On the IIth, we took Horfe about Four in the Morning, and rode three Leagues to Pouilly, where we drank very good Wine, which that Place is noted for Four Leagues thence we dined at Cofne, a walled Place, noted for Dogfkin Gloves. In the Afternoon we travel'd five Leagues to Bony, and one League and an half farther lodged in Briare, a fmall walled Town. At this Place begins a Channel cut from the Loire to the Seine, the Water being Lept up by Locks or Sluices. On the other Side of the Loire, in Berry, and about two L.eagues from Cofue is Sancerre, a Town fituated upon a Hill; formerly a ftrong Place and well defended by the Proteftants about ninety Years ago ; they held out folong, that they underwent the greateft Miferies of Famine, fome Women digging up their Children they had buried three or four Days before. We met on the Road many Savoyards, who were Chimney-fweepers at Paris, \&cc, They come off the Mountains of Savoy in the Beginning of Winter, and return thither in the Spring.

The 12 th, we rode four Leagues, and dined at the Efcu de France in la Bufiere, a fnall Village. Seven Leagues further we lodged in Montargis, a City where we faw nothing worth our Obfervation. An indifferent Caftle ftands here on a Hill: There is an Archbifhop of this City, and the King fends a Governor. In the Roadi we took Norice of many thatch'd Houfes, and many Country-houfes with high and fteep Roofs cover'd with Slate. The I3th, we travel'd about five Leagues, and had on our Right Hand Pont a Gaflon, a walled Town, and a League thence dined at the Angel or Maifon rogue, a Houfe that ftands in the open Fields. In the Afternoon we went over a Plain fowed with Corn, and five Leagues from our Bait paffed by Milly, a large walled Place on our Lefr Hand, and one fhorr League thence arrived at Corrance, where we lodged. This Afternoon we faw on our Right the Wood of Fontainbleau. The 14th, we rode about a League, and paffed among Rocks where Travellers are often robbed. About two or three Leagues farther we faw, on our Right Hand, Corbilly, a City in a Valley, with many Villages round it. Seven Leagues from Corrance we dined at $\mathcal{F} u r i f i$, at the Sign of the Golden Lyon. Three Leagues thence we paffed through Ville fuifue, and there, on the Top of a Hill, had a Profpect of Paris, where we fafely arrived after we had traveled two Leagues.
15. On our Left Hand we had a fair Hofpital; from Corbilly to Paris is a Caufeway in a ftrait Line, and well paved with fquare Pebbles. Nigh Paris we obferved feveral Stone Quarries. This Stone is of very great Advantage to the City of Paris; for were it not thus plentiful, the Buildings would be but indifferent. We faid in this City till April $\mathrm{r}, \mathrm{I} 666$, too fhort a Time for fo great and remarkable a Place ; but the French King's Declaration of War againft England commanded us out of France, within three Months after the Proclamation thereof, which was on the $1 / f$ of February, N.S.

What I could obferve during my Seay here, I haftily
put in Writing, viz. Every Wednefday there is a Horfemarket in Fauxbourg S. Victor, and every Saturday at Port Richlieu. At Mount Martre is made the Plaifter called Plaifter of Paris, and they have this Saying about it, Il y a plus de $M$. Martre à Paris que de Paris à M. Martre. Cardinal Mazarine left a great Legacy to build the College of four Nations, Italian, French, Spanifh and German; a good Part of it was now finifhed; the Front is ftately made, like a Theatre, and it looks upon the Lowure, being placed on the oppofite Side of the River Seine. The Sorbonne College is a magnificent Structure. The Doccors wear black Gowns; and when Exercifes are perform'd, they wear a white Furr, which hangs athwart the Breaft. L'Hôtel de Ville en la Place do Grave is an old and fair Building. Pont Neuf in the Middle is joined to the Inand Notre Dame Church ftands in. The Brafs Statue of Henry IV. on Horfeback, made by Bologna (who is buried at the Annunciata in Florence) itands in the Middle of the Bridge, having Infcriptions and Baff relievi, defcribing his Victories, Erc. Place Dauphine is a triangular Plazza built very uniform, and juft in Sight of Henry IVth's Statue. Rue de Harlay is behind that Piazza, where all the Houfes are of the fame Building. Place Royale is an uniform Square, very near, having a green Court railed about, and a fmall Portico under all the Houfes. Notre Dame is a fair Church with a handfome Front, adorned with Statues, and two flat Steeples, from which is a good Profpen of the City. Several Colours hang up in this Church, two of them were taken by the Englifh. The Baftile is like the Tower of London, for Prifoners of State, where the King gives them Allowance. It is near Port St. Antonine. The Arfenal conffits of many Courts, and has lair Walks in a Garden nigh the Gity Wall. St. Germain Auxerrois is a pretty Church nigh the Louvre, and is called the King's Parifh Church. The Tbuilleries is the Garden belonging to the Louvre, which they would not permit Strangers to fee at this Time. The Louvre Gallery is 900 Feet long; under half the Length of it are Stables.

Before the Louvre Gallery, not far from Pont des Tbuilleries, ftood an old Tower called la Tour des Anglois, which was thrown down the laft Year. Some fay, the preceding Kings durft not throw it down, becaufe of a Prophecy that France fhould be then conquered. The Louvre will be a vaft Place when it is finifhed; that Side towards the River, and the End towards the Tbuilleries is already built. Donec totum impleat orbem, and Virtuti Regis invicififmi, infcribed on feveral Parts of the Cbefteau de Louvre. In the Jefuits Church Rue St. Anthoine, is Lewis the Thirteenth's Heart kept in a Golden Cafe, held up by two Silver Angels. In the fame Church is a fair Altar, with about four Brafs Figures or Statues, being the Monuments of this Prince of Conde's Father. I rode out of the City two Leagues to St. Clou, where Madame Henrietta, Dutchefs of Orleans our King Cbarles the Second's Sifter, hath a Palace and Gardens. In the Parifh Church of St. Clou is a fpiral Marble Pillar, and Infcriptions to Henry III. whofe Heart is kept here. In a Chapel under the Choir is the old Monument of St. Clou; two Leagues thence we came to Verfailles, a pretty Pleafure-houfe built by M. Foucquet. Here rare Birds and other Animals are kept, but the Conceirge would not let us fee them, or the Rooms of the Houfe, becaufe we had no Ticket from M. In the Room, they fay, are Cabinets, are LookingGlaffes, $\xi^{3} c$. curiounly adorned with Silver Fillegreework. Here I faw Levers XIV. and his Queen, attended by a Foot Company of Swi/s, armed with Back, Breaft, and Head-pieces, a Company of Srei/s with Halberds, and a Company of French Foot, befides his Guard in Livery on Horleback, armed with Carbines. The King has alfo a Guard of Younger Brothers, who ferve him voluntarily, and wear whitifh Coats with Silver Lace; they carry Muskets. Out of thefe the King oftentimes choofes his Officers. The Lord Douglas was formerly the French King's Page, who at this Time commanded a Regiment of Scots, which the King of England fent for over upon the Declaration of War between Erance and England.

Every Monday comes out the Fournal des Scavans, a Pamphlet written by one Mr. Galloyer a Parifan, and but a young Man. M. Foncquet is Profeffor in the King's Garden, which is a handfome large Place; but that at Montpeliier is bigger and more pleafant. M. Marchand, formerly an Apothecary, hath travelled fome Parts of the Levant, and is very skilful in Herbs; he hath the beft Hortus Siccus that we ever faw, the Plants. being neatly faften'd on with a Glew, which he freely told us was made thus: Take of IEfbyocolla and 乡идоксдаの, ana; cut thefe fmall, and then boil them with Colom cynth, and afterwards diffolve all in Vinegar. Among the dried Planti, Medica Ciliaris and Ferrum cquinum; Siliqua multiplici, are moft remarkable. We mer accidentally with one M. Crock, a Phyfician in Amiens, who feemed to be a very ingenious Perfon. In a dirty narrow Screet, called Rue de la Ferranerie, we faw the Well, which Ravillac ftood againft, when he ftabbed Henry IV. the King's Footmen, going through St. Innocent's Church-yard, which is juit by. St. Innosenl's Church-yard hath many Charna! Houfes round about, and it is obfervable, that none of the Graves there are digged much above one Foot and an half deep, and yet the Flefh of the dead Bodies is fuddenly confumed by the Earth, which is of a chalky Nature. When they make new Graves, they fometimes met with whole Coffins, but the Flefh quite confumed within them. In Lent-time no Butchers can Fill Fleh, the Horpital having the Gain of all the Flefh that is eaten at Paris in this Seafon; which muft be a confiderable Profir, if they always, as they did this Lent, fell Beef at eight Sols per Pound.

St. Euftace is a fair and large Church. Voldegrace is a new Church building, at the Expence of the late Queen Mother of France; it hath a handfome Afcent up to it, by feveral Stone Steps, which lead into a Portico in the Front of the Church: It is made after the Italian Fathion, and hath a Cupola between the Choir and the Nave. The Queen's Heart is buried here. The Carthufions have a great Cloifter in the Fauxbourgh St. Germains, and have large Walks. Luxembourg is a fately Palace, and very uniformly built ; it hath fair and large Walks, like thofe of the Roman Villa, where all Perions may walk with Freedom. Madamoifolle the Prince of Conde's Sifter lives here. Every Hour of the Day there paffes a Hackney-coach from the Place Royab to Luxembourg-boufe; and another Coach goes from Rue St. Honore to Rue St. Faques, where the Bookfellers live. Every one pays five Sols for his Place, but goes with other Company, and for that Reafon it is not ufual for Perfons of any Quality to go in them. Palais Cardinal is a fair Palace with handfome Wallss. Here Madame Henrictta, Dutchefs of Orleans, lives. At one Side of this Houfe is a publick Stage, where the Italian and French Comedians act by Turns. I faw here $1 l$ Maritagyio d'una Statua; a merry Play, where the famous Buffoon Scaramuccio acted; three antick Dances pleafed the Spectators. The Quatro Scaramuccie was another pleafant Italian Comedy. We ftood in the Parterre or Pit, and paid thirty Sols for feeing the firft, and but fifteen Sols for feeing the laft. We faw a French Comedy, entitled, L'Eflourdie; which was better acted than we expected. We paid for fecing this, and ftanding in the Pit, fifteen Sols a Man. In the Marais du Temple are another Company of Frencb Actors, who have Machines to move their Scenes. M. le Dauphin hath his Company of Boys, who, they fay, act very well. The Sale des Macbines, in the Lourre, is made like that at Modena, and by the fame Workman Gafpar Vigarini ; this is larger, and the Roof of the Theatre richer gilt; they fay it will hold 5000 People, and that at Modena but 3000 ; one of the Machines moves a Hall with the King and Courtiers. The Sea is well reprefented in one Machine. Noblemen's Houfes are called Hoftels, and over their Gates are always written the Names of them; $a s_{2}$ Hoftel des Ambaffadeurs near the Luwmbourg. Hoftel de Sully is in Rue St. Antoine; Hostel de Vendofme in Rue St. Honore. The Matburins are the Padri di Rifcbatto, and are thus called in Paris, becaufe St. Mathurin's Body
was formerly kept here ; which is fince carried to the Place where he was born, called Arcbant, a Village in Gaftinois. In the Cloyfter here is a Tomb-ftone with a Sphere on it, and round about it this Infcription.

## De Sacrobofco qut compuftita Joannes <br> Tempora difcrevit jacet bic a tempore raptus Tempore qui fequeris, memor efto quod morieris, Si mifer es plora, miferans pro me precor ora.

Clermont College is a fquare and high Building, that belongs to the Jefuits who teach here, in feveral Schools, about two thoufand Boys, many of whom are Gentlemen's Sons boarded here, having feveral Halls to dine in, and long Chambers to lodge in. They fay about 400 Boys live here in this Manner, and are not fuffered to go out of the Gate without Leave. Many of the Scholars wear colour'd Gowns, fafhion'd like the Sophifters in Cambridge, and have large Velvet round Caps when they learn Logick, and fquare Caps when they read Philofophy. At a Difpute, we faw the Duke of Guife, a young Lad. Le Palais is in the fame Ine with Notre Dame, where the Courts of Judicature fit ; the Lawyers wear black Gowns and fquare Caps. In the Hall are many Shops and Galleries. One Varennes is the only Proteftant Bookfeller here, who, to fignify whether Mafs is faid or not, hangs out a Pafteboard, having on one Side the Letter $N$. and on the other the Letter O. for Non and Ouy. This is taken Notice of by the Proteftants that come to the Hall, that they may avoid the Elevation of the Hoft. Efchelle du Temple is a great Ladder that ftands in the Corner of a Street not far from the Place where the Templars formerly lived. The chief Streets are, 1. Rue St. Faques. 2. Rue St. Martin. 3. Rue Montmartye. 4. Rue St. Denis. 5. Rue St. Honore. There are ten Fauxbourgs or Suburbs, twenty Gates, eleven Bridges, fix hundred Streets in the City and Suburbs, more than thirty-two thoufand Houfes, and above one hundred Religious Houfes or Convents. At the Gobelins is a Houfe where Tapeftry is made. Nigh Port St. Honore, the Lord Hollis, the Englifb Ambaffador, dwelt.

The Fair of St. Germain begins the 3d of February, and holds all the Lent ; the Place the Fair is kept in, is a large fquare Houfe with fix or feven Rows of Shops, where Cuftomers play at Dice, when they come to buy Things; the Commodity is firft bought, and then they play who Thall pay for it. After Candlelighting is the greateft Gaming; fometimes the King comes and plays. Here we faw the Picture of our Saviour's Afcenfion, Sc. Peter, Sc. Paul and two Angels; it was made by Antonio Moro, who lived in Cbarles the Vth Time; it is valued at 200 Piftoles. The Erame is curioufly carved, and very richly gilt. The Theatins have a fair Church and Cloitter, a Building by the River Side, fome Diftance below the College of Four Nations. Cardinal Mazarin gave a Legacy for the Erecting this Convent. 1. Pont St. Micbel, 2. Pont aux Cbange, 3. Pont Notre Dame, and 4. Petit Pont, have Shops on each Side. The Pont Notre Dame is a very uniform Street. 5. Pont Marie, fome Years ago had many of its Houfes, at one End, tumbled down in the Night, by a violent Stream of the River. Every one without a Sword pays two Livres that paffes over. 6. Pont de Bois, which joins the Ine Notre Dame Church ftands in, to Ine Notre Dame, where are new and handfome Streets. An Englif Boat rowed by twelve Men, two of them Englifh, in this River, and bslongs to the Dutchefs of Orleans. The King hath one or two Pleafure-boats. Crofs feveral Streets of Paris hang little Bells and Chains, which are rung when Thieves break into Houfes in the Night-time. The Cbaftelet is a Prifon not far from Pont aux Cbange, where Men are clapt up for Debt, and fometimes criminal Matters. Such as are found murdered in the Streets are brought hither, and expofed to View, that they may be known. Vade in Pace is a clofe Prifon in Convents, where they keep fuch as have been profeffed of their Order, and are turned Proteftants. They feed them with Bread and Water, and there let
them lie fometimes all their Days. It is like a Dungeon, having only fome Light from the Top, whence their Meat is let down.
16. A Frencbman, at the firft Sight, is very civil and familiar, and will as fuddenly forget his Acquaintance with you; they will ask you, whether you are of the Religion, i. e. Proteftant or of the Eglife, i. e. Romans Catholick Religion, the firft Time you fall into their Company, and enquire who made your Cloaths, what they coft, and twenty fuch Queftions. If you employ a Porter, $\xi^{\circ} c$. and not agree with him before Hand what he fhall have, he will go away grumbling, though you give him more than he could have expected if a Bargain had been firft made. None but Gentlemen, or fuch as have been Officers in the Army, can wear Swords, E'c. when they travel. The French Women are generally bad Houfewives, minding their Cloaths; and dreffing moft, which they will have in the Fafhion; and the Humour of obferving Modes muf be fatisfied in both Sexes, though their Bellies pinch for it; for in moft Families their Diet is both coarfe and nender. The Women drink ufually Water, and fomecimes a little Wine ; they have a Breeding fo free, that in England we fhould efteem it immodeft, the Hugonet as well as popifh Ladies, fpot and paint their Faces, which, however, fome of their Minifters do not approve; and, in a Word, Women of both Religions, agree but too much in their Morals.

Swearing and Curfing, with the Addition of obfcene Words, are cuftomary in both Sexcs. Yet there are fome Men and Women among the Hugonots that are truly religious. Look on a French Woman, and you fhall fee her fare you in the Face, which is a Confidence that better becomes the Men, who feldom or never are put out of Countenance. The French are ftrangely impatient at all Games, efpecially at Cards, which tranfport fome that lofe into a Rage, and they make a dreadful Noife, with Blafphemies, Curfing and Swearing in a horrid Manner. At this Time moft People complained of their King's impoling Taxes, $\mathcal{E}^{3} c$. yet they feemed to boaft of him, and were proud to think themfelves Subjects to an abfolute Monarchy. Shirking or Sharping is as natural to a Frencbman as his Oaths; and tho ${ }^{\text {P }}$ his Carriage be free, yet he is ftingy enough of his Purfe, and will fooner lofe a Friend than a Penny, and fimali Interefts will govern his Affections; Exceptis Excipiendis.

Malefactors receive their Sentences on their Knees, which pronounced, the Hangman prefently ties a Rope about their Necks, and conveys them to the Prifon; whence after Confeffion, they are immediately hauled to the Gallows, fo that fometimes they are condemned in the Morning, and hanged before Night. If one hath endeavoured to kill another, and the affaulted Perfon lives, yet the Juftice of France will condemn the other to die, taking the Will for the Deed. The Marquis de l'Ange, a Proteftant, and reputed a ftout Man, was divorc'd not long fince from his Wife, a very handfome and virtuous Woman. She after fome Years complained to her Friends, that the Marquis was not able to get her with Child: This made fome Difturbance among the Relations, but at laft, when Phyficians, $E^{3} c$. had given in their Teftimonies, they could perceive no external Fault in either; it was agreed by both Parties they fhould prepare themfelves, and a Day was appointed by the Phyficians to be not far off; but notwithftanding all the Endeavours of the Marquis, it was concluded by a Decree of Parliament, that they might be divorced. The Lady is fince married to another, and hath Children by him, and the Marquis hath another Wife, and hath got her often with Child.

April 7. After Dinner, and juft as Mr. Howlett, Dr. Ward, Mr. Ray, Dr. Moulins, Mr. Litter and myfelf, were going out of our Lodging towards the Chaffe Maree, a kind of a Cart, that fetches Finh from Calais, one of the French King's Officers, a Captain de Guet, asked for Monfieur Moulins; and while he exchanged two or three Words with him, he fet his Bafton, which he had under his Cloak in two or three Pieces, together; and prefently came in eight or ten Mufqueteers, who
feized on Dr. Moulins, and hurried him away in a Se- upon the faid Security; to which he anfwered as before, dan to the Baftile; the Captain firft read the Order or Warrant commanding him to apprehend one Moulins wherever he could find him. Mr. Howlett, Dr. Ward, and Mr. Ray went away this Day for England, but Mr. Lister and myfelf not liking that Way of travelling by the Cbaffe Maree, ftaid a little longer in Paris; in which Time we could not learn any Thing concerning the Imprifonment of Dr. Moulin's, only Gueffes were made that his chief Crime was, he had lived too long among the French Proteftants in Languedoc; and that the French King fufpected he might difcover the prefent Inclinations of that Party after his Arrival in England, he being very intimate with fome of good Quality, that were difcontented with the prefent Management of Affairs in France.

When Oliver Cromwell was Protector, there happened this Accident at Nifmes; the Proteftants having a Right to chufe Magiftrates, the popifh Party were refolved to hinder them by Force on the Day of Election, and had fome of the King's Guards, and all the Papifts in Arms ftanding ready about the Town-Houfe; the Proteftants alfo armed in great Numbers, and one Proteftant Gentleman being nigh the Door that led into the Maifon de Ville, had a Pittol in his Hand, and being demanded why he ftood in that Pofture, anfwered, to defend their Privileges; then they commanded him to deliver up his Arms, which he refufing, the Guard Shot him dead ; which gave fuch an Alarm to the Proteftants, that they immediately fired at the Guards and others, and killed the Bifhop of Nifmes's Nephew, and then turned the Guards, and the reft of the Papifts out of the City. After that they began to fortify, and had many of their Friends come in daily to their Affitance, from the Sevennes, \&c. But fome more confiderate Perfons confulting what was to be done, at laft refolved to fend Dr. Moulins, then in Nifmes, into England, and acquaint the Protector with it, and to defire his Interceflion with the Court of France; fo Dr. Moulins immediately and privately rode away for Lyons, in bitter fnowy Weather, and in eight Days arrived in England, having firft waited upon Lord Lockbart, the Englifh Ambaffador at Paris. In this Journey, Dr. Moulins rode Poft with a Frencbman, that feeing the Poftboy fall down dead with the Extremity of Cold, opened his Codpiece, and rubbed his Membrum virile, with Snow, till he recovered him, which he did in a little Time, and the Boy was able again to ride Poit. Dr. Moulins ftaid but a very fhort Time at London, and then returned with Secretary Tburloe's Letters to the Englijh Ambaffador and Cardinal Mazarine ; the Pofffript of the Letter to Cardinal Mazarine was written with the Protector's own Hand; the Words were to this Effect : As you Serw Kindness to the Proteftants, so you bave me your Friend or your Foe. Dr. Moulin's, upon his Arrival at Paris, delivered the Letters to the Ambaffador; within a fhort Time he attended on the Ambaffador to the Cardinal's, who read the Letter, and then had fome private Conference with Lockbart ; after which Moulins was called in, who heard the Cardinal promife to the Ambaffador, the Proteftants at Nifmes fhould not be meddled with; and added, Mr. Ambaffador, Kou know France is not in a Condition to deny England any Thing. Acccordingly, Orders were fent exprefs to ftop the Troops which were marching againft Nifmes, and within a Day's March of the Place when they received the Orders.

Dr. Moulins fent a Note for fome Linnen to our Lodging, and Mr. Lifter returned by the Meffenger a little Billet, which only condoled his Misfortune, but the Captain of the Guard at the Baftile tore it in Pieces. All this while we heard of no Crime laid to his Charge. He was kept a Prifoner at the King's Charge, and well dieted and ufed. After the City of London was burnt, the French King fent a Courtier, I think Rouvingny, to Moulins, to acquaint him he fhould make any Province in France his Prifon, if he would give Security in a great Sum of Money not to go out of it, which he faid he was not able to give. Some Time after the King offered him all France for his Prifon,

Vol. II. No CXIX.

At laft the King fent for him and told him, he had done him no Wrong, and then bid him begone out of France within a Fortnight. This Relation I had from Dr. Moulins after his Coming into England.
17. The Romifh Gallican Church confifts at prefent of fourteen Archbifhopricks, which are, 1. Lyons. 2. Ambrune. 3. Aucbs. 4. Arles. 5. Tours. 6. Rbeims. 7. Bourdeaux. 8. Tbouloufe. 9. Bourges. 10. Narbonne. 11. Aix. 12. Vienne. 13. Rouen. 14. Paris. Under thefe Archbihopricks art Eighty five Suffragan Bifhopricks, which contain 7000 Parfonages, Priories, and Parifhes, above i140 Commanderies of Malta, 157000 Chapels, befides 557 Abbeys of Friars, and above 700 Convents of Cordelicrs, exclufive of the Carmelites, Jacobins, Augufins, Cartbufans, Caleftines, Fefuits, Minims, and other religious Orders, who polfefs 14077 Convents. To thefe Clergy belong 259000 Farms, and 17000 Acres of Vineyards, which are by them leafed out in Fronce, not reckoning 3000 Acres from which they take the Third and the Fourth. The Revenue of the faid Church is eftimated at 920,000 Crowns per Annum, exclufive of the Refervations in their Leafes, which aniount to 120,000 Crowns, confinting of three Livres each. The faid Calculation. was made by order of the Affembly of the Clergy of France, held in the Auguftine's Convent, at the End of Pont Neuf, in Paris the 16th of November, 1635 .
18. April the ift, Mr. Poiey, Mr. Lifter and myfelf gave eighteen Livres a Man for our Places in a Coach-Waggon that holds eight Perfons; we had in the Coach with us, one of Generva, (a Genevrite as they vulgarly call them) who had lived many Years, and married a Wife in Venice; but the laft Year the Inquifition took Notice of fome that were privately Proteftants, and clapped two into Prifon. This Man had Intelligence of their Defign, and therefore prefently, retired out of Venice, and undertook a Journey for London, where he refolved to end his Days. We had allo in the Coach, a ftout young Swedifb Soldier, who had folen away a young Woman ; and that Morning we fet forward, three Frencbmen pretending themfelves the King's Officers, attempted to get her away, and carry him to Prifon, becaufe he had dreffed the Wench he fometimes call'd his Wife, in Men's Cloaths ; but the Swede outvapour'd them, and turned them down Stairs, and went after them, hectoring them all the Way to the Inn-Gate. When I came to London, I met with this Swede, and asked him in Italian, where was his Belia Donna, he replied, he had difmiffed ner; and faid, Fo Tenge una piu, bella, i. e. I have got a handfomer. This Day we rode through St. Dennis, four Leagues from Paris, and four Leagues further lodged in Bearmont, a little Town fituated by the River Loazzo. We obferved fome few Vineyards this Day. 2d. We travelled four Leagues, and dined at the White Crofs in Tilliar, and three Leagues further lodged in Beaurais, a large Town but the Houfes low, and built of Wood.

The Royal Manufacture here employs four or five hundred Men in weaving Tapeftry, having feveral Looms in long Chambers; and Painters are invited thither to draw the Piftures that are to be woven. We obferved thofe that weave have the Picture they work juft underneath the Tapettry they are weaving. The Cathedral in this City was not finimed. The Choir is built like thofe in Englond, very high and handfome within and without: There is a large Piazza in this Town. On the 3 d , after fix Leagues riding, we dined at St. Puy; then three Leagues brought us to Pais, a Village where the Duke of Crecqui hath a Cantle. On the 4th, we went five Leagues, and dined in Airaines, a great Village, and after Dinner rode four Leagues more to Abbeville, a large Town with wooden Houles. Good Guns and Piftols made in this City. There are likewife three or four large Piazza's here. St. Ulfrane is the chief Church, a lofty fone Building, not finifhed. The River Soanne croffes the City in three Places; limle Veffels of 80 Tons come up hither, the Sea being but
three
three Leagues off. Between Airanies and Abberille we paffed by a Fort. On the 5th, we rode five Leagues, and dined in Berneil, a Village five Leagues thence, and lodged in Montrevil, a Garrifon Town indifferently bailt, but well paved and fortified; where we entred, there was a treble Wall, and good Ditches, and where we went out, was a fteep Defcent into a marlhy Ground. On the 6 th, we travel'd two Leagues, very bad Way, to Fran, a fmall Village ; and after Dinner rode hilly Way five Leagues to Boulogne, a City built on a Hill. The Suburbs called the Baffe Ville, where we lodged; a little Sea-port here. All the Way, in this Journey from Paris, we bargained for our Meat before Meals, and at Night did the like, or elfe bought it out of the Cook's Shops, paying only for our Lodging, Ufe of Table-linnen, $\mathcal{E}^{\circ} c$, in the Inn. Piccardy is a great Corn Country.

On the 7 th, we rode bad hilly Way, three Leagues to Marquife, a Village, and four Leagues further to Ca lais: Half a League before we came into the Town, we defcended into the Fenny Country about it. We paffed alfo by a ftrong Cittadel, and among many little Cottages, which are ufed, as fome told us, for Peft houfes in Time of Infection. Entring Calais, the Guards only examined how many Englija and Frencb we were in the Coach. On the 8 th, after taking a Paffport from the Judge-Major, and our Things fearched, we delivered our Paffport without the Gate, and entring the Englif乃 Packet-boat, failed two Hours S. W. to gain the Wind; and in three Hours, without once changing Board, we fafely arrived at Dover, a Boat fetching us a Shore. The Author concludes his Journal with this Infcription.

Deo<br>Omnipotenti<br>Maximas reddit<br>Gratias<br>P. S.

19. Thefe Travels of Mr. Ray and Mr. Skippon may prove both ufful and entertaining to the Reader in many Refpects, not only though they were written fo long ago, but even from that very Circumftance. They Thow the Condition that France was in at that Time of Day, the Size and the Number of the Inhabitants in feveral of the principal Cities, and above all, the Situation of Things before the Edict of Nants was recalled, and the Proteflants were obliged to quit that Kingdom: This will afford the Means of making many ufeful Comparifons to Perfons who have their Heads turned for rational Politicks, and ground their Opinions of Kingdoms and States, not upon the loofe and yeneral Reprefentations of the ordinary Rank of Writers, but upon Obfervations of their own, founded in Facts that may with Reafon be concluded certain. As for Inftance, our Author laft-mentioned gives us the State of the Clergy in France at the Time he was there: I will alfo give another fhort State of it as it now ftands, from a Book publifhed with Royal Authority : There are at prefent, in the Dominions of the French King, 18 Archbifhopricks, 113 Bifhopricks, 770 Abbeys of Men, and 317 of Women, to which the King names: There are befides 250 Commanderies of the Order of Malia, which fhows not only the Power of the Clergy in that Kingdom; but alfo the Power and Influence of the Crown over the Clergy.
We may learn likewife, from thefe Travels, fome very curious Circumftances with refpect to Manufactures and Commerce. Thofe Things that appeared fo new and fingular even to thefe great Men, are now very common in this Kingdom. We are no Strangers to the Art of making Verdigreafe; and, as for the Art
of Blanching or rather Bleaching of Wax, it is not only known, but practifed here with as great Succefs as Abroad; fo that the Notions of peculiar Excellencies of the Climate or Water of France appear to have had no Foundation in Nature, but were the mere Chimera's of French Vanity; and there is no Doubt that, upon proper Experiments, the fame Thing will be found true in other Cafes. It is, indeed, highly likely that thefe Travels occafioned our looking into and transferring feveral French Manufactures hither ; and therefore this Kind of Writing ought, of all ochers, to be encouraged.
There was an Attempt made in King fames the Firft's Time, to introduce the Silk Trade into this Kingdom, and a Plantation of Mulberry-trees was raifed for that Purpofe at Cbelfea; but it failed, not becaufe the Thing was found impracticable from any Faults in the Soil or Climate, but becaufe thofe concerned in the Project, wanted Steddinefs, and thofe employed under them, Care and Induftry; without which, nothing of this Kind can be ever brought to bear. I have been informed, that in Hamp/fire fome Trials of the like Nature have been made with great Appearance of Succefs; but thofe that were concerned made fuch a Secret of their Proceedings while living, that the Thing could not be conveniently carried on after their Deceafe. It has been likewife afferted, that Olive-trees might be cultivated in at leaft five of our Southern Counties; but we delight, it feems, rather in having Rarities in our Gardens, than Riches in our Fields.

The French had that Notion too, as well as we, but Henry IV. the very beft King they ever had, beat them out of it, and compelled the Inhabitants of the pooreft Provinces of France, to become wifer and richer in Spite of their Teeth. He made Ufe of his Power to make his Subjects happy ; and defired it, for no other Purpofe, as appears from an Anfwer he made, when it was nily infinuated to him in Prejudice to the Proteftants, that he could do nothing in Rocbelle, which was then in their Hands. It is a Mijtake, faid the King, I am absolute in Rochelle, for I can do there juff as much Good as I pleafe. His Succeffor dragooned the Proteftants out of France, though the moft induftrious People in it, becaufe they were not of his Religion; but Henry IV. dragooned his Subjects of all Religions into planting Mulberry-trees, and making Silk. One, from a Principle of publick Spirit, obliged People to do what they ought againft their Inclinations, becaufe he knew it was for their Good; the other from a narrow and bigotted Spirit, drove People out of his Dominions, who were doing all the Good they could.
But there is no Need 'of making Ufe of Force here, another Method would do the Bufinefs much better. A Reward of Ten Thoufand Pounds for the firt Hundred Weight of Silk, or the firt Hoghhead of Oyl, upon Security given to make the like Quantity annually for twenty Years after, might beftow upon us both Commodities, if it be poffible for us to enjoy them.; if not, the Reward would never be obtained, and therefore no Hurt would be done.

We find, in thefe Travels, a remarkable Point of fecret Hiftory; I mean the Protector's faving the City of $N i$ imes, and that from the moft authentick Authority, with many other Things which we might look for in vain any where elfe. But with regard to Matters of a later Date, which come nearer our own Times, and that may better enable us to judge of the prefent State of France, it is neceffary that we fhould have in this Collection, Travels of another Nature, and in another Seafon, which the Reader will find in the next Section; and, from the Perufal of both, will be more inftructed and better entertained than they could have been with either, if it had flood fingle.

## SECTION IVV.

Travels through France, interfperfed with hiftorical, political and medical Obfervations, made with great Care and Circumfpection, in two different Journeys through that Kingdom, the laft of which was compleated in the Year 1702, and the Whole revifed by the Author a little before his Death.

By Doctor John Northeigh, of the Royal College of Pbyficians.

1. A fhort Introduction. The Autbor's Entrance into the King dont of France. The Places be pafed through in bis Journey to Paris. 2. A large and curious Defcription of that City, weith an Account of the principal Edijces and otber Things remarkable, offerved therein by the Autbor. 3. A very copious and circump Fantial Defrription of the Univerfity of Paris, and of the feveral Colleges of wobich it is compofed. 4. A Defcription of Jome of the principal Cburches in this City; alfo of the Houfes belonging to the Jefuits. 5. The Abbey of St. Germains defcribed, woith fome Account of the Curioftities there. 6. The Palais, the Cbappel of St. Louis, the Palace of Luxemburg and the Obfervatory defrribed. 7. An Account of the Bridges in Paris, weitb fome biforical Remarls. 8. The Place de St. Victoire, and the Triumphal Arch erected to the Honour of Lewis XIV. 9. An Account of the principal Gates of this City. 10. A Defrription of the French King's Country Palaces, particularly Fountainbleau, St. Germains, and Marli. II. A more particular Defor ription of Verfailles, and fome otber Palaces not far from it. 12. A Defrription of the Monaffery of St. Dennis, where the French Kings are interred. 13. The Autbor's Journey to the Sea-Coaff througb Pontoife, Roan, Dieppe, Abbeville and Calais. I4. The Autbor's 'Yourney from Paris by Charrienton to the Banks of the Loire, zeith bis Obfervations in bis Pafage. 15 . Nevers, Moulins, and otber Places deforibed, weith fome Account of the Waters of Bourbon. 16. A Defcription of the City of Lyons, of the mof remarkable Buildings, and otber Curiofities there. 17. This Subject continued revith an Account of tbe adjacent Country. 18. The Autbor's Remarks on the French Government and Nation. 19. Some Obfervations upon the foregoing Section.

Ware acquainted with very few Circumftances relating to the ingenious Gentleman, who was the Author of thefe Travels. He was bred at the Univerfity of Oxford, as Mr. Wood informs us, and traveled through the greateft Part of Europe, purely for the Sake of Improvement and Information. He entred France from that Part of the Low Countries now under the the Dominion of the French Monarchs, having before paffed through the Territories of the Republick of the United Provinces, which he has alfo defcribed; but confidering we have inferted Travels through that Country already, we thall not fatigue the Reader with Repetitions, but give him at once our Author's own Account of the Places he paffed through in his Way to Paris.
The firf Place we came to in France, properly fo call'd, (without its Conquefts) was Peronne, formerly a Frontier Town towards Cambray, and well fortified after the old Way, being the firtt on that Side in Picarciy. Here the Cuftom-houfe Officers fearched us as fricely as if we had firt fet Foot into the French Territories, though we came out of the French Conquefts, and had paid Duties there to the fame King. It is feated upon a Level on the River Somme, not unlike our Salisbury, but in Bignefs approaching near to Exeter, in that Part of Picardy called the Vermandois or Sans-terre; the firft being the Situation of the ancient Veromandue; St. Quintins, which is not far off, being fuppofed to have been the Augulfa Veromanduorum of Cajar.

From Peronne, paffing through the little Village of Marfipo, we came to Roy, formerly a Town of Note, (as its Ruins fufficiently teftify) feated on the River Moreul in the Sans-terre; then taking our Way through the Village of Gourney, furnamed Sur le Arondeburg, in the Ine of France, we came to Pont firnam'd St. Maixerice, upon the River Oyfe, having an old ftrong Wall, and a good Bridge that brings you to it crofs the River. From hence travelling three Leagues further, we came to Senlis; a Bifhop's See, Suffragan to that of

Reimis; fome would have it the Augufomagus of Ptolomy. The Great Church, dedicated to the Holy Virgin, is fuppofed to have been built by the Englif. The next Town betwixt this and Paris is the Louvre, feated in the Dukedom of Valois, once the Sirname of the Royal Family, before it was fwallow'd up in the Houfe of Bourbon. Picardy has generally a pleafant and fertile Soil.
2. Thence we came to Paris, the Metropolis of France, which fome have compared with London for its Extent, Buildings, and Number of Inhabitants. As for its Circumference, the fame is eafily difcover'd from off the Towers of their Notre Dame or Our Lady's Church, to be much lefs than our's, though it lies in a more circular Figure. The Houfes, it muft be confefs'd, look very handfome on the Outfide, being built with a fair white . Free-ftone (found thereabouts) with handfome Safh-windows.

The Number of its Inhabitants is, in my Opinion, beft guefs'd at, without any furcher Scrutiny, by the People you meet with in the Streets, efpecially on the Pontneuf, the greateft Paffage in Paris, and that a very fhort one, notwithflanding which, you fhall very rarely fee near fo many People there, as you meet every where walking all along from Tower-bill to WefminfterAbbey: Add to this, that their By-Sireets and Alleys are not near fo throng'd with People as ours in Lons don; and if Trade is the main Thing that renders Cities populous, (as we fee in thofe of Holland) it is evident that our Metropolis challenges the Preference upon that Account. What fome would alledge in Reference to the Number of Coaches in Paris is of no great Confequence, though I am apt to believe we may carry it even upon that Account.

This fo much celebrated City is feated in a moft delighfful Plain; their Houfes are generally fix or feven Sories high : By common Computation Paris has betwixt thirty and forty thoufand Houfes, and about feven hundred thoufand Souls.

The Streets are much handfomer and lefs dirty than they were formerly, (which gave it the Name of Lutetia) and their Squares are exceeding noble ; they are enlightned in the Night-time by Lanthorns hung on Lines. The whole Bulk of this fpacious City is divided into three Parts; the firft is called la Ville, containing the four Suburbs of St. Antoine, Du Temple, St. Martin and St. Denis, being encompafs ${ }^{\circ} \mathrm{d}$ with the Sein on one Side, and Walls on the other ; the fecond is call'd la Cite, feated betwixt the firft and the third, upon what is properly call'd the Ifle, furrounded by the Branches of the before-mentioned River, and joyn'd to the reft by Bridges, being the moft ancient part of the Town; the third Part is called the Univerfity, feated on a rifing Ground, containing the Colleges erected for the Promoting of Learning, and the Fouxbourgs or Suburbs of St. Germain, St. Micbael, St. Faques, St. Marcell, and St. ViEtoire.

The Suburb of St. Germain has the beft Palaces and Colleges. For the reft ; in all the three Quarters are reckoned forty Parifh Churches, forty two Abbeys and Convents, forty Nunneries, twenty four Hofpitals, forty eight Colleges, belides feventeen Chapels; fo that Charity and Religion feems to take up a confiderable Part of this great City. The S'ein paffes through the Middle of it, and the Water is very fweet and frefh here, but has no Tide, like our Thames about London. So much of it in general. We will now proceed to give you the Particulars. The Louvre, were it finifh'd according to the firt Defign, would queftionlefs exceed all Structures in the World, whereas now only two Sides are compleated, viz. that towards the Sein and Thuilleries, the Hotels of Crequi, Longueville and Montaufier being fince built within the Compals of this Scructure, which for this and fome other Realons (amongft which the Siding of this City, with the Malecontents in this King's Minority is none of the leaft) is fuppos'd will never be finifh'd, it being certain that the third Part of the Charges employ'd in Building of Verfailles, would have made this as compleat and magnificent a Structure as ever the World beheld: Some fay Pbilip the Auguf was the firt Founder of it, above 500 Years ago, but the Fabrick, as it now ftands, oweth its Rife to Francis I. The Hall call'd le Salle de Cent Swifs, formerly the Hall of Audience for Ambaffadors, was by Mary de Medicis turn'd into a Playhoufe. On the Porches you fee feveral Infcriptions, fufficiently demonftrating that the French were always good at flattering their Monarchs, though they then did not come up to that Height as they have fince, in beftowing the Epithet of Viro Immortali and other fuch-like blafphemous Expreffions upon them. Upon this Occafion I can-. not forbear inferting three Diftichs made by the French Poets, exceeding for their Loftinefs the Structure itfelf:

Rex, Regnum, atque Domus, tria funt Miracula Mundi! Rex animo, Regnum viribus, arte Domus.
Non orbis gentem, non urbem gens babet ullam, Urbfue Domum, Dominums nec Domus ulla parem.

## Louvre Domus, Dominus Ludovicus, Regia Rege Digna fuo, Calo eft bac minor, ille Deo.

All the Antiquities and Roman Statues, with a moft curious Cabinet of Paintings formerly preferv'd here, are tranfported to Verfailles; there are however fome Pieces left of le Brun's, and that celebrated Piece of Paul Veronefe?s Wedding of Cana, prefented to the King by the Senate of Venice; for the Servi, in whofe Church it food on the Altar, having fold the fame to the French King, the Senate hearing of it, to check thefe mercenary Monks, prefented it to the King. Their Academy for the cultivating and improving the French Tongue, infituted by the prefent King's Farher, confifting of forty or fifty of the moft ingenious Perfons of the City, is kept here ever fince. Many of the chief Artifts belonging to the King have their Apartments in this Pa lace: their chief Painter then was M. le Brun, fince dead; their head Graver was Girardon; and for Sculp-
tures, Medals and Coin, M. Rotier, whofe two Brothers have the Honour to ferve in the fame Employment to the Kings of England and Spain. And not far from thefe they fhew you another fpacious Place call'd the Guard meuble, fror'd with all Sorts of Paintings, Tapeftries and curious Cabinets.

The Thuillery is alfo a Part of the Lourere, where it faces the fine Garden of the Tbuilleries; it was formerly furnifh'd with Abundance of the beft Painting, and other Movables of the beft Workmanflip, which have been carried to Verfailles: That Part which fronts the Garden is a long beautiful Piece of a Fabrick begun by Henry IV. and compleated by Lewis XIV. The Theatre in it is exceeding noble, and the Gardens before if not inferior to any in Europe, not excepting even Verfailles; the Walks and Plantations whereof are indeed more coftly, but not more delighfful and regular. At the lower End of it, ftands a noble Statue of Verity carried off in the Arms of Time, with this Infcription;

Opus Petri à Frankavilla Comeracenfis, Ann. 1609.
There are divers excellent Pieces extant of this great Mafter.

The Royal Palace, call'd Palais Royale, does alfo belong to the King, being the ordinary Refidence of the Duke of Orleans, the King's only Brother, when in Town; it is compos'd of two fair Courts, with a delicious Garden behind it ; Cardinal Ricblieu was the Founder of it, who alfo built here a Theatre on Purpofe for Tragedies, of which he was a great Admirer ; but fince Moliere had Liberty to act his Comedies there, and after his Death the Opera's were acted in the fame Theatre. The Place-Royal is a vaft Square, open towards the Street of S. Honore, intended chiefly for the King's Statue, which is to be put in the Middle, for which Reafon they have demolifh'd the Hotel de Vendome, and ruin'd the Convent of the Capucbins.

Near this is another Structure call'd le Palais Brion, defign'd for a Library, but fince turn'd into two Academies, viz. for Architecture and Painting; the firft erected by M. Colbert; Manfard, Perault, Blondel and Felibien were Members of ir, ; they meet two or three Times a Week to confult about the moft curious Models in Architecture that can be contriv'd. That of the Painters acknowledges M. Noyers, Secretary of State, for its Founder, but M. Colbert for its Reftorer; of this M. le Brun, their great Painter, was Prefident. They keep here a good Collection of original Paintings of fome of the beft Mafters, Statues, Buftoms of ancient Roman Sculpture to defign by; befides which, they hire every Day fome clean-limb'd Man or Woman, who expofe themfelves naked to their view. The Houfe, known by the Name of the Cabinet $d u \cdot R o y$, contain'd formerly great Store of curious Pictures, Medals, Agates, and fuch-like Rarities, as alfo the Anticalia found in Cbilderic the Firft's Tomb at Tournay, with his Library, and a confiderable Collection of Manufcripts, among which was St. Cyprian's Work, brought thither from St. Laterence's Library at Florence; but thefe are for the moft part now at Verfailles.
The Academy of Sciences was likewife founded by M. Colbert; they are employ'd in promoting Mathematicks, Phyfick, and natural Philofophy, like our Royal Society, which exceeds theirs both in the Number of its Members and Advancement of Learning. They have many Nobemen's Houfes of Note, call'd by them Hotels; that of the great M . Colbert, now in the Porfeffion of the Marquis of Seignelay, is a very noble Fabrick, and his Library is moft exquifite, both for its Number of good Books and curious Manufcripts; they fhew you a ManufcriptBible as old as the Reign of Cbarles. le Cbouve; the famous Hiftorian M. de Thou has alfo left the Publick an excellent Library. Moft of their Noblemens Palaces of Note are furnith'd with very good Collections of Original Pictures by the moft excellent Hands, which they have purchas'd for the moft Part from the covetous Italians; among thefe the Palais Mazarin, and the Hotel de Seiguier, deferve to be particularly re-
membered:
membered ; the firft is noble without, and curiouny furnifhed within, with Statues and Paintings both ancient and modern, of the Hands of Grimsaldi and Romanell, two famous Italian Painters, fent for hither upon that Account; the King has taken the beft of them, yet there are many Cabinets, Tapeftries, and other rich Veffels of Stone and Silver, lefr. The fecond was at to excellently well furnifh'd with all Sorts of Curiofities, and particularly with precious Cbina-works of all Sorts, but fince fold or diftributed.

The Recolets have a very good Library, and fome excellent Paintings: Hard by is the Hofpital of St. Lewis, founded for thofe that are infected with the Plague, by King Henry IV, but at prefent is made ufe of for the Sick of the Hotel de Dieu. In the Street of St. Avoye is an old large Palace belonging to the Graind Prior of France, but formerly appertaining to the Knigbts Templars; it has a confiderable Revenue annex ${ }^{3}$ d to it. In the Street of St. Leweis is a noble Fountain, adorn'd with Tritons and other fuch-like Ornaments.

Their Maijon de Ville or Torenboufe flands in the Place called the Greve, built by King Francis I. Neither the Place nor Structure are anfwerable to the Greatnefs of fuch a City as Paris; however, there is a noble Way leading to it, enlarg'd in 1675 , with Caufeway-banks on both Sides.

The Place Royal is a magnificent Square, near as fpacious as our Great Lincoln's-Inn-Field, enclos'd with Piazza.Walks, and the Platform with Iron Rails; the Statue of King Lerwis XIII, fet up by Cardinal Ricblieu, ftands in the Middle of it, with feveral Infcriptions on it in French and Latin; the Horfe is faid to be the Work of Volterre a famous Italian, who made it for King Henry II. The faid Cardinal's Houfe ftands in the fame Place, having among other Curiofities an excellent Collection of Paintings.
The Baftile is a Place not unlike our Tower, furrounded with a plain Wall and eight antique Turrets, and ferves for the fame ufe, viz. for a Magazine and a Prifon for Prifoners of Quality. There is another very good Arfenal not far from this, a fpacious Pile of Building, three great Courts and a Garden ; the Portal is fupported by Cannons inftead of Pillars, with this Infription in Capitals:

## AEtna bac Henrico Vulcania tela minjifrat, Tela Giganteos debellatura furores.

Here many Workmen are employ'd by the King, to caft Statues and other Works in Metal.

The Abbey of St. Victoire, in the Poffeffion of the Canons Regular of St. Aufin, is one of the moft ancient Foundations in Paris; it has a good Library, and fome Manufcripts; and Students are permitted to make ufe of them three Times every Week. The noted Mr. Santeuil belong'd both to this Houfe and Order. The Fardin Royal or Pbyjick Garden (of which Mr. du Verney, an excellent Anatomift, was Surveyor) is maintain'd at the King's Charge, and Botanick Lectures are kept there during the beft Seafon for Plants; it is fomething longer, but not broader, than that of Oxford. There alfo belongs to it a very good Anatomy-School, ftored with Skeletons of Animals, and among the reft with one of a very large Elephant. In the King's Laboratory every Body is admitted to fee the Operations, and the Medicines made here are beftowed upon the Poor.

Near it is the Hofpital General, as they call it, a vaft. Pile of Buildings, finif'd in 1657, by Cardinal Mazarin, and containing near fix thoufand poor People, who are employ'd here in different Sorts of Work, and when fick well look'd after. Another of their Hofpitals is that call'd Hotel Dieu, a very large Building, but neither handfome nor extraordinary convenient, being fometimes overcrowded with Sick, and too clofely built up round about it. As it is the chief Horpital in Paris for the Sick, the Nuns of St. Aussin are oblig'd
to tend and look after them, which they to tend and look after them, which they do with fo much Tendernefs fometimes, that they don't care much

YOL. II. No 119.
to return to the Nunnerys ${ }^{\text {j }}$ for, not long before, a certain Irifmimat being recovered by the Care of his pretty Nurfe, made flift to carry her away without being ever heard of fince : The Danger and Trouble that muft needs be the Attendants of this Employment, making the fame very meritorious among the Roananifts; the Ladies of the firt Quality fometimes employ themfelves in thefe Acts of Piety; and it was in this Place that (not long before) the Dutchefs of Nemiour's, Mother to the Dutchers of Orleans, got the Small-pox, and her Death into the Bargain. Not far thence is the Horpital de lid Cbarite, where the Friers of St. Fobn perform the fame Office as the Nuns do in the former : Each Room has three Rows of Beds.

There is another Hofpital in Paris they file The Ind curable, becaufe only fuch as are paft Cure are admitted into it.

But what exceeds all the reft is, the Hotel Royal des Invalides, or the Royal Hofpital for maimed Soldiers, or thofe render'd unferviceable by Age, founded upon the fame Defign as our Cbelfea Hoppital, built at the prefent King's Charge, from 1670 to 1678 . The whole Structure is compofed of five Quadrangles, one large one in the Middle, flank'd with two other fquare ones on each Side, with Piazza's and Cotridors or Galleries round them all; the whole Fabrick being of fine hewn Stone, makes a very noble Appearance. The Kitcheri is very large and handfome, and in their Refectories (where the Soldiers eat) you fee moft of the Sieges un dertaken in the late Wars by the French, painted on the Walls. The Apothecary's Shop belonging to this Place is the beft contriv'd and as well furnifh'd as any I ever met with in all my Travels. The Soldiers are attended here by the Sifters of St. Lazarus. Confidering the Freedom allow'd to Strangers, to be prefent at their Operations perform'd in all their Hofpitals, the Advantage of their Chymical Lectures, Phyfick-Garden, and frequent Practife in Anatomy, Paris feems the moft accomplifh'd School for young Phyficians; and to be preferred in this Refpect to Leyden, Pa, dua, Montpellier, Cambridge, and Oxford itfelf. The Houre known by the Name of the Gobelins, in the Suburbs of St. Marcell, was formerly famous for the making and dying of the beft Scarlet Clochs, but now divers Sorts of the beft-Workmen are employ'd here at the King's Coft and Profit, in making the fineft Tapeftry, Plate, Mofaic, Iron, Copper and Brafs-Works, Statuary, Sculpture, Embroideries, $\mathcal{E}^{2}$. Thefe Suburbs have a Church dedicated to St. Marcell, where you fee the Tomb of the celebrated Peter Lombard.
3. The Univerfity of Paris, which makes up one third Part of the whole, is worth the Curiofity of a Traveller ; they make it as ancient as Cbarles the Great, and fay it was he encompafs'd it with a Wall; hence it is that they celebrate a certain Day to his Memory, when all the Heads of the Univerfity meet at the College of Navarre. Formerly the Univerfity of Paris had more Colleges and Students, the Number of the firt (where publick Exercifes are perform'd) is at prefent reducid to eight or nine, among which the Sorbonne, the College du Pleffis, that of Navarre and of Harcourt, are the chiefeft : They had alfo formerly the Privilege of being exempted both from the civil and criminal Juriddiction of Paris, which is now lietle regarded.

The chief Things profefs'd here are Divinity; Phyfick, Law, and Arts, or Philofophy; for each of thefe they chufe, four Times a Year, a Recior or Profefor: The Sorbonne and the College of Navarre are the moft confiderable for Divinity: The Schools' for the Civil Law are in the Rue de Baurais, lately new model'd by the King's Orders. The Phyficians liave a fair Anatomical Theatre in the Rue de Boucbiere; and their College call'd de quatre Nations, (i. e. of four Nations) viz. thofe of France, Picardy, Normandy, and Germany, is dedicated to their Faculty of Arts.

The Sorbonne has got its Name from Robert de Sorbonne its Founder, formerly a plain and ordinary Fabrick, but now turn'd into a magnificent Structure, chiefly by the Care of Cardinal Ricblieu; it has always been famous for its learned Profefors, ever fince its
firft Foundation, which was under the Reign of St . Lewis, as the Infcription on a Brafs Plate in the Church teftifies ;

## Ludovicus Rex Francorum, fub quo fundata fuit Domus Sorbone, circa An. Domini MCCLII.

The Profeffors and Students are lodged in the Apartments about the great Quadrangle.

The Library is kept in a handfome and lofty Room, much increafed by the Liberality of the faid Cardinal, efpecially with fome Manufcripts, diftinguifhed with his Arms upon them. Among other curious Pieces, they fhew you two large Volumes of Livy, an old Tranflation of antiquated French, written in the Reign of Cbarles V. embelifh'd with Paintings in Miniture on Vellum ; which Art has been loft above two hundred Years ago. They have good Store of Divinity Works, and all Trannations of the Bible. The Picture of the Cardinal their Benefactor hangs at one End of the Room, at Length, in his Habit; and, at the other, ftands his Buft in Brafs, done by the excellent Hand of $V a$ rini. The Fathers and School-Divines are regularly placed one after another, with their refpective Annotators in the Rows underneath. After they have fre quented the publick Lectures for three Years, they are qualified for the Degree of Batchelors, who wear Lambikins and Tippets like our Batchelors of Arts at Oxford; after two Years more, they may be promoted to the Degree of Licenteats, who generally are the Opponents to fuch as take the Degrees of Doctors. I was prefent at fome of their publick Exercifes and Difputations, which were managed with a great deal of Decency and Order. The Subjects on which moft generally they exercife themfelves are, the Sacrament, the Tranfubftantiation, Trinity and Incarnation, which in the Roman Church being look'd upon as the fole Object of Faith, even in Contradiction to Senfe and Reafon, I could not but admire to hear the Opponents urge oftentimes fuch Things as are accounted and declared heretical among them.

The College of Navarre, the next in Rank, acknowledges King Pbilip the Fair and his Queen for its Founders, as the Infcription under the Statues teflifies. Formerly none but Noblemen's Children were admitted here, but now all Sorts, without Diftinction. They have four Profeffors in Divinity, and the Archbifhop of Paris is Prefident of it. In I684, the Magiftrates of Paris founded an annual Panegyrick for this prefent King, on St. Lereis's Day.
The College de Harcourt is a large Structure near the Sorbomne, where continual Exercifes are held for inferior Forms of Students in Logick and Philofophy; they print their Thefes, and difpute categorically, without confining chemfelves frictly to Syllogiftical Rules. The College du Plefis was reftored by Cardinal Ricblieu, being as it were the Nurfery of the Sorbonne, who always place a Governor of their own College over it. The Faculty of Arts for the four Nations is a different Foundation from the College of the Quatre Nations, thefe Artifts having peculiar Houfes allotted them, and chufe each, every Year, a Prefident of their own Nation.

The College of the 2uatre Notions acknowledges the Cardinal Mazarin for its Founder; the Portal hath this Infcription:

> Ful. Mazarin: S. R. E. Card. Baflicam, \& Gymnaf. F. C. A. MDC.EXI.

It has a double Court, and a good Library of the Cardinal's own Collection, which is open to every body at certain Hours in the Day. The Number intended by the faid Cardinal's Will were fixty, viz. fifteen from about Pignerol and the adjacent Parts of Italy, fifteen for the Alfatian Youch of Germany, twenty for thofe of the Nerw Conquefis in the Netherlands, and ten for Rouflion and Catalonia; but neither the Strucure nor Institution is compleated yet. As the Doctors of
the Sorbonne are Governors of this College, fo their Books in the Library treat of the Cannon and Civil Law; mixed with Abundance of School-Divinity.

The College Royal, founded by Francis I. for Law, Phyfick, Mathematicks, and the Oriental Languages, was carried on farther by King Henry IV. Mary de Medicis, and Leweis XIII. though not brought to Perfection, the Profeffors receive their Salaries from the King, without any Dependance on the Univerfity. It is feared near St. Fames's-ftreet and the College of Cambray.
4. The Englifh Roman Catbolicks have a good Nunnery and Convent of the Benedictines in Paris, founded in 1657 . In the Nunnery many young Ladies of Popifh Families are educated. Among their Churches, the Cathedral called Noftre Dame challenges the firtt Rank, an antique Gotbick Strucure, compleated at feveral Times, more flrong than noble, a very ancient Bifhoprick, founded (as they fay) by St. Dennis not long after the Apoftles Time, but made an Archbifhoprick fo late as 1622, by Pope Urban VIII. In the Choir you fee divers good Pieces of Painting and rich Tapeftry, and Abundance of Gold and Silver Plate for their Altars: It has about fifty Canons belonging to it, among which was once the famous Hiflorian Poulus Emilius Veronenfis, whofe Tomb is to be feen in one of the little Chappels.
The next is the Fefuits Church ; on the Front of their College you fee thefe Words in Capitals, Collegium Ludovici Magni. This Society was firft introduced into Paris by du Pratt, who prefided at the Council of Trent for France, and afterwards proved a great Benefactor to them, as well as that famous and unfortunate Minifter of State M. Fouquet. The Library, which was his Gift, is a very good one, both for Number of Books and Manufcripts, among which are many Protestant and Socinian Authors. Thefe Fathers have another College in the Street of St. Antbony, the Church whereof is a magnificent modern Struentre, carried on in Part by Cardinal Ricblieu, under ise Reign of King Lerois XIII, whofe Heart is entombed here, as well as that of Henry de Bourbon Prince of Conde.
They have lately built another in the Suburbs of St. Germain, called the Novitiates, the Church whereof is but fmall, but the Architecture moft excellent; it was built at the Charge of M. Noyer, Secretary of State. The Church of St. Generieve, with its regular Canons, is faid to have been founded by King Clovis, who has an old Tomb here, which has been embellifhed of late Years, for they have put on his Head a Crown with a Flower de Luce, whereas thofe Arms were not till long after ufed by the Crown of France; juft as in fome other Popifh Countries I have obferved our Saviour painted with Beads and a Rofary in his Hands. They have alfo put a modern Infcription upon the old King's Tomb. But the chief Ornament of this Church is the Tomb of that great Frencb Philofopher Des Cartes; it has two Infriptions, one in French Verfe, the other in Latin.
The Apothecary's Shop belonging to the Convent, and the Library, are neatly difpofed, where they have ancient Bufts, Coins, Medals, and other Antiquities : Father Molinet has a curious Collection of Rarities of his own; and the famous Architect Father Creil was a Member of this Convent. In the Monaftery of the Facobins is to be feen the Monument of Humbertus, the laft Prince of Daupbine, who having no Iffue, fold this Principality to Pbil. de Valois, and, embracing a monaftical Life at Lyons, became firft Prior of. this Convent, and afterwards Patriarch of Alexondria, as the Infcription tells you.
5. The Church of the Carmelites is, for its Antiquity, not inferior to any in Paris, being fuppofed to have been founded by St. Dennis; it now contains the Heart of the Great Turenne, and has divers excellent modern Paintings and other Ornaments within. That called Val de Grace is both a modern Inftitution and Structure, after the Italian, founded by Queen Anne of Aufria, upon the miraculous Birth (as they ftile it) of the prefent King, after the had been married twenty-two Years: Her Heart, as alfo that of our Henrietta Maria

Dutchers

Dntchefs of Orleans, lies entomb'd here. The Altar and Cupola are exceeding fine, and upon the Portal you fee thefe Words,

## Tefu nafcenti Virginique Matri.

All the Nuns are of noble Extraction, and chufe a Lady Abbefs every three Years: Madam la Valliere, once the King's Miftrefs, retreated to this Nunnery, to do Pennance for her paft Mifcarriages.

In the ancient Abbey of St. Germain are the Tombs of many of their ancient Kings, who us'd to be buried here, before the Time of the Inroads made by the Nortbern Nations, as of late at St. Dennis. That of Cbilperio has only thefe few Words, in a very old Character, on a plain Stone,

## Rex Cbilpericus boc tegitur Lapide.

But that this was but Part of his Tomb, is evident from the Infcription on a broken Tombftone dug up fince in another Place; which fhew how much in thofe Days, they were afraid of being difturb'd in their Graves.

## Hic jacet Cbilpericus Francorum Rex.

Ego Cbilpericus Francorum Rex precor ut inde in IEternum non aufferentur offa mea.

Queen Fredigonde, who died in 6or, is alfo entomb'd here; and Clotbarius, and the fecond Son to Cbilperic, of the fame Name with his Father, with their Wives. Among the modern Monuments chiefly remarkable are that of the Duke of Vernouil, Prince of Bourbon, natural Son of King Henry IV, who was Bifhop and Abbot of St. Germain, but afterwards relinquifhing the monaf. tical State, married the Dutchefs of Sully. Here is alfo interr'd the young Duke of Bourbon, Son of the prefent King of France, and Cafmir King of Poland, who after having refign'd his Crown, died Abbot of this Place; their Epitaphs and Infcriptions are too long to be inferted. Here are buried alfo fome of the Family of Douglas of Scotland. They have a very good Library here, formerly accounted one of the beft in Paris, and which ftill has the Reputation of excelling all the reft in Manufcripts, except the King's. They pretend to have the Pfalter of St. Germain, which he generally ufed at divine Service, and a Miffal of nine hundred Years old, written with a Stile on little Tables of Cedar. They fhew you a great Volume brought by a French Ambaffador from Confantinople, with Atteftations of moft of the Bifhops of the Greek Church, concerning their Belief of Tranfubftantiation, which they produce as an undeniable Proof againtt the Opinion of the Proteftants; though to fpeak the Truth, it is very probable that thefe good Fathers might do much out of Complaifance both to the King and the Ambaffador, nothing being more obfervable among the Greeks than to accommodate themfelves, both in Difcipline and Doctrine, to thofe among whom they live; as is particularly remarkable at Rome and Venice.

The Fathers of this Abbey formerly publifh'd a very good Edition of St. Auftin's Works, from the beft Manufcripts in Europe; and Father Dachiery, of this Houfe, has fent Abroad divers Volumes of his Specilegium, containing many, Curiofities and Antiquities taken out of their Manufcripts. They tell you, that the Church being built in the fame Place where ftood anciently the Temple of Ifis, a Statue of which Goddefs remains on Part of the Walls, a fimple old Woman was feen to worfhip it for a Saint, which the Fathers having had Notice of, they broke it to Pieces.
6. Another of their publick Structures is. what they call le Palais, becaufe in old Times it was the Refidence of their Kings, but by King Pbilip the Fair appropriated for the Affembly of their Parliament. The Hall in which anciently their Kings ufed to perform their greatel Solemnities is very fpacious, and arch'd, with the feveral Courts of Juftice in particular Chambers about it; the ancient Chamber of private Audience is now the Room where the Remainders of their ancient

Parliaments affemble when the King has any Thing of Moment to propofe to them ; it opens always on 'St. Martin's Day, when the Members attend in the GreatHall in their Scarlet Robes. Here is alfo kept the Court of Aids, which has a feparate Jurifdiction from the Parliament; their Court of Cbancery, and the Cbamber of Accounts are the fame as our Excbequer Court : they plead by Way of Bill and Anfwer, Plaintiff and Defendant, but in a more fummary Way than in our Court of Cbancery, much like our Civil Law Courts of Jiudicature; though at the fame Time there are not wanting Inftances, that their Suits have been protracted for a great many Years. Here all the Patents of the Peers are regittred, as well as their Cbartors and other Records.

In the Chapel of St. Lerris, belonging to the Law yers, they flew you Abundance of Relicks, which they vouch for authentick; as, the Sponge dipt in Vinegar and Gall; the Head of the Spear wherewith they pierc'd our Saviour's Side, and the Purple Robe entire, though at Rome they fhew with the fame Affurance a Piece of it. Near this Palace is the Square call'd la Place Dauphin, of a triangular Form, buile immediately after the Birth of Lerois the XIIIth, which gave it the Name Daupbin.

The Palais de Iuxembougb, or Palais d ${ }^{3}$ Orleans, built by Mary de Medicis, is one of the moft regular and magnificent Structures in Paris; Madamoifelle $d^{3}$ Orleans has her Lodgings on one Side, and the Dutchefs of Guife on the other, in whofe is that famous Gallery of Paintings of Mary de Medicis, reprefenting her whole Life, from her Nativity to the End of her Goverment, the Work of the excellent Paul Reuben, who, they fay, beftow'd two whole Years upon it; her Meeting with Henry IV, juft before Marriage, he all in Armour, and the dreffed with all imaginable Advantage, and the moft beautiful and amorous Looks in the World, is a moft exquifite Piece: The fame Dutchefs has moft of her other Apartments curiouny furnifh'd with the choiceft Italian Pictures, among thefe the wandring David, by the Hand of Guido Reni, is moft excellent. The Gardens are fuitable to the Magnificence of the Palace, and ópen for publick Walks.

The Obfervatory, built by the prefent King for Aftronomical Obfervations, is a vaulted Fabrick, without either Wood or Iron-work, three Stories high; befides which, you defcend by two hundred Steps into a Cave with little Alleys, from whence there is a Profpect thro ${ }^{9}$ the very Top of the Houfe to the Sky, in Order to obferve the Motions of the Stars by Day; but this Contrivance has not anfwer'd Expectation, no Stars being to be feen there, but the Light only, which they impute to the not paffing of any Stars through the Ze> nith of Paris; but it is fomething ftrange that this Defect fhould not have been forefeen by their Artifts; though otherwife the Building is better contriv'd than ours at Greenteich.
Near it is the Tour de Cbarpente or the Timber Torver, all of Carpenters-work, for the fixing of their Tubes and Telefcopes; M. Cafini is the chief Supervifor of all this Bufinefs, the fame who was Profeffor of Bolognia, and made that famous Meridian Line in one of the Churches of that-City; he has a very good Salary allow'd him by the King, and deferves that Reputation he is in with the Publick, and if poffible a greater.
7. Among the Bridges of Paris there are only three worth taking Notice of; the firf is, the Pont-Royal, or Royal Bridge, 'a ftrong plain Piece of Stone-work, but lately built crofs the Sein to the T"builleries; in 1685 a Silk Bag of Medals was lodg'd in fome of the Mafonry of it, to perpetuate the Memory of their Lewis le Grand; it was included in a Cedar-Box, with a blue Sattin, and the Arms of France upon it: One of thefe Medals was very large, of Copper gilt, befides twelve others of Gold and Silver; one among them had for its Motto, Germania Jervata; another, Jufit Quiefcere: another Rbeno Batavifque unâ fuperatis; and on another is reprefented Jupiler, with this Motto, Vibrata in fuperbos Fulmina, and underneath, Genua emendata. What Vanity!

The fecond is the Pont Noifredame，charg＇d with Houfes fomething like our London Bridye，but not near fo big．The next to this is the Pont Neuf or Nerw－ Bridge，a curious Fabrick，（though not near fo large as that of London）firt begun by King Henry III．but fi－ nifh＇d by his Succeffor Henry IV．whofe Statue on Horfeback ftands upon it much beyond the natural Size； it is a moft excellent Piece of Workmanihip of Yobn of Bologn，an Italian Artift，but defcended from French Parentage；it has feveral Infcriptions about it，relating to fome memorable Actions，and the Batcles of Yury and Arque are reprefented in baffo relievo upon the Pedeftal，on each Angle of which lie four Slaves of maffy Brafs．
8．That noble Monument，erected in the Place of St．Victoire，to the Memory of their prefent King，by the Care（if not at the Coft）of the Duke de la Feuillade， is certainly the moft excellent Piece of Statuary that can be beheld either in Italy or any where elfe，and the French boaft，that it exceeds all that ever were made of this Kind，not excepting even thofe erected to the Greek and Roman Emperors．The King＇s Satue is of maffy Brafs，thirteen Foot high，in his Robes，with a Victory ftanding behind him，of the fame Bulk and Metal，crowning him，poifed with his Foot on a Globe； under his Feet is a three－headed Cerberus，to denote the triple Alliance over which he triumphed，at the Foot whereof you fee thefe Words，Viro Immortali，the laft of which they explain of the Immortality of bis Fame． The whole was caft all at once，and weighs above thirty thoufand Pound．The Pedeftal is twenty two Foot high，which，with that Part of the mafly Mould the Statue ftands on，being three Foot，and the Satue itfelf thirteen，makes this fuperb Piece about thirty eight or near forty Foot high．Upon the Pedeftal reft four Slaves of Brafs，much beyond the natural Large－ nefs，with Bafo relievo＇s of his Battles and Conquetts． It ftands in a very fpacious Square，and to render it the more uniform，they demolifhed many Houfes，and the Duke pull＇d down Pare of his Palace．The Satue it－ felf is enclofed by fately Iron Grates that environ a Floor of Marble ；and a Centinel is always placed near it．The grand Infcription upon it runs thus：

> Ludorico Magno
> Patri Exercituums
> E Ductori
> Semper felici,
> - Domitis bostibus, protectis fociis, Adjectis Imperio fortiflimis populis, Extructis ad Tutelam Finium firmiJfmis Arcibus. Oceano \& Mediterraneo inter fe junctis, predari vetitis loto mari Piratis: Emendatis Legibus. Deletâ Calvinianâ impietate; Compul/is ad Reverentiam Nominis Gentibus remoti ifmis, cunctig; fummâprovidentia, छ乛 virtute domi forifg; compofitis.
> Proncijcus Vicecomes d'Aubufon, Dux de la Fueillade ex Francic Paribus, E Tribunis Equitum unus in Allobrogibus Prorex $\mathcal{G}$ pratorianorum pedituns
> Prafectus.
> Ad memoriam posteritatis Sempiternam.
> P. D. C.

Befides this，there are feveral Verfes，fome for the Sta－ tue，fome relating to the hiftorical Part reprefented in the Baffo relievo＇s；as for Inftance，that relating to the Statue．

Tali de ore ferens，orbi $E^{2}$ Sibi，jura modumq； Dat Lodoix，famamq；affectat vincere faEiis．

There are divers others upon his Paffage of the Rbine，the Peace of Nimegher，the Dutch and the Ger－ sions，but that on the Genoefe for Haughtinefs exceeds all the reft．

Vane Ligur，frustraq；animis elate fuperbis；
Fufitiam monitus dijce， $\mathcal{F}$ non temnere Divos．

The Triumpobal Arcb was，at the Time of my being there，not brought quite to Perfection；but if you will believe the French，it is to eẍceed all of that Nature in Europe，whether ancient or modern：It is true，the Defign promifes fomething very noble；the Models confift of two Faces of an extraordinary Height，with three Portals，after the Manner both of the ancient and modern Romans；the Orders of the Columns are finely defigned，and the Captives and Trophies moft exqui－ fitely done，by the famous Perault，who tranflated Vi－ truvius．The King＇s Statue on Horfeback is defigned to be placed on this Arch．
9．The other Gates of the Town（as many Trium－ phal Arcbes）are all proud Pieces of Architecture ；that of St．Dennis（which leads to the Place of the fame Name）is above feventy Foot high，and as many over， adorn＇d with Columns，Baffo relievo＇s，and Trophies， with fome Infcriptions relating to the Paffing of the French over the Rbine，and their taking of Maefricbt． The Gate of St．Martin is fifty Foor high，and as many wide，having on each Side an Infcription relating to this Kingss Actions．The third Gate is that of S $\mathrm{C}_{\text {。 }}$ Antbony，erected in King Henry the Second＇s Time，buit new embellithed by the City，with fome Infcriptions likewife relating to the prefent King．The Frenco boaft，that Cajar makes Mention of this City，and that he laid Siege to it，being then enclofed betwixt the two Branches of the Sein，the fame that is now called the 1／he．Some of their Hiftorians add，that Ceflar，after the Conqueft of Goul，had his Head－Quarters here，and built feveral Caftles on the Sein．They all agree in that Point，that the Name of Lutetio was given it by the Romans，from its Situation in a moilt dirty Soil，be－ twixt the two Branches of the River ；the modern Name of Paris，being deduced from Paris，one of the Kings of the Gauls．

This City is much more gay and fplendid in outward Appearance than wealthy within，nothing being more frequent than to meet with B ：ggars that appear in H a－ bit like Gentlemen．It has few or no Pumps，moft of their Waters being preferved in Cifterns．I took par－ ticular Notice here of two Medals that went about at that Time，made in Spleen to Pope Innocent XI；one reprefented our Sir Edmund－bury Godfrey ftrangling，with this Motto，Juflu Pontificis；the other had his Holi－ nefs＇s Head or Buft on one Side，and an Altar，Pix and Chalice turn＇d topfy－turvy on the other，with this In－ fcription，Ponlifcis quis credat opus？Another I met with at the fame Time no lefs odd than the two former， having the King＇s Buft on one Side，and a broken Co－ lumn on the Reverfe，on the upper Part whereof hung a Scroll of Parchment with thefe Words written upon it，Edictum Nancii rever fum．

10．Mezeray fays，that Paris was firt paved and walled under the Reign of King Pbilip II．firnam＇d the Auguf；；and near it the French King has many Palaces， where he refides at Pleafure ：That called Fountainblean， feated in the Ine of France among Woods，is of an irregular Structure ；but its convenient Situation for Hunting makes the Court frequently retire thither in the Summer－time．Its Fountains and Canals are very good，and it has one noble fpacious Hall，the reft of the Apartments being neither large nor magnificent enough for a Royal Palace，though fome very good Paintings are to be feen in them；in the Queen＇s Gal－ lery the Conquefts of Henry IV．are excellently well done in Freforo and in the Gallery de Cerfs underneath this，you fee all the Royal Palaces of France，with Land－ kkips of the Country round them curioully painted；not to mention the Paintings in the King＇s and Queen＇s Ca－ binets．The Chapel Royal is alfo a very good Fabrick and well adorn＇d．
In their Play houfe is to be feen a curious Marble Chimney－piece，reprefenting the Battle of Ivry fought by King Henry IV．The Gardens are beautified alfo with Statues；and formerly a good Library belonged to it，fince removed to Paris．The moft noted Apart－ ment in this Palace，is what they call the Salle de Con－ feil，famous for the Conference occafioned by M．dus Pleflis＇s Book againft the Marfs，in which the celebrated

M．Perron
M. Perron (afterwards Cardinal) pretending to fhew at leaft five hundred falfe Quotations, a Conference was appointed to be held in this Room on May 14, 1600 , in the Prefence of King Henry IV. the Prefident de Tbou, and the famous IJaac Cafaubon; the firft for the Romanifs, and the laft for the Proteftants: The firt Day was fpent in examining only nine, and each Party challenging the Victory, the Conferences were difcontinued; Du Pleffis afterwards publifhing a Treatife upon thefe Debates, the fame was anfwered by Perron.

The Palace of St. Germain, feated on a rifing Ground near the River Sein, about tour or five Hours from $P a$ ris, and one from Verfailles, is built in the Nature of a Caftle, furrounded with a dry Ditch; a noble Stone Gallery runs round the Middle of the whole Structure, which is of an oval Figure: The Covering of this Pile is of flat Free-ftone, each Stone being three Foot long, two broad, and three Inches thick : On one Side of the Garden is a moft delicious Terras-walk, with the River running under it, 3350 Paces long; and on the other Side it is flank'd by a moft delightful Wood. I found hereabouts the wild Genifa Hipanica, or Spartunn Hijp. Cluf. Cbab. or the Spanifb Broom, and the Onobrycbis Spicata, commonly call'd by us Saintfoin, brought from France firt, where it grows wild. In the Garden I obferv'd, among other curious Plants, the Agrifol. Odoratum, a fmooth Holly with fweet-fcented Flowers.

The Cbateau Neuf was built by Henry IV, upon the Brow of the Hill near the other, its Gardens defcending by Degrees down to the River; here are to be feen the noble Ruins of Grotto's, Cafcades, and Waterveorks. About an Hour from hence is Marli, a moft delightful Sum-mer-fear, built by the prefent King (rather gay than magnificent) at the Head of a Canal, with feveral Houfes along the Side of the Water for the Courtiers; they were then bufy in cutting a Way to it through an adjacent Wood. Near this Palace, on the Sein, is that fo much celebrated Watervoork of Marli, by which the Current of the River is, by the Help of an Engine-mill built upon it, forced over two or three vaft Hills, by Iron Pipes of half a Foot Diameter, jointed into one anocher, and feveral laid by the Side of one another, every Stroke of the Mill throwing a vaft Quantity of Water into the Bafons on the Hill, which from thefe Bafons is convey'd by fuch anocher Mill higher, over all the Eminencies, when gathering into a fmall Lake, the fame by Aquaducts furnifhes with fufficient Quantity of Water both Marli and Verfailles.
11. Verfailles, the moft beautiful Palace in Europe, is feated in a dirty defart Ground; that Side which faces the Scables is not fuitable in Magnificence to the reft, as that which fronts the Garden furpaffes all that can be imagin'd fumptuous; its Roof glittering with Gold, affords a glorious Profpeet at a Diftance; and the Garden for Statues, Canals, Groves, Grotto's, Fountains, Waterwoorks, or what elfe may be thought delightful, far furpaffes any Thing to be feen of this kind in Italy; and its Riches and Beaury within are altogether anfwerable to its Outfide. The Royal Cabinet for Medals, Coins, Painting, and fuchlike Curiofities, has the Choice of all Iialy could afford. The King's Lodgings are enrich'd with Utenfils of mafly Plate, even to the Bedfteds, Balufters and Rails: The Gallery towards the Side of the Garden is the nobleft that ever I beheld in my Life, for its moft delicious Profpect, Statues and Looking glafles plac'd between the Pannels. The modern Paintings in this Palace are for the moft part of Mignard, Poufin and le Brun, among which the Battles of Alexander are highly efteem'd. At one End of the Garden is the Place where they breed all the foreign Beafts and Birds the Eaft and Weft-Indies afford: And what they call the Trianon is a cool Retreating-Place for the King after his Walks, fuitable in all Refpects to the reft.
About two Leagues thence M. Louvois, the late prime Minifter, had erected a noble Palace with vaft Coft, the Ground rifing into a pleafant Terras, with fine Gardens behind it. Near Paris there is another of the King's Houfes, call'd Madrid, both unfurnifh'd and unfinifh'd
they tell you that it was built by King Francis 1, who having promis'd to pay his Ranfom at Madrid, gave it this Name, and carrying the whole Sum thither, paid the Spaniards with this Equivocation inftead of Money.

Hard by it, viz. at Ruel, a fmall Town, ftands a pretty litcle Palace built by Cardinal Ricblieu; it is neither ftately nor magnificent, but has very neat Gardens and curious Waterworks.
About two Leagues from Paris, on the Afcent of the Hill of Sr. Cloud, is another of the King's Houfes where the Duke of Orleans fometimes refides for his Diverfion ; the Gardens are very pleafant, the Galleries very beautifui, and fome of the Paintings very good! It was here that King Henry the IIId was ftabb'd, by one Clement $\hat{t}$ a Monk.
12. In our Tour to Roan, Diep, and the Sea-coafts we paffed through St. Dennis, about a League from Pa ris, famous for the Sepulchres of the French Royal Race, and the Abbey built by King Dagobert, formerly call'd Catullia, but fince dedicated to St. Demnis, the Areopagite, whofe Body lies inter'd here; though the Monks of the Convent of St. Emeran, near Ratisbon in Germany, difpute that Point with them, and pofitively affirm; that they have the whole Body, and thofe of St. Dennis only a Finger. They boaft here of the Sepulchres of feveral other Saints, as of their King St. Lervis, St. Hilary Bifhop of Poiztiers, St. Hypolito one of the fanctified Martyrs of the Tbebcarn Legion, and one of the Innocents murcher'd by Herod's Command. The mof remarkable among the Tombs of the Royal Family are thofe of Francis I. and Lewois XI. Here you fee alfo the Tomb of the Great Marfhal de Turenne, placed by the the King's Order (but at the Charge of his Nephew) in a Marble Chapel built for that Purpofe; he lies at full Length, furrounded with Laurels and Trophies in Relievo, with a Roman Eagle at his Feet retreating as it were back wards, with difplay'd Wings at the Sight of his formidable Enemy: For though this Abbey is chiefly defign'd for the Sepulchres of the Royal Family, yee by the King's Favour, fuch of his Subjects as have fignaliz'd themfelves in his Service are alfo fometimes interred here. There is a Crofs of maffy Gold on the Altar feven Foot high, fet with Diamonds and the bett Pearls, and a Table of Gold, the Altar iffelf being alfo plated over with Silver.
13. From hence we pafs'd on to St. Pontoyfe, an inconfiderable Place, feated upon the River Oyfe, which rifing in Picardy, runs a little below it into the Sein. The Country of Normandy betwixt this Place and Roans is champaign and extremely fertile, efpecially in Apples, of which they make excellent Cyder.

Roan is the Metropolis of Normandy, and one of the Cities of the fecond Rank in France; its Situation is upon the Banks of the River Sein, at the Foot of a Hill, and to the oppofite Bank you pafs by a handfom Bridge of Boats, two hundred and feventy Paces long, which being pav'd, rifes and falls with the Tide; below it you fee the Pillars of an ancient Stone Bridge, beaten down fome Years ago by the Violence of the Current; fomething lower Ships of about two hundred Tun can ride with Safety: Near the River-fide flands a very anciens Caftle with Turrets, now the Refidence of the Governor. Two other Rivers (viz. the Robbee and Reinelle) run alfo through this City, which has two Charches remarkable; the Cathedral, dedicated to our Lady, exceeds in Beauty and Regularity that of Paris; here you fee the Tomb of Yobn Duke of Bedford, Regent of France in King Henry the IVth's Time, but the Monument is not anfwerable to the Grandeur of fo high a Perfon. The Church of St. Toin is alfo a lofty Structure, but chiefly famous for its great Bell. The Streets of Roan are narrow, and their Houfes for the moft part of Wood and Plaiter-work; here it was the Engli/b burnt the Maid of Orleans; this Place was the Rotou magus of the Romans, and the Refidence of the Dukes of Normandy; it is at prefent a Bifhop's See, and was lately a Place of very good Traffick.
From hence we travel'd through a very good Country and bad Road to Diep, a pretty litcle Sea-pors Towns

9 A
the
the Streets whereof are more fpacious and regular than thofe of Roan; they are very ingenious here at working in Ivory. The little Harbour lies betwixt two Cliffs, and the River Arquo runs into it ; anciently it was known by the Names of Fulia bona and Deppa, and then ftrongly fortified; it has ftill a good Caftle and Wall. From Diep we continued our Journey through a little Place called Eu, feated upon the River Breffe, which being the common Boundary on that Side betwixt Norimandy and Picardy, difcharges itfelf into the Sea about a League below it.

Near the River's Mourh we faw on the Cliffs another fmall Town call'd Criel-port, and fo paffing through Francberille, came fafely to Abberille, a poor old Town, meanly built and extremely dirty, in that Part of $P_{i}$ cardy they call Pontbieu. They are noted here for making Guns and Piftols, but they are rather fine than ferviceable. It is feated upon the River Somme, which falls into the Sea near St. Valery, from whence Barks can come up to this City. B fore the French had made themfelves Mafters of the Province of Artois, this was a Frontier Town of a confiderable Strength, and inacceffible in fome Parts, being almoft furrounded by the Fenns. It is alfo a Bifhop's See.

From hence we travel'd by the Way of Heddin to Calais, from whence we could difcover the chalky Cliffs of Dover; it is of no great Compars, but regularly fortified, and ftrengthened with a good Cittadel; the Town-houfe is but fmall, but the Market-place fpacious. Some Antiquaries would have it to be the fame mention'd by Cafar in his Commentaries, under the Name of Portus Iccius, which fome again explain of Boulogn, others of Doway. The Lots of it by the Engiifl is alledg'd to have been the chief Caufe of our Queen Mary's Death.

## The Doctor's Second Journey.

14. As you travel from Paris, in a Kind of Dutch Treck- Cobuyt along the River Sein, you pafs by Cbarenton, a curious fittle Place, feated on the Banks of the Marn and Sein, and once famous for the Privileges the Proteftants enjoy'd there. Above it is a neat Houfe belonging to Madamoifelle. In the next Place is Corbeil, of no great Confequence, the Caftrum Corbolium of the Latins, call'd by Cafar Fofedum or Metrofedum on the Sein, where its Waters are mix'd with thofe of the Fuin or the Eflampes.

Higher up, on the River, you fee another little Place, abour four or five Leagues from Corbeil, call'd Melun, (the Melodunum of the ancient Romans) which gives Title to the Vifoounts of a very ancient Family. Here the River Sein dividing into two Branches, makes a little Illand, which you pafs by two good Bridges. The Barge, which carries you from Fountainbleau down the River to Paris, being drawn by three or four Horfes, runs in ten or twelve Hours, fixteen of their Leagues, or about forty eight Engli/h Miles. In the Woods thereabouts I took Notice of the Milyfopbillum, Orobanche, Rapum Genifte, Ger. Park. Cariopbillum olens, C. B. our Broom-rape, Polygonatum, Latifol. vulg. C. B. the Solomon's Seal, befides all Sorts of Spurges of the Efula and Tytbimalus kind.

The next Place we came to from Fountainbleau was Nemours, having nothing remarkable, except that it gave Title to the ancient Dukes of that Name. Near it is the Abbey of Surcafon, of the Order of St. Bernard. Here we oblerved the Women of the Town (even fuch as were in very good Habit) to come to the Inns to collest Alms from Travellers for the Poor.

From hence we travel'd on to Montargis, an old walled Town, but of no great Note, except that being Part of the Demefnes belonging to the Crown; it gives Title to the King's Brother, who is Duke of Orleans and Montargis ; it has, however, a very ancient Church with curious Pillars, and an antique Caftle built in the Midft of Ruins : The prefent King's only Brother has laid the Foundation of a Church here; but it remains unfinifhed, there being nothing compleated but a fmall Portico, in which, on a black Tablet of Marble, is a French Infcription with Golden Letters, incimating, that
he laid the firft Stone of this Church in 1677, in Me mory of his Victories obtain'd in the Battles of Montcafel, St. Omer and Buchar.

From Montargis we continued our Journey to Briare, whither Cardinal Ricklieu caufed a Canal to be brought from Blefneau, a Tract of twenty Miles, and thereb made a Communication betwixt the Loing (which falls into the Sein) and the River Loir, fo that by the Help of Sluices, Boats can pafs through all three; the Banks of the Loir lying all along on the Flats, as you fee near the Sea-fhore, make it a very pleafant River. Near it we found the Cariopbillus marinus, Ger. Hob. Funcus C. B. or the Sea-Gilliflower, which is rarely found in Inland Countries, but commonly in Salt Marfhes near the Sea-fide.
15. From hence we pafs'd through Cofne, a little Place noted for the making of Knives, and fome Mills for polifhing Iron and Steel, and fo in Sight of la Cbarite, an inconfiderable Place, to Nevers, feat ed near the Conflux of the Loir and the Nibatre, the Capital of the Territory of Nivernios, though the Houfes are but meanly built, reprefenting more of Antiquity than Beauty. It is a Bifhop's See, Suffragan to that of Sens, and gives Title to the Dukes of Nevers, (now in the Family of Cardinal Mazarin) Cafar mentions it under the Name of Nipernum or Noviodunum.

The next Place we came to was Moulins, near which are the fo much celebrated Waters of Bourbon, even in the Time of the Romans; they are of the Nature of our Batbs and thofe of Aix la Cbapelle, compofed of a bitumenous Subftance, impregnated with an Alcalifate Salt which being mix'd with an Acid, caufes a Fermentation and produces the fame Effect on Syrup of Violets as the Salt of Tartar, turning it green. Of late they have been much ufed inwardly againft the Gout and other nervous Diftempers. The above-mentioned Town of Moulins is of no great Extent, though once the Refidence of the Family of Bourbon, who built a handiome Caftle here ; the Inhabitants are reputed excellent Workmen in Steel and Iron, Knives and Sciffars, $\mathcal{E}^{\circ} c$.

Among their Churches and Convents (of which they have feveral) thofe of the Cartbufians and of the Vifitation are moft remarkable, the laft containing the Monument of the Great Duke of Montmorency, who was facrificed to the Power of the Cardinal Ricblieu. The whole Chapel confifts only of a fmall Cupola to cover him ; his Canopy and Armour is fupported by Angels, with his own Effigies and that of his difconfolate Lady lying by him, in an elevated Tomb, with the Statues of Pallas, Hercules, Cbarity and Religion, all of the choiceft Marble, much beyond heir natural Grandeur, with this Infcription to his Memory

Henrico 11. Montmorenciaei Ducum ultimo, optimo EJ maximo, Francice Pari, Tbalaffiarcho, Polemarco, Terrori bofium, Amori fuorum.

Maria felix Urfina, ex Romana Stirpe Conjux unica, cui ex immenfis viri Divitiis, una amor viventis, E' defuncti Cineres, fceliciflimo poft exactos Conjugis An nos XVIII. Marito incomparabili, de quo dolere nibil unquam poterat, nifi mortem bene merenti pofuit. Ann Sal. MIכLII. Sui luclus XX.

It is remarkable, that they were forced to behead him in the Town-houle for Fear of the Populace, whofe Darling he was; his Dutchefs was fo highly afflicted at his Death, that fhe forfook the World and retired into this Monaftery, where the ended her Days in Tears for the Lofs of a Husband the loved more than her own Life. I was credibly inform'd, by a Perfon who was well acquainted in that Family, that her Fondnefs to the Duke was fuch, that the would not ftick to affift him in his Amours.

We had hitherto travel'd for the moft part through fertile Plains; but coming near to St. Sopborin and Brefle, two fmall Placés, we pafs'd through Mountains cover'd with Pines and Firrs, which afforded great Variety of Plants: Thofe I took Notice of en paffent were, the Polygala Lutea, call'd by Cbabre. Polygala vulg. maj.

## Chap. IV.

fol. angufiffrmus, a kind of Milk-wort ; the Melifopbillum or wild Baum; the Bellis Carulca Monspel, though growing alfo in other Parts of France; blue Dafies. In the Woods we obferved the feveral Species of Orcbis, Spurges of all Kinds, but efpecially the Titbymalus Cuprificus.
16. From Brelle we foon came to Lyons, the largelt City of France next to Paris, feated at the Confluence of the Soan and the Rbofne; the laft runs here with a fwift Current, and over the firft they keep a Chain of Boats link'd together, to prevent Barks from paffing by without paying Cuftom. Its Situation was anciently, as well as now, at the Conflux of thefe two Rivers, as appears from a Paffage in Seneca; and that its Name was Lugdunum among the Romans, is evident from the following Infeription found at Gaeta in Italy.
L. Minutius 2 L. Fil. L. N. L. pro N. Plancus
Caff. Cenf. Imper. iter VII. Vir Epulon:

Triumph. ex Rhetis cedem Saturni fecit de manubiis agros divifft in Italia Beneveriti, in Gallia colonias deduxit. LUGDUNUM E Rauracum.

Part of the City is built on the Hills of Tornir and St. Sebaftian, the reft along the Banks of the Rivers; the Market-place is handfome, and the Town-houfe (lately built) a fine Structure. In the Carmelites Church is an Altar of Agate and Lapis Lazwi; the Capucbins have all the pretended Miracles of their Saint painted on the Walls of the Cloytter; among which you fee one where he pays his Apothecary with Prayers inftead of Money.

The Church of St. Foon is their Cathedral, the Chapter compofed of Gentlemen of the beft Families, and formerly boafted of having had therein feveral Kings and Princes: They compute, that in the thirteenth Century they had, at the fame Time, one Son of an Emperor, nine Sons of Kings, fourteen Dukes Sons, thirty of Counts, and twenty of Barons; there belong no lefs than three Churches to this Chapter, viz. that of St. Fobn before-mentioned, of St. Stepben, and of the Holy Crofs; in the firft is to be feen the Clock fo much celebrated for the Variety of its Motions and Mechanifm. The Huguenots, during the CivilWars, knock'd down many of the Heads of the Saints that were placed to adorn the Front of this Church. Their Theatres and Opera's are not inferior here to thofe of Paris; and the Fefuits College upon the Rbofne is the fineft Structure in the whole City, being a regular Quadrangle curiounly painted in Frefco, which is fomewhat defaced on the Eaft Side, where the Weft Winds from the Mountains bear upon it : I found them to perform their publick Exercifes much after the fame Manner as they do at $P a$ ris. Their Chapel has a fine Altar-piece of Lapis Lazuli, and an excellent Piece of Painting by Blanchard, who died while we were there. The Apartment for their Library is fpacious and handfome, but the Books not extraordinary, and at that Time were all diforder'd, by reafon of a late Fire that broke out in the College ; they have, however, fome Manufcripts of the Bible, but not very old; and Pliny's Natural Hiftory and Decades finely printed on Vellum about two hundred Years ago, all the capital Letters in Miniature, gilt and embelifhed as we fee the old Mafs-books. The moft valuable Piece of the whole Library is a Manufcript of the fame Author's Natural Hiftory, four or five hundred Years old; many obfolete Words, fuch as illod, jocondifSimo, \&c. demonftrate it to be a Piece of a confiderable
Antiquity. Antiquity.
The Abbey of Daifne, juft without the Town, is an ancient Piece of Architecture, with very good Mofuick Work, the Picture of God the Father (excellently done) being almoft defaced by Age. This Abbey is the fame Place where Caligula had erected his Atbencum for the Improvement of the Greek and Latin Tongues, (mentioned by Suetonius) Rewards and Punifhments being
propofed to fuch as did either well or ill ; to this 7 propofed to fuch as did either well or ill; to this $7 u$ -
venal alludes,

Palleat ut nudis preflit qui calcious anguem,
Aut Lugdunenfem Rhetor dicturiis ad aram.
Here they fhew you the fo much celebrated Buckper of Scipio, which, upon due Enquiry, is fo far from being his Buckler, that it is racher a Bafin or Difh well gilt and embofs'd; for, according to the ancient Form of Armoury, it is too unweildy, and its Concavity within no Way adapted to the Bending of the Arm and covering the Body. Add to this, that all Bucklers both ancient and modern, have their Ornaments of Painting or Gilding on the Outfide, and not within the Concavity ; and I remember, that talking with M. Patin, a great Antiquary of Padua, upon this Subjeet, he was of the fame Opinion; it being crack'd, it was cramp'd on the Back with fmall Iron Bars. They have here a more authentick Piece of Antiquity, I mean the Speech of Claudius, who was born here ; it is to be feen in the Front-walk of the Town-houfe, and the Word illod for illud, and the old Romin Punctation betwixt evefy Word, fufficiently fhews its Antiquity. They have alfo fome Obelifks, but not fo ancient as thofe at Rome; that near the Facobins Church is infcribed $O$ WD.

Their Sc. Peter's Nunnery is a fine Foundation, and the parochial Church of St. Niege, adorn'd with feveral fine Pieces of Painting by le Erun.
17. The Prifon of the City is built upon a Rock, unto whi h they have cut out a Way with vatt Charge and Difficulty; but it is probable that this was rather done to make a Way into the Town by the Waterfide, it extending, perhaps, before out into the River, which now runs juft by she Street that lies under the Rock. This Place being feated on the Confines of Italy, was one of the beft Magaziries of the Romans in Gaul; fome of the greateft Men of Rome have honour'd it either by their Birth or Abode, befices the Emperors Claudius, Germanicus, Geta, Caracalia; and here are ftill to be feen fome Remnants of the Roman Antiquities, of their Baths, Aquaducts, and Part of an Amphitheatre. At prefent the King's Treafury for that Part of France is kept here, and another called the Court of Commerce. Two General Councils have been held ar Lyons in 1245, under Innocent IV. and in 1274, by Gregory XI ; befides which, they had feveral Synods here long before, as that affembled by St. Irenceus in 197, and another in the Time of Sr. Cyprian, under Fauftinus B:fhop of Lyons; it was upon this Occafion St. Cyprian writ that Letter to the Pope, which begins thus, Fouftinus Collega nofter Lugduni confitens, \&c. In my Walks about the Carmelites Church-walls 1 obferved the Fumaria major fcandens, the large Fumitory; the Muscatellina fol. fumarice bulbo $\int_{6 e}$ J. B. or the Radix cavia minima, Ger. the Mufkrood Crowefoot; Bellis major, the Enneaphyllon of Pliny, or the great bastard Hellebore; the Hypericum vulg. C. B. St. Fobn's Wort. About the City grows alfo the Ancbufa Lutea, a Kind of baftard Gromel with a yellow Flower.

I was not a little furprized to fee fo fruitful a Soil as all the Country betwixt Lyons and Savoy (called Daupbiny) almoft deftitute of Inhabitants, though well. enough cultivated in many Places; but upon Enquiry found, that this Part of the Country being allotted for Winter-quarters to the French Horfe, the Peafants ufed to come thither only in the Spring, to fow the Seed, and in the Summer to reap the Product thereof, and fo retire into other Parts. This fertile Tract of Dauphiny brought us to the utmoft Borders of France on that Side, viz. Pontebeauvofin, an obfcure Place feated upon an inconfiderable River called Gyer, which, however, is the common Boundary here betwixt France and Savoy. The chiefeft Plants of Note I obferved in Dauspbiny were, the Valeriana rubr. anguifol C. B. the nar-row-leaf'd red Valerian; the Radix Rodia or Roferwort, in great Plenty; Linaria fol. Bellidis J. B. a Kind of Toad-flax with a Daify Flower; Imperatoria vulg. or the common Maftervort; Parietaria cerulea quedam, a Sort of blue Pellitory; the Cataname fol. Cyani Delech. $A$. Coronop. J. B. which Cbabreus would have the Sijamoidis minus Matth. a certain Grafs with the Leaves of the Blubottles and Flowers of the Buckiborn Plantain.

We were no fooner pals'd the Bridge of Pontbeavoifin, but we were fenfible of the Difference of the Country; for whereas we had left behind us the fertile Plains of Daupbiny, the other Side of the Banks of the fame River reprefented to our View the frighful Alps, the Precipices whereof would have been more dreadful to us, had not the many Vineyards we found on the firft Afcent taken off a great Part of the Horror we had conceiv'd at the firft Sight of them.

As you afcend the firf Rocks, you fee and hear the Cataracts of the River Guyre among the Precipices, over which you ride by a Way cut out and fupported by Art: Along this terrible Road I found among the wild Hedges the Oxyacantba, the Privet, Ligufrum \& Vaccinia nigra. From this narrow Paffage you proceed further into the Alps, where the Duke of Savoy has made a Road thro' the Middle of the Rock, near which is erected a Stone with this Latin Infcription:

## Carolus Emanuel II.

## Subaudice Dux. Pedem. Princeps. Cypri Rex. Publicâ

 felicitate partâ ingulorum commodis attentus, breviorem fecurioremque viam Regiam, à natura occlufam, Ronanis intentatam, cateris defperatam, dejectis foopulorum Repagulis, equatâ montium iniquitate, que Cervicibus imminebant, precipitia pedibus fubfternens, aternis populorum Commerciis patefecit. Anno Domini, 1670.About half-way betwixt this noted Paflage and Cbambery you fee a delightful Fall of Water from one of the higheft Rocks, which being continued afterwards by three or four more gradual Falls joining into a Current, and from a valt Height fpreading iffelf among the craggy Precipices, produces here a natural, but more pleafant Cafcade than all the Art and Expences of Verfailles are able to afford.
From hence we proceeded to Cbambery through a Sort of a Valley, (in refpect of the other Mountains) a Town not fo confiderable at prefent as in former Ages, when it could boaft the Refidence of the Dukes of Savoy, but now has nothing to fhew but old Houfes and Walls, and a ruin'd Ditch about them; it is the Cameriacum of the Latins, and ftill the Capital of the Dutchy of Savoy, where there Parliament is conven'd, and the Chamber of Accounts kept: Its Situation is on the little River Orban, in a Sort of a Valley furrounded with Mountains; the Churches and Convents, the Town-houfe, Mar-ket-place, and a great Number of Fountains, make fome tolerable Show. Here we firft obferv'd what we afterwards found common over all Italy, the Houfes built fo as to jet out into the Streets, and fupported by Pillars, which form a Sort of Alley or Cloyfter, under which you may pafs fecure from Rain and the Heat of the Sun. The Mall without the Town is handfome. Another fuch Plain brought us to Montmelian, a Place of great Strengh both by Nature and Art, in Savoy, feated on a high Rock at fuch a convenient Diftance from the adjacent Mountains, that though they overlook it, they don't command it ; the River Hero runs by the Town that bears the fame Name with the Caftle, with an impetuous Current, and joining with the Arche, another rapid River made by the melted Snow, falls into the Rbofne at Arbigny, a little Place above Montmelian, as the Ifere does at Grenoble, the Acceffion of thefe rapid Rivers being the true Occafion of the impetuous Courle of that River. This Fortrefs is the Key of the Mountains on this Side, as Sufa is on the other ; but notwithftanding its Strength, it was taken by the French in I691, and is now demolifhed.
The Country hereabouts being all mountainous, hath a very indifferent Profpect, except fome few Valleys, which feem to promife fomething of Fertility; and the People looking as meagre and dejected as the Soil is barren, they feem to be made for one another, and adapted to that Slavery they are forced to fuffer from their Prince, who has model'd his Government after that of France.
We had farce pals'd the River Ifere at Monturelian,
but we came into a Valley much more pleafant than any we had yet met with in Savoy, and continuing our Way towards Argentier, we met the roaring River Arche, which at that Time (it being Midfummer) was fo fwelled by the melted Snow from the Mountains, that we were forced to leave the ordinary Road near the Waterfide, and, inftead thereof, climb up a dreadful Precipice, call'd by them Mount Greny or Grezy, as high if not higher than Mount Cenis itfelf. On the middle Region of this Mountain you fee a few fmall Farm-houfes, there being thereabouts fome cultivated Ground, which you can perceive below, but when you come to it, you find another Mountain rifing upon the former, like $P_{e}$. lion upon Ofla: The Froth and Sediments which are by the Impetuofity of the River Arche forc'd down from the Mountains, make its Waters appear in the Valley as black as Pitch, almoft like the Wafhes of Dyehoufes.
We kept however along the Current of this River for fome time through Argentier, Efperies, and la Cbambrey, inconfiderable Places, and we no fooner left the laft, but we were forced to climb up the Mount, by Reafon of the Inundation of the River Arche, the Defcent whereof brought us to. St. Fobn Morienne, once the chief City of the Madulli, and an Archbilhop's See, which gave the Title of Earls of Morienne to the Dukes of Savoy. From hence we went on to St. Micbael, a low watery Place: On the Top of the Mountain I obferv'd as well as I could the Mentba Cattaria montana, Valeriana Alpin. Latifol. Valerian. Alpina Anguffifol. the Caryopbill. Alpin. minimus; the fmall Mountain Pink of the Alps; afterwards I found it in great Plenty on another Hill. St. Micbael was formerly a Convent, but now only a Village, near the Banks of the River Arcbe, which they pals over hereabouts by Bridges of Timber made of the Trunks of young Fir and Pines, laid athwart, which being round and ill joyn'd, tremble under your Feet as you pafs them.
The next Place we came to was St. Andre, an inconfiderable Town feated among the Mountains; juft over againft it is fuch another Cafcade or high Waterfall, but not altogether fo diverting as that near Cbambery. The Current of this River, render'd impetuous by various Waterfalls, is almoft like the Torrents of our Millpools, but more foul and furious. I took Notice hereabouts of the Abfintb. Latifol. Ponticum or Rom. and the Abjnth. tenuifol. minus, which fome would have to be Abfintb. Communue minus of Gefner and Gerard. Above St. Andre the River Arche is, at a Place call’d Termignon, augmented by a Channel of Water coming from another Part of the Mountains, which brought us to Lafnebourgb or Lanfebourgh, a Place that has nothing remarkable, except its Situation at the Foot of Mount Cenis: Here croffing the River Arcbe, we took our Leave of it, which rifes about two Leagues above this Place with a pure but fmall Source, and affords in the Neighbourhood as well tafted Trouts as our beft Rivers. We were now come to the Paffage of Mount Cenis, (the Cinijoum of the Ancients) which we perform'd by the Help of Mules we were furnifhed with at Lafinebourg. This Mount exceeds in Height thofe of St. Goddard and Sampion, by which you enter Italy from Swoitzerland: Mount Cenis being in fome Places cover'd with Pine and Fir-trees from the Top to the Bottom, afcending regularly one above another with the gradual Rifing of the Mountain, affords the moft natural Grove that can either be devifed by Art or expreffed by the Pencil. About May thefe Mountains open the vaft Storehoufes of Snow, which melting by Degrees till O8tober, (when they begin to harden again) make the Rivers fwell hereabouts in the Heat of the Summer, when the Sources of moft other Rivers are very near exhaufted.
The Paffage of Mount Cenis, notwithftanding its Height, is not very unpleafant; the Precipices being not perperpendicular, gave our Eyes Liberty to look about with lefs Trouble, and the Slownefs of our Cattle (which made me walk on Foot) allow'd me fufficient Opportunity to expatiate a little Way out of the Road, and to take Notice of a great many Plants; but hav-
ing loft the Collection at Sea, I can only give fuch as I accidentally remembered and fince fet down, viz. the Caryoph. Alpin.minor in prodigious Quanticies; the German. Columbinum, and what is more remarkable, the Geran. Argent. Alpinumn ; the Cranes-bill; the Hyacinth. Caruleus Ger. or Racemofus carul. minor, C. B. Funcifol. toward the Bottom out of Flower ; Calceolus Maria, ad Ger. Elleborine major. Park. ftell. for. rotund. C. B. About the Bottom, Helleborine for. alb. C. B. or Damafonium Alpinum J. B. the little, wild, white Hellebore; Iris fl. albo ; the great white-Hower'd Iris, or Flower de Luce wild; the Herba Paraly/s or Paralytica Alpina, out of Flower; the Caryopbillat. Montan. or Caryopbillat. Alpin. Lutea; Cafp. B. yellow Mountain; Avens, flos Caryopbill. Alpinus pumilio dictus; the litele Dwarf-mountain Pink, or rather a Lycbnis, agreeing with the Defrription of Ger. who from its Calix calls it of the Lycbris Kind ; Sedum Alpinum, Exigui fol. C. B. Sedum Alpin. minim. for. carneo, Schol. Botan. Helleborus niger, Lob; verus Park. Ger. $f$ l. Albo \& Atro rubente ; the black Hellebore, Gentian. maj. f. lut. \&c.
I took this Opportunity to make a frict Examination of the Snow, as it lay incruttated in hard Cakes on the very Top of the Mountains; fome of thefe are fuch as have lain there for feveral Years, the Sunbean3s not being able to diffolve them quite, by reafon of their vaft Thickness.

In the Midit of the Top of Mount Cenis, near the Road, (which is flank'd by orher higher Rocks) you fee a pretty large Lake gather'd, quettionlefs, by the melted Snows, as the Coldnefs of the Water feems to tellify; in the Midft of it the Duke has a handfome Houfe, and another juft by the Road ; one for Devotion (of which the Priefts take Care) and the other for his Diverfion, which lies almoft in Ruins by Neglect. Here it is you take Carriages to defcend the Mountain, being only wooden Chairs carried by two Poles: By this Carriage you are convey'd down the rocky Precipices, which are however not fo dangerous or dreadfiul as fome have reprefented them; for though yourr Horfes are led about a further Way, you may defcend, for the moft part, without much Difficulty on Foot, which I chofe rather to do, than be jolted in thefe uneafy Chairs. Here is alfo a little Horpital for fuch as fall fick by the Way, and a fmall Chapel to bury fuch as periih in the Snow, from thence called the Tranfit. The Plain on the Top of this Mountain (which is about four Miles long) has alfo an Inn for the accommodating Paffengers, fuitable to the Circumftances of the Place: The Afcent is accounted four Miles, but the Defcent no more than two. Novalefe has not any Thing remarkable, except its being the utmoit Frontier of Savoy near the River Semar, which joins its Waters with the Doria at $\mathcal{S u f a}$, where begins the Principality of Piedmont.
18. Though the Frencb live under the moft difpotick Government in Europe, yet are they fo fond of it, that they laugh at other Governments, which do not come up to that abfolute Power, of which they frame themfelves fuch plearant Imaginations, that in the Midft of their Slavery they find out an Oligarchy in their Council of State, an Arijfocracy in their Parliaments, and a Democracy in their City Governments, adminiftred by Provoits, Mayors and Merchants, and thereby would introduce into the World the moft perfect Mixture of a Commonwealth; when, to fpeak truly, all thefe different Qualifications make up but one entire Chain of Slavery. They boaft of the Policy of France as loudly as of their Conquefts; and it muft be confers'd, that in their Military Affairs they follow, in many Things, the Footfleps of the ancient Romans, but want their Honefty and true Generofity. The Body of the People is compofed of the Nobility, Husbandmen, Artificers and Traders; the Peafants, being condemned to perpetual Drudgery, furnifh the Field with Labourers and Soldiers, for when they are fuck'd to the very Marrow by the Gentry and Tax-gatherers, they muft either chufe to ftarve at Home, or feek for a Livelihood (fuch an one as it is) in the King's Armies. Arcificers and Traders are much encouraged in France, being the Court-

Sponges, from whence they fqueeze out what juice they have gather'd before by one Means or other. The King commonly picks out the moft ingenious among them for his own Service, and the reft are employ'd in converting the Products of France into Manufactures exported into Foreign Parts.

The Clergy of France has of late been look'd upon with fomewhat of a jealous Eye by the Laity, both by Reafon of the Encreafe of their Number, and feveral Ecclefiaftical Ufurpations; thefe Encroachments of the Clergy at Home, and the pretended Power from the Popes Abroad, has made them revive our Lord Digby's Diftinction betwixt the Church of Rome and the Coure of Rome, and not to be fo fond of the Fure Divino Doctrine of the Priefthood, but that the Privileges of the Gallican Church, and the Regale, have been made to give Laws to both; witnefs the Synod and the Decrees made there in 1682, againft Pope Innocent XI; the Profeflion of the Proteftant Religion being to be rooted out, fome were for attempting it by mild Ways, which were follow'd at firt, but foon changed for Fire and Sword, as the moft effectual Means, either to make them fly the Kingdom, or to comply with the King's exprefs Commands. This is differently taken among the French, according as they are more or lefs devoted to that unchriftian Doctrine of the Extirpation of Herefy.
19. The Remarks of this Gentleman are fuch as might be expected from one of his Education and Profeffion; and as he doth not feem to be prepoffeffed in Favour of the French, fo there appear on the other Hand no Signs of Prejudice againft them. This may be jufly efteemed a peculiar and a confiderable Advantage to his Writings, for, generally fpeaking, moft of our Travellers take one or other of thefe Turns. If they are Men of Vivacity, they grow fond of French Cufloms, and of Frencb Notions, receive for Gofpel. every Thing that they are told, magnifying in their Relations both the Country and its Inhabitants, and labour to perfuade fuch as read their Writings, that France is the fineft Part of Europe; and the French Nation our of all Comparifon the moft powerful People in it. Such again as embrace oppofite Sentiments, run with equal Violence into the other Extream; they find nothing lovely in the Place, and exclaim perpetually at the Slavery, the Poverty, and the Vanity of the People. Whoever takes his Notions of France, and the French, as a Nation, from either of thefe Sort of Writers, will be infallibly minled; and as in the prefent Situation of Things efpecially, Mifakes of this kind may be extremely fatal, by tending to infpire an Apprehenfion, that the Power of the moft Chriftian King is irreffifable, and therefore it is to no Purpofe to oppofe; or to create an Opinion that the Power of France is a mere Bugbear, and that at the Bottom; notwithflanding the Noife that is made about it, we have little or nothing to fear. To overturn both thefe Errors, and to give the Reader as near as may be a true Picture of the prefent State of that Kingdom, we will enter into a fhort political Anatomy of it, which, as it could not be expetted from Travellers, fo it may ferve as a Supplement at leaft for fome Time, to whatever has been publifhed of that kind. We have taken a great deal of Pains to become, in fome Meafure, Mafters of this Point, and we fhall report what has been the Refult of our Inquiries as concifely, as correctly, and with as much Candour as is poffible.
It is very certain that in Point of Situation and Extent, the Dominions of the Crown of France are very confiderable, they lie between the forty fecond and the fifty fecond Degrees of North Latitude, in the fixth feventh and eighth Northern Climates; fo that they enjoy a very pleafant and wholfome Air, and generally fpeaking a
rich and fruifful Soil, which by the Way rich and fruitful Soil, which by the Way however is far enough from being improved to the utmoft Advantage. From Weft to Eaft, that is, from Point Conquef in Britany, to the City of Strosburgb in Alface, they reach pretty near fix hundred Miles, and from South to North, that is, from the Frontiers of Roufillon to Dunkirk, they extend upwards of five hundred Miles.

But

But there is another Method of computing, which will prove more fatisfaciory than this to the intelligent Reader. France, according to the exacteft Computation, contains about a twentieth Part of Europe, and is certainly much better peopled than Spain, Italy, Rufia, Sweden or Denmark, but is not near fo populous as Holland, England, or fome Parts of Germany. If we could depend upon the French Accounts, we fhould reckon there are in it twenty Millions of People, but it is very certain that they are apt to ftretch in their Computations, and that according to the eftablifhed Rules of political Arithmetick, we cannot affirm the Number of its Inhabitants to be above fourteen Millions, and, in my own Opinion, even this Calculation is rather too high, confidering that according to their own Reckoning, the Number of Perfons in Religious Houfes, that is to fay, both Men and Women, amount to four hundred Thoufand. As to their Secular Clergy, I never faw any juft Computation, but I think there cannot be much fewer, and if we take in thofe, who from other Confiderations lay themfelves under Obligations of leading fingle Lives, the Number will not fall much fhorr of a Milion, which mult be a prodigious Drawback on their Increafe as a People.

This great Country is divided into thirty fix Governments, of which that of Paris is efteemed the firft, that is to fay, diftinguifhing it, and the Diftrict dependant upon it, from the Ine of France. It is faid to contain fifty one Parifhes, fifty two Monafteries for Men, feventy eight Convents for Women, fixteen Hofpitals, fifty Hotels, five Royal Palaces, fifty Colleges, twelve Suburbs, and fix hundred and fifty fix Streets. 2. The Ine of Franice, which is generally fpeaking a good Country and well inhabited. 3. Picardy, a very fine Province, yielding Plenty of Corn and Fruits; the Capital of which is Amiens. 4. Cbampagne, famous for Corn, Cattle and Wine; its Capital is Troie. 5 . Burgundy, a very large, and very fertile Country, its Capital Dijon. 6. Daupbine, fomewhat mountainous, but generally fpeaking well cultivated, and the Valleys very fruitful; the Capital Grenoble. 7. Provence, which though it cannot boaft of producing much Corn or Grals, it is remarkable for its Wines, Oils, Saffron, and a great Variety of Fruits ; the Capital is Aix. 8. Languedoc, is the largeft and by many accounted the beft Province in the Kingdom, producing great Quantities of Corn, Fruit, and Wine ; the Capital is Toulouze. 9. La Foix, fo called from its Capital, is neither large nor Fruitful. 1o. Bern and the lower Navarre are accounted but one Province; the Capital of the former is Pau, and of the latter St. Fobn Pie de Port. I I. Guiene, is a very fine, and a very rich Province; the Capital of which is Bourdeaux. 12. Saintonge and l'Angoumois make but one Government, tho' it has two Capitals, viz. Saintes and Angoulefeme. I 3. The Country of Aunis is very fmall, but very fertile and well peopled; the Capital is Rochelle. I4. Poitou is a very large Province, about 180 Miles from Weft to Eaft, but not the fineft Country; the Capital is Poiftiers. I5. Britanny is very fertile in Corn and Paftures, has in it many rich Mines, and is well feated for Trade; the Capital is Rennes. i 6. Normandy, which once belong'd to us,' is one of the faireft and fineft of the French Provinces, though it produces no Wines; the Capital is Rouen. 17. Havre de Grace, a very fmall Government, taken out of Normandy purely on-the Score of the important Port which gives a Name to it, and is its Capital. '18. Maine and Percbe; the Capital of the former is Nantz, of the latter Mortagne, paffable Countries both, but nothing extraordinary. 19. Orleanois, famous for its Wines; the Capital is Orleans, which gives the Title of Duke to the fecond Son of France. 20. Nivernois, a very fmall Country feated on the Loire, and confequently both fruitful and pleafant: There are alfo fome Iron Mines in it ; the Capital is Nevers. 21 . Bourbonnois, a good Country, which is alfo full of Wines, and famous alfo for its Baths near the Caftle of Bourbon; the Capital is Moulins. 22. Lionnois, a rich and noble Country; its Capital is the famous City of Lyons, remarkable on many Accounts,
but chiefly for its being the Seat of the Silk Manufac. ture. 23. Auvergne, a large Province, in which are found all the Neceffaries of Life; and the Inhabitants of which are confidered as the beft Farmers in France: the Capital is Clermont. 24. The Limoufin, a barren mountainous Country, the Inhabitants of which how ever are very induftrious; the Capital is Limoge. 25. Marche, a fmall, well watered Country; the Capital of which is Gueret. 26. Berry; it is faid to have the fineft Meadows and Paftures in France ; it produces a great deal of Wool, and therefore moft of the Cloth Manufactures are in this Country. 27. Touraine, commonly called the Garden of France: Few Provinces boaft of better, and none has fo little bad Land; the Capital of it is Tours. 28. Anjou, a very fine well watered Country; the Capital of which is Angiers. 29. The Saumurois, taken out of Anjou, a fmall Country, the Capital of which is Saumur. 30. French Flanders, the richeft and fineft Province belonging to the French Crown; the Capital is Lille. 3I. Dunkirk; this Town and Diftrict makes a Government, ever fince it was fold by us in 1662. 32. Metz and Verdun; the former is fituated at the Conflux of the Seille and the Mofelle, and is now one of the ftrongeft Fortreffes in Europe. Verdun upon the Meufe is large, populous, and well fortified. 33. Toul upon the Mofelle ; this, with the other two Cities before mentioned, are commonly ftiled the three Bifhopricks, and were taken out of Lorrain before the Whole of that Country became a Sacrifice to the French Ambition. 34. Alface, a large, fruitful and rich Country, torn from the Empire with little or no Pretence, and kept, as it was got, by Force; its Capital Strasbourg. 35. Franche Comte, or, as it is commonly called, the County of Burgundy, fruitful in Wine, Corn and Wood ; another Conqueft without Right ; the Capital of which is Bifancon. 36. Roufillon, a mountainous and barren Country, the Capital of which is Perpignan.

Thefe Governments were thus eftablifhed in 1698. by Louis XIV. They have fuffered fome Alteration fince, and are liable to the like Changes from the Will and Pleafure of the King, who may if he pleafes join two of them together, or feparate them if he thinks fit. The Reafon we have mentioned them fo particularly is, that we may fhow how they are governed; and by that Means how much France is changed from what it was, and how effectually the Power of the Crown is eftablifhed. In every Province there is a Governor, who is a Perfon of the firt Rank, and his Poft is generally for Life; but as it is fuppofed that he cannot always attend the Functions of his Office, the King appoints a Lieutenant General if it be a fmall Province, if a large one, two or three, each of which has his particular Diftrict, in which his Power is independant. Befides thefe Lieutenant Generals, there are alfo the King's Lieutenants, who have fmaller Diftricts; and the Governors of Towns are likewife appointed by the Crown, and are independant of the other Officers. In Places that have Citadels, thofe have likewife their Governors independant of the Governor of the Town, and by the Help of thefe Checks it is impoffible for thofe Difturbances to happen, which were fo frequent in every Reign before the lat. Heretofore it was common for the King to grant the Survivorfhip of the Government to the Son or next Relation of the Governor ; but now another Method is taken, for the Father actually refigns to the Son, who has the Title, but the Exercife of the Office is referved to the Father by a Brevet, which gives him likewife the Power of refuming the Title, if his Son dies before him. The Adminiftration of Juftice in the Province is vefted in the Parliament to which it belongs, in which the Governor has a Seat, which however is a mere Point of Honour, and, gives him little or no Power. As this creates a new Diftribution of the Kingdom, with refpect to Parliaments, fo there is alfo a Third in reference to Taxes, by which it is diftinguifhed into Generalities and Elections; and at the Head of thefe are the Intendants. By this Kind of Policy, which was invented by Ricblieu, and perfected by his Succeffors, every Part of the Kingdom is immediately under the

Power

## Chap. IV.

through FRANCE.

Power and Infpection of the Minifters ; and the Princes of the Blood and Great Lords, notwithftanding they have ftill the Title, Authorities and Revenues of Governors, have nothing of that Kind of Power that was fo dangerous in paft Times. But with refpect to their Lordfhips, they have ftill very great Prerogatives; which though they do not render them formidable to the Crown, give them fuch a Power over the common People, that without doubt the Peafants in France are as miferable as any in Europe; and this is the true Secret why their Infantry, notwithftanding all their Difo cipline, is not near fo good as the Englif, the Sroifs, or thofe of fome of the German Princes; for Men born and bred under Oppreffion, have never that true Spirit and Courage that is fo remarkable in Freemen. The Artizans and Manufacturers. are fomewhat better treated, and in the Cities of France they have Immunities and Privileges which at firft Sight bear a near Refemblance to Liberty; yet even thefe give Way upon any Exigence; fo that after all, the King is abfolute Mafter of every Rank of his Subjects, and difpofes, in a great Meafure, both of their Perfons and Properties at his Pleafure, which is the true Reafon why fo many leave their Country, and fettle elfewhere.

We have hitherto ir this Account reprefented Things in general ; and indeed it would require much more Room than we have to fpare to enter into Particulars. It may very well fuffice to fay, that the ruling Maxim of the French Government is to fuftain and to extend the Power of the Crown, to which every Thing mult give Way. The Church, as a State Machine, is managed with greater Addrefs in France, than in any Country in the World. Louis XIV. was a Bigot in his Practice, but not in his Church Politicks; for while he dragoon'd his Hugonot Subjects, out of pious Regard to the Principle of Unity, he countenanced and approved the nice Diftinction between the Roman and the Gallican Church. For by this Contrivance he procured for himfelf, and has left to his Succeffors, two Reins; by which the Ecclefiaftical Machine is governed with Eafe. If the Pope is to be managed, and the Influence of the See of Rome becomes neceffary to the Eldeft Son of the Cburch, then one Rein is pulled, and the Royal Power is exerted in Support of the papal Authority: But if fome ftubborn, long-headed or well-meaning Cardinal is advanced to the fupreme Dignity in the popifh Hierarchy, who has a greater Regard to the Whole than to any Part, and will not employ either his Credit or his Power to ferve the Purpofes of the Gallic Monarch, then he plucks the other Rein, and makes his Holinefs fully fenfible, that without his Affuming the Title, he is truly and effectually Head of the Gallican Church. It muft be confeffed that this Sort of Policy is not without its Inconveniencies, and thofe too that are very evident, and fometimes very troublefome, fuch as continual Heart-burnings and Struggles, vexatious Difturbances, and a kind of perpetual Perfecution, under all which Mifchiefs the Gallican Church has now la boured near thirty Years: But this gives no Pain to the Miniftry ; they look upon it as a neceffary Evil, and raife and fall the Tide of Perfecution as Intereft directs. Thus the greatelt Part of the French Clergy are obliged to conform to the Court Creed, as well as to the Catholick Faith ; and that Part of his Subjects are now moft in the King's Power, which were leaft fo in his Predeceffors; and thofe Men receive their Inftructions from the Cabinet, who, from the Nature of their Office, have the ftrongeft Sort of Influence over the Common People. By this Management alfo the Government draws a large Revenue from the Church, which in former Times was reckoned impracticable. The Tenths, which are annually paid to the King, amount to about Sixty thoufand Pounds ; the Free Gifts, which are now become a ftated and regular Revenue, amount to above two hundred thoufand Pounds a Year, that is, in Time of Peace; for in War the extraordinary Free Gifts bear fome Proportion to the Exigency of the publick Affairs.

The Ecclefiaftical and Civil Government in France was reduced by Degrees pretty near the fame it ftands at prefent under the Reign of Lewis XIII. and the 1 m .
provements only are to be attributed to his Son and Succeffor ; but with refpect to the Military Eftabliffo ment, Lewis XIV. was its original Founder. Before his Time a few Companies of Guards, and the four old Corps as they are ftill called, were all the ftanding Troops of France; neither were they exactly of the fame Nature with the Regiments that are now kept up; though this is not a Place to difcufs the Difference. It is fufficient for us to obferve, that the Prince laft mentioned, finding every Thing at home difpofed accord ing to his good Pleafure, when he took the Ads miniftration into his own Hands, refolved to lay hold of that Opportunity to fecure the boundlefs. Authority, of which he was poffeffed in his own Dominions; and at the fame Time to make himfelf terrible to his Neighbours. It was to this End that he eftablifhed firft, under the Notion of Guards; a very confiderable Force, which is now ftiled the Troops of the Houfehold, and afterwards, as Occafion offered, raifed Regiment after Regiment, both of Horfe and Foot, and kept them in conftant Service. It was by the Help of this Standing Army, that he gained fo many and fo great Advantages over Spain, and the reft of his Neighbours, and annexed feveral conquered Provinces to his Dominions, which at the fame Time afforded him an Opportunity of increafing the Number of thefe regular Troops, and of covering his Frontiers on every Side with Abundance of ftrong Fortrefles. By Degrees other States in Europe found themfelves obliged for their own Defence to raife and maintain regular Troops likewife, which afforded that ambitious Prince a Pretence for augmenting his to as great a Number as was poflible for him to maintain; and his Example in this, as well as in moft other Points, has been exactly followed by his Succeffor. So that immediately before the Breaking out of the prefent War, the Standing Troops of France confifted of one Hundred and twenty thoufand Foot, twenty thoufand Horfe and Dragoons, and between eight and ten thoufand Invalids; that is, in the whole, to about One hundred and fifty thoufand Men. The keeping up fo large an Army, and the maintaining fo many Garrifons, is as ferviceable to the King, as it is burthenfome and ruinous to the Kingdom; inafmuch as it keeps fo great a Proportion of able and active Perfons in a State of abfolute Idlenefs with Regard to the Publick, at the fame Time that heavy Taxes are raifed upon the induftrious Part of the People for their Subliftence. But it muft be allowed, that it finds Employment for the Nobility and Gentry of France more efpecially, as it is become almoft an indifpenfible Cuftom tor them to fpend their Youth, at leaft the firft Part of it, in the Service ; by which they are brought infenfibly into a Dependance upon the Court and have their Minds filled with falfe and Clavifh Notions of the Glory of their Grand Monarch, which entirely gets the better of the natural Paffions that all Men of Birth and Breeding in other Nations, have for the Ser vice of their Country. Thus the Reader fees, that the Church, the Law, the Civil Employments, and the Military, being wholly at the Pleafure of the Court, the far greater Part of the active People in this great Country have their Lives and Fortunes at the Difpofal of the Crown, and fpend the beft Part of their Days in the Maintenance of a Syltem calculated to hold them in irrecoverable and perpetual Servitude.

As for the political Government, it is managed by feveral great Councils, or rather Committees of. Council, of which there are at prefent four, which are ftiled the Council of State, the Council of Difpatches; the Royal Council of Finances, and the Royal Council of Commerce. The firft Civil Officer in France is the Chancellor, the only Officer that is not removeable at the King's Pleafure; that is to fay, he cannot be turned out without being brought to a Tryal; but the King may and frequently does take the Scals from him, and put them into the Hands of another Perfon, who has the Title of Keeper, and the Power of Chancellor, who is removeable at the King's Pleafure. There is gene rally a Perfon at the Head of the Miniftry, either with or without the Title of prime Minifter, and with more or lefs Authority as the King pleafes: At prefent this
is the Cardinal de Tencin. For the Management of publick Affairs there are four principal Secretaries of State, who have each their feparate Deparments. Thefe are at prefent the Count de Maurepas, who has the Marine; the Count de Puifieux, who is Secretary for Foreign Affairs; the Count de Saint Florentin, who has the Care of Domeftic Concerns; and the Count $d^{\prime} A r$ genfon, who is Secretary at War. The principal Officer of the Revenue is the Comptroller General of the Finances, at prefent M. de Macbauilt, who has under him a Multitude of Intendants and other Officers, fubject to the Direction of the Council of Finances, of which the Duke de Betbune is Prefident. As to the ordinary and fettled Revenue of the Crown of France, if we may believe their own Writers upon that Subject, it is not at all increafed in its real, though it is confiderably augmented in its nominal Value. In 1683 , it was computed at $116,873,476$ Livres, and in 1730 , it amounted to no more than $140,278,473$ Livres, which make 5,844,973 Pounds of our Money, which hews that neither the general Wealth of France, nor the Income of the King, are near fo great as is commonly imagined. It is, indeed, very true, that in Time of War the King levies much larger Sums; but it is very plain, that even thefe muft fall fhort of what fome Prople would perfuade us they amount to, fince there muft be always a Proportion between the ordinary and extraordinary Revenue ; and confequently, if we know the one, we may very eafily compute how far the other can be carried, becaufe even under arbitrary Governments, fome Meafures muft be preferved, and fome Regard had to the general Income of the People, which is lefs in Time of War, at the fame Time that the publick Expence is greater.

With regard to the Commerce of France, there remains no Sort of Doubt, that it has grown more extenfive and more profitable than formerly, when Trade was very little known in this Country. It may feem a little ftrange, but the Faft is certainly very true, that the Commercial State of this Country is entirely under the Direction of the Crown; and in this there feems to be the lefs Hardfhip, becaufe it may be very truly affirmed, that the Commerce of France is as much or rather more the Work of their Minifters, than of their Merchants. When Colbert was at the Head of Affairs, he made the Increafe of Manufactures, the Facilitating Domeftick, and the Improving Foreign Trade, one of the principal Objects of his Miniftry. In this he was very fuccefsful; he underftood Commerce as a great Man fhould underftand it, fo as to render it beneficial to a Nation, without confulting too minutely the Profit of private Perfons. Upon this Occafion I will venture to relate, after an eminent French Author, a very fingular Story: He invited feveral eminent Merchants to meet in his Cabinet, in order to difcourfe on the Principles of Commerce, and promifed them the utmoft Liberty in Converfation. At their firft Meeting, a certain Merchant, who was confider'd as the beft Head amongft them, made a fett Harangue againft the Management of the Duties, and fpoke fo bluntly, that the Minifter rofe in great Heat, and bid him hold his Tongue, for that was no Part of his Bufinefs. If no Freedon, no Speech, anfwered the Merchant, we will be going, if you cannot hear, it is impoffible you fhould learn, and if you will not correct what is immediately in your own Power, what are we to expect? Colbert bid him fit down, and go on, and from that Time forward never checked any of them, let them fay what they would. By this Means, in a few Years, he knew more than them all. Madam de Maintenon was likewife a great Politician in Commerce; and it fell out, when the Affairs of Louis XIV. were in the utmoft Diftrefs,
that fome of his Minifters propofed pofponing the Pay ment of the Sums due to his Bankers for a Year : To which the King feemed inclined. The Lady, who was fpinning at the other End of the Room, without quitting her Work, addrefs ${ }^{3} \mathrm{~d}$ herfelf to the King in thefe Words: Sire, If youi fop Poyment to your Bankers, they will lofe their Credit with their Foreign Correfpondents, wobich wbile they maintain, you are newer at a Lofs for Money in any Part of Europe. Wbile Tbings continue in this State, your Distrefles are known only to a fere ; but if you take this Refolution, you will become a Bankrupt in the Eyes of the whole World: Stop therefore your Pen. Cons, the Money deftined for Buildings, and otber Pleafures, and pay the Bankers punitually, for Credit is the true Bafis of Power. The King took her Advice, which was certainly better than that of his Minifters; and it an fwered the End that was propofed.

By this it appears, as well as by what was faid in the former Volume, of the French Eaft- India Company, that the Commerce of France is the Creature of the State; and from thence it follows, that though in particular Branches it may flourifh wonderfully, yet, taking in the Whole, it is nothing near fo confiderable as it might be, nor can it ever be made fo under a Government conftituted like that which fubfitts in this Country at prefent ; which is one of the beft Reafons that can be affigned, why the ordinary Revenue of France is not higher now than it was many Years ago, and why even very fmall Sums of Money, in Comparifon of what are raifed elfewhere, are raifed here with fo much Difficulty. The Shipping of France is certainly increafed, but not in that Proportion that is commonly imagined, much lefs in the Degree fome of our political Writers have afferted, for I have actually feen Computations of the Shipping employed in only one Branch of Trade very confidently laid down, which I could demonftrate to be very near, if not beyond the whole Shipping of this Country; a very clear and inconteftable Proof of this, is the prefent State of their Navy. I have before me a Lift of it, in the Year 1693 . when it confifted of One hundred and fourteen Ships of the Line, but at the Beginning of the prefent War, they had not forty Sail of Men of War and Frigates of all Sizes: I have likewife before me a Memorial prefented by the Merchants of France, to the Count de Maurepas, at the Clofe of laft Year, in which the Loffes fuftain'd thereby, are computed at Two hundred Millions, which makes Nine Millions three hundred thoufand Pounds of our Money. In this Memorial it is faid, that if the King could maintain Sixty Men of War and Frigates, including the Breft Squadron, which is reckoned at twenty Sail, the whole Trade of France might be well protected, which is an Evidence, that it is very far from being protected at prefent, and that the King has not any fuch Force as the Merchants think is requifite for that Purpofe. While the War continues it is impoffible he fhould, foreign Subfidies, and the Expences of his Land-Forces run away with all, and more than all; fo that if our Naval Force was employed in Diftreffing the Frencb Trade, in every Part of the World, but more efpecially in the Weft-Indies, there is no Doubt that we might put them back for half a Century, at leaft; and if at the End of this War, there fhould remain fuch a Part of the Sinking Fund, $\mathrm{as}_{s}$ would enable us to take off the Duties upon Sugar entirely, I believe their Wef-India Trade could never revive. But I ought to ask my Reader's Pardon for this Digreffion, and for extending my Remarks to fuch a Length; but the Defire of fhewing, that if France be a Hydra, it is not impoffible fhe may meet with a Hercules, was what led me thus far, and I hope will ferve for a tolerable Excufe.

## CHAPTER V.

Comprehending Travels through the remoteft Parts of Germany, Boo bemia, Moravia, Hurgary, \&c. to the very Frontiers of Europe upon that Side; interfperfed with the Hiftory of Mines, Salt-works; Fifheries, and other curious Particulars.

## S E C TION I.

A Voyage from England to Holland, with a Fourney from thence, by Land, through the Electorates of Cologne, Treves and Mentr, the Lower and Upper Palatinate, Bavaria and Auftria, to Vienna; from thence tbrough Moravia, Bohemia and Saxony, to Hamburgh; with many judicious and ufefuil Obfervations.
By the very learned Dr. Edward Browne, of the Royal College of Phyficians.

1. Introduciory Account of the Autbor. He embarks at Yarmouth, and proceeds by Sea to Rotterdam. Defcription of that City. 2. A very curious Account of the Hague, Leyden and Harlem. 3. A con pious and circumfantial Defcription of what is moft remarkable in Amfterdam. 4. The like Account of the City of Utrecht, and of the Country about it. 5. A Defcription of Boileduc, Breda and Dort. 6. The Author's Pafage into the IJand of Walcheren, with a Defcription of Middieburgh and Fluming. 7. The Courle of the River Schelde, and the City of Antwerp deforibed. 8. The Autbor's Fourney continued through Bruffels and Maeftricht to Cologn. 9. His Journey from thence to Bonn, with fome very curious Obfervations. 10. An Account of the Autbor's Fourney from Bonn to Francfort, and of the Places be paffed through upon the Road. I1. A Succinct Account of Frunckfort. 12. A Defcription of the City of Heideiburgh, and of the Palatinate. 13. His fourney from Heidelburgh to Nurembergh, with a Defcription of the laft-mentioned City. 14. The Country of Bavaria and Auftria defcribed, with the principal Towns in them. 15. A large and particular Account of the City of Vienna. 16. A Viewo of the Emperor's Court, and of that Prince's Manner of living. 17. Of the celebrated Library at Vienna, and the Emperor's Collections of Curiofities. 18. The moft remarkable Things in the Neigbbourbood of this City defcribed. 19. The Autbor's Remarks upon the Cuftoms and Manners of the Inbabitants in that great City. 20. A Defcription of the remaining Part of Auftria and Moravia. 21. His Fourney through the Kingdom of Bohemia, with an Account of the Silver Mine at Guttenberg. 22. The famous City of Prague defcribed, together with an Account of fome other remarkable Places in Bohemia. 23. A Defcription of the City of Drefden, and of the Country of Saxony. 24. The Author's Journey through Freiberg, Leipfick and Magdeberg; with an Account of thofe great Cities. 25. A Defcription of the noble City of Hamburg, with the Autbor's Remarks upon the German Nation.

1T is now Time that we fhould lead the Reader out of Europe; of which, however, many Countries remain yet undefrcibed; for the making known of which, we could think of no better Method than digefting, into the clofeft Order poffible, the Travels of the ingenious Dr. Brozene through moft of thofe Countries, Accounts of which are ftill wariting. He was the Son of the famous Sir Thomas Browne of Norroich, fo well known to the learned World by the many curious and valuable Works he publifhed. As for this Gentleman, he received the firf Part of his Education under the Care of his worthy Father ; and having paffed through the Circle of School Learning, was removed to the Univerfity of Oxford, where, after having taken his Degrees regularly, and with much Reputation, he refolved to travel, as he did, through the greateft Part of Europe; and having Recommendations where-ever he came, to Perfons the moft diftinguifhed for Rank and Learning, acquired thereby va-
Vol. II. $\mathrm{N}^{\circ} \mathrm{CXX}$.
rious Opportunities of making deeper and better Obfervations than is common wirh Travellers in fuch hafty Tours. He publifhed two Volumes of his Voyages and Travels, which were extremely well received; and in the Account given of them by the Secretary of the Royal Society in the Tranfactions, they are very highly and juftly commended. He after wards took his Degree of Doctor of Phyfick, and became a Member of the College, Fellow of the Royal Society; and, in regard to his great Knowledge and Experience, was promoted to the Rank of being the King's Phyfician. He enjoy'd thefe Honours, together with an univerfal and unblemifh'd Reputation, for many Xears, and was very juftly confider'd as an Honour to his Family and Profeffion. We have taken the Liberty to range his Travels in the Manner moft fuitable to the Nature of this Collection, and becaure it was impoffible to preferve a proper Connection, without taking in his Account of the United Provinces, the Low Countries, and fome Part

9 C
of Germany; we chofe rather to retain them, though many of the Places had been before fpoken of in former Chapters of this Book, than to begin abruptly with his Accounts of Auftria, Bobemia, Hungary, \&c. for the Sake of which they were chiefly inferted; but as all he fays is equally entertaining and inftructive, we apprehend that this cannot be confidered as any Inconvenience.
I went in the Year 1668, from Norivicb to Yarmouth, a Sea-Port in the County of Norfolk, at the Entrance of the River Yare: Where being furnifh'd with Letters of Recommendation by Sir Fames Fobnfon to Amsterdam, Francfort, Venice, and Vienna, 1 embark'd the 14 th of Augut in Yarmoutb Road, aboard the Angel Ketch, Burthen Fifty five Tuns; and fet fail for Rotterdam. It was not long before we difcovered Goree Steeple, and immediately after the Briel, fituate at the Entrance of the River Mofa, or the Maefe; which having its Rife in the Mountains of Vouge, or Vaugefus, paffes by Verdun, Dinant, Namur, Liege, Maefricbt, Ruremond, Venlo, and feveral other Places, and here difcharges itfelf into the Ocean. In our Paffage up the River we faw many ftately Villages, the moft noted of which were MaefelandSluice, Scbiedam, and Delfis-Haven; and came afhore about Six in the Evening at Rotterdam.
Here I had Sight of two of the largeft Men of War belonging to Holland, viz. the Crane, and the Waffenaer; the laft of which was built in Lieu of that in which Admiral Opdam was blown up, as he was engaged againft his Royal Highnefs the Duke of York. The Points of the Keys of this City are very fair, and the Channels, which extend into the very Centre of it, fo large and deep, as to be capable of receiving Ships of great Burthen. It is very populous, the Houfes well built, and the Streets very clean. The Organs of the great Church, the Tower, and the Monument of M. De Wit, the Statue of Erafmus upon the Bridge, and fome other Curiofities, are worth the Obfervation of a Traveller. It being then Fair-time, we faw fome Drolls acted, and fome Rarities, viz. Lions, Leopards, and among the reft a Woman of feven Foor high.

From Rotterdam we paffed forward to Delft, paffing by the Powder-Houfe (a beautiful Scructure at fome $\mathrm{D}_{\mathrm{i}}$ flance from the City). The Piazza of Delft is very large, the Town-houfe fronting it at one, and the new Church with its high Steeple at the other End. This Church is famous for the Tomb of William of Naflaro, Prince of Orange, together with his Wife and Son, Prince Maurice, whofe Statue is in Armour, with his Dog lying at his Feet, with four Obelisks fupported by ten Marble Pillars: It flands in the Middle of the Ine. The old Church contains the Tomb of the famous Van Trump, carved en the Walls, his Effigies lying upon a Cannon, furrounded with Arms and Trophies. In another Church we were fhewn the Monument of Admiral Hein, who took the Spanish Plate Fleet: And in a large Houfe, in a Wall, the Marks of fome of the Bullets, by which Prince William was murthered, in 1584.
2. The Hague is celebrated for being the ancient Refidence of the Counts of Holland, and now of the States-General; it is about three Englifh Miles from Delft. It has a very fair Piazza, many well built Houfes, and the Pall-mall, the Wood, and the Park, are very beautiful Places; but what furpaffes all, is the Way from hence to Scbeveling, which is paved with Brick for three Miles, with feveral Rows of Trees on both Sides, as far as to the Steeple of Scbeveling. The City of Leyden (nine Miles diftant from the Hague, may for its Neatnefs compare with any in Europe, its Streets being beautified with noble Houfes, and large Channels on both Sides : Its Fortifications are after the modern Way. One of the chief Antiquities of Leyden, is what they call the Hengit Casile, (or the Berg,) from its Founder Hengit the Saxon. On the Top, into which we went by very handfome Stairs, we faw a very fair Arbour, a Labyrinth and Well, and at the Bottom is a very good Houfe of Entertainment. But what furpaffes this, are the Ruins of an ancient Fortrefs not far from this City, at the Village call'd Cat.
roick, upon the Sea, known by the Name of Arx Britannica; which being built by Caligula, and afterwards ruin'd by the Normans, was overwhelm'd by the Sea at laft ; yet not fo, but that at certain Times, when the Tide is very low, its Ruins have been plainly difcovered, and fome Antiquities have been found with this Infeription: Ex Ger. Inf: that is, ex Cermania Inferiori. The Stadt-houfe has a very fair Front towards the Street. In the Anatomy Hall you fee many Skeletons, of a
Whale, a Horfe, Deer, Cow, Cat, and Fox, and two Legs of an Elephant, befides thofe of Men and Women, fome Mufcles preferv'd, and one entire Body with the Skin and Flefh.

The Phyfick -Garden is none of the largeft, but abundantly ftock'd with Plants of all Sorts. Near it flands the College where the Publick Leetures are kept every Day, and under it is the Printing-Houfe of the Univerfity. In the Stadt-houfe, in the Apartment of the Burgermafters, I faw a moft curious Piece done by Lucas van Leyden, reprefenting the Day of Judgmenr. Near the fame Place is alfo flewn the Table of that famous Taylor, Yobn of Leyden, upon which he ufed to work, before he took upon him the Trade of a Reformer, and came to be King of the Anaboptifits in Germany. From Leyden I travell'd to Harlem, feven Duicb Leagues (or twenty one Emglilh Miles) thence. Its Situation is very pleafant, among Groves of Trees. The great Church furpaffes for irs Bignefs all others in Hollond, and is full of remarkable Infcriptions. The Pictures of all the Earls of Holland, in the Prince's Houfe, are very good Pieces; and in the Summer-Houle of the Garden is that of Laurence Cofier, a Citizen of this Place, whom they file the firft Inventor of Printing; whereas others afcribe the fame to a certain German, named Jobn Gottenberg. In the other Rooms you fee feveral excellent Pieces of Paintings of Hemskerk and Goltzius; but thofe of Cornelius of Harlenz exceed the reft, efpecially his Hiftory of Herod's killing the Children; his Feaft of the Gods, in which Vulcan's Foot is efteemed moft; and his Collation of a Nun and a Monk.

On the other Side you fee a Piture of a Ship with Saws, in Memory of the glorions Action done by thofe of this Town, who under the Reign of Frederick Barbaroffa, fighting againft the Saracens, took Damiata, entering the Port by Means of Saws faftned to the Keels of their Ships, which cut the Chains of the Harbour. Here is alfo an Hofpital for Sixty aged Perfons, and another for the Sick, both very handfome and neatly kept. Here I obferved the firft Time their Way of Whipping Malefactors with Rods: They tie their Hands ftretch'd upward as high as they can, to a Poft erected upon a Scaffold, with an Iron round their Wafte, and fo give them as many Stripes as are allotted them by their Judges. The Lake near Harlem, call'd the Horlem Meere, is above twenty Miles long.
3. The next Place to Harlem is the City of Amferdam, famous throughour the World for its Riches, Trade, Shipping, fair Streets, and magnificent Buildings. Its Situation is upon the River $\mathcal{Y}_{e}$, being formerly the Seat only of a few Fifhermen; but being favour'd in Time with the Title of a City, by the Earls of Holland, was ftrengthned with a Wall 1470, againt thofe of Utrecht; and many Years after, by the Emperor - Maximilian, honour'd with the Imperial Crown over their Arms, which are three Croffes on a Pale. It is Yalmoft incredible how this City is increafed of late Years, being now encompals'd with a new Wall, and large Ditch, after the Modern Way of Fortifications. The new Streets efpecially are very fpacious, with large Channels. The River Amfel (from whence it has borrow'd its Name) alfo paffes through it, being let in under a very handfome Bridge of eleven Arches, and twenty fix Paces broad, which makes part of the Wall. This whole vaft Body is built upon Piles of Timber driven into the Earth clofe to one another, the Foundation of the Tower over-againft St. Catbarine's Church, being faid to confift of 6334 great Trees; and I myfelf was an Eye-witnefs of the valt Number of Trees

## Chap. V. through Austria, Bohemta, Moravia, ف̂̉c. 743

I faw them drive into the Foundations, where the EaftIndia Houfe was to be enlarged ; and at another Place, where they were Jaying the Foundation of a Lutberan Church.

The nobleft Strufure of all this Country, and one of the fineft in Europe, is their Stadt-houfe, built of Freeftone, ilo Paces in Front (in which it exiceeds St. Peter's Church at Rome, ) and Eighty one Paces deep. At its very Entrance, on the Right-Hand, you fee the Hall where Malefactors receive their Sentence ; the Marble Statues here hanging down their Heads, as if grieved at what was pronounced. All the Floors are covered with Marble, and the Roofs finely carved, painted, and gilt ; Atlas, bearing a Globe upon his Shoulders, ftands on the Top of it. The Globe is of Copper of ten Foot Diameter, and exceeds, as far as I ever heard or faw, any Ball or Globe of this Nature. That of St. Peter's Church at Rome, and that of Florence, being lefs; and fuch as I have feen upon any of the Turki/b Mofques, don't come near this in Bignefs; nay, the largeft of thofe three famous Balls at Morocio, are, according to the Report of thofe that have feen it, inferior to this The Exchange of Amferdom is very fair, exceeding large, and frequented by an incredible Num ber of People. Moft of their Churches are ftately Edifices. The Partition with Ballifters of Brafs in the new Church are truly noble; and the Carvings of the Pulpit exceed the reft.

The Tombs of Van Hulfe and Hemskerk, in the old Church, are very well worth a curious Traveller's Obfervation: The laft of thefe two has rendred himfelf famous by his fuccefsfnl Expeditions in the Eaft-Indies, after their firft Settlement there, by the Way of the Cape of Good Hope, when they had found the North Paffage by Nova Zembla impracticable. Their Houfe of Correction is alfo worth Obfervation ; having at its Entrance two Lions bridled with this Infeription:

## Virtutis eft domare qua cuncii pavent.

A proper Emblem for the Purpofe it was intended, viz. to bridle the Infolencies of fuch as are riotous in the Streets, or commit Diforders, and the Extravagancies of the Sons of Citizens, who are paft the Government of their Mafters and Parents. They are employed in Gaining their Bread by rafping Brazil Wood; and if they refufe to perform their Task, and become incorrigible by Blows, they (as we were told) put them in a large Ciftern, with a Pump by them, and fo letting in the Water upon them, force them to work for their Life.

Their Spin-buis is intended for the Correction of young Women, fuch as live loofely, or are taken in the Streets, and other fufpicious Places: Sometimes the Citizens fend their Daughters hither for Chaftifement, and thefe have Chambers allotted them ; I faw above an hundred Women in one large Room, fome of which were very well drefs'd. In the Hofpital for Children are 600 Orphans, well educated and look'd after. The Dol-buis is like our Bedlam, intended for delirious Perfons. The Gaft-buis, an Hofpital for the Sick; as the Mannen-boufe is an Hofpital for old Men. They have befides this, a laudable Cuftom throughout all Holland; which is, that upon the Appointment of any Meeting at a Tavern, or any other Occafion, certain Forfeitures are put into a Box kept in all Publick-Houfes, for the Ufe of the Poor, which is the Reafon that farce ever any Beggars are feen in the Streets.

Their Eaf-India-Houfe contains an incredible Store of Spices, and other Indian Commodities. Their Admiralty Houfe, where they keep their Stores for Shipping, is furrounded with Water for its greater Security, and near it lie Seventy two Men of War. On the Top of this Houfe (as moft of Note of this City) is a Cif tern for the Reception of Rain-Water, to fupply the Defect of Spring. Water, which is very farce. At the Entrance of the Gate, we faw the entire Body of a a Mian preferved from Corruption, enclofed to the Watte in a Canoe, made of Fifh-fkin, fo clofely fewed together, that no Water could get in. The handfomeft

Streets of Amsterdam are, the Harlemi-Street, the Cingel, Princes Graft, Kaijers Graft, and Heeren Graft, as allo the Nerw Ifland. Among other Rarities I faw here a Globe, the Workmanthip of Vingbomes, betwist fix and feven Foot Diameter; it was all of Copper, and very well painted, with all the new Difcoveries made in 1641 ; at 42 Deg. S. Lat. and 170 Longit. thofe towards the N. W. of Fapan, about Noria Zembla, the Tartarian Sea, beyond the Streights of Voygats, viz. Nero Holland, Weft-Friefeland, \&xc. Though moft of thofe Difcoveries are contradicted by Martiniere, who made a Voyage into thofe Parts in 1653 , from Copenbagen, efpecially as to the true Pofition of Zembla, its Coherency to the Continent, the Length of the Streights of Voygats (which they make ten, but he thirty five Dutch Leagues) and a Paffage through it into the Tartarian Ocean.

I had the Curiofity to take a Profpect of the City from the Steeple of the Church, which by Reafon of the Unevennefs of the Houfes, did not appear altogether to beautiful as thofe of Italy, which are flat on the Top. Every Day, at Eleven a Clock in the Forenoon, there is very good Mufick at the Stadt-houfe, being the Gift of the Earl of Leicefter. The Chimes, of which there is a Sett in moft Steeples here, make alfo a very agreeable $H$ Harmony.

Among other Perfons of Note, I got into the Acquaintance of Dr. Ruifh, who frew'd me many Curiofities in Anatomy; fuch as the Skeletons of Children, and Fœeus's of all Ages, very neatly done; the Lymphatick Veffels preferved, with all the Valves; all the Veffels of the Liver feparated from the flefhy Part; many Mufcles diffected, and whole Bodies kept entire, without the leaft Signs of Corruption. Dr. Swammer dam fhew'd me feveral of his Experiments, according to his Treatife De Refpiratione, with a Collection of many Inlects. Glauber, the noted Chymift, gave me a Sight of his Laboratory. And Blofius, famous for his Obfervations upon Veflingius, gave me many Marks of his Civility.

It is to be obferved, that the Jews live at Amferdams in more Splendor than in any other Part of the World being provided with magnificent Houfes, and a very fair Synagogue, and have among them Perfons of Learning, and endow'd with other good Qualifications; fome of them having lived under the Notion of Chriftians in other Places. There was one Juda Leo, who had a Model of the Temple of Solomon, the Fort of the Temple, the Tabernacle, and many other Curiofities of that Nature. I alfo faw the Ceremony of the Circumcifion of a Jerwibh Child; they thruft a Probe betwixt the Glans and Preputium, and dilating it fo, that both the inward and outward Skin be drawn forward, by a certain Inftrument they hold the Skin clofe to the Inftru ment ; the remaining Skin being put back immediately, the Blood ftopp'd, and the Plaifter applied : All there prefent finging all the while, that the Cries of the Infant may be the lefs heard.

I pals'd from Amfterdam to Utrecht in feven Hours, in one of their Track Scbuyts, or large Boats, drawn by Horfes, through the artificial Channels which are made for this Purpofe in moft of the Provinces, as well of Holland, as of the Lore-Countries.
4. Utrecbt, (anciently Antonina, and afterwards Ultràjectum,) the Capital City of the Province of the fame Name, is very large, and handfomely built. It has been an Epifcopal See for near thefe thoufand Years: Its firlt Bifhop was Willebald, an Englibman. It was made an Univerfity in 1636 . The great Church has three Steeples one above the other, from whence I took a full View of the adjacent Country, which is very plain, and fo populous, that there are no lefs than fifty one walled Towns, to any of which you may go in a Days Journey thence. Here is alfo an Englifh Church, in the Middle of which is a Pillar, the Foundation of which was laid upon Bulls Hides, in 1099, with the Picture of a Bull with this Infcription:

Accipe Pofieritas quod per tua faccula narres,
Tourinis cutibus fundo folidata columna efl.

The Library belonging to this Church has feveral old Manufcripts, and among the reft a Bible in fix Volames, painted and gilded afier a very ancient Way. The two German Idols, beftowed upon this Place by the Emperor Henry IV. are worth taking Notice of for their Antiquity's Sake: As alfo a Horn faid to be made of Ivory. I faw alfo three Sea-Unicorns Horns, (being an Animal in the Northern Seas) one of which being tipp'd with Silver, ferved for a Drinking-Cup. They were about five Foot long; though the King of Denmark has two that were taken near Nova Zembla, that have ten Foot in Length: This King's Father had fo many of them, that he beftowed above one hundred of them for the making of a magnificent Throne. I myfelf have feen fome fifteen Foot long, and a Walk-ing-Staff, a Sceptre, Scabbard for a Sword, and other Curiofities made of the Teeth of this Animal, but could never be convinced of its Effects againft Poifon; or any contagious Diftemper, though I have given it frequently, and in very great Quantities.

Here I had alfo the Honour to fee Dr. Cyprianus ab Oesterga, Dr. Regius, Voetius, the only Member left alive of the Synod of Dort; ; but unfortunately mifs'd the Sight of the famous Anna Maria Skurman, fhe being gone into the Country, yet had the good Fortune to fee her Picture, drawn by her own Hand, with this Infription:

## Cernitis bic pictâ noftros in Imagine vultus, Si negat ars formam gratia vefira dabit.

I travel'd from Utrecht, in two Hours, to Friffeick, and croffing the River Leck to Vianen, where there is nothing remarkable befides the Houie and Gardens of Count Brederode, accounted the nobleft Family in Holland, as that of Wafenger is the moft ancient, and that of Egmont the richef. A Mount belonging to this Garden, makes Part of the Rampart of the Place. The Statues of the Twelve Cafars, of Aristotle, with fome Pyramids, Parctions, and Paintings, are Ornaments, fuitable to a Traveller's Curiofity.

Hence I pafs'd by Boat through the Country of Arkel, and came the fane Night to Gorcum, a City fituate near the three Rivers, the Ling, the Waal, and the Maese: It has a pretty handfome Market-place, and a Church with a very high Steeple. The Fortifications are of Earth; and over the Water-Gate you fee this Infcription :

Civitas in quâ maximè Cives legibus parent, छ in pace beata, EO bello inviita. 1642.

Which Infcription feemed to have been fulfild in 1672 , when the powerful Army of Leerwis XIV. King of France, who conquered thirty Cities in one Campaign, did not extend their Conquefts beyond this Place. From Gorcum I went to Worcum, on the other Side of the River, and fo by the Cattle of Loveftein, famous for the Imprifonment of Barnevelt; which, fince that Time, has given that Name to the whole Party, which is generally called in Holland the Loveftein Faction.
5. Paffing farther up the Maefe, we came the next Day to Hertogen Booche, having left Proye on the Left, and Heufden on the Right Hand. This City, called by fome Sylua Ducis, Boifeduc, and Bolduc, is a well fortified City, fituate upon the River Difa, or Deefe, which joins its Waters, two Leagues below this Place, with the Maefe, being one of the chief Frontiers belonging to the United Provinces on that Side, and ftrong both by Art and Nature. Its Avenues are only Caufeways made through the Marfhes, with various Turnings, commanded by fix fmall Forts; befides which, the Town is both commanded and defended by a Cittadel, confifting of five regular Baftions. The Market-place here is triangular. In the Cathedral (which is dedicated to St. Fobn) are many of the Arms of the Knights of the Golden Fleece, and on the upper Stalls an Infrription containing a fhort Account of the firl Inftitution of this Order, by Pbilip firnamed the Good, Duke of

Burgundy, Lorrain, and Brabant. It was made an Epifcopal See in 1559, and taken by the Dutch from the spaniards in 1628.

From hence we purfued our Journey through a plain and fandy Country to Breda, a City fituated upon the River Merk. It is very well forified, with a large Ditch round the Counterfcarp, and a Ravelin betwixt each Battion, joined to the Rampart with-infide of the Ditch: befides a good Number of Half-moons and Hornworks, and a Parapet frengthened with a double Row of Elms. This Place belongs to the Prince of Orange. The spaniards took it in the Beginning of the Lover Country Wars; but the Dutch not long after furprized it, by putting eighty armed Men in a Boat covered with Turf, who thus entred the Cantie.
It was taken by the Spaniards in 1625 , and afterwards regained again by Frederick Henry Prince of Orange. It has a very fair Church, in which are many good Tombs; and among the reft thofe of Englebert Count of Naflarw, with his Family; of the Heer Van Horn, and his three Wives; and of Henry Earl of Noflaw, who being the Founder of the Cantle of Brede, his Armour is fupported by four Warriours upon their Knees: The Gardens, Gallery, Walks, and Dials belonging to this' Cafte, are worth a Traveller's Obfervation. From Breda we travel'd by Land to St. Gertruydenberg, the utmort Frontier Place of the Duich on the North Side of Brabont. It is of no great Extent, but abounds in Fifh, which are catch'd in a Kind of a Lake called the Waart, made fo by the Fall.ng into it of the Maefe, and divers ocher Rivers. You fee here a very fair Church, and the Ruins of a large Stecpie. We pals'd hence over a large Water, which had overflow'd the Country, and drown'd tweniy-two Parifies, and, paffing by the ancient Tower called Murvey Houle, came to Dort, or Dordracum. This City, which is feated in the Waves of thofe great Lakes made by the Maefe and the Wael, is reckoned the chief Town of Soutt Holland, as having the Privilege of the Mint, and the Staple for Rbenijb Wine and Englifh Cloth; we have two Churches here, as the French lave one. The great Church has a Steeple of 312 Steps high. It took a View of the Aparment where the Synod of Dort had been held in 1611; which was a very fair one, and had an extraordinary agreeable Profpect into the Country. The large round-bellied Veffels, which fland betwixt this City and Cologn, internixed with long Liege Boats, afford an odd Spectacle to Strangers.
6. I embarked in a Veffel bound for the Ine of Walcberen, and failing by moft of the Inands of Zeeland, and in Sight of the Towns of Williamfiadt, Zirickzee, Tergoes, \&c. we came afhore at Ter-Vere, where there is a convenient Harbour. It has a fair long Marketplace. The Scotch have had a Factory here for above 200 Years; over-againft it you fee a Steeple, the poor Remainder of a noble Town, which has been fwallow'd up by the Sea.
From hence to Middleburg the Way is paved with a Kind of fmall hard Brick; the fame being to be obferved in many Places alfo in Holland. The City of Middieburg is feated in the very Centre of the Ine of Walcheren, being very well built, fpacious and populous, the fourth Chamber or Port of the Eaf-India Company; Amferdam being in the firt Rank, Rotterdam the fecond, and Fuyfing the third. There is a broad Water within the Compars of the Town, from whence is cut a Channel, which carries Veffels to the Sea. It is very well fortified, and beautified with many fair Churches, and other publick and private Structures. The new Church is of an octogonal Figure, with a Cupolo; the Steeple of the old Church is famous for its Height, the Town-houfe confiderable for its old Statues, and the Piazza of a circular Figure. The Country round it being cover'd with fruitful Gardens. The Zealanders are generally great Lovers of the Family of Orange. Hence I went to Flufbing, a ftrong Sea-port Town, ftrengthen'd with Stone-Waills towards the Sea, and Mud-works to the Land-fide. This being one of the firlt Places the Dutch took from the Spaniards in 1572, was, together with Rammaken and

Chap. V. through Austria, Bohemia, Moravia, $\mathrm{g}^{\circ} \mathrm{c} .745$
the Brill, made a Cautionary to Queen Elizabeth, 1585 , and reftored again to the United Provinces in 1616 , by King fames I. The Mouth of the Harbour is furrounded with Piles driven into the Ground, and thefe again are fecured by Rufhes, Flags and Reeds, ftaked down, intermix'd with Ofiers and Hurdles, to break the Force of the Water. The Stadt-Houfe is a noble Structure, ftanding in the Market-place, and affords a fair Profpect in Front, which is adorned with three Rows of Pillars, one above the other; the lower Row being of the Dorick, the fecond of the Ionick, and the Uppermoft of the Corintbian Order, on the Top of which is a Gallery, from thence you may difcover Ships at a great Diftance at Sea. We faw here many Ships, and among them fome Men of War of confiderable Bignefs. The Women in the Ifle of Walcheren are clad for the moft Part in red Cloth, and wear Straw Hats. If a Man happen to die here, a. great Bundle is laid at the Door, if a Child a little one, if a Male it is put on the right Side, if a Female on the left. When a Woman is delivered, they give Notice of what Sex the Child is of to all the Neighbourhood, by tying a Piece of Lawn to the Rapper of the Door, made up into the Shape of a Puppet, and reprefenting the Sex of the new born Child. I returned to Middleburgb by Land, where I embark'd again, and paffing down the River by the Fort Rammaken, entered the River Schelde, and failing up, pafs'd the Fort Frederick Henry, and fo to the Fort Lillo, where we were forced to ftay till our Ship was fearched. Juft oppofite to the laft of thefe two Forts, on the other Side of the River, is the Fort called Lifgens boek, and on the other Side another call'd de la Croix, the laft belonging to the Hollanders; the Spanib Forts to defend this Frontier are, the Pbilip, the Pearl, and the Mary.
7. The River Scbelde, mentioned by Cafar, has its Rife in the Country of Vermandois, and paffing by Cambray, Valenciennes, Tournay, Dornick, Oudenard, Gbent, Rupelmond and Antwerp, divides itfelf afterwards into two Channels, whereof the Southern is call'd the Hont ( $\operatorname{Dog}$, ) the other taking its Courfe from Bergen-op-Zoom, falls into the Sea between the Ines of Zealand. The next Day we continued our Voyage upon the Schelde, and arrived fafely at Antwerp. This City is of a large Extent; its Walls very broad, with Rows of Trees upon them, faced with Brick and Free-Atones, after the modern Way, though the Baftions are none of the largeft, but the Ditch is very broad and deep. The Ci tadel is accounted one of the beft Fortifications of five Baftions, in thofe Parts, very well lin'd with Brick and Stone, and commanding the City; the River and the adjacent Country. There is alfo another Fort near the Scbelde. The Exchange of Antwerp is fupported by thirty fix Pillars, each carved a different Way. It ftands in the Middle of four Streets, which lead unto it. The Meer, the moft remarkable Street of the City, has the Water running under it, and here the Coaches meet to take the Tour-ala-mode; at one End of it you fee a large Brafs Crucifix, placed upon a Pedeftal of Marble. The Fefuits Church exceeds for Magnificence any that ever I met with out of Italy. The Front is a noble Piece of Architecture, having the Statue of Ignatius Loyola on the Top. The Roof is for the moft part painted by Rubens and Van Dyke; the Carving is moft excellent, and the Flower Work done by Segers a Fefuit. It has a very handfome Library, kept in four Chambers, the Founder of which was Godfrid Houtappel, whofe Tomb is to be feen in a Chapel on the South-fide of the Church. The Carmelite Church is famous for the large Statue of Silver of the Virgin Mary. The Church of our bleffed Lady is the biggeft, and the Steeple the nobleft and one of the beft built in the World, being 459 Foot high. This Church abounds alfo in many curious Pieces of Paintings, and among the reft, there is one highly efteem'd, done by Quintin, who being at firft a Smith, made that curious Iron Work of the Wall before the Weft Door; but afterwards, to gain his Miftrefs, turn'd Painter, and became famous in this Art. His Head, cut in Stone, is placed near the Church Door, with this Infcription:

Vol. II. NQ ${ }^{1} 20$.

## Connubialis amor de Nulucibre fecit Apellem.

I took alfo a View of the Abbey of St. Micbael, feated upon the River Scbelde; among other Rarities I faw here a Glafs which reprefented the Pictures of our Saviour and the Virgin Mary, collected from the putting together of divers other Heads: One being reprefented from a certain Pifture, which contained no leis than thirteen Faces, and the other from one of twelve. That of the Virgin Mary had this Infcription:

## Diva nitet variis expreffa Maria Figuris.

In this Abbey, which contains fixty three Monks, faw alfo the Tomb of a Countefs of Brabant, who was drowned, and her Statue. Near the Wharf-gate, you fee the Church of St. Wallurgis, an Englifs Saint. The Town-houfe of Antwerp is a fine Structure, that belonged formerly to the Eaftern Merchants very magnificent and large, but run to Ruin; here were preferved, feveral Sorts of Mufical-Inftruments, not known now-a-days. The Hejfen Houfe has been none of the worft in former Time. The Water which they make ufe of in Brewing, is conveyed hither from Herental, at leaft thirty Miles, by Means of a Canal. This City produces alfo many great Collections of Picures, and fome of the beft Miniature, done by Gonfol; of that kind I faw one curious Piece, done by thirty five feveral Mafters.
8. I went from Antwerp to Brufels by Water, changing Boat five times, by Reafon of the many Locks and Sluices, the Country abour Bruffels being 200 Foot higher than Antwerp. There is a Place calis ${ }^{2}$ d Fontaine, about five Miles from Brufels, where three Rivers crofs one another, and one of them is carried over a Bridge. The Market-place of Brufels is a long Square, having the Town-houfe 'at one End, and oppofite to it the Royal Palace, near which the Counts of Egmont and Horne were beheaded. On the Top of the Townhoufe you fee the Statue of St. Nicbael, the Patron of this City, in Brals. In the Church of the Carmelites, the Altar is a very noble Piece, and near the Church ftands a Statue of a Boy piffing, which ferves inftead of a continual Conduit. We alfo took a View of the Armory, which was well furnifh'd formerly, but has now only fome few Remains, fuch as the Armour of Cbarles V. of the Duke d $d^{3}$ Alva, of the Cardinal Infanta, and fome few others, and divers Bucklers curioully wrought ; the Sword of Cbarles V. wherewith he ufed to make the Knights of the Golden Fleece ; and fome Banners taken at the Battle of Pavia from Francis I. Before the Court of the Palace ftand five Brafs Statues, and on one of the Towers a Bird pierced with an Arrow, in Memory of the Shot which the Infanta Ifabella made. The Park has very pleafant Walks, fet with Trees, and intermingled with Grotto's, Fountains, and Water-works ; one Piece comes near to Frafcati, imitating the Sound of all mufical Inftruments, by a Kind of perpetual Motion. But what is moft furprifing in this Park is, the Echo, which makes ten or twelve diftinct Replies. The Church of St. Gudula claims the Preference for Bignefs ; and two Chapels here are worth the Travellers Obfervation; in one of which is prefented the Hoft, which bled when ftabb'd by the $\mathfrak{J}$ eres. The Dominican Church is famous for the Monuments of the Duke and Dutchefs of Cleve, in Corintbian Brafs. The Beguines, or pious Maids, (a Kind of Nuns) of which there are near 800 at Brufels, have alfo a very fair Church, which is milk-white, and lately built. The Englifb have alfo a Nunnery here. There were at that Time above 300 Houfes fhut up, infected with the Plague, and marked with this Token,

## IHS

Which made me haften away; fo that after I had dined at the Fih-Tavern, (noted for its Pictures)' I re. turned to Antwerp, and travelling the $4^{\text {th }}$ of Oifober,

$$
9 \mathrm{D}
$$

ihrough
through an open Country, I took up my Quarters at Molin brufle, and entring the Country of Liege the 5 th, arrived the 6 th at Maefricbt, a fltong City, fituated upon the Maes, four Leagues below Liege. It is chiefly confiderable for its Out-works, the Wall itfelf being old. To remedy the Inconveniency arifing to the Town from an adjacent Hill on the S. E, Side, they have made an Horn-work within a Musket-fhot of it, and a high Baftion anfwering to it, covers the Town. Under this Hill is one of the beft Quarries of Stone in the World. On the other Side of the Maes is a Suburb called the Wicke, rather ftronger than Maeßfricht, unto which it is joined by a Bridge of nine Arches. The Country on that Side is flat : The Houfes of Maeflricbt are none of the handfomeft ; yet the Town-houle is a ftately Structure, ftanding in one of the Piazzas; in another Piazza flands the Great Church. This Town was taken by the Spaniards in 1632 . October the 7 th, I pafs'd through Gallop, and came the fame Night to Aken, Aix la Cbapelle, or Aquijgronum, famous for its hot Baths. From hence I purfued my Journey to $\mathcal{f u} u$ liers, but being late, we pafs'd by it, leaving it to the Right. Not far from this City runs a fhallow but fwift River, called the Roer, at the Confuence of which with the Maes is Roormonde, the capital City of the Spanifb Gelderland, feated upon a rifing Ground.
9. Cologne, Collen, or Colonia Agrippina, anciently the chief Seat of the Ubii, who firft-inhabited the Country of Bergues, were infefted by the Germans, and, implo. ring the Protection of the Romans, were by them placed on the other Side of the Rbine, and fettled in this Place by Agrippa Lord Lieutenant of Gallia, and was afterwards named Colonia Agrippina, in Honour of Agrippina Daughter of Germanicus, and Wife of Claudius, whofe Birth-place it was. It may for Extent vie with any City of Germany, and is fortified to the Land-fide with two high Walls and two deep Trenches, and beautified with feveral Rows of pleafant Trees, and fecured on the Side of the Rbine by a Wall of Stone; but its greateft Strength confifts in fome Out-works, Halfmoons and Ravelins. The chief Streets are broad, and paved with broad Stones. Maternus, who was prefent at the Ccuncil of Arles, was their Bifhop at leaft 1350 Years fince. Great Part of the Town is taken up with Churches and Monafteries, many of them very well endowed, there being to moft of the Houfes of the Canons and Prebends, large Gardens and Vineyards. The Church of St. Kunibald lies on the North Side of the Town; but the Convent of the Dominicans is a very fair modern Structure. The Fefuits Church is full of rich Ornaments; and that dedicated to St. Gereon (who was martyr ${ }^{\circ}$ d thereabouts in the Time of Maximianus) contains above 1000 Saints Heads. In the Church of St. Urfula you fee her Tomb, and thofe of ir,000 Virgins flain by the Huns. The Tomb of Urfula has this Infcription:

Sepulcbrum Sancia Urfule indicio Columbe deteitum.
Upon many of thofe Tombs were old Croffes and Lamps. The Church is alfo full of the Bones and Heads of Martyrs. The Cathedral of St. Peter is a large Structure, but remains unfinifhed. Within the Body of the Church are four Rows of Pillars, and the Choir is very handfomely built; behind it are fuppofed to be the Tombs of the three Wife Men of the Eaft, or the Kings of Arabia, commonly called the three Kings of Cologn' Milcbior, who, as they fay, offer'd Gold, Gofpar Frankinfence, and Baltbafar Myrrhe. They relate, that their Bodies were firft tranflated to Conftantinople by Helena, the Mother of Conftantine the Great; from thence to Milan by Eastorfus their Bifhop, whence they were removed above 500 Years ago, viz. 1164. to Cologn, by Rainold Bifhop of this Diocefe. All the Canons of this Church muft be Noblemen. Upon one of the Ruins in the Street, you fee a Tomb made of one Stone, of which Kind many more are to be met with in other Places of this City. Of thefe I faw a great Number at Arles in Provence. The Townhoufe is an elegant Strufure; on the Front of which
is a Man in Baffo reliero, engaged with a Lion, who, as they relate, was a Burger-mafter of that City, that having exafperated the Clergy againt him, upon fome Difference, they fent in a Lion upon him, whom he flew upon the Spot. The Elector of Cologn, who is alfo their Archbifhop, has two Palaces here, but by Agreement is not to flay above three Days at a Time. It is a free Imperial City, notwithftanding which it does Homage to the Elector,

The Inhabitants are generally Roman Catbolicks, and the City, by reafon of the vaft Number of Convents, Churches, and Reliques, is filed the Rome of Germany. However, the Luttberans have a Church within the Precinct of the Walls, and the Colvinifts another at Mulbeim, about two Miles below it, on the other Side of the Rbine. Jutt oppofite to Cologne is the Village of the Dutz, inhabited chiefly by Yeros. They fpeak but a Kind of odd High-Dutch; but to recompence this, the Latin and Frencb are much in Ule here. It was made an Univerfity in 1388 , and has four very good Hofpitals, two for young and old Perfons that are infirm, and two for the Sick. After we left Cologne, we were drawn up the Rbine by Horfes, and lodged the fame Night at a fmall Village, near which Fulius Cafar made his Bridge over the Rbine.
io. We came the next Day to Bonne, the ordinary Refidence of the Elector of Cologne. It was formerly called Castra Bonnenfa, as being the Station of the fixth Legion in Winter, in the Time of Tacitus. The Archbifhop's Palace is a noble Edifice, ftretching a good Way into the Rbine. We took our Quarters this Night at the Foot of one of the feven Hills near the Rbine, moft of which have old ruined Caftes upon them. On the 15 th we pafs ${ }^{\circ}$ d by a very pleafant Inand, with a Convent in it ; we faw allo the Convent at Remagen, built upon a Rock, and fortified with round Towers, and came the 16 th in the Morning to Andernach or Antenacum, one of the Roman Fortreffes upon the Rbine. Some affirm, that this was the Birth-place of Caligula, and that Valentinian was buried near it. There are divers Mineral Springs hereabouts. The City is only fortified with an old Wall. The Waterpaflage being grown tedious, we hired a Coach to Coblentz, and paffing through a very agreeable Country, planted with Wallnut Trees, and in Sight of two of the Elector of Treves's Country Houfes, we crofs'd the River Mofelle, over a very fine Bridge, fuftain'd by thirteen Arches, built in 1344, by Archbifhop Baldwinn. We went immediately to the Convent of the Dominicans, very agreeably feated upon the Banks of the Rbine; the Prior of which being in our Company, he would needs keep us with him all Night, and entertained us with an handfome Supper, and excellent Mofolle Wine. Coblentz or Confuentia, is fo called, from its Situation at the Confluence of the Rbine and Mofelle, which make two Sides of it, the Third being a noble Fortification, aftes the modern Way, from one River to the other, which makes it of a triangular Figure. It has an old Wall within the Works, and is under the Juriddiction of the Elector and Archbifhop of Treves, as is likewife the Caftle of Hermanfein, (Hermans ferna) by fome called Ebrenbreitstein, built juft over acainit it on the other Side of the Rbine, being join'd to Coblentz by a long Bridge. At the Font of a Rock juft underneath this Cattle, you fee a very noble Palace belonging to the Elector, having two very large Wings, and a Fort with five Pavilions, facing the Rbine. Not far from Coblentz, the Cartbufians have a Convent pleafantly feated upon a Hill.
Oitober the Iyth, we continued our Voyage upon the Rbine to Boppart, a wall'd Town upon the Weftern Bank, an ancient Fortrefs of the Romans, known by the Name of Bodobriga.
The 18th, we dined at St. Goar, a Place upon the River, under the Jurifdiction of the Lantgrave of Heffe, who has a Cafte here. On the Outfide of the. Wall of the Town is faftned a Collar of Brafs, given, as they fay, by Cbarles V. It is the Cuftom, that fuch Strangers as come afhore here, mult put their Knees into this Collar, when they are ask'd, Whetber they woill bo

# Chap. V. through Austria, Bohemia, Moravia, $8 \overbrace{}^{\circ} \mathrm{c}$. 747 

Jprinkled with Water, or Beer, or Wine? If they are for the Wine, they muft give an Entertainment of Wine to the Company. The Queen of Sreeden paffing by that Way not many Years before, had prefented them with a great Silver Cup, which they commonly drink out of. The 19th, We purfued our Voyage to Baccbarach, famous for its excellent Wines; under the Elector Palatine. Hence we pafs'd by a very old Caftle, fituate upon a Rock in the Middle of the Rbine, called Pfalts, becaufe hither formerly the Princeffes $P$ alatines were fent to be brought to Bed. The next Day we paffed along with a rapid Stream, which is very dangerous by Reafon of the many Rocks that lie under Water; and a little above it we had a full Sight of a round Tower, on a Rock in the Rbine, commonly call'd Moufe-Tower, built by Hatto, Archbifhop of Mentz, who having at a Time of general Scarcity invited a great Number of Poor to prefent them with Corn, inftead of relieving, fet Fire to the Barn in which they were enclofed, and whilft they made lamentable Cries, he faid, Hear bow the Mice fcream. Soon after, being perfecuted with Rats and Mice to that Degree, that he was not able to abide in his Palace, he built this round Tower in the Rbine, but being alfo profecuted thither by the Mice, he miferably ended his Days. Not far above it, upon the Weftern Bank, you fee the Town of Bing or Bingium, an ancient Roman Fortrefs upon the Rbine, at the Conflux of that River, and the Navus or Naw, over the laft of which is a very fine Stone Bridge. It belongs to the Elector of Mayence. From Bing we fet forward for Mayence, and in our Way at Rudeßbeim in the Rbine (fo famous for the Excellency of the Wine) we were fhew'd a Boy, whofe Hair was as woolly as any of the African Moors, but of a whitifh Colour; I took fome of the Hair along with me.

Mentz, or Mayence, Moguntia, by the Latins, is fituated juft below the Confluence of the two Rivers, the Main, and Rbine, over againft it ; extending in Length towards the River, abounding with Monafteries, Churches, and publick Buildings; but the Streets are narrow, and the private Houfes built after an antick Fafhion; the Country round it is extreamly fertile. Nayence claims the Invention of Printing, but may rather be faid to have brought it to Perfection. It is famous for the Defeat of the Roman Legions, under Varus, by the Germans, which happened near it; and Guftavus Adolpbus, the victorious King of Sroeden, made his publick Entry here, 163 I . in great Magnificence, and laid two Bridges, one over the Main, the other over the Rbine, the firlt of which is taken away fince, but the other remains in the fame Station. The Elector of Mayence is the firft in Rank of the Electoral College, and has his Place at the Emperor's right Hand in all publick Affemblies. But his Territories are not fuitable to his Dignity, being far lefs than thofe of Cologne and Treves; befides that, they lie fattering in the Palatinate and Franconia However his feizing the City of Erfurdt has been no fnall Addition to his Power; where he has built a Cittadel on St. Peter's-Hill, which ferves for an Inlet into Tburingia.

If. From Mayence we continued our Voyage up the Maine to Franckfort, an Imperial City, call'd TrajeCTum ad Mcenum, becaufe the Franks ufed to pafs and repafs here, whilft they made War upon the Gauls, and to diftinguifh it from Franckfort upon the Oder, an Univerfity belonging to the Elector of Brandenburgh. The City is very large, divided in two by the River, the leffer of which is called Saxon-Houfe, joined to the other by a fair Stone-Bridge, fupported by twelve or thirteen Arches. The Advantage of the River Main, which paffes by Bamberg, Scbweinfurt, Wurtzburg, and other Places, and is join'd by the River Tauber, and others of lefs Note, together with its running into the Rbine, renders this City very commodious for Trade, as may be feen at the Time of the two great Marts kept there every Year, in March and September, when there is an incredible Concourfe of People of all Nations, who buy and fell their Commodities, but efpecially Horfes and

Books, though at other Times the Bookfellers have little Bufinefs here.

In Saxon-boure is a Palace, belonging to the Knights of the Teutonick Order, which is a Sanctuary for Debtors and Criminals; for fourreenD ays. Abundance of Jews live in, and frequent this Place they are diftinguifh'd from the Chriftians by their Habits, which is a Ruff for the old Ones, a Bonnet for the younger Sort, and a peculiar Head-drefs for their Womèn. We continued our Journey from Franckfort through the Bergftraet, and paffing by Darmfacit, travelled through a very fruitful Country, full of Wall-nut Trees, Vines, Corn, and Tobacco in fome Places. Coming to Heidelberg, we pafs'd the River Neccar or Necarus, rifing in the Sylva Martiana or Black Foreft, and continuing its Current through the Duke of Wittenberg's. Dominions, joins its Waters with the Rbine at Manbeim. It paffes by Sultz, Tubingen, Stutgard, Hailbrun, Heidelberg, and divers other noble and famous Cities.
12. As for the City of Heidelberg, its Situation is betwizt a River and a Ridge of Hills; extending from Eaft to Weft, which makes it unfit for a regular Fortification. It was made an Univerfity, in 1346 : It was taken by the Spaniards in 1620. when the famous Library that was preferved there in the Great Church, was carried to Rome, and added to the Vaticank Library, where I faw it in I664 on one Side of the Gallery, oppofite to that of the Duke of Urbin's. This Church, as well as that of St. Peter, contains many beautiful Monuments of the Palatitue Family and other Perfons of Note. The French have a Church here as well as the Lutberans; the laft of which is call'd the Church of Providence, and the Elector, though a Calvinift, laid the firft Stone of it: The Electoral Family are now Papifts.

The Town-Houfe is remarkable for its Clock, which has feveral Motions, and reprefents feveral Figures of Men, fighting of a Cock, $\mathcal{E}^{\circ} c$. when it Atrikes. The Elector's Stables are near the River-fide, but one half of them has been ruined in the laft German Wars, as well as the Statues that were on the Outfide of the Caftle; which being upon an Eminency has among other Things a very large Tower, formerly call'd Truizkayjar or Defiance to the Emperor, the Name of which is fince changed into that of the Star-fort. Near it is a beautiful Garden, adorn'd with Grotto's; Caves and Water-works. But the moft remarkable of all are the Cellars, replenifhed with Veffels of Wine, of a more than ordinary Size, among which, that commonly call'd the Tun of Heidelberg furpaffes the reft, built in 1664 , containing near 200 Tuns; inftead of Hoops it is made with large Knee Timber, like the Ribs of a Ship, well carved and painted, and fupported by Pedeftals likewife carved. On one Side is a Stair-cafe forty three Steps high, leading up into the Gallery, which is on the Top of this great Veffel.

There is a folitary Place not above a Mile from Hei. delberg, where you fee three very fine Springs come forth out of the Mountain, and after they have fill'd five Ponds, and paffed through three Cafcades or Falls, carry fo ftrong a Stream through the adjacent Plains, that they turn four Mills within a fmall Diftance one of another. It is call'd the Wolfs Fountain, from a certain Princefs, who, as they fay, was torn to Pieces near this Place by a Wolf. At Heidelberg I was vifited by two Englißmen, Mr. Villers and Timotby Middleton. Thefe belonged to a certain Monaftery call'd Lobensfeldt; poffeffed formerly by the Fefuits, but befow'd fince upon the Engli/h, who, to the Number of about an hundred, leaving their Native Country, in 166 r , fertled themfelves with their Families in this Convent, a few Miles from Heidelburg. They call'd themfelves Cbristian Feres, maintain'd a Community of many Things, did not cut nor fhave their Beards, and obferved many other Ceremonies enjoin'd in the Old Teftament. Their Head was then one Mr. Poole of Norwich.

Whillt I was at Heidelberg, I took a Turn to Spires, and afterwards to Maabeim. The firft (fuppofed to be Urbs Nemetums of the Ancients') is fituate in a Plain near
the Weftern Banks of the Rbine. The Swedes, in the laft German Wars, demolifh'd it. The Epifcopal See is under the Juridiction of the Archbifhop of Mayence; it is well built, and has feveral good Churches. In the Cathedral, which is beautified with four large Towers, the Roman Catbolicks, Lutberans and Calvinifts preach in their Turns at different Hours. It is very populous from the the vaft Concourfe of People which attend their Law Suits here. The Imperial Chamber, which was by Maximilian eftablifh'd at Worms, being fince removed to Spires, in which, not only private Caufes, but alfo the Differences betwixt the Princes of the Empire, are determined without Appeal. Manbeim lies at the Conflux of the Rbine and Neccar, which, from a Village, is in a few Years encreafed to a Town, with large fair Streets, walled about and defended by a very ftrong Caftle or Fortrefs. I faw the Model of a Palace the Elector is building, and in that Part which is already built, are many good Pictures, and among the reft, a Landfkip, with the Hiftory of the Swifs Confederacy.
13. In our Way from Heidelberg towards Nurenberg, we travel'd along the Neccar in rocky Ways to Mojpach; the fecond to Poxberg, where we faw nothing but an old Caftle ; and the fame Day came to Merkentbal, or Mergentbeim, the Refidence of the Grand Mafters of the Teutonick Order. It is a very well built Town, with a handfome Piazza, which has a Fountain in the Centre, and a Statue of one of the Grand Mafters of this Order, with a long Corridore from the Palace. This Order took its Rife under the Emperor Frederick I. who, in his Expedition againft the Holy Land, being accompanied by many Gentlemen of Germany, in Emulation of the Knights Templars, entred into an Order, which being approved by Pope Celeffine III. they waged afterwards War againft the Pagans inhabiting Prulla and Livonia, and fubdued them; of which they remain'd Mafters, till they were at firtt difpoffers ${ }^{3} \mathrm{~d}$ of thefe Countries by the Poles, and afterwards by the Swedes; fo that there is nothing remaining now of this Order, but a few Commanderies in Germany. They wear a plain black Crofs on a white Mantle ; and the Dignity of Grand Mafter (who takes Place of all the Bifhops) is generally beftow'd upon one of the firft Rank among the Princes of Germany.

As we pals'd by Lauterbach, we faw a Church, a very noble Structure, on the Top of a high Hill, where the Pilgrims perform their Devotions in great Numbers. The next Place we came to was Rotenberg, an Imperial City, fituate near the Head Spring of the River Tauber; which, after it has pafs'd by Rotiengen and Landen, falls into the Main near Wertbeim. We lodg'd that Night at Burgperner, paffing the next Day by Scbantzbach, came before Night to Nurenberg. This City may very well claim the Prerogative of being the faireft in Germany; molt of the Houfes being built of Free-ftone, very high, and many of them painted on the Outfide, and adorned with gilded Balls on the Top; they are generally fix or feven Stories; and though the City is at a good Diftance from any navigable River, and fituated in a barren Country; yet is it very populous, the Induftry of the Inhabitants being fuch, as to be accounted the beft Artificers in Germany, in Steel, Brais, Ivory, and Wood, which creates a vaft Trade here, and retains it.
The three chief Churches are, the Hoppital Cburch lately built; that of St. Larerence, which is famous for its Bignefs, with two Steeples in the Front; and that of St. Sebald, which excels the reft. Here you fee a wooden Crucifix fo carved, as to be valued at an exceffive Rate: Without the Church is another of black Wood. In fhort, as the Lutberan Religion is exercifed here in its full Pomp, fo this ftately Church, and efpecially the Pulpit, which is excellently carved and gilt, may challenge one of the firft Places among thofe of that Religion. Every Morning Half an Hour is fpent in this Church in reading certain Paffages out of the Scripture by the Prieft, before he preaches to the People. The Senate-Houfe is worth the Notice of any Traveller; the Hall is very fpacious, and the Chambers lofty, and adorn'd with many good Pictures,
the Floor being paved with Stones gilt, and internix'd with feveral Colours. In one of thefe Chambers you fee the Picture of moft of the Great Perfons of Germa$n y$, that were entertained in the Halls; another of the Three Brothers of Saxny ; an Elephant painted to the Life; a Piece of St. Fobn, a nother of St. Mark, and two more of St. Peter and St. Paul, both done by $A l$ bert Durer ; but that of Adom and Eve, by the fame Hand, exceeds all the reft, with this Infcription:

## Albertus Durer Alman faciebat pof Virginis partum, I50\%.

There is alfo another very rare Piece, of St. Luke drawing the Picture of our Saviour, and the Virgin Mary. As you enter the Shambles, you fee a large Ox carved in Wood, and painted over, with this Infcription:

Omnia babent ortus fuaque incrementa, fed ecce
Qucm cernis, nunquam Bos fuit bic, Vitulus.
The Caftle of Nurenberg is feated upon a Hill. The Emperor's Picture, his Chapel, a very fine Well, and other Pictures of the Electors, are very remarkable. They fhew'd us alfo the Armour of Hebbele van Gailleingen, a famous Sorcerer in thofe Parts, and the Print of his Horfe's Feet in the Wall of the Caftle; from whence, as they tell you, he leap'd with his Horfe over the Town Ditch. They were then bufy in making a new Fountain; I muft confefs, that the Brafs Statues intended for it, were excellent Pieces: The Sea Horfes were of a very large Size, and the Sea-Nymphs exceeded the ordinary Stature of Women: The Statue of Neptune, defign'd to be fet on the Top, was above ten Foot high.

The fmall River Pegnitz paffes through the City, near which are feveral Stone Bridges; below it joins with the River Rednitz, that unites its Waters with the Maine at Bamberg, which laft falls afterwards into the Rbine. The River Rednitz has its Rife at Weifenburg, at no great Diftance from the River Altmul, which falls into the Danube not far from Ratisbon. This Conveniency induced Cbarles the Great to endeavour a Communication between the Rbine and the Danube ; but after he had advanced about two German Leagues in this Work, his warlike Employments, and fome other Difficulties, made him give over his Defign.
14. Not above four Leagues from Nurenberg is $A l$ torff, a Town under their Jurifdiction, with an Univerfity erected in 1623 . They have here a very handfome Phyfick Garden, containing above 2000 Plants. The Anatomy School is not very large, yet has feveral Skeletons, of a Hart, of a Horfe, of a Man, and of a Bear, bigger than a Horfe; befides fome very ancient Pictures, as that of Mofes, and of a Ninivite. Dr. Wagenicyl (whofe Brother travell'd with me from Heidelberg) Profeffor of the Civil Law and Hiftory, fhew'd me alfo a good Collection of his own, of Rarities and Coins, which he had gather'd in his Travels through Europe. In the Univerfity Library I faw a fair Hortus Eyfetenfis, and Youngerman's Collection of Plants, by his own Hands.
Leaving Nurenberg, we paffed through Newmark in the Upper Palatinate, belonging to the Elector of Bavaria; and the next Day by the Way of Heinaw, fubject to the Duke of Nervburg, to Ratisbon, anciently called Augufta Tiberii, and Colonia Quartanornm, from the Fourth Italick Legion, which had their Quarters affigned them here, as being the chief Place belonging to the Romans on thofe Frontiers. Some are of Opinion, that Tiberius fettled a Colony here in the Year of our Saviour's Paffion; but it owes its chief Increafe to the Emperor $A r$ nulpbus. Near it the River Regen falls into the $D a$ nube, whence the Germans give it the Name of Regensburg. It has a Bridge of Wood below the Town, and another of Stone, the faireft that is to be feen upon the Donube, being fupported by fifteen Arches. It is an Imperial City, and tolerably well fortified, and has many ftately Buildings, both private and publick. The Cathedral of St. Peter is a very fair Edifice, on the

## Chap. V. through Austria, Bohemia, Moravia, Goc. 749

South-fide of which you fee the Picture of St. Peter in a Boat, and on the oppofite Side the Apoftle's firft Miffion. In the Piazza ftands a fmall but very neat Church ; the Convent of St. Paul, another of St. Emerammus, Bifhop of Ratisbon, and a celebrated Saint in thofe Parts: Albertus Magnus, who was alfo Bifhop of Ratisbon, has made no fmall Addition to its Fame. But the chief Glory of this Place is the Diet, or General Affembly of the States of the Empire, which is call'd together here. Upon this Occafion the ViceMarhal is obliged to take Care that Lodgings are provided for the Perfons that are to appear there; that Provifions may be brought thither in Plenty, and fold at a fet Rate; that the Place of the Affembly be adorned fuitable to fo great an Occafion, and the publick Safety be not violated.
In this Place I entred that famous River the Danube, which beginning to be navigable in Suabia, paffes by Donawert, Newburg, and Ingolfadt; it is increafed by the River Licus, or Leck; by which the Commodities of the famous City of Augsburg are tranfporied into it. From Regensburg we pass'd the firft Day to Tbonarefiein, (Danube-ftone) where is a Caftle feated upon a high Rock, and thence to Pfeter, famous among the Ancients, by the Name of Vetera Castra, now an inconfiderable Place. The Boats made Ufe of upon the Danube are generally flat bottom'd, and broad at the Head and Stern ; there is an Apartment for Paffengers in the Middle, and they have very large Rudders, the better to command the Boats where the Current is fwift. The next Day we paffed by Straubingen, a wall'd Town belonging to the Elector of Bavaria; and the fame Afternoon by Swartz, where we faw a Church upon a Hill, much frequented by Pilgrims; we lodg'd that Night at Deckendorff, near which the River Ifer, or Ifara, after having paffed by Land/but, Frifing, and Munchen, (the ordinary Refidence of the Elector of Bavaria) falls into the Danube.
T'bur day, being November the I5th, we pafs'd by Wiffoven to Paffar, Pafforia, or Boiodurum, a handfome City in the lower Bavaria, formerly known by the Name of Caftra Batava among the Romans, who had fettled a Colony there. It is compofed of three Towns, viz. Illfadt, Paffow, and Instadt, and feated at the Meeting of the three Rivers, the Inne, the Danube, and the Iltz. It has feveral very fair Churches, amongft which that of St. Stephen exceeds the reft. The Bifhop's Refidence is a Caftle built upon a Hill; his Revenues are very confiderable, Part of which arife from the great Lead-Mine at Bleyberg in Carintbia. It was, not many Years ago, almoft laid in Afhes, by an accidental Fire, and as moft of the Streets have been rebuilt fince after the Italian Manner, fo this City may now juftly claim to be inferted in the Number of the ten confiderable Cities upon the Danube, viz. Ulm, Ingolfadt, Ratisbon, Paffaw, Lintz, Vienna, Presburg, Strigonium, Buda, and Belgrade; the eight laft of which I had the Opportunity to fee, before the End of my Journey.

Juft by a Wall, oppofite to the Great Church at PafSarw, ftands a very large Head cut in Stone, the Mouth being two Spans wide, and the reft proportionable. In the River Iltz, which comes from the North, they find Abundance of Pearls: And the noble River Inne coming from the South, and paffing by Infprung, is augmented by the River Saltz, (upon which ftands the City of Saltzburg) difcharges itfelf with great Force into the Danube, being the largeft Stream that hitherto had joined that River. The River Inne rifes among the Alps in Tyrol. The 16 th we arrived at Liniz, the Capital of the Lower Aufiria, not fo confiderable for its Bignefs as Neatnefs, the whole Town being built of a white Free-fone, and the Market-place very facious and handfome. The Caftle lies upon a Hill, and is fortified after the modern Way. It has a Bridge alfo over the Danube. When Solyman the Magnificent befieged Vienna, this was the Rendezvous of the Imperial Army. It was befieged by 40,000 Peafants in Ferdinand II's Time but relieved by Pappenbeim. Somewhat below Lintz, the River Draun, which rifes out of the Genmunder Sea (or Lacus Felicis) joins irs Current with the Danube.

The $177^{\text {th }}$, we pals'd by Embs, or Anifa, fituated up-
Vor. II. NO 120.
on the River Anifus or Onafus, which rifing near the Frontiers of Saltzburg, and being augmented by the River Saltza, upon which ftands Maria Cell, noted for Pilgrimages, divides the Higher and Lower Aufria, and then falls into the Danube. Hereabouts ftood the ancicent Lauriacum, a Roman Garrifon, where a great many Roman Coins and Antiquities are found. On the North Side of the Danube we faw a Seat of the Earl of Leicbtenfeyn, near the Village of Greim. Not far below this Village are two dangerous Paffages in the Danube, called the Strudel and the Wurbel; the firft is a Place where the River being forced among the Rocks; fome under, fome above Water, the Waves are broken, and render the Current rapid and troublefome, requiring a great deal of Skill to pafs through the Ledges of the Rocks, efpecially when it is low Water ; the fecond is a Kind of Whirlpool, where the Current being forcibly repel'd by a great Rock, turns round with much Violence. Hard by, on the Top of a craggy Rock, you fee a large Crofs, and at the Foot a Chapel dedicated to St. Nicbolos, who being look'd upon as Patron and Protector of fuch as have pafs'd fafely this Way, a Boat comes thence to receive fuch Prefents as the Paffengers are willing to give. We took up our Lodgings this Night at Ips, on the South-fide of the Danube ; oppofite to which is Befenbeug or Usbium Ptolomei. Two German Leagues below lps lies Pecblarn, believed by fome to be the old Arlape, where the River Erlaph falls into the Danube. A Mile and a half lower you fee Melcke, formerly the Refidence of the Marqueffes of Aufria, which was thence removed, firft to Leopold, and afterwards to Vienna. The City is built along the South-fide of the River ; the Monaftery of the Benedicitines is feated upon a high Hill; has very great Endowments, and many Monuments of great Perfonages, and among the reft the Tomb of St. Colman. We dined at Steyn, where is a ftately Bridge over the Danube. Near to this lies Crembs, a walled Town, and on the oppofite Side Maitern; not far from whence is the rich Monaftery called Ketwein.- A little beyond it the River Traifn, or Tragifama, comes from the South. Afterward we pafs'd by the famous Town of St. Pold; and taking up our Quarters that Night at Sc. Eldorff, went the next Day by Tbuln, Stockerau, and Cloister Neuburg, fafely to Vienna.
15. Vienna, called Wien by the Germans, and Beach by the Turks, is the capital City of all Aufria, fituate in $43^{\circ} 20^{\prime}$, differing not much from the Latitude of $P a$ ris, the Seat of the Archdukes of Auftria and the German Emperors. According to ancient Geographers, this City belonged to the Upper Pannonia; the Limits of Pannonia extending as far ha Kalemberg, or Mons Cetius, about fix Miles to the Weftward of Vienina; beyond which all that lies more Weftward, betwixt that Mountain and the River Inne, or Oenus, which falls into the Danube at Paffaro, was anciently called Noricum.

Several of the Roman Emperors, and efpecially Marcus Antoninus Pbilofopbus, have made themfelves famous by their great Actions againft the Marcomanni and Quadi; the laft of which, after he had routed thefe Nations, fell fick at Carnuntum or Petronel, and died at Vindobona now Vienna, fituate upon the South Shore of the Danube; which is the Reafon, that at feveral Times, but efpecially in 1662 , many Romon Antiquities have been found hereabouts; the laft was a Kind of Coffin containing hard Earth and Bones, with a fmall Gold Coin, a Glafs Urn in a Brafs Cafe, an Iron Knife like thofe ufed anciently in Sacrifices; a little Roll of pure Gold, clofed with a Golden Cover at both Ends, with an Infcription; which, according to Lambecius's Opinion, was in old Pannonian CbaraEters. Not far from the Monument itfelf, which was under the Foundation of a Wall near the old Palace, they found a Head in Brafs, a Patera, Lamps, Lachrymatories, and other Veffels of the fame Metal, and a Copper Coin of Antoninus Caracalla.

This City is not feated upon the Channel of the $D a$ nube, but only upon a Branch thereof, of which there are feveral that make divers fmall Inands. - The River Wien (which has imparted its Name to the Place) pafles by the Eaft-part of the City, and below it falls into the

Danube

Danube: Its Floods ofien do confiderable Mifchief to the City, though at other Times it is fo fhallow and narrow, that one may ftep over it: It divides Part of the Suburbs from the Body of the City, the former are very fpacious and full of fine Houfes, Gardens, Walks, and other Conveniencies. The Body of the City is well fortified, being feparated from the Suburbs by a fair Efplanade, defcending in an open Ground for 300 Paces. Its Fortifications are after the modern Way, composs ${ }^{\circ} \mathrm{d}$ of ten Baftions to the Land-fide, and a very deep Ditch, which though it be kept continually dry, for Fear the Water fhould fpoil the Cellars, which are very deep here, yet they can let the Danube into it at Pleafure. It has two Baftions toward the Water, on the North-fide of the Town. The Baftions are very large, the whole Fortification of a great Breadth, well faced with Brick, and edged with Free Stone. Befides, which it has an old inward Wall, built with the Ranfome of our King Richard I. who was detain'd Prifoner there, in his Return from the Holy War.
The whole Circumference, Suburbs and all, takes up a great Tract of Ground; but the Fortifications of the City don't exceed three Englijh Miles, but is exceeding populous, nothing being more deligheful than to fee Turks, Tartars, Greeks, Tranfilvanians, Sclavonians, Hungarians, Croatians, Spaniards, Italians, Frencb, Germanss Polanders, all in their own Country Habits. It has fix Gates, viz. I. The Stuben Gate to the Eaft. 2. The Carintbian Gate to the South. 3. The Cafle Gate. 4. The Scotch Gate. 5. The Nero Gate. And, 6. The Red Tower Gate, to the Northward, leading to the 'Bridge over the Damube; befides which there is a Port by the Emperor's Palace, towards the Water-fide: There is a certain Nunnery in the Town, call'd Himmel Port, or the Gate of Heaven. The five firft of thefe Gates are vaulted through the Town-Wall, with convenient Draw-Bridges to pafs the Ditch. The fixth is a Paffage under a Tower, towards the Bridge of the Danube:' For as that River runs through a low Country, it divides itfelf into feven fmall Channels, which are join'd by as many Bridges made of many thoufand Trees laid clofe one to another. There is a very remarkable Bridge at Vienna call'd the High Bridge, made by the croffing of two Streets by equal Angles; but the Ground in one Street being equal in Height to the Tops of the Houfes of the other, they have been forced to build a Bridge or Arch in the lowermoft Street, to let the upper pafs over it. For the reft, the Houfes here are of Stone, for the moft Part fix Stories high, and flat-roof'd after the Italiain Manner.; the Streets are of a middle Size, neither broad nor narrow: Their Cellars are worth a curious Traveller's Obfervation ; in fome of them I found four Cellars one under another, well arched, with two Pair of Stairs to go into them. In fome I obferved an open Space in the Middle of each Roof, for the Reception of the Air, and from the loweft a Tube, to convey the Air into it out of the Street, much after the fame Manner as they do in the Mines.

I can't here pais by the Encomium Eneas Sylvius gives of Vienna; viz. Tbat it bas Palaces fit for Kings, and Cburches wobicb Italy may admire: Which is much better verified now. For the Imperial Palace is a truly noble Structure, and excellently well furnifh'd; it has two Courts, one very large, the other lefs, where the Emperor's Lodgings are. Over the Gate you fee no other Infcription but the five Vowels in Capital Letters, viz. $A, E, I, O, U$; which fome have interpreted thus: Aufric Eft Imperare Orbi Univerfo; though I am apt to imagine, that this is not the true Senfe of thefe Letters. There is befides the two before-mentioned Courts, another fmall one, where are the Lodgings of the Pages; where I took Notice of a large rough 7 fapis Stone, of about nine Fcot Diameter, which lay unregarded upon the Ground, though a little Piece that was polifhed, fhewed that it was full of beautiful yellow, red, black, and white Veins: It was a Prefent of the Archbifhop of Salizburg, in whofe Territories are noble Quarries, and Stones of feveral Sorts. Next to this the Palace of the Count de Draun, and that of Count Rotbal, lately built; with feveral others, are very confiderable. This City
has alfo noble Churches, and rich Convents; as for Inflance: Thofe of the Carmelites, of the Francifcans, of the Benedidtines, and of St. Nicbolas : In the Church of the laft I faw the Tombs of Count Strozzi and Cardinal Harracb. The Convent of the Dominicans is a very fair Structure: The Church of the Auftin Friars is very large, and has in the Middle a Chapel, the Model of which was taken from the Holy Houfe of Loretto; the Top being adorn'd with many Colours taken from the Turks and Tartars, various of which were not fquare, but Efcutcheon-wife, fome full of Circles, with Halfmoons within them.

The Jefruits Colleges are all very fair and fpacious here; the Front of their College, which faces the Hiazza, has a Statue, or Column of Copper, belonging to it, which ftands in the Centre of the Market-place, refting upon a Pedeftal of white Stone, with four Angels, Efcutcheons, and the bleffed Virgin on the Top: It has alfo divers Infcriptions, by which the Emperor dedicates AuAria to her Patronage and Protection.

When I came into the Sootch Convent, it raifed no fmall Curiofity in me to know how the Scotch became fo confiderable here, till I was inform'd, that Vienna had been many Ages ago a Receptacle of the Scots, in their Pilgrimages to ferufalem; and that Colman, a Saint in high Veneration in thofe Parts, was not only a Scotchman, but alfo defcended of the Blood Royal of Scotland, and barbarouny murthered by the Peafants at Stockerou, four German Miles from Vienna; who hung his Body on a Tree, where it remained uncorrupted a Year and a half, and after many Miracles was buried at Stockerou, and from thence removed firt to Melk, and afterwards into Hungary, where it was preferved for a long Time after at Alba Regalis, or Stulweiffenburg. The Church of St. Peter is highly efteem'd for its Antiquity, being the oldeft in the City, and built in the fame Place where ftood before the Altar dedicated to Domitian, called Ara Flaviana.
In the Cathedral of St. Stepben are many fumptuous Monuments of Princes, and other great Perfons: It is a very noble Fabrick, but none of the higheft, by Reafon of the Paintings of the Glafs Windows; it is covered only with Tiles of Wood, yet makes no ill Shew. But what is moft worth Obfervation, is the Steeple and Spire, high, large, ftrong, and nobly built: It has on the Top, inftead of a Weather-cock, a Crofs under a Star and Half-moon, well gilded : This Star and Half-moon was, as they relate, put upon this Spire by Order of Solyman the Magnificent, who when he had befieged the City, offered to fpare the Cathedral, provided they would fet upon the Top the Turki/J Arms, viz. the Half-moon and Star ; which the Citizens comply'd with. This Spire has the largeft Crockets I ever faw, being above a Yard long, and adorned with Foliage Work. The Steeple is accounted 465 Foot high : I went up half Way by $33^{8}$ Steps; whence I could fee the Hamburger Hill, near Prefourg, and the Courfe of the Danube through a great Part of Aufria.
In the Room where I was, they had wooden Hammers, which they make Ufe of from Good-Friday till Eafter-Sunday, the Ufe of Bells being forbidden during the Time our Saviour was in the Grave. In the latt Siege the Crefcent on the Top of the Steeple was fhot down, and has not been put up again there. Near one of the Doors of the Church is a Stone fix'd into the Wall, which they believe to be one of thofe wherewith St. Stepben was ftoned to Death: It looks like a Pebble, and is very fmooth, by the frequent Rubbing of the People, who touch it with their Fingers when they go to Church.
I was hewn a nother Stone, which they faid, was one of thofe that kill'd St. Stepben in St. Saturnine's Church, at Thouloufe in France. Befides many Monuments of great Perfons, which are in the Church of St: Stepben, there are alfo feveral Tombs of Men famous for their Learning, as of Fob. Faber, Bifhop of Viemna; Fo. Cufpiviamus, and Sebafianus Tengnagelius, the laft of which, according to the Infcription, was verfed in fifteen Languages.
The Univerfity of Vienna may alfo challenge the Preference before moft others, in Refpect of its Antiquity, the Number of Students, their Accommodations and Privileges, Albertus the Third is reputed the Founder,

# Chap. V. through Austria, Bohemia, Moravia, $\theta_{0} c$. 

above 300 Years ago; who diftinguifh'd the Students into four feveral Divifions or Nations, each of which, befides the General Conftitutions, had their peculiar Rules and Privileges; they were Auftrians, Nations of the Rbine, Hungarians, and Saxons.

To the Auftrian Divifion belonged thofe of Friuli and Irent, all Italy, and other Provinces beyond the Mountains. Under the Nations of the Rbine were comprehended the Suevians, AlJatians, Franconians, Heflians, and the other Provinces, France, Spain, Navarre, Holland, and Brabant To the third Clafs of the Hungarians, are joined the Bobemians, Moravians, Sclavonians, and all that ufe the Sclavonian Tongue, as alfo the Germans. To the Clafs of the Saxon Nation, belong the Saxons, Weftpbalians, Tburingians, Mifnians, Brandenburgers, Pruffans, Livonians, Lufatians, Pomeranians, with the Ultramarine Kingdoms of England, Scotland, Ireland, Sweden, Norway and Demmark.

As in thefe feveral Divifions all Europe is comprehended ; fo it muft be confefs'd, that there are in this Univerfity Students of many Nations, who fometimes, when any Differences arife among themfelves, ftand up each for their refpective Divifions; but are fure to unite together, if any Contentions happen betwixt the Students and the Citizens, or Jews. As for their natural Philofophy, they have not yet attain'd to our new Way of explaining Things, by Corpufcular Morions, and Experimental Philofophy; though fome of them were very inquifitive after our Royal Society, as well here as at Altorff; and I have been folicited even from Caffovia in Upper Hungary, to fend the Tranfactions of our Society thither : A manifeft Sign, that if they were once lead into the Path of our modern Philofophy, they would without all Queftion follow our Footfeps. For the reft, they are well verfed here in Languages, Hiftory, and Antiquity.

I remember I was prefent here at a publick AnatomyLecture of a Woman, which lafted nineteen Days perform'd by Dr. Wolfftregel, a learned Phyfician. I obferved the Pyramidal Mufcles to be very plain and large, and the Uterus of a Size larger than ordinary ; the Cartilago Enfiformis was double, and the Lungs very black. The Motions of the Eye were very nicely fhewn by an artificial one of Ivory, and another of Paftboard, contrived and made by himfelf; and after the Diffection of the Mufcles of the Pbarynx, Larynx, Os Hyoides, and the Tongue, he reduced them with an admirable Dexterity into their proper Places, to difcover their natural Pofition. The Anatomy-Theatre was capable of holding a hundred Perfons.
16. This Univerfity has, among other Privileges, the Power of Life and Death, in refpect of their own Members. But what gives the greateft Luftre to this famous City is the Refidence of the Emperor Leopold, born in 1638. His eldeft Brother Ferdinand, King of the Romans, dying before his Father Ferdinand III. Leopold fucceeded in the Empire, and married Margareta In fanta of Spain, the Daughter of Pbilip IV. He is the Darling of his People, and equally beloved both by the Soldiery and Clergy. He is of a grave, but graceful Afpect, and has the long Chin, and remarkable Lip of the Family of Auftria. He is well verfed in the German, Italian, Spanifh, and Latin Languages; and as he takes Delight in Reading, fometimes for feveral Hours together, to he is always forward in countenancing learned Men. He alfo delights in Mufick, and frequently compofes himfelf; which makes all the Church-men, and others, encourage Mufick and Muficians. The Emperor himfelf has excellent Mufick, both Vocal and Inftrumental, in his Palace, and fome of his own Compofitions are play'd in his private Chapel, where eight or ten Pages of the Emperor, Earls Sons, ferve at the Altar, with white Torches in their Hands, whilft the Eunuchs are finging.

His Recreations abroad confift chiefly in Hunting, efpecially the wild Boar. The young Nobility formerly ufed to encounter a wild Boar, fometimes a fingle Perfon alone, but fince the unfortunate Accident that happened to Count Nicholas Serini, who was kill'd by one of thofe Creatures, the Huntfmen are always at Hand, when
the Boar is at a Bay, that the Emperor, or others there prefent, may the more fafely kill it. There are grear Numbers of thefe Creatures hereabouts, their Flefh being a common Difh at Vienna, and of a delicious Tafte; for they feed upon Acorns, Beach-maft, and Chefnuts, and upon the Sprouts of Broom, Juniper, and other Shrubs, as alfo upon the Roots of Fern; they will fometimes leave the Forefts, and range in the Corn-fields and Vineyards. It is the Huntiman's Bufinefs to keep a watchful Eye over them; and they are fo fkilful in that Game, that by the Tread of their Feet, and canting their hind Feet out of the Track of their Fore-feet, they will tell you, whether it be a wild Swine or tame Hog; nay, whether it be Male or Female, Young or Old, Lean or Fat, $E^{2} c$.

The Emperor,' as he is a good Huntiman, fo he takes a great Delight in Horfes: He has a very fine Stable fill'd with manag'd Horfes, brought from Turkey, Tartary, Poland, Iranfylvania, Germany, Bobemia, Hungary, and Naples. It was fomething furprizing to $\mathrm{me}_{\text {s }}$ to find in an inland City fuch confiderable Magazines of Naval Stores, as I found at Vienna: Thefe are employ'd in the Fleet upon the Danube againft the Turks; being a kind of Gallies, carrying great Guns, and a confideras ble Number of Soldiers, befides Seamen. They are laid up behind one of the Baftions of the City, and fome of them are kept at Raab and Comorra.

The Imperial Court was at this Time compofed of many wife Counfellors, great Generals, and refined Courtiers; fuch as, Eufebius Wenceflaus, Duke of Sagan. Prince Lobkorwitz, Lord High Steward, chief Minifter and Favourite of the Emperor, being the Perfon who difcovered the late Hungarian Revolt, for which Count Peter Serini, and Nadafti, paid with their Heads. Henry William Count Stabrenberg, Marhal of the Court, Fobn Maximilian, Count Lamberg, Lord Chamberlain, who has near a hundred Gentlemen of the Bed-Chamber under him, all Barons and Counts: They wear a Golden Key upon the Breaft, as the Grooms of the Bed-Chamber wear one of Steel : Two of each attend every Night. Gundaker, Count Dietrichstein, Mafter of the Horfe. Count Zinzendorff, chief Hunts-Mafter. The Count of Averberg, chief Faulconer, who has twelve others under him. . The Count de Paar, Poft mafter-General. Leopold Wilbelm, Marquis of Baden, Captain of a hundred Hartbires, who are a kind of a Horfe-Guard of the Emperor's Body, arm'd with Piftols and Carabines, without the City; but within, the Foot carry Launces and Javelins with broad Points. Francis Auftin, Count Walleftein, Captain of a hundred of the Emperor's Foot-Guard of his Body. Sixty Pages, moft of them Counts and Barons. Raymund Count de Montecuculi, who has fignaliz'd himfelf in Po land, Hungary, and Germany; the Emperor's General, Prefident of the Council of War. Next to him was Count Soucbes, a Native of Rocbel; and his Son Governor of Leopolfadt. Count Lefly, Nephew to Count Lefly, who was fent in the Quality of Ambaffador to the Port from the Emperor, is alfo look'd upon as one of the beft Commanders the Emperor has: Befides a great many other brave Officers, who have fhewn their Valour upon a thoufand Occafions; fo that though the Emperor never takes the Field in Perfon, yet has he been very fuccefsful in his Wars, efpecially againft the Iurks. The Courts of both the Empreffes are filled with Perfons of great Worth. Among the Clergy, and Men of Learning (of which the Emperor is a great Lover,') the 'Fefuits, Moelner, and Boccabella, are the chiefeft. And to fum up all, it is certain, that Vienna is the moft likely Place for any Foreigner, whether Soldier or Scholar, to make his Fortune, provided he be of the Roman Catbolick Religion.
17. It will perhaps be furprifing to fome, that upon the utmoft Limits of the learned Part of Europe, the Emperor is Mafter of a Library, which both for the Number and Value of Books, gives Way to no other Library in Europe. The wort is, that the Receptacle is not fuitable to fo valt a Treafure; for though it is divided into eight fpacious Rooms, in which the Shelves ftand fo clofe, that there is farce an eafy Paffage left
betwixt
betwixt them, yet many Books lie upon the Ground. The Manufcripts have their peculiar Places, diftinct from the printed Books, and are divided into fix different Claffes, viz. Theological, Yuridical, Medicinal, Pbilofopbical, Hiforical, and Pbilological. The Manufcripts of Hebrew, Syriack, Arabick, Turkih, Arnienian, EEtbiopick, and Cbinefe Books, are without Comparifon the beft Collection that is to be found.

The choiceft Books of which this Library is compofed, (which has been collecting ever fince the Time of Maximilian I.) are : The famotis Library of Buda, of Mattbias Corvinus, Son of Huinniades. The choice Library of Wolfgangus Lazius; as allo 3000 Books of Fobannes Sambucus. Augerius Busbequitis made a confiderable Addition to the reft; and in his two Turkey Embaffies, bought a great many choice Greek Manufcripts at Conftantinople, which are mark'd thus with his own Hand, Aug. de Busbeck. emit. Constantinopoli. There was alfo a confiderable Number added out of the Library of the learned Fobannes Cufpinianus, the Emperor's Library-keeper: And the noted Libraries and Mathematical Inftruments of Tycho Brabe, Kepler, and Gafjendus, were purchafed for it.

But the greateft Addition of all was made by that noble Library of Count Fugger, which confifting of 16,000 Volumes, was purchafed by Ferdinand the Third. Befides which, the learned Peter Lambecius, the prefent Library-keeper, Hiftoriographer, and Counfellor of the Emperor, has brought hither the choiceft Books out of the Library of Infpruck; and himfelf is Mafter of a moft excellent one of his own, which will in Time be added to the Imperial Library. I had it from his own Mouth, that there were at leaft 80,000 Volumes in this Library, which are encreafed by the Acceffion of other Books, which are purchafed, efpecially in the Turki/b Dominions, where the Emperor keeping a conftant Refident, no Opportunity is let nip to buy up any good Greek Manufcripts in their Convents. I remember myfelf, that when I was at Lariffa in Thelfaly, the Refident, Seignior de Cafa Nora, was continually enquiring after Greek Books in their Monafteries, the prefent Emperor fparing no Coft to purchafe them; and were it only for the Number of Books, it is certain, that by the Right the Emperor has of having two Books of whatever is printed in Germany, this Library might foon increafe to a vaft Number.

As Lambecius conferred on me a thoufand Obligations, fo he was fo kind as to give me a Sight of all the rare Copies in this Library, among a vaft Number of which, I took an Account of the following: A Letter in the Cbinefe and Tartarian Language, from the Emperor of Cbina, to the prefent Emperor Leopold, weaved in a.very fine Roll. Another Roll written in an unknown Character, but moft refembling Greek. A Book in the Runick Language. A very fair Manufcript of Ptolemy, the Maps colour'd. A Copy of Livy, the moft ancient Manufcript extant, a thoufand Years old, in large Letters, without Diftinction of Words or Sentences, brought hither from the Infpruck Library. A very fair Manufcript in Greek of Diofcorides, 1 roo Years old, in large Characters, without Diftinctions of Words or Accents; the Plants finely painted; with the Pictures of Diofcorides, Galen, and fome other noted Phyficians. Two Books of Geometrical Propofitions demonftrated in the Cbinefe Language; whereof one with Pictures. An old Greek Manufcript in great Letters, without Diftinction of Words or Accents. A Greek Manufcript 1300 Years old, of the Book of Genefis, without Stops or Accents. It contains forty-eight Draughts in Miniature, or Water-colours, relating to the Habits of the Ancients, to the Manner of their Feafting, their Poftures at Meals, Attendance of Servants, and Mufick. Among other Things, the Execution of Pbaraob's Baker is worth Obfervation, his Head being thruft through a forked Piece of Wood, and his Hunds tied behind him. A Book of Painting in Miniature, by Albert Durer; and a Sphere wirh a Globe within it, carved and painted by the fame Hand. A Book of Micbael Angelo; wherein befides many Raricies in Architecture, all the Paintin'gs and Defigns of the Belvedere are feen in Miniature. A very fair Al-
choran in Arabick, with the Turkifb Explication interlined betwixt it. A Bible in the Coptick and Perfian Languages. Lutber's Bible, with many Notes, written by his own Hand. A fair Greek Manufcript of the New Teftament, written with Golden Letters upon Purple 1500 Years ago. A Magical Glafs of the Emperor Rudolpbus. Sixteen thoufand Pieces of ancient Greek, Roman, and Gotbick Medals and Coins, in Gold, Silver, and Copper. They pretend to have two Copper Coints of the Emperor Marcus Otbo. Being willing to add a few Drops to this Ocean, I prefented fome Coins, Intaglia's, and Infcriptions, not to be found in Gruterus's Great Work; which I met with in the remoteft Part of the Emperor's Dominions; which being fhew'd to his Imperial Majefty by Mr. Lambecius, he was fo well pleafed with them, that he not only permitted me the Ufe of what Books I defired, but alfo granted me a free Pafs, in Latin, through the Empire, exempting my Goods from being fearched;-which is no fmall Conve niency, in a Country where a Traveller is to" pafs thro' fo many different Jurifdictions.

After I had taken a full View of this Library, I thought I could not beftow my Time better than in vifiting alfo the Repofitory or Collection of Rarities made by the Care of many fucceeding Emperors; in viewing of which, I fpent feveral Hours; but fully to fet down all the rich and magnificent Curiofities I faw here, is much beyond the Compafs of this Treatife, (the Catalogue which is kept of them taking up a large Volume in Folio) fo I will content myfelf with meritioning only a few of the beft out of a great many, from whence the Reader may be able to give a Judgment of the reft. The Whole is divided into fourteen Cafes or Cupboards.

1. Contains many curious Veffels turn'd out of Ivory, Cups of Amber, Spoons, and other Veffels, of Mother of Pearl, fine Works of Coral, a Galley of Ivory, and two Cups, one turn'd by the prefent Emperor's own Hand, the other by Ferdinand III. Several Cups of the Rhinoceros's Horn. In the 2d; An Elephant with a Cattle, and many other Rarities of Workmanthip on his Back. Two fine Pillars all of Ivory, with Baffo relievo, and other Varieties in Ivory. A. Picture in Oil of Ganymede, by Corregio. In the 3d, An old Man's Head in Oil, by Albert Durer ; vaft Varicty of Watches and Clockwork ; a fine Centaur in Silver. The 4 th, Alfo contains Watches and Clocks; a triumphant Chariot; a Turk of Quality with his Attendance ; a Landfkip and a Cupid, by Corregio. In the $5^{\text {th, }}$ Are Variety of curious Works in Filegree, brought from Spain and the Indies; and a Bafon of Agate finely wrought. The 6 th, contains an excellent Collection of Intaglia, and old Roman Stones, of ineftimable Value for their Workmanfhip and Bignefs. - A large Agate, on which is wrought the ViEtory of Augustus Cefar over the Dalnatians and Panronians; it is five Inches long, and four broad, of a very high Value; befides feveral Heads and Figures cut in Onyx's, Shells, and Sardonyx's; and a Chain with the Heads of the whole $A u$ Arian Family. In the 7 th, Divers Pieces of Mother of Pearl, curiounly wrought. The Head of Maximilian I. in Plaitter-work, with a Lock of his own Hair, and the Twelve Cefars Heads. Another Head, excellently well done in Oil, by Han's van Ach. In the 8th, A Veffel made of one Piece of Chryital, of a Yard and a half high; an Urn; feveral Hands, with other Chryftal Works. The gth, Has a very noble Ewer of Chryftal, and another noble Veffel; many curious Croffes, and other Varieties. The Ioth, Containing five rich Crowns; the Imperial Crozon adorned with precious Jewels, and a large blue Sapphire on the Top. A Model of the Croron wherewith the Emperors are crown'd, much exceeding in Value the Original. A Paragon Diamond, weighing I7 $\frac{1}{2}$ Carats. Several very large Rubies. A Sceptre made of Unicorn's Horn, fet with precious Stone. A Locket made of very large Diamonds. A moft magnificent Sceptre, Globe, Crols, and Crown, valued at 200,000 Crowns. An Opal as big as one's Fift, as it came out of the Mine, with many other very fine Opals, and a very large Emerald. In

## Chap. V. throug $\ddagger$ Austria, Bohemia, Moravia, $88 \%$. 753

the IIth, A Golden Bafon, ufed at the Baptifm of the Aufrian Family. Divers Golden Sceptres, Scimeters, Knives, and other Prefents from the Ottoman Court. Three rich Dog-collars, fent from England, with this Mark DCDC. A great Piece of pure Gold, of the $^{\text {C }}$ Bigners of one's Fift, as it came out of the Mine. Another Piece of Gold Ore, where you fee the pure Gold fhooting forth upon a white Stone ; befides divers other Bafons of Gold, and Veffels of Coral. In the 12 th, Great Store of Veffels of Fafpis, Agate, Lapis Lazuli, Oriental Granates, Cups of Onyx and Sardonyx, one very great one of an Ametbyt, and divers very large ones of Lapis Nepbriticus. In the 13th, Are divers Flowers made out of precious Stones. A large high Veffel of Bobemian Topaz. A Cup made of an Hungarian Diamond. A Piece of Ambergreafe of the Bignefs of a Man's Fift. A very fine Fajpis Stone. A large Agate Stone on the Outfide, and a Bed of large Ametbyts naturally in it in the Middle, which is look'd upon as a great Rarity. In the I 4th, Are many noble Chryfolytes; Jacinths, Oriental Granates, Beryls, and Aquamarines. A very rich Emerald, or a Cup of that Stone ; three great ones having been already taken out, valued at 300000 Crowns. Grear Numbers of Gold Veffels, and rare Figures in Coral; Turkiß Knives, Gauntlets, E®c. fine Wax-works, large Bezoar-ftones; a Golden Medal of the Emperor's Arms, worth 1000 l. Sterling, a Cup faid to be taken out of Solomon's Temple; a moft curious Bafon and Ewer of carved Ivory; King Pbilip 1I. of Spain in Diamond Armour, fet in Gold; a curious Picture of an old Man courting a young Woman, with this Motto :

## Arctum Annulum nè gestato.

'A very fine Crucifix of Pearl; the Buff-coat of Gufavus Adolphus King of Sweden, in which he was kill'd near Lutzen; all the Gofpel written and painted; the Head of King Cbarles I. King of England, in Marble.; Priefts Garments fet all over with Pearls ; an ineftimable Agate Difh, betwixt three and four Spans Diameter, in which you fee in natural Characters $X R I S O S$ : Unto which may be fubjoin'd that mott magnificent Chain of Pearl taken from Count Teckley in the late Hungarian Wrar, as I have been informed fince.

One Day I had the Curiofity to walk up the Hill which lies two Engli/b Miles from Vienna, from whence I had a full Profpect of the City and Country, as far as to the Mountains of Styria, covered with Snow ; and in my Return took a View of the Emprefs Dowager's Houfe without the Town, call'd la Favorita.
18. Two Englijb Miles to the Eatt of Vienna are the Gardens of Rodolphus II. which are fomewhat ruinous now. They confift of an inward and outward Garden, the inward being about 200 Paces fquare, much of the fame Bignefs as the Place Royal at Paris. It has a Cloifter fupported by forty Pillars of white Stone on each Side; and is covered with Copper, as are alfo the Pavilions. In certain other Buildings they keep Lions, Tigers, and other wild Beafts, which breed here. Some fay that Solyman the Magnificent pitch'd his own Tent in this Place, when he befieged Vienna.

At two or three, Miles Diftance from thence, is a Place called Arnols, whither many Devotees go on Pilgrimage, efpecially in Lent, with heavy Crofles on their Shoulders. Here you fee a Houfe, the Model of which is taken after the Holy Sepulchre of Ferufalem, with a very curious Copy of the Picture of our Saviour and the Virgin Mary, at full Length ; the firlt is exactly fix Foot high, the laft two or three Fingers Breadth lower. They are done after the Original in St. Jobn de Lateran at Rome. I faw one Day the Emperor and Emprefs go thither on Foot, the Road being very dufty, and were followed by the greateft Part of the Court. Somewhat nearer to the City, is another Place call'd Itzing, likewife much celebrated for Devotion. In the Road from Vienna to it, the twelve Stations of the Crofs are marked out in the fame Manner as is obferved in the Via Dolorofa, near Jerufalem, in Memory of our Saviour's going to the Mount Calvary. The Em-

Vol. II, No 120.
peror has a very fine Park juft by Vienna, with a Houfe of Pleafure in it: I alfo took a View of Luwenburg, a Houfe of Retreat alfo belonging to the Emperor; it is an old Structure, not very large; there is alfo a Sum-mer-Houfe, built in the Middle of a Pond, and an Octagon in the Marfh, from whence they let frequently fly at the wild Beafts. Over the Emperor's Palace Gate you fee a Rib and Jaw-bone of an extraordinary Size, which they told me were human Bones, but appear'd to me more like the Bones of an Elephant.

From this Place I took a Progrefs to Mannerddorff; fituated near the River Leyta; famous for the Bath, call'd the wild Bath, over the Spring of which is built a Church: The Water being only Luke-warm, they boil it, and fo bath in Tubs: That being judg'd beft; from what fticks to the Sides of the Copper when it is a Boiling; it feems to be impregnated with Sulpbur, Saltpetre, and Cbalk: The Water leaves a Turquois Colour upon the Stones, and the Vapours, which condenfe and adhere to the Roof and Sides, give it a Tincture of Gold. The Phyficians of Vienna have publifh'd a Treatife in Higb-Dutch of this Bath:

From hence I went to the Neweidler-Sea, or Lake, which is three German Leagues broad, and feven long, abounding in Fifh, and is encompals ${ }^{\circ}$ d with a great Number of fmall Towns and Villages: It has got its Name from Nerefiedle, a Town fituated on the North-fide of it, with a Caftle upon a Hill. Near this Place is a black Earth, of which they make Saltpetre. Afterwards I proceeded four Englijb Miles up the Danube, to the famous Quarry of Altenburg. The Beds or Rows of the Stones don't lie horizontally; but elevated to the North, yet follow the Shape of the Hill in their Situation. I found here a Subitance between a Clay and a Stone, call'd by them Liverfone; upon many of which you fee the Figures of Trees and Leaves, but not fo plain as in thofe of Florence.
I pafs'd by Cloifter Newburg, a Town belonging to a rich Monaftery of the fame Name. Upon one of the Peaks of Calenbergh, before-mentioned, live certain Hermites, call'd Camaldulenfes, a very fevere Order, living upon nothing but. Herbs and Roots. Near their Cells they had paved the Ground with thofe figured Stones. It being now near December, the Branches of the Danube were frozen over, and the Ground being covered with Snow, afforded good Paftime for the Ladies, who at this Seafon take their Recreations in handfome Sledges in feveral Shapes, viz. Grifins, Tygers; Swans, Dolpbins, Scallop Sbells, \&xc. In one of thofe Machines the Lady is feated richly attired in Velvet, lined with rich Furs, adorned with Laces and Jewels; and Velvet Caps lined with Sables. The Sledge is drawn by one Horfe, adorn'd with Plumes, Ribbonds; and Bells ; and as this Paftime is commonly performed in the Night Time, the Footmen ride on Horfeback with Torches, the Gentlemen fitting on the Sledge, behind the Lady, to guide the Horfe.

Cbristimas they celebrate here much after the fame Manner as in Italy. On Cbrifmas-Day the Emperor dines in publick. Upon St. Stephen's Day he went to the Cathedral, where he kneeled upon the Altar, and kifs'd the Plate whereon the Hoftio had lain. On Twelfth-day they celebrated at Court the old Cuftom of choofing King and Queen; and the Lot falling upon Count Leflie to be King, the Emperor laid the Cloth, and the Emprefs fill'd out the Wine. Not long before Cbriftmas, I faw the Solemnity of the Marriage of Count Serau, with a natural Daughter of Pbio lip IV. King of Spain, where I could not but be furprized at the Splendour in which the Ladies appear'd upon this Occafion. Not long after I faw alfo a very pompous Funeral, the Corps of Count Draun, which was brought from Italy, being interr'd in the Dominican Church, and a very fumptuous Castrum Doloris was raifed, fet round with a vaft Number of Wax Torches and Candles.

During my Stay at Vienna, the Election for a King of Poland being at Hand, after the voluntary Abdication of King Cafmir, there paffed Meffengers daily through Vienna. The Czar of Mufcovy's Son, the

9 E.
Duke

Duke of Newburg and the Prince of Lorrain were Competitors for the Crown ; but the Poles thought fit to pitch upon Micbael Wijnoweitski, a Native of Poland, for their King. I faw alfo at the fame Time at Vienne, the Spanifh Ambaflador Don Baltbajar de la Cueva; the Pope's Nuncio was Carlo Caraffa. Befides which, the Venetians had their Ambaffador at Vienna, who folicited Succours for Candia, which the Turkija Envoy oppofed with all his Might. Much about the fame Time came an Ambaffador from the Cbam of the Crim Tartars, named Cba Gagi Aga, who prefented the Emperor with feveral very fine Tartarian Horfes, in Return of which he was regaled by the Emperor with fome Plate, a Silver Bafon and Ewer, and a very fine Watch for the Cbam. They were lufty, ftrong-limb'd Fellows, but very coarfe, their Habit long fur'd Vefts and Caps. They took a valt Quantity of Tobacco in very long Pipes.
19. Among the Greeks, who live and trade at Vienra, I was chiefly acquainted with three confiderable Perfons; one was an Abbot, who had been forced to quit his Convent for Fear of the Turks; another, who called himfelf Confantine Cantacuzenus, being defcended of the Royal Blood of the Cantacuzeni; the third was a Greek Prief, named Feremiab, who having travelled in Queft of a young Man, taken by an Algerine, and retaken by an Englijh Ship, through Italy, France, Germany, the Low Countries, and England, had retained a moft peculiar Kindnefs for the Englifb, who, he faid, had treated him more courteoully than any other Nation.

The Country about Viemna is fo fertile in all Things, that People live here in great Plenty; and if any Scarcity fhould happen, the Danube fupplies them from remoter Parts. Hungary, Italy, and Germany, furnifh them with fuch Varieties of Wine, that you may drink thirty feveral Sorts at any good Table in Vienna; neither are they deftitute of good Beer. Houltadt in AuAria affords them Salt, from whence the Emperor draws a vaft Revenue. Sheep and Oxen they have in great Plenty of their own, yet are they fupplied with the laft out of Hungary and the Grand Seignior's Dominions. Wild Boar is a great Difl with them, their Fat being as delicious here, as that of our Venifon. Neither do they want Hares, Rabbets, Partridges, Pheafants, a Fowl called in Latin, Gallina Corylorum, \&c. The Danube furnifhes them with vaft Plenty of $\mathrm{Fi}_{1} \mathrm{~h}$, fuch as Carps, Trouts, Tenches, Pikes, Eels, Lampreys of all Sorts, white Fifh, and large Creviffes, befides Fifh not known to us. Here you meet with the Scbeiden, the Silurus Gefneri, which exceeds the Pike, Salmon, nay, any of our River Fifh in Bignefs; but the biggert of all are the Haufons, called HuJones, by Fobnfon, being fometimes twenty Foot long. Some will have this to be the Fifh named Anacetus by Alian, which he fays is catch'd in the Ister. I faw them bufy in fifhing for them in the Ine of Scbutz, between Presburgh and Comorea, for they feldom come up hisher, it being fuppofed that they come out of the Euxine-fea. They are not unlike the Sturgeon in Tafte, and they eat them both frefh and pickled. It is full of Griftes, having a hollow nervous Chord down the Back, which, when dried, they ufe inftead of a Whip. When they fifh for them, they blow a Horn or Trumpet. Venice furnifhes Vienna with Oyfters, Sturgeon, and orher pickled Fifh, with Red-Herrings, Oranges, Limons, and other Fruits. They are much difpofed to Jollity in this City; nothing more common than to fee them dancing and fencing for Prizes on Holy-Days, and fpending their Time in Merry-making, which made me wonder that they have not a Company of Players belonging to them.

Their Way of executing Criminals is commonly done by cutting off their Heads; though in Cafes of High Treafon, they firft cut off the Right Hand, and next the Executioner ftrikes off the Head with one Foreblow. I remember I faw one executed in this Manner ; and no fooner was the Head feparated from the Body, but a Man ran fpeedily to catch the Blood, which gufhed out of the Neck, which he drank, and then ran as
faft as he could: They look upon this as a Remedy againft the Falling Sicknefs. I had heard of fomething like this in Germany before, and I well remember, that Celfus tells us, that in his Time, fome epileptical Perfons ufed to drink the Blood of the Gladiators ; yet moft Phyficians exclaimed againft this Remedy, and I did not ftay long enough here to learn the Effects of it.
At Presburgb they have an odd Way of Execution, (which is alfo in Ufe at Metz). They have an Engine framed in the Shape of a Maid, which the criminal Perfon is obliged to falute; but at the fecond Salute, fhe embraces him, and cuts him through the Middle.
It muft be confefs ${ }^{3} \mathrm{~d}$, that the Winters are very fharp here, but their Rigour is much mitigated by their fleeping betwixt two Feather-beds, and the Stoves they make Ufe of to warm their Rooms, as well here as in molt other Parts of Germany and the Northern Countries. The Citizens of Vienna are generally well clad, and wear Furs very much, and the Womens Bonnets, which they wear upon their Heads, are both lined and faced with fome Fur or other. The Climate is very healthful, yet have they an epidemical Difeafe, called Colica Aultriaco; among them, which is very difficult to be cured. In the Court and City they fpeak very good German, but the Country People fpeak fomewhat thick, and have a different Tone, and divers odd Words. I faw a certain Trick, performed at Vienna, which at firt Sight fomewhat furprifed me, viz. a middle fiz'd Man laid upon his Back, had a heavy Anvil fix'd upon his Breaft ; upon which two lufty Fellows, with great Hammers, gave at leaft a hundred Blows, till they had cut an Iron Horfefhoe, about half an Inch thick, afunder.

No other Religion but the Roman Catbolick is permitted the publick Exercife of Worfhip here, the Proteftants being obliged to go to Church as far as Prefburgh, forty Miles from hence; for which Reafon a Coach goes thither every Day, befides the Convenience of the Paffage by the Danube; the Exercife of the Proteftant Worfhip being frictly forbid here ever fince the Battle of Prague, the fame being allowed before in the Church of the Holy Gboft at firf, and afterwards at Arnolds, not above an Englifb Mile from Vienna In this City are Abundance of $\begin{aligned} & \text { Fews, } \\ & \text {, but thefe have their di- }\end{aligned}$ ftinct Habitations on the other Side of the Water. They are, indeed, permitted to traffick in a certain Street in the Day.time, but muft leave the City before Night. They have frequent Broils with the other Inhabitants, and more efpecially with the Students. Whilft I was there, thefe laft affaulted the Feros Town, where divers were killed on both Sides; the Confequence of which was, that many of the feros were to be banifh'd againft a certain Day. The Emprefs being then with Child, they prefented her with a Silver Cradle; but as fhe was their declared Enemy, fhe would not accept of it, and it was chiefly by her Means that afterwards thev were banifh'd, not only out of Vienna, but alfo out of all Auffria; for as they were ufful on one Side, for the Sale or Exchange of many Things, and ufed to furnifh the Officers with Accoutrements and other Neceffaries; fo on the other Hand, they fpoiled the Trade of the Citizens, and were accufed of holding a fecret Correfpondence with the Turks. The Fewijb Phyficians pretend to more than ordinary Skill in Urines, which makes the common People refort to them, and to look upon their Predictions as Oracles.
20. Being now refolved to take my Leave of Vienna, in order to my Journey for Prague, I took a Place in the Coach, which goes thither in fix Days in the Summer, and eight in the Winter. We pafs'd over the great Bridge upon the Danube near the Chapel of St. Bridget. After we had pals $s^{\circ} \mathrm{d}$ the River, we enter'd that Part of Aufria which lies betwixt the Danube and the River Tbeya, and travel'd in Sight of Cornenbergh, feated near the Hill Bifnebergh, which lies oppofite to Calenbergb. Hence we came to Stockerau, famous for the Death of St. Colman: It is feated at the Conflux of the River Mial and the Danube. From thence, by the Way of Gunterfdorf to Koldorff, which (though on the other Side of the River Theya) is reckoned the firf Village of Moravia, and fo farther to Znaim. It is ob-
fervable,
rervable, that in this Part of Aufria, which extends along the North-fide of the Danube, believed to be inhabited in former Ages by the Marcomanni and Quadi, chere are not any Towns of Note; the Romans having had their Stations and Colonies on the South-fide o that River. Yet is the Country well inhabited and full of Villages. I came in Sight of one of the chiefeft Places call'd Crembs or Cremona Aufria. Znaim is a good Place upon the River Tbrya; the common Boundary betwixt Moravia and Auftria, which, joining its Waters at laft with the River Mark, thereby opens itfelf a Paffage into the Danube. This Town is the Fourth in Rank among thofe of Moravia; Olmutz, Brun and Iglaw, being the other three.

We continued our Journey from hence over Ulverfkirken, Paulitz, and Moravian Budrocife to Zimmaro, and taking our Way through Byrnitz, came to Iglaw, upon the River Iglaw, a Place pleafantly fituate upon a Hill, on the Frontiers of Bobemia. Its Fortifications are very ftrong, after the modern Way, efpecially on one Side, and the Market-place is one of the largeft I ever met with. Moravia is a very plentiful and pleafant Country, being irrigated by divers Rivers, among which the Mora or Marck is the Chief; it rifes on the North-fide, and paffing through the whole Extent of the Country falls into the Danube near Presburgh. The other Rivers of Note are, the Theya, or Tbeyfa, the S'warta, the Scbwitta, which run into the River Marck.

2I. After we left Iglaw, we enter'd Bobemia, the firit Place we came to being call'd Stecken; thence to Teutcbin Broda, near the River Saczua, and fo further through Haberne to Fanikaw, famous for the Battle which was fought there, the 24 th of February, 1643. betwixt the Imperialifs and Swedes; the firft had the better of it at the Beginning, but falling to plundering, were defeated by the Swedes. In this Town I happened to meet with a Gentleman, who lived at Scbacklitz, not far from the Rifgeberg, or Mountains of Giants, fituate near the Head Spring of the River Albes or Elbe; I was curious to enquire of him, what he knew concerning the pretended Spirit of Ribenzbal, which they fay infects that Country, but I could get nothing from him that was fatisfactory; all what he told me amounting to no more than that he verily believed there was fuch a Spirit, but that he had not done any Harm thefe twelve Years laft paft. I have heard divers fuch Reports among the Mountains and Mines of Germany. Thus they talk of Spirits in the Silver Mines of Brunfwick, and in the Tin-Mines of the Slackenwalde in Bobemia, but they talk of them only.

From J̌anikarv we continued our Journey to Czaflare, the chief City in the Circle of that Name. This is reputed the Burying- place of $Z i f c a$, the famous Bobemian, General who forced the Emperor Sigifmund to quit that Kingdom. From Czafare, we came to Guttenberg, about twelve Englif Miles from Prague, a very confiderable Town, near the River Elbe, and famous for the Silver Mines about it. There are in all about thirty of them, but as the Hills hereabouts are not very high, fo the Mines are not fo deep as thofe in Hungary, and in fome other Places of Germany; however fome are almoft feventy or eighty Fathoms, and have been wrought at there 700 Years. I went into one of them which was firft digged, called the Cutten-Hill, (Cutten fignifying a Man's Garment) which has got its Name as they fay from a Monk, who found a Silver Tree there, which gave Occafion for the Digging of this Mine, which is no more than nineteen Fathom deep: The chief Vein of the Ore, which is about a Foor broad, runneth South. It contains both Silver and Copper, of the firft, a hundred Weight yields about an Ounce ; of the laft, eight, nine, ten, or more Ounces; though fome Ore contains eight or nine Ounces of Silver in the hundred Weight. When they meet with a blue Earth in Digging, they are in Hopes of good Ore.

From hence we pafs'd through Colline, and fo by the Way of Bobemion Broda (to diftinguifi it from the Teutonick Broda) came to Prague, the capital City, and
formerly the Refidence of the King's of Bobernia. I foon perceived, even at a Diftance, that the Walls of this Town enclofed a larger Tract of Ground, than any in Germany, but confiderable Abatements are to be made for the wide Spaces and Mills encompaffed within them. It is fuate upon the Moldou, a large rapid River, having its Source in the South Part of Bobemia, and, before it comes to Prague, being augmented by the Rivers Sarfa and Watta, and to the North of Prague by the River Egra, at laft empries itfelf into the Elbe. This great Body is divided into three Cities, viz. the Old, the Nere, and the Leffer City.
22. The Old Town is feated on the Eaft-fide of the Moldou, being the moft populous Place of the three: and confiderable for the Univerfity, frequented by a vaft Number of Students, this being the only one of the whole Kingdom, though it is not comparable now to what it has been. If we may believe Lerois du May, there were, in 1409, when Gobr Huss was Rector, above 40,000 Students ; and it is credibly reported among them, that when the Emperor Cbarles the IVth, would have retrenched fome of their Privileges, 24,000 Students left the Town in one Week, and not long after 16,000 more. This Part of the Town has alfo feveral Colleges and Monafteries, and among the relt the $\mathcal{F e}_{\ell}$ fuits, which is a very handfome one.

The New Town is of a very large Extent, encompaf: fing the Old Town, together with the River, being divided from it by a Ditch, into which they can let the River. The Irifh have a Convent of Francifcans here, and the Jefuits have likewife a noble College, They were then bufy in making fome Baftions, and a Citadel for the Defence of the Town, but they were not finifh'd

The Lefler Prague, is feated on the Weft Side of the Moldou. It is far beyond the Old Town in Pleafantnefs and handfome Structures, being join'd to it by a very ftrong Stone Bridge, of fixteen great Arches, the whole Fabrick 1700 Foot long, and 35 broad, with two high Gates, under two large Towers at each End. Part of this Town is built upon a rifing Ground, on the Top of which ftands Hartfcbin, or Upper Prague, where the Emperor has a Summer-houfe, and a moft magnificent Palace. In this Part of the City is alfo the Cathedral Church of St. Veit, containing many ancient Monuments. Moft of the Houfes of the Nobility are alfo in this Part ; among which the Garden and Palace of Coloredo excel for Neatnefs, but it is not very large. The Palace of Count Wallenfein, afterwards Duke of Friedland, General of the Emperor Ferdinand II. his Armies, is a very ftately Structure, built upon the Ruins of at leaft 100 Houfes, which were pull'd down for that Purpofe: The Hall is a very lofty and fpacious Room, and the Garden exceeding beautiful, on one Side of which you fee the Place where they ufed to manage his Horfes, with a noble Fifh Pond near it: On the other Side you fee the Aviary, beautified with Trees and a Garden; the Model being taken from the Aviary of Prince Doria at Gerioa. But what is moft furprifing are the large Stables, where you fee a Marble Pillar betwixt each Horfe; every Horfe having a Rack of Steel, and a Manger of Marble, fixd in a Nich of the Wall: Over the Head of each Horfe you behold his Picture, as big as the Life, with his Name under it. Thus a Bay-Horfe was named Monte d'Ore, a Mare Bella Donna, but his beloved Horfe's Name was Mas, Querido. The current Language of Bobemia is a Dialect of Sclavonian, though all the Perfons of Quality here, and not a few of the Inhabitants both in the City and Country, fpeak very good Higb Dutch. The Leffer Prague was furpriz'd by the Srevdifb General Koning fmark, in the long German War, who carried off an incredible Booty.

A Part of Prague being inhabited by Feres, is thence call'd the fews-Town. They are here in great Numbers, and deal chiefly in Jewels, and efpecially in thofe Stones that are found in the Mines of Bobermia. I bought fome Bobemian Topazes, very well cut, of them, at the Rate of feven or eight Crowns a Stone.

Fobn Hufs, and 'ferome of Prague, who endeavour'd to bring about a Reformation in thofe Parts 800 Years before Lutber, are not as yet forgotten among the Bobemians, who keep Silver Medals to the Memory of thefe two great Men; upon which Account I cannot help mentioning, what Eneas Sylvius, afterwards Pope Pius II. Fays of them two, viz. That John was more in Pears and of greater Autbority, but Jerome excelled in Eloquence and Learning; That they faced Deatb with unparallel'd Confency, finging Hymns in the Midft of the Flames. He adds, None of tbe old Pbilofophers fuffer'd any Kind of Death revith so couragcous a Temper, as these the Flames.
As the fame Author has made a Comparifon betwixt the City of Florence and Progue, I cannot forbear to give you my Obfervations upon this Head, which I made myfelf, both from the Top of the Domo at Florence, and from the Cathedral of St. Veit, on the Hill of the Leffer Towen. I found Prague to comprehend a much larger Compafs, and to be more populous than Florence. The Streets of the firft are much longer ; and the Windows of the Palace being of very fine Glafs, made a much better Show than the ragged Paper Windows of Florence: The River Arno, which paifes through this laft, bears not the leaft Comparifon with the Moldau at Prague; and the great Stone Bridge over this River, bears a full Proportion to, if not exceeds, not only any one, but all the four Bridges of Florence. The Emperor's Palace alfo upon the Hill is a very noble Structure. On the other hand, it muft be confefs'd, that the Cathedral of Florence, built of black and white marble; the Chapel of St. Lozerence, and the Great Duke's Gallery and Rarities, exceed any Thing I faw at Prague. Upon the White Hill near Prague was, 1620. November the 8 ch , fought the famous Battle betwixt the Armies of the Emperor Ferdinand II. and Frederick Elector Palatine, in which the latter was routed.
23. The Winter coming on, I would not go by Water to Hamburgb by the Moldau, which near Meinick falls into the Elbe; fo that being obliged to travel by Land, I left Prague and the Moldou to the Right, and pafs'd through Zagetbal, Welverne, and Budin, to Labafilz upon the Elbe. After having crofs'd the River Egra, (which arifing near the City of the fame Name, falls afterwards into the Elbe) I came by the Caftle of Kriegstein, feated upon a high Rock, thence to Aufig, a.fmall City, and fo by the Way of Nolndorff, and over the Mount Kninsberg to the Frontiers of Mijnia; taking our Way through Peterfwald, Hellendorff and Kijz. bel, near the laft of which are Iron Mines and Works. Having fpent nine Days by Coach, from Inglaw, on the Confines of IMoravia, to this Place, not reckoning my Stay at Prague, which is computed to be 200 Englifb Miles, the Ways being very bad in fome Places, efpecially in the Winter Seafon.
As we were going toward Dredden, I took a View of the Bobemion Rocks behind us, which refembled, at a Diftance, the Ruins of an old Wall; but could not be convinced of what moft Geographers have told us of Bobemia, That it is enclofed in a great Foreft, though it is not to be difowned, but that both within the Country, and in fome Parts near the Borders, there are confiderable Woods, believed to be Part of the old Sylvia Hercinia, or Hercinian Forest. The Bobemians have been at all Times a flout and warlike Nation; and though the common People are fomewhat rough, the Gentry are very obliging and polite. They abound in lufty and flrong Horfes, but fince their unfortunate Revolt, they have loft moft of their Privileges, and many thoufand Families have quitted the Kingdom.
We continued our Journey through Mifnia to Dreflen, one of the moft remarkable Places in all Germany, being the Refidence of the Electors of Saxony upon the Elbe, over which is a ftately Bridge, fupported by feventeen Arches. The Fortifications of the City are very ftrong, after the modern Way; the Baftions faced with Stone, furrounded in fome Places with a double Ditch. It has three Gates. The Things moft worth Obfervation are, The Italian Garden in the Suburbs, the Huntivg-boufe in the Old Town beyond the River, and
the Electoral Palace, with the Houfe for Wild Beafts; Stables, and Arrenal. The Hall in the Elector's Palace is very fpacious, and chiefly remarkable for the many Draughts of Cities, Pictures of Giants, and the Habits of feveral Nations, very well done.
But what is moft furprifing is, the Collection of Ra rities, divided into feveral Chambers. The firf contains all Manner of Mechanical Inftruments, made very artificially. In the other Chambers, thefe following are moft worth Notice: A Tube-Glafs four Ells long; divers artificial Works of Coral; Bowls and Cups made out of Mother of Pearl; Caftles of Gold and Mother of Pearl; a Cup made of a Stone taken out of an Ox's Stomach, of a Foot long; a Stone as big as one's Fift, taken out of a Horfe, refembling a Bezoar-fone; fome very pure Ore out of the Mines of Freiberg; a natural Crofs of the fame Ore; one hundred twenty one Heads carved on a Cherry-flone ; a Chryftal Cabinet, fold by Oliver Cromzvell; Cbarles II. of England, on Horfe-back, carved out of Iron; King Cbarles I. his Head; an Organ of Glafs; feveral unpolifh'd $\mathcal{T}_{0}$ pazes, ten Inches diameter; a Cup made of a Topaz; feveral Emeralds, an Inch in diameter, as they grow in the Rock.

Figures of Fih in Stones; the Stones dark colour'd, the Fifh of a Gold Colour; two large fine Pieces of pure Gold Ore ; a White Hart as big as a natural one, made of the Filings and Shavings of Harts-horn. Another Chamber contains all Manner of Matkematical Inftruments, and a Library of Mathematical Books and Maps ; an Unicorn's Horn, which they.affirm to be of a Land Unicorn, becaufe it is neither wreathed nor hollow. The moft remarkable Pitures, among a great Number, are, the Siege of ferufalem, by Colier, valued at a high Rate; two Nuns, by Lucas van Leyden; a Picture of Dr. Lutber. Here is alifo a rowling Bullet, to demonftrate a perpetual Motion.
Of Clock-works you fee a vaft Variety: A Cuckows finging, a Horleman- riding, a Ship under Sail, an old Woman walking, a Centaur running and fhooting, and a Crab crawling or creeping upon a Table; all done by Clocik-work, to the Amazement of ordinary Spectators. In the Stables, and Chambers thereunto belonging, you fee a noble Stable full of Horfes, each Horfe eating out of a Rack of Iron, and Manger of Copper. Near them is a curious Fountain and Pond, furrounded with Ballifters, where the Horfes are watered; a long Walk arched, and painted with very fine Horfes ; over which is a Gallery, with the Pictures of all the Dukes and Electors of Saxony, in their Electoral Robes and Military Habits; two Beds of Marble ; a Horfeman of Silver, bringing a Cup of Wrine in his Hand, moved by a Spring; a Pair of very fine Piftols, with Stories of the Old and New Teftament upon them; a Glafs Gun; a Gun, which difcharges forty Times without being charged again ; a Lock without a Cock. Another Chamber has many rich Sleds and Accoutrements, made Ufe of in the Winter-time upon the Snow. A White Bear's Skin ftuffed; Tigers and Lyons Skins ; a Cafforwares Skin; very fine Armour for Men and Horfes; a Picture of a Laplander; a Lapland Magick Drum; a Chamber full of all Sorts of curious Hunting Tackle and Arms.
The Arfenal is a long Square, a Building containing near 400 Brafs Pieces of Ordnance ; of Mufquets and other Arms a great Quantity ; divers Silver Coats of Mail, E'c. In the Hunting-houfe in the Old Town are maintained fifteen Bears; Fountains and Ponds are made here for the Conveniency of wafhing themfelves, in which the Bears much delight. Round the Pond you fee high ragged Trees or Pofts fet up, where the Bears climb up and down, and Scaffolds on the Top, where they fun and dry themfelves after they have been fporting in the Water. The Horn Gallery here is alfo worth taking Notice of; out of which you pafs through three Chambers, one painted with all the different Sorts of Hunting, the fecond with Fowl, and the third with all Kinds of Wild Beafts. In the Houfe where the Wild Beafts are kept, was a Marian, a four legg'd Beaft, which hangs on the Bows of Trees by the Tail.

## Chap. V. through Austria, Bohemia, Moravia, Egc. <br> A wild Mountain Cat of an extraordinary Size; five deemed the bef. This is melted in peculiar Furnace,

young Bears, five old black Bears; the Feet, Head and to feparate it from the Ore; fome of which yields Neck, longer than thofe of the black, but not fo thick; two Lions and ten Lioneffes.

The Italian Garden and Summer-boufe in the Suburbs, contained two noble Obelisks, two beautiful Fountains, Theatre and good Landfkips. They were built by two of the Elector's Eunucbs. It is not many Years ago fince Drefden has been made a City. The Revenues of the Elector of Saxony are very confiderable, arifing chiefly from his Impofitions upon Commodities, Excifes upon Beer and Silver Mines. The chief Church of Drefden is very fair. They are reputed to fpeak the beft Higb Dutch here, and throughout all Mifnia, which is a pleafant, fruitful and populous Country.

After I left Drefden, my Curiofity led me to Frieberg, noted for many confiderable Mines, which are within two Englißh Miles of the Place. Among thofe I took particular Notice of three; one call'd the Higb Hill,' the deepeft in thofe Parts, being Seventy feven of theirs, or Two hundred and eight of our Fathoms deep, which Depth exceeded any of the Mines I faw in Hungary. The fecond Mine I faw was call'd the Prince of Heaven, which not many Years ago, produced an Ore fo rich, that an Hundred Pounds weight afforded an Hundred and thirty Marks of Silver, or Sixty five Pounds in the hundred; but it is a conftant Obfervation among the Miners, that where the Veins are richeft and pureft, they are thinneft, and generally not above the Breadth of two Inches. The Ore, as it generally runs, ffords not one Ounce and a half of Silver in the Pound and they work it, if it holds above half an Ounce, which may feem fomewhat ftrange to thofe who know not, that even in the Silver Mines of Peru and Cbili, they will work the Silver Ore, which affords not above four or five Ounces; and the rich Ore in the Mines of Potof does not commonly produce above ten or twelve Ounces of Silver; though this Hill alone, if we may credit Alberto Alonfo, has produced in Silver fince it has been dug, betwixt four and five hundred Millions of Pieces of Eight. They have here feveral Ways of opening the Ore to prepare it for Melting ; as, by Lead, and a kind of Silver Ore which holds Lead.
The Sulphur Ore alfo which is found here, after its Calcination, proves no fmall Addition towards the melting of Metals; as likewife the Scblich, or pounded and waihed Ore, and the Scblaken, being the Drofs, Sediment or Scum, taken cut of the Vortiegel (Pan) which received the melted Minerals, let out into it at the Bottom of the melting Furnace. Their Treibhearth, or Furnace of Separatins, where the Litbarge is driven, which I faw here, is more like that defcribed in Agricola, than thofe I faw in Hungary. Some of the Litharge is Green: They walh the pureft Ore, and fuch as is mix'd with Stones or Spars ; and they have this Peculiar, that before they melt the Ore in the MeltingFurnace, they burn the pounded and wafhed Ore on the Roasting Hearth, as they term it. They make much Ufe of the Virgula divina or Forked Hazel, to find out the Silver Ore, or any other Treafure. I never faw them ufe it in the Mines of Hungary, where I was, but I took particular Notice of the Manner how they ufe it here ; yet as it is amply defrribed in fome Books, and is better feen than reprefented at a Diftance, I will not enlarge further upon that Subject.

The third Mine I vifited was call'd the Neckbreaker, about eighty of our Fathoms deep: The Ore it produces is either Copper and Silver, or Silver and Lead, and fometimes all three; but they work only for Silver I found the Mines cold as far as the Air could penetrate, but otherwife wârm enough. Where they are at the deepeft, they are full of Damps; but that which troubles them moft, is the Duft, which fettles upon the Lungs and Stomachs of the Miners. They have excellent Engines here to prevent the Inconveniencies arifing from the Water. But I muit not omit a rich Sulphur Ore, hard and ftony, that with red Spots being

VoI. II. $\mathrm{N}^{\circ}$ CXXI.
three Pound of Sulphur out of 100 Weight of Ore which as it melts runs out of the Eurnace into Water or the Exhalations of the Ore are condenfed into Brimftone, by the Coldnefs of the Surface of the Water placed to receive it. It is purified again, by melting it a fecond Time. Some of this Brimftone Ore holds Silver, fome Copper, but in very fmall Quantities: The Remnants, after Sulphur is feparated from the Ore ${ }_{j}$ is referved for a double Ufe; either for the melting of Silver, or the making of Vitriol. In the firt Cafe, a certain Proportion of it is caft into the Melting-Furnace of the Silver, which, as the Miners term it, helps to make it Flux. In the making of Virriol or Copperas; they take the Ore from which the Brimftone has been feparated, and burn it over again, or let it continue to burn in the open Air, then putting it into a large Vef fel, pour as much Water upon it as is requifite to imbibe the Vitriol; which Water being afrerwards boiled to a certain Confittency, is let out into Coolers, where the pureft Part of the Vitriol adheres to Sticks fet for that Parpofe, the reft fetling on the Sides and at the Bottom. It is obfervable, that the Ore, after it is deprived of its Vitriol, has not the leaft Virtue left in opening Metals, or rendring of them fluid.
24. The City of Frieberg itfelf is of a circular Figure, furrounded with ftrong Walls; Its Streets are handfome, and fo is the Market-place: The Elector's Palace is a very beautiful Structure ; it has five Gates. But what exceeds all the reft, is the Church of. St. Peter, famous for the Monuments of many of the Ducal Family, among which, that of Maurice, Duke and Eleftor of Saxony, excels, being accounted the nobleft in Germany, raifed three Piles high of black Marble, with many fair Statues about it in Alabafter, and white Marble, which is the Reafon, that when this Town was furrender'd, Oitober the 5 th, 1632 , to the Imperialifts, the Elector of Saxony paid 80000. Crowns to fave the Tombs of his Predeceflors, and the Robes, Jewels, Rings and other Enfigns of Honour, that were buried with them.

There were certain Vaults and fubterraneous Paffages from the Mines into the City, which are faid to have been difcover'd firft ir89, fince which time the Silver Mines at Scbneeberg, Annebergb and Foachims Dale, have been found, viz, in 1526. After having taken a View of what I thought moft curious in and about Frieberg, I travell'd by Waltbeim and Coldick to Leipfock, feated upon the River Elster, which having its Source in Vogtland, paffes by this City, and afterwards falls into the River Salá.

It is a very rich Place, celebrated for its three Marts or Fairs every Year, when there is a great Refort of Merchants from all Parts. The Houfes are generally ftately Buildings, being for the moft part fix or feven Stories high. It has a Caftle, but neither this nor the Town are well fortified. The Church of St. Nicbolas has the Reputation of being within one of the fineft $L u$ theran Churches in Germany.

This City is famous for three Battles fought near it in our Age; the $1 / t$, Between Guftavus Adolpbus, King of Sweden, and Count Tilly, the Imperial General, 1631 , in which the laft was totally routed. The $2 d$, Some Years after, betwixt Torstenfon the Sreedifh, and Arch-duke Leopold William, the Imperial General. The $3 d$, about a League and a half from hence, near Luizen, fought between the fame King of Sreeden, and Wallenfein Duke of Friedland, the Imperial General in which the Sroeeds were again victorious, notwithftanding their King was nain before the Beginning of the Battle, as he was going to take a View of the Pof ture of the Enemy. There is alfo a good Univerfity at Leipfock, erected there whilft the Troubles continued in Bobemia, with the Hufites, when 2000 German Schollars came hither at once from Prague.

Erom Leipfick I profecuted my Journey to Magdeburgh, through a plain Country, betwixt the Rivers Sala and Elbe, through Lonsberg, and near Peterfaorff, and fo

9 G
by the Way of Koebten (the Refidence of the Prince of Anbalt) to Caln, fituate upon the River Sala, not far before it falls into the Elbe. In this Neighbourhood is the famous Mountains, ftiled the Fichielberg, much celebrated for the Mines, Baths, and mineral Waters near it, and for four Rivers, running to the four different Quarters of the World, viz. The Main to the Weft, the Nab or Nabus to the South, the AEger to the Eaft, and the Sala to the North; which four Rivers afterwards join the three capital Rivers of Germany, the Danube, the Rbine and the Elbe.

Hence we pafs'd through Saliz (noted for its Saltfprings) to Magdeourgh, feated upon the River Elbe. This, which in former Ages was the Metropolitan City of Germany, but now under the Jurifdiction of the Elector of Brandenburg, is of a very large Circumference, but fcarce half built, fince it was deftroyed by Tilly the Imperial General, who put 56000 Perfons there to the Sword. The Cathedral Church is a very fair Structure, built after the Model of our Engliff Churches; by the Emperor Otho I. and his Emprefs Editha, the Daughter of our Englifh King Edmund. Her Effigies in Stone ftands ftill in the Church, with the Reprefentation of eighteen Cafks of Gold by her, which fhe gave thereto. The Lutberan Churches are very handfome here, and the Jefuits very fine, as indeed they are in all other Places. In the Cathedral Church of St. Maurice, I faw the Statue of the five wife Virgins fmiling, and the five foolifh Virgins lamenting, which were not ill done. Among the reft they fhew'd feveral odd Relicks, viz. The Bafon in which Pilate wafh'd his Hands ; and the Ladder whereon the Cock crow'd, after St. Peter's Denial of our Saviour. Among the Ruins of the Cloifter of the Aufin Friars, are ftill remaining Luther's Chamber, his Bedftead, and his Table. Upon the Door are certain German Verfes, which tranllated into Englifh are to this Purpofe:

> Great Luther lodg'd witbin this little Room, While as a Monk this Cloifter was bis Home; And we in Rev'rence of bis Mem'ry keep The Bedfead upon which be us'd to Neep.

At Magdeburgh I began to be fenfible that I had left behind the true Purity of the German Language, for here you begin to hear another Dialect, generally called the lower Saxon, fpoken in all the Nortb of Germany, at Hamburg, Lubeck, and other Cities in thofe Parts. However People of Fafhion converle in High Dutch, and their Sermons are generally held, and Books written in the fame Language. The City of Nogdeburgh is highly celebrated in Germany, as having been the firtt where the moft famous Turnaments were inftituted in the Year 638 , by the Emperor Henry, firnamed the Fowler. The Condition of thefe Turnaments or Exercifes of Cbivalry were, That none but of the ancient Nobility, no Baftard, no Ufurper, no Perfon attainted of High-Treafon, no Oppreffor of Widows and Orphans, none born of Parents, whereof one was of ignoble Extraction, no Heretick or Murderer, Coward, or who had given Offence to Ladies in Word or Deed, fhould be admitted into the Lift, and not above one in a Family at a Time. Princes were to come attended with four Squires, Counts and Barons with three, a Knight with two, and a Gentleman with one. He that was defirous to enter the Lifts, appear'd at the Prefident's Lodgings, where his Name and Quality being regiftred in the Prefence of three Heralds, the Champion deliver'd unto them his Helmet and Sword, and after Confeffion enter'd the Litt, attended according to his Quality. Their Horfes were to be without Defect, their Furniture according to the Rules prefcribed, and the Saddles without any rifing behind or before. Having performed all Manner of Exercifes, they expected the Sentence from the Judges, and he who obtained the Prize, received it from the Hand of fome Lady, or from the Prince who gave it.

But after thefe Paftimes had continued for fome Ages, they were abolith'd upon very weighty Confiderations,
thefe Exercifes having caufed no fmall Emulation among the Nobility, fo that at the twenty third Turnament, held at Darmfladt, 1473, this Animofity rofe to fuch a Height between the Gentlemen of Franconia and thofe of Hefle, that feventeen of the former and nine of the latter remained dead upon the Spot. The Winter now coming on apace, I haftened my Journey to Hamburg which I performed in the Stage-Coach in four Days, taking our Way through the Elector of Brandenburgb and the Dukes of Lunenburgb's Territories. In this Road I took Notice of many fmall Mounts of Earth, the ancient Funeral Monuments of Great Commanders; (which are alfo found in England) and fometimes Rows of great Stones; and in one Place I faw three great mafly Stones in the Middle, in a large fquare, enclofed by other large Stones, fet up on End
25. The City of Hamburgh, one of the greatef, richeft, and perhaps the mont populous Cities of Germany, is feated in a Plain, being well fortified after the modern Way, yet are their Works not faced with Stone. But the Territories belonging to it are of no great Extent. It is divided into the Old and New Town; It has five Gates; the Stone-Gate, which leads to Lubeck; the Dyke Gate; the Grafs-Brook Gate; the Dome Gate, and the Ellern or Altena, a Town belonging to the King of Denmark. Their Buildings are very handfome, with very grand Entrances, and fpacious Halls. The Senate Houfe is a noble Structure, beautified with the Statues of the nine Worthies. The Exchange was then enlarging: It is celebrated for its fair Churches, and noble Steeples cover'd with Copper. The Church of St. Catbarine has a noble Front, and round the Steeple you fee a Crown well gilt. The Steeple of St. Nicbolas is fupported by great Globes. The other great Churches are, the Dome or Catbedral Church, St. Peter's, St. James's the Great and Lefs, St. Micbael's Church in the New Iorin, befides feveral leffer ones, as of St. Gertrude, St. Jobn's, St. Mary Magdalen, the Holy Gboft, the Blue Coat Hof pital Cburch, and Se. George's in the Suburbs. The River or rather Lake call'd Alfer, paffes through it into the Elbe, which is juft beyond the Town, join'd by another fmall River call'd the Bilde. The Tide paffes daily twice through moft of the great Screets, through Channels, though the City lies eighteen Leagues diftant from the Mouth of the Elbe.

As it is excellently well fituated for Commerce, fo it abounds in Shipping; for befides its Paffage into the Ocean, it is but an eafy Day's Journey from Lubeck on the Baltick-Sea, befides, that by the River Elbe, they carry on their Commerce by Water with a great Part of Germany, even as far as Bobemia. The Conveniency of Trade drives many foreign Merchants thicher, among which the Engli乃h Company enjoys great Privileges; it being computed that they vend there about 100,000 Pounds worth of our Woollen Manufactory annually. I left Hamburgh the ioth of December, when embark. ing in an Engli/s Veffel, we got that Day to Stadt upon the Zwingh, which near it falls into the Elbe. It belongs now to the King of Sweden; and here it was the Englifh Merchants refided for fome Time, upon fome Difcontent with the Hamburgbers.
it th, We pats'd Gluckfadt, feated upon the Holfatian Shoar, and belonging to the King of Denmark: We anchor'd that Night at the Mouth of the River Oaft, which rifing in the Dutchy of Bremen, falls into the Elbe, a Mile from Brunfouttel, on the oppofite Side of the Holfatian Shoar. 12 th, We pafs'd Cook's Haven, in Hopes to reach the Sea that Night, bur being becalm'd at Three in the Afternoon, were forced to Anchor again, between Tbickfand to the North, and Necvark to the South, near a Light-Houfe. I3th, The ftrong Wind forcing us back to Cook's Haven, I embrac'd the Opportunity to go a-fhore, and took a View of the Caftle, which belongs to the City of In amburgh. It is a fquare Fort with a double Ditch, and at high Tide, fome Veffels come up to the Channel, which reaches up to the Fort, but at low Water it is dry. Both the Town and Caftle are call'd Reutzbuttel, being not far from the Lands-End, and the Governor therrof is always one of the Senate. Within three Duys after we

## Chap. V. through Austria, Bohemia, Moravia, छ®o.

fet Sail again with a brisk N.E. Wind for England, and fcarce were we out of the Mouth of the Elbe, but we got Sight of a certain fmall Ine, belonging to the Duke of Holfein Gottorp, called the Holy Land, which as it is very high, fo it is a fafe Direction for Ships, efpecially thofe that come from Sea, without which they would be often at a Lofs from the Lownefs of the Shoar near that River's Mouth. This Inand, which is very fmall, is reputed to have about 2000 Inhabitants, who live for the moft Part upon Fifhing, and by carrying Lobfters and other Sea-fifh to Hamburgh, London, and Queenborough. We chofe the main Sea that Night, but the next Day made nearer to the Shoar, and fail'd in Sight of Amelandt and Scbelling; and in the Evening difcovered the Lights at the Vly and Texel. The next Day, having a fair Wind, we took down our Sails in the Evening, for Fear of coming too near the Engli/h Shoar in the Night-time, and next Morning difcovered the Northforeland, came the fame Day to an Anchor in Margaret Road, and came as fafely afhoar on Cbrifmas Day.

Now I muft confefs, that after I had taken fo full a View of Germany, I found it quite different from the Conceptions I had formed of it myfelf. 'For to fpeak firft of its Rivers, they are fo noble and great, that they excel thofe of Italy and France, it being certain that the Po, the Arno, Garigliano, and other Rivers of Italy, bear not the leaft Proportion to them ; and though France has four great Rivers, viz. The Loire, the Seine, the Rbofne, Garonne, as well as Germany has the Danube, the Rbine, the Elbe, and the Wefer, yet has France none that can come in Comparifon with the Danube and Rbine. 'Tis true, France has many fine Cities and Seaports, yet they do not come up in Number to thofe in Germany, and I much queftion, whether it has any Places that exceed Hamburgh, Lubeck, Dantzick, Bremen,
\&tc. Belides which, the whole Country is full of populous Towns, great Villages, ftrong Caftles, Seats of Perfons of Quality, delicious Plants, Forefts, and pleafant Woods. Nay, Germany affords even under Ground Mines of Gold, Silver, Copper, Iron, Tin, Lead, Quick-Silver, Ancimony, Coal, Salt, Sulphur, Cad$\mathrm{mia}, \varepsilon^{2} c$. and is full of the beft Arcificers to work in them. Add to this the eafy Converfation of the People, who are great Lovers of Strangers, and honeft in their Dealings: The Women are generally well complexioned, of a fober Behaviour, faithful to their Husbands, and good Houfe Wives.

Befides that, Germany affords an inexhauftible Stock of Men, the People being naturally fruitful, not exhaufted by long Sea Voyages and Engagements ; and by Colonies fent into far diftant Countries; the only Confumption of Men being in the Wars; and if they have none at Home, they will reek for them Abroad, being generally inclined to martial Exploits; and their Perfons of Quality are always averfe to Trade. To conclude, when I confider the prefent Condition of Germany, their great and populous Cities, with the Strength of their Fortifications, the valt Number of their magnificent Struc. cures, publick and private, and their civilized Manner of living in them, and compare all this with the Character Tacitus gives of the ancient Germans, That they lived poorly, fcattered, without Towns or Villages, ignorant of Arts, and fuch like,' I cannot but be pleafed with the Expreffion of a certain learned Perfon, tho' long ago, upon this Subject, That if Ariovifus and the other great Men of Germany of thofe Times, fhould rife out of their Graves, and take a full View of their Native Soil, they would fancy themfelves to be in another World, and never acknowledge this for their own Country.

## S E C TIONII.

A Defcription of the noble Kingdom of Hungary, in which its various Prerogatives and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Difpofition of the People, their Language, Manners and Cuftoms are, from the Knowledge of the Writer, clearly and copioufly fet forth; interfperfed with a Variety of Geographical, Hiftorical, Phyfical, Political and Literary Remarks, upon various Subjects.

## By' the learned Dr. Edward Browne, Prefident of the Royal College of Phyficians.

I. An Introduction, witto fome Account of the Autbor's Defign in this Treatife. The Climate and Soild of Hungary deficribed. The fanous Rivers by wbich this Kingdom is watered. 2. Of the feveral Bridges that render this Country famous, particularly the admirable Bridge of Effeck, the intended Bridge of King Sigifmond, and the Ruinss of that built by the Emperor Adrian. 3. Of the Iflands. in, and Fleets upon tbe Danube ; as alfo of the famous Lakes in Hungary. 4. Of the large Plains in tbis Country, and boove they facilitate Travelling. 5. Of the vart Quantities of all Sorts of Fi/h, and of fome Species pe-
culiar to the Danube. 6 . The prodigiouss Fertility of the Country culiar to the Danube. 6. The prodigious Fertility of the Country defcribed, and of the Excellency of its Wines, Bread, Beef, \&cc. 7. Of the Language of Hungary, and of the adjacent Provinces. The general Knoweledge the People bave of Latin. The State of Learning there. 8. An Accouns of the old Hungarian Crown, the vaal Veneration tbe People bave for it. The Martial Difpoftion evvili of their Ecclefiafficks. The Tomb and Epitaph of the Roman Poet Ovid. 9. The Pyrrhic Dance fill underfood and pracizijed by the Heydukes. TThe State of Hungary at the Time of the Author's being there. Ac-
count of the Froutier towards the Tuks in count of the Frontier towards the Turks, as it then food. 1o. Of the Roman Stations, Garrijons and Antiquities of this Country. II. A A curiouss Account of a prodigious Treafiure of ancient Greek Medals
found at Deva, with Remarks op ton found at Deva, with Remarks upon fome Roman Medals that bave been alo found in tbis Country. 12. Of the Habits and Arms of the Hungrians, and the Reafons weby they bave been imitated by the
neigbbouring Nations. neigbbouring Nations. 13. A fuccinct Account of Tranfivania by anotber Hand.

A$S$ we have already given an Account of the Author, we fhall only obferve, that having fpent a great Deal of Time in vifiting the different Parts of the Kingdom of Hun. gary, and in the Examination of the Curiofities it contains, Dr. Browne thought he could not do a more acceptable Service to his Countrymen, than by giving them a fuccinct View of the Refult of thefe Examinations and Inquiries. It is a received Opinion, that the Air in this Country is very unwholfome, which is attributed to many Caufes ; firft, the Flatnefs of the Country, for where there are no Mountains, there are feldom any Winds fufficient to cleanfe and purify the Air. 'Secondly, the Soil being marhy and full of Minerals, the Vapours rifing from thence are fuppofed to be tinged with Particles far from being Salutary to the human Body, Thirdly, the extream Heat in Summer, and the thick Mifts and Fogs in Winter and in Autumn, contribute not a Jittle to draw this evil Report upon the Climate But after all, it is very certain, that the Natives of Hungary live many of them to a vaft Age; and though it be true, that it was formerly filed at Vienna, Ccemeterium Germanorum, that is, the Churchyard of the Germans, yet perhapz a candid Judse upon a fair Hearing, would be inclined to acquit the Air of Hungary of the Murder of the Germans, and advife a frefh Indictment againft the Wines. The Truth of the Matter feems to be, that in this rich and plentiful Country, Strangers are apt to indulge themfelves too much; and in that Cafe it muft be owned, that the Climate is not very favour able, for without vigorous and conftant Exercife, the Natives themfelves would not be able to maintain fuch robuft Conftitutions as they are famed for, confidering the Liberties they take in Eating and Drinking.
But except this Charge in Relation to the Air, there feems to be no Impeachment againft the Excellency of this Country, which in Time paft, and while under the Government of its Native Princes made as great a Figure as any in Europe ; and its Inhabitants had the Ho nour to give the firtt Check to the Arms of the Mabometans on this Side, as the French did on the other, and prevented them thereby from over-running all Europe Since it fell under the Dominion of the Houfe of Auftria, it has indeed made a lefs Figure, and grown more out of Knowledge as all Kingdoms do when they become Provinces; and to the fame Caufe it has been owing that the Turks have made themfelves Mafters of fo great a Part of it, and that it has been fo ruined and diftracted by inteftine Divifions and civil Wars, that for their Severity and Length, there are farce the like to be met with in Hiftory. But thefe are cafual Events common to other Countries as well as Hungary, and which cannot be reafonably urged as derogatory from or deftructive of thofe high Perfections, which it enjoys from Nature, and which ought to render it as much the Object of Attention to Strangers, as any other Country upon the Globe. For if we were to enumerate the feveral Advantages that diftinguifh thofe Countries of the World that are moft defervedly famous, we might venture to affirm, that almoft all of them may be found here. Since if Germany boafts her fine Rivers, Italy her golden Fruits, Sicily her copious Harvefts, France her generous Wines in fhort, if the numerous Commodities of Europe, if the luxurious Plenty of $A j a$, if the various Curiofities of Africa, if the Silver of Mexico, and the Gold of Peru, are fit Objects of our Admiration, Hungary muft claim it too; no Country is better watered, none more fertile, none more pleafant, none yields better Fruits, none produces richer Wines, none abounds more with Cattle, none, notwithftanding all thefe Riches above Ground, can boaft a greater Wealth below. But to clear up all this, let us now enter a litule into Particulars.

On the Eaft-fide it has that noble River Tibifous, or the Tbeyfe, rifing at the Foot of the Carpatbian Mouncain, in the Country of Maromorus, and being increafed by the Waters of the River Marifous, or Marifa, and of feveral others, joins its Current with the Danube beeween. Waradin St. Peter, and Belgrade. This River carries valt Quantities of Stone Salt from the Salt Mines of Hungary and Tronfilonia, and fo by the Donube to all

Places as far as Presburgb, (it being not permitted to be carried higher, that it may not obftruct the Sale of the Aufrian Salt) a conifiderable Quantity of the fame Salt being carried down the Danube, and fo by the River Morava into Servia, and other Countries adjacent. On the Weft-fide is the River Rab (Arabo) which has its Rife in Styria, and being in its Paffage augmented by the Waters of the Louffiz, Pinca, Guncz, and other Rivers, falls into the Danube near Raab or Favrinum. The late Defeat of the Turks at St. Gotbard near this River, has rendered its Name famous to Pofterity. Upon the South-fide are two very confiderable Rivers the Dravus or Drave, and the Savus or Save. The firt has its Source in the Country of Salizburgh, (Part of the ancient Noricum) and after a Courfe of three hundred Miles through Carintbia and Hurgary, difcharges itfelf into the Danube near Erdoed or Teutoburgum. At its Entrance into Hungary, it is joined by the long River Mur; but a great Way before that, even near its Source, it is a confiderable River. The Save, the fecond noble River on that Side, has its Spring in Carintbia, and being augmented by the Acceffion of many other Rivers, after a Courfe of three hundred Miles, joins with the Danube near Belgrade. It is a very beautiful Stream even at Crainburgh (Carnodunum) an handfome Town not far diftant from the Head-fpring; which is fo confiderably enlarged afterwards, that ic contains feveral remarkable Inands, as that of Metubaris, on the Weft-fide of Sirmium, and that of Seffeck (Segefitca) near Zagabia, whereupon was anciently built a ftrong Fortrefs, unto which the Romans ufed to carry their Provifions, and other Neceffaries from Aquileia, and fo by Land to Nauporius, for the Ufe of their Forces in thefe Provinces. Into the fertile Plains between thefe two Rivers, viz. the Drave and the Save, Solyman the Magnificent retired from before Vienna, and fo farther to Belgrade. On the North-fide of Hungary are the Rivers rifing from the Carpatbian Hills, which are the Boundaries betwixt that Kingdom and Poland, viz, the River Gran, which falls into the Danube over-againft Gran or Strigonium; the River Vagus, or Waag, which joins with the Danube near Comorrab: Ir'is generally conceived to equal the $P_{0}$ in Italy: This I am fure of, that at Frieftadt (above fifty Miles before it runs into the Danube) it is already a confiderable Scream, and has a long Bridge over it ; and another very near to its Source at Trenfcbin, a handfome Town, famous for thirty two Springs of hot and Mineral Waters. Befides thete, that great and famous River the Danube paffes through Hungary, not any one Province having to large a Share of this River, as this Kingdom: For taking this River from the City of Ulm in Suabia, (where it begins to be navigable) it paffes by Ingolftadt, Ratisbon, Straubing, Paffau, Lintz, and Vienna, unto Presburgh; from whence it continues its Courfe for at leaft three hundred Miles through Hungary, before it comes to Belgrade. Not to mention here its fmoother. Paffage along the Shores of Servia, Bulgaria, Wallacbia, and Moldavia, and its Divifion into many Mouths, by which, after it has received into its Channel above fixty great Rivers, and, by a modeft Computation, kept its Courfe for fifteen hundred Miles, it difcharges into the Euxine or Black Sea; thence it is vifible, that in refpeet of its different Parts, it might well be mentioned by a double Name by the Geographers, viz. by that of Danubius, and Ifter. Strabo afcribes that Name unto it below its Cataract, or Water fall, near Axiopolis, in the Inferior Mosfa, or Bulgaria; whereas Appian, and moft modern Authors, begin it, at its Confluence with the Save, near Belgrade.

Befides thefe large Rivers, it has divers others, Fluvii non ignobiles, as Pliny very juftly ftiles them, viz. The Sarvizza, or Orpanus, rifing near Efperies, (Vefprinium) and paffing by Stulweiffenburgb (Alba Regalis) falls into the Danube. The River Walpo, or Vulpanus, which has its Rife near a Town of the fame Name; we pafs'd over it by Walcovar, and the River Bofneth, or Bacunthus, which empties itfelf into the Save not far from old Sirmium.
2. Moft of thefe great Rivers are covered with long
on yot Bordent of SClAV ONIA f Omer HUNGARY.

Bridges. The Bridge of Boats over the Danube, betwixt Strigonium and Barcban, is the firft upon this River after you come from Viemna. I faw alfo the Ruins of a Stonebridge, upon the Shore of St. Andrew's Inand; by Virovicbitz; but the Turks now-a-days neglect thofe Bridges, inftead of which they make Ufe of Bridges of Boats, which they find more ufeful, and contrive fo conveniently, hat they may with Eafe open a Paffage for Veffels that come that Way. Such a Bridge of Boats is betwixt Buda and Pef, over the Damube, being above half a Mile long; and if Sigijmund had lived to effect his Defign of building a Stone Bridge in that Place, no Bridge in Europe could, in all Probability, have compared with it.

Colocza, formerly an Archbifhop's See, has alfo a Bridge; and near Walcovar is another over the River Walpo. But the Bridge of Effeck (anciently Murfa) bails partly over the Drave, and partly over the low marfhy Grounds and Fens, juftly challenges the Precedency before the reft. It is five Miles long, with Towers upon it at each Quarter of a Mile, being handfomely railed on both Sides, and fuftained by large Piles of Wond, nine or ten in a Rank for each Arch. Count Nicholas Serini burnt that Part of it which was built over the Drave in the laft Turkilh War, inftead of which, the Turks have laid a Bridge of Boats a little below the other, which I pafs'd in 1669. Here it was the unfortunate King Lereis of Hungary engaged with the Turks under Solyman, which coft him his Life. In ancient Times there were likewife many Bridges over that Part of the Danube, known generally by the Name of Ister. Darius King of Perfia made a Bridge of Boats over that Mouth of the Ifer called Ofium Sacrum : And, according to Nicephorus, Confantine built a Stone-bridge over it; but that admirable Bridge built by the Emperor Adrian, (if we may give Credit to Dion the Hiftorian) furpals $s^{d} d$ all the reft. Some of its Ruins are to this Day to be feen near Severin, about twenty Hungarian Leagues from Belgrade. It confifted of twenty Piles of fquare Stone of one hundred Foot high, befides the Foundation of fixty Foot broad, the Diftance betwixt each of them being one hundred and feventy Foot, and joined by Arches with this Infrription:

## PROVIDENTIA AUG. VERE PONTIFICIS VIRTUS ROMANA QUID NON DOMAT? SUB JUGUM ECCE? RAPITUR ET DANUBIUS.

And for an everlafting Memorial, many Coins were ftamp'd in Silver with this Infcription, DANUVIUS.
3. Not any River, that I know of, has fuch large and well-peopled Inands as the Danube; as the Inle of St. Andreew's, betwixt Vicegrad and Vacia: Another lies a little below Buda, againft the Weft-fide of which ftands Adom, forty Miles long, and containing many Villages; another oppofite to Mobatz, and another at the Confluence of the Drave and the Danube, and another new one near Belgrade, where forty Years ago there was not the leaft Footiteps of an Inand to be feen: And if the River Leyta be the Boundary of Auftria, the Ine of Scbutz (Infula Cituorum,) excels all the others, being well-peopled, and full of good Villages, befides divers confiderable Towns, fuch as Comorrab, Samarien, \&cc. Another Thing is obfervable in the Danube, that no River whatever, at fuch a Diftance from its Mouth, can boalt of fuch confiderable Naval Engagements as this ; the Emperor keeping his Gallies at Vienna, Prefburg, and Comorrab; as the Turks do theirs at Strigo nium, Buda, Belgrade, \&rc. It feems not a little furprifing, when we read, that Mabomet at the Siege of Belgrade, appear'd upon the Danube with 200 Gallies, and other arm'd Veffels, which were fo fmartly engag'd by the Chriftian Fleet, that befides what were taken, the Turks were forc'd to fet their own Veffels on Fire, to prevent their falling into the Hands of the Enemy The Chriftians had a Fleet of twenty four Gallies, and eighty other arm'd Veffels, befides Tenders and Ships of Burthen, at the Siege of Buda: And when Solyman the Magnificent lay before Vienna, the Imperial Admiral Vol. II. N9i2I.

Wolfgang Hodder, did a fignal Piece of Service with his Veffels; for coming out of Presburg, he funk the Turkifb Veffels, which carried the heavy Cannon, intended for the Battering the Walls. Hungary is alfo furnilh ${ }^{\text {d }} \mathrm{d}$ with feveral confiderable Lakes; as the Lake Baleton, or Platfee, as they call it; (the Volcea of the Ancients) extending a great Length between Efperies and the River Drave, being guarded with feveral Forts; which have proved of great Ufe againft the Incurfions of the Tuirks. The Nerwidler-Sea, being feven German Leagues long, and three broad, having borrow'd its Name from the adjacent Town of Nerofidel, a handfome Place, fituate upon a Hill, with a fmall fquare Caftle. This is the fame mentioned by Pliny, under the Name of $P_{e i j o}$; and the modern Hungarians call it Terteu, lying juft half Way betwixt Vienna and Sabaria.
4. The vaft Plain of Pampus, in Paraguay, in America, is famous for its Extent, being 2000 Miles long; I remember that famous Sea-Captain, Mr. afterwards Sir Fobin Narborough, told me, that there is all low Land from the Plate River, to the Middle of the Streights of Magellan. The great Plains of Mujcory and Poland, are alfo famous throughout Europe; however, thefe are intermix'd with Trees; and fometimes whole Woods, whereas the Plains of Huing ary are clear and open; and; if compared with our Englißs Plains, as of Salifury, Lincoln, and Neromarket, exceed them as far as a fullgrown Man does a Child ; fuch are the Plains of Aufria from Vienna to Mount Simmarein, upon the Frontiers of Styria. I myfelf travelled from Vienna to Belgrade, through one continued Plain, for 400 Miles, without any. Eminencies, except one inconfiderable Wood near Bacna and Sbilberg, beyond Dotis: And this Plain taken from its firlt Beginning, viz. at Mount Kalenburgh; (Cetius,) two German Leagies Eaftward from Vienna, and fo beyond Belgrade, along the Northfide of the Danube, to the very Frontiers of Wallachia, exceeds by much that renowned Paffage from Labor to Agra in the Indies. It is true, Upper Hungary has Abundance of Woods and Hills, yet are thefe intermingled with large Plains. The Levelnefs of Hungary proves a confiderable Conveniency for Travellers, who are carried in open Chariots, carrying two Men befides the Driver, drawn by two or three, and fometimes four Horfes a breaft. Hungary has more large Cities upon the Danube than any other Province; for among the ten confiderable Cities which are feated from Ulm unto Belgrade, four, and thofe very large ones, belong to Hungary, viz. Presburg, Strigomium or Gran, Buida, and Belgrade; unto which if you add Pef, it makes up the Fith.
5. All the Rivers and Lakes of this Country furnifi them with vaft Quantities of Fifh: The River Thefe is fo famous for its Plenty of Fin, that they have a common Saying, That one Part in three confits of Fiffo And the Budziack, which falls into the Theyfe near Tockay, is fo full of Fifh, that the Country People faý, It fmells of Fibs; being to be undertood of the dry Summer Seafon, when its Waters are very low; though (as I was credibly inform'd by a certain Officer) it is thirty Fathoms broad, and $8 \frac{1}{8}$ deep; but being of this Figure V , he told me, it could not be well fifh'd with Nets. The Damube alfo affords a plentiful Share of Fifhes, as Trouts, Percles, Carps, the largeft and fineft I ever met with; and befides many others, a certain Fifh called Coppen, or Capito; a Bifcurrie, a kind of Lamprey, a Grundel, or fpotted kind of Cobites, with fix Beards, two fhort, and four longer; another Filh, exceeding in Bignefs a Pike, call'd Scbeyden, the Sjliurus of Gefiner, and at certain Seafons gteat Numbers of Hufones, call'd by them Haufons, which are fometimes twenty Foot long, a delicious Fifh, not unlike a Sturgeon. There are fet Fifhing-places, and peculiar Store-Houfes for that Uie upon this River, the higheft thereof is above Comorrab, in the Ine of Scbutz; but the -greatef Plenty of Finh is near Kilia in Wollacbia, where they take and falt many Sorts of Fiff coming out of the Euxine Sea, and fend them into the adjacent Countries. Thefe Rivers afford alfo great

Plenty

Plenty of Water-Fowl in the Winter, and among the reft Pelicans, but I never faw any Swans upon the Danube.
6. The Land here affords the like Plenty of Provifions of all Sorts, but efpecially of Bread and Wine, their Bread being as good as any in Europe, made light by kneading for a confiderable Time; and that fo cheap, that you may buy as much here for Two-pence, as we generally do for Twelve-pence in England; the fame being to be met with in the Iurki万b Dominions in thefe Parts. Their Grapes are both large, and of a lufcious Flavour, among which thofe of Virovichitz, near Vacia, excel the reft; their Vines are very noble, witnels thofe of Tockay, which are in great Requeft; and the pleafant and rich Wines of Sirmia, in the Southern Parts of Hungary; the Vines of this Province having been planted firft by the Emperor Probus, near Mount Almus, or Arpataro. At Vienna are no lefs than thirty Sorts of Wines to be fold. Neither are the Hunvari. ans at all negligent in improving their Grounds by Husbandry. I remember that in February I faw every Night great Fires in the Country, occalioned by the Burning of the Stubble and old Grafs, which rendred the Ground more fertile againft the next Seafon. Inftead of our Barns, or Hay, and Cornftacks, they ufe deep and fpacious Caves under Ground, whither they retire allo with their Families, in Cafe of a fudden Inroad from the Turks or Tartars. They have vaft Plenty of Hares and Deer, as alfo of all Sorts of Poultry, Partridges, Pheafants, $E^{\circ} c$. vaft Store of Sheep, having in fome Places long fpiral Horns, and long curl'd Wool; of Oxen fuch prodigious Numbers, that, according to a well grounded Computation, they fend to Germany, Italy, and other Parts, above 100,000 yearly. They have alfo good Store of Boufftes, which are very ufeful to them, elpecially in ploughing fome ftiff Grounds. Neither do they want Horfes, fome of which are pretty large, but generally fmall, though exceeding fwift; I faw above 1000 of them belonging to the Village of Lower Sene, or Senia, near Comorrab.
7. Their Language is peculiar to themfelves; I heard a Minifter praying and preaching in a Church at Bitcbka, and though he that was with me was very well vers'd in the Sclavonian, Germon, Turkih, Vulgar Greek and Ilalian, yet could he not find the leaft Afinity in it, with any of thefe beforemention'd Languages. The fame we obferv'd in the Albanian Language, in the Northern Part of Epirus, and Weft of Macedonia, where indeed the Sclavonion is ufed by fome, but their own Language in common Converfation among themelves, could not be underftood by the beft Linguifs, both Cbristians and Turks, that travel'd along with us. Thus, in fome Parts of Hungary, the Sclavonian is much in Ufe; I remember that at Friestadt (call'd Colgotz by the Hungarians) I heard them preach in Sclavonian in the Church of the Town, but the lirancifcans preach'd in Hungarion. This Remotenefs of their Language from others, makes them much addicted to foreign Languages, efpecially the Latin, which moft of the Gentry and Soldiery fpeak fuently enough, and there is farce a Coachman, or Footman, but what underftands as much of it as will ferve to make him underftood; this makes the Latin Tongue very ufeful through all Hungary and Tranfloania; but beyond Belgrade the Sclavonian is the univerfal Language; it being certain that you may travel with the Germans and Sclavonian from Hamburgb to the Frontiers of Tartary and Conftantinople itfelf; the Sclavonian being generally fpoken in Servia, Bulgaria, Romania, and Part of Macedonia, befides in many other Parts; io that a Man may make Shift to paifs with this Language from the Adriatick Shore in Dalmatia, unto the Tartarian Ocean. It is farce to be fuppos'd, that in a Country fo near unto, and fo much expofed to the Violences of a barbarous Neighbour, I mean the Iurks, there fhould be any Seminaries of Learning, there being no Univerfity in thofe Parts beyond Vienna; and though of old they have had many learned Men, yet thefe had their Education in Foreign Parts as had of o!d St. Ferom, and St. Martin; and thofe, Perrons of Quality in Hungary, who intend to breed up their Children to Learning, fend them
now-a-days to Vienna, Breflau, Prague, and fome other Univerfities in Germany. At prefent there is a Gymas fium, or fmall Univerfity at Schemnitz. The Hungarians boaft however of their once fo famous Library of Buda, founded by their King Mattbias Corvinus, the Son of Humiades, about 200 Years ago, confifting of feveral Thoufands of Books, and among them many Greek and Latin MSS, not to be purchafed; Part of it was carried off into Turkey, after Solyman had furprized that City, and the choiceft thereof procured afterwards for the Imperial Library at Vienna, when Cufpinianus was Keeper thereof; many of thefe Books being mark'd with the Arims of Corvinus, viz. a Crow bearing a golden Ring in bis Beak; thefe, with the fucceeding Additions of Bubocquius, Wolfgangus Lazius, Fugger, \&cc. together witn the choicef Manufcripts brought thither by Petrus Lambecius, the prefent Library-Keeper, from the Ambrofan Library near Infpruck, are Part of the 80,000 Volumes mentioned in the Imperial Library ; of "which I had the Favour not only to fee the rareft Manufcripts, and other Rarities, but alfo to have feveral of the beft Books to my Lodgings; and at my coming away, the fame learned Perlon prefented me with a Catalogue of fome hundreds of Alcbemical Manufcripts, with an Offer to have any of them brought to Englond, or to be tranfcribed at Vienna. There were lately about 400 Books (the Rcmnants of the Corvinian Library) left at Buda, but carelenly kept by the Turks, and were confumed in the great Fire that happen'd there, in 1669.
8. The Hungarions have a moft profound Veneration for their Crown, which, they tell you, was fent to their King Stepben by Pope Benedizz VIII. being admonifh'd by an Angelical Apparition to fend it to Stepben, and not to Mifca the then King of Poland, his Competitor: Hence it is, that they have always been fo careful to preferve it, as thirking the Fate of the Kingdom to depend on the Poffeffion or Lofs of it. Formerly it was kept in the Caftle of Vicegrad, but at prefent in that of Presburg. This Crown has alfo a moft peculiar Figure, being a very low Crown, with a Crofs upon it, enclofed with four Turnings up like Leaves, one whereof is as large as two of the o:hers. As it is a hard Matter to get Sight of the Original, fo I was forced to be contented with the Sight of the Model thereof, in the Treafury of the German Emperor Lecpold, exactly made after the Fathion of the Hungarian Crown of Gold, and befet richly with precious Stones, perhaps richer than the Original. Though the Hungarians want neither Inclination to or Abilities for Learning, yet have they generally been moft addicted to Martial Exploits, even to the Clergy, witnefs that unfortunate Battle of their King Lewis near Mohatz, in which fix Bifhops were nain with that Monarch. Some are of Opinion, that the famous Poet Ovid being recall'd from his Banifhment at Tomos, near the Euxine Sea, died at Sabaria in Hlungary, in his Return Home; where they fay, his Tomb was found, with this Epitaph made by himfelf:

Hic filus eft vates quem Divi Cefaris ira, Augutti Patria cedere juffit humn.
Scepe mifer voluit patriis fuccumbere terris,
Sed fruftra, bunc illi fata dedere locum.
9. In Hungary I alfo firft obferved the Pyrrbical Saltation, or warlike Way of Dancing, which the Heydukes perform by Dancing with naked Swords in their Hands, advancing, brandifhing, and clafhing the fame, turning, winding, elevating, and depreffing their Bodies with fingular Activity; finging at the fame time to their Meafures, after the Manner of the Greeks.

The great Deeds of Attila, King of this Country, and his numerous Armies, together with that memorable Battle fought againft the Roman General Rtius, (who was a Myfian or Servian by Birth) in whicn 200,000 were flain, is fufficiently famous in ancient Hiftories; and how far they extended afterwards their Conquefts over their Neighbours, is teftified by the Banners carried at the Coronation of their Kings, viz. that of Hungary, Dalmatia, Croatia, Sclavonia, Galifa, Rafcia, Servia, Bulgaria, Bofnia, and Ludomiria; and it mut be confefs $s^{s}$, to the everlafting Honour of the Hungarians,

## Chap. V.

and Defcription of HUNGARY.
that of all other Nations they have put the longeft Stop to the victorious Arms of the Turks; and had it not been for their inteftine Divifions; which the Turks have known very well how to improve to their Advantage, it is more than probable the Ottomans would never have been able to penetrate fo deep into this Country as they have done; notwithftanding which, a very confiderable Part thereof remains to this Day under the Emperor's Jurifdiction as King of Hungary, viz. almoft all Upper Hungary, from Presburgb unto Tockay and Zatbmar ; and in the Lower Hungary there are ftill in the Poffefion of the Chriftians, (befides divers other Places of Note) the three ftrong Bulwarks of Chriftendom, viz. Raab, Coniorrab, and Leopoldfadt, of which I took a full View, the laft being erected fince the Lofs of Newbaufel, and fortified after the fame Manner. It is feated on the Weft-fide of the River Wang oppofite to Friestadt; its Fortifications, which were begun in 1665 , confift of fix regular Baftions and Ravelins, and were not quite finifhed in 166 g , when I was there.
10. Thefe Quarters are famous in ancient Hiftories for the Prefence, Birth, Death, and great Actions of many Roman Emperors; not to fpeak here of Trajan, Caracalla, Galienus, Conftantius, and others; the Emperors Aurelianus, Probus, Gratianus, and Mawimianus, had Sirmiuns for their Birth-places; and Claudius Gotbicus died in or near it. Forianus and Valentinianus were Pannonians by Birth, and Ingenuus, Governor of Pannonia, was faluted Emperor by the Masian Legions, as was Vetranio in the fame Country. When Pbotinus was Bifhop of Sirmium, a General Council was held in that Place. The Roman Armies being fo frequent in this Country, no doubt but they brought Abundarce of their Copper, Silver, and Gold Coin hither, of which I obrained a good Number at Petronel, of old Carnuntum in Pannonia, and with many more at Sene, or Senia, near the Danube. An Armenian Merchant, with whom I lodged at Belgrade, furnifhed me with a good Quantity of Roman Coins at my Return, which he had got at Old Buda or Sicambria, at Old Sirmium, in the Country now called Scbremnia, and at Murfa or Effeck.
11. Near Deva, Lyfmacbus King of Macedon and Tbrace, is fuppofed to have kept his Court, in the Neighbourhood of which that unparallel'd Mafs of ancient Golden Coins was'found, under the Ruins of an ancient Caftle : For a ftrong Current of Water having been forced that Way by long continued Rains, which wafhed away the Rubbifh that had covered thofe Golden Medals, and the Glance of this coftly Metal having drawn thither many of the neighbouring Peafants, they difcovered thefe Medals, weighing two and three Crowns a-piece, having on one Side the Image of $L y$ Simactus, and on the other Side a VīFory; under thefe Medals they alfo found a Golden Serpent, which Ge-neral Caftalde fent unto Ferdinand, who had alfo 1000 of thefe Medals, befides 300 Caftalde had for his Share; of which there were collected, (after the Peafants had taken up a vaft Quantity) to the Value of Io,oçol. So that there was fcarce a Man found hereabouts, but what had fome of them, fo infinite was the Sum. This Caftle was fuppofed to have been fome Time the Refidence of King Ly/machus, and this Coin remained here from that Time ; it being a received Cuftom among the Ancients, for fuch as buried their Treafure, to place Serpents there, as the Symbol of a faithful Keeper. Among other Medals, there were alfo found two Medals of Gold, one of Ninus, the other of Semiramis, which were prefented to the Emperor Cbarles the Fifth. As I pafs ${ }^{\circ}$ d through the old Roman Towns, the Inhabitants brought me feveral Sorts of old Coins, which they term Heatben-Money; and in Bofnia and Servia the Armenians drive a great Trade with them, and fend them by the Way of Ragufa into Italy. Among other Coins I found one of Copper pretty frequent here, but not eafily found in other Parts. It was a Coin of the Emperor Julius Pbilippus, having on one Side the Head of Pbilippus, with this Infcription, IMP. C. M. JUL. PHILIPPUS. AUG. and on the Reverfe a Woman between a Lion and a Bull, with this Infcription, P. M. S. COL: VIM. AN. VII. which may be; Provincice Mo.
fae Superioris Colonia Viminacium Annona Septimo data Viminacium being a Roman Colony in Mefa Superior (now Servia) fuppofed to be Singidunum or Senderin upon the Danube, at the Mouth of the River Morawa or Marofh. The Lion and Bull feem to declare the Fitnefs of the Soil for Agriculture, and the Warlike Temper of the People, and by thefe two Animals fitting peaceably together, the Prudence of Pbilippus. Annona Septima, queltionlefs, intimated the feventh Diftribution of Corn by Pbilippus, the conducting of which was committed to the Legio XVI. Frumentaria.
12. The Habit of an Hungarian, for its Conveniency; efpecially in Warlike Exercifes on Horfe-back, is made Ufe of by all the neighbouring Nations, as the Croations; Sclavonians, and the Turks themfelves, living near the Frontiers, though otherwife very nice in this Point. The Hungarians delight generally in Blue, Yellow, Green, and Purple Cloth, Black being a Colour rarely to be met with here, the Priefts themfelves being clad in long purple Garments. Two Sorts of Weapons are mof common among the Hungarians, viz. a Kind of Iron Mace, called Catfon by them, with a round Iron Head, with Furrows in it, and Spaces cut away to ren. der it the more light; the other they call Balto, being a Kind of a Hacchet, with a Head fomewhat like a Hammer, but broader, and at the End makes the Shape of the Letter Delta.
13. The Country of Tranfivania was formerly a Part of the Kingdom of Hungary; but as I propole to give only a fummary Account of the Place and its Inhabiants, I thall not meddle with its ancient Hittory. It is bounded on the North by the Carpatition Mountains, on the South by the Principality of Walacbia, on the Eaft by Walacbia and Moldavia, and on the Weft by the Kingdom of Hungary. I believe there is no Country in the World fo nearly equal in Length and Breadih, each being about one hundred and forty Englifh Miles, it may be very truly ftiled a Country of Wonders; for to Travellers, who have feen the reft of Europe, it appears altogether aftonifhing. The Air is temperate, and, generally fpeaking, wholfome; the Soil wonderfully fruitful, the Water commonly but indifferent, as being frequently tinctured with Minerals, or, which is worfe, with Allom or Arfnic. There run through it four great Rivers, viz. the Marifus and the Samos, both which fall into the great River Tbeyfle, the Alula, which difcharges itfelf into the Danube, and the Cbryja, which the Germans call the Krufcb from its Windings, in which, I verily believe, it exceeds the Meander itfelf, for one is obliged to pafs it thirty Times in half the Number of Miles.

The Country is finely chequered with Woods and Plains, Mountains and Vallies: There are many ftrong Paffes in it, and fome of its Cities are naturally fo well feated, that with the Help of very fmall Improvements from Art, they might be rendered impracticable. To Speak of its Plenty, is a Theme that might exercife the ableft Pen; for it is extremely difficult to know where to begin, or when to leave off. The Wheat that grows here is the faireft and fineft in Europe, and fo cheap, that, with refpect to the Subfitance of an Individual, it has hardly any Vahe: The Oxen in this Country are large, fat and fine, and their Flefh wonderfully juicy and pleafant; yee I quefion whether one of them was ever fold for an Englifh Guinea, but from twelve to fifteen Shillings is the common Price; and yet, if I may be allowed the Expreffion, they are the Saple Commodity of the Country, and are bought up for the Auffian and other Markets. They want not any other Kind of Cattle; and as for Hogs, they go in Droves like Sheep, are prodigioully far, firm and well tafted; fo that the Bacon of this Country is truly excellent. All Kind of tame Fowl are here both cheap and good; as for wild, they are fo common and in fuch Plenty, that they farce bear any Price at all. Fing are not fold in Tranflyoinia, nor are you much troubled with the Sight of them, every Man, poor or rich, fines where he pleafes, and with what Inftrument he pleafes; if he takes more than will ferve for a Meal, he throws them in again after chufing the largeft and the beft, for
nobody
nowndy will touch a Fifh that has been dead an Hour before it is dreffed.
They have a very ftrong ferviceable Breed of Horfes, and befides thefe, they have a wild Sort with Manes that reach almoft to the Ground. As for their Wines, they are rich, ftrong, and full bodied, much fuperior to thofe of Auftria, Moravia and Walacbia, but inferior in Flavour to fome of the Wines in Hungary. Honey and Wax they have in Abundance, and of the former they make a Mead, which, when it is long kept, is richer and ftronger than moft White Wines. In their Mountains are Mines of Gold, Silver, Steel, Iron, Lead, Copper, Quickfilver, Salt and Brimftone.

As for the Inhabitants of this Country, to fpeak of them diftinctly would take up a Volume, and that Volume might be filled with Matter very inftrutive and entertaining. What I have to fay however fhall be contained in a few Words; there are four Nations that are look'd upon as Inhabitants of Tranfylvania. The firft of thefe are the Saxons, who are fuppofed to be the Remains of the ancient Dacians; they have a Language peculiar to themfelves, and are governed according to their own Laws and Cuftoms; the Capital of their Country is Hermanfadt, which is a confiderable Place; and befides this they have fix other Cities, and amongtt them Cronstadt and Claufenberg are confiderable Places. The Inhabitants of Towns are a civilized and good Sort of People, but the Plains are occupied by the Heydukes, who, in the Days of the Princes of Iranfyluania, were a Sort of Militia, and indeed for Strength, Activity and Valour, there are very few Nations that can compare with them. In Time of Peace they are Graziers, and live by Breeding, Feeding, and Selling of Cattle.

The Siculi inhabit the Northern Part of the Country towards the Carpatbian Mountains; they are fuppofed to be Defcendants from the Huns, and are as rugged and barbarous as the Country they dwell in ; they refemble the Highlanders of Scotland, or rather the old Irifh, for they value themfelves upon their Nobility, and the meaneft Creature in the Country infifts upon it, that he is a Gentleman of Birth. They too have feven Towns, fuch as they are, are brave to a Degree of Madnefs, and contend for what they call Liberty, with a Fiercenefs that no Authority or Force has hitherto been able to tame.

The Hungarians have five Counties, and their Metropolis is Alba Julia, which is very far from being either a large or beautiful Place. Thefe People were much favoured by the Ragot $k i^{\prime}$ 's, and other Princes of $T_{\text {ran- }}$ Sylvania, which encouraged them to make various Attempts upon the Privileges of the Saxons; nor were their Differences lefs frequent with the Siculi, fo that no Country was ever more torn or diftracted with civil Diffentions than this. Each Nation had its Dyet apart, and, which is ftill worfe, the feven Cantons of the Saxons were independant of each other, and their Dyets at Cloufenburg were in the Nature of States-General.

There is a fourth Nation in Tranfyluania, which live all over it, but without having Land, Property or Government; thefe are the Cingars, in plain Englifh, Gipfies; they had great Privileges from the Princes of TranSylvania, pitched their Tents where they pleafed, removed when they pleafed, and did almoft what they pleafed; but the Race of thefe Vagabonds is almoft extinguifhed, I mean in Tranfylvania, for there are enough of them yet in the Turkifh Dominions. They are without Controverfy the moft arrant Scoundrels in the Univerfe, Atheifts by Profeffion, Thieves by Trade, and have only this fingle Virtue, that they pretend to none. With all this they are a lively, active and ingenious

People, and, which is ftill more extraordinary, when there is nothing they can fteal within their Reach; they will be very induftrious. Like our Gipfies they are very expert Fortune-tellers, and have fuch Knowledge in Phyfiognomy, that they never fail to promife every Man or Woman that applies to them, what he or the likes beft, and pick their Pockets for their Pains; they are very fucceifful as Quacks; very fkilful as Farriers, are good Blackimiths, and the moft able Tinkers in the World.
We have now fhown the fairett Side of the Picture let us turn the Reverfe. As rich and as fine as this Country is, as healthy, brave and vigorous its Inhabirants; yet, whether they are the happieft or the wretchedeft People upon Earth, is a Queition one cannot eafily refolve. As for Want, that is a Thing unknown, but with Regard to fix'd Property, Lands, Farms, and what we call Eftates, they are far from being common. As for the Saxons, there fupreme Delight is Drunkennefs; fat Bäcon is the only Difh they defire, upon which they pour as much Wine and Mead as their Stomachs will hold, and then fleep fixteen or twenty Hours till they are fober. The Heydukes are the merrieft Mortals if the World ; they dance with their Swords drawn, and their Targets upon their Left Arm, with inconceivable Agility; and the Strokes of their Bucklers, and the Clafhing of their Swords, correfpond with the Tune that is played; to which the Gracefulnefs of their Motion, and the Sweetnefs and Serenity of their Countenances, add fuch a furprizing Beauty to the Sight, as renders it extreamly delightful. They have Mufick always at their Feafts, drink in Tune, and keep Time by clafhing their Muggs. An Excurfion is their fole Pleafure, and Induftry would certainly be very dreadful to them, if they had any Conceptions of it. But as they neither fee it or hear of it, they fight, feaft, and fleep all their Lives long, in fhort, they live without Care, and die without Thought.

But if a good Government could be eftablifhed in this Country, and the People brought under due Regulations,' they might certainly become both rich and powerful, as it is not a fifth Part of their Land that is cultivated, nor one Tenth of their Mines wrought. Some Cloth they make, but it is coarfe, and only fit for their own Ufe, but one may guefs what Induftry would do in this Part of the World, by what one Baron Lefley in the Emperor's Service actually did; he employed twenty of his Soldiers as Drovers, and they at proper Seafons of the Year carried Cattle to Vienna, by which in five Summers he acquired One hundred thoufand Florins; and having vefted his Stock in proper Commodities fent it to Venice, whither he repaired at the next Carnival, where he found his Capital doubled, with which he bought a noble Lordfhip in Bobemia, and being naturally a Man of OEconomy, and a good Mafter, made his Vaffals happy, and lived himfelf with all the Magnificence of a Prince.

But notwithftanding all this, the Towns in Tranfylvania are, generally fpeaking, mean; the common People live in Hutts; their Roads are bad at all Times, in wet Weather impaffable; the People fave nothing, and will rather abandon their Homes than pay Taxes; in fhort, they are proud of a Plenty which they abufe, and of a kind of Liberty, which is worfe than any Sort of Subjection. They have all Sorts of Religions amongft them without Morality, and, in the Midft of the moft valuable and faleable Commodities in the World, have few Manufactures, and little or no Trade. In fhort, they are Barbarians that think themfelves the happieft People in the World, and might be really 10, if they would become civilized.

## S E C TION III.

Travels through Hungary into Theffaly; a Defcription of the City of Lariffa, and of the Grand Seignior's Court there, with other curious Particulars; together with a Defcription of other Parts of Hungary, more efpecially of the Gold Mines, and fome Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the Houfe of Auftrias

By the Learned Dr. Edward Browne.

1. Introduction to this Section, including the Motives and Defign of our Autbor's fourney. 2. He Jets out from Vienna, and arrives at Petronal the Carnuntum of the Romans, with an Account of the Coins, and other Remnants of Antiquity found there. 3. A Defcription of the City of Presburgh, the prefent Capital of the Kingdom of Hungary. 4. An Account of the City of Raab, and the Manner in rubich it zeas betray'd into the Hands of the Turks. 5. The City of Comorrah defcribed, weith an Account of fome Antiquities found there. 6. A Defcription of Newhawfel and Senir, with various remarkable Paf. Jages. 7. An Account of Strigonium or Gran, and of the Cafle of Vicegrade, with fome otber Places in that Neigbbourbood. 8. A copious Relation of the Baths, and wohatever elfe is roorthy of Notice in the Royal City of Buda. 9. A Defcription of Tolnor, Mohatz, and Zygetch, and feveral curious Particulars. 10. An Account of the Town of Effeck, and of the famous Bridge near it, Juppofed to be one of the longeft in the World. II. Obfervations upon the Country and its Irbabitants from thence to Belgrade. 12. A Defoription of that important City and Fortrefs. 13. The moft remarkable Pafjages in the Autbor's Journey from thence to Lefcovia. 14. A Defcription of that Place, and of the famous Mountain Hœmus. 15. The Author's Account of Macedonia, with feveral curious biforical Remarks and Obfervations. 15. A Defoription of the City of Larifla, and the Country about it. 17. The fame Subject continued, more efpecially with regard to Mount Olympus. 18. A Defcription of the Grand Seignior's Perfon and Court. 19. Mifcellaneous Remarks, and, among/t other Things, of the different Modes of Sbaving. 20. The Manners of the People, and the Reafon of their being bandfomer than the Macedonians. 21. Of the Produce and Commodities of Theffaly, and of the great Plenty of Provifions. 22. Some Remarks on the vaft Extent of the Greek Cburch. 23. A Continuation of the Author's perfonal Remarks in tbis Country. 24. The Manner of Travelling through the Grand Seignior's Dominions. 25. Of the great Miferies indured by fuch as are Slaves among the Turks. 26. Of their Manner of Burying, and of the many Tombs that are to be met with on the Roads. 27. A very copious Detail of the Cultoms and Manners of the Turks, with Remarks upon their good and bad Properties. 28. The Autbor's Fourney from Comorrah to vijit the Mines. 29. A large Defcription of the Mines at Schemnitz, and the Manner of working them. 30. Of their Produce, and of the Manner of purifying the
Metal, when extraEted from the Ore. Metal, when extracted from the Ore. 31. An Account of a Gold Mine loft, and fome otber curious Particulars. 32. The Autbor's Journey to Eifenbach, with an Account of the Baths there. 33. A large and curious Account of the Gold Mines at Kremnitz, their Produce, and Manner of working them. 34. The feveral Methods made Ufe of for Separating and cleanfing the Gold. 35. An Account of the 2uickjiver and Copper Mines. 36. The Autbor's 'Journey to that of Herrn-graundt, and bis Obferviations there. 37. An Account of a Vitriolate Water that turns Iron into Copper. 38. A very fingular Account of the bot Batbs at Stubn, 39. A Defoription of the Salt Mines at Eperies; with fome otber
remarkable Particulars.

THE ingenious Author, in the Collection of his Travels which he publifhed, has regarded rather the Relation between Places, and the natural Connection of Things, than the Order of Time, for with refpect to this, his Journey to the Mines was prior to that which he made to Lariffa. In following this Method, he fought the Reader's Conveniency and Information, to whom it was of little Confequence when he travel'd, provided he was well inform'd of what he faw. While the Doctor lived, his Rank in his Profeffion, his high Reputation, univerfal Acquaintance and agreeable Converfation, gave his Travels the Vogue, and every body read them with Applaufe; but now they begin to grow a litcle out of Date, merely on the Score of their being made fo long ago; and yet we have nothing better, or, to fpeals the Truth honeflly, nothing near fo good.

Indeed, it is not at all probable that we fhall ever meet with any Thing of the like Kind of equal Value; for in the firft Place, Dr. Browene travel'd at a proper Age, not after pafing a Year at the Univerfity, but after having paffed with Applaufe through both UniVor. II. $\mathrm{N}^{\mathrm{Q}} \mathrm{I}_{2 \mathrm{I}}$
verfities, and was in his twenty-feventli Year. In the next Place, he was a Man of great Learning, very well fkilled in ancient Hiftory, and a perfect Matter of the Greek Language. We may add to this, that he was alfo acquainted with Phyfick, Botany, Anatomy, natural Hiftory and Chymiftry; which laft feems to me to have been his favourite Study. But the main Recommendation of all remains yet behind; he did not travel for the Sake of Amufement, and to kill Time, or as a Trader in Expectation of Gain, or in pure Obedience to a Father, who defired, that Traveling fhould fer a Polifh upon his Education; but he travel'd for the Sake of Knowledge, that he might employ his junior Years in procuring Materials fic for the Meditations of old Age; that he might vifit thofe Countries with his Eyes, of which modern Books gave him fo bad an Account ; and that he might gratify his peculiar Inclination to the Study of Minerals, by infpecting himfelf the moft famous Nines of Europe. When he had executed his Defign, and found his Head fraught with Knowledge fuperior to that of other Men, and very conducive to the publick Good, he refolved not to conceal it ; and thus the. Writing and the Publication of his

Book

Book were both the Effects of that great and generous Turn of Mind, which firt put him upon Traveling; not any mercenary Defign of Advantage, or a Scheme of making his Court to any great Man by a flattering Dedication.
We cannot heip, therefore, reading his Book with Satisfaction, becaufe, on the one Hand, we are certain that his Labours had no other Object than the Difcovery of the Truth, and that he was a Man of too much Parts and too much Learning to be impofed upon himfelf; befides, in the Courfe of his Narration it appears, that he fpared no Pains, and grudged no Expence in order to obtain an exact Acquaintance with whatever he thought it worth his While to enquire about; and as he took Time fufficient to examine all Things carefully, and to fer them down circumftantially while he was abroad, fo he did not hatten the Publication of his Book at home, till he had thoroughly digetted as well as reviewed his large Collection of Materials. In a Word, he had all the Diligence of Sir Pbilip Skippon, all the Accuracy of Mr. Ray, and feems to have had a more extenfive and penerrating Genius than either of them, of which we fhall receive indubitable Proofs in the Courfe of this Section. Thus much I thought due to the Author's Character, as well as requifite to excite the Readers Attention, which having awaken'd by this fhort and I hope not improper Introduction, we will now proceed to the Doctors's Narrative, as near as may be in his own Words.
2. After having pafs'd the Winter at Vienna, I met with a fair Opportunity to fee the Grand Seignior's Court, which then, and a confiderable Time before, refided at the ancient and famous City of Lariffa in Theffaly. As I do not pretend to give you the Names of all Places through which I pafs ${ }^{5} \mathrm{~d}$, fo on the other Hand you' will find mentioned fome which are not to be found in Maps, at leaft not in any that ever I met with. Between Vienna and Presburgh, the firf Place worth my peculiar Obfervation, was the Town of Petronel, and Haymburg Hill and Caftle : The firt is fuppofed to be the old Carnontum; one of the ftrong Holds of the ancient Pannonians, who, one hundred and feventy Years before our Saviour's Birth, bravely repulfed the Romans here, but were forced to fubmit to the Power of Auguftus, who made it a Roman Colony, and the Station of the Legio XIV. Gemina, and of the Claffis Iftrica; and by Degrees arrived to that Pitch of Greatnefs, that it became the capital City of all Pannonia Superior, comprehending all that Tract on the South Bank of the River Danube, wherein now are Haymburgh, Dutch Altenburgh, and Petronelii. Here I met with Variety of Medals, Infcriptions, and the Ruins of a moft noble Aqueduct, and the Remnants of a ftately Fabrick, which I thought might have belonged to a Temple of fonus, but is generally fuppofed to have been a triumphal Arch, erected in Memory of a Victory obtained by Tiberius, in the ninth Year of our Saviour, over the Pannonians and Dalmatians. Petrus Lambecius has, befides other Antiquities of this Place, given a Draught of the one Side thereof, and of the back Part I took a Draught myfelf. In this Place it was that the Emperor Antoninus Pbilofopbus, when engaged in a War with the Marcomanni or Moravians, refided for three Years, and died at Vienna (or Vindobona.). And here Severus was elected Emperor by the German Legions. But this great City was laid defolate by Attila the Hunn, there being nothing remaining now, where the old Carnutum food, but fome ruinous Foundations of the Houfes and Streets, fcarce difcoverable by the Eye.

Of Roman Coins there have been, and ftill are, found fuch Quantities, that even the Peafants bring them to Sale, of whom I bought a good Number ; and I re member, that Mr. Donallan an Irifh Gentleman, my Fel-low-Traveller, as we were viewing the Ruins of the ancient Foundations, flruck by chance a Silver Coin with his Foot out of the Earth.
3. Presburgh, Pofonium and Pifonium, is pleafantly feated on the North-fide of the Danube, ten German Leagues to the Eaft of Vienna, now the capital City of Hungary, under the Emperor's Jurifdiction, and,
fince the Surprifing of Buda by the Turks, the Place of Convention of the Eftates of that Kingdom, and fince the Lofs of Gran (Strigoninm) the Metropolitan City. Its Caftle is very noble and ftately, built of white Stone, on the Top of a Hill, where is now kept the fo much efteem'd Hungarian Crown. The Garden of the Arch. bifhop is exceeding fair, the Walks, Grotto's, Laby: rinths, and Fifhponds, very noble, and the Figure of Jeronymo, well worth the Obfervation of a Traveller: In the Cathedral Church is interr'd the Body of Sr. Fobannes Eleemofynarius, Bihop of Alexandria. Part of this Church is in the Poffeffion of the Fefuits; the Lum therans have likewife a handfome Church here.
4. Raab or Favrinum, a ftrong Frontier City, is feated at the Confluence of the Rivers Raab, the Rabnits, and the Danube. It has two Bridges, one laid over a double Ditch, leading towards Auftria, and the other towards Stulweiffenburg, or Alba Regalis: Its Fortification confifts of feven Baftions and four Cavaliers or Mounts. I. The Caftle Bastion, upon which ftands the Governors Palace. 2. The Water Baftion, on the Side of the Danube. 3. The Baftion of the Holy Hill. 4. The Middle Baftion, to the Eaft on the Land-fide. 5. The New Bafion. 6. The Imperial Baftion; and, 7. The Hungarian Baftion, facing the River Raab. Here the Turkifs Governor was kill'd, when the Chriftians furprized this City. It lies in an open and plain Country, there being no Eminency near it, except a fmall Hill, which is undermined, ready to be blown up in Cafe of the Approach of an Army, for which Reafon alfo a Spy Tower is built at fome Diftance, to give timely Notice in Cafe of Need of an approaching Enemy. Sinan Baffa the Turkib General, under the Reign of Acbmet III, after having loft a vaft Number of Men before this Place, and 12,000 in one Affault, took it by Compofition, by the Treachery of Count Hardeek the Governor, who paid for it with his Head. But in a few Years after was recover'd by the Chrittians, who furprized it in the Night-time, under the Conduct of Count Swartzenburgb and Count Palf, who put all the Turks to the Sword. At Raab and Consorrab we were fhown feveral Sorts of Warlike Inftruments, viz, a Morning-Star, as they call it, being a Club fet round with Spikes; ufed in the Defence of Breaches, and in affaulting of Towns; Earthen-pots, fill'd with flinking and combuftible Materials, to throw in among the Enemy; a Lebn Brader, or Plank, fet with Hooks, to be fix'd to the Out-fide of the Works, cover'd flightly with Earth ; a Werf Kugel, or Kind of Hand-Granadoe; a Spanibh Ritter, or Cbeval de Frife, to be faftened in the Earth, to keep off the Horfe, provided with long Iron Spikes on all Sides. At this Place the Turkifb Cbiaufes or Meffengers are obliged to ftay to receive their Difpatches, the Court of Vienna being much pefter"d with them before that Order, as they were fent continually with fome infignificant Meffage or other from the Governors of the Turki/b Frontier Places, for the Prefents Sake, which they expect at their Departure.
5. Comorrab, Crumenum or Comaronium, is a large and ftrongly fortified Place, feated at the Eaft End of the Ille of Scbutz, looking over the Danube and Waag. The ftrongeft Fort is called the Tortoije from its Figure. After Sinan Baffa had made himfelf Mafter of Raab, he was alfo for trying his Fortune againft this Town; but being repulfed with great Slaughter in all his Attacks, he was for tempting the Fidelity of the Governor Barors Brown, unto whom he fent five Turks, under a Pretence of a Parley, with very advantageous Offers; but this brave Man, though dangeroufly wounded, having firft given them the Hearing, caufed four to have their Heads cut off, which he put upon lony Pikes upon the Bulwarks, and fent back the fifth with this Meffage; That he was miftaken in his Perfon, if he judged of him by the Treachery of Count Hardeek; and that he mighe reft affured, he would live and die in the Defence of the Place committed to his Charge by the Emperor. In the innermoft Caftle of Comorrah, I faw three very ancient Tombs, brought thither formerly from Senia, a Place of Antiquity not far off, two of which having Infcriptions not to be met with in Gruter, I thought fit to infert here.

The third Tomb was of the fame Figure, but without any Infrription. Of fome other Places, through which I pafs'd alfo the Year before, I fhall fpeak only en pafant.
6. Nerwbarofel, call'd Vywar by the Hungarians, is fituate by the River Nitra, not far from Nitria, a ftrong Place, taken by Count Zouches, in the late Wars. Newbawesel is a regular Fortification of fix Baftions, in the Form of a Star. After Count Forchatz, the Governor thereof, had rafhly engaged with the Turks at Barchan, they laid Siege to this Place, and after a flout Defence made themfelves Mafters of it by Capitulation; though it is generally believed, that if the Vifier had had not fpent his Time and Men in this Siege, he might have put moft of the Emperor's hereditary Countries into a great Confternation, whereas the Emperor's Auxiliaries being join'd by that Time, the Turks receiv'd a fignal Difgrace near St. Goddard, the Lofs of which Battle procur'd a fpeedy Peace. The Turki/b Baffa lives now in the Palace, formerly belonging to the Archbifhops of Presburgb. Sene or Senia, a Place of Note for many Remains of Antiquity found there now and then. Here, by the Favour of the Byra or Judge of the Place, I got a Roman or Heatben Key, as they call it, and feveral Sorts of Coins, fome of Gold, and fome Intaglia's, fome of which I prefented to Petrus Lambecius. The Inhabitants will have its Name to have been anciently Apollonium, but without any grood Ground. In our Way betwixt Raab and Datis, we pals'd in Sight of Martinberg, a ftrong and handfome Town, feated upon a Hill. Datis, Tata or Theodata, twelve Englijb Miles from Comorrah, has fcarce any Thing remarkable, except its Caftle, and fome natural Baths near it. But to return into the Road; we were row'd from Comorrab in a Saick of twenty four Oars, the Hungariains rowing on one, and the Germans on the other Side; thus paffing by Sene, Nefmil, and Rodzoan, we came to Motch, the Frontier Place, where we were to ftay for the Turki/h Convoy, which being ready in the Morning, their Officers went afhore firtt, and next our Veyda, or Veyvod, with the Interpreter, and Chief of the Company, with a flow Pace, and at Meeting faluted one another by fhaking, of Hands together; then delivering our Boat to the Turks, they faftned it to their Saick, and fent one into ours to fteer it. At parting they faluted the Chriftians with one Gun, and fo with eighteen Oars row'd down the Danube, we carrying the Eagle in our Flag, and they the Double Sword, Star and Half-moon. The Turkibs Saick having brought us to Gram, fet our Boat afhore, and fo left us; the Governor took no Notice of us, but being reprimanded upon that Account by an Aga, who came from Nerwbarvjel with four Troops of Horfe, we were foon difpatch'd.
7. The City of Gran, Strigonium, or Offrogon, is fituate on the South Side of the Danube, near its Confluence with the River Gran ; it is divided into the upper and lower Town, each of which bas its peculiar Walls, that of the lower Town commanding the Danube. The Hill of St. Thomas, which overlooks the Place, is alfo fortified with a Wall. Here are natural Baths of a

Hunsary, which gave Birth to St: Slepben, their firt Chriftian King, and King Stephen III. lies entombed here. This Place has endurd many remarkable Sieges, having been often taken and retaken: It yielded in 1683, to the Duke of Lorrain. Oppofite to it is Bars cban, being joili'd to it by a Bridge of Boats. :From hence we paffed to Vicegrade or Vizzegrade, having two Caftes, the Upper Caftle being feated upon a high Rock, where formerly the Crown of Hungary was kept. The lower Cafte has been formerly a fair Structure. Here are alfo to be feen the Ruins of an ancient Fabrick of Arches of fquare Stone: This Place, after it hâd been a confiderable Time in the Hands of the Turks, was furrender'd to the Duke of Lorrain in 1684. Oppofite to Vicegrade lies Maroz, where there is a handifome Church, the Chriftians living pretty weil at Eafe here, under the Turks, becaufe of its voluntary Serreitder to them. Below this Place, we faw the large Inand of Sc. Andrere in the Danube, and fome Ruin's of Stofie upon the Shore of the Ine, which the Turks told us were the Remnants of a Stone-Bridge. Beelow this, pafing by Virocbivitz,famous for its large and noble Grapes, wé carne to Vacia, forinerly an Epiicopal See, which has now two Mofques and one Chriftian Church. It was taken by the Turks in 1541. and regain'd by the Duke of Lorrain in 1684, after a fignal Defeat given the Turks near that Place, but being not tenible by Reafon of fome adjacent Hills, was quitted the fame Year in Autumn.
8. We changed again our Convoy here, and we came to Buda, formerly the Capital City and órdinary Refidence of the Hungarian Kings, and at prefent of a Turkifo Vizier, who has feveral Bafbas under his Jurifdietion. This City is of a large Circumference, pleafantly feated upon the Donube, divided into the Upper and LowerTowo ; wherein are to be feen the Remnants of many magnificent Structures, -built by the ancient Hungarian Kings, and efpecially Maittbias Corvinus, in whofe Palace the Vizier now refides. This had anciently three moft admirable Statues of Brals, of Hercules, Apollo and Diana, at its Entrance, which were by Soliman caft into great Guns; the whole Palace, in all other Refpects not approaching to its ancient Glory ; however, here are feveral handfome Mofques and Caravanfera ${ }^{5}$ s. On the Top of Sc. Gerard's Hill is a Fort, which overlooks the Town and Couniry. But what Buda has moft to boaft of now-a-days, are its natural Baths, efteemed the nobleft in all Europe, both for the Largenefs of their Springs, and the Magnificence of the Buildings; for negligent as the Turks are in their private Houres; yet we found them moft fumptuous in their publick Structures; as their Caravanfera's, Mofques, Bridges, but efpecially their. Batbs, bathing being in great Requeft among them and all ocher Mobamimedans.
There are here in all eight Baths, of which I took a View during my. Stay in this City; viz. Three towards the Eaft and South-Eaft Part of the City, in the Way to Confantinople, and five towards the Weft End of the Town, in the Way to Old Offen and Gran. The firt is a large open Bath, at the Foot of a rocky Hill, call'd Purgatory. The fecond has a Cupulo on the Top, flands near the fame Hill, but more into the Town. The third they call the Batb of the Green Pillars (tho ${ }^{*}$ now they are red) over againit a Carazanfera: The Spring is very hot, yet ufeful without the Addition of cold Water ; it contains a petrefying Juice, which is to be difcover'd on the Sides of the Bath and its Spouts, where it leaves a Gummy Stone behind it \& and the Vapours of the Bath coagulated on the Cupola, the Irons reaching from one Column to another, and on the Ca pitals of the Pillars, form long Stones like Icicles, which you fee hanging to all there Places. The Bath is of a circular Figure, fet aboue with large Pillars fupporting the Cupulo, which has divers Openings, for the free Paffage of the Exhalations, notwithftanding which, the Bath continues always as hot as a Stove. The Water is let out every Night after the Women have done Bathing.

The Baths on the Weft End are, firlt, Tactelli, i. e. the Table Batb, being but fmall, the Water whitihn, and of a fulphurous Smell, they both drink of, and
bathe
bathe in it; what is drunk, is receiv'd from a Spout conveyed into the Bath; I gave a Piece of five Sols to a Turk, who holding it under the Spout, to let the Water fall upon it, and rubbing it in the mean Time with his Fingers, gilded it for me in half a Minute. The fecond is Barat Degrimene or the Bath of the Powder Mill, arifing in an open Pond near the High-way, and its Waters being mix'd with thofe of the Pond, makes one Part of it of a whitifh Colour, and clear in another, as likewife cold and hot in feveral Parts ; being conveyed crofs the High way into a Powder-Mill it becomes ufeful in making of Gunpowder, whence it got its Name. The third is Cuzzoculege, the Little Bath, or the Bath of the Saint, being kept by Turkif Monks. The Water near the Spring-head is fo hot, as not to be fit for Ufe, but being conveyed through one Bath into another, becomes tolerable. The Water differs neither in Smell, Tafte, or Colour, from common Water, being without the leaft Sediment, except that the Sides of the Bathing-Room are cover'd with a green fpongy Subftance. The fourth is called Caplia, a noble Scructure, of an octogonal Figure; with a very handfome Bath in the Middle, furrounded with a Trench of Water to bathe the Feet in: On each Side it has a Niche, wherein is a Fountain. In the Anti-chamber, where the Cloaths are left, is alfo a beautiful Fountain, with a Stone Bafon; the Water of this Bath is alfo very hot; and not without a petrefying Juice. The fifth is the Bath of Velibey, the nobleft of all the reft, having a fpacious Anti-chamber; the Bathing-room is allo very capacious, high arch'd, and advanced with one great $\mathrm{Cu}-$ polo in the Middle, juft over the great round Bath, befides four leffer ones at the four Corners, over as many private Bathing-Rooms, where the Turks take off all the Hair of their Bodies with Pflotbrum, mix'd with Soap, except their Beards. The middle Cupolo is fupported by twelve Pillars, betwixt eight whereof are Fountains of hot Water, and between the reft Places to fit down, where the Barbers and Bath-men attend. In each of thefe Places are two Stone Cifterns, one for cold and the other for hot Water, to be mixed as every one thinks fit, the Water being not fit to be ufed without the Addition of cold Water : For the reft, it has a ftrong fufphurous Smell, and contains a petrefying Juice. The Mornings are appointed for the Men to bathe in, and the Afternoons for the Women. If you have a Mind to bathe, you are brought into the Antichamber of the Bath, where being furnifhed with a Cloth and Apron by thofe that attend, you lay by your Cloaths, and fo enter the Great Bath, where fitting down on the Side or between the Pillars near a Fountain, you are well rubb'd, with your Hands and Arms ftretch'd out, by the Barber, after which you bathe. If you pleafe, or the Cuftom of your Country requires it, you may have your Head fhaved, and your Beard alfo, except the upper Lip; next the Barber rubs your Breaft, Back, Arms and Legs with a Hair Cloth, either fitting or lying upon your Belly; then having wafhed your Head with Soap, and thrown cold Water upon you all over, you walk in the Steem of the Bath for fome Time. This City is generally called Offen by the Germans ; fome trace the Original as far as to a Brother of the famous Attila, called Buda. And to confefs the Truth, the Situation of this Place upon the Banks of the Danube, where it gathers its Water in one entire Channel, and that upon an eafy Afcent of rifing Hills, from whence there is a Profpect out of many of the Creeks crofs the Danube, into a beautiful Country, and of the City of Pest ; fo excellent a Situation, I fay, added to the Advantage of its hot Springs, might well invite the Conquering Huns to prefer this Place for the Building of a City, before all their other conquered Countries. The City of Buda was the ordinary Refidence of the Hungarian Kings, till it was conquer'd by Solyman the Magnificent, the I 3th of Auguf 1541 . There is another Place called Old Offen, fuppofed to be that ancient Sicambria, where the Sicambrion Soldiers had their Quarters in the Time of the Romans. Here fome Antiquities and Infcriptions have been difcover'd formerly.

Upon the Eaft-fide of the Damube, directly opponte to Buda ftands Peft, in a Plain, of a Quadrangular Figure. This City imparts its Name to the whole' Country; or Comitatus Peftbienfis, (Hungary being divided into Counties like England) and is joined to Buda by a Bridge of Boats above half a Mile in Length.

I was fomething furprized at firft, when I faw the Turkib Women wear long Breeches, reaching almoft down to their Feet. Over thefe they wear their Shifts, and over thefe a Kind of a long Garment; their Headdrefs covers their Faces, except the Eyes, almoft like our Penitents. Whilft we ftaid at Buda, wie took View of one of the Turkibh Convents, where we were entertained in a large Room, not unlike a Chapel, with Melons, and fome other Fruit, by the Monks. The Superior, called Julpapa, i. e. Father of the Rofe, having a Girdle about his Middle, emboffed before wịh a white Stone called Galactites or Milk-ftone, bigger than the Palm of a Hand. They have a fuperftitious Opinion, that Mabomet turned a whole River of Arabia inio a Kind of Stone. From the Houfe where we lodged, we had a fair Profpect of the Danube, and were often vifted by divers Cbiaufes (Turki/h Meffengers.) The Mafter of the Houfe being a Rafcian, was thought to hold a fecret Correfpondence with a Frainiifan Fryer of Peft, and with fome other Perfons of Note at Comorrab, Raab, and Vienna: We were alfo very civilly entertain'd by Mortizen Epbendi, who had been in Quality of Envoy-Extraordary at the Court of Vienna, and would needs have me fit upon a Stool, brought in for that Purpofe, being fenfible that their Way of fitting crofslegg'd would not be very agreeable to me. Among many other Queftions, he ask'd me, What was the King of Poland's Name ; and when I told him it was Micbael Wifnowitski, he replied, Micbael is a good Name, it is the Name of the greateft Saint in Heaven, except Mary.
9. From Budo we travel'd by Land to the Eaft, and paffing by Ham Zabbi Palanka and by Erzin, came to Adom, call'd Tzan Kurteren, i. e. Anima liberata, by the Turks; which Name was given it by Solyman the Mag. nificent, becaufe here he made the firf Halc with his Army, after his Retreat from Vienna. Hence we came to Pentole or Pentolen Palanka, which fome are of Opinion was the old Potentiana, where the Huns were overthrown by Macrinus and Tetricus, the two Romon Generals. Some will have this to have happened near Adom. From hence we went on to Fodwar in Sight of Colocza, feated on the other Side of the Danube in the Road to Temefwar, and fo further by Pax, or Paxi, to Tolna, the old Altinum or Altinium, near which the Huns fought a fecond Battle, and routed the Romans with the Lofs of $40,000 \mathrm{Men}$ on their Side. It is inhabited by Hungarians and Rafcians, who are often at Variance. Thence we came to Feni Palanka, where we pafs'd the River Sarvizza (or the Urpanus) which rifes near Efperies, and paffing by Stulveiffenburgh (Alba Regalis) joins its Current below it with the Danube.

From thence, by Setzar to Botofeck, and fo to Setz, a large Town, near which we faw the Ruins of an old Caftle upon a Hill, enclofed with Pallifadoes. Here is a new Caravanfera. Hence we went on to Mobatz, but before we came to this Place, paffing by a fmall Bridge over the Brook Curaffe, we took a View of the Place where the unfortunate Hungarian, King Lewis, after the Lofs of the Battle near Mobatz, fought Oetober 29, 1526, was plunged in the Flight with his Horle in the Mud, and miferably perifhed. His Body being difcover'd by Cotrifous, who was near him when he was drowned, to the Hungarians, it was taken up and buried at Alba Regalis, the Place of Sepulture of the Hungarian Kings. Near this Place we mer with a Caravan of two hundred Perfons under a Guard of Fa. nizaries, and frequently upon the Road we faw numerous Droves of Oxen driving towards Vienna, belong. ing to the Eattern Company there, who, as they have the Monopoly of Oxen in that City, fo they have Liberty to buy them in the Grand Seignior's Dominions. The fame Day we faw the City of Five Cburcbes (Quinque Ecclefic) and Zigetb to the Right of us. This lanis is
ftrong

# Chap. V. through Hungary, Thessaly, Macedonia, ©o c. 

ftrong Place, fituate on the Side of a Fen, in which there is an Inle, and beyond it a Caftle. This Place is famous for the unparallel'd Refiftance made here by Count Serini againft the Turks; for, after having been forced out of the Town, he retired into the Ine, and from thence to the Caftle, where, after having repulfed the $\mathcal{T} u r k s$ in feveral Affaults, he fallied out with twenty four Men, (all that were left) who were all llain by the Infidels, in endeavouring to break through their Lines.
10. From hence we pafs'd on by Barinowaar Darda, or Draza, to Efeck or Ofjeck, fuppofed to be the old Murfa, or at leaft very near it. Its Situation is very low, the Streets being paved with Timber Trees laid crofs-wife ; upon one Side of the Gate you fee fome Remnants of an old Roman Infription, M. ELIAN $\mathcal{E}^{\circ} c$. and on the other Side a Maid's Head cut in Stone Here you fee alfo an uncommon Dial, brought hither from Serinwear; and the largeft Piece of Ordnance that ever I faw in thore Parts, not lying upon Carriages, but upon Bodies of Trees. But what furpaffes all the reft is, the famous Bridge of Elfeck, built of Wood, partly over the River Drave, partly over the adjacent Marhes, being five Miles long, railed in on both Sides, and defended by certain Towers at every Quarter of a Mile's Diffance. But of this elfewhere; it being the greateft Paffage from Servia, and other of the Grand Selgnior's Dominions, into Hungary. Count Nicbolas Serimi, to hinder Supplies from coming to the Grand Vizier's Army, burnt that Part of the Bridge which was laid over the River Drave, (rebuile fince) and in his Re turn alfo fet Fire to Five Cburcbes, which lies to the Weft of Efeck.
From hence we travel'd to Valcowar, where there is a ftately Bridge of Wood over the Walpo, (Valpenus) a River affording great Plenty of Fifh, upon which, to the Weft, ftands alfo the Town of Walpo; then by Sotzin Palanko, and Towarnick, or Tabornick, to Netrovitza, a large Town near a Lake, and fo to Simonovitz, leaving to the Right of us (at a great Diftance) the fo famous ancient Sirmium, a Place fcarce worth taking Notice of now, except for its Antiquity. The Country hereabouts is called Scbremnia; but that Part extending nearer to the Drave, Bofoga.
Ir. In this Country many Families, nay the Inhabitants of whole Villages, have their Habitations under Ground, like the Troglodytes, and the fubterraneous Nations bordering on Egypt. We faw fome Weills near them, where they draw their Water like our Brewers ; they no fooner got Sight of us, but they retired to their Caves, their Dogs by their Barking having given them timely Notice of our Approach. We alighted to take a View of the Houfes of thefe poor Chrittians, which we found tolerably well contrived within, divided by Partitions with wooden Chimnies, and a Window at one End a little above Ground: All Things were neatly kept, though but poorly, after the Falhion of thofe Parts. Their Speech we found to be a DialeEt of the Sclavonian.

We continued our Journey between the Danube and the Save; we came to Zemlin upon the Danube, and from its Caftle had a fair Profpect of Belgrade; whither we pafs'd from hence by Water.

Belgrade, Taurunum, Alba Graca, or Greek-Weifenburgh, or Nandor Alba, as it is called by the Hungarians, is a large, ftrong, populous, and trading City in Servia or Muefia Superior, feated at the very Confluence of the River Save and the Damube, the firt being to the Weft, and the other to the North. The Danube is very broad here, and its Current fo rapid, that it feems to cut off that of the Save, as the Rbofne 'doth the Sein near Lyons in France. The Water of the Danube feems more yellow and troubled, and that of the Save greenifh and clear. At the very Mouth of the Save is an Ine, made there of the Settling of the Sands of both Streams, about thirty-five Years ago, which is now full of Wood.
12. As we entred Belgrade, I pals'd by the WaterCaftle, and afterwards by the Upper Cafte, both large, and ftrengthened with feveral Towers. The chiefeft Trading-Itreets are covered over Head, to keep off the
Vol. II. ${ }^{\circ}$ CXXII.

Sun and Rain. The Shops are no bigger than Taylors Shopboards, and very low, the Shop-People fetting upon them as our Taylors do, and felling their Wares to the Chapmen, who remain without, and feldom enter the Shop There are befides thefe at Belgrade, two large Bezafans, or Places where the beft Commodities are foid; they are built crofs-wife like the old Cathedrals, with Walks within, like to thofe of our Old Exchange above Stairs. They have alfo two Exchanges built of Stone, with two Rows of Pillars over one another, but were almoft filled up with Merchandizes. The Grand Vizier had lately built a ftately Caravanfera, at his own Coft, with a Fountain in the Court, and juft by a Molque with a Fountain before it; this being the firt I ever faw within-fide. He had alfo built a Col1 -ge for young Scudents, one of which I faw in a green Garment, with a four-corner'd Turbant on his Head. I obferved alfo great Numbers of Sepulchres near Belgrade. We lodged at an Armerian Merchant's Houfe, where we were well accommodated, and our Landlord conducted us to feveral other Armenians, who had very fair Houfes, and entertain'd us with Coffee, Sherbet, and very good Wines of the neighbouring Country. There are very few Trading People in thofe Places where the Armenians do not live; they have a Church at Belgrade, and feem to be more open, candid, and fair-dealing than the Greeks and feros.

Belgrade is a Place of great Trade; its Situation at the Conllux of the Damube and Save, and the River Thbey Je falling into the Danube near it, as the River Drave does not far from it, and the Morava, or Marofh, not much below it : All this, I fay, togerher with the Advantage of a very fruifful adjacent Country, through which the Donube paffes towards the Euxine Sea, is fufficient to make Belgrade one of the moft flourifing Cities in Europe, were it in the Hands of a People that knew how to improve all thefe Advantages. This City was formerly the main Bulwark of Hungary, which has feveral Times ftemm'd the Current of the Turkih Victories, witnefs the Difgrace received here by Mabomet the Great; but was at laft taken by Solyman the Magnificent in 152 I .
13. Atter we had left Belgrade, we continued our Journey through Servia, and paffing by a very high Hill called Havilleck, to the Weft of us, (where we faw the Ruins of an old Monaftery) we caine to Hijfargick near the Donube, though our Maps place it at a good Diftance from it. Here we bid adieu to the Danube, at a Place where it had run already from Ulm in Suabia, where it begins to be navigable, about 900 Miles, befides what is to be accounted for from its firf Source thither, and has feveral Hundreds of Miles to run before it difcharges itfelf into the Euxine Sea. The next Place we cáme to was Collar, not far from Samandria, an old Roman Colony, but now an inconfiderable Place. From hence to Hafan Bafa Palanka, about forcy Englifh Miles from Belgrade, where we found a Lion worrying a Wolf, in Stone, a very ancient Piece.

Coming afterwards to Baditzna, we faw feveral Bulgarian Women, whofe Drefs feemed to us very odd: For they wear a Kind of Canopy upon their Heads, fet about, as well as their Foreheads, with all Sorts of Foreign Money; we alfo beftow'd fome Pieces upon them, as an Addition to their Ornaments, which they thankfully received. Much in the fame Manner have I feen fome Gracian Women attired, their Foreheads being cover'd richly with Duckats of Gold, and Pearl; but their Head-drefs was not raifed fo high.
We pals'd forward for Yagodna, pleafantly feated in a moft delightful Country; and in a few Hours after we had left it, turning off to the South, we faw to the Right of us, on the Side of a Hill, the Tomb of a Turkija Saint, about four Yards long, and a fquare cover'd Place near it: Our Cbiaus having performed his Devotion here, we went forward through great Woods by Cbiffick, where there is a Caravanfera; but we thought it more fafe for us to refrefl ourfelves, and our Horles, at an adjacent Farm-houre, belonging to a Merchant of Belgrade. Hence we travel'd all Night to the Morava, or Mofcbius (the Marofo) the chief Rivèr

9 K
of this Country, arifing in the Mountains in two Streams, the one call'd Morava di Bulgaria; the other Morava di Servia; and uniting afterwards in one Channel, falls into the Danube at Zendecir, or Singidunum, oppofite to the Rafcian Shore. We happening to pafs this River in a Place where it was very broad, deep and rapid, the Cbiaus betook himfelf to his Prayers; and after the Danger was over, it put me in Mind of the rapid River Varus or Var, on the Confines of Provence and Italy, which, when I pafs'd on Horfeback, two Men were forced to go on the lower Side of me, to keep my Horfe from beinig carried downwards by the Violence of the Current. By this River the Commodities of Servia and Bulgaria, are carried into the Danube, and from thence to other Places; as on the other Hand, Salt, and various other Commodities of the Product of Aufria and Hungary, are brought up againft the Current of the fame River. Near. this River, Hunniades furprized the Turkib Camp by Moonlight, with 10,000 Horfe, with the Slaughter of $30,000 \mathrm{Men}$, and 4000 taken Prifoners.

At laft we came to Halli Fabifar, or Crußovats, a Place of Note in Bulgaria, having a handfome Church, with two fair Towers. From hence we continued our Journey for a whole Day through Hills and Forefts, and and came at Night to Procupie, fuppofed by fome to be the old Villa Procopiana; the Turks call it Urcbup. We lodged here this Night at a Merchant's Houfe of Ragufa, where we met with very good Accommodation. Here we met with a Roman Catbolick Monk, who fpoke Latin (a Rarity in thofe Parts) and one of their Phyficians, whofe Knowledge went no further than the Compofition of fome ordinary Simples; his Way was to offer his Service to the People every Morning in the Market-place.
14. From hence we travel'd to Lefcoa, or Lefcoria, a Town feated upon the River Lyperitza, which may well be call'd the Meander of Mafia, having fo many various Windings betwixt the Hills, that in lefs than twelve Hours time we pafs'd it ninety rimes. This put me in Mind of the Italian River Taro, which I pals'd forty times betwixt Parma and Fornovo. I found nothing worth taking Notice of here, except an ancient large Tower, but without any Infcription. We were alfo much diverted with the great Concourfe of People met together on Account of a great Fair, which is annually kept in an Enclofure near the Place. We continued our Journey the next Day over the Mountain Clifura (one of the Branches of Mount Hermus) where our Eyes were furprized with the Brightnefs of the Rocks, which confifting of Mufcovia Glafs, made a pleafing glittering Show; like that mentioned by Olearius, of Lapis Specularis, betwixt Permeras and Schamacbia, which fhined like Diamonds. We defcended through a narrow rocky Way, by the ftrong Caftle of Kolomboiz, or Golobotz, which brought us co Urania, a ftrong Pafs with a Caftle at the Foot of Mount Cliffura, and commanding that Paffage.

The whole Ridge of Hills, which extends betwixt Servic and Macedonia, is a Part of Mount Hamus, which under divers Names reach from the Adriatick to the Euxine Sea; vifiting by the Way feveral Paffages which Pbilip King of Macedon took care to fhut up, to fecure himfelf againt the neighbouring Nations; tome affirm, That from the middle Peaks of Mount Hemus, there is a Profpect both to the Adriatick and Euxine Seas. But King Pbilip, who made Trial of it, found himfelf difappointed in his Expectations, and fo was I ; for being upon one of thofe high Mountains, but fomewhat nearer to the Adriatick Sea, I found that the Mountains of Albania cut off the Profpect on that Side. From hence we went forward to Comonava, where there is Itill a Greek Monaftery on the Side of the Hills, and fo to Kaplanlib or Tygres Town; then to Kuprulib, or Bridge Town, having a good Bridge over a confiderable River call'd $P$ finia. It was cafually fet on Fire before we left it, and a great Part of it burn'd.

From hence we travel ${ }^{3}$ d by the Way of Isbar to Pyrlipe, firt paffing the high and craggy Mountains of Pyrlipe in Macedonia, which glifter like the Clifura, and
probably contains, befides the Mufcovia Glafs, fome Minerals. There we faw maffy Stones lie upon mafly Stones, without the leaft Earth about them; and upon a high Ridge or Rock, many Sceeples high, a very ftrong Caftle, belonging formerly to Marco Crollowitz, a famous Man in thofe Parts.
15. After this, paffing through a plain Country, we came to a large pleafant and well-peopled Town of Ma cedomia, call'd Monafter, or Toki, where great Preparations were making for the Reception of the Sultana, whe was to lie in here; where I afterwards heard fhe was de livered of a Daughter, who lived not long. From hence we went on to Filurina and Ecciffo Verbeni, where are plentiful Springs of Mineral Waters: But as we were defcending the Hill which leads to the Town, we had Sight of that noted Mount, Olympus, though Seventy Miles off; and to the Left of us, of the two Lakes of Petriki and Ujtrova, one whereof, as they fay, was made by the removing of great Stones out of the Side of the Hills, whereby Vent being given to the Subterrarieous Waters, they broke out into the adjacent Plains. Coming to Egribugia, we quitted again the Plains, and paffed over high Rocks to Sariggiole, built partly upon a Hill, partly in the Plain ; the firft being inhabited by Chriftians, and this lower Part by Turks: Upon one of the adjacent Rocks ftands a Caftle. Not far from this Place we went through a Paffage cut through the Rocks, like a Gate, through which alfo paffes a Rivulet; this Pafs commanding the Accefs of this Country, which put me in Mind of the Paffage of La Cbiufa, in the $\mathcal{F} u$ lian Alps, betwixt Venfone and Ponteva, which is fhut up by the Venetians every Night. We paffed alfo by a Hill of a fine Red Earth, whereof they make Veffels, much efteem'd in thofe Parts; we proceeded over very dangerous Rocks, in narrow hanging Ways, with dreadful Precipices on one Side, where the Carkaffes of Horfes, which were tumbled down, gave us fufficient Warning to be upon our Guard. Afterwards we faw Mount Olympus upon our Left, till we come to Alef fone, or Aleffew, a Place of Note, where the Greeks have a Monaftery, belonging to thofe of the Order of St . Bafll; the Building whereof was a quite different kind from that we had feen before.

From hence paffing a River, we entred a pleafant Place of five Miles long, with divers Towns in it; and afterwards over a Hill, a Branch of the Mount Olympus, on the Top whereof we faw an Old Man beating the Drum to give Notice, that the Paffages on both Sides were free from Robbers. We defcried from thence into the Plains of Tbeffaly; and turning to the Left, paffed over the River Pbaribus, which comes from under a Rocky Mountain, not in fmall Springs, but in one continued Channel, and taking its Courfe through the Vineyards and Corn-fields to Tornovo, runs unto Lariffa, of which we fhall hereafter fay more.
In our Return we left the Road about Kaplanlib, taking that of Skopia (the Scupi of Ptolemy) call'd Ujcopia by the Turks, being a large and trading City. It is feated on the Frontiers of Mafia and Macedonia, at the Foor of Mount Orbelus, upon the River Vardar or Axius: in a pleafant fertile Country intermix'd with Hills and Plains. It was formerly an Archbifhop's See: Above 700 Tanners live here, who make moft excellent Leather. There are feveral handfome Sepulchral Monuments, and fair Houfes here, as that of the Cadib, and of the Emir, or one of Mabomet's Kindred, whole $\mathrm{Fa}=$ ther was in great Veneration in thefe Parts. In the Court-Yard of the Houfe of Emir you fee a Fountain built like an old Caftle with Towers, out of the Tops whereof fpring the Water. The Floors in their beft Houfes are generally covered with Carpets, and the Roofs divided into Triangles, and many other Figures well painted, and richly gilt, but without any Figures of Animals or Vegetables. The Bezaftan, or chief Mar ket-place here, is covered with Lead, and the trading Streets with Wood; it contains alio a confiderable Number of Turki弓 Mofques. The moft fplendid of all ttands upon a Hill, having a fpacious Portico, fuftain'd by four Marble Pillars; near it is an Arch, wich a Brook running under it, which feems to be an ancient Plece ;

## Chap. V. through Hungary, Thessaly, Macedonia, $8 \mathscr{O}^{\circ} \mathrm{C}$.

as alfo a large Stone (being part of a Pillar) with this Infeription, S HANC. Not far without the City you fee a moft noble Aqueduct of Stone, from one Hill to another, over the interjacent Valley: It has about 200 Arches, and is a noble Piece of Antiquity. The Country hereabouts has been the Field of Great Actions in the Roman Times; here Regilliamus did fuch mighty Feats, that he deferved a Triumph. Hereabouts ftood alfo Parecopolis, and Ulpianum. This City drives a confiderable Trade with Belgrade and Salonichi, which is the old Theffalonica.

The Sanziack of Servia is under the Juriddiction of the Beglerbeg of Rumelia, or Greece; as our Geographers generally mention this Place as a very confiderable one, fo I thought fit to give a more particular Account of it. From hence we went on to Cat/banich, a Fortrefs commanding the Paffage of the Hills, and travelling on reach'd the Plains of Colova in Bulgaria, known for the great Actions perform'd here, though not much exceeding Lincoln Heath. Some take it to be the Campus Merule. Here it was that Lazarus, Defpot of Servia, at the Head of 500000 Men (the greateft Chriftian Army that ever was brought into the Field) was worfted by Amurath, and he flain in the Field; nor was he furviv'd long by Amuratb, who viewing the dead Bodies, was ftabb'd by Michael Cobilovitz, a Chriftian Eoldier, left for dead in the Field ; whence this Part, to this Day, is call'd, The Field of the Sepulcbre, where a Monument is erected to the Memory of Amuratb.
In thefe Plains alfo Hunniades engaged three Days fucceffively againft Mabomet, but being very unequal in Forces, was put to the Rout at laft.

We travell'd on to Prefina, a mof beautiful Town; but the Plague being there, we took a Gypfy for our Guide, who conducted us through a fruitful Country, but very ill peopled, and were much refrefhed with the fair Carnations that grew by the Way. On the right Hand we faw a Bath, which we found arched within; the Water had a red Sediment, and a petrefying Juice, as might be feen by the grey Stone it had produc'd. It is not above two Leagues from Bellachorque, or Curfumde, which has a Convent with an old Church near it, with two handfome Towers. From hence paffing over the Hill $\mathcal{F} a f n e b a t z$, we came to Efselleck, betwixt the two Channels of the River Marofh, and thence by a Caftle upon a Hill, near which is a Convent famous in thofe Parts for the Sepulchres of Kenez Lazarus, and of St. Romanus, whofe Bodies were interred here. But it is Time to return to Larifa.
16. Larifa, the Capital City of Tbeffaly, feated by the River Peneus (the moft confiderable of this Country) has to the North the famous Mount Olympus, and to the South Part of the Plains of Theffaly, being inhabited by Cbrifians, Turks, and Feres, the firtt of which have feveral Churches here; it has alfo many fair Bezantens or Turki/b Mofques. Its Situation is very pleafant, on a rifing Ground, on the upper Part whereof ftands the Grand Seignior's Palace, having large jetting Windows on all the four Sides, to give the freer Paflage to the Air ; here the Grand Seignior had kept his Court for feveral Years, to be nearer to Candia, and for the Convenience of Hunting and Hawking; he ftaid there for fome Months after we came away, and then removed to Salonicbi, and afterwards to Belgrade. It is now an Archbifhop's See, having divers Suffragan Bifhops under it. We went into the Cathedral of St. Acbilleus, where we faw the reverend Father Dionysus (who was then Archbifhop) ftanding in his Throne in his Epifcopal Habit, and his Crofier in his Hand. The Summer being very hot, 1669 , the Grand Seignior retreated for two Months to Mount Olympus, to enjoy the frefh Air, whence he had a Profpect of part of the Igrean Sea: This Removal proved deftructive to a great many People, who being obliged to attend the Court, and being overheated by the afcending of fo high a Mountain, were fo ftruck by the fudden Alteration of the cold Air, that they $d y^{\text {sd }}$ foon after, efpecially fuch as had, in their Heat and Thirft, drunk of a certain Spring of a whitifh Colour, who were immediately feized with a Coldnefs at their Stomachs, and died in three or four

Days after. Of Horfes and Camels there alfo died a great Number, and the Sulcan himfelf was ill for feveral Days; he kill'd one of his bett Horfes there, by forcing him up a cragged Peak called Pytbagon, or Krfo fagon, where ifarce any Body durft follow him ; and had he not been with held by the Prayers ol his bett Friends, he would have leap'd over a Fiffure or Cleft in the Rocks.
17. The ancient Greeks (the beft Romancers in the World, efpecially when they fpeak of their own Country) will have Olympus to reach beyond the Clouds, and therefore have affign'd 7 upiter, and the Gods, their Refidence thereabout: I am fure I faw Clouds above i:; and to me fome Parts of the Alps appear'd much higher ; and in September there was no-Sign of Snow upon Olympus, whereas the higheft Peaks of the'Alps, Pyrencan and Carpatbian Mountains, befides feveral others in Europe, are never without it; of which Olympus alfo had a confiderable Share upon the firf Rain that tell hereabouts; it being well known, that when it rains in the Valleys, it fnows upon thofe and all other high Mountains.

I faw, as I told you, the Olympus at feventy Miles Diftance, and it confifts not of one high rifing Peak, as fome defcribe it, but is a long Ridge of Mountains, ftretching out a great Way in Length : Its Extent from Eaft to Weft makes the Inhabitants, at the Foot of the North and South Sides, as fenfible of the Difference of the Air, as if they lived in very different Climates; which makes good the Words of Lucan :

## Nec metuens imi Borean babitator Olympi, Lucentem totis ignorat nootibus Arcton.

Paulus Emylius, the Roman Conful, furprized King Perfeus, by marching about this Hill along the Seafide. At the Siege of Lariffa by Antiocbus, Appius Claudius, by making Fires on many different Places of Olympus, fo terrified the King, that he left the Place, and the Conful Martius found Means to bring his whole Army over this great Mountain.

Larifa has been frequently vifited by feveral famous Princes; King Pbilip of Macedon, the laft of that Name, kept his Refidence here for a confiderable Time. Whether Xerwes honour'd this Place with his Prefence, when his Army march'd through T'beffaly towards Thermopile, the Hiftories of thofe Times do not exprefy mention; but certain it is, that Pbilip, the Father of Alexander the Great, having form'd his Defign againt Greece, took the City of Larifa upon the River Peneus, and afterwards made good Ufe of the Theffalian Horfe againt the Greeks. Before the Battle of Pbarfalia, Scipio was quarter'd here with a Legion; and this was the firft Place of the Retreat of Pompey, after his Overthrow; according to Lucan:

## Vidit prima tuce tefis Lariffa ruince <br> Nobile, nec victum fatis caput.

And going down the River, went out to Sea in a Boat, and was taken in by a great Ship which was ready to fail.

The River Peneus rifes from Mount Pindus, which running by Lariffa, and being augmented in her Paffage by feveral other Rivers of Theffaly, exonerates itfelf into the Sinus Thermairus or Gulf of Salonicbi, paffing by the famous Valley of Tempe, and running betweên Mount Olympus and $O f f$, into the Sea. Over this River, which (according to the Defcription of Homer) has a very clear Stream and Bottom, is a handfome Stone-Bridge, fupported by nine Arches, with Holes or Paffages in the folid Parts betwixt the Arches, to afford a Paffage to the Water, when the Water rifes high by the Floods. The City being then crowded with People, by reafon of the Grand Seignior's Refidence here, many of the Turks had fee up their Tents in the lower Grounds near the River; and thefe not coming within a Yard of the Ground, afford a free Paffage to the Air. The neareft Port of Note unto Lariffa is that of Vollo (the old $P a_{0}$ gafo) in the Sinus Pagaficus, or Gulf of Ammira; not
far from whence food the ancient Argos Palafgicum, from whence the Argonauts fail'd for Colcbos; by this Way the Grand Seignior receives his Intelligence from Candia, and his Afatick and African Dominions. Near the Promontory Sepias (not far from hence) Xerwes loft 500 Ships, by a Tempent from the Eaft.
58. As the Grand Seignior Molommed IV. went often abroad a Shooting and Hawking, attended by a great Number of his Huntfmen, Falconers, and others, and alfo went often to the great Mofque, I had many Opportunities of feeing him; among the reft, I took once a full View of him, as he was coming out of the Palace to go to the Mofque. Before the Halace I faw reveral very fine Horfes richly accoutred, which were rode by fome of his Attendants in the Court-Yard, till he looking out of the Window, made a Sign to let them know which he would make ufe of; he no fooner appear'd without, but he was received with great Acclamations, and very low Reverences, both near and at a Diftance; the Streets were made clean, and a Janizary placed at every Corner, to remove any Thing which might be in the Way. The Chiaules lead the Van on Horfeback, thefe were follow'd by twenty four Perfons of Quality on Foot ; on each Side of his Horfe walk'd two Janizaries, with large fpreading white Feathers of a Fathom high, faften'd to their Caps; and thefe fhaking as they walk'd along, were high enough both to fhade and fan his Face. After him follow'd many very fine lead Horfes, and feveral Perfons carrying Cuhions and Pillows to the Mofque.

The Grand Seignior was then fearce thirty Years of Age, well proportion'd, but fomewhat fhort-neck' $d$, inclining to Fatnefs, of a fallow Complexion. For the reft, he was of a ftrong Conftitution, delighted in hard Riding; his Countenance fomewhat ftern, yet he would invite with a kind Look, People to approach him. I heard of no Phyfician of Note he had about him; but the Grand Vizier had taken feveral Chriftian Surgeons along with him to Candia. The Caimacban, or Deputy to the Vizier, had the chief Management of Affairs of Staie, in the Abfence of Acbmet the Prime Vizier. I went with Ofman, Cbiaus, to fee his Palace, which was a fine Structure ; where I heard ten Men playing all at once in a high Room, upon large Wind. Inftruments, which they do at certain Hours every Day, making a very loud, yet not unpleafant Noife, even to fuch as do not underftand their Mufick.

The Sultana was at the fame Time at Lariffa, by Birch a Candiot, and much beloved by the Grand Seignior ; the was but low of Stature, and fomewhat mark'd with the Small-Pox ; being then big with Child, great Preparations were made for her Delivery at Monafter, a pleafant Town in Macedonia, the Roads were then a Plaining, and the Hills laying level, with broad Bridges over the Rivers, for her more convenient Paffage thither. The Grand Seignior's Son, who was with her there, was then fix Years of Age.

I heard, at feveral different Times, the Turks fing their ufual Songs, and, among the reft, one concerning that famous Ferwits Impoftor Sabata Serv, whom CuJJum Baffa forced to turn Turk. This Cufum Baffa is a Man of great Reputation at the Oitoman Court, and much valued for his Skill in Phyfick, (a Thing not much known in Turkey.) He was formerly Vizier of Buda, and is now Vizier of Erzrum, upon the Frontiers of Georgia and Perfia, and married to one of the Grand Seignior's Sifters. Of Padre Ottomonno, a Dominican Friar, whom I had feen at Turin, and who was thought to be the Grand Seignior's Brother, I could learn nothing here.

Ig. The Wintering of that vaft Army of Xerxes under Mardonius, is an undeniable Teftimony of the ancient Fertility of The foly, which continues to this Day; for notwithftanding the vaft Concourfe of People, occafioned by the Sultan's Refidence here, every Thing was fo cheap, that one might dine at a common Vic-tualling-houfe, upon roafted and boil'd, and have good Sherbet to drink, for Six-pence a Head; and an Officer arm'd with a Club, with twenty-four Followers, begt the Streets fo quiet, that not the leaft Difturbance
was to be heard of there in the Night-time. The hot Weather which happened in September, 1669, occafioned frequent Fevers and Agues in thofe Parts, as about the fame time other Parts of Europe were much infected with Quartan Agues. It being then their Vintage, I tafted of their Muft, or new Wine; and I obferved that fome of the zealous Turks, who would not drink Wine, yet would take a plentiful Draught of this with a great Deal of Eagernefs.

During the hot Seafon, we ufed frequently to vifit the Barber, who perform'd his Bufinefs very weell, and would trim every Man according to his Country FaThion. The Greeks always leave a bare Place of the Bignefs of a Crown-piece, on the Top of their Heads, round which they let the Hair grow to the Breadth of two Inches, and fhave all the reft of their Head. The Croation fhaves his Head on one Side, and on the other lets his Hair grow as long as it will. The Hungarian keeps only a Fore-top, the reft being fhaved all over the Head. The Polanders dont have their Heads, but keep their Hair cut fo as it comes down to the Middle of the Forehead, and the Middle of the Ears. The Turk fhaves his whole Head, leaving only a Lock upon his Crown. The Franks wear their Hair long, without Maving their Heads, but to give no Offence to the Turks, generally turn up their Hair under their Caps; but the Greek Priefts keep and wear their Hair long.

The Party to be fhaved fits low, fo that the Barber, who lays on much Soap, takes of a great deal of Hair at once, and finifhes the whole Bufinets in a few Strokes. A Veffel of Water, with a Cock, hangs commonly over the Head of thofe that are to be fhaved, fo that the Barber lets out the Water upon them as he pleafes. I faw accidentally in one of the Barbers Shops of Lariffa, an ancient and very noble Monument, or Tombftone, of a Jafper-green Colour, through the Top-ftone of which the Barber had caufed a Hole to be made to ferve him for a Ciftern.

In the Market-place fit certain Money-changers, who exchanged our Duckats, and Rix-Dolars, into Medines, Afpers, and five Sols Pieces, of which great Plenty is to be found in thofe Parts. All the Trading Streets were cover'd with Wood; their Shops were generally fmall, but well enongh provided, the Shopkeeper fitting like a Taylor, and felling his Wares to the Buyers, who commonly remain ftanding in the Street: Such Commodities as are not to be had in the Shops, are cry'd about the Strects by a Man on Horfeback, who at the fame Time tells the People what Price they are to be fold at.
20. I had been much pleafed with the Sight of the Yeveral Stables of Chriftian Princes, as that of the French King's, the Vict-Roys of Naples, the Elector of Saxony's at Drefden, and that of Count Walleftein's at Prague; but for Horfes, I mult confefs none of there could compare to thofe I faw at Larifa, being chofen from among the beft of the Turkib Empire, fo richly equipp'd with moft ftately Saddles and Bridles fet with precious Stones, and fo tractable, that I could not but be furprized thereat. I faw among the reff fome Tartarian Horfes, valued chielly for their Hardinets and Swiftnefs, being for the reft rather unfightly, than beautiful. Some of the richeft Greck Merchants are well verfed in the Itclion Tongue, which is preferr'd here before either Latin or French. The Feros of Macedonia, Servia, and Bulgaria, commonly fpeak Spanifh; and thofe of Hothgary, High-Dutch, for Conveniency in Difcourfing with Strangers.

At our being there theSeafon was fo parching, that even the greateft Rivers were very low, and the fmall ones quice dry, except one, I took Notice of about feven Miles on this Side Tornovo, which continued to flow plentifully in one copious Channel from under the Rocks. This general Drought however of the Country, put me in Mind of the Deluge which happened in the Time of Deucalion King of Theffaly (as fometimes we are api to remember Things by Contraries, ) when by the Stop . ping of the Current of the River Peneus (into whicin molt of the others run, ) the whole Country of Theflaty? which is plain, and enclos'd on all Sides by Hitls, was

## Chap. V. through Hungary, Thessaly, Macedonia, goc.

laid under Water for a whole Winter : I know fome who are of Opinion, that all Tbe $\int$ Jaly was, in the moft ancient Times under Water, till the Mountains Offa and Olympus being torn afunder by a violent Earthquake, the River Peneus forced its Paffage that Way by Tempe, into the Sea.

I remember, that as we were travelling in Macedonia, our Chiaus told me, that within a few Days I fhould fee Frencbmen in thofe Parts; meaning the Theffalians, the Country People wearing narrow brim'd Hats like the French Hats, then laiely in Fafhion. The Tbeffalians had always the Reputation of being Warlike, and are accounted fo to this Day among the Turks, this Country having been very famous in ancient Times, not only for the Battles fought in the Plains of Theflaly, but alfo for its having produced many great and worthy Perfons; and Hippocrales, the Father of Phyficians, lived and practifed here, and died about Lariffa, being buried betwixt that Flace and Gyrton. The Theffalians are generally well made, have very black Harr and Eyes, with a frefh fanguine Complexion; and their Women are much celebrated, among Strangers, for their Beauty; the Macedonions, who inhabit a Hilly Country, being of a much rougher Complexion; and the Moreans, or ancient Peloponnefians, who live more to the South, inclining to Swarthinefs.
21. The Country abounds in Horfes, and they have the largeft Bufflos in all Greece, except thofe of Santa Maura in Epirus. They have alfo Plenty of fine yellow and black Tortoifes, which are good Meat ; but the Turks ufe to laugh at the Chriftians, for eating them, when they had fuch Plenty of Mutton, and all Sorts of Fowl. This Country alfo produces very large and moft delicious Figs, and the beft tafted Water-melons that I ever met with; likewife Pomegranates, Oranges, Limons, Citrons, and Vines, which grow low here like thole of Montpellier, and though not fupported, bear large Branches, and Grapes as big as our Damafcens, and of a moft lufcious Tafte. The Wine of the Country is rich, but has a refinous Tang.

The Tobacco they plant, they efteem beyond what is brought from orher Parts, being ftronger and more pungent. Their Fields are cover'd with Sefamum, and Cotton-Trees, which though but low, make a glorious Show; as alfo with Almond and Olive-Trees; the Greeks pickle their Olives ripe, whereas ours are all green. The Gourds in the Hedges, with their large yellow Flowers, and the different Sorts of green Thorns, and Sempervirent Oaks, make the Ways exceeding pleafant. The Ilex Coccifera, and Cbermes Berry, or the Excretion ferving for dying and making the Confection of $A l$ chermes, are very plentiful in this Country. The high Hills produce Afclepias, and Helleborus; and the ftony Plains Carduus Globofus, Cyfus, Lavender, Sweet Mar joram, Rofemary, and other fweet-fcented Plants. The Platanus, or Plain-Trèe, grows very fair and lofty in Macedonia.

They ufe a great deal of Garlick in their Difhes, and their Onions exceed ours, not only in Bignefs, but alfo in Tafte; being tharp, and pleafantly pungent upon the Tongue, without any offenfive Smell; they agreed very well with my Stomach, though I never ufed to eat Onions before. They are ufed here at moft Collations the $\mathcal{T} u r k i / b$ Cbiaus, who had travell'd almoft through all the Turkij/b Dominions, told me, that the Onions of Egypt only, exceeded thofe of Theffaly in Goodnefs which was the firf Time I really underftood that Paffage in the Scripture, of the Ifraelites longing after the Onions of Egypt. They have alfo a Fruit call'd Patle jan, or Melanzan (mala infana) between a Melon and a Cucumber, out of which, they take the Seed, and after having fill'd the Concavities with the Meat of Saufages, they pare and boil them, which makes a very good Difh.
The Foreign Minifers who attended the Grand Seignior's Court at Lariffa, were the Imperial Refident, and the Ambaffadors of Ragufa and Wallacbia; thore Ambaffadors that refide at Conftantinople chielly on Account of Trade, being not obliged to follow the Court.

VOL. II. N ${ }^{\circ} 122$.

The Imperial Refident having got Leave of the Sultan (by Reafon of the great Concourfe of People at Lariffa) to chufe which of the neighbouring Towns he pleafed for his Refidence, he pitch'd upon Tornovo, a large and pleafant City of Theffaly, twenty Miles to the Weftward of Larifa near the Hills, where mof of the Inhabitants are Chriftians, having eighteen Greek Churches there, whereas the Turks had no more than three Mofques, The chief Churches I took Notice of were, the Cathedral of Si. Stepben, the Church of St. Demetrius, of Cof mus, and Damianus, of the Nativity of the Bleffed Virgin, of St. Elias (with a Monaftery adjoining to it, of St. Anaftafius, of the Twelve Apottles, of Sr. Nicholas, (with a Convent alfo) and of St. Antbony the Hermite. The B hhop of this City is a Suffragan to the Archbithop of Lariffa.
22. Before I travell'd into thefe Parts, I could never conceive that the Eaftern Countries contained fuch vaft Numbers of Greek Chriftians as are to be found in Grecia and the Greek Inands; in the Turkilh Parts of Dalmatia and Croatia, in Rafcia, Bofnia, Servia, Thrace, Sagora, Bulgaria, Perfia, Beffarabia, Coffackia, Podolia, Moldavia, and Wallachia; befides the vaft Dominons under the Jurifdiction of the Czar of Mufoovy: Which put me in Mind of what a certain learned Aurhor fays upon that Head, viz. That if a true Computation werc made of the Greek Cbritions in Europe, they would far exceed thofe of the Roman Religion.

The Font or Bafon in the Greek Churches is generally made of plain Stone, and plac'd immediately upon the Floor of the Church, which feems to be done for Conveniencies Sake, for being not contented with fprinkling of Water upon the Child's Head; the Prieft, having firft blefs'd the Water, and dipp'd the Crucifix into it three Times, takes the naked Child by one Arm, and putting it into the Font up to the Wafte, with the other Hand laves the Water thrice over his Head; which that it has been the ancient Cuftom among them, may eafily be gathered from what is related of the Emperor Confantine VI. Conftantinus fextus, dictus Copronymus, quod Infans dum baptizaretur aquam facrams ventris folutione maculaffet; The Dipping of the naked Body in Water being apt to move it. Some of their Children I faw baptiz'd before the Navel-ftring was fallen off.
23. The Fields round this Place were full of Vines, Sefamum and Cotton-Trees. The Emperor's Refident, named Signore di Cafa nova lived here in great Splendor, with a Retinue of about thirty Perfons, fome Chritians and fome Turks, and has two Fanizaries attending at his Gate. He was a Milanefe by Brrh, much addiEted to Sudy, civil and courteous in his Behaviour, but referv'd. The Ambaffador of Ragufa had made Choice of the fame Town for his Refidence; but they never vifited one another, by Reafon that the Ragufan being here in the Quality of an Ambaffador, would nor give the Precedency to the other, who had only the Character of a Refident; which fometimes gave great Occafion of Laughter to the Germans, who look upon the Ragufans no otherwife than as Vaffals.

Here I muft not pafs by in Silence the many Civilities I receiv'd from a certain Greek Merchant of Tornovo, whofe Name was Demetrius, who entertained us with a great deal of Freedom at his Houfe, at feveral Times, and brought his two Daughters to bid us welcome, whom we faluted after the Cuftom of our own Country. They were very well drefs'd after the Greek Fafhion, with their Hair braided and hanging down their Back ; their Shoes and Slippers painted, and (which fomething furprized us) their Nails colour'd with red, by a certain Tincture drawn with Water and Wine out of the Leaves of a certain Plant call'd Cnà or Alcanna, broughe out of Arabia and FEgypt, and much ufed in Turkey, where fome colour the Mains and Tails of Horfes with ir. The Gracions of Scio, who wear Gloves, ufe alfo this Tincture to colour them upon thofe Parts that touch their Nails. It muft be confefs ${ }^{2} \mathrm{~d}$, that the Gracian Countries bear now-a-days'a quite different

Face

Face from what they have done in ancient Times; the many Incurfions of barbarous Nations, and the late Conqueft by the Turks, having laid defolate many great and once famous Cities, and exchanged the Names of the reft, not leaving even the ancient Names of the Rivers, which generally are beyond the Fate of Towns. Thus the Rivers of Macedonio, the Axius, Erigonus and Aliaomon, which I pafs'd, have now Names which have not the leaft Afinity to thofe of former Ages. The famous River Peneus has undergone the fame Fate, as well as Apidanus, Enipeus, and others that join their Waters with it. Lariffa is call'd Jeni-Sabar by the Turks ; and Tbeflaly, Comenolitari
24. It feems to be one of the greatef Delights that attends Travelling, to behold, as one moves along, à different Face of Things in Habits, Diet, Manners, Cuftoms and Language : Of this we had our full Share af ter we had travelled a Day's Journey beyond Raab and Comorrab; for before we reach'd Buda, we enter'd upon fo different a Courfe of Life, efpecially as to Habit and Manners, (which with fome fmall Alteration, continues to the utmoft Part of Afia, viz. Cbina) that we though ourfelves in a Manner in a new World. Though we were provided with good Paffes, and had taken all other imaginable Care for our Security, yet we were not without Fear from the Huffars, who knowing' all the By-ways, commonly rob all they meet with as far as the Bridge of Effeck; neither were we in lefs Fear of the Cingars or Gyphes, who are noted here for their Robberies; though they live in the Towns of Hungaria, Servia, Bulgaria, Macedonia (and fome allo in Theffaly) by Labour and handy-craft Trades. They are generally fuppofed to have their Original from the Frontiers of Wallacbia. They have a Way of Colouring their Hands and Feet of a reddifh Colour, with Cnì, and fome of the Women colour the Extremities of their Hair alfo.

We were in no fmall Danger of being robb'd as we travel'd from Belgrade into Servia, by three Horfemen, who coming up with us difcharged their Piftols; had it not been for our Chiaus, who knowing them to be Spabies, fhew'd them his Feather, bidding me to dif charge at the fame Time my Piftol, to let them know that we were not unprovided; whereupon they left us. Caravanfera's; or publick Inns, built by charitable Benefactors to the Publick, for the Lodging of Travellers upon the Road, we feldom made Ufe of, the Rooms being very fpacious: We were but a few in Company, and not fitted for Places where we muft provide every Thing one's felf; and therefore private Houfes were much more convenient for us: Befides that the Situation of thofe Caravanfera's is often-time fuch, as not to be fecure againft the Infults of Robbers, which are too frequent in thofe Parts, though punifhed with the greateft Severity; for which Reafon, in moft dangerous Paffages, Drummers are appointed, who by Beat of Drum give Notice to Travellers, that the Roads are fafe.

However, in the main, we had fufficient Accommodation; for from Comorrab our Boat was towed by a Saick of twenty-four Oars, till we came to the Turkib Frontier Town, where meeting with the Turkib Convoy, our Boat was faften'd to their Saick with eighteen Oars, till we came to Buda, from whence we were carried in open Chariots, with two, three or four Horfes a-breaft, and that very fwiftly, through a very pleafant Country, to Belgrade. Here we were mounted on good fure-footed Horfes, which would carry one fafely twenty Miles in a Stage: They are very free, tender mouth'd, and tractable; which made the Owners not well pleafed with our Spurs, which are feldom ufed by the Turks. They have generally a lighter and leffer Shoe than our Horfes. Moft of thefe Countries abound in good Horfes, which are very fleet ; but they never dock them, looking upon a long Tail as a great Ornament to a Horle, which they will handfomely make up, and adorn to render it more fo.

The Bafla of Temeftear prefented Ragotzi with a Horfe, which he nlighting, cut off the Horfe's Ears,

Main and Tail, and to fent him back again; whith the Bafa took for fuch an Affront, that he did not defilt till he brought about the Ruin of Ragorizi, as be might have expected. They do not feed them out of high Mangers or Racks, but lay their Hay before them almoft even with the Ground

In the Caravanfera's they tie their Horfes to Rings, faften'd to the Side of a long Place a little elevated, upon which the Travellers fleep as they can, their Hay being laid fomewhat lower at the Feet, whereon their Horfes feed. They plough generally with Oxen and Buffelo's, and have great Variety of Ploughs and Carts, fome whereof I faw in Macedonia with Wheels of folid Weod, in the whole Piece, perhaps the betrer to refik the rough and ragged Ways of a rocky Country. We obferved among the People in general, that they will be much obliged with a fmall Prefent, fuch as Knives, Sciffers, and other Toys; nay, we gave fometintes a Glove to one, and the Fellow to another, which they took very kindly. Thus the Bulgarian Women wosld be well pleafed with a fmall Piece of Silver Foreign Coin, and put it as an Ornament to their Head-drets, though they had others of much more Value there before.
25. In our Journey about the Mountains of Servic, we were in great Danger from Wolves, efpecially in the Woods, where they would come very near us in the Night-time ; fo that we were forced to remain clofe together, and keep our Fire-Arms in Readinefs : Neither were the Dogs lefs troublefome; for no fooner came we near a Town, or left it, but they, would eithee meet or follow us at a confiderable Difance, and with Barking and Biting our Horles Legs, be very offenfive. I remember, that at my coming to Comorrah, which happened to be about Midnighr, we were fo clofely purfued by the Dogs, which were thut out of Doors on Purpofe, that we were forced to feek for Shelter in the Guard-houfe.

The Fear, in which the poor Chriftians live in the fe Parts, could not but move us greatly to Compaffion, where we faw them retreat to the Woods, at the firt Sight, to avoid us; which made us many Times ride after them to undeceive them. But the miferable Condition of che Slaves and Captives is almoft beyond exprefing, efpecially if you confider the Variety of their hard fate, and the odd Chances that reduce them into this miferable State ; fome by Trachery, fome by Cliance of War, others being fole by the Tartars; among all which, thofe who belong to the Grand Seignior leems to be in the worft Condition, as being paft all Hopes of being redeemed or exchanged. Of thefe I mot with one at Egribugia in Macedonia, who, though he had a Tole-Table Place at the Pof-houfe, yee was quite dejected upon that Account. In Theffaly I met with an Hungarian, who being taken at the Battle of Barchonit, firft ferved a Turk, and afterwards was fold to a Jere with whom he endured great Hardhip; but being at laft fold to an Armenian, he behaved himelf fo well, that his Mafter gave him his Frecdom, and coming to Larifa, he was entertain'd in the Imperial Refudent's Service. He was a very worthy P.rlon, who bad retain'd his Chriftianity among all thele Changes of Fortune. He fpoke Hungarian, Sclavonian, Turki/h, Armenian, and Latin, and, notwithttanding his Ravifh Condition, had been fo curious as to take Draughts of many Monafteries, Abbeys, Mofques, and other conliderable Buildings in Armenia, Perfia and Turkey, which he fhew'd me. 'The Turks make peculiar Obfervations upon the Captives of feveral Nations: Thus they fap, a Ruffan makes the beft Galley-Slave, a Georgian a good Courtier, and an Albanian a good Counlellor, Esc. I remember that the firft Time I went to have a Sight of the Grand Seignior, Ofmen Cbiaus kept backwards ; having ask'd him the Reafon, he anfwer'd, I take no great Pleafure in coming too near bim.
26. As the Iurks are commonly buried near the Iighways, Tombs and Sepulchres are met with every where hereabouts, but are not very fplendid, coniniting only of a Scone at the Head, and another at the Fuot, fome

# Chap. V. through Hungary, Thessaly, Macedonia, ©̛c. 

of which are two, three or four Yards high ; fome have a Turbant cut upon the Stone at the Head; fome alfo fet up two Pillars of Stone, and fometimes raife the Scpulchres after the European Fafhion, placing two Pillars upon them, one at the Head and the orher at the Feet. Of thefe I faw feveral at Scopia; but their neateft Way is to erect a Pavillion, fupported by four Pillars.

As we travel'd through Servia, I faw to the South of Fagodna, on the Side of a Hill, a Iurkib Tomb $^{\text {a }}$ four Yards long, which, the Cbiaus told me, was the Tomb of one of their Saints. As I could fcarce conceive that the Length of a Man fhould extend to that Height, fo it put me in Mind of what I once heard Mr. Wood fay upon this Account, viz. That he had leen feveral Graves in the Southern Parts of America, of four Yards in Length; and having never met with an Americon that came near that Height, he had the Curiofity to have one of the Sepulchres opened from one End to the other, wherein he found a Man and a Woman fo placed, that the Woman's Head lay at the Man's Feet, and confequently required a Grave of four Yards long. I thought I might, without the leaft Hazard, relate this upon the Credit of a Perfon, who has given fufficient Proofs of his Ingenuity to the World, by his accurate Maps of the Streights of Magellan, its Inands, and the Coaft from the Plate River to Baldivia in the South Sea.

In our Travels in thefe Parts, we met often with Tur$k_{i} \|_{3}$ Fairs, which are kept in fome large Ground, enclofed and divided into Streets, where you may furnifh yourfelf with all Manner of Things not to be feen in thefe Weftern Parts, and have Mufick at a chéap Rate; which, though none of the beft, yet ferves to pals away the Time pleafantly enough. We had the good Fortune, in all this Journey, to light upon no more than one Place infected with the Plague, viz. at Prefina, in the Plains of Cofora, which made us make what Hafte we could thence to a Gypfie's Houre among the Hills, where we met with a good Accommodation. The Turks were very well pleafed to fee me take out my Pocket-Book, to write down fuch Obfervations as I had Opportunity to make, and were much taken with my Writing fo quick with a Pen made of a Goofe Quill; whereas theirs are made of a Reed, where with they will write very well upon finooth Paper.
27. I would often, as Occafion ferved, look into fuch Maps as I had brought along with me; whereat the Cbiaus fmiling, faid, There is but little Dependance to be had on Maps, for they do not mention niany great Towns, and thofe they do are often not rightly placed. We Cbiaufes, added he, who fpend our Days in Travelling, take Notice of all Places, and know their Turkib Names, are the beft Map-makers; and I muft confefs, that in feveral Particulars I was convinced he fpoke nothing but the Truth; for I found the Maps of Hungary not exact, and thofe of Servia, Bulgaria, Macedonia, and Tbeffaly, very imperfect. In Upper Hungaria many Towns were omitted, and as many ill placed ; in the Lower alfo not a few. The Danube feems to take too great a Circumference to the S. W. before the Theyfle falls into it. In Servia I found IFifargick placed a good Way from the Danube, which runs jult by it. Procupic or Urcloop, and Lefcoe or Lefcovia, confiderable Towns (the laft upon the River Liperizza) I found quite left out, as likewife Kaplanly or Tygrefs Town; in Macedonia, Kupruly or Bridge Town, Urania, Pyrlipe, Comonara, Eccifo Verbeni, as alfo the Lake of Petriki; and the Towns of Oftrovo, Egribugia, Sariggiole, and Sarvizza, and the River Injecora near it; thus I found neither Aleflon nor Tornova, though one of the moft confiderable Cities in Theffaly; and to confeís the Truth, he that travels into Macedonia, will never be able to fquare the true Situations of Towns and Rivers to their Pofitions and Defcriptions in Maps, not excepting thofe that have been very lately publifhed of Grecce.
It was one of my chiefert Pleafures in this Journey to converfe with Cbiaufes, who have (if they are come to any Age) feen much of the World in their Travels, and
confequently are good Company, and can give a good Account of Things. Ofman, Cbiaus, who was our Conductor, and then of about fifty Years of Age, fpoke three Languages, viz. The Turkif, Sclavoniam, and Italian, was a brave honeft Fellow, who had travelled thro ${ }^{\circ}$ the greateft Part of the Grand Seignior's Dominions, and proving old, had feated himfelf at Buda as a Cbiaus to the Vizier: He took a very obliging Farewell of me at Buda, conducting me withont the Gates, with many a Dios and hearty Wifhes of a happy Return into my own native Country; and I muft feak well in Honour of the Turks, thar in all my Journey I met with very civil Ufage from them; I never came into a Room where the Turks were fitting, but they would give the firlt Salute; and defiring 'me to fit down', offer fome Coffee or Tobacco, except that now and then the Boys, and fome few of the Scum of the People, would call us long hair'd Infidels: The worft Language I ever received was from a Fere at Larifa, whom I had employ'd to buy fome Things; but had it not been for the Grand Seignior's Refidence in that City, fome of the Turks that were prefent would have taught him better Manners.
I found the Turks much addicted to taking of Tobacco in thofe Parts; they carried it in litule Bags by their Sides, and uled to take it in Pipes of an Ell long, made of Reed, with an Earthen Bowl at the End, laying one End on the Ground, and holding the other in their Mouths. I was not much ufed to Tobacco, yet out of Complaifance, I would now and then take a P!pe with them after their Manner, which, by reafon of the Length of the Pipe, I found cool, and lefs diftafleful than any other. I was alfo much taken with the Neatnefs and Cleanlinefs of the Turks, and with their wafhing of their Feet, Hands, and Faces; I ufed to be mightily pleafed to fee our Cbiaus, at the sight of a Spring, or any clear Water, alight and wafh himfelf. He was very curious in winding up his Turbant every Morning, and combing of his Beard ; nay, they are fo nice, that they carry a Pitcher with Water with them to the Houfe of Office; when they make Water, they reft upon one Knee, ftretching out the other Leg.

Juftice is a Virtue much encouraged, as well as reverenced, in Turkey; of this we had an Inftance in our Return to Egribugia in Macedonia; for coming to Sariggiole, we met by the Way with a Turki/h Aga, who having a numerous Attendance, had taken up all the Horfes at Egribugia, fo that not being likely to be fupplied, we refolved to continue our Journey upn the fame Horfes to another Stage, finding our Horfes ftrong and able enough to travel through the Plains we were to pals ; but we were fcarce got without Egribugia, when we were ftopt and carried by the Poft-matter of the Place before the Cadi or Judge. He alledged againtt us, that he being the Grand Seignior's Servant, who had given him a certain Allowance for every Horfe he provided, we were injurious to him in paffing through the Town without taking Horfes from him ; for whinch he defired Reparation. We found the Cadi fitting upon a Carpet in a contemplative Pofture, leaning his Elbow upon four or five Folio Books; he commanded his Servants to give us each a Difh of Coffee, and asking what we had to fay in our Defence, the Cbious urged, that we were going upon very urgent Bufinefs, had the Cbaimacbam's Letters, and were employed by the Grand Seignior to the Emperor of Germany; and that he was the Cbiaus to the Vizier of Buda, whither he was to conduct us. 'Upon mature Deliberation, the Cadi faid, The Cbiaus mut not be fopped in bis Fourney, nor the Poft-mafter unconfider'd; and fo calling for the Poftmafter's Book, took his Pen, and fet down a sultomine to be allowed him in his Accounts to the Teftardar or Treafurer, and fo winh'd us a good Journey.
The Turks, it feems, make ufe of a Maxim contrary to that of Auguffus, who thought fit to put fome Limit to the Roman Empire; whereas their chief Aim is to enlarge their Dominions by new Conquefts; unto which their hardy Education, fobir Courfe of Life, and unlimited Obedience to their Prince, feems to encourage them : Certain it is, that their Aim is beyond Huxgary,
and I have heard fome Turks of Note often fay, we muit try our Fortunes again before Vienna; where the Star and Half-moon then remain'd upon the Steeple of the Cathedral Church of St. Stepben, above the Crofs ; and I could not, without a great deal of Grief, take Notice of a particular Crofs (not known to our Heralds) lunated, to be feen in many Frontier Places, whereby the Inhabitants, as they teftify their Chriftianity by the Crofs, fo they acknowledge the Turki乃 Sovereinty by the Half-mcons.

## $A$ Fourney from Comorrah or Gomorrah, to the Mine-

Towns in Hungary, and from thence to Vienna.
28. Having fatisfied my Curiofity at and about Comorrah, I purfued my former Refolution of taking a Journey to the Copper, Silver, and Gold Mines of Hungary; and being unwilling to take fo long a Journey as to Presburg again, to bring me into the ordinary Road, towards them, I pitch'd upon a nearer, though not much frequented Paffage ; taking therefore my Way along the North Shore of the Ine of Scutz, till I came to the Confluence of the Rivers Waag and Danube, I paffed over to Gutta, a Fortification raifed fince the late War, in a marthy Ground, between a Branch of the Danube, the Waag, and the Swartz, within a Mile of Newoboufel, which we plainly faw from the Steeple of the Church of Gutta. It had then a Fort of 130 Men, commanded by an experienced and brave Officer, whofe Name was Mr. Mattbias Frureurdt. Their Boats, in which they will pafs the greatef Rivers, are only one Piece of Wood hollowed out.

From hence we went on by way of Forchatz to Scbel$l a$, where is another Fort to hinder the Incurfions of the Turks and Tartars, and about half a Mile from this Place is a certain Concavity in the Earth, which burns like the Solfaterra near Naples; and fo forwards to Schinta, a large Fort which commands the River and the adjacent Country. It confifts of four Baftions, and has a Tower in the Middle. At the Gate hangs a great Rib, a Thigh-bone, and a Tooth, which, they fay, belonged to a Giant ; but I judge them to be of an Elephant. We came afterwards to Leopolfadt, a regular Fortification of fix Baftions, where the young Count de Zoucbes then commanded. Not far from hence, paffing the Rivers, we came to Frieffadt, a handfome large Town, but lately ruined by the Turks. I took a Draught here of the Caftle and Palace belonging to Count Forcbatz, which was a Structure that would have been thought elegant in Italy.

The Lutberan School had been lately ruined by the Turks. They pay a yearly Tribute of four Pence a Head, whether of Men, Women, Children, Sheep, Oxen, or Horfes: They are much inured to Hardhip, and their Women rarcly marry above once. Bathing and Sweating naked in Stoves, with their Feet in warm Water, is much ufed here, as alfo Cupping and Scarrifications. There were only twelve Fryars left in the Convent of the Francifcans, the Roman Chriftians having faarce any other Priefts but Monks hereabouts. About fourteen Englifh Miles from hence is Banca, which has fifteen Baths in a low Ground near the River, three of which are fpoiled by the Waag, which has there tranfgrefs'd its ordinary Bounds. About twenty Years ago there were allo hot Baths on the other Side of the River, but thefe are likewife fwallowed up by the overflowing of the River. The Water of thefe Baths cafts out a white Sediment, and tinges Copper and Silver in an Inttant as black as Ink. Not far off is a Quarry of Stone, and feveral Chalk Veins, which being of all Sorts of Colours except Green, and curiounly mix'd or marbled, was very pleafing to the Eye. It being the 18 th of March , the cold Weather hinder'd us from bathing in fo open a Place, though we faw feveral Women and Children in them, and our Charioteer bathed himfelf in one of them at Midnight.

March 2f. Some Mufqueteers having been fent us by Count Zoucbes for our Guard, we continued our Journey, and paffing by Ripnich, a Caftle at Docatzi, belonging to Baron Berrini, came the fame Night to To-
polcban, a Town upon the River Nitra, great Part whereof had been confumed by Fire in the laft Wars. At Bellitz, a Mile from hence, are likewife hot Baths. We pals'd the next Day by Clefch, and through a great Wood by Hocbroife, inhabited by Germans, and came to Sernowitz, fituate upon the River Gran, having a Caftle built upon a Rock. It is tributary to the Turks, March 28. We pals ${ }^{\circ} \mathrm{d}$ the River Gran in the Morning and travelling among the Hills, came to Hodrytz, by which runs a rapid Stream, of great Ufe to move the Engines employed in the pounding, walhing, and melting of Silver Ore.
29. Hence we travelled over a Mountain call'd Hell, and fo to Scbemnitz, which claims the Precedency for Bignefs before all the other Mine-Towns in Hungary, and where a great Quantity of Silver Ore is digged every Day. It is a well-built Town, moft of the Inhabitants being Lutberans, who have three very handfome Churches here. It has alfo three Cantles; i. The Old Cafle in the Town, where there is all Sorts of Wind-Mufick at Six in the Morning, at Twelve at Noon, and at Six at Night. 2. The New Castle, built by a Lady in a Place where formerly the Gibbet ftood. 3. On a high Peak, where a continual Guard is kept to difcover the Approach of an Enemy, in which Cafe the Signal is given by the Difcharge of a Culverin. The Country being very hilly, the Streets confequently very uneven. There are hereabouts very good Mines, among which thefe are the moft remarkable: The Windfcbacht-Mine, the Trinity, that of Sc. Benedict, St. Fobn, St. Mattbias, and another called the Three Kings; but the Windjobacbt and the Trinity are the beft and moft wrought. The TrinityMine is at leaft feventy Fathoms deep, builc and keps open with Under-Work, at a vaft Expence, the greateft Part of it being in an earthy Soil. The Ore is very rich, and generally blue, cover'd with a white Clay, which gives the Streams where they work it a milky Tincture, and is that Subftance, as I fuppofe, commonly known by the Name of Lac Lune, or the Milk of the Silver.
Some of thefe Veins run to the North, and other rich Veins to the N. E. If two Veins happen to crofs one another, they count it lucky; fo that the Veins of Ore keep not the fame Point even in the fame Mine; but as they have no certain Way to know where they are, or which Way they run, fo they mult proceed by Guefs, and perfevere in their L.abour till they light upon the Veins. They don't make ufe of the Virgula divina, or forked Hazel.ftick to direct them (as they do in the Silver Mine at Friburgha in Mifria) but dig on, according as they judge it moft likely to fucceed. They fhew'd me one Place, where they had digged fix Years together, when afterwards they found the Vein of Ore but two Fathom diftant from the Place where they firft began; and they fhew'd me another Place, where they digg'd twelve Years before they found the Vein, which prov'd fo rich, that in a flore Time they were very well paid over and above their Charges. I went fo far into this Mine, that I pafs'd quite under a Hill, and came out on the other Side.

I defcended allo into the $W$ indfcbacbt-Mine as far as the Water would permit me, by 300 large Steps or Stairs of a Ladder; deep in the Earth I faw a large Wheel of thirty fix Foot Diameter, turn'd by the Fall of fubterraneous Waters; by the Help of this Wheel feveral Engines are moved, which pump out the Water from the Bottom of the Mine up to the Concavity, where this Wheel is fix'd. The Water which turns the Wheel, does not fall lower into, the Mine, but is convey'd thro' a Cuniculus, or a fubterraneous Paffage made for that Purpofe, together with the Water pumped from the deepett Part of the Mine, to the Foot of a Hill, where it difcharges itfelf into the Valley. Befides this Wheel, there is another above Ground, which lies Horizontally, turned by twelve Horfes, which alfo ferves to pump Part of the Water out of this Mine. I was told, that no lefs than 200 Men were employed in all the Works belonging to this Mine. I found fome Places very cold and ochers fo hot, that I was forced to open my Cloaths, which were only Linen before: It being always hor

## Chap. V. throuz̧ Hungary, Thessaly, Macedonia, छ®o

where they work, they work eight Hours naked, if is left at the Bottom, and is melted afterwards, and the they can hold it fo long, and then reft eight Hours. They fhewed me a Place, where fix or feven Perions were ftilled by a Damp; to prevent which for the Future, they have placed a Tube there; the like they have over all Doors and Paffages where they intend to dig for a great Space, and have no Paffage through, whereby they let in, or let out the Air, or carried about according as the Miners under Ground ought to be ventilated. The blackifh Ore is generally the richeft, much of it is mix'd with a hhining yellow Marchafite, which if not in too great a Quantity, is very welcome, becaufe it renders the Ore fluid, and eafy to be melted; but if this is found in too great a Proportion, they are of Opinion that it preys upon the Silver in the Mine, and in the Furnace over-volatilizing it, and whilft it is a melting carries it upwards with the Smoak; for which Reafon they call it the Robber. There is alfo frequently found a red Subftance, growing to the Ore, call'd Cinnabar of Silver, which being ground with Oil, makes a VermiIion equal to, if not furpaffing the common Cinnabar made by Sublimation.

1. 30. Thefe Mines alfo produce Cbrystals, Ametbyyts, and Ametbiftine Mixtures, fometimes in the Clefts of the Rocks, fometimes near or join'd to the Ore ; as alfo a natural chryftalliz'd Vitriol, particularly in a Mine in Paradije Hill, There is alfo great Variety in the Silver Ore, in refpect of its Richnefs, or Proportion of Silver : A hundred Weight of fome Ore yiclds not above half an Ounce of Silver, fometimes two Ounces, chree, four, five, even unto twenty Ounces; what is richer is very rare, though fome have been found to hold half Silver, and I myfelf have feen fome fo rich as to be cut with a Knife.

- To difcover the Richnefs of the Ore, a certain Officer is appointed, whom they call the Probieter, (EfayMafter) which he does in this Manner. They bring him a Specimen of each Sort of Ore digg'd out of the Mine, of all which Sorts he takes an equal Quantity, and (the Ore being firft dry'd, burn'd and pounded) adds to all an equal Proportion of Lead, melts and purifies them, and then by exact Scales, takes the Proportion between the Ore contained in it, of which he gives an exact Account to the Work-men employ'd in the great Melting Furnaces; who, according to his Report, add or diminifh the Quantities of thofe Subftances, which are to be mix'd with the Ores, to melt them in the melting Furnaces; as for Inftance, to a 100 Centen, or 10,000 Pound Weight of Silver Ore; a hundred Pounds Weight, or a Centen of which contains two Ounces and a half of Silver, they add forty Centen of Leicb (which is Ore pounded and wafhed) 200 Centens of Iron-Stone, which is not Iron Ore, but a Stone found in thofe Hills of a Liver Colour (perhaps the Lapis Hematites) a certain Quantity of Kis (a Sort of Pyrites) in Proportion as there is a greater or lefs Quantity of Marchafite mis'd with the Ore, and of the Slacken as much as they think fit. This latt is nothing elle but the Scum taken off from the Top of the Pan, into which the Metals run, and is a Subftance made out of the former mentioned, by Fufion.

Whatfoever is melted in the melting Furnace, is let out through a Hole at the Bottom into the Pan, faftned in the Earth before it ; and thus exposd, it acquires, as it cools, a hard Scum, Drofs or Cake, which being continually taken away, the remaining Metal becomes purer; unto this they add Lead, which carries all the Silver down to the Bottom, and after fome Time the melted Metal is taken out, and afterwards melted again in the driving Furnace, where the Lead, or what elfe remain'd mix'd with the Silver, is driven off by the blowing of two great Pair of Bellows; and runs over from the melted Silver in Form of Litbarge of Silver; but that which comes laft, being longeft in the Fire, rurns red, and is call'd Litbarge of Gold, though both be driven from the fame Metal. Moft of the Scbemnitz Silver-Ore. contains fome Gold : This they feparate after the Silver is melted, by granulating it, and afterwards diffolving it in Aqua fortis niade out of a peculiar Vitriol, prepared at Cbremnitz, whereby the Gold

Vol, Il. $\mathrm{N}^{0} 122$.

Aqua fortis being feparated from the Silver by Diftillation, ferves again for the fame Ufe.

Bur it is Time to quit the Subject for Fear of ene tangling myfelf- too far in a Bufinefs, the accurate Defcription of which would require entire large Volumes, as well as thofe of Minnia, fo exacly defcribed by Agricola. Lenys in his Works concerning Minerals, are alfo worth Reading, and Lazarus Erker has given a very nice Account of the principal Ores and other Mineral Bodies. But after all, it mutt be confeffed, that there are few Places in the World to be compared with this, where Art and Nature frive to fhew their utmoft Force, to procure Riches. The Emperor Rudolpbus being a great Encourager of Mines, they work to this Day much after the fame Manner, eftablifhed in his Time, except that many of their Engines and Inftruments are much improved fince. It feems to be fomewhat odd, yet is neverthelefs very true, that in a Place where every Week a vaft Quantity of Silver is digg'd up, and carried away by Cart Loads, I could not meet with one pure Silver Piece. This happened to me at Scbeminitz; for being defirous to fee what Alteration feveral of thofe Mineral Waters in that Country would make upon Metals, I would fain have had a Piece of pure Silver, which, however the whole Town was not able to furnifh me withal, the current Money of the Country being all mix'd with Copper ; fo that I was forced to borrow fome Silver Croffes and Medals, to try the intended Experiment.
31. Near to Scbemnitz (where old Scbemnitz ftood) I daw a high perpendicular Rock, Part of which from the Top to the Bottom is of a fhining blue Colour, with fome green and yellow Spots, which appear'd as beautiful to the Eye, as if it had been one entire Mafs of Lapis Lazuli, finely polifhed: I was not a little furprized at the Sight thereof, and fhould have been more fo, had I not heard before from a certain Spaniard who had lived a confiderable Time in the West-Indies; That there is a Rock like this near the Silver Mines of Peru.
Ac Glass-Hitten (about; feven Englifo Miles from Schemnitz) there was formerly a rich Gold-Mine, but is loft ever fince the Inroad made by the Tranfloanian Prince Betblem Gabor into thofe Parts, when the Inhabitants flying, the Entrance was ftopp'd up, and has not been known fince. The Owner thereof has however thought fit to leave fome Directions and certain Marks behund him, whereby in Time the fame might be difcovered again ; with the Figures of his Inftruments upon the Barks of the Trees; which Inftruments having already been found by Digging, thus much is intimated, That where they find a Stone on which a Face is carved, they are near the Entrance of this rich GoldMine.; and to open the Paffage into it, they are only to remove a certain Part of the Rock thereabours, which was made ufe of by the Owner, to ftop up the Entrance into the Mine.
Glafs-Hitten is alfo a Place very well known and much frequented by Reafon of its natural Hot-Baths, of which five are conveniently built with handfome Steps into them, and cover'd with fair and lofty Roofs. The Springs are very tranfparent, having a red and green Sediment; the Wood and Seats under Water, being cover'd with a ftony Subftance, and Silver is gilt by being left in them. But that call'd the SweatingBatb excels the reft, its Spring being draind through a Hill before they iffue forth into the Bath; at one End of which is a Cave, into which you afcend by feveral Steps, which being heated by the Therma, like a Stove, by chufing your Seat either higher or lower, you may enjoy either a more remifs or more intenfe Degree of Sweating at Pleafure. The Sides of this Stove, as wëll as thofe of the Bath, by the continual. Exhalations of the hot Springs, are cover'd with a red, white and green Subftance.

Whilt I was bathing myfelf in the largeft of thefe Baths, a certain Fellow who was dhewing Tricks of Activity to the Men and Women that were then in the Bath, gave me a fatisfactory Account concerning feve-

9 M
rob
ral Queftions I ask'd him about the natural Vitriol, which he told me was to be found in feveral Mines hereabouts, cryftallized in Lumps, and fit for Ufe; but efpecially in a certain Mine near Scbemnitz, now given over by Reafon of the Earth's falling in, in feveral Places. About two or three Days after he came to me at Scbemnitz, and having brought along with him, Lamps, and Minemens Habits for me and cwo more, we went together into the Mine, where he fhew'd me the Vitriol fhooting upon the Stones and Earth, nay, upon the Floor and Sides of the Paffages, in the fame Manner as it does in the Pans, and about the Sticks, not hanging from the Top like to Icicles, as I have feen in feveral Places before. Glafs-Hitlen belongs to the Earl of Lippey, of whore Family was the famous Polycarpus Procopius Bocanus, who being fent by the ArchbiThop of Presburgh, to inveltigate the Curiofities of thefe Countries, died before his Obfervations came to Light.
32. Eifenbach, not above four Englifb Miles from hence, and about fix from Schemnitz, has alfo hot Baths, with a red Sediment, and containing a confiderable Quantity of petrifying Juice, as may be feen by the Timber on the Sides of the Bath, fome of the lowermoft of which, near the Water, were quite turn'd into Stone; it bears the Spout through which the Spring was convey'd into the Bath, being under Water, though of Wood, yet not in the leaft changed, the Reafon of which muft be afcrib'd to the volatile Particles of thefe Waters, which are carried immediately upwards with their Exhalations. I remember, that in the Bath of the Green Pillars at Buda, thefe Vapours condenfed by the high Cupola built over it, and on the Irons extended from one Column to another, and on the Capitals of the Pillars were formed into long Stones Jike Icicles, hanging to all thofe Places, fuch as I have obferved in many fubterraneous Grotto's, and efpecially in England, in Okey-bole in Somerfetfoire, and Pooles-bole in Derbybire.
This is evident from the fulphureous Parts contained in thefe Waters, which however are not difcoverable, if you either boil or evaporate the Bath-water, as being carried away with the Steam; and nothing is more common than to fee the Sulphur of the hot Wrater ftick on many Places over the Bath. I perfectly remember, that leaning one Day over the Balifters of the Lower Bath at Baden, I found my Buttons, which were of Plate, tinged by the fulphureous Particles, of a fair Gold-colour, though at a good Diftance from the Water. This Accident tempted me to the Trial of another Experiment, viz. I took Care to hang fome Money at one or two Foot Diftance, which was colour'd likewife in lefs than a Minute; which made me conclude, that its petrifying Quality confifted chiefly in its volatile Particles. I brought away with me feveral Pieces of this petrified Water, of five or fix Inches Diameter. But to return to Eifenbach. It has in all three Baths; two of which are conveniently built ; the third made by the Water let out of the former, is called the Snake-bath, from the Number of Snakes coming into it immediately after it is fill'd with thefe Waters.
33. March 30. I fet out from Scbemnitz, and taking my Way from Glafs. Hitten and Apfelsdorff (where the Archbifhop of Presburgh has a Palace) I afterwards paffed the River Gran, and travelling among the Mountains, I faw certain Entrenchments caft up from one Ridye of the Mountains to the other, to defend themfelves againtt any fudden Incurfions; then following the 'Traces of the fame yellow Silver,' which owes its Colour to the Ore which it wafhes above, we came to Cbremnitz, ftanding very high, efpecially the Church of St. Jobn, at fome Diftance from it, which is fuppofed to ftand upon the higheft Ground in Hungary. The Town is but fmall, but the Suburbs are of a pretty large Compafs. As the Mine here is the oldeft, fo it is the richeft in Gold of all the feven in thefe Parts, which are, Scbemnitz, Cbremnitz, Newfol, Koningsbergb, Bocbantz, Libeten and Tiln
The Gold Mine of Cbreminiz has been work'd, for very near a thoufand Years, being nine or ten Engli/h Miles in Length. It has one Cuniculus or Horizontal
and its Depth being at leaft 170 Fathoms; into which they do not defcend by Ladders, but are let down in certain Seats of Leather, broad and conveniently contriv'd, faftned to the End of a Cable, by the gentle Turning of a Wheel, to which the other End of the Cable is faft ned. This Mine has fix perpendicular Schachts, Shafts or Pits, (1) That of Rudolphus, (2) of Queen Aime (3) Ferdinand, (4) Matrbias, (5) the Windboibt, and (6) Leopold. I went into the Mine by the firt, 108 Fathom deep, and after many Hours Stay there, was drawn out again by Leopold's Schacht or Pit, in a ftrait Line above 150 Fathoms, a Height furpafing that of the Pyramids by a third Part. It was kept up on all Sides with fair Trees, laid upon one another from the Bottom to the Top, in the fame Manner as all the other Mines are here, that have not Rock on all Sides. Moft of the Veins run to the North and Eaft, and they work towards one, two or three, as they call it in the Miners Language, who direct themfelves Under-ground by a kind of Compafs, not of thirty two Points (as is ufed at Sea) but by one diftinguifh'd into twenty four, which they divide into twice twelve, as we do our Days, and fo compute by Hours.

The Gold Ore is fome white, fome black, fome red and fome yellow; but the white with black Spots is accounted the beft, as alfo the Ore next to the black Veins. As this Ore is not rich enough to be made Trial of in fmall Parcels, to inveftigate the Proportion of the Gold it contains, fo they take another Way for the Proof thereof; by pounding a confiderable Quan tity, and wafhing it in a fmall River running by the Town; which being branch'd out into feveral artificial Channels, runs over the Ore continually, and thus wafning away the earthy Part from the Metalline, becomes thereby tinged below the Town (after its Paffage over fo much Ore) with a dark yellow Colour, the fame with the Earth over which it runs. This is manifeft at Cbriftmas, Easter and Whitfuntide, on each of which Feafts, the Miners ceafing from their ordinary Works in the Mines for two Days together, the River flows as clear below as it does above the Town.

There have been Pieces of pure Gold found in this Mine, of which I have feen fome in the Emperor's and Elector of Saxony's Repofitories, one of the Breadth of the Palm of my Hand, others fomewhat lefs; but thefe are efteemed great Rarities. The yellow Earth of the Grounds about Cbremnitz, but efpecially of the Hills to the Town are not without Gold, which is the Reafon that a great Part of one of thofe Hills is quite dig'd away, the Earth having been wafh'd and managed in the fame Manner as the pounded Ore, not withour good Profit. Mattbias Dollinger, the Surveyor of the Mine at Cbremnitz (who entertain'd me very obligingly) has of late found out a certain Engine to pound the Ore much finer than it was before; by which Means they now obtain a confiderable Quantity of Gold out of that Ore, which otherwife would have yielded none.

There are certain Paffages in this Mine, cut through the Rock, which being long difufed, the Sides whick were formerly fpacious enough to carry the Ore through, were grown now fo near one another, that we were fcarce able to pafs. Their Way of conveying the Ore from Place to Place, or to the Bottom of the Pit (from whence it is drawn up) is performed by a certain Cheft they call the Dog: It is higher behind than before, and runs upon four Wheels, having a Tongue of Iron at the Bottom, which being fitted into a Channel of Wood, cut in the Middle of the Bottom of each Paffage, cannot deviate thence, fo that a little Boy runs with 300 or 400 Pounds Weight of Ore in the Chariot before him, without any Light, through thofe dark Paffages with great Swifnefs, and coming out, turns out the Ore upon the Ground, and fo back again, thro' the fame Way he came. They make Ufe of another Engine or Cheft, altogether like this, except that inftead of an Iron Tongue, is has four Rowlers, befides the four Wheels; with this they carry the Ore from the Mouth of the Mine, or down the Hills to the Bucbseorke, (as they cal! it) where it is founded and whand, the Wa

## Chap. V. through Hungary, Thessaly, Macedonia, $\mathscr{O}^{\circ} \mathrm{C} .779$

Way being laid all along with Fir-trees, and fo contrived, that the Rowlers muft needs rowl upon the Firtrees, without being able to over-turn or run out of the Way, fo as to be managed by a Child, and fometimes a Dog, there. paffing ficarce a Week but that betwixt 300 and 400 of thefe Chariots, containing each 400 Weight of Ore, are carried down thus to every Buchwoorke. There were then in this Mine two very pernicious Damps, befides others that were lefs dangerous ; one was in a Scbacbt, Sbaft, Pit or Puteus, the other in a Stall, as they call it, or Paffage, or Cuniculus; no Lamp would burn in them for any Time, and fo long as they did, the Miners would venture to flay there; but as foon as they went out, they were drawn up again: They find thefe Vapours more peftiferous, where the Water is very high; but that in the Cuniculus they were in good Hopes to correct by Perflation, and digging another $P_{\text {affage }}$ into it.

They told me, that at one Time they loft twentyeight Men in four feveral Paffages, viz. feven in each Cuniculus. At the firf finking of Leopold's Scbacbt or Pit, they were extremely troubled with pernicious Damps, which they qualified in this Manner: They fixd a Tube reaching from the Top to the Bottom of the Pit, but this not anfwering altogether their Expectations, they were obliged to have Recourfe to another Invention, viz. by ftopping the Pit, by Means of a broad flat Board, which covered all the Sides of it, except where the Tube was, and fo forcied out all the Air in the Pit through the Tube, which they were forc'd often to repeat till they made feveral other Paffages into it, whereby the Air is render'd wholfome enough; for as I was drawn up through it, I found not the leaft Difficulty in Breathing. Altermans Fore-ftall or Cuniculus, 500 Fathoms long, was, by the Carelefsnefs of a Boy, wiping the Snuff of his Lamp upon the Wood, burn'd in 1642 , and fifty Men fmothered in it; they were all afterwards taken up, except one, whofe whole Body feem'd to have been confum'd by the Corrofivenefs of the Waters of the Mine; there remaining nothing but his Cloaths.
34. This Mine alfo contains red, white, blue and green Vitriol and vitriolate Waters. There is alfo in this Mine a certain Subflance adhering to the Gold Ore, and confifting of fmall pointed Parts like Needles of a purple Colour, and frining, the Colour of it being yellow like Brimftone, they give it the Name of Antimony of Gold. Various Sorts of Cryftals are alfo found here, and among them fome yellow ones.

Near the Gold Mine in the fame Hills, is a Vitriol Mine, at leaft eighty Fathom deep; containing a red, and fomewhat greenifh Ore or Earth. This they infufe in Water for three Days, and then pouring it off, boil it for feven Days fucceffively in Leaden Cauldrons till it is coagulated to a white thick Subftance, which being reduced to a Calx in a Furnace, they keep for the making of Aqua Fortis, or the Separating Water ufed at Scbemnitz. Where they pound the Gold Ore, a Foundation of Wood is laid, at leaft three Yards deep, upon which they fpread the Ore. Over this are twenty four Beams, covered at the Bottom with Iron, for the better grinding of the Ore, which is always covered with Water, and the Work continued Day and Night without Intermiffion, making Ufe of Fir, or fome other refinous Wood, inftead of Candles.

This Grinding, as I told you, is performed by the twenty-four Beams, moved by four Wheels, viz. fix Beams by each Wheel; the latter, which runs from the pounded one, being let into little Pots or Cifterns; perhaps feven or eight one after another, and at laft into a very large one, of perhaps half an Acre of Ground; which, after it is well fettled, is let out.

The pounded Gold Ore they call Slich, among which they account that the richeft, which is neareft to the Beams, where it is firft pounded: Then they take the Slicb wathed fo long, as, perhaps, in a hundred Pounds Weight there may be half an Ounce, or perhaps an Ounce of Gold and Silver, two Thirds whereof are generally Gold, (the Cbremnitz Ore being rarely without fome Mixture of Silver, as the beit of the Scbemnitz

Silver Ore contains, for the moft part, an eighth Part of Gold, in Proportion of the Silver:) To this Slicb they add Lime-ftone, and ßaken and melt them together in the Melting-Furnace. This Melting produces that they call Lech, which Lech being burn'd with Charcoal to render it more porous, is then call ${ }^{2}$ d Rost. This Roft they mix with Sand; and melt it again in the Melting. Furnace, then let it out into the Pan, and proceed as in the Melting of Silver.

Among feveral other Ways they have to feparate the Gold from the pounded Ore, they have one perform'd without the Ufe of Lead, viz. The pounded Ore being well wafh'd, they lay it in Powder upon Cloths, fo that by the eafy defcending of the Water over it, and their continual firring it, the earthy Parts are wafh'd away, and the heavier and metalline remaining on the Cloth. In the fame Manner they proceed with Sheep- fkins and Wool, being placed where the Rivulets come either from the Works, or the Hills. The Cloths in which the Ore is thus fettled, they walh in feveral Tubs, and the Water', after fettling, is poured off from its Sediment: This Sediment being again wafhed feveral Times, and ftirr'd up in feveral Veffels, they at laft fprinkle Quickfilver upon it, and knead it well together for two Hours ; then wafhing it again in a wooden Veffel, (after they have firt feparated good Part of it, which the Quickfilver touches not, by friking the Veffel againft their Legs) they reduce the Mixture of Gold and Quickfilver into an Amalgama.

After this, having feparated again the Quickfilver, by ftraining it through a coarfe Cloth firft, and afterwards through a fine, they put the remaining Mars upon a perforated Plate, which they fet over a deep Pan placed in the Earth, in the Bottom of which is a good Quantity of Quickfilver: Over this Pan and Plate they lute a Cover, and making a Charcoal Fire upon it, force the Quickfilver, as yet remaining with the Gold, downwards to the reft in the Bottom of the Pan, and afterwards taking out the Gold, purify it once more in the Fire.
35. Having paffed feveral Days at Cbremmitz, I travelled forward to Nerevol; and as I paffed over the Hills on the Eaft-fide of Cbremnitz, upon the Top of one of them I faw a valt Stone or Rock alone, near the high Road ; thefe Hills being for the moft Part covered with Wood, which are of great Service to the Gold Mine. Paffing on furcher, we came in Sight of the Village of Lila, near which are the Quickfilver Hills. From hence we came to the River Gran, upon which Nerevol ftands, which has a handfome wooden Bridge over the River, and a handfome Row of Piles crofs the River to fop the Wood, which about ten Miles higher is thrown into the River, and withour any further Labour, by the Force of the Current, carried down to Nerevol, for the burning, melting, cafting, and hammering the Copper in that Copper-Mine.
Nervol is a very handfome Town, having a fpacious Piazza, at the upper End of which ftands a fair Tower. The Church, which ftands within the Caftle, is covered with Copper, and within it are many carved Figures of Wood and Stone Relicks, which, though not much reverenced, yet are preferved by the Lutberans, who are in Poffefion of this Church ; the fame being obferved in moft other ancient Lutberan Churches.

All about this Town are the greateft Copper Mines in all Hungary; but the Copper iffelf being fo ftrongly united to the Stone, or Ore, the Copper Ore of this Mine is burnt and melted fourteen Times before it produces Copper fit for Ufe. The firf Melting is perform'd with a certain Stone they call Fluft-fein, and its own Drofs, and with Kis, or a Sort of Pyrites. Then it is carried to the Rost-beartb, as they term it, being great Stacks, or Heaps of Billets, upon which it is laid, and thefe being fet a-fire underneath, the Ore is burned into a Subftance called Roft; which being repeated thus feven or eight Times, it is then melted again in the Melting-Furnace, and at two Furnaces more at Mifmills, and twice more at the Hammer. This Kis is brought hither from Fefna, which melted is ufed in the Meling of Silver.

At Mifmills, not far from hence, they have a Way of getting a certain Quantity of Silver out of the Copper, by adding Lead to it whilft it is a melting, after which they take out the melted Metals, mixed together in Spoons or Iron Difhes. After it is cold, they give it a quick Fire again as it lies upon crofs Bars, until the Silver and Lead melts and falls through. The Copper after by many reiterated Meltings it is made fit for Ufe, is cut in Pieces by very large pointed Hammers, moved by Mills, and afterwards formed into Plates, with other flat and round Hammers.
36. The Surveyor of the Works of Nerefol did not only entertain me with a Prefent of Wine and Fowls, but alfo gave me a Letter to the Governor of the Cop-per-Mine of Herrn-grundt, to procure for me the fame Treatment there. This is a fmall Town feated very high between two Hills, about an Itungarian Mile from Newol: He found the high Lands thereabouts all cover'd with Snow, whereas in the Valleys between this Place and Nerefol we met with none. We felt the Air very piercing at the Entrance of this Mine, being only in our Miners Habits, which confift only of a Linnen Coat and Drawers, a ftiff round Cap, like the Crown of a Hat, a Leather Apron turn'd behind, and two Pieces of Leather faftened to the Knees, to defend them againft friking upon the Rocks, or the Fall of any Earth upon them. But within the Mine it was warm enough
I paffed into this Mine through a Cuniculus called Tachfoln, and vifited moft of the remarkable Places in it ; you defcend into it by certain Trees fet upright, with deep Notches cut into them to reft the Foot upon. As this Mine lies very high in the Hill, fo they are not troubled with Water, but often with Duft, and fometimes with very pernicious Damps. In one Place they fhewed me how they had remedied a very peftiferous Damp, by blowing a valt Pair of Bellows for feveral Days together. But what is moft obfervable is, that thofe Damps are not only to be found in thofe Parts of the Mines where it is full of Earth and Clay, but alfo where it is rocky. I faw one Place where there had been a very bad Damp, furrounded on all Sides with fo hard a Rock, that they had been forced to open their Way with Gunpowder ram'd into long Holes, and fo blown up; for it is to be confider'd, that a great Part of this Mine is within the Rock, where confequently they need no Timber to keep it up, as they are forced to do in thofe Paffages, that have either Earth on both Sides, or Rock on one and Earth on the other Side. The Paffages of this Mine are neither horizontal, nor near to a perpendicular, but moderately inclining up and down, having many large Cavities within.

In one Place where we defcended, we found the Paffage ftop'd by fome Earth lately fallen in; but one of our Guides finding the Earth yet loofe, without more Ado digged his Way through, and, notwithftanding the Earth fell continually upon him, got through, though a great Heap of Earth tumbled after him, which they foon carried off with their Engines call'd Doggs, and fo clear'd the Paffage. This Mine has very large Veins, fuch as they call Cumulatio, and the Ore is very rich, a hundred Pound Weight of Ore yielding commonly twenty Pounds of Copper, fometimes thirty, forty, fifty, and even to fixty in the Hundred; but a great Part of it is firmly united to the Rock, nay, in many Places the Rock and Ore are one continued Stone, with this Difference only, that one Part of it will yield Copper, the other none; which is diftinguifh'd only by the Colour, and that at firft. Sight, the Copper Ore being for the moft Part either yellow or black, the yellow being pure Copper Ore; whereas the black contains alfo a Proportion of Silver.

This Mineral produces white, green, and blue Vitriol, and a red clear tranfparent; as alfo a green Sediment of a green Water, call'd Berg-Green, uled by Painters. Here are alfo found Stones of a beautiful green and blue Colour, and one Sort upon which Turcoifes have been found, and therefore call'd the Motber of Turcois.
37. But above all the reit, there are two Springs of

Vitriolate Water here (call'd the New and the Old Ziment) which turn Iron into Copper, and confequently deferve our peculiar Obfervation. Thefe Springs lie very deep in the Mine, and commonly the Iron laid in it, is turn'd into good Copper in about fourteen Days Time, with this further Advantage, that the worft and moft ufelefs Iron is turn'd into the pureft Copper, much exceeding in Goodnefs that of the Ore, which muft run through many Fires before it is render'd ufeful, whereas this made by the Vitriolate Springs is very malleable, and eafily melted; for I myfelf have melted it, without the Addition of any other Subftance. I took a good Quantity of this Copper out of the Old Ziment, and among the reft a Piece of Copper of the Figure of a Heart, which had been laid in it eleven or twelve Days before, having the fame Figure, but was as perfectly Iron then, as it is Copper at this Day. Some will not allow this to be a Tranfmutation of one Metal into another, but that this Water being faturated with the $\mathrm{Vi}_{-}$ triolum Veneris, and meeting with a Body fo apt to receive it, as the Mars, or Iron, it depofes Venus, who immediately infinuating herfelf into Mars, precipitates his Subftance, and in Lieu thereof fubftitutes her own Body. But this Opinion is fufficiently contradicted by Experience ; for though, in the Changing of Iron into Copper, many Parts are feparated, and lie at the Bottom of the Ziment, yet the fame melted produces no Iron, but an excellent Copper, as I found it by my own Experience. I have fince feen fuch a Kind of Tranfmutation attempted by Art, and not without Succefs, which deferves Confideration. After having taken a full View of the Mine, I was reconducted to the Surveyor's Houfe, who entertain'd me very handfomely, prefented me with a Chain of Copper tranfmuted in thofe Springs; and among other Curiofities fhew'd me an exact Map of this Mine, with moft curious Delineations of all its Paffages, with a Scale to meafure the Diftances of the Places in the Mine ; which, for its Extent, Number of People, and admirable Order, might well be compared to a very confiderable fubterraneous City. I faw him take fome Copper Ore, which being well heated and caft into common Water, made it like the natural Baths which arife near thefe Hills. At parting we drank out of a Cup made of this tranfmuted Iron, gilt over, having a rich Piece of Silver Ore faftened in the Middle of it, with this Infcription engraven on the Outfide :

## Eifen ware ich, Kupfer bin ich <br> Silberg trag ich, Goldt bedeckt mich. i. e.

Copper I am, but Iron I was of old;
Silver I carry, cover'd am with Gold.
The yearly Profit arifing to the Emperor from his Mines, is computed at 120,000 l. Sterling. But if more of thofe Vitriol Springs fhould be difcovered (as fome have already been at Zolnock, and other Places near the Carpatbian Hills) the fame would be confiderably increafed. But if like Springs faturated with the Vitriol of Silver, fhould be difcovered near the Silver Mines, and the fame by a skilful Artift improved to the beft Advantage, the Profit likely to arife from fuch a Tranfmutation would amount to an immenfe Sum.
38. From Herrn-grundt we travel'd to Stubn, about twenty Englifh Miles from NereSol, and fourteen from Cbremnitz. Here we faw, near a Brook, feveral hot Baths, highly efteem'd, and much frequented; the Wa. ter is very tranfparent, of a fulphureous Smell, with a green Sediment; it colours the Wood over it green and black, but does not change the Colour of Metals fo foon as moft others : I left Money in it a whole Night, which I found but faintly colour'd.

There are feven Baths here: 1. The Nobleman's Bath. 2. The Gentleman's. 3. The Country-man's. 4. The Country-woman's. 5. The Beggar's Bath. 6. For fuch as are infected with the Frenib Difeafe. 7. The Gypfies Bath. They are much of the fame Degree of Heat as the King's Bath in Englond, in a fine Plain furrounded with Mountains, thole to the Enft being the

## Chap. V. through Hungary, Thessaly, Macedonia, $\varnothing_{0} c$.

$f_{\text {ame, }}$ which on the other Side are fo rich in Metals. From Stubn we went on to Boinitz, croffing the River Nitras, and leaving Privitz, a large Town, to the Left of us. At Boinitz are alfo five natural Buths, of a very gentle Heat, covered all of them under one large Roof. Into the Nobleman's Bath you defcend on all Sides by ftrong Stairs, the other four being of Wood, but handfomely built,

From hence we continued our Journey to Wefonilz, fourteen Engli/b Miles, and the next Day to Trenfobin, which they count four Hungarian, or twenty eight Englifh Miles, which took us up a whole long Day's Journey. Trenfobin is a very handfome City upon the River Waag, having a very handfome wooden Bridge over that River, and a fair Piazza. The Jefuits Church is a noble Structure, and the Caftle (belonging to Count Fellbafey, ) feated very high; about a Mile from the City are two choice Baths, and the Country hereabouts affords feveral good Springs of Mineral Waters. Here it was that we met with Count Rotbal, who being then on his Way to Eperies in Upper Hungary, to treat in the Quality of the Emperor's Commiffioner, with thofe of Abaff Prince of Tranjylvania: I engaged fome of his Attendants to make an Enquiry into the Salt Mines there, of which they afterwards gave me the following Account.
39. About two Englifh Miles from the faid City of Eperies, is a famous Salt Mine 180 Fathoms deep; for the moft Part in an earthy, and not a rocky Ground.

The Miners defcend it firft by Repes, and afterwards by Ladders. The Salt Veins are fo large, that éntire Pieces have been found of 10000 Pound Weight, which they commonly cut into long fquare Pieces of two Foot in Length, and one in Thicknefs; which is afterwards ground betwixt two Stones. Though the Mine be cold and moift, yet is the Salt not eafily diffolved: Notwithftanding which, great Part of the Water of the Mines is fo much impregnated with Salt, that when boil'd, it affords a bluifh Salt, which the Country People give their Cattle. The Colour of the Stone Salt of this Mine is fomewhat inclining to a grey; but when ground to Powder is very white, and confifts of pointed Parts, or Foffets. Another Sorts of Salt there is alfo, which confifts of Squares and Tables; and they have a chird Sort with long Shoots. There is alfo fome Difference in the Colour of the Salt
of this Mine, fome of which is grony mix'd with the Earth participating much of its Colour ; and even that which is as pure as Cryftal, often receives divers Tinctures: I faw once in the Middle of a Cryftal Salt, with long Shoots, a delicate blue ; and at the Count of $R_{0}-$ thai's a large Piece of a tranfparent yellow; fome Pieces are fo clear and fo hard, that they carve them into difierent Shapes and Figures like Cryftal. Of all thefe Sorts I brought fome Pieces with me to England. But it is Time to take our Farewell of the Mines, and to return to our Journey ; which we continued near to the River Wag, to Novo Mnefto; and the next Day to Tirnaw, feated in a Plain. The following Day we reach'd the Danube, and took up our Quarters that Night at Prefourgh, (of which we have fpoken before.) Here pafling the Danube in two Ferry-boats, we travelled by Homburg Tower, by Haimberg Hill, by the Town of Haimberg, by Rogelforun, Vijcbet, and Swecbet, to Vienna. We obferved in thofe Countries in Upper Hungary, through which we paffed, Things wore a quite different Face from that of Aufria, and from what in all Likelihood they have been formerly; moft of them having been fubject to the Ravages of the Turks and Tartars in the laft War, and fome of them being forced even now to pay a yeariy Tribute to the Turks. The Inhabitants live fo meanly, that chey fcarce afford themfelves neceflary Furniture for their Houfes. Even in thofe Countries under the Emperor's Jurifdiction, many of the Inhabitants, being either Lutberans or Calvinifts, and in conftant Fear from the Roman Clergy, are but little fatisfied in their Condition.

Formerly almoft all the Mine-Towns were inhabited by Lutberans, but now the Officers are all Roman Catholicks. And at Schemnitz, one of the Lutheran Churches was taken from them. And we were inform'd, that Count Palf had enjoyn'd all his Lutberan Tenants, at and about Boinitz, either to change their Religion, or to quit their Houfes and Lands. You meet alfo in Places of Hungary with Anabaptifts; and near the Frontiers of Tranflluania, with Unitarians. Even the Roman Catbolick Hungarions are not a little jealous of the Germans, and the Court of Vienna; becaufe they think them preferr'd before them, and that their Privileges are not well maintain'd, which is the true Source of almoft univerfal Difaffection.

Appendix to the former Section.

## A Journey from Vienna to Venice by Land, with a diftinct Account of the Quickfilver-Mines in Friuli, including the Author's Obfervations in his Paffage through Styria, Carintbia, and Carniola.

By Dr. Edward Browne.

1. The Defign of the Autbor's Fourney. A Defoription of the Baths at Baden, four German Miles from Vienna. Remarks upon the Nature and UJe of thefe Batbs. 2. A Defcription of the City of Neultadt, and fome otber Places in Auptria. 3. An Account of the Town of St. Veit, or St. Faith, the Antiquities in its Neigblourbood, and the fingular Metbod of inftalling a Duke of Carinthia. 4. A Defcription of various Antiquities in this Neigbbourbood, and of the Civilities paid to the Autbor, by feveral Scotch Officers in the Imperial Service. 5. The wonderful Paffage into Carniola through Mount Luibel, refembling that of Paufilipo in the Kingdom of Naples. 6. An Accouni of the ancient Nauportus, famous for the Landing there of the Argonauts. 7. A curious and copious Defcription of the Zirch-nitzer-See, cheemed the greateft natural Curiofty of its Kind in the World. 8. The Autbor's Journey to, and Defcription of the Quickflver-Mines at Idria in Friuli. 9. The Autbor's Remarks upon the Country and Inbabitants. 10. An Account of Palmanova, a Fortrefs of the Venetians, beld at. this Iime to be the beft in Europe, and confdered as the great Bulwark of that State againft the Turks. II. The Autbor continues bis fourney to Venice, and after a Joort Stay there, refolves to return by Land to Vienna. 12. A curious Defcription of the Venetian Dominions on that Side, and of the different Manners of the People on the oppofite Sides of the Bridge over the Fella. I3. Some furtber Remarks upon the Country of Carintbia, and on the Lead and 2uickfiver Mines therein. I4. The Autbor's Remarks on the moft confiderable Paflages in bis Journey. 15. Some additional Obfervations upon the foregoing Seetions.

Vol. II. $\mathrm{N}^{\circ}$ CXXIII.

AFTER having taken a View of feveral Places about the City of Vienna, I made a Journey to Venice on Horfeback, for the Conveniency of faying at a Place, or going out of the Road at Pleafure. The firt Place of Note we faw was Baden, four German Leagues from Vienno, a walled Town, feazed near a Branch of Mount Cetius, the common Boundary of Noricum and Pannonia. Near the City paffes a River call'd Sreechet, which about a German League from Vienna falls into the Danube. It has three Churches, that of the Austin Friars, of our Lady, and St. Stephen. But what makes this Place moft remarkable, are its nine Baths, two whereof are within the Town, five withont the Wall, and two beyond the before-mentioned Rivalet.

The Duke's-Bath, being the chirf and by much the largeft, is twenty Foot iquare, in the Middle of a Houfe of the fame Figure built over it: The Vapours pafs through a wooden Tunnel at the Top, but the Water is carried in at one Corner of the Bath, near the Bottom, by wooden Pipes, under the Town-Wall from the Spring-head, which rifes not far thence to the Weft ward.

The Springs of all the other Baths are conveyed into them through Holes of the Plancher, they being on all Sides cover'd with Wainfcot. The Water is generally tranfparent, inclining fomething to a Blue, and makes the Skin appear pale, like the Smoak of Brimftome: It turns Metals black in a few Minutes, except Gold (the Colour of which it heightens, but the Coin of the Country (which is a Mixture of Copper and Silver,) it turns in an Inftant from a White, into a dark Yellow, which however foon after turns black.

The Water gives a delicious green Colour to the Plants it wafhes, and fometimes leaves a Scum upon them, of a Purple mix'd with white. Near the Springhead it has a great Refemblance to the Sulphur River between Tivoli and Rome, but its Scent is not fo naufeous, nor does it incruftate its Banks as that does,

This Spring-head is worth the Obfervation of a curious Traveller, in Regard it rifes under a rocky Hill, into which is cut an arched Paffage of forty Yards Length, through which I paffed, and found it as hot as a Stove, occafioned by the hot Spring-Water running under it, (like that of Tritola and Baje) the greatell Part of this Cave being incruftated on the Tops with a white Subftance, which towards the Entrance becomes harder and ftronger. I had fome of the Pipes which conveys the Bath-Water opened; and from the Upper Part of the Pe Pipes took off a good Quantity of Powder like Flower of Brimftone fublimated; whereas nothing like it was found in the lowermoft Parts of the fame Pipes. I dropp'd Oleum Sulpburis per Campanaws into this Water, which it received without the leaft Agitation: But the Oleum Tartari per deliquium dropp'd into it, caufed an Ebullition, as in the making of Tartar Vitriolate.

The (2d) Bath within the Wall is call'd, Our Lady's Bath, being about twelve Foot broad, and twenty four in Length, and one End of it under a Church of the fame Name. This feems to be more impregnated with Sulphur than the reft, and is bluer, leaving a yellow Flower upon the Boards, as the reft do a white. The (3d) is the Nerw Batb without the Gate. The (4th) the Feres Bath, having a Partition in the Middle to feparate the Men from the Women. The (5th) St. Fohn's Bath, of a triangular Figure: The ( 6 ch ) the Beggars Bath; fo fhallow, that they are forced to be drawn in it. The (7th) is the Bath of the Holy Crofs, about two Fathoms fquare, intended for the Clergy. The (8ch) St. Peter's Bath, the Waters of which are greener than the reft. The (gth) is the Sour Bath, fet about with Stone Balafters, with a fair Cupolo and Lanthorn on the Top. The Water of it is very tianfparent, and will colour Money black without touching it ; but if once cold, will not change the Colour of Metals although they be boil'd in it. The hotteft of thefe Biths reach not the Heat of the Queen's Bath in England. They ufe no Guides here, but direct themfelves with a fhort turn'd Staff.
2. A Captain in the Emperor's Service prefented me with a Gempskugel, which is faid to be an Excrefcence upon the Liver of a Rupicapra, or wild Goat, in the Mountains of Tyrol, to which they attribute a fignal Vertue in the Difeafes of the Liver, malignant Fevers, and the Plague itfelf. The Soldiers of thele Parts make great Account of it, being poffefs'd with an Opinion, that it renders them invulnerable for two Hours after they have taken it. From hence I travelled on io Nerefladt, one of the moft confiderable Cities of Aufria: It is of a fquare Figure, having a Piazza in the middle; it has four Gates, three whereof are to be feen from the Piazza. St. James's Church has two Steeples in the Front. The Emperor has a large fquare Caltle here, having a Tower on each Corner, which, as well as the greateft Part of the Town, is to be feen at a great Diftance, its Situation being in a low marfhy Ground encompafs'd with a Ditch and a double Wall. Here Count Peter Serini, and Frangipani, the Heads of the late intended Rebellion in Hungary, were beheaded.

From hence we went on through the Plains towards Mount Simeron (Part of Mount Cetius,) upon the Top whereof you fee a great Heap of Stones, which make the Boundary betwixt Auttria and Styria; the Afcent of it is very rocky, and fo fteep, that twenty four Horfes or Oxen, are fcarce able to draw up a Coach with Safety. In our Way we paffed by Newkirckel, where is a Chapel with a little red Pinnacle, built, as they fay, by an Englifh King, and lodged that Night at Scbotwein, or Schadtzeein, a ftrong Town, fituate on the Paffage leading up to the Rocks betwixt the Hills; the Houfes on the Sides of the Rocks being inacceflible but from the Top. This Town having the Mountain on both Sides, and being Thut up with a Gate at each End, is therefore by fome ftıled Clauftra Auftrice; and a fmall Brook coming down from the Hills, paffes under the Wall of it. From hence we travelled to Mebrzufchlag, where they beat out Iron into Bars: From thence pafing by a fwift Rivulet call'd Murtz, to Keimburg, and by a Caftle belonging to the Family of Stubnberg, one of the moft ancient in Germany, came to Prug, or Muripons, a well built Town, with a fair Piazza, feated upon the River Mur, or Muer, a fwift large River, but not navigable. There is another Town of the fame Name upon the River Leyta, call'd Prug upon the Leyta for Diftinction's Sake.
3. We went on from hence to Lubeim, where the Staple of Iron is; and thence to Knitelfeldt and $\mathfrak{F} u d$ enburg, along the River Mur. The next Day to Hundtsmark and Newmark, and fo to Freijach, fuppofed by fome to have been Virunum, and by others Vacorium, in Sight of Altenbofn, the Caftle of Itrowitz, and the Caftle of Tottenbrun, which belongs to the Archbihop of Saltzburg. From hence we travell'd to St. Veit, or St. Faitbs, (Vitapolis) formerly the Capital of Carintbia, feated at the Confluence of the two Rivers Glan and Wunich, encompaffed with a Wall; it has fix Churches, and a handfome Piazza, in which ftands a noble Fountain, the Bafon being of white Marble cut out of one Stone, five Fathom in Circumference, which was brought hither from Saal, or Zolfeldt, a Place near it, abounding with Roman Antiquities, of which this is one.

In Sight of this City are four confiderable Hills, viz. that of St. Veit, St. Ulrick, St. Laurence, and St. Helena, with a Chapel upon each of them; to all which, upon a certain Day in the Year, the Inhabitants, for thirty Englijh Miles round, come in Pilgrimage on Foot. We had here the Diverfion of a Latin Comedy at the Francifcans Convent; it being then in May, we found the higher Hills covered with Snow, whereas the lower were very green, and full of Fir and Larch-Trees. Many of the Inhabitants here are troubled with hard Tumours in their Throats, fome as big as their Heads (Strumatici,) which they are obliged to cover in cold Weather, when they are much difcolour'd. There is an Hofpital without the City for thofe, as well as fome others that are Blind, Dumb, and Changelings. We obferved however, that the better Sort of People, who ufe a good Diet, were feldom troubled with this Diftemper; though

## Chap. V. through Hungary, Thessaly, Macedonia, ${ }^{\circ}{ }^{\circ} \mathrm{c} .783$

their Throats much exceeded in Bignefs thofe I faw before in the Alpine Parts of Savoy.
From hence we continued our Journey to Saal, or Solua, an ancient Roman Colony, mentioned in the Map of Wolfgangus Lazius, by the Name of Colonia Scluenjs, with a Field near it call'd Ager Soluenhis, or Zolfeldt; a Place noted for Roman Antiquities, many of which have been carried away into ocher Parts. Here I faw that fo much celebrated Piece of Anticuity of the King's Chairs; being of Stone, fet together in the Form of two Elbow-Chairs, turn'd back to back. Upon three of the Stones are Infcriptions, which appear to be much more ancient than the Fabrick of the Chair. At the inftalling of the Duke of Carintbia (whether a King or Emperor) either he or his Reprefentative fits in that Part of the Chair which faces the Eaft, a Peafant fitting at the fame Time in the other Part to the Weft. Among other Ceremonies, the Peafant rifing up, prefents the Duke with a fat and lean Ox; the Duke being obliged to return the fat one, and keep the lean one, receives afterwards a gentle Box on the Ear, from the fame Peafant, and the Inftalment is thus concluded.

The Church of Saal having had the good Fortune to efcape the Fury of the barbarous Nations, is very ancient; and on the Walls has many old Roman Antiquities of Befo relievo, taken firt out of Zolfeidl. Among many others, I took parcicular Notice of thefe: A Cbariot drawn by two Horfes. A Cbariot weith a Man in it. A Wolf licking of Fruit fallen from a Tree. Hector drawen bebind Achilles bis Cbariol about Troy. Four very fair Heads unto the Middle. Two Wolves, eacb bolding a Horn and a Cup between them, out of wobich foots a Vine veitb Leaves and Grapes; this is over the Porch. Within the Porch is a Cupid holding of a Buncb of Grapes; Romulus and Remus fucking of a Wolf: Two Figures over the Crucifix by St. Cbristopber, with fome others; all which, as I told you, were brought hither from Zolfeldt, where I alfo faw many Infcriptions; one upon a Stone on the South-fide of the Church was this;

## hercvid. E <br> EPONAE.AUG. <br> PROSALUTE.IMP. <br> CAES. M. AVR. <br> ANTONINI. PII: FE. <br> LICIS. INVICTI.

As alfo feveral Roman Coins of Copper and Silver found in thefe Parts. I brought away a Golden Medal of Trajan.

We went from thence to Clagenfurt, (the ancient Claudia) now the capital City of Carintbia, being a handfome four fquare Town, well fortified with a ftrong Wall, and a broad Rampart. Its Streets are very regular ; and the Piazza in the Middle, being adorned with a Marble Column hath a Statue of the Virgin Mary upon it, as alfo a Statue of the Emperor, and, what exceeds all the reft, hath a moft noble Fountain in the Centre, over which is a Dragon of a prodigious Size, made out of one Stone, Hercules with his Club flanding before it. This was likewife brought from Zolfeldt. Thefe mountainous Parts afford three noble maffy Fountains, viz. thofe two of St. Veit and Clagenfurt, and that of Salizburg of white Marble. Clagenfurt being at that Time full of Soldiers, we were very civilly entertained by feveral of the Officers, but more efpecially by Count Lefley their Commander in Chief, Baron Hay, and Lord Paifley, who carried me in the Count's Barge through an artificial itteight Channel into the Werd Sea, or Lake of Clagenfurt, to a Country Seat call'd Loretto, moft pleafandly feated; having a Chapel belonging to it, built in Imitation of that of Loretto in Italy, which I found exaEtly conformable to the Original.
5. From Clagenfurt, we turned to the South, and after fix or feven Engli/b Miles, pals?d the River Drave over two wooden Bridges, with an Iland in the Middle; and within two Hours after entring among the Hills at a Place call'd Hammer, (where the Iron is beat out) continued my Journey towards the high and great Moun-
tain of Luibel. Soon after we faw ourfelves arrived by the oddeft Defert of Rocks that can well be imagined, at a great Cafcata or Water-fall, which having worn out the Rocks underneath, appears at firf Sight to be artificial. The Afcent is very furprifing, being enclofed with Walls, turning backwards and forwards, to the very Pinnacle of this great Mountain Luibel, Part of the Carnick Alpes, dividing Carintbia and Carniola. Coming up as high as the fteep Rocks and Peaks would let us, we were amazed to fee our Guide lead us Sideways through an artificial Road into a Paffage cut quite through the Mountain, like the famous Grotto of PauGlipo by Naples. It has a Roof of Wood-work in the Middle, which is continued unto the Carniolian Side. The Roof of this Paffage is very high, its Length ${ }^{1} 56$ Yards, and four Yards in Breadth, affording daily Paffages for Country Carriages and Carts.
Having never heard or read of this furprifing Paffage, I at firft imagined it to be forne old Roman Work, till I was credibly informed, that it was much later, there being formerly no Paffage into Carniola this Way ; but People entred it by going about a great Way by Villach. In afcending this high Mountain, being infefted with much Rain, and a fierce Storm, till we came to the highen Part of it, I had the Opportunity to fee the Clouds defcend, and after it was pafs'd to afcend again fo high, as to get over Part of the Mountain, and a Stream of them pafs'd through the rocky Paffage out of Carniola to the Carintbian Side, directly contrary to our Way, who came out of Carintbia into Carniola. As we reached this Grotto by a continual Afcent, fo no fooner were we got through it, but we defcended by Degrees, firft to St. Anna, two Englijb Miles downward, next to Nereyfattel, fix or feven Miles lower, and fo defcending fill till we came to Crainburg, (the old Carnodunum) a handfome Town, feated upon the River Save, from whence, through a very pleafant Plain four German Leagues long, we came to Labacb (Lubiana) the capital City of Carniola, through which runs the River of the fame Name, which afterwards difcharges itfelf into the Save. This is a very handfome City, its Caftle, which is fituate upon a Hill, óverlooking iwo large Valleys to the N. and S. but being commanded by another Hill that lies near it, its Fortifications are neglected of late Years. Mr. Io/h, a Scotch Apothecary in this City, fhew'd me various curious Minerals of thofe Parts.
6. Labach is fuppofed to be the ancient Nauportus, fo famous for the Landing of the Argonauts, who fetting out from Argos Pelafgicum in Thefaly, fail'd to Colchos, on the Eaft fide of the Euxine Sea; but being purfued by the Veffels of the King of Colchos, fteer'd their Courfe Northward to the Mouth of the Danube, and paffing up that River, till they came to the Confluence thereof with the Save, they next went up the Save, and fo the River Labach, till they landed at this Place call'd anciently Nauportus, from whence they return'd by the Way of the Adriatick Sea into Greece. So that in my Travels I had been near the Place of their fetting out in Theffaly, and at their Landing-place in Carniola.
From Labach we travel'd towards the Zircbnitzer See, or that famous and moft furprifing Lake of Zircbnitz, having the Marfhes on our Right, and the Hills on our left Hand, till we came to Brounitza; and then palfing over them, we reach'd Zircbnitz, a Town farce containing three hundred Houfes, but which has given its Name to that ftupendious adjacent Lake. Here, having received the neceffary Directions and Accommodations from the Hands of the Judge of the Place, for viewing of the Lakes, we went to Seedorff, a Village about half a Mile nearer the Lake, and thence to Niderdorff, where we took Boat, and fpent fome Time in taking an exact View of the Lake.
7. This Lake is about nine or ten Engli/b Miles long, and half as broad, enclofed with Hills at fome Diftance, and to the South-fide with the Birmbaumir Foreft, of a great Extent, and faid to abound with Deers, Wild Boars, Foxes, Wolves, and Bears.

What makes this Lake moft remarkable, or rather furprifing, is, that every Year, in fome Part of the Month of Fune, the Water thereof defcends through
certain Holes at the Bottom, under Ground ; and in the Month of September returns by the fame Ways, with a very fpeedy Afcent, rifing up to the Height of a Pike, and fo covering the Ground again. Whilt the Water remains under Ground, the Earch produces very fpeedily great Plenty of Grafs, yielding Food for Catcle in the Winter; and, during that Time, you may fee the Hares, Deer, and other Wild Beafts, refort thither from the adjacent Forrefts, of which great Numbers are then taken by the Country People.

The Lake affords vaft Plenty of Fifh, though that as well as Part of the adjacent Country being a Lordfhip belonging to the Prince of Eckenberg, the Country are not allow'd the Liberty of Fifhing, except upon the reciring of the Water, when they take vaft Numbers of them, by intercepting their Paffage as they are going under Ground. As far as I was able to learn, this Lake brings not up any unknown Fifh at the Return of the Waters, but only fuch as went down, and are found in moft other Lakes, fuch as Carp, Tench, Eels, the which having fpawn'd before they go down, the Fry has about three Months Growth, when they are brought up again through the fame fubterraneous Paffages.

The Water in this Lake is of a very different Depth, in fome Places not above four Foot, and not far thence perhaps twenty Yards; fo that the Ground being as it were divided into fraall Hills and Valleys, the Fifhermen have given peculiar Names to feven of them, which in the Sclavomian (this Country Language) are, Vodanas, Refbetu, Sitarza, Ribibkiama, Naknibu, Levilße, Kottel. I myfelf pals'd over five of the aforementioned Valleys, and faw a rennarkable Stone call'd the Fijßers Stone, becaufe, by its Appearance, they guefs when the Water will begin to retreat under Ground ; as alfo by a peculiar Hill, which being higher than the reff, becomes a pleafant Inand at the Return of the Water.
Upon the moft exact Enquiry I could make, I could not find that this Lake had fail'd one Year to defcend and afcend again ; or how long it was fince this Property had firft been obferved; fo that it feems more than probable, that this Lake does not owe its Rife to any Earthquake, but has been the fame from all Antiquity, and, if my Conjecture fails me not, is the Lugea Palus of Strabo, who, notwithftanding this, as well as all the other ancient Geographers, make not the leaft Mention of this furprifing Quality.

The neareft Part of the Sea unto this Lake is the Sinus Tergefinus, and Sinus Flanaticus, or the Gulph of Triefte, and the Gulph of Quevero; at within a few Miles Diftance, divers confiderable Rivers have their Sources, as the Labach, the Corkoras or Gurk, the Colapis or Culp, which falls into the Save, and the Vipao or Amnis Frigidus, which runs into Lyonfo by Goritia, befides divers others. I obferved the Ground about this Lake very hollow, and full of Caverns: The like I took Notice of in feveral other Parts of Carniola, not unlike unto Elden Hole in Derby/bire; and, if we may give Credit to what feveral of the beft Perfons at Zirchnitz affured us, the Prince of Eckenberg had the Curiofity to go into one of thofe Caverns, and came out again upon the Side of a Hill.
8. Being upon my Departure, I was in fome Doubt, whether I hould go to Tbrejte, (Tergefum) a Sea-port in the Adriatick Sea, belonging to the Emperor, and thence by Ship to Venice; but having a great Curiofity to fee the famous Quickfilver Mine at Idria in the Country of Goritia, I went from Zircbnitz to Lovec, and paffing through the mountainous Parts of that Country, came to Idria, enclofed with Hills on all Sides, a River of the fame Name running juft by it; which is ftiled by Leandro Alberti, Juperbifimo fume d'Idria, though it was very fmall and fhallow then, and after great Rains, Fcarce has Water enough to carry down the Fir-trees, and other Wood made ufe of in the Mines, for Building and Fuel, which being caft into the Water above this Place, are flop'd by fome Piles fet crofs the River, as we oblerved in the River Gran near Neworol.

The only Thing that makes this Town worth taking Notice of, are the adjacent Quickfilver Mines; the En-
trance into which being fomewhat lower than the Town itfelf, this makes them fomewhat fubject to Water floods, to empty which, they are provided with excellent Engines, and other Devices: The deepeft Part of the Mine, from its Entrance, is betwixt 120 and 130 Fathoms. This Mine affords two Sorts of Quickfilver ; one call'd the Virgin Quickfilver, the other plain Quickfilver. They call Virgin Quickfilver that which difcovers itfelf without the Afiftance of Fire, and is either found in the Earth or Ore naturally as it is, or falls in fmall Drops, or fometimes ftreams out in a confiderable Quantity down into the Mine. Thus feven Years before I faw it, they had fuch a Stream coming from the Earth, which at firt was as fmall as a common Thread, and afterwards as big as a good Pack-thread, but did not continue for above two or three Days. They alfo reckon that Sort of Quickfilver, Virgin Mercury, which is feparated by Water in a Sieve firft, and afterwards in a long Trough with fmall Holes at one End, without the Help of any Fire.
Plain Quickfilver, or Mercury fimply fo called, is that, which being not at firf perceivable to the Eye, is forced by Fire either out of the Ore or native Cinnabar of Mercury, which they dig out of this Mine. The Ore is of a dark brown Colour, mix'd with red, but the beft is a hard Stone, which before they put into the Fire, is firft gronly powder'd and work'd by the Sieve, to feparate the Virgin Quickfilver, if any be found in it. The Quickfilver Ore of this Mine is the richeft of all that ever I faw, for it generally contains half Quickfilver, or in two Parts of Ore one Part of Quickfilver, and fometimes, in three Parts of Ore two Parts of Quickfilver. I defcended this Mine by the Pit of St. Agatba, by Ladders, and came up again by that of St. Barbara ; an Afcent of 639 Staves or 89 Fathoms. I faw in the Laboratory, where the Quickfilver is feparated by the Force of Fire, 16,000 Retorts of Iron, each of which coits a Crown at the Iron Furnaces in Carintbia. They employ at once 8 coo Retorts, with as many Recipients, for the drawing over the Quickfilver in fixteen Furnaces, fifty Retorts in each, viz. twenty-five on a Side, twelve above and thirteen below of each Side.

Fune the 12 th, 1669 , When I was there I faw them carry away into Foreign Parts forty Saumes of Quickfilver, each Saume containing 315 Pounds Weight, to the Value of 4000 Ducats: It is carried upon Horfes Backs, two fmall Barrels upon each Horfe. In the Caftle I faw 3000 Saumes of Quickfilver at once, all made up in double Leather, and in another Houfe as much of the beft Ore as could be feparated in two Years Time, unlefs they fhould have more than ordinary Plenty of Wood coming down by the Rains ; though, by reafon of the high Hills about them, it fnows oftner here than it rains.

It is a Cuftom for all the Strangers who come into the Caftle of Idria, to have their Names fet down in a Re-gifter-Book kept for that Purpofe, with the Names of their Native Country. In the large Catalogue thereof, we met with but few Englijh Mens Names, and of late Years only with Mr. Evelyn and Mr. Pope's Names, with their Companies, who after their Return, had their Obfervations inferted in the Pbilofopbical Tranfactions. As the better Sort of the Inhabitants of this Town generally fpeak five Languages, viz. the Friulian, Sclavonian, German, Latin and Italian, (befides that fome alfo fpeak Frencb) fo it is very fit for the Reception of Strangers.
9. From Idria we paffed the Swartzenberg or BlackMountain, and defcending ten Miles through a fony Country, came to Adefini, and fo to Goritia (the old Noreja) the chief City of the Country of Goritia, pleafantly feated, over-looking a fair Plain to the South. The Imperial Governor refides in the Cafte, having a Guard to attend his Perfon. As we were travelling in the Night-time, we had fometimes about us a great Number of large Glow-worms, which put in Papers, gave a dim Light, and in fome Places in the Plains the Air was full of flaming Flies. There is Abundance of that neat kind of Acer, whereof Violins and ocher Mu-
fical

## Chap. V. through Hungary, Thessaly, Macedonia, geo

fical Inftruments are made, as well in thofe Parts as in Carintbia, and the Archbihoprick of Saltzburg, where they make Trenchers and Tables of it, and fell them at a cheap Rate; I brought fome of the fair broad Leaves from thence.

Leaving Goritia, I pafs'd the River Soncius or Lizonfo, which rifing near the Hills, empties itfelf into the Adriatick Sea, famous for the Death of Odoager, who was flain near it in a Batcle by Tbeodorick King of the Gotbs, and the Inroad of the Turks made hereabouts, in 1477, under the Reign of Mabomet the Great; after which, travelling: through the Meadows, we came unto the ftrong City of Palmaं Nova, built fince by the Venetians to prevent the like Incurfions. All this long Circuit, till within a Mile of Palma Nova, we travelled through the Emperor's Dominions, which are much larger than generally apprehended; and as I have fooner or later feen the greateft Part of them, I can't but think him a great and powerful Prince, he being in Poffeffion of all Auftria, Styria, Carintbia, Carniola, Part of Croatia; Ifria and Friuli, Part of Alfatia; Tyrol, Bobemia, Moravia, Sile. Sa, Part of Lufatia; and a confiderable Part of Hungary.
10. Palma Nova in Friuli, is the largeft regular Fortification I ever met with in my Travels, having nine Baftions, bearing the Names of as many noble Venetians; on each Courtain there are two Cavaliers, the Rampart is much higher than the Wall, and the Ditch thirty Paces broad, and twelve deep; being kept dry to render the Town more healthful, but may be fill'd in Cafe of Neceffity. It has three Gates; viz. Porta Maritima, Porta di Cividal, and Porta di Udine. The three Baftions Fofcarini, Savorgnan, and Grimani, lie betwixt the Porta Maritima and the Porta di Udine; thofe three called Barbara, Dona and Monte, betwixt the Porta di Udine and Porta di Cividal, as thofe of Garzoni, Contarini and Villa Cbiara are betwixt the Porta di Cividal and the Porta Maritima. Each of thefe Gates were then covering with a very far Half-Moon. In the Middle of the City is a Sexangular Piazza, from whence there is a fair Profpect to the three Gates, and. fix Streets quite through the Town. In the Centre of it is fix'd a Standard over a triple Well ; the Front of the Cathedral facing the Piazza, which is alfo beautified with divers Statues; and a finely gilc Obelisk. There is in the Middle of the Bridge an artificial Drawbridge, fo contriv'd, that upon the Approach of any Force, the Centinel, by touching only an Iron Spring, can draw it up.

I have in my Travels made Obfervation of feveral Kinds of well-contriv'd Drawbridges, amongt all which none pleafed me better than thofe of Amferdam, which part in the Middle, fo that the Maft-head or Break-water of the Ship bearing againft it, opens it, and affords a free Paffage to the Veffel without any other Help. The Venetians have made a Channel from Palma Nova to the Sea, capable of Veffels of good Burthen. This Fortification, which was begun by the Venetians in 1594, is efteem'd here one of the ftrongeft in $E u$ rope, having been contriv'd by the Advice of the beft Engineers.
11. From Palma nova I went to Maran St. Vito, a Port Town of the Venetians in Friuli, fo named from St. Vito, who is faid to have been buried in this Place. At this Town we took a Felucca, and failing by the Shore of Friuli or Patria, we palfed by Porto di Taiamento, and came to Caborle. In this Inand there is a Church dedicated to the bleffed Virgin, feated upon the Sea-fhore nigh the Waves, yet faid never to be overflowed by the Sea, being as it were, the Halcyon Neft of its Patronefs, and a Place of remarkable Devotion. On this Shoar we refrefhed ourfelves, and were diverted while at Sea, in feeing them take Shell-fifh; and then paffing by Livenza, where the Sea came formerly up as high as Opitergium, and afterwards by Porto di Piave; I arrived at Venice, entering by the Porto de Cafellit, paffing by the Cartbufans Convent, and landed at the Piazza of St. Mark. Here I found the whole City highly concerned for the hazardous State of Candia, which was loft foon after ; Dominico Contarini, the prefent Duke was

Vol. II, No 123.
fedulous in that Affair. The Voyage of Gbiron Frant cifco Marchese Villa, General of the Infantry of Candias with a Journal of a Siege, had been lately publmed; and was in many Hands. There was a Supply of Auxiliaries in good Readinefs. It was at that Time a more than ordinary hot Seafon, and fome of our Engtifo Sea-Captains and Mafters told me, that they had felf dom met with fuch hot Wreather even between the Tropicks. Having formerly had a View of Rome, Nas ples, Florence, and the great Cities of Italy, and paffed fome Time ar Pudoa a few Years before, I made but a Thort Stay about Venice; and having reviewed what was moft confiderable, and renewed my Acquaintance wich fome worthy courceous Friends at Venice and Padoas Mr. Hales the Conful, Mr. Hobfon, Dr. Cadined, and others, I difpofed my Affairs for my Return to Vienne the ordinary Way.
12. In order chereto, I took Boat at Venice; and landed at Mefire a pretty Town, and the beft Place for Accommodation for fuch as travel into Germany by $T_{y}$ rol, or into Auftria by Friuli; from hence I cravelled ten Miles through a pleafant plain Country, till I came to Trevifo, which gives its Name unto the Country about La Marca Travigiana, a handfome City adorned with good Houtes, Churches, Towers and Fountains. The clear River Sile or Silo runs through it, and afterwards into the Sea between Mefire and Murano; it abounds in good Wines and Fruits, and was a chief Seat of the Lombards in thefe Parts. This old City, after having run various. Fortunes, and bing under the Subjection of the Huns, and other conquering Nations; and fometimes obeyed the Signiora della Scala, and the Carraref, was united to the State of Venice in the Year 1388. It was converted to the Chriftian Faith, by Profdocbimus, a Follower of St. Peter. Eight Miles from hence flood the ancient City Altinum, founded by Antenor, and deftroyed by Attila. From thence I came to Lovadina, and croffed the great River Piave, Plavis, or Analfus, which arifing in the Mountains, paffes by the Cities of Belluna and Feltre, then to Concian o: Coniglian, and next to Sacille or Sacillum, formerly a Bifhop's See, under the Patriach of Aquileio, a pleafant and well built Place, efteemed the Garden of the Republick, and feated by the River Livenza, or Liquentia; which paffing by Motta, runs into the Gulf of Venice: Here I took a Guide to conduct me through the Plains and Meadows, and came to Spilimbergo, where I again took a Guide to crofs the fwift River Taiametito, or Tiliaventum; this is efteemed the greateft River in Friuli, arifing above in the fulian Aipes; and running down into the Adriatick Sea, and often overflowing a great Part of the plain Country. This fwift River put a Stop to the Incurfion of the Turks, when Scander, Buffa of Illyria, broke into Friuli with twelve thoufand Horfe, and deftroyed all before him; in the Reign of Sultan Bajazet the IId. Not far from Spilimbergo, I pafed a neat River or notable Cut, call'd, La Brentella, fixteen Miles long, made by the Venetions, for the better bringing down of Wood from the Mountains, to be ufed in the making of Glaffes at Murano: It is all paved with a good Stone Bottom and Sides; the Bottom is round, fo that it is fomewhat like a Tube opened or fplit in two. Then I paffed by St. Daniel, feated upon a Hill by Hospitaletto, and came to Venfone, a Town feated at the Beginning of the Hills, and formerly the Limit of the Verietion Dominions; thence by Rejuta to la Cbiufa, a Place remarkable for the ftraight Paffage of the Alps, where the Venetians keep a Guard, and fhut up the Paffage every Night. From thence I came to Pontebe or Ponte Fella, upon the River Fella, the exact Confines between the Venetian and Imperial Dominions; and furely a Man can feldom pafs more clearly and diftinctly, from one Country into another, than in this Town. On one Side of the Bridge live Italions, Subjects unto the State of Venice ; on the other Side, Germans, Subjects unto the Emperor. Upon the one Side, their Buildings, their Manner of living, their empty Rooms, large Windows, Iron Bedfeads, fhew them to be Italians: On the other Side immediately, their Stoves, higher Bedfteads, Feather Beds one over another, fquare

90
Tables,

Tables, and their Bafon and Cloth by the Wall, declare them to be Germans. The Bridge itfelf is alfo half ILalion, half Dutch, one Part being built of Stone, and the other of great Trees laid over, after the German Eafhion of making Bridges. Between Venfone and Ponteba there are many great Cafcala's, or Falls of Waters; but of feveral Paflages of the Alps, this feemed unto me the beft and moft eafy. In thefe mountainous Places I was entertain'd with ftrange Stories of the Snow, which cover thefe Hills in the Winter ; as how many Pikes Length the Snow was deep in fome Places; how round the Country would look when all the craggy Rocks were cover'd ; how a Snowball, thrown down from a Mountain, would fo gather and augment in the Fall, as to do great Mifchief in the Valley; and that if the fmallef Bird thould but fcrape with her Foot at the Edge of an high Hill, that little Beginning might fo increafe in the Defcent, upon a Thaw, as to overwhelm an Houre at the Bottom.
13. From hence, by Tervis and Tirl, unto Villach or Willack, an handfome Town, and one of the chiefeft in Carintbia; but before I came to Villach, I went to fee the natural Baths, which were not much out of the Way, at the Foot of an Hill, about an Englibh Mile from the Town, and in good Efteem. There are two clear fulphureous Baths, but very gently warm, and have an Acid, and no unpleafant Tafte. The Bottom is not planchered nor paved, but hath its own natural Spring and Settlement with it; yet into one there is a hot Spring let in, which arifes by it. They are large, and have Stairs to defcend into them, with little Rooms of Wood about them for Accommodation: They are cover'd over, and they bathe in them cloathed with Shirt and Drawers, as in Aufria. Not far from hence is a Lake called the Ofracker-See, from Oflack, a Town upon the Side thereof, and is one of the molt confiderable Lakes in Carintbia, there being befides it, thefe which are remarkable, the Wbite Lake, the Millfatter, the Werd, and the Forcbien. This Lake doth not only abound in Fifh, but affords great Plenty of Offacker Nuts, which the People eat, and fome make Bread of, which notwithftanding, upon Examination, I found to be no other than very large Seeds of Tribulus Aquaticus or Water Gallthorps. From Villach I foon came to the Werd-See, and keeping it continually on my Right Hand, I travelled by the Side of it till I came to Clagenfurte, and then paffed again to St. Veits, where I met Mr. Donellan, from whom, upon my former Defires to him, I received an Account of the great L.ead Mines in Upper Carintbia, at Bleyberg, where they have worked eleven hundred Years, and the Pits are deep. Federnus Stollen or Cuniculus is an hundred and ten Fa. thoms deep in the Earth, and the Hills fo high about it, that upon the Melting of the Snow in the Spring, there is often much Hurt done, the Snow rolling and falling in fuch valt Heaps, that nothing is able to refilt it ; fo that in the Year 1654 , it fell fo vehemently, that it deftroyed and carried away fixteen Houfes. He prefented me alfo with many handfome natural Curiofities, collected by him in thofe Parts; one of which, among the reft, I cannot but mention, which was a rich, large, fair Piece of natural Cinnabar, found in Crezaltar, in the Foreft of Cre, two German Miles from St. Veits, in the LordMip-of Ofterwitz, where there hath been great Quantities found out; for the Herr von Standach about thirty Years ago, as he was hunting in this Forelt, being thirlty, and laying down to drink out of a Stream, which runs from the Top of the Hill, he perceived the Stream to be full of Cinnabar ; but fince it hach been fo diligently fearched after, that without working and digging for it there is none to be found. From St. Viets I continued my Journey by Friefach, where formerly there was a Gold Mine, and then by Neromark, Hundfmark, Pelffolz, Knitelfeldt, Luibm, Prug, Kemberg, Mebrz-u Scblag, Scbadiwien, Newkirc$k e l$, Nerefadt, Solinare, Trafkircbell, Newdorff, to Vieina.
14. This my Return from Venice to Vienna, about three hundred and fifty Italian Miles, was the moft quiet Journey I ever made; for not meeting with good Com.
pany, I perform'd it alone, and upon one Horfe; and although there are feveral Nations, and no lefs than four Languages fooken upon this Road, yet I met with no Difturbance from any, nor did any one ask from whence I came, or whither I would go; no Trouble as to Bills of Health, and good Accommodations in the Inns at an eafy Rate. They are, for the moft part, a plain People, make good Soldiers, little mutinous, but obedient to Commands, and hardy, and are of good Ure and Service unto the Emperor. In my Travels in Germany, I feldom failed to meet with feres; but in this Journey I met with none, or fuch as I could nor well diftinguifh ; for though there were then whole Villages of Fews in Austria, yet they were prohibited in Styria, and feverely banifhed out of Carintbia; fo that for thofe $\mathcal{F}$ ews, who travelled between Venice and Vienna, the Emperor difpenfes with them as to their Ruff, and the Venetions as to their Red Hat. I went this Journey when the Sun was in Cancer, in the hotteft Time of the Year, and Heat was very offenfive to me in the great Plains of Friuli and Aufria, but in the Alps it was much more moderate, and the Country was all green and pleafant ; when, on the contrary, all the Grafs in Auftria was burnt up by the Sun; and if there were not a continual Breeze about the Middle of the Day, upon all great Plains, efpecially in Southern Countries, the Heat would be intolerable ; and I could not but take Notice, how pleafantly the the poor Peafants in the Alpine Countries diverted chemfelves in the Fields, and after their Labour would be lively and brifk, fometimes play at Cards with Cards of a Span long, fuch as they have in thofe Countries; while the rich Countrymen in Auftria were faint, and gafping for Breath; nor did it any Thing avail them, that Auftria was more Northern than Styria or Carinthia, for there may be as much Difference as to the Temperature of the Air, as to Heat and Cold in one Mile, as in ten Degrees of Latitude, and he that would cool and refrefh himfelf in the Summer, had better go up to the Top of the next Hill, than remove into a far more Northern Country. I have been ready to freeze on the Top of a Hill, and in an Hour's Time after have fuffered as great Inconvenience from the Heat of the Valley at the Rifing of the Sun; I have been upon a Hill with a clear Sky and good Weather, and have feen a Valley encompaffed with Mountains, and covered over with Clouds much below us the Sun fhining upon the upper Part of the Clouds made them appear like fine Down or Wool, and made the fofteft, fweeteft Lights and Shadows imaginable ; afterwards, when we defcended into this Valley under the Clouds, we had no fuch pleafant Profpect, but were rained upon the moft Part of the Day. In that hot Country of Arabia, Travellers complain moft of the Cold they fuffer in paffing the Hills. The Mountains in Italy and Spain, are, fome of them covered with Snow and Ice all the Summer long. I have heard that Mount Atlas is fo alfo, from Dr. Butler who lately travelled in thofe Parts, and from others, when in Great-Britain there is no fuch Thing. At London we have Winters for the moft Part favourable; when Captain Fames, who went to difcover the North-weft Paffage, and to fearch if there were any Communication between the Atlantick. Ocean and the Soutb-Sea, in the Northern Part of America, as there is in the Southern, fuffered more Hardfhip in the fame Degree of Latitude, than the nine Englifomen, who were left all the Winter in Greenland; and Baffin, on the contrary, upon the fame Defign, had a pleafant Voyage in an open Sea, and met with Inhabitants upon the Shore, till he came within nine Degrees of the Pole. But I fhall wander too far out of the Way, and therefore will put an End to this Difcourfe.
15. In the laft Folio Edition of Dr. Browne's Travels, there are added, his Journey to Cologne in 1673 , on Purpofe to view the Baths of Aix la Cbapelle, and to examine the mineral Waters of the Spa; as alfo his Travels through Italy, which were firft made, and which had coft him twelve or fourteen Years to digeft and put in Order. It may not be amifs however to inform the Reader, that in thefe he fhewed himlelf a very
loarned

## Chap. V. through Hungary, Thessaly, Macedonia, $\varnothing^{2} c .787$

learned and curious Antiquary, of which, we have a clear and pregnant Inftance in what he fays of the Cicy of Padoo, which, for that Reafon, we fhall tranfcribe for the Reader's Satisfaction and Entertainment, though otherwife much ftraitned for Room, and very impatient to take our Leave of Europe. "The Landing-place " of Padoa is handfomely fet off, with Stone Steps conss tinued for a long Space along the Side of the River, " after the Manner of the Landing place at Gbent, and "s fome other elegant Cities of the Lorw-Countries. The 's outward Wall is ftrong, being well fortified accord" ing to the modern Rules of Fortification, in the s: Time of Leonardo de Loredaro, Duke of Venice; and * to render it more ftrong, the Rivers of Brenta and "6 Baccbiglione are let into the Town-Ditch. The in"ward Wall is now moft confiderable for its Antiqui"ty, and for retaining the Name of its Founder, it "c being ttill call'd Antenor's Wall: It contains a far * lefs Space of Ground than the former Padoa, being "b built in this Refpect like to the City of Aix la Cba" pelle, or Aken, having one Town within another. "That Patavium or Padoa is one of the oldeft Ci*ties of Europe, built prefently after the Irojan © War, is confeffed by ancient Writers, and fo genees rally believed of old, that Livy lays it down for the * Ground-work of his Hiftory, beginning in this Man© ner, Tam primum omnium fatis conftat Troja capta, \&c. \& In the firtt Place it is fufficiently manifeft, that "Troy being taken, the Grecians executed the utmoft © of their Rage upon the Trojans, Eneas, and Antenor only excepted, by Reafon of their ancient Friend"fhip with the Greeks, and in Refpect that they had © always endeavoured to make Peace and reftore $H e$ se lena. After various Fortunes, Antenor brought a great * Number of the Heneti, who having loft their King « Pylemon at the Wars of Troy and being driven out sc of Papblagonia by a Faction, were now feeking new * Seats, and a Captain to lead them, and came along "s with them to the Bottom of the Adriatick Gulf, drove © out the Eugenians, who inhabited between the Sea * and Alper, and eftablithed the Trojons and Heneti in ©s thofe Countries.
" Martial alfo Saluting Flaccus, a Padoan Poet, calls © him.

## cs Flacce Antenorei fpes Eo Alumine Laris.

*A And that you may more firmly give Credit to it, you may further alfo have the Authority of a Goddefs os for it, for Venus is introduced expoftulating in thefe ${ }_{-E}$ Terms with fupiter in the Behalf of Eneas.
« Quem das finem Rex magne, malorum?
«Antenor potuit, mediis elapfus Acbivis

* Illyricos penetrare finus alque intima tutus:
*Regna Liburnorum et fontem fuperare Timavi,

*St mare proruptum et Pelago premit arva fonanti
* Hic tamen ille Urbem Patavi Sedefque locarit
© Teucronum et genti nomen dedit armaque fixit.
"What Time, great King, fhall terminate our Woes?
"Safe could Antenor break through all his Foes;
"Pierce to the Bottom of the Illyrian Bay,
* View Kingdoms where Lyburnian Princes fway;
${ }^{6}$ Pafs the nine Mouths of fierce Timarus Waves,
${ }^{66}$ Which roars upon the Hills, and o'er the Valleys "r raves,
"And there could fix, and on that Foreign Ground
"Great Padoa's Tow'rs for After-Ages found.
"New name the Race, and free from all Alarms,
* Hang up in Peace his confecrated Arms.
"In thofe Days, when the Art of Navigation was " but in its Infancy, and the Mariners very unwillingly "6 parted with the Sight of Land, Antenor was forced " to keep clofe, and creep along the Coaft of Pelepon-
*s nefus and Epirus, and then fail by the Illyrion and "s Liburnion Shoars, which are very uneven and trouble-
"c fome to deal with, being full of Creeks, unfafe Bays
${ }^{\text {se }}$ and Rocks, befides very many Inands of various
"Shapes; whereas if he had croffed over to the Italian "Coaft, he had had a nearer Voyage, and fail"d with "Pleafure all along an even, bold, brave Shoar. The " People of Padoa are well pleafed with the Thoughts " of their ancient Founders and Progenitors; and they " ftill preferve the Tomb of Antenor, near to which at " prefent ftands the Church of St. Laverence, and in " their publick Shows they will be fill reprefenting " fomething of Troy and the old Trojons; and in one "Place I faw a Horfe of Wood about twenty Foot " high, in Imitation of the old Trojan Horfe, but I " fuppofe nothing near fo big as the frit Original: " Yet when I confider, that above eleven hundred " Years after the Deftruction Troy, when Towns " and Buildings were very much amplified and impro"s ved, Pompey coming in Triumph could not enter " even the great Triumphal Gates of Rome itfelf in a "Chariot drawn by Elephants, an Animal that feldom " or never comes to be fo high as this Horfe, it may "well be fuppofed that they could not have received " even this poor Model of the firft great one into the " old Town of Troy, without pulling down their Walls. "The City of Padoa was always a Friend to the Ro" mans, and did them great Service in their Wars " againft the Galli Senones, the Umbrians, Boians, In"Jubres, Cimbrians and Cartbaginians, and ftuck clofe " to their Intereft till the Time of the Declination of " the Roman Empire.
"When Attila the powerful King of the Ifuns, with
"Fire and Sword deftroy'd it; and when afrer divers " Years it was rebuilt by the Favour of Narfes the Eunuch, "General to the Emperor Justinian, it was again la" mentably ruined by the Longobardian Princes, who, by " fhooting Arrows with Firebrands fixed to them, fer "s the City on Fire, and took it. But under the Em" pire of Cbarles the Great and his Succeffors, it arofe " out of its Afhes again, and flourifhed for a long
" Time, being governed firft by Confuls, and then by " a Podefta, until the Time of their dreadful Tyrant "Ezzelin, who harraffed, banifhed, tormented and " maffacred the Inhabitants, cramming their own Wells "within the City, full with mangled Bodies, and, " amongft other Severities, upon an angry Diftafte "s againft them, flew ten thoufand of them in one Day " at Verona. But notwithftanding thefe Cruelties, they " recover'd their Liberty again after the Death of $E z$ "zelin, and by Degrees became very powerful, having " under their Juridiction Vicenza, Verona, Trent, Ire " vifo, Feltre, Belluno, Ceneda, Seravalla, CboJa, Baflano, " with its Territories; all the Polefine or Peninfula, and " the greateft Part of Friuli, with other important "Places, when in the End Marfilio de Carrara made
" himfelf Captain or Governor of the City.
"This noble Family of the Carraref, very powerful " in thefe Parts, came from their Caftle of Boffano, and
" lived in Padoa, where they became very confiderable, " and fiding with the Pope againft the Emperor Fre-
" derick the Second, they were driven out by Ezzelin;
" but when, upon the fuccefsful Attempts of the Ro-
" man Legate Angedin, a Commander under Ezzelin,
" was overthrown, they were again reftored, dignified,
" and eftablifhed in the Government of Padoa, which " they poffeffed with fome Variety of Fortune from
" one to another, in their own Family, for about an
" hundred Years, in the Conclufion of which they were
"feized on by the Venetians, who thought fit to pur
"Francifco Novello and his Sons to Death in the Year
" 1405. And after this Manner, by having totally
" extinguifhed the noble Family of the Carraref, with-
" out Fear of any further Claim or Difpute, they pof-
" feffed themfelves of the City of Padoa, and hold it " in their Hands to this Day.
"The Buildings at Padoa, both publick and private, " are very confiderable; for moft of the City is built " upon Arches, making handfome Portico's or Cloyfters " on each Side of the Street, after the Manner of the "Houfes in the Piazza of Coveni-Garden, which at all "Times afford a good Defence againft the Sun and "Rain, and many of the Houfes are painted on the $\because$ Outfide with very good Hiftory Painting in Frefco:
ss their Churches are fair, and divers well adorned.
'The Domo or Cathedral Church is large, feated near
" the Middle of the City, endowed and mightily en© riched by the Emperor Henry the Fourch, whofe Emprefs Berla lies buried here. The Revenues of this
"Church, at prefent, are reckoned to amount to a
" hundred thoufand Crowns a Year; and befides the
" Monuments of many eminent Perfons, they preferve
" here the Body of St. Daniel, of Cardinal Pileo de
"Praito, and of Cardinal Francefco Zabarella.
is The Church of St. Antonio is vifited by Perfons far "s and near, and the exquifite Defign, artificial Carving
\% in Marble, the handfome Choir and rich Ornaments
${ }^{6}$ make it worth theereeing. The Top of the Church
's is made up of fix Cupola's cover${ }^{2}$ d with Lead. The
"Chapel of St. Antonio is nobly fet out with twelve
si Marble Pillars, and a rich Roof. Between the Pil-
"f Jars are carved the Miracles of this Saint, who lies
" interred under the Altar, upon which ftand feven
"Figures made by Titian Afpetti, a good Statuary of
"Padoa; and behind the Aliar there is a moft excel-
" lent Baffo relievo done by Sonfovinus, Tullius, Lombur-
"dus, and Campagna Veronenfis. Over againgt the Cha-
"pel of St. Antorio ftands the Chapel of St. Felix, and
${ }^{66}$ his Tomb, nobly wrought with colour'd Marble, and
ss the whole fplendidly adorned with the Paintings of
" the highly celebrated Giotto. The chief Relicks in this
*Church are the Tongue and Chin of St. Antonio, a Cloth
" dipped in the Blood of our Saviour, three Thorns of
s6 his Crown, and a Piece of the Wood of his Crofs,
${ }^{66}$ fome of the Hair and Milk of the bleffed Virgin,
" and fome of the Blood of the Marks of St. Francis:
os Before the Front of the Church, there is a handfome
"Brafs Statue on Horfeback, reprefenting the great
"Venetion General Gattamela. St. Anionio lived fix and " thirty Years, died upon the thirteenth of 7 une, $123 \mathrm{I}_{3}$, ${ }^{66}$ and was canonized by Pope Gregory the IXth, in the
ss City of Spoleta, 1237.
"The Convent of the black Monks of St. BenediEz 6: may compare with moft in Itaily, and their Church
" dedicated to Santa Giuftina, built by Palladio, is one
" of the faireft in Europe. St. Giuftina was a Virgin
"s and Martyr, Daughter to Vitaliano of this City; fhe
" fuffered Martyrdom in the Time of Maximianus the
"Emperor. In this Church there are ftill preferved, as
" they fay, the Borly of St. Luke the Evangeift, of St.
" Matthias the Apoflle, of two of the innocent Chil " dren, of Pradocbimus, of the Converter of thefe Counos tries to the Chriftian Faith, and firt Bifhop of Padoo; " of Maximus their fecond Bifhop, and of Santa Giuf"tina. The Front of this Church looks into a fpacious os Place, called Prata della Valee, where the Gentlemen " meet in their Coaches in the Evening for their Plea"fure. In a handfome Room or Burying-place on the "South-fide of this Church, is a round old red Mar" ble Sione, upon which the Heads of many Martyrs s were cut off, and near to it, a fine white Marble '6 Well, call'd, Pozzo di Martiro, or the Martyr's "Well, a Place of great Devotion
"Where the Temple of Funo frood in old Time, ${ }^{66}$ there is now built a handfome Church dedicated to St. 'Aucufin, wherein are divers Monuments of the Fa-
© mily of Carrara, the Tomb of Cbarlotta, Daughter
"to Fames King of Cyprus, and of Petrus Aponenfis, a ". great Philofopher. Il Ponte Melino, where there are "thirty Water Mills together, and the Caftello della
" Munitioni, both built by Ezzelin, are worth the fee" ing. La Corte del Capitanio is fplendid, and was "the Palace of the Carrarefi. The Palazzo della Ra"gione, where the Courts of Juftice are held, is very " large, beautiful, and highly confiderable, both with" out and within, being built of Marble, with Rows of "Pillars without and within; there are Heads and In
\& fcriptions for divers eminent Perfons of this City; the
" Length thereof is two hundred fifty fix Foot, and "the Breadth eighty fix, without any Pillar or Support s 6 in the Middle.
"The Univerfity of Padoa was founded in the ${ }^{66}$ Pear 1220, by the Emperor Frederick the IId, and "the Schools are fair and large, containing one Qua-
's drangle, with Rows of Pillars above and below, and "s befides handfome Schools on every Side, there is a "s very convenient anatomical Theatre. The Phyfick"6 Garden is large, of a round Figure, walled about, " and well flored with Plants. The Prefects hereof " have been Men of Note, as, Aloy fus Mundella, Aloyfius, Anguillará, Melcbior Guilondinus, $\because \mathfrak{F}$ acobus Antonius; Cortufius, Profper Alpinus, and Foannes Veflingius.
"The Arena, or old Amphitheatre at Padoa, is an
"Antiquity very remarkable, and the Remains of fome of the Arches are to be feen fill in the Gardens " backwards, but the Arena itfelf, and the whole Po"s dium are preferved intire and free, and empty. And " at one End thereof is built a handfome Palace, the "Front of which looks directly into the open Amphi" 6 theatre, and is a Portion of an oval Figure, and the " whole Area or Arena of the Amphitheatre ferves " for the Court to it, in fuch Manner, that the En" trance being now at the End, directly oppofite to " the Houfe, the handfome Profpect of it, and the "c clear Avenue to it is extraordinarily furprifing, and " extreamly noble ; and I could not imagine that any " Gentlemen would ever defire to have a fairer Court"yard to his Houfe, than the fpacious Plain Arena " of an old Roman Amphitheatre, nor a better Wall "than a high, intire handfome Podium, the like to " which perhaps is not at this Day any where elfe to " be feen. And I muft freely confefs, that of the Re" mains and Ruins of twelve old Amphitheatres which " I have feen niyfelf, I have not met with any one " that comes near it ; for in the Amphitheatre at "Doue in Poictou, which is cut out of a Rock, and " being of a fmaller Dimenfion, and Part of the Bots tom being fill'd up, there is no vifible Beauty of the "Podium ; the like may be faid alfo of that at $\mathrm{Nizza}_{2}$ " near the River Varus, and that at Pozzuolo.
"That at Nifmes is filled up with Dwelling-houfes " in fuch Manner, that the upper Seats only are di"ftinctly vifible. The Amphitheatres of Bourdeaux " Xainctes, Arles, Garigliano, that at Rome, near the "Church of Santa Croce in Gierufalemme, and others " are at prefent fo much ruined, that nothing of this " Nature diftinguifhable is to be expected, nay even " about the Arena at Verona, and the great Collifeo or "Domitionus's Amphitheatre at Rome, the Ground is " now rifen fo high, that the Podium is at prefent " either buried or disfigured. But as the Arena at $P_{a}$ " doa, is clear and evident in this Part, fo it is wanting " in all the reft, and he that defires at. this Day to ' view all the Parts of an Amphitheatre, muft not fee "s one but many; and by joining them together in " his Thoughts, he may collect the Figure, Proportion " and Dimenfions of this fumptuous Sort of Buildings " of the old Romans.
"From the Walis of Padoa there is a pleafant'Profpect of a plain Country to North-Eaft and South, and of the Euganean Hills to the Weft, which fupply the Town with Variety of Plants, and "great Numbers of Vipers. At a few Miles Diftance are the hot Baths of Abano, and the Mineral drinking "Waters of Monte Orione, as alfo Maribefe Obizzi's " Country-Houfe, which we. faw with great Delight, " it being weil defign'd and accommodated with a "good Armory, a Theatre for Comedies, handfome "Stables, and a Tennis-Court, and nobly painted both "s within and without by that Mafter Poulo Veronefe."s This large Extract fhows his Manner of treating Antiquities, and māy ferve as a ufeful Memorial to young Travellers who are defirous of knowing how to digeft their Thoughts, and to unite the Knowledge they have brought from the Univerfities, with what they collect from vifiting the World. It is really a very difficult Thing to give our Author his due Praifes; for the more we confider what is written, the more Reafon we fhall fee for commending him ; and which is not a little extraordinary, the more we confider what he has omitted, the greater Reafon we fhall have to admire his Prudence. There are however fome Paffages in his Writings, which perhaps may be a little obfcure, not from any Want of Knowledge in the Author, but rather

## Chap. V. through Hungary, Thessaly, Macedonia, Eogc. 789

from his Superabundance, which hinder'd him from difcerning that what was extremely clear to him, might be very dark notwithftanding to Perfons of lefs general Knowledge, and to fuch as had not found an Opportunity of confidering particular Subjects in fuch a Light, as to be able to underitand the Hints he gives about them.
As for Inftance, what he fays of the Miners Compafs, feems to ftand in Need of Explanation. They work, fays he, towards One, Two, or Three of the Clock; for the Miners differs from the Mariners Compafs, being not divided into thirty-two, but into twen-ty-four Points. This is very 'true, not only in regard to the Hungarian and German Mines, but with relpect to our own Coal Mines, where, if you ask any of the Workmen about the Courfe of the Veins, they anfwer you, that it dips towards Six $0^{\circ}$ Clock ; which is utterly unintelligible to common People. The Truth of the Matter is, that the Miners and Mariners Compafs is founded upon different Principles, though I very much doubt, whether a Method might not be found of ufing the Mariners Compafs to very great Advantage in Mines; but at prefent we have not Room to infift upon this, and fhall therefore content ourfelves with obferving, that in the Miners Compafs the upper Twelve o'Clock anfwers to the Meridian of the Place where the Mine is, and from thence the Hours are mark'd on each of the Semicircles; fo that Six $0^{\circ} \mathrm{Clock}$ makes a Quadrant on each Side, and each of the Hour Lines is diftant from the other fifteen Degrees; fo that in Fact, the Miners Compafs is a Kind of Dial, and when they fay they have worked to fuch an Hour, they mean that they work to fuch a Point as the Sun bears from them at the Time of the Day which they mention.

There is another Paffage in thefe Travels, which deferves alfo to be infifted upon, and that is, the Hint given by the Author about the vaft Advantages that might arife to the Houfe of Aufria, from the Practice of a philofophical Secret ; in fhort, his own Experience had convinced him, that the Vitriolate Springs really and effectually changed Iron into Copper; from whence he inferr'd, that Springs might be found in the Silver Mines, which might have the like Effect with refpect to Copper, or rather with regard to Copper Ore, which might poffibly be managed in fuch a Manner, as to difpofe it to fuch a noble Change; for the Doctor obferves, that not the beft, but the worft Iron anfwered the former Experiment moft effectually; for which many Reafons' might be given; but as what we have already faid will fully anfwer the End we propofed, and let the Reader fully into the Senfe of what the Author delivers in the following remarkable Words, we fhall dwell upon it no longer.
". The Profit which the Emperor makes by his " Mines, fays he, is reckoned to amount to an hun"dred and twenty thoufand Pounds Sterling, yearly. " But when they come to deal with deeper and richer "c Veins of Ore, and that there fhall be by Degrees "c more of thefe Virriolate Copper Springs difcover'd, "t this Revenue will be then increafed. And it is more "t than probable, that Time will bring more of them "s to Light; for at Zolnock, and other Places near the "C Carpatbian Hills, there are divers of the fame Springs "c already made Ufe of. . But if, furthermore, confi"c dering the Noblenefs of thefe Springs, containing in " them the true mature Salt of Venus, fome Perfons " hereafter fhall be fo fortunate, as moreover to difco"r ver and experimentally improve the Ufe of Springs
" and Fountains faturated with a-Vitriolum Lunce, and " learn perfectly how to adapt metalline Bodies to the " adequate Energy and Activity of fuch Waters; the " Improvement by Tranfmutation, as it is at prefent " more than ten to one, fo it will in thofe Days amount " to above a hundred to one; and the Ure of thefe " Mines and metalline Labours may hereby effectually " prove, in Times to come, one of the richeft Jewels " in the Imperial Crown."

We are now to take our Leave of Dr, Edrward Brozone and his Travels, with which we fhall clofe this Section, this Chapter, and this Book. We fhall, indeed, in the firft Chapters of the next, be obliged to enter into the Defrription of feveral Parts of Europe; but as the Travels included in thofe Chaprers relate chiefly to Afa; and as it would have been very difficult to divide them, without breaking the Thread of the Difcourfe, and thereby deftroying the Connection between its Parts, we judged it better to involve all fuch Travels in the Third Book. The Reader will obferve, the Ufes which may be made of this Collection are not only much more numerous, but more excellent alfo in their Nature, than thofe which refult from any Kind of Geographical Performance, how accurately foever performed, becaufe we do not dwell upon the Su perficies, but go to the very Bottom of Things; and in the Accounts that we have given of the feveral Parts of Europe, we have taken all imaginable Care to treat fuccinctly ${ }^{\prime}$ of what appeared trivial, and to be more copious upon Points of real Ufe, and which contribute to the Improvement of folid Knowledge. If we had been allowed more Room, we fhould doubtlefs have anfwered all Purpofes better ; but we have made the beft Ufe of what we had, and we may fafely affirm, that no Collection of this Kind has, fo far as we have already gone, treated èvery Country we have mentioned more fully, or given the judicious Perufer an Opportunity of underftanding its paft and prefent State more clearly.

It fhall be our Study to execute what is to come in the fame Manner, fo that every Part of this Performance may, as near as it is poffible, correfpond with the Whole of it. Some fmall Differences there may be, which lie out of our Power to hinder, becaufe of the Inequality in the Capacities of thofe Authors: we tranfcribe ; but if we make the beft Choice we can of thefe, and give their Accounts in the beft Manner that we are able, it is all that can be expected, indeed all that can be performed by us; which every candid Critick will allow. In fucceeding Times, there will no Doubt be Variety of Voyages and Travels fent into the World, and amongtt them probably there will be feveral fuperior in Value to thofe that have gone before them; but with refpect even to thefe we have provided, as far as it lay in our Power, for the Reader's Service, becaufe they may be eafily digefted according to our Method, and be ranged upon. new Shelves in the fame Library. We fay this; that the Publick may be apprized of the true Value of what we have given them, and be fatisfied, that this Collection can never be out of Date, the Authors which it contains, and thofe which it will contain, not only have at prefent, but will always have their Value; and how neceflary or how pleafing foever it may be to perufe new Voyages or Travels, or new Collections of them, yet it is impoffible they fhould ever fuperfede the Neceffity of reading thefe, becaufe the Perufal of them will be always requifite to the perfect Underftanding of fuch as are later in Point of Time.

# Or, A Complete Collection of VOYAGES and TRAVELS. 

## B O OK III.

Voyages to and Travels through the Dominions of the Grand Signior, and through the other Empires, Kingdoms and States in Afia; with curious and copious. Accounts of fuch Parts of that great Continent as are leaft known.

## C H A P. I.

Voyages through the Iflands of the Arcbipelago: Travels through moft of the Provinces under the Dominion of the Grand Signior ; with a full Account of the prefent State, Forces, Revenue, Commerce, Bic. of the Turks.

## S E C T I O N I.

The Voyages and Travels of the Celebrated Mr. John Thevenot, from Italy to Conffantinople, including a very curious and exact Defcription of the feveral Places he touched at in his Paffage ; of the feveral Cities he vifited upon the Coafts; and a moft exact View of Conflantinople at the Time he vifited it. Interfperfed with a great Variety of Hiftorical and Political Remarks, equally inftructive and entertaining.
Extracted from the laft. Edition of the Autbor's Travels, printed at Amfterdam in 1727.
x. An Account of the Autbor and of bis Family; the Occafion of his Voyages, and the Manner in wobich, they were undertaken. 2. His Arrival in Sicily, and his Defcription of that IJand and its Coafts, weith. fome Account of Scylla and Charybdis. 3. An Account of the IJand of Malta, and the Obfervations made therein by our Autbor during bis Stay there. 4. He profecutes bis Voyage from tbence towards Conftantinople, and defcribes the IJlands touched at by the Way. 5. Acurious Account of the celebrated Streigbts now called the Dardanclles. 6. Several Cities on the Afian Coaft between the Streights and Conflantinople, defcribed by the Autbor. 7. The feveral Cities on the Thracian Side of the Streights defrribed in the like Manner. 8. An Account of the feveral IJands in the Propontis. 9. A Defcription of the City of Conflantinople, its Ports, Walls, Gates, Towers, \&cc. Io. Continuation of this Defcription, zevith a large Account of the noble Catbedral called Santa Sophis, now turned into a Turkifh Mofque; with an Account of Jeveral otber Mofques and magnifcent publick Buildings. if. $A$ very copious Defcription of the Seraglio, taken not not only from Mr. Thevenot, but from Tavernier and Wifher's Accounts. 12. Of the Divan, or Grand Signior's Council of State, and the Manner in wwhich Caufes are heard there, and the Metbod in which Ambafadors are received in publick Audiences. 13. The Secrets of the Seraglio, with the Manner of the Grand Signior's living with bis Wives and Concubines. 14. The Policy of the Seraglio, comprebending the entire Detail of the Education of the Sultan's Servants there, by which they are qualifed for the chief Places in the Em-
 pire. 15. The Government of the Seraglios, containing a carious Account of the Grand Signior's. Houfs vifions of bis Courcount of bis Manner of Living, together wiith a Detail of the Expences and Prom vifions of his Court. 17. The Cultoms and Rules of the Seraglio, and the Manner of the Grand Seig-
nior's going abroad in State. I8. The Manner inn which their Bayram or Carnival is kept. Defcription of the Old Seralio. The Manner ine which their Bayram or Carnival is kept. 19. A veral Places adjoining, 21. The reft of the Country of the Afiatick Side of the Bofphorus defcribed. 22. An Appendix, conffing in a great Varity of entertaining and infructive Paffages, exiracted from other Authors. 23. Hiflorical, Political, and Mifcellaneous Remarks on the foregoing Section.

$T$ is impoffible to read, with any Satisfaction, the Travels and Adventures of an Author, without having fome Knowledge of who or what he was, and of his gene. ral Character in the World. Mr. Fobn Therenot was of the fame Family with the famous Melche zidec Therenot, who publifhed a large and curious Collection of Voyages, Part originally written, and the relt very accurately tranflated from Spani/h, Italian, Englifh, and other Languages, into French; which is the Reafon they are very often confounded together, by fuch as are not well acquainted with Literary Hiftory, but borrow what little Knowledge they have, from Title Pages, Indexes, and Journals. The elder Thervenot travelled, in deed, for fome Time, but never without the Limits of Europe ; nor did he think any Accounts of his Voyages worthy the Notice of the Publick. He was appointed Library-keeper to Lewis XIV. and not only difcharged the Duties of his Office with great Diligence and Fidelity, but Jikewife enriched that noble Storehoure of Learning, with upwards of two thoufand Volumes from his own Study. He was particularly careful in collecting Manufcripts in all Languages, and more efpecially in the Englijh, Spanih, Ihaliam, Latin, Greek, Hebrew, Syriac, Arabick, Turkib and Perfian Tongues; all of which he underftood perfectly. He died by too great Abftinence, which he flatter'd himfelf would have cured an Ague, on the 29 th of OEtober in 1692 , in the fe-venty-firft Year of his Age.

Our Author had, from his very Youth, a ftrong Inclination to travel, in Hopes of gratifying that Curiofity, which excited him to enquire into and examine after whatever appear ${ }^{3} \mathrm{~d}$ new or curious, ufeful or entertaining. It was to gratify this Inclination of his, that he went to Rome, where meeting accidentally with the celebrated Mr. Herbelot, the moft learned Man of his own, or perhaps of any Age, in every Branch of Oriental Literature, he caught from him to violent a Paffron for penetrating into whatever was curious or extraordinary in the Eaft, that he refolved to continue his Travels to the moft diftant Yart thereof; in which he flatter'd himfelf with the Hopes of having the Company of the very judicious Perfon before-mentioned; but fome Family-Affairs, which required the Prefence of that learried Gentleman, obliged him at that Time to return into France; but Mr. Thevenot having made all the neceffary Preparations for this long Expedition, and being encouraged to undertake it by his Friend, who promifed to join him in the Ifland of Malta, refolved to proceed in the Execution of the Defign he had undertaken.

Accordingly, on Monday, May 1, 1655, he left Rome, in order to go and embark at Civita Veccbia on board the Galley commanded by Count Gaddi, in which he began that Voyage of which we intend to give the Reader an Account in this Section. He appears, by his Writings, to have been a Man of great Accuracy and Diligence, as well as of wonderful Curiofity and Vivacity, of a bold and enterprifing Spirit, merely for the Sake of Knowledge; for he does not appear to have trad any Turn towards Profit or Glory. His fole Aim was to know; and as to Wealth and Power, he left them to the Covetous and Ambitious. He was very careful in his Enquiries, took very little upon Truft, examined alt Things with his own Eyes, committed his Obfervations to Writing immediately, and, after his Return to France, revifed and publifhed them at Several Times, at the Requeft, and to fatify the Importunity of his

Friends. He appears to have hảd a large Share of ufeful Learning, which enabled him to make juft and proper Enquiries; as well as very judicious, and at the fame Time very entertaining Remarks. He was very inquifitive, but very far from being credulous; he had a ftrong Difpofition to learn, and was ready to fubmit himfelf to be taught by any whom he found more knowing than himfelf. He was free from Prejudices or Prepoffeffions, was very defirous of knowing the true Siate of Things, and very willing to communicate his Knowledge. In a Word, his Candour and Integrity procured him the general Efteem of all who knew him, and have had the fame favourable Effect with refpect to his Writings, to which we fhall now proceed.

2: He continued his Journey from Rome, and upon Fune the 2d. he embark'd at Civita-Veccbia, and came to an Anclior before the Port of Mefina in Sicily in Seven Days. This Town lies oppofite to Rbegio in Italy, from which it is diftant about fixty Miles. It was buile by the Meffinians of Peloponnefus, and from them took its Name, being anciently call'd Zande. Is is a fafe Harbour by Nature, and round it are feveral fair Palaces built very uniform, which form a pleafant Profpect. The Mole, which muts in the Port; has a Tower by it to fecure the Entry, and another in the Midft of it. This Town is but a melancholy Place, though the Streets are fair and large. Oiver the Door of the Cathedral Church is written, Gran-Mercy a Meffine, in Memory of the Surrender of that City to the French, when they took Sicily. Before it is a great Piazza, with a Theatre in the Middle of it; where the Victory of Lepanto is reprefented in Brafs, and a brazen Statue of Don Yobin of Austria ftands by it. The Novitiate of the Jefuits ftands upon an Hill that over-looks the Town.

There are eighteen ftrong Caftles in it, but four of them only are in the Hands of the Spaniards: The Mefinefe have the reft. The Town is very rich, by Reafon of the great Trade in Silk driven there. There are no Inns for Strangers, fo that they are obliged to lodge in a wretched Tavern by the Harbour. All Things are cheap, the Wines ftrong, but bad. It is an Archiepifiopal See. The Streiglts are made dangerous by Scilla and Cbarybitis, though anciently they were much more fo than now, becaufe Navigation is improved. Scilla is a Rock near the Caftle Scyllio, on the Italian Shore. Cbarybdis is the Meeting of two contrary Eddies, which by beating and clafhing one againft another, make a Noife like the Barking of Dogs, and by caufing Veffels to turn round about, fuck them down to the Bottom ; nor is the Harbour itfelf fafe from it, for the Currents will fometimes carry the Ships out into it, and therefore the Mefinefe have always a great many Pilots in Readinefs to affift Veffels in Danger.

Sicily is of a triangular Form, each Angle making a Cape, which are now called Difaro, anciently Pelorus, Pafaro, anciently Pactionis, and Bocho, heretofore Lilibaum. It is but three Miles diftant from Italy, being feparated from it by a dangerous Streight, call'd, The Pbaro of Meffina. It is the moft confiderable Inand of the Mediterranean Sea, both for Bignels (being 700 Miles in Compars) and Fruitfulnefs, produces Plenty of Corn, excellent Wines, Olives, and other Neceffaries of Life, infomuch as that it was call'd one of the Granaries of Rome. It contains a great many fair rich Towns, but it is much annoy'd by Mount Gibello, or, as it is Ati led by the Ancients, 无tna, which contirually cafts forth Abundance of Flames, and covers the Land about it
with Afhes for a great Way; this Inand is alfo much infefted with Earthquakes. It has been under the Dominion of many Nations, viz. Greeks, Cartbaginians and French; at this Time fubject to the King of Spain, who has always a Vice-Roy there, that has his Refidence half a Year at Palermo, and the reft at Miefina. From all thefe Nations the Sicilians have derived fome Vices which makes them revengeful, haughty and jealous, efpecially of the French, whom judging by their vindictive Temper, they fufpect not to have forgotten the Sicilian Vefpers, and for that Reafon always wear their Daggers by their Side even in their Shops and WorkHoules. They are of a fubtle and malicious Wit, ready to contrive or execute any Mifchief.

From Mefina he failed to Agoufta, which is but an ordinary Town with one Street, but the Country about it produces excellent Wine, which has a ftrong Flavour of Violets: Then coafting along by Syracufe, now corruptly called Saragoufia, formerly the Metropolis of Sicily, and Birth-place of Archimedes, the Country about which produces excellent Mufcadine, he made the Ifle of Malta, anciently call'd Melita, from the Plenty of Honey it yielded.
3. This Ine is low, and the Soil a foft Chalky Rock, yet it produces very good Fruits, as Figs, Melons, which grow fo eafily, that they require no Care but to preferve them; Grapes very good to eat, but not for Wine; Cotton, but little or no Corn, for that is brought from Sicily thither. The Air is fo hot, that there is no Walking in the Sun; and the Nights are as intollerable, if not through the Heats, yet through the Stinging of Musketoes; yet is fo wholfome for old Men, that they can hardly die. They drink their Wine with Ice. Head-aches and fore Eyes, caufed by the Whitenefs of the Earth, are there common and dangerous. There are no venomous Beafts in the Ine, nor can any live in it, which the People attribute to St. Paul's Benediction, and they give the Earth of the Grott, where he lived, for an Antidote againft Poifon, with greater Succefs than Terra Sigillata. The Inand is populous: The People are of a brown Complection and are very revengeful. The Women are beautiful, and familiar, for though they hide their own Faces with their Mantle, they fee every Body's elfe.

They fpeak Arabick, but Italian is allo common. Here are feveral Ports and Creeks, but the chief Havens are the Great Port, and that called Marfamouchet. In the great Port are all the Gallies of the Order laid up, and all the Veffels that are to make any Stay at Malta, either to load, careen or refit, put in there, fhut with an Iron Chain: The Port of Marfamouchet is for Ships to perform their Quarantine in, before they have Accefs to the Town, and for fuch as by Reafon of foul Weather can't get into the great Port, as alfo for the Corfairs, who come only for a little Time, and fo will not go into the great Port, becaufe it is hard to get out again. As foon as the King of Spain had given the Inland of Malta to the Knights of St. Fobn, Sultan Solyman refolving to extirpate them, who had given him fo much Trouble, fent a powerful Army to take it. The Turks landing near the Mount Pelegrino, attack'd the Caftle of St. Erme, kill'd all that defended it, and took it. Then they turned againft the Ine de Sangle, but were affaulted fo furiounly by the Caftle of St. Angelo, who firing their Cannon, level with the Water, upon them, funk their Boats and drown'd their Men, which being repeated feveral Times, the Turks defpairing of Succefs, and finding Recruits come to them out of Europe, drew off, and left the Ine in the End of September, 1565 .

After the Turks were gone, the Knights refolv'd to build a new Town, where the Great Matter with all the Order might conveniently dwell. They pitched upon the Tongue of Land where the Caftle of St. Erme ftands, from whence the Turks had fo furiounly driven them. The Great Mafter Fobn la Valetio laid the firf Stone of it, March 28. 1566. and from himfelf called it Valetta; it has been fo fortified fince, that none exceed, and few Places can equal it. The Entry into the Port
is defended by the Caftle of St. Erme, the Baraque, which has nine Pieces of Cannon, and the Battion of Italy, and on the other Side by the Caftle of St. Angelo, and a Tower, which has two or three Pieces of Cannon The Town is no lefs ftrong by Land than towards the Sea, being begirt with good Walls, built upon very high Rocks, with feveral Baftions and other Pieces of Fortification, which are equally fair and ftrong. The Baraque is very delighful, being covered with lovely Orange and Lemmon-Trees planted in Rows, and hav ing a great many Fountains, where the Water-works playing very high, give mighty Diverfion.
From the Port you go up an Hill to the Town, which is fmall, but very pretty. It hath but two Gates, one leading to the Port, the other into the Country There are feveral Churches in it, but that of St. 7 obn is the Chief. On one Side of it is a lovely Piazza, and at each Angle a Fountain. It is a large Building and pretty high, paved with beautiful Marble, and adorned above with many Colours taken from Infidels. In this Church they pretend to have many fine Reliques, viz. St. Fobn Baptif's Right-Hand, and many others
There are feveral admirable Buildings in the Town, among others, the ftately Palace of the Great Mafter, in which is a Magazine of Arms for 35 or 40000 Men, kept very clean and in "great Order, and among them the Arms of fuch great Mafters as have been wounded in any Action, are to be feen with the Marks upon them This Palace looks into a large Square, in the Middle of which is a charming Fountain, which throws up Water in great Quantities, and very high, and fup plies the whole Town. The Palaces of the Confervatory and Treafury are fair Buildings, and fo are the Inns.

The Hofpital is very well built, and the Hall for the fick Knights is hung with Tapeftry, where they are at tended by Knights, and ferv'd in Plate. Poor Travellers find Entertainment here, till they can get Paf fage to the Place they are bound to, and then they are furnifhed with Provifion, and their Charges are born through their Voyage. The Jefuits have a very well built Houfe and a College there, and even the meaneft Houfes make a good Show, being built of a large fquare white Stone, which retains its Colour long and feems always new : They are all flat Roofed. The Streets of the Town are incommodious, becaufe one goes always up Hill and down, but they are wide and Itrait. The faireft reacheth from the Caftle of St. Erme to the Royal Gate, which is almoft a Mile long, and in it they make the Horfes and Affes run the Pallio upon their Days of Rejoicing. The Country about it is full of Gardens and very agreeable Places of Pleafure. About twelve Miles from the City the Grand Mafter hath a Palace, built in Form of a Caftle, and very uniform, the Halls of which are adorn'd with excellent Paintings, and it has very neat Gardens full of Orange, Citron and Olive-Trees, with feveral lovely Fountains. At a little Diftance from the Houfe is a Grove ftock'd with Game for his Diverfion.
Five Miles from Malta is the Inle of Gozo, which is thirty Miles in Circuit, twelve in Length, and fix in Breadth. It is a very wholfome Air, and though mountainous, is almoft all cultivated, for the Inhabitants delight more in tilling the Land for Corn, than any other Sort of Husbandry, though it has many Places well watered, and fit for Gardening and Pafture On our Lady-Day, September the 8th, the Knights keep a Rejoicing yearly for the Turks raifing the Siege of Bourg, with Mals, Shooting, Feafting, Races of the Pallio, and many other Diverfions.
4. Leaving Malta, Tburday Nov. 1655 , he failed by the Ine of Sapienza, and having weathered Cape Matapan, came to an Anchor in the Bay of St. Nicholas, in the Ine of Cerigo. Cape Matapan is a Promontory of the Morea, formerly called Tenarus, where Arion, carried by a Dolphin, was put on fhore. This Country is inhabited by the Meinots, a People who lived in the Mountains without Law or Government, and are fub-

jeet to thofe who have mot Power in the Country; fometimes the Venctions, and fometimes the Turks. All their Bufinefs is to rob Travellers.
Cerigo was anciently called Porpbyris, becaufe of the great Quantity of Porphyrion Marble found there, and Cytbera. Venus, who is fabled to have been born of the Froth of the Sea, firft dwelt here, and had a Temple near the Sea-fide, the Ruins of which are ftill fhewn. It is the firft Inand in the Arcbipelago, or Egean Sea, fixty Miles in Compafs, and five from the main Land. The Venetions are Mafters of it, and keep a good Garrifon there, becaufe it is a Pafs of very great Importance.

From Cerigo, where the Ship paid the Conful a Piaftre for Anchorage, he failed to Zia, leaving many inconfiderable Illands on the Right-hand, as Melo, Antimelo, \&cc. This Ine was anciently called Ceos, or Cea, it is Chaped like an Horf-Thoe, and fify Miles in Circumference. The Soil is pretty good, producing Corn, Wine, Grafs, and a great many other Things, and the Harbour is full of Fifh. The Irhahitants pay a Tribute to the Turks of 3400 Piaftres, and to the Venetians 2600, befides the Extortions and Robberies they meet with, which fo impoverifh them, that they are often forced to leave their Hlabitations. They are good Pcople, and deferve to be pitied, becaufe of the Miferies they fuffer both from Chriftians and Turks. The chief Town of the fame Name is five Miles from the Port; it is a large Place, containing feven hundred Houfes but there is not above four hundred of them inhabited, the reft being forfaken fince the War of Candia. The Houfes are built of Stone and Earth, rank'd on the Side of an Hill like the B.nches of an Amphitheatre. The Gaftle is ruinous, but ftrong, fo that fixty Turks, with two Mufquets only, held out againft the whole Venetian Army, ander General Morofini, till Want of Water forced them to yield.

From Zia he failed to Andra, anciently called Andros, fixity Miles from it, and eighty in Circuit. It is reckoned the moft fertile Ifland of the Archipelago. It produces almof all Things neceffary, and Silk more efpecially, for which they have a great Trade. The Port is pretty good, and the Town adjoining to it hath about two hundred Houfes. In the whole Illand are about fixty Villages, of which the moft confiderable are Arni and Arnolacos, inhabited by the Arnauts or Albanions, who are about twelve hundred Souls, and all of the Greek Church, differing in Language and Cuftoms, yet all without any Difcipline. Near thefe Villages is a large Monaftery of an hundred ignorant Monks, called Tagia, who have a neat fmall Church, which they fupply, and fix leffer ones. There is a great Number of Greek Churches in the Ine, which are under the Government and Difcipline of a Greek Bifhop. The Latins alfo have a Bifhop there, and fix Churches, of which the Cathedral is dedicated to St. Andrere. The Capuchins preach in them, and teach a School, to which the Greaks fend their Children from as far as Atbens.

The Turks difpore of the temporal Affairs of this Ine, and are but uneafy Neighbours to the Chriftians. The Jefuits have a Church dedicated to St. Veneranda, and an Houfe near the Valley Monites, with a Garden full of Fruit-trees of all Sorts, which yield them confiderable Profit. The Houfes in this Ine are ill built, and both the Air and Water bad. The Inhabitants are civil their Women are chafte, and fpeak well, but their Apparel is unbecoming. The Inhabitants of the Towns love good Cheer and Diverfions, and care not much to labour, but the Peafants are very induftrious. Their Food is Goat's Flefh, for though in their Woods there is good Venifon and Wild-fowl, yet they have neither Huntmen nor Fowling-pieces to catch them. The Sea affords them no Fifh. They have neither Phyfician nor Chirurgeon, but when they are fick, betake themfelves to the Mercy of God as their only Remedy.
5. From Andra he failed by the Negropont, Sciro, Ipficera, Cbio and Tenedo, to Troy, where there are ftill confiderable Ruins of that ancient and famous City, and thofe of great Extent, viz. An Harbour, Pieces of large Pillars, and the Remains of a great Temple; but

VOL. II. No $\mathrm{N}^{\circ} 23$.
the Learned fay; that they are only the Ruins of fome Buildings erected there by the Romans long after the Deftruction of Troy. From hence he paffed the Mouths and entred the Channel of Hellefpont, where the Turks firft paffed over into Europe, and failing betwixt the Cafles of the Dardanels, came to an Anchor. The Dardanels are two Caftles, built on each Side the Channel of the Hellefpont by Mabomet II. Son of Amuraib II. The one ftands in Europe, in Romania, in the very Place where Seflos formerly ftood. This Caftle is triangular, and befides two Baftions, hath three Towers covered with Lead, and twenty large Guns, which carry Stone Bullets of fixty Pound Weight. The other is in Afa, in a Plain where anciently Abidos ftood. Thefe two Forts are the Keys of Conftantinople, though at two hundred Miles Diftance, for they can hinder any Ship, Friend or Foe, to pals them without Leave, unlefs they will run the Hazard of being funk. All Ships that come from Conftantinople, are fearched here for contraband Goods and fugitive Slaves. Thefe Places are famous for the Loves of Hero and Leander, and Xerxes's Bridge into Europe, which was made hereabouts. From Andra to this Caftle is 280 Miles.

From thence he fail'd to Gallipoli, which is reckoned thirty five Niles. This Town was built by Callias, Prince of the Atbenians, from whom it was called Calliopolis, which now is corrupted into Gallipolis. This Place is but thin peopled: The Greeks that dwell in it fell Raki, or Brandy, for the moft Part, and their Houfes have Doors not above two Yards high, to keep out the Turks, who will ride in elle when they are drunk, and turn all Things upfide down. It has a Tower and Arfenal, where are commonly laid up feveral Grullies.
6. Departing thence he paffed the Ine of Marmora, which gives Name to the Sea, that was formerly called the Propontis, and failing along by the Seraglio and Conftantinople, came to an Anchor at Galata, where is the Harbour of that City. The Sea of Mermora, or the Propontis, which is about 120 German Leagues in Comm pafs, lies between the $38^{\circ}$ and $41^{\circ}$ of Northern Latitude, which makes the Clime fo temperate, that it has neither the Inconveniences of fharp Cold, or burning Heats, which is the Reafon that both Sides of it has been fo well adorn'd with famous Cities: For on the Afion Side ftood Cbizico, a Town formerly famous not only for being built by the Argonauts 500 Years before Rome, but for its lofty Towers, magnificent Buildings, large Arfenals and Magazines, fine Amphitheatre and convenient Port, though Nothing now remains of all thefe Things but frightful Ruins, which are the Habitations of Owls.

Nice, called by the Turks Ifnich, famous for the firft General Council. It is almoft fquare, and ftands at the Extremity of a Bay in a fine Plain. On the N. E. is a Ridge of Hills, which abound with Wood, Vines, Fruits and Fountains. It is encompaffed with Walls full of round Turrets, and had a Covert-Way that ran by them, but it is now ruined. The City is pretty large, the Streets neat, and has at leaft 10,000 Inhabitants, as well Greeks as $\mathcal{F}$ eros and $\mathcal{T}$ urks, who trade in Corn, Fruit, Cotton, fine Cloth, $\mathcal{F}^{2} c$. to Conftantinople. There are here many Remains of Pagan and Chriftian Antiquities, but thefe are fo defaced by the Turks, that nothing admirable is to be difcerned.

Montagma, or Nicopolis. It ftands on a Bay anciently called Cianus Sinus, from the City of Cium, which once ftood there. This Town is fmall, but by Means of the Bay drives a great Trade to Conflantinople, for its Nearnefs to Burfa brings all the Traffick of Bitbynio to it. The Inhabitants are about five or fix thoufand Greeks, Turks and Fews, and are all Merchants, and live by their Trade in Fruits, which they fend to. Confantinople.
Nicomedia, which, next to Constantinople, has the pleafanteft Situation of any City in the World. It ftands at the Bottom of a Bay, and runs up the Side of an Hill, adorn'd with many Fountains, and is cover²d with FruitTrees, Vineyards and Corn. Their Garden-Fruits are extraordinary, and their Melons are thought by fome 9 Q
to equal thofe of Cachon in Perfia for Goodnels, which are reckoned the bett in the World. Here are Abundance of Remains of Antiquity, enough to fatisfy the Curiofity of Travellers. It was built by the Nymph Olbia, but has its Name from. Nicomedes, King of Bithynia, who enlarged it. It is famous for the Death of Hamibal and Confantine the Great, for the early Converfion of its Inhabitants to Chriftianity, and the many Martyrs who fealed the Faith with their Death.

It is called Ifmit by the Turks, and is a large and populous City, having about 30,000 Inhabitants, Greeks, Armenians, Feros and Turks, who molt of them live by trading in Silks, Cotton-Wool, Linnen-Cloths, Fruits, Earthen and Glafs-Wares, and feveral other Commodities, which make it a City of great Traffick. There are a great many Greek Churches and fair Mofques, with feveral Inns and neat Bozaars, or Market-Places, in this Town. Moft of the Ships and Veffels which belong to Conftantinople are built here, but they are forry Artifts at it. On the right Side of the Bay of Nicomedia is a Fountain of Mineral Water, which the Turks and Greeks fay, cures all Diftempers, and therefore flock to it mightily.

Cbalcedon. This Town was once famous for the Temples of Venus and Apollo. Many Chriftian Churches, and among them one dedicated to Sr. Euphemia, where the Fourth General Council fate, and in Part of which, as it ftill remains, the Greeks have yet their Religious Worfhip, and ftrong Fortifications, and other fine Buildings it had; but is now reduced to a Village of rooo or 1200 Houfes, and thofe very ruinous. The City gives Name to the Screights adjoining, which are called Fretum Cbalcedonicum, Bopphorus Cbalcedonius, as well as Bofphorus Tbracius, and near it is a Light-houfe and a Pleafure-houfe belonging to the Grand Signior, called Finari Kioske, which Sultan Soliman II. built for his Retirement with the Ladies of the Seraglio.
7. On the Thracian Side ftands Kodofto, or Radifo, a Town well fituated at the Extremity of a Bay, which affording it a very good Haven, fills it with Inhabitants, who drive a Trade all over Thrace, the Propontis and Black Sea. In it are three or four large Mofques, and fome fmall ones, fome Chriftian Churches belonging to the Greeks, and two Ferwißh Synagogues. The Town lies along the Sea-flore, where the Trade is, and toward the Land are many Gardens ; but the Fruit is not very good, becaufe the Gardiners of Turkey are but unskilful in their Art.

Perinthus, or Heraclea, which once gave Law to Byzantium, but now is fubject to it. This Town lath two good Havens belonging to it, but one of them is fo choaked up with the Rubbifh and Filth of the City, that it ferves only for Barks and Saicks. The Amphitheatre of Heraclea was one of the feven Wonders of the World; but now there are only fome hatter'd Ruins of it. There are alfo feen many Pedeftals with Greek Infriptions to Severus, Trajan, and other Emperors, who had conferred any fignal Benefit upon the City; but the Statutes which once ftood upon them are thrown down and demolifhed. The Town at prefent is but thinly inhabited, and drives but a fnall Trade, though they have many Commodities, fuch as great Quantities of Cotton, Olives, Fruits, both green and dry, Skins and Wool. The Cathedral is one of the fineft in all Greece, having a handfome Roof, and being very neat in the Infide, and better contrived than the Patriarchal Church of Conftantinople. There are five or fix Churches befides, but none of them in fo good a Condition as the former, and two of them are wholly difufed. But though the Buildings and Trade of this City daily decay, and Time may blot it out of the World, yet the Sufferings of many Chrifian Martyrs in it will keep up its Memory as long as the World endures.
8. In the Proponits are feveral Inands, viz. Mermore, which gives Name to the whole Sea, and is about ten Leagues in Compafs. The chief Towns in it are Gallioni and Craftio. The Caloyers, or Greek Monks, have feveral Convents or Hermitages in it. They are very

Town is of the fame Name. It hath two other Vil lages called Aloni and Arabi Kieny, becaufe it is inhabited by Arabians only. 3. Contalli, which has a Town of the fame Name: And, 4. Gadoro, which has only fome Houfes and Cloyfters for Monks: Thefe four Illands go all by the Name of the firft, and lie in a Clufter, abounding with Cattle, Corn, Wine, Fruits, Cotton, $E^{3}$ c. Their Fifhery is allo good, but they regard it only for their own Ufe, becaufe Confantinople is fupplied from Places in its Neighbourhood. Nearer to Conftantinople lies another Knot of Inands, called by the Turks Papas Adaff, by the Greeks Papa Doniffa, or the Inlands of the Monks; and by the Europeans, The Pope's Ifes. If Conftantinople were in the Hands of the Chriftians, they would be a perfect Paradife, and every one would have his Houfe of Pleafure there; but being fubject to the Ravages of the Turks, who often go thither to be drunk, and in their Heat rifle their Gardens and Vineyards, they lie in a Manner uncultivated, and only a few Caloyers manure a little Bit of Land by the Monafteries for Herbs and Roots for their own Ufe. Thefe Caloyers are Monks of St. Baftl, who retain the ancient Way of Living and Habit, without any Alteration. They lead a very retired and auftere Life, and never eat any Flefh. They obferve four Lents in the Year, befides feveral other Fafts; and fome among them are fo abftinent, as to be fatisfied with eating a little Bread and Pulfe, dreffed with Salt and Water, once a Day; and others by Cuftom have brought themfelves, to eat once in two or three Days, during their Lents; and it is faid fome will eat but feven Times in the feven Weeks of their longeft Lent, though this feems improbable; but thefe are only the moft devout, which are but few. The reft order Matters fo cunningly, that they obferve nothing lefs than Fafting ; for though indeed they eat no Butter, Fifh, Eggs, or Oil, and drink no Wine, yet they ufe other Things luxuriounly, as Oifters, Cavear, and Shell-fifh, for Fifh; Almonds, Piftacho's, and Nuts, for Butter ; Aqua Vita, Coffee, and Sherbet, for Wine, $E^{2} c$.
9. Conftantinople has the happieft Situation of any City in the World. It lies in Europe upon a Point of the main Land, jetting out towards the Bofphorus of Tbrace, from whence it is but half an Hour's Paffage into Afia On the Right-hand is the Wbile Sea, or Propontis, by which there is an enfy Paffage into Afa, Egypt, and Africa, whereby it is fupplied with all the Commodities of thofe Places. On the Left-hand it hath the Black or Euxine Sea, and Palus Mcotis, by which it is furnifhed with all the Commodities of the North; infomuch that there is Nothing that can be neceffary, ufeful, or pleafant, which is not brought plentifully to Conftantinople, the Winds always ferving to bring in Commodities from one of thofe Parts. The Port is by Nature the lovelieft in the World, being fix Miles in Compafs, and a Mile over, and fo deep in all Places, that a Ship may lay her Head a-fhore without Danger.

It was anciently called Byzontium, and was built by Paufanias, King of Sparta. The Emperor Severus demolifhed it, to punifh the Rebellion of the Inhabitants, and Conftantine the Great rebuilt it, calling it Nero Rome firft, and then Confantinople; being afterwards dedicated to the Virgin, it fometimes bears the Name of Partbenopolis; the Turks call it Iftambol, or Stamboul. After the Divifion of the Roman Empire ; it was the Seat of the Eaftern Emperors, from whom, in 1209, it was taken by the Venetions and French, but recovered by the Paleclogi fifty Years after, and fell into the Hands of the Turks on Wbitfunday, 1453, who have kept it ever fince. The Air in Summer would be very hot and incommodious, were it not cool'd by a Breeze which comes every Afternoon from the Mouth of the Port, by which it is render'd very healthful, fo that no Difeafes are known here but the Plague, which makes a great Havock every Year. It is very fubject to Earthquakes, fo that fometimes two happen in a Day. The Figure of it is triangular, one Side lying toward the Propontis, the other on the Port, and the third toward the Land. It is all encompaffed with good Walls, and to the Land Side they are double, being built in fome Places

## Chap. I.

to the LEVANT.
of Free-ftone, and in others of Free-ftone and Brick. markable Things without the Walls, both of the City It hath twenty-two Gates, fix toward the Land, as many. along the Port, and ten on the Streight of the Propontis, which have all Landing-places and Stairs, and the whole City is about tweive Miles in Compafs.

The Cafte of the Seven Towers joins the doubleWalls on the Continent Side to thole that lie upon the Propontis. It was anciently one of the City Gates, called The Gilded Gate, from the gilt Ornaments of it, and had four Turrets; but Mabomet II. becoming Mafter of Confantinople, added three new ones, and made it a Caftle, ftrong enough to keep the Treafures of the Empire, and for that Purpofe it ferved a long Time; but at prefent it is only ufed as an honourable Prifon, where the Grand Signior fhuts up fuch Perfons of Quality and Slaves of Note as have incurred his Difpleafure. If any Chriftians are confined in it, their Priefts are allowed to come and fay Mafs to them in a little Chapel; and if they are Knights of Malta, or other Perfons of Quality, they are allowed to go out, if an Ambaffador, or other Perfon of Note, will be engaged for their Return. Sultan Ofman and Heuffein Ba/ba were ftrangled in this Cafte.
Without the Walls, hard-by one of thefe Caftles, are two large Statues of white Marble in Baffe Relief, the one feems to be Endimion, and Diana coming down to fee him, and the orher the Nine Mufes, with the Horfe Pegafus. They are done by a good Hand, but inferior to fome Pieces in Europe. In going by Sea from this Caftle to the Seraglio, there is a fquare Tower ftanding in the Sea, at about two Paces from the City-Walls, where, they fay, Fuftinian imprifoned Belizarius, his famous General, out of meer Jealoufy, and having ftript him of all, forced him to beg his Subfiftence of charitable Paffengers. Not far from this Tower is a Fountain, to which the Greeks always pay a great Veneration, and, upon the Day of Chrift's Transfiguration, carry their Sick to it , to whom they give fome of the Waters, and cover their Bodies a While with the Sand, and they fay, wonderful Cures have been thus done by it. The Greeks have Abundance of thefe miraculous Fountains, which they fuperftitioufly honour, and the Priefts encourage them in it for their own Gain. Near this Fountain flands the Kioske, or Pleafure-houfe of the Boftangi Baba, or Overfeer of the Gardens. It is a Pavilion cover'd over juft without the Walls of the Seraglio, and overlooks the Propontis and Bofpborus Tbracius; but he, being in the fourth Poft of the Empire, has no Time almolt to take the Air. Beyond this Kioske are a great many Cannon planted, fo as to ftrike any Ships that pafs between Wind and Water, to hinder the Entrance into the Seraglio or Port, if any fhould attempt it by Force. There Pieces are always charged, but never difcharged, unlefs it be upon the firft or fecond Day of the Month Bairam, to give the Muljelmen Notice of that folemn Feaft, or upon the Account of publick Rejoycings, as the Taking of a City, or conquering fome Province.
In the Middle of there Pieces of Cannon is one of the four Pofterns of the Seraglio, called Boftan Capi, or the Gate of the Gardens. It is fortified with two large Turrets, and guarded by two Companies of Boftangi's, or Gardiners, who keep all from entring at this Gate, but the Sultanas and Officers of the Seragtio. After you have paffed the Cannon, and doubled the Cape, where you pafs a Fountain, from which moft of the Ships take in their freft Water, you come to two Kioskes, built by Sultan Soliman to view the going out and coming in of the Men of War, and divert himfelf with his Women, of which he had Plenty. Both of them are well adorn'd and furnifhed with gilded Cupola's, Alcoves, Sopha's, Quilts, Cufhions, Carpets, and all other Things fit for §o great a Prince, but nothing can be imagined more noble than one of them. At thefe Pleafure-houres always attend fome fmall Galleys and Saicks, ready to receive the Grand Signior and his Train whenever he pleafes to divert himfelf. Thefe Galleys and Barks are very neatly gilded and painted all over, the Oars and Grappling Irons not excepted. Thefe are all the re-
markable Things without the Walls, both of
and Seraglio. We muft now go into the City.
ro. It ftands upon feven little Hills, as old Rome did, and the Houfes are fo difpofed, that one takes not away the Sight from the other. The Streets are narrow for the moft part, but there are feveral fataty Buildings in them. There are many magnificent Mofques in it, of which the moft magnificent is that of Santa Sopbia, which was anciently a Chriftian Church, builc by the Emperor Fuffin, enlarged, enriched, and adorned by Fufinian, and dedicated to the Wifdom of God, Hagia Sopbia. The Turks have changed it, into a Mofque, but retain the Name. This Fabrick is 114 Paces in Length, 80 in Breadth, and as many in Height, fquare without, but round within. The Mofque is very fpacious, hath a Dome in the Middle, in the Form of a flatted Globe, which is a fingular Kind of Architecture. It is paved with fine Marble, and matted, that the Cold may not hurt fuch as come to worfhip without Slippers, and fquat down in their Service. There is a Tomb, which, the Turks fay, is Conffantine's, and a Sone on which, they believe, the Virgin wafhed our Lord's Linen, and they bear a great Reverence to it.
The Church was painted in Mofaic with Croffes and Images of Chrift, the Holy Ghoft, the Virgin, and other Saints, which yet appear, though the Turks have endeavour'd to deface them, for they duffer no Images. Within are two Galleries one over another, that go round the Church, and are fupported by fixty-two Pillars, which, 'tis fuppofed, were for the Women when it was a Church. On the Out-fide of the Church are four Steeples, very high and flender, on which are feveral Balconies, from whence the Maezims call to Prayers. Ir's big enough to hold 40,000 People, which Number ufually meet in it at their Bairam or Pafiover. In a little Street on the Back of this Church are two large thick Pillars, where, they fay, Juftice was wont to be adminiftred, and by them an old Tower, where the Grand Signior's Beafts are kept, viz. Lions," Wolves, Foxes, Leopards, a fpotted Lynx, the Skin of a Giraff, and other rare Creatures.
Befides this Mofque, there are feven others, call'd Royal or Imperial, of which the Chief is called Solimania, becaufe it was built by Sultan Soliman, whofe Coffin remains in it, adorned with Carpets, a Turban fet with Heron-Feathers and precious Stones, and Lamps burning. Several Alcorans are chain'd to it, that the People may read them, and pray for the Defunct's Soul, and fome are hired to do it, for the Grand Signiors take care to leave a Fund for concinual Prayers to be faid for them after their Death. Near this there is another, where lies the Body of a Sultana whom Soliman loved extreamly, as alfo of Sultan Selim, his fecond Son. This Mofque hath a moft lovely Cloifter, with Bagnio's and Fountains. The New Mofque, built by Sultan Acbmet, is one of the faireft and moft magnificent in Conftantinople. The Entry into it is through a large Court. It is a great Mofque, hath a ftately Dome, and is full of Lamps, and many Curiofities in GlafsBalls.
The faireft of all, are the Molques of Sultan Mebemmet, Sultan Selim, and that which is call'd Cbabzadeb Mefdgidi, i. e. The King's Son's Mofque, being buile by one of Soliman's Sons, and Bajazet's. All thefe Mofques have Hofpitals and Schools, where a great many poor Scholars are maintained, and educated. Moft of the ancient Statues, Obelisks and Pillars, fet up by Conftantine and his Succeffors, are entirely ruined, yer the large Hippodrome, called by the Turks, Atmeidan, where they exercifed their Horfes in Racing, is ftill to be feen. It is a large Square, 550 Paces long, and 150 broad. In the Midft of it is an Obelisk pretty entire, mark' d with Hierogliphick Letters, and at a little Diftance from it a pretry high Pillar, made of large Stones, laid one upon another without Cement, and towards the End of it is a Pillar made of three brazen Serpents twitted together, and the Heads make the Capital. It was faid to be the Talijman or Spell, raifed by Leo Ifouricus the Emperor againft Serpents, fo that none would come near, till Mabomet II, when he took Conftantinople,
beat off the under Jaw of one of them with his Zagaje, and now they are faid to do no Hurt, becaufe it is flanding. The Occafion of erecting it is as fabulous as the Virtue, and fo the Relation may be fpared.
The Grand Bezifan?, or Excbange, is a noble Building and a glorious Sight. It is a great round Hall, built all of Free-Stone, and furrounded with a thick Wall, by which are Shops full of the richeft Commodities, It hath feveral Gates, which are flut faft a Nights, and becaufe no Body lies in it, it is guarded by feveral Warchmen, till it is opened again. Each Body of Merchants of Tradefnen have an Apartment by themfelves, and no Man may fell the fame Commodities in another Place, All Manner of Goods are here fold, during the Time it is open.
There is alfo another Bezifanz, but neither fo large nor fo well flocked with Goods. There are alfo ieveral Bazaars, or publick Markets, in one of which, called the Auree Bazaar, or Womens Market, is a i iillar of an extraordinary Hecight, called, the Hiflorical Column, becaufe from the Top to the Botton, which is 147 Foot, are reprefented in Baffo Relievo, feveral Expeditions, Battles, and other remarkable Events, during the Enpire of Alrcaiius. 'Tis all of Marble, but much deficiced, and the Houfs fland fo near to it , that one can't have room to examine or find out the Figures of it. There are Stairs in it to afcend up to the Top, but the Turks will fuffer no Man to go up them. In the Quarter of the Yanizaries, near the Baths of Ibrahinn Bafba, in the Court of a private Man's Houfe, ftands the Column of the Eniperor Marcian. Ic is all of fpotted Marble, about fifteen Foot high, and its Capital of the Corintbian Order. On the Top is a fquare hollow Stone, adorned with four Eagles at each Corner. It is reafenable to think his Heart was put in this Stone, and his Body buried under the Column. The other is call'd, Tbe Burrat Pillar, becaure it has been lately burnt by a Fire that happen'd near it, which has fo flateter'd it, that they have been forc'd to keep it tight with Iron-Bars. It is compofed of eight Picece of Porphbyrian Marble, fo neatly join'd, that they feemed but one Stone, till the Fire damag'd it, but now they are all feen.
ri. The Grand Signior's Seraghlio's are alfo remarkable Buildings. They are the Palaces where the Ottoman Princes ordinarily keep their Courts. The Word is taken from Serrai, which fignifies a noble Houfe. There are two Seraglio's belonging to the Grand Signior, viz. The Old, and the New, which being much the more noble Building, though nothing fo magnificent as the Palace of fo great a Prince ought to be, is called the Grand Seraghio. It is of a triangular Form, two Sides whereof are encompanied by the Tbracian Boffborus, and the other divides it from the Town. It flands in the Place of the anciene Byzantiumin. It is three Miles in Comppafs, and is enclofed within a very flrong Wall, upon which are divers Warch-Towers, on which the Aggliain-Oglams watch Night and Day. It hath many Gates both to the Sea and Land-fide, but the chiefeft is towards the City, and that is ufed daily, but the reft are never opened but upon fome fpecial Occafion, thofe to the Sea-ward, when the Sultan or fome chief Officer of the Seragio open them for Pleafure, and thofe to the Land-ward, when the Grand Seignior orders fome Great Man to be put to Death, or upon fome other great Defign.
The chief Gare above-mention'd is guarded Day and Night by the Companies of Capoocbees, or Porters, under the Connmand of the Cappocbbe- Beffac's, or Captains of the Porters. A Company of fanizaries watch without the Palace, who are to give Notice of any Accident. And by the Sea-fide, the Agliam- Oglams watch in Tow. ers upon the Wall, and if any Shipping attempt any Mirchief, they have Ordnance realy charged, and the Gunners lying clofe by them. In this Seraglio are many flately Rooms, fuiting the Seafons of the Year, the greatelt Part whereof are built upon plain Ground, and fome upon the Fills and Sea-fide, which are called $K i$ osks, or Banquetting. Houres. Among thefe is the Chamber where the Grand Signior gives Audience to Ambaf-
fadors, Batha's, Ecc. This Room ftands in a Court adorn'd with many delicate Fountains, and is furnifled with rich Carpets and Crimfon Velver embroidered with Pearls, and the Walls covered with fine white Stones, and by it is a frall Room covered wilh filver Plate, hatch'd with Gold.
To there Lodgings of the Sultan belong fair Gardens, with all Sorts of Flowers and Fruits, pleafant Walks and Marble Fountains. There are alfo Lodgings for the Women like a Nunnery, wherein the Sultana Oween, the other Sullana's, and all the Grand Seignior's Women Slaves dwell, in which are Bed-chambers, DiningRoomis, Bagnios ${ }^{\text {s }}$, and all other Buildings neceffiary for the Service of the Women. There are alfo convenient Rooms for the principal and inferior Officers, all well furnifhed, among which are the Hazineb, or King's private Treafury and Wardrobe, both fliong Buildings with Iron Doors, which are kept continually fhut, and the former is fealed with the King's Seal. In the Seragalio are alfo Rooms for Prayer, Baths, Schools, Butteries, Kitchins, Diftilling-rooms, Places to fwim in, to run Hories, and for Wreftling and Shooting at Buts, and, in a Word, all other Conveniencies for a Prince's Palace.
At the Entrance into the Seraghio is a very large and flately Gate, where there is a Guard al ways flanding of fifty Capigies. This leads into a very fpacious Court of near a Quarter of a Mile fquare, but it is not paved. The Baf/an's, and other great Men may ride into it, and near the Gate is a Piazza for the Shelter of Men and Hores. On the Right fide of it is an Hofpital for all that fall fick in the Seraghio, and an Eunuch called Ha Peler Agafif, looks after them. On the Left Side is is Place where they keep their Timber and Carts, to be ready for the Service of the Palace, and over it an Hall, where are hang'd up Weapons of Antiquity, as Cimitars, Javelins, Bows, Head-pieces, Gantiets, $E^{\circ} c$ c. which are lent to the Soldiers when the Grand Signior, or chief Vizier makes any folemn Entry into Connfantutinople.
After having paffed through this great Court, you come to another Gate, lefs than the former, but neater and more cortly, in which chere is alfo a ftately Porch, and a Guard of Capoocbees. This leads into another Court lefs than the former, but far more beautiful and pleafant, adorned with Fountains and Walks, Rows of Cypreffes and Grafs-Plats rail'd in, where the Gazels, feed. It is near 300 Paces fquare, and the Walks are paved. In this Court all muft walk on Foot, except the Grand Signior. On both Sides of this Gate is an open Gallery, where the Cbiauffes, or Purfuivants, the fanizaries or Foot-Guards, and Spabi's, or Horfe. Guards, fland in their Ranks, very well apparell'd, when any Ambarfadors enter, or on other folemn Occafions. In this Court are feveral Kitchins, with their Offices and Larders, for the Sultana's, and other Officers of the Court. On the Left Side is the Sultan's litete Stable for about thirty five Horfes for his Highneffes Ufe, and over it Rooms for their Furnitures, which are very rich, fet with Jewels, to the Admiration of all Beholders. Next the Stable are Rooms for the Officers of the Divan, or Court of Juftice, and by then the Chamber, where the Divanf fits, and a lietle behind that is the Gate that leads to the Womens Lodgings.
At the End of this Court is the Royal Gate, which leads to the Sultan's Lodgings, and may not be entred by any, but fuch Gentlemen as attend him, and others that ferve him, without Leave from the Sultan himfelf. This Gate is kept by the Capee-Aga, or chief Chamberlain, and a Company of white Eunuchs. The Courr is paved with fine Marble, wrought with Mofaic Work, and adorn'd with curious Fountains, and a Lake where the Grand Signior has a fine gilt Boat for his Recreation. In the Buildings, which are fumptuous, are a Chamber of Audience, a Row of Summer-Rooms flanding on a little Hill, and looking toward the Sea, a large Hall flanding on Pillars, and opening towards the. Eatt, and by it the Grand Signior's BedChamber, the Walls of which are covered with the fineft Cbina Metal, and the Floors with very coflly Perfiena Carpets of Silk and Gold. The Pofts of the Bedfted
are Silver, the Canopy, Bolfters, Mattreffes, and Pallets, are all of Clort of Gold. Behind the Hall is a Place to thoot in, where for that Purpofe are laid up many Bows and Arrows.
12. The Divan fits four Days in a Week, viz. Saturday, Sunday, Monday and Tuefday, upon which Days the Vizier-Azem, or chief Vifier, who is the fupream Judge, and reprefents the Grand Signior, with all the reft of the Viffers, the two Cadilefchers, or Judges of the Armies in Greece and Natolia; the three Tefterdars, oi Treafurers; the Reiskitaub, or Chancellor; the Ne foannge, or Keeper of the Mark, with their Secretaries and Clerks; the Cbioufh-Bafba and his Officers, are to be at the Divan by Break of Day. All Canfes are determined by the Vizier-Azem, if he pleafes, for the Baba's do not fpeak, but only hearken and attend till he refers any Thing to their Judgment, as he often does for Expedition, referving the Caufes of the greateft Confequence and Importance to himfelf, as the Caimekam or his Deputy does alfo in his Ábfence.
The Petitioners fpeak for themfelves, or defire the Help of a Cbiaufh, for they have no Pleaders, or Attorneys. When the chief Vifier hath heard their Suits, he confults with the $B a ß a a^{\prime} s$, and then refolves and determines them as he will himfelf. This he doth ufually after Dinner, and then he repairs on Sundays and Tuef days to the Chamber of Audience, to give an Account to his Sublime Highnefs of what Bufinefs he has dif patched. Sometimes the Grand Signior will come privately to a little Window, which is cover'd with a Lattice, and looks into the Divan, to hear the Caufes; and this forces the chief Vifier to act circumfpectly and juftIy in managing Affairs, while he fits in the Divan, tho' at other Times his Hands are open to Bribery, and he will carry Bufinefs as he pleafes; but all Things are dif patched without Delay.

When an Ambaffador from any great Prince is to kifs the Grand Signior's Hand, the Grand Vifier calls a great Divan of all the Grandees of the Port, and all the Cbiaubes, Mutafurraka's, Spabi's, and Fanizaries are or der'd by the Captains to drefs themfelves in the beft Manner they are able, and ftand in their Places in the fecond Court. "When the Divan is fet in their Or der, the chief Vifier fends a Cbiauk-Bafba with many of his Cbiaußbes on Horfeback, to conduct the Am baffador to the Divan, where he is placed clofe to the Vifier, who having complimented him a while, entertains him at Dinner, and then conveys him to a Room by the Imperial Gate with his Attendants, till the Sultan is ready to receive him. In the mean Time the Ambaffador's Prefent is carried about the fecond Court, in the Sight of all People, and then is brought to the Sul tan, and the Grand Vifier fends the Ambaffador feveral Vefts, appointed by the ancient Rule, for himfelf and Gentlemen, to put on for that Ceremony.

The Vefts for the Ambaffador are of Cloth of Gold of Burfa, but for the reft, they are of little or no Value ; yet the Ambaffador muft make a-Prefent to the Grand Signior of more than the Worth of them. Then the Ambaffador is conducted by the Mafter of the Ceremonies to kifs the Sultan's Hand, (which is, indeed, but his Hanging-fleeve ;) which done, the Druggoman, or Interpreter, declares the Ambaffador's Commiffion; to which the Grand Signior makes no Anfwer, (for he difdains to fpeak to a Chriftian) but fpeaking to the chief Vifier, refers all Proceedings to his Difcretion, and fo the Ambaffador departs, bowing his Head to the Sultan, but pulls not off his Hat at all. Other Ambaffadors of Petty Princes, or State though they have Vefts given them alfo by the Grand Signior, yet come not to the Divan, but go privately with their Prefents. All Ambaffadors are maintain'd by the Grand Signior, except thofe from the States of Venice, during their Abode at the Port, but it is hard to get his Allowance through the Bafenefs of the Officers.
r3. All Perfons, that live in the Seraglio, are the Grand Signior's Slaves, as are alfo all that are fubject to his Empire; for they all acknowledge, that whatever they Vor. II. Ne. CXXIV
enjoy proceeds from his Good-will, and that their Eftates and Lives are abfolutely at his Difpofal.

There are in the Sultan's Court about twelve hundred Women old and young. The Sultan's Concubines, who are kept for their Beauties, are all young Virgins, ftollen from foreign Nations, inftructed in good Behaviour, Dancing, Mufick, Singing, and curious Sowing; and are given to the Grand Signior as Prefents by the Tartars, Bafhaws, and other great Men, and fo their Number is uncertain. Thefe Virgins, immediately upon their coming into the Seraglio, are made Turks by ufing this Ceremony: They are to hold up their Finger and fay thefe Words, There is no God but God alone; and Mahomet is the Meffenger of God; and then being examined by an old Woman, called Kabiyab Cadun, i. e. the Mother of the Maids, they are placed in a Room with their Equals in Age and Difpofition. All the Wo~ men live like Nuns, but have large Apartments to dwell' in. Their Beds are coarfe and hard, made of Flocks, and by evcry tenth Virgin lies an old Woman, and there are Lamps always burning by them. Near their Apartments they have Baths and Fountains for their Ufe, and, above their Bed-chambers, Places to fit and few in. They dine in Companies, and are waited upon by other Women, wanting Nothing that is neceffary for them. There are alfo Schools for fuch as will learn to read or fpeak the Turkifb Tongue, work or play, and fome Hours are allowed them for Walking and Recreations.

The Sultan never fees thefe Virgins, unlefs when they are firft prefented to him, or when he defires to have one of them for his Bedfellow, and divert himfelf with Mufick, or fome other Paftime. When the Grand Signior defires a frefh Mate, he gives Notice to the Kabiyab Cadzn, who picks out the faireft and moft plealing, and having placed them in two Rows in a Room, brings in the Sultan, who walking four or five Times in the Midft of them, views them, and as he goes out, throws his Handkerchief into the Virgin's Hand which he chufes to lie with. This Choice is accounted a great Favour, and the Cadun ufes all the Art fhe can to prepare her for it, by attiring, painting and perfuming her, and at Night the is brought to fleep with the Grand Signior in certain Chambers fet a-part for that Bulinefs in the Womens Lodgings. By the Bed they have great wax Tapers burning all Night, and Moorifh Women fitting by them. In the Morning when the Sultan rifes, he changes all his Apparel, and leaves them to her he lay with, and the Money in the Pockets, and then departs to his own Lodgings, from whence he fends her immediately a Prefent of Jewels, Money and Vefts of greater or lefs Value, according to the Satisfaction he received from her.

If any conceive by him, and bring him forth his firft begotten Child, fhe is called Sultana Queen, and if it be a Son, the is confirmed and eftablifhed by great Feafts and Solemnities, and thenceforward has an Apartment, Servants, and a large Revenue appointed her, and all Perfons in the Seraglio muft pay her the Refpect of a Queen. The other Women that bear him Children are called Sultana's, but not Queens, yet live in feparate Apartments, are well ferved and attended, and have no Want either of Money or Apparel, according to their Degree. But if it happens that the firit-begotten Son of the Queen, Heir to the Empire, dies, and another of the Sultana's have a Son to fucceed the deceafed Heir, the former is deprived of her Revenue and Royalty, but remains a Sultana, and the latter becomes Queen; and fo the Title runs from one Sultana to another by Virtue of the Son's Right to the Succeflion.

In Times paft the Grand Signior was married to the Queen, but now the paffes without celebrating any Nuptial Rites; yet the Mother of the Heir enjoys all the Prerogatives of a Queen, and has a Guard of thirty or forty black Eunuchs, under the Command of the KizlarAga, their Mafter, to be employed on her Occafions. Thefe Sultana's never go out of the Seraglio but in the Sulran's Company, and are never feen by any but fuch as attend them, who are thofe black Eunuchs, and have all
cut off clear to the Belly, that there may be no Danger from them.
The Grand Signior's Daughters, Sifters and Aunts, have their Lodgings alfo in the fame Seraglio, and being royally ferv'd, and fumptuoufly apparell'd, live by themfelves in continual Pleafures, until fuch Time as, at their Requeft, the Sultan fhall be pleafed to give them in Marriage, and then they come forth, and carry each of them a Cheft along with them, which the Grand Signior gives them full of rich Apparel, Jewels, and Money, to the Value of about thirty thouland Pounds Sterling, befides what they hoarded for themfelves before, which arrounts fometimes to a great deal; and if the Grand Signior be difpored to deal generounly with them, they are fuffered to carry with them twenty Women Slaves, and as many Eunuchs, and he continues their Allowance of a thoufand or fifteen hundred Afpers a Day, which they had in the Seraglio, and furnifhes their Houfes; and if the Hufband of fuch a Lady has not an Houfe fit for her, the Sultan gives her one of his own.
As for the Hufband, he is to make her a Bill of Dowry of at leaft 100,000 Checquins in Money, befides, Vefts, Jewels, and other Ornaments, which amount to a great Sum. Being married, they converfe with Men no more than they did before, except their Hurbands, but only with Women, vifiting their old Acquaintance in the Seraglio, but not without the Grand Signior's Leave. The Sultana's thus married, are for the moft part their Hurbands Miftreffes, infulting over them, and commanding them as they pleafe, wearing an Hanjar, or Dagger, in Token of their Power over them, and fometime they will put them away and take others, and fuch a Divorce commonly proves the Death of the Hußband, whom the Grand Seignior leaves to their Will.

The other Women either grow old in the Seraglio, and fo are made Miffreffes of the young ones, or are fent into the old Seraglio, which they account their beft Fortune, becaufe from thence they may be married, with the Confent of the Miftrefs, and carry away the Riches they have got, which is very confiderable, partly by faving out of the Sultan's Allowance, and by the Prefents made them upon their Bairan, and by the BaSaa's Wives. Hither alfo, after the Sultan's Death, are all the Sultana's fent, except the Sultana Queen, and if they are wealthy, they marry to Men of reafonable Quality, yet with the good Will of the Miftrefs, and Confent of the Grand Signior. The Women of the Seraglio are punifhed for their Faults very feverely, and are foundly beat by their Overfeers, and if they prove difobedient and incorrigible, they are by the Sultan's Order fent into the old Seraglio, and the beft Part of what they have, taken from them; but if they are found guilty of Witchcraft, Whoredom, or any fuch notorious Crime, they are bound Hand and Foot, and being put into a Sack, are in the Night caft into the Sea.
14. The Seraglio may be properly termed the Seminary or Nurfery of the beft Subjects, for in it all have their Education, who afterwards become the principal Officers or fubordinate Rulers of the State and Affairs of the Empire, and thefe are they which are called the Agliam-Oglans, i.e. unexpert and untutor'd Youths. There are ordinarily about 6 or 700 of them, from twelve to twenty five or thirty Years of Age at moft, being all Chriftian Children, gather'd up every three Years in the Morea and throughout all the Parts of Albania. They are taken from fuch Families as are fuppofed to be of the beft Spirit and moft warlike Difpofition, and as foon as they are brought into the Seraglio, they are circumcifed and made Turks. They are at firft put to very bafe and navifh Employments, fuch as to ferve in the Stables, Kitchens and Gardens, Digging and Cleaving Wood, and are made to row in Saicks or Barges, and to lead the Greyhounds to Courfing, or whatever elle they are commanded to do by the OdaBafba's, or Captains. They are allow'd from two to five Afpers a Day, but afterwards fuch as have a Defire to learn, are taught to read and write, and generally all of them are taught to wreftle, leap, run, throw the

Iron-Bar, hhoot the Bow, difcharge a Piece, and all other Exerciles becoming a Turkibs Soldier.

The Grand Seignior makes ufe of them, when he intends a Journey to any Place for pitching his Tents, removing or carrying his Chefts, and fuch like Services, for which Employment he never takes with him lefs than three or four hundred of them. The BofangeeBafba always takes with him a good Number of them, when by the Sultan's Order he puts fome great Man to Death, which is commonly done by the Hands of thefe Agliam-Oglans. They are capable of being made Stewards to the Boftangee-Ba/ba, and may rife to that great Office, which is an eminent Place, for he hath the Keeping of all the Grand Signior's Gardens, and Houfes, fteers the Sultan's Saick, and wears a Turbant in the Seraglio, and if he be in Favour, he is preferred to higher Dignities, viz, to be Captain-Ba/ba, Ba/ba of Cairo, Damadcus, Aleppo, \&rc. and fometimes he comes to be Vizier-Azem, or Prime-Minitter.
There are other Youths educated in the Seraglio, called Itcboglans, but in a far better Manner than the former. They are brought up in Learning, in the Knowledge of the Law and Military Exercifes for the Sultan's and their Country's Service, and to underttand thofe Things which belong to the Government of the whole Empire. By the ancient Inftitution they fhould be always made of Chriftian Renegado's and Captives of the nobleft that can be found; but the Capee-Aga; or chief Chamberlain, brings in fome natural born Turks of the beft Afpects, and who promife well, but with the Sultan's Confent. The Number of them is uncertain, but it is faid, they are commonly about one hundred. As foon as they come into the Seraglio, they are exceedingly well inftructed, and daily taught, as well polite Behaviour, as the Rites and Ceremonies of the Mabometan Law, and whatfoever may tend to the Improvement of their Minds, and for this Purpofe there are four Oda's, or Schools, being fo many Degrees, every one higher than the other.
In the firt, called the Cboukou-Oda, they all come when they are but Children, and there learn Silence, the Poftures of holding down their Heads and Jooking downwards, with their Hands before them join'd acrots, which are expreffive of fingular Reverence, and are ufed by fuch as are before the Sultan. Then they learn to write and read the Turkib Tongue, and are taught their Prayers by Heart in the Arabian Tongue, and that they may learn thefe Things well, are encouraged to Admiration. In this School they flay about five or fix Years, and fuch as are dull ftay much longer.
In the fecond School, called 2uilar Oda, they are taught by more learned and fufficient Tutors the PerFian, Arabian and Tartarian Tongues, and to that End the Profeffors take great Pains in reading divers Authors in thofe Languages. Here they begin to wreftle, fhoot the Bow, throw the Iron Mace, tofs the Pike, run and handle their Weapons, $\mathcal{E}^{\circ}$. and in thefe Exercifes in feveral Orders and Places they fpend certain Hours daily, and are feverely punifhed if they are found negligent in the leaft.
In this Oda they alfo fpend four or five Years, and being become ftrong Men fit for any Thing, they are removed to the third, where forgetting Nothing they have already learn'd, they are taught further to ride, and how to behave themfelves in the Wars. Befides all this, every one of them learns a Trade neceffary for the Service of the Sultan's Perfon, as to Thave, make a Turbant, fold up Apparel handfomely, pare Nails, attend at the Bath, keep Hawks, to be Sewers, Querries of the Stables, Target-Bearers, wait at Table, छ̌c. While they are in thefe three Schools they are but meanly apparell'd, having yearly only two Cloth-Vefts, fomewhat fine, but their Linen is coarfe. In this Oda their Punifhments are fevere, for their Mafters will give them an hundred Blows for great Faults upon the Soles of their Feet or Buttocks, infomuch that they are oftentimes left for dead. In this School none is fuffered to be familiar with any but their Companions, fo that none may fpeak with them, but by Leave from the Capee Aga, and that in the Prefence of an Eunuch. When

## Chap. I.

to the Levant.
they go alfo to the Bath, or about any other Bufinefs, they have Eunuchs attending them, to keep them from any Lewdnefs, and for the fame Reafon they have Eunuchs lying by them always in their Bed-Chambers,

Here alio, before they are raifed to the 4 th Oda, the Eunuchs ufe all Arts to try whether they are firm to Turcijm, and have no Inclination to Chriftianity, and being thus proved, they are preferr'd to what is call'd, Haz-Oda, or, The Prince's Cbamber. Here it is that all Punifhments ceafe, and they may freely converfe wich all the Great Men of the Seraglio, and being cleanly and neat in their Apparel, the Grand Signior takes them along with him when he goes abroad upon Pleafure, if none of his Women be with him. Out of the young Men thus perfected and compleated in their Education, the King chufeth his $A g a$ and and ${ }^{\text {Ba's }}$, viz. the Seliitar Aga, the Sultan's Sword - Bearer ; the Cbioadar-Aga, he that carries his Yagmoorlick; Rachi Aga, Yeoman of the Stirrup; Mataragee-Aga, who brings him Water to wafh his Hands and Face; Talbenter-Aga, he that brings his Turbant; KernbafirAga, he that looks to his Apparel and the wafhing of his Linnen; the Cbef/negir-Bäba, the chief Sewer the Dogangea-Bafoa, the chief Falconer; the ZagargeeBafba, the chief Huntfman; the Turnackgee-Ba/ha, he that pares the Sultan's Nails; the Hamaungee-Bafba, the chief Accomptant; and the Teskeregee-Ba/ba, his High nefs's Secretary.

All thefe are created out of the eldeft of the Itchoglans of the fourth Oda. They are always in the Sultan's Prefence, holding their Heads down, and Hands a-crofs, never fpeaking; but whatever the Sultan commands, they are wonderful ready to obey. They wait at the Sultan's Table, and he is pleafed with their Service and Company. He will ride with them, and play at the jecrit and other Sports when he is fo difpoled. He often gives them Prefents of Vefts, Swords, and Bows, and fometimes ready Money. He entrufts them with the Difpatch of Embaffies, and though they mult not go themfelves, yet finding out what Prefents the Prince, to whom the Embaffy is to be fent, ufes to give to Ambaffadors, they fell it to a Cbiaufh; and this is done to enrich them againft the Time he fhall fend them out of the Seraglio, to be Generals at Sea, or Batha's of fome great City, as Babylon, Aleppo, \&c. or makes them Beglerbergs of Gracia, Natolia, \&c. When any is thus fent out, the next in ftanding fucceeds, unlefs his ill Behaviour has made him incapable; and fo all live in Hopes of Greatnefs and Riches. Before their Departure, they ftay a while till their Beards are grown (for they are always fhaved in the Seraglio) and then they receive handfome Prefents of the Sultana's and Bafha's, and when their Beards are grown, they pay their Vifits to all the great Men of the Court.
15. In the Seraglio there are likewife other Minitters for neceffary Services, as alfo Buffoons, Tumblers, Muficians, Wreflers, and Mutes. Thefe laft are in great Requeft, becaufe the Grand Signior thinks it below his Dignity to fpeak to any about him familiarly, and therefore he makes himfelf merry with thefe Mutes, who though deaf and dumb, will reafon and difcourfe of any thing by Nods and Signs, as other People do by Words; nay, many of them can write very fenfibly and well, which is admirable.

There are alfo White Eunuchs, who attend the Grand Signior at his Gate. The chief of them is, I. the Capee Aga, or Chamberlain, who is in greateft Auchority with the Grand Signior ; for he alone is allowed to fpeak to him, and prefent all Petitions, Meffages, and Writings, and accompanies the Sultan where-ever he goes. His Salary is eight Sultana's a Day, i. e. about three Pounds Sterling, befides Prefents from all that have any Bufiners with the Sultan.
2. The Hazinebdar-Ba/ba, or the Trealurer of the Houfehold, who keeps an Account of all the Treafure brought into this inward Treafury, which is only the Wealth of ancient Sultans, and the Revenue of Egypt, and the adjacent Provinces, and takes it out upon Occafion. He hath the Cuftody of all the Sultan's Jewels,
which he either wears, or are prefented him, and keeps a Regiftry of them, when received and when given away. He fucceeds the Capee-Aga, when he dies.
3. The Keelergee-Ba/ha, i. e. Mafter of the Wardrobe, into which are brought all the Prefents of Cloth of Gold, Plate, Silks, Woollen Cloths, Furs of all Sorts, Swords, Raw Silk, Carpets, and whatever elfe ferves for his Majefty's Ufe, of which he keeps particular Inventories, as we!1 as Servants under him, and his Salary is one thoufand Afpres a Day, viz. 50 s. Sterling. He is commonly in Favour with the Sultan, and ufually fucceed to Hazinebdar-Ba/ba.
4. The Sarai Agajee, i. e. the Keeper of the Seraglio. He fees that all Things be prepared for the Service of the Palace, and that the Rooms be kept as they ought to be, and that all the Officers do their Duty. He is allowed to ride up and down the Seraglio, in the Courts, Gardens, and by the Sea-fide, as the three former are : His Penfion is eight hundred Afpres, or 40 s. a Day. befides Vefts and Furs; he fucceeds the Keelergee-Ba/ba The three laft may not fpeak to the Emperor, unlefs in Anfwer to any Thing he afks them.
The Number of there Eunuchs is about two hundred, and they are all not only gelt, but cut fmoth when they are very young, and that with their own Confent, which is obtain'd by affuring them what Great Men they will be, for otherwife they would be in Danger of Death, as the Workmen in that Bufinefs affirm. They are brought up with the Ichoglans, and are taken from the fourth Oda to ferve the Grand Signior, who employs them in the Government of his other Seraglio's, and his Seminaries of Youth at Confantinople, Adrianople, and other Places, makes them Bohba's of Cairo, Aleppo, and other Cities, and fometimes Vifiers of the Bench. They are allo trufted by the Capee-Aga to keep the King's Curiofities and valuäble Rarities, as great Pieces of Ambergreefe, Musk, Balfom, Cups of Agat, $\mathcal{E}^{3}$ c. for though they are, generally fpeaking, not of much Courage, yet they are accounted of great Judgment and Fidelity.
The Black Eunuchs and Black Moor Wenches ferve the Sultana's and the reft of the Queen's Women. Thefe Eunuchs, while they are Boys, are brought up as the White ones are, and after are fet to ferve and wait at the Sultana's Gate, under the Command of the KilarAga. They are allowed a Penfion of fifty or fixty Afpers a Day, and two Vefts, with Linnen and other Neceffaries, yearly, befides Prefents given them by fuch Women as come to vifit the Grand Signior's Women. They are never fent abroad in any Employment, but ferve for ever in the Seraglio. They are called by the Names of Flowers, as Rofe, Narcifus, \&xc. Their Bufinefs is to carry Meffages and Notes from the Sultana's to the Capee-Aga, to be delivered to the Sultan, and attend upon the Ladies in Sicknefs and Health.
16.The Grand Signior's Sons by the Queen are brought up by themfelves, by choice Nurfes, which are found out of the Seraglio, and if he has Sons by other Sultana's, they are brought up alfo by themfelves, but may play with them till they are fix or feven Years old. They live with the Women nine or ten Years, and about fourteen are circumcifed with great Pomp, as Weddings are kept among Chriftians. The Sons, from five to ten Years of Age, are taught to write and read by an Hojab, or School-mafter, who for that End is admitted into the Womens Apartment for certain Hours, but fees them nor, unlefs two or three old ugly black Moorib Women; but Daughters are little regarded. When the Sbawbzazodeb, or Sultan's Son who is Heir to the Crown, is circumcifed, he is fometimes fent abroad with a fuitable Equipage, and under the Care of his principal and trufty Eunuchs, to be Governor of Magnefia, and the Provinces about it, but as Deputy to his Father. The Eunuch is bound to give continual Advice to the Grand Signior of his Son's Deportment; fo that if he tranfgref's the Limits of his Commiffion in the leaft, he quickly falls into Difgrace, and into a Sufpicion of Rebellion.
The Victuals in the Seraglio is drefs'd by fuch of the

Agliain-Oglans as are brought up to this Service, called. Askees or Cooks. They wear white Caps for Diftinction, and are about two hundred from the higheft to the meaneft Officers of the Kitchen. They begin their Bufinefs early in the Morning, for the Grand Signior: rifing: betimes, they muft have always fomething ready for his Breakfaft. He dines at Ten o'Clock in the Forenoon; and fups at Six in the Evening, both in Summer and Winter. He fits down with his Legs acrofs, according. to the Turkißh Fafhion, and has a rich Napkin laid before him. He carves for himfelf, but ufes neither Knife nor Fork, for his Meat is fo tender and delicately dreffed, that he eafily pulls it in Pieces with his Fingers. He hath two wooden Spoons, the one to eat his Pottage, and the ocher to fup the Syrups with, which he ules to quench his Thirft. He ufes no Salt nor Antipaft. He tafteth of all the. Difhes one by one, and clofes his Meal commonly with a Boclava, or Tart; and when he has dined or fupp'd, watheth his Hands in a golden Bafon, fet with precious Stones.

His ufual Diet is wild Pigeons, Geefe, Lamb, Hens, Chickens, Mutton, and fometimes wild Fowl, and ufually as much boiled as roafted of all of them, with Broths, Preferves, and Syrups in Porcelaine Difhes, and fome Tarts and Pies. When he has done eating, he concludes with a Draught of Sherbet, and feldom drinks more than once at a Meal. He feldom or never fpeaks at Table, but to favour fome Aga, to whom he fpeaks a Word or two, and throws him a Loaf. The Grand' Signior's Difhes are all Gold or yellow Purcelane, fcarce to be had for Money, in which he eats chiefly in their Ramazan or Lent, which lafts a whole Moon, and only by Night, as all the Iurks $^{2}$ do ; but they make no Difference of Meats, excepting Swines Flefh, and Things ftrangled, which are forbidden by their Law at all Times. The Sultan feldom eats Fifh, unlefs when he is by the Sea-fide with his Women, where he fees it taken. The Meat which is left at the Grand Signior's Table is carried to the Aga's that wait; and after Dinner the Sultan diverts himfelf with the Mutes and Buffoons. The Capee-Aga hath a Table by himfelf, dreffed in his own Kitchen, and with him the Hafnebdar-Baba, Sarai Agafee, the Sultan's Phyficians, eat, and what he leaves ferves all the White Eunuchs. The Youths in the Oda's have two Loaves a-piece and boil'd Mutton, with Pottage made of Rice, Butter and Honey allow'd them daily.
The Queen and Sultana's are at the fame Time ferved by the Black Eunuchs, but in Copper Difhes, unlefs the Sultan be with them. They drink their Sherbet with Snow, which cofts dear to bring it from the Hills, and keep it under Ground. They eat no Cheefe but Parmefan, rent by the Bailo, or Refidentiary of Venice. All thefe Things are done in fuch Order, that all is finimed in lefs than two Hours Time. The Grand Signior's, Sultana's, and Batha's Bread is made of Wheat, brought from Burfa, and ground there, and is very white and favoury; the reft of the Bread for the Seraglio is made of Corn brought out of Velo in Greece. There are vaft Quantities of Bread fpent in the Seraglio, becaufe every one has a large Allowance made by the chief Vifier. The Rice, Lentils, and other Pulfe, is brought twice a Year out of Egypt in Galleons. There is a vaft Quantity of Sugar fpent in Sherbets and Boclava's, but they eat little Spice, except Pepper. This is brought out of Egypt, with a great Quantity of Conferves, Dates, Prunes, pickled Meats, and dried Plumbs, though four hundred Halvagi's are continually at Work to preferve others.
The Honey ufed at the Sultans Table comes from Cio, but the reft comes from Walacbia, Tranfluania, and Moldaria, in great Earthen Jars. The Oil is brought from Modon and Coron in Greece, and is much ufed in Meats and Lamps; but the Sultan eats only what comes from Candia and Zant, which is the deareft and beft. Their Butter comes by Shipping out of the Black Sea From Bogdianio and Caffa, in Ox and Buffalo's Hides. They eat very little or no frelh Butter, nor eat much Milk, unlefs it be Yoghourd, i. e. fower or clotted Cream.
In the Seraglio are fpent in dried Beef of Cows of Bof.
urnia, killed when they are great with Calf, becaufe they fay their Flefh is then more tender and favoury, four hundred yearly; and the daily Provifion is two hundred Sheep, one hundred Lambs and Kids in their Seafon, ten Calves, fifty Geefe, one hundred Hens, one hundred Chickens, and two hundred Pigeons. In the Seraglio there is little Fifh eaten, though the Sea yields Plenty, and therefore the Chriftians buy it cheap. The Seraglio is plentifully ferved with Fruit from the Sultan's Gardens, and Prefents fent to the Grand Signior from all Parts; fo that they fell a great deal, and the Money is given to the Sultan for his Privy Purfe.

The Furniture of the Sultan's Kitchins are of Brafs, but fo well kept, and fo large, that they are as fine a Sight as can be feen. The Grand Signior's Cloaths differ little in Fafhion from other Mens, only in Length and Richnefs. His Turbant is like the Bajba's, only he wears Plumes and Gold Clafps, which they do not. He Aleeps upon Matraffes of Velvet and Cloth of Gold co ver'd in Summer with Sheets, embroider'd with Silk, and in Winter with Luferns, or Sables. When he lies alone in his own Lodgings, he is watched by the Pages of his Chamber, two at a Time, and two old Women wait on him with burning Torches to light him, if he pleafes to fay over his Beads, which they pray by at the Hours of Prayer: in the Night, viz. at Midnight, and two Hours before Day. The Women's Habit is much like the Men's, for they wear Cbachbirs; or Breeches, and Buskins, and neep in them ; but they have thin ones for the Summer, and thick for the Water.
17. The feveral Stipends of the Officers of the Seraglio are paid by the Tefterdar, out of the outward Treafury, who fends them their Vefts againft the Carnival; and if he fails at the Times appointed, upon any Complaint he will be utterly ruined, or at leaft difplaced. If any of the Itcboglans or Agliam-Oglans die, his Chamber-fellows are his Heirs; and fo it is with the young Women that never lay with the Sultan : But if any of the Eunuchs, who are generally very rich, dies, all comes to the Grand Signior himfelf, except he be out of the Seraglio, for then the Sultan has only two Thirds, and the reft he may difpofe of by Will, if the Sultan will confent to it; but to fecure his Parts, there is an Officer, called the Beytel Marelgee, who, as foon as any one dies, enquires after their Eftates, and certifies the Tefterdar of it, that he may feize it for the Grand Signior; yet the Beytel Mawlgee, for his own private Gain, will very often conceal a great Part of the Eftate of the Deceafed, to divide it privately betweeen the Kindred and himfelf. If any falls fick in the Seraglio, they are immediately carried, in a Cart cover'd with Clorh, and drawn with Hands, from their Chamber to the Lazaretto or Holpital belonging to the Palace, where they are kept fo clofe, that none can fpeak with them without great Difficulty, but the Phyfician and Apochecary; and, when recover'd, they are carried back in the fame Manner to their Chambers. The Grand Signior is at vaft Expences in Gifts to the Sultana Queen, chief Vifiers, Serdars or Generals, and Captains of his Forces by Sea and Land, Tefterdars and others, in Vefts, Bows, Swords, Plumes, E $c$. and he allows the Sultana Queen and Vifier-Azem in the Wars to be very generous, according to their Stations. He Way go out of the Seraglio when he pleafes, either by Water or Land. When he goes abroad by Water, he is carried in his Saick or Barge cover'd with CrimfonVelvet, richly embroider'd, under which he fits, his Aga's ftanding all about him, and is row'd by the $A g$ -liam-Oglans, the Bostangee-Baba fteering, When he goes by Land, he always rides on Horfeback, and commonly goes out of the great Gate of the Palace. When he goes to the Mofque on Fridays, he is accompanied through the City by all the Baßba's and Grandees of the Port, befides a large Retinue of Servants, who march at his Stirrup.

The People in his Way follow him with repeated Acclamations of Happinefs, which he returns by a Nod, and fuch as are, or believe themfelves wronged, prefent to him their Arzes, or Petitions, which his

Highnefs

to the LEVANT.

Highnefs orders to be received, and being read at his Return, he gives Command for Redrefs, to make good the Title he gives himfelf, that he is Awolem Penarwh, i. e. The Refuge of the World. The Grand Signior at Confantinople, by the Sea-fide, has a large Stable of a thoufand Horfes, for the Ufe of his Houfhold, of which the Imrobor-Ba/ba, or Mafter of the Horfe, has Charge, and leffer Stables at his Houfes of Pleafure in the Country, of ten Horfes each. He has allo Studds in Burfa, Aarianople, and many other Places for Stal lions, which furnifh him with very ftately Colts, befides fuch as are daily fent him from Cairo, Damafous, Bagdat, and other Places, by the Bafha's. For his meaner Servants, he has Horfes from Walacbia, and for his Baggage five thoufand Mules to carry Pavillions, Chefts, Water, and other Neceffaries for Travelling; of which alfo the Vifer-Azem makes ufe when he goes in Quality of General in any Expedition.
18. Upon the firft Day of their Bairam, or Carnival, the Sultan fhews himfelf publickly, and lets all the great Men and better Sort of his Servants kifs his Veft, and then he is richly drefs'd with all his beft Jewels, and fits down on a Perfian Carpet, where his Tabt or Throne is fet, the Chief Vifier telling him the Names of the Perfons, that he may take Notice of them, and chielly he refpects the Mufti, Cadelefcbers, and other Doctors of the Law of the higheft Degree. The Ceremony being ended, he goes to the Mofque of Santa Sopbia, the Company attending him, and hears the Mamaz, or Divine Service, and a Sermon; which being concluded, tho' he retires to his own Lodgings, and dines alone, as upon other Days, yet he orders a fumptuous Banquet in the Divan for the Bafha's and Grandees, and a great Dinner in the Court-yard for the reft of the Company, and after Dinner fends them a Bairam-Lick, i. e. a Newyear's Gift, to all according to their Qualities. During year's three Days of the Bairam, he caufes Shews of Fireworks to be made all Night, and a Drum to be beaten all the while, the Sultan, with his Sultana's, as well out as in the Seraglio, diverting themfelves with them, as well as with other Sports and Tricks, which the Sultan tolerates all that Time.

But as the Grand Signior gives, fo alfo he receives Prefents at this Time from the Bafha's and great Perfons, who ftrive to exceed one another in the Value of their Gifts, that they may gain Favour. The Bairams is celebrated alfo in all the Grand Signior's Dominions at the fame Time, as well as at Confantinople, the Streets being fet out with pretty Devices and Salunjacks, or Swings very artificially made to folace both Old and Young: But in this Fit of Turki/b Mirth, it is dangerous for Feres or Cbrifitians to ftir out, for the Turks, putting off their wonted Sobriety, are very infolent, and will do them a Mifchief, if they do not give them what Money they demand.
19. Befides the Seraglio we have been defrribing, there is another in Conflantinople, as has been obferved, filed the Old Seraglio, fo called, becaufe it was the firft built by Mabomet the Second, whin he took Conftantinople to be his own Palace. It is a large Place, about three Quarters of a Mile in Compafs, and feated in the nobleft Part of the City. It is environ'd with an high Wall, and the Buildings are very fair. It hath but one Gate belonging to it, and that is of Iron, which is kept by a Guard of White Eunuchs. The Inhabitants of it are all Women and Eunuchs. The Women are only fuch as have been put out of the Sultan's Seraglio, viz. the Sultana's of the deceafed Grand Signiors, fuch as are fallen into Difgrace with the Sultan for their ill Conditions or rude Behaviour, or fuch as are infirm and defective in fomething that fhould fit them for the Sultan's Bed. They are governed by an old Woman, called Kabiya-Cadum, i. e. the Woman-Overfeer, who is to take Care that they have all Things neceffary for them, according to the Cuftom of the Houfe. The Sultana's have Lodgings apart, and are reafonably well ferved, though far hort of what they had in the Sultan's Seraghio. If they are rich when fent thither, they take Care to make it known, and that procures them a good Husband and Jointure. The Sultan will fometimes go thither to vifit

Voi. II. $\mathrm{N}^{\circ} 124$.
his Grandmother, Sifter, or other Relations, or when he is melancholy.
There are other Seraglio's in Constantinople, which belong to private Perfons, but built with an ugly Appearance for Fear of giving Jealoufy to the Grand Siga nior, though within the Walls, which are high, there are very beautiful Apartments, adorned with Gold and Azure, and the Floors cover'd with fine Carpets, the Walls faced with fine Tiles like Cbina. In the Halls and Chambers they have a Rifing about a Foot higher than the Floor, which they call a Divan, covered with richer Carpets than the reft of the Room, and embroidered Cuftions fet againft the Wall. Here they reft, receive Vifirs, and fpend moft of the Day. There are alfo many great Buildings in the City like Monafteries, which they call Hans, with Galleries and Chambers, where Merchants have Lodgings and Warehoufes at eafy Rates, viz. one or two Afpers a Day. They bring in a great Revenue to the Owners. They are built of Free-Stone round a Court, which has generally a Fountain in it. The Walls are ftrong and well barr'd to fecure the Goeds. The faireft of them in Constantinople is the Valide, built by the Grand Signior's Mother. The Houles of Conflantinople are all of Wood, very indifferently built, and very fubjeef to Fires from their taking much Tobacco. The Streets are crooked and narrow, ftanding alfo up and down Hill. The Caravanfera's are built as the Hanis, but are ufed only to lodge poor Travellers and the Servants of the Caravan, who have Rooms there for little or nothing.
20. Galata is the Suburb of Conftantinople, feparated by the Port only, in which there are Saiks, or fmall Boats, and Wherries, to carry you at all times for a fmall Matter. You may go by Land, but it is a little about, and you pafs by the Atmeidan, or Field where the Turks exercife their Archery, and go in Proceffion to make Prayers to God for the Succels of their Arms, and whatever elfe they want. Then you go to Cafumpafoc, a great Village, where is the Arfenal for building Galleys, Maones and Ships: It has 120 Docks, and a Magazine of Arms for 60,000 Men, but it is inacceffible to Chriftians. In it are, befides the Capou-dan-Ba/ja's, or Admiral's Lodging, a fpacious Bagnio for the Grand Signior's Slaves, of whom there are many Thoufands, and live very miferably. This Town is divided from Galata only by the Burying-Places.

Gaiata is a pretty large Place, the Houfes are good and well builc. Many Greeks live there, and the Franks, who cohabit with them, have five Monafteries and as many Churches. It has a large Tower in it, and by the Sea-fide the fineft Fiih-Market in the World, where there is great Plenty of all Sorts of Fifh to be had cheap. The Greeks keep here a great many Taverns, which draw the Turks from Confantinople thither, who are very infolent in their Drink, and dangerous then to be met with, fo that this is one of the greateft Inconveniencies in Confantinople.
Beyond Galata lies Pera, a large Borough, which is feparated only by Burying-Places. In this Town refide the Ambalfadors from Chriftian Princes, for the Emperor's, King of Poland's, and the Republick of Ragoufa's only may refide at Confantinople. The Houfes are high and handfome, being inhabited only by Greeks of Quality. Over againft the Seraglio, on the RightSide, ftands the Topbana, i. e. the Place where all the Guns and Artillery are caft, and it gives the Name to all the Quarter. The Houfes of thefe three Places ftand fome higher and fome lower, like an 'Amphitheatre, and form a pleafant Profpect from the Port or Sea.

2I. In Afa, if you crofs the Sea, which is about a Mile over, you come to Scbutari, paffing by Leander's Tower. It is a large Town, and there the Grand Signior has a ftately Seraglio and lovely Gardens. A hitle lower lies Cbalcedon, once a City famous for the fouth General Council, but now a pitiful Village. The Prince's Ife, which is four Hours Sail from Confantinople, and contains two little Towns of Greeks, has excellent Air, and the Channel of the Black Sea, call'd the Tbracian Bofphorus, is very convenient to take the Air upon, being twelve Miles long, affording a delighful Profpeat
of flately Houfes and lovely Gardens. This Channel affords Plenty of Fifh, efpecially Sword-Fifh and Dols phins. Six Miles from Confantinople are two Forts, built to hinder the Inroads of the Coffacks, who would otherwife feek their Booty in that City. At the Mouth of the Bofphorus is a Rock, about fifty Paces from the Land, where ftands a Pillar of white Marble, called Pompey's Pillar, becaufe raifed by him (as it is faid) in Memory of his Victory over Mitbridates. Over-againft this Rock in Europe is a Village by the Sea-fide, call'd Fanore, where is a Tower, with a Light on it always for the Convenience of Veffels to keep them from the Rocks, on which they are in Danger from frequent Tempefts and Currents, caufed by the Danube, Boriftbenes, Tancis, and other Rivers falling into this Sea, to fuffer Shipwrecks, and from thence it is called MauroTbalaffa, i. e. The Black-Sea; and by the Greeks, the Euxine, or Axene Sea, i.e. Inbofpitable. Near the Channel of the Black-Sea there are a great many Siacalles, or wild Dogs, fomething like Foxes, but fuppofed to be engendered between Wolves and Dogs. They howl dreadfully in the Evenings and Nights, efpecially in cold and bad Weather. 'I hey are very mifchievous, and as fierce as Wolves. The Land on Europe fide is a fine Country, full of Gardens and good Pafture, and Villages inhabited by Greeks. A little further are the fine Aqueducts that fupply Conflantinople with Water in great Abundance.
22. As we are now conftrained to think of every Method of faving Room, inftead of giving feveral Travels thro' the fame Country, we mult be obliged to fupply the Defects of fuch as we infert, by Additions from other Authors, at the Clofe of every Section, and this plain Account of the Matter may very well ferve for an Introduction. Our Author has given a very good Defcription of the Dardanelles, which the Turks call Bogar Heffarleri, that is, the Streights of the Hellefpont. It is certain, that they fpeak in very high Terms of thefe new Caftles, which they would have che World believe are the ftrongeft Fortreffes in the World, as well as the great Security of Conftantinople ; but though they are right as to the Importance of thefe Caftles, yet they are much out of the Way as to the Caftles themfelves, which undoubtedly are very pitiful Fortifications.

There is Reafon to believe, notwithftanding this fwelling Language in which they fpeak of them, that the Turks are not in Reality perfuaded of the Truth of what they fay, with Refpect to thefe Caftles, for they are fo jealous of a Chriftian's making any Draught of them, that if a Man looks at them more fteadily than ufual, they prefently confine him; and if he frould be caught with a Pencil in his Hand, he would certainly be put to Death, The Batteries level with the Water, are terrible only to Sight, from the large Size of the Cannon, and the prodigious Stone Bullets which they difcharge. It is indeed true, that after the great Viftory gained near thefe Streights by the Venetians, in 1657 , their Admiral Mocenigo was deftroy'd in attempting to paif, which hindered their victorious Fleet from going up to Conftantinople; and this has raifed their Credit with the Chriftians, yet without any great Reafon. There is a wide Difference between the Paffage of a Galley, and that of a Man of War with a brisk Gale; for as thefe Cannon are fixed, and not upon Carriages, they can make only one Difcharge, for to load them again takes a great Deal of Time, and the People employed in that Service muft be expofed all the while they are performing it.

In order to force this Paffage, two different Methods may be made Ufe of, neither of which can be faid to be expofed to infurmountable Difficulties. In the firft Place, the Caftles may be attacked by Land, and that without any formal Siege, as they are no otherways fortified than by a fimple Rampart and a Paraper, fo that a Battery or two of large Cannon would quickly make a Breach; nor is it at all impoffible, that thefe Caftles might be carried by a Scalade, and then the Paffage would be free from all Interruption. The fame Thing mighr perhaps be effceted by a Bombardment, or rather ghere is no Doubt of it, and therefore there is no Ne-
ceffity to run the Rifk of thofe formidable Batteries. But, Secondly, even this might be very practicable, fuppofing it neceffary, for with a brisk Gale, a whole Fleet might pafs, and if two or three of the firt Veffels were old Ships laden with Wool, it is highly probable the Stone Bullets would not do them much Harm; fo that after all the impregnable Fortreffes of the Dardanelles, as the Turks call them, are in Reality little better than Bugbears, and fo it will certainly appear whenever an Attempt of this kind thall be made.

The Account our Author gives of the Turki/h Name of the Capital of their Empire, is not very fatisfactory, and indeed it is very hard to meet with any that is fo, and therefore we will endeavour to clear up that Matter effectually. All the Turki,h Authors of any Note, but efpecially their Hiftorians, call it, Conftbantbinab or Cons Atantiniab, which is the City of Confantine, and is the Trannlation of Confantinople into their Tongue. As to the Vulgar Name of Stamboul, it arofe thus; The Turks hearing the Greeks often fpeak in their Language of going to the City, for fo emphatically they call Conflantinople, miftook the Greek Words, zis tey widiv, which they pronounced, is Stinpolen, for the Name of the Place, and fo called it corruptly, Stanpoli and Stamboul; but their learned Writers being afham'd of fo grofs a Corruption, and yet finding it impoffible to rid themfelves of a Word fo long in Ufe, have brought in a new Orthography, and write it Ifambol, which fignifies in their Language, the Affembly of the true Belief, or the Capital of Believers; and to the beft of our Knowledge, this is the cleareft and moft correct Account that can be given of the Matter.
Our Author has barely touched, as became a Traveller, on the feveral Changes that has happened to this famous City ; but perhaps the Reader will be pleafed to fee thefe Matters placed in a clearer Light, the rather too, becaufe very few of our Books of Geography, or of general Hiftory, are tolerably correct or exact in this Point. The City of Conftantinople received that Name, according to Eufebius, Anno Domini, 328, from Contantine its Founder, who removed hither the Seat of his Empire from Rome. It was firft befieged under the Reign of the Emperor, or rather Tyrant Pbocas, by Cbozroes, King of Perfa, or rather it was blocked up by him for eight Years together, that is, from An. Dom. 603. to 611 , when it was delivered by Heraclius, who thereby merited and obtained the Empire.

In the Year of the Hegira 52. A. D. 672 . it was befieged by $Y_{e} f d$ the Son of Moavia, the firft Caliph of the Family of the Ommiades. This happened under the Reign of the Emperor Conflantine, furnamed Pogonates, and it was at this Siege that $A b u$ Aivo, the laft of the Companions of the Prophet Mabomet, ended his Days. The Greek Emperor found himfelf fo preffed by this Siege, that he was almoft in Defpair; for at the fame Time that the Saracens Army lay before it on the Land Side, it was blocked up by a prodigious Fleet of theirs at Sea. But the famous Engineer Callinicus invented a Sort of Wild-Fire, called from thence the Greek Fire, which would burn under Water, and therewith deftroyed the whole Fleet.
A.H.99. A. D.717. It was again befieged by Mof. lemab the Brother of Solyman, the feventh Caliph of the Family of the Ommiades, Tbeodofius the IIId. being then Emperor of the Greeks. It was relieved by Leo, the Ifaurian, who caufed the Emperor to be haved and thut up in a Cloifter, feating himfelf upon his Throne. A.H.164. A. D. 780. Haroun Rajcbid, Son of the Caliph Mabadi, came before it with a vaft Army of Saracens, the Greek Empire being at that Time governed by lrene, as Regent to her Son Conftantine the VIth. furnamed Porpbyrogenetes, who found herfelf fo hard preffed, that fhe was glad to deliver herfelf by a fcandalous Treaty, in which the promifed to pay an annual Tribute to the Caliph, of Seventy thoufand Pieces of Gold.

The Greek Empire declining from this Time, and the Power of the Mabometans increafing to fuch a Degree as threatned all Cbrifendom with Slavery, produced thofe famous Expedicions, that make fuch a Figure
in Hiftory, under the Title of the Croifades. And the People of Con/tantinople having firft put out the Eyes of their Emperor Alexis, and then throwing him from a high Place, beat him to Pieces, when he had reigned only ten Weeks; Baldwin Earl of Flanders furprifed the City, $A . D .1204$. and was proclaimed Emperor of the Eaft.
He did not reign quite a Year, and was fucceeded by his Brother Henry Earl of Flanders, who held the Government ten Years. Peter Courteney (of that noble Family which fitl fubfifts in England) having married his Daughter, fucceeded him, and was killed in the fixth Year of his Reign. His Son Pbilip yielded the Empire to his Brother Kobert, who was murdered after a Reign of feven Years. His Son Baldwin II. fucceeded, though a Child, under the Tutelage of Fobn de Brenne, who ftiled himfelf King of ferufalem.
A.H. 630. A. D. 1232 , Batu, Grandfon to Gengishkan, the Founder of the Tartar Empire, after overrunning Mufovy, Poland, Silefia, Bobemia, and Hungary, advanced through Bulgaria to befiege Confantinople. Upon this Occafion, the Eaftern and Weftern Chrittians joined, gave him Battle, routed him, and forced him to abandon his Defign. In 1259, or, as fome fay, in 1262 , Micbael Paleologus recovered ConAantinople from Baldrwin Courienay, and the Greek Emperors held it from that Time, though their Power was very weak.
A.H. 857. A. D. 1453. Mabomet, Emperor of the Turks, laid Siege to this City on the gth of April, and took it by Storm on Tuefday, May the 2gth, in WbitfunWeek. The Turks maffacred forty thoufand Men in cold Blood, pillaged the Churches, Monafteries, and Palaces, the Greek Emperor Conftantine Paleologus being killed, as fome fay, in the Breach; or, as others report, trampled to Death by his own Soldiers in their Flight.
It is a Point out of all Doubt, that the Cbriftians in general are ftiled Franiss at Conftantinople, and throughout all the Eaft but it is not quite fo clear why they are called fo; moft. People imagine it is a Corruption of French, and that the Turks do not diftinguilh between Frencbmen, and other Nations, who, like them, wear Hats, and not Turbants ; but others who have lived long in Turkye, affirm, that it is from the Itatian Word Franco, which fignifies Free. In order to apprehend this clearly, we are to confider, that once a Year the Turks collect a Tribuce from all their Subjects that are not Mabometans; and this Capitation they hold to be very reafonable, becaufe they enjoy the Protection of their Government without fighting for it in War, or undergoing any troublefome Offices in Time of Peace; fo that if it were not for this Tax, they would be in a berter Condition than their Mafters, which in the Turkiß Logic would be very unreafonable.

Another Maxim of theirs is, that the Grand Signior is the great Judge of the whole World, the Redrefler of all Wrongs, and hence his Seraglio or Courc is ftiled the Port, and upon this Principle they confider his Dominions as the Refuge of Mankind in general ; fo that they admit all Strangers to come to them who will, and to fettle amongtt them if they pleafe, granting them immediately the fame Privileges with their native Subjects. But then again it muft be alfo underfood, that all Subjects in Turkey are held to be Slaves, and therefore not at Liberty to quit the Dominions of the Grand Signior. without his Leave; which if they do their Eftates are forfeited. But the Subjects of Foreign Princes that come to refide in the Grand Signior's Country for the Sake of Trade, live there by Virtue of Capitulations granted by the Turki/b Monarch to them at the Requeft of their Sovereigns; and being by this Means free from the Capitation Tax, and all the Confequences of being reputed Turkibs Subjects, are from thence ftiled Franks.
The Reader will pleafe to obferve, that though it be very true, that long before any fuch Capitulations were made, Cbrifians might be called Franks in the Eaf, upon the fore-mentioned Suppofition, yet this will by no Means prove that the latter Etymology is falfe, becaufe nothing is more common than this Kind of double Senfe of the fame Word. As for Intance, A.
mongt us, a Turk fignifies the fame Thing with Mabo meian, and what they call I/aifm, many of our Writers tranflate $\mathcal{T u r c i}$ m, or the Religion of the Turks; and yet we make ufe of the fame Word in a more reftrained, and indeed in a more proper Senfe; for the Nation govern'd by the Grand Signior, who by our old Writers is commonly called from thence the Great Turk.

Thefe are Things that may appear to be but of fmall Moment, but every Thing is of Moment that contributes to render what we read in Books of Hiftory and Voyages perfectly clear and dittinct; and I dare affure the Reader, that if he is very converfant in Books of this Kind, he will find thefe Remarks to be very ufeful: as to the French Writers, they adhere unanimounly to the firft Senfe of the Word, and would perfuade us, that the French King is regarded at Conftantinople as the firft Prince in Cbrifendom; and for a clear Proof of this, they tell you, that he is filed Padiba, or Emperor, which is very true, but at the fame Time proves Nothing. For when the Lord Cbandois, Anceftor to the prefent Duke, was our Ambaffador at Confantinople from King Cbarles II. he might have procured him the Title of Padiba alfo for a Prefent, but he thought that the Turks asked rather too much; and as he knew they fet no great Value upon Titles, he thought it for the Honour of the Englifh Nation to fet lefs, or his Britannick Majefty had been at this Day ftiled Padifa as well as he is King of France, and would have been alike the better for both. But it mult be allowed, that the French have a much clofer Correfpondence with the Turkibb Court than any other of the Cbriftian Powers ; the Reafon of which is, that other Powers lave nothing to do with them but in a Commercial Way; whereas the French treat with them alfo on a political Confideration, and are in that Refpect as good, perhaps I fhould not much err if I had faid better Friends and Allies to thofe Infidels than to any of their Chriftian Neighbours; and if this has procured them greater Marks of Honour and Refpect from the Turks, than are paid to other Nations, however it may flatter their Vanity, it adds but little to their Reputation.
23. The Account given by our Author of the Manner in which Perfons are educated in the Seraglio, plainly proves, that it is a mere vulgar Miftake, which prevails as to the Ignorance of fuch as are advanced to Employments in that Empire. It appears, that far from wanting Education, they are regularly bred up in all that Sort of Knowledge which is requifite for the fufficient Difcharge of thofe Offices to which there is a Probability of their rifing; and, perhaps, there is hardly a Nation in the World where fo much Care is taken. It is true, that thefe young People are brought up in a Manner very different from ours; but then their Government is alfo very different ; and provided they are fo educated, as to ferve effectually that Government to the Service which they are bound; this, with refpect to them, is certainly a right Kind of Education. But I doubt whether our Author's Account of the Turkib Miniftry is quite fo exact, becaufe it is not eafy for a Traveller (let his Genius be what it will) to gain, in a few Weeks or even Months, an exact Knowledge of fuch Matters. Sir Dudley North, who refided many Years in $\mathcal{T} u r k y$, and had many Opportunities of enquiring into and obtaining a perfect Acquaintance with the Manner in which Things are there adminifted, has given us, in very few Words, a clear and more diftinct Account of this Matter, than is to be met with almoft in any other Writer: Which runs thus.
"For the better Underftanding of thefe Affairs, it " is abfolutely neceffary, firft, to fay fomething con" cerning the Nature of the Government, of the Office " of Vizier-Azem or Chief Vifier, and of the feveral "Kainachams, which are his Subftitutes, and act only " in his Abfence. The Turkiß Government is directly "that of an Army, being under the fame Methods in " the City in Time of Peace, as in the Field during "War. The Grand Signior is the General; he hath " indeed a double Capacity, the one as Head of the "Empire, the other as a private Perfon. As Head of "- the Empire, he hath a daily Pay out of the publick

Treafury;
"Treafury; and his common and ordinary Charges, " both at home and abroad, are born by the Tefterdar " or Treafurer for the Empire. As he is a private "Perfon, he receives Prefents, Fines, and Conficca-
"tions, and defrays many extraordinary Expences, as "Buildings for charitable Ufes, Jewels for himfelf and "his Women, \& 6 . Which Treafury is under the Care " of the Hafna Kiiafi or Treafurer of the Grand "Signior. Here is to be noted, that in his private "Capacity he is always vaftly rich, and heaps up "very great Treafures, when many Times the Publick "Treafury is exhautted; fo that in Wars he is often " forced to lend great Sums of Money to the Publick, " which they are fure punctually to pay back again.
"The next in Office under the Grand Signior, in
" the Government, is the Vizier-Azem, or Chief Mini-
"fter, who is of that Credit in the Empire, that the "Grand Signior calls him Tutor ; and, indeed, he acts " all both in Peace and War. The Grand Signior " minding his Pleafures, leaves all to him: And this " happens not more out of Luxury, than from the " Maxims of their Policy: But when the Grand Signior " is an active Prince, and will look into Bufinefs him"felf; or when he is jealous, and his Nature fickle,
"apt to hear and believe Complaints againft his Great
" Minifter, the Vizier fignifies much lefs. When the
" Grand Signior goes to the War, he carries with him
": all the Officers of the Court, even the Mufti, Judges, " and all. The like doth the Grand Vizier when the
" Grand Signior flays behind: But then he leaves a
"Subftitute, which they call Kaimacbam, to act like
" him in his Abfence ; and all the other great Officers " of State make their Subftitutes in the like Manner ; ". fo that the Grand Signior hath as formal a Court as " he had before. So alfo in Cafe he doth not flay in "the Imperial City of Constantinople, but removes to " any other Part of the Empire, where-ever he goes, " he carries with him his whole Court ; but then, not " to leave the great City deftitute, a new Kaimacbam " and other Subftitutes are appointed, whereby, not"withffanding the Abfence both of the Grand Signior " and Vizier, the City hath the fame formal Govern" ment as if they were all there, with this Difference, "that thefe are Underlings, and dare not meddle in " great Matters.
"But in all Bufinefs of Concern, they receive Orders "from their Principals abroad, and att accordingly.
"The Government being thus fupplied, there is no
"Need (unlefs upon extraordinary Occafions) for the
"Ambaflador of any Nation to attend the Perfon of
" the Vizier; but they may difpatch their Bufinefs in
"Confantinople, the Refident of Germany only except-
"ed, who continually attends the Vizier's Camp at
" fome reafonable Dittance."
This gives us a clear Idea of the great Office of Vi -zier-Azem, and the Manner in which he executes in Perfon, and by his Subftitutes. We are generally perfuaded, that as the Grand Signior is an abfolute Monarch, and acountable to none, fo he governs entirely according to his Will and Pleafure, which appears to us to be the fole Caufe of the frequent Changes that are made in the Adminiftration; but in this we are certainly much miftaken. I muft confefs, it is a little befide the immediate Purpofe of thefe Remarks, to infift upon this Point ; but as I have fome Reafon to be acquainted with the Turkijs Polity, and the Difcufing of it cannot fail of pleafing the Reader, I cannot help indulging myfelf in fetting this important Point in a true Light. A very wife and great Prince would be abloute in any Country, let its Conflitution be what it will; and in Defpotick Governments, a Prince of no great Parts, that will fuffer himfelf to be governed by an able Minifter, may ftretch its Authority to its utmoft Bounds. But let the Government be ever fo abfolute, an unfteady Prince would be ever a Slave; and in Turkey this is always the Cafe.
The Grand Signiors coming to their Power without any Acquaintance with the World, and under the Influence of an ambitious Mother or an intriguing Wife, feldom follow their own Choice in appointing a Vizier;
and it is a Maxim in the Eaft as well as the Weft, that the Miniter, who is raifed by a Faction, is ruined by a Faction. Befides, in all Defpotick Governments the Populace or Mob is the dernier Refort ; and it mult be fo in the Nature of Things, for where all Men are Slaves, as they are by Law in the Ottoman Dominions, though the Grand Signior has the Name, yet the Commons, that is, the Soldiery and the loweft of the People, have in Fact the Supreme Power. Thus then it appears, that a Grand Signior of limited Abilities has a very limited Power, being under the Influence of the Factions in the Seraglio on one Side, and under the Terror of the People on the other. The frequent Changes therefore in the Government are fo far from being the Effects of Plenitude of Power, that in Reality they demonftrate the Want of Power in the Sultan. But in Cafes of this Nature, it is beft to recur to Faits.

In the Minority of the Emperor Mabomet IV. when the Seraglio was torn by Factions, Viziers were made and depofed continually, and the greateft Part of Europe looked upon this as the Effect of the Emperor's Will : At laft a great Mutiny happened amongft the Spabis, or Turkjlh Cavalry, who put the then Vizier Azem and all the Bafha's to Death, except one old Man, whofe Poverty made him contemptible. This was the famous Cuperli, or, as the Name ought to be written, Kioprili. Yet in this Maffacre the Spabi's miffed the chief Inftruments of thofe Mifchiefs which the Empire had fuffered. Thefe were the Kiflar Aga and the Selicter, who really governed the young Sultan, and made and depofed Viziers at their Pleafure. Thefe fartious Men finding, as we fay, that they had only Hobfon's Choice, declared Kioprili, Vizier Azem, upon a Promife that he would do nothing but by their Direction ; to which he confented, provided they gave their Directions in Writing. The Change of Men producing no Change of Meafures, the Spobis mutinied again, and Kioprili, inftead of Theltering himfelf behind the Gultan's Throne, went directly to the Mutineers, and told them, that if they were difpleafed with the Government, it was fit they fhould know who were the Governors, producing at the fame Time the Directions he had received. This had its Effect, the Spabis went directly to the Scraglio, and demanded the Heads of the Killer Aga and the Selifzar, which the Sultan was not in a Condition to refufe. Kioprili had then a private Audience of that Monarch, who was exceflively alarmed, and doubted even of his own Safery; but the old Man foon fet his Heart at reft; he told him he was now a Monarch, and himfelf a Minifter, that the Spabis had done his Bufmefs, and he would do theris ; and he was as good as his Word, for in two Years Time there was not a Soul of them left alive.
He governed the Empire with great Dignity for feven Years; and as he lived, fo he died, Prime Minifter. His Mafter made him a Vifit when he was near his End, and deploring the Lofs of fo good a Servant, he defired he would recommend his Succeffor ; upon which he told the Grand Signior frankly, that his Son Acbmet Kioprili, who had been hitherto employed wholly in Civil Affairs, was the fitteft Man to fucceed him. He was accordingly declared Vizier Azem, held that Employment feventeen Years, and was the greateft and beft Minifter the Turks ever had. Under their Adminiffration, which lafted near twenty-five Years, and ended with the Death of Acbmet, the Emperor maintained his Power, and the Empire recovered its Credit. After his Deceale Factions revived, new Fluctuations in Government enfued, and at the laft the unhappy Sultan was depofed, and five Years afterwards died in Obfcurity.

In all Governments, Court-Factions are dangerous, and the true Sources of popular Difcontent and general Infurrections. Great Princes and wife Minifters know how to prevent, or to quell Fastions if they cannot be prevented; and the Felicity of a People does not depend fo much upon the Conftitution under which they live, as the Genius and Capacity of thofe who adminifter Affairs under that Conflitution, be it what it will. It is not therefore the Defpotick Power of the Grand

Signiors

Signiors that is the Source of their Subjects Miferies and their own Misfortunes, but the Want of that Power in proper Hands, the fhifing Minifters continually, running from one Syttem of Affairs to another, not as the Situation of Things directs, but as the Intrigues and Factions in the Seraglio compel; and though the Minifters, and fometimes their Mafters fuffer, the Eunuchs and the Women are generally in Fault.
Timid Princes are commonly governed by thefe Sort of People; they liften to Whifpers in their Clofets, and hold their Councils in their Bed-Chambers. Their Divans, where the Affairs of the Empire ought to be tranfacted, into which only Men of Bufinefs are admitted, become Things of Courfe, and the Grand Signior gives his Orders where he ought to confult what Orders fhould be given. It is departing from the Genius of the Ottoman Empire that has funk it into that low Condition that we fee it at prefent, and what has happened in Turky, will happen every where; for in all Climates, and in all Ages, the fame Caufes will produce the fame Effects. A Government founded as that of the Turks is, in Military Vircues and the Adminiftration of the Government by a fingle Perfon, muft crumble by its own Weight, where thofe Virtues and that Ca-
pacity, which are effentially neceffary to direct it, are wanting.

Governments founded upon better and more rational Principles, fuch as Juftice, Liberty, and perpetual Re. gard to the publick Good, will decay more flowly; but will infallibly decay, when thofe Virtues are loft in factious Contentions for Power, Contempt of the Sos vereign Auchority, and Difregard of publick Happinefs, from the mean and pitiful Ambition of raifing private Fortunes. But we have wandersd too far from the Bufinefs of this Section, and into Reflections that cannot perhaps be purfued to the general Satisfaction of our Readers. Therefore we will here put an End to our Remarks, and return to the Obfervations of Mr. Thevenot, which will make the Reader Amends for this fhort political Digreffion, by leading him again into the flowry Paths of Amufement. Yet, why do we travel through every Part of the World but to know it? Or, what have we to do with the Cuftoms, Manners and Policy of the Turks, if not to improve ourfelves, by confidering the Miftakes, and the Confequences of thofe Miftakes in other Nations? This is, or at leaft this ought to be, the End of Reading and of Writing.

Containing an Account of the Cuftoms and Manners of the Turks, their Learning and Religion, the Form of their Government, their Forces by Sea and Land; as alfo an Account of the Chriftians and $\mathcal{F}$ eros, inhabiting Countries, that are fubject to the Grand Signior.

Taken chiefly from the Travels of Mr. John Thevenot ; interfperfed with many curious, ufeful and entertaining Particulars, extracted from the Works of other eminent Authors.

1. Of the Perfons of the Turks, the Manner of their Drefing amongft various Ranks of People, efpecially amongft the Janizaries. 2. The Manner of their eating and drinking, preparing their Vicruals, and by rebat Explications they So far fatisfy themfelves, as to drink Wine upon Occafion. 3. Of the Language and Learning of the Turks, and of their Fondnefs for Agtrology. 4. The Religion of this Nation, the Author's Account of Mohammed from the Greek Writers, and other Particulars. 5. Their Praying for the Dead, and the Reafon of it; their Notions of a future State, and of the Happine $F_{s}$ of the Bleffed, and Mifery of damned Spirits, with their Doctrine of univerfal Redemption. 6. Of the Ceremony of Circumcijon, the Time whben, and Manner in which it is perform'd. 7. Of the Manner of keeping their Ramadan or Lent, and of their Feaft of Bairam or Eafter; their Extravagance and Folly at that Seafon, and the great Rifque Chriftians run by appearing in Publick at that Time. 8. Their Ablutions or ceremonious Wafbings, and publick and private Prayers, and the Manner of Preacbing in their Mofques. 9. Of the cbaritable Dijpofition of the Turks, and of their Readinefs to forgive each other, and to avoid long Enmity and bafy Quarrels. 10. Their Pilgrimages to Mecca, and other Precepts of their Religion. II. Of the Turkinh Clergy; their Offices, Credit, and Power, and of their Dervifes or Monks. 12. Of the feveral Kinds of Marriages practifed amongt them, and of their Diiorces. 13. Slavery amongft the Turks not near fo grievous as it is generally reprefented, fo that fome Slaves bave refufed Freedom. 14. The Manner in which the Turkinh Women pafs their Time, and the Cafes in which they are entitled to be divorced from their Husbands. 15 . Their Cufoms in burying the Dead, their Mourning and Praying for them. 16 . The Virtues and Vices of the Turks, their good and.bad Qualities very impartially fated. 17. The unlimited Power of the Grand Signior, upon robat Principle founded, and bow exerted. 18. Of the Office of Vizier Azem, the Viziers of the Bench, and otber Officers and Governors. 19. The Manner in rwbich 'Jufice is adminifter'd in the Divan, and within the Provinces. 20. The great Care taken to preferve Peace and Plenty in the Capital, and otber great Cities on the Empire. 21. Of the Money current in Turkey, and of the Weights ufed in Tradetbere. 22. Of the Punifbments in UJe in Turkey, both for Men and Women. 23. Of the Military Efablijb. ment and different Sorts of Troops employ'd in the Grand Signior's Army. 24. Of the Manner in robich bis Forces are raifed, and the Funds appointed for their Maintenance. 25. Of their Naval Afoirs, and the Reafon of their being in fo indifferent a Condition. 26. Of the Greek Chriftians that live int the Dominions, and are the Subjects of the Grand Signior. 27. Of the Armenians, and the Difference of their Faith from that of the Greek Cburch. 28. Of the feveral Orders of Greek Monks, and their Manner of living. 29. Of the reft of the Greek Clergy, and their Influence over the People of their Communion. 30. Of the Virtues, Vices, Cufoms, Manners, and general Difpofition of the Greek ChriVol. II. $\mathrm{N}^{\circ}$ I24.

9 T
ftians.
fitians. 3 r. Of the Jews that live in the Grand Signior's Dominions, their Manner of living, and the Caufe of their being generally bated and defpifed. 32. Mifcellaneous Obfervations collected from various Autbors, ferving to explain the foregoing Articles. 33. Remarks biforical, political and critical upon this Section.

THE Turks are commonly well fhap ${ }^{4}$ d, and have none crooked or cripple among them, but are of robuft and ftrong Confitutions for the moft Part: Their Habir is very fit to make them feem graceful, and to cover all Defects; for next their Skin they wear a Pair of Drawers, and over them a Shirt and Doliman, reaching down to their Heels, like a clofe bodied Caffock, made of Sattin, Taffata, or other neat Stuff, which is quilted in Winter, and this they gird about with a Sath, or Leathern-Belt, adorned with Gold or Silver-Buckles. At their Girdles they commonly wear two Daggers, or Cangiars, their Handles and Sheaths being garnifhed with Gold and Silver, and fometimes precious Stones, and their Pouch for Tobacco. Over the Doliman they wear a Feredg or Night-Gown, which in Winter-time they line with rich Furs, if they are able. Their Stockings are of Cloth, and the Feet are Socks of red and yellow Leather few'd to them. Their Shoes, which they call Padouches, are of the fame Colour, like our Slippers. Their Heads are covered with a Crimfon Velver Cap, without Brims, about which they wreath a white or red Turbant, which is a Sarf of Linen or Silk-Stuff, many Ells long, and by the Fafhion of it the Quality of the Man is known.
The Attire of the Ladies of Confantinople hath a particular Air of Grandeur and Magnificence in it, and far furpaffes the Drefs of the other Women of that Country. Their Tarpous, or Head-Drels, is made up of many Handkerchiefs of various Colours, all wrought with Gold and Silver, befet with all Manner of precious Stones, and adorn'd with feveral Sorts of Flowers. They can put it on or off without undoing it, and ufually wear it feveral Days, and then put it into another Fafhion, but it is often fo heavy, that it is a Burthen to them. They wear outward a white Gown, edged at the Bottom with Gold-Laces and Fringes, and lined with Furs in Winter, as the Mens. The Ladies of the Seraglio wear fometimes on their Heads a Calpak, or Fur-Cap, others a round Platine, as the Ferei/h Women, with a Feather on each Side, and Plumes at their Ears. The fanizaries wear upon fome fpecial Occafions a Sercola, or Cap of Ceremony, which hangs down behind, and has a Pipe of gilt Leather before, half a Foot long, and reaches to the Middle of their Foreheads, otherwife they wear a Turbant of white, red, or other Silk, as the common Sort of Turks do.

They fhave their Heads, and fay the Devil neftles in Iong Hair, but they fuffer their Beards and Muftachoss to grow, and have a great Efteem for a Man with a lovely Beard, and account it a great Affront to take a Man by the Beard. They fwear by the Beard or Head of their Father, Grand Signior, or the like. They falute one another by laying their Hands upon their Breafts, and bowing a little, Jay, Sela meon Aleicom, i. e. Peace be with you, and the Perfon faluted returns the like Anfwer, which was the ancient Way of Salutation, as appears from Scripture, and is very grave. The Left Hand is the moft honourable with the Turks, becaufe it is the Sword-fide, fo that the Cbristians and Turks, though neither will give the upper Hand one to another, agree well in Walking together, through Difference of Opinion.

The Turks make great Ufe of Bathing, both for keeping their Bodies neat and clean, and for their Health's Sake; and in every Town they have many fair Bagnio's, the fmalleft Village being feldom without one. They are all made of the fame Fafhion, differing only in Bignefs and Ornaments. All that go into them Shave off all the Hair of their Body, and go in naked, all but their Privities, which are cover'd with a Napkin. A Servant alfo rubs them well behind and before, to Kupple their Bones before they go in. Such as cannot have themfelves, fetch off the Hair with the Powder of
a certain Mineral called Rufma, which being mingled with Lime and hot Water, and laid upon any Place, will fetch off the Hair in half a Quarter of an Hours Time. In Malta they ufe Orpiment for the fame End. Having bathed, a Servant with Soap and Cloths cleanfes the Body from all Filth, and then they are dried with warm Cloths, and fo drefs. The Price of the Bagnio is two Afpers for the Mafter, and as many to the Man, if he will be well ferved. The pooreft Perfon that is, Man or Woman, goes to the Bath at leaft once a Week. The Women go in by themfelves, and are ferved by Women only. It is a capital Crime for a Man to go into the Bath where the Women are. Great Perfons have them in their Houfes for themfelves and Wives.
2. The Turks have no fumptuous Feafts, but are contented with a fmall Matter. They cook their Meat themfelves, for they have no Sauces but what are made at firt Sighr, as Oil, Pepper, $\varepsilon^{\circ} c$. Their ufual Food is Pilau, which is Rice boil'd with a Pullet, a Piece of Mutton, Beef, or the like, and for want of Meat, with Butter. Their Bread is light, but coarfe, like our Bifcuit, and flat. They fpread a Carpet of Turky Leather on the Ground, called a Sofra, and fquatting down upon the Ground like Taylors, eat it with Wooden Spoons, and inftead of Napkins they ufe a long blue Cloth caft round about the Table, They fay, Bifmillah, i. e. In the Name of God, before they ear, as we do $B e-$ nedicite. They pull their Meat in Pieces, (for they ufe no Knives) and then every one takes his Share. They feldom drink at their Meals, but, having eaten, rife and fill their B=llies with Water, and then fay, Handillab, i. e. God be proifed. Having finifh'd their Meals, they wafh their Hands.

They drink Water ufually, becaufe Wine feems to be forbidden by the Alcoran; but the Goodfellows fay, it is a Council, not a Precept, and fo drink it plentifully; but few do it in publick, except the fanizaries or fome Defperadoes. They never mingle Water with their Wine, and laugh at the Chriftians for fo doing. It is plentiful at Conftantinople, and all over the Arcbipelago. The poorer Sort for Cheapneis drink a Liquor made of Barley and Millet, fomewhat like our Beer, but not fo pleafant. This Drink will make them drunk. They alfo drink Coffee all Hours of the Day. They make it of the Berry parch'd and peal'd. This Liquor they hold to be good to cure the Head-ach, and keep down Vapours from the Head; it comforts the Stomach, and helps Digeftion; nay, they fay it is good againft all Maladies. To mix any Thing with it makes it lefs wholfome and ufeful. All Sexes and Ranks, Rich and Poor, drink at leaft two or three Dime's a Day in Turkey. At the Coffee-houfes the Mafter hath Mufick to divert his Cuftomers, and draw others in. They have alfo Sherbet, which is a very good Drink, made in Egypt, of Sugar, Lemmon-Juice, Musk, Ambergreafe and Rofe-water. At their great Treats they give Coffee, Sherbet, and Perfume ior their Beards. They fpread Quilts on the Ground for their Bedding, and every one lies on his own, and the Mafters lay them on their Divans.

Their Recreations are either to fleep, fmoak a Pipe of Tobacco, or play on the Tambour, which is a Kind of Lute; and though it be no pleafant Mufick, they will play all Day on it; but Scholars read or write. They laugh at the Fronks for walking backward and forward. They entertain their Company with Difcourfe, or a Game at Cheis, Draughts, Tables, or fuchJike Plays; but they never play for Money, or any Thing of Value, becaufe they account it finful, and yet will Ipend whole Afternoons at their Games; but their moft ufual Game is Mancalo, at which they play with Shells in Boxes like our Tables. The Recreations of Soldiers are their Military Exercifes, viz. Mooting at Marks or Butts with Bows and Arrows, darting the

Chap. I.

Zagaye, fhooting with an Harquebufe running. The other Turks make a great Diverfion of Puppet-Shews, which, though performed a different Way from ours, yet are more pleafing; their Songs are pretty, but very obfcene ; and fo are many of their Poftures.
3. The Turki/s Language is a Primitive and Oriental Tongue, and though not very copious, yet is grave and pleafant, and. with a little Supply from the Arabian and Perfian, is rich and elegant enough. The Turks are not-much addicted to Sciences, yet have Doctors of their Law, who explain it in all the Senfes that can be given it. Some affect Aftrology and Poetry, in which they have pretty Conceits, but they generally ufe the Perfian Language, and the Tone they fing in is agreeable enough through Cuftom. Their Mufick is a little Lute with three Strings, and the Flute. Many among them pretend to Fortune-telling, and have good Luck at it. They divine by the Alcoran, and four Arrows, which they call confulting the Book, and naming two of the Arrows Cbrifians, and the other two, Turks, make them fight by reading the Alcoran; if the Cbriftians overcome, they look upon the Action, whether in War or Peace, which they are to undertake, to be unlucky, and fo will not enterprize any thing. They never go out to War, but they make this Experiment. They alfo divine with Beans, by taking out an uncerain Number, and then counting them, confult the Book to fee what the Number fignifies; and by a Piece of Timber almoft fquare, which they call Eliph, which having Letters written on each Side, he that feeks his Fortune, takes it, and rolling it three Times, puts the Letters together, and then confults the Fal, or Fortune-Book, what the three Letters fignify.
They have few or no Phyficians, being very healthy, becaufe of their frequent Bathings and Temperance. When they are fick, they make Ufe of their common Receipts, and, if they fail, confult the feros, or fome Renagado Chriftians, who learn their Skill at the Coft of many. When they bave the Head-ach, they fcarify, lance, or fear the Place, and that cures them. In other Diftempers they alfo ufe Burning, and endure a live Match applied to the Place with Patience. Doubtlefs, Phyficians might do them more Service, and help them at an eafier Rate; but they are fuch bad Paymafters of Men for their Skill, and befides, if a Phyfician fhould be unfuccefsful, and a Patient die under his Hands, they will accufe him of killing him, which is a Difcouragement to the Art among them.
4. The Religion of the Turks is full of Fopperies and Abfurdities, of which it would be no hard Matter to convince them ; but that Mabomet, to prevent any better Information, hath commanded, that whofoever contradicteth it fhould be put to Death. Mebomet was an Arab, and illiterate, a Driver of Camels, and a Man of no Morals; but friking in with a Greek Monk, who had forfaken his Monaftery, and had fome Smattering of Learning, he was by him enabled to lay the Foundation of that great Sect, which hath hitherto infected fo large a Part of the World. He made Ufe of the Oid and Nerw qefament in compofing the Alcoran, that he might draw both feres and Cbriftians to fubmit to it, though both are confufedly applied; but the Turks hold, that it was written in Heaven by God himfelf, and brought Chapter by Chapter to Mabomet by the Angel Gabriel. No Chriftian may touch it, and the Turks, by reading it merit, in their Opinion, Paradife. It is written in pure Arabick, and the Turks believe it cannot be turn'd into any other Language ; and for that Reafon they account the Perfians Hereticks, becaufe they have tranflated it into their Tongue.
This Book contains all their Laws, both Canon and Civil, but is full of Rabbinical Fables. According to this Book the Turks believe in and worhip God, the Eternal and Almighty Creator of Heaven and Earth, but they will not acknowledge a Trinity, nor allow any Images in his Worfhip, either painted or graved. They have a peculiar Fondnefs for Predeftination which they extend even to the moft indifferent Actions. They are firmly perfuaded, that under the Reign of every Em:
peror the State will infallibly and perpetually have either a difaftrous or happy Fate. That Death is fatal both in War and Peace, and therefore as they willingly take up Arms, believing that if they are killed by their Enemies, they fhould fome Way or other have died at Home, fo they take no Care to keep themfelves from the Rlagues, or other infectious Difeafes, and are offended at Chrittians for it.

They believe, that Jefus Chrift was conceived by the Rauah, i. e. The Breath or Spirit of God, in the Womb of the Virgin; but they deny him to be the Son of God, who is one, and hath no Companion; That he was a great Prophet, and wrought many Miracles among the Gewes, and foretold the Coming of Mabomet, under the Name of the Comforter, but they deny that he was crucified ; That Jefus Chritt fhall come to judge the World, and fhall reign forty Years in Damafcus, marry and have Children, at which Time Anticbrift fhall arife, and deceive many, fetting a Mark on their Foreheads; but Chrift fhall deftroy him, and fhall next afcend up into Heaven, and then the Day of Judgment fhall come. In fhort, they give great Honour to Jefus Chrift and the Virgin Mary, and if they hear any Man fpeak ill of them, they will chaftife him as feverely as if he fpake againt Mabomet; for they believe that the Gofpel was fent to Jefus, as the Law was to Mofes, and the Pfalms to David.

They believe all the Prophets, and that Paradife fhall be filled with the Juft, and Hell by the Wicked. They fay moreover, That the Power of God is fuch, that at the Creation of the World he prefix'd and appointed a fet Time for every Man's End, that the Wit or Device of Mortals cannot divert nor prevent, which makes them not only very refolute and courageous in their Wars, and upon all other Occafions, but they laugh at and forn all Means to drive away Difeafes and prevent Death, as if they oppofed God's Will in fo doing. They deny a Purgatory, but hold that there is a Place called Araf, between Paradice and Hell, where they hhall be that have done neither Good nor Evil. In Paradice Mabomet promifes the Bleffed, delicious Gardens, full of pleafant Fruits and Fountains, Rivers of Waters, Milk, Wine and Honey, Scarlet and Green Cloathing, and lovely Virgins, with Skins as white as a new-laid Egg, and black Eyes, always young and Virgins; that God fhall appear to them every Week on Friday; That thole that are in Hell fhall drink fcalding hot Water, and eat of the Fruit of the Tree Zacon; That if they have Faith, after all their Sins thall be confumed and wafh'd in the Water Solzaboul, they fhall be admitted into Paradice, where they flall receive and enjoy as much Happinefs as thofe that entred at firft ; but fuch as have no Faith, and are meer Atheifts, fhall burn everlaftingly in Hell-Fire.
5. They pray for the Dead, as the Papifts do, and invocate their Saints to recommend them to God. They acknowledge Guardian Angels, not only to every Muffulman, but to every Affair and Member, and attribute all that befals any Body to them, becaule they wait upon them in all Places but when they go ta do their Occafions, and then they leave them at the Door. They alfo believe, that when a Man is buried, his Soul returns to his Body, and two Angels, called, Munker and Guanequir, come to him, and if he has lived ill, they bring him an ugly Creature, that reprefents lis Sins and bad Deeds, to torment him till the Day of Judgment; but if he hath lived well, they bring him a lovely Creature, which reprefents his good Actions, and which gives him a great deal of Content, and ftays with him till the Day of Judgment.
They believe, that not only the good Mulfelmen, but fome Beafts and Fowls fhall enter info Paradice, viz. The Prophet Saleb's Camel, which he raifed to Life in Perfia; Abrabam's Ram; Mofes's Cow, whofe Athes are mingled with the Water of Purification; Salomon's Ant; the Queen of Sbebas Parrot, which brought her the firt News of Selomon; Ezras Afs, which, they fay was raifed to Life many Years after it had been dead, to prove a Refurrection; Jomab's Whale ; the litte

Dog Catmer, that attended the four Sleepers, who flept 372 Years; and Mabomet's Camel, that carried him from Mecca to Medina to his Friends Houfe by a certain Inftinct.
6. They circumcife their Children as the Fews do, not at eight Days, but at eleven or twelve Years old, that they may make a Profeffion of their Faith in thefe Words, There is no God but God, and Mahomet is bis Propbet. The Turks, as well as Ferws, make great Rejoycings at the Circumcifion of their Children; for upon the Day fixed for the Ceremony, the Child is fet on Horfeback, and carried about the Town with Timbrels and Mufick, and being circumcifed in his Fathers's Houfe, he makes a Feaft for all his Relations and Friends, at which they are merry, dance and fing, and the next Day the Guefts make Prefents to the Child according to their Quality. When a Cbristian turns Turk, he is circumcifed after the Manner aforefaid; but if a fero turns, his former Circumcifion is fufficient, and he only is obliged to make the afore-mentioned Profeflion; for which the Turks have fuch a Reverence, that if any Fews or Cbrifians pronounce them inconfiderately, they mult turn Turk, or be burnt.

This Circumcifion, called by the Turks, Schounnet, is only a Mark of their Obedience to Mabomet's Example and unwritten Command, for there is no Mention of it in the Alcoran; but they take it to be fuch a Token of Difobedience to their Law not to be circumcifed, that fuch as are uncircumcifed, whether Children or Chriftians, are not allowed to be prefent at their publick Prayers ; and though there be no Perfons to keep fuch out of their Mofques, yet if any are fo bold (as fome have been) and are taken, they are burnt alive, or impaled. Upon fome fpecial Occafions fome are admitted to circumcife at feven or eight Years old; but in Cafe of Poverty, it is more ufual to ftay till fourteen or fifteen, till either the Parents of the Perfon to be circumcifed, or the Perfon himfelf, is able to defray the Charges of it ; or if neither are able, they wait till fome rich Perfon is circumcifed, that they may thelter themfelves from the Charge by his Purfe.

Men of Eftates, at the Circumcifion of their Children, make many Prefents to the Youths that are circumcifed with them, and give liberal Alms to their poor Neighbours, that by their Prayers the Grace of God may defcend upon the new Muffelman, and their whole Family. When any poor Renagado Chriftian is circumcifed, two Bafons are carried after him to gather the Alms, which the Spectators freely give them, though they have a common Proverb among them, Tbat be that bas been a bad Chriftian, will never wake a good Turk. The Time and Place for Circumcifion is not fix'd, for it may be done by a Prieft or Chirurgeon, either at the Bath or Parents Houfe. They name their Children as foon as they are born, and do not ftay till they are circumcifed, by putting fome Grains of Salt into their Mouths, and fo lifting them on high, as dedicating them to God, fay, God grant N. N. that God's boiy Name may be as favoury in tbis Mouth, as this Salt is, and that be may preferve you from being too much in. Love with the World. As to thofe that die young, before they are circumcifed, they believe that thofe are faved by the Circumcifion of their Father.
7. The Turks receive the Ten Commandments of Mofes's Law, and caufe them punctually to be obferved by all; and to them Mabomet has added five, viz. r. To believe One Only God, and to worfhip him as fuch. 2. To faft during the Ramadan. 3. To pray at the Hours appointed. 4. To give the Poor yearly the Fortiech Part of their Subfance. And, 5. To go in Pilgrimagè to Mecca once in their Lives.

The firft of thefe they obferve very punctually, fhewing great Reverence to God and his Name, which they never pronounce, nor hear pronounced, but with great Reverence, and will not fet about any Action, but they firt fay, In the Name of God; yet they fwear much by God, when they would be believed.

The fecond Commandment is to keep Lent, or Ramadan, in Eatting, whereby the Flefh is mortified, Concupifence fubdued, and the Soul purified. This Faft
lafts a Month, and is kept in the Month called Ramadan; becaufe (as they fay) the Alcoran came down from Heaven in that Month. This Lent begins as foon as fuch Pcople as are fet on Hills and high Places on Purpofe can difcover the New Moon, and the firt Meflenger of it, if a credible Perfon, hath a Reward given him for publifhing it, and then the Ramadan is appointed all over the Town by publick Proclamation.

The Manner of keeping it is thus: It is faid in the Alcoran, That they may eat and drink all Night long, till they can difeern a white Thread from a black by the Morning-Light ; but after that, it is unlawful for them to eat, drink, or fmoak Tobacco, yea, to touch their Wives; and thus their Nights are turn'd into Days, their Minerets being all hung with Candles, and their Coffee-houfes are full all Night. In Summertime this Faft is very troublefome, for though they are burnt up with Heat, they may not drink. Every one is obliged to keep this Lent, and fome are fo ftrict as to keep it in their Travels, and in the Army, though they may defer it to a more fit Opportunity. There are many that do not keep it, but they munt eat and drink privately; for if it be known, they will be at leatt Baftinado'd. The Punifhment of drinking Wine in Lent, is to have melted Lead pour'd down their Throats; and it hath been executed, though rarely. None may marry in Lent.

When the Ramadan is ended, the Bairam, or Eafter, begins with the next New Moon, which is publifh'd by firing of Guns, and publick Bonfires and Rejoycings. At this Feaft the Houfes and Shops are adorn'd with fine Hangings, Tapeftries, and Sopha's ; the Streets are full of Swings, adorn'd with Feftoons, in which they fit down, and are tols'd in the Air, while Mufick, both of Inftruments and Voices, hired by the Mafters of the Swings, pleafes their Ears. They have many other Diverlions, as Mills, Fire-works, $\mathcal{E}^{2} c$. which they get ready fome Days before the Bairam. Many Women, who never ftir abroad the reft of the Year, have Liberty to walk about thefe three Days ; but it is dangerous for the Franks to appear, becaufe the Turks, being got drunk, will ftab them with their Cangiars, or to be fure make them pay dear for their Paffage, by exacting Money from them.

One Thing very commendable is done at this Time, which is, that they pardon all their Enemies, and are reconciled to them; for they have made a bad Easter, if they keep Malice in their Hearts againft any body; and for this Reafon, when they meet any of their Acquaintance in the Streets, they kifs one another, wifhing a good Eafter and mutual Happinefs one to another. This they call the Great Bairam, to diftinguifh it from the Little Bairam, which they keep feventy Days after. Their other Feftivals are, the Night between the rath and 12th of the Moon called Rebiul Ervell, wherein Mabomet was born; as alfo the Night between the 26 th and 27th of the Moon Rebiul Abber, when they believe that Mabomet afcended up into Heaven upon the Alboraob, as he tells them in his Alcoran; and on Tburdday the 4th of the Moon Regule, they have Prayers in their Mofques till Midnight, and then return home and feait. On all thefe Feftivals the Steeples of the Mofques are deck'd with Lamps in feveral Figures, which make a very pretty Sight.
8. The third Command of the Turks is, To pray at the Hours appointed; but becaufe they always wafh before they go to Prayers, 'tis neceffary to Speak of their Ablutions. They are of two Kinds, one is called Goufl, which is a general Wafhing of the whole Body, and this they are obliged to ufe after they have lain with their Wives, or after Nocturnal Pollutions, or when any Urine, or any other unclean Thing, hath fallen upon them. The other is called Abdeft, which is performed by turning their Face to Mecca, and wafhing the Hands, Nofe and Mouth three Times. This they ufe after their Needs, or when they have handled any Thing that is unclean, and for both thees they have Baths and Fountains near all their Mofques: If any one happens to break Wind upwards or downwards, or any Blood or Filch iffue from their Body, if

## Chap. I.

they vomit, fall into a Paffion, faint, are drunk, laugh at Prayers, embrace a Woman, or touch any naked Part of her, fleep at Prayers, touch a Dog, or any unclean Beaft, all thefe Accidents make void the $A b$ def, fo that it mult be renew'd before they can legally go to Prayers.

The Places of Prayer are their Morques, which on the Outfides are like our Churches. They have by them Towers or Minerets, which have a Balcony round them, from whence the Murzim call them to Prayers. In the Infide there is nothing written, but the Name of God. When they pray they turn toward the South becaufe Mecca lies on that Side. They have a Pulpit for the Imans to preach in, and the whole Mofque is cover'd with Matts for the Eafe of the People's Kneeling, and Carpets for the better Sort. Their Prayers are in an unknown Tongue. They have them five Times a Day, viz. at Break of Day, at Noon, between three and four a Clock in the Afternoon, at Sun-fetting, and about an Hour afterwards in the Evening. On Fridays they have Prayers at Nine oㅇlock befides, and in the Ramadan, or Lent, at Midnight, and all are prefent at them, and then they may go to work, or open Shops, but moft of them reft and make merry, or vifit their Friends. When the Hour of Prayer is come, the Muezim, going up to the Mineret, fings and cries with all his Force, putcing his Fingers in his Ears, Allab Ekber, \&c. i. e. God is great, God is great, God is great; bear weitnefs there is but one God, and that Mahomet is bis Prophet; Come and prefent yourfolves to the Mercy of God, and ask Forgiveness of your Sins; God is great, \&xc. and this he does towards the four Corners of the World, beginning at the South, and ending at the Weft.

While he is crying, every one goes to the Abdest, and then to the Mofque, or if they cannot go, fay their Prayers at Home. They leave their Shoes at the Door of the Mofque, or carry them in their Hands with them. When they are entred they bow to the Keble, i.e. a Nich in the Southern Wall, and then go to their Seats, and wait till the Iman or Prelate begin Prayers, and then join with him. In praying the Men lift up their Hands to their Shoulders, and then lay them upon their Navels, and the Women lift up their Hands but half-way, and clap them on their Breafts. When Prayers are ended, they bowe both to the right and left Side, as to the two Angels, Kerim, and Ki-atib. When they are at Prayers they are fo attentive, that they will turn neither this Way nor that. They never talk in their Mofques, but carry themfelves always with great Reverence. They are but few who go not every Day to Prayers at Noon, Afternoon and Night, for if they obferve not thefe three Hours they are punifh'd feverely, and this they muft do in Travelling. All their Prayers do not laft above half an Hour at moft, and feldom above a Quarter. They are commonly of a very ordinary Compofure, efpecially in the leffer Mofques, and upon ordinary Days; but during the Ramadan, and upon ligh Days, they are fomething better.

The Mabometans, during the Time of their Prayers, obferve a grave Silence and a modeft Deportment, kneel-- ing till the Prayers begin, and then joining with the Inarin in repeating the Prayers foftly after him, and imitating his Geftures with Kneeling and Proftrations, which are more or lefs, according to the Hours ; for in the Morning and Afternoon they ufe but fix, but at Noon, Night and Evening, eight. When thefe are finifhed, fome Chorifters get up into the Galleries, and fing in Parts a Sort of an Anthem of an indifferent good Air. On Mondays, Wednefdays and Fridays, a Preacher mounts the Pulpit, to explain fome Point or other of the Alcoran, which he underftands and expounds as he thinks fit. Any one may be prefent at thefe Sermons, as well as thofe made in the Market-place. They conclude all with fome Prayers for the Sultan and the Succels of his Armies; to which all the People fay, Amen.
9. The 4th Command is Charity, to give the fortieth Part of their Goods to their Kindred, if they have any, and if not, to their poor Neighbours, and for want of
them, to the firft they meet. This Command is well obferved by them, fo that Beggars in Iurky are very rare. And, indeed, they perform great Acts of Charity in founding Hofpitals, building Bridges, and Inns for the Caravans, bringing Water into the Highways, fetting Slaves at Liberty; and they that have not Ability to do thefe Things, mend the High-ways, fill the Cifterns with Water, and fhew Travellers the Fords; and if offered Money, they refufe it, for they 「ay, they do it for God's Sake, and not for Money. Their Charity alfo extends to Birds and Beafts, for fome will buy Birds in the Market to let them lly, and they believe, that the Souls of thofe Birds will one Day teftify their Kindinefs to God. Others will leave confiderable Means to maintain fo many Dogs and Cats.

To this Command of Charity may be reduced that of forgiving Enemies, not of their State and Religion, (for thofe their Law obliges them to hate) but their particular and private Enemies. And indeed they obferve this Law fo well, that there are few Enmities among the Turks; for if there happen any Quarrel, they are obliged to ufe their utmoft Endeavour to pacify it, and commonly they do not defift till it is, adjufted; and that the Reconciliation may be firm, the Perfons at Difference are obliged, before they pray to God on Friday, which is the Weekly Sabbath, to proteft, as in the Prefence of God, that they freely pardon their Enemies, or elfe they are taught, that their Prayers will not be heard. If the Perfons at Variance will not be reconciled, they part them by Force, and carry them before the Cadi, or fome other Judge, who will give them two or three hundred Drubs on the Bottom of their Feet, and make them pay two or three thoufand Afpers. The Severity of thefe Punifhments generally keep the Turks fo much within the Bounds of their Duty, that they feldom quarrel, or injure one another ; nay, they do not fuffer themfelves to be tranfported with Paffion, or to fwear.
10. The fifth Commandment of the Turks is to go to Mecca, which is the worft obey'd of any of them, becaufe feveral for Want of Money, and others by their Affairs, are hindered from going fo tedious a Pilgrimage ; yet many go yearly, and fuch are reverenced ever after under the Name of Hagies, or Pilgrims, and others get ready to do it. Next to there Commandments they have feveral Prohibitions, which they cannot break without Sin , as, I. To make, or have any Figures of Man, Woman or Beaft; and this they obferve fo ftrictly, that they are angry at the Sight of any, and though they are great Lovers of Watches and Clocks, yet if they have any Figure on them, they will not accept of them, though given. 2. To lend Money upon Ufury, and they are careful to abfain from it, but they will make Bargains that differ little from it. 3. To forbear unclean Meats, as Hogs, and fuch Creatures as the ferws account unclean; and this they. Atrictly keep, and fome will rather ftarve than eat of them. 4. Not to drink Wine, but this they fay, was only a Council of Mabomet, and fo they often drink it, and are drunk; yet if any Wine be fpile upon their Cloaths, the greateft Drunkard will labour to get out the Stain, and the moft fcrupulous will wear them no more, left they be found guitty of Sin.
II. The Turks have their Clergy, as all other Reli-gions have, to refolve their Doubss, and celebrate divine Service. They continually ftudy the Alcoran, and are moft of them knowing Men. The chief Ecclefiattick is the Mufti, whom they reverence as much as the Romanifts do the Pope. He is chofen by the Grand Signior, and is always a learned Man in their Way, i.e e much verfed in the Alcoran, for he refolves all Matters of Confcience, and gives his Decifions in Jittle Writs, called Fefta, to which even the Sultan himfelf muft ftand, but by adding thefe Words, God is the beft Fudge, he fhews that he pretends not to Infallibility. He is married, and had in fo great Veneration, that the Grand Signior rifes to meet him and falute him when he comes to Court. It is unlawful by their Law to put the Mufti to Death, yet fome Emperors have done it. There is but one Mufti, and his Refidence is ordinarily at Conftantinople, where finding Bufinefs enough,

9 U
the Cadilefquers, Moullab's or Cadi's, or Juftices and Naibs, perform his Office in other Places. The Sultan confults with the Mufti about State-Affairs, as when he defigns to put any Prime Minifter to Death, difgrace the Prime Vizier or Ba/ba, or undertake any other Bufinefs of Importance, becaufe 'tis a Notion among the People, that there is more Equity in a wife and pious Perfon's Judgment, than in the abfolute Power of a Prince, though as it is now ufed, 'tis meer Formality, for the Mufti mutt comply with the Will of his Prince. Every Mufti muft have been a Cadilefquer firft, and have difcharged that Office well before he is raifed to that Dignity. He has no Power over the Imans, or Priefts, becaufe the Turks have no Hierarchy.

Thofe who officiate in their Mofques, and read Prayers there daily, are the Danifchmend, or as the Franks call them, Talifmans, and the Iman is the Chief of them. The Muezims, or Church-Clerks, call them to Prayers from the Minerets of the Mofques, and the Hodgia's are old Men of Integrity, very knowing in the Alcoron and Civil Affairs. Thefe are confulted in Affairs of Importance, and fometimes preach on certain Feftivals. They have feveral Sorts of Monks, of which the Dervices are the Chief. They live in common, and have their Superior, as Popifh Monks have. They go very mean in their Apparel, and wear on their Heads a Cap of white Felt, like our Night-Caps. Every Tuefday and Friday they make a Dance in the Middle of an Hall, rail'd in fquare, where are two Pulpits, the one for the Superior, and the other for the Vicar. At the other End of the Hall is a Scaffold, where feveral Dervices are placed to play on the Flutes or Drums. When they have fung fome Prayers, the Superior makes a Sermon upon fome Words of the Alcoran in Turkib, which are read to him by the Vicar in Arabick. When the Sermon is ended, the Superior with the Vicar, come down from the Pulpit, and having, with the reft of the Dervices, taken two Turns about the Hall, all the InItruments play in Concert, and then begins the Dance. They pafs before the Superior, and falute him humbly, and then making a Leap, fall a-turning upon their left Foot as a Windmill driven by the ftrongeft Wind, and though they fletch out their Arms, and fometimes Thut their Eyes, they never touch one another, but keep Time to the Mufick, and never make the leaft falfe Step. The Author of this Dance was one Hazreti Merolena, a Dervife, who is reckoned a Saint among them, but all their Dervifes and Santo's are Hypocrites.
12. The Marriage of the Turks is of three Sorts, and fo they have as many Sorts of Wives. 1. Lawful Wives, and thefe they take after this Manner: The Man that defires to be married agrees with the Parents or neareft Relations of the Maid about the Dowry they will give their Daughter or Kinfwoman before a Cadi, who writes it down. This done he gets an Iman to blefs his Marriage, and then the Bridegroom on the Marriage-day leads the Bride to his Houfe, her Baggage being carried on Horfes or Camels before them, and there they fealt and are merry, the Men and Women by themfelves, and commonly they have Mufick and Poppet-Shows, as alfo the Women called Tebingene, to Thew Tricks for the Diverfion of the Company. Thefe Wives the Turks may divorce when they pleafe, by going before the Cadi, and faying, Alei talac be talaii, i. e. l part with ber for three Times: But if a Man put away his Wife wrongfully, he mult give her her Dowry; but if he does it upon juft Grounds, or flie forfakes him, he gives her nothing. When a Woman is thus divorced, fhe may not marry another Man till four Months be patt, that fhe may know whether fhe be with Child, for if fhe be, the Huband that divorced her muft keep it, and if fhe be not, fometime fuch Matches are made up in that Time. A Man that hath divorced his Wife cannot marry her again, till the hath been firft married to another Man, and then he may take her back. When they are thus married, if the Hubband happen to die, the Wife takes her Dowry, and no more, and if the Wife dies, and leaves Children, they may conftrain their Father to give them their Mother's

Dowry. Of thefe Wives the Tirks can have but one though fome have faid four.

They may alfo have Wives of Keben, which they take with lefs Ceremony than the former; for they only go to the Cadi, and tell him, that they take fuch an one to be their Wife, promifing to give her fo much if they divorce her. This the Cadi writes down, and gives the Man a Copy, and he may keep her or divorce her as he pleafes, performing his Promife, and maintaining the Children he hath by her. The Turks may have feven of thefe Wives, nay, as many as they can keep, but to fave Charges, few of them will have more than one or two.
Their other Wives are Haylaykes, i. e. Women-Slaves, and of thefe every Man may have as many as he pleafes, and the Children begotten of them are held as legitimate as thofe of the former Wives, and have as much Title to the Inheritance of what their Father leaves behind him, if by his Will he infranchizeth them, otherwife they remain Slaves to the eldeft by the lawful Wife but if a Turk takes a Slave for his Bed, he may not fell her again if fhe have Children, but fhe becomes a Member of his Family; if the proves barren, fhe may be fold as often as her Mafters will.

The Turks may buy all Sorts of Slaves of every Religion and Nation, but Cbristians and Feres may not buy a Turk. At Confantinople is a Market for Slaves in a Place near the Beziftan every Wednefday, and every one may buy freely for their feveral Ufes, their Luft not ex cepted. Thefe Slaves are bought and fold like Horfes, view'd, review'd, and felt all over their Bodies, and their Mouths look'd into, being alfo examin'd of their Country and Age. A beautiful Virgin at thefe Markets is held at an high Rate, but the Seller is anfwerable for her Virginity, for if the prove otherwife, he muft reftore the Money fhe was fold for, and bear a fharp Fine for his Fraud.
13. The Slaves of the Turks are not fo miferable as they are commonly fuppofed. They are frequently the Under-Mafters of Families, for if they light on a good Mafter, or are endued with any Talent, their Mafters will love them, and will feldom hinder them from going to Church to pay their Devotion: They are very frequently alfo in Favour with their Miftrefles, who through a tender Compaffion, natural to their Sex, give them Prefents. Their Mafters, indeed, are obliged by their Law to exhort them three Times a Day to embrace the Alcoran, but they feldom force them to renounce their Faith. Thefe Things have made fome Slaves to refufe their Liberty, and being made free to return again to their Servitude.
14. The Turki/b Women are commonly beautifuI, ftreight and well-fhaped, for they never go abroad without their Veil to cover their Faces. They paint their Eye-brows with Sarmee, which gives them a blackifh Colour, and their Nails with El-banna, which is a reddifh brown. They are very cleanly and neat, for going to the Bath twice a Week they have neither Hair nor Dirt upon their Bodies. Their Cloathing and Shoes are much like the Mens, but their Head-Attire is different, for they make a very long Trefs of their Hair, which hangs down to the Small of their Back, and if they want Hair, they ufe an artificial Trefs, or a Cafe of Sattin.
In the Houfe they cover their Heads with a Cap of red Cloth, like our Night-Caps, but with four Horns or Points on the Tops, to the Middle of which they ftitch a Round of Pearls, and tie it below with a Handkerchief of fine Stuff wrought with Flowers of Gold and Silk ; but when they go abroad, they change it for one made of gilt Pafte-board, and muffe up their Head fo in a Linen Cloth, that nothing but their Eyes is uncovered, nay their Shift Sleeves cover their Hands, becaufe it is a Thing of ill Repute fo much as to fhew any Part of their Bodies; yet in a Corner of the Streets, they will venture to uncover their Face to a Friend, or a young Man they like, though, if they be difcovered, they are baftinado'd.

The Turkib Women are very haughty, and extreamly lazy, and though they do nothing but fit on their $D i_{-}$

## Chap. I.

to the LEVANT.
vans embroidering an Handkerchief, yet they muft go fine and have their Slaves, though their Hurbands be ever fo poor. This Idlenefs makes them vicious, and feek only Ways of having their Pleafure, of which the Hurbands are fo jealous, that they will not fuffer them to fhew themfelves to Men; and if they do, they are fure to receive the Baftinado on their Buttocks. Upon thefe Accounts no Women are fuffered to go to the Mofques, Markets, or appear in their Hufbands Shops.

The Wives have not the Privilege of Divorcing their Huband, as their Hufbands have of Divorcing them, unlefs they deny their Wives the Things which they are obliged to furnifh them withal, as Bread, Pilou, Coffee, and the Ufe of the Bed once in eight Days, and Money to go to the Bagnio twice a Week; for, if they fail in thefe Things, they may go the Cadi and demand a Divorce, which if the Cadi, upon going to the Houfe, finds true, he grants her Suit, as alfo if the complains, that he hath offered to ufe her contrary to the Courfe of Nature, which fhe expreffes by Turning up the Soal of her Slipper, without Saying a Word.
15. When any one is fick, the Imans go and pray with him, and if he dies, all the Neighbours know it by the Howling of the Women, who cry out as if they were in Defpair. The Friends and Neighbours go immediately to condole with them, weeping and mourning in a doleful Tone ; but yet, as if they were finging, they rehearfe the Praifes of the Dead, viz. The Wife will fay of her dead Husband, He loved me So weell, be gave me Plenty of every Tbing I flood in Need of, \&cc. and all prefent join with her, repeating her Words, and imitating her Geftures. This lafts feveral Days, as often as any new Vifits are made; nay, fometimes thefe Cries are renewed at the Year's End. After thefe Lamentations comes the Burial, for which the Relations wafh the Body, and fhave off all the Hair, and then shey burn Incenfe about it to fcare away evil Spirits and Devils ; and then praying God to be merciful to him, they wrap him up in a Sheet, and put him into a Coffin and Bier, like ours, but with his Face downward, and covered with a Pall, which is red ; if the Perfon dead be a Soldier, green; if a Scberiff, i. e. one of Mabomet's Relations, black, with a Turban; which is red, if he be a fanizary; red and white if a Spabi; green if a Scheriff; and white if any other Man.
As he is carried to the Burying-place, which is with his Head foremoft, the Priefts go before, faying certain Prayers, and often calling upon the Name of God : After the Corps, which is carried by four Bearers on two Sticks, follow the Relations and Friends, the Women come laft howling like mad Folks: Being come to the Burying-place, they take the Body out of the Coffin, and bury it in the Earth, and leaving the Women to mourn, depart. When the Grave is filled up, the poorer Sort ereft a Stone over the Head of the Deceafed, for the Angel that examines them to fit on ; but the richer Sort have Tombs of Marble, and at both Ends a Turbant of Stone like that of the Deceafed. Their Burying-places are always without their Towns, that the Air may not be infected by the corrupt Vapours of the Graves, and this was the Cuftom of the Ancients. The Iurks Burying-places are commonly by the Highway-fides, that Travellers may pray for them, and always diftinct from the Chriftians. After the dead Body is interred, the Relations and Friends, for feveral Days, come and pray upon the Grave, that God would deliver the Soul of the Deceafed from the Torture of the Black Angels, exhorting him not to be afraid. The Women alfo do the fame with fo much Paffion, that one would think them abfolutely diftracted. Many on Fridays bring Vietuals and Drink to the Graves, and leave it there for Travellers, that they may pray for the dead Perfon, for whofe Sake it is given shem.
16. In fine, though in Chriftendom the Turks are accounted barbarous, yet, in. Truth, they are good People, and love honeft Men, whether Turks, Feres, or Cbriffians. They do not chink it lawful to cheat or rob
a Cbrifian more than a Turk, but carefully obferve that excellent Command, To do to otbers only wobat we are weilling otbers Joould do to us. They are, indeed, guilty of great Extortion from the Franks, but it is through the Inftigation of the Feres and Cbristians, who envy one another, and feek each others Ruin. Ufury is efteem'd a very great Sin by the Turks, and is very little practifed. They are very devout and charitable, very zealous for their Religion, which they feek to propagate all over the World; and whenever they love a Cbrifian, they exhort him to turn Turk.
They are ever loyal to their Prince, whom they highly reverence, and blindly obey, and are never known to betray him, but willingly die for him, whenever he commands it: They never quarrel or fight among themfelves, and know not what Duels are, which may be faid to proceed from Mabomet's wife Policy, who forbad them Wine, and Gaming for Money; and the good Turks fo religioully obferve thefe Laws, that they will not drink a Drop of Wine, and always play for Diverfion. They are very temperate, and never commit any Excefs in Quantity or Quality of Victuals fo that it may be truly faid of them, They eat to live, and do not live to eat. Yet are they not without their Vices, for they are fo proud, that they think themfelves above all other Nations, and that the World was made for them. They difpife the Yews and Cbrifizians fo much, that they call them Dogs; and the Rabble think they do a good Act. Some of them are fo fuperititious, that if at their firt going out in a Morning, they meet a Cbrißian or fore, they return home again, faying, God preferve us from the Deviil.
The Turks love not hard Study, and think it enough to learn to read and write. They often ftudy the $A l-$ coran, which comprehends all their Law, both Canon and Civil, and fome apply themfelves to Aftrology and other Sciences. They are very amorous, but their Love is brutifh, for they are the greateft Sodomites, and boalt of this infamous Vice. They are very covetous, fo that Money will do any Thing among them, both at Court and in the Country. They are very friendly and civil, if they can gain by it; but common People are purchafed at a cheaper Rate, for let them have but Drink enough, and they will do any Thing for you.
17. The Turks are fubject to one Prince, called by them, The Sulton, and by other Nations, The Grand Signior, or Emperor of the Turks. He comes to the Empire by Inheritance, and is always of the Ottomana Family, for which the Turks have fo great a Veneration, that they will not fubmit to any ocher. When the Grand Signior dies, his Son fucceeds him, or, if he have none, his Brother, who fixes upon a Day when he will go by Water to the Mofque of Efoup, where being feated upon a Tribunal of Marble, raifcd upon Marble Pillars, the Mufti fays fonie Prayers, girds him with a Sword, and then he makes his Entry into Conftantinople with a Cavalcade to the Seraglio, and this Ceremony ferves inftead of a Coronation. The Emperor is no fooner fettled on the Throne, but he takes care to fecure to himfelf the Poffeflion of it, by firt fhutting up all his Brothers fo clofe, that none can tell where they are, and, if he has Children, putting them to Death by ftrangling them, making a Scruple of Confcience to fhed the Royal Blood. The chief Reafon of this Fratricide is to fecure the Militia to himfe:f; for fo long as he has a Boother alive, they are ever threatening him with a Revolt, unlefs he will augment their Pay as they pleafe. When the Grand Signior is fettled on his Throne, he frequently minds nothing but his Pleafures, being attended with a great many Buffoons, viz, Mutes and others, who ftudy continually to invent fome new Pranks to divert him, and his Bafba's fend him Multitudes of the fineft Women to gratify his Luft. His Power is abfolutely and entirely defpotick, and his Will is the only Law by which he rules. He is not curb'd by any written Law or Cuftom, io that the Oppreffed have not fo much as a Righe to complain. He may take away any Man's Eitate, prefer the meaneft Perfon to the higheft Dignities, and fend for the Heads of whom he has a Mind, without Trial
or Juftice, and none has any Right to enquire the Caure.

This unlimited Power of their Sultan is founded on the Mabometan Religion, which enjoins a blind Obedience to all his Commands under Pain of Damnation; but the Turks are freed in a great Meafure from the Effects of it, by his retiring fo much from Civil Concerns to his Pleafures; for as to all publick Bufinefs, he refers that to his Minifters, who have the whole Management of his Affairs, yet are obliged, on certain Days every Week, to give him a fummary Account of them. When the Grand Signior is weary of ftaying in the Seraglio, he goes abroad to take the Air, either by Water or Land.

When he goes by Water he has little Attendance. His Galliot comes to the Kioske of the Seraglio, and from thence he goes to Scudaret, or the Black Sea, to take the Air, being row'd by two Bohangi-Bafha's, and twenty-four others, being their Favourites, on each Side. When he goes by Land, it is either in Pomp, as he does through Conftantinople to the Mofque; but then he has fo many Petitions put up to him againft the ill Management of his Minifters, that they hinder it all they can; but he will often go abroad incognito in Difguife, to fee if his Orders be punctually obferved, and the Chriftians are glad of it, for by this Means they are free from Affronts. Sultan Amuratb went often out thus, and one Day caufed a Butcher's Head to be cut off, for felling Meat above the Price fix'd, and two Men more to be beheaded, at another Time, for fmoaking Tobacco, which he had Atrictly forbidden, becaufe, by taking it in their Beds, feveral great Fires had been kindled in Conftantinople, which had burnt down great Part of the City.
18. The chief Minifter of State is the Grand Vizier, who is called King by the Turks. He it is that receives Ambaffadors, hears their Propofals, and gives them an Anfwer, the two Audiences which the Grand Signior allows them, being only for Ceremony at their coming and Departure. He takes Care to pay the Army, decides Law-Suits, condemns Criminals, and manages the Government, having in his Cuftody the Imperial Seal, and difcharges the Office of the Grand Signior. This is a very heavy Charge, and requires a great deal of Sagacity and Prudence; and yet for all that, few can hold it above fix Months before they are frangled, they create themfelves fo many Enemies ; and they that do efcape; muft by their Gifts make great Friends at Court, and have the Protection of the Mother of the Grand Signior, the moft beloved Sultana's, and others.

Next to this great Officer are the fix Viziers, called Viziers of the Bench, who are properly the chief Counfellors of State, but intermeddle not with the Government, being only confulted upon Points of Law by the Grand Signior and the Vizier Azem. The other chief Charges are the Cadilefquers, or Judges of the Army, which are as it were Chief Juftices, or Sovereign Judges, both of Civil and Military Affairs. They have under them Cadies, or Inferior Fudges, being Bailiffs or Provofts, before whom are tried ordinary Caufes, Marriages made, Liberties given to Slaves, and the Writings, called Heudgets, or Decrees ordered.

The Caimacan is the Captain and Governour of Confiantinople, Lieutenant of the Grand Vizier, but has no Authority but in his Abfence, and then he performs all the Offices of that important Charge. The Baßa of the Sea is the Admiral of the Naval Forces of the Grand Signior ; and the Beys are the Governors of the Maritime Provinces, and are obliged to keep the Grand Signior's Gallies in good Order.

The Aga of the fanizaries, who is the Colonel-General, or Commandant of that formidable Body of the Soldiers called Janizaries, is a confiderable Station. He is allowed to come into the Grand Signior's Prefence with his Arms in abfolute Liberty, and with a confident Deporment, whereas all the other Grandees of the Eort appear with their Arms crofs their Bodies, in Token of profound Submifion.

The Bafba's are a Kind of Viceroys in the Provinces; their Office is to adminifter Juftice exactly, and to keep
the People in Subjection to their Government. They are obliged to pay a Tribute of Money and Slaves yearly to the Grand Signior, befides the Carache and other Impofts, But they generally abufe their Authority, and are more arbitrary than the Grand Signior himfelf, their Aim being to raife a Fortune fpeedily by their Spoils and Oppreflions. The Sultan is forced to diffemble his Knowledge of thefe Difordars for Want of Power to fupprefs them, becaufe they have the Soldiers fometimes more at their Service than he.

The five chief Batha's are thofe of Babylon, Cairo, Buda, Natolia, and Romania, who have a Privilege of having Horfe-tails carried before them.

The Beglerbeys are next to thefe, and are as it were fo many Sovereigns in the general Government of the Empire, which the Grand Signior gives them. Under the greateft of thefe are feveral Sangiac-Beys, who govern fmall Provinces.

The Spabi's are a Body of 15000 Men, maintained out of the Revenues of the Grand Signior's Manors, or Timars. They pafs for the Nobility or Gentry of the Country, and ftand much upon their Honour. The Zaims differ not much from them.
19. The Cbiaux-Ba/ba is the Chief of the Purfuivants, or Meffengers, who carry the Prince's Commands to all Places, are fent of Ambaffadors, and have the Cuftody of all Prifoners of Quality. The Government of Cities is managed by five Kinds of Officers; the $B a f b a$, who judges criminal Caules; the Sub-Bajba, who is his Deputy; the Wairwod, who regulates Affairs in the City, walks the Rounds twice a Week, examines Weights and Meafures, fuppreffes Tipling-houfes, punifhes Drunkards, and all fuch as commit any Diforders, feverely ; the Cadi, who is the Judge of all Civil Suits, and the Receiver of the Cuftoms, and not only receives the publick Duties, but takes Cognizance of all fraudulent Practices relating to pecuniary Duties, and judges as he fees fit. Thefe Officers make it their Bufinefs to ruin and difcredit one another.
They have no written Laws but what are contained in the Alcoren, which they hold to be the Rule of Faith, and Standard of Juftice; and every Thing that it forbids is efteemed unlawful and punimable. Neverthelefs the Bafha's and Cadies judge as they pleafe, for the Book is fhort, has but few Laws and moral Precepts, and thofe it has are fo ambiguounly exprefs'd, and deliver'd in fo loofe a Manner, that thofe greedy Officers cannot defire a more favourable Opportunity to fatisfy their Avarice, for they judge without Appeal, and caufe their Sentence to be executed upon the Spot. It is true, fome injured Perfons have appealed to the Divan, but it is fo hard, as well as chargeable to carry a Caufe thither, that few will attempt it.

The Divan is the great Council and Affembly of the Nation, where all Affairs of State are debaced, all Suits are finally decided, for any body may be heard there, of what Country, Quality, or Religion foever he be, and the pooreft Man has Liberty to ask Juftice of the Grand Signior in Perfon, and deliver him his Petition, which as foon as he has read, he gives Sentence according to Equity. If it be for Debr, rhe Vizier, upon Supplication, fends a Cbiaus: to fetch the Debtor into Court, and the Creditor bringing his Witneffes, the Prifoner is condemned, and the Sentence is immediately put in Execution ; for all Things are difpatched with fo much Expedition, that a Matter no fooner comes to a Hearing, but it is prefently judged and finally determined.

No Trial, unlefs in a difficult Cafe, will laft above four or five Hours without Sentence given one Way or other, fo that no Man is wearied and ruined by Lawyers and Delays, as in other Places: Nor is there any Fear that Juftice will not be adminifter' $d$, becaufe ar the End of the Hall where they fit, is a Window covered with black Crape, where the Grand Signior hears and fees when he pleafes, without being difcerned, and the Judges, fearing he may be there, dare not adminifter partial Juftice, for if he finds it out, it would, immediately coft them their Lives.

The Treafury is opened upon all Divan Days, but firft the Cbiaux-Bafba looks whether the Seal be whole, and then takes it off; and when they have taken out, or put in what they think fit, he feals it again with the Grand Vizier's Seal. While the Divan is fitting, the Aga of the fanizaries, the Spabilar-Agafi, the Cadiles. quers, the Officers of the Divan and the Viziers, being introduced by the Capidgi-Ba/ba and Cbiaux-Ba/ba, are brought before the Grand Signior, to give an Account of their feveral Charges, and what they have done, and none of them can promife themfelves to bring back his Head again, becaufe the Grand Signior, for a fmall Offence, will caufe them to be ftrangled on the Spot.
20. In all Things the Turks are great Lovers and Obfervers of Order. They take fpecial Care of Provifions, that all Things be had in Plenty and at reafonable Rates, and he that has taken Pains to bring Fruit to the Market firtt, has no Advantage but to take his Money firft ; for he mult not exact a great Price, or fell dearer, unlefs he has a Mind to be foundly drubb'd, baftinado'd and fined. They have Officers to examine every Man's Weights and Meafures, who daily go their Rounds; and if they find any Man's Weights too light, or that he fells his Goods too dear, they fail not to order him fo many Blows with a Cudgel on the Soles of his Feet, and make him pay a Fine; fo that moft Sellers are fo much afraid of offending, that they will give you fomething above Weight, and they dare not cheat the leaft Child.

Every one is obliged to hinder any Quarrels or Diforders that happen in the Streets; for there is a Law, that if a dead Man be found before any Man's Door, he muft pay for his Blood 500 Piaftres, or 45000 Afpers ; fo that every Man is obliged to fee, that no Noife be made before his Door, and hinder all ill Effects of it. If he who committed the Fact be taken, and convicted of it, he is difcharged of the Sum, and the Murtherer is punifhed, unlefs the Relations of the deceafed will hearken to an Accommodation, for then the Murtherer is allowed to ranfome himfelf, which is ufually done by paying three or four hundred Crowns.

To prevent any Accidents in the Night Time, all Perfons whatever are prohibited to go Abroad after Evening is fhut, except in the Romadan or Lent; and if the Under-Bahha, who is Captain of the Watch, and walks his Rounds all Night, as our Conftables do, meets any Man, he is carried before the Codi, who examines him, and if he cannot give a good Reafon for his being out late, he is fined and baftinadoed; and if he be difmiffed without Fining, it is a lafting Difgrace to him, and he lies under Sufpicions.

2 r. The Money current at Confantinople is, the Mangour, which is half a Quadrin, Copper-Money, and Six of them make an Afpre, which is a little Piece of Silver, flamp'd with the Grand Signor's Name, and worth eight Deniers, or three Farthings Sterling. The IJolette is worth fifty five Afpers. The Alani, or German Rix-Dollar, fo called becaufe it is ftamp'd with a Lion, in Turki/b Afan, is worth eighty Afpers, and the Piaftre, or Picade, 90. The Turkib Cbequin is worth two Piaftres, and the Venetian ten Afpers more. The Afpres are many of them counterfeit. Their Weights are the 2 Uirat, which is four Grains, and fixteen of them make a Drachm; the Medical is a Drachm and an half, twelve Drachms make an Ounce; the Rotte is twelve Ounces; the Oque is three Rottes, or four hundred Drachms ; and the Cantar is an hundred and fifty Rottes.
22. The Turks ufe feveral Sorts of Punifhments for Offenders ; thofe for fmaller Faults are Blows upon the Soals of their Feet, or Buttocks, with a fmall Stick. The Feet of the Sufferer are fo held up by two Men in a Talacca, or Wooden Inftrument, that they cannot ftir them, and then two more with Switches lay on the Blows upon them, as upon a Smith's Anvil, till he that is to fee to the Execution fays there is enough. Such as have received many Blows (as fometimes they inflict three or four hundred) are not able to go for three or four

VoE. II. Voi. CXXV.

Months after, but they'll bear thirty without any great Inconvenience.

Mafters dare give no other Correction to their. Servants and Slaves than this, and they are ufually fo fevere, that for Fear of Punihment, they are wonderfuliy well ferved. You may fee their Servants ftand before them a whole Day together like Statues, with their Hands upon their Bellies, expecting their Mafter's Command, which at the leaft Wink of an Eye is obey'd. SchoolMafters do not whip their Scholars as we do in Chriftendom, but baftinade them on the Soles of their Feet. When they chattife any Perfon on the Butcocks, the Party is laid on his Belly, and the Blows are laid on over his Drawers. Sometimes they give five or fix hundred Blows, but that is the higheft; and if any Man hath been thus handled, a great deal of mortified and fwollen Flefh mult be cut off with a Razor from his Buttocks, to prevent a Gangrene, and he muft keep his Bed five or fix Months before he is able to go about his Bufinefs.

Women are alfo chaftifed this Way, when they deferve it: Such as deferve Death for their Crimes, are punifhed with Strangling, Hanging, Drowning, B-heading, Burning, Empaling, or Throwing upon Spikès of Iron. When any Man is to be hang'd, which is done for Robbery or Murder, they will make a Chriftian the Executioner, if they can light of any. In Beheading, which is done for Rebellion or Sedition, they are fo dextrous, that they never mifs cutting them off at one Blow. The Gancbe, or throwing upon Spikes or Hooks, which is performed by letring the Malefactor fall upon them, and hang there feveral Days, till he expire with Hunger, Thirtt and Pain, is accounted fo cruel a Dearh, that the Turks very feldom practife it.
The Turks that turn Cbrifians are burnt alive with a Bag of Powder hang'd about their Necks, and a pitch'd Cap upon their Heads; but Cbriftians that do or fay any Thing againft the Law of Mabomet, or are taken with a $\dot{\text { qurkj}} \mathrm{b}$ Woman, or go into a Mofque, are empaled, unlefs they will turn Turks; for they are fo zealous for their Religion, that a Chrifitan may redeem his Life by turning Turk, whatever Crime he has been guilty of; but in thefe, as well as many other Cafes, if he will not turn Turk, he is put to Death ; but a Turk has no Way to fave his Life, if he happens to commit the like or even a leffer Offence.
23. The Grand Signior's Arnss have acquired him that vaft Power and large Dominions he holds by their Means, taken from his Neighbours, for he always maintains a flanding Army both in War and Peace, to defend himfelf and furprize others : His whole Army, which confifts of Horfe and Foot, are punctually paid once in two Months. The Infantry are of feveral Orders, as Capigi's, or Porters, who keep the Gates of the Seraglio, and fland round the Grand Signior when he gives Audience to Ambaffadors: They are in all three thoufand, and have a Captain, called the Capigi-Bafba: They execute Death upon fuch as are fallen under the Sultan's Difpleafure : They wear a Cap with a Cone half a Foot long. Solaques, which are the Grand Signior's Life-guard, and attend him when he goes abroad in the City: They wear a Doliman with Hanging. fleeves, and a Cap fluck with Feathers in Form of a Creft, their Bow always hangs on their Arm, and their Quiver is always full of Arrows ready to draw, if Need requires; but the chief of their Infantry are the fanizaries, who are either Children taken for Tribute, and educated in the Oda's of the Seraglio, or Renegado Cbrifians, and fome few Turks. This Order was inflituted by Ottoman, the firft Emperor of the Turks.
They call one another Brothers, and will not endure the meaneft of their Body to fuffer the leaft Injury, and none but their Officers dare lift up an Hand againft them, upon Pain of Death : They can beat any Man, and no body dare touch them ; for no Intereft or Money can fave the Life of him that has beaten a Fonizary; and upon this Account Ambaffadors take them into their Retinue, and Travellers hire them for their

Guides:

Guides: They are diftinguifhed from other Turks by their Caps, called Zarcola's, which being made like the Sleeves of a Cajaque, hang down behind, and have a Cone on the Forehead half a Foot long, gilt with Silver and embroidered. Their Pay is from two to fix Afpres a Day, and a Piece of Cloth every Year.
The Fanizaries of the Port are 12000 in Number, and live in two Inns or Colleges, containing one hundred'and fixty Chambers, in every one of which are thirty, forty, or fifty Soldiers. Every Chamber has three Officers, viz, the Cbobargi, or Captain ; OdaBalha, the Chief; and the Vikil Hardge, i.e. the Steward. Over thefe is the Kiaya-Bey, or Lieutenant-General of the Fanizaries; and over all, the Aga, or General, who is always a Muteferaca, or Perfon of Quality. He has not Power to punifh any Soldiers by himfelf, but upon Complaint he delivers him to the Oda-Bolba to be punifhed, which can be done only in the Night, for Soldiers can neither be beaten or put to Death in Publick. They are beaten on the Soals of the Feet for ordinary Crimes, and if they deferve Death, they are ftrangled, and thrown into the Sea in a Sack, a Cannon being difcharged for every one that fuffers. The other lower Orders of Infantry are Azapes, or Pioneers; Dgebegi's, or Men at Arms ; Topidgi's, or Gunners; and others.

The Grand Signior's Cavalry are the Cbiaux; their Employment is very honourable, for they execute moft of the Commands of the Grand Signior and his Bafba's, and are fent on Embaffies to Foreign Princes: Their Caps are a Foot in Diameter, and are long and flat above: The Grand Signior and his Bafba's wear them. The Mutefaraca's are all Perfons of Quality, and their Captain is the Grand Signior himfelf, and therefore they never go out to War but when the Grand Signior goes in Perfon.
24. The Spabies are the ordinary Troopers, or LightHorfe, and are of two Sorts. Some receive their Pay every two Months, which is from fifteen to forty Afpres. They are divided into fix Regiments, and have each a feveral Commander, called Buluk-Agaf, and different Colours. The others have, inftead of Pay, a Timar, or Penfion, from the conquer'd Territories, where they refide ufually, and obey the Sangiac-Bey, or Lord of the Mannor, that rules that Quarter. They are very numerous, being difperfed all over the Empire, and, being required by the Grand Signior, bring him many Horle to his Wars. The Grand Signior is Heir to all in his Pay, if they die without Children; but he takes but two Thirds, if any leave Danghters.
Things being thus fetted, it is eafy for the Grand Signior to raife an Army of two or three hundred thoufand Men in a very little Time, by fending his Orders to the Baffa's and Sangiacs only, who come in with their Servants, Soldiers of their Governments, and $\mathcal{T}_{i}$ -mar-Spobi's inftantly. Nor is he at more Charge in War than Peace, for all maintain themfelves and Servants ; and fo good Order is kept in their Camps, that where-ever they are they draw a Market, becaufe they pay exaçly for what they håve; nay, Merchants travel fecurely by or through them, without Fear of being plundered. All their Soldiers are both ftrong and couragious. They live on a fmall Matter, and are fo har: dy as never to be wearied with Travel, or long Marches.
They fight like Lions, chufing rather to be cut in Pieces than retreat, unlefs the Enemy exceed them much in Number. That which makes them fo couragious, is the Confidence they have in Deftiny, believing, that they can't die before their Time is come, though an hundred thoufand Men feek their Lives, and if they die in the Field, they fhould alfo have died at Home, which makes them fearlefs of all Difeafes and Dangers. They are alfo fo zealous for their Religion, that they will chearfully die in Fighting againft the Enemies of their Law, believing that they die Martyrs, and fhall, after Death, enjoy the Delights that Mabomet hath promifed them.

They will blindly obey the Ofders of their Commanders, ruaning into the greateft Dangers of War as chearfully as to a Feaft; and befides, they are
well armed with a good Musket, and a handfome Sword, with other fuitable Habits and Accoutrements, infomuch, that it is not to be thought ftrange, if they are very ftrong by Land, and bring almoft every Thing to pafs that they undertake.
25. But though the Turks are fo potent by Land, and fucceed well in their Wars there, yet are they neither fortunate nor ftocit by Sea, and always worfted, unlefs they be fix to one; and the Reafon is, becaufe they have neither good Ships nor good Men. They are, very unskilful in Building their Ships, and when they have done, they not only want good Sea-Oficers to manage them, but Soldiers to man them; for even thofe fanizaries, who know not what it is to give Ground on Shore, always go to Sea againit their Wills, and if they can get off for Money, never fail to do it; and no Wonder, if their Navy can never be vittorious, when all Things are fo unfic for Battle. And hence it is, that the Venetians gain great Advantages over them, and particularly in 1656. gave them fuch a fignal Defeat at the Dardanelles, where they loft twenty feven Ships, thirty feven Galleys, and eight Maones, that all the Turks were put into Confternation by fo great an Overihrow, and imagined themfelves to be Slaves to the Venetians, who, had they purfued their Victory, would certainly have driven the Turks out of Confontinople, and, perhaps, out of Europe; for the Grand Signior was preparing to fie into Afa, and the Turks believing that God had decreed that Time for their Expulfion out of Europe, as one of their Imans had foretold, would eafily have departed; but the Venetians neglecting the Advantage, fuffered the $\mathcal{T u r k s}$ to refume their Courage, and thereupon they grew more terrible to the Chrittians, whom they could not fee without Regret, and threatned them with Deffruction at their next Bairam, according to their natural Infolence.
But as the 7 fonizaries; when obedient to the Grand Signior, render him one of the moft formidable Princes upon Earth, fo they ftrangely limit his Power when they lofe that Refpet to him, and revolt, which they pretty often do; and then, flighting all Commands, they follow the Dictates of their own furious Paffions, and run down all that comes in their Way, for they have ftrangled feveral Grand Signiors, and among others Sultan Ofman, becaule they fmelt out his Refolution of diffolving their Body, as the only Curb to his unlimited Power, and fet up his Uncle Muftapha in his Place; and in the next Succeffion Sultan Ibrabim, his Brother, and Father of Mabomet, who reign'd in the Year 1655 . And this. Prince they reduced to fuch Streights, that he was forced to grant them all that they demanded, and put many of the chief Officers of the Court to Death to appeafe them; but whoever they attempt againft, yet they always fo refpect the Royal Blood, and have fo great a Veneration for the Race of Ottoman, that they never fo much as dream of altering the Succeffion from that Family.
26. The Subjects of the Grand Signior who are not MuJulmen, are either Chriftians or Fews. The Greeks are the chief of the Cbrifians. They wear the fame Habit with the Turks, except that they may not wear green on any Part of their Bodies, without Danger of being foundly baftinado'd and fined, nor a Turbant all white, left they be forced to turn Turks, or die for it; but all other Colours they may wear, though it be better not to ufe all red or all yellow, for Fear of offending the Soldiery. The Papa's, or Greek Priefts, are always clad in Black, but their Cap has : a Lift of white. They wear long Hair, and fo do their Monks.
As for their Religion, they differ from the Church of Rome in thefe Points: 1. They maintain that the Holy Ghoft proceeds only from the Father, and not from the Son, but at moft by the Son; yet they believe him to be God, and the Spirit of the Son. 2 . They deny the Pope to be Head of the Church, and have four Patriarchs of equal Authority, to whom they fubmit in their feveral Jurifdictions, viz. Constantinople, Antioch, Alexandria and Ferufalem; but they are all raifed by Bribery to their Dignities by the Grand Signior

## Chap. I.

to the LEVANT.
and Confirmed by the Grand Viziers and Baha's of hofe Countries, as the Grand Signior's Deputies, from whom they receive a Caftan, or Veft, at their Confir mation. They have feveral Archbifhops and Bifhops inder them; but they muft firft have been Caloyers, of Monks, and obferve their Rule during their Lives The Priefts are regular, who are not married, and Seculars who marry. 3. They admit of no Purgatory, but hold a third Place, where the Bleffed remain in Expectation of the Day of Judgment, before which Time, though they believe not the Saints to be admitted into Paradife, yet they pray to them to intercede for them. 4. They ufe leavened Bread in the Sacrament, fuch as they commonly eat, and communicate in both Kinds, as well Laymen as.Priefts, and Women and Children as Men, and condemn the Latins for depriving the Laity of the Cup. 5. They have four Lents, but the firft, which begins fix Weeks before Eafter, and lafts till that Feaft, they keep moft ftrittly, calling it the great and holy Faft; for they eat nothing then that hath Blood, nor Oil, but only Herbs and Shellfifh, as the Cutcle-Fifh and Oifters. In the other three Lents, one of which is kept in Honour of the bleffed Virgin, and the other of St. Peter and St. Paul, they may eat Fifh and Oil.
27. The Armenians keep their Lent ftricter than the Greeks, for they eat no kind of Fith nor Oil, nor drink any Wine, but live only on Bread, Water, Herbs and Roots. Their Churches are like ours, except that the high Altar is divided from the reft of the Church by wooden Partition with three Doors, which make a kind of Sanetum Sanciorum. They have no Images, but Pictures only. They never kneel in their Churches, not fo much as at the Elevation of the Hoft, but lean upon Crutches, of which they have Abundance for that Purpole. No Man can be admitted into Priefts Orers till he is full thirty Years old. Priefts are allow'd to marry but once in their Life-time, and that to a Virgin, who is alfo under an Obligation not to marry, if her Hufband dies.

Their Mafs is much the fame in Subftance with that of the Latins, fave that it is much longer, for it takes them five Hours in a Day to read it over only, which occafions fo many of the Clergy to omit it, that there is farce any Place where it is regularly read, unlefs it be in Mount Atbos and Neomagni, a City of the Inland of Scio, and in fome few well regulated Monafteries, Their whole Liturgy is divided into feven Books. I. Triodion, which contains the Office for Faft-Days. 2 Euchologion, which is a General Office for all Days, and all Occafions. 3. Paraclitiks, which contains all the Hymns. 4. Pentecafterion, which is the Service of the Church from Easter sto Wbitfuntide. 5. Meneon, an Office belonging to each Month. 6. Horologion, the Service for all the Canonical Hours for every Day. 7 Antoloion, which comprehends all that ufes to be read in the ordinary Service of every Month throughout the whole Year. This Part of their Liturgy, they fay, every Prieft ought to have, and it ought to lie in every Church ; but as to the reft the Length of them is fo tedious, and the Price fo great, that moft of the Bifhops, Priefts, yea, even their Caloyers, never trouble themSelves with them.
28. Their Caloyers, or Monks, lead a very auftere and exemplary Life. They make three Vows: i. O renourcing the World. 2. Abftaining from Flefh: And, 3. From Marriage; which they very ftrictly obferve, fpecially in the larger Monafteries of Mount Atbos Neomagni, Mount Sinai, Sc. Saba and St. Micbael of Jerufalem, which are thofe that are beft governed Their Food is the Product of the Earth, and Fifh, ex cept on Faft-Days, when they will not eat any Thing that hath Life. Some of them, who are called Afcetai, live only on the Fruits of the Earth, and to that End leave their Cloifter to live on the Mountains, and never return but on great Feftivals, to affift at the publick Service. All their Morks are divided into three Orders, viz. St. Bafll, Elias, and St. Marcellus; and in all of them they have three Sorts of Monks, Superiors or Elders, called Egoumenoi, the profeffed and other Fathers,
and the Novices, with the Lay-Brethren; but the Superiors, though had in great Veneration, have little Authority, except in impofing fome trivial Penances; for they are afraid left by Severity the Monks fhould turn Turks, as they have had many Inftances, and therefore their monaftick Difcipline is almoft loft; yet they ftill retain the Prerogative of ftripping fuch Monks of their Habit, who have been guilty of fome notorious Crimes; and will not fubmir to their Rules

The Profeffed alfo take the fame Liberty to lay down their Habits when they pleafe, yet not without fome Scandal to the others, and rendering themfelves contemptible ; however, upon their Repentance, and undergoing fome flight Penance, they are re-admitted. Thefe profefs ${ }^{\circ} \mathrm{d}$ Monks, fo long as they are in the Convent, take care of the Fruit, Corn, Sheep, and other Things that belong to the Cloifter. The Novices and LayBrethren work in the Fields, and though they return ever fo weary from their Labours in the Evening, yer they muft attend at a long Prayer, and make many Genullexions, which they call Netaniai, before they eat their Supper, or go to their. Reft. Over all thefe Monks are placed Provincials, or Vijitors; but inftead of reforming the Abufes of the Monafteries, which fould be their Bufinefs, they onty gather up the Money which the Patriarch exacts of them. And, indeed, thefe Vifitors come fo often, that they are miferably poor, and are become thereby ignorant and illiterate, becaufe the Time they ought to fpend in their Scudies, they are forced to employ in labouring for a Suftenance.

But, notwithftanding this general Poverty of the Monks, fome few Monafteries are fo well endow'd, and their Monks are fo rich, as to be able to raife great Sums of fifty or fixty thoufand Crowns to purchafe the Patriarchate, nay, fometimes before the Poffeffor is dead, for the Grand Signior never refufes Money. Their fecular Priefts, called by them, Cofmicoi Iereis, are thus made : Firft they take their Tonfure upon them, i.e. are fhaven on their Crowns the Breadth of one's Hand, and are thus taken into the Service of the Church. Then after fome Months they are created Anaguofta's, or Readers, becaufe it is their Bufinefs to read the Mattins; Pfalms, and fome other Things, which the Clerks ufe to fing. When they have ferved the Church fome Months in this Office, the Bifhop confers upon them Deacons Orders, and a Power of waiting at the Altar, and chanting the Epiftle: When they are Deacons, if they have a Mind to marry, they are allow'd to do it, provided they give Notice to the Bifhop of the Woman and her Abode, that he may enquire after her for if the be not chafte, wife, and handfome, the is nor a fit Wife for a Prieft, nor will the Bithop fuffer their Marriage. And, indeed, the Greeks are fo ambitious to beftow their Daughters on the Priefts, that if it be known that a Prieft defires to marry, all are forward to feek out the greateft Beauty for him, as if they were to confecrate it to God, and to court fuch Women they are difpenfed with in their Service, and, upon their Return into it, are made Priefts.
29. The Under Minifters of the Greek Church are, I. Seruopbylaces, or Sextons, who look after the confecrated Plate, and other Utenfils of the Church. 2 The Colonarcbai, who inform the Singers what Tunes to fing. 3. The Tyrroroi, or Porters, who open and Thut the Church Doors. 4. The Canidlaptbi, who take Care of the Tapers, of which they confume many The Service of the Greek Church is faid feveral Times a Day. In the Monafteries they rife at Midnight to perform a particular Form of Devotion, called Mefonuczion, and to prepare them for fome great Feftival, they turn it into an Holonution, or an All-night Service. After this they celebrate a Service at Break of Day, called Oortos; another at the firft Hour, called Protiora; and fo again at the fecond Hour, called Tritiora; and as Nine o ${ }^{\text {C Clock }}$ in the Morning, called Ektiora: Then follows the Ennati, the Liturgy, and the Eucharift at Three o'Clock in the Afternoon, and Efperines, or Evening-Service ; after which they ufe fome llight Ex ercife till they go to Supper, and when that's done, they return ggain to Church, to perform the Service called

Apodipbo

Apodipho, or, the Service of the Night, which in the Romifh Church is called the Complines.
The Minitters of Churches follow the Example of the Monks as near as pofible, fo that in all Churches, be they rich or poor, there is every Day performed the Hagia Koinoma, or Celebration of the Eucharift, and fome Churches more than once, but at different Altars. None of thefe Ceremonies or Ufages are performed in Conformity to the Church of Rome, for they abominate both them and all their Cuftoms, and if a Latin Prieft fhould fay Mafsat any of their Altars, they would wafh them as polluted. At the Clofe of every Thurfday they excommunicate the Pope and all the Latin Bifhops, and damn them as fo many Hereticks and Schifmaticks.
They have fo great a Number of Holidays, that there is no Day in the Year but is confecrated to fome Saint ; but thofe they have in greateft Veneration, are, befides the Feafts of Chrift and his Apoftes, the Invention and Exaltation of the Holy Crofs, in September; the Feaft of St. Demetrius in October; St. Fobn Cbry fofom, and the Virgin's Entrance into the Temple in November ; St.Nicbolds, St. Spiridion, and St. Ignatius, in December; the Feaft of St. Bafll, St. Antbony, St. Atbanajus, St. Cyril, St. Gregory Nazianzen, and Chrift's Baptifm, in 'fanuary; St. Simeon's meeting with Jefus and St. Blafus in February; the forty Martyrs in March; St. George in April ; St. Atbanafius, Conftantine the Great and Helena, and the Invention of St. Fobn Baptije's Head in May; St. Marinus, Elias the Prophet, St. Parafaua and St. Pantaleon in $\mathcal{F} u l y$; Chrift's Transfiguration, the Death of the Virgin Mary, and the Beheading of St. Jobn Baptift in Auguft.
On thefe Days they read in the Church the Life and Actions of thefe Saints in the vulgar Tongue, out of their Synaxarion, or Martyrology, and conclude the Service with the Diftribution of the Eucbarif; and generally the People, who come to hear, bring an Offering of Bread, Wine, Oil, Tapers, and the like, for the Ufe of the Priffts, and give liberally to the Poor, even beyond their Abilities. They celebrate Eaffer, which they call, Há $\alpha a$ avaotacipov, i. e. the Paffover of the Refurrection, with great Demonftrations of Joy. By the Laws of their Church, they are obliged to confefs themfelves four Times a Year, but not fo particularly as the Church of Rome requires, and after they have done fome Penance, or promifed, they are abfolved in Form of a Prayer: Let tby Sins be forgiven.
They look upon Baptifm as indifpenfibly neceffary for Salvation; and though they baptife rot till eight Days are pafs'd after the Birth, unlefs in Cafe of Neceffity; yet, when a Child is in Danger, they allow Laicks of borh Sexes to baptife, becaufe they dare not hope well for Children who die unbaptifed. They rebaptife Hereticks and Apoftates, when they repent and defire to come into their Church. Among the former they reckon the Papifts : They have a great Averfion to Images in Baffo-Relievo, and fay, the Papifts imitate the Heathens in the Ufe of them, but the Pictures of Chrift and the Saints they account holy, and pay a Reverence to them, and to that End fet them up in their Churches on their Fefivals.
30. They condemn all the Weftern Chriftians for eating Things ftrangled, and account them Hereticks for fo doing. They follow the Doctrines of the ancient Fathers, and the Canons even of the firtt General Councils, very exactly, and think all others of no Force. The Turks make them pay very fevere Capitations for their Religion Sake, and which is worfe to them, take their Children from them often by Force, to educate them in the Mabometan Faith, and make them Icboglans. Though they have many Churches, yet they are obliged to take great Care to keep them in Repair, for Fear they flould have no Churches at all, for the Turks very rarely will fuffer them to rebuild them, if they fall; but they are allow'd to repair them. In their Churches they have a Candleftick which holds three Candles, by which, they fay, is reprefented the Holy Trinity; and another two, which fignify the two Natures in Chrif. Their Sacerdotal Veftments have alfo the like Myfteries. In giving the Blefing, they make
the Sign of the Crofs from the Right to the Left, contrary to the Latins.
Maids fhew not themfelves before they are married, even to their Relations, and therefore go not to Church for Fear of being feen. They are married by a Prieft, and give a Ring like the Latins, but take Godfathers and Godmothers, which they do not. The Bride and Bridegroom being come before the Papa or Prieft, he fays fome Prayers over them, while the Godfathers and Godmothers hold a Garland of Flowers, mix'd with Orpine, over their Heads, and a Pall over it. The Father and Mother of the Bride give her; and when Prayers are done, the Bride and Bridegroom drink to one another, and the Glafs being given to the Prieft, he merrily drinks it off, and then breaking the Glafs, fays, So may this Bridegroom break the Virginity of the Bride. Their other Rites are like thofe of the Latin Church.
Their ordinary Way of Living is much like the Turks, only they are more wicked, for they are covetous, perfidious, treacherous, Sodomites, revengeful to the higheft Degree, very fuperftitious, and great Hy pocrites, for which Qualities they are fo much defpifed by the Turks, that they do not value them though they turn Mabometans. They are greater Enemies to the Papits than the Turks are, and none would hinder them from being Mafters of Turkey more than they, if Providence fhould fo favour them to recover what the Turks hold in Europe. Their Women are beautiful, but a little too fat, and moft of them very proud.
31. The Ferws in Turkey ufe the fame Habits with the Turks, only may not wear green, or a white Turbant, or red Vefts, and fo are obliged to wear their Meftes, Pabouches and Caps, which are fhaped like an Hat, of a Violet Colour only. Their Religion is contained in the Old Testament and Talmud. As to their Manners, they are great Cheats in all Places, and their only Contrivances are to vex both Cbriftians and $T_{\text {wrks }}$ with their Taxes and Tricks, which is the Reafon they are hated and defpifed in all Places. All the 7 feres and Male Cbriftians, which are fubject to the Grand Signior, pay the Karadge year!y, which is a Tribute of four Piaftres and an half, beginning to pay it about nine Years old; but the Cbrijfian Priefts and Monks are exempted from it, and fo are the fervijh Rabbi's; the Women alfo paying Nothing. This Tax brings in a great Revenue to the Grand Signior, and no body can avoid it by changing their Habitation, for at whatever Place they come in their Travels, their Karadge is demanded, and if they have paid it in any other Place, they muft fhew their Acquittance, and if they can't produce one, they muft pay it, and take a Note or Acquittance to ferve them in other Places; but fuch as are not Subjects to the Grand Signior, do not pay this Tribute, and to fhew that they wear an Hat, and have a Certificate of their Abode from a Conful.
32. The Accounts already given from the Works of the moft authentick Authors that have been publifhed, cannot fail of entertaining as well as inftructing the Reader ; but, perhaps, it may not be amifs to make fome Additions to thefe, from Materials of another Nature ; fuch as the Informations of thofe who have refided long in the Dominions of the Grand Signior, and Books written in or tranflated from the Oriental Languages. To render thefe Remarks of the more Ufe, by keeping them in a certain Method, we will, as near as may be, purfue that which in the Courfe of this Section has been already laid down. The Drefs or Cloathing of the Turks, though it appears odd and uncooth to us, is neverthelefs founded upon Reafon, and for that very Caufe is not much affected by Fafhion; as they have Nothing of Levity in their Nature, fo there is Nothing can give Men a graver Appearance than the Eafern Habit; and in refpect to all the Ufes of Cloathing in a Climate like theirs, it will be found, that it anfwers them perfectly well. By changing the Stuff of which their Robes are made, from Silk to Cloth, and from plain Cloth to Cloth lined with Furrs, the Change of Seafons is provided againft. Their Habit agrees likewife with their Manner of Living, they
ride without any Inconvienency. The Manner in which their Houfes are furnifhed is fuited to their Garb, and every Part of that is well contrived for the great Ufe they make of Bathing. The only Thing in the Turkijh Drefs, that feems to deferve Reprehenfion, is their Turbants, and it is obfervable, that this is the only Part of it that is fubject to Fancy or Change; for as to the reft, there has been little or no Difference introduced in the Courfe of many Years.

The modeft and temperate Way of Living, in Ufe amongtt the Turks, is very commendable, and the more fo, becaufe it is not carried to any Degree of Severity or Extravagance. They abftain from all Animals that die of Difeafes, that are choaked, ftrangled, or knocked on the Head, or that break their Necks; but in Cafes of great Neceffity, they allow that even thefe may be eat; but from Blood and Swines Flefh they moft religioufly abftain. They hàve not many Difhes, nor any great Variety of Dreffing, but thofe they have are favoury, cheap, provided with little Trouble, and their Meals are foon over. All this is alfo very agreeable to their Climate and Way of Life, but at certain times, when they have a Mind to indulge, they have their Niceties, efpecially in Paftry and excellent Liquors, which they ftile Sherbets, compofed of a Variety of Ingredients, and always cool and pleafant. But after all, their great Dainty is Water, and fome, from a Principle of Charity, carry it in Stone Veffels through the Streets of Confantinople, and offer it with great Civility to fuch as defire to drink; whence we difcern the Propriety of that Eastern Expreffion, which occurs in our facred Writings, of giving a Cup of cold Water; which, from the Difference of our Manners, does not appear to be any great Matter here.

As for the Practice of Drinking, the common People in thofe Countries have it not; fo that if you offer Workmen any Thing for that Purpofe, they anfwer very naturally, that they are not dry; but ftill you may oblige them, if you are difpofed, by calling the CoffeeMan, who ftands at the Corner of every Street with his Utenfils, and all working People will be very grateful for a Difh of Coffee. But that we may not deal altogether in Generals, we will take this Opportunity of fpeaking particularly to three Heads, with refpect to which we find very little in our printed Books that is exact and worthy of Credit. Thefe three Heads fhall be Coffee, Opium and Wine.

As to Coffee, which the Turks call Capbuab, it was firlt ufed in the Country where it grows, in the Kingdom of Yemen in Arabia-Felix, which from its producing Coffee, our famous Mr. Ray delivers it as his Opinion, that it may be Atiled not only Felix, but Felicifima, that is not barely the happy, but the molt happy. A Multitude of Writers have defribed Coffee, and fome have pretended long ago to give us diffinct Accounts of their own Knowledge and Experience, and yet it is but a very little while that we have known any Thing of it with Certainty, fo as to be difabufed in Reference to thofe Fables that have gone current for many Years, though without having Foundation or even Colour of Truth. The Tree then that produces Coffee is in Reality a kind of Jeffamine, which bears firft a very beautiful and odoriferous white Flower, inclining to yellow, which is compofed of five Leaves refermbling the Spanifh Jeffamine. As thefe Flowers drop off, the Fruit begins to appear, which is at firt green, then of a pale red, turns next to a bright Crimfon, by Degrees of a very deep red, and at laft inclines to a dufky Brown. In Size and Shape it refembles a honey Cherry, bur inftead of a Stone, there lies within the Pulp two of thofe that we call very improperly Coffee-Beans, with their flat Sides joined to each other, and their Convex Sides outward ; as there are Flowers, green Fruit, and ripe, all upon the fame Tree at once, there are feveral Coffee Harvefts, but the moft confiderable is that in May, when by laying Cloths under the Trees, and fhaking them, the ripe Fruit drops off in great Quancities, out of which the Beans are taken, and very carefully dried, firf in the Sun, and then in the Shade, and upon their curing in this Refpect, their Goodnefs chiefly depends.

VQL. II. No ${ }^{125}$.

It is faid, that the Virtues of Coffee were firft difcovered by the Frinking of Goats that fed upon it, and their living almoft wholly without Sleep, which put a Prior of a Convent upon trying what Effect they would have upon a much groffer Animal, a fat, fleepy, lazy Monk, upon whom having wrought a wonderful Cure; Coffee came into gencral Ufe. I cannot vouch for the Truth of this Story fo well as for what follows. It paffed from Arabia into Egypt, where it began to be much taken Notice of, the Turki, $\beta_{0}$ Doctors doubting whether the Ufe of it was not forbid by their Law, becaufe they held its Properties to be the fame with chofe of Wine. This Point was cleared up by a Mufti, who was a great Friend to that Liquor, and wrote a Treatife in Defence of it, A.H. ${ }^{8} 75$. A.D. 1470 . The Name of this learned Mufii was Abda leader Bent Mobammed, and his Sirname Al Anfari, and the Titie of his Work, Omdat al Safuût fi ball al Cabuat: We have been the more particular in mentioning this Book, becaufe there is a Copy of it in the French King's Library amongft the Arabick Manufcripts, $\mathrm{N}^{\circ} 944$, and there are in it fome very curious Obfervations.

It is faid that there are in Grand Cairo, no lefs than two thoufand Coffee-houfes; there are a vant Number at Confantinople, and in all the Cities in the Turkifs Dominions; but fometimes on Account of the diftracted State of their Affairs, thefe Coffee-houfes are fhut up; but in Times of Peace they are much frequented, more efpecially in the Mornings and Evenings, when fuch as are moft at Leifure, and are in tolerable Circumftances, pals an Hour or two there in Converfation, in hearing the Mufick which the Mafters of fuch Places provide, or Books of Tales read, for which chey have People on Purpofe, who from a kind of Pulpit divert the Audidience with Collections of Stories of all kinds, good, bad or indifferent. I will for the Reader's Amufement quote one, which is not much amifs.
" When the Tortar Slaves are crofing a River, and "find themfelves in Danger of being drowned, they "s catch hold of the Horfe's Tail that paffes before them, "a and by this Means frequently efcape. From hence "comes the Proverb, Lay bold of the Iail if your can, "" and be fure keep it faft. There was an honeft Mufful" man once, that by applying it luckily efcaped being " empaled, and the Cafe was thus; he had fpent many "Years in Study, had molt Part of the Alcoran by
"Heart, was acquainted with many Sciences, but by
" attending to them, had fipt a very material Science,
" that of knowing how to live; fo that when he grew " " Years, though his Mind was well fed, his Body "was in Danger of Want. He addreffed himélf "to the Sultan Mabomet the IVch. on whofe Memory " be Peace! Befeeching him to fave a Son of Science "from ftarving. The Sultan having confidered his " Cafe, gave him no other Anfwer than this; Friend, "woith all your Learning don't you know, that the "World is a Tail, and bappy is be that gets hold on " it. The Muffulman went Home in Defpair, where " after paffing three Days in deep Meditation, he thus " addrefled himfelf to his Ruffian Slave, from whom " he had learnt that Tongue; Infidel, fays he, let us "change Cloaths, carry me to the Market, and fell " me to fuch a one. His Orders wère obeyed; he " worked for fix or eight Months in the Fields with " the other Slaves, and appeared fo very fupid, that " he was the Jeft of all his Companions. At the End "s of that Time he began to preach, affirm'd that he had "V Vifions, and that the Prophet, whofe Name be blef"fed, had taught him the Alcoron, of which he repeat"c ed many Chapters. This made a very great Noife, " he was vifited by every Body, and Nobody went " empty handed ; at laft, the Grand Signor heard of "it, and fent for him. As foon as he came info his "Prefence, the Sultan recollected him, Friend, faid he, " bave I not feen you before? For God's Sake cry"d " be, do not betray me, you know the World is a "Tail, and I have but juft got hold of it. The ifue " of the Matter was, that the Man got a living by his "Wit, and the World has got a good Story. My "Friends you'll be never the worfe for hearing it, and
beliews
" believe me, you will be much the better for remem" bring it; for of all Kinds of Knowledge, there is none " more important than this, that the World is a Tail, "r and beppy is he that can lay bold of it." I have feen a Book that belonged once to Sir Roger Manly, the true Auchor of the Turkib Spy, which contained the Stories that were read in a Week at a Coffee-houfe at Damafcus, and it was in Italian. I wonder it has not been publifhed, for in my Judgment it was much fuperior to any Thing of the Kind that I have feen in Print, and I do not doubt but there are many fuch Collections in the Cabinets of the Curious in Italy and France.
Every body knows that the Turks are great Takers of Opium, and much has been written upon thofe Subjects, about which, however, there are many Miftakes; we will endeavour to redify fome of them. The Turks call it Affoun, and the beft comes from Aboutige in Egypt. It is very true, that as much as we have heard of Opium, there never was any of it in Europe. That which is ufed by the Turks of Diftinction, is drawn by Incifion from the largeft Sort of Black Poppies, by laying new Ropes under them in the hottett Seafon of the Year ; when they are flit with a Lance, the Liquor falls on and fticks to the Ropes in Drops of an Amber Colour, which are carefully collected, and fold at a confiderable Price; and this is the true Opium. They afterwards mow and extract the Juice from the Poppies, which over a fow Fire they reduce to the Confiftency of Turpentine, and afterwards make it up in Lumps and cover it with the Leaves; this is properly Meconium, but is what we receive for and generally call Opium. The beft is of a black Colour, tough rather than brittle, of a pungent ftupifying Smell, and free from Drofs and Sand. The wort Sort is of feveral Colours, clammy in fome Places, hard in others, and full of Drofs and Impurities. What is extracted from Garden Poppies in Europe, is what we ftile Diacodiums ; and this, if it be carefully made, of the largett and beft Poppies, properly cultivated, and in a very dry hot Seafon, comes nearer Opium, and may be ufed with better Effect than the Meconium.

When the latter is purified and diffolved in fome convenient Vehicle, it is ftiled Loudanum, and when compounded with other Ingredients, thefe are marked by a Variety of Epithets added to the Word Laudanum. There is alfo a folid Laudanum, which is only the Meconium well purified, and reduced again into a folid Form. The very beft Method of doing this is by mixing the pureft Meconium with Rain-Water, and then evaporating it over a now Fire, to the Confiftence of a Syrup; after which it will foon grow dry of itfelf.
The Turks, the Perfians, and, indeed, all the Eaftern Nations, take Opium as we do Wine or Drams; and the Cbinese are faid to have the beft Preparations of it in the World. It exhilerates the Spirits wonderfully, and the Ufe of it is fo bewitching, that when People have once got a Habit of taking it, they cannot leave it off; and as they feel the Effects of it lefs by Ufe, they are obliged to increafe their Dofe, till at laft they come to take amazing Quantities. Mr. Gracin, an Author of good Credit, fays, that he faw a Fellow at Bengal, who for a Roupy took four. Ounces of it, which made him fleep all that Day; but the next Morning he came to himfelf, and appear'd not much the worfe for it. This, however, is very unufual, and it is very rarely that any Perfon in Turkey ventures upon half an Ounce, and this muft be after many Years Pradice. Thofe who take it while they are young, feldom live to be above fifty; but thofe, who begin to take it at that Age, are not fo much affected with it.

As to Wine, there is nothing clearer than that the Ufe of it is forbidden to the Turks by the Interpreters of their Law, except in Cafes of Neceffity, when it is prefcribed them as Phyfick. The Clergy make a great Point of carrying the Edicts againtt the Ufe of it into the ftricteft Execution, but to very little Purpofe; and what they do of this Kind, produces as bad Confequences as Drunkennefs; for upon the coming out of any new Edits, or once or twice in a Year to keep up a Show of executing the old ones, the Sub-Baflhaw and bis Officers go into fome miferable Tippling-houfe, let
all the Wine about, take every Penny of Money they can lay their Hands on, break and deftroy whatever they meet with in the Cabin; and, to complete all, treat the Mafter of the Houfe, at his own Door, with a delicate Baftinadoe; of which, if he complains, or infinuates that he depended upon the Officer's Protedtion, in Confideration of an annual Prefent, he is probably fent to Goal into the Bargain. But notwithftanding all this, there are every-where Tippling-houfes kept by the Greeks, for the Sake of getting a little Money, where yet they are expofed to a great many Inconveniencies, and to the daily Infults of the Turks when in their Cups.

Their Hovels are both within and without the moft defpicable Places that can be imagined. Four Mud Walls compofe the Houfe, plaifter'd on the Infide, painted over with bawdy Figures, drawn in Charcoal by drunken Turks, three or four rotten Benches, and a few Earthen Pots in which the Wine is both drawn and drunk. Wretched as thefe Places are, they want not Company or Noife from Morning till Night, the Greeks being exceffively abufive, and the Turks brutally quarrelfome in their Liquor; which fhews, that, from a political Principle, the Prohibition of Wine in thefe Countries is a very right Thing.

Almoft all our Travellers agree, that the Turks are extravagantly ignorant; but the Queftion is, whether themfelves are good Judges of this, and whether it lies much in their Way to be acquainted with fuch as apply themfelves to Letters. It is, indeed, very true that the Turks are prodigioully fond of Aftronomy, Geomancy, and other Arts of Divination, which are very juflly mentioned as Proofs of their Ignorance; but in Excufe of this, we fhould confider, that mean People practife this with Belief, and that Perfons of higher Stations do it out of Cunning. We ought alfo to reflect, that it is not fo long fince we ourfelves were addifted to thefe Fooleries, in which, after all, the Turks excel us extremely, not that their Aftrology or other Arts are a Grain more certain, but the Cheat is managed with infinitely greater Dexterity. The Turks have Grammars and Dictionaries of their own Language ; Books of Divinity, Hiftory, Poetry, Phyfick, Mathematicks and Morality ; fo that after all, perhaps, they are not quite fo barbarous in this Refpect, or at leaft not fo univerfally ignorant as they are reprefented; nor do we find, that in any Negociations with their Viziers, they are apt to be over-reached in their Politicks.
Their Religion, indeed, is abfurd enough; but this is common to them and to other Mabometons; and, perhaps, they appear more abfurd to us, than they really are, from our Want of being acquainted with many of their Doctrines. It is moft certain, that they entertain very odd Notions of the State of the Dead, and are actually perfuaded, that they have fome Kind of Senfation in their Graves. An Engli/b Merchant once walking by a Turkijb Village, with a Fanizary before him, came to the Burying-place of the fewe, where a miferable, fhabby-looking Fellow was fitting before one of the Tombs; upon which the Fanizary ftept up to him, and accofted him in thefe Words: You old Rafcal, wobat do you do out of your Grave? get into it again tbis Minute, and don't stink the World a Second Time! The poor ferw marched off as faft as he was able, and the 7 Fanizary took it for granted that he was fneaked into his Grave again.

But with all their Superftition, there is no Want of Free-thinkers amongft the Turks, who take great Lio berties with their Religion, and perhaps believe very little more of it than the Cbrijtians themfelves. But they are obliged to keep their Notions very fecret, for the Civil Government flanding upon the fame Bafis with their religious Belief, any open Declarations of Infidelity would not only render a Man highly infamous, but fubject him alfo to grievous Punilhments. The Dervifes or Monks are fometimes Enthufiafts, but, generally fpeaking, they are notorious Cheats and Hypocrites; they commonly affect a very warm Zeal for their Reli: gion, which they exprefs by being very rude to Cbriftigns, and taking uncommon Freedom with Perfons of
all Ranks among their own People, who very unwilling ly fubmit to their Impertinences for Fear of opening the Eyes of the Vulgar, who cannct but bear a great Reverence to Religion, when they fee that the more ftrict Profeffion of it, fets the meaneit Man on a Level with the greateft. Some of the enthufiaftical Dervifes are fincere in their Way, and do fome Service to Society by reproving the great People for their Offences.

As to the Slaves in Turkey, they are the moft fubmif five, tractable and obedient Creatures in the World, and tho' there are Mafters, that from the natural Brutality of their Tempers, treat them harfhly enough, yet generally fpeaking they are tolerably well ufed; nor are they totally precluded from the Benefit of the Laws, for a Slave may fummon his Mafter before the Cadi for ill Ufage, and if he alledges that their Tempers are fo oppofite, that it is impoffible for them to agree, the Cadi will oblige his Mafter to fell him ; but then it muft be allowed, that this Way of coming to Market does not much recommend him to the next Mafter; what affords thefe poor People moft Ground of Complaint, is, the little Care taken of them in the Time of the Plague; for the $\mathcal{T}$ urks upon a Principle of Fatality, and a Belief that every Man's Fortune, as they phrafe it, is written in his Forehead, when they lofe one Slave by the Difeafe, put the next not only into his Room, but into his Bed, without taking any Precautions, and fo lofe perhaps half a Score, one after another.

An Englifh Merchant who was very intimate with an honeft and fenfible Turk, that was half ruined by this wild Way of acting, convinced him of the Folly of it, by a very eafy and natural Experiment. He bid hirn take three large fine Lemons, one of which had juft begun to rot, and place them fo as that this rotten Lemon touched one of the found ones, and not the other; the next Day the found Lemon corrupted; the Iurk faw the Force of the Argument, caufed his Slaves Chamber and Bed to be well wathed with Vinegar, all the Utenfils changed, and every, Thing to be thoroughly perfumed, and thefe Precautions had their Effect, for the next Slave he had did very well, and it is to be prefumed, the Mafter was cured of his Folly ever after. By the Way let us obferve, that the Price of Lemons is a fure Way of knowing whether the Plague increafes or decreafes, when Conftantinople is infected, for almoft the fole Nourifhment they give the Sick, is the Juice of that Fruit, which they fuck continually, and as foon as one Lemon is exhautted, a frefh one is put into the Hands of the Patient, Experience having taught them, that Acids contribute moft of any Thing to the Cure of this Diftemper.

That the Turks are exceffively jealous, is a Fact as certain, as that their Women are exceffively lewd; and therefore if a Woman fpeaks to a Man, they take it for granted, that fhe has lain with him, or would lie with him, if She had an Opportunity; and when a Frank attempts to perfuade a Turk of the contrary, by infinuating that they may like the Company of a Man, for the Sake of Converfation, their common Anfwer is, Friend, if you catch a Perfon's Hand in your Pocket, would you think it was a fufficient Excufe if he fhould tell you he did it only out of Curiofity, to fee what was in it. The beft Security they have againft their Slaves, the only Males that have any Opportunity of coming near their Women, is the Severity of their Chaftifements, for an Offence of this kind he is punifhed with Death without Mercy; yet even this dreadful Remedy is not always effectual, for their Women having fo much Leifure on their Hands; have Intrigues always in their Heads, and it is allowed that none in the World exceed them in their Skill of managing them with Dexterity and Secrecy. We have already obferved, that the defpotic Power of the Grand Signior and the Vizir Azem is neceffary, according to the Scheme of their Conftitution; and though it is not limited by Law, yet it finds a natural Reftraint from the Fear of popular Infurrections, which are more terrible in this than almoft any other Country. As to the Iurkib Juftice, it is a Point of all others, the leaft underftood by Strangers, at which we need wonder the lefs, when we confider,
that even in Europe, one Nation knows very little of the Laws and Cuftoms practifed in another. Bur however it is certain, that the Turkif Law very much refembles what is ftiled the common Law in this Kingdom ; that is to fay, it depends upon Maxims and Rules that are founded chiefly in Ufage.

But there is one Thing that deferves particular Notice, and that is, that in no Country in the World there are fuch Numbers of falfe Witneffes, nor are thefe lefs ufed by the Chriftian Merchants eftablifhed amongft them, than by the Turks themfelves; for as every Thing in their Courts of Juftice muft be proved by two legal Witneffes, that is, by Mufumen, Merchants, would find. it impoffible to recover their Right, if they were fo fcrupulous as not to make Ufe of this Practice. In fuch a Cafe they call in a Couple of Turks of their Acquaintance to their Affiftance, and thefe baving firft very ferioufly afked the Merchant, if the Fact be as he flates it ; upon his anfwering in the affirmative, immedrately tell him, Well, upon thy Credit we will fwear 11, and are as good as their Words, for which they are gratified with a fmall Prefent; nay, in pubick Caufes, fuch as Petitions for repairing a Church, if the Caufe fticks for want of a Witnefs, a grave Turk that flands by will come in a Volunteer, and tell a formal Story how he came to know fo much of the Marter as will fut the Thing a-going ; but he experts to have his Prefent next Day, and it would be a Thing of very bad Confequence to neglect it ; but the greateft Objection to the Turkib Law arifes from the Corruption of thofe who difpenfe it ; for every Man is at Liberty to apply to the Cadi privately, and then without Doubt what he fuggefts is fupported by more weighty. Arguments than can be delivered in Words. Yet with all thele Difadvantages, and without Doubt they are not inconfiderable, an Englifh Lawyer who had great Opportunities of examining this Point to the very Bottom, has fuggefted, that the Turkib Manner of Proceeding is not wachout fuch Conveniences as balance all thefe Defects. The Reader no doubt will be glad to hear him, as his Remarks upon this Head are more to the Purpofe, than thofe that could be made by any other Man, not of the Profetion.
" One fovereign Virtue, fays he, of the Turkifb Luw, " is this, that every Man is his own Bailiff and Sum" moner, without the Plague of Procefs, Returns, "Alias, Pluries, and I know not what Hooks or Crooks, " that often beggar a Suitor, before he can bring his "Adverfary to anfwer him. But a Man, in this Country, " requiring the Adverfary to go before the Judge, he " muft without Shift or Delay go ; and if he offers to "efcape, a Thing fcarce known there, he muft run " quite away, for the very People will almoft deftroy " him if they catch him. Here is no fuing out a Writ, " going to the Sheriff, from him to the Bailiff, with a " farther Train of ill Confequences I am afhamed to " remember.
"Another Virtue, and a fingular one, is, that no Man " anfwers by Attorney, but in proper Perfon only. "The Courfe is, when the Parties come before the "Judge, the Plantiff makes his Demand for Money " lent, the Price of Goods fold, or the like. The Judge " fits all the while with his Paper upon his Hand, and " writes his Minutes. What Say you to it? Says he to " the other, and then he makes his Defence; if there " be a Writing fhewed, the Defendant fails not to " own it; there are no Non eft faifums for pure Delay, " to be tried. It is there infamous in the greateft De" gree for a Man to deny his Writing, when fhewed " to him before a Judge, or indeed any Matter of Fact "that is true, after it appears to have been fo to his "Knowledge. What a vaft Retrenchment of Delay " and Charge is this? Men anfwering in Perfon can "fcarce be brought to fpeak falfe; they muft be " ftrangely abandon'd to all Shame, that in the Face 's of a Court, without ftammering or blufhing, will do "fo. Whereas when they fit at Home, and leave s6 their Attorneys and Council to plead for them, "s there fhall be falfe Pleas for Delays profefedly, os and no Concern at all to their Countenances.
${ }^{6}$ The Turkib Law feems to have another Virtue, ${ }^{66}$ which lies in the Method of Proof; after the Judge 's hath heard the Demand and the Anfwer, he confi ${ }^{6}$ ders on which Side the Proof lies; If the Dealing be
" denied, as by the Defendant's faying he bought no
" Goods of the Plaintiff, or the like, the Judge bids
${ }^{6}$ the Demander prove it ; and if Witneffes are not rea-
" dy, he gives a few Days to bring them, becaufe he
" might expect the other Party would have owned the
" Dealings; but if he faid, It is true, I bought the
"Goods, but I paid bim for them, then the Judge bids the
${ }^{6}$ Defendant prove; but he will never let Witnefs
" come to fwear on both Sides to one and the fame
${ }^{6}$ Fact, for that is to make fure of a Perjury; fo in a
"Turkib Court, Witneffes never confront and upon
" Oath contradict one another ; but being once taken
" as Witneffes, the Caufe is at an End, the Demand is
${ }^{6}$ made and proved, What would you have more?
" But yet, if the Witneffes are not credible, that Ex"ception is allowed, and Witneffes heard to prove it,
6 and the Judge determines thereupon, whether he fhall
"s believe the Witneffes or not, and accordingly judges
6 of the Main.
"Another admirable Virtue of the Turkib Law is,
${ }^{66}$ that Decrees or Decifions never fight one with ano"s ther; and yet the Party hath the Benefit of an Ap-
${ }^{6}$ peal. They call their Decree an Odgett, which is a
" fmall Scrip or Ticket, which' the Judge writes upon
" his Hand, and gives out to the Party that hath ob-
"s tained Sentence. After this Odgett made and fign-
"s ed, and given out, no Judicature or Authority in the
"Empire can queftion or difcharge the Matter, or the
" Effect of it, no not the Great Divan, although the
" Odgett were made by the meaneft Judge in the Em-
" pire. This feems very much to refemble the Laws
" of the Medes and Perfians, when a Decree might
's not be revoked. It is certain, that in Turkey there
" cannot be more than one Odgett or Decree in one
's and the fame Caufe.
" A Turkih Judge would laugh, if he were told of
cs our Judgments, Writs of Error, and Error upon
' Error, Appeals, Reviews, $E^{2} c$. with full and entire
"Sentence of the Caufe pronounced in all, and the
" latter giving the former ill Language, and looking
${ }^{66}$ as if a Judgment in a Caufe were but a Foundation " whereupon to commence a new Suit, to the incoms6 prehenfible Delay and Expence wherewith the Parties,
" their Heirs and Affigns are tormented. But it will
" be faid, How then can the Parties have an Appeal ?
"As to that, if either Side thinks the Judge unskilful
" or partial, at any Time before Odgett made, he may " appeal to a Superior Judge, and then the Caufe is
"s as if it had not been heard; but the Parties go be-
" fore the Judge by Appeal, as if the Caufe originally
" came before him, and then he makes the Odgett;
"s but whoever makes it, the Odgett is irreverfible.
" A farther Virtue of the Turkiß Law is this: All
"Equity is comprehended in it. Men there are bound
" by their Contracts as well as here; but if a Contract
" prove very unequal, the Judge takes Notice of the
" Unreafonablenefs, and gives Relief. As if a Man takes
" an Houle to build at half the true Value; when the
"Work is done, he may fue in a Quantum meruit for
" the Whole; and it is enough to fay, I thought I
" might have done it for the Price, but was miftaken.
"This goes farther than our Courts of Equity, for
" they do not relieve againft any hard Bargains, with-
" out Eraud or Circumvention proved. It hath been
" faid, they do not fit there to relieve Fools; but if "we confider well, it will be found, that all Perfons "circumvented by Fraud, are fo far within that Deno" mination. But granting full Relief may be had, " what doth it coft to come at it ? In this Refpect the "Turkib Law is fimple, for it not only difallows all " over-reaching Bargains but, the Judgment of them "falls proper in one and the fame Suit, which Party "foever promotes it. And even here very good Pa-
" triots have deciared it fit, that the Court having Ju-
${ }_{-}^{6}$ rifdiction of the Caufe in Point of Law, fhould alfo
judge of the Equity emergent thereupon: But the prefent Conftitution doth not allow it.
"The Civilians reproach the common Law, faying, "it wants Equity, and needs a particular Judicature to "fupply it. But I think theirs worfe, for they have " no Mitigations, and all is funmum jus. And then "s they contradict themfelves, laying, Apices juris non "funt jura; and more grony leap over their Law, " judging as they fay, ex autboritate, againf Law, which, "s in their Language, is nobile Officium Fudicis. But the
"Turki/b Law feems, in there Refpects, to be moft con"s fiftent and complete. One Thing more I will ven-
${ }^{66}$ ture to alledge in Favour of the Turkibh Law, which
"s is of admirable Ufe, and that is, their Difpatch. A
"Caufe feldom lafts a Week, and very often is opened " 6 and determined in a Day; and there is fearce any ${ }^{6}$ Means to prolong it, but demanding Time to pro"duce Teftimony to Facts, about which the Parties "6 happen to differ ; their alledging and anfwering "6 for themfelves orally before the Judge, keeps down " Differences of Facts. For the Pride or Shame of "6 the Parties, as well as Integrity, will make them fave "proving, and, for the moft part, own what they " know to be true, and fo bring the Matter in Judga " ment upon the right Point.

It may be objected here," That this Proceeding is " precipitous, and Corruption a-part, for Want of "Advice and Deliberation of the Parties, as well as on "s the Part of the Judge, Wrong may be done; and "Juftice is a facred Thing, and ought to have the greateft Regard. It is granted that Juftice is a rare "Thing, if it may be had; but if it is to be gained by "failing through a Sea of Delays, Repetitions and " Charges, really it may be as good a Bargain to ftay " at home a Lofer. A wrong Determination expedite, " 6 is better than a right one after ten Years Vexa'tion, Charge, and Delay. A good Caufe imme" diately loft, is in fome Refpects gained; for the " Party hath his Time and Tranquility of Mind refer" ved to himfelf to ufe as he pleafeth, which is a rare "Thing in the Opinion of thofe who have felt the " Want of both, and of their Money into the Bargain. " The Reafon why Juftice is fo facred, is not becaufe " the Caufe of Suit, or Thing claimed in itfelf is of "s any Regard, for that Argument will bring all Things "s to a Levelling, as why fhould one Man have too " much, and another want? But becaufe it preferves "s Peace and Quietnefs among Men, which is the great"eft of all temporal good Things; and confequently, ${ }^{6} 6$ wrong Judgments, foon and final, have the Virtue of "6 Juftice, becaufe Peace and Quietnefs is thereby pre"ferved. But Delays have an Effect directly to the " contrary, for thofe maintain Feuds and Hatred, as ${ }^{6}$ well as Lofs of Time and Money; fo that if it be 66 faid, that in the End Juftice is fecured thereby (which " I do not grant) I anfwer it is done by unjuft Means, " and comes to the fame. But is it not a fad Tbing, fay "fome, for a Man to be burried out of bis Right? Is it "not a fad T'bing a Man Bould bave a Fever? As "s the Body, fo the Eftate muft be obnoxious to Infir6 mities; there is no Perfection in either State, and " that is always beft which is fhorteft, and hath the leaft 6 Anguifh or Pain.
" I fhall alledge but one Inftance farther, where I " think the Turki乃h Law is remarkably diftinguifhed, and " it is on the criminal Side: If a Man comes to the Judge, "s and with Clamour, as the Way is, complains that he ' is robbed of his Goods, the Cadi will ask him, By "whom, and where is the Thief? And if he fays he " does not know, perhaps punifh him as a Knave, that ${ }^{6}$ pretends to be robbed to cheat his Creditors. What, "fays he, doth not the Grand Signior protect his Sub" jects? If you are robbed, find the Thief, and Right " Shall be done; if you want Help, take an Officer, " but do not accufe the Grand Signior's righteous Go"s vernment. Now to add here a Word or two of their 'criminal Juftice, I fhall obferve, that it is executed ${ }^{6}$ with fuch Rigour, as keeps down Ofences fo effec". tually, that in that great City of Conftantinople, there

## Chap. I.

to the LEVANT.
 's Years, as in one, I may fay, in one Seffion, in Londion. "If a Thief is ca'sght, they make more Account of " him by difcovering others, than by the Example of " his Punifhment ; and they handle him at fuch a Rate, " that he cannot but difcover all he knows. He fhall
" fometimes be fecretly chained to an Officer, and fo " go about the City, and whom he points to is taken "up. The firft Thing done, is to fee that he makes
" full Amends to the Perfon robbed, and when that
"Perfon declares he is fatisfied, he is fent away with a
" Menace, that he concern not himfelf for Favour to
"s that Man. And, after all, what hath this poor
" Thief to reward him for all his Ingenuity and Ser-
" vice to the Publick, by difcovering? Nothing but
" to die without Torment, for if the Judge be difla-
" tisfied with his Behaviour, he makes fuch a publick
" Torture of him, as muft terrify all Rogues from the
" like Practices; otherwife he is committed to an Of-
" ficer to be fimply hanged, and then that Officer takes
" him into the Street, and chufes what Man's Sign or
" Poft he pleafes, and conftrains whom he thinks fit to " perform the Ceremony; and a Frank, if he comes " by unluckily at that Time, is not fafe from being pre= " ferred to the Employment.
We have dwelt fo long upon this Subject, that it is neceffary for us to be the fhorter in regard to the reft. The general Accounts we have of the Turkibh Manners are, at one and the fame Time, both true and falfe. True in regard to the Relaters Knowledge, who delivers what he faw and knew ; but falle, as it is applied, by afcribing what he collected from the narrow Circle of his Acquaintance to a whole Nation. The Turks are like other People, fome are Men of Senfe, others Blockheads; there are Men of Learning amongft them, as well as Multitudes that are ignorant. Drunkennefs is common among the meaner Sort, and much worfe Crimes amongft thofe in an exalted Station. Their Paffion for Women, and the effeminate Life they lead in their Apartments, has a very bad Effect even amongft Perfons of the greateft Diftinction ; and, to fay the Truth, there is fo little Felicity to be enjoy'd under their Conftitution, that we need not wonder at the Pictures modern Travellers draw of the prefent State of the Ottoman Empire, in which all that have Power are Oppreffors, and all that have it not, are oppreffed.

The Greek Chriftians, that live under the Yoke of the Grand Signior, are the molt miferable Pcople in the Univerfe; and though all of them do not appear fo, yet in Fact they are moft miferable Slaves. If they can get nothing, they muft of Courfe pafs their Days in Meannefs and Poverty ; and, if they come to have any Thing, they muft ftill wear the Appearance of Meannefs and Poverty to keep it. It is, indeed, true, that fome of them lift up their Heads a little, and live in a State much fuperior to what we have defcribed; but they muft have powerful Protectors to do this, and they muft be continually acknowledging the Favour of this Protection by Prefents equal to, if not above their Abilities; and, after all this, if any Change happens, and fuch Changes are continually happening to their Protectors, they are torn to Pieces, and ruined in an Inftant. But before this happens, they are equally defpifed and hated by the Turks, and the very meaneft of them will infult the Greeks with Impunity. But in the Midft of fo much Calamity, and under the heavy Load of fuch barbarous Oppreffion, thefe People keep up their Spirits, if to be eafy and merry may be fo called, and will be as frolick and gay over their Cups, as if they had milder Mafters, or lived in abfolute Freedom, according to the common Proverb amongft us, fo much ufed and fo little underfood, viz. as merry as a Greek. The Turks have fo much Policy as to indulge them in the free Exercife of their Religion, and to keep up their Hierarchy, which, generally fpeaking, keeps them in the Interefts of their Manters, fo as to prefer the $\mathcal{T} u r k i / b$ Government (bad as it is) to that of any Chriftian Power not of their own Religion. But if ever the Ruffan Empire comes to be fettled on a firm
VoI. II. $\mathrm{N}^{\mathrm{e}} 125$.

Foundation, and there fhould happen a Succeffion of two or three great Princes, the Turks would run a confiderable Hazard of finding that Prophecy trues which they have amongft them, that the Mufcovites will one Day fubvert their Empire.
The forws in the Grand Signior's Dominions are pretty much the fame that they are every where elfe, that is, a Kind of neceffary Evils. At Confantinople, Smyrna, Aleppo, and other Ports, every Chritian Houle, and, indeed, every Merchant of any Rank, has his Fere, who, if he has Goods to fell, finds him Cuftomers: and, if he wants to buy, finds out the Commodity is wanted. By their Ufefulners in this Refpect, they have a Share, and not a trifling Share, in all Sorts of Dealings; and fome of them arrive at Wealth, but never at Refpect ; for as they hate Turks and Cbrifitians equally, fo both Turks and Cbriftians hate them in Return; and for the far greateft Part of the Nation, they are in as low and defpicable a Condition as it is poffible to conceive a People, and which feems to be the very Extent of human Mifery : They are deftitute even of Hope, for no Revolution that can poffibly happen in a Country, the moft fubject of all others to Revolutions, can ever prove favourable to them; but they muft be content to drudge on under the fame heavy Yoke, let who will be their Maiters.
33. We will clofe this Section with fome Remarks upon the Decadence of the Turki万b Empire, which tho' its Dominions are very near as extenfive as ever, yet is very far from having the fame Force that it had heretofore. This proceeds from a Multitude of Caufes, but the principal is the Extinction of their ancient Spirit. It is very truly obferved by an eminent. Author that has been already quoted, that theirs is a Military Government, and that the Contitution is formed upon this Plan. It is for this Reafon, that a State of War is natural to, as well as perfectly confiftent with the Wel fare of their Empite, which can never enjoy interior Peace, if the Arms of the Grand Signior be notem ployed on one Sideior other. Almolt every State befides is oppreffed by War, and recovers its Strength in Time of Yeace ; but the Reverfe of this is the Cafe in Turkey, where War is almoft always beneficial, and Peace brings along with it the greateft Danger. But for many Years paft the Turkifh Difcipline growing relax, their Troops are no longer fo formidable, and their being continually beaten by the Cbrifians and the Perfans, has made Peace neceffary at leaft, if not agreeable.

This has been attended with an innumerable Train of Mifchiefs and Inconveniencies, for their Soldiery being never disbanded, as making a Part of their Conftitution, grow more and more formidable at Home, in the fame Proportion that they became more and more defpicable Abroad, which muft be the Cafe of all Countries that put their Truft in a Standing Army. Their Officers alfo being no longer preferred for their Military Virtues, but in Confequence of Cabals and Intrigues, are Soldiers only in Shew ; and the fame Difpofition fpreads itfelf downwards, fo that a Fanizary is at prefent terrible only from his Staff and his Cap, and to thofe he fhould protect, who fee Nothing in him now that is military except his Infolence. The Government alfo is fallen of late Years into the Hands of the Men of the Law, who for that. Reafon do all they cain to maintain Peace, notwithftanding that they cannot but be fenfible how much the Empire fuffers from the Extinction of that Spirit, by which it rofe and extended itfelf to that prodigious Dominion it ftill preferves.

But we may fafely affirm, that how large foever it may be, it is now no more than an infirm gigantick Body, which reels and totters under its own Weight, and would be infallibly overthrown, if its Neighbours fhould unite to bring about its Deftruction. The RufSians, the Poles and the Hungarians, would at this Day be a great Overmatch for the Ottomans, and it would be no difficult Thing for each of thore Nations, to bring fixty or feventy thoufand Men into the Field, be fides Irregulars. The Venetians are now no longer what they were, and their Maritime Power is funk to fuch a Degree, as to make no Figure at all in Europe, but

9 Z
even
even weak, as it is in Conjunction with the Pope's Gallies, thofe of other Italian Princes, and the Naval Power of the Knights of Malta, it would be very capable of giving Difturbance to the Turks, and of making a formidable Diverfion in Favour of fuch a Confederacy.
This is very far from being a mere empty Scheme or vifionary Project, for moft certainly, if thefe Powers were to confider their own Interefts, they would find it much eafier to gratify their Ambition in its full Extent by attacking the Turks, than by injuring each other, fince the Provinces depending upon that Empire, which by fuch a Confederacy might infallibly be torn away, are in every Refpect more fruitful and more valuable, as well as out of Comparifon more extenfive than thofe Countries about which they have been for many Centuries difputing. Befides, this would change the general Face of Affairs extremely, and open many new Branches of Commerce to all the trading Nations in Europe, which would make them ample Amends for the Lofs of that Profit they make by dealing with the Turks. The Paffage to the Black-Sea would be then fet open, and that noble Country which is now ftiled Crim-Tartary, from being in the Hands of thofe Barbarians, would be inhabited by a civilized and focia People, inftead of ferving for a Den of Thieves and Murderers, who fubfift by Rapine, and the Ruin of their Fellow-Creatures.

If once that Spirit of Intrigue could be conjured down, which, for two or three Centuries has diftracted and difturbed Europe, fuch a Defign as this might be eafily brought to bear ; and there is the more Reafon to wifh it, becaufe it would not only contribute to the Glory of the Chriftian Name, but to the common Eafe and Benefit of Mankind. It would afford to Sovereigns that Satisfaction which is truly royal, of relieving diItreffed and injured Nations, and reftoring them to thofe Rights of which they were at firft difpoffeffed, and from which they have been fo long withheld by barbarous and brutal Force. It would recover incredible Numbers of People from an abject State of Slavery, to a rational and induftrious Way of living, which would change the Face of the Countries they inhabit, and make them appear once more adorned with all the Advantages that Art can procure, from the bountiful Dif pofitions of Nature, not more profufe in any Part of the Globe, than in thofe neglected Territories, that groan under the Iron Sceptre of the Grand Signior; nor is it to be feared, that the Changes which fuch a Revolution would produce, fhould be attended with any of thofe fatal Confequences that commonly follow fuch

Events ; becaufe inftead of depopulating thefe Countries, it would certainly prove the Means of drawing into them prodigious Acceffions of People.

The Weakners and Nakednefs of the Turkiß Government would then lufficiently appear, for they would be neither able to carry off any Number of their Subjects from the Countries they loft, nor would they dare to treat with the fame Ufage as they now do, the Chriftians remaining under their Power, becaufe in Proportion as that declined, they would be compelled to abate of the Infolence that is fupported by it. Nor would the Advantages derived from fuch Conquefts belong only to the Powers that made them, for every Part of Europe would feel the Benefits of fuch a Change, fince it muft be attended with a vaft Alteration of Manners, and a free Communication with Countries, that are now as much hidden and unknown, as either the Northern or the Southern Extremities of the Univerfe. Add to all this, that the apparent and extenfive Profits, which murt redound from fuch Expeditions, would exciee a new Spirit in the Chriftian World, and very probably procure frefh Settements and Plantations in more favourable Climates, and at Diftances far lefs remote than we are now forced to feek them.

We fhould then fee the Greek Inands, that are now fo many Defarts, fmile again in all their native Beauty, the venerable Remains of Roman and Greek Antiquities would be difinterred, and new Structures rife, however unequal to them, out of their Ruins. It would be eafy to expatiate much further, on fo agreeable and pleafing a Theme; but what I have faid is fufficient to awaken the Thoughts of the intelligent Reader, and therefore it is high Time that I fhould call of my own, in order to refume the Thread of our Narration, and return to the Travels from whence I have digreffed. But before I do this, give me Leave to declare, that I am thoroughly perfuaded, that this Change is not at a very great Diftance, but, that either the prefent or the next Generation, will infallibly fee fomething of this kind accomplifhed, which in all Probability had been attempted before this, if the Change in the French Conftitution, which has brought them to act upon the Tur$k i / b$ Syftem, had not called off the Attention of the Chriftian Princes, to fet Limits to that all grafping Power, which before it is long, will be alfo crufhed by its own Weight ; for Structures raifed by Violence and Fraud, have fuch Weakneffes in their Foundations, that they cannot fubfift for any Length of Time, but when at their greateft Height fink into Deftruction, by the very Means whereby they were raifed.

## S E C T I O N III.

An Account of feveral of the moft remarkable Cities in Afid, of various Iflands in the Archipelago, and of Things moft obfervable in them, both with Refpect to their ancient and prefent Condition; with Remarks Hiftorical, Phyfical and Geographical.

Extracted chiefly from the Writings of Mr. John Thevenot ; but intermixed with Accounts from Wheeler and Le Brun.

1. A Defcription of the City of Burfa, or as fome call it, Prufia, with an Account of the Seraglio's and Tombs of the Turkinh Princes in its Neigbbourbood. 2. The famous City and Port of Smyrna defcribed. 3. A curious and copious Defcription of the Camelion, from Wheeler's Travels. 4. A Viere of the noble City of Ephefus, from the Writings of Le Brun. 5. The adjacent Country defcribed, with fome Account of the famous River Meander. 6. A curious Defcription of the Iland of Chio, of the Maftick Trees, and the Trade arijng from the Sale of that Gum. 7. The famous Convent of Niamoni, one of the beft belonging to the Greeke, defcribed. 8. Of the cbief City of the Ifland of Chio, which bears the fame Name, from the Accounts given of it by feveral Autbors. 9. A very particular and difinct Vierw of the moft remarkable Places in that Ifland. 10. Of the Inbabitants of Chio, tbeir Manners, Cufoms,

Trade,

Trade, and dreadful Oppreffions by the Turks. II. The IIlands of Patmos and Naxos defcribed, with an Account of the Inbabitants, and of the State of the Greek and Latin Churches. 12. Of the Iflands of Pa ros, Delos, Micone and Tina. 13. The Iflands of Nio and Santorini defcribed, with fome very curious Particulars relating to the latter. 14. An Account of the Ifland of Polecandro, and its Inbabitants. 15. A Defcription of the Iflands of Milo and Chimolo, with a very curious Account of the Hot-Baths in the former. 16. Sifanto and Thermia defcribed, with an Account of their Produce, and of the Cuffoms of their Inbabitants. 17. Of the Iflands of Ajora and Scyra, reith an Account of their Inbabitants. 18. Of the IJands of Samos and Nicaria, and of the peculiar Privileges which the Women enjoy in the latter. 19. A Defcription of the Ifland of Coos, now called Ifola Longa, and of the famous Cafle of Bodrou, which formerly belonged to the Knights of St. John. 20. Of the famous IJand of Rhodes, the Manner in which it woas taken by the Turks, and the Remains of the Cafles, Palaces, and otber Structures erected there by the Knights of St. John, wobile they were Mafters of it. 2I. A large and curious Defcription of the noble IJland of Cyprus, weith an Account of its ancient and prefent State. 22. Mr. Randolph's Account of the Ifland and Kingdom of Candia, and of the long War fuffained by the Venetians againft the Turks, in Defence thereof. 23. Mifcellaneous Obfervations and Remarks from various Autbors.

'MR. Thevenot left Confantinople, Auguft 30, commodious. It boafts of being the Birth-place of 1656. and fail'd in a Saique to Montagna, from whence he rode to Burfa, which was called by the Ancients Prufia, the Metropolis of the ancient Kingdom of Bytbynia, and was the Capital City of the Turkib Empire in the Reign of Orcan, the Son of Ofman, the firft Sultan, who took it in the 726 th Year of the Hegyra, and in the Year of our Lord, 1325 ; but it was taken from Bojazet by Tamerlane. It is about ten Miles diftant from Mount Olympus. It is pleafantly fituated, and Water is fo plentiful, that befides what they have in all their Dwellings, they have Fountains in their Houfes of Office for their Ablutions. They have fome Waters that run through the Town, fo hot, as to boil an Egg, of which they have made feveral Bagnio's, which ferve for the Cure of many Diftempers, and People come above ico Miles to wath in them. There are many fair Houfes in the Town, and above 200 Mofques; many Hons, very magnificently built and conftantly inhabited, becaufe the Caravans from feveral Places pafs through this Town; but the moft remarkable Buildings of this City are the Sepulchres of the firft Turki/b Emperors and their Sultana's, in fo many Chappels built Dome-wife.

Among them is faid to be one, of a French Sultana, who being taken Captive, and prefented to the Grand Signior, fo much ravifhed his Affections, that he enjoy'd her, but permitted her to exercife her Religon to her Death, The Cbrifians after her Deceafe defired to have the Care of her Burial, but it was not granted them, and fo fhe lies in a little Chapel, arch'd and inclofed with Walls among the reft. This Town is about half a French League in Length, not entirely wall'd, and has a Caftle ftanding in the Middle on a little Hill, which has Baftions that in their Opinion render it impregnable; but the Water that fupplies it runs through the Tuwn, and fo may be cut off. No Cbrititian is allowed to go into it, left they fhould endeavour to regain it, becaufe it was taken from them by ftopping the Water. Within this Caftle was formerly the Seraglio of the firtt Sultans of the Ottoman Family, but it is now demolifhed. It is faid to be built by an Emperor's Daughter, who was cured of a Leprofy by wafhing in the hot Waters of this Town, being taught the Experiment by a meally Hog, that by wafhing in it was cured. Clofe by the Town is an Hill, where a Turkib Hermit lives in a Chapel, which is enclofed with good Walls and Iron Gates. In it are the Tombs of one Roland, or Orland, and his Son, with his Sword and Mace lying on a Table juft by, who valiantly defended this Caftle againft the Saracens in the Life of the Foundrefs, and flew many of them.
2. From Burfa he went to Smyrna with the Caravan, and becaufe Nothing is to be met withal upon this Road but Water, Travellers mult carry all their Provifions and Houfhold-ftuff along with them, or want both. The Way lies through Tablitalie, Loubat, Soufurluc, Dgelembe, Palamout, and Manafa, to Smyma. This Town is a noted Place in Ionia, built at firt by Tantalus, named fo from an Amazon who took it, and when it was demolifhed by an Earthquake, rebuilt by Mark Antbony nearer the Sea, to make the Harbour more

Homer.
The Turks call it Ifmyr. It is a large Town, and well inhabited both by Turks and Cbrijtians, but is neither pleafant nor ftrong. It is commanded by a Cafte, at the Bottom of which, in the Way to the Greek Church called Santa Veneranda, is a great Amphitheatre, where Si. Polycarp, St. Yobn's Scholar and Bifhop of Smyrna, fuffered Martyrdom. Near it are the Ruins of St. Fobn's Cathedral Church, which had feveral large Chapels, and in one is till a Tomb, which the People fay is St. Polycarp's; but it feems rather to be that of fome Turk. The Port is but fmall, but the Road is fpacious and fafe, and has a Caftle lately built, to hinder what Ships they pleafe from coming in, or going out. By the Road ftands the Cuftom-Houfe, and the Houfes of the Confuls and Merchants, Franks, who have, for the moft Part, a Back-door towards the Sea. In it is a Cadi to adminifter Juftice.

Befides Turks, there live in it Cbrijtians of all Countries, Greeks, Armenians, and Latins. The Greeks have two Churches, viz. St. Veneranda, where their Archbifhop officiates, and St. 'George, which belongs to their Monks. The Armenians have alfo two Churches, and the Latins as many, one of them belonging to the Capucbins, which is over-againft the French Conful's Houre, and the other to the fefuits, which has a lovely Houfe adjoining to it. The Country about it is plain and fertile in Ulive-trees, and full of Gardens. All Things there are in Abundance, and their Wine is moft excellent. It is very fubject to Earthquakes, which happen every Year, and often ruin the Town; but it is foon rebuilt again, becaufe of the Convenience of its Situation. The Air in Summer-time would be very hot, if it were not for the low Wind, or North Breeze, as they call it, which blows regularly every Day, and much qualifies the Heat

We have a larger and more correct Account of this City in Sir George Wheeler's Travels, which we will add in his own Words. Smyrna hath fo many Advantages from its natural Situation, that notwithftanding the great Calamities which have befallen it by War, and moft prodigious Earthquakes, that no lefs than fix Times have over-thrown and almoft utterly ruined it Yet it hath ftill been thought worth the Repairing and Reftoring to all the Beauty the Art of its Inhabitants could contrive to adorn it with; notwithfanding alfo, that from fome old Tradition they expect the Seventh fhall be its utter Ruin, never to be repair'd. Is is fituated at the Bottom of a Bay, efteemed twenty Miles to its Mouth, fecured with high Mountains on every Side from all Winds but the Weft; whence from Sea they can receive no Damage : For the Hermus which emptieth itfelf into it, maketh a Bank of Sand that barreth the raging of the Sea out, yet leaves fuch a Paffage in it, although but narrow, that he muft be a very Ideos of a Pilot that cannot bring a Ship in fafe into the inmoft Part of the Bay; where he may find Room and Depth enough, with very good Moorage.
This Bay hath Mount Sypilus Nortb. Another Mountain, which I judged to be the Mefogijmonds,
mentioned by Ptolomy and Strabo, Nortb-Eaft. The into the Bay Soutbrwards, and of the Plain much more mentioned by Polomy and
Hills whereon the Town flands, from Eaft to South. North-East than the New Smyrna of our Times; but From thence to the Promontory Argemum, winding about to the Wefteria Point. Mons Mimas, now called the Brotbers, from the two higheft Points. Here is indeed a little Gap, being the Mouth of the Bay, but thence Hills begin to rife again to joyn to Mount Sipylus. Of this Entrance I fhall have Occafion again to fpeak when I part hence. But as to the reft, thefe Mountains are not fo near, but that they leave fruitful Fields round about between the Bay and them, well planted with Olive-yards, Vineyards, and Corn Fields among them; and from the Town to Mount Sipyius is a Valley of four or more Miles in Length, and near a Mile broad in fome Places, which with the Gardens about the Towns, and the Town itfelf, drink up two pretty Streams of good Water, one rifing Nortbward from the Mountain Sipylus, and the other Soutbward from Mount Mimas, which join together Norib-Eaft of the Town, and what it fparech, which is but little, the Sea receiveth at the Nortb-Wefl-End of the Towi. That which cometh Nortbwards from Mount Sypilus, is a confiderable Stream, driveth feven Mills, and hath A-. bundance of Fifh in it. The other, coming from Mount Mimas, is the greateft Part brought to the Town in Aquæducts, two of which are well built, with Stone Arches croffing the Valiey or deep Fols, which itielf hath dug between two Hills, whereof the Northernmofs is where Old Smyrna flood, now only a Cafte. The reft of the Water is divided amongtt the Gardens.
Smyrne is a Place of great Antiquity, and is reputed to have had the Amazon Smyrna for it Foundrefs. They therefore ftamped their Money with the Figure of her Head. I got feveral Pieces of them, very rare, and faw many more in the Cabinet of an ingenious Merchant there, Mr. Falkener, who defigns his Collection for the Univerfity of Oxford. One fmall one hath her Head crowned with Towers, and her two-edged Hatchet on her Shoulder, almoft worn out with Age, and about it are theie Letters, $\Sigma \mathrm{mypna}$, on the other Side the Prow of a Ship, and thefe, $\Sigma \mathrm{mrpnim} \Omega \mathrm{N}$. From another I faw of the Emprefs Tranquillina, is to be feen her whole Habit, which is thus: Her Head is crowned with a Tower, as before, her two-edged Axe upon her Shoulder, holding a Temple in her Right-hand, perhaps referring to fome Temple Tranquillina had built, in a fhort Veft down to her Knees, and Buskins half Way her Legs. There is fomething alfo fhe holds in her Left-hand, befides her Axe, which perhaps is her Bow. In another fhe is drefled in the Hahit of Hercules.
Of the ancient Situation and Beauty of this Place, Strabo giveth the beft and fhorteft Account. Thence, faith he, (defcribing it Nortbward from Ephefus) is another Bay, in which is Old Smyrna, twenty Stadia, or two Miles and half from the New. When the Lydians had deftroyed Smyrna, the Country thereabouts was only adorned with Villages for four hundred Years togecher; after which, Antigonus reftored it, and after hin, Exyimacbus. At this Day it is, of all the Affan Cities, moft beautiful. Part of it is built upon the Mountain, but the greater Part on the Plain to the Haven, unto the Temple of the Motber of the Gods, and to the Gymanaum. The Streets are mofic excellently built, and as much as poffible, reduced into Right Angles, all paved with Stone. It hath great and fquare Portico's both in the higher and lower Parts of the City. There is a Library, and the Homerion, which is a fquare Portico, with a Temple containing his Statue; for the Smyrnoites are very zealous for the Nativity of Homer amongft them, and have a Brafs Piece of Money called by his Name, Homerion. The River Meles runneth by the Walls. There is a Haven on the other Side of the City, which may be fhut up at Pleafure. Thus far Strabo.

The Old Simyrna that was in his Time, in all Probability, was on a Hill Soutb of this that is now, and Weft of the Cafle-hill; for there are fome Steps of Heaps of Stones laid in fome Order, as if a Wall had been there. This New Smyrna, but the Old one of our Times, without Doubt, took upall the Hill the old Cafle ftandeth on and then adjoining to it , down to a Point running

North, I believe, not much more, if fo much; for turning into Frank-Areet, is a Wall which feemeth to be Part of the ancient Walls of the City, although the Month of the River Meles is juit without the prefent Buildings; which is not far, and might eafily be turned thither, if nearer to the Walls formerly. Along this Wall, from the Sea, you come to the Foundation of a great Building of hew'd Stone they were then demolifh ing, which might have been the Sybils Temple, the great Mother of the Gods.

After difcouring largely of the Antiquities that fill remain here, and of the State of the ancient Chriftian Church of Smyrna, he proceeds thus. The Greeks that are here have but two Churches, yet they are numerous, this Place being the Seat of their Metropolitan. But befidcs them, here is a great Number of Chriftians of all Nations, Seets and Languages. The Latin Church hath a Monatery of Francijcens; the Armenians have one Church; but the Englijh, which are the mott confiderable Number next the Greeks and Armenions, have only a Chapel in the Conful's Houfe, which is a Shame, confidering the great Wealth they heap up here beyond all the reft : Yet they commonly excel them in their Paftor; for I efteem a good Englifb Prieft an Evangelift, if compared with any of the reft. The Hollanders, I believe next to the Englijh, are more numerous than any Nation of the Franks, and take no more Care, as I could learn, of their Religious Worfhip. But as to Trade, none ftrive to outvy each other fo much as the Englifo and Hollanders, whereof Smyrna and Aleppo are now the chief Places in the Levant. The Trade was formerly pretty well divided between them; but fince their War with the French, the Englijh have much the greater Part of it.

The chiet Commerce confifts in raw and Perfian Silks, Grograms, both in Yarn and alfo woven, brought to this Scale by the Perfans and Armenians, and much Cotton, raw and made in Yarn, $\mathrm{E}_{\mathrm{c}}$. which groweth all about thefe Countries, and the Inands of the Archipelago, being brought by the Greeks and Turks to be fold here. The Englijb Factory confifts of fourfcore or an hundred Perfons, moft of them younger Sons to Gentlemen, who give three or four hundred Pounds to fome great Merchant of the Levant Company, and bind thcir Sons Apprentices for feven Years, three whercof they ferve at London, to underftand their Mafters Concerns, and then their Mafters are obliged to fend them to negotiate in thefe Parts, and to find them Bufinefs, out of which they are allowed a certain Sum per Cent. where by their Induitry in Traffick for themfelves, allo upon good Gains, but little Lofs, they live genteclly, become rich, and get great Eftates in a fhort Time, if they will be but indifferent good Hufbands, and careful of their own and their Owners Bufinefs.
The Officers allowed over them by the'King and the Levent Company, are a Conful, a Chancellor, a Treafurer, a Divine, and a Phyfician. The Conful is allowed by the Levant Company, three thoufand Dollars a Year Salary, and five hundred of Gratuity, befides other Perquifites and honef Ways, whereby he may get much more. His Office is to maintain the Privileges granted by the Grand Signior to the Engli/b Nation, againft the Injuries and Infolencies of the encroaching Turks, inflead of an Ambaffador to decide all Differences that happen between Factor and Factor, to fee that no Injury be done by any of the Factory to the Turks, and to punifh Delinquents : So that he doth, in Effect, govern the Bufinefs of the whole Factory there, but yet from his Sentence, there may be an Appeal made to the Ambaffador. Mr. Ricaut was then Conful, who writ the State and Policy of the Ottoman Empire, and a Treatife of the Greek Church, an Appendix to the Turkifb Hiftory down to his Time, and alfo an Account of the feven Churches of Afia. He was very obliging to us, amongft other Favours, in directing and informing us, concerning the'e Parts. Their Chaplain is allowed five hundred Dollars a Year Salary by the Levant Company. He hath befides, a Warehoute
allowed
allowed him to trade with, befides cuftomary Gifts of all the Merchants yearly, which a much more. And indeed the whole Factory live together in the greateft Amity, Peace and Freedom, of any of them I have feen beyond Sea.

The French and the Venetians have alfo their Confuls here, but they are in no great Credit amongtt the Turks. The Englijh have the beft Reputation for their honeft Dealing, and therefore ordinarily their Word is taken inftead of Searching. But the Armenians pay more Cuftom than any. The Turks have thirteen Mofques, and the Fereos feveral Synagogues, all which make the Town populous, though ill-built, and without either Strength or Beauty. All that defends it from the Incurfions of Corfairs, is a little Fort at the Strait coming in about five Miles from the Town, whofe great Guns are its beft Security: For it hath but a little Ditch about it, and the Walls fuch as by two or three great Guns would be beat to the Ground. As to the Caftle on the Hill above the Town it is nighted, and although it hath the old Wall about it, I believe built by the Greek Emperors, yet it is only a Heap of Ruins within, with here and there fome arched Caves, ufed anciently for Citterns or Granaries, as fome think, having only two or three little Guns mounted againtt the Haven, to falute the Captain of the Gallies, or as Mr. Smith faith, the new Moon of Bairam. About the Walls are fet one or two of the Roman Eagles well cut, and another Boffo relievo of Men on Horleback. Over the Door is an Infcription in Marble, in the latter Greek Characters, but too high and difficult to be read.

There is another little old fafhioned Caftle at the Harbour, for the Gallies and Boats. On the other Side of which Harbour is the Scale or Cuftomhoufe for the Grand Signior's own Subjects. Beyond which, Southwards under the Hill, where St. Polycarp's Tomb is, are the Eniglifb and Dutch Burying-places, and North of the Caftle along the Shore, is, Firtt, the new Bezeftein, built out of the great fquared Stones of the Theatre. It is in Form like a Street, to fhut up at each End; the Shops are little Rooms, with a Cupola over each of them covered with Lead, and little Holes on the Top, with Glafs to let in the Light; oppofite unto this is a very fine Kan now Building. Af ter which is the Scale and Cuftom-houfe of the Franks, and then follows Frank-freet along by the Water-Side, with their Scales and Warehoufes, very convenient to lade and unlade their Goods, and is the pleafanteft and beft built of any Part of this prefent Smyrna.
3. As it muft be allow'd that no Author extant has given fo clear, fo curious, or fo correct an Account of that wonderful Animal the Camelion, as Sir George Wbeeler has done; and as he was led to this by his feeing fo many of thefe Creatures at Smyrma, it cannot but be agreeable to the Reader, to perufe his Remarks on fo entertaining a Subject. About Smyrna fays he, are Abundance of Camelions, which is an Animal fomething refembling a Lizard, but hath his Back gibbous like a Hog, and its Feet are divided like the Claws of a Woodpecker or Parrot, two Claws before, and three behind, which are not feparated from each other until near the Ends. A long Tail it hath like a Rat, and is ordinarily as big, but it hath very little or no Motion with its Head. They are in great Abundance about the old Walls of the Caftle, where they breed, and lie in Holes and Heaps of Ruins. Several we faw, and two we kept twenty Days at leaft, in which Time, we made thefe following Obfervations upon them.
Their Colour ufeth to be green, darker toward the Back, and lighter towards the Belly, inclining to a Yel low, with Spots, fometimes of a reddifh Colour, and fometimes whitifh. But the Green would often change into a dark Dirt Colour, without any Appearance of Green. The whitifh Spots would fometimes vanifh, or turn into the fame Dirt Colour, and fometime remains, Sometimes they would only change into a darker Colour, of a kind of Purple-like Tincture, which ufed of ten to happen when it was difturbed. Sometimes from a green all over, they would be fpotted with a pure

Voe, II. No $125^{\circ}$
black, which alfo happened fometimes when it return'd from the black, ordinarily when it flept under a white woollen Cap, it would, when uncovered, be of a white or Cream Colour. But this it would do alfo under a red Cap. I never faw any change red or blue, altho ${ }^{\circ}$ they have been laid upon thofe Colours often, and continued there a long Time. But upon green they would become green, and upon the dark Earth they would foon change to that Colour. One of the fame Bignels, of which I made a Draught, I caught as I was walking on the Side of the Hill near the old Caftle, where I faw many which had changed themfelves from the Colour of the fpeckled Stone Wall, to a grey, with Spots like Mofs. This I found on the Top of a green Buhh of Prunella Spinofa, which, when I firft caft my Eye upon, it was of a bright green Colour; but as foon as it perceived that I faw it, immediately let itfelf drop to the Ground, and I as foon ftopp'd to look for it, but could fee nothing; yet continuing to look about earnefly, at laft I perceived it creeping away to a Hole in the Rock, being changed to a dark brown Colour, exactly like the Earth, which was then of that Colour after a Shower of Rain
This changing of Colours is given to this Creature by Nature for its Prefervation. For it is very now in its Pace, lifting up its Legs high and not quick, as if they faw not the Way before them, or rather, as if they fearched for Hold to climb up by, which they can do very well on a Bufh, Tree, or Wall. When it faw itfelf in Danger to be caught, it opened its Mouth, and hiffed like a Snake. In a fmall Time after I put it into my Handkerchief, it turned of the fame Colour, with fome white Spots, and a little Tincture of red. This little one changed its Colour more nimbly than others that were greater. The Caufe of which I attribute to the Wildnefs of it, the other having been kept a good while before it was given us, and confequently tamer. The Eyes are as wonderful as the Colours, which are as my Lord Bacon hath remarked, large in Proportion to the Bignefs of its Head, being commonly bigger and larger than a Pea. Bui that which feems moft obfervable, his Lordfhip hath taken no Notice of. It is covered all over with a thick Skin, of the fame Subftance with the Body, the Grain being in Circles juft to the Center or Middle, where there is a Hole no bigger than a fmall Pin's Head, by which it receives Light, which mult make the Angle of its Vifion very acute. The Head being immoveable, it cannor turn itfelf to the Objects as it lifteth. But to make Amends for all fuch Inconveniencies, Nature hath given moft wonderful Motions to its Eyes, beyond thofe of any living Creature It cannot only move them at the fame Time, both forward and backward, upward and downward ; but alfo one forward, the other backward, the one upward the other downward, the one fixed on one Objeet, and the other moving according to the Motion of fome other Object, and fo is capable of all the Changes imaginable, which my Comrade Mr. Spon, and I often éxperimented with a great deal of Aftonifhment.
The Tongue is a kind of little Trunk, of a grifly Subftance, above half an Inch long and hollow, join'd to his Throat by a flrong membranous and flefhy Subftance, in which it is fheathed when it is in the Mouth. It will dart this out of its Mouth above an Inch, being fmeared with a glutinous Subflance to catch Flies, which ftick faft to it as to Bird-lime, and fo are brought into its Mouth. Thefe Flies are their ordinary known Food, although I never faw them catch any, but faw one that was almoft dead, having a Fly in its Mouth. The reft of its Suftenance is Air, of which it will fill itfelf, being fet out in the Sun, until it becometh much fwollen. Of its Excrement I remarked Nothing. But my Comrade reported, that a Perfon of Curiofity at $L y$. ons, affured him from his own Obfervations, that although the Camelion did eat little or nothing, yet is neverthelefs made much Excrement.

They will live without any Suftenance befides Air, a very great While, as will many other Animals of the like cold Nature, viz. Serpents and Lizards, E3c. One that I open'd had Guts, but I perceived Nothing in 10 A
then:
them; but the Reafon I believe was, becaure it was even ftarved, having been kept a great while, and then almoft dead. Its Lungs reach near the Length of its Body, confifting of a thin skinny Subftance, full of fmall Veins, and divided into two Labels placed on each Side, and filled with Air, which being let out, thofe Labels fhrunk together. Its Tail is of very great Ufe to it in climbing. It will twine it about a Bone or a Stick fo faft, that if it lets go, or falls fhort in reaching at any Thing elfe with its Claws, it will hang faft by the Tail, and furtain and recover its whole Body by it. The little one that I caught, I put into a Glafs fo deep, that it could not reach the Brim with its Fore-feet by much, nor could take any Hold with its Claws; and yet it got itfelf out, and almoft efcaped from me, as I faw afterwards, by flanding upon its Fore-feet, and hoifting itfelf up backwards, until it catched hold of the Brim of the Glafs with its Tail ; by the Help whereof it lifted all its whole Body out. And this is what I oblerved of this wonderful Animal, which thus challengeth Praife for its Creator the Lord of all Wonder.
4. Epbefus lies not above fourteen or fifteen Leagues from Smyrna. In the Way is a Village called Sedequi, about three Leagues from Smyrna, fituated in a very pleafant Country; for which Reafon the European Confuls of Smyrna have their Country-houfes there, and frequently retire thither to divert themfelves with Hunting. The reft of the Way from Sedequi to Epbefus is over a very pleafant and large Plain. Epbefus, once fo noted a City, is now nothing but a confufed Heap of Rubbifh, Pieces of Marble, demolifh'd Walls, broken Columns and Chapters. That Part, which is at prefent inhabited, is bounded on the Eaft with a large Plain, which reaches as far as the Archipelago, and on the Sides with high Hills. The moft remarkable Things in it are, The old Church of St. Fobn the Evangelif. It had anciently four Gates, but two of them are wall'd up. You enter into the Church by a Defcent of fixteen Stairs, at the Bottom of which is a Fountain. Within it are four Pillars of Porphyry fpotted with Black and Red, twelve Foot and an half in Circumference, and thirty-fix Foot high, being one entire Piece of Stone, which bears up the Roof. There are alfo two other Pillars of Sameon Stone, and round about the Church, on the Outfide, is a Gallery having four Pillars a-breaft, and fix in Length, fet off in the Middle with an Octogon Fountain, each of whofe Sides are ten Foot long, and one Foot thick. The Church hath two Domes, and is cover'd with Lead. The Turks having converted it into a Mofque, have added a Mineret, and adorn'd it after their Fafhion; but the greatef Rarities of it, when it was a Church, were carried to Conftantinople to Sultan Soliman, to adorn the Mofque he had erected there.

The Caftle ftands on an Hill juft by it, and has a very ancient Tower ftill ftanding, on the Top of which is a very curious Piece of Sculpture, or Baffo-relievo, which, as fome fay, reprefents the Hiftory of the famous Roman, Marcus Curius; but others fay, the Deftruction of Troy. The Truth is, none dare come near enough to take an exact View of it, and fo they only guefs at it. In paffing it, you may difcern three Pieces of Marble, one reprefents Baubmal, the fecond a Man fallen dead from his Horfe, and a Perfon in a Senator's Habit ftanding by, feems to lament the Accidênt, and the third is the Figure of a dead Body laid out ready for Interment.
A large Inclofure, where anciently flood the Temple of Diana; but there is nothing remarkable of it, but one large Gate much ruined and defaced. Within it, on the North Side, is engraven on a Stone a Man on Horfeback, with a Dog by him, and a Serpent twifted round a Tree. On the South-fide are two Infriptions, the one within, in thefe Words, ACCENSO. RENSI ET ASI压; and the other, M. P. VEDI NICERH. VEDIAE. PAVILLIMX. M. HIEEVXORIS EI. But the Learned cannot tell what they mean. On the Front of the Gate are thefe Words graven, UNIOR CANIUSIUM; but they are fo niingled, that their Meaning is not to be guefs'd at.
Two Amphitheatres, where Prizes ufed to be anci-
ently fought; but nothing now remains of them, but Part of the Walls of one of them, built after the antique Manner of large Free-Stones. Hard by thefe Amphitheatres is a large Square, where are a great many Pieces of broken Columns, Chapters, Frizes and Pedeftals, of a wonderful Bignefs. Upon fome of them are Arches of a prodigious Bignefs, and in the Body of one of the Columns are a Pair of Stairs, which lead a great Way under Ground. Among the Ruins are fome Remains of the ancient Baths.

The Grotto, called, The Cave of the feven Sleepers, who Hying into that Place to avoid the Perfecution in the Reign of Decius the Emperor, two hundred and fifty Years after Chrift, fell into fo found a Sleep, that they did not awake again till the Reign of Theodofius II. who was a zealous Protector of the Chriftians, and fuppofed they had flept but one Night, though it was near two hundred Years.
A Tomb, or Monument, on which are feveral Greek Characters, and four little Children in Bafjo-relievo, with feveral Marble Statues buried under Ground, yet fo carelefly, that the Feet of fome of them appear'd above.
5. About a fmall Hour's Journey from Ephéfus are to be feen the Fonts, where, they fay, St. Fobn the Evangelift baprized the Chriftians. It is a grey JafperStone, fixteen Foot in Diameter, but a little mangled by Travellers, who ufually carry away a Piece of it. The Greeks have many like them. About half a League further, upon the Top of an Hill, is a Fabrick, faid to be the Place where St. Paul was imprifon'd. There are four Rooms curiounly wrought in Marble, ftill ftanding. From this Cafte is a pleafant Profpect over the Plains and Meadows, where the River Meander makes fo many Windings and Turnings, as ravifhes the Spectator with Wonder and Delight at once. The Water of it is very pleafant, and the Current of it fo ftill, that one can hardly difcern which Way the Stream runs, unlefs it be at the Mouths where it empties itfelf into the Sea. Not far from Ephefus lies an Inand called Scala Nova, but by the Turks, Cous-Adaf, or the Ifland of Birds. Here are the richeft Mufcadine Wines made, of all the Inands of the Archipelago.
6. From Smyrna Mr. Thevenot went for a Diverfion to fee the Wonders of Cbio, fo much talked of throughout all Afa. This Inand, which may be called the Paradice of Greece, is governed by Cbrijtians, though under the Authority of the Turks, who command in fmall Matters. They chufe themfelves COSS, one half Greeks, and the other half Latins, who, during the Time of their Continuance, take Care of all Affairs. The People obtained thefe Privileges by fubmitting voluntarily to Mabomet II. when he conquer'd Greece, and the Turks fuffer them to enjoy them without Controul. Up and down the Country are feveral Churches, belonging either to the Popifh Bifhops or Monks, but the Greeks have many more in feveral Places, the Latin Churches being reckon'd but three hundred and one, but the Greeks five hundred: They are all very well ferved, and Divine Service is performed with as many Ceremonies, as if it were in the Heart of Cbrifendom, for the Turks moleft them not, but they have a free Exercife of their Religion, infomuch that on Corpus Cbrifti-Day the Eoly Sacrament is carried about the Streets under a Canopy, without any Fear of Indignity that may be offered by the Turks, though nothing is more odious to them than that Ceremony.

When any Man is found killed in this Illand, whether Cbristian or Turk, the Author of the Murther is diligently fought for, but if he be not found, the Town mult pay the Price of his Blood thus flain, at the Rate of 12,000 Afpers, which is affeffed upon every Houfe by the $\operatorname{COSS}$; but if the Murtherer be found, his Blood fatisfies for all, and no Money is paid. The Cadi and Turki/b Officers make Advantage of thefe Fints. In the Ifland are twenty two Villages that have Maftick Trees, which are in all an hundred thoufand. They are Lentisks, crooked like Vines, and creeping on the Ground.

They prick thefe Trees in the Months of Auguft and September, and the Maftick, which is their Gum, fweating out by the Holes made in the Bark, runs down the Tree, and falls upon the Ground, where it congeals into flat Pieces, which they gather fome Time after, and lay it in the Sun to dry, and then range and fhake them in a Sieve to feparate the Duft from them, which fo fticks to the Faces of thofe that do it, that it cannot be got off but by rubbing their Faces with Oil. Thefe Villages produce above one thoufand Chefts of Maftick, of which they pay to the Grand Signior yearly three húndred Chefts, or three hundred Weight, containing ninety Oques a-piece, every Village being affeffed according to their Quantity of Trees, and the reft they are obliged to fell at a certain Rate, to the Farmer of the Cuftoms. This Maftick is by Diofcorides allowed to be the beft in the World, though it grows alfo in other Places. It is a white Gum which enters into the Compofition of many Ointments, and the Greeks ufe to chew it much, becaufe it makes them fpit, whitens their Teeth, and fweetens their Breath; they put it alfo in their Bread to make it more delicate. The chief of there Maftick-Towns is Callimacba, which hath two Gates that ftand always open, fix Greek Churches, and a Nunnery. It is well peopled, and round it are faid to be thirty Greek Churches.
7. Some Miles from this Town lies Niamoni, i. e. the Old Virgin, where is a Convent of Caloyers or Greek Monks. It ftands among Woods and Rocks, being built by Confantine Monomancus, Emperor of Confantinople, in 1050. The Church is adorn'd with a great many Pieces of Marble and Porphyry, and among others with thirty two Marble Pillars. The Dome is full of Pictures of Mofaick Work, and the Church is kept in good Repair. The Convent is very fpacious, and built in the Form of a Cafte: No Woman may enter into it. There are commonly two hundred Monks in it, under the Government of an Abbot, and it muft never exceed that Number.

When any Places are vacant, fuch as will fupply them, and become Caloyers, muft pay one hundred Piaftres, and carry what Eftate they have into the Convent, which they enjoy for Life, and then leave it to the Convent, unlefs they have a Kinfman who will become a Monk, and then he may give one Third to him, on Condition, that at his Death it go to the Convent. The Convent gives to the Monks every Day black Bread, Wine, but not good, and rotten Cheefe; and, if they will have any Thing elfe, they muft provide it as well as they can; and fome live well on their own Eltates, and keep a Horfe to take their Pleafure ; the reft muft make a Shift with their Commons, yet on Fefivais and Sundays they eat altogether in their Hall or Refectory. This Convent pays the Grand Signior five hundred Piaftres a Year, for their yearly Revenue is above fixty thoufand Piaftres; and in their Treafury they have above a Million of Gold, for two Thirds of the Inand belongs to them. The Monks that die among them are laid in the Church of St. Luke, jult without the Convent. They have two Bells, and there are little ones in every Village, but the Turks throughout their Dominions, allow them no where but here.
8. The chief Town of this Ine is of the fame Name. It hath good Houfes, and the Streets are wide enough for Coaches: It is not large, but well peopled, and moft Part of the Inhabitants are Chriftians, either Greeks or Latins, who have each of them a Bifhop, and feveral Churches; but the Greeks have moft by far. They have alfo many Convents of Nuns, but not fo ftrictly flut up, but that Men may come at them, and they will be kind to them, fometimes even beyond the Bounds of Chriftian Charity. They may leave their Convent when they pleafe; and their Bufinefs, while they are in it, is to embroider in Gold, Silver and Silk upon Handkerchiefs, Purfes, $\mathcal{E C}$. and they are very skilful in it. The Latins have five Churches in the Town, the firt is the Bifhop's, which is fair and large, but built fince the Turks have been Mafters of Cbio, according to an Agreement made between the French King and the Grand Signior.

To this Church belongs a Burying-place, where all the French that die in this City are interred; which was given to it - by Mr. Fobn Dupuis, of Marreilles, the French Conful there. The Capucbins alfo have a large and fpacious Church, which ftands over-againft their Convent, which is neatly built, and has a large Garden, but wants Water. They are forced to keep their Gate continually flut, becaufe of the Turks, who, if they get in, fpoil their Gardens, and commit many other Infolencies. They teach the learned Languages and Chriftianity to all Children that are fent to them, The Jefuits allo have a Church and College, and are of three Congregations. The Facobins and Cordeliers alfo have fair Churches. The Turks have their Mofques, and the feres their Synagogues. The Town is but fmall, and not ftrong, but hath eight Gates, and a pretty good Caftle to defend it. The Turks live in it, and are generally about eight hundred Men. No Cbrifian may lodge in it ; but the feres, for their Security, pay a certain Sum yearly to dwell in it, for they would find but bad Entertainment among the Cbrifizans.
It was built by the Genoefe, when they were Mafters of the Ine, and commands the Port. Four Miles from the City, near to the Sea-fide, is to be feen a vaft Stone, which was cut out of fome Rock ; it is almoft round, but the upper Part is flat, and fomewhat hollow. On the upper Part are Places like Seats cut in the Stone, of which there is one, higher than the reft, like a School-mafter's Chair, where, as Tradition reports, was Hower's School, where he taught his Scholars, M. dut Mont fays, he faw nothing but a fquare Altar cut out of a Rock, with the Figures of an Ox, Wolf, Sheep, and Rabbit, in Bafforelievo, and thinks, that in all Probability there were no Schools there, but that it was a Place where Sacrifices were offered to the God Pan, or fome other Rural Deity. The Ine of Cbio is eighty Miles in Circuit, and very populous, containing, befides the chief Town Cbio, already defcribed, fixty Towns and Villages, inhabited for the moft Part by Chriftians.
9. The chief Villages are Cordomolo, which contains about five hundred Inhabitants: The Country about it is very fertile and well watered, yielding annually one hundred and fixty, or one hundred and feventy Tun of Wine. Some Years ago, feveral Pieces of Gold, Silver, and Copper Money, of the Emperor Confantine, were found there. Five Miles from it is a lovely Valley half a Mile long, where is a Spring of Water, to which there is a Defcent by twenty five beautiful Marble Steps. At the End of it was a Temple of fine Afh. colour'd Marble, but it is pull'd down, and the Stones broken, and this only to get the Iron and Lead. that joined them together.

Beyond it is Vichi, a Village inhabited by three hundred Souls, having a Church dedicated to the Virgin. Beyond it is Cambia, which has one hundred Inhabitants, and lies among Rocks, Hills, and Woods of wild Pine-trees, which they fell for Timber to build their Galleys. Among the Mountains are feveral Churches. Below this Village is a Valley, where ftands a little Caftle built upon a Rock, which is almoft inacceffible. Over-againft this Caftle is the Mount of St Elias, which is the higheft Place of all the Inand, and is feen from Tenedo, which is above one hundred Miles diftant. It has a Church dedicated to that Saint built on it, but is ufually cover'd with Mifts and Snow. In the Middle of this Mountain is a large Spring, which waters the Fields about it, and makes them very fertile, and they are planted with all Sorts of Fruit.

In a Wood hard by lies Spartonda, a Village inhabited by about fifty Shepherds, but very pleafant, affording Plenty of good Water and Fruits. Between Calandre and Coronia there is a Bath of Sulphur by the Sea-fide, under extraordinary big Oaks. It is called Hayafma, i.e. the Holy Water, becaufe the Water being drank, cures many Difeafes, but by the violent Operation it has killed many. Three Miles from the Sea, at the further End of the Inand, is a Town called Sc. Helena, built on a Rock, containing two hundred Inhabitants, two Churches, and a Chapel. The Inhabitants of this Place firmly believe, that if a dead Body does not
corrup
corrupt in forty Days, it turns Zorzolacas, or a Nomolacas, i. e. an Hobgoblin. The Chapel is highly efteemed for its Sancticy by all the Villages round about.

From hence one goes to Voliffo, which is a great Village, with about three hundred Houfes, and fitteen hundred Inhabitants. It is feated on an Hill, and has a Caftle built by the famous Belifarius, the Emperor fuftinian's General, who was forced afhore there by a Storm. The Country about it is very pleafant, open and fruitful, and the Inhabitants raife five thoufand Weight of Silk yearly, with which they pay their Tribute. They are, vicious, and it is thought they lie under a Curfe of being always deftitute of Bread

Near this Place is Varvarifo, where there is a Church dedicated to St. Marcella, to whom they keep a folemn Feaft, called Panagirio, and the Prietts fing Praifes to her all Night long.

Three Miles irom this Village is the Monaftery dedicated to St. Jobn, and by it a Village called Fitta, near which is a great Village, where there is a running Water that drives eight Mills, which ferve all the Villages thereabout, for the Peafants have Hand-mills, and their Wives grind their Corn. From hence you go to Sieronda, which is an ancient fpacious Tower, inhabited by fifty Shepherds, who have a Church in it. A little farther is Lecimiliona, a Village of one hundred and fifty Inhabitants, and a Church. There begin the Maftick Trees. Two Miles from thence is Elata, the Inhabitants of which are famous for taming of Parcridges.
10. At Armolia, which is a little farcher, is made all the Earthen Ware ufed in the Ine. It lies in a Plain full of Maftick Trees, and contains five hundred Inhabitants and feveral Churches. Over-againft this Village ftands a Caftle, called Apollieno, very ftrong to refift the Corfairs. It was built in 1440 by Nicbolas Juftiniani, and has a Church in the Midft of it. The Village Mefta exceeds all the reft in Strength and good Building, and contains three hundred Inhabitants and feveral Churches. By it are two Harbours, Aidinamy, and San Nicbita, but this laft is neareft Pergi, a grèat Village with a Tower, containing two thoufand Inhabitants and thirty Churches. The reft of the Villages have the like Number of People and Churches, and in many of them are Caftles and Towers, built to defend their Towns and Maftick-Trees from the Ravages of the Turks of Natolia, who croffing the Sea in Boats or Gallies, come and carry away both the People and their Goods; for which Reafon they have built. Towers all round the Mand, at four Miles Diftance one from another.

This whole Inland is very fubject to Earthquakes, yet would be very fertile were it not fo ftony, and had more Water, for it rains fo lttle there, that every Spring the Turks, Greeks, Latins, and Feres, are forced to make Proceffions to obtain Rain. But notwithftanding the Hillinefs and Drinefs of the Inand, it has all Things neceffary and good in fufficient Quantities. It yields Corn and good Wine, but being thick, fome do not like it, becaufe, they fay, they mult both eat and drink it. All Things are cheap there, and excellent Partridges may be had for little or Nothing, for they keep them tame like Turtles, and have Keepers, who drive them out in the Morning, and whiftle them in at Night, which Call they always obey. The Inhabitants of this Illand are the only People who have preferved their Liberty under the Turks, living as they think fit, and exercifing their Religion with all imaginable Freedom, only paying them their fettled Tribute.

They are generally Cbrifians, many of them are Pa pifts, and the reft of the Greek Church. They are apparelled after the Fafhion of the Genoefe, and have much of their Humour. They are in Countenance (that is, the Men) fo ugly as would feare a Man, though their Perfons are proper and well fhap'd. They are very proud, yet their Gentlewomen go to Market to buy Provifions, and carry them openly in the Streets. They love the Spaniards better than the French, but had rather be under the Government of Turks than Cbrifians.

The Cbiots make much Damask, Sattins, Taffata's, Fuftians, and other Silk Stuffs, and drive a Trade in
many Places with their Saiques, viz. to Grand Cairo, and the Maritime Cities of Barbary and Natolia. Such as are not obliged to work or follow Bufinefs, fit whole Days under the Trees talking together. Learning is out of Ufe in this Country, but profound Ignorance reigns among them, yet they have naturally a fharp Wit, fo that to avoid their Cheats in Dealing, a Man had need of all his Eyes about him. They are much given to Pleafúres, and love exceffive Drinking.

The Women are very beautiful and well Maped, their Faces are as white as the Jafmin they wear on their Head, and are very charming, but their Breafts are fcorched with the Sun, which is much to be wonder'd at, becaufe they take as little Care of their Faces as Breafts. They are always very neat in their Drefs, wearing on their Heads very white Linen. They have a very brink and lively Wit, which renders them the moft talkative Women in the World, but are extreamly vain in their Apparel, wearing the fineft Stuffs they can get; but whereas they ufed formerly to load themfelves with Rings and Jewels, efpecially upon the Vigil of St. Fobns? Day, they now are forbidden it under the Pain of Excommunication by the Pope, becaufe the Captain-Ba/ba, feeing this Finery, impofed a Tax of 50,000 Piaftres upon them, and made them pay it, fo that they wear no Gold, Silver nor Jewels about them.

The Cbiots, both Men and Women, are much given to Dancing, and on Sunday, and Holidays they dance all Night promifcuoufly, both in the Cities and Villages, and a Stranger is freely allowed to put in with them. They are not at all jealous, but their Women and Maids are allowed to ftand at their Doors to fee and talk with fuch Men as pafs by; and they will be as merry and familiar with Strangers, as if they had been acquainted with them all their Days.
II. Another Inle of the Arcbipelago, bordering upon Afa, is Patino, Palmofa, or Patmora, anciently Pathmos. It is but eighteen Miles in Compafs, and has but one well built Town in it, with a Caftle in the Middle of it, called, The Monaftery of St. John, where 200 Greek Monks live. St. Fobn the Evangelijt, being banifh'd into this Iffe, is faid to have wrote here his Revelations. They carefully keep in their Church a Body fhut up in a Cafe, which they likewife fay, is the Body of St. Fobn, and fhew a Grotto where they likewife fay, St. Fobn wrote the Apocalypfe. There are about 3000 Souls in the Ine, who have much ado to live, the Inle being very dry and rocky. No Turks live in the Inand, but they are all Cbrifians who pay Tribute to the Grand Signior. The Corfairs put into this Inand to careen, and take frelh Water.

The Ifle of Nixia, anciently Naxos, is 120 Miles in Compafs. It was fubject to the Sanudi and Somarigi, Venetian Dukes, till the Turks took it under the Emperor Solymus, yet there are ftill in it feveral noble Families defcended of thofe Dukes. The Land is fruitful in all Things, but efpecially the Valley of Darmilla, which has eighteen Villages: They feed many Cows, Sheep and Goats, and their Country yields many Vines, of which they make great Quantities of Wine and Cheefe, which they fend to Alexandria, Smyma, and Cbio. Near the Town by the Sea, are Salt-pits and a Pond, which they farm out to Fifhermen. In the Marhes of the Valley of Plietri, they catch great Plenty of very fine Eels. Their Woods are full of Rocks and folitary Dens, where there lie large Stags. The Peafants catch Partridges by ftalking with an Afs, train'd up to it, and they have Plenty.

There are many Monafteries in this Ine, and one of of them, which is built in Form of a Tower, is very ancient. There is alfo another called Fanaromeni, dedicated to the Virgin, which has feventy Rooms, and a fmall Church, but the Monks are extreamly ignorant, and by their Vicioufnefs one would judge they ferved fome Uniknown God. By the Sea-fide, over-againft the Inand of Nicaria, is to be feen upon a very fteep and ruggid Mountains fome Ruins of the Caftle of Apollo; and it is a Wonder how Stones could be got up fo high to build it. By it are four little Towns well inhabited.

## Chap. I.

to the Levant.

On the Hills hereabout many Goats feed upon an Herb, called Ledum, which leaves a kind of vifcous Dew upon their Beards, that turns into a kind of Gum, of a very good Smell, called Labdanum, or Laudanum, and is gathered by cutting off their Beards.

As you go to the Town, there is a Caftle upon a very high Hill,' which commands the Villages of Darmilla. Near the Town, upon the Rock Strongyle, is the Palace or Temple of the God Baccbus, built of very white Marble, but the Turks and others carry it away daily for their private Ufes. Bacchus may well have a Palace at Naxos, where they are fo great Drunkards. The Tower and Ducal Palace are ftill in being in the Town. There are two Archbifhops in it, a Latin and a Greek. The Cathedral Church of the Latin Archbifhop, dedicated to the Affumption of our Lady, is very handfome, and very well ferved by fix Canons and feven Priefts, but their Revenue is inconfiderable, for the Archbifhop has no more than twenty Piaftres of yearly Rent. He hath a Seat in the Country with a Church, at a Place called San Mamma; the Church is paved and lined with Marble, but not kept in very good Repair.

In the Caftle the Jefuits have a forry Houfe, and the Greeks a Chappel, that belonged formerly to the Dukes. Without the Town are Recollets and Capucbins, who make many Profelites to the Roman Faith. The Inhabitants have fuch violent Feuds among them, that fometimes they will not fpeak one to another as long as they live; but the Women are more obftinate than the Men, and are great Medlers in other People's Bufinefs. The Women wear fo many Coats one over another, that they are fcarce able to go, and their Shoes are fo ftrait, that they can hardly get their Feet in, but they are faid to be pretty honeft and chafte. From the Sale of their Wine, Cheefe and Silk they raife their Tribute.
12. About fix Miles from Nixia is the Ine of Paro, anciently called Paros, which has three Caftles, feveral Villages, and a good Harbour for all Sorts of Veffels, fair Churches, and many Greek Priefts and Monks. The Antiquities of this Ine, confifting in Statutes, Marble Chetts, Ecc. were carried away by an Englifh Gentleman, who cook all he could find here, as well as at Delos, now called Sedrille, where was Plenty of them; but now there remains but one Image of a Woman fo large that it cannot be ftirr'd. This Ine was famous for its noble Quarries of Marble, and for the Oracle of Apollo heretofore, but now it is the Refort of the Corfairs. The Ifland of Mycone, anciently Myconus, was once a well peopled Inle, but now is almoft forfaken, becaufe of the rigorous Perfecution of the Turks. It is about three Miles round.

Over-againft this Inand is the Ifle of Tine, formerly Tenes. It belongs to the Venetians, is well peopled, and hath a very ftrong Caftle built upon a Rock, and the Houfes ftand one above another. It is forty Miles in Circuit, and yields Plenty of Provifions and Silk, but it is fo overftock'd with People, that many are obliged to go out of it, and dwell at Smyrna and Cbio. There is a Latin Bifhop in it, and the Women are handfome and courteous enough.
13. Nio, called of old Oliarus, which was not long fince inhabited by the Albanians, a barbarous and warlike People, who ufed to go all Night arm'd by the Sea-fide, and is a fruitful Country in all Things, efpecially Woods of Oaks, and other Trees, which they cut down and fell to other Places, You fail then to Sentorini, formerly called Tberafia, which is thirty Miles about, and fixty from Condy, from which it may be feen. There are feveral Caftles in this Ine, viz. That of St. Nicholas, the Houfes of which are built upon a black Rock, that is frightful. A Greek Bifhop has his Refidence there, and about 500 Souls about him; but they live moft of them in Caves made in PumiceStone, and it is pleafant to fee them come out of the Ground like Coneys, while others are plowing over their Heads.

Vol. II. No CXXVI.

Scaro, built on a frightful Mountain, fo fteep, that thofe who go up to it muft climb with their Hands and Feet. It contains 150 Houfes, and the Greeks have a Church there, in which are two Images of mafly Silver; one of our Lady, and the other of St. Micbael. It formerly belonged to the Latins, who have fill a. Bi fhop there.

Pirgo, near which is a Chapel of our Lady, with many large Caves, where about two hundred People live. Between thefe Caftes lies an Hill, from whence one may fee the whole Inand, which is planted with Vines, but has no Trees, but Fig-trees and white Mulberries. They make more Wine than they fpend, which their Neighbours fetch from thems to carry to Cbio, Snyrna, and other Places. They make all Sorts of Stuffs, and by the Sale of them they raife Money to pay their Tribute. In this Place are one thoufand Souls, almoft all Greeks, and the Cadi refides here. Their Houfes are well built, all white, and wall'd in, fo that each looks like a Tower.

At Scaro there is an Houfe of the Nuns of St. Dominick, but their Lodgings are poor and Air bad: Their Church is kept in good Order, and ferved by a Chaplain. On St. Stopben's Hill, between Pirgo and Nebrias lived a Woman, that in ancient Times gave Victuals to all the People for a whole Year that a Plague and Famine lafted, and there are ftill remaining feveral Statues of her.

Crotiri, inhabited by an hundred and fifty Souls, and about it there are feven Villages, but ill peopled. The Inhabitants of the Iffe live very meanly; their Bread, called Schijes, which is made of Wheat and Barley, is as black as Pitch, and fo harfh that one can hardly fwallow it; for they bake it but twice a Year, becaufe they have no Wood but what they buy by the Pound from Nio. They have no Fifh or Flefh, but feed only on Beans, Peafe, Eggos, and Bifcuit. They have little or no Fruit but Grapes, which are plentiful. They know not what Phyficians, Chirurgeons, and A pothecaries are ; they are ftout, and can defend themfelves from their Enemies with Stones. The People live a beaftly Life, doing nothing but eat, drink, neep, and play at Cards.

The Ine at a Diftance looks like Hell, being on the Shores all black and fcorched by an Eruption of Flames, which happened about an hundred and twenty Years ago. About the Year 1638 , there was another Eruption of Fire in the Port, which, with an incredible Noife, was heard two hundred Miles from thence, caft vaft Numbers of Pumice-ftones out of the Sea, like Bullets, and fo infected the Air, that many on the Ine died, and feveral loft their Sight, but recover'd it fome Days after ; and all the Silver turned red, even in Mens Chefts and Pockets, but in a few Days came to itfelf. Seneca fays, this Ifland ftands upon Mines of Sulphur, from whence thefe Fires proceeded. It is faid, that Alexander founded the Sea in this Place, but could find no Bottom; yet a Ship may come to an Anchor at-Tirefia, a little Ifle by it.
14. The Ine of Policandro is eight Miles in Compafs and a pleafant Place: 'There is but one Village of one hundred Houfes, and three hundred Souls in it: It has three well built Churches, and two Monafteries, one of Men and another of Women. The Convent of Monks is well fituated, and dedicated to the bleffed Virgin. It has a little Garden, and a Fountain of excellent Water in it. The Nuns obferve no Rule, but live as Nature teaches them; their Church is dedicated to St . Yobn, and a Monk fays Mafs in it on all Sundays and Holydays. The Caftle ftands upon a very high Hill, but all the Houfes are ruinous, except a Chapel dedicated to St. Micbael the Arch-angel. From it one may fee all the Inles of the Archipelago. The Inhabitants of this Ille are honeft, civil, and courteous People, efpecially the Women, who are very handfome. They have good Bread, Fowl, Sheep, and other Things neceffary, but no Wine; fo that what they drink comes from Santorini, which is but thirty Miles diftant. They have no

Trades

Trades among them, becaufe their Port, which is indifferent good, is infefted by the Mainots and Corfairs, who lodge in a Church by the Sea-fide.
15. The Inand of Milo, which is fo called from Mylos, a Mill, becaufe they have many Wind-mills in it, and it affords Abundance of Mill-ftones, is thirty-fix Miles about. It is fruitful in all Things, and exports yearly to Candia, Venice, and other Places, between three and four hundred Tun of Wine. They have a Mine of Brimftone, and another of Pumice-ftones, which they farm to one of the Inhabitants for one thoufand five hundred Piaftres yearly. Three Miles from the Town are certain hot Baths of Sulphur, where difeafed People from feveral Places wafh and recover theirHealch. The Port is fix Miiles long, three over, and has a good Depth of Water, and two Miles from it, in a Grotto, is a Fountain of Luke-warm Water, which gives fo much Heat, that an artificial Bath cannot make one fweat more. In this Ine is a Town where two thoufand five hundred Souls live, and an old Caftle inhabited by five hundred more. They have a Latin and Greek Bifhop.

The Latin Cathedral is without the Town, dedicated to St. Peter, but without Ornaments ; and the Bifhop celebrates in a Chapel that joins to a Greek Church. He has many Tithes, of which he gives to the Greek Bifhop. one third Part. He has alfo many well built Churches in good Repair under him, and many Priefts to officiate in them. Moft of the Inhabitants are Greeks, who live much at their Eafe, and are civil, but, as ufual wicked and perfidious. Their Women go in a very ugly Drefs, fpeak very ill, and cannot pronounce the Letter $L$. They are, however, very charitable and kind to Strangers. They have all Neceffaries for Life, but no Phyficians or Chirurgeons. There are no Turks in the Ine, but it is govern'd by four Deputies of the Town.

Half a Mile from Milo is the Ine called Cbimolo, or Argentara, which hath a good Harbour, and a Village containing about two hundred Souls, which was burnt by the Corfairs in 1638 . Thefe poor People live in great Mifery.
16. The Ine of Sifano, or Sifanto, anciently Sifanus, is thirty-fix Miles in Circuit, and has a Caftle upon a Hill, with double Walls, inhabited by three thoufand Souls; and there are no other Houfes in all the Inand, unlefs it be fome Country-houles of private Men. The Harbour is not good. There is upon it a Latin Bifhop, and a good Greek Vicar; but the Bifhop's Chapel is little and very poor. There is alfo a Monaftery of Greeks built upon a Hill. The Ille produces not Provifions enough for above two Months in the Year, and for the reft of the Year, the People fetch it in Barks from other Places. They are very great Rogues, but their Women are very honelt, and go with their Faces cover'd. There are no Manufactories or Trades, but Weavers, Shoe-makes, Joiners, and fuch-like.

The Ine of Thermia, fo called from the Therma, or hot Springs in it, which give a great Relief to fick Perfons, is thirty-fix Miles in Curcuit. The Town contains about three hundred Houfes, inhabited by about two thoufand Souls. The Greeks have fifteen Churches in it, and a Bifhop, who refides fix Months here, and as many at Zia. There is alfo a Caftle and a pretty Village, called Mef. The Ine is almoft all plain, has few Trees, yet is fruitful, and abundant in all Things. The Inhabitants are reputed to be honeft Pcople, and trade in Stuffs, Threads, and other Commodities, raifing thereby Money to pay their Tribute. The Venetian Corn only goes in this Ine, as it doth in all the others, except Naxia, Andro, and Scyra, where Turkifh Money goes. Their Women are vertuous, handfome, and wear a neat Drefs. The People live pretty well there, and a Cadi commands, with four Procurators, chofen out of the Citizens of the Town.
17. Ajora is an lle eighteen Miles about, and depends on the Inle of Scyra, who keep fome Shepherds there to feed their Sheep. There are four Churches in it, but Divine Service is perform'd in them at Eafter only, when the Shepherds communicate. The Cor-
fairs hinder its being cultivated, becaufe they take away the Oxen, and fometimes the Sheep.
The Ine of Scyra, which in the vulgar Greek fignifies Signora, or Miftrefs, is fo called, becaufe it ftands in the Midft of the other Ifles, and by its Height commands them all. It is thirty-fix Miles in Compafs, and having a dry Soil, but few Trees, abounds with Plenty of Provifions, as Flefh, Fifh, and Venifon. The Water is good. They have no Villages of Note, but only fome fattering Houfes up and down in the Country. The People are much addicted to Devotion, and efper cially the Women, who are very filly. There is much Hatred and Envy always amongft them, by reafon of the Oppreffion they fuffer from the Turks, and Oppreffion of the common Poverty. They are almoft all La tins, and have feveral Churches. The Cathedral ftands at the upper End of the Town, and is dedicated to St. George, and ferved by feveral Priefts, who have a $\mathrm{Bi}-$ fhop for their Superior, and he lives on his Revenue and Tithes. The Capucbins are diligent in Preaching, Catechizing, and hearing Confeffions, by which they do much Good.
18. From Cbio Mr. Thevenot failed into Egypt, and in his Paffage, being left before the Inle of Samos, he took a View of it. It is a very barren Country, though famous for having been the Birth-place of Pytbagoras, Polycrates, and the Sibyl. It is eighty Miles in Circuit. Over-againft Samos, and pretty near it, is the Ille of Nicaria, anciently called Icaria, from Icarus the Son of Dedalus. It is of a long Figure, and the Land is very dry, and full of Rocks, in which are the Houfes of the Inhabitants, who are in all about three thoufand Souls, very poor and ill clad.

They are much addicted to Swimming and Fifhing up Sponges and Wrecks, and the richeft Men, or Papa"s in the Ine, give their Daughters to the beft Swimmer, which is tried before the Damfel and her Father. He that can remain longeft under Water wins the Maid. They pay the Grand Signior Tribute in Sponges. They have Vineyards among the Rocks here and there, and they make of the Grapes a Sort of white Wine, as clear as Water, which paffes by Urine as foon as it is drunk. The Wine, as alfo Wax and Honey, they trade with to Cbio. The Women are Miftreffes there, and as foon as the Hufband is arrived from any Place, the Wife goes to the Sea-fide, and takes the Oars, and carries them Home, after which the Hufband can difpore of Nothing without her Leave. The Inhabitants are well fhaped and ftrong. The old Greek Emperors of Confantinople banifh'd Perfons of Quality that had offended them into this Ifle
19. Leaving Samos, he came to the Ine of Stancbio, otherwife call'd Ifola Longa, ninety Miles diftant from it. It was anciently call'd Coos, is feventy Miles in Circuit, and very fruitful, efpecially in good Wine. On the Port by the Sea-fide is a pretty good Caftle, where the Turks keep Garrifon. The Town lies behind it, where there is a prodigious Tree of that vaft Extent, as to cover 2000 Men eafily, for the Branches being fupported with many Stones and wooden Pillars; there are feveral Barbers Shops, Coffee-houfes, and fuch like Places, befides Benches to fit on under it. It was anciently famous for the Temple of REfculapius, and the Births of Hippocrates the Prince of Phyficians, and Apelles the Prince of Painters. The Knights of Malta held it when they were Mafters of Rbodes, and there are ftill many Monuments remaining in it. Strangers are here more regarded by the Women, than is grateful to their Hurbands.

From hence he failed to the Caftle of Bodrou, which lies over-againft Stanchio at twelve Miles diftance. There is a good Port, but fo fhut up with Dirt, that great Ships can't get into it. You enter this Caftle through feven Gates, over which are feveral Coats of Arms, which belonged to the Knights of Rbodes, that commanded there, for in fome of them are Croffes of Malta. There is above 300 of thefe Efcutcheons. Beyond the fixth Gate is a Platform, where there are fix Cannon pointed toward the Sea. The laft Gate is made of Iron $_{2}$ and there ftands a Guard of fifteen or twenty Men continually

## Chap. I.

to the LEVANT.
continually. The Caftle is frong, and the Walls high, both built of a Sort of Stone, which great Guns can not hurt. The Sea beats upon one Side of it, which has Port-holes, with great Guns mounted, which can eafily hinder Ships from approaching it. It is alfo very ftrong towards the Land, the Walls being as found as if they were lately builc. No Horfe can approach it, and yet it may be eafily taken, by cutting off the Water that is brought to it by an Aqueduct. The Houfes in it are ruinous, and there are many Pieces of Pillars found among them. The Country about it is fruitful in Grapes, Figs, and fuch like Fruits.
20. From Bodrou he failed to Rbodes, which is 100 Miles from Stancbio. The Ille of Rbodes hath Lycia on the North, being parted from it by the Sea, which is twenty Miles broad, the Ine of Cyprus on the Ealt, Candia on The Weft, and Agypt on the South. It is roo Miles in Circuit, lying in a temperate Climate. The Soil is fruitful, and hath feveral Villages in it well inhabited, befides a fmall City which is ftrong. This Illand has been under the Grecks, Saracens, who loft it to the Knights Hofpitallers of Jerufalem in 1309, who held it 200 Years, and now is in the Hands of the Turks, who under Solyman 1I. took it in 1522 . by Compofition, 'and that more thro' the Treachery of Andrea d'Amaral, Chancellor of the Order (who being angry that he was not chofen great Mafter at the laft Election, inform'd the Turks of their Weaknefs, by a Letter fhot to them on an Arrow) than by Force, though his Army confifted of 200000 Men.

The 'Town hath two Harbours, of which the Great Port, being fquare and facious enough, is not very fafe, when the Wind blows from the E. N.E. or S. E. On the Right Hand at the Entry of this Port is a new "Tower, built by the Turks, in a Place where the old Tower of St. Nicholas ftood. It is well furnifhed with Cannon, hath a Baftion behind, and Curtine reaching to the Walls of the Town; over againft this Tower ftands the Caftle of St. Angelo, but fomewhat ruinous.

This Caftle and Tower were built in the Place where ftood the Feet of the great Coloffus, one of the feven Wonders of the World, between the Legs of which a Ship under Sail might pafs. It reprefented the Sun, and was caft by Cbares the Lyndian. It, was feventy Cubits high, ftrided fifty Fathom, and carried a Lighthoufe in one Hand. It was overthrown by an Earthquake, and being broke to Pieces by the Saracens, was fold to a Ferw, who loaded 900 Camels with the Metal, and carried it to Alexandria, in the Year of our Lord, 954, and 1461 Years after it was made. The Port of the Galleys, which is covered by the Caftle of St. Erme, is a good Harbour, and able to contain many Galleys, but the Mouth of it is fo narrow, that one Galley only can enter at a Time. It looks to the E. N. E. and is every Night fhut with a Chain. A little up-land above the Port is a Burying place, and in it fifteen or twenty Domes of Free Stone well built, and fupported moft of them by four Arches. Thefe are the Sepulchres of the Beys, or other Perfons of Quality in Rbodes, who have been killed in the Wars. On the Side of this Port is a Piazza with fome Trees and a Fountain in it, and at the Bottom of it the Arfenal, where the Galleys and Saiques are built. The Town is fmall, but ftrong, having high and well built Walls, planted with Faulcons on the Top, and below there are Port-holes for great Cannon.

It hath three Gates, one to the Sea, where Corn is fold, and two to the Land-fide. Over the WaterGate is fet up the Dragon's Head, which was thircy three Feet long, wafted all the Country round, and was flain by Deogate de Gozon, one of the Knights of St. Fobn. The Streets of the Town are pretry broad, all paved with little Stones, and for the moft part covered 'with Pent-houfes on each Side. There are feveral fair Buildings in it. St. Fobn's Church is ftill ftanding, but is turned into a Mofque. Over the Gate in a Nich, which hath a round Cover, are the Figures of our Saviour and the bleffed Virgin, and St. Jobn holding the Crofs, cut in Baffe Reliefe. No Chriftian is now fuffered to go into it. The Street of the Knights lay juft as you
come out of the Church, as the Arms upon the Houfes fhew; but now Rbodes is inhabited only by Turks and Feres, for though the Cbriftians are permitted to keep Shops in Town in the Day-time, yet in the Night they muft retire to the Villages in the Country about it. Lindo, the Country of Cbares, who made the Coloffus of Rloodes, is a little Rock at the Point of the Ine of Rbodes, fixty Miles from the Town. It has a fmall Town on it, with a very good Fort.

2I. At the Bottom of the Mediterranean, lies the noble Ifland of Cyprus, famous in all Ages for the Fertility of its Soil, the Excellence of its Climate, and the Advantage of its Situation. It has been known in different Ages of the World, by very different Names, and fome of thefe are fuch, that it would be a difficult Thing to point out clearly the Authorities upon which they are founded. In the Holy Scripture it is called Kittim, from Kittim the Son of Favan, the Son of $\mathcal{F a}$ phet, the Son of Noah, who firft poffeffed it; in fucceeding Times it was called Cerafis, becaufe of the many Promontories it thrufts into the Sea like Horns; Macaria, becaufe of the Fruitfulnefs of the Soil, and Happinefs of the Climate; Afperia from the Roughnefs of the Soil ; Collinia from its numerous Hills; AErofa, becaufe of the Mines of Copper or Brafs, which were firft faid to be found there; Amatbufia, Papbia, Salaminia, Lapitbia, from the Towns of Amatbus, Papbo, Salamine, and Lapitbus. At length it was called Cyprus, but from whence is not very clear; fome fay from its Copper Mines, others from Cyprefs Trees, which were in a Manner peculiar to it.

In ancient Times it was confecrated to Venus, who is ftiled by the Poets, the Cyprian Goddefs, and the Reafon of this feems to have been from the Wantonnefs of its Inhabicants, as this again may be derived from the Excellence of its Climate, and from the Fertility of the Country. The longeft Day is about fourteen Hours and a half, their Weather in Summer is prodigioufly hot, fo that fometimes their Brooks, and even their Rivers have been dried up; and in the Reign of Conftantine the Great, when they had no Rain for thirty fix Years, it was in a great Meafure deferted, 'but fuch Accidents, or rather fuch Judgments happen feldom, and therefore ought not to be mentioned as Objections to the general Repute this Country has been in for its great Fruitfulnefs. It was anciently governed by Kings, of whom there were nine when Cyrus reduced it; but it feems they remain Tributaries, and were not ftripped of their Dominions; for long after this, we find the Greek Orator Ifocrates, addreffing two of his Orations to two of the Cyprian Monarchs; and in the Time of Alexander the Great, the King of Citium is recorded to have prefented him a moft excellent Sword, which he ufed afterwards during his Life.

Upon the Divifion of his Empire, Cyprus fell under the Dominion of Ptolemy, and was governed fometimes as a Province, fometimes as a feparate Principality by that Family, till conquered by Portius Cato for the Romans, who carried from thence feven thoufand Talents, which was more than ever came into the Roman Treafury by any former Conquett. After the Divifion of the Roman Empire, it belonged to the Greeks, from whom it was taken by the Saracens, recovered from them, and governed by Dukes or Princes. In I191, it was conquered by our King Ricbard I. who firt mortgaged it to the Knights of Rbodes, and then gave it to Guy of Iufignan, whoie Family held, it for many Generations.

Under there Princes it was divided into twelve Coun ${ }^{2}$ ties, containing forty eight great Cities, and upwards of eight hundred Villages. Cbarlotta, the laft Heirefs of that Family, was driven out by 7 ames II. her Baftard. Brother, who married Catbarine Cornaro, of a noble Venetian Eamily, adopted Daughter of the Republick, to whom fhe bequeathed this Kingdom, to which, however, her Right was but indifferent. The Venetians came into Poffeffion in 1473, and held it almoft an hundred Years; but at laft it was taken from them by Solyman II. Emperor of the Turks, after a long and glorious Defence, and with Circumftances of moft in-
famous
famous Cruelty and Treachery on the Part of the Turks, who have kept it ever fince.

It abounds with Wine, Oyl, Corn, Sugar, Cotton, Honey, Wool, Turpentine, Alom, Verdigreafe, all Sorts of Metals, and moft excellent Salt. This Ifland affords feveral good Ports, all the Materials requifite for building of Ships, all the Commodities that can be defired for carrying on a great Trade ; and, if it were under a right Government for one Century, might be able to defend itfelf againft all its Neighbours. At prefent it is thinly peopled, and not half cultivated. A Turkib Baha deftroy'd all the Sugar Canes, to prevent the Cypriots from having too much Wealch; an Evil which there is now no Reafon to fear.

In a Word, it is at this Day the cleareft Proof that can be given, how much a bad Government can defeat all the kind Intentions of Nature; for in Spite of all the Advantages that a Country can poffibly have, there never was a more difmal or defolate Place than this Inand is at this Day, from having Millions of People, there are now in it fcarce thirty thoufand; from a Climate that produced a perpetual Spring, it is become both unwholfome and unpleafant; from Cities and Towns that touched each other, there are now only Villages and Heaps of Ruins; from Abundance of all Things, the Inhabitants are reduced to Indigence and Starving ; fo that except to confiderate and intelligent Perfons, the Face of the modern Cyprus refutes all that ancient Authors have faid in its Favour. Such are the Effects of a falfe Religion and tyrannical Government.
22. Ir would be inexcufable in fpeaking of thefe Inands, to fuffer that which makes the greateft Figure in Hiftory, to remain hidden and out of the Reader's View; I mean the Inand of Candia, fo long the Theatre of War between the Venetians and the Turks. The Inhabitants of this Inland are allowed to be fenfible, as well as brave and hardy; whereas the Sciotes, or Inhabitants of the Inand of Scio, are commonly called Praflinos by the Turks, which is as much as to fay Green. The Reafon of this is, that a TurkiJb Bahha, much efteemed for his Wifdom, obferving the, Manners of the Inhabitants of that Inland. faid, that a wije Sciot and a green Horfe were Rarities equally bard to be met with. By this unlucky Sarcafm he ftamped the Name of Prafinos upon this whole Nation. But for the Candiots, though the Turks hate them, yet they cannot help owning, that they have both Courage and Underftanding, of both which they gave ample Teftimony in the Courfe of the long War before-mentioned.

Among others who have recorded the Events of that famous Difpute, our Countryman Mr. Bernard Randolph, is thought to have done it with as much Fidelity as any. He fpent upwards of twenty Years not only in the Levant, but amongtt thefe Iffands; and upon his Return home, he compofed a Defcription of them, which was printed in a thin Volume in 2 Uarto in 1687, at the Theatre in Oxford. It appears from thence, that he was a plain well-meaning Man, more concerned about Matter of Fact, than the Stile or Manner of relling his Story: What he related was chiefly from his own Knowledge, which gives great Credit to his Accounts, and in fome Meafure excufes the Roughnefs of his Language, and his Writing without any Method. It appears from the Works of the judicious Sir George Wheeler, that Mr. Randolpb's Book was printing, when he was writing his Travels; and for this Reafon that worthy Gentleman fpeaks very refpectfully of that Performance, and refers his Reader to it, as a Kind of Supplement to his own: Yet in moft Parts of his Book Mr. Randolpb is wonderfully concife, and tells us more or lefs of a Place, not in Proportion to its Size, Situation, or Importance, but as he was little or much acquainted with it himfelf. Of this Iland, however, he freaks copioully enough, and has tlírown together, in his Defcription, the principal Actions in that War, which coft the Grand Signior Mabomet IV, fo much Trouble, and which broke the Force, and exhaufted the Treafure of the Venetions to fuch a Degree, that they have never been able to recover. We will give che Reader, therefore, his Account in his own Words.

The Inand of Candia, (which in old Time was, and alfo now is by the Turks called Crete) hath fol lowed, for the moft Part, that of the Empire of Greece, and is now fubjected to the Tyranny of the Turks, after a War for above twenty feven Years; in which Trme the Venetians did bravely, and with unparallel'd Courage, defend the City of Candia to the laft Exiremity After a clofe Siege for near two Years Continuance, thic Vizier there in Perfon, and with him the beft of all the Ottoman Forces, they were forced to furrender, yet upon the moft honourable Terms that themfelves could propofe, carrying away with them not only their. Cannon and all other Ammunition, but alfo the Bells which were in the Steeples, and whatever elfe they thought worth their Labour. The Vizier was fo much overjoyed that the City was furrendred to him, that he appointed feveral of the Turki/h Boats to affitt the Venetions, if they fhould have Occafion for their Help in carrying their Goods to the Ships. He was fo obferving of bis Word on the Ceffation, that he caufed two $\mathfrak{F}$ anizaries to be put to Death for attempting to force their Way into the City.
All Europe has heard of this great Siege, how many thouland Bombs were caft into the City; how many Mines and Fornellos were blown up; and how many bold Affaults the Turks made. They had at laft work ed themfelves fo near the Walls, that it was impoffible for the Befieged to make ufe of any of their great Guns; for no fooner could a Man appear to level a Gun, but there was a Shower of Bullets and Arrows; fo that the $\mathcal{T}$ urks would often attempt to undermine, and the Venetians did countermine them; and when they met under Ground, they fought moft defperately. The Venetians have an Engine which they call Irombo di Fuoco, it is as long as a half Pike, the Staff bigger ; at the End are two Irons about two Foot long, in the Form of a Fork, in which is faftened a Trunk made of Iron, and fome are of Wood; In it are five Charges, each firing feverally and at a certain Time, and carry feveral Bullets to do Execution as far as a Pittol ; they fet Fire to it at the Fore-part, and have a Touch to reach from one Chamber to the other.

Another Invention they had to fifh up the Turks when they attempted to undermine their Walls; they had Hooks made in the Form of a Boat's Grapling, the Points fharp, faftened to a Rope, and four or five Foot of Chain at the End; thefe Hooks they often caft over the Walls amongtt the Turks, and feldom fail'd to bring up a Turk, fome faftened by the Cloaths, others by the Body. I have heard fome of the Officers fay they have taken feveral in a Night, for when the Hook was faftened, they gave them not Time to unhook themfelves, but had them foon over the Walls. At the Greeks leaving Candia, there happened a moft fad Accident, a new Ship, called La Fregatta Galliera, or the Gally Frigat, was pitch'd upon for tranfporting moft of the Principal of the Gentry, and the greatelt Part of the Riches of the Citizens ; there was alfo (befides what were mounted) fifty great Brafs Guns ; the Paffengers were between two hundred and fifty and three hundred, befides two hundred Mariners and upwards. Being between an Inland called Obo and the Port of Cerigo, the Ship opened, and not a Man was faved. The reft of the Fleet got well, fome to Zant, others to Ceffalonia, Corfu, and Venice, landing the Greeks as they had a Fancy to the Place which they came to, or as they found Friends. Thus they left their Eftates to the Enemy, and not above five or fix Greeks remained, who being in Years, and fickly withal, defired Leave of the General that they might end their Days there. In the Articles of Peace it was concluded, that the Venetians fhould keep Pofieflion of three fmall Inets which are clofe to the Inand of Candia, and have each a very ftrong Caftle. The Turks laughed at their Propofals, faying, We bave the Hen, and the Cbickens will follore of Courfe.
This Ifland had twenty Cities, and above one thoufand Towns, Villages, and large Monafteries; now there is not above four Cities and three hundred Towns and Villages. To give you an Account of them, I will begin with the Eaftern Part. This was formerly a Pro-

## Chap. I.

to the LEVANT.
vince called Sittia; the head City had the fame Name fanding in a Bay at the North Eaft Part of the Inand on the Weft Side, extending from the North to the Bot tom of the Bay Southerly, above a Mile in Length. The Caftle ftood on a rifing Ground to the North Weft of the Town, built of a coarfe Marble Stone. The Wenetians finding the Place was not tenable, caufed feveral Mines to be made, by which they deftroy'd the Caftle and Town, and fo went to Candia. By the Ruins it may be feen, the Builders had no Thoughts fo foon so have left them. Moft of the Walls are entire, and fome have lower Rooms with Beams, which are patch'd up, and ferve for Store-houfes to put Corn in, when any Ship comes to lade. In the Year 1680, I was here, and loaded a Settee of Provence, Capt. Steppe Bremon, who belongred to Caffis, about ten Miles from Marfeilles. The Wheat was the Bafha's own, which he fold at three Timins a Killoe, (i.e, about 14 d. the Bufhel.) The Turk, who came with me from Candia, was an ordinary Servant ; but as we travelied the Road, and when we came hither, he would domineer at a Atrange Rate. Here are no Inhabitants nearer than twelve Miles, at a fimall Village called Alona, faving at a fmall Houfe and Chapel, which is a Metoiki, (or Chapel of Eafe to a Monaftery up in the Mountains) about a Quarter of a Mile from the Sea: Amongtt others, the Greek Priefts brought their Tenths to the Turks: They all defire to have a Seaman to meafure their Corn, ra ther than the Turks; for they will ftir the Corn about with their Hands, and prefs it down : But the Mafter was content to take it with a juft Meafure, and favour'd the poor Greeks what he could.

At Alona refides the Bafha's Lieutenant, who has one hundred Spahi's to guard the Coatt from Privateers, but more to gather in the Tenths. The Greeks maintain them at their own Charge. To the Eaftward of Sittia, on a Point of Land, is a Monaftery dedicated to St. Ifidore, to which belongs a great Revenue; it maintains about forty Calojeros. There are feveral rich Lamps, and other Ornaments of Silver and Gold. Here they fhew you the Picture of the Bleffed Virgin, which, they fay, was brought by Angels from Stancoi, and was found in a Cave of that Mountain. They have Lands on the Inand of Rbodes, where they have a Metoiki and feveral Calojeroes to gather in the Crops of Corn, Oil, and Wine ; the Turks allowing them to enjoy it, calling it Vacofa, or Poffeflions for God's Ufe; yet they will receive their Tenths from it. The Gomina or Overfeer of this Monaftery had made his Efcape, taking with him above two thoufand Pieces of Eight in ready Money and Plate; but being purfued, he was taken at Scarpante, an 'Inand lying in the mid Way between Candia and Rbodes, and by the Bafha's Order put to Death.

To the South of Alona, about ten Miles, is a very high Mountain, called by the Turks, BaJba Dogg; from it may be feen the Sea to Eaft, Weit, North and South. Here are the Ruins of a Caftle, called formerly Barozza, becaufe it was built by a Gentleman of that Name: If is fquare, about fixty Foot high, with a Tarazzo and Battlements on the Top ; each fquare is about forty Foot. The Wall is very thick, the Door about ten Foot from the Ground, having a dry Ditch about it. Of thefe there are feveral about the Inand, like the old built Caftles that are Itill in Ireland: For formerly the Candiots ufed to war amongt themfelves ; but now all fuch Quarrels are ended by their Subjection to a common Mafter.

The City of Girapetra is in the South Part of the Ifland, having no fecurre Port, but an open Road, where Veffels in the Summer Time may lie with Security from the Weather, but not from Privateers, for while I was there, they carried away a Saike which came from $A$ lexandria. The Town is walled round, and hath a fmall Caftle, which lies higher than the Town. Here is conftantly a Garrifon of two hundred Ganizaries, beIIdes there are feveral Turks who are Merchants, fo that in all they can raife five hundred fighting Men. There is about it a very fine Plain full of Olive-trees, and fome very pleafant Gardens. Their Howles are well built of

Vol. II. $\mathrm{N}^{\mathrm{Q}} \mathrm{I} 26$.
good Stone, the Rooms very lofty, but few Houres above two Stories high. In the Year 1675 , one Monfieur Crevellier, a famous Privateer, landed five hundred Men in the Bay of Spina Longa; travelling in the Night, he came next Morning, juft at the Dawning of the Day, and found the Turks at their Sabbab Nomas, or Morning Prayer, fo he made himfelf Mafter of the Town, carrying away two hundred Slaves, nailing up the Guns which were in the Caftle. The Turks who were at the South Part of the Town, betook themfelves to fome fmall Veffels, for they had not the Heart to return home to fetch their Arms. Monfieur Crevellier, to retreat with this great Prize, refolved to kill what Horfes he found, fecuring twenty for himfelf and Officers to ride on and form the Rear.

This Enterprize was effected in lefs than fix Hours after they entered the Town, for they did not make any Stay to ranfack the Houfes. After they were departed, about three hundred Men, Turks and Greeks, were got together, and marched a Mile or two out of Town, and had not Crevellier killed the Horfes, he could never have got out of the Ifland. It is very ftrange, that fo many Men could come with that Secrecy as not to be difcovered, and that the Hearts of thofe Turks fhould be fo funk. Immediately they difpatched Expreffes to the City of Candia, writing to the Bafha, that about fifteen hundred Cbriftions had landed, and carried away two hundred Prifoners, moft of them Men of the Garrifon. The Bafha asked the Meffenger, if the reft of the Inhabitants were alleep, or dead? No, fays the Meffenger, but their Hearts were, being all furprized, fome in their Mofques, and fome in the Coffee-houfes, and not a Man that had his Senfes; moft of the Horfes alfo being killed. The Bafha asked him, how he efcaped? He anfwered him, that he had the Wit to hide himfelf, as a great many others did. There were three Gallies in the Mole of Candia, under the Command of one Bobba Haffan, who were fent to look after Crevellier, but to no Purpofe, for they returned without feeing him.

Since this there is an Order, that the Gates fhall be fhut an Hour before Sun-fet, and not opened till an Hour after Morning Prayers; and now there are feveral Guards on the Mountains; befides, the Batha of Candia has threatened the Providitore at Spina Longa to complain to Venice, if he fuffer any Privateers to come into that Bay; fo as for fome Years they have attempted nothing. The Country towards the South is not fo mountainous as in the North and North-Weft Parts ; having feveral large and plearant Plains, which have many Ruins of fine Towns. To the Eaft of Girapetra, about ten Miles, I went to fee a Cave under the Mountain of Tro, as they now call it, where, they fay, Se. Paul preached. It is a large Chapel, having twelve Pillars, all cut out of the Rock by the Chrittians in the Night-time. Some fay, but without Grounds, it was finimed in lefs than a Month. Clofe by is a Fountain, where, they fay, he ufed to baptize; and it is now called St. Paul's Fountain ; the Water thereof is very. good to cure fuch as have fore Eyes. From Girapetra to Bonifacia is 14 Hours Riding, moft in Plains, very delightfome, there being very high Mountains to the North, with moft pleafant Valleys between, and Abundance of Cyprefs Trees. Bonifacia ftands on a rifing Ground, having only the Walls of a Caftle.

The Inhabitants are moft of them Greeks, very poor; here is a Metropolitan who pretends to be next to the Archbifhop of Candia. There are two Italian Churches, the Doors of which are now made up with Walls to keep Cattle from going in. The Greeks have four fmall Churches, but one would contain more than all the Inhabitants. They have now new-nam'd the Place, calling it, Malafacia, inftead of Bonifacio (good Face) it being fo much alter'd from what it was in former Time. From Bonifacio to the Labyrintb is about ten Miles, or three Hours riding, Weft, moft a Plain. Several Men have feveral Opinions, about this Building (if I may call it fo.) But one Signior Venetando, who was born in a neighbouring Village, gives this Account, that a certain King of this Illand had fo great a Hatred for all Women, that he order'd this Place for his Courr, and at
laft lived fo privately ${ }_{3}$ that he would not fuffer any to come to him, but fuch as adminiftred Affairs, and ruled in his Stead; he would feldom come out, but to worfhip at a Temple dedicated to Fupiter, which ftood clofe by it. In this Labyrintb he ended his Days, and had a famous Tomb built for him, the Ruins of which they fhew you.

The Labyrintb is about two Miles about, being fo covered on the Top with Earth, as it feems to be all firm Land; we entered it with two Torches and Candles in Lanthorns, having a Line to direct us out again. The Way is plain under Foot, and arch'd over Head, fome Arches being about ten Foot high, fome more, fome lefs, with feveral Windings. I made it my Bufinefs to oblerve, if there was any Thing of a Building in the Pillars or Sides, but found it moftly an entire Stone, which they told me fo well cemented together, that indeed it appeared fo. Here are a great many fimall Vaults, about four Foot long, two broad, and two over, which were for Burying-places. There are Abundance of Batts which hang in Clufters, fome are larger than ordinary. We endcavoured to fright them, forching their Wings, by which we found there was Life in them; their Sleep is obferved to be much more found with a North-Wind, than with a South-Wind; as their Spring comes on, they leave this their Palace. We had almoft ended our Line, being about ico Pikes, which is about eighty Yards, and then returned out, being a good Hour in the Labyrinth. The Damps are very great, againit Rain it is always dropping, but very dry with Northerly Winds. At the End is a Lake, and they tell you, that fome who have attempted to go to, have been drawn into it. Our Curiofity did not invite us to fee it, for though it were not true, as in Probability it is not, the noifome Smells are enough to flifle one.

To the South, and clofe by, is a fmall Village with two Churches, which feem to have been anciently Temples. To the South-Weft, about ten Miles diftant, is that famous and great Mountain, call'd Pfrila Vuona, formerly Mount Ida; at four of the Clock it cafts a Shadow on the Labyrinth. On it are many pleafant Monafteries, with Groves of Cyprefs-trees, and Abun dance of Fountains. Some fay the Coaft of Barbary may be feen from the Top. From the Labyrinth to Candia, is about ten Hours riding, moft in a Plain, till within ten Miles of the City. On the right Hand, about a Mile from the Road, is a moft ftately Monaftery, dedicated to our bleffed Saviour, which was built by Order of the Emperor Conftantine the Great. It hath always been continued to the Greeks, and kept its Splendor thl the late War, when it was much defaced.

There are in this Inand Abundance of Monafteries, but very poor, and fome are fhut up for Want of Monks. Candia Noro is about fix Miles from the City of Candia, Southward, being a ftrong Caftle, having Mount fove to the Weft. Here the Turks kept their Treafure and Ammunition in the-Siege of Candia. It is feated very pleafantly on a rifing Ground, giving a Profpect to the Sea. It is now chiefly inhabited by Greeks; the Cattle has a Garrifon of Turks, which the Bafha intended to bring to Candia, and demolifh the Caftle, having writ to the Porte about it, but he had no Anfwer. Candia fo famous, and generally known for the brave Defence it made againft the Turks, appears by the Ruins, to have been one of the beft Cities in the Mid-land Seas. It is feated on the Northfide of the Mand, almoft Mid-way, between Canea and Sittia, in a pleafant Bay, having an artificial Port fecured from the North-wind by a Mole about 200 Yards long, with a ftrong and large Caftle at the Head, called Caftel del Molo, having twenty great Guns. From the South is a low Yoint of Land, which runs into the Sea, Norch, that fecures it from the Eafterly Winds, and makes the Entrance not above thircy Yards wide; upon this Point of Land, the Turks have built a cover'd Way, with a very thick Wall, full of Holes for fmall Shot, ftrongly arch'd over, reaching from the Arfenal to the Entrance into the Port, where is a fmall Fort, with four great Guns, alfo very ftrongly arch'd over, fo as no Bomb can deface it. At the Right-hand at coming out
of the Gate to the Mole, is a new Fort, built with four very great Guns, which lie level with the Water ; over them are eight fmaller Guns. This Fort is oppofite to the Mouth of the Port, and is arch'd over to prevent Danger from Bombs or Wild-fire.

On the Mole are feveral great Guns, planted with Arches over them. To the Eaft of the Arfenal is the old Caftle, call'd La Batiaria del Arfenal, which is rebuilt with a Ditch round it to bring in the Sea, moft cut out of a firm Rock. The Port is almoft round, and fecure againft any Wind for Galleys and fmalle Veffels, but there is not Water enough for Ships of any confiderable Bignefs. It is filled very much with the Rubbifh that the Rains carried into it from the City, and would certainly have been choak'd up in a few Years, had it not been for a French Merchant, one Monfieur Dodei, who to ingratiate himfelf with the Bafha, caufed an Engine to be brought from Marjeilles to cleanfe it. There are the Ruins of twelve Arches of the Arfenal, and about fix Arches are yet entire, but they ufe them only to work in when the Gallies are there; no Gallies having been built here.
The City is not repaired towards the Land, where the Walls are fo much fhaken, that it will require a great deal of Time and Coft to fortify them. From the Port, towards the Weft upon the Wall, are fifty large Guns planted. The Fort of Sc. Andrea, at the Northweft of the City, is well repaired, having a double Wall toward the Sca. In all there are about 400 Guns planted on the Walls and Outworks, which are fix Miles in Circumference. The Gates of Candia are the beft I ever faw, the Arch or Gaiehoufe being about 100 Yards long; and the Gates ten broad; the Arch is all built of firm Stone. It will take up three Hours to walk round the Outworks; there are feveral Mines which were never blown up; every Mine had a diftinct Name. I was in one Mine, which was above a Mile in Length, being above fix Foot high, and three broad. All the Plain for above two Miles without the Walls, is like a new plow'd Field, where you cannot walk, but mutt fee Pleces of dead Men's Bones. None are permitted to walk round the Works, but fuch as have a Licenfe, and a Fanizary with them.

The Turks take a Delight to give an Account of the Strength of the Place, and efpecially will thew you a fmall Cave or Arch, where the Venetian General ufed to fleep, (as they tell you) to fecure himfelf from the Bombs. Not above one eighth Part of the Houfes that formerly were, are now inhabited, very few being left intire; nor do the Turks repair any but thofe where they dwell; the chief Moque is well repaired; it was formerly a Church dedicated to St. Mark, and ftands to the Eaft of the great Piazza, to the South of it are part of the Walls of old Candia, clofe to which are built up a Row of Houfes, two Stories high, for the Fanizaries.

The Bafha's Palace is a little below the great Mofque, on the other Side of the Way; oppofite to it is the great Hall, formerly called, La Sala di Configlio, which is a very ftately Building; of white Marble, with feveral Works in Baffo Relievo to the South Eaft of it ; ftands the Church of St. Francifco, with an entire Cloifter, which is now a Mofque. The Street from the Mole to the chief Piazza is in good Repair, being broad, and paved with large even Stones; the Houfes are alfo well inhabited, but that part towards the Weft, is a Heap of Ruins, among which live the feros, who have very large Houfes; but fome of their upper Rooms have no other Shelter from the Weather, but a few Matts made faft upon Poles. The Beams of the old Houres are bought up and carried to Venice, Zant, and other Places, and being made of Cyprefs Wood, they ferve to make Chefts and Cabinets, many of which have been brought to England. The Number of the Inhabitants of the City is not reckoned to be above 10,000 , including Greeks. There is a continual Garrifon of 2000 fanizaries, befides the Bafha's Guards. Since the taking the Place, they have granted Liberty to all that will come to inhabit there, but all their Encouragement cannot bring the Candiotes to dwell there. Formerly the Plain was full of Olive-trees, with moft beautiful Pleafure-

Houfes and Gardens. Now nothing but Ruins are to be feen.

The City ftands on a rifing Ground from the Sea, and the Houfes were fo built with Terraffes, that moft from their Tops could have a Sight of the Sea. From Candia to Rettimo is about twelve Hours Riding. The City ftands on a Point of Land very pleafantly, having a Port to the Eaft, which is almoft choak'd up, fo as no Galley can get over the Bar, being laden, but Brigantines and fmaller Veffels are very fecure againft all Winds. Towards the Sea are no Walls, the Rocks there fortifying the Place, fo that no Enemy can come but by Land. This Place was the firft the Turks made chemfelves Mafters of, putting all to the Sword, to ftrike the greater Terror into the reft of the Inand. Since they poffeffed it, they have built three new Forts towards the Sea, and a Wall, with a dry Ditch to Landward.

It is now chiefly inhabited by Turks, who trade to Confaniinople confiderably. The Houfes are here entire, according to the Venetian Manner of Building. There are fome Greeks that dwell in the City, but they have a fmall Town about a Quarter of a Mile off, in which are two Churches, where they have the free Exercife of their Religion. The Country hereabouts is very pleafant, full of Olive-trees, and from the Sea-fide the Land rifes eafily to the Foor of the Mountains of Sfacia, about eight Miles from the City, which from the Sea feems to be all a Wood; from which Mountains run feveral pleafant Streams, and one very large River, called Platonica, which is continually full, being fupplied from above a thoufand Fountains, which the Mountains produce.

Thefe Mountains of Sfacia are abounding in all Things neceffary for Life, and Nothing can be more delightfome in the Summer-time. They reach near chirty Miles to wards the South-Weft, and in fome Places about ten in Breadth, coming down clofe to the Bay of Suda. The Cheefe which is made here is bought up by the $V e$ netians and other Merchants, and tranfported to France, Italy, Zant, $\mathcal{E J}^{c}$. It is the beft Cheefe that is made in any of the Southern Parts, and generally as good as our Cbefbire Cheeres, being made as big; belides which, they have great Plenty of Honey, Wax, Silk, Wooll, Cordovan Leather, and a Sort of Goats-hair little inferior to that of Angura in Afia. No Olives, Oranges, or Lemons grow here. There are above an hundred Villages on thefe Mountains, befides feveral Monafteries. The Inhabitants are a warlike People, and withftood the Turks above twenty Years after Rettimo was taken, living as the Mainiotes in the Morea. There are fuch difficule Pafles to them that an Army cannot march. Now at laft they are brought into Obedience, and by humbling themielves to the Vizier, he granted them great Privileges to encourage them, left they fhould take Part with the Venetians, who have the Inand of Suda fo near them.

As the Vizier pals'd by, in his Way from Canea to Candia, they brought him feveral Prefents the Mountains produced, which he was fo well pleafed with, that he exempted them from going with him and paying their Attendance on him, only he obliged them to furnifh the Camp with Mutton at a certain Rate. Moft of his own Provifion was carried from hence, Sheep at three Timins (about a Shilling) a-piece; Butter at a Timin the Oke (a Groat for two Pound eight Ounces); Cheefe at the fame Rate, and at this Price they were obliged to carry it as far as the Camp before Candia, where an Officer gave them an Acquittance, which was abaced them out of their Tribute. They have a certain Drug, called by the Venetians Oldain, much of the Colour of Liquorice in Balls; it is a very great Comforter of the Head, having a pleafant Smell, being burnt it gives a pleafant Scent. Moft of this is bought up by the Venetians, and fent to Venice. Here is alfo a Sort of Wood which the Greeks call Plaete Excillo; it burns like a Torch, and gives a moft fragrant Smell; much of it was ufed to burn at the Siege. Every Night, at the Vizier's and other great Men's Tents, chey had Fires of this Wood, the Wood being cut fmall, and put into an Iron Grate
at the End of a Poll faftened in the Ground. If a Man be hot in the Plain in riding two or three Hours up the Hills, he Ball find fo great an Alseration in the Air as is incredible.

About fifteen Miles from Retimo is a lovely Fountain called Boghare Bajbe, ftanding fo becween two Mountains, that at Two in the Afternoon it is hady, continuing fo all the reft of the Day. The Water is fo cold as will caufe a Dew upon any Fruit that is put into it; and tho' a Man ever fo hot mould drink of this Water, it will do him no Harm. In the Summer-time here are always fome Perfons of Quality, who bring their Beds, and continue for feveral Days together. The Sfacioti are a healthy, frong and flout People; they pretend to be of a very ancient Stock : Some there are, who derive their Families from before the Coming of our Seviour. I faw a Callojero that was one hundred and ten Years of Age; he was very lufty, and could walk very well with a Staff. Part of thefe Hills are under the Jurif diction of the Bifhop of Retimo, and Part under that of Canea. From Retimo to Canea the Read is mof by the Sea-fide, pafing by the Bay of Suda, having the Mountains of Sfacia on the Left Hand.

Canea is feated in a fine Plain, about three Miles from the Botton of the Bay of Suda, and upon the Sea to the North, having a very fair Harbour, which may be called a double Port, the one being round, the other ftretching away to the Eaftward, where are two Arfenals. It is fecure againft the worft of Weathers. The Entrance is narrow, and not above eighteen Font Water ; to the Weft of which the Turks lately have built a new Battery with twenty very large Guns; and above it, to the South, is a great Cittadel, in which are forty good Guns. To the Eaft of the Entrance is another great Caftle, which commands the Port called the Sabioniera, with the Arfenal. Round about the Port is a broad Key, which is always crowided with Merchandize, and is Jittle inferior to the Port at Marfeilles. The Houfes are all well built, and not much battered. The Walls are in very good Repair, having a dry Ditch about thirty Yards broad, and fix deep from the Land on the other Side. The Walls are about thirty Foot high; within them the Earth is raifed about ten Foot higher than the Walls, there being a Walk between. There is a Mount, which they call the Marteningo, where formerly were ten Guns; but now it is of no Ufe. Toward the Land there are four Baftions ; to the South is the great Gate called La Porto di Retimo ; to the Weft is a Mace placed on the Wall, to thew where a Bafha, at the Taking of the Place, firft entred the City: Before the Gate is a Half Moon built of Earth, about twenty Foot high; at each End is a fmall Pyramid of Mortar and Sculls, which are the Sculls of Chriftians who were flain before the Place in the Year 1666.

The Venetions then atcempting to regain the Place under the Conduct of Marquis Vila, a Savoyard, 5000 Men were landed at Culatte, at the Bottom of the Bay of Suda, and were encamped before the City feveral Days. The Turks fallied out of the City to the Weft, furprifing the Chriftians, and had a very great Victory, purfuing them to the Fort, which was built at the Bottom of the Bay. In this Flight there were above 1500 killed, and feveral taken Prifoners; amongft the latter was one Captain Scot, a Scotfman, who had his Hand upon the Drawbridge of the City ; he was carried afterwards to Smyrna in the Gallies, and there redeemed by the Englifh Merchants: But when he came to Verice, his Arrears were paid him, and he returned his Ranfom to Smyrna, which remains there in Bank till another like Occafion fhould prefent itfelf. The City is near three Miles in Circumference, and is much better inhabited than Candia, having a Bafha and other Officers, as in Candia, only in all Councils the other hath the Precedence.

The Country about is very pleafant, being all a Plain for above fix Miles to the South and Weft, planted with young Olive-trees, fo that it feems to be a Garden. It is well fupplied bothwith Flefh and Fing; of the latter there is great A bundance, for befides the Sea, there is a Lake about ten Miles to the South, which furnifhes
them
them with great Varrety of all Sorts. The Trade is much greater here than at Candia, it lying fo convenient for the Morea, Italy, and other Places. The French have a great Trade for Oil, Wool, Wax, Cheefe, and feveral other Commodities, having a Conful and two Merchants. The Venetians have alfo a Conful, but moft of their Oil is fhipped off from Suda, to which Place it is brought from Retimo and other Places thereabout. All great Ships come to an Anchor at a Place called St. Todoro, being two fmall Inets, about five Miles to theWeft of the Port of Canea. There is very good Anchorage, and a fmall Fort to defend them. On one Inand, notwithtanding it feems to be all Srone, and is very low, there are feveral Fountains of good frefh Water.

No Greeks live within the City. They have a new Town built to the South, about half a Mile off, where are two long Streets very commodious, and here they enjoy entire Liberty; their Churches are open, and the Bimop hach a very plealant Houfe, living in good Efteem. Clofe to this Town runs a pleafant River, which is feldom dry; there are likewife feveral pleafant Gardens well ftockt with all Sorts of delicious Fruits. The Turks have alfo fome Gardens here, but they muft retire into the City an Hour before Sun-fet, Winter and Summer, or elfe muft remain out all Night, the Gates being then Aur, and a ftrift Watch kept about the Walls. The Turks of this Place are generally very rich, and incline to Trade, giving all Encouragement to have Me erchants come and refide amongtt them. There was an Engli/b Merchant here, one Mr. Trenchard, who was recommended to the French Conful to have his Arfiftance, but in a little Time he grew weary of the Place

Here they keep their Oil in great Veffels called Timi, which are fquare and made of Wood, fome will hold twenty Tuns. They have a fpecial Regard to preferve the Efteem of their Oil, nor will they force a Merchant to take any longer than it comes clear, not mixing the Bottoms, as in fome Parts they will, by taking a hollow Cane, and putting it to the Bottom, by blowing through which they raife the Foot of the Oil, fo that thick and thin goes together. Here they fell the Foot of the Oil at an under Price, and this ferves to make Sope. Moft Parts of Turkey have an Efteem for Caneá Oil above others. Some will have it to be the better for that the Trees are all fo young; others impute it to their Care in the making, for here they gather all their Olives, whereas in the Morea, they thrafh them down with Poles. The Wines are generally efteemed above all others. The red Mufcadine they call here Leattico, it is a richer Wine than Tent at Cadiz, and much more pleafant; I have feen it fold at fifteen Gallon, for half a Dollar. White Mufcadine is not fo good, as that of Luxuria in Ceffalonia. Some are of Opinion, that in the War, the true Mulcadine Grape was loft; on the Mountains, there are fmaller Sorts of Wines, fo as a Man may have what Sort he pleafes.

All Sorts of Provifions are very plentiful, but in the Summer-time the Mutton hath generally a bad Tafte, which proceeds from their Feeding on fome Herb on the Mountains. Here are Fowls of all Sorts in Abundance, but efpecially a Bird called Beccha figgo, which is almoft a Lump of Fat; they are valued about four for an Afper, or eight for a Penny. Turtle-Doves and Quails are very plentiful. Their Beef is fmall, but very fweet. Of Fruits there is no Sort but what they have. I never faw larger Pears than are brought from the Mountains, being a Sort of Sugar Pear. The Mufk Melons are very good, but their Water Melons are fingular, Salating there is all the Year of all Sorts; no Place is efteemed to have larger and better Endive and Carduus than there are here. I have feen Sugar Canes of a great Height, full as good as what are brought from Grand Cairo. There are Abundance of Simples which are bought here for France and Italy.

Some fay the Reafon why no venemous Thing will live on this Ifland, is the Quantity of Dittamo that grows here. Others fay it has only been fince St. Paul fet Foot upon the Inand. Moft of the Candiotes pretend to have great Knowledge in Simples. The Women are
experienced Doctreffes. One I have Reafon to fay was very fkilful, fhe having in a little Time wrought a great Cure upon me; for by Accident a Bullet having paft through my Leg, I applied myfelf to her, and in fif teen Days the cured it. She did not allow me to eat any Flefh till it was perfectly well. They have feveral Antidotes againft the Plague, but they had not the Effect they pretend to, for feveral of the Doctreffes were fwept away by that Difeafe ; but moft certain it is, that after St. Jobn Baptift's Day it did here abate, as they always obferve it to do in moft of thefe Eaftern Parts.
There are feveral other Places that have had the Name of Cities, which are now Heaps of Ruins; many hundred ftately Palaces there were, that now have only fome Walls, and thofe moftly fallen down. The Can diots keep their Habit, that is, the Women; but the Men are dreffed alla Turcbeffa, efpecially the better Sort. They are as ignorant of the Antiquity of their Country, as the Mereotes, that have been above 200 Years in Slavery. There is no Latin Church upon the whole Ifland, as I was inform'd, but what is fhut up, or converted to the Turks Ufe. Before the Turks conquered this Inland, there were above a Million of Souls, whereas now there are not 80,000 , of which not above 30,000 Turks, on the whole Inand.

The Inlets, which the Veneiians have about the Ifland of Candia, are Carabufa to the Weft End of the Inland, about fix Miles from the Main, having a very good Port between the Ifet and the main Land: The Caftle is very ftrong, mounting about eighty Guns. In the late War it withfiood feveral Affaults, but lying fo far from any confiderable City, the Turks did not fo much Mind it as they did Suda. Here is a Garrifon of Venetian Soldiers, and a Proveditore, who is under the Inquifitore at Suda. In Time of Peace with the Turks, they have a continual 「rade and very good Correfpondence with them, having all Sorts of Provifions at very reafonable Rates.

Spina Longa lies about forty Miles to the Eaft of the City of Candia, at the Entrance of a great Bay. The Inet is not above a Mile and a half about ; it has a very good Fortification round it, befides it is fteep all round, fo as an Enemy cannot well Land. It is not above a Mile from a Point of land, where the Turks raifed a Battery, and continued for a Week to batter the Caftle, but to little Purpofe, for moft of their Dwellings are in Caves under Ground. Here and at Carabufa there is no Water but what is brought them by Shipping, or what they fave in great Cifterns and Jarrs. Here is alfo a Proveditore, and a Garrifon of Venetian Soldiers.

Suda lies in a great Bay, about thirty Miles from Retimo, Weft, twelve Miles from Canea, and nine from the Bottom of the Bay South-Eaft, having the Land to the South about a Mile, on the North North-weft, not above half a Mile diftant. This Inland is about two Miles in Circumference, not above fifty Foot above Water at the higheft Part, being all rocky and fteep. To the South-weft lies a long Rock about ten Foot above Water, and not above twenty from the Ifland; againtt it is the Entrance up to the Caftle, very fteep and winding, having two Gates and a ftrong Counterfcarp, before you pafs into the main Caftle. The Wall about the Inand is low but very thick.

To the Weft is a Mount, called Il Marteningo, about thirty Foot high, and three hundred in Circumference, very ftrongly built with fmall Stone and Mortar, which has above 1000 Shot in it. They are fo faft in, that it would endanger its falling, if they fould be pulled out. The Fortifications of the Catle are quite round, the Iflet, wherein, and upon the Marteningo, are about 120 Guns planted. The Turks have feveral Times attempted to take this Place, and to that Purpofe, in the Year, 1659 , they built fix Caftles, three on each Side of the Bay, from whence they continued to batter it, and fecured the Harbour fo as no Ship or Gally could come to bring them Succour, but what in the Night fmall Veffels would adventure to get in.

In the Year 1665 , the Captain Bafha attempted to reduce it: he came with forty five Gallies, but durft
not adventure to land any Men. He caufed the Gallies to batter that Part of it which is towards the Sea, while on the other Side they continually fired from the fix Forts. The Venetian Fleet was fo difperfed, that they could not come to relieve them. The Befieged were much itreightned for Provifions, but moft for Want of Water; for above a Month they had but a Pint a Day, and were fo difheartned, that they were near inclining to furrender the Place. But it pleafed Good to fhew them his Goodnefs in a fignal Manner, by a Shot from the Enemy, which ftruck a Piece of Rock afunder at the Bottom, a little above the Sea, out of which fprang a Water whick fufficed them to drink. I have feen the Fountain, and drank of the Water, though it is not very pleafant. Several Officers that were in the Inand avowed this for a Truth, it being noted in the Venetian Hiftory of Suda. The Winds coming about Northerly, the Venetian Fleet came from Zante, forcing the $\tau^{2} r k j 万$ Gallies to retreat. The Captain Bafha was killed with a great Shot, upon which the Army broke up and retired to Canea:
The Vizier, in his March from Canea to Candia, paffed by here, and with Admiration beheld the Place, but would not attempt any Thing at that Time, faying, it was not worth the Men which had been already lof againft it. The Port is very commodious, being one of the largeft in all thefe Seas, and there is very good Anchorhold all over the Bay, at the Bottom of which are Saltpans. The Turks have here a fmall Tower, where are two or three Servants of the Cuftomer of Canea, to fee that no Goods are carried away which have not paid Cuftom at the City. In Time of Peace they have all Provifions from Canea at the Market Price, and there is a good Correfpondence betwixt the Inquifitore of Suda and the Bafha, who often fend Letters to one another. The Governor of Suda hath the Title of Inquijtore Generale delle Ifole di Levante; Cerigo and Tine being alfo under his Government, although there be Proveditors to both. The Venetians have no Benefit from thefe Inands, but are at a continual Charge to miaintain the Garrifons in each. The Bottom of the Bıy they call Cullatte.
23. In collecting the Materials for this Section, we have met with fome more diftinct and connected Accounts of the Military and Naval Forces of the Turks; which, as they come in properly enough at the Clofe of this Defcription of their Dominions, Ghall be here inferted ; the rather, becaufe they will enable the Reader to difcern what Probability there is of thofe Events happening, which were mentioned in the laft Section. It is with Bodies Politick, as with the natural Bodies; they get over even violent Difeafes when attacked in their Youth; but when Infirmities grow upon them in their old Age, they feldom, if ever, efcape. The moft that can be hoped for in fuch a Cafe, is a gentle and gradual Decay; but even this can hardly be expected in fome Conftitutions. That of the Turks has neither -Food nor Phyfick, but continual Wars. If thefe are fuccefful they thrive ; if not, their Diftempers increafe, and their political Difeafes grow more and more dangerous. It is not with them as with States of another Texture, where the Laws themfelves will, for a long Time, maintain the Form of the Gonernment by the Refpect the People have for them. In thefe Countries the Laws are derived from the Will of the Grand Signior, and confequently-they are good or bad, wife or otherwife, according to the Temper of the Prince. Whenever, therefore, it happens, and in the Decline of every Government it generally happens, that a Race of weak and degenerate Princes fucceed to the Empire; this alone mutt bring on its final Ruin, which might, perhaps, have been diverted by the Intervention of a great Genius. It would be no difficult Thing to bring many Inftances in Support of this Doctrine, both from ancient and modern Hiftory; but that it is high Time to leave our Reflections, and come to Matters of Fact, which, we dare promife the Reader, are important enough to deferve, and fufficiently curious and entertaining to command his Attention.

Though the greater Part of she Turki/b Infantry carries the Name of fanizaries; yet it is certain, in all this great Empire, there are not above twenty-five thou-

Vol. II. Ne 126.
fand who are true fanizaries or Ianizaries of the Porte. This Soldiery was once compofed only of Tributary Children, inftructed in the Turkijb Religion \% but at prefent this is not obferved, and People are not molefted on this Account, fince the Officers take Money of the Turks themfelves to be entred in this Body. Formerly the Fanizaries were not permitted to marry, the Turks being perfuaded, that the Cares of a Family render Soldiers lefs fit for the Exercife of Arms. Yet now-adays they who will, marry, with the Confent of their Chiefs, who alfo at the fame Time give them a Sum of Money. The principal Reafon, which keeps the $\mathcal{F a}$ nizaries from marrying, is, that Batchelors only arrive at Offices, the moft defirable of which are to be Chiefs in their Chambers; for this Soldiery are all lodged in a large Quarter, divided into one hundred and fixty two Chambers. Every Chamber has a Chief, who commands in it ; but out of it he only performs the Office of Lieutenant of the Company, and receives Orders from the Captain. Every Chamber has its own Enfignbearer, its Expenditor, its Cook, and its Water-Carrier. Above the Captains there is only the Lieutenant-General of the fanizaries, who sf fubject to the Aga.
Befids the common Pay, the Emperor gives the $\mathcal{Y}_{a}$ nizaries every Year a compleat Suit of Cloth of Salonica, and every Day allows them a Quancity of Rice, Mear, and Bread. The Chamber lodges them for One half per Cent. upon the Pay they receive in Time of Peace, and feven per Cent. in Time of War. This Pay is but from two to twelve Afpers a Day, and is never raifed but by little and little in Proportion to their Service. When they are difabled they have an Allowance for Life. The Cap peculiar to the Fanizaries is made like the Sleeve of a Coat, one End is put upon their Head, and the other hangs down upon their Shoulders; to this Cap before is faftened a Sort of Spike half a Foot long, of Silver, gilded and adorn'd with fome falfe Stones. When the Fanizaries march into the Field, the Sultan furnihes them with Horfes to carry their Baggage, and Camels to carry their Tents, to wit, one Horre for ten Soldiers, and one Camel for twelve. At the Acceffion of every Sultan their Pay is augmented at leaft one Afper a Day.

The Chambers inherit the Effects of thofe Meribers who die without Children, and the reft, though they have Children, always leave their Chamber a Legacy. The Solees and Peyes alone among the fanizaries are the Emperor's Guard ; the reft of the Corps never go to the Seraglio but to attend their Officers upon Divan Days, and to prevent Diforders that might happen in the Court ; they are generally placed Centinel at the Gates and the Crofs-ways of the Town, to keep Watch there. They are feared every where, and refpected, tho' "they carry only a Cane in their Hand, for Arms are not delivered to them but when they take the Field. The greater Part of the $\mathcal{f}$ anizaries do not want for Education, being taken from the Body of the Azamoglans, which either through Impatience, or on fome other Account, they frequently forfake. Thofe who are to be admitted among the Fonizaries, pass along in Review before the Officer, and every one takes hold on the Bottom of his Companion's Veft. Their Names are entred in the Grand Signior's Regiftry, after which they all run up to the Mafter of their Chamber, who, to make them know they are under his Jurifdiction, gives them every one a Box on the Ear as they pafs by. At their Inrollment they take two Oaths; the firlt is to ferve the Grand Signior faithfully; the fecond, that they will not fubmit to the Will of their Comrades in Matters relating to the Body.
There is no Order of Men in Turkey fo united as that of the 7 anizaries; it is this ftrict Union which preferves their Authority, and gives them the Courage fometimes to depofe the Sultan. Though there are but twelve or thirteen thoufand in Conftantinople, they are affured that their Brethren, what Part foever of the Empire they are in, will not fail to approve their Conduct. If they think they have Occafion to complain, their Difcontent begins to fhew itfelf in the Court of the Divan, at the Time of the diffributing the Difhes of Rice
to them, prepared in the Grand Signior's Kitchen: For they eat it quietly, if they are contented, and on the contrary, they throw the Difhes on the Ground, and turn them toply turvy, if they are out of Humour at the Miniftry. There is no Infolence they fcruple to utter at fuch a Time againft the principal Minifters, being well perfuaded they Thall obtain Satisfaction; for this Reafon the mof favourable Opportunity is taken early to prevent their Rifing, efpecially at the Time when they give them feveral Days Pay together.

The Mutinies of the Fanizaries are much to be dreaded: For how often have they in an Inftant changed the Face of the Empire? The fierceft Sultan's and the molt ikilful Minifters have often found how dangerous it was to keep on Foot, in Time of Peace, a Militia who fo well underftand their own Interefts. They depofed Bajazet II. in 1512 ; and promoted the Death of Amurat III. in 1595. They threatned Mabomet III. with Dethronement. Ofman II. who had fworn to deftroy them, having imprudently difclofed his Defign, was difgracefully treated by them, for they made him walk on Foot to the Cafle of the feven Towers, where he was ftrangled in 1622. Nuftaplia I. whom this impudent Soldiery put in Ofmon's Room, was depofed two Months after, by the fame Hands that advanced him. They alfo put to Death Sultan Ibrabim in 1649 , after they had dragged him ignominioully to the feven Towers. His son Mabomet IV. was not fo unhappy indeed, but they depos'd him after the latt Siege of Vienna, which mifcarried yet only by the Fault of Cara Muftapba the prime Vizier. In this Sultan's Stead was preferred his Brother Solyman III. a Prince of no Merit, who was alfo depofed in his Turn fometime afterwards, as others have alfo been.

With Refpect to the Sultanefs Mother, the Viziers, the Caimacan, the firt Eunuchs of the Seraglio, the Grand Treafurer, and their Aga himfelf, the Janizaries value them not, and demand their Heads upon the leait Uneafinefs. All the World knows how they ufed, at the Beginning of this Century, the Mufti Fefullab Effendi, who had been Preceptor of Sultan Muftapba. This Prince who loved his Tutor blindly, was not able to prevent his being drawn upon a Hurdle to Adrianople, and thrown into the River. The only Expedient which could ever be devifed to reprefs the Infolence of thefe Soldiers, was to encourage the Spahi's againft them, and thereby make them jealous one of another, but they agree together too we!l upon certain Occafions. It fignifies nothing to change their Quarters, for as the Abfent always ftand to what their Fellows have done, it is impoffible to avoid their Fury, when they have once taken it into their Head that they have fuffered fome great Injuftice. The Hiftory of the Turks can furnifh few Examples of their having been appeafed, without confiderable Largeffes, or without its cofling the firt Officers of the Empire their Lives.

They have never dar'd to confifcate the Treafure of the Janizaries, nor to fhare the Goods their Officers poffers in Property, in feveral Parts of $A \beta$ ga, as at Ca taya, at Angora, at Caraiffar, and in other Places. When the General dies, the Treafurer inherits his Goods; he is the only Officer whofe Efficts are not feiz'd to the Emperor's Profit. This General has the Privilege of prefenting himfelf before the Sultan with his Arms at Liberty, whereas the Prime Vizier, and the other great Men of the Port, never appear in his Prefence, but with their Arms acrofs their Breaft, which is rather a fervile than a refpectful Pofture.

After the Aga, the Principal Officers of the Fanizaries are the Aga's Lieutenant, the Grand Provoit, the Captain of the Serjeants, who march by the Emperor's Side upon Days of Ceremony, the Captain, of his Foot Archers, and the Commander of his Pages, on Foot; thefe laft as well as the Archers, march by the Grand Signior's Perfon when he walks through the City. They are but threefcore, and wear Caps of beaten Gold, embellifh'd before with Milk white Feathers. As for the Foot Archers, or Archers of the Guard, they are in Number three or four hundred, and in a Day of Battle, they are about the Sultan, arm'd only with Bows and

Arrows, that they may not frighten the Grand Signior"s Horfe. Their Habit is a Coat of Cloth, tucked up at the Corners as high as their Wain, fo as to Mew their Skirts; their Cap is Cloth, and ends in a Point, and is adorn'd with Feathers, in Fafhion of a Plume. Thefe Archers thoot with their left Hand, as well as with the right, which they are taught, that fo they may never turn their Back upon the Sultan: When he paffes over Rivers, they fwim by bis Horfe, and found the Fordings with all the Diligence imaginable: As a Reward, the firt Time the Sultan paffes the River, he caufes a Crown a Piece to be given to every one who was up to the Knee in Water, and if they were up to the Middle, they have two Crowns, and three if they were above the Waift. Out of the Body of the Fanizaries are taken the Gunners, and thofe who take Care of the Arms.

The Gunners are about twelve hundred, and receive their Orders from the Grand Mafter of the Artillery; they live at Topana, in Apartments divided into fifty two Chambers;; but it is very happy that they are not as dextrous as the Chriftians in the cafting and managing Artillery. They who look to the Arms are fix hundred in Number, divided into fixty Chambers; they lodge in Apartments near Saniza Sopbia. They not only take Care of the ancient Arms which are in the Arfenal, but of thole of the Janizaries and Spabi's, which they deliver out to them in good Order, when they are going into the Field.
Befides the Fanizaries now mentioned, all the Provinces of this vaft Empire are fili'd at prefent with Foot Soldiers, who bear the Name of Fanizaries; but thefe Fanizaries of the fecond Order are not inrolled in the Body of Fanizaries of the Port; and have nothing of the ancient Difcipline of the Turks. All ill Perfons who would fkreen themfelves from the ordinary Courts of Juftice, and honeft Perfons alfo who are willing to cover themfelves from the Infults of others; they who would efcape the Taxes, and be excufed from publick Offices, purchafe of the Colonels of the Fanizaries who are in the Towns of the Province, the Title of Fanizaries. They are fo far from receiving Pay, that they give feveral Afpers a Day to thefe Officers to enjoy thofe Privileges; fometims they pafs for Invalids, or Penfioners for Life, and live quietly at Home, without being obliged to go into the Army. Is it furprifing after this, that the Turkijh Forces are fo much diminifhed? They never have had fo many Soldiers, nor fuch fmall Armies. The Officers who are obliged to take the Field, pals their own Domelticks for Soldiers, and put the Pay of thofe who ought to bear Arms in the Prince's Service into their own Pockets. The Corruption which is introduced into this great Empire, feems to threaten it with fome flrange Revolution.

Neither muft we confound with the Fanizaries, another Sort of Infantry, call'd Azapes and Arcangi's. The Azapes are the old Muffulman-Bands, more ancient than the fanizaries themfelves, but very much defpifed. They ferve for Pioneers, and fometimes are meerly a Bridge to the Horfe in marfiny Grounds, and fo many Fafcines to fill up the Ditches of a Place befieged. The $A r$ cangi's have no more Pay than the Azapes, but are appointed only to ravage the Frontiers of the Enemy. Yet in full Peace, (for the War is not efteemed to be declared, unlefs the Artillery be drawn into the Field) they are perpetually making Incurfions and pillaging their Neighbours. If any one among thefe Troops happens to become a good Soldier, after fome vigorous Action, he is entered in the Body of Fanizaries. This is the State of the Turki/h Infantry, nor is that of their Cavalry at prefent one Tittle better; it is compofed of two Sorts, known by the Name of Spabi's, but they muft be carefully diftinguifhed.

The one are upon the Emperor's Pay, and the other not. The Spabi's in Pay are divided into feveral Standards, the Principal of which are the Yellow and the Red: Thofe who have no Pay are of two Sorts, the Zaims and the Timariots. The Spahi's in Pay are taken from among the Ichoglams and the Azamoglans, who have been bred up in the Grand Signior's Seraglio's. Their loweft Pay is twelve Afpers a Day, and
the higheft a hundred. Thofe who come from Icboglans generally begin with twenty or thirty, which are increafed according to their Merit or the Intereft of their Friends. In Time of War all the Spahi's in Pay, who bring in Heads of the Enemy, are advanced two Afpers a Day; and they who firt acquaint the Sultan with the Death of any of their Comrades, are raifed as much. The Spahi's are paid in the Hall, and in ehe Prefence of the Grand Vizier or his Chiaia, in order to avoid all Occafion of Complaint.
Though the Spahi's are born of unknown Parentage, they may yet be looked on as the Nobility of the Country; their Education makes them more accomplifhed than the other Turks, and in every Place good Manners ought to conftitute a real and true Nobility. Thofe of the Red Standard were heretofore only Servitors to the Yellow; but now they are all equal, and the Red have even overtopt under Mabomet III. who in a Battle in which the Spahi's of the Yellow gave Ground and fled, reftored the Fight by the Valour of the Red. The Arms of both are a Lance and a Scymiter, and they make Ufe of a Dart, which they manage with wonderful Dexterity, and the Dart has a Steel Point at one End, and is about two Foot and a half long. They alfo carry a Sword, but it is faften'd to the Saddle, and hangs down upon the Horfes Thigh, fo as not to hinder them in diffharging their Piftol and Carbine. Some likewife ufe Bows and Arrows, efpecially the Spahi's of Anatolia; for thofe of Europe or Romelia rather chule the Arms in Ufe with us. Thefe Troops, however, fight without Order and in a Crowd, inftead of throwing themfelves into Squadrons, and rallying regularly.
Mahomet Kuperli the Grand Vizier, who was a great General, was fo far from bringing them to Difcipline, that he affected to humble them and keep them ignorant, for Fear of increafing their Infolence, fince which Time they have extremely loft their ancient Reputation. They baitinade them now on the Soles of the Feet, left, if they fcourged them, they fhould be difabled from mounting their Horfe; and for a contrary Reafon the Fanizaries are fcourged, becaufe they are obliged to ufe their Feet in marching. When the Grand Signior goes to command his Army in Perfon, he caufes large Sums to be divided among the Spahi's. One Spahi and a Janizary are placed Centries at each Cord of his Tent, and the fame at the chief Vizier's. The other Standards of the Spahi's are the White, the White and Red, the White and Yellow, and the Green. The moft famous Spahi's are thofe called Mutafaraca, who receive forty Afpers a Day. The Emperor is their Colonel; their Duty is to attend upon him : They are about five hundred.

As to the other Cavalry, called Zaims and Tamariots, they are Perfons to whom the Grand Signior gives certain Commands, term'd Timar, for Life, on Condition they maintain fuch a Number of Horfe for his Service. The firft Sultans, being Mafters of the Fiefs of the Empire, erected Baronies or Commands out of them, to reward any extraordinary Services, and principally for raifing and fubfifting a Body of Troops without iffuing Money. But it was Solyman II. who eftablifhed the Order and Difcipline of there Baronies, and fettled by his Decrees the Number of Men each one fhould be obliged to find. This Body has been not only very powerful, but very celebrated alfo through the whole Empire. But Avarice, the common Vice of the Eaft, has made them decline feveral Years ago. The Viceroys and Governors of Provinces prevail fo far by their Intrigues at Court, that even the Commands which lie out of their Government are given to their Domefticks, or to them who offer the moft Money. The Zaims and the Timariots differ little more than in their Income. The Zaims have the moft confiderable Commands, and their Revenues make from 20,000 to 818,819 Afpers. If they produce even an Afper above this, it becomes the Property of fome Bafha. Alfo when a Commander dies, his Command is divided, fuppofing the Income of it has been augmented under the Deceafed, as it commonly happens to be, for they are generally improved rather than leffened.

The Zaims are obliged to maintain at leaft four Horfe, which is after the Rate of one Man for 5000 Alpers of Rent. There are two Sorts of Timariots, the one receive their Provifions from the Port, the other from the Viceroy of the Place; but their Equipages are lefs than thofe of the Zaims, and their Tents are fmaller and proportioned to their Revenue. They who receive their Patents from the Coirr, have from 5 or 6000 to 19,999 Af pers; if they fhould receive one Afper more, they would pars into the Rank of Zaims. They who have their Patents from the Viceroys, have an Income from 3000 Afpers to fix thoufand. Every. Timariot is bound to provide one Horfeman for every 3000 Alpers his Income produces. The Zaims. and Timariots are obliged to march in Perfon to the Army on the firt Orders, and nothing can excufe them. The Indifpofed are carried in Litters, and their Children in Baskets and Cradles. The Timariots muft furnifh Baskets to their Troopers, to carry Earth for filling up Ditches and Trenches. Thefe are better difciplined than thofe who are properly called the Spabi's, though the Spabi's are more per!onable and luity; and whereas the laft never engage but in a Crowd at the Head of the ancient Cavalry, the Zaims and Timariots are divided into Regiments, commanded by Colonels under the Batha's. The Batha of Aleppo is Colonel General of this Body of Horle when he is in the Army, becaufe being Seraskier of the Army by his Place, it belongs to him to command in Chief during the Abfence of the Grand Vizier.
It is not ftrange that the Turks are fo weak at Sea, becaufe they want good Mariners, skilful Pilots, and experienced Officers. The Pilors of the Grand Signior fcarcely know how to ufe the Compafs, and thofe of the Saicks, which are their Merchant-fhips, certainly underftand Nothing of it. They fteer by their Knowledge of the Coatts, which is very erroneous, and they generally truft themfelves in long Voyages, as to Syria and Egypt, to Greeks who have run the Courfe with Cbriftion Privateers, and have got the Track of the Countries of $A f a$ and Africa by Rote. However, if the Turks would apply themfelves to Navigation, they would eafily become Mafters of the Mediterranean, and chafe away the Corfairs who do fo much Mifchief to their Traffick. Without reckoning the Supplies they might draw from Greece, or the Inles of the Archipelago, Egypt, and the Coaft of Africk, the Black Sea alone would furnin them with more Wood and Rigging than are needful for even a very formidable Navy. At prefent the Maritime Forces of this great Empire are reduced to twenty eight or thirty Men of War, and they arm not above fifty Gallies.
The Turks had much more powerful Fleets in the Time of Mabomet II. of Selimus and Solyman II. but they never made any great Expeditions. Since the War of Candia, they have mightily neglected the Sea, and perhaps would have done fo much more, if Mizomorto the Captain-Bafha had not in our Days reftored and improved their Navy. The Advantage which arofe by the Sea to the Inands of Spalmadori, under the Venetians, made him fet a wonderful Value upon the Inand of Scio, and gave the Mabometons fren Spirits. He was a Man of extraordinary Capacity for the Sea, and tried all Methods to engage Chriftian Officers in the Grand Signior's Service. The Sultan may now have fix or feven Renegado Captains, who are well experienced ; but the Seamen know nothing of the Tackle, and the Gunners are miferable to the laft Degree.
The Succefflor of Mizomorto was but little efteemed. Adram a Bafha, who was named the Admiral upon the Death of the other, was able to have brought the Condition of the Turkjb Navy to Perfection, if fome, who envied him, had not grot him ftrangled a little after his Promotion. He was known among the Turks by the Name of the Bafha of Rbodes, and among the Chriftians by that of the Butcher's Son of Marfeilles. He was taken very young in a Ship belonging to that City, and was fo unhappy as to turn Mabometan. He had the Character among the Turks of a very upright Man, and very difinterefted. It is faid, that as he was going the Round one Day to execute Juftice at Scio, he asked
to whom three or four She-Afhes belonged, which were loaded with weighty Stones, and were tied to the Door of a certain, Houfe; and underftanding their Mafters were hard-by at Breakfaft, he paffed on ; but at his Return, being difturbed to find the poor Creatures were ftill in the fame Condition, and that no Care had been taken to feed them, he fent for their Owners, and told them, it was but jult that the Affes fhould eat in their Turn. The Peafants readily affented; but were furprized, when he order'd each to bear one of the Stones upon his Back all the Time the Affes were eating. The fame Story is alfo told concerning Sultan Asorat.

The Poft of Captain-Bafha is one of the nobleft in the Empire. He is great Admiral and General of the Gallies ; his Power is abfolute when he is out of the Dardanelles, fo that he can ftrangle the Viceroys and Governors who are on board, without waiting for the Sultan's Order. The Grand Vizier is the only Minifter who is above him : It is the fecond Poft in the Empire, and he is accountable to the Grand Signior alone. Not only the Sea-Officers, but all the Governors of the Maritime Provinces likewifé receive Orders from him. At Conftantinople there are not above twenty eight or thirty Men of War. The Gallies are diftinguifhed into two Claffes, namely, thofe of Conftantinople and thofe of the Arcbipelago; thofe of Conftantinople are at Sea only in the Summer. At the Clofe of the Campaign they are difarmed, to be laid up in the Arfenal of Caffums Baffe; the greater Part of the Beys or Captains are Renegades. Befides the Body of the Galley, Artillery, and Bisket, the Emperor alfo allows them Pay, and the reft of their Equipage, which confifts of two hundred Oars, and a Boat to go on Shore.

If the Captains are rich enough to fubfift their Slaves who row, they make a confiderable Profit, for they are allowed twelve thoufand Livres for Rowers, and make an Advantage alfo of the Journeys in which they employ their Slaves by Land during the other Part of the Year. When there are not Rowers enough, they prefs the Slaves of private Men at Confantinople; but very little Service is done by thefe poor Wretches, who have no Experience, and perifh moft of them at Sea, as the Service of the Sea requires much more Practice than that of the Land. To reinforce the Soldiers of the Gallies, the Turks add fome of the Janizaries. The Gallies of the Archipelago are obliged to be in a Readinefs to put to Sea at all Times. The Captains are paid by Affignments upon the Inlands, and are bound to find their own Slaves, and pay them, for the Grand Signior allows them only the Veffel, Artillery, and Rigging.

They avoid an Engagement all they can, in order to preferve their Slaves; and molt of them have neither the Number of Gallies they ought to maintain, nor their Equipage compleat, becaufe the Captain-Bafha for a Sum of Money (which the others know proper Ways enough to hand to him) often winks at it, confequently the Military Difcipline is very indifferently obferved. The Beys of Rbodes and Scio ought to provide feven Gallies for each Inand; he of Cyprus fix ; thofe of Mytelene, Negropont, Salonica, and Caval one a-piece. Andros and Syra only one, and Naxos and Paros the like. The Captain-Batha fails round the Archipelago in the Summer, to raife the Capitation Tax, and learn the State of Affairs which have happened. He commonly holds his Days of Audit in a Port of Paros, called Drio, which is the Center, as it were, of the Arcbipelago. The Officers of the Inlands repair thither to make their Prefents to him, and pay in the Sums at which each Inand is taxed. Here alfo the CaptainBatha finally judges all Matters, as well Civil as Crio minal.

The only Danger that can now be apprehended from the Turks, muft arife from the Wickednefs of Cbrifion Renegadoes, more efpecially Men of defperate Fortunes, who have had long Experience, and arrived at confiderable Dignities, either in Military or Naval Service; for thefe Men may, by repeated Memorials, awaken the Turkih Minifters to a true Senfe of their

Condition, and may alfo propofe amending their Dir cipline, by introducing that of the Germans, and fo the laft Evil would be worfe than the firf, fince Turki/g Infantry, thus difciplin'd, would be infinitely more terrible than the Fanizaries have ever been. That this is not altogether a groundlefs or idle Sufpicion, appears from two Inftances in our own Time, viz. the Port's fending an Aga into Holland to treat with Mr. Langallerie, a Frencbman, who quitting the Service of his own Prince, was raifed in that of the Allies to that of a Lieutenant General; but growing difcontented, as thefe Sort of People generally do, after the Peace was con cluded, propofed tranfporting a Colony into the Morea, and reviving the Ottomon Naval Power in the Archipelago. His Schemes were received, a Perfon fent to treat with him in Holland, and confiderable Sums of Money paid him; but fome of his Practices requiring his Prefence in Germany, he went thither, was feized and imprifoned, and continued in that Situation, till in a def perate Fit of Madnefs he put an End to his own Life.

The recent Example of Count Bonneval is another of the fame Kind; he was a Man of one of the beft Families in Fronce, but profligate in his Morals, and without any Principles whatever. He too quitted the Service of France to enter into the Troops of the Allies, where he obtained very great Preferment, and if any Thing could have fatisfied his Ambition, might have had it; but having conceived, fome Prejudice againft his Patron Prince Eugene, he behaved in fuch a Manner as forced the Imperial Court to proceed againft him with Severity, which fo exalperated his haughty Spirit, that he retired to Turkey, where having fome Differences with the Erench Ambaffador, who refufed to take him under his Protection, and being claimed as a Subject of his Imperial Majefty, which by the Treaty of Peace then fubfifting would have obliged the Iurks to have given him up, he found himfelf under the dreadful Neceffity of abandoning the Chriftian Faith to fave himfelf from being thus delivered.

Thefe Circumftances are not taken from the fabulous Hiftory of his Adventures, but from his own Letters, and therefore the Reader may depend upon them. This Man might have proved as ufeful to the Turks as dangerous to the Cbriftions. He had ferved againft them in the laft War in Hungary, was perfectly acquainted with the Errors in their Difcipline, and without Doube would have fet them right, as appears from the Memorials that he prefented from Time to Time, and which muft be allowed to be very judicious in their Kind ; but he was never much eiteemed or greatly trufted by the Inficels; and to fay the Truth, as Things ftand at prefent in that Empire, it is very improbable that fuch a Man fhould fucceed, for many Reafons, out of which I will mention a few.

The Nation in general are ftrongly wedded to their own Cuftoms, and have an infuperable Contempt for thofe of other Nations. The Difcipline of the Fanizaries is now corrupted to fuch a Degree, that there is nothing they dread fo much as a Reformation; they no longer confider their Kind of Life as a Military Profeffion, in which Preferment is to be derived from Merit, but as a Trade of which they are inclined to make the moft they can, and therefore deteft all Thoughts of being put out of the Way in which they now are, and would certainly mutiny, if a new and ftrict Difcipline was infifted upon. The qurki/b Minifters are naturally fufpicious of Renagadoes, forefeeing that if they fhould rife to confiderable Employments, it muft be at their Expence, the Thoughts of which they cannot bear; and therefore though they cannot refufe fuch People Protection and Countenance, yet they always ftudy to deprefs and keep them under; but we know not what Time, and the Lights of Experience may produce, and therefore we ought to be upon our Guard againft all Accidents.

Befides in a Country fo fubject to Revolutions, Nobody can pretend to decide about what may happen. A new Emperor may arife of a martial and enterprifing Genius, and may take the Reins of Government into his own Hands, and pay very little Deference to
his Minifters. Such a Prince, from the Genius of the Turkib Conftitution, would very foon become the Darling of his People, more efpecially if Succefs hould attend any of his Undertakings; and in that Cafe he might very poffibly have Recourle to Renegades, as Perfons the moft capable of ferving him, which if they were able to do, he would not fail to raife them in Spite of all Oppofition; and this once accomplifhed, the Effects that muft attend it would become terrible to Cbristendom; for confidering that general Depravity of Manners, and that dangerous Spirit of Irreligion, which prevails over all Europe, there is nothing more likely than that fuch a Turn as this would draw all the turbulent and reftlefs Spirits in this Part of the World to feek their Fortunes under the Turks, and then perhaps it would be too late to think of any Remedy for fuch an Evil.

But if an oppofite Spirit could be raifed in Time, if Chriftian Princes could be prevailed on to lay afide their inteftine Jealoufies and Difputes, and think of augment-
ing their Subjects, and increafing their Dominions, at the Expence of their common Enemy; we have already fhewn, that this might be very practicable: We will conclude this Section with oblerving, that how little foever we hear of it, Things on this Side are really at a Crifis, and in the Space of a very few Years we thall fee them take either one Turn or the other; that is to fay, either the Chriftian Princes, more efpecially the two Imperial Powers of Germany and Rufla, the King of Poland, and the State of Venice, will think of recovering what has been torn from them by the Ottomans ; or after fome fudden and great Revolution among the Turks, the Face of Affairs will change, and they will refume their Defigns againft the Cbriftians too, which they are always encouraged by that Power, which, as it feems to have adapted the Maxims of their Policy, has for many Years acted as if it was the natural and unalterable Ally of the Infidels, and in that Light as well as others the common Enemy of Cbriftendom.

## SECTIONIV.

> A Journey from Aleppo to Ferufalem, containing a curious and accurate Defrription of the Holy Land and City, interfperfed throughout with great Variety as well of Philological, Phyfical, and Philofophical ; as Hiftorical and Critical Remarks.

By Henry Maundrele, M. A. late Fellow of Exeter College, and Chaplain to the Factory at Aleppo.

1. An Introductory Account of the Author and his Performance, in which is Shewn the Nature, Defign, and UJes of this Section. 2. The Author Sets out in Company with fourteen Englifh Gentlemen from Aleppo; the Manner of their Travelling, and the Nature of their Accommodations. 3. They are furprized in their Fourney by a Storm, and obliged to take Shelter among the Tombs of Turkifh Saints. 4. An Account of the City of Latichea, and of a Nation called Neceres, wobo are of all Religions, and of no Religion. 5. They continue their Journey to Tripoly, and meet reith feveral Antiquities in their Pafage. 6. A Defcription of that City, with an Account of the Entertainment they met with there. 7. Their Vifit to Oftan Balba of Tripoly, the Ceremonies of their Reception, and webat pafled at their Audience. 8. A Defcription of Gibyle, the Byblus of the Ancients, famous for being the Birtb-place of Adonis. 9. A very curious and learned Account of various Antiquities in this Neigbbourbood. 10. A fuccinet but curious Relation of the Emir Faccardine, bis Subjects and Succeffors. II. The Autbor's Account of Tyre and Sidon, with fome Remarks upon the Prophecies relating to thofe Cities. i2. A Defcription of Solomon's Cifterns, the City of Acra or Ptolemais, and other Places in that Neigh. bourbood. 13. They pafs the River Kifhon, and travel through the Country of Samaria. 14. Some very curious and fatisfactory Remarks on the ancient Fertility and prefent Barrennefs of the Land of Judea. I5. A very copious and circumfantial Account of the Ceremonies annually ufed at the Cburcb of the Holy Sepulchre on Good-Friday. 16. The Celebration of Eafter, and the Autbor's Vifit to the Sepulcbres of the Kings. 17. The Author's Fourney to the River Jordan and the Dead Sea, with a Defcription of both. 18. A Fourney to and Defcription of Bethlehem, with Variety of critical Obfervations and Remarks. 19. His fourney to the Convent of St. John in the Wildernefs, with a Detail of the remarkable Places be fawe therein. 20. A very particular Account of the Holy Fire at Jerufalem, and of fome very extraordinary Pratices of the Monks and Priefts. 21. A circumfantial Account of the moft remarkable Places in the Neigbbourbood of Jerufalem. 22. The Autbor's Viait to Mount Olivet, and the Palace of Pilate, the Pool of Bethfaida, and otber Places. 23. Their Departure from Jerualem, and Fourney from thence to Nazareth. 24. A Defcription of that Village, and of Mount Tabor. 25. An Account of what bappened in their Fourney till their Arrival at Damaicus. 26. A very large and accurate Defcription of that City and tbe Country about it. 27. An Account of the great Turkifh Caravan of Pilgrims that go annually to vifit Mecca. 28. A very curious and copious Defcription of the City of Balbeck, the Palmyra of the Ancients. 29. An Account of the Turkifh Punijbment called Empaling; a Defoription of Mount Libanus, and the Autbor's Return to Aleppos. 30. Another Journey of his from Aleppo to vifit the River Euphrates, the City of Beer, and the fruitful Country of Mefopotamia. 31. Remarks and Objervations upon the foregoing Section.

THE Author of thefe. Travels was a Gentleman who, during the Time he refided in the Univerfity of Oxford, laid a Foundation of an extraordinary Character, in Point both of Learning and Manners. He applied himfelf with great Diligence to the Reading of Greek Authors, and a ftrong Turn towards Antiquities and Church-Hiftory; and though his Conftitution was far from being ftrong, and his great Patron Dr. Sprat, Bifhop of Rochefter, had it in his Power to provide for him at home ; yet, upon the very firf Propofal of his going Chaplain to the Factory at Aleppo, he very chearfully and gladly embraced it ; and, during his Refidence there, was equally happy himfelf, and agreeable to the Gentlemen who then refided there, as I have been informed by feveral who were there at that Time, and by fome that accompanied him in his Journey. It may not be amifs to obferve, that the worthy Bifhop Frampton was his Predeceffor in this Employment; and as he was a Man of great Piety and Purity of Manners, fo, on the other hand, his Converfation was fo chearful and entertaining, and he had the Art of introducing learned Subjects with fuch Eafe, and of enlivening them in fuch a Manner, that he diffufed a Spirit of Literature through the whole Factory; fo that when Mr. Maundrell came firft amongtt them, he profeffed himfelf aftonifhed at the frrict Order and perfect Regularity in which they. lived; exhibiting, as himfelf fays, in all their Actions the beft and trueft Signs of a Chriftian Spirit, fincere and chearful Friendhip among themfelves, a generous Charity towards others, a Converfation innocently chear.. ful, addited to no Pleafures but fuch as were honeft and manly ; and, in fhort, in all Points fo well difpofed, that it feemed rather a College, and a wellgoverned College too, in fome famous Univerfity, than a Factory of young Merchants, fent there to make their Fortunes. We need not at all wonder, that in Company like this Mr. Maundrell rejoyced in his Situation, or that amongft other Advantages he there enjoyed, he fhould lay hold of vifiting the Land of $\mathcal{F} u d e a$, and the Places confecrated to the Reverence of all Chriftians, by their having been the Scenes of the principal Acts of our Saviour and his Apoftes in the firft Ages of the Church. What he faw with Pleafure, he has related with great Accuracy and Judgment; and the Learned, both of our own and of Foreign Countries, are agreed, that annongft the numerous Relations of Journeys to the holy City, there are none that, in Point of Candour, Fidelity, and Exactnefs, furpaffes this; which is the Reafon that we have given it a Place in this Collection, and dare recommend it to the Reader as an excellent Performance of its Kind, filled not only with all that can be reafonably expected from it ; but alfo with a great Variety of curious and uffful Learning, which can hardly fail to inftruct and pleafe.
2. On February 26, 1696, I fet out with fourteen Englijh Gentlemen from Aleppo, defigning to vifit the Holy Land at the next Eafter, and the firft Night we took up our Quarters at the Honey-Kone, about an Hour and a half Welt of Aleppo. A very indifferent Lodging we had; for here it is to be noted, that in travelling this Country, a Man does not meet every Night with Inns as in England; but you muft either lodge under your own Tent, or elfe in Publick-houfes, founded for your own of Travellers, called by the Turks, Kanes; to which all Comers are welcome, paying a fmall Fee to the Kane-Keeper, if they be able. And here you muft expect nothing but bare Walls, for all other Neceffaries mutt be carried by every one that travels.
On the 27 th, we parted from the Honey-Kane, and paffing by Oorem and Keffre, we entred into the Plains of Kefteen, of a vaft Compafs, and in moft Places very fruiful. At our firft Defcent into them at Effoyn, we -counted no fewer than twenty four Villages; and Kefteen itfelf is a large Village on the Wefl-fide of the Plain, encompars ${ }^{\circ}$ d with fo many Fields of Corn, that the Inhabitants breed many Pigeons. At this Place we faw, over the Door of a Bagnio, a Marble-ftone carved with the Sign of the Crors, and the Gloria Patri, \&c. which.was probably the Portal of fome Church former.
ly. On the 28 ch , we left Kefteen, and continuing in the fame Plain, abounding with Corn, Olives and Vines, we came to Harbonoofe, and from thence to a very rich Valley called Rooge, which is wall'd on both Sides with high Mountains; and having travel'd in this Valley four Hours, we pafs'd through the Skirt of the Lake or Sea of Rooge, and from thence we came to Te-ne-ree, where we paid our firft Caphar. Thefe Caphars are certain Duties paid by Travellers to Officers that attend in their Stations to receive them. They were at firf levied by Chriftians, for repairing the Ways, and fcouring them from Robbers; but under that Pretence the Turks now exact unreafonable Sums, though themfelves are often the greateft Robbers.

After this Caphar, we crofs'd over the Mountains on the Weft-fide of the Valley of Rooge, and defcending into a Valley, we pals'd Bell-maer, and came to Sboggle, which is a large but filchy Town, fituate on the River Orontes, over which you pafs to it by a Bridge of thirteen fmall Arches. The River hereabouts is pretty deep, and yet fo rapid, that it turns great Wheels, made for lifting up the Water by its natural Swittnefs, without any Force added to it, meerly by confining its Stream. We lodg'd here in a large and handiome Kane, founded by the fecond Grand Vizier Cuperli, and to well endow'd, that it fupplies every Traveller with a competent Portion of Bread, Broth, and Flefh. It was crouded with $\mathcal{T} u r k i / b$ Hodgees or Pilgrims, bound for Mecca; but we found a peaceable Reception among them.
3. March I. we parted from Sboggle, and crofs'd a Mountain on the Weft-fide of the Valley, from which we defcended into a third Valley like the two former ; and having pafs'd the Village Bedame, we entred into a woody Country, where our Road was very rocky and uneven, but yet pleafant, becaufe it prefented us with the Profpect of Plants and Flowers of divers Kinds, as Myrtles, Oleanders, Tulips, and other aromatick Herbs. After this we defcended into a low Valley, at the Bottom of which there is a Fiffure fo narrow, that you cannot difcern it till you come upon it, though you may hear the Noife of the Stream running into it at a great Diftance. They call it the Sbeck's Wife, from a Woman of that Quality that fell into it. From hence we came in one Hour to a Place called the Sultan's Stone, where we pitch'd our Tents, and lodg'd for that Night.

On the 2d, we left our Campagnia Lodging very early, the Weather being yet moitt and cold, and came in an Hour to the Caphar of Crufa, and from thence in another to the Foot of a Mountain called Occaby, which we afcended with great Difficulty, and then we found a fine Country planted with Silk-Gardens, through which we came to Belulca, and there repair'd to a Place which is both the Kane of the Village, and the $A g a^{3}$ 's Houfe; but though we gave him a fmall Prefent, we could hardly obtain a dry Part of the Houfe to lodge in. In the mean Time, being informed that there were feveral Chriftians Inhabitants in this Place, we went to vifit their Church, which was only a Room about four or five Yards fquare, wall'd with Dirt, and cover'd with Bufhes, in which was an Altar of the fame Materials with the Walls, paved at Top with Potherds and Slates; and in the Middle of the Altar ftood a Crofs made of two Laths naild together, on each Side of which there are two or three old Pictures of our bleffed Lord and the Virgin, $\mathcal{E}^{\circ}$ c. a very mean Habitation for the God of Heaven, but yet held in great Efteem by the poor People, who come hither with great Devotion, and hang the Room with Bags of Silk-worms Eggs, that by the Holinefs of the Place they may bring a Bleffing upon them, and increafe their Virtue.

On the 3d, we left Belulca, and arrived at Scbolfatia, a poor Village, fituate upon a fmall River, now fwollen fo high with the late Rains, that it was not fordable; which put us to a Nonplus, not knowing what to do till the Rain abated; and then we pitch'd in the open Field, though thoroughly foak'd with Wet. But after the Rain had ceafed a little While, it began to pour down a-frefh with Lightning and Thunder, and then

Chap. I.
from ALEPPO to JERUSALEM.
we fent a Turk to a Sbecks Houle hard by, to try if by any Means we could get Admittance there; and at laft, with good Words, having declared, that we had no Intention to defile their Faith, we were permitted to fecure our Baggage in the Houfe, whilft we fhelter'd ourfelves among the Tombs from the Rain, which pour'd down all Night long. A Sbeck's Houfe is a Stone Fabrick, of fix or eight Yards fquare, roof'd with a Cupola, erected over the Grave of fome eminent Sheck, i. e: one who by his long Beard, whining Prayers, and Pbarafaical Pride, (the great Virtues of the Mabometan Religion) has purchafed the Reputation of a Saint ; of which Sort there are many in this Country, to which the People repair with their Vows and Prayers, which they offer in thefe Shrines, not to the Saints, as the Papifts do, but to God only, whom alone they adore
4. On the 4 th : This Morning we found the River fordable, and got to the other Side of it with our Baggage, from whence afcending a very fteep Hill, at the Top of it we were prefented with the firft Profpect of the Ocean ; and to the Weftward, we had a View of the City Laticbea, built by Seleucus Nicanor, and by him call'd Laodicea, which Name it ftill retains with a little Corruption. After it was reduced to a low Condition, it now begins to flourifh again, being put in a Way of Trade by Coplan Aga, a Man of great Wealth and Authority in thefe Parts. From the Hill laft mention'd, we defcended into a fpacious Plain, having the Sea on the Right-hand, and Mountains on the Left. In which Plain we difcern'd two ancient Tombs, which were Chefts of Stone, two Yards and a half long each, cover'd over with large Tables of Stone, carv'd on the Outfide with Ox-heads, and Wreaths hanging between them, after the Manner of adorning Heathen Altars

Above an Hour from thefe Tombs we were ftopt by another Stream, but here we found a fafe Paffage to the other Side, and then we were forc'd by the Rain to make the beft of our Way to Jebilee. After this Manner our Road continued for feveral Days, between the Sea on the Right, and the Mountains on the Left; but the Mountains go under different Names, and are inhabited by feveral rude People. In that Part of them above $\mathcal{F}$ ebilee, there dwell a People called by the Turks Neceres, of a very fingular Character for it is their Principle to adhere to no certain Religion, but to put on the Colour of that Religion which is profeffed by thofe with whom they converfe : And fo with Cbrifians they profefs themfelves Cbrifians, with Mabometans they are good Mufulmans, and with Feres they pafs for fezos. All that is certain concerning them is, that they make very much and very good Wine, and are great Drinkers, but in Religion they are very Proteus's.

On the 5 th; This whole Day we fpent in Jebilee, having a convenient new Kane to lodge in, built by Oßtan their Bafhaw of Tripoly. Febilee is feated clofe by the Sea, having a vaft and fruitful Plain on the other Sides of it ; its ancient Name was Gabala, and fo it is call'd by Strabo. In the Time of the Greek Emperors it was a Bifhop's See, and is ftill accounted a City, though it makes a very mean Figure at prefent. The moft remarkable Things in it are a Mofque and an Alms. houfe, built by Sultan Ibrabim; in the former is his Tomb, which we found to be a great wooden Cheft erected over his Grave, and covered wih a Carpet of painted Callico, trick'd up with a great many Ropes of wooden Beads, which is the Turks ufual Way of adorning the Tombs of their holy Men. In this Mofque we faw feveral Incenfe-Pots, Candlefticks, and other Furniture, being the Spoils of Chriftian Churches.

The Turks reported, that he divefted himfelf of his Royalty, and liv'd twenty $^{2}$ Years in a Grotto by the Sea-Side; and to confirm the Truth of their Relation, shey fhow the Cell where he abode, and another Grot twice as large, which had three Niches or Praying-places hewn in its South-fide, as they always are, for that Way che Mufulmen are oblig'd to fet their Faces, in Reverence to the Tomb of their Prophet. From this

Mofque our Guide carried us to a Chriftian Church which we found to be nothing but a fmall Grotto in a Rock open towards the Sea, having a rude Pile of Stones for an Altar ; which poor Chappel is the only Place, as the Curate told us, allow'd to the Greek Chriftians for Divine Service. But the moft confiderable Antiquity in Febilee, is the Remains of a noble Theatre, of which the Semi-circle is all that's now ftanding, being an hundred Yards in Compals, having in it feventeen Windows, between which are large maffy Pillars ftanding againft the Wall, that is three Yards three Quarters thick of firm Stone, by which Means it has been preferv'd thus long from the Jaws of Time, and the Ruin which the Turks bring upon moft Places.

On the 6th, having done with Febilee, our Road continued by the Sea-fide, and banifh'd us in two Hours to a fair deep River, call'd the King's River; on both Sides of which we faw the Footfteps of fome confiderable Buildings. About half an Hour further we paffed the River Jobar, and on the other Side ftood a great Square Tower, and round about it there was the Rubbifh of a great many other Buildings. And all along this Day's Journey we obferv'd the Ruins of Caftles and Houfes, which teflify that this has been formerly a Place of great Strength and Beauty. Strabo calls that whole Region, from Febilee as far as Aradus, the Country of the Aradii, and gives the Names of feveral Places fituate along the Coaft, which cannot be now diftinctly known. Only the Balanea of Stribo feems to be that Place which the Turks now call Baneas, which ftands about a Furlong from the Sea, and has fuch a pleafant Situation, fuch Ruins, and fuch a Bay, as fhews it to have been a commodious Habitation, Leaving Baneoss, we went by the Sea-fide, and in one Quarter of an Hour we pafs'd by an old Caftle, on the Top of a high Mountain, built in the Figure of an equilateral Triangle, which the Turks call Mercbab, which probably is the fame Caftle mention'd by Adrichomius under the Name of Margath, to which the Bifhops of Balanea were forc'd to tranllate the See, by Reafon of the Infults of the Saracens. About an Hour and half from Baneas, we met with a fmall clear Stream, which induc'd us to take up our Lodgings near it, about two or three Furlongs from the Sea, having in Sight on the Mountains above us a Village call'd Sopbia, inhabited only by Maronites, and a little further, Refeck, poffefs'd by the Turks; and a little further Merakiah, poffefs'd. by Cbrifions and Turks together.
5. On the 7 th : Next Morning we came in three Hours to a deep River call'd Nabor Hufine, having one Arch large and well wrought; and in an Hour and half more we reach'd Tortofa, anciently call'd Ortbofia, being a Bifhop's See in the Province of Tyre, frequently mention'd by the Writers of the Holy Wars as a ftrong Place, as it appears to have been. What remains of it is the Caftle, wafh'd on one Side by the Sea, on the others fortified by a double Wall, between which there is one Ditch, and another compaffing the outermoft Wall. You enter this Fort over an old Draw-bridge which lands you in a fpacious Room, which on one Side refembles a Church, having at this Day feveral holy Emblems, as that of a Dove defcending, and that of the holy Lamb; but on the other Side it has the Face of a Caftle, being built with Port-holes inftead of Windows. On the South and Eaft-fide of it ftood anciently the City, encompaffed with a good Wall and a Ditch, of which there are fome Remains; but of other Buildings there is nothing left, except a Church which is an hundred and thirty Foot long, ninety three broad, and fixty one high, fo entire, that it might eafily be repair'd; but. it is now made a Stall for Cattle, in which we waded up to the Knees in Dirt when we went to fee it.

From Tortofa we fent our Baggage before towards Tripoly, which we follow'd not long after, and within one Quarter of an Hour we came to a large Channel of a River, now almoft dry; and in half an Hour more we came to a fmall Inand about a League from the Shore, call'd by the Turks, Ruad, which is fuppored to be the ancient Arphad, or Arpad (mention'd, 2 Kings xix.

I3. Geg
13. Ger. x. I8. Ezck. xxvii. II.) and the Aradus of the Greeks and Romans, which feem'd to be fill'd with Buildings like Caftles, and to have been anciently famous for Navigation. About a Quarter of an Hour further we came up with our Muliteers, who had pitch'd our Tents at a Place where we found feveral notable Antiquities, having in it a Fountain call'd the Serpent Fountain. The firft Antiquity that we obferv'd was a large Dike thirty Yards over at Top, cut into the firm Rock, whofe Sides went floping down with Stairs form'd out of the Rock; and this was on the North-fide of the Fountain; but on the other Side we found a Court of fifty five Yards fquare, cut in the natural Rock, and compafs'd about with Walls of the fame Rock on three Sides, but to the North it lay open. In the Center of this Area was a fquare Part of the Rock left ftanding, being three Yards high, and five Yards and half fquare, which ferv'd for a Pedeftal to a Throne made of four large Stones, two at the Sides, one at the back, and another hanging over the Top like a Canopy, which was five Yards and three Quarters fquare, carv'd round with a handfome Cornifh. The Court we imagin'd to be an IdolTemple, and the Pile in the Middle to be the Throne of the Idol, which feem'd the more probable, becaufe Hercules, i. e. the Sun, the great Abomination of the Pbenicians, was wont to be adored in an open Temple.
6. On the 8th: We got up early to take a nearer View of the two Towers we faw the Night before, whereof one was thirty three Foot high, on a Pedeftal ten Foot high, and fifteen fquare ; the other was thirty Foot high, on a Pedeftal fix Foot high, and fixteen Foot fix Inches fquare, fupported by four Lyons, the upper Part rear'd upon the Pedeftal; being all one fingle Stone. Under thefe Monuments were feveral Sepulchres, to which we defcended by Steps, having feveral Cells for Corps hewn out of the Rock, fome of which we found to be eight Foot and half long. Having parted from thefe Antiquities, we entred into a fpacious Plain between the Sea and the Mountains, reaching almoft as far as $\mathcal{T}$ ripoly, which the Natives call 7 unia. We were feven Hours in paffing it, and found it all along very fruitful, by reafon of the many Rivers that are in it ; of which the firlt being about fix Hours from Tripoly, has a Stone Bridge of three Arches, and is called the Great River.

About half an Hour further we came to another, called the Leper's River : In three Quarters of an Hour more we came to a third, called Nabor Accbar ; and two Hours more brings you to a fourth, called the Cold Waters. Which Rivers I do particularly mention, becaufe it is probable, according to the Defcription of the Ancients, that one of them is the River Eleutberus, though the Moderns do all agree, that it is the fame with a River between Tyre and Sidon, called by the Turks Cafimeer, contrary to the Account of Sirabo and Pliny, who place it near Ortbofia, or between that and Tripoly; and of Ptolomy, who places it yet more Northerly between Ortbofia and Balanea.
On the 9 th, our Muliteers were afradd left their Beafts fhould be prefs ${ }^{9}$ d for publick Service, as indeed they were, in Spight of all their Caution; and fo we left them in the Plain of Junia, and arrived at Tripoly about Sun-fet. It is feated about half an Hour from the Sea, and the major Part of the City lies between two Hills, one on the Eaft, on which ftands a Caftle that commands the Place, and the other on the Weft between the City and the Sea, which is faid to be firft rais'd, and ftill increas'd by Sand blown to it from the Shore; whence arifes a Prophecy, that the whole City fhall in Time be buried with this fandy Hill.
On the Ioth, we were treated by Mr. Filher in a narrow pleafant Valley by a River Side, about a Mile from the City: A-crofs the Valley there runs, from Hill to Hill, a lofy Aquæduct, carrying upon it fo great a Body of Water as fuffices the whole City. It was called the Princess Bridge, and is fuppofed to be built by Godfrey of Bulloign.
7. On the IIth we all dined at Conful Hafing's Holle, and after Dinner we went to wait upon Ofian,
the Batha of Tripoly, having firt fent our Prefent, after the Manner of the Turks, to procure us a favourable Reception; for it is accounted uncivil in this Country, to vifit without an Offering in Hand, which all great Men expect as a Tribute due to their Character. And even the inferior People feldom vifit without bringing a Flower or an Orange, or fome fuch Token of Refpect according to the ancient Oriental Cuftom, hinted in I Sam. ix. 7. If we go, fays Saul, what fall we bring the Man of God? there is not a Prefent, \&c.

On the 12 th we went to vifit Bell-mount, a Convent of Greeks, about two Hours to the South of Tripoly, and we came there juft as they were going to Evening Service. The Church is large but oblcure, and the Altar is enclos'd within Chancels, which none but the Prieft muft approach, after the Manner of the Greek Churches. They call the Congregation together by beating a Tune with two Mallets on a long Piece of Plank hanging at the Church Doors, Bells being an Abomination to the Turks. Their Service confifted in a hafty Chattering of certain Prayers and Hymns to our Bleffed Saviour and the Virgin, and in fome dark Ce remonies, for the Prieft that officiated fpent at leaft a third Part of his Time in compaffing the Altar, and perfuming it with a Pot of Incenfe, and then going round the Congregation, tendring its Smoke with three Vibrations to every one prefent. Towards the End of the Service, there was brought into the Body of the Church a fimall Table, covered with a Linnen Cloth, on which were placed five fmall Cakes of Bread crofs wife; and in a Hole made in each Cake was fixed a fmall lighted Wax Taper. And then the Prieft read the Gofpel concerning our Lord's feeding the Multitude with five Loaves; after which, the Bread was carried within the Cancelli, and being there broke in Bits, was again brought out in a Basket, and prefented to every one in the Affembly, that he might take a little.

After this Collation, the Prieft pronounc'd the Blef fing, and fo the Service ended. On both Sides of the Church there were Seats for the Monks, being about forty in all, and in each Seat there were Crutches (as there are in moft Churches of this Country) which are us'd by the Prieft to eafe him, by leaning on them, in Cafe the Service be long, becaufe by the Rubrick he is forbidden to fit down. We found the Monks goodnatur'd, but very ignorant, for the Chief of them told the Conful, that he was as glad to fee him, as if he had beheld the Meffiah in Perfon come to vifit him. Nor is this Ignorance much to be wondred at, fince they are forced to fpend all the Time, between their Hours of Devotion, in managing their Flocks, cultivating the Lands, and pruning their Vineyards, which they do with their own Hands; and this they are obliged to do, not only for their own Suftenance, but to fatisfy the unreafonable Exactions of the Turks. And to Shew what Kind of Men they are, I took particular Notice, that the fame Perfon whom we faw officiating at the Altar in his embroider'd Prieftly Robe, brought us the next Day on his own Back, a Kid, and a Goat's Skin of Wine, as a Prefent from the Convent.

On the 13 th: This Morning we went again to wait upon Oftan Bafha, by his own Appointment, and were receiv'd with great Civility after their Manner, which is this: When you would make a Vifit to a Perfon of Quality, you muft fend a Prefent by a Servanc, who is to learn what Time may be moft feafonable to wait upon him : When you come to the Houfe, fome Servants receive you at the outermoft Gate, and conduct you towards their Mafter's Apartment, and others in their feveral Stations meet you as you draw nearer to him Coming into the Room, you find him prepar'd to receive you, either ftanding at the Edge of the Duan, or lying down at one Corner of it, as he thinks proper. Thefe Duans are low Stages rais'd about fixteen or eigh teen Inches above the Floor, fpread with Carpets, and furnifh'd with Boliters to lean upon; on which the Turks eat, fleep, fmoke, fay their Prayers, receive Vifits, Esc. Their whole Delight is in lolling on them, and their Luxury confifts in furnifhing them richly.

Being come to the Side of the Duon, you nip off your Shoes, and take your Place firft at forme Diftance, and upon your Knees, laying your Hands formally before you; and there you muft remain till the Man of Quality invites you to draw nearer, and to lean upon a Bolfter. When you are thus fix'd, he difcourfes with you as Occafion offers, the Servants flanding round with profound Refpect and Silence. When you have talk'd over your Bufinefs or made your Compliments, he makes a Sign to have the Entertainment brought in, which is generally a little fweet Meat, a Difh of Shirbet, and another of Coffee, which is prefently brought in by the Servants, and tender'd to all the Guefts in Order with great Care; for if any of them fhould make the leaft Slip in giving or receiving his Difh, it might coft him 100 Drubs on his bare Fcet to attone for his Crime. At laft comes the finifhing Part of the Entertainment, which is perfurning the Beards of the Company ; and for this Purpofe, they have a fmall Silver Chafing-difh, with a Lid full of Holes, fix'd on a Plate, in which they put fome frefh Coals, and upon them a Piece of Lignum-Aloes, and then the Smoke afcends with a grateful Odour through the Holes of the Cover. This Smoke is held under every ones Cliin, and offer'd as a Sacrifice to his Beard, which greedily drinks in the gummy Steam, and retains the Savour of it a good while after. This Ceremony is intended to give a civil Difmiflion to the Vifitants, incimating that they may go away as foon as they pleafe, and the fooner after this the better.

Having ended our Vifit to Ostan Baffa, we rid out after Dinner to view the Marine, which is about half an Hour diftant from the City. The Port is an open Sea, rather than an enclos'd Harbour, but is partly defended by two fmall Ines, about two Leagues out from the Shore, one of which is called the Bird, and the other the Coney-Ifland, from the Creatures they feverally produce. And for its Security from Pirates, it has fix feveral Caftles on the Shore at convenient Diftances. In the Fields, near the Shore, there are many Heaps of Ruins and Pillars of Granite, which are Indications of fome great Buildings this Way ; which agrees with what Caufabon fays upon Strabo, that Tripoly was anciently a Clutter of three Cities, of which the firft was the Seat of the Aradii, the fecond of the Sidonians, and the third of the Tyrians, which may more probably be the Occafion of the Name, than the Joint-Intereft of three Cities in Building it, as is commonly faid.
8. On the $14^{\text {th }}$, we refted at Tripoly, and on the 15th our Muliteers having run away for Fear of the Baffa of Sidon's Servants, who prefs'd Mules every where for their Mafter's Service, we put ourfelves in a new Pofture of Travelling. We parted from Tripoly, and going clofe by the Sea-fide, we came in an Hour and half to Callemone, a Village juft under Bell-mount, and from hence putting forward, we met with a high Promontary that lay in our Way, and forc'd us to turn off to the Left-Hand into a narrow Valley, where we took up our Quarters under fome Olive-trees; which Promontory feems to be that which is call'd by Strabo the Face of God, and which he affigns for the End of Mount Libenus.

On the 16 ch , this Morning we crofs'd over the foremention'd Cape, which we did in an Hour, though it was very fteep and rugged, and we came into a narrow Valley, which laid the Sea open again; and near the Entrance is a fmall Fort that commands it, call'd Temfeida. And in half an Hour we came up with Patrone, which is thought to be Botrus, ficuate clofe by the Sea, in which we found fome Remains of a Church and Monaftery. In three Hours more we came to Gybile, called by the Greeks Byblus, a Place once famous for the Birth and Temple of Adonis. It is compafss d with a dry Ditch and a Wall, with fquare Towers at forty Yards Diftance, and on its South-fide it has an old Caftle.
There is nothing elfe remarkable in it but many Heaps of Ruins, and the fine Pillars in the Gardens near the Town. It is probably the Country of the Gi-

Vol. II, No CXXVII.
blites, mention'd fool. xiii. 5. whom King Hiram made ufe of in preparing Materials for Solomon's Temple, as may be collected from I King. v. 18. where the Word rendred Stone-fquarers in the Hebrewo is Giblim, and in the Verfion of the feventy Byblii, i.e. the Men of Byblus, the former ufing the Hebrew, the latter the Greek Name of the Place; which Difference may be obferv ${ }^{\circ} \mathrm{d}$ likewife in Ezek. xxvii. 4. where our Tranflation has the Ancients of Gebel, and the Seventy the Elders of Byblus. Leaving Gybile, we came to a River call'd by the Turks Ibrabim Baffa, which is doubtlefs that ancient River fo famous for the Idolatrous Rites perform'd here in Lamentation of Adonis, and we lodg'd on the Banks of it that Night.
9. The izth, having had a very tempeftuous Night of Wind and Rain, we had an Opportunity of difcovering the Occafion of that Opinion which Lucian relates, that this River, at certain Seafons of the Year, efpecially about the Featts of Adonis, is of a bloody Colour, as he fays, from a Sympathy for the Death of Adonis, who was kill'd by a wild Boar in the Mountains out of which this Stream rifes; for we found the Water of a very red Colour, which doubtlefs was occafion'd by a Sort of Minium, or red Earth, wafh'd into the River by the Violence of the Rain. In an Hour and a Quarter we paffed over the Foot of Mount Climar, and entered into a large Bay call'd Innia, where we found an old Stone-Bridge, and at the Bottom the high Mountains of Caftravan, chiefly inhabited by Maronites, and famous for producing an excellent Sort of Wine.
The Maronite Bifhop of Aleppo dwells here in a Convent, and there are many other fmall Convents on the Top of thefe Mountains. Towards the further Side of the Bay we came to a fquare Tower or Caftle, at which we paid a fourth Caphar, which is receiv'd by the Maronites, who are more exacting Rogues than the Turks themfelves. In an Hour more we came to the River Lycus, call'd alfo fometimes Canis, whofe Name is deriv'd from an Idol in the Form of a Dog or Wolf, which was worthip'd and gave Oracles. The Body of it is fhewn to Strangers lying in the Sea, but the Head they fay is to be feen at Venice. This River, which is certainly different from Adonis, (though fome Moderns confound them) falls into the Sea from between two Mountains very high and rocky, where we found a good Bridge of four Arches, and near the Foot of it, a Piece of white Marble inlaid in the Side of a Rock, with an Arab Infription, that the Emir Faccardine was the Founder of it.
Having pafs ${ }^{\circ}$ d the River, we prefently afcend the Rock hanging over it on that Side, where we met with a Path above two Yards broad, cut along its Side at a great Height above the Water, being the Work of the Emperor Antoninus, as appears by an Infcription engraved on a Table, plain'd in the Side of the natural Rock. In paffing this Way we faw ftrange antick Figures of Men carved in the Rock, in Mezzo relievo, and in Bignefs equal to the Life; and clofe by each Figure there was a Table plain’d in the Side of the Rock, on which fomething had been infcrib'd, though the Characters are generally now defac'd, which may deferve the further Scrutiny of fome Traveller. The Antonine Way extends about a Quarter of an Hour's Travel; after which you come upon a fmooth fandy Shore, which brings you in an Hour and half to the River Beroot, which has over it a Stone-Bridge of fix Arches; and on the other Side is a Plain near the Sea, which is faid to be the Stage on which St. George duell'd and kill'd the Dragon. In Memory of which, there is a fmall Chappel built upon the Place, dedicated at firlt to that Chrittian Hero, but now perverted to a Mofque. From hence in an Hour we arrived at Beroot, and quarter'd at a good Kane by the Sea-fide.
10. On the 18th: This Day we fpent at Beroot, anciently called Berytus, (from which the Idol Baal-Berith is fuppos'd to have had its Name) which was honour'd with many Privileges, and the new Name of $\mathcal{F}$ ulia Felix by Augufus. Its greateft Happinefs at prefent confifts in its

10 F
Situation,

Situation, being feated by the Sea-fide in a fertile Soil, which abounds with frefh Springs flowing down from the Hills. The Emir Faccardine had his chief Refidence here, in the Reign of Sultan Morat, the fourth Emir or Prince of the Drufes; who not contented to be penn'd up in the Mountains, enlarged his Dominions into the Plain, all along the Sea-Coaft, as far as from this Place to $A c r a$, but was driven back again to the Mountains by the Grand Signior. We went to his Palace, and found at the Entrance a Marble Fountain of greater Beauty than is ufually feen in Turkey.

The beft Sight that the Palace affords, which is much ruin'd, is the Orange-Garden, which contains a large quadrangular Plat of Ground, divided into fixteen leffer Squares, four in a Row, with Walks between them, which are fhaded with Orange-trees of a fine Growth, on which the Fruit hung thicker than ever I faw Apples in England. Every one of thefe fixteen Squares was bordered with Stone, and in the Stone-work were Troughs artificially contrived for conveying the Water all over the Garden, there being little Outlets cut at every Tree for the Stream, as it pafs'd by, to flow out and water it. But the Turks have fo little Senfe of fuch refin'd Delights, that they ufe it now as a Fold for Sheep and Goats. In another Garden we faw feveral Pedeftals for Statues, and at one Corner of it, a Tower about fixty Foot high, whofe Walls were twelve Foot thick, from whence we had a View of the whole City, and faw a large Chriftian Church, which was faid to have been confecrated to St. Fobn the Evangelift, but is now the chief Mofque of the Turks.

There is another Church, that being a very mean Fabrick, remains in the Hands of the Greeks, which is adorn'd with many old Pictures ; and among the reft, I faw one with this Infcription in Greek, Coartus the firt, Arcbbibop of Berytus, and juft by it the Figure of Neftorius, who commonly makes one in the Greek Church of his Sect, though they do not now profers, nor, I believe, know, his Herefy. But there was one very odd Figure of a Saint, at full Length, with a large Beard reaching down to his Feet, and the Curate told us, that this was St. Nicephorus, who wanting the Ornament of a Beard to fet off his other Endowments, fell into a deep Melancholy; whereupon the Devil tempted him to comply with his Suggeftions, by promifing to give him a Beard; but this beardlefs Saint rejected the Temptation, and at the fame Time taking the downy Tuft upon his Chin in his Hand, he found the Hair immediately ftretch with the Pluck he gave it, and he never left pulling his Beard till he had drawn it down to his Feet. At the Eaft-end of Beroot are to be feen feven or eight Pillars of Granite, and feveral Pieces of Marble, having Greek and Latin Infcriptions, Fragments of Statues, and other poor Relicks of its ancient Grandeur. On the Sea.fide is an old Caftle, and fome Remains of a Mole.

19th. Leaving Beroot, we came into a large Plain, and at the Entrance of it there is a Grove of Pine-trees of Faccardine's Plantation, and at a Diftance we faw a fmall Village called Suckfoat, which belongs to the Drufes, who poffers at this Day a long Tract of Mountains as far as from Caftravan to Carmel. Their prefent Prince is Acbmet, Grandfon to Faccardine, an old Man, and one who keeps up the Cuftom of his Anceftors. of turning Day into Night, from a traditional Perfuafion among them, that Princes can never fleep fecurely but by Day, when Mens Actions and Defigns are beft obferv'd by their Guards, and, if Need be, moft eafily prevented : but in the Night it concerns them to be always vigilant, left the Darknefs hould give Traytors an Oppurtunity to affault them with Dagger or Piftol.

Two Hours from Faccardine's Grove brought us to the fifth Caphar, and another Hour to the River Damer, anciently called Tanoras. Here were Country Fellows who had ftript themfelves naked to affift us in paffing over: and to make their Help more neceffary, they brought us to a Place where the Water was deepeft, which Cheat we faw chem impofe upon other Travellers; but we found a Place of the Stream which was broader and fhallower, where we paffed without their Affiftance, and jutt by we faw the Ruins of a Stone Bridge, which
might have been ftill entire, had not thefe Villains broke it down to make their Advantage of Paffengers, either in conducting them over for good Pay, or elie, if they have Opportunity, drowning them for their Spoils. On the other Side of the River the Mountains came clofer to the Sea, leaving only a narrow rocky Way between.

From Damer, in two Hours Time, we came to another confiderable River, not mentioned by any Geographer; but the Maronite Patriarch at Canobine told me it was called Arole, and had its Fountain near Barock in Mount Libanus. At this River we were met by feveral French Merchants from Sidon, who have there the moft confiderable Factory they have in the Levant; and being arrived at Sidon, they conducted us to a large Kane clofe by the Sea, where the Conful and all the Nation are quartered together. Before this Kane is an old Mole running into the Sex, which was filled up with Rubbina by Faccardine, to prevent the Turki/b Gallies from coming hither ; fo that all Ships that take in their Burthen here, are forc'd to ride at Anchor under a fmall Ridge of Rooks about a Mile from the Shore.

Sidon is well enough ftock'd with Inhabitants, but is very much fhrunk from its ancient Extent, and more from its Splendor, as appears from many beautiful Pillars that lie in the Gardens without the Walls. On the South-fide ftands an old Caftle, faid to be built by St. Lereis IX. of France; and not far from the Caftle is an old Palace of Faccardine's, which ferves the Bafha for his Seraglio. Near to Sidon begins the Precincts of the Holy Land, particularly of that Part which was allotted to A/bers the Borders of which Tribe extended from Carmel as far as Great Zidon, as appears from Foffua xix. 26, 28. But the People on the Sea-coafts were never actually matter'd by the Ifraelites, being left to be Thorns in their Sides for a Reafon given, fudges ii. 1, 2, 3, Ec. He who is the French Conful at Sidon, has alfo the Title of Conful of Ferufalem, and is obliged to vifit the holy City every Eafter; with whom we defired to join in this Year's Pilgrimage, but he fer out from Sidon the Day before our Arrival there.

1. The 20th. We fet out next Morning from Sidon, hoping to overtake the Conful, and travelling in a fruitful Plain, in half an Hour we met with a large Pillar of Granite lying crofs the Highway, on which was a Fragment of an Infcription ; and fome Engli/h Gentlemen, in 1699 , found another Pillar with the like Infcription, about Midway between Ferufalem and Sidon, by which we may obferve the Exactnefs of the Romans in meafuring out their Roads, and marking down on every Pillar the Number of Miles, as $1,2,3, \varepsilon \xi^{c}$.

A little beyond this Pillar we pafs'd in Sight of Korie, a large Village on the Side of the Mountains, and in twelve Hours and half more came to Sarpban, fuppofed to be the ancient Sarepbatb or Sarepta, fo famous for the Refidence and Miracles of Elijab. From hence, in feven Hours, we arrived at Cafimeer, a large River running down to the Sea, which had once a good Stone Bridge, of which there remains Nothing now but the Supporters, between which are laid Beams and Boards to fupply the Room of Arches. This River, by modern Geographers, is fally thought to be the old Eleutberus, as has been fhewn before; but it feems to be that River mentioned by Strabo, p. 52 I . falling into the Sea near Tyre, for within a Bow-fhot of this River Cafimeer, is a Kane of the fame Name, from which, keeping near the Sea-fide, you arrive in an Hour at Tyre.

This City ftanding in the Sea upon a Peninfula, promifes fomething magnificent ata Diftance, but when you come to it, you find Nothing like the Glory for which of old it was fo renown'd, as it is defcribed, Ezek, 26, 27, 28. On the North-fide it has an old Turkiblb Caftle, befides which there is Nothing here but a mere Babel of broken Walls, Pillars, Vaults, Ecc. there being not fo much as one entire Houfe left. Its prefent Inhabitants are only a few poor Wretches that harbour in Vaults, and fubfift upon Fifhing, whereby God appears to have fulfilled his Word concerning Tyre, viz. That it fould be as the Top of a Rock, a Place for Fibers to dry their Nets on, Ezek. xxvi, 14.

## Chap. I. <br> from ALEPPO to JERUSALEM.

In the Midt of the Ruins there ftands up one Pile higher than the reft, which is the Eaft-end of a great Church, probably of the Cathedral of Tyre, and may very well be the fame that was erected by its Bifhop Paulinus, and honour'd with that famous Confecration Sermon of Eufebius, recorded by himfelf in Eccl. Hift. l. Io. c.4. And 'tis, very oblervable, that in all the ruin'd Churches which we faw, being perhaps no fewer than 100 , though their other Parts were totally demolifh'd, yet the Eaft-end we always found ftanding, and tolerably entire. How this came to pafs I cannot determine, but certainly a Thing fo univerfally obferv'd by us in our Journey, could not proceed from blind Chance.

But to return; There being an old Stair-cafe in the Ruin above-mention'd, I got to the Top of it, from whence I had a Profpect of the Inand-part of Tyre, the Ifthmus, and the adjacent Shore; and from that Height I could difcern the Ifthmus to be a Soil of a different Nature from the other, it lying lower than either, and being cover'd all over with Sand, which the Sea cafts upon it. The Inand of Tyre, in its natural State, feems to have been of a circular Figure, about forty Acres in Compafs, and the Foundations of the Wall that encompafs'd it are ftill to be feen. It makes with the Ifthmus two large Bays, one on its North-fide, and the other on its South, which are in Part defended from the Ocean by a long Ridge, either of Walls or Rocks, refembling a Mole, ftretching out directly on both Sides from the Head of the Inland. Coming out of thefe Ruins, we faw the Foundation of a very ftrong Wall, running crofs the Neck of Land which ferved as a Barrier to fecure the City on this Side. And hence we paft the fandy Ifthmus, and came to the Place we thought the natural Shore, where we met with a fertile Plain, which extends to a vaft Compals before Tyre, whence we arrived in three Quarters of an Hour at Rojelayn.
12. March 2 Ift: Rofolayn is the Place where are the Cifterns call'd Solomon's, which according to the common Tradition are faid to have been made by that King, as part of his Recompence to King Hiram, for the Materials he fent toward building the Temple: But though they are very ancient, yet they are of a later Date than this Tradition makes them, becaufe the Aquæduct which conveys the Water, is carried over that Neck of Land by which Alewander join'd the City to the Continent at his Siege of this Place, and fo cannot be older than his Time. Of thefe Cifterns there are three entire at this Day, one about a Furlong and half diftant from the Sea, the other two, a little further up. The former is of an Octogonal Figure, being twenty two Yards in Diameter, and contains a vaft Body of excellent Water, which is fo well fupplied from its Fountain, that though there iffues from it a Stream like a Brook, driving four Mills between this Place and the Sea, yet it is always brim-full. On the Eaft-fide was the ancient Outler of Water by an Aquæduct, having a Channel one Yard wide, which is now flopt up by the Turks, who have broke an Outlet on the other Side, which makes a Stream for grinding Corn.

The Aquæduct, now dry, is carried Eaftward 120 Paces, and then approaches the two other Cifterns, of which one is twelve, the other twenty Yards fquare, and they had each a Channel, by which they rendred their Waters into the Aquæduct, and fo the united Streams of all the three Cifterns were carried together to Tyre. There ftill remains fome Fragments of the Aquaduct, and in its Sides, and under its Arches, we oblerv'd fome Heaps of Matter, produc'd by the Leakage of the Water which petrified as it diftill'd from above, and by continual Acceffion of new Matter were grown to a great Bulk. They were compos'd of innumerable Tubes of Stone of different Sizes, cleaving to one another like Ificles, each Tube having a Cavity in its Center, from which its Parts were projected in the Form of Rays to the Circumference, like the Stones call'd Thunder-ftones. The Fountain of there Waters is as unknown as the Contriver of them, though 'tis certain, from their Riing fo high, they come from
fome Part of the Mountains which are about a League diftant.

From this pleafant Place we came in an Hour and half to the white Promontory, over which you pafs by a Way about two Yards broad cut along its Side, from which the Profpect is dreadful, by Reafon of the Steepnefs of the Mountains, and the Raging of the Sea ai bottom. This Way, and the Cafte Scondalium, which is not far off, are faid to be buile by Alexander; from whence we come frilt to Nacbera, and then to the Plain of Acra, over a deep Mountain, fuppos ${ }^{\mathrm{d}} \mathrm{d}$ to be part of Mount Sbaron. This Plain extends from Mount Sbaron as far as Carmel, and is fix Hours long, and two Hours broad, between the Sea and the Mountains, and was a delicious Plain, but is now, for Want of Culture, over-run with rank Weeds, which were, when we pafs'd it, as high as our Horfes Backs.

Having travell'd about an Hour in the Plain of Acra, we pafs'd by an old Town call'd $Z i b$, which probably is the Old Acbzib, mention'd $\mathcal{F}$ of. xix. 29. and $\mathcal{F} u d$. i. 3 I and feems to be one of the Places out of which the Abberites could not expel the Canaanites. Two Hours further we came to the Fountain of the bleffed Virgin, as it is call'd by the French Merchants at Acra, at which Place we arriv'd in an Hour more.

Acra, anciently call'd Accbo, is another of the Places from which the Ifraelites could not. drive the Natives; but being in After-times enlarg'd by Ptolemy I. it was by him called Ptolemais. And fince it was poffeffed by the Turks, like other Cities, having loft its Greek Name, it is call'd by them Acca, or Acra. This City has often chang'd Mafters, and at laft, by a long Siege, was taken and ruin'd by the Turks, in fuch a Manner as if they had taken Revenge upon it for the Blood it coft them. On the North and Eaft it is compafs'd with a fpacious and fertile Plain, on the Weft it is wafh'd by the Mediterranean Sea, and on the South by a large Bay, extending from the City as far as Mount Carmel.

But notwithiftanding thefe Advantages; befides a large Kane in which are the French Factors, a Moque, and a few poor Cottages, there is nothing now to be feen but vaft Ruins, which fhow its former Strength, for it appears to have been compafs'd about with a double Wall defended with Towers, and without the Walls are Ditches, Ramparts, and a kind of Baftions. In the Fields we find feveral large Balls of Stone, thirteen or fourteen Inches in Diameter, which were part of the Ammunition ufed in battering the City, Guns being then unknown. Within the Walls are the Ruins of the Cathedral dedicated to St. Andreer, of the Church of St. Jobn, the titular Saint of this City, and of the Convent of the Knights-Hofpitallers, and near to it the Palace of the Grand Mafter of that Order; and laftly, fome Remains of a large Church, formerly belonging to a Nunnery, of which they tell this Story.

The Turks having prefs'd this City with a long Siege, at laft entred it by Storm, May 19, 1291. In which Extremity, the Abbefs fearing that herfelf and her Nuns fhould be fubjected to fuch Beftialities as is ufual in fuch Cafes, exhorted them all to cut and mangle their Fa ces, as the only Way to preferve their Virgin Purity ; and to encourage them, fhe made herfelf the firf Example of her own Counfel, which the Nuns inftantly follow'd, cutting of their Nofes, and disfiguring their Faces with fuch terrible Gafhes, as might excite Horror rather than lufful Defires. The Confequence of this was, that the Soldiers breaking into the Nunnery, and feeing inftead of beautiful Ladies fuch fad Spectacles, put them all to the Sword in Revenge for difappointing their Lufts.

There are many other Ruins here of Churches, Pa laces, Monafteries, Forts, $\xi^{3} c$. for more than half a Mile in Length. But that which pleas'd us moft was, to find the Fronch Conful l'Empereur here, who having ftaid for us two Days, refolv'd to fet forward next Morning. But we were doubtful which Way to take, becaúe of the Factions of the Arobs, which are kept up by the Turks, to prevent their uniting under one

Prince

Prince, whereby they might be frong enough to fhake off the Turkif Yoke; for in thefe Difcords Strangers are fure to fuffer, being a Prey to each Party.
13. The 22d, we fet out early from Acra, having fome Turkifh Soldiers for our Convoy: And firtt we pafs'd by a fmall River, which we took to be Belus, famous for its Sand, of which Glafs is made. Here we declin'd from the Sea-coaft to the Eaft, and crofling over the Plain, we arrived at its further Side, where it is bounded by Mount Carmel; and here we found a narrow Valley, which led us out of the Plain of Acra into that of Efdraelon. About this Place is the End of the Tribe of $A / b e r$, and the Beginning of that of $Z e_{-}$ bulon, as their Borders are defcribed, $70 / 5$. xix. 26.

Paffing through the faid narrow Valiey, we arrived in two Hours at the River Kilhon, which curs its Way down the Middle of the Plain of Efdraelon, and then continuing his Courfe by the Side of Mount Carmel, falls into the Sea at a Place called Caypbo. We faw it when it was low, but we difcern'd many Torrents falling into it froin the Mountains, which muft make it fwell, as it did at the Deftruction of Sijera's Hoft, Fudg. v. 2 I. In three Hours and half from Kifhon, we came to an old Village and good Kane called Legune, near to which we lodged that Night.

From this Place we viewed the Plain of Efdraelon, which is very large and fertile, and about fix Hours Diftance food within View Nazareth, and the two Mounts Tabor and Hermon; and here we felt the Dew of Hermon, as the Pfalmizt calls it, our Tents being as wet with it as if it had rained all Night. About a Mile's Diftance from us was encamped Cbibly, Emir of the Arabs, with his People and Cattle; and below, upon the Brook Kijhon, lay another Clan of the Arabs, being the adverfe Party to Cbibly; and it was litcle to our Satisfaction, that we were feated in the Midft between two fuch bad Neighbours.

The 23d. Leaving this Lodging, we went to the Emir's Tents, to whom we paid two Caphars, one of Lagune, and the other of 7 eneen, and whatever elfe he was pleafed to demand. He very civilly eas'd us of fome of our Coats, which begun now, by reafon of the Heat, to be troublefome. Getting quit of Cbibly, we return'd out of the Plain of Esdraelon, and entred into the Precincts of the half Tribe of Manafles. From hence our Road lay, for four Hours, through narrow Valleys, pleafantly wooded on both Sides, and we lodg'd at Capbar Arab.

On the 24 th, having paid our Caphar, we fet out very early the next Morning ; and leaving firt Arab, and then Rama, on their Right-hand, we came to Selee and Sibafta, where we leave the Borders of the Half Tribe of Manafles, and enter into thofe of the Tribe of Epbraim. Sebafta is the ancient Samaria, the Imperial City of the Ten Tribes after their Revolt from the Houfe of David, and being raifed by Herod the Great to a magnificent State, was by him; in Honour of Auguffus, call'd Sebafta.

It is fituate on a long Mount of an oval Figure, and is now wholly converted into Gardens, having no other Remains of fuch a Place, but on the North-fide a large〔quare Piazza, encompafs'd with Pillars, and on the Eaft fome Ruins of a great Church, faid to be built by Helena, over the Place where Fobn the Baptit was imprifon'd and beheaded. In the Body of the Church you go down a Stair-cafe into the Dungeon where that Blood was thed. The Turks hold that Prifon in great Veneration, and over it have erected a fmall Mofque ; but for a little Piece of Money they fuffer any one to go into it.

Leaving Sebasta we pals'd by Sberack and Barfeba, and then entring into a Valley, we arrived in an Hour at Naplofa, which is the ancient Sychem or Sycbar, as it is call'd in the Nero Testament. It flands in a narrow Valley between Mount Gerizim on the South, and Ebal on the North. From Mount Gerizim God commanded the Bleffings to be pronounced upon the Children of Ifrael, and from Mount Ebal the Curfes, Deut. xi. 29. Upon the former the Samaritans, whofe chief Refidence is at Sybbem, have a fmall Temple, to which they are
ftill wont to repair for Religious Worhip: But that their Religion confints in worhipping a Calf, as the Jeros fay, leems to have more of Spight than Truth in it.
Upon one of thefe Mountains alfo it was, that God commanded the Children of Ifrael to fet up greatStones, plaifter ${ }^{5} d$ over and infcribed with the Body of the Law, and to erect an Alcar, and offer Sacrifices, Fealting and Rejoycing, before the Lord, Deut. xxvii. 4. Bur whether Gerizim, or Ebal, was the Place appointed for this Solemnity, there is fome Caufe to doubt; for the Hebreve Pentateucb and ours, from it afign Mount Ebal for this Ufe; but the Samaritan afferts it was Gerizim. Our Company halting a little at Naplofa, I had an Opportunity to vifit the chief Prieft of the Samaritans, and to difcourfe with him about this and other Difficulties.
And firlt, as to the Difference between the Hebrece and Samaritan Copy, Deut. xxvii. 4. the Prieft pretended, that the Jeres had malicioully alter'd their Text out of Odium to the Samaritans, putting for Gerizim, Ebal, becaufe the Samaritans worfhipped in the former, which, for that Reafon, they would not have to be the true Place appointed by God for his Worlhip. To confirm this, he alledg'd, that Ebal was the Mountain of Curfing, Deut.xi. 29. and an unpleafant Place; whereas Gerizim was fertile and pleafant, and the Mountain of Bleffing ; and therefore it was more probable, that this was the Mountain appointed for Religious Worhhip, and not Ebal. But he could not fay that any of thofe great Stones, which God direcled Fofbua- to fet up, were now to be feen in Gerizim, which would have determin'd the Queftion clearly on this Side.
I enquired alfo, what thofe Selave were wherewith the Children of Ifrael were fo long fed in the Wildernefs, Numb. xi. he anfwer'd, They were a Sort of Fowls, which by his Defcription appear'd to be Quails. Then I ask'd him, what Sort of Plant or Fruit the Dudaim or Mandrakes were, which Leab gave to Racbel for the Purchafe of her Husband's Embraces? He anfwer'd, They were Plants of a large Leaf, bearing a Fruit like an Apple, ripe in Harveft, but of an ill Savour and unwholefome, and that the Virtue of them was to help Conception, being laid under the genial Bed; to which Purpofe they are often made Ule of by Women at this Day.
Of thefe Plants I faw feveral in the Way to ferufalem; and if they were as common in Mefopotamia as here, we muft conclude, that either thefe were not the true Mandrakes, or elfe it is hard to give a Reafon why Racbel fhould purchafe fuch common Things at fo beloved a Price. Naplofa is at prefent in a very mean Condition to what it has been anciently; it confits of two Streets lying parallel under Mount Gerizim, but is full of People. Having paid our Caphar here, we proceeded in the fame narrow Valley between Gerizim and Ebal ; and juft without the City we faw a fmall Mofque, faid to be built over the Sepulchre purchafed by facob of Emmor, Father of Sbecbem, Gen. xxxiii. I9. It goes by the Name of Yofepb's Sepulchre, his Bones being inter'd here, Foll. xxiv $3^{2}$. About a Quarter of an Hour from Naplofa we came to facob's Well, famous not only for its Author, but for the Conference it had there with the Woman of Samaria, Fob. iv. Over the Well there ftood formerly a large Church erected by Helena, of which remains nothing now but fome Foundations. The Well is cover'd at prefent with a Stone Vault, into which you are let down through a very ftraight Hole ; and then removing a broad Stone, you difcover the Mouth of the Well. It is dug in a firm Rock, and is about three Yards in Diameter, and thir-ty-five deep, five of which we found full of Water.
At this Well the narrow Valley of Sycbem ends, opening into a wide Field, very pleafant and fruitful, which is probably Part of that Parcel of Ground given by $f a-$ cob to his Son $\mathcal{F} 0$ feph, $\mathfrak{F o b}$. iv. 5. From 'facob's Well we went chrough a large Valley, and having pafs'd by two Villages on the Right-hand, called Howar and Sazvee, we came in four Hour's to Kane Leban, near a Village of the fame Name, one of which is fuppofed to

## Chap. I.

 from A LEP PO toto JERUSALEM.
have been the Lebonah, mentioned $\mathfrak{F u d . x i .}$ 19. and here we lodg'd that Night.
14. On the $25^{\text {th }}$, from Kone Leban our Road lay through a rocky Country'; but having pafs'd-by Cinga, we entred into a narrow Valley between two rocky Hills, at the further End of which we found the Ruins of a Village and a Monaftery. In this Place $\mathrm{F}_{\mathrm{a}} a \mathrm{ab}^{\text {h }} \mathrm{s}$ Betbel is fuppofed to have been, where he had his ftrong Couch made eafy by the Vifion of God, and of the Angels afcending and defcending on a Ladder between Earth and Heaven, Gen. xxviii. near which Place are the Limits that part between Ephrain and Benjamin, Fofh. xviii. 13. From hence we pals'd through large Olive-yards, and having left Geeb and Selwid on the Right-hand we arrived at Beer; which is the Place to which Fotbam fled from the Revenge of Abimelech, Fud. ix. 2 I . and is fuppofed to be the lame with Michmas, I Sam. xiv.

Beer is feated on the Side of a Hill, which at the Bottom has a Fountain of the fame Name, and at its upper Side are the Remains of an old Church built by Helena, in Memory of the bleffed Virgin, who being in Queft of the Child Jefus, Luke ii. 24. is faid to have fate down here penfive and weary, becaufe the could not find him ; but after her Return to 7 erufalem, The found him fitting in the Temple with the Doctors, both hearing them, and asking them Queftions. Thro' the whole of this Day's Juurney we had nothing in View in moft Places but Rocks, Mountains, and Precipices, which aftonifhes Pilgrims, as being contrary to thofe high Idea's they had form'd of the Pleafantnefs and Plenty of this Country, and almoft ftartles their Faith, as thinking it hardly poffible for a Land like this to feed fo prodigious a Number as are faid to have been poll'd at one Time, being no lefs than $1,300,000$ fighting Men , befides Women and Children.

But to remove thefe Scruples, any one may obferve that thefe Rocks and Hills muft have been anciently covered with Earth and cultivated, and fo they afforded a larger Space of Ground than if the Country were level, which they husbanded by gathering up the Stones, and placing them along the Sides of the Hill in Form of a Wall, which kept in the Mould, and form'd many Beds of excellent Soil, from the Bottom to the Top of the Mountains ; of which Form of Culture we-fee plain Footteps in all the Mountains of Paleftine. And there is Nothing upon Earth more fruitful, even at this Day, than the plain Country and Valleys, either for the Production of Corn or of Pafturage for Cattle.

The Hills, tho' improper for any Cattle but Goats, yet being difpofed into the Beds before-mention'd, ferv'd very well to bear Corn, Melons, Gourds, Cucumbers, and fuch-like Garden-ftuff, which are the chief Food of thefe Countries for feveral Months of the Year. The moft rocky Parts might ferve for Vines and Olivetrees, which delight in fuch dry and finty Places; and the great Plain joining to the Dead Sea, which by reafon of its Saltnefs could not ferve for Corn, Vines, or Olives, was yet very ufeful for the Nourifhment of Bees, and making of Honey, as Fosepbus teftifies, Bell. Fud. l. 5. c. 4. and I found by Experience, when I was there, finding in many Places a ftrong Smell of Honey and Wax. Thus the Country might very well maintain the vaft Numbers of its Inhabitants, being every where productive of Milk, Corn, Wine, Oil, or Honey, which are the principal Food of thefe Eaftern Nations.

Leaving Beer, in two Hours and a Quarter we came to the Top of a Hill, from whence we had the firft Profpect of Jerufalema; Rama, anciently called Gibeab of Saul, being within View on the Right-hand, and the Plain of Fericbo, and the Mountains of Gilead on the Left. In an Hour more we came to the Walls of Ferufalem, but durft not enter without Leave of the Governor ; which being obtain'd, we entred at the Betblebem Gate, mounted and arm'd, becaufe we were in Company with the French Conful, for otherwife all Franks that come not in with fome publick Minifter, are to difmount at the Gate, deliver their Arms, and enter on Foot. We took our Lodgings at the Frencb

Vol. II. $\mathrm{N}^{0}{ }^{127}$

Conful's, and our Board at the Latio Convent, while we ftay'd at 7erufalem.
15. The 26 th, being Good Friday in the Latin Stile, we were obliged to go with the Conful into the Church of the Sepulchre, to keep the Feaft with him, though it was a Week before our own Easter. We found the Church Doors guarded by Fanizaries, who fuffer none to go in untal they have paid their Caphar, which for Franks is commonly fourceen Dollars per Head, unlefs they be Ecclefialticks, and then it is but half fo much. This being once paid, you may go in and out gratis as oft as you pleafe during the whole Feaft at the ordinary Times when the Door is open. All the Pilgrims being admitted, the Church Doors were lock'd, and opened. no more till Eafuer-day; and being confined for three Days, we vifited all the holy Places at Leifure; therefore I fhall relate what pafs'd during the Feftival, and fay of the Church, what is neceffary to make my Account intelligible.

The Church of the Holy Sepuichre is founded on Mount Calvary, a fmall Hill upon the greater Mount of Moriah; it was anciently appropriated to the Execution of Malefactors, and therefore fhut out of the City as a polluted Place; but fince it was made the Altar on which the precious Sacrifice for the Sins of the World was offer ${ }^{5} \mathrm{~d}$, it ftands in the Midft of $\bar{F}$ erufalem, a great Part of the Hill of Sion being thut out of the Walls to make Room for it.

Though a great Part of this Hill was cut away to make it a fit Foundation for a Church, yet Care was taken that none of thofe Parts concern'd in our Lord's Paffion flould be alter'd or diminifh'd; and fo that very Part of Calvary where Chrift was faftened to the Crofs, remains entire, being about ten or twelve Yards fquare, and ftanding fo high above the Floor of the Church, that you have twenty one Steps to go up to its Top; and the holy Sepulchre, which at firft was hewn into a Rock under Ground, is now a Grotto above Ground, the Rock being cut away from it all round The Church is lefs than an hundred Paces long, and not more than fixty wide, yet it contains twelve or thirteen Sanctuaries, confecrated by fome particular Actions relating to the Death or Refurrection of Chrift.
As, I. The Place where he was derided by the Soldiers. 2. Where the Soldiers divided his Garments. 3. Where he was fhut up, while all was made ready for his Crucifixion. 4. Where he was nail'd to the Crofs. 5. Where the Crofs was erected. 6. Where the Soldiers ftood that pierced his Side. 7. Where his Body was anointed in order to his Burial. 8. Where his Body was laid in the Sepulchre. 9. Where the Angels appeared to the Women after his Refurrection. 10. Where Chrift himfelf appeared to Mary Magdaten, \&xc. All which Places, and many others of the fame Nature, are contain'd within this Church, and adorn'd with fo many feveral Altars.

In Galleries about the Church, and little Buildings annex'd to it, every Chriftian Nation had anciently proper Quarters for a Society of Monks, but now, all except four, have forfaken thefe Quarters, becaufe of the fevere Rents impofed upon them by their Turkifb Landlords; and of thefe four, the Copbies have only one to reprefent their Nation ; and the Armenians are fo much in Debt, that they are likely to defert the Place quickly, and then the Greeks and Latins will only remain.

Befides their feveral Apartments, each Fraternity have their peculiar Altars and Sanctuary for their own Ufe. But the great Prize now difputed between the Greeks and Latins, is the Command of the Holy Sepulchre, in which Contention they have proceeded to Blows and Wounds, even at the Door of the Sepulchre; and as an Evidence of this Fury, the Father Guardian fhew'd me a great Scar in his Arm, being the Mark of a Wound given by a Greek Prieft; but at the Requeft of the French King, this holy Sepulchre was appropriated to the Latins in 1690, they alone having the Privilege to fay Mafs in it, though all other Chriftians may go into it for the Celebration of their private Devotions.

Io $G$
The

The Latins, of whom there are always ten or twelve at Church, with a Prefident over them, make every Day a folemn Proceffion, with Tapers and Crucifixes, to the feveral Sanctuaries, and fing at every one a Hymn relating to the Subject of the Place. Their Ceremony begins on Good-Friday Night, which is called by them the Nox Tenebrofa; and as foon as it grew dusk, all the Friars and Pilgrims met in the Chapel of the Apparition, (which is on the North-fide of the Holy Grave) to go in Proceffion round the Church.

After a Sermon, at which all the Candles were put out to make a lively Image of the dark Night, every one had a lighted Taper put into his Hand; and amongit the other Crucifixes, there was one very large, which bore an Image of our Lord, as big as the Life, faftned to it with great Nails, crown'd with Thorns, befmear'd with Blood, and lively reprefented our Lord's Body as it hung upon the Crofs. 'This Figure was carried in the Head of the Proceffion, after which all the Company followed to all the feveral Sanctuaries of the Church, finging at every one a Hymn.

The firft Place was that of the Pillar of Flagellation, kept in a little Cell juft by the Chapel of Apparition; there they fung their Hymn, and a Friar preach'd in Spanifl about the Scourging of our Lord. From hence they proceeded to the Prifon of Chrift, where they had alfo a Hymn and a Sermon. From the Prifon they went to the Altar of the Divifion of Chrift's Garments, where they only fung a Hymn; and from thence to the Chapel of Derifion, where they had a Hymn and a fourth Sermon. From this Place they went up to Calvary, leaving their Shoes at the Foot of the Stairs. Here are two Altars, one where he was nail'd to the Crofs, at which they laid down the great Crucifix, and acted the Nailing of Chrift to the Crofs. The other where his Crofs was erected, bearing the Image of our Lord's Body. At this Altar there is a Fiole in the natural Rock, in which the Foot of our Lord's Crofs ftood; and here they fet up their Crofs, with the bloody crucified Image upon it, and then fung a Hymn , and preach'd a very affecting Paffion Sermon.

About a Yard and half from the Hole where the Foot of the Crofs was fixs d , is feen that Cleft in the Rock which was made by the Earthquake at Chrift's Death, when the Rocks were rent, Matt. xxvii. 5 I. It appears to be a natural Breach, for the Sides of it anfwer each other like two Tallies, and it runs in fuch intricate Windings as could not be counterfeited by Art. After the Ceremony of the Paffion is over, two Friars perfonating Fofeph of Arimatbea and Nicodemus, come with a grave and folemn Air, and take down the feigned Body from the Crofs. The Limbs of the Image were foft and flexible, and it was furprizing to fee the two Mourners bend down the Arms which were before extended, and lay them upon the Trunk, as is ufually done in Corpfes. The Body being taken down was receiv'd in a large Winding-fheet, and carried from Mount Calvary to the Stone of Unction, i.e. the Place where our Lord's Body was anointed, Fobn xix. 39. And here while they caft over it fweet Powders and Spices, they fung a proper Hymn, and a Friar preach'd a Funeral Sermon in Arabick. After this they carried the feigned Corpfe and laid it in the Sepulchre, fhutting up the Door till Eafer Morning.

On the 27th: This Morning the Pilgrims had Leifure to mark their Arms with the ufual Enfigns of $\mathcal{F}_{e-}$ rufalem; and in the Afternoon, the Congregation was affembled in the Area before the Holy Grave, where the Friars fung over the Lamentation of feremy, which with the ufual Proceffion to the holy Places was all the Bufinefs of this Day.
16. On the 28 th, being Eafter Morning, the Sepulchre was again fet open very early, and Mals was celebrated juft before it, being the highef Place in this Church, where the Eather Guardian in his Robes gave the Hoft to all that were dipos'd to receive it, not refufing Children of feven or eight Years old: Which Office being ended, we went out of the Sepulchre, return'd to the Conyents, and din'd with the Friars. Afer Dinner we
went to vifit fome of the remarkable Places without the Walls; we began with thofe on the North-fide. And firf, we were conducted to a large Gret, a little without Damafcus-gate, which is faid to have been the Refidence of Jeremiab: And here they fhew'd us the Prophet's Bed, being a Shelve on the Rock about eight Foot from the Ground, and near it is the Place where they fay he wrote his Lamentations. This Place is now a College of Dervifes, and is much honour'd by Turks and Feros.

The next Place we came to, was thofe famous Grots called the Sepulcbres of Kings, for what Reafon I know not, unlefs they were the Sepulchres of the Sons of $D_{g}$. vid, mentioned Cbron. xxxii. 33. but it appears by the Labour and Expence to have been the Work of Kings. At the Eaft-end you enter through a Rock into an open Court, about forty Paces fquare, cut down into the Rock. On the South-fide is a Portico nine Paces long, and four broad, cut out of the natural Rock, and at the End of it you defcend into the Sepulchres, within which is a fair Room about feven or eight Yards fquare, cut out of the natural Rock fo exactly fquare, that Nothing could be built more regular; and fo firm, that it may be called a Chamber hewn out of one Piece of Marble.

From this Room you pafs into fix more, one within another, all of the fame Fabrick with the firft. In every one of thefe Rooms, befides the firft, were Coffins of Stone placed in Niches on the Sides of the Chamber, and in each Room there was a fmall Channel cut in the Floor, to drain the Drops that conftantly fall into it. But the moft furprizing thing that belongs to thefe Rooms was their Doors, of which there is only one remains hanging to puzzle the Beholders. It confifted of a Plank of Stone about fix Inches thick, of the Size of an ordinary Door ; it was carved fo as to refemble a Piece of Wainfcot, but the Stone was vifibly of the fame Kind with the whole Rock, and turned upon two Hinges like Axels, which were of the fame Stone with the Door, and contained in two Holes of the Rock, one at the Top, the other at the Bottom.
It feem'd to be a Riddle to Pilgrims, whether thefe Doors were here cut out of the Rock, or brought hither ; for refolving of which, I obferved that the Door left hanging did not touch its Lintel by at leaft two Inches, and fo might eafily be lifted up and unhinged, which intimates how this Work was done. From thefe Sepulchres we return'd towards the City, and juft by Herod's Gate were fhown a Grotto full of Mire, which paffes for feremiab's Dungeon, out of which he was difmiffed by Ebed Melech, Jer. xxxviii.
17. The 29th. This Day, being Eafter Monday, the Mofolem, or Governor of the City, fet out with fome Bands of Soldiers to convey the Pilgrims to Fordan, and to fecure them from the Infolence of the Arabs in thofe Parts. The Fee to the Mofolem, upon this Occafion, is twelve Dollars for each Frank Pilgrim, and fix for Ecclefiafticks, which every one muft pay, whether they go the Journey or ftay in the City. We went out at St. Stephen's Gate, being in all, of every Nation and Sex, about 2000 Pilgrims; and having crofs'd the Valley of Febofepbat, and Part of Mount Olivet, we came in half an Hour to Betbany. At the Entrance into it there is an old Ruin called Lazarus's Caffle, fuppofed to be his Manfion-houfe, and not far from it is the Sepulchre out of which he was raifed by Chrift, which is held in great Veneration by the Turks, who ufe it for an Oratory, and demand of all Chriftians a Caphar for their Ad. miffion into it.
A little further you pafs by what they call Mary Magdalens Habitation, and then defcending a Hill, you come to the Fountain of the Apoftles, where they were wont to refrefh themfelves in their Travels between $\mathcal{F}$ erufalem and Fericbo. After fome Hours Travel in a barren Country, you come to the mountainous Defart into which our Saviour was led by the Spirit to be tempted of the Devil ; and from the Top of thefe Hills we had a Profpect of the Mountains of Arabia, the Dead Sea, and the Plain of Fericho, into which we defcended, and turning up on the Left-hand, we came to the Foor of the Quarantonia, which they fay is the Mountain into
which the Devil took our Saviour, when he tempted him with that vifionary Scene of all the Kingdoms in the World, and the Glories of them.

Turning down hence into the Plain, we came to the Fountain of Eli/ba, fo called, becaufe by him it was miraculouny purg'd of its Brackifhnefs, at the Requeft of the Men of $\neq$ ericbo, 2 Kings ii. 19. Its Waters now being receiv'd in a Bafon, divide themfelves into feveral fmall Streams, which refrefh the whole Field that lies between this and Fericho. A little from hence is fericho, at prefent only a poor nafly Villige of the $A$ rabs; and here we faw the Place where Zaccbeus's Houle is faid to have ftood, which is an old fquare Stone Building on the South fide of Fericho.

30th. We fet out early for Fordan, and arrived there in two Hours. We found the Plain very barren, producing Nothing but Marine Plants; and in many Places of the Road, where Puddles of Water had food, we obferved a Whitenefs on the Surface of the Ground, which we found to be a Cruft of Salt raifed by the Water out of the Earth. Abour a Furlong from the River Fordan, was an old Church and Convent dedicated to St. $\mathcal{F}$ obn, in Memory of his baptizing our Saviour. We were there in March, but could difcern no Sign of its overflowing, though it was the proper Time for thefe Inundations.
One Bank of the River is fo befet with Bufhes and Trees, that feveral Sorts of Wild Beafts are faid to harbour in them ; whofe being wafh'd out of their Covert by the Overflowings of the River, gave Occafion to that Allufion, Fer. xlix. 19. He Joall come up like a Lion, from the freelling of Jordan. When we came to the River, fome ftript and bath'd themfelves in it, others cut down Boughs from the Trees, and every one was fome Way employ'd to take a Memorial of this famous Stream. Its Breadth was, about twenty Yards over, and in Depth it far exceeded my Height. By the Mofolem's Leave we went towards the Dead Sea with a Guard to attend us. The Dead Sea is enclofed on the Eaft and Weft with very high Mountains; on the North it is bounded with the Plain of fericbo, on which Side alfo it receives the Waters of fordan. On the South it is open, and extends beyond the Reach of the Eye. It is faid to be twenty four Leagues long, and fix or feven broad. On the Shore of the Lake we found a black Sort of Pebbles, which being held in the Flame of a Candle, foon burns, and yields a Smoke of an intolerable Stench; but by burning it lofes only of its Weight, and not of its Bulk. It is a common Tradition, that Birds attempting to fly over this Sea, drop down dead into it ; and that no Fifh, nor other Sort of Animal, can live in thefe Waters. The former Report I faw actually confuted, by feveral Birds flying over this Sea without any vifible Harm. The latter I have fome Reafon to fufpect as falfe, having obferved on the Shore two or three Shells of Fifh like Oyfter-fhells. As for the Bitumen, for which the Sea is famous, there was none at the Place where we were, but it is gathered near the Mountains on both Sides in great Plenty. It is fo like Pitch, that it cannot be eafily diftinguifhed from it but by its fulphureous Smell and Tafte.

The Water of the Lake was clear, and not only falt to the higheft Degree, but extreme bitter. To try its Strength I went into it, and found it bore up my Body Swimming with an uncommon Force. Though I diligently fearched, I could rot find any Remains of thofe Cities here fituated, which were made fo dreadful an Example of Divine Vengeance; neither could I difcerin any Smoke afcending above the Water, nor any Ruins. But the Father-guardian, and Procurator of Ferufalem, both affured me, that they had feen one of thefe Ruins, and the Water being very fhallow, they went to it, and found there feveral Pillars, and other Fragments of Buildings. On the Weft-fide of this Sea is a inall Promontory, near which, as our Guides told us, is the Monument of Lol's Wife metamorphos'd.

As to the Apples of Sodom, I never faw nor heard of any fuch hereabouts, nor is there any Tree near the Lake from which one might expect fuch Fruit, In our Return, about an Hour's Diftance from the Sca, we
faw a ruin'd Greek Convent, and found a good Part of the Church remaining, with the Figures of feveral Saints, and a Greek Infcription over the Altar. Hereabouts, and in many other Places of the Plain, I perceived a ftrong Scent of Honey and Wax, the Sun being hot, and the Bees very induftrious about the Bloffoms of that Salt Weed the Plain produces. Among the Products of this Place, I faw a notable Fruit, called by the Arabs, Zacchone ; it grows on a thorny Bufh with fmall Leaves, and both in Shape and Colour refembles an unripe Wall-nut. The Kernels of this Fruit the Arabs bray in a Mortar, and then putting the Pulp into fcalding Water, they skim off the Oil which rifes to the Top; which Oil they ufe inwardly for Bruifes, and outwardly for green Wounds; and I have found it, upon fome Trials, a very healing Medicine.
18. On the 3 1ft: This Morning we went in Six Hours near the Walls of Ferufalem, and thence to Beiblebem in two Hours, through the Valley of Bepbaim, famous for being the Theatre of David's Victories, 2 Sam. v. 23. In this Road we met, I. With the Houre of Simeon, who having our Saviour in his Arms fung his Nunc dimittis. 2. The Turpentine-tree under which the Virgin is faid to have refted, when the carried Chrift in her Arms to prefent him to the Lord at Ferufalem. 3. A Convent dedicated to Elias, where the Greek Monks pretend to thew the Impreffion of his Body in a Stone that ferv'd for his Bed; near to which is the Well of the Star, that appear'd to the wife Men, which there re-apppear'd to them. 4. Racbel's Tomb, mention'd Gen. xxxv. 19. which is a modern Structure, but probably the true Place of her Interment.

Being arriv'd at Betblebem, we went to all the Holy Places belonging to it, viz. the Place where our Lord is faid to be born, the Manger wherein he is faid to be laid, the Chapel of Yofeph his fuppofed Father, that of the Innocents, thofe of St. Ferom, of St. Paula and Eufocbium, and of Eufebius of Cremona, and the School of St. Ferom; all which Places I only Name, being afore defrrib'd by Mr. Sandys.

From the Top of the Churel we had a View of $\tau_{\ell-}$ koab, about nine Miles diftant Sourhward, of Engedi about three Miles Eaftward, and of a high Hill called the Franks Hill, being defended by the Crufaders forty Years after the Lofs of Jerufalem.
April I. We went to fee the remarkable Places near Betblebem, and firt to the famous Fountains, Pools and Gardens, which are faid to be King Solomon's', to which he feems to allude, Eccl. ii. 5, 6. The Pools are three in Number, fo difpos'd, that the Waters of the uppermoft defcend into the fecond, and the fecond into the third. The Breadth in all is the fame, being about ninety Paces, but the Length is different, that of the firft being about an hundred and fixty Paces, that of the fecond two hundred, and the third two hundred and twenty.
About an hundred and forry Paces from them, is the Fountain from which they chielly derive their Waters, which the Friers will have to be that feal'd Fountain to which the Spoufe is compar'd, Cant. iv. I2. Here you find four Places where the Water rifes, from which it is convey'd into a Bafon, and from thence is carried 'by a fubterraneous Paffage into the Pools; and by the Way there is an Aquæduct of brick Pipes, which receives Part of the Stream, and carries it by many Turnings about the Mountains to Jerufalem. Thefe Pools may probably be the fame with Solomon's, becaufe there is not the like Store of good Spring-water to be met with any where elfe in Palefize. From thefe Memorials of Solomion we return'd to vifit fome Places nearer Betblebem, where we faw the Field in which they fay the Shepherds were watching their Flocks, when they receiv'd the glad Tidings of Chrift's Birth, and hard by the Village where they dwelt, and an old Nunnery built by St. Poula, in which the died ; all which Places lie Eaftward about half a Mile from the Convent.

But to the Weftward we faw David's Well, which he fo much thirfted after, 2 Sam. xxiii. 15. and a little beyond it fome Remains of an old Aquaduct, which convey'd the Waters from Solomon's Pools to Ferualem;
which is faid to have been the genuine Work of Solomon, but is now deftroy'd by the Turks. Returning from this Place, we went to fee the Greek and Armenian Convents, contiguous to that of the Latins, each of which has a feveral Door opening into the Chapel of the holy Manger: and then we went to the Grot of the bleffed Virgin, within forty Yards of the Convent, where fhe is faid to have hid herfelf, and her divine Babe, from the Fury of Herod, fometime before their Departure into Egypt. This Grot is hollow'd into a chalky Rock, whofe Whitenefs they fay proceeds from fome Drops of the Virgin's Milk, that fell from her Breaft while the was fucking the holy Infant; upon which Account, they believe that this Chalk has a miraculous Virtue of encreaffing Women's Milk, and for that End it is often taken by Women Turks, Arabs and Cbriftians, and they fay with very good Effect.
19. On the 2 d , having prefented the Guardian with two Chequeens for his Civilities to us, we went from Betblebems to go vift the Wildernefs, and Convent of St. 'Fobn Baptift, and in this Stage we firt crofs'd that famous Valley in whicn the Angel is faid in one Night to have deftroy'd many thoufands in the Army of Senccherib; and then we came to Boat /bellab, in which they fay no Turk can live above two Years, by which Report the Cbriftans have it to themfelves. A little further we came to a Fountain, where they told us, but fallfy, that Pbilip baptiz'd the Etbiopian Eunuch; and then to the Village of St: Pbilip; at which afcending a fteep Hill, we came to the Wildernefs of St. Fobn, which is very rocky, but is well cultivated, and produces great Plenty of Corn, Vines and Olive-trees. And here we faw the Cave and Fountain where the Baptist is faid to have led an auftere Life, Mot. iii. 4. Near this Cell are fome Locuft-trees, which the Friars fay yielded him Suftenance, though they appear to be planted much later than his Time. After this, as we went to the Convent of St. Fobn, we pafs'd along one Side of the Valley of Elab, where David flew the Giant, I Som. xvii. and had a View of Modon, on the Top of a Hill, the Burying-place of the Maccabees.

When we came near the Convent, we vifited a Place which they call the Houfe of Elizabeth, Mother of the Baptift and in the Ruins of the Convent that was formerly here, is a Grotto in which they fay the bleffed Virgin faluted Elizabeth, and pronounced her divine Magnifcat, Luke i. 46. The Convent of St. Fobn has been rebuilt from the Ground within thefe four Years, and is now a large fquare Building, and neat all over; and has in it a very beautiful Church, at the North-end of which you go down feven Marble Steps to a flately Altar, erected over the Place where they fay the Baptift was born. As we return'd from St. Fobn's to Ferualem, we faw a Convent of the Greeks, taking its Name from the Holy Crofs, becaufe they fay here is the Earth that nourifh'd the Root that bore the Tree that yielded the Timber that made the Crofs; and under the high Altar you are flhown the Hole in the Ground where the Stump of the Tree ftood. After this we return'd to Ferufalem, and had our Feet wafhed by the Guardian, and kifs'd by every Friar, who did all fing Lattn Hymns at the Time.
20. On the $3^{d}$, we went to fee the Office of the Holy Fire, a Ceremony kept up by the Greeks and Armenians, who believe that every Eafter-Eve a miraculous Flame defcends from Heaven into the Holy Sepulchre, and kindles all the Lamps and Candles there. When we came to the Church of the Holy Sepulchre, we found it crouded with a numerous Mob, who began their Diforders by running round the Holy Sepulchre with all their Might, crying out Huia, i.e. This is be, or this is it; by which they exprefs the Truth of the Chriftian Religion. After this they began to aet many antick Tricks, like Mad-men; fometimes they drago ${ }^{\prime}$ d one another round the Sepulchre, fometimes they fet one Man upon another's Shoulders, and fo march'd round; and fometimes they tumbled round the Sepul. chre like Tumblers on a Stage, and acting the rudeft Things on this Occafion.

This frantick Humour continued from twelve to four: and then the Greeks firt fet out in a Proceffion round the Sepulchre, who were immediately follow'd by the Armenians, in which Order they thrice compafs ${ }^{\circ}$ d the Sepulchre, producing their Standards, Crucifixes, and embroider'd Habits, upon this Occafion. Towards the End of this Proceffion, a Pidgeon came fluttering into the Cupola over the Sepulchre, at whic:1 there was a great Shout ; and the Latins told us, this was let fly by the Greeks, to deceive the People into an Opinion that it was a vifible Defcent of the Holy Ghoft. The Proceffion being over, the Suffragan of the Greek Patriarch, and the principal Armenian Bifhop, approach'd the Door of the Sepulchre, and cutting the String with which it was faften'd, and feal'd entred in, fhutting the Door after him, all the Candles and Lamps within having been before extinguifh'd in the Prefence of the Turks. And then the Exclamations were double as the Miracle drew nearer, and the Pcople prefs'd with fuch Vehemence to the Door, that the Turks could not keep them off with the fevereft Drubs, which they did out of a great Defire to light their Candles at the holy Flame, as foon as it is brought out of the Sepulchre, for that is counted moft facred and pure, as coming immediately from Heaven.

The two Miracle-mongers had not been above a Minute in the Sepulchre, when the Glimmering of the holy Fire was feen through fome Chinks of the Door, which made the Mob as mad as any in Bedlam. Then prefently came out the two Priefts with blazing Torches in their Hands, which they held up at the Door of the Sepulchre, while the People thronged with mighty Zeal to obtain a Part of the firtt and pureft Flame, and could not be kept off by the hard Blows of the Turks Clubs, who laid on without Mercy. Thofe who got the Fire applied it to their Beards and Faces, pretending it would not burn like an earthly Flame; but I faw none that endured the Tryal long enough to make good the Pretenfion. However, fo many Taper's were prefently lighted, that the whole Church feem'd to be in a Flame; and with this lllumination the Ceremony ended. Thofe within the Church acted their Part with great Quicknefs and Dexterity, but the Behaviour of the Rabble without, which would better become a Baccbanale than a Cbriftian Feftival, very much difcredited the Miracle.
The Latins take a great deal of Pains to expofe this Ceremony as a fhameful Impofture, and a Scandal to the Chriftian Religion; but the Greeks and Armenians pin their Faith upon it, and make their Pilgrimages chiefly upon this Motive; and it is the Unhappinefs of their Priefts, that having acted the Cheat fo long, they are forced now to fland to it for Fear of endangering the A poaftcy of their People. After the Rout was over, when we went out of Church, we faw feveral People about the Stone of Unction, who, having Store of Candles lighted with the holy Fire, were daubing. Pieces of Linen with the Weiks of them, and the melting Wax, which were defigned for Winding-fheets; for they believe, that if they are buried in a Shroud fmutted with this Fire, it will fecure thenn from Hell-fire.
The 4th being our Eafter, we did not go abroad, the Time requiring Employment of another Nature.
${ }_{21}$. On the 5 th, we went to fee fome new Curiofities; and firft we came to that which is called St. Peter's Prifon, from which he was deliver'd by an Angel, $A E t s$ xii. Next we came to an old Church, in the Place where the Houfe of Zebedee ftood; then to the Place where ftood the Irongate which open'd to St. Peter of its own Accord; and a little farther is a fmall Church built over the Houfe of St. Mark, whither Peter went after his miraculous Goal-delivery. The Syrians, who keep it, pretend to fhow you the Window at which Rboda look'd out when Peter knock'd at the Door. In the Church they fhew a Syriack MS. of the New-Teftament, pretended to be eight hundred and fifty-two Years old, and a little Stone. Font ufed by the Apoftles in baptizing. Beyond this, in the fame Street, is that which is call'd the Houfe of Sc. Thomas, formerly a Church now a Mofque.

A little

## Chap. I.

A little further, in another Street, is the Place where us two noble Antiquities, the Sepulchre of Zacbariab, they fay our Lord appear'd after his Refurrection to the Maries, Matt. xxviii. 9. And here the Armenians have their Convent and Gardens, which take up all that Part of Mount Sion that is within the Walls of the City, Their Church is built over the Place where they fay St. Fames, the Brother of Fobn, was beheaded, REts xii. 2. and on the North-fide of it is Hown the Place of his Decollation. In this Church are two Altars fet out with extraordinary Splendor, deck ${ }^{3} \mathrm{~d}$ with rich Mitres, Copes, Croffes of Silver and Gold, $\mathcal{E}_{6}$. and in the Middle a Pulpit made of Tortoife-fhell, and Mother of Pearl, curiounly mingled and inlaid in one another
In the Anti-chapel are three large rough Stones, efteem'd very precious, one of them being the Stone upon which Mofes caft the iwo Tables when he broke them, the other two being brought, one from the Place of our Lord's Baptifm, and the other from that of his Transfiguration. After this we went to another Chapel of the Armenians, which is faid to be founded in the Place where Annas's Houfe ftood; and in it is hown a Fole, denoting the Place where one of the Officers of the High-Prieft fmote our Saviour, Fobn xviil. 22 whom the Friars will have to be the fame Malcbus, whofe Ear our Lord heal'd. In the Court before this Chapel is an Olive-tree, to which they fay Chrift was chain'd for fome Time by Order of Annas to fecure him from efcaping.

From the Houfe of Annas we went out of Sion-otate, which is near to that they call the Houle of Caiapbas, where is another fmall Chapel of the Armenians. Here, under the Altar, they fay is the Stone which was laid to the Door of our Saviour's Sepulchre, Màt. xxvii. 60. which the Armenians ftole from the Church of the Sepulchre and brought hither; it is two Yards and a half long, one Yard high, and as much broad. Here is likewife fhown a Cell, faid to have been our Lord's Pri fon till the Morning, when he was carried hence before Pilate; and alfo the Place where Peter was frighted into Denial of his Mafter. A little further without the Gate was the Church of the Canaculum, where they fay Chrift inftituted his laft Supper, which is now a Mofque. Near this is a Well, which is faid to be the Place where the Apoftles divided to go every one to his feveral Charge; and clofe by it is the Ruin of a Houfe, in which the Virgin is faid to have breathed her laft. And a little lower is the Grot in which St. Peter wept fo bitterly for denying his Mafter. After this we return'd to the Convent, and by the Way had a View of the beautiful Gate of the Temple.

On the 6th, we took a another Progrefs about the City; and going out at Betblebem-Gate, and turning on the Left-hand, we came to Betbßeba's Pool, where fhe is faid to be wafhing herfelf when David fpied her from his Palace. A little below this Pool begins the Valley of Hinnom, on the Weft-fide of which is the Place call'd the Field of Blood, now called Campo SanEEO, which is about thirty Yards long, and half as broad The Corpfes are let down into it through five Holes left open for that Purpofe, through which we could fee the Bodies under feveral Degrees of Decay. A little below the Campo Sancto is an intricate Cave, in which the Apofties are faid to have hid themfelves when they forfook their Mafter and fled. The Valley of $7 e-$ bofaplsat croffes the End of that of Hinnoms, in which is the Brook Cedron, which is always dry except in the Winter

In this Valley of Febofapbat we firft went to the Well of Nebemiah, fo called, becaufe it is reputed the Place where he recover'd the Fire of the Altar after the Babylonib Captivity, 2 Mac. i. 19. A little higher is the Place where Ifaiab is faid to be fawn afunder; and above that is the Pool of Siloam. A little farther is the Fountain of the Bleffed Virgin, and over-againft it the Village call'd Siloe, in which Solomon is faid to have kept his ftrange Wives; and above it is a Hill call'd the Mountain of Offence, where Solomon built the high Places, 1 Kings xi. 7. Not far from it they fhow another Field of Blood, where Fudas met with his compounded Death, Matt. xxvii. 5. Here alfo they How'd

Vol. II. $\mathrm{N}^{\mathrm{Q}}{ }^{127}$.
and the Pillar of Abfalom; and clofe by is the Sepul chre of Jebofapbat. From hence keeping in the Val ley, we faw the Sepulchres of the Bleffed Virgin, St Amna, and Fojeph. After this, going up the Hill, we faw a broad Stone on which they fay St. Stephen was martyr'd, and not far from it a Grot into which the Feros caft his Body; from whence we went to St. Ste pben's Gate of the City.
22. On the 7 th, we fet out again to fee the holy Places upon Mount Olivet, and as we afcended the Mount we faw certain Grotto's, call'd the Sepulchres of the Prophets. A little higher you come to the Place where they fay Chrift utter'd his Prophecy concerning the Deftruction of Ferufalem, Matt. xxiv. and on the Right-hand is the Place where they fay he dictated a fecond Time the Pater-nofter to his Dilciples, Luke xi. r, 2. At the Top of the Hill you come to the Place of our Lord's Afcenfion. Here was anciently a large Church buile in Honour of that Triumph, in which they fhew the Print of our Saviour's Foot; but it is now ufed for a Mofque, as many other holy Places about Ferufalem are, whether out of Devotion or Lucre I do not determine. Two Furlongs Northward is the higheft Place of Mount Olivet, on which ftood a high Tower call'd Viri Gallilei! in Memory of the Apparition of the two Angels to the Aponles after Chrift's Afcenfion, which about two Years fince was demolifh'd by a Turk, who bought the Field in which it ftood. From this Place we defcended the Mount by another Way, and about Midway they fhow the Place where Chrift beheld the City, and wept over it, Luke xix. 4I.

A little lower they fhow Gethfemane, about fifty feven Yards fquare, lying between the Foot of Mount Olivet and the Brook Cedron. It is well planted with Olive-trees, which are believed to be the fame that ftood here in our Saviour's Time; which Opinion made thefe Olives and Oil an excellent Commodity in Spain. At the upper Part of the Garden is a flat Ledige of Rocks, which is faid to be the Place on which Peter Fomes, and $7 o b n$, fell anleep during our Saviour's Agony; and juft by is a Grotto, which is faid to be the Place . in which our Saviour underwent that bitter Part of his Paffion. Not far off is a fmall Shred of Ground twelve Yards long and one broad, which is faid to be the Path on which ' Fudas walk'd up to Chrift, and faid, Hail, Mafter, and kifs'd him: Which narrow Path is feparated by a Wall out of the Midft of the Garden, as a Terra damnata; which is the more remarkable, becaufe it is done by the Turks, who, as well as Cbriftians, deteft the Ground on which that infamous Treachery was acted

On the 8 th, we went to fee the Palace of Pilate, which is not far from St. Stepben's Gate, from whence we had a Profpect of the Place where the Temple food, which is all that is allow'd us, for we cannot go within the Borders of it without forfeiting Life or Religion. It lies upon the Top of Mount Moriab, over-againft Mount Olivet, the Valley of Jehofaphat lying between. It was about five hundred and ninety of my Paces long, and three hundred and feventy broad ; in the Middle of the Area ftands now a Mofque, which is faid to be built on the Ground where formerly ftood the Sanctum Sanctorum.

In this pretended Houfe of Pilate is fhown the Room where Chrilt was mock'd with the Enfigns of Royalty, and buffetted by the Soldiers. As you come out is a Defcent, where was formerly the Scala Sancia. On the other Side of the Street is the Room where, they fay, our Saviour was fcourged, which is now a Weaver's Shop. Returning from Pilate's Palace, we pafs'd along the dolorous Way, in which we faw, I. The Place where Pilate brought our Lord forth to the People and faid, Bebold the Man! 2. Where Chrift fainted thrice under the Weight of the Crols. 3. Where the Bleffed Virgin fwoon'd at fo tragical a Spectacle. 4. Where Veronica prefented hims the Handkerchief to wipe his Bleeding Brows: And, 5. Where the Soldiers compel'd Simon to bear his Crofs. All which Places I need only to name, being defcribed by others.

IO H
On

On the 9 th, we faw the Pool of Betbefda, which is one hundred and twenty Paces long, forty broad, and eight deep, but no Water in it; and there we faw fome Arches, which are faid to be the Porches in which the Lame, Halt, and Blind fate, Fobn v. From hence we went to the Convent of St. Anne, where there is a large Church, and under it a Grotto, where, they fay, the Bleffed Virgin was born. Near this Church they fhew the Pbarifees Houfe, where Mary Magdalen wafh'd Chrints. Feet with her Tears, and wiped them with her Hair, Luke vii. 38. In the Afternoon we faw the ftately Pool of Mount Gibon, which is one hundred and fix Paces long, and fixty-feven broad, lined with a Wall, and well fored with Water.

On the 1oth, we went to take our Leave of the holy Sepulchre, which being the laft Time, the Turks allow free Admittance to all People without any Fee, not only to the Poor, but to the Lewd, who prophaned it as much as when the Heathen celebrated here their Apbrodifa. On the inth began the Turks Byram, and we kept at home to avoid the Affronts ufual at fuch Feftivals. On the 12 th and 13 th, we prepared for our Departure, and how to avoid the Arabs, by going along with the Mofolem.
23. On the 14th, we went with a fmall Prefent to wait on the Mofolem, who fet out the next Morning; and before our Departure I took the Meafure of the City, going out at Betblebem-Gate, and walking round about to the fanie Gate' again, and found it in Circumference to be four thoufand fix hundred and thirty Paces, and ten of my Paces amounting to nine Yards ; this Number makes four thoufand one hundred and fixty-feven Yards, which is juft two Miles and an half.
On the 15 th in the Morning, having received our Diplomata, to certify that we had vifited the holy Places, and prefented the Convent with fifty Dollars a Man for their Trouble, we fet out with the Mofolem, and lodg'd at Kane Leban. The Country People being at Plough, in order to fow Cotton, us'd Goads of an extraordinary Size, being eight Foot long, having at one End a fharp Prickle to drive the Oxen, and at the other a Paddle to cleanfe the Plough, which is held by the fame Perfon that drives; and with fuch a Goad it feems to be, that Sbamgar made the great Slaughter Fudg. iii. 3 I.

The 16 th . Leaving Kane Leban, we paffed by Na plofa and Samaria, and came to the Fountain Selee, where we lodg'd. The 17th, we travelled in the fame Road we came to Capbar-Arab, and then we left that Road, refolving to crofs the Plain of Eddraelon, and vifit Nazareth, which we did, after paying our Caphar to Emir Cbibly.
24. April 18. Nazaretb is now a fmall Village, on a high Hill, where we were treated at a Convent of fome Latin Fathers, who live in perpetual Fear of the Arabs. The Church of Nazaretb ftands in a Cave, faid to be the Place where the bleffed Virgin received the Meflage from the Angel, Hail thou tbat art bighly favoured, \&c. Luke i. 28. It refembles the Figure of a Crofs, whereof the Tree is fourteen Paces long, and fix over, and the Traverfe is nine Paces long, and four broad; juft at the Sestion are two granite Pillars, whereof one ftands at the Place where the Angel, the other where the bleffed Virgin flood at the Time of the Annunciation.

After this we went to fee the Houfe of $\mathcal{F o f e p h}$, where they fay the Son of God liv'd for near thirty Years in Subjection to Man, Luke ii. 51 ; and near this they fhew the Synagogue, where our Lord preached that Sermon which fo much exafperated his Country-men, Luke iv. Here are the Ruins of two Churches built by Helena.

On the 1gth, about two Hours diftant from Nazaretb Eaftward, is Mount Tabor, a high Mountain, round and beautiful, ftanding in the Plain of Efdraelon, about three Furlongs within the Plain. This is thought to be the Mountain on which our Lord was transfigur'd, Mat. xvii. which has a plain Area at Top very fertile, on which in feveral Places are Cifterns of good Water,
and three Grotto's reprefenting three Tabernacles, which St. Peter propos'd to erect, when he faid, Let us make tbree Tabernacles, \&xc.
And here I cannot but obferve, that almoft all Paffages and Hiftories of the Gofpel, are faid by them who fhew the Places, to have been done in Grotto's, Thus the Places of the bleffed Virgin's Birth, of the Annunciation, of the Virgin's Salutation of Elizabetb, of the Baptifts and Cbrife's Nativity, of St. Peter's Repentance, and the Transfiguration; all chefe Places are faid to be Grotto's, though it is no Ways probable that fo many various Actions, with fuch Circumftances as feems fometimes to require Places of another Naturc, fhould be done in Grotto's.
From the Top of Tabor you have a moft delightful Profpect: Oa the North-weft you difcern the Mediterranean, and all round you have the beautiful Plains of Efdraelon and Galilee, where you have a View of many Places memorable for the Refort and Miracles of Chrift at the Bottom ftands Daberah, which is faid to take its Name ftom Deborah, and near it is the Fountain of KiBon. Eaftward you fee Mount Hermon, and at the Foot of it Nani, famous for our L.ord's raifing the Widow's Son there, Luke vii. 14. and Endor, where Saul confulted the Witch. Southward you fee the Mountains of Gilboa, fatal to Saul and his Sons.
Due Eaft you difcover the Sea of Tiberias, and clofe by it a fteep Hill, down which the Herd of Swine ran and perifhed in the Waters, Mat. viii. 32. Towards the North appears that which they call the Mountain of Beatitudes, where our Saviour delivered his Sermon, Mat. v. 6, 7. And not far from this little Hill is the City Saphet, that ftands upon a high Mountain, to which being then in View, our Saviour may be fuppofed to allude, when he fays, Mal. v. 4. A Cily fet on a Hill camnot be bid. From Mount Tabor, we had alfo a Sight of the Place call'd Dotbami, where they fay Fofeph was fold by his Brethren, and of the Field where our Saviour fed the Multitude with a few Loaves, and a few Fifhes. After Dinner we went to fee the Mountain of the Precipitation, i.e. the Brow of the Hill where they fay the. Nazarites would have thrown down our Saviour, Luke 4. had he not made a miraculons Efcape: 'And here the Friars fhow fome Holes, which they call the Prints of Chrift's Fingers, made in the hard Stone, when he refifted the Violence offer'd him.
20. On the 20th, we directed our Courfe to Acra, pafs'd in View of Cana of Galilee, and came to Sepharia, the reputed Habitation of Foachim and Anna, Parents of the bleffed Virgin ; over which ftands a good Part of a large Church. Here begins the Plain of ZQbulon, from whence we came to Acra.
On the 2 Ift : At Acra we were treated by the French Conful, and came the firt Night to our old Lodging at Solomon's Cifterns.
On the 22d: About three Hours from Sidon, we were carried to fee a Place we had not obferv'd before, which was a high rocky Mountain ; on the Side of which were hewn a Multitude of Grots, to the Number of 200, as they were counted, which have an Entrance two Foot fquare, and a Room within for the moit part four Yards fquare, which feem'd to be defign'd for the Ufe of the Living, and not of the Dead, becaufe fome of the Cells are no more than one Yard fquare, and in the Rock are Cifterns for ftoring up Water. On the ${ }_{2} 3^{3}$, we continued at Sidon, being generoully treated by the French.
26. On the 24 th, having gone through the OliveYards of Sidon, we afcended Libamus, till we came to a Fountain calld Ambus-lee. On the 25 ht, we arrived at the higheft Ridge of the Mountain, where the Snow lay clofe by the Road; and then we begun to defcend on the other Side, and came to a Village call'd Me/hgarah, where a Caphar was demanded by the Drufes, who poffefs thefe Mountains. From hence, in one Hour, we entred into a Valley call'd Bocat: This feems to be the fame with Bicatb-Aven, mentioned Amos i. 5 . together with Eden and Damafous, for there is very near it a Place call'd Eden to this Day; in this Valley there runs a large River call'd Setome, which falls at laf
into the River Cafimir, fally call'd Eleutherus. V crofs'd a Bridge, and pitch'd our Tents on its Bank.

On the 26 th , we paffed through the Valley Bocat, and came to the Foot of Antilibanus; and having pars'd by feveral Villages, we went through a narrow Clift between two rocky Mountains to Demus, a fmall Caphar. On the $27^{\text {th }}$ in the Morning, we came to the River Barrady, which fupplies all the Gardens and the City of Damafcus with Water; we crofs'd over it at a Bridge, and our Road afcending brought us to the Brink of a high Precipice, from whence the Turks fay their Prophet took a View of the City Damascus, which he found fo pleafant and beautiful that he would not enter into it, becaufe he faid there is but one Paradife defigned for Man, and he would not take his in this World.

It is, as near as I could guefs, about two Miles long, but compais'd with Gardens, extending to thirty Miles round ; in which are Fruit-trees of all kinds, and many Turrets, Steeples and Summer-houfes, peeping out from green Boughs. The River Barrady, near its Springhead, is divided into three Streams, whereof the Mid-dle-moft runs directly to Damafous, and is diftributed in the City; the other two are drawn round to the Borders of the Gardens, fo that there is not a Garden but has a fine quick Stream, which ferves not only for watering the Place, but for Fountains and other Wa-ter-works.

This River was call'd by the Greeks and Romans Cbryforrboas; but as for Arbana and Pbarpar, Rivers of Damafcus, mention'd 2 Kings v. 12. I could find no Memorial of them, but doubtlefs they were Branches of the River Barrady. We continued a good While upon the Precipice, as being loth to leave fuch a charming Profpect, though it allur'd us down to the City. Coming down the Hill into the Plains, we were conducted by a Fanizary into the City, where we obferv'd the Garden-walls to be made of great Pieces of Earth, fafhion'd like Bricks, and hardned in the Sun, being two Yards long and one Broad, and half of one thick. We alfo obferv'd their Method of fcouring the Channels : They put a great Bough of a Tree in the Water, and faften it to a Yoke of Oxen, upon the Bough there fits a good heavy Fellow to prefs it down and drive the Oxen; and thus the Bough is dragg'd all along the Channel, and ferves at once both to cleanfe the Bottom and alfo to fatten the Water, for the greater Benefit of the Gardens.

On the 28 th, we walk'd out to take a View of the City: And here we found all the Houfes on the Outfide built either with Sun-burnt Brick or Flemijh Wall, very coarfely daub'd over; and fo by the Wafhing of the Houfes upon a violent Rain, the whole City becomes as it were a Quagmire. But the Gates in thefe Mudwalls are adorn'd with Marble Portals, carv'd and inlaid with great Beauty; and on the Infide you find generally a fquare Court, beautified with Variety of fragrant Trees and Marble Fountains, and Duans floor'd with Marble, richly gilded, and furnifh'd with Carpets and Cufhions.

In the next Place we went to fee the Church of St. Jobn Baptif, now converted into a Mofque, which no Chritian may enter into. Its Gates are vaftly large, cover'd with Brafs, ftampt over with Ayab Characters; and within it is fpacious and lofty, built with three Ines, between which are Rows of polifh'd Marble of great Beauty. In this Church is kept the Head of St. Jobn, with other Reliques fo holy, that it is Death for a Turk to go into the Room where they are. From the Church we went to the Caftle, and being admitted within the Gate we faw Store of ancient Arms and Armour, and among the reft a Romar Balifta, and a Chain cut in Stone.
27. On the 29 th, we went to fee the Cavalcade of the Hadgees fetting out for Mecca, which has been defrrib'd before. After this we went to fee the Ager Damafcenus, a beautiful Meadow juft without the City, divided in the Middle by a Branch of the River Barrady; and it is a current Tradition here, that Adam was made of the Earth of this Field. Adjoining to this is a large

Hofpital, enclofed on the South-fide by a fiately Mofques and on the other Sides with Cloyfters and Lodgings. Returning hence Homeward we faw a beautiful Bagnio; and not far from it a Coffee-houfe capable of entertaining four or five hundred People.

It had two Quarters for Guefts, one for Summer, and the other for Winter. That for Summer was a finall Inand, wafh'd round with a large fwift Stream, Maded over Head with Trees, and with Mats when the Boughs fail. And here we found a Multitude of Turks in the Duans, regaling themfelves with Greens and Water ${ }_{3}$ which two, with a beautiful Face, according to their Proverb, are a perfect Antidote againft Melancholy. In the Afternoon we went to vifit what they call the Houfe of Ananias, who reftor'd Sight to St. Paul, Aits ix. I7. And the Place fhown for it is a fmall Grotto, containing a Cbrition Altar and a Turki/b Praying- place ${ }_{3}$ feated too near one another.

Our next Walk was out of the Eaft-gate, to fee the Place of St. Paul's Vifion, which is about half a Mile from the City, clofe by the Way-fide. A little nearer the City is a fmall Timber-ftructure with an Altar in it, where you are told St. Paul refted fome time in his Way to the City after the Vifion, AOts ix. 8. Being return'd to the City we were fhown the Gate at which St. Paul was fet down in a Bafket, AEts ix. 25. This Gate is at prefent wall'd up, by Reafon of its Vicinity to the EaftGate, which renders it of little Ufe: In the City we faw the Patriarch of it, who told me there were more than twelve Hundred of the Greek Communion in that City.

On the 3oth, we went to vifit the Gardens, and fpent a Day in one of them, where we found a pleafant Summer-houfe, with a plentiful Stream of Water running through it, and the Garden thick fet with Fruittrees. In vifiting thefe Gardens, the Franks are oblig'd either to walk on Foot, or ride on Affes, which ftand there ready to be hir?d) for the Turks will not allow them to ride a Horfe. May r. we fpent in another Garden, whofe Summer-houfe was more fplendid, and had greater Variety of Fountains.

On the 2d, Some of us went to Sidonaia, a Greek Corivent, about four Hours from Damafcus to the Northward, and by the Way we faw on the Right-hand a very high Hill, reputed the fame on which Cain and Abel offer'd Sacrifices, and where the latter was nain by the former. Sidonaia is fituated at the further Side of a large Vale, on the Top of a Rock, which would be* inacceffible but for the Steps that are cut in it all the Way up. It is fenc'd at Top with a Wall (which enclofes the Convent, which was at firl founded by $\mathcal{F} u f-$ tinian, and is at prefent poffefs ${ }^{3} \mathrm{~d}$ by twenty Greek Monks, and forty Nuns, who live promifcuoully together.

Upon this Rock, and in a little Compafs round about it, are no lefs than fixteen Churches or Oratories, dedicated to feveral Names, 1. To St. Fobr. 2. To St. Paul. 3. To St. Thomas. 4. To St. Babylas. 5. To St. Barbara. 6. To St. Cbriftopber. 7. To St. Fofeph. 8. To St. Lazarus. 9. To the bleffed Virgin. Io. To St. Demetrius. II. To St. Saba. 12. To St. Peter. 13. To St. George. 14. To All-Saints. I5. To the Afcenfion. 16. To the Transfiguration of our Lord; from all which we may conclude, that this Place was highly efteem'd for Holinefs.

In the Chapel here made Ufe of by the Convent for their daily Service, they pretend to a great Miracle ${ }_{y}$ of which they give this Account. In this Church they had once a little Picture of the bleffed Virgin, very famous for the many Cures and Bteffings granted to Supplicants. This Picture was fole away by a facrilegious Rogue, who had not kept it long but it turn'd into a Body of Elefh; which wonderful Event ftruck him with fuch Remorfe, that he carried back the Prize, and begg'd Pardon for his Crime. The Monks having recover'd fo great a Jewel, to fecure it for the future ${ }_{2}$ laid it in a Cheft of Stone, and placing it in a little Cavity behind the high Altar, fix ${ }^{3} \mathrm{~d}$ an Iron Grate before it.

Upon the Gratés hang Abundance of Toys, being the Offerings of many Votaries for the Succefs of their Prayer's made at this Shrine. Under the fame Chert, in which the Incarnate Picture was depofited, they always place a fmall Silver Bafon, to receive the holy Oil, which they pretend diftils from the enclofed Image, and does wonderful Cures in many Diftempers, efpecially thofe affeeting the Eyes. On the Eaft-fide of the Rock is an ancient Sepulchre hollow'd in the firm Stone, which is about eight Yards fquare, and contains twelve Chefts for Corpfes. At the Entrance are fix Statues in three Niches, two in each; at the Pedeftals are fome Greek Words very dark.

On the 3 d, we went to fee the Street call'd Straigbt, Alts ix. 11 . in which is fhown the Houfe of 7 udas, with whom St. Poul lodg'd; and in the fame Houfe is an old Tomb faid to be Ananias's, much reverenc'd by the Turks, who keep a Lamp always burning over it: On the $4^{\text {th }}$ : In an Hour and half we came to a fmall Village call'd Sinie, juft by which, on the Top of a Hill, is an old Structure, fuppos'd to be the Tomb of Abel, which is thirty Yards long, and thought to be but juift proportion'd to his Stature; from whence the adjacent Country, in old Times, was call'd Abylene.
28. On the $5^{\text {th }}$ we pafs'd by the Fountain of Borrady, and came to a village called Surgaroch, from whence we arrived a fecond Time. in the Valley of Bocat; and hence, going Northerly, we came in three Hours to Balbeck, which is fuppofed to be the ancient Heliopolis, or City of the Sun, and fo the Word imports; for Baal, though it comprehends all Idols of whatever Sex, is very often appropriated to the Sun, which is the Sovereign Idol of this Country. The City has a pleafant Situation on the Eaft-fide of the Valley of Bo: cots, of a \{quare Figure, compafs'd with a good Wall, though its Houfes are mean, as they are ufually in Tur$\mathrm{kj} / \mathrm{b}$ Villages.

There is in it a noble Ruin, which was anciently a Heathen Temple, in which we obferved, firft, a round Pile of Building, all of Marble, encircled with Columns of the Corintbian Order, very beautiful, which fupport a Cornifh that runs all round the Strueture, of no ordinary State and Beauty; and what remains of it at prefent is in a very tottering Condition, but yet the Greeks ufe it for a Church, which fhould excite them to a little more Fervour in their Prayers than they generaliy ufe, for they are feemingly the moft indevout at their Divine Service, of any People in the Chriftian World.
But befides this Temple, here is another Curiofity, which is fo ftrange, that a Man may be thought to ftrain the Privilege of Travellers in relating it, and that is a large Piece of the old Wall, which encompafs'd all the Stuctures in the City; a Wall made of fuch prodigious great Stones, that the Natives here afcribe the Building of it to the Devil. Three of the Stones we meafured, and found them to extend to fixty one Yards in Length, whereof one was twenty one, and the other two twenty Yards long; thefe three Stones lay in one Row, End to End. Here was alfo a fingle Column of the Tufcon Order about fourteen Yards high, and one Yard and half diameter, having a Channel cur from the Bottom to the Top.
On the 6 th we left Balbeck, and went a-crofs the Valley; and as we pafs'd by the Walls of the City, we faw many Stones infribed with Roman Letters, which fhow that the Walls are made of the Ruins of the old City. In two Hours we faw, near the Road, an old Pillar nineteen Yards high, and five Foot in Diameter. In an Hour more we came to the other Side of the Valley, at the Foot of Anti-libanus; and, afcending the Mountain, we faw an old Lake called Limone, and thence in an Hour more we arrived at the Snow. Here we lodged all Night on the Top of Libanus, which is free from Rocks, but very barren, and cover'd with a Sort of white Slates.
It is fo high, that it proves a Confervatory of Abundance of Snow; which thawing in the Summer, fupplies with Water the Rivers and the Fountains in the Valleys below; and in the Snow we faw the Print of the

Feet of Wild Beafts, the fole Proprietors of thefe uppes Parts of the Mountain.

On the $7^{\text {th }}$ we went almoft four Hours upon Snow, which being frozen, bore us and our Hories, and ther defcending about an Hour, we came to a Fountain and a milder Region. From hence we defign'd for Canobine, but our Guide being at a Lofs, we fteer'd to Tripolys where we were nobly treated.
29. On the 8 th, Mr. Conful Hafings carried us to fee the Cafle of Tripoly, which is fituate on a Hill that commands the City; bur being now unprovided with Arms, it ferves rather for a Prifon than a Garrifon. There was in it a poor Chriftian called Sbeck Eunice, a Maronite, one that had formerly renounced his Faith, and turn'd Mabometan; but in his declining Age retracted his Apoftacy, and died to attone it ; for he was impaled by Order of the Bafha two Days after we had left Iripoly; which Kind of Punifhment is certainly one of the greateft Barbarities that can be offer'd to hus. man Nature.
The Execution is done after this Manner: They take a Poft about the Bignefs of a Man's Leg, eight or nine Foot long, which they make Tharp at one End, and force the Criminal to carry to the Place of Execution ; and there they thruft in the Stake at his Fundament, and then taking him by the Legs, draw on his Body upon it till the Point of the Stake appears at his Shoulders: and then they erect the Stake, and faften it in a Hole dug in the Ground. The Criminal fitting in this Poflure, does fometimes drink, fmoke, and talk, for twenty-four Hours; but generally, after he has remain’d an Hour in this Pofture, one of the By-ftanders is permitted to give him a gracious Stab to the Heart, which puts an End to his inexpreffible Mifery.
On the gth, having crofs'd the Plain of Tripoly, we came to the Foot of Libomus; and thence afcending, in four Hours we pafs'd by a Village call'd Eden, and in two Hours and a Half more we came to the Cedars which grow amongft the Snow, near the higheft Part of Libanon, where we found fome very old, and of a prodigious Bulk, of which Sort I counted fixteen, and others younger, of a fmaller Size. I meafured one of the largeft, and found it twelve Yards fix Inches in Girt, and thirty-feven Yards in the Spread of its Boughs. It was ftill found, and about five Yards from the Ground, was divided into five Limbs, and each of which was equal to a great Tree.

Afer we had ftaid about half an Hour in this Place, the Clouds began to thicken and fly upon the Ground, which fo obfcured the Road, that with much ado we found the Way that goes down to Canobine; which is a Convent of the Maronites, and the Seat of a Patriarch, and is pleafantly fituated near a Rupture in Libanus, cloath'd with Greens, and refrefh'd with Fountains. It is feated on the North-fide of this Chafm, about the Midway in the Mountain, and was founded by Theodofrus the Great, at the Mouth of a great Cave, having a few Rooms fronting outward that have the Light of the Sun, the reft being all under Ground. The Valley of Canobine was anciently much reforted to for Religious Retirement, as appears from the many Hermitages, Cells, and Monafteries here to be feen.

On the 1oth, I took my Leave of the Patriarch, and return'd to Tripoly, through a Path cut in the Side of the aforefaid Rupture. On the 11 th, we took our Leaves of our worthy Friends at Tripoly, and travelling the fame Way we came, we arrived in eight Days at the Honey-Kane, and found many of our Aleppine Friends there. All that occurrd to us new in thefe Days Travel, was a particular Way ufed by the Country-people in gathering Corn, which they pluck up by Handfuls from the Roots, that they may loofe none of their Straw, which is generally very fhort, and neceffary for the Suftenance of their Cattle, no Hay being made here. This is their Practice in all Places of the Eaft I have feen, and feems to give Light to that Expreffion of the Pfalinift, Pfal. cxxix. 6. whbich withereth afore it be piucked up; and though there is Mention in the next Verfe of a Mower; yet being fuch as fills not his Hand, this rather confirms the former Senfe.

## Chap. 1. from Aleppo to Jerusalem.

130. We are next to take Notice of an Excurfion our Author made fome Years after this, in order to take a View of the famous River Eupbrates, and the Country near it on both Sides; which being fo famous both in ancient and modern Hiftory, might well excite his Curiofity, as the Plainnefs and Perfpicuity of his Account cannot but fatisfy ours. We fet out, fays he, from Aleppo, Aprit 17, 1699, and fteering Eaft Norch Fant fomewhat lefs, we came in three Hours and a half to Surbafs.

The 18 th, we came in three Hours and a half to Be zay, pafing by $B a b$, where is a good Aquæduct, Dyn it Daab, to which you defcend by about thirty Steps, and Lediff, a pleafant Village. Our Courle was thus far Eaft and by North. In the Afternoon we advanced three Hours farther, Courfe Norch Eaft, to an old ruined Place, formerly of fome Confideration, called Acamy : It is fituated in the Wildernefs on a Hill encompafied by a Valley: It was large, and had the Footteps of good Walls and Buildings.

The 1gth we went Eaft and by North, and in four Hours arrived at Bambych. This Place has no Remnants of its ancient Greatneís but its Walls, which may be traced all round, and cannot be lefs than three Miles in Compafs. Several Fragments of them remain on the Eait-fide, efpecially at the Ealt Gute, and another Piece of eighty Yards long; with Towers of large fquare Stone, extremely well built. On the North-fide I found a Stone, with the Bufts of a Man and Woman large as the Life, and under two Eagles caryed on it. Not far from it, on the Side of a large Well, was fixed a Stone with three Figures carved on ir in Baffo Relievo. They were two Syrens, which twining their finy Tails together, made a Seat on which was placed fitting a naked Woman, her Arms and the Syrens on each Side murually entwined.

On the Weft-fide is a deep Pit of about an hundred Yards Diameter: It was low and had now Water in it, and feemed to have had great Buildings all round it, with the Pillars and Ruins of which it is now in Part filled up, but not fo much but that there was ftill Water in it. Here are a Multitude of fubterraneous Aquæducts brought to this City, the People attefted no fewer than fifty. You can ride no where about the City without feeing them. We pitched by one about a Quarter of a Mile Eaft of the City, which yields a fine Stream, and emptying itfelf into a Valley, waters it, and makes it extremely fruiful. Here perhaps were the Paftures of the Beafts defigned for Sacrifice. Here are now only a few poor Inhabitants, though anciently all the North-fide was well inhabited by Saracens, as may be feen by the Remains of a noble Mofque and' Bagnio a little without the Walls. We were here vifired by a Company of Begdelies, who were incamped fome Hours further towards Eupbrates, having about a thoufand Horfe there.
20. For avoiding the Begdelies, we hired a Guide, who conducted us a By-way. We travelled North North Eaft over a $D=$ fert Ground, and came in three Hours to a fmall Rivulet called Sejour, which falls into the Eupbrates about three Hours below Ferabolus. In about two Hours more we came to a fine fruitful Plain, covered with extraordinary good Corn, lying between the Hills and the River Eupbrates. In about an Hour and half's Travelling through this Plain on the Banks of the River, we came to ferabolus. This Place is of a femicircular Figure, its flat Side lying on the Banks of Eupbrates ; on that Side it has a high long Mount clofe by the Water, very fteep. It was anciently built upon (and at one End of it I faw Fragments of) very large Pillars, a Yard and half Diameter, and Capitals and Cornifhes well carved. At the Foot of the Mount was carved on a large Stone, a Beaft refembling a Lion, with a Bridle in his Mouth, and I believe ancienily a Perfon fitting on it ; But the Stone is in that Part now broke away; the Tail of the Beaft was couped.

Round about this Place are high Banks caft up, and there is the Footteps of Wall on them. The Gates feem to have been well-built; the Whole was 2250 Paces, that is Yards, in Circumference. The River is

Vol.II. Ne CXXVIII.
here as large as the Thames at London; a long Bulletgun could not fhoot a Ball over it, but it dropt into the Water. Here is found a large Serpent, which has Legs and Claws, called Woralla. I was told by a Turk, that a little below this Place, when the River is low may be feen the Ruins of a Stone-bridge over the River; for my own Part, I faw it nor, nor do I much rely on the Turk's Veracity. The River feem'd to be lately fallen very fuddenly, for the Banks were frefh wet two Yards and more above the Water. It was here North and South.

On the 21 it we kept clofe on the Banks of Euphrates, and in two Hours and a Half croffed a fine Rivulet called Towzad, and in two Hours more arrived overagainit Beer, and pitched on a Flat, clofe by the Riverfide. Oblerving the Latitude of the Place by my Qua. drant, I found the Angle between the Sun and the Zenith, to be twenty-two Degrees, and the Declination this Duy being fifteen Degrees ten Minutes ; theWhole is thirty feven Degrees, and ten Minutes.

On the 22 d , we continued at our Station, not daring to crofs the River for Fear of falling into the Hands of the Cbiab of the Baha of Urfa, who was then at Beer, ordering many Boats of Corn down to Bagdal. We were fupplied at the fame Time with Provifions by Sbeck Afyne, to whom we made Returns.

On the a3d, the Cbiab being now departed, Sbeck Aflyme invited us over to Beer. We croffed in a Boat of the Councry, of which they have a great many, this being the great Pass into Mefopolamia. The Boats are of a miferable Fabrick, flat and open in the Fore-part for Hories to enter : They are large enough to carry about four Horfes each: Their Way to crofs is, by drawing up the Boat as high as they know to be neceffary, and then with wretched Oars ftriking over the Falls a good Way down by the Force of the Stream before they arrive at the further Side.

Having faluted AJjye, we were conducted to fee the Caftle, which is a large old Building on the Top of a great long Rock, feparated by a great Gulph or natural Bottom, from the Land. Ac firft coming within the Gates, which are of Iron, we faw feveral large Globes of Stone, about twenty Inches diameter, and great Axles of Iron, with Wheels which were entire Blocks of Wood two Foot thick in the Nave, and cut fomewhat to an Edge toward the Periphery and Screws, to bend Bows or Engines; as alfo feveral Brafs Field Pieces.

Afcending up the Sides of the Rock by a Way cut obliquely, you come to the Caftle. At firft Entrance you find a Way cut under Ground down to the River. In the Caftle the principal Things we faw were, firft, a large Room full of old Arms. I faw here Glafs Bottles to be fhot at the End of Arrows; one of them was fluck at the End of an Arrow, with four Pleces of Tin by its Sides, to keep it firm. Vaft large Crofsbows and Beams, feemingly defigned for Battering, Rams and Roman Saddles, and Headmpieces of a large Size, fome of which were painted, and fome large Thongs for Bow- Atrings, and Bags for llinging Stones. But the Jealoufy of the Turks would not permit us to ftay fo long as would have been requifite for a perfect Examination of thefe Antiquities. From the Caftle we return'd to AJJne, and were civilly treated. In the Evening we went up into the Country of Mefopotamia. The Hills are chalky and fteep, and come clofe to the Water-fide, without a Plain intervening, as it is upon the Side of Syria, fo that Beer ftands on the Side of a Hill. However, it has a Couple of fine Streams that run over the Top of the Hill; one of which drives two Mills, and fo runs down to the City, which is well walled. In the Side of the Hill there is a Kane under Ground, cut inco the Rock, with fifteen large Pillars left to fupport its Roof.
24. We left Beer, and travelling Weft, came in three Hours to Nizib, a Place well fituated at the Head of the Towzad. Here is an old fmall Church very ftrong and entire, only rhe Cupola in the Middle of the Crofs is broke down, and its Space covered with Leaves to fit the Place for a Mofque. I believe the Turks made the Places to which they turn in Prayers, empty

Niches,

Niches, to fhew that they worthipped one invifible God, not to be reprefented by Images. In two Hours we came from Nizib to a good Chriftian Village called Urour, and in an Hour and half more to a Well in the Defert.
25. We travelled Weft near two Hours, and came through a fine Country diverfify'd into fmall Hills and Valleys, to a Village called Adjia, having left Silam and two other Villages on the Right-hand. At Adjia rifes the River of Aleppo from a large Fountain at once, and juft above it runs the Sejour, which might be let into it by a fhort Cut of ten Yards. From Adjia our Courfe was Weft North Weft. The Banks of the Sejour are well planted with Trees and Villages. In two little Hours we came to Antab, having croffed the Sejour at a Bridge, about three Quarters of an Hour before. Leaving the City on the Right-hand we paffed under its Walls, and pitched about three Quarters of an Hour from it on a plain Field, on the Banks of the Sejour.

Antab ftands moftly on a Hill, having a Caftle, on a round Mount at its North-fide, and exactly refembling that of Aleppo, though much lefs: It has a very deep, Ditch round it, and at the Foot of the Mount within the Ditch, is a Gallery cut through the Rock all round the Caftle with Portals for Shot, and it is faced with Stone Walls, where the Rock was not ftrong enough. The Houfes have generally no upper Rooms, the Bazars are large. I faw here a fine Stone very much refembling Porphyry, being of a red Ground with yellow Specks, and Veins very gloffy. It is dug juft by Antab.

Antab is doubtlefs Antiocbia penes Taurum, in the Skirts of which it ftands, and is not far diftant from the higheft Ridge: It is about two Thirds as big as Aleppo.
26. We paffed through a fruifful mountainous Country, and came in feven Hours and a Quarter to Rowant Caftle: It ftands on the Top of a round fteep Hill, and has been ftrong for the Times it was built in. It is probably a Saracen Fabrick, and is now in Ruins. At the Foot of the Hill Weftward runs the River Ephreen, its Courfe is South-South-Weft; our Courfe from Antab to Rowant was North-Weft and by North.
27. We continued travelling through the Mountains, which were now fomewhat more uneven and precipititious, but watered every where with fine Springs and Rivulets. In about fix Hours we came to Corus; our Courfe was South-weft, having croffed the Epbreen about two thirds of an Hour before. Jult by Corus is the River Sabon, that is, Cbor or Cbar, which encompaffes moft part of the City.

Corus ftands on a Hill, confifting of the City and Caftle: The City ftands Northerly, and from its Northend afcending, you come at laft to a higher Hill to the Southward, on which ftands the Caftle. The whole is now in Ruins, which feem to have been very large, wall'd very ftrongly with huge fquare Stones. Within are obfervable the Ruins, Pillars, $\mathcal{E}^{2} c$. of many noble Buildings. On the Weft-Side there is a fquare Enclofure of great Capacity, compaffed with good Walls and five Gates, which admitted into it as one may difcern by the Ruins of them. I conjectur'd they might be the Cathedral.

Below the Caftle-Hill to the Southward ftands a noble old Monument. It is fix fquare and open at fix Windows above, and is covered with a Pyramidal Cupola. In each Angle within is a Pillar of the Corintbian Order of one Stone, and there is a fine Architrave all round juft under the Cupola, having had Heads of Oxen carved on it, and it ends a-top with a large Capital of the Corintbian; near this are feveral lepulchral Altars.
28. We left Corus, and without the Town about half a Mile South-Eaft, we defcended down through a Way cut obliquely on the Side of a Precipice, which leads to a Bridge of feven Arches, of a very old Structure, over the River Sabon. And about a Quarter of a Mile further we came to another Bridge of three very large Arches over the River Epbreen. Thefe Bridges
are very ancient, and well built of fquare Stone. Three Pillars have an acute Angle on the Side againft the Stream, and a round Buttrefs on the other Side, and on both Sides are Niches for Statues. They were well paved a-top with large Stones, and are doubtlefs as well as that of the other Side of the Town, the Work of the ex. cellent and magnificent Theodorit.

From this Bridge in about three Hours with a Courfe South-Eaft, or South Eaft and by South, we arrived at Fan Bolads. From Fan Bolads to Cbiblis is one Hour and two Thirds, Courfe North, NorthEaft. Cbiblis is a large populous Town, and has fifteen Mofques that may be counted without the Town, and it has large Bazars. Many Medals are found here, which feem to argue it to be ancient; but under what Name I know not.

Aleppo bears from $F a n$ Bolads South and by Eaft, Seck Berukel South South Weft. An Hour from Fan Bolads is $A z a / s$; and two Hours further we lodged in the Plain, which about Cbiblis and $A z a / s$ is very wide and no lefs fruitful. This Country is always given to the Valide, or Grand Signior's Mother. On Saturday, April 29, we arrived tafe at Aleppo, having travelled about five Hours that Day.

There is at the Diftance of about four Hour's Journey from this City, a very great natural Curiofity, much talked of in that Country, and which deferves to be particularly defcribed: It is called the Valley of Salt, and indeed is fo filed with great Propriety. This Val ley is of two or three Hours Extent ; we were three Quarters of an Hour in crofling one Corner of it. It is of an exact Level, and appears at a Diftance like a Lake of Water. There is a Kind of a dry Cruft of Salt all over the Top of it, which founds when the Horfes go upon it like frozen Snow There are three or four fmall Rivulets empty themfelves into this Place, and wafh it all over about Autumn, or when the Rains fall. In the Heat of the Summer the Water is dried off, and when the Sun has fcorched the Ground, there is found remaining the Cruft of Salt aforefaid, which they gather and feparate into feveral Heaps, according to the Degrees of Finenefs, fome being exquifitely white, others alloy'd with Dirt. It being fott in fome Places, our Horfes Hoofs ftruck in deep; and there I found in one Part a foft brown Clay, in another a very black one, which to the Tafte was very falt, though deep in the Earth. Along on one Side of the Valley, viz. that towards Gibul, there is a fmall Precipice, about two Men's Lengths, occafioned by the continual taking away the Salt, and in this you may fee how the Veins of it lie. I broke a Piece of it, of which, that Part that was expofed to the Rain, Sun, and Air, though it had the Sparks and Particles of Salt, yet it had perfectly loft its Savour, as in St. Matt. Chap. v. The inner Part, which was connected to the Rock, retain'd its Savour, as I found by Proof. In feveral Places of the Valley we found the thin Crult of Salt upon the Surface, bulged up as if fome Infect, working under it, had raifed it ; and taking off the Part, we found under it Efflorefcences of pure Salt, fhot out according to its proper Figure. At the neighbouring Village Gibul are kept the Magazines of Salt, where you find great Mountains (as I may fay) of that Mineral ready for Sale. The Valley is farmed of the Grand Signior at 1200 Dollars per Annum.
31. Our Author not only wrote this large and regular Account of his Travels, but was alfo ready on any Occafion to explain whatever Difficulties arofe in the Minds of his Friends, with refpect to the Eaftern Countries, in which he had lived fo long, or the Manners of the People that inhabit them. Thus upon the Reverend Mr . Osborn's writing him a Letter, to defire from him a general Character of the Turks, and a particular Account of the Manner in which the Englifh Merchants lived amongft them; he gave him the following clear and diftinct Anfwer. "As to the former it would fill " a Volume to write my whole Thoughts about them, I " fhall only tell you at prefent, that I think they are very "f far from agreeing with that Character, which is given ${ }^{66}$ of them in Cbriftendom, efpecially for their exact Juf-
"t tice, Veracity and other moral Virtues, upon Account "of which, I have fometimes heard them mentioned "s with very extravagant Commendations, as though " they far exceeded Chriftian Nations. But I mult pro"fefs myfelf of another Opinion: For the Chriftian "Religion, how much foever we live below the true Spirit " and Excellency of it, muft ftill be allowed to difcover fo st much Power upon the Minds of its Profeffors, as to "s raife them far above the Level of a Turkißh Virtue!
"It is a Maxim that I have often heard from our Mer-
"s chants, that a Turk will always cheat when he can
${ }^{6}$ find an Opportunity ; Friendfhip, Generofity true
"Wit (in the Englifh Notion) and delightful Converfe,

* and all the Qualities of a refined and ingenuous Spi"s rit, are perfect Strangers to their Minds, though in "Traffick and worldly Negociations they are acute "s enough, and are able to carry the Accounts of a large
" Commerce in their Heads, without the Help of
"Books, by natural Arithmetick, improved by Cuf-
" tom and Neceffity. Their Religion is framed to keep "up great outward' Gravity and Solemnity, without ss begetting the leaft good Tincture of Wifdom or
" Virtue in the Mind. You fhall have them at their
" Hours of Prayer (which are four a Day always) ad-
" dreffing themielves to their Devotions with the moft
"folemn and critical Wafhings, always in the moft "s publick Places, where People are paffing, with moft lowly and moft regular Proftrations, and a hollow ' Tone, which are, smongft them, the great Excellen"s cies of Prayer. I have feen them, in affected Charity, " give Money to Bird-catchers (who make a Trade of * it) to reftore the poor Captives to their natural Li"s berty, and at the fame Time hold their own Slaves "s in the heavieft Bondage. And at other Times they " will buy Flefh to relieve indigent Dogs and Cats, and "syet curfe you with Famine and Peftilence, and all the " molt hideous Execrations ; in which Way thefe Eaft-
" ern Nations have certainly the moft exquifite Rhe-
" torick of any People upon Earch. They know hardly
" any Pleafure but that of the fixth Senfe. And yet with " all this, they are incredibly conceited of their own Reli" gion, and contemptuous of that of others, which I take "to be the great Artifice of the Devil, in order to keep
" them his own. They are a perfect vifible Comment " upon our Bleffed Lord's Defcription of the Jewifh
"Pbarifees. In a Word, Luft, Arrogance, Covetouf-
" nefs, and the moft exquifite Hypocrify, compleat their
"Character. The only Thing that ever I could ob-
" ferve to commend in them is, the outward Decency
"s of their Carriage, the profound Refpect they pay to
" Religion, and to every Thing relating to it ; and
"their great Temperance and Frugality. The Dear" nefs of any Thing is no Motive in Turkey, though it " be in England, to bring it into Fafhion. As for our
" living amongft them, it is with all poffible Quiet and
"Safety, and that is all we defire, their Converfation
" being not in the leaft entertaining. Our Delights are " among ourfelves, and here being more than forty of " us, we never want a moft friendly and pleafant Con"verfation. Our Way of Life refembles in fome Mea-
" fure the Academical. We live in feparate Squares
" Thut up every Night, after the Manner of Colleges.
"We begin the Day conftantly as you do, with Pray-
"ers, and have our fet Times for Bufinefs, Meals, and
"Recreations. In the Winter we hunt in the moft
" delightful Campaign twice a Week ; and in the Sum-
" mer go as often to divert ourfelves under our Tents,
"w with Bowling, and other Exercifes ; fo that you fee *s we want not Divertifements, and thefe all innocent "s and manly. In fhort, it is my real Opinion, that
" there is not a Society out of England, that, for all
"good and defirable Qualities, may be compared to "this."

Thus we fee, that very fenfible Men differ very much in Reference to this Subject, and that as fome entertain very high, fo others again have very low and mean Opinions of Turks. This Difparity muft arife from that Inequality in Point of Underftanding and Morals, which is natural to them and to all Nations; and therefore we are to make proper Allowances in reference to all
fuch general Characters. One Thing deferves to be particularly remarked, which is this, that amongtt the Turks it is not ufual for the better Sort of People, by which I mean thofe beft bred and educated amongft them, to betake themfelves to. Trade; bur, on the contrary, they commonly apply either to the Sword or to the Robe; that is to fay, they endeavour to rife in the Army, which is the fpeedieft Way; of in the Law, which is the fafeft ; this may very well account for the Want of that Integrity and ftrict Honour, complained of amongft the Turks; and I apprehend, that it has appear'd amongt the Englifh in a very high Point of Light when our Author refided at Aleppo; where he lived and converfed with Gentlemen, who, in Point of Birth and Fortune, were fuperior to Temptations, and who were above leffening their Characters to increafe their Riches. I had the Honour to know more than one of thefe Gentlemen myfelf, and have fpent fome of the happief Moments of my Life in their Company: They were Perions, who, from their long Experience, had juft and excellent Notions of Trade; and never ditcourfed of it without obferving, that the true Bafis of Credic was an irreproachable Behaviour : They thought, that in Foreign Countries, and more particularly in the Levant, Factors were not only trufted with the Effects of their Correfpondents, but alfo, in fome Meafure, with the Honour of their Nation, and that to injure the latter was as much a Crime, as to be falle to the former. I hope and I believe, that the fame Meafures are flill purfued with the fame Punctuality, and as much to the Profit and Honour as ever of the Britifl Nation; but whoever reflects on the wide Difference between Turki/b Traders and Briti/b Merchants, will not at all wonder that the former were fo low in the Efteem of the latter. But for all this, we may lay it down as a Thing certain enough, that amongft the better Sort of Turks there are Men of great Probity and Honour, and who are very far from feeking to make an Advantage of the Ignom rance or Credulity of Strangers. When I fay this, I do not mean their great Minifters and Bafhaws, who have rofe either by Accident, or by the Caprice of their Mafters; fuch Men in Turkey, and in all other Nations, are frequently unworthy of the Pofts they hold, and exercife them with a Venality fuitable to their vicious Difpofitions. Ambition, Pride, and a Spirit of Voluptuoufnefs, are Paffions that infpire Men with as mean Thoughts as Avarice can do, though certainly that is the meaneft of all Vices, and moft unworthy of the Mind of Man. We muft likewife make fome Allowances for the Nature of their Government, which has already been fully defcribed; for in a Country where Money will do every Thing, it is natural for every Man to be defirous of getting Money.

It may not be amifs to confider how great and dangerous an Evil this is, and how far it is capable of fubverting the Conftitution of every Country where it prevails. We know that in former Times this Humour did not prevail among the Turks; and that on the contrary, they were proud of their Poverty, or rather, being content with the Neceffaries of Life, they defpifed thofe who could not live without enjoying Superfluities; in thofe Days the Turks were a great and a victorious People. The fame Thing may be faid of other Na tions with the fame Truth, but we will confine ourfelves at prefent to the Eaft. The Saracens or Arabs, in the Days of Mabomet and his immediate Succeffors, were a Race of hardy People, and their Princes valued themfelves upon their Power, without dreaming of Magnificence. As that Spirit declined, and as their Caliphs began to affect ftately Palaces, numerous Guards, and all the exterior Enfigns of unlimited Authority, they loft thore Qualities which rendred them truly venerable. This created Diffentions and civil Wars, frequent Infurrections, and a Series of Revolutions, which by Degrees broke the Power of particular Princes, and in Procefs of Time that of the whole Nation; fo that now there is not the leaft Footfteps of that Authority, which once appear'd fo terrible to all its Neighbours. The Mabometan Empires of the prefent Age, fuch as thofe eftablifhed
in India, Perfa, Barbory and Turky, have been raifed on the Ruins of the Saracen Empire, and are all of them now grown old and infirm, fo that they feem ready to crumble under their own Weight. No other Reafon can be afligned for this, but the Prevalence of Corruption in them all, for wherever moral Virtues grow into Contempt, it is fimply impoffible that national Power fhould long fubfint ; or that where Princes and great Men, inftead of devoting their Cares to the Adminiftration of Juftice, become infenble of all Things, but what contribute to their Eate and Pleafure, they fhould for any Length of Time continue to enjoy even thefe. Innocent Divertifements and manly Pleafures are not at all inconfiftent with good Government and publick Spirit ; but fenfual Delights, and a Propenfity to Indolence which always accompanies them, naturally begets Contempt in thofe whofe Reverence and Refpect can only keep them in real and conftant Subjection. Thefe Remarks may be confirm'd, from what has happen'd within our View in all thefe Countries. The Mogul Empire has been over-run in lefs time than would have fufficed in ancient Time for the Conqueft of one of its Provinces ; the Perfian Empire has been fubverted over and over; nothing has been more unfteady of late Years than the Throne of the Xeriffs in Africa, and the depoing of the Grand Signior is in fome Meafure become a Thing familiar. But let us now return to our Auchor for the laft Time.

Mr. Maundrell, though he had lived long in a Country where Supertition prevails to fuch a Degree, that the feveral Nations who inhabit it feem to vie with each other in Credulity, yet he preferved a jutt Regard for Evidence, and did not fuffer his Judgment to be hurried away by Tradition, however ancient; or Affertions, however bold. He examined every Thing carefully, and then exercifed his own Judyment freely, affited by all the Helps that could be derived from Converfation and Learning. Of this we have a remarkable Inftance in an Antwer he gave to a Gentleman who confulted him upon thefe two Points, viz. Whether Gebazi's Leprofy ftill fuck to and diftinguifhed his Pofterity as fome have reported; and what Ground there was to impute to the Greek Church, a Notion that Perfons who died excommunicated, did not confume in their Graves. "When "I was in the Holy Land, fays he, I faw feveral that © labour'd under Gebazi's Diftemper, but none that " could pretend to derive his Pedigree from that Perfon. "Some of them were poor enough to be his Relations, " particularly at Sicbem (now Noplofa) there were no "s lefs than ten, (the fame Number that were cleanfed by " our Saviour not far from the fame Place) that came " a begging to us at one Time. Their Manner is to s come with fmall Buckets in their Hands, to receive © the Alms of the Charitable, their Touch being ftill ${ }^{6}$ held infectious, or at leaft unclean. The Diftemper "s as I faw in them, was very different from what I have " feen it in England, for it not only defiles the whole "Surface of the Body with a foul Scurf, but alfo de"forms the Joints of the Body, particularly thofe of " the Wrifts and Ancles, making them fwell with a "goury, fcrofulous. Subfance, very loathfome to look "upon. I thought their Legs refembled thofe of old " battered Horfes, fuch as are often feen in Drays in Eng-
" land. The whole Diftemper indeed as it there appeared, " was fo noifome, that it might well pafs for the utmoft "Corruption of the human Body on this Side the Grave.
© And certainly the infpired Penmen could nor have 's found out a fitter Emblem, whereby to exprefs the "Uncleannefs and Odioufnefs of Vice. But to return " to Gebazi. It is no Wonder if the Defcent from him "s be by Time obfcured, feeing the beft of the Feres, " at this Time of Day, are at a Lofs to make out their "Genealogies. But befikes, I fee no Neceffity in "Scripture for his Lines being perpetuated. The "Term (for Ever) is, you know, often taken in a li" mited Senfe in holy Writ, of which the Defignation " of Pbineas's Family to the Priefthood, Numb. xxv. "15. may ferve for an Inftance. His Pofterity was, "s you know, cut entirely off from the Priefthood, and " that transferred to Eli, who was one of another Line, " about three hundred Years afcer. I have enquired of
a Greek Prieft, a Man not deftitute either of Senfe or "Probity, about your other Queftion. He pofitively " affirmed it, and produced an Inftance of his own "Knowled ge in Confirmation of it. He faid, that
" about fifteen Years ago, a certain Greek departed this
os Life without Abfolution, being under the Guilt of a " Crime which involved him in the Sentence of Ex${ }^{6}$ communication, but unknown to the Church. He
" had Chriftian Burial given him, and about ten Years " after a Son of his dying, they had Occafion to open ${ }^{66}$ the Ground near where the Body was laid, in order " to bury his Son by him; by which Means they dif${ }^{66}$ covered his Body as entire as when it was firft laid in " the Grave. The Shrowd was rotted away, and the "Body naked and black, but perfectiy found. Report " of this being brought to the Bifhop, he immediate6. ly fufpected the Caufe of it, and fent feveral Priefts, " of whom the Relator was one, to pray for the "Soul of the Departed, and to abfolve him at his " Grave. Which they had no fooner done, but " (as the Relator goes on) the Body inftantly dif "folved, and fell into Duft like flack'd Lime. And " fo well fatisfied with the Effect of their Abfolution, " they departed. This was deliver'd to me Verbo Sa"cerdotis. The Man had hard Fortune not to die in "the Roman Communion; for then, his Body being " found fo entire, would have entitled him to Saint
" fhip : For the Romanists, as I have both heard and " feen, are wont to find out and maintain the Relicks " of Saints by this Token. And the fame Sign, which " proves an Anathema Maranathe amongft the Greeks, " demonftrates a Saint amongtt the Papifts; perhaps "both equally in the Right". This fufficiently proves what has been before advanced, that Superftition prevails generally through the Eaft, and that the Cbrifitians are as far gone in it as the Turks; neither need it be at all wonder'd at among the Grecks, fince it is natura for all Nations under Oppreffion, to fink into Superftition; and there is certainly nothing that can be more evident; than that thefe unfortunate People are brought as low, and their Spirits as much broke, as it is por fible to conceive in the Courfe of fo many Ages as they have been under the Yoke: But however, it is certain, that even in Rufla, where their Religion is eftablifhed by Law, this Notion prevails, together with the Practice eftablifhed upon it, of abfolving the Dead, that their Bodies may rot in Peace, and not remain, as they apprehend they do, for a Covering or Receptacle to evil Spirits. Upon the fame ftrange Notion, collected from the fame Nation, arofe the wild and incredible Relations concerning Vampyres, or dead Bodies that fuck the Blood of living ones, that appear'd in our News Papers fome Years ago from Hungary. Yet I think it might be doubted, whether this flrange Opinion was not originally borrow'd from the Mabometans, who, as we have before obferved, are ftrongly perfuaded, that Men have a Kind of Senfation in their Graves, and that there is no fuch Thing as abfolute Reft even among the Dead.

We may learn from this Gentleman's Account of the Holy Land, the true State and Condition of it at this Day, independent of Fable and Prieitcraft; and from thence it appears, that there could not be a more fruitful or pleafant Region, better feated for all Purpofes whatever, or more in the Heart or Center of the Univerfe, while that was a Thing of Confequence to the Propagation of Religion, than this Land of Ifrael. It is no lefs evident from the Remains of a valt Variety of Antiquities, fome of which extend to the very Country itfelf, where not only Buildings but Mountains are feen in Ruins ; that this was truly what Canaan is reprefented to be in the holy Scriptures, a Land of Hills and of Valleys, abounding with Corn, productive of Wine, and flowing as it were with Milk and Honey. Yet now its State is fo much alter'd, that if we were to meafure the Wickednefs of its Inhabitants by the Mifery of the Places that once furnifhed them with Habitations, we fhould not in the leaft doubt of the Reprefentations made by infpired Writers of the Sinfulnefs and Obftinacy of thefe People. There is another natural and

## Chap. I. from Aleppo to Jerusalem.

plain Obfervation arifes from contemplating the paft and prefent State of this famous Country, and it is this ; that the unanimous Inclination of ferws, Cbriftians, and Mabometans, upon very different Principles, to pay it an high Veneration, and to efteem many Places therein as peculiarly facred, is à Kind of perpetual Teftimony in Favour of Revealed Religion. It is impoffible that Nations, differing fo widely in their Manners and Cuftoms, as well as in their Religious Notions, fhould for fo many A ges agree in obtruding Cheats upon each other. We may add to this, that the Samaritan Scripture is another ftrong Proof of the Sincerity and Authenticity of the Mofaick Writings; for nothing but Truth could have united the Samaritans and Feros, whofe Hatred to each other has now fubfifted for many Centuries, in concurring to vouch any Fact. To this, indeed, it may be objected, that they differ about the Mountains Gerizim and Ebal, in which they directly contradict each ohher : But when this Objection is maturely weigh'd, it will be found to fortify extremely the Credit of this Teftimony, becaufe it is the cleareft and moft unexceptionable Proof, that there is no Kind of Collufion between the two Nations, but that the refpective Perfuafions of each, with regard to the Copies of the Scriptures they have amongtt them, is founded upon Motives in which they cannot be deceived. It is very true, that there is a prodigious Mixture of fabulous Superfition in the Traditions of all thefe Nations; but as this is natural, and indeed unavoidable in Things of this Kind, it is fo far from derogating from the material and fubftantial Proofs, which are, if I may be allow'd the Expreffion, over-grown and cover'd with this Bark of Folly, that it rather fortifies the Evidence in the Sentiments of a fober and ingenuous Mind. For what Kind of Hiftory is there, which has come down to us pure and unmixed with Fable? The Eaftern Nations were always famous for it, the Egyptions had it
in a high Degree, it paffed from them to the Greeks and as to the Hiftory of the elder Ages of Rome, it was fo intermixed therewith, that in the Times of Cicero they were farce able to diftinguifh any beyond the capital Facts that were to be relied on. But does it follow, that becaufe Men have always loved to amplify and extend the Truth, therefore there was no fuch Thing? Shall we, becaufe it is very difficult to fettle the precife Situation of ancient Cities that make fo great a Figure in the beft Authors, doubt whether thofe Cities ever were in the World? Or, becaufe the Oriental Chronicles of all the ancient Empires differ widely from ours, fhall we peremptorily decide, that there never were any fuch, notwithftanding that manifeft Monuments of the flourifhing State of thofe ancient Empires remain even to our Times? Are the Antiquities at Tcbelminar in Perfia, of Tadmor or Palnira in the Wildernefs, of Balbeck, or Heliopolis feen by our Author, to be rejected as Fancies or Fables? And, if thefe are all Matters of Fact, do they not more clearly prove the Hiftories of paft Times, than all the Chronicles in the World? Men may write fabulous Hiftories, or may forge Records, but fuch Monuments of ancient Times are beyond the Reach of Fiction or Forgery, fo that Incredulity, with refpect to them, is not only irrational and abfurd, but downright Madnef.
We may upon the whole reft fatisfied, that what our Author has delivered to us in his Travels, and in his Remarks, deferve both Credit and Refpect, and are capable of furnifhing us with Materials for very folid and ufeful Meditations. But it is now Time to proceed and quitting the Limits of the Turkijb Empire, to purfue our Journey with frefh Guides, and frefh Views, into other Regions, which will afford us new Pleafures and additional Helps, to the Increafe of our Knowledge, and the Improvement of our Underftandings.

## CHAPTERII.

Containing Travels through the Empire of Perfia, and the Pro vinces depending thereon; with a large Account of their Climate, Soil, and Produce, the Conftitution of the Empire, and Nature of the Shah's Government, the Laws, Manners, Religion, Commerce, Diverfions, $\mathcal{O}^{\circ} c$. not only of the native Perfians, but of the feveral Nations living in their Country, and fubject to the Shah, with a brief Account of the late Revolutions in that Empire,

## SECTION I.

The Travels of Sir John Chardin, by the Way of the Black-Sea, through the Countries of Circafia, Mingrelia, the Country of the Abcas; Georgia, Armenia, and Media into Perfa Proper; with a very curious and accurate Account not only of the Countries through which he travelled, but of the Manners and Cuftoms, Religion and Government, Commerce and Inclinations of the feveral Nations that inhabit them ; Relations fo much the more curious, as thefe Countries, and the People dwelling in them, had not been tollerably defcribed before by any Author.
I. A fuccinct Introductory Account of the worthy Perfon by rwhom thefe Travels were written, of the Value of them, and of the peculiar Excellencies by wobich they are difitinguifbed. 2. An Account of the Thracian Bofphorus, of the delightful Profpects in Sailing through it, and the beautiful Countries upon the Coaft. 3. The Autbor's Arrival at Caffa, a Defcription of the Country of the Crim Tartars, and of the Condition, Cuyfoms, and Manners of that Nation. 4. The Cherks, Abcas, and otber barbarous Nations that boweverer file themfelves Chriftians, largely defcribed, weith fome very currious Remarks on the State and Strength of thofe Nations. 5. A more particular Relation of the Mingrelians, Cara Cherks, or Black Circaffians, and otber Inbabitants of that Country, knowen to the Ancients by the Name of Colchis. 6. The large and fruitfull Country of Mingrelia exaclly defcribed, woitt a View of the Government, Forces, Way of Living, and difolute Manners of all Ranks and Degrees of People wwbo inbabit it. 7. Of the terrible Corruption, in Point of Religion, wwhich reigns among/t them, and from wwbence it appears to be a weild and extravagant Mixture of Atbeijnand and Superflition, kept up by the Arts and Frauds of their Priefts, who are little better than Cheats and Yuglers. 8. The Principality of Guriel, and the King dom of Imeretta, anciently called Iberia, weith the Countries adjacent, defcribed, and the Manner in wobich they loft their Independency, and became Tributaries to the Turks. 9. The Author continues bis Journey tbrough Mingrelia, is prefent at the Ceremony of Baptizing two Cbildren, of which be gives a large and particular Account. 1o. The famous Mountain Caucafus defrribed, and a View of the Condition of its prefent Inbabitants. II. A large and circumpfantial Detail of the Country and Inbabitants of Georgia, with a Defoription of the capital City of Teffis, and the State of the Roman Catbolick Miffonaries in that Country. 12. The Author's Travels througb the Countries, at the Foot of Mount Taurus, forming a little Principality inbabited by the Coffacs. 13. An Account of the famous City of Erivan, and of the Country of Armenia, of which. it is the Capital, as well as of the People zwbo inhabit it. 14. A Digreffion concerning the Marriages of the Perfians, and the Reafons weby Divorces, thoughblarwful amonget them, are feldom praczijed. 15. The Autbor's Jubfequent Obfervations in bis Travels through Armenia, and of the Fortrefes ereited to prevent the Incurfions of the Turks. 16. Of the noble Province of Azerbeyan, anciently called Media, woith an Account of a fpurious Kind of Cocbineal prepared by the Inbabitants. 17. A Defoription of the large populous and magnifcent City of Tauris, the prodigious Fertility of the Country round about it, and a Comparifon between the different Climates of Media and Parthia, veitb many other currious Particulars. I8. A Defcription of the laft-mentioned Province, and of the Cities of Ebher and Casbin, in tbe Neigbbourbsod of rubich grow the fineft Grapes in the World. In. An Account of the famous City of Rey, formerly one of the larget in Afia, of wbich there are now jcarce any Ruins remaining. 20. The City of Com and the
glorious Tombs of the Perfian Saints therein, fully defrribed, woith an Account of the adjacent Country, 21. A Defcription of the City of Cafhan, with an Account of the feveral Manufactures carried on there, and of the fruitful Country about it. 22. The Autbor's Account of two other Roads leading from Warlaw to Ifpahan, and from IIpahan to Mofcow. 23. Remarks and Obfervations upon the foregos ing Section.

WE have very large and confiderable Col- Mark of his Favour, beftow'd upon him in the Month lections of Travels through the Empire pire of Perraa, and the Provinces depending upon it; and indeed there are very few Countries that better deferve to be vifited, or which afford either the Traveller himfelf, or whoever perufes his Accounts, more Entertainment than Perfia. Notwithftanding this, many Inconveniences would arife from inferting numerous Accounts of Travels through this Country, becaufe of Neceffity it muft produce many Repetitions, which would appear tedious and troublefome, as well as perplexing to the Reader. The Method therefore that we fhall take, is to give in this Section the Travels of Sir Fobn Cbardin, from Conftantinople into the Perfian Dominions ; and in the fubfequent Sections, we Chall give a Defcription, in as regular a Method as is poffible, of the whole Empire, diftinguifhed into its feveral Provinces, with whatever occurs remarkable of worthy of Notice in the Works of other celebrated Travellers, fo as to preferve the Marrow and Quintefcence of their Relations, without embarraffing ourfelves with Things of lefs Confequence and Particulars, that without the leaft Prejudice to the Defign of this Work may be as well omitted. By this Means we fhall bring into a reafonable Compafs al! that is requifite, and give a diftinet and clear Notion of the paft and prefent Condition of one of the moft powerful and famous Empires of the Earth.

The Reafon we made Choice of Sir Jobn Cbardin's Travels, by way of Introduction, was his taking a different Route from moft other Travellers, viz. by the Black Sea, and the Countries that border upon it, which are farce defcribed by any other Traveller, or at leaft are defcribed by none with equal Plainnefs and Perfpicuity. It rifes from hence, that, generally fpeaking, we have only confufed and imperfect Conceptions concerning thefe Countries and their Inhabitants, which however it is of fome Importance that we fhould know more diftinctly, becaufe as they made a great Figure in ancient Hiftory, fo it is not at all impoffible, that as low and defpicable as they now feem, they may hereafter come to change their Circumftances, and appear with new Luftre, if not in ours, yet in the Eyes of our Pofterity. It is very evident, that from their Situation they are very confiderable, and if their Inhabitants were well governed, and lived in tolerable Correfpondence with each other, they might be now, as they were heretofore, equally formidable to the Grand Signior, Succeffor to the Greek Monarchs of Confantinople, and to the Perfian Emperors. We have a late Inftance of this in the Cafe of Nadir Sbab, who received from thefe defpifed and barbarous People, that Check which proved firft fatal to his Authority, and in the End to his Perfon. The Author of thefe Travels was a Gentleman of a good Family in France, and of a liberal Education; he applied himfelf to Commerce very early, and profecuted with great Succefs the moft confiderable Branch of Foreign Trade, that of dealing as a Merchant in Jewels, which he underftood perfectly, and by which he acquired, with an unfpotted Character, a very large and affuent Fortune. He made feveral Excurfions into the Eaft, by different Roads, and refided feveral Years in Perfara, had very great and uncommon Opportunities of entring deeply into the Subjects of which he has treated and digefted his Accounts, with great Accuracy and Perficuity, fo that they have been efteemed not only here, but in France, and throughout Europe in general, as the moft perfect in their Kind that have hitherto a ppeared.

This Gentleman, when the Perfecution againft the Proteftants broke out in France, came over hither, and brought with him great Riches. He was received with much Refpect at Court, and King Cbarles the IId, as a
of March, 1693, the Honour of Knighthood. He publifhed the firlt. Edition of his Travels in our Language, in a large Folio Volume, but they have been fince feveral Times printed with many Corrections, great Improvements, and confiderable Augmentations in French. He continued to refide here, and purchafed a confiderabie Eftate, fo that in the Reign of Queen Anne, we find him frequently mentioned by fuch as took Occafion to fhow how much the Wealth of England was improved, and its Trade increafed, by encouraging Foreigners of the Proteftant Religion, to come and fettle amongft us, Sir Jobn died at a good old Age, on Cbriftmas Day, i712. He left behind two Sons, and feveral Daughters.

His eldeft Son was created a Baronet of this Kingdom by his late Majefly King George the Firft, and having purchafed from Grantbam Andreves, Efq; of Sunbury; the noble Seat of Kempton-Park; in the County of Middlefex; and not far from Hampton-Court; fix'd there, and is ftill living and unmarried. The old Gentleman employ'd a great Part of the latter Period of his Life, in compleating his Book of Travels, and intended, as himfelf informs us, to have written a diftinct Treatife, explaining a great Variety of Paffages in the Scripture, from the Cuftoms and Manners of the Eaftern Nations, with which no Man was better acquainted than he; but by many unlucky Accidents was hindered from fulfilling that Promife; to the no fmall Concern of the learned World, who expected with great Impatience fo ufeful and inftructive a Book, of writing which he was extremely capable; and of feeing any Thing of the fame kind, the Publick fince his Deceafe feem to defpair.
2. Sir Fobn Cbardin left Paris, Aug. 17, 1671, with an Intention to go to the East-Indies, and travelling by way of Milan, Venice, and Florence, arrived at Leghorn in the End of OEFober, and embarking in a Ship, under a Dutch Convoy, arrived at Smyrna, Marcb 2, 1672 and twelve Days after at Conflantinople. He remained in this City four Months; and in the mean Time there happening a Quarrel between the Grand Vizier and the French Ambaffador, which caufed a Report, that the Grand Vizier intended to arreft the Ambaffador, and all the French Nation, he was afraid that his Goods; which were very rich, and very confiderable in Quantity; would be feized; and fo fought all Means to get out of Confantinople, and to proceed on his Journey to Perfa.

The Caravans in thofe hot Months did not travel but the Port being about to fend a new Commander; with fome Soldiers and Money; as they do yearly, to the Fort of Azoph, which ftands upon the Lake Mrootis, he obtain'd Paffage in a Turkifb Saick belonging to that Fleet, and embark'd, Fuly 27, at a Port in the Thracian Bofphorus. This Chanel, which is about fifteen Miles in Length, and about two in Breadth; in moft Parts, but in others lefs, fo called, becaufe an Ox may fwim over it, is certainly one of the lovelieft Parts of the World; for the Shores are rifing, and cover ${ }^{i}$ d over with Houfes of Pleafure, Woods, Gardens; Parks, de lightful Profpects, and Wilderneffes, watered with Thoufands of Springs and Fountains: The Paffage through it, in fair Weather, is exceeding diverting, by reafon of the great Number of Barks which are continually failing to and fro; and the Profpect of Conftontinople from the Top of it, which is about two Miles diftant, is the moft charming that ever Eyes beheld. There are four Caftles ftanding by it, all well fortified with great Guns, two of them eight Miles from the BlackSea, and two at the Mouth of the Channel, which is the moft dangerous Place for Shipwrecks in all the Euxinesea.
3. On the 3 d of $A u g u f f_{\text {, }}$ in the Morning, he arrived at Caffa, a Port in the Tauric Cberfonefe, or Peninfulla,
fo called, becaufe it was firft inhabited by the Scytbians of Mount Taurus. It is chirty-five Leagues from North to South, and fifty-five from Eaft to Weft. The Ifthmus, that joins it to the Continent, is not above a League in Breadth. It is inhabited by the Crim Tartars, who dwell in Cities and Towns; whereas their Neighbours the Nogays and Calmuc's dwell in Tents, as the reft do on the Continent.

Caffa is a great Town built at the Bottom of a little Hill, upon the Sea-fhore, and encompaffed with ftrong Walls, that advance a little into the Sea. It hath two Caftles, the one, which ftands on a rifing Ground on the South-fide, is large, and commands all the Parts thereabouts, and is the Refidence of a Bafha; the other is not fo big, but is well furnifhed with Guns. 'They reckon about 4000 Houfes in it, of which about 3200 are Mabometons, Turks, and Tartars, and the reft Cbri'תions, Grecks, and Armenions. The Houfes are fmall, and built of Earth; as are alfo their Bazars, Mofques, and Baths. The Soil about it is dry and fandy, bearing little Fruit, and the Water is bad, but the Air is very pure and wholefome. All Provifions are very cheap and good, Mutton being not above a Farthing a Pound, and other Things proportionable. The Road of Caffa is Thelter'd from the Winds, except on the North and South-Eaft Sides, and the Ships lie clofe to the Shore fafely in ten or twelve Fathom Water. There is a great Trade driven here in Salt-fifh and Caveare, which being taken out of the Lake Mreotis, that is twenty-fix Miles diftant from it, in great Quantities, are tranfported into Europe, and as far as the Indies. They alfo export Corn, Butter, and Salt, with which they furnifh Constantinople, and feveral other Places, for the Caffa Butter is the beft in all Turkey.

From Caffa he went in a Ship bound for Colcbis, Aug. 30. and the next Day arrived at Donflow, or the Salt-pits, fifty Miles from Caffa, on the Shore. Here are great Marfhes of Salt, which is made by letting in the Sea-water, and fuffering it to congeal by the Sun. The People fay, that two hundred Veffels are laden here with Salt yearly, paying only 3 s. a Day to thofe that load it. About a Mile from the Shore is an Habitation of the Tartars, where there is not above ten or twelve Houfes with a little Mofque, and round about it a great Number of Tents, with feveral Wagons clofe cover'd, which ferve them inftead of Houfes. The Tents for themfelves are very handfome, being made with Poles, and cover'd with large light Furs wellftretched upon them; their Infide is commonly hung with Tapeftry, and the Floor is laid with the fame. Every Eamily hath two other Tents belonging to them, cover'd with a great Sarplar of Wool, one for their Servants, and Kitchen, in which is a Pit five Foot deep, to make a Fire in to drefs their Meat, and the other for their Horfes and Cattle.

They fore up their Corn and Forage in Magazines under Ground, which they cover fo exactly, that none can find them but themfelves. They can remove their Tents with a fmall Trouble, and in a very little Time, and carry them away in Carts drawn by Oxen and Horfes, of which they breed a great Number. They profefs the Mabometan Religion, but mix with it ftrange fuperititious and ridiculous Opinions of Fortune-telling and Divination. From Donflowe he fail'd all along in the Channel to Cape Cuodos, which Ptolemy calls Cirocondoma, where the Coants that bound the Lake Mrootis, which are very high Lands, are feen at about thirty Miles Diftance.
4. From the Channel of the Lake Maotis, to Mingrelia, is reckon'd 600 M iles along the Coafts, which confift of pleafant Woods, inhabited by a Sort of Tartars, called Circafians, and by the Turks, Cberks, but fo thinly, that the Country looks like a Defart. The Ancients called them Zageans, or Mountaineers; and Pomponius Mela, Sargacians. They are neither Subjects nor Tributary to the Port, becaufe their Country producing nothing valuable, the Turks think it not worth the Toil of conquering it. The Veffels that come from Confantinople co Mingrelia trade with this People, but with their Arms in their Hands, and by Hoflages, for they
are Infidelity and Perfidioufnefs itfelf, and will never fail to fteal where they find an Opportunity. The Trade with them is managed by Exchange, the Cberks bringing down Slaves of all Sexes and Ages, Honey, Wax, Leather, Jackals, Zandava, and other Beafts Skins, for fuch Commodities as they want.

Circaflia is a pleafant Country, and the Soil is very fruitful, bringing forth great Plenty of all Sorts of Fruit without Trouble, as Cherries, Apples, Pears, Walnuts; but their chief Wealth confifts in Cattle, as wellfhaped Horfes, which are fo fwifr and good, that they will tire the wild Beafts, and catch them in plain Courfe; Goats, Deer and Sheep, the Wool of which is as fine as that of Spain, which the Mufcorites fetch to make Felts. They fow no Grain but Millet for their own Bread, and Barley for their Horfes and their Women till and manure their Ground: Their Drink is Water and Boza, which is a Liquor made of Millet, as intoxicating as Wine : They live in wooden Huts, and go almoft naked. Every one is a fworn Enemy to thofe that live in the Provinces round about him. Their Beds are made of Sheep-Skins fowed together, and ftuffed with Millet-Leaves, beaten in the Threfhing as fmall as Oatchaff. They were formerly Chriftians, but now have no Religion; no not fo much as the Light of Nature among them, fave what they place in the Obferving certain fuperftitious Ceremonies, borrow'd both from the Cbriftians and Mabometans.

The Abca's Border upon the Cberks, poffeffing about an 100 Miles upon the Sea-Coafts, between Mingrelia and Circofia. They are not fo favage as the Cberks, but are as much inclined to Thieving and Robbery; fo that the Merchants trade with them with the like Caution, and after the fame Manner. September the roth, he arrived at I/gaour, a Port in Mingrelia, where all the Veffels that trade thither lie. It is a Defart Place, without any Habitations, only the Traders that come thither build themfelves Huts and Booths of Boughs for the Time of their Abode, which is ufually as long as they find themfelves fafe from the $A b c a$ 's.
5. Colchis or Mingrelia is fituated at the End of the Black-Sea: It is bounded on the Eaft by the little Kingdom of Imeretta, on the South by the Black-Sea, on the Weft by the $A b c a$ 's, and on the North by Mount Caucajus. The Corax and Pbafis, two famous Rivers in the ancient Hiftories, now called Codlours and Rione, part it, the firlt from the $A b c a^{\prime}$ s, and the other from Imeretta. The Length of it is about 110 Miles, and the Breadth fixty. It was once fortified againft the Abca's, by a Wall of fixty Miles in Length, which is long fince demolifhed, and become a thick Foreft.
The Inhabitants of Caucafus, that border upon Colcbis, are the Alanes, Suanes, Gigues, Caracioles, or CaraCberks, i. e. Black Circaffans, fo called by the Turks, not from their Complection, for they are the faireft People in the World, but from their Country, becaufe it is always darken'd with Fogs and Clouds. They were alfo anciently Chriftians, but now profefs no Religion, but live by Robbery and Rapine, having nothing that can entitle them to Humanity but Speech. They are very tall and portly, and their very Looks and Speech fhew their Savage Difrofitions, being the moft refolute Affaffins, and daring Robbers in the World.
The ancient Kingdom of Colcbis was much larger than Mingrelia now is, extending itfelf to the Lake Mrootis on the one Side, and Iberia on the other. The Country itfelf is uneven, full of Hills and Mountains, Valleys and Plains. It is almoft covered with Woods, except the manured Lands, which are but few, and thofe preferved by grubbing up the Roots, that are continually fpreading into them. The Air is temperate, as to Heat and Cold, but very unwholfome, by Reafon of the continual Wet, which being heated by the Sun, breeds Peftilences, and feveral other Diftempers. It abounds with Waters, which defcend from Mount Caucafus, and fall into the Black-Sea. The principal Rivers are the Coddours, of old called Corax; the Socon called by Arrian, Terflen, and by Ptolemy, Thaflaris; the Langus, of old Aftulpbus; the Cobi called by Arrian, Cobo; the Cimifcari, called anciently, Cioneus; the

Persia.
Tecbeur called by Arrian, Sigemus, and the Scbenifcari, change for neceffary Conveniencies; yet when they have i. e. River-horfe, called therefore by the Greeks, Hippos: And the Abafcia, called by Arrian, Caries; and Polemy, Caritus; which wwo laft mix with the Pbofis about twenty Miles from the Place where it falls into the Sea.

The Soil is very bad, and produceth little Corn, or Pulfe, and the Fruits are almoft wild, without Tafte, and unwholfome, unlefs it be their Vines, which thrive well there, and produce moft excellent Wine. The Earth is fo moift in Seed-time, that when they fow their Wheat and Barley, they never plow it at all, but fprinkle it upon the Earth; for they fay, that fhould they plough it, the Land would be fo foft, that all their Corn would fall. They plough their Lands for their other Corn with Plough-fhares of Wood, which make as good Furrows as Iron, becaufe their Land is very moift and tender. Their common Grain is Gomm, which is as fmall as Coriander Seed, and refembles Millet. Of this they make a Pafte, which they ufe for Bread, and prefer it before Wheat; which is not to be wonder'd at, for it is very acceptable to the Palate, and conducive to Health, being cooling and laxative. They have alfo great Plenty of Millet, fome Rice, with Wheat and Barley, but very fcarce. The People of Quality eat wheaten Bread as a Rarity, but the meaner Sort very feldom or never tafte of it.

The ordinary Food of the Country is Beef and Pig, of which laft they have great Plenty, and the beft in the World. They have alfo Goats Flefh, but it is lean, and not well tafted. Their Wild-fowl is very good, but fcarce. Their Venifon is the Wild Boar, Hart, Stag, Fallow Deer, and Hare, all which are excellent Food. They have Partridges, Phearfants, and Quails in Abundance, with fome River Fowl and wild Pidgeons, which are good Meat, and as big as a cramm'd Chicken. Their Nobility fpend their whole Time in the Field, ufing Lanner-hawks, Gof hawks, Hobbies, and others, for their Sports, to catch Water-fowl and Pheafants; but their moft delightful Paftime is the Flight of the Falcon at the Heron, which they catch only for the Tuft upon his Crown, to put upon their Bonnets ; for they let him go again when they have cut it off, that it may grow up a-new.
6. Mount Caucafus produceth a great Number of wild Beafts, as Tygers, Leopards, Lions, Wolves, and Jacals, which laft make great Havock amongft their Cattle and Horfes, and often difturb their Houfes with their dreadful Howlings. They have large Numbers of Horfes, and thofe very good ones, which every Man almoft keeps in great Store, becaufe their Keeping ftands them in little or Nothing, for they neither hooe them, nor feed them with Corn. They have no Cities nor Towns, except two by the Sea-fide; but their Houfes are fo thick up and down the Country, that you can hardly travel a Mile, but you meet with three or four. There are nine or ten Caftles in the Country, of which the chiefeft is called Ruis, and it is the Court of the Prince. Their Houfes are all built with Timber, which is plentiful, and the poorer Sort never raife above one Story, nor the rich above two. The lower Rooms are always furnifhed with Beds and Couches to lie down on or to fit upon, becaufe of the Moifture of the Earth, but are inconvenient, becaufe they have no Windows nor Chimneys.

They have but one Room for their whole Family, and fo lie all together. The Men are well fhaped, and the Women fo handfome, that they feem born for commanding Love. They all paint their Eye-brows, and their Faces abominably. They drefs themfelves with all the Curiofity they can, their Habit being like the Perfians, and their Head Attire like the European Women, even to the Curling of their Hair. They are witty and civil, but to ballance that, haughty, deceitful, cruel, and impudent. The Men have alfo as many mifchievous Qualities, and there is no Wickednefs to which they are not addicted; but that which they moft practife and delight in is Theft. This they make their Employment and Glory. They juttify it as lawful to have many Wives, becaufe, they fay, they bring us many Children, which we can fell for ready Money, or ex-

VoL. II. $\mathrm{N}^{\circ} 128$.
change for neceflaty Conveniencies yet when they have
not wherewithal to maintain them, they hold it a Piece of Charity to murder Infants new born, as alfo they do fuch as are fick and paft Recovery, becaufe, they fay, they free them from a deal of Mifery.
The Gentlemen of this Country have full Power ovet the Lives and Eftates of their Tenants, to fell and difpofe of their Wives and Children as they think fit, and every Country-man is bound to furnifh his Lord with as much Corn, Wine, Cattle, and other Provifions as he wants. The Lords decide the Quarels of their Vafials ; but if they themfelves are at Variance, they decide it by Arms, which makes them go all armed with a Lance, Bow and Sword. Their Habit is peculiar ; they wear very little Beard, and cover their Heads with a thin Felc Cap in Summer, and a furr'd Bonnet in Winter : Over their Bodies they wear little Shirts, which fall to their Knees, and tuck into a ftrait Pair of Breeches; but they never have above one Shirt, and one Pair of Breeches, which lafts them a Year, and in all that Time never wafh them above thrice, only once or twice a Week they fhake it (for a certain Purpofe) over the Fire.
The whole Fanily, withouc Diftinction, eat all together, both Males and Females. The King with all his Train, to his very Grooms, and the Queen with her Maids and Servants. They dine in the open Courts in fair Weather, and if it be cold, they make a roufing Fire, for Wood cofts them nothing. Upon WorkingDays the Servants have nothing but Gomm, and the Niatters Pulfe, dried Fifh, or Flefh; but on Holydays, or when they make Entertainments, they kill an Hog, Ox, or Cow, if they have no Venifon. They are very great Drinkers, both Men and Women, and at their Feafts provoke their Friends, as much as they can, to Drinking. They drink their Wine pure, and beginning with Pints, proceed to much greater Quantities. Their Difcourfe at their Merry-Meetings is, with the Men, about their Wars and Robberies, and among their Women obfcene Tales of their Amours.

Mingrelia is but thinly peopled, by reafon of their Wars, and the vaft Numbers fold to the Perfians and Turks by the Nobility. All Trade in it is driven by way of Barter, for they have no fet Price of Money among them; the Species current are Piaftres, Dutch Crowns, and Abaffi's, which are made in Georgia, and ftamp'd with the Perfian Stamp. The Revenues of the Prince of Mingrelia amount at molt to 20,000 Crowns, which arifes from the Cuftoms of Goods exported and imported, the Slaves he fells, Impofitions and Fines; and this he lays up, for his Slaves ferve him for nothing, and his Crown-Lands furnifh his Court with more Provifion than he can fpend. He is not able to raife above 4000 Men fit to bear Arms, and thofe are all Cavalry for the moft Part, for he has not above 300 Foot to join with them. His Court, upon folemn Feftivals, confits of 200 Gentlemen, but upon other Days of about 120 .
7. The Religion of the Colcbians was formerly the fame with the Greeks, being converted, as the Ecclefiaftical Hiftorians fay, in Confantine's Time, by a Slave: But the Mingrelians fay, St. Andrezo preach'd among them in the Place call'd Pigivitas, where now flands a Church, whither the Catbolicos, or chief Bifhop goes once in his Life-time to make the Oil call'd Myrone by the Greeks; but now the Mingrelians are fallen into a profound Abyls of Ignorance and Darknefs, and have not the leaft Idea of Fairh and Religion, but look upon Life Eternal, the Day of Judgment, and the Refurrection, as meer Fables deviled by Men. Nor do their Clergy perform any Ecclefiaftical Duties, for there is hardly one of them that can either write or read. They have utterly loft the true Knowledge of the Service of God; but the Priefts make a publick Profeffion of foretelling Things to come, and make the People believe, that their Books fhow them the Courfe of future Events.

The Catbolicos of Mingrelia is Head of all the Clergy of that Country, as alfo of Abca, Gureil, Mount Caucafus, and Imeretta; but the Prince appoints or depofeth him as he pleafth. His Revenue is very great,

10 L
for he has 400 Vaffals under him, who furnifh his Houfe with all Things neceffary for human Life, and many Superfluities. He fells their Children to the Turks; and when he vifits the Diocefes under his Jurifdiction, it is not to reform the Clergy, nor inftruct the People, but to fpoil them of their Goods, and rake together great Sums. He will not confecrate a Bifhop for lefs than 600 Crowns, nor fay a Mafs for the Dead under 800 , nor any other Mafs under one hundred.
The Sanctity of this Prelate confifts in a continual Abftinence from Flefh and Wine in Lent, and in long Prayers Day and Night; but he is fo ignorant, that he can hardly read his Breviary and Miffal. He has fix Bifhops under him, who take no Care of the Souls of their People, nor ever vifit their Churches and Diocefes. They fuffer the Priefts to live in all Manner of Errors, and the People to contaminate with themfelves the groffeft Vices; they underftand not the Form of Baptifm, let Polygamy be practifed, and permit the Morhers to bury their new-born Children alive. All their Bufinefs is in Feafting and Banqueting, where they are drunk almoft every Day. They are rich, and go very fumptuoully apparel'd, oppreffing their Vaffals, and felling their Wives and Children to maintain their Luxury. They abftain from Flefh, as the Greek Bifhops do, and place the whole Chriftian Religion in the Practice of Fafting, and think not themfelves obliged to do any other Duty. Their Cathedral is pretty neatly kept, and well adorn'd with Images, which they deck with Gold and Jewels, believing, that in fo doing they fatisfy God's Juftice, and attone for their Sins. They are cloathed in Scarlet and Velvet, as the Seculars are, and differ from them only in this, that they wear their Beards long, and their Bonnets black, round, and high.
There are allo in Mingrelia certain Monks, of the Order of St. Bafil, who wear the fame Habit, and live after the Manner of the Greek Monks, wearing black Bonnets, eating no Flefh, and fuffering their Hair to grow; but they mind nothing of Religion, but to obferve their Fafts exactly. They have alfo Nuns of the fame Order, who obferve their Fafting Days, and wear a black Veil, but they have no Nunneries, nor are under any Vows or Subordination, but quit their Habit and Temperance when they pleafe.
The Priefts of Mingrelia are very numerous, but a Sort of miferable Creatures. They till their own Ground, and the Lands of their Lords, being no lefs Slaves than the Seculars; nor have they any Refpect fhewn them, but when they blefs their Food at Meals, or fay Mafs. Their Parifh-Churches have no Bells, but they call the People together by knocking with a great Stick upon a Board, and they are kept as nafty as Stables, the Images being foul and broken, and cover"d with Duft. The Wormip which they pay to their Images is idolatrous, for they adore them not with a relative Adoration, but pay their Devotion to the material Subftance. They worfhip fuch moft, as are fineft adorn'd, or fam'd for their Cruelty, and if they fwear by any of thefe, they will never break the Oath. St. Giobas is one of their mof formidable Images, and him they will not approach nearer than they can juft fee him, but pray to him, and leave their Prefent at that Diftance; for they report, that he kills all that approach him very near.
The Chriftian Saints they have no Value for, unlefs it be St. George, whom they account their chief Saint, as do alfo the Georgians, Mufcovites, and Greeks. Their Mals is after the Greek Manner, and the Priefts celebrate it without any other Sacerdotal Habit but their Surplices. Their Cup or Chalice is a Goblet of Wood, and the Cover is of the fame Matter ; and their Patten is a Wooden Difh. In Lent they never fay Mafs, but on Saturdays and Sundays, for they hold, that the Communion fpoils their Fafting. They confecrate unleavened or leavened Bread, without any Difference, and never mix Water with Wine, unlefs it be.very ftrong.
They laugh at Tranfubftantiation, and fay, How can Clirif ger into a Loaf? For what Reafon thould he leave Heaven to come down to the Earth? They anoint the Eoreheads of their Children with the Oil called My.
rone, as foon as they are born ; but baptize them not till a long Time after, and then they wafh them all over with Water : but none will baptife their Children till he is able to make a Feaft for the Prieft, God-fathers and Guefts, and that is the Reafon many of their Chil dren die unbaptized. They do not believe that Ordination imprints a Character not to be defaced, and therefore they ordain a-new fuch Priefts as have been degraded. Their Marriages are a Contract by Way of Bargain and Sale, for the Parents of the Maid agree upon the Price with the Perfon that defires her; the Price of a divorced Woman is the leaft, of a Widow fomething more, but of a Maid mont. When the Bargain is made, the young Man may company with the Damfel till the Money is paid, and it is no Scandal if the be with Child. If any one has married a barren Woman, or of an ill Difpofition, they hold it not only lawful, but requifie to divorce her, as a Match not made by God, who only does good. There is none that underftands the Bible, or reads it, but the Women will repeat feveral Stories of the Gofpel, which they have by Tradition. They obferve the fame Fafts almof as the Greeks, for they keep the four great Lents, viz. the firft before Eafter, which is forty eight Days; that before Cbrifmas, which is forty Days; St. Peter's Faft, which is near a Month; and the laft, which the Eattern Chriftians obferve in Honour of the Virgin Mary, which continues fifteen Days. They make the Sign of the Crofs when they drink Wine and eat Pork, but not as any Mark of Chriftianity. Their Prayers are all addrefs'd to their Idols for their temporal Benefits, viz. their own Profperity, or Ruin of their Enemies, They offer Sacrifices like the feres and Gentiles. They never make Holiday upon Sundays, or abftain from Works but at the Feftivals of Chrilmas and Eafler, which they celebrate only in Eating and Drinking to Excefs in their Houfes. Their greateft Feftivals are when an Idol is carried through their Country, when they put on their beft Cloaths, make a great Feaft, and get ready a Prefent for the Idol. Their Mourning for the Dead is altogether barbarous, and like that of People in Defpair, the Women rend their Cloaths, tear their Hair and Flefh, beat their Breafts, cry, yell, and gnafh with their Teeth, like People mad or poffeffed ; the Mer alfo tear their Cloaths, and thump their Breafts.
8. Their Neighbour Nations live and act after the fame Fafhion almoft in all Refpects, only they that live near Perfaa and $\mathcal{T} u r k e y$ are more civil in their Manners, and more honeft and juft in their Inclinations, whereas thofe that border upon the Tartars and Scytbians are more barbarous, having no Idea, or outward Form of Religion, and obferving no Laws.

On the Confines of Mingrelia lie the Principality of Guriel, and Kingdom of Imeretia. The Country of Guriel is very fmall, bordering upon Imeretta on the North, Mount Caucafus on the Eaft, Mingrelia on the Weft, and the Black-Sea on the South. It lies all along by the Sea-fhore from the River Pbafis to the Caftle Gonie, which is held by the Turks. The Inhabitants are of the fame Nature and Manners as the Mingrelians, and have the fame Inclinations to Lewdnefs, Robbery and Murther.
The Kingdom of Imeretia is fomething bigger than the Country of Guriel, and is the Iberia of the Ancients. It is encompaffed with Mount Caucafus, Colcbis, the Black-Sea, the Principality of Guriel, and Part of Georgia. It is twenty fix Miles in Length, and fixty Miles broad. The Country is full of Woods and Mountains, like Mingrelia, but the Valleys are more pleafant, and Plains more delicious, producing Corn, Pulfe, Cattle, and Herbs of all Sorts. There are fome Iron Mines. They have alfo fome Money current among them, which is coined in their Kingdom, and feveral Towns; but their Manners and Cuftoms differ little from the Mingrelians. The King has three good Caftles, one called Scander, feated on the Side of a Valley, and two on Mount Caucafus, call'd Regia and Scorgia, being both almoft inacceffible, as being built in Places that Nature itfelf has wonderfully fortified, the River Pbafis running between them, The Fortrefs

Chap. II.
into P ERSI A.
of Cotatis was once in this Prince's Jurifdiction, but the Turks are now Mafters of it.

The King of Imeretta govern'd the Abca's, Mingrelians, and People of Guriel, after they had all four freed themfelves from the Power of the Emperors, firft of Conftantinople, and then of Trebijond: But in the laft Age, fetting up for themfelves, and revolting from one another, they were involved in continual Wars among themfelves, till calling in the Affiftance of the Turks, they were all made tributary to them. The King of Imeretta pays eighty Boys and Girls, from ten to twenty Years of Age. The Prince of Guriel pays forty-fix Children of both Sexes; and the Prince of Mingrelia fixty thoufand Ells of Linnen-Cloth made in that Country. The $A b c a$ 's feldom paid any Thing at firft, and now pay Nothing. The King of Imeretta, and Prince of Guriel, fend their Tribute to the Bafha of $A k a l z i k e$, but a Cbioux gathers it at Mingrelia.
9. Leaving IJagour, OEtober 4, he paffed by the Mouth of the River Alolphus, called Langur by the Mingrelians, one of the biggett Rivers in Mingrelia, and on the 5 th came to Anargbia, a Village two Miles from the Sea, confifting of two hundred Houfes, but fo far diftant the one from the other, that it is two Miles from the firft to the laft. Hither the Turks come to buy $^{2}$ Slaves, and have Barks ready to carry them away. It is thought, that the fair and large City, called Heraclea, ftood in the fame Place. At this Town there is Plenty of Provifions, and that very cheap, viz. Wild Pidgeons, Fowl, Porkers and Goats in Abundance, and Wine is plentiful. From Anargbia he fail'd up the River Astolpbus, and went to a Place called Sapias, which is the Name of two little Churches, of which the one is a Parifh Church of Mingrelia, and the other belongs to the Theatins, a Sort of Friers, who firt came into Mingrelia in 1627 , and were admitted there as Phyficians, and have built chemfelves feveral Apartments about it, after the Manner of the Country. They have fome Slaves, and two Families of Country People their Tenants. They have good Employment as Phyficians, but none will embrace their Religion, their very Slaves refufing to communicate in their Services; fo that they would have long fince left the Country, had it not been for the Honour of the Roman Church and their own Order.

After a Month's Stay with the Monks, it not being fafe to travel, becaufe of the Troubles in the Country, he' return'd again to Anargbia, and having hired a Turkj乃 Feluke, for Gonie, November the Itoh, ftaid till the 27th to take in Loading and Paffengers. While he ftaid here he was invited to two Chriftenings, and Cu riofity engaged him to be prefent at them. The Manner was this: The Prieft being fent for abour ten a Clock in the Morning, fat himfelf down in the Buttery, and fell to reading a Book half torn, about the Bignefs of a New Teftament, in Octavo. He read very faft, and with a low Voice, in fuch a carelefs Manner, as if he regarded not what he did, any more than the reft did what he faid, for the Father, Godfather and Child, who was about five Years old, went to and again all the Time.

When the Prieft had read an Hour, there was a Bucket of warm Water got ready, into which when the Prieft had poured about a Spoonful of Oil of Wallnuts, he bid the Godfather undrefs the Child; which done, he fet him upon his Feet in the Water, and wafhed his Body all over well, and then the Prieft gave him a fmall Quantity of Myrone, or Oil of Unction, with which he anointed the Top of his Head, Ears, Forehead, Nofe, Cheeks, Chin, Shoulders, Elbows, Back, Belly, Knees and Feet, the Prieft ftill reading, till the Godfather drefs'd the Child, and then the Father bringing in Wine, Bread and Pork, they all fat down to eat and drink, and were all extremely drunk before they parted. Their Mafs they perform with the fame Irreverence and Carelefsnefs.

Departing from Anargbia in fair and clear $W^{+}$eather, he difcover'd the high Lands of Trebifond on the one Side, and of the $A b c a$ 's on the other, and came to the River Kelnbel, which though not fo broad nor rapid as Langur, yet is deèper.
10. On the 3oth he came to the River Phafis, which taking its Rife in Mount Caucafus, runs at firft in a narrow Channel, though fwiffly, about Cotatis, and fometimes fo low, that it is eafily fordable; but where it difchargeth itfelf into the Sea, which is about ninety Miles from Cotatis, the Channel is a Mile and half broad, and fixty Fathom deep, being augmented in that Courfe by divers Streams. The Water is muddy and thick, but very good to drink. There are feveral Illands at the Mouth of it, which being covered with thick Woods, make a delightful Profpect. Arrian fays, That upon one of thele Ilands ftood the Temple of Rbea, but there are no Remains of it now, though there are fome Hiftorians who fay, it was ftanding in the time of the Grecian Empire, and was, in Zeno's Reign, dedicated to the Worfhip of Chrift. On this River, and the Black-Sea about it, are Plenty of Phea fants, or Pbafani, fo called from the River Pbafis. All the Coafts of this River are a low fandy Soil, cover'd with Woods fo thick, that one can hardly fee fix Paces up the Land.
On the 3oth, he arrived at Gonie, which is about thirty Miles from Pba/is, the Sea-Coafts being exceeding high Land and Rocks, fome being woody; and others naked. Gonie is a large Caftle, in the Territories of the Prince of Guriel, built four fquare, of hard and rough Stones of a very large Size. It hath no Trenches, but Walls 8nly, and two great Guns. In it are about thirty fmall poor Houfes, made of Boards, and without is a fmall Village of about as many more, all inhabited by Mariners, and other boorih People. There is a Cuftom-houfe here, the Officers whereof are extremely rude, and imperious, and fevere to the People of the Country, but extravagant to the Europeans, not regarding any Man's Perfon, nor any Recommendations from the Port, but fearching all Things itrietly, and exacting what they pleafe.

From Gonie he went to the Caftle of Akalzike. The Way lies over Mount Caucafus, which is one of the higheft Mountains, and one of the moft difficult to pafs over in the World. The Top is always cover'd with Snow, over which the Natives pals in a kind of Sandals, made flat like a Racket, to keep them from finking. It is ufual for the Guides here to make long Prayers to their Images to keep the Winds from rifing, for if the Wind be high, it buries all the Travellers in Snow.
This Mountain, though not inhabited for fome Leagues together in many Places, yet is fruifful to the very Top, yielding Honey, Wheat, Gom, Wine, and Fruits, and feeding Hogs, and large Cattle. The Vines are fo luxuriant, that they run up to the very Tops of their higheft Trees, fo that the People cannot gather them. The Country People dwell in wooden Huts, of which every Family has four or five. The Women grind their Corn as they want it, and bake their Bread on Stones, or upon their Hearth, and yet the Cruft is very white, and the Bread good. Thefe Inhabitants are for the moft part Chriftians, after the Georgian Ceremonies; they are frefh complection'd, and their Women are handfome. At the Bottom of the Hill is a very fair Valley, rich and fertile, being watered by the River Kur, which has many Villages, and in them the Ruins of feveral Caftles and Churches, which, the People fay, were deftroy'd by the Turks.

Akalzike is a Fortrefs built upon Mount Caucafus, fortified with double Walls, and flanqu'd with Towers built with Battlements, after the ancient Manner, and defended with a few grear Guns. Upon little Hillocks about it ftands a large Town of 400 Houfes, which have nothing of Antiquity, but two Armenian Churches It is inhabited by Turks, Armenians, Georgians, Greeks and 7 feres, who have their Churches and Synagogues. The Kiver Kur, anciently called Cyrus and Corus, which rifes in the Mount Coucafus, runs by it. A Bafhalodges in the Fortrefs, and his Soldiers are quarter'd in the ad. jacent Villages. It was built by the Georgians, from whom the Turks took it.

From Akalzike he went to Gory, and paffed by Usker, where the Iurks have a Cafte, built on a Rock, with' a

Garrifon

Garrifon and Cuftom-houfe, under the Command of a Sanziac, and two Leagues farther, you crofs over the Mountains which part Perfia and qurky, from whence you fee feveral Villages, in which are the Ruins of many Caftles, Fortreffes and Churches, the miferable Remains of the Grandure of the Georgians, before the Turkibs and PerfzanWars deftroyed them.

At the Foot of the Mountain lies a Town and Fortrefs, both called Surbam. It ftands on a very lovely Plain, full of Cenfes, Villages, Hillocks, Houfes of Pleafure and little Caftles belonging to the Georgian Lords, and has a Fortrefs containing a Garrifon of 100 Men. All the Country is very well tilled, and mighty pleafant and delightful, as far as Gory, except that on the Right-Hand lies a great City almoft in Ruins, as not containing above 500 Houtes inhabited, whereas formerly, by Report, it had 12000 .

Gory is a fmall City, feated on a Plain, between two Mountains, upon the Bank of the River Kur, and by it is a Caftle on an Hill, garrifon'd by native Perfians. The Houfes and Market-places are all built with Earth, but the People are all very rich and wealthy, and it is furnifhed with all Neceffaries for human Life at a cheap Rate.
11. From Gory he departed December the r6th, and travelling upon the Banks of the, River Kur, through pleafant Plains, with great Numbers of Villages on all Hands, he paffed through Calicala, a City almoft totally ruined, and came on the 17 th to Teflis, the Capital City of that Part of Georgia, lying in the Province of Cartbueli. The Country of Georgia, wnich is under the Jurifdiction of the Perfians, borders at this Day to the Eaft upon Circafia and Mujfory, to the Weft upon Armenia the Leffer, and to the North upon the BlackSea and the Kingdom of Imeretta. It is extended from Touris and Erzerom to Tanais, and was anciently call'd Albania. It is a Country very Woody and Mountainous, unlefs in the Middle, where it is more even and level. The River Kur runs through the Midft of it, and empties itfelf into the Cafpian Sea.

The Grecians are thought by fome to have called it Georgia, from Georgoi, Husbandmen; but others will have the Name deriv'd from St. George the Patron Saint of all the Chriftians of the Greek Church. The Temper of the Air is very kindly in Georgia, being very dry, cold in the Winter, and hot in the Summer. The fair Weather does not begin till May, but then it lafts till the End of Novernber. The Soil being well watered, produces all Sorts of Grain, Herbs and Fruits in Abundance, fo that a Man may live there deliciounly and cheap. Cattle are there very plentiful and good, as well the larger as leffer Sort; their Fowl is incomparable, ef. pecially their wild Fowl; their Boars Flefh is as plentiful and good as any in Colcbis; and, indeed, the common People live upon nothing elfe almoit but young Pigs, which are excellent Meat, and never offend the Stomach. The Cafpian Sea, which is next to Georgia, and the Kur, that runs quite through it, fupplies it with all Sorts of falt and frefh Fifh. There is no Country that drinks more and better Wine, and they tranfport great Quantities of it into Media, Armenia and to Ifpaban, for the King's Table. They have great Quantities of Sill, but know not how to weave it, and therefore they carry it into Turkey to Erzerom, and the Parts adjoining, and drive a great Trade with it. The Complection of the Georgians is moft beautiful, you can hardly fee an illfavour'd Perfon among them ; and the Women are fo exquifitely handfome, that it is hardly poffible to look upon them, and not be in Love with them. They are tall, clean limb'd, plump and full, but not over fat, and extreamly flender in the Wafte: But this Beauty they fpoil with painting and dreffing with fumptuous Habits and Jewels. The Georgians are naturally very witty, and would be as learned Men and great Artifts as any are in the World, if they had the Improvements of Arts and Sciences; but having a mean Education and bad Examples, they are drowned in Vice, are Cheats and Knaves, perfidious, treacherous, ungrateful and proud. They are irreconcileable in their Enmities,
for though they are not eafily provok'd, yet they preferve their Hacred inviolable.
Drunkennefs and Luxury are fuch common Vices The Church-men will they are not fcandalous in Georgia. The Church-men will be as drunk as others, and they keep male Slaves in their Houfes, which they ufe for their Concubines, at which No-body is offended, becaufe it is fo commonly practifed, that Cuftom makes it thought lawful; yea, and they fay, he that is not drunk at their great Feftivals of Eafler and Cbriftmas, cannot be a good Chriftian, and deferves to be excommunicated. The Georgians are very great Ufurers, and will lend no Money without a Pawn. The loweft Intereft they take is two per Cent. for a Month. The Women are as vicious and wicked as the Men, and contribute more than they to that general Debauchery, which overflows the Councry. In their common Converfation they are civil and courteous, grave and moderate. Their Habit is much like the Polonian, and their Bonnets like theirs, their Vefts are open before down the Breaft, and faftened with Buttons and Loops ; their Hofe and Shoes are like the Perfians, and their Womens Cloathing is wholly in the fame Tafte.

The Houfes of their Grandees, and all their publick Edifices, are built according to the Perfian Model, and they imitate the Perfans in their Sitting at Table, in their Beds, and Manner of Diet. The Nobility exercife an abfolute Tyranny over the People, who are their Vaffals, making them labour as long as they pleafe for them, without Food or Wages, challenging a Right over their Eftates, Liberty and Lives, and felling their Children, or making them their own Slaves. They were converted to Chriftianity by an Iberian Woman, in the fourth Age, but have nothing left of Chriftianity, but the Name; for they do not obferve che leaft Precept of Yefus Cbrift; they place all their Religion in Fafting, and making long Prayers.
There are feveral Bifhops in Georgia, with a Patriarch, whom they call Catbolicos, and an Archbifhop, whofe Sees, as often as they are vacant, are difpofed of by the Prince, though he be a Mabometan, and he generally gives them to his Relations, and the prefent Patriarch is his Brother. The Churches in Georgia, efpecially in their Cities, are kept fomething more cleanly than in Mingrelia, but in the Villages are full as nafty. The Georgians and their Neighbours build their Churches upon high Mountains, in remote and inaceffible Places, and bow unto them at great Diftances, but fcarce go into them once in ten Years, leaving them to the Injuries of the Weather, and for the Birds to build their Nefts in. They can give no other Reafon for all this, but that it is a Cuftom; though we may fuppofe, it is rather to avoid repairing and adorning them. Georgia was made tributary to the Perfians by Ihmael the Great, and though it has feveral Times revolted, yet ftill continues in Subjection to them.

The City of Tefis, the Capital City of Eaft Georgia, is one of the faireft Cities in all the King of Perfan's Dominions, though not fo big as fome. It is feated at che Bottom of a Mountain, and on the Eaftern-fide of it runs the River Kur, which rifing in the Mountains of Georgia, joins itfelf to the Araxes. The moft Part of the Houfes built by the River-fide, ftand upon a Rock, and the whole City is encompaffed with ftrong and beautiful Walls, except on the Side next the River, and is defended by a Fortrefs on the South-fide, wherein are none but native Perfans. This Fortrefs is a Sanctuary for all Manner of Criminals.

Teflis has in it fourteen Churches, which is very much in a Country where there is fo little Devotion. Six of them are appropriated to the Georgian Service, and maintained by them, and the other eight belong to the Armenians. The Cathedral called Sion, is built all of hewn Stone, and ftands on the Bank of the River. It is an ancient Building, in good Repair, compofed of four Bodies, and has a great Duomo in the Middle. The great Altar ftands in the Middle of the Church, and the Infide is full of Paintings, after the Greez Manner. The Armenians have alfo feveral Monafte-

## Chap. II.

ries here, in one of them, they fay, they have St. George"s Skull.

There is not any Mofque in Teflis, though it be under a Mabometan Prince, and though the Perfans have attempted to build one feveral Times, they could never accomplifh their Defign, for the People mutinied and beat down their Work; which Action, though very affronting to the Perfian Religion, yet the Emperor of Perfia is afraid to come to any Extremities with them, left they fhould revolt to their Neighbours the Turks, and fo Teflis and all Georgia enjoy their Liberty to retain almoft all the exterior Marks of their Religion; for, on the Top of all the Steeples of their Churches ftands a Crofs, and in them they have Bells, which they often ring. Every Day they fell Pork openly, as well as other Victuals, and Wine, at the Corners of the Streets, which vexes the Perfians to fee, but they cannot help it. Some few Years fince they built a Mofque in the Fortrefs, and the Georgians could not prevent it: But when the Prieft, after their Cuftom, came up to the Top, to make Profeffion of his Faith, and call the Mabometans to Prayers, the People fo ply'd him with Vollies of Stones, that he was forced to lly down in Hafte, and never dared to appear there any more.

The publick Buildings, viz. their Market-places, Inns and Magazines, are well built of Stone, and kept in good Repair. The Prince's Palace is a noble and beautiful Building, being adorn'd with Halls and Rooms of State, Gardens, Aviaries, and fpacious Courts, to which the Viceroy of Caket's Palace is not much inferior.

The Out-parts of the City are adorned with feveral Houfes of Pleafure, and many beautiful Gardens, of which the Prince's is the biggeft ; but the Trees are fuch only as ferve for Shade and Coolnefs.

The Capucbins, who were fent into Georgia about the Year 1657 , by the Pope, have an Habitation in this City, as alfo at Gory, where they are highly efteemed as Phyficians, which is the Title they give themfelves, but they make very little Progrefs in the Converfion, of the Georgions; for befides that thefe People are very ignorant, and take little Care to inftruct themfelves, it is fo rivetted into their Heads, that Fafting, as they obferve it, is the effential Part of the Chrittian Religion, that they do not believe the Capucbins to be Chrittians, though they faft as they do, becaufe they are informed, they do it not in Europe.

The City of Teflis is very well peopled, and there are as many Strangers refort thither as to any Place in the World, for there is a great Trade driven there, and the Court is very numerous and magnificent, becoming the Capital City of a Province. The Georgians do not call it Teflis, but Cala, i. e. The Fortrefs, which is a Name they give to all Habitations encompaffed with Walls, and fome Geographers call it, Tebele-Cala, or, The bot City, either by Reafon of the hot Baths, or becaufe the Air there is not fo cold and boifterous as in other Parts of Georgia.
12. On the 28th he departed from Teflis, and paffing thro' Sogan-lou, or the Place of Onions, ftanding upon the River Kur, came to Kupri-Kent, or the Village of the Bridge, becaufe there is a very fair Bridge over the River Tabadi, in the Arches of which are made little Chambers and Portico's, and in every one of them a Chimney, on Purpofe to lodge Strangers, and in the middle ones Balconies, to take the cool Air in the Summer; Melick-Kent, or, the Royal Village, and fo to Dely-Fan, a Village of 300 Houfes, feated upon the River Acalfapba, which runs at the Foot of an high and dreadful Mountain, part of Mount Taurus. Here is Plenty of Water, and the Ground is very fertile, and a great many Villages to be feen on every Side, fome of which ftood fo high upon the Points of the Rocks, that they were almoft indifcernable. They are inhabited by Georgian and Armenian Chrittians, but not intermix'd, becaufe they have fuch an inveterate Enmity one againft another, that they cannot live together in the fame Villages. The moft Part of the Houles of thefe Villages are no better than Caverns or hollow Places made in the Earth; the reft are built with Timber, and covered with Turf.

Vol. II. $\mathrm{N}^{\circ} 128$.

Thefe Sort of Buildings are very convenient, being cool in Summer, and warm in Winter. The Borough of Dely-Fan, and all the Country round about for fix Leagues, is govern'd by its own natural Princes, from Father to Son, and holds of Perfia, as Georgia does It is called the Country of Cafac, the People being fout and fierce, defcended from the Cofaques, who inhabit the Mountains on the North-Eaft of the Cafpian Sea and is at prefent under a Prince called Kambi-Can. He lodg'd at Kara-Pbifbi/h, a large Borough, feated at the Bottom of the Mountains, which feparate Georgia from Armenia. It ftands on the Banks of the River Zenguis and pafling Bichni, where there is an Armenian Monaftery, our Author arrived at Erivan, Jan. 7, 1673.
13. Erivan is a great City, but dirty. The Vineyards and Gardens make the greatelt Part of it, there being no ornamental Buildings in it. It is fituated in a Plain, encompaffed with Mountains on every Side, between two Rivers, the Zengui, and Queurk-boulack. The Fortrefs itfelf may pals for a fmall Ciry, containing 800 Houfes, inhabited by Perfians only; for though the Armenians have Shops there to work and trade in in the Day-time, yet they return to their Houfes in the Evening. It is furrounded with three Walls of Earth, and Brick made of Clay, with Battlements, and flank'd with Towers, and ftrengthen'd with Ramparts, according to the Cuftom of the Ancients, and in it is conftantly maintain'd a Garrifon of 2000 Men, The Goo vernor of the Province's Palace is within this Caftle, and is a very fpacious and delightful Place in Summer.

The City ftands about a Cannon-fhot from the Fortrefs, but the Space between is filled up with Houfes and Market-places, which are fuch pitiful Structures, that they may be removed in one Day. There are feveral Churches in this City, of which the Epifcopal See called Ircou-ye-rize, and Catovike are the Chief; the reft are fmall, funk deep in the Earth. Near the Epifcopal Church is an old Tower, built of Free-ftone, of antique Work, with feveral Infcriptions, but none can read them; nor is it known when, by whom, or for what Ufe it was built. At a little Diftance from it is the Grand Meydan, or great Market-place, 400 Paces fquare, where they ufe all Exercifes, both for Horfe and Foot, as Caroufels, Racings, Wreftling, and Managing of Horfes for War. There are many Buths and fair Inns in it. The Air is good, but a little thick and cold, for their Winter lafts long, and they have Snow fometimes in April. The Country is very delightful and fertile, and produces Fruits in great Flenty, efpecially Wine, which is there good and cheap.

The Armenians have a Tradition, that Noab planted his Vineyard near Erivan, and fome pretend to thew the Place, about a fmall League from the City. The River and Lake, which is twenty-five Leagues in Compafs, furnifh the City with excellent Fifh of nine Sorts; of which the Trouts and Carps are famous all over the Eaft. In the Midft of the Lake is a fmall Inand, where ftands a Monaftery, whofe Prior is an Archbifhop, and takes upon him the Title of Patriarch, refufing to acknowledge the Grand Patriarch. The Armenians hold this City to be the moft anciently inhabited Place in the World ; for they affirm, that Noab and all his Family dwelt there, both before the Deluge, and after he came out of the Ark, and that the earthly Paradife was there : But all this is a Story without Foundation, reported by Perfons equally ignorant and vain-glorious.

Two Leagues from Erivan ftands the famous Monafo tery of the Tbree Cburches, the Sanctuary of the Armenien Chriftians. The Armenians call it Ecs-miazin, which Name alfo the principal Church bears. It is a fubftantial, but dark Structure, all built of large FreeAtone. The Monks fhew feveral Reliques preferved in it, as a Finger of St. Peter, and two of St. Fobn the Baptift, a Rib of St. Fames, Bifhop of Ferufalem, and an Arm of St. Gregory, \&xc. but they mult be very credu. lous and fuperftitious, that can believe them fuch. The two other Churches that food near this are, St. Caianco and Sc. Rep/ima, the Names of two Roman Virgins, who fled into Armenia, as they fay, in the gth Perfecution,

IO M
and
and fuffer'd Martyrdom in the fame Places where thofe Churches ftand.

Within the Territory of Erivan, which reaches about twenty Leagues round it, there are twenty-three Convents for Men, and five for Women, which are fo poor', that being continually employ'd in getting a Livelihood, they never perform holy Duties, but upon Holidays. They hold the Opinions of the Monopbyytes, but in other Points are very ignorant. Two Leagues from Erivan Eaftward, is to be feen the famous Mountain where Noab's Ark is faid to have refted. The Armenians hold, that the Ark is ftill upon the Top of the Mount called Maus, but that no Man can afcend to it. The Governor of Erivan is a Beglerbeg, i. e. a Lord of Lords, and has alfo the Title of Serdar, or General of the Army. His Revenue is 32,000 Tomans, which is above 112,000 l. Sterling a Year, befides Fines, Prefents, and indirect Ways of enriching himfelf, which amount to 50,000 Pounds more.
14. While he faid at Erivan, he faw a Wedding of the Governor's Steward's Brother. Matrimony in Perfia is very expenfive, fo that only Men of Eftates will venture upon it, left it prove their Ruin. The meaner Sort content themfelves with a Concubine or Slave. The Mabometans that follow the Tenets of Haly, take their Wives after three Manners, viz. By Purchafe, Hire, or Marriage. All thefe Ways their Religion allows, and their Civil Law acknowledges the Children born in any of them legitimate. The Wives, who are Slaves, are called Canize. Of thefe the Law allows a Man as many as he can maintain, and takes no Cognizance how they are ufed. He is Mafter of their Chaftity, yea, of their Lives, and it is their Honour to ferve their Mafter as his Wives. The hired Wives are called Moutaa: Of thefe alfo a Man may take as many as he pleafeth, and as long as he pleateth for the Price agreed on, and at the End of the Term they may part with them, or renew the Bargain. A handfome young Maid at Ifpabon may be hired for 35 l. a Year, befides Cloaths, Diet, and Lodging. If amy break off before the End of the Term, he muft pay the whole Sum contracted for, and the Woman, after Difmiffion, muft tarry forty Days before fhe lets herfelf to another. There Days they call, The Days of Purification.

The efpoufed Wives are called Nekaa, and of there the Mabometan Religion allows a Man to marry four ; but they never marry above one, to avoid Expence and Diforder, for every one will command, and their mucual Jealoufy caufes a perpetual Confufion; wherefore, if they cannot content themfelves with one Woman, they ufe their Slaves. In Perra they ufually marry by Proxy, becaufe the Man never fees his Wife till after he has confummated the Marriage, which fometimes he does not till feveral Days after his Wife has been at home. One would think, that this Way of Marrying fhould produce unfortunate Matches; but it doth not, for Marriages are not more happy in any Country than this. If either of the Parties dinlike one another, and refolve to unmarry themfelves, the Mabometan Religion permits a Divorce, and they may feparate either before a Judge, or a Churchman, giving each other a Talaac, or Bill of Divorce, and then the Parties are at Liberty to marry again where they pleafe themfelves.

Upon this Diffolution of their Marriage, if the Man has fued the Divorce, he is obliged to return the Woman her Dowry ; yet if the Woman fought it, the lofeth her Portion ; but if the Perfons repent the Act they may renew the Marriage again three Times: Yet, the Perfions rarely make Ufe of this Licenfe to part with their Wives, only fome Citizens and Tradefmen make their Advantage of it. Perfons of Quality count it fo difhonourable, that they will rather die, than divorce their Wives, and the meaneft Sort cannot part with the Portion, and fo, if they defire a Divorce; which is rare, they effect it by ill-ufing their Wives, to force them to fue for a Divorce, and thereby facrifice all to their Liberty.
The Armenian Patriarch lives in this City, and has an Epifcopal Palace. He, with all the reft of his Clergy, is much addicted to Simony, as are alfo all the Eaftern

Sects. Their chief Gain lies in felling the Oil called Myrone, at a dear Rate, which, they teach the People to believe is a Remedy that phyfically cures all the Diftempers of the Soul, and confers the Grace of Regeneration and Remiffion of Sins, faying, that in Baptum it is the Oil, not the Water, which is the Matter preferibed. The Patriarch confecrates this Oil, and fells it to the Bifhops and Priefts, who get great Sums by it.
15. April the 8 th he parted from Erivan, and travelling through a Country fomewhat hilly, but full of Villages, came firt to Daivin, and then to Kainer, leaving the Mountain of Nool on the Right-hand. On the roth he went on the fame Road, which led him through a fertile and fair Country, and leaving sederec, a great Town, and the Capital of the Province of Armenia, called Cbarour, where the Sultan refides, came through Nouratcbin, and over the River Harpafony to Naccbivan, which is thought to be the ancient Artaxate, It is now little elfe but a Heap of Ruins, not containing above two thoufand Houles which are inhabited, and thofe in the Heart of the City, with Inns, Baths, and other publick Houfes, where they fell Tobacco and Coffee, whereas formerly the Perfian Hiftory affures us, that it contained forty thoufand.

Five Leagues to the North lies a great City called Abrener, i. e. the fertile Field, and feven others near to it, all whofe Inhabitants are Papifts, and their Bifhops and Curates Dominicans, who perform their Church Service in the Armenian Language. Thefe Towns were brought into Subjection to the Pope by an Italian Dominican of Bologna. Twenty Villages more acknowledg'd the fame Ecclefiaftical Jurifdiction, but are returned to their firft Religion, and their Obedience to the Armenian Patriarch ; and it is not likely that the reft can hold out long, for the Governors of the Province ufe them violently, and lay heavy Impofitions upon them, for withdrawing from their Jurifdiction.

From Naccbivan he paffed to old Fulpha, through a dry ftony Country, where there is Nothing to be feen but Hills of Stones. It is a ruined City, and thought by fome Authors to be the ancient Ariammene. It is faid to have contained four thoufand Houfes, though the Ruins do not fhew above half fo many. At prefent there is Nothing but Holes and Caverns in the Mountains, fitter for Beafts than Men to live in.

This City was ruined by Abas the Great, for the fame Reafon as Naccbivan, viz. to hinder the Invafions of the Turks for Want of Provifions, By Julpba runs the River Araxes, which Separates Armenia from Media. It rifes in the Mountain where Noab's Ark is faid to have refted, from which perhaps it takes its Name, and empties itfelf into the Cafpian Sea. It is very large, and of fo rapid a Courfe, efpecially when it is fwelled by the Thaws of the Snows that come down from the Mountains, that no Bridges can ftand upon it, nor Dams refift its Force, and the Noife of the Waters aftonifhes the Ears of the Beholders.
16. Media, which formerly ruled all Afia with an Imperial Dominion, at prefent makes but one Part of a Province, though the largeft in the Perfan Empire, called Azerbeyan, or Afapaican. It borders on the Eaft upon the Cafpian Sea and IIyrcania, on the South upon Partbia, on the Weft upon Araxes and the Upper Armenia, of which Alfyria is a Part, and on the North on Dageftan, which is that mountainous Country that borders upon the Mufcovite Coffacks, and Part of Mount Tourus. The Perfians affirm, that the Name of Azer beyan implies the Country of Fire, by reafon of the famous Temple of Fire which was there erected, where was kept that Fire which the Fire-worMippers hold to be a God: Nimrod is faid firft to have brought in this Worfhip, and there is a certain Sect, called Guebres, which ftill maintain it.

From 7 fulpha he travelled through a Country full of little Hills, leaving a fpacious Plain upon the Lefthand, where many bloody Battles between the Turks and Perfians were fought, and particularly that between Selim the Son of Solyman theGreat, and I/bmael the Great, to Alacou, and from thence, through a more even Country, to Marant, a very fair Town, confift-

## Chap. II.

into
PERSIA.
ing of about two thoufand five hundred Houfes, and which has io many Gardens as take up as much Ground as the Houfes. It is feated at the Bottom of a Mountain, at the End of a Plain, watered by the little River Zelou-lou, from which the People have drawn feveral Cuts into their Grounds and Gardens.

In the Places adjoining grow Plenty of Fruits, the beft in all Media; but that which is moft peculiar to thefe Parts, is this, that here they gather Cochineal, though in no great Quantities, nor for any longer Time than only eight Days in Summer, when the Sun is in Leo; for before that Time, the People fay, it doth not come to Maturity ; and after the Worm, from which they draw the Cochineal, makes an Hole in the Leaf in which it grows, it is loft. The Perfians call Cochineal Kermis, from Kerm, which fignifies a Worm, becaufe it is extracted out of Worms. The Armeniuns have a Tradition, that Noob lies buried here
17. From thence he travelled among the Mountains to Sopbian, a little Village full of Rivulets and Gardens, and fruitful to a Wonder, and fohe went to Taur is, which is fifty three Perfian Leagues from Erivan. This City is very large and potent, being the fecond in Perfa in Dignity, Grandeur, Riches, Trade, and Number of Inhabitants. It is neither walled nor fortified, and the little River Spingtcba runs a-crofs it, which fometimes carries away the Houfes on the Side of it, and makes dreadful Havock. On the North-fide runs the River Agi, or the Salt River, whofe Water is made falt by the little Rivulets, which paffing through the Salt Marthes, fall into it, and fo can nourifh no Fifh. It is divided into nine Wards, and has fifteen thoufand Houfes, and as many Shops in their Market-places, among which are three hundred Inns, and fome fo large, as to lodge three hundred People, and many Cabarets for Coffee Tobacco, and ftrong Liquorss. There are three hundred and fifty Mofques, three Hofpitals, which relieve the Poor with Victuals twice a Day ; and a fair Hermicalled Hali's Eye.
The Inhabitants have been formerly computed to be five hundred and fifty thoufand. This City is full of Strangers, who come hither to trade from all Parts of $A \int a$, becaufe it is full of all Sorts of Merchandizes, and abounds with Artifts in Cotton, Silk, and Gold. The faireft Turbans in Perfac are made here; and it is faid, there are fix thoufand Bales of Silk confumed in this Manufacture. The Air of Taur is is good, healthy, and dry, but the Cold continues long, becaufe it is expofed to the North, and the Snow lies nine Months in the Year upon the Mountains ; the Winds blow every Day, Morning and Evening, and Rains often fall.

It abounds with all Things neceflary for human Support, as Corn, Filh from the Cafpion Sea, Venifon, and other wild Beafts. Bread may be bought there for three Pound a Penny, and Flefh at three half Pence a Pound. There are faid to grow no lefs than 60 Sorts of Grapes in and about Tauris. Near it is a Quarry of white Marble, a Mine of Gold, and another of Salt. There are feveral Mineral Waters, all fulphureous, of which fome are cold, and others boiling hot. Moft of our Geographers of beft Note, as Ortelius, Ananias, Molets, \& \& are of Opinion, that this City is the ancient and celebrated Ecbatana, fo frequently mentioned in holy Writ, and in the ancient Hiitory of $A\{a$, but there are no Remains of the magnificent Palace of Ecbaton, where the Monarchs of Afia kept their Courts in Summer, nor of Daniel's, to juttify this Notion.

From Tauris he travelled firft to Vafpinge, a great Borough, furrounded with Gardens and Groves of Poplars and Tylets, and watered with feveral Brooks, which make it very pleafant; then to Agi-agach, by which are the Plains which afford the beft Paftures in all Media, and perhaps in the whole World, where the choiceft Hories in the whole Province are put to Grafs from April to $\mathcal{F u n e}$, to purge, refrefh, fatten and ftrengthen them. Thefe Plains are the Hippopothon of the Ancients, of which they write, that the Kings of Media kept here a Breed of fifty thoufand Horfes.

The Road from hence leads by feveral Circles of large hewn Stones, which the Perfians affirm to be the

Places where the Caous or Giants, when they made Wars in Media, held their Councils, it being a Cuftom among thefe People, that every Officer that came to the Council brought with him a Stone; to ferve him inftead of a Chait, and fo carries you over Wlills and Dales, all fruitful and delightful, to Admiration, through Turiman, fo called, becaufe that in the Fields about it there is a great Number of Shepherds with their Flocks, that are called by that Name, to Purvare, an handfome large Village at the Bottom of an Hill, and upon the Banks of a little River.

From thence lie proceeded in his Journey, and croffing the River Miana feveral Times, by Reafon of its Windings, paffed through the Town of the fame Name adjoining, both fo called becaufe they part Media from Partbia, and afcended a Ridge of Mountains, which are a Branch of Mount Taurus, at the Top of which ftands a Caftle, call'd the Virgin's Caftle, becaufe Aria xerxes is faid to have built it on Purpofe to imprifon a Princefs of the Blood.

As foon as you have paffed thefe Mountains, and the River Kefl-burefe, which is at the Foot of them, you perceive a Change of the Air; for whereas Media is moift and cloudy; fubject to high Winds and much Rain, the Partbian Air is dry to the higheft Degree, without Clouds or Rain for fix Months fometimes, and the Soil fandy, fo that nothing will thrive without good Hufbandry and Pains.
18. Paribia, which was fo long the Seat of the Em pire of Afa, is now a large Province of the Perfari Monarchy. It is the proper Demeans of the Shah, and therefore has no Governor, as the reft of the Provinces. It is extended 200 Leagues in Length, and 150 in Breadth, being bounded by the Province of Cboraffan on the Eaft; by Fars, which is properly Perfaa, on the South, by Azarbeyan or Media on the Weft, and Guilan or Mezanderan, which compofe the Province of Hyr: cania, on the North.

The Air is dry, and though the Mountains produce nothing but Thiftes and Briers, yet the Plains are fruitful and pleafant; where there is Water. This Province has above forty Cities, which is much in Perfia, becaufe it is not peopled according to its Extent. The Partbions took their Original from the Scytbians, who were the Tartars, who now inhabit the North of Perfia, called Uzbecs, and formerly Baitrians. The firft Village you come at is Zerigan, which is fam'd for its Antiquity, being founded, according to the Perfiant Records, in the Reign of Ardecbir-babezon, feveral Ages before Cbrift, and then paffing over delightful Plains, you come to Sultanyi

This City is feated at the Foot of a Mountain. It feems afar off a very neat well-built Place, but does not appear fo when you are within it; yet fome of the pub: lick Buildings are very remarkable, both for the Materials and Architecture. It contains about three thoufand Houfes, and befides, there are very vaft Ruins, which makes it probable, that it was once the largeft City of the Kingdom, as their Hittories relate. Provifions are very plentiful and cheap there, and the Air wholfome, though very changeable, the Mornings, Evenings, and Nights being very cold, and Days hot. It is faid to be the moft ancient City in Partbia. The Predeceffors of I/bmael Sopbi, and the laft Armenian Kingrs, refided there, and then it is faid that it contained four hundred Chriftian Churches; but being demolifhed by Tamerlane, and feveral other Turkib and Tartarian Princess the Chriftians have deferted it.

From hence he travelled through a lowely Country, and paffing through feveral Villages, furrounded with Meadows, and Groves of Willow and Poplar, he came to Ebber, a fmall City for the Buildings, as containing not abové 2500 Houfes, but taking up a large Extent of Ground, becaufe they have fo many large Gardens. A fmall River runs through the Midtt of it. It is thought to be anciently called Barontba. The Situation is delightful, the Air wholfome, and Soil plentiful. It is govern'd by a Darogue, or Mayor ; and the Mirt/be-ki-Bafbi has his Tabvil, or Salary, charged upon the Revenue of this City. The Perfing Geographers affert,
that this City was built by Kei-Cofrou, and that DarabReiboni, or Darius, began to build the Caftle; and that Skender-Roumi, i. e. Alexander the Great, finifhed it. At Ebber they begin to fpeak the Perrian Language, which is fpoken all the Way to the Indies, more or lefs pure, as the People are more or lefs diftant from Scbiras, where it is fpoken in the greateft Perfection.
19. From Ebber he travelled to Perfac, leaving Casbin five Leagues on the Left-hand. This great City ftands in a delightful 2 Plain, three Leagues from Mount Alou-vent, one of the higheft and moft famous Mountains in Perfia. It is fix Miles in Circumference, containing 12000 Houfes, and 100,000 Inhabitants, of which there are forty Families of Chriftians, and one hundred Jeres, but all very poor. It was formerly walled, but they are now all fallen down. The chiefeft Ornament and Grace of Casbin is the King's Palace, and the greac Number of the Seats of the Perfian Grandees, who attend upon the Court, which has its continual Refidence there There are but few Mofques in Casbin, but the Royal Mofque, called Met f bid-fba, is one of the largeft and faireft in all Perfia. This City has no great Plenty of Water, but it is fupplied, with all it has, by fubterraneous Channels called Kerijees.
The Air is thick, and not very healthful, and the Soil dry and fandy, yet it abounds with Meat, and all Manner of Provifions, which are brought thither from the Countries adjoining, which having many well water'd Plains, feed a World of Cattel, and produce prodigious Quantities of Corn. The faireft Grape in Perßa, called Sbaboni, or the Royal Grape, being of a Gold Colour, and tranfparent, of which the ftrongeft and moft lufcious Wine in the World is made, grows here. The Air is very hot in Summer all the Day long, but the Nights are fo cold, that if a Man expofe himfelf never fo little to the Air, after he is undreffed, he is fure to fall fick. Some of our European Geographers affirm it to have been the City, which the Greeks called Ragea, or Rages, afterwards Europa and Arfacia, and now Casbin, from a King of that Name. It is govern'd by a Darogue, or Mayor, chofen every Year, whofe Office is worth to him 600 Tomans, or 2000 Pounds.

Having paffed Casbin, he came to Kaiare, and having lodg'd there, travelled the next Night (for that's the general Way of travelling all over the Eaft, to avoid the Heat of the Sun, which would hurt both Man and Beaft in the Day-time) by Segs-abad, which fignifies, the Habitation of Dogs, to Sava, a great City, feated in a fandy and barren Plain. It is two Miles in Circuit, and walled round, but fo miferably built, that, unlefs it be in the Midft, it runs to Ruin for want of Inhabitants. The Hiftories of Perria unanimoully agree, that the whole Plain of Sava was formerly a Salt-Marfh, or Lake; but how it was dried is not certainly known : Some fabulounly report, that Haly, Mabomet's Son-in-Law, drain'd it by a Miracle; and to preferve the Memory of it, the People built this City in the Midft of it.
19. Juft over againft Sava, Eaftward, at four Leagues Diftance, ftands a Place of Pilgrimage, moft famous for the Devotion of the Perfans. They call it Ecb. mouil, that is to fay, Samuel; for they believe, that this Prophet was there interr'd, and over his Tomb is built a moft fumptuous Maufoleum, in the midft of a magnificent Mofque. Over-againft it is ftill to be feen fome Remnants of the City of Rey, which is reported to have been once the biggeft City of Afa, next to Babylon. The Perfian Hittories relate, that it was divided into ninety-fix Quarters, every one of which had forty-fix Streets, and every Street 400 Houfes, and ten Mofques; that there were in it 6400 Colleges, 16600 Baths, 15000 Towers of Mofques, 12000 Mills, 1700 Channels, and ${ }_{13} 3000$ Inns, and People almoft numberlefs.

The Chronicles of the Magi make Cbus, the Grandchild of Noab, to be Founder of it; and Ptolemy calls it Raquaia; but the vulgar Opinion is, that it was founded by Houfbeing Pi/bdadi, or the Chief Juftitiary, and enlarged by Marrouther, his Succeffor. It was deftroy'd by che Mabometans, who being divided into two Sects, viz. Of Sbia and Sunnis, made War one upon the
other for fixty Years together. The Sect of Sumnis cal led in the Affiftance of the Tartars, and, by their Help, bore down the Sect of Sbia. In thefe Wars the Tartars, by their frequent Incurfions, deftroy'd the potent City of Rey, and reduced it to nothing before the 60oth Year of their Hegyra. The Soil about it is fertile and pleafant, and produces great Plenty of Fruits ; but the Air is unhealthy, making the Skin fwarthy, and breeding Agues.
Departing from hence, he paffed by an Hill, called Coub-Telifin, which has this remarkable and peculiar to it; that as you approach nearer and nearer to it, it fhews a different Form, and varies both in its Bignefs and Figure ; that the Top or Point of it is always in Sight, and you would think, that it turned that Side, which Way foever you ftood to look upon it. It confifts of a black Earth, that crumbles like that of the burning Mountains; but it is not known to have vomited Fire. The People of the Country fay, that they that afcend that Mountain never come back again.
20. Having paffed it, he came to Com, a large City, feated in a Plain, by a River-fide. It contains 15000 Houfes, as the People fay, and is furrounded with a Moat and Wall, flank'd with Towers, but half ruined On the River-fide are two fair Keys, and at the Eaft of the City a fine Bridge. It contains many large and beautiful Market-places, both for Wholefale and Retale: Though it be a City of no great Trade, yet they export large Quantities of Fruit, dried and raw, and parcicucularly Pomegranates; Soap, Sword-blades, and Earthen Ware, both white and varnifh'd, which hath this peculiar Property, that it cools the Water in Summer both wonderfully and fuddenly, by Reafon of its continual Tranfifiation. It contains a great Number of fair Inns, Maufolæums and Mofques, wherein the Grand-Children and Defcendants of Ali, which are the Perfan Saints, called Yman-Zade, Sons of the Apoftes, lie interr'd One of thefe Mofques is the molt celebrated in the Eaft : It has four Courts, of which the firf is planted with Trees and Flowers, like a Garden, with Terraffes on each Side; the fecond is not fo beautiful as this, but the third is nothing inferior to it, being furrounded with Apartments two Stories high, and having a Terrafs, Portico and Canal. In the fourth are the Chamber and Lodgings for the Priefts, Governors and Students, that live upon the Revenues of the facred Place. Fronting thefe Courts ftands the Body of the Structure, confifting of three great Chapels upon a Line. To the Middlemoft belongs a Portal, eighteen Foot high, of white Marble. The Top is a large Half-Duomo, overlaid without with large fquare Cbina Tiles, painted with Morefco Work, and embellifh'd within with Gold and Azure. The Folding Doors are plated with Silver, gilr with Vermillion
In it ftands the Tomb of Fatima in the Midft, which is overlaid alfo with Cbina Tiles, painted $A$-la-morefro, and overfpread with Cloth of Gold, which hangs down on both Sides. It is enclofed with a Grate of mafly Silver, ten Foot high, diftant half a Foot from the Tomb, and at each Corner are Apples of fine Gold. In the two Chapels on each Side fland the Tombs of the two laft Kings of Perfia, viz. Abas and Sophi, boih very magnificent; but on that of Abas are written in large Characters of Gold, feven Elegies upon Mabomet and Haly, made by the Learned Hafan-Caza.
Thefe are rare Pieces of Eloquence, and in them may be feen not only the Genius of Perfian Poetry, but the Tranfports of the Mabometan Devotion. This City contains feveral other beautiful and fumptuous Edifices, and would be a very pleafant Place, were it not for the Heat, which is exceffive, there being no Place in all Perfia where the Sun fcorches more violently, yet is the Air wholfom, and Soil fruifful, efpecially in Pittachio's. The People are very courteous and civil. The River that paffeth by it is but a fmall Current in Summer, but being fwell'd with the Snow-waters that fall from the Mountains, is fometimes overllows great Part of the City.

Chap. II. into Persiá.

From Com he travelled four Leagues over very fertile Plains, abounding with fine Villages, to Caffem-abad, a Town confifting of about 300 Houfes, belonging to the Queen-Mother, as her Dowry, from whence he paffed over a dry fandy Plain, without Villages or Water, to Abibirin, or Sweet Water, becaufe there is a Fountain of fair Water, and went from thence to Ca/ban.
21. This City is feated in a large Plain, near an high Mountain, a League in Length, and a Quarter of a League in Breadth, running out from Eaft to Weft in Form of an Half-Moon. There is no River near the City, but it is fupplied with Water by Canals, deep Wells, and Cifterns. It is encompaffed with a double Wall, flank'd with round Towers, after the old Fafhion, and hath five Gates. The City and Suburbs, which are the moft beautiful, contain 6500 Houfes, as the People fay, forty Mofques, three Colleges, and about 200 Sepulchres of the Defcendants of Aii. The principal Mofque ftands right againft the Market-place, and has a Tower, like a Steeple, of Free-Stone. The Houles are built of Earth and Brick, but are none of them remarkable for their Beauty.

The Bazars and Baths are well built and kept, and the Royal Inn is the faireft in all Perfia. The Wealth and Trade of Cafban confiits in the Manufactory of all Sorts of Stuffs; and Tiffues of Gold and Silver, plain and Hower'd, Sattin and Velvet; and there is no City in Perfer that makes more. Cafban ftands in a good Air, yet fo violently hot, that it is ready to ftifle you in Summer, which is occafion'd by the Reflection of a Mountain, that ftands on the South of it ; but the greateft Inconvenience that attends this City, is the great Number of Scorpions which infeft it; and the Parts adjoining, when the Sun is in Scorpio, and therefore there is Nobody but has by him feveral experienced Remedies againft the Sting of this Creature.

Cattle and wild Fowl are not plentiful, but the Country abounds in Corn and Fruits. They furnifh Ifpaban with Fruits, efpecially Melons and Water-Melons, all the Seafon. Several European Authors think this City to be Ambrodux or Ctefipbon of the Ancients. It is faid to be founded by a Virgin, who therefore laid the firtt Stone of it when the Sun enter ${ }^{3} \mathrm{~d}$ Virgo; and nam'd it Caban from her Grandfather. It is govern'd by a $D a$ rogue, or Mayor, who holds his Place two Years.

From Cafban he paffed over a Mountain, and then defcended into a deep Valley, very narrow and about a League in Length, which is well fill'd with Houfes; Vineyards and Gardens, fo clofe one to another, that they all feem but one Village. Several delightful and clear Streams preferve the Summer fo wonderfully cool here, that the Rofes were not blown, nor Corn or Eruit ripe, when the Harveft was quite got in at Calban. Seve-ral modern Authors affert, that Darius was murthered by Beffus in this Valley, and that not improbably, becaule Hiftory fays, Beflus Hed to BaEtriana, and Nabarzanes, to Hyrcania, and here the Road begins to thefe two Provinces, and fo by Mouthacour, a large Village of 500 Houles, to I/paban, which is fo thick encompaffed with Villages, that you would think you are in the Suburbs two Hours before you come near them.
22. There are two other Roads, which it is neceffary that Travellers fhould be acquainted with, which I hall briefly defcribe, viz. From Warfaw to Ifpaban, and from Ifpaban to Mofcow.

Warfar, which is feated upon the Left Hand of the Viftula, is the ordinary Refidence of the King of $P \sigma_{-}$ land. Beginning your Travels here to Ifpaban, you muit go to Lublin, which is fix Days Journey, and in five more you may get to Iluove, where the Cuftomers open all the Bales of the Merchants Goods, and exact five in the Hundred. From Iluove you go to Fallovieer in twelve Days. This is the laft City of Poland next Moldavia. Here, if you fell any Goods, you muft pay five per Cent.

From thence you go to $\begin{aligned} \text { abbe in eight Days. This }\end{aligned}$ is the Capital City of Moldavia, and the Refidence of the Wayvod, which the Grand Signior fends to govern that Country. Here all Bales of Merchan-

Vol. II. ${ }^{9}$ CXXIX.
dizes are opened, and there is a Roll of all that, the Merchant is to pay, which amounts to five per Cent.

From Rabe the Way lies through Ourßaye, to which you come in three Days. This is the laft City in Moldavia. From hence to Akerman you go in four Days, and the Cuftoms amount to four per Cent. but they take the Merchant's Account. From Akerman you go to Ozou, where they take two per Cerit. and fo to Precop, where they pay two and an half per Cent. but they truft to the Merchant's Word at both Places.

From Pracop the Road lies to Kaffa, where alfo the Cuftom is three per Cent. And the Journey from Warfare to Kaffa is fifty one Days by the Waggon, which is the ufual Way of Carriage in that Country, and the Cuftoms in all come to eighteen and an half per Cent. to which you muft add the Carriage and Paffage by Sea to Trebifond, where you pay three Piafters for every Mules ${ }_{3}$ and four for every Camel's Load. To avoid fomething of this Charge, the Armenians fhip their Goods ufually at another Port, called Onnie, which is a very good. Port, and where they never pay above a Piafter and a half' for a Camel's Load.

There is another Road from Warfaw to Trebifond fhorter by three Days Journey, viz. From Warfare to Talbe; in the former Road, and from thence by Galas; a City of Moldavia, Megin and Mangalia, the beft Port in the Black-Sea to the Weft, to Trebisond, from whence to Erzerom five Days Journey, from which to Ifpaban you go the ufual Road.

The other Road from Ifpaban to Mofcow lies thuse You muft travel the ufual Road before-mention'd, to Sbamaki, and from thence to Derbent, which the Turks call Demir-Capi. This is the laft City in the Perfan Jurifdiction, by which the River Sbamourka runs. From Derbent you may travel to Tetarck in eight Days, where hiring Barks with twelve Oars, you may be at Aftracan, by the Help of a little Sail which they put up; if the Wind ferves, in four or five Hours, but if you row only it will take up nine. When you embark upon the Cajpian Sea, you muft provide yourfelf Water for the firft three Days, becaufe the Water on the Coaft is bitter for that Time, but afterwards it is very good. At Afracan the Merchants are all fearched by the Cuftomers, and they take five per Cent.

From Aftracan to Mofcow you take Shipping in great Barks, that make Ufe both of Oars and Sails, rowing againft the Tide, and weigh all you carry aboard, for which you muft pay fourteen Caya, and three Abaffi's and an half for every Pound. From Aftracan you fail to Corinya, and fo in Order by Sariza, Sarataf, Samarat, Senuriskat, Coulombe, Cafan, Sabouk-ßba, Godamijan, Tri-guina, Mouron and Cafin, to Mofcow, which they count 2950 Sbagarons, or 590 Italian Miles.

At Sarataf you may go a-fhore, and fo go by Land to Mofcore, in Waggons, when the Snow is gone, and on Sledges while it lies, and then the Way lies through $1 n$ Serat, Tynnek, Canquerma and Valodimer, a City bigger than Conftantinople; to Mofcow, which Journey may be finifh ${ }^{\text {s }}$ d in thirty five Day; but this Way is never ufed, but upon Neceffity, when the River is frozen, becaufe in the Paffage from Sarataf to Inferat, which is ten Days Journey, there is nothing to be had for Man or Horfe. At Mofcow the Cuftoms are the fame as at Afracan, viz. five per Cerit. and all the Afans, viz. Turks, Per: fians, Armenians, and others, lodge in a Sort of Inns: but the Europeanis lie in a Place by themfelves all together.
23. There are few Countries in the World that are fo little vifited by European Travellers as thofe about the Black Sea, and indeed there are feveral Reafons for it. In the firft Place; the Turks will fuffer no Trade to be carried on by Sea in any other than their own Veffels, and fo jealous they are on this Head; that when the Ruflans were Mafters of Afoph, and fhared by that Means in the Navigation of the Black Sea, they were never eafy. It is, in the next Place, a very rare Thing, even for fuch as travel for Pleafure through the Domis nions of the Grand Signior, to ftrike ous of the com-

10 N
mont
mon Road purely to gratify their Curiofity, nor indeed in fuch a Country as this would that be always fafe. And laftly, The common Reports of moft of thefe Countries place both them and their Inhabitants in fo fo bad a Light, that few have any Curiofity to be better acquainted with them. Our Author's Journey was by mere Accident, he took this Route to Perfia as the moft convenient at that Time for his Purpofe ; and it was alfo by Accident M. de la Motraye took many Years after the fame Route, and their Accounts agree, generally fpeaking, very well; but fome Points in both feem to fand in Need of Explanation.

Our Author has given but a very fhort Account of the Crim Tartars, and therefore it is neceffary to fay fomething more of them. Authors differ very much as to the Condition of this Nation, that is to fay, whether they ought to be confidered as free and independent, as Allies, or as Subjects to the Turks. Inftead of endeavouring to difculs thefe Queftions, we fhall leave them to the Decifion of the Reader, after reporting a few Matters of Fact. There are not many Towns in this Tartary, and. in thofe that have any Fortreffes, the Turks have Garrifons. The Tartar Princes are rarely admitted into, and never allowed to lodge in them. Caffa, we have elfewhere fhewn, was once a very fine City, and is fitll a good Port, which is in the Power of the Turks; fo is Baluclarea, which is ftill a better 'Port, and, if we may depend upon the Turkith Writers, is not exceeded by any in the World, either for the Depth of Water, or Security from Winds. The Town of Cbirck, upon the Streights of Daman, has alfo a very fine Port, but it is an open Place, and belongs to the Tartars. The Capital of this Country, properly fpeaking, is Bafcia Sarai, which is the Refidence of the Khan, was taken by the Ruffrans in the late War, and totally deftroyed. The Khan of the Tartars though a Sovereign Prince, is appointed and depofed by the Grand Signior, but he is always fucceeded by a Prince of his own Fanily, and this prefumptive Succeffor, whether he be the Brother or the Son of the reigning Prince, is ftiled Sultan Galga. The fecond Prince of the Family is ftiled Hor Bey, the third Noradin Bey, and the reft of the young Princes have particular Titles. It is to he obferved of the Tortars in general, that even the meaneft and moft ftupid of then is fo much Mafter of his Genealogy, as to know exactly of what Eamily he is defcended, and to what Tribe his Family belongs. The Truth of the Matter is, that they refemble exactly Higbland and Iribl Clans, and like them, are commanded by. Chiefs.

Every diftinct Family or Clan of the Tartars is by them filed Horda, and the chief Murrfa, or as others write it, Mirza. Amongtt the Crim Tartars there are four great Tribes, to which all their Hords belong, and the Chiefs of thefe four Tribes are the Councellors of the Khan, without whofe Confent he can undertake Nothing of Importance. Hereditary Right is the fundamental Law of all the Tertars, and the Dignity of Mir$z a$, or Chicf, defcends from Father to Son. The Khan of Crim Tartary can bring eighty thoufand Men into the Field, buc his Contingent, when called to affitt the Grand Signior, confits of thirty thoufand Horfe. All the World knows, that thefe Tartars are very far from being handfome, but they are, generally fpeaking, brave, hardy, active, and enterprizing, and their Horfes refemble them, for worfe looking, or better Bealts for Service, the World does not produce. As for Riches, they confift in Horfes and in Slaves; and as for their Manner of Living, it is equally coarle and barbarous in the Opinion of all other Nations, and honourable and happy in their own. They are very hofpitable and kind to one another, fo that every Man is at honie in his Neighbour's Houfe. Neither are they lefs civil and refpectful to fuch Strangers as come anong them, who are very welcome to what they have, and would be as welcome if they had more. One Thing is remarkable, when any Stranger comes to their Tents, he is ferved by their Children, and not by their Slaves, let the Quality of the Matter be what it will. A Gendeman who was in the Service of Cbarles XII. paffing
through this Country in his Way to Bender, where that Monarch then was, lodged in the Tent of a principa Mirza, and when it was Time to go to Reft, his Son made up for the Stranger a Bed of Skins, by the Side of which he fet a little Stool, with a Pipe, a Box of To bacco, and a Bottle of excellent Sherbet. In the Morning he came and rolled up the Bed, prefented him Cakes, Butter, Coffee, and Milk, and brought him likewife his Boots. The Father, who was a Kind of Prince, when the Gentleman expreffed fome Aftonifhment at his putting his Son upon fuch Offices, made him this Anfwer; "Friend, this World is a Lottery, " in which there are many Blanks to a Prize; though I " have many Slaves, yet by the Fortune of War my Son " may become a Slave; it is fit therefore he fould "learn to behave in all Conditions; the Khan does "the fame Thing; and befides, let me tell thee, Stran" ger, that among the Tartars, we hold the meaneft "Office done to a Friend as the higheft.Honour, and "therefore never fhare it with our Slaves.

As the Tartars are chiefly known to the reft of the World, by their Excurfions, we cannot defcribe them better, than by flowing in what Manner they aft on fuch Occafions, wherein, without doubt, they difcover an extraordinary Genius for this Manner of making War, which however barbarous it may feem to us, anfwers all the Ends of War to them, by furnifhing Slaves and Booty in Abundance, which fupplies then with the Means of Happinefs in Time of Peace. It is very true that they run through great Hazards and Hardfhips in Time of War; but then thefe Hazards and Hardfhips are all that they fuftain, for when they return to their Tents, they are free and independent, have neither Care nor Solicitude, but are Princes in their own Family, and live in what Manner they like beft, without any Apprehenfions or Conftraint. To us, indeed, even their Repofe and Luxury appears a moft fhocking and hideous Courfe of Life ; but it appears otherwile to them ; and, after all, if there be any Thing certain in this World, it is this, that the true Standard of Happinefs is Opinion. But to come to the Point; every Tartar that goes into the Field, carries with him two Horfes, which are taught to follow without being led, and are confequently ufeful to, without embarrafing their Mafter. On thefe Horfes they lay a Sack of Rye Meal, and another with Bifket and Salt, which is all the Baggage and Provifions wherewith they are encumbred. It is only a few of the Commanders that are provided with Tents; the reft pafs the Night in the following Manner. They carry with them four fharp Stakes, which they drive into the Ground, and upon thele they fix their Mantle, which ferves for a Bed; their wooden Saddle fupplies the Place of a Pillow, and a coarfe, thick Cloth, which is thrown crofs the Horfes Back under the Saddle, becomes a Coverlid. The Horfes are tied to the Pickets with pretty long Cords; and while their Mafters fleep, the Beafts very handily remove the Snow with their Forefeet, and feed upon the Grafs that is under it, taking now and then a Mouthful of Snow to moiften it. When a-Horfe tires, his Mafter cuts his Throat upon the Spot, and diftributes his Flefh among his Friends, who make him the fame Compliment when Occafion offers. The beft Part of the Flefh they cut in Slices, of an Inch thick, and thefe they place very -neatly under the Saddle of the Horfe they ride upon. When they have travelled three or four Leagues, they difmount, turn all the Pieces of Flefh, and mix then very carefully with the Sweat, which they turn up with their Fingers, then to horfe again, and at Night they fup upon this dainty Difh, which they take ready drefs'd from under their Saddles.
In this Manner they will traverfe two or three hundred Leagues of Ground, without ever lighting a Fire, which they carefully avoid, to prevent being difcover'd; and they chale the Depth of Winter for their Expeditinos that the Bogs, Lakes, and Rivers being frozen, they may avoid all Interruptions, and profecute their March with greater Expedition. Thus the Tartars march one hundred in Front, that is three hundred Horfes; every one of them has two, whichferve for Re-
lays, as has been faid before ; their Front may extend eight hundred or one thourand Paces, and they are eight hundred or one thoufand in File, which reaches four long Leagues, or three when they keep clofe; for at orher Times they extend above ten Leagues. This is wonderful to thofe that have not feen it, for eighty Thourand Tarters make up above two hundred thoufand Horfes. Trees are not thicker in the Woods than Horfes are at that Time in the Field; and to fee them at a Diftance, they look like a Cloud rifing in the Horifon, which increafes as it rifes, and frikes a Terrot into the boldeft; I mean thofe who are not ufed to fiee fuch Multitudes together. Thus thefe mighry Armies march, halting every Hour about half a Quarter of an Hour to give their Horfes Time to flale; and they are fo well managed, that they do it as foon as they flop; then the Tartars, alight and pifs too. They remount immediately, and go on, all which is done only by the Signal of a Whirlte; and when they are come within three or four Leagues of the Borders, they lie fill two or three Days in fome Place chofern for that Purpofe, where they think they are conccaled; there they give out Orders, and refrefh their Arnyy, which they difpofe of in this Manner: They divide it into three Parts, two Thirds are to compofe one Body, the other Third is fubdivided into two Parts, each making a Wing, one on the Right, the other on the Left. In this Order they enter the Country.

The main Body moves nowly, which, in their Lan. guage, they call Cocbe, with the Wings, but continually without hajting Day or Night, allowing but an Hour to refrefh till they are got fixty or eighty Leagues into the Councry, without doing any Harm. But as foon as they begin to march back, the Body holds the fame Pace ; then the General difmiffes the two Wings, which have Liberty, each on its own Side, to ftray ten or twelve Leagues from the main Body; but that is to be underflood Half of the Way forward, and the other Half Sideways each Wing, which may confift of eight or ten thoufaind Men, is again fubdivided into ten or twelve Squadrons, of five or fix hundred Men each, who run up and down to the Villages, encompafs them, making four Corps de Garde about each Village, and great Fires all the Night for Fear any Peafant fhould efcape them : Then they fall to Pillaging and Burning, kill all that make any Refiftance, and take and carry away all that fubmit, not only Men, Women, and Sucking Babes, but the Cattle, Horfes, Cows, Oxen, Sheep, Goats, $\mho c$. As for the Swine, they drive and fhut them up in a Barn, or fuch-like Place, and fire the four Corners; fo great is the Loathing they have. for thofe Creatures. The Wings being allowed to fray but ten or twelve Leagues, (as has been faid) return with their Booty to their main Body, which is eafily done; for they leave a great Track, marching above fifty in Front; fo that they have nothing to do but to follow, and in four or five Hours they join their Body again, where, as foon as they are come, two other Wings, confifting of the like Number as the former, go out on the Right and Leff, to make much the fame Havock ; then they come in, and two others go out, and fo continue their Excurfions without ever diminifhing their Body, which, as has been mentioned, makes two Thirds of the Army, and move gently, to be always in Breath and ready to fight their Enemy, if they fhould meet them, tho their. Defign is not to meet, but to avoid them as much as poffible. They never return the fame Way they broke in, but take a Compars the better to efcape; for they always fight in their own Defence, nay, and they mult be forced to it, without they know themfelves to be ten to one ; and yet would they confider of it before they fell on; for thefe Tartars do not enter Poland to fight, but to pillage by way of Surprize. When the Polanders meet them, they make Work, forcing them to get home fafter than their ufual Pace. At other Times, after they have fufficiently plundered and robbed, they enter upon the defart Plains in the Frontiers, thirty or forty Leagues in Length, and being in that Place of Safety; make a great Halt, recovering Breath, and put-
ting themfelves into Order, if they were in any Confs fion, on Account of meeting the Polanders.

At their Return from fuch an Incurfion, the Khan receives his Tenth of the whole Boory, which is afterwards divided amongt the feveral Hords, and every Mirza receives the Tenth of the Shate that belongs to his Hord; after which, what remains is divided fairly and regularly amongft all that ferved in the Excurfion. It is, undoubtedly, one of the moft fhocking Spectacles that can be beheld, to fee the unhappy People of all Ages, Ranks and Sexes, that have been thus carried away, feparated from each other, and torn away by their relentlefs Miafters, who either keep and employ them in fervile Work, or fell them, if they think proper, to the Turks, Perfans, Circofians, or any of the adjacent Nations, or to the Merchants who come up into their Countries on Purpofe to buy Slaves. It is from their Fortune in thefe Kind of Excurfions, that the Tartar Princes become rich and potent; for what they receive from their Parents is very inconfiderable, and they make no Scruple of telling Strangers, when they admire the Number of their Tents, Horfes, Cattle and Slaves, that what they have, was acquired by their Sword and Bow ; and that if they had been lefs lucky in their Expeditions, they had been as poor and as miferable as any of their Subjects. By leading this Kind of Life they become very active and vigorous, capable of enduring prodigious Fatigue, fo as to go without Sleep for many Nights together, and with little or no Food for many Days; but when they come to have more Leifure, they will fetch this up by fleeping forty eight Hours upon the Stretch, and will crowd three or four Meals into one. Their good and bad Qualities are peculiar to themfelves; and feem to be derived entirely from the Kind of Life they lead; for though they will fight very bravely, yet they muft be forced to it, chufing much rather to fly, if it be practicable. They will drink very freely upon certain Occafions, but upon fuch Occafions only, for atother Times they are both abftemious and fober. The Crim Tarters are very far from being jealous, and are, generally fpeaking, content with one Wife, feldom making ufe of their Slaves as Concubines; but then they are mercilefs Mafters, treat their Slaves in the fame Manner as thelr Cattle, and fell them with as little Ceremony. Under Misfortunes they are patient, or rather fullen, but what little Education they have makes fome Difference amongtt them, as appears by fuch of their Khans as are banifhed to Rbodes, which is the common Place of their Exile when depofed, where they live very handfomely, and without any Dejection of Spirit. Indeed this Misfortune happens fo frequently, that they cannot be much furprized at it. In the Court of the Khan's Palace at Bafcia Saray, there are two Tombs of Princes that died in Poffeffion of that Dignity, and, it is fuppofed, were erected there as Curiofities in that Refpect. I have dwels the longer upon this Subject, becaufe I take it to be both inftructive and entertaining.

In order to apprehend clearly the Nature of our Author's Voyages and Travels, we muft confider the Countries that lie upon the Black Sea, which is every where fhit in by the Land, except at the narrow Streights of Confantinople. On the Weft-fide lies the European Coaft, viz. the maritime Parts of Moldavia, Bulgaria, and Romania, extending from South to North, that is, from Confantinople to Oczakow, in a ftreight Line, about three hundred and twenty Miles. On the North-fide lies the Little Tartary, the Peninfula of Crim, and the great Country of Circefia, that circumferibe the Palus Meotis, which communicates with the Black Sea by the Streights of Daman or Theman, which have the Peninfula of.Crim on one Side, and Circafia on the other. Thus it appears, that Circafic makes the North Eaft Boundary of the Block Sea, and ftretches itfelf quite to the Cafpian. The Countries lying on the Weft-fide of the Black Sea, and to the South of Circafha, are Mingrelia, Immoretita, and Guriel, of which our Author has given a large and very good Decription.

Thefe

Thére Countries are all mountainous and narrow, having behind them towards the Cajpian, the large Country of Georgia, which borders immediately on the Perfan Dominions, having Circafia on the North, the Countries of Mingrelia, Immoretta, Guriel and Armenia on the Weft, the Cafpian-Sea on the Eaft, and the Territories of Perfia to the South. The feveral Nations that inhabit thefe Countries are, properly fpeaking, Tartars, or very little better; and though there are fome Towns, and even Cities, yet moft of the Inhabitants live in Tents. The Princes of the Circafians, are hereditary Chiefs of Clans, like other Tartars, and it is certainly a Degree of Complaifance to efteem them Chriftians It muft be however allowed, that they are not quite fo barbarous, or to fpeak with greater Propriety, fo far removed in their Manners from ours, as other Tartars, notwithftanding their unnatural and deteftable Cuftom of felling their Children; for it is certain that they take a good deal of Pains in their Education, but with no other View than that of bringing them to a better Market. The Boys, befides Riding, Hunting, Shooting and martial Exercifes, are taught feveral Languages, and as they are, very active in their Perfons, have quick Wits, and are of bold and enterprizing Natures, they rife frequently to great Perferments, both in Turkey and in Perfia; as for the Girls they are likewife taught the Turkibs and Perfian Tongues, Mufic, Dancing, and to repeat amorous Novels and Romances. If it may be accounted wonderful to fee Parents part with their Children with fo much Eafe as they do, it is certainly not at all lefs ftrange, to fee the Children quit their Fathers and Mothers not only without Pain, but with the utmoft Alacrity, the Girls more efpecially. This arifes from the Stories they are told, of the vaft Fortunes that their Countrywomen have made in different Parts of the World, which fills them with afpiring Thoughts, and to fay the Truth, their Slavery is none of the hardeft, for the Merchants who buy them, take as much Care as is poffible to improve their Education,
and are fo far from making any Attempts upon their Chaftity, that they are the moft jealous Guardians of it in the World, becaufe all the Hopes they have of fe!ling them to Advantage, are founded in the extreme Fondnefs the Mabometans have for Virgins, and when they are fold, it is at fo high a Price, that thofe who buy them, muft be both able and difpofed to maintain them in Affluence.

There is no need to add any Remarks on the remaining Part of this Section, becaufe whatever requires farther Explanation, will be fet in a clear Light in the fubfequent Sections; only it may not be amifs to obferve, that fince the Declenfion of the Perfian Empire, the Ruffians have taken many of the Circafian and Georgian Princes under their Protection, and it is highly probable, that in Time the reft will follow their Example, which perhaps may render the Country more acceffible, and prove the Means of drawing the Inhabitants our of their prefent State of Barbarifin. If this could be done, and they once civilized, and brought under one Sovereign, or even two or three that lived in tolerable Harmony with each other, there is do doubt that they might be able to defend themfelves againft any that fhould attack them, and by the Happinefs of their Situation, between the Euxine and Cafpian Seas, and the many valuable Commodities their Country produces, they might very fpeedily eftablifh a much more profitable, as well as reputable Commerce than that which they have hitherto carried on. The late Scbab Nadir, who had great Views with refpect to Trade, was very defirous of forcing a Paffage to the Black-Sea, where he intended to have eftablifhed a Port from which he expected vaft Things, but very probably thefe great Defigns will fall with him, and as the prefent Generation is not like to fee his Equal, we muft leave to Pofterity the Hopes of beholding thefe Countries and their Inhabitants in a better Situation than they are at prefent, for which they feem to have been defigned by Nature; in a worfe, however, they cannot well be.

## SECTION II.

A copious and circumftantial Defcription of the great Empire of Perfia, its Situation, Extent, Diftribution of its Provinces, Climate, Rivers, Seas, Soil, Produce, and the chief Cities throughout the Country, fo as to afford a perfect Idea of its Condition, in paft and prefent Times.

Collected from the Writings of the moft famous Travellers, particularly from thofe of Herbert, Chardin, Tavernier, Thevenot, Le Brun, and others, their Several Remarks and Obfervations being all digefted into a regular and eafy Method.

1. The Situation and Extent of the Perfian Empire, with a fuccinct Account of the Reafons woby a clear and perfect Notion of the Territories robich compofe this Empire, is of fuch Importance towards a right Idea of general Hiftory and Geography. 2. A difinct and accurate Defcription of the feveral Provinces under the Dominion of the Perfian Emperor, their ancient and modern Names, Situation, Extent, cloief Cities and Ports. 3. The Air and Climate of Perfia in its different Parts; with an Account of the bot and fiffing Winds fo dangerous to Travellers on the Sea-Coafts. 4. The Rivers in this Country, and the various Metbods made Uje of to diffule the Water by Canals and Aqueducts; and an Account of the Seäs upon which it borders. 5. Of the Appearance of the Country in general, and of the Diverfity of Soils in Perfia. 6. Of the particular Husbandry ufed in tbis Country, the Produce of arable Lands and Gardens. 7. Of the Variety of Fruits, Trees, Flowers and Shrubs that grow therein. 8. Of medicinal Drugs that are brougbt from Perfia, particularly Opium, Affa Fœtida and Bezoar. 9. A large and curious Account of the Animals, tame and wild, in the feveral Provinces of Perfia. 10. Of the

- Forols, Birds and Fi/b in this Country, and the Reafon why the latter is fo. Scarce at Ilpahan. Ir. Of the Minerals in Perfia, and of precious Stones, particularly the Turquois, beld to be peculiar to this
Country. 12. Of the Manner of Building in Perfia, how well adapted to their. Climate, and of the

Metbods ufed to keep their Houfes cool and pleafant, even in the botteft Seafons. 13. A particular. DeJcription of the Capital City of Ifpahan or Spahawn, with its pectuliar Beauties and Blemifles.: I4. $A$ dijtinct Defoription of the Royal Palace and of the Imperial Molque. 15. Of the Bagnio's, Gardens and Bridges in the City of Ifpahan, and in its Neigbbourbood. 16. A large Defcription of the Borough ar Suburb of Julpha, with an Account of the Armenians who inhabit it.0 17. The noble City of Schiraz delcribed, reith an Account of the adjacent Country, and its Produce. 18. An Account of the noble Antiquities at Tchelminar, the Remams of the ancient Perfepolis, jufly efteemed the mof glorious Anc tiquity in the World. 19. Of otber Places of Note in Perfia, more efpecially upon its Sea-Coaft, and of the Defgin of Shach Nadir to bave removed the Capital of the Perfian Empire, wittb the Reajons upon wobich that Project was founded. 20. A. Comparifon between the paft and prefent State of Perfia, in Regard as well to the Fertility and Riches of the Country, as of the great Cities and Ports. 21. Remarks biforical, political and critical, upon the foregoing Secition.

1.7HERE is fcarce any Country in the World, which makes a greater Figure in Hiftories facred or prophane, ancient or modern, than this of which we are fpeaking. In the Scriptures the Deliverance of the Fewes by Cyrus, the Protection chey received from his Succeffors, the memorable Prefervation of the whole People from the dark and deep laid Plot of Haman, all refer to this potent Empire and its Monarchs. In Reference to the Greek Hiftory, the earlier Parts of it turn entirely on the Difputes between the free States of Greece and the great King, as the latter contain nothing more than the Hiftory of the Subverfion of the Perfan Empire by Alexander the Great, and the Divifion of its feveral Provinces after his Deceafe, among his Captains. In Regard to the Roman Hiftories again, we find the Partbians continually difputing the Progrefs of their Arms in the Eoff, and the moft confiderable Part of the Conftantino* politan Hiftory before the Irruption of the Saracens proved fatal to both Empires, comprehends the Difputes between the Succeffors of Conftantine the Great, and the Emperors of Perfia. From the Time the Saracens became Mafters of this Country, the Succeffion of their Caliphs forms a principal Branch of the Oriental Hiftory down to the Extinction of their Dominion. Since that Time the feveral Conquerors of this Empire have fufficiently diftinguifhed themfelves to deferve Notice, and even the Frequency of Revolutions in this Country, make the Hiltory of it more curious and more entertaining. We know very little of the Etymology of the Word Perfaa, fome fay it was fo called from the Hero Perfeus Son of Fupiter and Danae, but that feems to be a very ridiculous Fable; others derive it from PerSes, a Nobleman of that Country, in Times of great Antiquity, but with Refpect to this alfo, there wants both Probability and Proof; neither is the third Account of the Matter, which derives its Name from $P_{a-}$ ros, that fignifies a Horfe, very fatisfactory; and as for the modern Perrian Word Fars, it is vifibly derived from Perfa, and therefore cannot help us to explain it. As to the Oriental Writers, they know it not at all by this Name, but ftile it conftantly Iran. In order to apprehend the Meaning of this Name, which is ablolutely neceffary to the Underftanding their Hiftories, we are to know, that an ancient King of this Country, or rather of the Upper Afia, whofe Name was Ferri doun, had two Sons, Tour and Irag, who fucceeded him in his Dominions, the former had all the Country on the other Side the River Oxus, which by the Way, the Orientals ftile Gibon, and the other the Country on this Side. Hence arifes the Diftinction of all the Countries in the Upper Afra (Cbina and the Indies excepted) into Touran and Iran, the former comprehending great Tartary, and all the Countries bordering or depending upon it, and the latter Perfia, in like Manner, with all its Dependencies. As for the modern Writers in the Perfan Tongue, as they ftile their Sovereign Sbab, fo they give his Dominions the Title of Sbabifan, or the Territories of the Sbab.

We will proceed next to the Situation of this Country, and this is beft fhown, by marking the Dominions of thefe Princes that confine it; for as to the diftinct and precife Limitations of this Empire, it is impoffible to lay them down with Accuracy or Certainty, becaufe they depend upon the Power of its Monarchs, which

VoL. II: $\mathrm{N}^{-12 g .}$
fluctuates every Day. On the Eaft it has the Dominions of the Great Mogul, the Ocean and the Gulph of Perfia towards the South, the Territories of the Grand Signior on the Weft, and the Country of Circaflza, the Cajpian Sea, and the River Oxus, which divides it from the Usbeck Tartary, on the North. It may not be amifs to oblerve, that the Northern and Southern Boundaries feldom or never vary, as being fixed by Nature, but on the Eaft and Weft the Perfans fometimes encroach upon, but in later Times have been oftener encroached upon by their Neighbours, as will appear more clearly when we come to fpeak particularly of its Provinces.

As to its Extent, it reaches from South to North about twenty Degrees, that is, from twenty-five to forty-five Degrees of North Latitude. It contains pretty near the fame Number of Degrees of Longitude, the neareft of its Provinces lying in the Longitude of fortyfive, and the moft diftant about fixty-fix Degrees Ealt from the Meridian of London. According to the ordinary Computation, allowing for the Divifion made by the Cafpian Sea, it is a Square of between eleven and twelve hundred Miles, which fhews plainly, that it is one of the moft confiderable Countries of $A / \beta a$; and if it was as thoroughly inhabited as the Excellency of its Situation, Climate, and Soil deferve, its Monarchs would be, doubtlefs, as powerful as any fovereign Princes in the World; though at prefent, from a Multitude of concurring Accidents, it feems to be thinner in People, and weaker in Point of Government, than any of the othêr four Afatick Empires. As Perfia, properly fo called, is but a very fimall Country in Comparifon of what now goes under that Name, fo the different Times and Occafions by which the other Diftricts that now depend upon it were annexed thereto, render it extremely difficult to fix the Number, the Names, and the Situation of its Provinces, about which hardly any two Geographers or Travellers have been hitherto able to agree; therefore the Reader will not think it ftrange, if the Account we give of them differs from thofe he has met with before.
2. In order to deliver as plain an Account of this Matter as is poffible, we fhall obferve, that the moft accurate of the Perfian Writers themfelves divide their Country into thirteen Provinces, and therefore it appears moft reafonable to follow that Divifion; and it may likewife be convenient to purfue their Method of defrribing them, as this is a Thing altogether arbitrary, and there feems to be the fame Caufe to take it one Way as another, provided that when the Method is once chofen it is clofely purfued, that the Reader may be able to trace ic exactly, without Confufion, and even to form in his Head, as it were, a Scheme of the whole Country that is laid before him. We fhall begin then with the North Eaft, and fo paffing along Southward, defcribe all the Countries of Perfia that lie towards the Frontiers either of Tartary or India. We Shall then defcribe the Provinces on the Ocean and the Perfian Gulph, together with fuch as lie within Land ; thofe on the Frontiers of the Turkigh Empire will follow thefe, and we fhall end with the Provinces that lie North Weft and North on the Coaft of the Cafpian Sea.
I. Aftarabat, or Eftarabat, is fituated on the Coaft of the Cafpian Sea, to the South of the Opening of the River Amu or Oxus ; it hath Cborafan on the Eatt, and
on the South the Province of Mafanderan, on the Weft the Cafpian Sea, and Part of Tartary on the North. It is but fmall, having thirty five Leagues in Length from Weft to Eaft, and fifteen in Breadth from North to South; for which Reafon many of our Geographers include it within the great Province of Cborao fan. In regard to Fertility, as well as to its Climate, there is not a finer Country in $P_{\text {erfia }}$. A Ridge of Hills that run through it furnifh abundance of fmall Rivulets, and fome fine Rivers, that running through it into the Cajpian Sea, cloath, the Country for a great Part of the Year, with continual Verdure. The Capital of this Province has the fame Name with the Province itfelf, and is one of the beft built Cities in Perfia; and as it is a Frontier towards Tarta$r y$, it is tolerably fortified, and has commonly a good Garrifon. It ftands upon a Gulph of the fame Name, and has a very good Port for fmall Veffels that do not draw any great Depth of Water. There are in it both Silk and Woollen Manufactures, and the Inhabitants drive a great Trade in a Sort of Camblets, that are much efteemed both for Beauty and Strength The Country about is well cultivated, and as for the Weftern Part of the Province, it is a perfect Orchard, abounding with Fruits of all Kinds, as well as with fine Trees for Shade and for Timber ; but the fame Thing cannot be faid of the Eaftern Part of the Province, which being expofed to the Inroads of the Usbeck Tartars, is fo depopulated, that in Spite of the Kindnefs of Nature, it looks like a perfect Defart.
II. Cborafan is eiteemed the faireft, richeft, and moft fertile Province of the whole Empire, and is the Country known to the Ancients by the Name of Bactria ; it is divided by the Mountains of Balck from Great Bucbaria, has the Principality of Candabar on the Eaft, the Province of Segiftan on the South, the Provinces of Terack and Mafanderan to the Weft, and the Province of Eferabat and the River Amu on the North. It is thought to be about one hundred German Leagues in Compafs. The Climate is very temperate, the Soil extremely fruifful, abounding with rich Fruits, fine Pafturages, producing excellent Corn, Wine, and Silk, and affording befides rich Mines of Gold, Silver, and precious Stones. It was formerly the beft peopled, the beft planted, and the beft built Province in Perfia, but of late the Incurfions of the Usbeck Tartars have laid one half of it wafte; and though for a few Years they were kept in Awe by the Shah Nadir, who drove them out of this Country, for which he had a peculiar Affection, yet it is not to be fuppofed, while the Affairs of the Perfian Empire are in Confufion, that they can be long reftrained. The chief City of this Province is Mefchid, or Thous, of which we fhall have Occafion to fpeak more hereafter ; and befides this, there are many other confiderable Places, fuch as Nichabour, Herat, T'cbarkez, Amonove, \&c.
III. Sabiuftan, bounded on the North by the Provinces of Chorafan and Candabar, which latter is fometimes reckoned a Part of this Province, on the Eaft by the Dominions of the Great Mogul, and on the South and Weft by the Province of Segiftan. The Climate is tolerable, but the Soil is extremely mountainous and barren; the Inhabitants are, generally fpeaking, boorifh and rude, at leaft in Comparifon of the reft of the Perfrious, yee the Capital of the Province, which is the City of Boff, is large, well built, well inhabited, and the Country about it is exceedingly well cultivated ; all which arifes from its lying in the direct Road to the Indies. It is a Place of great Trade, abounds with Manufactures and Strangers from all Countries, and with the Diftrict about it, looks fo very unlike all the reft of the Province, that it feems to have dropt into it from the Clouds. Some other Towns there are, but of no great Importance, only it is fit to remark, that the People of this Country make the hardieft Soldiers, and are the beft Infantry in the Perkan Empire.
IV. Segiftan, which feems to have been the Drangiana of the Ancients, is bounded by Sabluftan on the North, the Territories of the Great Mogul on the Eaft, by the Provinces of Makeran on the South, and by Part of the Province of Kerman on the Weft. This Councry is to-
lerably fruitful, and is particularly remarkable for its Palm-trees and its excellent Dates, but it is greatly expofed to Winds, which fometimes drive the Sands in fuch a Manner, as to cover the Houfes, and even whole Villages. It was formerly famous for its Gold Mines, which, if we may cruft the Perfian. Authors, were the richeft in the World, the Veins fometimes pufhing to the very Surface, in which they are countenanced by fome very ancient Greek Authors. This Province has produced both Heroes and learned Men, who have from thence borrowed the Sirname of Segifanis, which by the Way is a Practice very common in Perfac. The Capital is the City of Zereng, more commonly ftiled Segitan, but a Place of no great Note. There are befides two other Places of fome Figure in this Country, Gobin and Mafich
V. Macran, or Macberan, fuppofed to be the ancient Gedrofia, is bounded by Segiftan on the North, by the Dominions of the Great Mogul on the Eaft, by the Ocean on the South, and by the Province of Kerman towards the Weft; it is looked upon as one of the worft Provinces in Perfa, the Air being very indifferent, and the Soil barren; it is but indifferently peopled, and the Inhabitants are efteemed barbarous and faithlefs. The chief Towns in it are Makeran, Palir, and Geft; the North-part of it is entirely a Defart of ten Day's Journey; it has indeed a Port at Guadel, but of no great Confequence, for it is capable of receiving only fmall Veffels, and is befides not very fecure.
VI. Kerman, which is without doubt the Caramania of the Ancients, a very large and noble Province, which may be well efteemed one of the moft beautiful in PerSia. It is bounded by Segitan and Makeran towards the Eaft, the Ocean towards the South, the Province of Fars towards the Weft, and by a Defart which feparates it from the Province of Yerac Agemi, towards the North. Some Part of it is mountainous and barren enough, bus the Valleys are wonderfully fertile, producing Fruits, Roots and Flowers in vaft Abundance; it is in this Province that fuch vaft Quantities of Rofes grow, as enable the Inhabitants to carrry on a confiderable Trade in Rofe-water, which is highly efteemed not only through out all the Eaft, but in Europe; they have alfo very rich Mines in this Country, particularly thofe of Turquoijes, of which we fhall fpeak hereafter; admirable Steel, out of which they fabricate all kind of Arms, and they have befides great Manufactures of Tapeftry. But after all, the principal Glory of this Country is its Sheep, the Wool of which is efteemed the fineft in the World, and they have a very fingular Way of coming at it, for at a certain Seafon of the Year they pull it from the Backs of the Animals with their Fingers, fo that the Sheep are entirely naked; this Wool is all wrought in its natural Colours, and without Dye, it is of three Sorts, the firf brown, the fecond of a fpeckled grey, and the third of a Milk-white ; this laft is the moft efteemed; but there is none of it that ever goes out of the Country, for it is intirely employed in making Garments for their Moulbas, or Men of the Law, and Priefts, who wear nothing elfe. There are in this Province more of the Gubers, Gours, or FireWorfhippers, who are the Remains of the ancient $P$ erfians, than in all the Empire befide; and thefe frugal and induftrious People manufacture from the other two Sorts of Wool, feveral Kinds of light Stuffs, which in Point of Beauty and Luftre are not at all inferior to Silk. The City of Kermen is the Capital of the Province, it is large and well peopled, Provifions are cheap there, and in the Neighbourhood they have a Manufacture of Earthern Ware, which comes very near Porcelain. The Fort of Gambroon, and the Inand of Ormus, are by fome Authors reckoned dependent upon this Province, which has produced feveral great Heroes, learned Phyficians, excellent Poets, and in a Word, famous Men of every kind; amongtt the reft; the celebrated Acbmet Kermani, who was Poet Laureat to Tamerlone, and compofed in Perfann Verfe the Acts of Alexander the Great, of Gingicchan, and of his Patron.
VII. Fars or Farjitan, as the Perfans call it, is the ancient Perfia Proper, the Orientals fay, that if derives

Chap. II.
of the Empire of PERsia.
its Name from Fars, the Son of Azaz, that is, Arphaxad, the Son of Shem, the Son of Noab; but what Authority they have for this, is more than I can determine; it is bounded on the Eaft by Kerman, by the Gulph of Perfia on the South, by the Province of Cbufiston towards the Weft, and by a great Defart called Naubendigbian upon the North, which reparates it from Yerac Agemi. This fandy Defart is of a vaft Extent, and reaches to the Frontiers of the Province of Cborafan; it is the fame we have mention'd before, in fpeaking of the Province of Kerman. This is a rich and noble Country, abounding will all the Neceffaries of Life, but more efpecially famous for producing in the Neighbourhood of Sbiraz, the richeft and fineft Wine in Perfa; but the Imperial Grape of Tauris is efteemed moft pleafant and lufcious for Eating. They have alfo an admirable Glafs Manufacture in this Province, where they blow Bottles of an enormous Size, fome that are faid to hold three Gallons of our Neafure; but they keep their Wine in earthen Veffels, as we fhall have Occafion to fhow hereafter. The chief Cities in this Country are Sbiraz, which will be defcribed elfewhere. Lar, formerly the Capital of a little independant Principality; Bander Congo, a Port upon the Perfian Gulph, to which we may add, though as I have faid fome comprehend it under the Province of Kerman, the famous Port of Gambroon, or Bander Abaff. On the oppofite Shore of Arabia, there is a fmall Territory, called from the principal Place therein, Elcatiff, which formerly belong'd to the Perfians, and was fometimesa annexed to the Government of Farfitan, which is one Reafon why I mention it here; another is, that in feveral Màps, and in many oriental Authors, the Perfian Gulph is from hence called the Sea of Elcatiff.
VIII. Cbuffitan, the Sufiana of the Ancients is bounded on the Eaft by the Provinces of Farfiftan, and $\mathcal{V e r a c}$ by the Gulph of Perfja on the South, by the Territory of Baffora on the Weft, and by the Province of Curdestan on the North; the Capital of this Country is Scbouster, believed with Reafon to be the City of SbuBan, mentioned in the Book of Elther, famous for a noble Palace built here by the Perfian Monarch Artazerxes, who is the Abafuerus of the Scripture, and for the Tomb of the Prophet Daniel, of neither of which there are now any Remains, though a Perfian Author of great Credit affures us, that the latter was ftanding in his Time, and that he had feen it.

1X. Curdestan, or Curdiftan, part of the ancient $A F$ Syria, bounded on the Weft by the Dominions of the Grand Signor, by the Province of Cbufiftan on the South, by Erac Agemi on the Eaft, and by Arderbeitzan or Media on the North; it is with very little Reafon that this Country finds a Place among the Provinces of Perfia, for the Curds are a Nation that fometimes own the Protection of the Porte, and fometimes profefs a Dependance upon the Shah, but are in Reality Subjects to neither; they are, to fay the Truth, a very extraordinary Race of Higblanders, governed by their own hereditary Chiefs, and the Reafon that Iftile them extraordinary is, becaufe their Force confifts in Horfe, of which fome Chiefs can bring Hundreds, others Thoufands, and it has been known, that a Chief has brought twenty thoufand into the Field, where they behave as well as any Troops in the World. As to their Religion they call themfelves Mabometans, but except Circumfion and Abftinence from Wine, in both which they are very ftrict, they obferve no other Precepts of the Alcoran, and have neither Moulabs nor Mofques, except in two or three of their great Towns. The Mountains of which this Country is full, are rude and barren, but the Valleys are fertile and pleafant, producing great Quantities of Tobacco and Vines; of the former they make a great Profit, but they make no Wine of the latter, which they convert into Raifins. The chief City in this Country is Betlis, and befides this, there are fome other Places of Note, indifferently built, but well inhabited. Tbamas Kouli Kan attacked thefe People often, but with very little Succefs, and they have more than once defeated both the Perfians and the Turks in pitched Battles, yet they act generally on the Defenfive, and feldom fight out of their own Country.
X. Erac Agemi, or as fome write, Azemi ; the Rea fon of this Addition is to diftinguifh it from a Province of the Turki/b Empire which is called Erac Arabi, and is precifely the ancient Province of Babylon; whereas Erac Agemi is the ancient Partbia. This noble Province is bounded on the North by Aderbeitzan and Gbilan, by the Province of Cborafan on the Eaft, by Cbufistan and Farfifan on the South, and by Curdeftan on the Weft. The chief City is the Capital of the Perfan Empire; viz. Ifpaban, or Spabaren, fituate in the Latitude of 32 Degrees, 40 Minutes North, and in the 50 th Degree of Longitude Eaft from the Meridian of London; there are alfo in this Province feveral other confiderable Places; fuch as Casbin, fuppofed to be the ancient $A r f a f i a, C o m$, defcribed in the laft Section; Sava mentioned chere likewife; Hamadan, a very fine City on the Frontiers of Curdeftan, the Country about it extremely fruitful in Rice, the Mountains in the Neighbourhood fupplying feveral fine Rivulets, which render its Territory wonderfully fruitful. The Tiurks became Mafters of it by Storm in 1623, and almoft totally deftroyed both it and its Inhabitants. Calbam, which lies about feventy Miles North of Ifpaban; $\mathcal{Y e z d}^{d}$, which is fituated one hundred and five Miles to the Eaftward of that Capital.
XI. Gilan, under which the modern Perfian Geo graphers comprehend not only the Country properly fo called, which comprehend precifely the Hyrcania of the Ancients, but alfo the Provinces of Mazenderan and Tabreftan; fo that, confidered in this Light, it is a very extenfive Country, bounded by the Cafpian Sea on the North, by the Province of Cborafan on the Eaft, by that of Erac Agemi on the South, and by the great Country of Aderbeitzan on the Weft. The whole of this Province is wonderfully fair and fruitful. It is diftinguifhed from almoft all the Provinces of this great Empire by fome very particular Advantages. In the firft Place, its Situation is very peculiar, for on the one Side it is covered by the Sea, and towards the Land it is furrounded with Mountains and Rocks thar rife like fo many natural Fortifications, with this fingular Circumftance, that while they are rude, inacceffible, and terrible on that Side, which is turned towards the reft of the Provinces of the Empire, they are on the Infide refpecting this Province, of gentle Afcent, covered with perpetual Verdure and covered with Groves of Citrons, Oranges, Olives, and Figs. The very Summits of the Mountains fhaded by Cyprefs-trees and other excellent Timber, which may be eafily tranfported to the Sea-fide; for through this Rampart of Rocks, Nature has formed feveral Paffages fo wide, and with fuch a Slope, as render them perfectly eafy; and yet fo well fenced on each Side, that a fmall Barricade will render them impregnable. - Another fingular Benefit which this Country enjoys, is its unbounded and amazing Fruitfulnefs, which with very little Cultivation pours out fuch prodigious Abundance of all Things neceffary and defireable, as is fcarce to be believed; for it is equally famous for its Silk, its Oil, its Wines, its Rice, its Tobacco, and a valt Variety of Fruits. In other Parts of Perfia their Houfes are but mean, and the Moveables of the common People very coarfe; but here on the contrary, every Peafant has a good Houfe, and moft of his Furniture is made of Box, of which they have the largeft and fineft Trees in the World, and a large Garden full of Citrons, Oranges, Figs, and Vines, fo large, that the Branches of them are frequently as big as a Man's Body. A third Commodity, in fome Meafure peculiar to this Province, is a vaft Abundance of Fifh in their Rivers, and in that Part of the Cafpian Sea which wafhes their Coafts; from whence, as the People draw an immenfe Profit; fo the Shah des rives from thence a great Revenue. The Capital of this Province is Refech, which ftands in the Latitude of 37 Degrees of North, a large and populous City; befides which, there are Kesker, Aftara, and other confiderable Places within its Bounds. Two Things more deferve our Notice ; one is, that the People of this Pro. vince are of the Turkih, and not of the Perfian Religion, that is, they are Followers of Omar, and not of Ali : The other, That by the Treaty between the Emperor Peter the Great and the Shah in 1723 , this Province
was yielded to the Rufions. Mazanderan and Tabrefian are alfo very confiderable Countries, but fo like to Gilan in their Produce, that it is not neceffary to defrribe them particularly.
XII. Aderbeitzan, which comprehends the greateft and beft Part of the ancient Media, is a very noble and beautiful Country, bounded by the Province of Sibirvan on the North, by Gilan and the Cafpian Sea on the Eaft, by Erac Agemi and Curdeftan on the South, and by the River Aras or Araxis on the Weft, which divides it from Georgia. The famous City of Tatris or Tabris, which is defcribed in the foregoing Section, is the Capital of this Country, and was one of the fineft Cities of Perfia, till deftroyed by the Turks in their laft War with the Perfons, when they are faid to have put one hundred thoufand Perfons of all Ranks Ages and Sexes to the Sword. Arderil is another great and fine City in this Country, fanding about thirty Miles from Mount Touris; and Sultonia, which was deftroyed by Tamerlane, was foarce inferior to any City in Perfia, as the Ruins that ftill remain fufficiently teftify at this Day. It is ftill a good Town, containing about fix thoufand Inhabitants, but is particularly remarkable for a moft noble Mofque, in' which is the Tomb of the Founder of this City, the famous Sultan Mabomet Cbodabende. This Mofque has three great Gates, all of polifhed Steel, and the Tomb is feen through a Grate of the fame Metal, finely wrought in Foliages and Branches of Trees; and though fome of thefe are of the Thicknefs of a Man's Arm, yet they are fo exquifitely finifhed, that there is not fo much as a Joint to be perceived in the whole; from whence the Inhabitants perfuade themfelves, and would willingly perfuade Strangers, that it is made of one entire Piece, and affirm that it was feven Years in making.
XIII. Sbirven, or according to the Perfian Orthography Scbirwan, contains the Northern Part of Media, and is by many Authors made only a Part of the foregoing Province ; but we comprehend within it, for the Sake of keeping within Bounds, the little Provnice of Dageftan, and fo much of Georgia and Armenia as belongs to the Perfans; and taking it in this Light, it is thus bounded; by Circolfia and the Ruffan Territories on the North, by the Cafpian Sea on the Eaft, by Aderbeitzan on the South, and by the Turkib Armenia and Georgia on the Weft. Scbamakie is the Capital of this Province, and ftands in the Latitude of 40 Degrees 50 Minutes North, between two Mountains well fortified, and is a Place of great Trade. Derbent, or Debircan, which fignifies an Iron Gate, is a famous Pals between the Mountains and the Cajpian Sea. Baku is the only tolerable Port on the Weft-fide of the Cajpian; it is large and fafe, but not deep; the Town is Emall, but well peopled, and commanded by a Citadel; it was given up to the Ruffans by the Peace of 1723 . The Province of Dageftan is at prefent, for the molt Part, in the Hands of the Tartars, and to curb this fierce Nation, who are able to bring twenty thoufand Men into the Field, the Ruffians built the Eortrefs of St. Andrero, not far from Tarkt, which is the Capital of this Country, as Tefis is of that Part of Georgia which belongs to PerIra. . That Part of Armenia which belongs to this Country is filed Aron, and the Capital of it is Erivan, which has been before defcribed. Within the Bounds of this Province ftands alfo the City of Nackfivan, which the Inhabitants are fully convinced is the oldeft in the World, having been built by Noab and his Children upon their coming out of the Ark, of which, if you will credit them, there are ftill fome Remains on the Mountains that are not far from hence. Thus we have compleated a regular and Geographical Defcription of all the Parts of this great Empire, which will enable the Reader to comprehend perfectly all that follows in the enfuing Section. And we dare alfo affure him, that he will find it of very great Ufe towards underftanding all the Hittories of, and Travels through this Country, already publifhed, as well as the Accounts we may hereafter receive from thence, which might otherwife appear very unintelligible.
. Perfia, extending from the 25 th Degree of Latitude to the $45^{\text {th }}$, the longeft Day in the South is
thirteen Hours and 2 Half, and in the North above fifteen Hours. In 10 great an Extent of Country it is natural to fuppofe that the Air and Seafons are very different, as in Fact we find them to be. In the Middle of the Empire, their Winter begins in November, and continues till March, with Severe Frofts and Snow, which falls in great Quantities on their Mountains, but not fo much in the champain Country; from the Month of Marcb till May, the Wind is ufually high, and from thence to September they have a calm ferene Heaven, without fo much as a Cloud; and though it be pretty hot in the Day-time, the refrehing Breezes which blow conftantly Morning and Evening, as well as in the Night, make the Summer very tolerable, efpecially fince the Nights are near ten Hours long. The Air is 10 pure, and the Stars hine with that Luftre, that one Man may know another very well by their Light, and People travel much more in the Night, than the Day. In this Part of Perfia, there are very feldom any Hurricanes or Tempetts, and very little Thunder and Lightning, nor is it fubject to Earthquakes, and the Air is fo extremely dry in the Summer Seafon, that you will not find the leaft Dew or Moifture on any thing that is laid abroad all Night, or even in the Grafs, and it viry feldom Rains in the Winter. No Country is more healthful than the interior Part of Perfia, as appears by the hale Complexion of the Natives; they are ftrong and robuft, and, generally fpeaking, enjoy conftant Health. As for Foreigners, who come thither, it is a common Obfervation, that thofe who are healthy ar their Arrival continue $\mathrm{fo}_{\mathrm{o}}$, and that thofe who are fick, feldom recover.

The Air in the Southern Part of Perfia, particularly about Gombroon, is very unhealthy in the Spring and Fall: Our European Factors never pafs a Year. without a dangerous Fic of Illnefs, which frequently, carries them off. It is an ordinary Thing for two of them to agree, that if one of them die, the Survivor fhall poffefs the other's Fortune. Nor is this any great Prejudice to their Relations, for if a Man leaves private Truftees, or makes the Company his Executors, the Heir of the deceafed will meet with great Difficulties in Recovering the Teftator's Effects. The Months of fune, $7 u l y$ and Auguf are healthy enough, but fo very hot, that both Natives and Foreigners get up into the Mountains at that Time. The hot Winds which blow from the Eaftward, over a long Tract of fandy Deferts, are ready to fuffocate them, and fometimes there happers a Peftilential Blaft, which ftrikes the Traveller dead in an inftant. It rains but very feldom here, any part of the Year, and the Water they fave then is very unwholfome.
The Provinces of Georgia, Sbirvan and Adirbeitzan, are very dry and warm in the Summer, but fubject to Storms and Tempetts in the Winter, and as fevere Frofts for fix Months as any Countries on the Continent, in the fame Latitude; but as this Part of Perfa, is very mountainous, there is frequently a vaft Difference between the Air on the North and the South-fide of the Mountains, and in a few Miles travelling People think themfelves in a different Climate; but however cold the Mountains in the North may be, they are extremely healchful. On the contrary, the flat Country of Gilan and Mezenderan, which lies upon the Cafpian Sea, and was the ancient Hyrcania, is very damp, full of ftinking Moraffes, and unhealthful, infomuch that the Inhabitants in the Summer retire into the Mountains, all the Water they have being foul and corrupted in the hot Seafon; and here, and in Chorafon, it is faic Earchquakes are very common.
4. It is obfervable, that there is no Country in the World of fo large an Extent as Perfia, where there are fo few navigable Rivers; there is not fo much as one River in the Heart of the Country that will carry a Boat of any Burthen, and you may travel feveral Days Journey, without meeting with any Water whatever, in fome Parts. The River Oxus indeed which divides Perfia from Usbeck-Tartary, is a large Stream, but as there are no Branches of it, that arife in the Perfion Dominions, it is of little UJe to them, The Rivers Kur and

## Chap. II.

Aras, anciently called Cyrus and Araxes, which rife in or rather recovered this Fiihery, and are in Poffeffion of the Mountains of, Ararat, and run through Georgia, Sbirvan and Adirbeitzan, and having joined their Streams, fall into the Cafpian Sea, are much the moft confiderable Rivers in the Perfian Dominions. However, there are feveral fmall Rivulets which fall from the Mountains, and are conveyed by fubterrancous Channels or otherwife to their principal Cities.

Water being fo fcarce in Perfia, there is no Place, where they hufband it better, or have more ingenious Contrivances, to convey it to their Cities, and into their Corn-fields and Gardens. This is the Care of the Government, and there is a great Officer in every Province, who has the Charge of the Conveyance and Diftribution of the Waters. They turn all their little Rivulets and Springs to thofe Parts of the Country, where they are moft wanted; they dig Wells alfo of a prodigious Depth and Breadth, out of which they draw the Water with Oxen, in great leathern Buckers, which being emptied into Cifterns, is let out as there is Occation for the Service of the Country. They have'alfo valt fubterraneous Aqueducts, through which they convey Water twenty or thircy Leagues to the Places affigned. Thefe are two Fathom high, and arched with Brick, and at every twenty Paces Diftance, chere are large Holes like Wells, which were made for the Conveniency of carrying on the Arch without Working under Ground too far, and the more eafy repairing them. The Diftribution of the River and Spring-water, is made one Day to one Quarter of the Town, and another Day to another, as Occafion requires, when every one opens the Canal or Refervatory in his Gardens to receive it, for which every Garden pays a certain Sum yearly to the Government, particularly about I/paban; and as it is very eafy for one to divert his Neighbour's Water into his own Channel, this is a Fraud that is feverely punifhed. They give a greater Rate for River Water, than they do for Spring-water, which is not found fo proper for the Improvement of their Grounds.

Befides the Ocean, there are two Seas belonging to Perfia, one on the North, and the other on the Southweft, viz. The Cafpian Sea, and the Gulph of Boffora or Perfia, which have been already mentioned. The Cafpian Sea is about a hundred Leagues in Length, from North to South, and ninety Leagues in Breadth, and has near a hundred Rivers running into it, of which the Chief is the Wolga, at the Mouth whereof ftands Astracan but this Sea has no Communication with any other, and though fo many Rivers fall into it, there is no vifible Way by which it difcharges iffelf of its Waters, but they remain, always of the famic Height, and do not either ebb or flow. The Ruffans have in a great Meafure the fole Navigation of this Sea, which is very profitable to them, and might be made much more fo by the new Trade that has been fet on Foot, from Europe to Perfia, through Rufia.
The Sbab Nadir was very defirous of becoming a maritime Power on this Side alfo, and employed a Gentleman of a certain Country, to build him Ships of Force for this Purpofe, but confidering the Revolutions that will probably attend his Death, thefe Defigns are like to fall to the Ground. The Perfians were formerly entirely Maifters of the Gulph that feparates their Country from Arabia, for which they were in a great Meafure indebted to us, who affifted them in dilpoffefling the Portuguefe of the Illand of Ormus, upon which they had opened a very advantageous Port, allowing us half the Cuttoms arifing from the Goods imported and exported here. But Sbab Abbas the Great, thought that Confideration too large, and therefore when he tranferred the Commerce to his new Port of Gambroon, or Bander Abalfi, i. e. the Port of Abbas, he allowed the Eof-India Company no more than One thoufand Tomans, which makes three thoufand three hundred thirty three. Pound fix Shillings and eight Pence of our Money. It was in this Gulph, on the Coaft of the Ifland of Baberem, that they had the fineft Pearl Fifhery in the World, which produced annually above fifty thoufand Pounds, but in the late unfertled State of their Empire, the Arabians have feiz'd

Vol. II. ${ }^{8}{ }^{1} 129$.

## it, at leaft for the prefent.

5. As we have now given a clear Account of the Rivers and Seas of this Country, we will next fpeak of the Soil and its Produce; and in the firt Place we muft obferve, that there is not a Country in the World, which has more Mountains, and fewer Rivers than Perfar, and fome of their Mountains are looked upon to be the higheft on the Face of the Earth. Mount Tourus, which receives different Names as it branches itfelf out into different Provinces, runs quite througha the Country, from Weft to Eaf. The loftieft of thete Mountains are thofe called Arrerat in Armenia, the Mountains which feparate Media from Hyrcania, and thofe between Hyyrania and Partbia or Erak. Thofe allo which divide Fars or Perfis from Carmania are exceedingly high, the moft famous of which is called Mount farron, but they are generally dry barren Rocks, without Trees or Herbage upon them except thofe of Gylan or Hyrcania, and the Mountains of Curdeftan, which are covered with Woods and very Fruifful, where they are manured. There are valt fandy Defarts, feveral Days Journey over in this Kingdom, where there is fcarce a Drop of Water to be found, and the Land in general upon the Frontiers lies uncultivated, to difcourage their Enemies from invading them ; and in Fact there is not the leaft Subfiftence to be met with for feveral Miles, whether you enter this Empire from Turkey or India. There are however fome fruitful Plains and Vallies, in which their principal Cities ftand, which yield Plenty of Grain, and Herbage, and no Country is more fruitful, than the Provinces which lie upon the Cafpian Sea, as has been already oblerved. But then Hyrcania is very unhealthful in Summer time, which fome apprehend proceeds from the Multitude of Snakes and Infects, which lie rotting upon the Ground, when the Waters are dried up, as well as from the Foulnefs of the Water itfelf, which is fo thick and muddy, that there is no drinking it at that Seafon of the Year.
As to Perfia in general, there is not a tenth Part of it cultivated, not but that there are many Valleys which bear neither Grafs nor Grain at prefent, which formerly when greater Care was taken to turn the Waters into them, were fruifful Countries. In fome Provinces, there are hundreds of fine Aquaducts, choaked up and buried in Ruins, fo that it is not fo much a Defeet in the Soil, as the Want of People, or at leaft of Hurbandmen, which renders Perfica barren. The Soil in fome Parts is a hard Gravel, and in others a ftiff whitifh Clay, almoft as hard as Stone, but either of them are fruifful enough, when well watered, and will bear offen two Crops, and fometimes three in the Compals of a Year ; and if we give any Credit to ancient Authors, there was not a more plentiful Country in the World than Perfia was formerly; the Reafon of this Alreration fome afcribe to the different Difpoficions of the People, who have inhabited it. The ancient Perfians, the Fire-worfhippers, it is faid, were obliged by the Precepts of their Religion, to cultivate the Soll, and it was by them accounted a meritorious act, to plant a Tree, tobring the Water into a Field, and make a barren Spot of Earth produce Grals or Grain, while the Mabome tans feem to have no Genius for Improvements, or even to keep up what their Anceftors have built or planted, but let every Thing run to ruin; however, one Reafon of this Neglect may be, that the Properties of the People are in no Security, and no Wonder they have but little Inclination to make Improvements, when they have no Certainty of reaping the Advantage of them.
6. Near great Towns they improve their Grounds with the Dirt and Dung of the Streets, but at a greater Diftance, they throw their Fields into little level Squares, which they bank about, and then turn the Water into them, letting it ftand in the Field all Night, which having foaked it , the Water is let out next Morning, and the Sun fhining with almoft perpendicular Rays upon the moint Earth, renders it fit for the Production of any Sort of Grain or Plants. Where the Ground is Light

10 P
they plow with two or three Oxen or Buffalos; but in Gilan and other Countries, where they meet with a filf Clay, it is as much as eight or ten Oxen can do to draw their Ploughs which are very large! Rice, Wheat and Barley, are almoft the only Kinds of Grain growing in Persar; Oats they have none, and little or no Rye. Their Seafons are not the fame in the North as in the South, but when they are Sowing in one Part of the Country, they are reaping in another, and in fome Places, it is not more than three Months between Seedtime and Harveft.

Their Land never lies fallow, but it is fown once every Year, at leaft, it is fo meliorated and enriched by being flowed, and the Heat of the Sun afterwards working on the Mud, that it is never out of Heart. As to the Rice, it muft be conftantly fupplied with Water till the Harveft; but for other Grain, the Land is only flowed before the fowing, to render it prolifick. Their Kitchen Gardens are well furnifhed wish moft of the Roots and Salads we have in Europe; they have no lefs than twenty feveral Sorts of Melons during the Seafon they laft, which is about four Months, the common People make them their conftant Food, thore which come to Maturity firft in the Spring are round and fmall, thofe that ripen in the latter Part of fe Seafon are the bett and largeft, fome of them weigh eight or ten Pounds, and are as fweet as Sugar itfelf ; at the Tables of Perfons of Quality they have them all the Year round, there being a Way to preferve them under Ground till the Seafon returns again, and it is faid, fome Perfons will eat eight or ten Pound of Melons at a Meal, without being fick. The beft Melons grow in Cboraflan near Tartary, and they are carried as far as Ifpabon for the Shah's Ure, and as Prefents to their Friends. Cucumbers are another Fruit much eaten by the common People, one Sort of them has fcarce any Seeds in it, and is eaten without paring or drefling, and is not reckoned unwholfome.
7. Of Grapes they have feveral Kinds, and fome of them are fo large, that a fingle Grape is a Mouthful. They make their Wine at Ifpaban of the Kifmim's, a little round Grape, and without any Stone that can be perceived, but much the beft Wines are made at Sbiraz. They keep their Grapes all Winter, and let them hang a confiderable Time on the Vine, wrapped up in Linnen Bags; the Air is fo dry, that it preferves all kinds of Fruit as long as they can defire. Dates are reckon'd one of the moft delicious Fruits in this Country, they are no where fo good as in Perfin, the Pulp which enclofes the Stone is a clammy Subitance, as fweet as Honey; they are laid on Heaps when they are ripe, and melting, candy or preferve themfelves with out Sugrar. Foreigners are advifed to eat moderately of them, becaufe they Heat the Blood, and occafions Ul. cers in thofe who are not ufed to them, and fometimes weaken the Sight, but have no ill Effects upon the Na tives; the Tree which bears them is nender, but very tall, and like other Palms, has no Branches but on the Top, and the Fruit grows in Clufters of thirty or forty Pounds Weight ; the Tree does not bear till it is fifteen Years old, but continues bearing above a hundred Years. There are in Perfia moft of the Fruits which are to be had in Europe, and they would be in much greater Perfection, if they knew any Thing of Gardening, but they underftand neither grafting, inoculating, or the Art of managing $D$ warf-trees; all their Trees run up very high, and are loaded with Wood. They have excellent Apricots of feveral Kinds, which are in Seafon one after the other, and their Nectarines and Peaches weigh fixteen or eighteen Ounces a-piece; there is an Apricot red within, which is call'd, the Egg of the Sun; there are dried and exported in vaft Quantities; they are boiled in Water, which is thickened by the Juice of the Fruit, and makes a perfect Syrup without Sugar.
Apples and Pears grow chiefly in the North Part of Perfia, they have alfo Pomegranates of feveral Kinds, with Oranges, Quinces, and Prunes, and fuch Variety of Fruits, that Sir Fobn Cbardin fays, he has feen above fifty Sorts at an Entertainment, fome of which grew three hundred Leagues from the Place. The Piftachio Nutsare
almoft peculiar to Perfa, and are tranfported all the Worid over; here are alfo Small-nuts, Filberds and Almonds. Olives grow in Hyrcania, near the Cafpian Sea, but they neither know how to preferve them, nor draw Oil in the beft Manner from them. They have alfo Plantations of Sugar and Tobacco.
8. Among other Trees in their Gardens, they have the Cyprefs, the Palm, and the Mulberry, of the laft there are large Plantations for their Silk Worms, which they dont fuffer to grow up to be grear Trees, becauíe the Leaves are beft, when the Shoors are young. They root up the Trees therefore when they grow old, and plant their Grounds afrefh. But the Tree which is n as great Efteem as any in Perfla, is the Senna; the Body of this Tree is very large, and frequently forty or fify Foot high, and frait as the Matt of a Ship, having no Branches but on the Head of it ; the Bark is of bright Grey, and the Wood ferves them to make Doors, Rafters, and for other Ufes in Building. The Trees that are moft common in Perfia are the Plane-tree, the Willow, the Fir, and the Cornel-tree; the Plane-tree the Pcrfans imagine is a Prefervative againft the Plague, and orher contagious Diftempers, and obferve, that the Plague has never raged in Ifpaban fince this Tree was planted in their Streets and Gardens. The Trees alfo which bear the Gall Nut is very common in many Parts of Perfa, and there are Trees which yield Gunz Maftich, and Frankincenfe ; that which produces Frankincenfe very much refembles a Pear-tree, and abounds chiefly in Carmania.
There are likewife Trees which produce Manna of feveral Sorts: The beft Manna has a yellowifh Caft, a large coarfe Grain, and comes from Choraffan or Bactria; there is another Sort called Tamerisk, becaufe the Tree it drops from is fo named, and is found in large Quantities in the Province of Sufiana; and there is a third Sort gathered about Ifpaban, which falls from a Tree much like the Tamerisk, but larger; the Leaves of this Tree drop liquid Manna in Summer-time, which the Natives take to be the Sweat of the Tree congealed upon the Leaf in the Morning ; the Ground under it is perfectly fat and greafy with it, and this has as fweet a Tafte as other Manna.
The Cotton-Tree is common all over Perfa, and they have another little Tree, which yields a kind of filken Down, ufed for Quilting and Stuffing of Pillows: there is alfo a Plant, called Hannah, that bears a Seed which they beat to Powder, and colour their Hands and Feet, and fometimes rub over their Faces with it, apprehending it keeps their Skin fmooth, and preferves their Complexion ; they fometimes bruife the Leaves of it, which ferves them for the fame Purpofe.

There are found in the Defarts of Carmania, two little Shrubs of a poifonous Quality, the firft is called Galbad Samour, or the Flower that poifons the Wind fome People imagining that it is this occafions thofe killing Winds which blow in this Province in the hot Seafon; the other Shrub is called Herzebre, the Trunk whereof is about as big as a Man's L.eg, and grows about fix Foot high ; its Leaves are almoft round, and it bears a Flower like the Sweet-Briar. There are fearce any Trees to be found on the Mountains, or wild Fields in Perfia; thefe are for the moft Part deftitute of all Manner of Verdure, while in their Cities, and the Villages for three or four Leagues round them, the Streets as well as Gardens are fo well planted, that the Houfes are hardly to be difcerned at a Diftance; when you have travelled fome few Leagues, indeed you meet not either with Houfe, Tree, or Shrub, for many Miles, but all looks like a barren Defart, notwithftanding which, great Part of this Soil, were it watered, would be as fruitful as the other, and actually was fo fome Ages fince, when a more induftrious Generation, than the prefent, poffeffed the Country.

From their Trees, I pals on to their Flowers, and of thefe there is a great Variety to be found in fome Provinces. The South Part of Perja has much the feweft; exceffive Heat being as deftructive to them, as extreme Cold; but nothing can be more beautiful than the Fields of Hyrconia, where are whole Groves
of Orange-trees, Jeflamins, and all the Flowers we have in Europe. The Eaft Part of this Country, which is called Mazenderan, is one continued Parterre from September to April; the whole Country at that Time is covered with Flowers, and this, though it be their Winter Seafon, is alfo the belt Time for Fruits. In the other Months the Heat is fo exceffive, that the Natives find themfelves under a Neceflity of retiring to the Mountains.

In Media the Fields produce Tulips, Anemonies, and Ranunculus's; about Ipaban, and fome other Towns, Jonquils grow wild. They have alfo Daffodils, Lillies, Violets, and Pinks in their Seafon, and fome Flowers which laft ali the Year round; but they have the greateft Quantity of Lillies and Rofe; they export abundance of Role-water to other Countries; in the Spring, there is vaft Plenty of yellow and red Gillyfiowers, and another red Flower which refembles a Clove, of a beautiful Scarlet Colour, and every Sprig bears thirty of thefe Flowers, which form a fine Head as large as a Tennis Ball.
Their Rofes are white, yellow, and red, and others white on one Side and yellow on the other; buc notwithftanding all this great Variety of beautiful Flowers, their Gardens are not comparable to thofe of Europe. As Flowers are fo common they are very little regarded; you fee them intermix'd with Fruit-trees and Rofebufhes without any Order; but large Walks planted with Trees, Fountains, Canals, Cafcades, and Pleafure Houfes at proper Diftances, are all that muft be expecpected in their fineft Gardens; nor do the Perfans take any Manner of Pleafure in walking in them, any more than in the Fields; but fet themfelves down in fome Alcove or Summer houfe as foon as they come into them, totally negligent of that exquifite Variety that every Foreigner is charmed with.
8. Perfia alfo affords great Plenty of phyfical Drugs, as Caffa, Senna, Antimony, Nui Vomica, Gum Armoniac, Galbanum, Sal Armoniac, and a Kind of Rbubarb, with which they purge their Cattle; but the beft Rbubarb comes from Cbina, or rather from Eaftern Tariary, which lies to the Northward of Cbina. The Perfian Poppies are in great Efteem from the Quantity of Juice they yield, and the Strength of it ; they grow four Foot high in fome Places, and have white Leaves. They extract the Juice from them in Fune, when they are ripe; by making little Incifions in the Head of the Poppy, a thick Liquor diftills from them, which is gathered very early in the Morning before Sun-rife. It is faid to have fuch an Effect on the People, who are employed in this Work, that they look as if they had been buried and taken up again, and their Limbs tremble as if they had the Paliy. The Liquor which is thus drawn from the Poppies, in a latle Time grows thick, and is made up into Pills. The Porfions give it the Name of Afoum, and we, probably from thence, call it Opium. The Perfian Bakers ftrew Poppy-feed on their Bread, which incline thofe that eat it to Sleep, and the eating it is not reckoned unwholfome after their Meals ; the common People eat the the Seed at any Time almoft for Pleafure.

Saffron grows plentifully in Perfia, and Afa Fatida is to be had every where almoft, which is much admired by the Natives of Perfia as well as India, and frequently eaten with their Food; that which to us is moft offenfive of all Scents, by them is efteemed a Perfume. Affa fretida is a Liquor which diftills from the Plant called Hiltot ; it thickens after it is drawn, and grows as hard as Gum ; there is the white and black Kinds of it, of which the white is reckoned the beft to eat. The Smell of this Drug is fo very ftrong, that if any Goods be near it in a Ship, the Smell is communicated to them, let them be wrapped up ever fo clofe, and it is almoft impofible to clear them of it; nay, it affects the Colour, and therefore Sir Fobn Cbardin tells us, the Veffels ufed in tranfporting it are frequently broke up and burned, to prevent other Goods from being fpoiled by being carried in them, from which no Package can fave them.

The Perfan Bezoar is efteemed preferable to that of Indig, which having already defcribed, we thall not
dwell upon it here. It is fufficient to obferve, that the Reafons it is not fo much efteemed in Europe as it was formerly, are thefe; in the firt place, it is frequently fophiticated, notwithtanding that feveral Methods are in Ule for detecting thefe Frauds, of which I thall mention a few. The genuine Bezoar, at leaft that which comes from Perfa, has a very fine Smell refembling that of Ambergreafe, but not near fo ftrong; if thrown into hot Water, and left there for three or fout Hours; it lofes Nothing either of its Colour or Weight ; if prickt with a hot Iron, no Smoke arifes ; if rubbed upon a Leaf of Duich Vellum, it leaves a yellow Impreffion ; if broke or cut, it appears to be compofed of feveral Coats unequally difpofed, in the fame Manner as appears in cutting an Onion. Another Reafon why it has loft its Credit, is the Humour People have of embracing the contrary Extream to that of their Anceltors 3 heretofore Bezoar was fold very dear, and was held to have many and great Virtues, and now it is fafhionable to affirm that it has little or no Vircue at all ; which though it has driven it out of Ufe, has not much beat down its Price, becaufe in the Eaft, and even in ocher Parts of Europe, it is ftill in Efteem.

A third Reafon is, our giving it in two fmall Dofes; fo that its Virtues are not difcernable. A famous Per. ficn Phyfician had a great Secret for curing Lunacy which he fold to a French Gentleman for a large Sum of Money, and this Secret confifted in giving equal Quantities of Bezoar, Musk, and Camphire, as I found in a French Manufript of Receipts, in which it is faid, that very fingular Cures were performed by it; but the Quantities of thefe Drugs in a Dofe were not mention'd,
In the Province of Chorafan they. frequently find human Bodies preferved in the Sand, the Flefl of which they fell under the Name of Nummy, for medicinal Ufes; and there are alfo fuch Bodies found in a Cavern not for from the Borough of Abin, in the Province of Farfitan. It is however neceffary to inform the Reader, that in the Perfian and Turki/b Languages, the Word Moum, from whence we have formed Mummy, fignifies literally a foft clammy Subftance, of the Confiftency of Balfam, which explains fufficiently what is meant by mineral Mummy, which is a Kind of natural Balfam diftilling thro' the Rock of a large Cavern in the Province of Lar, efteemed fo precious, that the Shah keeps it entirely for his own Ufe, the Doors of this Cave being fealed by the Governor of Lar, who opens it only once a Year, to take out the Balm, the Quantity of which feldom exceeds ten Ounces. A Multitude of Virtues are afcribed to it, particularly in the Cure of Fractures, in which it is faid to perform Wonders ; but it may very well be doubted, whether any of this was ever brought into Eirope.
9. We will now proceed to fpeak of the Animals that are found in Perfia, and in Reference to thefe, the Camel, for a Beaft of Burthen, much excells all the reft, whether we confider the Weight he carries, the Difpatch he makes, or the little Charge of keeping him. Of thefe Camels there are feveral Kinds : fome have two Bunches upon their Backs, and others but one, and there is a third Sort, ingenders'd between a Dromedary or Camel, with two Bunches, and a Female with one, which are efteemed much the beft, and fold for twenty or thirty Pounds a-piece, for they are feldom tired, and will carry nine hundred or a thoufand Weight Thofe which travel between the Perfian Gulph and Ifpaban are of a much lefs Size, and do not carry above five or fix hundred Weight ; but thefe, notwithftand ing, are almoft as ferviceable as the other, for they are much fwifter, and will gallop like a Horfe, whereas the others feldom go fafter than a Foot Pace. Thefe fwift Camels are kept by the Shah and great Men, and ferve to tranfport their Women from Place to Place, and carry their Baggage; they are ufually adorned with embroidered Cloths, and filver Bells about their Necks; a String of fix or feven of them are tied together when they travel, and governed by one Man; they ufe neither Bridles nor Halter to hold them, or Whips to drive them, but they are directed by the Driver's Voice, who fings or plays to them as they travel; good

Ufage only moves them, for they are naturally fo obftinate, it is in vain to beat them if they tire.
When they are to take up their Burthen, the Driver touches their Knees, whereupon they lie down on their Bellies till they are loaded, groaning however, and giving Signs of Uneafinefs, under a Senfe of the Fatigue they are about to undergo; they let them graze by the Road-fide, with their Burthens on their Backs, on Weeds and Thiftles, and fometimes they feed them with Balls made up of Barley Meal and Chaff, into a Pafte, with which they often mix the Cotton-Seed; but the Camel is the leaft Feeder of any Beaft, confidering his Bulk. It is very happy alfo that they can live without Water swo or three Days together, there being fcarce any to be met with in thofe Deferts the Caravans are forced to crofs. They fhed all their Hair every Spring, and are perfectly naked. Of the Camels Hair, abundance of fine Stuffs are made, as we fhall fhew in Speaking of Manufactures; thefe Creatures are very tame and tracEable, except when the lufful Fit is upon them, which lafts thirty or forty Days, and then they are very unruly, which makes their Drivers increafe their Burthens at that Time, to keep them under. When once the Male has cover'd the Female, he grows fluggifh, and does not care for ftirring out of the Stable: They go with young eleven Months, and fome fay twelve.
Oxen, Buffaloes, Affes and Mules, are alfo ufed indifferently for carrying of Paffengers, or Burthens, and their Land being plowed by Buffaloes and Oxen, thefe Beafts are very feldom killed for Food, though fome Perfian Governors, in the South of Perfia, have extorted confiderable Sums out of the Indian Banians, who refide thereabouts, under Pretence they would order them to be butchered, if the Banians did not redeem their Lives by a confiderable Prefent. The Affes of Perfia, are much larger and fwifter than ours, and will perform a Journey very well.
But the fineft Beafts are their Horfes, thefe are beautiful Creatures, and no where better manag'd than in Perfia. They have fine Forehands, and are exactly well proportion'd, light and fprightly, but only fit for the Saddle, or or at leaft, not ufed for any other Purpofe; they are never gelt, and wear their Tails at their full Length; but though they are lovely Creatures to look on, they are neither fo iwift as the Arabian, nor fo hardy as the Tariar Horfes, and the Sbab cherefore has always a Stable of the Arabian Breed. Horfes are very dear in Perfa, fome of them being fold for two or three hundred Pounds, and feldom any that are good for lefs than Fifty. It is not fo much the Scarcity of them, as the Selling fuch Numbers to India and Turkey, which enhances the Price.
They have Mules alfo that carry very well, and are valued, fome of them at thirty or forty Pounds a-piece, and fome Affes at not much lefs, after they have been taught to pace. The ordinary Food for Horfes is Barley and chopt Straw; they have no Mangers in their Stables, but give their Horfes their Corn in Bags. In the Spring they cut green Grafs for their Horfes, but never make any into Hay to be eaten dry; fometimes they feed their Horfes with Balls made of Barley-Meal, as in India; inftead of Litter their own Dung is dried, and beaten to Powder, and laid a Foot deep for them to lie on; and if any of it be wetted, it is dried in the Sun the next Day. Their Horfes Hoofs are much founder and harder than ours, and they are fhod with thin Plates, as the Oxen are, on Account of their travelling over the flony Mountains. They daub their Horles Legs in Winter with a yellow Herb, called Hamnab, and fometimes anoint their Bodies with it as high as their Breaft, to keep out the Cold as it is faid; but it feems to be rather by Way of Ornament, for in fome Places it is done all the Year round.
The Sbab has large Stables of Horfes, difperfed throughout the Kingdom, almoft in every City, for the Publick Service. A Horfe is feldom denied to any Man that demands one, if he will keep him, but then fuch Perfons are accountable to the Government for them, when they fhall be called out into the Field; but they have the Liberty of riding them in the mean Time.

Thefe Troopers Horfes are fometimes quartered upon People, who would gladly be excufed from the Trouble and Charge of keeping them, and if any Horfe dies in their Hands, Oath muft be made, that it did not die for Want of Corn, or looking after. Their Horfes are fubject to many Diftempers, lometimes their Legs fwell, and a Humour rifes on the Breaft, which proceeds from cating too much Barley; and in this Cafe, they clap a hot Iron to the Swelling, or lance it, and keep the Sore open, by tunning a Willow Twig through it, but a hot Iron applied to the Part is the moft general Remedy for lame or diftemper'd Horfes.

Of Sheep and Goats there are great Plenty in Perfia: the Natives feldom eat any other Meat, their Sheep are large, and remarkable for their fat Tails, which weigh eight or ten Pound, and fome it is faid are above twenty Pounds in Weight; they are remarkable alfo in fome Parts of Perfia for having more Horns than ours. Some have fix or feven Horns ftanding ftrait out of their Forehead, fo that when their Rams engage, there is ufually a great deal of Blood fpilled in the Battle. The Perfian Goats are not only valuable for their Flefh, but the fine Wool they yield, of which great Quantities are annually exported, more efpecially from Carmania. Hogs there are farce to be met with, for as the $M a$ bometans, who are the governing Part of the Country, abhor this Animal, their Chriftian Subjects do not endeavour to encreare the Breed, unlefs towards Georgia and Armenia, where the Chriftians are numerous.

Wild Beafts there are not many, either in the Middle, or the Southern Part of Perfia. Deer they have fome, and Antelopes, which are much of the fame Nature, except that they are fpotted, and have finer Limbs. In Gilan and Curdifan, the woody Parts of the Country, wild Beafts abound, fuch as Lions, Tygers, Leopards, wild Hogs, Jackals, E'c. And in Media and Armenia, there are Abundance of Deers, wild Goats, Hares and Rabbits, and there are fome found on the Mountains almoft all over the Country, but not many.

Infects they are not much troubled with in the Heart of Perfia, which is very dry, unlefs it be with Swarms of Locufts, which vifit them fometimes in fuch Numbers, that they look like a Cloud, and perfectly obfcure the Sun, and wherever they light deftroy the Fruits of the Earth; but there are certain Birds which generally vifit the Country about the fame Time, and eat up the Locufts, and fo prevent the Ruin of the Hufbandmen. That Part of the Country which lies upon the Cafpian or Hyrcamian Sea, is full of Serpents, Toads, Scorpions, and other venemous Infects, which in Summer-time die, many of them for want of Water, and infect the Air, rendring that Part of the Country very unhealthy at that Seafon.

Scorpions particularly there are of an immoderate Size, and their Sting is mortal, if proper Remedies be not immediately applied, and at beft a Perfon fturg by one of them, is in fuch Torture, that he becomes raving mad for fome Time. Musketoes or Gnats are very troublefome in the flat Country, near the Cafpian Sea; and there is a white Fly no bigger than a Flea in Perfia, which makes no Noife, but its Scing is like the Prick of a Pin. Here is alfo the Millepedes, almoft like a Caterpillar, and whofe Bite is as pernicious as the Sting of a Scorpion, the Perfians call them Hezarpai, or a thoufand Feet.

1o. There are the fame Sorts of tame and wild Fowl in Perfia as in Europe; as Geefe, Hens, Ducks, Partridges, Snipes, $\mathcal{E}^{\circ}$. ; but more of them in the North than in the South Part of the Country. Turkeys have been carried to I/paban, but they do not thrive. The Breed of Pidgeons they take all imaginable Care to increafe and propagate, on Account of their Dung, with which they raife their Melons. Their Dove-houfes are five Times as large as ours, of a round Figure, and handfomely built of Brick; of thefe, it is faid, there are not lefs than three thoufand in the City of Ifpaban only. The Dung is always fold for four Pence the Bifty, or twelve Pounds Weight, and the Government, it feems,
lay a fmall Tax upon it. Their Partridges are reckoned the largeft and beft tafted that are to be met with.

The Pellican, which the Perfans call Tacob, or the Water-drawer, is as remarkable as any of their Fowls, for the Body of it is faid to be as large as a Sheep, its Head at the fame Time wondrous fmall, but a large Bill of fixteen or eighteen Inches long, as big as a Man's Arm, and under the Bill there is a large Bag, Travellers reil us, which will hold a Pail of Water; they build their Nefts in the Defarts, where there is no Water, and confequently no Inhabitants for their Security, and frequently go two Days Journey for Water for their young ones; but then they bring enough in the Receptacle above-mentioned to laft for fome Time, if we may give entire Credit to thefe Accounts.

There is another extraordinary Bird, mentioned by Travellers, in the Province of Cborafjan, which has fuch an Appetite towards the Water of a certain Spring in that Country, and fuch Sagaciry in difcovering it, that they will follow any Perfon that carries it in a Bottle, feveral Hundreds of Miles. As to Eagles, Hawks, Falcons, and other Birds of Prey, there is no Country where they have more, or where they are better inftructed than in Perkia. The Shah has eight hundred or a thoufand of them, and there is no Man of any Figure without his Hawks and his Falconers ; and their Hawks are taught not only to fly at Birds, but at Hares, Deer, and all Manner of wild Beafts, and by fixing themfelves on the Head of the Animal, and beating him with their Wings, he is fo terrified and diltracted, that the Dogs and Huntfmen which follow have very little Difficulty in taking him; and the Perfians, it is faid, breed up the very Crows to fly at Game.

There are the fame Kinds of Singing-birds in Perfaa as with us, fuch as the Liner, the Chaffinch, the Nightingale, the Lark, $E^{2} c$; and fome Birds there are which are taught to fpeak, but no Parrots or Parrokeets on this Side India. However, there are feveral partycolour'd Birds to be feen in Perfia, with a Plumage of blue, green, and yellow, bautitully mixed. Of Sparrows there are fuch Numbers, that they are very troublefome to the Husbandmen, who are forced to place their Servants in the Fields all Day long when the Harveft approaches, to keep thems from their Corn.

In the Heart of Perfia there are fcarce any Fifh to be met with, the few Rivulets they have hardly fupplying the Country with Water for neceffary Ufes, and in the Summer time they are almoft all dried up; even the River Zenderbood, to which the Government, at a prodigious Expence, have joined other Screams for the Supply of the City of IJpaben, is perfectly loft in the fandy Defarts about twenty Leagues from thence; and it may be doubted whether there be one Stream which rifes in the Middle of the Kingdom that ever reaches the Sea in the Summer; tho' in the Spring, when the Snow melts on the Mountains, they make a confiderable Figure. In the Cafpion Sea and the Perfian Gulph, there are great Plenty of Sea-fifh of all Kinds almoff, and the Rivers Kur and Arras; which fall into the Cajpian, have Plenty of River-fifh, but they lie at too great a Diftance from Ifpabain to fupply that City; fo that Fifh is very rarely eaten there.
11. We are to fpeak next of the Metals and Minerals in this Country; and to proceed methodically, we ought to begin with thofe of Gold and Silver, if any were now wrought in Perfia, but there are not; for, notwithftanding what old Writers relate of the rich Mines in Baefriona, and that almoft all the Perfian Authors agree that there are Mines of this Metal in Cborafan, yet from the Neighbourhood of the Tartars they have been long neglected; and it is che fame with refpect to the Si:ver Mines in other Places, tho' from the Accounts lately given by Tavernier, one would fufpect that the Perfans are but indifferently skilled in the Art of Mining, and that of refining of Metals; they have, however, good Mines of Iron, Steel, Copper, and Lead. The Iron and Steel Mines are in Hirconia, Media, and the Provinces of Erak and Cborafan; their Steel is fo full of Sulphur; that if the Filings are thrown into the Fire, they will give a Report like Gunpowder ; is has a fine Vol. II. N? CXXX.

Grain, but is as brittle as Glafs, and the Perfian Artificers, who do not undertand how to give ir a due Temper, cannot for that Reafon make Whecls or Springs, or any minute Pieces of Workmanfhip. Theit Copper Mines are moft of them near Seris, in the Mountains of Mazenderan; they mix it with Swedifh and Fopan Copper, and the Proportion is one Part foreign to twenty of their own Metal.

The Lead Mines are, moft of them, near the City of Cesd, and in thefe are found the greateft Quantity of Silver. Sulphur and Saltpetre are dug in the Mountain Damaverd, which divides Hircania from the Province of Erak. Antimony is found in Carmania, bur it is a baftard Sort. Emery is had near Niris; Vitrioland Mercury they have none, and their Tin is imported from abroad. There are two Kinds of Salt in Perfia, the one upon the Surface of the Ground, the other dug out of the Rock: There are Plains of ten or twelve Leagues over quite covered with Salr, as others are wich Sulphur and Alom. The Salt is fo hard in fome Parts of Carmania, that the poor People make ute of it inflead of Stone to build their Cottages.
Their Marble is either white, black, or red, and fome veined with white and red; it is dug near Hamadan, and in Cbufifon fome of it will break into large Flakes or Tables like Slate, but the beft comes from Tauris, which is almoft as tranfparent as Cryftal. This Kind is white mixed with green. In the Country about Touris alio is found the mineral Azure, but this is nor fo good as that which comes from Tartary, lofing its Colour by Degrees. In the Provinces of Fars and Sbirvon there is found abundance of Bole Armoniack, and fo rich and fat a Marl, that the Country People ufe it inftead of Soap. There are fome Mines of Ianglas in the fame Country. In feveral Parts of Perfa we meet with Naptba, both white and black; it is ufed in Painting and Varnifl, and fometimes in Phyfick, and there is an Oil extracted from it which is applied to feveral Ufes, The moft famous Springs of Naptba are in the Neighbourhood of the Town of Baku, which furnifh vaft Quantities ; and there are alfo upwards of 30 Springs about Sbamaschy, both in the Province of Scbirwoan, The Perfands ufe it as Oil for their Lamps, and in making Fireworks, of which they are extremely fond, and in which they are great Proficients.
But the molt valuable Product of the Perfian Mines is the Turquoife, concerning which there have been fo many Miftakes made, that notwithftanding we find ourfelves preffed for Room, we cannor avoid treating fomewhat largely upon this Subject. In the firt Place, it is afferted, that it derives its Name from Turkey, which is true enough when rightly undertlood, but abfolutely falfe according to the common Acceptation; for there neither is, or never was, any of thefe Stones found in the Dominions of the Turks, but in the Country of Turcomania, which was indeed the Seat of that Nation, tho' for any Thing I know, this has never been obferved by the Writers upon this Subject. Thefe Stones are diftinguifhed into Oriental and Occidental. The Oriental Turquoifes come from Perjia, and from Perfia only; and thefe are diftinguifhed into thofe of the old, and thofe of the new Rock; the former are taken out of the Mines of Nicbapour and Caraflon, and, as Sir Yobn Cbardin juftly oblerves, differ greatly from ocher Stones chat bear the fame Name. They are hard, firm, of a beautiful Blue, inclining a little to a Green, take a fine Polifh, and are never obferved to lofe their Colour. The Shah endeavours to preferve thefe entirely for himfelf; and though after chufing the largeft and the fineft, he permits the fmaller Turquoifes to be fold, yet foreign Merchants are not contented with that Manner of Dealing, but have ftruck out a better. The Officers belonging to the Mines, and their Servants, frequently deceive the Shah, and, inftead of fending him the finctit and largeft, vend thofe for their own Profit, but always to Europeans, that they may be lefs liable to Difcovery; and by this Means very fine Turquoifes find their Way into thefe Parts of the World. The new Rock is at five Miles diftant from the old, and the Stones are fofier, lefs firm, veiny, of a green,

10 Q
inclining
inclining to blue, and are apt in Procefs of Time, to lofe their Colour. The occidental Turquoifes are found in Bobemia, France, and other Countries, but they are not valued, and have generally the fame Faults with thofe taken from the new Rock.

Dr. Cromwell Mortimer, in the laft Tranfactions of the Royal Society, for the Months of Fanuary and February, 1747. has given us a much better Account of thefe Stones than 1 have ever met with before, and diftinguifhes them very juftly into true and falfe Turquoifes; the former he fays, is a true mineral Subftance, impregnated with Copper Ore, which is highly probable, for there is no Country in the World that has more Copper Mines than Perfia; the latter is an Ivory or bony Subftance, tinctured alfo with fome metallick Juice, and probably that of Copper, which is a Difcovery worthy of Notice, as it frees this Subject from Abundance of Difficulties, under which it has hitherto laboured.
12. After having taken a View of the Country, and of its Produce, we will fpeak next of the Habitations erected upon it, and this will naturally lead us to the principal Cities that yet remain to be defcribed; but without taking a previous View of what with thern paffes for magnificent Buildings, fuch Defcriptions would be in a Manner unintelligible. The Houfes of Perfons of Quality here, are generally built in the Middle of a fine Garden, and make little or no Appearance to the Street, for there you fee nothing but a dead Wall, with a great Gate in the middle of the Wall, and perhaps a Skreen or Wall within the Gate, to prevent Pcople looking in ; fo fond are they of Privacy and Retirement. Another Thing that the Perfians differ from us in, is, that they feldom have more than one Floor, which is laid out in this Manner; in the Front of the Houfe fands a little Piazza or Cloyfter open before, where they fit and tranfact their ordinary Affairs; beyond this is a large Hall, eighteen or twenty Foot high, which is ufed at great Entertainments, or on any folemn Occafions: On the farther Side of the Houfe is another Piazza with a Bafon or Fountain of Water before it, beyond which runs a Walk of fine Trees, as there does allo from the Street to the Houfe : At each Corner of the Hall, is a Parlour or Lodging-Room (for it ferves for both Purpofes;) between thofe Parlours on the Sides, there are Doors out of an Hall into an open fquare Space, as large as the Rooms at the Corners; there are alfo feveral Doors out of the Hall into the Piazza, before and behind the Houfe; fo that in the hot Sealon, they can fet open nine or ten Doors at once in the great Hall, and if there be any Air ftirring, they will have the Benefit of it.

In fome Palaces there is a handfome Bafon, and a Fountain playing in the Middle of the Hat!, which contributes ftill more to the Coolnefs of the Place. The Walls of their Houfes are built fometimes of burnt Bricks, but more commonly of Bricks dried in the Sun. The Walls are of confiderable Thicknefs, and the Roof of the great Hall is arched, and five or fix Foot higher than the other Rooms about it. The Roofs of the Buildings on every Side of the Hall are fat, and there is a Pair of Stairs up to the Top, where the Perfians walk in the Cool of the Day, and fometimes carry up a Mattrefs, and lie there all Night, there being Ballifters all round the Top of the Building. As for the Kitchens and other Offices, they are at a Diftance on the right or left, and it is obfervable, that all their Rooms, except the Hall, ftand feparate, and there is no Paffage out of one into another, but only from the Hall; Chimneys there are fome, but ufually, inftead of a Chimney, there is a round Hole, about four or five Foot broad, and a Foot and a half deep in the Middle of the Room, in which a Charcoal Fire is made, and the Place covered with a thick Board or Table, about a Foot high, fo clofe, that no Smoke can get out, and over that Table is thrown a large Carpet, under which they put their Legs in cold Weather, and fit round, there being a Paffage for the Smoke by Pipes laid under the Floor. The Doors of their Houfes are narrow, and feldom turn upon Hinges as ours do, but chere is a round Piece left at the Top and Bottom of the Door which are
let into the Frame above and beiow, on which they turn, and the very Locks and Bolts are frequently made of Wond.

As to their Furniture, it confifts only in Carpets fpread on the Floor, with Cuthions and Pillows to lean on, and at Night, there is a Mattrefs brought to fleep on, and a Quilt or two to cover them, but very feldom any Sheets are ufed. As to their Servants, they lie about in any Paflage upon Mats, and take up very little Room. The Eloors of the Rooms are either paved or made of a hard Cement, on which they lay a coarfe Cloth, and over that a Carpet: The Sides of fome of their Rooms are lined with fine Tiles about a Yard high, and the reft of them well painted, or hung with Piciures.
${ }^{1}$ S. Ifpatom, or as it is pronounced Spabawn, is fituated in thirty two Degrees, forty Minutes, North Latitude, and in the fiftieth Degree of Longitude, reckoning from the Meridian of London. It ftands in a fine Plain almoft furrounded with Mountains, which lie about two or three Leagues from it, and the Form is pretty near oval. The River Zenderbood runs by it at about a Mile Diftance, but there are feveral Channels and Pipes above the Town, which convey the Water from it into Canals and Bafons, for the Service of the Court and City. 'The Town is without Walls, and about ten or twelve Miles in Circumference. Thofe who extend it ten Leagues take in the Town of Fulpba, and feveral others. There were formerly twelve Gates to the Town, but four of them are now clofed up, the others are always open; as for the Walls which fome Travellers mention, it is probable there was a Mud-Wall formerly, but there is no Part of the Wall vifible at prefent. There is an old Caftle, it is true, without Artillery, which runs to Ruin, but is no more tenable than the Town.

The Streets of 1jpaban are for the moft Part narrow and crooked, and either exceeding Dirty or Dufty, for farce any of them are paved, and though there are no Coaches or Carts, yet all People of Fafhion riding through them with great Trains of Servants, renders the Paffage not very pleafant. There are however fome very fine Squares in the Town, particularly the royal Square or Meydan, into which there opens two of the Palace Gates. On the Sides of this Square, which is one third of a Mile in Length, and more than half as much in Breadth, are Buildings with Shops on both Sides, where every particular Trade has a Quarter affigned, and there is a fecond Story where the Mechanicks have their Working-Shops. There feems to be little Difference between thefe Exchanges and ours, but that thofe of Ifpaban have no Windows but great Openings at proper Diftances to let in the Light, and People ride through them as they do along the Streets.
In the Middle of the Square there is a Market for Horfes and Cattle, and all Manner of Goods and Provifions are expofed to Sale, though the great Sbab Abbas, who built the Square, defigned it for manly Exercifes, and particularly thofe of Horfemanfhip, and handling the Bow and Lance, at which no People are more dextrous than the Perfians. On that Side of the Square next the Palace, there is a fine Row of Trees planted, and a handfome Bafon of Water, and fome great Brafs Guns, which were taken from the Portuguefe at Ormus, ferve to make a Show.

There ftands a great Mofque at the South End of the Square, and another Mofque on the Eaft Side over againt the great Gate of the Palace; feveral Streets in Ifpaban are covered and arched over, which makes them pretty dark, and this feems to be peculiar to the Perfian Towns. Another Thing they feem to be particular in is, that their Houfes and Shops are never in the fame Places, and it is a common Thing for a Tradefman to go half a Mile in a Morning to the Bazar, or Market-place, where his Shop is, and in the Nighttime, they lock up their valuable Goods in Chetts and Counters, and the reft they leave packed up, fometimes in the open Square, and it is very rare any Thing is loft; fo careful are the Watch appointed to guard their Market-Places, or fo very little given to Thieving are the People in this Part of the World, and no Doubt the fpeedy and exemplary Punifhments inflicted upon Pilferers, is one great Means to deter them from it.

## Chap. II.

 of the Empire of Persia. 887As to Foreign Merchants, they lodge their Goods in the publick Caravanfera's about the City, which ferve them alfo inftead of Inns for Lodging and Diet; but there is this Difference between an Inn and Garavanfera, that every Perfon finds his own Bedding and Cookery in the Caravanjera, whereas in our Inns we have not that Trouble. There are two Things, however, that render a Caravanfera preferable to an Inn; one is, that a Perfon is not fubject to the Extortions of an Innkeeper, but buys his Provifions at the beft Hand; and the other, that let the Merchant take up ever fo many Rooms, he fhall not be difturbed in them, and pays but a Trifle for his Warehoufe or Lodgings; and upon the Road he pays Nothing. There are not, it feems, lefs than fifteen hundred of thefe publick Caravanjera's in Ifpaban, which have been ereted by charitable Ptople for the Ufe of Strangers; moft of them are built after one Model, and differ only in the Dimenfions. There is a handfome Portal at the Entrance, on each Side of which are Shops, from whence you enter into a Square, about which there is a Cloifter or Piazza, and within are Lodging-Rooms and Warehoufes for Goods: There is alfo Stabling and Conveniences for Horfes and other Beafts on the ourlide, or they may be brought into the. Square and faftened there, as is frequently done upon the Road more efpecially where there is Danger of Robbers.

As to Taverns, there are none at Itpaban, their Religion prohibiting Wine. However, fome of the Perfians will drink pretty plentifully in private. There are very handfome Coffee-houfes in the principal Parts of the Town, where People meet and talk Politicks, though they have no printed Papers in them, and there we meet with fome Amufements peculiar to the Country, as the Harangues of their Poets, Hiftorians, and Priefts, who hold forth and get a Crowd about them; and it feems they expect a fmall Prefent from their Audience for their Amufements and Inftructions.
14. The Buildings of the Palace, with the Gardens belonging to it, take up above a League in Compafs. The two Gates which come up to the Royal Meydan, or Square, are, one of them called Alicapi, and the other Doulet Cuna; over one of them is a Gallery, where the Shah ufed to fit and fee martial Exercifes performed on Horfeback. No Part of the Palace where the Court refides comes up to the Royal Square ; but having entred the principal Gate, there is a Hall or Court on the Left-hand, where the Vizier and other Judges adminitter Juftice on certain Days ; and on the Right are Rooms where Offenders are allowed to take Sanctuary. From hence to the Hall, where the Shah ufually gives Audience, is a handfome Walk: It is a long Room well painted and gilded, and fupported by forty Pillars; it is divided into three Parts, one a Step higher than the other, on which the great Officers fland according to their Rank. As to hereditary Nobility, there is no fuch Thing in Perfia: On the third Afcent is the Royal Throne, raifed about a Foot and a half above the Floor, and about eight Feet fquare, on which is fpread a rich Carpet; here the Shah fits on it crofs-legged up. on folemn Occafions, having a Brocade Cufhion under him, and another at his Back.
As to the reft of the Apartments of the Palace, and particularly the Haram, or Womens Apartment, neither Foreigners or Natives can give an exact Defcription of them, none being permitted to enter but the Eunuchs ; but in general we are told, that they confift in feparate Pleafure-houfes difpers'd about the Gardens, much of the fame Form with the Houfes firft defcribed, and that their great Beauty confifts in the fine Walks, Fountains and Cafcades about them. Beyond the Gardens the Shah has a large Park walled in, where the Ladies hunt and take their Pleafure with the Prince. In this City are above one hundred and fifty Mofques or Temples, covered with Domes or Cupola's, which appearing through the Trees that are planted almoft all over the Town, in the Streets and Gardens, afford a noble Profpect ; but the common Buildings are fo low, that they are hardly difcerned by one who takes a View of the Town on the Outfide.

All Chriftians being prohibited to enter their Mofques, or even to come within their Courts, under fevere $\mathrm{Pe}=$ nalties, it is not eafy to meet with a particular Defrription of them. There is a Gate which leads to the great Mofque covered with filver Plates. Through this Towr you proceed to a Court with a Piazza or Cloyfter on each Side, where the Priefts lodge who belong to the Mofque. Oppofite to the great G.te are three large Doors which open into it. The five Ines the Mofque is compofed of are beautified with Gold and Azure. In the Middle is the Cupola, fupported by four great fquare Pillars; the Ines on the Sides are lower than that in the Middle, and born upon thick Columns of Free-ftone ; two great Windows towards the Top of the Middle Ine give Light to the whole Mofque ; on the Left-hand towards the Middle ftands a Kind of Pulpi, with fone Steps to go up to it ; the Bricks and Tiles on the Ouffide of the Building are painted with various Colours, after the Manner of PerFa, and the Floor of the Mofque is covered with Carpets, all People putting off their Shoes as they enter it; there are no Seats or Pews as in the Chriftian Temples, or any Kind of Imagery or Pictures. The Outfie is Stone, and the Walls lined fifteen Foot high with white polifhed Marble; and in the Middle of the Square before the Mofque is a large Bafon, where they wafh themfelves before they enter the Temple, The Mofques have, moft of them, Cupola's, with Steeples or Towers, whither the Molla's go up to fummon the People to their Devotions, according to the Mabometara Mode, making no Üfe of Bells.
${ }^{1} 5$. The numerous Hummums or Bagnio's in this City are another Subject of Travellers Admiration; fome of thefe are fquare Buildings, bus mott of them globular. The Stone of which they are built is ufually white and well polifhed; the Tops are covered with Tiles painted blue; the Infides are divided into many Cells or Chambers, fome for Pleafiure, and others for Sweating, and the Floors are laid with black and white Marble. The Perfians bathe almoit every Day, looking upon it to be extremely conducive to Health, an effectual Remedy for Cold, or Aches, and many other Diftempers. But what is admired as much by Foreigno ers as any Thing about Ifpaban, is the Cbarbag, being a Walk above an hundred Yards wide, and extending a Mile in Length, from the City to the River Zenderbood; on each Side are planted double Rows of Trees, and in the Middle runs a Canal, not continued upon a Level, but at every Furlong's Diftance the Water falls into a large Bafon and forms a Cafcade, and the Sides both of the Canal, and Bafons are lined with hewn Stone, broad enough for feveral Men to walk a-breaft upon them. On each Side of this Walk are the Royal Gardens, and thofe of the great Men, with Pleafure Houfes. at fmali Diftances, and all together form as agreeable a Profpect as can be imagined.
At che End of this Walk is a Bridge over the River Zenderbood, which leads to the Town of $\mathcal{F} u l p b a$; there are alfo two other Bridges, one on the Right, and the other to the Left, by which the neighbouring Villages have a Communication with the City, and which moft of our Travellers are pleafed to call its Suburbs, though they are diftant a Mile from IJpaban, and on the other Side the River. Thefe Bridges are taken Notice of for the Oddnefs of the Architefure, for it feems on each Side, both above and below, are arched Paffages, thro ${ }^{\circ}$ which People ride and walk from one End of the Bridge to the other, as in the covered Streets of the City; and at little Diftances there are Openings to admit the Light. The Arches of thefe Bridges are not very high, there being no Veffels to pafs under them, for this River is not navigable any more than the reft of the Perfian Streams. It is true, in the Spring, on the melting of the Snows in the Mountains, it makes a pretty good Appearance, but at the latter End of the Summer the Channel is exceeding narrow and fhallow, infomuch that there is not Water enough for the Gardens which belong to the City ; to fupply the Want whereof they have abundance of Wells about $1 / \mathrm{p}$ aban, of very good Water for all Domeftick Ufes.
16. The
16. The Town, or rather the Borough of Juipba, Itands on the South-fide of the River Zenderbood; and though there are many who look upon it as a Suburb of Ijpaban, yer it certainly deferves to be confidered by itfelf, as being a very large and a very conilderable Town, the Buildings of which are more regular, and to the fall as thagnificent as thofe of Ifpaban. It is generally reckoned two Miles in Length, and about a Mile in Breadth, and is beyond Comparifon, taking all Circumftances together, the fineft Place in Perfia; for, with refpect to Houres, Trade, Manufactures, and Induftry, there is nothing comes near it ; and as to beauziful Walks of Trees, cooling Shades, delightful Fountains, pleafant Gardens, and magnificent Summer-houfes, they are every where to be mer with. The principal Xohabitants are the Armenions, and beffdes thefe, there are Georgians, Circaffians, Mingrelians, and other Chrifrians, bur no Mabometans, who dwell in it. The Foundation of this Place, and the Rife of the Armerians, who are now as confiderable Merchants as any in the World, are Events that deferve our Notice.

It was the famous Shah Abbas who firft took Notice of the Candour, Affability, Diligence, Penetration, and Integrity of the Armenians, in the Management of their little Concerns in their native Country, where they were liable to the Incurfions of the Perfians and the Turks. He was not only an ambitious and powerful, but a very wife and prudent Prince; he was defirrous of introducing Trade into his Dominions, where, till his Reign, it was hardly known; and no lefs defirous of infpiring his Subjects with the fame Views, who were fitte acquainted therewith. In order to accomplifh thefe great and laudable Defrgns, he thought it proper to eftablifh a Staple Commodity, by Way of Foundation, and for that Purpofe, fixed upon Sills. He then tranfported twenty or thirty Armenians into the Province of Gilan, where they acquitted themfelves fo well, that in a very fhort Space of Time vaft Quantities of Silk were made there. Encouraged by this happy Beginning, he demolifhed the Town of Old Fulpha in Armenia, as has been fhewn in the former Section, and tranfported the Inhabitants into the Neighbourhood of Ifpaban, where by his Royal Munificence, and under his powerful Protec tion, they built the Place of which we are now fpeak ing, and by his Direction undertook to diftribute all rhe Silk that was not wrought up by Perfian Manufacturers, through Afia and Europe, a reafonable Price being firft fixed, which at their Return they were obliged to pay, all the Profit being left to themfelves; when it was neceffary, the Shah advanced them Money for carrying on their Commerce, but by Degrees, and as they grew wealthy, the Government no longer took any Share in their Trade.
In this Manner, from the right Notions of one Man, and from his jutt Views for the Benefit of his Subjects, arofe all the Trade of the Armerians, who are now be come a Nation of Merchants, and carry on the moft extenfive Dealings of any People in the World; for befides their Eftablifmments here, and in all the great Cities of Perfia, they ipread over the whole Eaft, carry on a prodigious Trade in Ruflia, and have Factors of their own Nation in moft of the great Trading Cities in Europe. In fhort they are become as noted in this refpeet as the feres; but what redounds eternally to their Repusation, their Application to Trade, and their Dealings as Brokers, has not in the leaf leffened their Character, for Candour or Probity; they are diligent, affable and difcreet, but content with a moderate Profit, ferve thofe that employ them faithfully, are grateful to their Benefactors, love each other as Brechren, and are extreamly ufeful to all the Countries in which they are fetcled. This Digreffion in Favour of fuch a Sort of Men, and in order to ezplain the Prudence and publick Spisit of Sbab Abbas their Patron, and fuch of his Succeffors as chofe to tread in his Steps, we thought might be agreeable to the Reader, though it carried us a little out of our Road, to which we fhall now return, in order to concinue the Defcription, we have promifed of the principal Cities in Perfia, before thofe Confufions began that have produced fuch fatal Alterations.

The City of Scbiras or Sberaz, as we pronounce it, lies about two hundred Miles to the Southward of If. paban, in twenty nine Degrees, fifty Minutes of NortiLatitude, and is ufually reckoned the fecond. City of the Kingdom. It is the Capital of the Province of Fars, or the ancient Perfia; fome will have the Name derived from Cyrus the Great, there being a Tradition that he was buried there; others fay it is derived from Sherab, which in the Forfan Tongue, fignifies a Grape, becaufe that Fruit abounds in this Place; and others from the Word Sbeer, which fignifies Millk; but as it is not very material from whence the Name is derived, fo I believe it is impoffible to determine at this Day. The Town is feated in a pleafant fertile Valley, about twenty Miles in Length, and fix in Breadth, and has a Rivuler running through it, which in the Spring bas the Appearance of a large River, and fometimes encreafes to fuch a Torrent as to bear down the Houfes in its Way, but in the Summer is almoft dry. There are no Walls about the Place, nor does it contain above four thouFand Houfes at prefent: The Compafs of ir is reckon'd to be abour feven Miles, but then it is to be confider'd that much the greateft Part of this Space is Garden.
The publick Buildings taken Notice of, are the Viceroy's Palace, the Mofques, Bagnio's, the vaulted Streets and Caravanfera's, which being of the fame Model as thofe of Ifpaban, do not need a particular Defrription here; only it is obfervable, that they lee moft of their Buildings run to Ruin, as in orher Towns of Perfia; every Generation chufing to build new Houfes, rather than ufe thofe of their Anceftors. It is remarked alfo, that there is no Place where the Mabometan Superftition prevails more than here, there being a Mofque or Temple to every twenty Houfes almof, their Domes covered with blue varnifhed Tiles, make a pretty Appearance among the Trees; here is alfo a College where the liberal Arts are ftudied, of which the Fame is great for breeding many Perfons of renown'd Learning.
The Streets of Sberaz are, for the moft part, narrow and dufty, but there are fome broad ones with Canals and Bafons, faced with Stone : But what Sheraz is mofer remarkable for, is, the fine Gardens and Vineyards about it. The Cyprefs-Trees, of which their Walks are chiefly compofed, are the talleft and largeft that are any where to be found, and grow in a pyramidal Form; ; intermix'd with thefe are feveral broad fpreading Trees, and all Manner of Fruits, as, Pomegranates, Oranges, Lemons, Cherries, Pears, Apricots, Dates, $\xi^{\circ} c$. None of thefe are planted againft Walls as with us, but fland in the Allies, and fometimes irregularly, as in a Wildernefs. They have alfo Abundance of fweet Flowers of various Colours, but not planted in that regular Order as in the Gardens of Europe. Their Vineyards and Wines are preferable to any in Perfia, and the Canals, Cafcades, Fourtains, and Pleafure-Honfes in their Gardens, are not at all inferior to thofe of Ifpaban. The Shah's Garden here is no lefs than two thoufand Paces fquare, and furrounded with a Wall fourteen Foor high, but of late Years, the Gardens, as well as the Buildings of Sheraz, Gave been pretty much neglected.
38. Thirty Miles to the North Eaft of Sberaz are found the nobleft Ruins of an ancient Palace or Temple, that are now to be feen on the Face of the Earth; êven. Rome itfelf, as it is faid, has nothing comparable to thefe venerable Remains of Antiquity; the Place at this Day is called Cbilmaner, or forty Pillars. Mr. Herbert fays, it was built upon a Mountain of dark coloured Marble, and the Steps hew'd out of the folid Rock; but others who have viewed it more narrowly fince, obferve, that the Steps are compofed of large Stones, fifteen or fixteen Foot in Length, and of fuch a Thicknefs, that fix or feven Steps are cut out of one Stone, the whole being fo artificially joined, that they appear to be but one Piece, which might eafily occafion Mr. Herbert to miftake. It is feated at the North-eaft End of that fpacious Plain where Per $\int$ epolis once ftood, and generally held to be part of the Palace of Darius, who was conquered by Alexander the Great. The Front of this Palace ftood towards the Weft, and was about five hundred Paces in Length, the whole taking up near
threefcore
threefcore Acres of Ground. The Afcent to it is by ninety five Steps, thirty Feet in Length, and twenty Inches broad, but not more than three Inches deep, fo that a Horfe may eafily go up or down them. The Stair-Cafe divides as you afcend, one Branch winding to the right, and the other to the left ; each having a Wall on one Side, and a Marble Balluftrade on the other ; afterwards both Branches turn again, and end at a large fquare Landing place, from whence you go into a Portico of white Marble, twenty Foot wide. On it are carved in Bafs relievo, two Beafts as big as Elephants, but their Bodies are like Horfes, and their Feet and Tails like Oxen.

Ten Feet farther ftand two fluted Columns of whitifh Stone, about fixty Feet high, befides their Capitals and Bafes, and as thick as three Men can fathom; a little farther ftand two other Pilafters, carved like the firf, only that the Beafts on the latter have W.ings and Men's Heads. Beyond this Portal or Hall is fuch another double Stair-Cafe, leading to the upper Rooms, twenty five Feet broad, but incomparably more beautiful than the former, for on its Walls are carved in Bafs Relief, a kind of Triumph, confifting of a great Train of People, in diftinct Companies, carrying fome Banners, and others Offerings, and after all comes a Chariot drawn by feveral Horfes, with a little Altar upon it, from whence the Flames of Fire feem to afcend. On the other Side are carved wild Beafts fighting, and among others, a Lion and a Bull are cut with greàt Exactnefs, and fo hard is the Stone, that to this Day the moft curious Part of the Workmanflip is preferved. On the Top of the fecond Stair-cafe is a fquare Place, which has been furrounded with Columns, whereof feventeen only are now flanding, but there are a hundred Pedeftals; thofe that are left are of red and white Marble fluted, fome of them fixty, and others feventy Foot high, and twelve of them near three Fathom round. Thefe, fome Antiquaries imagine, fupported the Temple of the Sun.

On the fame Floor near thofe Columns is a Place fifty Foot fquare, enclofed with Walls fix or feven Foot thick, of a much finer Marble than any that hath been yet mentioned, and fo wonderfully carved, that it would take up feveral Days to view all the Figures; which Way foever a Man turns himfelf in this fecond Floor, there appear Figures cut in Bafs and half Relieve. Here you fee Men fighting with Lions, and in another Place, a Man holding a Unicorn by the Horn; in a third you fee the Figures of Giants, and in a fourth, a Prince giving Audience to his People or Ambaffadors, and numberlefs other Scenes. Here are alfo abundance of Infcriptions, in lafting Characters, which have been tranfrribed, and brought into Europe, but none of them underftood at this Day by the learned, any more than they are by the People of the Country: This glorious Palace o: Temple, with the whole City of Perfepolis, the nobleft and wealthieft then in the World, was burnt to the Ground by Alexander the Great, about the Year of the World, 3724 , at the Perfuafion of Lais the Atbenian Harlot, as is faid in Revenge for the Towns the Perfian Emperors had deftroyed in Greece.
19. In the former Section, and in this, almolt all the great Cities have been defcribed, as they flood in Time paft, and as they are reprefented to us by fuch as had feen them; yet thefe Accounts bear but very little Relation to thofe Places at this Day, for in the Courfe of the Civil Wars and Confufions, with which this Empire has been overwhelmed, there is hardly any one of thefe Cities that has efcaped. Tauris has been plundered over and over, Scbiras burnt to the Ground, and even Spabaren has fuffered not a little. The Porr of Gambron, or Bander Aboff, had been always confidered fince the Time of Sbab Abbas, as one of the richeft Jewels of the Perffian Diadem; and notwithftanding the Badnefs of the Air, and fome Inconveniences that attended the Port, it was always a Place of great Trade, and might have been a Place of much greater Trade, if the fucceeding Monarchs of Perfia had been Princes of the like Spirit, and had conceived as juft Notions of Commerce as he did.

VoL. II. No ${ }^{2}$ IzO.

By their Fault it was, that the greateft Part of the Perfian Trade came to be carried on by Land, through Turkey, which was neither agreeable to the Interefts of the Perfans, nor requifite for tranfporting their Commodities to Europe, for which other Means might have been employed. But when Sbab Nadir had affumed the Empire, and by his amazing Succeffes had acquired fo great a Power, that he thought himfelf in no kind of Danger from his Neighbours, he began to entertain Notions of Commerce, which, like all his other Notions, were of a Stamp peculiar to himfelf, and which do, not feem, from any of the Accounts that we have met with, to have been at all underftood in Europe. He faw plainly, that the $\tau_{u r k s}$ were prodigiounly enriched by the carrying on of the Perfian Trade for Silk through their Country, and this he was refolved to prevent at any Rate. It was with this View, that he formed a Project, which we have more than once mentioned, of forcing a Paffage to the Black-Sea, and thereby opening a direct Trade with Europe, which, with all his Power, he could never effect. He then turned his Thoughts towards the Cafpian, and having recovered the Province of Gilan from the Rufians, and provided effectually againft any Impreffions they could make upon his Territories by Land, he refolved to carry on the Trade of Perfio that Way, by the Affiftance of the Armenians, and to reftore the Credit of that Nation, which had been very much funk in Perfia, by the vaft Loffes that had been fuftained by their Eftablifhment at Fulpba, which, in the Courfe of the Civil Wars, has been almoft totally ruined.

But befides thefe Schemes, he had another, the Grounds of which it would take up too much Room to explain, and therefore I fhall content myfelf with barely faying, that from certain Motives, that appeared to him reafonable, he determin'd to remove the Capital of Perfia, and inftead of fixing, as his Predeceffors had done, the Imperial Refidence at $I$ Jpaban, he refolved to transfer it Northward, and fo place the Seat of his Empire in the Province of Cboraffan, to which perhaps he might in fome Meafure be determined by his Fondneff for his native Country. He fixed there upon the Town of Mef. cbed, which had been formerly the Capital of the Province. It is to be obferved, that the Word Metccbid, fignifies both in the Perfian and Turkib Languages, a Houfe or Temple confecrated to the Service of God, and it is from thence that we have framed our Word Mofque. The Name of this City therefore implies a great Mofque, and it was fo called from one of the fineft in that Part of the World, erected over the Tomb of the Iman Riza, a great Saint, which rendred it a Place frequented by Pilgrims, who out of Charity erected there feveral publick Structures of great Magnificence. It was befides famous for its Manufactures of all Sorts, fuch as Gold and Silver Brocades, Tapeftry, rich Silks; and woollen Stuff, as beautiful and as dear as Silks, there was befides a Manufacture of earthen Ware, which was looked upon as the beft in $A\{a$, on this Side China; fo that an Age ago this City for Mofques, publick Baths, Caravanfera's, Bazars, and other publick Structures, was not in the leaft inferior to any City in Perfia; but the Usbeck Tartars had fo totally deftroyed it, that it made but a very indifferent Figure when the Sbab Nadir made Choice of it for the Seat of his Empire.

The City of Mefched is fituated in the Latitude of thirty five Degrees twenty Minutes North, upon a fmall Stream that falls into the River Kurgan, which feparates the Province of Cborafan, from Aftarabat; and it may be very truly affirmed, that a happier Situation there is not in the World. The Air is extremely mild and temperate, the Soil about it wonderfully fruitful, and while it continues the Capital of the Empire, there is no doubt that the Tartars will be kept at a fufficient Diflance. While Sbab Nadir was employed in his Expedition againft the Mogul, his eldeft Son Riza Kuli Mirza refided there with the Title and Authority of Shab of Perfia; by his Care the City was rebuilt and reftored to its ancient Luftre, and fuch Privileges granted to the Inhabitants, as not orily came up to, but exceed-
ed thole that former Sbab's had granted to the People of Ifpaban. This young Prince was not contented with barely attending to the Civil Goverment of the Empire, he was defirous of difplaying alfo his Military Capacity, which induced him to attack the Khan of Balkh, the Sovereign of the Southern Part of Great Bucharia; which Country, together with its Capital, he reduced, and thereby gained not only an Acceffion of Territory, but one of the greateft and beft Cities in thofe Parts, Balkb having been, for feveral Ages, the Center of the Commerce carried on by Land to and from the Indies.
By this Eftablifhment, and thefe Conquefts, the Face of Affairs in Perfab is abfolutely changed, and this is a Thing that has not hitherto been fufficiently confidered. It is poffible, and indeed it is probable, that the Sous thern Provinces of the Perfian Empire will fuffer exextremely by this Alteration; and it is not alrogether unlikely, that if a civil War arifes from the Death of the late Shah, a new Principality may be erected in the Southern Parts, of which Spabaren, or fome other great City, may become the Capital; but itill Mefched will, in all Probability, remain the Seat of the Perfian Empire, and the Monarchs who govern there will extend their Conquefts Northwards, through Countries formerly indeed dependent upon the Perfians, but which have been for many Ages in the Hands of the Tartars; and if this fhould be the Cafe, we mult confider ourfelves extremely happy in having fet on Foot a Trade through Rufia into Perfia by the Cajpian Sea, by which the moft lucrative Part of the Commerce of that Empire will fall into our Hands, and may be juftly efteemed the Fruits of our great Naval Power, and the Effects of fending our Squadrons into the Baltick, which gave the Court of Petersbourg fuch an Impreffion of our Power to affift or diftrefs them, as it is our Intereft to take Care that Time fhall never efface.
20. We promifed to fay fomewhat of the ancient and prefent State of the Country and People of Perfia, confidered in a comparative Light, and we will endeavour to execute this as fuccinctly as poffible. The learned Dr. Hyde wrote an admirable Treatife in Latin, of the Religion of the ancient Perfians, a Work equally curious and ufeful, and which, notwithftanding, was fo ill received by the Publick, that the Doctor boiled his Tea-kettle with the greatent Part of the Impreffion, which has made it fo ficarce, that from its natural Price of Ten Shillings, or lefs, it is now fold for two Guineas, and even at that Price will not be efteemed dear by fuch as can judge of its real Value. It is from this learned Book that we are informed of what we fhould otherwife never have known, that the ancient Perfians, on whom the Greeks beftowed the Name of Barbarians, were in Reality the beft governed, the politeft, and the moft civilized Nation upon the Face of the Earth. Their Religion was far more incorrupt than thofe of $E$ gypt, Greece, or Rame, for they worfhipped only one God; and though they were over-run with Supertition, they never degenerated into Atheifm or Idolatry. The common People were, from Principle, extremely induftrious; they cultivated their Country with the utmoft Care, infomuch that thofe Diftricts that are now fandy Deferts, were then perfect Gardens; and many rich and populous Cities were feated in Places that at this Day are wafte and howling Wilderneffes. Yet there even flill remain clear and indifputable Proofs of the Truth of what this learned Gentleman has afferted, and thefe are of two Kinds, Firf, The Ruins and Remains of this ancient Magnificence, which even the Iron Teeth of Time have not been able to deftroy, as appears from what the Reader has been told of Perfepolis; and next from the Tomper and Difpofition of that Remnant of the ancient Perfees, Gubers, Gaurs, or Fire-worhippers, that are ftill left in this Country and in India, and who are, beyond all Controverfy, the moft quiet, induftrious, and moft inoffenfive Nation, if we may yet ftile them fo, on the Face of the Globe. The Seat of their prefent Habitations is the wildeft and worft Part of the Province of Kerman, and yet even there the fimall Diftricts they poffefs, appear a Kind of Rara-
dife in Comparifon of the Country round about ; and by them thofe Wollen Stuffs are wrought, which the modern Perfians, from a true Principle of Luxury, think too good for any Bodies Wear but their own, and therefore never fuffer them to be carried out of their Dominions.

As for thefe People, it is no Wonder that they have brought the fame Diferedit upon the large and fruiful Provinces they inhabit, that the Turks have done upon the Land of Canaan; and indeed it is the Genius of the Mabometan Religion to deface all Marks of former Improvements, as well as to receive no Benefit from fuch Examples. The Wars, by which this Empire has been continually wafted fince it fell into the Hands of its prefent Poffeffers, has contributed not a little to thin it of People; fo that now there are not above a twentieth Part of the People in Perfia that there were at the Time that Alexander invaded it. Befides this, there are feveral Nations featter'd up and down it, that are rather Vaffals than Subjects to the Shahs, and live after the Manner of the Tartars in their Tents. The Want of a fettled Nobility, and the little Security that the Pcople in general have for their Fortunes; is another great Obftacle to the cultivating their Lands, and the Improvement of their Cities. We may add to this, the Revolutions and Civil Wars which have been fo frequent in Perfia; as alfo the Incurfions of the Tartars and other barbarous Nations, from which they are hardly ever free. As to the Lazinefs and Luxury of the Perfians, though it is in one Senfe a Caufe of the wide Difference between the paft and prefent State of their Empire, yet confidered in another Light, it is the Source of what little Commerce they have; for as they are not willing to work themfelves, they are very ready to let other Nations dwell amongft them ; and provided they reap the Fruits of their Induftry, treat them fairly and civilly enough, without any Mixture of that haughty, infolent, and unbridled Temper, which is fo hateful and fo intolerable amongft the Turks. Befides, as they fpend without the leaft Confideration, all they get, this occafions a quick Circulation of Money, fo that the Ar menians, Indians, and other Foteigners that live amongft them, pick up a tolerable Livelihood, and are not impofed upon and oppreffed as in the Territories of the Grand Signior.

It is the Want of People that makes a great Part of Perjal lie wafte and barren; and the natural Fertility of the Country is another Caufe of this, for even the few Parts that are now cultivated, produce much more than is neceffary for the Subfiftance of its Inhabitants; and it is from thence that their Trade and their Riches arife; for fince there are no Mines now wrought in Perfia, what Gold and Silver they have comes into that Country by the Purchafe of their Silks, and other rich Commodities; whence the Reader will eafily difcern, how powerful and how happy the People might be under a fettled Government, that paid fome tolerable Refpect to the Welfare of its Subjects; but after all, this is hardly to be hoped for while in the Hands of the Mabometans, who, on the one Hand, are very litile inclined to any Kind of Induftry themfelves, and, on the other, are very apt to be jealous of their Chrittian Subjects thriving, tho' they are the better for it. While the Ruffans were Mafters of Gilan, which was but for a very fhort Space, the Inhabitants were fo fenfible of the Change, that there was Nothing they dreaded fo much as returning again under the Dominion of their old Mafters; and when this actually happened, great Numbers of them quitted their Habitations, and retired into the neighbouring Parts of Georgia, Dagefran, and Armenia, that they might avoid falling under the Yoke of Tbamas Kuli Kan, notwithftanding that was as light, at leaft in Time of Peace, as any of the former Shahs.

2I. It is to very little Purpofe that we increafe the Stock of our Knowledge; by reading, unlefs we enable ourfelves to make fome Ufe of it by Reflection; as a Trader does not thrive by having his Warehoufes ftocked with Goods, but by his knowing where and how and to carry them to Market. We fee plainly from

## Chap. II.

of the Empire of Persia.
the Defcription of the Perfan Empire, at the Beginning of this Section, that in Point of Territory, the Shah's of Perfa are very little inferior to any of the great Monarchs in the Univerfe; but we know experimentally, that for all this, the Princes of this Country, from the Time of Shah Abbas, have made but a very indifferent Figure, and are not like to make a better in Time to come. This fhews us the terrible Effects of arbitrary Power, a Thing altogether infupportable; but from the Wifdom of fome great Princes, who by diffembling and letting it down, preferve it. Shah Nadir had this in his Will, but never in his Power ; he had acquired his Authority by being at the Head of an Army, and he found it impoffible to futtain it any other Way than by remaining at the Head of it; for he neither durft disband his Troops, nor could he truft them any longer than they were employed; this was the true Reafon of his Indian Expedition, and this mult be the Cale, till fuch Time as the Army, by which he attained his Sovereinty, is in fome Meafure worn out, and then perhaps, the Feeblenefs of the State may draw upon it foreign Invafions.
If either the Extent, or the Quality of Countries, could make Princes eafy or happy, the Sovereigns of Perfa might be fo without making Slaves of their Subjects, or diturbing their Neighbours. We may from hence alfo difcover the Value of right Principles with Regard to Induftry and Commerce, which always include due Refpect to Liberty and Property, without which the former can never fubfift, and the latcer can never be attained. If we could, with any Probability, fuppofe that a well-conftituted Government could take Place and be thoroughly eftablifhed in Perfa, it is very evident, that in the Space of a Century, not only the Affairs, but the very Face of the Country would be changed; their great Cities would be repeopled, the Trade through Perfia to India and Tartary would be revived, their Silk-works and Manufactures would be reftored, and Multitudes of People would flock into all their Provinces for the Sake of that Plenty, which, in fuch a Situation of Things, they would be fure to enjoy. But as this Suppofition is, on the one Hand, improbable ; fo, on the other, it is very evident, that for this very Reafon the Perfian Monarchy muft, for a long Series of Years, continue broken and weak;
for it is by Commerce only that the People of that Country can beeome formidable; for while, on the one Side, they want a Naval Power to maintain the Sovereignty of the Cajpian Sea, to which they pretend ; and on the other Hand, to have no Fortreffes of great Strength to fecure their Frontiers againft the Usbeck Tartars on the North, and the Turks on the Weft, they will always be in Danger from both thofe Neighbours.
Thefe Things are fo plain, that they cannot be denied or doubted. The fingle Inference I would draw from this is, that fo far as human Forefight reaches, there feems to be a Difpofition in Providence to overturn the Mabometan Powers every where; for if we compare the prefent State of Things with the paft, we cannot help feeing, that they are much in the fame Situation that the Greeks were at the Time their Empire began to decline ; and though it may be fome Centuries before their total Deftruction comes on, yet we muft fhut our Eyes againft Evidence, if we are not convinced that it is coming. We muft indeed allow, that there were fome vifionary People here in Europe, who apprehended mighty Things from the Shah Nadir, and believed that he would overwhelm the Turki/b Empire ; but there was no Kind of Reafon for this, except the known. Weaknefs of that Empire; and if it were not for this, we might with more Reafon expect, that the Turks, at this Juncture, fhould make fome Impreffion upon Perfia, which however I am perfwaded will not happen. But if the Feuds of Chriftian Princes were once laid aneep, there is no Improbability in the Conjecture, that the Ruffians might make themfelves Maiters, at leaft, of fome of the Provinces of this Empire, which lie neareft to the Cafpian Sea; and whenever it fhall happen, it may prove a Beginning to much greater Revolutions, fince there are Multitudes of Chriftians in the adjacent Countries, who are either of the Greek Religion, or very little removed from it ; and if their Spirits fhould once revive, the Weaknefs of the Mabometans, Booth here and elfewhere, would be quick ly feen. I know very well how little Heed the prefent Generation will give to Remarks of this Nature; but I flatter myfelf, that how weak or how impertinent foever they may be now efteemed, Experience will juftify them to Pofterity.

## S E C T I O N III.

## Of the Difpofition and Temper of the Perfians, their Perfons, Habits, Manner of Living, their Artificers and Mechanicks, the Refpect paid to Merchants, the Method in which their Inland Trade is carried on, the paft and prefent State of the Englijh Commerce, and other Particulars; together with fome curious Obfervations on the Nature of the Silk Trade, and a Computation of the annual Balance in Favour of Perfia.

## Collected as weell from private Memoirs, as from Accounts that bave been publijhed.

1. An Introductory Account of the Subject of this Section, the Diffculty of draweing National Characters, the likelieft Way of coming at the Truth, the general Temper, Difpofition and Genius, of the modern Perfians. 2. Of their Perjons, Drefs, great Value of their Turbants, and of the Magnificence and Prow Jufion into wobich all Ranks of People are apt to run in that Country, in every Thing that regards Appearance and Equipage. 3. Of the Womens Habits, their Painting, their Head-dreffes ufually adorned with Feathers, frequently jet out with Fewels, and more efpecially weith Pearls, wwich were efteemed the beft in the World, So long as the Perfians were polfeffed of the Ifland of Baharen. 4. The Manner of Living in Perfia, the Metbod of eating and drinking, their CuAloms at their Meals, the Commonne/s of Cooks-Shops and Ordinaries among/t them, and of the open and general Hopitality in Perfia. 5. A Viero. of their Entertainments, the Ceremonies and Givilities that pals upon Juch Occafions, their laudable

Temperance

## 892 The Manner of Liviag, Diverfions, Commerce, \&c. Book III.

 Temperance and great Sobriety, ond of the Manner in wbich, by the UJe of Opium, they fupply tbeir TNant of Arong Liquors. 6. The Manner of Travelling in Perfia, the Nature of Caravans, bowe they supply the Want of Wheel Carriages, of their Foot-Poffs, and of the woonderful Swoiftnels of, their Shatirs or Rumning-Footmen. 7. Of their Artifucers and Mecbanicks of all Sorts, the Neatnes; of fome and the Inexpertness of otber Workmen, and of the Nature of their Companies, and the Rules by whbich they are governed. 8. Of the Silken, Woollen, and Mobair Manufaizures, that are carried on in this Empire, the Management of their Domeftick Trafick, the great U/e of Brokers; the Manner in which their foo reign Trade is carried on, and the Realons that binder Mahometans from becoming Merchants; weith fome political Remarks upon that Subject. 9. The Nature of the Englifh Trade in Perfia, the Meafures, Weigbts, Money, generally ufed in tbat Country, and the Alterations that bave bappened by tbe Removal of the Capital from Iipahan to Mefched. 10. A fuccinct View of the Jeveral Routes by whbich foreign Commodities are introduced into Perfia, weith a clear View of the Advantages arijing from the new Trade to that Empire, through Ruffia. 11. A fhort Reprefentation of the Value of Silk, confidered as the Staple Commodity of Perfia, and of the Advantages that would refullt to this Nation by the joint Endeavours of the Ruffian, Levant, and Eaft-India Companies, to import Perfian and China Silks, on the cheapeft Terms poofible.1. FTER taking a View of the Country of Perra, and its Product of all Kinds, it is very natural for us to come next to the Inhabitants, for whofe Sake the other Defcription was held neceffary, and made intirely with a View to render this more clear and intelligible. It mult indeed be owned, that there is fomething very difficult and bazardous in attempting to characterife a whole Nation, and nothing is more common than Inflances even of great Authors falling into Miftakes on this Head ; yet as the Thing is neceffary, fo it is alfo very feafible ; Nations certainly have their Characters as well as private Men, and thefe are frequently hit, though to be fure fometimes they are miftaken.

The Means of hitting them, is to obferve carefully the Points in which all Travellers agree, for thefe, without doubt, are founded in Truth and Nature; when a fufficient Number of thefe are fixed, they will ferve to guide you in the reft, for the Humours of Men, though of feveral Sorts, and vaftly different from each other, yet have a Connection among themfelves, that is to fay, one Humour aflorts with, and joins eafily with another, while there are fome Humours that never come together, or are found in the fame Breafts. That there really is fuch a Thing as national Characters, appears from hence, that the Inhabitants of the fame Country, through a great Diverfity of Ages, and defcribed by Authors of various Difpofitions, keep pretty nearly the fame Character; of this, the Defcription of the People of Paris, by the Emperor Fulian, is a remarkable Inftance, and others might be mentioned, if that before us were not as good a one as any of the reft; for whoever confiders attentively what is faid of the Temper, Genius and Cuftoms of the Perfans, independant of their Religion and Government, by the Greek and Latin Writers, and compares thefe with the Writings of modern Travellers, will be amaz'd to fee what a Conformity there is between them, and be from thence convinced, that national Characters are nothing lefs than imaginary. But to come to the Point, and to that Defcription which will juftify this Obfervation, at the fame Time that it carries on the Thread of our Difcourfe, and performs the proper Bufinefs of this Section.
The Perfans are Men of bright Parts, and Abundance of Vivacity, fond of Glory, and known to excel their Neighbours of India in Point of Courage, infomuch that the Mogul prefers them to the greateft Pofts, both in his Court and Army; and as they were obferved anciently to be of all Men the moft civil and obliging, they retain the fame Difpofition to this Day, efpecially towards Foreigners, who admire their Hofpitality and Benevolence; they are far from being guilty of that brutifh Behaviour towards Chriftians, as the Turks are; what they feem to be moft juftly and univerfally charged with, is Vanity and Profufion in their Cloaths, their Equipages and Number of Servants; as to Voluptuoufnefs in Eating and Drinking, this does not appear to be their Vice, at leaft we are much more guilty of it in Earope; for the greatef Part of their Food is Rice, Fruits, and Garden Stuff; they have not any great Variety of Flefh,
neither have they many Ways of dreffing it; Pilo feems to be the ftanding Difh, even among thofe of the beft Quality. And as for ftrong Liquors, though they drink them now and then by Stealch, Drunkennefs is very far from being common; Liquor is never forced, and every Man may retire from an Entertainment without Ceremony when he fees fit, without a Breach of good Manners.

No People have a greater Genius for Poetry, infomuch that there it not a Feftival or Entertainment made, but a Poet is introduced and defired to oblige the Company with his Compofitions ; and thefe Gentlemen are often found with a Crowd about them in Cof-fee-houfes, and other Places of publick Refort. The Perfanis are by fome looked upon to be very covetous, buc by this they mult mean covetous in getting, for as to hoarding up Money they are generally abfolved. They only get that they may fpend, and when they have furnifhed themfelves with an Equipage, Houfe and Gardens fuitable to their Mind; they rather lay out their Money in building Caravanfera's, Mofques, and on other publick Occafions, than let it lie by them, infomuch that fome Travellers oblerve, that there are no People in the World that take lefs Thought for Tomorrow. A Man who happens to have eight or ten thoufand Pounds fall to him, fhall in a few Weeks lay it out in purchafing Wives and Slaves, Cloathing, and Furniture, withour confidering where he fhall meet a Supply, and in two or three Months after, you will fee him difpofing of them again for Subfiftance. Thefe People, it is oblerved, have a great Command of their Paffions; they are not eafily moved, and when they are, it proceeds very feldom to Blows. The Quarrel generally ends in ill Language, and perhaps fome hearty Curfes; and to fum up all, they call one another feres of Cbristians. They are of a very infinuating Addrefs, and a moft obliging Behaviour; few European Nations are more polite.
2. The Perfians are generally of a good Stature, well Thaped, clean limb'd, and of agreeable Features, and in Georgia and the Northern Provinces, of an admirable Complexion ; towards the South they are a little upon the Olive. However, the great Men having had their Wives and Concubines chiefly from Georgia and Circaflia, for a hundred Years paft, their Complexions are very much mended even in the Southern Provinces. Their Eyes and their Hair are generally black, and they wear only one Lock on the Crown of their Heads, like other Mobometans, by which they expett Mabomet will lift them up to Paradife.

As to their Beards, the Shah and the Great Officers of State, and Soldiery, wear only long Whiskers on the upper Lip, which joined to a Tuft of Hair on the upper Part of their Cheeks, grow to a very enormous Size, infomuch that fome of them, it is faid, are near half a Foot long. Their Mollabs and religious People wear their Beards long, only clipping them into Form, and the common People clip their Beards pretty fhort, but none of the Perfians fuffer any Hair to grow upon their Bodies. They wear large Turbants on their

## Chap. II. of the Inbabitants of the Empire of PERsia.

Heads, fome white, and others flriped with red or other Colours, and the Great Men have Flowers of Gold and Silver woven or marked on the Cloth. They have alfo a Scull-cap under their Turbant, and all together does not weigh leis than feven or eight Pounds, fometimes a great deal more. Next to their Skins they wear a Shirt of colour'd Silk or Calico, generally blue, which they feldom or never wafh; this Shirt has an open Bofom, but neither Neck nor Wriftbands, and is made clore to the Arm; they have alio a Pair of Breeches, or rather Drawers, clofe before, they reach half down their Legs; their Stockings are made of woollen Cloth, but not at all fhaped to the Leg ; over the Shirt they wear a Waiftcoat, and upon thete a Coat with clofe Sleeves, and Buttons and Loops before, tied with a Sah; this is wide at Bottom, and hangs a litele below their Knees; befides this, they put on another Coat frequently, without Sleeves, the uppermoft Coat being the fhorteft, and in the Winter Time over all they have another loofe Coat lined with Furrs: Inftead of Shoes they have piqued Slippers, turned up at the Toes, and made of Turkey Leather, which are neither tied nor buckled, aud when they ride, they have Boots of yeliow Leather; their Bridles, Saddles and Houfing are immoderately fine, being almoft covered with Gold; the Houfing is fo large, that it almolt hides the hinder Part of the Horle, and whether on Foot or on Horfeback, they wear a broad Sword, and a Crice or Poniard. Therr Ladres have allo a Dagger at their Sides, efpecially thofe of high Rank.
3. The Garb of the Women is not very different from that of the Men, except it be, that the Women neither wear Turbants on their Heads, nor Safhes about their Waifts, and their Coats or Vefts reach almoft down to their Heels. If ever they go into the $S$ : reets, which Women of Quality feldom do, they have a white Veil which covers them from Head to Foot. The Girls wear a flifned Cap upon their Heads, turned up like a Hunting-Cap, with a Heron's Feather in it, their Hair being made up in Treffes, and falling down their Backs to a very great Length, and the Quality have Pearls and Jewels interwoven and mixed with their Hair. The married Women comb their Hair back, and having bound it about with a broad Ribbon, or rich Tiara, fet with Jewels, which looks like a Coroner, let the reft of their Hair fall gracefully down their Shoulders, than which there cannot be a more becoming Drefs. As for Gloves, neither Men nor Women ever wear them, but their Arms and Fingers are ufually full of Rings and Bracelets enriched with Jewels.

As black Hair is the moft common, $\mathrm{fo}_{\mathrm{o}}$ it is in moft Efteem, and the thickeft and broadeft Eye-brows are thought the fineft; the Women, if their Eye-brows be not black, will colour them, and commonly paint their Faces; they rub their Hands and Feet with an Orangecoloured Pomatwin. Some will have Feathers ftand upright in their Tiara, and others have a String of Pearls or precious Stones fafted to it, which hangs down between their Eye-brows; they wear alfo Jewels in their Ears, and Rows of Pearls fall down their Temples, as low as the Neck, and in fome Provinces bordering on India, they have Jewels in their Noftrils, which to the Europeans do not feem very becoming, for hanging down to the Mouth, it makes them look as if they had Hare-Lips, but the Ladies of Ipaban, never wear thefe Nofe-Jewels. Their Necklaces are either Gold or Pearl; they fall upon the Bofom, and there always hangs a little golden Box to them, filled with moft reviving Perfumes.

As their Clothes are of the richeft flower'd and brocaded Silks, it appears that their Drefs is no inconfiderable Article in Perfia, where People of mean Fortunes endeavour to vie with the Quality, and will have fine Clothes, though they want Food. An ordinary Turbant cannot be purchafed under Ten Pounds, and they frequently give twice as much, and they muft have Variety of them, left they fhould be known by their Clothes. Their Safhes alfo are brocaded, and coft from twenty to a hundred Crowns, and over this they have frequently another of Camel's Hair, of which the Workmanhip

VOL. II. No ${ }^{1} 30$.
is fo curious, that it feldom cofts lefs. Thofe who wear Sables, which they will not be without if they can purchafe them, feldom pay lefs than a hundred Pounds for a clofe bodied Coat; all this, with the rich Furniture and Equipage they have, when they ride out, amounts to a vaft Sum ; and this, as it well may, keeps them exceeding poor. The common Mode of living is thus:
4. Early in the Morning they ufually drink a Difh of Coffee. 1 About Eleven they go to Dinner, when they eat Melons, Sweetmeats, Fruit, Cheefe, Curds, or Milk, but their principal Meal is in the Evening, when you may depend on a Difh of Pilo, which is boiled Rice well buttered, and feafon'd with a Fowl, a Piece of Mutton or Kid ferved up with it; they have an excellent Way of boiling their Rice all over the Eaft, the Water is perfectly dried away, by that Time the Rice is enough, after which they feafon it with Spices, and mix Saffron or Turmerisk, with it, giving it a yellow, or what other Colour they think fit; but there is very little Variety either in their Food, or Way of Dreffing it ; if they have a large Joint, it is baked, inftead of being roafted, but their ufual Way is to cut their Flefh into little Slices, and 'Spitting or Scuring them together, roaft them over a Charcoal Fire, and whether they boil or roaft, it is always done to Rags, or it would be impoffible to pull the Meat to Pieces with their Hands, as they do without Knives or Forks. Pork is never eaten here any more than Veal, nor do they eat Hares or other Animals prohibited to the feres, Beef but feldom ; they do not deal much in Venifon, Finh or wild Fowl, they drefs only plain Difhes, being Strangers to Hafhes, Ragouts and other Compounds, and feldom have any other Sauce than a Slice of Lemon, or fome Pickles. Bread they have baked in thin Cakes the Moment they ufe it, but eat much more Rice. They ufe no beaten Pepper, only whole, and not Abundance of Salt in their Sealoning, nor is there any brought to Table: Meat is never falted before it is drefled. They ufually kill their Meat and Fowls the fame Day they ufe them, and fet by nothing to be eaten cold.

They fit down crofs-lego.d at their Meals, and a Cloth is fpread upon the Carpet. Then one of the Perfons who has the Provifion before him, diftributes Rice and Flefh to the Company. They ufe no Spoons, except for Soup and Liquids, but take up their Rice by Handfuls. They feldom fit above half an Hour at Table. They wafh both before and after their Meals, making ufe of their Hankerchiefs inftead of a Towel. The common People of Ifpabanifeldom drefs their Victuals at Home, but when they have fhut up their Shops of an Evening, go ftrait to the Cooks, of which there are great Numbers in that City, and buy Pilo for their Families. The Cooks have Kettles or Coppers fixed in Brick-work, in their Shops, and Stoves, over which they drefs moft of their Mear, making fcarce any Ufe of Chimnies. It is remarkable of the Perffians, that they are fo far from fhuting their Doorsat their Meals, that they invite every one to eat with them, who happens to come to their Houfes.
5. When a Perfon makes an Entertainment, it is ufually a Supper, notwithftanding which the Guefts generally comie at nine or ten in the Morning, and fpend the whole Time at the Place to which they are invited. They difcourfe, they fmoke, eat Sweetmeats; and pafs away the Time with a thoufand Amufements; fometimes they hear Poems repeated in Honour of their Prince, fometimes the Singing Women are introduced, who fing, and dance, and play, and fhow antick Tricks, to divert the Company; and if any one of the Guefts are difpofed to withdraw with any of thefe Dancing-Girls, they are fhewn into a private Room, and when they return Nobody takes any Notice of it. When Supper is ferved up, the Son or fome Relation of the Mafter of the Houfe, takes the Honours of the Feaft upon him, and helps the Guefts to their Meat.

They generally provide Variety of Sherbets on thefe Occafions, their ufual Drink being nothing but fair Water, and even this, it feems, they drink with Ice ;

10 S

## 894 The IMamner of Living, Diverfions, Commerce, \&c. Book III.

it is the Employment therefore of Abundance of People about Ifpaban, in the Winter-Seafon, to heap up vaft Quantities of Ice together, and keep it in Repofitaries under Ground all the Summer, when they fell it to great Advantage. Wine is made in feveral Provinces of Perfia; but the Armenians and other Chriftians drink the greateft Share of it. The Officers will indeed fometimes indulge themfelves in this Liquor, and other People drink it as they pretend for their Health, but that is not common; much the greateft Part of it is either tranfported to the neighbouring Countries, or drank by the Chriftians, who are difperfed through the Perfian Dominions.

But thofe who abttain from Wine out of Confcience, becaufe it is prohibited by Law, raife their Spirits with Opium, Bang, Poppy-feed, and other intoxicating Ingredients. The Perfans like other Eaftern Nations, take Pills of Opium, which fome of them gradually increafe to fuch a Dofe, as would deftroy half a Dozen Europeans. Within an Hour after they have taken the Pill, it begins to operate, and a thoufand pleafant Scenes prefent themfelves to their Imagination; they laugh and fing, and fay Abundance of humorous Things like Men intoxicated with Wine, but after the Effect of it is gone off, they find their Spirits exhaufted and grow penfive and melancholy, till they repeat the Dofe again; and fome make it fo neceflary to them that they cannot tive without it. There is alfo a Decoction of the Seed of Poppies, fold in moft Cities of Perfia, and in thefelfloufes you will fee People looking and talking as Men do when they are drunk: As long as they keep to the Letter of the Law, and abftain from Wine, it is no Matter how much they diforder themfelves, they think they fhall never be accountable for that.
6. There are no Wheel-Carriages in this Country, but all People travel upon Camels, Horfes, Mules or Affes. The Women who are to be concealed as mach pofible, are put into a fquare wooder Machine, of which they hang one on each Side of a Ca mel; they are abour three Foot deep, and juft large enough for one to fit down in, and over-head are three or four Hoops like thofe which fupport the Tilt of a Waggon, with a Cloth thrown over them. Their Affes are much larger and nimbler than ours, and will trot ten Miles at a pretty good Rate, but they are very obftinate, and frequently throw their Riders. People ufually rravel in this Country with the Caravan, confifting of four or five hundred Camels, befides other Beafts, and there is no Place where they travel with greater Security and lefs Expence, there being Caravanfera's at proper Diftances, where they have their Lodging Gratis, and purchafe Provifion at the beft Hand; and though the Roads are frequently fteep and mountainous, yet fuch Care is taken in laying Bridges and Caufeways, and to level and enlarge the Ways, that a Traveller feldom meets with any Difficulties but what are eafily furmounted.

Here are no General Pofts, but if any Perfon has Letters to fend, he difpatches a Shatir or Footman with them on Purpofe, who will travel a thoufand Miles in eighteen or twenty Days, and not ask more than twenty Pence or two Shillings a Day for his Trouble : They carry with them a Bottle of Water, and a little Bag of Provifion, which ferves them thirty or forty Hours: They generally leave the high Road, and crols over the Country the neareft Way. There are a great many Families which make this their only Employment, and breed their Children up to it, obliging them to run from their Infancy.

The Shah, and all the great Men, have feveral of thefe Sbatirs or Footmen in their Retinue, but before a Man can be admitted one of the Imperial Footmen, he mult give a very extraordinary Proof that he does not want Heels or Breath; for he muft run from the great Gate of the Palace called Aly Capi, to a Place a League and half from the City, twelve Times in one Day, and every Time bring an Arrow along with him, which is delivered him by thofe who ftand at the End of the Race, to fhew that he has run the whole Courfe; and this he performs between Sun-rife and Sun-fet, in and this he performs between Sun-rile and Sun-let, in
a hundred and eight Miles. It is always fome Favourite Servant of the Shah's who is admitted to this Honour. On the Day of Trial the Elephants and Horfemen are drawn up in the Royal Square, with the Mufick, Drums and Trumpets founding, and as if it was a Feftival. All the Grear Men make Prefents to the Sbatir, and feveral of them ride the Courfe with him to ingratiate themfelves with the Shah ; and the Mob attend him every Time he returns with their Shouts and Acclamations. The Chams and Viceroys, who admit a Sbatir into their Service, make him run the fame Number of Miles, and they are careffed and prefented by ail their Dependents in the fame Manner the Royal Sbatirs are, though not fo largely; for it is a very common Thing to fee the Shah's Sbatir prefented with above a choufand Pounds on fuch an Occafion. This is a very ftrong Mark of the Spirit of this Nation, and of that Difpofition they have to difplay their Generofity, fometimes at the Expence of fiftice, but withour Regard to Prudence always.
7. With refpect to their Artificers, Manufacturers, and common Tradefmen, the Regulations that are made in this Country are extremely well contrived, for every Company has a Head or Mafter, who with a fmall Number of his Brethren, form a Kind of Council, and fettle fuch Rules and Orders for the general Benefit of fuch as are engaged in the particular Branch of Trade he fuperintends as to him and them feem requifite. Whoever intends, to fet up a Trade, goes to the Mafter, and regifters his Name and Abode, and no Enquiry is made who was his Mafter, or whether he underftands the Bufinefs or not ; nor is there any Reftraint Jaid upon them that they fhall not encroach upon any other Profeffion; for Inftance, the Braziers are ar Liberty to make Silver Veffels, as they frequently do, without being in Danger of any Difturbance from the Silverfmiths. Neither do they take Apprentices for a Number of Years, but hire their Servants, and allow them Wages from the firf Day they entertain them. Every Trade almoft is bound to work for the Shah when ever he requires it, and thofe who are not, pay an annual Tax to the Government for an Exemption.

Their Armourers make very good Broad Sword Blades, and damask them as well as any European. The Barrels of their Fire-arms are not amifs, they make them very ftrong, and as thick at the Muzzle as at the Breech. Their Stocks are but ill contrived, being thin and light at the Butt, and not fit for a Man's Shoulder ; and for Locks to their Guns, or any other Locks that have Springs, they do not pretend to make them any more than Watches or Clocks, which they either purchafe abroad, or employ European Workmen to make for them. Knives, Razors, Sciffars, and fome orher Cutlery Wares, they make very well, and little Steel Mirrors, which they ufe inftead of Looking-glaffes; they are almoft all convex, and the Air is fo perfectly dry, that they feldom ruft or grow dull. The Art of making Looking-glaffes they do not underftand, but have them from Europe. However, they have a Manufacture of Glafs, which ferves for Windows and Bottles. The Glafs of Sbiraz is the beft in the Country.

As the Ufe of the Bow is what the Perfians value themfelves much upon, there are no where better Bows made ; the chief Materials are Wood and Horn with Sinews bound about them ; they are painted and var nifhed, and made as fine as poffible. The Bow-ftring is of twifted Silk, of the Bignefs of a Goofe-quill ; their Quivers of Leather, embroidered or worked with Silk. This is a Trade they are as well. verfed in as any thing, efpecially the Gold or Silver Embroidery, either on Cloth, Silk, or Leather. They cover their Saddles and Houfings almoft with Embroidery, and their ftitching of the Leather is much beyond any Thing we do. Their Saddles are made after the Morocco Model, and the Stirrups mighty fhort ; they have a Kind of Breaftplate to them, and where we ufe Braffes about our Furniture, their Men of Quality have Gold. The Leather which we call Turkey Leather, from its coming to us through that Country, is all made in Perja. The Shagreen alfo comes from thence, which is made of the Skin of an Afs's Rump. The Tanners drefs their coarfe

## Chap. II. of the Inbabitants of the Empire of PERSiA.

Skins with Lime, and ufe no Bark, but Salt and Galls intead of it.

The making Earthen Ware is another Manufature the Perfians excel in; it is much beyond the Dutch, and fome fay almoft equal to Cbina Ware. The Places where it is chiefly made, are, Sberaz, Meffob, Tefd, and at Kerman: And mending of Glafs and Earthen Ware, is a particular Trade in Perjia; they will drill Moles through them, and faften the Pieces together, fo that a broken Bowl or Plate will hold Liquids, as well as it did at firf. Their Gold Wire-drawers, and Threadtwifters are Artifts alfo in their Way ; they will draw a piece weighing a Diachm, to the Length of three hundred Perjian Ells. Their Lapidaries underfand the Grinding of foft Stones, and cutting them pretty well. Their Dying is preferred to any Thing of that Kind in Europe, which is not afcribed fo much to the Artift, as to the Air, which being dry and clear, gives a Livelinefs to the Colours, and fixes them.
The Perfian Taylors work very neatly; and as the Men's Clothes are made of the richeft fower' ${ }^{9}$ and brocaded Silks, they are fitted exactly to their Bodies without the leaft Wrinkle, and cheir Sowing is incomparably beyond that of our Workmen, as the fine Materials they work on require it fhould. They work Flowers allo upon their Carpets, Cufhions and Window-Curtains, fo very nicely, that they look as if they were painted.

With Taylors, we mult not forget to mention their Barbers, who are no lefs excellent in their Way; for they will fhave the Head almoft at half a Dozen Strokes, and have to light a Hand, that you can farce feel them; they ufe only cold Water, and hold no Bafon under your Chin as with us, but have their Water in a Cup, about the Bignefs of a little China-Difh: After they have fhaved a Man, they cut the Nails of his Fret and Hands, with a little Iron Inftrument like a Bodkin, Tharp at the End; then they ftretch his Arms, and rub and chafe his Flefh, which is an Amufement, that the Europeans as well as the Narives are pleafed with, in thefe hot Countries. But notwithftanding this, thefe Artifts are nothing comparable in their Way to thofe of India, and thefe again fall as flort of the Cbinefe Barbers
8. We are now to proceed to the more material Parts of the Perfan Commerce, from whence their national Riches fiow, and by which they draw to themfelves the Wealth of other Countries; for as we before obferved, Gold and Silver are no longer the Produce of Perfa, but are brought thither in Payment for their Commodities. Sillss are the principal Manufacture of the Country, fuch as Taffaties, Tabbies, Sattins and Silk mixed with Cotton or Camel and Goats-hair, Brocades and Gold Tiffue, of the fingle Brocade there are a hundred Sorts, the double are cailed Duroy or Two-faces, becaufe both Sides are equally good; they are the richeft that are to be met with any where; and the Gold Velvet which is wrought in Perfa is admirable; all their rich Stuffs are very durable; the Gold or Silver does nor wear off or tarnifh while the Work lafts, but keeps irs Colour and Brightnefs. The fineft Looms for thefe Stuffs are at Ifpaban, Caban and Vefd. Thofe for Car- $^{\text {C }}$ pets are chiefly made in the Province of Kirman, what are commonly called Turkey Carpcts are indeed Perfan but obtained that Name from being brought to us by Way of Turkey.

The Camel Hair Stuffs are made in Cormania, it is mighty foft and fmooth, and almoft as fine as Beaver Wool, but the Stuffs they make with it are not very ftrong. Camblets and Silk, and worfted Druggets are made in the fame Province. Goats-hair Stuffs are made in Hyrcania, and near the Gulp of Baffora. There is fome Callico-Cloth made in Perfa, and they know how to paint and ftain it, but it is not comparable to the Indian Callicoes. A Merchant is a very honourable Profeflion in Perfia, and the more fo, becaufe there is no fuch Thing as hereditary Nobility, which defcends from Father to Son; as to thofe in great Pofts, their Honour and their Profits terminate with the Office; and their Lives and Fortunes are both in perpetual Hazards, efpecially under a weak and cruel Prince. The Trader feems more independant than any other

Subjef, and notwithftanding the Government be defpo tick, they are ufually encouraged, becaufe they bring in a confiderable Revenue to the Crown; and another Thing is, the greatef Minifters do not think the Bufo neis of a Merchant beneath them, even the Sbob himelf, within our Remembrance, has had his Fators and Agents in the neighbouring Kingdoms, and exported Silks, Brocades, Carpets, and other rich Goods, anc? his Agents at the Mogul's Court, and ellewhere, have frequently had the Character of Ambaffadors conferred upon them, when indeed their Bufnefs was chiefly Commerce

All Bufinefs of Confequence is carried on in Perfias by Brokers, who are very cunning; after they have agreed and talked over the Matter at the Sellers-houfe, they agree about the Price upon their Fingers, putting their Hands under a Cloth; the Finger's End it feems fland for one, the bent Finger for Five, and the flrait for ten, the Hind open for a hundred, and if fhut a thoufand; and they keep fo even a Countenance all the while they are tranfacting the Affair, that it is impoftible for a Stander-By to grather any Thing from the Circumftances. But notwithtanding the Mobometans are the governing Part of the Country, they are not the greateft foreign Traders. The Armenion Chriftians, and Banians of India, have much the largeft Share.

The Mabometan Perfians trade from one Province of their own Country to another, and to India pretty much, but the Armenians manage the whole European Trade: One Reafon whereof is, that the Mabometons do not Care to go into Chriftian Countries, becaufe they cannot there obferve the Cuftoms their Religion prefcribes, for their Law it feems forbid them to eat Flefl killed or dreffed by a Man of a different Religion, or drink out of the fame Cup with him, and even prohibits the touching of Perfons in fome Circumftances, whom they look upon to be polluted. Another Thing, which is a Difadvantage to their Trade is, that the taking up Money at Intereft is unlawful, though they are at Liberty to make what Advantage they can in buying and felling. It appears from hence, that from the very Nature of their Religion, all Mabometan Powers fand excluded from Commerce, and this is the true Secret of the Declenfion of their Governments; for as Trade produces Shipping, as Shipping in Procefs of Time begets Naval Power, and as it is a Maxim, juftified by Experience, as well as founded in Reafon, that naval Power will in the End get the better of all other Power; it follows that the Mabometons wanting this, can only prey upon each other by Land, from whence Revolutions in Power, but no Acceffion of Power can ever arife. Whereas if Chriftians fould turn their Arms upon the Mabometans, fo as to make Conquefts, and come into Poffeffion of their Countries, the Cale would be altered, their Commerce would follow them, and the new erected Principalities would in a fhore Space of Time acquire a Naval Power, and fo be in a Condition to extend their Conquefts at the Expence of their Mabometan Neighbours.
9. We are indebted to Mr. Lockyer for the beft, indeed for the only tolerable Account we have of the Method Trade is carried on in Perfia, and therefore from him we muft borrow what is neceffary for the Reader's Information upon that Subject. Their great Weights are Maunds only, and thele differ according to the Narure of the Commodities to be delivered by them. Sugar, Copper, Tutanague, all Sorts of Drugs, $E^{3} c$. are fold by the Maund Fabrees; which in the Factory and the Cuftom-houfe is neartt fix Pounds and three Quarters, Averdupois; but in the Bozar it is not above fix Pounds and a Quarter, which one ought to have Regard to in buying out of the Shops.

Eatables and all Sorts of Fruit, as Rice, Raifins, Prunelles, Almonds, Onions, Esc. are fold by the Maund Copara of feven Pounds and three Quarters in the Factory, and from feven Pounds and a Quarter to feven Pounds and a half in the Bazar. Fine Goods, as, Gold, Silver, Musk, Acheen, Camphir, Bezoar, Coral, Amber, Cloves and Cinnamon, Oils, driec China, Silk, E c. are fold by the Mifcal, fix of which

## 896 The Manner of Living, Diverfions, Commerce, \&c. Book III

are commonly counted an Averdupois Ounce ; its juft Weight is 2 dw. 23 gr. 24 d : ps. Troy. The Maund Shaw is two Maund Tabrees, ufed at Ifpaban. All Bargains in Gambron are made for Shahees, and the Company keep their Accounts in them, reckoning them worth four Pence each, though that Coin is rarely met with, but in its Stead Coz and Mamooda's are current every where. Horfes, Camels, Houfes, $\mathcal{F}^{\circ} c$ are generally fold by the Toman, which is two hundred Shahees, or fifty Abaffes, and they ufually reckon their Eftates that Way; fuch a one, they fay, is worth fo many Tomans, as we fay, Pounds in England. The Laree is ufed about Ifpaban, nor are Abaffes to be got without allowing feven or eight per Cent. for the Difference in Exchange, yet Returns to Fort St. George, and other Parts of India, are commonly made with them. Next to thefe, Chequeens are the moft profitable; there are feveral Sorts of them, but the Venetion is better than the reft by one and a half or two per Cent. at Surat, and feveral other Ports on the Malabar Coafts, whither vaft Quantities are fent every Year. When a Parcel of Venetion Ducats are mixed with others, the whole goes by the Name of Chequeens of Surat; but when they are feparated, one Sort is called Venetians, and all the others Gubbers indifferently.

The Englifh Eaft India Company, as has been oblerved, do not only receive the Sum of three thoufand three hundred and thirty three Pounds fix Shillings and eight Pence of the Government of Perfia, in Lieu of the Service the Company did them in taking the Inand of Ormus from the Portuguefe, but they have an Exemption alfo from Cutoms, and whatever Ships trade under their Protection have the like Exemption, only paying the following Port Charges, viz. Two per Cent. on the Sale of Goods to the Company, one per Cent. Confulage to the Agent, one per Cent. to the Broker. Boat or Franky Hire for landing Goods is thirty Mamooda's per 2000 Maund Tabrees. Hamalgae, or Cooly Hire at Weighing, one Coz of every twenty Maund Tabres. The Company do not meddle at all with the Trade between Perfia and India; this they leave altogether to their Factors and Servants, and to fuch Country Ships and private Traders as put themfelves under their Protection, and are content to pay the Port Duties above-mentioned.

It is to be obferved, that the Turkey Company having always had an Opportunity of fending great Quantities into Perfa from Aleppo, abated much of the Commerce which the Agents of the Eaft-India Company would otherwife have carried on in that Empire. Of late the Ruffia Company have alfo interfered in this Trade, by tranfporting great Quantities of Englifb Goods by the Cafpian Sea ; and it is generally believed, that fo long as we maintain an amicable Correfpondence with the Court of Petersbourg, this Trade will not only go on, but increafe, which muft be attended with great AdvanEages to the Nation. As this appears to be a Matter of far greater Confequence to us than any thing that has occurred in this Section, it is but reafonable that the Point Thould be fully explained, as well for the Advantage of the prefent Age, as for the Benefit of Poftericy.
10. In order to fet this Affair in as clear a Light as it is poffible, we thall obferve, that all foreign Commodities are brought into Perfia by four great Routs; and that by each of thefe, more or lefs of Briti/b Commodities have been, or may be introduced into this Country, where there always has been, and, if we are true to our Intereft, there always mutt be, a very high Demand for them. Of thefe Routs the firft is that of Balfora, or Bajora, a great. City at the Bottom of the Perfan Gulph, fubject to its own Prince, and a Kind of Emporium or Magazine of Turkif, Perfian, and Indian Commodities. The Goods that are brought hither for the Perfian Market, come by Land by the Caravan from Aleppo, in about thirty Days, and are tranfported from thence either to Bandar $A b a / \sqrt{2}$, or Ifpaban. It is by this Caravan that the Turkey Company tranfport Englifh Cloths into Perfia in Exchange for Silk, which they purchafe at Aleppo, and confequently this Trade is either greater or leis, according to the good. Correfpondence be-
tween the two Empires of Turkey and Perfac. By this Means alfo we were led into Errors about Carpets, Lea ther, and other Commodities which pafs for Turkifh, be caufe imported by the Turkey Company from Turkey, though really of Perfian Growth and Manufacture.

The next great Rout is that of Gambron, or Bander Abafis, with refpect to which we have already given a large Account from Mr. Lockyer. Goods are brought hither by Sea, but not directly, as many apprehend, from England; on the contrary, they come from fome Indian Port, and confequently are charged with a very high Freight, and with other incident Charges, which render them very dear ; notwithftanding which, in Times of Peace, and when Things were well fettled in Perfa, the Shah keeping his Court at Ifpaban, there was large Vent for them, and our Agent there lived with all the Pomp and Splendour of a Prince. The Reader will eafily difcern from hence, how great a Change muft have been wrought in the Traffick carried on by this Canal, by the Difturbances which lafted fo many Years in Perfa, and by the Change of the Capital of that Empire, which is now removed to a prodigious Diftance from Bender Abaffa; and if he defires any Proof of this Fact there calling the Englifh Agents from I/paban and Bandar Abaff, may pafs for inconteftable Evidence.

The third Rout is that through India to Boft, which, as we have fhewn in the Defcription of the Perfian Empire, is the Eaftern Magazine, as Bandar Abafl is the Southern, and Baffaro is the Weftern for all that enter into Perfia. By this Means it is very far from being im. poffible that the Eaft India Company fhould introduce Englifh Goods into this Empire; but whether they are actually carried thither by this Road, is more than I am able to fay; and if they are, I prefume it is done by Indian, Armenian, or Fervif Merchants.

The fourth or laft Rout is by the Cafpian Sea, and the Englifh Commodities that are fent this Way, muft of Neceffity pals through Ruffa. For the carrying on this Trade Magazines muft be erected at Astracan, and from thence the Goods are tranfported into the Provinces of Gilan or Aftarabat; from which laft Province the Caravans go in a Week to Mefcbed, which is the prefent Capital of Perfia.

It may be faid, that this is going a great Way about, and taking a vaft Compafs before our Goods arrive at Market. To this there are two Anfwers; the firft is, that let the Inconveniencies that attend this Commerce be what they will, they muft be born, for we have before fhewn, that little or nothing can now be expected from tranfporting of Goods to Bandar Abaffi, much lefs from Aleppo, which lies ftill at a much greater Diftance from Mefched; fo that we are under a Neceflity of taking this Compafs, if we will not entirely lofe the Perfian Commerce, and therefore it is to no Purpofe to complain, even fuppofing the Objection were well grounded. The fecond is, that there is not either Truth or Force in the Objection, for Goods may be tranfported from Petersbourg, from thence through Ruflia to Aftracan, crofs the Cafpian to Gilan, and fo to Mefched, and the Returns made the fame Way in half the Time that they could be made by the Way of Gambron.

We may add to this, that we now go to the Market and fell our Goods, or rather barter them for Perfian Silk upon the Spot, whereas formerly we went a great Way about; and notwithftanding this, the Perfan Factors went alfo a great Way to get at us, fince before we could fhip the Perfian Silk, it muft either be carried by Land to Aleppo, which was three Months Journey, or to Bandar Abaff, which was above two. Befides, it is highly probable, that when our Commerce at Mefched is as well fixed as it was at Ipaban, we fhall be able to tranfport Englifh Cloths into the remoteft Parts of Tartary, and thereby reap cuoft of thofe Advantages that were heretofore wifhed for and expected from the Difcovery of a North Weft Paffage.It was by this very Canal, and in fpite of all the Inconveniencies with which it has been fuppofed to be attended, that the Dutch difpofed of prodigious Quantities of their Cloths in Perfia, which for that Purpole were bought up by the Armenian Merchants ; and it was by this Way alfo,

## Chap. II. of the Inbabitants of the Empire of PERSIA. S97

that the Frencb were in Hopes of eftablifhing a Trade to Perfia, as appears by a very curious Memoir prefented to the Frencb Miniftry upon that Head, the Subject of which is inferted in the Dictionary of Commerce, one of the beft and moft ufful Works that was ever publifhed. But there is fill fomewhat behind with which the Reader ought to be acquainted, in order to frame a true Notion of the Value and Importance of this Trade, about which fo many Difputes have been of late Years raifed in this Kingdom.
ir. We have already enumerated the Commodities of Perfia, and fhall not therefore pretend to meddle with them again; for in order to give the Reader a View of the Trade of this Empire, it will be fufficient for our prefent Purpofe, to infift barely upon the Silk, of which there are four Sorts; the firft is, that which in Perfia they call Sbirvan, but which we in Europe call Hardafs; the fecond, is what they call Karvary, but we ufually ftile it Legee or rather Legy, from the little Town of Legiam in Gilan, from whence the greatef Part of it is brought ; the third is in their Language called Ked-Coda-penfend, which is as much as to fay, Tradermens Silk; the laft is what they and we call Sberbaffle, or, as the common People ftile it, Turkey Silk, from the Mitake which has been fo often mentioned.
Of all thefe Kind of Silks, the Provinces of Georgia, Gilan, Mezanderan, Sbirwan, Cborafan and Kirman, produce annually, about Twenty two thoufand Bales, each of about two hundred and fouricore Pounds Weight. Of thefe it is computed, that not above two thoufand Bales are wrought up in all the Manufactures of Perfa, from the coarfeft Carpets, to the richeft Brocades. At this Rate, there are between five and fix Millions of Pounds of Silk yearly carried out of Perfa, and as it is worth about ten Shillings a Pound on the Spot, the Reader will eafily apprehend, that raw Silk is a kind of Gold Mine to the Perfans, fince it furnifhes them with between two and three Millions annually, above one half of which is receiv'd in ready Money.
In the next Place it is to be fhewn, how the bringing in vaft Quantities of Silk turns to the Advantage of this Nation. In refpect to our Silk Manufactures, what we bring of this Sort ferves only for the Shoote, for the Warp of all our raw Silks is, as we have elfewhere told the Reader, Organzine or Italian Silk, which is prodigiounly dear. If therefore we can abate the Price
of this, we may the better afford to pay for that ; or if we can obrain the Quantities we want, in Exchange for our Manufactures, this will prove a very great Saving ; and whatever can be faved in this Way, will enable us to work fo much the cheaper.
It has been fuggefled, that it might be attended with Inconveniencies for our Turkey and Ruffic Companies to interfere with each other in this Trade, which I confefs, furpaffes my Comprehenfion; and I am fo far from believing that any bad Confequences will refult from thence, that I think it may be demonftrated, this is the only, or at leaft the moft practicable and beft Method of making Companies ufeful, by engaging them to vie with each other in exporting Britifh Commodities and Manufactures; and provided this can be done, it is of no real Confequence to the Nation who does it. But there is another Thing that, joined to this, would be of ftill greater Confequence, and that is, the Eoft India Companies, exerting themfelves in procuring of Sillk from Cbina, which would fupply the Place of the Piedmontefe or Organzine Silk; and thus by the united Efforts of thefe three Companies, it is very poffible that twenty or thirty per Cent. might be faved in the prime Coft of Silk to this Nation ; and of what prodigious Benefit fuch a Saving would prove in our Manufactures, and how much it would contribute to enable us to work cheaper than our Neighbours, I leave every fenfible and ftudious Reader to judge.

I know very well, that in order to bring fuch a Project as this to bear, there muft be fome Application made to Parliament for an Alteration in the Duties and I am perfuaded that no great Difficulty would be found in obtaining this, if the Reafonablenefs of the Thing was fairly fhewn, and as it might be, fully made out. Our great Misfortune is, that Commerce is not fufficiently explained or underftood, the Reafon of which I take to be, that none concern themfelves about the Theory, but thofe who are engaged in the Practice; and as thefe muft be always interefted, it will very rarely happen that they can be impartial Judges. It is from this Motive that I have 'fo often turned my Pen to this Subject, with a View, if poffible, to excite a more general Attention to what is certainly in itfelf the moft confiderable and important Object of all political Confiderations.

## S E C TION IV.

Containing an Account of the Government and Conftitution of Perfia, the Nature of the Shah's Power, the Diftribution of Civil, Ecclefiaftical and Military Offices, the interior Policy of the Empire, the regular Forces kept up there, both Horfe and Foot, and the Nature and Amount of the publick Revenues.

## The whole digefted into Order from the beft Autborities.

1. An Introductory Account of the Reafon and Subject of tbis Section, in which the Confitution of arbitrary Monarchies is explained, and applied to the prefent Purpofe. 2. Of the Power of the Perfian Monarch, how far absolute and terrible; and bow, notwithffanding mild and equal enough, with Refpect to the Bulk of the People. 3. Of the Confitution of the Perfian Court, the principal Officers therein, their Ranks and Subordination, and the Duties of their refpective Offces. 4. Of the Ecclefiaftical Confitution in Perfia, and the Difference between the Head of the Mahometan Cburch there, and in Turkey. 5. Of the Government of the Provinces, the Jeveral Checks contrived for the Safety of the Prince, and the Prefervation of bis Subjects. 6. Of the regular Troops or old Aanding Army of the Perfian Empire, bow compofed, under what Dijcipline, and the Metbods by wobich it was Jubffted. 7. Of the niero panding Army introduced by the Shah's, intirely dependant upon them, bow model'd and provided for, and bow corrupted and rendred ufelefs. 8. Of the Art. Military among the Perfians, their Manner of making War, acting offenfively, defenfively, and particularly their Metbod for fecuring themjelves againgt Invafions. 9. Some further Obfervations on the military Affairs of this Empire, on the Ad-
vantages enjoyed by, and the Difadvantages under which the Perfians labour, from the Regulations eftablifbed amongft them in this Refpect. 10. Of the State of Property in this Empire, whence the Imperial Revenues arife, bowe levied, and their Amount. II. Obfervations and Remarks on feveral Particulars delivered in the Courre of this Section.
2. 

A$S$ at this Juncture the Perfian Empire, by the Murder of the Shah Nadir, is in fuch Confufion, that it may be in fome Meafure confidered as diffolved and no longer a Government at all; fo it might feem excufeable, if we had paffed by this Section altogether ; yet confidering that even in abfolute Monarchies, Revolutions are but convulfive Motions, and that as foon as they ceafe the Body Politick recovers its natural Conftitution, we could not but think it very requifite, for the Reader's Information, that a View fhould be given of the Form of the Perfian Government, and this for three Reafons Firft, Becaufe we are very apt to confound all abfolute Monarchies one with another, and to fuppofe that there neither is, nor well can be, any Difference between them ; whereas, in Truth, the Form of fuch Governments may, and actually do vary, as much as any other of the milder Forms, as the Reader will fee by this Inftance. Secondly, Of all the abfolute Monarchies in the Eaft, the Conftitution of the Perfions was very juftly held to be the beft; and therefore it deferves, o all others, to be reprefented to the View of the, Reader, who from hence will learn by what Modification the arbitrary Power of a Sovereign may be rendred in fome Meafure beneficial to his Subjects. Thirdly, Becaufe, in all human Probability, the Britifs Nation may hereafter have a clofer Communication with, and enter into a more extended Trade amongft the Inhabitants of Perfia than in Times paft ; fo that it is highly requifite we fhould enter, at leaft briefly, into a Subject that may, to us or our Pofterity, become of extraordinary Importance.

It is by $n o$ Means fit, the: fo large and fo regular a Collection as this fhould be governed by temporary Views, or that we fhould take the Liberty, becaufe this Country is at prefent unfettled, to nip over its Government, which we have a moral Certainty will be reeftablifhed, perhaps before this very Collection is compleated. Befides all this, there are a great Variety of Articles which naturally fall. within the Compafs of this Section, that tend to give us a fuller and more perfect Notion of the State of this Empire and its Inhabitants, than can be obtained by the Perufal of any fingle Book of Travels, in which the State of the Country is reprefented, as it ftood at the Time the Author vifited it. But notwithftanding that, the Force of thefe Confiderations have determined us to infert this Section ; we Thall not forget the Obligation we are under to keep Things within their due Bounds, and thall therefore labour to deliver, as fuccinctly as it is pofible, without Prejudice to their Perfpicuity, the feveral Articles that we think ourfelves obliged to handle for the Reader's Inftruction and Entertainment, and in order to render our Account of Perfia confiftent with the general Plan of this Work.
2. The Shah of Perfa is an abfolute Monarch, and has the Lives and Eftates of his Subjects entirely at his Difpofal. There is no Prince in the World more implicitly obeyed; let his Orders be ever fo unjurt, of given at a Time when he is fo little Mafter of his Reafon that he knows not what he fays, or does, nothing can fave the greateft Subject if he determines to deprive him of his Life or his Ettate; neither Zeal for his Perfon, Merit, or paft Services, will avail in the leaft. If he be in a Humour to ruin them, it is done by a Word of his Mouth, or by a Sign, and executed in an Inftant, without any Form of Law, or Evidence of Facts. The common People, who are at a Diftance from the Court, have much the better of the Quality in this Refpect; there are very feldom Inftances of any Oppreffion or fevere Judgments executed upon thefe, but they feem to enjoy as much Security as in any Country in the World; and perhaps the Magiftrates are the more inclined to govern equitably, in regard they know sothing can skreen them from the Refentment of theiv

Sovereign, if they are guilty of any finifter Practices The Perfians, out of Confcience, it is faid, obey all the Commands of their Prince without Referve, and believe that his Orders ought to be obeyed againft the very Laws of Nature, infomuch that if the Son be commanded to be his Father's Executioner, or the Father the Son's, it muft be complied with. But if he command any Thing in Prejudice of their Religion, they are not obliged to him, bui ought to fuffer any Thing rather than violate the Law of God.
Yet nothing makes the Perfan Government appear fo tyrannical, as the Cuftom of executing the Governors of Provinces, and great Officers of State, without giving them an Opportunity of making their Defence, or being informed of the Crime they are charged with; it is ufual for the Sbab two or three Times in a Year to fend every Governor the Calaat or Royal Veft, and thefe are fent by fuch Perfons as the Court intends a Favour to for the Cbam or Governor, to whom they are fent, al ways makes a confiderable Prefent to the Meffenger.

When he comes within two or three Miles of the Place where the Governor refides, the Meffenger fends him Word to come and receive the Calaat, but inftead of a fine Coar, the Governor is fometimes prefented with a Halter, and is difpatched without any farther Ceremony.

This makes the Governors very circumfpect in their Conduct, and they are always under difmal Apprehen fions, when they hear the Calat is arrived, knowing how common it is to have their beft Actions mifreprefented to their Prince. The Perfians fay in Defence of this Practice, that the Court feldom proceeds with that Severity, but in extraordinary Cafes, where the Fact is notorious, and there is Danger of Rebellion, if they fhould cite the Perfon accufed to anfwer ; that if it be otherwife, they always give him an Opportunity of anfwering his Charge.

As for thofe about the Court, whom the Sbab looks upon as Slaves he has purchafed, he does not think himfelf obliged to obferve thefe Formalities, but dooms them to be punifhed, or put to Death, as he fees fit. The Sbab of Perfia has no Council of State, as in the European Governments, but he afts as he is adviled by his Prime Minitter and great Officers ; that which moft perplexes the Miniftry, is the Cabals that are carried on by the Women in the Haram; the Refolutions that are taken here, frequently thwart their beft laid Schemes, and the Minifters do not only run the Rifque of having their Counfels rejected, but they very often turn to their own Deftruction, if they are not fuitable to the Inclinations of the Ladies moft in Favour. This is not an Evil peculiar to Perfia, but a kind of Curfe, throughout all Eaftern Courts; and perhaps fome in the Weft are not altogether free from it.
3. The Royal Family of Perfia are, generally fpeaking, more unhappy than the Princes of the Ottoman Blood, for though they are not put to Death fo frequently as the former, yet they ufually have their Eyes put out, and live in that miferable Condition many Years. They have the Tartar Title of Mirza added to their Names, which is equivalent to our Title of Highnefs, and is never given but to thofe of the Imperial Line. The firft Minifter in the Empire is the Atamadoulet, a Word which fignifies the Support of the Empire. In Petitions, or when they fpeak to him, they ftile him the Grand Vizir, or Vizir Azem. No Bufinefs of Confequence is tranfacted in the State but by the Direction of this Minifter, nor any Grant or Act of State of the Sbab's held to be valid, till counterfeal'd by him.

The Reafon whereof is faid to be, that their Sbab's being bred up in the Women's Apartment, and perfectly ignorant in Affairs of State, it is neceflary, for the Safety of the People, and the Prefervation of the Government, that their Orders fhould be confidered by fome

## Chap. II. of the Inbabitants of the Empire of Persia.

wife Minifter, before they are put in Fxecution. The Grand Vizirs in Turkey, it is oblerved, feldom die a natural Death ; on the other Hand, the Prime Minifter of Perfia, if it be thought fit to difcharge him, is ufually pernitted to retire, and end his Days in Peace with his Family. The fecond Poft in the Government is, that of the Divan Begbis or Bey. This great Magiftrate is the laft Refort in all Caufes, Civil and Criminal, unlefs where the Sbab in Perfon fits in Judgment. The Divan Bey can command any Caufe to be removed to his Tribunal, from any Court in the Kingdom ; and during the late Reigns it has not been known that their Sbabs have ever fat in a Court of Juftice, or concerned themfelves in examining the Decrees of the Divan Begbi.
In the third Rank come the Generals, and firtt the Generaliffimo when there is one. The next Place is the General of the Courtcbis, which are a Body of thirty thoufand Horfe, of Turk or Tartar Original. The thiird is the General of Mufqueteers, a Body which ferve on Horfeback, but fight on Foot like our Dragoons. The fourth is the General of the Coulars, or Royal Slaves as they are called; and the laft the Maf ter of the Ordnance. After the Generals, the Vacanavilb or Secretary of State, poffeffes the next Poft. This Officer regifters the publick Acts, and has the Care of the Records; he alfo appoints a Deputy in every Province of the Empire, who tranfmits all Affairs of Confequerice to him, to be laid before the Minittry. The laft great Officer is the Mirab, or Lord of the Water. Every Province has its particular Mirab, who takes Care to diftribute the Waters of the Rivers and Aqueducts in fuch Proportion, that every Part of the Country may have an equal Share.
Thefe are all the principal Officers of State. Thofe of the Houfhold are firft the Nazir, who is both Lord Treafurer and Steward, and it is with this Gentleman, that all Ambaffadors and Foreigners tranfact their Affairs, but there is a Comptroller and feveral other Officers which are a Check upon him, as he is on the Prime Minifter, and thofe two have a very great Influence in the Court of Perfia. But to prevent the Sbab's Treafury being mifapplied, no Sums are paid out of the Treafury, but the Order paffes under the Seals of the Prime Minifter, the Nazir, the Divan Bey, and two other Officers of the Revenue. The next is the Ichicagafi Bafa, who commands all that attend in the outward Palace, and the Guards.
When the Sbab goes out, this Lord marches before him with a great Staff, covered with Gold and precious Stones; he does not fit, as feveral Officers do of inferior Quality, but ftands always ready to obey his Imperial Majefty's Orders, and fee them executed. And after him is the great Huntfman, who has not lefs than a thoufand Huntfinen and Falconers under him. After this Officer the principal Phyfician and principal Aftrologer take Place, which are Pofts of great Honour and Profit.
4. As to Ecclefiaftical Officers in this Empire, the Grand Pontif is ufually ftiled the Sedre in Perkia; they alfo give him the Titles of Prince, Head of the true Church, Subftiture of Mabomet, and Lieutenant of the twelve Imans, or Caliphs, who fucceeded their Patriarch Haly. The Churchmen and bigotted Part of the Perfans hold, that the Dominion of the Laity is an Ufurpation, and that the Government belongs of Right to the High-Prieft; but that of the Majority is, that the Regal Power exercifed by their Princes is derived from God, and that the High-Prieft and his Brethren ought not to meddle with Politicks, yet the Sedre and his Subftitutes are the ordinary Judges in all civil as well as Ecclefiaftical Caufes; Lawyer and Divine are Terms of the fame Signification in Perfa, their ecclefiaftical and civil Laws being indeed the fame. The temporal Judges have no written Laws to go by, but their Decrees are founded upon ancient Cuftom, or the Equity of the Cafe, and the Judges in their temporal Courts are ufually Men of the Sword. The Sedre is the fupreme Judge in the Ecclefiaftical Courts, and takes Place in all publick Affemblies next to the Atamadoulet or Prime Minitter.

The fecond Ecclefiaftical Judge, is the Ancient of the Law; whom the Perfans ftyle Cbeik Ifam; his Jurifdiction is little inferior to the Sedre's, and the People feldom appeal from one of thefe Courts to the other but to the Divan Begbi, who is the fupreme Judge in all Caufes, ecclefiaftical as well as temporal; The Cad is the third Ecclefiaftical Judge in Perfia; he takes Cognizance of the fame Caufes with the two former, but his Authority is confined to fome particular Town or Diftrict. The Mufti is the fourth, who has not that Authority here as in Turkey, for he cannot controul or Reverfe the Proceedings of inferior Courts; but is reverenced however as a Perfon well skilled in the Ecclefiaftical Laws, and his Opinion frequently demanded by the other Judicatures, who norwithftanding act as they think fit. Thefe Judges do not fit all in one Court, but have each their refpective Tribunal, and the People apply indifferently to the one or other, as they are inclined.
5. There is in every Province of this Empire; a Chan and a Vizier ; the Vizier has the Government of all thofe Towns and Villages which are the King's Demefne Lands, or which belong to the Crown in Propriety, and the Chan of the Province in general. This Word Cban, or Caun, as we pronounce it; and Cbam, fignify the fame Thing, namely, viz. a puiffant or mighty Prince; and this is the Title of all the Tartar Princes in Afaa; and the Perfian Provinces being of the Extent of Kingdoms, and formerly dittinct Sovereignties, the Perfan Court have thought fit to give their Governors the Titles of fovereign Princes; and the Shah of Perfia is frequently ftiled now, as his Predeceffors of old, King of Kings. Indeed the Chans in their refpective Provinces, live almoft in as much State as their Sovereigns, having exactly the fame Kind of Officers as are in the Shah's Court with the fame Titles, there being farce any Difference but in Numbers and Penfions. The Chan commands the Militia of the Province, and affigns Lands for their Maintenance ; he reviews them at certain Times, and fees that they are fit for Service, their Arms and Horfes in good Order, and that they all perform their Exercifes well ; but every Soldier is permitted to live in his own Houfe in Time of Peace.

The Chans or Governors of Provinces have their Pofts for Life, and if they behave well, their Children after them. There are two Degrees of thefe Chans, the greateft is called Beglerbeg, or L.ord of Lords; the other is filed Coulembeg, or Lord of Slaves. The Governors of the Frontier Provinces are for the moft Part Beglerbegs, as the Chan of Armenia, from whom the Chans of Cburs, Marega, and other Diftricts, in Time of War, receive their Orders, and are obliged to march under his Standard. Sometimes thefe inferior Governments are made independent of the Chan of the Province. In every Province there are three Officers put in by the Government, who are independent of the Chan, namely, the fanitelim his Lieutenant, the Vizier or Receiver General of the Shah's Revenues, who hath alfo the Management of the Lands belonging to the Crown, and the Government of all Places where the Crown Lands lie; and the Vacanavif, or Secretary whofe Bufinefs it is to take an Account of all Tranfactions of Moment in the Province, and tranfmit them to Court.

One principal Defign of placing thefe Officers about the Chan,' is to obferve his Conduct, and oppofe him is he fhould undertake any thing againft the State. Befides thefe, the Governors of Cities and Cafles, who are called Darogas, are put in directly by the Shah, and have their Lieutenants and Vacanavifs alfo independent of them ; and the fame Perfon who is Governor of the City is never made Governor of the Fortrefs which belongs to it. The Minifters of State, and Generals of Armies, have alfo their Lieutenants and Comptrollers to fuperintend their Conduct, with fecret Orders how to adt on certain Emergencies; but it is obferved, that unlefs in Matters where the Safety of the State is concerned, thofe Officers have a very good Undertanding, and and agree fo well together, that the Shah is no lefs
cheated
cheated and deceived than if the Management, was in one Hand. Befides, the Daroga or Governor, the Vizier and Vacanavifh, there are alfo in every Town the Cadi, or Civil Judge, before whom all ordinary Caufes are heard; the Head Officer among the Trading People, the Provoft or Sheriff; and every particular Trade has a Warden or Mafter. There is an Officer alfo who has a Watch, and is principally concerned in keeping the Peace in every great Town in the Night-time.

The Governor of every Town is the Judge in the laft Refort in criminal and civil Cafes too, if he pleafes to interpofe, and may inflict any Pains on Offenders Ahort of Death. Capital Punifhments are very rare in Perfia, and the Sentence is, in moft Cafes, paffed by the Shah himfelf. The ufual Punifhment is a Fine, which always goes to the Shah, or rather to the Governor of the Province, who generally brings the Crown indebred to him in his Accounts. When a Governor or Vizier is fent into any Province, he has his Inftructions in Writing; wherein are contained the Extent of his Government, of the Revenues, and the Manner in which he is to treat the People; and Inftructions, in like Manner, are given to every Officer of State when he enters on his Poft. On the other Hand, when a Governor or other Officer returns from his Command, which he never does but by exprefs Order of the Court, he waits without at the Gate of the Palace, and gives Notice by fome of his Friends of his Arrival, and that he begs to throw himfelf at his Imperial Majefty's Feet ; whereupon Orders are ufually given for his Admittance ; but fometimes, if the Perfon has misbehaved in his Poft, inftead of an Anfwer in the ordinary Stile, Orders are iffued to take off his Head.
6. The Perfians are naturally a brave People, but the Sloth and Inactivity of their Princes had of late renders ${ }^{5}$ them not fo formidable as they ufed to be. In the laft Century, under Abbas the Great, they made confiderable Conquefts on the Side of Turkey, as well as India, though their Troops were always much inferior in Number to the Armies either of the Grand Signior or Great Mogul ; but they funk in our Time fo much below what they were in that Reign, that every little Tartar and Arabian Prince infulted their Frontiers, and robbed them of fome Part of their Territories, before the late Shah Nadir affumed the Government.

The Forces of Perfia are divided into the Troops of the State and the Shah's. The Troops of the State are entertained by the Governors of the refpertive Provinces, and paid out of certain Lands appropriated for that Purpofe, and are divided into Militia and regular Troops. The regular Troops are called Courtcbis ; they were originally of Tartary, a ftout hardy Race of People who lived in Tents. Thefe are the Soldiers which are properly called Coofelbafbes, or Red-heads, fo ftiled when they came to the Affiftance of Cbeic Seff, the Founder of the late Imperial Family, for which Service he allowed them the Honour of wearing red Caps or Turbants, of a particular Form, like that he wore himfelf. Thefe Coofelbalbes remained in their Tents, as well in Time of Peace as War, and employed themfelves in feeding, buying and felling of Cattle, from whence they were called Courtchis, or Shepherds.

The Service they did to Cbeic Seff, and their Zeal for the Religion of the Imans, procured them great Refpect, and they poifeffed the chief Pofts both in the Court and Army ; and from thefe the Perfian Soldiery, and afterwards all the Perfians in general, obtained the Appellation of Coofelbafbes, a Name formidable to the $I_{n}$ dians, Turks and Tartars in the laft Age; and it was by this Generation that the $\mathcal{T} u r k i 万 万$ Language was introduced into the Court of Perfia, and the Northern Parts of that Kingdom, where they fpeak it much more than the Perjaan. The Coofelbafbes held the firt Rank in the Kingdom till the Reign of $A$ Abbas the Great, who endeavoured to fupprefs them upon account of the unreafonable Influence he obferved they had in all Affairs of State, depofing and fetting up what Princes they thought fit, like the Turki/h Fanizaries. He was fo jealous of his own Son, on account of the Refpect he had obferved they paid him, that he caufed him to be put to

Death, and difperfed the Coofelbafles in fmall Detachments through all the Provinces of the Empire. Thefe Troops ferve on Horfeback, carrying a Bow and Arrows, a Sword, Poinard, and Lance, with a Hatchet at the Saddle-skirts; and for Defenfive Arms have a Shield and Helmet; they are commanded always by their own Oficers, and their General is called Courchibatbi, or Commander of the Courctbis.
Both the Courtcbis and Militia have their Pay out of the Lands of the State of the refpective Provinces, and enjoy it as their Inheritance, from Father to Son, if they do not refufe to bear Arms : They are obliged to march to the Place of Rendezvous on twelve Hours Notice, and every Year pals in Review before a Commiffary fent from Court, or before the Governor of the. Province.
7. The Troops of the Sbab are two Bodies, which Abbas the Geat inftituted. One confifts of twelve thoufand Men, and are called the Musketeers, becaufe inftead of Bows and Arrows they carry Muskets, and though they march on Horfeback, yet like our Dragoons they fight on Foot. Sbab Abbas ufed to oppofe them to the Turki/b Fanizaries, of whom he had obferved the Enemy made great Advantage in their Engagements with him. Before this Time neither Foot-Soldier or Fire-Arms were ever heard of in Pery $2 a$, and their Neighbours the Tartars have no Foot among them to this Day. The other Body confifted of Ten choufand Horle; thefe were called Coulars, and carried FireArms alfo inftead of Bows. They were called Coulars or Slaves, to fignify their Devotion to their Sovereign, or as fome fay, becaufe they come from thofe Countries from whence the Perfians had their Slaves, as Georgia, Circafia, \&cc. Part of them are fent as Prefents to the Sbab when they are young; and the reft are defcended from the People of thofe Countries, who are fettled in Perfia. They almoft all profefs the Mehometan Religion, though defcended from Chrittian Parents. Abbas the Great had a particular Affection for this Body, and ufed to call them his Horfe Fanizaries. They are tall well-made Fellows, in whofe Courage and Fidelity the Shah has a particular Confidence; for as they fcarce know the Country or Relations from whence they fprang, and can have no other Views, than to recommend themfelves to their Mafter by their Services, they are entirely devoted to the Crown, and obey every Order without Hefitation; and from among thefe, the Court ufually prefers Men to the higheft Pofts; fo that confidering the Number of Georgian Women which are married into Perfia, and the Potts the Men who derive themfelves from thence poffers, the Perfian Court may, one half of them, probably be of Georgian Extraction.

It is obferved, that in Perfia, as well as India, the Word Slave is an honourable Title, and preferable to that of Subject; nay, a certain French Author tells us, that the Word Koulam Sbab, or King's Slave, is equal to that of Marquis in France, becaufe all that have that Denomination are fure to be preferred to fome Poft if they behave well. Befides thefe, there are two other fmall Bodies, the one called Sopph's or Sepbi's, inflitured for a Guard to the King's Perfon by Cbeik Seff; thefe are not above two hundred Men, and wear the Sophi's Cap on their Heads, and for their Arms have a Sabre, a Poinard, and an Ax, which they carry on their Shoulders. The fecond, called the Ziezari, or the Six hundred, who are all of the Size of Grenadiers, ftout young Fellows, inftituted by Abbas the Second for a Guard to his Perfon, Anno 1654. The Monarchs of Perfia, before that Time, had no Guards in the Palace, or when they went abroad, for the Sephies only ferved to make a Show at Feftivals, and on publick Occafions; they wear long red Caps of the Form of a Sugar-loaf, and their Arms are a Musket, Sabre, and Poinard, which are adorned with Silver, and exceeding fine; they are under the Command of the General of the Mufqueteers, and a fmall Party of them do Duty as the Palace Gates.
All the Troops of Perfia are comprehended under thefe two Names, of Courtchis and Coulers, that is,

Shepherds

## Chap. II.

of the Empire of PERSIA.

Shepherds or Slaves, by which they underttand the Soldiers of the old or new Eftablifhment. The Shah finds all the Trocps with Horfes, Arms, and Accoutrements, but every Man provides himfelf with Cloaths according to his Fancy, the Soldiers having no particular Livery, any more than the Servants of the King's Houfhold, or of any great Man. There was in the Reign of Abbas the Great, a Body of twelve thoufand Men, that belonged to the Artillery, but they were difcharged in the Reign of Abbas the Second, and the Perfians had no Artillery, unlefs fome ufelefs Guns in the Front of the Palace at Ifpaban, and in fome other great Towns, which are more for Show than Service; till they were new difciplin'd of late Years by Sbab Nadir.
8. Their Armies were never large, confidering the Extent of the Empire : Abbas the Great, who made fuch confiderable Conquefts, had never more than a hundred and twenty thoufand Men in his Service in all the Provinces; and the Soldiers have been fo ill paid in the late Reigns, that they have deferted, and gone into foreign Service, or applied themfelves to other Employments, which the Courtiers winked at, putting their Pay in their Pockets, and never filling up their Places. The Perfion Troops not being troubled with Artillery or Baggage, make prodigious fwift Marches, and fall upon an Enemy frequently in his Camp or Quarters, with incredible Fury, when he leaft fufpects fuch a Vifit. At other Times they cut off his Provifions, and turn the Waters from their ufual Courfe, and having fufficiently harraffed him in a long March through a defert Country, when he is fatigued and difpirited, fall upon him. When an Enemy makes Head againft them they will fly till they have drawn him into fome difadvantageous Ground, and then return to the Charge again.

In their Retreat, as has been obferved, they fhoot more Arrows than when they advance, as Hiftory acquaints us was the Practice of the ancient Partbians. The Perions never throw up any Intrenchments about their Camp?, their Fortification is fome Mountain or difficult Pals; but in Sieges they intrench, and ufually take a Place by undermining it; and it is thought that no People underfand Mining and fubterraneous Works better than the Perfians. It was thus they took Erivan, the Capital of Armenia, from the Turks the latt Time. This City, in a very fhort Space, found almoft every Part of it undermined ; but as the Perfians do not trouble themfelves with Artillery, fo neither have they any Breadwaggons or Sutlers amongft them, and yet their Camp is generally as well fupplied as a Camp need to be, the Country People continually following them with Provifions. Indeed, as Rice and Fruit is almoft all they want, it can be no difficult Matter to fupply fuch finall Bodies as take the Field in Perfia, efpecially as they are perpetually in Motion, and feldom ftay long in a Camp.

When they are apprehenfive of an Invafion, their conftant Method is to withdraw all the People on the Frontiers, and deftroy the Country in fuch a Manner as the Enemy may find Nothing to fubfift on, nor leav.ing fo much as a Spire of Grafs, or a Tree upon the Ground; but they give the Husbandmen Time to fecure their Grain, Fruits, and Forage, by burying them, with moft Part of their Utenfils, in deep Pits, which they will do in fuch a Manner that it is almoft impoffible to difcover. them ; and as the Earth is very dry, they receive no Manner of Damage. The Army having thus deftroyed the Country for eight Days Journey together, they encamp near it in feparate Bodies, and as they fee Occafion, fall upon the Enemy and diftrefs him in his March ; fometimes they fall upon one Quarter of his Camp, and fometimes on another, in the Nighttime; and if they cannot by this Means put a Stop to his March, they retire farther into the Country, driving the People fill before them, and deitroying every Thing as before; and by thefe Means they have defeated the greateft Turkib Armies.

When the Enemy are retired, every Man returns to his Lands again. As for the Houfes, thole of the common People are no great Lofs, they are foon run up with Clay or fuch Materials as they find upon the Place.

Vol. II. N9 CXXXI.

The Perfions are faid to found their Conduct upon this Dilemma, either the Enemy will invade us with great Numbers, or but few; if he brings great Numbers, confidering the Extent of defart Ground he muft march over, it is impoffible he fhould fubfift; if their Numbers are but fmall, we fhall harrais them in their March till they come to Nothing, without running the Hazard of a Battle.
9. The Perfians are excellent Markfmen, as well with their Fire-Arms, as their Bows and Arrows. Their Colours are made of rich Silks, in much the fame Manner as our Horfe Standards; for a Device; they write fome Paffage of the Alcoron, or part of their Confeffion of Faith, and fometimes have a Lion, with the Sun rifing over his Back, wrought in them. The great Standard-Bearer, whom they call Alemdar Baffa, is one of their principal Military Officers. The Management of the Soldiers Pay is much commended, becaufe they do not fuffer it to pafs through their Officers Hands; but every Man receives it of the Farmers of fuch Lands as are appropriated for that Purpofe; the Officers Pay is very good; the General of the Musketeers, and the General of the Coulars, have each of them above three thoufand Pounds a Year; and as the Lands affigned for the Payment of it are valued mighty low, it is thought to amount to four Times as much.
In time of Peace, they ufually keep a Body of fix or feven thoufand Men in Cbaldea towards Babylon, to prevent the Incurfions of the roving Arabs. The Governor of Armenia has about five thoufand Men under his Command, and the Governor of Georgia a like Number. In Cboraffan they have ufually eight thoufand Men to bridle the Usbeck Tartars, and fuch another Body in the Province of Candabar, towards India, and thefe Troops being the Outguards of the Empire, and almoft in conftant Action, were efteemed pretty good; but as for the reft, who are cantoned in the Inland Country, they enjoyed fo long a Peace, that even Travellers obferve, they had not the Air of Soldiers:

In thofe Parts of the Country, where they have Sea for a Boundary, they keep fcarce any Troops, infomuch, that in Gilan, and Mazenderan, which lie on the Cafpian Sea, the Coffacks have landed fmall Parties; and plundered the Country for feveral Days together; and here the Mufcovites very lately fixed themfelves with very little Oppofition, though it be one of the richeft and moft fertile Countries in the Empire. The Perfian Generals are perplex'd with nothing fo much as the ftupid Conduct of the Court, in attending to the Predictions of their Aftrologers. Thefe Men are ever averfe to War, becaufe they are obliged to take the Field with the Prince, and therefore feldom fail to pronounce it unlucky to enter into one on any Confideration whatever; and if ever they are brought to approve of a War, they muft prognofticate the jucky Minute, when to encamp, and when to march, $\mathcal{E}^{2} c$. So that the Generals lofe the great Advantages which might be made fometimes, by waiting till they confult the Stars. The favourite Women, and the Eunuchis are no lefs averfe to War than the Aftrologers; for in lofing their Prince, they lofe their all, and therefore they conftantly fall in with the Aftrologers, to divert their Lord from every Enterprife which carries a Face of Danger.

All this mult be underftood of the old Line of which Tbamas the Son of Huflein depofed by Mer-Weys, and afterwards reftor'd, depos'd again, and at laft put to Death, by Thamas Kuli Kan, or with his Privity, who thereupon affumed the Title of Sbab Nadir was the laft. It is a Thing furprizing, that confidering the great Extent of Coaft which they have upon the Perfian Gulph, and the Ocean on the South, and the Number of their Provinces bordering upon the Cafpian Sea, they fhould never think in Earneft, or to fpeak with the greater Pro priety, thould never think at all of raifing a Naval Force, which if they had done, would have rendered them fecure at Home and refpected Abroad.

The only Reafon that can be affigned for this is, their Neglect of Trade, which Defect in their Conftitution, if the ingenious Reader will attentively confider ${ }_{3}$ he wil! without Difficulty difcover, that it is the fole
$10 \cdot \mathrm{U}$
Source

Source of the frequent Troubles, Rebellions, and Revolutions, which have fo often brought the Perfian Government to the Brink of Ruin. This will be the more obvious to the Reader, when we come to ftate the Nature of Property among the Perfians, from whence it will appear, that the landed Intereft in that Country is colerably fecured; but as the like Provifion is not made for the Moncy'd Intereft, People do not turn themfelves fufficiently to thofe Methods of Subfiftance that would make the Government eafy, and themfelves happy.
10. The Lands of Perfar are either fuch as are cultivated, or fuch as are uncultivated, and uninhabited, of which the latter are ten to one more than the former. The Lands in Occupation are of four kinds; the Lands of the State, the Sbah's demefne Lands, the lands of the Church, and laftly, thofe belonging to private Men. The Lands of the State contain much the greater Part of what is cultivated, and are in the Poffeffion of the Governors of the refpective Provinces, who out of them take their own Revenue, and affign the reft for the Payment of their Officers, and the Troops they are obliged to maintain; for every Soldier has his Pay affigned him upon fome Village or Farm, in the fame Manner as in Sweden. The Demefne Lands are the Sbab's particular Eftate, out of which are paid the Officers of the Houthold, and the Troops he maintains over and above thofe which are maintained at the Charge of the refpective Provinces, and the Refidue are given among the Courtiers and Favourites; or managed by the Viziers and Intendants, who remit the Produce of them into the Treafury.

The Lands which belong to the Church, are the Donation of Princes, or private Men, and are accounted facred, fo that they are never taxed or confifated for any Crime whatever, and after one Yeat's Poffeflion, the Title of them cannot be called in Quettion, on any Account whatever. The Lands of privateMen are held of the Crown for the Term of ninety nine Years, paying an inconfiderable Quit-rent ; and at the Expiration of the Term of ninety nine Years, they are allowed to renew their Leafe for the fame Number of Years on advancing one Year's Income. As to the cultivated Lands, if any Perfon defires to build upon them, or to convert any Part of them into plowed Fields or Gardens, the King's Officers procure him a Grant for ninety nine Years, under a frall Rent, which Terms are renewed as other private Eftates; fo that all Ranks of Men derive their Eitates immediately from the Crown, and by this Merhod have a Perpetuity, on Payment of their Fines and accuftomed Rents.

The Officers of the Shah, as well as private Owners, let out their Lands to Husbandmen, upon Condition of receiving a third Part of the Produce ufually, but the Rent is more or lefs, according to the particular Agreements of the Parties; and the Grain in Perfa being fubject to be deftroyed by Hail, Drought, Locufts, and other Infects, the Tenants never fail to infift on an Abatement in thefe Cafes. When the Deftrution is very great, the Husbandmen take the withered Branches of Trees, and the damaged Ears of Corn, and refort to the Shah's Officers, complaining of the Seafon, and their Inability to pay their ufual Rent, if they have received never fo little Hurt; their Complaints are very loud, and they frequently make an Advantage of the Misfortune.

Private Landlords are lefs fubject to be impofed upon in thefe Cafes, having the Lands under their Infpection, but then their Tenants are not fo much oppreffed, and fubject to fuch Hardfips as the Tenants of the Crown. The Shah's Officers frequently pretend they have no Authority to make Abatements, and thereupon whole Villages go up to Court, and deliver their Petitions to the Stah in Perion, infomuch that there is feldom lefs than feven or eight thouland People attending at Ifpaban on there Occafions. The Cotirt ufually fends Orders hereupon to the Provinces to make fuch Allowance as the Nature of the Cafe requires, or depute Commiffaries to enquire into the Truch of the Complaint, but in either Cale the Crown is ufually defrauded; for the Countrymen fo well undertand the Force of Bribes,
that they commonly make a Purfe, and procure a favourable Reprefentation of the Cafe from the Officers fent to check them.

The Shah and private Owners have the like Profits of the Hubbandmen's Cattle, as they have of their Corn, as the third Fleece, and the third Part of the Breed; and of Fruit, the Crown has ftill a greater Share, there being not that Charge of manuring and cultivating Fruito trees, as there is of the Grounds which produce Grain.

The Governors of Provinces receive the fame Profits out of the Lands of the State, towards the Payment of the Officers, and Troops of the Province, as the Sbab does out of his own Lands, and every Province befides makes large Prefents, from Time to Time to the Court, of the beft the Country affords, whether ' Silk, Grain, Fruits, Cattle, or whatever is in Efteem among them; and thefe are fent up in fuch Quantitiess as are fufficient to fupply the Sbab's Houfhold, and therefore may be accounted a confiderable Part of the Revenue. The Shab has alfo the feventh Fleece, and the feventh of the Breed of the Cattle, in thofe Lands which are not appropriated to his Ufe, and this is a great Addition to his Revenue, for the Shepherds of Perfal, like the ancient Patriarchs, pofiefs vatt Flocks and Herds, on which they continually attend, living in Tents, and removing from one Place to another, as they can meet with Pafture for them; for thofe Lands which are not the Property of particular Perfons, are at Liberty for all Men to graze upon, though the Sbab's; and this Payment of the feventh Beaft leems to be an Acknowledyment of his Property in them. Thefe wealiny Shepherds the Perple of the Eaft call, Saranetchin, from whence we have the Word, Jaracen, that is ro lay, an Inhaditant of the Eiuds, for they live in Tenis, far from Fowns, two or three hundred together, aid :onerimes gou fie a choufand or two encamped in one Place ; un, peffetly cover the Plains with their Fiocks and Huds, that fometimes you may be two or three Hours in pafing chrough them; and the Sbals has an Officer called Ickomben Beffi, or chief of the Shepherds, refiding in every Province, who takes the feventh of the Catile for the Sbab's Ufe, viz. of Sheep, Affes, Mules, Camels and Goats; as to Horfes, it feems the Sboth is entitled to every third Colt; of Silk and Cotton allo, it is faid the Sbab has a third Part over the whole Kingdon.

Minerals and precious Stones belong to the Shah only, and he has Two per Cent. of all Money. The Money that is raifed by the Waters is another confiderable Part of the Rcvenue, for every Perfon pays for their being let into his Fields or Gardens; nothing will grow in that parched Country without it. A Tribute is alfo paid to the Crown by all People who are not of the Religion of the Country, whether Natives or Foreigners, and this amounts to a Ducat a Head ; and there is a Tax of ten Pence on every Shop of the handycraft Trades, and twenty Pence on the reft. The Cuftoms and Port Duties are another Branch of the Revenue, but thefe do not amount to much here, for they have no confiderable Port except Gambron. As for the Merchandize carried into Perfia, or out of it, by Land, they only pay a fmall Sum for a Camel's Load, and proportionably for every Mule or Ox , without examining what the Packs contain. But that Part of the Revenue which is merely cafual, exceeds all the reft, viz. what arifes by the confifcated Eftates, and the Prefents which are made by the great Lords, Governors of Provinces, $\mathcal{E}^{3} c$. and particularly thofe which are made on New Year's Day. They prefent the Shah with wrought Silks, Horfes, Affes, beautiful Boys and Girls, Gold, Silver, precious Stones, Perfumes, and every thing which is rich and curious, and may ferve for Ure, Ornament, or the Pleafures of Life; and as there are feveral handicraft Trades which pay no Duties to the Crown, as Carpenters, Mafons, and fome others, thefe are obliged to work for the Shah when he requires it, without Pay, whatever Buildings or Palaces the Shah erects. or repairs, he has only the Materials to find, the Warden or Chief of the Trade is obliged to fend a certain

Number:

Number of Workmen, which faves the Treafury a great deal of Money, and therefore the Labour of thofe People may well be efteemed Part of the Revenue. The Maintenance of Ambaffadors, and the providing them with Carriages, is done alfo at the Charge of the Country, and cofts the Shah Nothing. When he has a Mind to reward any Perfon for any fignal Piece of Service, this is done alfo at the Expence of another; he fends him perhaps to one of the Chans or great Courtiers, with che Calagi or Royal Veft, for which the Chan makes the Meffenger a Prefent ufually of ten times the Value or more, according to the Poft he is in. The Shah fomerimes expreffes the very Sum he expects fhould be paid, which is commonly exceeded out of Refpeet, and as a Proof the Perfon values the Prince's Favour. But notwithftanding the Impofitions above-mentioned, the People do not feem to be oppreffed or impoverifh'd; even the Tradefmen and Husbandmen appear to be in eafy Circumftances, and few of them but have Rings on their Fingers and Arms. One great Advantage to the Subject is, that fcarce any of the Duties are farmed, and in Times of Scarcity the Court is very indulgent and ready to make Abatements of their Rents and Taxes in Proportion to the Occafion. As to Poll or perfonal Taxes there are none in Perja, unlefs that which is levied upon thofe of a different Religion; nor are neceffary Provifions of any Kind taxed.

What the Revenue of the Crown may amount to in the whole, is very uncertain, depending fo much as it does upon Cafualices; thofe who have attempted to compute it, fay, that one Year with another the Revenue amounts to four Millions of our Money; which, confidering their Troops are moit of them paid out of the Lands of the State, that are not reckoned into this Account, is very confiderable ; but as the Splendor and Magnificence of the Perfzan Court is much beyond any thing we have in Europe, pofibly very little of it may remain in the Treafury at the Year's End. The Court, whether it remains at I/paban, Mefched, or any other Capital, or removes from one Province to another, as it ufed to do during the Summer, if we confider the Women, the Eunuchs, and other Officers and Servants, feldom confirts of lefs than ten thoufand Perfons which belong to the Houfhold, nor including the Troops, or the great Men and their Dependants, which it muft require an immenfe Sum to mainiain. The Officers of the Revenue fend every Year up to Court the State of their Province, and what every Town and Village produces, examined and attefted by the principal Inhabitants of the refpective Places, which are looked upon as fo many Debentures; and thefe given in Payment to thofe who are entitled to Penfions or Salaries from the Crown. In like Manner every Governor pays all the Officers and Soldiers of his Province, with Affignations on the Lands belonging to the Province; there is very lietle Money disburied on thofe Occafions, and where the Pay is fmall, as that of the common Soldiers, and inferior Servants, one Man is deputed from the Troop or Company to receive the Wages of the reft, and the Refidue, after ali Demands are fatisfied, is remitted into the Imperial Treafury.
It may not be amifs to add a few Words concerning the Seals under which. Acts of State are paffed in Perfia; they have five Seals which are ufed in five feveral Branches of Bufinefs, one in all fuch Affairs as concern the demefne Lands. A fecond for Commifions, Lerters Patents, $\mathcal{E}^{\circ} c$. The third only in Military Affairs. The fourth about the Revenue; and the fifth in Things relating to the Houfhold. There are no Arms engrayen upon them, but on one there are the Names of the twelve Imans or Patriarchs, on the others, a Scrap of the Alcoran, or fome pious Exprefions, fhewing their Dependance on God, and his Prophet Mabomet. The Form of one of the Seals is round, two others are fquare, and the other two are of an irregular Form. The largeft are about the Bignefs of a Crown-piece, and the others about half that Bignefs. They are made of Turquoifes, Rubies, Emeralds, or fome other precious Stones. The principal Seal the Shab always wears about his Neck, and on every Friday all Inftru-
ments which require thefe Seals, are carried to the Paw lace, and fealed in the Sbah's Prefence. The Impreffion is made on the Paper, with a kind of thick $I_{n k}$ and not on Wax as with us; the fame Ufage prevails in moft of the Eastern Courts.
II. The Generality of the World will agree from this View of the Perfian Policy, that there it no Realon, fo long as their Government continues in a fettled Condition, to look upon the whole Nation as Slaves and Beafts of Burthen. It is very certain, that, there are great Errors in this, as well as in all the Conftitutions founded in the Kboran, and it muft be fo, for that Book: itfelf is a mere Syftem of Tyranny; and which is worft. of all, it is pretended that this Syitem came from God. It is upon this Principle, that the abfolute Power of their. Princes is built; for as to all the Qualifications befides, they are brought in from the Remains of the old Perfian Goverment, which by their apparent Wifdom, and, natural Rectitude, have continued in Ufe through all Invafions, and in Spite of all Changes of Government. Thus the Governors, Treafurers, and Secretaries of Provinces, are precifely mentioned, both by facred Writers, and by the Greek Hiftorians, as well as modern Travellers. The profound Refpect born to the Skah, is the Remains of that Reverence paid to their Emperors of old, of which the Heathen Writers are full, which Alexander would have transferred to himfelf, and for which chiefly the Ronzans looked upon the Partbians as a barbarous Nation.

But above all, the new-Years Gifts are the ftrongeft Tcfimonies of the Difficulty there is in extirpating an. cient Cuftoms amongft any Ser of People. This was the Practice in the moft early Times, and the Perfan Emperors with all their Pride were then very humble to and familiar with their People. They eat and drank. with them in Publick; they gave Audience to all who defired it, and as they received Prefents even from the meancf, fo they received every • Man's Petition, and granted almoft every Man his Requeft.

There are many other Things, in which the modern Perfians refemble very much their remoteft Anceftors, but in nothing more than in their natural Inclination to and wondertul Genius for Poetry. This is fo univerfal, that every Chan, and indeed every rich and powerful Man, keeps a Poet in his Houfe, to whom occafionally they give Themes, and it is wonderful how well and how fiddenly they execute them. Thefe Sort of People allo frequent Coffee-houfes, and other publick Places, where, for the Amufement of idle People, they repeat their Performances with infinite Spirit, and with inimitable Grace. It is certain, that the Perfians are very nice in their Rhime, but fomewhat loofe in their Numbers, that is to fay, they regard Cadence more than Quantity. Yet no Nation in the World has more of that Enthufiafm, which is the Effence of Poetry, the very found of their Verfes fufficiently diftinguifhes the Subject, even to the Ears of thofe who are little acquainted with their Languge; fo that Foreigners are never at a Lofs to know, whether their Poems are merry or melancholy, humourous or grave, intended to inftruct, or calculated only to divert.

In fhort, almoft all their Learning confifts in Poetry, for their Proverbs are in Rhime, fo are their Fables, and they have Hiftories in Verfe of a great Length, which though fufficiently crouded with Fable, are feldum or never without a Ground of Truth. It is true that their modern Writers, many of them, make Uie of Profe, but even this is incermixt with Verfe, and they are alfo very apt to quote Verfes in Converlation, which they are oblerved to do with great Propriety. But it is worth our Notice, that no kind of Writing is here fo much in Fafhion, as Satyr, which is moftly national, and falls, generally fpeaking, upon their Neighbours. As for Example, they reprefent the Turks as Brutes and Barbarians; and whenever they have a Mind to reprefent a Blockhead, they are fure to paint him in a TurkjJo Drefs. The great Indolence, Effeminacy, and Luxury of the Indians, are likewife common Topicks of Raillery, and fo are the Faults and Follies of the Tarters; the Pride and Self-fufficiency of the Georgians; the Cinn-
ning and Self-intereftednefs of the Rufians, and the Covetoufnets of the Europeans are frequently expofed by their Wits.
They are far from being ignorant of Mufick as a Science; they learn by Rule, and they play by Note, though in a Manner fo different from ours, that it is a long Time before it becomes pleafant to a Stranger's Ear. There is no fuch Thing as Singing in Parts, but they fing one after another, and they generally fing to fome ftringed Inftruments, like the Lute or Viol: Their Men fing better than the Women, but there are not many of them that practife it, Singing being look'd upon as a fcandalous Employment in Perfia, as well as Dancing. People of Condition will not fuffer Children to learn either the one or the other, but it is left almoft entirely to the common Wenches and Proflitutes, as it is indeed all over the Eaft. It is reckoned an Indecency in People of any Reputation to fing, and it would render a Man contemptible who fhould attempt it in Company. The Perfans call their Singing-women Caine, intimating that they derive their Skill from the Daughters of Cain, who they pretend were the firft Inventors of Singing and Muffick in the Eaft.

They have a great Number of Inftruments both of String and Wind Mufick, fome in Shape like our Hautboys and Flutes, others like the Viol, Harp, Virginals, Kettle-drums, and Trumpets; but furcly their Trumpet is the moft monftrous Inftrument for Size and Sound that can be met with; it is commonly feven or eight Foot long, and proportionably wide at the great End, and as much as a Man can hold up ; thefe and their Drums, in a Manner, drown all other Sounds, though the leffer Inftruments, as has been obferved, have no great Harmony in them : And indeed their Mulick, as ir is called, ferve chiefly inftead of Clocks, to let People know the Time of Day or Night, founding conttantly at certain Hours, for Bells they have none; and when the Shah or any great Man goes out of his Palace, you have always Notice of it by thefe Drums and Trumpets, who fand over the Palace Gate, or in fome Balcony or Gallery and play upon fuch Occafions, being heard at a vaft Diffance. In fome Places the Mufick and Dancing Girls make Part of a great Man's Equipage, and run before him when he goes abroad.
It is obfervable, that the Strings of their Inftruments are never made of Gut, the touching of any thing belonging to a dead Animal, efpecially the Entrails, being held a Pollution; they make them therefore of twifted Silk, or Brafs Wire, and it is not only indecent, as has been obferved, for People of Condition to play upon a mulical Inftrument, but it feems alfo to be prohibited by their Religion, and therefore their Ecclefiafticks and Devotees will not fo much as be prefent at fuch Entertainments.

Aftronomy is ftudied in Perfia purely for the Sake of Aftrology, which laft they term the Revelation of the Stars. The People of the Eaft look upon Aftrology as the Key to Futurity, and they have an infatiable Curiofity for prying into Things to come. This feems to be the principal End of their Studies, and they look upon a Perfon to be ftupid and ignorant to the laft Degree, who fpeaks nightly of this Science. The Aftrologers of Perfia, at leaft the moft celebrated, are all Natives of the Province of Cbarafan or Bactria, and the moot noted among them of the Town of Genabed. The Shah never entertains an Aftrologer who is not of that Town. The Reafon that the Aftronomers here have more Skill in their Art than elfewhere, it is faid, is becaufe the Air is drier and purer, by which Means they have a better Opportunity to oblerve the Motions of the Sars. If we confider the Number of Aitrologers that are found in Perfiz, the Rank they hold, and the large Penfions they receive from the Crown, we may eafily guefs at the Confidence that People put in them ; they are paid by the Government no lefs than four hundred thoutand Pounds per Annum.

To the Poft of chief Aftrologer to his Imperial Majefty there is annexed a Penfion of ten thoufand Pounds *iper Ammum, and to the fecond Aftrologer five thoufand Pounds per Annum, and to the reft according to their

Skill. They have alfo in Prefents annually two hundred thoufand Pounds, and yet they are fometimes arbitrarily punifhed, and pur to Death for the moft trivial Offences, and even for Actions the moft innocent in themfelves, according to the Caprice of their Prince. Sir Fobn Cbardin relates, that in the Reign of Sef, when the Shah and all the great Men were affembled to fee fome Criminals of State cut in Pieces, and the Chief of the Attrologers was there among the reft ; the Shah viewing attentively the Countenances of his Courtiers, obferved that the principal Aftrologer fhut his Eyes at every Stroke of the Sabre, as not able to behold fo horrid a Slaughter; he thereupon called to the Governor of a Province who fat near him, and bid him put out the Eyes of that Dog who fat at his Left Hand, fince he did not ufe them ; which was executed in an Inftant on the unhappy Aftrologer, which Part of his Deftiny the Stars never revealed to him.

There are conftantly a certain Number of Aftrologers in Waiting at the Royal Palace, and always fome of the chief of them about the Shah's Perfon, except when he is in the Haram with his Women, who advertife him of the lucky or unlucky Moments. Every one of them carries an Aftrolabe hanging at his Girdle, in a neat little Cafe not bigger than the Hollow of one's Hand; they are confulted not only in Affairs of Importance, but frequently upon the leaft Trifies; for Inflance, if his Imperial Majefty fhall go abroad ; if it be an aufpicious Hour to enter the Haram; if it be a proper Time to eat, or to give Audience, $\mathcal{E}^{\circ} \%$ When thefeQueftions are asked, the Aftrologer immediately take out his Aftrolabe, obferves the Situation of the Scars, and by the Affiftance of his Tables makes his Aftrological Conclufions, to which they give entire Faith as to an Oracle, offending againft which would be dangerous.
Their Aftronomers obferve pretty jufly the Eclipfes of the Sur and Moon, and often foretel the very Moment wherein thofe Luminaries will be obfcured; but there are Inftances of their being miftaken half an Hour, and efpecially in Eclipfes of the Sun; but they differ from us in Nothing more than in the Calculation of the Vernal Equinox, there being fometimes an Houris Difference between them and the Europeans. Comets, they apprehend, always portend fome great Calamity, but generally fuppofe their malign Influences are directed againft fome other Empire than their own. They had neither Celential Globes, or Charts, or Telefcopes, to obferve the Conftellations, till the Europeans imported them, they have fince indeed endeavoured to imitate their celeftial Globes, and had only fome Reprefentations of the Conftellations before in a Book called, The Schemes of Abdal Rbamen. It is obfervable however, that the Figures were much the fame as on our Globes; the Longitudes and Latitudes of the Stars are alfo marked, but a little different from ours. The Perfians generally make forty eight Conftellations, and the Names of them, for the molt Part, are the fame we give them ; but fome of them are different. The only Inftruments they ufe in any of their Operations, are the Aftrolabe and $7 a c o b$ 's Staff; and as it is with there alone they take the Elevation of the Pole, it cannot be fuppofed that their Latitudes are very exact ; their Aftrolabes, it is true, are very curioufly made, and commonly by thofe who ufe them.
The Perfian Almanack is called Takumi; it is properly a Mixture of Aftronomy and judicial Aftrology, containing an Account of the Conjunctions, Oppofitions, Aipects, Longitudes, Latitudes, and, in fhort, the whole Difpofition of the Heavens. It contains alfo Prognofticks of the moft notable Events, as War, Famine, Plenty, Difeafes, and other Accidents of human Life, with the Jucky or unlucky Times for tranfacting all Manner of Affairs, directing the People to regulate their Conduct accordingly. The Feftivals alro are marked, as in our Almanacks, but whereas we divide the Year into four Parts, they make only two, Winter and Summer. What is moft oblervable is, that though there are great Numbers of thefe Alma-nack-makers, and though they frequently difagree even in their Aftronomical Calculatlons, as well as sheir Pre-
diEtions,
dictions, they are neverthelefs looked upon as infallible; a Thing fcare to be credited, if we had not fome Examples of the fame Kind nearer Home.

Their Prognoftications are generally taken from the Moon, their Artifts believing that this fublunary World, as it is called, is much more influenced by this Planet; than by the Sun. And thefe Aftrologers, like other Oracles, endeavour conftantly to deliver themfelves in dubious and equivocal Expreffions, which may bear various Meanings; fo that if their Predictions prove true in any Senfe, or but in Part, they are fure to meet with Applaufe tho' they fhould fail in fome Circumitances. They teem to regard the Earth more than the Heavens, and to be govern'd by the Confideration of probable Cir cumftances, rather than the Conftellations, and their Predictions on that Account are frequently found true. For Inftance, their Almanacks are always publifhed in the Spring, when the Winter is paffed, and according to the Weather they then had, it is no difficult Matter to foretel, whether they fhall have good or bad Crops in the Summer, efpecially in a Climate where it does not vary as in Europe ; and from the fame Premifes they will be able to pafs a tolerable Judgment on the Health or Sicknefs of the enfuing Seaions. But above all, as the Aftrologers are always about the Court, and have fo great a Share in the Adminiftration of Affairs, and fuch Credit with all the World, they may be fuppofed to make very fhrewd Gueffes in Relation to Politicks. They cannot but obferve the Humours and Dif politions of the Prince and his Favourites, the Likelihood there is that one will be reftored, and another difgraced. Nay they know very well what an Influence themfelves have in thefe Cafes, infomuch that there very rarely happens a confiderable Alteration in the State, but it is brought about, and is indeed the Effect of fome of their own Predictions.

But Aftrology is not the only Foible of this kind, for they have various other Sorts of Divination, which have grown into Ufe by Degrees, under the feveral Changes of their Government. It is true, that for the mott Part their Aftrologers practife chefe, but not exclufively, for there are others who practife them likewife, more efpecially Geomancy, which is the favourite Method of Divining throughout all the Eaft. Charms and Amulets againlt Difeafes and Enchantments, are another Part of their Superttition; you will not find a Perfana without his Amulet, and fome of them almoft loaded with them, they put them allo about the Necks of their domentick Animals; thefe Amulets have certain Infcriptions on Pa per, and fometimes on precious Stones, and thefe Infcriptions they wear in little Bags about them; they contain fome Paffages of the Alcoran, or Sentences of their Saints or Prophets, applicable to the Difeafe or Enchantment they would avert: The Perfians alfo are extravagantly fupertitious in Relation to Days. and Times. They depend in thefe Cafes, as much on the Diviners and Aftrologers, as a Child upon its Nurfe ; for Inftance, when the Sbab is upon a Journey, the Aftrologers will make him rife at Midnight, and begin his March in the worft Weather that can happen, and perhaps out of the high Road, to avoid the unfortunate Hour, or his evil Stars, as from Ignorance or Knavery they molt impudently call them.

We muft not however imagine, notwithftanding thefe Follies are very general, that there is not fome kind of real and ufeful Learning amongft this great Nation. Moral Philofophy is in high Credit with them, and is not only taught but practifed; they have many excellent and judicious Books upon this Subject, in which the Viciffitudes of human Life, and the Folly of placing Happinefs in fenfual Enjoyments, are very fully and very finely ftated. As for the ordinary Parts of Education, and fuch as may fit Youth for common Bufinefs, they have as many Conveniences as other People. There are abundance of Schools in every Town, where, befides the Perfian, is taught the Arabick, which is their learn ed Language; the Alcoran, and their other facred Writings, are all in this Language, and the Alcoran is looked upon as the Standard of good Language both for Grammar and Rhetorick. People of Condition

VoI. II. No $\mathrm{N}^{\circ} 3 \mathrm{I}$.
chufe to have private Tutors for their Childien, rathet than fend them to thefe publick Schools; and no Nation it is faid, is more intent on the Education of Children; and breeding them up to manly Exercifes than the Perfians. Their Schools are called Mekteb, which fig: nifies an Entrance ; this being; fay they, the Gate by which Lads enter into the Sciences.

There are, as has been faid, many in every Town; and the Expence of Scholing is very fmall. They learn the Perfian and Arabian Languages; with Writing and Accounts, which when they are arrived at fome Perfection; in, they are removed to fome College, or Medres, as they call them, which fignifies a Place where their Doctrine or Principles of their Religion are taught. Their Colleges are all endowed, and fome of them very richly; the largeft have fifty or fixty Apartments, and to each of them belong two Chambers. In thole Colleges that are beft endowed, every Scholar has about two Shillings a Day allowed him, which he lays out as he thinks fit, for they do not common together.

There are fome Colleges where the Students have no more than a Penny a Day, and yet Intereft is made to get into one of thefe, on account of having a Lodging gratis, and fome other cafual Advantages. Many here are, who get in without any Defign to ftudy, and live and grow old in thofe Houfes, and are allowed to have their Wives and Children with them, whofe principal Defign feems to be in Eafe and Idlenefs. There are abundance of Colleges in the great Towns of Perfia, and fome in the Villages. The Perfians lay out the greateft Part of their Charities in publick Foundations. In the firf Place, they ufually build a Caravanfera for the lodging of Travellers gratis; afterwards a Bagnio, a Coffee-houfe, a Bazar or Market-place, and they purchafe alfo a Garden, and thefe they let out, and. apply the Revenues arifing from them towards the building and endowing of a College. The Founder and his Heirs have the Appointment of the Head and Governors of the Society, and if the Founder's Eftate happens to be forfeited to the Crown, the Shah has the Nomination. In Ifpaban there are fifty feven Colleges, moft of them of Royal Foundation, or which have devolved to the Crown ; there are Profeffors who teach the Sciences in every College, to whom the Scholars make an annual Allowance for their Trouble; but as there are feveral who read Lectures gratis, the Scholars frequently refort to thefe, and forfake their proper Tutors.

Thofe Students who are Men of Parts and Learning; may have a handfome Salary in any great Man's Houfe for inftructing his Children; for thefe never fend their Children either to Schools or Colleges, but have them educated in their own Houfes. The Head of the Houfe admits or excludes whom he fees fit, and pays the Students their Penfions monthly, fo that they fhew him abundance of Refpect. Befides their Colleges, there are in every Town thole who teach the Liberal Arts gratis, and thefe are frequently great Officers who have been difcarded, or have voluntarily retired from Court. Thefe frequently allow their Difciples Books and Paper, and entertain them at their own Expence certain Days in the Week, and fometimes cloath their Pupils and give them Money, and by this Means they endeavour to recover their Reputation with the People, for nothing gives a Gentleman fuch a Reputation in Perfia, as the inftructing great Numbers of Scholars at their own Expence, and the being Patrons of Learning and Learned Men. Thefe are Circumftances that muft effectually prove, that the Europeans have no Right to treat the Perfians as a rude and barbarous People.

As the Cuftoms and Manners, fo the Reading and Learning of all Nations mult differ, and the wider and more remote thefe Differences are, the readier the Vulgar on both Sides feem to be in deriding and contemning each other; but as this Humour proceeds from the fame Principle in both Cafes, viz. that of prefuming themfelver to be the Standard by which the Wifdom and Civility, the Learning and Politenefs of all other Nations are to be determined; and as this is a Point not to be defended, it ought to be given up as

10 X
no better than a popular Error in both. It has been already obferv'd, that a great Part of the modern Conftitution of Perria is derived from the ancient Form of Government that prevailed under their old Emperors, chat is, the Series of Princes, who governed that which is fo well known to the learned World, by the Title of the fecond general Empire, allowing the Afyrian to be the firft. It is therefore well worthy our Notice, that Conflitutions judiciounly fettled, are of fo permanent a Nature, and have fuch an interior Strength and Solidity, as not only to refift the Power of Time, but even of repeated Invafions, to which it is certain, that no Country in the World has been more fubject than this of which we are fpeaking. We may from hence difcern, that though Nations wafte away, and are loft, as well as all the Monuments of their Power and Greatnefs, yet the Effects of their Wifdom remain, and the Conquerors themfelves are content to receive and fubmit, for their own Sakes, and from a Convition of their Excellence, to the Laws of the Conquer'd.
We know that this has been heretofore obferved of the Egyptions, we know that in much later Times it has been confeffed in Reference to the Cbinefe, but I do not remember to have feen this Remark made before as to the Perfians. Yet I arrogate nothing to myfelf upon this Head, for whoever reads Dr Hyde's learned Book, and compares it with the modern Accounts of Perfia, muft difcover it at firft Sight. At this Day the whole Plan of the Perfian Conftitution, except the Ecclefiaftical Part of it, which is changed by the Introduction of Mabometanifm, is very near the fame that it was three thoufand Year ago; and yet the Perfees, who are the Remains of the ancient People of Perfac, to whom that Conftitution belonged, are now reduced to fo inconfiderable a Remnant, that it is doubted whether there may be ten thoufand Souls left in Perfia of this Race. Thofe that are left indeed preferve their primitive Cuftoms, and are authentick. Witneffes of the Truths reported of them by the moft learned Writers. It is indeed true, that there is another fmall Colony of thefe People in the Indies, and it may not be amifs to put the Reader in Mind of a Conjecture, mentioned in Commodere Roggervin's Voyage, that fome Inands, difcovered by him in the South-Seas, are actually peopled by the Relicts of thefe ancient Perfans.

I had myfelf an Opportunity of converfing for feveral Xears with a very fenfible Phyfician, who went that Voyage, to whom I was indebted for many of the Parficulars publifhed therein, and who is dead fince they were publifhed. Of this Gentleman I very carefully enquired what the Reafons were which induced him and his Companions to advance that Notion, which at firft Sight is none of the moft probable. He told me the Caufes were chiefly three, Firf, that their Complexions, in the Sentiments of thofe who had feen fome of the Gubers in Perfia, very much refembled them, and were very unlike either the Inhabitants of Africk, or of India; for whereas the former are of a black, and the latter of a reddifh or Iron Colour; thefe were of a light Olive, and yet their Afpeets differed abfolutely from the Cbinefe and Tartars. The fecond Caufe he affigned, was their worfhipping the Sun and Fire, turning towards the Eaft when they prayed, and ufing a low or whifpering Voice, all of which are fuitable enough to the Gubers, or Gours as the Turks call them. The third was the Innocency of their Manners, the quiet and peaceable Life they lead, the Pains they took in cultivating their Lands, and their great Induftry in feveral ingenious Manufactures. I fhall not talke upon me to determine what Credit is due to thefe

Conjectures, but thall content myfelf with obferving, that they are worth remembring; and confidering perhaps, our Pofterity may have an Opportunity by converfing with thefe People, to enter into them more minutely.

One thing more I recollect that paffed upon this Subject, and it was this, that ingenious Genteman obferved to me, that though we had various. Travels through and Accounts of Perja, yet we had no general or correet Hiftory of it, by which a curious Perfon might fee in a litcle Time, what Changes had happened therein, from the earlieft Ages down to the prefent, which he thought might be of very great Ufe, even though it were digened into a very narrow Compafs. Upon mature Deliberation, I faw the Truth and Expediency of this in the ftrongeft Light, and that nothing difabled us fo much in this Part of the World, from forming a right Judgment of Affairs in thofe Parts, as the not laving diftinct and correct Views of the Succeffions of their Princes.

The famous Prefident Brifon, fo barbarounly murdered by the Leaguers, in the Reign of Henry III. of France, was long ago fatisfied of this; and to remedy an Evil, the Confequences of which he judged of very truly, he compofed a large Hiftory of Perfia, which he publinhed in Latnn, and digefted therein an Account of the Affairs of that Nation from the earlieft Ages to his own. This without doubt was a very curious and a very ufeful Work, with refpect to Men who ocupy the higher Forms in Learning, but to the Bulk of the People, I mean of that Sort of People, who believe themfelves to make a Part of that learned World, it was in Reality of no Service at all. In the firt Place, the Book itfelf is very large, written in a learned Language, and in a hairh and perplexed Stile even in that Language; for it is obfervable of him and of de Thou his Cotempurary and Countryman, that they brought the Stile of the Bar into the Narration of Hiftory, and generally ftated Cafes, or as the French Lawyers term it, wrote Factums, inftead of giving us a natural and eafy Detail of Facts. Befides, Prefident Brifon's Book was chiefly grounded on the Greek and Latin Hiftorians; what he derived from the Perfian Writers, he had thro' the Canal of fome German Pedants, which inftead of the beft, rendred it the wort Part of his Book, in which there are large Chafms ; fo that notwithftanding what the Title promiles, it is nothing lefs than a compleat Hiftory; though I believe at the Time it was wrote, it would have been impoffible for any to have given us a better; and it is plain, that before him, none had thought it worth his Time and Pains to give us one fo good.

After making thefe Reflections, I became more fenfible of the extreme Difficulty of reprefencing the Scheme of the Perfian Hiftory within fo narrow Bounds as I am tied to in this Work; and yet I was fenfible, that without this, all I had done was imperfect, and that the Reader mult neceffarily have Recourfe to ocher Books in order to underfand mine; which Inconveniency perhaps I had fubmitced to, if I could have told him where to have fought for better Information; but that being alfo out of my Power, I found myfelf under an abfolute Neceffity of trying what might be done for his Relief; this produced what follows, fo that all I have faid is not calculated to inhance the Value ; but to excufe the Imperfection of the enfuing Section, which being the firft Attempt of its kind, may be allowed fome Degree of Merit, though it falls, as I am very fenfible, extremely fhort of Perfection.

SECTIONV.

#### Abstract

A Succinct View of the Perfian Hiftory, from the earlieft Accounts down to the prefent Time; in which is contained a concife Reprefentation of the feveral remarkable Revolutions in that Empire, ancient and modern, the Conquefts thereof by feveral Nations, and the Succeffion of their refpective Monarchs, fo far as is ruceeffary to illuftrate what has been delivered in the foregoing Sections.

## Collected as well from the Orienial Writers, as from the Greek and Latin Hiftorians.

1. An Introductory Account of the Nature and Defgnt of tbe following Vierw of the Perfian FFifory, and of the State of that Nation in tbe earlief Times, according to their own Hiflorians. 2. Of the Perfian Empire, confidered as the fecond of the four great Monarchies, from the Origin thereof under Cyrus, to its Deffruction by the Greeks. 3. Of the Invafion and Conquef of Perfia by the Macedonians, and of the Situation of Affirs after the Death of Alexander the Great. 4. Of the Revival of the Perfian or Parthian Empire by Schapour or Sapores, to the intire Defruction of the ancient Perfians, under the Reign of Jefdegerde Shehriar, the laft of their Monarcbs. 5. The Conqueft of Perfia by the Arabs or Saracens, under their Caliph Moavia; and of the Time they poffefed tbis great Country, down to the laff Kbalif of Bagdad. 6. The Conquel/ of Perfia by the Mogul Tartars, and the Succefion of their Princes, fo long as they poleffed or claimed this Country. 7. The great Irruption of that Tribe of Turcomans, dif Finguifted by the Title Kara Kuyonlu, i.e. of the Black-Sheep, and of the Time they remained in Poffefion of Perfia. 8. Of anotber Tribe of Turcomans, Ailed Aku Kuyonlu, i.e. of the White-Sheep, and of their Dominion in this Country. 9. Of Shab Inmael Seff, the Founder of the late Imperial Family, and the Succeffion of bis Defcendants down to Shab Abbas III. wwho was crowned in bis Cradle by Thamas Kouli Kan. Io. A brief Account of the Hifory of Sbab Nadir, from bis firf Appearance in the World to the Time of his being murdered. iI. An Account of Ali Kuli Kan, now ftiled Adi Shah, the prefent Poffefor of the Perfian Monarchy, with Jome Remarks on the principal Events that fall weitbin the Compals of this Section.

1.HE ancient Hiftories of all Nations are, generally fpeaking, intermix'd with Fables, notwithltanding which the Knowledge of them is of great Ufe, becaufe the Antiquities of every Country are grounded upon thefe traditional Hiftories, and withour being competently verfed in them, even modern Relations are full of Doubts and Difficulties; and this we know experimently, not only by the Perufal of Greek and Roman Authors, but from our own Hiftory, which, how obfcure foever in its Original, has notwithftanding been efteemed worth knowing, and even worth the Pains of being fifted thoroughly by the moft learned and intelligent Perfons. It is very true, that the modern Perfian Hiftorians are of a very late Date, in Comparifon of thofe Times to which their Hiftories refer ; but then it is to be confidered, that they tranfribe from their Neighbours the Tartars, who though it may found harfh in our Ears, have always had amongft them very ancient and authentick Records, and from the Books of the Perfees, or primitive Inhabitants of Perfia, whofe Writings deferve as much Credit as thofe of any Eaftern Nation whatever. According to them the moft ancient Monarchy of this Country began in the Province of Aderbeijan, or Media, where the People, weary of enduring thofe Evils that are infeparable from Anarchy, made choice of Kayomars for their Sovereign. This Kayomars, if we may depend upon their Accounts, was the Son of Aram, the Son of Sbem, the Son of Noab, and confequently his Monarchy began at no great Diftance of Time from the Flood. If there was nothing in their Hiftory more extravagant than this, it might perhaps be well enough defended; but all that they relate afrerwards, of the Succeffion of his Defcendants, whom they reckon Eleven in Number, is fo ficitious, that little or no Credit can be given to it ; they file this their firft Dynafy, the Piccbdadians from Houfcbenk, the fecond Monarch, Grandfon of Kayomar, who from his ftrict Regard to Juftice, had the Sirname of Pifdad, which is to fay, the Juft, or rather the great

Diftributer of Juftice. The latt Monarch of this Line was Guftasb, which is the fame Name that the Greeks call Hyftafpes; it is not eafy to give any Account of thefe ancient Monarchs, fo as to reconcile them with other Hiftories, but in general it may be affirmed without Prejudice to the Truth, that under this firt Race of their Monarchs, the ancient Perfans comprehended all the Princes that ruled in their Country, before the Age in which Cyrus was born; fo that this may be properly niled, the fabulous or obfcure Age in the Perfian Hiftory, taking in all the Time, from the Flood to the Empire of the Medes, who as other Hiftories better known to us record, had once the Sovereignty over Afa.
2. The fecond Race of the Perfian Monarchs is, by by their Hiftorians called, the Dynasty of the Kanites; and this is, Atrictly fpeaking, that Race of the Perforn Kings, recorded by the Greek Hiltorians, who reckon up twelve, and allow them to have reigned all together two hundred and fix Years, that is, from Cyrus, who began his Reign five hundred thirty fix Years befor Chrift, to Darius Codomanus, who ended his three hundred and thirty Years before Chrift. It muft be allowed, that there is a very wide and almoft irreconcileable Difference between the Greek and Perfan Hiftorians, with Regard to this Period of Time, and the Actions of thefe Princes, as the inquifitive Reader may difcover, by perufing their Accounts diftincly fated in the Univerfal Hiftory, the nobleft and moft comprehenfive Work of its kind, that has appeared in our own, or in any other Language.
The only Fact in which thefe two Hiftories feem tolerably to accord, is in the Appearance of the great Perfian Legillator, whom in their Language, they call Zerdufth, and whom the Greeks ftile Zoroafer: He flourihed, according to both Hittories, under the Reign of Gulfasb or Darius Hyyafpes, who began his Reign in the Year before Chrift Five hundred and twenty two. It was this great Man Zerdufbt, who modelled
and reduced into Order the Religion of the Magi, the fundamental Maxim of which was the Worfhipping only one God under the Symbol of Light, and becaufe they in a particular Manner reverenced the Sun, and paid their Devotions before a Fire, which was kept continually burning upon an Altar, the Greeks meafuring the Religion of others by their own, took it for granted that they worfhipped the Sun and the Fire ; and according to that remarkable Facility they had of fupplying by Fiction the Want of better Authority, they have given us very large Accounts of the Perfian Religion, which have only ferved to millead and deceive fuch as trufted to their Relations ; for beyond all Queftion, what they have fet down of human and other Sacrifices offered by the Perfians to feveral of their Divinities, is one continued Chain of Fables, utterly repugnant to the fundamental Principles of their philofophical and theological Syftems.

The Perfian Hiftories relate the laft War between their Monarchs and the Greeks, in a Manner very differently from what is contained in the Writings of the laft-mentioned Nation; the former file the laft Monarch of their Second Dynafty Darab al Aggar, which is as much as to fay, Darius the Leffer, or Darius the Second; whereas the Greeks reckon him the Third of that Name. The Perfans alfo fay, that he was a cruel and tyrannical Prince, and that by his Male-Adminiftration he fo eftranged the Hearts, and loft the Affections of his Subjects, that fome of the great Men about him privately called in Alexander of Nsacedon, with a Promife to betray their Mafter into his Hands. To us this appears wild and incredible, but that Nadir Shah was actually fo called in by the Minifters of the Mogul, paffes for true Hiftory; which very poffibly may appear flrange in the next Age, and ridiculous to Pofterity. The Perfan Hiftorians fay, that Alexander found Darius yet alive, when he fell into his Hands; that he bequeathed to him his Daughter Roufchenk, which Name the Greeks have changed into Roxana, for. a Wife, and advifed him to leave the Government of the Provinces of his new Empire to the Perfian Grandees, which Alexander promifed and performed. They add farther, that repenting of this fome Time after, he refolved to remove them to make way for Greeks; but that he was diffuaded from this Meafure by Aristotle, who fuggefted to him, that the latter would not be able to maintain themfelves againft the general Confederacy of the Perfion Princes; and that the only Way to prevent fuch a Confederacy was to allow feveral of thofe Princes a greater Meafure of Power under his Government, than they could hope for under a Monarch of their own Nation.
3. The Perfians nile Alexander the Great, Eskender al Roumi, that is, Alexander the Greek; Eskender ben Pbilicous, that is, Alexander the Son of Pbilip; and Efkender Dbulcarnein, that is, Alexander with two Horns, and give a very different Account of his Expedition into and Conqueft of Perfia, from what we meet with in either in the Greek or the Latin Hiftorians; wherein as in many Things they err, fo in fome perhaps they are in the right, and probably it might furnifh a learned Man, perfectly well acquainted with the Greek and Oriental Tongues, with an Opportunity of writing a very ufeful and entertaining Differtation, by way of Comparifon between thefe Hittories, as it would afford him an Op. portunity of clearing up a Multitude of Paffages in both, that feem at prefent either very dark or abfolutely unintelligible. Something of this Kind, with refpeft to the laft mentioned of his oriental Titles, has been attempted with Succefs by the very learned Dean Prideaux, out of whofe excellent Performance Mr. Rollin, in his ancient Hiftory; has borrowed whole Sheets at a Time, and his Authorities from the Ancients into the Bargain, which is a new Way of writing Univerfal Hiftory, in which I am afraid he will have but too many Followers.

The Perfian Writers tell us, and I believe very truly, that not long after the Death of this great Conqueror, many of their Princes fet up for Petty Sovereigns in the Provinces which were committed to their Government, and that the Perfan Empire was vuled in this

Manner for feventy two Years. Thefe Princes they ftile in general Moluk Thaovaif, that is, the Princes of the Provinces, and make a diftinct Dynaky of them, which is their Manner of diftributing their Hiftories, and a very perfpicuous Method it is, as the learned Reader will eafily difcern, by confulting Abul Ferrajuis, who has digefted his Work in this Manner, and from thence has given it the, Title of the Hiftory of $D_{y}$ nasties; nor do I know' any univerfal Hiftory extant, in any Language, that confidering its Concifenefs ought to be compared to his. We need not wonder that there is a good deal of Confufion in that Part of the Perfian Hiftory which relates to the Time immediately after the Death of Alexander the Great, and we are the lefs able to rectify it, becaufe neither the Greek nor the Latin Hiftorians treat of it clearly, but mention it oirly incidentally, contenting themfelves to mention it from Time to Time as it falls in their Way ; and from Hiftory thus wrote by Starts, it is a very dificult Thing to collect fuch a Number of Facts, as may. enable one to reduce it under any certain Method, and yet this is abfolutely neceffary, in order to preferve the Thread of our Difcourfe.
4. The Greeks fay, that under the Reign of Ptolemy Pbiladelpbus, an Armenian Prince, revolted and formed a new Empire in the Eaft. This Armenion Prince was Arfaces, the Founder of the Partbian Empire; the Oriental Writers call him $A f c b e k$, and make him the firit Prince of their Dynafy of Afkanicns, and they likewife reckon him amongft the Moluk Thaovaif, or the Princes that ruled after Alexander; fo that he feems to have acquired a Dominion over feveral perty Princes, who were once his Equals, and his affuming this Dominion feems to be by the Concurrence both of the Perfiana and Greek Writers, well enough fixed to the Year $25^{\circ}$ before Chrift. It may not be amifs to obferve, that Mirkond, and fome other Perfan Writers, appear to be very much at a Lofs in regulating the Succeffion of thefe Princes, for which the true Reafon feems to be this, that they found no regular Memoirs concerning them in the old Perfian Writers, who did not confider them in the Light of their natural Princes. It was however under this Race, that the Partbians became known to, and capable of makingHead againft the Romans; and therefore in their Hiftories we find the Names and principal Circumftances of the Reigns of moft of thefe Princes. The laft of this Race was Ardevan, who was Cotemporary with the Roman Emperor Commodus, and with him the Partbian Empire fell, or rather the Sovereignty of the Eaft was reftored to the Perfians in the Perfon of Artaxerxes, after it had lafted upwards of four hundred and thirty Years.
This great Prince the Perfian Chronicles file Ardccbir Babegan, and make him the Founder of their fourth Dynafy, called the Saffanians; he was not only the Revivor of the Perfian Empire, but the Legillator of ir alfo, and left behind him a famous Book, intitled, Adab alaijch, i.e. The Rule of Life, which is ftill preferved, admired, and reverenced throughout the Eaft, as the moft compleat Syftem of Government and Morals that was ever publifhed. It would not in all Probability be much efteemed in this Part of the World, even if we had it ; being penned entirely in the Eafern Manner; as for Inftance, one of the Capital Maxims, which he lays down for a Prince to follow, is this, never employ a Sword, wobere a Cane will do as well; by which he meant, that a Monarch fhould never refort to Capital Punifhments for light Offences.
I mention this particularly, to fhow, that there was a great Difference between the Genius of the Partbian and Perfian Governments, and that the latter were naturally mild, even though their Monarchs carried their Claim to abfolute Power, as high as the former. The Laws of the Medes and Perfians were indeed no other than the Will of the Prince, but they were irrevocable and immutable even by their Princes; and therefore Ardefbir Babegan having reftored the Empire, thought himfelf at Liberty to lay down Rules for his Government, which were no lefs binding on his Succeffors than his Subjects. He it was that fixed the Tenure of
the Lands, the Modus betwixt the Farmer and Tenant, the Rights and Revenue of the Crown, and diftinguifhed all the Artificers and Tradefmen in his Empire into different Companies, over whom he appointed Mafters and Wardens ; with many other Regulations, moft of which fubfirt to this Day.
The Defcendants and Succeffors of this Prince, were thofe famous and powerful Emperors of Perfia, who contefted the Dominion of the Eaft with Confantine the Great, and the following Greek Emperors, till by Degrees, and chiefly by the long and bloody Wars they carried on againft each other, both Empires were much weakened, and at laft brought fo low, as to be overrun and ruined by a Race of Barbarians, that had been taught the Art of War by ferving as Mercenaries in both their Armies. The Perfian Writers reckon twenty chree Monarchs of this Dynafty down to Fefdegerde Sbebriar, who was the laft, and in whom not only his Family, bur his Nation ended. Long before his Time the Empire began to decline, Princes became Tyrants, their Subjects, and even their Sons, confpired againft them, their Religion grew corrupt, and the People dif folute ; this encouraged their Neighbours to invade them on all Sides, and a prodigious Multitude of Turks breaking in on the North Eaft, Fefdegerde marched againft them into the Province of Cborafan, but before he came to a Battle, he had Intelligence that the Arabs had invaded Perfia on the other Side; upon which he determined to march againit them ; but whilft Things were in this Situation, and before he could affemble Forces fufficient to act againft fo formidable a Power, Grief and Diftraction of Mind brought him to his End when he had reigned about nineteen Years. His Death is, by the beft Authors, referred to the thirty firf Iear of the Hegira, and confequently to Anno Domini 650. It may not be amifs to obferve, that the famous Æra, which is denominated from this Prince, does not commence, as one would imagine, with his Death, but from the Beginning of his Reign, and therefore anfwers to the eleventh Year of the Hegira, and to Anno Domini 632.
5. As we have already marked the precife Time when the Arabs became Mafters of this Country, we fhall only obferve, that the firft of their Khalifs was Mowavia, the Fourth lawful Succeffor of Mabomet, who reigned twenty Years; it would lead us into a vaft Field, if we fhould pretend to give even a fhort Account of the Succeffion of thefe Priefts and Princes; for under Pretence of being Succeffors to the Prophet, or, as the Word Kbalif litterally fignifies Lieulenant, they affumed the fupreme Power in fpiritual as well as temporal Affairs, and executed it for the moft Part with great Severity. It was this that led them to treat with unrelenting Cruelty, the unhappy Race of the ancient Perfion Nation, whom they were bent upon excirpating, from a ridiculous Notion of their being Infidels and Idolaters; whereas it is very difficult to fay, whether their Religion is not as near the Truth as that of Mabomet; but without entring into this Dilpute, it is fufficient for our Purpofe to tay that they fucceeded fo far therein, as to reduce that numerous People to a very handful, and even thefe were forced to take Shelter in Woods, in Mountains, and in Defarts, to fecure themfelves from the Effects of their religious Fury.

At length, after a Succeffion of fifty four Princes who bore this Title, though in that Space there happened many Revolutions, the Power of the Arabs or Saracens funk and grew weak, in the fame Manner as all other Nations do, that is to fay, their Monarchs grew drunk with Power, and the People were debauched by Luxury. In this melancholly Situation they were continually difturbed, either by Invafions from Abroad, or by Confpiracies at Home; till at laft the Strengh of the Empire, unable to fupport fuch continual Fatigues, funk under them. Moftadbem, or Mofazem Billab Ben Mostanfer Billah, the thirty feventh Khalif of Bagdat, or Babylon, faw the End of that Einpire; he fucceeded to the Government in the Year of the Hegira 640, and from the very Beginning of his Adminiftration was un-
VoL. II. $N^{\circ} 131$
fortunate in all his Undertakings. Holokou was at that Time Kan of the Tartars, a Prince fo powerful, and whofe Dominions were fo extenfive, that he for fome Time deliberated whether he fhould pufl his Conquiefts through Poland into Germany, or turn them againtt this Khalif, and he was determined to the latter by the Advice of Naffreddin, a famous Aftrologer, who being difobliged at the Khalif's Court, went to the Tariar, and advifed him to fall upon his old Mafter. It fell out that this unfortunate Prince had ftill a Traytor about him greater and more dangerous than this Aftrologer.
The Name of this perfidious Monfter was Morevded din, who was Vizier to the Khalif, but was of the oppofite Sect in Point of Religion; he perceived the D-fign of the Tartars, and adviled his Mafter to disband his Forces, under Pretence that he was fo much reverenced by his Neighbours, that there was no Fear of his being difturbed, if he did not open a Pretence for it by appearing armed. The Khalif, who naturally loved Money and Pleature, fwallowed the Biit, applied himfelf folely to the heaping up Wealth, and taking his Diverfion, till of a fudden the News came, that the' Tartars had invaded a diftant Part of his Dominions; upon which, by the Advice of this trufty Miniter, he ordered all the Forces in his Service to march againft them. By this Means his Capital, the glorious City of Bagdat, the faireft and richeft of the Eatt, and perhaps of the whole World, was left in a Manner unguarded. The Tariar Khan, who forefaw and expected this, marched immediately with a choice and powerful Army to inveft it ; and as foon as that was done, the Vizier, under Pretence of propofing Terms of Peace, went to the Camp of the Enemy, from whence he never returned. The City was foon after taken by Storm ; the Khalif, who was then forty fix Years of. Age, was made Prifoner, together with hisConfort and an only Son, his eldeft being killed in the Attack. The Tartar Prince behaved towards him with great Inhumanity; he caufed him to be dragged through the Streets till he died, and put his Son alfo to Death ; this happened in the Year of the Hegira, ${ }^{56}$, Anno Domini 1258. At the fame Time the City was deftroyed, and almoft all its Inhabitants, withour refpect to Sex, Age, or Rank, put to the Sword.
6. In this Manner the Saracens or Arabs loft Pof fefion of Perja, after they had kept it fix hundred Years; and as for this Tortar Prince Holokou or Olaku Kban, he was the Grandfon of that mighty Conqueror Jengiz Kban, and raifed in a very fhort Space one of the molt powerful and extenfive Empires the World ever had, though moft of the Tartar Hiftorians affirm, that when he conquered Perfia, he acted only as Lieutenant to his Brother Mancbu Kan, whom he afterwards fucceeded. He had the Reputation of being a juft and good Prince, and though he returned into Tartary to quiet fome Difturbances that broke out there, yet he was fo plealed with the Country of Media, that he quickly came back thither, and fpent the Remainder of his Days. He left his Dominions to his Son Abkay Kban, who was fucceeded by his Brother Hamed Kban, the firt of this Race, who became a Mabometan; after whom there followed a Succeffion of fix Princes of this Family, the laft of whom was Abu Said Babudar Kban, who deceafed in the Year of Hegira 736, Anzo Domini 1335, in whom this Race ending, the Government fell into great Confufion, which continued till Perfia fell under the Power of the Succeffors of the great Timur, whom we call Tamerlane. This celebrated Prince having, in the Courfe of his glorious Reign, added the greateft Part of Perfia to his other Dominions, left them to his Family, among whom continual Wars and Ditfentions reigned; fo that in the Space of about forty Years, there were no lefs than twelve of his Race who ftiled themfelves. Monarchs of Per $/ i a$, and actually pof feffed Chorajan, and fome other Provinces of that Em pire. In the mean time, another Hord of Turcomans grew very powerful in Diarbeck, and made Bagdat the Capital of their Dominions, from whence they made Incurlions into Perfia for many Years with various Succefs, till at laft they defeated Mirza Abukeker, the
$10 Y$
Grandfon

Grandfon of Timut, and the laft of his Race that reioned in Perfia, whom they flew in the Year of the Hegira 811, Anno Domini is 408.
7. By thisVietory Kara 1fuph, that is, Fofepth the Black, who was Chief of the Tribe of Kara Koyunli, or the Black Sbeep, fo called from their bearing this Figure in their Standards, became Sovereign of Perfa, which he governed fourteen Years $3_{3}$ and died in the Year of the Hegira 823 , Anno Domini 142 1. He was fucceeded by Amir Scander, who reigned in Touris, and was all his Life long engaged in various Wars with great Diverfity of Fortune, till he was killed by his own Son in the fixteenth Year of his Adminiftration. He was fucceeded by his Brother foon Sbab, who, though one of the lewdeft and wickedeft Princes that ever fat upon a Throne, extended his Dominions by his Succefs in War, and ruled Perfaa thirty two Years, till furprized in a March againft his Enemies, when drunk and afleep, he was cut to Pieces: His Succeffor was his Son Haffan Ali, the laft of his Family, who being defeated by Ozun Acen : Beck, who had killed his Father, loft his Dominions, which fell under the Power of the Conqueror in the Year of the Hegira 872, Anno Domini 1467.
8. This Ozun Acenbek is the fame that in moft of our Hiftories is called UJun Cbafan, and was the firt of the Family of Ak Kuyonli, or the White Sheep, another Tribe of Turcomans, who reigned in Perfia; he engaged in a long War with Sultan Mabomet the Ottoman Emperor, with very bad Succefs; however, he held the Government for eleven Years, and then left it to his Son Sultan Kalil, who, after a fhort Reign of fix Months, was killed by one of his Brothers. He was fucceeded by Yacub Beg, another Brother, who was a Prince of grear Learning and Moderation, and governed his Dominions for twelve Years with much L.enity and Wifdom, till at length he was taken off by Poifon; and then followed a Scene of Blood-fhed and Confufion under a Succeffion of five Princes, either Defcendants of or allied to this Family, till Sultan Morad, whom fome Eaftern Authors make the Son of the laft mentioned Prince was entirely defeated, and driven out of Perfia by IJbmael Seff in the Year of the Hegira 9 14, Ammo Domini ${ }^{1} 508$, and in him ended the Line of the White Sbeep, which gave Place to that Imperial Family, which continued to govern Perfia to our Times.
9. It would take up too much Room for us to enter into the Hiftory of this Prince's Family, which is befides fo well known, that it would be needlefs; we therefore think it fufficient to obferve, that he gave himfelf out to be a direct Defcendant from Mortis Ali the Son-in-Law of the Prophet Mabomet, and made his Way from a private Station to the Empire of Perfia, by very high Pretences to Sanctity, and fetting up for a Kind of Prophet himfelf. He it was that introduced the new Sect into Perjoa, and changed that Sort of Men to whom his Father had given Red Caps, as a Mark of their being his Difciples, into a regular Militia, from thence called Kuzzlebafbes, that is, Red Heads, who under his Succeffors became the Janizaries of Perfia. He was certainly a Man of great Parts and extenfive Genius, as appears plainly from the Manner in which he profecuted his Wars, fharing every Thing with his Soldiers till he had made himfelf Mafter of the whole Empire of Perfa, and then under Pretence of Care for their Intereft, introducing thofe Sorts of Military Tenures, which have been before defribed. He preferved, as loing as he lived, the Confidence and Efteem of his Subjects, who looked upon him as one fuperior to the ordinary Race of Men, in Point both of Piety and of Wifdom; to which his great Victories againft the Tartars on one Side, and the Turks on the other, contributed not a little; fo that the Perfians always confidered him as one, through the Favour of God, invincible. He died at the Age of Fortyfive, Amo Domini 1525 , in full Poffeffion of one of the greatef Empires, and of the Character of one of the ableft Princes in the Eaft.
He was fucceeded by the eldeft of his four Sons, Shah

Thamas, who was then about eighteen Years of Age We have very different Characters of this Prince from different Authors, and yet it is not at all impoffible that they may be true. In Time of Peace he led a quiet, lazy, inactive Life, and left Things pretty much to his Minifters, which gave an ill Impreffion of his Capacity; but when he came to be engaged in a Wa againft the Turki/b Emperor Solyman, he convinced thofe, who had taken up this Opinion, that they were ablolutely miftaken, for he managed that War with great Addrefs, and forced the Turk to quir his Country, notwithftanding that he attacked him with very unequa Forces, and harraffed him fo much in his Retreat, that of five hundred thoufand Men that Solyman brought into the Field, he fcarce carried fourfcore Thoufand back to Conftantinople. This War enabled Shali Thomas to rid himfelf of two of his Brothers ; for one revolting to the Turk, he attacked, defeated, and cut him to Pieces ; and, fufpecting the other had the like Defign, he caufed him to be taken off by Poifon. As to the Third, he died a natural Death; fo that all the Countries, which had been affigned them by their Father, were again united to the Empire. This Shah Thoma removed the Capital of his Dominions, and inftead of the City of Tauris, refided at Casbin. The worft Action of his Life was the putting to Death Sultan Bajazet, the Son of the Ottoman Emperor Solyman, who had fled to him for Protection ; which, however, procured him an advantageous Peace with the Turks, that lafted all the reft of his Reign. He died in 1556, in the Sixty-eighth Year of his Age, and the Fortieth of his Reign, and bequeathed the Empire to his third Son.
The great Officers of State having more Regard to their Conflitution than to the Will of their deceafed Monarch, fent to his eldeft Son Mabomet Codabende, who was Governor of Kborafan, and defired him to take the Title of Shah; but he fignified to them, that the Empire was a Weight too great for his Shoulders to bear, and advifed them to fet his Brother I/fmael upon the Throne. This Prince was about Forty-three Years of Age, twenty of which he had fpent in Prifon, where his Father had confined him out of Jealoufy. I/bmael II. was one of the braveft Men, as well as one of the greateft Captains of his Age, but fufpicious and cruel. His Father caufed him to be treated very gently in his Confinement, and fent him feveral fine Women; but he would never touch them, alledging, that it was enough to be miferable himfelf, without begetting a Race of Wretches. His Severity was fo great, and his Views to the Prejudice of his Family fo apparent, that it is faid his Sifter, at the Requeft of the Nobility, poifoned him, when he had reigned only two Years.
His elder Brother Mabomei Codabende was forced to take the Title of Sbab upon his Deceafe, againft his Will. He loved Privacy and Retirement, from a particular Turn in his Temper, and not from any Want of Parts or of Vigour. He ufed his three Brothers very well upon his firt Coming to the Crown ; but finding that they were inclined to revolt to the Turks who invaded his Dominions, he put them to Death without Mercy. In the firt Year of his Reign, he gained' a fignal Victory over the Turkjb Forces on the Frontiers of $A r$ menia, and in 1578 , he beat them again near Babyon, in which Battle they loft fourfcore thoufand Men upon the Spot: The Year following he gave them another Blow, for having fent twenty-five thouland Horfe, and five thoufand Camels to forage in the Spring, under an Efcort of thirty thoufand Foot, the Perfian Monarch by long Marches came upon them in the Night, and took his Meafures fo effectually, that neither Man nor Beaft efcaped. This Perfan Prince, who notwithftanding all thefe Victories, is faid fill to have regretted his ever leaving his Station in Khorafan for a Crown, and who treated all the Pomp and Grandeur of it with the utmoft Contempt, died in $15^{8} 5$, leaving behind him three Sons, the eldeft of which, Emir Hemfe, fucceeded him ; bur was foon after killed by the Intrigues of his Brother Ilbmael, who had not been long feated upon the Throne, before he had his Throat cut by his Barber, which made Way for the third Brother.

## Chap. 11.

 of the Empire of PERSIA.This was the fanous Sbab Abbas, who by the many glorious Actions of his Life, juftly acquired the Title of Great: He was Governor of Kborafan during the Life of his Father, and at the Time he was called to the Imperial Dignity, was about eighteen. He began his Reign with fome Acts of Severity, which he thought neceffary to fix his Government on a ftable Foundation. When this was done, he took a Refolution of recovering all that had formerly belonged to the Perfion Monarchs, and with this View marched into the Province of Kborafan, the greateft Part of which had been conquered by the Usbeck Tartars. This War lafted three Years, and was terminated at laft by the total Defeat of Abdallab Kban, the Sovereign of thofe Tartars, who with his Brother, and three Sons, was taken Prifoner. Sbab Abbas caufed their Heads to be ftruck off, that he might have the more Leifure to turn his Arms againft the Turks. They were much more powerful and troublefome Enemies, for at that Time they were in Poffef fion of a Track of Country of 150 Leagues, from South to North, to which Sibab Abbas had a juft Claim from his Predeceffors. All this he not only recovered, but pufhed his Conquefts as far as the Black-Sea, made himfelf Mafter of the City of Balfora, a great Part of Arabia, and by the Help of the Englif, recovered Orinus from the Portuguefe. He was beyond all Queftion one of the ableft Princes that ever reigned in Perfia, but withal, ambitious beyond Meafure, and cruel to the laft Degree. He found the Nobility very powerful, and the Kuzzlebafbes not a little infolent, he humbled the former, and weakned the latter, by introducing, as has been fhown elfewhere, a new Militia of his own Forming, and entirely depending upon the Crown. He conceived an unreafonable Jealouly of his only Son Sefi Mirza, on Account of the great Qualities with which he was endowed, and the high Refpects paid him by his Subjects in general, and the Soldiers in particular. To free himfelf from thefe groundlefs Apprehenfions, he caufed his Son to be put to Death, and repenting the Crime, as foon as it was committed, paffed the reft of his Days in Sorrow and Regret. He built the City of Ferabat, on the Coaft of the CaJpian-Sea, where he died in the Year $\mathbf{3} 629$, at the Age of Sixty three, after he had governed the Empire forty five Years.
He was fucceeded by his Grandfon Sefi Mirza, who was but a Child; as he grew up he difcovered all the bad Qualities of his Grandfather, and none of the good ones, for which his Father had been fo much beloved. He put out the Eyes of his only Brother, and murdered almoft all the old Servants of his Grandfather. His Severities were fo great, and the Murders he committed fo frequent, that the Women in his Haram confired againft his Life, and gave him a Dofe of Poifon, under which he ftrugled for two Months, and at laft recovered. The Pains he took to reach the Bottom of this Confpiracy were fo great, that at Length he difcovered all who had any Concern therein, and in one Night caufed forty four Ladies to be buried alive in his Garden, amongft whom, it was faid, were his Mother and his Aunt. He was brave in his Perfon to a Degree of Rafhnefs, but never fortunate in War, and the two ftrongeft Fortreffes in the Empire were loft in his Reign, viz. Kbandabar and Bagdat, chiefly through his own Fault. Amongtt many Vices, he had hardly any Virtues to compenfate them, but in Excufe of this, it is faid, that his Grandfather being afraid he might prove as great a Man as his Father, had caufed fo much Opium to be mingled with his Food, while a very Child, that it affected his Brain. To abate that Coldnefs which this occafioned, he was advifed by his Phyficians to drink Wine, to which he took fuch a Liking, that in the latter Part of his Life, he was almoft always drunk, and in one of thefe Debauches, he ended his Days, in 1642 , after a Reign of twelve Years. His exceffive Cruelty caufed a Sufpicion that he was poifoned.

He was fucceeded by his Son Abbas II. who was his only Child, and yet it was by the Virtue of an Eunuch, that this young Prince was in a Condition to fucceed him. In one of his drunken Fits, he ordered that Eunuch to pafs an Iron before his Son's Eyes, by which he
meant a Plate of Iron red hot in order to blind him, but making Ufe only of the Word Iron, the Eunuch very charitably fulfilled his Mafter's Command literally, but at the fame Time, directed the Child to counterfeit Blindnefs; which he did fo effectually, that his! Father had not the Jeaft Sufpicion of his Seeing, even when he lay upon his Death-bed. It was then that he deplored the Cruelty that he had been guilty off, in fuch moving Terms, that the Eunuch, who was by his Bed-fide, told him, he had a Secret for reftoring the young Prince's Sight, which rejoiced him fo much, that it kept him alive till the next Day. As Sbab Abbas II. was barely thirteen wherk he fucceeded his Father, and had been till then confidered as blind, and confequently incapable of the 1 m . perial Dignity, we may eafily conceive, that he could not take very early any Share in the Government, the the Care of which devolved upon his Mother and the Prime Minifter, who was a Creature of her ${ }^{\text {b }}$ s.

Things continued in this Situation during the three firft Years of his Reign, when the Minitter shaving unluckily, from the Peevifhnefs incident to old Age, let fall an Expreffion fomewhat difrefpectful towards his Mafter, Febean Kban, one of the noft powerful Lords of the Court, followed him to his Houfe and put him to Death as if it had been by the Order of the Shah. This exceedingly alarmed the Princefs his Protector, who demanded Juftice of her Son with all the Impetuofity natural to her Sex and to her Character ; but $A b^{0}$ bas, inftead of difavowing what had been really done without his Confent, gave to Zebean Kban the Poft of Prime Minifter, the vaft Eflate of the Deceafed, and foon after made him Generaliffimo of all his Forces. The wifeft of Monarchs has faid, That the Hearts of Kings are deep. One would have imagined, that in fo young a Prince, thefe high Favours had been either the Marks of Confidence, or the Effects of Timidity, but they were neither; Shah Abbas had a Mind to fee whether this Lord had acted out of a true Zeal for his Service, or from other Motives; he had allo a Mind to difcover how far his Intereft reached, and to what his Views tended. It was not long before he difcovered all. Jfebean Kban knowing how much he was hated by the Shah's Mother, formed a Defign' of killing her in the Haram, which being made known to the Shah, he in a great Council gave him the firft Stroke with his own Poinard, and with the Affiftance of his Guards cut off him and all Friends at once. This neceffary Severicy difcovered his true Character, and made him feared by his Minifters, and reverenced by his Subjects.

He was very far from being free from Vices, being much given both to Wine and Women; but was, for all that, a very great Prince. He retook Kbandabar, which had been loft by his Father, and recovered feveral Places from the Turks, and was preparing to have attacked them with all the Forces of his Empire, when he was taken off by Death. There is one Point of his Conduct which ought not to be paffed in Silence: He was a conftant Protector of the Chriftians, and when the Sedre, or Chief of the Ecclefiaiticks in Perfia, remonftrated againft it, he made him this remarkable Anfwer, The Dominion of the Mind belongs to that Supreme Being who bas given me Power over the Perfons of my Subjects, yet be allows them Freedom of Sentiment, and bas thereby taught me, that it is not my Duty to force it. While they are good Subjects, whatever their Religion be, I Ball confider them as good' Men. I' will not fay, as others have done, that this Maxim fhould be written in Letters of Gold, but I will fay more, that it ought to be writ in nobler Characters, I mean, in the Hearts of Princes. Shah Abbas II. died in the thirty eighth Year of his Age, on the 25 th of September, 1666 , in the 23d Year of his Reign.

He left behind him two Sons, Sefi Mirza, and Hamzeß Mirzia. In a great Council held by his chief Officers after his Deceafe, it was refolved to raife the youngeft to the Throne, becaufe he was the moft likely to be governed; but to give this a colourable Pretence, thofe who gave into this Opinion, fuggefted that Shah Abbas, when he fet out for Tabreftan, had returned fuddenly to Ifpaban, when he was a Day's Journey from it, and that he
came back melancholy; from whence they prefumed he had put out his eldeft Son's Eyes; the rather, becaufe he had brought the younger Prince along with him. . The Governor of the young Prince, who was thus preferred from an unparallel'd Virtue and Integrity, was the only Man that oppofed this Refolution; he raid it was injurious to the Contlitution, and to the Memory of the late Shah; he undertook, on the Peril of his Life, that the Fact was falfe, and as there is often an irrefiftible Force in Truth, he brought over all the reft to his Sentiments, and was deputed by them, who hitherto concealed the Death of Shah Abbas, to go to Ifpaban and prefent their Duty to his Succeffor. The Mother of that young Prince was alarmed at his Arrival, and at his demanding to fee her Son ; it was an Hour before he could be torn from her Embraces; but her Sorrow was foon turned into Joy, when the was informed, that by the Death of his Father he was become the Sovereign of Perfa.

He became [o, as his Subjects believed, in an ill Hour, for after he had reigned two Years with little Capacity and lefs Succefs, he was folemnly crowned a fecond Time, in Hopes of removing the malignant Influence of the Stars at his firft Coronation; and then it was that he changed his Name from Sefi to Solyman, as we are informed by Sir Gobn Cbardin, who was an Eye Witnefs of this fecond Coronation. If it ferved for any Thing, it was to fhew the Folly and Abfurdity of thefe Aftrological Precaucions; for notwithftanding all the Pains they took to fix upon a lucky Hour for this important Ceremony, his Adminiftration was not a Grain more fortunate than before: In fhort, under him the Perfian Empire began to decline, which funk and crumbled to Pieces under his Son. Shah Soly man had Vices, which, no doubt, were prejudicial to him, but his Follies were more 10 ; he loved Wine and Women to Excefs, Faults in themielves very great ; but another, which might feem more excufable was more fatal. He was indolent to the laft Degree ; he confided not only the Care of his Perfon, but of his State to his Eunuchs, and out of thefe half Men formed a Council for governing a great Empire.
The Confequences that attended this fcandalous Ma nagement, were fuch as might well be expected from it, that is to fay, his Councils were ill taken and worfe executed, few able Men were raifed either to Pofts in the Government or in the Army, and as foon as thefe few were difcovered, they were conftantly removed. When weak and bad Men are at the Helm, Calms are more dreadful than Storms, for thefe naturally fright them from their Polts, and call thofe to Power who know how to employ it. Shah Solyman reigned twenty eight Years, dying on the laft of fuly, 1694, at the Age of forty eight Years, leaving behind him the Character of one of the weakeft, meaneft, and bloodieft Princes that ever difgraced the Perfian Diadem.

His converfing fo much with Women and Eunuchs made him fufpicious; his being often 'drunk, and always half drunk, rendred him cruel, as the Want of Underftanding caufed him of Neceffity to be capricious. His Character was admirably drawn by one of his Courtiers; Inever leave the Shah's Prefence, fays he, with out feeling my Neck, that I may be Jure my Head is fill upon my Sboulders.

He left behind him two Sons, Mirza Abbas and Mirza Huflein, The Council of Eunuchs were to be the Judges which was the fitteft to wear the Crown; the late Shah made them fo by his Management; but what is ftill ftranger, he made them fo by his Will. The Approach of Death commonly gives unufual Force of Mind ; it did fo to Shah Solyman; but it was a left-handed Senfe, for after reigning like a Fool, he died a Knave. You bave it in your Power, faid he to his Eunuchs, to live under what Government you like beft. wben I am gone; your Cboice, if you would bave a martial Prince, muft fall upon Abbas; if you would ratber bave a pacifick Reign, you mift raife Huffein to the Thbrone. One need not, even at this Diftance from Perfa, be at a Lofs about the Refolution formed in this wife Council; weak Men know well enough, that they can never hold their Places but
under a weaker King; and therefore the fagacious Dif pofers of a Crown moft unanimoufly fixed upon the Prince that was unworthy of it. The Character of Mirza Abbas was truly given by his Father; he had all the great Qualities, and wanted none of the good ones neceffary to a Monarch; he was brave, but not fierce, and affable without Fallhood. As to the Character of Huffein, it may be very truly defcribed in a very few Words; there never lived a better Man, or a worfe Prince.

He had been bred in the fevere Study of the Alchoran, and at the fame Time that he was very knowing in the Mabometan Religion, he was very fincere in the Belief of it

He gave a ftrong Teftimony of the Uprightnefs of his Difpofition in refufing to put out the Eyes of his Brother Mirza Abbes; he was content at firt to fay it was inhuman, but finding himfelf continually excited thereto, by fuch as directed him in all other Things, he told them fairly, that when his Brother and he firlt read the Law together, they had fworn upon that holy Book, never to put out the Eyes of each other, which ever came to the Throne; and he would not incur the Guilt of Perjury. Indeed his Nature was fo tender, that firing a Piftol among his Ducks, which by Accident had Shot in it, he cryed out when he faw them wounded, that he was defiled with Blood, and gave a large Sum, in Alms to the Poor, to wipe out the Stain. His Minifters faw his Indolence with Pleafure, and his Weaknefs with Delight ; but his Integrity and Rectitude of Mind gave them infinite Concern. It was therefore for fome Time, their fole Bufinefs to ftudy how they might corrupt him; they thought at laft of a proper Method, and they made Choice of his Mother to carry it into Execution. That Princefs pretended to be at the Point of Death, and that the Phyficians had declared nothing could fave her Life but drinking Wine. The Sbah, out of Piety, had forbid the making it in any Part of his Dominions, and out of Refpect to the Law of Mabomet had never tafted it himfelf. He caufed it to be got however to fave his Mother's Life, and becaufe the would not drink unlefs he drank to her, he took off a large Glafs, which left fuch a Relifh on his Palate, as gave him an Inclination to it ever after.

By Arts like thefe Shah Huffein was drawn to become the great Inftrument of his own Ruin, and that of his Subjects. The Eunuchs, firft admitted into Council by his Father, contrived under him to fhut out all others. The Prime Minifter himfelf was excluded ; and thus Perfia, for the firft Time, was blefs'd : But why fhould I not fpeak plain? was curfed then, let me fay, with a Cabinet-Council. It is true, the ancient Form was kept up, the great Officers of State met, the Affembly was as regular as numerous, and to the Populace ap peared for fome Time as auguft as ever: But it was a mere empty Show, for only the White and Black Eunuchs had the Power, and which fure never happened in any Country but this, dictated their Orders through the Mouth of their Sovereign. We cannot dwell upon this extraordinary Subject; we cannot enter into the Detail of the Steps by which this Monarchy fell to Ruin; we leave thofe to the Imagination of the Reader and efteem ourfelves happy, that by fo reafonable an Excufe, we can difcharge ourfelves of fo difagreeable a Task.

Let it fuffice then to fay, once for all, that through this loofe and fcandalous Adminiftration the Conftitution was diffolved, and the whole Frame of Government fell to Pieces. The Ecclefiafticks were noted for irreligious Notions and Depravity of Manners; the Governors of Provinces had as little Power as Will to protect, but were allowed to plunder, that others might fqueeze them; the Viziers fleeced the People for fome Years, and were then fleeced themfelves; the Soldiers were robbed of their Pay, which forced them to work for a Subfintence ; and as this furnifhed them with Mo ney, Part of it was given to their Officers to wink at their Neglect of Difcipline ; which was the more readily complied with by Men trufted with Commands, tho' they knew little or nothing of martial Difcipline themfelves. In fuch a State of Things one would think

## Chap. II.

there muft be Complaints, more efpecially in a Country where the Law not only tolerates, but encourages fuch Complaints. But what then? The Shah fhut himfelf up in his Palace, and would not hear them. Memorials and Petitions might be drawn, and Means might be found to get them prefented. All this was done, but the Shah would never trouble any Body but his Eunuchs to read them ; and when Felons are Judges, Virtue is the only Thing that is thought a Crime.
Affairs being thus in a State of Depravity, and the Empire in a Manner ripe for Deftruction, we are next to fee how this was brought on ; and indeed it happened in a Manner, which, for any Thing that has occurred to me, there is nothing in Hiftory can parallel. At the Time Georgia fubmitted to Shah Abbas, it was agreed, that the Princes of that Country fhould be dependant only upon the Perfian Emperors, in the fame Manner that Crim Tartary does upon the Turks; and this Capitulation was frictly obferved till this wife Miniftry thought fit to violate it more than once, which induced the reigning Prince, to take fuch Meafures as he thought requifite to fet him beyond the Reach of their Power. The Council of Eunuchs were too cunning for him; they were informed, that his Army confifted of feveral fmall Bodies of Troops commanded by their refpective Chiefs; to thefe they offered large Sums of Money, and by Degrees drew the greateft Part of them to quit the Service of the Prince; upon which he retired with his Familiy and his Riches into the Mountains. Upon a little Reflection, he conceived an Opinion, that thofe who bribed with Money, might be bought with Money; and therefore fending an Agent to I/paban, he cancelled his Crime with Gold, and got himfelf reftored. Some Time after, the Mogul fent an Embaffy, in which he demanded the City and Principality of Kbandabar, in Terms that aftonifhed the Cabinet-Council of Shah Huffein. If, they were attacked by the Mogul, it was requifite to have a General and an Army ; and therefore like great Politicians, becaufe they knew this Prince of Georgia would fight, they fent him to command in Kbandabar, and allowed him to name a Lieutenant to command in his own Principality. This reftoring a Man after a Rebellion, and giving him a fecond Principality for the Courage he had fhown in his Rebellion, was a Policy fo refined, that none but thefe great Men could ever have found it out.
The Prince of Georgia was fent to Kbandabar, in the Year 1704, and he had not been long there, before he difcovered a Perfon as capable of making that Principality revolt, as he was of raifing an Infurrection in his own Country. The Name of this exttaordinary Perfon, was Mir Vaez, whom our Gazettes call Mirizeeis, and whom they reprefent as fprung from the Dregs of the People; this however is an Untruth : He was a Man of great Quality in that Country, and a kind of ReceiverGeneral of the Sbab's Revenue, in which Poft he behaved with fuch Honour towards the Court, and fo much Tendernefs towards the People, as gained him Credit with the one, and procured him the Affection of the other. The new Khan was by no Means pleafed with him, and reprefented therefore to his Friends at IJpaban, that this Man muft be fent for. If either he or they had ftruck off his Head, for prefuming to be wife and honeft under fuch an Adminiftration, there had been an End of the Matter, but they brought him to IJpaban, and there he foon faw that his Wifdom was much fuperior to that of the Cabinet Council; but that as for Honefty, it was become a ufelefs and dangerous Thing; to he parted with it immediately, and became as arrant a Courtier as the beft of them.

In 1709, he made a Journey to Mecca, with much Show of Religion, one of the beft Cloaks in the World for a bad Defign. His Countrymen were not of the eftablifhed Church, but of the Sect of Sunnis, which is the fame Religion with the Turks of Mecca; therefore he got a Fefta or folemn Decifion of the Head of the Law, importing, that his Countrymen might very lawfully take up Arms againft their Sovereign, as a Here-

Vol. II. $\mathbb{N}^{\bullet}$ CXXXII.
tick, and break all their Oaths to him without Perjufy. Upon his Return to Ifpaban, he contrived a Story of art Attack that was to be made upon the Perfian Empire by the Mufcovites and by the Mogul, fuggefting, that it was highly probable, that the Prince of Georgia's Lieutenant would revolt to the former, and himfelf go over to the latter. Upon this the Eunuchs fent Mitr Vaez to watch over the Prince's Conduet at Kbandabar, and it is certain, that he took Care the Prince of Georgic fhould do them no Hurt, for under Colour of a Reconciliation, he affafinated him in his own Palace; and by the Affiftance of his Countrymen, maffacred moft of his Troops; fending up a very formal Excule to IJpaban, that the Prince was an Oppreffor, and his Soldiers obferved no Difcipline, and therefore they had been tempted only to take the Liberty to knock their Brains out, but hoped they would believe, that notwithttanding this, they were as good Subjects as ever,
At this very Moment Mîr Vaez had declared himfelf Prince of Kbandabar, and upon producing the Fefta beforementioned, all his Countrymen adhered to him; it was however two Years before they were thoroughly perfuaded at Ifpaban, that the Thing was really fo, and that they had no more to do with Kbandabar as Sovereigns, than with any Province in Cbina. This forced them to raife an Army under the Command of the new Prince of Georgia, to which they added a Body of Perfians, and fent them againft Mir Vaez; but partly through the Difpute between the two Nations, and partly through the Treachery of fome of the Council at IJpaban, who held a Correfpondence with Mir Vaez, this Army was routed, and their Commander killed. Some other Attempts were made, but made in a more feeble Manner, and at laft the Thing was no more thought of, fo that Mir Vaez lived and died an independent Prince at his Capital of Kbandabar, in 1717 , afs ter a Reign of about feven Years.
His Countrymen made Choice of his Brother to fucceed him, and that Brother was inclined to Peace, but Mir Mabmud, the Son of Mir Vaez then about feventeen, conceiving that this would be prejudicial to his Intereft, flipt into his Uncle's Room one Night when he was anleep, and cut off his Head. He then fummoned the People, charged his Uncle with being a Traytor to them, and produced Papers under his Hand, to prove his Defign of fubmitting to the Perfians. This had the defired Effect, the People approved his Conduct, and declared him their Prince. But it is neceffary to inform the Reader, who there People' were, becaufe till about this Time, their Names were never heard of in Europe. The Afgbans are a Nation who inhabit Kbandabar, and moft of the mountainous Countries on the Frontier; we meet with large Defcriptions of them in the Perfian Authors, but they may be all reduced to a fingle Word, which will convey the Idea of them diftinctly; they are Highlanders; their Drefs, their Manners, their Clans, their Difcipline, and their Hardinefs are precifely the fame; they only differ in Religion, for the Afghans are Mabometans, moftly of the Turkibl Sect, and zealous to the laft Degree.

Mabmud was firft for drawing in the reft of the Afgbans in the adjacent Countries to be his Confederates: but their Chiefs thought themfelves as good Men as he; upon which he refolved to bring that to a Tryal, and by beating them, made them ready to do what he would have them. When this was brought about, he refolved to invade Perfa, though all the Men in his Country were not capable of furnifhing an Army any Way equal to fuch an Undertaking. He executed it howes ver with the Forces he could get rogether, advanced into the Province of Kirman, and furpriz'd the Capital. Thus far Things went well, but the Sbab having caft his Eyes upon the Brother of his firt Minitter, Luft Ali Kan, and made him General of his Forces, he advanced with a numerous Army againft the Afgbans, defeated them totally, and drove them back to Kobandabar. The Cabinet Council apprehenfive that fo great a Service might free the Prime Minifter from his De-
pendance
pendance upon them, alarmed the Sbab in the Night, pretended that Minifter was coming to murder him, and obtained an Order to feize and put out his Eyes, and another Order for fecuring his Brother. Both thefe were executed ; and as foon as Mir Mabmud was informed of it, he refumed his Defign, and entered Perfia a fecond Time with a much greater Army.

This fecond Invafion was in the Month of Fanuary 1722, and was not at firft attended with Succefs. He was bafled in the Siege of Kirman, his Forces being no Way fit for Sieges; but borrowing Courage from Defpair, though many of his People returned home, he marched on towards Ipaban. In his Paffage he met and fought the Perfan Army, and by the Difagreement between the Generals, defeated them, and afterwards laid Siege to the Capital ; which, however, he had never taken but for the Mifunderftandings in the Place, and the Intrigues he entered into with fome about the Shah, who at laft betrayed him into his Hands, in Confequence of a fcandalous Treaty, by which he agreed to refign the Empire to $M a b m u d^{2}$, and to give him his Daughter, which he performed, and by this Means that Captain of Banditti came to have the Title of Suiltan Mabomet, OEF. 22. 1722.

His Conduct, after this unaccountable Succefs, appeared very unequal ; fometimes he behaved with fuch Moderation and Prudence, that he feemed to deferve all that he had acquired ; at others, he acted with fuch Fiercenefs and Barbarity, as difgraced the very Nation from whence he came; but the Murders he committed, and more efpecially his inviting three hundred of the Perfian Nobility and Gentry to a Feaft, and then cutsing their Throats, was fuch an Act of Bafeners and Cruelty, as ought for ever to ftigmatize his Character, as the Reflection of it afterwards turned his Head. The Efcape of Mirza Seff, the eldeft Son of Shah Huf Sein, increafed his Fury; and on the 27 th of Fanuary 1725, he caufed moft of the Princes of the Royal Blood to be maffacred in his Prefence, except two Infants the Sons of Shah Huffein, whom that unfortunate Prince covered with his own Body, and had his Hand run through by parrying a Thruft made at them, before he could place them behind him ; which fo mollified the Heart of the Ufurper, that he fuffered them to live. Nor long after this he was feized with a Leprofy, and his lucid Intervals grew fhorter and lefs perfect; upon which the Afgbons fent for his Coufin Albruff, whom he kept in Prifon at IJpaban for Confpiracy, and made him their Prince.
He was the Son of that Uncle by cutting off whofe Head Mir Mabmud made himfelf Prince of Kbandabar, and in Return he ordered his Coufins to be cut off in the fame Manner, which put an End to a turbulent Reign of about two Years and a half. A/bruff, who was now Mafter of Ifpaban, is faid to have put to Death a Son that Mabmud had by Shah Hufein's Daughter; but it is certain that he married another Daughter of his himfelf, and treated the old Shah with much Lenity for fome Time, though afterwards he caufed him to be put to Death; but when or where, the Accounts we have hitherto had from this Country, does not enable us to mention with Certainty.

About the Time that the Afgbans befieged Ifpaban, it was refolved to fet up one of the young Princes as his Father's Lieutenant-General. Mirza Sefi, the eldeft of them, had been tried before, and after having been at the Head of a fmall Body of Troops for about a Month, he declared himfelf incapable of publick Affairs, and retired again, of his own Accord, into the Haram. The fecond Prince had difobliged the Eunuchs, and they perfuaded the old Shah to confine him; fo that it was now refolved, that his third Son Mirza Thbamas hhould be fent out to make an Experiment of his Fortune. He marched accordingly at the Head of five hundred Men, and had the good Luck to make his Efcape. He fhowed fome Bravery, but very little Judgment; for when he had got a few Troops about him, he differed with and even attacked the Prince of

Georgia, the only Perron from whom he could have expected any Affiftance.

We have no very diftinct Account of his Actions while Mir Mabmud held the fupreme Power ; but it is certain that his Succeffor Sultan Afbruff drove him into Mazenderan, from whence, with fome Difficulty, he got into Kborafan, and there he took the Title of Shah on Account of his Father's abdicating the Government. His Affairs wore a very indifferent Afpect, till fuch Time as he placed Fatteb allab Kban Kajar at the Head of his Army, who brought his Concerns into fome Order. In 1726, he took Nadir. Kuli, afterwards known to the World by the Name of Thamas Kouli Kan, into his Service, who infinuated himfelf fo into his good Graces, that in the Spring of the Year 1728, he prevailed upon him to put his old General to Death, and to give him the fole Command.

His Affairs were then in a very indifferent Situation, the Iurks were Mafters of all the Weftern Provinces, Afbruff and his Afgbans were in Poffeffion of the Middle of the Empire, and the Abdollee Afgbons had actually invaded Kborafan. His whole Army confifted only of twenty thoufand Men, with which Nedir Kuli engaged and defeated the Abdollees totally. This awakened the Attention of A/bruff, who in Seplember 1729, marched from Ifpaban in order to attack him. Nadir Kuli pofted himfelf with fixteen thoufand Men in a very advantageous Camp, and there waited for the Afgbans, who attacked him with great Fury ; but, after an obftinate Difpute, were entirely routed. This raifed his Reputation highly, and as the greateft Reward the Shah could then give him, he beftowed his Name upon his Genera!, who thence forward was ftiled Thamas Kouli Kan.

The Fame of this Victory enabled him to increafe his Army foon after to forty thoufand Men, with which he defeated Afbruff a fecond Time; and this fo much difpirited the Afgbans, that they refolved to plunder, burn and abandon Ifpaban; but the Shah did not give them Time to put this barbarous Defign in Execution, but marched with fuch Vivacity towards the Capital, that they were obliged to leave it with great Precipitation, in the Month of November 1730. This great Stroke, that in all outward Appearance feemed to fee him above the Reach of Fortune, was very foon followed by a Step that made Way for his Ruin. He thought that his General was flow in purfuing the $A f$ ghans, he therefore prefled him to ufe more Expedition. Upon this Kouli Kan told him roundly, that he was well informed of the Manner in which his Father's Generals had been treated, that when they were in the Field, they were ill fupplied; and that he was refolved to lay down his Command, unlefs he would give him the Power of raifing Money in what Manner he thought fit: To this, though with much Reluctance, the Shah confented; and, in Hopes of uniting his General more clofely to him, gave him his Aunt in Marriage.

Kouli Kan then followed the Afghans to Sbiras, tho it was in the Depth of Winter, defeated them totaliy, took all their Baggage and Treafure, and A/bruff endeavouring to make his Retreat towards Kbandabar, was furprized by a Body of the Balluches, who cut him and the few Troops he had about him to Pieces. Sbab Tbamas then turn'd his Arms againft the Turks, but was unluckily defeated by Acbmet Bafbaw, who foon after his Victory, offering reafonable Terms of Peace, the Sbab accepted them. In the Month of Auguf, 1732, Tbamas Kouli Kan having fettled all the Eaftern Provinces of the Empire, returned to Ifpaban with an Army of fixty thoufand Men, and infifted upon breaking the Peace with the. Turks; to which the Sbab howing fome Unwillingnefs, Kouli Kan foon after feized his Perfon, and fent him Prifoner to Mazenderan. He next took his Son, though a Child in his Cradle, and declared him Sbab by the Title of Abbas the IIId.

By this Means having fecured the Tranquillity of Perfia for the prefent, he turned his Arms againft the Turks, whom in the Spaice of two Years, he defeated in various Battles, and at laft difpirited them to fuch a

Degree,

Chap. II. of the Empire of PERSIA.

Degree, that they no longer kept the Field ; upon which he determined to lay Siege to Bagdat.

While he was before this Place, he received Advice, that Mabommed Kan Balluche had revolted, and declared for Sbab Tbamas, and made himfelf Mafter of Sbiras. Upon this he raifed the Siege immediately, marched directly againft this General, whom he treated as a Rebel, had the good Luck to defeat him; after which he plundered the City of Sbiras, and put Numbers of People to Death. He then returned to JJpaban, from whence he foon after marched into Georgia, reduced the City of Teffis, which is its Capital; over-run Armenia, and by the very Terror of his Name, frighted the Rufflans out of Gilan, which Province they had feized during the Troubles in Perria.

After all thefe Victories he fummoned the Chief of the Perfian Nobility to his Army, which then confifted of 150,000 Men, and there partly by Fear, and partly by Promifes, made them confent to the total Subverfion of their Conftitution, both in Church and State, by agreeing to make the Crown hereditary in his Family, to renounce for ever the ancient Line of their Princes, and to admit an Union between the two Sects of the Sunni's and the Scbia's, which being oppofed by the Mullab Bafbi, in a fet Speech, he anfwered his Arguments, by frangling him upon the Spor, and on the 2 Ift of Murch, 1736, he caufed himfelf to be proclaimed Sovereign of Perfia, by the Title of Nadir Sbab. The firft publick Act of his Adminiftration was to feize, or as he was pleafed to call it, refume all the Church Lands in Perfa; but finding that the Clergy were irreconcileable to him, he thought the Difpute would be lefs dangerous, if they were ftript of their Property, which was very confiderable, their Revenues amounting to a Million of Tomans, which is upwards of three Millions Sterling.
In fune following he was crowned at Casbin, and from thence he marched to Ifpaban, where he ftaid about fix Months, during which Time he was acknowledged by the Grand Signor, and the Great Mogul. He Ipent his Time in preparing for his Expedition againtt Kandabar, and marching thither in the Beginning of 1737 , he appointed his eldeft Son Reza Kuli Mirza, to govern Perfia in his Ablence, who fixed his Refidence at Mefched, whither Sbab Tbamas was afterwards conducted, and as it is faid, by order of the young Prince, who no doubt acted therein by his Father's Direction, was there put to Death, to prevent, as far as poffible, any future Revolts in his Favour, or in Support of any of his Family. Nadir Sbab was as fortunate in his Expedition againft Kbandabar, as in any of his former Undertakings, reducing it much fooner than could have been expected, confidering the great Strength of the Place. And it was while he lay before this Place, that he received an Invitation from fome of the Mogul's Minifters, to invade that Empire. As we have given a very large and full Account of this Tranfaction in our former Volume, in fpeaking of the Succeffion of the Defcendants of Timur Bek, in the Empire of Indoftan, we fhall not infift farther upon it here, but content ourfelves with firft giving the Reader a fhort View of the Life of this extraordinary Perfon, and then refuming the Hiftory of his Reign, at his Return from the Indian Expedition.
10. We have had various Reports in England concerning the Birth of this famous Conqueror and though they are now grown ridiculous, there was a Time when they were better received. It muft be allowed, that on one Hand, it is extremely difficult for us to obtain any true Accounts from Places at fo great a Diftance, and it is no lefs true on the other Hand, that we are extremely carelefs in our Endeavours to procure them. The Dutch at Batavia require their Factors at different Forts throughout India, to fend them Intelligence, and it is from thefe Letters, that they judge of the Abilities of the Perfons they employ fo that by this Method they are able to give their Mafters in Hollond, a tolerable View of the whole State of Affairs in the Eaft, once in the Year. It is but very lately, that we have had any
diftinct and true Account of this Hero, who was the Son of the Chief of one of the Clans of the Afsbars, a Turcoman Tribe divided into three Families, of which his was the fecond, and inhabited a Diftrict of the Province of Chorafan. He was born in the Year 1688 , and as he was the eldeft Son of his Father, was confidered acording to the Laws of that Nation, as his apparent Succeffor. In order to form a right Notion of this, the Reader is to be told, that there are feveral Tribes of the Turcomans, who inhabit this and other Provinces of Perfuz, where they live after their own Manner, in Confideration of certain Services that from Time to Time they are called upon to render to the Government of Perfia; and the particular Service of his Family was to defend a Fortrefs commanding the Valley which they inhabit againft the Usbeck Tartars. As to his Father"s Name, we know it not; but that which he beftowed upon his Son at the Time of his Circumcifion, was Nodir Kuli, which fignifies literally the Slave of the Wonderful, but the true Senfe of it is, the Servant of God.

His Eather dying in his Minority, his Brother, the Uncle of Nadir, became, according to the Cuftom of the Turcomans, the Tutor of his Son, and the Chief pro tempore of the Clan. He took Care of the Education of the young Man, whom he bred up a zealous Mabometan, according to the Sect of the Sumi's, who are looked upon by the Perfians as Hereticks, and who, on their Side, confider that whole Nation in the fame Light; he caufed him likewife to be taught his Exercifes, and fhowed him for feveral Years a great deal of Kindnefs and Refpect. But when he came of Age, and would have taken upon him the Command of the Fortrefs and of his Clan, his Uncle did not care to refign; and being a Man of great Art, he had brought the People into fuch a Dependance upon himfelf, that his Nephew found they were little inclined to do him what he called Juftice; and the Spirit of the young Man was fuch, that fcorning to live in Subjection, in a Place where he conceived it his Right to rule, he refolved to put himfelf into the Perfan Service. It was for this Reafon he went to Mefcheds which has been confidered as the Capital of Cborafan ever fince Shah Abbas the Great inftituted Pilgrimages thither, on Purpofe to hinder his Subjects from vifting the Tomb of their Prophet at Mecca, before which time the City of Herat had that Title. Nadir Kuli was well received by the Governor, who gave him a fmall Polt in his Family, and another fmall Poft in the Army. His Behaviour here was very regular, and very infinuating; he fhowed all poffible Refpect for his Superiors, was very kind and condefcending to his Inferiors, and very exact in the Difcharge of every Branch of his Duty.
By Degrees he gained the Confidence of the Governor to fuch a Degree, that he was raifed to the Ranle of a Nim-Bafbi, a Command equivalent to that of a Colonel of Horfe in our Service; and then it was that he began to difplay the extraordinary Qualities he received from Nature. He affected a very different Conduct from that of his Brother Officers, for he was as attentive to Difcipline as they were negligent in it; he defpifed Perquifites, kept his Corps contantly full, and by doing frict Juftice to Merit, made his Soldiers not only content with their Lot, but pleafed with their Profeffion. He was often employed in Service, and was always fucceffful, which was chiefly owing to two Things, the ftrict Difcipline of his Troops, and his keeping them Complete, which gave him a vaft Advantage of the Tartars, and diftinguifhed him from all other Officers, who for that Reafon hated him heartily. The Confufion in the latter Part of the Reign of Sbab HufSein, as it encouraged the Usbecks to make frequent Incurfions into Cborafan, fo it gave him many Opportunities of raifing his Reputation, by reprefing their Infolence, and obliging them often to retire, notwithftanding their Superiority of Numbers. But in 1720, the Usbecks invaded the Province with a numerous Army, to which the Forces of the Governor were fo unequal, that in a great Council of War, the Officers were una-
mouny
simounly of Opinion, that it was impofible for them to look the Enemy in the Face; and therefore they advifed the Governor to retire into the Heart of the Province, and act wholly upon the defenfive. Nadir Kuli oppofed this, he magnified the Spirit and Courage of the Perfian Cavalry, and infifted, that notwithftanding their Superiority of Numbers, if they marched and attacked the Tartars, inftead of waiting for them, there was the greateft Probability of their giving a Check to their Expedition in its Beginning; which might fop their Progrefs, and fave the Country from Ruin ; the Governor, who was a Man of Spirit, clofed with his Sentiments, gave him the Command, and he very fortunately executed, even more than he had promifed; for he totally defeated the Tarters, and purfued them with fuch Vigour in their Recreat, that not one half of them efcaped into their own Country.
The Governor promifed to ufe all his Intereft at Court to procure Nadir Kuli a Recompence from the Sbab equal to his Service; but the reft of the general Officers reprefenting to the Miniftry, that this new Hero was no Friend of theirs, an Order was procured to the Governor for difpoffefing him of his Command, and giving it to that Nobleman's Nephew, who had never feen Soldiers in his Life but at a Review. Nadir Kuli was at this Time thirty two Years of Age, and yet his Refentment was fo much ftronger than his Reafon, that taking Things according to their firft Appearance, and without ftaying to enquire how far the Governor had been juft to him, he went and expoftulated with that great Man, in fuch rough Terms, that he ordered him to be baftinadoed on the Soles of his Feet, and turned him out of his Service. He was now totally undone, without Fortune, without Friends, and without Hopes. In thefe difmal Circumftances he picked up a Couple of Fellows as defperate as himfelf, and with them robbed a fmall Caravan, which put them in Poffeffion of a confiderable Sum of Money, with this they bought Horfes, Arms and Ammunition, and in a fhort Time, they affociated twenty daring and undone Fellows, with whom they committed many Robberies, and in the Space of a few Months, encreafed their Number to five hundred Men. At the Head of thefe, he not only committed Depredations through the greateft Part of the Province, but laying hold of the Confufion of the Times, encreafed his Forces to fuch a Degree, that the Government, inftead of being in a Condition to punifh him, really ftood in Awe of him.

Things were in this Situation, when a Commander of Shah Thames's Army being traduced to his Mafter, and in Danger of his Lilie, fled to Nadir Kuli with fifteen hundred Horfe. His Uncle having Intelligence of this, thought it was high Time to talse fome Method to reconcile himfelf to his Nephew; in order to which, he made Ufe of his Intereft with the Shah to procure his Pardon; which was no fooner intimated to Nadir Kuli, than he promifed his Uncle to repair to him, in order to make fuch Submiffions as were neceffary to cancel the Memory of his former Offences. This, however, was all Artifice; for being of an implacable Na ture, he furprized his Uncle's Caftle the firft Night he lay in it, and put him to Death, notwithftanding which barbarous Action, he was now become fo formidable, that the Shah, to fave himfelf the Trouble of reducing him, confirmed his Pardon, and took him into his Service.

We have already fhewn, how grateful and loyal a Return he made for this undeferved Favour, and in what Manner he affumed the Title of $S b a b$ in 1736 ; as alfo the principal Tranfactions that followed till fuch Time as he invaded the Mogul's Territories. He returned from hence in the Year 1739, contenting himfelf with the Ceffion of all the Countries to the Weft of the River Attock. He knew very well, that it was impoffible for him to have preferved his Conquefts in india, if he had intended it; and he knew as well, that if he did not keep them, it was impofible for him to provide better for his own Security, than by leaving them in the Hands of their own Poffefor Sultan Mo-
bammed, a weak, inactive Prince, and confequently leaft likely and leaft able to incommode him. Shah Nadir, on his Return to Perfa, meditated feveral great Defigns, but executed none of them effectually, except that of transferring the Capital to Meccoed; for though he carried on the War againft the Turks fuccefffully, defeated them in feveral Battles, and wintered with his Army in their Dominions; yer he found himfelf fo often difturbed with Infurrections, that he was never in a Condition to profecute or improve his Viétories.
He turned his Arms fometimes againft the Lefgis, the Curds, and the Gcorgians, but without any Succees, and thefe Difappointments increafing, the natural Haftinefs and Severity of his Temper, he began to make himfelf odious by a continual Series of Cruelties, fome of which he exercifed upon his own Family, caufing his eldeft Son Riza Mirza to be put to Death, at the Age of thirty two ; and fome Accounts fay, that his fecond Son met with the fane, or a worfe Fate, that of having his Eyes put out. He grew infatiable alfo in Refpect to Money, opprefing his Subjects to the laft Degree.
He was always partial to his own Country, and to his own Nation. His little paternal Caftle of Calot he endeavoured to render impregnable, and there he laid up all his Treafures; the Guard about his Perfon was entirely compofed of Affars, as fuppofing nothing could corrupt their Fidelity to their Chief. In this however he was miftaken, for his Nephew, who revolted againft him, who is the Son of that Uncle he fo bafely murdered, had fuch an Intereft amongft, them, that he engaged them to make Sbab Nadir Prifoner, and this occalioning a Difturbance; thofe who had feized hin, to put an End to it, and to fecure themfelves, cut his Throat when he was in the twelfth Year of his Reign, and the fifty ninth of his Life. He had the two Sons that have been already mentioned, by Wives whom he married while he ferved as a Mim Bafhi, under the Beglerbeg of Kborajen; by the Sitter of Sbab Hufjein, whom he married at the Time that Sbab Thamas declared him Generalifimo ; he had only one Daughter; but by other Ladies in his Haram he Jeft three Sons that were very young at the Time of his Deceafe, and of whom we flall have Occafion hereafter to make Mention.
11. When his Oppreffions and Cruelties had rendred the very Name of Sbab Nadir odious in all Perfal, and when it was vifible, that even his Soldiers rather feared him than loved him, many of the great Men began to confider whether it might not be poffible, under Colour of Attention to the publick Good, to pluck the Crown from his Head. Thefe Intrigues could not be fo fecretly carrried, but that he difcovered fome, and was informed of others; which produced fuch bloody Executions, that at Length, the Difaffection to him became fo general, as to induce Ali Kuli Kan his Nephew, to think of fetting up for himfelf; to which he was chiefly moved by three Confiderations; the firtt, that the Difcontent was become general amongft the Army, as well as the People; the fecond, that he was himfelf at the Head of a confiderable Corps of Troops, on whofe Fidelity he knew he might depend; the third, that his Uncle was grown furpicious of him, fo that Submiffion was to the full as dangerous as Rebellion; excited by thefe Confiderations, about the latter End of laft Year he began to recruit and increafe his Army, to pay no Regard to the Orders that came from Sbab Nadir, and to carry on a clofe Correfpondence with fome of the Officers that were near the Sbab's Perfon.

Amongt thefe was Mabomet Kouli Kan, Kourt fcbibacbi, to whom, when he was in Readinefs to march towards Mefched, he fent Orders to make himfelf Matter of the Perfon of the Sbab, which he performed; but finding that there was no keeping him with Safety, and that there began to be great Cabals amongft the Officers who commanded under him, he took a Refolution of putting him to Death, which he executed without Delay, and immediately difpatched an Exprefs to ali Kould Kim, intreating him to haften his March to Mefcbed.

## Chap. II.

On his Arrival there, that Pritce was immediately fa- of a Tyrant, he remits to the People all Arrears of the luted Sbab by all the great Officers of the Crown, and the chief Commanders of the Army: He took Care to make himfelf Mafter of the Fortrefs of Calot, where he found all the immenfe Treafure of his deceafed Uncle, by raifing of which he had made himfelf fo many Enemies, and by a wife Diftribution of which, his Succeffor has made a Multitude of Friends.

The new Monarch, at the Time of his Inauguration, took the Name of Adil Sbab, which fignifies the juft Prince, and one of the firlt Acts of his Reign was to publifh a Manifefto, from whence we have taken moft of thefe Particulars, and in which, after inveighing bitterly againft the Mal-Adminiftration of his Predeceffor, who he fays received the juft Reward
extraordinary Taxes impofed upon them, exempts them from every Impofition for two Years, and promifes ample Reftitution to fuch as have had their Eftates conficated under the former tyrannic Goverment. He is faid howa ever to have thought it neceffary to his own Security, firft, to put out the Eyes, and then to poifon his three Nephews. Time will fhew whether this was an Att of Neceffity, or whether it flowed from a Blood-thirty Difpofition: In the mean Time he has given the ftrongeft Affurances to the Grand Signior, and to the Czarina, of his Intention to maintain the Peace and Friendhip, fubfifting between their Empires and his own, and is at prefent exercifed in fettling his new acquired Sovereignty upon the only folid Bafis, thas of the Zeal and Affection of all his Subjects.

## CHAPTER III.

A Defrription of the North-Eaf Parts of Afia, and the extenfive Empire of Cbina, with the Countries dependent thereon, and the Manners and Cuftoms of the feveral Nations that inhabit them.
(2

## SECTION I.

The Travels of his Excellency E. Ysbrants Ides, Ambaffador from Peter the Great to the Emperor of Cbina, through Great Ufiga, Siriana, Permia, Siberia, Daour, \&c. to the Frontiers of Cbina; containing an exact Defcription of the Extent and Limits of thofe Countries, the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet,' daily Occupations, ${ }^{\circ} c$.

Faithfully tranflated from the Autbor's Original Gournal, printed under the Direction of the Burgo-mafter Witzen, the greateft Critick of bis Time in Holland, and dedicated to the late $C \approx a r$ Peter the Great.

1. An Introductory Account of the Author, and of the Character and Credit of bis Work; with the Reafons for inferting it in this Collection. 2. The Manner of bis Jetting out from Morcow; bis Voyage down the River Dwina, weith a currious Account of the Inhabitants of the Province of Sirene. 3. His Paflage from thence to Solikamskoi, with a large Account of the Salt-works in the Neigbbourbood of that City. 4. The Autbor enters Afia, and vijits the Country of the Wogulski Tartars, whofo Manners and Cuftoms be defcribes. 5. That Subject continued and concluded. 6. He continues bis Gourney tbrough the Country of Tumeen, the Woods of which abound woith a Kind of Animal that furrijs the richeft Furs in Ruffia. 7. A Defcription of the City of Tobolesk, the Extent of the Country of Siberia, and the Manner in which it wass reduced under the Power of the Ruffians. 8. The River Irtis def/ribed ; the Manner of training Dogs to drawo Sledges, and a Defrription of that Kind of Carriage over the Shoove. 9. The Autbor's Arrival at the City of Surgut; an Account of the adjacent Country and of the Foxes, Beavers, and otber roild Beafs. 10. The Courre of the River Oby defcribed; an Account of the Oftiacks wwho inbabit its Banks, their Cufooms and Manner of Living. II. The Autbor vifits one of their Princes, and gives a large Detail of the miferable State of bim and bis Family. 12. The difficult and dangerous Paflage of the River Keta, and the cxtraordinary Risk the Autbor ran of perifbing thereon. J3. A very copious and curious Relation of the Manner of funding Mammut's Teetb, weitb Conjectures concerning the Nature of that. Beaft, wbich is invijfble during its Life-time. 14. An Account of the Skammanskoy or Negromantick Water-Fall, and of the Manner in whicb Shipspafs down and are towed up it. 15. Our Autbor makes a Vift to the Schaman or Necromancer ; a large Account of him, and of the Metbods be makes ufe of in deceiving the Tunguifians, weith a Detail of the Manners and Cuffoms of thefe. People. 16. The Autbor's Arrival at Buratskoy; the Burattians, a Pagan People defrribed, and a particular Account of their Arange Ways of Living. 17. A very large and difinct Account of the Yehiam or Musk-goat, weith the different Manners ufed in preparing that rich Perfume. 18. An Account of the Lake of Baikol, and a fingular Infance of the Autbor's good Senfe and Courage. 19. He continues bis Yourney to the City of Telimba; bis Adventures in that Fourney, weith an Account of the Country be travelled tbrough, and the People be met with. 20. His fourney to, and a Defcription of the City of Nerzinskoy, the adjacent Territories defcribed, as alfo the twoo Nations of Tungufians, their brutal Manners and barbarous Cuffoms. 2I. Our. Autbor proceeds to the utmof Limits of the Ruffian Dominions in Afra; of the Frontiers of wbich Empire be gives a very curious and copious Defrription.

AFTER giving an Acconut of the Perfian Empire, it was requifite, that as we had defcribed that of the Mogul in the former Volume, and given the Succeffion of Princes down to our Times, to proceed to the fourch great Sovereignty of $A f a_{3}$ the moft extenfive and moft cele-
brated Empire of Cbina. But at the fame Time we had this in View, it feemed alfo no lefs requifite to give fome Account of the Countries that lie between Ruflid and Perfia, and the Frontiers of that vaft Empire, the Omiffion of which would have left a great Pare of $A / 10$ unfurvey'd. In order to attain this End, there feemed

## Chap. III.

from Mufcovy to China

Perfon who had paffed through thefe Countries with a publick Character, who furvey'd them at Leifure, had very 'extraordinary Opportunities of examining every Thing that was curious and worthy of Notice, and who afterwards compofed his Work for the Information and Satisfaction of the Czar Peter the Great, of glorious Memory, to whom it was dedicated, and who was fo well pleafed therewith, that he teftified his Refpect for the Author, by honouring him with the Office of a Privy Councellor. It is however requifite to obferve, that in 1699, there was printed at Amffterdam an Account of this Embalfy, and the Travels of the Ambaffador, by one Mr. Adam Brand, who accompanied him in his Journey as one of his Domefticks; but whether it hap pened through Want of Care in keeping an exact Joural, from a natural Incapacity in the Author, or from his entring into too great Liberties, grounded upon the Licence that Travellers take, more efpecially fuch as pafs through unknown Countries, or from whatever Caufe it fell out, fo it was, that this Relation contained a Multitude of Things equally inconfittent with Probability and Truth; notwithftanding which, it gained Credit for a Time, and paffed current for a true Relation of this celebrated Embafly. But when our Author's own Work appeared, the Folly and Weaknefs of this furreptitious Account became manifett to the whole World, and Brand's Romance has been ever fince as much decried as the following Performance has been univerfally efteemed. There is no Need of faying any Thing more, either by way of Introduction or Recommendation of a Piece that has been long in Poffeffion of the higheft Character from the propereft Judges. All therefore that we fhall add is, that the Reader has it here entire in the Author's own Words, compared with the laft and beft Edition of the Original.
2. The moft illuftrious Czars, Fobn and Peter Alexowitz, having refolved to fend a fplendid Embaffy to the Great Bogdaichan, or Sovereign of the famous Kingdom of Kitai, by Europeans commonly called Cbina; this obliged me with a favourable Opportunity of travelling through Part of the famous, but hitherto unknown Siberian and Kitaian Countries, and informing myfelf by credible Witneffes of the Remainder of thote Lands, as well as obtaining certain Knowledge of feveral Things with which the World hath not been hitherto truly acquainted. For by God's paternal Provi dence, and the particular Favour of their Czarifh Majefties, I obtained the great Honour of being difpatched their Envoy to the Cbinefe or Kitaian Court, furnifhed with fufficient Credentials and other Neceffaries.

The Preparation of my Retinue and Equipage took me up fo much Time, that I did not fet out betore the 14th of March, 1692, when I went from Mofcow in a Slead. The Beginning of my Journey proved very uneafy, by the violent Rain which accompanied us from Mofcow to Vollogda, and occafioned fuch an Inundation, that our Sleads almoft fwam over the remaining Ice of the Rivulets and Brooks, and deep Roads, However, by the Divine Affiftance, though not without Difficulty, we reached the City of Vollogda, where I refted three Days in Expectation of better Weather, which happened according to my Wifhes; for within two Days it froze fo hard, and fnowed fo violently, that all the Water was froze up in four and twenty Hours ; fo that we could eafily pais all the Rivulets and Ditches in our Sleads, without any Apprehenfion of Danger. The 22d of the fame Month, I fet forwards from. Vollogda to Sucbina, where I arrived on the ${ }_{23} \mathrm{~d}$, and without ftopping advanced to the City of Great Uftiga, where the Rivers Suchina and Irga unite, and thereby compofe the famous River Drwina; the Name of which imports a double River.

The Courfe of the Sucbina is almoft full North, thro' a fertile Country, and its Banks on each Side are adorned with well inhabited Villages, befides Totma, an indifferent City, fituated on its left Shoar ; and feveral Travellers annually pafs this River, going from Vollogdo to Archangel, in fmall Ships well laden, as long as the River is open: But the Stream running in a ftony

Channel, thofe Ships which pais it muft be provided with good Plank at both Ends, by reafon of the hidden Rocks, and the Rapidity of the Stream, which would otherwife fink them to the Bottom. At the Mouth of this River is fituated the City of Great Uftigas where I was obliged to ftay about twenty four Hours. Leaving that Hace, I came the 2 gth of Marcb to Solowitzjogda, a very large City, inhabited by many confiderable Merchants and curious Artificers, efpecially in Silver, Copper, and Bone. Itere are alfo a great many Salt-pits that yield vaft Quantities of Salc, which are tranfported to Vollogda, and all over the adjacent Countries

I fet out from this Place on the firt of April; and the fame Day reached, the Province of Sirene or Wollof $U_{s g y}$; the Inhabitants of which fpeak a Language that has not the leaft Affinity with the Mufcovite, but is fomewhat like the barbarous Germon Livonian Language ; for fome of my Retinue who underftood thar, could underftand a great Part of the Speech of thefe People. They are of the Greek Church and fubject to his Czarifh Majefty, to whon they pay their Tribute: though they are not under the Jurifdiction of any Viceroy or Waywode, but chufe their own Judges amongft themfelves, and important Caufes which cannot be decided before them, are removed to the Foreign Pofolfche or Minifters Court at Mofores to be determined. The Stature and Habit of both the Men and Women are not very different from thofe of the Ru/fan Peafants; all which confidered, I cannot but think that thefe People might anciently tranfplant themfelves hither from the Borders of Livonia or Coral. I asked fome of them out of Curiofity, concerning their Original; but they were not able to give me any Account, whether their Anceftors came thither out of foreign Countries, or not; nor could they give any Reafon why their Language has no Affinity with the Ruffan. They generally live by Agriculture, except that Part of them which are employed in the Manufacture of Grey Furs, near the River Zizol. They inhabit a confiderable Tract of Land, which extends to the City of Kaigorod, and is about feventy Sumka's long, each Sumka being a large German Mile. Thefe People do not live in Cities or Towns, but for the moft Part in fmall Villages built in the large Woods, and their Houfes are like thofe of the Ruffians.

This Country terminating in a great Foreft, we were again infefted with a violent Rain, and fuch a Thaw, as in the Space of one Night fwelled the Waters to that Degree, that I could not pafs them without great Difficulty. In this uneafy Condition 1 remained four Days, during which Time I was obliged to ftruggle with all the incident Inconveniencies; our Sleads fwam continually, and the Rivulets and Brooks on each Side of the Woods poured in upon us, fo that, as though'we had been in a Sea, we could neither proceed forwards, nor return backwards: Nor would the Ice of the great Rivers bear any, longer; notwithftanding which, by the Help of Bridges and other proper Means, at laft, on the 6th of April I reached Kaigorod, an indifferent large but very ftrong City on the River Kama.
3. From thence I defigned to have fet forwards immediately to Solikamskoi, the chief City of Great Permia, in order to profecute my Journey to Siberia over the Mountains of Werchaturia; but the Thaw at the End of Winter continuing, forced me to alter my Refolution, and ftay there feveral Weeks, till the opening of the River Kama favoured my Departure by Water; during which Time I made all neceflary Preparations for my Journey. Another Thing which occafioned my Stay, was the great Damage that the City of Kaigorod had fuffered lately by Robbers.

This Misfortune, which fell upon the Commandant of the Place who had that Poft when I was there, happened in the following Manner : On a Sunday about Noon, feveral well mann'd Barks, with flying Colours, Drums and Hautboys, came failing on the River Kama to the City ; the Men leaped on Shore, whilt the innocent Inhabitants fufpected no Harm in Time of Peace, and in a quiet Country, but
took
took them for Eriends and Acquaintance from the neighbouring Villages, met together to divert themfelves; but the Robbers fet the South Part of the City on Fire, and falling upon the Inhabitants of the North Quarter, cut all of them to pieces that came in their Way, and at laft went to the Wairood's Apartment, which they plundered, and committed all Manner of Infolencies and Outrages on his Servants ; after which carrying off whatever they pleafed, they returned to their Boats and failed down the Kama. But diligent Search being made after thefe Birds of Prey, they were found to be a Rabble of runaway Servants got together, fome of which were at laft taken, tortured, and punifhed according to their Crimes. I caufed Wood for Firing to be brought to warm me, and kept ftill upon my Guard, appointing ftrong Watch by Water and by Land.

After my Veffel was, equipped, and the Kama free of Ice, on the 23 d of April we fet forwards, and fafely arrived on the 27 th in the City of Solikamskoi, from whence I fhould have gone over the Mountains of Wercbaturia, which is only practicable in Winter; the Multitude of the Moraffes, and Deepnefs of the Roads, rendring that Way utterly impaffable in Summer; for which Reafon all Officers, as well as Merchants, are obliged to lie ftill the whole Summer in Solikamskoi, till rhey meet with hard Winter Roads. It is true indeed, that it is poffible to fail round thefe Hills; but for cercain Reafons that Paffage is abfolutely forbidden, neither Commanders nor Merchants being allowed to go that Way. Notwithftanding which, the Governor of Solikamskoi knowing that my Embaffy would admit of no Delay, ordered me to be fupplied with as many fmall Barks as were requifite to pafs the River Suzarvaia.

Solikamskoi is a very fine large and rich City, where feveral very confiderable Merchants refide. Here are alfo many Salt-works or Pits, and very near fifty Saline Springs, from twenty-five to thirty-five Ells deep, out of which great Quantities of Salt are taken and boiled, and thence fhipped off in great Tide-fhips built for that Purpofe ; each of which will eafily ftow from One hundred to one hundred and twenty, thoufand Poeds, that is, from one thoufand fix hundred to two thoufand Tun; mann'd with about feven or eight hundred Sailors and Labourers, and furnifhed with Kitchins, Bagnio's, and all Sorts of Conveniencies. Thefe Veffels are from thirty-five to forty Ells long, and carry a Maft ; to which is fixed a Sail of thirty Fathom broad, which they make ufe of to fail up the River when the Wind is good; but when they go down, they only row, and that chiefly to keep the Ship's Head right, which the Rudder alone is not ftrong enough to do. They are flat bottomed, and have no Nails, or other Iron-work in them, but are made entirely of Wood. They foat along the Kama with the Tide, till it falls into the famous River Wolga, where they are forced to be towed up againft the Tide, or fail up if the Wind be favourable; but the Salt is unladen from Kafan to Nifna on the Wolga, and at feveral convenient Places.

The 14 th of May I fet forwards from Solikamskoi by Water, and paffed on the Ufolkat, a fmall River about Half a Mile from the City, again into the Kama: On which River we drove entirely out of Europe into Afra. So on Whitfunday I went on Shoar, and upon a high and beautiful green Hill eat my laft Dinner in that Part of the World on the Grals. And after I had drank a Glafs of Wine, as a Farewell to dear Europe, I immediately returned on Board, in order to proceed on our Voyage along the River.
4. Having thus entered the Afiatick River Suzawaia, we found it far lefs agreeable than the beautiful Kama; which is a fine River, abounding with all Sopts of Fifh, and from Solikamskoi to this Place adorned with very fine large Villages and Towns, feveral very expenfive Saltworks, fertile Corn Grounds, fruitful Lands, fpacious Fields beautified with all Sorts of Flowers, Woods, $\varepsilon^{3} c$. all wonderfully pleafant. But though the Banks of the Zareaja, which falls Wettward into the Kama, are not lefs beautiful and fruitful; yet we found our paffing this River very tedious; for by the high Water we made but a very fmall Progrefs in \{everal Days, being
obliged to be towed along with a Line; however, at laft, after twelve Days, and tirefome tugging againft the Stream, we came to, and touched at a pleafant Shoar on the 25 th of May, amongtt the firft Siberian Tartars, called Wogulski. I muft acknowledge, that the well peopled Countries on the Sides of this River, deferve to be reckoned amongtt the moft charming in the World. And when in the Mornings or Evenings I ftepped on Shoar to divert myfelf, and went within Land towards the Hills, I every where found the molt beautiful Flowers and Plants, which emitted a moft agreeable fragrant Scent, and all Sorts of Wild Bealts running about in great Multitudes. But the Wogulskian Tartars, to which this River led us, are ftupid Heathens, which induced me to pry more narrowly into their Religion, Manner of Living, and other Circumftances ; and for this End I went on Shoar, and lodged a Night amongtt them.

They are naturally robutt, and have remarkably large Heads. Their whole Worfhip confifts in making an Offering once a Year; when they go in Crouds into the Woods, and kill one of each Species of Beafts, of all which they prefer the Horfe and Tyger as beft ; they flea off the Skins, hang up the Carcaifs on a Tree, and fall proftrate to the Earth, and in their Way pray to it ; after which they eat the Flefh together, and return Home; which done, they are free from the Trouble of praying for that Year. What need of Praying any oftner than once a Year, fay they ? They are not able to give the leaft Account of the Original or Import of their Faith, but only that their Forefathers did fo, and they think good to follow their Example.

I asked them concerning their Knowledge of God; Whether they did not believe that there was a God and Lord in Heaven above, that had created, preferved and governed all Things, and gave Rain and fair Weather? To which they replied; We may very well believe that, for we fee, that the Sun and Moon, thofe two bright Lights which we worMip, and the Stars alfo, are in Heaven, and there is one which rules them. They would not in the leaft hear of the Devil, becaufe he never appeared, or revealed himfelf to them. They acknowledge a Refurrection of the Dead, but are ignorant what Sort of Rewards to expect, whether corporal or not. When any of them die, they bury the Carcafs without any Grave-ftone ; and be it Man or Woman, all his or her beft Apparel and Ornaments, befides fome Money, according to the Ability of the Deceafed, are buried with the Corps; to the End that he may have fome Cloaths on, and fomething to fpend at the Time of the Refurrection. They cry over the dead Corps in a difmal Manner, and the Husband is obliged to continue a Widower a Year after the Death of his Wife. If a Dog dies, that in Hunting or any other Way has been ferviceable to them, they erect in Honour of him, a fmall wooden Hut, on four Props of Earch ; in which they lay the dead Dog, and fuffer him to continue there as long as the Hut lafts. They take as many Wives as they can keep, and when any of thefe is pregnant, and near her Delivery, the is obliged to retire into a Hut in a Wood, erected for that Purpofe, where the is delivered ; and the Husband and the are not permitted to come near each orther for the Space of two Months after.
5. When a Man defires to marry, he is obliged to buy the Bride of her Father. They have very few Marriage Ceremonies befides treating the neareft Relations; after which the Bridegroom goes to Bed to the Bride. They have no Priefts, nor marry any nearer than the fourth Degree of Confanguinity. Amongtt other Dif courfe I admonifhed them, that it was Time to acknowledge Chrift the Saviour of the whole World, and turn to him ; which would fecure their temporal and eternal Welfare. To this they anfwered; As for what concerns Temporals, we daily fee vaft Numbers of Poor Ruffans, that can hardly get a Piece of dry Bread, and neverthelefs fome of them believe in Chrift; and as for the eternal Things they left them to themfelves; and at the fame Time declared, that they would live and die in the Opinion of their Forefathers, whether

The fireat rocky Whatorfall cillid e Shamanskoy -
right or wrong. The Habits of Men and Women, as well as theirs and their Childrens Shape, are expreffed by the annexed Cut, which fhews they are neither extravagant nor ridiculous.

Their Dwellings are quadrangular wooden Rooms, like thofe of the Ruffion Peafants; only inftead of Ovens they ufe Hearths', on which they burn Wood, and drefs their Victuals. The Smoak-hole which is in the Roof, is covered with Ice; as foon as the Wood is burnt to a Coal, which keeps the Warmth in the Room, and the Light ftrikes through the clear Ice. They have no Chairs, but inftead of them a broad Bench round the Room, about an Ell high, and two Ells broad, on which they fit like the Perfians, with their Legs acrofs under them, and neep on them at Night. They live upon what their Bow and Arrows furnifhes them. Their chiefeft Game are Elks, whole Herds of which are found here; thefe they cut in Pieces, and hang in the Air round their Houfes to dry; if it happens to rain upon them, and they begin to flink abominably, they dry them again, and eat them as a Delicacy. They do not eat either Cocks, Hens, or Hogs. They have a pleafant Way of catching wild Beafts, for they place a Sort of great Bows in the Woods, faftning a String to them, to which they fix fome Corn, or other Bait, leaving only a Place for the Game to enter, to that the Elk, or any other Beaft that comes in there, cannot pars by without touching this Snare; and when the Bow lets Aly, the Arrows enter the fore-part of the Body, and he prefently falls down. They alfo dig great Pits in the Woods, which they cover with Reeds and Grafs, fo that if any Beart comes thither, he falls in and is taken. Thefe Tartars live in their Villages all along the River Iuzarioaia to the Caftle of Utka, and are under the Protection of his Czarifa Majefty, to whom they pay Tribute, and live in Security and Peace. The Extent of Land, which they inhabir, reaches about 800 German Miles in the North part of Siberia, and even to the North Samojedes.
6. After leaving thefe Heathens, we arrived at the Caftle of Utka on the firft of fune. This Place is a Frontier Fortification againft the Baskirian and Uffmif sbian Tartars. When I was there, an Uffimijcbian Tartarian Gentleman, an Inhabitant in his Czaris Majefty's Dominions, came thither in Search of his Wife, to whom he had been long married, and who had eloped without any Provocation. But when he could not find her amongft the Peafants, he comforted himfelf, faying, that he was the feventh Husband fhe had left, who were all alive; by which it feems that the Lady was Lucky enough to meet often with new Lovers.

On the 20 th of the fame Month, fetting forwards from Utka in Waggons drawn by Horles, we paffed the Caftle of Ajada, and croffed the River Neuia, which runs round it. After which we proceeded by the River Reefcb to the Caftle of Arfamas, and from thence to the Caftle of Neuianskoi, on the abovementioned River Neuia. This Journey by Land to Neuianskoi, proved one of the pleafanteft in the World, fince I met therein with molt charming Fields, Woods, Brooks, and ftanding Waters, as alfo extraordinary fertile and well tilled Grounds, perfectly well inhabited every where by Ruffans, and furnifhed with all Neceffaries at a very cheap Rate. At Neurianskoi I again took Water, and we drove with the Tide, betwixt two populous Shores, adorned with well built Villages and Caftes, inhabited by Rufian Chriftians, down to the Kiver Tura, which terminates Weftward in the River Tobol.

On the 25 th of the fame Month we reached the City of Tumeen, which confidering its Situation is ftrong and populous, moftly inhabited by Ruffians; and the Remainder being about one fourth Part, with Mabometan Tartars, who drive a confiderable Trade to the Kalmick Countries, Bucbaria, $\mathcal{E}^{c}$. Great Numbers of thefe live difperft all round in the Country, fubfifting on Agriculture' and Filhing. This and the neigbouring Places do not afford any Quantity of other Skins, than thofe of red Foxes, Wolves and Bears ; but a few Miles diftant is a Wood called Heetkoy-Wollok, which abounds with the very fineft Grey Squirrels, that keep their Co-

Vol. II. No ${ }^{132}$.
lour both Summer and Winter; they are as large as the common Squirrels; befides which the Leather prepared from them is very ftrong, and they are not to be found any where in the whole Maufoovite Empire befides, It is forbidden under a great Fine, to fell them to Mer chants; for they are ordered to be preferved for the Ufe of the Czar. Thefe Beafts are faid to have the ftrange Quality of killing and eating all other Species of Grey Squirrels, that come into their Wood.

Whilf I was in this City, its Inhabitants and ah their Neighbours were in great Fear of the Kalmakian and Kofack-Orda Tartars, who had joined and made an Ir ruption into Siberia, laid feveral Villages wafte, cut the Inhabitants in Pieces, and alfo threatned this City, from which they were not above fifteen Miles diftant. But the Governor very expeditioufy raifed a confiderable Force out of Tobolska and other Cities, and fent them againf thefe roving Tartars, whom they foon drove back with great Lofs.
For this Reafon, I was not willing to ftay any longer here, but as foon as I had obtained fref Rowers, and Soldiers for Convoy, I left that Place on the 26th of the fame Month, and went farther down the River Tobol, the Shoars of which on each Side are low and moitt Ground, which in the Spring is under Water, fo that it is fcarce, if at all inhabited; though for feveral Miles farther in Land on each Side it is abundantly peopled, partly by Mabometan Tartars, and partly by Rufians; and the River produces all Sorts of excellent Fifh.
7. On the firft of $\mathcal{F} u l y$, I arrived fafe at Tobolesk: Which City is furrounded with a large Stone Cloyfter with high Watch-Towers, which may pafs for a Fortification. This Place is fituated on a high Hill of a vait Circuit about, the Bottom of which, along by the River Rbitijch, is inhabited by the Mabometan Tartars and Bucbars, who drive a great Trade up the Rbiificb or Irtis, into the Kalmakian Territories, and carry their Goods to Cbina; fo that if it were fafe to travel the Kalmakian Country, the moft expeditious Way to Cbina would be to pafs the famufcoorea Ofera, or famucciain Lake.
Tobolefk, Tobolka, or Tobolfroi, is the chief City of Siberia, whofe Jurifdiction extends Southward beyond Baraba, from Wercbaturia to the River Oby; Eaftward to Samojedia, Northward to Oftiafki, and Weftward to Uffa and the River Zuzaroaja. This Province is every where very well peopled, as well by Ruffians who depend on Husbandry, as by all Sorts of Nations, particularly Tartars and Heathens, which pay Tribute to his Czarif Majefty. Corn is fo very cheap there, that 100 German Pounds of Rye Flower may be bought for fixteen Cops; and as for Flefh, the Price of an $O_{x}$ is commonly from two Rixdollars, to two and a half, abous eleven Shillings Englifb Money; and that of an indifferent large Hog is from thirty to thirty five Styvers. Befides, the River Irtis produces fuch a prodigious Quantity of Fifh, that a Sturgeon, weighing forty Pounds, may be there bought for five or fix Styvers; and thefe Fifh are fo far from being lean, that when they are boiled, their Fat appears of the Thicknefs of a Finger Here are great Plenty of all Sorts of wild Beafts, as, Elcks, Stags, Deer, Hares, छ$c$. and of wild Fowl, viz. Pheafants, Partridges, Swans, wild Geefe, Ducks, and Storks; all which are cheaper than Beef. This City is defended by a ftrong Garrifon, which upon Order from the Czars, can bring 9000 Men into the Field; befides which are feveral Thoufands of Tartars, who ferve all on Horfeback on Occafion.
Incurfions into the Weft Frontiers, are very frequently made by the Kalmucks, the Kofack Orda, and the Subjects of the Teficbam or Governor of the Bucbiarian Tartars: Befides which the Ufimur and Bakirian Tartars commit fuch like Infolencies fometimes; but thefe are immediately oppofed and repulfed by the $\overrightarrow{T O}$ boleskians. This City is alfo the Place of Refidence of the Metropolitan or chief Ecclefiaftick, who is fent from Mofcore hither, and exercifes fpiritual Juridiction over all Siberia and Dauria.

About an hundred Years ago, this City and the whole Province of Siberia became fubject to the Czar, by the following Accident. Feremak Timeffeiewitz, a very famous Robber in the Reign of Czar Mlam Waflerwitz, having plundered thefe and all the adjacent Countries, had greatly injured the Subjects of his Czarif Majefty; when he was purfued, he and his Companions fled up the River Kama, and from thence into the River Iuzaroaja, which falls into the Kama, where lie the Lands of Stroginoff, farnous for his vaft Eftate and Iron Works, which take up the greateft Part of the Shoar, and ftretch to the Length of leventy German Miles. It was this rich Man's Grandfather that he applied himfelf to for Protection, and begged his Intereft in obaaining his Czaribs Majefty's Pardon; offering at the fame Time by Way of Actonement, to reduce the whole Province of Siberia to be fubject to the Czar. Purfuant to which he alfo obtained from the abovementioned:Stroginoff, A fiffance of Barks, Arms, and neceffary Workmen; and thus provided and accompanied with his Fellow Robbers in light Barks, he paffed up the River Serebrenfkoy, which runs by the North-eaft Part of the Wercbalurian Hills, and falls into the Iuzaroaja; thence he conveyed his Equipage by Land to the River Tagin, on which he failed into the Tura, took the Fort of Tumeen fituate thereon, razed it to the Ground, and advanced up the River Tobol to Tobolska, where then refided a Tartarian Prince, aged about twelve Years, whofe Name was Al tanai Kutzjumoweitz, whofe Defcendant is ftill honoured with the Title of the Siberian Czarervitz. This City he likewife attacked and took with fmall Lofs, after which he carried the Prince Prifoner to Mofcore, and put the conquered City into a better Pofture of Defence.
After this Succefs he proceeded down the River $\mathcal{F}_{e}$ tijch; but was fet upon in the Night by a Party of Tartars, not far from Tobolski, who cut off a great many of his Men, and he himfelf endeavouring to ftep from one Bark into another, leaped fhort, and by Reafon of his heavy Armour, funk to the Bottom; his Body was carried away by the Force of the Stream and never found. In the mean while Stroginoff had obtained the Czar's' Pardon for 'Feremak, and feveral hundred Mufcovite Officers and Soldiers came and garrifoned the Places which he had taken; and from this Juncture the Czar’s Sovereignty over Siberia is to be dated.
The Tartars chat live round Tobolka, for feveral Miles, are all Mabometans. I being fomewhat curious to fee their religious Worfhip, the Wairvode went with me, and by Virtue of his Authority, gave me an Opportunity which they will not ailow another Perfon. Their Mecfchets, called by other Authors Mofques, or Churches, had large Windows round them, all which were fet open: The Floor was covered with Tapiftry, befides which there was no other Ornament. All Perfons at their Entrance leave their Shoes or Slippers at the Door, and fet themfelves down in Rows, with their Legs under them : The Chief-prieft fat there in a white Callico Habir, and a white $\tau u r k i j b$ Turbant on his Head. Then I obferved one behind the People cry with a hoarfe loud Voice, and after he had faid fomething to them, they all fell on their Knees; then the Prieft uttered fome Words, and atterwards cried out, Alla, Alla, Mabomet, which the whole Aftembly roared out after him three Times fuccefively, proftrating themfeives on theGround: This done, the Prieft looked into both his Hands, as though he defigned to read fomething there, and repeated Alla, Alla, Mabonet: Then he looked firtt over his right Shoulder, then over his left, which all the People did after him, and fo their fhorc Devocion was ended.

The Mufti or Cbief Priest is an Arabion, whom they highly reverence; and they very much efteem any Perfon that can either read or write the Arabick Language. This Prief invited us to his Houfe, which was near the Metfobet, and treated us with a Dinh of Tea. There are alfo in this Calmackian Country great Numbers of Tartars that are ufed for Slaves; as alfo fome long imprifoned Calmackian Princes; all which are the Confequences of Wars, which one Tribe of thefe barbarous Nations have carried on againt another, and this in
a defert Country, more than wide enough for thems all.
8. After I had provided myfelf with Barks, Soldiers for Convoy, and other Neceffaries, I fet forwards in the Name of God, on the 22 d of Fuly from the City of Tobolski, falling down the River Irtis; paffing Tartarian and Ofteckian Villages, and the Townis Demionskoy, Famin, $\mathcal{G}_{6}$. all on the South-fide, where Pennonka, a fmall River, falls into the Irtis. On the 28 th of the fame Month we arrived fafe at Samarosky-Fam, where I took in frefh Rowers, and ordered the Mants to be erected in our largeft Veffels, in order to fail up the River Oby, if the Wind proved favourable; for the Irtis difcharges icfelf into the Oby, not far from this Town of Samar oskoy- Fam.

The River Irtis appears to be a white light Water : it rifes from the Hills in the Kalmackian Country; its Courfe is from the South to the North.Eaft; and it paffeth down through the two Lakes of Kobako and Saifan. Its whole South-Eaft Shore, from Beginning to End, is all high Hills, on which grow fome Cedars dif perfed here and there. The North-Weft Shoar is low Pafture Ground, and on this Side are a prodigious Number of great Black Bears, Wolves, and Red and Grey Foxes. Not far from Samaroskoy-fam is a Rivulet, called Kafunka, which runs into the Oby, and upon its Banks affords the beft Grey Squirrils in all Siberia, (except only the Wood of Heetkoy Wollock) which are called from the River, Kafumka:

Here I am to relate what the Inhabitants told me as a Truth : That laft Year, in Harveft-time, early in the Morning, an extraordinary large Bear broke into one of the Cow-Houfes in this Town, feized a Cow, held her faft by the Shoulder with his two fore Feet, and carried her off, going on his hinder Feet only. Upon the Lowing of the Cow, the Owner and feveral of the Neighbours came out, faw it, and all run at the Bear with Fire-Arms and Clubs ; notwithftanding which, be would not part with his Prey till they fired and killed the Cow.

Moft of the Inhabitants here are Ruffian Femskicks, who are in the Pay of his Czaribs Majetty, for which they fupply the Waywodes that are ordered this Way', and all other Perfons who travel on the Czar's Affairs in Siberia, with free Carriages and Men to work; and are obliged to carry them by Water in Summer, and over the Ice in Winter, as far as surgut, fituate on the Oby, at a very reafonable Price. Thefe People keep great Numbers of Dogs, which they make ufe of to travel with in Winter, for it is utterly impoffible to pafs this Country with Horfe-Sleads, by Reafon that fometimes the Snow on the Oby is above a large fathom deep, fo that no Horfe could travel.
Thefe Dogs are yoaked two to each Narta or Slead, which is for that Purpofe made very light and thin; and carry from two to three hundred German Weight. The Slead nor the Dogs are not hurt by the Snow, but both run very. fwiftly over, leaving a Trace only of the Depth of a Finger's Breadth. Some of thefe Dogs know beforehand, whether there is like to be any Work for them, as we were vainly told; and if they are likely to be employed, they herd together in Crouds, and howl in a difmal Manner, whence their Mafters draw their Prefages. If when they are on the Way, they are inclined to hunt, the Mafter takes his Gun on his Shoulder, and puts on his long fliding Shoes, with which he goes over the Ice, takes his Dogs with him, and fteps a little Way into the Wood, turns up all Manner of wild Game, perhaps a fine black Fox ; and then they divide what is taken fairly, for the Skins of the Game are the Mafters, and the Flefh belongs to his Dogs. Thus they make a very profitable Ufe of thefe draught Dogs; which are middle fized, fharp Nofed, with long ereeted Ears, and carry their Tails crooked; fome of which are very like Wolves or Foxes, infomuch that as they lie afteep in the Woods, they are fometimes by Miftake flot for one of thore two Species: Te countenance which, it is alfo affirmed, as a Thing certain, chat thefe Dogs mix their Strain, by a promifcuous Copulation. with that of Wolves and

1ol.2. Page 922.

pa. 933.

- Tunquzian taking a -Solemn Dath?

Chap. III.

Foxes; whence, as our Informers afferted, whenever a Courfing Match happens among the Inhabitants, they find a great Number of both Species near the Villages, as has been frequently obferved.

Having all Things prepared by the Samaroficbian Femskicks in order to advancing on my Journey, I departed thence on the 2 gth of $7 u l y$, and with my two large Dofchenicks or Tide Ships, I drove down the moft convenient Arm of the Irtis, to the celebrated River Oby, which I reached early the next Day. I found her Eaftern Shoars abounding with Hills; but the Weft intirely flat Land, as far as was vifible to us. The Oby was half a Mile over at this Place.
9. On the 6 th of Auguft we reached the City of Surgut, fituate on the Eaftern Shoar of the Oby: The inland Country for fome Diftance Eaftwards of Surgut, as alfo farther up the Oby, about or near the City of Narun, produces Sables, fome of which are pale, and others as black as Pitch, the fineft and largeft Ermines in all Siberia and Rufia, and above all black Fox-Skins, which are the very fineft and richeft any where: Among the beft of thefe Fox-Skins, which are referved for his Czarifh Majefty, there are fome which are valued from two to three hundred Rubels a Skin, that are fo very black, that the blackeft Daurion Sable is not comparable to them. Thefe Foxes are caught by Dogs; of which the Inhabitants related the following very remarkable Accident, in ftrong Terms, but lec the Reader believe as he pleafes.

Laft Year, near a Village adjacent to Surgut, by Day-light, an extraordinary fine Fox difcovered himfelf, upon Sight of which a Boor let loofe his Dogs: The Fox was within Sight of the Peafant, and the Dogs foon got up to him; but when this fubtle Animal faw that it was impoffible to efcape the Hounds by Flight, he fawning run to meet them, tumbled on his Back before them, and licked their Mouths, run backwards and forwards and played with them; the unexperienced Dogs foftned by his fawning Treatment, did the fly Fox no Manner of Hurt, but fuffered him to efcape into the Wood; fo that the poor Peafant having no Fire-Arms at Hand, notwithttanding all his Vigilance, did for that Time lofe Sight of this rich Booty.
But two Days afterwards the fame Fox returned to the fame Place; which the Peafant was no fooner aware of, but he took another, and his beft Dog with him, which was white haired; and full freight with frefh Hopes of this rich Game, he runs this Dog at the Fox, but the black Dogs fiew towards him, and while he was fawning on chem, the white Hound was fo cunning as to fawn at firft, but being come within Reach, he took a good Leap at him, and had certainly feized him, if he had not, by leaving a Piece of his Side behind him, fprung nimbly from him, and efcaped into a thick Wood, where it was in vain to look for him.
The Boor was at laft however too hard for this fubtle Fox, for he coloured his white Dog all over black, that the Fox who was become fhy of him, might not know him; which done he went the third Time on this Courfe with his dy'd Dog, and was fo fortunate that his Hound fmelt him out; upon which the Fox feeing the difguifed Dog, fawn'd on him without the leaft Fear, taking him for one of the firft black Hounds, with whom he defigned to play again; and in this Pofture they approached each other, when the Dog watching his Opportunity, grafped the carelefs Fox, and fo caught this fly Beaft with his fine Skin, which proved very well worth the Peafant's Trouble, he felling it for an hundred Rubels.
Here are great Numbers of thofe which are called Crofs-Foxes, whofe Skins are of a mixt black and grey, but very few perfect black. Red Foxes and Hyana's, as alfo Beavers are very plentiful in this Country; but she Hyena's are very mifchievous and live on Prey.
They, like the Linx's, place themfelves in the Trees, lie very ftill and clofe, till a Hart, an Elk, a Doe or an Hare runs under the Tree; from which they leap upon him, ear a Hole in his Body, and continue gnawing, cill the Beaft by Force of Pain falls down, and confequently comes to their Share. One of the Waizeods
kept a Hyæna alive for his Diverfion, which he put ${ }^{\text {t }}$ into the Water, and let two Water Dogs loofe at him st but he immediately leaped upon the Head of one of them, and held him fo long under Water till he drowned him ; after which he fwam to the other, whom he had treated in the fame Manner, if he had not been interrupted by throwing Wood at him, till the Dog, taking his Opportunity, fwam out.

But with Regard to the Beavers, which herd bere in great Numbers, fome very ftrange Particulars afe related as Truchs, though they feem ridiculous; wherefore 1 take it to be worth my Pains to touch a little on cheir Properties, of which the following are all ferioully averred to me. The greateft Part of their Food being Fifh, they harbour on the Shores of thofe Rivers which abound moft with Fifh, and which are not much troubled with Paffengers. In the Spring they not only herd together, but affemble themfelves into a Society, and pick out fome, and feize others as Prifoners, whom they carry to their Holes, and oblige them to ferve as Slaves. They fell Trees with their Teeth, carry them to their Dwellings, and there hack out their Wood to a certain Lengch, which they artificially fix together like Joyners-work, and Chefts, and there they lay up fee parately all their Summer-ftore of Provifions. And about the Seafon of this Preparation, the Time of the Female Beavers Bringing-forth approaches ; upon which the Inhabitants told me improbable Things of their Practices. They fay, that againft that Juncture the whole Neighbourhood go together, and frequently gnaw a Tree of above an Ell Circumference, for the Length of above two Fathom, even to the inner Pith, till it falls down; that they are expert enough to bring it to their Holes by Water, and that they can rear it upright before the Entrance of their Holes, fo artificially, that the Tree flands perpendicularly in the Water above an Ell deep, and yet touches no Ground; and that fo firm and immoveable in its Line or Centre, that though the Wind blow ever fo hard, the Tree remains firm in its Place. All. which feems unnatural; and yet all the Siberians that I ever difcourfed unanimounly affirmed it; and added feveral other Things concerning thefe Beafts, which feem rather the Effects of human Reafon, than within the Compafs of that Inftinct which guides irrational Brutes; all which I hall not trouble myfelf to defcribe at large.

At the fame Time, fome afcribe this Erection of the Tree before the Beaver-holes, to the Conjuration of the Oftiacks, and other Heathens, who live in all Parts thereabouts. Whether it is fo or not, God knows ; but it is certain, that thefe Beafts have Slaves amongft them, which in all Parts here are known to the Peaants, by reafon they are lean, and their Furr worn off by Labour.

The Ruffians, as well as the Oftiacks, which go out a Beaver Hunting, always avoid the Deftruction of a whole Neft or Kennel; for if they kill or fhoor all the reft, they leave a Couple, Male and Female remaining, in order to furnifh them with frefh Game in the fame Place the next Year.
10. Having paffed feveral Miles up the Oby, Part of which we failed, and towed the reft with a Line, on the 13 th of Auguft we paffed by the Mouth of the Wagga which rifech out of the Truganian Mountains. This is a large River, its Water is brown, and its Courfe North Norch-Weft into the Oby, on this Side of Narun, at which City we arrived on the 24 th of the fame Month. It is fituated on the Side of the River in a fine Country, and is provided with a Fortrefs or Caftle, and an indifferent Garrifon of Coffacks. All the Country around this City abounds with Crofs and Red Foxes, Beavers, Ermines, Sables, $\mathcal{E}^{\circ} c$. which afford fine Furs.

The Banks of the Oby to this Place are inhabited by a People called Ostiacks; who worfhip Terreftrial Gods, but acknowledge, that according to Nature there mutt be a Lord in Heaven, that governs all ; neverthelefs, they do not pay any Worfhip at all to him, but have their own Gods made of Wood and Earch, in feveral human Shapes. Some of the richeft amongft thema drefs thefe Deities in filken Cloaths, made after the Fafhion of thofe of the Ruffian Women. All of them
have
have thefe Idols placed in their Huts, which are made of Barks of Trees, fewed together with Harts Guts. On one Side of the God hangs a Bunch of human and horfe Hair, and next that a wooden Veffel with Milis Pap, with which they daily fupply their Idols, and thruft it into their Mouths with a Spoon made for that Purpofe; but in as much as thefe Idols cannot fwallow this their Milk Diet, it runs out again at both Sides of their Mouth, down their whole Bodies, in fuch a filthy Manner as is fufficient to difguft one from eating of that Food. When this nice God is to be worfhipped or prayed to, his Adorers ftand bolt upright, and tols their Head up and down, without bending their Backs in the leaft; befides which, they chirrup or whiftle thro' the Lips, as we do when we call a Dog; and in thefe Fooleries confift their Devotion.

They call their Gods Saitan, and might indeed very well fay Satan. Once feveral Oftiacks came on. board the Ship in which I was, to fell us Fifh, and one of my Servants had a Nurenburg Bear in Clock-work, which, when wound up, drummed and turned his Head backward and forward, continually moving his Eyes till the Work was down. Our People fet the Bear at Play a litcle; and as foon as ever the Ofiacks faw it, all of them performed to it their cuftomary Religious Worfhip, and danced exceffively to the Honour of the Bear, nodding their Heads, and whiftling at a great Rate. They confidered our Bear as a right Saitan, crying out, What are our Saitans which we make? If we had fach a Saitan, we would hang him all over with Sables and Black Fox Skins. They alfo asked, whether this Clock-work was to be fold; but'I ordered it out of their Sight, to avoid adminiftring any Occafion to Idolatry.

As for what farther concerns thefe Heathens, they have as many Wives as they can maintain, and marry their near Relations without any Scruple: If a Relation dies, they cry inceffantly for feveral Days, covering their Heads, and fitting on their Knees in their Huts, and will not fuffer themfelves to be feen; but they carry the Corps on Poles to the Ground to be buried. They are a poor People, and live very miferable in forry Huts. They might, indeed, live very happily and well, fince all Parts near the Oby abound with great Quantities of rich Furrs; befides that, there is extraordinary good Fihhing in that River, in which are very fine Sturgeons, Jacks, $\varepsilon^{\circ} c$. infomuch that twenty great Sturgeons may be bought of them for three Penny-worth of Tobacco; bur they are fo horrid lazy, that they do not defire to get any more than will barely fuffice them annually for the Winter : For when they travel, they eat moftly Fifh, efpecially when they are on the Water fifhing, for then they live on nothing elfe. They are all of a middle Stature, moft of them yellowifh or red hair'd, and their Faces and Nofes difagreeably broad; they are weak and unable to labour hard, not at all inclined to Wars, and unfit for Military Exercifes. Bows and Arrows are their Weapons, with which they fhoot wild Beafts, tho' they are not much addicted to thits neither. Their Cloaths confift of Sturgeon and other Fifh Skins; they ufe neither Linnen nor Woollen; their Shoes and Stockens are faftened together, and they wear a fhort Coat with a Cape and Hood, which in Cafe of Rain they pull over their Heads. Their Shoes are alfo made of Fifh-ikins, and are fowed faft to their Stockens, but not clofely; fo that their Feet muft neceffarily be always wet. When they are upon the Water, notwithftanding the Thinnefs of their Cloathing, they. will bear extraordinary great Cold ; for if it be but a common Winter, they are no better clad than has been mentioned; but if the Winter prove hard, thofe who are thus clad are compelled to put another Coat of the fame Sort of Fifh-fkins over that; and they exprefs this fevere Weather amongft one another, by faying, Do you like the Winter that forces one to wear two Coats of Skins? They fometimes go a Hunting in the Winter with a fingle Coat only, and their Breafts bare, depending upon warming themfelves quickly with niding and running over the Ice in their Schaits or niding Shoes; but if,
as it feveral Times happens, they are overtaken by an extraordinary fevere Froft, and it feems utterly improbable to efcape it, or fave their Lives, they with the utmoft Hafte throw off their Fifh-1kin Coat, fling themfelves' into the deep Snow, and voluntarily freeze to Death; the Reafon why they pull off their Coat is, only that they may die the fooner, and with lefs Pain.

The Womens Cloaths are almof like the Mens; the Mens greateft Diverfion is Bear-hunting, to which Sport they gather together in Crouds, armed with no other Weapon than a fharp Iron like a large Knife, fixed to a Stick about a Fathom long. As foon as they have put up a Bear, they run at hum with thefe Mort Spears, and having killed him, they cut off his Head, ftick it upon a Tree, run round it, and pay the profoundeft Refpect to it: After which, they run to the deat Body with repeated Cries, asking the Bear, Wh bo killed you? The Rufians, they anfwer, themfelves. Who cut off your Head? $A$ Ruffian $A x$. Who cut up your Belly? A Knife which a Ruflian made. And more fuch-like Follies. In a Word, the Ruffians bear all the Blame, and they are entirely innocent of the Murther of the Bear.
II. They have a Sort of Petty Princes amongft them, one of which is called Kneska, or Prince Kurza Muganak, whofe Authority extends over fome Hundreds of Huts; and he lays on and collects the Tribute which they are obliged to pay to the Wairoodes of his Czarifh Majefty. This Potentate came with all his Princely Family and Servants on board me, paid his Compliment, and brought me a Parcel of frefh Fifh as a Prefent ; which I requited by prefenting him with fome Brandy and Tobacco, with which he went on Shoar very well contented; but returned immediately, and invited me to his Princely Palace. I being very curious to fee this great Lord in his fumptuous Place of Refidence, went thither, though I had no great Appetite to his Entertainment. Coming on Shoar, the introductory Ceremonies were not very particular. He acted the Mafter of the Ceremonies himfelf, and without much Solemnity brought me to his magnificent Apartment, which, like the other Huts of the Oftiacks, was compofed only of Barks of Trees nightly fewed together. I found here four of his Wives, two old and two young; one of the young ones had a red Cloth Coat on, and was fet off with all Sorts of Glafs Corals about her Neck and her Middle, and in the Curls of her Hair, which hung down on both Sides of her Head in two Rows; the had alfo in her Ears great Thread-wrought Rings, with long Strings of Coral hanging at them. Each of thefe Princeffes prefented me with a Barrel made of Birch-Bark fewed together, and full of dry Fifh; but the youngeft gave me a Barrel of Sturgeon Fat, which was as yellow as Gold. After I had received thefe Prefents, I caufed them to be treated with Brandy and Tobacco, which is a great Delicacy amongtt them. In this whole Princely Building, I faw no other Furniture than fome Cradles and Chefts made of Barks of Trees fewed together, in which the Bed-Cloaths lay, being of planed WoodShavings, which yet were almoft as foft as Feathers. Thefe Cradles ftand at one End of the Hut, to avoid the Fire which is kindled in the Middle, and the Children lie naked in them. I alfo faw a Copper Kettle there, and fome other Kettles compofed of Barks of Trees fewed together, in which they boil their Victuals on the live Coals or Embers, for in the Flame they cannot do it.

To fmoke Tobacco, (to which all, both Men and Women, are very much addicted) inftead of Pipes they ure a Stone Kettle, in which they ftick a Pipe made for that Purpofe, and at two or three Drawings, after they have taken fome Water in their Mouths, can fuck out a whole Pipe; and they fwallow the Smoak, after which they fall down and lie infenfible, like dead Men, with diftorted Eyes, both Hands and Feet trembling for about Half an Hour. They foam at the Mouth, fo that they fall into a Sort of Epileply; and we could not obferve where the Smoak vented itfelf, and in this Manner feveral of them are loft. For as
they are upon the Water travelling, or fitting by the Fire, fome of thefe violent Smoakers fall into the Water and are drowned, or into the Fire and are burned; but fome, after they have fucked in the Smoak, let it out at their Throats again, and thefe are in a better Condition than the other, tho fome weaker Conftitutions are fometimes fuffocated even thus with the Smoak which they let down into their Bodies.
It is furcher obfervable, that they are very angry, if any of their Relations, though long dead, are named or mentioned. They are utterly unacquainted with all Things before their own Life-time, and do not pretend to give any Relation of them; nor can they either write or read; and though they are very fond of Bread when they meet with it, they never trouble themfelves with the Tillage of Land, or Culture of Gardens.
They have neither Temples nor Priefts. Their Shipping or Boats, on the Outfide, are Barks of Trees fewed together, and the Infide Ribs of very thin Wood; thefe are two or three Fathom long, and but an Ell broad; and yet they can fecure chemfelves in them in great Storms till they get on Shore. In Winter-time theif Offiacks live entirely under Ground, there being no other Entrance to their Caves, but a Hole left open on the Surface of the Earth to let out the Smoke: If, as is frequent, a great Snow falls, it happens that, as according to their Cuftom, they lie anleep naked, round the Fire, Part of their Body which lies a little diftant from the Fire, is two or three Fingers thick covered with Snow; when they perceive themfelves cold they turn about to the Fire, and beftow the beft Place on the cold Part of their Body a little while, and fo take no more Notice of it, being a very hardy People in refpect to the Variation of Weather.
When an Offiack is jealous of one of his Wives with another Man, he cuts fome Hair from the under Part of a Bear's Skin, which he carries to the Man whom he fufpects: If he be innocnnt he then accepts it, but if he be guilty, they believe he dare not venture to touch it, but muft acknowledge the Truth, and then amicably makes up the Bufinefs with the Husband, and the Wife is fold; for if any fhould prefume to be fo rafh as to take the Hair though he was guilty, they tell us they are affured, that the Bear's Skin from whence that Hair was cut off, will again become a living Bear, which after the Expiration of three Days will appear in the Wood, and tear the perjured Wretch to Pieces. On this Occafion they invoke Bows, Arrows, Axes, and Knives, and firmly believe that if the guilty Perfon takes any of there, he fhall certainly be killed by thofe individual Inftruments which he accepts, within the Space of a few Days; which is nor only averred by themfelves, but unanimoully vouched alfo by the Ruflans who live in the Neighbourhood of thefe Parts. But enough of there Oftiacks. The Shore of the River Oby, on which they live, is all untilled Land from the Sea to the River Tom, by reafon of the extreme Cold ; fo that no Corn, Fruit, or Honey, is here produced; there being only a few Nats which grow on the Cedar-crees.
12. After having paffed fome Weeks on the River Oby amongft the barbarous Offiacks, we went by the City of Keetskoy, firuate on the River Keta, which falls North-weft into the Oby. On the 28 th following I paffed by the Cloifter of St. George, and the 3d of $O_{C-}$ tober I went by the Village of Worozeikin ; and on the fame Day died Jobn George Weltfel, a Painter, one of my Retinue, who was born at Slefwick, after he had kept his Bed fourteen Days on Account of a Swelling juft above his Heart, which was aggravated by a Fever.
On the 7 th of October, I fafely arrived at the Village Makofskoi, and there caufed Weltfel's Corps to be buried on a Fill near the River, in the Middle of the Village. I muft own that this Voyage upon the River Keta was the more irk forme and melancholy than all the whole Way before; we were obliged to labour for five Weeks againft the Stream, without feeing fo much as any Man, befides now and then an Oftiack that appeared, and immediately hid himfelf in the Woods. This Sort of Officks fpeak a different Language from thofe on the Oby; but their Idolatry is the fame.
YOL. II. $\mathrm{N}^{\circ}$ CXXXII.

In this tedious uneafy Paffiage, I was expofed to much Care and Anxiety; for our Provifions, and efpecially the Meal, grew very low, by reafon. I had not recruited otherwife than with Fin fince my Departare from Tobolska, and had been too charitable to the Ofiecks on board our Ship, who when we found it requifite, were obliged to tow us along with a Line; by which continual Fatigue they were become fo weak, that we were obliged to keep a perpetual Watch over them to prevent their Defertion.

Notwithftanding all this Care, no Day pafed in which fome did not run away. And at laft the Coldnefs of the Seafon, and their perpetual Labour, render ${ }^{\text {d }}$ d them perfectly unferviceable; and if I had not before-hand written to the Governor of Fenizeskoy for Men to affift me, which he difpatched away to meet me with the firft Opportunity, I and my Retinue had been probably loff; for not being within thirty Miles of the Village when the Anfiftance came, we had been certainly frozen up in the River, and had perifhed by Famine, and the deep Snows, which fall there; for this River is utterly unnavigable in Winter.

I was fcarce got from Makofskoi before the River froze up. The Courfe of this River is, for the moft Parr, through an even Country, abounding with Woods and fmall Shrubs; the Water in fome Places runs in fuch a crooked Channel, that where we dined at Noon, we were obliged to fup at Night, or at leaft not far from thence. Here are great Quantities of Woodcocks, Pheafants, Partridges, and other Wild-fowl ; and is was a very diverting Sight to fee great Flocks of Woodcocks and Pheafants come to the Brink of the River to drink, which gave us an Opportunity of fhooting as many as we pleafed in our Paffage, and when our Provifions grew fcarce, afforded us no fmall Affiftance. Here grow alfo Strawberries, black and red Currants and Black-berries ; but the River doth not yield great Quantities of Fifh.
13. Amongt the Hills which are fituate North-eart of, and not far from hence, the Mammuts Tongues and Legs are found, as they are alfo particularly on the Shores of the Rivers Fenize, Trugan, Mongamfea, Lena, and near $\operatorname{Fakutskoi}$, even as far as the Frozen Sea. In the Spring, when the Ice of this River brcaks, it is driven in fuch valt Quantities, and with fuch Force by the high fwollen Waters, that it frequently carries very high Banks before it, and breaks off the Tops of Hills, which falling down, difcover thefe Animals whole, or their Teeth only, almoft frozen to the Earth, which thaw by Degrees. I had a Perfon with me, who had annually gone out in Search of thefe Bones; he told it to me as a real Truth, that he and his Companions found the Head of one of there Animals, which was difcovered by the Fall of fuch a frozen Piece of Earth. As foon as he opened it, he found the greateft Part of the Flefh rotten, but it was not without Difficulty that they broke out his Teeth, which were placed in the Fore-part of his Mouth, as thofe of the Elephants are; they alfo took fome Bones out of his Head, and afterwards came to his Fore-foot, which they cut off, and carried Part of it to the City of Trugan, the Circumference of it being as large as that of the Waift of an ordinary Man. The Bones of the Head appeard fomewhat red, as though they were tinctured with Blood.
Concerning this Animal there are very different Reports. The Heathens of Fakuti, Tunguf, and Osticcki, fay that they continually, or at leaft by Reafon of the very hard Frofts, moftly live under Ground, where they go backwards and forwards; to confirm which they tell us, that they have often feen the Earth heaved up when one of thefe Beafts was upon the March, and after he was paffed, the Place fink in, and thereby make a deep Pit. They furcher believe, that if this Animal comes fo near to the Surface of the frozen Earth as to fmell the Air, he immediately' dies, which they fay is the Reafon that feveral of them are found dead on the high Banks of the River, where they unawares came out of the Ground.

This is the Opinion of the Infidels concerning thefe Beatts, which are never feen.

But the old Siberian Ruffans affirm, that the Mammutb is very like the Elephant, with this Difference only, that the Teeth of the former are firmer, and not fo ftreight as thofe of the latter. They allo are of Opinion, that there were Elephants in this Country before the Deluge, when this Climate was warmer, and that their drowned Bodies floating on the Surface of the Water of that Flood, were at laft wafhed and forced into fubterraneous Cavities'; but that after this univerfal Deluge, the Air which before was warm, was changed to cold, and that thefe Bones have lain frozen in the Earth ever fince, and fo are preferved from Putrefaction till they thaw, and come to Light; which is no very unreafonable Conjecture. Though it is not abfolutely neceflary that this Climate fhould have been warmer before the Flood, fince the Carcaffes of the drowned Elephants were very likely to float from other Places feveral hundred Miles diftant, to this Country, in the great Deluge which covered the Surface of the whole Earth. Some of thefe Teeth, which doubtlefs have lain the whole Summer on the Shoar, are entirely black and broken, and can never be reftored to their former Condition: But thofe, which are found in good Cafe , are as good as Ivory, and are accordingly tranfported to all Parts of Mufcory, where they are ufed to make Combs, and all other fuch like Things, initead of Ivory.

The abovemention'd Perfon alfo told me, that he once found two Teeth in one Head that weighed above twelve Ruffian Pounds, which amcunt to 400 German Pounds; fo that thefe Animals mult of Neceflity be very large, though a great many leffer Teeth are found. By all that I could gather from the Heathens, no Perfon ever faw one of thefe Beafts alive, or can give any Account of its Shape; fo that all we hear faid on this Subject arifes from bare Conjecture only.

But to return to my Travels, in which I durtt not venture to proceed any farther by Water, but was obliged to go by Land from the abovementioned Village ot Makofskoy. After I had advanced fixteen Miles, on the Izth of Oitober I fafely arrived at the City of FFenizeskoy, where I refted for fome Time, being obliged to wait till the Roads were fufficiently frozen to be paffable with Sleads. Though in the Interim, I prepared to proceed on my Journey as foon as I fhould be informed that the Rivers Tungufka and Fenizea were intirely frozen up. This Delay furnifhed me with an Opportunity of thoroughly obferving the City of Jenizeskoy.

Which is fo called from the River, and in Order to make the adjacent Country the more diftinctly known. The River which runneth by and below the City, is called Jeniza, arifeth out of the Calmackian Mountains, and takes its Courfe Northwards, almoft in a direct Line, to the Tartarian or Frozen Sea; very different from the Oby, which difcharges her Water out of her Bofom, which is afterwards conveyed to the Sea by indirect Branches. Below the City the River is a full third part of a Mile over; its Water is white and light, but doth not much abound with Fifh. Somewhat above feven Years paft the Citizens of Fenizeskoy fitted out a Ship, and fent her on the Whale Fifhery; but the Enterprife did not fucceed, and they never yet heard where their Ship was loft. Wherefore they imagine that it was fwallowed up in a violent Inundation of Ice. But from the City of Fruganai, fituated lower down this River, feveral Perfons go out yearly on the Whale-Eifhery; but they carefully watch their Opportunity, when the Wind blows from the Land, and the Ice drives towards the Sea, at which Seafon they purfue their fiming very fuccefsfully, and without Danger. The City of Fenizeskoy is large and populous, and the Fortrefs indifferently ftrong, Several Villages and Cloifters extend themfelves for the Space of fome Miles round the City: And the Land is very proper for Agriculture. Corn, Flefh, Cattle, and wild horned Beafts, and Eowl are very plentiful here. Subject to the Juriddiction of this City are feveral Tunguzians Heathens, who moftly live on the $7 e$ nizen, Tungulkay and the Inland Neighbouring Country. Theie pay a Tribute of Furs to the Czar for every

Bow, taking that to be a Man and Woman reckoned together. No large Fruit-Trees grow here, by Reafon of the extream Cold, and the only Fruits are black and red Currants, Strawberries, Goofeberries, and fuch like.
14. After a long Stay at this Place for the Sake of Refrefhment, I fet forwards in a Slead, and on the 20 oth of January reached the Inland Ribnoy, which fignifies Fibh-Ifland. This Ine is fituate in the Midft of the River Tangujka, which is plentifully ftored with Fifh: Here are Sturgeon, Jacks, and Roach of an extraordinary Size. The Inand is chiefly inhabited by Ruffans. On the 25 th of the fame Month we came to the City of Ilinfkoy, fituate on the River Ilni, which runneth from the South Souch-Weft to the North North-Weft, and falls into the Tungufac. Thus far the River Tung koy is a little inhabited by Tunguzians as well as Ruflians.

Some-Days Journey from hence is the great rocky Waterfall, called Schaman Scbamanfkoy, or the Negromantick Fall, becaufe of a famous Scbiassan or Tungufcbian Corijurer who lives there. This Waterfall is a Defcent of half a Mile long. Its Shoar is covered with high Rocks, fo that the whole Ground of this Water is pure Stone, which indeed affords a hideous Profpect, and makes fuch a difmal loud Noife, that its rapid Courfe over both vifible and invifible Rocks, may in ftill Weather be heard at the Diftance of above three German Miles. The Dofcbanicks or Ships which are obliged to come up it againft the Stream, require five, fix or feven Days, though empty, to tow up this dangerous Water, by cafting of Anchors and the Help of feveral Men; nay farther in fome fhallow Places where the Water is very low, and the Rocks lie high, they are obliged to tow a whole Day before they can get forwards fo much as a Ship's Length, and the Ship frequently ftands an End on the Stem; a Thing incredible almoft except to Eye Witneffes.

The Ships which pafs up and down, are always unladen, and their Cargoes carried by Land till they get paft this dangerous Place, when they are again loaded. I have myfelf feen the Ships which failed down this Torrent, perform it in twelve Minutes; fo prodigious rapid is this Defcent: And there are very few either Ruffans or Tunguzians that know how to bring down the Ships, which muft be provided with a Rudder fore and aft, and Rowers on both Sides; the Pilors give their Orders very dexteroufly to the Rowers by a Handkerchief; for no Voice can be heard, by Reafon of the Noife of the Water. The Ships are alfo clofe thut every where, that the Waves which frequently fly over them, may not find Entrance into, and confequently fink them. Several Ships, notwithftanding thefe Precautions, are caft away here every Year, efpecially when unexperienced Pilots undertake the bringing them down, being very often fhattered to Pieces againft the hidden Rocks. And the Men are in fuch Cafes inevitably loft, and immediately ftiffed by the rapid Stream, or dathed to Pieces by the Rocks; wherefore their Bodies are very rarely found; and the Shoars are full of Croffes, erected in Remembrance of thofe drowned there. In the Winter Seafon, the Water of this River is fo high that it ftands almoft level with the Flood, and it hath been fo overflowed from the Icy-Sea, that feveral have paffed over it with Ice-Sleads: But in the Summer the Water is very low as we have already hinted.

Some Miles from hence live feveral Tunguzians, amongft others, their famed Scbaman or Diabolical Artift. The Reports which paffed concerning this Cheat made me very defirous to fee him. Wherefore in order to gratify my Curiofity, I went to thofe Parts, to vifit him and his Habitation. I found him a tall old Man, that had twelve Wives, and one who was not at all a fhamed of the Art he pretended to: He fhewed me his Conjuring Habit, and the other Tools which he ufed. Firft I faw his Coat, made of joined Iron-work, confifting of all Manner of Reprefentations of Birds, Fifhes, Ravens, Owls, E'c. befides feveral Beafts and Birds Claws, and Bills, Saws, Hammers, Knives, Sabirs, and the Images of feveral Beafts, $\mathcal{E}^{2} c$. fo that all the Parts of this Diabolical Robe being fix'd together by Joints
might,

might at Pleafure be taken to Pieces. He had alfo Iron Stockings for his Feet and Legs fuitable to his Robe, and two great Bears Claws over his Hands. His Head was likewife adorned, with fuch like Images, and fixed to his Forehead were two Iron Bucks-Horns. When he defigns to conjure, he takes a Drum made after their Fafhion in his Left-Hand, and a flat Staff covered with the Skins of Mountain-Mice in his right Hand; thus equipped he jumps crofs Legg'd, which Motion fhakes all thefe Iron Plates, and makes a great Clangor; befides which, he at the fame Time beats his Drum, and with Eyes diftorted upwards, and a ftrong bearifh Voice makes a difmal Noife. Thefe were the Prologues: But his Conjurations were performed in the following Manner.

If the Tunguzians have any Thing at any Time ftole from them, or defire to be informed of any Thing, in the firft Place, he muft be paid before Hand: After which he plays fuch Tricks as are already related, jumps and roars till a Blackbird comes and fits on the Top of his Hutt, which is open above to let out the Smoak: As foon as he gets Sight of the Bird, he falls into a Swoon, and the Bird vanifhes immediately: After he hath remained bereft of his Senfes for about a Quarter of an Hour, he comes to himfelf, and tells the Querift who hath robb'd him, or anfwers his Queftion of what Sort foever ; and they tell us, that all that he rays prove true. His Robe was fo heavy, that I could fcarce lift it with one Hand. This Conjurer had a great Quantity of Cattle, which Crouds of People that flock to him from very diftant Places had prefented him, they always giving him his full Demands.

Thefe Heathens are called Niforian Iungufans: They are tall and ftrong Men, and have long black Hair, which being bound up. in the Shape of a Horfe's Tail, hangs upon their Backs: They are broad faced, but their Nofes are not fo flat, nor their Eyes fo fmall as the Calmackians. Both Men and Women go naked in the Summer, except only a leather Girdle of three Hands Breadth, that they moftly cut in the Shape of Ribbands, which they wear about their Waift, and cover their Privities. But the Women adorn their Hair with Coral and Iron Figures. Both Men and Women carry a Pot on their left Arms, continually furnifhed with old fmoaking Wood; which preferves them from the Biting of the Mofcbitoes, or Gnatts, with which the Country along the River $\mathcal{T} u n g u / k y$ and the Woods are fo abundantly peftered, that if not only the Face, but the Hands and Legs are uncovered, their biting becomes infupportable; which however the Natives do not feel fo much as Strangers, becaule their Skin being all over bitten by them becomes thereby hardened. Thefe People are Admirers of Beauty, according to their Notion of it. To improve which, they adorn their Foreheads, Cheeks and Chins in the following Manner: They with a Needle run Threads greafed with black Greafe through the Skin, in Reprefentation of feveral Figures, and leave the faid Threads therein for feveral Days; after which they draw out, and leave their Traces behind them, and very few of them are without this Embellifhment.

Their Winter-Habit is a Coat made of Doe-fkins, which is bordered at the Extremities with Dog-fkins, befides which they have alfo a Breaft-piece hung with Tails of Horfe-hair. They are wholly unacquainted with either Linnen or Wollen Cloaths ; but to fupply their Neceffities, they make Nets and fowing Thread of Fifh-fkins. Inftead of Caps on their Heads, they wear a Roebucks Skin, with the Horns fticking up on the Crown of their Heads, efpecially when they go a Buckhunting; by which Means they eafily deceive their Game, which they creep clofe to in the Grafs, and the unwary Animals miftaking them for their own Species, void of Fear, never remove their Station, whilit they having their Bow and Arrow ready, and being gotten fo near, are fure to fhoot him down. When they are inclined to divert themfelves together, they form themfelves into a Ring; and one of them ftands in the Middle, having a long Staff in his Hand, with which, in turning round, he Itrikes at the Legs of one of the Company;
who fo nimbly lifts them up, and fo dextrouly avoids the Blow, that it is very feldom that any of them are hit; but if any one is touched, the is duck ${ }^{3}{ }^{\text {d }}$ till he is all over wet.

They lay their Dead upon the Trees, and after they are rotten, their Bones are buried in the Earth.

They have no other Priefts but their Conjurers. They have in their Huts carved wooden Idols, about half an Ell; long, with the Reprefentation of human Faces, which they feed as the Oftiacks do, with their beft Sprt of Food, which runs out of their Mouths over their Bodies. Their Huts are hung rocind with Horfes Mains, Tails, and other Baubles, and are made of Birch-Bark: Before which they hang their Bows and Quivers, and very few of them are found without feveral dead young Dogs hanging near them. Their Boats or Canoa's are made of Birch-Bark fewed together, which notwithftanding will carry feven or eight Perfons; they are long, flender, and without any Benches; they fit in them upon their Knees, and make ufe of a Sort of Oars broad at both Ends; which they hold in the Middle, and row or paddle, firlt with the one, then with the other End; and when they row all together, the Boat goes at a great Rate. With thefe flight Canoa's they can bear up againft violent Storms without any Danger. They generally fubfift themfelves in Summer by Fifhing, and in Winter by hunting all Sort of furred Game, Bucks, Does, $\mathcal{E}^{\circ} c$.
16. I left thefe People without any other Occurrence remarkable, and arrived on the ift of February at the Fort Buratz; which Place, and all along to the Lake Baikal, is watered by the River Angara, and inhabited by the Burattians, a Pagan People.

On the IIth of the fame Month we reached the Fortrefs of Bulagan/ki in this Country, fituate between the Hills and the Vallies, in a Champion Ground, on which live feveral Burattians, who are ftocked with Cows, and a hairy Sort of Bulls. They all live in low Dwellings made of Wood joined together, and covered with Earth; on the Tops of which a Hole is left to let out the Smoak. Their Fires are made in the Midft of thefe Apartments. They are utterly ignorant of all Sort of Agriculture, or the Management of Gardens: Their Houfes, as in Villages, ftand next each other, and are commonly fituated near the River: but they do not change their Habitations like the Tunguzian, and other Heatbens. Clofe by their Doors feveral Poles are ftuck into the Ground, on fome of which are ftuck Bucks, on others Sheep, and fome faften Horle-hides on them. In Spring and Autumn they go out by Hundreds in a Troop on Horfeback, to hunt Stags, wild Sheep, and Roebucks; which they call Ablavo. When they have found a Place whiere there is Game, they range themfelves in a circular Order, fo that they can eafily come near one another, by which in fuch a Ring they will hunt together and encompais fome hundreds of Beafts; and having once got them within the Reach of their Bows, every one lets fly, fo that very few efcape, each Hunter being fo well provided as to make thirty Shot fucceffively.

After the Hunting, each Sportfman eafily finds his own Arrows by their peculiar Mark; but there is a very great Misfortune which attends this Way of Hunting, which is, that in fuch a confufed Mixture, they unawares frequently fhoot one another, and feveral Horfes are wounded. They flea their Game, cut the Flefh from the Bones, and dry it in the Sun; on which Provifion they live as long as it lafts, and when it is done, go out a Hunting again. Here are vaft Quantities of wild Beafts, and I have for the Diftance of a Quarter of a Mile been able to fee nothing elfe but wild Sheep, which like Snow covered all the Hills; but in the Country for five or fix Miles round hereabouts very few furred Beafts are found, except only a few Bears and Wolves, which fometimes appear, but very rarely.

Thofe who want Oxen or Camels of an extraordinary Largenefs for their travelling to Cbina, are obliged to buy them of thefe People, who will not deal for Money, but receive in Exchange of the Buyers, pale Sa.
bles, Pewter, Copper Barons, red Hamburg Cloths, Ot-ters-Skins, Perfian fhaggy Silk of all Colours, and Gold and Silver Bullion: In which Commodities the Price of an Ox that weighs from 800 to 1000 German Pound Weight, is not above four or five Rubels, and a Camel is not valued at more than ten or twelve Rubles. Both the Men and Women of this Country are robutt, large, and according as Beauty goes here, have handfome Faces, being a little like the Chinefe Tartars. In the Winter both Sexes wear long Coats made of Sheeps-Rkins, with a broad Girdle tipped with Iron. They have a Sort of Caps that they call Malachaves, which they can draw over their Ears in cold Weather. In Summer feveral of them wear Coats of llight red Cloth. Comparatively fpeaking, their Faces and their Bodies look like young Devils, by Reafon that they know, or at leaft practife Nothing of Wafhing at any other Time than when they are born; nor ever cut the Nails of either their Hands or their Feet.

The Virgins whole Head of Hair fticking faft together in Plaits, ftands on End, and makes them look juft as Envy is reprefented by the Painter's. The Women have only two Plaits which hang down on each Side of their Heads, adorned with all Sorts of Tin Figures. When any of them die they are buried with their beft adorned Cloaths, Bows and Arrows. Their Religion confifts in the worfhipping dead Bucks and Sheep, which are fpitted upon the Poles before their Doors, at feveral Times in the Year, as long as they continue unputrified. Their Adoration of them is performed by bowing the Head, whillt they fit on their Knees with clafped Hands, without either Prayers or fo much as fpeaking one Word. This is the only divine Service that they are acquainted with, nor will they ever hear of any other: They have indeed feveral Priefts, which when they think fit, they kill firf, and afterwards bury them, together with Cloaths and Money, alledging, that it is neceffary to fend them before to pray for them, and that left they fhould be driven to. Neceffity, they ought to have Money to fpend, and Cloaths to wear.

If they are obliged to the taking of any Oath amongft themfelves, they go to the Lake Baikol, near which is a Hill that they efteem Sacred, to which they can ride in two Days. Upon this high Mountain they take their Cath, and firmly believe the falfe Swearer thall never come down alive. To this Hill they frequently offer up all Sorts of naughtered Cattle, and have paid a Veneration to it for many Years. But upon what Tradition this Reverence is built is not known.
17. In this Neighbourhood Mufk-Cats are alfo found, which are Chaped more like a Goat. This Animal is almoft like a young Buck, without Horns, with this Difference, that its Hair is a little black, and the Head inclines more towards that of a Wolf. The Musk is contained in a certain Swelling at the Navel, like a little Purfe, which is compofed of a thin Skin, covered with a very fine Hair. The Cbinefe call this Animal Tebiom, which is Mufk-Hart, by Reafon of its Likenefs to a Stag ; but befides the Diffimilitude of the Head, it hath alfo two Tunks like thofe of a wild Boar, which ftick out of its Mouth.

Pbilip Martinus, in his Cbinese Allas, reports, that this Animal is chiefly found near the City of Leao, in the Province of Xanxi ; as alfo in that of Xenxi, and more efpecially in that of Hanchungfu; and that there are allo fome in the Province of Sucbuen, the fecond Divifion of Paoningfu, about the City of Kiating, near the fixth fortified City Tienciven; in feveral Parts of the Province Junnan, and feveral othet Places Weftward. He further gives us the following Defcription, which may contribute to the Satisfaction of the curious Reader. "The Musk Cat, faith he, is almoft like a young ${ }^{6}$ Hart or Doe, only that he is fomewhat browner, ©s and fo flow and unactive, that the Hunter's greateft ${ }^{s 6}$ Difficulty is to put him up; for that once done, he os is immediately fhot, for he fuffereth himfelf tamely to 6s be killed, without either defending himfelf or ftirring. ${ }^{6}$ The Musk of which there are various Sorts of diffeis rent Value, is prepared from this Beaft in the fol6 lowing Manner:
"s After he is taken, all his Blood is drawn off and st referved; and from under his Navel is taken off " a Bladder, that is filled with Blood, or fome other "s odoriferous Liquor there concreted; after which the
"Animal is flea'd-and cut to Pieces.
"When the Cbinefe defign to make the beft Sort, " they take the hinder Part of the Animal, beginning " from the Kidneys, which they ftamp and bruife to a " Jelly, which they. dry, and therewith fill the fmall " Bags, which they make of the Skin of the Beaft.
"But if they defire a nlighter Sort of Musk, which 66 fhould yet be very good, and not at all fophifticated, ${ }^{6} 6$ they then beat all the Parts of the Animal together, "6 without any Diftinction, to a Jelly, with a little of "6. his Blood, in a Mortar, with which, as before, they " fill up the Bags made of the Hide.
" Befides thefe two, there is another Sort of Musk, sc which is alfo highly valued, though not fo good as "s the precedent. This is prepared from the Fore-part " of the Animal to the Kidneys, which they particu" larly lay by the reft of his Body in order to make the "common Musk ; fo that none of this Creature is "6 thrown away, but all Parts of it are good; whence " it is faid to be better dead than alive." Thus far Martinius ; but whether thefe Barbarians make the fame Ufe of the Musk-Cat as the Cbinefe, is not certainly known.
After travelling fome Days amongft this Nation, I arrived at $\bar{J} e k t u$ koi, a City fituate on the River Angara, the Courfe of which is from the North to the South, but its original Source is the Baikol-Meer, about eighe Miles diftant from this Place. This City not long fince was rebuilt and ftrengthned with very ftrong Fortifications. The Suburbs are very large : All Sorrs of Grain, Salt, Flefh, and Fifh are very cheap here, a hundred Pound (German Weight) of: Rye not yielding above feven Kopties or Styvers; for round about this City, and to Wergolen $/ k 0$, fome Miles diftant from thence, the Land is very fruitful, and Corn grows in great Abundance ; befides great Numbers of Ruffians have fettled here, and taken up fome hundreds of Villages, all which with great Induftry and Succefs promote Agriculture.

Oppofite to the City on the Eaft-fide is a BurningCave, which for feveral Years burnt very violently, but now feems extinct, very little or no Smoak iffuing out at prefent. It is a large Cleft in the Earth, whence the Flame formerly afcended vehemently, which now ceafes; but if a long Pole be put into it, it feels very warm.

Over againft this City, where the River Fekut falls into the Angara and fo runs to the Meer, is a very fine Cloyfter. Earthquakes are here frequent in Autumn, which yet don't prove very prejudicial. Here refided a Taiffcba or Mongalian Baron, who had put himfelf under the Protection of their Czarifh Majefties, and embraced the Greek Chriftian Religion.

He had a Sifter, which according to the Mongalian Cuftom, lived in the devoted fpiritual State, and was almoft enclined to receive the Chriftian Faith. When fhe was difcourfed on that Subject, fhe replied, "I am "fatisfied that the Chriftians God muft neceffarily be a "flrong God, fince he hath beaten our God out of "Heaven: But he will return thither, though he fhall "the fecond Time be beaten down." When the enters the Chamber, fhe falutes no Perfon, as the Mongalians are yet accuftom'd to do, but her Order doth not admit of it. She had a Rofary or String of Beads in her Hand, which fhe continually paffed round through her Fingers. I found a Lama or Prieft with her, who had alfo fuch a Sering of Beads in his Hand, according to the Mongalian and Calmokkian Fafhion, which he very fwiftly and inceffantly turned over through his Fingers, continually moving his Lips, as though he were at his private Devotions ; and with this perpetual telling of his Beads, his Thumb was worn through the Flefh and Nail up to the Knuckle; which rubbing off by now Degrees did not at all pain him.

After a fhort Stay to reft myfelf in Yekutskoi, on the firt of March I fet forward by Land in Sleads, to
the Lake or Meer of Baikol, which I reached on the roth of the fame Month, and found it frozen up very hard.

I paffed over this Lake and fafely arrived at Kabania. This Meer is about fix German Miles broad, and forty long: The Ice in it was full two Ells thick, and is very dangerous when the Paffengers are overtaken by a great Snow, or a high Wind; and the Horfes which draw the Sleads mult be very fharp fhod, by Reafon the Ice is all over very flippery, and even on Land here is no Snow found to lie, but it is immediately driven away by the Wind. Here are feveral broken Places or Wind-holes, that are not frozen up, which prove very dangerous to Travellers when furprifed with tempeftuous Winds; for the Horfes, if not fharp Shod, by the Fury of the Winds are driven on fo violently that they cannot tread fure, but fliding and falling on the glib Ice, are hurried on by the Wind, till they and the Slead too are fwallowed up in one of thefe open Places; by which feveral Men and Horfes are loft: Befides, to augment the Danger, the Ice of this Lake is fometimes torn open feveral Fathoms by fudden Winds, which make a Noife as loud and terrible as Thunder-Claps, but after the Expiration of a few Hours, the Ice joins again, and becomes quickly as clofe as before.

The Camels and Oxen, which Travellers take with them for their Journey to Cbina, are alfo obliged to go this Way from Fekutskoi, in order to which the Camels have a kind of Boot tied about their Legs, which is very fharp at Bottom: The Oxen alfo are provided with fharp Irons ftruck through their Hoofs, without which it would be impoffible for them to go forwards. The Water of this Lake taftes very frefh, is clear, and yet of a deep Green, like that of the Ocean. Where the Ice was open we often obferv'd a great many SeaDogs, all blackifh, and not variegated, like thofe in the white Sea. Here are alfo great Multitudes of Fifh, as large Sturgeons and Jacks, of which I have feen fome that weighed two hundred German Pounds. The only River that iffues from this Lake is the Angara, whofe Defcent is to the North-North-weft: But amongtt the Rivers which fall into it, is the Silinga, the principal River, the Source of which is in Mongalia; the Remainder are feveral Rivulets, which fall from the Hills: There are alfo fome Iflands in this Water. Its Shoar and adjacent Country is inhabited by Burattians, Mongalinns, and Outkotians. In all Parts hereabouts there are very fine black Sables, and Caberdines are alfo frequently caught here.

I obferved, that when I entred upon this Sea, and left the Cloyfter of St. Nicbolas, fituated at the Entrance of the Angara, on the Sea-fhore, I was very zealounly entreated by feveral Perfons, that when I came upon this dangerous Water, I fhould not call it a fill Water or Lake, but a Sea; alledging, that formerly feveral confiderable Perfons, who had been on this Sea, and ventured to call it an Ofer or ftanding Water, were immediately overtaken by violent ftormy Winds, and were in Danger of their Lives: But I could not help Laughing ar this wild Notion, that the Waters fhould refent Affronts, and ftand up for their Honour. However I went forward in the Name of God, and being got to the Middle, I called for a large Glafs of Sherry, and drank a Health to all fincere honeft good Chriftians, and my Friends in Europe, adding, robich I take you Orera, or fill Water to witne/s; and the Wine proved very refrefhing, and I obferved, that the farther I went, the Wind, which before was fomewhat rougher than ordinary, began to decreafe; fo that I landed with Sun-Thine and clear Weather, at the Cartle of Kabania, the firft Daurian Fortification beyond the Meer, without having the leaft Satisfaction taken of me. I heartily laughed at the Folly of thofe, who gave Credit to fuch ridiculous Superftitions, and truft not in God, who created, and governs all Things; to whom the Sea and all the Winds are obedient, either to ferve or deftroy them for their Sins, or perhaps to chaftife and terrify them to Righteoufnefs; fince otherwife the Sea is deaf and ftupid, and utterly incapable of refenting or revenging.

Vol. II, $\mathrm{N}^{\circ} \mathrm{I} 33$.

I9. Leaving the Caftle of Kabinia the following Day, on the 12 th of March we arrived at Ilinskoy or Boljoy Saimka, a very large Town, moft of whofe Inhabitants are Ruflens, which in the Winter go a Sable-hunting, not tilling any more Ground than Neceffity requires; wherefore the Land is every where deformed with great barren Hills, which, by an induftrious People, might be rendred pleafant and fruitful.
Departing thence, on the ruth of the fame Month we reached the Cantle of Tanzienkoy, which was provided with a ftrong Garrifon of Colfacks, to cover this Country from the Incurfions of the Mongalians which border on it. Without any Delay I went forwards with the firft Slead that went off, and on the igth Inftant came to Udinfkoy, which City or Fortrefs is fituated on a high Hill ; but moft of its Inhabitants live below the Fortrefs, at the Foot of the Hill, on the River Uda, which falls into the Silingc, about a Quarter of a Mile Weftward below the City, which bordering on the Mongalians, is conitantly fupplied with a ftrong Garrifon of Ruffan Coffacks.

The City of Udinfkoy is accounted the Entrance of the Province of Daur, and in Summer-time the Mongalians frequently come hither, and carry off the Horfes of the Inhabitants, which are grafing in Sight of the City; and befides a little Pafture, this Land, which is every where mountainous, is very improper for Tillage ; tho' it plentifully abounds with Cabbages, Turneps, Carrots, and fuch-like Vegetables, which belong to the Culinary Garden: But here is not a Tree to be feen.

After having refted here fome Days, one Night at Nine of the Clock happened a violent Earthquake, which terribly fhook the Houfes of this City, thrice within the Space of an Hour, bur went off without any Damage.

The River Uda yields very little Fifh, befides a few Facks and Roach. But annually in Fune, from the Lake Baikol, great Shoals of a certain Fifh fwim hither againft the Tide: The Inhabitants call them Omuli; they are as big as Herrings, and proceed no higher up this River than the End of this City, by a fallen Mountain, where they ftay fome Days, and then return back. During which Time they fwim fo incredibly thick and clofe, that the Commandant told me, he threw feveral Lime-ftones into the Water, which did not fink, but continued lying on the Shoals of Fifh. When the Inhabitants are defirous to catch them, they ufe no other Net than a Bag, a Shirt, or a Pair of Linnen Stockins; with which they go to the Shoar, and draw greater Quantities than they want of thefe Fin on Land. I was obliged to a tedious melancholy Stay here, before my Camels and Horfes were ready, and was indeed very glad, that at laft I got from hence on the 6 th of April.

On the 26th of the fame Month we travelled by Land to the River Ona, which flows from the North-North-Weft, and falls into the Uda.

On the 27 th I reached the River Kurba, which allo proceeds from the North-North-Wet, and falls into the Uda. We travelled hither upwards on the River Uda, at about half Flood, but were frequently obliged to go off from it, and fometimes to fuch a Diftance, that we loft Sight of it.

On the 29 th of the fame, I had the good Fortune to put an End to my Travels in this uncouth, uninhabited Road, and to reach the Fortrefs of Jarauna. I was not a little glad that I once more came within Sight of Towns, for from Udinfkoy to this Place is wholly uninhabited, and we were obliged to travel over high and difmal Rocks. The Caftle of Farauna is garrifoned by Coffacks, and alfo inhabited by feveral Ruffians, who depend upon Sable-hunting. The Heathens, which poffers this Country, are called Konni Tunguzi, being a Sort of Tunguzians, which live along the Banks of the River Angara; though their Language is entirely different from all others. If any one of them die, he is buried with his Cloaths and Bows under Ground; upon his Grave, Stones are laid, and a Pole erected, to which is faftened his beft Horfe, being firft fhot to Death. They live entirely on Sable-hunting, and the

Furrs of thefe Animals are extraordinary black in this Place: Here are alfo very fine Linxes, and a Sort of Squirrels; the Furrs of which were formerly taken off by the Cbinefe. On the North-fide of this Caftle are three large Lakes near one another, each of which is full two Miles in Circumference, and are plentifully Atored with Fifh, more efpecially with Jacks, Carps, Pearch, and fuch-like. From hence there are two Roads which lead to Zitinfkoy or Platbifcba. I ordered Part of my Retinue to go one of thefe Roads ; but the Caravan and Convoy went directly Southwards, along the Lake Scbackze-Ofer, which plentifully abounds with Fifh; and the other proceeded forwards over the $\mathcal{F a}$ blufnoy or Apple-Mountains, on which, though they bear that Name, there grow no Apples, but only a Sort of red Fruit on the Trees, which indeed tafte very like them. But I myfelf, accompanied with a Retinue of Forty Men, took the other Road, which proved very Moraffy, and lay betwixt high Rocks, which continue all the Way from Farauna to the City of Telimba. In this laft Fortification live feveral Ruffons, "who in Winter go out a Sable-hunting; and indeed this Country yields fuch rich black Sables, that better are not to be found in the whole Province of Siberia.
Lodging here one Night, a Tunguzian Knezets or Prince, whofe Name was Liliulka, came to vigit me; he had prodigious long Hair, which for that Reafon he bound up in-a Leathern Band, and wound three Times about his Shoulders. I was very curious to fatisfy myfelf, whether his Hair was really fo long as I was told; to which Purpofe I caufed him to be intoxicated with Brandy ; by which Civility I obtained the Favour of having his Hair loofened, and I found it to be all his natural Hair only, for I examined it very narrowly, and meafuring it with an Ell, to my great Surprife, was convinced that it was four Duich Ells long. He had a Son of fix İears of Age, whofe Hair growing in Imitation of his Father's, hung down over his Back the Length of an Ell wanting an eighth Part. This Sort of Tunguzian Heathens live on the Hills in great Multitudes. Part of them grow rich by catching the moft fine and beautiful Sables, for which they receive great Sums of Money.

We were obliged to travel two Days from hence over high rocky Hills, running North-Weft and South-Eaft. Very far Northward there rifes a Spring, from whence the River Konela, afterwards called the Wittim, proceeds, which runs North Eatt, and falls into the River Lena, that empties itfelf into the North Frozen-Sea; and about half a Mile beyond the high Hills, the River Zita arifes, which falls into the River Ingoda or Amur, and purfues its Courfe on to the Amurifcbian or Eaftern Sea, into which it flows.

Arriving fafely on the 15 th of May at Platbijcha, which Place the Caravan alfo reached the next Day, having run through feveral Dangers, by reafon that the withered dry Grafs was burned off the Fields every where, the Fire of which was very prejudicial to the Caravan, and often catched the Horfes Tails ; befides which, the Beafts wanted Forage, and were frequently obliged to go a Mile out of the Way in Search of fome Grafs, which was not yet burned on the Side of the Hills, to relieve the poor Cattle.

We were obliged to ftay feveral Days in the Village Platbifcha, fituate on the River Zita, partly to refrefh our Beants, and partly to make Floats, to drive down the Rivers Ingoda and Sbilka, to Nerzinfkoy, this being a very fhallow Water, on which no other Sort of Shipping can be made ufe of. And even thefe Floats can farce pafs over the rocky Places without Danger, two of ours being broken to Pieces in our Paffage, fo that we had Trouble enough to fave our Goods.
20. All Things being ready, I caufed the Camels, Horfes, and Oxen to go firft over the Mountains for Nerzingoy; but I went from thence on the 18 th of the fame Month, and on the 19th reached the River Onon, which runs Northward, taking Rife in the South out of the Mongalian Pool, and, after it is united with the Ingoda, takes the Name of Scbilka. The Water of this River is very white, and its Shoar is inhabited by
great Numbers of Mongalians, who make frequent Incurfons over the Scbilka to Nerzinfkoy, though not always with Succefs; for fometimes they are not only driven from their Prey, but catched themfelves, and punifhed as Robbers; and the Ruflian Coffacks themfelves, by way of Reprifal, make Sallies up the Onon, deftroying whatever comes in their Way.

But throngh Divine Mercy we arrived, without being once attacked, on the 20 th Inftant at Nerzinfoy, which lies on the River Nerza, that runs from North-North-Eaft, and about a Quarter of a Mile from the City falls Southward into the Schilka. This City is tolerably ftrong, provided with feveral Brafs Guns, and a great Garrifon of Daurion Coffacks both Horfe and Foot. It is fituate between high Mountains, notwithftanding which it has Champion Ground enough for the Inhabitants to graze their Camels, Horfes and Cows; and fome Parts of the Hills afford Spors of Ground a Mile or two over, that are very proper for
Tillage, and afford Room to plant and fow enough to Tillage, and afford Room to plant and fow enough to fupply their Neceffities.

From four or five'Miles upwards to ten, below on the River Schilka, live feveral Rufian Gentlemen and Coffacks, who fubfift on Tillage, Grazing of Bealts, and Fifhing: Amongt thefe Hills, and round the City, are likewite feveral very fine Garden-Trees and Plants, as alfo Rbaponticum or Bafard Rbubarb, of an extraordinary Thicknefs and Length, and very fine white and yellow Lillies. Here are vaft Quantities of red, and allo of Snow white Pconies, which diffufe an extraordinary fragrant Scent, and feveral other Flowers, with which I was unacquainted. Here are Rofemary, Thyme, Marjoram, Lavender, and feveral other odoriferous Plants unknown to me, which grow fpontaneounly in great Abundance: The Fruits here are only red and black Currants, $\varepsilon^{2} c$. agreeable to the Climate.
Here are two Sorts of Heathens which have for a long Series of Years lived in Subjection to the Czar ; the Konni-Tunguzians and Olenni-Tunguzians: The former of which are obliged to be ready on Horfeback, at the Command of the Wayrood of Nerzinkoy, or whenever any Incurfions are made on the Frontiers by the Roving Tartars. And the Olenni-Tunguzians are obliged on all Occafions to be ready on Foot, and appear armed on any Exigence in the City. The chief of the Konni-Tunguzians is the Knees Paul Petrovitz Gantimur, whofe Tunguzian Name is Catana Gantimur, born in the Country of Nieubeu; he is an old Man, that was formerly a Taifcha or Baron there, fubordinate to the Emperor of Cbina; but falling into Difgrace, and being difplaced, he, attended with his entire Horde or Clan, retired to Dauria, put himfelf under the Protection of their Czarifh Majefties, and embraced the Grecian Religion. This Knees Paul Catana can on any grand Occafion in one Day raife three thoufand Horfemen, well equipped and provided with good Bows, all which are valiant and fearlefs Soldiers, of whom it is frequently obferved, that fify of them attack four hundred Mongalians, and very frequently beat them. All of thefe Heathens which live near the City fubfift themfelves by grazing, but thofe on the River Scbilka and Amur depend on Sable-hunting, becaufe the Beafts in the Forrefts are there very black, and their Furrs valuable.

They all live in Huts, called in their Language furten, the Infide of which is compofed of wooden Poles jointed together, that whenever they are willing to remove their Dwellings, as they frequently do, they may conveniently pack them up and carry them altogether.

This wooden Work when fet up is thatched all over with Hair and Rubbifh, except only the Smoak-hole left open at the Top. They place their Fire in the Midft of their Huts, and fit round it upon Turves, Their Religion is the fame with that of the Daorn or Daurians, from whence they pretend to be defcended: So that indeed throughout all Great-Tartary, to the Beginning of the Mongalian Tartars, there is a very great Similitude in Religion, as I fhall hereafter evince. Both Men and Women in this Country are very ftrong, broad faced, and both Sexes, not excepting the young Girls,

2. unnquzian Prince whofe. ACair was Four Dutch Ells longand his Son's near an Ell long.

The Tinez. Paul Petrmits Gantimur Shief of y Ronni. Tunguzians Sulject to the Ozar.

ride on Horfeback, and are equally armed with Bow are, plainly prove thefe People apprehend the Necef and Arrows, in the Ufe of which they are very expert. The Female Drefs is the fame with the Male; of both which our Print drawn from the Life is an accurate Reprefentation. Their common Drink is Water; but the better Sort drink Kara't Za, or Black Tea, which is a particular Species of that Plant, the Infufion of which, inftead of greenifh, tinctures the Water blackifh. They boil it in Mares-Milk and Water, to which they alio add a little Lard or Butter. They alfo draw off a Sort of Brandy from Mares-Milk, which they call Kunnen, or Arak, and is diftilled in the following Manner. The new Milk is firft boiled, then put into a Fat, to which is added fome ftale Milk, and this Mixture is firred every Hour: After which this foured Milk is put into a Pot, and clofely covered with another Pot which fhuts tight upon it, into which a Reed is ftuck, and the Pot firmly luted, and fet over the Fire to diftill as in Europe: But the Spirit muft be twice drawn off; then it is fit to drink, being as clear, and ftrong, as Malt Spirits, and very foon intoxicates. It is really very furprifing that none of the Cows in Siberia and Dauria, as long as their Calves fuck them, will ever permit themfelves to be milked, nor will they after the Calf is removed from them give any more Milk: Which is the Reafon why Mares-Milk is fo much ufed by thefe People, which is alfo richer and more agreeable than CowsMilk.
In Spring and Autumn thefe Heathens go a Hunting, like the Burattians, in order to provide themfelves againft Summer and Winter with fufficient Store of Flefh, which they alfo as well as that Nation dry in the Sun. Inftead of Bread they gather the Pods of yellow Lillies, which they call Sarana, and having dried and beaten them to Meal, they drefs them: feveral Ways to eat. They are very expert at Shooting Fifh in the Water with a Sort of Arrows, which are round, folid, and about three Fingers thick at the Head; at the End of which under the Iron Point is a Ball of Bone bored through, which occafions a loud whiftling Noife in its Flight. Thefe Arrows are fo heavy that they do not fhoot them farther at moft than fifteen or twenty Fathom, and chiefly at large Fifh, as Jacks and Trouts, which harbour in clear Water on the rocky Ground near the Shores. And when thefe Arrows hit, they make a furprizing large Orifice, which looks as if it were a Cut given by a Hatchet.

Thefe Heathens have a very odd Cuftom of taking folemn or teftimonial Oaths: An Inftance of which appears in the following Story of two noble Tunguzian Hoftages at Nerzin/koy. To illuftrate which Relation, the Reader ought to be informed that it is ufual on thefe frontier Places (by Reafon a great many Sorts of People put themfelves under his Czarih Majelty's Protection, which live difperfed in Siberia) to keep fome Children of the principal Men, and if they are very great, themfelves in the Amandivor-atkkoy or Hoftage-Court for fome time, all the while providing them amply with Eatables and other Neceffaries; which is done by Way of Security that they hall not defert, and that when they have ftaid fometime, others fhall come in their Places. It happening that two of thefe Tunguzian Hoftages falling out, one accufed the other before the Waywode, of having conjured his deceafed Brother to Death. The Wayroode asked the Accufer if he would, according to the Tunguzian Cuftom, put the Accufed to his Oath? To this he anfwered in the Affirmative ; after which the Accufed took a live Dog, laid him on the Ground, and with a Knife ftuck him into the Body, juft under his left Leg, and immediately clapped his Mouth to the Wound, and fucked out the Dog's Blood as long as he could come at it ; after which he lifted him up, laid him on his Shoulders and clapped his Mouth again to the Wound, in order to fuck out the remaining Blood, as the Print expreffes it. An excellent Drink indeed! And this is the greateft Oath and moft folemn Confirmation of the Truth amongft them ; fo that on Credit of this the Accufed was fet free, and the Accufer punifhed for his falfe Accufation. Thus far concerning the Cuftoms of shefe Heathens, which, barbarous and ridiculous as they
fity of Oaths to determine Differences, and that Provi. dence will interpofe to preferve Innocence, and punifi Perjury, Thus we clearly difcern, that the Brutality of this Nation does not arife from their Want of intellectual Faculties, but from their Supinenefs, Negligence and Nonufage of thofe Faculties.

2r. I was obliged to fay fome Weeks at Nerzinfkoys and furnifh myfelf with Camels, Horfes, Oxen, Provifion and all other Neceffaries for the Profecution of my Travels. All which being carefully performed, I fet forwards from thence in God's Name, on the 18th of Fuly, paffed the following Day by the River Borfchofka over the Schilka, and after ten Days travelling, on the third of Auguft fafely arrived at the Caftle of Argunfkoy; which is the laft Fort and utmoft Frontier of the Czar's Dominions, towards the Eaft Country. This Fortrefs is wathed by the River Argun, which flows from Southweft to North-Eaft, and falls into the River Amur, and divides his Czarifh Majefty's Territories from thole of the Emperor of Cbina: And on the other, or Eaftern Side of the River, the great uninhabited Tartarian Wildernefs hath its Beginning. I was obliged to flay here fome Days, to ger a good Number of Carts with two Wheels, for the farther Purfuit of my Journey; and this was the firf Time that this Way from Argun through Tartary was ever travelled with Waggons.

The Way from Nerzinfloy hither was moftly over high, fony, and mountainous Land, though in fome fcattered Places interfected by fine large Valleys, and little Rivulets, which Intervals are richly overfpread with all Sorts of fine Herbs, Flowers, Grafs, lofty Cedars, and Woods of Birch-trees. This Country is alfo very populous, by Reafon the Tunguzians (which, though Heathens, are all fubject to his Czarifh Majefty) live in great Multitudes throughout all Parts of this Country where there are Rivers, and pay a voluntary Tribute to that potent Emperor.

In feveral fcattered Places in the Valleys, I obferved Hundreds of old, and, in Part, fallen Caftles, built with Rock-Atones, which, as the Tunguzians told me, were built by feveral Warriors long fince, when the Mungalion and Western Tartars made joint Incurfions into this Kingdom of Nieucbeu. Which Monarchy, according to their Computation, comprehended the whole Land from Nerzinfkoy to Nieucheu, as the Cbinese call it, and from the River Amur down to the Albanian Mountains and Leaoting. And it is not long fince that Waggon Wheels bound with Irons $_{5}$ and large Milfones, were found in this Country; from whence I conjecture, that the Nieucbeuers, which border on the faid Province of Leaoting, formerly followed their Trade and manual Employments in this Ruffan Dauria, fince they make ufe of thefe Waggon-wheels bound with Iron, which are no where elle to be found amonglt the Mongan lians, \&xc.

I alfo faw feveral Tunguzian Tombs covered with many Stones, by which great Stakes were placed, and feveral dead and putrified Horfes upon them. Befides which, I obferved that the River Argun feparates two very different Sorts of Lands. On our Way to this River, the Hills abounded with Woods, but on the other Side of it Nature varies, and very few or fearce any Woods are to be feen, buc only inconfiderable Numbers of fcattered dry Trees.

About eight Miles from Argunkoy, from which I departed the 5th of Auguft, the River Zerebrenkoy, or the Silver River, called in the Mongalian Dialect Mongagol, falls into the River Argun. This Silver River is fo called, becaufe that formerly, about two Miles up that Water, there were Silver Mines, out of which the Nieucbeuers and Mongalians dug immenfe Quantities of that Mettal, and great Numbers of Pits, in which the Mertal was melted, are at at prefent to be feen; but thefe Mines, by the Courfe of Time, and lying unwrought for many Years, are now fallen in, and covered with the Hills which have tumbled upon them. Notwithftanding all which, I brought a Proof of their Mettal into Mufcory, and, doubt not but to reftore them, if his Czarifh Majefty would inmediately order
a. Begins
a Beginning to be made, it being very well worth the Pains, and they are very conveniently fituated in a Place where there is no Want of Wood.
In the Year 1693, on the 8th of Auguf, we were obliged to crofs the River Argun, and pals two whole Days on our Way with the Merchants which were with us ; and on the gth atNight, we again travelled South Eaftward, upwards in the great Tartarian Wildernefs, all the Way betwixt Hills and Vales, and next Day reached the River Calabu; which being but a fmall one, we eafily forded it with our Horfes, Camels, and Waggons. This River arifes out of the Hills, and falls Weftward into the Argun. It was obfervable, that it was fo cold this Night, that the Ice froze the Thicknels of a Crown-piece.

On the I2th of this Month we reached the River Terbu, which is alfo but fmall and fhallow, and likewife falls Weftward into Argun. On the next Day we came to the River Gan, which occafioned us a very troublefome Paffage, it being fo deep by reafon of the fwollen Waters, that no Camel could reach the Bottom; fo that we were forced to fearch for Trees, (in this defolate uninhabited Wildernefs, where no other Hope was left) which having felled, we bound in Couples, to carry over our Goods and travelling Provifions: And for our own Paffage we alfo made a Sort of Boats of fmall Twigs, which we covered with Ox-hides fewed together, which proved tolerable Barks, and would carry about a thouland Pounds Weight. The Horfes, Oxen and Camels were fwom over, which indeed the laft did very eafily; for as foon as they loofe Footing on the Ground, they turn themfelves on one Side, without ftirring their Feet, like a floting Leathern Bag; no more Care being neceffary, than to bind five or fix of them faft together by the Bridles and Tails, and let fome body fwim a Horfe before them, which is faftened to the Bridle of the firft, and confequently towes him along, without which Precaution they would drive feveral Miles down the Stream before they got over ; and even notwithftanding this, they drove confiderably downwards. This tedious, uneafy Paffage coft us fome Days Time, the River being broad, and the Tide rapid and ftrong. This River comes out of the Eaft, and falls Weftward into the Argun.

Breaking up from thence on the igth of the fame Month, on the 2 Ift we reached the River Mergeen, which admitted us without the leaft Uneafinefs or Interruption to ford it, being but fmall and fhallow. It alfo comes from the Eaft, and falls Weftward into the Argun ; and thus we travelled to this Place off and on, berwixt Eaft and South. On the 23d we came to another River called Kailar, the Water of which being low, we paffed it without any Trouble. This River falls alfo from South-South-Eait, Weftward into the Argun. On the $25^{\text {th }}$ we as eafly paffed the River Zadun, which rifeth in the South-Eaft, and falls North-Weft into the Kailar.

Before this Book of our Author's was publifhed, we had no diftinct or clear Account at all of thefe Countries, the very Names of which was farce mention'd in
our Hiftories, and the Countries themfelves appeared only as a vaft Defert in our Maps. Yet here we find, that thefe Parts are very far from being either uninhabitable or uninhabited, and that though their Cities are not very thick, yet fome of them are pretty confiderable Places; as for Inftance, Nerzinfkoy, of which we have lately feen his Defcription, and which, though the very Name of it may be new and ftrange to us, is fo well known notwithftanding in thofe Parts of the World, that there are few Places more famous. In this City was held a Congrefs for determining the Difputes between the Cbinefe and Ruffan Empires, the laft of which was in 1689, when Father Gerbillon figned a Treaty of Peace there, by which the Limits of both Empires were plainly fettled, and the River Amur made the common Boundary on that Side.

As this River falls into the Eaftern Ocean or Sea of Japan, the Ruffans were always very defirous of being entirely Mafters of it, and for that Reafon they attempted, notwithftanding the Treaty, to fettle on the other Side of the River, fuppofing that the Cbinefe would be fometime before they had perfect Intelligence of this Infraction of the Treaty, and that they would not in cline to commence a War immediately, but rather fet: on Foot a new Negociation, for amicably terminating their Differences. In this it feems the Ruffan Minifters were, however, fomewhat miftaken, for the Cbinefe quickly made Complaints of the Progrefs of the Ruflan Troops; and finding thefe Complaints made no Impreffion, they ordered their Subjects the Nongals to take Poffeffion of the Country lying on the South of the River Amur; and as this intirely overturned the Schemes of the Court of Petersbourg, they found the Tafk of Negotiating turned upon themfelves, which was one of the principal Motives to their fending our Author on this Embafly.

The Reader, perbaps, may not be difpleafed at meeting with thefe Remarks at the Clofe of the Section, which' we chofe to place here, rather than interrupt the Thread of our Author's Narration, who, in this Part of his Travels which we have already given, has defcribed the Ruffan Dominions lying in Afia, with much more Accuracy than any other Writer whatever: The making ourfelves acquainted, at leaft in fome Meafure, with thefe hitherto fo little regarded Countries, will be very foon found to be both of great Ufe and confiderable Importance, fince it is on this Side that the Ruffians are profecuting thofe Difcoveries, upon which the Eyes of all Europe are turned at prefent. In thefe Countries likewife they have, within thefe few Years, difcovered very rich Silver Mines, of which we have a Hint in our Author; and if thefe can be wrought, it will quickly change the Face of Things on this Side, and, in the Space of forty or fifty Years, our Pofterity will find fome of thefe Countries reprefented in a Man= ner very different from that in which they have been heretofore fet forth. But let us now return to our Author's Travels, and attend him in his Progrefs through the Cbinefe Dominions.

Travels through the Countries of the Mongal Tartars, lying between the Ruffian and Cbinese Empires, the Paffage through the famousWall, and from thence through feveral confiderable Places to the City of $P e=$ king, the Capital of all China; with Obfervations Hiftorical, Phy= fical, Topographical, Critical, and Political, on the feveral Nations converfed with by our Author, and the Countries by them inhabited; with fome Conjectures alfo as to their former Inhabitants.

## Taken from the Original Yournal of bis Excellency Everard Ysbrants Ides.

1. The Autbor's Reception at the frrt Chinefe Guard, an Account of the Targafinian Tartars, their Cuftoms and Manner of Living, with a brief Viewo of the beautiful and pleafant Country they inbabit. 2. He is met by a Chinefe Mandaryn, at the Village of Xixigar ; the great Civility and Politene/s of bis Reception, and of the mutual Courtefes that pajed between the two Minijers. 3. A Defcription of the Country of the Mongals, and of the Inbabitants, their Hoppitality, refpectfful Bebaviour, and the Manner in which they live under the Chinefe Emperors. 4. The Author, in Company with the Chinefe Mandaryn, pafes tbrough a Country in wwbicb there are feveral decayed and abandoned Cities, of which be gives a very curious and copious Account. 5. They arrive at a Chinefe Village inbabited entirely by Lama's or Tartarian Priefts; a Defcription of it, and of the Country round it. 6. The Manner in webich the Emperor of China bunts annually in this Neigbbourbood for fome Weeks, with an Account of the Game, and other Particulars. 7. The Author's Arrival at the famous Chinefe Wall, a very curious and circumfantial Defcription of it, and of the Materials of rubich it is compofed. 8. The Autbor's Arrival at Galkan, his magnificent Entertainment there by a Chinefe Mandaryn, the Cufoms of the Chinefe People of 2uality on fuch Occafons, and an Account of a Play be faw acted. 9. The City of Xantunnung defcribed, the Idol Temple of Jugangu, and a City which is inhabited entirely by the Emperor's Concubines. 10. He proceeds to the Cities of Kixu and Tunxo; a Defcription of the latter, and of the famous Market for Porcelain or China Ware tbat is beld there. 11. A Digrefion in reference to the Excellency, Origin, and Hifory of that Manufacture ; interfperfed woith Jeveral newo and curious Obfervations, by wacy of Supplement to the Autbor.

"THE Plainnefs and Simplicity of our Author's Relation gives us the greateft Reafon to believe, that he pays a ftrict Regard to Truth; for it is worth obferving, that he never magnifies his own Courage or Conduct, or talks loudly of the Dangers he has run through; but very modefly fets down what occurred to him in his Journey, and very carefully diftinguifhes between what fell immediately under his own Infpection, and what he received from the Report of others. What is contained in this Section, relating to that vaft Tract of Country bordering upon Cbina, appears to me extremely curious, becaufe out of this Country originally proceeded that famous Race of Mongal Tarlars, which affumed the Empire of $A f a$, and, after conquering India, Perfia, $A f$ fyria, and a confiderable Part of Europe, threaten'd an Irruption into Germany; and had very probably conquered all Mufcovy and Poland, if they had not been diverted partly by their Civil Wars, and partly by the Invafion of Cbina. One cannot help therefore being pleafed with our Author's Defcription of the original Seat of thefe mighty Conquerors, at the fame Time that it very much confirms what we meet with in the Writings of Marco Polo and other ancient Travellers, whofe Relations we have inferted in our former Volume. We may from hence be taught not to be too rafh in cenfuring what we cannot immediately reconcile either to our Reafon or our Experience: One of the beft Leffons that the former teaches us is, its ownWeaknefs; and there is nothing that we learn with fo much Certainty from the latter, as that without due Care we may be eafily deceived. All that has a plaufible Appearance is not therefore to be accounted Reafon; nor is every Thing that we hear or read to be looked upon as Experience. If there is nothing abfurd or impoffible in what a Man of a fair Character relates as an Eye-Witnefs, his Teftimony ought not to be flight-
Vol. II. $\mathrm{N}^{0} 133$.
ed ; and when we fit down to learn what paffes, or what has paffed in Countries with which we have been hitherto unacquainted, it is irrational to expect, that ali we meet with fhould be fmooth, clear, and intelligible. When we are Children, we read with Aftonifhment of the great Actions of the Greeks and Romans, and thefe are impreffed upon our Minds fo, that as we grow up; they pafs for inconteftable Proofs s yet read thefe Hiftories to illiterate People, and they will make more Difficulty of believing them, than we do at receiving what is delivered concerning the Natives of thefe Eaftern Countries, where Empires have rifen without our Notice and, after flourifhing for many Ages, have funk again before they came to our Cognizance. But let us dwell no longer on Reflections, it will be better to attend our Author on his Journey, who, in fpeaking of the Pros fecution of it towards Cbina, proceeds thus.
On the ift of Sept. I came to the Falijcbian Mouns tains, lodged there, and found my Poft-Meffenger, who was a Ruffian Gentleman that I had difpatched to Xixigar was returned, and arrived here before me, and had als ready waited fome Days for me. He was accompanied with a Cbinefe Captain and ten Men, which were fent tơ meet me. When I ordered him to be brought to me he complimented me from his Lords, who had ex. prefly fent him to meet mes and in their Name pres fented me with fome neceflary Refrefhments, as fifteen Sheep, fome Tea, Loaf-Sugar, and twenty Horfes for my Ufe, which I thankfully accepted, and in Returry made the Captain feveral Prefents.

Thefe Hills are called the falifcbian Mountains, fromz the River ${ }^{\circ}{ }^{3}{ }^{3}{ }^{3}$ s rifing amongft them its Source being: united to feveral Rivulets which fall from the Hills and the Head of this River being not above two Faw thom broad. As we climbed up thefe high Mouns tains, on the North Side we found them not one third Part fo fteep as at our Defcent on the South. Befides

Y\& E
which, we obferved a very remarkable Alteration of the whole Country on the South-fide of the Hills.

From the River Kailar to thefe Mountains, we travelled thro' fteep Rocks and high Hills, with which the Valleys, which we paffed thro', were encompaffed on both Sides. There are alfo a few fmall Thickets fcattered up and down, befides which the whole Way is void of all Trees or Wood; which fometimes gave us the Trouble of carrying the Wood which we wanted for our Kitchen, from one Lodging-place to another.

There Valleys are wholly covered with fine Grafs, as the Mountains are ftocked with all Sorts of Herbs and Flowers; befides which, this Country plentifully abounds with large Harts, Roebucks and wild Sheep, which frequently appear in great Herds of many Hundreds together. Here are alfo large Flocks of wild Geefe, Ducks, wild Turkies, and Partridges; but none of the Rivers, which I paffed from the Argun to this Place, abound with Fifh, excepting only Roach and Jacks. The Air is temperate, or rather cool. But on the 2 d of September, quitting the Hills and travelling along the Side of the River Falo, we were entertained with the Sight of very fine Oak and Lime-trees, as well as a great many Hazel Bufhes, which did not grow above an Ell above Ground, and yet bore vaft Quantities of Nuts. We proceeded two Days in fuch an agreeable Road, and on the 4 th Inftant, to our mighty Satisfaction, reached the firft Cbiucfe Guard, which was placed upon a high Mountain, that afforded them a very large View, and commanded the whole adjacent Plain. As foon as this Watch efpy any Perfons, they fummon them, and conduct them to their main Guard, under their Commanders on the Mergeen, as they alfo did by us.

Without any farther Interruption, we proceeded on our Journey, and on the 5 th Inftant got Sight of the firft Targazinian Huts; and the next Day we paffed by the laft of them. The Targazinians are a feparate independent Hord or Clan, which are obliged to pay Tribute to the Emperor of Cbina: They are governed by their own Chief, but obey thofe who are moft potent in Tartary. They are an Infidel Heathen Nation, and are faid to worfhip the Devil: They are of a middle Stature, and broad-faced like the Mongalians. Their Summer-drefs is compofed of Blue Cbina Callicoe and Tanned Leather; but it being cold betwixt the Mountains here in the Winter, they wear Coats made of Sheep fkins. Their Language is very little different from the Tunguzians; and they live in Huts made of thin Bamboes or Reeds. They depend chiefly on the Tillage of Land for the Production of Barley, Oats, and Millet ; the Remainder of what they do not confume themfelves, they tranfport and fell amongft the Xixigarian Villages. Their Cattle are chiefly Horfes, Camels, Bulls, Cows and Sheep ; the laft of which are very fine and large, the Tail being a large Span thick, and two Spans long, all of which is fat, and they are fo very heavy, that they cannot go faft, much lefs run. Thefe People ride very commonly upon Oxen; and are very expert Archers; they make great Quantities of Bows, which are efteemed the very beft in all Tartary, and are therefore fold very dear. We paffed by thefe People on our Journey on the charming Banks of the River $\mathcal{F}$ alo with the utmoft Pleafure; but now turned our Eyes from thence downwards towards the South. I cannot help owning, that the Side of this River is perfectly a Paradife, as confifting of beautiful PaftureGrounds, Silver Streams, and the pleafanteft Woods in the World ; and the moft delicious Entertainment of the Eye is not a little improved by the Profpect of the rifing Ground, and beautiful towring Hills, which offer themfelves to our View, at about a Mile and half Diftance on each Side, and are a perfect Warren or Park of Wild Game; Great Numbers of Wild Swine, Harts, and valt Herds of Tygers and Panthers harbouring under thefe hady Mountains. Here are Multitudes of Wild-Ducks; a fmall Sort of Geefe called Turpani, adorned with all Sorts of variegated Feathers, like thofe in India; and a particular Sort of extraordinary beautiful Partridges, the Feathers of which are
of feveral Colours, their Tails about an Ell long, which prove very delicate, being in Tafte, as well as Size and Shape, like Pheafants: They harbour in plain Fields, in the long Grafs, and in low Nut-bufhes; and being fprung, in their Flight clap their Wings with a Noife as loud as a Stork.

On the above-mention'd Day being obliged to leave this charming River, I turn'd off on the Left, from it to the South-Eaft, and fpent the 8 th, 9 th and 10 th Days in Travelling betwixt Mountains and Rocks on each Side, where we were afflicted with the Want of Wood and Water, being obliged to content ourfelvers with what the Pits yielded of the latter, which was of a deep brown Colour and almoft ftunk. But on the IIth we got out of the Hills, and came to a Plain, but fo barm ren a Field, that nothing at all grew upon it; the beft was that we had but one Day's Journey to Xixigar, to pals in this defert Field, fo that we held our Night En* campment this Evening not above half a Mile from that Place.
2. Having under the Protection of Heaven reached the Borders of Cbina, I immediately difpatched away a Meffenger Poft to the Adaganda or Mandaryn who had been fent from Pegu to receive me, and on the 12 th, early in the Morning, I fet forwards, having ranged my Retinue in good Order ; and was quickly informed by the Return of my Meffenger, that the Mandaryn accompanied with eighty Men , would ride from the Town of Xixigar to meet me, and was already advanced on his Way.

We approached each other but flowly, and met about a Quarter of a Mile fhort of the Town, where I was very civilly welcomed by the Mandaryn; and after mutual Compliments were paffed, we rode forwards together in Order, (making a very good Appearance) till we reached the Town, where a very good Houfe was provided for me, and thofe of my Retinue were well lodged fuitable to their Characters, as well as the Coffacks which I had with me, in the beft Houfes in the Town.

This Province is fituated in a very variable, and withal unwholfome Climate. About Noon generally rifes a high Wind, that continues about two Hours; but otherwife the Sky is very feldom overcaft, fo that the Sun continues to fhine very hot almoft always, by Means of which and the conftant Wind the Earth is fo dried, and driven upwards, that the fubtile white Duft is fcarce fupportable. I was very particular in my Obfervation of the Alteration of the Air, when I came from betwixt the Hills. About five Miles from Xixigar I perceived the Air to be cloudy as far as the Mountains extended, but no farther; and particularly, where the Hills ended, the Air was clearly and vifibly feparated by a windy Arch, from the Weft to the Eaft, towards the Albanian Mountains; a very extraordinary Phænomenon, which I affert as an Eye-witnefs.
As for what happened to myfelf, the Mandaryn; who was an agreeable well bred Man, very civilly envited me to take a Meal with him on the I 4th Inftant, at which I was received with particular Expreffions of Kindnefs, and fplendidly treated: The Entertainment was compofed of good Soops, favoury Herbs, roaft and baked Meats, all which were followed with a Banquet of Sweet-Meats and Cbinefe Fruit. His Men and Soldiers were all difpofed in the beft Order, each as perfectly and refpectfully knowing and taking his Station as is poffible in Europe. What alone was very uneafy to me, was, that I was obliged to fit with him on the Tapiftry, with my Legs acrofs and under me, which is to Strangers a very troublefome Cuitom.
On the $15^{\text {th }}$ I treated the Mandaryn in Return, having caufed him to be invited the Day before. I entertained him in the European Manner, and put a Glafs of good Sack brifkly about, caufing the Trumpets and other Mufick to play; all which wonderfully pleafed this Gentleman, fo that he and his Company returned Home pretty mellow, and mightily fatisfied with European Civility.

On the 25 th, the fame Mandaryn again entertained

us, and the following Day dined with me. During which Interval of Time, I caufed all neceffary Preparations to be made for me and my Retinue, in order to our Proceeding on our Journey to Peking. I informed the Mandaryn that I was ready, who immediately anfwered very civilly, that purfuant to the Order of his Amologda Cban or King, as many Coachmen or Waggoners as were neceffary were prepared to wait on me, if I pleafed to accept of his Company, and fet forwards on the 28 th Inftant. Before I invite the Reader to accompany me in this Journey, I think myfelf obliged in few Words to defcribe what appeared to me remarkable amongtt the Inhabitants of this Province of Xixigar.
3. About a Quarter of a Mile from this Frontier Town, runs the River Noun, on which is fituate the City of Naunkoton, lately built, and encompaffed with earthen Walls, well lined, and covered on the Outfide with maffy Timber. The Inhabitants of this City, and the fix large Southern Villages fubordinate to it, are call'd Daori or Old Dauri; and at prefent this Country is called Dori, by the Tartars which inhabit all along the River Nauna and Fallo to Albazin. Thefe People have very rich manured Lands, and all Sorts of GardenFruits, and feveral Tobacco Plantations; but their Religion is impious and Diabolical; for according to their own Report they are all Scbammans or Conjurers, which invoke the Devil. Several Neighbours of both Sexes frequently affemble together about Midnight; one of them lies with his Body extended on the Earth, and the By-ftanders with exalted Voices make a difmal Howl : Others beat on a Sort of Drums; which ceafing for a fmall Interval, the Howl is renewed, and fometimes lafts for two Hours, until he that lies on the Earth, feems returned to his Senfes, and after a tedious Howling, rifes up and relates where he hath been, and what he hath feen and heard; after which, whatever any of the Company are defirous to be informed of concerning future Events, or other Particulars, is propofed to him ; and while I ftaid there, no Night parfed without this hideous Howling of thefe Diabolical Minifters.
They keep their Dead three Days in their Houfes, then bury the Corps in a high-rais'd Grave in the Gar-, dens or Fields; after which it is daily vifited by the Relations of the Deceafed, a Hole being left open at the Head, to which Place they bring the Dead all Sorts of Vietuals and Drink, conveying thefe Edibles by a Spoon made for that Purpofe to the very Mouth of the deceafed; but leave the Drink ftanding in fmall Tin Cups round the Grave: This Practice latts for feveral Weeks, which ended, they bury the ftinking Carkafs, a good Way deeper in the Earth.
They live in Houfes of Clay or Earth, covered with Reeds or fmall Bamboes, fomewhat like the Peafants thatched Houfes in Europe. The Walls on the Infide are partly white, being plaiftered with Lime. The Middle of the Houfe is furnifhed with an erected Pillar, about which are wound the Entrails of Beafts, by which hang a little Bow and Arrows, Pikes and other Arms; to all this they fometimes, by bowing and Proftrations, pay an idolatrous Sort of Worfhip. Their Houfes are not partitioned into Chambers, nor have they any Garrets; but almoft one half of the Houfe clofe to the Walls is taken up all round, with a large Bench of an Ell high, and about two Ells broad, covered with red Matts; under thefe Benches pafs a Chimney, through which the Fire is kindled by the Door of the Houle, and the Smoak goes out at the other Side of it. And this Chimney in Winter ferves inftead of a Stove, though the Habitation is, not much warmed by it; but the Inhabitants which fit on this Bench in the Day Time, and lie on it at Night, are indeed fomewhat the better for it. There are conftantly in thefe Dwellings two fixed Iron Kettles, in one of which is warm Water to make Tea, and the other is referved for Boiling of Victuals. The Houfe is all round provided with fquare Windows, which are letticed with Paper inftead of Glais, and in warm Weather they are fer open with a

Stick to make Way for the cool Breezes to paif through the Apartment.
There People are generally well-hap'd, but more efpecially the Women. The Men, Women and young Girls, wear the fame Habit as the Manfourion Tartar's in Cbina. The Secretaries of the Mandaryns, which are in the Service of the Cban, and are fent hither or to any ocher Place in Tartary, whenever they are inclined to Venereal Pleafures, feize for their own Ufe as many Wives as well as young Virgins as they like, at Pleafure; and I have frequently feen them carry off the moft beautiful Creatures on Waggons, as to the Slaughter. Some Men being obliged to fend their Wives after thefe Courtiers, boaft of it as a very particular Favour, that they have the Honour to have fuch a Lord for their Brother-in-Law; but others, though perhaps not very well fatisfied with this Cuftom, for Fear of falling. into Difgrace and being punifhed, are obliged to bear it patiently, though a barbarous Pracice, efpecially amongtt a polite People.
Leaving this frontier Nation on the 28 th Infant, and fetting forward with the Mandaryn from Xixigar, by the Evening we reached a Village where we paffed that Night. On the 2gth we paffed through feveral Villages, and arrived on the other Side of the Falo, where it falls into the Naunda. We forded the falo without any Difficulty, it being but fhallow, bur the Nounda is very broad, ftrengthened with a high Sand and Earth Bank on each Side. The Stream is not very rapid, by reafon it is deep; its Water looks brown ; it abounds with Sturgeon, Jacks, and feveral Sorts of fmall Fifh; and feveral Morher of Pearl Shells are found on its Shoars.
On the 30th we turned off from the River Nounda, and left it on the Left; its Courfe is farther extended downwards, Eaft-South-Eaft, between large Mountains; but we travelled over Mountains of Sand and Earth till the Evening, when we firt reached the Mongalian Rivers. Thefe Mongalians are fubject to the Emperor of Clina. Here we were obliged to content ourfelves with the Water we took out of Wells or Pits," which did not indeed look very well ; and about twenty Huts were erected in the open Field, and covered with Felts, for me and my Retinue; in each of which Cottages an Iron Kettle was fet on the Fire, and a Mongalian appointed for our Service.

Near this Place we found three Ooferes or fmall Lakes of ftanding Water, which were utterly ufelefs, by reafon the Water was brackih in Tafte, and in Colour as white as Milk. Here the Land began to appear high and mountainous towards the Weft, whilit Eaft and Southward the Low-downs prefented themfelves to our View ; and we were forced to make fhift with Well or Pit-water, which was very bad, there being no Rivers near.
4. After four Days travelling without the Sight of fo much as one Houfe, we came to an old ruired City, encompaffed with a Quadrangular Mud-Wall, about a German Mile in its Circumference. The Land appear'd hitherto both Eaft and Weft as before; and after fix Days more travelling over a Hilly Country utterly deftitute of Houles, we reached another old defolate City, called Tainingzingb, fortified with a fquare Wall, and Bulwarks: There are in it cwo Towers or Turrets, one very high and the other lefs: The largeft was an Octagon, the Front of which was built with Brick, and about ten Fathom from the Ground, there was, on each of the eight Sides, Stones placed, on which were carved feveral Hiftories. Upon fome of them are expreffed fome great Perfonages or Kings, as big as the Life, fitting with their Feet under them, and Attendants on each Side of them: Others thew us feveral Figures which feemed to reprefent Queens folding their Hands together, with their Servants on each Side; the Queens having Crowns on their Heads, and the other being adorned with Rays or Luftres, as Saints are commonly painted, and allo folding their Hands; all which feems to hint that this Tower muft be built by Chriftians.

Other Parts of it reprefented Warriors with Pikes, after the Cbimefe Manner, and the King bare-headed,
in the middle with a Scepter in his Hand, and all the By-ftanders appearing with hideous Diabolical Vifages, and the Proportion of all thefe Images fo exactly obferved, that they looked like the Works of European Mafters.

This Turret was perfectly clofe on all Sides, with no Kind of Afcent without, or Entrance into it. Several large Heaps of Bricks lay in the City, befides a great many Stone Statues as big as the Life, in the Figures of Men and Idols, Grave-Stones, great Stone Lions, and Tortoifes of an uncommon Largenefs; by all which this feemed to have been a Place where fome Cbon or King had formerly refided.

One Part of the City was divided from the other by an earthen Wall; the Bulwarks were extraordinary large and high, and this great City had but four Ports or Entrances, into which ran Multitudes of Hares, as far as the Grafs grew, there being fcarce any Men in the Town, or rather Village erected within the Town of late by the Tartars.

The Cbinefe relate, that many hundred Years palt, Utaichan, or Un-Cban, a Tartarian King, governed here, but was conquered and driven out of his Country by a Gbinefe King. The City, as near as I could guefs, was above a German Mile in Circuit.

In feveral Places amongtt the Mountains we obferved Brick Turrets ftanding, which feemed to be ancient Burying-places of the Tartars. In thefe Hills I obferved an infinite Variety of known and unknown Plants, extending for the Space of feveral Miles as thick with Thyme and Marioram as Grafs.

After having travelled four Days farther, we came to Burgan Koton, or Idol City as it is called, which is likewife utterly laid watte: It takes its Name from being a Place where formerly only the principal Heathen Priefts lived. It had a Mud-Wall, moft of which is at prefent fallen down. In the middle of the City is a high octangular Stone Turret, built in the Cbinefe Manner, and hung with feveral hundreds of fmall Iron Bells, which whenever the Wind rifes a little, chime with a Silver Sound, which is very agreeable. There was an Entrance into this Steeple, by which I fent fome of our People up, to fee what was to be found in it: They informed me, that in feveral dark Holes, they faw many thoufands of Cbinefe or Heathen Idols of feveral Shapes, and that they were very glad they were got back again. On one Side of this Turret were leveral Holes, out of which the Stones had fallen by the Decay of Time; and thefe Holes were filled with Infcriptions by the Mangols, in the Eaft Tartorian Language, which were placed there by the Travellers that paffed by that Way, particularly by their Lama's or Priefts; for others who cannot write fatisfy themfelves with fetting up Figures moulded in Clay.
5. Halt a Mile from hence is a Cbinefe Village, moftly inhabited by Lama's, (for where the Corps is thither the Eagles flock) they entertaining all Tartars travelling this Way, and inftructing them in the dark Errors of their ancient Idols. We paffed on over fandy and downy Land, on which was a low Hill, with fome old Birch-Trees fanding on it: This Hillock is according to their Manner eftéemed facred by the Mongalians and the neighbouring Tartars. And thofe who travel by it, as a religious Offering in Honour of this Place, in order to obtain a good Journey, hang fomething which they have about their Body here, either Caps, Cloaths, Purfes, Boots, Breeches, Shirts, Switches, $\mathcal{F}^{\circ} c_{0}$ upon the Trees, which from the Top to the Bottom are fo full charged with this Trumpery, that they feem to be Shops; and it is chought very fcandalous to remove any of them, for they muft hang and rot upon the Principle of their Religion.

At laft we came to the River, which is called Schara Murin or Yellow Horfe; which proceeds from the Weft, and falls Eaftward into the River Karga: It is about thirty Fathom broad, and fordable with Camels and Horfes. Advancing farther we came to the River Logaa, which rifes in the South, and falls into the mentioned Schara Murin. The Land here on each Side is rocky, but in the Valleys are fome fine Villages, and well cultivated Grounds, Profecuting our

Journey we came to a large Village, in which was an old fallen Cbinefe Idol-Temple, without any Idols in it; as alfo another in which a great Lord lived, who was married to one of the reigning Emperor of Cbina's Daughters. After this we reached a fmall City called Kara-Katon or Black City: Which is Quadrangular, and encompaffed with Oaken Pallifadoes driven into the Ground; which ferve rather to defend it from Tygers and Leopards than the Enemy: The Land all about being covered with high Rocks, on which grow Thickets of Oaks, and great Quantities of Grafs, where Multitudes of thofe Beafts harbour, as well as wild Swine and Harts; for which Reafon, from hence to the great Wall, is thought fo dangerous, that no Perfons venture to travel it by Night : And all the Horfes, Affes, Ca mels, and Cows have Iron Bells faftned about their Necks, which fomewhat frightens the Tygers. The Inhabitants told us alfo, that frequently, Men that have only gone amongft the Hills in Day time, have been torn to Pieces: Wherefore the Mandaryn cautioned me to give Order that none of my Attendants fhould venture to turn out of the Road, or go amongft the Hills, that they might not be devoured by there wild Beafts, who by Day harbour on the Mountains Tops, and by Night go in Search of their Prey, and are then exceffively bold and ravenous.
6. The Emperor of Cbina annually in Auguft comes a Tyger-Hunting to this Place, accompanied with two or three thoufand of the beft Archers in Tartary, and a Party of Lancers. When the Tygers are to be put up, the Emperor himfelf goes to the Foot of the Hill along with the Men that attend him armed with Lances, Bows, and Arrows, who inveft the Hill, and befet it very well up to the Top; and when they find the Tygers there, they feeing themfelves befet, endeavour by Leaping to break through the Croud, but are hunted with Drums and Bells till they come to the Place where the Emperor himfelf is, who fhoots down the Game with Bow and Arrow, without any Hazard of his Perfon; for if there happen but the leaft Danger, he is encompaffed with fo many Men, that they eafily defend him from the wild Beaft with their Lances. The Emperor paffes fome Weeks in this Sport ; by Intervals putting up alfo fome edible wild Game, as Swine, Harts, Roebucks, Hares, befides Wolves and Foxes. And this I have heard not only from the Inhabitants, but from the Jefuits, two or three of which were obliged to go this Progrefs with him.

We obferved hereabouts, in the Fields and Trees, a Sort of Birds, in Size and Shape very like a Heron, the Feathers of which are very beautiful, their Neck and Breaft being white, their Wings and Tail of a bright Scarlet, their Flefh firm and very good Meat; we faw alfo another Bird which was as big as a Parrot, his Bill crooked, his Tail a full Ell long, and chequered with all Sorts of fine Colours, but he is fo very wild that he will not fuffer any to come near enough to take him: Here are likewife Partridges with long Tails and beautiful variegated Feathers.

Not far from hence we came to a fteep Rock, the Afcent of which was very crooked and winding, and was for above two hundred Fathom hewn through by Men, and a Way cut which was feven Fathom broad, probably for the Covenience of Travellers, the other Side of this Rock, by Reafon of the deep Morafs, being impaffable. We paffed hereabouts continually by fteep Rocks, furnifhed with Oaks and Limes, and in the Vales Cheitnut and large Nut-trees as well as Vines grew wild. From hence we went forwards and came to a very high Rock, fharp-pointed at the Top, and, by reafon of its Steepnefs, impoffible to be climbed : On one Side of which, about half Way up, is an Idol Temple hewn out of the Rock: It hath four Windows, and inftead of Idols, we faw four Stone Statues in a fitting Pofture. It is not a little to be wondered how it was poffible for Men to come there, and perform fuch a great Piece of Work; the Rock on that Side being fo extraordinary fteep, that a Moufe cannot get up it. This Temple, according to the Report of the Inhabitants, hath been built feveral hundred Years.
7. On

7. On the 27th of OEtober we reached fome WatchTowers on the Pinacles of the Rocks, from whence we got Sight of the Zagan Crim, that is, the great Wall, which we came to on the fame Day. This really feems to be one of the Wonders of the World. About five hundred Fathom from this famous Wall is a Valley, each Side of which was provided with a Battery of hewn Stone, from one of which to the other a Wall about three Fathom high is erected, with an open Entrance. Paffing through this Fore-wall, we came to the Entry of the great Wall, through a Watch-Tower, about eight Fathom high, arched over with hewn Stone, and provided with mafly Doors ftrengthened with Iron: The Wall runs from Eaft to Weft, acrofs the Valley and up extraordinary high Rocks, and about five hundred Fa thom diftant from the other hath on the Rocks on each Side of it a Tower built on it. The Foot of this Wall was of large hewn Quarry-ftone for about a Foot high, and the remaining upper Part was compofed of Brick and Lime, but, as far as we can fee, the Whole was formerly built with the fame Stone. Within this firf Port we came into a Plain full one hundred Fathom broad; after which we came to another GuardPort, which had a Wall on each Side, and like the firft Wall, was carried quite acrofs the Vale ; and this, as well as the firft Port, was guarded by a Watch of Fifty Men. On the firft or great Wall ftands an Idol-Temple, with the Enfigns of the Idol and the Emperor flying on the Top of it. The Wall is full fix Fathom high, and four thick, fo that fix Horfemen may eafily ride a-breaft on it, and was in as good Repair as if it had not been erected above twenty or thirty Years fince; no Part of it being fallen, nor annoyed by the leaft Weed or Filch, as other old Walls are obferved to be.
8. After this laft Watch-Tower, we came into a Vale about three hundred Fathom over, on which grew fome large Willows, and on the Weft-fide, at the Foot of the Rock, was a magnificent Temple ; a Mufquetthot from whence we came to the City of Galcban, which is encompaffed with a high quadrangular Wall, but is not very populous. Here I was welcomed by the Difcharge of three Iron Guns, and continued all Night in the Suburbs. The Streets were fo befet with the Concourfe of People, that it was difficult to pafs them, being drawn together by the Sound of our Trumpets and Bagpipes, which feemed very ftrange to them, they never having heard any fuch Mufick before. In the Evening the Mandaryn fent to compliment me, and invited me to fup with him at the Royal Palace, where the Fmperor refides when he paffes this Way. Upon my coming thither, befides the Mandaryn, I found there the Governor and the greateft Officers of the City; and after we had drank fome Difhes of Tea, I was entertained with a noble Supper, all the Action of a Play, and a Specimen of Mufick, after their Fafhion, confifting of all Sorts of Kettle-Drums and ftringed Inftruments, which made a hideous, confufed Noife; fo that I could have rather wifhed myfelf at a Diftance, than near it. They fate on Stools by Couples, no more than two at each Table. Thefe Tables were finely japanned, and covered with exquifite Needle-work Silk Carpets. They ufe no Table-cloths, Napkins, Knives, Forks or Plates; but only two fmall round Sticks of Ivory or Ebony were laid upon the Table, which was its whole Furniture; but indeed they are fo wonderfully expert in the Ufe of thefe Sticks, that they can with them take up any Thing, though of the Size of a Pin's Head. They hold them in the Right-Hand betwixt the Thumb and the two Fore-Fingers. All their Victuals, whether Soops, Rice, ftewed or roafted Meats, are brought to Table in Cbina Veffels, and not in Difhes : Each Sort of Roaft is ferved up alone, cut into fmall Pieces; but the Banquet of Sweet-meats and Fruit was difhed up in little Cbina Bafins. Their Soops and Pottages are extraordinary grateful to the Tafte, as being enriched with very delicious Herbs and Spices, as Mace, Cinnamon, $\mathcal{E} c$. The Herb they boil in their Soops grows on Rocks in the Sea, and, being boiled, appears flimy, and when dried is green, as it alfo looks in the Vol. II. $\mathrm{N}^{\circ}$ CXXXIV.

Soopṣ. This Plant hath no Leaves, but grows with interwoven Branches, and is of a very agreeable Tafte, and efteemed very wholefome; fome think it to be abortive Satyrion or Birds-Neft. They alfo drefs ftrips ped Shrimps, and Pigeons Eggs with the Whites tinged red and yellow; they have befides fine Salleting, efpecially Endive cut in fmall long Slips, being very agreeable both to Tafte and Smell; this they lay uppermoft in their former Difh. Their Soops are not to be mended by our German Cooks, or perhaps any other.

Inftead of Saltfellers, they have fmall Saucers of Pickle or Brine, into which the Meat is dipped. By reafon they ufe no Spoons, each Peafon takes the Cup of Soop fet before him, and fups it up; but that Part, which is too grofs, he guides to his Mouth with the round Sticks, that nothing may run befides or foul their Cloaths, ufing no Napkins, though indeed their Hand kerchiefs hang by their Sides, with which they only wipe their Mouths.

In the publick Eating-houfes or Ordinaries the Carver ftands at the Table with the Roaft-Meat before him, which, in Prefence of the Guefts, he cuts into fmall Bits, puts them into little Cups, and fets them on the Table. This Carver makes Ufe of no Cloth to wipe his Hands, but cuts off what is beft dreffed round the Bone as long as he can, and tears off the Remainder with his Hands, which are greafed up to the Elbows fo plentifully, that the Sight of them alone is enough to give the Spectators a Meal, more efpecially fuch as have fqueamifh Stomachs.
Their Drinks are Brandy, which they call Arakka, and a Sort of Wine they drink warm, called Tarafu, which is a Decoction of green or half-ripe Rice; and after it hath been kept a Year or two, in Colour, Tafte, and Strength, is very like the befh Rbenijb Wine.

Whilt we were at Table, the Mafter of the Band of Players upon his Knees prefented the Mandaryn with a Book of red Paper, containing a Lift of Plays written in black Letters; which the Mandaryn perufing, told him which Play he chofe; after this, bowing his Head to the Earth, he arole and began the Performance immediately.

Firft entred a very beautiful Lady, magnificently dreffed in Cloth of Gold, adorned with Jewels, and a Crown on her Head, finging her Speech, with a charming Voice, and agreeable Motion of the Body, playing with her Hands, in one of which the had a Fan. The Prologue thus performed, the Play followed, the Story of which turned upon a Cbinefe Emperor long fince dead, who had behaved himfelf well towards his Country, and in Honour of whofe Memory the Play was written. Sometimes he appeared in Royal Robes, with a flat Ivory Sceptre in his Hand, and fometimes his Officers thewed themfelves with Enfigns, Arms, and Drums, E' ${ }^{\circ}$ c and by Intervals a Sort of Farce was acted by their Lacqueys; whofe antick Drefs, and painted Faces, were as well as any I have feen in Europe; and, as far as was interpreted to me, their Farce was very diverting, efpecially Part of it, which reprefented a Perfon who had in his Marriage been cheated by a debauched Wife, and fancying her conftant to him, had the Mortification to fee another make Love to her before his Face. They alfo, according to their Manner, danced to the Lute; and after three feveral Plays were acted, and it grew towards Midnight, I took my Leave, rid Home, fet forwards on my Journey the following Day, and over a floating wooden Bridge paffed the River Lunga, which comes from the Weft, and flows South-Eaftward into the Sea of Corea.
9. Upon my Arrival at the City of Xantunnung, near thar of Lania, we were welcomed by the Difcharge of feveral Guns, and lodged in the Suburbs. The Mando. ryn fent to compliment and invite me to Supper, in Compliance to which, in Company with the Governor and principal Officers of the City, I went accordingly, where I was fplendidly entertained at the Empeo ror's Country Palace, and again diverted with Farces. On the fame Day we paffed the Xungo, which alfo rifes II 5
in the Weft and flows Eaftward near the City of Lania, and happily reached the City of Xonturnung Time enough to lodge there, where, as in the other Cities, I was entertained by the Mandaryn at the Imperial Apartment with a Supper and Play till Midnight. Next Day I went on, and paffed a Morafs, over which lay a very fine Stone Bridge, with numerous Arches, all of 'fquare Stone, and adorned with all Sorts of Imagery, but efpecially Figures of Lyons. We paffed through feveral confiderable Towns and large Villages, all of which were very populous, and very conveniently provided with Horfes and all Manner of Neceffaries for Travellers; here we obferved more efpecially great Numbers of Inns, Cooks-Shops, and Tea-Houfes. In the Evening we came to the City of Xungunua, where the Mandaryn, as before, invited me to Supper; but being indifpofed, and very much tired with a tedious Day's Journey, I civilly refufed him, and ftaying at Home, refrehed my felf with the charming Fruits of that Country, fuch as Grapes, Limons, Oranges, Apples, Pears, Cheftnuts, large and fmall Nuts, $\xi^{\circ} c$. all exquifite in their refpective Kinds.
The following Day we travelled up a high Rock, paffing by the Temple called Fugangu, the Front of which appeared very beautiful, being all of fquare Stone, and feemed to be a flrong Fort or Caftle. Next Day we paffed on the left Hand or Eaft Side over a high Mountain, by a beautiful Cloyfter, and feveral Towns and Villages. This Temple is in the Province of Peking, and very famous, by Reafon the Image of an ancient Cbinefe King, or falfe God, is kept there, which induces feveral Husbandmen, not only from the neighbouring Villages, but even as far as the great Wall, to come hither in Pilgrimage in the Spring to implore a fruifful Summer, and after Harveft to thank their Deity for a good Crop; to perform which Office whole Villages and Families refort hither with their Priefts. The Women being dreffed in their beft Apparel ride on Affes in the Middle of the Proceffion. The Priefts carry painted and metallick Reprefentations or Images of feveral Idols; and fome of the Men carry a Sort of long Trumpets, others Flutes, Drums and Kettle Drums, with which they make a horrid Noife. They are all followed by a Lama or Idolatrous Prieft, with a Basket fattened to his Body, in which he carries triangular folded Papers, fome gilded and other filvered over; thefe he fcatters on the Way about roo Fathom from the Cloyfter, in Honour of this Wonder-worker or Idol. Another carries burning perfum'd Tapers, which laft till they come to their defigned Place. Thefe Pilgrims ftay feveral Days there, pafing their Time in all Manner of Diverfions as well as Devotions.

Profecuting our Journey we paffed by a City inhabited only by the Emperor's Concubines, and their Retinue, where that Monarch fays feveral Days when he goes a Hunting. The City is not large, but hath a great many fine Stone Palaces covered with red Tiles; is full of Idol Temples, and encompaffed with a high Stone Wall. About chree Cannon Shot Weft of this Place is a Spring of boiling hot Water, of which a hot Bath is made.
10. After having paffed many Towns and Villages, we came the next Day to Kixa. Here the Hills on both the Eaft and Weft Sides of us began to difappear; though on the Mountains, on the South-Eaft and Weftern Sides, we could yet fee the great Wall. Going from hence we pafled over a Stone-Bridge on the River Xangu, and repofed that-Night at Xangole.
Oni the 2d of November we paffed through feveral Towns and Villages, and over a Stone Bridge over the River, Tungo, which brought us to the City of Tunxo, which is fortified by a great Wall, and is fituate clofe to the River Tumgo. About as far as the mentioned Bridge, the Governor of the City and principal Officers, with a great Train of Horfemen, came to welcome me. The Mandaryns told me that this Governor was a very great Nobleman, by Birth a Mongalian, or Eaf-Tartar, and a very affable, well bred Man . He invited me and the Mandaryns to Dinner, and gave us a noble Entertainment, fuitable to his Quality and Character.

The City of Tunxo is very large, populous, and a Place of great Trade, by Reafon of the Water-Carriage from thence to fapan and the Provinces of Nanquing and Corea. On this River, and haled on Shoar by its Sides, lie a great many Jonks ; befides feveral which belong to the Emperor, and are richly adorned with carved Work, Galleries, and Windows. In thefe Barges the Governors of Places are carried to their appointed Cities, landed, and afterwards brought Home again. Thofe Jonks which are haled on Shoar are inhabited in Winter like Houfes, though there is indeed but very little Winter here, nor doth the River ever freeze up, though fometimes Ice appears on the Shoar. Thefe Jonks or Barks are indifferent large, and built very ftrong. When they lie on the Wharfs the Joints, inftead of Picch and Tarr, are ftopped and fmeared over with a Sort of Clay mixed with fome other Ingredients, which once dried keeps fafter and firmer than any Pitch, The Mafts are a Sort of Bamboes, hollow within, but yet very ftrong; and fome of them are as thick as an ordinary Man's Wafte. The Sails are a certain Sort of Rufhes woven together, that when furled, fold up as pliable as Flags, which is fomewhat furprizing. The Forepart of thefe Ships is very flat, being built Archwife from Top to Bottom, and very conveniently fitted for the Sea. Infomuch that, according to the Report of the Inhabitants, with a good Wind, in one of thefe they can' reach the Koreaccibian Sea in three or four Days; and fuppofing the Wind favourable, can in four or five Days Sail, gain from thence to the Kingdom or Empire of Fapan, fo litcte are they Novices in Sailing.
Paffing thro' this City, I rode thro" the Cbina Earthen Ware Marker, where I faw vaft Quantities of the fineft Porcelain in the World. I alfo obferved Abundance of Pagods or Idol Temples and Cloyfters; and after I had lodged a Night in the Suburbs, and got every Thing in good Order, departed next Day, and proceeded forward till I entred Peking, this being the laft Lodging-Place in my Way, to that celebrated Capital of this extenfive Empire.
As our Author contents himfelf with fpeaking only of thofe Things that he has feen, and fays no more of them, than what he has feen, I thought it would not be difagreeable to the Reader, if, upon his mentioning fo great a Market for Cbina Ware, I took the Opportunity of inferting a fhort Memorial, that has lain fome time by me, upon this Subject, as it may otherwife run the Hazard of being loft ; and as I am perfuaded, that, upon Perufal, it will be thought worthy of a better Fate, the rather, becaufe at prefent we have nothing very diftinct or very methodical upon this Subject, except in Du Halde's Hiftory of Cbina, where it is fpun to fuch an exceffive Length, that very few People will be at the Pains to read it, and I know fome that have repented of their Perfeverance. Without farther Introduction then take this Memorial, which runs thus.
"There are very few Subjects that deferve more At" tention or Care to be beftowed upon them, than " the Efforts of the human Underftanding, in producing " and perfecting ufeful Arts. Amongft thefe there are " but few that deferve the Preference of Porcelain or "China Ware, fo univerfally admired upon its firf Ap" pearance, which has kept its Credit now for the Space " of two Centuries, and which is generally efleemed, not" withftanding the vaft Quantities of it that are con" tinually imported, as much as when it was firft known. "It is indeed true, that a great Part of its Value is " derived from the Opinion of the Ladies; neither can "I think that this is any Objection to it, for on the " one Hand, they are the moft converfant with it, and "' on the other they are the beft Judges.
"Their Sentiments therefore ought to fix it in our "Efteem ; but while they confider it in the Light of " a beautiful Curiofity, it may deferve our Pains to " encuire into the principal Points that regard it, which " cannet be done without a tolerable Share of diffe's rent Kinds of Learning. I dare not therefore prefume "to hope I fhall be able to fet the Subject in the ful"left and mooft perfect Light, but if I lead the Way, "s and trace out a proper Method of Handling it, "I conceive that I hall not lofe my own Time, and

## 

## Chap. III.

os that poffibly I may excire fome Mafter of a better
"s Pen to do that Juftice which ir deferves to fo enter*s taining and fo uleful a Subject.
" In the firt Place, we will confider the Excellency "s of Cbina Ware, a Thing that has ftruck fome of the " learned fo much, that according to their ufual Cuftom,
os they would needs entitle the Ancients to it, jutt as they
" have beftowed upon them, the Ufe of the Compafs and
"s of Telefcopes, without confidering that there leaving " no clearer Teftimonies of their Titles to fuch admi"s rable Inventions, does them infinitely more Difcredit
"s than the Notion of their Want of them. According
ss to the Sentiments, or rather to the Whim of thofe who ss doat upon Antiquity, the Vafa Myrrbina ought to be
" trannated Veffels of fine Porcelain. Thefe were firft
os feen at Rome in the Triumph of Pompey, and were "s afterwards efteemed valuable, I might lay invaluable © Curiofities.
c This gives us indeed a very high Notion of the os Excellency of Cbina Ware, but I am very much afraid
cs no very juft one; for if Pliny, who with Refpect to
c Things he had feen, was certainlya very juft and a very "s exact Author, has given us a right Defcription of thefe
c Veffels, they were of a Kind of precious Stone, which
" had a white Ground, interfected with Veins of different
"Colours, which Stone was found, as the fame Author
"s tells us, in fome Parts of Perfia; fo that, except their
" being very fine, of a vaft Price, and coming from
s the Eaft, there are no Arguments to prove that they
sc were Porcelain. But however that Matter may be,
sc moft certainly if the Ancients had any Knowledge
"s of this kind of Ware, they thought it inimitable,
cs for as yet I have not met with any Antiquary that
es has ventured to affert the Romans themfelves made
"s any Thing of this Kind, and yet they were not Noss vices either in the Art of Earthen Ware.
« It is true, that in Perfia they carried fuch a Manu" facture to a great Height, neither is it yet loft among
" the Inhabitants of that Country, who make a very

* fine Sort of Earthen or Stone Veffels, which would
s be imported, and highly valued in Europe, if, notwith-
" ftanding their Beauty, they did not fall very far fhort
"6 of Cbina. In America alfo, and efpecially in the
"s very Heart of Mexico, they make extraordinary hand-
s6 fome Veffels, of a kind of red Earth, little if at all
" inferior to that of the fame Kind, which we receive
"from the Indies; but ftill this is nothing to the Pur-
s pofe, for with Refpect to the Finenefs of the Grain,
s the perfect Tranfparency, the fnowy Colour of the
" White, the wonderful Beauty of the other Colours,
"s Blue efpecially, the Dexterity with which they are
sc laid on, or rather wrought in, and the Strength and
" Soundnefs even of the thinneft Pieces, no Manufac-
"s ture that has been hitherto feen, can be truly faid to
ss vie in Excellency, if I may be permitted that Ex-
s preflion, with the Ware of Cbina.
"s The French indeed have boatted, for what is there " which they will not boaft? that they have come up to "s it, but it is in their Eyes only. At prefent great Part " of the World is perfuaded to prefer the Drefden Ma": nufacture, for which, the beft Reafon that can be " given is, that it is more coftly. But with regard to "the Properties before-mentioned, for as to other "Properties I conteft not, Cbantilli and Drefden muft " both yield. Yet if we confider what a Spirit of Imi" tation the bringing over this Ware has excited, what " wonderful Advances our Potters have made, and
" what a new Field of Induftry this has opened in Eu-
"rope, I prefume there are few Politicians who will not "s agree with me, that we have no great Reafon to re" gret the Silver it has coft us. In this Light, when "we confider Luxury, we perceive that the Wifdom "s of Providence continually extracts Good from Evil, "s and that Nicety, Elegance, and even Profufion, are " made the Parents of Labour, Diligence, and a com" fortable Subfiftence to the Poor, who at firft Sight "feem to be injured by thofe Vices, which, in Reality, " and without the Intention of the Vicious, turn to os their Benefit and that of the Publick.
" But not to dwell too long upon moral Refections; " which however have their Ufe, and ferve to convince " very well-meaning People, that the Notions they re"receive, under an Appearance of Truth, are at the "Botiom frequently groundlefs. I fay, to leave thefe "Reflections, let us confider next the Antiquity of "Cbina. It was firft imported by the Portuguefe, and "came from Lifoon, in very fmall Quantities, to the "feveral Courts of Europe. Cavendifh, the famons "Traveller in the Reign of Queen Elizabeth, is held " to be the firft that prefented his Royal Miftrefs with "Veffels of that Ware, which came directly to England. " Thus far our Journey is eafy, but at the fame Time " it is very fhort: We have traced its Naturalization, but "the Difficulty is to fix its Origin in its native Coun"try, which is a Point of Difficulty indeed. Thofe " who pretend to be beft acquainted with the Cbimefe "Story, cut the Knot, which they cannot untie, and "s tells us very bluntly, that there are no Records of this " Invention extant. Men of more Modefty perhaps "s would have faid, that hitherto no fuch Record had "s reached their Hands, for fome other Accounts that
" they give us, leave us not altogether without Hopes, s that this Tale may be one Day contradicted.
" A Perfon, well verfed in Cbinefe Learning affures " us, that there is not a Province, a Diftrict, nor even " a City of Cbina, where they have not a natural, a " civil, and a political Hiftory of the Place; in the "former they fet down all that Nature produces, and " all the Improvements made upon her Productions by "Art. In the fecond, they give Place to all the re-
" markable Perfons, Male and Female, that, in the " Courfe of Ages, have dwelt therein, and the Acts for " which they became famous. 'In the third, they " preferve the Succeffion of their Governors, the moft
"s remarkable Events that happen, the Privileges they
" obtain, and the Misfortunes they fuffer. Now and then "' it is faid, that a Purfe of Gold diftates to the Scribe, " but a fpecial Mandaryn, who is a Native of the Place, " is fent once in forty Years by the Emperor, who, in "Conjunction with the Perfon then intrufted with the " Adminittration, reviews thefe Memoirs, and ftrikes " out all the Paffages that there is any Reafon to fuf" pect ought to have been writ in Gold Letters.

In Records fo curious, and written with fo much Cir"، cumfpection, we might expect that a Line at leaft fhould " have been fpared to fo efteemed and fo important an "Invention. It may be, there is fuch a Memorandum as " this, though hitherto it has efcaped the Curiofity of "s the Jefuits, yet one of thefe Fathers, more happy " than his Fellows, has come pretty near it, and af"fures us, that fince Anno Domini 442, the Cbinefe "Emperors have taken this valuable Manufacture more " immediately under their Care, and have appointed two cs Mandaryns, to infpect all that is furnifhed for the "Imperial Ufe. With this then we muft reft fatisfied, " till we receive fome better Information.
" But here I muft have Leave, to obferve that though "Porcelain and Cbina, Ware; are with us fynonimous " Terms, yet they are not fo in that Empire, in all the "Provinces of which they make Earthen Ware, but not " in above two or three they make Porcelain, or what "s we call Cbina. The Place where it is made in the " greateft Perfection, in the Cbinefe Manner of Wri"cing, is called Kim te tcbim; the laft of thefe marks s only-the Nature of the Place, and fignifies, that " though it is much beyond a Village, yet it is not a -6 City. It would lead us too much out of the Road to " explain this largely, and therefore it may be fufficics ent to fay, that it is a great Town, and, like Manchef"ter in our own Country, owes the Figure that it " makes to the Ingenuity and Induftry of its Inhabi"t tants. It feems there is fomething peculiar to this c Place, which renders it fitter for the Manufacture of " the fineft Cbina than any other; for when many of ${ }^{6}$ the Inhabitants, for the Sake of Gain, removed to $A$ "moy, then the only Port open to Strangers, in Hopes " of carrying on their Trade to greater Advantage, "s they were able to make nothing of it; and when by
${ }^{6}$ " the Emperor's Command, they were removed to $P e$ " king, and all imaginable Care taken to furnifh them "6 wich proper Utenfils and Materials, to intitle the
${ }^{6}$ Capital to fo valuable a Branch of Trade, the fame

- Misfortune happened to them, and the Emperor very
"6 wifely determined thereupon, to leave the Porcelain
" Manufacture where Chance or Nature placed it.
"Thus much may fuffice in Regard to the Origin
"' and Antiquity of this elegant Manufacture ; for tho'
"' more may be expected, yet I know not where it is
${ }^{6}$ to be found: Perhaps in Time, when the Cbinefe
"Learning comes to be regularly ftudied in Europe,
" we may come to have a clearer Infight into this Af-
" fair, fince though the beft China be made at Kim te
" icbim; yet as Perfection is not attained at once, it is
"s very highly probable, that the Art was invented elfe-
"s where, and that the particular Hiftory of the Place
" of its Invention may hitherto have efcaped the Inqui-
" ries of the Europeans. We will now fay a Word or
"two as to the Name of this Manufacture. Some
" have imayined that Porcelain was either a Derivation
" or Corruption of the Cbinefe Appellation; but this is
"s fo far from being true, that the Cbinefe have no fuch
s Sounds in their Language, and confequently no Cha-
"s racters to exprefs them. The Word is abfolutely
" Portuguefe, and in their Orthography is writ Porcel-
" lana. It fignifies literally and ftrictly fpeaking a Cup,
"s a Bafon, or a Saucer, and was firft applied to thofe
" Kind of Shells which we call Cowries, and which
"s paft for Money on the Coaft of Africa. The Infide "of thefe Shells having a gloffy, beautiful white Colour;
"6 when the Poriuguefe firt faw this admirable Earthen
" Ware, they beftowed upon it the fame Name, either
"s becaufe they thought it would give their Countrymen
sc an Idea of its Beauty, or poffibly from a Perfuafion
"s that it might be made of fuch Shells, or of fome
© Compofition that refembled them. As for the Cbi-
${ }^{66}$ nefe themfelves, the Word they commonly ufe to
"s exprefs what we call Cbina, is TJeki, or rather, accord-
s ing to their Manner of Writing and pronouncing it,
"TSe ki.
"6 We will now come to the Ingredients of which it
" is compofed. We had heretofore very ftrange Noti-
ss ons in Europe upon this Head; fome People were
"s perfuaded that Egg-Shells were the principal, if not
is the only Matter of Cbina, and that the Cbinefe were
sc extreamly careful and fecret as to the Method of pre-
"s paring it. After this another Fable was invented, of
" a kind of Clay that was fuffered to rot for one
"s hundred Years, after which Time, and not before, it
"s was fit to make Porcelain. This Story it is thought,
" took Rife from the fuppofed Difference, between new
"s and old Cbina, which was to be accounted for thus;
"s the former, for the Sake of Expedition, and to fup-
"s ply the increafed Demand for this kind' of Ware, was
" made, if we may be allowed the Expreffion, of half
"ripe Clay, and therefore fell fhort in Beauty of the
"s latter, compofed of Clay that had rotted its full Time.
"Some other Notions I have met with in German
" Writers, which are not worth repeating, as being
"f founded like the former purely in Fancy and Con-
${ }^{6}$ jecture.
"What I have to offer as more fatisfactory, has ne" ver yet appeared in our own Language, and is ta-
"ken from a fhort Treatife written upon this Subject,
"6 by Dennis Kao, a Cbinefe, converted to the Chriftian
"R Religion, and is the more likely to be true, becaufe
" it is very fimple and intelligible. There are, exclu-
" five of the Colours, three principal Ingredients in
" Cbina; and not to trouble the Reader or myfelf with
"Cbinese Terms, which neither of us would underftand,
"I fhall tell him in plain Englijh, that thefe Ingredi-
${ }^{66}$ ents are a dry Earth, a moift Clay, and a ftony Oil.
"It is very remarkable, that not one of thefe Ingredients
" is to be found in the Neighbourhood of Kim te Tcbim,
"s where the beft Cbina is made, but are brought thither
"f from feveral Places; and it is thought that the Situa-
"s tion of that Place, furrounded, though at a moderate
" Diftance, with Hills of confiderable Height, has fome-
"thing fo peculiar in the Temper of the Air, and in
"6 the Quality of its Waters, that thefe Ingredients, " wrought with ever fo much Diligence and Circum"f fection in another Place, never fucceed fo well. Be 's this as it will, we will keep clofe to our Subject, and '6 fpeak diftinctly of each Ingredient.
cs That which is ftiled a dry Earth is in Reality a kind
"s of Fire-Stone cut out of Quarries, and fent by Water
" to the Place where the Manufacture is carried on.
"s There it is beat to Pieces, and reduced into a grofs
" Powder; then with an Iron Peftle it is beat in a Brafs
" Mortar till it becomes as fine as poffible but they do
" 6 not give themfelves the Trouble of Sifting, from an
" Apprehenfion that the fineft Parts would fly off in
" the Operation. On the contrary, they throw it, thus
" " beaten into Water, and giving it Time to fettle, fkim
"s off, with great Nicenefs and Dexterity, the Crean,
"s and this, in their figurative Way of fpeaking, they
"ftile the Flefh of the Cbina. As for the moift Clay,
" it is undoubredly a kind of Fuller's Earth, for they de-
"frribe it to be of a greyifh white, very even, clammy,
"s and, in fhort, a Sort of natural Soap. This is like-
" wife brought by Water, and is, generally fpeaking,
" made up in the Form of Bricks; but as the Cbinefe
"6 are for the moft part ftrongly tinctured with the Spi-
"s rit of Fraud, they very often adulterate this precious
"Clay, though it is not of a very great Price, with
"s other Things that are however of lefs Price; and this
" obliges the Manufacturers to be at a great Deal of
"6 Trouble in refining it, which is done by the Help
"s of Water; for it is a fettled Rule, with Refpect to
"s thefe two Ingredients, never to make Ufe of Fire
" This moift Clay is intermixed naturally with a
"S Sort of fparry Subftance, which to the Eye looks like
" the Infide of Oyfter-Shells, and with which the whole
"s Mafs is fo thoroughly impregnated, that when it is
"s purified and cleanfed from all other Mixtures, the
s fmalleft Particle of it, if broken, will difcover Spects "s of this fparry Matter. This fecond Subftance, when "perfeetly pure, they diffolve in Water till it has ac"s quir'd the Confiftency of the former, and this they "call the Bones of the Cbina. For the fineft Sort thefe
" Materials are equally mixt and incorporated; for
"s the middle Sort, there are three Parts of dry Earth
's to two of moift Clay; for the coarfeft Cbina,
"s they mix three Parts of the former with one of the
" latter.
" The third. Ingredient is the Oil which is drawn
"s from the dry Earth or Stone, by a very curious Procefs,
"6 and this, they mingle with another Oil extracted from
"6 Lime feven times burnt. There is a very great Art in
" making this Mixture, for in certain Proportions thefe
" Oils will incorporate, but thofe Proportions vary con-
"s tinually, according to the Nature of the refpective
"s Liquors. The great Point therefore is to hit this exactly
" 6 and when this is done, there refults from thefe two
"Oyls a third, which is the laft Ingredient, and ferves
's for a Varnifh to the Cbina.
" In the Manufacture the feveral Pieces go through dif"6 ferent Hands, but the moft troublefome Part is pre"s paring the Pafte, compofed of the two firf Ingredi" ents, which are kneeded together upon Tiles, or ra"s ther upon Floors made of Tiles, till they become fo "s clofe and even, 'that, upon breaking, there does not "s appear the leaft Vacuity; for a Hair, a Grain of Sand, "s the fmalleft Fragment of any Metal, if taken up in " the Pafte, will infallibly fpoil the Piece into which it s happens to light.
"When all this is performed, it comes into the " Hands of the Potters, who firlt adjuft the Weight of " what they are to make, and then raifing it in a rough
"Way, paif it from Hand to Hand, every Man taking "6 that Share of the Work, in which his particular Ta"6 lent lies; fo that one applies it to the Mold, another "s pares it with the Chiffel to a proper Thinnefs, a third "f fmooths its Edges, and, in this Manner, a Cup and
"Saucer thall fometimes pafs through feventy Hands.
${ }^{6} 6$ When it is clear of the Potters, it comes to thofe "s who give it the Oil or Varnifh, and with them it "s paffes from Hand to Hand, according to their vari"6 ous Capacities, and their Addrefs in finifhing different * Sorts of Work.
" The

Chap. III. from Musciovy to China.
"The Body of Painters receive it next, and as night " as we make of them, for indeed they have no other sc Inftructor than Nature, yet it is very wonderful how * much Care and Pains they take. One traces the
" Border, another gilds it, he who draws the Outlines *s of a Flower never colours it, one Hand paints Clouds,
"s another Water, a third Animals, a fourth Infects, a
sc fifth human Figures, and fo on. Latt of all it ar" 6 rives at the Furnace, and is committed to the Care sc of the Bakers; neither are their Tafks lefs difficult
" than thofe of the other Workmen, for an exact
"Knowledge of the Degrees of Fire, how to raife, how
" to diftinguifh, how to heighten, how to reduce them,
"s are requifite in thefe People, who poffels wonderful
" Talents in their Way.
" Befides the five feparate Corps, which make up ss what may be fliled, the regular Workmen in this * Manufacture, there are a Variety of Branches be-
© longing to it, that occupy as great a Number of Peo-
es ple, fuch as thofe who prepare the feveral Ingredi-
" ents, thofe that make the feveral Inftruments and
s Tools that are required in the Progrefs of the Work;
" thofe that diftil an Oil from traniparent Flints for
" the fuperfine Cbina, of which none comes to Europe;
s thofe that extrace and prepare the Colours, who are
" alfo exceeding skilful in their Way, are in-
"comparable in their Preparations of Blues and Reds,
" and underftand perfectly the Art of compounding,
" $f 0$ as by a judicious Intermixture of the primary
"Colours, to produce all the reft with Truth and
" Beauty. After what has been faid, the Reader per-
s haps will not think it alcogether incredible, when he
« is told, that in Kim te tchim, there are not fewer than
" one thoufand Furnaces or Laboratories; to each of
ss which belong diftinct Companies, of Workmen ;
s that the fettled' Inhabitants amount to eighteen thou-
cs fand Families; and that the Number of Souls main-
" tained by, and depending upon this Manufacture in
s this Place, is computed to fall very little fhort of a
" Million.
" If this had been laid down fimply, and as a direct " Matter of Fact, without premifing any Circumftan" ces, or bringing the Reader to reflect on the Me" thod in which thefe kind of Works are carried on, " it muft neceffarily appear a very improbable, if not " a very incredible Affertion; whereas now, when the " Thing is better underftood, and we have fome kind " of Grounds for our own Computations, it will wear sc quite another Appearance, and the clofer we look " into it, the more we fhall incline to believe that thofe, "s wo have affirmed this Fact, were neither impofed " upon themfelves, nor had any Inclination to impofe «s upon others.
cs It is allowed, that vaft Quantities of this Ware " are exported annually to Europe, which, like moft " other Branches of their Commerce, muft be extreamly
" beneficial to the Cbinefe, who in Point of Oeconomy,
"s mult be acknowledged the wifeft Nation upon the
"Face of the Globe: For though they love Magnifi-
"cence, are no Enemies to Pleafure, and indulge Soft-
" nefs and Luxury to a very great Degree, yet what
" the French call their Police, is fo extreamly well re-
" gulated, that thefe feldom or never create any Diffi" culties to the State. They encourage and work by
"European Patterns, from a very wife and judicious
"Notion of pleafing their Cuftomers; but befides the
" European Market they vend vaft Quantities of Por" celain elfewhere; as for Inftance, they fupply the " whole Empire of Fapan, they fend vaft Quantities by
" the Caravans into different Parts of Tartary, they
" fupply all India and Perfia; and the Dutch and Por-
${ }^{6}$ tuguefe take off very large Affortments for the $E_{u-}$ -
" ropean Settlements in the Eaft-Indies, and for the other
" Countries with which they trade.
"But notwithftanding this, the fineft, richeft and moft «s valuable Cbina remains in that Empire, and is not
" exported at all, or at leaft very rarely; there is par-
"ticularly a yellow Cbina, which is deftined to the Im-
"t perial Ule, and is prohibited to all others, tho' we ${ }^{66}$ are told, that the Grand Signior always eats out of Vos. II. $N^{\circ} 134$.
"s this kind of Porcelain; but how he comes by it, is a "Secret I have not been able to penetrate. They " have a kind of Crimfon China, which is very fine 66 and very dear, becaufe great Quantities of it are fooi" led in the Baking. They have another Sort of a " fhining White, purfled with red, which is done by a " dextrous blowing the Colour through a Gawfe, fo "6 that both the Infide and the Out is equally beautified "s with Crimfon Spots, no bigger than Hins Points, and " this muft be exceffively dear, fince for one Piece that " fucceeds, a hundred are fpoiled. They have Cbina " purfled in the fame. Manner with Gold, which is " highly valuable for the fame Reafon. They have-a " kind of Cbina, which by drawing Lines with a Hair "Pencil, dipped in Oil of Flint, before it is varnifh" ed, looks like Mofaic Work, or as if the Cbina " had been cracked thorough in a thoufand Places, and "s was fet together again without Cement. They have "s a kind of Violet colour'd Cbina, with Figures com"s pofed entirely of green Specks, which is done by " blowing the Colour at once through a Figure pierced "s full of Holes, and this fucceeds fo rarely, that a very "6 fmall Bafon is worth two or three hundred Pounds. "They have a kind of white Cbina, exceffively thin, "6 with blue Finhes painted on the Metal between the " Varnifh, fo that they are invifible but when the Cup " is full of Liquor.
" It is reported that the Secret of making this Cbino " 6 is loft, and that vaft Sums have been fpent in endea"s vouring to recover it. I muft confef' I doubt much "s of this, as well as of another Circumftance univerfally " believed, which is, that the old thick, and as the "Cbinefe very properly call it, filent Cbinc, becaufe " though perfectly found it will never ring, is a Curio"fity not to be attained in our Days. Father Antbony "Solis, a Portuguefe Miffionary, who refided forty "Years in Cbina, and died at Macao, wrote a Treatife " which was never printed, though it very well deferved ' it of the Erauds of the Cbinefe, and amongtt thefe " he reckons old Cbina. He tells us, that no Country " " in the World abounds fo much with Virtuofs as this, " and that thefe People, by giving high Prices for an"s tique Cbina, have brought it into great Credit, but "s that by the Help of a yellow Clay, Oils of feveral " Kinds, fome of which are Metallick, and laying the "Cbina for fome Months in Mud as foon as it comes "from the Furnace, they produce the very fame Sort " that is fo highly valued by the Vulgar, for being five "6 or fix hundred Years old. But after all, it is a moft "6 high Perfection in this Ware, that it is capable of en" during fo long, not only without Lofs, but with an - Acceffion of Beauty; for though the Luftre of the Co" lours decay, yet this is more than compenfated by ' that Softnefs and Mellownefs, which refults from that ' kind of Fading; and the Art of procuring this Degree of Elegance in a fhort Space, is a wonderful "Proof of the Application, as well as Ingenuity of ${ }^{6}$ this Nation.

There is but one Thing more that I fhall add to ' this Difcourle, and that from the fame Author; it is a " Defcription of an ancient Painting making one Side " of a Summer-Houfe, thirty three Foot in Length, and "f feventeen in Height, which feems to be a fingle and "s perfect Plate of Cbina, though it is certain, that they "can bake nothing of any Thing like that Size in a "s fingle Piece. But upon a ftrict Infpection, it appear'd. ' to be a Wall made of Cbinc Bricks, the Face paint. 6 ed, varnifhed, and thoroughly baked by a Fire " raifed before it, and kept up a proper Time. It ap" peared by the Hiftory of the Town, that the Mandaryn, at whofe Expence it was done, failed twelve " Times in the Attempt, and that this was the thirteenth c Wall of this kind that had been erected.
" Every Trade in Cbina has its peculiar Deity or ra"ther Idol, and therefore it cannot be fuppofed, that "i fo noble, fo gainful a Manufacture fhould want one, " and yet this was the Cafe for fome hundreds of " Years; at laft a bold Potter formed the glorious " Defign of deifying himfelf, and giving his Profeffion " a Protector, as other Trades had. The Fact happen-

II G
${ }^{6}$ ed thus; A certain Emperor ordered a Number of 8، Veffels to be made of a Size fuperior to any in Ufe
" before his Time, and many Trials were made to no
" Purpofe; For notwithftanding they increafed the
" Thicknefs of the Plates to feveral Inches, yet when
"t the full Heat was given, they melted and funk down
" into a Thapelefs Mafs. At this the Cbinese Workman
s، was at Length fo much provoled, that growing fran-
" tick with Defpair, he threw himfelf into the Furnace,
" and was there confumed to Afhes in a Moment;
" and what was furprizing, the Attempt that was next
"s made facceeded happily; and the Cbinefe Emperor
" had, according to his Wifh, fuch Porcelain as never
" adorned the Tables of his Predeceffors. To reward
"the Courage of fo great a Hero, of which by the
"Way there are but few in this Country, and to per-
" petuate the Memory of fo extraordinary an Action,
" it was agreed, that he fhould be honoured as the tute-
". lary God of Cbina-Ware, and his Idol is to this Day
"، worfhipped by all the Fraternity of Porcelain-makers,
" under the Name of Pou $f$ a, to which they offer Pray-
" ers, cut Paper, and Incenfe, as to the other Idols.
" We fhall however be much miftaken, if we con-
" fider Pou $\int a$ as the only Martyr of this T'rade, for in
"Fact there have been many thoufands, or rather Mil-
*، lions; for the Fatigues which they endure in every
"Branch of the Manufacture, but more efpecially fuch
" as attend the Furnace, is fo great, that a quick Suc-
"ceffion in their Labours is occafioned thereby. The
"Hills which furround the famous Town of Kim te
"t tebim, are crouded with the Graves of thefe poor
"Laboupers; but though fuch Numbers are buried there,
" yet there are far greater Numbers that die fo poor as
" not to leave wherewith to bury them at all. For
"s the Reception of thefe unhappy Wretches, there are
" vaft Pits dug at the Bottom of the Hills, "into which
"their Bodies are hurled without either Ceremony or " Covering, except it be quick Lime, of which half " its own Weight is beftowed on every Corpfe. By "s this Means the Flefh is quickly confumed; and once " a Year, the Bonzes, from a Principle of Charity, as " they pretend, come and collect the Bones which are "burnt, and the Pit being purified by vaft Fires, be"comes again a Repofitory for thefe Relicks of Mor" tality.
"Thus we have purfued the Hiftory of this Manu"facture, and the Manufacturers thereof, as far as we "can well go ; we have feen how long it has been in "U Ufe, what Miftakes have been made upon it, how " remote thefe Miftakes are from the Matters of Fact " they were invented to explain, what real Excellenicies " belonged to this Trade, what a prodigious Inftance " of Induftry the State of it exhibits in Cbina, from " how many various Quarters Wealth is derived, from " the Sale of this admirable Ware; while yet the fineft " and the beft remains behind, which fhows the "Wealth of this Country to be by far fuperior to " that of all other Countries with which it engages in ' Commerce. Thefe and many incidental Circum" ftances may ferve to exercife the Thoughts, and ex' cite the Curiofity of the Reader to a clofer Enquiry into all the Branches of this comprehenfive Subject, the Heads of which, if we have fo touched as to merit Attention and Pardon, it is all that we expect; for as to Approbation and Applaufe, they are the fu" preme Rewards of Learning, and ought to be beftowed upon Works of greater Labour, and greater Extent, and which muft be confequently the Product of a fuperior Genius.

## S E C TION III.

The Author's Reception at the Court of China, the great Civilities paid him there ; the wonderful State and Magnificence of the Imperial Palace; the Ceremonies of a Publick Audience ; the Perfon and Manners of the Emperor defrribed. An Account of the Curiofities of the City of Peking ; the grand Eftablifhment of the Jefuits there ; Civilities paid by them to the Rufian Minifter; remarkable Things obferved by him during the Time of his Stay in the Imperial Refidence ; the pompous Ceremonies of his Audience of Leave; his Return from Cbina by Land; the Accidents attending his Journey; the many and great Hardhips he fuftained therein, notwithftanding his Intereft in both Empires, and his fafe Arrival, after fo many Hazards, and enduring fo great Fatigues, at Mofcow.

## From the Original Gournal of bis Excellency Everard Ysbrants Ides, Plenipotentiary from their Czarifh Majefties John and Peter, to the Emperor of China.

1. The Autbor's Entrance into the Imperial City of Peking, with an Account of bis Reception and Entertainment there, and the many Civilities paid bim till the Emperor was ready to give bim Audience. 2. He receives bisfirft Audience, is there fumptuouly entertained, and eats in the Prefence of the Emperor of China, November 16, 1693. 3: The Civilities ufed by bis Imperial Majefty at bis Departure. A Defcription of bis Apartment, Retinue, Perfon, and the Bebaviour of thofe about bim. 4. He vifits the City of Peking, and is hown every Thing remarkable therein by the Emperor's exprefs Order. 5. An Account of the annual Feftival rebich lafts for three Weeks, as allo of the Autbor's Audience of Leave, from wobich be returns to bis owo Apartment in a Carriage drawen by an Elepbant. 6. He is invited, by the Emperor's Permifion, to vifit the Jefuits, who entertain bim in a moft fplendid Manner. He vifits the Emperor's Stables, and fees there Abundance of Curiofities. 7. The Author leaves Peking on the 19th of February, 1694. An Account of bis Journey tbrough the Chinefe Territories, and the Accidents that

> attended.
attended it, 8. His Arrival at the River Sadun, where be is joined by a Chinele Envoy, and the great Hazard they run of being burned in their Tents. 9. The Difficulties and Inconveniencies to wbich they were expofed in theis Fourney, from the great Scarcity of Provifions and other Accidents, togetber with the Metliods they ufed to alleriate them as much as poffile. Io. They relieve themjelves in fome Meafure by Hunting and Filbing. His Intervierv with a Tungufan Conjurer, and the Succe/s of an Exprefs Sent to Argun for a Supply of Provifons. 11. The long-expected. Provifons arrive, by wobich theyllare delivered from all their Difficulties. The Ambaffador continues bis fourney through the Territories of the Czar, and at length arrives fafely at Mofcow on the Firflof January, 1695, after baving ppent two Years and ten Montbs in bis Travels.
1.

AB OUT Ten in the Morning we approached within half a Mile of Peking, and .went by feveral magnificent Country Seats, belonging to the Inhabitants as well as Man daryns; both Sides of the Way were adorned with thefe noble Buildings; before which were wide Channels, which ferved to carry off the falling Water, with fmall Stone Bridges over them oppofite to the Houfes, The Gardens were moft of them fenced with StoneWalls, and adorned with carved Gates, and very fine Garden-Houfes; the largeft Paths were planted on each Side with Cypreffes and Cedars, which afforded a charming Profpeet and Paffage through them. The Gates of the fineft Gardens were fet open, I fuppofe on my Account. Thefe plearant Seats continued on each Side the Way to the Entrance of the City. It is alfo obfervable, that from the great Wall to Peking, at the Diftance of about every half Mile, are Watch Towers, in each of which are five or fix Soldiers, who Night and Day difplay the Emperor's Flags and Enfigns, which are yellow: Thefe Turrets, like Beacons, ferve on Occafion of any Enemy appearing from the Eaft, to light Fires on, to convey Notice of it to the Emperor, which is done fo expeditiounly, that in a very few Hours it reaches Peking.
The Land from the City of Lanio hither is plain, and good arable Ground, on which grows Rice, Barley, Miller, Wheat, Oats, Peafe and. Beans, But no Rye. The Roads here are very broad, perfectly ftrait, and very well kept; for if but one Stone be found on them, it is immediately thrown to the Side by Perfons exprenly appointed for that Purpofe. In all the Villages we faw Pails filled with Water ftanding ready for the Camels and Affes to drink: And to my no fmall Wonder, I obferved that the great Roads through the Country, were as noify by the Multitudes of Travellers and Waggons, as if they were the crouded Streets of a populous City. So wonderfully ftocked is this vaft Empire with Inhabitants.
After I had caufed our Caravan with all the travel ling Baggage to be difpached into the City an Hour before, I rode on in order with my Convoy, and thofe who were ordered to ride before me, making in all ninety Perfons, befides feveral Coffacks. The Croud at the Gates, and the Concourfe of People with which the Streets were lined, gave us fome Interruption at our Entry into the City. Notwichftanding there were feveral of the Emperor's Borchy, or Harbingers, appointed to make Way for our Paffage; yet they had enough to to do to make us bare paffing Room ; the Cbinefe be. ing very curious to fee Novelties. Being come near to the Ambaffador's Court, feveral Mandaryns came to meet and compliment me on my Arrival. Both Sides of the Streets were lined with Soldiers as well as the Court. Riding through which, they brought me to my Apartment, where not myfelf only, but all my Retinue were inftantly ftocked with all Manner of Provifions and Refrefhments. And we every Morning returned Thanks to the great God, who after a long and difficult Journey of one Year and eight Months, had at laft conducted us fafe and well to our defired Place, without the Lofs of any more than one, Man, whofe Death for that Reafon has been particularly mentioned.
2. After a Repofe of three Days, I expected to be informed when it would pleafe the Emperor to admit me to Audience : And, according to the Cuftom of this Country, that Day the Einperor's Orders came for me to appear, and receive a Welcoming or Meal. Upon which I prepared myfelf, and feveral great Mandaryns
were appointed to conduct me up into the Caftle, where the Viceroy, Sungut Doriamba, Uncle to the Emperor, and four of the greateft Lords of the Empire, received and welcomed me. Here the Floor was overfpread with Carpets, upon which having feated myfelf with them, the Viceroy, in the Name of the Emperor, acquainted me that the Emperor his Mafter prefented me with this Table or Entertainment; and though he could not himfelf be prefent, yet defired I would accept this Meal, as a Welconre after fuch a long Journey. After which the Table was covered with cold Meats, as roalt Geefe, Chickens, Pork and Mutton, befides all Sorts of Fruit, and Confections; the Table appointed for me alone was about an Ell Square, upon which the Difhes, that were all of Silver, and pilled one upon another, amounted as I told them, to the Number of Seventy.

They were entertained with Tea, and I with Tarafoen and Rhenifh Wines. The Viceroy and ocher Lords diverted themfelves by Smoaking Tobacco, and he made his Compliment to me in the following Words; He defired, that I would accept of this Entertainment, as a Teftimony of the Emperor's Favoür, and expeč his Orders in a few Days, to bring their Czariß乃 Majef sies Credentials, and receive my publick Audience; upon which rifing up and thanking him for the Emperor's Favours, I return'd to the Ambaffadors Court.

On the í2th of November the Viceroy fent fome Mandaryns to give me Notice to appear with their Czari及 Majefties Credencials next Morning in the Caftle; for which I accordingly prepared myfelf. At Eight in the Morning three principal Mandaryns came to advife me that it was then a proper Time to wait on the Emperor: Befides their common Habit, they were alfo dreffed in Robes, which were embroidered, fome with Dragons, others with Lyons, and a third Sort with Tygers and Cranes on the Breaft and Back, work'd with Gold Thread: They brought with them fifty Horfes for my Retinue. According to the European Mode, I advanced with their Czarifh Majefties Credentials, and was attencied by my Retinue in good Order towards the Court.

Coming to the outer Gate of the Caftle, there is a Pillar, with fome Characters engraven on it, where I was told I mult alight, according to their Cuftom ; $\mathrm{f}_{\mathrm{f}}$ o that I went on Foot through five outer Courts to the Caftle itfelf. I found a great Number of Mandaryns at the Court, all cloathed in their richeft Embroidered Robes, fuch as they wear in the Emperor's Prefence, who waited for me.

After we had mutually exchanged Compliments, the Emperor appeared on his Throne; upon which I delivered his Czarifh Majefty's Credentials, and after the ufual Ceremonies, and a fhort Speech, was conducted back.

On the 16th of the fame Month, I was informed that I was invited to eat before the Emperor: Wherefore in the Morning, accompanied with the Nandaryns thereto appointed, and the chief Gentlemen of my Retinue, I rode to Court. And in the fixth Court, a great many Lords and Mandaryns were ftanding in Rows in their beft Robes; and fhordy after an Order came for us to appear above in the Palace. As foon as I entred, the Emperor afcended his exalted Throne, having near him fome Perfons who played very finely on the Fife, and a Life-Guard of twelve Men with gilt Halbards without any Point to them, but adorned with Leopards and Tygers Tails. As foon as the King was
feated,
feated, the Mufick ceafed, and the $\mathrm{H}_{\text {al }}$ badiers feated themfelves crofs-legg'd on each Side below the Throne. The Emperor's Table was furnifhed with cold Meats, Fruits and Sweetmeats, ferved up in Silver Difhes, and the whole covered with yellow Damask. The Viceroy, the Emperor's Uncle, and two other of the principal Nobles ftood on each Side of his Imperial Majefty, and I was placed on the Right-Hand of the Throne, about four Fathom diftant from the Emperor; who looking very earneflly at me, ordered the Viceroy (who received his Commands on his Knees) to bring me nearer. Upon which he took me by the Hand, and placed me about two Fathom diftant from the Emperor, and my Retinue were placed about fix behind me. The Emperor a fecond time fent the Viceroy to me with the utmott Refpect, to afk after the Healch of their Czarifh Majefties; to which I returned the proper Anfwer. Then he caufed his Table to be uncovered by taking off the Damask Covering, and defired me to eat, a Table being fpread for me only: The other Lords and Man. daryns, about two hundred in Number, took their Places according to their Quality, fitting two at each Table, in the Perfian Manner, upon Carpets, with their Legs under them; which Cuftom I was obliged to comply with, as it is not to be difpenfed with here
The Emperor fent me from his Table, a roaft Goofe, a Pig, a Loin of very good Mutton, and foon after feveral Dimes of Fruit, and a Sort of Drink compofed of boiled Tea, fried Meal and Butter, which looked not unlike Bean or Coffee Decoction: Having received all which, with due Refpect, his Majefly ordered the Viceroy to ask me, what European Languages I underftood ? To which I anfwered, I could fpeak the Mujcovite, German, Low-Dutch, and a little Italian.
Upon which he immediately difpatched fome Servants to the hinder Part of the Palace; which done, there inftantly appeared three Jefuits, who approached the Throne. And after Kneeling, and performing their Reverence to the Emperor, he commanded them to rife. Ont of thefe was Father Fobn Francis Gerbillon a Frencbman; and the two others were Portuguese, one of them called Father Antbony Thbomas. The Emperor ordered Father Gerbillonto converfe with me; who coming towards me, fpeakirg Italian, asked me in the Emperor's Name how long I had been travelling from Mofcows to Peking, and which Way I came, by Waggon, on Herfeback, or by Water? To which I returr'd fatisfactory Anfwers: On which returning to his Majelly, he informed him; who immediately anfwered, Gowa, Gowa, which is very well. The Emperor then ordered the Viceroy to acquaint me, that it was his mof gracious Pleafure, that I Thould approach nearer the Prefence, by coming up to the Throne; upon which I arifing, the Viceroy taking me by the Hand, after having led me up fix Steps, fet me at the Table oppofite to the Emperor. After I had paid my moft humble Refpects to his Majefty, he talked with Father Gerbillon, who again asked me, How long I had been on the Way hither? In what Manner I rravelled? and, in what Latitude Mofore was fituate, and how far diftant from Poland, Fronce, Italy, Portugal, or Holland? To all which I obierved my Anfwer proved very fatisfactory. Upon which he gave the Viceroy a Gold Cup of Tarlerian Liquor called Kumis, in order to hand it to me; which with due Refpect I accepted, and having tafted, return'd it. This Kumis, according to the Report of the Attendants, is a Sort of Brandy diftilled from Mares Milk. After this, the Emperor ordered my Recinue to advance within three Fathom of his Throne, and entertained them with the fame Liquor; which being done, I paid my Compliment in the European Manner, and the Viceroy took me by the Hant, conducting me to my former Place, where after fitting for a Quarter of an Hour, I was defired to rife.
3. After this the Emperor arofe, and having faluted me, defcender from his Throne, and went our of the Audience Hall by a Door on the Left-hand, in order to go to his Royal Apartment.' As he was leaving the Hill, he fent the Viceroy to ask me, whether I had heard any News out of Europe concerning Father Gri-
maldi, who had been difpatched thither on the Emperor's Affairs: To which I anfwered, that when I left Moforw, I was informed that he, with a Retinue of twenty-five Perfons, arrived at Smyrna, and relolved to profecute his Travels through Perfia and India. He replied, I am informed he is fafely arrived at Goa, and is upon his Departure thence in order to his Return hither, and it is feven Years fince he left Cbina. Hereupon I took my Leave, and retired to my. Apartment.

Defigning to take another Opportunity to give an Account of what I could obferve concerning the Court, I fhall at prefent only defribe the Outfide of the Pa lace, and the Throne on which the Emperor fate. The Palace is an oblong quadrangular Brick Building, which is twice as long as broad, and the Roof covered wich yellow glazed Tiles, on which were fixed Lyons, Dragons, and all Sorts of Imagery; the Height of this Building to the Roof was about eight Fathom; the Afcent to the Hall was up feveral Steps, and the farther Part or Entrance of it was provided with certain open Places or Windows, which were not glazed but peaked with Paper. At the Ends of this Hall were two Doors, the Tops of which were adorned with a Sorc of carved Work, fomewhat like a Crown, which was extraordinary well gilt. This Building hath neither any Room over it, or arched Roof, but the Height of the Room is to the very Top of the Roof, which was compofed of curious Pannels, beautifully colour'd; japann'd, and finely gilded. This Hall is about thirty Fathom long and ten broad. The Floor, according to the Tartarian Mode, was covered with Carpecs, adorned with Landskips and Figures.
The Throne is placed oppofite to the Eiftern Entrance, againt the back Wall, and is about three Fathom broad, and as many long; before it are two Afcents with fiz Steps each, adorned with Rails and Reprefentations of Leaves very well gilt : On the right and lefc Sides were allo Rails of caft Imagery, which fome report to be Gold, and others Silver, which are alfo extraordinary well gill. Exactly in che Middle of this raifed Place is a Throne, fomewhat like an Altar, which opens with two Doors, and in it the Emperor's Seat, about an Ell high, covered with black Sables, on which he fate with his Legs acrofs under him. This Monarch was then aged about fifty Years, his Mein was very agreeable, he had large black Eyes, and his Nofe fomewhat rifing; he wore fmall black Muftachoes, but had very little or no Beard on the lower Part of his Face ; he was very much pitted with the Small-pox, and of a middling Siature. His Drefs confifted of a common dark-colour'd Damask Waitcoat, a Coat of deep blue Sattin, adorn'd with Ermines; befides which, he had a String of Coral hanging about his Neck, and down on his Breaft. He had a warm Cap on turned up with Sable, to which was added a red Silk Knor, and fome Peacocks Feathers hanging down behind. His Hair, plaited into one Lock, hung behind him. He had no Gold nor Jewels about him. He had Boots on, which were made of black Velvet.
Whilf he was at Dinner, fuch a reverential and profound Silence was obferved amongft the Mandaryns, that not only no Noife was heard, bur they forbore fo much as fpeaking to one another, all fitting very ftill with modeft down caft Eyes, amongft them the higheft Mark of Refpect.
4. On the rext Day the Emperor fent two Mandaryns with fifty Horfes for my Retinue, and a Meffage, importing, It was his Majefty's Pleafure, that if I defired to fee the City, all that was worth my View fhould be fhewed me. Purfuant to which, I caufed my Horfe to be fadled, and rode out with thefe Mandaryns, who, by the King's Command brought me to a Sort of Play-houfe, or Court of Diverfion, which was a very lofty and capacious Building. In it was a great Stage adorn'd with carv'd Imagery, finely painted, which the Players had the Uie of tor an annual Rent. In the Middle of this Palace was an open Place encompaffed with Galleries, in which the Mandaryns defired us to fit down on Chairs ; and having entertained
me with Tea and Tharafin Wine, I and my all Retinue were treated with a Comedy, and the Diverfion of feeing a great many different Sorts of exquifite Juglers, who, by a dextrous Slight of Hand, feem to produce not only all Sorts of Fruits, as Oranges, Limons, Grapes, Ecr. but live Birds and Crabs, and perform all the Dexterities of that Kind practifed in Europe. Others fo nicely play'd with round glafs Balls, as big as a Man³ Head, at the Point of a fharp Stick, toffing them feveral Ways, without breaking or letting them fall, that it was really furprizing. After this a Bamboc Cane, about feven Foot high, was held upright by fix Men, and a Boy about ten Years old crept up to the Top of it as nimbly as a Monkey, and laid himfelf on his Belly upon the End of it, turning himfelf feveral times round;' after which rifing up, he fet one Foot on the Bamboe, holding faft to it with one Hand, and then loofing his Hold, clapped his Hands together, and run very fwiffly down, and fhewed feveral other Feats of Agility, which were very wonderful as well as highly entertaining.
The Comedies had alfo a very good Effect, by reafon they were atted in the beft Manner by the Emperor's Players. They frequently appeared in Changes of very rich Dreffes, embroidered in Gold and Silver; and the Plot turned on the Story of a Triumphant Hero, in which was brought in their Idols, and a late Emperor, whofe Face was painted of a Blood Colour ; which was intermix'd with a Farce, or diverting Entertainment, of two young Women richly drefs ${ }^{3}$ d, who ftood each on a Man's Shoulder, and nicely play'd with their Fans, bowing to one another, and keeping Time to the Mufick as exactly as if they had danced on the Ground. Two little Boys play'd Hofficki or Harlequins, in very fantaftick Habits, and recited their Parts very well. After the End of the whole, I thanked the Mandaryns and return'd home. On the fame Day the Emperor went out a Ty-ger-hunting, without the great Wall, purfaant to his annual Cuftom, and returned in a few Days to Peking.
On the fame Day I was invited to a Repaft by the Viceroy, or Sungut Doriamba, with which Invitation I complied, and after fome Difcourfe paffing betwixt us, he led me by the Hand out of his Bed-chamber into his beft Hall, or Parlour, where feveral Tables and Stoo!s Atood ready ; the Tables were adorn'd with rich Tapeftry Carpets of Silk and Gold, which were full wrought with Figures. I was feated on one, and the Mandaryns on the other Side of the Viceroy. The Tables were allo fet off with very fine Flower-pots, full of Flowers of all Sorts of Colours, work'd in Silk, which not only looked very beautiful, but very natural ; Crimfon Velvets, and the moft charming colour'd Silks being chofen to make them, it being Winter, when no natural Flowers were to be gathered: On the fore-part of thefe Tables were alfo placed Silver Cups, in which was laid lighted Pieces of the fragrant Wood Kalamba, which afforded a very good Perfume; next which flood fine Wooden Images, and Variety of fmall Figures or Puppets, finely painted and gilt. The Chairs or Stools on which the Viceroy and I fat, were, according to the Tartarian Fafhion, hing at the Back with Leopard and Tyger Skins, which appeared very magnificent; and a larger Difh of Tea than ordinary, in which was put peel'd Walnurs and Hazle-nuts, with a little Iron Spoon to take them out on Occafion, was placed before each Perfon. After the Tea was drank off, which tafted very agreeably, feveral little Agate Cups, filled with Brandy mix'd with diftill'd Waters, were ferv'd about ; and after that, feveral Difhes, or rather Cups, of fry'd or broil'd Fifh, cut into fmall Pieces, were fet in Heaps one upon another, garnifhed with fine Herbs and Flowers, and as an Ornament fet on the Fore-part of the Table in a Row; by them were placed fix Cups of very agreeable Soops, difh'd up with very fine ftew'd Flefh and Fifh; and when we had eaten of thefe, we were regaled with fevieral Courfes of the richeft Edibles, which were followed by all Sorts of fine bak'd 'Meats ; and after this laft Courfe all Kinds of delicious Confects, as candy'd Grapes, Limons, Oranges, Cheftruts, and Shell'd Nuts.
Vol. II. $\mathrm{N}^{\mathrm{o}} 34$.

During our fitting at Table in the Room where we eat, was acted a Play, interlarded with Songs and Dances, by little Boys drefs'd in Girls Cloths; who very skilfully meafured their Steps in Proportion to the Time of the Song, and play'd on the Flute, withal diflorting their Bodies into antick Poffures, and playing with a Fan in their Hands. His Lady and Daughter alfo appeared at the farther Part of the Hall, ftanding at a Door, which was but half open: They were very richly drefss'd according to the Mode of the Mongalian Tartars. After I had very agreeably fpent chree Hours there, accompanied by my Retinue, I rode to my Apartment.

Some Time after I was invited to the Houfe of the Treafurer of the Empire, who is called Scbiloy, where I was fplendidly entertain ${ }^{5}$ d. His Hall was very well furnifhed according to the Cbinefe Fafhion: The Floor of it was laid with a Sort of fine Stone, at three Corners of which, on Ebony Feet, were three extraordinary white Marble Tables naturally fhaded with black Veins, which reprefented beautiful Woods, Mountains, and Rivers: On thefe Tables were placed high Silver Flower-pots, very naturally adorns $\mathrm{d}^{\mathrm{d}}$ with all Sorts of fine Flowers. The Pillars, clear up to the Roof, were painted with very fine Colours. While we fat at the Table we were entertained with a Ball, and after this very agreeable Entertainment, I arofe and took Leave, extremely fatisfied with all the Civilities that were paid me.

When this Lord accompanied and conducted me through the principal Markets, where Silk, Cloath, Gold and Silver, Jewels, and all Sorts of fine Manufactures, were fold, I was defired to alight, and conducted to the Emperor's Difpenfary, which I was willing to make fome Scrutiny into, it being richly ftock ${ }^{3} \mathrm{~d}$ with all Sorts of Roots, Herbs, and Medicines. I was here treared with a Difh of Tea, and obferv'd while I ftaid there, that according to the European Cuftom, feveral Prefrriptions of Phyficians were brought in, which were methodically prepar'd. Next to this was a Toyfhop, which I enter'd, and bought what I liked. The Mafter of it had a very fine Garden-Houfe, in which were all Sorts of Flowers, young Stocks, and LimonTrees, in Pots : And amongtt other Things, he fhew'd me a large Glafs full of Water, in which were feveral living Fifh about a Finger's L.ength, which naturally looked as if they had been gilt with the fineft Gold; and the Scales of fome of them being fallen off, difcover'd; to my great Surprize, the Colour of their Bodies to be the moft beautiful Crimfon in the World.

After we departed from thence, we went through all the Markets; each Shop had a great Board fet before it, on which is very orderly written the Shopkeeper's Name, and the Commodities which he deals in. We alfo went through the Fifh-Market, in which are all Sorts of living Fifh, but more efpecially Carps, Caroeffes, and Water-Snakes, (which they eat here) Crabs, Shrimps, Ecc. all which ftand in Tubs to be fold, in great Abundance. Paffing through another Market, I faw great Numbers of Harts, Roebucks, Hares, Pheafants, Partiridges, $\mathcal{E}^{\circ}$ c. and feveral other wild Game, to be fold.
5. On the 7 th of fanuary the cuftomary annual Faftival happened, which they obferve for three Weeks. It began late at Night with the Appearance of the new Moon, and firlt the great Bell at the Emperor's Court was rung, and their large Drums, exprefly kept for, and ufed, in their idolatrous Worfhip, were beaten, and feveral Cannon difcharged ; upon which all the People in the City, of what Degree foever, according to their Ability, exprefs'd their Joy by Rockets, Serpents, and -all Sors of Fire-works, to which they alfo added the Beating of an infinite Quantity of Drums, and, according to their Cuftom, the Sounding of Trumpers by the Lamas ${ }^{3}$, or idolatrous Priefts, in their-moft innumerable Temples and Cloyfters; infomuch, that from Ten at Night till next Day Noon, there was as great a Noife, as if two Armies of one hundred thoufand Men were in the Heat of Battle one againft another. In the Day-

II H
time
time the Streets were crouded with all Sorts of Proceffions, with their Idols, which were carried in various Shapes, and the Lama's marched by them with IncenfePots, and Strings of Beads; the Drums and KettleDrums beating, Trumpets founding, and other Mufick playing, was endlefs. The carrying of thefe Diabolical Images, follow'd by a great Train of People, as well as a vaft Number of Lama's or Monks, which preceeded them, lafted three Days, during which Time all the Shops were fhut, and all Merchandizing forbidden, on Penalty of fevere Punifhmenrs. During this Time allo the Streets were crouded with People of both Sexes, but more efpecially Women, who rode on Affes, or Chaifes with two Wheels; covet'd all round, only before left open. The Servant Maids which fate behind, fung, fome of them; whilf others blew on a Sort of Horn-Pipe; and fome Ladies fate publickly taking a Pipe of Tobacco. The Women never appear in Publick thro' all Cbina, except in the Province of Peking only, and more efpecially the City, which is inhabited by Tartars; the Cbinefe being obliged to live all about the City Wall, and the Suburbs, where all the chief Markets, and publick Places of Sale are.

Some Days'after this, the Emperor fent two Mandaryns to defire me to be ready to receive my Audience of Leave the next Morning two Hours before Day: And accordingly three Hours before Day, three Mandaryns came to me on Horfeback, and we rode to the ufual alighting-place; whence being conducted to the third Court, and defired to fit down, I was entertained with a Sort of Bean Decoction or Coffee, ufually drank here in the Mornings. In the fourth Court appear'd all the principal Officers in their richeft Robes, dreffed after the Eaft Tartarian, or Mongalian Mode. At break of Day I was introduced into the jourth Court, and feated amongft the Mondaryns, who, according to the particular Rank of each of them, were placed on the Eaft and South Sides of the Court. After waiting half an Hour, we heard the Emperor approaching, accompany'd with an agreeable Confort of Fifes, and a Sort of Lutes. This was not the Hall in which I had my former Audience, but here was a Throne erected, and hung with yellow Damask, on this Occafion. On each Side of it were two great Drums, curiouny gilt and painted, each of which being two Fathom and, a half long, they lay upon a Stool made on Purpofe for them. After the Emperor was feated, by his Command, the Herald which ftood before the Throne, went to the Prefence-Chamber Door, directed himfelf to the Lords which fare without in the Court, and uttering fome Words with a fhrill Voice, he thrice fucceffively cry'd, Bow dorm, bowe to the Earth. Whilft this was three Times done one after another, the Bells were rung, the Drums were beaten, the Lute was touched, and three Pipes, made for that Purpofe, were very loudly founded. Then two principal Lords were, by the Emperor, fent to acquaint me, that it was his Majefty's Pleafure, that I fhould approach nearer the Prefence; accordingly they led me by the Hand, from the Place where I was, being about eight Fathom diftant from the Throne, where my Retinue were left fitting: And I fate down on one Side, about three Fathom from the Royal Throne, betwixt two great Lords, which were Wannes or Princes, and by Birth Tartarians; and after baving paid a refpectful Compliment to the Emperor, his great Bell was rung, and the large Drums on each Side were beaten, which made as great a Noife as a Volley of Guns; the Flutes were alfo played on, and the beforementioned Pipes nine times founded: Upon which I was defired to fit down; which having done, a Difh of Coffee or Bean Decoction, was preFented to me, which I accepted, and drank up. And after I had difpatched the Affairs of their Czarifh Majefties, with the Emperor, I rofe up, and having paid my Compliment to him, he alfo arofe from his Throne, and went out at the Weft-Door to his Apartment.

The Emperor's Life-Guard ftood in this fourth Court; they were cloathed in red Callicoe, printed with red Figures as big as a Rixdollar; they wore fmall Hats adorn'd wirh yellow Feathers, that being the Imperial Li-
very Colour. They were arm'd with Scimiters by their Sides, and fine Lances, with Colours fixt to them, and ftood ranked at a Diftance from the Throne, on each Side of the Court, where alfo, ftood eight white Sad-dle-Horfes for Shew. In the third Court of State, were alfo placed. four extraordinary large Elephants, one of which was white. They were all covered with rich Gold embroider'd Cloarhs; and all their Trappings, as Bridles, Cruppers, $E c$. were covered with Silver, and gilt ; and on their Backs was placed a very fine carv'd wooden Caftle, or Gallery, fpacious enough for eight Perfons to fit in. In this Court alfo ftood the Emperor's Waggons with two Wheels, and his Chaifes, all hung with yellow Damank Curtains: Befidies all which, there were there placed feveral Stands, or Stools, for Drums, Kettle-Drums, Idolatrous Inftuments, $\mathcal{E}^{\circ} c$.

Being got out of the Caftie, I mounted one of the Emperor's Waggons and was drawn to my Apartment by an Elephant ; on each Side of which ran ten Perfons, with a thick Rope in theirHands, faftned to each Side of the Elephant's Mouth, by the Help of which they lead and govern him: On his Neck alfo fate a Man with an Iron Hook in his Hand, which alfo contributes to hold him in and guide him. He went but at his ondinary Rate, which put his Leaders to run as fwift as polfibly they conld in order to keep Pace with him.
6. A few Days after I was invited by the Jefuits, with the Emperor's Leave, to vifit their Cloyfter; purfuant to which, two Mandaryns, according to order, artended on, and conducted me thither. I was then introduced into the Cloyfter, which was encompaffed with a high Stone Wall, and provided with two exquifite regular Stone-Gates after the Italian Manner. On the left Side of the Entrance, under Shelter of a Roof, made for that Purpofe in the Court, ftand the coeleftial and terreftrial Globes, of an extraordinary Size, each being about a Fathom Diameter. From hence we proceeded on to the Church, which is a very beautiful Italian Building, furnifh'd with a large Organ, made by Father Thomas Pereyra: And the Church itfelf, fuitable to the Roman Catholick Ufage, was richly adorn'd with fine Images and Altars; and was withal large enough to contain two or three thoufand People. On the Top was a Clock and Chimes. Having feen the Church, the Fathers brought me into the Mufoum, which was compleatly furnifhed with all Sorts of European Rarities. After which they conducted me to an Apartment on one Side of it, where being asked to fit down, I was treated with all Sorts of Confections and Preferves: Nor did we forget, according to their Cuftom, to drink the Healths of all the Chrittian Princes of Europe, in rich Wines: And after a confiderable Stay, I rode to my Apartment, very well fatisfy'd with the Entertainment of thefe Fathers.

About this time, two Mandaryns came from the Cbam to invite me to take the Diverfion of feeing the City: Accordingly I mounted with my Retinue, and there Mandaryns conducted me to the Emperor's Elephant-Stable, where ftood 14 of thofe Beafts, one of which was white: Having thus feen them, that was not enough, but they muft fhew feveral Tricks, and at the Command of the Mafter of the Stable, they roared like a Tiger, fo difmally lond, that their very Stable feemed to tremble: Others lowed like an Ox, neighed like a Horfe, and even fung like Canary-birds; but which was moft furprifing of all, fome of them imitated a Trumpet. After this they were obliged to pay their Refpects to me on their four Knees ; to lie down firft on one Side, then on the other, then to rife up. When they lie down, they firft ftrike out their Fore-legs forward, and then throw out their hind Legs backward, and by this Means lie with their Bellies flat upon the Ground. One of thefe was not broken, and, by Reafon he was very unruly, he was loaden with heavy Chains on two Feet, and, for the whole time he had ftood there, had nor been removed from his Place; and a great Pit was dug before his Stall, that in cafe he broke loofe, he fhould fall into it, and be prevented from coming into the Court to do any Mifchief. All thele Elephants were
extraordinary large, and the Teeth of fome of them , reft, which were a very confiderable Number, being kilwere a full Fathom long. The, Mandaryns told me, led by the ill Forage and unwholfome Grals. that they came from the King of Siam, who annually On the 2d of February, being ready to fet forwards fends feveral, by Way of Tribute, to the Emperor of Cbina. Their Food was only Rice Straw bound up in fmall Truffes, which they take up' one after another with their Trunk, and convey to their Mouths.
After a fatisfactory Sight of what I defired, I rode with the Mandaryns to my Apartment ; and as we were on our Way, I obferved at the Door of a confiderable Mandaryn, and a great Officer, tome Perfons fleaing of a fat Dog ; upon which I ask'd the Mandaryn, wherefore that was done? Who anfwered, That it was a healchful Sort of Food, efpecially in Summer, it being very cooling. After I had handfomely treated thete Mandaryns, they went away.
Next Day the Viceroy fent a Tyger, or Panther, in a Cage, to the Ambaffador's Court, to be fhewn to me ; as alfo feveral Juglers with Monkeys and Mice, which had been taught feveral Tricks. Thefe Apes, at their Maiter's Command, did really fome very ftrange Things; they fill'd a Basket with Stuff Coats of all Colours, each of which an Ape took out fingly at his Mafter's Command, never miffing the Colour which he was ordered to take out and put on, always varying his Grimace with his Habit ; after which, he not only danced upon the Ground, but on a tight Rope, in a very diverting Manner. There were alfo two Mice faftened to their Chains, who, at their Mafter's Command fo entangled themfelves in them, and immediately got loofe, that it deferved Admiration: Bur what was moft ftrange to me, was the odd Motions of thefe Vermine.
The Jefuits once told me, that about three Years paft were fent to the Emperor as a Prefent, from an Ifland in the Eaftern Sea, four Animals as big as ordinary Horfes, each of which had two tharp Horns prominent before; and that thefe Fathers were fent by the Emperor's Order to his Park, about ten Miles from Peking, to fee thefe Beafts, in order to inform his Majefty, whether they had ever feen any of them in Europe ; but returning, they affirmed, that they had never before feen any of that Species. I was indeed very defirous to have feen them, yet it being too far out of Town, and the Time of my Departure approaching, it was impracticable.
After I had fent my Compliment to the Viceroy, I defired that I might be advertiz'd of my Departure eight or ten Days before the Time when it fhould pleafe the Emperor that I fhould leave the Court and Royal City, which, purfuant to my Requeft, was accordingly done fome Days after.
7. Upon which, having made all neceffary Preparations for fuch a long Journey, and latterly, according to former Cultom, having one Morning in a Week eat át the Emperor's Table, I left Peking, accompany'd out of the City Gate with a numerous Train of Great Officers of State, and Mandaryns, on the 19th of February, 1694, and on the 25 th reached the City of Galgan, clofe to the Daaurian Wall. From thence we went on to Noun, and paffed through feveral Xixigarfchean Villages, to the Tartarian Frontiers, and the great Deferts, where we encamped and lay ftill feveral Days, and provided Saddles for our Camels, and all other travelling Neceffaries, by reafon that to Argum, on the Frontiers of their Czarifh Majefty's Dominions, I was obliged to provide me with all Neceffaries on my proper Coft, which I confider'd when in Peking; and Camels and Mules being very cheap there, I carried a good Number of the laft loofe along with me, they, as well as the whole Caravan, travelling free, at the Expence of the Cbinefe, hitherto, as well as my felf and whole Retinue, who eat at the Emperor's Charge thus far.
If I had not made this Provifion before-hand, but had depended on the Camels and Horfes which I left at Nuna, we fhould have fared but indifferently, for of all that I left there, fearce eight hundred remained, all the
on my Journey, I treated the Mandarym and his Retio nue, who, by the Emperor's Command, had accompanied me thus far; after which, taking very civilly Leave of each other, we parted.

On the 26 ch Inftant, in. God's Name, we entred the great Defers, about the River Sadun and Kallar, being obliged to be on our Guard, by Reafon that four Murigeffian Talifchi, or Lords, with about three thoufand Men, who waited for me, were ready and willing to try their Fortunes with us: Upon which I gave all necef fary Orders, and in the Night caufed a ftrong Watch of fixty well armed Horfermen to be kept; but nor encountring any thing from that Quarter, we next Day fet forwards on our Journey. Reaching the Jalifobian Mountains, we found our Forage grew worfe the farther we went, and our Saddle as well as Carriage Beafts began to look thin. Having travelled a whole Day over thefe Mountains, the Night proved very cold and fnowy, and the Grals grew yet worfe, being that of laft Year, which was dried up in the Field; fo that the Camels, but more efpecially the Horfes, though they eat their Fill, were not much ftrengthened by it. I here deliberated whether I fhould take the old Way, or a By-way, which was the fafeft Method that conld be taken to efcape the Tartars who lay in Wait for us, and again proceed on Eatwards ; preferring Certainty to an Uncertaincy, I pitch'd upon the laft, which proved very incommodious, efpecially for the Cattle.

We travelled but flowly through thele fteep, mountainous and deep morafly Ways, and that Day twelve Camels and fifteen Horles funk under Foot, and for fixteen Days after we were obliged to wrefte with thefe difficult Ways, which daily occafioned feveral Camels and Horfes to fink under their Loads and die; which happened from the heavy Burdens they were obliged to carry, as well as from the faplefs and dry Grafs, which afforded them no Nourifhment. But our Difficulties increared with refpect to Forage, for our Cattle had Grafs hitherto, which, though dry and not fufficient to fatisfy, yet ferved to keep them alive; but now we came to Fields that were intirely burnt up by the Tartars, which forced us, how feeble and uncapable foever our Beafts were to perform it, to difpatch two Days Journey this Day, in order to come to a Place where there was fome Grafs left.

Several of our Merchants, who loft their SaddleHorfes, their others being fufficiently laden with Merchandizes, were obliged to go on Foor; and if many of them had not been provided with fpare Horfes and Camels, we fhould have been obliged to have left a great Quantity of their Goods behind in the Wildernefs.
8, After various Fatigues and Miferies, with the greateft Difficulty in the World, we at laft reached the River Sadun, where our Quarters began to mend, in fome Meafure, and the tender Grafs to fprout up a little. We lay ftill two Days by this River, in order to refrefh our Camels and Horfes, which were unable to have held out any longer. During this Repofe, a Cbinefe Envoy with an hundred arneed Men, came up to me, who, by the Command of the Enperor of Cbina, was, by the Viceroy of Tartary, difpached from the City of Mergeen, with Orders to accompany me to Nerzinfioy, there to treat, concerning fome Affairs, with the Governor. The Arrival of this Company was very welcome to us, for now we could make out full fix hundred Men, and confequently had no Reafon to fear any ftrolling Parties of Robbers. On the 15th of March we arrived at the River Kailaan, which we forded, the Water being low ; and paffing about a Mile farther in a Dale, we pitched our Tents there, though therevwas but little Forage to be found: Yet we paffed the Night here, and in the Morning difcovered a terrible Smoak to arife out of the North-weft, which gave me fome Apprehenfions, that the Tartars having burne
up the old Grafs, lurked under thefe Pillars of Smoak, in order to obtain an Opportunity to fer upon us with great Numbers. To provide againft this, I caufed the Camels and Horfes which were left us in this horrible Defert, betimes, to be drove to a Place where there was fome Grafs, and which being behind a high Mountain, was fecurely fhelter'd from the Fire. After which I caufed an hundred Men to provide themfelves with the Felts with which the Camels were covered, and be in Readiners, if the Smoak approached us, to difperfe and drive it from our Camp as much as poffible. Within the Space of half an Hour, the Air was wholly darkned with the Smoak, and the Fire driven on by a ftormy Wind, flew fwifter than a Horfe could run, into the Vale, where the dry Grals was about half an Ell high; fo that it was farce poffible either to efcape or quench fuch a rapid Flame: The Fireflew, or racher flafhed by our Camp, as fwift as Lightning, fo that whilft I turn'd myfelf round, it was got to the fhort Grats, and behind the Brow of a Hill: Notwithitanding its fpeedy Flight, we did not clearly efcape it, for the Flame laying hold of our foremoft Row of Tents, immediately fent ten or twelve of them burning into the Air: Great Quantities of our Merchants Goods were confumed, and fourteen Men ftruck down by it which were miferably burnt, and fome of them taken up for dead; but after neceffary Care was taken for their Recovery, only one Perfian died. I was mylelf in great Danger, and if I had not in time run to a Hill where there was farce any Grafs, and been affifted by two Servants, which covered me with a Felt, to keep off the Heat, I fhould not have efcaped better than thole abovementioned.

The Flame was no fooner paft us than it vifited the Cbinefe Ambaffador, who was encamped at fome Diftance from us, amongft the Hills, where to his good Fortune, there happened to be very little Grafs, fo that the Fire pafled about and over the Hill, but was not violent enough to catch hold of any thing, fo that their Horfes Tails only were a little burnt, or rather finged.

Before it was poffible to have told two hundred, this Fire had reached the River Kailaan, (which was a Mile from our Encampment, where it was quench'd by the Interruption of the Water. After this Burning, the Land, as far as we could fee from the Hills, was quite bare of Grafs, and every where Coal-black. Upon this Difafter, I fent out my Guide, to try whether he could difcover any Place for us to encamp for that Night ; he return'd the nexr Day, with Information, that for two Days Journey all round, there was no Forage, the Fire having confum'd it all; for though there were fome few fcatter'd Places which had efcap'd the Flame, yet there was not hali Grafs enough to fatisfy fuch a Number of Camels and Horfes as ours; which was but melancholy News for me and the whole Camp.

Wherefore I confulted, whether it was not moft advifeable to repafs the River Kailaan, where the Grafs had efcaped untouched; but in Oppofition to this, the Danger of being fallen on by the Tartars which were on that Side of the River, offered itfelf; fo that I rather inclined to chufe the travelling two Days in Want of Neceffaries, than once more run the Rifque of expofing ourlelves to the Inhumanity of thefe Barbarians.
9. In the Morning then we broke up our Camp, which we pitched late that Night near a great Morafs, after having endured a great deal of Mifery and Fatigue that Day, by paffirg through Moraffes and over fteep Hills; which Hardfhip fell heavieft on the Cattle, infomuch that in this Day's Journey only eighteen Camels and twenty two Horfes funk into, and remained in the Moranes, not being able to ftir a Step further, which fell very hard upon us, and the farther we went, rendered us the more uneafy, fince we were as unwilling to leave our travelling Neceffaries and Provifions behind us, as the Merchants, were to throw away their Goods; wherefore the Remainder of the Beafts mult neceffarily be the heavier laden.
The next Day we alfo paffed through Moraffes, Vales, and over fteep Hills, and came to the River Mergeen,
where the Grais was not burnt off. Having forded this River, and proceeded on our Journey, though in a miferable Condition, as well by Reafon of the ill State of our Cattle, which daily finking under their Lioads, obliged us to leave them behind, as on Account of the Scarcity of Provifions for fo many Men, our Stock being at prefent very low, and confifting barely in a few lean live Oxen, which Travellers generally take with them in thefe Sort of Journeys, but not either Bread, Peas, Barley, or other Provifions, becaufe the Mer. chants and Coffacks wanted Beafts for the Carriage of their Goods, and it would have been too chargeable to lade Camels with Provifions.
There being but a fmall Number of Oxen in our Camp, the Pcople began to be very anxious, confider ing it was not poffible to reach Argum on the Frontiers in lefs than ten or twelve Days; fo that each Perfon, according to the Company he was engaged in, began to compute how long what they had would laft, and contrive how to manage his Share beft.

On the 18 th of this Monch, with great Difficulty and Fatigue, we at laft reached the Rivet Gan, which at low Water we forded, and on the other Side found frefh Grafs for the Beafts, with which we were very well pleafed, and mightily encouraged. Here I refolved to lie ftill three Diys, and would have refted longer, if the Merchants, Coffacks, and Workmen, had not complained that they were pinched by Hunger, and that there was but a very fmall Number of Oxen remaining, confidering how many hundred Men were to be fubfifted by them ; and they, by Example, Thewed me the beft provifional Methods which could be taken to prevent an entire Famine; for as foon as an Ox was killed, they faved his Blood, and boiled it to the Confiftence of Liver; this they eat inftead of Bread. Others cut the Hides into Slips, fhaved the Hair off, and toafted them at the Fire, and this paffed at that Time for good Food. Nor were any Part of the Entrails thrown away, fo that if the Scarcity had endured longer, poffibly their Nature had been changed into that of Caffers or Hottentots, who eat not only raw Flefh, ..but even the Excrements alfo.
10. In this Streight, being informed that the Country all about this River abounded with wild Game, as Harts, Roebucks, $E^{2} c$. I ordered fome expert Archers to go a Hunting; which proved fo fuccefsful, that they fhot about fifty Roebucks, which were afterwards diftributed to our famifh'd Company, who greedily devoured them half dreffed and half raw, and gave convincing Proof that Hunger, as "tis commonly reported to be, is really a flarp Sword; but belides it muft be owned that the affuaging it when it hath continued long and is grown outrageous, is one of the greatef Pleafures of Life; though indeed a tedious Thirft is more intolerable and painful to human Nature.

In this Streight I fent a Gentleman, accompanied with eight Coffacks to Argum the frontier Place, chargd with a Letter to the Governor, requefting that he would immediately fend us a Parcel of Oxen, Sheep, Bread, Meal and other Provifions, under Convoy, by Reafon we were driven to the laft Extremity; and this Meffage did not prove unfuccefsful, chough the expected Relief did not arrive fo fpeedily as we wifhed ; each Day on thefe melancholy Occafions commonly appearing an infupportable Year.

Having difpatched this Meffenger with his Orders, I thought it neceffary to break up from the River Gan, and inthe Interim to advance as far on our Way, and ftruggle as much as poffible with our Uneafinefs. And after we had travelled three Days, the hungry Complaints of our Company became inceffant; the Rocbucks were but a Morfel amongft fuch a Number of People, and no Edibles were to be bought for Money in this Wildernefs. During which Affliction we were obliged to make a Virtue of Neceffity, and bear as well as we could what we were not able to remedy. In this Condition difpirited and faint we arrived at a Brook, which flowed from the Hills, and was richly ftored with large Jacks, Trouts, and other Fifh, of which we fhot many with Bow and Arrow: for in clear Water the Coffacks and

Tunguzian

## Chap. III.

 from Muscovy to CHiNA. $95^{1}$Iunguzians, of both which I had feveral, are fuch experr Archers, that with their double pointed Arrows they very feldom miffed the Fifh they aim at, and but once touching, generally pierce through them, which inftantly caufes them to float on the Surface of the Water. This Fifhery afforded a very confiderable Refrefhment to our Camp, which was alfo increafed by fome Bucks being fhot that Evening and dreffed as before.

Our Hunters difcovered a Hutt amongft the Hills, where lived a Scbaman or Conjurer and his Companion. This Magician was Uncle to our Guide, and a Tunguzion, which Nation abounds with fuch Pretenders, as we have already hinted. About Midnight I was waked by a horrible Noife, upon which running out of my Tent, and asking the Centry that ftood there, what it was? He told me our Guide was making merry with his Uncle; which excited my Curiofity to that Degree, that led by one of the Centries, I fole thither foftly to fee what they were doing; approaching the Entrance of the Hutt, I found that they were Conjuring after their Manner ; and though the greateft. Pare of it was over, I yet obferved, him fitting with an Arrow in his Hand, the Head of which was inclined towards the Earth, and the Point he held under his Nofe; after which he rofe up, making a louder Outcry, and after leaping all round, laid himfelf to fleep. In the Morning the Coffacks, whom I had fent a Hunting, and whom he had accompanied, told me that this Conjurer came to meet his Nephew, whom he in their Prefence conjured out of their Sight, or carried away; which might eafily be done without any Diabolical or other Affitance than the Darknefs of the Night, and the uneven hilly Ground. My Meffenger returned with the agreeable News, that within three Days we fhould be furnimed with all Sorts of Provifions from Argum; the Approach of which appointed Time was not a little longed for amongft us.
11. On the 3d Day Heaven favoured us with our promifed Affitance, which confifted of twenty five Oxen and Cows, Millet and Bread ; but the Sutlers that brought this Convoy of Provifions, made the Merchants pay fo very dear for it, that their Relief looked more like Extortion than Charity; they taking a Rixdollar for one Loaf, and for all the reft in Proportion ; however coft what it would, this Supply was very welcome to us at that Juncture.

Thus invigorated, and alfo encouraged to find that the farther we advanced on our Journey the Grafs grew better, on we went, till through the Mercy of God we got to the End of this barren Defart, in which we had fuffered fo many Miferies, and ftrugled with the greateft Difficulties in the World.

On the 27 th Inftant we joyfully reached the River Argum, which with the whole Caravan we pafled: And on the 3 Ift arrived very fafe at the City of Nerzinfkoy; returning our Thanks to Heaven, that through fo many Dangers we were thus far advanced on our Way, and had got out of the Reach of pinching Neceffity.

After having refrefhed the Camels and Horfes with good Grafs, and refted ourfelves for a convenient Time, we departed from Nerzinfloy on the 5 th of Auguf, and proceeding forwards by Land along the River-fide, came on the 8 th Inftant to the City of Udin/koy; where we furnifhed ourfelves with Barks, and affifted by an ebbing Tide, and a good Wind, in one Night reached the Frontiers of Siberia, and on the 12 th arrived fafe at Fekutskoy.

On the 1 yth we left that Place, and after running a great Rifque by wading through the great Quantities of Water which were fallen, arrived fafe at $\mathcal{F}_{e}$ nizet/koy.

On the 26 th we went by Land from this City, and travelled through a Wood twenty Miles long, in which were harboured feveral wild and ravenous Beafts, that at our Approach took their Flight.

After which we arrived at the Village Makofkoy, where finding as large a Store of Shipping as I defired, we all embarked, and driving down the River Keta, on the 28 th of September we reached the Caftle of Ketskoy on the Oby; on which we drove down without meeting any Thing remarkable, and on the I6th of October came to the Town Samorofskoy $7 a m$, at the Mouth of the River Galis, on which Stream I fpent fourteen Days in waiting for Sleads to purfue our Journey by Land, I took the very firft Opportunity, fo that on the 29th I fafely reached Tobolkoy, where we refted three Weeks to refrefh ourfelves, and to provide ourfelves with new Cloaths.

After which we fet forwards with all poffible Expedition, being very defirous to put an. End to fuch a tedious Journey, and once more fee the imperial Metropolis.

On the 24th of November we travelled through the City of Wergaturia, without encountring any Thing obfervable, and through the Mercy of God, arrived in Sleads fafe at Mofcow on the firlt of Fanuary, after having fpent two Years and ten Months in thefe Travels, and endured feveral fatiguing Miferies, partly occafioned by Scarcity of Provifions as already hinted. We returned Thanks to Almighty God for graciounly preferving us in fuch imminent Dangers, and at laft conducting us to the Place from which we, were fent by their Czarifh Majetties.

## S ECTION IV.

A very copious and no lefs curious Account of the North-Eàt Part of Afia; comprehending a diftinct, particular and authentick Defrription of all that has hitherto paffed under the general Name of Siberia, fhewing the Extent and Situation of the feveral Diftricts thereof, their Climate, Soil and Produce, the Rife and Courfe of the principal Rivers, Defcriptions of all the great Cities upon their Banks; of the feveral barbarous Nations that inhabit near thefe Rivers; of the Value of their Furrs and Fifheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of leffer Circum ftances, as well as material Points of Fact, which contribute to the perfect underfanding the Condition of this hitherto unknown Country, and all its Inhabitants. To which is added, a fuccinct Recapitulation of the State of the Chineje Empire towards the Clofe of the laft

Century; with fome very impartial as well as judicious Remarks on the Temper, Genius, and boafted Oeconomy of that famous Na tion ; with a free Cenfure of thofe Hyperbolical Panegyrics, that have been beftowed on the Progrefs of Science amongft them.

## Being the Conclufion of bis Excellency Everard Ysbrants Ides's, Travels by Land from Mufcovy to China, and of his Return from thence.

1. The Autbor's Account of Siberia, the Extent and Situation of that Country, the Motives that led bim to think of making a Map of it, the Metbods ufed by bim for that Purpofe, and the Refult of bis Pains upon this Subject. 2. The Country of the Samojedes defcribed, with an Account of this Nation, ibeir Food, Garriages, Government, Arms, Religion, Marriages, Poetry and frong Difpofition to Magick. 3. An exait and excellent. Defcription of the Streights of Weygats, bow far they are navigable, the Ruffan Fifhery in them, Privileges that Nation formerly enjoged, which are now taken away. 4. An ample and curious Defcription of the Mountain of Pojas, or Back of the World: Of the Soutb Boundaries of Siberia, and of its principal Rivers, viz. the Jaka, the Tobol, the Oby, the Jenizea, and the Selinga. 5. The Source of the River Kugur, Defcription of the Uffinian Tartars, and their Neigbbours, the Nature and Produce of their Countries, the Stature, and Complection, Habits, Language, and Religion of theje People. 6. Of the Kalmucks or Kalmacks, who inhabit between the Tobol and the Oby. The Lake of Jamufchowa, famous for the excellent Salt it produces. The Country of Barabinfy, its Nature and Produce, the People that inbabit it, their Manners, Cuftoms, Arms, Government, Religion, and Trade. 7. Of the famous Toren of Tomfkoy, its Inhabitants and Commerce, of the Joort Route from thence to China, and a concife Account of the Country between this City and that of Jenizefkoi 8. Of the Country of the Kirgifes, the Hiflory of that People, and of their Neigbbours: Of the frontier Places belonging to the Mongals, with an Account of the three Princes by whom they are governed. 9 . Of the Country about the Cafle of Argum, of the People who inbabit thele Parts, and of the River Gorbifa, which Jeparates the Dominions of the Czar from thoje of the Emperor of China. 10. Of the Rivers Tugur and Uda, and of the Inbabitants of certain IRands that come thither to trade, extremely curious, and wobich occur in no otber Autbor. 11. The City of Kamfatka defcribed, with an Account of its Inbabitants, the Climate about the lcy-Cape, the Fifb taken there; the Manner in which the People live under Ground, and of the vaft Mountains of Ice in the Sea. 12. Of the River Lena, and the City of Jekutikoi, Capital of the Northern Parts of Siberia, the Fikery there, the Nations that inbabit on the Side of this River, their Cuftoms, Religions, Habits and Language. Of a certain Idolatrous Nation in thele Parts. A Dejcription of other Rivers that arife in tbis Country, and of the Lands they water. I3. A De/cription of the City of Wergolenfkoi, the fruitful and pleafant Country about it: An Account of the River Jenizea from its Source to its Mouth, with a Defcription of the People that inbabit the Banks of that and other Rivers. 14. A juccinct but curious and exact Defcription of China, with Remarks on the Genius, Temper and Dijpofition of the People. 15. Of the 'Author's Converfations with them, in Reference to religious and pbilofopbical Subjects; with otber curious Particulars. 16. The Autber's Sentiments with Re/pect to the bigh Notions that bave been entertained in Europe, of the Wijdom, Learning, Policy, Arts and Manufactures of this Nation. 17. Objervations Hifforical, Political, and Critical upon the foregoing Section.

'THE great Value of thefe Travels arifes from their Plainnefs, Perfpicuity, and apparent Veracity ; for it is eafy to fee that our Author had a true German Sincerity, and was far from allowing his Imagination to co-operate with his Judgment in the Compofition of this Work ; what he faw with his Eyes, he has faithfully fet down with his Pen, without Increment, without Diminution. But upon his Return to Mufoovy, and communicating his Journal of his Travels, many Queftions were asked him, and many Inquiries made, from which he was convinced, that a moft ufeful and entertaining Supplement might be added to his Work; and this it was that put him upon writing what compofes this Section. It had been a very eafy Thing for him, by digefting his Travels afrefh, to have brought all his Oblervations and Remarks into their proper Places ; and this, without Doubr, would have render'd his Performance more elegant, at leaft if not more ufeful. His Love for Truth, however, was fo great, that he refolved Things fhould appear as they really were, and inftead of taking that Step, has given us his additional Remarks in that Order to which he was directed by the above-mentioned Enquiries; by this Means he was obliged to retrace his whole Journey, which however he has done in fuch a Manner, as to mention little or nothing that he had given us before, and has caken fuch a Method, as will enable every attentive Reader to become abfolutely acquainted with this great Country never defcribed before,
and of which all Defcriptions that have been made fince fall very far fhort of his. Thus much I thought neceffary to premife, without taking away any Part of his own Introduction, becaufe I thought it but juft to acquaint the Publick with this Author's real Merit, which in Point of Accuracy and Regard to Truth, I look upon as fuperior to moft, and not inferior to any; and I perfwade my felf, when he has perufed it, that the Reader will be entirely of my Opinion, and will only regret, that in Collections of this Nature, fo few Pieces of this Kind can be inferted.
In the paft Relation of our Travels, folely aiming at Truch, we have reprefented her naked, without any hyperbolical or ornamental Illuftrations to render her the more agreeable and furprifing, according to the common Practice of Writers of Travels, who magnify Trifles, and croud in various Particulars on the uncertain Reports of others, in order to furbifh up the Book. This is indeed what I have all along carefully avoided in the Defcription of my Journey ; but finding I have not been fo methodical as I could have wifhed; that I have omitted fome Particulars worth the Reader's Cognizance, or at leaft not related them as they ought; for the firlt I beg Pardon, and fhall endeavour to make fome fimall Amends for the latter by a fhort Review.

My Travels then were through the whole Provinces of Siberia and Dauur; the Towns, Countries, and Rivers of which that I have paffed through, or over, are already exactly defcrib'd. The Courfe of our Journey was from
the North to the Eaft, that is, from Weygats to Amur ; and from the Weft from Uffa Baskiria to the Mongalian Country, and from thence from the Weft to the South.
As for what relates to the Frontiers of Siberia in general, they are every where garrifoned wich well armed Forces by his Czarifh Majefty, who are not indeed very folicitous to fubdue the Southern Tartars inhabiting the Gelifeefcbian Plains to his Majefty's Obedience, by rea fon it would not turn to any great Advantage. The Circuit of this Kingdom of Siberia, and the circumjacent Country is very large, as appears by our accurate Map, with regard to which I muft acquaint the curious Perufer, that he ought to guide himfelf only by the Degrees ; but as for the Diftances betwixt Countries, Cities and Rivers, they are not to be expected exactly placed to a Mile : For this Country having never been travelled by Geographers, much lefs meafured by Miles, I have only, as carefully as I poffibly could, taken the Alcitudes with a Mathematical Inftrument, and from thence marked the Places, leaving to my Succeffors in thefe Attempts, the more thorough Search and Difcovery of thefe untravelled, Countries. I have -indeed broke the Ice for them, being the firft German that ever went through this vaft Country to, and returned from Cbina.

I muft acknowledge that I am obliged for the firft Light of a good Sketch of a general Map of thefe Lands, to the highly honourable and worthy Nicbolas Witfen, Prefident Burgher-mafter of the City of Amferdam, whofe Memory will be perpetually reverenced by all the learned World; he having firf difcovered to the Europeans all Siberia, the Calmuckcan, Mugalian, and other Provincs, to the Cbinefe Wall ; and deferibed them by a Map. This Map I made ufe of as a Guide throughout my Journey, and as a Foundation, on which to build that annexed to my own Book. A fhort Sketch of my Journey is as followeth:
2. Firft we began our Traveis in the North, in the Samojedian, which he before called Sirenim and Waguliffan Countries, which are alfo under the Siberian Government, being fubject to the Waizodes of Pelun, as far as the Sea. It is obfervable that there are various Sorts of Samojedes, very different from each other in their Language or Exprefion, as are the Berefofkians and $P_{u}$ foferfians, which believe themfelves alfo to be the fame Nation: After thefe are thofe who live on the SeaCoaft beyond the Eaft Side of the Oby to Truchamfloy, or Mangazeifkoy; as alfo thofe which for the greateft Part of the Year refide about Arcbangel, near the River Drwina, though indeed in Summer they fet up Hutts by the Water-fide, and in the Winter far in the Woods: This laft Sort are the Scum of thofe People who formerly lived together by the Sea-fide, which now are come to this Country.
Befides thefe, are the Samojedes that inhabit all along the Ice-Coast of the Province of Siberia, which are a People that have not much more to pretend to than a humane Face and Figure; they have but a very fmall Share of Underftanding, and in all other Particulars are very like Wolves and Dogs, for they eat all Manner of dead Carkaffes, whether of Horfes, Affes, Dogs or Cats, which die a natural Death; as well as Whales, Sea-Cows, Sea-Calves or Horfes, छ'c. which are thrown upon the Shoar by the Ice; nor do they take the Trouble of Dreffing thefe Meats, but devour them raw; and if they. had but Wings they would certainly take their Flight to Greentand, and diet with the white Bears and Malmucks (a Sort of Birds of Prey) which feed on the flea'd Whales Carkaffes: And notwithtandall this, they inhabit a Country that richly abounds with wild Game, Fifh and Flefh ; but moft of them are too idle to provide themfelves with it.
They have a Sort of Governors amongft them, to whom they bring their Tribute, and thefe are obliged to carry the fame to the Cities or Winter Places of his Czarifh Majefty. A Gentleman who ftaid fome time at Posfoi Ofer, told me, that their Hart-Sleads were very convenient, and that with them they went prodigiouly frift over the Mountains covered with Snow. (The Fa-
thion of thefe Sleads, their Manner of Travelling, and their Buckskin Habit with the hairy Part outwards, together with their Bow and Arrows, are expreffed in the annexed Print.) He added that he had feen the abovementioned Governors in fuch Sleads as thefe, to which were fometimes harneffed fix or eight Bucks; the Governors are commonly cloathed in Scarlet-Coats, but their Retinue in the Habit already defribed. Their Arrows, inftead of being pointed with Steel or Iron, are only headed with the Bone of a Sea-Calf, or fome othes Animal.
They make a very difagreeable Figure all over, infomuch that I may venture to affirm, that fuch a fhocking ill looked People are nor to be found on the Surface of the whole Earth. Their Stature is flort and flat, they have broad Shoulders and Faces, flat and broad Nofes, great blubber hanging Lips, and frightful Eyes like thole of the Linx. They are very brown all over, their Hair is difhevelled, fome of it being red or pale, but moft of it is as black as Pitch; they have very litcle Beards; their Skin is brown and hard, and they are very fwift Runners. The Roebucks, which they ufe to draw their Sleads in Winter, are horned and fhaped like Harts, but have crooked hanging Necks, like thofe of Dromedaries '; befides which, what is obferved of them is very particular, that they are as white as Snow in Winter, and greyifl in Summer: They are fed with Mois which grows on the Ground in the Woods.
Thefe Samojedes are grofs Idolaters, who have no Notion of any Religion otherwife than that, like the Perfans; they workhip the Sun and Moon, by bowing their Bodies Night and Morning ; befides which, rhey keep near and in their Tents Idols that hang on Trees; fome of them are wooden Images reprefenting human Figures; orhers made of Iron, to which they fhew fome Refpect : Their Tents are cover'd with Birch barks few'd together, and when they remove them, as they frequently do in Winter as well as Summer, they fet up the Stakes round with the Points together, and upon thefe they lay the Covering of the fore-mentioned Bark over them, leaving a Hole at the Top for the Paffage of the Smoke. Their Fire is made in the Middle of their Tents, round which they lie at Nights naked both Men and Women. They lay their Children in Boxes or Cradles made of Birch bark fewed together, filled with Shavings of Trees which are as foft as Wooll, and covered with Buck-skins.
They marry within the Degrees of Confanguinity without the leaft Scruple, and buy one another's Daughters for Wives, giving for them Bucks and Hides, and according to the Cultom of feveral Eaftern Nations, they take as many Wives as they can keep. When they defign a Merry-making, they ftand in Couples oppofite to each orher, throw up one of their Legs, and mutually clap the Soles of their Ftet fo hard with their Hands that it may be heard at a Diftance. Inftead of Singing, they make a howling Noife like that of Bears, they neigh like Horfes, or chirrup like young Birds. They have a Sort of Conjurers that fhew all forts of diabolical Tricks moft, if not all of which are fraudulent Delufions. But here taking our Leave of thefe monftrous Samojedes, we thall turn our Difcourfe to another and more pleafant Subject.

Near this Coaft, as far as Weygats and Mefeem, are all Sorts of Quadrupeds, particularly Wolves, Bears, Foxes, and Harts, $\mathcal{E}^{\circ}$ c. The Fowls are Ducks, Partridges, $\mathcal{E}^{2}$. being Snow-whire in Winter, which is fo very fevere, that about Samojeda I have my felf feen Rooks and Magpies fall down dead in their Flight, being killed by the piercing Froft.
3. A great deal hath been faid concerning the Weygais, by Englijh, Danes, and Hollanders, who with Ships have endeavoured to bore through this icy. Channel' which hath been done indeed once or twice, bur then thofe who did it were repulfed, and forced to return to their own Country by the , vehement Current of Ice in the South or Icy Sea; of which Mr. Nicbolás Witfen, Bur-ger-maffer. of Amferdam, treats at large, that Gentleman having obtained an exact Account of whatever is remarkable, from feveral Perfons who have been there: all which Obfervations he hath incomparably well dia gefted in his Chart of Weygats and the Sea-coalts, to
the River Oby ; by which it plainly appears, that from Weygats to the Icy or Holy Cape, the Sea is utterly unnavigable with Ships, and thould a fecond Cbrifopber Columbus appear, and point out the Courfe of the Heavens, he could not yet drive away thefe Mountains, of Ice : For God and Nature have fo invincibly fenced the Sea-fide of Siberia with Ice, that no Ship can come to the River Fenifea, much lefs can they come farther Northwards into the Sea. Not to mention the Voyage from the Icy or Holy Cape, round Japan and Fedzo, I thall only infert what I have collected from the Informations of the Ruffians, who feveral Times have failed through the Streights of Weygats to the Oby.

We go, fay they, with our Koiskt, (a Sort of Barks fitted for the Sea) to the Streights of Weygats, to fifh for Sea-calves, and if they do not meet with great Quantities of Fifh, we fail directly into the Weygats; but if the Wind blows from the Sea, ihe whole Coaft is covered with Ice, and we are obliged to put into fome of the Creeks or little Rivulets which run inland, and withal not to venture too far, but ftay there till the Wind turns about and blows from the Shore towards the Sea; upon which thefe Streights are fo perfectly cleared of all their Ice, that it foon drives feveral Miles out of Sight at Sea; and making ufe of that Opportunity, we fail along the Coan till the Wind turns contrary, when we are again forced in, in Search of a Creek to fhelter us ; which if we fail of, the Bark is fhatter'd to Pieces by the Clots of Ice

About fifty Years paft, the Siberian Ruffrans had free Liberty to fetch their Provifion, as Corn, Meal, $\xi^{2} c$. from the Sea-ports, and to carry their Siberian Commodities thither through the Weygats, fuppofing that they paid the proper Toll to his Czarifh Majefty: But thefe Siberians abufed their Sovereign's Favour to a very great Degree, and made ufe of it to bring in great Quantities of Goods, by other Ways and Rivers into Rulfia by Stealth, whereby his Majefty fuffered very much in his Revenue ; for which Reafon, ever fince, the Importation of any Goods through the Streights of Weygats have been abfolutely prohibited; but all are obliged to be brought over Berefova, the Kamenskoy, or the rocky Pojas; which Paflages are not attended with fmall Difficultie's, for when they leave Berefora, the Carriers are obliged to cut their Boats (which are cut out of a Tree) acrofs in two, and in thofe half Boats draw themfelves and their Goods over the high Mountains, and having fpent fome Days in this irkfome Way of Travelling, till they are come to the North-fide, they again faften their Boats together, ftopping the Joints clofe with Mofs, and therewith purfue their Voyage to Arcbongel, or the other Places in Ruffa fituated on the River Oby.
4. I fhall now turn my Difcourfe to the Pojas, or Ridge of the World: which is a valt Quantity of Rocky Hills, that in their parting, according to the exacteft Obfervation, make a Sort of Ridge or Pojas. This Ridge begins from Petzerkay Ofer, or Pezerfe Lanis, and extends, without any Divifion, through the Province of Wergaturia, under which is comprifed the Wergatoer fcbian Wolok; and this Mafs of Hills is no otherwife to be travelled than by drawing over it: From thence it runs Southward by the Caftle of Utka, to the Ufinian Tartars Country, out of which Mountains the River UJfy, and Eaftward the River Nitra, Tuna, \&xc, originally rife, and the laft falls North-Weftward. into the Kama. From hence this mountainous Ridge takes its Courfe Southwards, to the Kalmockian Borders, out of which Pojas, the large River Faica, fo rich in Fifh, rifes Weftwards, and difembogues itfelf into the Cafpian Sea, and the River Tobol rifes out of the North Side of it. Its Courfe Eaftwards is along the Kabmuckian Country, and the Borders of Siberia, paffing by Afero. Saifan, and Ofer Kalculan, two Lakes; from the firft of which the vaft River Oby fprings, and from the fecond Irtis. From this great Lake Ofer Kalculan, this Ridge of Mountains turns off again Southward, where the River Fenifea rifes, which difcharges itfelf into the Tartarian Icy Sea.
Farther Southwards this Pojas or Ridge of Hills inclines in the Shape of an Elbow to the North-Eaft and

South. It runs along by the River Fenizea Northwards, and Southwards by the Ofer or Lake Kofogol, out of which rifes the Kiver Selenge, which falls into the Lake Baikal. From hence the Pojas extends to the Sandy Defert, in the Mongalian Country, and being interrupt. ed by fome Days Journey through the mentioned Defart, proceeds onwards to the South, as far as the Cbinefe great Wall, and then turns off Eaftwards to the Ca. reefcbion Sea, as is delineated in cur Map.
5. But to come to the Defcription of the People of thefe Provinces, and to inform the Reader to whom they are Tributaries. The Country from Pelim to Wergaturia, all along by the River Zufawaja, to the Province of Uffinia, is moftly inhabited by the Wogulifcbian Heathens, whofe Tenets and Manner of Living are already above defcribed. The River Kugur where the Uffinion Habitations begin, rifes out of the Uflimfcbian Jurifdiction, betwixt the Rivers Zufarwaja and Uffa, and falls into the Kama. On this laft River is fituate the City called Kungun, in which his Czarifh Majefty hath a Garrifon. Thefe Ufinfcbian Tartars, as alfo another Sort called Baskinzians, inhabit near the City of Oeffa, and live difperfed in Villages and Towns, all which are well built after the Ruffian Fafhion, along the Weftern Shoar of the River Kama, and by the Wolga Side, almoft as far as the Cities Sarat and Sarapul, both which are fituate on the River Wolga, and garrifoned by his Czarifh Majefty, in order to the collecting of his Tribute; and to keep the Tartars in Awe. This Tribute they pay in Furrs and Honey; and are a Sort of People that will not bear being too roughly handled by their Governors, but if fo treated by them are fure to rebel, of which there have been feveral Inftances formerly; but for a long Time they have not been guilty of any Dilloyalty.
South-Weftwards, in the Diftrict of Afracan, there are alfo other fmall Clans or Hords of that Nation, who being an independant People, in Conjunction with the Kaimockians bordering on Aftracan, rob and pillage in the Province of Siberia. Befides which, by Way of fupe plimental Maintenance, they apply themfelves to the Tillage of the Ground, chiefly for the Production of Barley, Oats, and Buck-wheat : And as foon as the Corn is reaped, they prepare a Threfhing-Floor in the Field, threfh it out, and ftow it in the Barn. This Country as plentifully flows with Honey as any Part of the World. Moft of the Men's wearing Cloaths are made of Ruflan white Cloths, the Coat being about the fame Fafhion with thofe of the Mufcovite Peafants, with long Flaps hanging down on their Backs. The Women, when the Seafon is not too cold, cover the upper Part of their Body with a Shift only, which is curiounly ftitched with Silk of all Colours by Way of Stripe, from the Top to the Bottom; and about the lower Part of their Body they wear Petcicoats, and a Sort of Shoes which not only cover their Feet, but reach above their Ancles. Their Head-drefs confifts in a Sort of Fillet about a Hand-breadth, which they wear on their Foreheads, and faften it behind. This Fillet is ftitched with Silk of feveral Colours, and adorned with a Sort of variegated Glafs, in Imitation of Coral, which is ftrung, and hangs dangling near the Eyes. Some have thefe broader than others, as being full two Spans long, and of one Hand Breadth, and ftitched through with Silk; thefe look like a thin Plank, and are adorned with Corals of all Sorts of Colours, which cover their Forehead. When they go abroad, they cover their Head-drefs with a fquare Linnen Handkerchief, ftitched with Silk, and edged with Silk Fringe.

Thefe Uffinfchian, as well as the Kafkierfcbian Tartars, are a valiant, warlike People; they fit their Horfes well, and carry no other Arms than Bows and Arrows, in the Ufe of which they are extraordinary dextrous. They are vigorous and large $\mathrm{Men}_{2}$ their Shoulders are broad . and they fuffer their Beards to grow to a good Length. The Hair of their Eye-brows is fo very thick and long, that it hangs over their Eyelids, and generally runs fo far crofs the Forehead as to unite the two Eye-brows.. They have a Language peculiar to themfelves, yet can partly underfand the Afracan Gartars. Their Re-
ligion
ligion is Pagan, though indeed they partly incline to the Mabometan, which they have borrowed from the Crim Tartars; with whom they formerly converfed very much.
6. The Country betwixt the Rivers Tobol and Oby , to the Famufchore Ofer, is inhabited by Kalnockians. This Ofer or Lake plentifully abounds with hard Salt, and lies under the Kalmockian Jurifdiction; notwithftanding which about twenty or twenty five Docloenicks, or Rufian Veffels, guarded by a Convoy of 2500 well armed Men, come annually from Tobolesk, up the River Irtis, from whence they travel by Land to this Ofer or Lake, where they dig up the Salt like Ice from the Shore, and load their Ships with it. Indeed they generally have fome Skirmifhes with the Kalmockians, who will not allow of this Practice: But yet, whether they will or not, they are forced to fuffer it.

Inclining lower down from this Fomufawaian Lake, near the River Irtis, Jies the City of Torre, adjoining to the River Tara: This is the laft Frontier Place which belongs to his Czarifh Majefty, bordering on the Territories of the Kalmockian Prince Buftucban. The Inhabitants of which are called Barabinfy, and ftretch themfelves Eaftwards from the City of Torre, to the River Oby, oppofite to the River Ton, and the City of Tomskoy. This Country of Barnabu is paffable in Summer as well as Winter ; but chiefly in the latter: For the Oby at Surgut and Narin being unpaffable in the Winter, Travellers generally go this Way to Siberia, by Tomskoy and Jemufeefcbs. This Nation, which is called Barabinfy, confifts of a Sort of Kalmocks which pay Tribute equally to the Czar, and the Buftucban. They have amongft them three Governors or Taifcbi; the fint of which is called Karfagaz, the fecond Baikifcb; and the third Baiduk: Thefe three Lords receive the Tribute of the Barabinzes, and bring the Czar his Portion. The Karjagaz, the firft of them, brings his Part to the City of Tora; Baikijch, his Portion to the Ruffron Cafte of Telurve; and Baiduk, the Remainder to the Caftle of Kulenba: All of. thefe Tributes being paid in Furrs. Thefe are an infolent villanous Sort of People; they live in low built wooden Houfes, like thofe of the Siberian Tartars; they are not at all acquainted with the Ufe of Stoves or Ovens, but make Ule of a Sort of Chimnies or rather Smoak-holes. When their Wood is burnt, they ftop the Smoak-hole, and warm themfelves by the Coals as long as any Heat remains in them.

Their Houfes are ranged into Villages; they fet up high Hutts in the Summer, but in Winter retire into their warm wooden Dwellings. They are tolerably skilful in Agriculture, and fow Oats, Barley, Miller, and Buck-wheat, but are not fond of either Rye or Rye-bread: And though they like the Tafte of it well enough, yet they chew it fo awkwardly, and roll it upon their Tongues as if they had Dirt in their Mouths, and fpitting it out, fcrape the Remainder off their Tongue as after a Thing which they cannot fwallow. They fteep their Barley in Water, dry it a little, and then threfh off the Husk; after which they dry, or rather fry it in a very hot Iron Pan or Kettle ; by which Management it becomes as hard as Bone; and this is their Bread which they daily eat, and is fo hard and dry, that it crafhes betwixt their Teeth. They alfo eat the Saranna or Bulb of yellow Lillies, dried, famped, and boiled with Milk, as a Sort of Milk-pap. They drink Kumis, a Sort of Brandy extracted from MaresMilk; and Karaza, i. e. Karatcba, or black Tea, which is brought thither by the Bucbarians.

Their Arms are thofe common to the greateft Part of the Tartars, viz. Bows and Arrows. They keep great Numbers of Cattle, particularly Horfes, Camels, Cows and Sheep: But neither keep or will cat Hogs. Their Country abounds with fine Sables, Martins, Squirrels, Ermins, Foxes, Hyena's, Beavers, Minks, Otters, $E_{5}{ }^{\circ} c$. in which they pay their Tribute. This Country extends from Tora to the Rivers Oby and Tom; is not mountainous but plain even Land, abounding with Woods of beautiful Cedars, Larch-Trees, Birch and Pitch-Trees, which are interfected by feveral Chryftel-

Voz.II. No CXXXV.
line running Streams. In the Habits of both Nien and Women, they follow the Numgolfobian and Kalmockiand Fafhion; and marry as many Wives as they can maintain. When they go into the Woods in order to hunt furred Animals, they carry their Saitans along with them ; which is a rough Image, as well carved in Wood as they can do it with a Knife: This they cloath in a Stuff Drefs of all Sorts of Colours, in Imitation of the Habits of the Ruffian Women, and place him upright in a fmall Cafe, and carry him upon a particular Slead, both made for that Yurpofe; and to him they offer up their firft Capture of what Sort of Beaft foever it prove.

When they have killed great Numbers of their Game, they return Home very merrily, mount their Idol in his Cafe, to the higheft Place in the Houfe, and hang him behind and before, above and below, with Sables, Martins and all Sorts of Furrs, in order to exprefs their Acknowledgments to him for rendring their Hunting: fo fuccefful; and all thefe rich Furrs muft hang there to be fpoiled and putrified, they believing it a moft unpardonable Crime to take off or fell any of thefe dedicated Hides; whence it is that we daily fee fo many fine Skins placed by thefe Images, that are eaten up by the Worms, which it is indeed a great Pity are not better employed.
7. Croffing the River Oby from hence, we come tó Tomskoy, which is alfo a Frontier Place belonging to the Czar, fituate on the Buzuk, and is a very fine and vaft large City, ftrongly garrifoned by Ruflan and Coffackian Soldiers, to prevent the Incurfons of the Tartars into Siberia; and in the Suburbs over the River live great Numbers of Bucbarfian Tartars, who pay Tribute to his Czarifh Majelty. This City lies on the River Tom, which rifes in the Kalmockian Territories, and from hence the Subjects of the Bufucbtu Cban, and the Bucbarfanns, drive a very confiderable Trade to Cbina, feveral Ruffron Merchants being concerned and fharing with them. This Way to Cbina is very expeditious, it being practicable to go thither in twelve Weeks, and return back in as fhort a Time; but it is withal expofed to the greateft Inconveniencies and Difficulties in the World; for the Travellers are obliged to carry all Neceffaries along with them upon Camels, nay even Water and Wood to drefs their Victuals. They go directly throngh Kalmockia, and through Cokoton, a Cbinefe City without the Wall. Eut it is utterly impolible for Ruffians or other Nations to travel this Road, by Reafon that it is infefted with feveral Gangs of Robbers, which fet on the Paffengers, and very often deprive them of all that they have gained by fo tedious and fatiguing a Journey.
From Tomskoy down to the City of Janifeefch is utterly defolare and uninhabited Land; the Country is an even Plain, on which appear fome fcattered Thickets: Alfo all about the two Rivers Kia and Zuwin, to as far as the Cities Kufnezkoy and Krafnajar, is very little or not at all inhabited, any where befides the Frontiers. The firt peopled Country we find here is that of the Kirgizens, which are the Subjects of the Bufucbtu Cban. The City of Krafnajar is very large, and defended by a ftrong Garrifon of Coffocks placed in it by his Czarifh Majefty, and they are always obliged to keep a very ftrict Guard to prevent the Incurfions of the Kirgizens, for which Reafon twenty Horfes both Day and Nighe ftand conftantly Sadled and Bridled, in the Marketplace, before the Governor's Houfe: For the Kirgizens, though at Peace with the Siberians, are a People who are never to be trufted. For frequently when they are not expected, they come in Parties, and fteal both Men and Horles under the very Walls of the City, and out of the neareft of the Siberion Villages: Bur the Coffacks generally make, fevere Reprizals on them, by often killing and carrying off, feveral hundreds of Men and Horfes from their Hords or Clans.
8. Thefe Kirgizens extend their Habitations SouthEaftwards as far as the Mongalion Diftriets. They are a warlike Nation, being genérally vigorous, tall, and broad-faced Men, fomewhat like the Kalmockions. Their Arms are Bows and Arrows, but they never go out in

IIK
Quef
queft of Booty without very good Coats of Mail and Lances, which they draw along by the Horfe Side, with their Points on the Ground. They generally live in the Mountains, which naturally ferve to defend them from Surprize. The greateft Part of their Language is Kalmockian, but they alfo fpeak a great deal of the Crins Tartarian Idiom, which the Turks partly underftand.
From Krafnoy along the River fenifea, as far down as Fenifeefch, is inhabited by fome Tungezians; but chiefly by Burattions. This laft-mentioned Cafte juft touches on Mongalia, and borders on the Ridge of Rocks between Tunkinskoi and the City of Selinga. The Frontier Fort butting, on Monsalia is not large, but provided with a very ttrong Garrifon, chiefly of Horfe, in order to defend the Weftern-fide againft the Mongalians, and their fubordinate Tartars the Mirottions, Milyans, and Burattians. Near this City grows a Sort of Santclunn or Sanders, which is prodigious hard. The Burattians, which are under the Protection of his Czarifh Majefty, formerly inhabited the Country all about Seling a; but by Reafon fome of them, at the Inftigation of the Cbinefe, began to fly over to the Mongalians, the Remainder were, for greater Security, tranfplanted to the Baicaffain Lake, round which they now live in the Mountains, and pay their Tribute to his Czarifh Majefty in Sables and other rich Furs.

From this City to the Lake Baikal runs a continued Ridge of Hills, where are found very fine Sables and Cabardins. From the Lake Kofogel Eaftward to the Sandy Defert, and from thence to Dway, or the Mongalian Lake, and fo on to the Province of Argun, and thence again North-weft as far as the Rivers Onon and Sikoy, is the Circumference and Boundary of the whole Mongalian Territories, or, as hath been formerly faid, of the Jurisdition of the Race of Gog and Magog, which is governed by three Regents, the Chief of which is the Kuttucbt, who is alfo the High-prieft of the Nation. The fecond Brother is the Aziroi Sain Cban, and the third is Elict, whofe Boundaries border on the Weft Tartars. The firft two Brothers infeparably hold together, but the third robs and plunders wherever any Booty is to be come at ; and is fo bold as to venture fometimes even to the Cbinefe Wall with his Troops, carrying off all that comes in his Way, not faring even the Emperor of Cbina's Money which he fends as a charitable Prefent to the neighbouring Tartars, to engage them to a firm Continuance in their Allegiance. Kuttucbt, otherwife call'd Koetoegt, and Aziroi Sain Cban his Brother, though their Country is of vaft Extent, have yet put both themfelves and that under the Protection of the Emperor of Cbina, out of their great Fear of the Ba fuicbtu Cban, Prince of the Kalmockians, from whom they fuffered very much in the Years 1688, and 1689.
9. But to ftay no longer on the Frontiers of his Czarifh Majefy's Territories, and to take a Turn Eattwards of Ardum Cafte, which Fortrefs is built on the Weft-fide of the. River Argum, and garrifoned with Ruffan Forces; the People inhabiting all round are Tungaf Konni, who pay their Tribute to his Czarifh Majefty in Sables, Linx, and grey Ferrets Skins, which there prove very fine. The Tungufians are a fierce, warlike People, and can; on Occafion, from thefe Borders only, bring into the Field four thoufand Horfemen armed with Bows and Arrows; infomuch that no roving Mongalians dare ride or appear hereabouts, otherwife than by Night, when they fometimes drive away a few Horfes and Cattle out of the Field. Their Winter Cloaths are Sheep-skins, and their Boots like thofe of the Cbinefe. Their Caps are turned up with broad Borders of Furr, which they can turn up or pull down as rainy or fair Weather gives Occafion. They wear about their Waftes a Girdle of about a Hand's Breadth, faften'd with thin iron Plates, and an Arrow, upon which they make a Sort of piping Mufick. In. Summer-time they generally ride with bare Heads. fhaven all round, leaving only one Lock hanging behind like the Cbinefe. Their Summer drefs is made of blue Cbinese Callico quilted with Cotton; but as for Shirts they wear none. They naturally have very finall, or indeed fcarce any Beards,
are broad-faced like the Kalmockians, and very flrong Men.

When they labour under Want of Provifions, they go in whole Hords or Clans out a Buck-hunting, where they encompafs and fhoot vaft Quantities of them, and whatever they take, they focially divide, and rarely Thoot but they hit their Game. The Wives are cloathed much in the fame-Manner as the Husbands, being chiety diftinguihned by two plaited Locks which they wear on each Side of the Head, and hang down on their Breafts, and are tied with Silver or Tin Rings. They marry as many Wives as they can keep, and buy them of one another, not being very nicely concerned at their having lived with another Man. They believe and acknowledge a God in Heaven, but they neither pay any Worfhip, nor addrefs any Prayers to him. In the Night they apply chemfelves to the Sutkur or Saitan, by beating of Drums and performing of Exorcifms, efpecially when they are going a Hunting, or upon any Robbing Defign, to enquire whether they are to expect good or ill Succefs. Their Liquor with which they make merry is Arak, a Sort of Brandy diftilled from Mares Milk, which they fuffer to turn acid. Inftead of a Cauldron they draw off this Liquor in two Pots, one fet upon the other, and well luted together, there being a wooden Pipe in one of them. This they draw off twice or thrice, and this Operation produces good Brandy; which even Girls, as well as Men and Women, fip to that Excefs, that they become infenfible and motionlefs for a long Space of Time. Their Wives and Daughters ride on Horfeback, arm'd with Bows and Arrows, as weli as the Men. Their Bread is a refined and dried Sort of Flour of yellow Lilly Bulbs, of which they make a Sort of Pap; befides which, they have no other Bread : But they alfo eat the mentioned Bulbs dry out of Hand, and are utterly unpractifed in and ignorant of Agriculture. The Trade or Barter which fome of this Nation drive with the Targafinians and Xixigarfans, which live under the Cbinefe Jurifdiction, is chiefly trucking Furrs againft blue Callicoes, Linnens, and Tobacco, and proves very advantageous to them, as it generally doth to all who follow it. They believe themfelves to be the Defcendants of the Targafinians of Daorzi, with feveral of whom they keep up an amicable Correipondence.
Near the before-mentioned Caftle of Argum, about half a Day's Journey from it, amongtt the Hills, is a Silver Mine, and it plainly appears, that formerly the People of Nieucbieu, or Daourzen, had feveral Foundaries and Works there, which are at prefent run to Ruin. From hence to Nerzinskoy, the chief City of Daour, it is ten Days Journey by Land with Camels, and is alfo a fine Country, very conveniently watered with feveral running Brooks. Upon and betwixt the Hills grow the moft charming Herbs and Flowers which Imagination can fuggeft: And the Vallies are covered with long Grafs about half a Man's Height. Tillage is not very much practifed here, by reafon the Inhabitants are chiefly his Czarifh Majefty's Tartars.
10. But leaving the River Argum again, and croffing over the vaft River Amur, I come to the River Gorbiza, which feparates the Dominions of his Czarifh Majefty from thofe of the Emperor of Cbina; from the Haven of the Gorbiza Eaftwards to the Sea being fubject to the Cbinefe, and the Weftern as well as the Northern Side of the faid River belonging to his Czarifh Majefty: If we fteer Eaftwards from the Gorbiza to the Rivers Tugur and Uda, which rife Northwards of the Amur, and fall Eaftwards into the Cbinefe Ocean or Amoerff cbian Sea, we find the Country betwixt thofe Rivers yields great Quantities of black Sables, and the Shores of thefe mentioned Streams are inhabited by Tunguzians, Alemurians, and Koreizions; which laft Nation feems originally to come from Coela, that Country lying not far diftant from thence, it being eafy to reach it in a fhort Day; with a favourable Wind. They are reported to have fettledialong the Banks of the River Amur, and afterwards fpread themfelves farther. Thofe who live on the Sea-coaft depend chiefly on Fifhing; but there are many of the Inland People very rich, great Num-
bers of the beft Sabies and ficheft Furrs being found hiere. This Country is fubject to the Governor of Fakutskey, and the Woods in this Neighbourlood are all ftrongly guarded in order to prevent the Cbinefe Tartars from hunting any Sables here.
To the Shores of thefe two Rivers, there come annually a Sort of People out of the Inands which lie in the Sea, but fo near the Shore, that from thence they may be eafily feen. Thefe People appear very well dreffed in very fine Furr Surtouts, under which they wear filken Coats almoft as rich as thofe of the Perfians. They are tall, have large Beards, and make a noble manly Figure. They come in fmall Barks to the Siberian Tartars, and buy Girls and Women of them, of which they are very fond, giving for them rich Sables and black Fox-skins; which they report they have in great Quantities on their IIands, and earnetly folicit the Siberian Tungufians to come and trade with them. They pretend that the Province of fakutskey was formeriy fubject to them ; and their Language bears a little Similitude to the 7 akut $J$ bbian.
11. Northwards of thefe two Rivers rifes the River Ogota, betwixt which and the Udd, near the Shore, and all along in the Sea, as far as the 1cy Cape, abounds with Whales, Sea-hores, and Sea-Dogs.. Kanfolka, and the Country farther along by the Sea-fide, is inhabited by a People called $X u x x i$ and Koelkik, each of which have a Language peculiar to themfelves. Thofe who live near the Sea are cloathed in Seal-skins, and dwell in fubterraneous Caverns ; but thofe who inhabit the inland Country are generally rich, and very much accuftomed to Hart- hunting ; they eat all their Flefh and Filh raw, and wafh themfelves with nothing elfe befides their own Urine ; and are a very lly, treacherous People, that never keep their Words. Their chicf Arms are Slings, in the Ufe of which they are very dextrous, and can throw a great Way. All hereabouts, near the Icy Cape, the Winter Snow lies on the Ground, though it is not very deep, and chieffy falls in the Beginning of the Winter, all the remaining Part of that Sealon being free from Snow. There is a Gulf which comes up to Kamjatke, that affords prodigious Quantities of SeaHories, and other Sea Finh, which are alfo caught in great Numbers.
If we put to Sea at the $I_{c y}$ Cape, we find, that the farther out we fail, the Courfe of the Sea is fill the more interrupted by the Multiplicity of Inands; and not far above Kamfatka is a Paffige which the SealFilhers and others make very good Ue of. All Anadieskey and Sabaliska are inhabited by the already defrribed Nations called Xuxi and Koeliki. The River Salazia abounds with fine Herrings, Sturgeoñ, Sterbech, and Nebna. |And in the Inland Country fomewhat diftant from hence, all along by the Simoniko, are feveral Win-ter-houfes, which are inhabited by his Czarifh Majefty's Coffacks, who colleet his Taxes and Tolls. But notwithflanding that feveral Sables and Linxes are caught in this Province along by the feveral Rivers, yet the Simonikoe of 'Muskey yields the moft confiderable Revenue, the greateft Quantity of Sables being caught there. The Climate of this Icy Cape, called in Muycovite Dialect, swettoinos, ocherwife the Holy Cape, is extraordinary cold, it freezing fo hard, that the Sea is covered with thick Ice in feveral Places, which driven into mountainous Heaps by the Wind from Year to Year, increafes and fticks fo fatt together that it feems but one Clot : From which, according as the Wind fits, are fometimes broke of great Pieces, which difperfe themfelves, and in Procefs of Time, in a boifterous Sea, become new Mountains of Ice : It fometimes happens that this Sea is frozen up for two or three Years fuccefively, and it was obferved that it continued fo from 1694 to 1697.
12. From hence let is proceed farther onf to the great River Lena, which rifes out of the South-weft near the Lake Bakeil, where the Provinces of Siberia and Daour are divided from each other. Upon this River lies fokutskoy, the Capital Ciry of this Northern Province: From which Town in Summer-time, it is cuttomary for fmall Barks to coaft it along by the Shoar

Side, and go through the Cape to Sabazia, Onodieftoy, and Kampatke, in Search of Sea-Calves Teeth and Train Oyl, \&ic. The Neighbyuring Heathens, or Tartars, make Ure of little Leathern-Boats on this River, which are very fwift. The Country about the City of Yakiulskoy, and the River Amga, is inhabited by a Sort of People called fakutifanns, whofe Habit is very particulat, their upper Coats being made of various colour'd Furrs fewed together, and the Edges bordered all round, with a Border about a Hand's Breadth of Buck's Hair, but in every Thing elfe made fomewhat like the Germait Fafhion, and open at the Sides and behind. They have long Hair, wear no Shirts, and believe that there is a great Being above in Heaven, who gave them Life, and lends them Food, Wives, and Children. And they celebrate a great Feftival in the Spring, in which they make Offerings of Kumis, or Arak, difitill'd from Milk, to this Being: And during the Continuance of this Feaft, they do not drink themfelves, but make great Fires, and continually frinkle this Kumis, or $A$ rak; towards the Ealt ; which is their Manner of Offering. When any one of them dies, his nearef Relation is buried alive with him ; from the fame Principles that, in feveral Places in India, the Women accompany the dead Bodies of their Husband on the flaming FuneralPile, in order to enjoy their Company in the other World.
About one half of their Language agres very well with that of the Mabometan Tartarss near Tobolskon, which is derived from the Bulgorion. They take as many Wives as they can maintain. Their chief Beafts of Burden are their Stags, upon which they alfo ride, and thereby in a little Time go a vaft Way: They are a valiant and a quick-witted People, and feem to be great Lovers of Truth. When the Governor of Yokutstkoy proves to be a Perfon who governs remiifly, they do one another all poffible Miichiefs, by robbing, pillaging, and all other Exorbitancies: But when they have one that holds the Reins very tight, they are quiet and obe dient, and no Outrages are heard of amongtt them; but they praife his great Wifdom, and wifh he may continue long in that Poft. They venture to tell us, that their Anceftors originally came from Kalmockia, from whence they were driven by the Ruffians, and forced to take up their Quartars in the cold Parts of this. Diffrict. They are very much afficted with the Scurry, which they foon drive away, by eating raw Fifh, and taking of Deugti, which is a Sort of Tar.
13. The yugogayers, a Sort of Heathens alfo which inhabit Part of this Country, ufually, when any of their Relations die, cut off all the Fiefh of his Cor'ps to the Bones, dry the Skeleton, and hang it with Glafs-Corals of all Colours, carry it round their Hutts, or Dwellings, and thus pay Idolatrous Worfhip to the deceared. Along by this River Lena are annually found feveral Mammuts Teeth and Skeletons, which fall off from the Mountains, and out of the frozen Earth near this River ; thefe Hills, by the Current of Ice from the highfwoln Waters in the Spring loofing great Pieces, which are tumbled down into the River. The feveral fine Rivers which defcend from the South and fall into the Lena, are the Witim, Olekina, and Maja, along which are great Muttitudes of fine black Sables, and other Furrs: In Winter 1000 Ermins being to be bought of the Tertars for three or four Roubels. All about the River Maja, as allo at the Source of the Lena, at Wergolenkoljo and Kirenga, grows all Sorts of Corn, the Land being very fertule, and ferving to fupply the Province of Yakutskoy, and that at 10 cheap a Rate, that añ hundred Weight of Rye-Méal is commonly fold for ten or twelve Penice, and all Sorts of Cattle are proportionably cheap; fo that living here doth not coft much, but Money is very fcarce.
To take our Progrefs further along this Sea-Coaft, from the Lena to the River Yenijea, which Extent hath not yet been travelled further by any, either by Water or by Land, than to the River Tarfida, by Reafon the Sea is too full of Ice, and is utterly unnavigable : Moft of the Inhabitants between Tarfida and Yenijea are found to be Samojedes, and a Party of Tuingaedchian Tartars
and Heathens: What their Opinion is, has been hinted above. But the River fenifea is, all along its Shoars, moftly inhabited by Rufians, and rifes in the South-part of Tartary, in the Kalmockian and Kirgizenian Territories, and very plentifully abounds with Fith : Three very fine Rivers fall into it, which are the Wergnaja Tunguka, Podkamenna Tungufka, and the Nifnaja Tungufa; on the Sides of all which dwell great Numbers of a barbarous, wild fort of Tunguzians, which may very well be ranked with the Samojedes, the latter being only larger and ftronger than the former. The Tartars, whenever they have wounded an Elk with their Bow and Arrows, (all their Arms) follow him by the Tract of his Feet, accompanied with their Wives and Children, fometimes for eight or ten Days, in the Woods, and taking no Provifions with them, but relying folely upon their Capture, they have a Sort of Stomacher, or Breaft-Cap, which, by Reafon of Hunger, they lace one or two Fingers Breadth clofer ; and having at laft caught their Game, they kill it, pitch a flight 'lent, and flay upon the Spot till no Part of the Beaft but the bare Bones are left : But in the Interim if they get any Furrs, they immediately repair to the Rufian Villages and Towns in order to fell them. Here are great Numbers of white and brown Foxes, Multitudes of Squirrels, but very few or no Sables. On this River are fituate the two Cities of Taugvikoy and Mungafeia, both which drive a very great Inland Trade in Furrs, Sea-Horfe and Mammuts Teeth; and in Summer-time feveral Boats go from there Places to the Sea-fide at the Mouth of the River, in order to catch Sea-Horfes or Sea-Calves and Seals.
Believing we have in fome Meafure attained our End, and performed what we propofed in the Defcription of our Travels, we fhall now fubjoin a fhort, but very accurate, Defcription of the mighty Empire of Cbina, written by a Native of that Country, whom I brought hither with me: This Defcription, which was never before printed, I have caufed to be illuffrated with feveral pertinent Annotations, extracted out of the beft Defrcip. tions of that Empire, in order to clear up fome Difficulties, and fatisfy the Reader; and this was not done by an illiterate Pen.
Notwithftanding which, before I take Leave, I am in fome Sort obliged to fay fomething in general, which is the Refult of my own Obfervation, concerning that vaft Empire, and was omitted in the Relation of my Travels.
14. The Empire of Cbina, fo far as I faw of it, to, and in Peking its Metropolis, I muft indeed acknowledge feems to be a Land peculiarly bleffed by Heaven; and I believe, that as this City is the Capital, fo it lies under the beft and moft healthful Climate of all Cbina. The Men there are vigorous, healchy, and tall: Corn, all Sorts of Fruits, Herbs, Roots, and indeed whatever is either neceffary or convenient to human Life, very plentifully abounds there, except only that no Tea grows in that Province, nor are any filk Manufactures or Porcelain made there. In Winter it freezes fo hard here, that the Ice will bear the People going overit; and the Summer Weather is but moderately hot ; whereas on the contrary, in the other Provinces, whole Summer Days are ufelefs, by Reafon of the intollerable Heat. The prefent Defcendants of the ancient Cbinefe are more fincere than the Manfures or Man scbeou Iartars. They live temperately and frugally; are very neat and clean in their Cloaths ; are very greedy of Prefents, and fhamelefs in their Trade, and have Addrefs enough to fuit themfelves to all Humours. They religiounly obferve their ancient Laws, in which appear fome Traces of Barbarity. They never alter the Fafhion of their Drefs, nor fuffer the Introduction of any new Laws; and fome of their principal Lords told me, that no Chan or King, for the Space of twelve thoufand Years, hath been empowered to make even the leaft Alteration in their Religion, Laws, or Habits.
So that it feems that the prefent Emperor Ammologgan Kambi, is the firft who hath difcovered a night Opinion of the old barbarous Cuftoms, and accordingly began a good Reformation of their Religion and Law, when in the Year 1692, he caufed publick Proclamation
to be made in all his Empire, That whoever was defirous to become a Chriftian, had thereby free Liberty to apply himfelf to the Romith Clergy, and be bapciz'd. This was a grievous Thorn in the Eyes of the Bonzies, or Idolatrous Priefts, but they were yet forced to bear it patiently, and be Eye-Witnefles to the Converfion of Thoufands yearly to Chriftianity ; and which is more, the Emperor himfeff is, in his Heart, a good Chrifian, but cannot poffibly quit any of his 1236 W ives. He is a more abfolute Legillator than we hear any of his Predeceffors were ; for, by Virtue of his defpotick Authority, he is fo formidable to his Subjects, that he governs them, without the leaft Reftrition, according to his arbitrary Will and Pleafure.
15. The Cbinefe obflinately perfit in denying, in their Map of the World, that there is any larger Country on the Surface of the terreftrial Globe, than their own; to confirm which prepofterous Affertion, their Maps never mention any more than their own, and one great Sea, in the Middle of which they affign a imal! Point of Land, which faintly appears to the Eye, like one of the fmalleft Stars, for the reft of the Earth.

They honour their Prince like a Deity, calling him a Son of Heaven, and a Terreftrial God. Their Religion is perfect Pagan Idolatry, as appears by their hideous diabolical Images, expofed to View in their Pagods or Temples. They have frequently replied to Queftions which I put to them concerning the Immortality of the Soul and eternal Life, That they were utterly ignorane of any fuch Thing; and that fince their Forefathers did not believe it, fo they could not. Their chiefeft Pleafure confifts in keeping feveral Wives, to which they are extreamly addicted. They have no Notion of Sin, but whenever they have been guilty of any villanous Crime, for which they happen to be feized and brought to Juiftice, they take the Punifment infiicted' by the Judge, for only a very. fmall Scandal, without fhewing any Remorie for the Wickednels and Difhonenty of the Fact.
Their Adminiftration of Juffice, and Judiciary Decifions, and whatever of that Nature which they take to be civiliz'd and reafonable, are indeed but rude and barbarous. Their Manufactures are principally thofe of Silk Stuffs, Porcelain, and varnifhed painted Works, which confidering their great Diflance from Europe, are fomewhat furprizing. Their Wars are carried on by the fole Dint of Numbers, they very feldom taking the Field before they are two or three hundred thoufand ftrong, as they did when they were engaged againft $B u$ fucktucban the Weft Tartar, from the Years 1686 to 1693; in which Wars, when their General Alliganibo happened to be killed in a Battle, they all fied, and each Man endeavoured to fecure his Life by making all poffible Hafte to his own Home. They carry with them good Field-pieces, and are indifferent expert in the Ure of them; but their Hand-arms are very wretched, the beft of them being their Bows and Arrows. Their Horfes are provided with very good Saddles, but when they ride, they cover them with Pillows, and Mattraffes above them; fo that they fit very high and loofe from the Horfe's Back. In a Word, as their military Affairs are managed in a confufed and diforderly Manner, fo their Battles being utterly void of all Conduct, they act like wild Men; for they run headlong together with their whole Force upon the Enemy, by which Means they frequently are entirely routed.
16. In fhort, from my own Obfervation I conclude, that the great Share of Wiifdom, Arts and Sciences, for which they are fo highly extolled by many Writers, comes far fhort of the Europeans; though indeed fome few Cbinefe, by the affiduous Diligence of the Jefuits, are inftructed in the Mathematicks, Aftronomy, and other Sciences ; and therefore publifh their Mafter's Fame to the World. The prefent Ammolog Cban Kumfti, or King of Cbina and Tartary, is an Eaft Tartar, or Mongalian, born at Nieucbes, near the River Sagalien Oula, or Amoer; he governs his Subjects very well, though he doth not heartily love the Cbinefe, but on, all Occafions prefers his own Nation before them: And whenever a Cbinefo folicits to obtain any impor-

## Chap. III.

from Muscovy to CHINA。
tant Poft from the Chan, he is obliged to naturalize himfelf a Manfur or Tartar. Moft of the Inhabitants within the Walls of Pcking are Tartars, and the principal Cbinefe Markets and Goods are kept without in the Suburbs. All rich People keep a certain Number of Slaves for the Emperor's Service, for which they receive an annual Scipend from him; and thefe Men, in Time of War, are obliged to be kept ready armed, cloathed, and mounted on Horfeback. The Jefuits who were at Peking when I was there were but eight; of which two were Spaniards, three Portuguefe, two Frencbmen, and the laft a Roman.

The Cbinefe, but efpecially the Courtiers, retain a very great Refpect for thefe Fathers, and the other Ecclefiarticks; but the Bonzies look upon them fomewhat obliquely. It muft indeed be own'd, that the Romifs Clergy difcover a very great $Z_{\text {eal }}$ for the Propagation of their Religion. The Rufian Nation hath alfo built a Church at Peking, and have converted and baptized reveral confiderable Perfons to the Greek Chriftian Religion. I do not think it at all neceffary to touch on the Races of the Monarchs which have hitherto reigned in Cbina, fince the curions Part of the World may find an entire and exact Lift of them in the Cbinefe Chronology publifhed by Cbriftian Menzelius, Councellor and Phyfician of the Body to the King of Prufla, printed at Berlin in, 1696.
As for what relates to the Great Well, which encompaffes Part of the Empire of Cbina, I fhall only add in fhort to what I have already faid of it, that it is a prodigious Work, but not fo much to be valued on account of any extraordinary Art fhewn in the building of it, as the furprizing Labour and Expence employed in the erecting of it by the Emperor who raifed it; for which the Cbinefe curfe him to this Day, by reafon he thereby thoroughly ruined the Empire. The Jefuit Father Alexander informed me, that by the Emperor's Order he travelled all along by this Wall, from the Weit where it begins, to the South-eaft, as far as the Corffkken Sea, and found it to be three hundred German Miles long, and had it food all on a Level, it would certainly have ftretch'd to four hundred Miles; but it is carried over feveral high Mountains, and hath four Entrances, viz. the Leatongian, Daourian, Lelinger, and Tibetcbian Gates ; befides which, it is fo broad, that eight Horfemen may eafily ride a-breaft upon it.
I do not think it proper to offer any more Particulars concerning Cbina, fince my Refidence there was not long, but defire the Reader favourably to accept this little, and give me Leave to refer him to the fuccinct Defcription annexed, in which he will find feveral Things very well worth his Attention.
17. It is very remarkable, that even in thefe Obfervations our Author very modeftly excufes himfelf from the fhort Stay he made in Cbina, and from his Manner of living there, as to giving any diftinct, methodical and regular Account of that valt Enpire and its Inhabitants. We very often meet with Writers, who, without having any of thefe Advantages, prefume to enter into particular Defrriptions of Countries and Nations, as if it were credible that in the Space of a few Months, a Man fhould either fee, or hear, or read fufficient for that Purpofe. There is another Thing no lefs extraordinary, our Author, though he is to circumftantial in every Thing that he fays relating to both his Journeys, and to what paffed at his feveral Audiences of the Cbinefe Emperor, yet he does not fo much as drop a Syllable of the Bufinefs upon which he went. He fays nothing of the Commiffion given him by their Czarifh Majefties, of the Succefs of his Negociation, or of the Advantages he procured thereby to the Court of Rufia; and yet if he had been a vain $\cdot \mathrm{Man}$, he might have done all this without any great Injury to Truth. A third Singularity there is which alfo deferves to be remembred. He acknowledges the Country to be one of the fineft in the World; he admits that no body could be treatēd more politely, or with greater Refpect than he was; but for all this he does not fuffer himfelf to be led away with thofe fond and enthufiaftical Notions with which many Travellers are poffefs'd, and to which the World owes
all thofe romantick and extravagant Stories they have been told of this Country and People.
The Charater he gives of both is very fimple, nad tural, and intilligible, and he gives it not with any Air of Sufficiencyor Confidence, but barely as his own Sentia ment, the Reception of which he leaves entirely to his Reader, after he Thall have examined it with che like Care and Candour with which it was delivered. It muft feem not a litcle ftrange to fuch as have read other Defcriptions of this Country, to find our Author advancing two Things that feem to be directly oppofite to all we have ever heard of this Empire and its Inhas bitants. The firft is, that the Tartars are wifer and more polite ; the fecond, that the Cbinefe have naturally more Probity than the Tartars. But notwithitanding this, many Reafons may be alledged in Support of our Author's Opinions, and perhaps it will not fatigue the Reader much if we mention two or three. In the firft Place let it be confidered, that the Cbinefe were fo much attached to their old Laws and Cuftoms, that without regarding either the original Motives upon which they were eftablifhed, or how far they were agreeable to that Situation of Affairs which the Changes and Revolutions that all Things, great and fmall, are liable to in this World, bring about, they perfifted with inflexible Firmnefs, or rather incorrigible Obftinacy, in fupporting them, without the fmalleft Alteration, from a Notion that any Thing of this Kind was the higheft Inflance of Impiery.
The Tartars, though they very wifely adopted the Cbinefe Conftitution as the fitteft for that Country, and by which alone it could be governed, yet they would never fubmit to this Notion of unalterable Laws ; bur on the contrary, made no Scruple of changing what either Reafon inclined them to think wrong, or Expea rience had taught them to be fo ; and to this their $I_{n-}$ tercourfe with other Nations, their opening their Ports to all Strangers withour Diftinction, and their fending and receiving Minifters, are fo many inconteftable Inftances. Whoever confiders thefe Points wish any Degree of Attention, will very plainly pèrceive that our Author had Reafon to prefer the Policy and civil Pruo dence of the Tartars to that of the Cbinefe.

Another, and yet a ftronger Argument of the Juftice of this Preference, may be taken from the Hiftory of the two Minorities which happened in this Empire immediately after the laft Conqueft of it by the Tartars. TJong té, who fubdued Cbina, died in the Year 1644, almoft as foon as he was feated on the Throne, and leff the Empire to his Son Cbun tcbi, who was but fix Years old, and confided the Care of the young Prince to his Brother $A$ ma van. One would have imagined that this muft have been fatal to a new and half eftablifhed Government ; and not only our Hiftories, but even thofe of the Cbinefe, by which I mean the natural and native Inhabitants of that Country, feem to confirm this. But it proved quite otherwife, the Protector finifhed the Conqueft of Cbina in the Space of about eight Years, without the leaft Prejudice to the Authority of his Nephew, and upon his Death the Adminiftration was put into the Hands of his younger Brother, with the Affitance of a Council, in which it did not continue long
They perceived very clearly that this kind of Rule was by no Means fuited either to the Tartar or to the Cbinefe Conftitution, and therefore wich a Wifdom and Honefly of which there is fearce any Parallel to be mes with in Hiftory, they laid down the Enfigns of their Power, and defired the young Emperor, who was then about fourteen, to take the Reins of Government into his own Hands. This was another Crifis that would have been fatal in almoft any other Country, but it was favourable here, and the Emparor governed for ten Years with great Wifdom and Capacity.
Upon his Death fucceeded Cang Hi his Son, who was no more than eight Years old, and according to the Direction of the deceafed Emperor, the Regency was put into the Hands of four of the principal Minifters, and one would naturally apprehend, that this muft have proved the Source of private Cabals, of various have proved the Source of private Cabals, of various
Factions, and in a fhort Space of Time of Diford and
is L
Confufion.

Confufion. Yet nothing like this happened, the Council of Regency acted not only with Prudence and Unanimity, but what was more extraordinary fill, with the utmoft Vigour; they found that there were fome Diforders in the State that needed Redrefs, that the Power of the Eunuchs was become too great, and that there was juit Ground to fear, that the Emperor being a Child, thefe Evils might increafe, or which was worfe, might grow irremediable. To prevent which, they without Hefitation, cut off the Guilty, removed all fufpicious Perfons, and by maintaining a wife and virtuous Conduct at Court, gave a good Example to the Tartars and Cbinefe in general. But as this kind of Government is never fubmitted to in that Country, from any other Motive than Neceffity, fo this Emperor, like his Father, was very early called to the fole Management of the Affairs of his Empire, to which he fhowed himfelf always equal, as well in the tender Years of his Youth, as in his declining Age.
It was to him that our Author was fent, and he governed no lefs than threefcore Years, in which Time he gave all the Marks of a truly great Genius. At the Entrance of his Reign, the Cbinefe rebelled, and it coft a long and bloody War to reduce them. The Emperor appeared in thofe Days rigoroully fevere, or rather cruel; he punifhed the fmalleft Faults with Death, gave a conftant Preference to the Tartars, and exprefled a ftrong Diffidence and Dinike to the Cbinefe. Under fuch a Prince, it might have been apprehended, that the Empire would have been very unhappy; it fell out quite otherwife, his Severity made every Body attentive and circumfpect, the Cbinefe were glad to abandon their own and affect the Tartar Cuftoms, that they might become agreeable to the Emperor, who in the Midft of his Severity had a ftrict Regard to Juftice. When he faw that the Empire was thoroughly fettled, the two Nations perfectly incorporated, and the rifing Generation for the moft part Tartars in Habit; and Manners he let fall his Severity by Degrees, and for the laft thirty Years of his Life wạs acknowledged to be the mildett and juftert Prince that ever fat upon that Throne. His Son and Succeffor proves as extraordinary a Monarch in every Refpect, and this by the Confeffion of the Miffionaries, notwithftanding that he has driven them not only from the Court, but in fome Meafure out of his Dominions. He has taken Pains to reform all the Abufes in the feveral Provinces of his Empire, applies himfelf wholly to the Cares of Government, receives every Memorial that is offered to him, reads and gives Anfwers to them all; fuch a Succeffion of Princes does Honour to a Nation. It is almoft without Example in the Cbinefe Annals, and therefore it is a convincing Argument of our Author's Penetration, with Refpect to the Superiority in Point of political Talents, of the Tartars over the Cbinefe.
A third Proof of this may be taken from their Conduct towards Foreigners. Before the Time of their becoming Mafters of Cbina, it was very difficult indeed, almoft impoffible for Strangers to find Admittance at the Imperial Court ; that is now quite altered, and as thefe Travels plainly fhew us, a Minifter from a European Court is not only received and treated with Refpect at Peking, but allowed to negociate whatever Bufinelis he comes about as at any other Court. It is very true, that this is not only contrary to the old Cuftoms of the Cbinefe, but is fo very difagreeable to their Humour, that they never ceafe to oppofe it, as much as in them lies; fo that nothing but the Emperor's abfolute Authority could get the better of their Obftinacy in this Refpect, which very ftrongly confirms the Truth of his Obfervation.
It is remarkable that our Author gives the Title of Bogdoy Kban to the Emperor of Cbina, but he does not explain the Reafon of this, and therefore it is fit we thould. The Ruflans called thofe Tartars who are now Mafters of Cbina, Bogdoyes, and therefore it is natural
for them to pieferve that Way of fpeaking, with Ref. pect to the qartar Emperor, chough he now refides in and governs Cbina. Many of our modern Writers call thefe Tartars, Manfeurs, which is only a barbarous Corruption of that Appellation, which they have beftowed upon themfelves, and which in their own Language is written Man tcbeou; and this is no more than the proper Name of the Father of that great Conqueror by whole Valour and Prudence they were eftabiifhed in Cbina, and is a Mark of the Reverence and Refpect which tinis whole Nation bear to his Memory. We may obierve, that this Cuftom of calling themelves by the Name of lome particular Perfon, from a Principle of Gratitude has been common in moft of the Nations of the Eaft, but has been particularly fo amongtt the the Tartars, and like many other of their Cultoms, prevails through all their Tribes, how remote foever in Point of Relation or of Refidence.
We have an Inftance of this among the Crim Tartars, which as it is fingular and curious, I will relate for the Amulement of the Reader. The reigning Famuly in that Country was, about a Century ago, by civil Wars, reduced into very diftreffed Circumitances, fo that at Length there remained only one Heir Male, and he was concealed and bred up privately in the Houle of a very mean Perfon. The Mirza's or Tartar Lhiefs, that had thus got rid of their Kbans or fupreme Lords, fell our amongft themfelves, and by their Feuds, the whole Country came to be filled with Blood and Confufion. To remedy this, a general Council was called, in waich both Princes and People lamented the Lois of the Royal Family, and confeffed that they were juftly punifhed by thefe dreadful Effects of their own Dilobedience. The old Man, who had bred up the only furviving Prince in his Houfe, took this Occafion to produce him, and he was immediately acknowledged Kban, and his Succeffors have governed Crim-Tartary to this Day: So great a Service demanded an extraordinary Reward, and the Kban offered his kind Protector to do for him whatever he pleafed. The old Nian whofe Name was Guirey, only delired that his might become the Sirname of the Royal Family, which was readily complied with, and all the Princes of the Blood Royal of Tartary bear it accordingly.

But to return to the Tartars that are in Poffeffion of Cbina; they are properly ftiled Moungals or Nieucbeu Moungals, to diftinguifh them from the Calcba Moung als. By thefe Words there is nothing more underftood than Eaftern and Weftern Moungals, and ethis in Refpect to the Situation of their Countries with Regard to Cbina., The former of thefe Nations, viz. the Nieucbers Moungals were, as we have fhewn in another Place, once before Mafters of that Empire, out of which they were driven by the native Cbinefe, Anno Dom. 1368. At prefent they have not only recovered the Dominion of this extenfive Empire, but have alfo brought the Weftern Moungals to be dependant upon them, which the old Cbinefe Emperors could never bring to pafs.

Our Author, that he might to the utmoft oblige his Readers, and make his Work as perfect as they could defire it, thought proper to add to it a Defrription and Hiftory of Cbina, written by a Chriftian Native, one Dennis Kao, who was a Surgeon by Profeffion in his own Country, and had alfo practifed his Profeffion in feveral Parts of the Eaf-Indies. The Reafon that induced Mr. Everard $Y_{\text {sbrant }}$ Ides to do this, was the Succinctnefs and Accuracy of that Performance, which, that he might render the more ufeful, he procured Remarks and Obfervations upon it, to be collected from. the moft efteemed Works that were extant, and by this Means, made it, without extending it too much, a very compleat Thing, as we hope the Reader will allow upon perufing it, as it ftands in the next Sections, with fome additional Remarks, diftinguifhed by inverted Commas.

## S E C TIONV.

A Geographical Defcription of the extenfive Empire of Cibina, and of the Sixteen Provinces into which it is divided. In which is contained a fuccinct View of the Situation, Bounds, Produce, remarkable Curiofities, and whatever elfe is worthy of Notice in each Province, taken entirely from the Writings of the Cbinefe themfelves, and more efpecially from their authentick Records and natural Hiftories penned by Direction of the State ; with fuch incidental Accounts of their Antiquities and of the perfonal Hiftory of the moft famous Emperors, Heroes, Statefmen, and Philofophers, as have been born or flourifhed in any of thofe Provinces through the Courfe of many Ages.

By Dionysius Kao, a Native of China. Illuffrated with many curious ObServations and Remarks drawn from the beft Autbors whoo bave treated of the Affairs of this Empire, both encient and modern.
I. An Introductory Account of the Author of this Work, and of the Nature, Accuracy, and Uefulne/s of the Work itfelf. 2. A general Defcription of the valt Empire of China, and of the Sixteen Provinces into which it is divided. 3. The Province of Peking, and the Imperial City of the fame Name, particularly defcribed. 4: A large Account of the Great Wall, with Remarks thereupon from feveral Authors. 5. A Defcription of the Province of Xantung, and of the famous Pbilofopher. Confucius, wwo was a Native of tbis Province. 6. The Province of Xanzi, with an Account of the great River Huango, and other Curiofities in that Difrict. 7. Of the Kingdom of Xienxi, weith fome Account of the Progrefs made botb by the Chriftian and Mahometan Religions in that Empire. 8. The Province of Honan defcribed, with an Account of the Manner in wobich the cbief City, and mof otber Places of Note, were deflroyed, and remain fill in a ruined Condition. 9. Of the Province of Leatung, and of the original Inbabitants before it made a Part of the Chinefe Dominions. 10. An Account of the Conquef of China by the Tartars for the laft Time. I 1. A copious Defcription of the Province of Nanking, and of the famous City of that Name, formerly the Capital of the Empire. 12. The Province of Chekiang, and the Cities therein defcribed. 13. Of the Province of Kiangfi, including the Hitory of Porcelain or China-ware, as formerly given by the Mifionaries. 14. A copious Defcription of the Province of Huquang, including feveral otber remarkable Particulars. 15. An Account of the Province of Suchuen, rebich is the fmalle/t in the Empire. 16. Of the Province of Queicheu, and of the Number of Cities therein, and the Commodities for which the Country about them is famous. 17. The Kingdom of Junan defcribed, with Remarks upon the Accidents that bave befallen it. 18. An Account of the Province of Quoangfi, the Manner in which it became annexed to the Empire. 19. A copious Defcription of the Province of Quoangtung, or Canton, with fome very curious Particulars relating both to Civil and Natural Hiftory. 20. The noble Kingdom of Fokien defcribed, and the Manner in which it was redused under the Poweer of the Chinefe. 2 I. A Digreffion, containing' the Hifory of the Ifland of Formofa, the Conquef of it by the Chinefe Fugitives from the Dutch. 22. The prefent State and Condition of the Province of Fokien. 23. Of the Boundaries and Ditances of the feveral King doms and Provinces of China; the Divifon of thems into Inland and Maritime, larger and lefs; the webole intended as a Supplement to the Autbor's Defcription. 24. The political Anatomy of the Chinefe Empire, from an Italian Manufcript. 25. Remarks and Obfervations Hiforical, Pbypacal, and Pbilofophical, upon the principal Events in the foregoing Section.

THERE is fcarce a Country in the World, that laying all Things together, deferves to be fo perfectly known, as this which our Author has defrribed; and for this Reafnn, without all Doubt, fo many Pens have been exercifed in making Defcriptions; there are, however, three Particulars that feem to recommend this of our Author in an extraordinary Degree; the firft is, that being a native Cbinefe, and bred up to Letters, he muft have had greater Opportunities both with refpect to Books and Converfation, of knowing his own Country than any Stranger, much lefs any Traveller could pretend to, and at the fame Time mutt be lefs liable to commit Miftakes, even fuppofing he fet Things down as they occurred to him, than they could be with all the Circunfpection and Care in the World. In the next Place, as he had ftudied Phyfick, prastifed as a Sar-
geon, and had travelld from Province to Provincefor many Years amongft the Chriftians, he mult have had great Opportunities of feeing Things; that is, muft have improved his Knowledge and Judgment very much. Laftly, his Defrription, after being often reviewed by his Excellency Mr. Ysbrants Ides, was judged to be the beft he had feen, and feems to have appeared fuch in the Eyes of others, fince it was tranlated into Latin and Higb Dutch, before it was printed in Lore Ducch, with theRemarks that are now added to it, by the Care, and under the Direction of the famous Mr. Witzen. It may not be amifs to inform the Reader, that it was penned, about the Year 1694, and that the Author, who alfo wrote feveral other Pieces, was efteemed a very worthy, honeft, and pious Man, and appears to have written. very impartially without any overweaning Fondnefs for his Countrymen, or flavin Dependance upon the Jefuits,

What

What Additions were neceffary have been very carefully added by the Dutch Editor himfelf, and we have alfo taken Pains to improve thefe as far as we were enabled to do it from fubfequent Accounts, only as to the Cbinefe Orthography we mult own ourfelves not a little at a Lofs, there being as yet no Rules fixed that can enable us to reduce the different Ways of Spelling, to any rational Standard; only this we know, that as the Cbinefe ufe none Monofyllables, later Writers generally follow that Method, though our Author feems to have neglected it for the Sake of keeping near the Portuguefe Pronunciation.
2. This extenfive potent Empire comprehends fifteen Provinces, which may more properly be called Kingdoms: For before they were united under one Head, above three thoufand Years paft, each of them had its peculiar King: As at prefent every Province hath its Viceroy, all which are fubordinate to one fupreme Sovereign the Emperor. The Province of Leaotung, though fituate without the great Wall, is alfo reckoned amongtt the reft, and pafferh for the Sixteenth.

Nieuboff places this Province within the Wall, in
" his Map affixed to the Relation of his Travels, and
" is herein followed by Martinus Martini ; but are both
"clearly refuted by the convincing Teftimony of
" our Author. The Jefuits Le Comte, Bouvet, and Go-
"bien, unanimounty confirm our Author's Affertion,
"they all affirming that the Province of Leauton is
"s only feparated from part of Corea by an Arm of the
"Sea, and is on that Side of the Great Wall, viz. the
"Side on which Corea is: Though Father Maritinus
" the Jefuit, in his Cbinefe Atlas hath not placed it on " that Side, but within the Wall, and thereby mified al-
is moft all the Geographers fince, they having very in-
"duftrioufly continued his Blunder.
"Formerly all Authors reckoned but fifteen Cbinefe
" Provinces; but after the Leaotungers affitted the Tar-
"tars in the Conqueft of Cbina, that became one of
" the Provinces of that Empire, and doth accordingly
" enjoy all the Privileges of that Nation.
"Le Comte fpeaks yet plainer on this Head. The
" Geographers (faith he) are grofly mittaken in their
"Accounts of Cbina. Firft they place the whole Pro-
" vince of Leouton on this Side of the Great Wall ;
ic though it is certain that it lies not within, but without
" 6 it; notwithftanding which it always belonged to
"Cbina. This is an undoubted Truth, to be latisfied
" in which no more is requifite than to have been on
"6 the Spot as well as we.
"And yer farther he goes on, I do not take in as
"belonging to it (he is fpeaking of Cbina) the Inands
" of Formofa, Honan, and feveral others, which united
"would make a great Monarchy, any more than
" Leauton, which lies without the Great Wall."
Thefe Provinces are divided into North and South.
The North (under which is alfo Leaotung) are Peking, Xantung, Xanf, Xienf, and Honan, in all fix. And the South Kingdoms or Provinces are the following ten : viz. Nanking, Cbekiang, Kianf, Huquang, Sucbuen, Queicbeu, funan, 2uoang i, 2uoantung or Canton, and Fokien.
Befides there, feveral Kings and Kingdoms are obliged to pay their annual Tribute to the Emperor of Cbina: Of which Number are $\mathcal{T} u n k i n$, Cocbincbina, Laos, Liukin, and Cbaofien. The two laft of thefe, are llands, fituate very near $\mathcal{F}$ apan. Corea, fapan, Siam, and Pegu, were alfo formerly fubject to this Empire, though not at prefent. I defign to defcribe all thefe Provinces and neighbouring tributary Kingdoms feparately, and geographically, as they butt and bound Eaft and Weft, North and South, as briefly as poffible.
Peking lies Eaft of Xenft, as Xanfi does Weft of Peking, and the Great Wall ferves as a Northern Boundary common to them both.
Xantung is Southwards of Peking, and Northwards of Nanking; it borders Eaftwards on the Sea, and Weftwards on Honan.
Xonff, as is above hinted, lies Weftwards of Peking, Eaftwards of Xienf, Southwards of Honan, and bounds Northwards on the Great Wall.

Xienfi the largeft of all the fixteen Provinces, is fituate Weft of Xanf, Eatwards of Weft Tartary, whence the Lama's come; Southwards of Sucbuen; and Northwards of the Tartars at the End of the Great Wall. And the Source of the yellow River Hoango is alfo in the Weit part of this Province.

Honan is in the Middle of Cbinas buttung towards the South on Huquang and Kiangfí ; North wards on Peking and Xanfi; Eaftwards on Xantung and Nanking; and Weftwards on Sucbuen and Xienf:
Leaotung borders Northwards on Xentung, which dẹclines Southward from it; Eaftwards it is oppofite to Corea; it extends alfo Southwards to the Great-Wall, and Northwards to Tartary.
Nonking is bounded by Chekiang on the South, and Xantung on the North; it ftretches Weftwards to Honan and Huquang, and Eaftwards to the Ocean.

Cbekieng touches on Nanking, from which it lies Northwards, as it doth to the South of Fokien; the Sea wafhes it Eaftwards; and Weftwards of it lies Kiangfi.

Kiang $\sqrt{2}$ borders Eaftwards on Cbekiang and Fokien; Weftwards on Queicbeu and Honem; Southwards on Quantung, and Northwards on Nanking.

Huquang is bounded Northwards by Honen; Southwards by Quantung; Wefwards by Zucbuen and 2ueicbeu; and Eaftwards by Kiangh.

Zucbuen butts Eaftwards on Huquang; Weftwards on Tibet; Northwards on Xienfi ; and Sourhwards on $2 u e i-$ cheu, and Funan.
'Queicbeu lies Northwards almoft on 2unni; Southwards on Zucbuen; Eaftwards on Huquang, and Weftwards on funan,
Funan looks Eaftwards and Southwards to Quoang fi; Southwards to Gannan; Weftwards to Laos, and Norchwards to Zucbuen and Queicbeu.
2 2uoangh or 2uams hath 2uoantung on the Eaft; Cocbinctina on the South; Funan on the Weft, and Queicheu on the North.
Quoantung or Canton is bounded on the Eaft and North by Fokien, on the Weft by the Yellow Sea, farther Northwards by 2 woang fi, and Southwards by the Ocean.
Fokien looks on the Eaft and South-Eaft to the Sea, and the Inand of Formofa; Weftwards of it lies Kianfi; Soiithwards Canton, and Northwards Cbekiang.
3. Peking is a Royal Province, fubordinate to which are nine leffer Provinces, or great Cities, with their dependant Diftricts, all which are dittinguifhed by the additional Name of Fu. And there nine large have fixteen leffer Cities fubjected to their Jurifdiction, which are alfo diftinguihed from them by the Appellative of Cbeu; and the lefs confiderable Places which are under the Government of the laft Sort are denominated Hien.

The firt Imperial City of this Province is Xuntien Fu, otherwife called Peking; it hath twenty fix other Cities fubjected to its Juriddiction.
"Xuntien Fu is the ancient and true Name of this "City; but fince the Seat of the Empire was tranfplant" ed from Nanking to this Place, it hath affumed the "Name of Peking; which imports the Nortb Court, as "Nanking fignifies the Soutb. We fhall fpeak of the "Courts prefiding at Nanking in our Defcription of "that Province and City. This Metropolis however "c very juftly lays claim to two Names, it being at pre"fent grown into two Cities, a new one being built " near the old one: For when the Tartar eftablifhed " himfelf on the Throne, he fo crouded this Place " with fuch Numbers of his own Nation, that the "Cbinefe were neceffitated to build a new City with" out the Walls of the old one. This new buile "Town is full as large as the ancient one, which laft " is a perfect Square, of about four Miles Compafs, " and being inhabited by Tartars alone, is called the "Tartar City: The new Town is as big as the other,
"but more populous, and is called the Cbinefe City:
"A And both of them take up the Compafs of fix large
"Miles about, each Mile being reckoned at 3600
" Paces, as appeared when it was meafured by the Em-

[^2]
s peror's exprefs Command: It is indeed a large City, " but not to be compared to Nanking.
The Second, Junging Fu, hath fix Cities under her Command
The Third, Cbinding Fu, hath twenty fix Cities.
The Fourth, Quoamping Fu, prefides over fix Cities.
The Fifth, Thiemming Fu, is chief of eleven Cities.
The Sixth, Funming Fu, governs fix.
The Seventh, Hokien Fu, governs feven,
The Eighth, Paoding Fu, ten Cities.
The Ninth, Xunte Fu, hath nine inferior Cities.
From this Rule, Superiority, and Power, which the great Cities as well in this, as in all the following Provinces, have over the leffer, though large and populous Cities, plainly difcover the Ability of each Province, and talken together difplay the vaft extended Power of this moft glorious Monarchy.
The Soil of this Province is not very fertile in any Thing but Corn, yet even of this it doth not yield fufficient to fupply its own Neceffities; but is obliged to be furnifhed with what falls fhort in their own Growth, from other Countries.
Formerly Nanking was the Metropolis and Imperial Seat : But the Incurfions and Outrages of the neighbouring Tartars, occafioned the Removal of the Imperial Court to Peking, in order to be nearer the Great Wall and the Enemy.
"The Emperors of the laft Race before the Tarta"rian Mancbeou (the Family or Nation which now "r reigns in Cbina, and of which the prefent Emperor "Cangby is the third) tranllated the Seat of the Em" pire to Peking, for the Reafon hinted by our Author, " that the Troops of the Houfhold being feveral thou" fand ftrong, might be immediately ready and near
" the Enemy: But neither this Precaution, nor the
" Great Wall, of which we fhall fpeak prefently,
"could prevent their being forced, or rather hinder
"Prince $\bar{T}$ Jon tè (who was invited into Cbina to op-
" pofe a Tyrant and Ufurper) from eftablifhing him-
" felf on one of the moft auguft Thrones in the "World.
4. This Wall, which is of a prodigious Length and Thicknefs, was built above 260 Years paft, by the Cbinefe Emperor Cbien Cbuvoang, by Way of Provifion againft the Incurfions of the neighbouring Tartars; and accordingly it covers the three Provinces of Peking, Xanfi and Xienfi. This Wall, exactly meafured with a Line, in Length is above fix hundred and fifty French Miles, or Hours travelling; (and by the Way the Reader is defired to take all Miles mentioned in this Tract for French Miles of an Hour's March each.) But if all its crooked Windings were meafured it would appear to be above one thoufand Miles long; it being carried over very fteep Mountains and Rocks. Upon the higheft of thefe it is provided with Fortreffes and Towers, four of which are placed within the Space of every Mile throughout the whole. Befides all which it is full broad enough for eight Horees to gallop abreaft without any Danger.
"This Wall is reported to be built by the Emperor "Cbius, about 250 Years before the Birth of Chrilt ;
"to the Performance of which fuctia vaft Number of
" Men were alotted, that the whole was finifhed within
"the Space of five Years, and was fo extraordinary
"f firm, that no Nail could be driven into it. To raife
" Men for this great Work, that Monarch abfolutely
"commanded throughout his Dominions, that three
" out of every ten Men fhould work at $i t$, and after-
" wards two out of every five were compelled to la-
" bour at this Undertaking: It is alfo faid, that though
"t the Inhabitants of each Province wrought as near
" their own Abode as they could, yet either by the
"Length of their Journey, or the Difference of the
"Climates, almot all thofe employed in this Building
" died fuddenly; which raifed a Tumult in the Em" pire, that procceded fo far as to murther the Em" peror and hos Son Aguizi, in the Fortieth Year of " has R.ign.
"Tar J fuits, who enjoy the Ear and Favour of the "Erup:r:r.r. are very expert in the Art of Menfuration,
" as their printed Books difcover; amongtt thefe are "the above-mentioned Le, Comte, Bobet, and Gobien, " and they tells us that the mof formidable Enemies the
"Cbinefe ever feared were the Weftern Tartars; where-
"f fore an ancient Cbinefe Emperor built this Great Wall
" to keep them off,
"I have (faith Le Comle) four times traced and ob-
"ferved it very near Hand, and without any Hyper-
" bole dare aver, that the feven Wonders of the World
"a are not to be compared to it, and that Fame repre-
"fents it lefs in Europe than I found it to be.
"Two Particulars, continues he; furprized me very " much.
" I. That this Wall, in its long Extent from Eatt to "Weft, is in feveral Places carried not only directly thro"
"vaft and defolate Plains, but alfo over very high
" Mountains; over which it feems to advance by now
" Degrees, the intermediate Vacancies betwixt being
"ftrengthened with great Towers, which ftand abour
"two Bow Shot diftant from each other. I meafured
" the Height of one of thefe, and found it one thou-
" fand feven and thirty Geometrical Feet above the Ho-
" rizontal Line; and it is not eafy to conccive how
" fuch a prodigious Bulwark could be raifed to fuch a
"Height, in dry mountainous Places, to which Water,
"Stone, Lime, and all other Materials, muft of Ne-
" ceffity be brought from Places far diftant.
" II. That this Wall is not carried on in a direet
" Line, but in feveral Places winds and turns, ac-
" cording as the Shape, of the Hills required, fo that
" one would be apt to fay, that three Walls inttead of one, cover a great Part of Cbina.
He farther faith, "That the Cbinefe have exceeded " the Antients in Fortification; that they call this Wall
"Vauli Tcham Tcbin, that is, of ten thoufand Furlongs:
" That its Extent is from the Oriental Sea to the Pro-
"vince of Xanfi or Cbanfi: That though it is certain
"that it is not fo long as Report makes it, yet all the "Turnings and Windings confidered, it cannot be " much lefs than five hundred Miles long: That where"s ever it feemed moft eafy to be forced, two or three
". Ramparts are clapped up one behind the other, fo that
"the hindmoft can eafily contribute to the Detence of " the foremolt: That it is carried over the higheft "Hills, or raifed or funk in Proportion to the uneven "Ground it ftands on; for (faith he) it is not to be " imagined that it is every where level, but that when" ever it takes its Courfe over lofty Mountains, it is extraordinary high, but otherwife it doth not exceed "the Height of common City Walls ; and notwith"ftanding Writers fo widely difagree about its Breadth, " it is not above five or fix Foot.

He adds, "That it is built with Brick, but the Work "fo good, that though it hath flood fo many Ages, "it is yet found and almoft intire. That as this Un" dertaking was the greateft in the World, it was allo " the moft ridiculous Attempt that ever was made, for " admitting, that Prudence obliged the moft feafible "Inlets to be fhut up, and fortified, it is neverthelefs " abfurd, to raife a Wall to thofe Mountain Tops which " are fo high, that a Bird can farce lly over them, much lefs could the Tartarian Troops climb them, " and to leave fome Places fo low and defencelefs as " they are. It is indeed to be wondered at, how they "t found fuch excellent Artifts and proper Inftruments, " to convey the Materials fo high; and more Work" mens Lives were facrificed in this Building, than " the utmoft Outrages of the Tartarian Armies would " ever have killed them
5. The Kingdom or Province of Xantung lies Southwards of Peking, and extends Eaftward towards the Sea; and through this Province, or that of Leaotung, the Inhabitants of Corea bring their anrual Tribute to Cbina. The Soil is fertile, producing all Sorts of Corn and Fruits in fuch Plenty, that one Year's Crop is fufficient to provide the Inhabitants of this Country for ten Years. All Sorts of Edibles, tending to the Support of Luxury, as well as tupplying Neceffity, bear but a very low Price here ; and this Province abounding with Rivers, Canals, and Lakes, this is the Rea-
fon that Fifh is here prodigious plenty; as alfo the Flefh of all Sorts of tame and wild Beafts. Nor are the Silk-worms backward in yielding great Quantities of Silk. But withal, this Country is more infefted with Robbers and Thieves than the other Provinces of Cbina, and they herd together in fuch Numbers, that they can raife a fmall Army. Subordinate to this are fix great Cities, diftinguifhed by the additional Appellative of $F u$, the Signification of which is explained above.

And fubject to thefe fix are fifteen leffer Towns, diftinguifhed under the Tiile of Cbeu, under which are eighty nine yet leffer, called Hien.

The principal City is Zinan Fu, which hath under its Jurifdiction four Cbeu, and fixteen Hien, which have again twenty under their Command.

The fecond large City is called 7 uncbu $F u$; it hath twenty four Cbeu, and three and twenty Hien
Tungcbang Fu, the third large City, prefides over three Cbeu, and fifteen Hien.
Cbinceus Fu, the fourth, hath fubordinate to it fourteen Cbeu, and as many Hien.
Tengcheu Fu, the fifth great City, commands one Cbeu, and feven Hien.
Laicbeu Fu, the fixth, governs two Cbeu, and five Hien: and thefe are the fix great Cities of Xantung.
The moft excellent Cbinefe Philofopher Ciungfufus, drew his firt Breath in this Kingdom or Province.
This Ciungfyfus or Confutius, left feveral Philofophical Tracts behind him, for which not only the Cbinefe, but alfo the neighbouring polite and knowing People, exprefs the greateft Veneration, and carefully preferve them, as the moft facred and valuable Writings in the World; he is faid to have flourifhed about five hundred Years before Chrift. The Cbinefe fo highly reverence him, that they bow down to the Ground at the very Sight of any Table or Plank, Eic. dedicated to his Memory, and on which his Name is infcribed. Though indeed this Practice doth not always obtain, but at certain Solemnities, at certain Times and Places, that the Memory of fuch a learned Man and great Benefactor to Mankind may not die; to preferve which they make an Idol of him.
There are fome fmall Inands which are alfo dependent on this Province, among which are the following three, Feuxil, Xamuen, and Tenneng, are the moft confiderable; and the laft very remarkable for having five hundred Cbinefe Philofophers murthered there, though it is not fo much rever'd on this Account as Xantung is for having given Birth to the great Confutius. The Story of that fingular Maffacre is this:
The Emperor Xius or Cbi Hompti, who built the great Wall (mentioned in the Defcription of Peking) being very much addicted to War, and an accomplifhed Soldier, but an utter Enemy to all Philofophers, whom he had peremptorily refolved to put to Death; commanded them all to repair from all Parts of his Kingdom to a particular Place, on the fpecious Pretext of difcuffing fome very important Point; and they all being affembled together, he fhipped them off to the mentioned Inand, and caufed them all to be murdered in a very inhuman Manner, though others fay they drowned themfelves. He was fuch an inveterate Enemy to all Literature, that he ftrictly commanded all his Subjects, on Pain of Death, to burn all the Books in the whole Empire, except only thofe which treated of Agriculture, Phyfick, and Necromancy or Magick.
Through this Province runs the River Luen, of which the Inhabitants relate very ftrange Things, many of which are found to be crue.
"Nieubof, amongtt other furprizing Things reports, "T That if nine Sticks are thrown into it, fix of them "c will infallibly drive Southwards, and three to the "N North; and that himfelf tried the Experiment and ${ }^{\text {or }}$ found it fucceed. Sed credat qui vult.
In this and other Provinces, is obferved a Sort of Fihing Bird called Lourea, which is fomewhat lefs than a Goofe, and not unlike a Raven; having alfo a very crooked Bill towards the End. The Manner of Fifh ing with them is as follows: The Fifhers having rowed themfelves in their Boats to a proper Place, throw thefe Birds over-board, who immediately dive, and the very

Inflant they have caught their Game, dart up to the Surface of the Water, when their Mafters immediately feize them, and very expedicioully pull the Fithe out of their Crops, it not being poffible for it to defcend lower, bccaufe it is fopped there by a Ring fix ${ }^{\prime} d$ about the Bird's Neck, which is removed when the Sport is over, and the Birds let loofe; after which they go a Filhftealing with open Throats, and having fatiated themfelves, return to their Boats.
"Fobn Gonfales de Mendofa fays, they are faftened "under their Wings to a long Rope before they are "thrown into the Water, and that they finh every third ' Day in the proper Seafon, after the Fifh have fpawn'd. Near the City of Cbincbeu, or Juncbu Fu, a Stone called Nieuboang, is obferved to grow in the Stomach of the Cows, which fome take for a Sort of Bezoar, and is very highly efteemed by the Cbinefe Phylicians, being an efficacious Remedy againft Catarrhs, and other phlegmatick Diforders.
6. Xan/ぇ lies Weftwards' of Peking, extending Northwards to the Great Wall, and is divided into two Parts by a large rapid River which runs through it, though it rifes in the Weftern Part of Xienf, from whence it turns Southwards, floortly after it winds to the North, and laftly inclining again Southwards, difembogues itfelf into the Sea.
"Writers differ very frangely concerning she Names "s of this Province, City, River, $\xi^{\circ}$. Our Author calls "the Province Xanf, another calls it Cbanfs; the chief "City he names Honang Fu, others Caifung; he calls " the River Huango, another makes it Hoamfo; and "s there is alfo a Difference, though not a very wide " one, concerning its Source, Le Comte tells us, that "the Hoamfo rifes at the farther End of thofe Moun"، tains which cover the Weft Part of the Province of "Sucbouen; from whence it throws iffelf into Tartary, " where having run its Courfe without the Great Wall, "s it repaffes through it into Cbina, betwixt the Pro"vinces of Cbanfi and Cbenfi (or Xienf, after which " it waters the Province of Honang, and running through " the Province of Nenking, having compleated its
" Courfe of above 600 Miles, laftly empties itfelf, not
" far diftant from the large River Kiam, into the Ori" ental Sea.

It runs through four Provinces, beginning with Weft Xienfi where it rifes, and paffes through that Side of that Province ; after which it runs through Xanf, Honan and Nanking, where it falls into the Sea. The Breadth of this River in fome Places is a Frencb Mile, or a Mile and half, and in others, two Miles over ; and by the Violence of its Tide, and Force of this great Mafs of Waters, it very much damages the adjoining Lands, by fometimes overflowing not only particular Houfes, but whole Villages and Cities, twenty or thirty Miles diftant, fweeping before it Men, Catcle or whatever it finds. In the Cbinefe Language it is called Huango, which fignifies the yellow River, by Reafon the Water looks yellow or reddifh, which is occafioned by its Paffage over, and carrying along with it a Sort of yellow Earth on the Tartarian Mountains, that imparts its Tincture to it: For this River runs through Part of Tartary without the great Wall, and after taking a winding Courfe there, re-enters the Wall. It is in many Places very deep, but yet in moft Parts of it unnavigable.
"This River hath formerly made vaft Devaftations,
" and obliged the Cbinefe to keep off its Water, by
"cafting up high and ftrong Dikes or Banks; which
" after all proved infufficient to the fecuring of the Ci -
" ties from the ill Effects of its overflowing. Befides
"which, the Cities in Honang, are all fenced round
" about a Quarter of a Mile from the Town, to pre-
"sent an Inundation, in Cafe of this rapid River's
" breaking through all its Banks, as it did above fifty
"Years fince. For the Emperor, in order to raife the
"clofe Siege laid to Caifung, the chief City of Honang,
"" by the Rebel Libuang (who had perfectly block'd it up
" from all Relief,) and to confound his Army, caufed "" the Banks to be cut through. But their Delivery " proved more fatal to them, and did them more Mif-
"chief than the utmoft Rage of the Enemy could:
"For by that Means not only the City itfelf but al-

Chap. III.
the Empire of CHINA.
" moft the whole Province, and feveral other Towns '" and Villages were laid under Water: So that above "s three hundred thoufand Men, amongtt which were " feveral Miffionaries, who had then a numerous Chri${ }^{66}$ ftian Congregation in the faid City, were all drowned sc and deftroyed, lofing at once both their Church and ${ }^{6}$ their Lives.
" Le Comite faith, I have failed on feveral Parts of ${ }^{6}$ this River, and found it every where broad and rapid, "bur fhallow, and fcarce Navigable."

This Country is very mountainous, and though lefs than other Provinces, yet it is very populous and fertile; its Jurifdiction extends over fix Fu, eleven Cbeu, and ninery five Hien.
The metropolitan City of the firf large Diffrict is caled Tbayenfu; the fecond Poutefu; the third Pingiangfu; the fourth Zuganfu; the fifth Funcbeufu, and the fixth Tatingfu.

All thefe have feveral fmall fubordinate Cities, which not affording any thing very remarkable, to avoid Prolixity I fhall not enlarge on. But it is very obfervable, that in all Parts of this Province are found fiery Wells, which very conveniently ferve for the Boiling of their Vietuals in the following Manner: They cover them clofe with a Lid in which is left a Hole, to fer the Kertle or Pot on, by which Means whatever is contained in it is boiled, without any other Affiftance.

The valiant Warriour and great General 2 uaniucbang, was born in this Province. This Hero had three bofom Friends all of them greatLords, who had fworn a mutual and inviolable Friendflip, and to whom he proved very fincere and faithful. They were all three highly efteemed by the Emperor, but one of them was his peculiar Favourite: And it happening that the Death of the Emperor occafioned a Civil War, this Hero and the others endeavoured to fet their Friend on the Throne; in Purfuit of this End he feveral Times proved viftorious, and won feveral Battles; but it happening once that the Enemy had carried off his Friends Wives and their Attendants; the News no fooner reached his Ears, than with utmoft Hafte and equal Bravery, he reduced his Men to Order, beat the Enemy, and delivered the Captive Ladies, and retired before and in Sight of a vaft approaching Army, which purfued him clofe at the Heels for two Days and two Nights; notwithftanding all which, he defended and preferved them from all Danger, and delivered them inviolate and untouched to his Friends. And for this glorious and gallant Action he is highly revered by his Countrymen ; in Remembrance of fuch fublime Virtue they adore him as a God, and fet up Images in their Idol Temples in Honour to him. It is but feldom that they will fhew this Image, the Face of which is of a very deep Blood-Colour, like a Hero not debauch'd by Baccbus. And the military Men highly efteem that Sort of Countenance; nay, the whole Cbinefe Nation imagine him very propitious to them, and fancy that fuch a fiery flaming Face will infpire them wich Valour, and enable them to acquit themfelves well.
7. Xienfi or Xenfs, is the largeft of all the Cbinefe Provinces, and had formerly three Viceroys, though at prefent it hath but two. Its Breadth from Eaft to Weft is three hundred and fifty, and its Length four hundred Miles. Its Plains as well as Hills are very fertile, and here are vaft Herds of Kine, and large Flocks of Sheep.
"This Province breeds as many Cattle of all Sorts as ${ }^{6}$ any Country in the World ; the Sheep and Goats "come on fo kindly, and thrive fo well, that they are " Ihorn thrice every Year, and their Wooll is wrought " into very fine Cloths and Stuffs, fit for Cloathing or "other Ufes. This Country alfo produces great Quan"t tities of Musk, which is extraordinary good, and © grows at the Navel of an Animal like a Hart without "Horns; their Navels fwell moft in their Rutting" time, when they are taken and killed, the Navel, " and what is contained in it is cut, and that proves
${ }^{6}$ the beft unadulterated Musk; a more particular Ac-
" count of which, illuftrated with a Print, is inferted
"6 in Mr 2 sbrants Ides's Travels to Cbina.

This Province hies Weftward of $\bar{X} a n x i$, the Great Wall terminates in it; it alfo borders on Weft Tartary, from whence the Lama's come, which are Tartarian Priefts that wear yellow or red Habits.
"The great or chief Lama, in their Language Dolsi "Lama, is the Head of their Religion, and him they " honour as a Deity. When the firft Embaffy, fent by "s the Dutch Eaft India Company to Cbina, was at Pe" king, there was alfo an Envoy from him; and by "Reafon, faith Nieuboff, they had formerly lived in "Cbina; but before the Tartar had conquered that "Empire, had been by the laft Cbinefe Emperor driven " out of it: Their Eirand was then to requeft ia Per" miffion for the Return of their banifh'd Ecclefiatticks " on the old Foot, and a free Exercife of their Re" Jigion.

This Province alfo borders on the upper Principality of Tibet, which extends iffelf to the Territories of the Great Mogul, from whofe Dominions great Numbers of Merchants come to the vaft trading City of Zurning, in the Kingtom of Xienf: And the Door of Commerce being for fome Time opened here, and Liberty granted to them, as well as Muscovites and Tartars, to trade there, they have with their Wares and Trade introduced the Mabometon Religion, which, as Weeds grow apace, is fpread over all Cbina to that Degree, that there appears more of that accurfed Seed than of the true Doctrine of Jefus Chrift, which from Experience I fpeak with Sorrow.
In this Province are eight large Cities, which have an hundred and fixteen under their Jurifdiction. The principal City is Sigan Fu, which is not only large in Size, but alfo very fine; the reft are Hancbang Fu, Fungiang Fu, Pingliang Fu, Linxiu Fu, Vacbang Fu, Hingang Fu, and Singang Fu; thefe are the eight, fubordinate to which, as I above hinted, are all the others.
Not far from Sigan Fu, fomewhat above feventy Years ago, a monumental Table was found, upon which a Crofs and feveral Letters were cut, whence the Eccleflafticks prove, that the Cbrijtian Religion was anciently known in Cbina, and that St. Tbomas the Apoftle, or fome of his Difciples, were there.
"The Jefuits Kircber, Le Comte, Gobien, and others, "fpeak largely of this Crofs and Table; but I hall " only make a fhort Extract of the principal Things " which they treat of at full. They fay then, that it is " a long Marble Table, on the Top of which is engra" ven a Crofs; that in the Year 1625 , fome Brick. "" layers digging the Ground near Signanfou, in the Pro"s vince of Cbien $f$, found a long Piece of Marble, which " had formerly been fet up as a Monument, but Time " had funk it under the Earth. This Stone was ten "Feet long and five broad, and was the more narrowly " examined, by Reafon a well engraven large Crofs ap" peared at the Top of it; and lomewhat below it a " long Infeription in Cbinefe Characters, with fome " ftrange unknown Letters, which were found to be "s Syriac. The Emperor being informed of it, caufed " a Copy of it to be given out, and afterwards com"" manded the Monument to be kept in a Pagode, " where it is at prefent about a quarter of a Mile from "Signanfou. The Infcription, which is too long to be "tranfcribed here, mentions the Meffias, and imports " that an Angel brought the Tidings of his coming, " and that Olopouen departed from fudea in the Year " 636 , and came to Cbina; that he being examined, " his Teftimony was found good, and that the Empe"ror publifhed a Proclamation and Command in his "Favour, in order to the building of a Church, $\mathcal{E}^{2} c$. " 8: Honan is fituated in the Middle of Cbina, borders Southwards on the Provinces Huquang and Kianfi; Northwards on Peking and Xanxi, Eattwards on Zantung and Nanking, and Weftwards on Sucbuen and Xienfi. Anciently, before all Cbina was fubjected to one Monarch, and each Province or Kingdom was governed by its own Prince, this was accounted the middle Kingdom, and diftinguifhed by that Name, which is at prefent given to Cbina, by reafon it is fituated in the Middle of feveral Kingdoms: And accordingly the Cbinefe frequently fay,

Southwards lie the Kingdoms of Tunking and Siam; Eaftwards Fapan, and fome other Illands; Weftwards Pegu; and the Country as far as Bengal and Tartary; Northwards are the Barbarian Tartars, which formerly paid Toll and Tribute as Subjects. Whilft Cbina lying in the Middle of all thefe, is juttly called in Cbinefe, Cbung lvoi, that is, the Middle Kingdom.

This Province confifts of flat Land, without Hills, which is very fruitful, yielding a vaft Plenty of Rice and other Corn, all which are to be bought here very cheap; a hundred Pound of Rice being frequently fold for no more than twelve Pence. In this Country was born the famous Tcbcon Tfong, who, according to the Cbinefe Annals, invented the $M$ ariners Compafs a thoufand Years before the coming of Chrif.

It contains eight large Cities, which have fubordinate to them an hundred and eight Towns or leffer Cities. The principal City is called Scbaifung Fu.

This formerly was the Royal Court, but was overflowed and covered with Sand by a great Inundation; and at prefent a City is built oppofite to it. Quinte Fu, Hincte Fu, Vecfe Fu, Vaking Fu, Honan Fu, Nining Fu, and Hojang Fu, are the Names of the remaining Cities, making all together eight, having Jurifdiction over the above-mentioned hundred and eight.
"By this Inundation is to be underftood the cutting " of the Banks already mentioned in the Defcription of "Xanxi, of the River Hoanga, which was done by the
"Emperor to deliver the City from the Siege which the
"Rebel Libuang had laid to it, and to drown him and
" his Army: But alas! it proved the Drowning and
"Deftruction of this chief City, and fo many hundred
" thoufand Men. I fhall only add, that the Cham-
" pion Ground of this Province hath continued ever
" fince like a Pond or Morafs: Projects have indeed
" been thought on to drain it, and reduce it to its " priftine State; but the Undertaking is almoft above
" human Ability, the Expence is unmeafurably great,
" nor is it poffible to accomplifh it; wherefore the
" Court hath given over all Thonghts of it ; yet Time
" has done much towards it, and Things are now much
" altered for the better."
9. Leaotung lies Northward of Xantung, Eaft wards of Corea; but Southwards of Tartary. Through this Province the prefent Tartar Conqueror came into Cbina. In the Reign of the Emperor Vanli, about the Year of Chrift 1590, the Tartars alfo broke into Leaotung, but were repulfed by that Monarch. This was about the Time that Father Mattbero Ricci the Jefuit came into Cbina. This Emperor Vanli governed, and peaceably poffeffed Leaotung for forty nine Years: But after his Death the Tartars, by the Affiftance of fome exil${ }^{2} \mathrm{~d}$ traiterous Cbinefe, that Jived in this Province, the utmoft Boundary which divided Cbina from Tartary; the Tartar, I fay, affifted by thefe Traitors who had before behaved chemfelves ill at Home, again entred this Country. This happened when the Emperor was but young, and all the publick Affairs were directed by his Viceroys and Eunuchs. So they grew more Potent in this Province. And about the Year 1630, one Licbuang, a perfidious Rebel, rofe up againft him in the Province of Xienfi, of which he not only made himfelf Mafter, but alfo over feveral others before the Emperor fo much as knew of it; his Eunuch Commanders induftriounly concealing it, fo that the ill News never reached his Ears till it was too late to remedy it, that is, till this Rebel was advanced with his Forces fo near Peking, that he entred it the next Morning.
'He was the laft of the Race of Taininga, whore " Name was Zungcbi: Of which Family Cbu was the "Founder. He drove out the Tartars who then lorded "it over the Cbinefe; and his Defcendants enjoyed the or Empire for feveral hundred Years.

Upon the News of which the Emperor clapt his Hand to his Sword, not out of manly Refolution, but hurried thereto by Defpair only, in order to kill his Imperial Confort, Concubines and Daughter, who expreffed their Grief in Tears and Lamentations fufficiently pathetick to have moved the moft obdurate Heart: Having thus prevented their future Mifery by prefent

Death, himfelf climbed to the Top of a Mountain, within the Walls of the Imperial Palace, and to provide againft falling into the Hands of this bafe Rebel chofe rather to die by his own, and accordingly hanged himfelf on a Tree.

After which Licbuano afcended the Throne, and eftablifhed himfelf in the Poffeffion of the Monarchy, as Sovereign Ruler of the People, but deported himfelf like a Tyrant and Ufurper: For he began his Reign with Cruelty: He commanded the Father to the Prince and General at the great Wall, and feveral other Noblemen, to be put to an ignominious and painful Death, for no other Reafon than becaufe he could not bring over his Son to the Rebels Side: Who afterwards not only attempted the Revenge of his Father's Death, but alfo to deliver the Empire from this Ufurper.

For he then went to Leaotung, and invited the Tartarss to his Affiftance: But they very much diftrufted him at firft, to remove which he promifed them on the Word of a General to be faithful to them, confirming his Promifes with an Oath on the naked Sabre. After which he led them as their General, and they boldily followed him. The prevailing Ufurper was come without the Wall, and alfo requefted Aid of the Leaotungers but in vain.
" From this and what follows, as that Lichuang went "s without the great Wall to requeft the Affiftance of of the Leaotungers, it clearly appears that Leaotung lies "s without the mentioned great Wall, fince this Princely "s General, by fome called UJangeii, and by our Author "Vii Sangquei, who then commanded, went from the "g great Wall and applied himfelf to the Leaotungers as "well as the Ufurper, and on the fame Account. But " in the Beginning of this Tract, to which we refer the " Reader, this is fo clearly proved, that no farther Evi"s dence is in the leaft neceffary.

This Heroick General bravely faced his Enemy, and in the firft Place revenging the Murther of his Father, after an obftinate Refiftance, he routed, put him to flight, and purfued him and his flying Army as far as Peking, where his Enemy made no Stop, but after he had taken out his hundred and ninety Concubines, and the richent Furniture and Jewels, fet Fire to the Imperiai Palace. The General purfu'd him accompanied with his own Forces, and fome Tartars, leaving the reft at Peking.
10. The Tartarian Chan or Prince, though but invited, in order to affift the Cbinefe, having with him about feven or eight thoufand Tartars, befides the Leaotungers, made Ufe of this fair Opportunity to mount the Throne of this mighty Empire. This happened about ten Years before the worthy Father Fobn Adam Scbalt fettled in Cbina.

The General returning from the Purfurt of his Enemy, found the Tartar, whofe Affiftance he had implored, feated on the Throne, and himfelf obliged to obey him : And complying with Neceffity, he confented to become his Relation by Inter-marriage. And the new Emperor created this Prince King of Funan.

The Bond of Affinity was yet too feeble, and the Crown of Junan too mean, to fatisfy and reftrain within Bounds this afpiring Prince, who aimed at the Empire itfelf. And accordingly after the Expiration of a few Years, he rofe againft the Chan; and ftiled himfelf Emperor, by the Name of Vii Sangqueii; reduced feveral Southern Provinces to acknowledge his Sovereignity : And after having carried on a vigorous War againft the Chan, and conquered near half the Empire, he at laft died, being arrived to a very great Age.

His youngeft Son who fucceeded him in his Pretenfions, was, at the Time of his Death, a Minor, and as it generally happens in Revolutions, an irreconcileable Diffention arofe amongft the Princes, which prevented his maintaining his Claim to the Empire: The eldeft Son kept his Court at Peking, was by Marriage allied to the Emperor, and had three Sons; but though he was thirty five Years of Age, yet he and his three Sons were put to Death. And ever fince the whole Empire of Cbina hath been fubject to one Sovereign, who is the Char of the Mantcheou Tartars.
"There is a Law in Force in Cbina which extends ${ }^{6}$ s the Punihment of Rebels to the ninth Generation. ©s The prefent Emperor Congbi, who is a mild Prince, "6 and difcovers a very great Averion to Cruelty, "s found himfelf oblig'd, in Compliance with the Laws ss of the Land, to put to Death the Children and fome
"s other Relations of Oufangeii, by Reafon he was con-
"s victed of Rebellion: But to teftify his Averfion to "s any fuch Practice, he caufed Proclamation to be made ss before-hand, that it was not he that had condemned " them, but that he was conttrained by the rigid Laws " of the Empire, the general Affembly of the Princes ss of the Blood, and the fupreme Courts of Juttice of s6 the Land, not to delay the Punifhment of any Per"6 fon who was convicted of Rebellion."

It is indeed true, that not long before fome Lords rofe up againft the Emperor, and carried on a War againft him, which did not prove fuccefsful, by Reafon of their mutual Divifions: Yet incredible Numbers of Men were killed; fome talk of forty Millions, others fay four Millions: Infomuch that human Blood (in an unheard of Manner) ftreamed from Mountain Tops; that the deep Channels were filled with dead Bodies, and the deeper Vales piled up and levelled with the Hills. This happened during the Minoricy of the prefent Emperor Cangbi, he being then not much above fourteen Years old.

As his Father's Acceffion to the Throne was not accompanied with any Fatigues or Uneafinefs, fo hiṣ Reign was very peaceable; leaving the greateft Difficulties for his Son to ftruggle with, who by his great Wifdom, heroick Courage, Royal Virtues, and exalted Endowments, hath overcome them all.

We fhall now turn towards the Southern Provinces, and take Leave of thefe Northern Countries', with faying that Leootung is a very fine though fmail Province, containing not above twelve as well large as friall $\mathrm{Ci}-$ ties: And adding that in this Province grows the famous Medicinal Root Ginfeng, acknowledged by the Phyficians to be an excellent Cordial Reftorative. The Cbiriefe Doctors ufe it in Hectick Peftilential Fevers, and feveral other dangerous Difeafes : It is prepared by Mixture with feveral other Drugs. Thofe of thefe Roots which are large, bright and weighty, are chofen as the beft; they wrap them up in Paper, and keep them in dry Earth, and alfo in Pepper: They commonly boil two or three Grains of it minced fmall, in Chicken Broth, or in fair Water : But particular Care mut be taken that the Pot be clofe covered, by Reafon that in an open Kettle a great Part of its Virtue evaporates.
"The Reader will naturally expect to have fome is Account of this famous Plant, beyond what our "Author, to whom it was common and familiar, has "thought proper to let down here. The Ginfeng is a "perconial Root that produces an annual Stalk of the
"Size of a large Quill, which rifes not very high, and " opens with five Leaves. Some fay, that this Plant " bears white and beautiful Flowers; orhers, that it "produces no Flower at all. The Root, which is the "Part moft valued, is of the Size of a fmall Parfnip, " not very unlike it, and generally divides itfelf into "s two. It is held to be the greateft Reftorative in the " World, and the Cbinefe Phyficians have written whole " Volumes about it, in which they tell us many Things "t that feem to furpafs all Credit. It is however to be " obferved, that the fgurative Stile, and the very con"cife Defcriptions in thefe Sort of Books, very often "s hinder Europeans from comprehending their true "Senfe; fo that we are apt to reject, as a ridiculous Ro" mance, what with them paffes for a well-wrought Al" legory, or a ufeful Fable. The Miffionaries, gene"r rally Speaking agree that it is both an ufeful and an " efficacious Medicine; that it removes Vapours, raifes " the Spirits, fupplies Strength, and promotes Secre"tions in a wonderful Manner. The Leaves are ufed " as Tea, and have a very great Effect that Way, but ss the Root is far preferable, and the true Way of ufing " it is thus. Divide an Ounce of Ginfeng into ten Parts, Voi. II. $\mathrm{N}^{\circ}$ I35.
"6 by breaking it; for it is affirmed, that Experience " fhows it lofes much of irs Virtue by being cur with " a Knife: One of thefe Portions is fufficient for a "Dofe, and is to be put into an earthen Pot, with a "Pint of Water, and being clofly covered, muft be "fet upon a flow Fire, till by ftewing, it is reduced to " about a Quarter of a Pint. This Liquor is to be fweet" ned with white Sugar Candy, and fo drank moderately " hot. Then half that Quantity of Water may be "put upon the fame Root and being half confumed; "the Liquor is to be taken in the like Manner. The " former fhould be taken in the Morning, fafting, the " latter in the Evening, and nothing eat after it. There " are various Reafons why this Drug does not anfwer ' in Europe; one is, that bearing a high Value, we are s often cheated, and fome other Root fent us, inftead of "Ginfeng; another and a better Reafon is this, that the " Root itflf is very apt to corrupt and fpoil, fo as to " lofe all its Virtue. I knew a Phyfician that made "Ufe of a Tincture of it, brought by the Cbinefe to "Batavia, with great Succers, but this Tincture was " extravagantly dear, fince at the firt Hand it coft "three Pounds an Ounce. The Ginfeng commonly "s grows in woody Places, under the Shade of "6 large Trees. It has been plentifully found in Canada, " where it was difcovered by a French Jefuit one Father "Lafitau. It is alfo found in Maryland, and under the "Title of the Maryland Plant is very well defcribed by "Mr. Ray. There is arother Plant more common in " Phyfick, the Latin Name of which is Hepatica No."6 bilis Tragi, that is held to be very little inferior in its "s Virtues to the Ginjeng, and ought therefore to be ${ }^{66}$ more in Ufe. It were to be wifhed that fome of the "Jefuits fettled in that Empire were well verfed in " Chemiftry, and then there is no Doubt they would " be able to prepare Extracts from this famous Root, "s that would reftore and eftablih its Credit in Europe, " and prevent our Phyficians from believing, that the "Cbinese Doctors, either through Ignorance or Prepof"f feffion-in Favour of their Country, have extolled this "Diug far above its Deferts. But till this be done, it " would not certainly be amifs to make fome Experiments "6 on the American Ginfeng, of which we might have con" fiderable Quantities from Maryiand; and as to the " Liverwort before-mentioned, one can hardly believe " that fo good a Judge as Scbroder fhould commend " it to fuch a Degree, if it had not really fome very "confiderable Qualities ; but, we are too apt to neg" lect Simples, and leavie them entirely to the Vulgar "s and to Quacks, who very ofren perform fuch extra"ordinary Cures by them, as not only raifes their Cre" dit, but is prejudicial to that of regular Phyficians, " who are more enamoured of Botany as a Science, "s than attentive to its Confequences, as it is a Branchz "6 of the Art of Medicine."
11. Having defcrib'd the Northern, we come to fpeaking of the Southern Provinces or Kingdoms of Cbina.

Nanking, which we named firf, is very large, and is governed by two Viceroys: The chief City is called Nanking, or rather at prefent Kiamning, the Tartars having changed its Name. This was formerly the Metropolis; and the Imperial Court, now kept at Peking, antiently refided here. This is the largef City in Cbina; and at prefent is fixteen or leventeen French Miles in Compafs'; but formerly contain'd three Circuits. The firft or outermoft and largeft Circuit was thirty Miles; but fince the Tranflation of the Seat of the Empire, it is run to Decay, and become fo far de. folate, that its fecond Circuit contains but fixteen or feventeen Miles, in which Compafs are above thirty Hills.
" The Footfeps of thefe Walls yet remain vifible; and " feem rather (faith Le Comte, to have been the Bounds "s of a Province than a City: And though Peking is " large and very populous, and Nanking very much de" clined from its former Grandure, it is ftill more popis" lous than the other. The Reafon of the Removal of " the Court is hinted in the fecond Chapter."

11 N
st We
"We fhould alfo here add, that this City was within "o one Night of falling into the Hands of Coxinga or "Couefius; but our Author having mentioned it in the "Chapter, where he is treating of Fokien and the Illand "Formofa, I refer the Reader thither. And as for the "third Circuit, (which our Author barely mentions " without any Defcription) we gather from other Wri" ters, that it was the ancient Imperial Palace, where "the Cbinefe Emperors formerly refided in as great "Splendor, as at prefent at Peking; it was on the South" fide of the City, and encompaffed by a Wall, which "at prefent enclofes the principal Part of the City. "Each of its four Sides were an Italian Mile long, "and confequently required above an Hour's time to " go round it, being by Nieuboff compared to Haarlemz " in Holland."

This moft charming City far furpaffes all the reft; befides which it is adorned with a lofty Tower of the fineft Porcelain of various Colours, and fet off on the Outfide with very fine Imagery: It is nine Stories high, and within is full of Stone Figures, richly guilt.
". The Difference amongtt all Authors in the Ortho" graphy, in Writing concerning Cbina, is very furpri" fing, they not agreeing in Names, the Senfe of them, " nor even in Things; one writes Cbina, another Sina; "t this $\operatorname{Xanf}$, Xienf, that Cbanf, Cbienff, and alfo Cbenff: "One calls the Emperor Cangbi, another Kambi; one " writes Oufangouet, whilft others have it UJangejus, or "Viifonguei; and all mean the fame Thing or Perfon. "So we find the like Difference concerning the Porce" lain Tower, in, or more properly without, Nanking.
"Our Author faith, the Porcelain on it is of the very
" fineft and beft Sort; others fay, that this Tower is " but plaiftered with Porcecain; and though the Rain " and Duft hath decayed the Beauty of it, the Remains " are yet fufficient to determine that it was Porcelain, " and not the fineft, but a coarfe Sort. Nor do Wri-
" ters vary lefs about the making of Porcelain, which " will be treated of in theCourfe of thisWork. But before
"I take Leave of this Tower, I fhall add what Nieuboff
"f faith, viz. That Seven hundred Years paft this Tower " was built, to the great Grief of the Cbinefe, and as a " pompous Monument of the Tartars being then Lords " of Cbina, of which they left this Memorial. Le " Comte on the other Side faith, it is about three hundred
"Years fince this Tower and the Temple of Memory
" were built by the Emperor Yonlo: And farther, fpeak"ing of Towers, faith, That the Spire, which is one " of its fineft Ornaments, hath fixed on the Top of it
" a giit Ball, or Pine-Apple, of an extraordinary "Largenels; and Nieuboff tells us, that the Cbinefe "report this to be all maffy Gold. Thus (Le Conzte "goes on) you have a Deffription of the Porcelain "Tower, which fome Europeans would call a Brick
"Turret: But indeed the Cbinefe are wonderfully ex-
" pert in beautifying their Stones with all Manner of
"Ornaments: And as it is, it is undoubtedly the neateft,
" moft compact, and beft Piece of Work at prefent
" remaining in the Eaft.
The Streets of Nanking are very fpacious and wide, as well as clean and neat, and there all Sorts of Rarities and fine Wares are expofed to Sale; but what is moft amazing is the almoft incredible Number of Men which are obferved to be there. The Inhabitants are computed to be eight Millions, Houfekeepers or Mafters of Families, fo that the Croud of People there feems juftly enough faid to be incredible to thofe who have not feen it.

Clofe by, or about the City, runs a River of two French Miles over, which in the Cbinefe Language is called Tangsku Kiam, that is, the Son of the Sea, and is navigable through all China. This River runs by and cuts through feveral Lakes and Rivulets, which all by its Affiftance are conveyed to, and by that Means difcharge themfelves into the Sea: Wherefore this River is very richly laden with innumerable Ships, and leffer Craft, which are very fine within, and richly gilt without; befides this, they are adorned with extraordinary fine painted Flags, and above Deck provided
with all Manner of convenient Seats, Tables, and Couches, for the Convenience of Travellers, and they are withal well victualled.
"It is reported to be fo deep that no Bottom is to " be found; whence proceeds that Cbine, e Proverb, "That the Sea is without Bounds, and the Kiam woithous "Bottom. And fome who have been there, affirm " upon their own Experience, that no Ground was to " be difcoveved by Sounding. But they alfo add, that "their Line was but fifty or fixty Fathom, and that if " they had made ufe of one of two or three hundred "Fathom, they fhould have given anocher Account " of it.

The Jefuits, who have feen the vaft Numbers there are of there Ships, fay that there are enough of them, (proverbially fpeaking) to make a Bridge from Chinu to Europe.

The Jurifdiction of this Province extends to fourteen: very large and magnificent Cities, all which are vaftly rich, and have feveral fmall, and they again feveral leffer fubordinate to them, as in the other Provinces.
The fecond large City of this Province is Suicben, which is the moft illuftrious, largeft, and moft famous of all the reft, being a Place of the greateft Trade of any in the whole Empire; and Ships, as wel! as Men, appear there as numerous as Sand on the Sea-fhore.

The Emperor receives from hence five Millions of Laens, each of the Value of two Rixdollars, befides the Corn, Rice, and Fruit, which is tranfported from hence annually to Peking, in nine thoufand nine hundred and ninety nine Jonks or large Ships; each of which is capable of carrying three or four hundred Weight : Not to mention all Sorts of Silks and other Commodities yearly carried to the Emperor.

The Ships are fix Months on the Way; and as foon as they are come to the End of the great Water, they come into navigable Rivers, cut by human Labour, with a Sluice at the Diftance of every French Mile, to preferve the Water on Occafion.
"Travellers, in the Defcriptions of their Voyages, " call them Sluices, but reprefent them widely different " from ours; for they are a Sort of Waterfalls, over " which the Ships are forced by the Affiftance of "a great many Hands and Windleffes. It is indeed "ftrange, that the fubtle Cbinefe have not yet invented " fuch as ours are, which if they once faw, they would " be forced to acknowledge, that we are not fuch "clumfy dull Wretches as they and other Nations re" prefent us there; and that they themfelves feem ra"ther like unthinking People, when they are forced to " make ufe of fo many Hands, and are fo fatigued to "force over their Ships, which we do with the greateft "Eafe in the World."

The Names of the other Cities are, Nincbueu $F u$, Tbaiping Fu, Ganking Fu, Sun Kiang Fu, Cbin Kiang Fu, Geancbeu Fu, fungjan Fu, Cbingan Fu, Lucbeu Fu, Quongte Fu, Cbancbeu Fu, and Kingcbeu Fu. Thefe fourteen, the two former being included, exercife Jurifdiction over a hundred and thirteen other confiderable Cities.
12. The Kingdom or Province of Cbekiang borders on Nanking ; and the Cbinefe fay, that next to that, it is the Indian Paradife of Arts, and the Paradife of the Gods; by reafon it plentifully flows with all good Things. Throughout this whole Country are deep.cut Channels, by Help of which all Parts of this Province may be eafily travelled over as well by Water as by Land. The Bridges have all of them very fine Stone Archies; and the Number of Barks or Boats there is as vaft as that of Men in the great Streets of Peking, that is, innumerable; which is the lefs to be wondred at, fince this Place is frequented by Merchants from all Parts of the World.

It contains eleven large Cities, the chief of which is Hancheu, and is the finett of them all, being provided both within and without with deep and navigable Channels, and almoft all the Corners of the Streets are adorned with lofyy triumphal Arches. Not far diftant Weftward from the City Wall, there is a very fine Lake, the Circumference of which takes in feveral Miles; its Wa-
ter falling into it from the Hills is very bright and clear, and is conveyed into the City by the above-mentioned Channels.
Eaftwards allo, near the City Wall, there runs a great River called Zbien Tangkiang, which at that Place is two Miles over, or as broad as the River Kiam, but not fo deep, nor doth it extend fo far, as paffing through but one Province.

The other large Cities of this Province are. Kiaking Fu, Xanking Fu, Nimpo Fu, Kiuncbeu Fu, Veniteu Fu, Niencbu Fu, Cbincberm Fu, Kingkoa Fu, Taicbeu Fu, and Nincbi Fu; the whole Number being eleven. They prefide over feventy fix leffer Cities; to which is added Vicbeu Fu, a City not lefs confiderable than any of the reft, and from it are brought very great Quantities of Silk.
13. Kiongf is a large Province, which plentifully abounds with all Neceffaries to human Life: It borders on Nanking. A Lake or fmall Sea of three hundred French Miles in Bignefs, called Pbojang Fu, takes up the greateft Part of it, and is as navigable for great Ships as the main Sea, and is furrounded by a Multitude of fine Towns and Cities. All the Rivers of this Province flow into this Meer, which difcharges itfelf into the Nankinfian River, and by Means of that is conveyed to the Ocean.

This Province contains thirteen large Cities, the chief of which is Nañcbang Fu, which, though a great City, is now ruined and reduced to a defolate Condition by the Wars, Vieicbeu Fu, a City where the Porcelain or Cbina Earthen-ware is made, is alfo in this Province.
"That this Porcelain is a common Manufacture in
"c Cbina, is acknowledged by all; and that the oldeft is
6s efteemed the beft, few are ignorant, partly on account
s6 of its beautiful Whirenefs, partly for its Antiquity,
" and by Reafon none fo good is at prefent made; be-
"c caufe that the Emperor appoints a Mandaryn at the
" Places where it is wrought, in order to choofe for his
" Ufe the fineft Pieces, for which he notwithftanding
" pays but a very mean Price; wherefore the Manufac-
© turers, not being able to fet their own. Rate, or per-
"s haps being but very ill paid, are difcouraged from
"s making it better than ordinary, and will neither take
os Pains, nor endeavour to fhew any great Art in the
"، manufacturing this Ware, without being richly re-
"s warded. Our Author here relates the Manner of its
" Compofition in his ufual plain Manner. But others
" ( 7 . G. de Mendofa) tells us, that it is made of Chalk,
"s which being beaten is thrown into a Pond clofely
", walled in, in which it diffolves and boils up, a thin
"S Skum arifing, of which the fineft Porcelain is made,
ss and the coarfer of the Remainder ; for the nearer the
" Bottom it grows, it becomes ftill coarfer. They
"s work this into what Shapes they pleafe, in the fame
«s Manner as we do, and gild or paint them according to
" their Fancies, which Colouring, or Gilding never fades.
«This, faith he, is what we know of our own Obfervation,
" 6 and is more probable than that it fhould be com-
"s pofed of Sea Shells which have lain a hundred Years
« under Ground to putiify, and are taken up, beaten,
os and then baked. Nieuboff faith that it is made of a
*Sort of Earth which is brought from a certain Hill
« in the Province of Nanking; that this Earth is not
s moift like Clay or Chalk, but dry like fine Sand;
" that they diffolve it with Water, but not that of
"Hoeicbeu in Nanking or the neighbouring Parts, it
s" being impoffible to work it in that Water; the Truth
"s of which they have frequently been convinced of by
os unfortunate Experience; but it is fuccefsfully temper-
ss ed with the Water of Vieicbeu Fu, and the adjacent
"Places. That having wrought it into Veffels of all
os Shapes and Sizes at Pleafure, they firft dry them in
"s the Sun, before they venture them in the Oven, after
"w which they put them into the Furnace, and let them
" bake for fifteen Days, and ftand fifteen Days after that
"s to cool, before they take it out, $\mathcal{E}^{3} c$. Le Comte faith,
"That it is made of a more folid Earth than ordina-
${ }^{6}$ ry, which is found in the Stone Quarries of this Pro-
ss vince: That this being cleanfed and beaten to a fine
6s Powder, is moiftened and made into a Mafs, which
s: is long and throughly mixed and beaten, in order to

- clear and renne it: That it is probable this Eartin " is moulded into feveral Formss at Pleafure by fuch a "Wheel as is ufed for that Purpofe in Europe: That ${ }^{6}$ after this it is carefully dried in the Sun, when the "Ground and Paint is laid on, and then is put into " the Furnace, which is kept to a moderate even 1 teat ${ }_{3}$ " and, that being baked enough, after a long Time " ftaying there, and becoming perfectly cold, it is taken "out."

This Porcelain is compofed by the Mixture of certain Sorts of moint and dry Earths : The dry comes from the Province of Nanking : From thefe two Ingredients this Cbina Earthen Ware is prepared, moulded into feveral Shapes, dried and baked; and when it is become cold, or rather almoft cold, the Colours are laid on, and it is glafed, once more put into the Oven, and baked in the Shape the Artift defires it fhould remain

The other large Cities are Kincheu Fu, Suicbou Fu, Nanbang Fu, Quoang/in Fu, Quiencbang Fu, Linkiang Fu, Cbungkue Fu, Tungcbeu Fiu, and Nangan Fu.

Thefe large preffde over feventy eight leffer Cities.
14. Huquang, and Xienf, already defribed, are the two largeft Provinces of Cbina. This contains in its Jurifdiction fifteen Cities, and more plentifully abounds with Rice, Corn and Fifh than all the reft; being alone very well able to furnifh the whole Empire with fufficient Quantities of Corn. For the Space of ten Years, this Province was miferably infefted with civil Wars and Difcord, which have cut off incredible Numbers of Men.
The factious Licbuang, already mentioned in the Defcription of Leaotung, was the Caufe of all this Bloodfhed when he poffeffed himfelf of this Province.

And after an Interval of only a few Years Prince $V_{i z}$ Sanguei (who invited in the Tartars to his Affiftance) made himfelf Mafter of a great Part of it, and for the Space of feveral Years carried on a vigorous War againft the Emperor.

There is a Lake in this Province, the Circumference of which is above four hundred French Miles, into which feveral Streams and Rivulets fall: And at the Mouth of it are feveral Mountains and fmall Inands, from whence and from its boifterous Waves, it is not unlike the main Sea. It is frequented by an incredible Quantity of Ships, and from it defcends a very large River which falls into the famous Nanquingian River.

On the four Corners of this Province are fituate four Cities: The firt of which is called Fockeu, and lies at the Mouth of the River, and is very ftrong, and the Key of all the reft. Vii Sanguei, King of Funan, took it. The Emperor's Brother, whom he had created King of this Province, affifted by the Imperial Forces, far down before it with a very great Army, and very clofely befieged it, lefing a great many Men before it. It happened one Night either in this Streight, to rid themfelves of ufelef People, and unprofitable Mouths, or elfe in order to convey a great Number fafe over the Meer, they embarked on board three hundred Ships; but fuch a fatal Storm arofe, that all the three hundred Ships and fifty thoufand Souls were funk to the Bottom.

But after the Death of Vii Sangui, this City, as well as the whole Empire, fell entirely into the Emperor"s Hands. There are in this Province fifteen large $F u$, fubordinate to which are an hundred twenty-five leffer.

Vii Chang Fu, the Principal, is a very large City, which is interfected by a River, frequented by Multitudes of Ships that drive a very confiderable Trade here.
Cotton grows here in fuch vaft Abundance, that it is tranfported from hence to all other Places almoft throughout the whole Empire.

The other large Cities are Hanjang Fu, Huangchere Fu, Gangling Fu, Sangiang Fu, Funiang Fu, Tegan $F u$, Fangiang Fu, Focbeu Fu, Cbangxa Fu, Paoking Fu, Xincheu Fu, Cbangte Fu, Hangcbeu Fu, and Jungchers Fu ; the whole Number being fifteen, whote Jurifdiction extends over one huridred and twenty-five other Towns.
15. The Province of Sucbuen, which hath been ruined and laid Wafte by feveral Wars, is the leaft of all the Cbinefe Provinces, and is mountainous. It produces Quickfilver, Tin, Wine, and a confiderable Quantity of Rhubarb, all which are exported to other Countries. But the Rhubarb is not efteemed the beft, nor are great Quantities of it either ufed or fent Abroad.

There are in this Country nine large Cities, the chief of which is Cbingtu Fu; which is a very great and confiderable City, but reduced to a very low Efate by numerous Wars.
The other are Langan Fu, Xunking Fu, Hungbing Fu, Paoning Fu, Cbungcbing Fu, Lingcbou Fu, Hiengcbeu Fu, Mabu Fu, and Taoy Fu; the Whole making up the Complement of Nine, which prefide over one hundred and three leffer Cities.
16. The Province of Queicber is a mountainous Country, which produces great Quantities of Quickfilver, Copper and Tin; and contains fourteen large Ci ties, fubordinate to which are twenty-four leffer.

Though this Province hath but a very few Cities, its Circumference is very extenfive; but it is alfo depopulated and ruined by deftructive Wars.

The chief City is Queijang $^{F} u$, and the reft are Gangxun Fu, Turven Fu, Cinquen Fu, Laiping Fu, Sucbuen Fu, Sunan Fu, Xecang Fu, Tung in Fu, Pinjung Fu, Pingiuen Fu, Thaiding Fu, Veineng Fu, and Mef Fu; amounting together as above to fourteen large Cities, which prefide over twenty-four leffer.
17. 7 unan, the farthermoft Province of Cbina, borders Weftward on the Kingdom of Lao; Southwards on the Kingdom of Tunkin, and was formerly accounted amongtt the Cbinefe Provinces ; but now is only tributary to that Empire.

Cocbincbina and Tonquin alfo formerly made one Kingdom ; but were afterwards divided into two, and diftributed to two Brothers, who carried on very bloody and obftinate Wars againft each other.

This Province produces Gold, Silver, Copper, and Tin, in great Abundance, and its Mountains, Rivulets and Streams afford feveral precious Stones, efpecially Rubies.

This Kingdom is very large, and was formerly, together with the Title of King, and the abfolute Power of governing it at his Pleafure, beftowed on Prince Vii Sanguei. He alfo kept his Royal Court, and built a very magnificent Palace there ; but after his Death the whole Kingdom as well as the Court fell to Ruin and Defolation. The Country is partly mountainous, and partly even Ground ; the Air heathful and temperate, being neither too hot nor too cold; and in this Province is a Lake which is ftored with Finh of different Kinds.

This Kingdom comprehends twenty large, fubordinate to which are fixty-eight fmaller Cities. The chief City is $\begin{aligned} & \text { unan Fu, a charming pleafant City, where }\end{aligned}$ Apples, Pears, Peaches, Plumbs, and all Sorts of Fruits, are incredibly plentiful.
The other great Cities are Quong $\mathcal{S}_{\mathrm{F}} \mathrm{Fu}$, Kaiboa $F u$, Cinjung Fu, Cbingkian Fu, 2uagnan Fu, Ivenking Fu, Chokium Fu, Wiiting Fu, Tali Fu, Mangboroa Fu, Juncbang Fu, Li Gikang Fu, Hoking Fu, Kintung Fu, Funing Fiu, Xumning Fu, Xingan Fu, Tungoba Fu, and Sinkoa Fu: Thefe are the twenty above-mentioned Cities which prefide over fixty eight.
18. The greateft Part of 2uoamg $/$ is mountainous, but the Remainder very fertile; one Point of it borders on the Kingdom of Cocbinchina. Abundance of Cinnamon grows here, as doth alfo a certain very ufful Wood to dye Red; which the Portuguefe call Sapao; and which grows alfo very plentifully in Siam. Here are likewife feveral excellent Sorts of Wood fit for the making of all Sorts of Cabinet, Joyners or Carpenters Work; befides which, great Quantities of Rice are tranfported from hence to Kanton.

There are thirteen large, and eighty leffer Cities in this Province.

2ueiling Fu, the chief City, is very agreeably fituated in a pleafant Plain. This Province was formerly
governed by a King, who was a Prince of the ancient Imperial Blood; but he dying without any Heir, his Dowager governed it for fome Time; but after her Death, the Royal Court was ruined and demolifhed ; in which State it is at prefent.
The remaining great Cities are, Pingeo Fu, Viichora Fu, Zincbeu Fu, Nanning Fu, Taiping Fu, Sumun Fu, Teucbeu Fu, Zbincbeu Fu, Singuen Fu, Cbincbeut Fu, (near which grows a certain Plant, of which is made a Sort of Suff that is worth more than Silk) Sucbin Fu, and Cbingan Fu: They altogether commanding eighty leffer Cities.

Very good Porcelain is alfo made in this Province; but the Earth from which it is prepared (as we have already fhewn) comes from one Place, and the Water from another: Poffibly by reaion that it is more efficacious, and breaks the Earch finer, or incorporates better with it, or for other hidden, though natural Reafons: Thus one Place borrows from another what it fometimes doubly reftores.
As the greateft Part of Cbino, fo this Province is very populous, being alone capable of raifing a Million of Men able to bear Arms, and containing near two hundred thoufand Families.
19. 2uoantung, called by the Europeans Canion, is the moft Southern Province in Cbina; is bounded by the Ocean, and is provided with a very good Haven at the End of a River, which is navigable by great Ships up to the City of Canton. The whole is a fertile Councry, plentifully abounding with all Neceffaries, which draws a very confiderable Trade hither, as well with the $I_{n-}$ dians as Europeans, from which latter above one hundred Englijh, Dutch and Portuguefe Ships annually come to and go from hence.
The Jaft mentioned Nation having made themfelves Mafters of Macao, a neighbouring Peninfula, have there a very fine Haven, from whence they drive a great Trade to Conton, but are obliged on that Account to pay annually 50000 , fome fay 500000 Laens to the Emperor, each Laen amounting to two Rixdollars.
"Macao, faith Le Comte, is famous for the vaft Com" merce of the Portuguefe formerly carried on there, " before the Hollanders jufled them out of aimoft all "India: And at prefent they are not able to keep " many Forces there. Here is a very good Road for "Ships to ride; the Haven indeed is very fmall, but "fafe and very commodious. All Cuftoms on import"ed Goods are the Emperor's: And though the Porti"guefe have ftill a Sort of Government there, yet they "are fubject to the Mandaryns in all Cafes which con" cern the Emperor."
They have poffeffed this Inand above an hundred and ten Years. (Our Author wrote about the Year 1694.) and they have ftrongly fortified and built feveral Churches and Monafteries upon it. The Commodities for which they chiefly trade with the Cbinefe are Pepper, Cinnamon, Cloves, Sanders, (very ufeful in dying) Callicoes : The Medicinal Wood, Pucbo; Ebony, Red Dying Wood ; Wine and a Sort of Birds Nefts found in the above-mentioned Inand. Thefe Birds Nefts are efteemed a very good Reftorative Medicine: They are commonly boiled for a Quarter of an Hour, and not longer in Chicken Broth; for if it be fuffered to boil longer, the whole would diffolve: Each Pound of this coft three, and fometimes four Laens; and the white is efteemed beft. Arecca, being the Fruit of a certain Palm, which is hard, bitter and aftringent, is alfo brought hither to be fold: The Indians commonly chew it with the Leaves which they call Betel, which wafhed in a little Lime-water become red: And the Spittle of thofe who chew it is of a Blood-Colour : And any Perfon not accuflomed to this Ufage upon trying of it becomes very red in the Face, and as it were inebriated, or half fuddled.

This Plant is very much ufed in India; both Sexes biting and chawing it the whole Day, as fome fmoak Tobacco in other Places: Ir is hot and dry, warms the Stomach, and heips Digeftion. It is alfo boiled in Water, and being aftringent, is ured in Cafe of Fluxes. There
are alfo brought hither Rhinocero's Horns, Ivory, Furrs, and red Lacca, from whence the fineft Scicks of Sealing Wax are prepared: This Drug is the Excrement of a Sort of Worms or Ants, which fticks to the Leaf and Wood of the Plants. We fhall hereafter treat of the Fruits.

This Province abounds with white and brown Sugar ; and great Quantities of Silk are wrought here, of which all Sorts of Goods are made, and tranfported hence to India and other Places. The Indians alfo buy here great Quantities of Porcelain, Tin, Iron, and Copperwork, Paper, and feveral other Merchandifes and Rarities, moft of which are paid for in Silver; but on the other Side a great deal of Gold is tranfported from Cbina to India.

The chief City of this Kingdom is called Quangcbeu $F u$, an extraordinary fine City: Which is ftocked with and trades in all Sorts of European and Indian Commodities. About four French Miles diftant from this City is a Village called Fuxan, where the greateft Trade in all Cbina is drove: For the Inhabitancs keep conftantly valt Magazines of all Sorts of Manufactures: And it is reported that fixty thoufand Families live in this Village.
This Province hath fuffered very much by War. In the Beginning of the Revolution of the Empire, the chief City was befieged by two petty Kings, Princes of the Imperial Blood, with a very great Army, and for above the Space of one whole Year, furioully affaulted and bombarded with Cannon and great Pieces of Artillery, by which Part of the Wall was demolifhed; notwithftanding which it was not taken by that Means, but delivered by the Treachery of a Perfon, to whom the chief Command of one of the City Gates was entrufted, who, tempted by a great Sum of Money, and larger Promifes, let in the Enemy; after which he receiv ed the juft Reward of his Treafon; for inftead of the promifed Riches, he was ftifled in Sand, after the Enemy had cut all to Pieces that came in their Way, and plundered the whole City: And after this they overrun the whole Province.
" Thefe Princes were afterwards, one of them King " of 2uantong, and the other of Fokien: But thole " Monarchies were but of fhort Duration; nor did " they devolve on their Heirs; for all thefe, one after " the other were accuftd of fome Crime or other; but " indeed the true Reafon of their Fall was, that Rea-
" fons of State would not permit the jealous Tartar to
" fuffer any Princes of the ancient Race, of which
"the Cbinefe were not a little fond. This was alfo
" the chief Reafon why-Ofangouev's Pofterity were kil-
" led, whatever fpecious Pretences were made Ufe of " to colour the Barbarity; fuch were thofe drawn from
"s the rigorous Cbinefe Laws, which directed the Punifh-
" ment of Trcafon to the ninth Generation, and that
" they were thereby forced to it."
This City was computed to contain eight hundred thoufand, or near a Million of Families: And without the Fort or Caftle is two Miles in Compals.
One of thefe Princes was made King of this Country, and built a magnificent and Royal Palace in the City; but being afterwards accufed of foul Practices againft the Emperor, he was deprived of his Life. And the other Prince, in Reward of his heroick Actions, was created King of Fokien by the Emperor then reigning.

The firft Prince or King being killed, his Family, hourhold Goods, and royal Treafure, by the Emperor's Order were carried to Peking. His Treafure indeed very juftly deferved the Name of Royal; for that alone amounted to above one hundred Millions, befides other valuable Effects, and the moft fplendid Furniture of the Court.

This Province comprehends ten large Cities, which exercife a fuperior Jurifdiction over feventy four, that are fubordinate to them. The fuperior Cities are Quangcbeu Fu, already defcribed; Nonkiang Fu, Xancbeu Fu, Hoycbeu Fu, Xanking Fu, Kiaocbeu Fu, Luicbeu Fu, Liencbeu Fu, Cbaucbeu Fu, and Kincbeu Fu, fituate on the Inand Ainan, which is very confiderable on Account of the greas

Voz. II. No CXXXVI.

Trade driven there with the Kingdoms of Tomzin and Cocbinctina. The Compafs of this Ine is three hundred Miles, and on it are thirteen leffer Cities. Here is alio a very fine Pearl Fithery; and Aloes are very common. That Plant grows like a Sort of Reed or Flag, about a Finger thick, but forty or fifty Yards in Height, and is a very good Medicine on feveral Occafions.
"Le Comte, whom we have fo often quoted, reiates ${ }_{5}$ "that there is upon this Ifland of Ainang or Hainang, "a ftanding Water, in which Fifh petrefy. I have " my felf (faith he) thrown Crabs into it, and obrerved " the Claws to be confolidated and fo far changed, that "they differed very little from Flints. But thefe Mi"racles of Nature are not fo peculiar to Cbina, for we " meet with them elfewhere (adds he) and withal a " great many more Prodigies, and occult Qualities of " Nature are obfervable there, but yet all the Cbinefe " fay muft not be believed; for though there may be " fome Truch in what they relate, yet in the difhing up "c they are too apt to intetlard it with fo much fabulous "Stuff, as frequently inclines us to queftion the Truth " of the whole Story. However, the Reader ought " not to doubs of the Truth of the Petrification of "Crabs and other Things, by reafon that he may at "Pleafure fee that, and orher fuch-like Metamorpholes, " in Mr. S. Schynvoel's MuSeum at Amsierdam.
20. The Province or Kingdom of Fokien hath fuffered very much by feveral Wars; and before the prefent Viceroy governed it as a Viceroyalty, was ruled by a potent Prince, who when the Tartar feized the Empire, would neither furrender his Realm, nor acknowledge any Subjection to him: But being treacherounly invited to Court, on the Pretence of treating concerning fome important State Affairs there, though he was forewarned and fmelt the Defign, he refolved to venture thither, leaving the Regency in his Son's Hands; being the lefs fufpicious', as he thought, that having left the Government in the Hands of fo brave a Prince as his Son was known to be, the Court therefore would not dare to injure him ; and accordingly he went to the Emperor's Refidence, but was kept there. The more prudent Son, though daily invited, perfited to refufe that Favour, being at the fame Time convinced his Father was become an involuntary Prifoner at Court: At which being highly incenfed, he began, and for feveral Years bravely carried on a vigorous War againt the Emperor; who on the other Side being impatient to reunite this Province to the Empire, was not wanting in the Ufe of all Means tending to compars that End; purfuant to which he raifed a vaft Army in order to fubdue the young Prince : Who feeing this numerous Force approach him, and finding himfelf unable to refift fuch a potent Emperor, repulfe his difproportionate Force, and gain his Point, though at feveral Times he gave them very fevere Biows, at laft refolved to quit his Country and fhip himfelf off. He accordingly prepared a Fleet, embarked with his Forces, and fteered with them to $\tau_{a}$ joan or the Inand of Formofa; where he landed, drove out the Dutch, and made himfelf Mafter of that charming Ine. This Prince is by the Natives called 2 woefing, but by orhers Coxinga.

The Dutch Eafi-India Company had poffeffed this Illand, and had very ftrongly fortified it.
Act the Time of the Chimefe Commotions, and the great Revolution of that Empire, it was utterly neglected and abandoned to the next who pleafed to give himfelf the Trouble to reduce it, The Spaniards of the Manilbas or Lufong, being but fifteen or twenty Miles diftant, and being informed hereof, feized, built and fortified a City on it; which was afterwards conquered by the Dutch, who becoming Matters of the whole Inand, built feveral ocher Forts upon it ; and defigned, on Account of its very commodious Situation, to have made it one of the molt confiderable Places in all India, and the Centre of their Commerce with the adjacent Countries.
21. Formofa is indeed a very beautiful Inand, which is naturally fruiful, and the Air healchful as well as temperate, very commodiouny fituated in the Neighbourhood of Japan, Clina, and the Manilhas, fit for managing Trade both Eaftwards and Weftwards: is being pot-
fible for Ships to come thither, and go from thence, the whole Year round.
When the above-mentioned Cbinese Prince 2uoefing or Coxinga landed, there were feveral large as well as fmall Ships in the Haven; and upon the Inand there were fettled nine or ten thoufand Hollanders, who were as rich, and lived as well as any where befides. But notwithtanding the Dutch Eaft-India Company was fo ftrong there, the Cbinefe left their native Country, and blocked up the Haven with their Fleet ; they bravely attacked the Netberlanders, and their Fortreffes, and conquered, burnt or deftroy'd them : So that at laft they took the City, Forts, and the whole Illand: They allo exercifed feveral Cruelties on their conquered Enemies, of whom they killed feveral, and cut off the Hands and Feet of fome, and the Ears and Nofes of others; after which, they fent thefe miferable Wretches on board three Ships to Batavia. This we mult underftand as taken from the Cbinefe Accounts.
After this Succefs, they difpatched away an Envoy to the Spaniards at the Manilbas, in order to demand a Recognition and Tribute of them; threatening withal, if they refufed, to treat them as they had done the Dutch. But the Spaniards nighting their Menaces, peremptorily refufed to comply with their Demands. Before we take our Leave of this Subject, we fhall relate another Circumftance that happened to this Prince. He had difpatched three Ships freighted with Silver, under the Conduct of fome of his Officers, with Orders to unlade it at Tcioan. Thefe Officers, inftead of carrying it where it was bound, bring it to the Emperor of Cbina, who appoints them fafe Conduct, and praifes the Enterprize. But this Prince being very much enraged at the Treachery, raifes an Army of above an hundred thoufand Men, and equips an innumerable Fleet, on board of which, with the utmoft Difpatch, he flipped his Forces, and unexpectedly failed up the great Nanking fian River, beat both Army and Fleet, , by Water and by:Land, reducing the Flaces round about the City of Nanking. To which he alfo laid fuch clofe Siege, that he plainly faw that it was feafible, and therefore he abfolutely intended to mafter it in a very few Days: Which he had certainly done, had he not declared to his Army, that it was his Pleafure, that a certain Day fhould be celebrated with all Manner of Mirth and Jollity, in Remembrance of his Birth-Day, which accordingly began with all imaginable Expreffions of excefive Joy, but ended with a bitter Farewel; for the Nonkingers having Notice of it, and being informed of the Negligence of their Guards, (thofe upon Duty, as well as thofe who were not, being all drunk) took that Opportunity'to make feveral vigorous Sallies on the Befiegers from all Parts, fell upon them in the Midft of their Debauch, beat them out of their Trenches, and killed the greateft Part of the Army, a few only efcaping; who ferved to carry the News.

The Prince with his fmall Remainder returns to his Illand, and is reported to be fo much affected with this fcandalous. Lofs, that running diftracted he bit off a Piece of his Tongue, which Wound occafioned fuch a Flux of Blood, as could nut timely be flaunched, fo that he died of it.
His Son, who fucceeded him, being young, and very little experienced in Military Affairs, his Father's Lofs remained unrevenged; and thus the faireft Opportunity imaginable of taking Nanking was irretrievably loft by an unfeafonable Rejoicing, and a fcandalous Debauch. [Our Author fpeaks here in the true Language of a native Cbinefe.]
On the other Side, the Emperor could not reft, till, in order to revenge the atrocious Affront offered to him and the late Imperial Metropolis, by this unexpected Incurfion, and to prevent any fuch Attempt for the Future, had mann'd out a Fleet of four hundred and fifty Sail, and embark'd on board them Forces enough to take Taioan, which was entirely encompaffed and blocked up by the Fleet. But contrary to all Expectation, the young Prince taking the Advantage of a favourable Wind, though he had but forty Ships in
he heroically attacked, beat, utterly ruined moft and deItroyed the Emperor's great Fleet. That Mionarch, who thus by dire Experience was inftructed not to have too mean Thoughts of his Enemy, foon refolved to take jufter Meafures: Accordingly he renews his Attempt the next Year, and not only fends more Ships and Forces, but took Care that they fhould more cautiouly encompafs and clofely thut up all the Avenues to the whole Illand, and kept it in this blocked Condition. Mean while the Prince fipping no Opportunity to gall his Enemy, imagining the Coaft clear, though provided with a very fmall Number of Ships, boldly flew at his too powerful Enemy; but was beaten out of the Sea, and forced to fly back to his Inand, where he bravely defended himfelf the Remainder of that Year: But the Coafts being encompaffed, and confequently a Stop put to all Commerce ; befides which, it was allo afllicted with a very great Draught, there having been no Rain for five Years ; and no Relief appearing, he at length being driven to the laft Extremity by War and Famine, found himfelf forced to furrender his Country, and fubmit himfelf to the Emperor's Mercy, who ordered him to be brought to Peking. At Sight of him the Emperor (touched by the tender Years, and the heroick Deportment of the Princely Youth) not only fpared his Life, but afterwards made him a Prefent of the before-mentioned Inand, and the Title of King of Formofa, which he accordingly at prefent governs.
Thus the whole Empire of Cbina, in the Year 1682, was again fubjected to one Sovereign, and the Illand Taioan or Formofa fubmitted to the Jurifdiction of the Province of Fckien, with the additional Appellative Fu, and is accordingly number'd amongtt the great Cities of that Province.
Its Compafs takes in a Circuit of five hundred Miles: Sugar and Buck-skins are the prime Commodities there, and this Ifland is reckoned about forty Miles diftant from the firm Land, or Continent of Cbina.
22. Focken $F u$, that beautiful and large City, is the chief of this Province, and is very famous for its Commerce with the Faponefe, Indians, and Europeans, tho' this of late has declined.
This Province contains nine large Cities, amongt which, as is already hinted, the above-mentioned Inand of Formafa is reckoned as one. Three of thefe nine are very confiderable and large, to which is added another Inand, viz. Haimui, which is about eleven or twelve Miles in Circuit, is bleffed with the fineft Haven in the whole Province, and formerly was poffeffed by the above-mentioned Prince of Formofa, and for a long Time bravely held out againft the Emperor ; but fometime afterwards it was conquered by one of the two Kings, which, as is before related, governed, the one Conton, the other Fokien. Both of them were rewarded for their great Actions with Donatives; but the King of Fokien rebelled againft the Emperor.
This King of Fokien at the fame Time profecuted a vigorous War againft the Prince of Haimai by Sea, and the Emperor by Land; who being too feeble to refift them both, fubmitted himfelf to the Emperor, on whofe Command being come to Peking, he and his Son were put to Death.
In thefe Civil Diffentions in this Empire, there fell, by the above-mentioned Wars, above Forty Millions of Men. The Names of the remaining large Cities are, Zbivencbeu Fu, Hingboa Fu, Cbaboen Fu, Jenping Fu, Quien Fu, Tingcbeu Fu, Cbengefu, and Taioon Fu, or Formofa. Thefe nine Capital Cities prefide over fixty others.
The Number of Cities in the whole Empire amounts to feventeen hundred ; to particularize the Names of all which would take up too much Time, and tire the Reader, wherefore we have only mentioned the Chief of them. I have barely touched on fome Events, the Story of which is very well known, happening moftly within the Compafs of our Remembrance, and during the Reigns of the laft Cbinefe and the prefent Tartarian Families; for it would have taken up too much of the Reader's Patience, to have defcended to Particulars :

Wherefore

Wherefore I chofe rather to fupply this fhort Defcription moftly from my own Knowledge and Obfervation, having in the mean Time, in the acquiring of one, and making the other, fuffered great Scandals and Afflections for Chrift's Sake, as well as frequently put up my Supplications to him, and implored his Aid in Time of Need, as alfo that he would pleafe to make his Grace known to the World, which I hereby do, through his great Mercy; defiring the Reader to give as much Credit to thefe few Pages, as he would to a Perfon that chiefly writes the bare Refult of his own Knowledge and Obfervation, by which Rule his Pen hath been guided, as it will be in the future Part of this Tract.

I proceed now to treat of the Diftances of Provinces, and at the fame Time to defcribe the People of the Country, the Progrefs of the Chriftian Religion; the Rivers, Lakes, Shipping, Bridges, and Walls; the Cbinefe moral Precepts, Education of their Children, Complements, good Manners, and Learning ; their Trees, Fruits, and Vegetables; neighbouring Ilands, Provinces, Kingdoms, and People ; concluding with the Nations that have been fubdued or were annexed to Cbina by the prefent Emperor Cangbi.
23. The Metropolis of the Empire, Xuntien Fu, otherwife. called Peking, is fituated two hundred Miles diftant from Leaotung and Xantung ; about one hundred and fixty Miles from Peking. Xanf is one hundred and fixty, Xienfi two hundred and fifty, Nanking two hundred and fixty, Honan one hundred and thirty, Kiang fr, four hundred and thirty, Chekiang three hundred and fifty, Sucbuen fix hundred and fifty, Huquang three hundred and fifty, Queicbeu eight hundred, 'Funan one thoufand, Quoang $f$ eight hundred and fifty, Quantung eight hundred, and Fokien feven hundred and fifty Miles or Hours from Peking. This is the Diftance of all the Provinces from the Court, computing from the Metropolis of the whole Empire to each Capital City of the refpective Provinces.

From Nanking to Xantung is reckoned two hundred Miles, to Honan one hundred and eighty, to Huquang two hundred, to Cbekiang one hundred, to Kiang $\sqrt{2}$ one hundred and fixty. This is the Diftance betwixt Nonking and the mentioned capital Cities.

Xienf is diftant from Honan two hundred Miles, from Xens $\sqrt{2}$ one hundred and fifty, and from Sucbuen two hundred.

Huquang is diftant from Cbiangf2 one hundred and thirty, from Honan one hundred and fixty, from Sucbuen two hundred, from Quoang $\sqrt{2}$ three hundred and fixty, and from Conton four huudred Miles.

Chekiang lies two hundred Miles diftant from Kiang $\sqrt{f}$, and above three hundred from Peking.

Conton is three hundred and fifty Miles from Fokien, four hundred from 2 uoang $\sqrt{2}$, and three hundred and eighty from Kiang $f$.

Funan is diftant from Quoangf three hundred Miles, from Quiecheu three hundred and thirty, and from the Kingdom of Laos three hundred. Thefe are the reciprocal Diftances of the capital Cities, computed according to the common Land Meafure.

The Maritime Provinces are, Zantung, Nanking, Cbekiong, Fokien, and Quantung or Canton.
Nanking, Cbekiang, Hucvang, Kiang fr, Junan, Canton, and Fokien, are efteemed the fineft Provinces.
Xantung, Xanfz, Xienfr, Peking, Honan and Leaotung, are of the middle Sort.

But Queicbeu, Sucbuen, and Quong $\sqrt{2}$ are accounted the worft of all, by reafon they are very mountainous, and very much impoverifh'd by the Wars.

The largeft Provinces are Xiengfr, Huquang, Nanking, Junan, Kiangft, and Cbekiang ; each of thefe larger Provinces is above three hundred Miles wide, and much longer. Compared with thefe, the middle-fiz'd Provinces are Peking, Xantung, Quoang $/$ I, Queicheu, Honan, and Fokien, and fo accounted, becaufe they are not above two hundred Miles broad; and alfo Quantung, which is but one hundred and fifty Miles long, but full three hundred Miles broad ; by which Rule, Xanfi, Leaotung, and Sucbuen, are likewife reckoned but finall

Provinces, fince they are but about one hundred and fifty Miles broad, and one hundred and fixty in Leength.

The principal Maritime Trading Cities, Towns, and Places, which are frequented by the Indians, Faponefes and Europeans, are the following ten, viz. Canton, the Ines of Macao, Hainan and Cbaochexis all which belong to, and are dependant on the Province of Quoantung; and belonging to Fokien, are Fochen Fu, and the Ilands Haemut and Tajouan, or Formofa; thefe drive on a vaft Trade with the Europeans and Indians: Befides which, there are alfo two Cities in Nanking and Xangbai, and the City Nimpo in the Province of Cbekiang; all which have a very confiderable Trade with the Faponefe. In the Province of Xinf or Xiend is the great City of Zinning, which is a moft noble Emporium, being the Centre of a vaft inland Commerce with the Weitern Tartars, Moungalls; Tibetts, and Ruflans.
"The Inand of Macao, which is mentioned aboves
"belongs to the Portuguefe; and they have upon it a Fore
"and City, if that Name may be given to a few Houfes,
" which are not enclofed by any Wall: This Place is fa-
" mous for the Trade which the Portuguefe drove there "before the Dutch Eaf-India Company chafed them out "of India. What they at prefent poffefs is by Favour " of the Cbinefe, to whom they are obliged to pay fer" vile Obedience, if they intend quietly to enjoy what they " hold: All Cuftoms for Goods imported here are paid " to the Emperor ; and though the Portuyuefe preferve a "Sort of Government here, their Power extends no far" ther than to Cafes which do not concern the Cbinefe; " for they are otherwife fubordinate to the Jurifdiction "s of the Mandaryns of Quoantung or Canton.
24. It may poffibly contribute to the Information, as well as Entertainment of the Reader, to perufe the following very fuccinct and comprehenfive Account of this Empire, written within thefe few Years, by an Italian that has refided upwards of thirty feven Years in the Empire, for the Satisfaction of an illuftrious young Prince, whofe Inclinations leading him to procure the moft certain Intelligence, as to the prefent State of all Nations, had found Means to requeft this Favour of one, who of all others, had the greatett Opportunity of fatisfying his Curiofity. There is nothing taken from the Piece, except the introductory and concluding Compliments, which having nothing to do with the Maters of Fact, it was thought neceffary, for the Sake of faving Room, to ftrike them out.

As to the Extent of this Empire, it is not eafy to " fpeak of it with Certainty, for with Regard to the "Europeans, they have no Opportunity of examining "the Frontiers on every Side, in fuch a Manner as " might enable them to decide on this Head, with any Degree of Exactnefs; and as for the Cbinefe, they
" have fewer Occafions, and much lefs Abilities for a
" Work of this Sort. To fay the Truth, the Thing it-
"s felf is fcarce practicable, there being nothing more dif.
"ficult, than to fix the Extent of the Territorities of the
"Tartar Princes, dependant upon this Empire, and " yet without this, there is no doing any Thing. It is " true, the old Cbinese Writers tell us, that their Em" pire was formerly much greater than it is at prefent; "s that Japan was once fubject to them, as allo the "Kingdoms of Tunkin, Siam, $E^{3} c$. and part of the Do. "s minions of the Great Mogul; but for all this, I " am apt to believe, that fince the Tartars became "c laft Mafters of Cbina, which is now a compleat hun"dred Years, the Empire is to the full as large is " ever it was. Its Bounds at prefent are the Domini" ons of the Ruffans on the North, the Ocean on the "Eatt; and on the South, for I look upon the Penin"fula of Corea as dependant upon this Empire; on "s the Weft, they have great Deferts, and the Countries "s under the Contaibs Koan, which ftretch as far as the
"Ruflan Territories; and this is all I am able to fay, "6 as to the Extent of this Empire, except that accord"6 ing to a Perambulation that I have feen, the Line of "t their Boundaries is computed at about feven thou"fand Miles, which, as far as I am able to judge, ${ }^{66}$ does not exceed the Truth.
"I can fpeak more particularly, as to the Climate; ${ }^{65}$ it extends from 18 Degrees of Latitude to 55 , and con" fequently takes in all the Climates from the third to " the tenth, fo that the longeft Day in the mof South-
" ern Parts is thirteen Hours and a half long, and in " the moft Northern about feventeen Hours. The " Heat is great in the Southern Provinces, and the Cold
"very fevere in the North. As to the former, I have
"s been upon the Coafts of Bengal, and I think it not " at all warmer than in Cbina, I have been alfo in
"Poland, and did not find it fo cold there as in the
" Northern Parts of Cbina, or rather of Tartary about
"6 the River Amur. By this Means they have at Peking
" all Sorts of Fruits, by which I do not mean every
"Kind of Fruit, bat of thofe different Sorts that are
" peculiar to the warmeft and coldeft Climates; as for
" Intance, the moft high flavoured Oranges and" well-
" tafted Apples; but there is this Difference between
"them, that Nature brings the Southern Fruits to the
" higheft Perfection with litcle or no Culture, whereas
" thofe of the North require a great deal, which however
"the Cbinefe never beftow upon them; hence therefore
" three or four Sorts of Apples, and five or fix of Pears,
" is all they can boaft; and as for Cherries, they have
"s them boch red and black, but they are neither of
"t them good, though they might have them, if they
" were at Pains, in the utmoft Perfection.
"It is eafy to difcern from hence, that there are no
s Kind of Commodities or Manufactures wanting in
"this Country, and a very few Specimens will convince
" you of the Truth of this; they have the very belt
"Silks of all Kinds in the World, and in a vaft Abun-
"dance; they have very rich Furs, which I take to be the
" oppofite of Silk ; they have alfo prodigious Quantities
" of Cotton, and are not deficient in Wooll. They
" have Metals of all Sorts in great Plenty, except Lead;
"they have likewife all Kinds of Wood, Sugar in the ut-
" moft Abundance, and Spices fufficient for their
"their own Ufe, and yet they ufe a vaft deal. It was
" from a true Senfe of their own Abundance, that the
" ancient Cbinefe were averfe to Foreign Trade; and if
"the Tartars permit it, it is upon this Principle, that
" their Subjects are valt Gainers by it ; for except Toys
" and Lead, there is Nothing comes to a good Market
" in Cbina.
"At prefent the Empire of Cbina, exclufive of its
" Dependencies, is divided into fifteen Provinces.
"Thofe of Cbenf, Cbanf, and Petcheli, in which laft
"\% is the Imperial City of Peking, are bounded by the
"famous Wall which divides Cbina from Tariary;
"thofe of Cban tong, Kiang nan, in which is Nanking
"s the old Capitai, Tcbe kiang and Fokien lie on the "Eaftern Occan; thofe of 2uang tong, 2uang $/ 2$, Yun nan
© Se tcbuen, lie on the South, and on the Weft; Honan.
"Hou quang, Koei tcbeou, Kiang $\mathcal{f}$, are Midland Pro-
" vinces. They divide their Towns into four Ranks,
" which it is impofible to defcribe; the three firlt have
"Names, the laft are fuch as are under the Jurifdietion
"s of the reft, and confequently have no particular De-
"s nomination. The great Cities they ftile Fou, and
" of thefe they reckon one hunded feventy three. The
" larger Towns they call Tcbeou, and of thefe they
"reckon two hunared thirty five. They give their
6. biggeft Boroughs the Name of Hien, and of thefe
6. they reckon eleven hundred and reventy three;
" as for the fubordinate Places, I dare not call them
8. Villages, for many of them are walled, and fome of
"s them contain fifty thoufand Souls; thefe, I fay, are
" without Names, and without Number.
"They pretend to be very exact in their Computati-
"ons of the Number of their People, and from the
© beft Enquiry I have been able to make, though the
". Thing muft appear romantick and ridiculous in $E u$ -
"rope, I am convinced that they are not much beyond
"t the Truth, in affirming that their Emperor has fixty
" Millions of Souls in his Dominions.
"One would imagine, chat vaft Difficulties muft :s arife to the Government, from fuch a Multitude of
"Subje:ts, but it is quite ocherwife, for Government is
©s widh them a fyttimatical Thing, reduced under cer-
tain Rules, with which, fo far as he is concerned, every Man in the Empire is acquainted, and moft of them no farther. The Emperor himfelf has his Circle of Bufinefs, which he is obliged to go through, and which cannot be done for him, and therein confifts the great Secret of their Policy. He has always the State of fome Province or other under his Infpection, and when one is finifhed, Nobody knows which will be the next; but all thefe Infpections are made with great Strictnefs and Severity. It is true, that in forne Yrovince or other, Corruption prevails perhaps for twenty or thirty Years, but it is as true, that fome Time or cther all this is redreffed, and Things are " brought back again to their original Inftitution; the firt Maxim in the Cbinefe Syftem is, that the Em-- peror acts as the Father of his People, he may indeed - be a bad Father, but he would be foon told of that; " by his abfolute Power he might difpatch .this Moni' tor, but that would quickly produce more; there are ' always many Patriots in China, who for the Sake of "that Glory, which refults from doing good to the So" ciety, are ready to lay down their Lives; yet after " all, Things are feldom pufhed to this Exuremity, and " it is more common to fee the Emperor confeffing his "' Faults and Weakneffes in his publick Edicts, which "، are generally calculated to repair them, and are ufually " concluded with many fair Promifes for the Future.
" It is certain, that the People are very corrupt, and " that this Corruption runs through all Ranks; but " their Scheme of Government is fo wife, that fooner " or later thefe Corruptions are met with; fo that Vice " ebbs and flows, and is driven out of one Province, " when it gains Ground in another; but fill there is " fuch a.Stock of Virtue, as ferves to preferve the whole, and to keep the Machine moving. Capital " Punifhments are very rarely inflicted, for there are " more Executions in a Year in Naples, than in all "Cbina ; one Year with ano:her, there are not three " in Peking, but there is a kind of Punifhment more "exemplary, and more ufeful than Death, that is very "common, their Mandarines, even of the higheft Order, " may be degraded, and he who had Yefterday a Train " of twelve hundred Men, fhall be To-day upon a Level with the meanelt of them, but never without " Caufe; for though there is Injuftice enough in all their "Tribunals, yet the lant Refort is pure, and the Tartar " Emperors have been hitherto the Fathers of their Peo" ple, in almoft all; but in that Refpect more efpecially. "Their Armies are very numerous, and according " to their Mode very well difciplin'd, yet their Fire" Arms are but indifferent; it is their Numbers that fe" cure them from any Danger from their Neighbours; " in one Thing they are fingular, their Motions create " no Diforder, a Body of fifty thoufand Men will " traverfe the whole Empire without taking an Egg or " an Apple by Force. Their Traders are all Cheats, and " their being fo is no great Inconvenience or Detriment " to Commerce, for it makes them all very expert and " attentive ; fince their Maxim is, that it is not the Per" fon who does the Wrong, who impofes upon ano"ther, but he that is outwitted that does wrong himfelf.
" As great as their Country is, the Number of People " that are in it would foon be reduced to Starving, if " every Spot was not cultivated that will admit of it, " and every Hand employed that can work.
"This is a fhort but a true Reprefentation of this "Empire, and of thofe that compofe it. It is not " like to extend iffelf, but it will certainly laft for " many Ages. The Cbinefe will never make Conquefts " or pufh their Foreign Commerce beyond its prefent "Bounds. Ningpo will be the Center of the Faponere "Trade, Amoy of the Indian, and Canton of the Eu" ropean, as long as they continue a Nation. They " have been long free from inteftine Commotions, but " in furceeding Times they may be expofed to them; " and yet thofe Revolutions, though deftructive to In. "dividuals, can hardly be dangerous to the Empire. "The Profperity of their own Government is the fole "Object of their Confideration; their Statefmen, and " more efpecially their Emperors, are far from being
"fo ignorant of Foreign Affairs as is imagined; they
" know enough of them for their Purpofe, and they
" have neither Leifure, Occafion or Inclination to know
" more; they are naturally civil to Foreigners, but at
" the fame Time they are naturally jealous of them.
"To fum up all, they look upon themfelves to be the
"Wifett, the Greateft, the Richeft, the Happieft, and
" the moft Powerful of all Nations; and, exclufive of
"their Spiritual Concerns, thofe who are beft ac-
" quainted with them, will think them the leaft mif-
" taken.
25. After this concife Detail of the Cbinefe Affairs, it is Time to haften to the End of this Subject, by giving our Readers the remaining Part of Dionyfus Kao's Deicription and Account of his own Country, which is written in fo plain, fo diftinct, and fo juft a Manner, that it will be eafily perceived it differs as much from the Accounts given us by the Jefuits, as it is poffible for Pieces to do that are written upon the fame Subject, and neither of which can be faid to be abfolutely void of Truth : For moft of the Defcriptions given us by the Miffionaries, are penned in a high-flown rhetorical Stile ; and every Thing in them is reprefented fo much beyond the Life, that either we do not conceive it at all, or the Notions we form are quite befide the Truth. But what our Cbinefe writes is in an eafy, fimple, and familiar Way, and in fuch a Way as leaves us no Doubt that he tells us the Truth, and nothing more or lefs than the Truch. In his Account, the Reader will obferve a Clearnefs and Candour that is fcarce to be found in any ocher Thing of the like Nature, as well as a Strain of fincere Piety, that has very little in it of Supertition, and nothing at all of that Hypocrify and Cant with which moft of the Defcriptions of Cbina are burthened. The Contents of it will very fully fupport and confirm what is delivered in the foregoing Memorial, and afford a Picture at whole Length, of what is there reprefented only in Miniature.

Before we put an End to this Section however, I crave Leave to make one Obfervation of my own, which I flatter myfelf will enable the Reader to deliver himfelf from a Difficulty that has hitherto been thought almoft inextricable. It is this : Some Writers, very well acquainted with Cbina, reprefent its Inhabitants as the molt ingenious, the moft penetrating, and the mof happy in their Inventions, of any People in the World ; while others again, who pretend to know them full as well, poficively affert, that their Notions are narrow, their Inventions mean, their Execution very incorreet, and that, in fhort, they fall full as much below the Europeans, as their Admirers would place them above them. Now common Senfe feems to teach us, that one of thefe Opinions muft be abfolutely falle, and yet it is not very eafy to diftinguifh which, fince the Authorities on both Sides are pretty nearly equal.

On the ftricteft Enquiry I begin to think, that boti thefe Notions, properly undertood, are reconcileable enough to Truth, and even to one another. If we compare the Arts and Sciences of Cbina with thofe of Europe, there is no Doubt that in moff Things they fall very far fhort; and yet compared with the reft of the Eaftern Countries, their Knowledge and their Performances are very extraordinary.
But on the other Hand it is to be confidered, that the Europeans have had much greater Experierice, and much better Mafters: For as to the former, it is notorious that we have all the Lights which various Countries and various Ages can beftow, what the Greeks left unfinifhed to the Romans, what the Romans farther perfected, and what, upon the Revival of Arts and Sciences in Itdy, was cultivated with that Zeal and Diligence, which is natural when Arts are emerging out of Barbarifm, at once excites and directs our Endeavours in thefe later Times. But befides all chis, there is and has been a valt Spirit of Emulation in the different Parts of Europe, and what has been firf ftruck out in one Country, has been altered, improved and carried to the higheft Perfection in another. By this Means we are become, in moft Things, infinitely fuperior to the Cbinefe; but if we confider Things in another Light, we muft allow them to be fuperior in their Turns.
They have been always a diftinct and detached $N a-$ tion, having nothing to do with the reft of the World, or at leaft nothing to do to with in this Refpect ; all that they have acquired, with regard to Science, all that they perform, in reference to Arts, is folely of their own Invention, Profecution, and Improvement; and therefore they deferve in this Senfe the higheft Praifes: If Printing, Artillery, the Ufe of the Compafs, and many other Things, feem very rude amongt them, in Comparifon of that Neatnefs and Perfection to which they are arrived with us; yet we cannot deny, that they had them long before us; and after all, there may be many Things faid in Excufe of that State in which they are found here; for their Manner of expreffing their Language in Characters, the Method they ufe in Printing is better than ours; their Artillery are fufficiently ferviceable for any the Purpofes to which they employ them; and as to their Navigation, confidering the Maxims upon which their Commerce is carried on, it may be very doubtful whether they wilh, and confequently we need not wonder, that they are not folicitous to arrive at any farther Perfection.

Thus I apprehend this Knot is fairly untied, and the Dirpute fettled, as to the Proficiency of the Europeans, and the Ingenuity of the Cbinefe; if the former excel in the one, fo do the latter in the other; and if we know Things better, we have this Knowledge from others; whereas they have all from their own Stock, and had all they have much earlier than we.

cinct merly depended upon it.

## By Dionysius Kao, a Native of China.

1. An Account of the vaft Numbers of People in tbis Empire, togetber woith Proofs of, and Reafons for, its being fo populous. 2. An Account of the Progre/s of Cbriftianity, and of the Niumber of the Cbriftians in China towards the Clofe of the laft Century. 3. Tbe Situation and Extent of the famous Chinefe Wall; the famous Rivers, and prodigious 2uantity of Shipping in this Empire.: 4. Of the moof famous Lakes, the mot remarkable Bridges, and the moft celebrated Ports in China. 5. The Religious and Pbilofophical Opinions of the Chinefe, more efpecially thofe of Confucius and bis Followers. 6. Of the breaking out of a deteftable Herefy that Rill prevails in this Empire, and of the Entrance and Progre/s of Iddatry amongst tbe Chinefe. 7. Of the Prevalence of Atbeifn in this Country, the Nature of it, ind the pernicious Effects of their fuperfitious Regard for Antiouity. 8. Of Deijm, or Natural Religion, as profefed and pratijed by the rujeff and beft Sort of People in China. 9. Of the Efabliffed Religion among the Tartars, their Lama's or Priefs, and of the Dalai Lama, or Living God; weith the jurprizing Progrefs of this abfurd Superfition. 10. Of the Ceremonious Civilities and Compliments eflablijbed by Lawo in China; and of the Rules prefrribed to all Ranks of People in Reference to Tbings of this Nature. II. Of the Marriages amongtt the Chinefe; of their Manner of Living in their Families, and otber Things of tbat Nature. 12. Of their Funeral Solemnities, their long Mourring, and the juper fitious Honourrs paid to Pervons deceafed. i3. Of the Lantborn Feaff, and of otber publick and private Fefivals oblerved by this Nation. 14: Of the Trees, Fruits, Flowers, Herbss, Drugs, \&cc. in China. 15. Of the Animals, Mines, Metals and Minerals in this Empire. 16. The Autbor's Account of Japan, Corea, Formora, Tunkin, and Laos. 17. Of otber Countries formerly dependent on, or that bave been lately fubjected to the Emperor of China.

IN the Villages and Towns, as well as Cities in Cbina, the People are reckoned not by ten or hundred thoufands, but by Millions: Their Numbers are fo vaft, and Cbina fo prodigious populous, that it really feems incredible; and thofe who have taken a View of this Country from an exalted Place, have always compared the Number of Men to that of Ants creeping in Crouds amongft one another. They are indeed fo numerous, that common and very indifferent Houfes are charged with five or fix Families: And the Roads, Streets and Lanes, are fo crouded, that it is fcarce poffible to pais without juftling one another. All this will appear yet more furprizing, if it be confider'd, that no Woman appears in Publick in any Part of Cbina, except at Peking; they never going on Foot, but are carried in covered Seats or Chairs, wherever they pleafe.
The moft populous Cities are Nanking, Hangcbeu, Sucbeu, Peking, 'ुungcbeu, Canion, Focben, Viicbang Fu, Cbengcbeu, and Zuencheu, befides feveral others. Not to mention the fabulous Relations concerning the firft planting and peopling of Countries, I am of Opinion that the firft Inhabitants of this Empire were the Defcendants of Sbem, Noab's eldeft Son; for in the Divifion of the World they feem to be all diftributed in Aha, of which China is Part: And at the Confufion of Babel, traverfing that Quarter of the World, probably fetteled here, becaufe they found no Part of it better than this, which is bleffed with a healdhful Air, temperate with Regard both to Heat and Cold: The Fertility of the Pafture Grounds, which richly feed all Sorts of Cattle, invited their Choice, and in a Manner forced them to take up their Abode here. After which, Experience confirm'd the Happinefs of their Choice, by their being amply provided not only with all Necelfaries to human Life, but even with whatever Luxury could wifh. Induftry, Art, and Prudence, improv'd the natural Liberality of the Soil, and engaged the Neighbours to think Cbina the Garden of the Univerfe, and its Inhabitants the wifent and moft polite People in the World; and that thofe of their Neighbours, who fucceeded beft in the Imitation of them, were next them efteemed the moft intelligent People of Afia. Buoyed up by this vaft Reputation, they extended the Limits of their Empire far beyond the Bounds of Cbina: And not only Tunkin, Cocbin-Cbina, and Laos, befides feveral neighbouring Inands; but the Kingdoms of Siam, Pegu, Part of Tartary, Camboja, and Fopan, have been
fubordinate to them, as may be fufficiently proved by their complying with and continuing to make Ufe of the fame common Cuftoms; which is alio confirm'd by the Cbinefe Empire, being known to be above one thoufand Years old, and to have always retained the fame Language, Doctrine, Government, and Habit, down to this Time. Though indeed one Exception lies to that General Rule, which happen'd about fifty Years paft; and that was the changing their Fafhion of wearing their Hair, when the Tartars overpower'd their Monarchy; but that Alteration was a coercive Acknowledgment of their wretched Slavery.

The Cbinefe formerly wore long Hair, of which they were not a litcle proud, adorning it with Gold Wire, and firmly believing that they fhould be drawn up to Heaven by it; which doubled the Severity of the Command that obliged them to part with it, and comply with the Tartarian Fafhion; and engaged them rather to fuftain the Fatigues of a cruel War, at the Expence of a great many Lives, than fuffer their Hair to be cut off: But the Tartar had proceeded too far to be oppofed. However, the Prudence of the Emperor, and the Mildnefs of his Government, permitting the Cbinefe Men of Quality, called Mandaryns, quiedly to enjoy their important Pofts, fomewhat alleviated the melancholy Reflections, occafioned by this Lofs, and their Slavery; for the Tartars having fubjected Cbina, did not thew themfelves folicitous to make any Alteration in its ancient Form of Government; and, as I juft now hinted, the Cbinese Mandaryns remained in the fame Sate and Character as before, only having an equal Number of Tartars added to them: And by thefe lubtle Meafures the foreign Power, which they were always jealous of, tole in upon them. And this Maxim was fo well obferv'd, that all the Courts of Juftice, from the higheft to the loweft, were equally fupply'd with a Tartarian and Cbinefe Judge; and indeed the whole Government is jointly entrufted in the Hands of Tartarians and Cbinefe, and to this prefent Time, peaceably adminiftred in Subordination to the Commands of the Emperor of Cbina and Tartary.

In the Reign of the prefent Emperor, the Chriftian Religion is more freely indulged than ever; fo that we ought not to defpair, but that the whole Empire of Cbina may in Time embrace that Faith which only leads to Salvation. And from the firft Entrance of the Miffionaries into that Empire, they have concinually ufed their umoft Induftry, to engage this fubtle Nation to

## Chap. III.

the Empire of CHINA.
embrace Chriftianity, and plant that faving Doctrine, which is at this Time very widely fpread in Cbina.
Kangbi, the prefent reigning Emperor, in the Year 1692 , granted to the Miffionaries and Jefuits, Freedom for all the World to worfhip God in their Churches, which is the fame as to become Chriftians; and this Edict, purfuant to the Emperor's Pleafure, was ratified by the Supreme Court of Juftice of the Empire; and empowered thofe, who thought fic to caufe themfelves to be baptized, afterwards freely to exercife the Chriftian Religious Worthip, without the leaft Interruption, which before that Time was prohibited; a Favour that had long been earnefly defired, and before which the Chriftians had run through many fevere Perfecutions: But now by the Divine Goodnefs, we are delivered from fore Afflictions and Oppofitions, for which we continually return our Thanks to Almighty God.

About the Middle of the fixteenth Century, Francis Xavier, defigning to plant the Gofpel here, died in Sight of Land; as he was coming from Japan: After him feveral Miffionaries and Priefts came into this Country with the-fame Intent, viz. Martinus Xerrada, Geronimo Marino, Micbael Rugieri, Piedro Alfaro, and Matibias Ricci, befides feveral others, who a little before the Year 1600, laid the firt Foundation of this good Work in the Reign of the Emperor Vanlie. Facher Ricci, whom we named laft, diftinguifhed himfelf above all the reft ; he converted feveral of the Nubility, and acquired a very great Reputation; he perfectly underflood, and fluently fpoke the Cbinefe Language; and being a fedulous and faithful Labourer in the fpiritual Vineyard, made the moft fucceisful Beginning, on which Account he hath always been thought the firft of the Miffionaries.

Whilft this Father Ricci was in Cbina, and in the Reign of the Emperor Vaile, the Tartars made an Irrupiton into Cbina, took feveral Cities, and conquer'd feveral Countries; but were thortly repulfed by that illuftrious Prince ; after which he ruled in perfect Peace, and in the Year 1620, the eight and fiftieth of his Age, and fory eighth of his Reign, he died. Not long before, about the Year 1615 , arofe a furious Perfecution, which threatened the utter Extirpation of the Faith that was fo lately planted. Thefe exorbitant Cruelties were principally puthed on by Cbinkio, one of the chief Magiftrates of Nanking; and by a malicious Cunning the Shepherds were the moft vigoroully attacked, in order the more fuccefsfully to deftroy the Flock; but after they had fuffered great Affictions for the Space of fix Years, their Perfecutor was punifhed by Death, and the Church recovering her former Liberty, began to increafe daily, efpecially after the Arrival of Father Gobn Adam, Schaal or Scaliger, whofe Learning, Mathematical Knowledge, and prudent Conduct, acquired for him one of the chief Places in the Emperor's Favour, and the good Opinion of the whole Court ; which furnifhed him with an Opportunity of farther propagating and confirming Chriftianity. And though in the Interim the great Revolution happened, which transferred the Crown to the Tartarian from the Cbinefe Family, by the Death of Zuncbi, the laft of the Race of Taiminga, which had fwayed the Imperial Sceptre for the Space of two hundred and eighty Years, and produced in that Time fixteen Emperors; yet the fagacious Father Adam Schaal render'd himfelf fo agreeable to the new Tartarion Court, that he became Prefident of the Tribunal of Mathematicians, and continued, though not without Envy, the Emperor's Favourite ; and after having enjoyed that Poft for feveral Years, died in 1665.
2. Yamquamfien, the wicked Inftrument of the moft cruel Perfecution that ever was in Cbina, fucceeded Father Adom Schaal in his Prefident's Charge: But his Reign did not continue long, being oppofed by Father Ferdinand Verbief, who clearly demonftrated his Abililities for that Poft to be far fuperior to thofe of his Perfecutor; wherefore he was promoted in his Place, and Camquamfien fell into fuch a Difgrace, that he narrowly efcaped a Sentence of Death, as the Reward of his Perfe-
cution againft Father Adam; a Sop being put to that Perfecution by the efpecial Mercy of the Emperor.'

After the Death of Father FerdinondVerbiest,' in the Year 1688, which was lamented by the Emperor hintfelf in a Funeral Elegy, he was fucceeded in the before mentioned Charge of Prefident of the Mathematica Tribunal by Father Pbilip Grimaldi, who filled that Poft as honourably as his Predeceffor, and advanced himfelf ro fuch a high Place in the Imperial Favour, that in the Year 1689 , he was fent Ambaffador from the Emperor into Europe, to adjuft fome important Affairs in Muf covy with the Czar ; his Prefident's Poft in the Tribunal being worthily fupplied till his Return by the Fathers Tbomas Pereira and Antbony Thomas.
" This is the fame Father Pereira, who, in Con" junction with Father Gerbillon, was twice fent, they " being dignified with the Title of Mandaryns of the "s third Rank, as Interpreters in the great Embaffy and "Treaty of Peace at Nepchou, by the Mufcovites called "Nerzinkoy, and of whom it is reported, to their greak " Honour, that they fuggeited the Meafures which ren" der'd the Treaty of Peace betwixt the Mufcowites and "Cbinefe fucceffful. To which Purpofe, Gerbillont went "feveral Times alone to the Mufcovite Camp, and fo " far convinced that Nation of their true Intereft, that " the Treaty of Peace betwixt the two Empire was "ratified and fworn on the 3 d of September, $1689 . "$." The Number of Chriftians daily increafed, from the Refpect paid to the Jefuits by the Court, and the Emperor's zealous Inclination for the European Arts and Sciences, infomuch that the leaft Number of Chriftians computed to be in Peking was fixteen thoufand; in Nanking an hundred thoufand. In the abovefaid large trading Village or Town Xangbui, there were but ten thoufand; in the Province of Cbekiang are reckoned feven or eight thoufand; in Koang $\sqrt{2}$ they amount to about ten thouland; in Huquang there are fix or feven thoufand ; in Canton about ten thoufand; in Fokien about five thoufand; and in Xien $f$ about three thoufand. The whole Number of Chrittians throughout the whole Empire being computed to amount to two hundred thoufand. But the Number of Shepherds which carefully watch this Flock, and fedulounly endeavour the Converfion of others, is not above fixty.
3. The prodigious Wall which covers this Empire, is called by the Cbinefe in their own Language, Vauli Tcham Tcbim, and was built fome Centuries before Chrift's time by the Cbinefe Emperor, Cbien Cbu Voang, in order to prevent the Incurfions of the Weftern Tartars: For which End it is extended from the Leaotungion, or oriental Sea, far beyond the Middle of Xienfo, and includes the Provinces of Peking, Xanjf, and almoft all the Country of Xienfi: Its Length is computed directly as a right Line at above 650 French Miles, but reckoned as a Curve Line amounts to one thoufand: Whence its Cbinefe Name was derived, which imports a thoufand Miles: It is full eight Ells thick, and fix high. It is not a little furprizing to fee this bulky Wall in a Manner skip over the moft terrible and fteep Hills, and to obferve three or four lofty Towers or Forts within the Compafs of every Mile, as well as its having run through fo many Ages, and its being in fuch good Cafe at prefent, which is owing to conftant Surveys, and timely Repairs. The two principal Rivers in this Empire are, the Yellow River, in Cbinefe called Hoang Jo, and Yangzu Kiang, that is the Son of the Sea, fo called on Account of its vaft Depth and grear Breadth, it being full two Miles wide: It is alfo called the Nankingfan River, becaufe it runs through the Province, and clofe by the City of that Name. This laft River is navigable throughout the whole Empire; feveral fmall Lakes as well as feveral Rivulets fall into it, which rife in the Provinces Kiang $h$, Huquang, 2uangr, Quoantung; Cbekiong, Sucbuen and Honan; and there are befides, Paffages cut and rendred navigable from this to the other principal River. The Courfe of the Yellow. River is extended to a very great Length, and runs through feveral Countries, it is alfo very deep, broad in fome Places and narrow in others: It rifes out of the Lake
in the Weftern Quarter of Tartary, and runs through the Provinces of Xanfi, Xienf, Honan and Nenking, where at laft it falls into the Sea. This River is fcarce navigable by Reafon of its prodigious Rapidity, and the vaft Floods which frequently defcend into it from Tartary and the Northern Parts, (through which it runs; ) and fometimes prove very mifchievous to both Men and Cattle, by carrying away Houres, Hutts, Fields and whatever is upon them, and at other Times fweeping away whole Villages and Cities.
Befides thefe two Principal there are other Rivers, as Zbientangkiang which is very broad, but not comparable to the two former in Length or Depth; running only through the Province of Cbekiang, and then falling into the Sea. The remaining Rivers, though fome of them are large, are much lefs confiderable than thefe which have been defcribed.
Befides the natural Streams or Rivers, here are feveral artificial large navigable Channels; moft of the Provinces are provided with one of thefe broad Channels of long Extent, for a Conveyance from one Province or River to another : They are commonly cut in a direct Line, paved with flat Stones, and adorned with beautiful lofty Stone Bridges, the Arches of which afford a very fine and regular Profpect. Some are of Opinion that the Yellow River was cut by human Induftry, above three thoufand Years paft, by Order of the Emperor Fuvoang: And to ftrengthen their, Affertion, they add, that the Land whereabouts it rifes was overflowed by a vait Inundation of Water, and that the Emperor, in order to draw it off, caufed a very wide and very long Channel to be dug, which making Way for this Deluge, it broke through, and difcharged ittilf with fuch Force into thefe arrificial Channels, that it compofed the Yellow River. But this meets with a very cool or rather no Credit; it not being poffible for the Flux of Waters occafioned by fuch an Inundation perpetually to fupply a River, whofe Length is above fix hundred Miles, and the Current of which is fo ftrong, befides its vaft Depth and Breadth.
There are navigable large and convenient Canals to all Places of the Empire, except only in the Provinces of Sucbuen, Queicbue, Xanfi and Xienf.
In Cbina the Quantity of Ships is innumerable as the Sand of the Sea: Thole which carry Corn only to $P e=$ king amounting to 9999 large Ships, fufficient to carry above thirty or forty thoufand Weight : And their Paffage from Nanking to Peking, being feven or eight hundred Italian Miles, moftly through artificial Channels, take up full fix Months time. Befides thefe, there is an equal Number of Ships made ufe of to carry Silk, Stuffs and other Goods thither ; fo that they are prodigiounly numerous, befides the Ships which belong to parcicular Merchants: So that it is not only feafible to ftep from Ship to Ship as on a Water-Key, from Nanking to Pering, but as the Jefuits expreffing their incredible Number fay, if it were but practicable in orher Refpects, here are Ships enough to make a Bridge from Cbina to Europe.
" The fame Number of Nine thoufand nine hundred "s ninety nine being before-mentioned, we will explain
" both Paffages here: Le Comte faith that the Barges
" from eighty to an hundred Tuns burthen, make this
"Voyage once in a Year ; but in another Place he tells
"us, That 9999 are always kept in •a Readinefs; to
"which he adds, fo runs the common Report of the
"People, by Reafon that fuch a Sort of Expreffion in
"their Language imports a much larger and indefinite
"\% Number, which may fairly be conftrued ten thou-
" fand.
"The fame Le Comte calls it a watry Road, deftined
"f for the Tranfportation of Grain and Stuffs from the
"Southern Provinces to Peking. The Number of Ships
" (faith he) is fo large, that whenever one fees that nu-
" merous Fleet pafs by, one would be apt to fay, they
"were laden with all the Tribute and Treafures of
" the Eaft, and of all their Monarchs, and that one of
"their Returns would furnifh fufficient Stores of Pro"活ion to fupply all Tartary for many Years." Befides thefe fmaller Veffels, there are at Nanking, and
alfo feveral other Havens of the Empire, Ships which are twice as large as thefe, being of feventy or eighty thoufand Weight Burthen; and thefe ferve to carry Sale to every Port in the whole Country. There are alfo Abundance of magnificent Barks or Ships which belong to the Mandaryns, Governors, and others of the Nobility, which are provided with f pacious Halls and Apariments, very richly furnifhed, as alfo with Galleries, Rails, Windows and Doors, for Convenience and Pleafure; they are befides finely gilt, lacquered, and beautifully painted with the fineft Colours. There are likewife feveral Pleafure-Boats, made Ufe of by the Cbinefe only for Diverfion and Merry making; thefe are alfo provided with Chambers and Apartments which are finely painted, lacquered and gilt both within and without ; fo that indeed they deferve rather to be efteemed Floating. Houfes than Ships: Befides all which, all Parts are abundantly provided with all Sorts of neceffary Barks or Boats for Travellers : For there is fcarce a City whether large or fmall, to which there is not a Paffage by Water. And what is yet more, here are a Sori of driving Floats, on which whole Familes live, by keeping Ducks, or following fome other Trade : So that indeed, when one fees fluch various Sorts of Craft in one Vehicle, they feem ftrongly to refemble a foating
City, in which the Veffels run together like Ants.
4. There are in Cbina feven or eight famous Lakes or fmall ftanding Seas; three of which are the largeft and moft celebrated.
The firft called Tungtingbu is in the Province of $H_{u-}$ quang, and is four hundred Miles in Circuit.

The fecond is in the Province of Nanking, not far from Sucbeu, and is alfo about four hundred Miles in Circuit : This Sea is befides very deep, and hath in the Middle of it an Inand called Tbaibu, which is about feven or eight Miles in Compafs and very mountainous.
The third is in the Province of Kiang $/$ /, its Circumference is about three, hundred Miles. Thefe Lakes, by Reafon of their towering hollow Waves and Roughnefs, appear to the Sight like the boifterous Ocean. The other Meers are in Nanking, and are abous two or three hundred Miles in Circuit. We are told prodigious Stories concerning fome Lakes in Cbina, viz. That the Waters of that in the Province of Canton, annually exchange their Colour; that there is a Lake of green Water in Fokien, which tranfmutes Iron to Copper ; that there is alfo a Palace on the Shore of another and not very diftant Lake, where a Ringing of Bells is always heard againft ill Weather; and feveral other like Reports are fpread, the Truth of which we entirely leave to the experimental Examination of others, having had none ourfelves.
There are great Numbers of fine built Stone Bridges in Cbina, which are fupported by Stone Arches: Two of thefe Bridges are the moft confiderable and extraordinary, being built over an Arm of the Sea : One of them is called Loiang, and the other Fungiang; and each of them is above an Hour's Journey, or a French Mile long. The firft contains nineteen Arches, of fuch an extraordinary Height, that large Ships may fail under them with their Mafts up. Each of thefe Arches is fhut by two Stones, each twenty Ells long, above two broad, and three thick. The Jefuits, and other Europeans, who have feen and been upon them, are aftonifhed at the Sight of them ; nor can they comprehend what Inftruments could be ufed to raife fuch great, heavy and long Pieces, all which are of folid white Marble, to fuch an extraordinary Height. The fecond Bridge, though not fo high, is as broad and as long.
There is alfo a third extraordinary Bridge in the Province of Quanton, not far from the City of Cbaocen; but this is carried over Land from one Mountain to another, and is ás long as the former. And throughout the whole Empire there are feveral of thefe Stone Bridges, which though not fo furprizing as thofe already mentioned, are yet very elegantly and artificially built ; and are every where carried a-crofs the Channels for the Travellers Convenience, that he may come to all Villages and Towns by a ftreight Road and without going a great Way about.

In watry or moraffy Places there are alfo high Banks or Caufeways raifed, to ferve inftead of Roads, and when any Hills or Mountains obftruet there Roads, no Coft or Labour is fpared to level, cut through, or render them paffable. The Road from Siquan Fu to Hamtcheou is cut through a Mountain, which was very rocky and fteep, and propped up with large Pieces of Timber, fo that betwixt the Air and the Mountain, it looks like a pendant Gallery of Clouds, and appears very difmal to thofe who are not ufed to travel it: But they have bred and fo accuftomed their Mules to fuch Sort of Roads, that they will climb up the moft rough, fatiguing and almoft inacceffible Ways, as eafily as if they were in ever fo ealy and good Roads.

On the high Ways, at the Diftance of every balf Hour's Journey, are a Sort of arched Gates about ten Ells high, on which, for the Direction of Travellers, are written in large Letters, the Diftance of one Place from another, and an Account to what City, Town or Village that Way tends. In all Parts of Cbina there are great Numbers of Marble Triumphal Arches, commonly containing three arched Doors, the largeft of which is in the Middle, and the Sides are adorned with great Lions and other Sorts of Imagery ; the Gates are every where beautified with very fine carved Images, Trees, and Foliages; and their Number in fome Cities mounts fo high, that the Streets are rather incumber'd than adorned with them.

Cbina hath alfo very good Havens. That of Nanking, into which the Nankingion River falls, is much celebrated on Account of its Dipth, Breadth, and the prodigious Quantities of Goods which pafs from thence to the City of that Name, and higher up to Peking, and all over Cbina, but do not pals fo clofe by the City, fince the famous Robber before-mentioned befieged, and had taken that City, if he had not been hindred by his own Negligence and Luxury.

The Haven of Quantung or Canton, on the Ocean, which wafheth this Province Southwards. Before the Entrance of the City of Canton are a great . many fmall Inands, the moft confiderable of which is Macao, which hath a very grood Haven, and is very famous for the great Commerce of the Portuguefe formerly there, by reaion of its Neighbourhood to Canton, to which great Ships could eafily come, and where all Sorts of Merchandize and Provifions are very plentiful.

Fokien is alfo provided with a very fine Haven, in which any Ships may faftly ride, and come almof clofe to the Shore, the Sea being very deep, and the Harbour bounded on the orher Side by the Mand Emoni; and a very great Trade is driven here with Foreigners.

The Haven of Nimpo or Ningno, in the Province of Cbekiany, is famed for the great Trade which is there driven with the japonefe, becaufe from thence it is but a Thort Voyage to Japan ; but no very large Ship can well come in there by reafon of Shallows and fmall Rocks, which render the Paffage very difficult.
In the Province of Zantung, joining to Cbekiang, where it runs out Eaftward on the great Ocean, there is alfo an indifferent good Haven and Trade with the Inhabitants of Corea and Yapan; but neither the one nor the other are fo large and confiderable as the Harbour and Commerce at Nimpo, though that Province is very well watered; there being there, as well as in almoft all Parts of Cbina, very convenient navigable Channels, provided with Sluices aud Locks; without which, the Ground not being every where level, and the Water rending downwards, and all thefe Channels dug, they would foon be dry; which Neceffity put them upon inventing thofe Sort of Waterfalls to let the Water through intermitting Pieces of Land, and keep it at an equal Height, and to wind or pull over them the Boats, Barges; $\xi^{\circ} c$. by the Help of Ropes and Windleffes.
5. The Cbinefe are perfectly well inftructed and trained up in the Principles of their Religion from their Youth. The Parents fend their Children to School at the Age of feven or eight Years, to learn Reading, Writing, and good Manners, that is, Rules which teach them to pay the fubordinate Refpect and Obedience due to their

Parents and Superiors. They begin their Studies and Exercifes with the Inftructions and Rudiments of their famous Inftructor in Wifdom, Policy, and good Manners, King or Confucius, called in Cbinefe, King fu, and highly reverenced amongt them. Thefe firlt Principles, as we have already hinted, confift chiefly in directing them to obey and love their Parents, to refpect and honour thofe older than themfelves, to live honeftly and virtuoully, to do no Perfon any Wrong, or what they would not have done to themfelves, to give every Perfon his Due, and fuffer him to keep it. All there Leffons are comprized in Five Books, which in their tender Years they are obliged to learn by Heart. After which they diligently learn the Arts of Writing, Arithmetick, and. Oratory; in which having made proper Advances, they are queftioned and ftrictly examined in what they pretend to have ftudied; and then being adjudged capable, they by Degrees become Bachellors, Mafters, and Doctors of their higheft Knowledge, and are alfo raifed not only to that of Mandaryns, but the more elevated Dignities of the Empire, in Proportion to their Worth, Learning, and Capacity to ferve the Publick, either in the Government of Provinces and People, on the Bench as Judges, or in the Exercife of feveral Political and Civil Offices entrufted to them:
This learned and venerable Confucius lived feveral hundred Years before the Birth of Cbrift, was born in the Province of Xantung, as is hinted before in the Defcription of it, and died, according to fome, in the Seventy-third, or according to others, in the Sixtythird Year of his Age. His Memory is very highly honoured by all intelligent and- learned Men. In all Cities and Villages honorary Temples are erected in Remembrance of him ; though his Image is not placed in the interior Part of them. His Virtue and honeft Principles are very famous, his Precepts are reverenced like the Word of God, though he. is acknowledged to have been but a Man, a Lawgiver and Preceptor ; in Honour of whofe Memory, the Cbinefe have erected a Pyramid, not of Stone, but in their Hearts, and they annually difcover Signs of Gratitude and Acknowledgement. Some of his Defcendants are at prefent living in Cbina, who are by Donative endowed with the perpetual Inheritance of a City, with all its Incomes, Rights, and Lordfhips; and for the more auguft Prefervation of his Memory, their Right of Exemption from all Tolls and Taxes hath been, and is, inviolably obferved to this Day. He had feventy (others fay five hundred) Pupils, which enforced his Doetrine with the Teftimony which they bore in all Parts, that his Zeal was perfect, and nothing was to be added to the Pu rity of his moral Leffons: Befides which, they fometimes rather efteemed him as an Inftructor of the new Law, than a Man educated in the Corruption of Nature.
6. For above two thoufand Years paft, or, to full five hundred Years before Chrift's Birth, the Cbinefe have acknowledged the Lord of Heaven and Earth, abitract. ed from all Idols; which appears from their Hiftories, and the Books of the above-mentioned illuftrious Confucius, in which we read, Kiso xe cbi li foy fu xang tie: which imports, that our Duty obliges us to make Of: ferings to the Lord of Heaven and Earth ; almoft and only like the 7 eroibs Sacrifices of a Calf or Lamb to the Lord, in the Holy Scripture. Notwithfanding which, their Knowledge and Idea of God was not fo clear, but on the contrary much more obfcure and confufed than that of the Feres. Bur the primitive Knowledge of God declined rather than encreafed, and that more efpecially after $L i$ Laokim, a certain Philofopher, and one of Confucius's Difciples, appeared in the World: He indeed wrote fome good Books, but withal taught, that the Supreme Deity was corporeal, and gom verned the other Deities as a King doth his Subjects, and that Man might be immortal: It was then that Idolatry, crept in under the Shew of good Manners, and corrupted the Minds of Men, and Conjuring, and other Diabolical Arts, came into Requeft, in order to prevent Death. Temples were built to the Honour of II $Q$

Li Laokim, and as much was confecrated to his Memory as to that of a Deity, though he died; and every Man, by Covenants with Satan and other devilifh Practices, was earneftly bent in Queft of that Immortality which their great Mafter could not find. Time ftrengthened the falfe Doctrine, and increafed the Number of its Teachers, who by their feducing Practices, drawing of Lots, and other Frauds, have even to this Day wonderfully poffeffed the Hearts of the Yopulace; who being mifled to, and ftrengthened in that Opinion, continually fearched for that on Earth, which is not there to be found.

The Cbinefe alfo relate, that long after that Time, an Emperor named Fanvang, dreamed, or was informed by Revelation, that there was a Saint in the Weft, whofe Religion we ought to embrace ; and this without wrefting may be underfood to be fpoke of CHRIST and his Doctrine. They alfo relate, that this Emperor difpatched a Perfon thither, in order to bring this Doctrine to Cbina; but the Envoy miftaking his Way, fell into the South Country, where he met with the Bramins, (a Sort of Idolatrous Prietts, which worfhip the Image of one of their Kings) and having declared the Reafon of his Coming, he was fo well entertained by thefe diabolical Engines, that they at once prefented him with an Image, and with the Syftem of their hellifh Doctrine, both which he brought to Cbina, and to which they at prefent cleave, that Idolatry being firmly retained, and numerous Temples every where erected to that Idol, infomuch that the Number of thefe wicked Priefts is infinite. They are called Bonzi's, and pretend to abftain from Flefh and Marrying ; but Experience convinces us of the contrary, and that they facrifice to their Lufts in private; fo that now they are not very much reverenced even by the Cbineje themfelves, though they have ever fince that Time worfhipped that Deity, and the Images reprefenting him.
" $L e$ Comte calls this Emperor Minti, and tells this "Story thus: That Confucius frequently faid, That the ${ }^{\text {s }}$ true holy One was to be found in the Weft; that * this his Affertion was continually in the Mouths of " the Learned; and that the Emperor Minti being ss difturbed at thefe Reports, and excited by the Image st of a Man coming out of the Weft, and appearing "s to him in his Sleep, difpatched Ambaffadors to the «6 Weit, with Orders to travel that Way till they found "t this Saint, which Heaven had revealed to him about " fixty-five Years after the Birth of our Lord: That "i thefe Ambaffadors were forced, by the Danger of © the Sea, to remain on a certain Ifland; and that " they found there the Idol Fo or Foe, which had per" verted India feveral Years before with his diabolical * Doctrine: That thefe Minifters caufed themfelves to si be perfectly inftructed in the Superftitions of that " Country, and carried them back with them to the st Emperor and his Subjects; and that through thofe "Means, and from that Time, this impious Doctrine "i was fpread throughout the Kingdom."

Anciently they worfhipped the Images of feveral illuftrious Men, as in treating of the Province of $\operatorname{Xanf}$, Mention is made of a valiant and potent Hero, which fprung out of that Country, whom they honour and pray to as a Demy-God, which revives their Courage and excites their Magnanimity; and the Tartar themfelves, at prefent Mafters of Cbina, likewife offer up their devout Oraifons to it; though indeed this is no Point of their Religion, Faith or Doetrine: But the Idolatrous Worfhip and Religion of the Bonzi's is fpread over all Eaft-India, through the Kingdoms of Pegu, Laos, Siam, Cocbincbina, Fapan, and al! over Tartary.
7. Several of the moft learned Perfons amongtt the Cbinefe are Atheints, who believe neither God nor Devil, deny a future State, and in Raillery ask, who hath ever feen or been either in Heaven or Hell? Or once came out of either of them? And boldly tell us they are meer idle and brainlefs Imaginations. But the Inage-wormippers believe a Heaven and a Hell; that the ancient, virtuous, and happy Dead are great Spirits or Souls in Heaven; that placed there as fuperlu-
nary Princes, they tender and do good Offices to Mankind: whilft themfelves abound in Riches and Profperity, and perpetually divert and entertain themfelves with the fineft Wines, and all Manner of Delicacies. That on the contrary, the Souls of wicked and impious Men either go to Hell, or tranfmigrate into other Animals, which are either better or worle, in Proportion to their Merit. So that at prefent the Pagan, Mabomes tan and Chriftian Religions prevail in Cibina.

I ought not to omit that in Paganifm, the firf of thefe, the Reafon of State or Policy is the fupream and prevalent Deity in Cbina, to which all Principles and Practices are adapted : And whatever does not fall in with the political Intereft is condemned as downright Sin, and confequently not to be tolerated. The Cbinefe are utter Enemies to Novelty, and are ftrangely fond of all ancient Cuftoms, folely on Account of their Antiquity; and abfolutely reject, or ar leaft are hardly prevailed with to allow any modern Ufage : This Fondnefs for Antiquity prevails not only in Temporals, in which they dare not prefume to alter any Cuftom without the Emperor's fpecial Command: But more particularly in Spirituals, though it really fhould be, and they themfelves were convinced it was for the better. Hence it is that they reject the Cbriftion Religion, becaufe in Proportion to the Antiquity of their Empire it is too recent, and hath too lately appeared in the World, as though Antiquity alone were fufficient to triumph over Truth, and it were a Crime to hinder the perpetuating of thofe flupid Errors which could only pretend to have prevailed for numerous Ages.
"It is a fundamental Axiom in the Cbinefe Policy, "faith Gobien, That the Prince is primarily obliged to " preferve Peace, Repofe, Plenty and Eafe; for which " the Subjects thould acknowledge their Obligations to " him, and he caufe them to be inftructed that they are s indebted for all this to him. For all Attempts to " keep the Subjects within the Bounds of their Duty "s would be vain, without the effectual Performance of "s the primary Condition of Obedience: Since the Laws "s themfelves would be but a weak Bulwark, if oppofed " to the Force of Arms: And all Inftructions would "s make but fimall Impreffions on the Minds of a Peo" " ple, that are hurried on to difprove them by Want " and Mifery. And be tells us elferobere, That the true " Foundation of the Authority of the OEconomical and "s State Government confifts, with Regard to Families, in " the due Obedience and Refpect to Parents and to " Mafters ; with Refpeft to Government, that the Sub" jects be faithful to the Prince, and that he be tender " of his People: A prudent Conduct, the Love of our " Neighbours, Virtue and Juflice are its Effentials; an " exact Obfervation of mutual Civilities helps to fill up " the Meafure: But the favoury Laws of a good Go" vernment afford Means for compleating the whole."
8. There are befides feveral other Sects of Religion in Cbina; for fome of them believe that there is a fupreme, eternal and omnipotent Spirit, which governs and directs all Things: This Being they acknowledge for the Lord of Heaven and Earth: And before Idolatry prevail'd, they worfhipped him under the Name of Cbamti or the Lord of Heaven : But fince the Sowing of that profligate Seed, this Opinion obtains only amongft a a few, but thofe indeed are moft of them great Men: The Emperor himfelf is faid to efpoufe this old Sentiment; and it is not improbable, that it is owing to this, this he is not averfe, but rather inclined to the Cbrifian Religion and Doctrine, and probably would not reject, but eafily be induced to embrace it, if not reftrained by political Reafons, and a Fear of creating thereby Tumults and Infurrections in his Empire.

There are others alfo who acknowledge Nature to be the fole Deity; underftanding thereby the Force or Power and natural Operation, which being the efficient Caufe of Motion and Reft, produces, maintains and preferves all Things: They look on Dame Nature as the Fountain of all and every particular Being: And that fhe is able to appoint and to alter the Order of all Things: They take her to be the one Soul which univerfally informs Matter, by Virtue of which the pro-

Chap. III.
the Empire of CHINA.
duces all Things; thus attributing to Nature, almoft all that the Ancients afcribed to Heaven, or we acknowledge in the Deity: They call her a Principle independent of all others ; feparating her from the Imperfections and Deficiencies of all corporeal and fenfible Matter. Thofe who encline to this Sect believe, that the World had a Beginning, and fhall have an End: But fhall afterwards begin and end again as before, and fo perpetually and interchangeably renew and perifh. And according to their Opinion numerous Woilds have already exitted, and thofe after this to an infinite Number fhall fucceffively make Room for one another.

Though thefe Hypothefes and Opinions concerning Nature are but groundlefs Imaginations, yet the moft learned Cbinefe are very fond of them, as affording Matter for feveral Speculations no. Way difagreeeble, which may tend to the Improvement of their Intellectuals.
9. We have already mentioned the Bramins and Bonzi's in this Chapter; they are not very different from the Lama's, (which are Tartarian Priefts) in any Particulars befides the external yellow Cloathing, and fome peculiar fupertitious Ceremonies: Both worthip the fame God Fo; their religious Worfhip, Opinions and Faich is very near the fame: However the Lama's in Cbina are only Tartarion Priefts, but in Tartary they act the Part of the Lama, God or Gods of the People : It is there that $F 0$ has his Throne, it is there he appears in the Shape of an immortal rational Animal, whofe Place at leaft is perpetually fupplied by a living Creature; for as foon as one Man dies, another like him is fubfituted in the divine Throne in the Temple, in order to keep up and promote the ridiculous Opinion of the Immortality of this God. To this Purpofe he is honoured with religious Worfhip by great Crouds of Lama's, whofe Number is fo large, and the Efteem of this Doctrine (though not for the Priefts of it) is fo imprinted on the Minds of the People of all Tartary and Cbina, that it is thought to withhold the Emperor himfelf from difcovering any farther Inclinations to favour the Chriftian Religion for Fear of a Revolt.

We have already fpoken concerning the Chriftians, the Time of their firft beginning to fettle here, their planting of the Faith, the bitter Afflictions they have fuffered, and in what State Chriftianity ftands at prefent. It now only remains that we fay fomething of the Mabometans ; of whofe Principles and Practiles I fhall only obferve, That their Number is not very great in Cbina, though they are more numerous than the Cbriftians, as having inhabited that Country much longer, that is, above feven hundred Years longer in feveral Provinces of this Empire, where they were indulged with Liberty, which they neither did, nor do mifufe, by prefling others to embrace their Religion, or zealoufly aiming at the making of Converts; for they quiecly live together, and are moftly allied by Marriage, Intereft, or Converfation ; and, in fhort, live in a Sort of Covenant, like the fews in other Countries. But their Religion is very much fpread here fince their Original, and hath taken very deep Root, more ef pecially fince the free Trade with the Mufoovites, Tartars, Mogols, and other Nations. And as Weeds foon fprout up and grow apace, this pernicious Seed of impious Doctrine hath fo increafed, that the Sprouts of it are, as I have faid, much more numerous in Cbina than the Chriftians.
10. The Cbinefe in general are very well bred, and they are obferved to be very civil in Words and Actions; when they entertain any Perfon, though below then, they always give the Gueft the upper Hand, which in the Southern Provinces is efteemed the Right, but in the Northern is taken to be the Left. They alfo utterly differ from the Tartars in their Manner of Sitting; for the former fit down on the Earth, but the Cbinefe make ufe of Chairs and Stools. In Vifits, the Mafter of the Houfe, feeing his Gueft approach, goes out well drefs ${ }^{\circ} \mathrm{d}$ to meet him, and with his Head covered (uncovering the Head being a Salutation never ufed in Cbina) advances half Way of the outer Court before his Houfe, where he and the Vifitant meet, and exchange Compliments in the following Manner: The Guelt takes the Right

Hand of his Entertainer for left actording to the abovementioned Difference in the Northern or Southern Provinces) who confequently ftands on the ocher Hand; then they both very refpectfully bow very low three ot four Times, lifting up their Hands and Arms, (which whilit they are going they fold in their wide Sleeves) in Sort of fately Manner, and afterwards as decently letring them fall; after which they fpeak to one another in a very civil and engaging Cisinefe Tone: This dones fometimes they change Places, he that was on the Righe taking the Left Hand, in order to repay the received Civilities. After which they enter the Houfe, where the vifited Perfon always takes the lower, and gives his Gueft the upper Hand. Being entred and fat down, a Difh of Tea, with a Piece of Sweatmeat in it is fet before each Perfon; he that fits at the upper Hand being firft ferved, and the reft fucceflively in Order. Before they fit down, even betwixt Perfons of equal Condition, feveral ceremoneous and engaging Contefts arife about the Refufal of the fuperior Place; the moft worthy and higheft efteemed Perfon is placed uppermoft, and he among thofe of equal Character is the oldeft ; but Strangers, and thofe who come from diftant Countries, are fet above all the reft.
The Ceremonies at Departure are almoft the fame with thofe at the Entrance. The Mafter of the Houfe, with feveral Bowings of Head and Budy, and moving the Hands, accompanies his Guefts, firft to the inner Door, then to the Middle of the outer Court, and laftly to the outermoft Gate, out of which he alfo goes; during all which Time the Vifitants are complimenting and thanking their Entertainer with the fame Refpect; after which, they either mount their Horfes, or get into their Chariots as they came ; then a Servant is fent after them. by the Mafter of the Houfe, to compli-ment and wifh them a good Journey in his Mafter's Name ; upon which they fend their Servants back to the Entertainer, to thank him for his laf Civility. The Ceremonies in paying and receiving of Vifits among fit great Officers or Perfons of Quality, mult not be done in their common Cloaths, but in Robes of State; and in Cafe the Vifitant fhould fail in this Parcicular, the Vifited would be apt to be difgufted at it, and not give him Entrance, at leaft before he had changed his own Drefs : And in like Manner, if the Mafter of the Houfe fhould attempt to receive his Gueft in a meaner Robe than he hath on, the other would not enter the Houfe. For which Reafon, Perfons of Condition always take Care to be provided with thefe vifiting Robes, and caufe them to be carried after them, in order to make ufe of them in Cafe of any fudden Accident; for even in chance Meetings, the Compliments are delayed if one of them have his Robe of State on, till the ocher can put on his. The Cbinefe abound in thefe and fuch like Grimaces and Gettures, which they reckon an Honour to their Nation, and fay that they are Signs of good Breeding, in which they excel orher Nations, as much as Men do Beats.

In Cafe of a Salutation or Vifit betwixt Perfons who have not for a long Time feen each other, they both fall on their Knees, and thrice bow fo low as that their Heads touch the Ground. And it is in the very fame Manner that even the meaner Sort welcome one another. This is likewife the Pofture of Servants fpeaking to their Mafters, and the Populace to the Mandaryns or high Officers: The like Bowings of the Head thrice fo low, as to touch the Ground, are alfo ufed in the worfhipping of their Idols.

I forgot to mention, that the Vifitant, always before he makes any Vifit, difpatches a Servant to the Perfon to be vifited, with a Piece of red Paper in his Hand, in which is written the Name of the Perfon his Mafter intends to vifit : With this he goes to the Houfe and delivers his Meffage; but if the Mafter of the Houfe be abroad, or engaged, he fill leaves that Paper in Difcharge of his Order, and returns with the Anfwer to his Mafter.
The Ceremonies obferved in Feafts and Entertainments are very great ; after the cuftomary Compliments of Salutation, each Perfon is placed according to
his Condition at a feparate Table, without either Napkin, Knife or Spoon, but is prefented with a Couple of long Ivory or Wooden Scures tipt with Gold or Silver, to affift him in the Conveyance of the Edibles, which are all. cut in Pieces, to his Mouth; and they are fo dextrous in the Ufe of thefe; that they can very fpeedily clear the Difh even to a fingle Corn of Rice. As I have already hinted, they make ufe of fine Chairs, Stools, or Benches, quite different from the Tartars, who, equally void of Civility and Manners, clap down on the Earch, without any other Gefticulations than what they now obferve in the Cbinefe, and begin io learn from the very Alphabet to the Book of Manners. The Cbinefe have alfo very fine Beds and Couches; but the Tartars, on the other Side, having neither the one to lie, nor the other to reft themfelves on, make ufe of a Board or Plank laid flat on the Earth, The firf Difh is commonly fome Sort of Hafh, and a Glafs or Cup of Wine, which yet is not fo much as tatted before the Mafter of the Houfe leads the Way; which is followed by the Servants crowding in Difhes and Wine, none of which are taken away, but piled up pyramidically, to the Number of twenty or twenty four, or more. Each Perfon drinks out of his own Cup, and is fure to follow his Leader; and though the Wine may be very briskly and continually put about, there is no Danger of intoxicating very foon, fo fmall a Quantity being filled into the Cups, and the Wine ittelf not being very ftrong. A ferious Gravity is always obferved at Meals, the Cbinefe difliking all immoderate Laughter. After, and fometimes allo during their Meals, feveral Tumblers, and fuch like, fhew their Agility of Body, feveral Farces are acted, and other Diverfions added: Befides which, they alfo play amongft themfelves, and he that lofes is obliged to drink, and is but within the Compars of good Manners rallied by the Company.
11. Marriages in Cbina are very fplendidly celebrated, and accompanied with Plays and Diverfions during feveral Days. As for the Preliminaries to Marriage, the young Perfons who intend to enter into that Eftate, have not the Opportunity by converfing together to found one another's Inclinations; for they are never permitted to come together, but the whole is managed by their Parents, who frequently promife their Children long before they come to be married, regarding Nothing fo much as that their Years agree, or at leaft be not very difproportionate : And though their Sons and Daughters happen to be advanced in Years, yet they make the Matches without fo much as the Confent of the Perfons to be married. But there is yet a great Difference on this Head, betwixt the Conduct of People of Quality, Midling Perfons, and thofe of the loweft Condition. Amonglt Perfons of the firft Quality, no Marriages are concluded without the Emperor's Confent, great Care being taken that young People are always matched to Perions of equal Defcent. Thofe alfo of a lower Degree are defirous of allying with and marrying into as good Families as their own ; but their Concubines they either take or buy from their mean Parents, and this to an unlimited Number. The lawful Wife is only honour'd as Mother or Miftrefs of the Family, and refpected and attended by all the reft as Chambermaids; and on her Death the Concubines Children are obliged to a three Years Mourning, which they are not obliged to for their own Mothers. The Children of the loweft Rank of People are in like Manner married by their Parents, and the Girls are in a Manner fold; for it is the Husband which gives the Portion, and the Bride hath only a few Trifles, though when the is led to the Bridegroom's Houfe, fhe feems to bring a large Share of Houfhold Furniture along with her; but all of it is bought before by the Bridegroom; befides which, he gives the Parents a Sum of Money in Proportion to their Character, for their Daughter, whence he is or may be faid to buy his Wife. If a Nobleman or Perfon of Quality dies, the Widow muft not marry again; but this perpetual Widowhood is not fo much regarded by Perfons of meaner Condition, though even amongtt them, the Widows, which yield to a fecond Marriage, thereby lofe, or at leaft leffen, their

Reputations. Though ceremonious good Manners and the Authority of the Parents run fo high amongft the Cbinefe, the Children will not yet endure a Father-inLaw, or pay him any other than fuperficial Obedience; wherefore almoft all the Widows end their Days in that State. The mature Years for Marriage are twenty, or two and twenty for the young Men, and eighteen or twenty for the young Women.
The Cbinefe Wives utterly feclude themfelves from the Sight of all Men befides their Husbands, not allowing themfelves to be feen even by their Father-in-law, their Husband's Brother, or any of the Male Sex, their Husband's youngeft Brother only excepted, and that in the Time of his Childhood only: But all her own Male Relations are abfolutely excluded from all Sight of or Accefs to her. Nor do the Cbinefe Women ever appear in the Streets throughout the whole Empire, except in Peking, the Metropolis, where they are carried whither they pleafe in cover'd Coaches or Sedans, as we have before obferved.
12. The Piety which the Cbinefe exprefs towards their Parents is incredible; which yet on no Occafioll fhines brighter than at or after their Deceafe. The Mourning and Funeral Solemnities are very numerous; which confift in the lamenting, keeping the Corps above Ground, burying, and what is afterwards done in Remembrance of them. When they put themfelves into Mourning, they differ from other Nations who make Ure of black, and wear all white Cloaths ; in which Drefs they keep a long Time for any of their Relations; and for a Father or Mother they mourn thus three Years. A Wife alfo continues in Mourning as long for her Husband. But the Husband does not hold it above a Year on Account of his Wife's Death; which is the Term commonly obferved by a Brother or Nephew for their refpective Brothers or Uncles. Children for at lealt one hundred Days after the Death of their Father or Mother, are obliged to avoid lying on any Bed, but repofe themfelves on the Earch, and daily celebrate their Remembrance in Tears; befides all which, they are obliged for three Years to avoid all matrimonial Converfation with their Wives; and if any of them fhould happen to be pregnant in that Time, they are liable to be punifhed. They fequefter themfelves from Treats, Nuptials, and other Entertainments; they confine themfelves to their Houfes, without ever firring abroad, and lay down their Offices for above a Year, and fome for three Years. Whenever they are abfolutely obliged to go Abroad, they caufe themfelves to be carried in Coaches or Chariots covered all over with clofe Mourning to the intended Place.

Their Obfequies are not much different from their Converfations, with Refpect to Ceremonies: What firf appears in the Funeral Parade, is the Reprefentation or Figures of Men, Women, Lyons, and other Animals painted on Paper; which are carried in State; the Bearers of thefe are followed by feveral Incenfe-Carriers, next which comes the Bier and Coffin born by feveral Men, and is followed by the Sons, and all other Relations and invited Guefts: The Sons are dreft all in white, and carry Wands in their Hands; next which come the Women in cover'd Chariots or Chairs, hung with Mourning fo clofe, that no Perfon can fee them. The Graves or Tombs are all without the City, fome of them are magnificently adorned with Marble, like a Palace, enclofed on the Outfide, and planted with feveral Trees in the Way to the particular Burying-place: To which being come, the Corps, enclofed in a Coffin of contly Wood, after the Paper Figures and Images are burned, is laid in the Tomb, and upon it are placed fome Stone Figures, and an Infcription in Praife of the Deceafed. And at certain Set-times of the Year the Cbinefe vifit thefe Tombs, offering there Meat and Drink, Tears and Lamentations, in Remembrance of the Dead.
"There are, fay the Jefuits, three Seafons when the "Dead are honoured in different Manners in Cbina : "Firit, before the Interment, when the Corps are ex"pofed to View, or laid in State, together with a "- wooden Image with the Name of the Deceafed, which
${ }^{66}$ is placed upon a Table, with burning Candles and ss Perfumes about it: They falute and honour the Corps
"6 by Kneeling and Proftrations, according to the Cuf${ }^{6}$ tom of the Country. The fecond Seafon is obferved
sc from fix to fix Months, in a particular Chamber of
${ }^{6}$ s the Houfe called their Anceftors Apartment, in which ${ }^{6} 6$ every Spring and Autumn all the richeft Delicacies "c that could be prepared for a Prince, are ferved up
s in Remembrance of the Dead. The third folemn
"Time happens but once each Year, and is obferved
s6 at the Tombs; all of which being without the City,
*6 they vifit them about May, when they pluck up Grafs
"t and green Herbs out of the Earth, exprefs by Several
si Tokens of Lamentations their Eiteem for the Dead, "s and then having fet their Victuals and Wine on the " Grave, renew their Mourning Feaft."

The Cbinefe obferve feveral Feltivals, but none more ceremoniounly than that of the New-Year. This Day or Days, for it lafts three Days, are by Perfons of all Ranks, pafs'd in very fplendid Mirth and Jollity; they then drefs themfelves as fine as poffible, vifit, and make Prefents to each other : There is no End of Plays, Entertainments, and other Diverfions, and all are then equally rich and happy. Bufinefs is at a Stand, the Pofts and Meffengers ceafe, all civil and criminal Courts are fhut up, and according to their common Phrafe, the Seal fhut, as indeed it is enclofed in a Cheit: And this Seal is of fuch Force, and the Judge fo far obliged to regard it, that though his Prince fully, fatisfied of his Sufficiency fhould fign his Commiffion, yet he would not dare to act till he had found the Seal, if once loft.
13. The Lantern Feaft obferved on the following full Moon (for the new Moon begins with the Year) is not lefs famous; nor is there one Houfe in all Cbina which is not illuminated at that Time; the Lanterns (fome of which are fo very large as to admit of Theatrical Reprefentations within them, acted by living Perfons inftead of Fuppets) are fo filled with Lights, and fo numerous and clole to each other, that the Cities and Towns feem to be in a perfect Flame; nor are Fireworks and Gunpowder fpared to add Flame to Flame: The Clangor and thundering Noife of fmall and great Shot, mixed with the loud Acclamations, Singing, Roaring and Hollowing of the raving Populace, look as if the whole World rejoiced at that Time.

There are alfo Feftivals obferved in Spring and Alltumn, in Commemoration of the fo much celebrated Confucius: The Ceremonies of which confift in Kneeling before a Board erected on a Table, with this Philolopher's Namie, encompaffed with beautiful Leaf-work, written on it. Kneeling before this Infcription, they. nine Times proftrate themfelves fo low till their Heads touch the Earth, and ferve up Wine, Victuals, Fruit, E'c. much in the fame Manner as is above related, that the genteeler Sort and rich People commemorate their Parents and deceafed Friends with Mourning Feafts. Anciently this Philoopher's Image was honoured in this Manner : But the Emperors' finding the People fall off to Idolatry, and that they either actually did, or probably would, pray to and adore him as a God, they, ordered thefe Sort of Boards, with the bare Infcription of his Name, to be placed in all the Schools and Colleges, inftead of his Image : And the fhewing of this commemọrating Refpect hath occafioned feveral warm Conrefts betwixt the Fefuits and Dominicans ; the latter charging this Practice with downright Idolatry, whillt the other urge in their Defence, that it is barely the Cuftom of the Country, and a civil' Ceremony paid to the Memory of every dead Perfon; and not only that, but the fame is given to the living Mandaryns of the Empire in common Vifits and Ceremonies.

The Cbinefe always obferve and pals their Birth day in Diverfions; and als happy Wifhes of numerous Years added to that, Panegyricks, or whatever elfe can contribute to Pleafure, are not fared on the one Side, to grateful Acknowledgements due to fuch Compliments on this happy Day are not wanting on the other. In thort, this Day is wholly fequeftred to civil Entertainments, "Ec and ends" with good Wifhes.
14. The Northern Provinces of Cbina do not produce the Fruits which grow in India, but the Southern yield them in the greatelt Abundance. The common ars boriferous or Orchard Fruits are, Apples, Pears, Peaches, Plumbs of all Sorts, Grapes, Olives, and feveral Sorts of Figs, viz. the Cbinefe, Indian, and European; the Cbinefe are as large as Apples ; the Skin is foft and fmooth; they are varioully fhaped, fimall or large, round or oval. If they are dried in the Sun, they may be kept a long Time good; their Stem is rough and ftrong. The Indian Fig being perfectly ripe, when the Skin is taken off is longifh, foft, and of a fiveet Tafte, though there are indeed varions Species of them, and what they grow on cannot be properly called a Tree, but rather a Sort of overgrown Shrub or Plant, not unlike Box, the Sprouts of which are covered with a thin Film, not much different from the Skin of an Onion; the Leaves are extraordinary long and broad; the Trunk bears its Fruit, which hangs by a fingle Tendril ; its Bloffom is a Liver-colour${ }^{2} \mathrm{~d}$ Flower, of which it is oblervable, that whenever it appears, like the $\mathrm{In}_{\mathrm{n}}$ faint from the Womb, it burfts and forces its Way from its proper Root; whenever the Fruit is pluck'd, this Plant dies, but is fucceeded by frefh Sprouts which fhoot from its Root: It is found to grow in the South Parts of Cbina only, but in all Parts of India it abounds. Thefe Southern Provinces alfo produce great Quantities of Oranges, fufficiently known in Europe, and diftinguifhed by the Name of Cbina-Oranges.
"The Portuguefe brought this delicious Fruit into "Europe. And the very firtt Orange-Tree from whence
" all the reft Sprung, we are told, is yet in Being in " the Earl of St. Laurence's Garden at Lisbon.

The Licia, a charming Fruit, alfo grows there; it is red and contained in or fenced with a Marp or prickly Shell; the Kernel is of a bright white Colour, very fweet, warm, and fo perfectly agreeable, that it furpaffes all other Fruit, not only in Tafte, but Colour: The Tree on which it grows is alfo very fine, large, and full of Branches and Leaves, which render it very agreeable to the Sight: The Fruit, which grows in Bunches, though not crouded together, but on long Stalks, is about the Size of an ordinary Plumb or Nut, and there are alfo various Species of it. If eaten to Excefs it inflames the Body, and raifes Ulcers; for which Rearon it is generally dried in the Shells, and like preferved Fruit, is ferved up in a Difh of Tea, and by Reafon of its agreeable Acidity preferred before Sugar; the interior Part of the Kernel diffolving like Sugar in the Mouth; for which and other Reafons it is ftiled the King of Fruits.

The Fruit called Lungon or Onjeu, is almof like the Licia, but not fo large, and of a very different Tafte; their Kernel is of a fhining White, and their Shell of the fame Colour; their Taite is agreeable and refrefhing, but not fo hot as the Licia, and not prejudicial to Health even if eaten to Excefs: They are allo very good dried, though not to compare to the freff. The Tree which bears them is like that on which the Licia grows; and a well cafted Wine is preffed out of this Fruit whilft frefh.

The facca is a Fruit which grows to the Bulk of forty and fometimes fifty Pounds; but there are alfo fmall ones, of an oval Shape, with a fharp prickly Sort of a Shell: The Kernel or Pulp is not firm but fibrous, tattes very fweet, and is of a Gold Colour ; and the Shell Green : This Fruit, of the great Sort, grows to the Foot, of the Stem or Root, otherwife the Branches (though ftiff and ftrong, the Tree being very large) would be too feeble to bear their Weight. The Shell of this Fruit is fo very hard, that it cain no otherwi'e be opened than by a Hatchet: The Infide is full (f) fmall Cavivies," in which are contained a yeilow Juice, and the Nut, which when ripe, eats better than a roaft d Cheftnut: The Leaves are rough and broad; and at the Branches grows alfo a Sort of Fruit, more agreeable to the Tafte, and more healthful than the Facca: The Afhes of the Shells burned are ured by the Cbinefe as a Ley to cleanfe Linnen or Woollen.

Anona's are a well-tafted Fruit when ripe; they are yellow or red, and emit a very agreeable Scent : The Plant fhoots its Leaves (fomewhat like Aloes) to the Heighth of fix or feven Feet; the Leaves are three Fingers broad, alfo hairy or woolly; and of them whilit tough a Sort of Clothes or Stuffs are made, which in Finenefs equals Silks: The Fruit fprouts out in the Middle amongft the Leaves, and when come to Maturity is very near as large as a Man's Head ; it is fweet and acid on the Tongue, though very delicious; at a Diftance it looks like an Artichoak: On its middle Stem grow feveral young ones, which are clapped into the the Earth, by thofe who gather the Fruit, and in a Year's Time produce ripe Fruit. The fharp and corrofive Nature of this Fruit is fo violent as to work even on Iron and Copper, and it alfo renders the Throat by fwallowing it very rough.
The Petcbi likewife grows here at the Side of or in the Water; and the uppermoft Paring being taken off its Root, there appears a Sort of Whitenefs which taftes almof like a Hazle-nur, and is endowed with the Virtue of foftening Copper in the Mouth.
Le Comte faith, "That he had an Account of " an Experiment made to that Purpofe by one of their "Society, by rubbing a Copper Coin with this Root; " one of us, fairh he, which had good Teeth, bit " it into feveral Pieces, but the Fragments ftill remain" ed hard, which made us apt to think that this Root " was naturally more eifficacious to the fortifying of the " the Teeth, than foftning of Copper.

The Coccao-nut is the Fruit of a Tree which fhoots upright: They grow in the Province of Funan, on the Inand of Hainan, and in other Places in Cbina, but in India they are incredibly plentiful ; the Nuts are as big as a Man's Head, the external Part of the Shell is hairy, and the Subitance of it ligneous, being in the whole about three or four Inches thick, and in the Core or innermoft Part of it full of Juice, which the ligneous Cruft being pierced through, runs out to the Quantity of a Cup-full: The Kernel is white and firm, and being fhaved or fcraped, and mixed with fair Water, it turns it to a lacteous Colour, not unlike Milk from a Woman's Breaft, only a littfe thicker, as if it had been turned with Rennet; it is alfo very good Food; it corroborates thofe who are weary and faint, refrefhes Seafaring Men, fatigu'd with the Scurvy and other Difeafes after long Voyages; for which Realon they are very fond of it, being well acquainted with its Ufes. It is boiled with Rice, or in Flehh-foops: Befides which a very fine Oll is drawn from it, not inferior to that of Almonds, and is not only ufed in Medicinal Preparations, but eaten as Sauce like Oil of Olives. The exterior Shell is fo hard, that the Kernel being taken out, is is ufed as a Cup or Bottle. The Trunk on which the Eruit grows, fhoots directly upright to the Height of fifty Feet, like the Maft of a Ship; the Wood is hard, and through it runs oleaginous Veins in the inner Part of it which is fpongy: Iss Root doth not pierce deep, nor is it large, to that it is very furprizing that fuch lofty Trees, laden with the heavy Weight of Fruit and Leaves, fhould not be blown up by the Roots by the Winds. The Eranches and Leaves are very beautiful and long, the former being full charged with the latter both without and within; and borh regale the Eye with a very agreeable Profpect. No Part of this excellent Tree is ufelefs; the very hairy Covering which encompaffes the Nuthell, ferves inftead of Tow to caulk and ftop Ships: Cups and other Veffels are made of the Nuthells; the Leaves are made into Paper and Cloth; the Wood is worked into Mafts, Planks, and Rudders, the Bark furnifhes Sails and Ropes, and its Fruit lade our Ships, and is ufeful allo in Phyfick.

Arceka, of which I fpoke in treating of the Province of Canton, is an Indian Fruit, tranfplanted thence to Cbina: The Tree bears fome Sort of Similitude to the Coco, but is neither fo thick, nor loaded with fo many Leaves; both Fruit and Tree are called Arecka: The Fruit is hard, bitter and acrimonious ; it is chewed with Becel, and a little foftened with Lime, and the Spittle tinctures the Mouth and Lips red. The Indians chew
it inceffantly, and are moitly followed herein by the Inhabitants of 2 uantung, Funan, and 2 uoanf, which is indeed to be wondred at, confidering how lictle the Cbinefe are addicted to Travelling, and confequently the few Opportunities they have of catching Foreign Cuftoms; but finding by Experience that it is good for their Gums, keeps their Mouths clean as weil as moilt in hot Countries, and befides caufes a fweet Breath, hath drawn them into this Cuftom, as well as feyeral others which they borrowed from the Europeans, being now convinced, that they are full as clear fighted, if not more, than themfelves.
The Fruit Fambua is a Sort of Lemon and Orange blended, as big as a Man's Head; the Peel or Rind is all round a Finger thick; the Fruit is white and red, fpongy, and of a bitter Tafte; its Infide is almoft like that of Oranges, with this Difference only, that the Kernels or Seeds are larger: The Juice of fome of them is fweet, and of others fower: The Trees are much larger than Lemon-trees, and their Leaves are broader and rough; they are prickly or thorny like the above-mentioned Lemon-tree, which they alfo refemble in their Bloffom; they afford a very grateful Smell, as hath alfo the Water extracted from them by Decoction.
The Indians call this Fruit Pampelimans.
The Pepper tree is but a Shrub, which, like Beans or Hops, climbs up Poles or Stakes, and, when got to the Top, like them, inclines downwards. There is a fecond Sort of Pepper, which is round and long; both of them, whilft green, grow in long Bunches clofe to the Stalk, but when ripe the Fruit turn black, is ftript off and dried in the Sun; and if the black Skin falls off, as it is eafily made to do, it is white, and taftes much hotter. The Long Pepper, which is more ufed in Pharmacy than Cookery, grows much in the fame Manner, but creeps more on the Earth, and climbs about lower Stakes, wherefore it becomes more moift, and if that Humidity be not dried up, becomes worm eaten ; the long Sort is dearer and harder than the round; and the Leaf of the former differs fomewhat, but not much from the latter, which is fofter, and of a deeper Green than the other, fomewhat like Ivy. The Leaves, Branches and Roots are all hot and dry, enflaming both Tongue and Throat, though not to fo great a Degree as the fmall Corns.
Here grows likewife a Plant or Berry called Maluei (in the Indian Language Carambole:) This Fruit fprouts from large Plants or Shrubs, about three Ells in Height-: The Berries are like thofe of Palma Cbrift; they are a very frong Purge, four or five Grains being a Dofe large enough for the moft roburt Man; they operate on tough Phlegm, and pituitous Humours, and are good againft a foul Stomach, cleanfing the Entrails: The Leaves, as well as the Berries, are inflammatory to a high Degree; wherefore thofe who pluck them are obliged carefully to avoid putring their Hands (when gathering them) to their Face or Eyes, which would immediately inflame them. This Plant, mixed with Rice or Dough, and thrown into the Water kills the Fifh. It grows in India as well as in feveral Provinces of Cbina: It is alfo preferved in Pots with Sugar, and fo tranfported; and by Reafon of its cordial Virtue made ufe of againft a cold Stomach or ftinking Breath. There are alfo Nut-meg-Trees, in fome Parts of Cbina, but they are not near fo Plenty there as in ocher hotter Places in India, from whence they are brought thither. This Tree is almoft like a Pear or Apple-tree: It fprouts free enough and grows wild. The Nut which follows the Bloffom joined to the End of the Branch, is at firft green and rough, but when ripe changes its Colour, and becomes pointed all over, and chop'd on the Outfide, being very ornamentally encompaffed by the Mace, which perfectly ripe, is three or four times annually gathered, and is of feveral Sorts, and of different Natures with Refpect to irs Virtue and Worth.

Grinoffel, or Clove-Trees are by no Means fo plentiful here as in other Places in India, from whence they are imported hither in vaft Quantities. The Tree on which they grow is, when young, about as large as the former, and fo encreares to a greas Thicknefs; thé

Leaf is longinh like that of the Pear-tree, and full of Fibres; at the End of which the Cloves grow in Bunches, and out of their Heads fprout the Bloffoms, which, as well as the Cloves, afford a very ftrong Scent ; the Bloffoms are of various Colours, and like the Fruit change in Ripening; for the Cloves are not black or brown at firt, but green; and accordingly the Flower is firlt white and then red. The Cloves are plucked or beaten off, and then gathered; and if any happen to remain on the Tree, they fall on the Ground without any farther Trouble, and from thence fhoot up young Sprouts, which are nourifhed by the Soil, and thrive without Culcure. I fhall not fay any Thing more of this Tree, becaufe it is very well known all over the World, and fhall only lightly touch on the Cinnamon Tree.
I have already hinted, that Cimnamon grows in vaft Plenty in the Province of Quoang $/$ I, and not only fneells very well, but is alfo very fharp upon the Tongue. The Tree on which it grows is like that which bears Lemmons, but its Leaves are fomewhat like thofe of Lawrel. This Plant hath a very fragrant Bloffom, which afterwards affords us a Fruit like a Plumb ; but neither the Fruit, Bloffom, nor Leaf, agree in any one Particular with the Bark ; which is the Cimnamon, and is alone endowed with the fpicy and odoriferous Virtue, for befides that, the Tree is a perfect infipid Wood, whofe Fruit is of no other Ufe than to be eaten by the Apes. This Bark, which clings clofe to the Tree, when the outmoft Rind is fcaled off, appears green, is dried in the Sun, and after it is cleanfed and thoroughly dried, it turns to the known Colour. The Tree being ftripped of its Bark, does not die, but, after the Expiration of fome Years, obtains a new Bark, and flourifhes again.
" The Indian Writers tell us, that thefe Trees grow «c in fuch prodigious Abundance in Ceylon, that if vaft " Woods of them were not burned, the whole World "could not confume the Cinnomon which grows there. ". And Nieuboff adds, that though this Inland is fo very " fruitful in Cinnomon, yet neither Clove nor Nutmeg"Trees will take there."
There is yet another Tree in Cbina, which indeed grows more luxuriantly in Goa, and is by fome called the Indian Fig-tree, and it accordingly produces little Figs, full of fmall Seeds like other Figs, but not very much efteemed, by reafon of their dilagreeable Tafte. This Tree or Trunk fhoots up very high, and the Branches afterwards turn down towards the Earth, and take Root again; after which, like the main Trunk, they fhoot up, and then down again; fo that a fingle Tree becomes a great Wood, and the firft Stem is hardly to be difcovered.
The Fat or Tallow-tree is the mof furprizing Plant of all that grows in Cbina; it yields a very fine Leaf and Flower; it is of a moderate Height, and its Stem is but low, its Branches thick and covered with long Leaves fhaped like a Heart, and its Bloffoms white, which are followed by the Fruit ; and this, when ripe, refembles a Cheftnut or Wallnut, with one Cleft. Round about the Stone, which is very like that of a Cherry, is the Greafe, or that which in Colour, Smell, and all its Characterifticks exactly agrees with Greafe, except only that it doth not fowl the Hands like it; round the Stones (of which each hath three feparated by Films) is the Pulp, which melted makes a Candle as white as the whiteft Capon, and is fupplied with a. Weik of Wood run through it inftead of Cotton. From the Stone or Kernel, which is full of Moifture, is drawn an Oil, which, by reafon of its ftrong unfavory Smell and Tafte, is not eaten, but ferves for Lamps. The red Leaves and white Bloffoms of this Tree render it very agreeable to the Eye.
Cotton grows here in great Abundance, notwithftanding which, as is hinted a little higher, they do not ufe it for Candle-Weiks, but make feveral Stuffs of it. It grows on a very thick, lofty, and crooked Tree, which is not over-loaded with Branches, and its Bloffom is a yellowifh Flower, from whence proceeds the Fruit not unlike a common Apple, that when ripe opens and difcovers the Wool, which when prepared is
tranfported to all Parts of the Wofld. There are alfo Shrubs and Sprouts which produce this Wool, and are not very different from this Tree; but their B'offoms' are of a deeper Yellow, and their Leaf more rugged; befides which, the Cotton which thefe laft yield is better and finer, and of that are made the white Callicoes. The Stems of thefe fecond Sort of Plants, which are like Reeds, run up to a good Height, when come to Maturity, they are cut down, thrown into the Water to rot, and afterwards peeled. The Province of Fokien yields prodigious Quantities of this Shrub, of which the beft and fineft Callicoes are made. Here are alfo whole Thickets of Canes or tough Ofiers, whicha the Portuguefe call Kota; they grow fpontaneoully, fpread very kindly, and are very tough ; of them are made all Sorts of Ropes or Cords, Hurdles, Baskets, Chairs, Stools and Couches, which in Summer are very cool, and for that Reafon are very much in Ufe amongtt the Cbinefe.
Sugar-Canes grow in great Abundatice in the Pro-, vince of Sucbuen, and produce the beft Sort of Sugar; befides which, other Provinces yield very good; and this proves a very valuable Commodity.
Bambooes grow here wild, on watte and untilled Lands; and though they are but a Sort of Canes or rather Reeds, fome of them grow to fuch a vaft Thicknefs, that fmall Boats are made of them, which both the Cbinefe and Indians make Ufe of, and row very dextrounly: But the chief Ufe which is made of the Bambooes is, that of ferving for Stakes or Poles for the Pepper to grow up and cling round. When they are young, the ordinary People draw from them a Juice of an agreeable Tafte; from whence they prepare their Acbar, which is a very delicious Sauce.
Though Mulberries are a Fruit univerfally known, yet the Mulberry-trees in Cbina are managed in a Manner abfolutely different from all other Countries, for they are kept low, and lopped annually, as the Vineyards are in Europe, and the Reafon is, becaufe the young Sprouts contribute to the Production of the beft Silk; and indeed the Difference betwixt the Silk produced by thofe Worms, which feed on the firft Leaves, and that of the Worms feeding on the latter Growth, when they are much harder, is very confidetable.

Though Ginger grows in feveral Parts of India, yet is there no Country produces greater Plenty of it than Cbina; nay farther, it yields that Spice in a greater D:gree of Perfection than any ocher Part of India. There are two Sorts of it, a larger and a fmaller Species; the Leaves and Root of the latter are lefs than the former, and therefore termed Male, whilf the other is called Female-Ginger. The flender Stalk, to which it grows, is like a fmall Reed when it firt flhoots out of the Ground. And the Roots are not all of one Sort, but the heavieft are the beft: Whenever they are dug, one or two of thefe Roots are left in the Earth, which moderately cultivated, watered, and dunged, fpread luxuriantly, and next Year are dug out of the Earth with great Advantage. This Plant is alfo produced in another Manner, by cutting off the Ginger or Root from the Trunk, and refetting it in the Earth, which by the next Year fpreads and fends forth young Shoots. The frefh or green Ginger is not fo hot as the dried. It is medicinally ufed againft flatulent Diftempers, Fluxes, and other Difeafes of that Clafs.
Tea, the Infufion of which is the common Drink, as well as the entertaining Liquor of Cbina, grows there in great Abundance; but fince this Plant is univerfally known, I fhall fay no more concerning it, nor intermeddle with the Difputes of its Virtue, farther than to inform my Reader of a Matter of Fact, which is, that Rheumatifms and Gouts, the Stone and Gravel, are Diftempers which none of the Cbinefe are ever afflicted with. Whether this is owing to Tea, warm Water, or the Nature of the Climate, or Temperament of the People, I fhall leave to be difcuffed by others, and proceed to the Defrriprion of feveral wholfome Roots.

The Root Cbina, though it grows plentifully in all Parts of the Empire, yet is not of equal Virtue; for the Province of Sucbuen produces the beft, and the
wild Sort thrives every where, The firf Sort grows our of a Sap or Gum, which adheres to the Root of a Pine-tree, which renders it fuch an excellent and efficacious Remedy, and fo famous on that Account in all Parts of the World. There Roots increafe to an extraordinary Size, fome of them being as big as a Man's Head. The wild Root, though far hort of the Virtue of this, is nut lefs efteemed. We have already defcribed the Root Ginfeng, and its cardiacal Virtues, in our Account of the Province of Leaotung, where it grows; and therefore we refer the Reader thither

Cbina abounds with great Quantities of Rhubarb, but no Place produces better than the Province of Sucbuen, as I have already hinted in the Defcription of that Country.
"There are two Sorts of Rbabarbarum or Rhubarb
"fold, an Oriental imported from Cbina; and this is
" ponderous, diftinguifhed by gold coloured and red
"V Veins, bitterifh and aftringent, fweet fcented, rather
" of a yellow Colour, and being moiften'd ftains the
"Hand with a Colour like that of Saffron, and is
"6 much efteemed for its Virtues. The other Sort comes
" from Rufia, and is ponderous, and of a darker Yel-
${ }^{66}$ low, and lefs valued than the other.
"Rhubarb is a mild and gentle Purger of yellow
$\because$ Bile and vifcous and tartarous Phlegm from the Sto-
" mach and firft Region. It is a Specifick for the Li-
" ver, cures a Jaundice, and for its aftringent Quality
" is commended beyond other Medicines; for all Dif-
"\% orders proceeding from Relaxation, as a Diarrhea,
"Dyfentery, and the like.
"This Root was unknown to Diofcorides and Galen; " and therefore fome are very crroneous in confound-
" ing the Rha or Rheum of the Ancients with our
"Rhubarb, for the Rheum of Diofcorides has lefs of a
"cathartick Quality, and wants the Characters of the
${ }_{6}$ true Rhubarb, which is a Compact Subftance, pon\% derous and dry, of a bitter Tafte, and acrid Smell,
"\% of a reddifh Colour on the Outfide, and of a light
© Red inclining to Yellow within, with fome Veins of
"deeper Colour, and, being macerated or chew'd, dyes "s of a Saffron Colour. Rapontic, on the contrary, is " not of a clofe but thin Subitance, and not pon" derous, but light, and wants the fweet Scent of " Rhubarb.
"s The Virtue of the Root confifts in the Mixture " of a fubtle and acrimonious Salt, with mucilaginous "s and earthy Particles; thofe faline and acrimonious
"Particles, in Proportion as they are more or lefs dif-
${ }^{6}$ engaged from the Mixture of mucilaginous and " earthy Particles, in which they fuck and were en-
"tangled, the more or lefs they exert of their ftimu-
" lating Force. Sometimes they excite fo great a
"Commotion, as to prefs upon the Liver icfelf, and
"s efpecially the Gall Bladder, whence may follow a "double Excretion of Bile, which proves the Root of " extraordinary Efficacy in the Jaundice, as was before s obferved. Its Cathartic Virtue confifts in its Salt, ${ }^{6}$ and not at all in its Refin or oleous Particles, as " appears from its Tincture, which is extracted with ic Water.
"Now it is clearly demonftrated from Chymiftry, ", that Water can never refolve refinous nor oleous "' Subflances ; and befides, the Tincture extracted by "Spirit of Wine is not fo potent a Cathartick as what " is extracted with Water; nay, the Water iffelf, after
" Mixture, does not become milky, as it happens in
"s all other Tinctures which are extracted from oily
" and refinous Subftances; and it is further to be ob-
"f ferved, that the faline Principles may be fo dif-
"fipated or diffolved by the Quantity of Liquids, as
"to be incapable of exerting, their Force. The Root, "s when it is dried up with Age, lofes its Acrimony, "s and all its Cathartic Virtue, as it does alfo in Boiling. ${ }^{5 s}$. The Smell of it, in forme, provokes to Stool. Is is of Service in a Gonorrbaa, by allaying the Heat of "Srine, expelling the Malignity, and fopping the "Flux. It is ufually prefcribed in Subitance, from half a Dram to two Drams ; the Dofe of the Extract is ${ }^{6}$ two Drams, of the Tincture one Dram. The Roos
"r roafted or dried is aftringent, as and effectual in a Dy . " fentery as Terra figilleta, and being mixed with Nur " meg and Laridonum, proves an excellent Rernedy for "an immoderate Flux of the Belly, its aftringent Wir. "tue diffufing itfelf into all Parts. Pecblius employed is " for Hzmorrhages of the Nofe, and fuch like Cafes, "The Root is fometimes hurful in a Vertigo; it de" Atroys Worms, and is an Ingredient in many officinal Compofitions.
"Alexander Trallianus, in the Opinion of Dr. Freind, "was the firf Phyfician that mentioned Rhubard, who recommends it in a Weaknefs of the Liver, and a Dyfentery, though Monf. le Clerc tells us, that the Arabians indeed, in tranflating Diofiorides and the Greek Phyficians, confound this Roor with the Rba"ponticum, and afcribe the Virtues which the Ancient have obferved in this latter to what is pro"perly the Rbabarbarum as may be evident to any ' who will' look into the Defcription which Rbazes gives of it. And I believe Alexander himfelf, "though it is plain Rbubarb was known in his Tirie, ' was in the fame Miftake, for he mentions it only as an Altringent, as the elder Greeks defcribe the Rbeponticum without the leaf Hint of its purging Virtue. ". Paulus feems to be the firt who takes any Notice of the Purging Faculty in the Rheum (he calls it fimply (fo) and tells us how we may make fome laxative Me. " dicines ftronger by the Addition of this. And P. Al " pinus fays, that fome have obferved, that even the "Rbaponticum would fometimes purge, though in a ". Jefs Degree than Rbubarb.
"The modern Greeks gave this Root the Name of "Berbaricum, not from the Place of its Growth, but " from the Place it was imported to, for the Country "، in the Upper Atbiopia, was called Barbaria, as Sal" maffus well oblefrves from its lying upon the Sinus Bar" baricus, in which were many great Emporiums, par" ricularly Rapta the Metropolis of this Region. "This Gulph upon the Eaft, joins with the Indian "Ocean, and therefore Actuarius, and aftér him My"repfus, calls this Plant Reon Indicon. No doubt in "thofe Times it was imported this Way to Alexandria, " and fo might be known to thefe latter Greek Phyfici"ans. However I muft obferve, that Salrnafius does " not take Notice of Alexander's.mentioning Rbubarb, " but quotes Paulus for it, who does not mention it, " but only in general fpeaks of and defrribes the Rba. "Garcias ab Horto, Phyfician to the Spani/b Viceroy, " tells us, he had learnt in India, that all the Rbubarb " which was imported thither, and into Perka, grew in "Cbina, that was brought thither by Sea and Land, " but that the latter Way of bringing it over Tartary " to Ormuz, was much the beft, for by Sea Carriage " it was more fubject to rot.
15. In Reference to the Animals in Cbina, though the Natives relate ftrange Things of them, yet there are indeed very few io extraordinary in their Kind, as to deferve mentioning. In fome of the moft mountainous and worfe cultivated Provinces of the Empire; there are Troops of very large Apes that live to a great Age, notwithftanding they are ofren attacked by the Na tives, thefe by obferving frequently the Actions of Men, and imitating them affiduoufy, perform many Things, which to Strangers would appear very furprizing. The Cbinefe call this Animal Sin Fin, and from their Defcription one would imagine, that thefe were a Race of wild dumb Men, and that perhaps Pains would not be thrown away in endeavouring to reclaim them. After all, the Truch of the Matter is, that the Cbinefe love to magnify every Thing they defcribe, and above. all, every Thing that relates to their own Country, for at the Bottom, the Cbinefe Baboons are as much Brutes, and fenfelefs Brutes, as any other Baboons upon the Earch.
There are alfo in fome of the Woods, on the Sides of high Mountains, a particilar Species of Bears, of a moft enormous Size, and capable of doing a great deal of, Mifchief. Thefe, without any View to Raillery or Wit, the Cbinefe call Men-Bears, to exprefs their Superiority and Strength, which however it feemis to do but obfcurely. As for the Horfe hart, there is nothing in
it wonderful, or even fingular, except that it is of the Size of a little Horle ; but they have a Kind of Deer that never grow any bigger than an ordinary Dog, which from the Beauty of their Shape, and Clofenefs of their Hair, are real Curiofities. As to the Horfe Tyger, that lives in the Water, and is covered with Scales as chick and as hard as Tortoife-Thell, it is a mere Invention, contrived to impofe upon weak People, and to make wifer Men laugh. But all thefe Kind of Tales begin to be exploded, for the Tartars are a Sort of People that do not at all affect them, but defpife the Cbinefe for believing and telling gravely known Fallehoods and palpable Abfurdities.

There are fome wild Elephants in Cbina, but not many; the Emperor has a Stable of fifteen or twenty of them, which are Prefents from Foreign Princes. Their Horfes are of middle Size, the ftrongeft and moft ferviceable come from Tartary; there are alfo Mules and Camels, Oxen, Cows and Buffaloes, alfo Wolves, Bears, Tygers, and other Beafts of Prey in the mountainous Parts of the Country. Their Sheep are like thofe of Turkey with great Tails that weigh feveral Pounds. Deers and Hares they have in great Numbers. Their Hogs are black, and have Bellies that reach the Ground, they are efteemed very good Food; notwithftanding the Heat of the Country, for indeed this is made no Objection to of Hog's Flefh in the Eait.
Geefe, Hens and Ducks, and all Sorts of Poultry, are mighty cheap, their Eggs are hatched in Ovens or Dunghills in moft Places: As to the Birds of Cbina, they have Paroketes extreamly beautiful in their Colours, and that are as eafily taught to fpeak as thofe that come from America. They have alfo a Kind of Hawks, which they call Hai thing, larger than our Falcons and ftronger, but thefe are very farce, and are feldom feen but in the Emperor's Court. It is very true, that in Cbinefe Writers there are very curious and copious Defcriptions of Birds that refemble the Phœnix of the Ancients, but then it is chiefly in this Particular, that though often defcribed, they were never yet feen; fo that there is no Need of fwelling this Chapter by inrerting fuch Defcriptions. The firft Miffionaries however were very excufable in giving Place to them in their Writings, becaule it was impoffible for them to perceive, but in Length of Time, how little Credit was due to thofe Authorities. Geefe, Hens, and Ducks, as we obferved, and indeed all Sort of Poulsry, are exceffively plentiful, and prodigionfly cheap, throughout the whole Empire, and yet there are numberlefs Families that live by Feeding and Sclling them. As for the Ducks, thofe that deal in them, become almoft as much Aquaticks as the Commodity they deal in, for their Houles are fixed upon Barges, and as the Ducks live in, fo they and their Families pals their Lives upon the Water, and their Children are often three or four Years old before they fet their Feet upon the Land. Wild Fowl are alfo plenty, and they may very well be fo, for with refpect to thofe, as well as to Animals, the Cbinefe eat without Ceremony, eat all that come to Hand, let them breed or feed how they will.

There are Butterflies in Cbina of an extraordinary Beauty, and of a very extravagant Size, but they are found only on a fingle Mountain in the Province of Quangtoung; and thefe too are generally fent to the Emperor. They ftick upon Trees and Flowers in the Day, immoveable with their Wings clofe; but if once difcovered, are eafly taken : Towards Evening they nly about like Bats, and the Extent of their Wings is very little if at all inferior to thofe of Bats in Europe. The Colours in their Wings are beautiful almof beyond Defcription, finely and regularly variegated with White, Green, Blue and Crimfon; the Body, which is almoft as thick as a Man's little Finger, is cover'd with a yellow Down as bright and as refplendent as burnifh'd Gold. There are a fmaller Sart of Butterfies taken in the Mountains of Sicbang, not far from Pekin, which have very vivid Colours, but are far inferior to thofe

VoL. II. NP CXXXVIL.
normous Butterflies beforementioned, and which make Part of the Furniture of the Imperial Cabinets.

Grafhoppers are exceeding troublefome in Cbina, and frequently devour the Fruits of the Earth in fome Provinces; there are alfo feveral Kinds of Serpents, particularly the Cobra Capella, or hairy headed Serpenrs, which have been defcrib²d in our Accounts of Intia. Fifh abound in their Rivers and Canals, and befides Nets and orher Engines; which are ufed in Europe to catch them, they breedup large Fowls like Herons, which are as much under the Fimerm man's Command as our Dogs, and Hawks are under the Huntfman's; they keep them perched on the Sides of their Boats, and when they give a Sign, every Bird takes its Flight to look for the Prey, and will divide themfelves the whole Breadth of a River or Lake; when they have feized a Fifh they bring it to their Mafter, and if it be too big for one, they will help one another; it is faid when they have brought it to the Boat they immediately take their Flight again in Search for more; but they have a Suring about their Necks, which prevents their Swallowing the Fifh, till the Mafter thinks fit to leave off his Sport, and then they are fuffered to prey for themfelves.

There are alfo all thofe Kinds of Fifh in their Waters, which are met with in Europe, and many mores, particularly one, which is called the Gold and Silver Fifh, which is wonderful beautiful, and kept by the Qua. lity in large Bafons in their Gardens. They are about the Length and Bignefs of one's Finger, the Male of a fine red, from the Head to the Middle of his Body, the reft with the Tail is of fuch a bright and glittering Gold Colour, that no real Gildings can come near it. The Female is of a pure Silver White, the Tail of either of them is not flat, but gathered thick like a Nofegay, which is an Addition to their Beauty. They are a very render Animal, and foon fenfible of the Alteration of the Weather ; therefore Contrivances are made to thelter them from the Heat, and their Water often changed. And if they are to be removed from one Bafon to another, great Care is taken not to touch them, for the leaft Touch, it is faid, will kill them, as will fometimes the Noife of great Guns, loud Thunder, or an offenfive Smell, fuch as Pitch or Tar. But it is needlefs to infitt longer on this Subject, fince Numbers of thefe Finh have been of late Years brought over into Europe, and even into Engtand, which has afforded the Curious an Opportunity of feeing that, though the Cbinefe often exaggerate, yet fometimes they keep at leaft pretty near the Truth.

The Mountains of Cbina are held to be the richeft in the World ; fome fay, on Account of their Mines of Gold and Silver; but perhaps their Character may be maintained, even fuppofe their Title to thefe rich Metals could not be made out. Yet this is very far from being the Cafe; for it is certain there are two Silver Mines open, one in the Province of Se tchun, and the other in that of $\mathscr{Y}$ u nan, which itill produce confiderably, and were formerly exceffively rich. The Emperor Can gbi caufed another Silver Mine to be opened and wrought for fome Time, but it was afterwards difcono tinued. It is believed alfo that they have very rich Gold Mines; at leaft it is very certain, that in the Mountains on both Sides of Cbina there are very rich Lavadores, as the Spaniards call them, that is, Places where Gold Sand is wafhed out of the Rocks. The Cbinefe, who are equally referved in their Politicks, and in their Books and who in their Converfation fpeak Truth or Falfehood, juft as it fuits their Purpofes beft, affect to fay, that though they have rich Mines of thefe Metals, yet they lie in Places inacceffible, and where it would coft more. to come at them, than ever Gold and Silver are worth.

This, however, is but a Pretence, fince the very Mine they laft wrought was difcontinued for being too rich; and the Secres of this Policy lies here: The Emperors of Cbina have fixty Millions of Subjects, and at prefent the Country being perfectly well cultivated, they are plentifully fupplied with Neceffaries, Conveniencies

115
and
and Elegancies; fo that Induftry is rewarded by Abundance. But as there is no eating either Gold or Silver; as wearing it is of very little Confequence; and, as there is already enough for all Sorts of Plate and Manufactures; to open Mines therefore would be a Means of diverting the People from their more neceffary Labours, would raife the Price of all Commodities, and inttead of being a Source of real Riches, would actually become the Caufe of Want and of Diftrefs. Befides, in no Country upon the Face of the Earth the true Value, or rather the true Ufe, of Gold and Silver is better underfood than in China; and therefore they hold it to be, as it certainly is, much better Policy to draw thefe Metals into the Empire by Commerce, than to dig them out of Mines; and from thefe Principles they aim chiefly at two Things, one is to export their Commodities and Manufactures into other Countries, by which they obtain a Balance of Gold and Silver; and the other is, to keep it when they have got it : In both which Schemes, as indeed in almoft every Scheme they form, they have been very fucceffful.
Add to all this, that as Indigence creates Induftry, fo Indigence and Induftry, taken together, are the ftrongeft Motives to Obedience. A rich and idle People may be and generally are prone to rebel; but a poor and active People are commonly dutiful and fubmiffive. This is the Cafe of the Bulk of the Cbinefe Nation, who get wherewithal to live, and live pretty well; yet with all their Sharpnefs and Dexterity, this is as much as they can get; and to fay the Truth, this is what makes them fo fharp. But if War, Famine, Inundations, or any other publick Calamity happens, they are prefently fet a Starving; and in this Situation the Wifdom and Equity of their Government appears, for to the Emperor they apply as to their common Parent, and they never apply in vain. He takes all they feel upon himfelf; he afcribes their Diftreffes to his Errors, their Misfortunes to the Judgments of Heaven upon his Sins ; and therefore, befides imploring the Mercy of the Supreme Being, and giving large Alms to the Poor and Needy in his Capital; he relieves thofe who are thus diftreffed in the Provinces, not only by a temporary Supply of Food and Raiment, but by remitting their Taxes for a certain Number of Years, and creating a Demand for their particular Manufactures by Dint of that abfolute Power, fo terrible in other Countries, and ufeful and beneficial in this alone. But to proceed.
The Mountains of Cbina furnifh prodigious Quantities of Coals, infomuch, that no Country in the World is better ferved with them, and the Inand of Great-Britain excepted, perhaps none fo well. They have allo Iron and Tin in Abundance, and ftill greater Plenty of another Metal, called, Tutenague, which is highly valuable, and of which one Mine produces them Hundreds of Quintals in a Day. They have alfo great Quantities of Copper, of the ordinary Sort, and befides this they have two very fingular Kinds of Copper, which are fcarce found, more efpecially the firft of them, in any other Part of the Univerfe. The Cbinefe call this wonderful Metal Pe tong, which is as much as to fay, white Copper, and it is very properly fo called, for it is as white as Silver, and they make all kind of Veffels of it ; the only Fault it has, is its Brittlenefs, fo that in the Hands of carelefs People, it is apt to break. To renedy this Defect, they employ one fixth Part of Tutenague, which makes it tougher, but if they were to ufe twice that Quantity of Tutenague, the Metal would be much better, and the Reafon that they do not ufe it, is becaufe it fpoils its Luftre, and nor its Colour, as the Jefuits commonly write; for it remains as white as ever, bur it is a dead, lifelefs, tinny white. Four Parts of this Metal, and one of Silver, makes a Metal equal in Luftre to Silver itfelf, and is fit for any thing but Money; for upon the Application of a Stamp it cracks. The other Kind of Copper, the Cbinese very properly call Te se lai tong, that is Self-made Copper, becaufe it is found like Goid in Grains, or in large Pieces, wathed out of the Mines by Torrents; properly fpeaking it is red Copper and very rich. The Cbinefe have Chemifts amongt
them, or rather Alchemifts, but their Skill in Metals does not reach ours; for it is certain, that their red and white Copper, mixed with Lapis Calaminaris, in a proper Quantity, will produce a Metal as high coloured as Brars, and almoft as malleable as Silver.

Their Mountains alio afford them moft excellent Quarries of various Sorts of Stone, and amongft others a Kind of yellow Stone, fo foft, that they worls it into any Kind of Veffels, paint it wich Vermillion, and fell it very dear. They have alfo Lapis Lazuhi, bus not in any great Quanticies, and Rubies, but they are very fmall, though very fine, and feveral Kinds of Agate and Jafper. Rock Chryftal they have in vilf Abundance, and they make various Kinds of Utenfils of it, which are extremely beautiful, as well as all Sorts of Toys. Marble of feveral Kinds is common, bur they know not how to polifh it, at leaft to fuch a Degree as is common in Europe. As for Stones proper for Building, and Earth fit for Bricks, they have as much as they want, and indeed every thing in this Empire is at a low Price, which is owing to the Wifdom of the Government, and to the Facility of Water Carriage, by which the Commodities and Manufactures of all the Provinces are to be found in every Province, and at reafonable Rates.

So that it may very truly be faid, that Cbina plentifully yields not only whatever is requifite to the Reftauration of Healch, fupplying the Neceffities and fuftaining of Mankind ; but likewife all Things which can contribute to gratify the luxurious Wifhes even of an Epicure: Nor do any of the European or Afian Countries produce any one Commodity, which is not here to be found ; or at leaft the Deficiency is doubly fupplied with equal or much better Subiticutes: But to particularize and defcribe all the Roots, Herbs, Fruits, Shrubs, Trees, Plants, or whatever elfe of the Botanical Kind, which is cither neceffary or agreeable to the Tongue or Eye, would be to tranfgrefs the Limits of our fhort Account of this Country; wherefore we have contented ourfelves with barely pointing them our, and fhall proceed to difcourfe of what we next promifed.
16. Fapan is juftly preferred to all the Eaftern Iflands: and (though its Natives unwillingly' hear it) was formerly fubject to Cbina : Their Manner of Living is like the Cbinefe, they learn and read their Books; and alfo eat with two Ivory Sticks or Scures; but fit upon the Ground, wear a different Habit, Leathern Boots, and long Hair.
" F.D. de Mendoza, alfo affures us, that the Cbinefe "were formerly poffeffed of the whole Continent from "Cbina to the moft remote Part of India: That of this "there are yet feveral confiderable Remembrances on " the Coaft of Cormandel, particularly a Caftle called "the Cbinese Cafle, by Reafon it is fuppofed to be " built by them : That at prefent in the Kingdom of "Calicut, there are feveral Fruit-trees which the Inha"bitants own to be planted by the Cbinefe when they " governed there, and were alfo Mafters of Melacca, "S Siam, \&cc. He adds, that at the fame Time they were "Mafters of $\begin{aligned} & \text { fapan, as appears by feveral Monuments, }\end{aligned}$ " as well as the common Uniformity betwixt the Man" ners and fome of the Laws of both Nations."
This Inand is an independant Sovereignty, governed by a Prince who affumes the Title of Emperor. It is a hundred and fifty or fixty Miles broad, and three hundred or three hundred and fifty in Length. It very plentifully produces Gold, Silver and Copper, as well as whatever can be wifhed to fupply both Neceffity and Luxury; it lies amongft and is parted from feveral leffer Inands, in 34 or 35 Degrees of Latitude. The Natives are very fubtle and fraudulent in their Dealing, and thoroughly verfed in the Art of Politicks: They are very jealous of their Liberty, and treat all other Nations with the utmoft Sufpicion; purfuant to which, they are fo very cautious of any Thing that barely feems to contribute to their Strength, that they unrig and take away the Rudders of all foreign Ships in their Havens. They are very neat in all Particulars, and rally the Cbinefe on that Head, believing themfelves
very much to exceed them. Before the cruel and outrageous Perfecution which fell upon the Faithful, almoft half the Natives were converted to Chriftianity, but at prefent no one Perfon who is but furpected to be a Chriftian, is fuffered to enter any Part of that Empire, before he hath trampled upon a Crucifix, as a Teftimony that he is not of that Religion. Notwithftanding which, we are told that there are fome who privately retain that Belief in their Hearts, and confefs it to God alone. But the very Name of Chriftian is here fo deteftable, that, even thofe of that Religion which do but trade here are obliged to conceal it; and the Hollanders, which drive a great Trade here, being afked by them whether they are Chriftians, never fail to reply that they are Hollanders, by which indirect Anfwer they thun the dangerous Rock, that would fhipwreck their Hopes of Gain.
The fecond Inand or Peninfula, (for it is doubted whether it be feparated from the firm Land) is called Corea, but the Cbinefe Name it Caoli; it annually pays a Tribute to the Emperor ; and lies Eaftwards of Peking and Xantung. When the Coreans carry the abovementioned Tribute to the Imperial City, they moft comimonly go by Way of Leaotung, but very rarely through Xantung. In their Habit, Writing, ECc. the Natives follow the old Cuftoms of the Cbinefe; but they differ from them in their common Converfation with Refpect to Women, who are here allowed to come freely into the Company of Men; on which Account the Cbinefe ridicule them as a barbarous and unpolite People: And this Difference alfo occafions another in their Marriages, which are heree the Effects of Choice. This Country is larger, but not fo rich as 7 apan: It plentifully produces all Sorts of Corn, and according to the Report of the Cbinefe, is four hundred and fixty Miles long, and one hundred and fixty broad. Though this Country is very commodioufly fituated, and richly provided with all Things, yet its Inhabitants at prefent drive no confiderable Trade with any other Nations than the Cbinefe and faponefe. Here are very rich Gold Mines, and the Root Ginfeng, of the Virtue of which I have already fooken, grows here; as alfo the red Colour which the Cbinefe call Cil, or Sandaracba, the beft Sort of which is prepared here by Expreffion out of the Bark of a certain Tree, and is of a Confirtence like Pitch or Glue ; whatever it is laid on with a Brufh is tinctured red, and thines as bright as a Looking-glafs; fine Pencils and Paper are likewife made of it.

Befides this there are two Illands fituate near fapan, one of which is called Cbaofien, and the other Linkin: The Princes of both which Kingdoms pay Tribute to the Empire of Cbina, though in Habit and Manners they approach much nearer to the faponefe than Cbinefe: Thefe Inands are large, but not to be compared with Japan.

The Illand Taion, otherwife called Formofa, is alfo fubject as has been faid to Cbina, and is accounted one of the nine great Cities of the Province or Kingdom of Fokien. The Ifland Hainan lies South of the Province of Conton, and as is already faid, is numbered amongt the Cities of that Province: It is two hundred and fifty Miles in Circuit.

There are alfo feveral other Inlands, which are Dependants on or Members of the Province of Canton, as that of Sanciam, where Francis Xavier died and was buried: Macao, where the Portuguefe have a Fortification and Port; together with the three Inands under Xantung, one of which was famous or rather infamous for the lamented Deftruction of the Cbinefe Philofophers, as has been mentioned. Thefe, befides feveral others, are fubject to this vaft Empire, all which united under one Dominion, would by themfelves amount to a very potent Monarchy, and furnifh Matter for a particular Defcription. But we fhall content ourfelves with barely naming them as they lie in our Way, and conclude this Chapter with an Account of fome fubordinate and adjacent Kingdoms.

The Kingdom of Tunking lies Weftward of Cbina; and formerly was fubject to and a Province of that Empire: But is at prefent only tributary to it; and is divided into the two Kingdoms of $\mathcal{T} u n k i n g$ and Cocbino
cbina; fubject to cheir refpective Kings; who are two Brothers, that continually make War againft each other. And though this Kingdom; or more properly thefe King: doms, are very diftant from Fapan; they yet follow the Fafhions and Manners of the faponefe: They are inftructed by and read Cbinefe Books, which they, like the $\mathcal{F}$ aponefe and Coreans, are very well verfed in. Several Chriftians live amongtt them ; and the Eingli/b, French, Dutcb and others, trade very confiderably with the Inhabitants of boch Kingdoms.

The Kingdom of Laos borders on the Province of Funan; and is alfo tributary to Cbina: Its Metropolis is Lancbang: It borders Southwards on Siam, and Weftwards on Pegu: But is a Country of no Manner of Commerce.

Siam is a very large Kingdom; which has been frequently infefted with Foreign Wars and Domeftick Confufions: It was formerly fubject and tributary to this Empire, but taking Advantage of its diftant Situation, and the various Revolutions of the Cbinefe Monarchy, that Kingdom hath, like Pegu, fhook off the Yoke. This is a Kingdom of very wide Extent, but the Land is wafte, untilled aud uninhabited; and its People living moftly in Woods and Wilderneffes, behave themfelves rather like wild Beafts than reafonable Creatures. They build or erect Huts made of Hides, and the whole Country abounds with Woods, which harbour Elephants, Rhinoceros's, Buffioes; wild Oxen; Tygers, Bears, and feveral other wild Beafts. Here are great Herds of Apes as big as Children. The Woods are very clofely crouded with lofty Trees; of the Height of forty or fitty Ells; fome of which are alfo fo thick; that feven or eight Men holding Handscan hardly begirt them, and one Trunk is large enough to hew out a Boat, Here are innumerable Crocodiles, which devour Men alive, and are four or five Ells long; which renders Travelling, either by Water or Land, very dangerous in all Parts of this Country; as it is alfo in Pegu, Laos, Camboja, छ̌c. The Inhabitants of all which Countries wear the fame Sort of Habits, and very nearly agree in their Cuftoms and Manner of Living ; but differ in their Language and Way of Writing. They are all Heathens, and extravagantly reverence or rather idolize their Priefts. Their Pagods or Temples are all of Brick, but very numerous and ornamental ; their idolatrous Images are large, beautiful, and finely gilt, fome of them being about ten Ells high. The Streets and feveral fpacious Places are adorned with large Turrets about fifty or fixty Ells high, gilded all over on the Outide. Thefe Idols were brought by the Bramins (fo their Priefts are called) out of India:
The King keeps his Court at '̛utia, which is alfo called Siam; this is a large, and upon an exterior View; feems a very fine City, but is very far from being fo within. The Dutcb have a Houfe or Factory at the City of Ligor, and the Englifh, Portuguefe, Mogols, Perfans, and Cbinefe, trade very confiderably here; nay, feveral Portuguefe live in the City. Formerly the Europeans enjoyed great Immunities here, but are now abridged of fome of them, and this on the following Occafion.
One Conftance, a Greek, that had long refided amongft the Englijh, came to Siam, and became fuch a Favourite of the King's, that, in a fhort Time; he got into the beft and moft honourable Pofts, and climbsd to the higheft Step in the Adminiftration; the King left the whole Government of his Realm to him, and he confequently became the Spring of Action. During this Time the News happen'd to reach the King's Ear, that France, then at War with the Dutch, had obtain'd a great Victory over the States; upon which that Prince, who look'd on the Hollanders with jealous Eyes, as a People that might one Day do him an Injury, refolved to fend an Ambaffador to the King of France. And he accordingly difpatched one of his Mandaryns on that Errand in 167\%; on board a French Ship ; but it is to this Day unknown what became of either the Ambaffador or the Ship, nor was the leaft News of them ever heard. The King, however, purfuing his firft Defign, fent other Ambaffadors, in a French Ship, to the Court of France, where they fafely arrived, and were very
well received. They, by Order of their Prince, entreated the French King's Friendfhip, as well as made Proteftations of their Mafter's tender Regard for his Moft Cbrifitian Majefty ; and withal requefted, that he would pleafe to fend him fome Forces to remain in his Country for the Defence of it. And after the Expiration of feveral Years, the King of France fent Ambaffadors, and three Ships to Siam, where they fafely arrived, and were very well received and fplendidly entertained; , befides which, large Privileges were granted to the Cbritians on their Account; for befides the Ambaffadors, in the three Ships, there came over with them a French Bifhop with feveral Monks, which, together with three or four hundred Men defigned for the Defence of the King and Kingdom, were by the Ambaffadors left behind.

This very much difgufted the Populace, but more the Priefts; and feveral of the Chief of the Nobility look'd awry at it ; as did the Mabometans, who gave the King Poifon, of which he ficken'd and died.

After which, the General and others rofe up, in Arms againft the Regent or Adminiftrator, maftered the City, and cut the above-mentioned Greek to Pieces; and the King dying without Heirs, leaving only one Daughter, and this General having forcibly got into the Thtone, defigned the immediate Deftruction of the French; but they perceiving his Intention, retired to a ftrong wellfortified Place, which they fo bravely defended, that he was obliged to permit them to depart freely, and furnifh them with three Ships for their Voyage.
17. Tartary borders North and North-weft on Cbina, from which it is divided by the Great Wall: Thefe Nations are divided into Eaft and Weft Tartars; the latter conquered Cbina at the latter End of the Twelfth Century; but about eighty Years afterwards were driven out of that Empire; and the Eastern Tartars are at prefent poffers'd of it, having leated themfelves on the Throne in the Year 1643. They are called Eaftern Tartars, not with Regard to Cbina, of which they lie Northwards, but with refpect to the other Tartars, which lie Weft of them, and are called Wefern Tartars.

The Eafern Tartars were feparated from Cbina not only by the Wall, but by the Province of Leaotung, which was not a Cbinefe Province before the Tartars came through it into that Empire; but being fituated without the Wall, it lay as a Barrier againft the Incurfions of the Tartars; and before it became a Pro vince of Cbina, was a Place of Exile, whither all banifhed Perfons were either ordered or fled of their own Accord for Refuge. Thefe and other Exiles affifted Prince Oufangouei, who, with the Help. of the Tartars, drove the Ufurper Li or Licoung from the Throne, which the Tartars then afcended. After which, the Province of Leaotung, in grateful Acknowledgment of its introducing the faid Iartars into Cbina, was incorporated to the Empire, and declared the fixteenth Cbinefe Province, enjoying the fame Rights, Privileges and Immunities with the fifteen ancient Provinces ; all whofe Tribunals and fuperior Courts of Juftice are fupplied by an equal Number of Tartars and Cbinefe, as are alfo all, the Prefidenthips.
Since the Tartar conquered Cbina, he hath extended the Frontiers of his Dominions in Tartary, for being formerly but one of the petty Kings of the Eaf Tartars, he hath not only obliged the other Eafern Princes, but even the Weftern Tartars, to fubmit to, obey, and for the moft Part, acknowledge him their Sovereign Prince. And the Union of thefe two mighty Kingdoms and Nations, has fwelled this Enipire to an extraordinary Bulk, and rendred it one of the nobleft Sovereignties 'in the Worid. By Means of this wide Extenfion of this Momarchy, Cbina, or more properly Tartary, ftretches its Borders to Mujcory, by which it is bounded Northwards. And by the Peace betwixt the Czar and the Emperor of Cbina, concluded in the Year 1689 at Nipchou, by the Ambafiadors of both Emperors, it appears that the Borders on both Sides are fixed by Agreement in the Latitude of 55 Degrees; which appeared very furprizing even to Geographers themfelves, they farce believing
that Cbina and Mufcovy were become Empires confining on each other by the Addition of Tartary, And the Ambaffadors could not reach the before-mentioned Frontier City, fituated on the utmoft Borders of Mufcovy from Peking, in lefs than fix Weeks Time, the Diftance being three hundred Leagues.

The Empire of the Great Mogul, and feveral other Monarchies, were in like Manner formerly Provinces obedient to the Cbinefe Empire, as is amply evinced by the prefent remaining Monuments in feveral Parts of India: But either their diftant Situation, political Intereft, or the Cbinefe Seditions, have long fince torn them from that Monarchy. The Empire of the Great Mogul extends over all the Kingdoms and Countries betwixt the Rivers Ganges and Indus, to the Gulph of Bengal. The Inhabitants of Cambay, Bengal, and other fubordinate Countries, drive a very great Trade with the Cbinefe, and have alfo with their Merchandize introduced thir own, that is, the Mabometan Religion. The Metropolis, where the Great Mogul keeps his Court, as alfo the Province in which it is fituated, is called Delli ; the Countries fubject to him are very fertile, and what by reafon of the Gulph or Arm of the Sea, and the Rivers which on both Sides run by it, very commodiounty fituate for the Tranfportation of the Produce of that Country. Befides vaft Plenty of Corn and Fruit-trees which that Land yields, it affords alfo great Quantities of Wax, Frankincenfe, Spices, and Drugs, as well as Diamonds and other precicus Stones. The Number of Elephants is here fo great, that they are not computed by Hundreds, but Thoufands; and according to the Cuftom of this Country, the Horfe and Foot capable of taking Arms, and which upon a fhort Warning may be raifed, are reckoned by Hundreds of Thoufands. The Commodities with which they chiefly trade in Cbina, are rough and other Diamonds, Jewels, Elephants Teeth, Wax, $\mathcal{F}^{2}$. The Emporium to which they and other Indians coming out of the Weft refort, as is already hinted, is Zunning, a very great and commodious trading City, frequented by all Nations; for though anciently no Foreigners were permitted to come to or trade in Cbina, yet the wifer Tartars regarding their own Intereft much more than obfolete Cuftoms, have allowed almoft all Nations to trade amongtt them. All the Indians are fwarthy, and go naked, except only a Cloth, which both Men and Women wear about their Waftes.

It was thought beft to infert the Whole of our Author's Account of the Kingdoms, anciently and at prefent depending upon Cbina, juft as it ftands in his Book, and without any Remarks, that the Reader might perceive at once what the Situation of Things was at the latter End of the laft Century. We may very eafily difcern from his Manner of Writing, that he was a very warm Friend to the Glory of his Country, and very defirous of reprefenting it as infinitely more glorious in former Times than it is now. It is not ealy to fay, what his Sentiments would have been, of an Opinion that prevails amongft fome very learned Men, if he had been acquainted with them, viz. that the Cbinefe themfelves are but a Colony from Egypt: On one Hand indeed, this Notion derogates much from their Glory, as it makes them appear fo far below what they efteen themfelves, and of which they continually boaft, that they are an original Nation ; that many Nations have defcended from them, and that before the Conqueft of their Country by the Tartars, their Race was in a good Meafure unmixed; yet confidered in another Light, this Notion feems to do them Honour, for if we reheet on the Accounts given us by Herodotus, Diodorus Siculus, and other antient Writers, concerning the Government, Cuftoms and Manner of Living amongt the original Natives of Egypt, they muft be owned for one of the wifeft and moft polite People of whom there is any Record in Hiftory.

In Matters of this Nature, however, it is not enough to affert, there ought likewife to be fome kind of Proof, and thofe who give into this Sentiment, endeavour to furtain it by three Arguments. The firft is, that the ancient Egyptians pofitively afert it, their
having

Chap. III. the Empire of CHINA.
having fent, in the moft early Times, vaft Armies into the higher $A \mathcal{F}$ a, who left behind them confiderable Colonies, of which, however, the Greeks tell us rather Fables than any Thing that can be called Hiftory, as to the Remnants they met with in India. So that fuppofing the Travels of the Egyptian Baccbus to have fome Thing of Truth, though buried under a Load of Fiction, we may likewife fuppofe that he penetrated into Cbina, and in that Country, rather than in India, left his Colonies. The fecond Argument is deduced from the great. Conformity between the two Countries, for if Egypt has its Nile, Cbina has its great River of Nanking; if the former abounds with Canals and Cutts of Water, from Town to Town, for the Sake of an eafy and commodious Communication, fo does thelatter; and if in Egypt there are many Monuments of great Antiquity, the like are alfo to be found in Cbina. The third Argument is taken from the Refemblance of their Governments, and the Maxims upon which they are founded; the Likenefs between the ancient Hieroglyphicks, or rather facred Character of the Egyptians, and that of the Cbinefe; the Averfion and Contempt which both Nations have for 'Foreigners, flowing from an arrogant Opinion of their own Superiority in Science, and in every Thing elfe; the Notions the Egyptians had of the Excellence of their Country, which is exactly copied by the Cbinefe, and in fine, the pacific Difpofitions of borh Nations, fpringing from the Principles of their Policy, immutable through the Courfe of many Ages. How far thefe Arguments reach towards eftablifhing the Probability of this Sentiment being true, we pretend not to determine, it being our Aim only to give the Reader as fhort and clear Account of the Sentiment itfelf that was in our Power; and having done this, we leave it entirely to his Decifion.
But it may not be amifs to add, that the Gaponefe, the Simoefe, and other Nations, mentioned by our Author, have actually fuch a Tradition amongft them as he contends for, and are fo far from denying that they were formerly under the fame Dominion with the Cbiriefe, that on the contrary, they boaft of being defcended from them as a very high Honour, and appeal to their Cuftoms and Manners for the Proof of it, fuppofing that their Learning and Knowledge of what Nature foever it may be, could be derived to them only from that People, who they efteem the wifert and moft polite Nation in the Eaft. We are not therefore to regard what our Author fays, as the pure Effects of Vanity, but as an Opinion that is current amongft the feveral Nations of which he fpeaks.
It ${ }^{\prime}$ muft look very ftrange after what has been faid, that thefe Countries are no longer under the Dominion of the Cbinefe Emperor ; for it fhould appear extremely eafy to preferve Territories, the Inhabitants of which have a Pride in being Subjects ; but the Riddle is not hard to be difclofed, and as the Solution is neither unprofitable nor unpleafant, it may not be amifs to infert it. The Cbinefe Monarchs of the laft Race, before the Country was fubdued by the Tartars, were defirous rather of keeping than of extending their Dominions; and for this Reafon they chofe the natural Bounds of Seas and Mountains, together with the artificial Fortification of the Great Wall, which had been raifed by their Anceftors, and raifed from that very Maxim which they now purfued.
By this Means the fifteen Provinces of Cbina, though of fuch a valt Extent, were perfectly well covered from foreign Invafion. On the Eaft or South they could be attacked only by a maritime Power, and a Power capable of attacking them, they yery well knew fubfifted not in that Part of the Earth; fo that their Coafts were perfectly faved, even fuppofing they had not been fo defenfible as they really are. To the South-weft they have a long Chain of impracticable Mountains, on the, other Side of which lie the Kingdoms of Laos, Tonkin, Cocbincbina, and Siam; from the People of which they knew by Experience they had nothing to fear; and they were wife enough alfo to know, that it would be much eafier for them to affift thefe Nations in Cafe they were attacked, than to defend their refpective Countries as Pro-

VoL. II. No 137.
vinces. On the Weff they are likewife covered by Mountains, and on the North by the famous Wall, beyond which they have the Country of Leontong, which they kept as an Outwork againft the Mantcbeou Tartars:
This Policy of theirs was found and good, and muft for ever have fecured ${ }^{\circ}$ Cbina, if their own civil Diffentions had not opened a Way to that Revolution which the Tartars compaffed by fuperior Skill rather than Force. As Things now ftand there is Reafon to believe ${ }_{5}$ that on the one Hand the Tartars will be eafily difpoffefs'd, becaufe their Force daily increafes in Com* parifon of the native Chinefe; and as to any Attempts of other Nations, they are lefs to be feared thàn ever, becaufe the Tartars heretofore, their moft formidable Enemies, are now become a kind of Out-guards, as willing and more capable to defend them than the proper Subjects of the Empire.

As this Obfervation is obvious, and as the Cbinefe have Penetration enough in this Refpect, we have Reafon to wonder that our Author has taken no Notice of it, but a little Reflexion will difcover the Caufe. He was not of Tartar, but of Cbinefe Extraction, and therefore if this Notion occurred to him, he would certainly fupprefs it as defrructive to the Honour and Reputation of his Councry, which it is vifible enough from his Manner of Writing he meant to raife as high as he could. At the Time he wrote, the Tartars had not been Mafters of Cbina above fifty Years; and it is very natural to believe, that the Cbinefe ftill retained Hopes of being fome Time or other able to throw off the Yoke; and in fuch Cafes, thofe who are well verfed in the Difpofitions of Men, which are pretty much the fame in all Couns tries, will eafily conceive, that all Things muft appear to them in falfe Lights, becaufe on one Side, the flate. tering Expectation of becoming once more free and independent, heightened the Opinion of their own Strength ; and on the other, their Averfion to Foreigners hindred them from perceiving that the Tartar Power was continually increafing, and at the fame Time, their Ability of refifting declining apace.

But to defpair, and to defpair in fo capital a Point as this at that Time, mult have been thought by every Cbinefe, was what he muft wifh to avoid, and whatever Men wifh with Regard to fpeculative Points being always in their Power, they feldom fail of bending their Belief to their Wihhes. We have various Inftances of this in other Countries than Cbina, and Inftances that in Point of Time reach very far beyond that wherein they have even now been Subjects to a foreign Power; a Circumftance every where alike hateful, and which therefore amongt all Nations will ever have the like Effect, till fuch Time as the Caufe imperceptibly wears out, that is, till thofe who were confidered as Strangers become Natives, and fo the Will to expel them is gradually loft. In all human Probability this Time is already come in the Country of which we are fpeaking, and if we had, a Hiftory of it written by a Cbinefe at this Day, we fhould find him place the Subject that we have been difcuffing, in the very fame Light that we have done.

We muft not however diffemble that there are various Paffages in his Accounts which might be corretted, and fome which without Prejudice to his Performance might have been omitted, but it is to be confidered, that thefe Miftakes are not very confiderable; either in their Nature or in their Number, that he wrote at a Diftance of Time, when Slips of the like kind would have been very pardonable, even in an Author on this Side of the World; that there is fomething ufeful in feeing what miftaken Opinions gain Ground in thofe Parts, and laftly, that there is not the leaft Danger that a Perfon, who has perufed the former Volume of this Work, fhould be minfed by what he fays. Add to all this, that as we have hardly feen any Cbinefe Writer before, fo it would not become us to play the fevere Criticks now. The Knowledge our Author had, like that of his Countryman, was all of his own acquiring, and what he has communicated, is written with that Freedom and Ingenuity, that it is highly reafonable we thould afford it a favourable Reception, and make many Allowances for

1 IT
the many Difadvantages he muft neceffarily labour under.

The fame Excufes, though perhaps in a more extenfive Degree, muft be likewife offered for what ftill remains of his Account, which it is very poffible may not be altogether fo exact as the modern Accounts of the Jefuits, but at the fame time, they are very well worth preferving for many Reafons. He had a Mind to give the People of Europe, a very fhort Account of the two great Revolutions that had happened in Cbina, fince they became acquainted with that Country, and alfo an impartial View of the State that Empire was in at the Time he left it ; this very Defign has fince employed the Pen of a very celebrated French Jefuit, and yet upon comparing their Works we may fafely affirm, that though our Author is not a tenth Part fo long, it contains as much Matter, many Circumftances that are not to be met with in his, explains the Caufes and Confequences of thefe Revolutions as clearly to the full, and affords a better Picture of the reigning Emperor, than that drawn by the French Father.

It was for thefe Reafons, that after mature Deliberation, we gave it a Place here, fo that the Reader has now the intire Work of Dionysus Kao, and in a better Drefs than it has hitherto appeared. Some of our Readers indeed might poffibly expect a larger Hiftory of Cbina, but befides that, this would have run us into much too great a Lengch, it would have been alfo foreign to, and quite befide our Defign; for all we aim at, is to give our Readers a juft Idea of Countries as they fland at prefent, and if we fometimes ftep back into more remote Times, it is only with a View that from the Accounts we give of thefe, the prefent may be the better undertood.

Taking Things therefore upon this Footing, what our Author has delivered is precifely what we wanted it is a Sketch of the Cbinefe Hiftory, within that Period of Time which falls immediately under our Notice, and accounts for the principal Events which have happened fince it was vifited by Marco Polo, the firt European that ever wrote about it, and whofe Travels are inferted intire in our former Volume. One Thing more is to be obferved upon this Subject, before we leave it, and it is this, that whatever Dinike our Author might have for the Tartars, he found himfelf obliged to fpeak of the Emperor reigning at the Time he wrote, in as high Terms as it was in his Power to invent; from whence we difcover two Things of fome Importance, with an equal Degree of Certainty; the firt, that the Monarch of whom he fpeaks, really defferved the high Character he gave him, for otherwife it is impofible that fo many Writers of different Nations and Interefts, fhould agree in it. The fecond, that it plainly appears from hence, that our Author had a juft Regard for his Proteftations, and did not fuffer either his Fondnefs for his own Country, or his Averfion to the Tartars, to mifguide him from the Paths of Truth. From this extraordinary Inftance therefore of his Veracity, of which we have the fulleft Proof, we learn what Credit is due to the reft of his Performance, and that it is not without Reafon we have commended his Writings fo much, to which it is now high Time to return.
:Tho' the Cbinese Empire is by all the learned of that Nation, without the leaft Scruple, pofitively afferted to have continued for above the Space of four thoufand Years, under the Government of two and twenty Imperial Families; and others believe it poffible to trace its Origin five hundred Years higher; yet to this Day, or rather to the Middle of the fixteenth Century, the Cbinefe have not made any Alteration in their Humour, Morals, Learning, Habits, Manner of Government, or Language. It is indeed true, that Seditions, Civil Wars, Infurrections and Revolutions have happen'd, which have made a temporary Alteration of the exterior Form, but they foon difappear'd, and all Things returned to their former State : For one while the Empire was divided into one hundred, nay three hundred Parts, then reduced to feven, afterwards to three; and at laft re-
turned to the primitive State of an encire Empife, fub. ject folely to one Sovereign.
According to the Cbinefe Chronology, the aboven mentioned two and twenty Royal Families have produced two hundred and thirty fix Emperors, computed to extend to the prefent Monarch, and beginning with the firlt Emperor Fobi: Which Priuce, agreeably to this Chronology, and the unanimous Atteftation of all learned Men, is acknowledged for the undoubted Founder of the Cbinefe Sovereignty. This is particularly confirmed by thofe appointed to examine into it by the Emperor himfelf, and his chief or moft able Minifters: We are told that this Emperor was a Prince of an exalted Genius, great Courage and Experience ; that he projected their Laws, declared good Education and good Manners to be the beft Foundation of the Publick Good; and beftowed his utmoft Praifes on thofe who by virtuous Means preffed forward to the higheft Degree of Wifdom; whilft on the other Side, he banifhed all Sloth, and fer a very high Value on thofe, who by their Parts and Induftry diftinguifhed themfelves from the reft of Mankind. His illuftrious Reign, crown'd with venerable Age and Experience, tranfmitted to his Defcendants fuch a ftrong Impreffion of his real Excellencies, that his Maxims, Inftructions, and Laws, are regarded as divine Precepts, and thofe who have ftudied them, have found them fo fuperlatively excellent, that they have juftly deferved as well as retained their exalted Fame amonglt the Afatick Nations.
Fobi was lucceeded by Cbumming, and he by Hoangti, who was fucceeded by Xao, and feveral others in order, which according to the fame Chronology were elective Kings; and being as long liv'd as the Noacbian Patriarchs, each of thefe is faid to have reigned above one hundred Years ; though like the Antidiluvians mentioned in holy Writ, they declined in Proportion to the Time of their Flourifhing. The fame Chronologies affign Yous as the firf Monarch which followed thefe elective Kings, and whofe Son and Race fucceeded to the Crown; fince which Time it has remained hereditary to this Day.

The prefent reigning Monarch of the Houfe of Taicin or Taicou, (as we have already hinted) is the third Tartarian Emperor, whofe Grandfather, after the Death of Zuncbi, the fixteenth and laft Emperor of the Race of Taiminga, which had fwayed the Scepter for the Space of two hundred and feventy fix Years, feized or rather rufhed inso the imperial Throne, after the Defeat and Expulfion of the traiterous Ufurper by Prince OuJangouei, affifted by the Tartarian Forces.
The fame Writers inform us, that in the Reign of the Emperor Xunus, the Tartars made their firft Incurlions into Cbina, but that Prince bravely repulfed them, and fettled the Empire in a quiet State: So that this Event, which happened long before Chritt's Time, was rather an Incurfion, than a War of any Duration. But in the twelfth Century, the Tartars conquered this Empire in the Reign of the laft Emperor of the Houfe of sung, which Family had then reigned four hundred Years: They then entered and feized the Empire, by the traiterous Affiftance of Zingbay, one of the Nobility: For this Traytor, watching his Opportunity, introduced the Tartars during the Emperor's Minority; and they quietly enjoyed the Empire about eighty Years: But in Procefs of Time, the Peace, Eafe, and Plenty in which they wallowed, debauched that warlike Nation to the luxurious, foft, and lazy Way of Jiving of the Cbinefe: Valour and Order were difplac'd, and Reputation vanifhed : The Soldier became leud, and tranfgreffed his Orders with Impunity: And the great Remifsnefs of the Commanders occafioned the greater Mifchief, of Robberies on the Highways, and in the Streets, and Murthers; which Currrent of Crimes running high, Fear of Punifhment produced Confpiracies, extending to whole Battalions, which at firft fculking and difperfing themfelves throughout the whole Empire, rendred all Cbina very dangerous either to live or travel in: Efpecially when they grew ftrong enough to appear in the Field in Troops, and at laft in fmall Armies.

Chap. III.

The Cbinefe tired with this foreign Power, which grew to infupportable Tyranny, as appears by what followed, murmured at it, and raifed Commotions throughout the whole Empire, but none of the Nobility firred in it, notwithftanding which they were delivered from the Tartarian Yoak in the following Manner.
A certain Boy, born in the City of Fajangfu, in the Province of Nanking, that had loft his Parents by the Plague, to efcape that raging Diftemper, as well as through Want of Bread; and in Hopes of bettering his Fortune, left his native Place, and retired to a Pagod, or idolatrous Temple, and put himfelf into the Service of the Bonzi's, which are their Idolatrous Priefts: But they treating him fomewhat feverely, he ran away from them, and became a Herdfman; and in Procefs of Time, being advanced to maturer Years, he lifted himfelf a Soldier amongft the Robbers before-mentioned, which were now grown to a formidable Body: And what contributed to his continual and gradual Advancement amongft them was, that one of their principal Commanders was his Uncle, who finding him acquit himfelf well, took Care to raife him: And becoming himfelf a General, he died fometime after, and was fucceeded by this Nephew: Who had nor been long General before (having encreafed his Forces to his defired fufficient Number, and being affifted by the Cbinefe) he fo expeditioully, vigoroully, and fuccefsfully made War againft the Tartars, that in the Space of feven or eight Years, he obliged them to evacuate the whole Empire of Cbina. He fixed himfelf on the Throne, was proclaimed Emperor, kept his Court at Nanking, and died after having reigned thirty three Years, affuming the Name of Hunguil, i. e. the Excellency of Arms. He was the firt of the Houfe of Mincbao, (or Tamincba) which governed that Empire about two hundred and eighty Years. His Son fucceeded him in the Empire, and removed the Imperial Seat from Nanking to Peking, in order to be nearer the Tartars, upon whom he fell with all his Force, and pierced through all Tartary, deftroying all to which Side foever he turned his victorious Arms, and fparing Nobody, purfuant to the Refolution he had made if poflible to extirpate all the Tartars; but finding none able to oppofe him, he returned to Cbina, where after a long and peaceable Reign he died; and his Defcendants continued in the Throne till in or about the Year 1644 , at which time the Reign of that Family ended in the Emperor Zuncbi, who by his miferable End made Way for the Tartar to afcend the Throne. It is indeed remarkable, that the very, Family which about three hundred Years before had drove out the Weftern, was driven out by the Eaftern Tartars.

Before we enter upon the prefent Government and Revolution of the Empire, we fhall by the Way only hint, that the Tartars in the Reign of the Emperor Vanli, one of the laft of the Taimincbian Race, who died in 1620 , aged 58 , after a Reign of forty eight Years, made an Irruption into Cbina, and were repulfed by him : And that about the Year 1580, in the fame Emperor's Reign, the Chriftian Religion began to be received in Cbina. Francis Xavier attempted firt to travel thither from $\dot{f} a p a n$, in Hopes of promoting the Kingdom of Chrift; but died on his Way in the Ille of Sancbam, a Place dependant on the Province of Canton. Then the Fathers Herrada, Marino Alfaro, and fome Francifans, viz. Martin Egnatio, Rogero, Pafio, Ricci, and other Fathers, undertook this Work with the fame ardent Zeal; but Father Ricci proved the moft fuccefsful of any of them, for having long refided at Macao, having ftudied the Religion, Laws and Cuftoms of that Empire, and being very well verfed in their Language, thefe A complifhments gained him the Efteem of the Emperor and the whole Court, and rendred his Miffion fuccefsful ; he obtained a Grant of buying a Houfe and a Burying-place, as alfo Leave to fertle there, which was the firft Foundation of the fpreading of the Gofpel here. But the Lord's Vineyard at Macao, was once very near an utter Extirpation by a cruel Perfecution, if the Hand of God had not ftopped it by punifhing che Perfecutors.

After the Death of the Emperor Vonil, reigned his Son Taicbon, a valiant Prince, who by raifing a great Army againft the Tartars, that began to be in Motion, difcovered his earneit Defire of heroically attacking them, but his Defign was fruftrated by his fudden Death, afré a Reign only of four Months. He was fucceded by his Son Tbienki, who not in the leaft degenerating from the Valour of his Anceftors, as foon as he was on the Throne, affited by his Allies, beat the Tartars out of Leaotung, in which Province they had made an Irruption and maftered feveral Cities, and after a Reign of about feven Years Duration died in Peace, and was fucceeded by his Brother Zungcbi, a mild negligent Prince, who, fond of Eafe, repofed too great Truft in his Officers, who inftead of a faithful Service repaid his Credulity with Treachery, and after an unfortunate Reign brought their M after to a miferable End, whicls was followed by the Empire's falling into the Hands of a foreign Family.
"The Caufes of the Revolution in Cbina, and the " utter Extinction of the lait Race of Cbirefe Emperors, " befides thofe alledged by our Author, are by feveral "Writers obferved to be : That the Court (or the "Emperor) was plunged in luxurious lazy Eafe; his " only Care being employed how to pals his Days with "the greateft Pleafure, with the beautiful Virgins " which were felected for his Ufe all over the whole " Empire: For the Prince being abfolute, ic was for" bidden to marry any young Women before they were " proffer'd to him. This Courfe has ruined more Courts " than one, it naturally adminiftring Occafions for In"furrections within, and Foreign Invafions, whilft the "Emperors, drowned in ridiculous Pleafures and Di" verfions, never trouble themfelves with the Govern" ment, but entrult it in the Hands of worthlefs "Eunuchs. Others add, that this Prince was allo " very covetous."

The Tartar was driven out of Leaotung and Cbinc by the above-mentioned Emperor Tbienski, and befides made a Tributary to him; but the Sparks of civil Diffention were not fo extinguifhed as to prevent their breaking out into a more raging Flame, which was kindled by the Cbinefe. Governors exorbitantly treating and plundering the Tartars and Tartarian Merchants, and not in the leaft frupling the Practice of any Manner of Injuftice againft them, in order to exafperate that Nation, and oblige themfelves with the Opportunity of fifhing in troubled Water. The Mer chants and others that were abufed by the Governors, petitioned againft them ; but the Emperor and the Court turned a deaf Ear to all their Complaints. The Tartarian King, in Refentment armed himfelf, and at the Head of his Army difpatched a Letter to the Erimperor, before he had Recourfe to coercive Means, or backed his Words with his Sword. He laid before him the unjuft and partial Practices of his Governors and Officers; and fet forth, that all the Remonftrances of his Merchants were flighed at Court ; defiring the Emperor would be pleafed to punifh his Governors and exorbitant Robbers, and provide againft fuch pernicious and corrupt Practices for the Future, and excufe him his annual Tribute, in order to reimburfe him the Military Expences he had been at; upon Refufal of which he declared, that he fhould be obliged to take fuch Meafures as the continual Complaints of the Violence and Injuftice daily exercifed upon his Subjects fhould oblige him to. The Emperor, inftead of examining into this Affair, utterly difcharges himfelf of it, and leaves it to his Council; who, keeping him blind, play'd their Game according to their own Pleafure, and without any great Oppofition fuffer'd the Tartar to feize Part of Leaotung. After the Conqueft of which, he endeavour'd to fubdue the whole Province, but was interrupted in his Career by a too vigorous Refiftance; and the War betwixt the two Nations lafted a long Time, Victory fometimes inclining to one, and at other Times to the other Side: But at laft the Strife ended in a Peace, in Favour of the Tartar, the Em. peror being obliged to leave him in the quiet Enjoy-
ment of his Conquefts; by reafon that the Robbers and feveral of the Nobility had made fuch a formidable Infurrection, that the Emperor feemed to apprehend more Dinger from them than from the Tartars themfelves: Which was indeed afterwards confirmed by the Event; for the Robber Licoung, after taking feveral Cities and whole Provinces, grew fo infolent as to prefume to attack even the Emperor himfelf in Peking his Metropolis, which he knew to be empty of Forces, or at leaft, that thofe there were commanded by thofe who would betray their Prince. The Emperor finding himfelf betray'd on one Hand, and deferted on the other, being unwilling to fall into the Robber's Hands alive, after he had killed his Daughter with his Sword, ended his one miferable Life with a Rope.

The Conqueror attempted to fix himfelf on the Throne; but Prince Oufangouei, who commanded the Army at the Great Wall, and kept a Watchful Eye on the Tartar, defigning either to fall on him with his great Force, or engage him on his Side, gained over to his Party the Leaotungers, and all thofe who were either banifhed, or had fled to that Province; but though they were added to his Army, he did not think himfelf ftrong enough to deal with the almoft infinite Numbers, and confequently fuperior. Force of the Ufurper: Wherefore he, by a Treaty with TJonte or Zunte the Tartarian King, obliged him to join his Forces againft the Ufurper, in order to revenge the Death of his Father, whom the Robber had cruelly murthered: He fucceeded in his Defign, and after a bloody Fight purfued him ; and it is at prefent utterly unknown where Licoung perifhed. During this Purfuit of the Robber, TTonte enters the Empire, in order to fupport Prince Oufangouei on Occafion, to clear the Empire of Licoung's Followers, and difperfe the Confpirators. He advanced to Peking, where finding the Coaft clear, and the Throne empty, he afcends it, and, affitted by his Tartarian Forces, caufed the Cbinefe (whofe Hearts he had already won by his engaging Deportment) to proclaim him their Emperor, without making any orher Alterations in the Government, than putting it in the Hands of an equal Number of Tartars and Cbinefe, and introducing the Tartarian Habit and Hair, to which he had in a Sort inured and engaged the Cbinefe by dreffing them in that Manner, by a martial Stratagem, in order to deceive the Enemy, and the eafier to beat Licoung.
"What Nieuboff relates of this Prince is very re" markable, and conduces to the Illuftration of this "Story. This Prince (faith he) feemed naturally en"dowed with all Manner of Perfections, and if he " had any vicious Inclinations, he very artuully cor"rected them by Practice. Before he afcended the "Throne, he gave plain Indications of his Excel" lencies. In his tender Age his Father fent him in "Cbinefo Habit into Cbina, under the Direction and "Care of fome of his Counfellors. He there learned " not only their Language, which his apt Capacity " foon maftered, but became fo tinctured with their " politer Manners and Morals, that he feemed utterly " to have forgotten the Tartarian Roughnefs and Bar"barity. As foon as he was got into full Poffeffion of "the Throne, he changed the rigid Manner of go"verning into a milder, knowing very well that the "former would prevent his gaining his Ends on the "Cbinefe. He fo eftablifhed himfelf on his new "Throne, rather by his Tendernefs and good Man" ners than by Arms, which endeared the Hearts of " his Subjects to him: He careffed the Cbinefe that
"came over to him, as much as his own Countrymen; "thofe he took Prifoners, if they pleafed, he enter"tained in his Service, and fuffer'd thofe who were "unwilling, to depart, difmifing them with obliging "Expreffions and a fafe Conduct; thus he won their "Hearts, and tender'd a kind Refuge and Protection
"to the Exiles, or thofe who had before fled out of
"their Country; and they indeed were very affiltant
"to him in gaining the Empire. There were alfo
or fome amongtt them, which had diftinguifhed them-
"Felves in his Service; thefe he rewarded with Places "or Prefents that far exceeded their Expectations."
After this, Oufangouei returning from the Purfuit of his Enemies, finds the Tartar upon the Throne, and, purfuant to the Treaty concluded betwixt them, the Empire being now in Peace, and the Rebel totally defeated, defired him to return to Tartary, tendering him the Prefents promifed for his Affiftance at the Beginning of the War. To this the Emperor putting on an obliging Air, anfwer'd, that it was yet too foon, fince the Rebel was not fo enfeebled, but that hearing of his Departure to Tartary, he might pofibly attempt a frefh Influrrection, and carry all before him ; which he fhould not be able to prevent, as not being at Hand to help them; wherefore it was much better firft to deftroy utterly the Rebel and all his Adherents, and revenge on him all the Evils which he had drawn on his Kingdom as well as the Cbinefe Empire; and withal, to reduce them to fo low a Condition, that it fhould be impoffible for them to make any new Attempts. The Prince either was or pretended to be fatisfied with this Anfwer, and applied himfelf to the Deftruction of the Rebels, which he fo warmly purfued, that he did not leave the fmalleft Body of them together, but reflored the Peace of Cbina.

The Emperor TYonte was fcarce well fettled on his Throne before he died, in the Year 1644. He was the firft of the Race of Taicim, who annexed the Imperial Crown of Cbina to his Royal one; and govern'd both his own Nation called Mantcheouns and the Cbinefe, thereby tracing out a Way for the greater Glory of his Defcendants.
He left a Son named Cbunchi, who was but fix Years of Age, to fucceed to his Crown, and committed the Care of his Perfon and Education, as well as the Government of the Empire, to his Brother Amavang ; who was as careful in the farther Subjection of the refractory Provinces on one Side, as Oufangouei was in the Purfuit of Licoung, in order to take his juft Revenge of him on the other: And we are accordingly told by fome, that in an Engagement Oufangouei himfelf cut Licoung to-pieces, in Sacrifice to the Manes of his Father.

Amarang, to whom was entrufted the fupreme Direction and Adminiftration of the War and Empire, acquitted himfelf with fo much Honour in all his Undertakings, that the Reduction and Maintainance of the Empire is to be alcribed to him as much as his Brother: He gave continual Proofs of his Wirdom and Prudence in the Direction of the State, and Forbearance of his Enemies: As he did alfo of his Valour and amazing Vigilance, in Beating of Thoufands of his Enemies; but he gave yet greater Evidences of the true Senfe of the moft exalted Honour which animated his tlevated Soul, utterly untainted with any. finifter Ends, or private Intereft, in furrendring as willingly and freely the Empire to the young Prince as foon as ever he came of Age, as he had reduced, governed and preferved it to that time. This Action alone is fufficiently famous, becaufe there are very few parallel Examples can be produced.

Cbuncbi's Reign was but fhort, for he died in 1662, and after his Entry upon the Goverment, met with very few other Difficulties than thofe common to the Exercife of Sovereign Jurifdiction, and the Care of the State. In his Intervals of Relaxation he difcovered a Atrong Propenfity to Arts and Sciences, particularly to thole whicli were Mathematical : It was this that engaged him to promote Father Adam Schaal to be Prefident of that Tribunal, and graced him with his Favour, notwithftanding that he was a Stranger, and a Chriftian; this gave Encouragement to hope that the Chriftian Religion would encreafe; for when Princes begin to beftow their Favours on its Teachers, it opens a Door to their ingratiating themfelves not only with the Commonalty, but with the Nobility themfelves.
" Le Comte faith, that the Emperor Cbuncbi came in "Perfon to vifit Father Adam above twenty times within "the Space of two Years, that he granted him Leave
${ }^{\text {a }}$ to build two Churches in Peking, and confented to ${ }^{56}$ every Thing that might contribute either to the Eftasi blifhment or Propagation of the Faith; infomuch ${ }^{6 s}$ that prodigious Advances would have been made, if ss a too violent Paffion had not made an Alteration, by ${ }^{6}$ d depriving us of this Prince, at a Juncture when we ${ }^{56}$ moft wanted his Protection. He died, faith he, of ${ }^{66}$ Grief for the Death of one of his Concubines, who ${ }^{66}$ fo ftrongly enclined him to the Service of the falle ${ }^{66}$ Gods, that he would not hear of any other ; upon \&s which followed a fevere Perfecution, the Ground of is which was laid by this Miftrefs. Nor did fhe ftrike "s at the Cbriftians alone, but her Refentment was alfo so fatal to the Bonzi's, who narrowly efcaped utter De${ }^{* 6}$ Itruction by her Means.

His Son Cambi, or Cancbi, which fignifies Peaceable, fucceeded him, being but eight Years of Age when his Father died. This is the prefent Emperor, whole Reign is crowned with fuch univerfal Elogies. He is a Lover of Arts and Sciences, and hath indulged to the Chriftians fuch great Immunities all over China, that it is to be hoped this mighty Empire, may in Time, through the divine Grace, be wrought upon entirely to quit their erroneous Pagan Doctrine, and embrace the faving Faith of Jefus Chrift; which the good God grant.

His Father faw in his Infancy his excellent Endowments, and therefore paffing by all his elder Brothers, declared him his Succeffor in the Imperial Throne. During his Minority, the Chriftian Church was in a fuffering Condition, the four Regents being bitterly incenfed and prejudic'd againft that holy Religion ; and then the Chriftians were obliged to try their Patience. Father Adam Schaal was thrown into Chains, and condemned to Death ; but mercifully delivered by the won. derful Hand of God; and he died not long after, full of Years and Honour; whillt his Enemies fell into Difgrace, and fome of them being caught in their own Traps, died Chameful Deaths. After his Deceafe Father Verbieft came into the Favour of this prefent Emperor, and held the fame Place in his Grace to his laft Hour, as well as that of Prefident in the Mathematicks. And after his Death Father Grimaldi fucceeded in his Stead, and to the Favour of this Prince, whofe Praifes are below his real Merit.

For if thofe Perfons may be believed, which fpeak their own Experience, and nothing but what they are Eye and Ear-witneffes of, he is a Monarch of whom it is much better to be filent, than to fay but little. His Virtues are too great to be comprehended in a narrow Compals, and my Pen too mean to do him or them Juftice. Wherefore I fhall by my Silence excufe myjelf from this too difficult Task, and only repeat and fum up the Lives of the Princes of his Race, that have ruled the Empire. His Grandfather T fonte fcarce enjoyed his new Acquifition fo long as was requifite for him to travel through it, and died in 1644 , leaving to fucceed him Cbuncbi, a Prince of fix Years of Age, but great Endowments, who died in 1662 , after that he had declared the prefent Emperor his Heir, the greatelt Action that he ever did, or could do. He was eight Years of Age at the time of his Father's Deceafe. Cancbi, or Peaceable, is his Name, who now quietly enjoys and rules his Empire, and is equally honoured, feared, and loved by his Subjects. In the Beginning of his Reign he ftruggled with feveral dangerous and rough Seas, which moft young Princes are obliged to break through before they reach a fafe Harbour. Shortly after, and when he had fcarce reached the Age of ewenty, Prince Oufangouei rofe up in Arms and carried on a vigorous War againft him ; and Cancbi being by Defcent a Tartar, and on the other Side Oufangouei a Cbinefe, and confequently more agreeable to the Populace, they the more blindly followed him, and fuch Numbers crouded to join him, that it was not a little furprizing, that having already one half of the Empire, he did not carry the Remainder. But the young Emperor, by his extraordinary Qualifications, fo engaged the Hearts of his Subjects, that he at laft concluded an honourable Peace with this Prince, which held feveral

Vo i. II. $\mathrm{N}^{\circ}{ }^{1} 7_{2}$.

Years; and after his Death the Emperor was wife enough to allure his Sons to Court, and make a pro per Ufe of their Weaknefs to his own Advantage; and thus by one Means or other he again fubjected all Parts of this Empire under one Head, and is now their fole Emperor. The Kings of Ganton and Fokien alfo took Advantage of Oufangouei's Infurrection, and began to make War againft him ; but he knew how to draw off their Forces, and to raife Difcord amongtt thefe three Princes, (to which Coxinga may be added as à fourth) to divide them, and make them help to pull down each other; whereas poffibly if they had all drawn one Way, how brave a Soldier, and how ac. complifhed a Statefman foever he is, he had been de feated, dethroned and expelled. Thus by his wife Conduct, and great good Fortune, gaining of Time, and ourliving his Enemies, he hath poffeffed himfelf of their Kingdoms. After the Death of their Fathers, alluring the young Princes to him, or fubduing them as ill Neighbours, he clear'd his Field of all the Seed that might infeft it, and thereby reaped a full Harveft of Obedience

Having reduced his Empire to a peaceable State, he applied himfelf to the perfect Regulation of it; to which End he choie the beft Men for his Minifters and Officers, honouring thofe that did well, and punifhing thofe who misbehaved. He fhewed them, by his own Example, how great his Averfion was to Idleners, and how well-difpofed he was to Induftry and Action. After the difpatching of State-affairs, he employs himfelf either in Hunting, Fifhing, or the Study of the Sciences; for being a learned Prince, he protects and favours thofe who excel in the learned Arts, whether his Subjects or Strangers, preferring them to the higheft Dignities, and not difdaining to make ufe of the Europeans in the moft important Services, and to beftow on them the greateft Pofts; nor is he afhamed to learn from them Aftronomy, and other Mathematical Arts; Anatomy, Medicine, and Natural Philofophy; in all which the Jefuits are his Inftructors, from whom he daily condefcends to receive Leffons; Grimaldi, Gerbillon, and Pereira, are three of that Society whom he has made ufe of in Embaffies. The firf of them we was fent alone to $M u \int$ covy in 1686, and the two latter were added to the great Embafly which proved fo fuccefsful by their Negociations in 1689, for the adjufting all Differences betwixt the Great Czar and this Emperor at Nogovium or Nipcbou. 'The Fathers Scbaal, Verbieft, and fome of the above-mentioned, he hath diftinguifhed by the honourable Charge of Prefidents of Tribunals, and the Dignity of Mandaryns, and himfelf as well as the Prince his Son, always heard them difcourfing of Arts and Sciences with the utmoft Pleafure.

This mighty Emperor is not content perfonally to excel in Arts and Sciences, but endeavours to implant them in his Children, efpecially Hoangtaife the Prince his Heir apparent, whom he himfelf particularly inftructs. And the Education of Children, and reveren. cing their Parents, being one of the fundamental poli tical Maxims of the Cbinefe, this great Prince pleafeth himfelf with it; and the Son difcovers fuch pregnant Signs of a good Genius, that far from dege nerating from his illuftrious Father, he gives juft Reafon to hope that he will make as great Advances in Wir dom as his fo great Predeceffor.

Whence it is, that if it fhould pleafe God, that the Cbriftian Religion fhould ever take Root in the Hearts of this great Father and Son, it might reafonably be hoped that Cbina would foon fubmit to the Obedience of the Crofs. The Learning of the Jefuits furnimes them with an Opportunity to endear themfelves not only to thefe two Princes, but likewife feveral others, who by the Refpect paid to thefe Learned Men, grow into a favourable Opinion not only of their Perfons, but of their Doetrines, which is heightened by their Abilities manifefted in both the former Mufcovite Embafies, which was the Foundation of the favourable Edict promulgated in 1691 , (about three Years before the writing of this) relating to the Cbriftian Religion; by which a Door is opened without Diftinction to alt Perfons of all

Degrees,

Degrees, to embrace that holy Faith. And what enhances the Value of this Favour is, that if Cbino could be converted, with the Bleffing of God, we may unqueftionably expect the Converfion of all India, and all the more remote and diftant Nations; of which Cbina being the Head, the leffer Members, as Politicians obferve, would of Courfe follow; to which the L.ord give his Bleffing.

In this Manner our Author concludes his Work, written in the true Patriot Spirit of a Cbinefe, and with all the Piety of a Chriftian, fhowing himfelf equally concerned for the Profperity of his Country, and for the Propagation of the Gofpel in his Country, which is a new Argument in Favour of his Writings, fince publick Spirit, and religious Zeal, without Views of Intereft, which clofely confidered, will be found to be very near the fame Thing, are the true Springs of the moft noble and heroic Conduct, as well as the moft candid and ingenuous Writings; and though thefe may be fometimes diffembled, yet to do this, fo as to deceive, requires a much greater Meafure of Arr, than our Author feems, from his Book, to have been endowed with by Nacure, or to have acquired by Practice. It remains to compleat our Author's View, and the Defign of this Section, to continue this Hiftory as low as we can, that the Reader may be acquainted, as near as poffible, with the Cbinefe Hiftory down to the prefent Times.

This great Emperor Cangbi reigned about twenty feven Years after the Conclufion of our Author's Hiftory, and in that Space of Time, had feveral Difputes which were terminated by as many Negotiations with the late Czar, Peter the Great. The Deffgns of thefe two mighty Monarchs were in a Manner oppofite; the Cbinefe Emperor was defirous of preventing the Encroachments of the Ruflans upon his Territories, and on the other Hand the Czar propofed to himfelf the eftablifhing a regular Commerce in Cbina. It was in order to accomplifh this, that by a new Treaty he regulated the Confines of the two Empires, upon-Condition of a free Paffage for the Caravans from Rufla to Peking, which fubfifted, tho' not without fome Interruptions, during the Reign of Canghi, who, directly contrary to the Cbinefe Maxims, admitted a Ruflan Refident to remain conttantly at Peking. The Sieur de Lange who had that Character, has publifhed his Memoirs, but they contain nothing that is very material ; on the contrary, they confift chiefly of his Difputes with the Emperor's Minifters, who on the one Hand diniked the Trade by Caravans upon the old Principle of defpifing all foreign Trade, which produced a Balance in Favour of Fo. reigners, and on the other were in a Manner diftracted at having a Ruflan Minifter in their Capital, who fometimes had Audiences of the Emperor, whofe Notions with Refpect to thefe Matters were not at all agreeable to his Minifters, that Monarch forefeeing, that without fome Conceffions in Favour of the Ruffan Trade, he fhould fometime or other be expofed to a War with a Prince, capable of giving him infinitely more Trouble than the reft of his Neighbours; of which however the Cbinefe Mandaryns, wedded to their old Maxims, and prefuming on the irrefiftable Power of their Armies, had not the leaft Conception.

All this Time the Emperor of Cbina, was engaged in an obitinate and bloody War with the Weftern Tartars, which was ended by a compleat Victory gained in the Year 1720. in Confequence of which the far extended Country of Thibet, and all its Inhabitants fubmitted to and acknowledged him for their Sovereign, by which Peace was eftablifhed on that Side. This was a Thing of prodigious Confequence to the Empire, as well as an Event remarkably glorious for the reigning Monarch. In the fucceeding Year, the Cbinefe Inhabitants of the Illand of Formofa, refolved to make a brifk Effort, in order to fhake off the Yoke of Tartars, in Hopes that lying at a Dittance, they might be able to preferve their Independency, and by the Acceffion of their Countrymen from different Provinces, become powerful enough to eftablifh themfelves in the Dominion of that and the adjacent Ines. In Confequence of this wild and ill concerted Scheme, they made a fudden Infurrection, murdered all the Mandaryns, and drove the Imperial

Troops out of moft of the Cities in that Inand. When the News of this Revolt was brought to Peking, the Miniftry would have perfuaded the Emperor; that the People had been excited to it by the Dutch, and this with a View to irritate him againtt Foreigners, but he was too wife to entertain any fuch Notions, and immediately ordered Part of the Forces in the Provinces oppofite to Formofa to be tranfported chither, which in a very fhort Space of Time extinguifhed the Rebellion, by extirpating the greatelt Part of thofe who had any Concern in it, and forcing the reft to fly for Shelter in the Mountains, where they lived by Rapine and Plunder, till by Degrees they were rooted out as Robbers and Thieves ; infomuch that this, ilike all Rebellions, that are fupprefled, ferved only to fix the Government, they intended to throw off, more ftrongly. The Year after the Suppref fion of this Rebellion, the Emperor being at his Country Palace, mentioned by his Excellency Mr. Ysorant Ides, and going according to his ufual Cuftom to hunt early in the Morning in a very rigorous Winter, he tound himfelf fuddenly ftruck with a Chilnefs, which difabled him from continuing on Horfeback, fo that returning to his Palace, he took his Bed immediately; and his Phyficians declaring that his Blood was coagulated, and that there was no Hopes of his Life, he ordered his principal Minifters to attend him, and appointed his fourth Son to be his Succeffor in the Government, foon after which he expired. This happened on the gth of September 1722. according to our Stile, about eight in the Morning, in the feventieth Year of his Age, and the next Day his Corps was tranfporred to Peking.

The new Emperor, who was about forty five Years of Age, took the Name of Yong Tcbing, which fignifies, fettled Peace, and from the Day of his Acceffion, dif covered not only great Abilities, but a very fteady and refolute Temper ; he found the Imperial Fanily very numerous, and many of his Brethren were poffefled of the firt Employments in the Government, in which relying on the paternal Tendernefs of the late Emperor, they had not behaved with fo much Circumfpection as they ought, more efpecially the ninth Brother, who had the Direction of Part of the Publick Revenues, him the Emperor called to a fevere Account, and not fatisfied with his reftoring Part of what he had embezzled, he caufed him to be banifhed into Tartary, where he died not long after. Another of his Brothers, who was at the Head of the Army, had likewife the Misfortune to incur his Difpleafure, was deprived of his Poft, and otherwife punifhed. Thefe Acts of Juftice, his conftant Application to Bufinefs, and his great Tendernefs to his Subjects in general, gained him univerfal Reputation, and procured him the ftricteft Obedience. In his Father's Life-time he had never fhewn any Liking to, or Confidence in the Miffionaries, but on the contrary, behaved towards them with great Coldnefs and Referve, and yet the Jefuirs themfelves confefs, he was as great a Lover of Learning as his Father, and as much inclined to protect and promote the Sciences as any of his Predeceffors.
There is a great Probability, that the Reafon of his Diflike to the Chriftian Fathers was owing to their Influence over the deceafed Monarch, and of his obferving that they made Ufe of that Influence, not only in regard to publick, but even to Family Affairs, and a Jealoufy perhaps they were averfe to, and had empl ,yed their Intrigues for preventing his Succeffion. We find this afferted by one who was in the Train of a Rufian Minifter at his Court, and it is the more probable, becaufe an Italian Monk, of great Simplicity of Manners, of exemplary Piety, and who amufed himfelf with Painting, continued ftill in his good Graces, and was not removed out of the Palace. Nay, Father Kegler, who was Prefident of the Tribunal of Mathematicks, enjoyed alfo his good Graces, and was treated not only with all the Refpect due to his Character, but even promoted to a fuperior Rank; which fhews that he diftinguifhed between Religion and Manners, and knew how to fet a juft Value upon worthy Men, notwithflanding they were of a different Religion.

What-

Whatever the Caufe might be of his Diftafte to the Jefuits, it was not long betore it became fatal to the Chriftians in general ; and yet this did not immediately fpring from his own Will and Pleafure, but from a Memorial prefented to him by one of his chief Minitters, fetting forth abundance of Enormities of which thefe Men had been guilty, more efpecially in the ill Ufe they made of their Favour with the late Emperor, and of the Influence they had over their Converts, which they reprefented as highly prejudicial to the State, and dangerous too, if not deftructive of their ancient Conftitution. This Memorial was followed by feveral others of the fame Nature, and not long after by a much warmer Paper, tranfmitted by the Viceroy of Fokien, containing his Reafons for expelling the Miffionaries out of that Province; and concluding with a Requeft, that the Emperor would iffue his Orders for exiling them out of all the reft of the Provinces, and fend them either to Court or to Macao.

This laft Memorial was referred to the Tribunal of Rites, and by their Advice the Prayer of the Petition was complied with, notwithftanding all the Endeavours the Jefuits could ufe, and the Interceffion of their Friends and Patrons, who in this unlucky Situation could do them no farther Service than to procure a fmall Alteration in this Meafure, which was to fubftitute Canton inftead of Macao ; and accordingly all the Miffionaries throughout the Provinces were obliged to abandon their refpective Places of Refidence, and were either fent to the laft mentioned City, or to Peking. Not long after this a Profecution was commenced againft a Prince of the Blood and all his Family, purely on the Score of their being Chriftians, which notwithftanding it was very numerous, and defcended from an elder Brother of the Founder of the Empire, was carried fo high, that by the fupreme Tribunal of the Empire they were condemned to fuffer Death; which however the Emperor was pleafed to commute, and fent them inco perpetual Exile, as fome fay, or as others affert, directed them to be kept Prifoners during Life.

One would imagine from thefe Accounts, that the Emperor Kong Tcbing was of a very fevere Difpofition, and had either conceived fome frightful Idea of the Chriftian Religion, or thought he had good Grounds to fecure himfelf againft any Attempts that might be made to the Prejudice of his Authority by fome of his own Family. Yet nothing of this Kind ever appeared, for with refpect to the Chriftians that made ufe of Cbinefe Priefts, and performed their divine Worfhip without Oftentation, he allowed them much the fame Kind of Indulgence they had under his Predeceffors; fo that it feems it was not the Precepts of the Jefuits, at leaft in a Religious Senfe, that he feared, but their Dominion over Confciences, their fecret Intrigues and hidden Practices. As to the Imperial Family, he behaved towards fuch as were in a private Condition, with all the Refpect and Tendernefs due to his Relations; but in regard to fuch as were in publick Stations, he expected from them as clear and as candid Accounts as from others in the like Employments, and if thefe were wanting, he punifhed them without any Refpect to their being of his Blood, which he confidered only as an Obligation on them to be more circumfpect in the Difcharge of their Duty. An Inftance there was which put the Rectitude of his Behaviour entirely out of Difpute. The next Brother to him had been thought of tor the Succeffion, being a Prince of great Wifdom and Prudence, and he was fet afide only from his affecting a fedentary Life. Yet the Emperor his Father admitted him into his Cabinet Council, took his Opinion upon all Matters of Importance, and very feldom or never acted contrary to his Advice. This Brother, when Yong Tcbing came to the Throne, he made the Partner of his Cares and of his Power; he did nothing but according to his Counfels, and was fo conftant in this Refpect, that he feemed rather his Brother's Minifter than his Prince.

When he died, which was in the Month of June, 1730, Tong Tibing, according to the Cuftom of the Country, thewed his Reverence and Efteem for the Deceafed, by the Solemnity of his Funeral, and the Length
of the Mourning, both of which rather fuited the Coms panion of his Throne than the Prince of his Blood. After the Death of this Prince, the whole Weight of Affairs devolved upon the Emperor, and he attended to them with Patience beyond Example, and behaved, whenever he gave Audience, with an Affability beyond the Reach of Defcription. The Jefuits at Peking, who would have been glad to have difcovered any Miftake in his Conduet, or Error in his Policy, very freely acknowledge this, and that inttead of indulging his Eafe, or purfuing his Pleafures, he was temperate in the higheft Degree, and dedicated more Hours to Bufinefs than almoft any Man in his Dominions. He made ufe of his Revenues purely for the publick Service, and in Cafe of Dearths, or any other publick Calamity, he was fure to prevent any Applications for Relief by an early and adequate Affiftance. He gave an extraordinary Inftance of this paternal Affection for his Subjects on the happening of an Earchquake, November 19, 1731, by whioh a great Part of the Imperial City of Peking was demolifhed, and upwards of a thoufand People buried in the Ruins. He was at the Time it happened at one of his Palaces in the Country, not far from that City, and was taking the Air in a Boat upon one of the Canals, from whence he had the Mortification to fee the greateft Part of the Buildings, which had coft his Predeceffors immenfe Sums, fubverted in an Inftant. Upon this he immediately went a-fhore, proftrated himfelf upon the Ground, implored the Mercy of the Great God of Heaven and Earth for his Fellow Creatures, and befought him, if that Punifhment was due to any Crimes of his, that he might rather be removed, and become the Object of the Divine Vengeance, than that it fhould fall upon an innocent People, criminal only from their being his Subjects.

As foon as the Danger was over, forgetting the Ruin of his Palace, he appointed Commiffioners to enquire into the Loffes which the People of Peking had fuftained, relieved the Families of thofe who were killed, and iffued a prodigious Sum of Money for repairing the Houfes, and rebuilding the publick Edifices that had been thrown down, and which is a very ftrong Proof of his having no Pique or Prejudice to the Chriftian Religion; being informed that the great Church of the Jefuits was in a Manner totally ruined, he fent for the Miffionaries, treated them with great Humanity and Tendernefs ar their Audience, recommended to them the Repair of their Church as foon as poffible, and made them a Prefent of one thoufand Taels in Gold, which amounts to 666 \%. of our Money, for that Purpofe.

We need not wonder that a Monarch, who reigned fo worthily, fhould be beloved anid revered, as well as obeyed with the utmoft Submiffion by all his People; and it is univerfally allowed, that the Cbinefe fhewed their Duty to this Prince in a Manner fuitable to the Obligations which he daily conferred upon them, and teftified upon all Occafions as fincere and tender Affection for him, as if he had been their natural Parent. We have no certain Accounts fince thefe, except only the Miffortune that befel the Chriftians in 1732, when the Miffionaries that had been hitherio allowed to remain at Canion were of a fudden ordered to retire to Macao. They had this Notice given them on the 6th of Auguf, and on the 9 th they were embarked, to the Number of thirty Perfons, and thofe who accompanied the Mif fonaries, were treated with the utmoft Indignity; the only Reafon affigned was, becaufe, contrary to the Emperor's Orders, they had endeavoured to propagate the Chriftian Doetrine. But various Difputes having arifen between the Dominicans and the $\mathcal{F}$ efuits refiding in Cbina, and feveral Books having been lately printed in Popith Countries relating to thefe Difputes, we may from thence in fome Meafure gather what have been the Motives to this new Perfecution.
In order to fet a Matter fo obfcure, in a Light as diftinct as may be, it will be, in the firft Place, right to obferve, that it is nor abfolutely certain, whether is can be, with greater Propriety afferted, that the Fefuits have taught the Cbinefe a new Religion, than that the Cbinefe have taught them one ; it is very reafonable to believe,
that the firf Miffionaries, even of this Order, fludied the Cbinefe Literature very innocently, and only with a View to enable themifelves to preach the Faith of Chrift more effectually. But by Degrees, it feems, they have taken fuch a Liking to the Cbinefe Philofophy, and the Cbinefe Manners, that they indulged their Difciples in Practices, which they file idle Ceremonies, but which the Dominicans, who feem to have no farther View than barely doing their Duty, confider as rank Idolatry. This has occafioned a long and warm Controverfy at Rome, which has been at laft decided againft the $\mathcal{F} e-$ fuits, who notwithftanding proceed ftill in their own Way, without paying that Refpect to the Roman See, of which they boaft fo much in Europe.

In a Word, the Fejuits finding that the Study of the Cbinefe Learning was the high Road to Preferment in that Country, and that thefe Ceremonies were neceffary to the acquiring it, could not find in their Hearts to block up either their own or their Difciples Way to Power, to Credit, and Court Intereft. Their Politicks, to be fure, were right ; but the Quefton is, Whether they were confiftent with their Religious Interefts; or whether it would not have been full as well for Chriftianity, if they had been more folicitous about teaching the People the Path to Heaven, and lefs careful about their Succefs at Court? Certain it is, that the great Influence this Order always have over the temporal Concerns of thofe to whom they become fpiritual Guides, is fufficient to awake Attention, and even to alarm any Government, and more efpecially a Government fo watchful and fufpicious as that of the Cbinefe. Their particular Applications to Women alfo, and that Itch which they too frequently difcover of gaining Wealth to the Church, cannot but be prejudicial to them in the Opinion of all fenfible People, more efpecially when they find it fo apparently repugnant to the Principles of that Doctrine they pretend to teach.

We may be allow'd alfo to obferve, that the Propenfity of thefe Fathers to a Relaxation in Morals in Favour of thofe who are intirely at their Difpofal, is another unlucky Circumftance in Regard to the Propagation of the Gofpel, which has always prevailed moft, where Men's Lives have been ftrictly agreeable to its Precepts, and where the Converts to the Faith have fhewn themfelves rather folicitous of obtaining the Bleflings of another Life, than the Conveniencies of this. At leaft two Things are very certain; one, that, by purfuing their particular Plan of promoting a temporal as well as fpiritual Intereft, that Perfecution was brought on in Fapan, which extinguifhed Chriftianity, and therefore a like Confequence may be juftly feared in Cbina. The other is, that in Paraguay the Jefuits have actually eftablifhed, under Colour of promoting the fpiritual Intereft of the Natives, a temporal Dominion fo abfolutely independent of the Crown of Spain, that it is very doubtful whether the People have the leaft Notion of their being his Catholick Majefty's Subjects. Now whatever Motives that Monarch may have to wink at this Behaviour of the Jefuits, and to fuffer them to maintain fuch a diftinct Kind of Government in America, it cannot be conceived, that the Cbinese Emperors will ever enter into any fuch Notions of falfe Policy, or permit the Obedience of their Subjects to be withdrawn in this World, under Colour of confulting their Happinefs in the next.

Thefe Hints will very probably lead the Reader to the Knowledge of the true Caules of the fudden Change that has happened in the Condition of the Cbinefe Chriftians, and will account for a Perfecution, by a Monarch, who even thofe whom he thus perfecutes, acknowledge to be a Prince of great Equity and Moderation, and neither an Enthufiaft nor a Bigot.

To feak impartially, the Jefuits themfelves do not much diffemble thefe Things in their Memoirs. We fee throughout, that they are charmed with their Court Life at Peking, the Refpect fhewn them by, and their Influence over the Emperor, the Titles with which they are honoured, the great Employments to which they are advanced, their living within the Walls of the Palace, and being admitted to the Imperial Prefence, at the

Seafons, when fo great a Monatch is moft difengaged, the Preceptors of his Studies, the Companions of his literary Amufements, the Perfons (who as Foreigners) are chiefly called upon to fill up the Vacancies in his leifure Converfations. All thefe Particulars they relate at large, with a long Train of Circumftances, and in Terms which moft evidently fhew their Senfibility with Regard to the Things which they relate. So that on the whole, we cannot help feeing that all the loud Boafts of the Popinh Writers, as to this Miffion of the Jefuits, are built upon a very fandy Foundation, and that the Converfions they make are very precarious Things, refembling rather the Gaining Men over to a Faction, than reconciling them to a new Religion, and confequently tending to awaken the Sufpicioris and Jealoufies of the moft dark, fubtle, and defigning Pcople on the whole Earth, except it may be-the Jefuits themfelves,

As it is impoffible the Gofpel Doctrines fhould be effectually fpread by thefe Miffionaries, who are fo much taken with the Kingdom of this World, fo it is not at all likely, that the Cbinefe Trade will ever become beneficial to this Part of the World, till it falls under fome new Regulation. In Reality, Nobody trades there upon a free or equal Footing, but in a fubmiffive flavifh Manner, by the Grace and Favour, as it were, of the Emperor, and upon fuch Terms precifely as he is pleafed to prefcribe; by which fuch Advantages are fecured to his Subjects, that the Profits of a Cbina Voyage refult entirely from the Sale of the Goods returned, and confequently are gained, by Europeans from Europeans; a very confiderable Balance on each Caryo being in the firft Place left behind in Cbina. Thefe are plain and unqueftionable Facts, and therefore deferve to be maturely weighed, and thoroughly confidered, by fuch as look upon Commerce as a Thing of the utmoft Importance. If the Dutch had remained Mafters of Formofa, or it we had continued our Factory at Cbufan, Things might have changed their Face, and the Trade to thefe Countries been carried on in a more advantageous Manner.

As it ftands at prefent, I will venture to hazard a Thought of my own, which I defire may not be defpifed, till the Arguments I offer in Support of it are clearly refuted. It is this, I am apprehenfive that while we are contending about the Balance of Power, and facrificing each others Trade to a Spirit of mutual Jealoufy, Trade itfelf will remove to the North; and when it is too late we fhall perceive, that not only the French and Spaniards, but the Englifb and Dutch, have been doing the Bufinefs of the Nations bordering upon the Baltick, and putting it in their Power to become rich and potent at our Expence. For to me, it is a Thing paft all Doubt, that if the Sreedes had not an actual and immediate Benefit accruing to them annually from the Trade with Cbina, they would not carry it on, fince Sroeden is a Country that cannot afford to export great Quantities of Bullion, as all the other Nations engaged in this Trade actually do ; and if by the bare vending their own Manufactures, they can make this Trade turn to Account, it muft be vifible to all who have a true Infight into Commerce, that fooner or later they will become entire Mafters of this Branch of Traffick, or at leaft, whatever Share we have in it, muft be a dead Weight upon us, as furnifhing the Inftruments of Luxury only in Exchange for our Coin; and when once this comes to be the Cafe, we may pleafe ourfelves with the Thoughts of the Cbina Trade, but confidered in a national Light, it would be better for us that we had none.
There is nothing more common, than for fuch as are actually concerned in Commerce, to fmile at and defpife Speculations upon that Subject; but I believe it would on due Search be found, that though Companies of Merchants and private Traders may be enriched by purfuing their own Schemes, and contriving to make the Management of them an impenetrable Myttery; yet with Refpect to National Advantage, the Notions of fpeculative Men have been, generally fpeaking, right. It is agreed on all Hands, that Trade is a Thing of a nice and delicate Nature, that from fecret and imperceptrble Caufes

Chap. III.
the Empire of China.
it ebbs and flows, is poffented now by one Nation, and then by another; and that when it is once loft, it is very hard to be regained. If therefore we obttinately perfift in the old Road till the Northern Nations actually become poffeffed of this and other Branches of Traffick; and in Confequence thereof, of a great Naval Force, it will be to no Purpofe to look back, or to confider by what Means this might have been prevented. There is a natural Vigour that attends an increafing and growing Trade; and there is alfo a natural Supinenefs and Negligence which accompanies the Declenfion of Trade; fo that when Nations in there different Circumftances come to contend with each other, it is no difficult Thing to perceive which muft go to the Wall.

We well know, that there was a Time when we had very little Trade, that it was with great Difficulty we firt raifed and then extended it, and that our doing this, made Way for the Declenfion of the SpaniJs and Portuguese Trade, which have never recovered fince. We alfo know, nay we even remember, when the Swedes and Danes had little or no Trade, and when themfelves confidered it as impracticable for them to interfere with us, or the Dutch in the Trade of the Eaff-Indies; but we now learn from Experience, that they are able to do it, and we cannot but be fenfible, that the greateft Obftacles to fuch Endeavours are felt at the Beginning; and that when thefe are once got over, as in Refpect to them, they are already got over, Things go on a-pace, that is to Cay, Exportation increares, Navigation is excended, Wealth rowls in, Shipping multiplies, and a naval Power is fuddenty raifed. The Bufinefs therefore is to reflect in Time, and to make Enquiries into the propereft Means for preferving what we have got, while it is yet in our Hands. Opportunities once flipt, are never to be retrieved; we are fill a naval Power, and a great naval Power; but if we imagine that this depends upon the Nature of our Government, upon the Supplies granted for the Navy, and the Orders iffued from the Admiralty, we fhall very foon become fenfible of our Miftake. Pbilip II. of Spain fell into this Miftake, he fancied that naval Power might be maintained, as well as employed, by Policy ; but what followed? In 1588, the Efforts of Spain were terrible to Europe in general, and to us in particular; in lefs than twenty Years the Returns from the Indies became abfolutely precarious, the Spani/b Fleets were the Contempt of their Enemies, and in half that Time both we and the Dutcb infulted the Coafts of Spain. The Source and Support of a naval Power is Commerce, and if we cannot keep this, we mult lofe that, let the Adminiftration in this Country be ever fo honeft, or fo wife; from whence my Conclufion is, that though there may be other very important Concerns, yet the moft important of all is our Trade; and may Providence incline us to fee this in Time!
But that we may not feem to be always complaining, and never thinking of any Means of removing the Evils of which we complain, let us confider a little with ourfelves, if fomewhat may not be thought of, which may afford us rational Hopes of preferving the Commerce we have left, and even of extending it. Such an Attempt as this would be ferviceable many Ways; it is peculiarly adapted to our prefent Situation; we have a rich and powerful Company, who are intrufted with the Commerce in thefe Parts, and who might be excited by the Defire of expreffing their Gratitude to the Publick for what they have received, to try what might be atchieved on this Side.
We have in the former Volume mentioned fomewhat of the Poffibility of venturing once more into the Inand of Fapan. But if that fhould be thought too hazardous, what can hinder fome of our Ships from vifiting Formofa? a fruitful, pleafant, and well fituated Inand: Are there not a thoufand Pretences that may be fuggefted for putting in there? and if the Veffel that makes this Attempt be a Ship of Force, and well manned, is there any Reafon todo ubt, hat fhe would be able to procure that Refpect
which would make way for Trade? It may be replied, that the Cbinefe Laws are fo ftrict, that there is no Trading in Formofa without the Emperor's Leave. To which I reply, that it is very well known the Cbinefe infift upon their Laws in the moft peremptory Manner, where they are fure they have Force enough to fuppors and carry them into Execution. On the other Hand, where this is not to be done, they are very flow in coming to Extremities, and had rather bate fome of their Punctilio's, than run the Hazard of a Difpute that might be attended with bad Confequences.
In Times paft, the Dutch made the Conqueft of this Illand, or rather the Duich Eaj-India Company made it, and kept Poffeflion of it in Spite of the whole Force of the Cbince Empire. I am very far from faying, that this fhould become a Precedent to our Eaf-India Company, or that they ought to attempt either a Conqueft or a Settlemient by Force ; all I contend for is, that if the Dutch Eaf-India Company conquered it, the Englifb Eaf-India Company might find a Way to trade there. They would find their Account in it, and the Nation would, find their Account in it; and though it might coft fome Time and Trouble to bring it about, yet this very Time and Trouble would for fo long a Space, exclude other Nations, and we might perhaps find a Means of putting the Trade there on fuch a Foot as to keep it wholly and for ever to ourfelves.
If we never try, it is certain we fhall never fucceed; and if the Swedes or Danes had been difcouraged by fuch Obftacles, there is no Doubt that they had never brought that Trade to bear which they now enjoy. Befides, when our Drake's and Cavendifb's undertook thofe perilous Voyages in the Dawn of our Navigation, they had much greater Difficulties to ftruggle with, and much lefs Affiltance to hope for, yet they overcame them all ; and to their Boldnefs and Intrepidity we owe that Figure we have fince made as a Maritime Power. If therefore a Spirit of this Kind could be raifed, or rather revived, why fhould not we expect fome fuchlike Effects? or why fhould we reft fatisfied with the prefent State of Things, and lay afide all Thoughts of improving or extending our Commerce, when we fee other Nations, far lefs able and powerful than our own, and under much greater Difficulties than we have any good Grounds to fear, making fuch Attempts, and making them with Succefs?
But to put this Matter out of all Doubt, and to fet the Thing in fo clear a Light that every Reader of tolerable Undertanding may be able to judge of it, I have added another Section, which relates to a Country that hitherto we have little or no Knowledge of, with which we never attempted any Trade, and to which, notwithftanding there is the higheft Probability that an advantageous Commerce might be carried on, Whether this be practicable or not; whether it will be ever attempted by this Nation; or whether the Hints here given may prove ufful to fome more confldetate and enterprizing Nation, muft remain in the Womb of Time.
Yet till this fhall be difclofed, I fhall have the Satisfaction of knowing that I have done my Duty; and that with infinite Pains and Trouble I have collected and. reduced into their proper Order, all the fcattered Hints and Paffages relative to a very large and fruitful Peninfula, not lefs wealthy, not lefs populous in Proportion to its Bignefs, than Cbina itfelf, and of which there is not hitherto extant any regular or tolerable Defrription in any Language; fo that if I fhould mifs in my great Aim, and which ought to be every Man's Aim, that of doing good to and improving the Trade of my Country, I fhall at leait fucceed as an Author, by enriching with a new and curious Section this great Work, which I commit to the Perufal and Confideration of Pofterity, and more efpecially of thofe heroick and enterprizing Spirits deftined to ftrike out of the common Path, and to acquire immortal Glory by bringing new Advantages to Mankind.

## SECTION VII.

A curious and concife Defcription of the Country, Hiftory of the Inhabitants, and Account of the prefent State of the Kingdom of Corea, together with fome Hints of the Eafe with which Commerce might be eftablifhed in its Ports, the Benefits that might be expected from thence, the great Likelihood of Gaining an Entrance from thence into Fapan, or at leaft an Intercourle with the Faponefe; and many other entertaining and inftructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of Cbina:

Collected chiefly from Memoirs bitherto unpublibed, and compared with all the printed Hifories and Travels, in which any Mention is made of this Country, its Commerce or Inbabitants.

1. Of the Situation, Extent, Climate, and Boundaries of the Kingdom of Corea, with Remarks and Obfervations. 2. Of the Hifory of this Country, as delivered in the Chinefe and Japonefe Autbors, wobich, for any Thing that is bitherto knowen, are the only Writers upon that Subject. 3. Of the Soil, Produce, Commodities, Manufactures, and Ricbes of this noble Peninfula. 4. Of the Provinces, Cities, Ports, Fortreffes, \&c. in Corea, and of the Iflands that lie upon its Coafts. 5. Of the Inbabitants, their Stature, Complexion, Habit, Cufoms, Manners, Temper, Learning, Diverfions, \&c. 6. Of the Commerce of the Coreans with the Chinefe, the Commodities they import and export, and the Reafon why the laft mentioned Nation are fo excelfively jealous of them. 7. Of the Commerce of the Coreans with the Japonefe, the Commodities and Manufactures they export and import, and of the natural Averfion between the two Nations. 8. An Enquiry into the Probability of the Coreanstrading by Stealth into other Countries, and fome Conjectures of the Countries to wobich they trade, and the Commodities for which tbey deal. 9. Reafons why it is not at all impoffible to enter into a Trade with the Coreans, as alfo why this Commerce might anfiwer, notwithfanding any Umbrage it might give to the Chinefe. 10. Some Arguments tending to prove, that a Trade reith Corea is the moft probable. Metbod of recovering fome Degree of Intercourfe with Japan; with a few Hints of the Means by which this might be effected. II. A fuccinct Reprefentation of the Advantages that might refult from fuch a Commerce as this, with Reference to the Dijcovery of unknown Countries, that are probably richer than any to which we trade at prefent. 12. A Hint tbat we may receive Satisfaction this Way, as to the Poffibility or Impofibility of finding a North Eaft Paffage. 13. Mifcellaneous Remarks and Obfervations on the principal Points mentioned in this Section.

'THERE are two different Methods by which Commerce may be promoted, the one derived from the Improvement of the Lights afforded by Experience, which is indeed certain and fure, but generaily fpeaking flow, and producing only a moderate Profit; the other ariling from Science, and the endeavouring to ftrike out a new Road to frefh Markets, by a comprehenfive Knowledge of Cofmography, Navigation, and the Manner of conducting foreign Trade. In Reference to the firf, the Spaniards refolved to attempt a diftant Navigation, after the Example of the Portuguefe; the Dutcb when oppreffed by the Spaniards, and denied a Share of the India Trade in Europe, refolved to attempt a Paffage thither themfelves ; and in like Manner, when we perceived the Advantages refulting to Spain, from her Colonies in the Wef-Indies, determined to try what might be done in the fame Way. In Regard to the Jatter, Columbus was the firft, who had the Courage to propofe going in Queft of all thofe Illands and Continents, that his own Sagacity had difcovered on the other Side the Globe, and we very well know, what mighty Things followed from the Queen of Spain's accepting his Propofal. In like Manner, Fobn Cabot firft formed a Notion of a North-weft-Paffage, which hitherto has not, but I perfwade myfelf will, fometime or other, be difcovered. Ferdinand Magellan was happier in his Project of going to the Indies by a South Paffage, which he accomplifined; all thefe were with

Refpect to the human Species in general, and with Regard to the Inhabitants of Europe in particular, very great and important Difcoveries, and thofe chiefly that in the Eye of important Reafon fet this Part of the World in a much fairer and better Light than any of the reft.
But notwithftanding the manifeft Advantages refulting from this high Prerogative of vifiting and commanding in all the other Quarters of the Globe, it feems in this laft Century to have been lefs regarded. Far from profecuting that noble Plan, which in the Midft of fuch Obfcurity our Anceftors had the Wifdom to draw, and the Courage to carry into Execution, we are difpofed rather to make the moft of what they have left us, and even to quarrel with each other about our Shares; fo that $A f a$ and America, inftead of wondering, as they were wont to do, at the Boldnefs of our Voyages, and the Expertnefs of the Europeans in whatever relates to Traffick, are juftly aftonifhed at our Feuds, and fee with Amazement, that we labour to deftroy Setclements already planted, inftead of making new; that we employ our Pains in decrying and difcrediting each other, in publifhing our Imbecilities and Misfortunes, and in exciting the Indians to Thake off that Fear, which the Exploits of the Europeans, in the two laft Ages impreffed, and to exert that Power, which themfelves always poffeffed, but hitherto have been afraid to employ, in thrufting out thofe, who, not contented with trading, have ventured to play the Mafters fo far from Home.

If inftead of fo weak, fo rafh, and fo impolitick a Behavour, we had forborn every kind of Difpute, fupported each others Settlements, and gone on in making Difcoveries, we had been in a much better Condition by this Time than we are. Thefe diftant Countries would have furnifhed us with Places enough to have difcharged thofe ufelefs Hands that we have employed, not to terminate, but to continue our Difputes with each other. By their Labour, our Power, our Wealth, our Fame might have been extended, and thofe Councries that are now poor and defolate, might have been then rich, populous and happy; it is fome Excufe for Barbarians, that they live in continual Enmity againft, and in perpetual Wars with each other ; but in us who pretend to have Policy that teacheth us better, and profefs a Religion that requires a Conduct oppofite from this at our Hands, it is as impious and iniquitous as it is ridiculous and abfurd. We difclaim by this Behaviour, all Title to Wifdom, Moral or Divine, and put ourfelves upon a Level with the Savages; we defcend to, or rather fink ourfelves beneath them, by doing precifely thofe.Things, for which we efteem them Savages and defpire them.
The orly Apology we ever hear made for fo irrational a Practice, is a very ill grounded Pretence of Neceffity; our Anceftors, it is faid, have done fo much, that there is nothing left for us to do; they difcovered, they conquered all, and thereby made Way for our Difputes with each other about Titles; in fhort, they were fortunate and glorious, and we unhappy, and precluded from acquiring Fame.

But thefe are all the fimple Pretences of Indolence, or the falfe Colours of Avarice, which when we come to examine with impartial Strictnefs by the Light of Truth, will totally difappear. Amongft other Difcoveries of our Anceftors, we may reckon this as none of the leaft important, that they diccovered, that after all they had done, much more remained to be difcovered. What a Scandal is it then to us, that having not only their Example to encourage us, but their Conjectures to inftruet us, we have neither followed the one, nor made ufe of the other. They left us an exact Survey of the beft Part of America, and we have left the reft totally unfurvey'd. They faw Reafon to believe that a Southweft Paffage might be found to the Eaft Indies; they attempted and difcovered it; they left us better Reafons to prove that there is a North Weft Paffage, and though by Fits and Starts we have made Trials, yet ftill it remains undifcovered. If we fet down and confider with Attention, in how fhort a Tract of Time, from the finding a Paffage by the Cape of Good Hope to the Eaft Indies, all the fubfequent Difcoveries were made, how fuddenly they flopt, and how long it is fince any thing has been done of this Kind; it muft induce us to believe that we either fall very far fhort in Point of Courage and publick Spirit of our Forefathers, or that there is fome fecret Reafon why we are fo backward in fpite of the Encouragement we have received. This fecret Reafon is no other than our managing our Trade into thefe diftant Parts by exclufive Companies, fuch as the Eaft India, the African, the Soutb Sea, and the Hudjon's Bay Companies, the Difcoveries under the Aufpices of all which, rnay I prefume be contained in a Volume of no exorbitant Size. It may be asked, Do our Companies reftrain the reft of the World ? To which I anfwer, No: But their own Companies do, and that Difcoveries are attempted in no Kingdom in Europe by an old Company, but either where there are no Companies, or by a Company exprefly erected for that Purpofe.
Now to fhew that fomething may be done without any mighty Hazard towards extending our Trade and our Knowledge at the fame Time towards the North Eaft, I have, by the Affittance of Lights and Memoirs communicated to me from Abroad, compofed the following Defcription and Hiftory of the Peninfula of Corea ; from whence it will appear, that it is a fine and fertile Country; that it is exceedingly populous, and inhabited by a civil, humane, and courteous People ; that they are much given to Commerce, and would in all Probability sejoyce. at and encourage any Attempt
made by us to commence a Trade with them 3 that this Trade might be made highly beneficial to the Nation; that it is far from being improbable it might procure us both Cbinefe and fapan Goods at a more reafonable Rate than we have then1 at perent; and lat: of all, that it muft open a Paffage to Difcoveries of much greater Confequence thain any chat have been yet made.
2. The Peninfula of Corea, fo little known to, and therefore fo litcle confidered by the Europeans, is one of the largeft, and in all Refpects one of the fineft, nobleft, and beft fituated Peninfulda's upon the Globe. The Tartars, who are at prefent poffeffed of Cbina, and who, before they conquered that Empire, were Maiters of the Country of which we are fpeaking, call it in their Language Solbo Kouron, which is as much as to fay, the Kingdom of Solbo. There is no Doubt that they have fome fufficient Reafon for this Appellation, though for Want of being acquainted with the Tartar Hiftorians, we are able to fay no more, than that they are reported to call it fo by the Cbinefe Geographers, As for this laft mentioned Nation, they have been pleafed to beftow upon this Country the Name of Kao lij koue, which we fhall endeavour to explain as well as we can. This Peninfula was originally inhabited by various Na tions, each governed by its particuiar Chief, untill they were all reduced under the Subjection of one Monarch, whofe Name was Kao. As for the Word li, it has many different Significations in the Cbinefe Tongue, and amongt the reft, it implies obeying, being fubject to, or under the Obedience of. The Word Koue is properly tranflated by that of Kingdom; fo that taking this Title as it ftands in the Cbinefe Maps Kao li koue altogether, it may be very faithfully rendred thus, the Kingdom ruled by Kao, or, in our Manner of fpeaking, Kao's Kingdom. It is true, that in the modern Records of the Cbinefe it is called Tcbao Sfien, from another Prince, or rather from another Race of Princes; but however this Name has never grown into common Ufe; but the Cbinefe, when-ever they mention it in Converfation, or in Writing, call this Peninfula Kaoli, which they pronounce in fuch a Manner, that from thence by Corruption the Word Corea has been formed, by which it is univerfally known in Europe.

Afrer adjufting as well as we can the Namre, let us proceed to fay fomewhat of the Nature of this Country, which has been varioufly reprefented to us by different Authors, fome treating it as a Kingdom diftinct from, others, as a Part of Cbina; many affirming it to be an Inand, but the beft modern Writers afferting it to be what it really is at this Day, a Peninjula. At firft Sight thefe Differences feem to be the Effect of Ignorance, but at the Bottom there is fome Colour of Truth for every one of the fe Reprefentations. According to the moft ancient Cbinefe Hittories, though the Thing is not affirmed in direct Terms, yet it may be fairly inferred, that Corea was once joined to China on the Weft-fide, though it is now divided from it by a large Gulph. For thofe Hiftories fay, that the Ocean broke in with great Violence on that Side, and overwhelmed a vait Tract of Country, and when this happened, it is not at all improbable, that Corea became an abfolute Inand. For the fame Hiftories fay, that a very ancient Emperor, whom they call $Y_{u}$ the Great, formed a Defign of recovering at leaft a Part of thefe Countries, by drawing Canals to a vaft Channel, and by piercing a Mountain, opened a Paffage for the great River Hoang bo, which finding by this Means a Vent into the Sea, carried off a great Part of the Inland' Waters, and thereby left the Northern Country dry, which now connects Corea with the Continent; and in this Manner we are told it became a Peninfula.
This Country in the State it now is, is bounded on the North by the Country of Nieucbeu, or the ancient hereditary Dominions of that Tartar Monarch, who is now Emperor of Cbina; on the Weft it has the Gulph of Leao tong, which feparates it from the Provinces of Pe tcheli and Cban tong, which are Part of Cbina; on the Eif lies the Sea of fapan, and on the South it is wafhed by the Ocean, It extends from thirty four Degrees
thirty Minutes, to forty two Degrees thirty Minutes, of a North Latitude, and from one hundred and forty two, to one hundred forty feven Degrees of Longitude; it is in Length from North to South, four hundred and fifty of our Miles ; in Breadth from Eaft to Weft, about three hundred; the Form of it is that of a Parallelogram, the upper Part towards the North being fomewhat narrower than the Southern Part of it. It is from hence apparent, that it lies in the fifth and fixth temperate Climates, the moft Southern Part of it being in the fame Parallel with Perfia, Cyprus and Barbary, and thé moft Northern in that of Portugal, Sicily, and the Madera's; the longeft Day in the South is fourteen Hours and a Quarter, and in the North about fourteen Hours three Quarters.

The prefent Capital of it Han cbing, is in the Latitude of thirty fix Degrees North, and in the Longitude of ten Degrees Eaft, from the City of Pekin, the Capital of Cbina. It is reprefented by all the Cbinefe Geographers, as a Country full of Mountains, more efpecially towards the North, or rather towards the North-weft, where there is a Ridge of high Hills that feparates it from that Part of Tartary which depends on Cbina, and thefe Hills are rocky and barren, but the other Mountains, more efpecially thofe towards the South, are of ealy Afcent, covered with a fine Turf, fhaded by beautiful Groves, and refrefhed by a Multitude of pleafant Brooks. It is alfo furnifhed with feveral large and navigable Rivers, of which we thall take particular Notice only of four; the firtt is the Yalou on the Northweft Side of Corea, which falls into the Yellow Sea, or that which divides this Country from Cbina; the Mouth of this River is in the Latitude of forty Degrees North, and is there about thirty Miles over. The River $L i$ falls alfo into the Yellow Sea, and is a large, beautiful and navigable Stream; the Tatong falls into the Eaftern Sea, or the Sea of $7 a p a n$, and at the Mouth of it there is a noble Port; the River Han is in the South Part of Corea, and falls into the Ocean, and is alfo large and navigable; in a Word, when we confider that this Country is walhed by two great Seas, and by the Ocean, and that its Coafts are fifteen hundred Miles in Extent, we cannor Doubt of the Excellency of its Situation.
3. It is very certain, that the People of Corea are much inclined to Letters, and that they have very ancient and very authentic Hiftories, and fome Books ftill more ancient, but thefe are full of Romances and Fables. They are very fenfible of this, and fay that they contain fome inftructive Truths difguifed, of which having loft the Key, they are no longer able to decypher them. Thofe which they regard as true Hiftories, go between two and three thoufand Years higher than the Birth of Cbritt, and yet are faid to contain nothing in them that carries the leaft Air of Fiction or Falihood. They affert that their Country was at firt inhabited by three or four different Nations, which however they admit to have been of Tartar Original; that thefe in a long Courfe of Years, and after various Wars with different Succefs one againft another, were at laft reduced under the Power of one Monarch. That his Pofterity degenerating from the Virtues of their Anceftors, behaved themfelves fo ill as to occafion civil Wars, which weakened the Country to fuch a Degree, that it fell under the Dominion of the Cbinefe Enperors, who fometimes governed it as a Province, and at others, appointed Kings, from whom they received only an annual Tribute.
It is remarkable that thefe ancient Hiftories fpeak of the Capital of this Kingdom, a thoufand Years before Chrift, as fituated in Cbina; from whence it feems highly probable, that this muft have been before the Inundation, that has been mentioned, for otherwife it is not eafy to conceive, why this Prince, even fuppofing him Mafter of that Part of Cbina, fhould chufe to refide in a narrow Slip of Country, divided by a wide Sea from the reft of his Dominions. The fame Hiftories fpeak of a Country lying to the North-Eaft, but fill on the fame Continent, from whence one would imagine, that fome Alteration has happened on that Side,

Corea from the Earthquake or Inundation feparated Corea from the Land of Yedfo, which is no other than the Southern Part of that great Peninfula, known to the Ruffans by the Name of Kamkatka. The greateft Part of their Hiftory is taken up in accounting for their Difputes with the Cbinefe, from whom they often revolted, and were as often reduced; and in them likewife they give a large Account of their having attacked and fubdued the Nieucbieu Tartars, or at leatt a Nation that formerly inhabited their Country.
Towards the latter End of the fifteenth Century, the Faponefe invaded Corea, and were at firlt very fuccefsful, driving the King from his Capital, and becoming Mafters of the greateft Part of his Dominions ; but he having Recourfe to the Cbinefe, they, after a long and bloody War, drove out the foponeje from all except two Provinces. Soon after this, another great Army landing from Jopan, the War was carried on with greater Vigour than ever, but at laft the Coreans and their Confederates had fo much the better of thefe $\mathrm{I}_{\mathrm{n}}$ vaders, that they concluded a Peace, and agreed to quit the Country, which they did. Before this Time, the Coreans and faponefe had always lived, not only in Peace, but in perfect Harmony with each other, infomuch, that many of both Nations were refpectively fettled in the others Country ; but thefe Wars occafioned fuch an implacable Spirit of Refentment, which fometime after the Conclufion of the laft, the faponefe took an Opportunity of maflacreing all the Coreans that were fettled in their Dominions. All there Events, and many more are found in the faponefe Chronicles, and are briefly fet down in the Hiftories of that Country, written by the Chriftian Miffionaries, which is a very ftrong Confirmation of the Veracity of the Corean Hiftories.

About the Beginning of the laft Century, the Man tchou Tartars, after they became Mafters of Leontong, attacked and reduced the Kingdom of Corea, that is, obliged the 'King to acknowledge their Khan for his Sovereign, and to pay him Tribute; which the Coreans refented as the mott grievous Indignity, having as we obferved before, been once Matters of this Country themfelves; but fince thefe Tartars have reduced Cbina, the Coreans no longer confider their Subjection as a Difgrace, but remain well fatisfied with their Condition, as indeed they have good Reafon, fince it has preferved them for the Space of one hundred and fifty Years, in a State of conftant and fettled Peace. All the Marks of Submiffion required from them, is, to fend annually an Embaffador, or rather an Embaffy, for fometimes there are three or four Perfons charged with equal Powers to Pekin. Thefe have alfo a Commifion in Reference to Trade, are intrufted with all the Commodities and Manufactures which the Coreans are allowed to tranfport into Cbina, and are impowered to fettle and receive the Price or Equivalent for them.

The only fenfible or uneafy Mark of Dependance which this Nation feels, arifes from the Ufage this Embaffador and his Retinue meets with, for they are affigned a Dwelling-Place in Pekin, which the Cbinefe are pleafed to call a Palace, but from its Outfide Appearance, and the Care with which it is guarded, it might better pafs for a Goal; there they remain from the Time they come, to the Time they leave this Capital of the Cbinefe Empire, without fo much as ftirring, except to Audience, and without feeing any but fuch as are firft examined by their Guards. The Reafon of all this Jealoufy, which of late Years has increafed rather than abated, is the Dread the Cbinefe are under of the Coreans coming to have any Intercourfe with the Rufians, who are their very near Neighbours, and might find an eafy Accefs into their Country, in Cafe they had Notice of it, and of the Advantages that might accrue from their fettling a Trade with thefe People.
The Cbinefe are the more uneafy about this for two Reafons; firft, becaufe they know that the Coreans are naturally hofpitable, defirous of feeing Strangers, and very willing to entertain and trade with them; and fecondly, becaufe this would place the Ruflans on both Sides their Empire, and in fome Meafure between them

## Chapp. III.

the Kingdom of Corea.
1003
and $\mathcal{F a p a n}$, which is what they could not bear, and muft be attended with a long and dangerous War, to remove an Evil of which they are fo apprehenfive. It was for this, and no other Caufe, that they infited fo peremptorily on making the River Amur the Northern Boundary of their Dominions, becaufe they judged that this would effectually cut off all Communication between the Ruffians and the Coreans, or rather all Poffibility of a Communication, as by Land it really does. But they made ufe of a very plaufible Pretence, which was, that the Ruffans difturbed them in their Pearl Fifhery in that River, a Thing in itfelf of no great Confequence to either Nation, and which therefore the Rufians readily gave up in Hopes of a fettled and quiet Trade with Cbina. This was alfo the Secret and true Reafor, why the Cbinefe Minifters would not long endure the Prefence of a Ruflian Refident at Pekin, notwithftanding that they kept him in full as great Reftraint, as they do the Corean Embaffadors, and at laft led them to infift upon the fending away the Sieur du Lange, who had that Character from the Czar of Mufcovy. But after all, thefe Precautions need be no Bar to the Ruffans, whilft the Paffage is open and eafy by Sea, and as will be fhewn hereafter ; the Coreans themfelves making Ufe of it to carry on a fmall and inconfiderable Trade with the Subjects of $R u f f a$, without knowing from what Country they come, or of what Nation they are.
4. The Reader has been already told, that there is Reafon to believe, this Country made formerly quite a different Appearance from what it does at prefent; and that the whole Gulph, which feparates Corea from the oppofite Coaft of Cbina, and which extends to full feven Degrees of Longitude, was formerly dry Land The Reader has been alfo told, that in the moft ancient and authentick Hiftories, this Country is faid to have been inhabited by various Nations; and in the Accounts we have of the Provinces into which Corea is now divided, we are told to which of thefe ancient Nations they belonged; but at the fame Time we find the Names of other Nations whofe Dwellings are not to be found, and who from the Actions recorded of them appear to have been all fettled on the Weft Side of the Peninfula, which affords another Argument to prove, that a vaft Trast of Country was anciently either fubverted by an Earthquake, or overflow'd by the Sea.

Our prefent Bufinefs is with what remains, and with the Kingdom of Corea as it ftands at this Day, when it is divided into eight Provinces ; the firtt of thefe is Hien king, which is as much as to fay, the profperous Court; it is the North-eaft Quarter of Corea ftretching all along the Sea of Gapan, which by the Way is almoft as clofe fhut up as the Black Sea; and this is the Reafon that when there are any Kind of Winds, the Navigation is extremely dangerous, the Waves running exceffively high, and beating with prodigious Fury upon the Coafts, which is but bleak and inhofpitable, except at its very Extremity where it is divided from the Country of the Man tcheou Tartars by a very large River, on the Banks of which are feveral good Towns, and the Diftricts round them are very well cultivated. This Province was the native Seat of the Kaskizli, a Nation that in Procefs of Time overcame all the reft, and ftretched their Sway over the whole Country. It is from this Province, that the Inhabitants in their fmall Veffels glide along the Coaft under a Notion of Pearl Fifhing, but in Reality that they may trade with their Northern Neighbours, and fometumes with the Rufians, who take them for Faponefe.

The next Province to this is that of Ping ncan, which makes the North weft Side of Corea, or, ftriEtly fpeaking, of the Continent of Corea, for this with the Province before-mentioned, lie to the North of the Peninfula, and make a Part of the great Continent of Afia. This Province, the Name of which fignifies the peaceable Land, or the Country of Quiet, is bounded on the Weft by the Province of Leaotong, and on the South by the Xellow Sea or Corean Gulph. It is through this Province that the River Calou rolls its Courfe, till it falls

Vo 1. II. $\mathrm{N}^{\circ}$ I38.
into the $\Upsilon_{e}$ llowe Sea, and it may not be amifs to obferve, that according to the Cbinefe Cuttom of diftinguifhing their Rivers by its Colour, this has received the Name of Yalou Kiang, that is as much as to fay, the Greers River, from the Tincture of its Waters, which are fuppofed to be mineral, and are therefore feldom drank till they have been boiled, and have food fo long as to precipitate a Kind of yellow Sediment. This is a very large, populous, and well-built Province ${ }_{5}$ which is chiefly owing to the River, that is navigable above ninety Miles, and has \{everal large trading Towns upon its Banks. It was the ancient Habitation of the Tcbao dren, which, as we have heretotore obferved, is the Name now beftowed in the Records of Cbina upon the whole Country of Corca.

The Province of Kitang yuen lies on the North-eaft Side of the Peninfula, and the Name fignifies the River's Source; it Atretces along the Sea of Japan, and has under its Juriddiction a great Number of fimall Inands, inhabited chiefly by Fifhermen. The Climate of this Country is remarkably pleafant, being neither exceffively cold in the Winter, nor forching hot in the Summer. It is finely diverfify'd with Hills and Plains; and the beft Timber in Corea forHoufe and Ship-building grows here. It is very populous, but the People live moftly in Villages and fmall Towns, as being addicted chiefly to Pafturage, Tillage, and Fifhing. In the Time of the Wars between the Faponefe and Coreans this Country was the principal Scene of Action; and confequently fuffered extremely; and therefore to this Caufe we may reafonably refer there being no Cities, and buc very few great Towns within its Limits; and perhaps to this likewife is owing the Activity, Hardinels and martial Genius of its Inhabitants, who are all well difciplin'd, and remarkably skilful in military Exercifes. This Province is likewife famous for a good Breed of fmall but ferviceable Horfes.

The oppofite Province, or the North-weft Side of the Peninfula, is ftiled Hoang bai, which is as much as to fay, the Yellow Sea, from its ftretching along the Coafts of it. It extends Northwards as far as the Mouth of the River Yalou, and ftretches from thence Southwards for the Space of two hundred Miles. It is for the moft Part a flat and fruitful Country, abounding with People who live in Cities and large Towns, and are much addicted to Trade and Manufactures ; on the Coaft there are feveral very large Inands, particularly, Thiao tong and Thang boa, the latter deriving its Name from a great City, the Inhabitants of which are chiefly empl yed in making a Kind of Stuffs that are very thin and light, but withal very clofe and warm. This was anciently the Seat of a Nation called Mabans, tha* they ought rather to be regarded as a Tribe, for the true Name of the Nation was Han, the largeft of al! thofe feparate People that originally inhabited this Country, and therefore divided into three Tribes, inhabiting as many different Diftricts.
The middle Province is called King ki, the former fignifying, as we have often before oblerved, a Court, the latter a Region, Province, or Difriit ; and it is fo called, becaufe the City of Kingki tao, which was the ancient Capital of this Country, ftands therein. This is the only Inland Province in Corea, and lies precifely in the Heart of the Country, being about two hundred Miles from North to South, and near an hundred from Weft to Eaft. There can be hardly imagined a Coun try more pleafant, more fruitful, or better peopled than this is, full of large Towns and almoft innumerable Villages, and containing befides feveral great and well built Cities. The Inhabitants are remarkable for Lear ning and Politenefs, and the Buildings in this Country are little, if at all inferior, to thofe of Cbina, even in its beft Provinces. The King has in this Country many noble Palaces, adorned with fine Gardens, and fpacious Parks well ftocked with Game. The People of this Province are a Mixture of all the Nations that formerly inhabited Corea, and it appears from their Hiftories, that this is a new Province taken out of the reft, and peculiarly fubject to the Tribunals of the Royal Cities, from whence Mandaryns are fent to govern the feveral

Diftricts

Diftricts into which it is divided; but the chief Cities. are under the Direction of particular Mandaryns, and the Troops both here and in the reft of the Provinces, are commanded by the Nobility or Perfons of Eftates, who raife them amongft their Vaffals, holding moft of their Lands from the King by a Sort of military Tenure. The Corn and Fruits that grow in this Country are the beft in Corea, which perhaps is chiefly owing to the great Cale taken in their Cultivation.

The South-eaft Province of Corea is called Kin cban, which is bounded on the Eaft and on the South by che Sea of $7 a p a n$, abounds with Cities and great Towns, and there are five large and commodious Ports in this Diftrict ; the Southern Extremity, which is directly over-againft the two great Inands that form what we call $\mathfrak{F}$ apan, is diftanced from thence about one hundred Miles, and there are Veffels that pafs regularly from one Country to another thrice in a Week. It is neceffary to obferve, that in thefe Streights which feparate Corea from Fapan, there lie two fmall Iflands, Key and Dor, which are as it were in the Middle; from the Mountains, in both of them, the Coafts of each Country are very eafily difcovered. Thefe Illands are fmall but very fruitful, and it would be no difficult Matter to erect on either a Fortrefs capable of refifting any Force that thefe People could employ againft it; fo that if any European Nation fhould fetcle themfelves here under the Direction of a wife and prudent Governor, and with a competent Body of feafoned Troops, he might maintain himfelf, and provided he attempted Nothing upon the oppofite Continents, might very foon compafs a free Trade with one, if not both Nations.
The Province of Tcbu fin occupies the South-weft Side of the Peninfula, lying over-againft the Province of Cban tong in Cbina, from whence the North-eaft Extremity of it is diftant about forty Leagues, whereas the South-weft Point of it is full two hundred Leagues diftant. The Name of this Province fignifies Ever Faitbful, and alfo witbout Blemi/b; and it was fo called, becaufe in the Wars with the faponefe it was never conquered. The Air here is foft and temperate, for the moft Part, and though their Summers are pretty hot, the Soil is very fruifful ; it is watered by feveral fine Rivers, and befides a Multitude of Villages, and a great Number of good Towns, there are in it four great Ci ties. The People are very induftrious, not only in the Cultivation of their Land, but alfo in Manufactures, in Navigation and Fifhing, which makes them very fout and hardy, fo that the beft Infantry in Corea are thofe raifed from thence. There are feveral confiderable Inands along the Coaft, and at the Diftance of about ten Leagues from the South weft Corner is the great Inand of Fong or Fong ma, which is near feventy Miles in Circumference, and upon which, if the Europeans could make a Settlement, it would lie conveniently enough for the Trade of Cbina and Fapan, as well as Corea, fince it is not above eighty Leagues from the former, and not quite fixty from the latter.

The eighth and laft Province in this Country is TJuen lo, which lies between the two Provinces laft mentioned, and takes up the Middle of the Southern Extremity of the Peninfula, the Ocean wafhing its Coafts, which extend about one hundred and fifty Leagues. It was anciently the Country of the Pien ban, which was the third Tribe of that Nation, and is at prefent inhabited by a very robult and induftrious People, who are naturally civil and courteous to Scrangers, and much addicted to Commerce. The whole Courfe of this Country is, as it were, covered with Inands, fome of which are rocky and uninhabited, others equally fruitful and populous. There are many great Towns, and two large Cities, in this Province, and it is generally believed that there is more Shipping belonging to it than to any of the reft. The Inand of Kelpaert lies about twenty four Leagues due South from its Coafts, and is much larger than any of the Inands hitherto mentioned, but notwithtanding this great Diftance, it is in a Manner united to Corea by an Arcbipelago of Inands that lie to the North-weft of it, and reach to the very Shore. We fhall have Occafion to mention this Inand here-
after, and fhall not therefore dwell any longer upon
it here.
Thus the Reader has as clear and diftinct a Geographical Defcription of the whole of this Country as we have been able to give him, after comparing together a Multitude of different Accounts, fome of which were written above an hundred Years ago, when it feems that Corea was better known to the Europeans than it is at prefent. Within the Compafs of thefe eight Provinces they reckon forty Ciries, to whom Mandaryns are fent directly from the Court, and of which there are generally three in each. Befides thefe, there are thirty three great Towns of the firft Order, like thofe which in Cbina are called Fou, upon which are depending fixty of the fecond Order, equivalent to thofe which the Cbinefe call $T^{c}$ chou, and no lefs than feventy Hien, or Towns of the third Order, every one of which has at leaft fix or feven, fome of them upwards of twenty Villages in their Diftricts. The Northern Provinces are mountainous, and the Air fharp and cold, notwithftanding which they produce all the Neceflaries of Life, have Woods of moft exceilent Timber, in which are Abun dance of wild Beafts that produce Furs, little if at all inferior to thofe of Siberia; and on the Frontiers of thofe Provinces towards Tartary, the greateft Plenty of Gin feng is found, of which they make a great Profic by felling it to the Chinefe. There are alfo Mines of all Sorts, and even of Gold, of which a confiderable Quantity is annually fent to Cbina. The Southern Provinces, that is to fay, the three laft mentioned, are as rich and fruitful in Gaiain and Corn as any in the World.

The Reader is to obferve, that when we fpeak of Corn, it is to be undertood, in the Northern Parts, of Barley, and in the Southern Parts of Rice; and though they want not other Grain of various. Sorts, they have alfo excellent Roots, fome of which in Tafte refemble the Potatoe, but are of a much larger Size. As for Fruits, they have thofe of Europe, fuch as Apples and Pears in the Northern Provinces, and the richeft Fruits of Cbina in the Southern. As for their Timber, it confifts of Oak, Chefnut, Pine, Fir, and of feveral Sorts that are not known in Europe. Silver and Lead they have in great Plenty, but the latter is not fo good as that of Europe, which in all Probability is owing to their Want of Skill in managing the Oar, for its Defects confift in being hard and brittle. Horfes and Cows are in valt Abundance, and they make ufe of Oxen to plough their Land, and to draw their Carriages ; in the Woods they have Bears and Foxes, Zibbelins and Caftors, wild Boars in great Numbers, a good Breed of tame Swine, chiefly black. Their Rivers are well fored with Fifh, and would be much better flocked if they were not infefted with Crocodiles, and thofe too of a moft enormous Size, fome of thirty Foot long. They have alfo great Plenty of all Sorts of Fowl, fuch as Swans, Grefe, Ducks, Storks, Herons, Pidgeons, Woodcocks, Pheafants, and tame Fowl, that are excellent. They have likewife Eagles, Falcons, Kites, and other Birds of Prey, and many Kinds of very beautiful Birds, which are not known in Europe, fome of great Value, with party-colour'd Feathers in their Tails which are three Foot long, and thefe are commonly either exported to Cbina or fapan, and make alfo Part of the annual Prefent fent to Pekin for the Emperor.
5. The Inhabitants of the Northern Provinces are generally tall, active, well fhaped, healthy, robult People, with very little about them of the Tartar, but thofe of the South are of a more fickly Complexion, weaker Bodies, and in their Perfons and Temper very much refembling the Cbinefe. In the Northern Provinces, Moft People wear a Kind of Furr Caps, filk Vefts, which in the Winter are lined with Lamb-skin; and the Women wear their Jackets and Petticoats flounced and fringed with Gold Lace. Moft Perfons of Quality affect to have their Robes of Violet-colour'd Silk; in the other Provinces both Men and Women are dreft in painted Linnen or Chinces, but are, generally fpeaking, adorned with Silver and Gold Ornaments notwithftanding. As they have Hemp and Flax in the Nor-
thern Parts in Plenty, they make vaft Quantities of Cloth, but none of the Memoirs that I have feen make any Mention of Cotton. They are very neat in their Drefs, and the better Sort affect Magnificence, yet they are far from being vain, and can be hardly faid to have any Farhions amongtt them. Their Cities are wal$l^{\prime} \mathrm{d}$ and fortified, but neither fo ftrongly nor fo neatly as in Cbina; their Houfes are commonly no more than one Story, with a Kind of Cock-loft over them, in which their Merchants keep their Goods; and in private Families they ferve for their Fruit. In their Villages they build with Earth, but in all their great Towns and Cities with Brick ; but they thatch every where either with Straw or Reeds, which is the only Kind of Covering they have. The People are courteous, modeft, and well behaved, yet their Morals are not quite fo regular as in Times paft, when Robbery, Murder, and Adultery, were Crimes unknown amongft them. They have common Women amongft them as in Cbina, and none of their young Men are afhamed of converfing witt, or being feen in their Company. They allow their Wives much greater Liberties than in Cbina; and for this Reafon the Cbinefe efteem them Barbarians, though in all other Refpects they fpeak of them not fairly only, but with Reverence.
In point of Learning they fall little, if at all, fhort of the Cbinefe; and here, as well as in Cbina, none but Scholars are preferred to Employments. They beftow Degrees once in three Years, and all who are Candidates for them undergo a very rigorous Examination ; fo that it is very difficult to obtain any Promotion but by Merit. With Rerpect to Religion, People of Diftinction are generally bred up in the Sentiments of Confucius, and are a Sort of moral Deifts, who make an uncorrupted Probity their Point of Honour. The common People are Idolaters of the Indian Sect, and have amongft them a valt Number of Bonzes; they have alfo Monafteries of both Sexes, where People lead fingle Lives, but are reftrained only by their own Choice, for they may marry if they think fit, and fometimes they do.
As to their Eftates, the King has the fole Property in the Land, which is granted out to every Man in Proportion to his Family, but perfonal Eftates defcend from Father to Son. The Mandaryns have allo Lands affigned them for the Support of their Dignity, which they let out in Farms, but receive their Rent in Kind and not in Money. The Monarchs of Corea are abSolute, except the Homage they pay to the Emperor of Cbina, from whom they receive the Inveftiture of their Dominions by their Ambaffadors; and though the Heir apparent enter immediately on the Adminittration from the Deceafe of his Predeceffor, yet neither he nor his Confort affume Regal Titles till they have the Emperor's Confent, which is always given; and as the whole Ceremony upon this Occafion is very exactly regulated, as well as the Tribute paid, which amounts to eight hundred Taels; fo there never happens any Difputes.
Each Province maintains a certain Number of Horfe and Foot, except that in which the Capital City ftands, and which is exempted on the Score of maincaining the Court The Troops of each Province ferve annually about the King's. Perfon, fo that he fees the whole Force of Corea once in feven Years; but proportionable Detachments are fent from every Province to guard that whofe Forces are about the King. They are remarkably mild in their Punifhments for common Crimes; they are bamboo'd or baftinado'd, but with more Modefty and lefs Severity than in Cbina. Adultery, Murder, and Treafon, are punifhed by Beheading; and for other Offences capital in their Nature, the Criminals are banifhed into the adjacent Inands.

Poetry and Mufick are their principal Amufements, more efpecially publick Spectacles, fuch as Comedies, Tragedies, and Operas, in the Performance of which they fpare no Expence. It has been furmifed that they were very ignorant, becaufe they, fetched their Kalendars annually from Pekin, but in Reality this is a Point of Submiffion to the Cbinefe Court, which is alfo paid by the Inhabitants of every Province of that Empire
from political Confiderations, and they go in the tenth Month of every Year to receive their Kalendars for the next. The People of Corea are the moft dutiful in the World to their Parents; it is faid that Difobedience is capital by the Laws, but that there has been no Inftance of any Punifhment of that Sort, the very Law preventing any fuch Offence. They mourn for their Fathers and Mothers three Years, during all which Time the Corpfe is kept embalmed in their Houfe; at the End of that Space the Body is interr'd, and the Wearing Apparel, Horfes, Dogs, and whatever elfe belonged to the Perfon of the Deceafed are diftributed among the Relations at the Funeral. The Mourning for a Brother lafts in the fame Manner for three Months.
The common People are plainly clad, and fo are their Soldiers, who carry a Pole-axe, a Firelock, and have a Sabre at their Sides; they live, generally fpeaking, foberly, though they have great Plenty of every thingo and make very good Ale, or if you pleafe to call it Wine of Rice, from whence alfo they diftill Arrack, which is preferable to that of the Eoff Indies, being ${ }^{3}$ clearer and ftronger, as well as a better flavoured Spirit. Tea is much dranks in the Northen Provinces, but lefs ufed in the South, where theirRivers are bright and clear, fo that they have every where good Water, which is wanting in Cbina, and of which there is alfo a Scarcity in fapan.
6. We have obferved, that the Subjection of the Coreans to the Cbinefe, is very far from being burthenfome to them, but this muft be underftood of their Condition in their own Country ; for in Reference to the Deputies that are fent once a Year into Cbina, and who are generally accompanied by about threefcoreMerchants, they are certainly treated with as much Severity and Indignity as People well can be. The Months in which they travel are March and Auguft; in the former they fometimes crofs the Gulph of Corea upon the Ice with their Carriages; but in Auguft they come in pretty large Veffels, and having debarked their Cargoes, convey them by Land to Peckin. The Commodities they bring are principally thefe that follow :
A coarfe Kind of Paper made of raw Silk, very thick, fmooth, even, and ftrong, which is made Ufe of in Cbina inftead of Glafs to cover their Windows. A very fine, thin, white, and fmooth Paper for Writing. A third Sort of Paper thick like the firt, and fmooih and fine like the laft, with large Figures emboffed in Gold and Silver, made ufe of tor Hangings. It may not be amifs to obferve here, that eight hundred Years ago the Cbinefe had that black fhining Stick Ink, which they now make themfelves, from the Coreans, and they acknowledge that they were three hundred Years before they arrived at the Art of making it in the fame Perfection. Umbrelloes of all Sorts, very ftrong and very neat. Fine Matts, beautifully wrought and of many Colours. Tobacco of a fmall Cut for fmoaking; this they had from the $\mathfrak{f a p o n e f e}$, to whom it was brought by the Portuguefe; it is of the Brazil Kind, and the Cbinefe efteem it much more than their own. Striped Cottons of feveral. Kinds, Furrs of various Sorts, dried Fiih, which are taken out of large Shells in the Sea of Japan.
They bring with them likewife vaft Quantities of Silver and Gold, Part in Ingots, and Part in Spanib Piftoles. They are clofé fhut up, as in a Prifon, all the while they remain at Pekin; and the Mandaryn who has the Guard of them, fells the Liberty of trading with the Coreans to the Merchants who give moft; and yet thefe have not the Liberty of conferring with them but in the. Prefence of a Soldier and two Interpreters. Whenever they. ftir abroad they have a Guard about them with Whips in their Hands, who lah any that come near, or offer to fpeak to them.

The Goods they purchafe are fine Silks in prodigious Quantities, but raw : a Kind of Darnask, which they take off alfo in great Quantities; a Sort of very thin Silk for Linings, which the Cbinefe call Fanfa; Tea and China-ware, white Copper Veffels of all Sorts, valt Quantities of Cotton, Part of which they manufacture in fuch a Manner, that they bring it back and fell is in China at a high Price.

The Coreans likewife bring as Curiofities, fine Pencils made of the Hairof their Wolves Tails; a Sort of yellow Varnifh that fhines like Gold, made of the Gum of a Kind of Palm-tree, as alfo feveral Iron and Steel Wares. Once in three or four Years, when the Seafon affords them a fafe Paffage over the Mountains, they bring their Caravans by Land, and in them great Quantities of Silver, that they may buy up the more raw Silk, which they manufacture for their Trade, though the Cbinefe prohibit them dealing with any foreign Nation whatever, and have a Mandaryn at the King of Corea's Court to fee that this Prohibition is obferved; and he is very careful in this Particular in all Cafes but-where he is largely paid for not being fo.
It is not eafy to enter into the Reafons why the Cbinefe are fo exceffively jealous of the Coreans having any Commerce with Strangers, except the Dread they have of Foreigners eftablifhing themfelves in that Country, from whence they might fo eafily pafs over into Cbina itfelf. But of all Nations they moft dread the Ruffians, and it is not fo much through Ignorance as Cunning, that all their Maps of the Frontiers of Corea are fo incorrect. But this Kind of Precaution can only be of Ufe in deceiving the Europeans, for as to the Natives of Corea, they have fo much of the Cbinefe in them, that they have falfify'd their Maps and Charts likewife, and reprefent the North-eaft Coaft of their Country as utterly innavigable, on Account of Shallows, Rocks, and Banks of Sand, which is only with a View to cover their Trade on that Side, in which they employ a great Number of Veffels under the Pretence of the Fimery. For in the Faponefe Sea there are Shell fifh of a moft enormous Size, which being broke fo as to get out the Fifh, they hang up and dry it, fprinkling it from Time to Time with Salt Water ; this dried Fifh, which in Tafte refemble Codfouns, are held a great Delicacy in Cbina, and are fold at a pretty good Price; but the Coreans will tell you that they get Millions by them, which alludes to their clandeftine Trade, that is chiefly covered by Prefents of thefe Finh made to the Cbinefe Mandaryn refident in Corea.
7. In ancient Times, as has been already obferved, the Intercourfe between the People of Corea and of $\mathcal{F a}$ pan was very great, and highly beneficial to both Countries; and we have likewife fhewn how this Intercourfe was interrupted, and the Means by which it was followed with Hatred as implacable on both Sides, as their former Friendfhip was cordial and fincere. In Procefs' of Time however, and by a Sufpenfion of Injuries on all Sides, this Enmity is again in a great Meafure wore out, at leaft among the People of borh Nations, for the Governments ftill keep at their old Diftance, the Faponefe from political Jealoufy of all Strangers, and the Coreans, becaufe the Court of Cbina has ftrictly forbid all Traffick between them and the faponefe.
: But for all this, the Commerce is conftant, regular, and even publick enough between the two Nations, and the Manner in which it is managed is chis: There is a pretty large Inand between Corea and Fapan, but nearer to the Coafts of Fapan, which in our European Map is called Sufima, but by the Coreans Tui la tao; and this by the $\begin{aligned} & \text { Faponefe } \\ & \text { Government } \\ & \text { has been yielded to the }\end{aligned}$ King of Corea, with an evident Intention to facilitate the Trade between their Subjects, notwithftanding the Prohibitions on both Sides. In this Inand, the Property of which, as we have obferved, belongs now to the Coreans, the Faponefe Merchants have vaft Magazines, fo that all Ships that come hither are very fpeedily laden; and on the other Hand, the Coreans have their Magazines at Tfin tchfion, in the Province of TJuen 10 , from whence they are brought by two navigable Rivers, one of which falls into the other, and the Mouth of the latter is directly over-againft the Ifland of Tui la tao, at the Diftance only of eighteen Leagues.
It remains now to give an Account of the Merchandize in which the Traders of both Countries deal ; and firft with Regard to the Faponefe; their Magazines are conftancly full of Pepper of Sapan, and other fweetfeented and fine Woods, Bouffers Horns, which the Coreanis burn, and ufe the Powder in making their Ink ; of

Deer and Goat-skins, and of various European Commodities, which they purchafe partly from the Dutch in their own Country, and partly from the Cbinefe. The roreans, on the other Hand, barter with the faponefe, Tyger Skins, Furrs, Lead, Ginfeng, feveral Sorts of Varnifh, and the Balance of this Trade, generally in Favour of the Faponefe, is paid in Ingots of Silver. They likewife change their Ingors for spanifs Ducats, upon which they receive a Premium of Six or Seven per Cent. and the Defign of this is to carry thefe Ducats to Cbina, to conceal the better that Plenty of Silver which they have of their own; but the Ducats produced by this Trade are believed not to amount to a tenth Part of what the Coreans carry to Cbina; and how they come by the reft will be explained hereafter.

Befides this Trade with the faponefe, they carry on a Sort of fmugling Commerce at the Inand of Kelpraet or Quelpraet, where there are alfo Magazines of both Nations, but not near fo great as thofe of Tui ta lao; for, as we Thall hereafter inform the Reader, this Inand is chiefly remarkable for a Kind of Smugling or contraband Trade, for which there never was a Place better fituated or difpofed by Nature, as having convenient Ports on all Sides. Some modern Writers fay, that the Coreans exchanged this Inand with the Faponefe for that of Tui ta lao, which is a Point that hitherto is not fupported by fufficient Evidence. TheDutcb Seamen that were fhipwreck'd here in 1662, and whofe Account of Corea is almoft the only one publifhed, make this a Place of much too great Confequence to be exchanged; and as other Accounts we have from the Pbilippines admit there are great Numbers of faponefe fettiled here, perhaps this may bs thought Foundation enough for fuch a Report.

It is indeed very certain, that the printed Relations of all thefe Countries are very fuperficial, and are to be read with great Caution; the Miffionaries in Japan were able to give no Account of Corea, but as they met with it in $\begin{aligned} & \text { faponefe } \\ & \text { Books }\end{aligned}$ fince they fairly acknowledge, that none of their Fathers ever went there, and if they had, perhaps they would not have learned much more than thofe who went to Yedzo, and yet were not able to fay whether it was a Continent or an Inand. The laft of the Miffionaries Account of Cbina admit, that what is contained in the Cbinefe Maps and Books concerning Corea, cannot well be depended upon. His Excellency Mr. Ysbrants Ides, who with vaft Pains and Difficulty made a large Map of his Travels, which he fent-to Burgomafter Witzen, and who fettled his Geographical Faith upon it, though he is very accurate in defcribing the Countries through which he paffed, is miferably miftaken in all thofe that he has ventured to lay down from Information. As for Corea, he makes it a fmall Inand, with a Strait to the North between it and Cbina almoft as broad as the Gulph, by which it is really divided from that Country on the Weft; and as to the Norch-eaft Continent of Afa, it is laid down within the fame Longitude with Corea, whereas the Councry of Kamskatska ftretches feveral Degrees to the Eaft, and if produced, would lie in a Manner parallel to Corea, as the Peninjula of Corea lies parallel to the Continent of Cbina. The Dutch, while they were poffeffed of Formofa, had great Opportunities of becoming acquainted with the Coaft of Corea, and accordingly by the Favour of a very worthy Perfon, I have feen feveral remarkable Paffages in the Journals of a Perfon in a diftinguifhed Station at Formofa, which are vaftly clearer than any Thing publifhed of late Years, tho' written above a Century ago.

As far as I know, there is Nothing of this Sort printed; and as for the Shipwreck of the Dutch Seamen on Quelpraet, it will be a ufeful Thing to thofe who have read this Section, becaufe they will then fee the Reafon of the Treatment thofe Seamen met with from the Coreans, and of the great Dread thefe People had of the Tartars, by whom they had not then been fubdued full thirty Years. We might expect fome tolerable Account of thefe North-eaft Parts of Afa in the Spanilb Hiftories of the Pbilippines, if there were any fuch, of modern Date, but we know only of one, and that printed at Madrid in 1733, and fuppreffed for

Reafons

Reafons of State. The Truth of the Matter is, that the Spaniards are as fufpicious and jealous of that Colony as the Cbinefe are of Corea, and with fome Reafon, for Manila is incredibly rich, and the Trade driven there is not of a Nature to be difclofed, as appears from fome Memoirs lately tranfmitted from Batavia, in which we are told, that if this Country was in the Hands of any but the Spaniards, it would produce as much Benefit to Europe, as all the other trading Settlements in the Eaft Indies put together
8. After what has been already faid of the many Difficulties that occur in obtaining Accounts that may be depended upon of the Commerce of the Coreans, the Reader will, no Doubt, be pleafed with whatever can be rationably given him upon this Subject, though it is not quite fo full, fo clear, or fo certain as either he could defire, or we could wifh; but upon this he may depend, that we thall fet Things before him in a juft Light, and leave that to his Decifion, which perhaps fome Writers would have delivered with a greater Degree of Confidence, and confequently lefs Refpect to Truth. In the firft Place, we lay it down as a Thing abfolutely certain, that notwithftanding all the Precautions of the Cbinefe, the Coreans carry on a very large Trade ; which appears thus :

They purchafe vaft Quantities' of raw Silk in Cbina, beyond the Degree of Confumption in their Country, which they muft manufacture and difpofe of fomewhere, otherwife their Trade with Cbina would have declined, whereas it increafes. They take off large Quantities of manufactured Silks in Cbina, more elpecially of that Sort of Damask, which from its being chiefly in Demand from them, the Cbinefe call Kao li Toanza, i. e. Corean Damask, very little of which however is worn by them. They pay for mof of their Goods in Spani/b Silver, which Spanijb Silver mult be acquired by Trade. They purchafe no European Commodities at Pekin, and yet they are common enough all over Corea; they mult therefore have them fome other Way. They purchafe fome fmall Quantities of Rufran Furrs, when they are to be hiad, in Cbina, and yet the fineft Ruflum Furrs are commonly worn by Perfons of Ditinction in Corea, which therefore they muft obtain by fome other Channel. They have Spices and other Indian Commodities amongtt them, though none of thefe are bought from the Cbinese ; and they have alfo Amethifts and Emeralds, which is a Proof of their having Correfpondence with fome Nations that trade to Anerica. We will endeavour to give a probable Account of the Manner in which they come by all, or at leat moft of thefe Commodities and Manufactures, and in feveral Inftances we fhall confirm our Conjectures by indifputable Teftimonies, which in a Matter of this Nature is all that we pretend to do, and is much more than has hitherto been done.

The Country of Corea, or to fpeak with Strictnefs and Propriety, the Peninfula of Corea, excluding the two Provinces that belong to it upon the Continent, is very carefully laid down in the modern Maps of Cbina; but the fame thing cannot be faid of the adjacent Countries to the Eaft and North-eaft, as will appear to any competent Judge who will compare the feveral Maps of thofe Countries that are extant, hardly any two of which are alike, and confequently, tho' it is very poffible they may be all falfe, yet it is impoffible they thould be all true, and more than probable the greateft Part have no Refemblance to Truth.
In the Sieur Bellin's Map, of the laft Difcoveries made by the Rufians, there is a large Gulph which he calls the Gulph of Kamfchatska, which feparates that Country from the Continent to which Corea is joined, and from this Map it appears to be very eafy for the Coreans to fail along the Coalt as high as the River Amur, the Mouth of which is there laid down in the Latitude of 46 Degrees, and pafling up this River they trade with the Subjects of the Ruffians, and fometimes with the Ruflans themfelves, as appears from what Mr. $Y$ sbrant Ides tells us of People who come thither dreft in Robes of blue Silk, with long Beards, who pretend that they dwell in an Inand lying North-eaft of that Coaft. Woz. II. $\mathrm{N}^{\circ}$ CXXXIX.

Now, in the firft Place, we know that the Corears ac tually drefs in this Manner, and on the other Hand it is very certain, that the Inhabitants of any Inand lying to the North-eaft of the River Amur, could not well have Silk of their own Growth, or purchafe it in Cbincs without our hearing of them.

The Reafon why the Coreaits make ufe of this Method to deceive the Rufrans, is to prevent their Commerce coming to be made known to the Cibinefe, which they are very ftudious to avoid, as the Cbinefe appear to be much more jealous of the Ruffians than of any other Nation. It may be enquired, how it is ponible for them to avoid a Difcovery, fince the Climefe Dominions are now extended to the River Amur? To which the plain Anfwer is, That thefe Countries do not belong to the Emperor of Cbina in that Quality, but as he is the Sovereign of the Man tchou Tartars, and thefe People are not of fo jealous and fuipicious a Nature as the Cbinefe, and therefore content themfelves very probably with fuch Accounts, as for their own Conveniency the Coreans are pleafed to give. It is alfo not at all unlikely that they may trade with the Inhabitants of the oppofite Coaft of Kamfobatska, but what Commodities they obtain from them we cannot pretend to fay.

After having thus fhewn how they obtain rich Furrs, and other Northern Commodities, we will endeavour to defcribe their Trade to the South, in reference to which the Reader is to obferve, that under Colour of failing to the Iland of Quelpraet, they take in from the $\mathrm{Ma}_{\mathrm{a}}$ gazines there full of Cbinefe Commodities, a proper Cargo for the Philippines, and paffing behind the Inand of Formofa by the Help of the proper Trade Wind, they come, fafely to the Port of Manila, where they trade under the Name of Cbinefe, and by this Means it is that they obtain fuch Quantities of Spanith Silver, without which they would find it very difficult, if not impracticable, to carry on their Cbinefe Trade. Here likewife they purchafe Spices and other Indian Commodities; nor is it at all improbable that they trade in their Paffage home with the Inhabitants of thofe Inands that lie between Manila and Formofa.

It may be asked, What Certainty we have of this? To which I anfwer, That fince we are certain they have Spanib Silver, and fince we are as certain that no European Nation trades with them in their own Ports, we may be fure that they have it this Way, becaufe they can have it no other Way. Befides, I am fure they did carry on this Trade above an hundred Years ago, and this from theLights given me by fomePapers relating to the melancholy Maffacre at Amboyna, feveral of thofe who were ftiled j aponefe, and who fuffered with the Englib for their pretended Confpiracy againft the Dutch, were in Reality Coreans. If therefore they were expert enough to enter into this Navigation then, what Reafon is there to doubt that they carry on the fame Commerce now; more efpecially fince we know, that fo late as the Year 1702, their Merchants brought a large Quantity of Spanib Silver to Pekin.

It may alfo be enquired, how the Coreans efcape being difcovered by the Cbinefe at Manila? And the Anfwer to this is very fhort and eafy. The Trade to Manila is as much a contraband Trade to the Cbinefe as to the Coreans, and therefore it would be impoffible for them to difcover fuch an Offence to their Government, without confeffing themfelves guilty of the fame Crime; and every body knows that the Cbinefe are much too cunning to do that. I forefee alfo that it may be demanded, why, if they trade to Manila, they may not alfo trade to Batavia? To which I can only fay, that there are no Proofs of it, nor any great Probability, whereas with Refpect to their other Commerce we have both Evidence and Probability.

I have already obferved, that we are far from have ing diftinct Accounts of the Commerce at Manila, we only know in general Terms, that Veffels from almoft all the Countries in the Eaft refort thither, not only for the Sake of trading with the Spaniards, but with each other. It may indeed be faid, that Mc cao lies more conveniently for the Coreons, and that they might be furnimed there with European, and per-
haps alfo with Indian Commodities. But when it is confidered that this Place is under the Power of the Cbinefe, who have a Mandaryn conftantly refiding there, it will appear no proper Port for Corean Veffels; and therefore their not making ufe of it, cannot be efteemed an Objection of any Weight to the Truth of what I have delivered; neither am I confcious to my felf of having concealed any thing that might make againft the Account which I have given, and which therefore I hope will be thought to deferve Credit, at leaft till we can obtain a better.
9. The Pains taken to defcribe this Country, to digeft the fcattered Remains of the Hiftory of its Inhabitants, to explore their Manners and Cuftoms, and to inveftigate the Nature and Circumftances of their Commerce, might pals for a very rational Amurement, even fuppofing no higher End to be propofed, than that of fupplying the Deficiency of other Writers, and placing in a tolerable Point of Light a Subject that had remained in the Dark before. But I muft confefs this was not my Motive, or at leaft it was not my only Motive ; and when I fay this, I perfuade my felf that the Reader will be not at all at a Lofs to difcover what was my Motive. At the Time when an Application to Parliament was defigned for altering the Method of collecting the Duties upon Tea, which fince that has in fome Meafure taken Place, I remember, among other Suggeftions, this was one, that for many Years paft our Trade to Cbina was declining ; and this firft put me upon enquiring whether there might not 'pofibly be fome Method found of fupplying this Deficiency in our India Trade; and this Hint produced the Thoughts of carrying on a Commerce on the Coafts of Corea; for which I fought and procured Materials, with an Intent to have publifhed them by themfelves; but after engaging in this Work, I thought they might be better preferved here.
The Reafons which induced me to think a Scheme of this Sort practicable, were chiefly thefe: The Situation of the Country, which being a Peninfula with a vaft Extent of Coaft, made it probable that fome convenient Port might be met with to which Britij/s Ships might refort: If upon Trial this fhould be found either impracticable or difficult, it appeared to me, that as the whole of this Coaft was furrounded by Inands, fome of them might afford fuch a Port, without the Hazard of navigating a Coaft which I know fome of the Dutch Charts reprefent as very dangerous, though I am not altogether certain that thefe Charts are to be abfolutely depended upon. Something of this Kind might undoubtedly be undertaken, for as thefe Inands are very numerous, it is not to be conceived that in none of them a good Port, a tolerable Bay, or a fafe Road fhould be found; becaufe Experience fhews us, that there is no fuch Thing to be met with in the reft of the habitable World. When I found, upon Enquiry, that the Coreans were much addicted to Trade, and very defirous of corsefponding with Foreigners, which obliged the Chinefe to take fo many Precautions to prewent their Deputies from indulging this Propenfity during their Stay at Pekin; I concluded, that if an Attempt of this Sort was made with proper Care and Diligence, it could not well fail of fuccceding ; and that though very poffibly the firf Trials might not be attended with any great or any extraordinary Profit, yet they nouft of Neceffity afford us great Lights, and enable us by Degrees to open a new Branch of Trade, which in the End muft tend greatly to our Benefit.

I was confirmed in thefe Notions, by confidering, that the Inhabitants of the Northern Part of this Peninfula live in a very cold Climate; for all the Writers of Credit, in relation to the Affairs of Cbina, agree, that the upper Part of the Corean Gulph is entirely froze over almoft every Year; that therefore the People might very probably be pleafed with fome Kind or orher of our Woollen Maniufactures; and I was the rather induced to entertain this Opinion, when I found that. we formerly fent confiderable Quantities of Cloth to fepon. It occurred to me farther, that as the Co reans had a great many valuable Commodities and Manufactures much efteemed in Europe, the Returns could
not but be valuable in Cafe fuch a Trade could be brought about; ; or if we found ourfelves difappointed in that Refpect, as it is certain that thefe People have amongtt them Plenty both of Gold and Silver, we could not fail of being very well paid, in Cafe our Commodities and Manufactures could be introduced. I was indeed aware of the Umbrage this might give to the Cbinefe, and that very poffibly it might put them upon taking every Meafure in their Power to diftrefs, and even to deftroy this Trade; but on the other Hand, when I reflected, that in Spite of the Endeavours of the Cbinefe, the Coreans were in actual Poffeffion of a confiderable domeftick, and no very defpicable foreign Trade, this did not appear any formidable Objection, there being no Reafon why the Cbinefe fhould exert themfelves with greater Vivacity to hinder the Coreons from trading with us than with the $\mathcal{F}$ aponefe, which they tacitly permit, though they openly prohibit; and as they are a very fubtle Nation, I could not help thinking they might be rather induced to connive at our Trade, in Hopes of its deftroying, in a great Meafure, the Inclinations which the Coreans are known to have for carrying on a Correfpondence with the Ruffans.
It is very eafy to penetrate the Caufes that alarm the Government of Cbina upon this Head; and as they have been before fet forth, there is no Occafion for repeating them here ; but whoever confiders them, muft at the fame Time difcern, that our Trading upon the Coafts of Corea would be attended with none of thofe Inconveniencies. It could not be feared that we flould aim at difcovering in order to conquer the Country; it could not be apprehended that we fhould excite the Coreens to revolt; it could not be fo much as fufpected, that under Pretence of Commerce we fhould attemps any thing to the Prejudice of thore Rights which for a long Courfe of Years the Cbinese Emperors firtt, and the Tartar Monarchs fince, have eftablifhed over this Kingdom and its Inhabitants. I am well enough acquainted with the Cbinefe Government, to be very feno fible that Nothing of this Kind can be fuggefted by any Ambaffador in our Favour ; but I know very well, that whatever we may imagine in Europe, there are no Refolutions taken in the Cabinets of the Cbinefe Monarch till the Confequences are thoroughly confidered; and therefore we have good Reafon to believe, that amongft other Circumftances attending a new Trade, thefe might fall under their Cognizance; and as the Inference I make is drawn from their own Maxims, there is Nothing abfurd in fuppofing that they may fee it as well as we; but I muft defire the Reader to oblerve, that what I contend for is not a Permiffion, or a Toleration to trade to Corea in the fame Manner as we do to Canton in Cbina, but a bare Connivance only, founded upon prudential Motives, which to be fure the Cbinefe will not think proper to declare, and into which it will be as little neceffary for us to enquire. But befides all this, let us but remember a little what paffed in former Times. The Dutch actually poffeffed themfelves of Formofa, when it was more ftrongly connected with Cbina than Corea is at this Day; nor does it appear from any thing recorded in Hiftory, though I muft confefs that we are pretty much in the dark as to what paffed in this Inand, that the Cbinefe Government ever made any confiderable Attempt to recover it out of the Hands of the Dutcb; but it was taken from them at laft by a Multitude of defperate Perfons, who when they were themfelves driven out of Cbina, were to feek for a Habitation, and refolved to fix themfelves here, which however not with great Difficulty they did.
It is indeed true, that we have fome imperfect Accounts of an Attempt made by the Dutch to fix themfelves at Amoy, on the Continent of Cbiza, in which they were repulfed with confiderable Lofs; but as the Point I am labouring is not at all of this Nature, and as I do not apprehend there is or will be any Occafion for proceeding to Force in order to fix a Trade, or even an Eftablifhment in one of the Ports, or on fome of the Inands about Corea, there will be no Danger of a Quarrel with the Cbinefe, though if there were, I prefume that their naval Force, which never appeared
terrible

## Chap. III. <br> the Kingdom

terrible to any other European Nation, would not very much alarm us; and yet nothing but a naval Force, and that too, acting at fome Diftance from their Ports, could be employed to difpoffefs us of this Trade, in Cafe we were once poffeffed of it.
Taking therefore the whole of this Matter together, there is nothing vifionary, romantick or abfurd, in fuppofing that it might be worth the while of our EaftIndia Company, to make an Experiment of this kind, in which if they fucceeded they could have no Caule to repent; and if they did not fucceed, we fhall hereafter Shew, that the Difcoveries with which fuch an Attempt muft be attended, would very well compenlate the Expences which fuch a Tryal would require. I likewife beg leave to add, that it would be no bad Policy for a great trading Company to make now and then fuch an Attempt, for the Sake of National Advantage; becaule it would be a juft and rational Recommendation of their Interefts to this, as to a trading Nation, and take off in a great Meafure that Load of Envy, which has long fat hard, and muft otherwife continue always to fit hard upon every exclufive Company.
10. Whenever a Defign of this Sort fhall come to be maturely weighed, in order to its bểng put in Execution, it will be natural to endeavour at deriving from it all the Advantages that are poffible, and amongft there I apprehend, there is none more obvious, than the reviving thereby in fome Meafure our Commerce with Japan, which has been now interrupted for a long Series of Years, and 1 believe was never fo much as thought of, at leaft as a Thing any way practicable fince the Reign of King Cbarles II. We have already fhown how the Trade is carried on between Corea and Fapan, and from thence, I think there naturally arifes a Profpect of no lefs than three different Methods of making an Attempt of this Sort, favourable to fo important a Scheme. In the firft Place, we might hope for fomething by eftablifhing a Factory upon the Inand of Quelpraet. It is very true, that the Dutch loft a Ship there, in the Year 1653 . but according to the Defcription given us by thofe that efcaped that Shipwreck, there is a tolerable Harbour on the South-fide of that Inand, and more than one good Road on the Eaft-fide towards Japan.

If therefore we could introduce a Trade there, we might in all Probability either enter into a direct Commerce with the Faponefe who frequent that Inand, or at leaft purchafe many of their Commodities from the $\mathrm{CO}-$ reans, out of their Magazines. This I fay is the firft Method, and we are pretty fure that no great Difficulties could attend it, for by the Help of the Dutch Charts, and we might poffibly have the Help of Dutch Seamen too, this Navigation either is or might be very foon tolerably well known, and therefore I fhould imagine, that this might be firft tryed. The fecond Method is attempting the Ifland of Tui la tao, which as I have fhewn, is the direct and capital Seat of Commerce between the Coreans and the Faponefe, and if upon this Inand we could make a tolerable Eftablifhment, there can no Doubt arife, that we fhould be from thence able to carry on both the Corean and Japan Trade with equal Advantage, and this without giving any Umbrage either to the Cbinefe or to the Faponefe. For with Refpect to the former, they have never hitherto pretended to confider this Inand as dependant upon them, and therefore could not take any juft Colour of Offence at any Nation's trading thither, and as for the Faponefe they feem to confider this Inland in the fame Light, and as a Place that affords their Subjects an Opportunity of gratifying their Defire for foreign Commodities, without Danger to the State; one might therefore hope, that from the fame Views we might eftablifh a Factory there, without being at all expofed to thofe uneafy and mortifying Circumstances that attend the Commerce of the Duich in Fapan, and which perhaps have been the chief Caufes, that for folong a Tract of Time, no other European Nation has ever judged it expedient fo much as to attempt interfering with them.
of COREA.
1009
The third Method by which we might pofibly come to a good Conclufion in this Affair, might be by fetling upon one or other of thofe two little Inlands, that lie to the Eaftward of Tui la tao, and which in the Cbinefe Maps are ftiled, Doro fima and Key fima. Thefe are indeed very fmall Inands but withal they are very conveniently fituated, are within a Day's Sail of one of the beft Ports in Coreo, in lefs than a Day's Sail of the Faponefe Coafts, and fo near. China; that it would be very eas fy to detach an annual Ship from thofe that are conftantly fent to Canton, and for that Ship to join the Companies Veffels from that Port at Macao, in order to return in Confort to Europe. With Refpect to this third Method, I do not think it difficult, though at the fame time, I muft confefs, I hould not advife it to make a Defcent upon, and a Conqueft of which ever Inand fhould be held moft convenient. We have already mentioned more than once, the Dutch Conqueft of Formofa, which in Comparifon of either of thefe Inands, is much the fame as Famaica and St. Cbrifopbers, or of Ireland, and the Ife of Man; fo that methinks, if the Dutch Company could undertake and maintain fuch a Conqueft as the former, there is nothing unreafonable in fuppoling we might be able to atchieve the latter. Befides the fmaller our Acquifition was, the lefs Umbrage it would give, and the eafier it would be to keep.

It may indeed be objected, that if any Thing of this Kind was practicable, it is highly probable the Dutcb would have long ago undertaken it. At firt Sight, there is fomething in this plaufible enough but; when thoroughly examined, this Objection will be found to have very little in it. For the Dutch have no Temptation to a Thing of this kind, as they are already poffeffed of a fettled and profitable Trade with Fapan; and we are too well acquainted with the wife Maxims of that People, to fuppofe that they would rink a Certainty for an Uncertainty, or quit the Monopoly, which they now enjoy, for a kind of Trade in which they might be rivalled by fome other Nation, But this is not at all our Cafe, we had formerly a Share, in this Trade as well as they, from which we are now excluded, and are like to remain forever excluded, unlefs we fhould make fome fuch Attempt as this to recover it; and though perhaps at firft, the foponefe might be a little intractable, and forbid their Subjects holding any Correfpondence with us, yet by Degrees, and in Procefs of Time, we might very well hope to overcome their Jea louly and Averfion; for when they found that we aimed at nothing farther than a Settlement for the Sake of Trade, and did not propofe any Encroachment upon their Dominions, they might be brought to confider us in the fame Light they do the Dutch, and admit, for their own Sakes, a regulated Commerce, under certain Reftrictions; at leaft there are two Things morally certain, firft, that if we were fo eftablifhed, we might be able to fubfift by our Correfpondence with the Coreans, who have a natural Propenfity to Trade, whether we had any Intercourfe with the Inhabitants of Fapan or not; and fecondly, that lying thus at a Diftance from their Coaft, we fhould be in very little Danger from the whole Force of the Faponese Empire ; which was not the Cafe, when we were actually fettled on the Continent by their Permiffion, and under their Protection.

We may likewife add, that the Cafe of the Portuguefe at Macao, is a kind of Parallel to fuch an Eftablifhment; and though it is very true, that in its prefent Situation, that muft be allowed to be both a very mean and a very precarious Sertlement, yet it was not always fuch, nor is the Force of the Portuguefe in the Eaft-Indies at this time any way comparable to ours; fo that if they, even with the little Power they have, are ftill in a Capacity of maintaining themfelves on the Coaft of Cbina, we who have a much greater Power, might very well hope to compals and fupport a better Settlement upon the Coafts of Fapan. At leaft, there is no Harm in thinking of it, in ftating the Arguments in Favour of fuch a Thing, or in looking into and enquiring after the Advantages with which it might be attended.

If the Europeans had never entertained much bolder and more romantick Schemes than thefe, we had never known more of fapan; than what was handed to us in Marco Polo's Travels; and why our Anceftors in CockBoats, in Comparifon of our Ships, and with few or none of the Advantages which we poffefs, fhould attempt Difcoveries, eftablifh Colonies, and make Conquefts that we ought not fo much as to entertain any Thoughts of, is paying fo high a Compliment to them, and throwing fo depreciating a Character upon ourfelves, as with all our Faults I think we can hardly deferve. But fuppofe we did take it for granted, that we were fuch mean fpirited daftardly Creatures as this Comparifon would make us, let us not expect that our Pofterity muft follow our Examples, or that we are to decline and grow downwards to the End of Time. If foftened by Luxury, if enervated by Corruption, if hampered by private Interefts, and the Chains of exclufive Companies, the prefent Generation dare act nothing that is great and noble, let us at leaft preferve our Thoughts free, and difcover, fettle, and conquer in Imagination; nor need we debar ourfelves the poor Pleafure of hoping that thofe who come after us may be better than we, as well as thofe that went before us.
II. When fuch a Race of Men fhall arife, the Advantages that we have already propofed will in all Probability appear fufficient to engage them either to chufe one of thefe Methods which we have offered, or to think of fome other which may be preferable to any of them, and which at the fame Time may do Honour to their own Invention. They will alfo in all Probability pufh Things ftill farther, and entertain Hopes of new Difcoveries, when they once find themfelves fettled on the Frontiers, as it were, of the known World. I beg my Readers will now reflect, that I fpeak of thofe who fhall live when we are no more, and that I do not pretend to expect any modern Supercargoes, who can make great Fortunes in two or at moft three Voyages, Factors at Buenos Ayres, Panama or famaica, who in the Space of a few Years can rife from Indigence to Opulence, though now and then their Practices may plunge the Nation in a feven Years War or fo; or thofe active and bufy Spirits, who know how to fifh golden Treafures out of the troubled Waters of ${ }^{\text {CCbange-Alley }}$; I fay, I do not expect that there fhould fo much as relifh my Propofals, much lefs concern themfelves in their Execution; indeed I fhould be forry if they did, for I fhould then have the Mortification to fee the Trade to Corea made a Bubble; or, the Revival of our Commerce to $7 a p a n$, a Jobb. No, I pleafe mypfelf with the Profpect of a new Race of Men, who when our Confufions are over, and our Animofities buried in Oblivion; when Parties, Factions, Intrigues, Corruption and Stockjobbing fhall' be no more, may inhabit under a new Heaven as it were on a new Earth.
-It is from thefe Men, full of the good old Englifh Spirit, that fent Drake and Cavendif/ round the World, that infpired the great Sir Walter Raleigh with the View of peopling Virginia, and even in our degenerate Times, excited another Gentleman I need not name, to an Attempt which will be the wonder of future Ages, as the Neglect of it will be the Reproach of ours; from thefe Men, I fay, I expect that when they have fixed fuch an Eftablifhment as I have been fpeaking of, that they would confider what it is makes the Fapan Trade fo dear to the Dutch, in Spite of the Dangers, the Difficulties, and the difagreeable Circumftances with which it is attended. They will find, that it is the rich Copper they receive from thence, by which they always make fourfore, and fometimes Cent. per Cent. that it is the Silver of which they likewife make a Profit, and that a great Part of the former, and almoft all the latter, come to the Faponefe, from Countries to the Northeait of their own, and of thefe Countries wherever they lie, I make no Doubs but fuch Englifmen, upon thefe Informations, will go in Queft.
Thefe Countries mult be inhabited, otherwife their Mines could riot be wrought, and from the Climates in which they lie, the People muft fland in Need of warm

Cloathing, fo that without Queftion, our woollen Manufactures would be very acceptable to them; when thefe Countries are found, they will lead to the Difcovery of new, for Countries without doubt there are, from Fapan to California; and as the wife Columbus rightly forefaw, that a Weft Courfe, muft of Neceffity carry Men from Europe to the East-Indies; fo with equal Security we may pronounce, that this North-eaft Navigation will fooner or later bring them to that Northweft Paffage, which whenever it is difcovered, will fet the Name of Dobbs on a Level with that of 'Magellan. I do not wifh that thefe Difcoveries fhould lead to Conqueft, or that the Eng $\overline{i j h}$, like the Spaniards, fhould employ their Force in fubduing the Natives, and bury Millions in digging to fupport their Luxury. No, from fuch Men I expeet better Things, and that they will place their Glory in what all-wife Providence has made their Intereft, in civilizing the Savages they may find, in teaching them Humanity, and the Truths of the Gofpel, and in Exchange for the Bleffings their own fruitful Countries enjoy, bring back the Tribute of thofe new difcovered Lands.
Thefe are high and noble Sentiments, which however flighted and defpis'd by fuch as have no Principle but Gain, and no God but Gold, are thofe that tend to make a People truly great, and to eftablifh that Greatnefs upon a Foundation riever to be fhaken. If the modern, narrow and felfinh Notions had prevailed in former Ages, the Eaf-Indies and the Weft had ftill remained unknown; and if they had not been propagated in fucceeding Times, there would not remain at this Day a full third Part of the habitable Globe to be difcovered. At the fame Time that we know this with as much Certainty as it is poffible, that a Thing of this Nature fhould be known, we cannot but be fenfible that it is ridiculous to complain of Want of Trade, while fo many Branches remain unopened; we likewife know, that within a fhort Time after their being firft difcovered, Trades are the moft profitable, and are at the fame Time eafieft kept, as appear'd by our preferving for a long Time our Commerce with Ruffia, in Confequence of our finding the Route thither by Arcbangel, and our quiet Enjoyment of the Hudfon's Bay Trade, in Virtue alfo of our being the firf Difcoverers.
To fuch Men as I have defcribed, to thofe who hava found Heads and honeft Hearts, thefe will be perfuafive Arguments; and far from confidering the Revival of the Trade to $\mathcal{F}$ apan, as the utmoft Limits of their Hopes and the Britifo Commerce, they will embrace every Opportunity to carry their own Knowledge, and the Commodities of their Councry farther, and try every Method that can Art dictate, or Genius can devife, for gaining frefh Information. Nor will they have any Apprehenfions that their Labours may prove fruitlefs, or their Difcoveries ineffectual, fince this will be fufpecting Providence, and fuppofing that God would create Countries, and place Men in them beneath the Notice, and unworthy the Converfation of their FellowCreatures; which, impious as it is, may be agreeable enough to the Pride of corrupted Minds, but mult feem equally abfurd and fhocking to every well feafoned Underftanding. Befides, Experience tells us, that never any Difcovery was yet made, which proved utterly ufelefs, ineffectual, or when properly purfued.

The Coaft of Guinea, when firtt vifited by the Portugueje, did not promile any mighty Things, and yet it proved the Way to the Indies. The Country about the Cape of Good Hope was deferted by more Nations than one, as abfolutely worthlefs and incorrigible, and yet in the Hands of the Dutch it it a kind of terreftrial Paradife. We may fay the fame of the Shores of the Magellanic Straits, which are inhofpitable to the laft Degree ; but they open into the Soutb-Seas, and are, if I may be allowed the Expreffion, the Gates to a new World. As thefe are Wonders difclofed by paft Difcoveries; they may well provoke Men of high Spirits and true Courage to profecute the fame Road, and endeavour, by frefh Expeditions of the fame kind, to ri-
val the Reputation of old Difcoveries, by the more furprizing Scenes they unfold, in making new.
12. It is a very juft Obfervation of the wife Lord Chancellor Bacon, that there are many People, who chufe to put the moft material Part of their Letters in their Pofffripts; I mult confefs, I do not enter into the Reafon of the Thing, though without adverting thereto, I have fallen into the Practice, of which fhall give the Reader very fincerely and without Referve my Motives. When I undertook to give this Hiftory of Corea, and to recommend an Eftablifhment upon the Coafts of it, I propofed to fpare no Pains in order to recommend it to my Countrymen, as a Thing highly advantageous, and that could not poffibly fail of amply rewarding their Endeavours; but at the fame Time it was my Intention to have concealed the capital and ftrongeft Reafon, which had induced me to prefs this Matter fo warmly, not out of the leaft ill Will or Jealoufy of my Countrymen, not from any private View to my own Advantage, but becaufe I was apprehenfive, that the difclofing this Matter might give other Nations an Opporcunity to profit, by an Invention which I could wifh to fee in the Poffeffion of the Britif/ Nation alone. This I the rather apprehended, becaufe of that fupine Indolence, which for many Years has locked up our Faculties, with Refpect to Difcoveries, while other Nations that we feem to defpife have crept fo fart into Naval Power, as already to tread upon our Heels; for the Swedes this very Year have deftined thirty five thoufand able Seamen for the Service of their Navy, and at the fame Time have renewed the Charter of their Eaf-India Company for twenty Years, and difpatched two large new Ships to China.
But being well informed, that thofe worthy and publick firited Men, who were at the Expence of the laft Expedition, for the Difcovery of a North-weft Paf fage, continue in their Refolution to profecute that Defign, which fooner or later I am convinced will be attended with Succefs; I was from thence determined to alter my Plan, and to acquaint the World, fairly and truly with the Secret of this Bufinefs; and the principal Reafon of my contending fo much, not only for the Expediency, but even for the Neceffity of making an Attempt on this Side, and fecuring a folid Eftablifhment on fome or other of the Inlands between Corea and Fapan. The fetting this Affair in a clear and $^{2}$ proper Light will take up fome Room, and require a little Attention; but every ingenious Reader, I am confident, will allow me the one without complaining, and gratify me in the other with Pleafure, fince what I have to offer, carries along with it the prevailing Charm of Novelty, at the fame Time that it is equally curious and important.

The Hopes of difcovering a North-eaft Paffage have been long laid afide, from a great Variety of Reafons, but chiefly on Account of thofe advanced by the laft Adventurer for that Difcovery our Countryman Captain Wood, who like many other great Navigators, having failed in his Expectations, confoled himfelf tor that Difappointment, by labouring to take away Expectation itfelf. I muft confefs, that this Method, however common, is very far from being fatisfactory to me, infomuch that I could. wifh it was difured, and that fuch as are for the future employed in any Expeditions of this Kind, would content themfelves with the Vindication of their own Conduct, in giving a fair Detail of their Mifcarriages, without laying it down as a Thing certain, or even probable, that no Man fhould ever fucceed where they failed. But notwithftanding all the Difappointments, and, I muft confefs there have been many of them in attempting this North-eaf Paffage, the Reafons for believing it remain yet unanfwered, and particularly a Matter of Fact which belongs properly to the Subject of this Section, and therefore I will res port it in the Author's own W.ords.

The Perfon, whoever he was, that wrote an Account of the Shipwreck of the Dutch Sailors on the Inand of Quelpraet, has added a fhort Defcription of the Kingdom of Corea, in which he has the follow-

Vol. II. $\mathrm{N}^{0} 139$.
ing very remarkable Paffage. "On the North-eaft it " is bounded by the valt Ocean where there is every "Year a great Number of Whales taken, fome of "them found with the French and Duitch Harping"Irons', thofe People ufing to follow that Fiihery'. "There are Abundance of Herrings alfo catch'd there " in December, Fanuary, February and March. Thofe " taken the two firft of thefe Months, are as large as "ours in Holland, but what they catch afterwards are "fmaller, and like thofe in Hollond, called Frying " Herrings, which are eaten in March and April. Hencé "we infer, that there is a Paffage above Corea, Jopan " and Tarlary, which anfwers to the Streights of Wei" gats. For this Reafon we often asked of the Core"Jian Seamen, who ufe the North-eaift Sea, what Lands "were beyond them, and they all told us they be" lieved there was nothing that Way but a boundlefs "Ocean."
This very Paffage is alledged by Captain Wood, as one of the feven Reafons which induced him to attempt finding this Paffage, but as at the Time of Writing his Book, he had two very different Objects in View, viz. the Showing that he did not venture upon the Expedition without good Grounds; and the Proving that, notwithftanding their fair Appearance, thefe were in Effect no Grounds at all; he is fo far from citing the Paffage as I have done, that he gives a very inaccurate, I might fay, falfe Accouit of it; for he fays, that the Dutch Writer reports, that in a cettain Bay of the Kingdom of Corea, dead Whales drive in with Englifa and Dutch. Harping-Irons in them, which if true, he owns had been a great Argument of a Paffage.
The Reader may fee, that the Dutch Writer fays no fuch Thing, and if he liad faid it, the Abfurdnefs of thefe dead Whales floating fo far, would have rendered the Paffage ridiculous; and this, very poffibly, Captain Wood intended by making the Change. Of the Herrings he fays not a Word; and therefore giving him up the dead Whales for his'own Ufe; I prefume the living ones, and the Herrings, may fill pais for tivo very frong Arguments of fuch a Paffage, and in its proper Place; I have produced thefe and many more. If therefore there be any fuch Paffage, it is very manifett from hence, that making fuch a Settlement as I contend for, is the likelieft Mechod to find it. For fup: pofing that we had a good Colony, or at leaft a ftrong Fort and Factory, upon the Inland of Tui la tao, we might from thence annually endeavour to difcover along the Coafts of Kamjcibatjca, at the moft favourable Seafon of the Year, and thereby obtain a fairer Opportunity than has yet offered, of getting round into the $E u$ ropean Seas; for as Dampier very rightly faid of the Northweft Paffage, that it was more likely it fhould be found by thofe who attempted it from California, than by fuch as fought it from Hudjon's-Bay; fo I may fay, with Regard to this Difcovery, that they have infinitely a better Chance, who feek this Paffage from Japan, than thofe who profecute it from the North of Scotland : and for the very fame Reafon, becaufe this is proceeding from the Unknown to the Known, and making the latter Part of the Voyage, fafe and eafy, which in the other Way is always dangerous and incertain ; to which we may with much Probability, attribute moft of the Difappointments that have been met with.

But if contrary to all Appearances, if in Spite of all the Reafons, Phyfical, Phyiofophical and Cofmographi: cal, that countenance this Opinion, and which hitherto remain altogether unrefuted, there fhould, after all, be none fuch, we fhould make this negative Difcovery earlier, and with greater Certainty than other People, and even from hence there might very great Advantages arife, that have not hitherto been confidered; for thought it would be impofible to tranfport Goods, yet Letters and Intelligence might be carried over Land; a Sloop. in the Space of three Weeks; with a fair Wind, in much lefs Time, might proceed from 2 uelpraet, up the River Amur, and fo the Packets might be conveyed to Nipchou, from whence there are frequent Opportunities of fending to Mofow, and by this Means, in the 12 A $\quad$ Spacea

Space of fix Months, Letters would reach Hamburgh, from a Factory upon the Coaft of fapan; in this there is nothing dark or unintelligible, nothing that refts upon Suppofition or Conjecture, the whole is juft as certain, as that the Dominions of the Czarina border upon thofe of the Emperor of Cbina.

Thus then, whecher a North-eaft Paffage, or no Paffage, fuch a Settlement would be highly ufeful, highly advantageous, and highly convenient. But I have fomething farcher to fay, fuch a Settlement as this might be of Ufe, if not to the Difcovery, yet to the Prefervation and Improvement, even of a North-weft Paffage; for though I am not fo fanguine, as to imagine, that thofe who fhall be fo lucky as to make that Paffage, would afterwards have the Courage to make fuch an enormous Stretch, as from California to Fapan; yet I prefume, that in Procefs of Time, fuch a Difcovery being once made, Endeavours might be ufed on both Sides, by difcovering to the Eaft one Way, and to the Weft the other, to facilitate a Junction in fome middle Port; for to me it appears a Thing certain, that chere are Countries, at leaft Inands all the Way. This double Difcovery would lay open the Whole, in half the Time that would be otherwife neceffary, perhaps in lefs than half the Time, for in both Cafes our Seamen having reafonable Hopes of reaching an Englijh Port, would make infinitely greater Efforts than could be expected from them in a State of Uncertainty, and proceeding conftancly through unknown Seas, without any View of being fafe at laft.

It is to be obferved, that all I have advanced under this laft Head, is abfolutely independant of what was faid before: fo that if the Advantages firtt propofed are fuch as may encourage the attempting fuch a Setclement, by proving the great Probability there is of its being advantageous to the Britifo Nation, then thefe additional Confiderations ought very much to ftrengthen and confirm the Refolution of doing fomething of this Sort in Time, and before any other Nation lays hold of what we neglect. To fome poffibly this may appear highly improbable, but to remove that, as I would willingly do every other Objection, I beg Leave to take Notice of three Things, which, in my Apprehenfion, are fufficient to fhew, that a Sulpicion of this kind is not altogether groundlefs, much lefs chimerical. In the firlt Place then, I prefume Nobody will doubr, that if we are fo happy as to find the North-weft Paffage, is will excite a great Spirit of Emulation, in all the trading Nations of Europe, more efpecially, if we fhould, as there is great Probability we nutt; reap very great Advantages from that Difcovery. Now to balance this, the moft natural Expedient they could recur too, would be attempting the Difcovering of the North-eaft Paffage, towards which, the finding the other would be the frongett Encouragement.

But, fuppofing this to be utterly impracticable, yes without any greater Knowledge than they have aiready, the Ruffians might be tempted to make Ufe of the Advantages they already poffers, in order to be beforehand with us, in opening a Commerce with fapan, and thereby precluding us from thofe Benefits, which from a listle Induftry and Pains we might now fecure to ourfelves againft all other Nations, at leaft for a confiderable Space of Time, during which we might eftablifh ourfelves fo effectually, as to preferve thofe Advantages for ever, in Spite of any Attempts to difpoffefs us.
My fecond Obfervation is, that the Ruflians have this very Point already in View, that it is what they aim at by all the Difcoveries they have been for many Years making; that this is confeffed in all the Accounts, that they have hitherto publifhed of their Progrefs; that it is the true and only Reafon of their not making their laft Difcoveries as publick as they did thofe of Captain Bebring; and thongh I am very far from faying, that we have any Right to take this ill, or to be offended with the Conduct of the Ruflans in this Particular, yet I cannot help thinking, that it is worth our Obfervation, and that there is full as good Reafon we fhould make Ufe of the Experience and Advantage, derived to us from our Eaj-India Trade, as the Rufians of the Situa-
tion of their Territories, and the Difcoveries which they have made by that Means.

In the third Place, I muft remark, that ever fince the Sroedes fuccceded in their Attempt of opening a Communication with the Eaff- Indies, they have had fomething of this Kind in their Head, I mean making a Setclement upon fome Inand near the Coaft of Cbuna, or to the Ealt of it; nor are weat all certain, that the Ships which have failed from Gottenburgb, while this very Section was princing, may not have Infructions to make, or at leaft attempt making fuch a Settement. Why then we fhould fit ftill with our Arms before us, while other Nations, more efpecially the Northern Nations, who are avowedly and earneftly endeavouring to render themfelves maritime Powers, ufe fo much Vigilance and Activity to compafs their Ends; or why, according to the old, but true and fenfible Proverb, We are to take no Care of the Stable-Door, wobilft the Steed is unfolen, I am at a Lofs to comprehend? Sure I am, that whatever Reception thefe Remarks may meet with at prefent, it will not be many Years before the World will fee, that I am not altogether miftaken in my Eftimate, and that the rich Goods of Fapan will find their Way to Europe in fome other Bottoms than thofe belonging to the Dutch Eaff-Trdia Company; and I am fatisfied, that-the Dutch themfelves will not blame me, for wifhing, that in fuch a Cafe they might be freighted in Briti/b Veffels.

There is a natural Connection between the Interefts of the maritime Powers in the Indies. as well as in Europe, and though it is certainly true, that as Trade is our common Miftrefs, we mult in many Cafes be confidered as Rivals; yet it is no lefs true, that if our Interefts be well undertood, we ought to avoid Quarrelling even upon that Account; for though it may be in our Power to deftroy each other, yet we have this Comfort, that if it is never in our Will, we may preferve our Commerce and our Naval Force in Spite of all our Enemies ; and this is a Topick that can never be too much preached upon, either in England, or in Holland; and as a Proof of this we need only confider, that fuch as are Enemies to both, never fail to infinuate the contrary. Whoever looks into the Pamphlets, publifhed here in the Reign of King Cbarles the IId, and whoever has read, and remembers the celebrated Letiers of Van Hoey, cannot bue acknowledge the Truch of this Obfervation, which I the rather make, becaufe in fome Parts of this Work, I have expreffed myfelf very freely, in Regard to the Practices of the Dutch in the Eaft-Indies; but I defire that it may be underftood, that I diftinguifh between the Servants of the Eaf-India Company, and the Subjects of the States-General; for though they are the fame Men, they are under different Directions, and this Diflinction is none of my coining, but one I learned from my old Mafter Gobn de Witt, whofe Maxims firf gave me a true Notion of Trade, and taught me to look upon it, not in the narrow Light of a Scheme to acquire Wealth, but as a generous Syftem, of diftributing through all Climates the Blefings beftowed by Nature, and chereby promoting the common Happinefs of Mankind.
13. After having thus finithed the Bufinefs of the Section, with the Readers good Leave, we will take the Liberty of making a few Remarks and Obfervations upon it. It confifts in a Defcription of Corea, which is entirely new, and confequently cannot be thought either ufeiefs or unentertaining. It fhews from the Defription laid down of this Country and its Inhabitants, that there is nothing improbable, in fuppofing that we may become better acquainted with them; it is true, we lie a great Way from them, but we vifit the Cbinefe very often, and thefe fame Coreans live but at next Door : It exhibits alfo fome Reafons that may induce us to think of calling upon them, and amongft others, that of opening by their Afiftance the Way to renew our Acquaintance with the faponefe, with whom we had Dealings in Times paft. It farther lays open fome additional Advantages that may refult from our entering upon this Commerce ; and finally it brings to Light fome very curious, and if they were well weighed, fome very cogent Reafons for our not Reeping over

## Chap. III.

the Kingdom of Corea.
an Affair, which, if well managed, may be attended with fo many good Confequences.

The Plan, it is true, is very extenfive, and I will readily grant is much fooner conceived and thrown out upon Paper (though that too has coft a good deal of Time) than carried into Execution. But it may be a very good Plan for all that, and I have the better Opinion of it, becaufe it may be executed Siep by Step, and be made to bear its own Charges into the Bargain. If the Trade to Corea fhould be found practicable and profitable, I thould certainly incur no Blame for pointing it out ; but fay, that Experience fhould juftify the former only, and not the latter: In that Cafe I fhould think we might eke out Matters from fapen, not in two or three Years perhaps, but in half a Score much might be done; and in the mean Time fome Trials might be made towards other Difcoveries. The old Proverb fays, that Rome was not built in a Day, and this Proverb was never better verified than when applied to Trade, to Settlements, and to Colonies. They are, to be fure, neither adjufted, fixed, or rendred beneficial in a Moment; but in Matters of this Nature, Time and Patience will do all. Let us look at Virginia and NeroEngland, thofe Sifter Plantations, that have grown up to be fine comely Perfonages, though they were fomewhat dificult in the Rearing; and let us remember how often chis Nation was told, while they were at her Breafts, that it was all Labour in vain, and that they would never live to go alone. But Thanks be to God, we were not terrified by thefe old Womens Prophecies, we continued our Care of them notwithftanding thefe untoward Prognoftications, and we have had no Caure to repent of it; the young Women, as they grew up, throve apace; they have been long fince able to get their own Living, and have made us very grateful Returns for the Pains we took in nurfing them.

The Danger is not fo great in undertaking extenfive Projects, as that which arifes from the Folly of abandoning them too foon. We ought moft certainly to examine Things maturely before we refolve upon them; as I faid once before, I am not vain enough to imagine, that I have pointed out all the Methods, or even the beft Methods for accomplifhing this Defign, but if upon Trial it thould be found that I have been ever fo much miftaken, and that the Thing muft be gone about in quite another Way, it will not affict me much provided the Thing can be done. That, and that alone, is my View, let the Project be decried, let the Projector be thought a Fool, if his Folly proves an Inftrument to his Country's Good, and his Countryman's Glofy, that Fool will be happier than all the Indies could make him. The Vanity of knowing much, the Ambition of making a Figure in the learned World, the afpiring Hopes of ftriking out new Paths, are Weakneffes without Doubt, but they are Weaknefles that are often beneficial to Mankind, and in that Light are excufable. I defire this may be confidered in no other, though in Truth I am not much concerned in what Light it is confidered, if it is but productive of any Good.

Extenfive as the Plan is, yet we fee plainly that it confilts of Parts ; though it is propofed at once, yet it may be effetted by Degrees. We are told that Milo, a famous Lubber of Anciquity, began with carrying of a Calf, and was able to jog about with it upon his Shoulders when it grew up to be an Ox, which he afterwards knocked on the Head with a Blow of his Fift; and then I think the Story fays, he eat it, not at a Meal, I prefume, but in Joints. This fhews us, that Time and Application will atchieve Wonders, and provided we make an Eflay to take up the Calf all in good Time, we may come to have many a good Dinner out of the Ox. But we muft fet our Shoulders to it, that was Milo's Beginning, and it mult be ours. If we can but carry the Calf, and do not fling it down in a Paffion, there is no doubt of its becoming an Ox , or that our Strength and his will keep. Pace, and that we fhall be able to carry him when he is an Ox. The Comparifon is familiar and coarfe, but it is very apt, and if I was fure that the Criticks, would not be angry, I
would fay that Homer himfeif has made ufe of fome that are not a bit more clumfy or lefs cleanly.
It may be farther objected, and indeed I cannot deny, that though I file it a fingle Propofition, yet there is a great Variety of Objects pointed out ; but if from this Conceffion it fhould be faid that any Diftraction arifes, againft that I fhall enter my Proteft. It is very certain that one Machine may anfwer a Variety of Purpofes, and therefore becaufe a Man affirms, that if a certain Thing be done, it may prove the Means of doing many other Things, it does not at all follow that what he propofes is the more difficult, much lefs that it is impracticable. To judge of this, we muft confider the Relation between the Means he propofes, and the Ends which he affirms may be anfiwered by them; for if there be a proper Connection between them, he may be fill in the right, tho' at the firft Appearance he may feem to promife large. To apply this general DoCrine. When 1 fay that Corea is happily fituated for Trade, the Reader need only turn to a Map to know whether I fueak Truth. When I affirm that the Inhabitants are addicted to Commerce, he may have Recourfe to the Authorities I have cited, and upon due Examination the Witneffes will be found to fpeak my Senfe. When I lay it down that there are Inands very conveniently fituated between Corea and $\mathcal{F}$ apan, I mention alfo their Names, fo that it may very eafily be feen, whether I imitate that Painter, who to gratify his Wife that did not love to fee fo much white in one part of the Globe, fprinkled a few Inands through it, which are called the Painter's Wife's Inands to this Day. When I hold forth about Countries beyond fapan, I mult confefs I ans a little a fhamed to appeal to Father Cbarlevoix and his Brethren the Fefuits; but however, if their Teftimony fhould be rejected, I believe I could produce fome Proteftant Witneffes to the fame Facts. And laftly, when I talk about a North-eaft Paffage, there is Captain Wood will bear me out in' all that 1 have advanced. Thus I reconcile my Means to all thefe feveral Ends, or at leaft I put it into the Reader's Power to fee whether I reconcile them or nor.
In the next Place it is to be obferved, that I do not pretend to fay, that the Moment a Settlement is fixed, it will fulfill all that I have promifed in its Behalf, or that it is requifite we fhould attempt to fulfill them the very Inftant that we have made fuch a Serclement. This I am fo far from affirming that the principal Reafon of my introducing this Remark, is to fhew that it ought not to be expected. I maintain that there is a Connection between this Settlement and all the Ends I have alledged it may anfwer; but we muft touch but one String at a Time, ocherwife we fhall produce Difcord intead of Harmony. We mult take each in its Order, and if we do not immediately fucceed, we muft drop that Defign for a Time, and drive only the Nails that will go, and thus by Degrees there is no Room to fear we fhall come to drive them all at latt.
When the Canaries were firtt difcovered, and toffed about from Hand to Hand, whoever thought that from thence a new World might be difcovered? Why truly Columbus. And what then ? He propofed it to the Portuguefe, who were thought to be the beft Judges of fuch Projects, and they rejected it as an idle Dream. But as good Judges as they were, they miftook the Point, and as much as they thought him miftaken, he hit the Mark. Not at once indeed, but gradually; he firt reached the Babama Iflands, then the Continent of America, and as foon as he heard of a South Sea, he pronounced that the Indies he fought lay beyond that. By Degrees every End was anfwered, and the Spices brought home in Magellan's Ships, though many Years after Columbus's Death, proved that his firft Conceptions were right; and give me Leave to fay they would have been juft as right if Magellan had not fucceeded in his Voyage. All the Ends of a Propofition may not be anfwered in a very long Tract of Time, and yet they may be all truly laid down. We have not yet fquared the Circle, but the Dutch Mathematician that had a Line and half of Decimals inferibed upon his Tomb went very near it,

Without doubt many a one will fay, that the Scene is laid at a prodigious Diftance, that there are a Multitude of Obftacles lie in the Way, and that it would be a wild Wafte of Wealth to undertake any of thefe enormous Schemes, which are out of the Reach of any but whimfical People's Obfervations. As to the Diftance, I proteff I cant tell what to fay. It is moft certain, that I can't bring Corea nearer, but where it is there Providence placed it ; and if it had been placed any where elfe, it would have been fo much the worfe, for all the Ends that I have propofed, and I muft even have had Recourfe to any other Country that ftood in its Room. But then if a North-eart Paffage fhould be difcovered, though it would not bring Corea nearer, or fhorten the Diftance a Yard, yet we fhould get fooner there by very near two thirds of the Time. Well then, there is fomething in Alleviation of the Diftance, and as to the Difficulty why that is not much greater than mult be got over to get at a Pound of Hyfon Tea, and not fo great as is actually got over, before Europeanśs can make themfelves Mafters of a Fapan Teaboard. Whence I infer, that any Body who ever drank Tea upon fuch a Tea-board mult allow that the Thing may be done.

King Pbilip the IId, who was a very wife Man, framed far more extenfive Projects, and durft think of encountring Difficulties, to which all that I have mentioned are but Mole-hills, He conceived an Idea at leaft of univerfal Monarchy in Europe, and a Monarchy as univerfal on the Ocean. He knew all the poffible Paffages to the Indies, and refolved to be Mafter of them all; with a View to this he actually attempted to fix a Settlement, and build a City on the miferable Coaft of the Streights of Magellan, where one of our Men of War's Boats, Crew could not fubfift during their Paffage; and it fell out with Refpect to his Colony, as might be expected, that is, fuch as did not drown or hang themfelves were fairly farved. He had it likewife in his Head to put it out of every Body's Power to look either for North-eaft, or North-weft Paffages, by reducing the Englifh and Duich, the only Nations that had thought of fuch a Thing. Nay to fuch a Degree did he carry this kind of Imperial Madnefs, that he was even for locking up the Baltick, and with that View actually took Meafures for making himfelf Matter of the Sound.

Thefe were prodigious and impracticable Projects, and yet they enter'd into a very wife Man's Pate ; they were purfued with the utmoft Vigour, and with the Affiftance of as much Power as Europe ever faw, and yet they mifcarried. But all this happened by affigning to their Accomplifhment the Life of a fingle Man. Had Pbilip contented himfelf with framing his Plan, executing any one Fart of it, and by culcivating the Arts of Peace, raifed the Power of his Subjects to a Degree proportionate to the next Branch of his Scheme, what he left unaccomplifhed, might have been performed by his Pofterity, fuppofing them to have made no more Hafte than good Speed in compleating this fuupendious Fabrick, which like the Tower of Babel, being confecrated to the Ufe of Slavery, the divine Juftice of Providence tumbled to the Ground. Thus the Reader fees, that there are great Projects practicable, and greater Projects impracticable ; that wife and powerful Kings may be miftaken and defeated, and that an Adventurer, like Columbus, without a Freehold as big as his Hat, or Half a Crown in his Pocket, may bring his Defire to bear, even when that Defire was fo feemingly improbable, as to look for a new World. But afier all, the Difficulty in this Cafe is not fo great as to exceed the Power even of the Eaft-India Company; they can do much more than I have propofed, that they will do it, though I am bold enough in prophecying, I fhall not venture to foretel.
There is another Thing that I apprehend may be called in Queftion, and that is the Strefs I lay upon the Expeditions made by the Northen Nations to the EaflIndies. What does this Fool mean, will fome great Politician fay, by being in fuch a Panick about the the Szaedes and Danes fending now and then a Ship to

Cbina? Will erecting an Eaf-India Company eftablifh a Maricime Power ? Truly I can't lay that, but this I will fay, and can prove, that no Nation ever carried on a Trade to the Eafl-Indies, but became a maritime Power. I have written half a Folio Volume to evince this, and Idefy all the Men in the World to fhew the contrary. Within the Compafs of thefe lait five hundred Years, did not the Venetians and Genoefe become maritime Powers by the Eaff-India Commerce, though they carried it on at fecond Hand. What made Portugal a maritime Power, but the Eaf-India Trade? What made Spain a maritime Power, but the Defire of the EafL-India Trade, which threw the WeftIndies in her Way? it is true, fhe flood ftill to pick them up, but then fhe went on, as the Pbilippines will bear me Witnefs? What made us? What made the Dutch maritime Powers? This very Trade. And when have all maritime Powers declined? When they loft their Trade to the Eaf-Indies. Judge then Reader for yourfelf, whether my Conjectures be rah or vain, or whether I have not too good Grounds to fufpect, that thofe who have overcome greater Difficulties, than in Refpect to Navigation was oppofed to other Nations, will in a fhort Time become maritime Powers alfo.

I may be miftaken, and flould be glad to be miftaken; I fay no more, and I wifh I had never had Occafion to fay fo much. Yet even this affords a Juftification of my Scheme; for if I point out the Difeafe, I have likewife prefcribed a Remedy. If there be any Maxim in Polisicks, certain it is this, that if a maritime Power does not increafe, it muft quickly decline. We are every Day complaining that our old Branches of Trade fail, that one turns to no Account, that in another we are fupplanted, that a third is quite wore out. What Medicine then fo natural, and at the fame Time fo eafy as to frike out new Branches? We have Strength and Power enough to do that, but whether we have Force fufficient to abet fuch an Attempt as that of King Pbilip's, I mean to reftrain all the reft of the World from Trading, I fuppofe, I need not fay; but if we really had, that very Force would fink and crumble to Pieces in the Attempt. This Remedy then or none muft cure us; it is the Tar-Water of the State, and if it will not help us, we may die according to the regular Practice, as other maritime Powers have done before us.
Thefe are melancholy Confiderations, but however they may lead to a merry Purpofe. There is a Time for every Thing, and we mutt be fometimes grave as well as gay; and if heretofore we had no Rival but the Dutch, we mult not now flater ourfelves that we have no other Rival, when every Dutch Mail that bring us Papers and Letters from the North, fhow the contrary. I might fay fomewhat of the Prufian Pretences, but I don't care to talk of Lovers in Leading Strings, or pretend to think of ftrangling a hopeful Babe in its Cradle, for fear when he grows up he fhould prove our Rival too. Yet it may not be amifs to obferve, that there is a ftrange Spirit gone Abroad, and that while every Body is looking after Trade, it becomes us who fublift by it, to look about it too. This indeed is a very obvious Remark, but the more obvious it is, the more neceflary; if none but a blind Man could mifs feeing it, what mult he be who miffes the right Ufe of it? The Queftion is eafily anfwered, and it is the Anfwer that I will recommend to the ferious Confideration of our Superiors.
One Obfervation more and I have done; fome Objection may be made as to the Seafon in which I made this Propofal ; we are engaged in a dangerous, doubtful and deftructive War, this therefore cannot be thought fit Time for thinking of new Schemes, or for aiming at Difcoveries. But alas, I am forry this is fo eafily anfwered ; we have already loft a great deal of Time, and it is our own Fault that we did not think of thefe Things fooner, that we ihould not chufe fuch a Time as this I will readily agree; but it is not left to our Choice, the Situation of Things has made it neceffary, and as Neceffity, in Fact, has no Law, fo Neceflity in Argument will admit of no Aniwer.

## Chap. III.

the Kingdom
It is indeed true, that in a Time of War the Thoughts of our Statefmen are much occupied, and Money is not eafily found for Expeditions of this Sort, where neither immediate N.ceffity, nor inftant Gain feem to require or excite them. But Men who fee further will perceive, that notwithftanding thefe and fome orher Inconveniencies that might be pointed out, yet upon the whole a Time of War may be efteemed the moft proper, becaufe Ships of Force may be difpatched into thofe Parts, firft without Sufpicion, and next without any Lofs; for the Situation of Things is Reaion fufficient to account for our fending Ships of Strength to the Indies, without leaving it in the Power of any to difcover what our true Intentions in fending them may be; and next they may actually render fuch Service to our Commerce in thofe Parts as may effectually indemnify us for our Expences in fitting them out, even if we fhould be fo unlucky as in the firt Trial not to fucceed. Befides, whatever Acquifitions we make in Time of War, may be fortified and fecured by a fubfequent Treaty of Peace, fince none of our Neighbours are fo much interefted in thofe diftant Parts as to refufe to accomodate us, if in Return we gratify them in Matters in which they have a nearer Concern, and which it is very poffible, may not affect us, or at leaft not fo much.
For though, without Doubt, we have a very high Intereft in the Balance of Power, and therefore ought to be careful in fecuring it, yet there is no Means fo fure for compaffing this as enlarging our Trade, and thereby extending the Foundation of our Naval Force. Whatever therefore tends to this Point is our higheft Concern; and if there be any thing that merits more than ordinary Expences, even at a Juncture when we have fo many good Reafons to be frugal, moft certainly Projects of this Sort ought to be regarded in that Light. We fhould be the more fenfible of this, if we would but confider ferioully, and reflect frequently upon what firlt gave us that wide Power, that high Credit, that great Influence amongft our Neighbours, of which, we have been fo long poffeffed. It was not moft certainly the deep Schemes of our Minifters, for thefe have been feldom laid, and when-ever they were laid, have been commonly difappointed; for though no Nation has a greater Pronenefs to talk Politicks than the Inhabitants of Great Britain, yet fince the Reign of Queen Elizabeth, we have had no great Reafon to boait of very refined Statefmen; nor at the Bottom, perhaps, has this been any Misfortune to us, any more than to our Neighbours. It was not our military Exploits that raifed us to this envied Station, for though the Bravery of Englijf Troops was never contefted, yet we have feldom feen it employed fo much in our own Service as in that of our Allies. But the Foundation both of our Grandeur and of our Glory has been, on the one Hand, out great maritime Force, which, generally fpeaking, whether well or ill employed, has maintained its Superiority; and on the other, our immenfe Wealth, accruing from an extenfive Commerce, of which indeed we have feen many, and fome very large Computations made, and yet I am convinced, that none of them exceeded the Truth, from this plain Reafon, that as yet we are not undone, after wafting in other Folks Quar-
of Corea.
rels fuch a Proportion of Wealth, as Nothing but fo reign Trade, fuperior even in Profit to what it was ever thought, could poffibly have fupplied.
This then fhould be our great Concern, for if we ever hope to difcharge our Debts, to leffen our Taxes, and thereby recover thofe Branches of Commerce that have been loft in Europe, it muft be by opening new Channels, through which, norwithftanding the Burthens they have upon them, our Manufactures may be carricd to Markets where we may fet upon them what Value we pleafe. This Point is of all others that of which we ought to be moft jealous; for if our Neighbours fhould get the Start of us in this, we fhould find our Misfortunes grow upon us, and our Profperity decline apace. It is neceffary therefore that we fhould be very ftritt in examining what others may do, and what it is in our Power to do, while we have yet a fuperior Naval Force; for to provide early, and to prevent Mifchiefs, is the Part of a wife and of a prudent People; but to ftay till they come upon us, is the very Reverfe. It is very evident, that notwithftanding the vaft Profits of our Commerce, we have been compelled to run in Debt; and it is as plain, that other Nations, fully poffers'd of Naval Stores and valuable Commodities, are now fetting up Manufactures, and launching into a Commerce more diftant from them than fopan is from us. Does it not then become us to weigh the Confequences of fuch a Conduct, both with Regard to them and to ourfelves? Would it not be right to prevent the Effects of their Induftry by refuming our own? Is there any Thing that can better employ the Thoughts of fuch as are at the Helm? Can they anfwer it to their Country, if they neglect Matters of fuch high Confequence, for the Sake of Things that are nearer, but at the fame Time inconfiderable when compared to thefe? Or can we have any Right to blame, them, if from a fenfelefs Spirit of Faction, a groundlefs and unreafonable Oppofition, we keep them continually upon the Watch for their own Safety, and leave them not either Time to contrive, Power to provide, or Means to execute what is required for the publick Good? How many Nations have been undone by fome or other of thefe Miftakes? And if we purfue their Errors, what Reafon is there to expect, or even to hope, that we fhould efcape their Fate? .

I muft indeed acknowledge, that in Point of Compofition I have offended greatly, by recurring fo often to Remarks of this Kind; I am fenfible that in this I have acted weakly, ridiculoufly, abfurdly, as an Author; but alas! what is my Character in that Refpect to the Duty I owe my Country? Perim all private Advantages, all Views of Intereft, all Hopes of Fame, when it comes in Competition with a Nation's Good. Let every Man who has the happy Fprtune to gain the publick Ear, in any Meafure, in any Manner, or upon any Terms, ftrive to curn that Attention to the publick Benefit. Let his Endeavoirs at leaft fpeak him a Patriot, whatever, his Succefs may do; and let me have Leave to remember by Way of Excufe, for what may be accounted my Failing, the Anfwer of the Aibenian Philofopher who was charged with che fame Fault, 1 repeat, faid he, over and over again my Admonitions, to a People, qobo commit over and over again, the fame Fauliss

## SECTION VIII.

#### Abstract

A diftinct Account ofPart of the North-eaftFrontier of the Rufhan Empire, commonly called the Country of Kamfchatka or KamJchatska, including the Voyages of Captain Behring for difcovering towards the Eaft; with many curious and entertaining Circumftances relating to thofe diftant Countries and their Inhabitants; and alfo an Enquiry into the Probability of the Country which he difcovered, being connected with North America; with a Variety of other Points of great Confequence in Relation to the Defigns now on Foot in various Parts of Europe for making a thorough Difcovery of the fuperior Parts of the Northern Hemifphere, which would be of the utmoft Confequence to Trade and Navigation in general, and to thofe of Great Britain in particular.

Collected from the beft Autborities both Printed and Manufcript.

1. A general Introduction, in which is Serwn the woonderful Cbange made in the Affairs of Ruffia by the Czar Peter the Great, and bis baving firft conceived a Notion of opening a Trade between bis Country and North America. 2. A Defcription of the Country of Kamfcharska, as defcribed by the Ruffians in the Time of Peter I. Berving its Juppofed Situation, Boundaries, and Extent. 3. The Motives of Captain Behring's Expedition, bis Departure from Petersbourg, Feb. 5, 1725, and Fourney tbrough Siberia. 4. An Account of the Preparations and Expeditions made for furtbering bis Diccoveries in the Sear 1726, with various other Circumftances relating to the Produce and Inbabitants of the Countries through which be paffed. 5. A Detail of the many Miferies and Hardjbips fuffained by this Gentleman, and the Inferior Officers and Soldiers under bis Command, to the Time of bis Arrival at Kamfchatska. 6. A large Account of the Country, the Ruffian Settlements, Fortrefles and Garrifons there at the Time of Captain Behring's Arrival. 7. His Preparations in order to profecute bis Difcoveries to the Eaft; and an Account of bis Difcoveries and Return to Petersbourgh. 8. Some Account of this Gentleman's fubléquent Expedition, and of the Difcoveries that have been fince made on that Side by Direction of the Ruffian Court. 9. A Reprefentation of the newo Hypotbefis faid to be built upon thefe Difcoveries, collected from the Memoirs of the Royal Society. 10. The Improbability of that Hypothefis fully ferw, from a great Variety of Circumfances, which amount to a Proof, that nothing advanced on this Subject ought to prejudice our Hopes of finding a Nortb-wef Paffage. I. Hiforical, Pbyjical, and Critical Remarks upon the principal Points in this Section.

䁲HERE could not be a more proper Subject chofen for the fhutting up a Collection of this Kind, than the Hiftory of the Difcoveries made by the Ruflans in the Northern. Parts of their Dominions. In Point of Matter they are far more important than any which have been attempted within our Memory, the finding out a North-weft Pafrage only excepted. In Point of Time alfo they are later, for the laft Account of their Difcovery is, if I may be allowed fo familiar an Expreffion, dated but the other Day, and thefe Difcoveries are ftill profecuted, perhaps with greater Skill and Conftancy, and wirh more Vigour and Induftry than has been commonly imagined.
It is generally looked upon as the Foible of inquifitive Minds, that they are apt to make fuch Excurfions into the Realms of Fancy, as fometimes to fall under she Power of Superftition, and to be enflaved by Enthufiafm at others. I am very much afraid I fhali run the Rifque of one, if not both Imputations, from what I am going to fay; but that gives me little Concern, for I had rather be laughed at for fpeaking what I take to. be Truth, than applauded for diffembling it.

There feems then to me to have been a very fingular Kind of Providence difcernable in all the Difcoveries that have been hitherto made, by which I mean, that from their Confequences they appear to have been conducted by another Spirit than that of human Wifdom;
for in Proportion as the Nations who made Difcoveries have abufed the Advantages they derived from them, thofe Advantages have gradually funk, and that Spirit of Difcovery has been loft, of which I could give various Inftances, if it was not wholly unneceffary, fince upon the bare Mention of the Fact the judiciousReader will inftantly recolleet them.

It is from the confidering Things in this Light, that I am led to apprehend the late Czar Peter the Great, of glorious and immortal Memory, was one of thofe fignal Inftruments, raifed up by the immediate Power of the Divine Ruler of all Things, to fulfil the great Purpofes of his unfearchable Providence. Before his Reign, the People who inhabit the vaft Country of Ruflia, were very little or fcarce at all known to the reff of the World by their Actions or Performances. It was ow-, ing to that Spirit of Difcovery which reigned here in the Time of Queen Elizabetb, that the Importance of their Situation came to be at all confidered. The Dutch indeed quickly followed the Lights we gave them, and converted to their own Advantage that Route which with infinite Pains and Hazard: we firt defcribed.

But this great Monarch was born to be not only the Governor, but the Legiflator of his People; his Genius was the Gift of Nature, or to fpeak with greater Piety, and at the fame Time with more Propriery, the Gift of the great Author and Lord of Nature, and

## Chap. III.

 the Russian Diforeries. 1017appeared with all the Luftre worthy of its Auchor. That knowing, that well-meaning, that Patriot-Monarch of the North, drew, or rather forced his Subjects out of that Obfcurity in which for many Ages they had remained. He enlightened them by his Exhortations, he animated them by his Example, he compelled' them by his abfolute Power to thake of the Chains of Barbarity, to come forth out of a State of infenfible Ignorance, and to appear upon the bright Theatre of the Univerfe, not only as a great and powertul Nation, but as one of the greateff and moft powerful Nations that have been the Object of Hitory.
He it was that made the World know the Importance of the Country he poffeffed, and this in Spite of Obftacles that would have amazed and terrified an Inferior, that would have tired and overcome a lefs vigorous Ge nius. It was this wile, this active, this heroick Prince, that raired his People from being the loweft to the higheft of the Northern Powers. It was he that taught them to criumph by Land, and opened them a Paffage to the Sea; In fhort, it was he that conceived and executed the amazing Project of making them a Maritime Power, and this too in a furprizing Extent.
From a People unacquainted with a Veffel bigger than a Bark, and who knew no Navigation but that of their own Rivers, he not only taught them the Ufe of Ships, but put it into their Power to buld and to equip them; nay, he did more than all this, he was not content with opening Ports on one Side only, he opened them on all; his Frigates, fecured him the Poffeffion of the Ca/pian Saa, his Men of War furpyized with their Appearance the Nations inlaburting the Coafts of the Black Sea, and even the fupine Pleatures of an Eattern Prince were difturbed by the Thunder of his Cannon, that alarmed the Inhabiants of Conssantinople; after trying thefe Experiments, he arpired to fthll greater Things, and not only built the City of Petersbourg, but opencid various Ports upon the Baltick, which he covercd with his Flects, and came in Perion as their Admiral to Coperabagen, where not fome Ages only, but fome few Years before, they would have as foon cxpected a Vifit from the Eniperor of Yapan.
His Prediceffiors hardily comprehended the Extent of their Dommionis, but the Czar Peter not only difcover'd that his Dominions were the moft extenfive in the World, but that he had a Mind more extenfive than thete. He faw the Advantages that might be made of every Province, every Port, and every River in his Empire, and in the Courfe of a hhort Reign, a very fhort Reign indeed, compared with the great Events to which it gave Birth, he convinced his Subjects, his Neighbours, and all the confiderate Men in every Part of the World of the Truth of this; and that he perfeetly knew how to have pufhed his Greatnefs on all Sides, if the pufhing it had not exceeded the Strength and Limits of a fingle Life.
But within the Compafs of that fingle Life what did he, or rather, what did he not ! He exhauffed the Power of Sweden, the only Means of taming the lionlike Spirit of his Enemy Cbarles XII. he put it out of his Power to conquer, for to conquer him was not even in Peter's Power. He protected Poland, to which before his Time his Empire was inferior. The Tartars, to whom his Predeceffors were Tribuaries, he frighted into Quiet. He encountred alone, and when they had no other Enemy to deal with, the Forces of the Turks. He extended his Dominions on the Side of Perfia. He fomerimes encroached upon their Territories, he fometimes fought to conciliate by Conceffions, the Friendhip of the Cbinefe.
He did more than all this, for after making himfelf firft known, and then admired in all Parts of the civilized Earth, he began to look beyond the Eounds of the habitable World itfelf, and to propofe after fhowing his Subjects fo many new Seas and new Countries, to point them out the Way to the Eof Indies and to the Wef. Such were the Cares that occupied the Thoughts of this great Prince, while other Monarchs were complimented with high Titles for difturbing the Peace of Mankind about Trifles, for flealing little Provinces, and buying now and then a Town.

It is very true, that he did not live to perfect his laft great Defign, but that he framed it was fufficient for his own Glory, and to amaze all who are capable of forming a competent Judgment of the Circumftances that mutt attend the perfecting this Defign when-ever it fhall be brought about. To thew that this is no Chimera, but a very wife and well laid Scheme, and which fooner or later will be certainly carried into Execution; is the Bufinefs of this Section, in which we are to fipeak of the North-eart Limits of the Ruffian Empire, and of the Country of Kamt ccatko or Ramitchalska, for it is written both Ways, of which, though we have but lately heard, it imports us as much to be well acquained with as any Country upon the Face of the Globe; for though we cannot boalt much of the Figure it makes at pres fent, yet as it is the Poffeffion of this Country that put it more in the Power of this Nation than any ocher to make Difcoveries, and as the moft important Difcoveries that eyer were made, may very probably be made from hence, we mult be content to take a liticle Pains in the Explanation of this Point, and in becoming Mafters of a Subject, as curious and entertaining as it is ufeful and important ; fo that however great they may be, we fhall have no Caufe to regret the Labour they coft, to think our Time ill beflowed, or our Trouble not well laid out.
2. It is not eafy to difcover at what Time the Rufians became acquainted with that Part of their own Dominions which boriers North-eaft upon the Icy Sea ; bur if feems very evident, that though the Name of Kamfchatska was given to lome very remote Parts of their $A \mathcal{j}$ atick Dominions, then commonly included under the general Name of Siberia, yet were they very indifferents Iy and very indiftinetly known at the Clole of the laft Century, as appears by the Map of Mr. Ysbrant Ides, which is very far from agreeing with later Dilcoveries. But after the Czar Peter had travelled, and had acquired a competent Knowledge of Colmography and Geography, he began to be extremely defirous of having thete Parts more thoroughly examined, as having now fome Notion of their Imporance. He took great Pains to make himicif well, acquainted with the Route to China, and alio caufed a very accurate Map to be drawn of the Countries lying about the River Amur, as far as the Peniniulua of Corea on the South, and as high as he had any cerrain Accounts of his own People to the North.
He l:kewite directed the frictent Enquiries to be made into the State of Nova Zembla, and the Country about the Streighis of $W_{J \text { ygaiza }}$, and fo along the $I_{\text {ty }}$ Sea as far as pofiible to the Eait ; and of thefe allo he had Maps, in which the Mountains and Rivers that had been carefully examined, were laid down; but the whole was not compleated at the Time of his Death ; fo that he erjoyed not the Satisfaction of beholding a diftinct Reprefentation of his Dominions on that Side. He had the Pleafure however of dilcourfing frequently of the Difcoveries that might be made, and of the Trade that probably might be carried on from thefe Countries bounded by the Sea of Fapan; and as he would fometimes difcourle of thefe Matters a lietle hyperbolically, which was however no more than neceffary to awaken the Curiofity and Attention of his Countrymen and Subjects ; fo by Degreesit had Effet, and many of his Minitters, efpecially Prince Menzikeoff and Admiral Apraxin, entered pretty well into his Sentiments, and endeavoured all they could to pulh their Colonies as far as Kamj cbas ska.
It was however with infinite Difficulty that they prevailed, and the Relations that were trantmitted from thence feemed to deffroy all Hopes of doing any thing there to the Purpofe; for the Soil was reprefented the moft fterile that could be pofiibly imagined, the Climate fevere beyond Exprefion, binding not only the Brooks and Rivulets, but even the Earth irfelf in fuch Icy Chains, that it was as practicable to dig a Rock, as to make a Spade enter it. It was faid that Wild-fowl were frequently kilied by Coid, and that fometimes even the wild Beafts perifihed by the exceffive Scverity of the Weather; neither do the very lateft Accounts
that we have received contradict this, though they lay the Scene of thefe tragical Effers of Cold on Countries to the North-eaft of Kamfibaiska.
The firt Accounts of Kamycbatska that had any Appearance of Clearnefs or Certainty, reached this Part of the World about the Year $17^{2} 3$, and were brought by an Englibman, whom the Czar Peler had employed in erecting a Glafs-work ; and they amounted to no more than this, that it was 2 vaft Tract of Country, extending from the Polar Circle down to fixty Degrees of North Latitude, I make ufe of the Perfon's Words from whom I had it ; that it contained thirty Degrees of Longitude ; and that the North-eaft Extremity was either a Promontory fhooting into the Icy Sea, or the Beginning of a long Ridge of Mountains that were fuppoled to sun out Eaftward, and join the Continent of North America.
Wild and extravagant as this Account may feem, I am very certain it was the beft that at this Time could be given by the moft experienced Perfons in Rufia; and that from this Account, and the Conjectures founded upon it, a Refolution was taken for pufhing their Difcoveries on that Side in Hopes of fome bencficial Confequences. It was allowed, that no Country could be more wretched than this, that it produced only a few Roots, that no Kind of Grain would grow there, and that a fmall infignificant Colony of Rulfans, that had been forced thither in Obedience to the Czar's Orders, fubfifted entirely upon Fiht, and fuch fnall Supplies of coarfe Rye Bread as could from Time to Time be fent them ; that it was certain they had not any Black Cattle, Horfe, or Deer, but that however fome Animals hey had, of the Skins of which they made their Cloathing. This was the Sum total of what was known of this Country before the Expedition of Captain Bebring ; upon which we are next to enter, and of which I fhall give as clear and plain an Account as it is ponible.
3. It was in the laft Year of the Life of Peter the Great, that Captain Bebring received Orders from Count Apraxin, Admiral of Rufia, to traverfe the valf Councry of Siberia, to penetrate its utmoft Extremities to the Eaft or North-eaft, in order to obtain a diftinet Notion of iss Bounds, and of the Diftance between them and the Continemt of North America. The better to enable him to fulal thefe Initructions, which were given him in the Month of Februsry $\equiv 725$, a Lieutenant was difpatched with twenty-Livé Men, and fuch Baggage and Tools as could be carried upon twenty-five Horles before him ; and as foon as he could make the neceffary Preparations, the Captain followed with a Retinue of about thirty three Perfons. He came up with his Lieutenant at Wologda, and continued his Journey to Tobolsty, which is looked upon as the Capital of Siberia, where he arrived on the 16 th of $M a r c h$.
The Seaton being too far advanced for him to make an immediate Progrefs, he continued there for two Months, and then having received a conffderable Reinforcement, he proceeded on his Expedition on the River Irtilb till it falls into the River Oby or Obb, and then remounted that River as far as the Town of Narin. All the Country through which he paffed was inhabited by the Ofiacks, formerly Pagens, bur a little before converted to the Chriftian Faith by the Care of the Metropolitan of Tobolsky. He proceeded from thence to the Monaftery of Makofsk, and from thence went by Land to the City of $\mathcal{F}$ enifciski. He embarked there with thirty Perfons on buard of four fmall Barks, in order to continue his Voyage on the. River Yenifa, and afterwards on that of Tumpuska; from whence with much Dificulty he reached Îlimski.
There he determined to winter, and to fend his Lieutenant to make the neceffary Preparations for continuing their Voyage upon the Lena, directing him to employ his Time in conftructing a fmall Squadron of Barks for that Purpofe. The Capiain himfelf, during the Winter, took all the Care he could to inform himfelf of the Countries that he had fill to pafs through, before he reached that which was the proper Object of sheir Enquiries. And the Accounts that he received, were fuch as gave him to undertand that a more dificult

Task could fcarce be impofed on any Man than that which had been lain upon his Shoulders. The Country where he now was belonged to the Tungufees, a Nation of Pagans, who lived very miferably along the Sides of the great Rivers, which they navigated in fmall Boats, or rather Canoes made of the Barks of Trees. When the Severity of the Seafon was a little over, he refolved to profecute this tedious and dangerous Expedition with all the Diligence and Caution in his Power.
4. In the Beginning of the Spring he began to defcend the Lena with his fmall Squadron of fifteen flatbottom'd Boats, and arrived fafely at Gakutsky. Both Banks of the Lena below the River Witem, are inhabited by the fakuts and fome few Tunngufees. As for the former, they are well provided with Horfes, and have great Herds of Black Cattle, that is to fay, fuch as are in a tolerable Situation in the World; and as for the poorer Sort, they maintain themfelves as well as they can by Fifhing. As for their Religion, they are Pagans and grofs Idolaters, worfhipping the Sun and Moon, and fome Kind of Rirds, fuch as the Swan, the Eagle, and the Crow. They are famous for having many Conjurers among them, and for praying to a Sort of diminutive ugly Idols, called in their Language Saitans. In other Refpects they reckon themfelves, and are efteemed by ochers, a Tribe of Tartars. Upon his Arrival at $\mathcal{F} a k u t s k y$ the Captain demanded a Reinforcement, and having obtained it, he gave Inftructions to a Lieutenant to proceed with the beft Part of his Troops and all the heavy Baggage upon the Lena, to its Confuence with the River Aldan, in order by remounting that, and the Rivers Maya and $\mathcal{F u d o m a}$, to reach $\mathcal{F} u$ domske Krefta, that is, the little Fort of Judomska, and by this Route he was in Hopes of leflening the Fatigue of fo long and troublefome a Paffage.

As for himfelf, he fet out on Horfeback, attended by the few People that were left about him, and fome Horfes laden with Provifion, to go by Land to Ochotski, though the Road was very far from being tolerable. The Captain alfo left a Lieutenant at fokutski, with Orders to pals the Winter there, and to follow him at the Beginning of the Spring over Land to Ochotski. Upon his arriving in Perfon at that Fortrefs, he found it in a very poor Condition, and no more than ten Rufian Families refiding there or in its Neighbourhood. About the End of the Month of December he received Advice from his firft Lieutenant, importing that he had been furprized by the Ise at his Entrance into the River of Gorbea, diftant above one hundred Leagues from $\mp u$ domska; and that this obliged him immediately to confiruct fome long and narrow Sledges for the Carriage of his Provifions and Baggage ; but as for himeelf and his Men, they continued their Route on Foot. Upon receiving this News, the Captain thought proper to advance from Otchotski to recieve his Lieutenant, carrying with him a Convoy of Provifions laden upon large Dogṣ. By this wife Precaution he brought his Lieutenant and the Remainder of his Detachment fafe to Ochotski, upon Nerv. Year's-Day 1727.
5. The Account which this Officer gave him of the Miferies they fuftained in their March was equally melancholy and fincere. They quitted the River of Gorbee on the 4th of November, and not being able to carry with thern a fufficient Quantity of Provifions, were very quickly conftrained to feed upon the Flefh of their dead Horfes. They afterwards burnt off the Hair from their Skins with Lime, and then converted them into Coats and Shoes. They were forced to abandon their Easgage in three different Places, and had certainly perifhed at Fudomska Krefta, if it had not been for a fmall Quantity of Meal which the Captain had been obliged to leave there by Reafon that fome of his Horles died. The Nation of fakuts, who inhabit the Banks of the Lena, dwell allo on thofe of the Rivers Aldan and Maya, buit on the Sides of the River fudoma, and in the Neighbourhood of the Fortrefs of Ochota, refide the Nation Lamutki. Thefe People have tame Rain-Deer, which they employ in drawing their Carriages, as well as to furnifh them with Cloaths and Subfittance. In the Neighbourhood of the Lakes and of

Chap. III. the Russian Difcoveries.
the Sea, dwell the Tungufes, for the Conveniency of nate Victims under it, paft all Poffibility of extricating Fifhing. Thefe People are as barbarous and as much Idolaters as the fakuts.
In the Beginning of the Month of February, the Captain difpatched a Lieutenant and 90 Men , with fome Dogs, to fetch off the Baggage that had been abandoned in the Manner before-mentioned; he returned with a part of it in April; and another Detachment being order'd on the fame Service, they brought the reft back in May. In this Country the Snow falls in fuch prodigious Quantities, that it commonly lies about two Yards thick, and fometimes more, upon the Ground, which obliges People, for three or four Months, to travel on Foot, and to drag their Baggage on little Sledges, which will carry 6 or 700 Weight. In this Manner the Lieutenant marched that came to Ocbotski, and during his whole Paffage, the poor People had no other Relief in the Night-time, or when the cutting icy Winds blew, than to cover themfelves as deep as they could in the Snow. This is practifed on the Coafts of Hudfon'sBay, and in other cold Countries as well as here ; and if Credit may be given to feveral 'Narrations written by thofe who have vifited thefe frozen Climates, it is a very convenient and effectual Screen from the extreme Fury of the Weather, which will be the lefs wonder'd at, if we confider, that both Gardiners and Husbandmen acknowledge very difcernable Heat in Snow, by which Corn, Fruit and Flowers, are defended from the Rage of Winter, in the Earth, and are enabled by this kindly Covering to pufh out and difcover that they are alive in the Spring.
On the zoth of fune the Captain ordered Lieutenant Spanberg to crofs the Gulph to the Mouth of the Balcbaia rerca, or Great River; he was to perform this Voyage in a new ftout Veffel built by their own Workmen, and had Orders to carry over with him the fecond Architect, and a fufficient Number of Men to cut down Timber, and to build a new Veffel there, which when they had performed, they were infrutted to give the Captain Notice of it at Ocbotski. While they were thus employed, the other Lieutenant Creziboff returned, bringing with him 2300 Poud of Meal, that is about 800 Weight, which was immediately embarked on board the new Veffel that was recturnd from Kamjchatska. The Captain then ordered all the heavy Baggage and Provifions to be embarked without Delay, and on the 2 Ift of Auguft he went on board himfelf for the Port before-mentioned. He left behind him a Pilot, and a fimall Number of Perfons, with Inftructions as to the recovering and fecuring the Provifions that had been left behind, which they were to bring with them if they could, but if not, they were to deliver them to the Government of Gakusky, and to take a Diicharge for them ; after which, the Pilot, and thofe under his Command, were to join the Captain, and bring with them a fmall Supply of Provifions, Iron, and Tar. However, he faw nothing of them till the Year 1728.
The Captain being come to the Mouth of Bolcbaya rerka, tranfported his Provifions and other Neceffaries to Bolcbay reeski oltrog, or the Habitation of the great River. The heavy Baggage was from hence conveyed in fmall Boats, that were drawn againft the Stream for 120 Werfts, to the higher Settlement in Kom/cbat ska. This Journey they performed themfelves by Land, making ufe of the little Sleds before-mentioned, that were drawn by Dogs, for the Carriage of what was neceflary for them during the Journey. On this Occafion, they had thorough Experience of the extreme Rigour of the Climate, being obliged to have Recourfe to the Method before-mentioned, that is to fay, towards Night, or when-ever they had a Mind to reft, they ran a very deep Trench or Ditch through the Snow ; at the Entrance of this Trench they hung up Deer Skins, and then lay down under the Snow, either to fleep or to take Repofe. The Intent of hanging up the Skins, is to prevent thofe fudden Siorms which are common in thefe Parts, and to which they give the Name of Purgi, from being fatal to them, as they often are to lefs cautious Paffengers, by bringing with them fuch prodigious ©uantities of Snow as bury thefe unfortu-

YOL. II, Ne 140 .

## themfelves or efcaping. <br> As we have now conducted the Reader into that

 Country which is the proper:Subject of this Section, and which, for any thing that is yet known, feems to be the very Extremity of the Continent, on this Side, tho ${ }^{\circ}$ there is a very wide Country behind it, extending directly North for above $15^{\circ}$ of Latitude. I fay, as'we have followed him hither, the next thing is to fee what Account he gives us of this ftrange Place, which lies fo far out of the Reach of the reft of Mankind, and which could never have been vifited, much lefs planted and poffefled by any but the Rufians, and even thefe had not been long fixed there at this Time.The Rufluns have three Settlements, or to fpeak with greater Propriety, have occupied three Pofts in this Country. In the Fortrefs which is in the upper KamScbatska, there are feventeen, in the lower Forrefs there are about fifty Rufian Houfes, exclufive of thofe that are about the Church, which may be about fifteen in Number. At the Mouth of the River before-mentioned, there were at this Time fourteen Houles. In there three Pofts there were about 150 Soldiers in Garrifon, and the principal Point aimed at by fixing them here, was to collect the Tribute from the neighbouring Nations. The Captain, to reward thofe that had affited him in tranfporting his heavy Baggage, his Stores and Ammunition, and who had likewife furnifhed him with Carriages, gave them about an hundred Weight of Train Oil, which he extracted from a Whale the Sea left upon the Coaft at the warm Seafon of the Year; and with this and a little Cbinese Tobacco, they were better contented than if he had given them Money. To the South of this Country inhabit the Nation of the Kuriles, and to the Northward dwell the Kamef cbadales, the Languages fpoke by thefe Nations are fo different, that they hardly underftand each other; fome of them are addicted to Idolatry; amonft others there are no apparent Signs of any Religion; and to fay the Truth, hardly any convincing Tokens of Humanity.

The Ruflians that are fettled in Kamt $f_{\text {cbatska, }}$ as well as the Natives or original Inhabitants, are deftitute both of Cattle and Corn; inftead of the former they make ufe of Dogs, which are very large and ftrong; and by the way, this is likewife the Cuftom in Groenland, and in the Countries bordering upon Hudfon'sBay. As to Provifions, they live chiefly upon Fifh, Roots, and Pears; they have likewife Carrots and Beans, and in fome Seafons of the Year tolerable plenty of Wild-fowl. As to their Cloaths, they are made of Dogs-skin; it is however worth obferving, that in the Country about the Convent of Pakufiska, which is not far from the Church, they have a little Barley, as alfo fome Hemp and Radifhes, and in the Plantations about the Ruffan Houfes, they have Turnips of a prodigious Size, that is to fay, of five or fix Pounds Weight apiece. The Captain, while he was there, caufed fome Rye and Oats to be fowed, but he did not ftay long enough to fee whether they came up. The Froft fets in here very early, and the People, who are tributary to the Ruflians, pay their Taxes in feveral Sorts of Furs.

The Cuftoms of there People are barbarous in the higheft Degree, of which a very few Inftances may be fufficient to convince the Reader. If a Woman hap. pens to have two Children at a Birth, one of them is deftroyed as foon as it is born, and it would be efteemed a Crime to preferve it. Nor are they cruel only to Children, for if the Father and Mother of a Family happens to fall fick, tho' the Difeafe does not appear to be mortal, yet they drag them away prefently to a Wood, let the Weather be what it will, and there they leave them, not indeed without Provifions, for they commonly carry them as much as will.ferve them for a few Days, but they very feldom hear any more of them. When People die fo fuddenly that they cannot be thus removed, they drag the Body into the Woods, and leave it thire to be devoured by the Dogs. There feems to be a good deal of Superfition in this, for fome of them will quit the Place of their Refidence, if a Man happens to breathe his laft in it. The Nation 12 C
of the Koratkes butn their Dead, and though they have been often admonifhed to leave off this Practice, yet hicherto there has been no breaking them of it.

Since the Time our Author wrote, it appears from Several Books that have been publifhed at Petersbourg, that this Country, at leaft the Ruffan Settlements in it, have been greatly improv'd; fo that in the Latitude of 56 , and even higher, they have Barley, Oats, and Rye, in tolerable Plenty. The Number of Houfes alfo ate greatly increafed, and the Fortreffes are in much better Order, which is owing to the Hopes chat are ftill entertained of opening on this Side, fome Time or other, a very advantageous Commerce. We have been promifed, and were in Hopes of receiving a large and accurate Defcription of this Country in its prefent Condition, but as yet it has not been publifhed; many People may pofibly think, that confidering the Rigour of the Climate, the Barrennefs of the Soil, and the Thinnefs of its Inhabitants, that it is no great Matter whether it be ever publined. Yet notwithftanding all this, it is not impoffible, or even improbable, that in Procefs of Time Things may change their Face here, for the Country now called Kamifchatska, is not that vatt Northern Continent that extends from 60 to 73 Degrees of North Latitude, which was formerly included under that Name, but the Peninfula only which extends from the Latitude of 51 to 60 , and lies between 80 and 95 Degrees Longitude Eaft from Tobolski; fo that if a fufficient. Number of People were fent thither to cur down the valt Forefts with which it is incumber'd, and enabled to till, manure, and cultivate the Earth, it might be render'd a Place far enough from being defpicable; and then the great Importance of its Situation would very quickly appear. But to return to our Narrative.
7. Upon the Captain's Arrival at the lower Fortrefs, he found Wood enough cut for the building a Veffel, which was put upon the Stocks April 4, 1728, and was entirely finifhed the roth of fuly following. It is certain that a properer Perfon could not well have been employed, fince he thought nothing a Difficulty, nor was afraid of any kind of Hardfhip or Danger that ftood in the Way of the Execution of his Orders, but with infinite Addrefs, and almoft incredible Patience, got over thofe Difficulties, that to another Man would have appeared unfurmountable. All the Timber that was ufed in Building, was conveyed to the Place where his new Veffel was conftructed, upon Sledges drawn by Dogs, and confequently with infinite Pains and Trouble. The Supply of Tar he expected not being arrived, was another great Inconveniency, but the Captain, who had a Brain very fercile in Expedients, obferved a Tree there, called by the Natives Lijnijcbink, which he fancied would fupply them either with Tar, or fomething like it ; accordingly he caufed great Quantities of it to be cut and burned, and, as he expected, the refinous Matter that run from it anfwered the Ends of Tar, if not perfectly, at leatt tolerably.
The Veffel being built, the next Thing was to viftual her, and that for a Voyage, the Length of which was altogether uncertain; and to do this in a Country in a Manner deftitute of Provifions, was none of the eafieft Undertakings. The Captain however went about it, and, in the firf Place, having collected a vaft Quantity of Plants and Herbs, he diftilled from them a pretty ftrong, Spirit, upon which he was pleafed to beftow the Name of Brandy, and of this he laid in a plentiful Stock. Infead of Meal or Corn, he furnifhed himfelf with Carrots or other Roots. By boiling the Seawater, he procured as much Salt as he wanted. Fifh Oyl ferved inftead of Butter, and dry and wer Salt-fifh took the Place of Beef and Pork. Thele Provifions, fuch as they were, he embarked in fuch Quantities as would ferve his Crew, confifting of forty Men, for a whole Year.

Thus equipped, he undertook the Execution of the Infructions given him by his Sovereign Peter the Great, under his own Hand, and of which the following is a Copy taken literally from his Journal.

Account of
Book III.
I. You fhall caufe one or two convenient Veffels to be builc at Kametcosatska, or elfewhere.
II. You fhall endeavour to difcover, by Coafting with thefe Veffels, whether the Country towards the North, of which at prefent we have no diftinct Knowledge, is a Part of America, or not.
III. If it joins to the Continent of America, you fhall endeavour, if poffible, to reach fome Colony belonging to fome European Power; or in cafe you meet with any European Ship, you fhall diligently enquire the Name of the Coafts, and fuch other Circumfances as it is in your Power to learn; and thefe you fhall commit to Writing, fo that we may have fome certain Memoirs by which a Chart may be conftructed.

On the inth of fuly, having recommended himfelf to the Protection of Almighty God, he failed out of the River of Kamtfchatska: On the 8th of Augufi he found himfelf in the Latitude of 64 Degrees, 30 Mi nutes, and being perceived by the Inhabitants on Shore, eight Men put off in a Boat made of Skins, and came to the Veffel, that is to fay, to the Side of it, where they enquired whence he came, and to what Purpofe: After he had anfwered them, they acquainted him in their Turn that they were $\mathcal{T}$ zuk $f$ chi, which is the Name of a Nation with whom the Rufians have been for fome Years acquainted. It was with fome Difficulty that he got one of them to come, to him, but he was foon tollowed by the reft. They informed him that the Coaft, for a confiderable Extent, was inhabited by their Nation, and that the Land tended to the Weft. They likewife gave him Information of an Inand that was not far off, which he accordingly found on the zoth of $A u$ guft ; and as that is the Feaft of St. Lazorence in the Rufjian Kalendar, he thought fit to beftow that Name upon the Illand. He fent an Officer on board a Shallop of four Oars thither twice to examine it, but he could not find any Inhabitants, though there were fome Houfes upon it; which fufficiently flewed that it was inhabited, though the People, out of Fear, or from fome other Motive, thought proper to conceal themfelves.
He continued his Courfe to the 15 th of the fame Month, when he found himfelf in the Latitude of 67 Degrees 18 Minutes, and conceiving that he had now fully executed the Emperor's Orders, as he faw no Land, either to the North or to the Eaft, he refolved to return, as thinking it to no Purpofe to continue his Voyage towards the Weft, or to run the Hazard of being driven by a contrary Wind beyond the Poffibility of getting back during the Summer to Kamjchatska, and to winter in a Country where he was fure of meeting with little or no Wood, and which might very poffibly be inhabited by fome Nation, Enemies to the Ruffians, was, in his Opinion, running a very great, and, at the fame Time, unneceffary Hazard.
From the Mouth of the River Kamjchatska, to the utmoft Point of their Voyage, they faw nothing upon the Coaft but great Ridges of Rocks, the Tops of which were covered with Snow, though it was Summer. They traverfed, according to their Computation, about ten Leagues of Latitude, and thirty of Longitude, that is to fay, the fartheft they failed Eatt, was 372 German Leagues. On the 20th of Auguft, in their Return, they faw forty Perfons on board four fmall Boats rowing towards them from Shore wich all their Force ; they lay by for them, and upon their coming near them, they concluded them, from their Appearance, to be of the Nation called $\mathcal{T}$ zukt $f$ chi. They had with them a good Quantity of dry'd Flefh, Fifh, and Water contain'd in Whales Bladders, 15 Fox Skins, and four Narval's Teeth, which they fold, or rather exchanged for Pins and Needles with the Seamen. Thefe People told them, that their Nation itravelled with Rain Deer as far as the River Koblima, which runs into the North Sea, but that they never had attempted any Paffage by Sea. That their Nation inhabited a very long Tract of Country upon that Coaft, and had been poffeffed of it for many Years; one of them particularly faid, he had been at the Fortrefs of Anadirski, where chey had traded with, and been very well treated

Chap. III. the Russian Difcrueries.
by the Ruflans. They had very great Hopes of obtaining confiderable Intelligence from this Man, but notwithftanding all the Queftions they propofed, they could gain from him no more than a Confirmation of what they had formerly learned from the $\tau_{z u k t c h i .}$

On the 2gth of Augult they met with a great Storm, attended with a thick Fog, by which they were driven upon the Coaft of fome Country Eaft of Kamjchatska, and where they were oblig'd to come to an Anchor. Upon their endeavouring to weigh it the next Day, their Cable broke; however, they were fo lucky as to efcape with no other Lofs than that of thèir-Anchor. On the 2d of September they arrived fafely in the Mouth of the River of Kamfcbatska, where they landed, and having fecured their Veffel in a Creek, went to the lower Fortrefs, where they paffed the Winter. There they met with the reft of their Companions, who brought them a confiderable Supply of Provifions, which, after the Fatigues they had futtained, were very acceptable. In this Place they fpent the Winter, without meeting with any thing worthy of our Notice. On the 5 th of Fune 1729 , they repaired their Veffel and put to Sea, fteering due Eaft from the Mouth of the River Kamf cbitska, in Hopes of difcovering that Land, which the Inhabitants affirm'd might be feen in a clear Day ; which, however, they were not fo happy as to meet with, though they continued that Route for 30 Leagues, and then meeting with a Storm at Eaft-North-Eaft, they were obliged to return to the Mouth of the Bolycbay reefcbi, after having paffed round the South Point of Kamjcbatska, which was a Voyage that was never performed before. They went from thence by Sea to the Fortrefs of Ocbotsky, where they delivered up their Stores of Provifion, confifting of Flour, dry'd Flefh, and Salt, to the proper Officers. On the 2och of $\bar{y} u l y$ they arrived at the Mouth of the River Ocbota, where they delivered up the Veffel, with the Materials and Tools on board her, to the Governor. The Captain then hired Horfes for himfelf and Company, to go by Land to fudomska krefta; thence they proceeded by Water in fmall Boats and Rafts, along the River Aldan to the Paffage of Beloya, and thence they went on Horfeback to $\mathcal{F}$ akutski; all this they performed exactly in a Month, arriving there on the 29th of Auguft.
On the 2oth of September they left that Place, and went in two Veffels up the River Lena, as far as the Village of Peledun, where they arrived on the 10 th of October, and there they were obliged to flay for about ten Days, becaufe the Rivers began now to be covered
with Ice. The Snow falling in great Quancities, and the River being thoroughly froze, they fet out on the 29th of Oztober for Ilimski, and from thence by the Rivers Tungus and $\mathcal{F}$ enefci, which where now covered with Ice, they came to the Town of Yenifcbiski, frowi that Town, paffing through feveral Villages of Ruflians and Tartars newly converted; they reached Tomski, and paffing over the great Deferts of Bambinski, they reached Tara, and froni thence mounting the River Irtijco, they came to Tobolski, Fanuary 10, 1730. In this City they remained till the 2 sth of the fame Month, and then fet out by the Road before deferibed, for Petersbourg, where the Captain fafely arrived on the firt of March following.
This Detail which we have given our Reader, is not barely copied from the Accounts that have been publifhed in German, Low-Dutch, French, and other Languages, but hath been compared with a Copy of Captain Bebring's original Journal, which has been of very great Service; we have alfo examined his Map very carefully, and confidered; at the fame Time, how far it was confiftent with prior and with pofterior Difcoveries, of which more thall be faid hereafer. At prefent I will crave Leave to add here, from a Manufcript Copy of the Journal, a very curious Table of the Places men. tioned therein, with their Latitudes and Longitudes from Tobolski, the rather, becaufe it has never been p pib. lifhed, at leaft fo far as I know, and becaufe it will ferve as Kind of Teft, by which all fubfequent Accounts may be tried with refpeet to their Veracity; for I make no Doubt at all, that this Table was framed with the utmoft Care and Circumfpection, becaufe I find it was tranfmitted by the Author to the Ruffians Court in 1728 , immediately after his Return from his Voyage for Difcovery, and while he remained at the Lower Fortrefs of Kamfcbat ska.
It is alfo neceffary to take Notice of the Meaning of the Rufian Words made ufe of in this Table, which, as they are but very few, cannot burthen the Reader's Memory. IKrepolf fignifies a Fortrefs, Ofrog a little Fort, Slaboda a Borough or Place bigger than a Village, Monalteria, a Convent or Monaftery. It is true, we might have avoided thefe, and have given the Places in plain Englifh, but as the Defign of this whole Section is ta facilitate the underftanding fuch Accounts as may be hereafter received of the Ruffan Difcoveries, I thought proper to preferve the Names for that Reafon, as well as becaufe we find them frequently occur in the Maps. Thefe Points being premiled, the following Tables will be very plain and perfpicuous.

Names of the Remarkable Places.
Latiudde. Lorgituide from
Tobolsky.

| The Town of Tobolsk, which is the Capital of Siberia, $5^{8}$ | 5 | Tob |  |
| :---: | :---: | :---: | :---: |
| Samarofky fam, upon the River Obb, | 17 |  | 30 |
| The Town of Surgut upon the River Obb, | 5 | 5 | 18 |

| The Eaftern Point of Sucbotski, 64 | 25 | 122 |  |
| The Inand of St. Larerence, | - | 122 | 55 |
| The Inand of St, Demetrius; . 6 | - | 125 |  |
| The Place from which the Captain returned, | 18 | 126 89 |  |
| The Southern Point of Kamjcbaitka or Oskoi, | 10 | 89 |  |

It may perhaps contribute to make this Matter fomewhat eafier to the Reader, if we obferve that Tobolski is 86 Degrees of Longitude Ealt from the Inand of Fero, and about 68 Degrees Eaft from London; fo that to find the exact Longitude of any of the Places mentioned in the Table, there is nothing more neceffary than to add the refpective Numbers before-mentioned to hofe which he has fet down. As for Inftance, the Place from whence he returned, is, in his Table, 126 Degrees 7 Minutes Eaft from Tobolski; if therefore we add to this 86 Degrees, we find the Longitude from Fero, which is 212 Degrees 7 Minutes, and in the fame Manner by adding 68 Degrees, we find that Place to be 194 Degrees Eaft from the Meridian of London.

It will not appear to one who barely perufes this Account, without weighing and confidering it attentively, that there is any thing in it very extraordinary; and yet to fpeak impartially, there is hardly any thing more fo in the Compaifs of this Collection; for, in the firft place, this Gentleman was charged with a moft arduous Employment, that of conducting a Number of Men over the greateft Tract of Land that is perhaps in the World ; in doing which he was to undergo the greateft Hardfhips, as he actually did, and arriving at his Journeys End, found himfelf in one of the moft inhofpitable Spots upon the Globe, there he was to build a fout Veffel, where hardly any but himfelf could have found Materials, and victual it in'a Country where there was not a Duft of Meal, or any other Animal but Dogs ; and in this Veffel, when finifhed, he was to make Difcoveries on an unknown Coaft through an unknown Sea. It is very evident that he did all this with the utmoft Spirit and Vigour, and without the leaft Lofs of Time, and yet it was fomewhat more than five Years before he reached Petersbourg again; which, exclufive of the Difficulties he met with in Travelling, will appear lefs ftrange, if we reflect, that going and coming his Journey was very little fhort of eighteen thoufand Miles.
He has likewife given us a Table of the Nations inhabiting the Countries through which he travelled, that is very curious, and which is a Circumftance of ftill greater Value, feems to be very accurate and authentick, and therefore I fhall give it the Reader in the beft Manner I am able, and as a Thing that may be of Uie towards explaining any future Difcoveries that may be made on this Side, the Credibility of which, as I hinted before, ought to be regulated by their Confiftency with his Accounts.

Table of the feveral Nations inbabiting the Countries between Tobolski and Kamfchatska.

Ofiaks, living in Villages from Tobolski to the Slaboda Domianska.
Different Tribes of the fame People on the Banks of the River lrtijch.
Different Tribes of the fame People in the fix Villages on the Banks of the River Oby, from Surgut to Narim.
Different Tribes of this Nation intermixed with others as far as Yenicibiski.
Tungufes in one large Town, and twenty little Villages as far as the River Tongus.
The fame Nation, amongf whom there are two Fortreffes, one Monaftery, and thirty Villages of feveral Sizes to the Mouth of the River Ilim.
The fame Nation, inhabiting one large Town and twenty-feven Villages, as far as the Town of Tlimski.

The fame Nation, inhabiting forty-three Towns and Villages, of different Sizes, as far as Kermya.
The fame Nation and the fokuts, amongft whom there are two large Towns, two Fortreffes, two Convents, and thirty Villages of different Sizes, along the River Liena to Jakutski.
Tongufes, Fakuts, and Lamutski, from thence to the Ocbotski Ofrog.
Kamychales and Kutiles, amongft whom are two For. trefies on the River Kamfibatska:

From the Mouth of the River Kamscbatska, fteering North-eaff, the Coafts are inhabited by the feveral Nations of Kamjchatdales, Kurackes, and $q$ zuktchys.
The North-eaft Cape is diftant from Tobolski ten thoufand five hundred and twenty-nine Werts, twelve thoufand nine hundred and feventy eight from Mofore, and thirteen thouland one hundred and eighty-eight from Petersbourg.

We fee from hence the true State of there vaft Countries, and may from hence form to ourfelves, at leaft, tolerable Ideas, as well of what they produce at prefent to the Ruffian Government, as of the. Improvements of which they are capable, in Cafe Kamjcbatska Chould be more fully fettled, and the Difcoveries made from thence render'd fome way or other ufeful in refpect to Trade. It is very poffible, that within a few Years we may have very extenfive Hiftories, or at leaft very copious Geographical Defcriptions of all thefe Countries made publick with the Stamp of Authority, and then by comparing them wich thefe Tables, we may be very well able to decide whether they have alfo the Sanction of Truth, fince at the Time Captain Bebring wrote his Journal, the Scheme of concealing Difcoveries was not adopted.
8. We need not at all wonder, that after the Return of this Gentleman, and the Relation of his Difooveries was made publick, it occafioned much Speculation and a great Variety of Enquiries at Petersbourg, in Confequence of which, it is faid, that they obtained certain and diftinct Accounts of coafting Voyages made by Sea from the Mouth of the River Lena by Cape Suetonios, or, as I find it Jaid down in Caprain Bebring's Map, Cape Sbelleginski, which he places in the Latitude of 72 Degrees 30 Minutes, and in the Longitude of 112 Degrees from Tobolski, and fo down to the Coafts which he had vifited. Upon fome Memoirs of this Kind, I mean of thefe Voyages from the Mouth of the River Lena, the Sieur Bellin publifhed at Paris in 1735, a Chart of thefe Difcoveries, which the Reader may find in Father Cbarlevoix's Hiftory of Эapan; but upon a frict Examination, I think a proper Judge of there Matters will agree, that there cannot be ary thing more romantick or incorrect. Inftead of that vaft Continent that Captain Bebring lays down to the North-eaft of Kamscbatska, we have this Peninfula enlarged vaftly beyond its due Bounds, and hardly any thing of that Continent appears ; and whereas Captain Bebring pofitively lays down the moft Southern Point of that Peninfula round' which himfelf failed, in the Latitude of $51^{\ominus}$. Io Minutes, in this Map it is brought as low as 4 r , and by that Means appears to be the fame Country heretofore called the Continent of $\mathcal{F} e \int f 0$, divided only by a narrow Channel from Niphon, the largeft of the Fapan Inands. As this Peninfula is produced ten Degres farther South than it ought to be, fo the Continent is removed 12 or 14 Degrees Weftward farther than it ought; and, in fhort, the whole of this extraordinary Piece, notwithftanding the Accuracy that is pretended to, is equally abfurd and chimerical. It mult however be allowed, that it was not poffible to difcover this without the Anfiftacce of Captain Bebring's Voyage, and of fome later Difcoveries; and therefore the Author of that Chart is the more excufable, and all the Conclufion I mean to draw from what I have advanced, is, that we ought not to be too hafty in giving Credit to fuch kind of Performances, for there is a very wide Difference between Charts drawn from Conjectures, and thofe laid down by Men like Captain Bebring, from their own Experience. But if the Reader will be directed to a better View of thefe Countries, I would recommend him to the Northern Hemifphere publifhed by Mr. William Deflile, in which thefe Countries are very accurately laid down.
Before I fpeak of the fecond Expedition of Captain Bebring, it may not be amifs to obferve, that if there be any Truth in the Accounts of Veffels failing from the Mouth of the River Lena in the Manner beforementioned, it amounts to a direct Demonftration, that
the Dutch Ships employed to difcover a North-eaft Paffage in 1670 , advanced far enough to have made that Paffage ; nor is it poffible to admit one Fact and deny the other, which may deferve Confideration, fince I think at this Day the North-eaft Paffage feems, without any juft Reafon, to be treated as a Thing known to be impracticable; and as from the Difcoveries made by Land, we may in a great Meafure perceive, that this is a Judgment made at Random; fo there is the higheft Probability, that if Difcoveries by Land were properly pufhed, the very fame Thing would appear with refpect to the North-wef Paffage. The fudden Alterations of Government that have happen'd in Ruf fia, may be look'd upon as the principal Caufe why thefe important Difcoveries have not been profecuted to the utmoft; and yet it muft be allowed that they have not been altogether neglected, as appears from the fending Captain Bebring back into thofe Parts better fupported than before.
It is not in my Power to fay at what Time this was done, or to give any diftinct Account, either of his Inftructions or his Expedition. All we know of the Mat ter amounts to no more than this, That in the Month of Fanuary 1740; an Account arrived at Petersbourg from Captain Spanberg, who ferved. as a Lieutenant under Bebring in his former Attempt, and who commanded a Veffel now, importing, that at the Clofe of the Summer of 1739, he had difcovered, aiter failing fifteen Days, thirty-four Inands, fome large, and others fmall; that upon his approaching them, the Inhabi tants fent fix of their Veffels to obferve them; that however he came to an Anchor, and they fuffered him to land without any Refiftance; that in other Refpects he met with a tolerable Reception; but as he knew nothing of their Language, fo he was able to learn very little from them by Signs, only they fhewed him confiderable Quantities as well of Gold as of Copper Coin and fome Pieces of the latter he obtained from them and fent by the Courier who brought his Difpatches to Petersbourt
Mr. Swartz, who wâs then and is now Minifter from their High Mightineffes the States General at that Court, gave at that time the following Account, in a Letter dated from Petersbourg, Fan. 13, 1740, O. S. "On "Saturday laft arrived here an Exprefs from Kamf ${ }^{\text {sc }}$ cbatska, with the News, that Captain Spanberg having "failed from thence with four Ships, after being fix"teen Days at Sea, difcovered thirty-four Inands of "different Sizes, the Inhahitants of which fent fix Gal" lies to reconnoitre him, notwithfanding which they " fuffered him to land, and received him with great "Affability; but as he underftood not cheir Language, " he could not converfe with them ; however, they "flewed him a confiderable Quansity of Gold Coin. "This was all that Officer would communicate to Coni" modore Bebring, defiring to come hither himfelf, in " order to difcover to her Imperial Majefty Things of the
" laft Importance, which may be highly advantageous " to her Interefts, and which he was refolved to difcover " to no other Perfon. Upon which the Commodore "fuffered him to return, and he is expected here in the
"Spring. It is believed that thefe are Inands belong" ing to fapan. The Courier has brought hither with " him fome of the Money of this Country, of which I " have feen a Piece; it is of red Copper, round, and about "the Size of a Holland Doit, but a little thicker, fur"s rounded by a fmall flat Border, and in the Middle "there is a little fquare Hole, on each Side of which, " upon the Face of the Coin, there is imprinted a "Cbinese or fapon Character ; but on the Reverfe it is " quite fmooth.

Captain Spanberg at the fame time wrote to one of his Friends, and the Reader will, no doubt, be glad to fee an Extract of that Letter, which however is without a Date, and conceived in the following Terms. "I ". employed all the Month of Auguft in the laft Year " in cruizing upon the Sea of Great Tartary. Amongtt " the 1 lands I difcovcred, there were many that were "only full of wild Beafts. I anchored however near "one that feemed more confiderable than the reft. Vob. II. No CXLI
"There we thought fit to go on Shore, and foon after " met with Inhabitants, who from their Figure and Drefs " appeared to be Savages, As foon as they faw us "they made their Elcape into a Wood. Wie did all "that was in our Power to furprize fome of them, but " found it impoffible to fucceed in that Defign. When "s they faw themfelves purfued, they fled into the " thickeft Part of the Wood and fet up the moft dread"ful Cries. The Inhabitants of fome of the neigh" bouring Inands were more communicative, as I have " fhewn in former Relations. I found the Country "every where extremely fertile; and embarked on " board my Ship large Quantities of the Fruits and " other Productions of thofe Illands. The Journal "w which I fhall publifh of my Difcovery, will contain ". Matters very fatisfactory to the Curious; at the fame " time that it will render it evident, that the Com " merce of the Ruffins with the Inhabitants of Cbina " and fapan, will receive great Benefit thereby."
It is probable, that after chis Captain returned to Kamfcbatska, Commodore Bebring continued his Voyage, of which all that we know is chis, that he failed Southward to the Ines of $\mathcal{F}$ apan, and from thence Eaftward about eighty Leagues. At that Diftance from Fapan he difcovered Land, which he coafted North weft, fill approaching towards the North-ealt Cape, without going ahore until he came to the Entrance of a great River, where fending his Boats and Men alnore, they never returned, being either loft, killed, or detained by the Natives, which made his Difcovery incompleat, his Ship being ftranded; and he afterwards died in an uninhabited Inand. Without doubt, the Ruffans are endeavouring to improve and extend thefe Difcoveries, and we very well know that Members of the Academy, Perfons of great Knowledge, and ani mated by the Defire of Glory, and fupported by whatever Affitance they can defire from the Government have been employed in this far diftant Country; and as I have befare obferved, Defcriptions of it thus ob tained have been actually compofed, and may very probably be publifhed at Petersbourg before this Time There is no Queftion that this is a very right, as well as a very regular Method; for without knowing exactly the Situation and Bounds, the Climate and Soil, the Mountains and Rivers, in any Country, it is fimply impofible that any juft Notion fhould be formed of the Means by which it may be render'd ufeful ; but that notwithftanding all this Care and Caution, and notwithtanding all the Lights they may Have received from thence, and from any Actounts they may have had of ubfequent Attempts, they are not yet very far advanced in refpect to real Difcoveries; may be eafily fhewn from he Notions that they fill entertain about them (fuppofing them in earneft in what they fay) which may be clearly demionftrated to be altogether vain and chimerical; even from the very Lights that they themfelves have afforded, and from the Facts which they infift upon as Proofs in Support of thofe Notions

We know from a Multitude of Inftances, that there is no Weaknefs to which the human Mind is more fubject, than to run into new Errors by running away from the old, notwithflanding that both Reafon and Experience teach us, that Truth feidom lies in the Extremes, but generally fpeaking, in the Middle, When firlt the Ruffans began to enquire carefully into the Extent of that Part of their Empire which lies in Afra, they found it went much farther to the Eaft than they had ever imagined; and the further and the more carefully they fearched, the greater Certainty they obtained of this Fact, and were ftill carried farther and farther. In order to underftand this clearly, it may not be amifs to obferve that according to the beft Maps of Ruffia made thirty Years ago, the Town of Yakutski upon the River Lena was placed in the Latitude of $6_{4}$ Degrees 50 Mi nutes; and in the Longitude of 120 Degrees, the firt Meridian being placed in Fero; but according to the lateft Obfervations, this Place actually ftands in the Latio tude of 62 Degrees 8 Minutes, and in the Longitude of 143 Degrees, 53 Minutes. It was at that Time believed, that Cape $N$ ofs, or the Icy Cape, laid down in

12 D
the Map by the Name of Cape Suitenos, extended very far to the North-eaft, and, as has been before hinted, night poffibly be joined to America. In Procefs of Time however, this was difcovered to be a Promontory only, and was placed in the Latitude of 66 Degrees, and in the Longitude of 160 ; but in the Chart of Captain Bebring's Voyages and Travels, where it is called Cape Scbeleginski, it is laid down in the Latitude of 72 Degrees $3^{8}$ Minutes, and in the Longitude of 198 Degrees 30 Minutes; fo that it appears to be almoft fix Degrees farther North, and 37 Degrees and a half farther Eaft than it was imagined.
But after all, this is not the fartheft Stretch of the Afian Continent; for the North-eaft Cape, difovered by Captain Bebring, runs almoft 14 Degrees farther, lying, as he found by a very exact Obfervation of a Lunar Eclipfe, in the Latitude of 67 Degrees 18 Minutes, and in the Longitude of 212 Degrees 7 Minutes. This altered the Notions of the Mathematicians at Petersbourg extremely, fince it appeared from hence plainly and certainly, that their Empire extended 48 Degrees farther Eaft than it was held to do thirty Years ago, that is, upwards of 384 Leagues, and more than a thouland Miles, which greatly ftrengthened the Opinion which they had before entertained, that the Extremity of their North-eaft Frontier was at no vaft Diflance from the Continent of North Amerrica. They were indeed thus far right, that from thefe Difcoveries it was put out of Difpute, that the North-eaft Cape was much nearer to the Coaft of California than had been formerly imagined; but fill the Diftance was very great, and not the leaft probable Ground to believe that there was only a Paffage of inconfiderableBreadth between them. Yet as this was the original Suggeftion of the Czar Peter the Great, who very probably had no other Reafon for giving it out, than to excite the Defire of his Subjects to co-operate with his Views of difcovering on this Side, by making them imagine they might by this Means become Mafters both of the Eaft Indies and of the West; they remained fixed in their Belief of it, feeing, as they thought, fuch ftrong Reafon brought from thefe Difcoveries to fupport it. They flattered themfelves, perhaps, that as fuch an enormous Miftake had been made in fettling the Geography of their own Country, it was not impofible but that a like Mittake might be made as to the North-weft Continent of America; and this indeed might have leffened the Ditance very confiderably. Yet if they had refiected, that the neareft Coaft of California had been vifited and examined by Strangers, whereas their own Northeaft Coant was totally unknown to every other Nation but themfelves, and but a little while before unknown to them too, they would have feen juft Reafon to reject fuch a Suppofition.
But fo natural it is to fee clearly what makes for our own Hypothefis, and to fee whatever makes againft it, either doubtfully, or not at all, that we need not be much furprized at this Turn of Mind in the Ruffan Wirtuof. That this is really, fo, and that from hence there is a great Probability of their concealing moft Part of their Difcoveries for the future, will fufficiently appear to any attentive Reader, from the following very curious Extract printed in the Pbilofophical Tranf. actions, NP 482. Page 42 I. being. Part of a Letter from Mr. Leonard Euler, Mathematical Profeffor, and Member of the Imperial Society at Petersbourg, to the Reverend Mr. Cbarles Wetfein, Chaplain and Secretary to his Royal Highnefs the Prince of Wales, dated from Berlin, Dec. 10, 1746, which I fhall take the Liberty of entirely tranferibing.
"As you are defirous to hear fomething more parti6. cular concerning the Rufloin Expeditions to the North, " and North-eaft of Affa, I will here give you an Acof count of all that has come to my Knowledge relating "s to the famie. But as I hould, on the one Eland, be of very glad that thefe Obfervations might give any "L Light concerning the Paflage now fought through 8: Hudfon's-Bay; I Mhould, on the other, be very forry, © if Mr. Bebring's Opinion, whe believed that the new 65 Land he had dilcovered was joined to California,
" fhould rather lead us to doubt of the Succefs of that glorious Undertaking. I wifh however, that a happy Experiment may fon inform us certainly of the Truth. In the mean Time, you will not be forry to " be acquainted with the Reafons upon which Mr. Bebring's Sufpicions were founded, notwithtanding the - Objections you have been pleafed to make, and to "communicate to me upon that Head.
"Firft, This new Land which he fell in with at the "Diftance of 50 German Miles from Kamfibatske to" wards the Eaft, was followed by him and coafted for " a great Way, though I cannot fay how far: Fron " whence alone it will appear, that an Abatement muft " be made in the Diftance of 30 Degrees, or there" abouts, which you fuppofe to be between the laft " known Headland of California towards the Weft, and " the fartheft Extremity of this new difcovered Land ' towards the Eaft. Secondly, Captain Bebring hav"ing had the Opportunity of obferving an Eclipfe ' of the Moon at Kamichaiska, concluded from the " fame, that that Place lay much farther off to the Eaft "than is expreffed in any Map; and that to reprefent " it truly, it ought to be tranisferred into the other He" mifphere, as its Longitude is more than 180 Degrees "Eaft from the Ine of Fcro, for this Reafon, Captain "Bebring's new Land will be confiderably approached " to the laft known Part of California, and will not in"deed appear to be many Degrees from it.
"What we have therefore flill to hope, is only that " in this unknown Diftrict there may be found fome "Streight, by which the Pacifick Sea may freely com" municate with Hudfon's Bay; but if it fhall appear " that there is no fuch Paffage, it muft then be conclu" ded, that whatever furcher Progrefs may happen to " be made through Hudjon's-Bay, the Opening at laft " muft only be into the Frozen Sea, from whence there "could be no paffing into the Pacifuc Octan, but by " the Neighbourhood of Kam (chatska; and this Way " would, without doubt, be too long and too dange"rous to be maftered in the Courfe of one Summer.
"I very much doubt, whether the Ruffians will ever " publifh the Particulars of their Difcoveries, either " fuch as have been made from Kamfchatska towards "America, or fuch as have been made upon the Nor" thern Coafts of Afa. And indeed it is but very much " in general that I know the Succefs of this laft "Expedition. What I do, was communicated to me " by Order of the Court from the College of Admiral" ty, for me to make ufe of it in the Geography of " Ruffa, with which I was at that Time charged.
"They paffed along in fmall Veffels, coafting be" tween Nova Zembla and the Continent at divers times " in the Middle of Summer, when thofe Waters are open. The firft Expedition was from the River Oby, " and at the Approach of Winter the Veffels fhelter'd " themfelves by going up the Yeniska, from whence the " next Summer they returned to Sea in order to advance " further Eaftward, which they did to the Mouth of " the Lena, into which they again retired for the Win" ter Seafon.
"The third Expedition was from this River to the " fartheft North-eaft Cape of Afio. But here they loft " feveral of their Boats, and a great Part of their Crew; " fo as to be difabled from proceeding, and from ma" king the whole Tour fo as to arrive at Kamfchat ska. " It was however thought, that a further Attempt "s was then unneceffary, becaufe Captain Bebring had c. already gone round that Cape, failing Northward " from Kamjcbatska.

## "The Ruflians have not attempted the Paffage round

"Nova Zembla, but as they have paffed between that
" Land and the Coaft of Afa, and as the Dutcb did
" formerly difcover the Northern Coafts of Nova. Zem "bla, we may be now well affured that that Country " is really an Inand,"

There are feveral Points in this Letter that are, very well worth our Obfervation. In the firlt Place, it is very evident, that from Captain Bebring's' Difcoveries the Rufiams look upon it as a Thing certain; that a fhore Paflage may be opened from their Dominions to Nortb

## Chap. III.

 the Russian Difcourries.America; and that the Senfe they have of the great Advantages that may be derived from thence, is the Reafon that induces them to think of concealing what may be difcovered for the future, efteeming fuch Lights as they may receive thereby as Secrets of State, to which no Strangers have a Right to be admitted. In the next Place we may obferve, though the Profeffor fpeaks very modeftly, that he looks upon Captain Bebring's Syftem as abfolutely deftructive of our Scheme for difcovering a North-weft Paffage through Hudfon's Bay; which indeed is fo far well founded, as that granting his Premifes, and that the new difcover'd Country of Behring's lies contiguous to California, cannot be denied Lafly, It may be obferved, that though he fpeaks very cautiounly, and therefore indeterminately of the Pofition of the North-eaft Cape, which he fays ought to be carried into the other Hemifphere, as indeed it ought, ye he plainly enough infinuates, that if this be duly confidered, it will overturn the Arguments formerly of fered in Favour of the North-weft Paffage. So that on the whole, if we attend to the Spirit rather than the Letter of this fhort Difcourfe, we muft plainly difcern, that the Rufians look upon themfelves as in full Pofleffion of that great Secret, fo long and fo ineffectually fought by the Northern Maritime Powers, of a fhort Paffage to the Eaf Indies and the South-Seas, and that ton exclufively of other Nations, from a Perfuafion, that by difcovering this Paffage, they have difcovered alfo that the North-weft Paffage, by which only we could interfere with them, is impracticable.
10. But in the next Number of the Pbilofophical Tranfaftions, viz. 483. Page 47 I , there is a very curious Letter from the ingenious Artbur Dobbs, Efq; to the be fore-mentioned Mr. Wetzein, in which all this Reafoning is very fully and fairly refuted; and it is chiefly from the Arguments advanced therein, that I fhall be enabled to make good my Promife to the Reader, by Thewing, that in the firft Place, there is no Reafon to apprehend that Captain Bebring has made any Dícovery at all, at leaft with regard to the Point we are examining ; by which I mean, that he has given no new Light whatever as to a new Continent, which may be reafonably prefumed contiguous to California. Secondly, That the Argument drawn from the advanced Situation of the North-eaft Point of $A f a$, is abfolutely inconclufive, and does not at all prove fo much as the Probability of there being any fuch Continent as the Ruffians feem to be fatisfied they have found. Thirdly and Lafty, That taking every Thing they have advanced, as through this whole Section, I have taken them for indirputable Truths, yet the North-weft Palfage by Hudfon's-Bay remains not only as probable as ever, but is in reality rendered more probable than ever from thefe very Difcoveries. All this I hope to make out to the entire Satisfaction of the ingenious, inquifitive, and impartial Reader, fo as to leave not the leaft Scruple upon his Mind in reference to this Rufian Syftem.
As to the firlt Point ; as there are no Longitudes or Latitudes mentioned in reference to Captain Bebring ${ }^{3}$ s fecond Voyage; all we can pofibly know of it amounts to this, that he failed South from Kamfcbatska, as low, or perhaps lower than 50 Degrees, and there found Land 80 Leagues North-eaft from $\mathcal{F} a p a n$, for otherwife by coafting it North-weft, as it is exprefly faid he did, hie could not poffibly have approached the North-eaft Cape; to do which, had it lain due Eaft from fapan, he mult have failed North-eaft. Now there is the higheft Probability, not to fay an abfolute Certainty, that this is the very fame Land that was difcovered by Goma fo long ago, and is likewife that very Land to which Martin Herit/zoon of Uriez gave the Name of the Company's Land in the Year 1643, making the Weft-fide of the Straits of Uriez, which lie feven or eight hundred Leagues Weft of any known Land in America, and above a thoufand Leagues Weft of any Land in the Latitude of Jopan; and confequently, whether Continent or Illand, there is Room enough for a very large Paffage between this Country and Amierica; neither did Captain Bebring coaft it fo far as to come at any Kind of Certainty whether it was Conti-
nent or Ifand; all therefore that can poffibly be col lected from this Account, is no more than a Confirmation of the two former Difcoveries, and perhaps of a third; for, as Dr. Cromwell Mortimer has very judicioufly obferved, the Gaponefe, in their Maps, have Jaid down two Iflands, each as large as Ireland in this very Tract, as appears from the Map Dr. Kempfer brought from thence in 1666, and which is now in Sir Hais Sloan's Mufeuna.
Taking therefore the whole of this together, what we learn from Captain Bebring's fecond unfortunate Voyage, is fo far from fhewing that he difcovered a Continent continuous to America, or that probably might be fo, that, on the contrary, he only touched upon a Country which feveral Europeans had vifired before, and which there are very fltong Reafons to believe is not a Continent, but an IMand. Neither is this faid with any View of difparaging the Induftry or Abifities of that adventurous, brave, and indefatigable Perfon, whofe Memory ought always to be revered, and to which I have raifed the beft Monument I was able; but in Things of this Nature, Truch is to be regarded before any other Confideration ; and there can be nothing plainer than this Truth, that his Difcovery does not warrant any fuch Suppofition, as that the Country he touched was a great Continent making Parr of Nort 5 America; and if in any Accounts he left behind him, he furmifed any thing like this, he muft have been miftaken:
As to the fecond Point, the Argument drawn from the Proximity of the North-eaft Cape, and the mott weftern difcovered Coaft of America, is eafily difcuffed; forithough, as has been already obferved, the Ditcoveries and accurate Obfervations made by Captain Bebring in his firt Voyage, have really altered the Face of Afrairs extremely, and fhewn us Things in quite a new Light, by proving that the North-eaft Part of Afia is a Countr of much larger Extent, than, till it was thus examined, was ever fufpected, or would ever have been fuppofed true, if it had been ever fo frongly afferted without Proof; yet for all this, the North eaft Continent of Afia has fome Bounds, and Captain Bebring has very accurately fixed thofe Bounds, by afforing us, that the moft North-eaft Cape of the Afatick Coant is in the Latitide of 194 Degrees Eaft from the Meridian of London. There might indeed have been fome Difpute about this, as Captain Bebring did not examine the Coaft any higher than to the Latitude of 67.18 Mi nutes, if the Account which Profeffor Euler has publifhed had not plainly proved him in the right, by affuring us that his Obfervation was confirmed by chofe who failed round Cape Suitonos to the North-eaft Cape of Captain Eebring, by which it is render?d perfectily certain, that he has fixed the Longitude of the Exiremity of the Afatick Continent.
If therefore we add to its Longitude from London the Longitude of Cburcbill River in Hudforis's-Bay, which the ingenious Captain Cbristopber Middleton, by a very accurate Obfervation fixed at 95 Degrees Weft; I fay, if we add thefe two Longitudes together, they will amount to 289 Degrees; and if we tubtract this Sum from 360 , there will remain 7 I Degrees of Longitude, which is the Diftance between the North-eaft Cape and that Part of Hudfon's-Bay, In order to reduce this into Leagues, we may compute a Degree of Longitude in the Parallel of 65 Degrees at the Rate of eight of thofe Leagues, of which 20 make a Degree of Latitude ; and from thence it will appear, that there are 568 fuch Leagues, or upwards of 1700 of our Miles between the Extremity of the North-eaf Continent of Afia and Hudjon's-Bay'; and this furely is Space fufficient for many larger Illands, and a confiderable Paffage between the neareft Coaft of Anerica, and the moft Eaftern of thofe Inands, fuppofing all thefe Lands to lie in that Parallel, which however is a Suppofition we are not obliged to make, there being not the leaft Shadow of Proof of any Countries or Inands hitherto difcovered fo far to the North.

But farther ftill from the fettled Longitude of the North Cape of $\begin{aligned} & \text { Fapan } \\ & \text { in } \\ & 40\end{aligned}$ Degrees Latitude, which is pretty exactly known from the Obfervations made by the Jefuits at Peking, and is about 150 D grees Eaft from London, and from the beft compured Longitude of California in 40 Degrees North Latitude, it lies in 130 Degrees Longitude Weft from London, making together 280 Degrees, leaves 80 Degrees for the Diftance of California from Fapan, allowing 17 Leagues to a Degree of Longitude, in 40 Degrees North Latitude, the Diffance would be about 1360 Leagues: By the fame Calculation, California mult be at leaft 7 or 800 fuch Leagues from the North-eaft Cape of Afa; fo that in to great a Space there may be very great Countries or Inands, without fuppofing the new dilcover'd Country continuous to California, and might well allow of an open Channel or Sea from 50 to 100 Leagues wide between the difcovered Coaft and California.

The two Infinuations, of which we have undertaken the Difproof, have a vifible Connection with each other ; and if either of them had been well founded, it might have been urged as an Evidence in Support of the other. But examining them feparately, we have fhewn, that the Country difcovered by Captain Bebring in his fecond Expedition, whether Continent or Inand, does not render it at all probable, that the Land of which it makes Part, is continued to the North-weft of America, and joined there either to California, or to the Continent lying farther to the North-weft of that Country, now known not to be an Inland, but Part of the main Land. What we have urged upon this Subject, is farther fupported and rendered more credible by the Difproof of the fecond Suggeftion, viz. That the Diftance is but very fmall between the North-eaft Cape of Afia, and the North-weft Part of America; for with refpect to this we have proved, and that from Captain Bebring's own Obfervations the direct contrary, and have not only made it evident that the Space between them is very great, but have likewife fhewn what that Space is; fo that the Reader can decide for himfelf as to the Probability of this Pofition, that there is only a Paffage by Sea between Afia and America, near the Confines of the Rufian Dominions, and that the reft of the Space is taken up by the North-weft Continent of America, Part of which was coafted by Captain Bebring in his fecond Voyage.
But we have undertaken to do fill more than this, and to make it appear that the Rufian Difcoveries are to far from yielding any Colour of Proof as to the Probability of that Suppofition that has been advanced from them, that in reality they rather prove the contrary, and add Weight to the oppofite Opinion, which is a Point of very great Confequence, becaufe it removes that Bar which has been thrown in the Way of our difcovering a North-weft Paffage, which is a Thing of the higheft Importance to us as a trading Nation. Of which, if we ftood in need of Arguments to prove it, this alone is no inconfiderable Reafon ; that almoft all foreign Nations are inclined to reprefent it as a Chimera, which is a Notion dictated to them by their Interefts, and therefore ought to contribute to make us fenfible of our own. When I fay this, I have not the leaft Intention to reprefent fuch an Infinuation as the Sentiment of the Profeffor Euler, who fpeaks as an indifferent Perfon, and in the Language of a Gentleman, and a Man of Learning; for I am only labouring to refute thofe after whom he fpeaks, whofe Objections he has heard and repeats, and to which he fhews himfelf very willing to hear what can be faid in Anfwer. To come to the laft Point, and to fhew that the fe Difcoveries of the Rufians, inftead of juftifying their Notions of a North-eaft Paffage only, of which they look upon themfelves in Poffeffion, rather favour the oppofite Sentiment, and afford probable Grounds to believe, that the Space between the North-eaft Cape of $A f i a$ and the oppofitee Continent of America, is filled up by broken Lands, and confequently that there is alfo a North-weft Paffage, I fhall make ufe of feveral diffetent Methods.

In the firft Place then, I muft obferve, that the concluding Paragraph of the Profeffor's Letter evidently proves that he is of the fame Opinion with me, in refpect to a North-eaft Paffage, that is to fay, that from the Expedition of the Dutch Ships in 1670, the coafting Voyages of the Ruffians from the Mouths of the Rivers Obi, Fenifa, and Lena, and from the late Difcoveries made by Captain Bebring in his firf Voyage, there is an inconteftable Proof of fuch a Paffage. Now from hence I make two Inferences; the firf is, that if the Norch-eaft Paffage, fo long ago given up, and that too, if Captain Wood's Arguments had fignified any thing upon what might be called direct Evidence, as chimerical and impracticable; be at this Day known to be real and practicable, fince every Lieague of it has been failed over, I fhould be glad to know, why even without the leaft Degree of Evidence, it is to be thought reafonable to conclude in the like hafty Manner, againf a Poffibility of finding a North-weft Paffage? It is an ufual and a very juf Method of Argument, that after detecting one great Miftake, one ought from thence to be doubly cautious of committing another of the fame Kind ; but it is a new and ftrange Reafoning to conclude, from the Detection of a Mitake, into which Men were drawn by fome kind of Evidence, that they may, withour Danger of miftaking, conclude the fame Thing with Regard to another like Point, and this without any Evidence at all. My fecond Inference is, that as the fame kind of Reafoning is applied, I mean with refpect to Cofmographical Topicks, to the Norch-weft as to the North-eaft Paffage, and it is now found by Experience, that thofe Arguments were we!1 and rightly applied with refpect to the Oeconomy of Providence in reference to one Paffage; this fhould therefore be taken, not as Evidence indeed, but as a very probable Indication that the fame Arguments have not been wrong applied in regard to the other Paffage. It is indeed true, that Nature effects the fame End, when aimed at under different Circumftances, by feveral Means; and this fhews at once the Wifdom and the Power of Providence, but in like Cafes the generally takes the fame Means; and therefore this being confidered, our having a Certainty of a North-eaft Paffage, which Certainty is derived from thefe Difcoveries, becomes a flrong analogical Argument for there being a Northweft Paffage.

I fiall now beg Leave to offer quite another Method of Argument, and that fhall be taken from the Nature of the Whale-filhing, or to fpeak with greater Propriety, from the Nature of the Whale. Thofe Fifh refort at a certain Seafon of the Year from warmer to colder Climates, and the Reader is very well acquainted that it was urged as a ftrong Reafon why there fhould be a North-eaft Paffage, that Whales were thrown upon the Coaft of Corea with Dutch Harpoons in them. We now fee that this was a juft and a right Argument; for Captain Bebring tells us, that he met with Whales caft afhore on the Coaft of Kamjcbetska, and I fuppofe no body can doubt that thefe Whales went thro' the Northeealt Paffage, now that fuch a Paffage there is known to be. But Whales are found, even in the latter End of the Summer, in the Welcome in Hudfon's Bay. Inftinct being an unerring Principle, I fhould be glad to hear where thefe Whales muft be going at that Time of the Year, if not into the Soutb-Seas, and if into the Soutb-Seas, whether there muft not be a Paffage between the North-weft Continent of America, and the Countries, whether Continents or Illands, between that and the North-eaft Cape of $A$ ha, For to fuppofe that thefe Whales fhould go round fuch a vaft Continent as that muft be, if the new-difcovered Land was continuous to $A$ merica, and were to enter by that Paffage in which Captain Bebring was, is a palpable Abfurdity, becaufe in the advanced Seaton of the Year, and in fo high a Latitude, thofe Seas would be frozen. This Argument I muft infift upon to be in a Manner decifive we know there are Whales upon the Coafts of Spitzbergen and Nova Zembla; we now know that thefe Whales go through the North-eaft Paffage, and fo dedçend into the warm Seas of Japan ; we know that

Chap. III. the RUSSIAN Dicuveries.
$102 \%$

Whales are found in the North Part of Hudfon's-Bay, and not in the South, why then fhould we not think, or rather, how can we avoid thinking that they alfo find a Paffage round into the warmer Seas?

Another ftrong Motive there is to believe that this Country, upon which Captain Bebring touched in his fecond Expedition, mult be an Illand, and not any fuch Continent as he is faid to have imagined, is this, that being fo near Fapan as himfelf places it, it is impoffible the Subjects of that Empire fhould not have been long ago acquainted with it, and with its Inhabitants; yet we are well enough verfed in the Faponefe Hiftory, to be thoroughly fatisfied they know of no fuch Continent ; but on the contrary, have laid down two pretty large Illands in this Tract, one of which, in all Probability, Captain Bebring coafted. If all the Space beween the North-eaft Continent of AFia, and the oppofite Continent of America, is partly Sea; and partly flands of feveral Sizes, we may very eafily account for their remaining fo long unknown to the Spaniards in America, and in the East Indies, as well as moft of them are to the Faponees; whereas if the Continent of America extended in fuch a Manner as the Rufians feem to imagine it does, it muft appear almoft an Impoffibility that it fhould not have been long ago difco vered, confidering how oftel, in a long Series of Years, the annual Ships from Manila to Aquapulco, muft have been driven out of their ordinary Route (which it muft be confeffed is not calculated for Difcoveries) either outward or homeward bound. Yet nothing of this Kind has been ever heard of ; but all the flying Stories we have of Difcoveries made in thefe Tranfits, relate only to Inands, and thofe too none of the largent, as appears, from the Difficulty of meeting with them again.
One might add to all this, that the Confideration of the vaft and enormous Extent of this new Continent, which upon this Suppofition would contain 140 Degrees of Longitude, renders it highly improbable; and this more efpecially, if we confider the Difpofition of other Parts of the Globe, and particularly that Part of America, the Coafts on both Sides of which are perfectly well known. It was this uniform and wife Diftribution of Sea and Land, that firft induced Men of penetrating Parts and great Experience to expect, that fo many different Paffages might be found from one Part of the Globe to the other; and as we fee that thefe Expectations have been perfectly anfwered in refpect to the Paf. fage into the South Seas by Cape Horn, and are now convinced that there is a Paffage by the North-eaft ; fo sill they are abfolutely certain of the contrary, it cannot be fuppofed that the ableft Cofmographers will be difpoffeffed of the Notions they bave entertained of finding a Paffage by the North-weft, to which I hope I have fully fhewn, that thefe new Difcoveries are fo far from raifing an infuperable Bar, that on the contrary, they have made it more probable than $\mathrm{it}_{5}$ was before. For it muft be obferved, that the Advocates for a Northweft Paffage are very far from difputing any of the Points that are actually fettled by thefe Difcoveries, and are only engaged in a Controverfy about the Probability or Improbability of this imaginary Continent, which is no Part of thofe Difcoveries, but a Suppofition raifed in Confequence of them, without any juft Grounds,
If it fhould be enquired, why, confidering the In duftry and perfect Underftanding of Captain Bebring, with refpect to Matters of this Nature, he fhould be fo defirous of ferting up a Fiction, like this, without any juft Eoundation or Authority, the Anfwer is not very difficult. He was inftructed to find fuch a Continent as we have already feen; fo that he fet out upon his firft Expedition, with a Prepoffeffion that perhaps he could never get over. We have already feen in the Beginneng of this Section, that before the North-eaf Coafts of the Ruffan Dominions were thoroughly known, a Notion prevailed, that poffibly they might be continued in fuch a Manner as to join and make the fame Continent with America; and when this was found to be filfe, notwithtanding their extending fo far into the other Hemifphere, then his other Opinion was taken up:

VOL. II. Ne EAf.
and becaufe Captain Bekring had fully difcoverd that here was an open Paflage round the North-eaft Continent of Afa, by his firt Expedition, and the Confequences that attended it; and becaufe in his lecond Ex pedition he difcovered new Land fill farther to the Eaftward, it was from thence prefumed, that this muft be Part of that Continent he was fent to look for, becauie had it been fo, he would have fully executed his Inftrict tions, and have found what the Court of Petersbourgh were defirous he fhould find. This is a very clear and candid Account of the Matter, and what I am inclined to flater myfelf, will fatisfy every fenfible and impartial Reader.
But to make it fill plainer and more fatisfactory, if poffible, I will beg Leave to cite a parallel Cafe , which has been frequently mentioned in the Courfe of this Collection. The great Cbrifopher Columbus, as wife a Man, and as experienced a Cofmographer as he was, when he firlt framed his Scheme of Difcovery, propofed nothing more than to find out a new Route to the Eaft Indies by failing Weft, and when he met with the Babama and Lucaya Inands, he flattered himfelf that he had obtained what he fought, that he hadiperformed what he promifed, and that he had put the Crown of Sain in Poffeffion of a Part of the Indies; and from this Perfuafon, when the Error was difcovered, the Name of the Weft-Indies arofe, to diftinguifh thefe new-found Countries from the old, of which they now appear to be no Part. Thus we fee how Columbus was deceived in imagining, that by failing directly Weft he could not fail of meeting that Eaftern Continent, which was then the Object of the Wifhes and Searches of all Difcoveries, by which incleed he made a great and glorious Difcovery, that will and ought to perpetuate his Name ; but at the fame Time that he did this, he difcovered his Miftake, and that he was very far from having reached thofe Countries for which he originally fought. Yet he ftill retained his firf Purpofe, and in fome Meafure his firf Notion; for when he heard of a great Continent lying ftill Weft from thofe Inands, his Hopes revived, but it was not long before he perceived that he was again miftaken, and then finding there was a narrow Ifbmus which connected the Northern and Southern Parts of this Continent, he flattered himfelf there might beftill a Paffage, and under this Perfuafion he died.

Now, as the Criticks fay, there is fomething divine even in the Dreams of Homer ; fo in relpedt to the Senments of Columbus, of whofe Menory I never fpeak but with the utmof Reverence, there was always fomething great and noble; and if I might be indulged fo bold an Expreffion, I would venture to fay that there was fomewhat of Truth in his Errors, and of Wirdom in his Miftakes; for notwithftanding he was wrong with refpect to Circumftances; he was right in the main; for had there been no fuch Continent as America, he might undoubtedly have failed, as he propofed, from Spain to the Indies, though hardly with fuch Veffels as thafe in which he made his firf Difcovery. However, it was upon his Thought that fucceeding Difcoverers built; it was from his Difcourfes they colleeted thofe Lights that led them to all they afterwards performed and it was from the Scheme of Cbrifopber Columbus that Sir Fobn Cabot, (for he was the Knight, and not his Son Sebaftian) took the Hint of a North-weft Paffage, which is yet undifcovered ; that Sebaftian Cabot framed his Defign of finding a North-eat Paffage, which has been but of late known to be poffible; and that Ferdinand Magellan sathered thofe Obfervations from whence he has fo confidently undertook, and fo happily accomplifhed, the finding a Paffage to the Spice Iflonds through the Soutb Seas.

In Matters of this Nature, as it is very eafy to miftake, as well as very hard not to miftake; fo there is nothing thameful or injurious to a Man's Reputation, who from real Difcoveries falls into erroneous Suppofitions; the only Danger is, that the Fame and Credit of the Difcovery Jhould give Weight and Authority to fuch Suppofitions'; and this makes it both neceffary and laudable to examine them with the ftricten Atten-

12 E
$\mathrm{tion}_{3}$
tion, which muft be my Apology to the Reader for the Pains I have made him take upon this Occafion, in order, through all this Mift of Obfcurity, to bring him out again into the Light, and to enable him to make the proper Ufe of Captain Bebring's moft admirable and moft important Difcoveries, without being led away by that vain and idle Delufion to which they have moft unaccountably given Rife. We may from this Examination of the Matter, very eafily, and with fome tolerable Degree of Certainty, perceive, what will be the Iffue of this Defign, in Cafe the Ruffans fhould continue, as in all Probability they will, to profecute thefe Difcoveries. What I mean by this, is, that in the Courfe of a few Years, they will very probably find out all that is yet to be, found on that Side, and pafs from one Illand to another, till they have obtain'd an abfolute Certainty as to the Situation, Size, and Nature, of the Countries that Providence has placed between Aha and Americulang which, I will not prefume to alledge there may not be one more confiderable than the reft, and extending much farther to the North, which in that Refpect may deferve to be ftiled a Continent; neither will I difpute, than when this fhall be done, it may be both poffible and practicable for the Ruffians to obtain a Share in the Commerce of America, though for many Reafons, fome of which I fhall hereaffer mention; this feems to be a Thing far enough from being probable.

We may likewife difcern from what has been faid, how very little the reft of the World have to apprehend, from any Pains this Nation may employ to conceal their Diicoveries ; for, in the firt Place, if they fhould prove confiderable in themfelves, and advantageous in their Confequences, that will be a Thing abfolutely impoffible ; for whether they derive thofe Advantages from Conquefts, or from Commerce, they cannot be hid; and if we once learn that thefe Advantages are derived to them, the Manner in which they are derived cannot long remain a Secret. On the other Hand, if they proceed flowly in thefe Difcoveries, and reap no great Profits from them, they need not take much Pains about the-Matter, fince no Secret is fo eafily kept as that which is hardly worth the knowing. But as we have already explained the true Caufe of that erroneous Notion of the Continent of America being at ro great Diftance from the Northeaft Coafts of the Ruffian Dominions, fo it will be no hard Task to find out whence this other Sentiment of the Poffibility of concealing Difcoveries has its Original; the Ruffians have, for the two laft Ages, employed themfelves in making Difcoveries and Conquefts to the North-eaft, and thefe they have taken great Care, and not without confiderable Succefs, to conceal, which they might very eafily do, fince it was not poffible for any other Nation but themfelves to reach them. Yet while they were thus concealed, they proved of no mighty Confequence to them; and the only Fruits of their Induftry, in that Refpect, at leaif fo far as we can learn, were Want of real Improvements, or fo much as acquiring a juft Notion of their Importance. When the Czar Peter came to have right Ideas, in refpect to Government, Power, and Commerce, this little narrow unprincely Scheme of concealing was immediately banifhed, and he not only took all the Methods poffible to make himfelf and his Minifters thoroughly acquainted with the remoteft Parts of his Dominions, but with equal Care and Indultry publifhed the Refults of his Enquiries to all the World ; and from thence it was that he not only raifed a juft and never-fading Reputation, but likewife reaped many Advantages, in a very fhort Space of Time, that otherwife muft have coft whole Ages in the Form of flow and filent Methods to attain. By this Means principally he reached the great Point at which he aimed, and came to have right, diftinct, and thorough Notions of the Value of the Diicoveries made in the Reigns of his Predeceffors, which were not known to them from their being addicted to that barbarous Policy of hiding andmaking a Myttery of what muft be ufelefs in the very fame Proportion that it is concealed.

This fhews the Folly and Abfurdity of fuch a Principle, while confined to Difcoveries upon the Continent, in which it was very poffible it might be purfued with Succefs; but there is nothing eafier than to fhew, that it is not barely ridiculous, but abfolutely impracticable, with refpect to fuch Dilcoveries as are made by Sea. We already know enough of their Difcoveries not to be much, if at all in the dark, as to the Sources of any Advantages they may reap from them hereafter ; and, as I obferved at the Clofe of the former Section, fo long as we preferve our Naval Force, it will be always not only practicable, but a very eafy Thing for us to acquire a Share of thefe Advantages, let them be what they will, in fpite of any Pains, or any Means they can polfibly ufe to prevent it. For it will be always poffible for us, while we have fuch large Poffeffions in the Eaft-Indies, to fit out Ships ; or if it was neceffary, Squadrons of Ships, and that with as great or greater Advantage than can be done by the Rufians, and with thefe we may at any Time retrace all their Difcoveries, and make them our own, in Cafe there fhall appear any good Caufe to expect that Expeditions of this Kind may turn to our Profit.
Neither is it Reafon alone that teaches us this; for the fame Leffon may be learned in the School of Experience. The Spaniards and the Portuguefe were the original Difcoverers of America and the Eaff Indies, but how long did they remain the fole Proprietors of thofe valuable Poffeffions? And yet they were poffefled of an Advantage which the Ruffans have not, and which it is in a great Meafure out of their Power to attain ; that of being the greateft Maritime Powers in Enrope, indeed almoft the only Maritime Powers in Europe, at the Time they made them. Therefore if with this fingular Advantage, and when making Difcoveries was a Thing new, thofe Nations found it impoffible to conceal their Difcoveries, or to exclude Strangers from fharing with them, how fhould the Ruffans, who on this Side of their Dominions neither have, nor in any reafonable Space of Time, can raife any formidable NavalForce?
Yet after all that has been faid, I muft confefs, that if the Ruffans continue to proceed in thefe Difcoveries, with that Vigour which their great Importance deferves, and which the Succeis they have lately met with may well encourage them to do, they may poffibly make a Difcovery of the higheft Confequence, and perhaps conceal it too, and that to the great Advantage of themfelves, and the great Detriment of the reft of the World, and of the Britijb Nation in particular ; and to this I attribute all that Air of Darknefs and Myftery that has been of late thrown over moft of their Relations. In fhort, I apprehend, and am very fure, that I have good Reafon for my Apprehenfions, they are already pretty well fatisfied ; or rather, the few judicious Heads amongft them, are convinced, not of the Poffibility or Probability, but of the Reality of a Northweft Paffage ; and this it is that makes them fo very defirous of promoting a Belief of the running out of the two great Continents, till they almoft meet each other, and hath alfo put them upon the Scheme of ftifing their future Difcoveries, that they may make the moft of what they have already difcovered, and not lead others to the Knowledge of a Route, which would make them Mafters of thefe Difcoveries, and of many more.
XI. After having examined as thoroughly as poffible thefe Ruffian Difcoveries, which have made fo much Noife in the prefent Age, and which it is not impoffible may make ftill more Noife in the next, let us. proceed to a few Obfervations on what has been faid in order to render it more ufeful and more intelligible to the Readers. It is now about two hundred Years ago, fince our finding out the Navigation to Ruffa, was confidered, as a more furprifing Difcovery, than any of which the Ruffans are now in Purfuit; but then it muft be confidered that they had no Dominions upon the Baltick, nor hardly any Intercourfe with their Neighbours, except the Poles and the Srwedes. It was prefently forefeen, that from Arclangel, which was the Port
frequented:

Chap. III.
the Russian Dijcoveries.
frequented by us, a Paffage might be conveniently fought round Norva Zembla to the Eaft Indies, and accordingly various Attempts were made that Way, as in its proper Place has been fhewn. It could however hardly be forefeen, that fo long a Series of Years fhould elapfe, before the Englijh Nation received any Certainty as to the North-eaft Frontiers of this fpacious Empire, and yet it is purely owing to the great Wifdom and fuperior Genius of the Czar Peter the Firft that we are acquainted with them now, fo late have we been inftructed as to the real Boundaries of that Part of the Globe, with which, during fo long a Space, we have had almoft a conftant Correfpondence.

But now we are acquainted with them, let the Queftion be put, What are we the wifer or the better for this Piece of Knowledge ? For that is the Touch-ftone of all Acquiftions of this Sort; fince if our Knowledge ferves only to amufe the Learned, and to furprize the Ignorant, it is of very little Confequence, and indeed hardly deferves the Name. If, on the other Hand, it gives us a jufter Notion of Things than we had before, delivers us from the Mifts of ancient Errors, affords us a Profpect of new Truths, and enables us, by thefe Helps to decide judiciounly of our own Interefts, and thofe of other Nations; then, without doubt, our Enquiries are to fome Purpofe, and the Iffue of them may be well filed ufeful and folid Knowledge.

In the firf Place then, we are now able to reCtify our Miftakes, which to be fure were great enough concerning the Country of the Ruffians. We confidered them heretofore as a rude and barbarous Nation, thruft up into a Corner of the Globe, of litrle Confequence to their immediate Neighbours, and who were almoft in a State of Inability of making themfelves fo much as known, much lefs refpected and feared by the relt of the World. We fee them now in quite another Light; we fee, that in Point of Extent and of Compactnels, no Empire, either ancient or modern, can enter into Comparifon with that of Rufia, which is at once equal to any European Power, and fuperior to that of any Potentate in Afar. We fee, that inftead of being unknown or difregarded, even by her Neighbours, fhe has made herfelf courted as well as refpected by the greateft Powers in both Europe and Afa, as being equally formidable to the Turks, the Tartars, the Perfians, the Cbinefe, and, it may be, the Faponefe, on one Side, and to all the Powers in the North, on the other.

We may from hence learn how ealy fuch Miftakes are, and how much Time and Pains it cofts to rectity them, which ought to render us more careful in other Refpects, how we fuffer ourfelves to be impofed upon by crude and indigefted Opinions, or how we give into that common Source of great and dangerous Errors, the hafty rejecting as weak, abfurd, and chimeral, fuch Propofitions, of which, from their Novelty and the Want of prefent Lights, we cannot immediately fee the clear and diftinct Grounds. Of this I fhall prefently give a very ftrong, and hitherto unnoticed Inftance with refpect to this very Nation, and the Confequences of our Correfpondence with them. It is very well known, that but a few Years ago, an Act of Parliament was obtained in Favour of the Rufia Company, to enable them to carry on, through that Empire, a Trade with Perfia; and that this was not obtained without Oppofition, though the Advantages of fuch a Trade were then fet in a very clear Light, and have been fince Felt by Experience, notwithftanding the unforefeen and inevitable Difficulties to which this new Trade has been fubjected by the great Troubles and frequent Revolutions in the Country laft mentioned. It would be no difficult Thing to fhew, that Projects of the fame Kind had been many Years ago fet on Foot in Italy and in France, but I believe it will be News to moft of my Readers, that it was with a View to an Eftablifhment of this Sort, that King fames the Firft propofed to fend Sir Thomas Overbury into Mufcovy; and that fome who looked upon themfelves as very penetrating People, and above the ordinary Rank of Politicians, valued their own Sagacities in feeing through this Project, as they imagined, and treating it as a Thing altogether im-
practicable, and fit only to amule the Minds of Specus latifts; by which, very probably, the Nation was defrauded of a Branch of Commerce that might have pros ved highly beneficial.
I am too well acquainted with the Temper of the prefent Age to advance fo ftrange, and, to moft People; fo unheard-of a Thing as this, without Proof; and therefore I fhall cite a Letter from Mr. Fobn Cbamberlain to Sir Ralph Winveood, preferved among that Gentleman's State Papers, who was afterwards Secretary. It is dated May 6,1618 , and the Writer having firft obferved, that it was the urging Sir Thomas Overbury to go to $M u f$ covy, that drove him to that peremptory and unmannerly Anfwer for which he was committed to the Tower, he proceeds thus: "Indeed we have great " Doings in Hand, and ftrange Projects for that Place, "which I doubs will all prove Difcourfes in the Air, " for they be grounded upon certain Speeches of fome " of the Nobility to an Engl/b Merchant about two "Years fince; but tempora mutantur, and the Cafe is " much altered there fince that Time. Yet the King " apprehends the Bufinefs very earneftly, and hath "caufed Sir Henry Nevile to confer with fome of the "Council about it divers Times, wherein, they fay, he " hath fhewed great Sufficiency, and difcourfed at iarge " what Commodity might arife by bringing the whoie "Trade of Perfia, and the Inland Part of the Eajt "Indies up the River Hydafpes, and fo with a fhort Cut "down the River Oxus into the Cafpian Sea, and then up " the River Volga to a Straight of Land that will carry " all into the River Dreina, that runs down to St. Nico" las and the Town of Arcbangel, the ordinary Port and "Station of our Shipping in thofe Parts. Thefe are " goodly fpecious Ditcourfes of Things not fo eafily " done as fpoken." If we have found a nearer, fhorter, and more expeditious Method of carrying on and improving this Trade, it is becaufe, as our Author fays, Tempora mutantur; and that with regard to us and the Ruffians alfo, we are no longer under the Neceffity of making the long Voyage to Arcbangel, nor are they obliged to take the Courfe before laid down for bringing Perfian Commodities into the Heart of their Empire. Yet for all this, it is no hard Matter to difcern this Project was both very pofirible and very practicable at that Time, and might have been attended with very great Advantages to both Nations.

We may learn from the Contents of this Section, more efpecially if we compare them with thofe of the foregoing Sections, what are the true Reafons why, with all the feeming Advantages of which the Rufzans ate now poffeffed, they make, notwithftanding, but a very fmall Figure in Commercial Affairs. It is very true, that from the advantageous Situation of their Empire, they have a Variety of different Profpects of extending and promoting their Trade; but perhaps this Variety has been, and ftill is rather detrimental than benefícial. We find them fometimes intent upon eftablifhing their Navigation on the Black Sea, and in a few Years this is dropped, and their Efforts are made upon the Cafpian; then the Trade by Land with Cbina, and the fuppofed Advantages that may be derived from regular Caravans ingrofles their Thoughts, till on a fudden they are turned to more diftant Difcoveries and a Naval Correfpondence with $\mathfrak{F} a p a n$, which is again dropped for the Sake of purfuing, a ftill more diftant, and more uncertain Scheme of opening a new Route to the Coafts of America.
Thus by running from one Thing to another, and by a prepofterous grafping at many Things, Nothing is attained, if we except this, that from thefe Attempts it has been made very apparent, that all, fave the laft, might have been attained. For while Peter the Great was poffeffed of $A$ opp, he not only opened to his Subjeets the Commerce, but, as we hinted before, eftablifhed a Naval Force in the Black Sea, and thereby terrified the Grand Signior in his Seraglio, but this however infpired the Turks with a Refolution of depriving him of that Fortrefs, and of the Power of making him uneafy on that Side; which they had the good Luck to accomplifh; yet there may come a Time, when, if
the Rufians fhould be content to profecute one Point at once, they may again become Mafters of AJoph, and of that advantageous Commerce that might be carried on from thence. Nay, it is not at all impoffible that they may conquer Crim Tartary, which, with refpect to Trade and Naval Power, would be the moft important Acquifition they could make; but it would require much Time and no fmall Application to render fuch a Conqueft as advantageous as it might be made to their Empire, and indeed to the Chriftian World in general.

On the Cafpion alfo Peter the Firft built Veffels of various Sizes, and conquered fome of the moft valuable Countries in Perfia; he likewife formed Projects of Difcovery in the moft diftant Part of that Sea; where, for the Encouragement of his People, he gave out there were Gold Mines; but all thefe Projects, partly by other Accidents, but chiefly by his Death, came to nothing. The fame great Emperor actually opened a Trade by Land to Cbina, of which we have given a large Account, and of the Reafons of its Declenfion. Reafons that ftill fubfift, and will always fubfint, while the Cbinefe Government is carried on in Conformity to the Maxims that having prevailed there for many Ages, are not likely to be laid afide in hafte. It remains that we fhould examine the Caufes that have hindered the Accomplifhment of the two laft Defigns.

With refpect to thefe, there is nothing clearer than that the valt Diftance of Kamfchatska, the prefent Condition of that Country, and the great Difficulty of eftablifhing any certain and eafy Communication between it and the weftern Provinces of the Empire, are Obftacles of fuch a Nature as muft render it very hard to furmount. On the other Hand, we are very well apprized of the fettled Averfion which the faponiefe have to any Correfpondence with the Europeans, which there are good Grounds to believe may rife higher with regard to the Ruffians, whom, notwithftanding their vaft Dominions in Afia, they will always confider in that Light. I fay, that we have good Grounds to believe, that their Averfion will rife higher againft them than any other Nation, becaufe their Apprehenfions, in refpect to their Power, will be greater and better founded. Thus we fee that there is no great Caufe to be furprized, that the Court of Petersbourg has not been able to make any great Progrefs hitherto in that Commerce, of which Captain Spanberg gave them fuch mighty Expectations.

Yet great as thefe Obftacles are, they feem to be ftill inferior to thofe that lie in the Way of this fo much wifh'd for Commerce with the Northern Continent of America; for which, as we have fhewn, they are utterly unqualified, until fuch Time as Kamjchatska is much better improved than we have any Reafons to believe it is at prefent ; becaufe, as we have already fhewn, the Space is much larger between the two Continents than they apprehend; and if it were much lefs, it is not very eafy to conceive either with what Commodities they would trade from Kamfchatska, or where they would find Men to undertake any thing in the Way of Conqueft. The Reader will obferve, that I fate thefe only as very great Difficulties, which it will be hard, but not impoffible to overcome. The Method they are now in of furveying thefe Countries, diligently inquiring into their Produce, and framing from thence natural Hiftories, tracing the feveral Rivers from their Sources to their Mouths, bringing the barbarous Inhabitants under Obedience, and ufing every other Means poffible to come at an exact Knowledge of their vaft Dominions, though very how, is out of Comparifon the fureft to artain Succefs.
It is not at all improbable, that in Procefs of Time they may find either Mines or Drugs, or fome other Commodities of Value, that may make the Plantation and Improvement of there Places, at leaft bear the Expences, and fo by Degrees extend their Sentlements and Fortreffes in a regular Manner from Tobolski to Ochotski; and then, no doubt, the peopling and improving Kamfcaiska will be found far eafier than is generally imagin'd; for, as I hinted before, there feems to be good Reafon to bellieve, that there is nothing, either in the Climate
or the Soil, fo incorrigible, as to take away all Hopes of making it a tolerable Habitation. It is indeed true, that fome Hints have been given of taking a fhorter Way, by fettling a Port at the Mouth of the River Le na, and opening the Navigation to Kamschatska by Veffels of confiderable Burthen. I might object to this, what Ysbrant Ides tell us of the Northern Seas being choaked with Ice for feveral Years together, fo as to render fuch a Paffage abfolutely impracticable; but as I am ftrongly inclined to doubt the Truth of this; I cannot think it fair to alledge any fuch Thing. But fuppofing the Paffage to be always practicable in the Summer, which is the utmoft that can be contended for, yet the thorough fettling of Kam/cbatka will remain a Thing abfolutely requifite before any Difcoveries of Importance can be undertaken with any tolerable Advantage on that Side, fince after fo long a Voyage as that round the North-eaft Cape, it cannot well be imagined that Veffels fhould be in a Condition to proceed, without putting into fome Port for Refrefhment.

If therefore this could be done at Kamjchatska, and proper Magazines of Provifions and Naval Stores were erected there, no Doubt need be made, that in the Courfe of a few Years, Things in this Part of the World would change their Face, and a Commerce of very great Confequence might be foon fettled. Whenever this fhall be effected, and fuch a Navigation from Practice and a perfect Knowledge of the proper Seafons made common, if not convenient, I cannot help hazarding a Conjecture, that the Court will call to Mind a Project formerly fet on Foot for reviving and reftoring the Trade of Archangel. It may be faid, that to fuppofe the Poffibility of an eafy Paffage to the North-weft of Nova Zembla, which mult be the Courfe from any Port eftablinhed at the Mouth of the River Leno, is abfurd aud romantick, but this is eafier faid than proved; the Dutch Ships thatwvere fent in 1670 for the Difcovery of the Nurth-eaft Paffage, actually paffed round Nova Zembla the other Way, and therefore it is very plain the Thing is not at all impoffible; and to People who inhabit the Country that borders upon the Sea, have an Opportunity of making Choice of the fitteft Seafon, and may have fuch Affiltances from the Nature of their Government, as cannot be expected in Places, where not only the Climate, but the Laws are milder; this may, in Procef's of Time, and that no very long Time either ; be render'd very practicable, and Archangel become once more the Centre of the Ruffian Trade, as in former Times. The Reafon thas the Czar Peter the Great, who delighted fo much in Improvements, made it in fome Meafure a Point to ruin Archangel, by withdrawing the Trade from it, may be very eafily learned. In the firf Place, it had been infulted by the Swedes, which made him apprehend, that the richer this Port grew, the more likely it would be to tempt his Neighbours to make it fuch Vifits. Befides this, he was very intent upon whatever might contribute to the eftablifning, enlarging, or enriching of the new City of St. Petersbourg, which he was building, and which he was equally defirous of rendering the Centre of Commerce, and the Capital of his Empire.

Both thefe Reafons are, in a great Meafure, taken away; for with Regard to the Power of the Sroedes, and the Safety of Archangel, there are no longer any Apprehenfions, or indeed the leait Grounds for them and with refpect to Petersbourg, it will always remain the Center of the Baltick Trade, as well as the Weftern Capital of the Ruffan Empire; fo that inftead of fuffering, it would in reality receive great Advantages by the Revival of the Commerce at Archangel; and ttill greater, if fuch a Communication could be opened, as that which I have defcribed. We were heretofore very well acquainted with that Port, as having a regular as well as conftant Navigation thither ; but of late we fpeak lefs of it, and confequently are fo much the worfe Judges of its Confequences, which is in reality very great, fince there is no Place in the whole Dominions of Ruffa that lie's fo conveniently for uniting the Commerce of the moft diftant Countries in the Eaft with
that of Europe. Of this a remarkable Specimen has been given from our own Hiftory, and that too in a mott extraordinary Period, as I could very eafily fhew, if it was proper at this Time; another I have exhibited from my own Conjecture, in Cafe thete Difcoveries to the North-eaft fhould be profecuted with Effect ; and a third fhall be taken Notice of hereafter, but in the mean Time, I believe it may contribute to the Amufement and Relief of the Reader, and at the fame Time prove no great Interruption to the Courfe of our Reafoning, if we infert a very ingenious and lively Defcription of this Port, when in its moft flourihing Condition, written upon the Spot by Sir Dudley North, a Man of remarkable Abilities, and no lefs diftinguifhed for his Accuracy in obferving, and his Veracity in relating whatever he met with worthy of Notice, in the many Years that he fpent Abroad.
This Gentleman after a very pleafant and humorous Defcription of this Voyage, which not being to our Purpofe I pafs by, proceeds thus in fetting forth the State in which he found the Port that is now under our Confideration. "We went afhore to live in "Houfes built with Trees laid along one upon ano"ther, and let in at the Ends, the Streets are pa" ved with Trees, and the Houfes covered with Birch
"Bark. The Ground where the Englifh are appoint-
" ed to dwell, is paled round with great Trees fer up" right ; the like there is for the Dutch and Hamburgbers.
"The Emperor of Rufia fends down every Year a
"Governor, and a Gort or Judge to keep the Peace,
" and decide all Differences. Their Law is in their
"Heads, and what comes out of their Mouth is with-
" out Controul or Appeal. So that whatever Diffe-
" rence arifeth between one Man and another, it is fure
" too'be fully decided in lefs than an Hour. After the
"Parties have once fpoke, he gives the decifive Stroke, " and there's an End.
" Now this is a fine Place to live in, Victuals of all "Sorts plenty, and brave Sunfhine Weather: As we " failed along the Coaft of Norivay, I fancied the "Clouds, though loft in the Horizon, were buta fmall
"Diftance from us, which this place confirms, elfe " one place could not be fo very ferene, and another " fo cloudy, and that almoft conftantly. For at the
" North Cape it is rare to fee the Sun, and here at
"Arcbangel, about two hundred L.eagues diftant, not a
"Cloud to be feen for feveral Months together ;
" when we were two Leagues diftant from the huge
" Mountains on the Coaft of Norway, we could
" plainly difcern the Clouds to pafs between the
" Mountains and us.
" One of the Inconveniencies that lie on thofe who "d dwell in this Country, is, that the People are fo " given to Naftinefs, that nothing can be eaten out of "their Hands; you fhall have perhaps four Brothers " and as many Sifters, with their Father, Mother, "Hurbands, and Wives, all dwell in one hot Houfe,
" (Wijbe) they call it. They have nothing but a little
"Straw flrewed on the Ground to lie upon. They "wear loofe Garments above, with Linnen Drawers, " which go down to their Heels, and a fhort Shirt un" derneath like a Coat. To this in the Winter, they " add a Cafftan as they call it, which is an Under"Coat, the Upper they call a Shube. And for their " Boots, and huge thick Stockings, and double Mit" tens for their Hands, they never alter but continu" ally wear them. The Women I think are the " moft deformed Creatures that ever were feen, ge" nerally fhort, and by Reafon of their lying in "Wifbies and Baftoes, very fwarthy. Their Wear is "for the labouring Women, Boots, but fór them "that keep Houfe, neither Shoes nor Stockings; they " wear a Linnen loofe Garment next their Skin for the " moft part, without any Thing elfe, but fometimes " they have another of blue Callico over the former, " bue that is all.
" The Men account it a Sin to have either long Hair " or a fhort Beard. They are extremely fuperftitious, " every Man has his Object of Worfhip, but fome "twenty or more. They are Commodities fold in the Vol. II. $\mathrm{N}^{\circ}$ CXLII.
"Market, and they will not fell any to a Stranger, or "fuffer him fo much as to touch them. Thefe are "Pictures of the Saints, and that of our Saviour:
" The great Men burn Lamps before them Day and
"Night, and adorn them richly with Gold and Pearl;
" but when thefe are worn out, and they cannot fee
" any Thing of them, they hold it not lawful to burn " them, but in a folemn Manner carry them to the "Sea, and there fet them a-drift to fhift for them"felves.
"Thefe People are generally Thieves from the firft " to the laft, and fteal not only from Strangers, bue " Neighbours; and Poffeffion is all the Law they have " among themfelves. Drinking is their only Paftime, " and he that is not drunk on a Holiday, or Sabbath"day, is not either a Friend to their God, or Emperor.
" They are all left to get their Livings the beft Way
"they can. He that is a Carpenter To-day, is a La-
" bourer To-morrow. Every Man breeds up his own
"Sons, and it is a Shame to be wifer than their "Forefathers.
"This Town of Archangel fands on a Bog, and if " you offer to walk out of Town, (except one Way, " which is by the Water-Side, leading to a finall "Grove of Trees, that are of a competent Height, " and moftly Pine, Fir, and Birch) if the Way be nor paved with Planks, as ordinarily is done, to make a Paffage from the Town to fome Windmill, you " are prefently over Shoes and Boots. Among the "reft of the Inands, fome are very good Grounds, " and bear Corn of all Sorts, which after it is turned "Colour, as it will in five Weeks after it is put in the "Ground, they cut down and lay in the Sun to ripen " or harden, and thus they often have two Crops in " a Year.
"You fhall not fee in all this Country, one hundred
"Acres of good Ground without a Monaftery or two " or three in Sight of it; who will may fhave him-
"felf a Fryar, but it is feldom done unlefs in Sicknefs,
" for they think, whoever dies without the laf Unction "cannot be faved, and he that recovers, and lives af" ter he hath received that Sacrament is a Friar all the " ref of his Life.
"In this Country the Hufband is the fole Com" mander of the Wife, who differs very little from " his Servant. Many will marry their Sons very "Young to lufty Baggages, on Purpofe to gain able "Servants.
"I fhall add (though not very material), the Pro"" cefs of making Tar, the Product of this Place. They " dig a Hole in the Ground of a competent Size, fome two or three Fathom deep, and a little lower "than the middle they make a Platform of Wood, " and thereon heap Earth about a Foot deep, except " in the Middle, where an Hole is left in the Form of " a Tunnel. Then they fill the Pit with Fir Billets, " piled up from the Platform, and rifing about a "Fathom or more above Ground, which part they " wall about with Turf and Clay to keep in the Fire. " They command the Fire by quenching, for which "Ufe they make a Lixiviunn of the Afhes of Fir. "When all is ready they fet Fire a-top, and keep " the Wood burning, but very leifurely, till it comes " within a Foot or two of the Partition, and then they " heave out the Fire as faft as it is poffible, for if it " once lay hold of the Tar, which is fettled down in"to the lower Pit it blows all up forthwith. Thefe "Tar-Pits occafion a great deal of Trouble, and require " many Men to tend them during the Time of their "Burning, that the Fire may defcend even and lei" furely, whereby the Tar may have Time to foak out " of the Wood, and fettle down into the Pit. As it "comes from the Wood it is pure Tar, but in the "Pit it mixeth wich Water, which iffues from the "Wood alfo, therefore it muft be clarified from it " once or twice.
"The Manner of their Baftoes or Baths is worth "Notice. They are made as a fquare Room, in "one Corner of which is built a Sort of Oven, the " Top of which is covered with great round Pebble-
$\because$ Stones $_{2}$
© Stones laid very thick one upon another, without any

* Mortar. In this Oven they burn an Arm-full or two
r6 of Billets, and, during the Fire, leave the Door open
"for the Smoke to go out, which elfe could not pafs
"s for the Clofenefs of the Room. When the Fire is
" out, and the Stones thoroughly hot, you go into it
" flark naked, and the Heat is fo extraordinary, that
- in lefs than a Quarter of an Hour the Sweat fhall
ss run from you like Water, and the Heat almont ftifle "you. There are feveral Benches, which arè the De" grees of Heat ; on the Ground it is tolerable, but * very few are able to hold up their Heads to the Top "s of the Room, or ftand upright. They heat the s Room to what Degree you pleafe, by dathing cold
"Water upon the Stones, which doth wonderfully
" augment it. Thefe Baftoes are fuch common Things,
"that there is fcarce an Houfe, however poor, that
"wants one. They feldom or never lie with their
" Wives but in the Bafto; the Women are always
"6 brought to Bed in it. It is common to fee Men "fland at the Church Door, not daring to enter, be-
"caufe they have not wafhed fince they lay with their
"Wives, fo nice is their Devotion.
"All the Tools they work with about Wood is an
"Hatchet, and all of a Bigness, fo that the largeft
«Trees, and fmalleft Pieces of Wood are wrought
"s upon with the fame Tool. I believe they are the beft
" Hatchet-men in the World, for except a Shave, they
" have no other Tool to do all Manner of Work.
" Moft Houfes in the Country are of Wood, and have
" no Sort of Materials elfe about them: And fome
"again, as at the City of Mofoow, for Prevention of
"Fire, have not a Stick of Woor about them, the
"s very Doors and Windows are of Iron. Moft of our
"Warehoufes here have Fire-houfes under them ; it is
" a perfect Houfe under Ground, built as others are,
" and covered with great Trees, with a Fathom of
"Earth laid over it. The Door is deep and laid
s round with Brick. When a Fire happens, the
"Goods are flung down at that Door, and there al.
"ways ftand ready about a Dozen Barrels of Sand,
" which ferve to dam up the Door. Then the Houfe
" may be burnt to the Ground, and. all the Goods re-
" main fafe."
This thort and entertaining Account demonftrates to us fufficiently the Poffibility of rendring Archangel a very commodious Place, a good Port, and a well fortified Town; fo that in all thefe Refpects it might very well ferve as a middle Place for the Reception of the Commerce of Europe and Afia; and if the Ruflans can tell how to bring is thither, of all the Inands between Aha and America, and even of America itfelf. It has been before hinted, that another Propofition has been made for fettling the Trade of the Eaft here of late Years, that is, in the Reign of the Czar Peter, of a different Nature from either of thofe which the Reader has yet met with ; the iormer, he muft remember, went upon this Suppofition, that the Commodities and Manufactures of the Indies might be brought through Perfia to the Cajpian Sea, and fo by various Rivers to Arcbangel. The other fuggefts a Pofibilicy of carrying on a Trade from Kamfibatske to the Ilands near Fapan, to Corea, Cbina, $E^{\circ} c$. and carrying the Produce of this Trade round by Sea to Arcbaigel.

This other Propofal goes upon the old Suppofition, that a North-eaft Paffage was impracticable; and therefore two Merchants laid a Scheme before the Senate, to make a Communication between feveral navigable Rivers and Lakes, by the Means of which, the Ruffian Merchants might carry their Goods from Archangel to the Eaftern Ocean, and fo by an eafy and fhort Way trade to Fapan and the Eaft Indies, to the incredible Advantage of the Ruffan Dominions. The Connection was to be by the Rivers Dwina, Fafta, Irtis, Oby, Keta, Tenifra, Angur, the Lake Baikal, the Rivers Schutka, and Amur, the latier of which runs through Dauria into the Eaftern Ocean. It would perhaps be no difficule Thing to hews that though this Scheme is not imporfible or impracticable, yet it would be much harder to accomplifh, than that of opening a Communication by

Sea ; and the only Reafon I mentioned it was to hew how many different Methods have been contrived to transfer the Eaft India Trade, at leaft in a great Meafure to the Rufians; according to all which, Archangel has been the Port preferred; fo that fome Time or other, perhaps, it may obtain what has been fo long fought, in different Times, by different Heads, and from fuch different Ways.

To conclude this Subject, and to thew how great a Sacrifice was made in the eftablifhing of Petersbourg, I Chall prefent the Reader with a Memorial, fhewing the Inconveniencies that would arife by transferring thither the Trade from Arcbangel. It was drawn up by a Committee of Merchants, who were the beft acquainted with the Interefts of Ruffia, and of the reft of the Nations in Europe trading thither, and though it had no Effect, yet the Facts contained therein are very curious; they were briefly thefe :
r. That at $W$ ologda only, a Town ficuate between Mofcow and Arcbangel, there are three German Merchants, who at their own Charge maintain 25000 Perfons and upwards in dreffing and preparing Hemp to be fent to Arcbangel, and from thence into foreign Countries: But fhould they be obliged to keep fuch a Number of People at Petersbourg, where every Thing is five Times as dear as at Wologda, that Trade not only would turn to no Account at all, but they would even be Lofers by it. 2. That the greater Pare of the Exportation of Arcbangel is of the Growth of the neighbouring Country of $W$ ologda, from whence thofe Commodities are with a great deal of Eafe carried by Water to Arcbangel; whereas were they to be tranfported to Petersbourg, it muft be done a great Way over Land, and with far greater Expences to the Merchants. 3. That the Soil at Petersbourg is fuch, that the Hemp cannot be kept there a few Months without growing damp.

It is hoped, that from thefe Remarks and Reflexions, the Reader will be led to a perfect Acquaintance with the Confquences of the Ruffian Difcoveries, the Nature of the feveral Projects that have been formed for improving and extending the Commerce of that Empire, and the Effects that thefe muft neceffarily pruduce upon the Trade of Europe in general, in cafe they fhouid ever be brought to any tolerable Degree of Perfection, than which it would be hard to find a Subject more ufeful of more entertaining to fuch as are defirous of acquanting themfelves with the real and fubftantial Knowledge that is, the Refult of Enquiries into the paft and pretent state of diftant Countries, and of learning from the Comparifon of the Situation and Products of the feveral Parts of the Globe, how they may be beft connected and made ufeful to each other.

But it may poffibly be objected, that all there Things are at a very great Diftance, in as much as hitherto the Ruffions have fcarce entered into any Kind of Commerce with other Nations, or at leaft with other Nations who inhabit Countries lying at a Diftance from them; fo that to confider them in the Light of a naval and come mercial Power, feems a little premature ; and confidering alfo the Viciffitude of human Affairs fomewhat chimerical. But to this it is very eafy to give a full and fatisfactory Anfwer. It is fcarce half a Century fince this Nation became thoroughly known to the reft of Europe, that is to fay, known as an independent and great Power, capable not only of holding the Balance of the North, or rather of prefcribing to the Powers there, but alfo of having a confiderable Infuence upon the general Syftem. Yet within this fhort Space, and notwithftanding feveral Revolutions in their Gevernment, they have acquired, and that very juftly, a very high Degree of Reputation, as well by a fucceffful War againft the Turks, as by their important Conquefts from the Crown of Sreden; and exclufive of this, have twice within the laft twenty Years, given Check to the Power of the Houfe of Bourbon, and Peace to Europe, by marching their Troops into Germany, exactly in the fame Manner, as when the over-grown Power of the Houfe of Auftria engaged the Swedes in an Enterprize of the like Nature, and with the like Succels. If there-

## Chap. III.

fore it cannot be denied, that in fo fhort a Time, and notwichftanding the many Obftacles they had to furmount, this Nation has carried its Power to fo unexpected a Height, and render'd its Authority and lnAluence fo very extenfive, why fhould we doubt, that upon turning their Thoughts to the promoting of Induftry, encouraging Manufactures, and improving their Trade, all which, it is very certain, are Points that have for fome Years occupied their Thoughts. I fay, why fhould we doubt, that in Procefs of Time they fhould become as fuccefsful in this, as in the aggrandizing themfelves by their military Expeditions, and their political Negociations, for both. which they were hought infinitely more incapable, but forty or fifty Years ago, than they can be now, with refpect to Im provements in Trade and Navigation?
I know very well, that it has been efteemed the Foible of this Nation, that they efteem themfelves abfolutely Mafters of any Science, by that Time they have acquired the firf Principles of it, and are apt to boaft of Things as accomplifhed almoft as foon as they have formed a Defign of undertaking them; but as this is natural to all Nations, upon their firt emerging out of a State of Barbarity, it may be probably concluded, that this is in fome Meafure worn off, and that in Confequence of their being more familiar with the Sciences, and having a greater Intercourfe with other Nations, they are become both more knowing and more polite; which if it was at all neceffary, might alfo be made good with refpect to Facts, and that from the moft authentick Evidence. But fuppofing they have ftill fome Remains of this Humour fticking upon them, as has been before admitted in the Cafe of Difcoveries, where without queftion, their Conclufions have been a little too hafty, and their Expectations not a little too fanguine, yet this is no kind of Proof that they fhall not fucceed by Degrees, or that they may not acquire a very profitable and extenfive Commerce, though not quite fo profitable and exienfive -perhaps, as they have flattered themfelves.

For if we reflect, that notwithftanding the Rigour of the Climate, and the Sterility of the Soil in fome parts of their Territories, yet there is within the Dominions of Ruffa, not only as rich and fertile Countries as any in Europe, but a much larger Quantity of rich and fertile Ground than in the Poffeflion of any European Power whatever, we fhall furely fee fome Caufe to alter our Opinion. Another ftrong Argument to this Purpore, may be drawn from the Staple Commodities of Ruffa, which, are very numerous, of general Ufe, and of great Value ; they have Hemp, Flax, and Timber ; Tar, Wax, Hides, Tallow, $\mathcal{E}^{2} c$. in vaft Quantities ; and if their Lands were improved, they might have as great Abundance of Corn as any Nation in the World neither are the worft part of their Dominions unproductive of very rich Commodities, fuch as vaft Quantities of the fineft and moft valuable. Furs, Iron in the greateft Plenty, Salt, and many more Things than we have not either Leifure or Necefficy to enumerate, fince enough have been already mentioned to prove that they are in a Capacity of exporting as many and as valuable Commodities as their Neighbours, from the immediate Produce of the feveral Provinces of their vaft Empire.

But farther ftill, a third and no lefs weighty Argument may be advanced from their Inland Commerce, which is very confiderable, as will appear from the Places in which their great Cuftom-houfes are erected, and which are become fo many Staples for different Branches of Trade. As for Inftance, there is a Cuftom-houfe at Kioze in the Ukrain, to which City there is a prodigious Refort of Turkih, Tartarian, Poli/h, Armenian, and Rafcian Merchants. At Tomski in Siberia, there are likewife great Magazines of rich and valuable Commodities, brought thither by all the various Nations inhabiting the Heart of $A f i a$, and with whom no other European Nation have any Intercourfe or Trade. Thither alfo and to Tobolski are brought the Commodities and Manufactures of Cbina, Corea, and of all the Nations which inhabit to the North and North-eaft of the River Amur. The City of Afracon is the Center of the Per.
fian Trade, and of what is derived from other Nations that inhabit either on or near the Shores of the Caspian Sea ; and from all thefe Places there is a conftant and prodigious Refort to the great City of Mofcow, where a very large Traffick is driven by Merchants of all Nations. I fay nothing of the Lapland Trade, which centers at Arcbangel, or of what is ftlll carried on at Novogorod from Courland, Poland, Litbuania, and other Places; from all which it manifeftly appears, that exclufive of their own, the Ruffans may be able to export very large Quantities of foreign Commodities and Manufactures, which they procure in the Way of Exchange, and may confequently enlarge their Trade that Way.
It may be indeed objected againit what has been ad. vanced, that as Luxury increafes as faft or faiter in $M u f$ covy than in almoft any other Country, the Balance of Trade is not like to be much in their Favour; but to this it may be anfwered, That the general Notions about Luxury are very falfe, both with refpect to the Thing it felf, and in regard to its Confequences. In common Speech, we take Luxury for the Defire of enjoying many Things that are not abfolutely neceffary; whereas in Truth; Luxury only confints in the Abufe of Things, whether neceffary or not neceflary ; and tho' it be true; that Luxury taken in either, or in both thefe Senfes, impoverifhes and brings to Deftruetion particular and private Families, yet it may be juftly queftioned, whether Luxury is highly deftructive to a Nation; for if we confider it ferioully, it will be found, that fuch as affert this Talk in a Circle, and having firt confounded their own Notions, labour next to difturb thofe of others. For what is it that encourages and promotes Induftry amongt the lower Sort of People, but the Luxury of cheir Betters? What has been the Source of all fine Manufactures at Home, of importing rich Goods unmanufactured or manufactured from Abroad, but Luxury? Or what Juftice is there in reproaching a Nation as barbarous, that in their Entertainments, Cloaths and Buildings, fall infinitely below their Neighbours, and then charging them wich Luxury for endeavouring to live like their Neighbours?

The Truth of the Matter is this, that if the Ruffans confine themfelves to the bare Search of Neceffaries, they may find them with very little Trouble, and remain as poor, as idle, and as barbarous as before the Reign of Peter the Great ; or fuppofe they would confine themfelves to the bare Purfuit of Conveniencies, thefe alfo may be had without any great Dealing with their Neighbours. But if in Confequence of travelling abroad, of receiving Foreigners holpitably at home, and of imitating fuch as pafs for the wifelt and moft polite Nations, they come to enlarge their Circle of Conveniences, and thereby create innumerable Wants that they never knew before, what will the Confequences of this be? Not living in Huts, leaving their Lands untilled, and fpending their Lives in eating dry'd Fifh, and drinking Malo Spirits, or Mead, as they were wont to do ; but in fetting themfelves to improve their Country, to increafe its Produce, to bring their Commodities to Light, to vend them to Strangers, and thereby acquire thofe Goods that they want, or which is exactly the fame Thing, thofe Goods they think they want, from Strangers. That Spirit of Luxury therefore that is faid to prevail in Rufla, is fo far from being an Impediment to their becoming a trading Nation, that in Reality the Prevalence of this Spirit will make them fo.

Another Argument which plainly proves that this Nation begins to have a Turn, and that a very ferious one too towards Commerce, is the feveral Treaties they have concluded both with European and Afatick Na: tions, for the encouraging, fecuring, and promoting it ; of which Treaties many Inftances might be given. It is true, that by their laft Treaty with the Turks, they are reftrained from Trading in the Black Sea, except in Turkilb Bottoms; but this is only an accidental Reftriction arifing from the Circumftances of theirAffairs at the Time the original Treaty in which this Claufe is in ferted, was concluded. Before that Time, the Czar Peter had no lefs than 200 Sail of Men of War, Gallies and Brigantines of his own upon that Sea, and we need
not doubt, that the Ruffians preferve the Memory of this, and will take the firft Opportunity that offers, of recovering a Trade which they once profecuted with great Diligence and Spirit.
I will add to thefe Arguments but one more, and that is, the prodigious Pains taken, and the immenfe Expence the Czar Peter and his Succeffors have been at in the Improvement of Roads, cutting Canals, rendring Rivers and Lakes navigable, purely tor the Sake of facilitating the Communication of the different Provinces of their Empire with Petersbourg, and each other. Thefe are manifeft Inftances both of the Rectitude of their Conceptions on this Head, and of the Sincerity of their Intentions, which have been alfo attended with furprizing Confequences; fo that at prefent there is hardly a Country in the World where Carriage is either cheaper or more expeditious than in Rufia; and this in Winter more efpecially, when by the Help of the Snow, cheir Sledges make an eafy Paffage from Petersbourg to Mofcow in four Days, tho' the Diftance between thefe two Cities is between four and five hundred Englijh Miles, a Thing that would be fcarce credible, if it was not fupported by as authentick and indubitable Proofs as any Fact whatever; to that as the Summer is favourable to their Navigation and foreign Commerce, the oppofite Seafon of the Year is no letis fo to their Inland Traffick, which is a very great Advantage; and tho it is already much improved, is ftill capable of being rendered more commodious.

But there may be another Objection ftarted, which will at firt Sight feem fubverfive of all that I have been faying, and that is taken from the Nature of their Conftitution, by which their Nobility, and indeed all Perfons of Property, are abfolute Lords over their Peafants, who for that Reafon abhor Induftry, confidering it as an Obligation to Labour, not for their own Profit, but that of their Mafters. In Support of this Objection, it may be likewife urged, that thefe Lords, who have fuch a boundlefs Power over the miferable People that live upon their Eftates, are in their Turns expofed, upon very trivial Offences, to feel the bitter Effects of the Refentment of their Government; fo that from this double Confideration it cannot be reafonably expected, that either the Peafants fhould alter their Courfe of Life without any Encouragement, or that the great Lords, from a meer Principle of Beneficence, fhould put their Dependants upon a better Foot than themfelves.

But tho' it mult be confefs'd, that there is much more in this than in any other Objection that can be made upon this Subject, yet it is very far from being unanfwerable. For by Degrees, as a new Spirit prevails in the Rufian Government, and among the Rufian Nobility, new Maxims muft alfo of Neceffity take place; and as, on the one Hand, the great Men will find it requifite, from no higher Principle chan that of Intereft, to deal more kindly, or at leaft more humanely with their Vaffals; fo on the other Hand, the Government alfo will relax in its Severity; for in Proportion as the great Lords come to employ themfelves in attending to their own Affairs, managing their Ettates, and taking Meafures to live decently at home, and magnificently at Court, they will contract new Habits and new Notions, that will hinder them from running into Confpiracies or defperate Defigns, and will conlequently contribute to fix their Government upon a firmer Foundation; and this by Degrees will beget a milder Adminiftration, and in Procefs of Time produce a better Conftitution.
Thofe who are acquainted with the prefent Situation of Things in Ruffia, are very fenfible that confiderable Alterations have been made already, and that the Clemency of the prefent Reign has had very fingular Effects, more efpecially if we confider, that as yet it has been of no long Duration. One Thing is particularly worth obferving, that the Government is now altogether in the Hands of the Natives, from whence feveral Inferences may be drawn. Firft of all, that evil Spirit which reigned among the People, and made them fo averfe to all Kinds of Improvement, from a Notion that. it ferved only to fubject them to Strapgers, is in a
great Meafure worn out, and their natural Readinefs to pay an implicit Obedience to their Superiors, provided they are of their own Nation, makes them chearfully undertake thofe Things to which they were formerly dragged with great Violence. In the next place it is evident, that the Ruffian Nobility alfo have got pretty well rid of their Prejudices, begin to embrace other Notions, and to act upon Principles very different from thofe by which they were governed in former Times. Tbirdly and Laftly, The happy Confequences that thefe Alterations have produced, as well by eftablifhing great Regularity and a new Face of Things at Home, as by rendering them efteemed and refpected abroad, may be very well fuppofed to have raited fo ftrong a Barrier againft their ever relapfing into their former Eftate of Barbarifm, that we may rather expect to fee them animated by a warm Ambition of carrying to the utmoft Degree of Perfection that new Stile of Life; if I may be allowed fo Metaphorical an Expreffion, from whence they have already received fo many and fo confiderable Advantages.
It may perhaps be alledged, and that with fome Foundation of Truth, that there are ftill many great Obftacles to be got over in their Manners, Policy, and Views, both in private and publick Life; but when one confiders how much greater Difficulties have been already overcome, and now much eafier a thorough Reformation is effected when once well begun ; then the fighteft Alterations made, while a People are univerfally barbarous, we cannot fuffer ourfelves to be much moved by any fuch Reprefentations. Befides, it is very well known, that the Impreffions given us of the Ruffians, by fome who have remained feveral Years in that Country, in reference to thefe Points, have been falified by Facts; for it is not a long Time ago that fuch People infifted very pofitively on the abfolute Incapacity of the Government to march any confiderable Body of Troops out of their own Territories, and this, notwithftanding an Inftance to the contrary frefh iis every body's Memory, which has however proved an abfolute Untruth, that large Body of Auxiliaries having marched with greater Eafe and Expedition, with more Chearfulnefs and Alacrity, and with better Difcipline than the like Body of Men of almoft any other Nation could have done, the Seafon of the Year and other Circumftances confidered.
It is therefore better to found our Opinions upon Facts, than upon Conjectures; and we fhall be lefs liable to be mined, if we form our Sentiments of what this Nation may hereafter do from what they have al. ready done, than from what Statefmen or Travellers may believe, or pretend to believe, they can or will do.
But now it is high Time to collect from all that has been faid, fome few Conclufions that may be applied to certain ufeful Purpofes. It has been thewn, that notwithftanding that Spirit of Difcovery which has of late appeared in Rufia, and which in many Inftances has been profecuted with Zeal, Induftry, and Vigour, yet there is little Reafon to fuppofe that any great Progrefs can be made in fuch Difcoveries during our Times, and that for a Variety of ftrong Reafons which have been already given. That tho' from the Situation of this vaft Country there refult many, and thofe too very confiderable Advantages with refpect to Commerce, yet there are many Difficulties that lie in the Way, and muft render the turning thefe Advantages to any great Account, a Work of Skill, Time, and Labour. That notwithftanding all this, there is a very high Probability there Difficulties will be got over, and that the beft Ule may be made of many; and in Length of Years, of all thefe natural Advantages, fo as to render the Rufians by degrees a trading People, and that from thefe gradual Improvements, as well of the interior State of the Empire, as of its Intercourfe with Foreigners, the Face of Affairs will be continually altering for the better.
It is indeed no way impoffible, that either from foreign Wars, or domeftick Commotions, thefe Improvements may fuffer fhort Interruptions; but it feems to be a Thing abfolutely improbable, that the Rufians fhould ever fall back into their former State of Obfcu-
rity, or relinquifi that high Rank to which they have railed themfelves amongtt the Powers of Europe. Now if this fhall be the Cafe, the prefent Syftem of the Commercial World will be entirely altered. The bringing Eaft India Commodities through Rufia into Europe, would as effectually ruin the Commerce now carried on by the Way of the Cape of Good Hope, as the Difoovery of this demolifhed the Venetion Trade by the Way of Alexandria, after it had fubfifted in the Hands of different Nations for the Space of feveral Ages, and for the very fame Reafons. When this is reflected upon a little, it will appear at once both evident and certain.

For firf, with refpect to the Evidence of it, whatever Method is taken, and I have fhewn-there may be three feveral Ways employed, two of which are not in the leaft incompatible with each other; I fay, which ever of thefe Courfes are taken, the Confequence will be, that the Commodities and Manufactures of India will come at a more moderate. Price at any Mart the Rufions thall eftablifh, than in the Way they are now brought into Europe, except, it may be, Spices, and a very few other Things hardly worth mentuoning; and therefore, as the Portuguese firft, and the Englis and Dutch fince, have fupplanted the Venetians and the Genoefe in this mot valuable Commerce, thofe who firf fall into a Way of dealing with the Ruflans for the Produce of Cbina and the Indies, will in all Probability get the 'Start of other Nations, and thereby procure great Advantages, to themfelves, notwithflanding that the Ruflans mult allo find their Account in this Manner of Dealing.

It may be indeed furmifed, that all the Methods I have mentioned being attended with many and great Difficulties, and requiring a confiderable Space of Time to be fpent in Carriage, this will go near to render the Time of the Paffage as long as that which is now in Ufe. But when we come to examine this Objection clofely, it will not be found near fo ftrong as at firft Sight it feems; for if this Trade can be carried on entarely by Sea, it would be no difficult Thing to prove, that Commodities might be tranfported from Kamfchatska to Arcbangel in one Summer; and in Procefs of Time, by railing proper Magazines in that Country, Supplies might be annually brought to Arcbangel, from whence the Paffage is far from being long to certain Countries that 1 fhall have Occafion hereafter to mention. But if initead of taking this Method, they fhould be brought, by embarking them on different Rivers to Mojow, and from thence to Arcbangel, there will appear no Kind of Abfurdity in fuppofing this may be done in thirteen or in fifteen Months at the molt; and after this Commerce thall be effectually fettled, much fooner. We muft likewile confider the Cheapnefs of Carriage through this Empire, and that Eafe and Expedition with which the Court can bring any thing to pals that is practicable, and may be attended with Profit.

I might upon this Occafion take Notice of the Poffibility there is, that the Rufians may one Day become Matters again of $A f o f f$, or perhaps may conquer Crim Tartary, or at leaft fecure a Fortreis and Yort there, which would open to them a new Channel for this Trade, as was hewn in the former Volume, in fpeaking of the different Methods by which the Trade to the Indies is now, and has been formerly carried on. I prefume the Reader will eafily grant, that if any one of thefe Attempts met with Succefs it would be an Encouragement to make more, and not only fo, but would likewife furnifh the Means of making them, as well as raife the Spirits of the Ruffan Court, and induce it to beftow greater Attention upon Projects of this Kind, and make ftronger Efforts for carrying them into Execution than it has hitherto done.
But it may be faid, To what Purpofe is all this? Why fhould we trouble our felves with foretelling or forefeeing thefe Things, in regard to which, in the firft place, there is great Uncertainty; and in the next, it is Time enough to concern ourfelves about them, when they fhall actually come to pafs. To this I anfwer, That whoever has well weighed what has been advanced

VoL. II, N ${ }^{8} 142$
from the beft Authorities, in this Sestion, will very plainly fee, that the pretended Incertainty refers only to Time; for that the Ruffans have turned their Thoughts this Way already, and that they have actually Variety of Means in their Hands to bring almoft any Schemes of this Sort they can form to bear, are Points out of Difpute. All that is in Doubt amounts to no more, than whether they fhall fall into a Share of the India Trade within thefe ten Years, or whether another ten Years fhall elapre before they obtain it. This, I fay, is the fingle Queftion upon that Head, and I refer it to the Confideration of thofe who make it fo much a Queftion, whether the Improbability of their attempting and fucceeding in this Way, is near fo great as that the Swedes fhould attempt and fucceed in the other Way, which we fee they have actually done, and that their Trade to Cbina is every Year increaling.

Befides all this, let it be remembersd, that two new East India Companies are on the very Point of being fet up, one at Embden in Eaft Frielland, under the Aufpice of his Prufian Majefty, now become Sovereign of that Country; and the other at Legborn, under the Protection of the Emperor in Quality of Grand Duke: and that it is no Secret there are Adventurers enough ready and willing to advance large Sums of Money for the Support of thefe Undertakings. Shall we imagine then, that fo many Examples will not rouze the Ruflans to look about them, and to put in their Claim, where they have at leaft as good a Title as any ; or fhall we imagine, that thofe who have the greateft Advantages, fhall be the only Parties in fuch a Struggle that will meet with Difappointments? $\mathrm{No}_{\text {, certainly, whenever }}$ a Defign of this Sort is heartily undertaken and vigoroufly purfued, it will not only fucceed, but fucceed fooner, and in a higher Degree than can be eafly imagined.

Now to the moft material Point, which is to fhew how far this touches us, and why we ought to intereft ourfelves therein, fo far as the early Confideration of thefe Points may be called interefting ourfelves rather than our Neighbours, tho' in Fact perhaps that may not be our Cafe, fince we have not been of late over-ready in feizing Commercial Advantages that lay more immediately in our Way, than I muft confefs this does at prefent. I fay then, it behoves us to be very attentive to what paffes of this Kind in Ruffa, for this plain and ftrong Reafon, viz. that we have better Grounds to hope we'might avail ourfelves of fuch a Change in the Commercial Syftem than any other Country in Europe.
In the firft Place, the Situation of our Inand renders it very ealy for us to carry on a large Trade with that Empire with mutual Advantage to both Nations; and in cafe it became very confiderable in Comparifon of what it now is, we might very eafily provide for the carrying it on fuccefffully, by enlarging and improving the Ports we have in the North-eaft Part of this Inand, by opening new ones, and by eftablifhing Magazines in proper Places, which by extending Navigation, promoting Induftry, employing Thoufands of our Countrymen and Fellow-Subjects in feveral Ways beneficial to the Publick, who are now. either idle and ufelefs, or if at all employed, are in the Service of our Enemies, would turn to the great Profit of this Inland, and to the inconceivable Advantage of its Credit and Influence. For there is Nothing we want fo much as a due Diftribution of Trade and Manufactures, that Wealth may circulate freely through every Part of the Inand, and thereby diffufe a kindly Warmth and lively Spirit, for Want of which, fome diftant Parts feem cold and ufelefs, like decayed Limbs, which has tempted fome Quack Politicians to talk of cutting them off, without confidering that fuch Amputations in the Body Politick are as abfurd and ridiculous as they are impracticable and unfafe.

Another Reafon we have to expect that we might be preferred to moft other Nations in fuch a Cafe as this by the Rufians, is the many Years that not only a fair Correfpondence, but a clofe Friendfhip has fubfifted between the two Nations; for from the Reign of Queen Mary to thefe Times, that is, from our firft opening .a $12 G$

Paffage

Paffage to Rufia till now, we have dealt with its Inhabitants on the Foot of perfect Amity, except during the Ufurpation'that followed after the 'Murder of King Cbarles I. when out of their Abhorrence of that Fact, all Intercourfe with this Empire; was fufpended. But after the Reftoration, our Commerce with that Country again revived, and has continued ever fince with little or no Interruption. It was here that the great Czar Peter acquired the Rudiments of Ship-building, and from hence he drew moft of thole Artificers which he employed in that and other Arts; not to mention the high Refpect paid him by King William, and the many good Offices done to himfelf and his Family, by the Pofleffors of this Throne ever fince.

We may indeed, with great Juftice, mention our Naval Power as a third Argument in Favour of what has been afferted; for, without all Queftion, this mult ever intitle us to be very highly confider'd by fuch as adminifter the Affairs of that Empire, in as much as Experience has fhewn what great Effects the Appearance of Britifl Fleets have had in the Baltick, and how fure that Caufe is to triumph which they efpoufe. As there is nothing clearer, than that the moft certain Method of obtaining the conftant Affiftance of Great Britain, is to favour her Commerce, which Sweden heretofore, and Portugal has lately felt, fo we may reafonably prefume, that a Thing of fuch Notoriety muft be well known to the Politicians of Ruflia, and cannot but have a proper Influence on their Councils, more efpecially if we remember, that as Ruflia has all things to hope from our Friendfhip, fo fhe has nothing to fear from the aggrandizing our Power.

This will be another Motive to increafe her Readinefs to fhare her prefent and future Advantages with us, becaufe it is impoffible, from any Alteration of Crrcumftances, or as far as can be forefeen from any Viciffitude to which all fublunary Things are liable, that ever our Interefl fhould come to clafh with theirs; which is more than can be faid for almoft any other Power in Europe. For this is one of the many Benefits that we draw from our being an Ifland, viz. that our Interefts, as a great Power, muft always be the fame with our Interefts as a trading Nation. It is indeed very poffible, that ambitious enterprifing Statefimen may fometimes pretend to divide thefe, and may perhaps find their Account in it; but as it is impoffible the Nation fhould, fo it is at leaft highly improbable that fuch unnatural Notions fhould long prevail. The Ruffians, who have Senfe enough to know, and who have hitherto fhewn Spirit enough to adhere to their true Interefts, cannot fail of being fenfible of this, and of affording due Weight to a Circumftance of fo great Importance which concerns them fo nearly, and is of fo permanent a Nature.

As Reafon teaches this, to it has been hitherto juftified by Experience, fince in the feveral Revolutions that have happened there in our Times, every Government and every Adminiftration have made it their firlt Care to renew their Engagements with Great Britain; and as they have always hitherto found their Account in fo doing, we may from hence infer, that it will become a fettledand unvariable Maxim in their Syftem of Politicks.

Lastly, in Conjunction with thefe there is another, and that no inconfiderable Argument, to induce the Rufiains to grant uś, rather than any other trading People; a Participation in whatever Advantages may accrue to them from the future Advancement of their Trade, or Improvement of their Dominions; and it is this, that we are moft likely to take all their Commodities off their Hands, at the dame time that we are able to fupply them with whatever they can want or wifh in Recurn. This is the natural Confequence of that extenfive Commerce which we already poffers, and which puts it fully in our Power to accommodate them with all thofe Things which either Neceffity requires, Convenience renders valuable, or Luxury defireable; and all thefe too, fuppofing them enriched by a Correfpondence with the Eaft Indies, in Exchange for other Commodities and Manufactures, without draining them of their Specie, and confequently to the reciprocal Benefit of each Nation. Any one of thefe Arguments taken fingly, might
afford us very rational Hopes of attaining all that is propofed ; but if we take them all together, I think is will be very difficult for any one who is well acquainted with the true State of Commerce in general, and of thefe two Nations in particular, to avoid yielding to the Force of this Reafoning, or not to confels that we have much to expect, and very little to apprehend from any Progrefs that the Ruflizns may make in the enlarging and Improvement of what Intercourfe they have at prefent with the Eaftern Nations.

Yet I do not deny that fome plaufible Objections may be made to this Syitem; and to thew that I have thoroughly confidered, it, and to prevent the Reader's being much moved when-ever he fhall hear them mentioned, I will briefly ftase and remove them; yet I do not apprehend that any Syltem, well fupported by affirmative Arguments, ought to be rejected and treated as chimerical, even if there fhould be fome Difficulties incapable of a conclufive Anfwer; which however, in the prefent Cafe, I will be bold to fay there are nor. For it muft be granted me, that all the Objections that can be made to this will either arife on their Side or on ours. I will begin therefore with fuch as may be taken, or rather fuch as may be fufpected, from the Syftem of Power in Rufia, or from the natural Difpofition of the Nation.
In the firt Place it may be faid, that if ever this comes to pafs, it will be a vain Thing to expect that the Ruffans will take the Pains, which from what is laid down in this Section, it is apparent they mult take, in order to obtain the Commerce of the Indies; and then from a Notion of Friendmip and Alliances, transfer the Benefit of this hardly acquired Traffick to another Nation, which by exporting they might keep to themfelves. Now in Anfwer to thus it may very well be obferved, that as it muft be a Work of Time, Application and Labour, for the Rufians to obtain this Trade, fo the obtaining it will very fully employ their Endeavours, and leave them without either Leifure or Abilities to attempt another and yet a harder Scheme to accomplifh, of opening a Trade to the other Countries of Europe at the lame Time. Befides, the one is very natural and agreeable to the People, who without ftrring beyond the Limits of their own Territories, may convey all that is brought to them by their Subjects or their Neighbours to Mofcow, Arcbangel, Petersbourg, or fome other Mart ; where, no doubt, they will be glad to receive from another Nation fuch Commodities and Manufactures as they really want or very much efteem, in Exchange for the Superfluities of the Eaftern Commerce, which would otherwife lie heavy upon their Hands. We ought likewife to reflect, that tho' the Multitudes of barbarous Subjects they have, may be eafily led, or if that fhould be requifite, without much Difficulty, be compelled to affift in promoting fuch an inland Traffick, yet it will be a Thing morally impoffible to make Seamen of thefe Savages, or to think of dragging them out of their Deferts, which however horrible to ochers, are moft defireable to themfelves, in which, as a Matter of Fact, all Travellers agree.
In the next Place it may be fuggefted, that there is no Quality for which the Ruffians are more remarkable, than their Jealoufy and Sufpicion of Strangers; and that therefore it is highly improbable they frould make it their Choice to deal exclufively with any one Nation which I mult confefs feems to have much greater Weight than the former Difficulty. However, when it is maturely confidered, it will be found to open a fair Anfwer to it felf. For, let the Jealoufy and Sufpicion of the Ruffians be ever fo great, it can only determine them not to deal with Nations that may be capable of turning what they acquire by their Trade to the Prejudice of their Interefts, and to encourage the Commerce of any Nation that is in a Capacity to affift, and never can be under a Temptation to diftrefs them, which we have already fhewn to be precifely the Cate of the Britifs Nation. This therefore, whatever it may be in Appearance, is in Reality and at the Bottom fo far from being a conclufive Objection againft my Syftem, that in Fact it is a good Argument in its Favour ; fo that the better founded it is, the more Reafon we have
to believe, that their Succefs, in regard to the Indian Trade, may become very beneficial to us, unlefs we are wanting to our felves.

The laft Objection that I can forefee, mult be taken from the Nature of their Government, and in Reference to this it may be furmifed, that there is no guarding againft the fhort Turns that may be made by a very felfifh and a very arbitrary Power, and in fupport of this, I know that feveral Matters of Fact may be urged, fuch as, that Peter the Great, when he made his laft Journey to Holland, ordered all the Ruffa Leather to be delivered to his Factors at a certain Rate, and then fold by them at a fet Price to fuch as would pay for it in Bills drawn upon Amsterdam. But this was in the firft Place à very fingular Thing, and if we ftay till a $R u f$ fian Sovereign makes fuch another Journey, it is not very likely to happen again. In the next Place it is very certain, that the Czar himfelf foon found the Inconveniency of that Proceeding, and revoked his Order, fo that allowing it to be a Precedelit, it appears at the fame Time, a Precedent not like to be followed. Some certain Commodities there are which belong to, and are entirely appropriated to the Sovereign, who fells them to the higheit Bidder. This will hardly be the Cafe of Indian Commodities, for that would cramp the Trade, and turn to the Prejudice of the Sovereign. The new Trade to Perfia has been already once fufpended, which looks like a Cafe in Point.' But when we remember, that this laft Sufpenfion was occafioned by an Englifbman's entering into the Service of Sbab Nadir, and undertaking to build Ships of Force for him upon the Cafpian Sea, we thall not be much furprized at fuch an Event, or fall into any Fear of our Countrymens traverfing Siberia, and the Countries beyond it, or tranfporting themfelves from Kamfchat/ka, into Fapan, and creating Difturbances there. Without doubt Difficulties may happen in this and in all other Trades; but for all this, Treaties of Commerce wifely made, and punctually executed on our Part, will fecure us from any real Danger, in cafe we are once poffeffed of this Traffick, from ever having it taken out of our Hands.

Thus far we have infifted only upon the Reafonablenefs of Things, but there would be no Difficulty in fhewing, that Experience is alfo in our Favour. In Reference to the firit Objection we ought to reflect, that the Sroedes and Danes actually difpofe of all their Indian Commodities to Strangers, and confequently fo muft the Ruffans. If we do not buy from them, it is becaufe it is not our Intereft, and if we fhould deal with the Ruffans, it has been Shewn, that it mult be our Intereft to buy, and theirs to fell. As to the fecond Objection, Treaties of Commerce have been fet on Foot between Rufia and France, and between Rullia and Spain, but the Jealoufy of the Minifters at Petersburg, and the Inconveniencies that were forefeen, and in fome Meafure felt from thofe Treaties, have rendred them ineffectual, whereas nothing of that Kind has happen'd to us. With Refpect to the laft, we are towards the Clofe of the fecond Century of our Correfpondence with this Empire, and in that long Space, have not experienced any confiderable Inconveniencies, from the fhort Turns made by their arbitrary Government, and confequently there is the lefs Room to fear for the Time to come ; more efpecially as the Ruffans are fo much altered, as their Cuftoms are fo much changed for the better, as the Interefts of the two Nations are fo thoroughly conciliated by repeated Alliances, and as we have all the Reafon in the World to apprehend, that their Minifters will confult the Interefts of their own Country, which while they do, they mutt be always Friends to ours.

We will now take a View of thofe Objections that it may be fuppofed may arife on our Side, and as I have ftated the former in their full Force, fo I fhall do the fame Juftice to the latter, as I have no other Thing in View, than to find Truth, and to point it out to others. It is not at all impoflible, that, notwithftanding all that has been or can be offered upon this Subject, the old Objection will ftart up, and we fhall be told, that fuch a Trade as this, would be altoge-
ther unneceffary, that the Nation has no Need of it, that little Profit could be drawn from it, and that therefore it is wild and chimerical to talk about it. As this is abfolutely begging the Queftion, I might very fairly difpenfe with giving any Anfwer to it at all.

But as I defire to leave nothing unanfwered, I thall not make Ufe even of this allowable Advantage, but fhall confider it, as far as it is poffible, fuch a Suggeftion can be confidered. We have already explained the Caufes from whence it is probable, thar, if ever a Trade is eftablifhed from Ruffa to Cbina, or the Indies, the Produce of that Trade will come cheaper than in the prefent Courfe of Things, and I prefume; it will be no difficult. Matter, for an intelligent Reader to perceive, that it will behove us to think of finding out the cheapeft Marker, when fo many new Companies are fet up, by which it will be put out of our Power to vend the Commodities we bring directly from the Indies at a high Rate. An Opinion is propagated with great Warmth, that however is altogether erroneous, which is this, that the Swedifh, Danifh, and other new Companies are under very great Difficulties for the Want of Settlements, that this renders their Trade very precarious, and has alfo a great Effect in diminifhing its Profits. All this is very plaufible, and ferves to give us hope, that thefe new Companies cannot long, fublift; but in Realicy the Cafe is far otherwife. The Want of Settlements is fo far from being a Difadvantage in Refpect to National Commerce, that it is quite otherwife. We know very well, that the Oftend Company, fo long as it fubfifted, made large Dividends; we know that the Swedifb Company have fometimes divided near Forty per Cent. and if this is thought at all incredible, or if credible, that there is fomething of Art in it, let the inquifitive, impartial, and judicious Reader, confule the Table of Dividends of the Dutcb East-India Company, inferted in the firf Volume of this Collection, and he will find, that in the fame Proportion the Dutch Company became potent in the Indies, their Dividends to their Proprietors have leffen'd. My Inference from this, is, that when there comes to be a real Competition in Trade, the new Companies will be able to underfell the old Ones, and then I fuppofe the Neceffity will pretty plainly appear, of having Recourfe to the cheapeft Market, if we intend to preferve this Trade at all. Now it has been hewn, that whenever the Ruffans can bring their Defigns to bear, they will have very great Advantages over their Neighbours; for either they will not be obliged to make any Settlements at all, or if they are obliged to make them; they will be made in their own Dominions, that is, either at the Mouth of the River Amur, or upon the River of Kamfchatjka. In either of thefe Cafes, the Expence will not be very large, and whatever it may be, as it will be entirely laid out amongt themfelves, it will in Effect be no Expence at all, as to the Nation. Thefe Circumftances therefore maturely confidered, will I prefume, go a great Way towards fatisfying the candid Reader, that there is nothing chimerical, in fuppofing that before the End of the prefent Century, the Ruffians may divert to chemfelves, a very large Proportion of the Eaf-India Trade, and when this comes to be the Cafe in Fact, which is now fo only in View, what I have advanced upon this Subject, will be thought very well worth the Reading.
The fecond Objection that may be raifed in refpect to ourfelves, will be taken from what is ftiled a Fundamental Law in refpect to our Commerce, by which I mean the Act of Navigation, which I very readily admit, is directly in the Teeth of what I propofe, fince the Britiß Subjects are reftrained by this $A \varepsilon t$, from importing Goods from other Countries, than thofe in which they grow. Now in Anfwer to this, I do not pretend to fay, that the Act of Navigation ought to be repealed, or that the Principle upon which it was made was wrong in it felf, or miftaken by thofe who made it ; but this I fay, that all Laws made upon a general Principle, are ever liable to fome neceffary Exceptions, as this Act has often been, and for that very Reafon has been difo penfed with. As for Intance, in she firt Dutcb War,
under the Reign of King Charles II. that King by Proclamation gave Leave for all Foreigners to iraport Artillery, Ammunition, Timber, Hemp, and Flax, and in fhort, all Sorts of Military and Naval Stores, in their own Bottoms ; which if he had not done, that War could not have been carried on; and therefore this is among the Number of the few Actions in that Reign, which we find approved and commended by Mr. Roger Coke, who certainly was no Flatterer, either of that Monarch, or any of his Family. I might add to this feveral other Inftances, but that I look upon them as unneceffary, fince there is an unwritten Law in regard to Commerce, as truly fundamental as the Act of Navigation, viz. That whatever will promote it, either is lawful, or ought to be made fo. It is an abfurd Notion to fuppofe, that while Trade remains a fluctuating Thing, which it ever was, and ever will be, there can be any Laws made about it that it ought to remain invariable.

It is indeed true, that with refpect to the Act of Navigation, as with regard to every other Act made upon right Motives, and with due Deliberation, we ought to be very cautious in making Alterations; but provided they are made with Caution, no doubt fuch Alcerations thould be made when they appear neceffary, or which is the fame Thing, advantageous. This has been always thought allowable in Time of War, when done by the Royal Authority only, notwithftanding the juft Apprehenfions that have been entertained of allowing too great Latitude to the Prerogative; but with fenfible People the Laws and the Prerogative both will fland upon the fame Foot with regard to the publick Good ; that is to fay, it will be expected, that either, or both of them fhould give Way upon fuch an Occafion, and the proper Judges of this Occafion, are, without doubt, the 'Leginature. The Humour therefore of giving a peculiar, and, as it were, facred Authority to particular Acts, and treating them as fuperior in their Nature to the reft of our Laws, is, to fay the beft of it, no better than political Enthufiafm, which may be attended with very bad, and can be very feldom productive of any good Confequences. There is no Doubt, that while Things remain in their prefent Channel, or any thing near it, and while there is no Danger that any of our Neighbours may fupplant us, by drawing to themfelves the Diftribution of Indian Commodities and Manufactures brought into Rufia, it would be very abfurd and chimerical to make any Change in the Act of Navigation relative to this Point by Way of Precaution. But on the other Hand, if ever fuch a Trade through Rufia fhould become practicable, it would be to the full as abfurd and ridiculous to pretend that no Alteration ought to be made in this Law, but that we muft ftill remain tied down to the old Method of carrying on this Commerce, though ever fo much to our Difadivantage.

I dare fay, that no body will difpute this with me at prefent, but will as readily grant the latter as I do the former; neither is it impofible that fome may think it is to no Purpofe to dwell upon this Head, which of itfelf is fufficiently clear. So for any thing I know it may be, but when the Paffions of Mankind are moved, when their Prejudices are thwarted, and both thefe happen when-ever their particular Interefts are ever fo lightly touched, all Things change their Faces, and what before was thought as clear as the Sun at Noonday, begins to be obicured, and in a very little time is not fo much as difcernable. So many Inttances of this Sort have happened within the Compafs of my own Obfervation, that I cannot help providing againft them; and I muft defire my Readers to obferve, that whatever Conceffions are made me now, will remain juft as reafonable, when fome Peopie, for Caules that will be then vifible enough, may take it in their Heads to retract them, and fet up once more this Notion, that the Act of Navigation is a fundamental and conititutional Law, no Part of which is to be repealed or altered on any Pretence, or for any Reafon whatever.

The third Objection on this Side, will in all Appearance arife from the Privileges of the Eaff India Com-
pany; and indeed, this I think by much the moft formidable Objection of all, becaufe it is the moft reafonable. It will be faid that this Company hath great Merit ; that it has rendered great Services to the Nation ; that its Proprietors are a very confiderable Body; that they have received high Immunities from the Favour of the Crown; and that thefe have been confirmed to them by the Legiflature. To all this it might be anfwered in general, That all Privileges, thofe of exclufive Trade not excepted, are granted in Truft for the publick Benefit, and that tho' this may not be exprefs'd, yet it is always to be prefumed and underftood; for a Law made for private Advantage to the Detriment of the publick, is void in itfelf; neither is this any Impeachment of the Power of the Leginature, becaufe it muft be fuppofed that it was obtairied by Deception, that is, by giving falfe Colours to Things, to which the higheft Tribunals may be fubject, becaure the higheft human Affembly cannot be infallible. Upon thefe Topicks, I fay I might infift, in order to furnifh a general Anfwer; but I declare I do not rely upon them, tho ${ }^{3}$ at the fame Time, I am very far from admitting that they are not juft and reafonable, for the Good of the whole ought certainly always to take place, and no Body of Men, however confiderable, can have a Right to any Thing that is either dangerous or deftructive to the Nation.
Yet the Anfwer I depend upon is this, That in fuch a Cafe, Expedients are to be fought for that may reconcile the Interefts of the Company to thofe of the Na tion; neither will it be difficult to find fuch Expedients, for when fuch a Trade fhall be found beneficial, Care may be then taken, firt to fix it by a Treaty of Commerce, and then the Benefit of that Treaty may be made over to the Company, provided always due Care be taken that this Privilege fhall not be abufed, or fo managed, as to turn to the Emolument of that Company, and the Prejudice of the Publick.
Thus I have taken the Liberty of difcuffing this Matter thoroughly, not from any prefumptuous Opinion of my own Judgment, or from a Defire of dictating in a Matter of fo high Importance, but merely becaufe I think any Man may fpeak and write freely as to a Cafe that he thinks may happen, and which others, who are perhaps wifer than he, will conclude may never happen. One of the moft judicious Hiftorians of Antiquity thought his Time not thrown away in examining a Matter ftill more chimerical than this, which was, Whether Alexander the Great would have fucceeded, if he had attempted to fubdue the Romans? Some great Criticks have imagined, that all he meant was to pay a Compliment to his Countrymen. I fhould be glad to have the fame mild Cenfure fall for the prefent upon this Difcourfe, in which I think it is moft evident that I can have no private Views, and therefore hope it will be no inexcufable Piece of Vanity, if I flatter my felf upon this Occafion, with, having thought for the Publick.
If after all I have faid, it fhould fall out that nothing of this Kind ever happens, why then it is plain, that whatever I have advanced can do no Hurt. But if, on the other Hand, my Conjectures fhould happen to hit the Mark, or even to come near it, no body will deny, that the previous Confideration of the Subject may be of Ufe; for thefe Arguments, how little Authority foever they may derive from their Author, mult neceffarily carry with them this Weight, that they proceeded purely from a Spirit of Reafoning, and were not dictated from any particular, private, or felfinh Confideration. I muft alfo defire it may be remember'd, that I have already confider'd the Point of fecuring, improving and promoting our Eaft India Trade in many other Lights, which evidently fhews my fincere Defire that we may avail ourfelves of our own Skill, our own Lights, our own Naval Power, and our prefent Gircumftances, rather than wait, till by our Indolence and Neglect we come to fall under the Neceffity of being fome way beholden to others. Until fuch Time as this fhall become the Cafe, there is no Need of recurring to this Sytter ; but if ever it fhould become the Cale, there will be no Harm in having this Syttem to

## Chap. III.

the Russian Difcoveries.
1039
recur to, and in all Probability it will not then-be thought a Crime that fuch Notions as thefe, once upon a Time, enter'd into a fpeculative Head, for the Benefit of thofe who confine their Thoughts intirely to Things prefent, and care not to look forward into Futurity, or to trouble themfelves with contriving Schemes for the Service of Pofterity.

However I fhall conclude this Section, with a full Proof, that I am far enough from being bigotted to any Syftem of my own. For after all that has been advanced from Matters of Fact, from the Confideration of Bebring's Difcoveries, from the. Hints that we have received of fubfequent Difcoveries, and from the Confequences that we might rationally conclude may attend them, it muft be acknowledged, that if we continue to profecute that Defign, which is the Glory of the prefent Times; I mean, the endeavouring to difcover a North-weft Paffage, we fhall infallibly deliver ourfelves from all Apprehenfions of feeing either the Eaf or the Weft-India Trade ingroffed by any other Nation, but on the contrary, may have well grounded Hopes of extending our Commerce, and preferving our naval Power to the lateft Times, and as long as we Shall continue a Nation.

That there have been probable Motives to eftablifh the Belief, and confequently to encourage our Endeavours for finding out a North-weft Paffage, I have Shewn at large in its proper Place, have occafionally infifted upon them elfewhere, and particularly in this very Section; that all the Difappointments we have hitherto met with, ought not to deftroy this Belief, or deter us from carrying our Enquiries as far as they will go, has I think been very clearly made out by others; but whether all that has been done and written upon this Subject, will be fufficient to keep up that Spirit, which in the End mutt bring this long-hid Secret to light, is in the Womb of Time. However, as no Man wifhes more to fee it difclofed, or has done more within the narrow Sphere of his Capacity towards the promoting of it, without any Motive of Intereft than myfelf; I cannot but think it my Duty, though it may feem a little out of the ordinary Manner of Writing, to finifh this Section, by giving the Reader notice of fome new Arguments, perfuading the Poffibility, Probability, and Reality of this North-weft Paffage.

For who can tell into what Hands this Book may fall? Part of it has already travelled to the laft difcovered Parts of Hudfon's Bay, and ferved for an agreeable and not ufelefs Companion to the Gentleman who carried it.' It may be, that what I have farther to fay, will be no lefs fortunate, perhaps more fo, for what is there impoffible, in fuppofing it may amufe the leifure Hours of him, who is fo lucky as to make the Difcocovery? At leaft this I will hope, and in the Warmth of that Hope, fet down thofe Reafons, that, to the beft of my Knowledge, have, in the long Courfe of this Difpute been wholly omitted.

To begin then with an Argument of the Poffibility of fuch a Paffage, that learned Naturalift, and moft candid Enquirer after whatever had any Relation to rational Cofmography, Mr. Ray, in his excellent Difcourfe upon the Deluge, affures us, that Eaft-India Fruits have been found wafhed on Shore, on the North-weft Inands of Scotland. Now if this be a Fact, as I believe indifputable Evidence might be brought to prove it fuch, then I prefume, it may be ftil'd an Argument for the Poffibility at leaft of fuch a Paffage. Whoever confiders how reafonable and how natural it is to fuppofe, that thefe Fruits, of whatever Kind they be, are wafhed from the neareft Indian Coafts, to that upon which they are found, will readily confefs, that a North-weft Paffage is the moft likely Way for them to come. If we hould fuppofe that many llands, Igreat and fmall, are fcattered in the Space between America and Afa, then it might be more probable, becaufe fuch Fruits might be prefumed to grow in thofe Inlands, and being driven to the Coalts of California, be forced by the high Tides that are now known to flow there into the Paffage, and fo round to the North-weft Inands before-mentioned.

VoL. II. $\mathrm{N}^{\circ}$ CXLIII.

I treat this as an Argument of the Poffibility only of fuch a Paffage, becaufe there are other Ways, by which thefe Fruits may be fuppofed to come; but then there are infinitely greater Difficulties that lie in the Way of fuppofing other Paffages than can be poffibly objected to this. I will name only one. There can be no Reafon in the World affigned, if they come by any? other Paffage than this, of the North-weft why they fhould not be found in other Places, and that in the fame Plenty, or rather more fo, than in thefe Ilands of Scotland, which is however a Fact, that I never heard fo much as pretended. But be that as it will, and allowing that there are other Paflages by which they may come, it is at moft but poflible they fhould come by thefe Paffages, and I think no Man that is a Judge of the Subject, will deny, that till we have full Evidence of there being no fuch Thing as a North-weft Paffage, it is likewife poflible they may come that Way. Now though in itfelf, this is no very weighty Argument, yet in Conjunction with others it may become fo ; for in all Enquiries of this Nature, the firft Step in the moft regular and certain Method, is to prove that the Thing fought for is poffible, and the next, that it is probable.
In Reference to this alro, I think, I can offer another Argument, that is in a good Meafure new, and it is this. The moft judicious Cofmographers are unanimounly of Opinion, from the wife Diftribution of Land and Water, in the Structure of this Globe, that not only the Centre of Motion, and the Center of Gravity, but the Center of Magnitude alfo is very nearly the fame, and confequently that the Center of the Convex Superficies of the Sea is the true Center of the whole terreftrial Sphere. It was from this Argument, that before any Difcovery was made of a Southern Continent, of which a large Account has been given in the former Volume, it was judged highly probable, that fuch a Continent there might be, and as we now very well know, that fuch a Continent there is, it certainly adds both Weight and Strength to this Way of Reafoning.

Before it was known that the Continent of Afacextended fo very far to the North-eaft, we might with equal Probability have conjectured, that either it really was fo, or that the Continent of America projected very far to the Weft, in order to form a due Proportion between Land and Sea. But now that the Thing is put out of Difpute, on one Side, and we have all the Certainty that can be defired, that the North-Eaf Continent of Afia, extends above thirty Degrees of Longitude into the other Hemifphere, there is the higheft Probability, that the Balance of Sea is preferved on the American Side, and that there is no fuch projecting of that Continent, as till this Difcovery was made, might with equal Reafon have been prefumed. From this Confideration therefore, one hath as good Caufe, as the Nature of the Thing will allow, to affert, that the Space between America and Afa is chiefly Sea, as we actually know it to be, between America and Eirope, on the other Side.

This will appear ftill the more probable, if we confider the vaft Breadth of America from the Coalts of Canada, or of Hudfon's Bay, to California, and how itrangely difproportionate this would be, if the Continent fhould be ftill extended farther on that Side to wards Afia. I cannot tell what Degree of Evidence this may carry to other People, but I confefs, it weighs very much with me, and I flatter myfelf, that whoever will feriounly confider the Figure of the Globe, with the new Difcoveries of the Ruflians properly laid down thereon, will incline to think as I do, and fee plainly, that the Suppofition of fuch an extended Continent would in a great Meafure deftroy that Proportion between Land and Sea, which, for the Caufes before af figned, we have the greateft Reafon to believe fhould be always preferved. If therefore this be fo, it cannot be thought, that I carry Things too far, in alledging that this is a probable Argument in Favour of a North-weft Paffage.

To this I beg Leave to add another Confideration, which will carry the Thing much farther. The greateft Philofophers have differed, at leaft heretofore, about the Origin of Rivers; but in this I think they all agree, that as Rivers fall at length into the Sea, fo from thence they are in a great Meafure derived, whether by fecret or fubterraneous Paffages, and the Percolation of Waters through the Earth, by the condenfing of Vapours, or the falling of Rain. I fay, which ever of thefe Ways we fuppofe Springs, Fountains, and Rivers, to arife, or by a Conjunction of them all, ftill the Vicinity of the Sea is neceffary; and it is obferved, that the Size of Rivers depends, in a great Meafure upon the Extent of the Country thro' which they run, and of the Difpofition of the Seas in refpect to that Country of which America is a very pregnant Inftance, for that Continent having a vaft Ocean on each Side the American Rivers, are the largeft in the World.
If therefore the Continent of America fhould be fo extended as to join to that Land which was lately feen by Captain Bebring, and before him by others, it would not be eafy to conceive how fuch a Continent as this Thould be furnifhed, in any Proportion, with Rivers, in as much as there would be but a narrow Sea between that and $A f a$, and its Diftance from thofe that we ftile the North-Seas, would be prodigiounly great. But if the Cafe, as I fuppofe is to be, is quite otherwife, and the Space between the two Continents is a great Ocean, interfpers"d with Inlands of different Sizes, then the Difpofition of this Part of the Globe will correfpond perfectly well with the Difpofition of other Parts, and thefe Countries may be at once as rich, as beautiful, and as pleafant, as any that are hitherto known, either in the Old World, or in the New.
Thus I have affigned two probable Reafons in Favour of this Paffage, or rather, I have fupported one good Argument by another; for in Reality, this fecond Reafon is no more than affigning the Reafon of the firft. When we fay that the Globe is fo difpofed as to form a Ballance between Land and Sea, becaufe this feems to be neceffary, or at leaft expedient to preferve the Equability of the Earth's diurnal Motion, we give a Reafon that refpects the World in general ; but when we fay that Continents mult be of a moderate Size, in order to render them convenient Habitations for Men, we give a Reafon that accords to, and agrees with every known Portion of the Globe, and confequently is more capable of being thoroughly examined and perfectly underftood. I might add to this, as perfectiy confiftent and agreeable to my Notions, the Obfervations made by thofe who were laft fent to difcover in Hudfon's-Bay ; who finding the Rivers there fhort in their Courfe, and of no great Breadth, very judicioully concluded that the Country could not be very broad, or the Rivers of a greater Length that fell into the Soutb-Sea. I fay, I might infift upon this, but as I have promifed to dwell only upon new Arguments, I fhall content my felf with the bare Mention of it.
From poffible and probable Arguments, we will proceed, with the Reader's Permifion, to fuch as actually prove a Paffage, for fuch there are, and thofe likewife new, and hitherto not infifted upon. It was long ago obferved, that the Tides in the Northern Parts of Hudjon's-Bay were fo high, as put it out of Doubt that they could not be propagated from the Atantlick Ocean; it was then pretended by thofe who oppofed the Sentiment of there being a North-weft Paffage; that thefe extraordinary Tides were raifed from a Como munication with Bafin's Bay and Davis's Streights; in Anfwer to which, it has been fhewn, that the Tide in the Welcome rofe 17 Feet, and not above o Feet in Davis's Streights; from whence it is juftly concluded, that fuppofing fuch a Communication, it would by no Means prove what it is brought to prove, becaufe the Effect would be then fuperior to what is fuppofed to produce it.

Thus, I fay, the Cafe has hitherto flood in reference to the feveral Opinions that have been advanced upon this Subject. For my Part, upon mature Deliberation, Iam iiplined to a Sentiment different from all thefe;
for I think that there is a Communication between Hud-Son's-Bay and Davis's Streights, and that the Height of the Tides in the latter is not otherwife to be accounted for, than by allowing a free Paffage into the Soutb. Seas near the Welcome. I fhall endeavour to prove this to fuch as are Judges of the Thing, and well acquainted with the Facts, in very few Words. Captain Baffn, in his Letter to Sir Fobn Wolfenboime, obferves, that the Tides in Davis's Streights keep an equal Courfe, and rife to about eight or nine Feet. Now this being the Fact, I fay it is imponible that this Tide flould come from the Atlantick Ocean; for at Cary Swan'sNeff it rifes but fix Feet, and therefore in Davis's Streights ought not to rife above three or four. Neither is it at all likely that it fhould come from any Northern Ocean; for upon the Coaft of Nova Zembla the Tide rifes but one Fathom, or fix Feet, and not above half fo high at Spitzbergen.
This equal and regular Tide therefore up Davis's Streights, declining gradually till it rifes only a fingle Foot in Baffin's Bay, is as much out of the ordinary Courfe of Things, as the high Tides in the Welcome. As therefore fuch extraordinary Effects mutt have a proportionable Caure, and as we have hitherto looked on every Side for fuch a Caufe in vain, it remains that Paffage by the North-weft into the Soutb-Sea, is that Caure, for that will fully and perfectly account for both thefe Appearances. It ought, according to the known Law of Tides, to make them in the Welcome at the Time in which they are found to rife, and if they are propagated from Hudjon's-Bay by any Communication into Davis's Streights, they may very well enter from the Southward, that is, through fome Paffage on the Weft-fide of Davis's Streights, and ought to rife and to decreafe in the very Manner which they are found to do ; and if this will not pafs for an actual Proof of a North-weft Paffage, I am at leaft intitled to expect from him who denies it, to give a more fatisfactory Account than I have done, of the Tides both in the Welcome and in Davis's Streights, for till this is done, I fhall continue to look upon this Argument as unanfwerable.

As to the common Affectation of treating this Matter as a Chimera, and behaving towards thofe who think it otherwife, as if they were either very credulous or vifionary People, ready to rely upon any Authority, or apt to be led away by whatever has fo much as the Appearance of an Argument. I mult fay, that it is either an infolent, or difingenuous Way of treating them. Infolent, if it comes from thofe who have not ever looked into the Merits of the Caufe, or are not competent Judges if they have; or difingenuous, if being competent Judges, they haughtily reject an Opinion fupported by ftrong Reafons, without deigning to refute thofe Reafons, which they ought to do if they are able, and if they are not able, they ought to confefs it.

But I now haften to a Conclufion, and fo to leave the Reader in Poffeffion of all the Arguments that I can offer him in Support of this, which I am not afhamed to own, is a favourite Opinion, becaufe I look upon it as equally tending to promote the Honour of Science, the Welfare of Mankind, the Extenfion of Commerce in general, as well as the Glory and Good of this Country in particular. How far foever this latter Confideration may move us, who have, or ought to have, an extraordinary Zeal for whatever may turn to the Benefit of the Place of our Birth, yet I prefume it cannot be fuppofed that foreign Writers can lie under any Influence or Biafs of this Kind, and therefore I fhall crave Leave to mention a very fingular Matter of Fact, incerted by the very curious, and no lefs learned Father Cbarlevoix, in his Chronological Series of Difcoveries, prefixed to the firft Volume of his Hitory and Defcription of $\mathcal{F}$ apan; in which he tells us, that in the Year 1609 , he has read in fome Memoirs, that a certain Ship failing from the Port of Acapulco, in the Kingdom of Nere spain, in order to proceed in the ufual Caurfe to the Mlanilas, being an annual Ship, was furprized almoft as foon as the was out of Port by a Tempelt,
that lafted long, and with fuch Violence, that her Crew were forced to give her up to the Mercy of the Winds, which in two Months Time brought her upon the Coaft of Ireland, and into the Harbour of Dublin; from whence fhe fafely returned to Lisbon, where, by Order of the King of Spain, all the Pilots Journals were taken from them and burnt, in order to prevent Strane gers from becoming acquainted with fo hort a Cut into the South-Seas. I have not added or altered, magnified or $\operatorname{dim}_{1}$ nifhed this Relation in the leaft, but liave reported it ${ }^{1}$ exactly as I find it in my Author.

It is indeed to be wifh'd, that we had a better Account of the Memoirs from which this Fact was taken, becaufe in them, perhaps, there might be other Circumftances worth knowing, and which might be of Ufe to fix the Matter of Fact beyond Difpute. In the mean time I mult obferve, that this has no Correfpondence whatever with the Relations heretofore publifhed of Perfons who have made that Paffage. The Portuguefe Pilot Martin Cbacke, who publifhed in 1573, an Account of his Return from the Eaft Indies, through the fame Paffage to Ireland, from whence he went to Lisbon, places his Voyage in the Year 1567, and therefore it is abfolutely impoffible that thete two Voyages Should be confounded, as at firf Sight might be imagined, from the Circumfance of their both putting into Ireiand, and returning from. thence to Lisbon; on which, for the Reader's Satisfaction, it may not be amifs to infift a little farther.

In the firft Place, There is a very wide Difference in the Place from which the Ships failed, the former from the Eaft Indies, the latter from the $W e f t$; the Size of the Ships alfo are very different ; the Portuguele Veffel was of the Burthen only of 80 Tons; the Acapulco Ship near ten times as big; the Portuguefe Pilor failed in Company with four Ships of very large Burthen for Europe ; the Spanifl Ship failed alone for the Eaft-Indies; the Portuguefedid not put into Dublin, but into a Port on the North-weft of lreland, from whence he returned to Lisbon a Month or five Weeks before the other Ships in Company with which he failed from the Ealt Indies: And befides the great Difference in Point of Time, which is no lefs than two and forty Years, it is very remarkable, that the Portuguefe Pilot returned home, and publifhed his Book under the Reign of Don Sebaftian, King of Yortugal ; whereas at the Time the Spanijb Ship arrived at Lisbon, the Kingdom of Portugal was under the Power of the Crown of Spain; of all which Circumftances the Reader may be convinced, by comparing this Relation with the Certificate relating to the Portuguefe Voyage, inferted in this Volume, Page 40 I .

I muft further obferve, that if there be a North-weft Paffage, there is nothing incredible in the Voyage being performed in fo fmall a Time; for from the Welcome in Hudjon's-Bay to Ireland, is a Voyage only of three Weeks; and if there be a Paffage, the like Time might have fufficed for their coming through it from Acapulco. İ might take Occafion to add to this, what is mentioned by that great Mathematician Mr. Henry Briggs, of a Spanifb Captain reported to have failed this Way to the Molucias, in the Service of the Emperor Cbarles V.; but, as I am perfuaded, that he only made fuch an Offer, and did not really attempt to perform it, I fhall fay no more of it. Upon the whole, having fhewn the Poffibility, Probability, and Reality of fuch a Paffage, by Arguments as conclufive as the Nature of the Thing either require or will admit, I have Nothing more to add but my good Wifhes, that the Spirit lately raifed for Difcovery may not be allowed to fink, or the Light we have already obtained be left to extinguifh, before this Matter be profecuted to the utmoft Extent, and all the Places thoroughly fearched, where, with any Degree of Probability, fuch a Paffage may be look'd for. The Succefs of fuch an Undertaking would indeed contribute effectually to raife our Hopes, and efface our Apprehenfions, by opening not only a new, fhort and eafy, but a commodious, plealant, and wholfome Paffage to the Eaft Indies, which would at once contribute to encourage and promote our Induftry at Home, and
extend our Commerce abroad, as well as increafe our Shipping, and improve our Navigation.

Befides all this, we have great Reafon to hope, that fo fortunate an Enterprize would recover us out of that State of Supinefs and Luxury into which we are fallen, and infpire us with a noble Defire of tranfmitting Wealth and Repucation to our Pofterity, rather than live as we do at prefent upon the Riches derived to us from our Anceftors, and the Credit that their known Succefs in Trade has given us with all our Neighbours. Thefe are Confiderations truly important, luch as ought to make Impreffion on the Minds of all who have the Interelt of their Country at Heart, who with to fee her thrive beyond, and yet not at the Expence of other Europears Nations. Thefe are Confiderations that relate alike to all Ranks and Degrees of People, becaufe all Ranks and Degrees will receive Benefit from it, if properly weighed, carefully attended to, and pufh'd with Spirit and Succefs, thefe Confiderations would lead to the only effectual Methods of repairing patt Miftakes, and opening a wide Profpect to future Advantages, the Confequences of them would fpeedily enable us to difcharge our Debts, and thereby afford the Means of taking off our Taxes; they would alfo extinguith Party Animofities, diffipate Faction, and by opening fuitable Employment to every dif-. ferent Genius, afford a proper Scene of Action to all, without giving Difturbance to any.
It may be therefore juitly prefimed, that thofe whofe peculiar Intereft it is that their Countrymen may be made rich and happy by their Wifdom and Care, and tranfmit the Memory of their glorious Adminiftration to lateft Times, will have a jut Regard' to whatever hath a Ten* dency to promote fuch a Difpofition as this, which is always neceffary, and which, however, may be faid to be more efpecially neceffary at this Juncture, when we receive repeated Accounts of the Pains, every where taken, to point out the Penefits of Ditcovery, to magnify the Advantages of Commerce, and to kindle a Spirit of Induttry amongt thofe who have been remark. able for the Want of it through a long Series of Ages. How poffible it is to enlighten even the cloudieft Huads, how practicable to warm even the coldef Mind; and how foon fuch an heroick Flame gathers Force and Strength enough to carry all before it, the former Part of chis Section has fully demonftrated. Neither would it be near fo hard a Task to fhew how eafly Commerce may decline, how certainly Virtue may wear out, and how fpeedily Frugality and Induftry may decay, if not warm'd and cherifh'd by proper Attention and due Encouragement, which are full as requifite to preferve them as Food to Animals, Fuel to Fire, or Exercife to Health.
Thus after a long but not unpleafant Excurfion, I return again to my Subject, and having largely fhewn when and how the firf Notions of Difcovery rofe, and how they have been conducted in Mufcovy, by what Hopes they have been promoted, how far they have been carried, what they have really brought to Light, what lies within, and what without their Reach, why they have been fo much retarded, whence, at other times they have been advanced, what Improvements are practicable, and what Schemes of Extention are at Bottom but Chimeras where the Affiftance of their Government may be applied with Effect, and where all the Force that could be exeried would fail, what other Nations have to apprehend from this new Turn of their Temper, how probable it is that we are not amongft the Number ; and that on the contrary, we might fhare in whatever Profits they obtain; I have, laft of all, fet before the Reader, the only Means of anticipating their Views, by bringing the Riches of both the Indies, by a fhorter Route to all the Markets in Europe, than they can pretend to do, even if all their Efforts, fhould be crowned with all the Succefs they can wifh; yet be it far from me to mingle with thefe Reflections any Spirit of Peevifhnefs, Prejudice or Partiality; they have a Right, no doubr, to all the Acquifitions they can make, but then we have the fame. I repine not at their Power, their Projects, or their Progrefs; all I aim at, is to make a right Ufe of their Example, in order to hinder my Countrymen from changing Place with the Ruflans,

CON.

## A retrofpective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Ufes to which the Contents may be applied.

1. A general View of the whole Work, its End and Intention, and a Metbod propofed for difcovering bore far this bas been anfwered, not only in the Grofs, but in every Part Separately, througbout the Performance, as a Key to the Ujes of the Book. II. The Plan of the Hifory of the Circumnavigators, intirely new, and abfolutely comprebenfive; Advantages derived from that Hifory thus cbronologically digefted; and the Reafons for rejecting twe Works, that feem at frrt Sight to come within the Plan. III. The Scheme of the Hiftory of the Eaft-Indies, briefly and fully reprefented; the Probability of a late Suggeftion, that the Arabians firf opened this Commerce, Jbewn, and a Short Reviere of the Principal Points regarding the Commerce of the Ancients in the Eaft. IV. The UJes that may be drawn from this regular Series, bow they contribute to fix the Excellencies and Deficiences of the Ancients compared with the Moderns; togetber with a curious Remark as to the Riches of Spain in ancient Times. V. The Care taken to relieve the Reader's Attention, by interfperjing the Defcription, Natural Hiftory, and moft remarkable Curiofities of thofe famous Countries; the Benefits refulting from that Method, and the great Help it affords of bringing much ufeful Knowledge within a little Room. VI. The Manner in which the Hiftory of Commerce is purfued after tbe Declenfon of the Roman Empire, and the finking of that of Conftantinople; Digreffion as to the Rife, Progrefs, and Decay, of the Republicks of Venice and Genoa; and Remarks on their prefent State. VII. How the modern Hiftory of the Eaft-Indies is conducted; the Rules by which the Cboice of Materials bas been made; Difficulties and Deficiencies consmon amongt our latef Writers; what might be reafonably expected from them, and an Example given of the right Metbod of reporting Facts. VIII. A fuccinct View of the UJes arifing from the Matters treated of in the fir $A$ Volume, to Perfons in different Ranks and Stations, and a political Difquiftion as to their Importance to the Nation in general, more elpecially at this critical Conjuncture, when fo many Attempts are making in all Parts of Europe for erecting new Companies to trade to tbe Eaf-Indies. IX. A Reviere of the fecond Volume of this Collection, in which is firft Jerwn wobat was propofed in treating fo particularly the Dijcovery, Conquefts, and Settlements made by the Spaniards in America. X. A hoort Reprefentation of the Uje of our Hifory of the fubduing the Empire of Peru, the Jurpring Boldness and amazing Succefs of that Attempt, with the famous Sir William Temple's admirable Survey of the Laws and Government of the Ynca's, the old Sovereigns of Peru. XI. The Manner in wobich the other European Settlements in America are treated, more efpecially thofe of the Englifh and French, with an Acknoweledgment of Communications receiv'd, and Approbation heerw of this Part of the Work, and an Apology for fome Freedoms taken therein. XII. The Contents of the fecond Book explained, the Rules eftablijhed in felecting the Voyages and Travels neceffary to give a competent Idea of the Northern Parts of the Globe in general, and of the particular Countries in Europe, and the Reajons of thofe Rules fet in a clear Ligbt. XIII. The Scope of the third Book, and a difinct Detail of the jeveral Pieces that regard the Defoription, Hiftory, and Commercial Concerns of the Afiatick Empires; the Autborities on which they are founded, the Motives on whbich they were admitted, and the Means of applying them go as to anfwer the great End of this Collection.

WE are now arrived at the Clofe of a very large Work, undertaken upon a Plan more regular, and of far larger Extent than was ever propofed, either in our ownt, or any other Language; and of the Execurion of which many have defpared in the Progrefs of its Publication ; but by the Bleffing of God it is now finifhed, and finifhed with the very fame Spirit with which it was begun; for 1 am perfuaded, the moft critical Reader will allow there has been as much Pains taken with the laft Section, as with any in the whole Collection. What now remains, is to caft our Eye back a litede, in order to difcover what all this Enquiry, Labour, and Expectation, has produced.

A large Work of this Kind may be very well compared to a publick Structure erected for the Service of Society, as well as at the common Expence, and of the Value of which we may, with tolerable Certainty judge, by confidering the Scheme or Ground-plot, that is to fay, the Plan upon which it was erected, the End propofed by it, and the particular Advantage that every Perufer may expect from it. With regard to the original Scheme, there were never many Objections made to it, except that the Bounds were too large, the Materials hard to be acquired, and the Labour of putting them together a Thing icarce to be effected; fo that fpeaking with Propriety, thefe could not be faid to re-
late to the Work, but to the conducting of it; and our Bufinefs here is not to fay only, but to prove, that if the Outlines were drawn as they ought to be, the Edifice has been finifhed according to the Draught.

The great End propofed, was reducing within a tolerable Compals the Subitance of a Multitude of Books, well written upon ufeful Subjects, in order to render them thereby more eafily purchafed and read. Now it is hoped that this has been alfo done in as great a Degree as the Size of this Collection, and it is no fmall one, would permit ; and that due Care has been taken to make fuch a Choice of our Materials, as that by the Perufal of this fingle Book, the Reader may acquire the practical Knowledge of Cofmography, obtain a perfect Notion of the Situation of different Countries in all Parts of the Globe, together with their Relation to, and Diftance from all other Countries, the Manner of their Correfpondence, the Commodities furnifhed, and thofe wanted by them.

In reference to the more particular and immediate Bufinefs of the Englijh Reader, which we may fuppofe to refpeet the Intereft and Commerce of his own Country, it may with great Truth be affirmed, that fo much upon that Subjeet, and that too in fo many different Lights, is not to be met with elfewhere, fince within the Compars of this Coliection lies all that has occurred within the Space of twenty Years, to one who has had
his Head ever turned that Way, and has likewife had it no lefs at Heart, which will appear particularly from his never efpoufing the Caule of any Party, but regarding the Independency, commercial Concerns, and Naval Power of Great-Britain, as her moft effential Interefts, which, if well minded, all other incidental Matters will fall in happily of Courfe. Thus much as to the Work in general; we will next confider the Parts of which it is compofed, from whence its Correfpondence with the Plan propofed will manifeftly appear.
II. The firft Thing defigned and executed, was the Hiftory of the Circumnavigators, which the beft Judges of Works of this Kind had always reprefented as equally important and neceffary; fo that it had been greatly defired, often attempted, but never in its full Extent performed, in any Collection extant in any Language, which was owing to certain Difficulties that are occafionally taken Notice of in the Progrefs of that Part of the Book, and therefore not neceffary to be repeated here. It is fufficient to obferve, that this Hiftory is abfolutely compleat, and that all the Circumnarigations in the Space of 225 Years, are particularly, circumftantially, and impartially written.

The Merit of fiff forming this Defign of failing round the Globe, is juftly attributed to the great Columbus, and it is fully thewn, that to hi m of right it belongs, tho' he was not fo fortunate, tho' very fortunate in other Refpects, as to execute it. The Reafons that induced him to think it practicable, and the Motives that lead him to attempt it, are fully explained from the moft authentick Memoirs, and the Obligations which Mankind owe him in that Refpect, are fet in a true Light. The particular Advantages arifing from the Difcoveries made by each of the Circumnavigators are conftantly attended to, and from thence the gradual Extenfion of Commerce, and with it our moft perfect Acquaintance with the Situation of the different Parts of the Globe, are manifeftly fhewn. But as it fell out that various of thefe Difcoveries, which were only touched upon in thefe general Voyages, afforded afterwards Occafion to clofer Enquiries, and more diftinct Defcription of Countries very far diftant, by particular Expeditions undertaken with that View, the moft accurate and confiderable of thofe Expeditions are thrown in as Appendices in their propar Places, to render the great Point in View as clear and as perfpicuous as it was poffible, fo as that the Reader may be perfectly informed of what has been found, what there is good Reafon to believe may be found, and what ftill remains abfolutely unfurveyed and unknown.

In fome Cafes, the Memoirs of Circumnavigators were fo involved and confufed, that their Names were ever hardly heard of as fuch; as for Inftance, the Officers in the Naflou Fleet, that failed from Holland in the Year 1623 , and Captain 70 bn Clipperton, who failed from Plymouth in the Year 1719, thefe we have drawn out of the dark, affembled all the Circumftances relating to them, the beft we could, and have given them as entire as it was poffible, under fuch Difficulties, to collect them. As for the Voyage of Commodore Roggervein, which, take it altogether, is one of the moft entertaining, curious and inftructive Pieces that was ever publifhed, it never appeared in our Language till now, and never in any Language fo fully as in this Collection, as we had an Opportunity of confulting a very candid and knowing Perfon, who made that Voyage upon every Part of it, and who was very defirous that the Publick fhould receive as ample an Account of it as poflible.
We have likewife given, fo far as was neceffary, and fo far as we could come at, with any Degree of Certainty, the principal Points of the perfonal Hiftories of all the Circumnavigators, which cannot but be very fatisfactory to the inquifitive and judicious Reader, fince there is nothing fo natural as to defire to know, what became of a Man who fo remarkably diftinguifhed himfelf as by conducting an Expedition of this Sort, of which there have not been more than fifteen in the whole, from that of Ferdinand Magellan, who failed from Seville in Spain, August 10, 1519. to that of the
Vo L. II. $\mathrm{N}^{\circ} 143$.
prefent Lord Anjon, who failed from St. Hellems, Sep," tember 18, 1740.

The Difpofition of all thefe Voyages, in theif regular and natural Order, renders them infinitely more ufeful, than when read feparately, as they reflect reciprocal Lights upon each other, and at the fame Time afford an Opportunity of throwing out many needlefs and ufelefs Repetitions. It was upon thefe Principles that two Pieces, which from their Titles might feem to claim a Right of being confidered in that Part of our Work, were, after mature Deliberation, rejected.

The firt of thefe is the Voyages and Travels of Dro Gemelli Correri, a very large Work, already tranllated into our Language; fo that the judicious Reader will eafily judge of the Solidity of thofe Arguments upon which it was $l e f t$ out. In the firt Place, what-ever the Title Page may fay, this cannot, ftrictly fpeaking, be confidered as a Circumnavigation, fince the Author went from Place to Place by Land, and embarked as his Occafions required, or his Inclinations led him, aboard feveral Veffels which carried him from Port to Port, and the Sum total of thefe Travels and Voyages? is what he is pleafed to call a Tour round the World. All our Circumavigators were other Sort of Men, and made their refpective Voyages on board the Veffels they commanded, or of which they had the Direction, fo that each Account is the Hiftory of a diftinct Expedition, and not a Detail of Adventures by Land and Sea. In the next place, the Doctor is a very voluminous Writer, and takes in fuch a Variety of Matter, beyond what it was poffible fhould fall under his own immediate Knowledge and Infpection, as render'd his Performance very improper to be ranged with thofe in which there is little or nothing related but from the Authority of Eye Witneffes. Laftly it has been afferted by Authors worthy of Credit, who inquired upon the Spor in Cbina, more efpecially, as to the Opportunity the Doctor had of feeing thofe Things which he relates, as very particularly examined by himfelf, that they were thoroughly informed that he took them upon Truft. Befides, there is Nothing to be met with in all his large Work, which is not to be found in this Collection, digefted in its proper Place, from the Memoirs of Authors of indifputed Credit.

The other Piece is in French, written by Mr. de la Barbinais le Gentil, and printed at Paris in 1728 . The Author embarked at a French Port, and in a Friench Veffel, Augult 20, 1714, but for fome Reafons which he does not difclofe, he conceals both the Name of the Port, and of the Veffel. He proceeded to Cbili, and after making fome Stay in South America, embarked on board another Veffel, in which he went to the Port of Amsoy in Cbina, from whence he returned into Europe in the Year I718, touching by the Way at the Brazils. The whole of this Relation is digefted into fifteen Letters, written in a very pleafant and entertaining Stile, agreeable to the Defign of the Author, who travelled only out of Curiofity, and of which we have made the beft Ufe we were able, by extracting every Thing that is curious, and inferting it in the Accounts we have given of Cbili, Peru, Cbina, and the Brazils, which appeared to be more fuitable to the Nature of our Defign, than making a profeffed Tranlation of a Piece, which the Author himfelf acknowledges to be made up of occafional Remarks and curfory Obfervations; which he thinks is a fufficient Reafon for its being defective in other Points, that had however been abfolutely neceffary to intitle him to the Honour of being a Circumnarigator, in the ftrict and proper Senfe of the Word.
There is no Doubt, that after all much is wanting to render this Kind of Hiftory compleat ; but to make it abfolutely perfect, future Difcoveries mult contribute; and there is no Doubt that Circumnavigations by new Routes, that is, by the North-eaft and North-weft Paffages, will afford a noble Supplement to what has been already done. Yet the moft important, the moft curious, and the moft entertaining Circumnavigation would be through both thofe Paflages, for we fhould 12 I
then have a diftinet Account of the Countries that lie between Afra and America, with which the Inhabitants of Europe are moft defirous of being acquainted, and sowards obtaining of which we have done all that lies in our Power, by labouring to fhew, that fuch a Circumnavigation is not either impoffible or impracticable, notwithftanding what has been alledged by fome very underftanding Perfons to the contrary.
III. The Plan upon which the History of the Commerce of the Indies is written, the Publick muit be fatisfied is entirely new; and as it is very extenfive, taking in the Accounts of the remoteft Antiquity; fo, upon reviewing it, there appears to be fome Room for Emendation. There is not the leaft Doubt to be made, that the firft Mention we have of Indian Commodities, is the Traffick carried on in Spices by the Idumeans; and we have faid in general Terms, that they carried on a Trade with Arabia, Perfia, and India, from which we have no Reafon to depart; but perhaps tibat Matter is not quite fo clearly explained as it might be, and as the beft Lights that can be obsained from Hiffory confirm it, fo there is much Probability in the Conjectures offered upon this Subject, fince the Publication of this Work, that the firft Traders by Sea in the World were the Arabians. We will therefore lay hold of this Opportunity of inferting a very curious Paffage from a late Treatife on Trade and Commerce, which will very much illuftrate, though it does not in the leat contradiet what is advanced in the third Section of the fecond Chapter of our firft Book; that Paffage runs thus:
" It is a Point as yet undecided by the Learned, "to what Nation the Invention and firf Ufe of Coniis merce belonged; fome attribute it to one People, " fome to another, for Reafons that are too long to be " difcuffed here. But after mature Reflection, I muft * confets it feems moft probable to me, that the Inha" bitants of Arabia were thofe that firt made long "Voyages. It muft be allow'd, that no Country was fo " happily feated for this Purpofe as that which they in" habired, being a Peninfula wafhed on three Sides by "three famous Seas, the Arabian, Indian and Perfann. "It is alfo certain, that it was very early inhabited, "a and the firt Notice we have of any confiderable " Trade, refers it to the IJbmaelites, who were fettled
"s in the higher Part of Arauia. To them $\begin{aligned} & \text { Fofepb was }\end{aligned}$
" fold by his Brethren when they were going down "، with their Camels to Egypt with Spicery, Balm and " Myrrh.
" It may feem ftrange to infer from hence, that "Commerce was already practifed by this Nation,
"f fince Mention is here made of Camels, or a Caravan,
" which certainly implies an Inland Trade; and it muft
" be likewife allowed, that Balm and Myrrh were the
"Commodities of their Country. But whence had
"they the Spicery? Or how came Arabia to be fo fa-
${ }^{6}$ mous in ancient Times for Spices? Or whence pro-
" ceeded that Miftake of many great Authors of An-
${ }^{6 s}$ tiquity, that Spices actually grew there? Moft cer-
"t tainly becaufe thefe People dealt in them, and that
${ }^{66}$ they dealt in them the firft of any Nation that we
" know of, appears from this very Inftance: Strabo,
" and many ocher good Authors, affure us, that in fuc-
"ceeding Times they were very great Traders; they
"t tell us particularly what Ports they had, what prodi-
" gious Magazines they kept of the richeft Kinds of
"Goods; what wonderful Wealth they obtained; in
"what prodigious Magnificence they lived; and into
"6 what Exceffes they fell, in refpect to their Expences,
${ }^{66}$ for Carving, Building, and Statues. All this fhews
"that they were very great Traders; and it alfo hhews
"s that they traded to the East-Indies, for from thence
${ }^{66}$ only they could have their Spices, their rich Gums,
"s their fweet-fcented Woods, and their Ivory, all
"s which it is exprefly faid that they had in the greateft
${ }^{*}$ Abundance. This therefore proves they had an ex-
${ }^{66}$ tenfive and flourifhing Commerce, and that they had
"it earlier than any other Nation, feems to me evident
${ }^{66}$ from their dealing at that Time in Spices.
"Befides, there is much lefs Difficulty in fuppofing ". that they firft difcovered the Route to the Indies, than
" if we afcribe that Difcovery to any other Nation; for, " in the firt place, they lay neareft, and in the next, they lay moft conveniently; to which we may add Tbirdyy, That as the Situation of their Country na"turally inclined them to Navigation; fo by the Help of the Monfoons, they might make regular Voyages " to and from the Indies, with great Facility ; nor is it at all unlikely that this Difcovery might be at firf owing to Chance, and fo fome of their Veffels being blown by a ftrong Gale to the oppofite Coaft, from whence they might take the Courage to return, by obferving the Regularity of the Winds at certain Seafons. All thefe Reafons taken together, feem to favour this Opinion, that Commerce flourifhed firf among them; and as to its Confequences in making them rich and happy, there is no Difpute about them.
The fame Author having mentioned the Pbanicians in Terms perfectly agreeable to what we have faid of them, proceeds to fhew what Ufes were made of their great maritime Skill by Solomon, and takes Occafion from thence to confirm what he had before advanced in reference to the Arabians; the Paffage is not long, and withal equally curious and inftructive, it runs thus: "It " is very certain, that Solomon made ufe of their Affift" ance in equipping his Fleets at Elatb and Ezion Ge"ber, and it is very probable that they put him upon " acquiring thofe Ports, and gave him the firlt Hints "of the amazing Advantages that might be derived "f from the Poffefion of them, and from the Com" merce he might from thence be able to carry on, "Thefe Ports were moft commodioufly fituated on the "Arabian Gulph, and from thence his Veffels, manned «chiefly by Pbonicians, failed to Opbir and Tbarfis, "where-ever thofe Places were. Some Writers will " needs have them to be Mexico and Peru, which is "certainly a wild and extravagant Suppofition; others "believe, that we are to look for Opbir on the Coaft of "Africa, and Thar/ts in Spain; but the molt probable "Opinion is, that they were both feated in the East c. Indies.
"By this adventurous Navigation he brought into "his Country, Curiofities not only unfeen, but unheard "of before, and Richies in fuch Abundance, that as " the Scripture finely expreffes it, He made Silver in "Ferufalem as Stones, and Cedar Trees as Sycamores " that grow in the Plains. The Metaphor is very bold " and emphatical ; but when we cơnfider that it is "recorded in this Hiftory, that the Return of one Voy"age only to Opbir produced 450 Talents of Gold, "which make $51328 \%$. of our Troy Weight, we cannot "doubt of the immenfe Profit that accrued from this "Commerce. It is alfo obfervable, that the Queen of "Sbeba or Saba, which lies in that part of Arabia be" fore-mentioned, furprized at the Reports that were " fpread of the Magnificence of this Prince, made a "Journey to his Court, on purpofe to fatisfy herfelf, " whether Fame had not exaggerated the Fact, and " from the Prefents fhe made him of 120 Talents of "Gold, of Spices in great Abundance, and precious "Stones, we may difcern the true Reafon of her Cu" riofity, which proceeded from an Opinion, that no "Country could be fo rich as her own. And there is " another Circúmftance very remarkable, and which " feems ftrongly to fortify what we have advanced in "the Beginning of this Difcourfe, it is added, neitber "was there any fuch Spices as the Queen of Sheba gave "to King Solomon; which feems to intimate, that "the Arabians had penetrated farther into the Indies "than even the Fleets of this famous Prince, and " brought from thence other Spices (perhaps Nutmegs " and Cloves) than had ever been feen betore. " It was by his Wifdom, and by his feady Appli"cation to the Arts of Peace, all of which mutually " fupport each other, as they are all driven on by the "Wheel of Commerce, which fupplies every Want, " and converts every Superfluity into Merchandize, "that this Monarch raifed his SubjeEts to a Condition - much fuperior to that of any of their Neighbours, and "r rendered the Land of Ifrael, while he governed it, the
s6 Glory and Wonder of the Eaft. He made great Ac" quifitions without making Wars; and his Succeffors, " by making Wars, loft thofe Acquifitions. It was his "Policy to keep all his People ensployed, and byem"s ploying them, he provided equally for the Extention " of their Happinefs and his own Power; but the fol" lowing Kings purfued other Meafures, and other Con©. fequences attended them. The Trade of $7 u$ dea funk " almoft as fuddenly as it rofe, and in Procefs of Time " they loft thofe Ports on the Red Sea, upon which "t their Indian Commerce depended."

After this, there is nothing dark or intricate in that Part of the Hiftory of the Commerce of the Ancients, of which we have undertaken to treat. It appears very clearly, that from the earlieft Times, even the remoteft Countries of the Eaft have been the Sources of all the Advantages derived from Trade, and the Poffefion of this particular Branch of Traffick has conftantly given the Afcendant to the Nation in whofe Hands it was. In tracing this Hiftory we have made it apparent, that the moft confiderable Points in the Syftem of Commerce, confidered as a Kind oi Science, were both very well known, and very fteadily pracifed in ancient Times, and produced exactly the fame Confequences then that they do now; or, in other Words, enabled People to heap up immenfe Riches, induced them to encourage Arts and Sciences, by rewarding plentifully fuch as excelled in them, propagating Magnificence and Luxury, from whence, in Procefs of Time, arofe Indolence, Effeminacy, and a total Depravation of Manners, which made Way either for foreign Conquefts, or fuch a Declenfion of Morals at home as produced Ruin and Poverty, and from which hardly any of the ancient States ever recovered.

We have fhewn the true Source of that incredible Wealth, for which, in the earlieft Times of which, Hiftory affords any Record, the Egyptians were renowned ; and we have fhewn allo how all this was transferred to the Perfians, in Confequence of their becoming Mafters of Egygt, and of the Means by which iss Inhabitants amaffed fuch prodigious Wealth. This leads us to confider the Conquelts and the Views of Alexander the Great, in a Light very different from that in which they have been hitherto feen, and from which it is unquefionably evident, that he was a much greater and wifer Prince than he has been reprefented, not by Hiftorians only, but by Panegyrift, that his Views were of quite another Nature than are commonly imagined; and that his Notions were incomparably more juft and more extenfive than that of any other Conqueror, either ancient or modern, fince he did not barely aim at eftablifhing an univerfal Monarchy, but was allo defirous of making this turn to the univerfal Benefit of Mankind, by fettling a conftant and regular Intercourfe amongtt all the Nations he fubdued, and rendring them thereby ufeful to each other; to facilitate which, he formed Projects impracticable indeed with Regard to their ulrimate Intention, but which, notwithftanding, were defigned with wonderful Sagacity, and from their Confequences in fuch Parts as could be executed, fully anfwered all that he expected from them.

It was by making ufe of the Lights afforded him by this great Monarch and his indulgent Mafter, that Ptolemy erected a Greek Empire in Egypt, which in point of Serength and Duration, as well as Magnificence, fo much exceeded all the reft that were formed out of his Conquefts. We have had many large and well-written Hiftories of that Empire, confidered in a political Light, but there was ftil! wanting a Commercial Hiftory of Egypt, which we have endeavoured to fupply, and from the attentive Perufal of which the Reader will fee, that nothing can contribute fo much to the Power and Splendor of Sovereigns, and at the fame Time to the Welfare, Happinefs and Tranquility of a People, as commercial Maxims well applied. All the other Succeffors of Alexander lived as it were upon the main Stock, and only wafted in fruitlefs Projects, and wild and extravagant Expeditions, the Riches which they extorted from their Subjects, and which they continued to extort, till by totally exhaufting them, they were no longer able to maintain that Power which was
requifite to fupport their Tyranny. Whereas Ptolemy and his immediate Succeffors, by following in their Dominions the judicious Maxims of Alexander's Policy, kept their Countries full of People, and by providing for the Happinefs of thofe Prople, were able to keep up larger Armies, to maintain greater Fleets, and to live with infinitely more Magnificence than thofe Monarchs, whofe Dominions were much larger, and who, till they ruined them by their Exceffes, might have been more powerful and confiderable, and might have made their Empire as permanent as his.

It is true, that at length the Government of Egypt funk and fell into Confufion from its falling under the Dominion of weak Princes, and from the prevailing Corruption of Manners, againft which Accidents human Policy affords no Defence. Yet it appeared great even in Decay, and its Magnificence was apparent in its Ruin. The Romans, when they became poffeffed of it, were very foon made fenfible of its Importance, and of the Wifdom of thofe Maxims by which its Monarchs ruled in better Times. They therefore adopted thofe Maxims, and not only purfued but improved the Methods formerly employed to make this Country the Center of Commerce, and the great Magazine of the civilized part of the World. All thefe Points we have at large explained, by which it appears, that the Splendor and Glory of the Roman Empire was chiefly built upon this important Conqueft, and the Confequences that attended it. That in Proportion as the Roman Affairs were wifely and prudently, or weakly and indifcreetly managed, the Concerns of Egypt were attended to or neglected ; and that the great Blow given to the real Power and internal Force of the Roman Empire, was transferring this Province to the Princes that reigned in the Eaftern parts of that Empire, and fixed their. Seat at Cointantinople.

We have defcribed, tho' very concifely, what were the Effects of this Change, and how the Imperial Refidence laft mentioned became fo large, fo beautiful, and fo immenfely rich as it was, by drawing thither, in a great Meafure, the Trade of the whole World. The graduat Ruin of the Eaftern Empire, and the Growth of the Arab or Saracen Power, did not make a greater or more univerfal Change in the political Affairs of Europe, than in the commercial; for Egypt falling early under the Power of thofe Barbarians, fince however learned they became afterwards, they certainly deferv'd that Title, when they fubdued Egypt, all Thoughts of Commerce were laid afide. At that Time War was their Trade, and they knew no other Way of making Acquifitions than by the Sword. The Countries of which they became Mafter, were exceedingly rich and populous, and they had no Views beyond feizing the former by Force, and impofing Slavery upon thofe whom they had deprived of their Property. But by Degrees, Experience, which is the proper Miftrefs of fuch Sort of People, taught them, that Force and Violence were not the fureft Means of maintaining Empire, and therefore they had Recourfe to Learning and Arts; and though they did not apply themfelves to Trade, yet they encouraged and promoted that of their Subjects, and allowed Strangers to deal with them, but upon fuch Terms as were highly advantageous to thefe Conquerors, who were never at a Lofs how to fqueeze the Money out of the Purfes of their Subjects, provided they had any to be fqueezed out.
IV. This regular Series of Hiftory is extreamly ufeful in a great Variety of Cafes, and is at the fame Time exceedingly entertaining; it at once raifes and fatisfies our Curiofity, it informs us of what is to be found in the moft diftant Countries, and the Ufes that have been in all Ages made of this Propenfity to vifit other Countries, and to bring back their Produce to our own. But above all, it ferves to deftroy thofe weak and vulgar Prejudices, by which Men are inclined to fancy, that in former Ages Mankind were abfolutely deficient in Learning, Politenefs, and above all, in underfanding the Nature, and confequently acquiring the Advantages deducible from Commerce. But upon examining this Hiftory, we fee precifely in what the Ancients excelled,
in what they came up to, and in what they were defective, when compared with the Moderns. From hence alfo we difcover; to what all this was owing, what were the natural, what the accidental Advantages they had over us; and, on the other Hand, what we really and certainly poffefs, which were inacceffible to them. To give a few Inftances of both.

The Ancients feem to have carried the Art of cultivating and improving Countries to a Height of which we have hardly any Comprehenfion. In the earlieft Times Egypt was wonderfully cultivated, admirably improved, and exquifitely adorned. We cannot form a Notion of an Agriculture more perfect than what was practiced by the ancient Egyptians; their Temples, Palaces, and other publick Structures, were magnificent in the higheft Degree; and if we incline to doubt the Veracity of the Records that relate to them, the very Ruins that ftill remain afford us Teftimonies that are abfolutely inconteftible. The Contrivances made ufe of for fupplying Water, and the Conveniency of Water Carriage, not only to all the great Cities, but to every Town and Village, furpals any thing that is to be feen at this Day in the moft civilized Part of the World, unlefs perhaps we except Cbina. This fhews that the Ancients excelled alfo in Policy, or the Art of eftablifhing right Rules for the Government of Mankind, which are beft difcovered from their Effects, the true Criterion of Government being the Exercife of human Induftry about ufeful Things, for without Queftion that Nation is beft governed where Individuals are beft employed, that is, where, on the one Hand, the Laws provided fuitable Encouragements for the active, and by a right Direftion and Diftribution of Authority, prevent any from being idle. The Ancients excelled alfo in all the Sciences that depend either on the Quicknefs of Parts, or the Solidity of Judgment, and in all the Arts that furnifh the Neceffities, procure the Conveniencies, or exhibit the Elegancies of Life; the Proofs of all which are to be found in their Writings, in the Hiftory of their Manners, and in the Remains of their Buildings, Utenfils, Coins, Curiofities, $\mathcal{E}^{2} c$.

On the other Hand, they were certainly defective in thofe Sciences that depend upon Experience, as well as Sagacity and Genius. Their Cofmography was equally narrow and erroneous; the fame may be faid of their Aftronomy, which was not either accurate or well applied. Hence it came to pafs, that their Navigation was uncertain, flow, dangerous, and confined. Neither had they any Notions of managing Commerce by Factories or Settlements. In thefe and many other Things we certainly furpais them, but then it mult be alfo allowed, that they could, and we cannot do without them, which perhaps is the real Caule of their Defects, as well as of our Proficiency.

But there is one Advantage they had, which is very little attended to, and yet it was the principal Source of that Wealth, the very Relation of which appears to us almoft incredible, I mean that amazing Fertility in valuable Commodities which feveral Countries enjoyed, and of which there are fcarce any Traces to be met with now. Several Inftances of this, with regard to the Regions of the Eaft, occur in our Hiftory of them; but becaule we had no Opportunity of mentioning it elfewhere, it may not be amifs to fet down a Teftimony here that is very well worth Confideration. The Pboenicions confidered Spain, and with very good Reafon, in the very fame Light that Spain now confiders Mexico and Peru, that is to fay, they drew from thence in Return for Merchandize of fmall and inconfiderable Value, immenfe Quantities of the richeft Metals, and of Silver more efpecially.

If we may credit Arifotle, they not only found wherewith to load their Ships, but when that was done, they forged Anchors, Bolts and Bars of Silver, to fupply the Place of Iron, that fthey might carry away the more of it. Diodorus. Siculus affures us that it was chiefly owing to the prodigious Riches they drew from Spain, that the Cartbaginians were able to fet on Foot fuch nuinerons Armies, to equip fuch potent Fleets, and to raife fuch ftupendous Fortifications, as made them at once the Wonder and the Terror of their Neighbours.

In a Word, one might produce good Authorities to prove, that there was hardly a maritime Province in Spain, from Algarve and Andalufia, to Galicio, Afturias, and the Pyrenean Mountains, but what abounded in Gold, Silver, Copper, Tin, or fome other valuable Metal. Yet except a Siver Mine in Portugal, of which the Reader has had a very particular and authentick Account in this Volume, there is not the leaft Sign or Token of thefe vaft Treafures, exclufive of the Appearances that yet remain of the Works that were carried on for maintaining them.
V. But though we have attended clofely to the Commercial Hiftory of the Indies, yet we have not negleeted or omitted what might be thought as ufeful or more entertaining. We have drawn together, from the beft and moft authentick Writers, whatever would contribute to the true Reprefentation of the Religion, Government, Hiftory, Laws and Cuftoms of the feveral Nations of India, and have been more efpecially folicitous in fetting forth the Learning, Difcipline, Offices, Way of Living, and peculiar Privileges of the Brachmans, now called Bramins, and have taken the Pains to fet forth the principal Doctrines of their Theology and Philofophy. We have been as folicitous about the natural Hiftory of the Indies, and have compared what ancient Authors have recorded, with the Remarks made by modern Travellers upon that Subjcet.

By this Means we have given the Reader, in a very narrow Compafs, and in fuch a Manner, as that Things of a like Nature are all placed together, what would have coft very great Labour to affemble out of the different Books in which they are difperfed, and yet to preferve, as far as poffible, all the Advantages that arife from a Variety of Reading, we have, generally fpeaking, made ufe of the Author's own Words, and have cited the Places where they are to be found in the Notes. We have very frequently taken Occafion, from this Manner of handling the Subject, to diftinguifh Fables from true Hiftory, and to fhew fometimes, that there is a great deal of true Hiftory in what many hafty Criticks have rejected as Fables. For if, on the one Side, it be true, that Ignorance is the Mother of Credulity, one may very much doubt, wherher Incredulity be not her Daughter alfo. This will be the more eafily apprehended, if we confider that there is a Kind of Similarity between Extreams, and that different Deviations from Truth may very well arife from the fame Caufe. For, afterall, what is Credulity, but believing without Evidence ? And what Incredulity, other than believing againft Evidence? And whence can either of thefe afife more naturally than from Ignorance. If this mean and deteftable Vice occupies the Breaft of one of a mild and placid Spirit, he believes without examining whatever he hears ; and again, if Ignorance be coupled with Obftinacy, there is hardly fuch a Thing as driving Belief into a Mortal, whofe Mind is over-run with fuch Maladies.
It is very poffible, that notwithftanding all the Care we have taken, fome Miftakes may be difcovered in this Part, by thofe who have been fo happy as to obtain better Lights; but a diligent Enquiry, and a ftrict Ex. amination, were the only proper Methods to be employed to prevent fuch Miftakes, and they were employed to the utmoft of our Power. We may add to this, another and a very juft Apology, that in this Tract we were without any Guide, all who had gone before us chufing rather to fave their own Pains than that of the Reader, and to heap up Relation upon Relation, Extract upon Extract, by which they multiplied their Volumes, and neither reprefented Things diftinctly themfelves, nor left it in the Power of a Reader, who had not uncommon Leifure, to form any diftinct Notion of what was really worth knowing, in that vaft Load of Materials that they exhibited to his View. In fhort, we faw very plainly, what was amifs in the Compilations that went before us, and we were very willing to take Warning by their Mifcarriages, which put us upon purfuing another Method, and if we have miffed of Perfection in that, we have at leaft this to plead, that we meant well, and have done our beft.
VI. After
VI. After fhewing how Commerce was in a Manner totally overwhelmed in the Eaft, we proceed next to point out the Methods by which it was in fome Meafure revived by the Subjects of the two trading Republicks of Venice and Genoa; and we have taken great Pains to difcover the different Ways, by which, at feveral Times, and under various Circumftances, the Commodities and Manufactures of the Eaft were brought into Europe. But as the Manner of our treating that Subject would not allow us to digrefs there, fo far as to give any Account of the Rife of thofe two celebrated States, it cannot be amifs, in this Review of our Performance, to fupply that Defect in as concife a Manner as it is poffible.

When the Weftern Part of the Roman Empire was over-run by Barbarians, and Arts and Sciences funk with that Power which had cultivated and protected them ; Commerce alfo vifibly declined, or to ipeak with greater Propriety, was overwhelmed and loft ; for in Times of Confufion and publick Defolation, when the Giant War ftalks abroad, overturns great Cities, tramples down the nobleft Improvements, and lays whole Countries wafte, it is impoffible that Trade fhould continue; or rather, it is highly probable, that on the very Approach of thefe Dangers the muft have already fled. It is a common Saying, that Riches are the Nerves of War, rather, I think, the Food of it; and therefore where War devours, there Commerce cannot fubfift, which is a perpetual Reafon why all Trading Nations fhould avoid offenfive Wars ; for by thofe that are abfolutely defenfive they can never be hurt. But to keep to the Point ; when that Irruption of various Nations had driven the Romon Policy out of the greateft Part of Europe, fome ftraggling People, either forced by Necefficy, or led by Inclination, took Shelter in a few ftraggling Inands that lay near the Coaft of Italy, and which would never have been thought worth inhabiting in a Time of Peace.

This was in the Sixth Century, and at their firt fixing there, they had certainly nothing more in View, than living in a tolerable State of Freedom, and acquiring a Subfiftance as well as they could. Thefe Inands being divided from each other by narrow Channels, and thofe Channels fo incumber'd by Shallows, that it was impoffible for Strangers to navigate them, thefe Refugees found themfelves tolerably fafe, and uniting among themfelves for the Sake of improving their Condition, and augmenting their Security, chey became in the Eighth Century a well fettled Government, and affumed the Form of a Republick.

Simple and mean as this Relation may appear, yet it is a plain and true Account of the Rife, Progrefs, and Eftablinmment of the famous and potent Republick of Venice. Her Beoinnings were indeed weak and flow, but when the Foundation was once well laid, her Growth was quick, and the Increafe of her Power amazing. She extended her Commerce on all Sides, and taking Advantage of the barbarous Maxims of the Mobamedan Monarchies, fhe drew to herfelf the Profits of the Indian Trade, and might in fome Senfe be faid to make Egypt a Province, and the Saracens her Subjects.

By this Means her Traffick fwelled beyond Conception, fhe became the common Mart of all Nations, her Naval Power arrived at a prodigious Height, and making ufe of every favourable Conjuncture, fhe ftretched her Conquefts not only over the adjacent Terra Firma of Italy, but through the IMands of the Arcbipelago, fo as to be at once Miftrefs of the Sea, of many fair and fruitful Countries, and of Part of the great City of Cone Atantinople it felf. But Ambition, and the Defire of Lording it over her Neighbours, Paffions equally, fatal in publick and private Life; to States and Empires, as well as to great Men, and to great Families, brought upon her thofe Evils which firft produced a Decay of Trade, and then a Declenfion of Power. General Hiftories indeed afcribe this to the League of Cambray, when all the great Powers in Europe combined againft this Republick; and in Truth, from that Period the Gnking of her Power is truly dated; but the Venetian Writers very juftly obferve, that though this Effect folm
lowed the League, yet there was another, a more latent, but, at the fame Time, a more effectual Caufes which was the falling off of their Commerce.

Her Subjects were become lefs frugal, and lefs wealthy, and, at the fame time, more ambitious and more profufe. It was impoffible, in fuch a Situation, that the State fhould maintain it felf when fo warmly ato tacked; a Man in a Confumption cannot ftruggle with the fame Force as in Health; and though By-ftanders may attribute the Fall he receives to the Strengh of his Adverfary, he cannot help knowing, that it proceeds folely from the failing of his own Strength. This was the Cafe of the Venetians, and they have ever fince been more indebted to their Wifdom, than their Power, to the prudent concealing of their own Weaknefs, and taking Advantage of the Errors of their Enemies, than to any other Cafe; for their keeping up that Port which they fill bear, and which had been loft long ago by any other Nation but themfelves.

At the fame Time that Venice rofe, as it were, out of the Sea, another Republick was erefted on the Coafts of ltaly, there could not well be a worfe Situation than the narrow, marfhy, unprofitable and unwholfome Inands in the Adriatick, except the rocky, barren, and inhofpitable Shores of Liguria; and yet as Commerce raifed Venice the Rich, on the one; fo the erected Genor the Proud on the other. In Spite of ambitious and warlike Neighbours, in Spite of a confined and unproducing Country, and which were ftill greater Impediments, in Spite of perpetual Factions and fucceffive Rem volutions, the Trade of Genoa made her rich and great. Her Merchants traded to all Councries, and throve by carrying the Commodities of the one to the other. Her Fleets became formidable, and befides the adjacent Inland of Corfica, the made larger and more important Conquefts. She fixed a Colony at Caffa, and was for fome Time in Poffeffion of the Coafts on both Sides of the Black Sea.

That Emulation which is natural to neighbouring Nations, and that Jealoufy which rifes from the Purfuit of the fame Miftret, Commerce, begat continual Wars between thefe Rival Republicks, which after many obflinate and bloody Battles, was at laft terminated in Favour of Venice, by that famous Victory of Cbiozzi, gained by her Doge Andrew Contarini, from which Time Genoa never pretended to be Miftrefs of the Sea. Thefe Quarrels were fatal to both; but what proved more immediately deftructive to the Genoefe, was their Avarice; which induced them to abandon the fair Profits of Trade, for the Sake, by that vile Method of acquiring Wealth by Ufury.

This leads us to mention another Subject that has a clole Connection with Commerce, and that is, the Bufinefs of Exchanges. This, tho' in many Cafes ufeful to Commerce, concerns alfo many other Things, fuch as Tranfactions of State, and of War, the Removal of Families, or the Defcent of Succeffions upon Strangers ; all of which create the Neceffity of removing Money from one Country to another, which fometimes cannot be done at all, and in moft Cafes muft be attended with Inconveniency, if practifed in the plain Way of Tranfportation. The Lombards, one of the many Nations that eftablifhed themfelves in Italy after the Ruin of the Roman Empire, and who have beftowed their Name on one of the fineft Countries in it, devifed a Method for removing, in a great Meafure, this Inconvenience; for they obferved that Money was very often wanting reciprocally in feveral Countries, and therefore they imagined, that if a Way could be found to eftablifh a Correfpondence capable of fupplying their mutual Wants, it might prove very advantageous to the middle Perfons, and this produced that Kind of Practice now known by the Name of Exchange; which, as it was invented by, fo it continued long in the Hands of the Lombards. For this Purpofe, they lettled themfelves in moft of the great Cities in Europe, and having a ftrict Correfpondence one with another, they managed this new Branch of Bufinefs, of drawing and remitting Money with valt Advantage to themfelves ; and to do this the more effectually, they enter'd into Partnerfhip, kept

But if upon this Occafion it thould be demanded what Remedy there is for thefe Things, we can only anfwer, that all the Remedy in the Power of private Perfons, is to forefee and point out the Caufes of fuch Evils; and by acquainting their Countrymen with the real Importance of this Commerce, to awaken and excite their Diligence, to preferve what is yet left, and if poffible, to open new Channels, which may balance the Deficiencies that muft naturally arife from the lofing thofe Branches of Trade, which, by thefe new Attempts, are likely to be cut off. All this the Reader will find regularly digefted to the utmoft Extent of our Power, and throughout the feveral Sections which relate to them, interfperfed with a great Variety of probable Expedients, by which thefe great and important Ends may be attained.

It is not at all in ours, or indeed within the Compafs of private Peoples Abilities, to carry Things of this Nature any farther; but the Rectitude of carrying them thus far, and of publifhing and making manifeft the mighty Advantages that would refult from directing our Councils to the Improvement of our Commercial Concerns, rather than the fetiling the Interefts of other Nations upon the Continent, which perhaps the betber they are fettled, the lefs it may tend to our Benefit, fince we fee that the firft Confequence of their Independency and Security is to profecute Projects for the Benefit of their own Trade, and to the Prejudice of ours, is put out of all Difpute.
Thofe who affect to treat thefe Things either as Chimera's or Trifles, Points of inconfiderable Moment, or remote and incertain in their Confequences, are either really or affectedly lgnorant; and which ever they are, fo far as they can carry their Opinions and Influence, the moft dangerous and moft deftructive Enemies to their Country; for to propagate Notions of Security, and to rock us as it were in the Sleep of Indolence, while other Nations are awake and full of Attention to the Means of improving Traffick, and laying the Foundations of Maritime Power, is to enervate and deftroy us, -more elpecially, if at the fame Time we are exhaufted by Taxes, which neceffarily render our Manufactures dear, and give thereby great Advantage to our Rivals, and oppreffed with Debts, a very large Proportion of which being due to Foreigners, mutt fpeedily and infallibly draw the laft Shilling out of thefe Kingdoms, if frefh Supplies of Wealth are not regularly and conftantly brought in by foreign Trade.

Thefe are the Subjects chiefly infifted upon in the firft Volume of this Collection, diverffified by a great Variety of pleafant and entertaining Reading, fo difpofed as to heighten Inftruction, and not to diftract the Mind, by aiming at no ufeful or perceptible End. We come next to fpeak of the Contents of the fecond Volume, and to fhew how far they are likewife calculated to anfwer the fame ufeful, important and national Purpofes.
IX. As an Intercourfe and Commerce with the Eaft Indies was the great Concern both of the Ancients and Moderns, to the Time that America was found out, fo that Discovery, and the great Confequences that have attended it, have been the juft Subjects of the principal Attention of the trading Nations in Europe ever fince; and hence the examining every Thing relating thereto in its proper Order, became naturally the next Object of our Care. We begin with a copious and circumftantial Relation of the feveral Expeditions of the great Cbriftopher Columbus, in which we have fully explained the Motives upon which they were grounded, the many Difcouragements he met with, and the various Difficulties he encountered before he was able to bring Things to bear. In treating thefe Subjects, we have taken the Liberty to intermix fome Reflections on the Detriments that Spain received from the early Interpofition of Statefmen in the Management of the new Colonies, from whence many Mifchiefs arofe, and the Profits of thofe early Eftablifhments were very much leffened, and their future Progrefs greatly checked.

We then proceed to the intermediate Expeditions beaween thofe of Columbus, and the Conqueft of Mexico.
by Ferdinand Cortes, which affords the Reader an ample Profpect of the mighty Difficulties that Men will go through from the Hopes of Gain, more efpecially, when it is to come immediately to themfelves, and they are not circumfcribed either by the unreafonable Power or particular Views of Companies, to which alone is to be afcribed the rapid Progrefs of the Spaniards, in thofe Countries where their Conquefts in our Times, when nothing is done but at an immenfe Expence of Time, Men and Money, appears incredible. The Paffage being now open, we go on to the Conqueft of Mexico, and to fhew from the beft Authorities, how a very great and powerful Empire, governed by a wife and brave Monarch, and fupported by numerous Armies of faithful Subjects, was neverthelefs fuccefsfully attacked, and in the End totally over-turned by a very handful of Men, and thofe too all the Time caballing, confpiring, and quarrelling amongtt themfeives, fo that the profperous Event of that marvellous Expedition, is entirely due to the incomparable. Abilities, indefarigable Labours, and fingular Virtues of the Commander in Chief; to whom however there was but very little Gratitude fhewed by his Countrymen, who reaped all the Benefits of that moft important Conqueft.
After recording his Actions, the Reader will find a fuccinct Account of the Manner in which the I/Rbmus of America, and the Country adjoining, were fubdued, and of the Difputes that arofe amongtt the Spanib Officers, or rather Adventurers that undertook and effected thofe Conquefts, which, how fatal fo ever they might be to themfelves, turned notwithftanding, as much, or more, to the Benefit of the Spanif Crown and Nation, as if they had proceeded with all the Harmony and good Underftanding poffible; fo valuable a Principle is Activity, and fo advantageous to the Publick a bufy and enterprizing Spirit, when employed at a Diftance, whether well or ill conducted, by which very often prodigious Conqueits are made abroad by thofe of reftlefs and turbulent Minds, that very probably had ftirred up Rebellion and Confufion, if they had ftaid at home. We may enter farther into the Truth of this Obfervation, if we confider how little has been done in thefe Parts in fo long a Courfe of Years, in Comparifon with what was then done in fo few; from whence it is vifible, that as Example excites and encourages vigorous Meafures, fo it likewife countenances Indolence, and by degrees fixes and eftablifhes it by Habit.
X. The Conqueft of Peru was not at all the Effect of any deep laid Scheme of Policy, or of Meafures taken in Confequence of Orders from Spain; on the contrary, it arofe from a Kind of Agreement or Compromife between two or three enterprizing Adventurers, and thofe too in defperate Circumftances. All the Force they could mutter up was fo infignificant, as fcarce to exceed a Modern Independent Company; the Veffels on which they embarked, were fill meaner than the Forces they carried; and as for the Funds which were to defray the Expences of this Expedition, they were equally infignificant in Money and in Credit. What is fill more extraordinary than all this, thefe Undertakers had. little or no Intelligence; they knew that the Country they were to attack was very large, and well peopled, but they knew very little of its Government, and ftill lefs of the Cuftoms and Manners of thofe People. We are not to imagine from hence, that the Inhabitants of Peru were wild and barbarous Savages, or that they were defeated and fubdued for Want of a Conftitution, Laws and Policy; for this was fo far from being the Cafe, that Sir William Temple, than whom there hardly ever was a better Judge of Things of this Nature, has given us, within a very narrow Compafs, a moft excellent Syftem of the Peruvian Empire, which having had no Opportunity to infert elfewhere, it cannot be difpleafing to our Readers, upon this Review of the whole Work, to find it here, more efpecially, as it is juftly efteemed the Mafter-piece of that polite Writer, who has therein given us both Facts and Obfervations that might very well furnih Matter for a confiderable Volume. "T The Empire of Peru deduced its Original "s from their great Heroes Mango Copac, and his Wife
" and his Sifter Coya Mama, who are faid to have firtt
" appeared in that Country, near a mighty Lake,
" which is ftill facred with them upon this Occafion.
"Before this Time, the People of there Countries are
" reported to have lived like the Beafts among them,
" without any Traces of Order, Laws; or Religion,
"without other Food than from the Trees, or the
"Herbs, or what Game they could catch; without
"further Provifion than for prefent Hunger, withoút
" any Cloathing or Houfes but dwelt in Rocks or
"Caves, or Trees, to be fecure from wild Beafts; or
" on Tops of Hills, if they were in Fear of fierce
"Neighbours. When Mango Copac and his Sifter firft
"came into thefe naked Lands, as they were Perfons
" of excellent Shape and Beauty, fo they were adorned
"s with fuch Cloaths as continued afterwards the ufual
"Habit of the Ynca's, by which Name they called
" themfelves.
"They told the People who came firf about them,
"that they were the Son and Daughter of the Sun,
" and that their Father taking Pity of the miferable
" Condition of Mankind; had fent them down to
"reclaim them from thofe beftial Lives, and to in-
" ftruct them how to live happily and fafely; by
"obferving fuch Laws, Cuftoms and Orders as
"their Father the Sun had commanded there his
" Children to teach them. The great Rule they firt
" taught, was that every Man fhould live according to
«Reafon, and confequently not either fay nor do any
"Thing to others, that they were not willing
"others fhould fay or do to them, becaufe it was
"againft all common, Reafon to make one Law for
© our felves, and another for other People ; and this
" was the great Principle of all their Morality. In the
" next Place, that they fhould worthip the SUN, who
" took care of the whole World, gave Life to all
"Creatures, and made the Plants grow, and the Herbs
" fit for Food to maintain them; and was fo careful
" and fo good as to fpare no Pains of his own, but to
" go round the World every Day to infpect and provide
"s for all that was upon it, and had fent thefe his two
" Children down on purpofe for the Good and Happi-
" nefs of Mankind, and to rule them with the fame
"Care and Goodnefs that he did the World.
"After this, they taught them the Arts moft necef-
"fary for Life, as Mango Copac to fow Mayz, or the
"common Indian Grain, at certain Seafons, to pre-
${ }^{6}$ ferve it againft others; to build Houfes againft In*clemencies of Air, and Danger of wild Beafts ; to di-
«ftinguifh themfelves by Wedlock into feveral Families ;
"t to cloathe themfelves fo as to cover at leaft the Shame
" of Nakednefs; to tame and nourifh fuch Creatures
" as might be of common Ufe and Suttenance: Coya
"Mama taught the Women to fpin and weave both
"Cotton, and certain coarfe Woolls of fome Beafts
" amongft them. With thefe Inftructions and Inven-
"t tions they were fo much believed in all they faid, and "adored for what they did and taught of common " Utility, that they were followed by great Numbers " of People, obferved and obeyed like Children of the
"Sun fent down from Heaven to inftruct and govern " them.
"Mango Copac had in his Hand a Rod of Gold, " about two Foot long and five Inches round. He
"faid that his Father the Sun had given it him, and " bid him, when he travelled Northward from the "Lake, he fhould, every Time he refted, ftrike this
"Wand down into the Ground, and where at the firft
"Stroke it fhould go down to the very Top, he fhould
" there build a Temple to the Sun, and fix the Seat of
" his Government. This fell out to be in the Vale of
"Cufco, where he founded that City which was Head " of this great Kingdom of Peru. Here he divided
" his Company into two Colonies or Plantations, and
"called one the Higb Cufco, and the other the Low,
" and began here to be a Law-giver to there People.
" In each of thefe were at firft a thoufand Families,
" which he caufed all to be regifter'd, with the Num-
"bers in each. This he did by Strings of feveral Co-
Vol. II. No 143.
lours, and Knots of feveral Kinds and Colours upon
"them, by which both Accounts were kept of Things
" and Times, and as much expreffed of their Minds as
" was neceffary in a Government, where neithér Letters"
"告or Money, or confequently Difpures or Avarice,
"s with their Confequences, ever entered.
"He inftituted Decurions through both thefe Colo-
"" nies' that is, one over every ten Families, another " over fifty, a third over a hundred, a fourch over five " hundred, and a fifth over a thoufand; and to "t this laft they gave the Name of Curaca, or Go"s vernor. Every Decurion was a Cenfor, a Patron, $"$ and a Judge or Arbiter in fmall Controverfies among "t thofe under his Charge. They took care that every " one cloathed themfelves, laboured and lived accor"ding to the Orders given them by the Ynca's from "their Father the Sun, among which one was, Thas " none who could work fhould be idle, more than to " reft after Labour ; and that none who could not "i work by Age, Sicknefs, or Invalidity, fhould want, " but be maintained by the others Pains. Thefe were "fo much obferved, that in the whole Empire of Periu, " and during the long Race of the Ynca Kings, no "Beggar was ever known; and no Woman ever fo " much as went to fee her Neighbours but with their "Work in their Hands, which they followed all the "Time the Vifit, lafted. Upon this I remember a "Strain of refin"d Civility among them, which was, "that when any Woman went to fee another of equal " or ordinary Birth, fhe worked at her own Work in the " other's Houfe ; but if the made a Vifit to any of the
's Palla's, which was the Name by which they called all
" the Women of the true Royal Blood, as Ynce's was " that of the Men, then they immediately defired the "Palla to give them a Piece of her own Work, and " the Vifit paffed in working for her.
"I Idlenefs fentenced by the Decurions', was punifhed " by fo many Stripes in publick, and the Difgrace was " more fenfible than the Pain. Every Colony had one "f fupreme Judge, to whom the lower Decurions remit-
"t ted great and difficult Cafes, or to whom, in fuch
"Cafes, the Criminals appealed. But every Decurion " that concealed any Crime of thofe under his Charge " above a Night and a Day, became guilty of it, and liable " to the fame Punifhment. There were Laws or Oiders " likewife againft Theft, Mutilations, Murders, Dif"obedience to Officers, and Adulteries, for every " Man was to have one lawful Wife', but had the Lí"berty of keeping other Women as he could. The " Punifhment of all Crimes was either corporal Pains " or Death, but commonly the laft, upon thefe two " Reafons which they gave; firtt, That all Crimes, "whether great or fmall, were of the fame Nature, anid "d deferved the fame Punifhment, if they were commit"t ted againft the Divine Commands, which were fent " them down from the Sun:- Next that, to punifh any "Man in his Poffeffions or Charges, and leave him "a alive, and in Strength and Liberty, was to leave an " ill Man more incenfed or neceffitated to commit new 6 Crimes.
"On the other Side, they never forfeited the Charge " or Poffeffions of a Son for his Father's Offences, but "the Judges only remonftrated to him the Guilt and "Punifhment of them for his Warning or Example. "Thefe Orders had fo great Force and Effect, that " many Times a whole Year paffed without the Execu"t tion of one Criminal. There is no Doubt, but that " which contributed much to this great Order in the "State, was the Difure of other Profeffions than what " were necefflary to Life, and the eminent Virtue of " their firtt great Hero or Legilator, which feemed to " have been intailed upon their whole Race in the " Courfe of their Reign : So as in the whole Length of " it, it is reported among them, that no true Inca was "ever found guilty or punifhed for any Crime. Thus "particular Qualities have been obferved in old Rome ' to be conftant in the fame Families for feveral hun"dred Years, as Goodnefs, Clemency, Love of the "People, in that of the Valerii; Haughtinefs, Pride,

12 L
Cruelty
"Cruelty, and Hatred of the People in that of the " Appii; which may come from the Force of Blood, "t of Education, or Example.
" It is certain, no Government was ever eftablifhed ci and continued by greater Examples of Virtue and
"Severity, nor gave ever any greater Teftimonies, than is the 1 nca's, of an excellent Intitution, by the Pro-
"greffes and Succeffes, both in the Propagation and
" Extent of Empire, in Force and Plenty, in Great" nefs and Magnificence of all publick Works, as
"Temples, Palaces, Highways, Bridges, and in all
" Provifions neceffary to the common Eafe, Safety, and
"Utility of human Life : So as feveral of the Jefuits,
" and particularly Acofta, are either fo juft or io pre-
" fuming, as to prefer the civil Conftitution of Mango
© Copac, before Lycurgus, Numa, Solon, or any other
"Lawgivers, fo celebrated in the more known Parts " of the World.
"To every Colony was affigned fuch a Compais of
" Land, whereof one Part was appropriated to the
"Sun, a fecond to the Widows, Orphans, Poor, Old,
" or maimed, a third to the peculiar Maintenance of
". every Family according to their Number, and a
" fourth to the Ynca. In this Order the whole was til-
" led, and the Harvett or Product laid up in feveral
" Granaries, out of which it was diftributed by Off-
" cers to that Purpofe, according to the feveral Ufes
" for which it was defigned, and new Seed iffued out
" at the Seafon for the new Tillage. Every Decurion,
" befides the Office of a Cenfor and Judge, had that
" likewife of a Patron or Sollicitor, for Relief of the
"Neceffities or Wants of thofe under his Charge.
"They were bound to give in to the publick Regifter,
" an Account of all that were born, and of all that
" died under their Charge. None were fuffered to
" leave the Colony or People he was born in without
"Leave, or to change the Habit commonly ufed in it
" (by fome Parts or Marks whereof thofe of each Pro-
" vince was diftinguifhed) ; none to marry out of it, any
" more than the $Y$ nca's, out of their own Blood.
"The Ynca that reigned was called Capa Inca, "which the Spaniards interpret Solo Semmor, or Only
"Lord. He ever married the firft of his Female Kin-
"dred, either Sifter, Niece or Coufin, to preferve the
"Line the pureft they could. Once in two Years he
"affembled all the unmarried Ynca"s Men above
"Twenty, and Women above Sixteen Years old, and
" there in publick married all fuch as he thought fit,
"s by giving each of their Hands one to the other.
"The fame was done among the Vulgar by the Cu -
"raca of each People. Every Family at their Time of
"Meals, eat with their Doors open, fo that all might
" fee their Temperance and Order. By thefe and fuch
" other Laws and Inftitutions, Manga Copac firt fettled
is his Government or Kingdom in the Colonies of Cuz-
"co, which were in Time multiplied into many others
" by the willing Confluence and Recourfe of many fe-
? veral People round about him, allured by the Divine
" Authority of his Orders, by the Sweetnefs and Cle-
" mency of his Reign, and by the Felicity of all that
" lived under it ; and indeed the whole Goverment of his
©, Raceof the $Y_{n c a}$ 's, was rather like that of a tender
© Father over his Children, or a juft, careful and well-
" natured Guardian over Pupils, than of a Lord or

- Commander over Slaves or Subjects. By which they
"came to be fo honoured or adored, that it was like
"Sacrilege for any common Perfon fo much as to
"touch the Ynca without his Leave, which was given
" as a Grace to thofe who ferved him well, or to new
-s Subjects that fubmitted to him. After the Extent of
"his Kingdom into great Compaffes of Territory
as round Cuzco, by voluntary Submiffion of the People,
" as to fome Evangelical rather than legal Doetrines
" or Inftitutions, Mango Copac affembled all his Cu -
"raca"s, and told them that his Father the Sun had
"commanded him to extend his Inftitutions and Orders
"c as far as he was able for the Good and Happinefs of
"Mankind; and for that purpofe, with armed Troops
to go to thofe remoter Parts that had not yet received
"them, and to reduce them to their Obfervance. That
" the Sun had commanded him to hurt or offend none
" that would fubmit to him, and thereby accept of the
"Good and Happinefs that was offered him by fuch "divine Bounty, but to diftrefs only fuch as refufed, " without killing any chat did not affail them; and then " to do it juftly in their own Defence.
"For this Defign he formed and affembled Troops " of Men armed, with offenfive, but chiefly with de-
" fenfive Weapons. He caft them into the Order of
"Decurions, in the fame Manner as he had done the "Families, to every ten Men was one Officer, "another to fifty, and another to one hundred, a fourth "to five hundred, and a fifth to a thoufand. There " was a fixth over five thoufand, and a feventh as a Ge" neral over ten thoufand, of which Number his firft "Army was compofed. With this and other fuch Ar" mies he reduced many new Territories under his " Empire, declaring to every. People he approached, the " fame Things he had done firft to thore who came " about him near the great Lake; and offering them
" the Benefit of the Arts he had taught, the Orders he " had inftituted, the Protection he had given his Sub" jects, and the Felicity they enjoyed under it. Thofe " who fubmitted were received into the fame Rights " and Enjoyments with the reft of his Subjects. Thofe " who refufed, were diftreffed and purfued by his For" ces, till they were neceffitated to accept of his Offers " and Conditions.
" He ufed no offenfive Weapons againft any till they "解tacked them, and then defenfive only at firft, till " the Danger and Slaughter of his Men grew otherwife "" unavoidable ; then he fuffered his Forces to fall upon " them and kill without Mercy, and not to fpare even "thofe that yielded themiflves after having fo long and "obftinately refifted. Thofe who fubmitted after the "f firt Threats or Diftreffes, or bloodlefs Oppofition, he "s received quickly into Grace, fuffered them to touch " his facred Perfon, made great and common Feafts " for them and his own Soldiers together for feveral "Days, and then incorporated them into the Body of " his Empire, and gave to each of them Cloaths to "wear, and Corn to fow.
"By thefe Ways and fuch heroic Virtues, and by the "Length of his Reign, he fo far extended his Domi" nions as to divide them into four Provinces, over "each whereof he appointed an Ynca to be a Viceroy, " having many Sons grown fit to command, and in "each of them eftablifhed three fupreme Councils; the " firft of Juftice, the fecond of War, and the third of " the Revenue, of each of which an Znca was likewife "Prefident; which continued ever after.
"At the End of a long and adored Reign, Mango
"Copac fell into the laft Period of his Life; upon the
"Approach whereof he called together all his Children
" and Grand-children, with his eldeft Son, to whom he
" left his Empire, and told them, that for his own
"Part, he was going to repofe himfelf with his Father " the Sun, from whom he came; that he advifed and "charged them all to go on in the Paths of Reafon " and Virtue which he had taught them, till they fol" lowed him the fame Journey ; that by this Courfe " only they would prove themfelves to be true Sons of
"the SUN, and be as fuch honoured and efteemed.
"He gave the fame Charge more efpecially and more "earneftly to the Ynea his Succeffor, and commanded
" him to govern his People according to his Example
" and the Precepts he had received from the Sun, and
" to do it always with Juftice, Mercy, Piety, Clemen-
"cy, and Care of the Poor; and when he the
"Prince fhould go in Time to reft with his Father the
"Sun, that he fhould give the fame Inftructions and
"Exhortations to his Succeffor. And this Form was
" accordingly ufed in all the Succeffions of the Race of
" the Ynca 's, which lafted 800 Years with the fame
"Order, and the greateft Felicity that could be of " any State.
"I will fay Nothing of the Greatnefs, Magnificence, " and Richnefs of their Buildings, Palaces, or Tem-
"ples, efpecially thofe of the Sun, of the Splendour ${ }^{6}$ of their Court, their Triumphs after Victories, their
"Huntings and Feafts, their military Exercifes and " Honours. But as Teftimonies of their Grandeur, "s mention only two of their Highways, whereof one ${ }^{66}$ was $500^{\circ}$ Leagues, plain and levelled through Moun${ }^{6} 6$ tains, Rocks and Vallies ; fo that a Carriage might "d drive through the whole Length without Difficulty. " Another very long and large, paved all with cut or " fquared Stone, fenced with low Walls on each Side, "s and fet with Trees, whofe Branches gave Shade, and ${ }^{66}$ the Fruits Food to all that paffed.
" I fhall end this Survey of their Government with ${ }^{6}$ one Remark upon their Religion, which is, that tho'
"s the Vulgar worthipp'd only the Sun, yet the Amanta's,
"s who were their Sages or Philolophers, taught, that
"s the Sun was only the Minifter of Pachacamac, © 6 whom they adored in the firft Place, and to whom a " great and fumptuous Temple was dedicated. This
" Word is interpreted by the Spaniards, Animador del
" Mundo, or, He that animates or enlivens the World,
${ }^{6} 6$ and feems to be yet a more refined Notion of
"s the Deity than that of the Cbinefes, who adored "s the Spirit and Soul of the World. By this Principle
* of their Religion, as all the others of their Govern-
"s ment and Policy, it muit, I think, be allowed, that
${ }^{6}$ human Nature is the fame in thefe remote, as well
${ }^{66}$ as the other more known and celebrated Parts of the © World.
" That the different Governments of it are framed ${ }^{66}$ and cultivated by as great Reaches and Strength of
${ }^{66}$ Reafon and Wifdom as any of ours, and fome of " their Frames lefs fubjeet to be fhalken by the Paffions,
* Factions, and other Corruptions, to which thofe in
"s the middle Scene of Europe and Afia have been lo " often and fo much expos'd. That the fame Caufes
ss produce every where the fame Effects; and that the
" fame Honours and Obedience are in all Places but \& Confequences or Tributes paid to the fame heroick
" Virtue or tranfcendent Genius, in what Parts foever,
" or under what Climates of the World it fortunes to " appear."
This may fatisfy the moft critical Reader, that the old Inhabitants of Peru were far enough from being Barbarians; though at the fame time it muft be confefs'd, that they were very much degenerated before they were delivered up by Providence to that fevere Correction they have received from the haughty Spaniards, under which they ftill groan, and fuffer their Slavery with infinite Grief and Pain of Mind ; neither have they forgot the Splendor of their ancient Empire, but in certain Songs fet to melancholy Tunes, deplore its Downfall and Ruin. After defcribing the capital Settlements of the Spaniards, we proceed to examine how they fpread themfelves into the remoteft Parts both of the Northern and Southern Continents, fet forth the Regulation and Dependency of their feveral Governments, compare the Value of their ancient and modern Revenues extracted from America; lay down the Manner of their working their Mines, give a true Account of the Commerce carried on amongtt their Settlements, as well as of that to Europe, and the contraband Trade.

We have likewife omitted nothing that might give the Reader intire Satisfaction as to the prefent State of Things in that Part of the World, and of the true Sources of that Feeblenefs and Decay which is inconteftably vifible in all the Spanifb Settlements, and which is gradually increafing; fo that if a Stop is not quickly put to this Declenfion by an abfolute and thorough Change of Meafures, which however is hardly to be looked for, the whole of their Power muft crumble by Degrees, at leaft in the Extremities and in the Illands, and leave thofe Countries in other Hands better difpos'd to make a right Ufe of them.
XI. In the Execution of the remaining Part of our Plan, we give the Rife, Progrefs, and prefent State of the Settlements of all the other Powers that are now fixed in that Part of the World, viz. the Portuguefe, Englik, French, Dutch, and Danes. With refpect to
the $f_{\mathrm{r}} \mathrm{rft}$, we have drawn together out of an infinite Number of Buoks in which they are fattered, the Materials that are requifite to form a fuccinct Hittory of the great Country of Brazil ; and this obliges us to enter into the Detail of the Conqueft of that Country, once made by the Dutch, a Thing of very great Importance, and yet never thoroughly treated in our Language; we have alfo fhewn, how the Recovery and Improvement of this Country became the principal Caufe of the Declenfion of the Poriuguefe Power in the Ealt-Indies ; that Nation finding it too hard for them to combat fo great a maritime Power as the Republick of Holland was become; in both Indies at once. We have alfo endeavoured to fet in a clear Light the prefent State of that Country, which is of fo great Importance, not only to its prefent Mafters, but to all the trading Nations in Europe; and though in the Courfe of the whole Work there was nothing that gave greater Trouble, yet it is hoped that it now appears in a tolerable Light; and that with refpect to the Gold and Diamond Mines efpecially, much more has been faid than will be eafily met with elfewhere, for which we are greatly indebted to the Communications received from feveral Perfons to whom we are not permitted to make any more particular Acknowledgements.
As to the Britiblb Plantations, both on the Continent and in the Inands of America, we have been almoft as copious as the Subject required, and have laboured with indefatigable Diligence to fet the prodigious Advantages derived from them, and their very high Importance to this Crown and Nation in a true Light. To fpeak freely, there is no Part of this Collection that we had fo much at Heart, or in the compiling of which we proceeded with greater Induftry, Care, and Freedom of Spirit, without having the leaft Regard to any private Intereft, or the Senfe of this or that Body of Men, who might be oblig'd or offended by our Manner of treating certain Subjects one Way or other. We were fenfible that the Interefts of the Publick ought to be dearer to us than any other Confideration whatfoever ; and we dare confidently affirm, that to the utmoft Extent of our Knowledge, and to the beft of our Skill and Judgment, thefe Subjects have been treated with the utmoft Zeal and Impartiality ; and as they have had the Honour to be commended and approved by thofe who were beft acquainted with our Plantations abroad, and thofe who have moft at Heart the promoting their Welfare here at Home; fo we look upon this as the higheft Reward, as indeed it was the only one fought by this Performance, which if at prefent or hèreafter it fhall any Way contribute to the Eafe, Security, or Benefit of thofe diftant Parts of Great Britain, for fo they ought ever to be efteemed, will afford us infinite Satisfaction.

The French Power in the West-Indies has been of late Iears the Subject of much Difcourfe; one would wifh to fay that it had been likewife the Object of much Care and Attention, which it moft certainly deferved, as it is more likely to clafh with our commercial Interefts than any other. It is for this Reafon that we have reprefented it as fully and as truly as it was poffible; that we have fhewn its Advantages and Difadvantages, the Probability there is that the former may be promoted, and the latter removed ; the Methods neceffary to be employed in both Cafes, and the Remedies that may be applied to prevent the Confequences of thofe Improvements from becoming prejudicial to our felves. In doing this, we have likewife taken Occafion to mention the Precautions that may be ufed to fecure our Settlements from running any Risk from the Vicinity of thefe ambitious, enterprizing, and dangerous Neighbours; neither have we omitted to fet in a jut Light our prefent Seperiority, that it may appear we are not in fo much Danger, either from the Power or the Capacity of our Rivals, as for Want of Circumfpection, Unanimity and Prudence in our own Conduct; and that confequently, if we do fuffer, there will be no body fo much to blame as ourfelves.

Neither have we been afraid to profefs our Senfe' of the Chimericalnefs of fome Apprehenfions, and the too great Sanguinenets of others, or of affigning our Reafons for both; whence we hope it will be fufficiently apparent, that nothing but unexpected and unexampled Vigour and Vigilance on their Side, and inexcufable Indolence and Inattention on ours, can poffibly caufe any great Alteration in the prefent Situation of Things between the two Nations in that Part of the World during our Times. All which is delivered, not with the leaft Intention to render us carelefs and fecure, but to keep up the Spirits of our People, and to introduce and maintain a right Opinion of our own Strength and Capacity of maintaining and extending our Commerce, notwithflanding the Growth of that of France, and the Pains taken to improve and encourage it. This we conceive to be a Spirit that ought to be excited in our Plantations, as of all other the moll capable to enliven their Hopes, invigorate their Conduct, and give Suiccefs to their Endeavours.

The Poffeffions of the Dutch in the Wef Indies, are in themfelves far enough from being confiderable, and yet through the Induiftry of their Inhabitants, and that Wirdom and Dexterity with which they manage their clandeftine Trade with the Spaniards, they are of no fmall Confequence, as we have largely fhewn. It is indeed true, that fince the Writing of that Part, we have been affured from very good Hands, that the Colony of Surinam, which we gave them in Exchange for their Settlements at New York, is very much improved, and is improving daily; nor can there be much Doubt of this, if we may believe what the French Gazettes have told us of the Value of the Prizes taken by their Privateers in that fhort Space that actual Holtilities were exercifed between the Subjects of the two Powers, which according to thofe Accounts a mounted to between two and three hundred thoufand Pounds; and this too in the actual Commodities and Manufactures of that Colony. This is the more furprizing, becaufe there has been a general Opinion, though 1 doubt not very well grounded, that the. Dutch were not very expert in making Settlements in that Part of the World; however it muft not be concealed, that the modern Improvements of Surinam are faid to have been in a great Meafure owing to the Planters receiving great Affittance from the Englifh and French, that from Cayenne and the Leward Inands have come and fettled amongtt them, and have taught them new Methods of manuring their Lands, of raifing Sugar, and other valuable Commodities.

The Court of Copenbagen has for two Reigns applied it Felf with fo much Attention and Diligence to commercial Affairs, that we cannot at all wonder at the Reporss which are daily fpread of the Danes baving an Intention to extend their Commerce in the Weft Indies; but confidering that the fmall Illand of St. Thomas is all that they poffeis there, and is in itfelf incapable of being render'd much more beneficial than hitherto it has been, we cannot eafily apprehend, how any Pains that can be taken about it, will be brought to yield any adequate Returns, unlefs there fhould be fome Truth in what has been likewife intimated from Denmark, that there is a Scheme on Foot for reviving their African Commerce, with a View of tranfporting their Negroes to the Inle of St. Thomas, and fupplying from thence the Spanif/ Plantations. Time will fhew whether this Project has any Foundation, and alfo whether it is poffible for the Danish Government to bring it to bear.
XII. The Second Book confifts of a Defcription of the Nortbern Parts of the Globe, and of Travels thro, moft of the Countries in Europe. We have handled the firt Part of the Subject very largely, and that chiefly for this'Reafon, becaufe it had been very much overlooked and neglected by others. We have allo taken the Opportunity of giving very compleat Hiftories of the A.trempts made for difcovering the Northcalt and the North-weft Paffages. With refpect to the firft, it was our Misfortune not to receive any certain Intelligence with refpeet to the Rufian Difcoveries, till long after that Part of the Work was finifhed and pub-
lifhed; but we have endeavoured to fupply that Defect, as far as poffible, in the laft Section, as, being willing to run the Hazard of fome Impropriety, rather than bury in Oblivion thofe curious and important Paffages that came fo lately to our Notice.
In reference to the North-weft Paffage again, we were ftill more unlucky, as not having an Opportunity to fee the Account of the laft Voyage, made with a View to that Difcovery, till many Mionths afier that Hiftory had been in the Hands of the Publick. But it give's us great Pleafure to find, that the Event of this laft Voyage is fo far from deftroying the Credibility of what we have advanced upon that Head, that it agrees in all Refpects with what we have delivered, and adds much greater Strength to our Conjectures than we could well have hoped for or expected. This too has encouraged us to add fome farther Thoughts upon that important Difcovery in the laif Section, which we flatter ourfelves will not be difapproved by our Readers, and which, we have little Doubt, will be alfo confirmed by the Event of the next Voyage, when-ever it fhall be undertaken, which for the Honour and Welfare of our Country, we hope will be very foon.

As to the Voyages on the Coafts of Norraay, Lapland, and Muscory, the Accounts of Sweden, Denmark, and Poland, and the Remarks upon them, they will be found to give as much Light into the prefent State and Condition of the Countries to which they relate, as any thing that could be extracted from what has been publifhed about them; and if any who perufe them think that we have carried Matters a little too far, with refpect to that very extenfive View which we have given of the commercial Improvements in the North, all the Favour we defire is, that they will furpend a decifive Judgment for fome Time, and we fhall theri' boch readily and patiently fubmit to any Cenfure that fhall be grounded in Reafon.
Of the Travels thro' the middle Parts of Europe, particularly the United Provinces, the reft of the Low Countries, Germany, Italy, Switzerland, \&cc. we can only fay, that they are fuch as were poffeffed of the publick Eff teem long before they enter'd into this Collection; and as we have given them very faithfully, and with no other Corrections than what relate to their Stile, and fome Part of their Diipofition with a View to prevent tedious and needlefs Repetitions, we have no Caufe to fear any Strictures upon our Conduct in relation to them.
The fame Care and Fidelity was fhewn in the other Travels through France, Spain, \&cc. and fome Merit we affume from recalling to the Eye of the World, the Travels of Dr. Edrward Brown through Hungary, Auftria, and other Countries, even to the very Frontiers of Europe, which, without Queftion, are in all Refpects as worthy of Attention and Credit as any Thing of their Kind in our Language. What Additions we have made, more efpecially in regard to the prefent State of France, and the reigning Syttem of Policy in that Kingdom, will be found very agreeable to Truth, and not at all unworthy of the Reader's Notice.
The great End of this Sort of Reading, is the very fame that is fought by actual Travelling, that is to fay, the fhaking off thofe narrow Notions; and, if I may be allowed fo familiar an Expreffion, thofe clownifh Conceptions which fuch People have, as have never fuffered either their Bodies or their Minds to make any Excurfions beyond the Limits of their own Countries, or to acquire a general Idea of the principal Nations about us, as well as fome tolerable Notions of the Countries they inhabit ; the Manners, Cuftoms and Policies of the one, and the Climate, Soil and Produce of the other.

Such Books therefore as were moft likely to anfwer thefe Intentions, were fitteft for our Purpore, and were therefore taken into this Collection in Preference to fuch as were written perhaps in a more elevated Stile, and were fuller of that Kind of curious Learning which renders them the Delight of Antiquaries and Virtuof ; not that thefe are not alfo valuable in their Kind, but that they are lefs fit for general Reading, lefs ufeful to the

Bulk of Mankind, and lefs likely to invite the Perufal, and then to fix the Attention of thofe, who, it is probable, will reap the mof Benefit from this Kind of Reading, and who may afterwards, if they think fit, perufe thofe more refined Travels with much greater Satisfaction and Pleafure.
XIII. The third Book, and, as Things fand at prefent, the laft in this Collection, takes in the entire Defcription of Afie. In order to effect this, we have made ufe of thofe Writers that have the higheft Character in Point of Accuracy, Sincerity and Abilities ; and, wherever the Subject required it, or the Helps received from later Writers put it abfolutely in our Power, we have improved, explained, and continued their Performances down to the prefent Times. Thus in Reference to the Cuftoms, Manners, Laws, Policy, and prefent Condition of the Turks, we have augmented the Author from whom our principal Collections were made very confiderably, and this for two Reafons, firt, becaufe it was impoffible that in the fhort Space of Time which a Man fpends in his Travels, or even tho' he refides a little longer in a Place, he fhould enter deeply into the Concerns of a great Nation ; and fecondly, becaufe at the Time Mr. Thevenot travelled through the Turkija Empire, the Oltoman Power was far greater than it is at prefent. We have therefore to his Remarks, joined thofe of a moft worthy and intelligent Turkibh Merchant, who refided a long Time in that Country, and many Years at Conftantinople ; and we have alfo, after proving that the Opinion of the Declenfion of the Ottoman Force is well founded, pointed out the real Caufes of that Decay, and affigned the Reafons which render it very probable this Empire is fick of a mortal Difeafe, from whence it is fcarce poffible it fhould recover.

The Travels of the Reverend and learned Mr. Maundrell through the Holy Land are fuperior to Correction, and all we could do was to bring them within proper Bounds, fo as to fuit with our Defign; in order to which, we have done little more than was neceflary to reduce the Copioufnefs of the Stile, that we might bring the Matters of Fact clofer to each other.

The Travels through Perfia, and the very full Defcription of that extenfive Empire, was drawn from feveral Authors, but the beft Parts of it from the incomparable Writings of the late Sir Fobn Cberdin, the Iaft French Edition of whofe Travels is certainly one of the beft Books of its Kind that ever was publifhed. The fuccinct Hiftory we have given of that Empire, was in fome Meafure without our Bounds, and ought to be confidered as a Prefent made to the Publick, not the lefs valuable for being voluntary. It happened that while this Part of the Work was in the Prels, the famous Sbab Nadir, better known by his old Name of Thamas Kouli Kan, was murdered, and thereby a new Revolution brought about in that Country. This excited the Curiofity, and awaked the Attention of the Publick, we were willing therefore to gratify the one, and do our utmoft to fatisfy the other. At the fame Time we did this, we afforded a Specimen of the Poffibility of bringing a modern Hiftory, even for a long Series of Time, and fruitful of great Events, within a very moderate Compafs. In this, and in the other Parts of the Collection relating to thefe oriental Regions, we have not failed to keep in View our primitive Purpofe, of giving, from the beft Materials we could obtain, an Account of their Commerce; and if this is not altogether fo accurate or fo ample as we could wifh, it cannot but prove acceptable, fince for the moft Part it is entirely new, at leaft in regard to our Language, and the Fruits of thofe generous Communications which the Concern we expreffed for Things of this Nature, drew from feveral Perfons of as great Candour and defty, as of Knowledge and Experience.

The Defcription, the Hiftory and Trade of the Eaft Indies, and more efpecially of the Mogul Empire, having been explained at large in the preceding Volume, there was no need of our repeating any Thing here, which is the Reafon of our paffing directly to thofe

Travels that lead us to the great Empire of Cbina. Yet not fo directly, but that we take the vaft Countries between Ruflia and Cbina in our Way, thofe Countries which have been hitherto the leaft known of any in Afa, except the North Eaft Regions within the Artick Circle, and which however deferve to be as well known as any, notwithftanding thofe Reproaches of Stupidity and Parbarity which the Nations that inhabit them lie under, and which perhaps arife full as much from our own Prejudices as from their Ignorance.
The Defcription of thefe Countries we owe to the indefatigable Pains of his Excellency 1 sbrant Ides, Embaffador from the late Czar Peter the Great, in the Beginning of his Reign, to that famous Cbinefe Emperor, equally remarkable for the great Length of his Reign, the Equity and Moderation of his Temper, and his Contempt of thofe invariable Rules the Cbinefe Policy prefcribes, even to their Emperors, by which the moft abfolute Sovereigns are kept, as it were, in Chains. As the Account of Cbina by that illuftrious Traveller is very fhort, he, and we following his Example, have fubjoined an ample Defcription of Cbina by a Native; and have alfo interfperfed throughout the Whole, fuch explanatory Remarks as were either communicated to us, amongft which we acknowledge that excellent Differtation upon the making of Porcelain, or that we had an Opportunity of collecting from other Writers. We have alfo given many curious and entertaining Accounts from the Journal of the Sieur du Lange, whe refided for a long Time in Cbina with the Character of Envoy from the Court of Petersburgh, not that fhort and meagre Journal which had been formerly publifhed in Englifb by way of Appendix to the prefent State of Rullia, but from the Author's own original Memoirs, in which we have a far better Account of the interior and exterior Commerce of that Empire, than are to be met with elfewhere, the great Collection of Father Dubalde not excepted.
The Defcription, Hiftory and Difcourfes relative to the Peninfula of Corea are entirely new, and are not to be met with either in our own, or in any other Language, fo that it is hoped they will be found as pleafant and entertaining as they are ufeful and important; more efpecially as they tend to excite a Spirit of making new Difcoveries for promoting Navigation and improving our Commerce. The laft Section, in which the Reader has an Account of the lateft Ruffan Difcoveries, compleats the Hiftory of Afia, and of the whole trading World.
It is true, that in preparing it, we trefpaffed not a little on the Patience of the Publick; but when it is confidered from how great a Diftance Part of the Materials were to be expected, and how much Care and Caution were requifite in difpofing and digefting them, we fhall ftand in fome degree excufed; more efpecially, if now, when they are all put together, they fhould afford the Generality of the World a Variety of new Lights in reference to the Poffibility of opening frefh Channels of Trade, and thereby in a great Meafure changing the whole Commercial Syftem.

There are indeed fome who think this Point drive rather too far, and that we have carried our Refpects for Trade beyond its due Bounds. But if thefe Criticks imagine that this proceeds from a particular or overweening Fondnefs for a Favourite Subject, they are at leaft in that Circumftance very much miftaken. In the Dedication prefixed to the firt Volume of this Work, we have at large affigned the Reafons why Commerce ought to he confidered in the Light that we have placed it. We have there fhewn, that it procures moft of the real and fubtantial Bleffings which Mankind can either hope for or enjoy ; and that the only Way to avert the Evils and Miferies to which we are expofed, is to cultivate and promote it. As there is in every Man a Spark of Ambition, there is and muft be the fame in Nations. Now this natural Defire of Greatnefs and Fame, can be gratified only by an inceffant Application to War, or by a conftant and uniform Regard to Commerce. The former may indeed, though it feldom does, render a
Vol. II. No 143.

## CONGLUSION.

Nation rich and powerful by the Spoil of others ; but then it carries the Seeds of Deftruction in the very Principles of its Greatnefs; for where Military Power is the Source of Grandeur, there muft be perpetual Hazards, not only as to the Iffue of Foreign Contefts, but from the frequent Convulfions of intefline Troubles, as not only Reafon teaches, but Experience vouches. Moft of the ancient Empires were fubverted by this. Means. That of the Greeks lafted but for a fingle Life; the great Captains of Alexander's Army thought they had the fame Title to be Kings, that he had to rule over Kings. The Roman Hiftory is, at the Bottom, no other than a Record of foreign Expeditions, to gratify the Thirft of Dominion, and of Civil Wars arifing from the fame Caufe. But an Application to Commerce cannot be charged, at leaft not juftly, with any of thefe Inconveniences. We may trade with People without fub duing them, and we may become potent, rich and happy, from the Effects of our Induftry, without injuring; but, on the contrary, exercifing our Beneficence towards our Fellow Creatures. It is indeed true, that fome, or to fpeak the whole Truth, moft trading Nations, have purfued a contrary Conduct; but as in this they defert the Principle that we recommend, fo it affords no rea Objection to what we have advanced, nor are we under any Neceffity of defending them. Factories are very neceffary, and in diftant Countries fo are Fortreffes; but the Flumour of fubduing thofe with whom we trade by Force is rarely beneficial. In Countries thinly inhabited, or by Savages, Plantations may be made agreeable to the Law of Nature; and there will be found equally honourable and profitable to the Nations that make them. By a due Diftribution therefore of Factories, Fortreffes, and Plantations, and by a juft Regard to Maritime Power, a Nation wifely governed may preferve a Correfpondence with every Part of the Globe, withour Injury to the Subjects of other Powers, and without Danger to their own Independance; which Plan comes the neareft to political Perfection of any that has been laid down. Providence has difpofed large Chains of Mountains, and other natural Fortifications, to check warlike Ambition, but the Seas are every where open to promote Commerce between the moft diftant Countries; and navigable Rivers, or artifcial Canals, ferve in civilized Nations, to nourifh and
maintain Trade amongft themfelves, as the Notion of communicating with each other, and thereby reciprocally removing Want, is the very Source of Civility itfelf. Conquerors we may be, and Barbarians flill, but a Race of barbarous Traders is at once a Seollcifm in Language, and an Abfurdity in Nature.

Thus, by giving the Reader firt a fuccinct Detail of the Scheme, the End and the Aim of this Work, and by proceeding afrerwards to an exprefs Enumeration of its feveral Parts, and exhibiting their Relation to and Connection with each other, we have put it in his Power to judge how far we have executed what was originally propofed and promifed, and that too within the Bounds which were affigned it by the Proprietors Stipulations with the Publick. He will alfo fee what the peculiar Advantages are which arife from the very Nature of this Collection, and from the known Characters of the feveral Pieces of which it is in a great Meafure compoled, he will farther enter into, and it is hoped, will at the fame Time approve, the Reafons from which fuch Pieces as are of dubious Authority, contain Matters of mere Amufement, are filled up with extravagant and uninftructive Adventures, and have nothing to recommend them but Livelinefs of Thought and Vivacity of Stile, have been rejected; to which we may add, that he will be alfo fenfible of the great Ufefulnefs of the Introduction, in which the Principles of thofe Sciences, fome Tincture of which was abfolutely neceffary, to the underftanding both the Hiftorical and Argumentative Part, of this large Collection, are laid down with fuch Plainnefs and Peripicuity, as to render them obvious to every Underftanding.

There Confiderations, as they were of continual Weight with us in the compiling, difpofing, and adjufting that great Variety of Treatifes which in Whole or in Part have been admitted into this Performance, it was equally reafonable and requifite they fhould be brought to the View of every Perufer; which being done, there remains nothing farther but to wifh the great Purpofes that have been honeftly purfued in the Execution of this Defign, may be fucceefsfully promoted thereby, and that the Publick will afford a kind Reception to Labours that have been moft fleadily, as as well as moft fincerely, dedicated to their Service.

# A <br> GENERALINDEX 

## OFTHE

Kingdoms, Countries, Rivers, Cities, Fortreffes, $\mathscr{O}^{\circ} c$. Together with the moft remarkable Proper Names that occur in both Volumes of this Work.
N. B. For the Sake of Brevity, c. Alands for Cape, f. for Fort, h. for Hill, ill. for Illand, Intr. for Introduction, and the Numerals that follow fand for the Pages therein, 1. for Lake, m. for Mountain, p. for Province, r. for River, t. for Town.

[^1]:     HERE are very few Books of Travels, that have maintained their Travels, that have maintained their
    Credit fo well as thefe of which we propofe in this and the following propofe in this and the following
    Sections to give a fuccinct Abridgement. Mr. Milfon was a Gentleman of great Reading and general Knowledge, which recommended him to the Favour and Protection of the old Duke of Ormond, who committed to his Care his Grandfon, the prefent Earl of Arran. He travelled alfo with feveral other Noblemen and Gentlemen, which gave him an Opportunity of examining very attentively, the Places through which he pafs?d, and of which he has given us
