# P R E F A C E. 

HE following Volume, as it makes a Part of this great Work, the Reader will find to be properly divided in refpect to Books, Chapters, and Sections; but here we propofe to confider it in another Light, and according to that natural Way of Divifion arifing from the different Subjects that are treated in it. In the Beginning, more efpecially, we have largely confider'd the Nature of Settlements or Plantations; in the Middle Part of the Book we have fhewn from Examples, the Utility of Travelling through all Parts of the habitable World ; and we have elfewhere difcourfed of the great Importance of new Difcoveries, and the Advantages which a Trading Nation may'derive from the opening frefh Channels of Communication with the Inhabitants of diftant Countries, and confequently of difpofing of their Commodities and Manufactures, in Places, where, perhaps, they were never feen or heard of before. In this Place we fhall very fuccinctly mention fome of the Capital Ufes that may refult from the Manner in which we have treated thefe feveral Branches of our Subject, and refer the inquifitive Perufer, for a more copious and circumftantial View of the Difpofition and Connection of the feveral Parts of this Defign, to the Conclufion, where we have Reafon to hope they are fo ftated, as to give him entire Satisfaction.
"The great Point with refpect to Plantations, is to fhew, that the Riches, Power, and Happinefs of the Mother-Country, depends, in a great Meafure, upon them ; and that, on the other Hand, this Connection is fo far from being gricvous, burthenfome, or prejudicial to the Colonies, that, on the contrary, their Peace, Welfare, and Profperity, are dependant upon this, and upon this only, fo that the Benefits and Advantages of Settlements and their Mother-Countries are always reciprocal ; whence arifes the Tie of mutual Obligation, that renders it equally unnatural for one to regret the Share fhe pays out of the Profit of her Labours, or the other to repine at the Demands that are now and then made for Affiftance and Protection. It is a Thing of the highef Confequence, that thefe Notions fhould be thoroughly defeminated, and all the Points before infifted on univerfally underfood. The fending People abroad to fettle for a Time in a Plantation, ought to be confidered in the Light of publick Service, becaufe fo in Fact it is, fince we have proved in the following Pages, that every Planter abroad, finds Employment for feveral Men, perhaps for feveral Families at Home ; there cannot therefore be any thing more unjuft, than to give a Preference of any Kind to thofe whom he maintains, before him who maintains them. There is alfo nothing more abfurd, than to fancy that well regulated Colonies tend to depopulate their Mother-Countries ; which is fo far from being true, that the more populous any Plantations are, the better peopled their Mother-Countries muft be ; for the more flourithing the Settlement, the greater Confumption of Manufactures and Home Commodities in that Settlement: Now thefe cannot be confumed unlefs they are furnifhed, and they cannot be furnifhed without a Multitude of Hands ; but Employment will always procure thefe, and confequently People in a Plantation, like Water in the Sucker of a Pump, fets the Machine in Motion, and by a. Kind of political Attraction, produces that Circulation of Induftry which is the Health of the Conftitution. Lafly, Though all Trade is advantageous, the Trade between Mother-Countries and their Plantations is of all others moft advantageous, becaufe where-ever the Profit falls, the fame People reap it, and little or nothing is diverted into foreign Channels. The large Hiftory enfuing may be confidered as a practical Commentary upon this Text, in which, by innumerable Infances it is proved, that where there Notions are adverted to and followed, Mother-Countries and their Plantations thrive equally, and that both pine, dwindle and decay, where thefe Maxims are either neglected or defpifed.

In Regard to Travels by Land, the Benefits refulting from them are partly in common, and partly diftinct from thofe which arife from Voyages ; we fhall infift here only upon the latter. We derive from well-written Relations of thefe, Accounts that may be relied on as to the Natural Hiftory of Countries, their Climate, Soil and Produce, whether Vegetables, Animals, or Minerals, and are thereby enabled to form fome Kind of Notion of thofe immenfe Treafures, which with a wife as well as bountiful Hand, the great Author of the World has diftributed through all its Parts. We are next informed concerning

## P R E F A C E.

the State of our own Species in every Country, more or lefs diftant, or however fituated in refpect to our own, their Maniners, Cuftoms, Religion, Government, Laws, Forces, Revenues, and Trade. Befides all this, we learn the Progrefs of Art in the Improvement of Nature, which is a Point of higher Confequence than is commonly imagined ; fince upon a frict Review it will be found, that even amongh the moft uncouth and barbarous Nations, there are many ingenious Inventions to be met with, fome taken from Accident, but moft dictated by Neceffity, which in neither Way have ever occurred, even to the mof lively Imaginations, amongft People more civilized. As for Inftance, The neat Cloaths of Skins, Hunting and Fifhing Tackle without Iron, and Boats that cannot fink among the Greenlanders; their Alying Prows amongtt the Inhabitants of the Marian Iflands; their Feather Works amongft the ancient Mexicans, \&c. By reading as well as feeing thefe Things, the human Mind is vaftly enlarged and improved; we become weaned and eftranged from thofe little, narrow, and childifh Notions which are the Effects of a fordid Education, and by which even the brighteft Genius is held in Chains. Neither is this the only Benefit, for the Extenfion of true Science naturally heightens and imprọves our moral Notions, teaches us Affability, Kindnefs and Commiferation for Strangers, and puts us in this refpect upon executing the Fundamental Maxim of the Chriftian Law, by doing unto others as we would wifh to be doneoby in their Circumftances. It teaches us Wifdom alfo, enables us to find out Means for meliorating our own Soil and Climate, and introducing as well foreign Fruits and Timber, as Animals ; and by Labour prudently directed, making them our own. In the fame Manner we transfer their Arts alfo, which though invented in particular Countries, and indifpenfably neceffary in fome, are, generally fpeaking, ufeful and convenient in all. Whatever Books of Travels therefore treat of thefe Matters moft copioufly, circumftantially, and correctly, deferve moft to be read, and beft to be preferved; which Rule we have ftudied to follow for the Reader's Emolument, as well as in Difcharge of our own Duty.

In Reference to new Difcoveries, and opening frefh Channels of Trade, we have fpared no Pains; nor have been deterred by any Hazards. We have confidered every Quarter of the Globe, and after enquiring how far it is already known and vifited, have pointed out how much farther and better it might be known, and what Advantages might probably be expected from thence. We have not ftood in Awe, upon thefe 'Occafions, either of the Cenfures of hafty Criticks, of the Raillery of fuch as defpife all Projects but thofe of Pleafure, or of the Refentment of Men who fancy that fuch Difcoveries would be an Intrufion upon their Rights, though they never attempt to turn thefe, fo much, as to their own Advantage. What we have offered, has proceeded from a right Intention, from a Defire of employing the Poor, of affording fuitable Rewards to enterprizing Minds; and in a Word, of contributing, fo far as this Opportunity put it. in our Power, to the Benefit of Society, which is a Tribute due from every Member of it, for the Protection, and other Bleffings that he enjoys in that Capacity. We have in every Inftance had Reafon for our Guide at leaft, and fometimes alfo Experience. We have propofed the undertaking of nothing without fhewing that there were probable Grounds of finding the Undertaking both beneficial and practicable. We have fudied to be as clear in the one, and as certain in the other, as it was poffible; neither have we pretended to dictate, but have contented ourfelves with propounding fairly what appeared to us feafible. To this we were chiefly encouraged by obferving, that the fame noble and generous Spirit, which animated our Anceftors not only to attempt, but to perform fo many and fo great Actions, of which we feel the Benefit, began to revive in the prefent Age for our own Advantage, as we hope, as well as for that of our Pofterity. What was in our Power we have done to cherifh and keep alive this glorious Flame, and to enable it to mount as high in prefent as in paft Times; and if in doing this we have fometimes digreffed with fome degree of Acrimony into expofing the oppofite Humour of preferring Indolence and Pleafure to Activity and Induftry, we hope the Warmth of our Zeal will at leaft excufe that of our Language. It is our Comfort however, that if it does not, it can offend only the Idle and Taftelefs, whom, to fay the Truth, we never had a Thought to pleafe. They muft look for a Library of this Kind elfewhere, for this is confecrated entirely to the Service of ingenious and intelligent Readers, who feek Improvement and Inftruction, and have no Notion of being entertained at the Expence of their Time and their Underftandings.

This we flatter ourfelves will be found a fair Reprefentation of the principal Matters that are to be met with within the Compafs of this Volume ; and having faid this, we have nothing farther to add, than that we heartily wifh the Perufal of it may, in fome Meafure, anfwer our Aim, and contribute to diffufe that publick Spirit which teaches Men not only to wifh well to the World in general, and to their own Country in particular, but to exprefs the Sincerity of their Wifhes in their Studies, their Difcourfes, and their Actions. We fhall then be amply rewarded for all the Anxiety and Labour with which the atchieving fo great a Work has been attended, and fhall chearfully leave it as a Monument to Pofterity, that we have not been idle in our Generation, or unworthy of the Examples that have been fet us in this Kind of Writing, by the great Men in the laft Age; in our own, and in other Countries.

# THE <br> <br> Table of CONTENTS 

 <br> <br> Table of CONTENTS}

OFTHE

SECOND VOLUME.

## B OOK. I.

## An Account of the Circum-Navigators of the Globe, and of the Dijcoveries of the Eaft and Weft, and Weft-Indies.

## C H A P TER III.

Comprebending the Difcovery, Settlement and Commerce of the West-Indies.

## SECTION I.

O$F$ the Importance of the new difcovered Continent of America, the Nature of that Difcovery, the Felicities attending it, the Advantages derived from thence to the Art of Navigation, and the principal Points to be treated of in this Chapter.

> SECT. II.

The firt Voyage of Cbriftopber Columbus, in which he difcovered the Lucayan Iflands, and afterwards Cuba and Hippaniola, which opened a Paffage from Europe to America, with his Return to Spain, and Reception by their Catholick Majefties.
S E C T. III.

The fecond Voyage of the Admiral Don Cbrifopher Columbus to the Weft Indies, including an Account of all the Difcoveries made by him in that Voyage.

> S E C T. IV.

The third Voyage of Don Chrifopter Columbuis to the Weft Indies, in which he firft faw the Continent of America, including the Troubles to which he was expofed, and his being fent home in Irons.
S E C T. V.

27

The fourth Voyage of the Admiral Don Cbriftopher Columbus his Difcoveries on the Continent, and of the Iflands in America; with an Account of his Return from that Voyage to Spain, and his Deceafe.

> S E C T. VI.

The Hiftory of the feveral Difcoveries, Settlements and Conquefts made by the Spaniards in the Wef-Indies, after the Death of the Admiral Don Cbrifopher Columbus, to the Expedition of Ferdinand, or Hernan Cortes.

## S E C T. VII.

The Expedition of Hernan Cortes for the Reduc-
tion of Nerw-Spain, from the Time of his being appointed to that Command; unto his being obliged to return to the Ifland of Cozumel. 63

## S E C T. VIII.

The Progrefs of this Expedition from the Time of the Spaniards embarking for Nerw Spain, to the firt Meffage fent by Cortes to Montezuma, Emperor of Mexico.

70

## S E C T. IX.

The Continuation of Hernan Cortes's Expedition ; his Alliances with feveral Indian Nations; his Succefs in quelling various Seditions in his own Army, and his Preparation for his March to Mexico, by burning his whole Fleet.

ni/b Nation. Interfperfed with fome Remarks by another Hand.

694

## S E C T. II.

Travels through Portugal and Spain, with a diftinct Defcription of the principal Cities in both Kingdoms; particularly Lisbon, Coimbra, Porto, and Braga in the former: Madrid, Valentia,

## Table of Contents.

Alicant, \&cc. in the latter: With a curious and correct Detail of the Curiofities in the Efcurial, and a fuccince Defcription of the other royal Palaces of their Catholick Majefties,

## S E C T. III.

The Travels of Pbilip Skippon, Eiq; afterwards Sir Pbilip Skippon, and the Reverend Mr. Fobon Ray, through the beft Part of the Kingdom of France; interfperfed with a great Variety of

Hiftorical, Political, Philofophical and Mechage nical Remarks and Obfervations.

## SECT. IV.

Travels of Dr. Yobn Nortbleigh through France; interfperfed with Hiftorical, Political, and Medical Obliervations, made with great Care and Circumfpection in two different Journies through that Kingdom; the laft of which was compleated in the Year 1702 , and the whole reviled by the Author a little before his Death.

## CHAPTER

Comprehending Iravels through the remotef Parts of Germany, Bohemia, Moravia, Hungary, ${ }^{\circ} \mathrm{O}$ c. to the very Frontiers of Europe upon that Side; interfperfed with the Hiftory of Mines, Salt-Works, Fiberies, and other curious Particulars.

## S E C T. I.

AVoyage from England to Holland, with a Journey from thence by Land through the Electorates of Cologne, Treves and Mentz, the Lower and Upper Palatinate, Bavaria and Aufria, to Vienna, from thence through Moravia, Bobemia and Saxony, to Hamburgh; with many judicious and ufeful Obfervations, by Dr. Edreard Brown.

741

## S E C T. II。

A Defcription of the noble Kingdom of Hungary, in which its various Prerogatives, and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Difpofition of the People, their Language, Manners, and Cuftoms, are, from the Knowledge of the Writers, clearly and copioufly fet forth ; interfperfed with a Variety of Geogra-

> phical, Hiftorical, Phyfical, Political, and Literary Remarks upon various Subjects:
> 759

## S E CT. III.

Travels through Hungary into Theffaly; a Defcription of the City of Larifla, and of the Grand Signior's Court there; with other curious Particulars; together with a Defcription of other Parts of Hlungary, more efpecially of the Gold Mines ; and fome Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the Houfe of AuJria.

765
APPENDIX to the former Section.
A Journey from Vienna to Venice by Land; with a diftinct Account of the Quick-Silver Mines in Friuli, including the Author's Obfervations in his Paffage thro' Styria, Carintbia and Carniola. $7^{81}$

## B O O K III.

Voyages to, and Travels through the Dominions of the Grand Signior, and through the other Empires, Kingdoms and States in Asia; with curious and copious Accounts of fuch Parts of that great Continent as are leaft known.

## CHAPTERI.

Voyages through the Iflands of the Archipelago: Travels tbrough moft of the Provinces under the Dominion of the Grand Signior ; with a full Account of the prefent State, Forces, Revenue, Commerce, \&cc. of the Turks.

## S E C T. I.

TTHE Voyages and Travels of the celebrated Mr. Fobn Thervenot from Italy to Conftantinople, including a very curious and exact Defcription of the feveral Places he touched at in his Paffage; of the feveral Cities he vifited upon the Coafts, and a moft exact View of Conftantinople at the Time he vifited it: Interfperfed with a great Varicty of Hiftorical and Political Remarks, equally inftructive and entertaining。

## SECT. II.

790
Coneaining an Account of the Cuftoms and Manners of the Turks; their Learning and Religion;
the Form of their Government ; their Forces by Sea and Land; as alfo an Account of the Chriftians and Jeres inhabiting the Countries that are fubject to the Grand Signior.

805

## S E C T. III.

An Account of feveral of the moft remarkable Cities in Afa; of various Iflands in the Arcbipelago, and of Things moft obfervable in them, both with refpect to their ancient and prefent Condition; with Remarks Hiftorical, Phyfical and Geographical. 822

S E C T.

## Table of CONTENT.

S E CT. IV
Page The Journey of the Reverend Mr. Henry Maundrell from Aleppo to Jerufalem, containing a curious and accurate Defrription of the Holy Land and

City; interfperfed throughout with great Va riety, as well of Philological, Phyfical and Philofophical, as Hiftorical and Critical Remarks.
$8_{4}$ I

## C H A P T ER II.

Containing Travels through the Empire of Persia, and the Provinces depending thereon; with a large Account of their Climate, Soil and Produce; the Confitution of the Empire, and Nature of the Shah's Government; the Laws, Manners, Religion, Commerce, Diverfons, \&c. not only of the Native Perfians, but of the feveral Nations living in their Country and Subject to the Shah; with a brief Account of the late Revolutions in that Empire.

## S E C T. I.

THE Travels of Sir Fobn Cbardin by the Way of the Black Sea through the Countries of Circaffia, Mingrelia, the Region of the Abcas; Georgia, Armenia and Media into Perfia proper; with a very curious and accurate Account, not only of the Countries through which he travelled, but of the Manners and Cuftoms, Religion and Government, Commerce and Inclinations of the feveral Nations that inhabit them; Relations fo much the more Curious, as thefe Countries, and the People dwelling in them, had not been tolerably defcribed before by any Author.

862

## S E C T. II.

A copious and circumftantial Defcription of the great Empire of Perfia; its Situation, Extent, Diftribution of its Provinces, Climate, Rivers, Seas, Soil and Produce, and the chief Cities throughout the Country, fo as to afford a perfect Idea of its Condition in paft and prefent Times.

## S E C T. III.

Of the Difpofition and Temper of the Perfians; their Perfons, Habits, Manner of Living; their

Artificers and Mechanicks ; the Refpect paid to Merchants; the Method in which their Inland Trade is carried on; the paft and prefent State of the Englifb Commerce, and other Particulars; together with fome curious Obfervations on the Nature of the Silk Trade, and a Computation of the annual Balance in favour of Perfia.

## S E C T. IV.

Containing an Account of the Government and Conftitution of Perfia; the Nature of the Shab's Power ; the Diftribution of Civil, Ecclefiaftical and Military Offices; the interior Policy of the Empire ; the regular Forces kept up there, both Horfe and. Foot ; and the Nature and Amount of the publick Revenues. 897

## S E C T. V.

A fuccinct View of the Perfian Hiftory, from the earlieft Accounts, down to the prefent Time, in which is contained, a concife Reprefentation of the feveral remarkable Revolutions in that Empire, Ancient and Modern; the Conquefts thereof by feveral Nations; and the Succeffion of their refpective Monarchs, fo far as is neceffary to illuftrate what has been delivered in the foregoing Sections.

907

## C H A P TER III.

A Defcription of the North-Eaf Parts of Asia, and the extenfive Empire of China, with the Countries depending thereon, and the Manners and Cuftoms of the feveral Nations that inbabit them.

## S E C T. I.

THE Travels of his Excellency E. Ysbrants Ides, Ambaffador from Peter the Great to the Emperor of Cbina, through Great Uftiga, Siriana, Permia, Siberia, Daour, \&c. to the Frontiers of Cbina, containing an exact Defcription of the Extent and Limits of thofe Countries; the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet, daily Occupations, $\mathcal{E V}^{2}$.

918

## S E C T. II.

Travels through the Countries of the Mongul Tartars lying between the Rufian and Cbinefe Empires s the Paffage through the famous Wall, and from thence through feveral confiderable Places to the City of Peking, the Capital of all Cbina; with Obfervations Hiftorical, Phyfical,

Chorographical; Critical and Political, on the feveral Nations converfed with by our Authors, and the Countries by them inhabited; with fome Conjectures alfo as to their former Inhabitants.

935

## S E C T. III.

The Author's Reception at the Court of Cbina; the great Civilities paid him there; the wonderful State and Magnificence of the Imperial Palace ; the Ceremonies of a publick Audience; the Perfon and Manners of the Emperor defcribed. An Account of the Curiofities of the City of Peking; the grand Eftablifhment of the Fefuits; the Civilities paid by them to the Ruffian Minifter; remarkable Things obferved by him during the Time of his Stay in the Imperial Refidence; the pompous Ceremonies of his Audience of Leave; his Return from Cbina by Land; the Accidents attending his

Journey, the many and great Hardfhips he fuftained therein, notwithftanding his Intereft in both Empires, and his fafe Arrival, after fo many Hazards, and enduring fo great Fatigues at Mo/cow.

944

## S E C T. IV.

A very copious and no lefs curious Account of the North-eaft Part of A/ia, comprehending a diftinct, particular, and authentick Defcription of all that has hitherto paffed under the general Name of Siberia, fhewing the Extent and Situation of the feveral Diftricts thereof, their Climate, Soil, and Produce ; the Rife and Courfe of the principal Rivers, Defcriptions of all the great Cities upon their Banks; of the feveral barbarous Nations that inhabit near thefe Rivers; of the Value of their Furs, and Fifheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of leffer Circumftances, as well as material Points of Fact which contribute to the perfect Underftanding the Condition of this hitherto unknown Country and all its Inhabitants: To which is added, a fuccinct Recapitulation of the State of the Cbinefe Empire towards the Clofe of the laft Century; with fome very impartial as well as judicious Remarks on the Temper, Genius, and boafted Oeconomy of that famous Nation; with a free Cenfure of thofe Hyperbolical Panegyrics that have been beftowed on the Progreis of Science amongtt them.

95 I

## S E C T. V

A Geographical Defcription of the extenfive Empire of Cbina, and of the Sixteen Provinces into which it is divided. In which is contained, a fuccinct View of the Situation, Bounds, Produce, remarkable Curiofities, and whatever elfe is worthy of Notice in each Province, taken entirely from the Writings of the Chinefe themfelves, and more efpecially from their authentick Records, and natural Hiftories penned by Direction of the State, with fuch inciden:al Accounts of their Antiquities, and of the perfonal Hiftory of the moft famous Emperors, Heroes, Statefmen, and Philofophers as have been born or flourifhed in any of thofe Provinces through the Courfe of many Ages.

961

## SECT. VI.

A copious, accurate, and authentick Account, of whatever is moft remarkable, in Regard to Per-
fons or Things, throughout the whole Empire of Cbina, more efpecially the Number of the Inhabitants in general, and of the Chriftians in particular, the Rivers, Shipping, Lakes, Bridges, $E_{c}$. The different Religions that prevail, and have prevailed amongft the People, their Manners, Ceremonies, and extraordinary Politenefs. Of the remarbable Trees, rich Fruits, and valuable Drugs in this Country, together with a fuccinct Account of thofe Kingdoms, that either now depend or formerly depended upon it. 975.

## S E C T. VII

A curious and concife Defcription of the Country, Hiftory of the Inhabitants, and Account of the prefent State of the Kingdom of Corea, together with fome Hints of the Eafe, with which Commerce might be eftablifhed in its Ports, the Benefits that might be expected from thence, the great Likelihood of gaining an Entrance from thence into Fapan, or at leaft an Intercourfe with the-faponefe; and many other entertaining and inftructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of Cbina.

1000

## S E C T. VIII.

A fuccinct Account of Part of the North-eaft Frontier of the Ruffian Empire, commonly called the Country of Kam/chatka, or Kam/cbatska, including the Voyages of Captain Bebring for dicovering towards the Eaft; with many curious and entertaining Circumftances relating to thofe diftant Countries and their Inhabitants; and alfo an Enquiry into the Probability of the Country, which he difcovered, being connected with Nortb America; with a Variety of other Points of great Confequence, in relation to the Defigns now on Foot in various Parts of Europe, for making a thorough Difcovery of the fuperior Parts of the Northern Hemirphere, which would be of the utmof Confequence to Trade and Navigation in general, and to thofe of Great Britain in particular.

1016

## C ONCLUSION.

A retrofpective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Ufes to which the Contents may be applied.

B O O K I.<br>An Account of the Circum-Navigators of the Globe, and of the Difcoveries of the Eaft and Weft Indies.

C H A P. III.

Comprehending the Difcovery, Settlement, and Commerce of the West Indies.

## S E C T I O N I.

Of the Importance of the new-difcovered Continent of America, the Nature of that Difcovery, the Felicities attending it, the Advantages derived from thence to the Art of Navrgation, and the principal Points to be treated of in this Cbapter.

1. All Ages and all Nations bave concurred in admiring fuch as bave diffinguifbed tbemfelves by the Difcovery of nerw Countries. 2. The Art of Navigation much improved in Columbus's time, and yet be bad great Dificulties to fruggle witt in Theory and Practice. 3. By bis Scheme be avoided the Imputation of Herefy, webich bad fallen upon all wwo maintained Antipodes before bim. 4. No juft Iuputation on bim that be did not find America exactly as be conjectured. 5. A fuccinct Account of the Subjects that are to be tracated of in this Cbapter.

HERE are very few Points as to which the Judgments of different Times and feveral Nations have fo well agreed, as in the Fame due to thofe who firft difcovered diftant Countries. In refpect to the fabulous Hiftory, Baccbus is highly celebrated for his Indian Expedition, and chiefly becaufe he durft penetrate farther than any Man had ever gone before, he was reputed a Deity. The Egyptians, who were efteemed to be the wifert People of Antiquity, and with reafon, fince almoft all the Sciences travelled into this part of the World from thence, paid the higheft Tribute of Praife to fuch of their Monarchs as were fuppofed to have conquered the Eaft, and to have penetrated into Countries where, before that time, no victorious Armies had ever come. It was for the fame Caufe that the Tyrian Hercules was fo much magnified by his Countrymen; and it was the Glory which thofe Heroes had acquired, that
Vol. II. Numb. LXX.
prompted Alexander, the moft ambitious and moft daring of the Greeks, to undertake his famous Expedition againtt the Indians, that he might not fall fhort of any whofe Names were recorded in Hiftory; which Vanity of his tranfported him to fuch a Degree, that though, after the Ruin of the Perfian Empire, he efteemed himfelf only the firt of Men; yet, on his framing the Project of invading India, he conceived himfelf, and expected that others fhould conceive him, fomewhat more than Man. In fucceeding Times, we find this Humour far from being worn out, fince even the Romans, who, if not a wifer, were moft certainly a more moderate and better-judging People than the Greeks, efteemed the Invafion of Britain by Julius Cafar the moft glorious of his Actions, and that which redounded moft to the Honour of their Empire.
Upon the fame Principle the famous Emperor Trajan was fo extremely defirous of following the Example of Alexonder, and carrying the Terror of the Roman Arms
into Countries which their Anceftors never knew. But, after all, this Notion of pufhing their Conquefts in .this manner carries in it nothing fo truly noble as the Project of difcovering Countries far removed from other Parts of the World by vaft Tracts of Sea; and this for many Reafons, but principally for thefe three. Firft, Becaufe the former is the bare Refult of Force; whereas the latter muft be the Effect of Skill. To enjoy Courage only is common with other Animals; but Fortitude of Mind, with refpect to Dangers not felt, but forefeen, is peculiar to us as Men; and fo likewife is the Conduet by which Providence has enabled us to guard againft them. Secondly, in attempting the Difcovery of diftant and unknown Regions, we not only combat thofe Difficulties which other Conquerors meet with; but, at the fame time, attempt to fubdue Nature, and to make her, who is the Miftrefs of Mankind, obedient to our Will, which, in ancient Times, was fuppofed to have fomewhat in it of Divinity, becaufe, to ordinary Minds, it feemed beyond the Reach and Power of Man. Thirdly, Whereas other Conquefts tend only to the Benefit of this or that Nation; thefe are advantageous to the Species, and add Dominion not to a fingle People, but to the whole Race of Mankind.
2. We muft allow that the Ufe of the Compaifs had brought about confiderable Changes in the Art of Navigation, before any Attempt was made to difcover new Countries by failing Weftward; but, however, there were great Difficulties to be overcome, before any Defign of - that fort could be accomplifhed. The Veffels then in ufe were very unfit for long Voyages, in Point of Form, Capacity, and Strength. The Seamen again had very little Experience, were naturally inclined to coafting, and knew not enough of their Art to be clearly fatisfied what could, or what could not, be performed by it. Add to all this, that their Skill confifted rather in practifing what they had feen before, than in the Knowledge of any fettled Principle of Science, capable of directing them in any extraordinary Cafes that might happen. And even as to their Obfervations, they were far enough from being exact, partly from the Meannefs of their Inftruments, and partly from the Narrownefs of their Notions about the Ufe of them.

We may fubjoin to thefe another Difficulty, as great, or perhaps greater, than any of the reft; which was their Pronenefs to Supertition, a thing incident to all Arts, while indifferently underftood, which made them, on the one hand, liable to be furprized and confounded by every little Accident, and, on the other, rendered them fo obftinate and intractable, that it was very hard, and, in fome Cafes, almoft impoffible, to force them out of their ordinary Road, notwithftanding their being directed by Perfons of fuperior Abilities, and who, by a long Courfe of Study and Obfervation, had conquered all or moft of thefe Difficulties. Thefe Errors and Imperfections in fuch fort of People might, however, be very eafily excufed, when thofe who, both from their Parts and their Profeffions, ought to have been freer from thefe Foibles and Follies, entangled themfelves, by their own Wilfulnefs and Vanity, in ftill greater Miftakes. Thus, for inftance, it became a Point of Faith to deny that there were Antipodes, and the learned Bifhop of Saltzburg was condemned as a Heretic for holding the contrary Opinion.
There has, indeed, been fome Endeavours ufed to palliate this Matter, and to make the World believe that the Clergy, in thofe Days, were not quite fo ignorant as they have been reprefented. With this View we are told, that St. Augufin, on whore Authority the Prelate before-mentioned was condemned, was far enough from believing, that the Earth upon which we live was flat, like a Trencher, which may be granted; but then let us hear how they explain the Matter, and in what manner they ftate the Cafe of che Antipodes, fo as to render the Belief of them an Herefy. Why, fay they, though the Church acknowledged the Earth to be a Globe, and that there was an inferior, as well as fuperior, Hemifphere; yet they denied that the latter was habitable, becaufe, as it muft be feparated from us by a great Ocean, the Confequence they thought muft have been, that, if it was peopled, the

Inhabitants could not have been defcended from Adam, and therefore the afferting a World fo peopled was, in their Judgment, a flat Contradiction of the Scriptures. This Pofition of theirs, though a little better Senfe, was as effectual a Bar to Science, and as much calculated to prevent Difcoveries, as the other Opinion of the Earth's being flat; fo that, confidering the Power of the Church in the fifteenth Century, one cannot help wondering how it came into the Head of fo religious a Man as Cbrifopher Columbus to maintain the Poffibility of fuch an Enterprize; and one ought to wonder much more that, that after he did maintain fuch a Doctrine, it was not condemned as a Herefy.
3. At firt fight, the examining this Point may feem to be a little wide from our Purpofe; but I hope, before I have done with it, to convince the ingenious Reader that nothing can contribute fo much to the perfect undertanding the Subject of this Section. We have already thewn, at the Beginning of the former Volume, that, when Columbus firft propofed his Scheme, it met with great Oppofitions, more efpecially from the Learned, who, either not comprehending the Force of his Arguments, were refolved to conceal their own Ignorance the beft way they could; or elfe, from a Principle of Envy, were affiduous in maintaining that what he afferted was falfe and abfurd, merely becaufe they had not Penetration enough to make fuch a Difcovery themfelves: But we never hear that they charged him with Herefy, and therefore I am inclined to think, that the Reafon before affigned for condemning the Opinion of the Antipodes was the true one-
The Bufinefs then is to fhew how Columbus avoided fplitting upon this Rock, and maintained his Notion without running into that to which the Church was, in his time, as little reconciled as when the Bifhop of Saltfburg was adjudged an Heretic. In order to clear up this, the Reader is to underftand, that though Columbus difcovered that great Continent, now called America; yet he was very far from declaring, at leaft, or perhaps from believing, before he undertook his firft Voyage, that there was any fuch Continent; by which I mean, a Continent feparated from Europe by fo large a Part of the Ocean on one fide, and as far feparated from Afra in like manner on the other. For, had he fo conceived, or, at leaft, had he maintained this Conception, however agreeable to good Senfe and Truth, he had been moft certainly. efteemed a Heretic.
But the Principle he went upon, though not frictly true, exempted him from all Imputation. It was, in few Words, this, That the Earth being globular, it was reafonable to fuppofe, that the Continent and Iflands of the Eaft Indies extended themfelves in fuch a Manner into the inferior Hemifphere, as that they might be reached very conveniently by failing Weftward. It is very evident that, by this Suppofition, he entirely avoided the Herefy of maintaining, that there might be another Continent, inhabited by Men that were not defcended from Adam. It is very true that he might maintain and publifh this Doctrine, without believing it; but, as the Reader will hereafter fee, this was not the Cafe; for he really fpoke as he thought. Nor does it appear that he was undeceived, even by the firlt Voyage that he made; but, on the contrary, firmly believed, that the Inands he had vifited were fuch as lay at fome Diftance from the Continent of the moft Eaftern Part of Afia.
4. There is nothing in this Error of Columbus which can in the leaft prejudice him in the Opinion of a judicious and intelligent Perfon; but quite the contrary, fince it was impofible for him, or, indeed, for any Man, to difcover, by the Force of his Genius only, how the Divine Providence had diftributed the Continicnt and Inands in that unknown Hemifphere. On the contrary, we learn, from hence, that there is always fomething magnificent and fhining, and, if I may be allowed the Expreffion, a fhadowy Refemblance of Truth even in the Miftakes of great Men. It was the Opinion of this able Perfon, that, after traverfing a wide Sea, he fhould fall in with that Archipelago of Inands which Marco Poulo had defcribed, and which he had called Zipango, or Cipango, which are what we call $7 a p o n$; and, if the Continent of America had not lain in his way (which, as I faid, it was impoffi-

volut.pane 3

ble for him to forefee) uncueftionably it had been fo; which is the true Reafon why, at firt, he fancied Cuba one of thofe Inlands, and, after a little Reflection, pronounced that an Error; but itill flattered himfelf that he fhould meet with thefe Iflands, but in a higher Latitude.

It was from this Miftake of his, that the Countries which he difcovered came to be called Weft Indies; for, upon his Return from his firt Voyage, and bringing with him Spice, Parrots, and Gold, he made no queftion that the Countries he had vifited made a Part of the Indies, that is, of the Afian or Eaft Indies: But when, by his fubfequent Voyages, he was convinced of his Error, and found that there was really a great Continent between him and the Countries he fought, he then chofe to call the Illands he had difcovered the Weft Indies. In Procefs of Time, when the Extent and Importance of the Continent to which thofe Inlands belonged was better known, it came to be called by a more emphatic and fignificant Name, viz. that of the New World.

This, to fay the Truth, was proper enough, fince, on the firf View of the Globe, it appears, that America is as it were a Balance to what was ftiled the World before it was difcovered ; and, as it lies from North to South, it occupies all the Zones, and, confequently, contains the fame Variety of Climates which had been diftinguifhed by Geographers in this Part of the World. It came afterwards to be called America, for Reafons which we fhall affign, when we come to fpeak of Americus Vefpufius, who was the firft that publifhed a tolerable Map of it, and in that Light only could be efteemed a great Difcoverer.
5. We have, in the former Volume, fpoken of Co fumbus as the firft Circum-navigator, tho' he was not fo in Fact, but in Idea only; however, as it was in Purfuit of his Notions that the Poffibility of failing round the World was firft difcovered, and has been fince often performed, he had a juft Right to be confidered in that Light. In this Section we propofe to fpeak of him as the Firft who vifited this new World; and, after giving an Account of his Voyages thither, and of the Difcoveries made by the Spaniards, who purfued his Tract, we fhall next entertain the Reader with the Hiftory of the two great Conquefts made by the Spaniards in America. The Firft by Ferdinand, or, as the Spanifs Writers call him,

Hernan Cortes, of the great Empire of Mexico. The Second by Frances Pizaro, who fubdued the no lefs famous Empire of Peru. This will afford us an Opportunity of entering into a Defcription of both thefe Countries, as they ftood at the Time thefe Conquefts were made ; and of the Manners, Government, Laws, Learning, and Trade of their ancient Inhabitants.
We fhall then fpeak of the Expeditions of our own Countrymen into this Part of the World, and of the Difcoveries and Settlements made by them, from the firft Voyage of Cabot, in the Reign of Henry VII. down to the Plantation of Georgia, which is the Laft, at leaft of any Confequence, that we have made. The Difcoveries and Settlements made by the French will next employ our Care. And, laft of all, we fhall fpeak of the few fmall Settlements which the Dutch and Danes enjoy in this Part of the Globe; which (with a View of the principal Advantages that Europe in general derives from her Commerce with this new World) will fill up the remaining Part, and complete the Defign of this Chapter.

It may not, however, be amifs to take this Opportunity of obferving, that, by this Means, our Hiftory of Difcoveries will be entirely compleated; fo that in our Third and Fifth Books we may, with the fame Propriety, infert Travels by Land, in the moft diftant Parts of Afia and America, as in the moft known Parts of the World; which could not however have been done, if in thefe two Chapters we had not fhewn at large how thefe great Countries were firft difclofed to the World, and their Commerce, in fome meafure, monopolized and fecured to the Inhabitants of Europe. Hence arifes the great Difference in Bulk between our Firft and our fucceeding Books; the former being, ftrictly fpeaking, a compleat Hiftory of Navigation and Commerce, fhewing the Connections between the different Parts of the World, as they now fland, as well as the manner in which thofe Connections arofe, and have been continued: Whereas in the following Books the feveral Parts of the World are diftinctly confidered, and the Conditions of their Inhabitants particularly explained, from the Accounts given us by fuch as vifited them for that Purpofe. Thus much being faid by way of Introduction, let us proceed directly to the Performance of what has been promifed.

## S E C T I O N II.

## The firf Voyage of Christopher Columbus, in which be difcovered the Lucayan Iflands, and afterwards Cuba and Hifpaniola, which opened a Paflage from Europe to America, with bis Return to Spain, and Reception by their Catbolic Majefies.

1. The Diffculties which Columbus met in concluding an Agreement with the 2ueen of Spain. 2. The Subfance of that Agreement, together with. an Account of the fmall Force with which be undertook this Expedition. 3. He fails from Spain on the 3d of Auguft, 1492. 4. The remarkable Occurrences in the Voyage, and the various Troubles to which the Admiral was expofed. 5. The Seamen grore uneafy and fuppicious, notwitbfanding all the Endeavours ufed by Columbus to pacify and encourage them. 6. When bis Patience was quite exbaufted they at laft difcovered Land. 7. The Admiral gives Names to the three firft Iflands be met with in the new World. 8. He fails to and examines the noble Illand of Cuba. 9. He procieds from thence to that of Hifpaniola. 10. An Account of bis Reception by the Inbabitants, and of the State of that Ifland at the Time of bis difcovering it. I r. Lofes bis Ship upon that Coaft, and refolves to fettle a Colony there. I 2. Takes proper Metbods for that Purpofe, and gives this newe Colony the Name of Natividad, in Honour of Chrift's. Nativity. 13. Begins to difpofe all things for bis Return to Spain. 14. Begins bis Voyage from the Port of the Nativity, and rejoins Martin Pinzon, who bad deferted bim. 15. Profecutes bis Voyage to Lifbon, rebere be bas an Audience of the King of Portugal. I6. Returns fafely to Palos, March I 5, 1493, and proceeds from thence to Barcelona, in order to pay bis Comoliments to their Catbolic Majefies. I7. Remarks, and Obfervations on the forgoing Voyage.

"THE Family and perfonal Hittory of Don Cbrifopher Columbus have been fo fully fet forth in the Beginning of the Firft Chapter, that there is no Need of repeating them here; and, therefore, we thall obferve, that after being nighted and abufed in Portugal, he travelled into Spain, in the year 1484, in order to propofe his Scheme of Difcovery to King Ferdinand and

Queen Ifabella, by whom he was referred to the Prior of Prado, afterwards Archbifhop of Granada, who fummoned an Affembly of fuch as were then efteemed learn* ed, to confider of his Propofals. But there being few Cofmographers then in Caffile, and thofe none of the beft in the Worid, and, befides, as Columbus did not fully explain himfelf, left he thould be ferved as he had been
in Portugal, they came to a Refolution nothing anfwerable to what he had expected.

Some alledging that fince in fo many Ages as there were from the Creation of the World, Men fo well verfed in marine Affairs had known nothing of thefe Countries Columbus perfuaded them muft be found, it was not to be imagined that he could know more than all of them. Others, adhering more to fpeculative Reafon, urged, that the World was fo large that there would be no coming to the utmoft Extent of the Eaft in three Years, whither Columbus faid he intended his Voyage. And in Confrmation thereof they alledged, that Seneca, by way of Difpute, faid, That many difcreet Men did not agree upon the Queftion, Whether the Ocean was infinite, and doubted whether it could be failed; and, fuppofing it to be navigable, whether there was any Country inhabited on the other Side, and whether it was poffible to go to it. They added, That no Part of this inferior Sphere was inhabited, except only a fimall Compafs, which was left in our Hemifphere above the Water, and that all the reft was Sea; and that notwithftanding it was fo, if it were pofible to arrive at the extreme Part of the Eaft, it would be alfo granted that from Spain they might go to the extreme Part of the Weft. There were ftill others who affirmed, That if Columbus fhould fail directiy Weftward he would not be able to return to Spain, becaufe of the Roundnefs of the Globe; fo that whoever fhould mo beyond the Hemifphere known by Ptolemy, would fall down fo low that it would be impoffible ever to return, by reafon it would be like climbing up a Hill. And though Cohimbus fully anfwered thefe Arguments, they could not apprehend him, for which Reafon thofe of the Affembly judged the Enterprize to be vain and impracticable, and that it was not becoming the Grandeur of fuch mighty Princes to proceed upon fo improbable a Scheme.

After much Delay, their Catholic Majefties ordered this Anfwer to be given to Columbus: That being engaged in feveral Wars, and particularly in the Conqueft of Granada, they could not enter upon frefh Expences, but when that was over, they would caufe further Enquiry to be made into his Propofal; and fo they difmiffed him. On receiving this Anfiwer, Columbus went to Sevil very 'melancholy, after having been five Years at Court to no Effect. He caufed the Affair to be propofed to the Duke de Medina Sidonia, and fome fay to the Duke de Medina Coli at the fame time; and they alfo rejecting him, he wrote to the King of France, defigning to go over into England, to look for his Brother, of whom he had heard nothing for a long time, in cafe the French would not employ him. With this Defign he went to the Monaftery for his Son Don Diego, in order to leave him at Cordova; and communicating his Defign to Father Fobn Perez de Morcbanta, he put off his Journey at his Requeft, who, to be the better informed of the Grounds Columbus went upon, fent for Garci Herandez, a Phyfician, and they three conferred together upon what Columbus propofed, which gave Garci Herandez, as being a Phyfician, much Satisfaction. Whereupon Father Jobn Perez, who was known to the Queen, as having confeffed her fometimes, writ to her, and the ordered him to come to the Court, which was then in the Town of Santa Fee at the Siege of Gronoda, and to leave Columbus at Palos, giving him Hopes of Succefs in his Bufinefs.
Father Fobn Perez having been with the Queen, the ordered 20,000 Marvedies in Florins for Columbus, by Fames Piete, an Inhabitant of Palos, for him to go to Court; where he being come, the Affair began to be canvaffed again. But the Prior of Prado, and others who followed him, being of a contrary Opinion; and Coluribus demanding very high Terms, and, among the reft, to have the Title of Admiral and Vice-roy, they thought he demanded too much, if the Enterprize fucceeded, and looked upon it as a Difcredit, if it did not. Whereupon the Treaty entirely ceafed, and Columbus refolved to go away to Cordova, in order to proceed from thence to Fronce, being refolved not to go to Portugal upon any Account. Alonfo de Quinionilla, and Lervis de Santangel, a Clerk of the Revenue of the Crown of Aragon, were much concemed that this Enterprize fhould be
difappointed; and, at the Requeft of Father jobn Perez and Alonjo Quintanilla, the Cardinal Don Pedro Gonzalez de Mendoza had heard Columbus, and looking upon him as a grave Man, had an Efteem for him. Befides, the adverfe Party objecting, that, as Columbus ventured nothing himfelf in the Difcovery, and made himfelf Admiral of a. Fleet of their Catbolic Majefties, he would not value being difappointed in the Enterprize. He offered, in anfwer to them, to lay down the eighth Part of the Expence, provided he fhould have his Quota of the Return; and yet nothing came of it. In Fanuary, 1492, he fet out from Santa Fee for Cordova, the City of Granada being then in the Poffefion of their Catbolic Majefties.

The fame Day Lewis de Santangel told the Queen, He wondered fhe, who never wanted a Spirit for the greateft Undertakings, fhould now fail where fo little would be loft, and fo much might be gained; for, in Cafe the Affair fucceeded, and fell into the Hands of another, as Columbus affirmed it was like to do, fhe might guefs how prejudicial it would be to her Crown. And fince Columbus appeared to be a difcreet Man, and demanded no Reward but out of what he fhould find, and was willing to defray a Part of the Charge, venturing his own Perfon alfo; the thing ought not to be efteemed fo impracticable. Befides, Columbus demanded only a Million of Marvedies to fit out his Squadron, and, therefore, he intreated her not to fuffer fo fmall an Expence to difappoint fo great an Enterprize. The Queen, finding herfelf importuned on the fame Account by Alonfo de Quintanilla, who was in high Credit with her, thanked them for their Advice, and faid fhe accepted it, provided they would ftay till the could a little recover the Expences of the War. However, if they thought fit, it fhould be immediately put in execution; fhe would confent they fhould borrow what Money was requifite upon her Jewels. They kiffed her Hand for this Favour; and Lewois de Santangel offered to lend as much as was neceffary.

Upon this the Queen ordered an Alguazil of the Court to poit after Columbus, to tell him from her to return. The Alguazil overtook him two Leagues from Granada, at the Bridge of Pinos; and, though much concerned, he returned to Santa Fee, where he was well received; and the Secretary, Jobn Colonna, was ordered to draw up the Conditions, after he had fpent eight Years in foliciting the Enterprize, and induring in that Time many Croffes and Hardfhips. When Columbus and the Secretary had conferred about the Terms, they agreed upon the following Conditions, on the 17th of April, 1492.
2. Firft their Highneffes conftitute Don Cbriflopher Columbus, their Admiral, in all thofe Illands and Continents that by his Induftry hall be difcovered in the faid Ocean, during his Life, and after his Death, to his Heirs, and Succeffors for ever, with all the Prerogatives to that Office appertaining, and in the fame Manner as Don Alonfo Henriquez, their high Admiral of Caftile, and his Predeceffors in the faid Office enjoyed the fame within their Diftricts. Item, Their Highneffes appoint the faid Don Cbriftopber Columbus their Viceroy and Governor General of all the Inands and Continents which he fhall difcover in the faid Ocean, and that he may chofe three Perfons for the Government of each of them, and that their Highneffes take and make choice of one as fhall be moft for their Service.

Item, That all Commodities, whether Pearls, precious Stones, Gold, Silver, Spice, or other things whatfoever, or Merchandize of any kind, that fhall be brought, changed, found on, or had within, the Limits of the f Admiral's Ship, their High Nightineffes, from this time, grant to the faid Don Cbrifopber, That he have, and enjoy the tenth Part for himfelf, deducting the Charges, fo that of what fhall remain clear and free, he have, and take the tenth Part for himfelf, and difpofe of it at his own Will; the other nine Parts remaining for their Highneffes.

Item, In Cafe that on Account of the faid Merchandize, which he fhall bring from the faid Mlands, which fhall be difcovered, or of thofe which fhall be taken in exchange for them of other Merchants, any Law-fuit hould happen to arife in the Place where the faid Commerce fhall be made and carried on; if by Reafon of his faid Office of

Admizals

Admiral, it thall belong to him to take Cognizance of fuch Controverfy; it may pleafe their Highnefles, that he or his Deputy, and no other Judge, fhall try the faid Caufe, if it appertains to the faid Office of Admiral as the fame has been enjoyed by the Admiral Don Alonfo Henriquez, or his Predeceffors in their Diftricts, and according to Juftice.

Item, That in all the Ships which fhall be fitted out for the faid Trade and Commerce, as often as they fhall be fitted, the faid Don Cbrifopber Columbus, if he fhall think fit, may lay out the eighth Part of what thall be expended in fitting them out; and that he accordingly have and receive the eighth Part of the Profits of fuch Ships.

Thefe Articles were granted in the Town of Santa Fce, in the Plain of Granada, with which Difpatch and Money Don Cbriftopher Columbus fet out from Granada on the 12th of May, and leaving his Sons at their Studies in Cordova, he went to the Town of Palos, to undertake his Voyage; few at Court expecting that he would perform what he had promifed. Their Catholic Majefties ftrictly enjoined him not to touch at the Mine in Guinea, or to come within one Hundred Leagues of the Portugueze Scttlements. They gave him their Letters Patents to all the Kings and Princes in the World, for them to give him a favourable Reception as their Commander; he repaired to Palos, becaufe there were able Seamen in that Place, and on Account of his Friendihip with Father Fobn Perez de Merchena, who helped him very much in the Difpatch of his Affairs; perfuading the Sailors who were very backward to engage in an unknown Voyage. He carried with him Orders for that Town to furnifh him with two Caravels, which by ancient Tenure it was obliged to find for the Service of the Crown, during three Months every Year.

He fitted out another Ship as Admiral, and called it St. Mary; the fecond was called Pinta, of which Martin Alonfo Pinzon was Captain, and his Brother Francis Martinez Pinzon Mafter : The Third was named Nina, carrying fquare Sails, whofe Captain and Mafter was Vincent Yanez Pinzon, who was very helpful in this Affair, and 1aid down half a Million of Marvedies for the eighth Part of the Expence. He made ufe of the Pinzons, becaufe they were principal Men in that Town, wealthy and fkilful Mariners, and all the Men feeing them approve of the Voyage, were willing to undertake it.
3. The Ships being provided for a Year, having on board ninety Men, moft of them Natives of Palos, and among them fome Friends of Clumbus, and fome of the Kings Servants, they fet fail on Friday the third of Auguf, half an Hour before Sun rifing, and got over the Bar of Saltes, diresting their Courfe for the Canary Iflands, after they had all (following the Example of Columbus) made their Confeffion, and received the Holy Communion. As they held on their Voyage, on the fourth of $A u$ guft, the Rudder of the Caravel Pinta, in which Martin Alonfo Pinzon commanded, broke loofe, as was fufpected by the Contrivance of Gomez Rafcon and Cbrifopher Quintero Mariners, to whom the Caravel belonged, becaufe they went the Voyage againft their Will, and therefore they had endeavoured to difappoint it before their Departure. But 'Martin Alonfo Pinzon being an able Sailor, the Rudider was faftened with Cables in fuch Manner, that they were able to fail till the Tuefday following, when it again broke loofe, and they were all forced to lie by.

This Mifchance happening to the Caravel Pinta, at their firft fetting out, would have ftartled any fuperftitious Perfon, efpecially confidering how difobedient Martin Alonfo afterwards proved to Columbus. Having mended the Rudder the beft they could, on the I Ith of Auguft by Break of Day they difcovered the Canaries, and not being able in two Days to put into grand Canaria, becaufe the Wind was contrary, Columbus ordered Martin Alonfo to procure fome other Veffel as foon as he could get afhore, and he, with the other two, made for the Ifland Gomera, to endeavour the fame; but finding none, he returned to great Canaria, and refolved to make a new Rudder to the Caravel Pinia, and to change the Sails of
the Caravel Nina, which were Equare, into thofe called Shoulder of Mutton Sails, that he might follow the other Ships more fpeedily, and with lefs Danger.

The 5th of September, in the Afternoon, he failed, and arrived at the Ifland Gomera, fpent four Days there, taking in frefh Water and Fuel, with the utmoft Diligence; becaufe, being informed that three Portuguefe Caravels were hovering about thefe Mands to feize him, he apprehended fome Trouble on Account of the King of Portugal's Concern, when he underitood that Don Cbrifopher Columbus had articled with their Catbolic Majefties, being apprehenfive that God had taken that good Fortune out of his Hands. Thur day the 6th, which may be reckoned the Entry of the Undertaking, he failed to the Weftward, making but little Way. But the next Day they loft fight of Land, and many fighed and wept, believing they fhould never fee it again: But Columbus encouraged and comforted them with Thoughts of Wealth and good Fortune. That Day they run eighteen Leagues, but the Admiral defignedly reckoned but fifteen, thinking it convenient to fhorten their Run, that the Men might be lefs afraid. On the 11 th, being 150 Leagues from the Inand Ferro, they fpied a Peice of a Maft, which feemed to have been carried away by the Current. In the fame Latitude, fomewhat farther on, the Current fat ftrong to the Northward, and 50 Leagues farther Weftward.

On the I4th Columbus about Night-fall obferved that the Needle varied to the North-weft about half a Point, and that at Break of Day it did the like, fomewhat above half a Point, by which he perceived that the Ncedle did not point directly to the Star called the North; but at another fixed and invifible Point. This Variation had not till then been obferved by any Perfon whatfoever, which was much admired, and much more the third Day after, when he had advanced ioo Leagues farther, holding the fame Courfe, becaufe the Needles then at Nightfall varied to the North-weft as before, and in the Morning again pointed upon the very Star.

On the 15 th, being near 300 Leagues Weftward of the Inland Ferro, a Flame of Fire was feen falling into the Sea in the Night, four or five Leagues from the Ships towards the South-weft; the Weather being calm and the Sea fmooth, the Currents ftill fetting to the North-caft; and the Crew of the Caravel Nina, faid they had the Day before feen a Bird called a Waterwagtail, which they admired, that being the firft, and a Bird which they fay never flies above fifteen or twenty Leagues from Land. The next Day they were more furprized to fee Spots of green and yellow Weeds on the Surface of the Water, which feemed to have been wafhed from fome Illand or Rocks, and they faw much more the Day following, which made them conclude that they were near Land, and they were ftrongly confirmed in it, becaufe they faw a little Grafshopper alive upon the Weeds; others fancied there might be Rocks or Lands under Water, and, being afraid, muttered againft the Voyage; it was alifo obferved, that the Sea-Water was not half fo falt as that they had paffed, and that Night they faw many Tunnies following the Ships fo clofe, that the Men in the Caravel Nina killed one of them with an Harping-iron, and in the Morning they found the Air as warm as in Andaluzia, in April.

Being 370 Leagues to the Weftward of the Mand Ferro, they faw another Waterwagtail, and on the 18 th Martin Alonso Pinzon, who had flipped before with the Caravel Pinta, which was a very good Sailer, lay by for the Admiral, and told him he had feen a Multitude of Birds making to the Weftward, which made him believe he fhould fee Land that Night, and find it to the Northward 15 Leagues from thence; nay, he fancied he had feen it: But the Admiral judging it was not fo, would not lofe Time to go in queft of it, though all were for it; becaufe he did not think himfelf to be in the Place, where, according to his Notions, he expected to difcover it. That Night the Wind frefhened, after they had failed eleven Days without handing their Sails, ftill failing right before the Wind to the Weftward; the Admiral continually noting down every thing that happened; obferving what Wind blew; what his Courfe was; what

C Fifhes

Fifhes and Birds were feen; and founding very frequently. 4. The Men being unexperienced in fuch a Courfe, feeing no Hopes, and nothing appearing but Sky and Water for ' $o$ many Days, carefully obferved every Token, being then farther from Land than any Mien had ever been before. On the Igth, a Sea Gull went to the Admiral's Ship, and others came near in the Afternoon, which gave Hopes that fome Land was near, as believing that thele Birds went not far from it; and with this Hopes, the Weather being calm, they founded with 200 Fathoms of Line, and though they found no Ground, they perceived that the Currents ran South-wef. On the 2oth; in the Forenoon, they faw two other Gulls near the Admiral ; and fome time after they took a Blackbird with a white Spot on the Head, the Feet like a Duck's; they alfo killed a fimall Fifh, and faw Abundance of Weeds like what they had feen before; and the Ships making way through them, they became lefs afraid. The next Morning, at Break of Day, three other little Land Birds came on board the Admiral finging, and at Sun rifing they flew away; which was fome Comfort to the Men, as believing that the other Sea Fowls might eafily go farther from the Land, but that the little Birds could not come from fo great a Diitance. Some time after they faw another Gull coming from the Weft North-weft; and the next Day in the Afternoon more Weeds to the Northward, which was fome Satisfaction to them, believing the Land was near. The Weeds at the fame Time perplexed them, fome Knots of them being fo thick, that they hindered the Ships Way, and therefore they kept as clear from them as they could. The next Day they faw a Whale; and on the 22 d they fpied fome Birds; and thofe three Days the Wind was at South-weft, and though it was contrary, the Admiral faid it was goot, bècaufe the Men muttering and refufing to obey; and alledging among other things, that fince they had fo long run before the Wind, it would be hard for them to return to Spain, by Reafon that though it had fometimes proved contrary, it had held but of fhort time, and was not fteady: And though the Admiral anfwered that was occafioned by their being near Land, and urged fome more Reafons for it; he ftood in need of God's fpecial Affiftance, becaufe the Difcontents increafed, the Men grew mutinous, and by degrees, paid him no Refpect; reflecting on the King for having given Orders for the Voyage; and almoft all of them agreed not to proceed in it.

The Admiral managed Things with great Addrefs; fometimes encouraging the Men , and affuring them of the Shortnefs and good Succefs of their Voyage; and fometimes threatning them with the King's Authority; but it pleafed God, that on the 23 d the Wind came up at Weft North-weft, the Sea indifferent rough as they all wifhed; and three Hours before Noon a Turtle Dove flew over the Admiral; and in the Afternoon a Gull and other white Birds; and among the Weeds they found little Grafshoppers. The next Day came a Gull and fome Turtle Doves from the Weftward, and fome fmall Fifhes, which they ftruck. As thefe Tokens had hitherto failed, the Mens Fear increafed, and they took occafion to gather Parties, faying, the Admiral in a mad Humour had thought to make himfelf great at the Expence of their Lives; and though they had done their Duty, and failed farther from Land than ever any Man had done before, they ought not to be inftrumental to their own Deftruction; ftill proceeding without any Reafon, till their Provifions failed them, which, though they were ever very fparing, would not fuffice to carry them back any more than the Ships, which were already very crazy; fo that no body would think they had done amifs, and that fo many having oppofed the Admiral's Projects, the more Credit would be given to them: Nay, there wanted not fome, who faid that, to put an End to all Debates, the beft Way would be to throw him into the Sea, and fay he had unfortunately fallen in, as he was attentively gazing on the Stars, and no body would go about to enquire into the Truth of it; that was the beft Means for them 'to return and fave themfelves.

Thus the evil Defigns of the Men very much perplexed Colvmbus; but fometimes giving good Words, and
at other times putting them in mind of the Punifhment they would incur if they obfrutted the Voyage, he curbed their Infolence with Fear, and as a Confirmation of the Hopes he gave them of foon concluding the Voyage fuccefsfully, he often put them in mind of the above mentioned Signs, promifing them they would foon find a very rich Country, where they would all conclude their Labour well beftowed. The Men were fo anxious and difconfolate that every Hour feemed a Year, -till on the $25^{\text {th }}$ at Sun fetting, whilft Columbus was talking to Vincent Yanez Pinzon, he cried out Land, Land, Sir; let me not lofe my Reward for this good News; and thewed towards the South-weft a Body that looked like an Inland, about 25 Leagues from the Ships. This, which was looked upon as an Invention concerted between them two, fo much cheared up the Men, that they returned Thanks to God'; and the Admiral, till Night, made as if he believed it to be fo, fteering his Courfe that way a great Part of the Night, to humour the Men.

The next Morning they all perceived they were Clouds, which often look like Land, and to the great Regret of of the major Part, they held on their Courfe Weftward. But to return to the Tokens; they faw a Gull and a Wagtail, and other Birds; and the next Day they faw another Wagtail flying from the Weft Eaftward, and many gilt Finhes appeared, which they killed; and a Wagtail flew very near the Ship, and they perceived that the Currents ran not fo itrong as before, but turned back with the Tides, and there were fewer Weeds; and the Day following they took many gilt Fifhes. On the 29th they faw a Wagtail, which is a Sea-Fowl that never refts, purfues the Gulls till they empty their Bellies for fear, and catching their Dung in the Air feeds on it; and of thefe Birds there are many in the Iflands of Cabo Verde. Soon after two Wagtails appeared, and many flying Fifhes, which having two little Wings, fometimes fly a Mufket Shot, or a few Yards, above the Water; being about a Span in Length, and fometimes fell into the Ships, In the Afternoon they met with a great Quantity of Weeds, in a Line from North to South, and three Gulls and a Wagtail purfuing them; the Men ftili fancying that the Weeds were a Token that there was Ground near them under Water, and that they fhould perifh.

On the zoth, four Wagtails flew near the Admiral, and by their being together, they gueffed that they were near Land, and alfo becaufe four more came foon after, and they faw many Weeds in a Line from Weft Northweft, to Eaft South-eaft, and many Fifhes called Emperors, which have a very hard Skin, and are not fit to eat. Though the Admiral took notice of thefe Tokens, he did not forget thofe in the Sky. He obferved, there, that the Polar Stars were, at Night, on the Weft Quarter, and when Day came on, they were at the North-eaft Quarter; by which he concluded that during the Night, they advanced but three Lines, which are nine Hours, and this he found every Night; he alfo perceived, that at Night-fall, the Needles varied one whole Degree, and in the Morning they were right with the Star; which very much troubled and confounded the Pilots, till he told them, that the Occafion of it was the Compals of the North Star about the Pole, and that gave them fome Satisfaction; for, in reality, that Variation made them apprehenfive of Danger, as being far from Iand.
5. October the Ift, at Break of Day, a Wagtail came to the Admiral, as did others, two or three Hours before Noon; and the Weeds came from Eaft to Weft, fome believing they fhould fall in fo near the Land, that the Ships would be a-ground and perifh. The fame Day, in the Morning, the Pilot told the Admiral that they were then 588 to the Weftward, of the Mland Ferro. The Admiral told the Pilot, that by his reckoning it was 584; but, in his own Thoughts, and according to his true reckoning, it was 60\%. The Pilot of the Caravel Nina, on the Third, in the Afternoon, faid he found they had failed 650 Leagues, and the Pilot of the Pinta faid 634, wherein they were mitaken, for they had always failed before the Wind: But Columbus fill took no notice, left the Men fhould be difmayed at the vaft Run; for the greateft Sea, till then known, did not exceed 200

Leagues.

Leagnes. On the ad they killed a Tunny, and faw much other Fifh, and a white Bird, and many grey ones, and the Weeds very much withered, and almoft rotted to Duft; and having feen no Birds the third Day, they feared they had miffed fome Inand on either Side, believing that the many Birds they had feen, went over from one Illand to another; and the Men being defirous to turn to one Side or other to feek for thefe Lands, Columbus did not think fit to let fip the fair Weather that favoured him; he kept to the Weft, which was what he defired, becaufe he thought he fhould lofe the Credit of his Undertaking, if they faw him turning, at random, from one fide to the other, to find out that, which he always affirmed he knew.
For this Reafon, the Men began again to mutiny, which none will wonder at, who confiders fo many Men led by one of whom few of them had any Knowledge, expofed to fo many Dangers, without feeing any thing for fo many Days, but Sky and Water, or knowing what would be the End of fuch a long Voyage. But it pleafed God to fend new Tokens, which, in fome meafure, quieted their Minds; for on the 4th, in the Afternoon, they faw about forty Sparrows and two Gulls, which came fo near to the Ships, that a Sailor killed one of them with a Stone, and feveral fying Fifhes fell into the Ship; all which things, and the good Words the Admiral gave them, pacified them; the next Day there flew near the Ships a Wagtail and a Gull, and feveral Sparrows from the Weftward. On the $7^{\text {th }}$ fome Signs of Land appeared to the Weftward, but no Man durft fpeak of it becaufe of the Thicknefs of the Weather, though they all wifhed for it, to gain the Reward of an an Annuity of io,000 Marvedies, their Catbolic Majefties had promifed for Life to the firft that fhould difcover Land; and to prevent their crying Land at every Foot, in Hopes of that Annuity, it was ordained, that whofoever faid it, if the fame were not made good in three Days, fhould be for ever excluded from that Reward, though he fhould afterwards really difcover it. However, thofe aboard the Caravel Nina, which was much a-head, being fo good a Sailor, concluding that it was certainly Land, fired their Guns and put out their Colours. But the farther they failed, the more their Joy abated, till it quite vanifhed.

In the Midft of this Anguifh, it pleafed God to comfort them again with the Sight of many Birds, among which many were Land Fowl, flying from the Weft to the South-weft; and Columbus, confidering after he had failed fo vaft a Length, that fuch fmall Birds could not be far from Land, concluded it muft certainly be near, and therefore he altered the Courfe he ad then held due Weft, and fteered South-weft; alledging, that though he altered his Courfe, he deviated but little from the firft Defign, and did it to follow the Rules and Method of the Portuguefe, who had difcovered moft of the Inands by following the Flight of fuch Birds: Befides, that thofe they then faw took the fame Way, he alfo concluded he fhould find Land, for as they well knew he had often told them he did not expect to find it till he had failed 750 Leagues from the Canaries Weftwards; at which Difance he had alfo told them he flould difcover the Inand Cipongo, and that he fhould certainly have found it, had he not known it was faid to lie North and South, and that he had not turned to the Southward to avoid falling on it, and that he believed it lay among other Iflands on the left Hand, and which Way thofe Birds flew, and that it was by reafon they were fo near Land, fo many, and fuch various Sorts, of them appeared.
6. It pleafed God, when Don Cbrifopher Columbus could no longer withftand fo much Contradiction, that on the Ith of Oitober, I492, in the Afternoon, he received fome Comfort by the manifent Tokens they perceived of their being near Land; for the Men aboard the Admiral faw a green Rufh near the Ship, and next a large green Fifh of that Sort that creeps clofe about the Rocks. Thofe aboard the Caravel Pinta faw a Cane and a Staff, and took up one that was artificially wrought, and a little Board, and faw Abundance of Weeds frefh torn off from the Shore; for which Reafoins, and, becaufe they brought
up Sand upon founding; there was a Certainty of their being near Land, which was confirmed by the Shifting of the Wind, which feemed to come from the Shore:

Columbus being fatisfied, after Night-fall, when they had faid the Salve Regina, as is ufual among Sailors; he difcourfed the Men , telling them how merciful God had been to them, carrying them fafe fo long a Voyage; and that, fince the Tokens were hourly manifeft, he defired them to watch all Night, fince they knew that, in the firt Article of the Inftructions he had given them when he came out of Spain, he told them, that when they had run 700 Leagues without difcovering Land, they were to lie by after Midnight, till Day, and be upon the Watch, for he firmly believed they would find Land that Night: And that, befides the io,000 Marvedies, an Annuity their Highneffes had promiffed the Perfon that thould firf difcover it, he would give a velvet Doublet. Two Hours before Midnight, Columbus ftanding on the Poop faw a Light, and privately called Peter Gutierres, Groom of the Privy Chamber to the King, and bid him look at it, and he faw it; then they called Roderick Sancbez of Segoria, Purfer of the Fleet, who could not difcern it; but afterwards it was feen twice, and looked like a little Candle raifed up, and then taken down; and Columbus did not queftion but it was a true Light, and that they were near Land, and fo it proved; and it was of People paffing from one Houfe to another. Two Hours after Midnight, the Caravel Pinta, was always a-head, and made Signs of Land, which was firt difcovered by a Sailor, whofe Name was Roderick de Triens, but two Leagues diftant. But their Catholic Majefties declared, that the Reward of 10,000 Marvedies Annuity belonged to the Admiral, and it was afterwards paid him at the Shambles of Sevil, becaufe be faw the Light amidft Darknefs, meaning the Spiritual Light that was then coming in amongt thofe barbarous People. When Day appeared they perceived an Ifland 15 Leagues in Length; plain, much wooded, well watered, and having a Lake of frefh Water in the Midft of it; well flored with People, who ftood full of Admiration on the Shore, imagining the Ships to be Sea Monfters, waiting with the utmof Impatience to know what they were, as the Spaniards were no lefs eager to be upon Land.

The Admiral went afhore in his Boat, armed, and the Royal Colours flying; as did the Captains, Martin Alonjo Pinzon and Vincent Yanez Pinzon, carrying the Colours of their Enterprize, being a green Crofs with fome Crowns, and the Names of their Catholic Majefties. Having all of them kiffed the Ground, and on their Knees, with Tears, given Thanks to God for the Goodnefs he had fhewn them; the Admiral ftood up and gave that Inand the Name of San Salvador, which the Natives called Guanabam, being one of thofe afterwards called Lucayo Inands, 950 Leagues from the Canories, difcovered after they had failed 33 Days. Then, with proper Solemnity, he took Poffelfion of it , in the Name of their Catholic Majefties, for the Crown of Cafile and Leon; a great Multitude of the Natives looking on.
The Spaniards immediately owned him as their Admiral and Viceroy, and fwore Obedience to him, as reprefenting the King's Perfon in that Country, with all the Joy and Satisfaction that fo great an Event deferved; all begging his Pardon for the Trouble and Uneadiners they had given him, by their Inconftancy and want of Refofolution. The Admiral, believing thofe Indians a gentle and fimple People, gave them fome red Caps, Glafs-Beads, and fuch like Things, which they highly valued. The Spaniards no lefs admiring their Colour and Shape. When the Admiral returned on board, the Indians followed him: Some fwimming, and others in their Boats, called Canoes, made of one Peice of Wood, like Trays. They carried along with them Skins and Bottoms of Cotton, Parrots and Javelins, the Ends of which were armed with Finh Bones, inftead of Horn, and fome other Things to exchange for Glafs-toys, Hawks-bells, and the like; which they were fo fond of, that they received even the broken Peices of earthen Plates as precious Relics, being a People in their original Simplicity.

They were all ftark naked as they were born, Men and Women, and moft of them young, or not above thirty Years of age. They wore their Hair down to their Ears, and fome few to their Necks, tied with a String. They had good Faces and Features, though their extraordinary high Foreheads fomewhat disfigured them. They were of a middle Stature, well fhaped, and their Skins of an Olive Colour, like the Natives of the Canaries; fome of them were painted with black, and others white, and others red; moft of them on their Bodies, and fome on their Faces and Eyes, or only the Nofe. They were not acquainted with our Weapons, for when they fhewed them naked Swords, they fimply laid hold on the Edges.

They knew nothing of Iron, and wrought Wood with hard fharp Stones found in Rivers. Some of them having Scars about them, and being afked by Signs, anfwered, that People, from other Lands, came to make them Prifoners, and they received thofe Wounds in their Defence. They feemed to be ready of Tongue, and ingenious; for they eafily pronounced the Words they once heard. No other Sort of Creatures were feen there but Parrots.
On the $13^{\text {th }}$ many Indians came aboard the Ships in their Canoes, moft of which carried forty five Perfons; yet fome were fo fmall that they held but one. They rowed with an Oar like the Peel of an Oven, as if they had. dug with a Spade; and their Boats are fo artificially made, that though they over-fet, the Indians fwimming turn them up again, and empty the Water with dried Gourds they had for that Purpofe. They carried Cotton to barter, and fome for three Ceutis of Portugal (worth about a Farthing) gave as many Bottoms of Cotton as weighed a quarter of an hundred Weight. They wear no Jewels or other things of Value, except fome little Plates of Gold they had hanging at their Nofes. They were afked whence they had that Gold, and fignified it came from the Southward, where a King had much of it. The Admiral underftanding that there were other Lands, refolved to go in queft of them. The Ships were never clear of Indians; the whole Day was fpent in bartering; their Generofity not extending to give what they had, but for the Value they put upon what they received in return; looking upon the Spaniards as Men come from Heaven, and therefore they would have fomething to keep as a Memorial of their being there.
7. On the 14 th, in the Morning, the Admiral, with the Boats, took a View of the Coaft to the North-weft. The Natives followed by Land, promifing Provifions, and calling others to fee the People come from Heaven, who, wondring, lifted up their Hands, and fome fwimming, and others in Canoes, went to afk them by Signs, whether they came from Heaven, and praying them to go and reft in their Country. The Admiral gave them all Glafs Toys, Pins, and other Baubles, being well pleafed; at length he came to a Ridge of Rocks, where there was a fafe and fpacious Harbour, and where a ftrong Caftle might have been erected, becaufe it was almoft encompaffed with the Sea. In that Place were fix Houfes, with many Trees about them; and becaufe the Men were tired with rowing, and he perceived the Country was not proper to make any long ftay in, he took feven Indians to learn the Spanifb Tongue, and returning to the Caravels, fet out in queft of the other Inlands; about an hundred appearing flat, green, and inhabited, the Indians telling the Names of them.

On the 15 th, he came to one that was feven Leagues from the Firft, which he called St. Mary of the Conception. The Side whereof next to St. Saviour extends 50 Leagues along the Coaft; but the Admiral took the Coaft that lies Eaft and Weft, being eighteen Leagues in Length; anchored on the Weft, and went ahore. The Natives flocked thither in great Numbers, with much Amazement, and he perceiving all alike thought fit to proceed no farther; a Canoe being aboard the Caravel Nina, one of the feven Indians of San Salvador, or St. Saviour, threw himfelf over-board and went his Way, and though the Boat purfued, they could not overtake him; the Night before another made his Efcape. Another Indian came in a Canoe, to exchange Cotton; the Admiral ordered a red Cap to be put upon his Head, and Hawks-Bells on
his Arms and Legs, and fo fent him away very joyful, without taking his Cotton. The next Day he failed away Weft to another Iland, the Coaft whereof flretched along 18 Leagues North-weft and South-eaft, where he arrived on the 1 gth, in the Afternoon, by reafon of the Calm.

On their Way they met an Indion in a Canoe, carrying a Piece of fuch Bread as they eat, and a Calabafh or Gourd with Water; a little black Earth with which they paint themfelves, and dry Leaves of an Herb they very much value, becaufe it is wholefome, and has a fweet Scent, and in a little Bafket a String of Glafs-Beads and two Vintems, a fmall Portugal Coin, by which they knew he came from St. Salvador, had paffed by the Conception, and was going to this Inand, which the Admiral named Fernanda, in Honour of the King. They underftood that the faid Indian was going to carry Advice of the Spaniards, but the Way being very long, and he tired with rowing, he went aboard the Ships, where the Admiral ordered him fome Bread and Honey to eat, and Wine to drink, and as foon as he arrived at the Inand he ordered him to be fet aftore with fome Toys he gave him. The good Account he gave, caufed the People to go aboard, and barter for fuch Things as they had met with in the other Inands, the Inhabitants of them being of one Nation. When the Boat went afhore for Water, the Inhabitants readily fhewed it, and carried the little Tubs to fill the Pipes; but they feemed to be a more underftanding People than the former; for they managed better in exchange of Commodities. Thefe had Cotton Cloths in their Houfes, and the married Women covered their Privities with a little Cotton Cloth, which the Maids did not.

This Inand appeared to abound in Water, having many Meadows and Groves, and fome agreeable little Hills, which there was not in the others; with an infinite Variety of Birds that fung fweetly, and flew in flocks, moft of them different from what Spain affords; there were alfo many Lakes, and near one of them they faw a Creature like a Crocodile, feven Foot long, and they throwing Stones at him, he ran into the Water, where they killed him with their Spears, admiring its Largnefs and frightful Shape; but Time afterwards made it appear, that thefe Animals being fcaled and flead, are good Meat; the Flefh of them being white, and much valued by thiIndians; and in the Illand of Hifpaniola they call them Yavanas; in that Inand they faw Trees that looked as if they had been grafted, as having Leaves and Branches of four or five different Sorts, and yet they were natural: They alfo faw Fifhes of fine Colours, but no Liand Creatures appeared, except large and tame Snakes, and Parrots, Alligators, and a Sort of little Rabbits, in Shape like Mice, but bigger, which they call Utias. Proceeding towards the North-weft, taking a View of this Inand, they anchored in the Mouth of a fine Harbour, that had an Inland before it; but they went not in, becaufe it had not Water enough; nor would the Admiral go far from a Town that had covered them; whereas they had not yet feen, in any Inands, any bigger than of ten or twelve Houfes like Tents, fome round and cthers long, with an open Portal before them, as is ufual in the Low Countries; covered with Leaves of Trees, well fitted for the Rain and Weather, with Vents for the Smoak, Ridges at the Top, handfomely made; and within them there was no other Houfhold Stuff or Ornament, than what they carricd aboard the Ships to barter. But their Beds were a Net, made faft to two Pofts, which are called Hamocks. They alfo faw fome little Dogs that did not bark.

They found an Indian who had a Bit of Gold in his Nofe, with fome Characters on it that looked like Letters; and the Admiral would have it taken from him, believing it had been a Coin, but it afterwards appeared there had never been any in the Wef Indies. Finding nothing more in Fernonda, than in St. Salivador and the Conception; he proceeded to the others that were neareft. The fourth Ifland he came to was called Safmoto, and he named it Ifabella, in Honour of the Queen; and took Poffeffion on it before Witneffes, and the Notary, as he had done in the others. He perceived the Land was beautiful as the reft, and the People like the former. They killed another

Alligator,

Alligator, and as they were going towards a Town the Indians fled, carrying away what they had. But the Admiral having forbid meddling with any thing, they foon came to the Ships to barter like the reft; and the Admiral gave them fome Toys, and to try their Kindnefs anked for Water, which they carried to him in Calabafhes or Gourds. He would not lofe Time at the Illand of Ifabella or others; but refolved to go in queft of another, which they told him was very large, and called Cuba, pointing to the South; he believing it had been Cipango, by Reafon of the Signs they gave of it, and their extraordinary Reports concerning it.
8. On the 28 th he drew near the Coaft, gave it the Name of fuana or Yobamna; which feemed to be a better Country than the others, by Reafon of the Hills, rifing Grounds, and Variety of Trees, Plains, and Shores that appeared. He anchored in a great River he called San Salvador. The Woods appeared very thick, the Trees tall with Bloffoms, and Fruits different from ours; and there were abundance of Birds. The Admiral, defiring to have Information, fent to two Houfes, the People whereof fled, leaving Nets and fifhing Tackle behind them, and a Dog that did not bark. He would not fuffer any thing to be touched, but failed to another great River, which he calied de la Luna, i. e. of the Moon. Another he faw, which he called de Mares, or of the Seas, the Banks of it were very well inhabited.

The Indians fled to the Mountains, which were covered with large and tall Trees of feveral Sorts. The Indians he carried with him fignified to him that there was Gold and Pearls in Cuba; and he thought it very probable becaufe he faw Mufcles; they alfo faid it was not ten Days Sail from thence to the Continent, according to the Notion he had. Paul, a Phyfician of Florence, having writ about it; however, though he was in the right, it was not the Land he imagined. Believing that if many Men went $a$-fhore, it would add to the Fear of the Indians, he fent two Spaniards, with one Indian of San Salvador, and one of Cuba, who came to the Ships in a Canoe. The Spaniards, being Roderigode Xeres, an Inhabitant of Ayamonte, and Lewes de Torres, who had been a Jew, and fpoke Hebrew and Cbaldaic, and fome fay Arabic. He gave them things to exchange, and allowed them fix Days to return in ; directing them to go up into the Country, and enquire into all Affairs without doing harm to any body. In the mean Time he refitted the Ship, and they obferved, that from all the Wood they burnt, there came a Sort of Gum like Maftic, refembling in the Leaf and Fruit the Maftic Tree, but much bigger. In this River of Mares the Ship had room to wind: It has 7 or 8 Fathom Water at the Mouth, and five within, with two Ridges of high Ground on the South-eart, and a fine Cape to the Weft North-weft, plain and running out; and this was afterwards the Port of Barachoa, which the Adalantado, or Lord Lieutenant Diego Velafquez, called of the Afumption.

When the Ship was ready to fail, the Spaniards returned, on the 5 th of November, with three of the Native Indians, reporting they had travelled 22 Leagues, and found a Village of fifty Houfes, built like them before mentioned, and that they contained about 1000 Perfons, becaufe a whole Generation lived in a Houfe, and that the primé Man came out to meet them, led them by the Arms, and lodged them in one of thefe new Houfes; caufing them to fit down on Seats made of one folid Piece of Wood, in the Shape of a Beaft, with very fhort Legs, and the Tail heid up the Head before, with Eyes and Ears of Gold; and that all, the Indians fat about them on the Ground, and one after another went to kifs their Feet and Hands, believing they came from Heaven, and gave them boiled Roots to eat, which tafted like Chefnuts; and intreated them to ftay there, or at leaft, to reft five or fix Days; becaufe the Indians that went with them faid nnany kind things. That Abundance of Women foon after coming in to fee them, all the Men went out, and they, with the fame Admiration, kiffed their Feet and' Hands, touching them as if they had been fome holy Things, offering what they brought; and that many of
Vol. II. Numb. 70.
the Men would have come away with them, but that they would admit of none but the Lord and his Son, with one Servant.
They added, that, both coming and going, they found many Villages where the fame Refpect was paid them, but, that none of them had above five or fix Houfes; and that, by the Way, they met many People, each of them carrying a Fire-brand in his Hand to light Fire, and perfume themfelves with fome Herbs they carried along with them, and to roaft their Roots, that being their principal Food; and the Fire was eafily kindled, becaufe they had a Sort of Wood, which, if they worked one Piece againft another, as if piercing a Hole, took fire; they alfo faw a Multitude of feveral Sorts of Trees, fuch as they had not feen on the Sea-coaft, and great Variety of Birds; different from ours, and among them Partridges and Nightingales; but that they had met with no four footed Creatures, befides thofe little Cur-Dogs that cannot bark. They had much Ground fowed with their Roots, and that fort of Corn called Maize, well tafted, either boiled or ground into Flower. They faw a vaft Quantity of fpun Cotton in Bottoms, and in one Houfe they believed there was above 12,000 Pound Weight of it; the fame growing in the Fields without being planted; and as the Rofes blow of themfelves, fo does that, when ripe, though not all at the fame Time; for, upon the fame Plant, fome were open and others ftill clofed; and for a Leathern Thong, or a Piece of glazed Ware, or a Bit of a Looking-Glafs, they would give a little Bafket full of Cotton, which they did not make ufe of to cloath themfelves, for they all went naked, but in making Nets for their Beds, and little Cloths to cover their Privities; and that being afked about Gold and Pearls, they faid there was Abundance at Bobio, pointing Eaftward.
9. The Spaniards ftill enquiring of the Indians for Gold, they anfwered, Cubanacan, which they thought had meant the great Cbam, and that the Country of Catbay was not far off, becaufe they alfo pointed out four Days Journey. Mertin Alonfo Pinzon faid it mult be fome great City, that was four Days Journey from thence; but it was not long before they underftood that Cubanacan was a Province in the Midft of the Inand of Cuba, for Nacan fignifies in the Middle, and that there were Mines of Gold. Having heard thus much, the Admiral would not lofe any more time, but ordered fome Indians to be taken, to be carried into Spain, from feveral Parts, that every one might give an Account of his own Country, as Witneffes of the Difcovery: Twelve were taken, Men, Women, and Children, without giving Offence. As they were ready to fail, an Indian, who was one of the Womens Hurband, and Father to two Boys that were aboard; came to the Ship, and defired they would take him along with his Wife and Children; the Admiral ordered him to be taken aboard, and all of them to be well ufed; and, becaufe of the North Winds, he was obliged to return to a Port, which he called del Principe; or, the Princes, where he arrived on the $13^{\text {th }}$, and erected a Crofs at the Mouth of it, made of two large pieces of Timber:

The next Day he ftood to the Eaftward; in queft of the Inand Hippaniola, which the Indians called Bobio, and fome of them Babeque; but it afterwards appeared Babeque was not the Inand of Hijpaniola, but the Continent, for they called it by another Name, Carabina. Martin Alonfo Pinzon undertanding now, that the Indians faid there was much Gold in Bobio, being covetous to enrich himfelf, he left the Admiral on the 2 Int, without aniy ftrefs of Weather, or any other lawful Cauffe; and, his Ship being a very good Sailer, made the beft of his Way thither. By the Name of Bobio, which was the Land of Hijpaniola, it feemed the Incions would fignify that it was a Land full of Bohios, that is, Cottages; the Admiral feeing; that; notwithftanding all the Signals he made, Martin Alonfo was not to be found with the two Ships, and the Wind being fill contrary, he returned to Cuba, to a large and fafe Harbour, which he called St. Catherines ; there he wooded and watered, and faw fome Stones with Tokens of Gold in them. On the Land there were tall Firr-trees, fit to make Mafts, and perceiving that all the Indians directed him to Hifpa-

D
niold,
niola, he failed along the Coat more to the Sonth-eart 42 Leagues, where he found large and fafe Harbours, and among them a River up the Mouth, whereof a Gally could eaflly pafs, though the Entrance could not be perceived, unlefs very near to it. The Convenience of the River invited him to go in the Length of the Boat, where he found eight fathom Water, and proceeding ftill farther, he faw a Canoe of twelve Oars on the Land, under a fort of Arbour, and in fome Houfes clofe by they found a Mars of Wax, and a Man's Head hanging in a little Banket at a Poft, the which Wax they carried to their Catholic Majefties, none being ever after found in Cuba, whence it was concluded to have been brought from $1 u$ satan, either by ftrefs of Weather in a Canoe, or fome other way. They found no People to make any enquiry of them, becaufe they all fled, but faw another Canoe 95 Spans in length, which could carry fifty Perfons, made of one entire Tree, like the reft; and though they had no iron Tools to work them, the Inftruments they made ufe of, for that Purpofe, of Flints, proved fufficient, becaufe the Trees were very large, and the Heart of them very foft and fpungy, fo that they eafily hollowed them with Flints.

The Admiral arrived at the Eaftern Point of it, and fet out from thence on the 5 th of December for Hifpaniola, being eighteen Leagues over to the Eaftward, but could not reach it till the next Day, by reafon of the Currents. When he entred the Port he called it St. Nicholas, becaufe it was that Saint's Day, and found it fafe, fpacious, and deep, encompaffed with thick Woods, though the Land is hilly, and the Trees not very large, like thofe in Spain; for they faw Firrs and Myrtles, and a pleafant River ran into the Harbour ; and on the Shore there were many Canoes as big as Brigantines of twenty-five Oars. However, finding no People, he proceeded farther to the Northward, to the Port he called the Conception, to the Southward of an Ifland he called Tortuga, ten Leagues from Hifpaniola, and finding that this Inland of Bobio was very large, and that the Soil and Trees were like thofe in Spain, as alfo that at one Draught of a Net, among other Sort of Fifh, they had taken Sbads, Soles, and other Sort of Fifh known in Spain, which till then they had not feen in thofe Parts; and that they had heard the Nightingale fing, with other European Birds which they admired, about December, he ftiled the Inland la Efpanola, by us corruptly called Hifpaniola. He thought fit the Name of Spain fhould have place, though fome told him it would be more proper to call it Caftelana, becaufe only the Kingdoms Caftile and Leon were concerned in that Conqueft.

In regard that the Indians he had on board gave him fo good an Account, he was earneft to fee what Truth there was as to the Wealth of that Country, and to take a View of it ; but the Indians flying, and giving one another Notice by Fires, he thought fit to fend out fix armed Spaniards, who having travelled far, returned without finding any People, faying wonderful things of the Delightfulnefs of the Land. Having ordered a great Crofs to be erected near the Mouth of the Harbour, on the Weft-fide, as three Sailors were in the Wood, feeking for proper Trees for that effeet, they $\mathrm{fpy}^{\text {'d }} \mathrm{d}$ abundance of naked People, who fled as foon as they faw the Spaniards. The Sailors running after them took a Woman who had a little Plate of Gold hanging at her Nofe. The Admiral gave her Hawks-Bells, Strings of Glars-Beads, and caufed a Shirt to be put upon her, and fo fent her away, with three of the Indions he had brought with him, and three Spaniards, to bear her company to her Habitation.
10. The next Day he fent nine Spaniards, well armed, with an Indian of San Salvador, which was four Leagues diftant to the South-eaft; they found a Town of a thoufand Houfes abandoned, the Inhabitants being fled. The Indian went after them, and fo much extolled the Spaniards, that they returned, and being fomewhat aftonifhed and trembling, laid their Hands on the Heads of the Spaniards, by way of Honour and Refpect, and carrying them Provifions, defiring they would fay that Night; abundance of People then came up, carrying on their Shoulders the Woman to whom the Admiral had given the Shirt, with her Hufband, who was going to return chem Thanks. The Spaniards returned with an Account
that the Country abounded in Provifions; the People whiter and of better Countenances than thofe of the other Inands, more tractable, and that the Country which produced Gold was more to Eaftward; that the Men were not fo large, but ftrong boned, and grofs, without Beards, their Noftrils very wide, and their Foreheads fimooth and high, and that they made them fo at their Birth, reckoning it graceful; for which Reafon, and becaufe they always went bareheaded, their Skulls were fo hard, that fometimes a Sponifb Sword would break upon their Heads.

The Admiral was informed that the Lord of that Territory, whom they called a Cazique, was coming with two hundred Men to fee the Ships, and though young, they carried him on a Palankin, on their Shoulders, and he had feveral Counfellors; when he came on board it was obferved, with Admiration, how great Refpect they paid him, and how gravely he behaved. An Indion of the Inand Ifabella went and talked to him, telling him the Spaniards were heavenly Men. He went aboard, and when he came to the Quarter-deck, he made Signs for thofe that were with him to itay behind, excepting two who fat down at his Feet, and were his Counfellors. The Admiral ordered to give him to eat; he took a little of every thing, and having tafted it, gave it to the other two, and afterwards carried it to the reft. They gave him Drink, and he only put it to his Mouth; they all behaved themfelves very gravely, faid little; his Men looked at his Mouth, and fpoke to him, and the Admiral, by means of the Indian Interpreter, gave him to underftand that he was Commander for their Najefties of Caftile and Leon, the greateft Sovereigns in the World. But, neither the Cazique, nor the reft, would believe any other than that they came from Heaven. They feemed to the Admiral to be a more rational People, than thofe of the other Inands; and becaufe it grew late the Cazique returned afhore. The next Day, though the Wind was contrary, and blew hard, the Sea did not fwell, by reafon of the Shelter the Ifland Tortuga afforded to that Coaft; and fome Seamen went a-fifhing, with whom the $I_{n-}$ dians were well pleafed. Some Men went to the Town, and obtained little Plates of Gold for Glafs-Beads, which much pleafed the Admiral, becaufe he was very defirous that fome Gold might be found in profecuting this Difcovery, to fhew that his Promifes were not vain.

The King came again to the Shore, in the Afternoon, and then a Canoe arrived from the Ifland Tortuga, with forty Men to fee the Spaniards; at which the Cazique appeared to be concerned; but all the Indians of Hifpaniola fat down on the Ground, in token of Peace, and thofe in the Canoe went afhore; but the King ftood up, and threatning them, they went aboard their Canoe again. The Admiral, being refolved to difcover the Country, fet fail, and during all the Igth of December could not get out of that little Bay between the two Inands, nor put into the Harbour hard by it. He faw many Mountains, Woods, and Groves, and a little Inand, which he called St. Thomas. He judged that Hijpaniola had many Capes and Harbours, and he thought the Temperature of the Air moft pleafant, and the Soil delightful. On the 20 th he put into an Harbour, between the little Inand of St. Thomas and the Cape. Several Towns appeared, as alío Fires; becaufe the Seafon being dry, and the Grafs there growing high, they burnt it to make Ways; for, as they were naked, the dry Weeds hurt them, and alfo to hunt the Utias, which they took with Fire. The Admiral entered the Port with the Boats, and, having viewed it, faid it was a very good one. Ile fent out to fee whether there was any Town near, and they found one at a little Diftance from the Sea; they faw Indians who kept a-loof from the Spaniards, but the Indians that came acoard the Ships bid them not to fear; and immediately fo many Men, Women, and Children came, that there was no feeing through the Throng. They carried Meat, Calabanhes with Water, and good Bread made of Maize or Indian Wheat; they did not hide the Women, as had been done in other Parts, but all admired to fee the Chriftians, and fanding amazed, glorified God. They were whiter and better fhaped, better natured, and more generous;
and the Admiral took fpecial Care that no Offence fhould be given them. He fent fix Men to fee the Town, where they entertained them as believing they came from Heaven. In the mean Time there came fome Canoes, with Men fent by a King, who defired the Admiral to go to his Town, where he was waiting for him, with many People on a Point of Land.
He went in the Boats, though many had intreated him not to go, but to fay with them. As foon as the Boats came, the King fent the Spaniards Provifions, and feeing they accepted of them, they went to the Town for more, and for Parrots. The Admiral gave the Indians HawksBells, Glafs Baubles, and forne of Tin; he returned to the Ships, the Women and Children crying out that he fhould not go away. Some that, out of Curiofity followed him in Canoes, he gave Victuals to, as he did to others that fwam aboard from half a League Diftance; though the Shore was covered with People, they could fee abundance coming and going crofs a large Plain, which was afterwards called la Vega Real, or the Royal Plain; the Admiral again commended the Harbour, and gave it the Name of St. Tbomas, becaufe he found it on his Day. The 22 d , in the Morning, he was going in fearch of the Inlands, which the Indians faid had much Gold, but was hindered by the Weather, and fent the Boats a-fifhing; and then one came from King Guacanagari, to defire him to go to his Country, and he would give him all he had, he being one of the five Sovereigns of the Inand, poffefing the greateft Part of it on the North-fide, where the Admiral then was; he fent him a Girdle he wore inftead of a Purfe, and a Vizor, with Ears, Tongue, and Nofe, of beaten Gold: The Girdle was adorned with fmall Fifh-Bones, like feed Pearl, curioully wrought, four Fingers broad. The Admiral refolved to go thither on the 23 d , though to pleafe others, there went before fix Spaniards, becaufe the Indians were fo much delighted every where to fee them.
The foul Weather detaining the Admiral, he fent a Notary to King Guacanagari, to acquaint him with it; he alfo fent two of his Indians to a Town, to fee if there was any Gold, gueffing that there was Plenty of it ; and it was believed for certain, that this Day above a thoufand went aboard the Ships; every one of them gave fomething, and thofe who went not aboard from their Canoes cried, Take, take. The Notary went to Guacanagari, who came out to meet him. He thought that Town more regular than any he had feen before. All the People gazed on the Chriftians with Joy and Admiration, and the King gave them Cotton Cloths, Parrots, and fome Pieces of Gold, and the People, what they had; valuing the Toys the Spaniards gave them like Relics. Thus the Notary and his Companions returned to the Ships, attended by Indians.
The 24 th the Admiral went to vifit Guacanagari; the Diftance from Fort Si. Thbomas to the Place where the King was might be about four or five Leagues, and there he faid, till, feeing the Sea calm, he returned aboard, and went to bed, for he had not flept in two Days and a -Night. The Weather being calm the Sailor who was-at the Helm left it to a Cabbin-boy, tho' the Admiral had, during the whole Voyage, forbid the Steerfman ever to quit the Helm, and in reality they were out of Danger of Sholes or Rocks; for on Sunday, when the Boats went to carry the Notary to the Cazique, they had furveyed all the Coaft, and the Sholes there are from the Point of Land to the Eaft-forith-eaft, for above three Leagues, and they had alfo obferved which Way they might paifs, and finding themfelves in a dead Calm they went to fleep, and it happened the Current carried the Ship on very gently, till it fruck on a Rock with fuch a dreadful Noife that it was heard a League off, and the Fellow that was at the Helm, finding the Rudder ftrike, roared out.

The Admiral, hearing the Cry, was firtt up, and then the Mafter, whofe Waich it was, and he ordered him, fince the Boat was out, to let fall an Anchor at the Stern, for by that Means they might, with the Help of the Captain, work out the Ship, and when he thought they were doing what he had ordered, he perceived that fome were making way in the Poat to the Caravel that lay to
the Windwaid half a League from thence. Obferving that the Water ebbed, and the Ship was in danger, he ordered to cut down the $\mathbb{M}$ aft, and lighten it, to fee if it might be faved; but it could nor be done; the Water falling away all at once, the Ship was every Moment left dry, and lay a-thwart the Sea; and tho it was not rough, by reafon of the Calm, the Ship fprunk a I eak berween the Ribs, and lay down on a Side, opened near the Keel, and was foon full of Water; and if the Wind had blowns or the Sea been rough, not a Man had efcaped; but had the Mafter done as the Admiral ordered him the Ship had got off fafe. The Boat came again to their Affiftance, for thofe in the other Ship underfanding how the Cafe ftood, not only refufed to receive thofe that had fleds but with them failed back to the Relief of the Diftreffed. There being no Poffibility of faving the Ship, Order was taken for faving the Men; to which Purpofe the Admiral fent James de Arana and Peter Gutierrez, to acquaint Guacanagari that by going to vifit him he had loft his Ship a League and half from Land. Guacanagari lamented this Misfortune, and immediately fent the $\mathrm{Ca}-$ noes, which in a Moment carried off all that were on the Decks ; and he came himfelf with his Brothers, and took particular Care that nothing fhould be touched, ftaying in Perfon to guard the Goods, and fent word to the Admiral not to be concerned, for he would give him all he had ; and the Goods were carried to two Houfes he had appointed to lay them up in. The Indians fo affectionately gave their Help in this Diftrefs, that it could not have been better done in Spain; for the People were gentle and loving, and their Language was eafy to be pronounced and learned; and they had fome commendable Cuftoms; and the King was ferved with much State, and he was very fedate; and the People were fo curious in alking, that they would know a Reafon for every thing.

On the 26 th of December Guacanagari went on board. the Caravel Nina, where the Admiral was in great Affliction for the Lofs of his Ship: He comforted him, and offered him all he had. Two Indians came from another Town, bringing Plates of Gold to exchange for Hawks-Bells, which were what they moft valued, and the Admiral had a Stock of thofe Baubles, grounded on the Experience he had learnt from the Portuguefe in Guinea. The Sailors alfo gave notice that others carried Gold, and gave it for Ribbons and other Trifles; Guacanagari obferving what the Admiral valued, faid he would caufe fome to be brought from Cibao; and going athore, he invited the Admiral to go eat Axis and Cazabi, which was their chief Diet; and he gave him fome Mafks, with gold Eyes, Nofes, and Ears, with fome other finall Things they wore about their Necks. He alfo complained to him of the Caribes who carryed away his People, which was the Reafon of his flying at firft, fuppofing the Spaniards had been Caribes. The Admiral fhewed him his Arms, and a Turkib Bow with which a Spaniard Thot very dexterounly; but what he moft admired was the Cannon, for when they were fired, the Indians fell down as if they had been dead. The Admiral having found fo much Afection, and fuch Tokens of Gold; and believing the Country was fruitful and wholefome, judged that God had permitted the Ship to be caft away to the end that a Settlement might be made there, and that the preaching and Knowledoge of his mot holy Name might be begun in that Inland.

The Indians went and came for Hawks-Bells, which were the Things they moft delighted in, and as foon as they came near the Caravel, they held up the Pieces of Gold, crying, Cbuque, Cbuque, that is, Take, Take. An Indian came to the Shore with a Piece of Gold weighing half a Mark, (that is, four Ounces) and holding it in his Lefthand ftretched out the Right; and an Hawls--Bell being; put into it, he let go the Gold and ran away, thinking he had cheated the Spaniard, The Admiral refolved to leave fome Men in that Country to trade with the Peoples, and acquaint themfelves with the Country, and learn the Language, that when he returned for Spain there might be fome capable to give Directions for making of a Settlement there ; and many offered themfelves to that Purpoie.

He ordered, for the Prefent, a fort of a Town to be built with the Timber of the Ship: And at this Time Advice came, that the Caravel Pinta was in the River, toward the Eaftern Point, and Guacanagari fent to inquire into it. The Admiral carefully attended the Building, and the more for that there were daily greater Inducements to it, and becaufe Guacanagari always fhewed himfelf fearful of the Caribes; the more to encourage and to fhew him the Effect of the Spanish Arms, the Admiral ordered a great Gun to be fired againft the Side of the Ship that had been caft away, and the Ball paffing clear-through fell into the Water: He fhewed him what Harm our Weapons did, and told him that with them, thofe he defigned to leave behind in his Country fhould defend him, becaufe he defigned to return into Spain to bring fome Prefents for him.
12. The Admiral haftened the building of the Fort ; and to that purpofe went afhore from the Caravel, aboard which he always lay. On the 18th, as he was going into the Boat, he thought he had feen Guacanagari, who went into his Houfe perhaps for the move State, tending one of his Brothers, who received the Admiral with much Joy, and led him by the Hand to one of the Houfes that had been given to the Chriftians, being the largeft in the Town: In it they had provided for him a raifed Seat, and made hirn fit on a Chair with a low Back the Indians ufed, and they were very neatly polifhed, and bright as if they had been made of Jet. As foon as the Admiral was Yeated, the Brother fent to acquaint the King, who prefently came, and very joyfully hung a great Plate of Gold about his Neck, and ftaid with him till it grew late, and the Admiral went aboard the Caravel. He had feveral Motives for leaving a Colony in that Place; the chief whereof were, That when it was known in Spain that Men had been left there to fettle, the People might be more inclinable to go over thither; and becaufe all the Men left could not build another Veffel in time, and likewife could not be tranfported in the only Caravel he had; as alfo becaufe he found thofe that were to flay very inclinable to it, encouraged by the Gentlenefs and Affability of the People; and becaufe, tho' he had defigned to carry to their Catholic Majefties fome Natives of the Country, and other moft valuable things there were in it, in token of the Difcovery, and for the more Reputation of the Enterprize, it was convenient it fhould be known that Men had ftaid there of their own free Will.

The Fort had a Ditch round it; and, tho' built of Wood, was very ftrong againtt the Natives. It was finifined in ten Days, becaufe a vaft Number of Men worked at it; and he called it the Town of the Nativity, becaufe on that Day he came into the Port. On the 2gth in the Morning a Nephew of the King's, very young and of good Senfe, went aboard the Caravel; and the Admiral, being always follicitous to know where the Gold was found, learned all that's poffible by Signs, and thought he underftood fome Words. Accordingly he afked the Youth about the Mines, and underftood that four Days Journey from thence there was an Ifland to the Eaftward, which he called Guarinoex, and others, Macorix, Mayonis, Fumay, Cibao, and Coray, in which there was a vaft Quantity of Gold. The Admiral immediately wrote down thofe Names: And by this it appeared, that he underftood nothing of the Indian Language; for thefe Places were not Inands, but Provinices in that Ifland, and Lands belonging to feveral Kings or Lords: Guorinoex was the King of that great Royal Plain before-mentioned; and the Youth meant to tell him, that in Guarincex's Country was the Province of Cibao, abounding in Gold. Macorix was another Province, which afforded little Gold: And the other Names were, as has been faid, Provinces; the Admiral not knowing how to write them, becaufe he did not underftand them; and he thought the King's Brother, who was prefent, had reproved his Nephew for telling him thofe Names. At Night the King fent him a great Gold Mafk, defiring he would fend him a Bafon and an Ewer, which it is likely were of Brafs or Tin : He immediately fent them, and believed he afked for them to have the like made in Gold.

On the zoth the Admiral went to dine afhore; and it happened to be at the time when five Caziques or Princes,
fubject to Guacanagari, were come, all of thern with Crowns of Gold on their Heads, and with great State; and as foon as he landed, Guaconagari came to meet him, and led him by the Arm to the fame Houfe where he had been before, where the raifed Place and the Chairs were. He caufed the Admiral to fit down with great Courtefy and Refpect, and then took of the Crown from his own Head, and fet it on the Admiral's; who took off a Collar he had on of fine Beads of feveral beautiful Colours, and put it about the King's Neck, and took off an Hood of fine Cloth which he had put on that Day, and put it upon the King, and fent for a Pair of coloured Bufkins, which he alfo drew on; he alfo put a great Silver Ring upon his Finger, becaufe the Admiral had been told that they had feen one on a Sailor's Hand, and did all they could to get it of him; for it is certain that they put a great Value on any thing made of white Metal, whether it were Silver or Tin. With thefe Gifts the King thought himfelf much enriched, and was highly pleafed. Two of thofe Caziques bore the Admiral company to the Place where he took Boat, and each of them gave him a great Plate of Gold; and thefe were not caft, but made of many Grains beaten together; for the Indians of this Inand had not the Art of cafting, but beat the Grains of Gold they found between two Stones, and by that means fpread them.
13. When the Admiral returned to lie aboard the Ca ravel, and found that Vincent Yanez the Commander of it affirmed he had feen Rhubarb, and knew the Strings of it, and the Root, the Admiral fent for fome Rhubarb, and they brought one Frail full of it, and no more ; becaufe they had no Spades to dig it up with; which was carried to their Catholic Majefties; but it did not prove to be Rhubarb. The Admiral looked upon the Pepper of this Inand, which they call Axi or Pimento, as good Spice, faying it was better than the Pepper that they carried from the Eaftern Parts; for which reafon they fancied there were other Sorts of it. The Fort being finifhed, he ordered all to be provided for failing, Wood and Water to be taken in, and other Preparations made. The King ordered as much as he would have of the Country Bread called Cazabi to be given him, as alfo of his Spice called Axi, falt Fifh, and what he had befides. Tho' he would not willingly have gone away for Spairs without coafting all that Country, which he thought extended very far towards the Eaft, that he might have difcovered its Secrets, and find the beft Paffage from it to Spain, for the fafer bringing over of Beafts and Cattle, he durft not then attempt it, as thinking he had but one Caravel, and might run himfelf into Danger, and therefore it was not reafonable to venture farther in unknown Seas.

He complained very much of Martin Alonso's forfaking him, as being the Caufe of thofe Inconveniencies. He made choice of thirty-nine Men to flay in the Fort, fuch as were moft willing, chearful, ftrong, and beft able to endure Fatigues. He left with them for their Commander Yomes de Arana, a Native of Cordova, Notary and Alguazil, with full Power as he had received it from their Majefties; and in cafe he fhould die, he appointed for his Succeffor in that Poft Peter Auticbrez, Groom of the Privy-Chamber to the King; and in cafe he died, the Place to go to Roderic de Efcovedo, born at Seville; and alfo left with them a Surgeon whofe Name was Fobn, together with a Ship-carpenter, a Caulker, a Cooper, and a good Gunner who was very fkilful for Fireworks. There likewife was a Taylor left, the reft were Sailors, whom he furnifhed with Bifket and Wine, and the other Provifions he had, for a Year; leaving Seeds to fow, and all the Goods and Things he had brought to barter, being a great Quantity; as alfo all the great Guns and other Arms that were in the Ship, and the Boat that had belonged to it.

When all things were ready, and he upon the point of departing, he called them together, and fpoke to them to this Effect, "He bid them offer up their Prayers to "God, and return Thanks to him for having carried "s them to fuch a Country to plant his holy Faith, and " not to forfake him, but to live like good Chriftians,

## Chap. III.

" and he would proteet them: That they fhould pray to "God to grant him a good Voyage, that he might " foon return to them with a greater Power: That shey " Thould love and obey their Captain, becaufe it was re-
"quifite for their own Prefervation; and he charged " them fo to do in the Name of their Highneffes: That " they fhould refpect Guacanagari, and give no Offence " to any of his People; nor offer Violence to any Man " or Woman, that the Opinion of their coming from " Heaven might be confirmed: That they fhould not " part, nor go up the Country, nor out of Guiacanagari's "Dominions, fince he loved them fo well: That with
"c his Confent they fhould furvey the Coaft in Canoes "" and their Boat, endeavouring to difcover the Gold
"Mines, and fome good Harbour, becaufe he was not
" well pleafed with that, where they remained, which he "called the Nativity; and that they fhould endeavour to " barter the moft they could fairly, without fhewing Co"vetoufnefs; and endeavour to learn the Language, "s fince it would be fo ufeful to them, to gain the Friend" fhip of the Natives, and very advantagious; and he "6 promifed to entreat their Catholic Majefties, to reward "s them, fince they had opened the Way to that new "World". They anfwered they would punctually perform all he ordered them.
On the 2d of Famuary, 1493, he went on Shore to take his Leave, dined with Guacanagari and his Caziques; recommended the Chriftians to him, whom he commanded to ferve and defend him againft the Caribes. He gave him a fine Shirt, and faid he would foon return with Prefents from the King of Spain. He anfwered with great Tokens of Sorrow for his Departure. One of the King's Servants then faid, he had fent Canoes along the Coaft to feek for Gold; and the Admiral anfwered, that if Martin Alonfo Pinzon haak not left him, he would have ventured to fail round the Ifland, and have carried a Ton of Gold into Spain, and would fill do it, neverthelefs, were he not afraid that the Caravel Pinta would get home fafe, and give fome falfe Information againft him, to conceal their own Crime.
14. On the 4th of Fanuary, 1493, The Admiral left the Port he had called Navidad, or the Nativity, failing Eaftward towards a very high Mountain, without Trees, but covered with Grafs, looking like a Tent, which he called Monte Cbrijto, and lies to the Eaft eighteen Leagues from the Cape he called Santo, that was behind, and four Leagues from the Port called Navidad. That Night he anchored five Leagues from Monte Cbrifto; and on the 5th of fomuary he proceeded to a little Ifland, where there were good Salt Pits; he entered the Ports, and was fo much pleafed with the Soil, the Plenty of Wood, and the Plains he faw, that he faid that was the Inand of Cipongo; and had he thought he was fo near the Mines of Cibao, whence fo much Wealth was brought, he would have affirmed it more pofitively. On the 6th he failed from Monte Cbrijfo, and foon after difcovered the Caravel Pinta, failing towards him before the Wind; they thought fit to return to Monte Cbrifo, where Martin Alonfo Pinzon made his Excure for having parted Company, and though there was no fatisfactory Reafon for what he had done, the Admiral paffed it by, and underftood he had bartered for much Gold, and that he had taken one half for himfelf, and the other half for the Seamen. Alpeat River runs down into this Harbour, which he called Rio de Oro, that is, the River of Gold; becaufe the Sand looked like Gold, and there he watered. On the gti he hoifted Sail, came to Ponta Roxa or Red Point, which is thirtyfix Leagues Eaft of Montc Cbrifto, and there they took Tortoifes as big as Bucklers, as they went to lay their Eggs a-fhore. The Admiral affirmed he had thereabouts feen three Mermaids that raifed themfelves above theWater, and that they were not fo handfome as they are painted, that they had fomething like a Human Face, and that he had feen others on the Coaft of Guinea. He proceeded to the River de Gracia or of Grace, where Martin Alonfo had been, and was alfo called by his Name, and caufed four Indians Martin Alonfo had taken Prifoners by Force to be left there.
On the inth he failed to a Cape he called Bolprado,
Fol. II. Numb. 70.
from a Mountain appearing, which being covered with Snow, as if it had been Silver, he called Monte de Plata, or the Silver Mountain; and a Port that is at the Foot of it, Puerta de Plata, or the Silver Harbour, which is like a Horfe-floe; and proceeding along the Coaf, with the Currents and fair Weather, above ten Leagues, he difcovered feveral Capes, which he called Angel, Puinta del Hiero, or Iron Paint, el Rodendo, or the Round Point, of Frances, the French, el Cabo de Buen Tiempo, the fair Weatber Cape, and el Tajado, the Craggy. On the 12 th he advanced thirty Leagues farther, admiring the Bignefs of the Inland, and called one Cape, de Pedrey Hijo, or Fatber and Son, and gave Names to Puerto Sacro, or the Holy Harbour, and Cabo de Los Enamorades, or the Lovers Cape, and coming up with it, he difcovered a vaft Bay, which was three Leagues in Breadth, and in the Midft of it a fmall Ifland. He ftayed there to obferve the Conjunction, which was to be on the 19 th, and the Oppofition of the Moon and Jupiter with Mercury, and the Sun in Oppofition with Jupiter, which occafions high Winds.

He fent the Boat for Water, and they found fome Men with Bows and Arrows. They bought a Bow and fome Arrows, and defired one of the Indians to go and fpeak with the Admiral, to which he confented... He afked him for the Caribes, and he pointed that they were to the Eaftward; and for Gold he pointed to the Illand of St. Jobn, faying, There was Gunain, that is, pale Gold with a purplifh Caft, which the Indians value very much. He ordered him fomething to eat, and to give him two Bits of green and yellow Cloth, and fome Glafs Beads, and the Boat to fet him afhore. Thofe who went with him found fifty-five naked Indians with long Hair, like the Women in Spain, Feathers, Bows, Arrows, Swords made of hard Palm Wood, and heavy Spears, with which they gave heavy Blows, lying in the Wood. Thefe Indians made them lay down their Arms, and then came to the Boat ; where the Spaniards bought two Bows of them by the Admiral's Order, and were fo far from felling any more, that they began to lay about, to feize the Spaniards, who being but feven, fell upon them, gave one ${ }^{2}$ Cut upon the Buttocks, and another a Cut on the Breaft; whereupon they fled, leaving their Arms behind, and many might have been killed if they had purfued them. This was the firt time that the Spaniards and Indians came to Blows in this Inand. The Admiral was forry for it, tho', on the other hand, it did not difpleafe him, that they might be fenfible of the Weight of the Spaniards Hands.
On the 14th, in the Morning, abundance of People appeared on Shore. The Admiral ordered the Boats-crew to be upon their Guard; but the Indians came as if nothing had happened, and among them the King of the Country, and the Indians that had been aboard the Caravel, whither the King came with three Indians. The Admiral ordered to give them Bifkets and Honey to eat, and gave them red Caps, bits of Cloth, and Beads. The next Day the King fent his Gold Crown and Provifions: The Men were armed with Bows and Arrows, four Youths in Canoes came to the Caravel, and were Men of fuch good Senfe, that the Admiral refolved to carry them into Spain; They acquainted him with many Particulars, and from thence fhewed him the Inand of St. Fobn. He failed from that Bay which he called do las Flechas, or of Arrows, on the 16 th, and would not make any long Stay becaufe the Caravels were very leaky.

He advanced with the Wind at Weft North-weft, and when he had failed I6 Leagues the Indian which he had aboard pointed to the Inand of St. Fobn, that of Martinino and the Caribes, where the Indians were that eat Men; and though he was willing to take a View of thofe Iflands, yet for fear of difheartening the Men, the Wind frefhening, he ordered to fteer directly for Spain; during feveral Days advancing fucceisfully, they faw many Sea-gulls, and the Air was very drying, and they met with abundance of Weeds, but being acquainted with it, they were not afraid: They killed a Tunny and a large Shark, which afforded them fomething to eat, for they had nothing but Bread and Wine. The Caravel Pinta was no good Sailer, becaufe fhe had little Benefit of her Mizen, by reafon the Maft was not good, and the Admiral being forced
to lie by for her, they made little Way. Sometimes when there were Calms the Indians leaped into the Water, fwam about and diverted themelves; having failed feveral Days changing their Courfe according to the Winds, they endeavoured to keep their Reckoning, and fancied they were to the Eaftward of the Iflands of Azores, becaufe they reckoned more Leagues than they really failed. Being quite miftaken in the Way, they made to the Northward, fo that inftead of any of the Azores they would more likely have fallen in with Madera, or Puerto Santo.
15. The Admiral, being more \{kilful at reckoning the Run, found I50 Leagues lefs than the others. On the lath of February the Sea began to fwell with great and dangerous Storms, and he drove moft of the Night without any Sail; afterwards he put out a little Sail ; the Waves broke and wracked the Ships. The next Morning the Wind nackened, but the very next Night it rofe again, which hindered the Ship's Way, fo that he could not fhift the Sails. The Admiral kept under a main Topfail reefed, only to bear up the Ship againft the Waves, but, perceiving how dangerous it was, he let it run before the Wind, there being no other Remedy. Then the Caravel Pinta began to bear away, though the Admiral kept his Light abroad the whole Night, and the Pinta anfwered. The 14th of February, after Sun rifing, the Wind blew fiercer, and they were more afraid of perifhing, with the Trouble of believing that the Caravel Pinta was already loft. The Admiral thinking himfelf near Death, to the End that fome Knowledge might come to their Catholic Majefties of what he had done in their Service, he writ as much as he could of what he had difcovered on a Skin of Parchment, and having wrapped it up in a Piece of Cere-cloth, he put it into a wooden Cafk and caft it into the Sea; all the Men imagining it had been fome Piece of Devotion; and prefently the Wind flackened.

On the I $5^{\text {th }}$ he faw Land a-head, bearing from them Eaft North-eaft: Some faid it was the Ifland Madera, others, that is was the Rock Cintra, near Lifoon, but the Admiral always faid they were the Inands Azores, and they plied to and fro with much Labour, but could not come up with the Inand of St. Mary. The Admiral's Legs being very uneafy, becaufe he had been out in all the Rain and Cold, he flept little; and on the 18 th came to an Anchor on the North-fide of the Inland, which they found to be St. Mary's; prefently three Men made a waft to the Caravel ; he fent the Boat for them; they carried the Admiral Refrefhments of Bread and Fowl from the Governor, whofe Name was Don Jobn de Caftaneda. On the 19th he ordered one half of the Men to go out in Proceffion to an Hermitage there was near, to perform their Vow, and that when they returned he would go out with the other half; and defired the Portuguefe to bring him a Clergyman to fay Mafs. While they were at Prayers in their Shirts, the whole Town on Horfeback and on Foot, with their Commanders, fell upon and made them Prifoners.

They ftaying very long, the Admiral fufpecting, either that they were detained, or that the Boat was ftaved, becaufe the Inland was enclofed with Rocks, and becaufe he could not fee the Hermitage, being covered by a Point of Land that runs into the Sea, he therefore brought the Caravel right before the Hermitage, and faw abundance of Pcople come into the Boat, and make towards the Caravel. The Commander of the Inand food up and demanded Hoftages, and though they were offered him, the Portuguefe would not venture his Perfon. The Admiral afked him why he had fent him Refrefhments and thofe Portuguefe to invite him on Shore, and afterwards, 'notwithftanding the two Nations of Cafite and Portugal were at Peace, he had fo bafely detained his Men, and that to convince him he was employed in the King of Spain's Service, he would thew him his Commiffion. The Portwguefe anfwered, we here know nothing of their Majefties of Cafile, nor their Commiffion, nor do we fear them. Some other Words paffed between them, and the Portusuefe bid him carry his Caravel to the Harbour, for all he had done was by the King's order: The Admiral took Witnefs of what he faid, and anfwered: That if he did
not reftore him his Men and the Boat, he would carry away an hundred Portuguefe into Spain: This faid, he returned and anchored where he was before, becaufe the Wind blew frefh. He ordered the Cafk to be filled with Sea-water to ballaft the Veffel, and by reafon of the foul Weather failed towards the Inand of St, Micboel, becaufe there are no good Harbours in thofe Mlands; and it is fafeft to keep out at Sea. He was in a great Storm all the Night, and having miffed of the Inand of St. Michael, he returned to that of St. Mary, and prefently the Boat came with two Clergymen and a Notary, and five Sea-men; and upon Security given them they came aboard the Caravel, and required the Admiral to fhew them the King of Spain's Commiffion, which he did, and they returned and releafed his Men and the Boat; and the Commander faid he had Orders from the King of Portugal to feize the Admiral, and would give any thing to have him.

Having recovered his Men, and the Weather becoming fair, he ordered them to fteer their Coaft Eaft. The next Day came to the Ship a large Bird, which the Admiral judged to be an Eagle. On the 2 d of March there was fo great a Storm, that he ordered to caft Lots for a Pilgrim to go to St. Mary de Cinta en Guelva, and the Lot fell upon the Admiral; fo that it looked as if God had followed him, that he might humble himfelf, and not grow proud for the Mercies he had fhewn him. They drove with all their Sails furled in the greatelt Danger, without Hopes of efcaping; but it pleafed God that they difcovered the Land and Rock of Cintra; and to avoid the Storm he refolved to put into the Harbour, not being able to ftay at Cafcaes. He returned Thanks to God for his Delivery, and all admired how he had got into the Port, affirming they had fcarce feen fuch dreadful Storms. The King of Poriugal was thien at Valparayfo, to whom he writ, fignifying that their Majefties of Spain, his Sovereigns, had ordered him not to avoid entering his Highnefs's Ports, to get what he wanted with his Money, defiring he would give him Leave to come up to Lifoon for more Security, and that his Highnefs might know he came not from Guinea, but from the Indies.

Bartbolomerv Diaz de Lifboa Mafter of a Galeon, who was there in an armed Boat, went aboard the Caravel and ordered the Admiral to go up with him to give an Account of himfelf to the King's Officers and the Captain of the Galeon. Columbus anfwered, that he was Admiral in the Service of their Majefties of Spain, and was not obliged to give any Man an Account of himfelf; nor would he go out of his Ship unleis he was compelled by Force. The Portuguefe anfwered, he might fend the Mafter of his Ship, but the Admiral would not fend him neither; faying he would not do it unlefs compelled and could not refift it, for he looked upon it much alike to fend another or go himfelf; and that it was the Practice of the Admirals of the Kings of Caffile, rather to die than deliver up themfelves or their Men. The Portuguefe Mafter replied, that fince he was fo refolved, he might do as he pleafed, but that he defired he would condefcend to fhew him his Commiffion from their Majefties of Spain, if he had any fuch: As foon as he had feen it he returned to the Galeon and reported what had paffed; and the Captain, whofe Name was Alvaro Daman, went aboard the Admiral's Caravel with Drums, Trumpets, and Hautboys, and offered to ferve him in whatfoever he fhould command.

As foon as it was known at Liflon, that the Admiral was come to Lifbon from the Indies, fuch Numbers flocked. to fee him and the Indians, that it was wonderful to obferve how they ftood in Admiration. The next Day he received a Letter from the King of Portural, by Don Martin de Norbona his Servant, by which he defired him to come to him, which he was obliged to do to avoid fhewing any Miftuft; he went and lay at Sacovash, where he was well entertained; and the King had given Orders that they fhould give him all he had Occafion for at Iifbon, without Money. The next Day he came to the Place where the King was, and the Gentlemen of the Houfhold came out to receive him, and bore him Company to the Palace. The King received him with much

Honour.

Chap. III.

Honour, bid him fit, and after having expreffed much Satisfaction for the Succefs of his Voyage, and anked fome Particulars about it; he faid he was of Opinion, that according to the Articles ftipulated with the Kings of Caflile, the Conqueft rather belonged to the Kings of Portugal, than to thofe of Cafile. He anfwered he had not feen thofe Articles, nor knew any'more than that their Highneffes had commanded him not to go to Del Mina or to Guinea, and that the fame had been proclaimed in all the Ports of Andaluzia before he fet out upon his Voyage.
The King gracioufly anfwered, he believed he would not ftand in need of Vouchers in that Particular; he then ordered the Prior of Crato to entertain him, he being the principal Perfon prefent. The next Day the King told him that if he wanted any thing he mould have it; and making him fit, afked him many Queftions concerning the Voyage, the new Countries, the Latitudes, and the People, and other things relating to thofe Parts, being much concerned for having miffed of that good Fortune; and there wanted not fome who offered the King to kill the Admiral, that what he had difcovered might not be known, but he would not confent to it. At length, on the IIth of March, the Admiral took his leave of the King, and all the Gentlemen of the Court attended him. He paffed through Villa Franca where the Queen was in the Monaftery of St. Antbony; he kiffed her Hands, and having given her an Account of his Voyage, departed ; and a Servant of the King's overtook him, and told him from his Majefty, that if he would go into Caftile by Land, he would order him to be attended, find him Carriage, and all that he had occafion for.
On the I 3 th he failed with his Caravel for Seville, and found himfelf the 16 th off Saltes; and, at Noon, he paffed over the Bar with the Flood into the Port from whence he at firt departed, on Friday the 3 d of Auguft, the Year before; fo thathe fpent fix Months and an Half in the Voyage. Being informed their Catholic Majerties were at Barcelona, he had Thoughts of going to them by Sea in his Caravel. He landed at Palos; was received with a folemn Proceffion and much rejoicing of the whole Town, all admiring fo great an Action, which they never imagined the Admiral could have performed. The Admiral having refolved not to go by Sea to Barcelona, fent Advices of his Arrival to their Catholic Majefties, with a Summary of what had befallen him, referving a more ample Relation to be delivered by Word of Mouth. The Anfwer found him at Seville: The Superfcription of the Letter was, To Don Chriftopher Columbus, our Admiral of the Ocean; Viceroy and Governor of the Iflands that bave been difcovered in the Indies. In his Anfwer he fent a Memorial of the Ships, Men, Ammunition, and Provifion that were proper to return to the Indies, and then fet out himfelffor Barcelona with feven Indians, for the reftdied by theWay: He carried with him green and red Parrots, and other Things never before feen in Spain. He fet out from Serille, and the Fame of this Novelty being fpread abroad, the People flocked to the Roads to fee the Indians and the Admiral.

Their Majefties having received the Memorial, ordered Fobn Roderiguez de Fonceca, Arcli-deacon of Seville, to furnifh what the Admiral thought fit for the fecond Voyage he was to make to the Indies. The Admiral arrived at Barcelona about the Middle of April, where the whole Court and City flocking out, the Streets could not hold them, admiring to fee the Admiral, the Indians, and the Things he brought, which were carried uncovered; and the more to honour the Admiral, their Majefties ordered their royal Throne to be placed in public, where they fat, and with them Prince fobn. The Admiral came in attended by many Gentlemen; when he came near, the King food up, gave him his Hand to kifs, bid him rife, ordered a Chair to be brought him, and to fit down in the Royal Prefence, where he gave an Account in a very fedate and difcreet manner, of the Mercy God had fhewn him in favour of their Highnefes, of his Voyage and Difcoveries, and the Hopes he had conceived of difcovering greater Countries; and fhewed him the Indians as they went in their own native Commtries, and the other

Things he had brought. 'Their Majefties rofe, and kneeling down, with their Hands lifted up, and Tears in theis Eyes, returned Thanks to God; and then the Choirifters of the Chapel began the Te Deum.

TheArticles formerly concluded with the Acimiral were only in form of a Contract; and as he had performed what he promifed, their Majefties allo, in the ufual Form, paffed Grants, making good what they had offered him in the Town of Santa Fee, on the ryth of Aprit of the foregoing Year : And the Charters were paffed at Barcelona on the zoth of the fame Month in the fucceeding Year 1493, and figned by their Highneffes on the 28 th of May. They alfo gave him the Royal Arms of Caftile and Leon, to bear with thofe of his Eamily, with other Additions expreffing his difficult and wonderfulDifcovery. And their Majefties conferred fome Honours on his Brothers, Don Bartbolomere and Don Fames, tho they were not then at Court. The King took the Admiral by his Side, when he went through the City of Barcelona, and did him much Honour other ways, and therefore all the Grandees and other Noblemen honoured and invited him to Dinner, and the Cardinal of Spain, Don Pedro Gonzalez de Mendoza, a Prince of much Virtue, and a noble Spirit; was the firft Grandee that, as they were going one Day from the Palace, carried the Admiral to dine with him, and placed him at the Head of the Table, and caufed his Meat to be ferved up covered, and the Effay to be taken, and from that time forward he was ferved in that manner.
17. We have given the Hiftory of this Voyage largely, and in a manner literally, from one of the beft Spanifb Hiftorians, the rather becaufe we efteem it fingle in its kind, both with refpect to the Matter and the Manner of it, for the Difcoveries hitherto made by the Portugncfo were chiefly by creeping along Shore, and rather the Effects of Labour and Induitry than of great Conduet, or an enterprizing Genius ; and the Difcoveries that were made afterwards, had not only this Example but the Advantage alfo of all the Improvements which the great Skill, conftant Affection, and wonderful Penetration of Columbus, enabled him to make in his own Art; fo that Navigation grew in his Time quite another thing than he found it. In this Voyage the Reader will perceive that abundance of very trivial Accidents are very carefully recorded, which we have preferved, becaufe taken from Columbus's own Journal, and becaufe they fhew how much he attended to, and what excellent Ufes he made even of the moft minute Circumftances, in order to keep up the Spirits of his Men, and to direct himfelf in the Profecution of fo hardy an Attempt, in which his Succefs depended intirely upon the Sagacity he fhewed in thofer Obfervations, which therefore, however light and trivial they may feem to us, were of great Importance to him, and ferve to Thew by what light Helps Men of true Genius are able to execute the moft difficult Enterprizes.

But there is one Obfervation of his which deferves to be particularly confidered, and that is, as to the Variation of the Compafs, which I find exprelly fet down by all the Spanifh Writers of note, but more efpecially by Hervera, a very careful and judicious. Author, and one who rarely took things upon Truft; as well as by Don Ferdinaind Co lumbus, the Admiral's Son, who profeffes that he wrote from his Father's Papers. Upon thefe Grounds I make no Scruple of believing the Fact, and very much wonder that fo knowing a Man as Sir Thomas Browene, in his Vulgar Errors, fhould pofitively affert, that Columbus was ignorant of the Variation, and that if he had obferved it in his firt Voyage, it mut have confirmed him in his Hopes of finding a new World; becaufe, fince it turned towards the Weft, it manifeftly proved, that there was a great Body of Land on that Side. This thews the great Danger of Theories; for, without doubt, if Columbus had depended upon this, he might have been miftaken, fince failing along the Coaft of Brafil the Needle declines from the Land towards the Sea, which is a Eact that fully overturns that Hypothefis which Sir Tbomas Browne looked upon as certain: But the Truth of the Matter is ${ }_{3}$ that not only Columbus obferved the Variation, but his Pilots alfo; and from thence they atgued, not that they were
near any other Land, but that they were in Danger of lofing the beft Guide they had, viz. the Certainty of the Compafs; and therefore Columbus was forced to tell them, that the Reafon why the Needle varied a whole Point to the North-weft was, becaufe the Star by which they difcerned this Variation, took a Compafs about the Pole, which gave them Satisfaction, tho' it could not give it him, who knew better than to take up with fuch an Opinion. This Turn, however, fhews the Wifdom and good Senfe of this great Navigator, who knew how to difcover the Caufe of moft Things, and when he was at a Lofs for a Caufe to invent fomething that looked like one, in order to pacify thofe whofe Fears were the conftant Effects of their Ignorance.
It was this Talent of his that enabled him to maintain his Authority amongft fuch a Crew of wild and unruly Spirits, and put it in his Power to complete that Difcovery which his great Parts had fuggefted to him. To fay the Truth, confider him in what Light one will, as a Philofopher, a Seaman, a Commander in chief, a Governor, or a Legillator, he was alike great in all ; and had that kind of Superiority of Mind which fet him above thofe Events which common People, for want of a better Expreffion, call the Frowns of Fortune. He was not difitracted in his Thoughts when his Companions defpaired of ever feeing Land more; nor was he elevated by that fudden Turn of their Affections when they difcovered the firt Inand; he knew how to pacify them when mutinous, and he knew likewife how to make a right Ufe of this fudden Return to their Obedience; his Behaviour towards the Indians was like a Father and a Friend; and it was this Magnanimity of, his that induced thofe honeft and fimple People to believe that he and his Companions came from Heaven, and made them fo defirous of their Company.

Neither àre we to attribute his earneft and conftant Search after Gold to any Self-intereft, or Principle of Avarice; but to the earneft Defire he had of fhewing that, by this Voyage, he had not only difcovered new Countries, but Countries in which this precious Metal was found in Abundance, which in thofe Days paffed for a Characteriftic of the Indies. The fame Notion made him liften with equal Attention to another Difcovery, that one of his Commanders believed he had made of Rhubarb; which would have been a ftronger Proof; for all that came
of that Drug into Europe, in thofe Days, was by the Way of Alexandria, and was therefore believed to come from the Indies, as indeed it did, tho' it grows chiefly in Tartary, and in thofe defart Countries, which, from the Frontiers of Perfa, extend quite to Cbina.
He fhewed a becoming Spirit on his Arrival in the Harbour of Liflon, and, in all probability, it was that Spirit that defended him from the Infults and Injuries that might have been offered him ; for there wanted not fome amongft the Nobility of Portugal, who fuggefted that this Difcovery was to the Prejudice of their Country, and fo poffeffed their Sovereign's Mind with this Notion, that he actually formed Pretenfions to thofe Countries, notwithftanding he had relinquifhed all colour of Right to them, by rejecting the Propofals of Columbus when offered to him at firt, and before he had made any Overtures to the Court of Spain. The fame Greatnefs of Soul diftinguifhed the Admiral in his Audience of their Catholic Majefties, in which he neither overvalued his Merit nor boafted of more than he had performed; but ftated the Thing truly, and laid open the Confequences fairly, with that Penetration and Sagacity peculiar to himfelf.
This it was that deternined their Catholic Majefties to fend him again with a ftronger Squadron, and better equipped, to perfect thofe Difcoveries. He was then in the Zenith of his Favour and of his Reputation; for tho' he did greater Things afterwards, or at leaft fuch as redounded more to the Advantage of Spain, yet thefe' were fo far from raifing him higher in Efteem, that, on the contrary, when others had made Voyages to the new World, not the Vulgar only, but fome even of Quality and Figure, affected to leffen his Credit, and to treat that as a flight and eafy Matter, which themfelves had formerly reprefented, not as difficult only, but impracticable. But thefe Turns and Changes in other Men wrought none at all in him, and it is very remarkable, that the Inftructions he gave for the Preparations of his fecond Voyage were fo perfectly well adapted as exactly to anfwer the End of his Defign, as will appear in the fubfequent Section, in which we fhall give the Reader a full and diftinct Relation of that Voyage, tho' in fewer Words than were ufed in the Narration of the firft, as well to avoid needlefs Repetitions, as that we may keep within the Bounds originally affigned to this Work.

## S E C T I O N III.

The Second Voyage of the Admiral Don Christopher Columbus, to the Weft Indies, including an Account of all the Difcoveries made by bim in that Voyage.

1. The Meafures taken by their Catholic Majefies to fecure their Properties in the firf Difcoveries made by their Admiral, and the Terms on wobich be failed a fecond Time from Spain. 2. His Jafe Arrival in the Weft Indies, and the Information be received from the Natives as to the State of that Part of the World. 3. The Admiral continues bis Voyage to the Ifand of Hifpaniola, funds the Colony ruined, and the Spaniards be bad left belind deftroyed by thoir own Folly. 4. The Pains be took to putt things once more into a good Condition; a Mutiny againgt bim, and the Manner of bis Proceeding after it was quelled. 5. He procceds to difcover the inland Parts of the Country, to fecure the Gold Mines, and to make an abfolute Conqueft of Hippaniola for the Ufe of their Catbolic Majefties. 6. The Admiral baving put all things in order, refolves to leave bis Brotber Governor of Hifpaniola, and to fail again upon Difcovery, which be performs accordingly. 7. The Confequences of that Voyage, the Difcoveries made therein, particularly that of Jamaica, and the Hardbips endured by the Admiral and his People. 8. His return to IHifpaniola, the Condition in which be found things there, and the Regulations made by bim for fecuring and promoting the Settlement. 9. The Grounds of thofe Gealoufes and Uncafinefies robich difturbed the Admiral, and induced bim to refolve upon returning back again to Spain. Io. An Account of bis fecond return from the Indies, and of the Reception be met with from their Catbolic Majefties. II. Remarks and Objervations on the foregoing. Section.
. HE more the Difcoveries made by Don Cbrittopher Columbus were canvaffed by the Spanifh Council, the more important they appeared; and therefore to ftrengthen their 'Title in the beft Manner poffible, their Catholic Majefties difpatched an Ambaffador to the Pope, who was at that time Alexander VI. requefting
him to exert his Apoftolic Authority in their Favour, and by his Bulls confirm to them thofe Countries, Inands, Ef. which their Admiral had difcovered. This his Holinefs moft readily complied with, and indeed it coft him little; and by his Bull, dated May 2, 1493, granted the faid Difcoveries to them as fully as the Diicoveries made
by the Portuguefe had been granted to the Crown of Portuggol; and by another Bull dated the next Day, granted their Catholic Majefties all that had been, or fhould be, difcovered, drawing a Iine from Pole to Pole, at the Diftance of Ico Leagues Weftward from the Azores, or from the, Cape de Verd Mlands. As foon as thefe Pulls, whether important or impertinent we need not ftay to determine, were once arrived from Rome, their Catholic Majefties were very deffrous the Adminal fhould fail on his fecond Voyage, for which reaion they hattened him away to Serille, where he found another Sort of a Fleet prepared than he had commanded in his firft Voyage. For now there were feventeen Sail of Ships of feveral Sizes, and no lefs than fifteen hundred Men, many of them Gentlemen of good Families, offered to go over, and took an Oath of Obedience, not only to their Catholic Majefties, but to the Admiral Don Cbrifopher Columbus likewife.

Thefe Preparations, which could not be concealed from the King of Portugal, raifed great Uneafiness at that Court, which was not to be quieted by the Pope's Bulls, his Portuguefe Majefty apprehending that they were founded on undue Suggeitions, and himfelf and his Subjects thereby much wronged. This he refolved to expoftulate with their Catholic Majefties, and named an Ambaffador for that Purpofe; but they, having Intelligence of his Proceedings, fent an Ambaffador to him under Colour of juftifying the Meafures they had taken; but, in Reality, to patch up Matters in any Manner, fo as to hinder that Monarch from obitructing Columbus in his fecond Voyage. In the mean Time the Admiral being come to Seville, and having received with his laft Difpatches his Commiffion, fetting forth the Limits of his Government, which extended over all that the Apoftolical Conceffion extended to; and having left his two Sons, Don Fames and Don Ferdinand, to be Pages to Prince Fobn, he applied himfelf to pick out the ableft Pilots, and in muftering the Men that had been raifed in the Prefence of the Comptroller. For the fake of Difcipline, all Perfons were forbid carrying any Goods, and it was ordered, that all belonging to his Highnefs, and to private Men, fhould be entered before they left Spain, and the fame to be done when they arrived in the Indies; and that all that thould appear not to have been fo entered, fhould be confifcated. The Admiral was ordered, as foon as he came to Hifpaniola, to mufter the Men, and after that, as often as he fhould think fit; and that they fhould be paid by his Direction; and that he fhould appoint Alcaldes and Alguazils in the Inands, and other Parts, to try civil and criminal Caufes, and the Appeals from them to be to him, and that in Cafe it was requifite to appoint Regidores, Jurats, and Officers for the Government of the People, or of any Colony that fhould be planted, the Admiral hould nominate three Perfons to every Employment, for their Highnefles to choofe one of them, but that the firft time he might name them. That all Proclamations fhould be in the Names of their Highneffes; that he fhould have the eighth Part of all that was gained, pay-ing-the eighth part of all that was carried over, firft deducting the tenth Part he was to have of the whole, purfuant to the Contract made; and that if it were requifite to fend Ships and Men to any Parts, he might do it.

Whilf the Admiral was at Seville expediting his Affairs, he received a Letter from their Majefties, dated at Barcelona, directing him, before his Departure, to caufe a Seâ-chart to be drawn with the Rumbs and other Particulars requifite for the Voyage to the Indies, and to haften his Departure, ftill promifing him mighty Rewards, becaufe that Affair of the Difcovery daily appeared to be of fo great Confequence; acquainting him that nothing was yet concluded with the King of Portugal, though it was believed. he would be brought to Reafon. The Admiral caufed many Plants and Trees to be put aboard, and Wheat, Barley, Oats, Rye, and all Sorts of Seeds, as alfo Cows, Lime, Bricks, and all Sorts of Materials for building; and having embarked the Men, on the 25 th of September, 1493, before Sun-rifing failed from the Bay of Gadiz: He feered South-weft for the Canaries, and arrived at Grand Comaria on the $2 d$ of OEFober, and on the 5 th anchored at

Fol. II. Numb. LXXI.

Gomera, where he ftaick two Days taking in Water, Wood, and Cattle, and eight Sows at the Rate of feventy Marvedies a-head, from which afterwards were produced all that have been fince in the Indits. They alfo took in Hens and other Creatures, as alfo Seeds for fallading, and all other Sorts of Garden-ftuff.

On the $7^{\text {th }}$ of Ogober the Admiral continued his Voyage towards the Indies, having firft delivered Inftructions, fealed, to every Ship, commanding them not to open them unlefs they were feparated from him by ftrefs of Weather; for as in thofe Letters he gate an Account of the Courfe they were to ftecr, to come to the Town of the Nativity, in Hifpaniola, he would not have that Courfe known to any unlefs neceffary. Thus failing with a fair Gale till the 24 th, when being 400 Leagues Weft of Gomera, he yet met with none of the Weeds he had feen the firt Voyage; when he was out but 250 Leagues, to the great Aftonifmment of them all. That Day and the next a Swallow flew about the Flect. On Saturday, at Night, the Corps of St. Elmo was feen, with feven Lights, on the round' Top, and there followed mighty Rains, and frightful Thunder. On the 2 d of November, at Night, the Admiral, perceiving a great Alteration in the Sky and Winds, and taking notice of the heavy Rains, concluded that he was near fome Land, and for this Reafon caufed moit of the Sails to be furled; and ordered all to be upon the Watch, not without Caufe, for that Night they fpied Land feven Leagues to the Weftward, which was a very high mountainous Illand, and he called it Dominica, becaufe difcovered upon Sunday Morning. A while after he difcovered another Ifland North-eaft of Dominica, and then another, and a third after that, more to the Northward, for which Mercy God had been pleafed to beftow upon them, all the Men, affembling in the Poop, fung the Salve Regina and other Prayers, and Hymns, very devoutly giving Thanks to God, for that, in twenty Days after departing from Gomera, they had made that Land; judging the Diftance to be about 750 or 800 Leagues, and finding no convenient Place to come to an Anchor on the Eatt-fide of the Inand Dominica, they ftood over to another Inand which the Admiral called Marigalante, that being his Ship's Name. Here landing, he with all neceffary Solemnity again repeated the Poffeffion he had in his firf Voyage taken of all the Illands and Continents of the Weft Indies, for their Catholic Majefties.

On the 4 th the Admiral failed from the Illand Marigalante Northwards, by another great Ifland he called Sta. Maria Guadalupe, at the Requeft of the Friars of the Houfe of that Name, to whom he had made a Promife to call fome Inand by the Name of their Monattery; before he came to it, by two Leagues Diftance, they difcovered a very high Rock, ending in a Point, whence iffued a Stream of Water, which falling, made fuch a Noife that it was heard aboard of the Ships, though many affirmed that it was only a white Vein in the Rock: The Water was fo white and frothy by reafon of its Fall. Going athore in the Boat to view a Sort of a Town they faw from the Shore, they found no body there, the People being fled to the Woods, except fome Children, to whofe Arms they tied fome Baubles to pleafe their Parents when they returned; in the Houfes they found Geefe and abundance of Parrots with red, green, blew, and white Feathers, as big as common Cocks; they alfo found Pompions, and a fort of Fruit which look like our green Pine-apples, but much bigger, and within full of folid Meat like a Mellon, and much fweeter both in Tafte and Smell, which grow on long Sticks like Aloes wild about the Fields, and are better than thofe produced by Art. They alfo faw other Sorts of Fruits and Herbs, different from ours; Beds of Cotton Nets, that is, Hamocks, Bows and Arrows, and other things of which they took none, that the Indians might be the lefs afraid of the Chriftians. The next Day, which was the 5 th of November, the Admiral again fent two Boats afhore to endeavour to take fome body that might give an Account of the Country, and inform him how far off, and which way, Hijpaniola lay; each of the Boats brought back a Youth, who agreed in faying they were not of that Mland, but
of another' called Boriquen (now St. Fobn de Porto Rico) and that the Inhabitants of that Inand of Guadalupe were Caribes or Canibals, and had carried them Prifoners from their own Illand. Soon after the Boats, returning to take up fome Chriftians they had left there, found fix Women with them, who had fled to them from the Caribes, and came of their own accord aboard the Ships.

The Admiral to invite the Iflanders would not keep them on board, but gave them fome Glafs-beads and Bells, and made them be fet afhore againft their Wills. Yet this was done unadvifedly; for as foon as they landed, the Caribes, in Sight of the Chriftians, took away all the Admiral had given them: Therefore, either through the Hatred they bore the Caribes, or the Fear they had conceived of thofe People, a while after when the Boats returned for Wood and Water, the faid Women got into them, begging of the Seamen to carry them aboard the Ships, and giving them to underftand by Signs, that thofe People eat Men, and made Slaves of them, and therefore they would not ftay with them; fo that the Men yielding to their Intreaties, carried them back to the Ships, with two Children and a young Man that had made his Efcape from the Caribes, thinking it fafer to put themfelves into the Hands of People they never faw, and fuch Strangers to their Nation, than to remain among thofe they knew to be wicked and cruel, and who had eaten their Hufbands and Children; and as they faid, they do not kill and eat the Women, but keep them as Slaves. One of the Women told them, that towards the South there were many Inands, fome inhabited, others not, which fhe and the other Women called Giamactic, Cairveyo, Hunio, Buriari, Arubiari, Sixibei, but the Continent which they faid was very great, both they and the People of Hijpaniola called Zuanta.
3. On the roth of Oatober the Admiral weighed Anchor, and failed with the whole Fleet along the Coaft of the Inand Guadalupe, towards the North-weft, for Hifpaniola, and came to the Inland Montferat, calling it by that Name becaufe of its Heighth, and underftood by the Indians he had with him, that the Caribes had depopulated it by devouring the Inhabitants. Thence he proceeded to St. Mary Redonda, fo called becaufe it is fo round and upright, that there feems to be no getting up to it without Ladders, which the Indians called Ocamaniro. Next he came to St. Maria la Antigua, which is-above 28 Leagues in extent, ftill holding on his Courfe North-weft. There appeared feveral other Inlands towards the North, and lying North-weft and South-eaft, all very high and full of Woods, near one of which he caft Anchor, and called it St. Martin, where they took up Pieces of Coral fticking to the Anchor Hooks, which made them hope they fhould find other valuable Things in thofe Countries. Though the Admiral was very defirous to know every thing, yet he refolved to hold on his Courfe towards Hifpaniola, to relieve thofe he had left there; but the Weather being bad, he came to an Anchor on the I 3 th, in an Inand where he ordered fome Indians to be taken to know whereabouts he was.

As the Boat was returning to the Fleet with four Men and three Children the Men had taken, they met a Canoe, in which there were four Men and one Woman, who perceiving they could not make their Efcape, ftood upon their Guard and hit two of the Chriftians with their Arrows, which they let fly with fuch Force and Dexterity that the Woman fhot a Target quite through; but the Boat furioully boarding the Canoe overfet it, fo that they took them all fwimming in the Water; and one of them fwimming flot feveral Arrows as if he had been upon dry Land. The Admiral, departing hence, continued his Voyage Weft North-weft, where he found above 50 mands, which he left to the Northward; the biggeft of them he called St. Urfula, and the others, the eleven thoufand Virgins; next he came to the Inand which he called St. Fobu Baptift, but the Indians Boriquen; and the Fleet anchored in a Bay on the Weft-fide of it, where they took feveral Sorts of Fifin, as Scate, Soles, Pilchards, and Shads, and faw Falcons and Bufhes like wild Vines, more to the Eaftwards. Some Chriftians went to certain IToufes, well buile after their Fafhion, with a

Square before them, and a broad Road down to the Sea, with Towers made of Cane on both Sides, and the Top of them curiounly interwoven with Greens: At the End of it, next the Sea, was raifed a large Gallery or Balcony, that could hold ten or twelve People, lofty and well built.

On the 2 Ift the Admiral came up with the North-fide of Hijpaniola, and prefently fent afhore, at Samana, one of the Indians born in that Part, whom he brought out of Spain, being then converted, who offered to reduce all the Indians to fubmit to the Chriftians.

The Admiral continuing his Voyage towards the Town of the Nativity; when he came to Cape Angel, fome Indians went aboard to barter their Commodities with the Chriftians; coming to an Anchor, in the Port of Monte Cbrifo; a Boat that went afhore, found near a River two dead Men, one of them feemed to be young, the other old; who had a Rope made of a certain Sort of Broom, or fuch Fuz that grows in Spain, called Efparta, about his Neck, his Arms extended, and his Hands tyed to a Piece of Wood in the Form of a Crofs; but they could not difcern whether they were Chriftians or Indians, but looked upon it as an ill Omen. The next Day, being the 26 th, the Admiral fent afhore in feveral Places; the Indians came very friendly and boldly to talk with the Chriftians, and touching our Mens Shirts and Doublets repeated their Names in Spani/h, to fhew they knew how thofe things were called, which delivered the Admiral from the Jealoufy he had conceived on Accouut of the dead Men: Judging that if thofe People had mifufed the Chriftians left there, they would not have come fo boldly aboard the Ships.

But the next Day when he came to an Anchor, near the Town of Navidad, after Midnight a Canoe came to the Fleet, and afked for the Admiral, and being bid to come on board, for he was there, they would not do it, faying they were refolved not to go aboard till they faw and knew him. The Admiral therefore was forced to come to the Ship-fide to hear them, and then prefently two went up with two Mafks, which they gave to the Admiral, from the Cazique Guacanagari. They being afked by the Admiral concerning the Chriftians left theres anfwered, that fome of them died of Diftempers, fome parted from their Company, and were gone into other Countries: But, that all of them had four or five Wives, though it appeared by their way of fpeaking, that all, or moft of them were dead. Yet the Admiral, not thinking it fit to take any Notice at that time, fent back the Indians with a Prefent made of Tin, and other Baubles for Guacanagari and themfelves, and fo went away that Night. On the 28 th, about Evening, the Admiral with all his Fleet, came into the Port of Navidad, found it all burnt, and no body was feen thereabouts. The next Day, in the Morning, the Admiral landed, very much concerned to fee the Houfes and Fort burnt, and nothing left belonging to the Chriftians, but only ragged Clothes and fuch like things, as is uffual in a Place plundered and deftroyed; and feeing no body to enquire of, the Admiral went with fome Boats up a River that was near the Fort.

Whilft he was going up it, he ordered the Well he had made in the Fort to be cleanfed, thinking to find Gold in it; becaufe at his going away, fearing what might happen, he commanded thofe he left behind, to throw all the Gold they could get into that Well, but nothing was found in it; and the Admiral could lay hold of no Indian, becaufe they all fled from their Houres to the Woods; having therefore found nothing but fome of the Chriftians Clothes; he returned to Navidad, where he faw eight of the Chriftians, and three others in the Fields near the Town, whom they knew to be Chriftians by their Clothes, and they feemed to have been dead about a Month; the Chriftians going about to feek fome other Tokens or Writing of the Dead, a Brother of the Cazique Guaca nagari, came with fome Indians to talk with the Admiral. Thefe could fpeak fome Words in Spanifh, and, knew the Names of all the Chriftians that had been left there, and faid that thofe Spaniards foon began to fall to Variance among themfelves, and to take every one what Gold, and as many Women as they could; whereupon Peter Gutierres and Efcovedo, killed one Fames, and then
they, and nine others, went away with their Women to a Cazique, whofe Name was Caunobo, who was Lord of the Mines, who killed them all; then, many Days after came with a great many Men to Navidad, where there was only James de Arana, with ten Men who had remained with him to guard the Fort, all the reft being difperf-, ed about the Inand. The Cazique, Caunabo, coming up by Night, fired the Houfes where the Chriftians lived with their Women, for fear whereof they fled to the Sea; where eight of them were drowned, and three died on Shore; that Guacanayari fighting with Caunabo in Defence of the Chriftians, was wounded and fled.

This Account agreed with that given by other Chriftians fent by the Admiral to learn more of the Country; who went to a Town where Guacanagari lay ill of a Wound, which he faid had hindered him from waiting on the Admiral, and giving him an Account of what was become of the Chriftians; among whom, he faid, foon after the Admiral returned for Spain, there began to be Diffention, and every :one would barter Gold for himfelf, and take what Women he thought fit; and not fatisfied with what Guacanagari gave, and allowed to be given them ; they divided into feveral Parties, and difperfed fome one Way and fome another: And that fome Bifayners joining together, went were they were all killed; and this was the Truth of what had happened, which they might tell the Admiral; defiring that he would come and fee him, becaufe he was in fuch a Condition, that he could not leave the Houfe. The Admiral did fo, going the next Day to vifit him, and he with great Signs of Sorrow, told him all that had happened, as has been related above; and that he, and his Men, had been all wounded in Defence of the Chriftians; as appeared by their Wounds, which were not given by Chriftian Arms, but with wooden Swords and Arrows, pointed with Fifh-bones.

This Difcourfe being over, he prefented the Admiral with eight Strings of fmall Beads, made of white, green, and red Stones; a String of Gold Beads; a Crown of Gold, and three little Calabathes full of Gold Sand: All which might have been about four Marks weight in Gold, each Mark being eight Ounces. The Admiral, in return, gave him abundance of Baubles, which might be worth three Ryals, and were valued by him at above a Thoufand. Though he was very ill, he would needs go with the Admiral to fee the Fleet, where he was courteouny entertained; and much pleafed to fee the Horfes, of which the Chriftians had before given him an Account. And becaure fome of thofe that were dead had mifinformed him concerning the Faith, the Admiral was forced to inftruct him in it; and afterwards would have him wear an Image of the Virgin Mary about his Neck, which, at firt, he had refufed to receive.
4. The Admiral reflecting on the Difafter of thofe Chriftians, and his own Misfortune at Sea; having loft the Men and Fort on Shore, and his Ship upon the Water; and that, not far off, there were better and more commodious Places, on the 7 th of December he failed with the whole Fleet Eaftwards, and anchored not far from the Inand of Monte Cbrifio, and the next Day, at Monte Cbrifto, among thofe feven low little Inlands; which, tho' they are without Trees, yet are neverthelefs very pleafant. Thence he went to anchor before a Town of Indians, where, refolved to plant a Colony, he landed with all the Men, Provifions, and Utenfils he brought aboard the Fleet, in a Plain near a Rock; on which he built a Town, and called it Ifabella, in honour of Queen IJabel, or Elizabetb; this Place was judged very convenient, as the Port was very large, though expofed to the North-weft, and had a moft delicate River within a Bow Shot of it, from which Canals of Water might be drawn to run through the middle of the Town; and beyond was an open Plain, from which the Indians faid the Mines of Ci bao were not very remote. For thefe Reafons the Admiral was fo eager upon fettling the faid Coiony, that what with the Fatigue at Sea, and what he here went through, he not only wanted time to write, Day by Day, what happened, but fell fick, which hindered his writing from the IIth of December to the rith of March, in
the Year 1494; during which time, having ordered the Affairs of the Town the beft he could, he fent one Alonfo de Hojeda with fifteen Men, to feek out the Mines of Cibao; afterwards, on the 2d of February, twelve Ships of the Fleet returned to Cafite, under the Command of one Captain Anthory de Torres, Brother to Prince $F 0 \mathrm{bn}$ 's Nurfe, a Man of great Judgment and Honour, and int whom their Catholic Majefties and the Admiral much confided. He carried in writing an Account at large of all that had happened, as alfo the Nature of the Coun-. try, and what it required.

Not long after, Hojeda returned, giving an Accounts, that the 2 d Day after he fet out from Ifabella, he lay at the Pafs of a Mountain, which was very difficult of Accefs; that afterwards, at every League's Diftance, he found $\mathrm{Ca}-$ ziques, who had been very kind to him; and continuing his Journey, the 6th Day he came to the Mines of Cibao, where the Indians immediately took up Gold in a fmall River, as they had done in many others, in the fame Province, where he affirmed there was great plenty of Gold. This News much rejoiced the Admiral, who was recovered of his Sicknefs, and he refolved to obferve this Difpofition of the Country, that he might the better know what was to be done. Accordingly, on the 12 th of March, he fet out from Ifabella, for Cibao, to fee the Mines, with all the People that were in Health, both Foot and Horfe; leaving a good Guard in the two Ships, and three Caravels, the remainder of the Fleet; and caufing; all the Ammunition and Tackle belonging to the other Ships to be put aboard his own, that none might rebel and feize them, as they had attempted to do whillt he was fick; becaufe they having gone that Voyage upon the Belief, that as foon as they landed they might load themfelves with Gold, and fo return rich home, the thing not happening as they expected, they grew diffatisfied and offended; as alfo, becaufe of building the new Town, and weary of Difeafes that the Climate, and Change of Diet caufed among them; they confpired to revolt from the Admiral; and taking the Ships that remained, by Force, to return in them to Spain. One Barnard de Pifa, who had been an Officer of Juftice at Court, and went that Voyage in the Quality of Comptroller, was the Ring-leader, and Head of the Mutineers; therefore, the Admiral, when informed of it, would not punifh him any otherwife, than by fecuring him on board a-hip; with a Defign to fend him afterwards to Spain, with his Procefs drawn up, as well for mutinying, as for having writ a falfe Information againft the Admiral, which he had hid.

Having therefore ordered all thefe Affairs; and having left fome Perfons, together with his Brother Don Fames Columbus, to look to and fecure the Fleet, he fet forward towards Cibao, carrying with him all the Neceffaries to build a Fort, to keep that Province under, and fecure the Chriftians left there to gather Gold, againft any Attempts or Defigns of the Indians; and the more to terrify them, and to take away all Hopes, that they might do in the Admiral's Prefence as they had done in his Abfence with Arana, and the Thirty-eight Chriftians left among them, he carried with him all the Men he could, that they might, in their own Towns, fee the Power of the Chriftians, and be fenfible that whenever any Wrong was done to a fingle Man travelling through the Country; there was a Force of Men to chaftife it ; and to appear the more formidable when he fet out for Ifabella and other Towns, he made his Men march with their Arms in Rank and File, as is ufual in time of War, with Trumpets founding, and Colours flying. In this way he marched: to the Side of that River which lay about a Mufket-fhot from IJabella; and a League beyond he croffed another River, and went to lie that Night three Leagues off; in a Plain divided into pleafant Fields; reaching to the Foot of a craggy Hill, and about two Bow-fhots high: This he called Puerto de los Fidalgos, or the Gentleman's Pafs; becaufe fome Gentlemen went before, to order the Road to be made. And this was the firft Road made in the Indies; for the Indions make their Ways but for one Mars to pafs at a time. Beyond this. Pafs he came into a large Plain, on which he travelled five Leagues the next Days
and went to lic near a great River, which the Men paffed upon Floats and Canoes : This River, which he called of Canes, fell into the Sea at Monte Cbrito. In his Journey he paffed by many Indian Towns, the Houfes where-. of were round, thatched, and with fuch a litcle Door as he who goes in muft ftoop very low. Here, as foon as fome of the Indians, brought from IJabella, went into the Houfes, they took what they liked beft, and yet the Owners were not difpleafed; as if all Things were in common.
5. On the 14 th, the Admiral fet forward from the River of Canes, and a League and a Half from it found a great River, which he called the River of Gold; having paffed it with fome Difficulty, he proceeded to a large Town, where many of the People fled to the Mountains, but mon of them fortified their Houfes, barring their Doors with fome Canes, as if they were a Defence to hinder any Body from coming in; for, according to their Cuftom, no Man dares break in at the Door he finds fo barred. Hence the Admiral went to another fine River, which he called the Green River; the Banks whereof were covered with bright round Stones, and there he refted that Night. Holding on his Journey, the next Day he paffed by fome great Towns, where the People had put Sticks a-crofs the Doors, and the Admiral with his Men, being tired, they flaid that Night, at the Foot of a rugged Mountain, which he called Parbibao, as the Province of Cibao begins behind the Mountain : From this, the firtt Mountain they pafted was eleven Leagues diftant, all which is a Plain, the Way directly South. Setting out the next Day, he travelled through a Path, where they were forced, with Difficulty, to load the Horfes, and thence he fent back fome Mules to IJabella to bring Bread and Wine, for they began to want Provifions, and the Journey was long, and they fuffered the more becaufe they were not yet ufed to the Indian Diet, as they are now, who live and travel in thofe Parts, who find the Food of that Country more eafy of Digeftion, and more agreeable to that Country, than what is carried from Europe, though it is not fo great Nourifhment.
The Admiral, pafing over the Mountains, on the 16 th entred the Country of Cibao, which is rough and ftony, fuil of Gravel, plentiful of Grafs, and watered by feveral Rivers, in which Gold was found. The farther they went into this Country, they found it encumbered more with Mountains, on the Tops whereof appeared Grains of golden Sand; for, as the Admiral faid, great Rains carried it down from the Tops ofilountains to the Rivers in fmall Sand. The Admiral perceiving he was now 18 Leagues from Ifabella, and the Country he had left behind very craggy, he ordered a Fort to be built in a very pleafant and ftrong Place, which he called the Caftle of St. Thomas, to command the Mines, and be a Place of Safety for the Chritians that worked there. Here, breaking Ground to lay the Foundation, and cutting a Rock to make the Ditches, when they were got two Fathoms below the Stone, they found Nefts made of Hay and Stzaw, and, inftead of Eggs, three or four round Stones as big as Oranges, as artificially made as if they had been Cannon Balls. And in the River that runs at the Foot of that Hill the Caftle now ftands upon, they found Stones of feveral Colours, fome of them large, of pure Marble, and others of Jafper. The Admiral, having given Orders for finifhing the Caftle, fet out for IJabella, and near the Green River met the Mules, and faid there, fending the Provifions to the Port afterwards, endeavouring to find the Ford of that River, and of the River del Oro; he faid fome Days in thofe Indian Towns, eating their Bread and Garlic, came well to IJabella, where Melons were already grown fit to eat, tho' it was not above two Months fince the Seed was put into the Ground; fo Cucumbers came up in 20 Days: A wild Vine of that Country, being pruned, produced Grapes which were good and large.

On the zoth a Hufbandman gathered Ears of Wheat he had fown at the latter end of fanuary; there were alfo Vetches, but much bigger than thofe they fowed, and all they fowed fprung up above Ground in three Days, and the twenty-fifth Day they eat of it. The Stones of Fruit
fet in the Ground fprouted out in feven Days, and the Vine: Branches fhot out in the fame tirne, and in twenty-five Days after they gathered green Grapes; the Sugar Canes budded in feven Days, which proceeded from the Temperature of the Climate ; befides that the Waters there are very thin, cold, and wholefome. The Admiral was well enough pleafed with the Air, the Soil, and the People of the Country. On the ift of April there came a Meffenger from Fort St. Thomas, who brought News that the Indicns of that Country fied; and that a Cazique, whofe Name was Counabo, was preparing to come and attack the Fort. The Admiral knowing how inconfiderable the People of that Country were, made little Account of that Report, efpecially confidering the Horfes, by whom the Indians were afraid to be devoured, and therefore were fo much afraid, that they durf not go into any Houre where a Horie ftood; however, the Admiral thought fit to fend more Men and Provifions, confidering, that fince he defigned to go to difcover the Continent with three Caravels he had left him, it was fit to fecure all behind. Therefore, on the 2d, he fent feventy Men with Provifions and Ammunition to the Fort; twenty-five of whieh were to keep guard, and the others help to make another Road, the firt being very troublefome, as were the Fords of the Rivers.
In the mean while, becaufe the Bifket grew towards an end, and they had no Flour but Wheat, he refolved to make fome Mills, though there was not a Fall of Water fit for that Purpofe within a League of the Town, at which Work he was forced to ftand over the Workmen, they all endeavouring to fave themfelves from Labour. After that, he refolved to fend out all the People that were in health, except Handicraftmen and Artificers, to the Royal Plain; that, travelling about the Country, they might pacify it, ftrike a Terror into the Indians, and by degrees be ufed to their Food, fince they daily felt more Want of that of Spain. Hojeda was fent to command thefe Men till they came to St. Thbomas, there to deliver them to Don Peter Margarite, Hojedo himfelf to command in the Fort; he having taken the Pains the Winter before, to difcover that Province of Cibao which in the Indian Language fignifies Stony. Hojeda fet out from IJabellos the 2gth of April towards St. Thomas, with this Party of Men, being above 400 ; and, having paffed the River del Oro, apprehended a Cazique that lived there, and a Nephew of his, fending them in Irons to the Admiral, and cut off the Ears of one of his Subjects in the great Place in the Town, becaufe, three Chriftians going from St. Thomas to IJobella, this Cazique gave them Indians to carry their Clothes over the River, at the Ford; and they, being in the Middle of the River, returned to their Town with them ; and the Cazique, inftead of puniihing them, took the Clothes, refufing to deliver them. Another Cazique, who dwelt beyond the River, relying on the Service he had done the Chriftians, refolved to go with the Prifoners to IJabella, and interceed with the General for them, who entertained him courteoully, and ordered the other Indians, with their Hands bound, to be publicly fentenced to die in the Market-place; which the honeft Cazique feeing, with many Tears, obtained their Lives, promifing they fhould never be guilty of any other Offence. The Admiral having difcharged them all, a Man on Horfeback came from St. Thomas's, and gave an Account, that he had found in the Houfe of that fame Cazique, who had been Prifoner in his Town, fiveChriftians, taken by his Subjects as they were coming from Ifabella; and that he, frighting the Indians with his Horfe, had releafed them, above 400 Men running away from him, of whom he wounded two in the Purfuit; and that when he had paffed the River, he faw they turned upon the faid Chritians, whereupon he made as if he would go back againft them; but they, for fear of his Horfe, all ran away, left the Horfe fhould fly over the River.
6. The Admiral being refolved to difcover the Continent, appointed a Council to govern the Ifland in his Abfence; the Sway it confifted of was, Dr. Games Columbus, his Brother, with the Title of Prefident; F. Boyl and Peter Fernandez Colonel, Regents; Alonjo Canabez de Corvajal, Rector of Bacca, and Yobn de Iuxan of Madrid, Gentle-
men to their Catholic Majefties. And that there might not want Meal for the Support of the People, he haftened the Building of the Mills, notwithftanding the Rain and Floods very much obftructed. As the Eruitfulnefs of the Soil appeared very extraordinary, fo they daily received frefh Advices of the Wealth of the Country; for fome of thofe the Admiral had fent out were always returning with Accounts of new Mines difcovered, befides the Relations of the Indians concerning great Plenty of Gold found in fome Parts of the Illand.

The Admiral not fo fatisfied, refolved to go out to difcover along the Coatt of Cuba, not knowing whether it was an Illand or Continent; therefore taking three Ships along with him, he failed on the $24^{\text {th }}$ in the Afternoon, and came to an Anchor that Day at Montc Cbriflo, Weft of Ifabella: Thence he went to Guacanagari's Port, thinking to find him there; but he feeing the Ships, fled for fear, tho' his Subjects falfely affirmed he would foon return. But the Admiral not caring to ftay, departed on Saturday the 26th, and went to the Iland Tortuga, which lies fix Leagues to the Weftward. He lay by it that Night in a Calm, with his Sails abroad, the Tide running back againtt the Currents. The next Day the North-weft Winds and Currents fetting to the Weft, obliged him to come to an Anchor in the River of Guadalquiver, which is on the fame Inand, there to wait for a Wind that would ftem the Current, which both then and the Year before, he found to run ftrong towards the Eaft. On the 29 th of the fame Month, the Wind being fair, he came to Cape St. Nicbolas, and then croffed over to the Inand of Cuba running along the Coaft of it. And having failed a League beyond Cabo Puerto put into a large Bay, which he called Puerto Granda, or the Grand Port; the Mouth whereof was 150 Paces over, and had much Water. Here he anchored, and took fome Refrefhment. On the furft of May, he continued his Voyage along the Coaft, where he found commodious Harbours, and fine Rivers, and high Mountains upon the Sea. After he left Tortuga, he met abundance of the Weeds he faw on the Ocean on his Voyage to and from Spain. And failing clofe along the Shore, abundance of People came on board in their Canoes, to bring off their Bread, Water, and Finh; giving it all freely, without afking any thing for it ; but the Admiral, to fend them home well pleafed, ordered them to be paid, giving them Beads, Bells, and fuch like Baubles. On the 3d the Admiral refolved to fail over from Cuba to Famaica, that he might not leave it behind, without knowing whether the Report of plenty of Gold they had there was true; and the Wind being fair, and he half way over, he difcovered it the next Day. Upon that he came to an Anchor, and thought it the beft of any he had yet feen in the Indies; and fuch Multitudes of People in great and fmall Canoes came a-board, that it was aftonifhing. The next Day he ran along the Coaft to find out Harbours ; and the Boats going to found the Mouths of them, theré came fo many Canoes with armed Men to defend the Country, that they were forced to return to the Ships, not fo much for fear, as to avoid falling out with thofe People. But afterwards confidering, that if they Thewed Signs of Fear, the Indians would grow proud upon it, they returned together to the Port which the Admiral called Puerto Bueno, that is, Good Harbour ; and becaufe the Indians came to drive them off, thofe in Boats gave them fuch a Flight of Arrows from their Crofs Bows, that fixteen of them being wounded, they retired. 'The Fight ending in this manner; there came abundance of Canoes from the neighbouring Places, in a peaceable Way to fee and barter Provifions; and feveral things they brought, and gave for the leaft Trifle that was offered them.

In this Port, which refembles a Horfe-fhoe, the Admiral's Ship was repaired, being leaky: And that done, they fet fail on the gth, keeping fo clofe along the Coaft Weftward, that the Indians followed in their Canoes to trade. The Wind being fomewhat contrary, the Admiral could not make fo much Way as he wifhed, till on the I 4 th he refolved to ftand over again for Cuba, to keep along its Coafts, defigning not to return till he had failed 5 or 600 Leagues, and was fatisfed whether it was an Inand

Vol. II. Numb. 7 I .
or Continent. The Day he was going off from Famaica a very young Indion came a-board, faying he would go ; and after him came feveral of his Kindred and other People in their Canoes, earnefly intreating him to go back; but they could never alter his Refolution; and therefore to avoid feeing his Sifters cry; he went where they could not come at him. The Admiral admiring his Refolution, gave Orders that he fhould be ufed with the utmoft Civility. The Admiral leaving Famaica on the 15 th of May, came to that Point of Cuba which he called Cabo de Santa Cruz, or Cape Foly Crofs; and running along the Coant, there happened a great Storm of Thunder and Lightning, which, together with the Flats and Currents, put him in no fmall Danger, and to very much Trouble, being obliged at the fame time to ftruggle againft two Evils, which required contrary Remedies; for it is a proper Remedy againft Thunder to frike the Sails, and it was requifite to fpread them to avoid the Flats. And had this Calamity lafted for eight or ten Leagues, it had been infupportable. But the worft of it was, that throughout that Sea, both North, and Southeaft, the farther they went, the more little low Inands they met with: And though there were Trees in fome of them, yet others were fandy, and farce appeared above the Surface of the Water: fome a League, fome more, and fome lefs in Compafs. True it is, that the nearer they failed to Cuba, the higher and pleafanter the little Inands appeared. And being a Matter of Difficulty, and to no Purpofe to give every one of them a Name, the Admiral called them all in general, Fardin de la Reyna, or the Queen's Garden.
But as many Illands as he faw that Day, he faw many more and bigger the next Day than he had before; and not only to the North-Eaft, but North-weft, and Southweft, infomuch that they counted 160 Inands that Day, all parted by deep Channels, which the Ship failed through: In fome of thefe Inands they faw abundance of Cranes, in Shape and Bignefs like thofe of Spain, but that they were red as fcarlet. In others they found abundance of Tortoifes, and of their Egogs, not unlike Hens, but that the Shells are very hard. The Tortoifes lay their Eggs in a Hole they make in the Sand, and cover them, leaving them till the Heat of the Sun hatches and brings forth the Tortoifes, which in time grow as big as a great Target. In thefe Inands they alfo faw Crows and Cranes like thofe of Spain, and Sea Crows, and infinite Numbers of little Birds that fung fweetly; and the very Air was as fweet as if they had been among the fineft Perfumes in the World: Yet the Danger was very great, there being fuch Abundance of Channels, that much time was fpent: in finding the way through them.

In one of thefe Channels they difcovered a Canoe of Indians Fifhermen, who very quietly, without Concern, expected the Boat, which was making toward them; and beino come near, made a Sign to them not to approach, till they had done fifhing. Their Manner of fifhing was fo ftrange, that they were willing to comply with them: It was thus, They had tied fome fmall Fifhes they call Reves by the Tail, which run themfelves againft other Fifh, and with a certain Roughnefs they have from the Head to the middle of the Back, ftick fo faft to the next Fifh they meet, that when the Indians perceive it, they draw both up together: And it was a Tortoife the Spaniards faw taken by thefe Fifhermen, the Reve clinging about the Neck of it, where they generally faften, being by that Means fafe from the other Fin biting them; and fometimes are faid to faften upon vaft Sharks. When the Incians in the Canoe had taken the Tortoife, and two other Fifhes they had before, they prefently in a very friendly manner came to the Boat to know what they would have; and by their Directions went alone a-board. the Ships, where the Admiral treated them very courteoully, and underfood by them, that there was an infinite Multitude of thefe Iflands in that Sea; and they freely gave all they had, tho' the Admiral would fuffer nothing to be taken of them but the Fifh, the reft being their Nets, Hooks, and Calabahhes full of Water to drink. Having given them fome Trifles, they went away very well pleafed; and he held on his Courfe with a Defign

G
not to do fo long, becaure he began to be fhort of Provifions already; whereas had he been well ftored, he determined not to have returned into Spain, but Eaft about.

Tho' he was very much fpent, not becaufe he fuffered Pain, but becaufe he had not nept, or lain in Bed ever fince he went from Spain till the Igth of May, except eight Nights (as appears by his Journal) when he was very much indifpofed. And if he had much Care upon him at other times, it was doubled this Voyage, by reafon of the innumerable Quantity of Illands among which he was failing, which were fo many, that on the 2oth he difcovered feventy-one befides many more he faw Weft-fouth-weft at Sun-fetting. Which Iflands, or Sands, are not only frightful, by their Multitude appearing on all Sides; but what is yet more terrible is, that every Night there rifes off them a great Fog, Eaftward, fo difmal to behold that it looks as if fome great Showers of Hail would fall. The Thiunder and Lightning is violent, yet when the Sun rifes it all vanifhes, Part of it turning to Rain and Wind, which is fo ufual and natural in that Country, that it did not only happen all thofe Nights the Admiral was there, but the fame was long after cbferved in thofe Iflands by the Spariaids in their Return from the Difcovery of Veragua. And generally here, at Night, the Wind is North, coming off the Ine of Cuba; and afterwards, when the Sun is up, it comes about Eaft, and follows the Sun till it comes to the Weft.
7. The Admiral, fiill holding out his Courfe Weftward among the Number of Inands, upon the 22d came to an Inand fomewhat bigger than the reft, which he called St. Mary ; and, landing at a Town there, not one Indian would ftay to talk to the Chriftians, nor did they find any thing in the Houfes but Finh, which is all the Food thofe People live on, and feveral Dogs, like Maftiffs, who eat Fifh too. Thus, without fpealking to any body, or feeing any Thing remarkable, he failed away North-eaft among many Illands, and abundance of thofe Weeds he faw on the Ocean when he difcovered the Indies, which fatigued him very much ; for fometimes he was forced to ftand Weft, fometimes North, and fometimes South, according as the Channels would permit; for, notwithttanding his Care in founding, and keeping Men upon the Round-top, to look out, yet the Ship often touched, and there was no avoiding it, there being no End of the Flats on all Hands. Sailing on in this manner he came again to Cuba to take in Water, whereof they had much need, and tho' there was no Town there, they put in becaufe the Place was wooded, yet one of the Seamen that went afhore going up among the Trees with a Crofs-bow, to kill fome Bird or Beaft, difcovered thirty People armed with fuch Weapons as they ufe, that is, Spears and Staves, which they wear inftead of Swords, and call Macanas; among them, he faid, he faw one clad in a white Coat or Veft down to his Knees, and two that carried him, with Vefts down to their Fcet; ail three of them as white as Spaniards, but that he had no talk with them; for being afraid of fuch a Number he began to cry out, and the Indians ran away without looking back.

The Admiral, the next Day, fent People afhore to -know the Truth of it. They could not travel above half a League, becaufe of the Thicknefs of the Trees and the Bufhes, and becaufe that Coaft is marfhy for two Leagues up the Country, where there are Mountains; fo that they only faw Footfteps of Fifhermen on the Shore, and abundance of Cranes like thofe in Spain, but bigger. Then failing about ten Leagues Weftward, they faw Houfes on the Shore, from which fome Canoes came with Water, and fuch Things as thofe People eat, which they brought to the Chriftians, who paid well. And the Admiral caufed one of thefe Indians to be fropped, telling him and the reft, by his Interpreter, that he would let him go home as foon as he had directed him in his Voyage, and given fome Account of that Country. At which the Indian was, very much pleafed, and affured the Admiral, that Cuiba was an Inand, and that the King, or Cazique, of the Weftern Part of it, never fpoke to his Subjects but by Signs; that all that Coaft was very low, and full of Iflands, which was found to be true. The next Day, being the IIth of Fune, to pafs from one Channel to another, the Admiral was forced to have the Ships
towed over a Flat where there was not a Foot of Water, and all the Breadth of it was not above two Ships Length. Bearing up clofe to Cuba, they faw Tortoifes of a vait Bignefs, and in fuch Numbers, that they covered the Sea. At Break of the Day they faw fuch a Cloud of SeaCrows, that they darkened the Sun, coming from the Seaward to the Inand where they all lighted. Befides them, abundance of Pigeons and Birds of other forts were feen. And the next Day there came fuch Swarms of Butterflies that they darkned the Air, and lafted till Night, when a great Rain carried them away.

On the 13 th the Adimiral perceived that the Coait of Cuba ran far Weft, and that it was a Matter of the greateft Difficulty to fail that way, by reafon of Ilands and Sands that were on all Sides, and that he already began to want Provifions, for which Reafon he could not continue his Voyage as he had intended. He refolving to return to the Town he had begun to build at Hifpaniola, and to furnifh himfelf with Wood and Water, anchored in the Inand of Evangelifia, which is thirty Leagues in Compais, and feven hundred from Dominica. Having directed his Courfe South, hoping to get out better that way, and failing through that Channel which looked cleareft, after a few Leagues found it thut up, which did not a little trouble and terrify them, feeing themfelves, as it were, hemmed in on all Sides, and deftitute of Provifions: But the Admiral, who was wife and couragious, faid with a chearful Countenance, that he thanked God for forcing him back the fame way he came; forafmuch as if they had continued their Voyage that way they expected to go, it might have, perhaps, happened they might have run themfelves into fome place, whence it would have been hard getting out, and at a time when they had neither Ships nor Provifions to go back, which at prefent they could. eafily do. Thus with great Satisfaction of all the Men he returned to the Inand of Evongelifta, where he had watered; and the 25 th of $7 u n e$ failed thence North-weft towards fome finall Iflands that appeared five I.eagues off.
On the 2oth, as he was writing his Journal of the Voyage, his Ship run a-ground fo faft, that neither Anchors nor other Inventions were able to get it off. It was by Boats drawn off a-head, tho' with fome Damage becaufe of beating on the Sand. However, with God's Affiftance, they got off at laft, and he failed on as the Wind and fhoal Water would permit, always through a very white Sea, and two Fathom deep. Befides which, every Day about Sun-fetting he was troubled with mighty Showers which rife in the Mountains from the Moraffes near the Sea, which was a great Fatigue to him till he came clofe to Cuba, toward the Eaft, the way he came at firlt; whence, as he had found before, came off a moft fragrant Scent of Flowers. On the 7 th of $\mathcal{F u l y}$ he landed to hear Mafs, and there reforted to him an old Cazique, Lord of the Province, who was very attentive at Prayer. When it was ended, he expreffed by Signs, it was very well done to give Thanks to God, becaufe the Soul which was good would go to Heaven, and the Body remain on Earth, but that the wicked Souls muft go to Hell. And, anong other things, faid he had been in the Inand Hifpaniola, where he knew fome of the chief Men: That he had been at Famaica, and a great way towards the Wert. of Cuba; and that the Cazique of that Place was clad like a Prieft.

The Admiral failing thence on the 16 th, drew near to Cape Cruz in Cuba, where he was furprized by fuch a violent Storm as bore his Ship's Side under Water ; But it pleafed God they immediately ftruck all their Sails and dropped their Anchors, but yet they took in fo much Water at the Deck, that the Men were not able to pump it out, efpecially in the Condition they were, being much fpent for want of Provifions, for they eat nothing but a Pound of rotten Bifket in a Day, and about half a Pint of Wine, unlefs they happened to catch fome Fifh, which yet they could not keep from one Day to the next, becaufe the Weather was always more inclinable to corrupt than in other Countries. And this Want being common to all, the Admiral, in his Journal, fpeaks thus concerning it: "I am at the fame Allowance, God grant it may " be to his Honour, and your Highneffes Service; for I
" fhall

Chap. III. Christopher Columbus.
" fhall never again, for my own Benefit, expofe myfulf " to fuch Sufferings and Dangers; never a Day pafing " but I fee we are all upon the Brink of Death."
In this Danger and Diftrefs he arrived at Cape Cruz on the 18 th, where he was entertained by the Indians. They brought him abundance of Cazibi, fo they call their Bread made of Roots grated, a vaft deal of Fifh, flore of Fruit, and other things fuch as they eat. The Wind being contrary, io that he could not fail tor Hifpaniola, he ftood over to famaica, and failed along Weftward, clofe under the Shore; the Country all along moft delightful and fruiful, with excellent Harbours at every League Diftance, and all the Coaft full of Towns, the People whereof followed their Ships in their Canoes, bringing Provifions, which were better liked by the Chrittians than what they found in the other Inands; the Climate, Air, and Weather, were the fame as the reft; for in this weftern Part of fomaica, there gathered every Evening a Storm of Rain, which lafted about an Hour, more or lefs, which the Admiral faid he attributed to the great Woods in thofe Countries, for that he knew this was ufiual, at firft, in the Canary Iflands, Madera, and the Azores, whereas now the Woods are cut down that fhaded them, there are not fo great and frequent Storms of Rain as there were formerly.
Thus the Admiral failed on, though with contrary Winds, which obliged him every Night to feek the Shelter of the Land, which appeared green, pleafant, fruitful, abounding in Provifions, and fo populous, that he thought none exceiled it; efpecially near a Bay, which he called de las Vacas, becaufe there are nine Iflands clofe to the Land, which he faid was as high as any he had feen; and yet it was peopled, and very fruitful and pleafant. This Inand he judged to be 800 Miles in compafs, and, when fully difcovered, computed fifty Leagues in Length, and twenty in Breadth. Being much taken with its Beauty, he had a great mind to ftay there, to be fully informed of the Nature of it; but the Want of Provifions, and the Leakinefs of the Veffels, would not permit: Therefore, as foon as the Weather was a little fair, he failed away Eaftward; fo that on the 9th of Augut he loft fight of that IIland, ftanding over directly for Hijpaniola, and called the moft Eaftward Cape of 'famaica on the South Coait Cabo del Farol.
8. The two Ships that had been miffing, came in about fix Days after, and the Admiral proceeded on his Voyage, and arriving on the Coaft of Hijpaniola, the Indians came in their Canoes, and faid, that two had been there from Ifabella, and that, at the Colony, they were all well. He held on his Courfe to the Eaftward, where he difcovered a great Town, and fent the Boats thither for Water. The Indians came out armed with poifoned Arrows; they threatened to bind the Spaniards with Cords they brought ; and this was the Province of Niguey, the Inhabitants whereof were the moft warlike People of the Inand of Hijpaniola, and poifoned their Weapons; but when the Boats came afhore, the Indians laid down their Arms, and afked for the Admiral, and carried Provifions. He held on his Courfe, and they faw a great Fifh, like a middling Whale, and it had on the Neck a large Shell, like that of a Tortoife, little lefs then a Target; the Head it held above Water was like a Pipe or But, the Tail like that of a TunnyFifh, very large, and two vaft Fins on the Side; by this Fifh and other Obfervations in the Sky, the Admiral perceived there was like to be a Change of Weather, and endeavoured to get under a little Inand, which the $I_{n}$ dians called Adamanoy, and the Spaniards Saona, which makes a Streight a little above a League over, with the Inand Hijpaniola, and is about two Leagues in length.

There he came to an Anchor, and the two other Ships, not being able to get in, ran the greateft Hazard. That Night the Admiral obferved the Eclipfe of the Moon, and affirmed the Difference of Longitude, between that Place and Cadiz, was five Hours and twenty-three Minutes; he continued there on Account of the Storm eight Days; and the other Ships being come, he failed thence on the 24 th of September, and came to Cape Engano, in Hijpaniold, which the Admiral named St. Rapbael; they next touched at the Mand Mona, which
is ten Leagues from Hippaniola, and eight from the Illand of Porto Rico, or St. Fobn; being fix I eagues in. Compafs, and on it grow moft delicious Melons, as big as a Jar of Oil that will hold fix Quarts ; being gone from Mona, and near St. Yobn, the Admiral was feized with fuch a Fit of theLethargy, that he loft all his Senfes, fo that it was thought he could not live; for which Reafon the Seamen ufed the utmoft Diligence, and ar--. rived with all the Ships at IJabella, on the 2 gth of September, without any farther Certainty of Crba being an Illand, than what the Indians had told them.
As foon as they arrived, the Admiral underfood that his Brother Don Bortbolomerw Columbus was there, and that the Natives of the Ifland were in Arms againft the. Spaniards. It is impofible to exprefs how much the Admiral was pleafed to fee his Brother, and it will not be amifs, before we proceed, to give an Account of what befel him, from the time his Brother fent him to propofe the undertaking of thofe Difcoveries to the King of England. He was along time before he reached that Kingdom, and then learning the Language, the Methods of Court, and gaining Accefs to the Miniters, occafioned another Delay; fo that after feven Years, when he had articled and agreed with King Hemry VII. of Englond, he returned into Spain to look for his Brother, who having heard nothing from him during that time, concluded he was dead: At Paris he heard of his having made the Difcovery, and that he was declared Admiral; being told it by King Cbarles, who gave him 100 Crowns towards his Journey, and though he made all the hafte he could, his Brother was gone on his fecond Voyage, with the feventeen Ships; but he had an Inftruction, which was left by the Admiral, delivered to him. He went to kifs their Majefties Hands, and vifit his Nephews, Don Fames and Don Ferdinand, at Valedolid, where the Court was; being then Pages to Prince $\mathcal{F}$ obn. Their Catholic Majefties did him much Honour, and ordered him to go away to the Indies, with three Ships that were to carry Provifions to the Admiral.

He arrived there in April I494, and found he was gone upon the Difcovery of Cuba. The Adniral thought he had fome Comfort in his Brother, and gave him the Title of Adelantado, or Lord Lieutenant; which their Catholic Majefties very much refented, faying, that it was not in the Admiral's Power fo to do, but that it belonged to them to give that Title : Yet fome Years after they confirmed it. Don Bartbolomere was a very wife Man, and as expert in Sea Affairs as his Brother; fomewhat harth in his Temper, but very brave and free fpoken, for which fome hated him. The Admiral having eftablifhed a Council for the Government of the Inand, Don Pedro Margarite, Commander of the four hundred Men, went with them to Vega Real, or Vale Royal, ten Leagues from IJabella, and quartered them in the Towns there, where they lived without any Order or Difcipline, ruining the Indians; for a Spaniard will eat more in a Day, than one of them in a Month. The Council reproving Don Pedro, becaufe he did not check the Licentioufnefs of the Soldiers, he thereupon began to cavil, refufing to obey them, either in this Particular, or in marching through the Ifland, as the Admiral had ordered him; and fearing to be punifhed for thofe Diforders, he thought fit to embark aboard the three Ships that brought over Don Bartbolomerw Columbus, and return to Coffile, and Father Boyl with him, befides fome more of his Party. Being come to the Court, they gave an Account that there was no Gold in the Indies, and that all the Admiral faid was mere Invention. The Soldiers being left without their Commander, difperfed themfelves about the Country, living like Men without a Chief. Whereupon a Cazique, whofe Name was Guatiguanti, who had a large Town upon the Bank of the great River, killed ten Chriftians, and privately fent to fet fire to a Houfe where fome fick Men lay; and the Indians, in feveral Parts of the Ifland, killed fix more; and Calumnies of the Spaniards being fipread abroad every where, in fuch Sort, that all the People hated them, even them who had not feen them, and particularly the four principal Kings, Guarinoex, Caunabo, Bebecbico, and Figua-
nama, and all that followed and obeyed them, being an infinite Multitude, were very defirous to turn the Spaniards out of the Country.

Only Guacanagari, King of Marien, did not ftir, but on the contrary, kept a hundred Chriftians in his Country, giving them Part of what he had, and treating them affectionately, as he had done from the beginning. Some Days after the Admiral's Arrival, Guacanagari went to vifit him, exprefing Sorrow for his Sicknefs and Troubles; and affuring him he knew nothing of the killing of the Chriftians; that he was his Friend, and for that Reafon all the Natives bore him ill Will, and particularly thofe that were in Arms in the Vale Royal, and other Places. The Admiral refolving to take the Field, in order to difperfe thofe People, and reduce the Mland to Peace, Guacanagari offered to bear him Company with his Subjects; but before he went out in Perfon, he fent to begin the War with Guatiguanti, who had killed the ten Chriftians, that the Punifhment might not be delayed, and to prevent his growing bolder. They killed feveral of his Men, and took many Prifoners; and he fled, and fome of the Prifoners were fent to Spain. But as Caunabo was the moft potent Lord of all the Inand, and brave in his Perfon, and had three valiant Brothers, being King of the Province they called Maguana, the Admiral had his Eye more on him ; and thinking it would be the beft to fubdue him by Policy, becaufe to do it by Force would be difficult, he contrived to fend Alonso de Hojeda, with nine Spaniards, under Colour of carrying him a Prefent.

The Indians valued Tin more than Gold, and rejoiced when they got any of it, or of the other Metals they carried from Spain, thinking they came down from Heaven; and when the Bell at IJabella rung, and the Spaniards upon it went to Church, they thought it fpoke, and the Fame of it reached Caunabo; who had often thought of begging it of the Adelantado, that he might fee the Turey of Bijcay, fo they called the Tin; for Turey, fignifies Heaven; and they fo highly valued Tin and other Metals, that they called it Turey, and the Spaniards added of Bifcay, and therefore they faid the Turey of Bifcay. Hojeda being come to the Province of Maguana, about 60 or 70 Leagues from the Colony of Ifabella, the Indians were in a Confternation to fee him on Horfe-back, as believing that the Man and Horfe were all of a Piece.

They told Caunabo that fome Chriftians were come, being fent by the Admiral, whom they called Guamiqui$n i$, and that they had brought him a Prefent of that they called Turey de Bifcay, which very much rejoiced him. Hojeda being introduced, kiffed his Hand, as the reft did, and then fhewed him the Prefent, being Fetters and Manacles, very bright and well polifhed, that looked. like Silver : He told him the Kings of Spain wore them, becaufe they came from Heaven, that they were wont to put them on at the Areitos, fo the Indians call their dancing Matches; and that it would be proper for him to go with them to bath himfelf in the River Yaqui, which was half a Leeague off, that he would there put them on him, and he hould come back on Horfe-back, and then would look like the Kings of Spaim. Accordingly he went one Day, attended by a few Servants, with Hojeda, to the River; little imagining that nine or ten Men Thould have a Defign upon him, in a Place where he was fo powerful, he waffed and refrefhed himfelf, and being very earneft to try on the Prefent, having ordered the Indians to keep at a Diftance, though they always avoided being near the Horfes; they fet him up behind Hojeda, and put on the Fetters and Hand-cuffs, the King obferving all very attentively; Hojeda took two turns about, the better to palliate his Defign, and the third time rode off with the Spaniards about the Horfe, till the Indians loft Sight of them; then they drew their Swords and threatened to kill him if he did not fit ftill whilf they tied him with Cords to Hojeda; and traveling with Expedition, they arrived at IJabella, and delivered him to the Admiral, who kept him in his Houfe, fettered, and when the Admiral came in he never paid him any Refpect, though he did Alonfo de Hojeda; being afked why he did $\mathrm{f}_{\mathrm{O}}$, he anfwered, that the Admiral
dumt not go to his Houfe to feize him, and Hojeda did:
The Admiral refolved to fend him into Spain, and being embarked with other Indions, there arofe fo great a Storm, that the Ship was catt away; and Gaunobo and the Indians perifhed; upon which the Admiral ordered two Caravels to be provided, that he might not be left without Ships. But let us now look over to Spain.

The Return of Antbony de Torres was very pleafing to their Majefties, which they fignified to the Admiral by his Brother, giving him Thanks for the Toils he underwent, promifing always to fupport him. And forafmuch as their Catholic Majeffies were willing to pleafe the Admiral, and that this Affair of the Indies thould profper, they ordered the Dean Fobn Roderiguez de Fonfeca to fit out four Ships with Expedition, furnifhed with fuch things as the Admiral required: And they appointed Antbony de Torres to return with them; by whom they wrote to him their Letter, dated at Segovia the r6th of Auguf, again repeating their Thanks for his good Services, promifing to promote him to the utmoft, becaufe all he had faid and propofed had proved as true as if he had feen it before he went upon the Difcovery: And tho' they had received the Account he had fent them, yet they defired he would more particularly acquaint them what Illands he had difcovered, the Names of them before, and thofe he had given them, with the Diftances from one to another; what he had found in every one of them, what fort of Weather there was in thofe Parts every Month, and how the things that were fowed came up, becaufe fome faid there were two Winters and two Summers, and various forts of Birds: That all the feveral things he had afked for in his Memorial were fent him. And to the end that they might oftener hear from him, it was thought expedient that a Caravel fhould go from Spain every Month, and one return from the Indies. The Affairs with Portugal being adjufted, they had fent him a Copy of the Articles concluded, that he might know and obferve them on his Part: That as for the Line of Partition that was to be drawn, that being a Matter of much Difficulty and great Truft, their Highneffes could wifh, if it were poffible, the Admiral fhould be prefent and draw it, together with thofe that were to be employed about it by the King of Portugal; and that in cafe he could not come himfelf, he fhould fend his Brother Don Bartbolomew, or fome other intelligent Perfon with Draughts and authentic Relations, and his Opinion concerning what ought to be done in the Cafe with the utmoft Expedition, that it might come in time, and not difappoint the King of Portugal.

The feizing of Caunabo very much incenfed his Brethren, who refolved to make War upon the Spaniards with the utmoft of their Force. The Admiral, perceiving that abundance of Men drew together, and all the Country armed, took the Field with two hundred Foot, twenty Horfe, and twenty Wolf-Dogs; which, as the Indions were naked from Head to Foot, made terrible Havock among them. There were no more Soldiers, becaufe the reft were fick. The Admiral fet out on the 24 th of March 1495, taking along with him his Brother, the Adelantado, Don Bartbolomore Columbus, and the King Guacanagari with his Men. He entered the Royal Plain, and difcovered the Enemies Army ; in which King Manicatex had a great Number of Men. And the whole feemed to amount to an hundred thoufand. The Adelantado gave the Charge, and the Men and Horfes and the Dogs io terrified them, that they were foon routed, and a vaft Number of them were killed and taken, the latter being adjudged Slaves, and many fent into Spain on board Antbony de Torres's four Ships. The Admiral continued ranging round about the Inland near ten Months, feverely punifhing thofe he found guilty, having fome Encounters with Caunabo's Brothers, who made the greateft Refiftance; but finding their Power too weak, they and Guarinoex, being the chief Kings in the Illand, refolved to fubmit themfelves to the Admiral.

The Admiral having thus reduced all the People under the Obedience of their Catholic Majefties, ordered they fhould pay Tribute in this Manner: The Inhabitants of the Province of Cibao, and thofe of the Royal Plain, and
thofe
thofe near the Mines, above fifteen Years of Age, to pay a fmall Hawk's Bill full of Gold quarterly ; and all other Perfons, a Quarter of an hundred Weight of Cotton each; and only King Manicatex to pay every Month half a Gourd full of Gold, worth an hundred and fifty Pefos. A certain Coin made of Copper or Brafs with a certain Figure on it was ftruck, and changed upon every Payment of the Tribute, that every tributary Indian might wear it about his Neck, in order to fhew who had paid. Upon this Occafion Guarinoex, King of the great Royal Plain, offered the Admiral to fow Corn throughout the Country from Ifabella to Santa Domingo, which is from Sea to Sea fifty-five Leagues Diftance, which would furnifh all Caftile with Bread, provided he would not require any Gold of him, becaufe his Subjects did not know how to gather it. But the Admiral being a Stranger, alone, and envied by the Miniters of their Catholic Majefties, and, like a difcreet Man, being fenfible that the Wealth he fent mut be his Support, he preffed for Gold, tho' in other refpects he was a good Chriftian, and feared God. And accordingly he muderated the Tribute, being fenfible that it could not be paid ; for which fome had fled to the Mountains, and others wandered into remote Provinces.

This Oppreffion, and the Indians feeing there was no likelihood of the Spaniards leaving the Country, becaufe there were no Ships in the Harbour, and they builtHoufes on the Land with Stone and Timber, made them melancholy; and they afked them, Whether they ever defigned to return home? And having found by Experience, that the Spaniards, compared with them, were very great Eaters, they thought they had come thither only to eat; whereupon, obferving that many of them were fick, and that the Provifions brought them from Spain were fpent, many Towns confpired to contrive fome Method that they might all perifh, or, to avoid that, be obliged to depart the Ifand.
9. In order to pulh this Defign with Effect, the Indians thought beft to forbear fowing, that there might be no Corn, and to retire themfelves to the Mountains, where they had many good Roots to eat, and might help out with hunting Utias, a fort of Rabbit, whereof there is a vaft Plenty. This Contrivance little availed them; for though the Spaniards fuffered much through Hunger, and in Purfuit of the Indians, they, however, went not away; but many dying through downright Want obliged thern to eat loathfome things, fo that all the Calamity fell upon the Indians themfelves; for they ranging about the Mountains with their Wives and Children, enduring much Hunger, and having no opportunity to hunt, fifh, and get Provifions, the Hills and Rivers about which they fkulked being full of Damps, a peftilential Diftemper reigned among them; fo that what through this, and the Wars, till the Year 1496, one Third of the Inhabitants perifhed.

But let us now look over to Spain, where Father Boyl and Don Pedro Margarite, as they agreed to go away together without Leave, fo they alfo combined in fpeaking ill of the Indies, and mifreprefenting the Enterprize, becaufe they had not found Gold for them to plunder, in Chefts, or growing on the Trees. They alfo alledged that the Admiral did not behave well, not having been in the Ifland from his Return thither in the fecond Voyage, till he came back from the Difcovery of the Ifiand of Cuba, full four Months. And there being Letters alfo that gave an ill Character of the Admiral, by thofe who went on board the four Ships under the Command of Anthony de Torres (for there are always Malcontents) their Catholic Majefties, at the time the Admiral took the Field againft the Indians in the Royal Plain, fent away Fobr Aguado, a Native of Seville, Groom of the King's Bed-Chamber, to obferve what was doing in the Illand Hifpaniola, taking with him four Ships laden with Neceffaries for the Relief of the People there.

Fobn Aguado carried with him Credentials, dated April the gth, I495, and arrived at IJabella about Octcber, at the time when the Admiral was carrying on the War againft Caunabo's Brother in the Province of Maguana. At Ifabella, by Words, and even by Aations, he pretend-

Vol. II. Numb. 7 I.
ed to have extraordinary Authority, interpofing in Matters of Government, feizing fome Perfons, and reprovis ing the Admiral's Minifers, fhewing little Refpect to Don Bartbolomew Columbus, who had been left Governor there during his Brother's Abfence. Nor was it long before Fobn Agzado thought fit to go after the Admiral; and took Horfe and Foot along with him: And thofe who went with him by the way gave out, that another Admiral was come, who would put the former to death; and the Natives being difcontented on account of the Wars and of the Tribute of Gold, they were much pleafed with this News ; and fome Caziques met privately in the Houfe of King Manicatex, whofe Dominions were near the River Kaqui, where they agreed to give in their Complaints againtt the Admiral, and to feek Redrefs from this new Minifter.

The Admiral, being informed that Gobn Aguado was looking for him, refolved to return to Ifabella, where in the Prefence of the People he read their Highneffes Letter, with Sound of Trumpet and great Solemnity: Fobm Aguado could not forbear very foon difonvering his Indifcretion, thrufting himfelf into many Affairs, without any Refpect to the Admiral, and giving thereby an ill Example to others. His Conduct being pernicious to the Admiral, the bold Threats he made, and the People being difcontented on account of the Troubles, and becaufe they had nothing to eat but the Allowance given them out of the King's Stores, which was a Porringcr of Wheat, ground in a Hand-mill by fome, and by others eaten boiled, and a flice of rufty Bacon, or rotten Cheefe, with a few Beans, or Spanibs Peas, and no Wine, and the Admiral obliging them, as they were in the King's Pay, to work at the Fortifications, his own Houfe, and other Structures, they complained to Fobn Aguado; tor as to thofe who were in health, by ranging about the Inand they fared better; and he thought thefe Complaints fufficient to lay before their Majefties.

At this time the four Ships that had carried over fobve Aguado perifhed in the Harbour, in thofe Tempents which the Indians call Hurricanes, and there was nothing left to carry him back but the Admiral's two Caravels, who obferving his Prefumption, and being informed that others had mifreprefented him at Court, where he had nothing to fupport him but his own Merit, he refolved to appear before their Majelties, to clear himfelf of all thofe Slanders, and at the fame time acquaint them with what he had found, in his fecond Difcovery, upon the Inand of Cuba, and his Opinion as to the Partition that was to be made of the Ocean between the two Crowns of Cafile and Portugal: And to the end that all things might be thoroughly fettled, he would firt leave other Forts in a good Pofture, which he had begun, befides that of St. Tbomas, for the Security of the Country, being the Magdalen, called the Lorver Macorix, in the Royal Plain belonging to the Cazique Guanaconel, three or four Leagues from the Place where the Town of St. Fago now ftands; another called St. Catberine; another on the Bank of the River Yaqui on the Side of Cibao, called Efperan$z a$; another in the Kingdom of Guarinoex, in the Royat Plain, called the Conception. The Caziques, being much oppreffed by the Burthen of the Tribute, difcovered to the Admiral that there were good Gold Mines on the South Side, and that he might fend his Spaniards for it.
Now as it concerned the Admiral to difcover much of that Sort, to fupport his own Credit; and this coming at the time when he was refolved to return to Spain, he fent Francis de Garay and Micbael Diaz, with fome Men and the Indian Guides: They went from Ifabella to the Fore Magdaler, and thence to the Conception, all the way over the Royal Plain: They next ventured through a Pafs two Leagues in Length, which led them into another Plain, called Bonao: they advanced fome Leagues farther along the Ridges of Bonao, and came to a great River called Hayna, very fruitiul, and where they were told there was much Gold, as there was in all the Brooks, which they found true; for, digging in feveral Places, they met with fuch Penty, that one Labourer, in a Day, could get above three Pefos: Thefe they called the Mines of St. Cbrifoopber, from a Fort the Admiral ordered to be there Cbriftopber, from a Fort the Admiral ordered to be there
built, and aferwards they were called the Old Mines.

H
When

When the Caravels were equipt and provided, the Admiral appointed his Brother Don Bartbolomerw Columbus his Lieutenant, a Perfon capable of a great Command; and, in cafe he died, his Brother fames; earnettly charging the People to be obedient to him: He alfo appointed Francis Roldan, a Man of good Underttanding, and who alfo had behaved himfelf well in his Office of Alcalde, and others he had employed him in, chief Alcalde of the whole Hland, to adminifter Juftice; for tho' he was not a Lawyer, yet being his Servant, and a difcreet Man, he thought fit to entruft him in that Place. He went aboard one of the Caravels, and Fobn Aguado went in the other; and in regard that their Catholic Majefties had ordered that the moft fickly, and others whofe Wives and Kindred had complained that the Admiral would not permit them to return into Spain, fhould have Leave, he took on board to the Number of two hundred and twenty, or better. He failed on the Ioth of March I496, and, going to take a View of Puerto de Plata, carried his Brother Don Bartbolomere along with him, becaufe he defigned to fetthe a Colony there.

Don Bartbolomere returned by Land; and the Admiral, by reafon of contrary Winds and Currents, failed to the Eaftward with much Difficulty, as far as Cape Eganno, and on the 22 d he loft fight of it. On the gth of April he came to an Anchor at Marigalante, and the next Day at Guadalupe, where many Women came with Bows and Arrows to hinder their Landing; and becaufe the Boats could not come near the Shore, as the Sea ran fo high, they fent out two Indians, having thirty aboard, from Hifpaniola, who told the Women that they would do them no Harm, but only take in Provifions. They anfwered, they flould go to the other Side of the Inand, where their Hufbands were; and when they came, a great Number of Men appeared, fhooting Flights of Arrows; but they fell fhort; and the Boats firing fome fmall Guns, they all fled to the Mountains, leaving their Houfes and Goods, where the Chriftians took and deftroyed all they found. Being acquainted with the Way of making Bread, they fell to work, and made enough to fupply their Want. Among other things they found in the Houfes, there were Parrots, Honey, Wax, and Iron, whereof they had Hatchets to cut Looms like thofe for Tapeftry-work, in which they wove their Tents. Their Houfes were fquare, and not round as is ufual in the other Inands. While the Bread was making, the Admiral fent forty Men up the Country, to learn fomething of it ; who next Day returned with ten Women and three Boys, the reft of the People being fled.

Among thefe Women was the Wife of a Cazique, whom a Man born in the Canaries, that was very nimble, had much Difficulty to overtake; and the had got from him, but, feeing him alone, fhe thought to take him, and clofing fhe got him down, and had ftifled him, but that others came to his Affiftance. Thefe Womens Legs were fwathed with Cotton from the Ancle to the Knee, that they might look thick; which Ornament they called Coiro, and looked upon it as very genteel, and thofe they girded fo hard, that, if it happened to nlip off the Leg, that Part appeared very thin. The fame both Men and Women ufed in Jamaica, who fwathed their Arms up to their Armpits, that is, about the fmalleft Parts, like the old-fafhioned Sleeves among us. Thefe Women, as foon as their Children could ftand upon their Legs, gave them a Bow, that they might learn to fhoot; and they all wore their Hair long and loofe upon their Shoulders; nor did they cover any Part of the Body. That Lady they took faid, that the Inand was only inhabited by Women, and that thofe who would have oppofed them on landing were Women, except only four Men, who were there accidentally from another Illand; for at a certain time of the Year they came to fport with them. The fame was obferved by Women of another Inand, called Matrimonio, of whom fhe gave the fame Account we read of the Amazons; and the Admiral believed it, by what he faw among thofe Women; becaufe of their Courage and Strength. They alfo fay thefe Women feem to be endowed with clearer Underftandings than thofe of the other Ilands; for in other Places they reckon the Day by the Sun, and the

Night by the Moon, whereas thefe Women reckon by Stars, faying, when fuch a Star is North, then it is time to do fo and fo.

When they had made Provifion of Bread for twenty Days, befdes what they had aboard, the Admiral refolved to continue his Voyage towards Spain; but perceiving this Inand was an Inlet to the others, he thought fit firft to fatisfy thofe Women with fome Gifts for the Lofs they had fuftained, and then fent them all afhore, except the chief Lady, who chofe to go into Spain with her Daughter, among the other Indians of the Illand Hijpaniola, one of whom was Caunabo, who, it has been faid, was the chief Man in all the Inand, and that becaufe he was not a Native of it, but of the Caribes; and therefore the Lady was content to go into Spain with the Admiral, who having furnifhed himfelf with Bread, Wood and Water, fet fail on the 20th of April from Guadalupe, with the Wind very fcant, keeping near the Latitude of 22 ; for at that time they had not found out the Method of runing away North, to meet the South-weft Winds.

Having made but little Way, and the Ships full of People, on the 2oth of May they all began to be much afficted for want of Provifions, which was fo great, that they had but fix Ounces a Day for each Perfon, and lefs than a Pint of Water, without any thing elfe. And tho there were eight or nine Pilots in thofe two Sloops, yet none of them knew where they were: But the Admiral was confident they were but a little Weft of the Azores. Thus continuing their Voyage, tho' all the Pilots were at a lofs, on the 8th of June they were in fight of Odemira, between Liflon and Cape St. Vincent, all the Pilots for feveral Days having ftill made for the Land, except the Admiral, who the Night before flacked his Sails for fear of Land, faying, he did fo becaufe they were near Cape St. Vincent, which all laughed at, fome of them affirming they were near the Englifh Channel; and even thofe that erred leaft faid they were on the Coaft of Galicia, and therefore ought not to take in any Sail, it being better to dye on Shore than ftarve miferably a Sea; the Scarcity being fo great, that there were many, who like the Canibals, were for eating the Indions they had a-board: And others, to fave the little Provifion there was left, were for throwing them over-board; which they would have done, had not the Admiral ufed all his Authority to prevent it, confidering they were human Creatures ; and therefore it fo pleafed God to reward him with the Sight of Land next Morning, as he had promifed them all; for which reafon he was afterwards looked upon by the Seamen as moft expert, and almoft prophetical in Sea Affairs.

Io. The Admiral being landed in Spain, began to prepare for his Journey to Burgos, where he was favourably received by their Catholic Majefties, who were there celebrating the Nuptials of Prince 70 bn, who married Margaret of Aufria, a Daughter of Maximilian the Emperor, who was conducted into Spain. The Admiral being come to Burgos, he prefented their Majefties with feveral things he brought from the Indies, as well Birds and Beafts, as Trees, Plants, Inftruments, and other things the Indians ufe for their Service and Diverfion; alfo feveral Girdles and Mafks, with Eyes and Ears of Gold; befides much Gold Sand, grofs and fmall, as Nature produced it, fome Grains as big as Vetches, fome as Beans, and as Pigeons Eggs. This was not always fo much valued, becaufe in Procefs of time there were Pieces of Gold found that weighed above thirty Pounds : Yet at this time what he brought was much efteemed, in Hopes of what was afterwards found: And accordingly their Majefties received it in good part. When the Admiral had given them an Account of all that related to the improving and peopling the Indies, he was deffrous to return with Speed, for fear fome Difafter fhould happen in his Abfence, efpecially becaufe he had left the People there in great want of all Neceffaries.

Though he preffed hard on this Account, yet the Affairs of that Court being fubject to Delays, he could not be fo foon difpatched, but that ten or twelve Months elapied before he obtained two Ships; which were fent with Succours under the Command of Peter Fernandez

Colonel. Thefe fet out in Eebruary, 1498; and the Admiral ftaid to negotiate the obtaining fuch a. Fleet as was requifite for him to return to the Indies. But he was forced to ftay above a Year at Burgos and at Madera del Campo, where, in the Year 1499 , their Catholic Majefties granted him many Eavours, and gave the neceffary Orders for his Affairs, and for the Government and Settling of the Indies.
His Credit with their Catholic Majefties was fill tollerably good, tho he had met with fome Enemies in Spain, as well as the Indies, who laboured all they could to decry his Merit, and to propagate an Opinion, that he had not done fo much as he had pretended, or as at firft, and upon his immediate Return from the Iidies, was univerfally allowed him. For fuch is the Nature of Envy, that, though often ftruck dumb by the Luftre of true Merit, it is a Monter never to be flain, at leaff folong as the Hero lives againft whom it directs its Rage. In time, therefore, and after brooding in Silence, Envy hiffes again as loud as ever: And as Meanneís is a Quality infeparable from the Multitude, thofe I-iffes, tho' over and over exploded, are a-frefh liftened to and regarded. This has been the Cafe of all the great Mien that the World has produced, and therefore we need not wonder it was the Cafe of Columbus. But to vindicate his Memory, to fupport the Truth, and, as far as it is in our Power, to curb the Malice of fucceeding Times towards Men of equal Worth, we will bettow a few Remarks upon this Section likewife, in order to render it more ufeful and inftructive to our inquifitive, generous, and public-fpirited Readers.
II. In order to explain clearly the Controverfy between the Admiral and his Opponents, we are to obferve, that they acted and reafoned upon very different Principles. The Admiral at firft intended to difcover Lands hitherto unknown to this Part of the World; which, from the Notion he had of their Situation, he believed to be a Part of the Indies, and confequently abounding in thofe Commodities which are brought from the Indies, and are moft efteemed in Europe. His Conjecture, certainly, was not improbable, nor can it be faid that he failed of Succefs, fince he opened a Paffage to the new World, and plainly made it appear that he had Skill fufficient to navigate a Ship to thofe Coafts, of which he had no Notice whatever, but from the Light of his own Reafon. He brought over from thofe Countries Gold, fome forts of Spice, Birds of beautiful Colours, feveral kinds of rich Woods, both in Colour and Scent, and People of quite a different Complexion from the Inhabitants of Europe. In this fecond Voyage he had profecuted and improved his former Difcoveries to fuch a degree, as to be able to affirm, that there were innumerable Inands in thefe new Seas; that they were all of them Countries pleafantly fituated, bleffed, for the mof part, with a rich Soil, and abundance of fine Rivers, plentifully ftocked with Wood, and in all Appearance with Metals; inhabited by a Crew of weak, timorous, and flavifhly-inclined People, who were able to make little or no Refiftance againft the Europeans, and who were likely, therefore, together with their Lands and Gcods, to fall entirely into their Power, and become a Part of their Poffeffion. He had formed a Scheme of Civil Government, and fettled a very effectual Difcipline among the Soldiers he left behind him, in order to fecure all he had thus difcovered, to the Ufe of their Catholic Miajefties, as well as to fearch out and render manifeft all the Advantages that might be derived to the Spaniards from his Difcoveries. In this Light, to be fure, he had performed all he had promifed; was well intitled to all the Grants that had been made him, and merited the

Favour of his Sovereigns, as weil as the Applaufe of their Subjects.

But thole who endeavoured to lefen his Merit, to obfcure his Fame, and to bring him into Difcredit with their Catholic Majelties, went upon this Pretence, that he had undertaken to difcover a Country exceedingly rich, and that on his Return from his firf Voyage he had boafted of entire Succefs in this refpect; whereas they who went over with him in his fecond Voyage had found no fuch Matter, had not been able to collect any great Quantities of Gold, or to make vaft Fortunes at once, as they had promifed themfelves. It is very remarkable that when their Catholic Majefties applied to the Pope for his Grant of thefe Lands which were already difcovered, and of thofe that by the Skill and Induftry of the Admiral, and fuch as profecuted his Defigns, fhould be difcovered, the principal Reafon affigned for the obtaining this Grant, was the converting thefe Indian Nations to the Chriftian Faith, and thereby enlarging the Bounds of the Church. It was therefore altogether abfurd and ridiculous to pretend, that becaufe there were not as many Gold Mines found as were expected, or that thofe Mines were not fo rich as they at firf flattered themfelves they were, this Difcovery fhould be either neglected or defpifed, inafmuch as fuch a Behaviour was altogether inconfiftent with thofe high Profeffions of Zeal for the Chriftian Faith, from whence their.Majefties had affumed the Title of Catholic. Yet, what was no lefs remarkable, the Perfon who was at the Head of the Admiral's Enemies, was Father $B o y l$, the very fint Chriftian Prieft that, in Compliance with the Reafons offered to the Pope, their Catholic Majefties had fent over to convert the Indians. This Man, with all his Feat and Malice, could not deny, but there were People enough to be preached to, and that they were tractable enough in point of Religion; his only Objection was, that it did not appear that there was fo much Gold in the Country where he had been as he expected; and this Objection wrought fo powerfully with many of the Spanifh Clergy, that from being great Promoters of this new Difcovery, and warm Admirers of this great Man who had made it, they began now to treat the thing flightly, and to mifreprefent the Admiral as one who had not kept his Word.

The wife Columbus forefaw all this in the Indies, which induced him to take the Meafures he did of putting the Indians under a Tribute, that he might fend over confiderable Quantities of Gold, that the Credit of this Difcovery might be kept up, and that he might be able to perfect, for their Catholic Majefties Benefit and his own, that Defign in which hitherto he had beyond all reafonable Expectation fucceeded. This excenive and illtimed Appetite for Gold produced all thofe Mifchiefs and Inconveniencies in the firtt Spanifh Colonies to which we have feen them expofed in the Courfe of this Section, and which there is no doubt the Admiral himfelf forefaw, at the fame time that he was fenfible he could not avoid them. It was to fet thefe things in a clear Light, to juftify his own Conduct, to prevent the new World from being loft again as foon as it was found; and to fecure if poffible a Reward for his paft Labours, by obtaining the Means of rendring them effectual, that he came over to Spain; where we have feen how he was received, and what Difficulties he met with in procuring the Supplies that were neceffary for undertaking a third Voyage to the Weft Indies, the Hiftory of which is to be the Subject of the next Section, and which will contain Events ftill more curious, and more entertaining, than thofe which have been already related.

SECTION IV.

#### Abstract

1. The Difficulties the Admiral bad to furmount, in procuring a Fleet fufficient for bis intended Return to Hifpaniola. 2. A complete Viero of the Tranfactions in the Spanifh Colonies, and of the Rebelizon that bappened there during the Admiral's Abfence. 3. What bappened to the Admiral in the Profecution of the Voyage, and the Meafures be cook for fending Supplies. 4. The Admiral fteers a neto Courfe for Dijcovery, and actually falls in with Part of the Continent, now called the Province of Paria. 5. Examines it, and enters into Correfpondence with the Natives; and yet was not clearly convinced whether it was the Conti-nent or not. 6. Pafjes through the Boca del Drago, and refolves to fteer direstly.for St. Domingo. 7. The Arrival of the Store-fbips before the Admiral, and bis coming to the IJand. 8. A fuccinct Hiliory of the Troubles in Hifpaniola, and of the Admiral's Endeavours to pacify them; wobich however prove altogeiber ineffectual. 9. The Court of Spain, being alarmed at the many Complaints fent from the Indies, depute a Perfon to go thitber, with full Power to bear and determine them. 10 . In conjequence of tbis extraordinary Commiffon, the Admiral is fent bome in Irons, and bis two Brothers with bim. II. His Arrival in Spain, and the Reception be met with. 12. The true State of the Difcoveries made to this time by the Spaniards, and their Importance, 13. Remarks and Obfervations on the foregoing Scetion, and on the Accidents that prove commonly detrimental to Difcoveries.

THE Accounts given by the Admiral Don Cbriftopher Columbus, both of the Indies in general, and of his own Conduct in particular, proved fo fatisfactory to their Majefties, and to the principal Perfons who compofed their Council, that 'twas refolved to fend him back again, as he propofed, vefted with fuch Powers, and furnifhed with fuch Supplies, as he judged requifite; for, when they came to be examined by competent Judges, the Complaints of his Enemies appeared to be as illfounded, as the Calumnies invented by mean Minds againft Perfons of diftinguifhed Merit ufually are. But tho' his Enemies were not able either to deprive him of his Authority, or to hinder him from returning with a greater Meafure thereof to the Indies than he enjoyed when there before, yet they had Intereft fufficient to throw great Obftacles in his Way, and to delay from time to time the Performance of thofe Promifes that had been made him. The Succours he demanded were, eight good Ships, five hundred Men, and a fufficient Quantity of Provifions of all Sorts, of which he gave in a very clear and particular Eftimate, amounting in the whole to fix Millions of Marvedies, which make fomething more than 4,500 l. of our Money. But as he well enough knew that fuch an Embarkation could not be foon made, and was fenfible alfo of the Diftrefs to which the Spanijb Colonies might be expofed by the Delays that might attend it, he defired that two Ships laden with Provifions might be firlf fent, and that he might go in Perfon with the other fix, as foon as they could be got ready.

This as a thing reafonable in itfelf their Catholic Majefties very readily confented to, and yet it was a long time before he could procure the two firft Ships to be fent away; and as for the other Ships, the equipping of them went on fo flowly, and the Money neceffary for that Service was iffued fo negligently, that the Admiral found even his large Stock of Patience almoft exhaufted before this Fleet was ready to fail. This was chiefly owing to the Ill-will of Don fuan Fonfeca, Archdeacon of Seville and afterwards Bihop of Burgos, who had been formerly one of the beft Friends the Admiral had, but was now entirely gained over by his Enemies, chiefly by the Intrigues of Father Boyl, and proved afterwards himfelf the moft violent Enemy the Admiral had. But how much foever there Difcouragers might perplex and difturb the Mind of this great Man, they were far enough from diverting him from his Purpofe, or even from leffening that Zeal and Diligence with which he had hitherto profecuted this great Affair: On the contrairy, the more Trouble he met with, the more Impediments were thrown in his Way, with fo much the greater Vigor, with fo much the more Conftancy, he applied himfelf to the Performance of what was requifite to accomplifh it.
It was with this View that he went himelf to Seville, to haften the Preparations that were making there, and to give fuch Directions as he thought might moft contribute to render thefe Preparations effectual. Yet it is more than probable, that, with all this Activity and Diligence, he would fcarce have been able to have carried his third Expedition into Execution, if it had not been for the Countenance and Protection afforded him by Queen IJa-
bella, who was a Princefs of vaft Underfanding, and of a generous and magnanimous Difpofition; whereas her Hufband King Ferdinand, though he was undoubtedly a great Politician, yet there was fuch a Darknefs in his Temper, and fuch a Doublenefs in his Conduct, that there was no great Caufe to wonder that the Admiral was not much in his Favour, or that the King did not ftand very high in his Efteem. But before we come to fpeak directly of the Admiral's Voyage, it will be neceffary to give the Reader an Account of what paffed in the Indies during his Abfence.
2. The three Ships the Admiral fent from Cadiz arrived at IJabella about the Beginning of $\mathcal{F} u l y 1496$, to the great Joy of the People for the Provifions they brought, and the News of the Admiral's fafe Arrival in Spain; for Hunger being the greateft Diftemper among them, nothing to much rejoiced them as Ships coming with Provifions from home. Don Bart toolomero Columbuis difpatched the Ships for their Return, and fent aboard them three hundred Indion Slaves, becaufe their Majefties having been informed that fome Caziques killed the Spaniards, they ordered that all who were guilty fhould be fent into Spain. And forafinuch as the Admiral had alfo acquainted their Majefties, that upon his Return from his Difcovery along the Inands of Cuba and Famaica, as he failed along the South Coaft of ITjpaniola, it had appeared to him a moft beautiful Country, and that there were fine Inlets which he thought might be good Harbours, and could not be far from the beft Mines he had difcovered, which he called St. Cbrifopher's, their Highneffes, in the Letter he found at Cadiz, anfwered him, that he might do as he thought beft in that Cafe, which they would approve of, as done for their Service. Hereupon the Admiral wrote from Cadiz to his Brother Don Bartholomerw, ordering him immediately to go over to the South Side, and find a convenient Harbour ; and if the Place was good, to carry away all that was at IJabella, and abandon it.
Accordingly Don Bartholomzzw, leaving his Brother Don Fames in his Place, fet out with the ableft Men for the Mines of St. Cbrifopper, and arriving at the River Ozama, fo called by the Indions, found it very agreeabie, and inhabited on both Sides. He viewed and founded, and found that Ships of above three hundred Tons Burthen might come up it. Whereupon he refolved to build a Fort of Earth on the marfhy Part of the River, at the Mouth of the Harbour on the Eaft Side. He fent for Men from IJabella to begin the Scttlement, and gave it the Name of Senta Doningo, either becaufe he came thither on St. Dominic's Day, or on a Sunday, called in Spanib Domingo, or becaufe his Father's Name was Dominic; and tho' the Admiral always called it the Neso Tfabella, yet the other Name has prevailed. There remained at the Oid Ifabella the People that were building two Caravels, and fome other Meir: The Work being begun, Don Bartbolomew refolved to view the Kingdom Xaragua, of whofe State and Government he had heard much Difcourfe. Having lefr Senta Domingo, thirty Leagues from thence he came to the great River Neyba; where a numerous Army of Indians were drawn up; for Bobecbico King of Xaragua, be-
ing informed that the Spaniords were coming, refolved to oppofe them. Don Barbolomero gave them to underftand, that he came not to makeWar, but to vifit the King and his Sifter, and was thereupon received with much Pomp and Rejoicing. Procceding thence thirty Leagues farther, he came to Xoragua: All the prime Men of the Province received him with Dancing and Singing, and other forts of Rejoicings ; he was conducted to the King's Palace, where Supper was ready, being Bread made of Cazabi, Utias boiled and roaited, and a prodigious Quantity of Sea and Frefh-water Fifh. After Supper they conducted all Don Bartbolomezo's Company to their re-毛ective Quarters, their Beds being Cotton Hammocks. The next Day, in the Square where the King, his Sifter, and Don Bartbolomew were prefent, there appeared two Parties of Men armed with Bows and Arrows, who made a Skirmifh after the manner of Spain, practifed with Canes inftead of Spears ; but by Degrees they began to grow hot, and many of them were wounded, and four dropped down dead; and all this with much Satisfaction, without regarding the Dead and Wounded; and many more had fuffered, had not the King, at the Requeft of Don Bartholomew and the Spaniards, commanded them, when mort furious, to give over.

After the Entertainment Don Bartbolomew told Bobecbico and his Sifter, that his Brother, the Admiral, was gone to vifit their Majefties of Spain, his Sovereigns, to whom many Lords of the Inand were already become Tributaries; and that he came thither to the end that he fhould own and pay Tribute to them. He anfwered, That as no Gold was found throughout all his Dominions he could not pay Tribute. Don Bartbolomero told him, it was not his Defign that any one fhould pay Tribute any otherwife than what his Country afforded; upon which he faid, he would give him as much Cotton and Cazabi as he would demand, and ordered his People to plant Cotton, becaufe they were to pay Tribute of it to their Majefties of Spain, and, in their Name, to the Admiral, and to his Brother Don Bartbolomew, who was then in his Houfe. Having thus concluded with Bobechico, Don Bartholomew thought fit to return to the Mines of Civao and Colony of Ifabella, and found that near 300 Men had died of feveral Difeafes, which troubled him very much; and the more, as no Ships came with Provifions ; for which Reafon he refolved to diftribute the Sick and Infirm among the feveral Forts there were between Ifabella and Santo Domingo and the Indian Towns; that having fomething to eat, they might have only their Diftemper to ftruggle with, and not Hunger at the fame time.

Then, having given Orders for the carrying on the Building of the two Ships, he went towards Sanio Domingo, gathering in the Tribute as he proceeded. The Indians of the Plain, and thofe of Cibao, thinking it hard to pay Tribute, and entertain Soldiers at their own Expence, and fuch as did eat fo much, befides other things, which they looked upon as Grievances, complained to the Cazique Guarinoex, reprefenting, itwas his Duty to endeavour to fet himfelf and them at liberty. Guarinoex being a peaceable Man, and confidering the Force of the Spaniards, the Swiftnefs of their Horfes, and the ill Succefs Caunabo, and others of the Province of Cibao, had met with, refufed to engage in a War; but being importuned by his People, who always perfuaded him that they could get the better; and, as fome fay, being threatened they would chufe another Leader, he confented to commence the War. The Spaniards, in the Conception, perccived thofe Commotions, and gave notice to thofe at the Fort built at Bonao, by fome Indians who remained faithful to thofe of Bonao, and alfo fent to Don Bartholomere, who was at Santo Domingo. The Indian made ufe of a Stratagem in carrying thofe Letters delivered to him in a Staff that was hollow at one End; for the other Indians having found by Experience, that the Spanif Letters fpoke, endeavoured to intercept them ; and the Meffenger, falling into the Hands of the Guards pofted on the Paffes, pretended to be dumb and lame, anfwering them altorether by Signs and Limping, as if he was going with much Difficulty into his own Country, he efcaped; becaufe they thinking he had been
Vol. II. Numb. 7 I.
dumb, afked him no Quefions; and fuppofing that the Staff had been to help him on they did not fearch it. And thus the Letter came fafe to Don Bertbolomere Colimbus; which proved the Safety of the Spaniards. As foon as Don Bartbolomew came to the Conception, he advanced with all the Spaniards to fall upon I5,000 Indians; Guarinoex had drawn together and attacked them by Surprize at Midnight, becaufe they never fought in the Night. They killed and took many; feveral Lords, of which Number they executed the chief Ring-leaders of that War ; and Guarinoex being carried to the Conception, above 5000 Men followed with loud Cries, demanding their King. Don Bartbolomere pitying them, and he, being fenfible of Guarinoex's peaceable Temper, gave him and the other Caziques up to them to their great Satisfaction, the lefs regarded by the Spaniards, as being vanquifhed and fubdued.

At this Time Meffengers came to Don Bartholomere from Bobecbic oand Anacanona with Advice, that the Cazabi and Cotton were ready; for when the Seeds of Cotton are planted, the Shrubs that fprout produce Fruit in fix or eight Months, and the higheft of them rife about a Fathom, tho' they begin to produce when much fhorter. Don Bortholomere was refolved to go eo Xaragza, to gather the Tribute, and leave his Men in that Country, to give them of the Plain, and others, Reft, tho' the Soldiers were in fuch Want of Clothes and other Things brought from Spain, that they grew very uncafy. He fent Orders to Ifabclla, for one of the Caravels to come to the Port of Xaragua to carry him, that Harbour being a large Bay, or Inlet of the Sea, dividing the Inand into two Parts, the one of which forms Cape St. Nicholos, ftretching out 30 Leagues; the other much larger, and ends in the Cape called Tiburon, and the Bottom of the Bay reached within two Leagues of Bobccbico's Palace. Thofe at IJabella fent the Caravel, and when it came into the Port, Anacanona perfuaded her Frother to go to the Port, to fee the Spanifb Canoc. Tho Bobechico had two very fineCanoes, yet Anacanona would not go in them; but in the Pinnace. The Veffel fired, which put the Indians into fuch a Confternation that they were ready to leap into the Water ; but feeing Don Bartbolomew laugh, they compofed themfelves. When they were aboard, the Seamen played on a Tabor and Pipe, and other Inftruments; which much pleafed the Indians; they looked all about the Head and Stern, went aboard the Caravel, and into the Hold, and were amazed. Don Bartholomeze ordered the Sails to be fpread, and the Caravel to take a Trip to Sea and return to the fame Place. The Cazique admired that fo great a Veffel Thould make way without Oars, and go forward and backward with the fame Wind.
When they returned to Xaragua the Caravel was loaded with Cazabi, Cotton, and other Thinge, and went away to Ifabella, as Don Bartbolomew did by Land. And being thus employed, Francis Roldan, the head Alcalde, a turbulent Man, who forgot the Admiral's Bread he had eaten, defiring to get into Authority, by raifing Commotions; and taking, for his Pretence, Don Yomes Columbus's having ordered the Caravel which had carried Bread and Wine to the Ifabella, to be laid dry, to prevent its being ftolen by fome Malcontents, who deffred to go away into Spain, began to cabal among the labouring Men, as alfo with the Seamen, and other mean Pcople and thofe that were moft difcontented, intimating that the Caravel would be better in the Water, and ought to be fent into Spain with Letters to their Catholic Majefties, fince the Admiral ftaid fo long; that theirWants might be relieved, and they not perifh with Hunger, or be deftroyed by the Indians. That Don Bartholomere and his Brother would not fend it, becaufe they defigned to revolt, and keep the Ifland to themfelves, and to make them all Slaves, employing them in building their Houfes and Forts; to attend them in gathering the Tribute, and enriching themfelves with Gold. The Men finding themfelves encouraged by a Perfon of fuch Power, as the Chief Alcalde, had the Impudence to fay thofe things in public which before they fcarce durf mutter in Comers. Roldan required they fhould all fign a Paper, importing, that it was for the Public Good that the Caravel fhould be fet afloat; but, as he was very fenfible it. was
was not fit that their Catholic Majefties fould know he had been the Ring-leader of fuch a Mutiny, he fought plaufible Pretences to corer his Defigns; he perfuaded the People that the beft Way to fecure the EriendMip of the Indians, was to quit them of the Tribute: And Advice being brought that Guarinoex's Indians did not pay the Tribute, and that they gave Tokens of Uneafinefs, Don James Columbus, thinking to put Roldan out of the Way, fent him with a confiderable Part of the Men to the Conceptiont, where he carried on the Mutiny more effectually, and difamed thofe that would not follow. Returning to Ifabella, having by Force taken the Key of the Magazine, he broke the Locks in Pieces, and crying long live the King, took all the Arms and Provifions he thought fit for his Followers, and fet up for himfelf. Don fames attempted to appeafe the Mutiny, but Francis Roldan behaved himfelf fo infolently, that he thought fit to retire into the Fort.

The Mutineers went where the King's Cattle were, and, having taken what Cows, Mares, and Colts they thought fit, they went amongft the Indian Towns, giving out that they had quarrelled with the Admiral's Broshers, on Account of the Tribute they exacted, perfuaded them not to pay any, and they would defend them. The true Reafon this Fellow behaved in this infolent and rebellious Manner, was the Project he had formed of fecuring all to himfelf, by feizing the Perfon of Don Bartbolomere; for he made no Queftion that the Admiral's Enemies would hinder him from returning into the Indies; and, perhaps, he had given them fome Reafon to hope, that he would from time to time tranfmit them fuch Relations as might ferve to juftify their Profecution of Columbus.

But while things were in this Situation, there arrived at Santo Domingo, on the 3 d of February, 1498, the Ship which the Admiral, with much Difficulty, had procured Leave to fend to the Indies. Both Parties endeavoured to make themfelves Mafters of this Ship, which, however, by the Care of the Inhabitants of the Place where it arrived, was fecured for Don Bartbolomere; who, upon opening his Difpatches found, that though their Catholic Majefties were at firft doubtful whether the Admiral had a Power to appoint a Lieutenant, and rather inclined to think he had not, by Virtue of his Commifion, yet upon his reprefenting that it was for their Majefties Service he had taken this Step; and that their Affairs in the new World muft have fallen into great Confufion without it; they were pleafed to confirm Don Bartholomere in his Title of Adelantado; which having publifhed, it greatly promoted his Authority, and enabled him to enter into a War with the Indians, though it was begun upon very unjuftifiable Motives, in as much as the Spariards had laid upon them Burthens they were unable to bear: This War Don Bartbolomere conducted with great Succefs againit thofe unhappy People; but with Refpect to the revolted Spaniards under Roldan, he could neither engage them by fair Means to return to their Duty, nor was it in his Power to reduce them by Force. As we have now run through the Hiftory of the Spanifh Colonies, during the Abfence of the Admiral we are at Liberty to purfue the proper Defign of this Section, and to enter on the Admiral's third Voyage into the fe Parts.
3. The Admiral failed over the Bar of San Lucar, on the I8th of May, with fix Ships, and as there was Intelligence that a Portuguefe Fleet lay at Cape St. Vincent, he, giving them the Slip, ftood away for the Illand of Madera, touched at Puerto Santo on the 7 th of Fune, and found the Inhabitants exceedingly frighted, imagining that his Ships had been French; he wooded and watered and then proceeded to Madera, where he was joyfully received, becaufe they knew him. On the 19th he arrived at Gomera, where he found a Frencb Ship with two Spanif,' which they had taken: He retook one of them, and fent after the Frenchman, and fix Spaniards that were on board the others, feeing their Relief at hand, drove the French that guarded them under Hatches, and failed away to the Admiral. He refolved to fend from Gomera the three Ships with Provifions to Hijpaniola, beliering the People there muft be in

Want, and appointed Alonfo de Corvojal, a worthy Man, Captain of the Erft of them; Peter de Alena, a Native of Cordorva, Kinfman to Captain Alona, who had been left Governor of the Fort of the Nativity, at the frit Difcovery, Commander of the fecond; and in the third he placed Fobn Anihony Columbus, a Relation of his own, a Man of Capacity and Judgment; he gave them Inftrutions, and ordered that ach of them fhould command a Week in Chief, and carrying the Kight, they fhould fail Weft by South 850 Leagues, and then they would fall in with the lland Dominica; whence they fhould fteer Weft North-weft, to fall in with the Inand of St. Jobn; then keep along the South-fide of it, that being the true Courfe for the New Ifabella; or Santo Doningo.

The Admiral, himfelf, being furnifhed with what he wanted, failed on the 12 th of jum , for the Inand of Hi erro, one of the Canary Inlands, the fartheft to the Weftward: He defigned in the Name of the holy Trinity, as he always was wont to fay, to fail to the Southward of them, till he came under the Equinoctial, and fo proceed to the Weftward, till the Ifland of IHifpaniola fhould bear North-weff from him, to fee what Inands or Continent lay in that Part. He faid it was his Opinion no Man had ever failed that Courfe, and that the Sea there was utterly unknown. When paft the Inand Hierro he difmiffed the three Ships; and with one Ship and two Caravels ftood away for the Mands of Cabo Verde, which he ufed to fay was a falfe Name, for he had always found them dry and barren.

On the 27 th of $F_{\text {ine }}$ he difcovered the firft of them, called de la Sal, which is fmall; he proceeded to that of Buena Vifa, anchored clofe by a fimall Inand, to which all the Lepers in Portugal were fent to be cured, by eating the Flefh of the Tortoifes, and frequently wanhing with their Blood; for in the Months of $\mathcal{J} u n e, \mathcal{F u l y}$, and Auguft, abundance of them refort thither from the Continent to lay their Eggs in the Sand; where they fratch a Hole, and leave above five hundred Eggs as big as a I-Hen's, which being covered with Sand, are hatched by the Sun, and the little Tortoifes run into the Sea. The Men there waiting for the Tortoifes, turn them on their Backs, and then they cannot recover themfelves. The healthy People living on that Inand, were only fix or feven, whofe whole Employment was to kill wild Goats, and fend their Skins, well cured, into Portugal; and fometimes they killed fo many in a Year, that they were worth 2000 Ducats.
The Admiral failed from thence on the 30th, for the Inand of Santiago, being 28 Leagues diftant, and is the Chief of them. He thought to have taken Cows aboard, to carry to the Inand Hifpaniola, becaufe their Majefties had ordered him fo to do, but was obliged to abandon that Defign, becaufe the Air of that Inand being very unhealthy, the Men began to ficken, befides he refolved to fail to the Southward, to find out whether King Fobn of Poriugal had been miftaken, who affirmed there was a Continent to the Southward. On the 4 th of $7 u$ ly $h$ he fteered South-weft, having never feen the Sun or Stars, fince his Arrival at the Inands of Cabo Ferde, the Sky being continually covered with a thick Fog. He gave another Reafon for holding that Courfe, viz. to find out the Truth of what the Indians of the Illand Hijpaniola reported: That there had come thither from the South-eaft a black People, who had the Heads of their Javelins of a Sort of Metal which they called Guanin, fome of which he had fent to their Majefties; and the Effay of it being taken, it appeared that, of thirty two Parts, eighteen were Gold, fix Silver, and the remaining eight Copper; a plain Proof that the $W$ eft Indies had been vilited by other People before the Sponiards.
4. The Admiral purfuing his Courfe South-weft, he found fome of thofe Weeds he had met with in the Way to Dijpaniola; having failed one hundred and twenty Leagthes, as foon as it was Night he took the Latitude, and on the I $3^{\text {th }}$ of $f_{u}$ ly the Pleat was fo violent he was afraid the Ships would take Fire, and the Men perifh; and fo fuddenly the Wind ceafed, and the excefliveHeat enfued, that no Man durft go down between Decks to
take'care of the Cafts of Wine and Water that were fale he paid Bim great Refpeft, took of a Circle of Gold he ling in Pieces, the Hoons flying of them; the Wheat parched, the Bacon and falt Meat fried: This Heat continued eight Days; the firt of them was fair, fo that the Sun parched them; the other feven it raired and was cloudy, and yet they found no Relief, but were all in a Manner melted. On the rath of fuly he found himfelf in $\eta^{\circ}$ of North Latitude, and they faw fome black and white Daws, which are Birds that do not go far from Land. On the 15 th the Admiral fell iil of the Gout for want of Sleep, and yet fill he kept up.
On the rgth the Air was fo burning hot that they thought they fhould have been deftroyed in the Ships, but there foon fprung a fair Gale that delivered them from that Heat, and they failed feventeen Days to the Weftward, defigning to turn again to the Suith, fo that Hifpaniole might bear North, where the Admiral believed he might find Land, either before or after he came to that Point; and there he hoped to refit his Ships, which were very leaky, and to recover the Provifions in order to carry them to Hijpaniola, though they were already damaged. Upon the 22 d a multitude of Birds were feen flying from the Weft South-weft towards the Northeaft, and by reafon of thefe Tokens he hoped to fee Land very foon; and the 3 Ift of Guly being come and no Land appearing, and Water growing fhort, he refolved to alter his Courfe, and ftood to the Weftward, fill inclining to the right Hand, to fall in upon Dominica, or fome one of the Inands of the Canibals, now called Caribbee Ihands, fteering North and by Eaft, which he held till Noon; a Sailor went up to the round Top and fpied Land to the South-eaft, about fifteen Leagues diftant, and feemed to be three Mountains; they immediately fung the Hymn Salve Regina: Having thus ${ }^{1}$ pied Land, he altered his Courfe from the Caribbee IJlands, where he defigned to have watered, and frood for a Cape that appeared to the Weftward, which he called de lo Galera, or the Gally Point, on account of a great Rock on it, which, at a Diftance, looked like a Gally under fail. When they came to Land they found a good Port, but could not enter becaufe it had not Water enough. He paffed on to the Point he had feen, being feven Leagues to the Southward, without finding any Harbour, and obferved that the Woods reached down to the Sea, all along the Coaft; fome Men were feen in a Canoe, at a Diftance, but they fled, and it appeared that this was an Illand which he called la Trinadada, or the Trinity, having promifed to give that Name to the firft he fhould dilcover; the Land was high, pleafant, and well cultivated.

On the firft of Auguft the Admiral advanced five Leagues along the Coaft to the Weftward, and came to a Point where he anchored with his three Ships, and took in Water, to the great Satisfaction of the Men. They found the Track of People, Fifhing-tackle, and the Foot-fteps of Goats, as they thought, which proved to be Deer, there being many in the Ifland. Having feen many Towns in this Inand they faw another to the Southward, which feemed to be twenty Leagues long, and he called it ijla Scinta, or Holy Tfland. All the Way from Punta de la Galera, to the Point where they watered, which he named Punta de la Playa, or the Point of Strand, though the Land was good, there was no Harbour, but there were many Rivers and Woods very agreeable, and ftill the Length of the Holy Ifland feemed greater. Seeking for a Harbour, on the 2 d of Auguft he arrived at the Point of the Iland of the Trinity, which he called Punta del Arenal, or Sandy Point, being to the Weftward, and he was then got into the Bay he called de la Bollena, or of the Whale, without knowing that he was near the Continent. He gueffed that the Illand of the Trinity extended, in length, from Cape de la Galera, to Punta del Arenal, thirty-five Leagues, though it is above forty-five; but the Admiral proceeding along it, at feveral times, could not make an exact Computation.
At Punta del Aronal he ordered the Men afhore to refrefh themfelves, becaufe they were much fatigued: A Cazique of the Illand was come thither, and obferving that the Admiral had a Cap on of Crimion Velvet,
he paid him ereat Refpef, took off a Circle of Gold he and with the other Hand took off his Cap and put it on his own, being very much pleafed with it. the fame Day a great Canoe, carrying twenty-five Mien, came from the Eaftwards, towards the Ships, and being abouk a Muiket-fhot from them, they gave over rowing, and cried aloud, which the Admiral fuppofed was to aff who they were, as is ufual among thofe People; by way of anfwer, he fhewed them fome little Braifs Bafons and other glittering things to entice them to come near the Ships; but they advancing very little, the Admiral ordered his Men to play on a Tabor and Pipe, and the Youths to dance, thinking to pleafe them, which proved quite contrary, for they took it for a Signal of War; and, quitting their Oars, laid hold of their Targets and Bows, and thot a great fight of Arrows.

The Admiral then ordered the Mufic to ceafe, and fome Crofs-bows to be brought, but only two of them to be fhot, whereupon the Indians immediately laid down their Arms, and ran in clofe under the Stern of another Caravel; the Pilor whereof went down into the Canoe, entertained them, and gave one, that feemed to be a principal Perfon, a red Cap. They defired him to go athore and they would give him fuch as they had; but as he was going in his Boat to afk leave of the Admiral, the Indocns went away. They were young, well adorned after their Way, of agreeable Countenances, and whiter than the Indions of the Inands. Their Hair was long and fmooth, cut after the Spanifs Fafhion; about their Heads they tied a Cotton Cloth, curioufy wrought of feveral Colours; and another about their Waift to cover their Nakednefs. The Admiral wondered, that being fo near the Equinoctial, he felt Cold every Morning, though it was in the Dog Days; as alfo, that the Waters ran ftronger to the Weft, than the River of Seville; that the Sea Water ebbed and flowed above fixty-five Paces more than at San Lucar; and that the Currents fet fo ftrong between the Inand of the Trinity and Santa, which are two Leagues afunder (by him afterwards called Gracia not knowing as yet that it was the Continent) that it run like a rapid River. They found the fame Sorts of Fruit as in Hijpaniola, and the Trees, Soil, and Climate, were alike; they alfo caught very large Oyiters, and infinite quantities of Fifh, Parrots as large as Pullets, of a light green, fome whitifh, and others intermixt with red and yellow.
The Admiral being at Point del Arenal, which is the laft Cape of the Inand of Trinity, he faw towards the Northweft about fifteen Leagues the Point of that he till then called Ifa Santa, or Holy Ifand, which proved to be the Province he afterwards called Paria; and believing it to be another Illand, he gave it the Name of Gracia, or Grace, as has been faid; and he thought it extraordinary high Land, and fo it is, for a vaft Ridge of Mountains runs along there. Being come up to the Continent, which he, at this time, thought to be an Inand, he fpied near the aforefaid Point two fmall Inands in the Midft of another Mouth or Entrance, forming that Cape which he called Boto, that is blunt, becaufe it appeared fo; and another Cape of the Illand of Trinity he called de Lapa: The Diftance between them being five Leagues, with two little Inands in the Middle, one of which he named el Caracal, or the Snail; and the other el Dolfn, or the Dolpbin. The Narrownefs of the Place, the Violence of the great River Yayopari, and the Waves of the Sea, going into, and out of this Bay, are dangerous, and therefore the Admiral called that Streight the Dragon's Moutb, which Name it holds to this Day; this River that falls into the Bay of la Balena runs through the Country above four hundred Leagues, and as it brings down an immerfe Quantity of Water, efpecially in July and Ausuft, about which time the Admiral was there, the Rains falling then, as they do in Spain in Ociober and November, and the Paffage between the Continent and the Illand of the Trinity being too narrow for fuch a Quantity of oppofite Waters; when they meet there is a mighty Struggle between them.
5. While the Admiral lay at Cape de Lapa, he difcovered very high Land to the North-weft, which he named

Bellajorma,

Bellaforma, becaufe it looked well. On the $5^{\text {th }}$ of Auguft he failed five Leagues from the Cape Lcpa, and faw feveral very good Harbours; he fent the Boats afhore, and the Men found Fifh, faw the Track of People, and a great Houfe uncovered. He proceeded eight Leagues further, ftill difcovering good Harbours, much Land and many Rivers. Going afhore they found well tafted Grapes, Apples, and a fort of Fruit that looked like Oranges, and within were like Figs; and faw many Monkeys.
On the 26 th he failed five Leagues; a Canoe, with five Men in it, came toward the Caravel that was neareft the Land. The Pilot called the Indians, giving them to underitand, that he would go athore: And as foon as he was got into the Canoe, he overfet it, and fwimming about, took and carried the Indians to the Admiral. They were of a proportionable Stature, had their Privy Members tied up and covered; but the Women were all ftark naked. The Admiral gave thofe Indions Hawks Bells, Glafs Beads, and Sugar, and fent them afhore, becaufe a great Number of People appeared. And as foon as they undertood how well the others had been entertained, if there had been Canoes enough, they would have all gone aboard. The Admiral ufed them well, gave thern all Toys, afked them Queftions; they anfwered, but did not apprehend each other. They brought him Bread and Water, and a fort of Liquor like green Wine. All of them had Targets, Bows, and poifoned Arrows. Before they entred, they fmelled to the Boat, and afterward to the Men. On the 7 th abundance of Indians came, bringing: Bread, Indian Corn, and Eatables; as alfo Pitchers of Liquor, fome of it as white as Milk, tafting like Wine, and fome green made of Fruit and Maize. They valued not the Beads the Admiral gave them; they had a great Efteem for Tin, they called it Turey, as if it were come from Heaven, for they called Heaven Turey; and found a certain Scent in it that much pleafed them. And whatever was given them, they fimelled to. They carried on board abundance of Parrots of three forts, and Bits of Cotton Cloth, well wrought, and wove of feveral Colours.
The Admiral would willingly have taken half a Dozen Indians to carry away with him, but he could not; for before Night they left the Ship. The next Day a Canoe, with twelve $\mathbb{M}$ Men, came on board the Admiral, fix of whom he took, and fent the reft on fhore. He proceeded to Puta del Aguia, or Cape Needle, whence he faw a fine Country, and well peopled. And being come before a Town, which for its Beauty he called the Gardens, having a vaft Number of Houfes and People, he anchored; and many reforted to the Ships, with their wrought Cloths about their Heads, like the little Veils worn by the Moorish Women. They wore fome little Plates of Gold about their Necks; and the Indians that were on board faid there was plenty of it in thofe Parts, and fhewed how they gathered it. The Admiral confidering that he was above three hundred Leagues from Hijpaniola, and that his Provifions began to grow fhort, made no long ftay in that Country, which he thought very agreeable, full of good Houres, and inhabited by a polite and warlike People. Being come to Point Aguja, he difcovered another to the Southward, which he thought to be an Inand running out South-eaft and North-weft, very large, and the Land high. He gave it the Name of Sabeta. And in the Afternoon faw another, and they were Parts of the Continent. He anchored at the Gardens, many Canoes, great and fmall, came on board with abundance of People wearing Pieces of Gold about their Necks, in the Shape of a Horie-fhoe: And though they feemed to value it, they would have given all for Hawks-Bells, but he had none left: However, fome Gold he got, which was very low, and they told him there were Inands hereabout that yielded much fuch bafe Gold: But the Men were Canibals. And they aetually faw an Indian who had a fingle Grain of Gold as big as an Apple.

More Canoes came ffill, all the People wearing Gold Collars and Beads of abundance of forts, their Clothes tied about their Heads, their Hair cut fhort, which looked well. There fell much Rain, which lindered many
more from going on board. Some Women went who had Strings of little Beads about their Arms, and among them fome Seed Pearl, as alfo fome large, which raifed the Hopes of the Spaniards much. The Admiral afked, where they found them? they fhewed him the Miother-of-pearl, and by very intelligible Signs gave him to underttand, That they were found to the Weftward, behind that Mountain, which is Cape Lapa, being the Point of the Province of Paria. He fent the Boats afhore, and found the People fo tractable, that tho the Sailors went not with a Defign to land; yet two of their Chiefs civilly conftrained them to it, and conducted them to a Houfe where they entertained them, and gave them Bread and Fruits of $f$ everal forts, and that fort of white Liquor, before mentioned, and another of a red Colour and good Tafte, the Men all the while keeping together at one End of the Houfe, and the Women at the other. When they had been fo treated at that Houre by the eldeft, the youngeft carried thern to another, and treated them in the fame manner. It feemed to them that the one was the Cazique, and the other his Son; and the Sailors afterwards returned very well fatisfied to their Boats. They thought the efe People of a very good Stature, whiter than any other Indians, the Country delightful and cold, which was admired by reafon of its being fo near the Equinoctial. The Admiral calied this, which he thought to be an Inland, Paria.
On the roth he failed to the Weftward, feeking fome Paffages to get clear of thofe which he took to be Illands, and named 1Jabeta and Tramontona, but were Part of the Continent: And the Indians he had on board faid the Pearls were found farther Weftward. He failed on in that Bay, and fent the little Caravel to fee whether there was any Paffage out to the Northward, becaufe oppofite to Y Sabeta and the Continent there appeared a very high and beautiful Illand. The Caravel returned and brought an Account that they had found a very large Bay, and in it four fpecious Openings that looked like fmall Beys, and a River at the End of each of them, which he called The Bay of Pearls, though there are none it. The Admiral believed thofe Openings were four Inands, which formed that Bay of forty Leagues; but the Miariners affumed they were Mouths of Rivers; and fo it proved, at leait in two of them; for the great River Tuyapcritan came out at one End, and that of Caurari at the other: And tho' the Admiral would have difcovered all very particularly, he could not ftay, but refolved to fail for Hifpaniola, to fend for Men and Provifions into Styiz, and order his Brother to continue this Difcovery. To which Purpofe, on the Inth of Auguft he feered over to the Eaitward, in order to pals through between the Point of Paria and the Continent. He advanced to a good Harbour, which he called Puerto de Gatos, or Cat's Port, which is near the Mouth, where the two Iflands lye, between the Capes of Lapa and Boto.

There he came to an Anchor on the thirteenth, intending to fail next Day. The Boat was fent to take a View of another Harbour juft by, which was alfo good; and near it were fome Fifhermens Houfes; for which reafon he called it Puerto de las Cabanas, or the Port of Cottages. Near the Sea they faw many Mirabolon Trees, with abundance of Oyfters flicking to the Branches that hung over the Sea, and open to receive the Dew. On the $14^{\text {th }}$ he advanced to Cape Lapa, which is that of Paria, to pafs through the Opening, which he called, the Dragon's Mouth, which is between Point Lapa to the Weftward, and Cape Boto; the Diftance between the two Capes being a League and an half beyond the fmall Inands that lye in the Middle. IIe ran a great Rifque of being loft in repaffing the Streight, where the running out of the frefh Water, and the coming in of the Salt, occafioned a very dreadful Appearance, at leaft to the Spaniords, who were unacquainted therewith, though it is common enough on our Coafts, and particularly at the Mouth of the Severn, where the riding of one Tide upon another is called the Egre.

The Admiral himfelf was more amazed at it than at any thing he had feen, and could not help faying, That if they got fafe through this Denger, they might be faid to have efcaped out of the Dragon's Mouth; whence the

Name

Name of Boca del Drago was fixed upon this Place; and it has been ever fince known thereby. When they got out of that Bay, extending full fifty Leagues from the firft Land of Trinity to the Bay called de las Perlas, or of Pearls, he failed along the Continent to obferve whether that immenfe Quantity of frefh Water proceeded from the Rivers, as the Seamen affirmed, and he could not believe, as thinking no River in the World could carry fo much Water as thofe Lands he faw produced, unlefs they were a Continent. He found along this Coaft many good Harbours and Capes, to which he gave Names, as Cabo de Conchas, or Cape of Shells, Capo Luenga, Long Cape, Cape Sabor and Cape Rico, \&xc. He found alfo feveral Inands, particularly Margarita, which is fifteen Leagues in Length, and fix in Breadth, very green and well inhabited. And at a finall Diftance from it are other fmall Inands, and among them, Cubaque, where Pearls have been found, but few of the Names the Admiral gave them have continued. Having failed forty Leagues farther, and feeing the Land continue to the Weftward, he was convinced that it was no Ifland, but the Continent, which he difcovered on Wedneday the 2 Ift of Auguf, 1498.
6. The Admiral was much furprized at the immenfe Quantity of frefh Water before fpoken of, and no lefs at the extraordinary Coolnefs of the Air fo near the Equinoctial; and he particularly obferved, that the People thereabouts were whiter, their Hair long and fmooth, more fubtil and ingenious, than thofe he had feen before. He was very defirous to return to the Mand Hifpaniola, having a Forefight that his Prefence was neceffary there; and he refolved to fend his Brother Don Bartholomerv to continue the Difcovery; befides, the Men were fatigued, and grew uneafy, bacaufe he had not told them at his coming from Spain that he was going upon Difcovery: For thefe Reafons, on the 16 th of Auguft he ftood away for that Inand, ftill difcovering high Nivountains on the Continent; and that Day he ran fixty-three Leagues between Sun and Sun, the great Currents fetting him forward as much as the Wind.

While the Admiral laboured under the before-mentioned Difficulties, the three Ships he had fent from Spain to Hijpaniola under Carvajal, Arana, and Colwous, thro' the Ignorance of the Pilots, and by the Currents that fet downwards of that Inand, inftead of going to the Port of Santo Domingo, failed on above 160 Leagues, and not knowing where they were, arrived at the Place where Francis Roldan was with the Mutineers, living without any Refpect to the Laws of God or Man; had they done it defignedly, it could not have happened worfe; and if the Revolt of Roldan had been known in Spain, it would have been concluded a malicious Contrivance either of the Captains or the Pilots. As foon as Francis Roldan and his Followers were informed of the Ships they went to the Harbour, which was two Leagues off, and concealing their Revolt, afked how they happened to come to that Place, and what News there were of the Admiral? They anfwered, that they had been carried by the Currents, and that the Admiral would foon be there with three Ships more, having fome Days fince fteered away to the Southward from them. They went aboard the Ships, were merry together, and had fome of the Provifions carried from Spain. When they were gone, the Captains thought fit, becaufe of the Difficulty of returning to Santo Domingo by reafon of the Currents and Breezes, that the Labouring-men who were in the King's Pay ihould march by Land, and agreed, that Captain Gobn Antbony Columbus, who commanded one of the Ships, fhould conduct them. Forty Men, with their Crofs-bows, Lances and Swords, went afhore; and Roldan perfuading them they were to lead a very painful Life, be obliged to labour and dig, with much Hunger and Want, eafily induced them to ftay with him, telling them at the fame time how they fhould live, which was, only by going about from one Town to another, taking the Gold and what elfe they thought fit. And tho' thefe forty Men were all of them condemned Criminals, yet eight of them remained true to their Captain.

This fully difcovered, that Roldan had deferted the
Vof. II. NuMb, LXXII.

King's Service, and Captain Columbus, being moft concerned at it, went to him, told him that thofe Men had received the King's Pay for fix Months before, and that he by employing them much obftructed the King's Affairs; therefore he advifed him not to act in fo fcandalous a Manner ; but Roldan regarded nothing he faid, becaufe by the Addition of thofe that had joined him he had. above a hundred Men to defend himfelf againt the Ad-miral ; and Captain Columbus returned aboard his Ship, and with the other Captain Pedro de Arana refolved to go away to Santo Domingo with the Ships, Captain Alonfo Sancbez de Carvajal faying behind to go by Land, and endeavour to bring Roldan to his Duty. By this time the Adelantado had notice, by means of the Indions, that there were three Ships arrived in the Weft, and gueffing that they might be come from Spain, and had miffed their Courfe, he fent out a Caravel in fearch of them. Before the Ships arrived, or Roldan had got fo many Men, he had written to fome of thofe that were with the Adelantado, defring them, in cafe the Admiral fhould come, to endeavour to make his Peace.

The Admiral the 1gth of Auguft arrived at the Illand Beata, which lies fifteen Leagues from the Port of $\mathcal{Y}$ aquimo, and twenty-five from Santo Domingo: And near the Inand Beata is that of Altovelo. It troubled him that he had fallen away fo much, but did not wonder at it, becaufe of his continual Watching all the Nights he lay by, or plied backwards or forwards, for fear of being upon the many Illands or Sholes of which thofe Seas were full, which at that time were little known, and the Currents which are there very ftrong, and fet towards the Continent Weftward, carried the Ships fo far infenfibly towards the Illands Beata and Hippaniola, that he was afraid of driving by them. On the 2oth of Augufl he fent the Boats to the neighbouring Towns to fummon the Indians, and wrote to acquaint the Adelantado of his Arrival. Six Indians went aboard at twice, and one of them carried a Crofsbow with all its Furniture, which did not a little furprize the Admiral, believing it to have belonged to fome Soldier that was dead. The Ships having been feen to pafs down the Current from Santo Domingo, the Adelantado fet out in a Caravel to feck the Admiral: It was high Pleafure to both Brothers to meet, tho' the Admiral was much vexed at the Advice of Roldan's Revolt. The 22d of Auguft they arrived at Santo Dowingo, it being but a few Days lefs than two Years fince the Admiral departed from Hi/paniola for Spain.
7. The whole Colony in a manner went out with Don Fames Columbus to receive the Admiral, exprefling much Joy for his Arrival: But when he thought he was come where he might take fome Reft, he found himfelf involved in new Troubles, by reafon of the Revolt. He immediately examined the Procefs made by the Adelantado, and, difapproving it, formed another, wherein it was fufficiently proved, that the Infurrection had proceeded from the wicked Inclination of Roldan, tho' neither the Adelantado, or any other Perfon, had given him Caufe to complain, or wronged him in the leaft. Some Days after the Admiral, arrived the other three Ships, with Arana and Jobn Antbony Columbus, as did the Carave! Don Bartbolomere had fent to feek them.

One of them had ftruck on a Shole, loft her Rudder, and was in a very bad Condicion, and having ftaid very long by reafon of the Currents and contrary Winds, almoft all the Provifions were fpoilt; and the Account they brought of forty Men ftaying with Roldan much troubled the Admiral. However he refolved to try him by fair Means, forgiving him all his Offences, being fenfible his Enemies in Spain would made a great Noife of that Revolt; for he was alfo pofitively told, that as foon as he arrived he would come and fubmit himfelf to him, he having long before written to that purpofe. At this time Capt. Sanchez de Carvajal arrived from Xaragua, and declared the Obftinacy of Roldan, who refufed his Propo fals: But Roldan having Advice of the Admiral's Arrival, either by the Indians or by Ietters from fome Friend he had at Santo Domingo, refolved to come nearer, and accordingly went to Bonao, a fruitful and delicious Plain, where fome Spaniords dwelt after the Fort of Bonao was
buity
built, and it is twenty Leagues from Santo Domingo. The Admiral fearing leit any thing that might give them Uneainefs fhould come to the Eais of their Catholic Majefties, and at the fame time difcredit the Affairs of the Indies, which had coft him fo many Fatigues, or give his Enemies occafion to revile him, tried to bring the Mutineers to an Accommodation; ufing this Method: Moft of the Spaniards in the Inland were defirous to return into Spain; he therefore, on the i2th of September, caufed Proclamation to be made, that he would give leave to all that were willing to depart, and provide for their Paffage and Provifions: Which was very acceptable to them in general, becaufe of eight Ships that were in the Harbour, five were almoft cleared, and two ready for the Adelantado to go and profecute the Difcovery of the Coaft of Paria.

In the mean time, the Admiral being informed that Roldan was going to the Conception, about which fome of the Mutineers had Eftates, he gave notice of it to Michael Ballefter the Governor of the Fort, that he might be upon his Guard, and endeavour to draw over Roldan, and tell him how much it troubled him that fuch a Man, whom he had left in fo confiderable a Poft, and on whom he depended fo much, fhould range about in that fcandalous Manner, to the Prejudice of the King's Service; however, for the Good-will he had always borne him, he would pardon him, if he fubmitted; and if he required any Security, he fhould have it. The Governor Ballefter went to the Fort of Bonao, where he found no body, but was informed that Roldan and the Chiefs were gone to the Houfe of Riquelmo, who was one of them.

Before the Admiral went away to Spain, about March in the Year 1496 , or foon after his Departure, fome Towns were charged inftead of their Tribute to till the Lands belonging to the Spanifh Colonies, as they had been wont to do for their Caziques ; and by this Method it was thought the Spaniards might be induced to ftay the more willingly in the. Indies, taking a Kindnefs to the Country, and the Merchants would come over from Spain, fo that the Royal Revenue would increafe without obliging their Majefties to be at fo great an Expence as they were at the Beginning, or elfe to quit the Enterprize, which the Admiral much dreaded, fo many being againft it. The Indians that did not comply in performing this Duty were punifhed, and thofe that fled were held as Slaves when taken. The other Improvement, in order to produce fome Profit, was that of the Brazil Wood, which the Admiral faid was in the Province of Yaquimo, on the Southern Coaft, near eighty Leagues from Santo Domingo to the Weftward. By thofe two Improvements, including four thoufand Slaves he reckoned upon, and four thoufand Quintals, or hundred Weight of Brazil Wood, he writ to their Majefties, that they would receive forty Millions of Marvedies, which amounted to twenty thoufand Pound; a large Sum, and much more confiderable in thofe Days, than at this time.

Hereupon, foon after his Arrival at Santo Domingo, being informed that a Cazique, who had been appointed for the Service of the Fort, leaving the fame, was fled to the Mountains, Soldiers were ordered thither, who took a good Number of People that were fent away in thofe laft Ships, the Admiral reckoning that their Catholic Majefties fhould make their Advantage of thofe Indians as the Kings of Portugal did of the Guinea Blacks. When Roldan, Gomez, and Adrian Moxica were come together, the Alcalde or Governor, Ballefter, went to difcourfe them; and having told them all he had been directed, offered them Pardon, and reprefented the Differvice they did the King by behaving after that manner. They foon Thewed they had quite different Defigns, uttering many haughty and difrefpectful Words againt the Admiral: And, among other things, faid, They came not to feek Peace, but War; and that Roldan had the Admiral and all his Followers in his Power, either to fupport or deftroy them: That they fhould not talk of any Accommodation till the Admiral had brought back the Number of Indians which had been fent as Slaves, becaufe he had taken them into his Protection, and it was his Duty to deliver them from the Opprefion they were under:

Befides, they wrote a Letter to the Admiral, laying all the Blame of their Revolt on his Brother. The Governor, Ballefter, went to Santo Domingo with Roldan's Anfwer; in which, amongtt other things, he faid, that his Followers would treat with no Mian but Carvajal; and though the Admiral had juft Caufe to fufpect that Perfon on feveral Accounts, yet he thought it beft to make a Virtue of Neceffity, and to fend him with Ballefter to endeavour to reduce them to Reafon. He alfo wrote an affectionate Letter to Roldan, foothing him, and in a moft obliging manner inviting him to return to his Duty.
7. The Alcalde, Ballefier, and Carvajal, difcourfed the Rebels fo effectually, that they inclined Roidan and the other Ringleaders to agree with the Admiral ; by which it was thought all would be adjufted; but the meaner fort, being unwilling to quit that licentious Life they led, unanimoufly cried out, That it fhould not be fo, but that if any Accommodation was made, it fhould be in Public before them all, fince they were all concerned: And Carvajal and Roldan trying all ways to reduce them to Reafon, and, not being able to prevail, Roldan demanding a fafe Conduct, and fignifying, that he was thoroughly convinced, that all his Men would forfake him, except fuch as were Gentlemen, the Admiral was much concerned at this Advice, and foon found it was true; for having made a Mufter, in order to march to Bonao, only feventy of thofe that were with him faid they would obey his Orders; and he had no Confidence even in many of them. In this Diftrefs, he caufed Proclamation to be made, that as to all who would return to their Duty, no Notice fhould ever be taken of what was paft ; befides, that fuch as defired to return into Spain fhould have their Paffage gratis. At the fame time he fent a fafe Conduct to Francis Roldan for himfelf, and all thofe that fhould come with him, to treat at Santo Domingo.

Whilit this Treaty was in Agitation, the Ships having been detained eighteen Days beyond the Month agreed on when they were hired, and many of the Slaves aboard them dying, the Admiral was forced to difpatch them, and by them writ to their Majefties, acquainting them with the Rebellion of Roldan, and the Mifchiefs his Men did in the Inand. He alfo defired to have religious Mèn fent to inftruct the People, and an able Lawyer for the Execution of Juftice. He added, that though at firft the Men had fickened by the Change of Air and Water, they were all then healthy and inured to the Country, and did better with the Indion Bread than with that of Spanifb Corn; and that there was an infinite Number of Swine and Poultry and other things, which had fo multiplied, that they wanted nothing but Wine and Clothes: That it would be expedient as often as poffible to fend him fixty or feventy Men, and he would return as many of thefe troublefome Difturbers. Much more he wrote to their Majefties in Vindication of himfelf and his Brother, and fent them fome of the painted Cloths of the Coaft of Paria, one hundred and feventy Pearls, and fome Pieces of Gold, as alfo a Draught of his laft Difcovery, and a Relation of his Voyage. After feveral Meffages it was concluded, that the Mutineers fhould have two Ships with Provifions to carry them to Spain, and every one a Slave with him; and to have Certificates of their good Behaviour. The Admiral figned thofe Articles on his Part, as did Roldan for the NMtineers. However, all things came to nothing, the Rebels not daring to go into Spain for fear of being punifhed for their Crimes.

But afterwards Captain Carvajal having acquainted the Admiral, that Roldan earneftly defired to fubmit himfelf, he went to Azuo to be nearer to the Rebels; Roldan went thither to him, where a new Contract was concluded, by virtue whereof, his Followers were to be reftored to what they had enjoyed before their Revolt, and he to be Alcalde-Mayor, or Chief Judge of the Inand. Roldan began again to exercife that Office with the greateft Infolence; and all his Followers behaved themfelves in the fame manner. The Admiral difpatched two Ships for Spain; and, purfuant to his Agreement, permitted the Mutineers to embark, allowing fome of them three Slaves, and others one. In October, 1499, Roldars
delivered
delivered to theAdmiral a Petition from all his Followers, being one hundred and two Men ftill adhering to him, wherein they defired to have Lands affigned them in the Province of Xeragua. But becaufe it was not convenient they fhould be all together, fome were fettled at Bonao, others on the Plain on the Bank of the great River, others at Santiago; at which Places the Admiral gave them Lands. And this was the firt Diftribution made in the Indies; which fet an Example to all the others that followed, that is, of affigning fuch a Number of Indians to fuch a Perion, it being expreffed in the Grants, that fuch a Cazique, or his People, fhould till the Ground for the Spaniard to whom it was given.
8. The Admiral having adjufted Matters with Roldan, appointed an Officer, with a Detachment, to patrol about the Inand, to reduce the Indians to pay Tribute, and to be in Readinefs, that upon any Mutiny among the Chriftians, or Sign of Rebellion among the Indians, he might fupprefs them ; which he did with a Defign to go over to Spain, and carry with him his Brother the Lieutenant, becaure he judged it would be difficult, if he were left behind, to forget old Grudges. As he was preparing for his Voyage, Alonfo de Hojeda, who had been out on Difcovery with four Ships, arrived in the Inand. This Man was a Creature and Dependant upon the Bifhop of Burgos, who perceiving this Prelate had entirely changed his Affection towards the Admiral, ftruck in with him, and procured a Licence to go and make Difcoveries, but without the Knowledge of their Catholic Majefties ; and fome Perfons at Seville having equipped, on the Credit of this Licence, four Ships, he failed with them from Port St. Mary's, on the 2oth of May 1499, and went directly in fearch of the Continent, purfuant to the Schemes the Admiral had delivered to their Catholic Majefties before his Departure, and which, before this Time, he had actually carried into Execution.

With this Man Americus Vefpucius made his firtVoyage, and though they never faw any other Part of the Continent than what the Admiral had difcovered failing from the Iffand of Irinity, along the Coaft to Venezuela, yet he impudently pretended to have firft difcovered the Continent; and by confounding this with a fubfequent Voyage which he made into thofe ''arts, he dreffed up a fine Story to his own Advantage; and being an excellent Geographer, and the beft Draftiman of his Time, impofed upon the greateft Part of Europe. But, in Spain, the Falfhood and Injuftice of his Pretences were foon detected; for whereas he pretended that, after a Voyage of thirteen Months fpent in Difcoveries, he returned directly to Spain; Alonfo de Hojeda pofitively made Oath, that he fpent but five Months in the Voyage, and that finding themfelves fhort of Provifions, they ftood over, as indeed was the Truth, to the Inand of Hispaniola, for a Supply. When he came upon the Coaft of that Inand, at the time of which we are now writing, he gave out, that he did not do it willingly, but purely to obtain Relief, and that he had juft Reafons to expect it in a Country under the Dominion of his Sovereigns; but his real Defign of creating Difturbances there, being ftrongly fufpected, he was advifed to take what he wanted, and to continue his Voyage.

This he pretended to call a great Hardfhip, and threw out many Reflections upon the Admiral and his Family. Upon which Ground she began to write to fome that were deep in the late Troubles, and to hold Correfpondence with them : But Roldan being informed of his Proceedings, by the Admiral's Order, went againft him to prevent his doing the Harm he intended. Being come within a League and a Half of him, he undertood he was at a Caziques', baking Bread and Bifkets, and therefore he travelled that Night to furprife him. Hojeda underftanding that Roldan was coming upon him, to make the beft of a bad Cafe, went to meet him; alledging, Want of Provifions liad brought him thither, to fupply himifelf in the King his Mafter's Dominions, and that he meant no fort of Harm.
But holding his wicked Purpofe, and taking leave of Roldan, he went with his Ships to Xaragua, where a great many of thofe People lived who had before rebelled
with Roldan ; and becaure the Shew of Gain is the mof ready way to promote any Mifchief, he began to give out that their Catholic Majefties had appointed him and Carvajal the Admiral's Counfellors ; and that, among many other Things they had adviled him to, one was, That they fhould fay in ready Money all in their Service, and fince the Admiral was not fo juft as to do it, he was ready to go with them to Santo Domingo, to oblige him to pay out of hand; and that done, to turn him out of the Inand, dead or alive, for they ought not to rely upon the Word he had given them, for he would keep it no longer than Neceffity obliged him to it. Upon thele Promifes, many refolved to follow him; and being affifted by them, he fell upon others who oppofed him, and there were fome killed and others wounded, on both Sides. And being fatisfied that Roldan would not join with them, they refolved to furprize him ; but he being informed of their Defign, went where Hojeda was; to put a Stop to his Diforders. Hojeda, for fear of him; retired to his Ships, and Roldan continuing afhore, they treated, each of them fearing to put himfelf into the Power of the other. Roldan perceiving thatHojeda was unwilling to come afhore, he pretended to treat with him aboard, to which Purpofe he fent for his Boat, which he fent him well manned; and having taken in Roldan and fix or feven of his Followers, when they leatt fufpected it, Roldan and his People fell upon Hojeda's Men, and, killing fome and wounding others, made themfelves Mafters of the Boat, returning with it to Land. Hojeda, who liad only a fmall Ship left, refolved to come peaceably to treat with Roldan. He agreed to reftore fome Men he had taken by force, that his Boat and Men might be returned, alledging, if it was not reftored it would be the Ruin of them all and their Ships, becaufe he had no other. Rolden readily granted it, that he might have no caufe to fay he was loft through his Means; yet he made him give Security that he would depart the Inand by a Time appointed, as he was obliged to do, by the good Guard Roldan kept on Shore.
A few Days after Hojeda was gone, one Don Ferdinand de Guevara being in Difgrace with the Admiral, as a feditious Perfon; and having taken part with Hojeda through Spite to Roldan, becaufe he would not permit him to take to Wife the Daughter of Anacaona Queen of Xaragua, began to gather many Confpirators defigning to feize Roldan, and fucceed him ; particularly he gained to his Party Adriain de Moxica, a chief Man among the late Rebels, and other wicked Men; who, about the Month of $\mathcal{F} u l y$, contrived to murder Roldon. He having Intelligence of the Defign flood upon his Guard, and ordered his Bufinefs fo well that he feized DonFerdinand, Adrion, and the chief Men of their Party; and fending the Admiral an Account of what had happened, demanded what he fhould do with them. The Anfwer was, That fince they had endeavoured, without any Provocation, to difturb the Country, he fhould punifh them according to their Demerit, and as the Law directed: The Judge did it accordingly, and proceeded legally againft them, hanged Adrian, as chief Author of the Confpiracy; banifhed others, and kept Don Ferdinand in Prifon, till, on the 13 th of 'fune, he delivered him with other Prifoners to Gonsalo Blanco, to carry them to the Plain, where the Admiral then was.

This Example quieted the Country, and the Indians again fubmitted themfelves to the Chriftians. Such rich Gold Mines were now difcovered, that every Man left the King's Pay, and went to dig Gold at his own Expence, allowing the King the Third Part of all they found. This profpered fo well that a Man has gathered five Marks, or forty Ounces of Gold in a Day. The Indians were alfo become fubmifivive, dreading the Admiral, and fo defirous to pleafe him that they readily became Chriftians only to oblige him; and therefore, to fettle all Things the better, the Admiral refolved to take a Progrefs through the Ifland, and accordingly he and his Brother, the Lieutenant, fet out on the zoth of February 1499, and came to Ifabella the 19th of March. From Ifabelle they fet out, the 5 th of Auguf, for the Conception. From the Conception the Admiral defigned to go to Santo Domingo, on the 3 d of February, in order to return into

Spain, to give their Catholic Majefties an Account of all Things in the Colonies.
9. At the very Time -thofe Diforders fell out in the Colonies, many of the Rebels from Hijpaniola, and others that were returned into Spain, did not ceafe to give in falfe Informations to the King and his Council againft the Admiral and his Brother ; alledging they were cruel, and unfit for that Government, as well becaufe they were not Spaniards, as becaufe they had not formerly been in a Condition to learn by Fxperience how to govern People of Condition; affirming, that if their Highneffes did not apply fome Remedy, thofe Countries would be utterly deftroyed; or, in cafe they were not quite ruined, by their ill Government, the Admiral would revolt, and procure fome Prince to fupport him, by pretending that all was his own, as having been difcovered by his Induftry and Labour; and that the better to compars his Defign, he eoncealed the Wealth of the Country, and would not have the Indians ferve the Chriftians, oi be converted to the Faith, becaufe by making much of them, he hoped they would be on his Side, to do what he pleafed againft their Highneffes.

They therefore importuned their Catholic Majefties to remove him, complaining there were fiveral Years Pay due to them, which gave Occanon to all that were at Court to rail. And their Impudence was fo great, that if the Catholic King went abroad they all got about him, crying, Pay, Pay; and if the Asmiral's Sons, who were Pages to her Majefty paffed by where they were, they cried out in a hideous Manner, making the Sign of the Crofs, and faying, There are the Admiral of the Mufquito's Sons, he that has found out falfe and deceitful Countries, to be the Ruin and Burial-place of the Spanib Gentry. Their Complaints running fo high, it was refolved to fend a Judge to Hijpaniola, to enquire into all thefe Affairs, ordering him, in cafe he found the Admiral guilty of what was alledged, to fend him to Spain, and ftay there himfelf as Governor. The Perfon their Miajefties made Choice of for this Purpofe, was one Francis de Bovadilla, a poor Knight of the Order of Calatrava, who, on the 2 Ift of May, 1499, had full and ample Commifion given him at Madrid, and blank Letters fubforibed by their Majefties to fuch Perfons as he fhould think fit, in Hippaniola, commanding them to be aiding and affifting to him.

Thus furnifhed, he arrived at Santo Domingo at the latter End of Auguft, 1500, at fuch time as the Admiral was at the Conception fettling the Affairs of that Province, where his Brother had been attacked by the Rebels, and where there were more Indians, and thofe more underftanding People than in the reft of the Inand; fo that Bovadilla, at his Arrival, finding no body to keep him in awe; the firft thing he did was to take up his Quarters in the Admiral's Palace, and feize and make ufe of all he found there, as if it had fallen to him by Inheritance; and, gathering together all he could find that had been in the Rebellion, and many others that hated the Admiral and his Brothers, he prefently declared himfelf Governor; and, to gain the Affection of the People, he caufed a general Freedom to be proclaimed for twenty Years to come; requiring the Admiral to repair to him without any Delay, becaufe it was convenient for his Majefty's Service he fhould do fo. And to back his Summons, on the 7th of September fent him the King's Letter, by $F$. Fobn de la Sera, containing no more, in effect, than that their Majefties had fent the Bearer to acquaint him with their Pleafure, which he was directed to obey. This Order was dated at Madrid, 2 Ift of May, 1499, which Order was figned both by the King and by the Queen.
10. The Admiral having feen their Majefties Letter, came away prefently to Santo Domingo, where the new Judge was; who having been eager to eftablifh himfelf Governor there, in the beginning of Oftober, without any legal Information, fent him Prifoner aboard a Ship, together with his Brother James, putting them in Irons, and a good Guard over them; and ordered on fevere Penalties that none frould dare to fpeak to them; after this he began to draw up a Procefs againft them, admitting the

Rebels as Witneffes, and publickly favoured all that came to fpeak ill of them; who, in their Depolitions, gave in fuch Incoherencies, that he muft have been blind that had not plainly perceived they were falfe and malicious. For this Reafon their Catholic Majefties would not admit of them, and cleared the Admiral, repenting that they had fent fuch a Man, and not without Caufe; for this Bovadilla ruined the Illand, and fquandered the King's Revenues, gaining Numbers to be his Friends, by faying their Majefties would have nothing but the Dominion, and that the Profit fhould be for their Subjects; yet he neglected not his own Share, but, fiding with the richeft and moft powerful Men, gave them Indians to ferve them, upon Condition, they flould fhare with him all they got by their Means, and fold by Auction the Poffeffions and Rights the Admiral had required for their Majefties, faying they were no Labourers, nor did not defire to make a Profit of thofe Lands, only kept them for the Benefit of their Subjects.

He thus on one Side felling all things under this Colour, endeavoured on the other, that they fhould be bought by fome of his own Confederates, for one third of the Value: Befides all this, he made ufe of his judicial Power to enrich himfelf, and gain the Affections of the People; being ftill afraic, that the Lieutenant, who was not yet come from Xaragua, fhould put a Stop to his Proceedings, and endeavour to fet the Admiral at Liberty by Force of Arms ; in which Particular the Brothers behaved themfelves very prudently, for the Admiral fent them Word, immediatcly, that they fhould come peaceably to him, the King's Service fo requiring, that the Inand might not be put into an Uproar ; for when they were in Spain, they fhould more eafily obtain the Punifhment of fuch a Perfon, and Satisfaction for the Wrongs done them.

Yet this did not divert Bovadilla from putting him and his Brother into Irons, allowing the bafer Sort to rail at them publickly; blowing Horns about the Port where they were fhipped, befides fcandalous Libels fet up at Corners of Streets againft them. When they were to fail, he defired Andrew Martin, the Mafter of the Ship, to look to him, and to deliver him in Irons as he was, to the Bifhop D. Fobn de Fonceca, by whofe Advice and Direction, it was concluded, he did all thefe things; though when they were at Sea, the Mafter, being fenfible of Bovadilla's Unworthinefs, would have knocked off the Admiral's Irons, which he would not permit, faying, That fince their Ca tholic Majefties, by their Letter, directed him to perform whatfoever Bovadilla, in their Name, commanded him to do; in Virtue of which Commifion he had put him into Irons, he would have none but their Fighneffes themfelves to do their Pleafure herein; and he was refolved to keep thefe Fetters as Relicks, and Memorials of the Reward of his many Services, as accordingly he did; for thefe Irons hung up in his Room, and he ordered them to be buried with him. Notwithftanding that, having on the 20th of November, 1500, written to their Highnefies, acquainting them with his Arrival at Cadiz; they immediately gave Orders that he fhould be releafed, and fent him very gracious Letters; in which they declared they were very forry for his Sufferings, and the unmannerly Behaviour of Bovadilla towards him, directing him to come to Court, where Care fhould be taken that he fhould be fpeedily difpatched with full Reftitution of his Honour, as, indeed, was but reafonable, fince all he had done, and which had brought upon him fo many Troubles, was purely out of Regard to the Intereft of their Majefties; and from the earneft Defire he had to hinder private Avarice from overturning the Meafures taken for the public Benefit; and for the Intereft of the Crown of Cafile, at whofe Expence the firf Difcoveries had been made.
II. Their Majefties Orders came on the I2th of $D \varepsilon$ cember for him to be fet at Liberty, and to repair to Granada; where he was received by their Majefties with a favourable Afpect, and kind Words, importing that his Imprifonment had not been by their Defire or Command, therefore they were much offended at it, and they wonld take care thofe that wore in Fault fonld
be punifhed, and full Satisfaction given him. Afterwards they ordered his Bufinefs fhould be expedited immediately, the Refult thereof was, That a Governor fhould be fent to Hifpaniola, who was to right the Admiral and his Brothers; and Bovadilla fhould be obliged to reftore all he had taken from them; and that the Admiral fhould be allowed all that belonged to him, according to the Articles their Majefties had granted him; and that the Rebels fhould be proceeded againft, and punifhed according to their Offences. Don Nicbolas de Obando was fent with thefe Powers; he was a wife and judicious Man, but, as afterwards appeared, partial, craftily concealing his Paffions, giving Credit to malicious Perfons, and therefore acting cruelly and revengfully.

But to return to the Adiniral; as their Majefties were pleafed to fend Obando to Hifpaniola, fo they thought it proper to fend the Admiral upon fome Voyage that might turn to his Advantage, and keep him employed till the faid Obando could pacify and reduce the Inand 'Hifpaniola; becaufe they did not mean to keep him fo long out of his Office, without any juft Occainon; the Informations fent by Bovadilla, plainly appearing to be full of Malice, and not containing any thing for which he ought to forfeit his Rights. But there being fome Delay in the Execution of this Defign, and ill Men endeavouring to prevail that a new Information might be expected, the Admiral refolved to fpeak to their Majefties, and beg of them that they would defend him againft all Dangers, which he afterwards repeated by Letters; and this procured him, firft of all, a very favourable Anfwer, and very foon afterwards as favourable Grants and Conceffions as he could poffibly defire ; which made him, in fome Meafure, forget all that he had fuffered, and refolve once more to expofe his Life in another Voyage to the Indies, for the prefecting his Defign, which probably after fuch Ufage no other Man would have done.
12. The Continent of America had never been touched upon, or known before this Voyage ; and, to the Honour of the Admiral, it muft be confeffed, that he difcovered it by Skill, and not by Chance; and failed directly in fearch of it from Spain, and not from the Indies. That he was indifputably the firft Difcoverer, appears from hence, that be was at the Inand of Margarita on the firlt of Auruft, 498, whereas Alonfo Hojeda, and Americus $V e \int p u c i u s$ did not fail from Cadiz till the 20th of May, 1499. But if the Admiral had been hindered from making this Difcovery, they could not, with any Propriety, have claimed the Merit or Title of Difcoverers, from what they performed in that Voyage, fince they made ufe of the Admiral's Drafts and Projects, which by their Catholic Majefties Commands, he had put into the Hands of the Bifhop of Burgos, for their Service; and which, without their Majefties Knowledge, he communicated to thefe Men, out of pure Hatred to the Admiral; and that he might, if it was poffible, rob him of his Credit and Reputation, as he had already deprived him of a great Part of his Intereft at Court. The Licences that he gave thefe Men were clandeftine, and it was no fooner known that they had obtained them, than others refolved to make ufe of the fame Intereft, in order to obtain Shares in the Riches of the new World.

A mongft others, fome Inhabitants of the City of Seville formed a Company for this Purpofe, and the principal Man amongft them, at leaft in Point of Capacity, was one Peter Alonfo Nino, an Inhabitant of Palos, who was with the Admiral when Paria was difcovered, and Cbritopher Guerra of Seville. Peter Alonjo Nino having obtained the King's Licence, upon Condition that he fhould not come to an Anchor, nor land any where within fifty Leagues of what the Admiral had difcovered, being himfelf unable to fit out a Ship, propofed it to Lewris Guerra of Serille to defray the Expence; and the Samples of Gold and Pearls the Admiral had fent, having ftirred up the Avarice of many, Guerra accepted of the Offer, provided that his Brother Cbriftopher fhould go as Captain; and accordingly they fet fail not long after Alonfo de Fojeda. They failed two or 300 Leagues to the Southward, difcovered Land, and, keeping down the

Vol. II. Numb. 72 .

Coaft, arrived at the Province of Paria a few Days after Hojeda, where, finding the Indians peaceably difpofed, they, contrary to their Inftructions, cut Brazil Wood; and holding on their Courfe, came to that which Hojeda had called the Bay of Pearls, formed by the Inand Margarita, where they bartered for many Pearls.

The People of this Country went aboard the Ships without any Fear, carrying Necklaces of Pearls, and fome of them in their Nofes and Ears; the Spowiards cirove a great Trade with Hawks-bells, Bracelets, Rings, and feveral Trifles made of Tin, which they took, and for them very freely gave their Pearls; having got a confiderable Quantity of them, they paffed by Coro, near the Province now called Venezuela, i 30 Leagues below Paria and the Dragon's Mouth; and anchored in a Bay where they were very well received by fifty Men, who came from a Place a League off; and very earneftly preffed them to anchor at their Town. The Spaniards gave them fome of their Toys, and the Indians taking off all the Pearls they had about their Necks and Arms, in the Space of an Hour gave them as many as weighed fifteen Ounces. The next Day they came to anchor before the Town called Curiana, where the Indians intreated them to go afhore, but the Spaniards being no more than thiry-three durft not venture, and made Signs to them to come aboard, which they did in their Canoes, carrying Pearls to exchange for fome Spanifb Toys.

At length, being convinced of their Sincerity, the Spaniards went afhore, and being courteounly entertained, ftayed there twenty Days: They plentifully fupplied them with Venifon, Rabbits, Geefe, Ducks, Parrots, Fifh, Bread made of Maize, Indian Wheat, and other things, and brought them all the Game they would afk for. By feeing fo many Deer they concluded that this muft be the Continent. They perceived that they kept Markets of Fairs, and that they made ufe of Jars, Difhes, or Porringers, befides other Veffels of feveral Shapes, and that in their Pearl Necklaces they had Frogs and other Creatures made of Gold; and on afking where it was gathered, they anfwered, fix Days Journey from thence; they refolved to fail thither, and that was the Province of Curiana Caucbcito, where the People came aboard in their Canoes, without any Jealoufy. They carried fome wrought and unwrought Gold, which they bartered away, but would not part with the Pearls, they had like thofe of Curiana; however, they gave them very fine Monkies and moft beautiful Parrots of Ceveral Colours.

Departing hence, they proceeded further, where above five thoufand naked Men came out with Bows and Arrows to hinder their landing, and though they endeavoured to appeafe them by fhewing Hawks-Bells and other things, they could not prevail, and therefore returned to Curiana, and were received with the fame Satisfaction as before, and earneftly entreated for Pins and Needles; for whereas, at firt, they had underftood they were to few, and tack things together, and therefore faid they had no ufe for them, going naked, the Spaniards fhewed them that they were ufed for drawing Thorns out of their Feet, there being many in that Part, at which they 'fmiled, and afked for them. All that Country lies in feven or eight Degrees Latitude, and is not at all cold in November and December. The Indions were highly pleafed, thinking they had cheated the Spaniards, who carried away above 150 Marks, or 1200 Ounces of Pearls, and fome of them as large as fmall Hanle-nuts, very beautiful and well coloured; but they were ill bored, the Indians having no Iron. The Spaniards thought fit to return home, and fo came back to Paria and the Dragon's Mouth. Two Months after they left Curiana they arrived, in Galicia, on the 6th of Fibluary, 1500 , where Ferdinand de la Vega, Lord of Grajal, was then Governor; before whom Peter. Alonfo Nino and Cbriftopher Guerra were accufed, by their own Ships Crew, of having concealed Pearls, and defrauded the King of his fifth Part, which was the Duty.

The Noife that this Voyage made, and the great Riches which the Adventurers gained thereby, promoted the Spirit of Difcovery, but more efpecially among fuch as had been acquainted with the Propofals made by the Ad-
L.
miral,
miral, or had ferved under him in his two fint Voyages, and confequently had greater Opportunities of gaining Experience, in this Way, than any other Men. Of thefe there was none fo capable of profecuting Voyages of this kind as Vincent Yoinez Pinfon, of whom we have already fpoken, for he was not only a very able Seaman, and, as fuch, had failed with the Admiral in his fift Difcovery, but was alfo a Man of liberal Education, great Courage, and had a large Fortune, fo that he fitted out at his own Expence a Squadron of four Sail of ftout Ships, with which he failed to the Cape de Verd Inands, and, having there taken in fuch Refrefhments as he thought neceffary, proceeded from St. Fogo upon the i 3 th of $\mathcal{F}^{2} a$ muary, I500, upon Dilcovery.

He firft ftood away to the South, and then to the Weft, and having failed 700 Leagues loft Sight of the North Star, and croffed the equinotial Line, being the firft Subject of the Crown of Coftile and Leon that did it. When paft the Line, they met with fuch a dreadful Storm; that they expected to perifh; he ran 240 Leagues farther to the Weftward, and on the 26 th of February they difcovered Land at a great Diftance, being that which is now called Cape St. Augufine, though Vincent Tanez named it Cabo de Confolation, or Cape Comfort, and the Portuguefe cail it the Province of Santa Cruz, or of the Holy Crofs, now a Part of Brazil; they found the Sea thick and whitifh, like a River, and, founding, had fixteen Fathom Water. Captain Pinfon, going on Shore, here took Poffeffion of the Country in the Name of their Catholic Majefties, and endeavoured all he could to bring the People to trade, but without Effect, for at laft they came to Blows, in which fome were flain on both Sides; and at laft he thought it advifeable to retire and continue his Voyage, which he did to the Mouth of the River Maranon, where he obferved what the Admiral had done before at the Mouth of another great River; a mighty Struggle between the Tide of Salt-water running in, and a vaft Current of frefh Water pouring down from the Land: He likewife found the Country at the Mouth of this River well inhabited on both Sides, but could not bring them to enter into any Trade as he expected, and therefore he refolved, without any farther Delay, to proceed towards Paria, which he accordingly did.

In his Paffage he met with another very large River, fo that he drew up frefh Water when above twenty Leagues at Sea, and therefore he called it Rio Dulce, or the Freff River, which has been fince fuppofed to be a Branch of the great River Yapari, that makes the frefh Bay betweeen Paria and the Inand of Trinity; upon this frefh River, found by $V$ incent $Y_{\text {anez, }}$ it is fuppofed that the People called Aruacas have their Dwellings. They proceeded to Paria, and there took in Brazil Wood; from which Vincent Yanez ftruck over to the Inands that lay in the Way to Hijpaniola, and, the Ships being at Anchor, there arofe fuch a dreadful Storm that two of them funk in the Sight of the others, with all the Men; a third was forced from its Anchors, with eighteen Men, and carried out of Sight: The Fourth, which is likely had the beft Anchors and Cables, riding it out, beat fo furiounly upon the Sea, that the Sailors, believing it would be dafhed in Pieces, went all afhore in the Long Boat, without Hopes of its efcaping; and, for their own Security, had Thoughts of killing all the Indians thereabouts, to prevent their calling in their Neighbours to deftroy them; but the Ship that had been drove away with the eighteen Men returned, and that which had rode out, when the Sea grew calm, was faved. In thefe two Ships they went away to Hifpaniola, where they refitted, and returned into Spain, about the latter end of September, having difcovered 600 Leagues about the Coaft of Paria.
In the latter end of the Month of December, 1499, Fames de Lepe, a Native of the Town of Palos, having heard of the Expedition undertaken by Pinfon, applied himfelf to the Earl of Mivanda, his Patron, and promifed him mighty things in cafe he would enable him to make the fame Voyage, which was very foon complied
with; and he actually argived at the Mouth of the River Maranon, within a very fhort time after Pinfon had left it, as he found to his Coft; for the People, being provoked by his carrying away thirty-fix Men out of their Country, attacked the Spaniards brinkly, and killed feveral, fo that he was compelled to profecute his Voyage to Paria, where he likewife quarrelled with the People, and returned without making the leaft Advantage of this Expedition, except taking a few Indiana Prifoners.

As it happened about this time, it is requifite that we fhould fpeak here of the great good Fortune of the Crown of Portugal, a Subject of which was fo happy as to fall upon one of the richeft Countries of South America, by meer Chance; the thing happened thus: Don Emanusl King of Portugal, fitted out a Fleet for the Eaf Indies, confifting of thirteen Sail, having on Board one thoufand two hundred Men, Soldiers and Sailors, under the Command of Peter Alvarez Cabral, who failed from Liboon on Monday the gth of March, 1500, and, to avoid the Coaft of Guinea, where they afterwards met with great Calms, ftruck out to Sea on the Starboard, fteering; his Courle to the Southward, the better to turn the Cape of good LIope, becaufe it runs far out into the Sea; having failed a Month, fill keeping to Sea, on the 24 th of April he fell in with the Coaft of the Continent of America, which, according to the Computation of the Pilots, might be about 450 Leagues diftant from the Coaft of Guinea, and in about $10^{\circ}$ South Latitude. The Pilots could not perfuade themfelves that it was a Continent, but fome great Ifland like Hippaniola, and, in order to find it out, they held on one Day along the Coaft, hoifted out a Boat, went afhore, and faw an infinite Number of naked People, but not black, nor, with curled Hair like thofe of Guinea, but hanging down lank like ours, which they thought was extraordinary; the Boat returned to give an Account of it, and faid that there was a good Harbour where they might come to an Anchor; the Fleet drew near to Land, and the Commander fent out the Boat again, with Orders to endeavour to take fome Men.

The Indions retired to a Hill, waiting to fee what the Portuguefe would do; but when they were about fending other Boats, the Weather obliged them to proceed along. the Coaft, and they anchored in another good Harbour, which they called Puerto Seguro, or Safe Harbour; a Boat went afhore and took two Indians, whom the Commander ordered to be cloathed and fent back, whereupon a great Number of People came forward, finging and dancing, founding Horns of feveral Sorts, and leaping in joyful Manner; the Commander went afhore with moft of his Men, and that being Eafter-day they erected an Altar under a Tree, where they fung Mafs; the Indians drew near in a very peaceable Manner, and with much Security kneeled down, beat their Breafts, doing all that they faw the Chriftians do, and were as attentive at a Sermon that was preached as if they underftood it.
Peter Alvarez Cabral fent away a Ship from thence under Gafpar de Lemos, with Advice of the Land he had difcovered, which was very acceptable. The Men walked about all that Day diverting themfelves, and the Indians, for pieces of Paper, bits of Cloth, and fuch like inconfiderable things, gave them Parrots and other Birds of fine Colours, Axis, Batatas, and the like. They went to the Towns, and thought the Country fruitful and agreeable, very full of Maize, or Irdian Wheat, and Cotton. Peter Alvarez ordered a Stone Crofs to be èrected there, in Token of Poffeffion, and therefore the Portuguese called that Country Santa Cruz, or Holy Cross, and it is now called Brazil, from that Sort of Wood brought from thence. The Commander left two Men there of twenty he had brought from Portugal, being banifhed Men, to be left where he thought fit, whom the Indians ufed very well, and one of them learned the Language, and ferved a long time for an Interpreter. Thus the Difcovery of Brazil was purely accidental, and the only one independant of what was projected by the Admiral, or grounded upon his Projects.

?
13. It muft naturally feem frange to the judicious and attentive Reader, that every light, every tranfient Scheme for finding new Countries, and making frefh Difcoveries, 'fhould ineet with Encouragement, while the Admiral himfelf was not only in a manner neglected, but alfo moft infamounly abufed. He ought to confider, however, that Difcoveries and Improvements are feldom well underftood by Statefmen and Courtiers. To fpeak honeftly and fairly they are the laft Sort of Men that can be brought to underftand them, and that for this plain Reafon: The Merit of fuch Undertakings confifts in propoling a very large and certain future Advantage from a fmall prefent Expence, whereas Statefmen and Courtiers, having the prefent Time only in View, care very little for fuch Advantages as are to redound to their Country in Times after their own.
We have a clear and direct Proof of this in the Conduct of the Spanifh Minitters upon this Occafion; for they were infinitely more ready to liften to all fuch Adventurers as propofed immediate Profits, and a prefent Supply of Gold, Pearl, and other rich Commodities, than to the Schemes of the Admiral, who was a grave public-fpirited Man, and thewed his Integrity as well as his Wifdom, in defiring his Reward in thofe Countries which he difcovered, and not in Spain. But to enter more particularly into the Miftakes that were made by the Spanifh Minifters in their Conduct of this Affair, for the fake of other Countries, and future Difcoveries, we will reduce them under Three Heads.
Firft, It was extremely wrong, to place the fole Merit of thofe new found Countries, in producing Gold and Pearls ; and this for many Reafons which might be afligned, but we will mention only two; one is, that a Country is not enriched fo much as endangered by having Gold Mines; and this, becaufe it exhauftsits Subjects, encourages Luxury, and excites the Envy of other Nations. In this Senfe, whatever Commodities will produce Gold and Silver are much more valuable than thofe Metals, as we fee plainly by the Dutcti Fifheries on our Coafts, which are infinitely more beneficial than if, inftead of Herrings, their Nets brought up fo much Gold as thofe Herrings fell for, fince it is a continual

Nurfery for Seamen, employs a vaft Number of People on Shore, creates a very large and profitable Trade', and has increafed the Dutch Shipping to almoft an incredible Degree : Gold and Silver, therefore, are the Riches of private Men; but the Wealth of a Nation confifts in Induftry and Trade. The other Reafon why the bringing over fuch rich Metals ought not to be encouraged, efpecially at the Beginning of fuch Difcoveries, is, becaufe it hinders Plantations and Settlements, and, by exciting a Spirit of Avarice, abfolutely deftroys that kind of public Spirit, which can alone difpofe the Inhabitants of Colonies to become truly uffull to their Mother Country.

The fecond great Miftake they committed was, it making their Notions public, and thereby drawing Multitude of Adventurers to croud in with their Projects; which not only diftracted the Views of the great Men themfelves, but diffurbed all Spain, and, inftead of promoting that kind of Turn which was requifite to improve thofe new difcovered Countries, begat quite the reverfe, and eftablifhed it as a general Opinion, that Wealth was the fole Good, and that every kind of Hazard was to be run in order to obtain it.
The tbird Error, was their flighting and relinquifhing that moft wife and judicious Plan which Columbus had chalked out; for he, by fuggefting the Converfion of Infidels to the Chrifitian Faith, and thereby obtaining the Sanction of the Pope's Grant, had . moft effectually covered all the Views of Ambition and Intereft which it became the Court of Caftile to conceal ; but the Bifhop of Burgos and his Creatures were not more wanting in Virtue than negligent in Point of Decency, and, from a reftefs and rapacious Defire of enriching themfelves in an Inftant, at the Expence of this new World, drew afide the Curtain, and Thewed all Europe at once, both what it was they fought, and how eafy a thing it might be to fhare with them. Whereas, if they had filently eftablifhed large and powerful Colonies in Hijpaniole, and contented themfelves with moderate Returns of Gold, they might have been ftrong enough to have given Laws in that Part of the World, before it had been poffible for any other Nation to have found their way thither.

## S ECTIONV.

The fourth Voyage of the Admiral DonChristopher Columbus; bis Dijcoveries on the Continent, and of the IJlands in America; with an Account of bis Return from that Voyage to Spain, and bis Deceafe.

1. An Account of the new Propofals made by the Admiral to the Court of Spain in regard to bis fourth Voy=: age to the Indies, and the Acceptance they met with. 2. His Arrival in the Indies, and the bafe Ufage that be met with from Nicholas Obando, the new Governor of Hifpaniola. 3. The Admiral profecutes Bis Difcoveries along the Coaft of the Continent, and labours all be can to gain Intelligence from the Indians, whom be treats with the utmoft Humanity. 4. He continues bis Voyage torvards the Iftbmus of Darien, fuppofing, from the Account given by the Natives, that be Jould bave found a Paflage thereabouts into the South-Sea. 5. Difcovers all along the Coaft of the Continent to the famous Haven of Porto-Bello, to which be gave that Name, and the Reajon of it. 6. He enters the Port of Baftimentos, and Jolters bimfelf afterwards in that of Retrete, where be falls out with the Natives, through the Fault of bis own People. 7. The Meafures be took for the Prefervation of the Spaniards, and the Reafon of bis refolving to leave a confiderable Colony in that Neigbbourbood. 8. The Difcoveries made by them of rich Mines of Gold in the Country nedr ibeir Settlement, and of the Caufes of the Troubles that enfued among them. 9. The Miferies cndured by the Admiral and bis Men in Jamaica, and the Metbod they took to fend Advice of their Miffortunes to Santo Domingo. IO. A large Account of the Rebcllion raifed againft the Admiral under thefe Difreffes, and of bis Wifdom and Courage in fupporting them. II. His Return with great Difficulty to Hifpaniola, and from thence into Spain, and bis Reception there. I2. His Death, and fome Remarks onz the Circumflances attending it. I3. Oblervations upon tbis Section, and the ill UJage bis Family met with notwithfanding all the Advantages derived to Spain from Admiral Columbus's Difcoveries.

"THE Admiral found not only all his Patience, of which he had a large Stock, but all his Parts, and all his Addrefs, in neither of which he was the leaft deficient, abfolutely neceffary to maintain his Ground at Court. The King, who was a Prince flattered with the Reputation of being a profound Statefman, be-
caufe he knew how to diffemble, who had a largeShare of Cunning, and who durft do any thing however unbecoming his Dignity and Birth, treated the Admiral with a cold. Efteem, and fecretly hated a Character fo unlike his own. The Queen herfelf, tho' a true Cafilian, which implies a Woman of Genius, Piety, and Honour, had conceived

Come Prejudices againft Columbus on account of that Height with which he had exerted his Authority; but at the bottom at his having procured it rather by way of Contract, than by expecting fuch a Reward as their Catholic Majefties thould judge proper. The Admiral faw this clearly enough, and that though their Majefties were defirous to do Juftice to his Pretenfions, yet they were inclined to frip him of his Power, and were therefore averfe to his Defire of returning to the Indies.
He refolved therefore to attack them in their own Way; and, having demanded a private Audience of the Queen, infinuated, that what he had yet done was nothing; that his Difcoveries on the Continent were with a View to find a Paffage to the Eafl Indies, and that he did not at all doubt but that in another Voyage he fhould be able to furmount all Difficulties, and fubdue the Eaft as well as the Wefo Indies to the Power of their Catholic Majefties. This had its defired Effect; a Fleet was immediately ordered for this new Service, and the Admiral was again as much careffed, as if the King and Queen had really thought it poffible to blet out of his Mind the Memory of his ill Ufage.
2. He fet fail from Cadiz on the 9th of May 1502, and failed to St. Catberines; thence they went to Arzilla to relieve the Portuguefe, who were reported to be in great Diftrefs; but when they came thither the Moors had raifed the Siege: The Admiral therefore fent his Brother Don Bartbolomerv Columbus, his own Son, with the Captain of the Ships, on Chore, to vifit the Governor of Arzilla, who had been wounded by the Moors in an Affault. He returned the Admiral Thanks for the Vifit, and to this purpofe fent fome Gentlemen to him, among whom fome were Relations to Donna Pbilippa Moniz the Admiral's Wife. The fame Day he failed, and, arriving at Grand Canaria on the 2oth of May, caft anchor among the little Illands, and on the 24 th went over to Majpalomas in the fame Ifland, there to wood and water for their Voyage. The I 5 th of Fune they arrived at the Inand Mar- $^{\text {a }}$ tinico, whence they ftood to the Weftward and came to Domingo, ten Leagues from the other, fo running along among the Caribbee Iflands to Santa Cruz; and on the 24 th of the fame Month ran along the South Side of the Inand of St. Fobn. The Admiral had a mind to change one of his Ships for another, becaufe it was a bad Sailer, and befides would lie almoft under Water, which was a Hindrance to his Voyage, becaufe his Defign was to have gone directly upon the Coaft of Paria, and keep upon the Shore till he came upon the Streight, which he certainly concluded was about the Places fince called $V_{e}-$ ragua and Nombre de Dios; but feeing the Fault of the Ship, he was forced to repair to S. Domingo, to change it for a better.

Yet that the Judge fent by their Majefties to call Bovadilla to an Account for his Mal-adminiftration might not be furprized at his unexpected Arrival, upon the 29th of June, being near the Port, the Admiral fent Peter de Terreros, Captain of one of the Ships, to flgnify what Occafion he had to change that Ship, for which Reafon, as alfo becaufe he apprehended a great Storm was coming, he defired to fecure himfelf in that Port, advifing him not to let the homeward-bound Fleet fail out for eight Days to come, for if he did it would be in great Danger. But the Governor would not permit the Admiral to come into the Harbour, nor did he hinder the going out of the Fleet that was bound for Spain, which confifted of eighteen Sail, and was to carry Bovadilla, who had imprifoned the Admiral and his Brother, Francis Roldan, and all the reft who had been in the Rebellion againft them, and done them fo much Harm; all whom it pleafed God to infatuate, that they might not admit of the Admiral's good Advice. This was prevented by their fetting out of that Port for Spain; for no fooner were they come to the Eaft-Point of the Ifland Hifpaniola, but there arofe fo terrible a Storm, that the Admiral of the Fleet funk, in which was Bovadilla, with moft of the Rebels; and this Hurricane made fuch Havock among the reft, that of the eighteen Ships only three or four were faved. This happened on the laft of Func, when the Admiral, having forefeen the Storm, and being refufed Admittance
into the Port for his Security, drew up as clofe to Land as he could, thus fheltering himfelf, not without much Diffatisfaction among the Men, who, for being with him, were denied that Reception which certainly had been allowed to Strangers, much more to them who were of the fame Nation; for they feared they fhould be fo ferved if any Misfortune fhould befal them for the future; and though the Admiral was concerned on the fame Account, yet it grieved him more to behold the Bafenefs and Ingratitude ufed towards him in that Country he had difcovered for the Honour and Benefit of Spain, in being thus refufed to fhelter his Life in it.

Yet his Judgment and Prudence fecured his Ships till the next Day; when the Tempeft increafing, and the Night coming on very dark, three Ships broke from him, every one his own Way, the Men on board each of them, though all in great Danger, concluding, the others were loft: Thofe aboard the Ship called Santo, thinking to fave their Boat, which had been afhore with the Captain Terreros, dragged it aftern, where it overfet, and were at laft forced to let go to fave themfelves: But the Caravel Bermuda was in much more Danger; for while running.out to Sea, fhe was almoft covered with it; by which it appeared the Admiral had Reafon to change it, and all Men concluding that, under God, the Admiral's Brother was the faving of her, by his Wifdom and Refolution; for, as has been faid, there was not at that time a more expert Sailor than he. So that after they had all fuffered very much, except the Admiral, it pleafed God they met again in the Port of $A z u a$, on the South Side of Hifpaniola, where every one giving an Account of his Misfortunes, it appeared, that Bartbolomew Columbus had weathered fo great a Storm, by flying from Land like an able Sailor ; and that the Admiral was out of Danger, by lying clofe to the Shore like a cunning Aftrologer, who knew whence the Danger muft come. Well might his Enemies blame him therefore, as if he had raifed the Storm by Magic, to be revenged on Bovadilla, and the reft of his Enemies that were with him, feeing that none of his four Ships perifhed, and that of eighteen with Bovadilla, only one, called la Aguja or the Needle, the worft of them all, held on its Courfe for Spain, where it arrived fafe, having on board four thoufand Pefos of Gold belonging to the Admiral, the other three that efcaped, returning to $S$. Domingo fhattered and in a diftreffed Condition.
3. The Admiral in the Port of Azua gave his Men fome Refrefhment after the Storm, and it being one of the Diverfions ufed at Sea to fifh when there is nothing elfe to do, it may not be amifs to mention two Sorts of Fifh among the reft which were taken there, the one pleafant, the other fingular: The firt was a Fifh called Soavira, as big as half an ordinary Bell, which lying anteep above Water was ftruck with a Harping-iron from the Boat of the Ship Bifceina, and held fo faft that it could not get loofe, but being tied with a long Rope to the Boat, drew it after it as fwift as an Arrow, fo that thofe aboard the Ship, feeing the Boat fkim about, and not knowing the Occafion, were aftonifhed, till at laft the Fifh funk, and being drawn to the Ship's Side was there hauled up by the Tackle. The other Fifh was taken after another Manner : The Indians call it Manati, and there are none in Europe; it is as big as a Calf, nothing differing from it in the Colour and Tafte of the Flefh, but that it is better and fatter: Within they have nothing like a Fifh, and feed only on the Grafs they find along the Banks.
But to return to our Hiftory: The Admiral having a little refrefhed his Men and repaired his Ships, left the Port of $A z u a$ and went to that of Brazil, which the Indians call Giacchomo, to fbun another Storm that was coming : He failed again on the i4th of $\mathcal{F u l y}$, and was fo becalmed, that, inftead of holding his Courfe, the Currents carried him away to certain Inands near Famaica, which are very fmall and fandy, and he called them los Poros, or the Wells, becaufe, not finding any Water in them, they dug many Pits in the Sand, and took up Water there for their Ufe: Then failing Southward for the Continent, he came to certain $\mathrm{Inands}_{2}$ and went athore
upon the biggef only, called Guanaia, (whence thofe that made Sca-Cliarts took occafion to call all the Ihands of Guanaia) which are almoft twelve Leagues from the Continent, near the Province now called Howduras, though then the Admiral called it Cape Cafinas. Being come to the Iland of Guonaia, the Admiral ordered his Brother Bartholomere to go afhore with two Boats; where he found the People like thofe of the other Inands, except their not having fuch high Foreheads; they alfo faw abundance of Pine-trees, and Pieces of Lapis Calaminaris, ufed to mix with Copper, which fome Seamen, taking for Gold, kept Parcels of it privately a long time.

The Admiral's Brother being afhore at that Ifland, and very defirous to know fomething of it, it fo fell out that a Canoe as long as a Galley, eight Foot wide, all of one Tree, and like the others in Shape, put in there, being loaded with Commodities brought from the Weftward, and bound towards Nero Spain; in the midft of it was a Covering like an Awning, made of Palm-tree Leaves, not unlike thofe of the Venetion Gondolas, which kept al under it fo clofe, that neither Rain nor Sea-water could wet the Goods; under this Awning were the Children, the Women, and all the Goods; and though there were twenty-five Men on board this Canoe, they had not the Courage to defend themfelves againft the Boats that purfued them. The Canoe being thus taken, without any Oppofition was carried to the Admiral, who blefled God that it had pleafed him at once to give him Samples of the Commodities of that Country, without expofing his Men to any Danger: He therefore ordered fuch things to be taken as he judged moft valuable, fuch as fome Quilts, and Shirts of Cotton without Sleeves, very curioully wrought, and dyed of feveral Colours, with fome fmall Cloths of the fame Sort, and large Sheets in which the Indian Women on board the Canoe wrapped themfelves, as the Moorifh Women at Granada ufed to do, and long wooden Swords with a Channel on each Side where the Edge fhould be, in which there were fharp Edges of Flint, fixed with Thread and a bituminous Sort of Matter, which cut naked Men as if they were of Stcel; and Hatchets to cleave Wood, like thofe of Stone the other Indians ufe, but that thefe were made of good Copper; alfo Bells of the fame Metal, Plates, and Crucibles to melt the Metal.

For their Provifion, they had fuch Roots and Grain as in Hijpaniola, and a fort of Liquor, made of Maize, like Englifh Beer, and abundance of Cacoa Nuts, which in New Spain paffed for Money, and which they feemed to value very much, for when they were brought on board among their other Goods, if any of thofe Nuts fell, they all ftooped to take them up, as if they had been Things of great Confequence. Yet at that time they feemed to be in a manner befides themfelves, being brought Prifoners from their Canoe aboard the Ship, among fuch ftrange and fierce People, and difcovered nothing extraordinary, except their Modefty, which among Men and Women was highly remarkable. This moved the Admiral to ufe them well, and reftore their Canoe, and give them fome things in exchange for thofe that had been taken from them. Nor did he keep any one of them but an old Man whofe Name was Giumbe, that feemed to be the Chief of them, to learn fomething of him concerning their Country, and that he might draw others to converfe with the Cluriftians; which he did very readily and faithfully all the while they failed where his Language was underfood; therefore, as a Reward for this his Service, when they came where he was not underftood, the Admiral gave him a Prefent, and fent him home very well pleafed, which was before he came to Cape Gracias de Dios.
4. Notwithftanding the Admiral had heard fo much from thofe in the Canoes concerning the great Wealth, Politeness, and Ingenuity of the People Weitward towards New Spain; yet thinking that thofe Countries lying to the Leeward, he could fail thither when he thought fit from Cuba, he would not go at this time, but held on his Defign of difcovering the Streight in the Continent, to clear a way into the South Sea; which was what he aimed at, in order to come at the Countries that produce Spice, and therefore refolved to fail Eaftwards towards Verogua,

Vol. II. Numb. 72.
and Nombre de Dios, where he imagined the faid Streight to be, as in effect it was; yet he was deceived in the Matter, for he did not conceit it to be an Ifthmus or narrow Neck of Land, but a fmall Gulph, rimning from Sea to Sea, from whence his Miftake might proceed; for when they faid the Streight was at Veragua and Nombre de Dios, it might be underftood either of the Land or Water; and he took it in the moft ufual Senfe, and for what he moft earnefly defired: And yet; though that Streight is Land, it was, and is, the way to both Seas, and by which fich immenfe Riches have been difcovered and conveyed; for (fays the Admiral's Journal) it was God's Will a Matter of fuch vaft Concern fhould not be otherwife found out, that Canoe having given the firft Information concerning Neve Spain.

There being nothing therefore in the Inand of Guanaia worth taking notice of, he without farther Delay failed, in order to feek out the Streight towards the Continent to a Point he called Cafinas, becaufe there were abundance of Trees that bear a fort of Fruit that is rough, have a Stone, and is good to eat, efpecially boiled, which Fruit the Indians in Hifpaniola call Cafinas. There appearing nothing worth taking notice of in that Country, the Admiral would not lofe time to go into a great Bay the Land makes there, but held on his Courfe Eatwards along that Coait which runs along the fame way towards Cape Gracias a Dios, and is very low and open. The People neareft to Cape Cafinas wear thofe painted Shirts or Jerkins, before mentioned, and which were like Coats of Mail, made of Cotton, ftrong enough to defend them againft their Weapons, and even to bear off the Stroke of fome of ours. But the People higher Eaftwards towards Cape Gracias a Dios were almoft black, of a fierce Afpect, go ftark naked, are very favage, and, as the Indian that was taken faid, eat Man's Flefh, and alfo Fifh juft as it was taken. They have their Ears bored with fuch large Holes, that they may put a Hen's Egg into them; which made the Admiral call that Coaft de las Orejas; or, Of the Ears.

There, on the r4th of Auguft, 1502 , Don Bartbolomere went afhore in the Morning, with the Colours, the Captains, and many of the Men to hear Mars. And when the Boats went afhore to take Poffeffion of the Country for their Catholic Majefties, above one hundred Men ran down to the Shore loaded with Provifions, who, as foon as the Boats came afhore with the Lieutenant, on a fudden retired back without fpeaking a Word. He ordered they fhould give them Hawks-Bells, Beads, and other things; and, by means of the beforementioned Interpreter, inquired concerning the Country ; tho', he having been but a fhort time with him, did not underftand the Chriftians, by reafon of the Diftance of this Country from Hijpaniola, where feveral Perfons aboard the Ships had learned the Indian Language; nor did he underftand thofe Indians; who being pleafed with the things which had been given them, came the next Day to the fame Place loaded with feveral forts of Provifions, as Hens of that Country, which are better than ours, Geefe, roafted Fifh, red and white Beans like Kidney Beans, and other things like thofe in Hifpaniola. The Country was green and beautiful, tho' low, and producing abundance of Pines, Oaks, Palm Trees of feveral forts, and Mirabolans, and almoft all forts of Provifions which Hifpaniola affords were there to be found; abundance of Leopards, Deer; and other Beafts, as alfo all forts of Fin that there are in the Iflands, and in Spain.
The People in this Country are much like thofe of the Inands, but that their Foreheads are not fo high, nor do they feem to have any Religion. They ufe feveral Languages among them, and for the moft part they go naked, but cover their Privities; yet fome wear fhort Jumps down to their Navels without Sleeves; their Arms and Bodies have Figures wrought upon them with Fire, which make them look odly ; and fome have Lions, others Deer, and others Caftles, with Towers or other things, painted on their Bodies: Inftead of Caps the better fort of them wear red and white Cloths of Cotton; and fome have Locks of Hair hanging on their Forehead; but when they are to be fine on a Feftival

Day,

Day, they colour their Faces, fome black, and fome red; others draw Streaks of feveral Colours; others paint their Nofe; and others black their Eyes: And thus adorn themfelves to appear beautiful, in a manner that to us would make them look like Devils. The Admiral failed along the faid Coaft de las Orejas Eaftward to Cape Gracias a Dios, which was fo called, becaufe tho' there be but fixty Leagues to it from Cafinas, thiey laboured feventy Days by reafon of the Current and contrary Winds upon a Tack to gain it, ftanding out to Sea, and then making the Shore, fometimes gaining, and fometimes lofing; Ground, as' the Wind was fcant or large when it came about. And had not the Coaft afforded fach good anchoring, they fad been much longer upon it; but being clear; and having two Fathom Water half a League from the Shore, and two more at every League's Diftance, they had always the Conveniency of anchoring at Night, when there was but little Wind; fo that the Courfe was navigable by reafon of the good anchoring, but however with Difficulty.

When, on the $14^{\text {th }}$ of September, they came up to the Cape, perceiving the Land turned off to the South, and that they could conveniently continue their Voyage with thofe Levant Winds that reigned there, and had been fo contrary, they gave Thanks to God; for which Reafon the Admiral called this Cape Gracias a Dios. A little beyond it they paffed by fome dangerous Sands that ran out to Sea as far as the Eye could reach. It being requifite to take in Wood and Water, on the 16 th of September the Admiral fent the Boats to the River, that feemed to be deep and have a good Entrance; but the coming out proved otherwife, for the Winds blowing from Sea, and the Waves running high againft the Current of the River, fo diftreffed the Boats, that one of them was lof with all the Men in it; and therefore the Admiral called it the River de la Difgratia, that is, of the Difafter. In this River; and about it, there were Canes as thick as a Man's Leg. And on the 25 th of September, ftill running Southward, they came to an Anchor near a little Inand called Quiriviri, and a Town on the Continent, the Name whereof was Cariari, where were the civileft People, the fineft Country, and beft Situation they had yet feen, as well becaufe it was high, full of Rivers, and abournding in Trees, as becaufe the Inand was thick wooded and full of Forefts of Palm, Mirabolan, and other forts of Trees: For this reafon the Admiral called it Frucite. It is a fmall League from the Town the Indians call Cariari, which is near a great River; whither reforted a great Multitude of People from the adjacent Parts, fome with Bows and Arrows, others with Staves of Palm Tree, black as a Coal, and hard as Horn, pointed with the Bones of Fihh; others with Clubs, as if they intended to defend the Country. The Men had their Hair braided about their Heads, the Women fhort, like ours; but perceiving the $S p$ aniards to be a peaceable People, they were very defirous to barter their Commodities, which were Arms, Cotton Jerkins, and Guanins, which is pale Gold they wear about their Necks.

Thefe things they fwam with to the Boats, for the Chriftians went not afhore that Day nor the next, nor would the Admiral allow any thing of theirs to be taken, that they might not be efteemed Men that valued their Goods; but gave them fome Spanifb Baubles. The lefs they faw Strangers defired Exchange, the more eager they were, making abundance of Signs from Land; at laft perceiving no body went afhore, they took all the things that had been given them, without referving any, and tying them together, left them in the fame Place where the Boats firft went afhore, and where cur Men found them when they landed. The Indians about this Place, believing that the Chriftians did not confide in them, fent an antient Man of an awful Prefence, with a Flag upon a Staff, and two Girls, one about eight, the other of about fourteen Years of Age, who putting them into the Boat, made Signs that the Chriftians might fafely land. Upon their Requeft, they went afhore to take in Water, the Indians taking great care not to do any thing that might diftafte the Chyiftians. And when they faw them return to their Ships, they
made Signs to them to take along with them the young Girls, with their Guanins about their Necks: And at the Requeft of the old Man that condufeed them, they complied, and carried them aboard, wherein thofe People feemed more friendly than others had done; and in the Girls appeared a wonderful Spirit; for though the Chrifians were Strangers to them, they expreffed no manner of Concern, but always looked pleafant and modeft, which made the Admiral treat them well, and fet them afhore again where the fifty Men were; and the old Man that had delivered them received them with much Satisfaction.

The Boats going afhore that fame Day; found the fame People with the Girls, who reftored all the Chriftians had given them. The next Day the Admiral's Brother going athore to learn fomething of thole People, two of the chief Men came to the Boat, and taking him by the Arms between them, made him fit down upon the Grafs; and he afking fome Queftions of them, ordered the Secretary to write down what they anfwered; but they feeing the Pen, Ink, and Paper, were in fuch a Conftertion, that moft of them ran away; which it was believed they did for fear of being bewitched, for they are reputed a fuperfitious People, and that not without Reafon, becaufe when they came near the Chriftians, they fattered fome Powder about them in the Air, and burning fome of the fame Powder, endeavoured to make the Smoke go towards the Chriftians. Befides their refufing to keep any thing that belonged to them, fhewed a Jealoufy. Having ftaid here longer than was convenient, confidering the fhort time they had after repairing the Ships, and provided all they wanted, they now haftned away.

Upon the 2d of OEtober the Admiral ordered his Brother to go afhore with fome Men to view that Indian Town, and learn fomething of their Manners, and the Nature of the Country. The moft remarisable things they faw were, in a great wooden Palace, covered with Canes feveral Tombs; in one of which there was a a dead Body, dried up and embalmed; in another, two Bodies wrapt up in Cotton Sheets, without any ill Scent; and over each Tomb was a Board with Figures of Beafts carved on it; and on fome of them the Effigies of the Perfons buried there, adorned with Guanins, Beads, and other things they moft valued. Thefe being the moft civilized Indians in thofe Parts, the Admiral ordered fome to be taken: Two of the chiefeft were picked out, and the reft fent away with fome Gifts and Civility, that the Country might not be left in an Uproar, telling them they were to ferve as Guides upon that Coaff, and then be fet at Liberty. But they believing they were taken out of Covetoufnefs, that they might ranfom themfelves with their Things and Goods of Value, the next Day abundance of them came down to the Shore, and fent four aboard the Admiral, as their Embaffadors, to treat about their Ranfom, offering fome things, and freely giving two Hogs of the Country, which, tho' fmall, are very wild. The Admiral therefore, obferving the Policy of thefe People, was more defirous to be acquainted with them, and would not depart till he had learned fome things of them, but would not liften to their Offers; he therefore ordered fome Trifles to be given to the Meffengers, that they might not go away difiatisfied, and that they fhould be paid for their Hogs.
5. On the 5 th of OEtober the Admiral failed, and came to the Bay of Caravaro, which is fix Leagues in Length, and about three in Breadth. Here there are many fimall Inands, and two or three Channels within thofe Inands. The Ships fail as it were in Streers between Ifands, the Leaves of the Trees fticking againft the Shrouds. As foon as they anchored in this Bay, the Boats went to one of thofe Inands, where there were twenty Canoes upon the Shore, and the People lye naked, having only a Gold Plate about their Necks, and fome an'Eagle of Gold. They fhewed no Signs of Fear ; and the two Indians of Cariari interpofing gave a Gold-Piate for three Hawks-Bells, which weighed ten Ducats. And they faid there was great Plenty of that Metal upon the oppofite Continent, not far from thence.

The nexs Day, being the twenty-feventh of OEtober,
the Boats went ahore, where meeting ten Canoes full of People, and they refufing to barter their Gold-Plates, two of the chief of them were taken, that the Admiral mighe learn fomerhing of them by the Affittance of two Interpreters. The Gold Plate one of them wore weighed fourteen Ducats, and the other's Eagle, twenty-two. Thefe faid, that a Day or two's Journey up the Country there was abundance of Gold in fome Places, which they named. In the Bay valt Quantities of Fifh were taken, and athore abundance of frefh Provifions, alfo great Plenty of Roots, Grains, and Eruit. The Men, who were paint ed all over, of feveral Colours, as red, black, and white, went naked, only covered their Privities with a narrow Cotton Cloth.

From this Bay of Caravaro they went to another clofe by it, called Aburena, which in fome Meafure is like the other. On the 17 th they put out to Sea to continue their Voyage: And being come to Guaiga, a River twelve Leagues from Aburena, the Admiral commanded the Boars to go afhore; which when they were doing, they faw above one hundred Indians on the Strand, who afGuulted them very furiounly, running up to the Middle in Water, brandifhing their Spears, blowing Horns, and beating a Drum in a warlike manner to defend their Country, throwing the Salt Water towards the Chriftians, chewing Herbs, and fpurting the Juice towards them. The Spaniards without ftirring, endeavoured to appeafe them, as they did, for at laft they drew near to exchange the Gold-Plates they had about their Necks, fome for two, and fome for three Hawks-Bells, by which Means they got fixteen Gold-Plates, worth one hundred and fifty Ducats, for a few Baubles

On the igth of OCZober the Boats went to Land again; yet before any Chriftians went ahore, they called to fome Indians who were under Huts they had built that Night to defend their Country; but none of them would come, nor would the Chriftians land without knowing firft what Mind they were in; for, as afterwards appeared, they waited in order to fall on them as foon as they had landed. But perceiving they came not out of the Boats, they blew their Horns, beat their Drums, and, making a great Noife, ran into the Water as they had done the Day before, till they came almoft to the Boats, making Signs as if they would caft their Javelins if they did not return to the Ships. The Chriftians, offended at this Proceeding, that they might not be fo bold and defpife them, wounded one with an Arrow in the Arm, and fired a Cannon; at which they were fo frighted, that all ran away. Then four Chriftians landed, and calling them back, they came very peaceably, leaving their Arms, and exchanged three Gold-Plates, declaring they had no more, becaufe they came not to trade, but to fight. All the Admiral looked for in this Voyage, was to obtain Specimens of what thofe Parts afforded; and therefore, without further Delay, he proceeded to Calibay and caft anchor in the Mouth of a great River.

The People of the Country were feen to affemble, and afterwards fent a Canoe, with two Men in it, to the Ships, who having talked with the Indians that were taken at $C a$ riari, prefently came aboard the Admiral without any Apprehenfions; and, by the Advice of thofe Indians, gave him freely two Plates of Gold they had about their Necks; and he in return gave them fome Baubles. When thefe were gone, there came another Canoe with three Men, who did as the firft had done. The Men, going afhore, found abundance of People with their King; and, to give his Subjects an Example, exchanged a Plate, and bid them barter for theirs; which in all were nineteen of pure Gold.

He then feeered Eaftwards, and came to Cabravo; the People of which Place lye near the Rivers of that Coaft ; and becaule none came down, and the Winds blew frefh, he held on his Courfe, and went on to five Towns of great Trade; among which was Veragua, where the Indians faid the Gold was gathered, and the Plates made that they wore about their Necks. The next Day he came to a Town called Cubija; for here the Indiais of Cariari faid the Trading Country end-
ed, which began at Caravaro, and ran as far as Cubija, for fifty Leagues along the Coaft. The Admiral proceeded till he put into Porto Bello, giving it that Name becaufe it was large, beautiful, well peopled, and en. compaffed by a well-cultivated Country: He entred this Place on the $2 d$ of November, pafing between two finall Iflands, within which the Ships may lie clofe to the Shore, and turn out if they have Occafion.
6. The Admiral the 9 th of November failed out of Porto Bello eight Leagues to the Eaftward, but the next Day was forced back four Leagues by Strefs of Weather, and put in among the lilands, where afterwards food the Town of Nombre de Dios; and becaufe all thefe fmall Illands were full of Grain, he called it Puerto de Bafimentos, or the Port of Provifions. There a Boat wellmanned purfuing a Canoe, the Indians imagining the Men would do them harm, and perceiving the Boat was within lefs than a Stone's-throw of them, they all threw themfelves into the Water to fwim away, as they did, for though the Boat rowed hard, it could not in half a League overtake any of them. Here they continued till the 23 d of November refitting the Ships, and that Day failed Eattward to the Place called Guaiga. The Boats going afhore here found above three hundred Perfons ready to trade for fuch Provifions as they had, and fome fmall Ornaments of Gold they wore at their Ears and in their Nofes.

But, without making any Stay here, on the 24 th they put into a fmall Port, which was called Retrete, or the Retired Place, becaufe it could not contain above five or fix Ships together, and the Mouth of it was not above fifteen or twenty Paces over, and on both Sides of it Rocks appearing above Water, and the Channel between them was fo deep that they found no Bottom, though if the Ships inclined to either Side the Men might leap afhore, which hazarded the Ships in that narrow Place, through the Fault of thofe who went in the Boats to view it, being covetous to deal with the Indians, and perceiving the Ships would lie there conveniently for it, run clofe to the Shore. At firft the Indians carne very familiarly to trade for fuch things as they had; but when they faw the Chriftians fteal privately out of their Ships, they retired to their Houfes ; becaufe the Seamen, like covetous, diffolute Men, committed a thoufand Infolencies, infomuch that they provoked the Indians to break the Peace, and fome Skirmifhes happened between them.

The Indians, encreafing daily, took Courage to come up to the Ships, which lay with their Sides clofe to the Shore, thinking to do fome Mifchief, which had turned to their own Detriment,' had not the Admiral always endeavoured to gain them by Patience and Civilities: But at laft, perceiving their Infolence, to ftrike a Terror into them he caufed fome Picces of Cannon to be fired; which they anfwered with Shouts, thraming the Trees with Staves, and by threatening Signs fhewed they did not fear the Noife; for they thought it had been only a Thundering made to terrify them: Therefore to abate their Pride, and make them fear the Chriftians, the Admiral caufed a Shot to be made at a Company of them upon a Hillock, and the Ball falling in the midft of them, made them fenfible there was a Thunderbolt as well as Thunder; fo that for the future they durft not appear, even on the Mountains. The People of this Country were the moft likely they had yet feen among the Indians, for they were tall and fpare, without great Bellies, and well-countenanced.

The Country was all plain, bearing little Grafs, and few Trees; and in the Harbour there were vaft Alligators, which went out to fleep afhore, and diffufed as ftrong a Scent as if all the Mufk in the World were together, but they are fo ravenous and cruel, that if they find a Man fleeping, they drag him to the Water to devour him, though they are fearful and cowardly when attacked. Thefe Alligators are found in many other Parts of the Continent, and fome affirm that they are the very fame as the Crocodiles of the Nile.
7. The Admiral, perceiving the violent Eaft and North-eaft Winds did not ceafe, and that there was no trading with thefe People, refolved to go back, to be fatisfied in what the Indions faid of the Mines of Veragues;
and therefore that Day he returned to Porto Bello, ten Leagues Weftward, and, continuing his Courfe the next Day, was retarded by a Wett Wind, which was oppofite to his new Defign, but favourable to that he had for three Months paft: But he believing this Wind would not laft long did not alter his Courfe, but bore up againft the Wind for fome Days, becaufe the Weather was unfettled; and when the Weather feemed a little favourable to go to Veragua, another Wind ffarted up and drove him towards Porto Bello; and when they were in hopes to get into Port, they were quite beat off again. This perplexed them, and made them almoft defpair, feeing they could not get half an Hour's Reft, being continually wet, turning fometimes one way and fometimes another, ftruggling againft all the Elements. Now it appeared that the Currents on that Coaft followed the Wind, running Weftward with a Weft, and with the Eaft Wind the contrary, the Water ftill coming with the prevailing Wind.
The Ships being now almoft broke to Pieces with the Tempeft, and the Men quite fpent with Labour, a Day or two's Calm gave them fome Refpite, and brought fuch Multitudes of Sharks about the Ships, that they were dreadful to behold, efpecially for fuch as were fuperfitious; becaufe it is reported, that as Ravens at a great Diftance fmell out dead Bodies, fo fome think thefe Sharks likewife do; which, if they lay hold of a Man's Arm, or Leg, cut it off like a Razor. Such a Multitude of thofe were killed with the Hook and Chain, that, being able to deftroy no more, they lay fwimming upon the Water; and fo greedy they are, that they do not only bite at Carrion, but may be taken with a red Rag upon the Hook.
Upon the 17 th the Admiral put into Port, three Leagues Eaft of Pennon, which the Indians call Huiva: It was like a great Bay; where going afhore they faw the Inhabitants, whofe Cots were upon the Tops of Trees like Birds, they laying Sticks acrofs from Bough to Bough, and building Huts upon them. In the Beginning of Fanuary they caft anchor near a River which the Indians call Yebra, and the Admiral Belem or Bethfem, becaufe they came to this Place upon the Feaft of the Three Kings. He caufed the Mouth of that River, and another Weftward, to be founded; the latter the Indians called Veragua, where he found but fhole Water, and in that of Belem four Fathom at high Water. The Boats went up this River to the Town where they were informed the Gold Mines of Veragua were. At firft the Indians were fo far from converfing, that they endeavoured with their Weapons to hinder the Chriftians from landing.

The next Day their Boats guing to the River of Veragua, the Indians there did as the others had done, and not only afhore but on their Canoes in the Water. But an Indian of that Coaft who underfood them a little going afhore with the Chriftians, and telling them they were good People, and defired nothing but what they paid for, they were fomewhat pacified, and trucked Ewenty Gold-Plates, fome hollow Pieces like Joints of Reeds, and fome Grains which were never melted, which, to make their Value the more, they faid were gathered a great way off upon certain Mountains, and when they gathered it they did not eat, nor carry Women along with them; which the People of Hifpaniola faid they alfo practifed, when it was firft difcovered.

On the gth the Admiral and the Bifcaina went up the River, and the Indians came prefently to truck for fuch things as they had, particularly Fifh, which at certain times of the Year come out of the Sea up thofe Rivers, in fuch Quantities as feem incredible to thofe who do not fee it; and they exchanged fome little things for Pins, and things they moft valued they gave for Beads or Hawks-Bells. Next Day the other two Ships came in, which they had not done at firft, becaufe there being but little Water at the Mouth of the River, they were forced to ftay for the Flood, though there the Sea never rifes or falls above half a Fathom. Veragua being celebrated for Mines, the third Day after their Arrival the Admiral's Brother went up the River with the Boats to the Town of Quibio the Indian King, who, hearing of
the Lieutenant, came in his Canoe to meet him ; they met in a very friendly Manner, giving one another fuch things as they valued moft; and, having difcourfed a long time together, went away peaceably: Next Day 2uibio came aboard to vifit the Admiral, and, having difcourfed together about an Hour, the Admiral gave him fome things, and his Men trucked Bells for fome Gold; and fo he returned without any Ceremony. Being thus very eafy and fecure, on the 24 th the River of Belem fuddenly fwelled fo high, that before they could provide againft it, or carry a Cable athore, the Fury of the Waves came fo impetuoufly againt the Admiral's Ship, that it broke one of her Anchors, and drove her with fuch Force againft the Ship Gallega, which lay aftern of it, that it brought the Foremaft by the Board, and both were carried away foul of one another, in the utmont: Danger of perifhing. Some judged the mighty Rains to have been the Caufe of this Flood, they having never ceafed during the Winter in that Country; but had that been it, the River would have fwelled by degrees, and not all of a fudden; which made it probable fome great Snows had fallen on the Mountains of Veragua, which the Admiral called St. Cbrifopbers, becaufe the higheft of them was above the Region of the Air where Meteors are bred ; for no Cloud was ever feen above, but all below it.
This Tempeft lafted fo long, that they had time enough to refit and caulk the Ships. The Waves broke fo furioully upon the Mouth of the River, that the Boats could not go out to difcover along the Coaft, to learn where the Mines lay, and chufe a Place where to build a Town, the Admiral having refolved to leave his Brother there with moft of the Men, that they might fettle, and fubdue the Country, while he went to Spain for Supplies of Men and Provifions. Upon this Profpect, the Weather growing calmer, on the 6 th of February he fent his Brother with fixty-eight Men by Sea to the Mouth of Veraguc, a League diffant from Belem Weftward; and he went a League and a half up the River to the Cazique's Town, where he ftaid a Day enquiring the way to the Mines. They travelled four Leagues and a half, and came near a Kiver, which they paffed forty-four times, and the next Day advanced a League and a half towards the Mines fhewed them by the Indians fent by Q 2 uibio to guide them. In two Hour's time after they came thither every Man gathered fome Gold about the Roots of Trees, which were there very thick, and of a prodigious heighth. This Sample was much valued, becaufe none of thofe who went had any Tools to dig, or had before ever gathered any. Therefore the Defign of their Journey being only to get Information of the Mines, they returned very well pleafed that fame Day to Feragua, and the next to the Ships. True it is, that as was afterwards known, thefe Mines were not thofe of Veragza, which lay much nearer, but of Urira, a Town whofe People were Enemies to thafe of Veragua; to do whom a Difpleafure, 2 थibio ordered the Chriftians to be conducted thither, that they might go away to thofe, and leave his.
8. On the 14th of February, 1503, the Admiral's Brother went into the Country with forty Men, a Boat following with fourteen. The next Day they came to the River of Urira, feven Leagues from Belem Weftward; the Cazique came out a League from his Town to meet him with twenty Men, and prefented him with fuch things as they fed on, and fome Gold-Plates. Whilft they were here the Cazique and chief Men never ceafed putting a dry Leaf into their Mouths and chewing it; and fometimes they took a fort of Powder they carried with that Herb, which looked very odd. Having refted here a while, the Chriftians and Indians went to the Town, where abundance of People came out to them, and provided them a Houfe to lye in, giving them much to eat: Soon after came the Cazique of Dururi, which is a neighbouring Town, and with him a great many Indians who brought fome Gold-Plates to barter. All thefe Indians faid there were Caziques up the Country who had plenty of Gold, and abundance of Men armed like the Spaniards.

Next Day the Lieutenant ordered the reft of his Men to return by Land to the Ships, and he, with chirty, held
on his Joumey towards Zobraba, where the Fields, for above fix Leagues, were all full of Maize, likeCorn Fields. Thence he went to Caieba another Town. At both Places he was well entertained, abundance of Provifions given him, and fome Gold Plates exchanged, which, as has been faid, are like the Patent of a Chalice, fome bigger, and fome lefs, weighing about twelve Ducats. They wear them about their Necks, hanging by a String, as in Popih Countries they do Relics. The Lieutenant, being now very far from the Ships, without finding any Port on that Coaft, or any River bigger than that of Belere, to fettle his CoLony, came back the fame way on the 24 th of February. As foon as he retumed, order was taken for his Stay, eighty Men being appointed to remain with him. They began to build Houfes on the Bank of the River of Bolemal, about a Cannon Shot from the Mouth of it, within a Trench that lies on the Right-hand coming up the River ; at the Mouth of which there is a little Hill. Befides thefe Houfes which were all of Timber, and Govered with Palm-tree Leaves which grew along the Shore, another large Houfe was built to ferve as a Storehoufe and Magazine ; into which feveral Pieces of Cannon, Powder, and Provifions were put, and other Neceffaries for the Support of the Planters. But for Wine, Bifket, Oil, Vinegar, Cheefe, and much Grain, which was all they had to eat, thefe things were left in the fafeft Place aboard the Ship called Gallega, that was to be left with the Lieutenant, that he might make Ufe of it either at Sea or afhore, having all its Cordage, Nets, and other Fifhing Tackle; for, as we have faid, there is vaft Plenty of Fifh in that Country in every River, feveral forts at certain times running along the Coaft in Shoals; on which the People of the Country feed more than on Flefh : For tho' there be fome forts of Beafts, they are not enough to maintain them.
The Indians, perceiving the Spaniards built Houfes, as if they defigned to ftay among them, began to be alarmed; and the Adelantado, fufpecting they defrgned to fet fire to the Foufes, marched out with feventy-four Men on the thirtieth of March, and, ordering them to advance two by two as privately as they could, came to the Cazique Quibio's Houfe, where he fecured him, fome of his Wives and Children, and about fifty Perfons in all, who offered a great Treafure, which, as they faid, was on the Mountain, for their Ranfom. The Adelantado, fearing the Country would rife upon him and refcue the Prifoners, fent them all away to the Ships, and followed the next Day himfelf with the Plunder of 2 uibio's Houfe, which might amount to the value of three hundred Ducats in Gold Plates, Eagles, Beads and the like. But the Cazique made his Efcape from thofe that had him in Charge, and returned to his People. Soon after the Rains fell, and the Flood coming down, opened the Mouth of the River, when the Admiral failed out with three Ships, leaving one for the Service of his Brother. However, he came to an Anchor a League from thence to wait for fair Weather, and in the mean time fent back the Boat for Water.

The Cazique Quibio, who, as has been faid before, had made his Efcape, being much concerned for the Lofs of his Wives and Children, and feeing the three Ships were gone, fell upon the Spanifh Colony fo unexpectedly, that he was within a few Paces of it before the Spaniards perceived it. He began the Attack with loud Shouts, cafting abundance of Darts, armed at the Ends with the Bones of Fifh, fo that fome were immediately wounded. The Adelantado being very brave, with feven or eight Men that ftood by him, repulfed the Indians, driving them into the Wood, tho' they feveral times rallied : But the Spanifh Swords making great Havock, and a Dog tearing many of them, they at length abfolutely betook themfelves to Flight, leaving one Spaniard dead, and eight wounded, of which Number the Adelantado was one. The Men in the Boat, tho' near Shore, did. not land to affitt their Friends, but after the Engagement went up the River to take in their Water.

The Indions, feeing the Boat a full League above the Colony, came out in their Canoes, and befetting it on all Sides, fhouting and founding their Horns, fo plyed about ten Men that were in it , with their Darts, that

Vol. II. Nemb. 72.
they all perifhed but one, who, falling into the Water, fwam away to the Shore, without being difcerned by the Indians, and carried the News of the Difafter; which fo much difmayed them, being but few in Number, and moft of them wounded; the Admiral out at Sea without a Long-boat, and in Danger of not being able to return to any Place, whence he might fend them Relief; that, being deftitute of all Hopes, they refolved not to ftay afhore, and went aboard the Ship without anking the Adelantado leave, to fail out; but they could not, becaufe the Mouth of the River was again choaked up, nor could they find any body to acquaint the Admiral therewith, by reafon of the violent working of the Sea upon the Bar. The Admiral was, at the fame time, in great Danger, where his Ship lay at anchor; that Coaft being all open, and having only a fmall Boat, and weakened, befides, by the Lols of the Men that had perifhed in his Long-boat. Thus thofe in the River, as well as thofe at Sea, were in the greateft Diftreis.

To add to all thefe Vexations, one Night the Indian Prifoners that were on board the Admiral opening one of the Hatches, feveral of them leaped out, and threw themfelves into the Sea to fwim afhore; and the reft that were prevented from following their Example all hanged themfelves in the Hold. The Admiral being in this Affliction, fome Spaniards offered to fwim athore to enquire after the Boat, and the Men that had been left behind, provided the little Boat might carry them beyond the Place where the Waves broke: The Admiral accepted their Offer, ordering the Boat to carry them beyond the Place where the Waves broke, and as near the Land as might be; and there Peter de Ledefma, a Pilot, born at Seville, had the Courage to leap into the Water, and, making his Way through the rolling Waves, got to Shore, where he was informed of the Condition the Men were in; and that they all affirmed that they would not ftay in that Place of Danger; for which Reafon they entreated the Admiral not to depart without them, becaufe it would be facrificing them; and they were refolved, as foon as the Weather grew fomewhat calmer, to go away in Indian Canoes, aboard the Ships; the Boat they had, not being able to contain them. With this Advice Peter de Ledefma fwam back to the Boat that waited for him.

In fhort, thofe that were afhore, as foon as the Weather grew calm, went all away in two large Canoes they had made faft together, that they might not over-fet, and their own Boat, leaving nothing behind them but the Hulk of the Ship, which was all worm-eaten. Being all aboard, they failed in three Ships as far as Porto Bello, where they were obliged to leave one of the Ships, which was fo leaky that they could not keep it above Water. They proceeded thence to a Province near which there were many fmall Inands, which the Admiral called Las Barbas, or the Beard, but which is now known by the Name of the Bay of St. Blafe. Ten Leagues from thence they turned from the Continent, and ftood to the Northward, to recover Hijpaniola. At the End of ten Days they arrived at two fmall Inands, which were all covered with Tortoifes as well as the Sea, which looked like Ridges of Rocks, and therefore the Admiral called them las Tortugas, or the Tortoifes, and they are now called Caymanes, being about twenty-five Leagues Weft of Jamaica, and forty-five to the Southward of Cuba , there being no other all the Way the Admiral paffed. There they came to anchor at Fardin de la Reyna, the Queen's Garden, being a great Number of fmall Inands to the South of Cuba, before fpoken of; they were ten Leagues from this Inand in much Want, their Bifket fpoiled, and little Oil left, and labouring Day and Night at three Pumps, becaufe the Ships were ready to fink, when there arofe fuch a Storm that one of them run foul of the Admiral, tore off Part of his Poop, the Cables gave Way, and all had like to have perifhed. Thence they failed to a Port in the Inand of Cuba, called Macaca, where they refrefhed themfelves, being fupplied by the Indians.

Thence they ftood for Famaica, where they arrived at Puerto Bueno, or Good Port, on Midfummer Eve, but it was a bad one for them, there being neither Water nor N
any Indian Town; fo that the Day after Midfummer they proceeded to another called Santa Gloria, and, being no longer able to keep the Ships above Water, they fet them faft aground, as near the Shore as they poffibly could, being about a Crofs-bow fhot from it, and the two Ships clofe together, Board and Board, fhoring them on both Sides, fo that they could not part, but were filled with Water almoft up to the Deck, and Cabins were made on the Heads and Sterns to fhelter the Men. When the Ships were thus fecured, the Indians came in their Canoes, being covetous of Spanifh Toys; and, to prevent Controverfy, the Admiral appointed two Perfons to deal with them, and every Afternoon to divide what they had purchafed amongft the Men, to maintain them, for the Provifions were all either fpent or fpoiled.

The Admiral looked upon it as a great Mercy that God had brought him to famaica, becaufe that Ifland was very populous, abounded in Eatables, and the Na tives were defirous to trade; therefore, to keep them in that good Humour, he would not go up the Country for fear the Spaniards thould difoblige the People, which would prove of ill Confequence; and this Conduct was fo pleafing to the Indians, that they gave two Utias or fmall Rabbits for a bit of Tin, and two of their Cakes of Bread for two little green or yellow Beads, and for things of more Value they took a Hawk's-Bell. They gave the Caziques little Looking-glaffes, red Caps, and Sciffars, to pleafe them. The Admiral having purchafed ten Canoes for the Service of his ftranded Ships, by this Method, the Men were plentifully fupplied with Neceffaries, and the Indians no Way difturbed at their Stay.
9. Columbus having confulted the Officers about the Means of getting away from thence, it was concluded to fend Advice to Nicholas de Obando, Governor of Hijpamiola, and to Alonfo Sancbez de Carvajal, the Admiral's Factor there, of the Condition they were in, that a Ship might be there freighted at the Admiral's Expence, to fetch them all away. This being an Affair of much Difficulty, two Perfons of Fidelity and Difcretion were appointed for it, becaufe they were to undertake fo great a Paffage in Canoes made of a fmall Piece of Timber. The Diftance between the two neareft Points of Famaica and Hifpaniola being twenty-five L.eagues, befides thirty more to the Points where they were to crofs over, it required very great Courage to go upon fuch an Enterprize. In the Paffage there is only one little Inand or Rock, called Navaja, which is eight Leagues from Hifpaniola. The Perfons the Admiral pitched upon to perform this were, Fanes Mendez de Sagura, chief Notary of the Fleet, a very honeft and difcreet Man, and Bartholomerw Fiefco, a Genoefe, a Perfon worthy of fuch a Truft. Each of thefe went in a Canoe with fix Spaniards, and ten Indians to row.

The Admiral ordered fames Mendez, as foon as he came to Santo Domingo, to go away to Spain with his Difpatches for their Majefties; containing a full Relation of his Voyage, the Dangers and Troubles he had met with, the Lands he had difcovered, and the rich Mines he had actually vifited at Verogua; and at the fame time complained of the unworthy Ufage he had before met with, his Imprifonment and the feizing of all he had, praying Redrefs, and lamenting, that, after having fpent twenty Years in the Service of the Crown, he had not a Houfe to put his Head in; but muft be obliged, when he came to Spain, to take up his Lodgings at an Inn, $E_{3} c$. Bartbolomew Fiefco was to treat with the Governor of Hifpaniola about fending a Ship to bring the Men off, and to return with it himfelf. The two Canoes fet out on the 7 th of $7 u l y$; the Spaniards carrying their Provifions, Swords, and Targets, and the Indians their Gourds full of Water, Axis and Cazabi. When they came to the Point of the Ifland of Famaica, they were obliged to ftay till the Sea was very calm, to venture to ftrike over, the Danger being very great, efpecially for the Spaniards; for the Indians being very expert and naked, if the Canoes happened to over-fet, foon turned them again, and with their Gourds threw out the Water. As foon as the Weather grew calm, they put themfelves into the Hands of God, and launched out one Night:
the Indians rowing, who, to cool themfelves, fometimes. leaped into the Water, and afterwards returned to the Oar. When they had loft Sight of Famaica, the Spaniards relieved the Indians, that they might hold out, and always watched for fear thofe People Mould do any thing amifs.

The fecond Day after their Departure, they began tobe all very much tired, but the two Chiefs encouraged the Men, adivifing them to eat and recover their Strength. The Indians, being heated with the Sun, and the Labour of the Oars, were more bufy with their Gourds than they fhould have been, fo that they were foon empty; and, the Heat encrealing, and their Thirft with it, by Noon they had not ftrength to work. The Commanders then relieved them, giving them now and then to drink out of their Rundlets, and fo fupported them till cool of the Evening. That which moft perplexed them, after having rowed a Night and two Days, was, the Fear that they had miftaken the Way, in which they were to find the Illand Navafa, eight Leagues from Hifpaniola, as was faid before, where they expected to refrein themfelves. That Afternoon they had thrown an Indian over-board, who died by Thirft; others lay along ftretched out, quite difabled, and the reft were totally dejected, expecting Death, holding Salt-water in their Mouths to cool them, and finding no Comfort in it. They proceeded the fecond Night as far as they were able again, without feeing the Inand till the Moon rifing; Fames Mendez perceived that it appeared like a half Moon, the other half being, at firft, covered by the Inand; for otherwife they could not have feen it, by reafon of its Smallnefs and the Night. Then they all encouraged the Indians, fhewing them the Land, and giving them fome fips of Water, wherewith they were fo much encouraged, that they rowed on, and by Break of Day arrived at the Inland where they landed.

They found this Ifland was all a folid Rock, about half a League in Compafs, but there was no Tree nor Spring of Water on it; however, going about from one Cleft to another, they collected fo much in the Hollows, as ferved to quench their Thirft, which did them harm; becaufe, being foorched with Drought, they drank fo much of it, that fome of the poor Indians died upon the Spot, and others fell fick. They ftayed there till the Afternoon, providing themfelves, with the beft the Place would afford; gathering finall Shell-fifh on the Shore, and making a Fire to broil it, Fames Mendez having carried Neceffaries tor that Purpofe. Being then in the Sight of the Point of Hippaniola, which the Admiral had named St. Michael's, and was fince called del Tiburon, and defigning to conclude their Paffage before the Weather grew foul, as foon as the Sun was low they went into their Canoes again, and rowed, and by Break of Day arrived at the Cape, the fourth Day after their fetting out. They refrefhed themfelves there two Days, and neither Spaniards nor Indians would runs the Hazard of returning to Famaica the fame Way they came.

Fames Mendez, being in hafte, went on as far as he could in the Canoe, and, at length, arrived in the Province of Xaragua, where he found the Governor of Hifpaniola, who feemed well pleafed with the Ietter he brought him, though he proved very tedious in difpatching the Buinefs he came about; for he fufpecting the Admiral, was afraid left fome Difturbance fhould happen in the Inland. After much importuning he gave Fames Mendez leave to proceed with his Company to Santo Doiningo, to perform what the Admiral had ordered him. He there bought a Ship and fent it well provided, though it were a confiderable time before he could accomplifh his Defign, as will be fhewn.
10. After this Step had been taken, not only with the Confent, but by the Advice, and at the Requeft, of the Principal Perfons on board, it was very natural to fuppofe they would have been eafy; but the Spaniards that remained with the Admiral, in Jamaica, having fuffered very much in that Voyage, began to ficken, and, difparing of Relief, all their Difcourfe was how they fhould efcape over to Hifpaniola; railing at the Admiral as if he had been the Caufe of all their Misfortunes. The chief Promoters of the ee Difcontents were two Brothers,

Natives

Fatives of Serille, whofe Names were Porras, one of whom went over Captain of a Ship, and the other Purfer of the Fleet; thefe Men, having endeavoured to bring all the reft to their Defign, thought it fufficient that they had gained forty of the moft mutinous, and refolved to declare their Intentions: Accordingly, on the $2 d$ of Fanuary, 1504 , being all armed, Captain Francis de Porras went upon the Poop where the Admiral was, and, without any Refpect, faid, We are of Opinion that your Lordfhip will not go into Spain, but intend to keep us bere to perifb. The Admiral, hearing thefe infolent Words, and guefling at the Meaning, very mildly anfwered, He could not but be fenfible how impracticable it was for them to pafs over to Hifpaniola; that it was well known, he had already, by the unanimous Advice of all, fent for Ships, and 'if they had any better Method to offer, they might propofe it. Francis de Porras replied, there was no need of much advifing, that he might embark immediately, or ftay behind; and, turning his Back, added, for I will go away into Spain, with all thofe that will follow me: Then the Confpirators cryed out, One and all, One and all; and, after having caufed much Confufion aboard the Ship, they feized ten of the Canoes the Admiral had bought, and, many of thofe who were fick joining them, went away to the Eaftern Point of Famaica, whence Fames Mendez and Bartbolomew Fiefco had taken Boat to Hifpaniola.

Being come to the Point of the Ifland, they attempted to pafs over it to Hifpaniola, forcing fome Natives, with them, to row: But the Sea growing rough, and wetting them, they thought fit to lighten the Canoes, which were heavy loaded, throwing over-board all they had, except fome Provifions, Water, and their Arms; and, at laft, the poor Indians that rowed; cutting their Hands if they offered to eafe themfelves by holding by the Sides of the Canoes when tired with Swimming. Returning afhore, fome were for paffing over to $C u b_{a}$, fome for returning and making their Peace with the Admiral, or taking all he had by Force from him; others, for attempting, again, to pafs over into Hi/pamola, which laft prevailing; they ftayed fix Weeks in the Indian Town, at the Point of Land, for calm Weather, ruining the poor Natives, and then twice ventured out to Sea, but were forced back. Then quitting the Canoes, they went from Town to Town, fometimes bartering with the People for Provifions, and fometimes taking them by Force; whilft they were thus ranging, the Admiral took particular Care of the Sick, to fecure them to him, and laboured to gain the Friendfhip of the Indians, to make fure of Provifions, and by fuch Methods, all that had been diftempered recovered; however, the Spaniards eating much more than the Natives, it was a difficult Matter to fupply them plentifully, and fo a great Part of his Men being revolted from the Admiral, thofe People began to make the lefs account of him, infomuch, that he was reduced to great Streights; but it pleafed God to relieve him in that Diftrels, after the following Manner:

The Admiral knowing there would be an Eclipfe of the Moon within three Days, took therefore this Opportunity to fend an Indion, that fpoke Spanifh, to call the Cazique and principal Men of thofe Parts to him. They being come a Day before the Eclipfe, he told them that the Spaniards were Chriftians, Servants of God, who dwells in Heaven, and is Lord and Maker of all things; "who rewards the Good, and punifhes the Wicked; and, being angry with thofe that had mutinied, would not permit them to pafs over to Hifpaniola, as the others, fent by him, had done; that he was alfo difpleafed with them, becaufe they did not fupply his diftreffed Servants with Provifions, in exchange for Commodities, and therefore was refolved to chaftife them with Famine and other Calamities; and, that they might be convinced of the Truth of what he faid, God was pleafed they fhould fee a Token of his Anger in the Sky: So that they might, that Night, obferve the Rifing of the Moon, that he would appear of a bloody Hue, to point out the Punifhment God would inflict upon them. When he had made his Speech, fome of them went away in a Fright, andothers fcoffed at his Prediction. But, the

Eclipfe beginning as foon as the Moon was up, and ens creafing the higher fhe rofe, it put them into fuch a Confternation, that they haftened to the Ships, loaded with Provifions, entreating the Admiral that lie would pray to God that he would not be longer angry with them; and they would, for the fucure, bring him all the Provifions he fhould have Occafion for.

The Admiral anfwered, he would offer up his Prayers to God; and then fhutting himfelf up till the Eclipfe was at the Height, and ready to decreafe, he came out again, telling them he had prayed for them, promifing they would be good; and tupply the Chriftians, whereupon God had forgiven them; and they would fee the Moon, by degrees, turn to her ufual Complexion: The Indians, perceiving the Eclipfe to go off entirely, returned the Admiral many Thanks, admiring the God of the Chriftians; went away very well pleafed, religioully remembring to be grateful for the Benefit they thought they had received of the Admiral ; for they fupplied him plentifully with Provifions, always bleffing God, believing he would punifh them for their Sins; and that the Eclipfes they had formerly feen, had been Tokens of his Anger.

There were eight Months paffed fince the Departure of their Agents without any Advice of their Arrival, or what had befallen them; which made thofe that were with the Admiral defpair, fuppofing thofe Meffengers had. been caft away in their Paftage, or murdered by the $I_{n}$ dions. On this, one Barnard of Valencia, and the reft that had remained fick, confpired together to do as the Porras's had done before: But God prevented this Mifchief by the Arrival of a fmall Caravel fent by the Governor of Hijpaniola, under the Command of 7ames de Efcober, one of thofe that had been in the Rebellion with Roldan. He had Orders not to go aboard the Ships, or afhore, or permit any to talk with thofe that were with the Admiral ; or to receive, or deliver, any Letter ; being only fent to fee the Condition the Admiral and his Men were in. The Governor had pitched upon Efcobar to execute this Commiffion, becaufe he knew he had been in Rebellion, and therefore would not fide with thofe in Diftrefs. Efcobar, leaving his Caravel at fome Diftance, went in his Boat to deliver a Letter from the Governor ; and then ftanding of, made an empty Compliment from him; after which he prefented the Admiral with a Cank of Wine and two Flitches of Bacon. The Admiral anfwered the Governor's Letter, giving him an Account of what he had difcovered, and what had happened fince, and praying him to fend fpeedy Relief: Whereupon Efcobar failed away, which made the Men fufpect that the Governor Obando defigned to let them all perifh in that Illand.

However, this difappointed the fecond Confpiracy, and the Admiral told them, that Efcobar went away fo fuddenly that they might be the fooner relieved, for he was refolved not to go away without them, and that little Caravel would not carry them alk. Thefe Words, and the Sight of the little Caravel, with the Advice that Mendez and Fiefco were fafely arrived in Hifpaniola, fomewhat comforted the Men, and gave them Hopes of getting off in time. The Admiral, rather defirous to reduce the Mutineers by fair Means than by Force, that they might do no Mifchief in the Ifland, fent two of their beft Friends to acquaint them with the Advice he had received, defiring them to return, and no Notice fhould be taken of what had happened. Francis de Porras met thofe Meffengers at a Diftance, for fear they fhould perfuade any of his Men to fubmit themfelves, and anfwered, that they would not truft the Admiral, but would behave themfelves peaceably in the Illand, if he would promife to find a Ship to carry them off, and fhare half of what he had with them, fince they had loft all their own Effects.

The Meffengers refufed to make any fuch Propofal to the Admiral, and Porras replied that if he would not do it by fair Means, he hould be compelled to it by Force. When the Meffengers were gone, he railed at Columbus, charging him with Cruelty; alledging, he would not perform what he promifed if he had them once in his Power 3 ridiculounly accunng him of being a

Sorcerer

Sorcerer; and afrming, that the Caravel his Men had feen had been only a Delufion, formed by Magic Art, or elfe he would have gone in it himfelf, with his Son and his Brother. By fuch Difcourfes he confirmed them in the Rebellion, and perfuaded them to go and feize the Admiral, and take away what he had aboard the Ships: He accordingly marched with his Followers towards the Ships; and, being within a Quarter of a League of them, halted in an Indian Town called Mayma. The Admiral being informed of it fent the Adelantado, his Brother, with fifty Men, to perfuade him to return to his Duty; who, coming within a Crofs-bow-fhot of the Place; fent the two Meffengers the Admiral had employed before, to offer Peace; but they, defpifing all Accommodations, would not fo much as hear them; and, on the contrary, advanced in fighting order, crying, Kill. bim, kill bim; fix of them having taken an Oath to deAtroy the Adelantado, who bid his Men do as he did, and to fear nothing hut the Stain of being vanquifhed by Rebels. This faid, they engaged; and, at the firft Attack, fix Men fell, moft of them Rebels. Froncis de Porres, who was a bold Man, fingled out the Adelantado, and at one Cut clove down his Target to theHand, which he wounded, but could not recorer his Sword as he would; and the Adelantado, feeing his Men give way, clofed with Porras; which done, others came in and feized him, much wounded. The Adelantado then fel! in among the reft, fo that many were foon killed, and among the reft Foon Barle, who had been the firt that drew his Sword againit the Admiral when they began to rebel; others being much wounded, the reft betook themfelves to Flight.

The Adelantado would have purfued them, had not fome of the beft Men about him diffuaded him from it, faying, That was a fufficient Punimment, and that it was not proper to carry Things to Extremity; fo he returned to the Ships, carrying Francis de Porras, and other Prifoners, and was joyfully received by the Admiral and thofe about him. The Day after the Battle, being the 2oth of May, thofe that efcaped fent a Petition, figned, to the Admiral, confeffing their Fault, and begging Pardon, and promifing to ferve him faithfully for the future; all which they took folemnly an Oath to perform, renouncing any Abfolution in cafe of Failure from Prieft, Bihop, or Pope himfelf, at the Hour of Death, and all Benefit of the Sacraments of the Church.
The Admiral, on his Part, promifed to pardon them provided their Ringleader, Francis de Porras, fhould continue a clofe Prifoner ; and, to prevent any Controverfies between the Rebels and the others, he fent them a Commander to keep them in the Inland till the Ship arrived; fuch was the Pofture of Affairs in Famaica, and the Admiral had been there fill a Year, when a Ship arrived freighted by $\mathcal{J}$ ames Mendez, and with it a Caravel commanded by Fomes de Salcedo, the Admiral's Servant. Columbus, his Followers, and the Rebels embarked, and they failed from thence the 28 th of 7 une 1504 , and arrived at Santo Domingo on the I $3^{\text {th }}$ of Auguft. The Governor withall the City went outto meet him, and paid him much Refpect, lodging him in his own Houfe, and paying abundance of Compliments, but all with a falfe Heart; for he fet at Liberty Francis de Porras, the Ringleader of the Rebellion at Famaica, who was a Prifoner aboard the Ship; and threatened to punifh thofe that had honourably ftood by the Admiral in his greateft Danger.

I I. The Admiral was a Perfon of too great Penetration not to difcern how deceitfully he was treated, and the true Motives of the Governor's Behaviour. He knew very well that Obando hated him, and, at the fame time, feared his Credit and Reputation; but he diffembled Things as well as he could, till the Ships were ready that were preparing for carrying him back to Spain; and as foon as he knew that they were fit to fail, and the proper Seafon was come, he difpofed every thing for his Departure; which was a Thing no lefs agreeable to the Governor Obando than convenient for his own Affairs.

Accordingly, on the I2th of September, 1504, he embarked on board a Ship, provided by his Agents, and took with him likewife the Veffel that had brought him and his People over from Famaica; but juft as they
were out of Port, the Main-maft of the leffer Veffel came by the Board; upon which he ordered her back to Santo Domingo, and continued his Voyage in the other. He had not, however, been long at Sea before he met with a moft violent Tempeft, in which, not the Men only, but the Pilot, expected every Moment to be caft away; and when the Vehemence of the Storm was over, and they began to congratulate each other on their narrow Efcape from fo great Danger, they were aftonifhed by a very unlooked for Accident; their Main-maft flying to pieces on a fudden, and without any vifible Caufe.

The Admiral was at that time confined to his Bed by the Gout, which, however, did not hinder his giving the neceffary Directions for making a Jury-matt of the Yard, which was accordingly done ; and in this Condition they profecuted their Voyage. Soon after they encountered another Tempef, in which they loft their Mizen-maft ; notwithftanding which Accident they fafely arrived at their intended Port of St. Lucar, having failed 700 Leagues after they had loft their Main-mait. All the Dangers and Difficulties he had ftruggled with at Sea had not near fo much Effect on the Admiral's Mind, as the ill News he met with on Shore; being informed, as foon as he landed, that his beft Friend and only Patronefs, the Queen, was dead, fo that he had now none but King Ferdinand to apply to, who, though he always treated him refpectfully, the Admiral well knew was far enough from having any Kindnefs for him, and even from inclining to do him Juftice.

In this Situation of his Affairs, the Admiral refolved with himfelf to go to Serille, in order to take fome Repofe, and the Advice of his Phyficians for the Recovery of his I fealth, which he accordingly did, having his Sons with him; and employing himfelf wholly in fetting his Family-Affairs in order. When he had refted fome Months at Seville, in May 1505, he proceeded to the Court, which refided then at Segovia. He did not think the King received him as he deferved, yet he prefented feveral Petitions fetting forth the Services he had performed, and his great Sufferings, and defiring the Performance of what he had promifed him in return; for which the King gave him many fair Words without any Effect, having no Intention to fulfil his Engagements, and therefore under-hand offered him a large Eftate in Spain, in exchange for what was his due in the Indies.

This much vexed the Admiral, who was then confined to his Bed, and he complained of it to the Archbifhop of Seville; but at that Time King Ferdinand travelled from Valladolid to Laredo, to wait for his Son-in-law King Pbilip, and Queen Fobanna his Daughter, who foon after arrived there from Flanders. The Admiral, not being able to go, fent his Brother the Adelantado, to compliment their Majefties and follicit his Affairs ; where he was well received, and had fair Promifes of having his Bufinefs favourably difpatched. But notwithftanding all this, fuch Methods were made ufe of to poftpone his Demand, and protract his Bufinefs in all Offices to which it was referred, that it was no difficult Matter for him to difcern, that very little good was intended him.
13. While the Adelantado, Don Bartholomere Columbus, was folliciting, as has been faid, the Admiral's Diftemper grew upon him, till, having made the neceffary Difpofitions, he departed this Life, with much Piety, at Valladolid, on Afcenfion-day, being the 20th of May, I506. His Body was conveyed to the Monaftery of the Cartbufans at Seville, and from thence to the City of Santo Domingo in Hijpaniola, where it lies in the Chancel of the Cathedral. He left his Son Fomes his fole Heir, and died before he knew whether Cuba was an Ifland. It may be expected that we fhould add here fome Character of this great Man, or at leaft a Defcription of his Perfon ; but, having already fpoken largely of his Abilities in the Beginning of our former Volume, as well as in this, we thall content ourfelves with barely tranfcribing what a Spanifo Hiftorian, jufly efteemed for hisFidelity andKnowledge, has difcourfed upon this Subjeit:

His Words are thefe: "Columbus was tall of Stature, " long Vifage, of a majeftic Afpect, his Nole aquiline,
" his Eyes grey, of a clear Complexion and ruddy, his
"Beard and Hair, when young, fair, though through
" many Hardhips they foon turned grey: He was a
" Man of Wit, pleafant and eloquent, moderately grave,
" affable to Strangers, and kind to his own Family: His
"Converfation difcreet, which gained him the Affection
". of thofe he had to deal with, and his Prefence attracted
"Refpect, having an Air of Authority and Grandeur ;
" temperate in Eating and Drinking, and modeft in his
"Drefs. He was very ftrict in Religion according to the
" Mode of his Country, and obliged fuch as were under
" his Command to obferve the fame with Decency. In
" that Refpect, he fhewed an earneft Concern for the Con-
" verfion of the Indians to the Chrittian Faith, and en-
"deavoured all. he could to invite them thereto, by
"obliging the Spaniards to lead a Life, in fome meafure,
" agreeable to that Faith which they profeffed. In other
"Refpects he was a Man of undaunted Courage and
" high Thoughts, fond of great Enterprizes ; patient,
" ready to forgive Wrongs, and only defirous that Of
" fenders fhould be fenfible of their Faults, unmoved in
" the many Troubles and Adverfities that attended him,
" ever relying on Divine Providence. In fhort, had
" he performed fuch a wonderful Enterprize in the an-
" tient Days as the Difcovery of the new World, it is
" likely he would not only have had Statues, and even
"Temples, erected to his Honour ; but that fome Star
" would have been dedicated to him, as was done to
"Hercules and Baccous, and among us his Name will be "renowned whilft the World endures."
13. Such was the End of this great Man, to whom, in the frricteft Senfe, the Spaniards are indebted for all that they poffers in the new World, as will very clearly appear; if we confider that he fettled Hijpaniola, took a View of Cuba, vifited Famaica, beftowed the Name of St. Fobn on the Inand of Porto Rico, called formerly Borriquen, and difcovered almoft all that can properly be called the Weft Indies. As to the Continent, it muft be confeffed that he barely faw it, but then he faw both Parts of it, and the Ifthmus that unites them; and he left behind him Projects for extending all thefe Difcoveries, and his Conjectures of the Confequences that might attend them. He did ftill more than this, he declared pofitively, that there lay a Sea on the other Side of the Continent, through which there might be a Paffage difcovered to the Eaft Indies; and accordingly, as we have flewn elfewhere, that is, in the Hiftory of Magellan's Voyage, this Paffage was actually difcovered from the Lights given by him.
It muft be confeffed, that for fuch Services fcarce any Rewards could be fufficient, much lefs too great; and if it be remembered, he demanded nothing beyond his firt Contract, notwithftanding that he performed much more than he promifed therein, one cannot help wondering at the mean and fcandalous Behaviour of King Ferdinand, who fo ungratefully endeavoured to deprive him, and his Family, of what were their juft Rights.

His eldet Son and Heir, Fames, or, as the Spamiard ftile him, Don Diego Colon, inherited his Pretenfions, and inherited, likewife, the Dinilike of Ferdinand, and the Hatred of the Binhop Fonjeca; and though he endeavoured by Petitions, and perfonal Applications, to obtain his Right, yet he never could receive any other Satisfaction than fair Words and fine Promifes; with which being at laft quite tired out, he defired the King to leave his Demands to the Decifion of the Law, which, being what he could not decently deny, was granted.
This Suit, as may be well fuppofed, was tedious and troublefome, but, at laft, he obtained a clear Decifion in liis Favour, and was re-ettablifhed, by the Judges, in all his Fathers Pretenfions; notwithftanding which, the King and the Bifhop found Ways and Means to delay the Execution of the Judgment; fo that he obtained nothing thereby, except the Recognition of a Right, which was fufficiently clear before. To ftrengthen his Intereft, therefore, he thought fit to marry, which he accordingly did, into one of the moft illuftrious Families in Spain; efpoufing Mary de Toledo, Daughter to Don Ferdinand, Brother to the Duke of Alva, and Coufin to his Catholic Majefty. By the Affiftance of his Wife's Relations, he at laft obtained the Government of Hippaniola; fucceeding the great Enemy of his Father, Nicholas de Obando, but with the Title only of Governor, and not of Viceroy, which was his Right.
He went thither in 1508 , with his Wife, his Brother, Don Ferdinand, who wrote the Life of his Father, of which we have made ufe in the foregoing Sections, and his Uncles, Bartbolomerw and Fames Columbus; together with many young Noblemen, and feveral young Ladies of good Families, by which the Luftre of the Spani/b Settlement, in Hijpeniola, was reftored, and encreafed. Yet his Power was not at all greater than that of his Predeceffor; and the little he had was foon after reftrained by the fettling of a new Court, at Santo Domingo, under the Title of the Royal Audience, to which Appeals were allowed from all Parts of the Indies. Here then we are to clofe our Accounts of this illuftrious Perfon and the State of his Family at his Deceafe.

In the next Section we fhall give a fuccinct Account of the manner in which the Spaniards profeçuted the Difcovery of the Indies, to the time of thofe two great Expeditions, for the Conqueft of Mexico and Peru; of which, as of the moft memorable and extraordinary Tranfactions that have happened in this Part of the World, and which have contributed moft to make it known, we fhall give a larger and more particular Account; and, indeed, if we reflect, that in all Senfes whatever, the Conquefts of the Spaniards, in the new World, have been the greateft in themfelves, and more beneficial in their Confequences, than thofe of any European Nation, we cannot, certainly, think that time ill employed, which is fpent in acquiring a circumftantial Account of them; more efpecially as the Events therein are more curious and entertaining than thofe that occur in any other Hiftory whatever.

## S E C T I O N VI.

The Hifory of the feveral Difcoveries, Settlements, and Conquefts made by the Spaniards, in the Weft Indies, after the Death of the Admiral Don Christopher Columbus, to the Expedition of Ferdinand, or Hernan Cortes.

1. The Improvements made by Nicholas de Obando in the Illand of Hirpaniola, and the great Value of the Gold Mines wrougbt there. 2. The Expedition of Don Juan Ponce de Lcon into Puerto Rico, and bis Conqueft of that Ifland. 3. A Settlement made on the fmall Ifland of Cubagua, the valt Fifbery for Pearls there, and the Occafion of lofing it entirely. 4. Alonfo de Hojeda, and Diego de Nicueffa, commifioned to make Difcoveries, and Jail with that Viero to the Indies. 5. Hojeda's unfortunate Expedition to Carthagena, robere be bad been defiroved, but for the timely A/jifance afforded bim by Nicueffa. 6. Afterwards fixes the Settlement of St. Sebaftian, bis Misfortunes and Death, together weith the Fate of bis new Colony before mentioned. 7. The Hitory of Vafquez Nugnez de Balboa, and of bis furprizing Exploits in the Indies. 8. The Hitory of Don Diego de Nicuefla refumed; he founds the Colony of Nombre de Dios, bis fubfequent Misfortunes and miferable Derth. 9. The Conqueft of the great Ifiand Vol. II. Numb. LXXIII.

of Cuba undertaken by Don Diego Velafquez, and the Progrefs made therein by bim. 10. The famous John Ponce de Leon, by an unaccountable Delifion, undertakes an Expedition to find out the Fountain of Youth; rubich produces the Difcovery of Florida. II. The Difcoveries made on the Continent by the Command of Diego Veiafquez, under Ferdinand de Cordova bis Lieutenant, to the Death of Cordova. 12. Thefe Difcoveries refumed and profecuted with greater Succefs, by the Command of Velafquez, under John Grijalva. I3. His fubfequent Expeditions open a Paffage into that Country, fince filed New Spain. 14. On bis Return Grijalva is moft umjufly difgraced by Diego Velafquez, for purfuingo bis Orders too friclly. 15. Obfervations and Remarks on the principal Events in the foregoing Section.

1T is natural for us to begin this Section with fome Account of the Progrefs of the Spaniards in Santo Domingo, or Hifpaniola, after a regular Government was fettled there, and the Value of the Difcovery thereby made known; and this for two Reafons, firt, becaufe the immenfe Wealth derived from this Colony was what excited the Spaniards to continue their Difcoveries; and becaufe this Vein of Wealth has been long fince dried up, and, at prefent, we hear nothing of the Gold of Hijpasiola; which, at its firt Difcovery, yielded more in Proportion than ever Peru has done, fince. This was, in fome Meafure, owing to the Induftry and Care of Nicolas Obando, who firt employed a fkilful Pilot to fail round the Ifland, and defrribe its Coafts; and afterwards took Pains to examine all the Provinces into which it was divided, and furveyed them likewife.

In his time there was difcovered, near the Town of Puerto Real, a Mine of good Copper, but, after much Money expended about it, the Produce did not anfwer. Thofe three hundred Spaniards whom Obando found in the Inand, at his firtt coming, lived very diforderly, and had taken the moft beautiful Women, and of the beft Quality in it, for their Miftreffes, their Parents believing that they were married; but the Francijcan Friars, thinking the Lewdnefs not to be tolerated, made Inftance to the Governor for fome Remedy therein; who, at laft, decreed, that they fhould either part, or be married within a limited time: Many Men of Quality thought this a very hard Impofition, yet, rather than lofe the Dominion they had over the Indians, in right to thofe Women, they complied, and married them, and tho' this entitled them to what was their Wives, and the Lawyers faid they had a legal Right to the Service of thofe Indians, Obando took them away as foon as they were married, and gave them to others, allowing them as many in other Places; alledging he did it to prevent their growing proud as natural Lords, and to keep them in Submiffion, as holding thofe Indians only by Gift; but this was looked upon as an unjuft depriving of the natural Lords of their Subjects.

This Nicbolas de Obando, when he went over Governor of Hijpaniola, carried with him Roderick de Alcacar, Goldfmith to their Majefties; a difcreet and honeft Man, who had the Employment of Marker of the Gold, and his Fee was one per Cent, which was looked upon as a very indifferent Allowance; but, after the Diftribution of the Indians, there was fo much Gold gathered, that it was four times melted down every Year; twice at the Town of Bucna Ventura, on the Banks of Hayna, eight Leagues from Santo Domingo, where the Gold, brought from the old and new Mines, was caft; and the other two at the City de la Vega, or the Conception, where the Gold of the Mines of Cibao, and the adjacent Parts, was conveyed; at each melting, in the Town of Buena Ventura, there came out between 110000, and 120000 Pefos; and at la Vega between 125000, and $130000 \mathrm{Pe}-$ fos, and fometimes 140000 . Thus the Product of $l a$ Vega was the greateft, and all the Gold of the Inand amounted to 460000 Pefos, or more Money; according to the niceft Computation, 150000 Pounds; which yielded unto Roderick de Alcafar about 4500 Pefos a Year ; which, at that time, was a very confiderable Revenue, and though it was well beftowed on him, their Catholic Majefties revoked it.
It was remarked, even at this time, that fuch as wrought at thefe Mines were never any Gainers, notwithftanding the vaft Quantities of Gold, of which they became Matters; for, living always luxuriounly, and upon

Credit, their Gold, at the melting times, was often feized for their Debts, and very frequently did not afford enough to bring things to a Ballance.
2. The laft War, in the Province of Higuey in Hivpaniola, produced a great Extention of the Spanifh Power; for the Governor, Obando, appointed one to command in thofe Parts, and keep the Indians in awe, who foon formed a Project of carrying his Authority beyond the narrow Bounds which were affigned it. The Name of this Spanibl Gentleman, was Fuan Ponce de Leon, a Perfon of good Senfe, great Courage, but, withal, imperious and cruel. He was informed, by the Indians, that the Ifland of St. Fobn de Puerto Rico, by thefe People called Borriquen, was exceedingly rich in Gold; a Circumftance fufficient to tempt him to a better Acquaintance with it.
In order to this, he applied himfelf to the Governor ${ }_{3}$ giving him a full' Account of all that he had heard, and defiring his Licence to go over to the Inand to enquire into that Affair, to trade with the Natives, and fee what might be done towards fettling there; for, till then, they knew nothing of it farther, than that it appeared very beautiful; and they faw abundance of People when Ships paffed by it. Fuan Ponce embarked in a finall Caravel, with fome Spaniards and Indians that knew the Place, and landed in the Dominions of Aguey Bana, the greateft Lord of the Inand, who had a Mother and Father in Law, who all received and entertained him very kindly; and the Cazique changed Names with him, which they called becoming Guatiacos, or fworn Brothers. He. gave the Mother the Name of Agnes, and called the Father-in-law Francis; and, though they wouid not be baptized, they kept the Names which the Chriftians gave them.
This Cazique, his Mother, and Father-in-law, where very good-natured, and always advifed the Son to be a Friend to the Spariards. Fuan Ponce prefently made it his Bufinefs to enquire whether what the Indians had told him was true, concerning the Gold Mines. The Cazique conducted him all over the Inand, Thewing him the Rivers where Gold was found, and among them two that were very rich; the one called Manatuabon, and the other Cebuco, whence much Treafure was afterwards drawn. He caufed Samples to be taken, which he carried to the Governor of Hijpaniola, leaving fome Spaniards there well recommended to the Cazique, and his Mother, who were well entertained till ochers came to fettle. The greateft Part of this Inand confifted of high Mountains, fome of them covered with fine high Grafs, like that in Hijpaniola. There are few Plains, but many Vales with pleafant Rivers running through them, and all very fruitful. The weftern Point of it is but twelve or fifteen Leagues from the eaftern Cape of Hijpaniola; fo that in fair Weather the one may be feen from the other, by People ftanding on the Tops of thofe Points.

There are fome Ports, but none good, except that which is called Puerto Rico, where the City and epifcopal See are feated. The length of it is about forty Leagues at leaft, and the Breadth fixteen; the Circumference about 120. The Southern Coaft lies all in feventeen, and the Northern in eighteen Degrees Latitude. It produced much Gold, though not quite fo fine as that of Hijpaniota, yer not much inferior to it.
While Ponce de Leon was thus employed, Obando was recalled, and Don Diego Colon, Son to the Admiral, came to take the Government of Hijpaniola in his Room; bringing with him, from Spain, a new Governor for Puerto Rico ; but he who had made the firt Settement
on that Ifland difputing this Appointment, the young Admiral, without farther Ceremony, fet them both afide, and appointed one Michael Cerron Governor of that Place, and made one Michael Diaz his Lieutenant.

However Fuan Ponce de Leon, by the Intereft of his Friend Obando, procured a new Commiffion from Spain, and, going over to Puerto Rico, eafily found Pretences for picking a Quarrel with Cerron and Diaz, whom he fent Prifoners into Spain. There People thus out of his way, Fuan Ponce de Leon profecuted his firft Defign of conquering the Illand, but found it a much more difficult Tafk than he imagined. However, at laft he compaffed it ; and with much ado the poor Indians were forced to fubmit. In confequence of which they were made Slaves, and employed in the Mines till they were quite worn out. Since which the Gold has likewife failed; which many Spanifb Writers acknowledge to have been a Judgment from God for that barbarous Proceeding ; fo much the more probable, becaufe the fame thing has happened in other Parts of their Dominions.
3. The Court of Spain was at this time very follicitous to make the moft of the Settlements already made in the new World, and therefore from time to time admitted of fuch Reprefentations as thofe who had been in the Indies thought fit to make, as to what was requifite to be done there for promoting the Royal Revenue.

Amongft other Propofitions of this nature, there was one which fuggelted it was much for the King's Intereft that the Inand of Cubagua, called alfo Of Pearls, near Margarita, fhould be inhabited by Spaniards, and therefore the Admiral was ordered to take care of it, that the Trade there might be the better looked after. And the Inhabitants of Hippaniola made a great Advantage of it, finding the Lucayo Indions moft ufeful, becaufe they were extraordinary Swimmers and Divers; fo that one of them came to be worth one hundred and fifty Ducats. And they not only defrauded the King of his Fifth, but alfo abufed and deftroyed the Indians, which obliged them to ftand upon their Guard, and was prejudicial to the Trade. This Inand of Cubagua, fomewhat above three hundred Leagues from Hippaniola, is about three Leagues in Compafs, lies in almoft ten Degrees of Latitude, the Soil very barren and dry, affording much Salt-petre, fome few Guiacum Trees and Shrubs, without any Grafs or Birds, only fuch as are proper to the Sea, being all flat and without any Springs of frefh Water.

No Land Creatures were found upon it, except a few Rabbits. The Natives painted themfelves, and fed on the Pearl Oyfters. They brought over in their Canoes Water from Cumana on the Continent, which is feven Leagues diftant, and gave Seed-pearl for it to thofe who would carry it over. Wood they had from the Inland Margarita, which lies a League to the Northward of it, and incompaffes it from the Eaft to the North-weft. And to the Southward of it is Cape Araya on the Continent, where the great Salt Pits are.

It has a good Port on the North Side. The Swine that were carried thither from Spain foon degenerated, their Claws turning upwards half an Handful. There was infinite Plenty of Oyfters breeding the Pearl within them, a little Nob growing at firft foft, and afterwards hardening as it grows. Some Years the King's Fifth of only the Pearl Fifhery amounted to fifteen thoufand Ducats. And it was wonderful that fuch a Quantity of Pearls fhould be found in fo fmall a Compafs, taken by Men diving, and ftaying under Water as long as they can hold their Breath, pulling off the Shells from the Places they fick to. And it is to be obferved that there are Pearls for above four hundred Leagues from Cape de la Vela to the Bay of Paria. And befides thefe the Admiral found at Cubagua (which he called the Thand of Pearls) he difcovered them on the Coaft of Cumana, as alfo all along the Coaft of Paria, Maracapana, Puerto Flecbado, and Curiana, which is near Venezuela.
4. Amongtt other Adventurers who petitioned the Spanifs Court for Leave to make Difcoveries, Hojeda was one, a brave Man, but poor; and Jobn de la Cofa, who had been his Pilot, and had faved that Money which the other fpent, out of pure Affection offered to affift him with
his Life and Fortune. They had a Grant promifed them of all that had been difcovered on the Continent: But Diego Nicueffa interpofing, being a richer Mans and having a better Intereft, ftopped the Grant, and procured Half of it for himfelf. To the former Adventurers the Court granted all the Country between Cape de la Vela and the Gulph of Uraba, now ftiled the Gulpb of Darien, under the Name of Nerw Andaluffa; and to the latter, from the before mentioned Gulph to Cape Gracias a Dios, under the Name of Cafilla del Oro, or Golden Cafilie, without a Word faid of the Admiral, to whom of Right all thefe Countries belonged as difcovered by his Father.

The Inand of Famaica was likewife granted to Diego Nicue/fa, in common, but the Admiral, being in the Indies, fecured that for himfelf. Hojeda was able to fit cut but one Ship, and one Brigantine; but Nicueffa had two Brigantines; with which they both failed to Santo Do~ mingo, where they quarrelled about their Rights: And it was with great Difficulty that the Difputes between them were adjufted: At laft, however, this was dorie, and both proceeded to their refpective Governments, or rather to fettle the Colonies they had promifed.
5. Thofe Difputes took up much time, fo that it was the latter End of the Year 1510 before either of them left Hijpaniola. Alonso de Hojeda, with whom Francis Pizaro imbarked, departed from the Ifland Beata, and, ftanding to the Southward, in a few Days arrived at Carthagena, which the Indians called Caramari, and they were then in an Uproar, and ready to oppofe the $S p a-$ niards becaufe of the Injuries done them by Cbrifopber Guerra and others, who had paffed by that way, and under ${ }^{3}$ Pretence of trading had feized many, and made Slaves of them. Thofe People were of a large Stature, the Men wore their Hair down to their Ears, and the Women very long. And both Sexes were very expert in fhooting with their Bows. Hojeda and Jobn de la Cofí had religious Men with them, his Mafter being very defirous to induce them to fubmit; and, having Indians of Hifpaniola who fpoke the Language, he adrifed them to be peaceable, and to leave off their Cruelty, Idolatry, and other hideousVices practifed among them; but they; being very much incenfed, for Reaions before mentioned, would not give ear to thofe Perfuafions.
Alonfo de Hojeda, purfuant to his Inftructions, tryed all poffible Methods to allure them, tho' he had alfo Orders in cafe they proved obftinate, to declare War and make Slaves of them. He began to barter for Gold, giving them fome Spanif Toys; but thofe Indians being fierce and bold, Fobn de la Cofa faid he thought it would be better to fettle a Colony at the Bay Uraba, where the Natives were more gentle, and that from thence they might return to Cartbagena better provided. Alonjo de Hojeda being always too refolute, and the more for that, having been in a great Number of Quarrels and Engagements in Spain and Hifpaniola, he had never loft a Drop of Blood, did not regard the Advice, but fell upon the Indians who were preparing to attack him, killed many, feized fome, and found a fmall Quantity of Gold in the Places taken from them.

Not fatisfied with that, ufing fome of the Prifoners for his Guide, he went to a Town four Leagues up the Country, whither thofe who had efcaped from the laft Fray were retired, and found the People there upon their Guard, armed with Targets, Swords of extraordinary hard Wood, Bows, fharp poifoned Arrows, and Rods, which they threw like Darts. The Spaniards crying out, Santiago, that is St. Fames, fell on, killing and taking all they met. Eight Indians, who were not fo expeditious as the reft, retired into one of their thatched Houfes, where they defended themfelves a confiderable Space, killing one Spaniard; at which Hojeda was fo provoked, that he ordered the Houfe to be fired, where they all perifhed in a Moment. Here he took fixty Captives, whom he fent to the Ships, and purfued thofe that fled. The Inhaw bitants of a Town cailed Yarbaco having Notice thereof, withdrew into the Mountains with their Wives, Childrens and Effects.

The Spaniards coming thither by break of the Day, and finding nobody, grew heedlers, and difperfed them.
felves about the Country. The Indions obferving their Carelcfnefs, fell upon them unexpectedly, and they fo furprifed endeavoured to retire to fome Place of Safety, but fill met with their Enemies, who, they being divided into feveral Detachments, attacked, wounded, and killed them with Flights of poifoned Arrows. Hojeda, with fome of his Companions maintained the Fight, often 'kneeling, the better to cover himfelf with his Target; but when he faw moft of his Men killed, trufting to his Activity, he rumed through the thickeft of the Indians, and, running as if he had flown, got into the thickeft Part of the Woods, directing his Courfe the beft he could towards the Sea, where his Ships.were. Jobn de la Cofa got into a Houfe that had no Thatch on it, where he defended himfelf at the Door till his Men being nain, and himfelf fo wounded with the poifoned Arrows that he could no longer ftand, looking about he faw one that ftill fought courageounty, to whom he faid, That fince it had pleafed God to preferve him he fhould go immediately and tell Hojeda all that had happened, and Hojeda and he were the only two that efcaped, Seventy Spaniards being flaughtered.

Things being in this Situation, very lucky for the Spaniards, Nicue $\iint$ a with his Ships appeared, and he, landing, was informed of what had befallen his Rival through his own Rafnnefs; upon which he defired he might be fought for, and brought to him ; and as foon as he faw him he faid, That infuch a Cafe they ought to forget their Difputes, and only remember they were Gentlemen and Spaniards, offering at the fame time to land his Men, and affift him in revenging the Death of Fobn de la Cofa. They did accordingly land 400 Men , which proved alone more than fufficient to beat the Indians, to take and burn their Town, and to put them in poffeffion of a vaft Number of Slaves, and of a Booty worth Seven thoufand Pieces of Gold to each of them. After this Victory they agreed to part, and that each Should purfue that Plan of Difcovery and Planting directed by his Commiffion; which they accordingly did with what Fortune we fhall hereafter fhew.
6. As for Alonfo Hojeda, as foon as he underftood that it was the Defign of Nicueffa to fteer for Veragua, he crouded all the Sail he could, for the River of Darien; but having loft his old Pilot, upon whofe Experience he chiefly depended, he miffed the River, and at laft refolved to fix a Settlement on the Eaftern Promontory of the Gulph of Uraba; which he accordingly did, and called his new Town St. Sebaftian; which he did the rather, becaufe as that Saint is faid to have been martyred by the Arrows of the Infidels, he thought him a fit Patron to defend him againft the poifoned Arrows of the Indians.

He was hardly fixed there before he found all the Inhabitants of the Country to be a Race of barbarous Sawages, from whom he had nothing to expect, but all the Mifchief they could do him ; in this Situation he thought fit to detach Captain Encifo with one of his Ships to HiSpaniola, with Orders to bring him as great a Reinforcement of Men as he could poffibly obtain, and during his Abfence he intrenched himfelf as well as he could, the better to fecure his Pcople; but Provifions growing very foon fo low, that they were not in a Condition to fubfift, he found himfelf under a Neceffity of making fome Excurfions into the Country to obtain a Supply; which Expedient, however, failed him, and he had the Misfortune likewife to lofe many of his Men by the Arrows of the Indians, which were poifoned with the Juice of a certain ftinking Root, that grew by the Seafide. By thefe Difafters his new Colony was quickly reduced into a moft wretched Condition, ftarved if they remained within their Works, and fure of meeting with Death if they ventured out of them; in this fad State, and when they abfolutely defpaired, they faw with an Amazement a Ship enter the Port.

It proved to be no better than a Pirate, commanded by one Bernard de Talavera, who, flying from Juftice, took Shelter here, in a Place to him unknown. Alonzo Hojeda did not think it neceffary to inquire very nicely into the Man's Character, but very readily bought his Ship's Cargo, and treated the Captain fo well that he willingly entered into his Service. However ferviceable
this Relief might be, it was but of fhort Continuance : fo that, all their Provifions eaten up, the Savages more troublefome than before, and no Succour coming from Hippaniola, they were once more at theirWits-end. After various Schemes formed to no Purpofe, it was at laft refolved that he flould go himfelf to Santo Domingo, in order to procure Supplies; and accordingly, leaving Francis Pizaro to command the Colony, he imbarked on board Talavera's Veffel, and put to Sea. The Voyage was very unfortunate from the Beginning; for Hojeda ufing too much Severity towards the Crew, and behaving very haughtily to Captain Talavera, he not only deprived him of all Command, but very fairly clapped him in Irons. A Storm however arifing, the Crew whos though they thought him a bad Officer, yet knew him to be a good Seaman, fet him at Liberty ; and it was chiefly by his Skill they were enabled to fave their Lives, by running the Ship afhore on the Inland of Cuba.

It was but a very fhort Paffage from thence to Hifpaniola, but Talavera durft not go there; and therefore he prevailed upon Hojeda to venture a Voyage of one hundred Leagues to Famaica in a Canoe, and he was lucky enough to perform it. He had, by his Commiffion, fome Pretenfions on this Inand; and having heard that the Admiral had fent over thither Don Juan de Efquibel, with the Title of Governor, he threatened to cut off his Head if ever he fell into his Hands; but now he was forced to fue to him for Favour, and was very kindly ufed. After a fhort Stay at Famaica, the Governor, at his own Requeft, fent him over to Santo Domingo; where he learned that Captain Encifo was failed for St. Sebaftian, but found his own Credit fo low that he could fcarce raife wherewithal to buy him Bread ; and in a fhort Time after he actually died of Want, though he deferved a better Fate, being one of the braveft Men that ever failed from Spain to the Indies. Talavera had ftill worfe Luck; for, ftaying too long at Famaica, the Admiral caufed him to be apprehended, tried, and hanged for a Pirate.

In the mean time, Captain Pizaro quitted St. Sebafian, and, with a very few Men, and with much Difficulty efcaped to Cartbagena, where, very luckily for him, Captain Encifo was juft arrived with two Ships, and a confiderable Reinforcement; he took Pizaro on board; and they returned all together to St. Sebaffian, where they had the Misfortune to be fhipwrecked; and, getting afhore with much difficulty, they found thePlace reduced to Afhes by the Savages. They reftored it as well as they could, and got afhore what they were able of Provifions, and other Neceffaries, out of their ftranded Veffels; but were foon reduced to the utmoft Extremities both by War and Famine; Hunger frequently forcing them out, and the Savages conftantly driving them back again with the Lofs of fome of their Number, which they could very ill fpare, being but One hundred and eighty Men at firft. Such were the Miferies to which thefe Men expofed themfelves in Search of Riches.
7. We mult, before we can proceed, give the Reader fome Account of a very extraordinary Perfon who was engaged in this Expedition, and who, by his Dexterity and Prefence of Mind, delivered his Companions, in fome meafure, out of the Dangers they were in. The Name of this Gentleman was Vafquez Nugnez or Nunez de Balboa: He was a Perfon of good Fanily, great Parts, liberal Education, of a fine Prefence, and in the flower of his Age, being then about Thirty-five. He had formerly failed with Baftidas upon Difcoveries, and had afterwards obtained a very good Settlement in Hijpaniolu, but, having committed fome Exceffes there, was in danger of being put to Death. In thefe unfortunate Circumftances he procured himfelf to be put on board Captain Encifo's Ship in a Bread-cank, and, after having remained there fome Days, he ventured at laft to make his Appearance, when the Ship was an hundred. Leagues at Sea. The Captain, who had been charged not to carry any Offenders out of the Ifland, was extremely vexed at this Adventure, and threatened to fet him on Shore in the firft Defart Inand he came to ; but the principal Perfons on board interceeding for him, the Captain was at laft pacified, and granted him his Pro-
tection;
tection ; which, however, did not efface from his Memory the Ufage he had met with, as we fhall fee in its proper Place.
This Man, obferving that the Company were in a down-right Defpair, and knew not which way to turn themfelves, took upon him to encourage them, by afferting, that they were not in fo defperate a Condition as they imagined ; for that, when he was upon this Coaft before, with Baftidas, they had failed to the Bottom of the Gulph, where they had feen a very large fine Town, fituated in a fruitful Soil, in a fine Climate, and which was inhabited by warlike Indianis indeed; but fuch as did not make ufe of poifoned Darts. He therefore advifed them to get off their Brigantines which were ftranded, and endeavour to purfue their Voyage.
They approved Nunez's Advice, failed to the River which the Indions call Darien, and, having viewed the Place, found all according as he had defcribed it. The Inhabitants and their Cazique, whofe Name was Cemano, underftanding that the Spaniards were coming, fecured their Wives and Children, and with Five hundred Men waited for the Spaniards on a little Hill, who having performed their Devotions fell upon them, and foon put them to the Rout. They went to the Town, and, as they wifhed, found it full of Provifions. The next Day they marched up the Country and the Mountains thereabouts, where they found many Houfes without Inhabitants, they being all fled, but there were Veffells, Houfhold Goods, and Cotton Things like fhort Petticoats for Women, as alfo mucla Cotton fpun and unfpun, and Plates of Gold, fuch as they hung on their Breafts, and other Things, amounting in the whole to Ten thoufand Pieces of fine Gold. Encifo being overjoyed at this Succers, fent for the Mien that had been left on the other Side of the Bay, becaufe the Brigantines could not carry them at once. Nurez gained much Reputation by the Succefs of this Enterpriife, and began to be in very high Efteem.

They all ageeed to eftablifh a Colony there, and to call it Senta Maria el Antiqua del Darien, or S. Mary the Antient of Darien; the firft being the Name of a Church at Seville, and the latter, the Indian Name of the River. Nunez, being now in great Credit, fecretly contrived with his Friends to depofe Encijo from the Command, alledging, that fince they were out of the Limits of Hojeda's Government, he had no longer any Authority. Whilft thefe Things were in Agitation Encifo thought fit to order that no Man, upon Pain of Death, fhould trade with the Indians for Gold; and they, fufpecting he did it to draw all to his own Advantage, unanimounly threw off all Subjection to him, faying his Authority was expired on the Account above mentioned, and for other Reafons. Encijo thus deprived of the Government, they refolved to chufe Alcaldes and Regidores, which are the Titles of the chief Magiftrates in Spani/b Towns; and accordingly Nunez de Balboa, and Zamadio, were elected Alcaldes, and Valdibia was appointed Regidore. However, the Men, not being pleared with this Government, and repenting that they had excluded Encijo, begun to fall at variance about it; fome alledging that it was not proper to be without a Commander in chief, and by this means they divided into three Parties. One of them demanding that Encijo fhould be reftored till the King appointed another Governor ; the fecond faid they ought to fubmit themfelves to Nicuef ${ }^{2}$, becaure that Country was within his Diffrict; the third confifted of Nunez's Friends, who would have the prefent Government ftand, but, in cafe they would have a fingle Commander, infifted it fhould be Nunez de Balboo.
In the Midft of all there Debates, Roderic Enriques de Colmenares arrived with two Ships, having on Board Provifions, military Stores, and feventy Men. This Captain, meeting a great Storm by the Way, put into the Port of Santa Maria, fifty or fixty Leagues from Cartbagena, by the Indians called Gayra; the Boats going there to water, the Lord of that Country came out with twenty of his Followers, cloathed in a fort of Cotton Cloaks, though all Indians in thofe Parts go naked, and, drawing near, bid them not take of that Water, becaufe it was not good, fhewing them another River. Not being able Yol. II. Numb. 73.
to come at it by the beating of the Sea, they returned to the firft Place; and, as they were filling their Cafks, on a fudden about feventy Indians rufhed out, and, before the Spaniards could ftand upon their Guard, wounded forty-five of them with their poifoned Arrows: The wounded Men fwam away, becaufe the Natives ftaved the Long-boat, and, when they got to the Ships, they all died except one. Seven Spaniards hid themfelves in a great hollow Tree, in order to fwim to the Ship at Night.
But the Men on board, fuppofing them to be killed, failed away very melancholy, for the Bay of Uraba, to enquire after Nicuel $\sqrt{a}$; and, finding no body on the Eaft-fide of the Bay, where they thought Hoojeda's Men, or their own, might be, Colmenares was much furprized, fufpecting they were all dead, or gone to fome other Place ; but thought fit to fire fome Pieces of Cannon, that they might hear him if they were thereabouts; and to make Fires at Night, and Smokes by Day; on the arjacent high Rocks. They that were at Santa Macria el Antiqua del Darien heard the Gun, which made all the Bay roar to the Weftward, and made Signals, and he came to them about the middle of Noveraber, 15 10: He difributed the Provifions he had among them all, and, by that Generofity, gained the Affections of the greater Part of thofe who oppofed the calling of Nicueffa; fo the: they agreed he fhould be fent for, in order to talke upon him the Government.
8. It is requifite for us, now, to turn to Don Diego Nicuefja, in order to fee how he paffed his time after leaving Alonfo Hojeda, whom he had fo generounly affifted. A few Days after, he met with as great Mifchiefs at Sea, as Hojeda had done on Shore; for he was toffed by a dreadful Tempeft from without, and betrayed within by Lopez de Olano; who, perceiving the Squadron feparate, followed one of the largeft Ships into the River Cbagre, in order to fet up for himfeif, and left his Patron to fhift as he could. After fome very unlucky Adventures, he arrived at Veragua, which was their general Rendezvous; and there he laboured to perfuade the People to abandon their original Defign as impracticable, and to fail away to Hifpaniola, there to make the moft of what they had left; alledging, that without all doubt, Nicueffa was perifhed with all his Men.

While they were meditating this Project, there came a Shallop into the Port, with four Men on Board, who brought Advice that the Governor Nicuefa was not far off; that he had been ftranded upon an unknown Coaft, and marched a great Way with incredible Fatigue by Land, and was, with his Followers, in a moft miferable Condition. Upon hearing this News, Olano's Heart relented, and he immediately difpatched the Shallop with Provifions and Refreflments, which came fo opportunely, as to fave Nicueffa and his Men from ftarving, which otherwife muft have been their Fate. Yet this did not, in the leaft, foften his Refentments againft his Lieutenant; whom, if it had not been for fear of the Men, he would have hanged; and, as it was, he put him in Irons, and threatened to fend him in that Condition to Spain. It was not long, however, that this Authority remained in his Hands; for, endeavouring to fettle a CO lony on the River Betblebem, he found himfelf fo ftreightened for Provifions, that he was conftrained to leave a Part of his Men there, and to fail with the reft to Puerto Bello; but the Indians not fuffering them to land, he was conftrained to proceed four or five Leagues farther to that Port, which, for Reafons before mentioned, Columbus called the Baftimentos; and, as foon as he entered it, he cried out Paremos aqui en el nombre de Dios, that is, Let us fay bere in the Name of God.
There debarking his. Men, he began to erect a Fortrefs, which, from the Expreffion before mentioned, was called Nombre de Dios. He had not been long there before he found himfelf in the fame Plight as in the former Colony; fo that he was obliged to fend one of his Veffels to Santo Domingo, to befeech the Governor to grant him fome Affitance. This Veffel was fcarce out of the Port, before that with Colmenares on board arrived in the River of Darien, on the Meffage that has been before related from the Spanib Colony fettled there: Cab-
menaress
menares, and his Mc , were fo amazed to fee Nicueffa and feventy of his Company he had left with him, lean, ragged, and bare-footed, that they could not forbear thedding of Tears, efpecially when they heard how many had died, and the great Difafters they had fuftained. Comenares did all he could to comfort Nicueffa, telling him that the People of Darien defired he would come and govern them; the Country there being good, that they had Provifions in Plenty, and did not want Gold. Nicueffa began to be in Spirits, and, having received Provifions, banifhed Defpair, returning thanks to God for that great Mercy; however, as foon as this Joy was over, he loft the Reputation he had before gained in Hifpaniola, of being a difcreet and prudent Man; for, forgetting the miferable Condition he had been in, and not remembring that thofe People who fubmitted themfelves to him had done it of their own Free-will; he had fo little Senfe as to declare in Public, that he would take all their Gold from them, and punifh them over and above, which was foon fpread abroad.

Nor was this the only Error he was guilty of, for he fuffered a Caravel to go before, having a mind to view fome Inands that lay in the Way. That fame Night Lopez de Olano, who was fill kept Prifoner, fpoke with fome of thofe that came from Darien to incenfe them, and, when he was going aboard, he faid, Nicueffa fancies that Hojeda's Men will receive him as we did, when he had been loft at Veragua. James Albetes and the Bachelor, Corral, went aboard the Caravel that went before, and gave notice at Darien of what Nicueffa had faid concerning taking away their Gold and punifhing them, that he was become cruel and ill natured, abufing thofe that were with him, and more to that effect. Nicueffa from the little Inlands fent $\mathcal{F o b n}$ de Cayzedo to acquaint the People of Darien that he was coming, and, he being privately his Enemy, incenfed them ftill more than the other two had done before ; whereupon they refolved not to admit him among them; and this Refolution was chiefly forwarded by Nunez de Balboa, who advifed all the prime Men to keep him out; though, at the fame time, underhand he called the public Notary, and declared that he was not againft Nicuelfa, and required him to give him a Certificate of the fame.

Nicueffa having fpent eight Days among the Iflands, taking fome Indians ${ }_{2}$ when he came to the landing Place at Darien, was amazed to find many of the Spaniards on the Shore, and one of them, in the Name of all the reft, requiring lim to return to his own Government at Nombre de Dios; but, defiring to be heard, and returning again the next Day, as foon as he landed they went to feize him, but, being extraordinary fwift of Foot, none of them could overtake him. Nunez hindred the People from proceeding any farther, fearing they might do him fome harm, and from that time was much his Friend. Nicueffa intreated them that in cafe they would not accept' of him as their Governor, he might, at leaft, be admitted as a Companion, which they refuling, he farther prayed they would keep him as a Prifoner, for he would rather die then go back to ftarve at Nombre de Dios.

But, notwithftanding all this, they forced him, and about feventeen of his Men, into an old rotten Bark, and ordered them to make their Way back to the Place they had quitted, on pain of being funk where they were. There is no doubt they endeavoured this, but with what Success, is uncertain, only thus much is known, that they were never feen any more. There was, indeed, a Story current in the Indies, that when the Spaniards came to fettle themfelves in Cuba, as Thall be prefently related; they found this Infcription cut in the Bark of a large Tree: Here the unfortunate Nicueffa finifbed bis Miferies and bis Life togetber.
9. The Admiral, Don Diego Columbus, was very much blamed for not endeavouring, to the beft of his Power, to fuccour thefe Adventurers, notwithftanding that the Governments beftowed upon them were contrary to his juft Rights; and his Enemies made ufe of this to his Prejudice, at the Court of Spain, which had always a Jealoufy of him, and therefore readily liftened to whatever Complaints were brought againft him. The Admiral, on his Side, was fo fenfible, and fo well apprized of this, that he
left no Stone unturned to fecure himfelf thofe Countries upon which, he conceived from the Contract made with his Father, he had jut Pretenfions.

Upon thefe Grounds, having undertood, at the beginning of the Year 15II, that the Court was very defirous of having the great Inand of Cuba difcovered and planted, though they had no accounts of any rich Mines therein; he refolved to be beforehand with them, and to fend a Body of Men thither, under the Command of a Perfon whom he could truft; that having a Lieutenant there of his own, the Court might liave no Pretence for granting it away to any new Undertakers, as they had done that Part of the Continent which his Father had difcovered, and even the Inand of Famaica, which, however, he had recovered. To this Purpofe he made choice of James Velafquez, being the wealthieft and beft beloved of all the firft Spanifb Inhabitants in Hipaniola; befides, he was a Man of Experience, of a mild and affable Temper, though he knew how to maintain his Authority, and very difcreet. As foon as it was known, in Hifpaniola, that 7 ames Velafques was going to make Settlements in Cuba, abundance of People refolved to bear him Company, fome, becaufe he was beloved, and others, becaufe they were ruined and in Debt: All thefe being about three hundred Men, rendezvoufed in the Town of Salvatierra de la Zavana, to embark on board four Ships ${ }_{3}$ that Place being at the extremity of Hifpaniola.

But, before we proceed, it is fit to obferve, that the Province of Guatiaba, lying next to Cuba, the Diftance between the two Points being but eighteen Leagues, many Indians went over to Cuba in their Canoes, and among them paffed over, with as many of his Men as could, a Cazique of the Province of Guatiaba, called Hatuey, a brave and difcreet Man. He fettled on the neareft Country, known by the Name of Mayci, and, poffeffing himfelf of that Part, kept the People as Subjects, but not as Slaves; for it was never found in the Indies, that any Difference was made between a free People, or even their own Children, and Slaves, unlefs it were in Nero Spain, and the other Provinces, where they ufed to facrifice Prifoners of War to their Idols, which was not practifed in thofe Iflands. This Cazique, Hatuey, fearing that the Spaniards would fome time or other pafs into Cuba, always kept Spies to know what was done in Hifpaniola; and being informed of the Admiral's Defign, he affembled his People, who were moft martial, and, putting them in mind of their many Sufferings under the Spaniards, told them, "They did, all that for a great Lord they "were very fond of, which he would fhew them." And then, taking fome Gold out of a little Palm-tree Bafket, added, "This is the Lord whom they ferve, "c him they follow, and, as you have already heard, they " are about paffing over hither only to feek this Lord; " therefore let us make a Feftival, and dance to him, " to the end, that when they come, he may order them " not to do us harm". Accordingly they all began to fing and dance till they were quite tired, for it was their Cuftom to dance as long as they could ftand, from Night-fall till Break of Day, and their Dances were as in Hifpaniola, to the Mufic of their Songs; and though fifty thoufand Men and Women were affembled, no one differed from the reft in the Motions of their Hands, Feet, and Bodies. But thofe of Cuba far exceeded the Natives of Hijpaniola, their Songs being more agreeable: When they were fpent with finging and dancing before the little Bafket of Gold, Hatuey bid them not to keep the Lord of the Chriftians in any Place whatfoever, for though he were in their Bowels, they would fetch him out, and therefore they fhould caft him into the River, under Water, where they would not find him, and fo they did.
It may not be amifs, here, to give a Defcription of Cuba, from the Spanifb Writers: This Inand is 230 Leagues in Length, from Cape San Antonio to the Point of Mayci. The Breadth from Cape Cruze to Port Manati is forty-five, and there it begins to taper, and fo runs on to the Wefternmoft Point, narrowing to about twelve Leagues, from Matamano to Havanna; its Situation is within the Tropic of Cancer, from twenty to twenty-one Degrees: Moft of it is flat, full of Woods and Forelts,

## Chap. III.

 Columbus to Cortes's Expedition.but, from the Eaftern Point of Mayci, for thirty Leagues, there are vaft high Mountains, as there are beyond it to the Weftward, and in the Middle there are Hills, but not very high. Very fine Rivers run down on both the North and South Sides, full of Fifh, and efpecially Skates and Olives, that go up from the Sea towards the middle of it. On the South Side there is a prodigious Number of little mands, which the firt Admiral, Don Cbriftopker Columbus, called the Queen's Garden. There are others, though not fo many, on the North-fide, which Velafques called the King's Garden. On the South-fide, about the middle, there runs down, into the Sea, a mighty River, which the Indians call Cauto; the Banks of it are very agreeable, and in it are vaft multitudes of Alligators.
This Inand is very well wooded, fo that Men may travel almoft two hundred and thirty Leagues always under Trees of feveral Sorts, and particularly fweet-fcented and red Cedars, of which they make large Canoes, that contain fifty or fixty Perfōns; and of this Sort there were once great Numbers in Cuba. There are abundance of Storax Trees, fo that if a Man in a Morning go up to a high Place, the Vapours that rife from the Earth fmell of Storax, coming from the Fire the Indions make at Night, and drawn up when the Sun rifes. Another Sort of Trees produce a Fruit called Xaquas, which, being beaten, and laid by four or five Days, though not gathered ripe, are full of Liquor like Honey, and better tafted than the fweeteft Pears. There are abundance of wild Vines, that run up high, bearing Grapes, and Wine has been made of them, but fomewhat fharp; and there being aninfiniteQuantity of them throughout the Inland the Spaniards were wont to fay, they had feen a Vineyard that extended two hundred and thirty Leagues. Some of the Trunks of thofe Vines were as thick as a Man's Body, which proceeded from the extraordinary Moifture and Fertility of the Soil.

All the Inland is very pleafant, and more temperate than Hifpaniola, is very healthy, and has fafer Harbours for Ships than if they had been made by Art, as is that of St. Jago on the Southern Coaft, in the Shape of a Crofs; that of Xaquas fcarce to be matched in the World, the Ships paffing to it through a narrow. Mouth not above a Crofs-bow Shot over, and then turn into the open Part of it, which is about ten Leagues in Compafs, with three little Iflands fo fituated that they may faften their Ships to Stakes on them, and lie fafe from the Winds of all the Compafs, being fheltered by Mountains as if they were in a Houfe, and there the Indians had Pens to fhut up the Fifh. On the North Side there are good Harbours, the beft being that which was called de Carenas, and now the Havanna, fo large that few can compare to it; and twenty Leagues to the Eaftward of it is that of Matanoas, which is not quite fafe. About the Middle of the Inland is another good Port called del Principe; and almoft at the End that of Baraca, where good Ebony is cut; between which there are other good anchoring Places, tho' not fo large or commodious as thofe we have mentioned.
There are abundance of Fowl in Cuba, as Pigeons, Turtledoves, Partriges like thofe in Spain but fmaller, of which there are none in the other Inands, nor Cranes, except on the Continent: Another Sort of Birds there was, of which they had none on the Continent, of the Size of Cranes, which at firft are very white, and by degrees turn red, now called Flamences, and would have been much valued by the Indians of Nere Spain, if they had them, for the curious Feather-works they made; thefe move always five hundred or a thoufand in a Flock; they look like Sheep bedaubed with red; they feldom fly, but fand on the Ground in the Sea, their Legs in the Water, and drink the Saltwater; if the Indians took any to keep in their Houfes, they were forced to throw Salt into their Water. There is an infinite Multitude of Parrots, and about May, when they are young, they eat them, being very good Meat. They had few Land Animals, excepr a kind of Rabbits like thofe in Hijpaniola; but to make amends for this, they had vaft Quantities of both Sea and River Fifh, efpecially Tortoifes, excellent in their Kind, and very wholefome, curing the Itch and Leprofy in fuch as were content to make them their conftant Food. As for Indian Corn, no Inand in the Weft Indies produced it in greater Plenty;
and, taking all things together, it might be pronounced one of the fineft Countries in that Part of the World, and one of the belt provided. After the Spaniards had been fettled there fome time, they found confiderable Quantities of Gold in the Rivers, fome very pure and rich; but for the moft part of lefs Value than the Gold in Hijpaniola, or in the Ifland of St. Fobn de Puerto Rico.

After having fpoken of the Country itfelf; and of its feveral Productss it is but juft that we fhould fay fomething of the Natives, before they were conquered. The firft Inhabitants of this Illand were the fame as thofe of the Lucayos, a good fort of People, and good-tempered. They had Caziques, and Towns of two or three hundred Houfes, with feveral Families in each of them, as was ufual in Hifpaniola: They had no Religion, as having no Temples, or Idols, or Sacrifices; but they had Phyficians, or conjuring Priefts, as in Hifpaniola, who, it was thought, had Communication with the Devil, and their Queftions anfwered by him. They fafted three or four Months to obtain this Favour; eating nothing but the Juice of Herbs; and, when reduced to extreme Weaknefs, they were worthy of that Apparition, and to be informed whether the Seafons of the Year would be favourable or otherwife, what Children would be born, whether thofe born would live, and fuch like Queftions. Thefe were their Oracles, and thefe Conjurers they called Bebiques, who led the People into many Superftitions and Fopperies, curing the Sick by blowing on them, and fuch other exterior Actions, and mumbling fome Words between their Teeth.

Thofe People of Cuba knew that Heaven, the Earth; and other things, had been created; and faid they had much Information concerning the Flood, and that the World had been deftroyed by Water, from three Perfons that came three feveral Ways. Men of above feventy Years of Age faid, that an old Man, knowing the Deluge was to come, built a great Ship, and went into it with his Family and abundance of Animals; that he fent out a Crow, which did not return for fome time, flaying to feed on the dead Bodies, but afterwards returned with a green Branch; with other Particulars, as far as Noab's two Sons covering him when drunk, and the other's fcoffing at it; adding, that the Indians defcended from the latter, and therefore had no Coats or Cloaks; but that the Spaniards defcended from the others that covered him, and were therefore cloathed, and had Horfes. As to their Laws and Cuftoms, fince they lived in Towns and had Lords, it is likely their Will was a Law ; many affirm, that the Natives of Cuba, St. Fobn de Puerto Rico, Hippaniola, and Famaica, were not guilty of the Sin of Sodomy, nor did they eat human Flefh, though Oviedo is of opinion that they were Sodomites; other Men, of as much Reputation as he, deny it, and reprove him for it ; and the moft probable Opinion is, that all thofe Inands were firf inhabited by People that came over from Florida.

After faying fo much of Cuba, let us go on to what Fames Velafquez did there: He fet out from Salvatierra de la Zavana in November 151I, and landed at a Port called Palina, in the Territories of the above-mentioned Cazique Hatuey, that went thither from Hijpaniola, who ftood on his Defence, taking the Advantage of the Woods, where the Spaniards could not make ufe of their Horfes. After two Months thus fpent, the Indians hid themfelves in the thickeft Part of thofe Forefts, and the Spaniards hunting them, they carried all they took to fames Velafquez, who diftributed them among his Men, not as Slaves but Servants. Hatuey withdrew into the moft inacceffible Places; however, after much Time and Toil, he was taken and carried to Fames Velafquez, who caufed him to be burnt; whreupon all the Province of Mayci fubmitted, none after fuch an Example of Severity daring to hold out. When it was known in Jamaica that Velafquez was in $C u b a$, many of thofe who were with $70 b n$ de Efquibel afked leave to go over and ferve under him : Panfilo de Narvaez, a Gentleman well born, went a Commander of thirty Archers; he was a Man of a graceful Prefence, well-behaved, but not over difcreet. He was well received with his Archers by Velafquez, who gave
him the chief Command next himfelf, fo that he governed all things under him. The Indians of the Province of Mayci being quite fuppreffed, Velafquez began to think of dividing them among the Spaniards, as Obando had done by them in Hijpaniola, and took to himfelf thofe of five Towns, where he had been Lieutenant; and to this purpofe he founded a Town at a Harbour on the North Side, which Place was by the Natives called Barracoa; and this was the firf Sponifb Colony in that Inand.

From this Place he fent Narvaez with thirty Men to the Province of Bayamo, fifty Leagues from Barracoa, a fine open Country, andvery agreeable: Only Narvaez rode, all the reft marching on foot. The Natives of the Country came out to meet them with Provifions, becaufe they had no Gold, being aftonifhed at the Sight of the Mare, and a Man on her Back. The Spaniards took up their Quarters in an Indian Town, the Inhabitants whercof, obferving their fmall Number, refolved to rid themfelves of them. Though Narvaez was not very cautious, he had his Mare in the fame thatched Houfe where he lay, and a Guard at Night. Near feven thoufand Indians affembled from all Parts of the Province, with their Bows and Arrows: They fell upon Narvaez and his Men after Midnight, though it was unufual for them to fight at that time: They gave the Attack in two Parties, and found the Sentinels afleep. The beft of it was, that being earneft to plunder the Spaniards, for they ever coveted to be cloathed fince firtt they faw them, they did not obferve the time they had agreed on, fo that one Party was more forward than the other, and entered the Town fhouting.

Narvaez awaked in a Confternation: The Indians went into the thatched Houfes, where finding the Spaniards, they neither wounded nor killed them, being wholly intent upon getting their Cloaths. The Shouts having furprized them, the Spaniards in their Fright knew not what they were doing. Thofe Indians Narvaez had carried with him from Jamaica lighted Firebrands; and, this Thewing the Spaniards their Danger, Narvaez, though wounded by a Stone, found Means to get to his Mare and mount her: At that time, it feems, Part of the Spani/b Furniture was hung with Bells, and the Indians hearing the Sound of them, and feeing Narvaez coming after them on a round Trot, with his Sword drawn in his right Hand, they not only abandoned their Enterprize, but fled out of their Country; and Velafquez being informed of this, fent a.Detachment to join Narvaez, and fo became abfolute Manter of that Province, the Inhabitants taking fhelter in different Parts of the Illand, and fome, from their firt Imprefions of Terror, flying to the full Diftance of fifty Leagues, leaving none but their old and decrepid People behind them.
10. We have already fhewn, how Juan Ponce de Leon, by the Intereft of Nicholas Obando, was reftored to the Government of Puerto Rico, and how he fent his Predeceffors Cerron and Diaz Prifoners into Spain, which, tho' he looked upon it as a bold Stroke in Politics, turned upon himfelf; for they, prefenting a Petition againft him to the Court of Spain, and being ftrongly fupported by the Admiral's Intereft, were fent back again in their former Employments; by which Ponce de Leon found himfelf reduced to the State of a private Man. But having made a good ufe of his Time, he had acquired a large Fortune, which induced him to think of regaining his Credit and Power by making Difcoveries: And accordingly, on the Ift of March I512, he failed from the Port of St. German, with two fout Ships fitted out at his own Expence, fteering through the Inands called Lucayos, till, on the 2 d of April, he difcovered Land unknown to the Spaniards before that time, in the Latitude of $30^{\circ} 8^{\prime}$. Charmed with which Piece of good Fortune, he ran along the Coaft in fearch of fome Port, and at Night anchored near the Shore, in eight Fathom Water: Believing that Land to be an Inand, they named it Florida, becaufe it appeared beautiful, having many pleafant Groves, and was all level, as alfó becaufe they difcovered it at Eaffer, which the Spaniards call Pafcba de Flores. Juan Ponse went athore there to difcover and take poffeffion.
On the 8th they failed again, and on the 20 th of April
they perceived fome Indians, where they anchored. Fuan Ponce being called by the Indions went afhore, and they immediately endeavoured to poffefs themfelves of the Boat, the Oars, and the Arms; which was not refented, that they might not provoke them, till one of them funning a Sailor with a Stroke of a Cudgel he gave him on the Head, the Spaniards were obliged to fight, and had two of their Men wounded with Darts and Arrows pointed with fharp Bones, and the Indians received little Damage. Night parting them, Juon Ponce with fome Difficulty got his Mien together, and failed thence to a River, where they wooded and watered; fixty Indians came to oppofe them, one of whom was taken to give fome Information, and to learn Spanifb. The River they called de la Cruz, or of the Crofs, leaving one of Stone there, with an Incription. On the 8 th of May they doubled the Cape of Florida, giving it the Name of Cabo de las Corrientes, or Cape Currents, becaufe they are ftronger there than the Winds, and came to an Anchor near to a Town called Abacoa. All this Coaft, from Cape Arracifes to this Cape Corrienies, lies North and South one Point to the Eaftward, is clean, and has fix Fathom Water; the Cape lying in eighteen Degrees fifteen Minutes North Latitude. They failed on till they met with two Inands to the Southward, in twenty-feven Degrees; one of which, being a League in Compafs, they named Santa Monta, and watered there.

On the is th of May they proceeded ten Leagues, along a Ridge of fmall Illands, as far as to two white ones, and called them all together los Martyres, or the Martyrs, becaufe the high Rocks at a diftance look like Men that are fuffering, and the Name has been regarded as prophetic, on account of the many that have fince been caft away there: They held on fometimes North and fometimes North-eaft, and on the 24 th ran along the Coaft to the Southward, as far as fome fmall Inands that lay out at Sea, and yet did not perceive that was the Continent. A Way appearing to be between them and the Coaft for the Ships to take in Wood and Water, they continued there till the 3 d of $\mathrm{F} u n e$, and careened one of the Ships called St. Cbriftopher. Here the Indians came out in Canoes to view the Chriftians, being the firft time they did fo, for the Spaniards, tho' called by them, would not go ahore. When they went about to weigh an Anchor, only to remove it, thofe People, thinking they were going away, came out in their Canoes, and laid hold of the Cable to draw the Ship away; whereupon the Long-boat was fent after them, and the Mien going afhore took four Women, and broke two old Canoes. At other times when they came, there was no failing out, as finding no Opportunity, but on the contrary they bartered fome Skins and Gold, tho", but indifferent.
On the $4^{\text {th }}$ of Fune, while they were waiting for a Wind to go in fearch for the Cazique Carlos, who the Indians that were aboard faid had Gold, a Canoe came to the Ships with an Indian that underftood the Spaniards, fuppofed to be a Native of EFifpaniola, or fome of the Inands inhabited by Chriftians; he bid them ftay, for the Cazique would fend Gold to barter. They waiting accordingly, faw twenty Canoes, Part of them made faft two and two together ; fome of them went to the Anchors, others to the Ships, and began to fight: Thofe at the Anchors, not being able to weigh them, attempted to cut the Cables; but a Long-boat was fent out, which obliged them to fly, taking four, and killing fome. Fuan Ponce fent two of them to tell the Cazique, that, though he had killed a Spaniard, he would make peace with him. The next Day the Boats went to found the Harbour, and the Men landed. Some Indions came and told them, that the Cazique would come the next Day to trade; but it was to gain Time, to draw Men and Canoes together, as it appeared; for at eleven $0^{2}$ Clock eighty Canoes well equipped attacked the neareft Ship, and fought from Morning to Night, without doing the Spaniards any harm, the Arrows failing fhort, becaufe they durf not come near, for fear of the Crofs-bows and great Guns: At length they drew off, and the Spaniards, having ftaid there nine Days, riolved on Monday the

Chap. III. Columbus to Cortes's Expedition.

I th to return to Hijpanioia and Puerto Rico, difcovering fome Inlands in the Way, of which the Indians they had with them gave an, Account.

They failed along Inands till the 2 rit, when they arrived at the fmall Inands they called las Tortugas, or the Tortoifes; becaufe they took one hundred and feventy of them in a fhort time in one of them, and might have taken many. more if they would. On the 28 th, feeing Land, they came to an Anchor to trim their Yards and Sails, but could not tell what Country it was, moft of them took it for Cuba, becaufe they found Canoes, Dogs, Cuts of Knives, and other Iron Tools, yet none of them knew it to be that Illand. The 25 th of July they were among a parcel of low Inands, without knowing any ching of that Place, till Fuan Ponce fent to view an Inand, which appeared to be Bchoma, and fo an old Indian Woman, they had found alone in another Mand, told them, as did James Miruelo, a Pilot, who happened to be there with a Boat from Hijpaniola; having ranged backward and forward till the 23 d of September, and refitted the Ships, Fuan Ponce refolved to fend one of them to take a Yiew of the Ifland Bimini, where the Indians faid there was a Spring that made old People young again. Fobn Ferez de Ortubia was appointed Captain of that Ship, and Antony de Alaminos Pilot; they took two Indians to pilot them over the Sholes, there being fo many that it is a difficult Matter to pafs between them. Twenty Days after Juan Ponce returned to Puerto Rico, as did, fome time after him, the Ship which he had fent, which found the Inand of Bimini, but not the famous Spring. Yet the Inand was large, pleafant, and diverffied with Hills, Meadows, Plains, many Rivers and delightful Groves.
It is certain that Fuan Ponce de Leon, befides the main Defign of making new Difcoveries, which all the Spaniards then afpired to do, was intent upon finding out the Spring of Bimini, and that River in Florida, the Irdians of Cuba and Hifpaniola affirmed old People bathing themfelves in became young again; and it was certain that many Indians of Cuba, firmly believing that there was fuch a River, Had, not long before the Spaniards difcovered that Inand, paffed over into Florida in fearch of that River, and there built a Town where the Race of them Atill continue. This Report prevailed with all the Princes and Caziques in thofe Parts, to endeavour to find out a River that wrought fuch a wonderful Change; fo that there was not a Brook, nay, fcarce a Lake or Puddle in all Florida but what they bathed themfelves in, and there are fome ftill that perfift in it, ignorantly believing that it is the River now called Fordan, at the Cape of Santa Helena; never reflecting that the Spaniards firt gave it that Name, in the Year 1520 , when the Country of Cbicora was difcovered. Though this Voyage, made by Fuan Ponce, turned to little or no Account to him, yet it gave him Encouragement to go to Court to fue for fome Reward for the Countries he had difcovered, believing them to be all Inands and no Continent, which Notion continued fome Years. However, the Voyage was beneficial on account of the Rout foon after found out, to return to Spain through the Channel of Babama, which was firft performed by the Pilot, Antony de Alaminos.
For the better underftanding of Fuan Ponce's Voyage it is to be obferved that there are three different Archipelagos of Lucayo Inands. The firf the Babama Inlands, which gave Name to the Channel where the Currents are moft impetuous: The fecond they called de los Organos, and the third Martyres, which are next to the Shore of Tortoifes to the Weftward, which laft being all Sand, cannot be feen at a Diftance, and therefore many Ship have perifhed on them, and along that Coaft of the Channel of Babama and the Inands of Tortugas. Havanna, in the Inland of Cubo, is to the Southward, and Floride to the Northward, and between them are all the before mentioned Inands of Organos, Babama, Martyres, and the Tortugas; having a Channel with a violent Current, twenty Leagues over in the narroweft Place, between $H a$ vanna and los Martyres, and fourteen Leagues from los Martyres to Florida; between Inands to the Eaftward, and the wideft Part of this Paffage to the Weftward, is forty Leagues, with many Sholes and deep Channels, but there

Vol. II. Numb. 73
is no Way for Ships or Brigantines, only for Canoes. But the Paffage from Havanna, to come to Spain, is along the Channel of Babama, between the faid Havanna, Martyres, the Lucayos, and Cape Canaveral; and this was the great Merit of Juan Ponce de Leon, who was well rewarded in Spain. There happened about this time a very fingular and melancholy Event, which, becaufe I find it recorded by many Spani/h Hiftorians, and as it fhews to what a Height Corruption was grown in fo fhort a time, as fince the Spaniards had fettled in the Indies; it feems but reafonable that it chould find a Place here for the In ftruction of the Reader. The Reports that had reached Spain of the manner in which the poor Natives were treated in the Indies, being affigned to the Proprietors of Land as if they were Cattle that grazed upon it; it moved fome religious Men, of the Dominican Order, to go over to the new World, in order to fee what Progrefs they fhould be able to make among the Indians, by the Ufe of fpiritual Weapons only.

Three of thefe Fathers landed in the Inand of Porio Rico, where one of them falling fick, the other two procured a Veffel to carry them over to the Miain, where they were landed not far from that City, which Hojeda and Vefpucius faw in their firft Voyage, and called it from its fanding in the Water Venezuela, that is, little Venice; where they found the People very docile and tractable, and were in a fair Way of making Converts to the Chrift ian Religion; but, very unluckily for them; a Spanifb Pirate that made it his Bufinefs to fteal Indians, anchored on the Coaft, and the poor People, confident of being wel treated by Chriftians, went on board the Veffel with their Cazique at their Head, of which the Pirate taking advantage, weighed anchor, and made all the Sail he could for Hijpaniole. This, as may be eaflly imagined, raifed a great Tumult among the Indians, who were on the very Point of putting the two Dominicans to Death; when another Spanifb Ship arrived in the Port, commanded by a Gentleman of honour; he pacified the Indians as well as he could, and having received Letters containing a true ftate of the Fact, from the Fathers, he promifed that in four Months time their Cazique and the reft of their Countrymen fhould be fent home again.

As he really intended to perform what he had promifed, fo on his return to Fifpaniola, he applied himfelf to the Royal Audience, or fupreme Tribunal, at Santo Domingo, fetting forth the Cafe as it food, and the Danger that the two Priefts were in, if thefe Indians were no fent back in due time. But, alas ! it fo happened, that thefe very People had been purchafed as Slaves by fome of the Members of the Royal Audience, and they were not fo much in love with Juftice as to releafe them The Confequence was, that when the four Months were expired, the Indians, to revenge the Lofs of their Prince and Relations, murdered the two Dominicans, whofe Names were. Francifoo de Cordova, and Fuan Garcias.
II. It is now time for us to return to the Tranfactions of Don Diego de Velafquez, in the Inland of Cuba, who, having reduced the beft Part of that Country, and fettled feveral Spanifh Colonies therein, began to be very defirous of fetting up for himfelf, and of fhaking off the Authority of the Admiral fames Columbus, by whom he had been placed there. The Admiral was by this time recalled into Spain, and oppofed this Project of Velafquez to the utmoft of his Power; which, however, was now funk fo low, that he was not able to carry his Point ; for though Velafquez was ftill left accountable to him for the Exercife of his Authority, yet he was not allowed to recall him but with the Confent of the Crown, which fo well anfwered the Purpofe of $V_{e}$ lafquez, that he refolved to execute, without farther Delay, a Project which he had long meditated of fitting out Ships for Difcovery

He no fooner made his Intentions known, than num bers of Spanifh Planters, who were grown rich, embraced the Propofal, and offered to contribute large Sums towards carrying it into execution. Amongtt thofe who diftinguifhed themfelves on this Occafion, Francis Her nandez de Cordova, a rich and brave Man, who had Indians of his own, offered to go as Captain of thofe Mer; which, being granted, he fitted out two Ships and a Bri-
gantine
gantine with all neceffary Stores: He liited one hundred and ten Soldiers, and failed from Santo Domingo, in Cuba, to the Havanna. They left the Harmana on the 8th of $\mathrm{Fe}_{\varepsilon}-$ bruary, 1517 , and on the 12 th they doubled Cape St. Antony, holding on their Courfe to the Weftward, becaufe the Pilot Antony do Alaminos faid the firft Admiral had always inclined that Way when he failed with him, being a Boy.

They met with a great Storm that held them two Days, in which they expected to have perifhed; and after twenty-one Days being at Sea, lying by at Nights, they faw Land, and, from their Ships, could defcry a large Town, which was about two Leagues from the Coaft. As they drew nigh two Canoes full of Men appeared: They haled them, the Canoes drew near, and thirty Indians went aboard the Commodore, having Jackets without Sleeves, and pieces of Cloth wrapped about them inftead of Breeches. The Spaniards gave them Meat, fome Spanifb Wine, and Atrings of Beads. They made Signs, for there was no Interpreter, that they would be gone, and return the next Day with more Canoes to carry, them afhore; very much admiring the Ships, the Men, their Beards, their Cloaths, their Arms, and other things they had never feen before. The next Day they returned with twelve Canoes and an Indian, who was the Cazique, crying out Conez Cotocbe, that is, come to my Houfe; and, for this Reafon, that Place was called Cape Cotoche. The Spaniards, having confulted, hoifted out their Boats, and in them, and the Canoes, went afhore with their Arms, where an infinite number of People waited to fee them.

The Cazique ftill preffed them to go to his Houfe, and they, obferving fo many Tokens of Friendihip, concluded to do fo, in order to take a view of the Country; when they came to the Wood, the Cazique called out to a great Number of armed Men that lay in Amburh, and immediately there appeared a Multitude in Armour, made of quilted Cotton, with Targets, wooden Swords having edges of Flints, large Cutlaffes, Spears and Slings, adorned with Plumes of Feathers, and their Faces painted of feveral Colours. They gave a hideous Shout, pouring in at the fame time fuch a fhower of Stones and Arrows that they wounded fifteen Spaniards, after which they fell on Sword in Hand, and fought with much Refolution. The Spaniards had only twenty-five Crols-bows and Mufkets, which were well plyed. But, when the Indians felt the Sharpnefs of the Spaniards Swords, they fled, many being wounded, and feventeen killed. There were taken in this Action two Youths who became Chriftians, and were called Fulian and Melcbior; the Spaniards returned to their Ships well pleafed, for having found a rational fort of People, and other things different from what there were at Darien, and in the Iflands; and, more efpecially, Houfes of Stone and Lime, which had not, till then, been feen in the Indies.

They held on their Courfe down the Coaft, always lying by at Night; and, having advanced fifteen Days after this manner, they found a large Town, and a Bay near it, which they believed to be a River where they might water, which was very acceptable, as they were in want. They landed, and underftanding the Indians called it Quimpeche, they from thence called it Campeche, Being come to a Well of good Water, of which the Natives ufed to drink; when they had taken what they wanted, and were ready to return to their Ships; fifty Indians clad in Jackets, with large Cotton Cloths instead of Cloaks, came, and, by Signs, afked them what they wanted, and, whether they came from thofe Parts where the Sun rifes, inviting them to go to their Town: When they had feriounly confidered on it, and put themfelves into a good pofture of Defence, for fear of being ferved as they had been at Cotache, they went to certain Places of Worfhip built with Lime and Stone, where there were Idols of various ugly Shapes, as they had feen in the former, with frefh Signs of Blood, as alfo Croffes painted, which they were much amazed at.

Abundance of People, Men, Women, and Children, came flocking, looking upon them with Aftonifhment, and fome of them fmiled; foon after two Parties of armed Men appeared in good order, like thofe of Cotocbe;
from one of the Temples iffued ten Men in very long white Mantles, their Hair long, black, and twitted up in Rolls behind: In their Hands they had little earthen Firepans, into which they caft Gum Anime, which they called Copal, and perfumed the Spaniards, bidding them to depart their Country or they would kill them; then they began to beat their little Kettle-Drums, and to found their Horns, Trumpets, and Pipes. The Sponiards, becaufe the Men that had been wounded at Cotocbe were not yet well recovered, and two died, retired to the Shore in good Order, ftill purfued by the armed Parties, and embarked again without any Lols. When they had failed fix Days longer the Wind blew North, bearing upon the Coaft, fo that they had like to have perifhed. When the Storm ceafed they endeavoured to draw near the Shore to water, becaufe their Cafks were leaky, fo that their Water lafted not long. They anchored near a Town, in a Bay, where they landed in the Afternoon, a League from the Town called Potoncban, and filled their Veffels at fome Wells they found near certain Places of Worfhip of Lime and Stone, like the former. When ready to return they perceived armed Men advancing towards them from the Town, juft as before. They afked whether they came from thofe Parts where the Sun rifes, the Spaniards anfwered they did; and then the Indians drew back to fome Houfes, becaufe the Night came on, and the Spaniards, for the fame Reafon, refolved to ftay there; a great Noife being heard foon after, the Spaniards, upon Debate, were divided, fome being for embarking, and others thinking the Retreat dangerous, becaufe there feemed to be three hundred Indians to one of them.

When Day appeared they perceived that the firf Parties had been joined by others, who, incompafing them, poured in a great Ihower of Arrows, Stones and Darts, which wounded near eighty Spaniards, with whom they clofed, ufing their Swords and Spears; and, though the Spaniards were not idle with their Fire-arms, Crofs-bows, and Swords, the Indians fureightened them, but, when they felt the Spanifh Swords, they drew farther off, the better to take aim with their Arrows; whilft they fought they cryed out Calachani, Calacbani, which, in the Language of rucatan, fignifies Cazique, or Captain, meaning that they fhould fhoot at the Commander, Hernond de Cordova, and they were not wanting in Endeavours, for they fhot twelve Arrows into him, which, it was generally faid, he might have avoided, for there was no Encounter in which he was not foremoft, though there was more Occafion for his directing than acting. He finding himfelf fo much wounded, and, that the Courage of his Men could not vanquih fuch a Miltitude, continually encreafing, they made a moft furious Onfet; and broke through them, the Indians ftill purfuing them with hideous Noife and Cries; when they came to the Boats, their Number being great they were ready to fink, but ftill they made off, the Natives fhouting at them, and running into the Water to wound them with their Spears: Seven and forty Spaniards were killed in this Action, and five died aboard the Ships. The wounded Men endured moft piercing Pains, their Wounds having been wet with the Sea-water, and fwelling, curfing the Pilot Alaminos for his Difcovery, who ftill perfifted that this Country was an Inand, and they called this Bay de Mala Prelea, that is of the bad Fight, for the ill Succefs they had met with. The Spaniards that efcaped aboard the Ships gave God Thanks for their Deliverance out of that Danger; but, being all wounded except one, they refolved to retarn to Cubo, and, in order to it, burnt one of their Ships that was leaky, becaufe they wanted able Hands to fail them both, and ply the Pump. Being diftreffed for want of Drink, having left their Cafks at Potoncloan, fome of the foundeft Men went afhore, who could get no Water but what was brackifh, which they took at a Creek where there were many Alligators, and therefore they called it de los Lagartos, or of Alligators. Antony de Alaminos advifing with the other Pilots, it was refolved to ftand over for Florida, and, accordingly, in four Days they difcovered that Country. Alaminos was fent afhore with twenty: of the ftouteft Soldiers, carrying Crois-bows and Mufkets, and Captain Francis Hernendez, who was much
wounded

Chap. III. Columbus to Cortes's Expedition.
wounded, begged he would fpeedily bring him fome Water, becaufe he was perihing for want of it.

When landed near a Creek, Alaminos told them he knew the Place, having been there before with $7 u a n$ Ponce de Leon, and that they muft be upon their Guard; having accordingly pofted Centinels along an open Shore, they dug Pits, where they found good Water, drank fome, and wafhed out Linen for the wounded Men. When they were about returning, they perceived one of the Sentinels come running, and crying, To Sea, to Sea; for warlike Indians are coming. On the other hand, they fpied many Canoes coming down the Creek. The Indians with long Bows and Arrows, Spears and Swords, after their manner, cloathed in Deer-fkins and being of a large Size, were very dreadful. They let ty their Arrows, and at the firft Difcharge wounded fix of the Soldiers; but feeing the Effect of the Crofs-bows, Mufkets, and Swords, they made to the Canoes, which preffed hard upon the Sailors, and had wounded Antony de Alominos in the Throat. The Soldiers clofed with them, being up to the Wafte in Water, and with their Swords made them quit the Boat they had taken. When ready to embark, they afked the Soldier who had ftood Sentinel, What was become of the other Sentinel? He faid, he had feen him ftep afide with a Hatchet in his Hand, to cut down a Palmito going towards the Creek along which the Indians came, and prefently had heard the Cry of a Spaniard, which made hin come to bring the Alarm. That Soldier was the only one who efcaped at Potoncbon, and it was his hard Fate to perifh there; for the others followed the Tract of the Indians, and found a Palm Tree he had begun to cut, and near it a greater Tract than elfewhere, which made them conclude that they had carried him away alive, and though they had fearched for above an Hour, they returned to the Ships without findling him.

The Men were fo extreme thirfy, and defirous of Water, that, as foon as the Boat came to the Ship's fide, a Soldier leaped into it, and laid hold of a Jar, and drank fo much that he fwelled, and died within two Days, Sailing from thence, in two Days and Nights they arrived at the little Illands, called los Martyres, where the greateft Depth being but four Fathoms, the Ship touched upon fome Rocks, and became very leaky ; but it pleafed God that, after fo many Sufferings, they arrived at Port Careras, now the Havanna; from whence Captain Hernandez de Cordova fent an Account of his Voyage to the Governor Fames Velafquez, with the Particulars of all he had feen, and died ten Days after. Three of his Soldiers died alfo at the Havanna, which made up fiftyfix loft in the Expedition ; the reft difperfed themfelves about the Ifiand, and the Ships returned to the City of Santiago; by which the Fame of their Voyage was fpread over all Cuba.
12. As indifferent Succeis as this firft Difcoverer met with, yet his Memoirs were highly efteemed by Velafquez, who trequently declared, that it was by no means his Intention to part with this Difcovery in fuch a manner ; but that, on the contrary, he was determined to purfue it when Opportunity offered, for many Reafons, but chiefly for this, becaufe thofe People feemed more civilized than any other Indians, and were confequently more likely to prove rich. Thefe Sentiments of his were no fooner known, than feveral of the principal Inhabitants of the Ifland offered him their Affiftance, fo that he was quickly in a Condition to put to Sea a fmall Squadron confifting of three Sail of Ships and one Brigantine, having on board in the whole two hundred and fifty Men, under the Command of the Captains Alvarodo, Montejo, and d'Avila; but the Perfon who commanded in chief was Jobn Grijalva, a Mian of Courage, Fidelity and Experience, to whom Velafquez gave this Order, That he fhould make what Difcoveries he could, but no Settlement. They failed from Cuba on the 8th of May 1518, and, having vifited the Coaft of Florida, and doubled Cape St. Antony, difcovered the Inand of Cozumel, to which their Commander gave the Name of the Ifland of Santa Cruz, becaufe he tound it on the Feaf of Holy Crofs, but it retained, notwithftanding, its old Name, by which it is ftill called.

Grijalua landed with a competent Number of Soldiers; and no body appeared, becaule the Natives having never feen Ships before, when they perceived them under fail, fled; whilt fome went to feek them he ordered Mafs to be faid. Two old Men being found in a Field of Indian Whear, and undertanding the Language of the Indions, Melchior and Julian, who had been taken in the former Expedition, Grijalva made much of them, and giving them fome Beads and Looking-glaffes, fent them away to their Lord, but they never returned. Whilft they waited for them, a young Woman, exceeding handfome, came, and in the Language of Famaica faid, The People were all fied into the Wood for fear ; but that fhe; being acquainted with Ships and Spaniards, was come to them: Many that came on board the Ships underftanding her, and admiring at it, anked, Who had carried her to that Inland? the anfwered, That a Canoe going out a fifhing from Jamaica two Years before, with ten Men in it, a Storm, and the Currents, had drove them to Cozumel, where her Huiband and all the reft had been facrificed to their Idols. Grijalva believing that Woman would be a trufty Meffenger, fent her to call the Natives, not confiding in Melcbior or Gulian for fear they would not return. The Woman came again two Days after, according to Promife, telling them, That though the had done all the could to perfuade them, they would not by any Means be brought to go back.

I 3. Grijalva finding no Good could be done there, went aboard again, and took with him the Famaica Woman, becaufe the begged him not to leave her there. In this Inland they found many Hives of good Honey Batatos, and Swine of that Country having their Navel on their Backs, which much refrefhed them. They faw feveral Temples, and one particularly like a fquare Tower, wide at the Bottom, and hollow at the Top, with four large Windows and Galleries ; and in the hol low Part, being the Chapel, were the Idols, behind which was a fort of Veftry ; where the Things belonging to the Service of the Temple were kept: At the Foot of it was an Inclofure of Lime and Stone, with Battlements, well plaiftered; and in the Midft of it a Crofs of white Lime three Yards high, which they held to be the God of Rain, affirming, that they never wanted it when they devoutly begged it of the fame. The Spaniards, embarking again, failed along the Coaft, much admiring to fee Jarge and beautiful Structures of Stone, with feveral high Towers which at a Diftance made a good Appearance ; for which Reafon, no fuch Thing having been feen at the Indies, as alfo on Account of the Crofs, Grijalva faid they had found a New Spain. Eight Days after they arrived at the Shore of Potoncban's Town, came to an Anchor, and landed the Soldiers with all the Boats near fome Houfes, where the Indians being grown vain with the Thoughts of having drove Hernandez's Men out of the Country, ftood drawn up to hinder the Spaniards from landing, fhouting, and making a great Noife with their Trumpets and Kettle-drums, and tho' fome Falconets, in the Boats, put the Men to a great Fright, being a Thing they had never feen, yet, when the Boats came near, they began to fhoot their Arrows, and caft Stones and Darts with their Slings, running into the Water to wound the Spaniards with their Spears; but as foon as they landed they made them give way with their Swords; for the Spaniards being taught by Experience, began to ufe the fame fort of defenfive Armour ftuffed with Cotton, as the Indians did: fo that they received lefs Harm by the Arrows, and yet fixty Soldiers were wounded, three killed, and Fobn de Grijalva, the Commander irn chief, was fhot with three Arrows, one of which broke fome of his Teeth.

The Boats coming with the Soldiers that had been left aboard, the Indians quitted the Field, and the Spaniards went to the Town, dreffed the wounded Men, buried the Dead, and found only three of the Natives. Grijalva ufed thofe three well, gave them fome Toys, and fent them to call the Inhabitants, promifing not to hurt any Man ; but they never returned, nor would he fend Mel cbior or Julinn, becaufe he fufpected them. Grijalvas embarked again, and came to a large, wide Gulph of
fref Water, like a River, but it was not; and Antony de Alaminos faid it was an Inand, and that the Water parted it from another Country, for which reaion he called it Boca de Terminos, that is, the Moutb of the Boundaries. They landed, ftayed three Days, and found it was no Iland, but a Bay, and good Harbour. There were Temples, with Idols of Clay and of Wood, reprefenting Men, Women, and Serpents; but no Town could be feen, and it appeared that thofe were Chapels for People that went a trading and hunting. During thofe three Days they took feveral Deer and Rabbits with a Grey-hound Bitch they had, which, the Spaniards not minding her, they left there; holding on the fame Way, always by Day, to avoid falling in among Flats or Rocks, they difcovered a very large Mouth of a River, which feemed to be a good Harbour; but founding it, they perceived that the two largeft Ships could not go- in, as the two fmaller did. The Boats went up the River very cautiounly, becaufe they faw many armed Indians, like thofe at Potonchan, in Canoes along the Shore.

This River, by the Natives called Tabafoo, being the Name of the Lord of the adjacent Town, the Spaniards named Rio de Grijalva, from their Commander in chief who found it. As they advanced higher, they heard the Noife of hewing Wood, becaufe the Inhabitants, having been informed of what had happened at Potoncban, concluded there muft be War.

The Spaniards landed at a Grove of Palm-trees, about half a League from the Town. The Indians feeing them land, about fifty Canoes full of armed Men, with Plumes of Feathers, and very fine, moved, ftopped again at a fmall Diftance from the Spariards, in a warlike Pofture; and when the Spaniards were ready to fire their Falconets upon them, they firft fent Melcbior and Fulian to fpeak to them. Thefe Interpreters told them, that they came only to treat about fome Affairs that would pleafe them. Four Canoes drew nearer, and being fhewn little Glaffes on Strings, and thinking they had been the Sort of Stones called Cbalcbibites, much valued among them, they were pacified. Then Grijalva ordered the Interpreters to tell them, that thefe Men were Subjects of a great King, to whom mighty Princes paid Obedience, and it was reafonable they alfo thould fubmit to him, becaufe it would be much to their Advantage; and that till they could explain thefe Affairs to them they fhould furnifh Provifions. The Indians anfwered, that they would give Provifions, but that they had a Lord of their own, and did not know why they who were juft come fhould offer to impofe a new Lord upon them; that they fhould take heed. how they made war on them, as they had done at Potonchan, for that they had provided above three Xiquiples (each Xiquiple being eight thoufand) of Men againft them; that they knew they had killed and wounded above two hundred at Potoncban; but that they were not fo weak as thofe People; and, to conclude, that they were come thither to know their Will, and would go and make a very juft Report of what they faid to a Number of very great Men, that were affembled either to treat of Peace or renew the War. Grijalva gave them Strings of Beaḑ, Looking-glaffes, and other things, charging them not to fail to bring back an Anfwer, becaufe if they did not, he muft needs go to the.Town, though not to do any harm.

He then returned to the Ships. The Meffengers delivered the Meffage, and all the prime Men, who were wont to be confulted in martial Affairs, thought Peace was preferable to War. They immediately fent their Indians loaded with roafted Fifh, Hens, feveral Sorts of Fruit, and Bread; then laying fome Mats on the Ground, they placed a Prefent on them, being a handfome Mank of Wood, and feveral Sorts of Feather-work, very beautiful; and an Indian faid the Lord would come the next Day to fee the Spaniards: Accordingly, taking along with him many Men unarmed, he without any Jealoufy went aboard Yobn de Grijalva's Ship, who was a genteel Man, about twenty-eight, and had on a loofe Coat of Crimfon Velvet, a Cap of the fame, with other rich Ornaments fuitable to the Coat. The Cazique was received with much Honour ; fitting down they began their Dif-
courfe, of which both Parties underftood very little, unlefs it was by Signs, and fome Words the two Indions, Julian and Melcbior, interpreted. After fome time, the Cazique ordered one to take out of a Petaca, which is in the Nature of a Trunk, the things he had carried.

The Indion took out Plates of Gold, and thin Boards covered with Gold, for Airmour, as fit as if they had been made for Grijalva, and the Cazique himfelf put them upon him, and took them off, applying thofe that fuited beft; and in this manner he put him on a complete Suit of Gold Armour, as if it had been of Steel. He alfo prefented him various Works in Gold and Feathers, a thing much valued, among them; and it was wonderful to fee how beautiful Grijalva looked; who gave the Cazique all the Signs of Gratitude that could be thought of He called for a very fine Shirt, and with his own Hands put it upon the Cazique; took. off his great Coat of Crimfon Velvet, and put that on him, as alfo a Pair of new Shoes. In fhort, he cloathed and adomed him the beft he could, gave him fome of the beft Strings of Beads, and Looking-glaffes, Sciffars, Knives, and feverall things of Tin; and the like to all that were with the Cazique. What the Cazique gave to Grijalva was computed to be worth three thoufand Pieces of Eight ; and among the reft there was a wooden Head-piece covered with thin Plates of Gold, three or four Mafks, fome of them covered with a fort of Stones like Emeralds, $E^{3} c$. and the Sight of thefe things made the Spaniards very eager to fettle in a Country which produced fo much Wealth.

As for $\begin{aligned} & \text { Fobn Grijalva, having received this great Prefent }\end{aligned}$ at Tabafco, and being fenfible that the Indians were not willing that their Guefts fhould ftay long, and in regard that the Spaniards afking for more Gold, the Indians anfwered Culua, Culua, he proceeded farther, and in two Days came to a Town called Aqualunco, which the Spaniards named la Rambla, the Inhabitants whereof appearing at a diftance, and having Targets of Tortoife-fhells, which glittered in the Sun, made fome of the Spaniards fancy that they were of pale Gold; they difcovered a Bay in which the River Tonala falls, where they entered at their Return, and called it Si. Antbony's River: At a diftance again they faw the great River Guazacoallo, but could not go up it, becaufe of the foul Weather: Next they had a Sight of the fnowy Inands of Nero Spain, and St. Martin, which Name was given them by the Soldiers who firft difcovered them. Holding on their Courfe, Captain Alverado went ahead with his Ship, and entered a River the Indians call Papalocva, but the Spaniards gave it the Name of Alverado's River, where the Indians of the Town of Tavotulpale brought Fifh, and the other Ships ftaid till he came out again: They then advanced to the Mouth of another River, which they called de Banderas, or of Colours, becaufe the Indians having large white Cloths on long Poles, like Colours, waved them for the Spaniards to come to them.

It is neceffary to inform the Reader of the Reafons which occafioned this, and which, in few Words, were thefe: The Country, on the Coaft of which they now were, was a Province of the great Empire of Mexico, over which Montezuma reigned, a Prince of great Wifdom and Penetration, who, having heard both of the former and of the latter Exploit of the Spaniords, and of the Pains they took to be acquainted with the maritime Parts of his Empire, began to grow jealous thereat, and was uneafy in his turn to know who and what there People were, and why they took fo much Pains to be inftructed as to the State of Countries that did not belong to them: To anfwer this Purpofe effectually, he gave Directions to the Governors of thefe Provinces to entertain thefe Strangers civilly, to take every Opportunity that offered of trading with them, and to fend him, from time to time, fuch an Account of their Motions, as might enable him clearly to difcern what Opinion he ought to entertain of them. It was in Confequence of theíe Inftructions, that the Indians fet up thefe Colours, to invite the Strangers on Shore.

On the other hand, the Spaniards feeing themfelves invited by the Signals of the Colours, Grijalva ordered two Boats to go afhore, and in them Captain Francis de Mon-
tejo, with all the Muketeers and twenty other Soldiers, with Directions, that, in cafe the Indians appeared in a warlike Pofture, he fhould give notice of it, that Succours might be fent. As foon as they landed they offered him Fowls, Bread, and Fruit ; the Indian, Fulian, not underftanding that Language, which was the Mexican, and they perfuming the Spaniards, burning Copal in little Fire-pans; Montejo fent advice to Grijalva, who, thereupon came up clofe with the Ships and landed, when one of the King of Mexico's Governors, and the other great Men, paid him much Refpect, he having given them fome GlafsBeads and Necklaces of feveral Colours. The Governor ordered the Indians to bring Gold to barter, and in the fpace of, fix Days they fcayed there, they got the Value of 15,000 Pieces of Eight in Gold Baubles, and Toys in feveral Shapes.
14. All things had hitherto fucceeded happily, fo as to do great Credit to the Commander in chief, and to thofe who were under him, but ftill there was nothing done comparable to the Expectations which had been raifed in Cuba of this Expedition; which prompted them to lofe no time, but to continue their Voyage with the utmoft Diligence, and, at the fame time, with all poffible Caution. Jobn Grijalva therefore contented the Ca ziques with Prefents of fuch things as he had, and having taken Poffefion of the New Country for the King, and for 'fames Velafquez, in his Majefty's Name, embarked again becaufe the North Winds blew there upon the Land, and he was not fafe; finding an Inand near the Continent he called it Ifla Blancha, or zobite Ifand, becaufe the Sands were whitih; and not very far from thefe another appeared four Leagues from the Coaft, which, being well wooded, they called la Verd, or the Green. Farther they faw another a League and a half from Land, and there being a good Road oppofite to it, Grijalva ordered the Ships to anchor there; he went to the Ifland with the Boats, becaufe there was Smoak, and found two Houfes well built with Lime and Stone, having many Steps that led up to Altars, on which there were Idols; and they perceived that five Men had been facrificed there that Night, their Breafts being ripped open, their Legs and Thighs being cut off, and the Walls bloody, which much aftonifhed the Chriftians, and therefore they call this the Ifland of Sacrifices.
They landed, again, oppofite to the Inland, where they made themfelves Huts of Boughs and the Sails of the Ships, whither fome reforted to barter Gold in finall Figures; but the Gold being inconfiderable, and the Indians fearful, the Spaniards removed to another little Inand about half a League from the Main. They landed on a Strand, built Barracs on the higheft Part of thofe Sands to avoid the Plague of the Mofquitos, or Gnats; and, having founded the Harbour, found there was fufficient Water, and that the little Ifland Sheltered them from the Northwind. Grijalva went over to the Inand with thirty Soldiers, in two Boats, where he found a Temple with Idols, and four Men who wore very long black Mantles with Hoods, being the Priefts of the Têmple, and, that very Day, had facrificed two Boys, whom they found ripped open, and their Hearts taken out; a piece of Cruelty which moved the Spaniards to Compaffion. Grijalva afked an Indian he had carried from the River de Banderas, who feemed a good rational Man, what that was for, who anfwered, that the People of Ulua would have it fo. The Name of the Spanifh Commander in chief being $\mathcal{F} 06 n$, and the time of the Year about the Feaft of St. Fobn Baptift, he gave that Name to the Ifland, and accordingly it has always been called. St. Jobn de Ulua, to diftinguifh it from St. Fobn de Puerto Rico.
Grijalva ftaid there feven Days bartering for fome fmall quantity of Gold; the Men being quite tired with the Trouble given by Gnats, having certain Knowledge that the Land they had been on was the Continent, and that there were great Towns on it, juftifying the Name given it of Nere Spain; the Cazibi Bread growing mouldy and bitter, and the Men being too few to fettle a Colony, becaufe ten had died of their Wounds, and others were fick; it was thought fit to give an Account

Vol. II. Numr. 73.
of all things to the Governor Velasquez, efpecially as he had ordered not to make any Settlement, that he might fend a greater Number if he fhould judge it fit to be done; for Grijalva, notwithftanding all the aforefaid Reafons to the contrary, was always of Opinion to build a Town. Peter de Alverado was made Choice of to carry this Meffage to James Velafquez, in the Ship St. Sebaftian, and to take with him all the Gold and other things that had been traded for, and ail the fick. Velafquez, after the Departure of Grijalva, from Cuba, had been in much Care for his Ships, as failing on unknown Seas, and therefore fent Chistopber de Olido, a Commander of Note, in a Ship with feventy Soldiers, to get Intelligence.

He being at Anchor on the Coaft of Rucatan, there arofe fuch a Storm as obliged him to cut his Cables, and run back to Santiago, in Cuba, whence he had fet out; and, at the fame time, arrived Peter de Alverado with the Gold, Cotton, Cloths, and a Relation of what had been done and difcovered, which was mighty agreeable to Velafquez, who conceived great hopes of that Enterprize, and the Report was fpread abroad to the great Aftonifhment of all Men.
Velafquez being a fevere Man to thofe that ferved him, and efpecially provoked againt fuch as were mifreprefented, alfo over-credulous, and Peter de Alverado having been one of thofe that were for fettling a Colony, and reprefenting the Affair to him as he thought fit, gave him very, ill Impreffions of the Man who had ferved him fo faithfully, and with fuch ftrict regard to the Orders he received from him at his Departure. But before we infift on this, let us return to our Difcoverers, and to the Progrefs they made in their Defign of obtaining a clear Account of this Part of the Continent.

When Captain Alverado was gone for Cuba, Grijalva, by the Advice of the Captains and Pilots, continued his Difcovery; and coafting along in fight of the Mountains of $\mathcal{T} u p a$, fo called from the Town near by them, and others, higher than they, for the fame Reafon, called Tupa; farther in the Province of Panuce, they faw Towns, and a River which they called Decancas. As they lay at Anchor, not being upon their Guard, ten Canoes, full of armed Men, appeared, 'and drawing near to the leaft Ship, commanded by Alonfo d' Avila, poured in a flight of Arrows, wounded five Soldiers, laid hold of the Cables and cut one, intending to carry off the Ship; and, though the Men in it behaved well, and overfet two of the Canoes, yet they ftood in need of the Fire-arms from the other Ships; for the moft of the Indians being wounded by them, defifted from their Enterprize, and fheered off; the Spaniards failed along the Coaft till they cane to a very large Point of Land, which being very difficult to double, and the Currents extraordinary ftrong; the Pilot Alaminos, gave Grijalva many Reafons to hew that it was not convenient to proceed any farther that Way; the Captains, Pilots, and principal Men, confulting together what fhould be done, thofe that had been before for fettling a Colony, were for turning back to find a proper Place for it.

The Captains, Montejo, and Avila, who differed in Judgment, alledged that Winter was drawing on, and Provifions were fcarce, for which Reafon, and becaufe one of the Ships was leaky, it was proper to return to $C u b a$; befides, that they were not able to maintain their Ground becaufe the Natives were numerous and warlike, and the Spaniards much fatigued with being fo long at Sea. Grijalva confidering that his Inftructions were pofitive not to fettle, and that his Commanders oppofed it, urging fufficient Reafons, thought fit to comply, and, tacking about, they arrived at the great River of Guazacoallo, but could not enter it, the Weather preventing them. They proceeded to that of Tonala, which they called of St. Antony, where they careened the leaky Ship. In the mean time many Indians came from the Town, which was a League off, with Hens, Bread, and other Eat-ables, which they parted with for Spanifh Toys; and the News being fread abroad, others came from Guazacoallo and the reft of the Neighbouring Towns, bringing Provifions, Came fmall Bold Plates; and Copper Axes, very
bright,
bright, with the Shafts of them painted. The Spaniards, thinking thofe Axes had been of pale Gold, purchafed fix hundred of them, and the Indians would willingly have parted with more.

A Soldier, whofe Name was Bartbolomew Pardo, went into a Temple that flood in the Fields, whence he took that Perfume which the Indians call Copal, or, as fome call it, Gum Anime ; he alfo took the Knives made of Flints, with which they facrificed Men, ripping open their Breafts, and fome Idols; all which he delivered to the Commander in chief, having firft taken off their Earrings, Pendants, Plates, and Crowns of Gold, worth about ninety Pieces of Eight; but, not being able to conceal his Joy for the Booty, Grijalva had Notice of it, who ordered all to be taken from him ; yet, being of a generous Temper, reftored them upon paying the fifth to the King. The Ship being refitted, in forty-five Days they arrived at Cuba with four thoufand Pieces of Eight in Gold, befides what Alverado had carried, and the Copper Axes, which, when they went to pay the fifth, thinking them to have been Gold, they found rufty, to the Confufion of the Purchafers.

They put into the Port of Matancas, where they found a Letter from the Governor, ordering Grijalva to make hafte to the Port of Santiago, and to tell the Men that another Fleet was fitting out to return thither to make a Settlement ; and that they who intended to go back fhould remain in fome Farms he had thereabouts. Grijalva made hafte to Santiaga, where the Fleet was making ready ; and when he appeared before Velafquez, he had no Thanks for the Trouble he had been at ; but was abufed, becaufe he had not fettled, though it was purfuant to his own Inftructions; which was a great Overfight in V'elafquez, and fuch an Overfight as was altogether inexcufable; for his great Point was, to find in the firf Place a Man capable of making fuch a Difcovery, and in the next, one incapable of betraying him in order to fet up for himfelf.

There could not certainly be a more difficult, or a more uneafy Employment, than to fearch out fuch a Perfon; but one would have imagined, that a Man of fo much good Senfe as Velafquez really was, would have had Wit enough to have kept him, when Experience had demonAtrated that Grijalva was fuch a Man. The very thing for which he difgraced him, ought chiefly to have preferved him from that Fate, fince nothing but a fcrupulous Regard to Inftructions could poffibly tie down a Man who had made great Difcoveries, from taking that Method which was moft likely to acquire him Reputation, and to eftablifh at once his Fortune and Independency. But Velafquez, like many other Men of good Senfe, preferred other Peoples Opinions to his own, and thereby loft the Advantage which his fuperior Talents would have given him, though it is highly probable that this Error of his might contribute more to the important Conquefts made by the Spaniards in thofe Parts than the wifeft Meafures he could have taken, as the Reader will fee at large in the enfuing Sections; but it is now time to conclude this with a few Obfervations and Remarks, which I flatter myfelf will be of fome Ufe to the Reader.
15. The vaft and furprifing Succefs which the Spaniards met with in reducing fo many fine Inands, and fuch rich and fruitful Countries under their Dominion, has united a multitude of Writers in a Notion, that they conducted their Affairs with that extraordinary Prudence and Steadinefs of Character, for which they have been always remarkable; but a little Reflection on the Facts related in this and the foregoing Sections will Thew, that this Notion is abfolutely groundlefs, and that they acted in this Matter with as little Conduct and with lefs Judgment than could have been expected from a Nasion at that time in fo high a Reputation for Wifdom, as they were. The Truth is, that it was the Virtue of Particulars that acquired all; and, in this Refpect, they were indeed very fortunate, fince few Nations could boaft of abler Politicians, or of more expert Captains than thofe three great Men to whom the Spaniards owe their mighty Empire in America.

The firtt was the Admiral Columbus who difcovered the Illands, and upon whofe Schemes thofe Difcoverers went who found and fubdued the two great Empires on the Continent. The next was Ferdinand Cortes, and the Third, the Marquis Pizaro, Men of incredible Abilities; and therefore worthy of immortal Reputation. There is no doubt that their Atchievements, weighed in the Balance of Reafon, very far exceeded thofe of moft of the Antients; for whereas, thefe had commonly good. Tools to work with, thofe not only did their Work but forged their Tools. To convince the judicious Reader of what I fay, I fhall not fend him for Inftances without the Limits of this Performance; for having given this Work the Title of a Library, there ought to be nothing wanting in it that is neceffary to make its Subject underftood. Let us compare then the Expedition of Nearcbus, of which we have given the Hintory in our formerVolume, with that of Columbus, let us confider how great a Fleet, what a Number of Men, and what able Commanders he had, how fmall a Difcovery he made, failing always within Sight of Land, and only from the Mouth of the Ganges to the Head of the Perfian Gulph, yet how great a Figure does his Expedition make in the Works of the ableft Authors of Antiquity, and what mighty Rewards were beftowed upon him for thofe Services, his important Difcoveries. Yet Columbus, with three Veffels, fmaller than any of his, with fcarce any Encouragement or Affiftance from thofe about him, made this furprifing Tranfit from Spain to the WeftIndies, and eftablifhed the Spaniards there before his Death, in wider and more ufeful Conquefts, than accrued to the Mafter of Nearchus, from his Indian Expedition. Let us compare the Force with which Alexander attacked the Indians, and failed of fubduing them, with the Armies commanded by Cortes and Pizaro, and we fhall find that the latter were, beyond all queftion, greater Conquerors, as we fhall fully demonftrate at the Clofe of their refpective Expeditions.

At prefent we mention thefe only as Proofs of the Truth of our Obfervation, that it was not the Wifdom of the Spanifh Government; but the perfonal Abilities of fuch as were accidentally employed in their Service that brought about thofe great Events. For, with regard to the former, we have feen how ill they treated the firft Difcoverer at Court, and how far they were from putting it in his Power to exert, even in their Service, his great Capacity to the utmoft. After his Deceafe, the Management of the Affairs of the Indies fell almoft intirely into the Hands of the Bifhop of Burgos, who, of all the Statefmen at that Court, was the leaft fit to have been intrufted with them, and who in fact managed them in the ftrangeft manner imaginable. Liftening, on the one hand, to the Propofals of every needy Projector, as in the Cafe of the firft Adventurers mentioned in this Section; and on the other, flighting the Schemes of thofe who, by their general Knowledge of the Indies, were moft likely to accomplifh great Things, and who, by their wife Conduct in the fettling of their new Colonies, had, in their own Hands, a Power fufficient to accomplifh them. Accordingly we fhall fee that of all the Bifhop's Inftruments, not one fuceeeded in what he propofed; but, on the contrary, brought themfelves to Beggary and Want, by rafhly engaging in Enterprizes every way beyond their Ability, whereas all the fuccefsful Undertakings of the Spaniards were under fuch as were employed by the Governors of Colonies, and confequently the Spanifh Miniftry had no Right to take to themfelves any fort of Credit from their Performances.

The only Favourites of our famous Bifhop Fonjeca, that made any Figure in the World, were two very bad Men, well provided with Impudence, but very indifferently furnifhed with otherTalents. The firft of thefe was Americus Vefpucius, whom we have already mentioned with little Credit, and whom we fhall again have occafion to mention with lefs. This Man, by the Intereft of his Patron, was declared Chief Pilot of Spain, and to him all the Journals of Difcoveries werecommunicated, from which- he drew very elegant Maps, and helped out by
his Fancy whatever Defects there were in his Memory, fo that he exhibited things with a very graceful Proportion, and the only thing wanting in his Charts was a ftrict Regard to Truth; but, however, they anfwered his Purpofe very well, for, befides fecuring to him a good Place and a competent Salary, they enabled him to impofe his Name on the new World, before he had difcovered a Foot of it.
The other Creature of the Bifhop's that diftinguifhed himfelf, was Bernard de Santa Clara, whom he preferred to be Treafurer of Hifpaniola, under the Governor Obando, who was likewife in the Efteem of the Bifhop, and the moft worthy of all his Eriends; the Treafurer before mentioned, was a very indifferent Steward for the King, but acquired a very good Eftate for himfelf, of which he was fo proud, that, befides the Salt for ufe, he caufed four large Salt-fellers, full of Gold-duft, to be fet every Day upon his Table; which piece of Vanity being known in Sprin, a Commiffion was granted to infpect this Gentleman's Accounts, and by this means it was difcovered that he had cheated the King, or, at leaft, was indebted to him in 80000 Pefos, which makes near 25000 Pounds in our Money. The Governor Obando was very fenfible, that, when all this Man had was fold, the King would hardly have his Due; but, to fave the Bifhop's Credit, and his own, he bethought himfelf of a very extraordinary Expedient: He loved to. pafs for a Man of ftrict Juftice, and therefore he ordered the TreaGurer's Effects to be fet up to Auction; this was, in all appearance, very fair, and no Exception could be taken at it; but the Governor, when the Lots came to be put up, encouraged People to bid confiderably more than they were worth, telling them that he would warrant it a good Bargain; they, to merit his Favour and Protection, bidding upon each other; the whole of his Effects were fold for 96000 Pefos, fo that the King had his Debt, and the Treafurer a very pretty Fortune to begin the World with again. Such were the Arts, fuch the Intrigues, of thofe Men, who had oppreffed the old Admiral, and fuch the little dirty Contrivances by which they hid their own Failings.
Yet thefe things were done under the Reign of King Ferdinand, efteemed one the wifeft Monarchs of his time; and things went rather worfe under the Emperor Cbarles $V$, though he was, certainly, in every Refpect, as great a Prince as ever fat upon the Spanifs Throne. The Inference I would make from thence, is, that at all Events, and under all Adminiftrations, Difcoveries ought to be attempted and encouraged, becaufe they carry in themfelves fuch Incitements to complete them, that they feldom or never fail of proving beneficial in the End, whatever Miftakes there may fall out in the Management of them at the beginning.

Some afribe this to Chance, others with more Senfe as well as Decency, to Providence. But, however, certain it is, that great Occafions provoke, if they do not produce, great Spirits; and when once the Way is open, and two or three Inftances have hewn the World that many things are practicable, that for feveral Ages were thought impoffible, mighty things are performed; for Emulation is a noble Principle, and one of the greateft Secrets in Government is to excite it ; for it is rarely feen that any thing meets either with Favour from the Great, or with popular Encouragement, but it is fuddenly carried to a great Degree of Perfection. When once fuch a Spirit is raifed, even the moft difaftrous Accidents cannot extinguifh it; the Numbers of Spaniards that perifhed in the firft Attempts on the Continent, by Ship-wreck, Famine, and Difeafes; the unfor-
tunate Ends of Hojeda, Nicueffa, and Cordova, had no bad Effects in deterring others; for as all agreed there were Gold and Pearls to be met with in thofe Parts; the Thirft of Gain in fome, and the Thirft of Glory in others, foon overcame the Terror of fuch Examples, which, at firft Sight, one would have thought impoffible to have removed; befides, there wanted not fome who diverted the Blame of all thefe Mifcarriages, from the Dificulty of the Enterprize, on the Imprudence or fome other Imperfection of the Commander; and, as Slanders always find an eafy Belief, fo the Imputations that fell upon the Dead, ferved to encourage the Living; and Men were eafily brought to think that either their fuperior Capacities, or better Fortune, would carry them through, notwithftanding former Adventurers had failed.

To thefe we may add feveral concurring Circumftances, which gave Life and Vigour to thefe Undertakings, and which, for the Sake of Brevity, we fhall reduce under three general Heads. Firft then, the Marriage of Don Diego Colon, to Donna Maria de Toledo, induced a great many young Gentlemen, and fome Ladies of good Families, to tranfport themfelves to Hifpaniola, which proved of incredible Service to the new Colony, as we may eafily conceive, if we reflect on the Spanib Temper, and that it had in it, formerly, a much ftronger Tincture of that Heroic, or if you will, romantic Spirit, of which it ftill retains enough, and which, of all others, was the fitteft for promoting fuch kind of Exploits. The fecond was the eftablifhing a fovereign Tribunal at Santo Domingo; the Members of which having large Salaries; fome confiderable Perfons, and thofe too of a more advanced Age, were thereby engaged to accept of thele Employments; which carried over likewife a new Train of young People, in Quality of their Dependents, and there being a continual Struggle for Power between this new Tribunal, or as the Spaniards ftile it, the Royal Audience of Santo Domingo, and the Admiral; this created fuch a Jealoufy and Competition amongft the Dependents on both Parties, as had very favourable Effects on Affairs in general, and greatly promoted the Succefs of the Colony; how much foever it might perplex or difturb their Superiors, by the Trouble it occafioned. The third and laft that we fhall mention, was the Diftafte taken, efpecially at his firft coming to the Crown, againft the Emperor Cbarles, on account of his Partiality in favour of his Countrymen, the Flemings, which induced the Flower of the Spanib Gentry to think rather of advancing their Fortunes in the Indies, whither none but Spaniards could go, than their Credit in his Service; whom they judged to be neither over-willing to difcern their Merit, nor over-ready to reward it.

Thefe Obfervations as they arife naturally from what has been before related, fo they will ferve greatly to illuftrate the following Sections; in which we fhall exhibit to the View of the Reader, as great Inftances of Courage and Conduct; of civil Policy, and military Skill, as are to be met with in any Hiftory whatever; and for the Honour of the Spaniards it muft be acknowledged, that how ill foever thofe Heroes who conquered America were treated by their Statefmen; the learned Pens of that Nation have done as much Juftice to their Labours, as themfelves could wifh, and have not fuffered any of their Actions to appear with lefs Luftre to Pofterity in their Writings, than the Recital of fuch great and glorious Performances deferved. But it is now time to quit thefe Reflections, and to refume the Thread of our Hiftory, which leads us to fhew on what Grounds, in what manner, and with what Force the Concqueft of the great Empire of Mexico. was undertaken.

S E C I O N VII.

## The Expedition of Hernan Cortes for the Reduction of New Spain, from the Time of his being appointed to that Command, unto bis being obliged to return to the Ifland of Cozumel.

I. The Refolution taken by Diego Velafquez, Governor of Cuba, to purfue the Difcoveries and Settlements of New Spain, and the Meafures taken for equipping a tbird Squadron for this Expedition. 2. The Cbaracter of Cortes, who woas appointed Commander in chief, and the manner in wobich be attained that Command by the Nomination of Velaqquez. 3. Departure of the Fleet from St. Jago de Cuba, and the Reafons woby Velafquez laboured to deprive Cortes of the Command be bad given bim. 4. The Attenpts made by Velafquez to carry this Defign of bis into Execution, and the Methods which were fuccefsfully ufed by Cortes to overtbrow and defeat them. 5. Cortes takes upon bim the Command, notwitbfonding Velafquez recalled bis Commilfion, and proceeds in bis Voyage with the univerfal Applaufe of all who are engaged in the Defign. 6. Arrives at the IJland of Cozumel, and remedies all the Diforders qubich had been occafloned by the coming thither of a Part of bis Fleet before bim, under Peter Alverado. 7. Sails from thence weith a Defign of profecuting bis Expedition, but funds bimpelf obliged to return tbitber with Bis Fleet. 8. There comes thither, during bis ftay, one Jerom de Aguilar, a Spaniard, long a Prijoner in Yucatan, who gives a large Account of that Court, and of its Products. 9. Obfervations and Remarks on the foregoing Section, reith Some Reflections on the political Cbaraiter of Cortes.

"THE Difcoveries made on the Continent, under the Direction of thofe employed by Diego Ve lafquez, mace a prodigious Noife over all the Weft-Indies, and multitudes there were who fhewed a Readinefs to hazard their Lives, and embark their Fortunes for the Profecution of this Defign. We have, in the former Section, fhewn how this Country, when firt difcovered, came to be called New Spain; for the Soldiers obferving to one another the Refemblance between the Soil and Climate of this ftrange Land, with thofe of their own, the Comparifon made fuch an Impreffion upon their Minds, that they cried out one and all, a Nere Spain, a New Spain; fo that while other Colonies derived their Names either from the mifunderttanding of Indian Words, or from the arbitrary Pleafure of the firt Difcoverers, this was impored by the Voice of the People.
But the great Bufinefs was to fecure and fettle this new found Country, and that immediately and without Delay; for Velafquez faw plainly, that if he did not proceed in his Defign, it would be undertaken, either from other Colonies, or by Perfons commiffioned directly from Old Spain; and it was the Apprehenfion of this that made him fo very angry, though with very little Reafon, at the Conduct of his Coufin and Creature, Fobn Grijalva, in not making a Settlement there, though in exprefs Compliance with his own Order. His own Ambition hindered him from diftinguifhing another's Obedience; and the vaft Hopes he had formed to himfelf, from the Difcovery and Conqueft of New Spain, would not permit him to receive any Excufe from him, who, as he thought, had defeated them. On the other hand, Grijalva was extremely modeft, which hindered him from defending himfelf as he might have done; fo that he contented himfelf with fhewing the Inftructions he had received, and infifting that his Behaviour fhould be tried by them; which Velafquez looked upon as a tacit Imputation on himfelf; he applied all his Care, however, to the refitting the Veffels employed in the laft Expedition, and equipping both them and others for a new one, in which he fucceeded very happily, and had, in a fhort time, fuch a Profpect of a Fleet, capable of carrying into execution the Defigns he had formed, that he directed his Agents at the Court of Spain, to infift upon very high Terms, particularly that he fhould be declared Lord Lieutenant of the Countries fubdued by his Direction, and at his Expence.
His Preparations being in fuch Forwardnefs, it was abfolutely neceffary that he fhould make choice of fome body to act in quality of General and Commander in chief: And, in this, he found himfelf under very great Difficulties. The inferior Officers, and even the People in general, who were to make the Voyage, were very defirous of their old Commander, Fobn Grijalva; but, to this, he would by no means agree, either from an obftinate ill grounded Perfuafion of his want of Capacity, or, becaufe he was afraid of trufting a Man whom he had injured in fo high a Degree. When his Friends and Counfellors faw this, they recommended feveral others, rather in Compliance with their own Intereft, and Notions, than from a juft Efteem of their Abilitics, and a due Notion of the great Danger there was
in committing the Conduct of fo important an Enterprize, to one who might prove unequal to the Tafk.
This gave exceffive Uneafinefs to Velafquez, who was a better Judge of Men than thofe who advifed him, and who had probably been more fucceffful in his Choice, at leaft with regard to his own Intereft, if he had acted without any Advice at all.
At laft, when the Seafon for failing approached, and this Affair would admit of no longer Delay, Amador de Laris, the King's Treafurer, and Andres de Duero, his Secretary, took upon them to mention Ferdinand, or, as the Spaniards call him, Hernan Cortes, but in a very artful Way; for they told the Governor, that in doing this, they had not the Service of their Friend fo much at Heart, as the Good of the Expedition; and the Character they gave him was fo modeft, and fo much fhort of the Truth, that Velafquez, who knew him as well as they did, was extremely fenfible that they did not endeavour to impofe upon him; and therefore, from the very beginning, he liftened readily to their Recommendations ; he knew very well, that not only great, but even contrary Talents were requifite in the Perfon he wanted, who of Neceffity muft be a Man of high Spirit, capable of acting from his own Lights in all Cafes, without adhering too ftrictly to Inftructions, and at the fame time it was to be wifhed that he fhould preferve fuch a Regard for the Perfon who employed him, as not to be tempted by any Succefs whatever to throw off his Dependence. Hard Qualities thefe to be found, but Qualities about which the wifen Man might be eafily miftaken.
2. Before we go farther, it will be proper to fay who Hernan Cortes was, and through what variety of Events his happy Deftiny led him to atchieve the Conqueft of New Spain. He was born in Medillin, a Town of Efremadura, Son of Martin Cortes, of Monroy, and Donna Catalina Pizaro Altamarino, Names that fufficiently declare the Nobility of liis Extraction. In his Youth he for fome time applied himfelf to Letters, and was two Years at Salamanca, which were fufficient to make him fenfible that the Application of a ftudious Life, was contrary to his Temper. He returned home, refolved to follow the Wars, and his Parents pointed out to him Italy, but when he came to embark, he fell dangeroully ill, by which Accident he found himfelf obliged to change his Intention, though not his Profeffion, and therefore he refolved to go to the Indiess, where the War, at that time, was carried on with a View to Glory, rather than to Wealth. He embarked with the Approbation of his Parents, in the Year 1504; and carried Letters of Recommendation to Don Nicholas de Obando, great Commander of the Order of Alcontara, his Kiniman, and then Governor of the Ifland of St. Domingo.
He was no fooner arrived there, and known, than he gained general Efteern, and was fo kindly received by the Governor, as to be immediately admitted into the Number of his Friends; but all thefe Favours were not fufficient to divert his Inclination to Arms, for he was fo uneafy at the Inaction wherein he found that Ifland which the Spaniards now poffeffed, without any Oppofition from the Natives, that he defired leave to go and ferve

# Chap. III. 

for the Reduction of NEW Spain.
in the Ine of Cubd, where the War was ftill carried on; and having gained the Confent of his Kinfman, he endeavoured to fignalize himfelf in that War, by Valour and Obedience, which are the firft Virtues of a military Profefion. He very foon acquired not only the Reputation of a valiant Soldier, but alfo that of an able Commander; diftinguinhing both his Cóurage in Action, and his Capacity in Council. Cortes was well made, of an agreeable Countenance, and, befides thefc common natural Endowments, he was of a Temper which rendered him amiable; for he always fpoke well of the Abfent, and was pleafant and difcreet in his Converfation. His Generofity was fuch, that his Friends partook of all he had, without being fuffered by him to publifh their Obligations.

He married in that Inand, Donna Catbalina Suarez Pacbeco, a noble and virtuous young Lady. This CourtThip brought him under many Difficulties, by the Interfering of Diego Velofquez, who made him Prifoner till fuch time as all Differences were adjufted; and then $V_{e}$ lafquez gave her to him in Marriage, after which they were intimate Friends, and the Governor, in a little time, gave him a Diftribution of Indians, and the Poft of Alcalde or chief Magiftrate in the Town of St. Fago; an Employment ufually conferred on thofe who had diftinguifhed themfelves in the Conqueft of thofe Countries. In thefe Circumftances was Hernan Cortes, when Amador de Laris, and Andres de Duero, propofed him for the Conqueft of Nere Spain: And they did it with fo much Addrefs, that the next time they waited upon Diego Velafquez, furnifhed with frefh Reafons to enforce their Recommendation, they found him refolved on Cortes, and fo poffeffed with the Advantages of entrufting the Undertaking to his Care, that they changed their premeditated Arguments into Flattery; and only endeavoured to oblige him by applauding a Refolution fo agreeable to their own Wifhes. They agreed with the Governor that it was convenient immediately to publifh the Choice, in order to put a Stop, at once, to all farther Pretenfions; and Andres de Duero was not flow in the Difpatch of the Commiffion.
Cortes received his new Charge from Velafquez with great Expreffions of Refpect; being as fenfibly affected with the Confidence the Governor repofed in him, as he was afterwards with his Diftruft. The Refolution was made public, and well received among thofe who defired to fee that Affair brought to a Conclufion; but occafioned much Difcontent among his Rivals for the Employment. Thofe who had declared themfelves with the greateft Coldnefs, were the Relations of Diego Velafquez; who made very ftrong Efforts to raife in the Governor a Diftruft in Cortes. 'Tis reported, that Diego Velafquez walking out with Cortes, and with his Friends and Relations, a pleafant crack-brained Fellow, with whofe Whimfies he ufed to be diverted, faid to him, Thou haft done well Friend Diego; fhortly there will be Occafion for another Fleet to go in purfuit of Cortes. But Diego Velafquez ftood firm to his Refolution, and Cortes wholly applied himfelf to haften the Preparations for his Departure. The firt Step, was to erect his Standard with the Sign of the Crofs; having this Infcription in Latin, Let us follow the Crofs, for with this Sign we fall overcome.
He appeared in the Habit of a Soldier, which became his Perfon well, and fuited his Inclinations better; he employed his own Stock liberally, and what he could borrow from his Friends, in the buying of Provifions, Arms, and Ammunition, to haften the Departure of the Fleet; endeavouring, at the fame time, to draw together a Number of Soldiers for the Expedition, in which he did not find much Difficulty; for, the very Name of Enterprize, and the Fame of the Captain, were fo great, that, in a few Days, were lifted three hundred Soldiers; among whom, were Diego de Ordaz, the principal Confident of the Governor, Francijco de Morla, Bernard Diaz del Cafillo (who has written the Hiftory of this Conqueft) and other Gentlemen. The time for their Departure being come, Orders were given for the Soldiers to embark, which they did in the Day-time, the People all running
Volo IL Numb. LXXIV.
to the Sight; and at Night, Cortes, accompanied by his Friends, went to take leave of the Governor, who embraced him in a very friendly Manner, and the next Morning accompanied him to the Sea-fide, and faw him cmbark. Small Circumftances, and of little Importance, if fome had not wrote, without any manner of Reafon, that he called the Soldiets together from their Houfes, at Midnight, embarking with them by fteaith; and that Diego Velafquez going out after him in the Morning, Cories came up to him in a Boat well armed, and gave him to underftand, in a difrefpecful Manner, that he no longer had regard to his Orders.
3. The Fleet weighed from the Port of St. Fago, in Cuba, the r8th Day of November, 1518; and, having coafted along the North-fide of the Inand, failed towards the Eaft, and in a few Days arrived at the Port of la Trinadad, where Cortes had fome Friends, who gave him a very kind Reception. With this Reinforcement of Gentlemen, and an hundred Soldiers who came from the two Settlements, the Strength of the Fleet was confiderably augmented; and, at the fame time, Care was taken to buy up Provifions, Arms, and fome Horfes. Cortes affifted all who wanted with his Money; but fcarce had left the Port of St. Jago, when his Enemies began to cry out againft him, talking of his Difobedience, after the Cuftom of Cowards, who always attack the Abfent.

Diego Velafquez hearkened to their Difcourfe, and though he feemed to be difpleafed, they difcovered in his Mind Jealoufy, eafy to be worked up to an entire Diftruft; to which end they made ufe of Juan Millan, who, notwithftanding he was very ignorant, pretended to the Knowledge of Aftrology. This Man, fet on by others, having engaged Velafquez to Secrecy, acquainted him in myfterious Terms, that this Expedition would have a fortunate and unfortunate Event, giving him to undertand that he had learned fo much from the Stars ; and though Diego Velafquez was a Man of fufficient Senfe to difcern the Vanity of fuch Prognoftications, neverthelefs as his Foible was Jealoufy, this had fuch an Effect, that, notwithftanding he defpifed the Aftrologer, he began to be affected by what he faid. From fuch flight Beginnings fprang the firt Refolution which Diego Velafquez took to break with Cortes, by depriving him of the Command of the Fleet; he difpatched immediately two Couriers to la Trinidad, with exprefs Orders to Francifco Verdago his Coufin, to difpoffefs him of his Captain Generalhip, in a judicial Way, as fuppofing his Commiffion now revoked, and another Perfon named in his Room.
Cortes was quickly informed of this Accident, and, without being difcouraged at the Difficulty of the Remedy, fhewed himfelf to his Friends and Soldiers, that he might know in what manner they would refent the Injury done to their Captain, and how far he might depend upon the Juftice of his Caufe, by the Judgment they paffed upon it: He found them all not only in his Intereft, but refolved to defend him from fuch an Injury, though it fhould carry them to the laft Extremity of taking Arms in his Defence; and though Diego de Ordaz, and Fuan Velafquez de Leon were lefs warm, as depending more upon the Governor; they were eafily brought to approve that which they had not Power to hinder. Being thus fecure, he went to vifit the Alcalde. He laid before him the Danger to which he might expofe himfelf in fupporting fuch a Piece of Injuftice, by difgufting fo many Perfons of Diftinction as followed him; and how much the Fury of the Soldiers was to be feared, whore Affections he had gained, that he might the better ferve Diego Velafquez; and that he already found it difficult to keep them within the Bounds of Obedience to him.
Francijco Verdago approved his Reafons from a Principle of Generofity, and offered not only to fufpend the Execution of the Order, but to write to Diego Velafquez to engage him to defift from a Refolution, which was now impracticable; Diego de Ordaz, and the reft who had any Intereft with the Governor, offered to do the fame, and wrote immediately. Cortes likewife wrote to him, complaining of his Diftruft, without fhewing how far he was difgutted, or omitting his ordinary Refpect.

Thefer

Thefe Meafures taken to quiet the Mind of Velafquizz; Cortes refolved to profecute his Voyage, and, fending Pedro Alverado by Land, with a ftrong Party of Soldiers, to take care of the Horfes; and raife more Men in the Settlements upon the Road, he failed with the Fleet for the Havanna.

The Ships parted from la Trinidad with a favourable Wind; but, at the coming on of the Night, they feparated from the Capitana, where Cortes was on board, without obferving, as they ought to have done, the Courfe he ftood, or perceiving the Error of the Pilots, until the Day difcovered it; but being now far advanced, they continued their Voyage, and arrived at the Havanna, where the Soldiers landed. They were kindly entertained by Pedro de Barba, at that time Governor of the Havanna, under Velafquez. They were much concerned that they had not waited for their Captain, but their Difcourfes on that Subject went no farther than to furnifh themfelves with Excufes againft his Arrival; yet perceiving that he ftaid longer than they thought it poffible he could, unlefs fome Misfortune had befallen him, they began to be uneafy and divided in their Opinions: Some were for fending two or three Veffels in fearch of him; fome propofed to name a Commander in chief in his Abfence, but others thought fuch a Propofition unfeafonable; however, as nobody commanded, every one gave his Verdict, and nothing was done.

He who moft infifted upon naming a Commander, was Diego de Ordaz; who, as a Confident of Velafquez, expected to be preferred to the reft; and thought, that by the gaining of this Point, he fhould ftand fair to obtain that Poft from Velafquez. But at laft, after a Difpute of feven Days, Cortes fafely arrived with the Capitana. His Delay was occafioned by the Fleet's paffing over fome Flats, which lie between the Harbour of la Trinidad and Cape St. Anthony, at a fmall Diftance from the Ine of Pines; where the Capitana, as being the largeft Ship, ftruck, and was in Danger of being over-fet.
4. This Accident ferved to raife his Reputation; for animating his Men on the View of the Danger, he gave fuch Orders as were neceflary, with great Prefence of Mind, and without Confufion. His firft Care was to put out his Boat, and take out the Ship's Lading, which was carried to a little fandy Inand; by which means he fo far lightened her, as to fet her afloat; after which, getting clear of the Shole, he took her Lading on board again, and purfued his Courfe; having thus fpent the feven Days he was detained, and thereby much advanced his Reputation. Pedro de Barba lodged him in his own Houfe, and he was received with great Acclamations by his Soldiers, whofe Numbers immediately encreafed; feveral of the Inhabitarts and Gentry entering into the Service; among thede were Francifco de Montejo, who was afterwards the King's Lieutenant of Yucatan; Diego de Soto del Toro, Garcia Caro, Fuan Sedo, and other Perfons of Diftinction and Fortune, who added very much to the Reputation of the Enterprize.

Thefe Preparations took up fome Days, but as Cortes knew not how to be idle, he commanded the Artillery to be brought on fhore to be cleaned and proved; ordered the Cannoniers to obferve, exactly, how far each Gun would carry; and, as there was great plenty of Cotton thereabouts, he dirested the making a fufficient Quantity of defenfive Arms. Thefe were a kind of Quilts in the Form of great Coats, which were called Efcoupilles: Necefiity inventing what Experience afterwards approved. It being found that Cotton ftitched between two Cloths was a better Defence than Iron againft the Arrows and Darts of the Indians; for they loft their Force, by the weak Reffitance they met with; and were likewife hindered from glancing from one Man to another. At the fame time he exercifed his Soldiers in the Ule of their Fire-arms and Crofs-bows, and the Management of their Pikes: He taught them how to form and file off in Order; how to charge, and how to fecure a Poft: Infructing them both by Voice and Example, in the Rudiments of War, after the Manner of Antiquity; which Practice, in time of Peace, was in fo much Efteem
among the Romans, that from this kind of Exercife they gave their Armies the Name of Exercitus.

With the like Diligence and Ardour he went on with the reft of his Preparations ; but when every one was rejoicing at the near Approach of the Day appointed for their Departure, Gajpar de Garnica, a Servant of Velafquez, arrived at the Havanna with frein Orders to Pedro de Barba, exprefly enjoining him to difpoffefs Cortes of the Command of the Fleet, and to fend him Prifoner under a good Efcort; telling him how highly he had been difpleafed with Francifio Verdago, for letting him go from la Trinidad: And withal, giving him to underfand how much he would rifque in not complying with his Orders. He likewife fent to Diego de Ordaz, and to Fuan Velafquez de Leon, to be affifting to Pedro de Barba in the Execution of his Commands. But Cortes was advertifed of what was doing from feveral Hands, and even from Garnica. They warned him to take care of himfelf, fince he, who firft entrufted this Enterprize to his Conduct, was now going to difcard him, in a Manner highly injurious to his Honour, and who freed him from the Scandal of Ingratitude, by forcing from him the Favour for which he ftood obliged. Cartes, though a Man of great Spirit, could not help being fhocked with this new, Attempt, which touched him the more fenfibly, the lefs it was expected; for he thought Velafouez had been fatisfied with the Affurances that had been given him by all, in their Anfwer to his firft Orders which came to lo Trinidad; but being convinced of his Obftinacy, he began with lefs Temper to think of taking care of himfelf. He acknowledged that Velafquez had expended fome Money in fitting out the Fleet, but the greateft Part of the Charge was borne by himfelf and his Friends, and almoft all the Soldiers were raifed upon their Credit: He was alfo concerned for the Enterprize, which he forefaw would entirely mifcarry if he quitted it; but that which moft fenfibly affected him, was the Wound given to his Honour, which is dearer than Life itlelf; and upon there Reflections Cortes took his firft Refolution of breaking with Velafquez, judging that it was now no longer a time to fmother his Refentment, but refolved to provide for himfelf, and make ufe of the Force he was Mafter of, as Occafion fhould require. To this end, before Pedro de Barba had determined to publifh the Order he had againtt him, he made hafte to fend away from the Havanna Diego de Ordaz, whofe Fidelity he fufpected on account of the Efforts he had made to be chofen Commander in chief in his Abfence. He therefore commanded him to embark immediately on board one of the Veffels, and to make the beft of his Way to Guanicanico, a Settlement fituate on the other Side of the Cape Si. Antony, to take in fome Provifions, which he had directed to be carried to that Place, and there to wait his Arrival with the reft of the Fleet.

Cortes affifted in putting this Order in Execution, with his ufual Diligence and Calmnefs, and by this means got quickly rid of a Perfon who might have given fome Oppofition to his Defign. He went then to vifit Fuars $V$ llafquez de Leon, whom he eafily brought over to his Intereft ; being himfelf not a little difpleafed with the Proceedings of his Relation, and withal, more tractable and of lefs Artifice than Diego de Ordaz. Having taken thefe Precautions, he fhewed himfelf to the Soldiers, acquainting them with the new Difafter that threatened him. They all offered him their Services, agreeing in their Refolution of affifting him, but differing in the Manner of expreffing themfelves. But Pedro de Barba, apprehending the ill Confequences of not appeafing this Tumult in time, went to Cortes, and, appearing publickly with him, quieted all in a Moment, by declaring aloud that he did not defign to execute the Order of Velafquez, or to have any Share in fo great and fo unprovoked an Injuftice.
This turned all their Threats into Acclamations; and he prefently fhewed the Sincerity of his Intentions, by publickly difpatching Gafper de Garnica with a Letter to Velafquez ; in which he told him that this was not a time to ftop Corties, who was too well attended to let himfelf be ill treated, or to be reduced to Obedience by Violence; he reprefented to him in the frongeft Terms, the Fer-
ment his Order had occafioned among the Soldiers, and the Danger the Town had been in by the Commotion, and concluded his Letter with advifing him to regain Cortes by Acts of Friendfhip, by adding new Favours to thofe he had already beftowed, and relying on his Gratitude for what could not be compaffed either by Perfuafion or by Force.
5. A Brigantine of moderate Burden having joined the ten Veffels which compofed his Fleet, Cortes diftributed his Men into eleven Companies, putting one on board each Veffel; and named, for Captains, Fuon Velofquez de Leon, Alonjo Fernandez Partocarrero, Francifco de Montejo, Chrifoval de Olod, Fuan de Esculante, Francifco de Mirla, Pedro de Alverado, Francifco Saucedo, and Diego de Ordaz, who he had not fent out of the way with an Intention to forget him, nor was he willing to difoblige him, by not giving him an Employment. He referved for himfelf the Command of the Capitona, and intrufted the Care of the Brigantine to Gines di Mortes. The Command of the Artillery he beftowed upon Francifo de Orozco, a Soldier, who had fignalized himfelf in the Wars in Italy ; and chofe for his chief Pilot Antonio do Alaminos, a Man of Experience in thofe Seas, having ferved in the farne Quality in the two Voyages of Francifco Hernandez de Cordova, and Fuan de Grijalva.

He drew up Inftructions for his Officers, wherein, with fingular Forefight, he provided againft Contingencies; and the Day of Embarkation being come, they celebrated a Mafs of the Holy Ghoft with great Solemnity, at which all the Soldiers very devoutly affifted, recommending to God the Beginning of an Enterprize, the Succefs of which they expected from his Diviile Afintance ; and Hernan Cortes, as the firt Act of his Command, gave the Word St. Peter, thereby acknowledging Him the Patron of this Expedition as he had been of all his Actions from his Childhood. After which he ordered Pedro de Alverado to fail for the North Coaft, in fearch of Diego de Ordaz in Guanicanico, and, after they were joined, to wait for the Fleet at Cape St. Antonio. The reft of the Veffels had Inftructions to follow the Capitana, and, fhould they be feparated by contrary Winds, or any other Accident, to ftand for the Ine of Cozumel, difcovered by Fuan de Grijalva, which was but little diftant from the Land they were in fearch of, and where Cortes purpofed to confider and refolve on what fhould be moft neceffary for the Profecution of their Enterprize.

In fine, they departed from the Havanna the roth of February, 1519. The Wind at firft was favourable, but did not long continue fo, for at Sun-fet there arofe a furious Storm, which put them in great Diforder; and when the Night came, the Ships were obliged to feparate, that they might not run foul of each other, and to put right before the Wind. The Ship that Francifco de Mirla commanded fuffered moft, a Break of the Sea carrying away the Rudder, whereby he was in great Hazard of being loft; but the Storm ended with the Night, and as foon as they had Light enough to diftinguifh Objects, Cortes was the firft who came up with the Ship in danger; the reft followed his Example, and the Damage fhe had fuffered was foon repaired. At this time Pedro de Alverado, who was gone in fearch of Diego de Ordaz, difcovered, by Day-break, that the fame Storm had forced him into the Gulph a great way farther than he imagined for, in order to keep clear of the Shore, he had been obliged to put out into the open Sea, as leaft dangerous. The Pilot found by his Compars and Chart, that he was fallen very far from the Courfe prefcribed to him, and was at fuch a Diftance from Cape St. Antonio, that his Return would have been very difficult; wherefore he propofed it, as moft advifeable, to fail directly for the Ine of Cozumel: Alverado left it to his own Choice, reprefenting to him the Order of Cortes, after fuch a manner as looked as if he difapproved it.
Hereupon they continued the Voyage, and arrived at the Inand two Days before the Fleet. They landed with a Defign to lodge themfelves in a fmall Town near the Coaft, well known to the Captain and fome of the Sol-
diers fince the Voyage of Grijalva, but they found it deferted; for the Indians, upon the firft Notice that the spaniards were landed, abandoned their Houfes, retiring farther into the Country. Pedro de Alverado was a young Man of Spirit and Valour, well qualified where he received Orders, but of too little Experience to give them. He had a miftaken Notion, that while the Fleet was coming, any thing but Inaction would be a Virtue in a Soldier, and therefore ordered his Men to march, and to take a View of the inner Part of the Illand; and at a little more than a League diftance they found another Town forfaken in the fame manner, but not fo entirely unfurnifhed as the former, for there were fome Cloths and Provifions, which the Soldiers feized as Spoils of an Enemy; and in a Temple of one of their Idols they found many Jewels which ferved to adom it, and fome Inftruments for facrificing, made of Gold hixed with Copper, which, though of fmall Value, they took away. This Expedition did by no means promote the Service they were upon, but, on the contrary, frighted the $I_{n}$ dians, and croffed the Defign of gaining their Friendfip; Pedro de Alverado grew fenfible that he had made a falife Step, and retired to his firft Poft, having taken three Prifoners, two Men and one Woman, who furrendered without any Oppofition.
6. The next Day Cortes arrived with the whole Eleet; having fent to Diego de Ordaz, at Cape St: Antonio, to join him ; fufpecting, as it proved, that the Storm would, hinder Alverado from executing his Orders, and though inwardly well pleafed to find him there in fafety, he commanded the Pilot to be imprifoned, and reprimanded the Captain very feverely, for not purfuing his Inftructions, as well as for his Prefumption in marching up and down the Inand, permitting his Soldiers all the while to rob and plunder the Inhabitants.

He did all this publickly, delivering his Reproof in a fet Speech, which not only contained his Sentiments, but his Reafons alfo why he thought it fo great a Fault, inafmuch as it tended to leffen the Reputation of the Spaniards, and to defeat the Defign of the whole Voyage. To repair this Miftake, however, as well as he could, he immediately fent for the three Prifoners, and, having fer them at Liberty, caufed both their Gold and their Cloths to be reftored to them, and then, joining his own Indian, Melchior, who was the only Interpreter he had, his Companion Fulian being dead, he fent them away with a great many Prefents for their Cazique, with Orders to affure them, that he highly difapproved of whatever had been done to their Prejudice; and that he was firmly refolved to do every thing in his Power to merit their Friendfhip. To prevent any new Difputes, which he thought it his Intereft to avoid, he drew down his Forces to the Sea-fide, and, having encamped them there for three Days, he thought fit to make a general Review; upon which it appeared, that this mighty Army with which he was to undertake the Conqueft of the Mexican Empire, confifted of no more than Five hundred and eight Soldiers and Officers, Sixteen Horfe, and of thofe who did not belong to the Army, two Chaplains aad one hundred and nine Pilots; Mariners, and Men of other Profefions. To thefe he made a long Speech, in which he reprefented to them, that Difcipline was of far greater Advantage than Numbers, exhorting them to obey his Orders punctually, and promifing that his Example fhould ever give Weight to his Authority.

He had fcarce made an End of his Oration before Intelligence was brought him, that a confiderable Number of Indians were approaching, divided into feveral Corps, and without Arms: He drew up his Men, however, in Order of Battle, and commanded them to remain under Arms, till it fhould appear what it was thofe People aimed at. The Indians no fooner came in fight, than, gazing attentively upon theSpaniards, they remained for fome time withour Motion, only whifpering and confulting among themfelves what they had beft to do. At length, perceiving that no Hoftilities were offered, they advanced boldly on a fudden, and, mingling themfelves with the Soldiers, prefented them wirh Refrefhments, and
from
from that time continued a friendly Correfpondence, without fhewing any Signs either of Terror or Surprize; the Reafon of this was, That having in their Inand an Idol univerfally reverenced by all the neighbouring Nations, they were accuftomed to ree People of different Countries, Habits, and Languages, which either hindered them from being fo much aftonifhed, as other Indians were, or elfe taught them better to conceal their Fear.

At Night they all retired to their Houfes, and the next Day the principal Cazique of the Illand came to vifit Cortes with a numerous Equipage, delivering his Embafly and Prefent himfelf. The General received him with great Courtefy, and by his Interpreter returned Thanks for the Vifit, with an Offer of his FriendThip and that of his Followers. To which the Cazique replied, That he accepted the Friendfhip offered, as a Man who knew how to preferve it. One among the Indians who accompanied him was heard to repeat, after a bad manner, the Name of Caftilla, and Cortes, whofe Attention nothing, could divert from his Point, obferved the Word, and commanded the Interpreter to inquire into the Meaning of it. The Indians faid, that his Men very much refembled certain Perfons who were in 1 ucatan, Natives of a Country called Cafiilla; which Cortes no fooner heard than he refolved to fet them at Liberty, and engage them in his Service.

Upon informing himfelf more particularly, he found that they were in the Power of fome Indians of the higheft Rank refiding two Days Journey within the Province of Yucatan. Cortes communicated his Intention to the Cazique, and afked him, whether thefe were warlike $I_{n-}$ dians, and what Force would be neceffary to refcue the Chriftians from Slavery ? The Cazique gave him a very teafonable Anfwer, telling him, the fecureft Way would be to ranfom them; for that endeavouring to releafe them by Force of Arms, would expofe them to the Hazard of being maffacred by their Mafters. Cortes embraced his Advice, with Admiration to find fo much good Senfe and Policy in the Cazique, whofe Rank among Princes, though inconfiderable, had taught him fome Principles of what they call Reafon of State.

He immediately gave Orders to Diego de Ordaz, to fail with his Veffel and Company to the Coaft of Yucatan by the fhorteft Cut from the Ine of Cozumel, where he was to land the Indians appointed by the Cazique for this Purpofe. They carried a Letter from Cortes to the Prifoners, together with fome Trifles for their Ranfom, and Ordaz was commanded to ftay eight Days for them, in which time the Indians undertook to return with an Anfwer. The two Veffels came upon the Coaft of rucatan, and landed the Indians. They, within two Days, delivered the Letters to a Spaniard whofe Name was Ferom de Aguilar, who was pleafed with it and the Toys. Some fay, the Indians, for Fear, delivered the Letter to Aguilar's Mafter, who feeing him read it, wondered that Perfons at fuch a Diftance fhould underItand each other by that Method. Aguila referring himfelf to his Mafter, as fearing he would caufe him to be killed if he attempted to go away privately, obtained Leave of him to go, defiring that he would make them his Friends. This Lord fent fome Indians with him, and when he came to the Coaft, he perceived they had waited thereabouts, finding feveral Croffes made of Canes. Being much grieved for want of fome Conveniency to proceed any farther, and going along the Coaft, he found a Canoe half funk, which, with the Help of his Companions, he cleared of the Sand; and, though half rotten, got into it, rowing with a Pipe-ftave he alfo found by chance, and fo went down the Coaft, crofing in the narroweft Part over to the Ifland, being at leaft four Leagues. The Currents carrying him near to the Fleet.

In the mean time Cortes marched, with all his Troops in a Body, to take aView of the Inand; not that he faw any Neceflity for being on his Guard, but to keep the Soldiers rogether, and to preferve the Inhabitants frombeing infulted. He told his Men, that they were an indigent People unable co defend themfeves; that the Sincerity they fhewed entitled them to good Treatment in return; and that their

Poverty was fuch as gave no Temptation to Avarice ; that they were not to expect from that fmall Spot of Ground any otherWealth than Reputation. He was always accompanied by the Cazique and great Numbers of Indians, who fupplied him with Provifions, and exchanged Gold for Glafs Beads, believing that they overreached the Spaniards, and could never purchafe thofe Toys at too dear a Rate.

At a little Diftance from the Coaft ftood the Temple of the Idol fo much revered by the Indians. It was a fquare Building of Stone, and of no contemptible Structure. The Idol bore the Figure of a Man, but of fuch an horrible Afpect as plainly difcovered the Original it was defigned to reprefent. This Circumftance of Deformity was obferved in all the Idols worfhipped by thofe miferable People, however they differed in Make or Signification; whether it were that their Imaginations hit in this refpect, or that he who ftruck out the moft hideousFigure was accounted the beRY orkman.'Tis faid, this Idol was called Cozumel, and gave to the Inand the Name which it retains to this Day. The Spaniards found a very great Concourfe of Indians in the Temple, and irs the midft of them a Prieft, diftinguifhed from the reft by a certain Ornament or Covering, which fcarcely hid his Nakednefs. He feemed to preach, and perfuade them to fomething, by a Voice and Action extremely ridiculous. Cortes took this Opportunity to difcourfe the Indian Prince roundly on the Subject of his Idolatry, telling him, in the firf place, that it was impofible for them to continue Friends if he did not quit it ; and next, that it was very unworthy of him, who was a Man of Senfe and good Undertanding, to pay Divine Honours to ars ugly deformed Image, fitter to frighten Children than to be revered by Men.

The Cazique did not know how to argue with him; but feemed rather willing to fhift the Difcourfe; telling him, that he was much his Servant in what depended upon him ; but that, as for Religion, it was out of his way, and fo left it wholly to the Priefts, who fhould, if he pleafed, difcourfe with him upon the Subject. This was readily accepted, and one of the Priefts fent for, who no fooner underftood the Bufinefs than he began to threaten the moft dreadful Penalties, in the Name of his Idol, againft any who fhould prefume to difhonour him or his Habitation. Upon which Cortes, to fhew them how much they were deceived and impofed upon by thefe Jugglers, cauled all the Idols to be broke to pieces, and moft of their Chapels to be demolifhed, only the largeft of them he'preferved entire; and, having caufed a very neat Altar to be fet up there, he had Mafs faid thereon by the Chaplains and Priefts; and, at his Departure, charged the Cazique to take care that every thing was kept in good Order, and that no Infult was offered to the Image of the bleffed Virgin, or to the two Croffes which he erected in that Chapel; which the Indian Chief very readily promifed. And thus all Things being adjufted, Cortes began to provide for his Departure, the Ship being returned with Advice, That they had waited the appointed Time without feeing any thing of the Perfons for whom they were fent, and therefore judged it their Duty to return.
7. All Things being in order, Cortes put to Sea, with a Defign to follow the fame Courfe, which Juan de Grijalva had done before, and to difcover the Countries from which he had retired by too fcrupulous an Obedience to the Orders he had received. The Fleet had the Wind a-ftern, and all were overjoyed at the profperous Beginning of their Voyage, when an unexpected Accident gave them great Uneafinefs. Fuan de Efculante fired a Gun, and the reft of the Commanders, cafting their Eyes towards him, obferved that he followed with great Difficulty, and foon after tacked about, and food for the Inand: Cortes well underitood the Meaning of what he faw; and, without ftaying to deliberate, immediately ordered the Fleet to follow him. Fuan de Efculante ftood in need of all his Diligence to fave his Veffel, for the had fprung a Leak, and took in fo much Water that the was upon the point of finking when the reached the Shore, notwithftanding all pomble Expe-
ditions
dition had been ufed in coming to his Relief: The Soldiers landed, and the Cazique prefently came down with the Indians, and feemed to be furprized at the fudden Return; but when they underitood the Reaion, they very chearfully helped to unload the Veffel, and afterwards aflifted in repairing and careening it, managing their Canoes with great Dexterity, and performing fingular Service in a Cafe that required it.
8. While this was doing, Cortes, accompanied by the Cazique and fome of his Soldiers, went to vifit the Temple, and found the Crofs and Image of the Virgin Mary in the fame Place where he had left them, obferving withal, to his great Satisfaction, fome Signs of the Veneration paid them by thefe Barbarians" in the Cleannefs of the Temple, and the Perfumes they had burned, befides Flowers and Boughs, with which they had adorned the Altar. Cortes thanked the Cazique for the Care he had taken in his Abfence. The Indian was pleafed, and received the Compliment of the Spaniard as if it had been an Inftance of his extraordinary Conduct, that the Image and Altar had ftood unmolefted for no longer a time at the moft than for two or three Hours.
Whiltt the Ship was refitting, Cortes was told that a Canoe appeared making from $r$ ucatan towards the Inand; he came out to view, and, thinking it fell off a little, ordered Andrew de T'apia to' go as much under the Shelter of the Land as he could, and endeavour to take that Canoe which made to the Shore behind a Point of Land; four Men ftark naked landed out of it, only their Privities covered, and their Hair treffed wound about their Heads, with Bows and Arrows in their Hands. Andrew de Tapia had pofted himfelf fo as to come upon the Canoe, and as foon as the Indians were landed, made towards them Sword in Hand; three were afraid, and would have returned to the Canoe, but the fourth bid them not fear, and fpoke to the Spaniards, faying, Gentlemen, I am a Cbriftion: And, with Tears in his Eycs, afked if that was Wednefday? becaufe he had a Prayer-Book he made ufe of every Day, and defired to know whether he was right ? He defired them to return Thanks to God, kneeled down, and lifted up his Eyes and Hands to Heaven, and alfo bleffed God for having reftored him to the Company of Chriftians.

Andreev de Tapia embraced him, as did all the reft, and then they went to Cortes, who received him with much Joy. The new Comer and his Indian Companions paid the greateft Refpect, and couched down upon their Hams, laying their Bows and Arrows on the Ground at their Right-hands; then having moiftened their Right-hands with Spittle, they touched the Ground, and ftroaked their Breafts next the Heart, that being the greateft Refpect they paid to their Princes, to denote, that they humbled themfelves to the Ground they trode on. Cortes being informed that this was the way of Salutation, he again bid Aguilar welcome, and, taking off a long yellow Robe trimmed with Crimfon he had on, with his own Hands put it upon him, defiring he would rife off his Hams and fit on a Chair. Afking his Name, he anfwered, his Name was Ferom de Aguilar, and that he was born at Eija, and related to the Licenciate Mark de Aguilar whom Cortes knew. Meat and Drink being fet before him, he took of both very moderately. And being afked why he was fo very fparing, anfwered, he did it, becaufe having been fo long ufed to the Indian Food, that Change of Diet might do him harm, whereas taking very little, tho' it were Poifon, there was no Danger.

He was in Deacon's Orders, and for that reafon faid, he never wonld marry, tho' he had been nuch importuned to it by the Indians. The Account of his Life and Adventures being too long for that time, Cortes bid him reft till the next Day, and ordered his Steward to clothe him; which he was not very fond of at that time, becaufe, having been fo long ufed to go naked, the Garment Cortes had thrown over him was fomewhat troublefóme.

The next Day Cortes afked him, before lefs Company, how he had fallen into the Hands of thofe Indians; he anfwered, That being at Darien at the time of the Con-

Vol. II. Numb. 74 .
teft between James de Nicueffa and Nunez de Balboas he came away with Valdibia, who was bound for Santo Do ming', to inform the Admiral and the King's Officers of what was doing in thofe Parts, to return with Men and Ammunition, and carry twenty thoufand Ducats for the King: That when he came near famaica, the Caravel was caft away on the Sholes called Caymanes or Alligators ; at which time twenty Men, with much Difficulty, got into the Long-boat, without Sails, Bread, or Water, and very bad Oars: That feven of the twenty Men foon died, be* ing reduced to fuch Diftrefs, that they drank their own Water; and the others landed in a Province called Maya, where they fell into the Hands of a cruel Cazique, who facrificed Valdibia and five others, offering them up to his Idols, and then eating them, keeping a Feftival, according to the Cuftom of the Country: That he and fix more that were fhut up in a Pen or Coop to ferve for another Feftival, refolved to lofe their Lives fome other way, and, breaking thro' the Cage accordingly, fled over the Mountains without being difcovered, till it pleafed God that they came into the Dominions of another Lord who was an Enemy to him from whom they fled, and naturally courteous, affable, and inclined to do Good; his Name was Acquineuz, Governor of Xaman Cona, who granted them their Lives, but made Slaves of them : That the faid Lord foon dying, he ferved Taxmar, who fucceeded him in the Lordfhip: That five of his Companions foon died thro' the Hardfhips they endured, he only remaining with one Gonzalo Guerro, who was with the Cazique Cbetemal, and married a very great Lady in that Country, by whom he had Children: He was then Commander for a Cazique called Nachancam, and, having gained many Victories over his Lord's Enemies, was much beloved and efteemed.

He added, that he had fent him Cortes's Letter, and defired him to come away, fince there was fo favourable an Opportunity, and had ftaid for him longer than was convenient, and believed he kept away for Shame, be caufe his Nofe, Lips, and Ears were bored, his Face painted, and his Hands wrought after the manner of that Country, where only brave Men are permitted to have their Hands wrought. Proceeding in the Account of his own Adventures, he faid he had endured very much during the firft three Years, being obliged to carry Wood, Water, and Fifh for his Lord; which he' performed with much Satisfaction to fave his Life, doing what every Indian directed him ; by which means he gained the Affection of them all. The Catique obferving that he lived chaftly, tempted him feveral ways, fending him out at Night a fifhing with a beautiful Indian Girl about fourteen Years of Age, who had been inftructed to provoke him; and he had a Hammoc given him for them to lye in. The Hammoc being hung up, the young Girl went into it, and invited Aguilar to come and lye with her, upbraiding him upon his Refufal, faying that he was not' a Man; yet he lighted a Fire, and lay down on the Ground by it. The Cazique, being informed of this by her, had the more value for him, and trufted him with his Wife and Houfe; which fhews that Virtue is honoured even among barbarous Nations. Afterwards he defired his Lord to employ him in his Wars, and contributed to the obtaining feveral Victories, which gained him fo much Reputation, that he was looked upon as the prime Man in the Country: And when the Ships under the Command of Hernandez de Cordova, and thofe under Grijalra, traded on that Coaft, they took fpecial care that he fhould not make his Efcape. The Converfation of this Man proved highly agreeable to Cortes, and the Accounts he gave were of extraordinary Ufe in the Profecution of his Expedition, becaufe they enabled him to forefee whatever might happen, to procure Advantages, and to provide againft Difficulties.
9. It muft be acknowledged that the Facts which are contained in this Section are far enough from being furprizing or extraordinary, but however, they are extremely curious, and withal highly neceffary. The Hiftories of fuch Difcoverers as thefe ought to be written for fome great End, and with fome important View; bare A-
$T$ mufement
mufement is too mean a Confideration. But what End, what View fo juft, fo laudable, fo worthy of the Subject, as the promoting vigoroully Expeditions of a like nature by fo noble an Example. Yet how is this to be done otherwife than by explaining the Character of Cortes fully, and fhewing how he came to undertake fo great an Enterprize with fo flight a Force; how from the very Beginning he had all the Difficulties to ftruggle with that the Author of an Epic Poem could have fuggefted to raife the Character of his Hero, and fhewed fuch Fortitude, Sagacity, and Penetration in overcoming them, as would have puzzled the greateft Poet to have feigned in favour of him, whofe Character and Adventures had depended folely upon his Imagination.

Here we fee him fixed upon to be the Commander in Chief in the greatef Expedition that hitherto the Spamiards had undertaken, merely for the fake of his perfonal Merit and great Abilities. We next find him fufpected, hated, recalled by the very Perfon to whom he owed his Power. Yet proceeding, notwithftanding all thefe Difficulties; and tho the Beginnings of his Enterprizes were not attended with any remarkable Succefs, we fee him eftablifhing an Authority even fuperior to that given him by his Commifion, when by the Contrivances of his Enemies, his Title to command was fo weakened, as that he
had fcarce any legal Authority at all.' We fee him from his firt fetting out, acting as the Legiflator as well as General and Commander in Chief, and not only forming his own Conduct upon juft, honourable, and heroic Principles, but infufing thefe with great Diligence and Dexterity into the whole Body of his Followers, as if, nos content with being a Hero himfelf, his Ambition excited him to command an Army of Heroes, and fo to ballance his want of Numbers by raifing the Power, the Credit, and Courage of the finall Number he commanded.
We fee him acting upon all Occafions by the Lights of his own Reafon, and without taking the Advice of any who were about him ; not that he defpifed Counfel, but that for good Reafons, and from juft Motives, he fufpected thofe he would otherwife have admitted of his Council. And laftly, we fee him behave towards the $I_{n}$ dians with Dignity void of Arrogance, inftilling Courage, not Fear, and teaching them Obedience, by propofing it as their Intereft, rather than due to his Pleafure. We fhall fee him in the fucceeding Sections uniform in his Conduct, exact in his Difcipline, fage in his Refolutions, vigorous in their Execution, always befieged with new Difficulties, and yet furmounting them by the Force of his Underftanding, and the Steadinefs of his Virtue.

## S E C T I O N.VIII.

The Progress of this Expedition from the time of the Spaniards cmbarking for New Spain, to the firf Meffage Sent by Cortes to Motezuma Emperor of Mexico.

1. The Motives wobich induced Cortes to refolve to attempt the Conqueft of New Spain with fo fmall a Force and under fo many Difficulties. 2. He arrives at the River Grijalva, finds bis landing oppofed, but debarks at laft in Jpite of the Indians. 3. The Town of Tabafco taken, and a great Victory gained over the Indians. 4. A Peace enfues-thereupon, to the Satisfaction of both Parties; after wobich the Spaniards embark in order to continue their Voyage. 5. They land in New Spain, and meet there with Embaffadors from Motezuma Emperor of Mexico. 6. The General and Governor of the Province confer with Cortes; inquire into the Reafon of bis coming thither, and Send an Account of it to their Emperor Motezuma. 7. The manner in which the Indians tranfmitted a full Account of the Spaniards and their Force to their Emperor. 8. The Reception that Account met quith, and the Anfiwer returned to Cortes's Requeft, by Motezuma. 9. Remarks and Obfervations upon this Section, and on the Situation Cortes found bimfelf in at this Functure.

THE fhort Stay that Cortes made in this Ifland was fpent in deliberating on the proper Means for carrying his great Defigns into Execution, towards which he found that good Information was likely to contribute more than the beft Advice; he therefore fpent many Hours alone with Aguilar, whom he found to be a Man of Senfe and Probity, of great Courage, and who had a Head perfectly well turned either for Service in time of War, or for Negotiations in time of Peace. It was from this Man that he learned perfectly the Humour and Temper of the Indians, their Maxims of Government, their military Difcipline, the Advantages derived to them from thence, and in what refpect they were inferior to the Spaniards. Matters about which he feemed to inquire from that natural Curiofity only which is incident even to the greatef Minds; but, in reality, he had nothing lefs in view than to amufe himfelf with hearing ftrange Stories, and made thefe Inquiries for the fake of knowing how to ufe all Opportunities that offered, and that he might be able to create them where they were wanting.

Among other extraordinary Qualities, he was bleffed with fo happy a Memory, that he retained whatever he once heard, and knew how to make ufe of the flighteft Circumftances fo as to convert them into material Advantages ; of which we fhall fee many remarkable Inftances in the following. Sections. He took occafion likewife, during his ftay in this Inand, to gain over to his Intereft the ableft and moft enterprifing Perfons that were embarked with him in this Expedition, by reprefenting to them how infeparably their Interefts were connected with his, fo that it was impofible for him to ne-
gleet rewarding them, if by a proper Difcharge of their Duty they put it his Power. In all thefe Applications he had much lefs regard to the Character and Station, than to the Temper and Capacities of the Men with whom he dealt, fo that he admitted to his Converfation private Men as well as Officers, which gained him the Affections of the People, and rendered it impoffible for any Cabals to be formed againft him, without his having immediate Intelligence of the Motives from whence they fprung, and the Perfons by whom they were managed.
He drew likewife another great Advantage from this Conduct, and that was bringing the greatef Points to bear without appearing to have any Concern in them; fo that he never propofed any thing he had a mind to carry, but by the help of his Agents he firft infufed it into the Minds of the People, and then complied with their Will, or rather feemed to comply with it when he accomplifhed his own. He defeated the Defigns of his Enemies by preparing the People to fuggeft their Dillike to them, when propofed by himfelf in Compliance with the Refolutions taken in Councils of War. And by thefe Arts he rendered himfelf at once the moft arbitrary and defpotic Commander, and the very Man in the World leaft fufpected of having any fuch thing in his Thoughts. The Difficulties they had hitherto met with, might under any other General have difgufted the People and deftroyed their Hopes, but his Management was fo dextrous, that under him they had quite different Effects; for he found Means to convince them, that all Miifcarriages were owing to thofe of Velafquez's Party; whence the Soldiers inferred, that all things would go well if

Cortes had the fole Command. Such were the Difpofitions of the Spaniards while Preparations were making to profecute their Voyage to the Miain.
2. The Fleet-left this Inland the fecond time on the 4th of March, I519, doubled the Point of Catocbe, which is the moft Eafterly Part of Yucatan, and following the Coaft came to the Road of Cbampatan, where the Queftion was put in a Council held on that Subject, Whether they fhould land or not? Cortes inclined to the Affirmative, that he might chaftize the Indians for the Oppofition' given to Fuan de Grijalva, and before that'to Francifco Hernondez de Cordova; and fome Soldiers that had been prefent on both thefe Occafions, pufhed by a Spirit of Revenge, fupported his Opinion with an extreme Warmth ; but the chief Pilot, and the reft of his Profeffion oppofed it with unanfwerable Reafons; for the Wind that favoured the Continuance of their Voyage, directly oppofed their landing in that Place. Whereupon they purfued their Courfe, and arrived at the River Grijalva. There was no Occafion to deliberate here, for the good Treatment which the Spaniards had received formerly from the Indians of Tabafco, and the Gold at that time brought from thence, were two powerful Attractives, and Cortes readily complied with the Inclinations of his Soldiers, although he had no Defign to ftay there many Days, for his Thoughts were continually bent on the Dominions of Motezuma, of which Fuan de Grijalva had his firft Account in this Province; it being his Opinion, That in this fort of Expeditions it was advifeable to begin with attacking the Head rather than the Members, and fo encounter the greateft Difficulties with his Forces entire.

As he had fome Knowledge of this Place by the Experience of thofe who had been there before, he made a Difpofition for entering the River. And leaving the larger Veffels at an Anchor, he embarked all his Soldiers, well armed, in thofe of a fmaller fize, and in the Boats, and was beginning to make the beft of his way againft the Current, in the fame Order as had been before obferved by Juan de Grijalva; when he perceived a confiderable Number of Canoes, with armed Indians, cover both Sides of the River, fupported by feveral other Bodies on the Shore. Cortes drew near in clofe Order, and commanded that none fhould fire or fhew the leaft Sign of Hoftility. He followed in this likewife the Conduct of Grijalva, for he was more folicitous to ufe the proper Means of fucceeding in his Enterprize, than to avoid the Imputation of copying after another, well knowing what Rifques they run who value themfelves upon finding new ways with no other Defign than to be diftinguifhed from thofe who went before them. The Indians thought to put a Stop to the Spaniards by their horrible Outcries ; and as foon as they were fo near that what they faid could be diftinguifhed, ferom de Aguilar found that he underftood their Language, which was the fame, or with little Difference from that of Yucatan. And Cortes looked upon it as the Work of Providence that he was furninhed with fo good an Interpreter. Aguilar informed him, that the Words he underftood were Mienaces, and that the Indians were inclined to War. Upon which Cortes ftopt, and ordered him to advance in one of the Boats with Offers of Peace. Aguilar executed his Orders, and returned in a very fhort time with an Account, that the Indians were in great Numbers prepared to defend the Entrance of the River, and fo obftinate in their Refolution, that they had very infolently refufed fo much as to hear him. Cortes had no Defign to begin a War in that Country, or delay his Voyage; but finding that he was now engaged, he thought it would be difhonourable to retreat, and fuffer this Infolence of the Barbarians to go unpunifhed. The Night overtaking them in a Country unknown, Cortes thought it moft advifable to lye by till Day, and difpofed every thing after the beft manner for the Engagement. During this Sufpenfion he commanded all the Artillery out of the great Veffels; and his Soldiers had Orders to arm themfelves with their Cotton Coats, for the better refifting the Arrows; to which he added fuch other Directions as he thought neceffary, without reprefenting the Danger greater or lefs than it was.

As foon as Day appeared the Veffels were drawn up in a Half Moon, whofe Figure leffened by Degrees till it ended in the Boats, the River being large enough to allow Room for that Difpofition. Their Advance was very flow, and feemed to invite to Peace; but the Men foon difcovered the Canoes of the Indians who waited their coming in the fame Order as the Night before. The General commanded his Men not to ftir till they were attacked, telling them all, That they ought to ufe their Shields before their Swords, as the Juftice of this War depended on the Provocation to it. And being defirous to have Reafon ftill more on his Side, he fent Aguilar to them a fecond time with Offers of Peace, and to affure them that this was a Fleet of their Friends who defigned their Advantage, and came on the Foot of that Alliance which had been formerly made with Juan de Grijalva; That to refufe them Entrance, would be a Breach of it, and would oblige the Spaniards to open their way by force of Arms; and that whatever Damage they fhould fuftain, muft be imputed to themfelves. The Anfwer to this fecond Propofal, was the giving the Signal for the Attack. They advanced by the Favour of the Current near enough to ufe their Arrows, of which they difcharged fo great a Number, both from the Canoes and the Banks of the River, that the Spaniards were very much embarrafled in their Endeavours to cover themfelves; but having received the firft Charge, according to Order, they returned it with fo much Vigour, that the Canoes quickly left the Paffage free: And many of the Indians, intimidated at the Deaths of their Companions, flung themfelves into the River. The Veffels purfued their way up the River, without farther Oppofition, and approaching the Shore on the left Side, the Troops began to land, but in a Place fo marihy and covered with Brambles, that they found themfelves engaged in a fecond Conflict, for the Indians who lay there in Ambufh, and thofe who efcaped from the Engagement on the River, united in one Body, and renewed the Attack with prodigious Fury. The great Quantity of Arrows, Darts, and Stones which they difcharged, increafed the Difficulty of the Morafs.

But Hernan Cortes drew up his Men, and thofe Ranks which were formed making head againft the Enemy, covered the reft of their Troops, who were landing. Having formed his Batallion in Sight of the Enemy, whofe Numbers continually increafed,' he gave Orders to Cap. tain Alonfo Davila to advance with an hundred Soidiers through the Wood, and poffers himfelf of the Town of Tabafco, the Capital of that Province, not far diftant from the Place of Action, according to the Accounts of thofe who had been upon the former Expedition. After which he engaged that vaft Multitude, forcing them back with equal Courage and Difficulty, for he was obliged very often to march up to the Knees in. Mud; and it is faid, that in the Heat of the Engagement the General loft one of his Shoes, and fought a great while without miffing it, fo thoroughly was his Attention employed upon the Bufinefs of the Day. After the Spaniards had paffed the Marfh, the Indians gave way, and difappeared in an Inftant among the Buthes. Their Flight was owing in Part to their lofing the Advantage of Ground, and in Part, to their Concern for the Town of Tabafco, upon their difcovering the March of Davila; as it prefently appeared by the great Multitudes that repaired to the Defence of that Place.

This Town was fortified with a kind of Wall, gene rally ufed in the Indies, made of large Trunks of Trees fixed in the Ground after the manner of Palifadoes, and fo placed together, that there was Room between to difcharge their Arrows. The Compafs was round, without any Traverfes or other Defences; and at the clofing of the Circle, the Extremity of one Line covered the other, and formed a narrow winding Street, in which were two or three little Caftles of Wood, which filled up the Paffage, and wherein they ufed to poft their Sentinels. A fufficient Fortrefs againft the Arms of this new World, where they were happily ignorant of the Arts of War, and of thofe Methods to attack and defend, in which Mankind have been inftructed elfewhere either by Malice or Neceflity.
3. Cortes
3. Corics arrived at the Town a little while before Alonfo Davila, who had been hindered by fome Marfhes and Lakes in his way; and having joined his Troops to the Batallion, and diftributed proper Inftruction for breaking down the Palifadoes (without giving time either to the Indians to recover themfelves, or to his own Soldiers to reflect on the Difficulty) gave the Signal to begin the Attack, only ftopping to fay, My Friends, bere we muft lodge this Night. The Soldiers went on together with equal Refolution, and turning afide a Shower of Arrows with their Shields, and even with their Swords, gained the Foot of the Palifado ; the Intervals of which were of Service at that time for the Difcharge of the Fire-arms and Crofs-Bows, which quickly drove the Enemy from their Pofts, and gave an Opportunity to thofe who were not engaged to beat down a Part of their Palifadoes. The Spaniards entered without Difficulty, becaufe the Indians retired to the inner Part of the Town; but it was foon perceived that they had ftopped up the Streets, where they again made head, but with finall Effect, for they were embarraffed by their own Numbers; and while fome were retiring from one Work to another, they put the reft, who would have fought, into Diforder.
In the Centre of the Town there was a void Space, where the Indians made their utmoft Efforts, but after a fhort Refiftance, turned their Backs and fled into the Woods. Cortes would not follow the Chace, that he might give his Soldiers time to refrefh, and the Fugitives an Opportunity to fue for Peace, tuking Counfel from their Defeat. Thus did the Spaniards gain Tabafoo, a large Town, and well provided for Defence, for the Indians had fent away all their Fanilies and Effects, and ftored the Place with Provifions ; fo that tho there was nothing found to gratify Avarice, there was nothing wanting which Neceffity required. Fourteen or fifteen were wounded, in this Engagement, in which died a confiderable Number of Indions. Of the Wounded there was no Account, becaufe they took care to carry them off, it being a Point of honour amongft them to conceal their Lofs from the Enemy. That Night the Troops werc quartered in that Part of the Town in which they laft engaged. Cortes went his Rounds, and pofted his Sentinels with as much Care and Exastnefs, as if he had had an Army of Enemies in View, well knowing Caution is as neceffary as Valour in a Commander.

The nextDay the Country appeared quite deferted, and fo far as the Eye could reach there was not the leaft fign of an Enemy. However, Cortes did not think it proper to march out of his Quarters; this great Stillnefs made him fufpicious, and his Apprehenfions were increafed when he underftood that his Interpreter Melcbior, who came from Cuba, had deferted them that very Night, leaving his Chriftian Habit hanging on a Tree. It was he that induced them to renew the War, acquainting them with the fmall Number of our Soldiers, that they were not immortal, nor their Fire-arms Thunder and Lightning, as they imagined; the Dread of which had made them defirous of Peace. But this Crime did not go long unpunifhed, for the fame Barbarians whom he had perfuaded to take up Arms, being vanquifhed a fecond time, revenged themfelves on the Advifer of the War, by making him a miferable Sacrifice to their Idol.
In this Uncertainty Cortes refolved to fend out Pedro de Alverado, and Francijco de Lugo, each with an hundred Men by different ways to view the Country, with. Orders, if they found an Army in the Field, to retire to their Quarters without engaging with unequal Numbers. This Rcfolution was immediately executed, and Francifco de Lugo, after little more than an Hour's March, fell into an Ambufcade of numberlefs Indians, who attacked him on all Sides, and that with fuch Fury, that he was obliged to draw up his little Batallion into a Square. The Number of the Enemy increafed, and the Spaniards began to be tired, when it pleafed God that Alverado, who had taken a different Road from his Companion, met with a Marfh, which obliged him to turn afide, and brought him where the Report of the Fire-arms gave him Notice of the Engagement. Alve-
rado marched ftrait to the Noife, and difcovered the Enemies Squadrons: Upon which he advanced with alt the Hafte poffible, under Cover of a Wood; and fending an Indian of Cuba to Cortes to advife him of the Accident, drew up his Men, and fell upon the Enemy with fo much Refolution, that the Indians, furprized at the fudden Affault, left them the Paffage free, and, without giving the Spaniards time to break them, difperfed of themflves.

This Succour gave Francifoo de Lugo's Soldiers time to breathe, and as foon as the two Captains had joined their Troops and doubled their Rarks, they charged another Batallion of the Enemy, who ftopt up the way that they might not execute the Crders they had received to retreat. Here again they found Refiftance, but in fine, they made way through them with their Swords, marching forward, though continually attacked, and fometimes almoft borne down; fome fought while others took Breath; and whenfoever they mended their Pace to gain Ground, they were charged by the whole Body of the Enemy, who immediately, upon their facing about, got out of their Reach, retiring with the fame Swifnefs that they attacked; the Motions of this Multitude of Barbarians, refembling the rolling of the Sea when the Waves are driven back by the Wind. The Spaniards had marched about three Quarters of a League, continually plying their Weapons, when Hernan Cortes appeared at a Diftance; who upon the Notice given him by Alverado, was coming to their Relief with all the reft of his Troops. As foon as the Indians fpied him, they made a Halt, giving thofe they purfued time to march off, and continued a while looking on by way of threatning, or to fignify that they were not afraid. Yet afterwards they difperfed in feveral fmall Bodies, and left the Field. Cortes returned to his Quarters without engaging farther, becaufe it was requifite to take care of the Wounded, being eleven in botl Companies, of which Number two died; and this was reckoned at that time a very great Lofs.
Some Prifontrs were taken upon this Occafion, and Cortes ordered ferem de Aguilar to examine them feparately, to know what it was thofe Indians founded their Obftinacy on, and what Forces they had to fupport it. Their Anfwer differed in fome Circumftances, but they agreed in declaring that all the Caziques, in the neighbouring Countries, were fummoned to the Affiftance of Tabajio, and that the next Day a very powerful Army was to be drawn together, to make an End of the Spaniards at once, of which Number the Body that had attacked the two Companies under Francijco de Lugo, and Pedro de Alverado, was but a fmall Detachment. This Intelligence gave Cortes fome Unealinefs, whereupon he refolved to call his Captains together, and advifed with them what was proper to be done. He laid before them the Difficultics in which they were engaged, their fmall Numbers, and the great Preparations the $I_{n}$ dians had made to deftroy them, without concealing the leaft Circumftances of what the Prifoners had declared. He then proceeded to confider how far their Glory was concerned, reprefenting to them their own Valour, the Nakednefs and Weaknefs of their Neighbours, and how eafily they had defeated them at Tabafo, at their Landing; hut above all, he urged the ill Confequences of turning their Backs upon thofe Barbarians, which would be a Difgrace of fo much Confequence, that, in his Opinion, they muft either entirely lay afide the Enterprize of New Spain, or proceed no farther, till they had either eftablifhed Peace, or fubdued that Province ; but, that he only propofed this, being refolved to act as fhould be judged moft convenient.
Every one gave his Opinion, and they all agreed that it was not practicable to depart that Country, till they had reduced the Inhabitants: Whereupon Cortes proceeded to make the neceffary Difpofitions for that Enterprize. He ordered the wounded Men to be carried on board, the Horfes to be landed, the Artillery to be in a Readinefs, and every thing to be in Order by the next Morning. As foon as it was Day, giving the Command of the Foot to Diego de Ordaz, he and the other Commanders mounted on Horfeback, and kept Pace with
the Artillery, which moved with much Difficulty, becaufe the Ground was boggy ; till coning to a Place called Cintho, a little lefs than a League from their Quarters, they difcovered, at a great Diftance, the Indian Army fo numerous, that the Eye could not reach to fee the end of them.

We will now defrribe the Indien Way of marching and engaging, which may ferve upon all Occafions, the Art of War being almoft the fame among all the Nations in New Spain. Moft of their Weapons were Bows and Arrows; the Bow-Strings were made of the Sinews of Beafts, or of Thongs of Deer Skin twifted, and their Arrows were headed with Bones ground flarp, or Fifh-bones; they ufed alfo a kind of Darts, which fometimes they threw, and fometimes managed like a Pike. They had likewife long Swords which they ufed with both Hands, as we do Fauichions made of Wood, in which they fixed fharp Flints; the frongett of them had Clubs pointed with Flints, and there were Slingers who threw Stones with great Force and Skill. The defenfive Arms, which are only ufed by Commanders and Perfons of Diftinction, were Coats of quilted Cotton, Breaft Plates, and Shields of Wood or Tortoife-fhell, adorned with Plates of fuch Metal as they could get, and fome made ufe of Gold as we do of Iron. The reft were naked, and a!l of them painted with various Dyes and Colours on their Faces and Bodies, which they made ufe on to ftrike a Terror into their Enemies, believing that Uglinefs made them appear dreadful. Their Heads were covered with diverfe Plumes of Feathers, like Crowns raifed high to make them appear taller. They had alfo warlike Inftruments and Mufic, with which they animated their Soldiers and gave Signals; there were Flutes made of great Canes, Sea-hells, and a Sort of Drums made of the Trunk of a Tree, fo hollowed and made thin, that they anfwered to the Stroke of a Stick a very difpleafing Sound, but feemed well fuited to the Ears of thofe People. They formed their Batallions of great Numbers without any Order, but had Troops of Referve to relieve where there was Occafion. They made their Attacks with great Fury and terrible Out-cries, with which they thought to intimidate their Enemies ; a Cuftom which fome have accounted among the Brutalities of thofe Indians, without obferving that it has been ufed by many ancient Nations, and not defpifed even by the Romans: We do not argue whether this is a commendable Cuftom or not, but only fay it was not fo barbarous in the Indians, as to be without Example in other Nations.
Their Armies were compofed of Natives, and feveral Troops of Auxiliaries from the neighbouring Provinces, who came to the Affiftance of their Confederates, being led by their Caziques, or fome prime Indian of their Family. Thefe were divided into Companies, whofe Captains led, but could fcarce govern, their Men : For when they came to engage, they were directed either by Fear or Rage, as is ufual among fuch Multitudes, being equally eager to attack and to run away. Such was the Soldiery of the Indians, and after this manner that Army, or rather Inundation of Men, which feemed to cover all the Country, advanced towards the Spaniards; Cortes was fenfible of the Danger he was in, yet did not defpair of the Succefs, but encouraged his Soldiers with a chearful Countenance, and pofted them under the Shelter of a rifing Ground, which covered their Rear, and placing the Artillery where it could do moft Execution, he ftruck into a Wood with his fifteen Horfe, advancing far into it in order to fally out and flank them as Occafion thould require. As foon as the Indian Army came up within a proper Diftance, they firt fhot their Arrows, and then fell upon the Spaniards with fuch Fury and Precipitation, that the Fire-arms and Crofs-bows not being able to ftop them, they were obliged to make ufe of their Swords. Great was the Slaughter made among them, and as they preffed on in Throngs, the Artillery deftroyed whole Companies; but they were fo obftinate, that, as foon as the Ball was paffed they clofed again, and covered the Lofs they had fuftained; making loud Cries, and throwing Duft into the Air that the Sponiards might not fee thofe who fell, or hear their Lamentations.

Vol. II. Nume. 74.

Diego de Ordaz acquitted himfelf as a good Captain and valiant Soldier. But the Enemies being fo very numerous, the Spaniards had enough to do to fland their Ground; and the Inequality of their Strength began to appear, when Cortes, who could not come fooner to the Affitance of his Men, by reafon of fome Brooks he had to pafs, fallied forth from the Wood, and fell upon all that Army, breaking through the thickeft of their Batallions, and doing fuch Execution with his Horfe, that the Indians, wounded and trodden under Foot, thought of nothing but getting from them, throwing away their Arms as an Obftacle to their Flight. Diego de Ordaz, fenfible that the Relief he expected was come, by the weak Refiftance of the Enemies Van-guard which began to face about by Reafon of the Confufion in the Rear, without Lofs of time advanced with his Foot, charging thofe who hiad oppreffed him, with fo much Refolution, that he obliged them to give way till he came to the Place where Cortes and his Captains had cleared off the Enemy.
They all joined to make the laft Effort, and were forced to mend their Pace, for the Indians were retiring in an hafly Manner ; yet ftill making head, and employing their mifive Weapons; and this manner of renewing, and withdrawing from Fight in good Order they continued till the Spaniards came up to them, when finding themfelves again attacked, they turned their Backs, and inftead of retreating, fled outright. Cortes commanded his Men to halt, to avoid the fhedding of more Blood; ordering only fome Prifoners to be taken whom he might make ufe of to fet on foot a Treaty of Peace, which he chiefly had in view, looking on this War as no more than a Circumftance of his principal Defign. Above eight hundred Indions remained dead upon the Spot, and the Number of the Wounded was very great. Of the Spaniards, two Soldiers were killed, and threefcore and ten wounded. The Enemy's Army, according to the Accounts we have, confifted of forty thoulfand Men; who, although they were naked Barbarians, yet had Hands to do Mifchief. And fhould we grant that they wanted Courage, which is proper to Men, yet they could not be defitute of that Fiercenefs of which brute Beafts are capable.
4. The next Day Cortes caufed the Prifoners to be brought before him, among whom were two or three Officers. They difcovered in their Countenances great Fear, expecting to be treated after the fame cruel Manner they ufed to treat the Vanquifhed. But Cortes received them with great Courtefy, encouraged them with a chearful Countenance, and fet them at Liberty, giving them fome trifing Prefents, and telling them at the fame time, that he knew both how to conquer and to forgive. This Piece of Humanity had fo good an Effect, that within a few Hours feveral Indions came to the Quarters with Indian Wheat, Flower, and other Provifions; defigning by that Prefent to facilitate the Peace, which they were to propofe from the principal Cazique of Tabafo. The People who came on this Embaffy were of the meaneft Sort, and made no Figure, which Ferom de Aguilar took notice of; becaufe it was the Cuftom of that Country, upon ali Occafions, to fend Perfons of the firf Rank. And although Corites was very defirous of Peace, he refufed to adimit their Propofals, as not coming in due Form, and fent back the Indians without fo much as feeing them ; bidding them, by his Interpreter, acquaint their Cazique, That if he defired his Friendfhip, he muft fend Perfons of greater account, and after a more decent Manner, to follicit it. The Cazique acknowledged his Fault, and the next Day fent thirty Indians of better Quality, with their Ornaments of Plumes and Jewels, wherein all their Pride confifted; they were followed by a Train of Indians loaded with another Prefent of the fame kind as before, but in greater abundance. Cortes gave them Audience, attended by all his Captains, affecting a grave and fevere Countenance.

They approached with very great Submifion, and having perfumed him with Gum Anime, or Gum Copal, and other fweet Scents, they delivered their Embaffy, which began with fome frivolous Excufes for their paft War,
and concluded in earneft Entreaties for Peace. The General reprefented to them the juft Caufes he had to be difpleafed with them, that on a View of their Faults, the Pardon might appear, with greater Luftre, and the Peace which he granted them prove more welcome. The Ambaffadors received it with great Applaufe, returning extremely fatisfied, and eafily enriched with thofe nlight Baubles they fo highly valued. Afterwards the Cażique himfelf came to vifit Cortes, accompanied by all his Officers, bringing with him a Prefent of Cotton Cloths, Plumes of various Colours, and fome Pieces of Low Gold, more valuable for the Workmanthip than for the Metal; he firft made his Prefent in order to be better received: Cortes careffed him very much, and the Vifit paffed in Proteftations of a reciprocal and fincere Friendfhip, all tranfacted by the Interpreter; the Spanifb Captains treated the other prime Indians who accompanied the Cazique, and nothing appeared but Signs of Joy and Peace, which they explained by their Countenances and Embraces to fupply the Want of Language.

The Cazique took his leave, and appointed another Day for an Interview, and to Shew his Sincerity and how much he confided in the General, he ordered his Subjects to return with their Families to Tabafco, and affift the Spaniards in whatever they fhould want. The next Day he came again to the Quarters, with the fame Attendance, and twenty Indian Women, well dreffed after the Manner of the Country, telling Cortes he brought them as a Prefent to ferve him and his Companions, being very fkilful in dreffing all Sorts of Meat, and in making Bread of Ivdian Wheat, which, amongft them, was always the Work of Women; they ground the Grain between two Stones, like thofe we ufe for Chocolate, and when reduced to Flower, they made it into Pafte, without having any Occafion for Leaven: Then they fpread and moulded it upon a Sort of Earthen Plates, which they put over the Fire and baked it; this being the Bread with which God has abundantly fupplied. that new World (to make amends for the Want of Wheat) and is very agreeable to the Tafte, and not offenfive to the Stomach. Amongtt thefe Women came one principal Indian, well made, and of more than ordinary Beauty, who was afterwards baptized, and received the Name of Marina, and proved very ufeful in the Conqueft, as will appear in its proper Place.
The Pilots prefled the Departure of the Fleet, which, according to their Obfervations, might be endangered by any longer Stay in that Place. And though Cortes was concerned to leave thofe People before he had better inftructed them, he found himfelf obliged to think of his Voyage, and Palm Sunday drawing nigh, he appointed that Day for embarking, fo ordering it that the Feftival might be kept firft, according to the Rites of the Church, Religion being always his firf Gare; at the fame time they embarked their Provifions, and made all other neceffary Preparations for their Voyage. The $I_{n}$ dians affifted in all things with an officious Diligence; and the Cazique, with his Captains, attended Cortes with the greateft Refpect and Veneration. When Mafs was done, Cortes took leave of the Cazique, and, having confirmed the Peace with further Demonftrations of Friendfhip, he embarked, leaving thefe People rather obedient than fubject to the King; and as to Religion, fo far in the Way to Salvation, as to defire, or at leaft not to oppofe, the Means of obtaining it.
5. The next Day the Spaniards fet fail, and, following the Coait to the Weftward, came within Sight of the Inand of Guazacoalco, and without putting in at the Inand of Banners, had a View of the Mland of Sacrifices and other Places, which had been before difcovered, and forfaken by Juan de Grijalva; the Soldiers who had ferved under him, telling their Comrades what Adventures they ined met with in that Expedition; and Cortes learning from the ill Succefs of that Enterprize, how to manage his own better. At length they arrived at St. Juan de Ulua at Noon, and the Ships had no fooner anchored between the Ifland and the main Land to fhelter themfelves from the North Winds, than they faw two large Canoes, which.
in that Country are called Piraguas, coming from the neighbouring Coart with fome Indians in them, who drew near without fhewing the leait Concern, difcovering by this Security, and fome Signs they made, that they came in a peaceable Manner, and had thofe on board who defired to be heard. When they came within a fmall Diftance of the Admiral, they began to fpeak in a ftrange Language that Aguilar did not underftand, which much troubled Cortes, being concerned to want an interpreter, when he had moft Occafion for him, looking upon it as an Obitacle to his Undertaking; but Providence, that brings about its Defigns, by Ways which to Men appear cafual, foon relieved him in this Diftrefs.

The Indian Woman, whom we fhall now call Donna Marina, was not far from Cortes and Aguilar, and guelfing by their Looks what they were difcourfing, and what they wanted, the told Aguilar, in the Yucaton Tongue, that thofe Indians fpoke the Mexican Language, and defired Audience of the General, on the Part of the Governor of that Province. This Donna Marina was Daughter to the Cazique of Guazacoalco, one of the Provinces fubject to the Emperor of Mexico, bordering upon that of Tabafco, and had, through fome Accidents of Life, which are variouny reported, been carried away in her Youth to Xicalango, a ftrong Place upon the Confines of rucatan, which was kept by a Mexican Garrion : There the was bred in a poor Manner, no way agreeable to her Birth; till by a frefh Misfortune, either by Sale or being taken in War, The became a Slave to the Cazique of Tabafco, who made a Prefent of her to Cortes. In Guzacoalco and in Xicalango they fpoke the Mexican Language, and in Tobafco, that of Yucatan, which Aguilar underftood: So that Donna Marina underftood both thofe Languages, and explained to the Indians in the Mexican Language, what Aguilar told her in that of rucatan. Cortes making ufe of this round about Way of fpeaking by two Interpreters, till fuch time as Donna Marina had learned Spanifh, which was not long, for the had a very ready Wit and feveral natural Endowments which well agreed with her Birth. She was ever a moft faithful Interpreter to Cortes, and he confirmed her in his Intereft by Ways not altogether fo decent, for he had Son by her, called Don Martin Cortes, who was made Knight of St. Fago, in confideration of the Nobility of his Mother's Birth.

The Indions acquainted him that Pilpatoe, and Teutile, the one Governor, and the other Captain General of that Province, from the great Emperor Motezuma, had fent them to know of the Commander of the Fleet, with what Intention he was come upon their Coaft? Cortes careffed them, gave them a few Baubles, and treated them with fome Spanifb Wine, and having thus obliged them, anfwered, " That he came as a Friend, to treat of Niatters of great Importance to their Prince and all his Empire; for which Purpofe he would meet the two Governors, and hoped to receive the fane good Treatment from them, as others of his Nation had done the Year before." And having received fome Information concerning the Greatnefs of Motezuma, his Riches and Form of Government, he fent them away very well contented.

The next Day being Good Friday, the Spaniards all landed on Shore near the Fleet, and Cortes gave Orders for landing the Horfes and Artillery, and that the Soldiers, in Companies, fhould go and cuit Fafcines to entrench themfelves, not forgetting to poft the neceffary Guards at the Avenues, and to build a fufficient Number of Barracs to fhelter them from the Heat of the Sun, which, at that time, was very great. The Artillery were planted fo as to command the Country, and in a little time they were all under Cover. For Teutile fent a great Number of Indians with Provifions, and Orders to affift the Spariards in that Work: To whom they were of great ufe, becaufe they brought their Tools edged with fharp Flints, with which they cut Stakes, and fixed them in the Ground; interwove with them the Boughs and Leaves of Palm-trees; forming the Walls and Roofs of a Lodging with much Eafe and Diligence, being great Mafters in this kind of Architecture, as having in many, Places no other Houfes, and being leis barbarous in pro-
portioning
portioning their Structures to what Nature requires, than thofe who build vaft Palaces where ftill they cannot find fufficient Room for their Vanity. They alfo bought fome Cotton Cloths with which they covered the Officers Barracs, the better to defend them from the Heat of the Sun. In the beft of them Cortes ordered an Altar to be fet up, on which, when adorned, he placed the Image of the Virgin Mary, and at the Entrance a great Crofs, in order to celebrate Eafter; for Religion was always his chief Care, and in that he was always equally zealous with the Priefts. Cortes underftood by thefe Indians, that General Teutile was attended by a confiderable Body of Troops, and that he was eftablifhing the Dominion of Motezuma, in fome Places newly conquered of this Province, the Civil Government of which was vefted in Pitpatoe. And the great Care they took to fend Provifions, and help the Spaniards in building of their Barracs, was not without Artifice, fo far as could be gathered; for they were very much terrified with the Account of the Succefs at Tabafco, which had now fpread over all the Country; and confidering that the Forces with which they were provided were inferior in Strength to thofe they had vanquifhed; they had recourfe to Prefents and Civilities, in order to oblige thofe they could not refift.
6. They paffed the following Day in great Tranquility, but not the lefs upon their guard; the Indians were continually coming to their Quarters, fome to work, and others with Provifions, which they trucked. On Eaferday in the Morning Teutile and Pilpatoe came with a very great Attendance to vifit Cories; he received them in equal State, furrounded by his Officers and Soldiers. The firft Compliments being over, he carried them with him to the great Barrac, which ferved for a Chapel, it being the Hour of Divine Service, ordering Aguilar and Donna Marina to tell them, that before he acquainted them with the Intention of his Journey, he was to comply with the Duties of his Religion, and recommend to the God of all other Gods, the good Succefs of his Propofition. After Service was over, they returned to the Governor's Barrac, who entertained the two Generals at Dinner, and he treated them with great Plenty. The Banquet being over, Hernan Cortes called his Interpreters, and, with a determined Air, faid, That his coming thither was to treat with the Emperor Motezuma on the Part of Don Carlos of Aufria, Monarch of the Eaft, touching Affairs of great Importance, not only to his own Perfon and Eftate, but likewife to the Welfare of all his Subjects; for performing whereof it was neceffary for him to appear before his royal Prefence, and hoped he flould be admitted with all the Civility and Refpect that was due to the King who fent him.

The Governors changed Countenance at this Propofal, and feemed to hear it with Diffatisfaction ; but before they returned an Anfwer, Teutile ordered a Prefent he had provided to be brought, and about twenty or thirty Indians came in loaded with Provifions, fine Cloths, Feathers of feveral Colours, and a great Box in which were feveral Pieces of Gold curiounly wrought: Having made his Prefent with a good Grace and Civility, and finding it was well received and praifed, he turned to Cortes, and, by the Help of the fame Interpreters, prayed him to accept that fmall Prefent from two Slaves of Motezuma's, who had Orders to entertain fuch Strangers as came upon his Coaft ; but adding, that he muft not immediately think of profecuting his Voyage, it being no eafy Matter to fpeak with their Prince. Cortes replied with fome Warmth, That Kings never refufed to hear the Ambaffadors of other Princes: That what belonged to them in this Cafe was, to acquaint Motezuma with his Arrival, for which he would allow fome Time; but that they fhould likewife let their Emperor know that he came refolved to fee him, and determined not to leave his Country with Difhonour to the King whofe Reprefentative he was. This bold Refolution of Cortes, gave the Indians fo much Uneafinefs, that they durf not reply ; on the contrary, they intreated him not to move from thefe Quarters till the re-
turn of Motezuma's Anfwer, offering to fupply him with all Things that were neceflary for the Support of his Soldiers. At this Time, fome Nexican Painters, who came in the Train of the two Governors, were very bufy about drawing upon Cotton Cloths (which they brought ready primed for that Purpofe) the Ships, Soldiers, Arms, Artillery, Horfes, and every thing elfe that appeared to them remarkable, of which Variety of Objects they formed different Landikips no way contemptible, either for the Colours or the Drawing.
7. Thefe Pictures were drawn by the Order of Teutile, the better to inform Motezuma of that extraordinary Novelty; and, to make thofe Defcriptions more intelligible, they placed fome Characters here and there, with which they feemed to explain and give the Signification of the Picture. Cortes had notice of what thefe Painters were doing, and went out to fee them; and being informed that they were painting upon thofe Cloths the Information which Teutile was to give Motezuma of what he had propofed, and the Forces he had with him to make it good, he with his ufual Wit prefently obferved, that thefe Images wanted Action to exprefs the Valour of his Soldiers; and therefore refolved to exercife his Men before them, to give the greater Life and Vigour to the Picture : To this End, he ordered them to Arms, drew up in a Body, commanded the Artillery to be made ready; and telling Teutile and Pilpatoe, that he would entertain them after the manner of his Country, he mounted his Horfe with his Captains: The firft ran two and two, after the Manner in Spain; and then the whole Troop being divided into two Bodies, they fkirmifhed $_{3}$ at which ftrange Sight the Indians ftood amazed, and like Men befide themfelves; for obferving the obedient Fiercenefs of thofe Beafts, they began to think there was fomething more than natural in thofe Men that managed them. Immediately, at a Signal made by Cortes, the Fire-arms difcharged; and, foon after, the Artillery. The Confufion and Aftonimment of thefe People increafing, with fuch various Effects, that fome fell down to the Ground, others began to fly; and thofe who bad moft Prefence of Mind affected Admiration, to diffemble their Fear.
Then Cortes encouraged them, giving them to underftand, that, among the Spaniards, thefe were military Diverfions. It was prefently obferved, that the Painters were inventing new Figures and Characters, to fupply what was wanting on their Cloths; fome painted the Spaniards armed and drawn up in form, others, their Horfes in Exercife and Motion. They defcribed the Artillery with' Fire and Smoke, and reprefented the very Noife with the Similitude of Lightning, without omitting any of thofe frightful Circumftances that moft directly regarded what their King was folicitous to know. In the mean time Cortes returned to his Barrac with the two Governors, and after having prefented them with fome finall Spanifb Jewels, he prepared a Prefent of fundry forts of Curiofities, to be fent from him to $\mathrm{Mo}=$ tezuma ; to which Purpofe he made Choice of feveral Pieces of the moft folid and brighteft Glafs, to which he added a Holland Shirt, a Cap of Crimfon Velvet adorned with a Gold Medal reprefenting St. George, and a Tapeftry Chair ; which the Indians feemed fo much to admire, that it was thought a fit Prefent for the Emperor. With this fmall Shew of Liberality, Hernan Cortes took leave of the two Governors, who remained as much obliged by his Civilities, as embarraffed by his Defigns.
8. The Indians halted at a fmall Diftance from the Spanifh Quarters to confult what Meafures they thould take. New the Refult of this Stop was, that Pilpatoe remained there to obferve the Spaniards; for which Purpofe a convenient Spot being fixed, a great Number of Barracs were raifed; and in a few Hours there appeared a confiderable Village built upon the Plain Pilpatoe provided againft the Sufpicion this Novelty might produce, fending word to Cortes, that he ftaid there to take care of his Entertainment, and the better to fupply his Troops with Provifions. Teutile proceeded to his own Quarters, and difpatched an Account to Motezuma of
all that had happened upon the Coait, fending the Pictures which were drawn by his Orders, and Cortes's Prefent, with the utmoft Diligence. For this Purpofe, the Kings of Mexico had a great Number of Couriers diftributed among all the principal Roads of the Kingdom, chofen out of the fwifteft Indions, and bred up to it from little Children. Rewards were paid out of the Public Treafury to thofe who arrived firft at the appointed Place. Thofe Couriers were relieved at every Town, like our Poft-horfes, and made the greateft Speed, becaufe they futcceeded one another before they were tired, fo that the fint four of the Couriers never ceafed. The Anfwer came in feven Days, and Teutile brought it to the Spanib Quarters, together with a Prefent from Motezuma, which loaded an hundred Indians; and before he delivered his Embaffy, he caufed them to lay Mats of Palm-tree Leaves upon the Ground, and place in order upon them the feveral things of which the Prefent was compofed.

There were various forts of Cotton Cloth well wove, and fo fine, that they could not be diftinguifhed from Silk but by feeling, a Quantity of Plumes and other Curiofities made of Feathers, whofe beautiful and natural Variety of Colours the Indian Artifts knew to mix and difpofe with fo much Skill, that without making ufe of artificial Colours, or of the Pencil, they would draw Pictures and imitate Nature. They next produced a great Number of Arms, Bows, Arrows, and Targets, made of the fineft forts of Woods; two very large Plates of a circular Form, the one of Gold, which by its embofing reprefented the Sun; and the other of Silver, reprefenting the Moon; and laftly, a confiderable Quantity of Jewels, Pieces of Gold, fome Precious Stones, Collars of Gold, Rings, Pendants after their Fahion, and other Ornaments of greater Weight, in the Shape of Birds and Beafts, fo curioully wrought, that notwithftanding the great Value of the Metal, the Workmanfhip exceeded it. As foon as Teutile had brought his Wealth before the Spaniards, he turned to Cortes and told him, That the great Emperor Motezuma fent him thefe in Return for his Prefents, and to thew how much he valued his King's Friendfhip, but that he did not think it convenient, nor was it poffible in the prefent Pofture of his Affairs to grant the Permiffion he afked, of paffing to his Court.

Cortes returned Thanks for the Prefent, and anfwered Teutile, That it was far from his Intention to be wanting in Obedience to Motezuma, but that it was not in his Power to go back without Difhonour to the King, or to forbear perffiting in his Demand with all the Earneftnefs to which he was obliged by the Reputation of a Crown that was honoured and refpected among the greateft Princes of the World. The Spaniards reafoned amongft themfelves very differently upon thofe Prefents, fome conceiving great Hopes from conquering fo rich a Country, while many concluded, the attacking fo powerful a Monarch with fuch an Handful of Men, to be a Piece of Rafhnefs; but the greateft Part juftified the Conftancy of their Captain, looking on the Conqueft as good as made. Cortes gave them leave to talk on, concealing his Sentiments till a proper time; and to keep his People out of Idlenefs, which was the way to make them difpute lefs, he ordered two Veffels out to view the Coaft and fearch out fome Port or Bay where the Fleet might be more under Shelter, and fome more fertile Plain, where they might be accommodated until the return of Motezuma's Anfwer, making a Pretence of the Sufferings of his People in this fandy Soil, where the Heat of the Summer was doubled by Reflection, and the Perfecution of the Mofquitoes made even the Hours of Reft uneafy. He appointed Captain Francifco de Montejo to command this Cruize, and picked out the Soldiers that were to bear him company, being thofe that feemed moft averfe to his own Opinion. He ordered him to run along as far as he could, fteering the fame Courfe he had done the Year before with Grijalva, and
that he frould take notice of what Towns appeared along the Coaft, without landing to view them, alloting ten Days for their Return; by which Means he executed what was proper to be done, employed thofe that were troublefome, and entertained the reft with Hopes of Relief.
9. The Skill and Conduct of Cortes appear manifeftly in the Prudence with which, in his Circumftances, he took fuch Precautions. But tho ${ }^{\circ}$ they made him fomewhat eafy for the prefent, yet they were fo far from filling him with Confidence, that on the contrary his Mind was never more occupied than at this Juncture. He faw a new Scene opened, not only unexpectedly, but directly oppofite to his Expectations. He found, inftead of fmall and narrow Diftricts, which hitherto the Spanifh Arms had eafily fubdued, a wide extended Empire, to which Spain itfelf was, in comparifon, a Province; and this under the Dominion of one pctent Monarch, whofe Power defcended to him through a Line of glorious Princes, renowned for the Wifdom of their lolitics and the Compafs of their Conquefts: He found this Monarch well apprized of his Defigns, and determined to oppofe them with the whole Force of his Empire.

On the other hand, thefe Informations fo clearly convinced him of the Weakness, or rather Inequality of his Army; and he was at the fame time fo fenfible of the Difficulties, which perplexed him in the Command of it, that he began feriounly to doubt whether it was poffible for him to perform what his Ambition had prompted him to undertake. He kept this Concern of his fo well concealed, that nothing of it appeared either in his Countenance or his Language, the former appearing more open, and the latter affuming a more refolute Tone than in times when for want of good Information he had lefs Fears about him; he determined, however, not to relinquifh his Enterprize, but to pufh it as far as it would go, and never to think of a Retreat till he was fully fatisfied that the Obftacles that lay in his way were abfolutely infurmountable. He applied himfelf therefore with the utmof Diligence to raife the Spirits, and heighten the Fortitude of his Soldiers.

In order to this, he took Pains to fhew them the great Advantages derived from their Difcipline, and the fmall Strength that occurred from Numbers, where they wanted that material Circumftance. He taught them to obferve how favourable the Divifions of the Indians among themfelves were to their Defign, and of what vaft Importance it was to preferve the Good Will of thofe who were inclined to favour them, which was no otherwife to be done than by behaving towards them with all the Kindnefs and Clemency imaginable. But above all, he made it his Bufinefs to inflame their Hopes with the Profpect of that vaft Wealth which muft accrue to them from-the Poffeffions of fo rich a Country, and for the fake of which, it would be requifite, and at the fame time highly reafonable to forego certain trifling and temporary Advantages, particularly. fuch as refulted from plundering the little Towns that fell into their Fiands, and treating all that came under their Power as Vaffals and Slaves. He fhewed them that this muft neceffarily break their Spirits, and enervate their Puwer, which at the fame time that it rendered thefe Indians ufelefs as Subjects, loft all that Acceffion of Strength which might be derived from them as Allies, and without which it was fimply impofible they could carry on their Enterprize with any Probability of Succefs.

By a frequent and conftant Practice of thefe Methods, he brought his Troops to a Degree of Confidence, which as yet he wanted himfelf, and rendered them not only willing to obey his Commands, but impatient even of neceffary Delays, and fo little afraid of Danger as to treat with Contempt fuch as attempted to infinuate, that their General engaged in an Undertaking to which his Forces were utterly unequal.

## SECTION IX.

## The Continuation of Hernan Cortes's Expedition, bis Alliances with Several Indian Nations, bis Succefs in quelling various Seditions in bis own Army, and bis Preparation for bis March to Mexico, by burning bis whole Fleet.

1. The State of tbe Mexican Empire at this Time, and the Caufes of Motezuma's Apprebenfions, wobich diffufe themfetves through the wbbole Indian Nation. 2. The Ayfwer fent by bim to Cortes, and the Refoiktion taken by the Spanih General thereupon, wobich produces a Rupture weith tbe Indians. 3. Cortes defeats a Conpiracy formed againff bim, embraces the FriendJip of the Zempoallans, and under Colour of fetting a Colony inflitutes a nerv Government among $f$ t his Spaniards. 4. Reffigs up bis Commiffoin to the new Magifrates, receives it again, and quafbes anotber Confpiracy. 5. The Army contimues its March to Zempoalle, wewere Cortes brings the Cazique to bave a perf fect Conjuldence in bim and in bis People. 6. He profecutes bis fourncy to Quiabiflan, gains over the Cazique of that Country alfo, and perfuades bim to feize Motezuma's Commi Jioners. 7. He encreafes the Number of bis Allies, founds the City of Vera Cruz, and gives Audience to freflo Embalfadors from the Emperor of Mexico. 8. The Spaniards, by an artful Contrivance, are drawin in by their Indian Confederates to attack the Inbabitents of Zimpazingo, weith zwbom, coming to a better Underfianding, they Joon make Peace. 9. Cortes returns to bis orenn Colony at Vera Cruz, fends Deputies to Spain to juftify bis Conduwt, and prevents fome Difputes that might bave bap-
pened from Sharers in bis Di forveries. pened from Sharers in bis Difcoveries.
2. T1HERE cannot occur, in any Hiftory, a more furprizing Event than that the Rumour of the Approach of Cortes, with his Handful of Spaniards, fhould ftrike fo great an Empire as that of Mexico really was, with fo much Terror and A mazement. The nearer he came the more Motezuma was alarmed; the more frequent Councils he held, and in each of thefe difcovered more and more Uneafinefs and Apprehenfion, which quickly infected his Grandess; for in all Countries, and in all Ages, Courtiers are, in fome Meafure, Copies of their Monarchs, efpecially in arbitrary Governments; and therefore, we need not wonder that his Fear firft diffuried itfelf among his Nobility, and from them, through the whole Mars of his Subjeers, fo that the Confufion became general, and the approaching Deftruction of their Government, might in very legible Charaçers be read in the Faces of the whole Nation. But to conceive this Fact clearly, to undertand it perfectly, and to form from thence jurt Notions both of its Caures and Confequences, it is abfolutely requifte that we fhould take a View of the State of this Country, and of its Government at this Juncture, which will, indeed, require Time and Room ; but, the Importance of the Mater confidered, I hope it will appear that neither can be better employed.
The Empire of Mexico was then at its greatelt Height of Glory, having under its Dominion almoft all the Provinces which had been difcovered in North America, which were governed by Motevauma himfelf, or by the petty Kings or Caziques, his Tributaries. The Length of it extended from Eaft to Weft above five hundred Leagues, and the Breadth from North to South, in fome Places, was two hundred, a Country populous, rich, and plentiful. On the Eaft it was bounded by the Allantic Sea (now called the Nortt Sesa) and extended along all that great Space of Land, between Panuco and Yucatan: on the Weft it reacheth the other Sea, being walhed by the Afatit Ocean (or Gulph of Anian) from Cape Men-
docino, to the farthef Part of Netw Ge ine docino, to the fartheft Part of New Galicia. On the South it ftretched out farther, running along the South Sea from Acapulco to Guatimale, approaching by the Way of Ni-
caraguua to the IThmus or caragua to the IThhnus or narrow Neck of Land, which unites the two Americas. On the North it extends as far as Panuco, including that Province, but was ftreightened confiderably by the Mountains poffeffed by the Chicbimecess and Otemies, a barbarous People, without Government, living in the Holes of Rocks, feeding upon
the Game they kill hi bunting the Game they kill in hunting, and the Fruits of fuch Trees as grow wild; butit fo dextrous in the ute of their Arrows, and in making their Advantage of the Paffes of the Mountains, that thicy had offen withtrood the whole
Power of Mexice bein fas Power of Mexpic, being fatisfied with not being conquered, and only defiring to preferve their Liberty amongtt
the wild Beafts. the wild Beants.
Vol. II. Numb. 74 .

This Empire grew to this vaft Greatnefs in little more than one hundred and thirty Years; for the Mexicans, a warlike Nation, were always making room with their Arms, among thofe who inhabited that Part of the World. They were, at firft, governed by a valiant Captain, who made them Soldiers and fenfible of military Honour. Afterwards they chofe a King, giving the fupreme Dominion to him, who had the greateft Reputation for Valour, being acquuainted with no Virture but Fortitude, or if acquainted with other Virtues, they looked upon them as much inferior: They always obferved this Cuftom, without regard to hereditary Succeffion; yet, where Merit was equal, they preferred the Royal Blood; and the fame Wars by which their Kings acquired their Titles to the Crown, enlarged the Monarchy.

At firft Juftice fupported their Arms, for the Opprefiion of their Neighbours forced them to Defence; but their Power afterwards increafing, Juftice was laid afide, and Tyranny took place. Motezuma was the eleventh King, and the fecond of that Name, a fingular Perfon, and much efteemed among the Mexicans before he began to reign. He was of Royal Blood, and a Soldier in his Youth; he raifed his Character by feveral heroic Actions, and gained the Reputation of a valiant Captain: He returned to the Court, and finding himfelf applauded and refpected as the firt Man of his Nation, he entertained Hopes of grafping the Scepter at the next Election. He then employed all his Skill in gaining Friends, to which end he made ufe of many Aris. He affected great Obedience towards the King, and extraordinary Modefty and Compofure in his Words and Actions; carefully preferving fuch an auftere Gravity in his Countenance, that the Indians were wont to fay the Name of Motezuma became him well, which, in their Language, fignifies a furly Prince, though he endeavoured to temper his Severity by his Liberality.
He alfo gained the Character of being zealous for hisReligion: And to this end he built an Apartment in the moft frequented Temple, to which he retired in the Sight of all the People, and ftayed there many Hours. He gained fo much Veneration by the ef outward Appearances, that when the King his Predeceffor clied, the Electors gave him their Votes unanimounly, and the People received him with great Acclamations; he made a fhew of refufing, fuffering himfelf to be courted to comply with his own Defires, and feemed to accept the Crown with Reluctancy: But no fooner was he poffiefted of it, than all that Artifice which he had forced upon his natural Temper ceafed, and he difcovered thofe Vices that had been hitherto covered with the Shew of Virtues.
The firft Action by which he manifefted his Pride, was the difcarding all who belonged to the Royal Faz
htily, whith all his Time was compofed of middling People; and under colour of greater Decency he made his Nobles ferve him, even in the meaneft Employments of his Houfe. He fhewed himfelf feldom to his Subjects, and only when it was neceffary to his Minifters and Domeftics, looking upon Retirement and Melancholy as a Part of Majefty. And for thofe who obtained Leave to come into his Prefence he invented new Obeifances and Ceremonies, inlarging Refpect almoft to Adoration. He perfuaded himfelf that he had the intire Command of the Lives and Liberties of his Subjects, and exercifed great Cruelties that he might put it out of Doubt with others; he impofed new Taxes, without Neceflity, at a certain rate on each Head of his Subjects, and exacted it with fo much Rigour, that even Beggars were not exempted bringing to his Treafury fome mean things, which were received and then thrown away before their Faces.

Thefe violent Actions made his People fear him, but as it is ufual for Fear and Hatred to go together, fome Provin̨ces rebelled; to reduce which, he went himfelf in Perfon, being too jealous of his Authority to fuffer any other to command his Armies. But, however, it cannot be denied, that he had a martial Inclination and Spirit, and that none were able to refift his Power, except the Provinces of Kecoacan, Tlafcala, and Tebcaca, and he was wont to fay, "He did not fubdue them becaufe he wanted thofe Enemies to fupply him with Cap tives for the Sacrifices of his Gods." He had reigned fourteen Years when Cortes arrived on his Coaft, and had fpent all that Time in eftablifhing the moft thorough Tyranny that any Hiftory has recorded. Many ftrange things fell out at this Juncture, which were magnified by Report, and falling in with the fuperftitious Temper of the Emperor and his Subjects, formed fuch a Series of Prodigies as frighted all Ranks and Degrees of People, in a Mianner, out of their Wits.
2. Whilf Motezunne's Court was taken up with melancholy Reflections, Hernan Cortes endeavoured to obtain fome Account of the Country; at that time Francifco Montejo returned from his Voyage, having coafted fome Leagues to the Weftward, and difcovered a Town called Quiabiflan, fituated in a fertile Soil, and well cultivated, near an anchoring Place or Bay, capacious enough, where, in the Opinion of the Pilots, the Ships might ride and be fecure, under the Shelter of fome great Rocks which broke the Force of the Winds. This Place was diftant from St. Juan de Ulua about twelve Leagues, and Hernan Cortes began to confider it as a commodious Situation: But before he came to a Refolution Motezuma's Anfwer arrived.
Teutile, with the principal Captains of his Troops, came with their little perfuming Pans, burning Gum Copal. After the Smoaking, Courtefies, and Ceremonies were over, ت̈eutile ordered Motezuma's Prefent to be produced, which was fomewhat lefs, but of the fame Sort of Goods and Pieces of Gold as came with the firft Embaffy. All that they brought particular, were four green Stones like Emeralds, called Cbalcuities; and Teutile told Cortes, with a great deal of Gravity, that Motezuma had fent thofe Stones to the King of Spain as Jewels of an ineftimable Value. The Embaffy was delivered in Terms refolute and difagrecable, and the Conclufion of it was to difmirs the Guefts without giving them leave to reply. Night drew on, and when Cortes was beginning his An'fwer, the Ave-Maria Bell rung in the Barrac, that ferved for a Chapel, and he kneeled down to fay that Prayer, as did all the reft after his Example. Their Silence and Devotion ftruck the Indians with Admiration, and Teutile alked Donna Marina the Meaning of that Ceremony; Cortes underftood their Queftion, and thought it proper to make ufe of this Opportunity, while he fatisfied their Curiofity, to talk to them upon the Subject of Religion, beginning to return to his Anfwer, by telling Teutile that one Point of his Embaffy, and the principal Motive which his King had to offer his Friendfnip to Motezuma, was the Obligation Cbriftian Princes lay under to oppofe Idolatry, and the Defire he had to inftruct him in the Knowledge of the Truth, and to help him to get free from the Slavery of the Devil, 'the invifible Tyrant of his

Kingdoms, who, in reality, held him a Slave and a Vaffal, though, in outward Appearance, he was fo powerful a Monarch; and that coming from fuch remote Countries upon Affairs of fuch a Nature, and in the Name of anothes: more powerful Monarch, he could not omit making new Efforts, and perfevering in his Inftances till he fhould prevail to be heard: Since he came on a peaceful Account, as appeared by the firrall Number of his Men, from which no Sufpicion could be had of greater Defigns.

No fooner had Teutite heard the Refolution of Corter. than he ftarted up haftily, and with fome Sort of Impatience, between Anger and Confufion, told him, Thas hitherto the great Motezuma had treated him as a Gueft, but that if he continued obftinate it would be his own Fault if he found himfelf treated as an Enemy; and ${ }_{3}$ without ftaying for an Anfwer, or fo much as taking leave, he turned his Back and went haftily out of his Prefence, followed by Pilpatoe and the reft of his Attendants. Hernan Cortes was a little flartled at Teutile's Proceeding, but fo much Mafter of himfelf, that, turning to his People with a Smile in his Countenance, "We fhall "s fee, fays he, where this Challenge will end; we know, " for the moft Part, Threats are the Effects of Fear. ${ }^{33}$ And that very Night the Guards were doubled, and Cortes provided againft what was poffible, as againft a Thing certain, for Commanders can never be too careful. As foon as Day appeared the Spaniards found a confiderable Alteration, which gave them fome Difturbance; for thofe Indians which inhabited Pilpatoe's Cabins were retired, and not a Man appeared in all the Country: Thofe alfo kept away who ufed to bring Provifions from the neighbouring Towns.

Thefe Beginnings of Want were fufficient to make fome Soldiers begin to be uneafy, looking upon it as very unadvifed to think of fettling in that Country, which Murmuring, fome Friends of Velafquez took Advantage of, and began to exclaim, faying in common Difcourfe, That Hernan Cortes had a Mind to deftroy them, and ambitiounly purfued a Defign without a Force proportioned to the Undertaking. That the Intention of maintaining themfelves with fuch a Handful of People in the Dominions of fo powerful a Prince, would be judged rafh by all Men. And that it was now neceflary that they fhould all demand to return to the Inand of Cuba, in order to refit the Fleet and reinforce the Army.
Cortes being informed of this, made ufe of his Friends and Confidents to enquire the Opinions of the reft of his Men, and found that he had on his Side the moft, and thofe too of greateft Confequence, upon which he fuffered himfelf to be feen by the Malcontents. Diego de Ordaz was the Perfon who fpoke in the Name of all, and with fome Heat and Difrefpect told him, That as his Forces were very unequal to the Attempt he was about to make, his Soldiers thought he would do much better to return and endeavour to get fuch Reinforcements as might enable him to purfue his Defign with fome Probability of Succefs. Cortes heard him patiently, and then told him calmly, that if all the Soldiers were of that Opinion they were very unfit for fuch an Enterprize, and he would think of returning home.
3. After Ordaz and his Party had left Cortes, he gave Direction for publifhing the Return to the Inand of $\mathrm{Cuba}_{3}$ and ordered the Captains hould embark with their refpective Companies on board the Veffels under their Command, and be ready to fail the next Day early. But no fooner was this Declaration publifhed, than thofe who were under-hand in the General's Intereft began to ftir in the Affair, crying out, That Cortes had deceived them by profeffing he meant to fettle in that Country, that they would not leave it, that if he had a Mind to retire he might, with fuch as were willing to follow him, for they fhould not want fome Gentleman that would take the Command. This Clamour was fo well managed, that it brought over many that had been forced or perfuaded into the contrary Eaction; and Cortes's Friends who had firred up one Part were obliged to appeafe the other.

They commended their Refolution, and offered to fpeak to Cortes to fufpend the Execution of his Order,
and before this Ardour cooled they went to him, attended by many of the Soldiers, in whofe Prefence they told him in a high Strain, That the Troops were upon the Point to mutiny on Account of his Order: They complained that he had taken fuch a Refolution without the Advice of their Captains: They put him in mind of what had happened to Fuan de Grijalva, whofe Difgrace was occafioned by his not making a Settlement in the Country he had difcovered, and maintaining himfelf there; for which he was treated as a pufilanimous Perfon, and the Command of the Fleet taken from him : They told him, in fhort, what he had directed fhould be told him, which he received as if it had been unexpected News. When they had done, he faid that he had been mifinformed, that he would proceed with fuch as were willing, that he would conftrain nobody, but, on the contrary, would caufe a Ship and every thing neceffary to be provided for carrying back to Cuba, fuch as found they had not Courage enough to follow him and his Friends.
This Refolution met with great Applaufe, for fome made Rejoicings becaufe they were fincerely glad, and others that they might not be diftinguifhed from thofe that really were fo. None were fo bold, at that time, as to contradict the making of a Settlement: Nor did thofe very Men who had before been Malcontents know what to fay for themfelves. But Cortes admitted thofe Excufes they offered without enquiring further into the Affair, laying that up for a better Opportunity. It happened that whilft Bernal Diaz del Caftillo, with another Soldier, ftood at one of the Avenues, they faw five Indians coming along the Road next the Sea-fide, towards the Quarters, and thinking them too finall a Number to alarm the Army, they fuffered them to approach.

They ftopped at a little Diftance, and fignified by Signs that they came in a peaceable Manner, with a Meffage to their General; Diaz went with them, leaving his Companion in the fame Poft to obferve if any more followed. Cortes received them very civilly, ordered them to be well treated before he heard them, and obferved they were of another Nation, as differing from the Mexicans in their Habit, though, like them, they had Rings in their Ears and Lips, with Jewels hanging to them. Their Language alfo had a different Sound, and when Aguilar and Donna Maria came, it appeared that they fpoke in a different Idiom, and it fell out happily that one of them underftood, and with fome Difficulty pronounced, the Mexican Language, by which means, and not without fome Trouble, it was known that they were fent by the Lord of Zempoalla to vifit the Captain of thofe valiant People, whofe great Actions in the Province of $\mathcal{T}$ abafco had reached his Ears, and to inform him, that being a warlike Prince, and a Friend to brave Men, he defired his Friendfhip.

They dwelt much upon the Value their Mafter had for good Soldiers, as doubting leaft the Spaniards fhould attribute that to his Fear, which they would have thought the Effects of his Inclination. Cortes very courteounly accepted of the Friendifip propofed to him on the Part of their Cazique, looking upon it as a particular Favour from Heaven, that this Embaffy fhould arrive at a time when the Mexicans had left him, of whom he was now growing jealous; and he put the more Value upon it when he underfood that the Province of Zempoalla was in the Road to that Place which Francifco de Montejo difcovered from the Coaft whither he was thinking to remove his Quarters. He afked the Indians fome Queftions, to inform himfelf of the Forces of the Cazique.

It being afked how it came to pafs that they (being fo near) had fo long delayed coming with this Propofal, they anfwered, that the Zempoallans had nothing to do where the Mexicans appeared, whofe Cruelties were abhorred by their Nation. This Intelligence was not difagreeable to Cories, and diving farther into it, thro Curiofity, he underftood that Motezuma was a cruel Prince, abhorred for his Pride and Tyranny, that many of his People were fubject out of Fear; and' that fome Nations were defirous to free themelves from his Xoke. This made his

Power appear the lefs formidable, and feveral Serratagetns and Means of increafing his Army came into this Head; which gave him fome Sort of Encouragement.
The firft that occurred, was to take part with thofe afficted Peopile, believing it would not be dificult to form a Party againft a Tyrant, among his own Rebels: So he reafched then, and it fell out afterwards accordingly: He immediately difniffed thofe Indians with fome Gifts, in token of Friendfhip; and told them he would foon come and pay their Mafter a Vifit, in order to eftablifh a Friendfhip with him, and give him the Affiftance he fhould ftand in need of.

His Intent was to pafs through the Province, and take a View of Quiabifan, where he had Thoughts of fixing his firft Settlement, from the good Account he had reeeived of its Fertility; but it behoved him, for other Ends, which he was then contriving how to compafs, to haften the forming his fmall Corporation in his prefent Quarters, although he was to remove the Troops to a Place more commodious : He communicated his Refolution to thofe Captains that were his Confidents, and having by this Meanis fmoothed the Way for what he had to propofe, he affembled the Men in order to name the Officers of the new Government. At which fhort Conference, thofe that were acquainted with the Mind of Cortes prevailed; and AlonSo Portocarrero, and Francijco de Montejo were appointed Alcaldes, Alonjo Davila, Pedro, and Alonfo de Alverado, and Gonzalo de Saudoval were Regidores. The chief Alguazil and Procurator Gencral $\begin{gathered}\text { fuan de Efoulante, and Francifoo Alve- }\end{gathered}$ rez Cbico.
They alfo appointed other inferior Officers ; and, having taken the accuftomed Oath, to obferve Reafon and Juftice, according to their Duty, for the greater Service of God and the King, they took Poffeffion; and began to exercife their Employments with the ufual Solemnity, calling their new Settlement by the Name of Villa Rica de la Vera Cruz; which Title it , received in the Place where it was afterwards fixed, being called Villa Rica, in Remembrance of the Gold they had feen in that Country, and de la Vera Cruz, in Acknowledgment of their landing there, on the Friday of the Crofs, or Good Friday, as we call it. Cortes was prefent as a private Perfon among the other Members of the Colony, and, though he could not eafily lay afide that kind of Superiority which is wont to confift in the Refpect which others pay, he endeavoured to fupport the Authority of thofe new Minifters, and by his Refpect to reduce the others to obey them.
4. The next Day in the Morning the Council met; under colour of confulting about fome Points relating to the Prefervation and Augmentation of the new Settlement, and foon after Hernan Cortes defired Admittance, to propofe an Affair which concerned the public Good. The Council rofe up to receive him, and he, paying his Refpect to the Magiftracy of the Town, went and took his Seat immediately next to the firt Regidore, and then laid open the Reafon which induced him to difapprove that Commiffion under which he had hitherto acted; and having finifhed his Difcourfe, he threw upon the Table the Commiffion given him by Diego Velafquez, kiffed the Truncheon, and delivered it into the Hands of the Alcalde, and retired to his Barrac.
He was under no Uneafinefs about the Event, for he had fo difpofed Matters that he ventured but little in the Refolution; but it muft be confeffed, that the Manner of acting was very handfome and noble, and no lefs commendable, than the Art he ufed to fupply the Defects in his Authority. The Council foon refolved upon the Election, for fome had confidered what they were to propofe, and others had nothing to reply: They all voted to admit the Refignation of Cortes; but that he ought to be obliged to take upon him the Command of the Army again, the Town giving him his Commiffion in the Name of the King, during the Time, and in the Interim, until his Majefty fhould otherwife order. And they refolved to communicate the new Eletion to the People, either to fee how they would receive it, or, in order to be fatisfied of their Approbation. The People were called together by the Voice of a Cryer; and the

Renunciation of Cortes being publifhed, with the Refolution of the Council, they received fuch A pplaufe as was concerted.

Some congratulated the Council on their good Election; others demanded Cortes, as if he had been denied, and if any were of a contrary Opinion they diffembled, and took care not to be remarkable by their Silence. This Work being over, the Alcaldes and Regidores went with the greateft part of thofe Soldiers to the Quarters of Cortes, and acquainted him that the Town of Villa Rica de la Vera Cruz had, in the Name of the King Don Carlos, with the Confent and Approbation of the Inhabitants in full Council, chofen and appointed him General of the Army of Nere Spain; and, in cafe it were neceffary, did require and command him to take upon him that Poft, it being convenient for the public Good of the Town and his Majefty.

Cortes accepted of the new Command with great Refpect, and now began to govern the Troops with another Kind of Authority, which had its Effect in the Obedience of the Soldiers. The Dependants upon Velafquez refented this Alteration in a very indifcreetManner, for they could not difguife their Vexation, nor would they give way to the Current which they were not able to ftem. They endeavoured to invalidate the Authority of the Council, and caft Reflections on Cortes, blaming his Ambition, and talking with Contempt of thofe that were deceived: And, as Scandal has its hidden Poifon, and an unknown Power over thofe that hear it, it fpread in their Converfation, where there wanted not fome who hearkened to, and endeavoured to foment it.

Cortes did all in his Power to remedy this Inconvenience, apprehending it might draw away thofe who were already difquieted, or put thofe into a Commotion who were eafily ftirred up. He had already found by Experience how little his Patience availed, and gentle Means made the Evil worfe, and therefore refolved to make ufe of Severity, which generally has the beft Effect upon the Infolent. He ordered Diego de Ordaz, Pedro Efcudero, and Fuan Velafquez de Leon, to be feized, carried aboard the Fleet, and put in Irons. This Action ftruck a great Terror into the Troops, and it was his Defign to improve it, declaring in a very pofitive and refolute manner, that he feized them as feditious Perfons, and Difturbers of the public Peace; and, that he would proceed againft them, and make them pay for their $\mathrm{Ob}-$ ftinacy with the Lofs of their Heads.

In which Difpofition he continued fome Days, without proceeding to the Rigour of Juftice ; for he rather defired to reform, than punifh them. At firft he fuffered none to go near them, but afterwards permitted it, artfully making ufe of this Permiffion for fome of his Confidents to endeavour to reduce and bring them to Reafon, which in time they compaffed, he fuffering himfelf to be pacified fo effectually, that he made them his Friends; and they faithfully ftood by him in all the Accidents which afterwards befel him; believing that they owed their Lives to his Clemency only.
5. The Perfons before-mentioned were no fooner imprifoned than Pedro de Alverado marched with a hundred Men to view the Country, and bring in Provifions; for they began to be fenfible of the W ant of thofe Indians who ufed to provide for the Army. He was ordered to commit no Hoftility, and he had the good Fortune to perform his Commiffion with little Trouble. At a fmall Diftance he came to fome Villages, the Inhabitants whereof had fled into the Woods, but had left their Houfes well provided, and without doing any Damage either to them or their Furniture. The Soldiers took what they had Occafion for, and returned to their Quarters thoroughly loaded, and very well pleafed. Cortes immediately difpofed his March as he had refolved, and the Ships accordingly failed for the Bay of Quiabilan; he followed by Land, taking the Road of Zempoalla, keeping the Coaft on his Right, and fending a Party before to difcover the Country, providing againft all Accidents which might happen in Circumftances where Security might be juftly accounted Neglect.

They reached in a few Hours the River of Zempoalla, and" finding it deep, they were obliged to make ufe of
fome Canoes, and other Veffels of Fifhermen, which they found on the Shore; in which the Soldiers pafed over, making their Horfes fwim. Having overcome this Difficulty, they arrived at fome Houfes in the Diftriet of Zempoalla; and they took it for no good Sign, not only finding them forfaken by the Indians, but alfo without either Furniture or Provifions, only they left in their Temples feveral Idols, with various Intruments, or Knives made of Flint, and fome miferable Remains of human Victims fcattered upon the Ground, which at the fame time moved Companion, and ftruck them with Horror. Here they firft faw the Mexican Books, which have been already mentioned: There were three or four of them in the Temples, which was thought contained the Rites of their Religion, each made of a long thin varnifhed Cloth, which they folded in equal Foldings, fo that every Fold made a Leaf, and all together made up the Volume like ours to Appearance, and were written or painted with that kind of Cyphers ufed by the Painters of Teutile.

The Army were prefently quartered in the beft Houfes, and paffed the Night fomewhat uneafily, their Arms in Readinels, with Sentinels at a convenient Diftance. The next Day they continued their March in the fame Order along the great Road, which turned off to the Weftward, leading farther from the Shore, and during the Morning, they faw no Perfon of whom to gain Intelligence ; which gave them Uneafinefs, till, entering into fome very pleafant Meadows, they difcovered twelve Indians, who were coming in fearch of Cortes with a Prefent of Hens and Bread, fent him by the Cazique of Zempoalla; very earneftly entreating him not to fail of coming to his Town, where he had provided Quarters for his Men, and where he fhould be more plentifully entertained. By thefe Indians he underftood, that the Cazique's Refidence was at a Town one Sun's Diftance from that Place, which, in theirLanguage, fignifies the fame as one Day's March; for they underftood not the Divifion of Leagues, but meafured Diftance by Suns, counting Time, and not the Way. Cortes difmiffed fix of the Indions, with many Thanks for the Prefent, keeping the other fix to fhew him the Way, and to afk them fome Queftions ; for he was not entirely fatisfied with this kind Treatment, which being fo much unlooked for feemed the lefs to be depended on. That Night they halted in a fmall Village, thin of Inhabitants; but very defirous to entertain the Spaniards well: And by the Behaviour of thofe People to the Spaniards, judged that their Nation was inclined to Peace; nor were they deceived in their Conjectures.
In the Morning the Army moved towards Zempoalla, following the Guides with all neceffary Caution, and towards Evening there came twenty Indians forth, to receive Cortes, well drefled after their Fafhion, who, after having paid their Refpects, faid, That their Cazique did not come with them, by reafon of fome Impediment, but had fent them to pay that Refpect on his Part, being very defirous to be acquainted with fuch valiant Guefts, and to receive them into his Friendfhip and his Efteem. The Town was large and beautiful, fituated between two Rivers, which fertilized the Country, defcending from fome Mountains at a fmall Diffance, which were covered with Trees, and eafy of Afcent. The Buildings were of Stone, covered and adorned with a fort of Lime very white and fhining, and afforded a pleafant and noble Shew at a Diftance, infomuch that one of the Scouts, who was fent before, returned in hafte, crying aloud, That the Walls were of Silver; which Miftake made much Mirth in the Army, where many at firft perhaps believed it, who afterwards made a Jeft of his Credulity.

The Squares and Streets were filled with People, who came to fee the Entry without any Arms that could give Sufpicion, or any other Noife than that which ufually proceeds from a Multitude. The Cazique came out to the Gates of his Palace, and his Diftemper appeared to be a monftrous Fatnefs, which oppreffed and disfigured him: He drew near with fome Difficulty, fupported by the Arms of fome noble Indians, by whom he ieemed to direct his Motion. His Habit was a Mantle of fine

Cotton thrown over his naked Body, enriched with various Jewels and Pendants, which allo he wore in his Ears and Lips: A Prince of a very extraordinary Make, in whom Weight and Gravity agreed wonderfully well. It was neceffary for Cortes to put a Stop to the laughing of the Soldiers. But as foon as the Cazique began his Difcourfe, receiving Cortes with his Arms, and welcoming the relt of the Captains, he fhewed his good Senfe, and by his Speech forced a Refpect to his Perfon.

He difcourfed much to the purpofe, and fhortened his Compliments with Refpect and Difcretion, bidding Cortes retire to reft after his Journey, and quarter his Men, after which he would vifit him in his Quarters, and talk more at Leifure about their common Interefts. He had provided Quarters in fquare Courts which had many Chambers, where they were all accommodated, and plentifully furnifhed with all they had Occafion for. After which the Cazique made way for his Vifit, by fending a Prefent of Jewels, of Gold, and other Curiofities, to the Value of above 2000 Pefos , and foon after came himfelf with a fplendid Attendance, in a Chair, carried on the Shoulders of the Chiefs of his Family. Cortes went forth to receive him, attended by his Captains, and, giving him the Precedence and the Right-hand, retired with him and his Interpreters, for he thought it convenient to talk to him without Witnefs. After having made him the ufual Speech about the Intent of his coming, the Grandeur of his King, and the Errors of Idolatry; he proceeded to tell him that the Defign of thofe valiant Troops was to redrefs Wrongs, punifh Violence, and take Part with Juftice and Reafon.

He touched on that Point on purpofe to draw him in, by Degrees, to complain of Motezuma, and to difcover what Advantages might be expected from his Indignation, of which he had been before informed. It prefently appeared, by the Change of his Countenance, that Cortes had touched the right String; and, before he refolved on an Anfwer, he began to figh, as one who found a Difficulty in making his Complaints: But at length, his Refentment prevailing, he broke out into Lamentations of his Unhappinefs, and told him, That all the Caziques of the neighbouring Countries were under a miferable Slavery, groaning under the Oppreffions and Tyranny of Motezuma, without fufficient Force to free themfelves, or Courage to think on a Remedy ; that he caufed himfelf to be ferved and adored by his Subjects like one of his Gods, and would have his Violencies reverenced like the Decrees of Heaven : But that it was not his Defire to have him adventure to fupport them, becaufe Motezuma was too powerful and ftrong for him to refolve to declare himfelf his Enemy, nor would it be agreeable to the Laws of Civility to pretend to his Friendfhip by felling, at fo great a Price, the fmall Service he had done him.
Cortes endeavoured to comfort him; telling him, That he fhould little regard Motezuma's Power, having Juftice on his Side; but that he was obliged to pafs on to $2 u i-$ abifan, where the Oppreffed and Needy fhould find him ready to affift them, and all who, having Reafon on their fide, food in need of his Arms, which he might communicate to his Friends and Confederates; affuring them all, that Motezuma fhould not be able to oppofe it while he undertook their Defence. With this they both took Leave, and Cortes prepared for his March, having gained the Good-will of that Cazique, and being extremely well pleafed, in himfelf, at the better Profpect of his Defigns; which, from being only diftant Views of the Imagination, began now to appear poffible.
6. The Ampy being ready to march, they found four bundred Indions provided to carry their Baggage and Provifions, and to help to conduct the Artillery, which was a great Eafe to the Soldiers, and looked upon as an extraordinary Refpect of the Cazique, till they underftood, from Donna Marine, that it was a common Practice to affit their Allies with that Sort of Luggage-carriers, which, in their Language, they call Tamenes, who are able to travel five or fixLeagues with three Quarters of an Hundred Weight on their Backs. The Country they were entering was pleafant and delightful; Part covered with great Trees, and the reft cultivated; at which Sight the Spa.
niards went on chearfully, rejoicing at their good Fortune in marching through fo plentiful a Country. At Sun-fet they found themfelves near a little Village unpeopled, where they ftaid to avoid the Inconveniency of entering Quiabilan by Night; and arrived the next Day by Ten in the Morning.

The Buildings appeared, at a Diftance, on an Eminence of Rocks, which feemed to ferve inftead of Walls; a Situation naturally ftrong, the Avenues narrow and fteep, which they found without Defence, and yet they entered with Difficulty. The Cazique had retired with the Inhabitants to difcover, at a Diftance, the Intention of the Spaniards; and the Troops took Poffeffion of the Town, without finding any Perfon from whom they could gain the leaft Information, till coming to a Square, where the Indians had their Temples, there came out Fourteen or Fifteen Indians to meet them, handfomely dreffed, after their manner, and with Abundance of Civilities endeavoured to cover their Fear with Refpect. Cortes encouraged them by his Careffes, and gave them fome Beads of blue and green Glafs, a fort of Coin, which for its Effects began to be valued even among thofe who were acquainted with it; with which good Treatment they recovered from the Fright, and gave him to underftand, That their Cazique had withdrawn himfelf to prevent a War, by putting himfelf on his Defence, and not adventuring his Perfon by trufting to armed Troops which he did not know; and it was impoffible to hinder the Flight of the Inhabitants, who were under lefs Obligations to run themfelves into Danger. But that as foon as the reft fhould be fenfible of the Goodnefs of fuch Guefts, they would immediately return to their Houfes, and account it a great Happinefs to ferve and obey them. Cortes gave them all the Affurances poffible, and, whilft they were gone with this News, he gave ftrict Orders to the Soldiers to treat the Indians well, who foon fhewed what Confidence they had in the Spaniards; for that very Night fome Families returned, and, in a little Time, the Town was filled again with its Inhabitants.

Some time after the Cazique returned, bringing with him the Cazique of Zempoalla. They both came in Litters, on the Shoulders of Men. He of Zempoalla made a handfome Excufe for his Neighbour, and, after fome fhort Difcourfe, they introduced their Complaints of Motezuma, recounting, with great Warmth, and fometimes with Tears, his Tyrannies and Cruelties; to which the Cazique of Zempoalla added as the utmoft Aggravation: " This Monfter is fo proud and fierce, that, befides his s impoverifhing us by Tributes, and raifing his Wealth "s out of our Calamities, he invades the Houfes of his "S Subjects, taking forcibly from us both our Wives and " Daughters, ftaining with their Blood the Altars of his "G Gods, after having facrificed them firft to other Ufes " more cruel, and lefs honeft." Cortes endeavoured to comfort them, and bring them to enter into a Confederacy with him; but at the Time that he was enquiring into their Strength, and the Number of People that would take Arms in Defence of their Liberty, two or three Indians came in, who feemed in a great Fright, and whifpering the Caziques in their Ears, put them into fuch Confufion that they rofe up, lofing Courage and Colour, and went haftily away, without fo much as taking leave or making an end of their Difcourfe.

The Caufe of this Diforder was quickly known; for fix Royal Commiffioners, fuch as went about the Kingdom to gather Motezuma's Tributes, were feen paffing before the Spaniards Quarters. They were adorned with Abundance of Feathers and Pendants of Gold on fine clean Cotton Cloths, with a fufficient Number of Servants and inferior Officers; who, moving great Fans made of Feathers, fanned their Mafters to cool them, or fhaded them from the Sun as Occafion required. Cories went out to the Gates, with his Captain, to fee them, and they paffed on without paying him any Refpect, and with Countenances that fnewed Indignation; which Pride provoked fome of the Soldiers fo much, that they would have chaftifed them, had they not been with-held by Cortes, who refted fatisfied at that Time with fending Donna Marina, with a fufficient Guard, to inform himfelf of
what they were doing. By this Means it was undentood, that, after having feated themfelves in the Town-houfe, they fummoned the Caziques to appear before them, and reprimanded them publicly for their Boldnefs in admiting Strangers into their Town, who were Enemies to their King; and therefore, befides the ordinary Service, to which they were obliged, they demanded twenty Indians to facrifice to their Gods, as an Atonement for fuch a Crime.

Cortes fent for the two Caziques by fome Soldiers, who had Orders, without any Noife, to bring them to his Prefence; when letting them know that he faw into their moft hidden Defigns, he told them, That he was well acquainted with the Vilenefs of thofe Commiffioners, who, without any Pretence but their having admitted hisTroops, endeavoured to impofe on them new Tributes of Human Blood: That it was no Time for fuch Abominations, nor would he fuffer fuch horrid Commands in his Prefence; but ordered them, without fail, to call their People, feize the Commiffioners, and leave him to maintain what they fhould do by his Advice. The Caziques refufed to execute fuch a bold Command, as being grown mean-fpirited; but Cortes repeated his Order with fo much Refolution, that they immediately went to execute it, and that with great Applaufe of the Indians.

They feized the Minitters of Motezuma, whom they put in a kind of Pillories in their Prifons, and very incommodious, for they held the Delinquents by the Neck, obliging them continually to do their utmoft with their Shoulders to cafe the Weight, for the fake of breathing. It was very pleafant to fee how proud the Caziques returned to give an Account of their noble Action, for they thought to execute them, and to make them fuffer the Punifhments affigned by the Laws to Traitors; and, feeing that would not be permitted, they defired to facrifice them to their Gods, as if it were a kind of Grace. The Prifoners being fecured by a fufficient Number of Spariig Soldiers, Cortes retired to his Quarters, and to confider with himfelf what was to be done; for he was not willing abfolutely to break with Motezuma, but ftill to keep him in Sufpence. On the other hand he confidered it as a very neceffary Point to maintain that Party which was beginning to form, that he might have their Affiftance, in cafe he fhould happen to want them. In fine, he held it moft convenient to manage Matters with Motezuma by making a Merit of fufpending the Effects of that Difrefpect.

The Refult of thofe Reflections was, to fend, at Midnight, for two of the Prifoners with all poffible Privacy; and, after receiving them courteouny, to tell them, That he had fent for them in order to fet them at Liberty: And that, as they received it folely from his Hands, they might affure their Prince he would endeavour very fpeedily to fend the reft of their Companions, who remained in the Power of the Caziques, whom he would endeavour to make fenfible of their Faults, and perform all that fhould be for his Service; for that he was defirous of Peace, and to teftify, by his Speech and Actions, all the Marks of Civility that were due to the Embaffadors of fo great a Prince. The Indians durft not fet out on their Journey, for fear of being killed, or taken by the way; and he was forced to give them a Guard of Spanifb Soldiers, who conveyed them to the next Bay, where the Ships lay, and one of the Boats was ordered to land them beyond the Diftrict of Zempoalla.

The Caziques came, in the Morning, much troubled for the Efcape of the two Prifoners; and Cortes received the News with Signs of Surprize and Concern, blaming their Want of Vigilance, and, upon this Pretence, he ordered, in their Prefence, that the reft fhould be carried aboard the Fleet; but he privately directed the Officers on board. to treat them well, and to keep them fafe, by which he gained the Confidence of the Caziques, without difobliging Motezuma, whofe Power, fo much cried up and dreaded among thofe Indians, made him caréful how he acted.
7. The good Behaviour of the Spaniards towards their Allies was quickly divulged through all the Diftricts thereabouts; and the two Caziques, of Zempoalla and Quiabilan,
gave notice to all their Friends and Confederates of their Advantages, being freed from Impofitions, and their Li berty fecured by the Protection of a People invincible, who knew the very Thoughts of Men, and feemed of a. fuperior Nature. The Report fpread with Exaggerations. It was faid publicly among the Feople, That their Gods were come down to Quiabiflan, darting Lightning againft Motezuma; which Credulity lafted fome time among the Indians, and caufed a Veneration, which, though ill founded, very much facilitated the Beginnings of this Conqueft.

This high Opinion of the Spaniards fo increafed, and the Name of Liberty founded fo well in the Ears of the Oppreffed, that, in a few Days, there came to Quiabilan, thirty Caziques of the Mountains that were in fight, which had numerous Settlements of Indians, called Totanaques, a ruftic People, of different Languages and Cuftoms; but ftrong, active, induftrious, and remarkable for their Courage. They paid their Obedience, offered their Troops, and, in the Form propofed to them, fwore Fidelity and Vaffallage to the King of Spain, of which a folemn Act was made before the Secretary of the Council.
The Number it is likely was very great, the Settlements many, and the People eafily ftirred up, againft Motezuma; efpecially for that the mountainous Country was inhabited by warlike Indiuns lately fubdued, or not quite conquered. This kind of Confederacy being made, the Caziques returned to their Houfes, ready to do as they had been commanded; and Cortes refolved to fettle the Town of Villa Rica de la Vera Cruz, which till then moved with the Army, though obferving its proper Diftinctions as a Republic. They pitched upon the Plain between the Sea and Quiabifan, half a League from that Town, a pleafant Place which invited them by its Fertility, abounding in Water, and having great Plenty of Trees, which lay commodious for the cutting of Timber for the Buildings. They laid the Foundations, beginning with the Church; the Handicraftmen were diftributed; Carpenters and Mafons, $\mathcal{E}^{\circ} c$. who came with Soldier's Pay; and the Indians of Zempoalla and Quiabilan affifting with equal Activity, the Houfes began to rife, mean as to Architecture, rather for a Covering than any Commodioufnefs. They prefently drew the Compafs of the Wall, with Traverfes of ftrong Mudwork; a fufficient Defence againft the Weapons of the Indians, and, in that Country, it might be properly called a Fortrefs. The principal Officers of the Army helped to carry on the Work, applying both their Hands and Shoulders, and Cortes worked hard as if he had fet himfelf a Tank, not fatisfied with the feeming Diligence, which is fufficient in a Superior, to fet a good Example.

In the mean time they had at Mexico the firt Advice of the Spaniards being admitted into Zempoalla by that Cazique, a Man, in their Opinion, of fufpected Fidelity, and the neighbouring Places little to be depended upon. Which Account fo provoked Motezuma, that he propofed to draw together his Forces, and march out in Perfon to chantife this Offence of the Zempoallans, and put the reft of the Mountain Nations under the Yoke, taking the Spaniards alive, whom he had already deftined for a folemn Sacrifice to his Gods.

But, at the fame time that he began to make great Preparations for this Enterprize, the two Indians whom Cortes had difpatched from 2 quiabilan arrived at Mexico $_{3}$ and gave an Account of their Imprifonment, and that they owed their Liberty to the Captain of the Strangers, who had fent them to reprefent how much he defired Peace, and how far it was from his Intentions to do him any Differvice ; extolling his Courtefy and Mildnefs fo much, that it might be perceived, by the Praifes they gave Cortes, how much they had been frighted by the Caziques.
Upon this Affairs changed. The Anger of Motezuma was mitigated, his Preparations for War ceafed, and he determined again to try Negociation, and endeavour to divert Cortes from his Defigns by a new Embafly and Prefent, to which Meafures he eafily inclined; for, in the Midft of his Anger and Pride, he could not forget the Signals of Heaven, and the Anfwers of his Idols, which he looked upon as evil Omens of his Undertaking,
or at leaft they obliged him to delay the Breach, endeavouring to qualify his Fear after fuch a Manner, that it fhould be taken for Prudence by Men, and for Refpect by his Gods.

His Embaffadors arrived juft as the new Settlement and Fortrefs of Vera Cruz were completed. They were the Emperor's Nephews, young Men, but affifted by four ancient Princes, who attended them as Counfellors. They told Cortes, That the Emperor had determined to chaftife the Caziques, till he received an Account of his Behaviour, which induced him to fufpend his Vengeance: That he hoped, however, he would foon quit that Country, fince the Obftacles which hindered his coming to his Court were in their Nature infurmountable.

According to his ufual Cuftom, Cortes heard their Difcourfe with great Temper and Calmnefs, and received. the Prefents made him by the Emperor with all Refpect poffible ; treated the Embaffadors with great Kindnefs and Complaifance; made them many Prefents, befides a proper Return to Motezuma: But, at the fame time, declared, That Dificulties were no Difcouragements to him, and the Importance of his Commiffion was fuch, that, at all Events, he muft purfue his Journey. This highly difgutted the Embaffadors; but was very ufeful with regard to the Allies, who were confirmed in their Opinion that Cortes was fomething more than Man, fince the great Emperor of Mexico vouchfafed to court his Friendfhip, and difcovered an Apprehenfion of his Prefence. They began therefore to conclude themfelves fafe under his Protection, and to lay afide that Fear, to which not only they, but their Anceftors, had been accuftomed.
8. The Cazique of Zempoalla, a fhort time after, came to Vera Cruz, with fome principal Indians, whom he brought as Witneffes of what he intended to offer, which was, That now the Time awas come to protect and defend his Country ; for that fome Troops of the Mexicans were arrived in Zimpazingo, deftroying the Corn-fields, and committing fome Hoftilities in his Diftrict. Cortes found himiflf engaged to fupport the Zempoallans to maintain his Credit; and befides, he thought it would not be right to fuffer that Infolence of the Mexicans as it were in his Sight, and that in cafe they were fome advanced Troops of Motezuma's Army, it would be neceffary to Prike a Terror into them to difcourage the reft of his People, for which Purpofe he determined to march in Perfon; engaging in it fomewhat too haftily, for he was yet unacquainted with the Deceits of thofe People (a capital Vice among the Indians) and fuffered himfelf to be carried away without examining into the Truth. He offered them to march out immediately with his Troops to chaftife thofe Enemies who difturbed the Peace of his Allies, and, ordering them to provide Indians of Burthen for the Service of the Baggage and Artillery, he made a Difpofition immediately for his March, and took the Road of Zimpazingo, with four hundred Men, leaving the reft in the Fortrefs of Vera Cruz.

As he paffed by Zempoalla he found two thoufand armed Indians whom the Cazique had provided to ferve under him in that Expedition, divided into four Bodies, with their Captains, Colours, and Arms, according to the Cuftom of their Militia. Cortes thanked him very much for the Care he took to provide that Succour; and though he let him underftand, that he had no. Occafion for his Men upon an Expedition of fo fmall Importance, yet he fuffered them to go to provide againt all Events; but intimated he did fo only to let them fhare in the Glory of the Succefs. That Night they lodged three Leagues from Zimpazingo, and the next Day, in the Afternoon, they difcovered the Town on the Top of a fmall Hill, a Branch of the Mountain, among great Rocks, which hid Part of the Buildings.

The Spaniards began to overcome the Craggednefs of the Mountain, but not without confiderable Trouble; for, being jealous of an Ambufcade, they went doubling and filing off as the Ground would permit; but the Zempoallans, either more dextrous or lefs embarraffed by the Narrownefs of the Paths, advanced with a Sort of Fury, which appeared like Valour, but was, indeed, no better than Revenge. Cories was obliged to give Orders to
halt, at a time when fome Troops of the Van-guasd were already in the Town.

He continued his March without meeting any Refiftance, and juft as he was preparing to attack the Town in feveral Parts, there came out of it eight Priefts who enquired for the Captain of that Army, before whofe Prefence they came in an humble and pitiful Manner. fuch as fufficiently fhewed Submiffion, without the Help of an Interpreter. Their Drefs was a black Mantle, of which the End reached the Ground, and the upper Part was gathered and plaited about the Neck, with a Piece hanging loofe in Form of a Hood. Their Hair reached to their Shoulders, clodded with the human Blood of their Sacrifices; Marks of which they fupertitiounly preferved on their Faces and 1 Iands, for it was not law ful for them to wafh themfelves. Thefe Priefts foon convinced the Spanifh Commander that he had been impofed on, that the Troops from Motezuma were long ago retired, and that this was only an Artifice of his Allies, who were their Enemies, in order to make ufe of him as an Inftrument for their Deftruction.

A thing in itfelf very fcandalous and bafe, bue at this Juncture particularly barbarous and black, as it contributed to draw an Imputation upon the Spaniards, which might have been fatal to their Affairs. After hearing their Difcourfe he retumed to his Indian Allies, and by the Confufion of the Zempoallan Captains, it appeared that thofe Priefts fpoke Truth, and Cortes was concerned at the Deceit, and vexed, at the fane time, at the Malice of the Indions; but confidering what was moft proper to be done upon this Occafion, he prefently ordered the Captains Olido and Alverado to go with their Companies, and gather the Indions together who had advanced before to get into the Town, and were now bury in the Pillage, and had taken a confiderable Quantity of Cloaths and Furniture and fome Prifoners.

They were brought to the Army fhamefully loaded, and the plundered People following, crying out for their Goods, for whofe Satisfaction Cortes commanded them to unbind the Prifoners and deliver up the Goods to the Priefes, that they might reftore them to their proper Owners, and calling for the Zempoallan Captains, reproved them publicly for their Prefumption, telling them they deferved Death for their Offence in making ufe of him only to compafs their Revenge; howewer, being warmly entreated by the Sponibs Captains whom he had inftructed before to pacify him, he pardoned them for that time, enlarging upon his Clemency, though, in Truth, he did not then dare to chaftife them; knowing well, that to preferve new acquired Friends, Clemency was more requifite than Juftice. Having managed things fo as to give him a Reputation with both the Nations, he commanded the Zempoallons to lodge without the Town, and marched in with the Sponiords, where he was received. with the Applaufe due to a Deliverer.

Immediately the Cazique of Zimpazingo vilited him in his Lodging, with others of the Neighbourhood, who came out of Friendfip, acknowledging the King of Spains for their Prince, whofe Name was already beloved and reverenced in that Country, where the People defired to be his Subjects out of Hatred to Motezuma, whom they knew, and Love to a Prince they knew not.

In their March back to Zempoaila, the Troops paffed by two Towns of thofe that were newly entered into the Confederacy; and while they halted in the Afternoon, a Soldier, whofe Name was Mora, took two Hens, fo that Cortes faw it, and was fo angry becaufe it was done in his Prefence, and in regard that he would have his Soldiers to obferve Difcipline, that he ordered him to be hanged, and had not Peter Alverado cut him down with his Sword, he had actually died; as it was he dropped down half choaked, and fome time afterwards was killed in Battle, at Guatemala. The Lord himfelf was neat Zempoalla waiting for Cortes with Provifions, and under great Concern, on account of having made him undertake that Journey on falfe Relations; for they were not fo barbarous as not to be fenfible that Cortes made good his Affertion, that he was fent to maintain Juftice, which gained him much Renutation; and as the Dread of Mo-
teztma made them uneafy, they could have wifhed, that for their greater Security, the Spaniards had never departed from their Town; for which Reafon they faid that fince they were now all one Nation, they fhould take their Women, and carried them eight beautiful Damfels, Daughters of principal Perfons, with Gold Necklaces and Pendants in their Ears, with Women Servants, the Cazique faying that feven of them were for the Captains, and the other, being his own Niece, for Cortes.

That General, before he would receive the Ladies, infifted that Idolatry fhould be abolifhed, to which the Indians were very loth to confent, alledging that they had no Occafion to quarrel with the Gods of their Fore-fathers, fince they had given them Succefs in War and good Harvefts; but what ftruck them moft, was their Fear that if they deftroyed thefe Gods, that is to fay, the Idols they worfhipped, they would punifh them feverely; but Cortes put them out of their Terror, by taking that upon himelf; and when the Idols were once deftroyed, the People fubmitted readily enough, in fpite of all the Pains their Priefts took to prevent it; and this great Point of Religion once fettled, Cortes and his Commanders made no Sort of Difficulty of accepting the Ladies, which was very agreeable to the Indians, who looked upon them thenceforward, not only as their Allies, but as their Countrymen.
9. Cortes having thus concluded a League with the Zempoallans, marched away to his new Colony of Villa Rica, and the fame Day he came to it a Ship arrived from Cuba, commanded by Francifco de Salcedo. The Ship brought Captain Lewis Martin, with a Mare and ren Soldiers, and Salcedo had a good Horfe. Thefe Perfons brought Advice that James Velafquez had received the Title of Adelantado, and the King's Commiffion to trade and make Settlements in the new difcovered Countries that had been granted him. The Forces having been now three Months in Nere Spain, and the Fort almoft made defenfible, it was propofed to go up the Country: But it was refolved, in the firt Place, to fend fome Perfons to the King, to give an Account of what had been done in his Service, and carry him a fifth of the Gold, and all the reft that had been given.

Alonfo Puerto Carrero and Captain de Montejo were pitched upon to go on this Errand, and Cortes thinking that what he had was very little, when every Officer and Soldier had his Share, and that the King's Fifth being accordingly very inconfiderable, it would not anfwer the Account they were to give of the Wealch of that Country; he ordered Francis de Montejo and Fames de Ordaz, that they, as Men in Authority, fhould fpeak to the Soldiers Man by Man, to refign their Shares to be fent to the King as a Prefent; many of the Gentlemen to whom the fame was propofed, freely offering to do the like. They readily confented, and all that had been got was converted into a Prefent, for Cortes would not deduct his own fifth Part, nor any Salary, only taking fo much out of the whole Sum, as was neceffary for the Expence of the Voyage, and to maintain the Meffengers going and coming, befides fomething Cortes fent to his Father Martin Cortes. He gave thofe Deputies ample Inftructions, with a particular Relation of what he had done both at Cuba and in New Spain; he likewife wrote a very long Letter to the King, taking Notice in it of the vaft Extent and Wealth of the Country, the Hopes he had of reducing it under his Obedience, and begging he would not forget him when any Commiffions were given out for that Country. The Magiftrates of Vera Cruz wrote another Letter, reprefenting the Service they had done his Majelty, the Reafons they had for making the Settlement, and their Sufferings. The Captains wrote another to the fame Effect, as did the Soldiers of mont Note; promifing to defend that Town at the Expence of their Lives, unlefs otherwife commanded by his Majefty; and all of them moft humbly intreating the King to beftow the Government of that Country, and others that hould be by them difcovered and fubdued, upon Ferdinand Cortes, whom they had chofen for their Commander, to prevent Difputes; and becaufe no Man was more capable of ferving his Majefty; and thats, in Cafe another had been appointed, his Com-
mifion might be called in Queftion, and that his Majefty would be pleafed fpeedily to anfwer and difpatch theis Deputies.

Cortes gave them the beft Ships, and appointed Antony Alaminos their Pilot, who, in order to avoid coming near St. 'Fago de Cuba, failed through the Channel of Bahama. They failed on the 26 th of $7 u$ ly, 15 I 9 , with fifteen Sailors, and touching at Marien, in Cuba , proceeded to the Ha vanna, paffed the Channel of Babama, and had a good Voyage to Spain; being the firft that ever failed that Way, which he did to avoid falling into the Hands of Velafquez. Alaminos took this Refolution, being well acquainted with the Lucayo Inlands, and the Coaft of Florida, and concluding that thofe Currents muft end fomewhere; and accordingly he ftood Northwards, and it proved well, for being got fafe out of the Channel, he came into the open Sea, and arrived fafe at Sanlucar, in October. Benedict Martin was then at Seville, in order to carry over the King's Difpatches to Fames Velafquez, at Cuba. He informing the Officers of the Indian Houfe, that thofe Deputies were out of the King's Service, they feized all that was in the Ship, together with the 3000 Caftalanos they had for their Expences, and what Cortes fent his Father. The Prefent for the King was fent to him at Valladolid, and Advice given to the Bifhop of Burgos, who was fitting out the Fleet to car ry his Majefty over to Flanders, with Complaints againlt Cortes, for having revolted from Fames Velafquez. The Deputies, with the Pilot Antony de Alaminos, and Cortes's Father, went away to meet the King at Tordefillas.

When the Deputies were gone from Vera Cruz, fome Servants and Friends of Velafquez, and among them $F_{\text {. }}$ Fobn Diaz, being uneafy among themfelves, contrived to fteal a fmall Veffel, and fail to Cuba, to acquaint Fomes Velafquez with what was doing; but when they had got the Ship ready, and were going to embark in the Night, Bernard de Coria repented, and gave Notice of it to Cortes, who immediately ordered the Sails to be taken from the Ships, and the Fugitives to be fecured, who owned the Truth of the Charge, impeaching alfo fome Perfons of more Note than themfelves, at whom, Cortes confidering his Circumftances, connived. However, he, with much feeming Sorrow, condemned Fames Efcudero the Alouazil, who had formerly arrefted him in Cuba, to be hanged, and, with him, Fames Cermeno, a Man fo active, that with only a Spear in his Hand, he would leap over another Spear held up at Arms-length by the talleft Men in the Army. Another had one Foot cut off, and two were whipped; he would not punifh $F$. Fohn Diaz, becaufe he was a Clergyman; and thus Cortes made himfelf feared and honoured. And as foon as he had figned the Warrant for Execution, to prevent its being obftructed by Intreaties, he went away to Zempoalla, where he appointed Peter Alverado to meet him.

He was now intent on his Journey to Mexico, and his People defirous of undertaking it, Cortes putting them in Hopes that they would be there enriched, by which Means he gained their Affections, and kept them in awe. The order of this March being under Deliberation, at Zempoalla, Cortes refolved to fink all his Ships, to deprive the Favourcrs of Velafquez of all Hopes of returning to Cuba; becaufe there were fo many of them, that if they went away they would have, weakened his Forces, and, at the fame Time, to add Refolution to the reft; who finding themfelves in that vaft populous Country, without any Pomibility of getting away, would be obliged to follow and obey him, and to truft only to their Valour. However, left this fhould occafion fome Difturbance among the Men, he contrived, that the Soldiers, who were his moft zealous Friends, fhould afk it of him, perfuading him to it, with feveral Arguments, and among the reft, that the Mariners, being an hundred Men, they would be a great Help to the Soldiers, and bear Part of all their Fatigues. The Soldiers, accordingly, afked it, and a public Inftrument was made of the fame by a Notary, though it was thought that there was another piece of Subtilty in this extraordinary Management, which was, his not being left alone under the Obligation of paying for'the Ships, but that the whole Army fhould be equally bound to pay for thęm.

This done, he ordered Tuian de Efculante, the chief Alguazil, to repair to Villa Rica, and to bring afhore from the Ships their Anchors, Iron Work, Sails, and all that might be of any Ufe, and then to fink them all except the Boats; and that the Mariners who were aged or difabled, and unfit for Service, fhould ftay in the Town. Fuan de Efculante, who was a very diligent Man, performed it with much Expedition, and returned to Zempoalla with the ableft of the Seamen, many of whom proved very good Soldiers. The more we confider and reflect upon
this Stroke of our Hero's Policy, the more we mutt be perfuaded he deferves that Title, fince nothing could be greater in itfelf, or performed with more Spirit and Refolution than this Scheme of burning his Ships, which he knew muft fill his Soldiers with a determined Refolution to conquer, fince it abfolutely took away what had hitherto damped and qualified that Ardour, the Hopes of getting back to $C u b a$, and efcaping perpetual Labours by a timely, though lefs honourable Retreat.

## SECTIONX.

The Hiflory of the War of Tlafcala, from its breaking out to Cortes's concluding a Peace with that Republic; and bis taking them into the Confederacy againft the Indian Emperor Motezuma.

#### Abstract

1. The Interruption Cortes met reith in bis intended March by the appearing of a Spanin Squadron on the Coaft, and the Meens he ufed to oblige them to retire. 2. He refumes his March towards Mexico, advances as far as Zocotlan, and refolves to move on notwitbfanding the Report of the vaft Power of Motezuma. 3. Determines to take the Rout of Tlafcala, though advifed againf it, and fends fome of the Zempoallans, as bis Embaffadors, who are very ill treated. 4. A War enfies notwithftanding all the Care of Cortes to prcvent it, in wbiclo feveral bloody Battles are fougbt, and a dreadful Slaughter made of the Tlaicalans. 5. A great Battle fought, in which the Republic exert their wobole Strength, but are neverthelefs overconc, thougb roith Difficulty. 6. The Tlafcalans employ Spies, which are difcovered and punifled: Anotber Battle enfues, in zubich they are again beat. 7. A Mutiny amongft the Spaniards, on the point of breaking out, is fopped by a Negotiation fet on foot for Peace. 8. The Peace is at length concluded, to the great Foy and Satisfaction of botb Parties, notwithfanding the Pains taken by Motezuma's Embafiadors to delay or binder it.- 9. A fuccinct Hitory of this celebrated Republic, including a Defcription of the City of Tlafcala, and the Manner in which Cortes was treatcd by its Inbabitants. 10. He perfits in bis Refolution of marching to Mexico, explains bimfelf clearly upon that Subject to the Thafcalans, engages them to alfitt bim in bis Undertaking, and prepares for bis March. 11. Obfervations on the moft rentarkable Events contained in the foregoing Section.

THE Genius of Cortes diftinguifhed itfelf chiefly in delivering him fuddenly, and as it were, without Difficulty, out of thofe fort of dangerous Conjunctures which feemed to threaten him with immediate and inevitable Deftruction: Of this there occurred a very extraordinary. Inftance. Immediately after he had fixed a Refolution of putting all to the Hazard, and marching directly with his handful of Troops into the Empire of Mexico, we have feen him take one of the boldeft and moft romantic Steps that was perhaps ever put in practice by a Perfon of fo much Prudence and good Senfe, in the burning of his Fleet, purely to prevent thofe who were under his Command from having it in their Power to fly from thofe Difficulties which he meant they fhould overcome ; but no fooner was this extraordinary Meafure taken, than the whole Ufe of it feemed to be deftroyed by an Accident he could not poffibly forefee, and which therefore it was impracticable for him to avoid.
This Accident was, the Arrival of a fmall Squadron upon the Coaft, of which his Governor at VeraCruzimmediately gave him notice. This could not fail of making Cortes uneafy, who, when he firft received the Intelligence, apprehended that it muft be fitted out by Fames Velafquez, in order to deprive him of his Command, under Pretence of fending a Reinforcement for the more effectual Profecution of the Expedition. Hee forefaw in an Intant what the Confequence of this might be, and therefore determined to march back with all the Forces under his Command to Vera Cruz, that he might be in a Condition to deal with his Enemies, either by way of Perfuafion or that of Arms, as Occafion fhould require. He did fo; but upon his Arrival he was informed, that thofe Ships came from the Northward; that they had been fitted out by the Governor of famaica, upon Difcovery; and, that they meant to fet Bounds to his Conquefts on that Side, under Pretence that they firt found the Country of Ponuco, and had traded with the Inhabitants for Gold, to the Amount of three thoufand Pieces of Eight or better.
VoL. II. Numb. 75.

He grew eafier upon this Advice, though there were ftill two Points to be carried before he could think of profecuting his firft Enterprize: The firft was, giving a Check to this Scheme of Difcovery; that he might have no more Rivals to difturb his Undertakings hereafter. The other, to oblige thefe Ships to quit the Coaft inftantly; that none of the Malcontents in his Army might have an Opportunity of deferting to them.
In order to effect this, he marched with a fmall Party of fuch as he could beft truft, to the Sea-fhore; where he was hardly arrived before he met with three Spaniards, one of whom advancing towards him faid, He was a public Notary, and that he brought the other two as Witneffes, to atteft the Delivery to him of a Writing which he had in his Hand, containing the Governor of famaica's Claim to a Part of this Country. Cortes declined taking the Paper, telling him very mildly, That it would be better if Captain Pineda, who he underftood was the Commander, would come on Shore himfelf. The Notary anfwered, That neither he, nor any body elfe, would quit the Ship. Upon this Cortes feized him and his Companions, and waited all Night behind a Sand-hill, to fee if any body would venture from the Ship; but find ${ }_{T}$ ing that no-body came, he obliged his Prifoners to ftrip themfelves, and having dreffed three of his Men in their Clothes fent them to make a Signal ; upon which a Boat came off from the Ship with twelve Men well armed: Cortes's Soldiers perceiving this retired under a Tree, and four Mer landing from the Boat with an Indian, advanced towards them, not in the leaft doubting that they were their own People. By this Stratagem he got thefe likewife into his Hands; and the Boat's Crew on feeing what had happened went off, to acquaint thofe on board therewith, and in a few Hours after the Ship bore away, and quitted that Coaft.
By this Means he delivered himfelf at once out of this Perplexity; and the Men he had taken, being well ufed, gave him a faithfuil Account of all they had feen, and very readily enlifted in his Service, affuring him at the fame
fame time, that the Difcoveries they had made were of ro little Confequence, and the Produce of their Voyage fo very inconfiderable, that he was not like to hear of any more Attempts of the like kind from famaica, which gave him fingular Satisfaction, and encouraged him to refume his Defign. for purfuing, which he found all under his Command, both Officers and private Men, more eager for than ever, which was chiefly owing to their feeing him always fucceffful in every thing he took in hand.
2. Cortes returned to Zempoalla, refolving to lofe no Time before he fet out for Mexico. The Men to carry Burthens being ready with the Baggage and Artillery, with the Auxiliaries of Zempoalla, and thofe of the Mountain Towns, whom he took along with him as Hoftages, leaving a Page of his own, of the Age of twelve Years, to learn the Language, he fet forward on the 16th of Augiuf, feveral prime Perfons waiting on him, of whom he took Leave at a fmall Diftance from the Town. The Indians wept, confidering the Danger into which they were going, though they relied on the Valour of the Spaniards, who were four hundred in Number, befides fifteen or fixteen Horfemen, and fix fmall Pieces of Cannon, with the Ammunition belonging to them. The March began in good Order; they arrived the firft Day at Xalapa, and thence proceeded to another Town, which, being Confederate with Zempoalla, gave them good Reception. There Cortes told them he was fent by the King of Spain, to admonifh them to forbear facrificing of Men, and following the other wicked Courfes they were guilty of, and to live in Peace and Juftice, and to chattize Tyrants.
He erected a Crofs in every Town, ordering them to refpect it; for, as they fhould be after better informed, through that holy Emblem they were to expect all Happinefs in this World and in the next; he proceedto Texutla, where he fpoke to the fame Effect to the Heads of the People, and they entertained him affectionately. They then came into the defart Country, where they met with much Hail and Rain, a fharp Wind blowing from the fnowy Mountains. The Men endured much, for there was alfo but few Eatables to be met with. They marched through another Pafs, where there were fmall Places of Worthip, with Idols and great Piles of Wood cut for the Service of the Temples. The Cold continued, and they were in great want of Provifions, which the Men bore with wonderful Patience, though the Weather pinched them, becaufe they were thin clad, and ufed to the temperate Climate of Cuba, Zempoalla, and the Sea-coaft. They next came into the Territories of Zocotlan, fubject to the King of Mexico; Cortes fent two Zempoallans before, to defire thofe People, in his Name, that they would be pleafed to quarter his Forces, and, at the fame Time, held them in Readinefs for all Events, becaufe this muft be confidered as an Enemy's Country; when they came in fight of the Town, a Portuguefe Soldier faying that it was like Caftel Branco, in Portugal, they gave it that Name.

The Lord was called Olintel, whom the Spaniards nick-named the Squab, becaufe he was very fat. He ordered the Men to have Provifions given them, but not a very great Quantity, or with a very good Will. Cortes by Means of his Interpreters, who daily grew more expert, talked to him as to others, and he was pleafed to hear thofe. Things which were fo ftrange to him. Cortes, obferving with what State he was ferved, afked him whether he was a Confederate, or a Subject, to the King of Mexico? He anfwered that Queftion, by faying, who is not a Slave to Motezuma? Cortes replied, that beyond the Sea there was a greater Sovereign, meaning the King of Spain, whom many Princes ferved, that himfelf was one of the meaneft Subjects he had, and that the Lord ought to fubmit himfelf, and give fome Demonftration that he did fo. He anfwered that he would do nothing but what Motezuma fhould command him. Cortes did not carry on this Difcourfe any farther, looking upon the Lord and his People to be Men of Refolution, but defired he would tell him fomething of Motezuma's Grandeur. This Lord faid he was Sovereign over many Kings; that there was
not the like of him in the World; that many Lords ferved him in his Palace bare-footed, with their Eyes fixed on the Ground ; that there were thirty Princes in his Empire, each of whom had one hundred thoufand fighting Men in his Dominions, and fome Years Motezuma facrificed as Victims fifty thoufand; that he refided in the largeff, moft beautiful, and ftrongeft City in the Univerfe, being in the Water, and having above fifty thoufand A.cales for the Service of it; that his Court was very fpacious, that many Princes of the Country round about continually reforted thither to ferve him ; that his Revenues were incredible, becaufe none, even the greateft, was exempt from paying Tribute, nor any fo poor as not to give fomething, though it were only Blood from his Arm ; that his Expences were prodigious, becaufe, befides thofe of his Civil Lit, he had continual Wars, which obliged him to maintain great Armies.
This Account ftruck fome of the People about Cortes with great Apprehenfions, from the mighty Strength of Motezuma, compared with their own flender Force; but he who had an admirable Faculty of turning every Thing to his own Advantage, ufually difcourfed of the Greatnefs of the Indian Emperor, with Pleafure; for, faid he, if we feek Wealth and Country from our Conquefts, we ought to rejoice, that thofe, againft whom we fight, have great Riches and large Dominions. As for this Indian Chief, with whom he then lodged, he was Lord over twenty thoufand People, had thirty Wives in his Houfe, and above one hundred Women to wait on them, and two thoufand Servants. The Town was large, and contained thirteen Temples, with abundance of Idols made of Stone; they facrificed to them, Men, Women, Children, Turtles, and other things, burning many Perfumes, with great Veneration. Motezuma had five thoufand Men in Garrifon in this Town and its Territory, and Men were ready two and two, at fmall Diftances, all the Way to Mexico, in the Nature of Pofts, to carry an Account of all Things that happened. Cortes was now thoroughly confirmed in the Notion he had of the Grandeur of Motezuma; and though fome about him were always giving Hints of the Difficulty of the Undertaking, and the Danger, he never hewed the leaft Irrefolution, but, on the contrary, with an undaunted Intrepidity, encouraged his People, affuring them of Succefs, with as much Firmnefs, as if he had it in his Power, as, indeed, he forefaw all Exigencies with wonderful Sa gacity and Difcretion.

Olintel feemed to grow better affected, and made more plentiful Provifion for the Men, upon the Difcourfe he had with Cortes; though he faid he could not tell whether Motezuma would not be difpleafed at his having entertained them without his Leave. Cortes, finding him more courteous, began to talk of Religion, and would have had a Crofs erected, as had been done in other Towns, but $F$. Olneedo did not think it proper, for fear of fome Irreverence. Francis de Lugo, a Man of Note, had with him a very large Greyhound that barked very much in the Night: The Gentlemen of that Town anked thofe of Zempoalla whether that was a Tyger, Lyon, or other Beaft to kill Men? They anfwered, it was a Beaft under good Command, and would bite and kill, when, and whoever his Mafter pleafed. They told them the great Guns killed whom they would, with fome Stones they threw into them, and that the Horfes ran like Stags, and overtook whom they pleafed, none being able to efcape them; that thofe were the Men who conquered the People at Tabafoo, threw down their Idols, and made them Friends wish their Neighbours. That Motezuma had fent them Prefents, becaufe he looked upon them as Gods, and therefore they wondered why Olintel made them no Prefents. Moved by what they faid, he im.. mediately fent Cortes four Head-pieces, three Collars, and fome Lizards, all of Gold, a Load of Cotton Cloth, and four Women Slaves to make Bread. In this Towr there was a Charnel containing abundance of Skulls and Bones of Men that had been facrificed, and in all other Towns in that Country, after the fame Manner as at Mexico, which fhall be defcribed in its Place.
3. Cortes ftaid nine Diys with Oliniel, to refrefh the
$\mathrm{Men}_{8}$

Men, and having given him a Prefent of his Toys, which was much valued, began to confult which Way he Thould travel to Mexico; Olintel faid, the beft and plaineft Way would be through a Town called Colula. The Zempoallans oppofed it, alledging that thofe People were very treacherous, and had always Garrifons; whereas the Tlafcalans were his Enemies, and good People, for which Reafon that would be the better Way. Cortes demanded of the Lord twenty Soldiers to be his Guides, as being well acquainted with the Country, which were given, and with them he fet out toward Tlafcala; as foon as he came to a Town called Xacazingo, he fent four Zempoallans to Tlafcala, with a Letter and a red Hat, and though he was fenfible that they underftood not the Letter, he thought they would, at leaft, conclude it to be a Meffage, that they might not do any harm to the Meffengers; for it was known that the Tlafcalans were informed that the Spaniards were marching towards them, and that they brought with them fome Indians that were Tributaries to Motezuma, as the Zempoallans and thofe of Olintel had taken up Arms. Cortes ordered the Meffengers to tell the Gentlemen of Tlafcala, that he had been informed, by the Lord of Zempoalla, and the neighbouring Towns, his Friends and Confederates, of the bloody Wars they had fo juftly waged with Motezuma, who had done them fo many Wrongs; that he was fent by a mighty Prince, in the firft Place, to bring them to the Knowledge of the true God, and at the fame time to deliver them from the Oppreffion of the Mexican Culuas; that he fent them that Hat, and with it a Sword and a Crofs-bow, that they might fee with what powerful Weapons he defigned to affift them.

This he did, becaufe he had heard how much a Crofs-bow and Spanifh Weapons had been admired at Mexico. Cortes fent this Embafly by the Advice of the Zempoallans, who faid the T'lafcalans were numerous and warlike, Enemies to Motezuma, and would eafily be brought into the Confederacy of the Totanaques. Cortes was more irclined to this Meffage, fince he hazarded nothing in fo doing, and had always found the Zempoallans fincere: And at this Place he began to be more fully informed of the Affairs of Tlafcala. The Meffengers coming, were received there, and conducted to the Town-Houfe, where Provifions were given them. The Council met, the Zempoallans were called in, and delivered diftinctly the Meffage given them by Cortes in the beft Terms they were able. On the other hand, the Ilafcalans having received the Hat, the Letter, and Arms, Maxifatzim, one of the Lords of the Republic, bade them fit down, faid they were welcome, that they thanked the Totanaques for their Advice, and were glad of their Liberty; that they were alfo thankful to the great Stranger for his Prefent, and that they might reft themfelves, becaufe it required time for them to come to a Refolution. Hereupon the Zempoallans withdrew, abundance of People flocking thither to enquire what they came about, and they recounting what they had feen of the Valour of the Spaniards, of their Behaviour, and their Weapons, defcribing the Horfes, and all the reft, and magnifying every thing.

The Lords of the Commonwealth, being by themfelves, Maxifcatzin, a Man of much Wifdom and well beloved, made a Speech, advifing them to receive the $S$ paniards in a friendly Manner, but Xicotencatl, who was General of the Army, was for oppofing them. This Diverfity of Opinions occafioned high Debates, the Traders and peaceable People being of Maxijcatzin's Mind, and the Soldiers fiding with Xicotencatl. Whereupon Temilotecatl, another of the four principal Lords, was of Opinion, that Embaffadors fhould be fent to the Commander of thefe new People, to tell him they fhould be well received, and in the mean Time, Xicotencatl Should advance with the Otomies, and try what thofe were whom fome called Gods, and if he vanquithed them Tlafcala would gain eternal Honour, but if not, the Blame might be thrown upon the Otomies, as a barbarous and rafh People: This Advice being approved, was put in Execution. The Zempoallan Meffengers were then called in, and told, that they were refolved to receive thofe Strangers in a friendly Manner, but, at
the fame time, they retained them under Colour of a Feftival, to gain Time for their General to march ${ }_{3}$ and to anfwer finally according to the Event. Eight Days paffed fince Cortes fent the Zempoallans to Tlafca$l a$, and they were not returned; he afked thofe that went with him what made them ftay fo long? They anfwered, it was likely they did not difpatch them for Oftentation; for which Reafon, and becaufe they gave him great Affurances of the Friendfhip of the Tlafcalans, he refolved to advance with his Forces. At the end of the Valley, he found a great Wall of dry Stone, a Fathom and an half high, twenty Foot broad, with a Parapet.. This Wall reached crofs the Valley, having only one Entrance, ten Paces wide, and there was a double Enclofure in the Nature of a Ravelin, about forty Paces in length, fo ftrong, that had there been any to defend it, the Spaniards would have had enough to do to force their Way through. Cortes halted to view it, and examine every Part, to fee whether there were any Ambuhh.

By this Cortes was convinced there were good Grounds for the Notion conceived of the Valour of the Tlafcalans, fince fo great a Work had been erected to oppofe them. The Workmanihip of this Wall was much admired, becaufe it was very artificially done, without any Mixture of Plaifter. He entered the Enclofure towards Tlafcalap his Men marching in good Order, and the Artillery ready, ftill fending Parties before to prevent Surprize. When they had advanced a League they came to a thick Wood of Pine-trees, with abundance of Thread and Papers tangled about the Trees, and, croffing the Way, which the Spaniards laughed at, being informed that the Sorcerers had promifed the Tlafcalans that they would difable them with thofe Threads and Papers. When they had advanced three Leagues from the Wall, Cortes fent Orders to his Men to haften their March becaufe it was late; and, going forward with the Horfe-men, as foon as they came to the top of a Hill, two that went foremoft, fell in with fifteen or fixteen Indians, armed with Swords and Targets, who had been pofted there to give Intelligence; and as foon as they difcovered the Spaniards ran away, tho' the Spaniards endeavoured to treat with them; but finding that the Horfes would overtake them, they drew up all together, and, defending themfelves, fought, fo defperately, that they killed twa Horfes, having almoft cut off their Heads; their Swords being edged with Flints, fo faftened to the Wood, that they cut like Razors; the Indians retired brandifhing their Swords, without fhewing the leaft Fear. But Cortes difcovering above five thoufand in a Body, that were moving to relieve the others, ordered them to be ftruck through with Spears, which he had forbid before, and fent to the Infantry to haften forward: Before the Infantry could come up, the Body of the Indians, before mentioned, had reached the Horfe-men, and, having fhot their Arrows, began the Fight.

The Horfe-men killed many with their Spears, efpecially thofe that preffed upon them. As foon as the Indians faw the Spanifh Infantry, they retired, being much frighted at the Horfes, faying thofe Stags were bigger than theirs, fwifter, and, that it was by Inchantment, that the Spaniards rode on them. When the Indians were thus withdrawn, two of the Meffengers that Cortes had fent to Tlafcala, returned, with fome Prefents from the Republic, who faid they were forry for the Rudenefs of thofe barbarous People; who were fome Towns of Otomies, that had committed fuch a Diforder without Leave, though they were glad they had been chaftized as they deferved; that the Republic was defirous to fee, know, and ferve him in their Town; and if they would have them pay for the Horfes thefe Otomies had killed, they would immediately fend Gold and Jewels; though Cories was fenfible of the Falfhood of the Meffengers, he thanked them for their Offer, adding, he would foon be with them, and, fuppreffing his Concern that the Indians had found the Horfes to be mortal, faid he would take no Pay for them, becaure he fhould foor have many more brought him from the fame Place where thefe had been bred. Thofe Otomies, though Sa. vages, were fubject to the Republic of Ilafcalia, having
their
their Towns in Bottoms, and their Scouts on the Hills; who, when they difcovered any Strangers, made Fires to give Notice from one Place to another, and the People affembled to defend themfelves.
4. The Tlafcalans Embaffador returned Home, carrying off about teventy Indians killed in the Action, to bury them ; and Cortes ordered the dead Horfes to be interred that the Indians might not be daily put in mind, by feeing them, that they could kill the reft. The Army was then, as has been faid, within the Territories of Tlafcala, and all that Province, from Villa, Rica thither, was called Catafla, which, though large, was not populous; becaufe Motezuma had, fome time before, deftroyed it. The Country is like Andaluzia, rich, hot, and fruitful, having many frefh Waters, which produce much Fifh, Forefts of Wild Trees, and Oaks bearing large Leaves, but fmaller Acorns than thofe in Spain. At Sun-fetting - Cortes encamped near a Brook, on a convenient Spot of Ground; and they kept Guard, by an hundred at a time, having been undifturbed that Night. The next Day they came to certain Houfes of Otomies, where they found fome of them dead of the Wounds they had received: They burnt the Houfes, and, for Want of better Provifions, Fed upon Tunis, a fort of Fruit that Country produces; becaufe they faw the Indions eat them.

The next Day Cortes proceeded, and being come to a troublefome Pafs, commanded every way by Hills; before they began to enter it a Dog barked: One Lores, a Smith, and an able Horfeman, made up to the Place, killed two Indians he met, and the reft fled. Here the other two Zempoallan Meffengers Cortes had fent to Tlafcala, came fweating, lamenting, much abufed, and in fuch a Fright that they could fcarce fpeak : They proftrated themfelves on the Ground, laid hold of Cortes's Feet and faid, The wicked ITafcalans, breaking through the Immunities of Embaffies, had bound them to be facrificed to the God of Vietory; that they unbinding each other that Night, had made their Efcape; and that they intended to facrifice all the Spaniards in the fame manner Soon after their Arrival, about a thoufand Indians well armed, appeared on a little Hill, who attacked the Spaniards with great Cries, and Vollies of Darts, Stones and Arrows. Cortes, by Means of the Interpreters defired them to be quiet, becaufe he would willingly have Peace, fignifying the fame to them. He perceiving they did not forbear, fell on, and they artfully gave way, retiring till they drew the Spaniards into an Ambufh of thirty thoufand, that lay in little Hollows that were by the Pafs. The Spaniords were in a defperate Condition, confidering the Multitude of their Enemies who charged them where they had not room to ftir. But the Encouragement given by Cortes, telling them, They now fought for their Lives, and did no Wrong to thofe that had attacked them, infufed frefh Courage. Here Tuch, one of the Noblemen of Zempoalla told Marina he forefaw the Death of them all; for it was impofible that one Man fhould get off alive. Marina told him, the God of the Chriftians, who was powerful, and loved them, would deliver them out of that Danger.

Not long after, the Spaniards and their confederate Indians, fighting manfully to avoid being facrificed, got out of that Streight, where the Tlafcalans behaved themfelves in fuch a furious manner, that feveral of them came to clofe with the Spaniards; and others laid hold of the Horfemens Spears as they rode before to make way for the Foot; and the confederate Indians leaping into the Water, Corites, every now-and-then turned to the Infantry, and bad them remember, That the planting the Faith of Jefus Chrift depended on the Prefervation of their Perfons. That they might expect very great Rewards befides, that being Spaniards they ought not to defpond, which their Nation never did. At length they extricated themfelves from among thofe deepRoads and Brooks, and 'got into the plain Fields, where the Forfes having room to run, and the Cannon to play, terrified the Indians, and killed many; fo that, not able to endure it, they retired to a rifing Ground and there fortified themfelves. In this Fight fome of the Spaniards were wounded,
but not one killed, and many Indians died upon the Spot, as did others afterwards of their Wounds. The Spaniards rejoiced, and with loud Voices returned Thanks to God, for having delivered them out of that Danger; nor was there any Want of Joy among the Indians, their Friends, who embracing the Spaniards, congratulated their Eicape. The Gentlemen of Zempoalla commending Narina, related her Prediction, and fhe declared the had never been afraid.

Such was the Pofture of Affairs, when an Indian who commanded one Part of the Enemy's Army, making Signals of Peace, came down where Cortes was with fome of his prime Men about him, and faid, That Experience had convinced him, that he and his were invincible and immortal Gods, therefore defired him that the War might ceafe, and he would prevail with the Commanders on his fide, that they fhould be reconciled, and perinit him to enter into Tlafcala. Cortes chearfully anfwered, That he had already offered them his Friendfhip, and, tho' he had fufficient Caufe to be otherwife, that he would ftill be their Friend. The Commander went back to the Tlafcalans, who beat him fo unmercifully that he was near Death. He returned to Cortes, faying, Thefe wicked Men would deftroy him. Cortes ordered him to be dreffed, and bade him, fince they were to be engaged with his Countrymen, ftand apart, with a Token he gave him that he might not be hurt. In fkirmifhing before the Battle begun there were feveral notable Actions; among the reft one of the four Indians whom Cortes had fent on his Embaffy to Tlafcala, knowing a Captain who in that City had feized him, afked Leave of Cortes to challenge him, who encouraged and allowed of the Challenge, directing a Spaniard to draw near when they were engaged, that if his Indian thould be in danger he might not perifh.

The Fight was begun in the Sight of both the Armies, with their Swords and Targets, but at the Conclufion, the Zempoallan killed the Tlafcalan, and cut off his Head. The confederate Indians celebrating the Victory with mighty Cries, and the Spaniards perceiving that Cortes rejoiced at it, and looking upon that as an happy Prefage of his future Victory, founded their Trumpets and beat their Drums. Between the two Armies was a very narrow and dangerous Pafs, which the Tlafcalans defended, and the Spaniards were of Neceffity to march that way. Fames de Ordaz boldly clofed with the Enemy, pufhing them, and gaining Ground, though Showers of Arrows fell on him and his Men: At length he gained the Pafs, and then the Horfes were led through. The Tlafcalans having loft that Pafs fo proper to be defended, left the Field and marched clear off; and the Spaniards being very well pleafed that they might be ftill advancing, took up their Quarters in a little Tower that ftood in an Eminence called Iracozizinco where there was a Temple with a little Town, which was afterwards called of Victory. They with extraordinary Diligence made Barracs of Boughs and Straw, the Indians working at them with muchAlacrity, becaufe Cortes pleafed them, and they were ready to ferve upon all Occafions upon that Account, and to avoid falling into the Hands of their Enemies. All that Night, being the firft of September, ftrict Watch was kept, and Cortes himfelf was upon the Guard with the third Part of his Men at the Morning Watch, which was moft apprehended, but no Enemy appeared; becaufe it was not their Cuftom to fight in the Night.

The next Day Cortes thought fit to fend Meffengers to defire the Tlafcalans to permit him to proceed freely on his Way, fince it was not his Defign to do them any Harm, nor was he going to join the Confederacy againft the King of Mexico; but only to perform what his Mafter the King of Spain had commanded him. In the mean time leaving Pedro de Alverado with half of the Forces, he marched with the other half, and the Horfemen. He burnt four or five Towns, and returned with four hundred Prifoners and no Lofs, though the Enemy charged him all the way to his Quarters, where he was told the Tlafalan Commander had anfwered his

Meffage

## Chap. III.

 for the Reduction of New Spain.Meflage, and that they would, the next Day, tell him their Minds. This bold Anfwer, and the Advice Cortes had received, that One hundred and Fifty thoufand Men were affembled, made him put his Forces into fuch a Pofture as he might not be furprized. Cortes refolved to be informed by the moft rational of the Prifoners about all things that were convenient for him to know; and they anfwered, That fince they were his Prifoners, and fo well ufed, they would tell him the Truth: They declared, that the Army was compofed of Otomies and Tlafcalans, all Subjects of the Republic of Tlafcala, though they did not care to have it known that their Commonwealth made the War, becaufe they would not have it thought, if they fhould be vanquifhed, that it had been by their Authority ; that they hated him, becaufe they imagined he was going to be a Friend to their mortal Enemy Motezuma, and therefore they agreed never to give over till they had conquered the Spaniards, and facrificed them to their Gods, and made a folemn Banquet of them, which they called heavenly; that the War was carried on at the particular Inftigation of Xirotencatl, the General 'of the Republic, who carried its Standard, which was a golden Eagle with its Wings difplayed, and that he would fee it the nextDay in the Rear of the Army, becaufe they were to fight; for in time of Peace it was before: That they were about One hundred and Fifty thoufand Men, moft Archers, who were very much afraid of the Thunder, and of the great running Stags, and were amazed at the dreadful Wounds their Swords had made.
5. The Tlafcalans Army appeared, the Standard was feen, and the Number of Men was fo great that they covered the whole Plain, all painted, adorned with great Plumes of Feathers, armed after their Manner with Bows and Arrows, Slings and Javelins, which they caft with fuch Dexterity that they would pierce a Door, and was the Weapon the Spaniards moft dreaded; long Spears; and Swords edged with Flint; Targets, Clubs, Headpieces, wooden Gauntlets, and Greves covered with DeerNkins; gilt Cotton Armour for the Body Finger-thick, which they called Efcupiles, worn afterwards by the Spasuiards, who found them ufeful againft the Arrows, and convenient in the Toils they underwent, not being able to endure Steel or Iron : They likewife made ufe of the Indian Targets, their own being foon fpoiled, and thofe were made of Wood; Leather, and adorned with Feathers, and others of Reeds and Cotton, being the beft', becaufe they did not fplit.

The Army marched very orderly, divided in two Battallions, but crowded together, and every Battallion had Horns and Kettle-drums, which was an extraordinary Sight, for the Spaniards had never beheld fo great anr Army fince they difcovered the Indies. The Enemy halted very near the Spaniards, with a deep Trench between them. Cortes fhewed himfelf highly pleafed at the Sight of them, and told his Men, that God gave them that Opportunity for his Glory, and the Honour of the Spanifh Nation, which would ftrike a Terror not only into Motexuma, but into all that World. The Tlafcalans being highly elevated with fo mighty an Army, encoutaged by the.fmall Number of the Spaniards, puffed up with their ufual Succefs againft their Enemies, fent three hundred Turkeys, two hundred Bankets of Cakes of Zentli, that is Fifty hundred weight of Bread, which was an extraordinary Supply, for the Spaniards, conficlering the Diftrefs they were in, and this, that they might be in better Cafe, and tafte more delicioully when facrificed.

When the Tlafcalons thought the Sponiards had eaten, Xicotencatl, in a very haughty Manner, commanded two thoufand Men to go and take thofe Creatures the Sea had fpewed up, and if they defended themfelves to kill them. The Two thoufand Men paffed the Trench, and with no lefs Intrepidity advanced to the Tower: The Horfemen went firt to receive them, the Infantry followed, and the Tlafcalans, at the firt Encounter, were made fenfible of what the Spanifh Weapons could do. They retired a little, but returned with greater Fury; when they were fully convinced that thofe few Men were

Vol. II. Numb. $75^{\circ}$
not to be nighted. In their Retreat they were moft of them killed. The Commander of the Army, having feen what had happened, fell on fo boldlys that many of the Indians came up to the Camp, and-fome entered $\mathrm{it}_{5}$ in fpite of thofe who were left upon Guard, fighting with the Spaniards Hand to Hand. This proved a Day of glorious Toil, for the Fight lafted above four Hours, within and without the Trenches, before they could make room, the Indians charging and attacking fo furiouly; till feeing a great Number killed, they began to flacken, being amazed that they could not kill a Spaniard, looking upon that as wonderful, fo that they ftill fought as if they had been angry with themfelves; but as it grew late they retired.
The Spaniards refted the better becaufe they knew the Indians would not fight in the Night, but kept a good Guard. The Tlafcalans did not look upon them felves as vanquifhed, and how many were killed could. not be known, becaufe as they fell they hid their Dead. The next Day Cortes marched out into the Country, burnt fome Towns, and plundered one that had three thoufand Inhabitants, but few Soldiers, becaufe moft of them were gone to the Army. The Town was fired, many Prifoners carried away, and the Spaniards returned to their Quarters, at a Time when a great Number of Men were coming to defend that Place, but retired ifnmediately for fear of the Guns, and being fatigued with Heat. The next Day the Tlafcalans thinking they could gain more Advantage over the Spaniards in narrow Places, in a haughty Manner fent them Provifions again, as they had done before; challenging them to come into fome ftreight Place, but finding they did not, they boldly began the Attack again. They fought five Hours very defperately, without being able to kill one Spaniard, which was what they aimed at, but of them a prodigious Number was flain, becaufe as they thronged together, the Cannon, the Mufkets, and the Crofs-bows, did dreadful Execution. At length, tired and athamed that they had not executed their Malice, they retired in Confufion.

The next Morning the Commanders fent Meffengers unto Cortes, who thus addreffed him: Sir, if you are a fierce God, here are five Slaves for you to eat; if you are a good God, we offer you Incenfe and Feathers; and if you are a Man, take then Fowls, Bread, and Cherries; for you and your Men to eat. Their Defign was to know whether the Spaniards were Men like themfelves, becaufe as they had not been able to vanquifh them, or fo much as kill one, they concluded they were immortal; and feeing, on the other Hand, that they did eat and do other things like Mortals, they were confounded. Cortes, who never wanted Prefence of Mind on any Occafion, faid they were all mortal Men like themfelves; but that, becaufe they believed in, and ferved one only true God, he did, and would always, affift them; that they fhould not deal treacherouny with him, for all would turn to their Prejudice; and fince he did not defire to do them any harm, but to be their Friend, he advifed them not to be obftinate; having delivered himfelf thus mildlys he difmiffed them, returning Thanks for the Prefent.

The next Day thirty thoufand I'lafcalans advanced, being defirous to fignalize themfelves, and fought fo bravely, that the Battle was more bloody than the former, but at length retired; and it is to be obferved, that for the Space of ten Days the Spaniards continued in thofe Quarters, the Indians generally, fupplied them with Fowl, Bread, and Cherries, only that they might have the Opportunity of viewing their Order and Situation, whether any dead Men were buried, wounded, or dreffed, and obferve how they looked, or whether they had more or fewer Forces; yet the Spaniards, at firt, had no Jealoufy of their Defign, and, on the contrary, commended the Indians for making War only with their Weapons, for had they cut off their Provifions they muft have been undone.
6. The Tlafcalons, intent upon feeking Revenge, and finding how little they could do by Force, had recourfe to Policy; and, in order the more to lull the Spaniards into Security, they fent forne Men of Note with Prefents of Gold and Feathers: They made many fubminive Bows to Cortes, and the eldeft of them told him, That the Re-

A 3
public
public fent that fmall Prefent, which was not fo inconfiderable, for want of good Will, but by Reafon of the Poverty of their Country; and that if he had any Commands, they would ferve him very readily. Cortes thinking the Meffengers had been fincere, very pleafantly told them, That though he valued the Prefents, he made more account of their Good-will, and coveted nothing more than making them his Friends. The next Day the Tlafcalans fent fifty Men, who brought Provifions, alked how the Men did, and what they meant to do ? Cortes faid they were all very well, and gave Thanks for the Prefent; and thefe Men growing familiar, walked about the Camp, and obferving every thing therein, and particularly the Horfes Teeth; a Zempoallan Gentleman taking particular Notice of them, told Cortes he looked upon thefe Men as Spies,' and that they had fome private talk with the Indians of $\Upsilon$ ztaactucbitlan: Upon this, Cortes ordered one of them to be taken up, whom he examined by his Interpreters, ufing Threats if he did not confefs the Truth. He owned that they had been all fent to difcover which Way they might burn the Barracs, for which Purpofe they defigned to march with a great Army by Night, thinking that the Guns, Horfes, and. Weapons, were lefs to be feared in the dark.

Others having confirmed this Account, he caufed the Hands of feven of thofe Men, and the Thumbs of others, to be cut off, though much againft his Inclination, but believing it might be of ufe for the future; and bid them go tell their General, Xicotencatl, that he would ferve all the Spies, that fell into his Hands, after that Manner; and that he might advance with his Army, for that he would always find the Spaniards invincible by Night or by Day. Thofe Men with their Hands cut off, ftruck a great Confternation among Xicotencatl's Forces, begetting an Opinion, that the Spaniards had fome Spirit that difcovered their Thoughts to them, for which Reafon they durft fend no more Spies or Provifions. Cortes, after this Information, enlarged his Trenches, and fortified his Camp, providing every thing till Sun-fet, when he perceived that the Enemies Army was advancing to put their Defign in Execution; and judging it moft convenient not to fuffer them to come up to his Quarters, he boldly marched out to meet them, which he thought would terrify them the more, as fuppofing their Intention had not been known.

He accoutred all the Horfes with large Breaft-plates, full of Hawks-Bells, that the Noife might make them feem the more; directing they fhould ftrike the Enemies on their Faces, with their Spears, becaufe they were wont to lay hold off, and fnatch them away. Then, having told the Soldiers that they muft overcome that Multitude by dint of Valour, he fell on at the very time when the Spies, whofe Hands had been cut off, were relating what had befallen them, which much troubled the General and all that heard it, but they were much more aftonifhed to fee themfelves fo unexpectedly affaulted, fo that they inftantly difperfed and fled, without making any Oppofition; and though a great Slaughter was made, Cortes took care to put a Stop to the Purfuit, for fear they fhould be drawn into fome Place of Difadvantage. The next Day Cortes feeing his Men chearful, faid to them, That fince God had, till then, fo vifibly affifted them, they would be all very much to blame if they did not proceed on what they had fo well begun with Refolution, and to that Purpofe it was requifite to prefs hard upon the Ilafcalans, to the End, they might afterwards prove the furer Friends, for that nothing could be more advantageous to them, in New Spain, than to be in Confederacy with that Commonwealth, which was to be compaffed by profecuting the Victories they had gained.

All the Commanders and Soldiers promifed to follow and go wherever he would lead them; Xicotencatl being much out of Countenance at the Difafters he had met with, retired to Tlafcala; Maxifcatzin, and the other Lords, told him it had been better to have followed the firt Advice, and faved the Lives of fo many, and therefore it was in vain to perfift obftinately to the Lofs of the Reputation of that Republic. Cortes feeing no Enery appear in the open Country, went up to the
top of the Temple, where his Quarters were, whence he difcovered feveral Towns, and abundance of Smokes towards the Mountains; then coming down, he told his Captains he believed that to be a large Place, and fince no Enemy appeared, it was proper not to lofe Time, but to put in Execution what had been agreed on. As foon as it was Night, having before taken a view of the Country, he refolved to try his Fortune, and entered upon a great Road, with half his Infantry, and all his Horfe judging that Way would lead him to the Smokes he had feen. They had fcarce gone a League, before a Horfe fell, which Cortes ordered to be fent back to the Quarters, and prefently two more fell one after the other, and in this Manner there fell five.

The Soldiers begged of Cortes to turn back, and do what they defigned by Day, becaufe they looked upon this as an ill Omen: He, with an undaunted Courage prayed them for the Love of God, whofe Caufe they had in hand, not to regard fuperftitious Obfervations, but to hold their Way, fince he went himfelf foremoft, and that the Horfes might return to the Place from whence they came. He had fcarce fpoke thefe Words, when his Horfe fell, which he wondered at, whereupon all his Men urging that it was a vain Thing to proceed, and fome, that he would ruin all; he, in a fevere Manner; told them they ought to confider that great Undertakings were not to be carried on without Difficulties, that they fhould try to march a-foot, leading the Horfes, to fee what that Accident tended to: When they had marched far after this Manner, the Horfes were all well, and they could never find what occafioned their paft Diftemper, though fome fancied it might have been fome Sorcery of the Indians, much practifed among them, but Cortes faid it was the Cold of the Night which gave them the Gripes. They proceeded thus till they came into fome ftony Grounds, from which they extricated themfelves with Difficulty, and fpying Fire, made towards it. They found two Men and two Women in a Houfe, who conducted them to the Mountains, where Cortes had feen the Smoke.

Before it was Day they came to fome Villages, where the Fright was greater than the Hurt; and being informed that Cintancingo, a large Town, was by, they foon came to it, the Surprize occafioning much Confufion: Some Harm was done at firft, but the People running away in the utmoft Confternation, Cortes ordered that no Perfon fhould be killed, and nothing taken, fo that the Diforder foon ceafed, and the Inhabitants returned to their Houfes. Cortes went up to a high Place, whence he difcovered fuch a multitude of Houfes, that he was aftonifhed, and afking what Places thofe were, received an Anfwer that it was the City of Tlafcala, and the Villages about it; he called all his Men, and faid, what would it have availed to have deftroyed the People of Cintancingo, fince there are fo many yonder? Then turning to Alonfo de Grando, who was chief Alcalde, he afked him what he thought was fit to be done, confidering the multitude of People they had difcovered? He anfwered, that they fhould return to the Sea and write to Fames $V_{e}$ lafquez to fend Supplies, becaufe if any crofs Accident or Sicknefs fhould happen among them, it was certain they fhould be all devoured by the Indians. Cortes was much concerned at this Anfwer, and efpecially for its touching upon fames Velafquez: However, he replied, that he ought to confider that if they muft certainly die, it was better to perifh in the Profecution of their Defign than in running away.
7. He then went to reft him by a Spring, without the Town, whither the Chiefs of the Country reforted to hims with abundance of unarmed Men, carrying a quantity of Provifions. They thanked him for having done no hurt, as he might; offered to obey him, and interceed with the Lords of Tilafcala for a Peace: He entertained them very kindly, promifing his Friendihip, provided they were fincere, and fo returned to his Quarters, advifing the Soldiers not to fpeak ill of the Day till it was paft, for he hoped that the War with Tlafcala was at an End, as they would find it, and if fo, God had much Profperity in ftore for them. Thofe he had left in his Quarters were very melancholy, fearing fome Difafter, becaufe of

## Chap. III. For the Reduction of NEwSpat No

the Sicknefs of the Horfes; but when they faw him return with a pleafant Countenance, and all Men fafe, with fome of the Natives of the Country, they crouded to welcome him ; he told them all that had happened, but when they were informed of the Greatnefs of Tlafcala, and the Multitude of thofe martial People, reflecting how many Accidents might happen, how little Hopes there were of Supplies, when they had run themfelves into a Country they knew nothing of; they began to hold Cabals, refolving to perfuade and to require Cortes not to carry them where they could not eafily retreat; fince the Danger was fo evident, offering to follow him through greater Fatigues, provided it was with a fuitable Power, that which they then had being too inconfiderable for fo extehfive a Country.

His Friends advifed him to take order about it before the Men mutinied; he anfwered, that the Danger was not fo great, for he did not believe that Spaniards could be fo faint-hearted, efpecially having till then met with fo much Succefs. One Night, going the Rounds, he heard loud talking, and fome Soldiers faying, if our Commander is mad, let us be wife and tell him in plain Terms, that he muft confider what is fit to be done, or we will leave him by himfelf. He told fome who were with him, that thofe who durtt fay fo were likely enough to do it; and going on heard the like in other Places, which troubled him very much; he would willingly have punifhed them, but thought it better to take no Notice, till hearing that the Murmers increafed, he caufed all the Men to be drawn together, and fooke to them fo effectually, that they all readily fubmitted to follow and obey him.
Very foon afterwards fix Mexican Noblemen arrived, attended by about two hundred Perfons; being brought before Cortes, they made him profound Obeifance, and it appeared that they had Notice, at Mexico, of the Victories he had gained over the Tlafcalans; before they fpoke they delivered him a Prefent from their Monarch, viz. one thoufand Cotton Garments, various curious Pieces of Feather-work, and the Value of rooo-Caftelanos in very fine Gold Duft, as it is taken out of the Mines: Then the Eldeft of them faid, That their Mafter, Motezuma, faluted him, fent the Prefent by them, wifhing him all Profperity, much rejoiced at the News he had received of the Victories he had obtained over the Tlaf calans, that, wifhing him well; he defired he would not go to Mexico, becaufe the Way was very bad and dangerous, and he fhould be forry that any Mifchance fhould befal Men of fo much Valour, whom he fo entirely loved; that he was willing to acknowledge the King of Spain his Friend and Sovereign, whom he would ferve in all he fhould command. Cortes, by his Interpreters, anfwered they were welcome, and he would confider of their Meffage. Cortes's Defign was, that thofe Embaffadors fhould fee how he behaved towards the Tlafcalans in cafe the War was carried on; and if Peace was concluded, that they fhould hear how he reproved them for having begun it.
He then gave Orders that they fhould be well treated; at that time he was indifpofed, and therefore had not for fome Days marched into the Country, fo that nothing more was done than fecuring the Quarters, and fkirmifhing with Parties of Tlafcalans. The Enemy fancying this proceeded from Weakneis; or a Lofs they were not acquainted with, prepared to attack them. Cortes, notwithftanding his having taken Phyfic, mounted on Horfe-back, fought a long time in Perfon, and omitted nothing that was to be done; till the Enemy were routed and fled; the Mexicans being prefent, and obferving every Circumftance of the Action. The Tlafcalans admiring that all their Power had not been able to compals their Defign, and moft of them concluding that the Spaniards were affinted by fome Deity, which rendered them invincible, and being informed that the Mexican Embaffadors were arrived at the Spanifh Army; having ferioully confulted what was to be done, after many Debates and Contefts, concluded that Peace ought to be made, and Endeavours ufed to divert them from entering into any Alliance with the Mcxicans, becaufe that would be thes
greateft Misfortune that could befal them. Young $\boldsymbol{X i z}^{=}$ cotencatl was appointed to go on this Embaffy, though he endeavoured to excufe himfelf, but having receitved pofitive Command, he made ready with fifty of the principal Men in the City, and fome Youths to be left as Hoftages:

He carried a Prefent of Cotton Cloth, and Featheirworks with fome Gold, according to the Ability of that City, which had very little of thofe things. .Cortes, being advertifed of this Embaffy that was coming from the Republic of Tlajcala, and that Xicotencatl was the Per fon employed, went out to receive and conduct him to his Quarters, with much Honour and vaft Attendance. They two fat down, all the reft ftanding; ds well Spaniards as Tlafcalans; the Prefent and the Hoftages were brought in, and Xicotencatl, in a very courteous Manner, begged Pardon for what was patt, for himfelf and his Republic, making many Excufes, and offering to enter into a ftrict Alliance with the Spaniards, and to ferve them faithfully for the future

Cortes, having confidered the Tlafcalan's Speech, told him that notwithftanding what was paft, they might depend on his Friendfhip, and on his coming among them; immediately after the Departure of the Mexican Embaffadors: Upon which Xicotencatl rofe up very well pleafed. Cortes went with him out of his Tent, the other Commanders attended him out of the Quarters, all being well pleafed, hoping that fince the War was concluded with Tlafcala, they fhould reap great Advantages from the Alliance, for at that time confidering that fome were dead, many wounded, and the reft fpent with Fatigues, their Number fo fmall, and thee many Difficulties they had to furmount; they concluded that if the War had lafted, they muft all have perifhed, and therefore they afcribed the concluding of this Peace, at that time, to be efpecial Goodnefs of God; and for confirming them in this religious Opinion, Cortes ordered Mafs to be faid and a folemn Thankfgiving; after which, F. Fobn Diaz called the Tower of the Temple there, The Tower of ViEIory, in memory of thofe Battles which the Troops had gained whilft they had their Quarters clofe by it, during almoft forty Days they continued in that Place.
8. On the Return of this great Man; who had acted as Embaffador, the Senate affembled, and heard, as leifure, a full Report of the Manner in which this Ne gotiation had been managed, and judging from what he delivered, thiat it imported them highly to fecure the Friendfhip of Cortes, in order to have his Protection againft Motezuma; they refolved to leave no Means untried to bring him into their City as foon as poffible, to prevent his concluding an Alliance with their Enemy. The Peace was proclaimed, and they made a Mitole; that is, a public Dance of above twenty thoufand Men richly adorned.

They offered extraordinary Sacrifices to their Gods? burning abundance of Perfumes, and garnifhed the Doors of their Houfes, with Boughs and Variety of Flowers; the Mexican Embaffadors were much concerned at that Alliance with the Tlafcalans, and bid Cortes take care not to truft thefe People who were fo falle that they would endeavour to compass, by Treachery, what they had not been able to perform by Force; and that he might be affured, if they once went into Tlafcala, that they would murder them every Man. Though Cortes, who was a cautious Man, did not, as yet, repofe much Confidencé in the Tlafcalans; he anfwered, that if they were ever fo treacherous, he was refolved to go into the City, for he feared them lefs there than in the Field. Having heard his Refolution, they defired he would give Leave for one of them to go firft to Mexico; he was pleafed with their Propofal, becaufe it gave time to fee if the Friendfhip the Tlafcalans offered was fincere, and how it was taken at Mexico; whilft thefe things were in Agitationt many Tlafcalans reforted to the Army with Provifions, others went out only to fee and become acquainted with the Spaniards, entreating them to come to their City. They gave them good Words, till the Meffenger, returning from Mexico the fixth Day, brought ten coftly Veffels of Gold, well wroughts and one thoufand five
hundred
hundred Cotton Garments, and in Notezuma's Name, intreated Cortes not to expofe himfelf by going into Tlafcala; for, he affured him, he would repent it, becaufe thofe were a needy People, and invited him thither that they might rob him.

On the other Hand, the four great Lords had already fent to importune him to repair to their City; offering him ftill greater Security if he defired it, and protefting that their Friendihip thould laft for ever, for they would never violate the Faith of the Republic upon any Account. Cortes concluding that fo much Courtely muft needs proceed from a fincere Friendihip, and being much courted to it by the Zempoallan's, refolved to go to Tlafcala, and accordingly began his March, leaving feveral Crofles and Heaps of Stones at his Quarters by the Torver of ViELory, in Memory of thofe glorious Advantages he had gained there.

The Accounts the Zempoallans and other Indians that followed the Spaniards gave were very advantageous; who, glorying to be in their Company, extolled their Valour, their Goodnefs, and their brave Actions; praifing their God, by whofe. Aid they conquered. Cortes took Care to fend Advice to $\mathcal{F}$ obn de Efculante, and the reft that had been left behind at Vera Cruz, of the Succefs it had pleafed God to give him, directing them to carry on the building of the Fort, and to keep a watchful Eye upon the Natives, and upon the Ships that fhould come from Cuba, and ordering two Jars of Wine to be fent him for faying Mafs, and for the Sick, having ufed all that he carried with him. When he arrived at Tlafcala on the 18th of September 1519, the Lords of the four great Quarters of the City came out to meet him, attended by feveral others of the greateft Perfons of the Commonwealth, and above an hundred thoufand Men. The Province complimented him at feveral Places, firft at Tezonpantzinco, next at Atliquetzan, a very large Town, whither Pilteculti came with a very numerous Retinue; thence Cortes proceeded to Tezatlia, belonging to old Xicotencatl, who came not becaufe of his great Age. The other Lords being Maxcifatzin, Zitlacpopucatzin and Tlevexolotzin, with all the prime Nobility, came up in good Order. Young Xicotencatl embraced Cortes, as did the other Lords, whom he received very courteounly, and they all proceeded together to the Place where he and his Men were to be quartered, always expreffing their Defire to ferve them; when the Spaniards had been put into their Quarters at the great Temple, and the Indions, their Friends, with them, they were generounly treated and fupplied with all Neceffaries.

The more to affure Cortes of their Affection, they prefented him with above three hundred beautiful Women, all very well dreffed, that had been condemned to be facrificed, which they gave the Spaniards as an Offering, and they lamented their Misfortune. Cortes would not accept of them, alledging, that their Religion would not permit any Man to have more than one Wife, and fhe a Chriftian: At laft, in regard that the Indians take it very ill to have their Gifts refufed; fome of them were received under Colour of ferving Donna Ma rine, who was prefent at all Conferences, and much refpected; for it was the Cuftom among the Indians, for a Woman of Quality to have a great Number to wait'on her. And the Indians obferving, that thefe and other Women Slaves they gave the Spaniards lived contentedly with them, the prime Men afterwards gave them their Daughters, that the Race of thofe brave Men might continue among them. Xicotencatl gave a beautiful Daughter, he had, to Peter de Alverado, and the was afterwards called Donna Louifa Tecbquiluafin; thofe People having no Ceremony in Marriage more than the Confent of the Parties. They gave Cortes the Name of Calchicbiutl, fignifying an Emerald, and Emeralds are highly valued among thofe People. They called Peter de Alverado the Sun, becaufe he was very fair of Complexion, with an agreeable Red, and much beloved by the Tlafcalans, Cories, by Degrees, enquired very particularly into the Rower and Condition of Motezuma's Empire, and the Enmity between him and the Republic, and omitted nothing that might afford him Means of
providing amply for the Accomplifiment of his Enterprize.
9. This bringing over of the Government and People of Tlafcala to his Intereft, uniting them in the Confederacy againt $M$ Notezuma, and engaging them to furnifh an Army for that War, was one of the greateft Strokes of Policy that was fhewn by Cortes, in the Management of this whole Affair ; and without taking which, it had been fimply impoffible for him to have fucceeded. It may not be amifs therefore, before we proceed further, to give a more particular Account of this celebrated Republic, which makes io great a Figure in the Hiftory of the New World. The Town of Tlafcala is fituated in Lat. $20^{\circ}$ in a Climate extremely temperate, and in a Soil wonderful fruitful; the whole Diftrict belonging to it was about 50 Leagues in extent, and yet within that narrow Compafs, from the great Mildnefs of its Government, more efpecially in Comparifon of that of the Mexican Monarchs, the Republic was able to raife thofe prodigious Armies that have been before-mentioned.
The Place itfelf' was built amongft the Rocks and white Cliffs, fo as to provide rather for Strength and Security than for Neatnefs and Beauty, though, as far as the Ground would permit, the City was not deftitute of either. It was from this Situation that it derived the Name of Tlafcala, which fignifies a Place of Rocks, tho' it was afterwards called Tlafcallan, which fome Spanifb Writers call a Corruption; but, as they allow that in the Indian Tongue ir implies, a Place well ftored with Corn, and confequently belonged as juftly to this City as the other ; I cannot fee why we fhould not rather fuppofe the City had two Names; the firft, perhaps impofed by their Enemies, and the latter by themfelves. There was a fine River paffed through their Territory, and wafhed a Part of the City, which commonly overflowed in the Winter, and thereby greatly enriched the Soil, but fometimes over-ran its Banks with fuch Violence, as to do a great deal of Mifchief, and rendered Dykes neceffary, which they, wanting Skill to raife, had recourfe to fuperftitious Ceremonies and bloody Sacrifices, which inftead of curing increafed the Mifchief. The Town was divided into Yarcels at fmall Diftances, without any Order ; many Houfes crowded together, and between them feveral narrow winding Lanes, the Houfes terraffed at the Top on Beams, fome on Mud-walls, fome boarded, fome on Brick, and fome of Lime, and Stone, according to every Man's Ability; they had no upper Floors, but all on the Ground; having very large Rooms of irregular Shape, nor had they Doors or Window-Shutters, but only Matts, made of a Sort of Sedge, which they hung on and took down at Pleafure, with Hawks-Bells, of Gold, Copper, or other Metals, and Sea-Shells hanging on them to make a Noife, when they were taken down, opened or thut. Moft of this Country was inhabited, for from the City there ftretched out other Towns, like Suburbs, extending two or three Leagues beyond the Walls of it ; every Houfe had Land about it, and there were eighteen Towns adjacent, belonging to Tlafcala. The Inhabitants being above one hundred thoufand, and all the Country round this Province was enclofed by other Nations, Subjects to the Mexicans, who had maintained War againft Tlafcala for fixty Years paft, and preffed them on all Sides.
The Tlafcalans had expelled the Ulmecans and Zucatecans out of their Country, and kept it to themfelves, calling themfelves at firft Cbicimecans. Having fettled their Boundaries to be known by, and refufing to fubmit to any King, or General, there enfued Civil Wars among them, by their confpiring againft their beft Commanders. The prime Men were fo hard preffed that they craved Aid of Tefcuco, and other Towns, being much ftreightened in Tlafcala. With thofe Succours they enlarged their Borders, and grew too hard for their Enemies, who fought Affiftance of Matzaliutzin, King of Mexico. He fent Word to the Tlafcalans, that though he had promifed to affift their Enemies, it fhould be only in Shew, for which he prayed them not to hurt his Sub-
jects. When the War was over, thofe Cbicbimecans of him, becaufe their God Guetfalcoatl was fo powerful; Tlafcala ftruck a great Terror into the Country, and all the Culuas and Mexicans joined in Alliance with them, and living long in Peace, had Leifure to build their Towns and fettle the Frontiers. Tlafcala enjoying Peace, all the Province'was inhabited, and Kalliuacuth, who was looked upoin as the only Lord, divided what he had with his Brother Teyobualminqui, and went down to govern his People into the Vale of Ocoteculco.

Thefe Brothers left the Sovereignty to two Soas of theirs; and one of them, though very brave, grew fo tyrannical in his old Age, that his Subjects, being uiteafy, confpired, and new him and all his Friends and Kindred ; but two Nurfes hid two young Sons of his, from whom defcended Maxifcatzin, the moft faithful Friend of the Spaniards; the other three Lords of Tlafcala were of no lefs remarkable Defcents. After the Death of Culbuacutli, the City and its Territory began to be governed as a Commonwealth. The Mexican Language was fpoken at Tlafcala, though there was another which they called Otomitick, from a Nation, which revolting from the Kings of Mexico, was received by the Tlafcalans as their Subjects, and had Lands given them to till, on Condition that they fhould guard the Frontiers againft the Mexicans and Culuas. Thefe were the barbarous Otomies, on whom the Tlafcalans at firft laid the blame, for having taken up Arms againft Cortes. They are very hardy, excellent Hufbandmen, obftinate Idolaters, leud, favage, and hard to be brought to Chriftianity, Drunkards, and fond of living in remote Places, being the reverfe of thofe that fpeak the Mexican Tongue, who were docile and polite. Thefe Otomies were once pofreffed of all that Country, and there are of them fcattered every where, but nothing is known of their Original ; becaufe they are fo barbarous, that they can give no account of themfelves.
10. Cortes being come into Tlafcala, to pleafe Maxifcatzin, removed into his Quarter of the Town called Ocoteculco, where a Market was kept every Week. The four Lords that governed the Commonwealth, and other great Men, went thither to difcourfe Cortes, and intreat him to acquaint them with his Intentions, promifing to concur fincerely in whatfoever he fhould propofe. Cortes gave them to underftand that he was come to inftruct them in the Chriftian Religion, to abolifh Idolatry, and to affift them againft all their Enemies; and particularly Motezuma. Maxifcatzin replied, in Defence of their Gods, and Cortes rejoined, ftill preffing them to renounce their Idols; but, by the Advice of F. Bartbolomeri de Olmedo, and fome of his Officers, he thought fit not to urge the Point of Religion any farther at that time. They promifing not to eat any more human Flefh, yet they all returned to it as foon as he was out of the way. Being now fatisfied that his Friendihip with the Tlafcalans was eftablifhed, he propofed his Journey to Mexico; and though they reprefented to him the Power of Motezuma, the Strength of the City, the Danger he was running into among the Culuas, who, they faid, were given to change; as alfo their Multitude; in Conclufion, to pleafe him, they confented to all he faid, and offered to affift him, if he would make War, or to bear him Companiy, if, as he faid, he only defigned to vifit Motezuma: Accordingly they immediately began to appoint Commanders, raife Men, and lay up Provifions.

The Fame of the Alliance between the Spaniards and the Tlafcalans being fpread abroad, put all the Country into a Confernation, and efpecially Motezuma, who was fill refolved to obftruet Cortes's coming to Mexico though, at the fame time, in order to draw him from Tlafcalc, he propofed his removing to Cbulula, where he might be better entertained. The Tlafcalans earneft ly oppofed it, and zealouly offered fifty thoufand Men to attend him, becaufe the People of Chulula, after having been long at Peace, with them, being corrupted by Motezuma, had, in a Battle they had with the Mexicans, and in which the Tlafcalars led the Van, fallen in upon cheir Rear, and killed many of them, fince which time they had been Enemies. The Tlafialans advifed Cortes to consider that the Cbululons faid they did not fear

Vol. II. Numb. $75^{\circ}$
that he would deftroy his Men with Fire from Heaven. or drown them with Water: He fmiled at this, and continued his Preparations. On the Part of the Flafcalans nine Sons of the Prime Men of the Quarter of Ocoteculico were appointed Commanders of the Troops that were to attend Cortes from thence, the other Quarters nominated thirteen Commanders. The feveral Commanders had alfo their peculiar Colours, and all very gay, with Plumes of Feathers, after their Manner. Certain it is, that the Tlafcalans were very dubious of the Event of the Journey, being apprehenfive of the Cbulutans, and bearing much Refpect to their City, as it was a Place of great Devotion and reputed Sanctity among them. Cortes, by the Advice of the four great Wards, fent to call thofe that governed at Cbulula to him.

Eight Leagues from the City of Tlafcala is the Mountain called Popocatepod, the Top whereof always fmoaked; and whilft the Spaniards were at Tlafcala it caft out more Fire than ufual, to the great Aftonifhment of the Natives. Fames de Ordaz took a Fancy to fee that Wonder, for till then it was a ftrange Thing to the Sponiards, and the Indians affirmed that no Mortal had ever been upon the Top of that Mountain. Cortes, to thew the Indians that the Spaniards made fmall Account of what they thought impracticable, was well pleafed that Ordoz hould go and view it: He took with him fome Spaniards and a few Indians for Guides, who ftopped at a certain Diftance; and Ordaz advancing they heard the dreadful Noife that was within, felt the Earth quake, and arrived at the Place to which the Fire and Stones caft out of the Mountains reached, the oreat Quantity of Afhes choaking up the way. Thefe Things making fome uneafy, and being very weary with going up, they would willingly have turned back; but Ordaz telling them, it was a Shame for Spaniards, who had undertaken any thing not to go through, they advanced, making their Way through the Afhes, and arriving at length at the Top, through a thick Smoak, they for fome time viewed the Mouth, which feemed to be round, and above a Quarter of a League in Compafs, with a deep Cavity, within which the Fire raged as it does in a Glafs-Houfe. From the Eminence appeared the great City of Mexico, feated in its Lake, and Towns about it: Not being able to make any longer Stay by reafon of the exceffive Heat, he returned the fame way he came for the Benefit of the Track. The Indians, being aftonifhed that mortal Men fhould do fuch an Action, kiffed their Garments, believing that to be one of the Mouths of Hell : Where fuch Lords, as were Tyrants, fuffered for their Sins ; and aftetwards went to reft.
II. The Events which we have reported in this Secs tion are in themfelves fo great and extraordinary, that if their Confequences had not put them out of all Queftion, they might very eafily pais for Things altogether incredible. If Cortes could have exhibited to the Spaniß Miniftry a Scheme of his Expedition, and had therein laid it down as a thing practicable to hatve beat the Republic of Tlafcala, though capable of bringing three or four hundred thoufand Men into the Field, into begging a Peace, and then making ufe of their whole Power againft Motezu$m a$, it would certainly have been taken for the wildeft, moit romantic, and ridiculous, Propofition that was ever ferioully recommended to the Confideration of Perfons ins trufted with the Management of public Affairs; and yet it is very evident, that from the Time he firft heard of this Republic, he actually formed fuch a Scheme, forefaw all the Difficulties that would attend it, provided for them, and by firmly perfifting in the Execution of his own Plan brought it to bear. This plainly thews us, that there is fcarce any thing infurmountable to a great Genius, or which may not be brought about if Men are obedient to a Commander, and awed with thofe extraordinary Abilities which conftitute what we call a Hero.

There feems to be no Queftion made by the Spanifo Hiftorians, that the whole Succefs of this amazing Enterprize was entirely due to the Wifdom, Fortitude, and fteady Refolution of this great Captain, whe yet

Bb
for
for any thing that appears, was made fo rather by the Strength of his natural Abilities, than from any Helps which he received from Difcipline, or Experience; for it is certain that he had feen little of War before he undertook this Expedition, and had never acted as a Commander in chief, till fuch time as he put himfelf at the Head of it, which is another Circumftance full of wonder, or rather more furprizing than all the reft taken together.
But it may be fuggefted, that fuch as have written his Hiftory, may be partial in this Refpect, and attribute more to Cortes, and lefs to thofe who attended him, than they deferve; which, however, the very Circumftances
of the Hiftory demonftrate to be falfe, fince it very plainly appears that there were always in his Army a confiderable Number of Malcontents, who, if they durf, would have declared againft his Authority, and in favour of that of Fames Velafquez, which muft have ended in overturning the Expedition; fo that from hence it very plainly appears, he was fo far from having much Affirtance from thofe about him, that, in reality, a great Part of his Care was neceffarily employed in preventing thofe Seditions, which they were continually labouring to ftir up, and which, as we fhall fee hereafter, no Succeffes could induce them to leave off.

## S E C T I O N XI.

The March of the Spaniards to Mexico, the Reception given to Cortes by Motezuma, bis Imprifonment and other Tranfactions to the Time of bis ordering the Spaniards to quit bis Dominions.

1. The Manner in which Cortes marched from Tlafcala towards Mexico, and the Number of Tlafcalans tbat accompanied bim in bis Way to Chulula. 2. His Reception in that City, the Merbods ufed by Motezuma to bring the Inbabitants to confpire againft the Spaniards, and the Mijchiefs that enfued. 3. Upon Peace being reffored at Chulula, Cortes continues bis March towards Mexico, and is complimented on the Road by many of the Mexican Nobility. 4. His folemn Entry into Mexico, the Manner of bis firt Interviere with Motezuma, the prodigious Splendor of that Monarch's Equipage, and bis Civility to the Spaniards. 5. The Manner in which the Spaniards zuere dijpofed of, and jettled, in the Palace of Motezuma's Father, and the Provifion made for them by the Orders of that Emperor. 6. The firf Caujos of Qualpopoca's Irruption into the Country of the confederate Indians; John de Efculante afjits them, and is killed, the Neres of which alarms Cortes excefively. 7. He refolves to Seize the Perfon of Motezuma, executes that Refolution, and carries away the Emperor from bis oron Palace to the bead थuarters of the Spaniards. 8. Qualpopoca, who occafioned this Rupture between the Spaniards and Mexicans, is fent for by Motezuma, and to fatisfy the Spaniards is burned alive. 9. A Confpiracy formed againjt the Strangers by Cacamazin the Emperor's Nepherw, difcovered and defeated by the Diligence and difcreet Bebaviour of Motezuma. 10. At tbe Perfuafion of Hernan Cortes the Indian Monarch declares the King of Spain bis Succeffor, and does Homage to Cortes as bis Reprefentative. II. The true Motives of Motezuma's Conduct in this Affair, and bis Demand that Cortes and bis Soldiers. Should quit bis Dominions.
2. $T$HE Embaffadors from Motezuma, taking great Pains to infufe Jealoufies into the Mind of Cortes, of the People of Tlafcala, and preffing him daily to depart, at laft, to content them, and being willing to eafe the Tlafcalans of the ftrange Dread they had conceived of the Gods of Cbulula, he refolved to remove; after he had refided twenty Days in Tlascala, and been informed of all that related to the City of Mexico, its Situation and the Power of Motezuma, and his Empire, and having concluded a Peace between Guacozingo and Tlafcola, obliging both Parties to reftore all that had been taken during the War. He was attended by a hundred thoufand Men; many were much concerned at his going upon that Enterprize, believing he would be loft; but others concluded that his Valour would extricate him from all Dificulties. Merchants went along with them to trade for Cotton and Salt ; the Cbululans, to whom the Interpreter, Aguilar, had protefted that Cortes would make War with them, unlefs they went to fubmit themfelves to the King of Spain, being informed that he was upon his March, fent feveral great Men, who faid they came not before, becaufe the Tlascalans, their mortal Enemies, were falife, whereas they themfelves were fincere, and then they, in a folemn Manner, declared themfelves Subjects of the Crown of Spain: They reached not the City that Day, to avoid entering by Night, though the Diftance was but five or fix Leagues, but encamped, where the Cbululan's prayed Cortes not to permit the Tlafcalans to do them any harm. He, feeing no fign of War, ordered them to return home, taking his Leave of the Officers with much Courtefy and Affection, and prefenting them with fuch things as he had. He retained with him only three thoufand Tlafcalens, or, as other Authors fay, fix thoufand, and would not take a greater Number to avoid putting himfelf into the Hands of a barbarous People, of whofe Fidelity he hitherto had had but little Tryal.

The Tlafcalans faid thofe People where he was going
were faithlefs, that he muft be upon his Guard; and, as an Inftance, mentioned how they had betrayed them. They offered to go to Mexico whenfoever they fhould be called, and declared they would moft willingly have proceeded with their whole Army, to fee the Event of the Affair; but Cortes told them he was fatisfied with thofe he had, being for their Valour worth four times as many. The next Day above ten thoufand Cbululans came out to meet him, bringing Rofes, Flowers, Bread, Fowl, and Mufic: One great Body came to welcone Cortes, and then drew off in good Order, to make Way for another; which was done, becaufe that City, being divided into fix large Wards, three of them were for Motezuma, and three were not. When they came to the City, all the reft of the People came out much furprized at the Shape, Mien, and Weapons of the Spaniards: Their Priefts advancing in white Garments, like Surplices, their Arms naked, and Cotton Fringes about the Edges of their Robes: Some of them carried Idols in their Hands, and others burned Perfumes, others founded Horns, beat Kettle Drums, and played on feveral Sorts of Mufic, all of them finging, and fome perfuming the Spaniards. In this pompous Manner they entered Cbulula, and went where they lodged all together, and their Indians with them always upon their Guard, being plentifully fupplied with all kinds of Provifions.
A few Days after, Cortes, obferved very fufpicious Circumitances; that fome of the Streets were barricaded, and abundance of Stones laid on the tops of Houfes, to throw down; the Supplies of Provifions grew fhorter, the great Men and Commanders of the City feldom vilited him, and Motezuma's Embaffadors farted Objections againt his going to Mexico, with more Boldnefs than before; nor was this all, for the Chululons, by order of the Embaffadors, had prefumed to tell him that there were Alligators, Tygers, and other fierce Creatures, where Motezumas was, which, if he ordered them to be turned loofe,
would
would devour the Spaniards; to which he anfwered, he could not believe he would put any Affront upon thofe that came to vifit him, but that in cafe he fhould do fo, they were to underftand that thofe favage Animals did not hurt the Spaniards; there things made him refolve with himfelf how he fhould fubdue the People of Cbulula, before he went farther.
2. Motezuma in the mean Time fent frefh Agents, by whom he promifed mighty Rewards to the Lords of the Quarters of Cbulula, if they would cut off the Spaniards, giving the Commander a gold Drum, and promifing to affift him with thirty thoufand Men. The Commander undertook to perform all, on Condition that the Mexicans - fhould not come into the City, becaufe he was afraid they would make themfelves Mafters of it. They agreed to barricade the Streets, and pelt the Spaniards from the tops of their Houfes, that fo they might take and deliver them bound. The thirty thoufand Mexicans being fo pofted, that without coming into the City, they might take all the Spaniards that hould happen to efcape out of it, they alfo began to convey away their Goods, and fecure their Wives and Children, which afforded new Grounds for Sufpicion. Whilft Cortes was thus uneafy and diffatisfied, Marina acquainted him that a Lady of Quality had told her, that having taken a Kindnefs for her, fhe advifed her, if the would avoid being killed with the Spaniards, to ftay with her, and fhe would hide her in a Houfe where the fhould be fafe, becaufe the Mexicans and the Cbululans had agreed to deftroy them.

Cortes, upon this, caufed two Priefts to be feized, who being examined afunder, and threatened, confeffed the fame that Marina had declared: Whereupon he called the prime Men and Priefts, and bid them not deal underhand, but if they laad any thing to fay to him, to fpeak plain like Men of Honour. They anfwered they were his Servants, that he might let them know when he defigned to depart, and they would attend him armed, for fear of any Difference between him and the Mexicans; he told them he would fet out the next Day, and therefore ordered they fhould find Men to carry their Baggage, and furnifh them with Provifions.
The Cbululans, thinking they had a fure Game to play, carried the Men to be loaded with Provifions, but as thofe Indians never ufed to undertake any confiderable Enterprize without confulting their Gods, they facrificed ten Children of three Years old, four Boys, and fix Girls, being the ufual Sacrifice upon commencing a War. Their Commanders pofted themfelves, with as many of their Men as they could, at the four Gates of the Quarters through which the Spaniards were to march out. Cortes, who omitted nothing conducive to his Safety, had ordered his Men to Arms, the Horfes to be ready, and the Tlafcalans and Zempoallans to obferve when the Signal was given, by firing a Mufket; when all things were ready, he called the principal Cbululans, pretending that he would take his Leave of them: Forty were admitted; and more would have come if they might, but the moft confiderable of them being wanting he was fent for. Cortes then, in the Prefence of the Mewican Embaffadors, faid he had loved them as Friends, and they had hated him as an Enemy, as appeared by their Ufage; though all his Men had been inoffeniive, that they had defired the Tlafcalans might not come into their Country, and he had confented to it; and that though he had advifed them to deal fairly, and challenge him like brave Men, if they had any thing againft him, yet they had agreed with the Mexicans to deftroy his Forces by Treachery, for which heinous Offence he had refolved to put them all to Death, and raze their City.

They were for a while ftruck dumb, and befice themfelves; but being a little recovered, faid, " This ". Man is like our Gods, who know all things, it is in " vain to deny any thing." And accordingly they confeffed all he had faid was true. Then taking four or five of them afide, he afked them for what Reafon they would have done fuch a wicked Deed? They anfwered, that Motezuma was fo averfe from his going to Mexico, that the Embaffadors, to obftruct it, had put them upon it. Cortes told the Embafadors what the Cbululans faid, but at

## the fame time pretended not to believe Motezuma could

 be guilty of to foul a Defign, and they endeavoured to excufe themfelves. The Signal of firing a Mufket being then given, the Spaniards fallied out, and, meeting with little Oppofition from the Inhabitants, though they were in Arms, killed almoft fix thoufand of them, without touching Women or Children, and fet fire to all- the Houfes and Towers where any Refiftance was made.The Cries of the Indians on both Sides were prodigious, and the Confufion not to be exprefed. Many Gentlemen got up into the Tower of the great Temple, with the Priefts, where they food upon their Defence: Their Lives were offered them if they would furrender: Only one complied, and was well received, the reft were all burnt. The Crofs-bow Men hot thofe that were got up to the Tops of the Trees in the Court of the Temple, and it was obferved that the Priefts complained of their Gods for not defending them. A great Part of the City was plundered: The Spaniards took the Gold and Fea-ther-work, though not much were found; and their Indians had the Cotton and the Salt, which was efteemed a great Booty by them. The News of what had happened was immediately carried to Tlafcala, where the Lords of the Republic ordered their General Xicotencatl to march with all fpeed, to the Affiftance of their Friends, which they did; and Cortes having returned Thanks, and beftowed Prefents on the General and other Officers, fent them back well pleafed to Tlafcala, where their Joys were incredible, for the Booty taken from the Enemies, and no lefs for being free from the Fire from Heaven, and the Tempefts with which the Cbululans threatened to deftroy the Spaniards, and all their Adherents.

The Lords that were Prifoners intreated Cortes to put a Stop to his Refentment, fince they were not fo much to blame as the King of Mexico, and to permit two of them to go and fee what was become of the Multitude. He thereupon ordered the Slaughter to ceafe, and many ftood up who had lain on the Ground among the Dead: So great was the Authority of the two Lords of the Commonwealth, whom Cortes permitted to go about the City, that the next Day it was full of People, and as quiet as if nothing had happened. He fet at Liberty the other Lords and Gentlemen he had taken Prifoners, at the requeft of Maxifcatzin, and Guacozingo, who had reforted to him; telling them they might be thankful he did not entirely fubvert the City, and put them all to the Sword, for fo he was accuftomed to punifh Traitors. He then propofed a Reconciliation between them and the Tlafcalans. By the Advice of Cortes they alfo made choice of a new General, the former being dead, and that City was a Republic as well as Tlafcala. Next he ordered the Tlascalans, and his other confederate Indians, to clear the Court of the great Temple, and the Streets, of the dead Bodies, becaufe they began to ftink.

Motezuma being informed of all that had paffed, and that nothing could divert Cortes from the Profecution of his Defign of coming to Mexico, fent frefh Embaffadors with four large Difhes of Gold, and a great Quantity of Provifions, with Orders to affure him that he knew nothing of the Defign that the Inhabitants of Cbulula had to have murdered his Men, and that he might freely come to Mexico if he thought fit, becaufe he had oppofed his Journey only to fpare him the Fatigue of it. As this flattering Meffage was falfe in itfelf, fo the Conduct of the Emperor at home was as mean-fpirited and bafe. For when he heard that his Plot was difcovered, and his Confederates deftroyed, for having attempted to put it in execution, he thut himfelf up in the great Temple, fatted and prayed for a Week together, and in the mean Time facrificed a multitude of poor innocent Men to his Gods, in hopes of appeafing them,
3. It was in Confequence of the le long Meditations on the prefent melancholy State of his Affairs, that he fent a great Lord of his Court to Cortes under Pretence of a friendly Vifit; but in reality, with a View to diffuade him from proceeding further, by affuring him the Roads were dangerous, Provifions fcarce, and the Climate unwholefome. The Spaniff Commander anfwered chearfully, that to many of thefe Hardhips they
were enured, and that he did not at all doubt they fhouid be able to overcome the reft. Motezumia was informed of all by forne of his People, though moft of them ftaid among the Spawiards; and as it was fufpected that they were privately armed to fall upon them by Surprize, Cortes bid the Mexican Lords not ftir into the Quarters of the Spaniards at Night, becaufe they never flept, and were wont to kill all that came among them. Notwithftanding this Precaution, fome Spies were employed to find whether that was true, and the Sentinels killed three or four of them, being forewarned, which proved fo advantageous, that the Mexicans afterwards took up Quarters very far from the Spaniards.

The next Day they marched to a Town called Amafcameca in the Province of Cbalco; the Lord came out to meet Cortes with a great Retinue; gave him forty Women Slaves, the Value of three thoufand Pieces of Eight in Gold, and Provifions for two Days; and told him in Secret afterwards, in what a tyrannical Manner Motezuma treated him, and all others; Cortes comforted, encouraged, and gave him fome Toys, fo that they parted very good Friends. The Army advanced from thence to a fimall Town, half of which ftood in the Lake, and the other half at the Foot of an uncouth ftony Mountain. Many of the King's Servants kept with the Army, fupplying it with all Neceffaries, and that Night they defigned to have murdered all the Spaniards; but Cortes was fo watchful, that his Sentinels, and a fmall extraordinary Corps de Garde he had appointed killed twenty Men that were fkulking in the Quarters ; the next Morning before they fet out abundance of People came from Mexico, and many Gentlemen attending on Cacamazin, Nephew to Motezuma, Lord of Tezcuco, a Youth about twenty-five Years of Age, who was richly clad, and carried on a Sort of Sedan upon Mens Shoulders ; and when he alighted, fome went before fweeping the way ; Cortes came out of his Tent to meet him, paying him much Refpect, and treating the others very courteounly; twelve Noblemen went with him into the Tent, and Cacamazin, with much State and Gravity, faid, that he and thefe Gentlemen were come to wait on him; adding, to excufe his Uncle, that he came not in Perfon, becaufe he was indifpofed. Cortes anfwered him fully, and yet Cacamazin infifted that it was not fit for him to go to Mexico, becaufe he fufpected there might be fome Difficulty in his Admittance, or that it would be oppofed. Cortes gave him a Prefent of fuch Things as he had, treating him in a very courteous and loving Manner, but held on his way; and it was wonderful to fee what a Multitude of People came out from Mexico, and the other Towns on the Lake to fee the Spaniards, admiring their Habit, Beards, Arms, Horfes, and the Strangenefs that appeared in every particular, faying, thefe are truly Gods.

Cortes warned them not to crofs the Soldiers Ranks, nor to come near the Horfes, nor to touch their Garments, which would immediately coft them their Lives, left growing familiar with his Soldiers they fhould fear them the lefs. They came to Tezcuco, which was twice as big as Seville, the Streets very regular, the Houfes beautiful, and feated in a Plain on the Salt-Lake, and had frefh Water in Pipes brought from the Mountain to every Houfe, which made it a very agreeable Habitation; from thence they proceeded to Lavaca, which they called Venezuela, or Little Venice, containing about two thoufand Houfes, all in the Water, pleafant, and plentifully fupplied with Fifh; they entered it by a Caufeway, twenty Foot broad and above half a League in length, with good Houfes and Towers.

The Lord of the Place came out to meet Cortes with Neceffaries; and at his Requeft they ftaid there that Night; he difcourfed Cortes in private, declaring, how much he wifhed to be difcharged from his Subjection to Motezuma, made grievous Complaints, adding, that if he and his were Gods, as they feemed to be, he ought to fet many great Men at Liberty, who would all be affifting to him. He comforted and affured him that the Great Monarch Motezuma would do whatfoever he would ank of him. As for the way to Mexico, that Lord affured him it was all good, being along a Cauf-
way, and broader than that which had brought him thither.
4. After this Conference, from which he learned many things that were of very great Ule to him, Cortes fet out better Catisfled, having refolved to make Boats to enter into Mexico, being afraid they fhould brealk down the Caufways; he marched with much Circumfpection, fending fome Horfemen before to difcover what paffed. At the Requeft of Cacamazin, he went two Leagues farther, to $\begin{array}{r}\text { ztacpalapa, a Town belonging to another of Motezu- }\end{array}$ $m a$ 's Nephews, who came out to meet him with another Prince of the Royal Family, and with them came an infinite Crowd of People. They prefented him with Women Slaves, Plumes of Feathers, Garments, and to the Value of four thoufand Pieces of Eight in Gold: The Lord of Yztacpalapa made a Speech, bidding Cortes welcome, in the King's Name ; Cortes anfwered very difcreetly, and prefented him fome Toys, which were more acceptable for the Rarity than the Value.

At Yztacpalapa he was well entertained in a Houre $^{\text {a }}$ that had large Courts, upper and lower Floors, and very delightful Gardens; the Walls were of Stone, the Tim-ber-work well wrought ; there were many and fpacious Rooms hung with Cotton Hangings extraordinary rich in their way; on one Side of it was an Orchard, with abundance of Fruit and Greens, the Walls were all inclofed with Reeds, interwoven, covered with odoriferous Flowers. There were Ponds of frefh Water, with much Fifh in them ; one of them was four hundred Paces fquare, with Steps to go down to the Water and to the Bottom ; fuch Numbers of finall Herons, wild Ducks, Gulls, and other Sorts of Fowls reforted to the Lakes, that they were fometimes covered. This City contained ten thoufand Houfes, one half in the Salt-Lake and the other on the Continent ; on the way from it to Mexica was a Spring of gond Water encompaffed with tall Trees.

Cortes attentively obferved all thefe Particulars, and having confidered the Grandeur of Mexico, he is reported to have rejoiced very much, and to have bid fome of his beft Friends cheer up, for they fhould foon receive the Reward of all their Labours. Motezuma, who ftill defired nothing more than to obftruct Cortes from coming to Mexico ; when he was at $Y_{z \text { tacpalapa fent fome Gen- }}$ tlemen to advife him to go back, reprefenting to him many Dangers, and offering to give him whatfoever he fhould demand. Tuch, the Nobleman of Zempoalla, being informed of what they had faid, told Cortes he fhould not give Credit to thofe Difficulties and Dangers they talked of, for he had been himfelf in Mexico, and offered to conduct him to the King's Palace, over a very fine Caufeway. Cortes then advancing, ordered an Indian to go before, and make Proclamation as he went, in the Mexican Language, that no Man fhould crofs the way, for if any did, they fhould be immediately killed, which proved of great Ufe, by giving them room to march notwithftanding the Crowd of the People.

Yztacpalapa is two Leagues fron Mexico, joined to it by a Caufway, fo broad, that eight Horfemen can eafily go abreaft, and it is fo ftrait, that, were it not for one Angle it forms, the Gates of Mexico might be feen at the firft fetting out; on the Sides of it are Mexicatzingo, a Town of four thoufand Houfes, feated in the Water; Cuyoacan of fix thoufand Houfes on the Land, very beautiful and pleafant; and Hiucilopucbeo of five thoufand Houfes. In thefe three Towns there were many Temples, and high Towers all plaiftered over with white Lime, which, when the Sun fhone upon them, at a Diftance, looked like Silver, being a great Ornament to thofe Places, and now are Monatteries; there was in them a great Trade of Salt, but not white, nor agreeable to eat, efpecially to the Spaniards, yet good for falting of Meat: It is made of the Surface of of the Earth, that is near the Lake and full of Saltpetre: The Lumps of it are round, and almoft of Brick Colour, and they yielded Motezuma a very great Revenue. The Trade ftill continues, and this Salt is carried into Provinces very far diftant.

On the Caufway there were Draw-bridges, at certain Diftances over the Openings, through which the Water runs, out of one Lake into the other. The Erefh-water

Lake

Lake is higher than the Salt, and though it runs into the other, they do not mix much, becaule of the Caulways that part them. Cortes had three hundred Spaniards; and when they marched out of Tlafcala their Number feemed fo finall to him, that, fancying fome ftayed behind, he fent Peter de Alverado to fetch them out, but he found none. The Indian Confederates that followed him were fix thoufand; for fome Tlafcalans, Cbululans, and others, had joined him at Cloulula: Being come near to Mexico, where another Caufway joins the former, he found a Stone Bulwark two Fathoms high with two Towers at the Ends, and between them a Breaftwork with two Gates: There Cortes halted, becaufe four thoufand Gentlemen of the Court, richly clad all in the fame Livery, came out to meet him; every one of them, when he came to the Place where Cortes was, made Obeifance, touching the Ground with his Right-hand, and kiffing it, and pafing along returned to the Place from whence he came.

To this Bridge the Emperor himfelf advanced, to meet Cortes under a Canopy of Green Feathers and Gold, carried on the Heads of four Lords : Before him walked three Lords one after another, each of them holding a Gold Rod upright, which was carried before Motezuma every time he went abroad, either by Land or Water, like a Standard or Token that the great Lord was there, to the End that all who were in the Way, though they did not fee him might pay the due Refpect. Two principal Lords, his Brother Quequatbuac, and his Nephew Cacamazin, led him by the Arms; they were all richly clad after the fame Manner, bating that the King had Golden Shoes, which they call Zagles, not unlike thofe of the antient Romans, and on them many precious Stones of great Value, the Soles faftened with Thongs. The two Lords that led him were barefoot, for the Refpect they paid him was fo great that no Man durft come in his Prefence without taking off his Shoes, nor might they lift up their Eyes.

Motezuma kept along the Middle of the Street, and two hundred followed him, as clofe to the Wall as they could, their Eyes fixed on the Ground, becaufe it was accounted Difrefpect to look on his Face. As foon as Cories faw him he alighted off his Horfe, at a fmall Diftance with fome Gentlemen, and drawing near faluted him after the Manner of Spain. Thofe that led Motezuma ftopped Cortes, thinking it a grievous thing that any Man fhould touch him, being held as fome Deity; they faluted one another after their Manner: Motezuma touched the Ground with his Hand, kifing it, a Ceremony ufed among the Indians, and then bid him Welcome : Cortes returned him Thanks for having come out to meet him, and put about his Neck a Collar of fine Glafs and precious Stones with fome Enamel. Motezuma bowed a little, in token of accepting the Prefent. He went on a little before, with the Nephew that led him by the Arm, and ordered the other to ftay and wait upon Cortes, leading him by the Hand along the Middle of the Street, not permiting any Spaniards or Indians to come near. This was the greateft Honour Motezuma could have done Cortes. The two hundred Gentlemen in one Livery that went behind, as foon as they turned about, came one by one to welcome him; the Day would have been too fhort if all the Nobility in the City were to have done the like; but the King going before, they all turned their Faces to the Wall, in token of Refpect; fo that the others, who were behind, could not come up.

The King was much pleafed with the Collar Cortes gave him; becaufe, though it was not coftly, it was gay, fparkling, and very ferange to him. That he might not be thought to fall fhort in any thing that became a great Prince, he called two Officers of his Bed-chamber, and bid them bring two Collars of large red Prawns as big as great Snails or Wallnuts, at every one of which hung 'eight Gold Prawns wrought to the Life, and about half a Foot long: When brought, the King ftopped till Cortes came up, and with his own Hunds threw them upon his Neck. The Indians were amazed that Motezuma fhould do Cortes fo fingular a Favour, for he had never done the

Vol. II, Numb. LXXVI.
like to any other Man. The Spaniards were attonithed to fee fuch a Multitude of People, and after a long time paffing through them came to a very large Court, which was the Wardrobe of the Idols, and had been the Houfe of Axyacazin, Motezuma's Father.
5. At the Door of it, the Emperor taking Cortes by the Hand, led him into a fpacious Room, placed him on a rich elevated Place, adorned with precious Stones, and faid to him : "You are in your own Houfe, eat, reft, "c and take your Pleafure, I will foon return." Cortes made him profound Obeifance without anfwering one Word. Such was the Reception that mighty Yrince gave Cortes in that vaft City of Mexico, on the 8 th of November, I5I9. They were lodged in a Houfe that contained fo many fpacious Rooms, with Bed-chambers, that one hundred and fifty Spaniards could all lie fingle. It was alfo worth obferving that, though fo big, every Part of it, to the leaft Corner, was clean, neat, matted, and hung with Hangings of Cotton and Feather-work of feveral Colours, and had Beds of Matts with Pavillions over them, no Man of what Quality foever having any other: There was Fire with Perfumes in every Chamber, and fo many Servants every where, as fufficiently difcovered the Grandcur of that Prince. . When Motezumat was gone, Cortes affigned every Man his Apartment, placing the Artillery before the Door, and when he had ordered all that was requifite, the prime Men ferving him in fuch a Quality as is ufual in the Houfes of the greateft Perfons there, in Honour to him, and becaufe it was then convenient, ftood in order about the Walls.

When they had all dined and refted, Motezuma returned, and Cortes went to meet him ; they both walked. together to the raifed part of the Room, and when they were feated in the Prefence of many Mexican Gentlemen and Cortes's chief Commanders, Motezuma gave Cortes many coftly Jewels of Gold, Silver, Feather-work, and fix thoufand rich Cotton Garments. Cortes returned Thanks for the noble Prefent in fuch a Manner as Thewed good Breeding and Difcretion. Soon after, the Emperor entred into a long Conference with the Spamifl Commander, in which he thewed himfelf a very great Politician, and a deep Mafter in the Art of Diflimulation: He fet out with giving abundance of plaufible Reafons why he was fo very unwilling to admit them into his Capital : He next took notice of the ftrange Reports that had been fpread about them; and then told them, he believed, that as ftrange as they appeared to one another, they were really Countrymen, fince it was certain that the Anceftors of the Mexicans came from a Land at a great Diftance, and had not been fettled there above a Century, that therefore he regarded them as Brothers; that they were free to take what they pleafed, and that they fhould ftudy to amufe and divert themfelves the beft way they could.
6. Cortes thanked Motezuma for thefe fingular Marks of his Kindnefs and Affection, took a View of the City, and for fome time paffed his Days very agreeably; however, before he had formed in his own Mind any Scheme of fixing the Spaniards in that Country, Things began to change their Afpect; and he faw great Caufe to efteem himfelf in more Danger than he had yet been expofed to in the Profecution of this Defign. The Occafion of his Apprehenfions was the Arrival of two Tlafcalans, difguifed fo as to pafs all Motezuma's Guards, whofe Bufinefs was to inform him, that the Indians allied to the Spaniards, finding their Lands ravaged by one of Motezuma's Captains, whofe Name was Qualpopoca, and apprehending that he had a Defign upon Ziempoalla, they applied themfelves, as he had directed, to Efculante, whom he had left Governor of Vera Cruz, and defired his Protection. The Spanib Governor fent immediately to 2 ualpopoca, to defire that he would forbear injuring the Friends of the King of Spain; but, notwithftanding he repeated his Inftances more than once, he found them ineffectual ; and therefore, in purfuance of his $\mathrm{In}^{-}$ ftructions, he marched to their Relief with all the Force he could fpare, which confifted of no more than forty Spaniards, and thofe but indifferently armed; having

C
with
with them only two fmall Field-Pieces; but being joined by two thoufand of the Confederate Indians, he ventured to engage the Mexicans, though double his Number; that is to fay, between four and five thoufand Men.

If the Confederate Indians had behaved as they ought, he would probably have obtained an eafy Victory; but they fled as foon as the Battle began, having loft a few Men : The Spaniards, being forfaken by their Allies, ftood their Ground, and routed the Mexicans, who having never felt them before, could not ftand the Edges of the Spanifb Swords. They purfued them as far as the Town, which was afterwards called Almeria, and burnt it. Gobn de Efculante was dangerounly wounded in this Fight and his Horfe killed, and fix of the Men were greatly hurt: Efculante died of his Wounds as foon as he came to Villa Rica. The Indians carried off one Soldier alive, whofe Name was Arguillo, a Native of Leon; a Man of a large Head, black Beard, very lufty and ftrong, who being fent to Motezuma (for this happened before Cortes entred Mexico) died by the Way of his Wounds; and becaufe he ftunk, they carried the Head, which, being of a lufty Man, put him into a Confternation : He would not have it offered at any of the Temples in Mexico, but in fome one without ; and faid, he wondered how it fell out that his Men, being fo numerous, did not vanquifh that fimall Number; and, that he was convinced that thofe Men were not immortal, though they appeared to be very brave. The Confternation he was put into by the Sight of Arsuillo's Head, fome fay, proceeded from the Predictions he had, That fuch Men fhould conquer his Monarchy, and change the Religion of his People. It is to be obferved, however, that this laft Circumftance was not known to Cortes at that time; fo that he was in doubt, whether this Action was performed by Order of the Emperor, or even whether he knew or approved it.

However, as the Situation he was in made him very uneafy, he fent privately to the moft fenfible and beft affected Indians of his Army, of whom he demanded, " If they had obferved any Alterations in the Minds of "s the Mexicans, and in what Efteem the Spaniards were "s at that time among them ?" They anfwered, "That os the common People were taken up with their Feftivals "s made for the Diverfion of the Spaniards, whom they "s reverenced becaufe they faw them honoured by their «Emperor: But that the Nobility feemed penfive and "s myfterious: That they had fecret Conferences, the " Refult of which they kept very private. They faid, "6 they had obferved fome Expreffions which admitted "c a finifter Interpretation, one of which was, that it "c would be no difficult Matter to break down the Bridges " of the Caufway, with others of the fame kind ; which " all together gave fufficient Caufe of Sufpicion." Two or three of thofe Indians heard it whifpered, That fome few Days before a Spaniard's Head was brought as a Prefent to Motezuma, and that he commanded it to be taken away and concealed, after he had viewed it with fome Aftonifhment, it being of a very large Size, and the Face of a fierce Afpect ; Marks which agreed very well with that of Fuan de Arguillo's. This added to the Uncafinefs of Cortes; for hence it appeared that Motezuma was privy to the Proceedings of his General.
7. As thefe Informations left him no longer any room to doubt, that notwithftanding all the Kindnefs fhewn him, Motezuma was actually contriving his Deftruction, he faw it was neceffary fome quick Meafures fhould be taken to deliver himfelf and the Spaniards out of thofe Dangers with which they were at prefent furrounded; but the Difficulty was, to fix upon that which might beft anfwer the End, and, when fixed upon, to carry it into Execution. He meditated upon this Subject a whole Night by himfelf; and, having fettled in his own Mind what was to be done, he then called a Council of War, in order to hear the Opinion of his Officers; in which they differed extremely, moft of them, however, inclined to make a Retreat; and fome of them fuggefted, that as Motezuma had made them fuch large Offers to prevent their coming to Mexico, he would probably be willing to give them as much Gold as they
could reafonably afk, in order to get them out of his Capital ; but Cortes difapproved this: And having in a fet Speech thewed the Impoffibility of their putting any fuch thing in practice, concluded, that the only Diethod they had left to fecure themfelves, and put a fpeedy Iffue to this Bufinefs, was fo feize the Perfon of the Emperor ; and the Reafons he gave for it were fo ftrong, and the Method he propofed for executing it liable to to few Objections, that at laft it was unanimoully agreed upon, and a Refolution taken to do it without Delay:

A moft furprifing Scheme furely, confidering the Force that Cortes had, and the many thoufands that were in daily waiting about Motezuma's Perfon. Yet this Defign, as it was contrived with great Wifdom, was executed with no lefs Spirit and Succefs. The Hour which the Spaniards were accuftomed to wait upon Motezuma was chofen for the Execution of their Defign, that no Alarm might be given by their making him an unfeafonable Vifit. Cortes gave Orders to his Men to arm themfelves in their Quarters, to faddle their Horfes and to hold themfelves in Readinefs without making any Noife, until they received frefh Inftructions. He poffeffed himfelf of all the Avenues of the Streets leading to Motezuma's Palace, with a fmall fcattered Detachment of Soldiers, and went to the Palace accompanied by the Captains Pedro de Alverado, Gonzala de Sandoval, Fuan Velafques de Leon, Francifco de Lugo, and Alonfo Darita having ordered thirty private Men to follow at a Diftance.

It was no furprizing Sight to fee them enter with their Arms, which they ufually carried as a military Ornament. Motezuma, as ufual, came out of his A partment to receive the Vifit, and they all took their Seats : His Servants, as by his Order they were always accuftomed to do, retired to another Part of the Palace, and when Donna Marina and Geronimo Aguilar were come up, Cortes began his Complaint with becoming Refentment: Firft, he laid before Motezuma the Action of his General who had the Infolence to form an Army, and attack his Confederates, in Violation of the Peace, under which they thought themfelves fecure: Then he urged as a Crime, for which he ought to make Satisfaction to God and Man, the fpilling the Blood of a Spaniard by the Mexicans, after they had made him Prifoner, to revenge upon him in cold Blood the Ignominy of their own Defeat : And laftly, he expofed in proper Colours, as a Point of ftill greater Confideration the Excufe made by Qualpopoca and his Captains, who declared they had undertaken that unjuftifiable War by the Emperor's exprefs Order ; concluding, that he thought he owed fo much to his Majefty, as not to give Credit to any Action fo unworthy of his Greatnefs, as that of favouring the Spaniards in one Place, while he was endeavouring to deftroy them in another. But Motezuma denied it.
Cortes interpofed upon this, telling him, he believed what he faid to be true, and that he could never entertain any Notion that fo great aMan as he, could be guilty of fo bafe an Act; but that what convinced him, did not feem to have the fame weight with his People, and that, for their Satisfaction, it would be very proper he fhould remove from his own Palace, and go and live with the Spaniards in that he had affigned him, till fuch time as Qualpopoca, whom he immediately fent for, arrived. Motezuma was extremely furprized at fo ftrange a Propofition, and for fome time refufed to hear of it; neither could all the Eloquence of Cortes have brought him to confent if Donna Marina had not interpofed; who told him, fhe was his Subject, and had therefore nothing fo much as his Intereft at Heart: That his Life was in the utmoft Dianger, and that nothing but his yielding to this Neceffity could fave him ; and that it was in vain to difpute where the only Queftion was, Whether he would chufe ${ }^{\text {F }}$ the L.ofs of Life, or temporary Liberty? This determined Motezuma. Let us go, faid he, to your Quarters, fince I find it can be no otherwife.
When he had faid this, he left the Palace, without any more Delay, taking with him all his ufual Attendants, the Spaniards, marching on Foot clofe by his Chair, furrounded it, under pretence of waiting on him. A Report

## Chap. III.

for the Reduction of New Spain.
was prefently fpread about the City, that the Strangers had carried off the Emperor, and the Streets were crouded, fome in Defpair, and fome difcovered the Tendernefs of their Concern by their Tears. But Motezuma, with an Air of Gaiety and Compofure, appeafed the Tumult, and fatisfied them in fome Meafure. He commanded them to ceafe their Cries, and, at the firft Motion of his Hand, a profound Silence enfued: He then told them, "That " he was not going to Prifon, but for his own Diverfion " to pals a few Days with his Friends, the Strangers." As foon as he was fettled in his new Lodging, many Noblemen reforted to Motezuma, exprefing their Sorrow for that Innovation, and offered to do any Service that fhould be enjoined them.
Cortes being fenfible of the Boldnefs of his Enterprize, and the Danger he was in, to provide for the worft, ordered two Brigantines to be built, that would carry two hundred Men, to come into, and go out, of the City, as there fhould be Occafion.
They were foon finifhed, and he kept them under a ftrong Guard near his Quarters, to the no fimall Amazement of the Indians. Motezuma fearing left any harm that might be done to the Spaniards, by his People, might affect him, put on a chearful Countenance to conceal the Griefs that perplexed, him, telling the Men of Quality that ferved and vifited him, there was no Occafion to be fo much concerned, fince he was well, lived in that Apartment at his Eafe, and no Injury or Affront was offered him ; that he had choien to go thither to convince the Spaniards that what had been faid of him, in relation to $2^{2 u a l p o p o c a, ~ w a s ~ n o t ~ t r u e ; ~ t h a t ~ h e ~ d e f i g n e d ~ t o ~}$ punifh him, that no other floould be guilty of the like; that he would ftay there till Cortes was fatisfied, and that fince he might depart from thence whenfoever he fhould think fit, they ought to fet their Hearts at reft, and as they had always loved him, they fhould fhew it at that Time.

As foon as he was brought into the Apartment, Cortes fet a Guard over him, and gave the Command thereof to Fobn Velafquez de Leon; and if particular Care had not been taken, he would have been conveyed away; for Walls were broke through, and other Methods ufed; and one Day he attempted to throw himfelf off from the flat Roof of a Houfe, that was ten Fathoms high, for his People that were underneath to catch him, had not a Spaniard that was upon the Guard, and near his Perfon, held him. Cortes vifited him every Day, and for his Diverfion, ordered the Soldiers to exercife their Weapons, at which he was very much pleafed, and generounly rewarded them. His own Servants waited on him, as they were wont to do in his Palace, and fo did the Spaniards, who, by Cortes's Command, honoured and refpected him as a King.

There he decided Law-fuits, difpatched all Bufinefs, and adminiftred the Goverument of his Kingdoms, fpeaking, either in private or public, to any Perfon whonfoever; and yet the Indians were fo reftlefs and uneafy, that they never ceafed by Day or Night to attempt refcuing him: For this Reafon Cortes ordered Roderigo Alvarez Cbico, a brave and watclful Man, to guard the backfide of the Houfe, with fixty Men, twenty mounting at a time; and Andrew de Monjarraz to do the fane before the Palace, with the fame Number.
Motezuma was ferved like a great Prince, the Diet that was brought him by four and four Men holding up the Difhes, with much Refpect, made a long Train, and when he had done, all the Meat was divided among the Gentlemen that ferved, and the Spaniards that guarded him. His Bed confifted in many coflly Cotton Blankets, fome of them very fine, fome quilted, and covered with others of great Value, made of Feathers and Wool, of various and natural Colours. The Bed was laid on Matts, and a wooden Beaditead, all fuited either for the Heat or the Cold. It was this Confinement of the Emperor which afforded Cortes all the Opportunities he could wifh, of enquiring narrowly into the Situation of his Affairs, and of penetrating into all the Secrets of his Government; he likewife found Ways and Means to draw out of the Indian Monarch, in this Confinement, very large Sums of

Money, or, which was the fame thing, Gold and Jewels to an immenfe Value.
8. In all outward Appearance Motezuma was very eafy and well fatisfied, the Spanibs Soldiers behaved to him with the greatef Civility and Refpect imaginable, and as for the Officers, they were his contant Companions, with whom he converfed continually, and fhewed a great deal of Pleafure, as alfo in playing at certain Spami/b Games, particularly at Skittles, in which he became, very foon, a great Proficient. In the midft, however, of all thefe Condefcentions, he fhewed himfelf a great Politician; for, obferving how fond the Spaniards were of Gold, he took care to lofe, that he might have an Opportunity of giving, and of obtaining; by this Means, an Intereft amongtt them.

While things were in this Situation, 2ualpopoca arrived with his Son and fifteen Men of Quality, who had been concerned with him in killing the Spaniards, in twenty Days after the Confinement of Motezuma; he was conducted to Mexico by many great Men that went out to meet him, and he was brought in upon their Shoulders and thofe of his Vaffals: When come to the Place he alighted, pur on Garments of lefs Value than he had before, and took off his Shoes, waited fome Time till he had Leave to go in, drew near alone, all that went with him, ftaying behind; and having made many Bows, and performed the ufual Ceremonies, with his Head hanging down, and his Eyes fixed on the Ground, he faid, "Moft high " and mighty Sovereign, here is your Slave 2ualpopo" $c a$, whom you have commanded to come, what will " you have done, for I am your Slave, and muft of Ne"ceffity obey you ?" Motezusiac fternly anfwered, "He " had done very ill in killing the Spaniards without any "Provocation, and faying he had done it by his Order, " and therefore he fhould be punifhed as a Traitor to the "Strangers, and to his King." Qualpopoca going to excufe himfelf, he would not hear him, ordering that he, his Son, and the reft, fhould be delivered up to Cortes, who, having fettered, caufed them to be examined, and they confefled the killing of the Spaniards; being afked whether he was Motezuma's Subject, he anfwered, "Is " there any other Lord that I could be fubject to? " They were examined a fecond time more ftrictly, and threatened with the Rack, and unanimounly averred that they had killed the two firtt Spaniards by Motezuma's Order, as they had likewife thofe in the Field.
When they had made this Confeffion, and confirmed it, Cortes condemned $2 u a l p o p o c a$ and the reft to be burnt. The Sentence being made known to him, he faid, That though he was to fuffer Death for having killed thofe two Spaniards, his great Lord, Motezuma, had commanded him, and that he fhould not have prefumed to have done it, unlefs he had thought it for his Service. He, with his Son, and the reft, were conducted under a ftrong Guard of Spaniards, to a large Square, and being fet on a large Pile of broken Bows and Arrows that were dry, with their Hands and Feet bound, Fire was fet to it, they again confeffing the fame as they had before: He prayed as the reft did, and the Fire blazed, and they were foon burnt, without Difturbance ; the Mexicans admiring the Execution done by the Spaniards in fuch a great City and Kingdom, and in the Prefence of their Monarch. Before and after this Execution, that the Spaniards might be always in readinefs, Cortes made Proclamation that none of them fhould go naked to Bed, and that the Horfes fhould ftand all Night faddled, with their Bridles at the Pommels of their Saddles, becaufe it was fufpected there would be an Infurrection, and that they would attack the Spaniards when anleep; but the Vigilance of Cortes was thought to have difappointed that Defign; and he caufed the firft Soldier that was found to have lain in Bed naked, to be expofed to public Shame, keeping him two Days in Fetters in the Air, induring the Dew in the Night, and the Sun in the Day, and a Clog at his Foot; no Intreaties prevailing to relieve him, alledging that Severity was requifite in fuch Cafes.

After the Confeffion was made, whilit they were carrying Qualpopoca to Execution, Cortes, attended by his Commanders, went to Molezumn, and faid to him, "Yous
${ }^{6}$ know you denied your having ordered 2ualpopoca to
${ }^{6}$ kill my Companions, you have not done therein as
${ }^{6}$ became fo great a Prince, and fince you have occa-
"s fioned the Death of my Men, as alfo of Qualpopoca,
" his Son, and fo many of his People, had I not Regard
" to the Affection you have fhewn to my King, and in
" his Name to me, I fhould think you ought to pay
"for it with your Life; for both the divine and hu-
"s man Law, appoints that a Murderer, as you are,
"6 hould die: However, that you may not go alrogether
"s unpunifhed, and that you and your People may be
"fenfible how advantageous it is to deal fincerely, I will
" order you to be put in Irons." Motezuma was very much furprized at this Reproof, and could fcarce utter his Words for Confufion, but only faid that he was innocent, and he might do what he would with him. Cortes went from him in a very angry Manner, and immediately after he was fettered.

It was thought that Cortes ufed this Policy to divert him from the Grief he might juftly conceive at the Execution of Qualpopoca in his own Sight. It is impoffible to exprefs how much Motezuma was concerned, when he faw himfelf in Irons; he affirmed he was innocent, and lamented his Gondition; his Kindred and Nobility were aftonifhed, and in that Confternation they wept, and kneeled down, bearing up his Fetters with their Hands, and thrufting fine Cloths through the Links, that they might not touch his Flefh, nor could they think what to do; for if they had had recourfe to Arms, they concluded that their Lord would certainly be put to Death, which added to their Terror. When Qualpopoca was executed, Cortes, thinking he had gained his Point, went in the Afternoon to Motezuma, and, faluting him with an Air of Kindnefs, ordered his Fetters to be taken off, telling him, that though, according to the Confeffion of the People executed, he deferved to be more feverely punifhed, yet for the Love he bore him, and becaufe he could not believe fo great a Prince guilty of fuch a foul Action, he had commanded him to be fet free. Motezuma was as much rejoiced at thofe Words, as he had been before dejected, upon being removed and put into Irons. He embraced Cortes, returned him Thanks, and beftowed many Favours that' Day, as well on the Spaniards as his own People.

By this Means both Parties were fatisfied with each other, and Motezuma came by Degrees to have fuch a Confidence in Cortes, that he reprefented to him the Expediency of granting him Leave to go to vifit fome of his Temples, that his Subjects might not look upon him to be longer a Prifoner, which was granted, upon Condition that human Sacrifices were abolifhed. As Cortes perceived that this Confidence in Motezuma had gained upon him extremely, he laid hold of this Opportunity to demand his Affiftance, for the accomplifhing of various things he had in view, which were very neceffary to him, and which, however, he could not accomplifh, but by the Emperor's Affiitance.

The firft of thefe was, the Knowledge of the gold Mines, where they were, to whom they belonged, how wrought, and what Quantities of that precious Metal, were obtained from them. Motezuma gave him very clear and diftinct Anfwers to all thefe Inquiries, and, for his farther Satisfaction, allowed fuch of his People as he could truft, to go to the Mines, both within and without his Dominions. In the next Place, Cortes was willing to have a Map of the Sea-coaits of the Mexican Empire, that he might be the better able to fix upon fome Port, to which Succours and Supplies might be fent him; he was, according to his Defire, furnifhed with a very accurate and extenfive Defcription of the maritime Provinces under - Motezuma's Dominion, finely painted after their Manner, which anfwered his Purpofe perfectly. The laft thing that he aimed it was, the obtaining of a fufficient Quantity of Gold to be fent to Spain, in order to maintain his Credit there, and fecure the King's Favour. In obtaining this, he met with no Difficulty, the Emperor and the great Men of his Court, readily yielding him their Affiftance:
9. But in the Midit of this Tranquility, there arofe a
new and very unlooked for Difturbance, which neither Motezuma nor Cortes could forefee or prevent. It was occafioned by the Emperor's Nephew, Cacamazin, who mortally hated the Spaniards; and going to Tezcuco, told his chief Counfellors how much he loved them, defiring they would reflect how they were kept under by a handful of Strangers, who dared to confine his Uncle Motezuma, to whom the greateft Refpect was due; that it was intolerable fo fmall a Number, and thofe of another Religion, fhould turn them out of their Houfes, and, what was ftill worfe, fet up their Gods in the Temples, inftead of thofe of the Country; that it was high time to ftand up for Religion, Liberty, Honour, and their King, without delaying till the Strangers had Succours from their own Country, from T'lafcala, and from other Parts; and therefore they fhould make ready, for he was refolved to fall upon the Intruders; yet if they differed from him in Opinion, they might tell him fo, and he would be advifed by them.

They approved of the Defign, and offered to ftand by him; but fome ancient Men, who had no mind to flatter him, faid, he fhould confider what he did, that Cortes was brave, had gained feveral Victories, and they believed there was very great Friendfhip between him and Motezuma, for if he would have drove him out of Mexico he might lave done it; they advifed him therefore not to be carried away by the Fire of Youth, or the Ambition of Rule, fince there were other Heirs as near as he. However, War was agreed on, and Preparations were made with the greateft Privacy, that nothing might be known by Motezuma or Cortes; but, notwithftanding their Care, they foon had Notice of it.

Cortes perceiving the View of this turbulent Youth, and fufpecting that Motezuma's want of Refolution, or great Affection for the Spaniards, encouraged him to undertake the Defign, fent Word to the Emperor that he had much Caufe to fufpect him, becaufe, fince what had happened about Qualpopoca, his Nephew, Cacamazin, was confpiring againft him; and therefore he defired him to put a Stop to thofe Proceedings, otherwife all would light upon himfelf. Motezuma was much furprized at this Meffage, and affirmed he knew nothing of what his Neplew was doing; that he was very well pleafed there, and would fend for his Nephew Cacamazin, and if he refufed to come, would order him to be brought by Force, and delivered up into his Hands to be punifhed, if convicted of that Crime. Cacamazin was then preparing for War, and the People readily came in to him, becaufe he gave out that he would refcue the King.

This Affair put the Spaniards upon their Guard, and Cortes defigned, for making an Example, and eftablifhing his own Reputation, to go himfelf to Tezcuco, and attack Cacamazin in his own Houfe; but Motezuma prevented it, alledging that the City was ftrong, and the People of Culua at his Nephew's Command, and therefore it was better to take another Courfe. Cortes followed his Advice, and fent to bid Cacamazin remember their Friendfhip, that he fhould confider it was an eafy Matter to begin a War, but not fo to put an End to it ; and that it would be for his Advantage to keep on good Terms with the King of Spain and his Subjects. He anfwered plainly, He would entertain no Friendhip with thofe that oppreffed the Country, and overthrew their Religion; that le knew not who the King of Spain was, nor did he defire to be informed; and that if he would not have him make War, he fhould immediately depart Mexico. Cortes again advifed him to defift, and defired Motezuma to lay his Commands upon him.

The Emperor fent for him, which he was fo far from regarding, that he faid, If his Uncle were the Man he ought to be, he would not fuffer himfelf to be confined; and fince Motezuma was fo mean-fpirited, he was refolved to reftore the Monarchy to its former Splendor, which had been loft through his Cowardice. Cortes, upon this, refolved to march out to meet Cacamazin, though the Danger was great, confidering the Multitude of Enemies within and without: But ftill Motezuma hindered him, contriving with fome of his Nephew's Commanders, that they hould deliver him into his Hands. Thefe
being bribed; as they were with Cacamazin, confulting about the Management of the War, fecured him, and before it was known abroad, conveyed him, by Water, to Mexico, and had him carried on Mens Shoulders; richly clad, to Motezuma's Apartment, who would not fee him, but ordered he fhould be delivered to Cortes; who; well pleafed to have efcaped that Danger, ordered him to be clofe confined.
The next Day, by the Advice of Motezuma, Quizquizcatl, younger Brother to Cacamazin, was conftituted Lord of Culua, being then at Mexico with his Uncle, having made his Efcape from his Brother ; and Motezuma conferred on him the Crown and the Title of King, with the ufual Solemnity; telling him he defigned to look upon him, for the future, as his Son : Quizquizcatl kiffed his Hand, promifed Obedience, and then, turning to Cortes, gave him Thanks, protefting he would ever be his Friend. Cacamazin was much concerned, when he heard that his Brother was made Lord of his Dominions, and Cortes had him ftrictly obferved, knowing that there were many that would willingly have conveyed him back to Tezcuco. Motezuma fent two Embaffadors to fignify to that City the new Election, and caufed the elected Monarch to be attended by many of his Courtiers, and Cortes fent along with him feveral of his prime Men, both of them in Perfon bearing him Company to the Gates of Mexico; he was received at Tezcuco with all public Demonftrations of Joy, being carried on Mens Shoulders.
At the Entrance into the City, the Magiftrates took him up, and when come to the Palace, an ancient Gentleman fet a Garland of Flowers on his Head, and, all the Company being filent, made a Speech to him; the Purport of which was, "t That he was fenfible, how, when ot he was ferving Motezuma, being fled from his Bro"s ther, on Account of his Pride, the Gods had raifed " him to that high Dignity, for which Reafon he ought " to take care not to change his noble Difpofition; for " that the thing Kings fhould moft endeavour to ac"quire, was the Love of their Subjects, $\varepsilon^{\sigma} c$." Thefe Ceremonies performed, the People withdrew, and Cortes was delivered from the Dangers that had threatened him. This, in itfelf, and independent of its Confequences, could not but be very agreeable to our Hero, who faw himfelf, by this Means, raifed to the higheft Authority, exclufive of the fovereign Power in that Empire; for the People being well enough acquainted with Motezuma's natural Difpofition, attributed this mild Way of punifhing, entirely to Cortes; and on the other Hand, the firft Prince of the Empire looked upon himfelf as his Creature, fo that there appeared a Probability of his eftablifhing fome kind of Intereft in Mexico, and the bare Appearance of this, was enough to engage Cortes to do all that lay in his Power to cultivate and increafe it.
10. All things feemed at this time to concur in favour of the Spaniards, and to render their Stay in the Empire of Mexico more fafe and more agreeable than it had hitherto been. Yet, of a fudden, this fine Profpect was intirely over-caft, and the Face of Affairs unexpectedly changed. It feems that Motezuma, though he had diffembled his Refentment, was far enough from being pleafed with the long Stay which the Strangers made; and, indeed, if we confider their Behaviour towards him, it was no Wonder; but he diffembled fo well, that neither Cortes nor any of his People fufpected him; and was fo great a Politician, that when he actually propounded the Scheme he had framed to be rid of them, they were fo far from conceiving it in that Light, that they took it for the higheft Act of Favour he had ever done them.

In fhort, Motezuma offered to call a general Affembly of his Nobles, and there acknowledge, in a moft folemn Manner, the Sovereignty of the King of Spain over his Dominions, and his own, and his Subjects Duty toward him. There could be nothing more acceptable to the Sponish Captain than this unexpected Offer of the Indiand Monarch's, and therefore he encouraged him to carry it into Execution as foon as poffible, without cver furpecting that the Emperor was as much inclined to this

YoL. II. Numb. $7 \sigma^{\circ}$
as himfelf, though from a very different View. The Af fembly was accordingly called, and Motezuma, being feated on his Throne, made a very long; and a very extraordinary Speech: He faid they all knew well enoughz that their firft Emperor came from the Eaft; and that he had left them a Prophefy, that his Defcendants fhould return to govern thefe Countries; that without doubt the King of Spain was the lawful Succeffor to the Empire, that if he had come thither in Perfon; he would have laid down his Crown at his Feet; that as it was; he was refolved to do him Homage, and fend him a Prefent of the moft valuable Things in his Dominions, and that he expected they would likewife contribute out of their own Poffeflions; that this Prefent might be the more worthy the Acceptance of fo great a Prince.

In this Manner Motezuma concluded his Difcourfes, though he did not utter it all without Interruption; for in fpite of all the Efforts made upon himfelf in this Act of his, when he came to pronounce himfelf Vaffal to another Prince, he found fomething fo hocking, and fo repugnant to his Nature, in thofe Expreflions, that he paufed a while as if he wanted Words to proceed, and he fhewed his Concern fo publicly, that fome Tears were feen trinkling down his Cheeks, which feemed as if they had efcaped his Eyes, without their Confent; and the Mexicans, fenfible of his Difturbance, and of the Caufe from whence it proceeded, began likewife to Thew their Concern, breaking forth into loud Sighs, defiring. in Appearance, not without fomething that favoured of Flattery, that by the Noife they made, their Fidelity fhould be taken Notice of; fo that Cortes thought it neceffary to defire Liberty to fpeak; in order to encourage Motezuma, and put him out of the Perturbation he tvas in. He faid, " That it was not the Intention of the " King his Sovereign, to difpoffefs him of his Royal "Dignity, nor to make the leaft Innovation in his 'Go"vernment; but, that all he defired was; that they "s would, at the prefent Affembly, fettle his Right ta "s the Succeffion, in Favour of his Defcendants or Pof"s terity ; by Reafon of his being fo far diftant from "s thofe Regions, and fo taken up in other Conquefts "s that the Cafe mentioned in their Traditions and Pro"c phefies, might not happen in many Years. ") With which Explanation Motezuma recovered Heart; rê-affumed an Air of Tranquility, and finifhed his Difcourfe, as has been before obferved.

The Mexicans remained aftonifhed, and tutterly confounded to hear fuch a Propofal, woridering at it, as a Thing inconfiftent with, and unbecoming, the Majefty of fo powerful a Monarch, and a Prince fo extremely jealous of his Authority. They looked on each other without daring either to contradict, or to give any Sign of Confent; as being apprehenfive, that by doing either, they fhould but confirm him the more in his ftrange De termination. This refpectful Silence lafted till his prime Minifter, as a Perfon who had a better Knowledge of his Prince's Difpofition than any other, took upon him to fpeak for the reft, and faid, "s That all the Nobles who "compofed that Affembly, refpected him as their Lord " and natural Sovereign, and fhould be ready to obey "s whatever his Majefty had been pleafed to propofe, and "s to follow any Example he fhould think fit to fet " them; they not doubting but that he had well weigh"6 ed every thing, and had confulted with Heaven; and "s they had no Inftrument more facred than that of his " Voice, whereby to be informed of the Will of their "G Gods." The whole Affembly agreed in the fame Sentiment, and Hernan Cortes; when it came to his turn to make his Acknowledgments, dictated to his Interpreters, a Speech no lefs artful that the former; in which he gave Thanks to Motezuma, and all who were prefent for this Demonftration of their Refpects accepting their Service in the Name of his King, without feeming to think it ftrange that they complied with their Obligations, but, rather as one who receives his Debt, and is pleafed with his Debtor's punctual Payment.

The Emperor took immediate Care to collect in Gold and Jewels, particularly Emeralds; a Prefent fuitable to his own Dignity; and his Nobility followed his

Example

Example with the utmof Alacrity. All thefe rich Gifts were carried, by Moiezuma's Order, to the Apartment of Cortes, who named a Receiver and Treafurer, that they might take an exact Account of what was delivered; and in a few Days they amaffed fuch a Quantity of Gold, that befides the precious Jewels, and pieces of curious Workmanihip, after they had melted down the reft, they found 600000 Pefos of Gold, in Bars of good Alloy; out of which the fifth Part was fet afide for the King, and of the remainder, a fecond Fifth for Hernan Cortes, with the Approbation of his People, and to defray the Expence of providing for the public Neceffities of the Army; he likewife fet afide the Sum for which he ftood accountable to Diego Velafquez, and that which his Friends, in the Ifland of Cuba, had lent him; the reft was divided among the Officers and Soldiers, including thofe that were at Vera Cruz.

Thofe who had Employments had equal Shares, but amongt the private Men there was fome Difference made; for thofe were diftinguifhed and beft rewarded, who had done beft Service, or had been leaft troublefome in the paft Difturbances. An Equity of a very dangerous Nature, where juft Rewards are looked upon as Grievances, and Diftinction of Merit occafons Complaints: There were great Murmurings and bold Words uttered againft Hernon Cortes and the Captains; for at the Sight of fuch a Mafs of Wealth, thofe whofe Deferts were leaft, required an equal Recompence with the moft Deferving. Their Avarice could not poffibly be fatisfied, nor was it convenient to publifh the Reafons of that unequal Diftribution; by degrees, however, and by the Dexterity of his own Management, Cortes got the better, and reduced the whole Army, not only to a peaceable Deportment, but to a voluntary Submiffion to his Method of managing.

In order to this he found it neceffary, not only to part with fome of his Share, but even to give confiderable Sums in ready Money, to fuch as were worft dealt with, and complained loudeft; amongft whom, there was one Fellow that had but 300 Pieces of Eight for his Share, who faid, merrily, that he would take care not to engrage himfelf again in a Contract with two Kings ; alluding to the General's taking' one fifth for his Catholic Majefty, and another for himfelf, upon which Cortes gave him 200 Pieces of Eight more, with which the Soldier was very well content.

I I. The General was perfectly well pleafed with the Situation he was now in, for he thought that he had entirely got the better of the Factions in his own Army, and that he ftood higher in the Favour of Motezuma than ever; but it was not long before he was convinced to the contrary; and found, when he leaft furpected it, that the Indian King was bent upon obliging him to quit his Country, a Thing he never apprehended would have come into the Emperor's Head, or if it had, that he would have had Spirit and Courage enough to avow it. But as wife and as penetrating a Man as he was, he found himfelf deceived in both.

The Manner in which this great Affair broke out, was thus: One Day as Cortes was diverting himfelf with the Spanifh Commanders, Motezuma fent Orleguilla, a young; Spaniard who had learned the Indian Language, and of whom he was very fond, to tell him that he wanted to fpeak with him immediately, and at the fame time that the young Man delivered this Meffage, he informed Cortes that Motezuma had fpent a great Part of the Night in clofe Confultation with his principal Minifters, and fome of his Priefts. As foon as he had heard this, Cortes could not help faying that he did not like the Meffage, but, however, he refolved to wait upon the Emperor immediately, taking with him about a Dozen of the Spaniards that were by when he received the Meffage, and laboured to conceal, as well as he could, the Confufion he was in. When he came into Motezuma's Prefence, he faluted him with profound Refpect, and then afked him very courteoully, what were his Commands?

The Emperor received him with more Gravity than ufual, and with an Air of Greatnefs that till then he had newer put on; and being now fomewhat acquainted with
the Forms of Spanifb Civility, called for Chairs, and all the reft ftanding, and two Interpreters on their Sides, he faid, "Captain Cortes, my Gods are angry with me for "s having permitted you to ftay fo long in my City, deftroy" ing our Religion; they fay they will give me no Rain, "s will deftroy my Corn, fend the Plague, and fubject "c my Empire to my Enemies. I intreat you to depart "s this Place immediately; afk what you will have, for " I love you entirely, and if I did not I fhould not beg " it of you, fince I have it my Power to do you harm, "s and fhall not tell you fo again. Take what you will "s out of my Treafures, and go away fatisfied, for my " Gods will not allow of what has been done; and "fince you fee I can do no lefs for their Honour and "s my own, be not concerned." When he hai. uttered thefe Words, before the Interpreter began to fpeak, Cortes turned to a Spaniard, and faid, "Run to our Com" rades, and bid them be in Readinefs, for their Lives " are at Stake." When the Interpreter had done, Cortes roufing his Courage, very fedately anfwered, "6 Ex"s perience had made him fenfible of his Affection, and "that it was not his Fault if he did not continue in his "Company; but, that fince his Gods and his People "s were of that Mind, he fhould confider when he would " have him be gone."

The King was fo well pleafed with his Anfwer, that he faid, "He would not have him go till he thought " fit himfelf, and he would then give him four Loads of " Gold, every Horfeman two, and every Foot-Soldier "one." Cortes replied, "That he could not return to " his own Country without Ships, and fince he had funk " thofe that brought him, it was his Requeft, that he "s would caufe Timber to be felled at Vera Cruz, which "t the Indians called the Coaft of Calcbicoeca, and he "would find Men to build them." Motezuma approved, and ordered Timber to be felled. Cortes appointed Workmen to do what Martin Lopez fhould direct them, and Motezuma believed it. Cortes acquainted his Men with Motezuma's Will, encouraged them, and faid, "That God, whofe Caufe they liad in hand, would in "s the mean Time, while the Ships were building, fo "difpofe their Affairs, that they fhould not lofe that "good Country." He directed Martin Lopez to make fhew of carrying on the Work with Diligence, but to retard it as much as might be, and fend him Advice of every thing that happened.

There were various Motives induced Motezuma to take this Refolution, which might, in fome Refpects, be thought not fo agreeable to his Temper and Conftitution, that was, as various Inftances we have given plainly fhew, rather timorous than enterprizing. But after all, the great and true Spring of this fudden and furprizing Refolution, was his confidering that if things went on in their prefent Channel, one or other of thefe Events muft neceffarily follow, viz. that either the Spaniards would abfolutely acquire the Poffeffion of his Dominions, by the Confent of his Subjects, or elfe the Inhabitants of the Mexican Empire, to preferve their ancient Government and Religion, would elect a new Emperor, under whofe Conduct they might drive them out by Force; and in either Cafe he looked upon himfelf as undone. It was for this Reafon that he determined to comply with all the Demands that Cortes had made, that he might have no Pretence for taying longer ; and that he might likewife furnifh his Priefts with an Opportunity of telling the People, that their Emperor having now fulfilled the Will of the Gods in every Refpect, had thereby regained their Favour, fo that now they might depend upon the Affiftance of Heaven, in expelling the Strangers.

On the other hand, the great Defign of Cortes was to gain Time, in Hopes that he fhould receive the King's Commiffion, and a great Reinforcement from Spain, which might enable him to act with Vigour, and fecure that extenfive Empire to his Catholic Majefty; and of this he had the greater Hopes, becaufe he had now brought his Men to have an abfolute Confidence in him; and they no longer thought there was any thing impof-
fible to be done that Cortes thought practicable. But alas! all thefe fine Notions were but Dreams, and this great Commander found, to his Coft, that a Civil War amongtt the Spaniards muft firft be gone through, before
all the Pains he had taken, and all the Arts he had practifed, would open a Paffage, for compleating what he apprehended was at hand, the entire Conqueft of the Empire of Mexico.

## S E C T I O N XII.

## The Hifory of Cortes's Expedition continued to the Death of Motezuma, and the Spaniards being forced to abandon the City of Mexico.

1. The firt Intelligence of a confiderable Squadron and a neve Army of Spaniards, landing in the Dominions of Motezuma, communicated by bim to Cortes, and the Conjequences of that furprizing Piece of Intelligence. 2. The Rije and Occafion of this fecond Expedition formed by James Velafquez for the Defruction of Cortes, and the gaining to bimflelf the Province of New Spain. 3. The Pains taken by the Royal Audience at Santo Domingo, to prevent Velafquez from executing fo rafb a Defign, and fo prejudicial to the public Service. 4. The Fleit fails under the Command of Pamphilo de Narvaez, arrives at Vera Cruz, and the bold Stand made in that Fortrefs by Sandoval in favour of Cortes. 5. The Meafures taken by that great Commander for fecuring Mexico, and for marching with the reft of bis Forces againf Narvaez: 6. Fe executes this Defign, and endeavours to come to Terms of Accommodation with the otber Army ${ }_{3}$ wobich are abfolutely rejected. 7. He attacks Narvaez in the Night, and after a hoort Dippute defeats bis, Forcesentirely, and takes bim Prifoner. 8. The Confequences of tbis Victory, and the wife Meafures takern. by Cortes to improve it, till.be is informed of the Troubles at Mexico. 9. A Jiort Account of the Occafion of this Sedition at Mexico, and of the Methods taken by Peter Alverado to quell it, and to reduce the Indians to their Duty. Io. The Arrival of Cortes, and the feveral Engagements that afterwards hap= pened between bis Troops and the People of Mexico, wwo notwitbjanding bis Arrival perfifted in carrying on the War. II. Motezuma endeavours to pacify bis Subjects, and webile be is Jpeaking to them receives a Wound on the Temples by a Stone, of which be dies. I2. The Conduct of Cortes after thisunfortunate Accident, and the Pains be took to reconcile bimfelf to the Indians, though to no Purpofe. 13. The Reafons wobich induced bim to refolve upon quitting Mexico, and to make the bef Retreat from thence be could. 14. The mamer in wobich be executed this Retreat, and the many Difficulties and Dangers with wbich it weas attended. 15. Objervations and Remarks upon the principal Occurrences mentioned in this Section.

.THE Satisfaction that the Emperor received from the Hopes he entertained of being fhortly rid of the Spaniards, and the Expectations of Cortes, that he fhould be for fome time quiet, from the Meafures he had taken, were entirely deftroyed by a very unforefeen Accident, equally inconfiffent with both their Intentions. In fhort, Motezuma had Intelligence brought him that eighteen Sail of Ships were feen off the Coaft of Ulua; and his Officers, who commanded in that Part of the Country, had fent the Figures of all thefe Ships painted upon Cloths, which ferved inftead of Letters, with a Defrription of the People they had feen in them; and fome Characters, which fignified what they fufpected of their Intentions, being Spaniards in Appearance, and arriving at a time when he treated of difpatching thofe who were already at his Court. Whatever Impreffion thefe Reprefentations had on the Mind of Motezuma, the Refult was, that he immediately fent for Cortes, laid the Picture before him ; and told him, "That now the "Provifion he was making for his Journey was unne"ceffary, fince fome Ships of his Nation were arrived

Cortes viewed the Painting with Attention rather than Surprize ; and though he did not underftand the Characters, which defcribed them, he knew enough by the Habit of the People and the Mark of the Veffels, not to doubt their being Spaniords: The firtt Motion of his Heart inclined him to Joy, fince he believed that his Commiffaries were arrived, and flattered himfelf that they had brought him very confiderable Supplies, in fuch a Number of Veffels. The Imagination is eafily carried away to that which one defires; and he could not fuppofe, at that time, that fo powerful an Armada was defigned againft him, for he formed his Judgment by his own fincere and noble Manner of acting, and the Well-intentioned are with Difficulty brought to believe that which is againft Juftice and Reafon.
His Anfwer to Motezuma was, "That he would de"part immediately if thefe Ships were bound back for "a any of the King of Spain's Dominions." And, without being furprized that the Emperor fhould have the
firt News of thefe Particulars', becaufe he was nơ Stranger to the indefatigable Diligence of his Couriers; he added, "That it would not be long before he fhould " have an Account of this Accident from the Spaniards " who were at Zempooalla, and that then he fhould know " with Certainty whither thofe Ships were bound, and " the Defigns of their Owners, and whether it would be " neceffary to proceed in the building of thofe Veffels." Motezuma approved this Anfwer, being well pleafed with his Readinefs. But in a fhort time; a Letter came from Vera Cruz, in which Gonfalo de Sandoval fent Cortes Word, "That thofe Ships belonged to $\mathcal{F}$ ames Velafquez; " and brought eight hundred Spaniards to oppofe and "deprive him of his Conqueft." This unexpected Stroke he received in the Prefence of Motezuma, and ftood in Need of all his Courage and Refolution to conceal his Perturbation of Mind; for he found himfelf ini Danger from the very Quarter from whence he expected Succour.
In order to underftand however this Point of Face clearly, and to judge perfectly of the Danger in which Cortes ftood from his Countrymen, it will be requifite to caft our Eyes over to Cuba, and confider what paffed there after the Departure of the Fleet under the Command of this great Man.
2. James Velafquez was at firft equally angry and uneafy at the Step which Cortes had taken; but after he had received Advice from his Agent in Spain, that he had obtained for him the Title of the King's Lieutenant, not only in Cuba, but alfo in all the Countries which fhould be difcovered by him; or by his Means; he became poffeffed with a kind of Fury, and conceiving this Difrefpect to him, even before he became the King's Lieutenant, to be a kind of Treafon, he refolved to punifh it as fuch, and to exert the whole Strength of the Colony for that Purpofe.
What contributed to heighten his Choler extremely, was the Subftance of certain Letters he received from his Agent, in which he was told, that the Bihop of Burgos, Prefident of the Indies, was his beft Friend ; but that the KKing was highly pleafed with the Conduct of Cortes;
and that all Spain rung of the great Things he had pet formed, and the mighty Difcoveries he had made. The Applaufe given to Cortes made him impatient and outrageous, and notwithftanding he was not-forry to fee the Conqueft fo far advanced, yet he could not bear that another fhould receive the Thanks which, in his Opinion, were due to him alone, fo vain was he, in the little Share he had in the firft Difpofition of that Enterprize, that without any other Foundation he took to himfelf the Name of Conqueror. Upon thofe Motives he immediately prepared to form a Fleet and Army for the Deftruction of Cortes, and all who had followed his Fortune. He bought Ships, lifted Soldiers, and went in Perfon over the whole Inand, vifiting the Spaniards, and encouraging them to the Undertaking.

He fhared with them before-hand the immenfe Riches of that Conqueft, which he faid was ufurped by ill advifed Rebels, who had bafely made their Efcapes from Cuba by flight. With thofe Hopes, and fome Expence, he got together a Body of Men, which in thofe Parts of the World might be termed a formidable Army. It confifted of eight hundred Spanifb Foot, eighty Horfe, and ten or twelve Pieces of Artillery, with abundance of Provifions, Arms and Ammunition. He appointed for chief Commander of that Expedition Pampbilo de Narvaez, a Mian of Capacity, and of the firft Diftinction in that Inand, but highly opinionated, and obftinately pofitive in his Refolutions.

He gave him the Title of his Lieutenant, naming himfelf Governor of Nere Spain. He gave him likewife fecret Inftructions, in. which he ordered him, "That he ©s fhould endeavour to the utmoft of his Power to take "Cortes, and fend him Prifoner under a ftrong Guard,
" that he might receive from his Hands the Punifhment as he had deferved; that he fhould do the fame by the ©s chief Officers who followed him, in cafe they refufed "s to abandon his Intereft, and that he fhould take Pof* feffion in his Name of all that had been conquered, s and adjudge it to be all within his Diftrict, as the
"s King's Lieutenant." He never fo much as confidered that it was poffible his Defign might not fucceed, or that the new Officer he fent might not have it in his Power to treat the old one in the Manner he directed.
3. But while he was thus employed in taking Meafures to gratify his private Refentment, under Colour of promoting the public Service, fome wifer People in the Indies were much better employed; for the Royal Audience at St. Domingo, as foon as they were informed of thefe Preparations, forefeeing the Inconveniencies that might refult from fo public a Competition, fent the Licenciate Welafquez de Ayllon, Auditor of the fame Audience, to endeavour to bring Velafquez to reafon; and if he found gentle Means infufficient, to acquaint him with the Orders he carried; commanding him upon great Penalties to difarm his People and unrig his Fleet, and not difturb or give any Impediment to the Conqueft, in which Hernan Cortes was employed, under the Colour of its belonging to him ; and in cafe he had any Complaint againft Cortes, or any Claim of Right to the Country he was then gaining, to appear before the Royal Tribunal, where he fhould be fure of Juftice in a regular way.

The Licenciate, according to his Inftructions, did all he could to reduce Velafquez to reafon, making ufe of what Arguments he thought moft proper to perfuade him to defift from his Enterprize; and feeing him incapable of Advice, he fhewed his Orders, and caufed them to be notified by an Efcrivano he had brought with him for that Purpofe, accompanying them with Requeits and Proteftations. But nothing was fufficient to ftop his Refolution, for the Title of the King's Lieutenant had fo raifed him, in his own Conceit, that it feemed he would acknowledge no Superior in his Government, and obftinately perfifted in his untractable Humour.

The Licenciate feeing that he endeavoured to haften the Embarkation of his People, feigned a Defire of beholding this Land, fo much applauded and cried up, and under the Pretext of Curiofity offered to accompany them, to which Propofal Velafquez agreed, that the News of his Infolence might come later to the Ine of Santo Do
mingo. Whereupon he embarked with general Approbation. Andres de Duero, that Secretary of Velajquez, who favoured Cortes fo much, in the beginning of his Fortune, likewife, made one in this Expedition; fome fay, he offered himfelf for this Voyage, purely to thare fome of the Wealth Cortes had acquired, by putting him in Mind of the Services he had formerly done him; and others fay, it was to pacify Narvaer, and prevent as much as he could the Ruin of his Friend.
4. The Fleet fet fail, and, having a favoursble Wind, in a few Days got Sight of the defired Land. They came to an Anchor in the Port of Ulua, and Pampbilo de Navaez, fent fome Soldiers afhore to get Intelligence, and make what Difcoveries they could in the neighbouring Villages. Thefe were not long before they furprized two or three Spaniards who were ftraggling about that Place. They brought them before the Commander, and the Men either tearful, or inclinable to Novelty, informed him of all that had paffed in Mexico and Verc Cruz, endeavouring to flatter him, by difcrediting of Cortes: Upon this Intelligence the firft thing he refolved on, was, to treat with Gonfalo de Sandoval about the Surrender of the Fortrefs under his Command, and to engage him either to maintain it for him or to difmantle it, and with his Garrifon to join the Army.

He intrufted this Negotiation with a Clergyman, named Fuan de Guevara, a Man of a lefs gentle Temper than his Profeffion required. There went with him three Soldiers, who ferved as Witneffes, and a public Notary. Gonfalo de Sandoval had his Sentinels in proper Places, to obferve the Motions of the Fleet ; and they gave Advice from one to another, by which Means he had an account of their Approach a good while before they arrived, and being affured that there was no greater Number to follow, he ordered the Gates to be opened, and retired, to wait their coming.

The Prieft after the firft Civilities were over, gave him an Account of the Forces with Narvaez, who were come to take Satisfaction for the Injury which Cortes had done Velafquez, by withdrawing from his Obedience, the Conqueft of that whole Country being intirely his Property, as having been begun by his Order, and at his Expence. Sandoval anfwered him with fome Warmth, which he could not well conceal, "That Pampbilo de "Narvaez was his Friend, and fo loyal a Subject, that " he would certainly defire nothing but what fhould " be convenient for his Majefty's Service. That the " prefent Juncture of Affairs required that he fhould " join his Forces with thofe of Cortes, and affift him to " perfect that which was in fuch Forwardnefs, for that " " the Quarrels of private Perfons were not, at the King's " Expence, to be decided by a Civil War: But that if " Narvaez, preferring private Revenge to public Intereft, " defigned any Violence againft Cortes, he might be af"f fured not only himfelf, but all the Garrifon, would ra" ther chufe to die, than to agree to fo difhonourable an "Action."

The Prieft received this Repulfe as an unexpected Stroke, and broke out into injurious Language and Threats againft Cortes, calling him Traitor, and went fo far as to fay, that Sandoval, and all who efpoufed that Traitor's Intereft, deferved no better Title. They all endeavoured to bring him to reafon, putting him in mind of his Profeffion, that he might be fenfible of the Confideration upon which they bore with him : But he, raifing his Voice without changing his Stile, commanded the Notary he had brought with him to publifh the Orders he had, " That all might know that they were to "pay Obedience to Narvaez on Pain of Death." But this was what could not be put in Execution, for Gonfalo de Sandoval told him roundly, "That he would order " him immediately to be hanged, if he prefumed to " publifh any Orders which did not come from the " King.,"

At laft Things rofe to fuch a Height, that, to prevent a Mutiny, Sandoval found it requifite to make thefe Pcople Prifoners ; and upon mature Confideration, he likewife thought proper to fend them Prifoners to Mexico, being carried by Indians in Chairs, or a kind of Litters,
thas
that are ufed in that Country, under a fmall Guard, commanded by Pedro de Solis, of whom he had a very good Opinion, and who behaved in this Affair admirably well.
5. In the mean time Cortes was extremely at a lofs how to behave in this Conjuncture. He had many things to do, and many Points to carry; ftood expoled to a Multitude of Croffes, and had little or nothing in his Favour ; yet his Behaviour was perfectly fober and difcreet. He told Motezuma, that his King had fent a confiderable Army to profecute his Rights to his Country; but, as he had already received his Homage, he would go to his Countrymen, perfuade them to return, and go back with them himfelf. He gave his Soldiers to underftand, that, notwithitanding Narvaez was fent, with the whole Force of the Inand of Cuba, for his Deftruction; ; yet he did not doubt he fhould be able to bring him, or at leaft his Soldiers, to join with them; and, in that Cafe, he made no fort of Queftion of their being ftrong enough to make a total Conqueft of the Empire of Mexico. To his Officers he was very fincere, and found in them the moft perfect Obedience.

In the mean time, Solis arrived with the Prifoners, fent by Sandoval; but Cortes, who had been before informed of their coming, went out to receive them with more than ordinary Attendance. He immediately ordered their Fetters to be taken off, embraced them with great Fiumanity, and Guevara more than once, with particular Civility, telling him, "That he would chaftife Sandoval " for the little Regard he had fhewn to his Perfon and "Dignity." He afterwards conducted him to his own Apartment, gave him his Table, and, with a feeming Satisfaction, intimated, "How much he efteemed the "Happinefs of having Narvacz in that Country, on "s account of the paft Friendhip and Intimacy that had "s been between them." He took care that the chief Spaniards thould all appear chearful before him. He made them Witnefles of the Favours he received from Motezuma, and the great Refpeet with which he was treated by the Mexican Princes. He prefented them with fome Jewels of Value, which greatly mollified their Tempers.

He did the fame by their Companions; yet without letting them know he ftood in need of their good Offices to induce Narvaez to Peace. He difpatched them in four Days, fully perfuaded by his Reafons, and engaged by his Liberality. After he had taken thefe Meafures, he refolved to fend fome Perfon of Account to make fuch Propofals to Narvaez as were reafonable. He chofe Friar Bartbolomere de Olnzedo, a Perfon of known Wifdom and Eloquence. He haftened his Difpatches, and gave him Letters for Narvaez, for the Licenciate, and for the Secretary Duero, with feveral Jewels to diftribute as he fhould think proper.

It is eafy to apprehend, from the Account that has been already given, that, in the whole Progrefs of this Expedition, this great Commander had never met with fo much Trouble and Perplexity, or apprehended himfelf in fo great Danger as in this Conjuncture, when, with all the Forces of the Mexicon Empire, he had likewife a fuperior Army of Spaniards to deal with, and thofe no lefs inclined to deftroy him than his foreign Enemy. Motezuma faw his Trouble, notwithftanding he took all the Pains he could to hide it; and, in a Converfation he had with him upon the Subject, told him plainly, That he perceived either he, or the new Spanifb Commander, muft be a Rebel; which mortified Cortes extremely. But he remained firm, notwithitanding, in his firf Refolution, which was to march in Perfon againft Narvaez, and to leave a fufficient Body of Spaniards behind him in Mexico to fecure the Perfon of Motezuma, and preferve the City under their Obedience. The Number of Men that were to be employed for this Purpofe was no more than fourfcore; but they were picked and chofen Men, to whom he affigned for their Commander, Capt. Peter Alverado, a Man of Fidelity and Refolution, ex. tremely beloved by the spaniards, and very highly efteemed by Motezuma. He fent Orders likewife to Sandoval to quit the Fortrefs of Vera Cruz, and to leave it to the confederate Indians, that he might he able to march againft Narvaez with the greateft Force he could draw together.

Vol. II. NuMe. 76.

He gave Directions alfo for raifing connderable Bodies of well-affected Indians; but he abiolutely refufed to accept of the Succours which Notezuma offered him, that he might not put either himfelf, or the Spaniards under the Command of his Rival, into the Power of thofe who were naturally Enemies to both. Thefe were vaft, and indeed almoft incredible, things to be performed in fo fhort a fpace of time; and yet fuch was his Diligence, fuch was his Dexterity, that they were performed, and every thing was ready for his Departure againft the Day be had appointed. But what was ftill itranger, and more extraordinary, he not only found his Soldiers perfectly well inclined to his Service, but all his Indien Confederates as chearful and hearty in his Intereft as he could either wifh or defire; fo that, difficult as his Enterpiize was, he entered upon it with a fair Profpect of Succefs.
6. Cortes, being refolved to lofe no time in marching againft Narvaez, thought fit to acouaint Motezuma, and received a fuitable Anfwer from that Monarch, who, at his Departure, bore him Company as far as the Caufway of Papalapan, where he took his Leave very kindly. Many Mexicans went with him; fome returned becaufe he defired them fo to do; and others becaufe they grew weary. Thofe that followed went to bring the King word of every thing that happened, as they hourly did. He was very well received at Cbuiula, where the Men were refrefhed; and, half a League from thence, he met a great Number of Tlafcalans coming to compliment him. The Cbinontlans had Pikes, and Cortes ordered all the Men to wear Efcaupiles, or Armour made of Cotton. Sandoval likewife came to the Place affigned him, where, upon a Mufter, there were found two hundred and fixtyfix Men, including the Commanders, five Horfemen, and the Friar.
Cortes's Friends that were with Narvaez, being informed that he drew near, advifed to fend Andrew Duero, who had an Influence over Cortes, to propofe an Accommodation. Duero went, and difcourfed Cortes in private, and the Refult was, that they treated one another like Friends. When Duero was gone, Cortes ordered Jobn Velafquez, who was a Relation to Narvaez, to go to his Camp, and take with him his Gold Chains, and all he had, befides much he gave him. Velafquez excufed himfelf; but Cortes would have him go, offered him his own grey Mare, and, having difcourfed him in private, and given him fome Jewels, he departed. $V_{e^{-}}$ lafquez, arriving at Zempoalla, alighted at the Cazique's Houfe, and from thence went to Narvaez's Quarters, who, being informed that he was come, was going out to feek him, and, having received him very lovingly, faid, He fhould be his Gueft. He anfwered, He muft return immediately; for that he only came to kifs his Hands, and to try whether any Accommodation could be made. Narvaez flew into a great Paffion, and faid, He wondered he fhould chufe to reconcile him to a Traitor, who had revolted from his Coufin James Velafquez. Fobn Velafquez was much offended at it, and faid, That fuch Words were not to be fpoken in his Prefence of Cortes, who was a very worthy Gentleman. Capt. Salvatierra, and other Officers, thinking that Velafquez took too much Liberty, advifed Narvaez to fecure him; but Augufin Bermuder, who was Chief Alguazil, Andrere de Duero, and Fobn de Leon, oppofed it, and perfuaded Narvaez to make much of him, who did fo, and defired him to perfuade Cortes to furrender himfelf, and put an end to all Controverfies. Narvazz would have $V$ Velafquez fee his Army, which paffed in review before him, and fo they went to dinner. Immediately after Velafquez took his leave, thinking he had done what he came for, which was to fee the Forces, fpeak to fome particular Perfons, and render Narvaez fecure. The Friends of that Commander were become abfolutely tired of the Company of Velafquez, and were therefore -glad to be rid of him, fo that they prevailed upon his Friend not to importune him to ftay; and indeed Narvaez himfelf was, by this time, of their Opinion.

After his Departure they held a Council of War; in which the Friends of Narvaez reprefented to him the Danger he was in from the Money that Cortes had taken care to diftribute among his Soldiers; and, while they were difcourfing on this Subject, the Cazique of Zem-
poalla came, and afked him what he was about; adding, That, when he leaft expected it, Cortes would be there and kill him; for that he had fo many Spies that he knew every thing that was done. Tho' they made a Jeft of him, the War againft Cortes was proclaimed to be carried on with Fire and Sword, and all Plunder to belong to the Taker. Narvaez marched out, with his Forces and Artillery, about a Quarter of a League from Zempoalla, intending to wait for Cortes there; but, it happening to rain all that Day, and thofe Men not being inured to Hardfhips, they murmured, faying, It was proper to return to their Quarters. Thofe who were acquainted with Cortes's Valour thought otherwife; and infifted that it was ill Advice to go back. Andrew Duero gave Cortes Notice of all thofe Particulars, by a Soldier who deferted.

Narvaez retiring, upon the Confidence that Cortes durft not attack him, ordered Soldiers to be pofted on the River he was to pafs, forty Horfemen to ftay all Night on the Road to Zempoalla, Twenty more to be in the Courts of his Quarters, and the Artillery, confifting of eighteen fmall Guns, to be planted before the Doors: And thus he thought himfelf fecure. He then proclaimed he would give two thoufand Pieces of Eight to any Man that fhould kill Cortes. Sandoval had ordered a confiderable Number of Mufketeers, Crofs-bowmen, and other Soldiers, with Partifans, to lye in his Apartment; and the Captains Salvatierra, Gommera, and others of his Confidants with them.

Cortes, coming to the River of Canoes, found much Difficulty in paffing it, becaufe there was a great Flood, and two Soldiers were drowned feeking for the Ford. As foon as they got over they heard firing of Mufkets in Narvaez's Army, which much frighted the Indians; who fent Motezuma an Account of all, magnifying his Power, and looking upon Cortes as a loft Man, which was no fmall Satisfaction to the Mexicans. Cortes, in that Place, drew his Men together; and, in a long Speech, acquainted them with all the ill Practices of Narvaez, extolled their Valour, and told them, they were then to fight for their Lives, for their Honour, and for their Eftates; the Defign of their Enemies being to make them Prifoners, and feize all they had. Fobn Velafquez, Fames de Ordaz, and other Commanders, anfwered, He might be affured they would either conquer or die, and flould take heed not to be enfnared by any fallacious Terms. Cortes was over-joyed to find his Men in this Difpofition, and defired them to keep their Order exactly, for many great Misfortunes happened for want of it; and it was very remarkable that he never gave them the leaft Intimation of the Intelligence he held in the Enemy's Army, that his Soldiers might believe that his whole Dependance was upon their Valour. He further faid, He defigned to attack the Enemy at Midnight, or before break of Day, which was the beft Method for a few to deal with a great Number. Alonfo Davila anfwered, That they did not defire to live without him, fo that he might go when he pleafed, and do as he thought fit, for they would be fatisfied to die with him at all Times.

As foon as Narvaez heard where Cortes was, he fent Gonfalo Carrafco, a bold Man, and his Servant Hurtado, to approach as near Cortes's Forces as he could, and bring him Advice of his Motions. Cortes's Forerunners met with Carrafco, and took him; who fpoke aloud that Hurtado might make his Efcape; and fo he did. Hurtado came among Narvaez's Forces, 'ran thro' their Quarters crying, Arm, arm! telling them, That Cortes was at hand, and Carrafco taken; but could give no Account of the Men or their Number. Some faid Cortes could not come in fuch a dark, rainy Night, and Narvaez bid Hurtado go to fleep, for he had certainly fancied it. Cortes, to juftify his Proceedings, gave Sandoval, who was his chief Alguazil, a Warrant to fecure Narvaez for raifing Commotions in the Country; and, in cafe he refifted, to kill him, requiring all his Officers and Soldiers to be affifting. Then he divided his Men into three Parties; the Firft under Sandoval, which was of fixty Men; the Second under Cbriftopber Olid, a good Soldier, and a Man of extraordinary Strength. Cortes himfelf took the Third. They had, among them all,
feventy Pikes made of Oak, with the Spears beforementioned, being thirty-eight Spans in Length. The Word was The Holy. Ghoft. He appointed Sandoval's Pikes to attack Narvaez's Quarters, and the reft the Cazique's Houfe, where he was kept under a Guard that he might not run away; and fifty Men to fall upon the Alcalde Fobn Fufte; and Olid was to attack Narvaez's Artillery, and he to fupport them.

The three Bodies advanced within a Stone's-throw of one another. Cortes halting, intreated Carrafco to tell him the Difpofition of Narvaez's Forces, threatning to hang him if he lyed; and he, refufing, was fo near being hanged, that his Throat was fore for fome Days: And one of the Horfemen faved him. Being come to a Place where the Road divided itfelf into two, they prayed, put on their Efcaupiles, or Cotton Armour, and marched towards the Town in good Order, obferving ftrict Silence. Fobn Velafquez, then feeing a Light on high, told Cortes that was Narvaez's Quarters, and he anfwered, I am glad that the Light guides us. He commanded Sandorval to move directly to Narvaez, which was a good Choice, for he was a daring Commander, and the other Parties to guard his Flanks. Sandoval charged Canillas not to beat his Drum till he ordered him, and kept him before him. When they were clofe by Narvaez's Quarters, Cortes, who was giving Directions, faid to Sandoval's Party, Gentlemen, ftick clofe to the Houfes on both Sides of the Streets, that the Cannon-balls may pafs along without doing any execution. All this could not be done fo filently but that there was Notice given of it. Narvaez, who was putting on a Breaft-plate, faid to him that brought the Advice, Be not uneafy, and ordered to beat the Alarm; but none came in from the other Towers, where the reft of his Men were quartered, for they could not come, being hindered by Cortes's Men. When Sandoval came to Narvaez's Quarters, the firf Sentinels, who ftood at the Foot of the Stairs of the Court, cryed out. Sandoval, feeing he was difcovered, ordered Canillas to beat his Drum. Cortes cryed, Fall on, fall on! Holy Gboft, Holy Gboof! Advance.
Sandoval going up the firf Stairs, with his Men following, found in the firft Court a Room full of Blacks; one of them came out with a Light in his Hand, and was killed with the Pikes. They paffed on towards Narvaez's Apartment, and going up four Steps faw the Artillery planted. One Gun was fired, which killed. two of Cortes's Men; but the reft preffed on fo faft that the other Pieces could not be fired. Cortes caufed the Artillery to be thrown down the Steps, and went up five more to get into the Room where Narvaez was with about forty Soldiers. Sandoval, who was already come up with Narvaez; required him to yield, but he made a Jeft of it, and ftood upon his defence till Martin Lopez, one of Cortes's Men, fet fire to the Thatch that was on the Tower, and the Smoke drove Narvaez and his Men out of the Place, and then he was run into the Eye with a Pike. Fames de Rojas, Enfign to Narvaez, fought bravely in Defence of his Colours, till two Pikes were thruft into him, when falling he cried out, Lady help me! and Cortes anfwered, She fhall fave you, not permitting him to be killed.

When Narvaez was wounded, Peter Sanchez came up and clofed with him, and then Sandoval faid, Yield yourfelf Prifoner, fo they dragged him down the Steps till Fetters were put upon him, and carried him to Cortes; to whom he faid: My Lord Cortes, value your good Fortune in making me Prifoner this Day. He anfwered, That the leaft Action he had performed in that Country was the taking of him ; and therefore ordered he fhould be well fecured. He was not dreffed that Night, by reafon of the Confufion all Men were in, but the next Day was fent to Villa Rica. Narvaez being taken, and his Men making no further Oppofition, Cortes ordered himfelf to be proclaimed Captain-General, and Chief Juftice of both Armies, in the King's Name; commanding all Men to come in and take an Oath to him as fuch, upon pain of Death.

They all did fo, fome voluntarily, others becaufe they did not know how to avoid it, except three hundred Soldiers, who fortified themfelves in their Quarters; to whom

Carrajeo

Carrafco now releafed faid, It was a fit time to fall upon Cortes's Men, becaufe thofe who had taken an Oath to him were difarmed, and his own Soldiers difperfed, plundering. Tho' the Advice was not difiliked, thofe Men having no Head, and many afpiring to be fo, they ftaid till it was Day; when Cbriflopber de Olid came to offer them a good Reception, from Cortes. Moft of them cried, God blefs the King and James Velafquez. When the Shout was over, Olid told them, they would be compelled by Force to what they refufed to do voluntarily. Whiltt he went to acquaint Cortes, Carrafco advifed them to fall upon Cortes's Baggage, and they fhould be all rich; and might then embark, and carry James Velafquez Treafure enough to fit out another Fleet. Though they liked the Propofal they could not agree, fo that Carr afso went alone, and finding no Guard but Marina and Fobn de Oreoga, Page to Cortes, he took a Horfe and a Spear, returned to thofe Men who were ftill together, and fhewed them what an Opportunity they had loft. Cortes then ordered his Artillery to advance againft thofe that would not fubmit, and commanded the Gunner to fire one Piece in the Air: He did fo. Olid fpoke to them again, and they again anfwered, God blefs the King and James Velafquez. One Gun being then fired upon them killed two Men, and the next one. Whereupon fome of them went over to Cortes, and the reft held out till wanting Ammunition they furrendered.

All had taken the Oath to Cortes except Carrafco, and he appearing on the Horfe he had ftolen, Cortes faid to him : Friend, that Horfe is mine; alight. He faid he would not unlefs his own was reftored. Cortes replied, he fhould quit him immediately, and Orders fhould be given for returning his. As to the Oath, he refufed it; for which he had a Clog fartened to one of his Feet, which continued three Days, and then he took the Oath. He was not hanged, to avoid exafperating thofe People.
8. When all had been fworn, he muftered his own Men, to fee how many here miffing; and Narvaez's Party feeing they were only two hundred and fixty without the great Army of the Tlafcalans, that had been reported, and that they had but thofe few Pikes without Armour or Horfes, and fome Coats of Mail, Spears, and Crofsbows, and their Swords in bad Condition, they were much afhamed, that they, with their little Pannels, as they called the Cotton Armour, fhould have defeated fo many Men of Note, and, blufhing, curfed Narvaez for his ill Conduct ; which much troubled Cortes, till by Degrees he gained their Affections: Two only of his Men were killed and one wounded; and eleven of Narvacz's Party flain.

Then came the Cazique of Zempoalla with his Indians, bringing Garlands of Rofes, and fetting them on the Heads of Cortes and the other Commanders, congratulated their Victory, and defired them to go to his. Houfe ; and in return Cortes gave him fome Spanifb Baubles; and having ordered all that had happened to be painted, Norvaez taken and putinto Irons, his Men fubmitting, and Cortes victorious, the Cazique fent it to Motezuma by the Advice of Cortes, who alfo fent a Spaniard to inform Alverado. When firt Cortes came to Zempoalla, the Lord prefented him with a beautiful Woman of Quality, who took the Name of Catherina, and now he took up his Quarters in the Woman's Houre, becaufe it was ftrong. She treated him very kindly; but he was uneafy in his Mind, feeing thofe conquered People, indifpofed. Whilft he was thinking how to get over this Difficulty, Capt. Bariantos came to him with the Cbinentlons well armed after their Manner, which was a great Satisfaction to him, that Narvaez's Men might fee how he was obeyed in New Spain.

He refolved to fend thofe Indians back, and to divide the Speniards; and accordingly ordered James Ordaz to march with Three hundred Men to fubdue the Province Guacacoaico, and Fobn. Velafquez with another Detachment to the River of Garray; thus to employ them, and fecure himielf, which at the fame time was acceptable to them. Cortes next commanded Peter de Malvenda, Steward to Velafquez, to pick up what belonged to his Mafter and Narvacz, and fecure it. A Black belonging to Acaraez, having the Small-Pox, infected the whole Town
of Zempoalla, and the Indians frequently wafhing themfelves, Numbers of them died, and lying unburied occafioned a peftilential Diftemper which fpread through all Nere Spein, and there enfued a very great Mortality. Ochers affirm, that this Diftemper was not brought over by the Black, but that they had it at certain Times in the Weg ${ }^{2}$ Irdies, and this feems the more likely, becaufe it affected none of the Spaniards.

Whiltt Cortes was endeavouring to fettle his Affairs at Vera Cruz, wherein he met with fome Difficulty, and Fames Ordaz was gone upon the aforefaid Commifions, the Spaniard he had fent to Mexico with the News of his Victory returned, and faid the Mexicans were in Arms, and fhewed fome Wounds they had given him; faying he had efcaped miraculounly. He preffed Cortes to march to the Relief of Alverado, telling him, that the Indians had burnt the four Brigantines he had built at Mexico, thrown down a Wall at the Spanifs Quarters, which had been repaired with much Difficulty, undermined another, fet Fire to the Ammunition, taken up the Draw-bridges, cut off the Provifions, killed Pena, Motezuma's Favourite ; that the Spaniards had defended themfelves bravely, killing many Indians ; and that, if Motezuma had not fometimes commanded his People to give over the Attacks for fear Alverado might kill him, the Spaniards had been deftroyed. Hereupon he fettled the Government at Villa Rica, leaving Narvaez and his Men Prifoners there; commanded thofe he had fent abroad to halt till further Orders ; made a Speech to the Men, faying, That thofe who were willing to follow him fhould have Arms given them ; and the Occafion being urgent, all unanimounly offered their Service.
9. It now plainly appeared that Cortes was become entirely Mafter of all the Spaniards under his Command, the new obeying as well as the old Soldiers, and fhewing as much Zeal for his Service. He had already given the neceffary Orders for fecuring the Fleet, and for putting a good Garrifon into Vera Cruz; fo that it was more in his Power to execute the Defign he had formed, and which indeed the Circumftances of Affairs required, marching directly to Mexico, and forcing a Paffage through the Rebels, to the Relief of his Countrymen. He directed his Rout accordingly from Zempoolla towards Tlafcala, having with him One thoufand Foot, and One hundred Horfe; but they were foon obliged to take different Roads for the fake of Subfiftence, which, notwithftanding all the Care and Circumfpection Cortes could ufe, they found it fometimes difficult to procure; infomuch that in the Courfe of this Journey, they found themfelves more than once expofed even to the higheft Extremities of Hunger and Thirft, and, which is very ftrange, the new Troops that had fhewn themfelves fo uneafy, and fo impatient, under much lighter and lefs grievous Hardfhips, behaved upon this Occafion with all the Firmnefs and Conftancy that could be defired, either from the great Hopes they had formed to themfelves of being made rich and happy by this Expedition, or becaufe they were defirous of fhewing their new General, that whatever Opinion he might have formed of them from what was paffed, he fhould find them, in every Refpect, as brave, 'as hardy, and as capable of enduring Fatigue as thofe he had trained up himfelf.
In this March, but efpecially at Tlafcale, Cortes found Means to gain a very clear and diftinct Account of the Caufes of that Sedition which had happened in his Abfence, and of which it is neceffary likewife that we fhould fay fomewhat, that the fubfequent Part of this Section may be the more perfectly underftood. A very fhort time after the Departure of Cortes from Mexico, Peter Alverado began to perceive vifible Marks, not only of Coldnefs and Dinike, but of Hatred and Difaffection in the People of Mexico; neither were his Conjectures unfupported by Proof, fince he was quickly informed, that, at the Perfuafion of their Priefts, the Mexicans were providing Arms, and whatever elfe was requifite, in order to attack the Spenifh Troops. He was certainly very much to be commended for being conftantly on his Guard, and neglecting nothing that might contribute to the defeating of their Defign. In this, however, he was much to
blame
blame, that he did not either communicate his Sufpicions, or his Difcoveries to Motezuma, or fo much as confer with him on the prefent Pofture of his Affairs, fince that Monarch teftified great Affection to the Spaniards; and, if applied to in time, might have prevented things from coming to Extremities.

But Alverado, it feems, depended upon his own Forefight, and the Courage of his Soldiers; and underftanding that the Indians were actually preparing, under Colour of a folemn Dance, which was one of the principal Rites of their Religion, to furprize and cut off the Spaniards, he refolved to be beforehand with them, and to put it out of their Power, by fhutting them up in the great Temple where this Dance was to be performed by their pincipal Nobility, in which he fucceeded; but when he had them in his Power, and faw that they were richly adorned with Gold and Jewels, he either commanded, or at leaft permitted, his Soldiers to fall upon them, and cut them to Pieces, and Atrip the dead Bodies of their valuable Ornaments, which afforded the Indians that efcaped, a fair Pretence of carrying on an open and avowed War, which from that time they did, and almoft every Day attacked the Spaniards in their Quarters; which, though they were not able to force, and notwithftanding they killed, but three or four, and loft feveral hundreds, nay, fome thoufands of their own People, yet they continued the War with the greatef Obftinacy, fuppofing, that in Time the Spaniards would expend their Ammunition, and, that fooner or later they fhould deftroy them all. The Spaniards themfelves apprehended this, and therefore preffed Cortes to haften his March, in order to relieve them.
io. He was very fenfible of their Diftrefs, and of the Neceffity of extricating them from it; and therefore, with as little Delay as poffible, he quitted Tlafcala, taking with him fome of the braveft Troops of that Republic, with whom he continued his March towards Mexico; which City, without meeting many Difficulties on the Road, he entered upon the Feaft of St. Jobn, 1520. He met with no Oppofition, for the Indians had quitted a great Part of the City, and had broke down feveral Bridges. However he advanced with great Caution, and at length arrived at the Spanifb Quarters, where he was received with the utmoft Joy by Alverado.

The Spanif/ Writers differ as to his Behaviour towards Motezuina; fome fay that he ufed him kindly, but others exprefly affirm, that he did not fo much as pay him a Vifit, and that he afterwards repented of this, as of one of the greateft Miftakes he ever made. He added, however, another of a different Nature; for, in Hopes of pacifying the Indians, he releafed Motezuma's Brother, who proved his moft dangerous Enemy, and therefore the Indians chofe him for their Captain. He aimed, at firft, at an Accommodation, but he foon found that impracticable, and that Motezuma had entirely loft his Authority, which proved of very ill Confequence to the Spaniards, Cortes fent Antony del Rio to Zempoalla, to give an Account of the Pofture of Affairs, and haften the March of thofe that ftayed behind; and as he was paffing a Horfeback, through Tlatlelulco, which is the MarketPlace, the People howled, and began to purfue him; being thus followed, and feeing a Stop before, he thought it beft to turn back, and breaking through the Crowd with his Horle, Sword in Hand, returned to the Quarters. Cortes then fent five Horfe-men to fee how Matters ftood, who found fome Timber taken of the Bridges, under which the Cuts of Water ran, and turning another Way, found the like in other Streets, many People on the Tops of the Houfes pointing to them to pafs the Bridges.

The next Day Hojeda and Marquez went to feek Provifions, and finding a Bridge broken, and the Waters in the Trench deep, they made a fhift to get over, by chrowing in Rubbilh, pieces of Matts, and other Things; then paffing along a little Street, Marquez heard a great Cry, and returning to his Companion, they agreed to fly, and had it not been for a Tlafcalan they had with them, who was their Guide, there were fo many Windings of Streets, that they had been in great Danger: They met
with an Indian Prieft crying out, and behaving himfelf like a Mad-man; they purfued him, and he ran into an Houfe that was full of tame Cranes, which, when they faw him, began to fet up their Cry, in fuch a Manner, that Hojeda came out in a Confternation; the Citizens flocked together on all Hands, great Cries were heard, and the Tops of the Houfes were full of Men. Six Spaniards that were at the Top of the Temple looking out, gave Notice of the Difturbance, and Hojeda and Marquez, coming in, two hundred Men fallied out of the Quarters, whilft the reft were arming. They fought with a great. Number of Indians, who preffed on furioully, without any Dread of the Swords; the Action lafted till Night, an infinite Number of Mexicans being nain, and not one Spaniard; thus was Cortes convinced that the War was unavoidable, and therefore he endeavoured to fend privately for Salcedo, who had been left benind with the Wardrobe. He ordered Men out to throw down fome Trenches the Indians had caft up, that the Horfes might pafs.

As foon as it was Day, the Shouting, Whiftling, and Fighting, began again, and continued the whole Day, with the Deftruction of many Mexicans; and fome Spaniards were hurt, becaufe the Indions threw Srones from the Tops of Houfes; but the Fire-arms and Crofs-bows drove them. The next Day the Indians affaulted Cortes the third Time, in a moft defperate Manner, killing Carezo an Horfe-man ; and Cortes finding that the greatef Mifchief came from Tops of Houfes, he left the Horfe-men, and with one hundred and forty Mufketeers and Crofsbow Men, entered the Street of Tabuca, gained it entirely, and came to Tabuca, where they might have fortified and fecured themfelves with all their Wealth; but, defpifing the Indians, they returned to their Quarters, and were fet upon, in the Streets, by vaft Numbers of Indians, where the Horfes having no room, were of little Ufe.

They took one Spaniard alive, and facrificed him in Sight of all the reft; they alfo took two Pieces of Cannon, and threw them into the Trenches, fo that the Spaniards, with much Difficulty, returned to their Quarters; and the Indians again cleared thofe Places which the Spaniards had filled up for their Horfes to pafs; the next Day they engaged the fourth Time; the Indians being fo numerous, that it was wonderful to behold; who attacked the Court of the great Temple, where, though it was large, no Ufe could be made of the Horfes, becaufe it was paved with broad Stones; many great Men were on the Top of the Temple, commanding where the Attack fhould be made. Cortes fent Efcobar, his Chamberlain, againft them, with one hundred Men; and by that time they were got up four Steps, there came down upon them, fuch a Shower of Stones, pieces of Timber, Sticks, and Fire-brands, that they were forced to retire: Three times they were repulfed in this Manner. Cortes, being informed of it, tied a Target to his Arm, becaufe he was wounded in the Hand, went to that Place, faid it was a Shame there fhould be any longer Delay in that Affair, advanced foremoft, and was followed by many.

They got up the Steps, and though many Spaniards were knocked down, fell upon the three hundred Gentlemen that were there, and left not fix of them alive, fome being killed with the Sword, and others throwing themfelves headlong from the Parapet of the Temple; two laid hold of Cortes to caft themfelves down with him, but he being a ftrong Man, got loofe. The fame happened to Hojeda, and he would have perifhed in that Manner, had not one near him relieved him. They went up to the Top of the Temple, where they found no Man, but much Cacao and Meat; and the Tlafcilans and Zempoallan Indians had a good Day of it, for they fed upon the Mexicans that were killed. The Mexicans came on again the next Day in a greater Rage, and had new Ways. of fighting, being affifted by the neighbouring Towns. They threw their Javelins clofe by the Ground, $c o$ wound the Feet and Legs, and in this Manner above two hundred Spaniards were hurt, till they provided Armour.

The Arrows flew fo thick, that thofe wino were appointed
to gather them up every Day, burnt forty Cart-Loads of them. Provifion was become fo fcarce, that the Indian Allies had but a little Cake, every Day, each Man, for their Allowance, and every Spaniard fifty Grains of Indian Wheat; nor was there le's Want of Water, fo that they endured much Drought. They dug in their Quarters, and, though the Earth was full of Salt-petre, they found frefh Water, which was wonderful; a Tlascalon looking over fome of their Works, to fee what was doing, the Mexicans cried to him, "You Dog, you and thofe "Chriftian Dogs fhall now perifh with Hunger and "Thirf." He anfwered, "You infamous falfe Scoundrels, "s who know not how to fight, but in Crowds, take that "Calke which I had to fpare this Day, out of my Al" lowance, for you fhall all be deftroyed by degrees."

The next Morning the Battle revived, and the Indians fet Fire to the Houfe; it was put out by throwing down a Wall, and that Breach made good with Cannon, and a Work raifed; and becaufe fome Mifchief was done from a Tower of Motezuma's Houfe, Cortes refolved to make himfelf Mafter of it. He attacked it with two hundred Men, and it was wonderful that long Pieces of Timber being rowled down the Stairs at Length, which might have overthrown ten or twelve Men, they all turned end Ways, and did no harm. He gained the Tower; killed thofe that defended it; advanced into the City; burnt above one thoufand Houfes; gained feven Bridges; killed a prodigious Number; and here a Horfeman came to tell him, that the great Men of Mexico would treat with him of Peace: He was glad of it, fent Alverado and Sandozal, with fixty Horfe, and ordered Fobn Velafquez to ftay there with four hundred Foot, to fecure the Bridges; then he went to the Mexicans, whom he faluted very courteoufly. They afked him why he did not go away as he had promifed, fince he had Ships, and reftore them their Lord Motezuma? Whilft he was in Difcourfe about this Affair, Advice was brought him that the Bridges were loft; he haftened away thither, and found Fobn de Soria, and another Soldier, dead, and five Horfes fallen down; he recovered them, and fought fo refolutely, that his Prefence alone was the faving of many Lives.

II: Cortes returned to his Quarters, with two Contufions on his Knee, made by Stones, where he found the Men in Confufion, believing he had been killed, becaufe he fayed fo long. They rejoiced at the Sight of him; the Battle continued; the Indians broke the Bridges, and fought from the Tops of their Houfes: Cortes feeing one of them very fine, and obeyed by all the reft, fent Ma rina to ank Motezuma, whether he thought they had put the Government into his Hands. He anfwered, that they would not prefume to chufe a King in Mexico, while he was living. He looked at them, and faid they were his Kindred, and that, among them, were the Lords of Tezcuco and Yztopalopa; the Engagement ftill grew warmer; Cortes was in Confufion, and Motezuma in no lefs, apprehending, as is likely, that they would kill him; he bid Marina acquaint the General that he would go up to a Parapet on the Houfe, to fpeak to his Subjects, which might perhaps induce them to come to an Accommodation. Cortes was pleafed with it, he went up with a Guard of two hundred Spaniards, in Royal Apparel, and Marina with them, to know what was faid.

The Noblemen that went up with him made a Sign, and he was prefently known, and raifing his Voice faid, "He fhould be pleafed if they would behave themfelves " gratefully, for the Good he had done them: That he " had been informed they had chofen, another King, ${ }^{6}$ becaufe he was confined, and loved the Chriftians, s* but could not believe they would forfake their natural "Sovereign, for another which God would punifh; "s that if they had fought fo long to fet him at Liberty, "s he thanked them, but they were miftaken, for he was ${ }^{6}$ there by his own Confent; that being his own Houfe, " in order to entertain his Guefts, and therefore he de" fired them to lay down their Arms; fince every Man " they killed, coft them above two thoufand; efpecial${ }^{66}$ ly confidering that they offered Peace, and had not " taken their Goods, ravilhed their Wives or Daughters,

Vol. II. Numb. 76.
"6 and were willing to be gone; that he could go out "from thence whenfoever it pleafed him, having always " had the Liberty fo to do; and therefore, if they loved " him, they fhould give over, and lay afide all Prejudice, which never permitted Men to at indifcreetly. " The Mexicans liftened to him with much Attention: But, as foon as he had done, cried out, "Hold your Peace, "you effeminate Scoundrel, born to weave and fpin; "thofe Dogs keep you a Prifoner, you have no Heart, " you are a Coward." Then they fell on again, cafting abundance of Stones, and fhooting their Arrows, and, though a Spaniard took care to cover Motezuma with a Target, yet, as ill Luck would have it, a Stone hit him on the Temple.
He went down to his Chamber, laid him on his Bed, and was fo much afhamed, and out of Countenance, that, though the Wound was not dangerous, he died in four Days with Grief, forbearing to eat, and refufing to be dreffed. The Fight continued, without Intermiffion, all the while that Motezuma kept his Bed; who, finding his Strength fail him, fent for Cortes in great hafte, and, fitting up, leaning on the Pillows with Tears in his Eyes, taking hold of his Hand, faid, "That he knew not "" where to begin, that he was the fame Motezuma, " whom he had fo pofitively infifted to vifit, whom " the World had fo much refpected, that he knew not " what ill Fate attended him; for he had not ufurped " another's Kingdom, had done Juftice, conquered many "Nations, beftowed many Fayours, and yet thofe, who " before durt not look him in the Face, had infulted "their King, giving him fuch Language as was not fit "for a Slave, and throwing Stones at his Royal Perfon; si that his Heart was ready to burf, and he died in great "Rage, wifhing he could fee thofe Villains punimed; " but it was now too late, and his End was rather oc"cafioned by Vexation, than by the Wound; he there" fore begged, that fince he died for his Sake, he would " take care of his Children, and punifh thofe that had " infulted him, and the Perfon that had ufurped the "Crown." Cortes could not help being moved at thefe Words, and holding him by the Hands, begged that he would not caft himfelf down, for he would perform all his Commands, as if they were the King his Mafter's; adding, that he had been in the Wrong in not fuffering himfelf to be dreffed; that he gave him his Word to take care of his Children, and revenge his Wrongs to the full; thefe and other Words, uttered by Cortes, very much comforted him; but Cortes was forced to take his leave, to go and fee what was doing abroad.

The next Day, being told he was very ill, he came back to fee him, found him in a great Agony, and faid, "That fince he had agreed to be baptized, he fhould " do it then to fave his Soul, for Francis Olmedo was there " ready to do it." He anfwered, "" That having but "' half an Hour longer to live, he would not forfake the "Religion of his Anceftors." And foon after he died, fome of the great Men that were Prifoners with him being prefent, to whom he recommended his Children; and the Revenge he defired to his laft Gafp. He never would fuffer any Cloth or other thing on the Wound, but if any was laid on, he pulled it off, wifing for Death. Four Hours after he was dead, Cortes looked out at the Top of the Houfe, made a Signal for a Ceffation, defiring to fpeak to the Commanders, and told them, " That they ill requited their Sovereign, having killed " him with a Stone; but, that he had died rather of "s Vexation, than of the Wound: That he would deliver " them his Body, to be buried according to their Man" ner; bidding them not contend any longer, for that "God, who was juft, would deftroy that City by his "Hands." They anfwered, "They had a Command" er, and would have no more to do with Motezuma, " dead or alive," with other fuch infolent Expreffions. Cortes turned his Back upon them, and ordered thofe great Men that had attended him to carry out the Body? that they might fee he died by the Blow of the Stone。 As foon as it was out of the Houfe, an Indian richly clad, ran up to him, making ugly Faces, without fpeaking, as if he had afked whofe Body that was, and being

Ef
told
told it was Moitzuma's, he made Signs to have it carried back to the Spaniards, and then ran to his own Party. Thofe that carried him vanifhed on a fudden, and the Spaniards heard no more of him, but fuppofed he had been buried in the Wood of Cbapullepeque, becaufe great Lamentations were heard there.

It is conceived that thefe were the greater, becaufe they intended, by this Ceremony, not only to pay the Funeral Honours due to their deceafed Sovereign, but in fome Meafure, alfo to expiate the Crime of which they had been guilty in taking away his Life; for the new World afforded no Nation fo barbarous, as not to account it a moft infamous Wickednefs, for Men to embrue their Hands in the Blood of thcir lawful Prince. This Motezuma was the fecond of his Name, and the eleventh in the Order of the Mexican Emperors; he was, before his Acceffion to the imperial Dignity, accounted one of the braveft Men, as well as one of the beft Officers in the Territories of Mexico, having fought nine Battles, and obtained in each the Victory; he was dreaded by his own People, , but efteemed and beloved by the Spaniards, for whom he had a fingular and very. extraordinary Affection.

He left feveral Children ; two of his Sons who accompanied him in his Confinement were killed by the Mexicans. When Cortes made his retreat, he had two others, with three Daughters, which Ladies were afterwards converted, and married to Spaniards. But the moft illuftrious of all his Children, was Don Pedro de Motezuma, who was alfo foon after converted to the Catholic Religion, and had that Name given him at his Baptifm : He was next Heir to his Father, his Mother being Princefs of the Province of Tiula, and one of the Queens who refided in the imperial Palace, with Royal Dignity ; which Princefs likewife followed her Son's Example, and was baptized by the Name of Donna Maria de Niagua Sucbil, keeping up in thefe Surnames the Nobility of her Anceftors. His Majefty beftowed many Favours on Don Pedro, giving him an Eftate, and confiderable Rents in New Spain, with the Title of Count de Motezuma, whofe legitimate Succelfion is ftill preferved in the Counts of that Title, with the heroic Remembrance of their royal Original.
12. The Mexicans, as foon as they had finifhed the Funeral of their Emperor Motezuma, refolved to elect a Succeffor, under whofe Command they might carry on the War, againft the Spaniards, with Effect; and, with this View it was, that they elected Quetlavaca, one of their greateft Princes, and the Second Elector in virtue of his Principality. But he dying in a few Days, they made choice, in his room, of Gatimozin, a Man of great Reputation in War, and who feemed the moft capable of anfwering their Purpofe. It was under his Conduct that they attacked the Spaniards again, with greater Fury than ever; but not with greater Succefs, but rather the contrary.

In one of their Engagements, however, they killed a confiderable Sponiard, and wounded feveral others, tho' with great Lofs to themfelves; the Day following, therefore, they defired a Conference, to which Cortes confented, in hopes of coming to fome Accommodation; he went to hear their Propofals from the Wall, and fome of the Nobles drawing near, on the Part of the new Emperor, propofed, "That he and his People fhould preis pare to fet out and direct their March to the Sea-fide, "s affuring him, There fhould be a Ceffation for as ${ }^{6}$ much Time as was neceffary for him to make ready "s for his Departure; adding, that, if he did not de"s termine to come to that Refolution, he might depend s6 upon it that both himfelf, and all who were with him, "fhould perifh: For that they were now convinced that " the Spaniards were not immortal; and that, tho' the "Death of every Spaniard fhould coft them the Lives s of twenty thoufand Men, there would ftill remain a " Multitude to celebrate the conclufive Victory." Cortes anfwered, "That the Spaniara's never pretended to be " 6 immortal, but valued themfelves upon being Men of "Valour, and knew themfelves to be fo far fuperior, in "c every Refpect, to the Mexicans; that, without any
"greater Force than what he then had witis him, he had "Courage enough to undertake the total Deftruction? ${ }^{66}$ not only of their City, but of the whole Empire. But "s that, being moved at the Calamities they had fuffered, " he was determined to depart, fince the Subject of his "Embaffy, and all the Bufinefs he had there, was ar an " End, by the Death of the grat Motezuma, whofe "Friendfhip had detained him at Mexico; and that he "s would put his Defign in execution without the leaft. "Delay, as foon as fome Articles, which were neceffary "for his March, fhould be mutually agreed on." The Deputies gave Signs of being well fatisfied; but thefe Overtures of Peace were made with peridious Views.

This new Emperor had called a Council of his Minifters and Grandees, in which it was refolved, That, to avoid the Damage they received from the Spanifh Arms, the Slaughter of their People, and the Ruin of their City, the beft Method would be, to keep them clofe blocked up, in order to diftrefs them by Famine, and to weaken them, that when they were difpirited and wanted Strength, they might attack them with more Advantage. Having invented this new Way of reducing an Enemy, till then utterly unknown amongft their Stratagems of War, it was refolved to make Overtures of Peace, in order to obtain the Sufpenfion of Arms they defired; flattering themfelves that they might be able to protract the Treaty till the fimall Referve of Provifions, laid up in their Quarters, were confumed; to which Purpofe all pofible Care fhould be taken to hinder: the Befieged from Relief; to block up, with Works, and Bodies of Men pofted at a proper Diftance, all the Ways by which they might attempt to make their Efcape, and to break down the Bridge at the Entrance of the Caufway which led to the Road of Vera Cruz; thinking it no longer convenient to fuffer them to depart the City, left at this Juncture, when the Provinces were ill fatisfied with the prefent Government, they might excite the Malcontents to a Rebellion, or reinforce themfelves by an Army of Tlafcalans. Some of the Affembly called to mind feveral Perfons of great Diftinction Prifoners in the Spanifh Quarters; reflecting upon what they muft fuffer, fince of neceffity they muft perifh with Hunger before the Calamity could affect the Enemy. But they were all fo zealous for the public Caufe that they unanimoully voted, that thofe Prifoners would be happy, and difcharged their Duty if they facrificed their Lives for the Benefit of their Country; and it is not unlikely that they fared the worfe on account of Motezuma's three Sons, who were with them, and whofe Deaths would be no way unwelcome to the Affembly, the Eldeft being a hopeful young Prince, capable of wearing the Crown, highly efteemed by the People, and the only Perfon of whom the new Emperor had reafon to be jealous. Their only Concern was for the chief of their idolatrous Priefts, who was likewife in the fame Prifon, for he was univerfally reverenced as the fecond Perfon in the Empire; and to produce his Liberty they made ufe of a very notable Stroke of Policy.

The fame Deputies returned that Evening and propofed, on the Part of their Sovereign, "That, in ordex "6 to prevent any Mifundertandings which might retard " the Treaty, it would be proper for the Spaniards to " fend fome one of the Mexican Prifoners to the Em" peror, well inftructed on the Subject of the Capitula" tion." This Expedient feemed reafonable; and the Deputies no fooner found it admitted but they artfully let drop, by way of Advice, that none would be fo proper as a certain ancient Prieft, becaufe he was an intelligent Perfon, able to remove all Difficulties which might be ftarted; which fpecious and well managed Pretext fufficed for the obtaining what they propofed: Not that Cortes was ignorant of the Artifice of the Propofal, but, confidering of what Importance it was, to found the Minds of thofe People, he efteemed it a fmall Matter to part with a Prifoner who was troublefome and deteftable. Soon after the Prieft was difmiffed, fully inftructed by the General in fome Demands relating to the March; intending afterwards, in cafe he returned, to employ him further in other matters of greater Confequence. But it was to no Purpofe to wait for his Return, it being foon
evident
evident that there was no fuch Defign. The Sentinels difcovered that the Enemy befieged the Quarters at a greater Diftance than they were wont, that they appeared more circumfpect than ordinary, cafting up Trenches, and other Works, to defend the Paffage of the Canals, and that they had detached fome bodies of Men to the Lake, who were breaking down the Bridges of the principal Caufway, and cutting off all Communication with the Road which leads to Tlafcale; a Proceeding which fully difcovered the Artifice of their Defigns.

This Intelligence Cortes received with Concern; but, inured to overcome great Difficulties, he reaflumed his natural Calmnefs, and, upon his firt Reflections, which always pointed directly at the Remedy, he ordered a Bridge of Planks to be made, wherewith to cover the Opening of the Caufway, capable of bearing the Weight of the Artillery, and fo contrived that it might, without much Difficulty, be carried by forty Men: And, without lofing more Time than what was neceffary for the compleating of this Work, he affembled his Captains to confult with them, and to take their Opinion concerning the Retreat, whether it fhould be made by Day or by Night. Ilis Commanders differed in Opinion, but the Majority of them inclined rather to the Night, and Cortes yielded, or at leaft feemed to yield to them, becaufe they were the Majority ; but, as the greateft Minds are not exempt from fome Weaknefs, fo it is faid that Cortes was in a great Meafure influenced by the Advice of a private Man, whofe Name was Botello, and who paffed for a kind of Prophet; this Man had the Boldnefs to declare, that if they marched by Night, and without Delay, they fhould certainly get off fate, but, that either himfelf or his Brother fhould be killed. It was the Cuftom of Cortes to defpife his Predictions, while he liftened to him, and to treat them as ridiculous, though he fuffered them to make an Impreffion upon him, in which, if Company could be any excufe, Cortes might have pleaded the Examples of others, as great Heroes as himfelf.
13. This Refolution of retiring being thus taken in the Morning, it was farther agreed, to execute it immediately, and to take the Opportunity of the fucceeding Night. The very fame Evening the General difpatched another Mexican, as his Embaflador, to the City, with Pretence of continuing the Treaty begun by the Prief, giving them to underfand that all Things thould be got ready for their Departure, within eight Days, at fartheft. Cortes, in the mean while, was diligently difpofing Matters to begin the March, the Shortnefs of the Time making every Moment precious. He diftributed his Orders, and gave his Captains the neceffary Inftructions, providing againt all Accidents which might happen upon the March, with all imaginable Precaution.
${ }^{1}$ He formed his Van Guard of two hundred Spani/b Soldiers, with the choiceft of the Tlafcalans, and about twenty Horfe, under the Conduct of the Captains Sandoval, Azebedo, Ordaz, Lugo and Tapia; he gave the Command of the Rear Guard, with a greater Number both of Horfe and Foot, to Alverado, Fuan Velafquez de Leon, and other Captains, of thofe who came with Narvaez. In the main Body or Centre, he placed the Prifoners, Artillery, and Baggage, with the reft of his Army, refolving himfelf to be employed as Neceffity fhould require, at the Head of one hundred choice Men, with the Captains Davila, Olid, and Vafquez de Tapia. Things being thus difpofed, he made a fhort Speech to his Soldiers, laying before them the Difficulties of the Undertaking, upon which he enlarged a little the more, becaufe it was a current Report among them, that the Mexicans never engaged by Night, and it was neceffary to infpire them wwith Diftruft, left they fhould fall into over-great Security. He next caufed all the Gold, Silver, and Jewels, which were in the Cuftody of Cbrifoval de Guzman, Groom of his Chamber, to be brought into his Apartment, and out of it he feparated the Fifth, belonging to the King, in thofe Things which were leaft bulky, of which he made a formal Delivery to thofe Officers, who had Care of the Accounts and Provifions of the Army, giving a Mare of his own and fome wounded Horfes for the Carriage thereof, in order to fpare the

Indians, who might be in other Refpects ferviceable upon that Occafion.
The Remainder, according to the beft Computation could be made, amounted to upwards of feven hundred thoufand Pieces of Eight, all which Wealth he left with little or no Reluctancy, protefting publicly, "That it "was no Time to embarrafs themfelves with it, and " that it would be a Shame to employ thofe Hands fo "unworthily, which ought to be left free for the De"fence of Life and Reputation." But finding the Soldiers not fo well contented with this ineftimable Lofs, he added, as he was going away, "That they ought not to " look upon their Retreat from thence as abandoning of " that acquired Treafure, and their main Defign, but as "a necenfary and indifpenfible Difpofition, in order to "r return with a greater Force. After the fame Manner " as a Man draws back his Arm, in order to give the "greater Blow." And withal, gave them to underftand, that he flould not think it a Crime in them to take away as much of that Wealth as they conveniently could; and though the greateft Part of them took Care to go light, there were fome, and particularly thofe who came with Nervaez, who gave themfelves up to pillage, loading their Shoulders beyond what they were well able to bear; a Permiffion, in which all the military Care and Circumfpection of Cortes feemed to be afleep. It was very near Midnight when they marched out of their Quarters, without the Sentinels or Advance Guards finding any thing to give them the leaft Sufpicion, and notwithftanding hoth the Wetnefs of the Weather and the Darknefs of the Night favoured their Intention of marching, and freed them from any Jealoufy of the Enemies continuing Abroad in their Works; they fo punctually obferved Silence, and Circumfpection, that Fear itfelf could not have wrought what Difcipline did in thofe Soldiers ; the portable Bridge went with the Van Guard, and thofe who had the Charge of it, laid it over the firt Ca nal, but the Weight of the Horfes and the Artillery made it ftick fo faft in the Stones, which fupported it, that they could, by no Means, remove it to the other Canals, as they deffogned, nor had they indeed an Opportunity to do it, for before the Army had paffed the firft Breach of the Caufway, they were obliged to take to their Arms, with the greatef Precipitation, finding themfelves affaulted on every Side, when they leaft of all fufpected any fuch Matter.
The Addrefs with which thofe Barbarians difpofed their Enterprize was worthy Admiration. They obferved with a ftill and filent Vigilance the Motions of the Spaniards. They affembled and diftributed, without Noife, the Multitude of their Troops. They took Advantage of the Silence and Darknefs of the Night, to compafs their Intention of drawing near without being difcovered. They covered the whole Length of the Lake on each Side of the Caufway, with armed Canoes, beginning the Attack with fo little Confufion, and fuch excellent Order, that the Spaniards heard their Shouts, and the warlike Sound of their Shells, almoft at the fame Time that they felt their Arrows. The whole Army had undoubtedly been deftroyed, if the $I_{n-}$ dians had obferved the fame good Oider in the Heat of the Engagement, as in the Beginning of the Attack; but to them Difcipline was a Reftraint, and when once they began to be enraged, Cuftom prevailed. They charged in Heaps where they perceived the Bulk of the Army, prefling upon each other after fuch a Manner that their Canoes were broke to Pieces by ftriking on the Caufway, and the Violence of thofe who were furiounly endeavouring to advance, proved a new Danger to thofe who were foremoft.

The Spaniards made terrible Deftruction among the naked Multitude, but they had not Strength fufficient to hold out fuch inceffant Exercife of their Swords and Spears, nor was it long before they found themfelves likewife attacked in Front, and were obliged to turn their Faces, where the Danger grew moft prefing; for the Iudians, who were at a Diftance, or who could not bear the Tedioufnefs of the Oars, flung themfelves into the Water, and by the Help of their Arms and natural Agility, climbed up the Caufway, in fuch Numbers,
that they were not able to make ufe of their Weapons; and this new Affault proved a Relief to the Spaniards, for the Mexicans were eafly routed, and all of them in a Manner being killed, their Bodies were fufficient to fill up the Canal, with no other Trouble than the flinging them in, where they ferved to fupply the want of a Bridge, for the Army to pais over. After this Manner, fome Writers relate it, though others fay, that they luckily found a Beam of fufficient Breadth, which the Enemy had left whole in the fecond Bridge, on which the Soldiers paffed over in Files, guiding the Horfes through the Water by the Bridles.
14. Cortes paffed with the firft Body of his People, and, ordering Ffuan de Xarmillo to take Care to form the Men as faft as they arrived, he returned, without Delay, to the Caufway, with the Captains Sandoral, Olid, Davila, de Morla and Dominguez: He entered the Engagement, animating thofe who fought as well by his Prefence as by his Example; he reinforced his Troop, with as many Soldiers as he thought neceffary to fop the Enemy on both Sides of the Caulway, and ordered the reft to file off from the Centre, caufing the Artillery to be thrown into the Water, to free the Paflage, and facilitate the March. Cortes at laft retired, with all he could pick up of the Rear-Guard, and as he was penetrating through the fecond Space of the Caufway, with little or no Oppofition, he was joined by Alverado, who owed his Life to little lefs than a Miracle of Refolution; for having found himfelf clofely befet on every Side, his Horfe killed under him, and one of the Canals ftill before him in his way, he fixed his Lance or Spear in the Bottom of the Lake, and, raifing his Body by Force, and fupporting his Weight in the Air, by the Strength of his Arm caft himfelf on the other Side; a furprizing bold Action, which has fince been looked upon as fomething furpafing Nature; and Alverado himfelf, when he afterwards reflected upon the Diftance, and the Succefs he had met with in the Attempt, eafily became fenfible of the Difproportion there was between the Fact itfelf, and the Feafibility of it.

The Army gained the firm I and by the firft Appearance of the Day, and halted near Tabuca, not without fome Jealoufy of that Town, which was very populous, and in the Intereft of the Mexicans, but they took Care not immediately to quit the Neighbourhood of the Lake, that they might give Time to thofe who could efcape from the Battle to fave themfelves; nor was that Precaution unneceffary, for feveral Spaniards and Tlafcalans found the Advantage of that Stop, who, by their Valour and good Management, got off by fwimming to the Shore, where they hid themfelves in the Fields of Maize in the Morning. Thefe gave the General an Account that the laft Divifion of the Rear Guard was entirely cut off; and Cortes having drawn up his Troops, found that he had loft about two hundred Spaniards, more than one thoufand Tlafcalans, forty-fix Horfes, and all the Mexican Prifoners, which laft not being able to make themfelves known in the Confufion and Obfcurity of the Night, were treated as Enemies by thofe of their own Nation: The Spaniards were fatigued and difcouraged, their Numbers diminifhed, and the Artillery all loft, expecting every Moment to be attacked, and the Place of their Retreat far off; and among fo many Motives of Concern, their Misfortune received a great Addition, by the Lofs of fome principal Captains, in which Number, thofe of the greateft Note were Amador de Larez, Francifco de Morla, and Francifco de Salcedo, who loft their Lives, all difcharging their Duties with extraordinary Valour. Juan Velafquer de Leon, who retreated in the very laft of the Rear Guard, likewife loft his Life, opprefled by Multitudes; after having endured incredible Fatigue, fhewing an invincible Courage, even to the Jateft Gafp ; a Lofs, which was generally lamented, for all Men refpected him, as the fecond Perfon in the Army.

Cortes fat down upon a Stone to reft himfelf a little, while his Officers were putting the Troops in order, and difpofing them, to profecute their March. He found himfelf fo oppreffed with Concern, that he never more ftood in Need of all his Magnanimity to temper his Grief.

He fummoned all his Conftancy to his Affiftance; and, at the fame Time he gave his Orders, animated his People, and exerted himfelf with his wonted Alacrity. He enquired for the Aftrologer, either in order to reprimand him for the Part he had in haftening the March, or to divert his Melancholy; by rallying him upon his Science; but he was told, he was killed in the firft Afault, off the Caufway; that Wretch having met with the Fate common to thofe of his Profeffion. But, in the midft of thofe Misfortunes, it was no fmall Confolation to Cortes, and the whole Army, that Donna Marina and Hieronimo de Aguilar had found Means to efcape from the Battle, in the terrible Confufion of that Night: They being the principal Inftruments of the Conqueft, and no lefs neceffary than they had been before; for without them, it was altogether impofible to engage the Friendthip of the Nations they were going to feek; nor was it lefs happy, that the Mexicans did not follow the Chace, for they gave Time for the Spaniards to breathe after their Fatigue, and to march in better Order, and with lefs Hafte, mounting the difabled Men on the Strongeft of the Horfes. This Stop of the Mexicans proceeded from an unexpected Accident, which may: be attributed to the Providence of God. The Sons of Motezuma who had attended on their Father, during his Continuance in the Quarters, together with all the Mexican Prifoners, who were laft under Convoy, with the Baggage, were unfortunately killed by the Enemy ; and in the Morning, the Indians allured by the Spoils of the Dead, beheld pierced through with their own Arrows the Bodies of thofe unhappy Princes, whom they reverenced with that kind of Adoration they once did their deceas'd Father. They ftood amazed, ftupified, and confounded at the Sight, without daring to pronounce the Caufe of their Aftonihment. However, it was not long before the News was carried through the Troops, and they were all feized with Fear, and that kind of fudden Terror, which the Antients called Panic.

The Mexican Chiefs refolved to fend an Account of this Accident to the new Emperor ; and he, who was forced to affect a Concern, out of Compliance with thofe whofe Grief was unfeigned, commanded the Army to halt : Beginning the Ceremony of the Funeral with Outcries and Lamentations, which ufed to precede the Obfequies, whilft the Prieft, followed by all who had remained in the City, came to receive their Royal Bodies, in order to conduct them to the burying Place of their Anceftors. It was to the Death of thofe Princes, that the Spaniards were indebted for the firft Recovery from their Confufion, and that feafonable Refpite ; but they lamented, notwithftanding, their untimely Fate, and particularly Cortes, who loved thofe Princes, refpected in them the Memory of their Fatlier, and had founded Part of his Hopes in the right of the Elder. Cortes, in the mean while, directed his March towards Tlafcala, with Guides of that Nation, his Army continually in order of Battle, as not being without Sufpicion of fome Defign in the Enemies Delay; and upon fuch Occafions Diffidence is oftener attended with Succefs than too confident Security. It was not long before fome Corps of armed Indians appeared, who followed the Army, without approaching within Shot. Thefe were the Inhabitants of Tabuca, Efcapugaleo, and Tenecuga, whom the Mexicans had fummoned, to obferve the Motions of the Spaniards on the March, till fuch Time as they had difcharged themfelves of their Duty towards the Sons of Motezuma. Cortes extended his Front, where he pofted his Fire-Arms and Crofs-Bows, being obliged to engage in the open Field, without having any Place of Security to retire to.

As many of the Indians, as had Courage enough to venture near, died without Difcouragement to the reft. The Horfe fallied out to fkirmifh, and made a very great Slaughter; But the Number of the Enemy continually increafed, and their Arrows and Slings did confiderable Damage; the Spaniards were tired, and without Hopes of repulfing that enormous Multitude, and now their Valour began to flacken for want of Strength; when Cortes, who behaved himfelf in the Battle like a Soldier, without forgetting the Duty of a General, oblerved a Rifing-ground at no great

Diftance

Diftance from thence, which commanded the whole Plain; upon the Top of that Eminence was a Building which appeared like a Fortrefs, or at leaft the Exigence in which he found himfelf made him fancy it fuch: He refolved to poffefs himfelf of that Poft, for the Advantage of its Situation, and, detaching a Party of Men to reconnoitre it, he moved with the Army to gain it, which he did not find could be effected without Difficulty, being obliged to face the Enemy all the while afcending the Hill, and to place fome Companies of Harquebuffiers, to defend the Avenues; but he happily compaffed his Defign, poffeffing himfelf of the Tower without Refiftance, and in that found all the Convenience which at that time he could defire. It was a Temple; but the Priefts and Servants who attended the Worfhip of that Place had quitted it, flying from the Neighbourhood of War, as People of a different Profeffion; the Court of this Temple was encompaffed with a Wall after their Manner of building, which, together with the Towers wherewith it was flanked, rendered it tolerably defenfible; and under the Shelter of thofe Works the Spaniords began to breathe.

The Enemy did not dare to fcale the Fill, nor did they give any Signs of their intending an Affault, but they approached within Mulket- fhot, furrounded the Eminence on all Parts, and made fome Advances to thoot theirArrows. In the mean time nothing was to be heard but barbarous Shouts and Menaces, which ferved only to difcover their Weaknefs. 'They were kept off till Evening began to approach, at which time they all retired ; whether to comply. with the Obfervation of their Cuftom, of retiring with the Sun, or that they found themfelves fatigued with having been in a manner continually engaged, is uncertain. Cortes difpofed every thing in his Quarters with all the Care and Circumfpection that a Poft fo threatened obliged him; he ordered the Guards and Sentinels to be fooner relieved than ordinary; that all might have their equial Share of Reft: They made fome Fires, as well becaufe of the Coldnefs of the Seafon, as to confume the Arrows of the Mexicans, to deprive the Enemies of their Ammunition. He gave fome Refrefhment to the People out of the Provifions found in the Temple, and what the Indians had faved with the Baggage ; particular Care was taken of the Wounded, which was attended with no fmall Difficulty in a Place where all Neceffaries were wanting.

Cortes attended in Perfon to all, but ftill without forgetting the Danger to which he lay expofed; and before he would retire to Repofe he affembled his Officers, to confult with them what was to be done in this Juncture: He had already formed his Refolution, but he always declined pofitively deciding in fuch Matters; and he was a great Mafter in bringing People over to what was reafonable, without fhewing his own Opinion, or making Ufe of his Authority: He propofed different Methods which might be taken, with the feveral Inconveniencies attending each of them ; leaving them to judge which Expedient was moft advifeable ; but that which he judged beft was, to continue the March fo as to be out of Reach of the Enemy before they renewed the Attack: In fupport of which Advice he advanced many Reafons. He had fcarce finifhed his Difcourfe when all the Captains agreed that no other Refolution was practicable ; and it was determined to begin their March at Midnight. Cortes conformed to what was really his own Opinion, though he treated it as the Opinion of others, a Policy which he was accuftomed to make Ufe of, in order to prevent Difputes when the Affair was urgent and admitted of no Delay, and which only thofe can practife who underftand the Art of deciding by afking Advice, and of making a Propofal
in fuch a manner as to leave no room for Objection. As. we have now conducted Cortes and his Army out of Mexico, and have feen with how much Prudence and Difcretion he managed every thing when Fortune feemed to defert him, it feems but reaionable to put an End here to this Section, and to referve the Reftoration of his Fortunes and the Recovery of his Conquefts; to the next.

I5. But, that we may not proceed too haftily; let us paufe a Moment, in order to confider the great Events we have been reading, and from thence form a true Judgment of the Merit of this illuftrious Conqueror. We have in the former Section hewn, that with a meer handful of Men, he undertook to conquer one of the mont extenfive Empires the World ever faw; and to which no Power, now fubfifting, can be efteemed equal. We have feen that this could not be called a rain or improvident Action, though it was, certainly; one of the boldeft and moft daring, that ever entered the Breaft of Man, As a Perfon fkilled in Mechanics, may, with good Senfe and great Reafon, undertake to perform, with an inconfiderable Force, what, to a Perfon unacquainted with that Science, would be efteemed beyond the Reach of Nature ; fo the Vigour of 'this Man's Underftanding, his incomparable Sagacity, and wonderful Penetration, enabled him to forefee moft of the Events that did fall out; and to contrive the proper Means for converting them to his Purpofe, as his Fortitude, Prefence of Mind; and happy Equality of Temper, put it always in his Power to exert his fuperior Abilities upon all Occafions, and fet him above the reach of Accident or Danger, however great or unexpected. We have feen him in this Section, performing things almoft incredible; and fome of them alfo, particularly the feizing and imprifoning Motezuma, not altogether juntifiable. But this is fo far from being a new Thing in a Hero; that I believe it may be fairly faid, there is fcarce a Character of this kind in ancient or modern Hiftory, in which more immoral and more outrageous Actions do not frequently occut.

One Thing more I fhall remark before I proceed in this Hiftory, becaufe it feems to do more Honour to the Courage and Conduft of Cortes, than any thing elfe; and in few Words it is this: The only Shadow of an Objection that can be raifed againft the Praifes that have been beftowed upon this illuftrious Perfon, arifes from the Suggeftion that he acted with regular and well difciplined Troops, againft a barbarous and uncivilized People, unfkilled in the Arts of Policy or War: But the Meafures taken by the Indians, to drive him out of Mexico, and the Manner in which they acted in the Execution of thofe Meafures, very plainly prove that this Suggeftion was ill grounded. Since, from thence, we plainly fee that they neither wanted Skill as Politicians, nor were deftitute of Difcipline as Soldiers. The Succefs likewife that they met with in the Conduct of their Scheme, plainly demonftrates, That if they had been to deal with a Man of lefs Abilities than Cortes, they would effectually have carried their Point, and have driven the Spaniards, not only out of Mexico, but out of all their Dominions, and have preferved their Empire, perhaps, till this time ; for, had they once acquired a thorough Knowledge of the Artillery and Powder, they were certainly ingenious enough to have acquired the Ufe of them; which if they had done, there is no Reafon to doubt that they would have kept. their Ground, and have preferved, at leaft, the interior Part of their Country; though, by dint of their Naval Power, the Spaniards had made them. felves Mafters of their Coafts.

## S E C T I O N XIII

## The Conclufion of Hernan Cortes's Expedition, including the Hifory of the remaining Part of the War, to the Reduction of the City and Empire of Mexico; by wobicb the Spaniards acquired their extenfive Dominions on the Continent of North America.

1. The Spaniards continue their Retreat under frefb Difficulties, wbile the Indians labour to intercept and bring them to a general Engagement. 2. The wobole Force of the Mexican Empire defeated in the famous Battle of Otumba, and the imperial Standard taken. 3. The Precautions taken by Cortes to improve this Victory, and to prevent the bad Effects of a Mutiny that bad like to bave broken out among bis People. 4 . The Mexicans fend an Embafly to Tlafcala, in bopes of gaining that Republic; in wobich they are difappointed by the Interpofition of Juch Lords as were Friends to the Spaniards. 5. The War renewed woith great Succefs, and a niew Colony founded by the Spaniards on the Frontiers. 6. The Meafures taken by Cortes for the Profecution of the War, the bad Difpofition of the Army, and the Difficuties which be found in keeping the Troops from running into a general Mutiny. 7. He receives, very unexpectedly, very conjiderable Succours from Spain, wbich encourages bim to think of recovering Mexico. 8. Ho is fo fortunate as to obtain fill larger Reinforcements, but is obliged to dijcharge a Part of bis Army, on Account of their feditious Bebaviour. 9. While Preparations were making for' a new Expedition, Cortes refolves to fend over frefh Agents to Spain, in order to procure a Commiflion from the Emperor. 10. An Account of what happened at Court upon the former Application, by the Fatber of Cortes and his furf Agents, and of the timely Arrival of the fecond. II. The Hitory of this Matter farther contimued, to the obtaining a Declaration of Council in favour of Cortes, againjt Velafquez. 12. An Account of bis memorable Expedition into the Province of Tezcuco, wbich fubmits witbout a Stroke. 13. The War with Mexico renerwed by Cortes, with great Danger to bis Army and to bimfelf. I 4. Upon a Forefigbt of the Difficulties that might attend the War, be makes Propofals of Peace to the Mexican Emperor, which are baugbtily rejected. 15. The War breaks out afrefh, and Cortes gains feveral Vitiories over the Mexicans. I6. The Indians are defeated in a general Engagement, in wwbich, bowever, Cortes run a great Hazard of beingkilled or taken. 17. AConjpiracy formed among the Spaniards to nurder bim, and a Sedition among $\theta$ the Allies. 18. Cortes ventures to attack three Caufrays of the City of Mexico at once, and at the fame Time carries on the War upon the Lake. 19. The Progrefs of the War, and the zmexpected Diffculties the Spaniards net with iberein. 20. Cortes makes a general Attack, in wobich, after an obfinate Engagement, be is defeated. 2I. The Spanifh Prifoners are facrificed to the Indian Idiols, and all their Affairs furprizingly decline. 22. Cortes renews the Attack, and forces the Indian Emperor to retire to the fartheft Part of the City. 23. The Emperor, Guatimozin, fiucceffor to Motezuma, is taken Prifoner, after which the City immediately furrenders, 24. A fuccinct Accoust of the Redurition of the whole Mexican Empire, and of the Rervards beftowed upon Hernan Cortes. 25. Obfervations and Remarks upon tbis and fome of the foregoing Sections.

ALittle before the appointed Hour, the Troops were affembled: The Order to march, and the Reafon for fo doing, was given at the fame time, upon which they prepared for fetting out, applauding the Refolution. Cortes ordered to conceal their Motion, that they fhould leave all their Fires burning, and, giving to Diego de Ordaz the Charge of the Van-Guard, with fome intelligent Guides, he placed his chief Strength in the Rear, where he remained, that he might be the nearer Danger, and be a Security to thofe who paffed before. They fet forward with all neceffary Caution; and, the Guides being ordered to keep at fome convenientDiftance from the high Road till the Morning, they marched, little more than half a League, without the Silence of the Night being interrupted by the leaft Noife: But, upon their entering into a broken and hilly Ground, the Scouts fell into an Ambufh; divers Troops of Indians came pouring down from the Eminences, and rufhing from among the Bufhes, withous Order, attacked the Flank; and though not fo numerous as to oblige the Army to halt, yet the Spaniards were obliged to beat off fuch of the Enemy as ventured neareft, to break through feveral Ambufcades, and to difpute many narrow Paffes.

The Spaniards were apprehenfive, at firft, that it was the whole Army which they had left on the other Side of the Temple, and fome report this Action as a Purfuit made by thofe Mexicans; but they were the Militia of the neighbouring Towns; who, by Orders received from Court, endeavoured to difturb the March, pofting themfelves in the broken Parts of the Road. With this kind of Oppofition the Army advanced two Leagues, and before Day halted in another Temple, fituate upon an Eminence, not altogether fo high as the former, but of fufficient Height to view the Country round about; that by the Number of Enemies they fhould difcover, they
might judge what Meafures were fitteft to be taken for their Security. The Indian Peafants continued their Shouts, following at a Dittance, till, having advanced about two Leagues farther, they difcovered a Village advantageouny fituated, and as they believed well peopled. Cortes pitched upon this Place for his Quarters, and gave Orders for his Troops to poffefs themfelves of it; and they found it wholly forfaken by the Inhabitants, together with fome Provifions, which they could not carry off; and which, at that Juncture, were very welcome. Here the Army ftayed a Day or two ; the Condision of the Wounded being fuch, that they could not proceect. They made two Marches more, through a Country more rocky and barren, always out of the great Road, and fomewhat doubtful whether their Guides were right. They had no Cover in the Night, nor did the Perfecution of thofe Indians ceafe, who continually kept in Sight; or, perhaps, they might be others who came out after the firft, in crder to follow them through their refpective Diftricts. But the greateft of all Inconveniencies was, they fuffered Funger and Thirft to that Degree, that they wanted little of being quite difpirited. The Officers and Soldiers, however, animating each other to move on.

They were forced to have recourfe to the Herbs and Roots of the Field for Sultenance, without examining whether they were venemous; though fuch as were the moft prudent governed themfelves by the Knowledge and Example of the Tlafcalans. One of the wounded Horfes died, and the Want they had of that Creature's Service in the Army, was forgot with Joy; for it was divided as a Regrale among thofe who were in the greateft Extremity, who celebrated the Feat by inviting their beft Friends to partake of that dainty Food: A relifhing Banquet at that time, at which all Scruples of Stomach gave way to Necefiry. The laft of thefe two Marches
terminated

## Chap. III.

terminated in a little Village, whofe Inhabitants; without abandoning their Dwellings like the others, gave them free Entrance, neither were they wanting in their Affitt ance to them, with a feeming Chearfulnefs in every thing they were ordered; which unexpected Entertainment was a new Stratagem of the Mexicans, that their Enemies might come lefs prepared to the Snare which they had provided for them.
Thefe People freely fhewed their Stores of Provifion, and, from other neighbouring Villages, procured what was fufficient to make the fatigued Spaniards forget their paft Sufferings. Early in the Morning the Army was difpofed to afcend the Mountain, which on the other Side declined into the Valley of Otumba, through which they mult of Neceffity pafs to take the Road to Tlafcala. They obferved fome Alteration in the Indians who followed their March; for their Shouts and Scoffs exprefs rather Satisfaction than Indignation; and Donna Marind took notice, that they frequently faid go on Tyrants, go on, for you will quickly arrive at the Place where you will all perifh. Thefe Expreffions gave them Occafion to reflect; fome began to doubt that thefe Indians, confiding in the Tlafcalans, rejoiced at the Danger to which the Spaniards were marching, as having received fome Notice that there had happened a Change in the Fidelity of that Nation. But Cortes, and thofe of better Judgment and Penetration, looked upon this Novelty as a Token of fome Ambuifh, that was nearer than Tlafcala; for there wanted not Examples of the Simplicity and Eafinefs with which the Indians were wont to publifh the very thing which they endeavoured to conceal: An Error not peculiar to this People, and though a certain Indication of Levity, no direct Mark of Barbarifm
2. They continued their March difpofed for frefh Action; when the advanced Guard, having reached the Mountain Top, came with an Account that the Enemy had poffeffed themfelves of all the Valley, barring up the Paflage to the Road whither they were directing their Courfe with a formidable Multitude. It was the fame Body of Mexicans which they had left at the firt Temple, reinforced with new Troops, who had difcovered, in the Morning, the fudden Retreat of the Spaniards; and, notwithftanding they did not doubt but that they hould be able to overtake them, yet they feared, by the Experience of the Night, that it would not be poffible to deftroy them before they reached the Tlafcalan Territories, if they went on fecuring Mountains; for which Reafon they fentDifpatches to Mexico for Reinforcements, that an Affair of fo much Importance might not mifcarry for want of neceffary Force, which Propofal was fo well received in the City, that all the Nobility inftantly fet out, followed by the reft of the Troops which they had affembled, to join the Army, and in the Space of three or four Days they divided themfelves into different Roads, marching under Shelter of the Mountains, with fuch Expedition, that they got before the Spaniards, and filled the whole Valley of Otumba, which is a very fpacious Plain, where they might undifcovered wait for their Enemies, and attack them without embarraffing each other for want of Room.

The Captain General of the Empire was diftinguifhed in the Centre of the Multituide, borne up upon Mens Shoulders in a Litter fumptuoully adorned, in fuch a Manner, that being a Witnefs of every one's Behaviour, his Orders might be punctually executed. Upon this Chair, or Litter, ftood erect the Royal Standard of Mexico, which was not intrufted into any other Hand but his, and could only be brought into the Field in Cafes of the greateft Exigence. This Standard was a Net of Mafly Gold hanging on a Pike, and crowned with a Plume of Feathers of various Colours; both the one and the other miyfterioully denoting a Superiority. The Spanifb Army perceiving the frefh Danger for which they were to prepare, Cortes began to examine the Countenances of his People, with that natural Fire in his Look, which influenced their Hearts far better thain Words; and finding them infpired with a generous Refentment, he thus addreffed them: "Our Cafe is now fuch, that "\% we muft either die or conquer: The Caufe of our
"God fights for us; " nor had he time to fay any more, for the Soldiers themfelves interrupted, crying out for the Word of Command; and he advanced with his Front extended, and united the Boidy of the Army with the Wings of the Horfe, who were appointed to defend the Flanks, and fecure the Rear. The Fire-arms and Crofs-Bows made their firt Difcharge fo opportunely; that the Enemy had fcarce time to make ufe of their miffive Weapons. The Swords and Lances did ftill greater damage ; the Horfe taking care, at the fame time; to break, and to put to Flight thofe Troops which endeavoured to inclofe the Spanifh. Army.

They gained fome Ground by the firft Charge: The Spaniards gave no Stroke without a Wound, nor any Wound which needed a fecond Blow. The Tlafcalans threw themfelves into the thickeft of the Battle, with an infinite Thirft after Mexican Blood, and all had fuch Command of their Paffions, that they killed firt thofe who appeared to be Leaders. But the Mexicans fought with great Obftinacy, advancing, though not in the beft Order, yet, with furprizing Refolution; to fupply the Places of thofe who fell; and the Spaniards were fatigued with the Slaughter, for the Battle was continually renewing with frefh Men. Their whole Army feemed to give way whenever the Cavalry charged them; or the Fire-Arms advanced; but they returned with new Vigour to recover their loft Ground, the Multitude movino fo from Place to Place, that the whole Field appeared like a Sea of Men, the perpetual Flux and Reflux feeming to juftify that Comparifon.
Cortes fouight on Horfeback, carrying Death and Terror wherefoever he came. But the obstinate Refiftance of the Indians gave hirn no fmall Concern; for it was not to be hoped, but that the Strength of his Men muft abate; with fuch unintermitting Action; and reflecting upon the Meafures he might take, to advantage himfelf, or to make his way to the Road, he was relieved by one of thofe Obfervations he was accuftomed to lay up in his Mind. He remembered to have heard'among the Mexicans, that the whole Fortune of their Battle depended. upon the Standard Royal ; the gaining or lofing of which decided the Fortune of the Day; on either Side; and being not infenfible into what Confufion the Enemy was always put by the Charge of the Cavaliry, he took a Refolution to make an Effort, for the gaining the Imperial Standard. To this Effect, he called for the Captains Sandoval, Alverado, Olid, and Davila, to follow and fecure his Rear, together with the reft of the Horfe which generally attended him; and having encouraged them with a fhort Harangue, and given the neceffary Inftructions how they were to proceed, he advanced, and attacked on that Part which appeared weakeft, and leaft diftant from the Centre.
The Indians gave back, dreading the Shock of the Cavalry, and before they could recover themfelves, the $S p a$ niards threw themfelves upon the difordered Multitude; treading under Foot whole Battallions, and, without much Oppofition, arrived at the Place whiere the Imperial Standard was defended by the Nobles who were appointed for its Guard; and while the Captains were difperfing that numerous Guard, Cortes clofed with the Captain General of the Mexicans, who at the firt Stroke of his Lance fell, being dangerouny wounded; on the other Side of his Litter: He was foon forfaken by his Guard, and left alone ; when Fuain de Salamainca, a private Gentleman, leaped from his Horfe, and put an End to the little Life he had left; and feizing the Standard, gave it into the Hands of Cortes. This Salamianca was a Perfon of fome Diftinction in the Army ; and, for having done his General fuch a Piece of Service, the Emperor conferred forie Favours upon him, giving him for the Creft of his Arms the Plume of Feathers which crowned the Mexicani Standard.
The Mexicans no fooner faw their Imperial Standard in the Power of the Spaniards, than they ftruck all the reft of their Colours, and betook themfelves to a precipitate Flight, feeking Shelter in the Woods and Fields of Maize : The neighbouring Mountains were covered with the terrified Remnants of the Army, and in a few Moments the Field of Battle remained to the Spaniards,
who purfued their Victory with all the Rigour of War, and made a terrible Deftruction of the Fugitives ; it was fo abfolutely neceffary to ruin and difperfe them, that they might not return. On the Side of the Spaniards fome were wounded, of which Number two or three died at Tlafcala; and Cortes, himfelf, received a Blow on his Head, with a Stone, fo violent, that it battered his Head-Piece, and made a fmall Fracture in his Skull. The Spoil was given to the Soldiers, which was very confiderable, for the Mexicans came with coftly Jewels and Ornaments, as to triumph. The Spanifb Authors fay, that twenty thoufand Indians loft their Lives in this Battle. A round Computation indeed! and perhaps, what is not uncommon in fuch Cafes, a certain Number put for an uncertain.
3. The fame Spirit which Cortes fhewed in his utmoft Difficulties, appeared in the Precautions taken by him in making the moft of this Victory, and taking an immediate Care for fecuring fuch a Poft, as might give them time to concert what was to be done next. There appeared on the Top of a Mountain, at fome Diftance, a large old Indian Palace, which he gained. There they ftaid that Night, and as foon as it was Day advanced a confiderable way through the Plain ; then going up a fmall Hill they found a Spring of good Water, where they halted and refrefhed themfelves, for till then they had met with very little, and that not good; they came to Gualipa, a Town of two thoufand Houfes, belonging to the Republic of Tlafcala: The People of that Place went out to receive them, fhewing extraordinary Compaffion for their Sufferings ; the Women wept at the Sight of them, and they were fupplied with Neceffaries, in a moft affectionate Manner.

Cortes bleffed God he found fuch Entertainment among Infidels. Thore People asked why they would not believe them, when they always told them they fhould not truft the Mexicans, who were treacherous. That Day, in the Afternoon, came to them Maxifcatzin, and another Lord, who was Governor of Guaxacingo, and, when chriftened, called Don Gobn Xuarez, and many others, as did Xicotencatl ; but this laft only in a Compliment. They brought much Provifion. Cortes received them with Joy ; but they were amazed to fee him and fo many others wounded. Maxifatzin, in that Aftonifhment, delivered himfelf very elegantly, faying, that fince his Valour was fufficient to withftand all the Mexican Empire, there had been fome Treachery in the Cafe, comforting him, and bidding him be eafy; for, fince he was alive, he might revenge that Injury, being among the Tlafcalans, his fincere Friends, who he promifed fhould affift him with all their Power; all the other Lords gave him the fame Affurances, and Cortes returning Thanks in a moft courteous Manner, producing the Mexican General's Standard and Arms, delivered the fame to him, and gave the reft much of the Booty taken in the Battle of Otumba.

The other Commanders and Soldiers, following the fame Example of Cortes, diftributed abundance of the Booty they had gained in that Fight, which was very acceptable, as being Mexican Trophies. Here Cortes was informed, that about twelve Days before, Fobn fifte and Morla, with about thirty Spaniards, had fet out from Gualipa, cariying Cortes's Equipage to Mexico; and that tho' they fought well, they were all cutoff by the Mexican Garirifons, together with one of Maxifcatzin's Sons, who he fent along with them. This was afterwards verified, for they found cut on a Trée. T'bis wocy pafled the unfortunate John Juite, and bis unbappy Companions, being reduced to fucb W ant of Food, that they gave a Wedge of Gold, weighing eigbt bundred Pieces of Eigbt, for a fero little Cakes of Italian Wheat. Thence the Spaniff Army proceeded to $\dot{T}$ lafcala, and the Country being populous, the Roads were crowded with the Inhabitants coming out to fee them. The Magiftrates met Cortes, with above two hundred thoufand Men in good Order. The Women and Children went foremoft, and wept as foon as they faw the Spaniards, curfing the treacherous Mexicans; next came the Citizens, and received them in a moft courteous Manner. The Lords of the four Quiarters
took Cortes into the Middle of them; there was much Mufic at the Entrance into the City ; he was lodged in Maxifcatzin's Houfe, who made him a great Entertainment, and in this Court there was much dancing, and. rejoicing.
At Tlafcala Cortes found Capt. Paez, whom he had left: there, with eighty Spaniards, and was glad to hear that he had been well ufed; he affured him, that Maxifcaizina was his real Friend, and that Xicotencatl hated him. When he undertood that Maxifcatzin had offered Paez an hundred thoufand Mien to march with the Spaniards, to his Relief, and that Paez excufed himfelf, alledging, that he had obferved his Orders, confidering how much Service the Succour might have done him, he gave him fome hard Words, calling him Coward; for that brave Commanders, in fuch Perils, are not to adhere literally to Orders, but to act as Exigencies may require. Hojeda was the Perfon that entertained the greateft Friendflip with the Tiafcolans, and brought Provifions from the Country Towns; fome reproached him, faying, why come you hither to devour our Subftance; go your way, you come in a wretched Condition from Mexico, being turned out like cowardly Women. He gave them good Words ; but Cortes was much concerned at it, being informed that Xicotencatl was the Occafion of it: He acquainted Maxifcatzin, who faid, that whilf he lived no Man fhould prefume to affront him; however he kept himfelf upon his Guard.
A Numbnefs feized his Head, occafioned by his Wound, and, it being followed by a violent-Fever, he was in much Danger; but it pleafed God, as he was well taken care of, he recovered. Whilft his Diftemper held him, thofe few Spaniards he had, hearing fome fufpicious W ords from the Indians, muttered that they would return to the Sea Coaft, alledging that Cortes's Contrivances to return to Mexico would be their Ruin, and that they were now fattening to be facrificed and eaten, as the Indians defigned; few being of a contrary Opinion, the greater Number, with a Notary, forcibiy required Cortcs to go away to Vera Cruz, to avoid the Danger that threatened. Cortes anfwered with much Gravity and Calmnefs: In the firft place, he extolled their paft Actions, put them in mind of the Victories they had obtained, and the Valour of the Spanifs Nation, blamed their Faint-heartednefs, for that having made the World ring with the Fame of their Exploits they fhould fhew Fear, which would turn to their Shame; he promifed them much Wealth and Profperity ; difpelled the Fears they had conceived of the Tlafcalans; faid, he would try their Friendfhip by making War on the Tepeacans, who had lately flain feveral Spaniards; he put them in mind, that all he had faid to them had proved true; that he had performed all he promifed, and then, in care the Affair of $\mathcal{T}$ epeaca did not fucceed, he would find fome Expedient for them to return with Honour to Vera Сruz.

This appeafed them for the prefent, but he had feveral Confultations with the chief Commanders, as to the Confidence that was due to the Tlafcalans: Some affirmed, that there was no trufting of them, fo that if they took a fmall Number of them the War would not be carried on; and if they had many, it was dangerous: Others added, that the Enmity between thefe two Nations was well known, as were the Advantagcs the Tlafcolons reaped by the War with the Culuas; for which Reafon their Fidelity was not to be called in queftion. Cortes, having maturely weighed this Affair, and made fome Enquiry into the Matter, adhered to this Advice, which made him believe that his good Fortune would not forfake him in this Enterprize.
4. The Mexicans having offered up their Sacrifices, returned. Thanks to their Gods, repaired their City, and, undertanding how well the Speniards had been received in Tlafcala, refolved to fend fix Men of Note Embaffadors thither with a Prefent of Cloth, Feather-works, and Salt, which were the Things thofe People wanted moft. Notice being given of their coming, they were met as ufual, and the Council being affembled to hear them, the Eldeft delivered his Prefent and faid, That as they
were Relations, fpoke the fame Language, and obferved the fame Religion, it would be convenient to put an End to the long Wars that had been between them, and that they fhould partake of thofe Things wherein the Mexican Empire abounded. And they wanted befides other Advantages that would accrue by Peace; and therefore in order to bring that to pafs it was proper they fhould facrifice thofe few Chritians, with whom their Gods were of fended for many Reafons, and who would infult them in the fame Manner if they did not look to themfelves. The Prefent was received, and they faid they would confider of it. When the Embaffadors were withdrawn, their Propofals were debated : Xicotencatl and others fpoke for the Confederacy; Maxifcatzin, defending the Spaniards, advifed them to be Friends with them, alledging the Fidelity and Honour due to Guefts.

He extolled their Valour, affuring them of the fame Advantages the Mexicans propofed, and particularly infifted, that the Friendfinip of the Spaniards ought not to be flighted, as it might contribute to enlarge the Dominions of their Commonwealth, which they could not expect from the Mexicans, whofe Ambition and Perfidioufnefs was well known; befides, that if once the Spaniards were expelled, no queftion was to be made but that they would be greater Eriemies than before, though it were only for having entertained them in Tlafcala. Xicotencatl ftill obftinately infifted, that the Spaniards were ill Men; and both Sides reflecting on each other, it came to fuch a Height, that Maxifcatzin gave Xicotencatl a Pufh from him, and threw him down fome Steps, telling him he was a bafe Man, and a Traitor to his Country. The Mexicans returned home without any other Anfwer, and reported what had happened. Cortes being immediately informed of all thefe Particulars returned Thanks to Maxifiatzin, promifing he would endeavour to make good all he had in his Name promifed to the Republic. Xicotencatl, being fatisfied that Cortes would be acquainted with what had been done in the Council, went to him and faid, he had tried by all Means to acquire Honour, by oppofing him ; but that fince the Gods had made him invincible, he begged he would take him into his Favour, offering his Perfon, and defiring he would make Trial of him in carrying on the War againft Tepeaca, Cbulula and Guaxacingo, fince they had offended him in breaking the Friendfhip and Faith contracted with him, going over to the Culuas, and killing the Spaniards that were marching through that Country ; befides, that to make the War on Mexico, as he intended, it was proper firft to take off their Confederates, and begin with Tepeaca.

Cortes embraced him, returning Thanks for his good Will, and promifing to take fuch Meafures for the Se-vice of the Republic, that it fhould be revenged on all its Enemies. Fifty Days were now paffed fince Cortes's Arrival at Tlafcala, after his Return from Mexico, and Xicotencatl preffed him daily, faying the Men were ready whenfoever he Thould think fit. Though Cortes had more need to have attended his Cure than to enter on frefh Fatigues fo foon; yet, for fear of lofing fo favourable an Opportunity, underftanding that the $\tau_{\text {epeacans, and the }}$ MexicanForces with them, had fecured all the Paffes that led to the Sea, he fent Meffengers to the Tepeacans, and to the other Towns, defiring them to quit the Friendfhip of the Mexicans, and to embrace that of the Tlafcalans, and he would forgive them the Injury done him by breaking their Faith, which they had engaged to him when he marched to Tlafcala. They made little Account of his Offer, but refolved to adhere to the Mexicans. Cortes fignified the fame to the Council of Tlafcala, and they, being Enemies to the Tepeacans, naturally inclined to War, defirous to pleafe Cortes, who had gained all the prime Men, having fent them many Prefents from Mexico, and done them much Honour ; and believing that the War would be very advantageous to the Republic, offered to fupply him with fifty thoufand Soldiers.
5. As Cortes found all things fucceeded to his Mind, and that it was not only juift, but neceffary to chaftife the Injury done by the Tepeacans, he began to prepare for his March. And here he firft thought to fend the King an Account of all that had happened; becaufe he had not done it

Vol. II. Numb. $77^{\circ}$
fince he fet out from Villa Rica for Mexico: He told his Majefty all his Succeffes, as alfo his Misfortune at Mexico with all the Particulars relating to it ; fhewing all his Difappointments to have been occafioned by Pamphito de Narvaez, who could not be brought to an Accommodation, for which Reafon he kept him Prifoner at Vera Cruz; he likewife demanded Men and Horfes, promifed to fubdue that vaft Empire with little Affitance, and without Expence to the Crown; for he offered to pay for the Horfes, Arms, and Ammuniton that fhould be fent to him : He defired fome Reward might be beftowed on Ferom de Aguilar, the Interpreter, who did extraordinary Service; and prepared to fend Mendoca with this Account, and the Value of thirty thoufand Pieces of Eight in Gold: The Alcaldes and Regidores of Villa Rica, who were always with Cortes, wrote at the fame time. Tepeaca being but eight Leagues from Tlafcala, the Inhabitants knew what was coming upon them, and on their Side prepared for War ; but we muft here mention what occafioned this War ; viz. the Affair of the Spaniards thore People deftroyed.

The News of the great Wealth of New Spain being fpread throughout the Inands, feveral Spaniards tranfported themfelves to Vera Cruz; where, about fifty or fixty of them, joining together, fet out for Mexico, by the Way of Tepeaca, at the Time that Cortes was retired to Tlafcala; and all the Country having been informed that the War was declared againft the Spaniards at Mexico, the Tepeacans refolved to kill them and their Captain, whofe Name was Corenado, which they actually put in Execution; and the like was done in other Parts, concluding that the Spaniards, at Mexico, would be all deftroyed, as the Mexicans every where reported. Cortes marched out of Tlafcala with his Spaniards, and fix thoufand Indian Archers, till fuch time as the fifty thoufand Tlafcalans were raifed, to be under the Command of Xicotencatl, affifted by Alonfo de Hojeda, and Fobn Marquez, who fpoke the Language tolerably; he advanced three Leagues, and took up his Quarters at Cinpancingo, whither fo great a Multitude reforted from the Lordfhips of Guaxacingo and Cbuiula, that it was not doubted but that they amounted to an hundred and fifty thoufand fighting Men.

The People of Zacatapeque, and of Acazingo, having made it their Choice to join in this War with the Inhabitants of Tepeaca againft the Spaniards; they, as lying neareft Tlafcala, were firft entirely deftroyed; and then Tepeaca was reduced to fuch Extremities, that the Inhabitants fubmitted, and took an Oath to be good Subjects to the King of Spain. This War happily over, Cortes divided the Profits between his own Forces and the Republic of Tlafcala, after deducting the Fifth for the King. The Republic of Tlafcala was highly pleafed to fee Cortes fhare the Booty fo punctually with them, and befides, their City was full of Slaves, Salt, Cotton, Fea-ther-works, Jewels, and other things they had Occafion for. The City of Ťepeaca being perfectly reduced, Marina underfood that the Mexicans were preparing to fall upon the Spaniards when they leaft fufpected it. Cortes feized fome that were neareft about him, who, he was informed, knew of it ; and, having examined into the Affair, punifhed them feverely. The Mexicans having Advice that Cortes was marched to make War on Tepeaca, took care to fend Armies to feveral Parts to fecure their Frontiers, perfuaded their Allies to ftand by them, and made all poffible Preparations, not only to defend themfelves, for that they looked upon as a Matter of no Difficulty, but to offend the Spaniards; and like a fubtle People, fent the Heads of Horfes, and other things they had taken, to the feveral Provinces they fufpected might be inclinable to forfake their Intereft, giving out that Cortes was dead, and encouraging the People with the Hopes, that having no Commander, they would eafily make an End of all the reft. This Notion fo far prevailed with the Indians, who are naturally fickle, that mon of them revolted, though they had fworn Obedience to the King of Spain; and wherever any Spaniards were they flaughtered them.
When all things were fettled at Tepeaca, and in the $\mathrm{H} h$
neigh-
neighbouring Parts, Cortes fent fome Commanders to reduce thofe that ftill held out; enjoining them to try all gentle and fair Means; and gave out that he would return to Tlafcalo. The chief Men of Tepeaca entreated him, that fince they were become the King of Spain's Subjects, purfuant to the Oath they had taken, he wouid not forfake them; but, in cafe he could not avoid going, he would leave fome Spaniords there, or elfe they fhould be deftroyed: Cortes anfwered, that he would endeavour to fatisfy them, and that they need not fear the Mexicans, for he hoped in God they fhould foon fee them quite difabled ; and thinking the Situation of that City very convenient to fecure the Way to Villa. Rica, as commanding the Paffes through which the Spaniards came into thefe Parts; and that the Province was in the Midft of the Country, near to the Republic of Tlafcala, Guaxacingo, and Cbulula, on which it bordered; and on another Side upon the Culuas, who, being fo clofe by, might occafion new Commotions there: Upon all thefe Confiderations, and to pleafe the Tepeacans, who had defired a Garrifon of him, he fent for the Alcaldes and Regidores of the Council, who were with him, and told them it was convenient to fettle a Colony there, for the Reafons aforefaid; who approving of it, he appointed the proper Officers, and ferom de Aguilar to be Regidore, being always ready to requite thofe that deferved it. He called this Place Segura de la Frontera, i. e. the Security of the Frontier, becaufe founded upon the aforefaid Motives, and becaufe it lay on the Frontiers of Culua.
6. It has been before obferved, that for the better carrying on the War againft the Spaniards, the Mexicans had thought fit to elect Guatimozin for their Emperor, the Nephew and Son-in-law to Motezuma: He was a young Man about twenty-five Years old, of fo much Spirit and Vigilance, that, contrary to the Manner of his Predeceffor, he entirely gave himfelf up to the Care of the Public; being defirous, immediately, to fhew the Advantages of Government when placed in proper Hands: He knew what the Spaniards were doing in the Province of Tepeaca, and, forefeeing the Defigns they might form, when affitted by the united Forces of the Tlafcalans, and other neighbouring Provinces; he began to have thofe seafonable Apprehenfions, which are neceffary to prudent Meafurcs.

Cortes received an Account that his Army was upon the Frontiers, which was confirmed by three or four Nobles, fent by the Cazique of Guacacbula, a populous City, fituate on the Road to Mexico, and a Place which the new Emperor looked on as one of the Ramparts of his Empire. They came to requeft Succour againft the Mexicans, complaining of their Violences, and offering to take up Arms againft them, fo foon as the Spaniards fhould come within Sight of their Town. They made the Undertaking appear eafy and juft; faying, that their Cazique ought to affift as a Vaffal of the King of Spain. Cortes afked them what Force the Enemy had in thofe Parts? They told him twenty thoufand in the Diftrict of their City, and ten thoufand more in another City, called $Y_{z u c a n,}$, four Leagues from them; but that, in Guacacbula, and its Dependencies, they could raife a very confiderable Number of Men, who would be glad of an Opportunity to take up Arms. Cortes examined them very carefully, that he might difcover the Intentions of their Cazique; and they gave fo good an Account of themfelves, as fully convinced him of their Sincerity; and, though he fhould have had fome remaining Sufpicion, he would, at that time, have diffembled it; for, in cafe the Treaty could not have been depended on, it was neverthelefs neceffary to drive away the Enemy, and fubject the frontier Towns before the Mexicons came with a greater Force to defend them.

Cortes applied himfelf fo earnefly to this Enterprize, that the very fame Day he formed an Army of three hundred Spaniards, twelve or thirteen Horfe, and above thirty thourand Tlafcalans, under the Command of Cbrifoopher de Olid; and after he had made this Difpofition, he put his Defign in Execution with fo much Expedition, that the Army marched next Morning. Olid car-
fied the Envoys, fent from Guacacibula, with him, and had Orders to advance with Circumfpection, till he came near the City; and in cafe he fuffected any Treachery, to engage the Mexicans in fome advantageous Poft, and break them before they attacked the Town. They all mauched on very chearfully, till, at fix Leagues from $q^{3} e_{-}$ peaca, and almoit at the fame Diftance from Guacacbula, they found it rumoured among the Peafants of the Country, but without any good Foundation, that the Emperor of Mexico was on the March with his whole Forcc, to relieve thofe Cities.

The Soldiers of Narvacz believed the Report, and fo multiplied the Enemies Forces in their Imaginations that, without hearkening to Reafon, or obeying Orders, they infolently protefted that they would march no farther: So that Cbrifopher de Olid grew angry, and in a contemptuous Manner bid them return; threatning them with the Difpleafure of Cortes, fince they were not touched with the Difhonour of their Retreat. But as he was preparing to profecute his March without them, there happened a new Accident, which, if it did not altogether ihake his Conftancy, yet retarded the Succefs of the Expedition. They faw feveral Bodies of Men defcending from the neighbouring Mountains, and advancing with more than ordinary Diligence; and Cbrifopber de Olid, believing the Mexicans were coming to attack him, drew up his Men in order, in which he acted rightly; for too much Care never did hurt in an Army. But fome Horfe, whom he had fent before to gain Intelligence, returned with an Account, that it was the Cazique of Guaxacingo, with his confederate Caziques, who were come to affift the Spaniards in their War againft the Mexicans, who had ravaged their Frontiers, and threatened their Dominions. Upon this, Olid ordered their Troops to halt, and the Caziques to come before him, which was prefently done.
But that which fhould have given them all entire Satifo faction, occafioned a fecond Uneafinefs in the Soldiers. It began amongft the Tiafcalans, and next infected the Spaniards; for they both declared, that thofe People were not to be trufted ; and that they were fent by the Mexicans to ferve them by falling on the Spaniards during the Engagement. Cbrifopher de Olid heard them, and, without enquiring fufficiently into the Matter, enteredinto their Sufpicions prefently, feized thofe Caziques, andfent them away to Tepeaca, for Cortes to determine concerning them An inconfiderate Action, by which he ran the rifque of raifing a Difturbance between his own People and thofe who really came as his Friends. The Prifoners were brought before Cortes, complaining with a good deal of Reafon of Olid. Cortes heard them with great Kindnefs, and, ordering their Irons to be taken off, endeavoured to regain their good Opinion. But upon further Confideration he found it would be neceflary to carry on this Enterprize in Perfon ; the Diftruft which his Indian Allies had of each other, and the Uneafinefs among the Spaniards, feeming to threaten fome fatal Event. He prefently fet out, and in a few Hours came up with the Army : There every body was pleafed with his Prefence, Things looked in quite another Manner, and the Storm that was beginning to gather difperfed; he reprimanded Olid, for not fending him an Account of the Accident, fince he was fo near, and for difcovering his Jealoufy by the Imprifonment of the Caziques; and, having joined all the Forces, without any farther Delay he marched on to Guacacbutla, ordering the Envoys from that City, to go and inform their Caziques where he was, and what Force he had brought along with him.

The Mexicons were pofted on the farther Side of the City, but on the firt Notice from their Sentinels they advanced with fo much Speed, that by the Time the Spaniards came within Mufket-fhot they had formed their Army, and poffeffed themflives of the Road, with an Intention to try their Strength under Cover of the Town. The Viktory was very vigoroufly difputed ; the Mexicans not only defending themfelves, but advancing with all the Signs of Refolution to maintain their Ground to the utmoft ; when the Cazique of Guacacbula laid hoid of this Occafion to give a Proof of his Fidelity, falling

## Chap. III. for the Reduction of New Spain.

on their Rear, and at the fame time affaulting them from the Walls with fuch Bravery as much facilitated the Victory; and in half an Hour the Mexicans were intirely defeated, there being but few who were not either killed or wounded. When Cortes had fettled his new Conquefis, he returned to Tepeaca which he called Segura de la Frontera, and there he received the News, that his firm Friend Mawifcatzin was at the point of Death, at Tlafcala, which baftened his Return thither, though not time enough to find him alive: He died a Chriftian, and as much attached to the Spanifb Intereft as ever ; fo that Cortes was much concerned for the Lofs of him, but his Grief however was foon leffened by the coming of a frefh Reinforcement of Spaniards in the following Manner
7. A Ship of moderate Burden arrived at Fuan de UTua and brought thirty Spanifb Soldiers, two Horfes, and fome Provifions and Ammunition, which Velafquez fent to Narvaez, taking it for granted that all the Conquefts in that Country were his own, and the Troops of Cortes at his Devotion. Their Commander was Pedro de Barbar, the fame who was Governor of the Havanna when Cortes failed from the Ine of Cuba, having by his Friend:hip efcaped the laft Snares that were laid to ftop his Voyage. Pedro Cavallero, who commanded on the Coaft, no fooner difcovered the Veffel, but he went out in a Boat, faluted the new Comers with great Civility ; and having found by the very refpectful Manner with which Pedro de - Barba inquired after Narvaez the Defign of their coming, anfwered him, without the leaft Hefitation, that he was not only in good Health, but in great Profperity, all thofe Countries having fubmitted to him, and that Cortes and fome of his People were fled to the Mountains; which induced them to land without the leaft Diftrut, and go to Vera Cruz, where they difcovered the Deceit, and found themfelves Prifoners to Cortes. Barba commended the Stratagem of Cavallero, for in reality he was not forry to find his Friend in fo good a Condition.

They were carried up to Segura de la Frontera, and Cortes fhewed a particular Satisfaction at the Arrival of more Spaniards, with the agrecable Circumftance of receiving this Succour from the Hands of his Enemy. He treated Barba very kindly, and gave him a Company of Crofs-bows, upon the Confidence he had of his Friend-fhip:- He diftributed Gifts among the Soldiers, upon which they agreed to ferve under his Command. He afterwards read the Letter privately, which Barba brought for Narvaez; in which Velafquez, fuppofing him Mafter of all thofe Conquefts, gave him Orders to maintain himfelf there at all Adventures; for which End he promifed him very powerful Succours ; and, laftly, told him, that if Cortes was not dead, he fhould immediately fend him away with a fufficient Guard, for that he had received exprefs Orders from the Bifhop of Burgos to fend him Prifoner to Court. About eight Days after arrived a fecond Veffel with another Reinforcement for Narvaez, which Pedro Cavallero feized after the fame manner. She brought eight Soldiers, and a Mare, with a confiderable Quantity of Arms and Ammunition, under the Command of Capt. de Lobera. They all immediately went to Segura and lifted themfelves, as the others had done

Thefe Succours came by a Way fo unlooked for, that Cortis confidered them as good Omens, and Forerunners of future Succefs. He had already refolved on the Conqueft of Mexico, and the great Number of Allies by which he found himfelf fupported in his latt Expedition confirmed him in his Refolution. But the Paffage on the Lake was the grand and unavoidable Difficulty, and gave him great Concern; for, after the Enemy had once found out the Secret of breaking the Bridges of the Caufways, there was no depending upon portable Bridges, which were only to be ufed when they were pinched in Time; wherefore he began to think of building twelve or thirteen Brigantines, which fhould be able to refift the Indian Canoes, and tranfport his Troops to the City ; and thefe he propofed to carry in Pieces on the Shoulders of the Indidn Tamenes for fourteen or fifteen Leagues at leaft of very bad way, over the Mountains of Tlafcala, to a Kiver near the Lake. He had a vigorous' Imagination, and was naturally an Enemy to fuch lazy Spirits as fancy
diffout Things to be impoffible. Fe communicated his Thoughts to Mortin Lopez, on whofe Ingenuity and great Abilities he depended for the compafing this important Defign; and found he did not only approve of $\mathrm{i} i$, but alfo undertook to execute it without Dificulty.

He fent him before to Tlafola, with all the Soanif Soldiers who had any Skill in the Carpenters Trade, in order to begin the Work, with a fufficient Number of Indians to cut Wood, or do any other Service for which there might be Occafion; at the fame cime he ordered the Iron-work and Rigging, and whatever had been preforved out of the Ships that were funk, to be brought up from Vere Cruz ; and, having obferved that thofe Mountains produced Trees which aford a kind of Rofin, he drew out fuch a Quantity as was neceffary for the careening of his Barks. He was in want of Powder, but foon found Means to make very good, fending to fearch for Sulphur in the Vuicano difcovered by Diego Ordaz; for he believed they could not fail of finding it there: And fome Spanifh Soldiers belonging to the Artillery offered their Service; and, in fine, returned with as much Sulphur as was wanted. When this Affair was over, he began to think of returning to Tlafcala, to haften as much as he could the Preparations for his Expedition ; and before he went he left his Inftructions with the new Council at Segura, and appointed Capt. Francifco de Orozco Commander of the Garrifon, with about twenty Spanifh Soldiers, and the Militia of the Country, at his Difpofal.
8. Cortes complained with fome Warmth of Francifoo Garay, becaufe, knowing the Progrefs he had made in the Empire of Mexico, he did not, notwithftanding, endeavour to make a Settlement in the Province of Panuco; but fuch a happy Afcendant had the Fortune of Cortes, over that of his Rivals, that as Velafquez furnifhed him with Succours, the fame Way by which he intended to deftroy him, and fupport Narvaez; fo the Meafures which Garay had taken to ufurp fome Part of his Government, turned likewife to his Advantage. We have already related how Garay was repulfed, when Cortes was with his Troops at Zempoalla; notwithftanding which, he prepared another Fleet, with a greater Number of Soldiers, commanded by his beft Officers.
But the fecond Expedition was as unfortunate as the firft ; for the Spariards were no fooner landed, than they met with fuch Refiftance from the Indians, that they were glad to retreat to their Ships in the utmoft Diforder ; and, being wholly intent how to avoid the prefent Danger, put to Sea without obferving the fame Courfe. They were feparated for fome Days, and, without knowing any thing of each others Defign, they arrived almoft all at the fame time, on the Coaft of Vera Cruz, where they agreed to ferve under Cortes, without any other Motive than that of his great Reputation. This Succour was looked upon as fent from Heaven; for tho' it be certain that the Confufion of the Soldiers and Sailors might help to difperfe thefe Veffels, which forced them on the Coaft, where they were fo much wanted, yet their coming fo opportunely, and after fo many Miffortunes, to augment the Troops of Cortes, is an Event worthy of particular Reflection.
The firft Ship that arrived was commanded by Captain Camargo, and had on, board fixty Spanifs Soldiers; a little after came another with fifty choice Soldiers, and feven Horfe, commanded by Captain Miguel Diaz, a Gentleman of Arrogon, who had fignalized himfelf on all Occafions; and laftly, though fomewhat late, arrived the Veftel commanded by Captain Ramirez, with forty Soldiers, ten Horfes, and great Abundance of Provifions and Arms. They all landed, and the firt, without ftaying for the reft, made the beft of their Way to Tlafcale, leaving an Example to the Followers to take the fame Rout, which they all did with entire Satisfaction; for the great Advantages made by Cortes, in New Spain, had made fuch a Noife over all the Mands, that the Soldiers were eafly led whither they thought Profperity invited them. This. Succour angmented the Number of the Spaniards, and infpired them with frefh Hopes. The Soldiers received the new Comers with Joy; they embraced each other as Eriends of a long Acquaintance,
without
without any other Tye than that of coming from the fame Country.

Notwithftanding this good Fortune, he could not quiet the Soldiers of Narvacz, who were importunate with him, for leave to return to the Ine of Cuba; they put him in Mind of his Promife, and he could not deny but that they went upon the Expedition to Tepeaca on that Condition; for which Reafon he was not willing to enter into any new Difputes with them, and the rather becaufe he found his Troops augmented with Soldiers, better difciplined, and did not think it a proper time to march at the Head of unwilling Mutineers.

For thefe Reafons therefore he ordered a Proclamation to be made: That whoever bad a Mind to return bome, was free to go, and Jbould be furnibsed with Velfels, and every thing elfe that was neceffary. The greateft Part of the Soldiers of Narvaez made ufe of the Opportunity, but fome ftayed; and what deferves to be remarked is, that Andres de Duero, who appeared on feveral Occafions fo much attached to the Intereft of Cortes, was one of thofe who retired; and although there be no Account of the Reafon of this Separation, we may very well believe there was but little Sincerity in the Pretences with which he coloured his Retreat; fince we find him, fhortly after, making ufe of all his Intereft at Court in favour of Velafquez.
9. Cortes having now got rid of thefe Mutineers, whom Alvekado had the Care of conducting to the Veffels, began to confider of the Time neceffary to be employed in building the Brigantines. He difpatched new Orders to the Confederates, to hold themfelves in readinefs to march upon the firft Notice, directing the Quantity of Provifions and Arms they were to provide: And at his Leifure Hours he wrote an Account of all the Particulars of the Conqueft, to be fent to the Emperor; defigning to equip a Veffel, and fend new Agents, who might haften the Difpatch of the former, or give him Notice of the Condition his Affairs were in at the Court of Spain; his Uncertainty therein being now one of his greateft Difquiets.

Cortes drew up this Account in form of a Letter, and repeating every thing of Importance in the Difpatches he fent the Year before by the Captains Portocarrero and Montexo, he gave his Majefty a faithful Relation of all his Adventures, from the Time he marched out of Zempoalla, and by his Courage and Conduct made his triumphant Entry into the capital City of the Empire, till he was afterward forced to retreat to Tlafcala with confiderable Lofs. He alfo acquainted him with how much Security he was able to maintain himfelf in that Province, together with the Number of Spaniards that had augmented his Troops, and the great Confederacies he had made with divers Indian Nations, for renewing the War againft the Mexicans. He expreffed, with a noble and generous Confidence, the Hope he had of reducing to his Majefty's Obedience all that new World, whofe Bounds to the North were unknown even to the Natives. He enlarged upon the Riches of that Empire, the Fertility of the Soil, and the Wealth of the feveral Princes. He highly extolled the Valour and Conftancy of the Spaniards, and the Affection and Fidelity of the Tlafcalans; with Relation to himfelf, he left it to his Actions to fpeak for him. He defired fpeedy Juftice againft the unfair Proceedings of Velafquez, and Francifco Garay; and made preffing Inftances of an immediate Succour of Soldiers, Horfes, Arms, and other warlike Provifions. He reprefented, in yet flronger Terms, the Neceffity of fending fome Ecclefiaftics and Regulars of approved Virtue, to affift Father Olmedo in the Converfion of the Indians; giving an Account that fome of the Chief among them were already baptized, and that in the reft there was fuch a Difpofition to receive the Truth, as gave great Hopes of its making a confiderable Progrefs.

The General fent thefe Difpatches by the Captains, Mendoca and Ordaz. His private Inftructions to them were, "That before they difcovered their Commiffion, ${ }^{*}$. or made any Declaration of their being fent by him, *6 they fhould firt find his Father, and the two Agents "s who were fent the Year before, and jointly carry on
"6 their Negociation, according as the Condition of his "Affairs fhould require." He, remitted alfo a fecond Prefent to the Emperor, confifting of Goid and other Curiofities, which had been preferved at Tlafcala, to which the Soldiers alfo contributed, and were, upon this Occafion, very liberal; adding the Booty acquired in the Expeditions of Tepeaca and Guacacbula;-a Prefent lefs in Value than the former, but more deferving, as being amaffed in the Midft of their Difgraces, after thofe Loffes whereof Cortes had given a faichful Account in his Letters.
10. It is now neceffary, in order to the perfect underftanding of what is to follow, that we fhould look over into Spain, in order to fee what Effects both thefe and the former Applications produced in his Favour had; fince, at prefent, he was not in more Danger from the Arms of his Foes in the new World, than from the repeated Efforts of thofe implacable Enemies which, in dipite of all his glorious Succeffes, laboured his Deftruction in the old. That we may perform what we intend of this kind at once, we will take up things from the Beginning, reducing the whole of this Controverfy in the Spanibl Court, into as narrow a Compafs as is poffible. It was a long time that Martin Cortes, with the two firt Envoys of his Son, Alonso Portocarrero, and Francifco de Montexo, held the wretched Employment of waiting in the Antichambers of the Minifters, fo far from being admitted to Audience, that, not daring to importune them, they only prefented themfelves in the Throngs as they paffed by, and were forced to content themfelves with receiving an accidental Glance of an Eye, the comfortlefs Notice taken of thofe who are afraid to ruin their Pretenfions, by advancing them unfeafonably. The Emperor, however, gave them a very favourable Hearing, and found fufficient time to inform himfelf, exactly, of all that paffed in new Spain, and to judge what might be expected from the Enterprize. And, in order to this, he made himfelf Mafter of the whole Affair, not difdaining to afk Queftions upon many Points. By this Means the Einperor difcovered the great Advantages which might be expected from fuch wonderful Beginnings: And the Idea he at that time formed of the Merit of Cortes helped to recommend him to his Favour, as he was naturally inclined to value extraordinary Men.

The fudden Departure of the Emperor did not permit him to come to any Refolution, in a Matter wherein fo many Difficulties were raifed, as well by the Agents of Velafquez, as by fome Minifters who fupported them. But when the Day of his Embarkation came, which was the 2oth of May, I520, his Majefty did, in a particular Manner, recommend the Affair of Cortes to Cardinal Adriano, Governor of the Kingdom in his Abfence. The Cardinal was very fincerely defirous to favour his Caufe; but as the Informations, by which he was to govern himfelf, came from the Council of the Indies (where the Votes were influenced by the Authority and Prejudice of the Prefident the Bifhop of Burgos) he found himfelf at a Lofs how to come to any Refolution; nor was it an eafy Vatter to affure himfelf of making a right Judgment, while the Reprefentations of Velafquez came cloathed with the Appearance of Juftice, and the noble Exploits of Cortes were difcredited with the Name of Rebellion. Afterwards, when it was moft neceffary, there wanted Time to examine into the Truth of this Affair, the Cares of the Minifters being employed in Matters of the laft Importance. It was, indeed, a very improper time to confider of new Enterprizes, when the Minifters were fo wholly employed in finding Remedies for the Evils which aflicted the State within Doors, that thofe without made no Sort of Impreffion upon them: So that Martin Cortes, and his Friends, fenfible of the fimall Advantages they reaped by their Solicitations, and of the general Diforders of Affairs, retired to Medillin, with a Refolution to let the Storm blow over, and expect the Return of the Emperor, who was perfectly well apprized of the Affair, and had fhewn a Difpofition to do Juftice to their Pretenfions; and they plainly faw that his Authority was neceffary to furmount the Oppofition of the Bimop of Burgos, and other Impediments which arofe from the prefent Pofture of Aftais.

Some

Some little Time after Ordaz and Mendoça arrived at Scuille after a prófperous Yoyage ; and, without difcovering themitlves, or their Commiffion, they took Care to be informed about Cortes's 'Affairs, a Precaution which imported no lefs than their Liberty; for they underftood, to their great Surprize, that the Commiffioners of Trade had exprefs Orders from the Bifhop of Burgos, to ftop and imprifon any Perfon who fhould be fent from New Spain, and to feize on the Gold and other Merchandize that he thould bring, either on his own Account, or by way of Commiffion. Upon which they only endeavoured to fecure their Perfons, and thought themfelves yery happy in preferving their Letters and Difpatches, leaving the Prefent for the King, with every thing elfe, in the liands of thofe Judges, and to be difpofed of at the Pleafure of the Bifhop of Burgos. They parted from Seville, not without great Apprehenfion of buing difcovered; determining, it poffible, to find out at the Court either Martin Cortes, or the two Agents, in order to get Light how to proceed; but hearing, on the Road, that they were retired to Medellin, they went on to that Town, where their Arrival was welcomed with all the Demonftrations of Joy which fuch wonderful and wifhed for News could infpire. It was debated among them, whether it would be proper to carry the Difpatches of Cortes immediately to the Cardinal-Regent, without delaying to inform him of fuch important News: But, confidering the prefent Difturbances of the Kingdom, they thought it would be to no Purpofe to fpeak of diftant Advantages, upon which they refolved to continue in their Retirement, till the Minifters were more at leifure.
The Account which came foon after, 'of the Emperor's Return, contributed very much to reftore the public Tranquility ; he gave Affurance, in his Letters, that he would leave al! other Affairs, to come where his Prefence was fo neceffary. This Affurance entirely fettled every thing, and Martin Cortes, judging it a proper Time to renew his Solicitations, fet out immediately for the Court, with the four Commiffioners from his Son; where, after fome fmall Delays, they had a particular Audience of the Cardinal-Regent. They informed him, in general, how far Matters were advanced towards the Conqueft of Mexico, and referred him to the Letters of Cortes for the Particulars. They gave him alfo an Account of the Orders they found at Serille, for imprifoning any one who fhould come from Cortes, and of the Seizure of the Prefent they had brought for the King. Upon this Occafion, they reprefented the Reafons they had to diftuft the Bifhop of Burgos, and, laftly, defired Leave to except againft him, in a legal way, as a Judge, offering to make good the Reafons of their Exception, or fuffer the Penalty of their taking fuch a Step. The Cardinal heard them with Attention; he feemed touched with their Misfortune, and comforted them with Promifes of a fpeedy Difpatch: He was particularly difpleafed with the Orders given at Seville, and the Seizure of the Prefent, as being done without his Knowledge. And farther, the Cardinal anfwered them, with regard to their Requeft concerning the Bimop, That they might take their Remedy againft him at Law.

With thefe Encouragements to hope for better Fortune they immediately entered their Exception againft the Prefident of the Council of the Indies, in his own Court, delivering their Reafons in Writing, with all the Temper and Moderation neceffary to a due Refpect. But their Reafons were fo ftrong, and the Truth of what they alledged fo well known to the other Judges, that they durft not deny Juftice in an Affair of that Importance, and more efpecially on the Approach of the Emperor's Return. After a full Hearing; the Bifhop was abfolutely forbid to interfere in any Matter between Cortes and Velafquez. His Orders were tevoked, the Embargoes at Seville taken off, and the Importance of the Undertaking appeared in its true Light. The heroic Actions of Corbes, which were almoft obfcured before by the Sufpicion of his Fidelity, were now celebrated as they deferved, and the Cardinal, by feveral Decrees, recommended the Difpaich of the Envoys, and was fo fincerely defirous to forward the Affair, that, even after he had

Voe. II. Numb. 77.
received the News of his Exaltation to St. Peter's Chair, he difpatched fome Orders favourable to Cortes, as he was on the Road to embark.
II. In a fhort Time after the Emperor's Arrival in his Spanifh Dominions he gave Audience to the Envoys of Cortes, and notwithftanding thofe of Velafquez at the fame Time prefented their Requeft; yet, as he had been well informed of the Cafe, on both Sides, by Letters from the Cardinal, now Pope, he, by a new Sentence, confirmed the Recufation of the Bifhop of Burgos, and appointed Commiffaries to determine this Affair. The firft. thing the Council did was, to look over the Memorials; drawn from Letters and Relations produced at the Trial ; but there they were fo embarraffed by contradictory fccounts, that they thought it neceffary to order the Agents, on both Sides, to explain themfelves vive voce at the next Meeting; for they wete all defirous to difpatch this Affair, and examine ftrictly into the Accufations brought by the Parties againft each other, and into the Strength of their refpective Arguments, that fo they might come to the Knowledge of the Truth.

The next Day the Agents appeared before the Council, with their Advocates, and, amongtt thofe for Velafquez, Andres de Duero fignified himfelf. But People were the lefs furprized to fee him unfaithful to his Friend, knowing he had been fo firft to his Mafter. The Memorials were read, and the Parties at the fame Time were examined, in order to difcover how they juftified themfelves from their refpective Accufations. From. their Anfwers the Judges drew what was fufficient to decide the Affair; and, after fome few Days Hearings, the Court unanimounly agreed, "That it was not reafonss able for Velafquez to appropriate to himfelf the Con"q queft of Nere Spain, without a better Title than that "s of having expended fome Money in the Preparations " for that Enterprize, and naming Cortes. for Com"s mander: That he could only have his Action for what "s he had laid out : That the Nomination of Cortes af: os forded him no Pretence; for befides that he gave " him the Commiffion without the Authority of the "Commiffioners of the Royal Audience; whofe Orders " he fhould have received, or fo much as acquainting "s them with it, he loft thofe Prerogatives the Day that "s he revoked it, and could have no right to fays that " the Conqueft was made by his Order; Cortes being; " by that Revocation, left free to act as he fhould judge "c moft advantageous for the Service of the King, with " the Troops and Veffels, which for the moft Part he "c had equipped at his own Expence, and that of his "Friends: And laftly, they cenfured Velafquez, as a "Perfon who had fhewn a very ungovernable Ambi" tion, in afpiring to ufurp the Glory and Advantage "s of the Actions of another, and as having been guilty "، of a Rafhnefs, which deferved a very fevere Repri"s mand, in fending an Army againft Herrian Cortes, "s without confidering the Confequences which might " have attended fuch violent Proceedings, or regard" ing the Orders he had received to the contrary, from "s the Minifters of the Royal Audience of Santa Do. "mingo."

Thefe Conclufions wiere laid before the Einpeior, which being approved by his Majefty, Sentence was pronounced, declaring Hernan Cortes to be a good Minis fter and faithful Subjeok; honouring with the like Approbation the Officers and Soldiers under his Command impofing perpetual Silence on Velafquez, on the Subject of having any Pretenfions to the Conqueft of Nero Spain, and ftrictly commanding him, on Pain of fevere Punifhment, not to raife the leaft Obftacle to that Affair, directly or indireetly, with a Refervation to any Demand he might have, on account of Monies by him expended in the Armament of the Veffels which he was to fue fors in the ordinary way of Juftice. And thus ended this Affair ; the Judges referring the Honours defigned for Cortes; the reprimanding Velafquiez, and other Conclufions of the Council, to the Difpatches that were to be fent in the Name of the Emperor. The next thing taken into Confideration was the Affifance to be giverz Cortes, the Care of which the Emperor referred to the fame Council. He gave a very favourable Audience to
his Agents, beftowed feveral Marks of his Kindnefs upon Martin Cortes, on account of his Son's Merit, whom he promifed to reward according to his Service.

Several Regulars were named for the Converfion of the Indians: He ordered a confiderable Number of Arms and Horfes to be embarked in the firft Fleet, and, confidering how much the utmoft Difpatch imported to them, he commanded the Orders to be immediately drawn, and fent ; one was directed to the Royal Audience of Santa Domingo, another to VelaSquez, ftrictly enjoining him to defift from further interfering in that Enterprize, and feverely cenfuring his violent Proceedings; another to Francifco Garay, blaming him for attempting any thing on Nere Spain: The laft, was directed to Cortes, and abounded in thofe Marks of Honour and Favour, which Kings beftow on thofe from whom they have received extraordinary Services, when they do not difdain to own the Obligation. Thefe Difpatches were figned by the Emperor in Valladolid the 22d of October I 522 , and fent away with two of the Envoys of Cortes, the other two remaining to follicit Succours, and receive Inftructions that were framing for the Government of the new conquered Country. But to return,
12. When our Hero refolved to renew the War, it was towards the Year 1520, and he had no fooner refolved than fo lucky an Accident happened, as gave both himfelf and his Soldiers frefh Spirits. A Ship arrived at Vera Cruz with Arms and Ammunition on the Account of private Merchants, but both the Captain and all his Men were fo charmed with the Reports they heard of the Riches of Mexico, that they quitted their Ship, and joined the Army. The next Day there was a general Mufter, when it appeared, that there were five hundred and forty Foot, and forty Horle, together with nine Pieces of Cannon. The Tlafcalans furnifhed ten thoufand Men, and the Confederates in Proportion.
The Army marched that Day fix Leagues, and took up their Quarters in a Place called Tezmeluca, which fignifies a Grove of Oaks. It was a confiderable Town, fituate on the Mexican Confines, and in the Jurifdiction of Guaxacingo, whofe Cazique took Care to provide fufficiently for all the Troops. The Day following they continued their March with all neceffary Precautions. They received Advice, that the Mexicans were affembled on the other Side of a Mountain, which rendered the Road of Tezcuco very difficult, and becaufe they came not to that Place till towards Evening, and it was not advifeable to march through fuch broken mountainous Ground when Night was approaching, the Army made a halt. In the Morning they began to mount the Hill, and penetrate the Woods, but they had not marched much above a League, when the Van-guard returned, with an Account that the Enemy had ftopt up the way, with Trees laid a-crofs, and fharp Stakes, which they had fixed in the loofe Sands, to wound the Horfes; upon which Cortes faid to the Spaniards aloud, Thefe valiant People don't feem very defirous to meet us, fince they take fo much Pains to fop up our way to them; and he ordered two thoufand Tlafcalans to join the Vanguard, and clear the Road, which they executed with fo much Expedition, that the Rear of the Army fcarce feemed to ftop.
From this Place they difcovered the great Lake of Mexico, and upon this Occafion Cortes put his Soldiers in Mind of the Riches they had enjoyed, as well as of what they had fuffered in that City, mixing the good and bad, that he might animate them to Revenge. They likewife difcovered feveral Fires in diftant Towns, fucceeding one another with fome Intermiffion; and, tho' there was no doubt but thefe were Signals made on the Difcovery of the Army, they purfued their March, with the fame Precaution. They foon difcovered, at a great Diftance, the Enemy's Army, which took up all the Plain, without making any Motion, feeming refolved to continue in a Poft from whence they could eafily make a Retreat. The Sponiards rejoiced at the Opportunity of coming fo foon to an Action, and the Tlafcalons did the fame: But the Joy of the latter foon turned to Fury; fo that Cortes was obliged to make
wfe of his Authority, and the Diligence of fome of his Captains, to prevent their running into Diforder.
The Mexicans were on the farther Side of a great Baranco, or Chafm in the Earth, which muft of Necefficy be paffed. It was made deeper by a Brook, which, collecting all the Waters from the Mountains, ran through it, and was at that Time confiderably fwelled. The Mexicans had a little wooden Bridge over it for the Ufe of Paffengers, which they could eafily have broke down, but had left on Purpofe, as was afterwards fuppofed, that they might deftroy their Enemies in that narrow Pafs, thinking it impoffible that they could ever form themfelves on the other Side, when fo vigorounly oppofed. After this Manner they reafoned, when at a Diftance from Danger; but when they difcovered the Army of Cortes, which they had believed to be fo numerous, their Imaginations were ftruck with other Notions: They wanted Courage to defend their Poft, and therefore began to retire by little and little, without turning their Backs. Cortes advanced with Speed, and when he came up to the Baranco, he efteemed it a Piece of good Fortune that the Enemy had quitted it ; for, notwithftanding the Spaniards found no Refiftance, they had fome Difficulty in paffing it. He detached twenty Horfe, and fome Companies of Tlafcalans, to keep the Enemy in play, without engaging farther, until fuch Time as the reft of his Troops were paffed. But the Mexicans no fooner faw them drawing up on the other Side of the Baranco, than they laid afide all their Policy, difperfing themfelves at once, fome betaking themfelves to the moft unfrequented Paths, and others feeking Refuge in the Mountains.
Cortes did not care to lofe Time, but marched to poffers himfelf of Tezcuco. The Army in their March made forme Slaughter of the Mexicans, who had abfonded in the Woods. The fame Night the Troops quartered in a Place lately forfaken by the Inhabitants, within three Leagues of Tezcuco, where they doubled their Sentinels, and were in a Manner all Night under Arms. But the next Day, at a little Diftance from the Town, they difcovered about ten Indians, who were coming in Hatte along the Road, with the Appearance of a Meffage, and who brought with them a Plate of Gold, in form of a Flag, hanging to the Top of a Lance, which was looked upon as a Sign of Peace.

The Chief of them came as Embaffador from the King of Tezcuco, defiring Cortes to fpare his People and Country; acquainting him, that he defired to be his Confederate, for which End he had provided good Quarters for all the Spaniards in the City; and that the reft of the Nations, under his Command, fhould be fupplied with every Thing that was neceffary. Cortes put fome Queftions to him ; and, as he came well inftructed, he anfwered without Hefitation; adding, that his Mafter had juft Reafon to complain of the Emperor, who was about to execute his Revenge upon him by fome Extortions, and other Oppreffions not to be endured, for his having refufed him his Vote in his Election, for which Reafon he was refolved to unite himfelf with the spaniards, as one of the moft interefted in the Ruin of that Tyrant.
It does not appear from any of the Spani/h Hiftorians who this King of $\mathcal{T}$ ezcuco was; but they all agree, that he was both a Tyrant and a Ufurper, fo that as foon as the Spaniards were in Poffeffion of the Place, the Nobility defired Cortes to reftore their lawful Prince; which, as it was an Act of Juftice, and feemed to promife much in favour of the Spanish Intereft, he readily performed, to the great Joy of the Inhabitants.

I3. As they made fome Stay in this City, Olmedo found Means to convert the King to the Chriftian Religion; and he proved both a faithful, and an uffeful Ally; fending fix or feven thoufand of his Subjects to affift in widening the Canals, that they might the better receive the Brigantines, which had been prepared in order to fail into the great Lake, againft the armed Canoes, which the Indians employed thereon. Cortes, at the fame time, defiring to undertake fomething to facilitate the Enterprize upon Mexico, refolved to advance to the City of

Iztapalapa,

Iztapalapa; fix Leagues forward, that he might deprive the Mexicans of the Shelter for their Canoes, and partly to give the confederate Indians fome Employment.
The City of Iztapalapa was fituated upon the fame Caufway by which the Spaniards made their firft Entry into Mexico; and difpofed after fuch a Manner, that the greateft Part of the Building was within the very Lake, whofe Water was brought into that Part of the Town, which was built upon the Bank, by Trenches, to let it in as Occafion required. Cortes charged himfelf with the Care of this Expedition, and took with him the Captains Alverado and Olid, with three hundred Spaniards, and ten thoufand Tlafcalans; and though the young King of Tezcuco was defirous to accompany him, he would not permit it, telling him his Prefence would be more ufeful in the City ; the military Government of which he left to Sandoval, and, with both of them, fuch Inftructions as he thought neceffary for the Security of their Quarters, and to keep things in order in his Abfence. They prefently began their March by the Caufway, defigning to poffers themfelves firft of that Part of the City which was built upon it, and difodge the Inhabitants from the other Part, with the Artillery and Firearms: But the Enemy was informed of their Motions, and the Army was no fooner come within fight of the Place, than they difcovered a Body of about eight thoufand Men; at a little Diftance from the Walls, who came out to defend them with fo much Refolution, that, though they found themfelves inferior in Number, they ftood the Engagement, and fought with Bravery enough to retire with Reputation, which they did in a little time to the City; where, without flaying to defend the Entrance, or fhut up the Gates, they inftantly difappeared, throwing themfelves into the Lake in diforder.
Cortes was fenfible that this kind of Retreat had the Appearance of a Stratagem, to draw him into fome greater Danger, and therefore marched his Army into the City with all poffible Precaution, but he found the Houfes utterly abandoned; and, though the Noife and Cries of the Enemy continued in that Part, which ftood in the Water, he refolved, with the Advice of his Captains, to maintain himfelf in the Poft where he was, and lodge within the Walls, without attempting any thing farther, the Day being far fpent: But it fcarce began to be dark, when they perceived the Canals every where to overflow, the Water running impetuounly over the lower Grounds.
Cortes immediately underfood that the Enemy's Defign was to drown this Part of the City, which they might eafily do by opening the Sluices of the great Lake; and, as the Danger was inevitable, he was obliged to give Orders, inftantly to quit the Place; and, though they made all the hafte poffible, the Water came above their Knees. Cortes was very much mortified, that he had not prevented this Stratagem of the Indians; as if it was pofiible, with the utmoft Vigilance, to provide againft all Accidents. He drew out his Army into the Road of Tezcuco, to which Place he thought to retire, deferring the Enterprize of Iztapalapa to a more favourable Opportunity; for it was impracticable, at this time, without a greater Force on the Lake-fide, and fome Veffels, to drive the Mexicans from the Place. The Troops lodged that Night on a little Hill free from the Water, where, neverthelefs, they fuffered very much, being wet and without any Defence againft the Cold; but in fuch good Heart, that there was not the leaft Murmuring among the Soldiers.
At the firft Appearance of Day, he continued his Retreat, and haftened the March of his Men. As foon as it was broad Day, they difcovered a formidable Body of Enemies in purfuit of the Army. Cortes, notwithitanding this, marched on, but more flowly, though the Soldiers moved but very unwillingly, being animated with a Spirit of Vengeance againft their Enemies. When Cortes thought convenient, he ordered his Troops to halt and face about; and the Enemies began the Attack with the fame Precipitation that they purfued; but the Spani/b Crofs-bows, and the Bows of the Tlafcalans, gave a Check to their firt Fury; and at the fame time the

Horfe charged them, making Room for the confederate Troops, who entirely broke that diforderly -Multitudes and obliged them to leave the Field with confiderable Lofs.

Cortes purfued his March without fopping, to reach his Quarters before Night. But the Enemy, no lefs diligent in rallying than retiring, advanced a fecond and third time to the Attack, without being terrified with the great Slaughter they had fuftained; till fuch time ass fearing to approach too near Tezcuco, where the whole Strength of the Spaniards lay, they marched back to $I z-$ tapalapa, fufficiently chaftized for their Boldneefs, having loft, in the three Attacks, fix thoufand Men: And tho ${ }^{5}$ Cortes had fome wounded, he loft only two TZafcalons and one Horfe, who, covered with Arrows and Cuts, yet lived to bring off his Mafter. Cortes, and all his Army, a little before Night, entered the City of Tezcuco, with the Glory of three Victories obtained by the Way, which gave Reputation to the Expedition, and covered the Difgrace of the Retreat.

Whilft Cortes remained in Tezcuco, he received fres quent Vifits from the Neighbouring Caziques; among the reft there came Meffengers from the Provinces of Cbalco and Otumba, with an Account that there was a powerful. Army of Mexicans upon their Frontiers; who had Commiffion to deftroy them, for having made an Alliance with the Spaniards. They defired Succour to affift them in their Defence: This Requeft appeared neceffarys for it imported Cortes very much, not to fuffer the Mexi-cans to fix themfelves in a Place where they might cut off his Communication with Tlafcala. He immediately difpatched Sandoval and Lugo, with two hundred Spaniards, fifteen Horie, and a fufficient Number of Tlafcalans; among whom, there were fome who hiad obtained his Permiffion to retire to their own Country, and fecure the Spoils they lad obtained in the War. Thefe Wretches marched with the Baggage of the Army, and, as Avarice regulated the Weight of their Burdens, they had fo overloaded themfelves, that they could not keep up with the Troops, but were forced to ftop frequently to take Breath.
The Mexicans being informed of this, fell upon them in one of their refting Places; Sandoval and Lugo returned immediately to their Relief, and fell upon the Enemy fo vigorouny, with their whole Force, that they turned their Backs as foon as attacked: Five or fix Tlafcalans; who were difarmed and embarraffed with their Burdens, perifhed upon this Occafion, but the Spaniards recovered all the Booty, with fome Addition. They continued their March, till the Army, having paffed the Province of Cbalco, approached the Frontiers of Tlafcala. The Mexicans had affembled all the Troops of the neighbouring Provinces, to chaftize the Rebels of Cbalco and Otumba; and, knowing that the Spaniards were coming to the Relief of thofe two Nations, they reinforced themfelves with Part of the Troops quartered about the Lake; and having thus a very formidable Army, pofted themfelves on the Road the Spaniards were to pafs, to try their Strength in the Field. Sandovaland Lugo, having given what Orders they thought neceffary, advanced in order of Battle, without altering their Pace: But, on Sight of the Enemy, the Sponiards and Tlajcalans halted, to examine more narrowly the Intention of that Body of Troops.
14. The Mexicans had the Advantage in Numbers, and advanced in Crowds, and made the firt Difcharge, without any Effect. The two Captains, taking Advantage of their Confufion, ordered the Horfe to advance, whofe Attack immediately made Room for the Spaniards and Tlafcalans, breaking this diforderly Multitude with great Slaughter. The Flight of the Enemy foon became univerfal; and the Troops of Cbalco and Otumba, which had fallied out on the Noife of the Battle, coming up at the fame time, the Chace was fo bloody, that the Mexi= can Army was entirely defeated, with lithle or no Lofs. Eight of the molt confiderable Prifoners were referved; in order to get fome Information from them; and the Army paffed that Night to the City of Cbalco, whofe Cazique went before to prepare Quasters with great
abundance of Refrefhments for all the Troops; nor did he forget to have the Victory celebrated with Rejoicing, after the ufiual Manner of that People.
The Inhabitants of Cbalco, as Subjects of the Mexican Empire, were Enemies to the Tlafíalans, and had, befides, perpetual Difputes with them about their Frontiers : But this Night all their Quarrels were forgot, at the Defire of the Cbalquefes. The Spaniards were Mediators at the Treaty, and, the Chiefs of both Nations being affembled, Peace was concluded: Sandoval and Lugo undertaking to get it confirmed by Cortes, and the Tlafcalans to have it ratified by the Republic. This Affair thus finifhed, they returned to Cortes, who highly commended both the Spanifb Officers, the Soldiers under their Command, and all the Indian Auxiliaries. He fet the eight Mexican Captains at Liberty, and fent them with Propofals of Peace to their Emperor; not that he hoped any thing from it, farther than fhewing the Juftice of the War to all the People in that Part of the World, by obliging the Enemy to draw it upon themfelves, by repeated Refufals of all Termis of Accommodation.
15. About this time Cortes was informed that the Brigantines were finifhed, by the Induftry and Care of Martin Lopez, and the Republic of $\mathcal{T}$ lafcala granted him ten thoufand Men to carry there Veffels from the Place where they were built to the Lake, which they accordingly performed; and, if we confider it attentively, this will appear one of the wifert Contrivances of this great Captain, and the happy Execution of it, one of the moft furprizing things performed by the Spariards, in the Courfe of this Expedition. He was no fooner acquainted with this, than he again took the Field, and had feveral Engagements with the Enemy, in moft of which he was fuccelsful; but, at the Attack of a Place called Tacuba, he was compelled to retreat. A Veffel arrived at this time at Vera Cruz, and, in her, Fulian de Alderte, a Native of Tordefillas, with the Character of the King's Treafurer, Father Urren, of the Order of St. Francis, Antonia de Caravaial, Geronimo Ruiz de la Moto, Alonjo Diaz, de la Reguera, and feveral Soldiers of Diftinction, with a very confiderable Succour of Arms. They immediately marched to Tlafcolla, and there had an Efcort to conduct them fafe to Tczcuco, themfelves carrying the firft News of their Arrival.
Soon after there arrived Meffengers, difpatched in hatte from the Caziques of Cbalco and Tbamanalco, to demand Succour ; for the Emperor Guatimozin, as appeared by his Conduct, applied himfelf entirely to the Arts of War; and had confidered that there was no better way to compafs his Defign, than by feizing on that Frontier, whereby he might cut off their Communication with Tlafcala, and prevent Succours from Vera Cruz; a Point of fo much Confequence, that Cortes found himfelf abfolutely obliged to protect thofe Allies, to whofe Fidelity he owed the Prefervation of this Pafs. He immediately difpatched Sandoval to their Relief, with three hundred Spaniards, twenty Horfe, and fome Companies of Tlafcala and Tezcuco. Sandoval marched with fuch Diligence, that his Succour arrived very opportunely. The Caziques had affembled all their Troops, which, ioined to thofe, made a very confiderable Body. The Enemy was not far off their Army, having lodged the Night before at Guafepeque, and it was refolved to attack them before they entered the Territories of Caalco. In the mean time the Mexicans, depending upon the Number of their Forces, poffeffed themfelves of fome hollow Ways, in order to wait their coming in a Place where they might be fecure againt the IHorfe.
The Spaniards faw the Difficulty when they came to the Charge, and Sandoval ftood in need of all his Refolution to diflodge the Enemy from the Poft; which, however, they did, Sword in hand, but not without Lofs. The Mexicans loft a great Number in this Conflict; howcver, they thought themfelves ftrong enough to rally, and draw up upon the Plain : But Sandoval, having overcome the Difficulty of the Paffage, attacked them fo brifkly that they had not time to form. The Van-guard continued the Fight with defperate Fury, but foon gave Way, and difperfed; and the Spaniards followed with fo
much Vigour, that the Mexicans loft the greateft Part of their Troops. Sandoval remained Mafter of the Field, and chofe a Place for his Army to halt in, and take a little reft, refolving to adrance that Night to Guaftepeque.
But fcarce had the Troops began to enjoy the Repofe they fo much wanted, when the Scoits gave the Alarm fo warmly, that it was neceffary to form the Army with all Expedition. A Body of fourteen or fifteen thoufand Mexicans were advancing fo near; that the Spaniords could hear their Drums and Horns. Thefe Troops were fent as a Reinforcement to thofe which hàd marched from Mexico before. The Spaniards advanced to receive thofe new Comers, and attacked them fo feafonably, that they made Way for the Horfe to charge; who made fuch a Slaughter of the Enemy, that they were foon obliged to retire to the Town of Guafepeque; but the Spaniards followed them fo clofe, that they entered the Place at the fame time, and maintained the Entrance till the reft of the Troops coming up, they divided into the feveral Streets, and Sword in Hand drove the Enemy out of the Town. The Mexicans loft great Numbers, and the reft fled. This Town was fo large, that Sandoval was refolved to quarter there that Night; and the Spaniards, with the greatef Part of their Allies, lay under Cover.
He was foon after obliged to take the Field again ; the Enemy having rallied; and Cortes himfelf came quickly after into the fame Country, where he had feveral Engagements with the Mexicans, not much to his Advantage; for, confiding in the Bravery of his Troops, and defpifing too much the Inexpertnefs of the Indians, he attacked them even in the moft difficult Poits, and thereby gave them fuch Advantages, as he found it very difficult to fruggle with. Yet his old and new Allies remained firm and faithful, which induced him to accept the Invitation given him of going to Guafepeque, in order to refrefh himfelf and his Army; and, before he well arrived there, he found himfelf called to frefh Toils, by the News that the Mexicons had affembled a very powerful Army at Quatlavaca, fo that it was abfolutely neceffary for him to march thither.
16. This large and famous Capital of an Indian Principality, Quatlavaca, was a populous Town, ftrong by Nature ; fituate between Baranco's, or Breakings of the Earth, above eight Fathoms deep, which ferved as a Ditch to the Place, and Paffage for the Water that defcended from the Mountains. The Army arrived at this Place, after having fubdued all the Towns which lay in their Way, without any Difficulty. The Mexicans covered the Banks with fuch a Number of Soldiers, that the Paffage feemed impoffible: But Cortes drew up his Army at a convenient Diftance; and, while the Spaniards and the Confederates endeavoured to divert the Army with their Fire-arms and Arrows, he went to view the Baranco, and, finding it at fome Diftance lower much narrower, he immediately ordered two or three Bridges to be made of Trees, cut at the Root, which reached from one Side to the other; and which, laid together as well as was poffible, made a Road for the Infantry to pafs.
The Spomiards of theVan-guard, leaving the Tlafcalans to keep the Enemy in play, immediazely paffed over, and formed a Battallion on the other Side of the Ditch, which was continually augmented by the Allies. But the Mexicans, who were quickly fenfible of their Negligence, poured down upon thofe that had paffed withe fo much Refolution, that they had much to do to keep their Ground; and the Succeís had been very doubtful, if Cortes had not opportunely arrived; who, whilft the Foot were getting over, had found out a Paffage for the Horie ; which, though very difficult and dangerous, was of great Ufe in the extreme Danger to which the Spaniards were reduced. The Horfe wheeled in order to charge the Mexicans in the Rear, which they did; affifted by fome Foot, who had paffed the Ditch by the Means of two or three Trees, which were fallen down by their own Weight, and lay acrofs the Baranco. But the Mexicans, who now faw the Danger that threatened them in the Midft of their Fortifications, gave themfelves for loft; and, difperfing, fought only to efcape in the
beft Manner they could to the Mountains. They loft great Numbers both in the Defence of the Ditch and in their Flight, neverthelefs the greatcft Part of them faved themfives among the Rocks and Precipices. The Town was found entirely abandoned, with great Store of Provifions, and fome Spoil; which was given to the Soldiers.

A little after, the Cazique, and fome of the chief Inhabitants who were willing to fubmit, called to the Spaniards from the further Side of the Ditch, defiring Leave to return to the Town, and prepare Quarters for the Troops; which was grainted, and they were of Ufe afterwards, by the Intelligence they gave of the Enemy's Notions, and by the Knowledge they had of the Country. Early the next Morning, the Army took the Road of Sucbimilco, a Place which deferved the Name of a City, feated on the Edge of a frefh Water Lake which had a Communication with the great Lake; the Buildings were partly on the Land and partly in the Waters, where a grear Number of Canoes ferved them to pafs from Place to Place. It was of great Importance to take a View of this Town, which was within four Leagues of Mexico, but the March was very troublefome ; for after they had paffed a Defile'three Leagues long, they came into a dry barren Country, where the Soldiers fuffered much for Want of Water.
The Fatigue of the March, and the Heat of the Summer, increafed their Thirft to fuch a Degree, that, at their Entrance into a Foreft of Pines, they were infenfible of any Relief from its Shade. Near the Road they found fome Farm-houfes: Here the Army lodged, and enjoyed that Night the Reft and Refrefhment they wanted. The Enemy had purpofely quitted them, to wait for the Spaniards in a ftronger Poft. Cortes drew up his Army in Order of Battle at break of Day, and began his March, expecting to meet with a good deal of Difficulty in his prefent Enterprize, it not being likely that the Mexicans would leave a Poft of fo great Importance, and fo near Mexico, without a ftrong Garrifon, efpecially fince all who had efcaped from their paft Engagements went to that Place. His Conjectures proved right, for the Enemy had drawn up their Battalions in a Plain at fome Diftance from the City, having a great and rapid River in their Front, which difcharged itfelf into the Lake. They had double lined the Banks of this River, and difpofed their main Body for the Defence of a wooden Bridge, which they would not cut down, having barricadoed it with Planks and Fafcines; and fuppofing, that though this Fortification fhould be forced, they hould have a fufficient Advantage in the Narrownefs of the Pafs, and be able to deftroy their Enemies as faft as they came over the Bridge : Cortes perceived the Difficulty, but, without appearing concerned, extended the Troops of the Allies along the Bank of the River, and, whilit both Sides made fome Difcharges at each other with little Effect, he commanded the Spaniards to advance, and go and take the Bridge. They met with fuch an obftinate Refiftance, that they were twice repulfed; but, returning a third time with greater Valour, and making Ufe of the Enemy's Trenches againft them, they foon gained the Pafs; which fo difcouraged the Mexicans, that they began every where to fly; their Commanders ordering the Signal for a Retreat.

The Spaniards made hafte to feize upon the Ground the Mexicans had quitted, and at the fame time feveral Companies of Tlafcala and Tezcuco threw themfelves into the River and fwam to the other Side, and joined the Army. The Enemy was drawing up in Order of Battle, under the Walls of the Town, but upon the firft Advance of the Spaniards they began to retire, provoking them ftill by fome Difcharges of Arrows, which did no Execution, to fignify that they retreated out of Choice: However, Cortes fell upon them with Vigour, as they conrinued retiring into the City; in the Entrance of which they loft great Numbers; but, fheltering themfelves within the Barricadoes, with which they had blocked up the Streets, they began again to ufe their Arms; and defy their Enemies.

Cortes left Part of his Troops without the Town, to fecure his Retreat, and to oppofe any Attacks that might
be made from abroad, and entered with the reft: For which Purpofe, ordering fome Companies to force the Barricadoes in the Streets on the Right and Left; he advanced to the principal, where the Enemy had their greateft Force: With fome Difficulty he broke through their Blockade, and, carried away by his Courage, forgoe the Care he ought to have taken of his Perfon; for throwing himfelf, with more Bravery than Prudence, into the midft of a Multitude of Enemies; he found himfelf furrounded by them; when he would have retired to the Affiftance of his Foot. He fupported himfelf for fome time with the titmoft Courage; until his Horfe; being tired; fell under him, and put him in extreme Danger of his Life. Thofe who were neareft, immediately advanceds and before he was in a Condition to make ufe of his Arms he was in a manner taken; the only thing that defended him, being the great Defire the Mexicans had to fieze him alive, for a Prefent to their Emperor: At this Inftant Cbriftoval de Olea, a Native of Medina del Campos a Soldier of diftinguifhed Valour; who was not far off; faw the Diftrefs of his General; and, calling to fome Tlafcalans who were fighting near him, forced his way to the Place with fo much Refolution, and was fo well feconded by thofe that followed him, that, after having killed with his own Hand thofe who preffed moft upon his General, he had the good Fortune to reftore him to his Liberty.

Cortes immediately made ufe of it to punifh the Enemy, who, upon efcaping to that part of the City which ftood in the Water, left the Spaniards Mafters of all the Streets upon the firm Land. Cortes came off with two night Wounds, and Olea with three dangerous Cuts with a Sword. Herrera informs us, that Cortes owed his Liberty to a Tlafcalan unknown, both before and after; and relates the Action as a kind of Miracle; but Bernal Diaz. who was onc of the firft that came to the Relief of the General, attributes the whole Honour to Olea; and the Defcendants of this valiant Man may very well be excufed. if they rather believe an Author who relates what he faw; than one who goes upon Conjectures. Whilft this Engagement lafted in the Town, the Troops that were without were not idle: The Nobles of Mexico made an extraordinary Effort to reinforce the Garrifon of Sucbimilco, the Prefervation of which their Emperor Guatimozin had very much at Heart. They embarked with ten thous fand chofen Men, and landed at fome Diftance from the Town, knowing the Spaniards were engaged in the Streets, defigning to fall upon their Rear ; but they were dif= covered, and charged with fo much Refolution, that they were glad to reimbark, leaving a good Number of their' Men behind them, dead in the Field.

This happy Succes made Cortes Mafter of thie Place, and of all the Streets and Buildings upon the firm Land, and, having placed fufficient Guards by the Water-fide, he lodged his Troops near the principal Temple, which, having a fort of a Wall capable of refifting the Arms of the Mexicans, feemed commodious for the Repofe of the Soldiers, and the Cure of their Wounds ; at the fame time he ordered fome Companies to mount, and view the Top of the Temple; which being forfaken, he pofted an Officer and twenty or thirty Spaniards in the upper Court, with Inftuctions to relieve the Sentinels often, that they might obferve every thing that paffed; as well by Land as by Water: A very neceffary Precaution, and of which the Ufefulnefs was foon experienced; for at Clofe of Evening they gave notice, that they difcovered on the Side of Mexico, above two thoufand armed Canoes that advanced with all Speed; by which timely Advice the Spaniards were enabled to prevent the Dangers of the Night, by doubling their Guards at the landing Places; and in the Morning they faw the Enemy difembark ${ }_{\text {s }}$ at a great Diftance from the City, in Appearance about fourteen or fifteen thoufand Men. Cortes went out to receive them, chufing advantageous Ground for his Horfe, and leaving behind him a good part of his Troops for the Defence of his Quarters.

The two Armies quickly drew near, and the Mexicans began the Charge ; but upon receiving the firf Fire they gave Ground, and the reft of the Troops coming up K k

Sword

Sword in Hand, and charging them brifkly, they foon turned their Backs and fied, and the whole Action was rather a Chace than a Victory. The Day appointed for theRetreat catne, which was executed as had been refolved, the Enemy ftill advancing to feize the difficult Paffes, in order to difturb their March; burt this Oppofition was cafily overcome, and with confiderable Advantage, and Cortes returned to Tezcuco with the Satisfaction of having obtained the Ends he propofed by this Sally; the Knowledge of Suchimilco, and breaking the Force of the Enemy, in order to weaken their Defience of Mexico. However, he was inwardly diffatisfied and melancholy, having lof nine or ten Spaniards in this Expedition; for befides thofe that were killed at the firft Affault of the Mountains, the Mexicans took three or four of them alive at Sucbimilco, as they were pillaging, and two of his Servants who fell into an Ambufcade by feparating from the Army: What mightily increafed his Concern was, the Circumftance of their being taken alive in order to be facrificed upon the Altars of the Indian Idols, and their Misfortune recalled to his Mind his own paft Danger, when in the Enemies Power, of dying after the fame abominable Manner.
17. The Brigantines were now in a Condition to be launched, and the Canal had Depth and Capacity to receive them. The Day was appointed for the Confederate Caziques to appear with their Troops, and particular Care was taken to bring Provifions. The General looked into the moft minute Matters that related to the carrying on the War, wherein great Dangers are often occafioned by fimall Faults, and therefore a very extenfive Prudence is required. But while Cortes had his Thoughts employed in thefe Affairs, a new Accident happened which gave him much Trouble, put his Valour to the Teft, and was a convincing Proof of his Judgment: A Spaniard, who had been long in the Service, came to him full of Concern, and defired to fpeak with him in private: When that was granted, he informed him, That during his Abfence' a Confpiracy had been forming againft his Life, and all his Friends; the Author of it, as he faid, was a private Soldier, his Name was Antonio de Villafona; and his firf Intention was to get off clear from that Enterprize, the Difficulties of which to him appeared infuperable: He fhewed his Uneafinefs at firft, by murmuring, and foon procceded to dangerous Refolutions: He, and thofe of his Faction, blamed the General for his Purfuit of that Conqueft, declaring, That they would not deftroy themfelves to gratify his Rafhnefs, talking of returning to the Illand of Cuba as if it was a thing very eafy to be performed.

They met to confult about this Point with much Secrecy, and though they found no great Difficulty in quitting the Camp, and pafing as far as Tlafcala, by Virtue of a fuppofed Order from the General, the Inconvenience of going to Vera Cruz immediately occurred; for there they could not pretend a Commiffion, or Leave from Cortes, without a Pafs under his Hand, or avoid the Danger of being feverely punifhed. This put them to a Nonplus, and yet they perfifted in their Refolution of withdrawing themfelves, without fixing on the Way how to compars it. Antonio de Villafana, at whofe Lodgings they held their Affembly, at laft propofed to bring all to pafs by killing Cortes and his chief Counfellors, and electing another General, who, having not fet his Heart fo much upon the Conqueft of Mexico, would be more tractable, and under whom they might treat without incurring the Name of Fugitives ; and they might give it the Turn of a Piece of Service to Velafquez, by whofe Reprefentation of it to the Court of Spain, it might be efteemed a Service done to the King. They all approved of the Project, and began by applauding the Scheme, and drawing up a Writing figned by all that were prefent, whereby they obliged themfelves to follow Villafana, in the Execution of this horrible Attempt. And this Affair was managed with fo much Dexterity, that the Numbers of thofe who figned increafed confiderably; and it was to be feared that this fecret Contagion might break out into fuch an Evil as would admit of no Remedy.

They had agreed to feign a Packet from Vera Cruz,
with Letters from Spain, and to give it to the General, when he was at Table, all of them going in together, under Colour of hearing the News; and that, whilft Cortes was reading the firft Letter, they fhould make ufe of that Opportunity to murder him, and all his Friends, with thicir Daggers, after which they were to go out and proclaim Liberty in the Streets, which they Thought fufficient to make the Army declare for them. The Perfons they had marked out for Deftruction were Olid, Sandoval, Alverado, and his Brothers, Tapia, the two Alcaldes, Martin Irico, Cafillo, and fome other Soldiers, Favourites of the General. They had alfo agreed to chufe Francifoo Verdugo for their Captain General, becaufe he had married a sifter of Velafyucz, and therefore they thought he might be eafily brought over, and was the moft proper Perfon to fupport their Party ; but they durft not acquaint him with their Defign till the Crime was committed, when they concluded he would be obliged to take upon himfelf the Employment, to prevent greater Evils. Such was the Account given by the Soldier, who begged his Life, for he was concerned in the Confpiracy. Cortes refolved to affift in Perfon at the feizing of Villafana, and, as the firt Meafures that were to be taken, to convict him, becaufe he forefaw that the clearing up theTruth depended on the firft Steps.
The Importance of the Affair required Precaution, and, as it was no Time to preferve the flow Proceedings of Juftice, he went immediately to fecure Villafana, attended by two Alcaldes, and fome of his Captains, and found him in his Quarters, with three or four of his Accomplices. The Trouble he was in at the Sight of his General, was a plain Proof of Guilt. And Cortes, after he had caufed him to be put in Irons, ordered all to retire, pretending to examine him, when, making Advantage of the Account that had been given him, he took out of his Bofom the Paper figned by all the Confpirators: He read it, and found the Names of fome Perfons, whofe Treachery much increafed his Concern; but, concealing it from his Friends, he directed the Soldiers, who were found with Villafana to be put into another Prifon, and then withdrew, leaving Inffructions with the Officers of Juftice, to proceed in his Trial with all poffible Speed, without taking any Notice of his Accomplices. There was not much to do in it; for Villafana, being convicted by the feizing of his Paper, and believing that his Friends had betrayed him, immediately confeffed his Crime: Whereupon, according to military Juftice, he was condemned to die, which Sentence was put in Execution that very Night, and the next Morning he was feen hanging at the Window of his own Lodging; fo that the Punifhment was executed at the fame Time that the Caufe was publifhed, the Guilty being ftruck with Fear, and the reft with jult Abhorrence of the Crime.
Cortes was equally afficted and provoked, to fee the Number of thofe concerned in the Confpiracy; but it was no proper Time to be frict in doing Juftice at the beginning of his Enterprize ; and therefore, to avoid punifhing the Guilty, and the Inconveniencies of Impunity, he gave out, that Villafana had fwallowed a Paper, which he believed contained the Names of the Conppirators. Soon after he affembled his Captains and Soldiers, and gave them an Account of the horrid Defign and Confpiracy of Villafana, againft his Life, and the Lives of many prefent; adding, "That he thought " himfelf very happy, in not knowing whether he had "any Accomplices, though the great Care Villafana " took to deftroy the Paper he carried in his Bofom, " made him fufpect he had fome : But that he did not " defire to know them, and only intreated his Friends "to enquire whether the Spaniards had any Complaint " to make againft his Proceedings ; becaufe he was de"firous, above all Things, to give entire Satisfaction to " his Soldiers, and was ready to correct his own Faults, " as he knew how to ufe the Rigour of Juftice, when "Lenity appeared of no ufe." At the fame Time, he ordered the Soldiers that had been taken with Villafana to be fet at Liberty ; and this, confirmed by the Care he took to fhew no Change in his Behaviour to thofe who had offended, fully perfuaded them that he was ignorant
of their Crime，and they ever after ferved with extraor－ dinary Care，to remove any Sufpicions of their Fidelity： However，not thinking fuch an exceffive Security which lays Care afleep，and feems to invite Danger，at all con－ fiftent with Difcretion，he ordered twelve Men for the Guard of his Perfon，commanded by an Officer ；and ＇tis likely he made choice of this Opportunity，that the People might without Surprize fee this new Addition to his Authority．
Soon after he was perplexed with another Affair， though of a different Sort，which had yet fome Circum－ ftances of Sedition ；for Xicotencatl，who commanded the firft Troops that came from Tlafcala，either upon fome Difguft，which may eafily be fuppofed，confider－ ing his haughty Temper，or that he ftill preferved in his Mind fome Remains of his former Enmity，refolved to leave the Army．Affembling fome Companies，which， upon his earneft Intreaty，engaged to ftand by him，he took the Advantage of the Night for his Retreat；and Cortes，who was prefently informed of it by the Tlafca－ lans themfelves，was much concerned at a Behaviour of fuch dangerous Confequence，in fo confiderable a Com－ mander among thofe Nations，at a Time when he was juft ready to put his Defigns in Execution．He fent fome noble Indians of $\mathcal{T}_{e}$ eucuco after him，to perfuade him to return，or at leaft to ftay till he heard what he had to offer ；but the Anfwer of Xicotencatl fo provoked Cortes， that he immediately fent three Companies of Spaniards， with an additional Force of Indians，with Orders to take him Prifoner，or kill him，in cafe of Refiftance．The lat－ ter was put in Execution；for he made an obftinate De－ fence to the laft；but the Tlafcalans，who followed him， contrary to their own Inclination，fhewed but little Re－ folution upon this Occafion，and returned with the Spa－ niards to the Army，leaving their Commander hanging upon a Tree．
Some fay that the Spaniards，fent after him by Cortes， had private Orders to kill him，which feems the fafeft Re－ folution that could have been taken；but which way foever it was done，the extraordinary Forefight and Prudence of the General in managing this Affair cannot be denied， fince neither the Tlafcalans of the Army，nor the Re－ public，nor even his own Father，made the leaft Com－ plaint for his Death；for，having been informed fome Days before，that the young Man fo far forgot himifelf， as to fpeak ill of his Conduct，and endeavoured to dif－ credit，among thofe of his Nation，the Enterprize upon Mexico，Cortes fent an Account of it to Tlafcale； and the Senate，in which his Father was prefent，an－ iwered，That，according to the Laws of the Republic， whoever was guilty of Mutiny in the Army deferv－ ed Death；and that he might proceed againft him with the citmoft Rigour，if he found it neceffary；as they would do，both againft Xicotencatl，and all that followed lim，if they returned to Tlafcala．
18．Thefe Tranfactions did not hinder his attending to the neceffary Preparations for his great Defign．The Brigantines were launched by Degrees，a Work happily brought to a Conclufion，by the Induftry of Martin Lopez；and，whilft they were carrying on Board the Sails，Rigging，and every thing elfe wanting，Cortes re－ viewed his Spaniards under Arms：They confifted of nine． hundred Men，of which，a hundred fourfcore and four－ teen were Fire－arms and Crofs－bows，the reft were armed with Sword and Buckler，and Launces；eighty－fix Horfe，and eighteen Pieces of Cannon；the three largeft of Iron，and the other fifteen Brafs，with fufficient Stores of Powder and Ball．Cortes put five and twenty Spa－ ziards on board each Veffel，under the Command of a Captain，with twelve Rowers，fix on each Side，and one Piece of Artillery，who immediately embarked；and each prepared to defend his own Veffel，and fuccour the reft． Things being thus difpofed for the Entry by the Lake， Cortes refolved，by the Advice of his Captains，to pof－ fefs himfelf，at the fame time，of the three principal Cauf－ ways，viz．Tacuba，Iztapalapa，and Cuyoacan，without re－ grarding that of Sucbimilco．

But，that he might avoid feparating his Troops，he divided his Army only into three Bodies，and committed the Execution of Tacuba to Alverado；with the Title of

Governor and Commander in chief of that Atenue．He had under his Command one hundred and fifty Spaniftio Foot，and thirty Horfe，in three Bodies；with thirty thou－ fand Tlajcalans，and＇two Pieces of Artillery．The Attack of Cuyoacan was committed to Colonel Olid；with one hundred and fixty SpanifbFoot，in three Companies，with thirty Horfe，two Pieces of Artillery，and thirty thoufand confederate Indians．Laftly；he gave the Charge of the Attack of Iztapalapa to Col．Sandoval，with one hundred and fifty Spaniards，commanded by two Captains，with two Pieces of Cannon，twenty－four Horfe，with all the Troops of Cbalco，Guaxacingo，and Cbulula，amounting to above forty thoufand Men．

Olid and Alverado marched together as far as Tacuba， where they were to feparate，and took their Quarters in that City，without any Oppofition，the fame being abandoned，as were all the Towns upon the Lake；the Inhabitants that were able to bear Arms being gone to Mexico to defend their Capital，and the reft retired to the Mountains，with their Effects．There they had In－ telligence，that the Mexicans had formed a confiderable Body，within half a League of the Town，to cover the Aqueducts，which came from the Mountains of Cbapul－ tepeque．Guatimozin took this feafonable Precaution as foon as he received News of the Motions of the Spaniards， which preferved thofe Conveyances that fupplied all the Fountains in the City with frefh Water．There ap－ peared on that Side two or threc Rows of Pipes，made of Trees hollowed，fupported by an Aqueduct of Lime and Stone；and the Finerny had caft up fome Trenches to cover it．But the two Captains marched out of $\mathcal{T}_{\text {a }}-$ cuba with moft of their Troops；and though they met with a very obftinate Refiftance，they drove the Enemy from their Poft，and broke the Pipes and Aqueduct in two or three Places，and the Water took its natural Courfe into the Lake．Thus Olid and Alverado began the Siege by cutting off their Water，obliging the Mexi－ cans to feek it，at a Diftance，in the Brooks that ran from the Mountains，and to employ their People and Canoes in Carriage and Convoys．

Olid marched on with his Party；and took Poft at Cuyoacan；and Cortes，allowing what Time he thought fufficient for Sandoval to reach Iztapalapa，took upon himfelf the Command on the Lake，that he might carry Relief where it fhould be neceffary ：He had with him Don Fernando，Lord of Tezcuco，and his Brother Sucbel， a young Man of brave Spirit，who was baptized foon after，and took the Name of Carlos．Cortes left a fuffici－． ent Number of Troops in that City，to cover his Place of Arms，and make Excurfions to fecure the Communi－ cation of his Quarters．Having difpofed all Things after he embarked，drawing up his thirteen Brigantines in a Line ；his Defign was to draw near to Mexico，and fhew himfelf，and afterwards to fall upon Iztapalapa，being under fome Concern for Sandoval，who had no Veffels to diflodge the Mexicans from that Part of the City，which ftood in the Water，and ferved as a Retreat for their Ca－ noes ：But，in his Return，he difcovered at a fimall Di－ ftance from the City，a little Ifland，a confiderable Height above the Water；on the Top of which ftood a pretty large Caftle，which the Enemy had poffeffed themfelves of，to no other End，but to provoke the Spas niards with ill Language and Threats，from a Poft where they thought themfelves out of Danger of the Bri－． gantines．
Cortes did not leave unpunifhed that Infolence，in View of the City，the Terraces and Balconies of which were filled with innumerable People，who came to fee the firft Action of the Fleet：He drew near to the Shore of the Inand，and landed with one hundred and fifty of the Spaniards，who took two or three different Paths，that led to the Top：They mounted，with fome Difficulty， by reafon that the Enerny were numerous，and made a brave Defence，＇till defpairing of being able to preferve the Eminence，they retired to the Caftle，where they were．fó crowded，that they had not room to manage their Arms： Many perifhed，though moft were faved．Having， by this Enterprize，chaftifed the Mexicans，the Spaniards． returned to their Brigantines；but，when they were dif pofing themfelves to make for Iztapalapa，they were
obliged to take otherMeafures; for the fame Canoes came out of Mexico, which advanced, encreafing continually in Numbers. The firft that drew near, rowing gently, were about five hundred, waiting for the reft to come up ; and, in a fhort Time, thofe that came out of the City, and other neighbouring Places, made fo great a Number, that it was judged they wete four thoufand, which, with the Motion of their Feathers and Arms, afforded a Sight both beautiful and terrible, and feemed to cover the Lake.

Cortes drew up his Fleet in form of a Half-Moon, that he might extend his Front: He confided in the Valour of his Soldiers, and the Advantage of his Brigantines, every one of which was able to make Head againft a great Part of the Enemy's Flect. With this Affurance he advanced towards the Mexicans, to let them fee he did not decline Battle; and then ordered his Men to lie upon their Oars, and reft; that they being refreflhed, he might break in upon the Enemy with the greater Force; for the Calmnefs of the Day left the whole to the Labour of the Mexicans, who did the fame, and perhaps, for the fame Reafon; but of a fudden there came a LandBreeze, which taking the Brigantines aftern, gave them all the Force that was neceffary to fall upon the Mexicans.

They began the Attack with the Artillery, and then the Brigantines made up with Sails and Oars, overfetting all that ftood in the Way; the Fire-Arms and CrofsBows made their Difcharges without lofing a Shot ; the Wind too was favourable, driving the Smoke upon the Enemy, blinding them, fo that they were obliged to retire to avoid it; the Brigantines themfelves faving the fmaller Veffels. The Nobles of Mexico, who were in the firft 500 Canoes, made fome Oppofition; but the reft were all Diforder and Confufion, the Canoes running foul upon, and overfetting, one another. The Enemy loft moft of their Men, and their Fleet was entirely broke and defeated. The Brigantines purfuing the miferable Remains with their Cannon-Shot, till they forced them into the Canals of the City of Mexico. This Victory was of great Moment, on account of the Reputation the Brigantines gained, of being invincible; and becaufe it was a great Difcouragement to the Mexicans, to fee themfelves deprived of that Part of their Power, which confifted in the Management and Swiftnefs of their Canoes, not for the Number of them that they then loft, which was inconfiderable, in regard of what they had ftill left; but becaufe they were convinced that they were incapable of fuftaining the Shocks of the Brigantines.
19. The Night was paffed but indifferently ; and in the Morning, when the Brigantines were preparing to fail for Iztapalapa, they difcovered a confiderable Number of Canoes, that were making the beft of their way towards Cuyoacan; whereupon he refolved to fuccour that Place firft where it was immediately wanted. It was not pofible to come up with the Enemy's Fleet. But he arrived foon after them, at the Time when Olid was engaged on the Caulway, and obliged to make a Front againft the Enemy that defended it, and to the Canoes on each Side, and was on the Point of retiring, and lofing the Ground he had gained. Neceffity taught the 'Mexicans as much as the Art of War could have done for the Defence of their Caufways: They had drawn up towards the City the Bridges that were over the Paffages, by which the V aters of the great Lake difcharged themfelves into the other, and fixed Timber and Planks behind them, in fuch a Manner, that they might mount in Ranks, to charge from the Top; they left Trenches, at proper Diftances, with Water running before them, which obftructed the Accefs. After this Manner they had fortified the three Caulways attacked by the Spaniards, who, in each, were obliged to take aimoft the fame Meafures to overcome the fame Difficulties.

The Fire-arms and Crofs-bows played upon thofe who appeared above the Trench, whilft others handed Fafcines to fill the Ditch, after which they brought up a Piece of Artillery, and in a few Difcharges cleared the Paffage, filling up the next Ditch with the Ruins of its own Fortification. Olid had juft made himfelf Mafter of the firft Ditch, when the Mexican Canoes arrived. But, on Sight of the Brigantines, all thofe on that Side fled with
the utmoft Diligence, and none fuffered but thofe who could not get out of the Reach of the Cannon. But becaufe the Mexicans, on the other Side, who thought themfelves fecure, continued the Engagement, Cortes ordered the Ditch in the Rear of Olid to be widened, to make a Paffage for three or four Brigantines ; at the firt Sight of which all the Canoes fled, and the Enemy who defended the next Bridge, finding themfelves expofed to the great Shot from both the Land and the Water, retired in Diforder to the laft Rampart next the City.

That Night the Troops took reft, without abandoning the Ground they had gained upon the Caufway, and the next Morning continued their March, with little or no Oppofition, 'till, coming to the lat Bridge, which was at the Entrance into Mexico, they found it fortified with ftronger Works, Trenches cut in the Streets, and defended by fuch a Multitude of People that the Enterprize feemed hazardous, but the Difficulty did not fully appear 'till they were engaged. The Artillery from the Brigantines made a miferable Slaughter of the People, who were in Crowds, in the Openings of the Streets, whilit Olid was employed in filling up the Ditch, and ruining the Fortifications of the Caufway, which, when he had done, he charged the Mexicons, who defended them, making room for the confederate Troops, under his Command, to come up. The Enemy, at the fame Time, were fupported by Troops from the City, and made an obftinate Refiftance on all Sides, but they foon loft fome Ground ; and then Cortes, who could not bear the Slowness with which they retreated, landed with thirty Spaniards, and gave fo much Life to the Attack, that the Enemy quickly turned their Backs, and the chief Street of Mexico was gained.
Another Difficulty occurred; for the Mexicans that fled had poffeffed themfelves of a Temple near the Entrance of the City, covering all the Outfide with fuch Numbers of Men, that the whole Building appeared like a Hill of Arms and Feathers. They defied the Spaniards with as much Boldnels as if they had been always Conquerors. Cortes, provoked at their Pride, when they had juft before fhewn fo much Cowardice, ordered three or four Pieces of Artillery to be landed; the firft Difcharge whereof made them fenfible of their Danger, and the Spaniards were foon obliged to point their Cannon lower, againft thofe that fled to the inner Part of the City. Thus all that Part of the City was forfaken; for thofe who fought from Windows and the Tops of the Houfes went off with the reft, fo that the Army advanced, and the Temple was gained without Oppofition. That Day the Mexicans fuftained a very great Lofs of Men. The Idols were caft into the Fire, and ferved to make Illuminations for the Victory.

Cortes was fatisfied that he had gained Footing in the City ; and, finding the Temple capable of more than ordinary Defence, he not only refolved to lodge his Troops there that Night, bur had Thoughts of maintaining that Poft, to ftreighten the Enemy, and of removing his Quarters from Cuyoacan thither. He communicated his Defign to his Captains, but they oppofed it with fuch Arguments that Cortes was convinced, and accordingly, the next Day, he retired to Cuyoacan, protected on cach Side by his Brigantines; fo that the Enemy durft not difturb his March. The fame Day he proceeded to Iztcpalapa, where he was put to the laft Extremity: He had poffeffed himfelf of the Buildings on the Land, and lodged his Army there, fortifying himfelf the beft he could; but the Enemy, who retired to that Part in the Water, endeavoured from their Canoes to do him all the Damage they could. Sandoval had made great Havock among thofe that approached, ruined fome Houfes, and had overthrown two or three Succours from Mexico, that came to attack him by Land: And that Day the Enemy forfaking a large Houfe, which was but a little from the Land, he refoived to feize it, in order to enlarge his Quarters. He made a Paffage with Fafcines, and got into the Houfe with fome of his People; but he had farce entered when a great Number of Canoes, which had lain in ambuft, advanced with a Multitude of People, who threw themfelves into the Water, and, taking away the Fafcines, cut off Sanduval's Retreat, by
which Means they befieged him on all Sides, fhooting from the Terraces and Windows of the neighbouring Houfes. He was in this Diftrefs when Cortes arrived, who, difcovering that vaft Number of Canoes in the Water-ffreets that looked towards Mexico, made his Brigantines advance with all poffible Speed, and played his Artillery with fuch Effect, that, terrified by the Deftruction the Balls made, they all fled at once through the moft retired Streets in the Town, with a Defign to get through into the Lake ; and fuch was their Diforder, that the People who were upon the Terraces, crowding into the Canoes, funk many of them, and the reft in their Flight fell in among the Brigantines.

The Mexicans fuftained fuch a Lofs that Day, as deminifhed their Forces confiderably; and the Spaniards, afterwards taking a View of that Part of the City they poffefled themfelves of, made fome Prifoners, and found a fufficient Booty to pleafe the Soldiers. Cortes perceived by the Difficulties which Sandoval had met with at Iztapalapa, that it was impoffible to make Ufe of the Caufway without firft ruining that half of the City which was the Retreat of the Mexican Canoes; and becaufe this would occafion a Delay which might be of dangerous Confequence to the other Attacks, refolved to quit that Poft, and dif patch Sandoval to poffers himfelf of Tapeaquilla, where there was another narrow Caufway, lefs commodious for attacking, but more advantageous for cutting off the Enemies Provifions, which they began to want, and which were brought that Way. This Defign was immediately put in Execution, and Sandoval marched by Land, efcorted by the Brigantines, till he had got Poffeffion of the new Quarters; the Place was forfaken, and he lodged himfelf there without Refiftance. Afterwards Cortes failed to Tacuba; Alverado found this City deferted, and in his further Progrefs he met with variousSucceffes; he beat down the Works, and filled up the Ditches in the fame manner Olid did; but though he did the Enemy confiderable Damage, and had once advanced fo far as to fire fome Houfes in Mexico, he had loft eight Spaniards when Cortes arrived, who found the Meafures he had taken did not anfiwer his Defigns; for this Way of attacking and retreating confumed his Time, and expofed his Men, without any Advantage, and was rather doing Acts of Hoftility than making any Progrefs.
To proceed by the Caufways was very difficult, by reafon of the Ditches, which the Mexicans were fortifying every Day, and the continual Perfecutions of the Canoes, which always charged in great Numbers wherever the Brigantines quitted ; for which Reafon he was obliged to think of other Meafures for the facilitating of his Enterprize. He then commanded all Attacks to ceafe till farther Orders, and applied himfelf to the providing fuch a Number of Canoes as might fecure him the Dominion of the Lake, to which End he fent fuch Perfons as he could confide in, to bring all the Canoes that remained in the Towns of his Allies; with which, and thofe that came from Tezcuco and Cbalco, he made up fuch a Number as gave frefh Terror to the Enemy: He divided them into three Squadrons, all managed by . Indians who knew how to conduct them, under the Command of Captains of their own Nation; and, having diftributed this Reinforcement among the Brigantines, he fent four of them to Sandoval, four to Alverado, and himfelf with the other five joined Colonel Olid.
20. Upon this Occafion the Mexicans not only fhewed Valour, but added military Skill; for they ftood in need of new Inventions, againft an Invafion by a People whofe Weapons, and Conduct in War, were unknown in their Country ; and they gained fome Advantages, by which they raifed the Reputation of their good Service: They fent, by round-aboutWays, Canoes full of Pioneers, to clear the Ditches which the Spaniards had been filing up, that they might fall upon them with their whole Force when they fhould be obliged to retire, a Stratagem which occafioned the Lofs of fome Soldiers in the firt Attacks. By degrees they brought out another Stratagem ftill more remarkable; for they acted contrary to their Cuftom, and made fome Sallies by Night, only to alarm the Enemies; and fatigue them" by want of Sleep, that they might afterwards at-

Vol. II. Numb. LXXVIII
tack them with the Advantage of frefh Troops; but nothing thewed their Ingenuity more than what they contrived againft the Brigantines, by engaging them feparate; for which End they built thirty great Veffels of that fort which they called Piraguas, but of a larger Size, and ftrengthened with great Planks, to receive the Shot, and engage under better Shelter. They fallied in the Night with this Fleet, to poft themfelves behind the Reeds in the Lake, which grew fo high and thick, that they formed as it were feveral Groves impenetrable to the Sight.
Their Defign was to draw thither the Brigantines, which cruized, about two at a time, to prevent any Relief getting into the City; and to entice them into that Wood of Reeds they had provided three or four Canoes laden with Provifions, having likewife fixed a good Number of large Stakes in the Water, in hopes to deftroy the Brigantines, or to make it eafier to board them. Thefe Contrivances fufficiently thewed, that they knew how to defend themfelves and offend their Enemies, and that they wanted not thofe Subtilties. The next Day, four of the Brigantines that attended Sandoval were to cruize about that Part, under the Command of the Captains Barba and Portilla. As foon as the Mexicans fpied them, they fent out their Canoes another Way, that, being feen at a Diftance, they might fly among the Reeds: Which was fo well executed, that the two Brigantines purfued the Prize, with the utmoft force of their Oars, and foon fell in among the hidden Stakes, where they were fo embarraffed, that they could neither go forward nor backward. At the fame time the Enemies Piraguas came out, and attacked them on all Sides with fuch defperate Fury, that the Spaniards were very near being loft.
But, exerting the utmof Efforts of their Courage, they maintained the Fight until fuch as were expert Swimmers, with Hatchets and other Tools, removed thofe Stakes amongft which the Brigantines were faftened; and, being thus at liberty to work their Veffels, and play the Artillery, they funk moft of the Piraguas, and followed the reft as far as Cannon-ball would reach. The Mexicans fuffered exceedingly, but the Brigantines were much damaged, feveral Spaniards wounded, and all much fatigued: Capt. Portilla was killed, to whofe indefatigable Bravery the Succefs was chiefly owing, and Capt. Barba received feveral Wounds, of which he died three Days after: Both thefe Loffes Cortes greatly lamented, and particularly that of Barba, for in him he loft a Friend ever fteady, and a brave Soldier. It was not long before this Difafter was revenged; for the Mexicans, having repaired their Piraguas, and reinforced them with new Veffels of the fame Kind, concealed themfelves a fecond time among the Reeds, fortifying the Avenue with a great Number of Stakes, believing the Spaniards would again fall into the fame Snare, without their giving a different Colour to the Deceit. Cortes, having Intelligence of this Motion of the Enemy, and being defirous of revenging the Lofs he had fuftained, as foon as he could ordered fix Brigantines, in the Night, amongft another Parcel of Reeds, not far from the Place where the Enemy had hid themfelves; and, making Ufe of their own Stratagem, one of them was to fally early in the Morning, as if in fearch for the Canoes laden with Provifions, and afterwards draw as near the concealed Piraguas as was neceffary, to let them fee they were difcovered; which done, The was to tack, and by a hafty Flight to draw them to the Place of the Counter-ambufcade : Every thing fucceeded as could have been wifhed: The Enemy fallied with their Piraguas in Purfuit of the Brigantine which they looked upon as their own, till, being come within a convenient Diftance, the other Brigantines rufhed out, and, before they could ftop or turn, gave them fuch a terrible Salute with all their Artillery, that the very firft Difcharge overfet beft part of them, and put the Mexicans who were on board the reft, into fuch a Confternation, that before they could recover themfelves almoft all the Piraguas were funk by the next Vollies, and moft of the Men perifhed; fo that the Enemies Fleet was entirely ruined ; and Cortes had the fingular Satisfaction of having given them a Defeat by their own Stratagem.
The Spaniards had Inteligence of what paffed in the City, by the Prifoners they took; and finding that Hun. L. 1
ger and Thirlt, and Want of all Neceffaries, began to occafion Murmuring among the People, and Difference among the Soldiers, Cortes applied himfelf with the greateft Diligence to cut off all Relief from the City ; and, to juftify his own Proceedings, he fent two or three Noblemen, who were Prifoners, to Guatimozin, with Overtures of Peace, on very advantageous Conditions; offering to leave him in full Poffeffion of his Empire, provided he would only acknowledge the fovereign Dominion of the King of Spain, whofe Right was already owned among the Mexicans, from the Tradition of their Anceftors, and the Confent of feveral Ages. This was the Subftance of his Propofal, which he repeated, becaufe it grieved him to deftroy fo beautiful and fo wealthy a City, which he looked upon as a rich Jewel in his Sovereign's Diadem.

Guatimozin received the Propofal with fomewhat lefs Pride than he was wont, and, as feveral Prifoners reported, he called a Council of his chief Officers and Minifters, with the Priefts; whofe Opinions were principally confidered in all public Affairs, in which he laid before them "the miferable Condition to which the City was reor duced, the Numbers they had loft, the Complaints of " the People upon their beginning to want, the Dif"c truction of their Habitations, and defired their Ad-
"v vice, expreffing as much Inclination to Peace as was
" fufficient to give room for their Flattery or Refpect "to fecond him."

This fo far fucceeded, that all his Officers and Minifters concluded immediately to receive the Overtures towards an Accommodation, leaving it till afterwards to confider of fuch particular Conditions of Peace as would be moft for the Intereft of the State: But the Priefts pofitively oppos'd all Treaty, feigning to have receiv'd fome Anfwers from their Idols, which gave them frefh Affurance of Victory. The Opinion of the Priefts fo far prevailed, that all who had Votes concurred with them; and Guatimozin, not without much Regret, becaufe he had already began to prefage his own Ruin, refolved to carry on the War, and faid to his Minifters, "That he would put to " Death the firf Man who fhould prefume again to men"c tion Peace, to whatever Diffrefs the City flould be re" duced, without excepting the Priefts themfelves, who " weremof obliged to fupport the Oracles of their Gods." Cortes, being informed of this Determination, refolved to puin his Attacks by all the three Caufways at the fame time, and carry Fire and Sword into the very Heart of the City, and fending his Orders to the Commanders of the two Attacks of Tacuba and Tapeaquilla, he, at the Time appointed, marched himfelf by the Caufway of Cayoacan, at the Head of the Troops commanded by Colonel Olid. The Enemy had cleared the Ditches, and caft up Works ; but the five Brigantines which were ftationed upon that Attack eafily overthrew their Fortifications at the Time the Ditches were filling up, and the Army advanced without any confiderable Oppofition, till coming to the laft Bridge, which opened upon the Quay, they met with another fort of Difficulty.
The Indians had broke down fome part of the Caufway to enlarge the Ditch, which was fixty Feet long, and turned into it the Water of the Canals, that it might be the deeper. On the oppofite Bank they had raifed a Fortification covered with Planks, in which were Rows of Loopholes with fome fort of Traverfes; and they had provided a Multitude of Men to defend that Poft : But the firft Difcharges of the Artillery deftroyed all that Fortification, and the Enemies, having fuffered much by the Fall thereof, and finding themfelves expofed to the Balls, retired into the City, without turning their Backs or abating their Threats. Thus they left the Shore free, and Cortes, unwilling to lofe a Moment, immediately ordered the Spaniards to poffers themfelves of it, making Ufe of his Brigantines and Canoes to land his Men, and the Horfe paffed the fame way with three Pieces of Artillery, which he thought fufficient for that Service.
Before they advanced againft the Enemy, who were ftill pofted behind the Trenches made acrofs the Streets, he ordered the Treafurer, Fulian de Alderete, to ftay there and fill up and fecure that Ditch, and the Brigantines
to draw near to the Place were the Action was, and do what Damage they could to the Enemy. The firft Engagement prefently began, and fulian de Alderete; hearing the Noife of the Battle, and feeing the Advances of the Spaniards, looked upon the Employment of filling up a Ditch to be unworthy of him when his Companions were fighting, and inconfiderately advanced to join the reft, leaving that Charge to another of his Company, who either did not know how to perform it, or elfe would not take upon him a Piece of Work which was thought difhonourable to him who cominitted the Care of it to him; fo that all the Men under his Command followed him to the Engagement ; and that Ditch which at the Time of the Attack had been thought impracticable remained intirely abandoned.
The Mexicans refolutely ftood the firft Charge. It coft the Spaniards no fmall Trouble and fome Blood, to make themfelves Matters of their Trenches; and the Hazard was fill greater when they had panfed the ruined Buildings, and were obliged to defend themfelves from. the Arrows and Darts of the Enemy, which came pouring on them from the Tops of the Houfes and the Windows; but in the Heat of the Engagement there appeared a fudden Slacknefs in the Enemy, which feemed to be the Effect of fome new Order, for they haftily quitted the Ground they had defended. This Change was then fuppofed, and afterwards appeared, to fpring IromGuatimozin's being informed that the great Ditch was abandoned; whereupon he ordered his Commanders to preferve their Troops, and to fall upon the Spaniards in their Retreat.
Cortes fufpected this Motion of the Enemy, and, in regard that he had but barely time enough to return to his Quarters before Night, he began his Retreat, ordering firt fome Houfes to be fet on fire, in order to prevent their receiving any Damage from them on the next Attack ; but they had fcarce began to march, when their Ears were ftunned with the melancholy Sound of the Sacred Trumpet, fo called by the Mexicans, becaufe it was not permitted to any buit the Priefts to found it, and that only when they animated the People on the Part of their Gods : The Sound was vehemently loud and ftrong, and the Tune compofed of difmal Notes, which infpired thofe Barbarians with a new kind of Rage, fuch as made them defpife Life, through a Motive of Religion. Next followed the intolerable Noife of their hideous Outcries; and, when the Army marched out of the City, they fell upon the Rear, which was brought up by the Spaniards, an incredible Multitude of their moft refolute Warriors being picked out of the whole Army, for this Action.
The Fire-arms and Crofs-bows faced about, and made Head; and Cortes, with the Cavalry, endeavoured to put a ftop to the Enemy; but, being informed of the Difficulty of the Ditch, which hindered the Retreat, he would have formed his Battalions, and could not; becaufe the Confederates, who had received Orders to retire, being the firft that came to the Ditch, haftily threw themfelves into it, in the greateft Confufion; fo that his Orders were not heard, or not obeyed. Many got to the Caufway in the Brigantines and Canoes, but more threw themfelves into the Water, where they found whole Troops of Mexicans, who either wounded or drowned them. Cortes was left with fome of his own People to maintain the Fight, his Horfe was killed under him, and Captain Guzman, alighting to give him his, was taken Prifoner, without Poffibility of being refcued. Cortes, at laft, got to the Brigantines, and returned to his Quarters, wounded and defeatied: Above forty Spaniords were taken alive, to ferve as Sacrifices to their Idols; one Piece of Cannon was loft; above a thoufand Tlafcolans were killed; and there was fcarce any one Spaniard that was not hurt. This was, in reality, a very terrible Blow, of the Confequence of which Cortes was very fenfible; but he would not fuffer his Countenance to fpeak the Grief of his Heart: On the contrary, he appeared, if not chearful, ferene; and tho ${ }^{\circ}$. not gay, yet tolerably compofed.
While Cortes was employed in this Attack, San-
doval and Alverado entered at the fame time, and met with the fame Oppofition, with very little Difference in the Succefs of their Attacks: But they did not meet with the Misfortune of the Ditch, and therefore their Lofs was lefs; though in both Attacks they loft about twenty Spaniards, which makes up the Account of above fixty of his own People, in the Action of Criyoacan. :The Treafurer Alderete, confidering the Damage which his Breach of Orders had occafioned, was fenfible of his Offence, and haftened to the General's Prefence with much Sorrow, offering his Head to atone for his Crime. Cortes gave him a fevere Reprimand, without any farther Punihhment ; not thinking it proper, at that Juncture, to difcourage the Soldiers, by inflicting upon that Officer, the Chaftifement which he merited. Upon this Occafion they were very fenfible, fays a Spanifb Author, of the fingular Gift of a private Soldier, Fuan Gatalan, who, without any other Medicine than a little Oil, and certain Benedictions, cured their Wounds in fo fhort a time, that it did not look like the Work of Nature.
21. The Mexicans celebrated their Victory with great Rejoicings, and that Night the Spaniards faw, from their Quarters, all the Temples of the City crowded with innumerable Lights, and Veffels of Perfumes; and in the principal Temple, dedicated to the God of War, they heard the Sound of military Inftruments in feveral Concerts, which were not altogether difagreeable. With thefe pompous Preparations they celebrated the Sacrifice of thofe miferable Spaniards, who were taken alive; the Blood of whofe leaping Hearts, ftill warm, was fprinkled upon their Idol; while thefe wretched Victims, with their laft Breath, were calling upon the God of Truth. This was fuppofed to be the Occafion of that extraordinary Solemnity; and the Fires gave fo great a Light, that the Motion of the People was perceived. The Advantage they had gained, joined to the Satisfaction of having appeafed their God of War, by the Sacrifice of fo many Spaniards, fo far raifed the Pride of the Mexicans, that the very fame Night, a little before Break of Day, they advanced by the three Caufways, to beat up the Quarters, with a Defign to fet fire to the Brigantines; and to compleat the Deftruction of thofe People; whom they, with good Reafon, concluded to be either wounded or fpent with Fatigue ; but they knew not how to conceal their Motion; for the infernal Trumpet, which infpired them with fo much Fury, turning their Defpair into religious Worhhip, gave Notice of their Approach, and the Spaniards were fo well prepared to receive them, that they were repulfed by the Artillery of the Brigantines, and fome Pieces which were mounted at their Lodgment; which, playing upon the Caufway, upon thofe throngs of People, fufficiently chaftifed their Prefumption.

The next Day Guatimozin employed feveral Artifices to intimidate the Indian Allies; he gave out that Cortes had been killed in his Retreat on the Caufway, thereby giving the People Hopes that they fhould fhortly be delivered from their Oppreffions: He fent the Heads of the facrificed Spaniards to all the neighbouring Towns, that thofe Tokens of his Victory might bring fuch as had fallen off from him, back to their Obedience: And laftly, he reported that their fupreme Deity, the God of War, being appeafed by the Blood of thefe their Enemies, had informed him by an intelligible Voice, that the War fhould be at an End in eight Days, and, that all fhould infallibly perifh who neglected this Advice. This he invented, concluding that he fhould quickly make an End of all the Spaniards; and he found Means to fend feveral Perfons unknown, into the Enemies Quarters, who fpread thefe Threatenings among the Indian Nations which ferved againft him.

The Oracles of that Idol had fuch Reputation among the moft diftant Nations, that the Indians were perfuaded of the Infallibility of thefe Threats: The Notion of eight Days fo precifely limited for the fatal Period of their Lives, had fuch an Effect, that they refolved immediately to quit the Army; and, during the two or three firt Nights, the greateft Part of the confederate Troops deferted, even the Tlafcalans and Tezcucans dif*
banded with the fame Diforder, either becanfe they really feared the Oracle, or that they were led away by the Example of thofe who did. This wàs a frefh Affiction unto Cortes, almoft caufing him so defpair of the Succefs of his Enterprize. But the Moment that he was informed of the Occafion of that fudden Change, he fent their own Commanders after the Fugitives to ftop them; delaying till the eight Days affigned by the Oracle being paft, they might be fenfible of the Impofture of the Prediction, and better difpofed to return to the Army,
22. This notable Contrivance of Cortes had the defired Effect ; for when the eight Days were expired, the Indians? having fully recovered from their Fright, returned to their Quarters with fref Vigour and Refolution. Don Hernando, Prince of Tezcuco, fent his Brother to bring back thofe of his Nation, who returned with him, and fome new Levies that were coming to join the Army. The Tlafcalan Deferters did not dare to proceed on their Journey, for fear of expoling themfelves to Punifhment, but waited to fee the Event of the Prediction, with a Defign to join fuch of their Nation as Chould have the good Fortune to efcape after the imaginary Defeat; but at the time they were undeceived of their Credulity, they had an Opportunity of incorporating themfelves with a Reinforcement that was coming from Tlafcala, and were better received in the Army upon their Return. The, Noife this Increafe of Forces, and the Diftrefs of the capital City, made in the neighbouring Countries, prevailed. with feveral Nations who had been Enemies or Neriters, to declare in Favour of the Spaniards. One of the moft confiderable, was the Nation of Otomies, a fierce unnatural People; who; after the Example of Beafts, preferved their Liberty amongft Mountains, and had hitherto kept themfelves free from the Mexican Empire, without any other Fortification than the Sterility of their Country, which afforded no Temptation to a Conqueror.
Thus Cortes once more found himfelf at the Head of an Army, of upwards of two hundred thoufand $\mathrm{Men}_{\text {, }}$ paffing in a few Days from a terrible Storm to an agreeable Calm. The Mexicans were not idle during this Sufpenfion of Arms, to which the Spaniards were reduced. They made frequent Sallies, beating up the Spanibs Quarters both by Night and Day; and were always repulfed with Lofs. By fome of the laft Prifoners, Cortes was informed of the great Diftrefs the City was in; that the Soldiers were diffatisfied, and the People reduced to Extremity for want of Bread and Water ; that abundance of People died by drinking the brackifh Water of their Pits, and that the Provifions they got by Canoes were equally divided among the Nobles, and became the Subject of Impatience and Difcontent to the Populace, whofe Clamours began to give fome Sufpicion of their Fidelity. Upon which Intelligence Cortes affembled his Captains to confult what was proper to be done. He reprefented the fmall Hopes he had that Want would oblige the Befieged to furrender, becaufe of the implacable Hatred they bore the $S j a n i a r d s$, and of thofe pretended Anfwers of their Idols. He gave his own Opinion to proceed immediately to Action, for the Reafons he had. alledged, and for fear the Allies fhould again defert him. And it was alfo refolved not to retire as before, but that each of the Spanifh Corps fhould endeavour to make their Quarters good in that Part of the City, into which they fhould be able to penetrate.
The General, after this Refolution was taken, and having made Provifion neceffary for the Subfiftance of his Troops, in a City where all things were wanting, caufed the Forces, at the dawning of the appointed Day, to march out of their refpective Quarters s Alverado from Tacuba, sandoval from Tapeaquilla, and the General, with the Body of Troops, commanded by Olid, from Cryoacan; each having his Brigantines and Canoes to fupport him. They found all three Caufways in a pofture of Defence, the Bridges drawn up, and the Ditches all cleared and guarded. All thefe Difficulties they furmounted with the fame Induftry they had done others, and, after fome fmall Delay, the three Bodies arrived in the City; and foon gained the ruined Streets. All the Spaniords attempted the firnt Day was, only to lodge themfelves each

Body fortifying their Quarters with the Ruins of the Houles, in the beft Mianner they could.

This caufed great Confufion among the Mexicans, and entirely broke all the I:Ieafures they had taken to charge the Spaniards in their Retreat. The Rumour of it was foon fpread, the Danger greatly magnified, and every one's Thoughts was employed about providing fome fpeedy Remedy. The Minifters inftantly repaired to Guatimozin's Palace, and, by their preffing Intreaties, pre-vailed with him to retire that very Night to a more diftant Part of the City. Councils were continually held, and the Opinions were different, being either bold and refolute, or timorous and dejected, according as the Underftanding followed the Diciates of their Hearts; fome voted that the King, for the Security of his Royal Perfon, fhould be immediately conveyed to fome Place lefs expofed; others for fortifying that Part of the City where the Court then was, and others preffed hard to diflodge the Enemy from the Pofts they poffeffed. Guatimozin inclined to the Advice of thofe who exprefled the greateft Refolution; fo that he declared he was fully determined to fhare his Fate with his People; and that Moment gave Orders that Preparations fhould be made to attack the Enemy at Day-break, with the Remainder of his Forces. To this Purpofe the Chiefs, with all poffible Expedition, affembled all the Troops, which were divided into three Battalions, with a Defign of exerting their laft Strength in this Effort, to the total Deftruction of the Spaniards.

Scon after dawning, the Enemy prefented themfelves within Sight of the three Lodgments; but the Artillery which played upon the Avenues, made fuch a terrible Slaughter in their Van-guard, that they durtt not advance to put their Orders in execution, and were foon convinced that their Attempt was wholly impracticable; fo that without venturing nearer they began to give back, endeavouring to make what was in reality a Flight, looked upon as an orderly Retreat. But the Motion, as it was now, gave the Spaniards an Opportunity to rout and difperfe the Enemy, and bettered their Quarters for the enfuing Night. All was fo happily and fo expeditiouny effecked, that in lefs than four Days the three Leaders came in Sight of Tlateleuco, whither they had all directed their Courfe. Alverado was the firt that came to that fpacious Square, where he found the Enemy endeavouring to draw up in order of Battle: But he gave them not time, neither was it an eafy Matter for Indians, when once in Diforder, to return to a Charge ; fo that, at the very firt Onfet, they abandoned the Ground, and in great Confufion retired to the Streets on the oppofite Side. Alverado obferved that there was at a fmall Diftance a very large Temple, the Towers whereof were poffeffed by the Enemy; and thereupon he immediately detached fome Companies to drive them from thence, in order to fecure his Rear; which Orders they foon performed. Soon after came up, by a different Avenue, the Detachment belonging to Olid, but then under the Command of Cortes himfelf; and the confufed Throng of Mexicans that fled before him into the Square, fell in upon the Battalion which Alverado had drawn up in order of Battle; where thefe Wretches being attacked on every Side, moft of them perifhed, and the like Fate attended thofe who were driven by Sandoval, who prefently after arrived.

Thofe of the Enemy who had retired to the Streets which led to the other Parts of the City marched with the utmof Precipitation, to defend the Perfon of their Prince, whereby the Spanifh General had an Opportunity to lodge himfelf to the beft Advantage, without any Interruption, ordering the Brigantines and Canoes to ply about the three Caufways, and to give him Notice of what fhould occur. The next Morning all the Streets were filled with armed Indians, but they were pofted there only to cover thofe who were working upon the Fortifications, which were making for their Retreat; and Cortes, perceiving that they did not attempt by any Hoftilities to provoke him, fufpended tha Attack which he at firf had determined, being inclined to offer them Peace, as fuppofing they might be now difpofed to an Accommodation. The Neffage was carried by three or four principal Pri-
foners, and Cortes was impatiently waiting for an Anfwer, as not doubting but the Propofal would be gladly received; becaufe it was obferved that thofe Multitudes of the Populace who were wont to be always ready to defend the Streets, were entirely withdrawn. The Quarter to which Guatimozin, with his Minifters and Soldiers was retired, was a very fpacious Angle of the City, the greateft Part whereof was defended by the Lake, and the reft was at no great Diftance from the great Square of Tlateleuco; and it was fortifyed by a ftrong Wall made of huge Planks and Fafcines, which reached the Buildings on each Side of thofe Streets, before each of which was a broad and deep Ditch, full of Water, which they had dug acrofs the Streets, to give a Current to the Waters of the Canals.

The enfuing Morning Cortes, followed by the greateft Part of the Spaniards, marched to view the Ground which the Enemy had forfaken, and advanced till he came within Sight of thefe Fortifications, which he found covered with an incredible Multitude of Men in Arms; but who feemed to be difpofed to Peace, for they neither founded their warlike Inftruments, nor made any Outcries. The General drew back, and returned feveral times with the Spaniards without offering to moleft them: And it appeared that the Mexicans had orders to do the like. During the three Days Sufpenfion of Arms, Guatimozin held feveral Councils to deliberate on the Overtures of Peace, and the Majority voted the admitting the Treaty, fenfible of the miferable Condition to which they were reduced, while others, conforming their Sufferings to the Inclination of their Sovereign, fhewed themfelves willing to continue the War; but the deteftable Priefts fupported the leffer Number, affuring Victory with dark and myfterious Menaces, and infpired the whole Affembly with the fame diabolical Fury which poffeffed their own Breafts. Upon this it was refolved to profecute the War, and to renew their Hoftilities, while Guatimozin, before he broke up the Council, gave Orders that all the Piraguas and Canoes hould retire to a Bay which the Lake made in that Part of the City, in order to fecure a Retreat, in Cafe they fhould be driven to Extremity.
This Order was inftantly put in Execution, and an incredible Number of thefe Veffels made to that Bay, of which Motion immediate Notice was fent from the Spaniards who were upon the Lake, to Cortes; who, without Hefitation, prefently concluded, That the Mexicans were ufing thefe Precautions, with no other Viêw than to fecure their Prince's Perfon. Hereupon he appointed Sandoval for Commander in chief of all the Brigantines, with Orders to furround the Bay at a Diftance, and to have a watchful Eye upon whatever Motion the Enemy fhould happen to make. Soon after he advanced with his Troops, but the Enemy had already received Orders to defend themfelves; and, before the Spaniards came up, the Indions declared the Breach of the Treaty by their hoftile Cries; and, with a fteady and refolute Countenance, prepared for the Encounter; but it prefently appeared that their Courage began to fail them, for they no fooner perceived the terrible Havock which the firf Difcharge of the Cannon made in their wooden Fortification, which they foolifhly imagined to be impenetrable; but they fent Notice thereof to Guatimozin, for it was not long before they made Signs of demanding a Parley, by hanging out white Cloths, and frequently repeating the Word Peace.

They were given to underftand, that whoever had any Propofal to offer from their Prince, might approach; upon which, four Mexicans, who feemed to be Perfons of fome Note, appeared on the further Side of the Ditch: Thefe Deputies, upon a Motion made by Cortes, promifed, in the Emperor's Name, that he fhould confer with him the next Day; and then brought an Excufe; which Method they purfued for four Days together, while Guatimozin, who never intended any fuch thing, was preparing to make his Efcape by the Lake.
23. The Day being come, which Cortes had appointed as the utmoft Period he would allow, Sandoval difcovered at the Dawn of the Morning Multitudes of

Mexicans,

Mexicans, with all imaginable Diligence, embarking on board the Canoes which were in the Bay, upon which he approached them flowly, and then the Canoes of the Enemy, on board of which were the Nobility and all the principal Perfons of the City, began to move, having unanimoully refolved to make their laft Efforts, and at all Hazards to maintain the Fight, till their Prince had made his Retreat, after which they were to follow him by feveral Ways. Accordingly they put this Defign in Execution, attacking the Brigantines with Vigour: But, at the fame Time that the Mexicans were engaging with fuch extraordinary Fury, Sandoval obferved, that from the fartheit Part of the Bay fix or feven Piraguas, with the utmoft Force of Oars, were making the beft of their way, upon which he ordered Capt. Garcias de Holguin to chafe them with his Brigantine, and endeavour to take them.

That Captain, without lofing a Moment's Time, ufed fuch Diligence that he foon overtook them; when turning the Head of his Brigantine, he fell in upon the foremoft Piragua, which feemed to command the reft. They all at once ceafed rowing, and lay upon their Oars, when they found themfeives attacked, and fome of thofe who were in the firft Piragua called out to the Brigantine not to fire, faying, his Mexican Majefty was on board that Veffel, which Words were interpreted by fome Spanifh Soldiers, who began to have a Smattering of the Mexican Language. Upon this the Brigantines boarded the Piragua, into which Holguin, with fome Spaniards, immediately leaped in order to fecure their Prize. Guatimozin inftantly advanced, and diftinguifhing the Captain, by the Refpect paid him by the reft, faid, "I am your Prifoner, and ready to go whither "s you think fit to conduct me : All I have to defire is, sc that fome Regard may be had to the Honour of my "s Confort, and to that of the Women who accom" pany her."
He then paffed into the Brigantine, and gave his Hand to that Princefs to help her up, and was fo much Maiter of himfelf, and fo far from being in any Confternation, that, perceiving Holguin to be in fome Concern about the other Piraguas, he with great Sedatenefs of Countenance added, You have no Occafion, Sir, to give yourfelf any Trouble concerning thofe, for they will all come to die at the Feet of their Prince; and upon the firft Signal he made them, they let their Weapons drop out of their Hands, and followed the Brigantine as Prifoners. Sandoval was all that time hotly engaged with the Canoes, and by the Refiftance he met with, he became fenfible of the Quality of thofe who defended them, and of the Courage and Fidelity of the Mexican Nobility, who, at the Hazard of their Lives, had undertaken to fecure their Prince's Liberty. But they foon had Notice of his being taken, and then their loud military Cries were converted into lefs noify Lamentations. Holguin came up at the fame Time, having firft difpatched a Canoe with the News to Cortes, and, without bearing down too near upon Sandoval's Brigantine, he gave him as he paffed by a brief Account of what had happened, but perceving he was defirous of taking care of that important Prifoner, he made the beft of his Way, left Sandoval fhould fend him an Order to that Purpofe.

As foon as this News was brought him, Cortes, lifting up his Eyes towards Heaven, as acknowledging the fupreme Author of all his Succefs, ordered two Companies of Spaniards to the Landing-place, to guard the Royal Prifoner, and then went himfelf to receive him not far from the Quarters, which he did with great Refpect, Signs and Geftures ferving inftead of Words, to which Guatimozin made a Return in the fame Manner, endeavouring to conceal the Agitations of his Breaft by a forced Complaifance.

Guatimozin was about twenty-four or twenty-five Years of Age; fo brave, that he had, by his Exploits and Victories in the Field, rifen to thofe Honours which qualified the Nobles to afcend the Throne. He was as to his Perfon well proportioned, tall, robuft, and ftrong built, and of fo fair a Complexion, that among thofe of his own Nation he looked like one of a different Climate. The Emprefs, who was about the fame Age, by the Gracefulnefs of her Carriage attracted the

Eyes of all, but her Beauty was rather majeftic than delicate; The was Niece to Motezuma; or; as fome fay, his Daughter ; which when Cortes underftood, he renewed the Offers of his beft Service, profefling himfelf obiiged to pay to the Perfon of that Princefs the Venera= tion he owed to the Memory of that Monarch. This great Event happened on the 13 th of Auguft 152 I, and therefore we may from thence date the Dominion of the Spaniards over this Empire. The Captive Emperor fent his Orders to his Subjects to lay down their Arms, and to fubmit to him who had their Monarch in their Power, which they accordingly did, and thereby put ant End to the War for the prefent.

The kind Ufage given at firft to the Emperor Guatimozin did not laft long, but the Change made in his Treatment did not properly arife from Cortes himfelf, but from the Soldiers, who, remembering what vaft Quantities of Gold they had formerly feen in the Poffeflion of Motezuma, demanded an Account of what was become of them; and when Cortes very truly protefted that he knew as little of them as they did, they grew fo furious and infolent, as to fuggeft that he had fecretly fecured them for his own Ufe. They were fo much the bolder in this Matter, becaufe they found themfelves fupported therein by the King's Treafurer Fulian de Alderete, who had great Authority, and who, as he was Nephew to the Bifhop of Burgos, hated Cortes heartily, and inclined to do him all the Mifchief he could. This Man, finding that no Account could be obtained of thefe Treafures, demanded that the unfortunate Guatimozin, and his firft Minifter, fhould be put into his Hands in order to be examined about them, which in his prefent Circumftances Cortes durft not refufe. The Method this Gentleman took to make them difcover what he fought was pretty fingular.

He put them upon the Rack, as fome Writers fay; but as others more truly affirm, caufed them to be extended upon burning Coals. The Minifter looking upon the Emperor cried out violently, upon which Guatimozin faid, Do you tbink I lie bere upon Rofes? Which Reproof ftruck the poor Creature filent, fo that he expired without any farther Complaints. But Cortes, hearing his firft Cries, broke into the Apartment and releafed the Emperor, and the Soldiers themfelves approved his Conduct, and blamed the Treafurer's Barbarity. This Cruelty had not the defigned Effect ; for there was no Difcovery made of the Treafure for which they fought, which made them almoft diftracted. They fearched all Parts of the Lake to no Purpofe, ranfacked the Temples without finding much, and tore to Pieces the Tombs, in which indeed they found fome little Gold, which Cortes, to pacify them, divided amongft them.
24. The Provinces of the Mexican Empire that were neareft that Capital immediately fubmitted to the Conqueror, and Cortes, having received Intelligence of the Kingdom of Mechoacan, which lies to the Weftward of Mexico, he firf fent Montano, with three other Spaniards as Embaffadors, to vifit the King, who at firft received them indifferently, though afterwards he treated them magnificently; and went himfelf to fee Cortes, who foon after difpatched Cbrifopher Olid to take Poffeffion of that Country with an Army, which he accordingly did, and forced the King, who fhewed himfelf difpleafed with his Proceedings, to fly for Shelter into the Mountains. This great Flow of Succefs altered the Temper of the Spanifh General, who began now to difcover fuch Haughtinefs and Cruelty in his Difpofition, as nothing could juftify. Cortes, having through this Country penetrated to the South-Sea, erected Forts and built Ships there, for farther Difcoveries on that Side, and fent alfo Gonzalo de Sandoval to fubdue the Countries near Tabafco and Tecountepec on the North-Sea; and Pedro de Alverados another Commander, was detached with a Body of Spaniords and confederate Indions to take Poffeffion of the Countries bordering upon the Vale of Guaxaca to the Eaftward of Mexico, who all fubmitted to the Conqueror.

While Cortes was thus employed in reducing this Country to his Obedience in the Name of the Emperor Cbarles V. Cbriftopber de Tapia arrived at Vera Cruzs

Mm
with
with a Commifion from that Prince, to command all the new Conquefts: But the Garrifon Cortes had left at Vera Cruz fo threatened and terrified Tapia, that he was glad to make his Efcape, and leave the General in Pofleffion of Mexico. Having got rid of this Rival, Cortes marched in Perfon to the Province of Panuco, which he obliged to fubmit to him, whereupon he divided the Country and all the Indian Inhabitants among the Officers and Soldiers, who treated them as Slaves; and this was his Practice in every Province, where the People voluntarily fubnitted to him, or were compelled to it by force. But notwithifanding this bad Behaviour to the Natives, and his refufing to refign his Government to thofe who were fent to fucceed him in his Command, fo powerful were the rich Prefents he from Time to Time fent to the Emperor, and fuch were the Reprefentations made to that Prince in his Favour, that Cortes was declared Captain-General and Governor of Nero Spain by the Emperor.
The Governor of Hijpaniola and Cuba were commanded to reinforce that General, and give him all poffible Affiftance: Whercupon, finding himfelf now eftablifhed in his Command, he fet about rebuilding the City of Mexico, which he had burnt and demolifhed. He affigned Places for building Churches and other public Edifices, laid out Market-Places, divided the beft Part of the Ground among the Spaniards, and the reft among the Natives, giving them Encouragement to build and people the Place again: He affigned one quarter Part particularly to Motezuma, a Son of the late Emperor, and another to one of the moft popular Indian Generals, and they foon erected a much finer Town than that which had been deftroyed, having now the Advantage of Iron Tools, Carriages and Engines, which they wanted before. But nothing could be more magnificent than the Palace Cortes erected for himfelf upon the Ground where Motezuma's Palace formerly ftood, about which 'tis faid he ufed feven thoufand Beams of Cedar, fome of them 120 Foot in Length; he alfo provided himfelf with a numerous Train of Artillery, confifting of thirty-five Pieces of Brafs Cannon, and feventy of Iron, which gave the Indians a valt Opinion of his Power; but that which was his real Strength, and did him moft Service, both in Mexico and Europe, was the prodigious Wealth he acquired by the Plunder of all the Provinces he became Mafter of, and the rich Mines of Gold and Silver he every Day difcovered, or took from the Owners.
All his great Conquefts, however, could not procure him Reft, and a peaceable Eftablifhment ; for fometimes he was in Danger from the Intrigues of the Indians, who were very defirous of recovering their Country, and driving out or deftroying the Spaniards : And to put an End to thefe Contrivances, he, in 1527 , found himfelf obliged to hang Guatimozin, and two other Indian Princes, whom he had detected in a Confpiracy againft him. Sometimes he found no lefs Uneafinefs from the Ambition, Avarice and Malice of fome of his own Countrymen. Thus, for Inftance, Chriffopher Olid, who had behaved fo gallantly in the War againft the Mexicans, revolted from him, but was foon taken off by a violent Death. Fulian de Alderete, whom we have fo often mentioned, contrived the Murder of Cortes while upen his Knees at Mafs, which he afterwards confeffed to him, and afked his Pardon. At another Time, a Prieft, whofe Namé was Leon, formed a Defign of blowing him into the Air by fetting Fire to a Barrel of Gunpowder, which either by Contrivance or by Chance was placed immediately under his Lodgings. Thefe Accidents fhew how fortunate a Man Hernan Cortes was.
But how great foever his Courage, his Conduct, or his Succefs, yet he wanted not many Enemies envious alike of his Merit and his Fortune, and who therefore took abundance of Pains to prejudice the Emperor Cbarles V. againft him.
In the Year 1528 Cories found it convenient to return into Spain, in order to juftify his Conduct againft his Enemies.' The Emperor Cbarles V. received him with great Refpect, gave him the whole Vale of Atrifco, with the Towns and Villages therein ; conferred on him the

Title of Marquis of the Vale of Guaxaca, and, to compleat his Favours, procured him a very honourable Marriage. The next Year he returned to Mexico with his Lady, but with a very limited Commifion, which turned more to the Difadvantage of the Spanihb Government, than to the private Lofs of the Marquis, who was fo much beloved and efteemed in that part of the World, as to ftand in no Need of Authority to procure him Refpect. He was fome time afterwards Captain General, Mendoca being Viceroy of the Province, at which Time there happened many private Grudges between them; but yet they joined together for the finding out a Paffage from thofe Seas to ours, which we properly call the North-Weft Paffage, as alfo the Conqueft of Cibon and Quivira, where they were perfuaded by certain Friars that the People worfhiped the Crofs, and had other Tokens of Chrittianity : But all proved falfe; and few Spaniards returned Home, their Mifery was fo great, and the Country fo cold and barren, the People cruel, and five hundred Leagues from Mexico. Cortes, after his taking Mexico, fent to difcover the northern Parts, and his People arrived in a Country where Ticoantipe Cician Pipe was King, who received them kindly, and fent an Embaffador to Cortes, thinking he was come out of the Clouds, and that their Veffels were great Whales. They wondered at their Horfes, and accepted a friendly Peace, offering Cortes fifty thoufand Men to affirt in conquering Tutepac, who was his Enemy, for ufing the Chriftians well.
Some new Troubles that he met with in relation to his Difcoveries, wherein the Viceroy interfered, inclined him in the Year 1542 to make a fecond Voyage into Spain, where he was received with as much Honour, and yet obtained as little Satisfaction as before. To fpeak impartially, the Emperor had conceived a kind of Jealoufy, that if Cortes was rewarded according to his Merits, he would become too formidable for a Subject. The Marquis was a Man of too much Senfe and Penetration not to difcern the Judgment that was formed of him at Court, when he had refided there but a little while : He was however too wife, and too much a Man of Honour, to think that any Miftakes made by his Prince could cancel any Part of the Duty he owed him. For this Reafon he applied himfelf more affiduouny than ever to merit the Emperor's Affections. He attended him in his dangerous and difaftrous Expedition againft the Algerines, and notwithftanding all his former Services, and fo low a Commiffion, as to be without a Voice in the Council of War, being unhorfed in a Charge he made againft the Infidels, he is faid to have loft in the Field two Emeralds of immenfe Value. After his return to Spain from that Expedition, he affected to lead a quiet and retired Life, employing moft of his Time in the Inftruction of his Children, of whom he had many both legitinnate and illegitimate. His fecond Wife was the Daughter of the Count of Aguila, by whom he had a Son who fiicceeded him in his Titles, and fome of whofe Defcendants are ftill remaining. As for the great Cortes himfelf he died at a Village near Seville, called Caftilleja de la Cuefa, on the 2 d of December 1554 , in the 63 d Year of his Age: But his Corpfe, by his own Direction, was carried into New Spain.
25. In relating the Hiftory of this great Event, we have taken in every thing that is material in the beft Spanifl Writers, fo that the Reader fees at one View, and in the Compafs of a few Sheets, what has filled many large Volumes. When he comes to reflect ferioufly upon all the Paffages herein related, and to confider the Conduct of Cortes from firft to laft, he will certainly be convinced, that this great Man merited the Praifes that have been given him, and that he was very much fuperior to many, if not to moft, of the Heroes of Antiquity. It mult not however be diffembled, that notwithftanding his great Abilities and many Virtues, he was far enough froin having a Character altogether blamelefs, or from behaving in a fuch a Manner as that no Imputation could be fixed upon his Conduct.

If this had been the Cafe, it is highly probable, he would not have been attacked by $F$. Bartbolomero de Cafas, Bilhop of Cbiapa, who went over to Spaim on Putpofe

## Chap. III.

to complain of him, and indeed with good Reaion, if what he fays be true, that in the Space of twelve Years he deftroyed upwards of $4,000,000$ of People; but though, without doubt, the Defign of this Prelate was very laudable, and he was in himfelf a Perfon of a true Chriftian Spirit; yet there want not many Objections capable of deftroying, or at leaft of weakening, to a very great Degree, the Accufations he has brought againft this noble Perfon. In the firft Place, we ought to confider the wide Difference there was between thefe Peoples Characters ; and that a Monk is not, by any Means, a fit Perfon to decide on the Behaviour of a Statefman and a General. The Principles he maintains are not more deftructive of the Character of Cortes, than the Characters of all the great Men, who have attempted Difcoveries or made Conquefts in thefe Parts of the World; and therefore if we admit his Judgment in its full Extent, we muft not only give up the Caufe of this great Captain, but of almoft all the great Captains in every Age and Country; which will perhaps be thought too great a Sacrifice. In the next Place, we ought to remember that from the very Beginning of his Expedition, our Conqueror was oppofed and perfecuted by the Bifhop of Burgos and his Party, not from any Chriftian Spirit of Moderation and Charity towards the Indians, but becaufe he had embraced the Party of Velafquez, who certainly meant to do all that Cortes did, by Means not at all milder than thofe which Cortes employed; and the Bifhop of Cbiapa, who was of the fame Party, may be, in fome Meafure, fufpected of condemning in a Perfon he dinliked, what perhaps he would have excufed in one for whom he had a greater Efteem.

We may farther obferve, that though this Prelate takes a great cleal of Pains to jultify the Indians, and to lay a heavy Load upon his Countrymen, by alledging, that for one Man facrificed by the former to their falfe Gods, the latter offered a thoufand Victims to their Goddefs Avarice; yet, inafmuch as he allows that they did offer human Sacrifices, he, in fome Meafure, allows the Truth of thts General's Relations, and indeed.it cannot well be fuppofed, that a Perfon of the Spirit and Temper of Cortes would write long Letters full only of Lies to the Emperor, his Mafter; and therefore we ought to make fome Allowances for the Provocations he received, and for the Circumftances he was in at a Time he cut off fo many Indians. What feems to juftify our Sufpicion that this good Bifhop exaggerated, either wilfully or by Miftake, the Cruelty of Cortes, is his charging him exprefly with maffacring in cold Blood all the Inhabitants of the City of Cbulula, notwithftanding they had given him a very kind Reception.

The Reader has already feen an Account of that whole Tranfaction, as it is related by the beft-Hiftorians; and from thence it appears, that Cortes inflicted upon that City no greater Cruelties than they meant to have exercifed upon him and his Soldiers, and that by a moft treacherous Contrivance; and, if this had not been the Truth, one can hardly conceive that the Indians that were Confederates with Cortes, would have adhered to him fo clofely as they did, on that and all other Occafions. If he had been really fo bafe and bloody a Perfon, he could farce have gained the Affections of fo many Nations, or granting that by his artificial Behaviour he might have done this, it would have been impoffible for him to have preferved their Affections, as it is evident he did from the very Commencement to the End of theWar: Befides, if the Ambition and Barbarity of Cortes deferved, in the Bifhop's Opinion, no Sort of Favour or Excufe, why fhould we have more Indulgence for the Pride and Tyranny of Motezuma, who certainly had no better Title than he to trample upon the Rights of Mankind, and to make fo many Millions miferable as he did.

Thefe are Things that deferve to be very particularly confidered, becaufe they enable us to judge truly and clecifively of the Subject under our Confideration, without hefitating in our Opinion, or being doubtful whether when delivered it can be futtained. To launch out in the Prailes of Cortes, as a Man in whofe Character there was nothing amifs, and all whofe Actions may be
reconciled to the ftricteft Rules of Religion and Morality; would be undoubtedly carrying the Thing too far, and fhewing fuch a Prepoffeffion in his Favour, as neither Facts nor Reafon could fupport. But we are not to confider him in that Light; we are to look upon him as an Officer fent to extend the Power of the King, his Mafter, in that Part of the World ; and though Velafquez deprived him of his Commiffion, yet, as he acted upon Principles of Honour, and took all due Care of the Royal Intereft, as far as he underftood it, we cannot refure him that Applaufe which is due to his Wifdom and Courage, without acting againft Reafon. As to Religion he feems to have been as zealous for it as the Priefts themfelves; and if that Zeal was intemperate, or ill placed, it was not fo much his Fault as theirs, who taught him no better. He feems, as a Chriftian, to have had a great Abhorrence of Idolatry ; and as an hos neft Man a hearty Deteftation of human Sacrifices; fo that if his Actions were in any Degree wrong, yet the Motives to them, fo far as we can perceive, might be very right. As to his Ambition and Avarice they are not to be excufed, fuppofing them to have been his Vices. But then we ought to reflect how difficult a Thing it is to diftinguifh between a laudable Defire to ferve one's Prince and Country, and what is called Ambition; as well as between a criminal Love for Money; and complying with the Neceffities of Times, by fending over to Spain what he knew was requifite to maintain his Credit, and to fupport him againft his Enemies: Taking therefore all things together, and making the fame Allowances for Cortes, that are ufually made for Men in his Station, we may venture to affirm, that he behaved as well, and performed as great Things, if not greater, than any of the Sponifh Captains that bore Command in this Part of the World; fo that if we meafure his Merit by the Importance of the Conquefts he made ; by the fmall Forces he made them with; and the Difficulties he met with and furmounted, which are the ufual Meafures of fuch Actions, there is no reafon to apprehend, that we err in the Commendations we beftow, upon him:

At the fame Time, however, we muft allow that he fhed a great deal of Blood; that he introduced a new Government to this Part of the World ; and did many other Things, that, however great they may appear; yets in the Judgment of fuch as are Friends to a rigid Morality, fubject, him to Cenfure. But as every Man has Faults, and every Man's Faults, who moves in a fuperior Sphere, have very extenfive Confequences; , fo even in this Refpect, we ought not to have a worfe Opinion of Cortes, than of his Mafter, the Emperor Cbarles V. or any other great Captain, that purfues a Syftem which, for any Thing we know, may be more agreeable to the Views and Defigns of Providence, than fuch a Conduct as might have pleafed us better. I have infifted the longer upon this, that I might not be under the Neceffity of making Reflections of the fame Kind in other Places for what I have. faid upon this Occafion will ferve to fhew my Sentiments upon all other like Occafions; and therefore there will be no Need of repeating them.
I am very fenfible that Writers frequently value themfelves upon deftroying great Characters; by fetting them in this difadvantageous Light ; and arrogate to themfelves a Power of judging in the laft Refort of Mens Actions and Motives. But this I think is very unfair, and I can fee no Reafons why the having this Opportunity of raifing or finking the Reputation of fo illuftrious a Perfon, fhould tempt me to endeavour raifing in the Reader an high Idea : of my Penetration or Probity, at the Expence of one who is already in Poffeffion of Fame, from the Approbation of his Behaviour by thofe who ought to be, and as far as I can judge from their Writings really were, better Judges of it than I am. All the Merie I pretend to is, the having fated his Actions fairly from the beft Authorities, and faid of them freely what I thoughts which, whether it be right or not; I moft readily fubmit to the judicious Reader, and fo return to my Tank of purfuing the Conquelts made by the Spaniards in America.

The Difcoveries made by the Spaniards in the Province called Golden Caftile; their firft Knowledge of the South-Sea, and their Efablifbment of Panama, by wobich a PafJage was opened to the Difcovery and Conqueft of the great Empire of Peru.

1. The Manner in which Vafquez Nunez de Balboa eftablijhed bimfelf in the Government of Santa Maria, in the Province of Caftilla del Oro. 2. He Jends two Agents to follicit Succours; one to the Admiral James Columbus, and the other to the Court of Spain. 3. The firft Expedition of Balboa againgt the Indians, in which be fubdued the Cazique Careta, and entered afterwards into a clofer FriendJbip rovith bimo 4. He goes, at the Requeft of that Indian Prince, to vijit another Cazique, whofe Name was Comagre. 5. He obtains there the firft certain Intelligence of the South Seas, and of the Empire of Peru, and its vaft Ricbes. 6. He returns to Santa Maria, and, receiving ill Neves from Spain, refolves to atternpt a Difcovery of the South Seas, in bopes of pacifying King Ferdinand and bis Minifters. 7. The Manner in robich be executed this. Refolution, and the woonderful Succefs of bis Expedition. 8. Beflows the Name of St. Michael on a Bay in the South Seas, and carries from thence a vaft Treafure in Gold and Pearls. 9. Sends another Agent to the Court of Spain, with a full Account of the Importance of the fe newe Difcoveries. Io. Don Pedro Arias d'Avila, by the Intereft of the Bifhop of Burgos, is Sent from Spain to take the Government of Caftilla del Oro. II. This new Governor firt cruelly perfecutes Nunez de Balboa, and afterwards moft unjufly caufes binz to be bebeaded. I2. Arias lays the Foundation of the City of Panama, which by reafon of its unvobolfome Situation proves very deftructive to its firft Inbabitants. I 3. He fails ing moft of bis Aitempts for making Conquefs and Difcoveries in America, and finds it difficult to maintain bis Power in the Midft of fo many Difappointments. 14. He barbaroufly murders, under a form of Juffice, Francis Hernandez, Governor of Nicaragua, and feizes that Province. 15. Obfervations on the foregoing Section, and on the great Difference between Genius and Cumning.

I$T$ is a Rule that I think ought to be obferved in all Works of this Nature, to explain one Subject thoroughly before we proceed to another; and to dwell more or lefs upon a Subject, according to its Weight and Importance: We have hitherto obferved this Rule ftrictly in both its Branches, which was the Reafon of dwelling fo long upon the Expedition of Cortes: Since this alone, in refpect to its Confequences, was more than equal to all we had mentioned before taken together. In this Section, the Matters we propofe to handle, though neceffary to underftand the Difcovery and Conqueft of America, and more efpecially the Manner in which Peru came firft to the Knowledge, and then fell into the Hands, of the Spaniards; yet being in themfelves of far lefs Confequence, we fhall fpeak of them more concifely, in order to keep within due Bounds, and inform the Reader fully without tiring him.

We have already fhewn how the Province of Cafilla del Oro was difcovered, and fettled by the Induftry and Pains of Vafquez Nunez de Balboa, a Man no lefs remarkable for the Succefs of his firf Beginnings, than for the Miferies that befel him at the Conclufion of his Adventures. We have likewife fhewn how he arrived by his perfonal Merit, at the extraordinary Authority he exercifed in the new Colony, on the Banks of the River Darien, where he deprived Encijo of his Command; and, upon his endeavouring to recover it, feized and imprifoned him, under Pretence that he had ufurped an Office which the King only could beftow; and for which he confifcated all his Effects: A very harfh and fevere Sentence, which was certainly founded, rather in perfonal Refentment, for the ill Ufage he had met with from him, than from any real Concern for the Intereft of the Colony, which was far enough from requiring fuch a violent Proceeding, though that was the Pretence. But when Men have acquired Power, it is not at all ftrange that they fhould lofe Moderation in the Ufe of it; however, there were fome in the Colony better inclined than himfelf; who, with fome Difficulty, prevailed upon him to fet Encifo at Liberty; but it was upon this exprefs Condition, that he fhould tranfport himfelf, either to Spain, or to Hijpaniola, on board the firft Ship that fhould come to Santa Maria, which was the Name of this Settlement.
The next Care of Nunez de Balboa, was to fecure thofe Supplies, of which the Colony flood in need, and with this View it was that he made choice of his old Friend Valdivia to go to Fijpeniola, in order to engage the Governor and Council there, to furnith him and his People with all they wanted; of which he had the greater Hopes
becaure the Admiral, Fames Columbus, was then there, and he very well knew that no body could have a greater Inclination than he had, to contribute all that lay in his Power to promote the King's Service.
2. This Point being fettled, he perfuaded the Colony that it was highly for their Service to fend a Perfon they could confide in directly to Spain, that the Court might be informed of the Situation they were in, and of the great Probability there was of their making very advantageous Difcoveries and Conquefts. The Perfon he chofe for this important Employment, was his Collegue in the Magiftracy, whofe Name was Zamudio, to which no body had any Objection. By propofing him Balboa gained two great Ends; for, in the firft Place, he fecured the fole Authority to himfelf, which was what he always affected; and in the next Place, he committed the Care of his Concerns to one whofe Interefts were the fame with his own : Since he had been as deeply engaged in . the before mentioned Revolution as himfelf. There was a fmall Ship belonging to the Colony in Port, and this he caufed to be fitted up as well as it was poffible, in order to carry the two Deputies, and his old Antagonitt Encijo.
Before their Departure, however it was fuggefted to Balboa, that he departed not a little from his ufual Wifdom in fending the laft mentioned Perfon, whom he had ufed fo very ill, to a Place where he might reprefent his Proceedingsin Lights far enough from being to his Advantage. But this did not induce him to alter his Refolution, though it put him upon taking a Precaution, which anfwered his Purpofe very effectually. He remembred that one Poffemonte, who was the King's Treafurer General at Santo Domingo, had a great Intereft with the Minifters in Spain, and therefore he gave Valdivia a confiderable Quantity of Gold, which he defired him to prefent the Treafurer, in his Name, fuppofing that this would attach him clofely to his Intereft, and therein he was not at all miftaken; for the Poffefion of this Gold, and the Hopes of more, induced him to efpoufe the Caufe of Nunez de Balbca ever after. Thefe Meafures thus talken, he fent the two Deputies, together with Encifo, on board the Ship, which prefently after failed for Sanio Domingo.
After their Departure, Nunez de Balboa began to contrive, in his own Mind, how to make the beft Ufe poffible of the great Power he had obtained, in order to make further Difcoveries, and to acquire more Gold, which he forefanv would prove the moft effectual Means for fecuring to him this Government, at which he had fo ftrangly arrived, and of which he had conceived fuch Advantages might be made to the Crown of Spain, as
would perhaps have entered into no Head but his own, confidering the Circumftances the Colony was then in: He was, indeed, a Perfon every way fit for undertaking vaft things; for he had a deep Cunning, ftuck at nothing, and had a Courage fuperior to every kind of Danger, fo that nothing could fright him from his Purpofe, or put him out of any Road which he thought likely to attàin it.
3. It was not long before fuch an Opportunity offered as he expected, and he made the Ufe of it which it might be fuppofed a Perfon of his Abilities would make in a Matter that fo nearly concerned him. At this time many Indians reforted to Darien, to fee whether the Spaniards were going away, or what they defigned; and, to cover their Intention, carried Indian Wheat and other Provifions to exchange for Beads, Knives, and other Spani/h Baubles; and, to perfuade them to be gone, faid there was much Gold, and plenty of all Eatables, in the Province of Coyba, which was thirty Leagues from thence. Nunez de Balboa fent Francis Pizarro, with fix Men, to difcover the Country; who, having travelled three Leagues up the River, was attacked by four hundred Indians, under the Command of the Cazique Zemaco, and hard preffed: But they clofing, ripped up the Bellies of one hundred of them with their Swords, and wounded many more, whereupon the reft fled.

The Spaniards then returned to Darien in a bad Plight, leaving one Francis Hernandez behind them, lying on the Ground; at which Nunez was fo much offended, that he commanded Pizarro to go back, with fome Men, for him, as he did, and brought him to the Colony Balboa thinking it a Difcredit to leave any one behind him alive. Nunez then marched himfelf, with one hundred Men, and advanced fome Leagues towards the Province of Coyba; the Cazique of which was Careta: But, meeting the Indians by the Way, he foon returned to his Colony, and fent two Brigantines for the Spaniards that had been left at Nombre de Dios.

As they were failing along the Coaft, when they came to a Port belonging to the Cazique of Coyba, two Spaniards ftark naked, painted red, came out to meet them: They, and one more, had a Year and an half before made their Efcape out of Nicuefla's Ship, when he was in queft of the Province of Veragua, to avoid the Punifhment due to fome Crime they had committed, and put themfelves into the Hands of this Cazique Careta, who always treated them very well; but, not agreeing among themfelves, though in Captivity, they one Day drew their Swords, and one of them, whofe Name was Fobn Alonfo, wounded the other dangerounly, whereupon the Cazique made him a Commander in the War he had againft fome of his Enemies, looking upon him as the braver Man, and did nothing without his Advice. Thefe two Men were very acceptable to thofe in the Brigantines, and gave an Account that the Country abounded fo much in Gold, that if Nunez would invade it, they fhould be all rich. Hereupon it was agreed that one of them fhould go and acquaint Nunez of the State of the Country, and the other fhould ftay to be ferviceable, as Occafion fhould offer. When the Brigantines returned to Darien, Nunez was well pleafed with the Intelligence they brought of the great Wealth, and at having Interpreters to deal with the Natives; and, being thoroughly informed of the Nature of that Country, fent back the Brigantines to bring away from Nombre de Dios thofe they could not fetch off at firf.

In the mean time he provided one hundred and thirty of the ableft Men, with Arms, Provifions, and other Neceffaries they were to carry; and, as foon as the Brigantines arrived, he fet out to feek Careta at his Dwelling, which was thirty Leagues off. The Cazique hearing of it, waited for him in his Houfe, where Nunez anked him for Provifions for his Men, and to carry to Darien. Careta anfwered, that when any Chriftians had paffed that Way, he freely gave them Part of his Provifions; but that at prefent he had none, being at War with a neighbouring Cazique, whofe Name was Ponca, for which Reafon his People had not fowed, and were then in great Want. Having received this Anfwer, Nunez, by the Advice of

Vole II. Numbo 78.

Folin Alonfo, pretended to go back the fame Way he came; and Careta thinking himfelf very fafe, Nunez res turned at Midnight, and attacked the Town in three Places, killing and wounding many, and taking the Cazique, his two Wives and Chiidren, and Ceveral others $\hat{p}$ all of whom he fent away to Darien, loading the Bri-s gantines with Provifions. At Darien, Careta intreated Nunez not to keep him in Captivity, promifing to do all that was in his Power to furnifh the Chriftians with Provifions, and to be his Friend: As a Pledge of which he would give him one of his Daughters, who was very beautiful; and, that his People might have leifure to till and fow the Ground, he fhould affift him againft his Enemy Ponca. Nunez accepted of, the Offer, and took his Daughter, whom he kept as his Miftrefs, though Careta thought he had taken her for his Wife; but he always loved and ufed her kindly, which highly pleafed the Indians.
4. This Indian Cazique, Careta, not only kept his Word, but treated Nunez, and eighty Men who accompanied him, fo well, that they willingly agreed to affift him in his Wars; which, when the other Cazique, whofe Name was Ponca, heard, he fled to the Mountains; and the Spaniards, entering his Country, found fome Provifions there, and a confiderable quantity of Gold. It was not long before Careta informed his Guefts, that he had another Neighbour more powerful, and of a better Difpofition, than Ponca; whofe Name, as well as that of his Country, was Comagre; that he had feveral Wives, and a great many Children, and lived in greater Splendor than any other Cazique. He likewife told them that this Indian Prince had a great Inclination to be acquainted with the Spaniards; and, as his Dominions were larger and more fruitful than his own, Careta advifed them to go thither, and offered to accompany them, as he did; and the Spaniards found every thing agreeable to the Account he had given them.
For the Palace of Comagre was a large wooden Building, one hundred and fifty Yards in Length, and eighty in Breadth; furrounded with a good ftone Wall, and well furnifhed within, after the Manner of thofe People. They likewife found there good fore of Provifions: They had feveral Sorts of Drinks of feveral Colours, not much inferior, either in Strength or Flavour, toWine. The Reception they met with, was equally kind and hofpitable; Comagre and his Sons taking all the Pains imaginable to make them welcome and eafy, and difcovering in their Converfation a Knowledge and Politenefs much fuperior to any of the Indians they had hitherto met with: They made them Prefents alfo of Gold and Pearls, to a very confiderable Value; fo that they had no Reafon to repent of their Journey, or diftruft Careta, who had brought them thither; and who feemed to be likewife highly pleafed with the courteous Entertainment that his Friend had given them, hoping it would make the Spaniards ftill more willing to oblige him.

Nunez and his Men being thus joyfully received and entertained, Comagre's eldeft Son, who was a difcreet Youth, being defirous to oblige his Guefts, caufed feveral pieces of Gold, valuable both for their Workmanfhip and Finenefs, weighing about four thoufand Pieces of Eight, and feventy Slaves, to be brought, all which he gave to Nunez and Colmenares. They immediately fet apart a fifth of the Gold for the King, dividing the reft among themfelves; about which fome quarrelled, ftruggling and making a Noife for the beft and fineft of thofePieces.
Comagre's eldeft Son, who was prefent, ran to the Scales, and, ftriking them with his double Fift, threw all the Gold upon the Ground; faying, "That Chriftians " need not fall out about fuch a Trifle; but, if they were " fo fond of it as to difturb peaceable Nations, and " leave their own Native Country for the fake of it, he " would hew them a Province where they might have as "s much as their Hearts could wifh, but that there muft " be a greater Number of them, becaufe they were to en-" counter a Monarch who defended his Dominions with " much Bravery: That they firtt would meet with a Ca " zique, who had a vaft Quantity of what they looked " upon as Wealth, who was fix Suns, that is, fix Days JourN n

56 ney
"s ney from thence, pointing with his Finger towards the is Soutb-Sea; which he told them they would fee as foon " 6 as they were paft certain Lands; and that there were ${ }^{66}$ other Nations had Veffels little inferior to thofe of the ${ }^{\text {sc }}$ Spaniards, with Sails and Oars; and that, beyond that
"Sea, they would find immenfe fore of Gold, out of
" which thofe People eat and drank." And having underfood from the Spariards that there was great plenty of Iron in Spain, he fignified that there was more Gold in thofe. Parts than Iron in Bifcay.

This was the firt Intimation given of that large Cotintry; "and, becaufe the Youth was acquainted with the great Extent of that Kingdom, and the Number of its Inhabitants, he added, that there ought to be one thoufand Chriftians, at leaft, to invade it ; and he offered to go with them, to affift them with his Father's Men. This Difcourfe was interpreted by the two Spaniords who had fied from Nicueffa, and lived with Careta. Nunez and his Followers, having heard of all this Golden Country, were fo overjoyed, that they' thought they could never make hafte enough to difcover it.
6. After a flort Stay in the Dominions of this Indian Prince, Nunez de Balboa retired to his own Government of Santa Maria, in order there to confider at his Leifure of the propereft Means for making the Difcoveries, upon which himfelf and his People were fo much bent. A yery little before Valdivia was returned from Hi/pariola, and brought from thence, on the Part of Fames Columbus, the ftrongeft Afturances of Support, which induced Balboa to fend. him over a fecond time with the fame Views and the fame Inftructions, but with frefh Proofs of the Services he had rendered to the Crown, and frefh Prefents for thofe he thought might do him Kindneffes with the Minifters: But the Veffel that carried Valdivia, and fuch as attended him, was very unfortunate, being thip-wrecked in her Paffage on the Coaft of Fucatan; the Men with great Difficult.y got on Shore, which proved a new Misfortune; for it had been much better they had perifhed at Sea, fince they were quickly furrounded and inade Prifoners by the Nattives; who, with all the crutel Circumftances imaginable, facrificed them to their Idols.
Such was the End of Valdivia and his Companions, two only efcaping, one of whom was Aguilar, who was of fo great Ufe to Cortes, and with whofe Hiftory the Reader is already acquainted. The News greatly aflicted Balboa, infomuch that, to prevent the ill Confequences that might follow from it, he had fome Thoughts of going himfelf to Spain; but the Colony would not fuffer him, looking upon his Prefence as abfolutely neceffary to their own Prefervation. He had very foon füfficient Reafons to believe that they had judged right; for, by the Difpatches he received from his Agent Zamudib, he was informed that Encifo had incenfed the Court againft him to fuch a Degree, that there was no paci-- fying the Minifters, or perfuading them that he was not the very worft of Men, and one who had in the higheft Degree contemned and trampled upon the royal Authority.

When Nunez de Balboa had confidered the Contents of thele Letters, and the melancholy Situation he was in, he faw plainly that there wàs nothing could deliver him; or reftore his Character in Spain, but making an immediate Ufe of the Informations he had received, by proceeding in, and perfecting his Difcoveries of, larger and richer Countries, than hitherto the Spaniards had -been acquainted with. This he very rightly judged would cover all paif Faules, and atone for every Irregularity he had committed; and therefore, without communicating to the Colony any of the Particulars contained in his Difpatches, he applied himfelf folely to perfuade them to fuch an Expedition, as the moft likely Means to make them all rich and happy; and his Labours in this Refpect proved fo effectual, that all Hands were immediately employed in making the neceffary Preparations for going in fearch of thofe golden Regions; and this, with a full Confidence, that if once they could be found, they might, without Difficulty, be fubdued. Such were his and their Defigns; let us now fee how they were executed.
7. Nunez de Balboa, having refolved to march over to the South-Seas, and provided all things for the Expedition, fet out from Darien about the Middle of September, 1513; going by Sea as far as the Territories of the Cazique Careta, who received him in a very friendly Manner. He there left the Brigantine and Canoe, and advanced towards the Mountains, and the Country of Ponica, Careta affigning fome of his Subjects to attend him. The Cazique Ponca, who had Spies abroad, being informed that the Spaniards were coming up his Mountains, hid himifelf. Nunez fent fome of Careta's Irdions tö affitie: him, that he would do him no harm, but wotuld be his Friend'; and' he thought fit to come to him, carrying' as a Prefent the Value of one hundred and ten Pefos of Gold, which was all he had.
Nunez received him with much Joy; that he" might have no Enemy behind. He gave him abindance of Beads, Looking-glafles, and Hatwk's-bells, and that' which the Indians moft valued, viz. fome Iron Axes: He demanded of him Guilles, and Mer to carry Burảens; whilft he went up the Hills, and advanced farther. The Cazique granted all he defired, and gave him Plenty of Provifions, and then the Spaniords marched on into the Dominions of a great Lord, whofe Name was Quare qua, whom he found ready to oppofe him with a greate Number of Men, armed with Bows and Arrows, and a fort of Slings, with which they threw Pieces of Wood hardened in the Fire like Darts. They had alfó Macanas, made of Palm-tree Wood, as hard as Iron, which they ufed, like Clubs, with both Hands. In this manner the Indians met the Spaniards, afking what they would have, or what they came for? requiring them, at the fame time, to proceed no farther. Obferving that they valued not what was faid, their Lord came forward, cloathed in Cotton, with fome of the prime Meń ; all the reft ftark naked.

They attacked the Spaniards with dreadful Cries and extraordinary Fury. Nunez, feeing fuch a Multitude, ordered his Soldiers to difcharge fome Crofs-bows and fome Firelocks, whereupon fome dropped down dead. The Indians, feeing the Fire, and hearing the Report, believing they had been Flaftes of Lightning, and that the Spaniards had Power to deftroy them, fled, to a Mañ, in fuch Confternation, that they thought the Spaniard's were Devils. The Dogs were fet on them, whilft their Mafters cut off the Limbs of fome with their Swords, the Dogs tearing others in Pieces. The Cazique was there killed, and about fix hundred more; fome were taken, and their Town plundered, where the Conquerors found a confiderable Quantity of Gold. Among the Prifoners were a Brother of the Cazique, and fome others, cloathed like Women; and Nunez, judging that they were guilty of Sodomy, fet the Dogs at them, and they were in a Moment torn to Pieces; which was all the Proof there was in this Cafe, though Gomera pofitively 'affirms it.

Some Spaniards were grown fickly with Hunger and Wearinefs, for which Reafon Nunez left them in 2uarequa's Town, where he took freih Guides, and Men to carry Burdens, to difmifs thofe that belonged to Careta; thus proceeding to the Top of the Mountains, whence they faid the other Sea might be feen. From Ponca's Lands to this Mountain's Top was about fix Days Journey; but they fpent twenty-five, through the Uncoothnefs of L, ands, and becaure they were fcarce of Provifions, and had little Reft. At length they arrived, on the 25 th of September, I5I3, whence the Sea could be feen.

Nuntez, having notice given him, a little before they came to the Top, that they were very near, commanded all to halt, went up alone, and, feeing the SoutbSea, on his Knees returned Thanks to Heaven for being the firft that had feen it. Having performed this, he called his Men, and repeated the fame; they followed his Example, whilft the Indians ftood amazed to fee them fo overjoyed. He then extolled the Intelligence given him by Comagre's Son, promifing all his Men much Wealth and Happinefs; and they believed him: For he was very much beloved, becaufe he made no Difference between himfelf and every Soldier. Befides, he was familiar, and fhewed much Compaffion for the Sick and

Wounded,

## Chap. III.

Wounded, every one of whom he vifited, and was himfelf undaunted in Dangers, never fhewing the leaft Concern in'the greateft Perils. He then caufed a Certificate to be drawn of his taking Poffeffion of that Sea, and all in it, for the Crown of Cafite; in teftimony whereof, he cut down Trees, erected Croffes, raifed Heaps of Stones, and cut the King of Spain's Name on fome Trees. He then refolved to go down the Mountains, to obferve what there was on them, and on the Sea-coaft.
Being informed that, near this Place, there was another Town, belonging to a Lord whofe Name was Cbiapes, he advanced very catutioully; and Cbiapes went out to meet him with a great Number of Men, in which he confided; for the Indians, feeing fo few Spaniards, generally made little account of them till they had felt their Swords: When they drew near, the Spaniards faluted them-with their Fire Arms firft, and then with their Crofs-bows, after which they let go the Dogs; the Indians; feeing the Fire of the Munkets, hearing the Report, fimelling the Gunpowder, obferving how many dropt down dead, and that the Dogs tore all they came at, turned their Backs and fled with the utmoft Precipitation: The Spaniards purfued, with their Dogs, killing fome, but chufing rather to take Prifoners, in order, by their means, to make Peace with Cbiapes, that he might not retard their Paffage. They difmiffed fome of thofe they had taken as Meffengers to their Lord, with fome of Quarequa's Men to afiure him they would do him no Harm if he would be their Friend. He thought it fafeft to put himfelf into the Hands of thefe dreadful Enemies, and carried the Value of four hundred Pieces of Eight in Gold. Nunez received him very gracioufly; and gave him Beads, Looking-glafes, and fome Hatchets; and here he difmiffed Quarequa's Indians, giving them Trifles, with which they went away well pleared.

From thence he fent Captain Francis Pizarro to view the Sea Coaft, and what there was about the Country; als alfo Fobn Efcarray and Alonfo Martin, with twelve Men each, to find out the fhorteft Ways to the Sea. Alonso Martin hit upon the readieft Road, and, in two Days, came to a Place where he found two Canoes upon dry Land; yet faw no Sea; but, whilft he was confidering which Way thefe Canoes were come up the Land, the Sea-water came in and lifted them up about a Fathom in Height: For, upon that Coaft, the Sea ebbs and flows every fix Hours, two or three Fathoms, fo that great Ships are left dry, and no Sea-water appears for two or three Leagues at leaft. Alonfo Martin, feeing the Canoes fwim, went into one of them, and bid his Companions bear Witnefs that he was the Firft who entered the SouthSeas; another, whofe Name was Blaez de Atienza, did the like, and bid them bear Witnefs he was the Second. They returned to Nunez with the News, at which all rejoiced very much.
8. The fick and wounded Spaniards that were left behind being come up, Nuvez refolved to proceed himfelf to the Sea-fide, and to try what farther Difcoveries could be made, taking the Indian Chief with him. When they came to the Shore the Spanifb Commander marched on, armed as he was, till the Water took him up to the Middle ; caufing a Notary to draw and fubfcribe a public Inftrument, importing, That he had taken poffefion of that Sea, its Coaits, and the Inands in it, on Behalf of the Crown of Caftile; at which Ceremony the Indians were very much amazed.

He proceeded next to pafs the Mouth of a great River, and landed on the oppofite Side, in the Territories of another Indian Prince, whofe Name was Coura, and who, at firf, endeavoured to make fome Refiftance; but, finding that it was in vain, he fuffered his Son to go and treat with them, and himfelf was foon after reconciled, and carried them a confiderable Prefent. Balboa obferving a large Bay of the Sea, refolved to navigate it; and, to that Purpofe, defired the Indians to furnifh him with Canoes, which they did, and offered to accompany him, though, at the fame Time, they advifed him to fufpend his Difcovery, becaufe the Winter was coming on. But he, being obtinate, embarked
with fourfore Spaniards, together with Cbiapes, and fome. of his Indians, on board nine. Canoes:

They weighed anchor upon the twenty-ninth of Sep-. tember, 1513 , which was the Reafon he called it St. Nit chael's Bay. When they were at fome Diftance from Land the Waves began to fwell fo high, that Nunez repented. he had not taken Chiopes's. Advice. It was a wonderful Providence that they, did not all perifh; and the Indians, who fwim like Fifh, made the Danger more evident, as being better acquainted, with the Place, which rendered the Spaniords more apprehenfive. The Roughnefs of this Bay is occafioned by the many litule Illands, Rocks, and Sholes, that are in it. The Irdions, being beft fkilled in thofe Affairs; had recourle to, their ufual Remedy, faftening two Canoes together with Cords, for then they do not fo eafily overtirn. They made the beft of their Way next towards an Inland, where they: landed, and lafhed the Canoes to the Rocks or Trees. There they continued all the Night, with as much Un. eafinefs as if they had been looking Death in the Face; for upon the Flood the whole Inand was coyered with Water, and they ftood in it up to their Waifts, or very. near it: When Day appeared, and the Water ebbed, they went to look for their Canoes, and found fome beaten in Pieces, and others fplit, all of them full of Water and Sand ; and nothing remained of all their Goods and Provifions; which was a very difmal Sight. In this Diftrefs, they pulled off the tender Bark of the young Trees, and bruifing it with Grafs and other Herbs, caulked the Crannies of the Canoes that were not quite flaved, and: thus embarked again half famifhed.

They immediately fteered to the Land of an Indiant Lord, whofe Name was Tumaco, in the Creek of the Bay, where they found him ready to oppofe them. Nunez feeing his Men weak and hungry, picked out a few of the ableft, whom he placed in the Front, and engaged: In a very fhort Space the Dogs and the Swords made fad Havock among the Indians, the Cazique himfelf being wounded. Cbiapes fent fome of his Men to acquaint Fumaci with the Power of the Spaniards, and how kind they were to their Friends, as himfelf, and other Lords they had met in their Way, very well knew by Experience. $\mathcal{T}$ maco would not be perfuaded the firf Time, but the fecond Meffenger prevailed fo far, that he fent his Son, whom Nunez entertained very courteounly, giving him a Shirt, and fome Toys, and bidding him advife his Father to come himfelf and be his Friend. Tumaco feeing his Son had been well ufed, went the third Day with a great Attendance of his Subjects, but carried no Prefent; how= ever Nunez paid him much Refpect.
Cbiapes told him, that the Spaniards were good, and it was but reafonable to affift them, fince they were Strangers in their Country: Being pacified, and out of Fear, he fent fome Servants home ${ }_{9}$ who brought Gold, to the Value of fix hundred and fourteen Pieces of Eights and, what was much more, two hundred and forty large Pearls very fine, and many more that were bright but fmall. The Joy Nunez and his Men conceived at the Sight of them is inexpreffible, believing the immenfe Treafures Comagre's Son had told them of were now at hand, and thinking all their Sufferings well repaid. The large Pearls were of a great Value, and would have been of greater, but that the Indians uling Fire to open the Oyfters they grew damp, and were not fo white as they naturally are: The Spaniards afterwards taught the In:dians how to open them without Fire. Tumaco, obferving that the Pearls occafioned fuch Joy among them, to thew that he valued them but little, fent fome Indians to fifng and within four Days they brought as many as weighed no lefs than ninety fix Ounces. Both Spaniards and Indians were well pleafed, the former concluding they fhould be poffeffed of all that Wealth, and the latter, efpecially the; Caziques, for the Friendmip of the Spaniards, feeing them fond of Gold and Pearls, which they valued but little ; but Cbiapes rejoiced moft becaufe he had been inftrumental in gaining Tumaco's Friendfhip.

Thofe two Caziques affured Nunez, that there was ans Inad about five Leagues from thence, in that Bay, gow
verned by a powerful Cazique ; where there were abundance of large Oyters, which had Pearls in them as big as Beans. Nunez ordered the Canoes to be immediately made ready to , go over to it . The Caziques intreated him not to think of it at that time, but to ftay till Summer, when the Sea was calm, and he might then go with eafe, and they would bear him company, and he approved of their Advice. The Cazique Tumaco alfo informed Balboa, that the Coaft extended prodigiounly, pointing towards Peru; that there was an immenfe Quantity of Gold, and that the Natives ufed certain Beafts to carry their Burdens, being the Sheep of that Country, and made a Figure of them with Earth to reprefent them the better. The Spaniards were amazed; fome faid they were Camels, others that they were Stags or Fallow Deer, of which there are many on the Continent about as big as finall Calves, but their Legs fo fhort, that they are not above a Span in length, and their Horns finall. This was the fecond Intimation Nunez had of Peru, and its Wealth.
9. It was about the Middle of Fanuary that Nunez de Balboa returned back to Santa Maria, carrying with him Gold to a very great Value, and Pearls to a much greater; of which he made a very fair Divifion, referving the fifth Part for the King, and diftributing the reft among the Soldiers in fuch a Manner, that they were perfectly fatisfied with his Conduct. He judged now, and not without great Appearance of Reafon, that he had performed fo fignal a Service, that it was impoffible for the Minifters to deny that it made amends for any Indifcretions into which he had fallen. He refolved therefore to fend another Agent to Spain with the King's Money, and with more confiderable Prefents than it was in his Power to fend by the former. The Perfon he made choice of for this Negotiation was Peter Arbolanchos, a Man of Capacity, and, which was of greater Confequence to him, a Perfon of great Integrity and unfhaken Fidelity.

He applied himfelf, when he came to Court, to the famous Bifhop of Burgos; who received his Letters with Civility, which changed into the greateft Kindnefs and Friendfhip upon the Sight of the Gold and Pearls that Balboa had fent him; for thefe fully convinced him that he was innocent, and a good Officer, and therefore he took Pains to fet him right in the Opinion of King Ferdinand, who was then living, and who had hitherto a great Averfion to Nunez de Balboa; but the Favours of this Prelate came too late, for he had already done this unhappy Man fuch an Injury as he was not able to repair. It was a Maxim with this Bifhop, that there was nothing fo dangerous as to fuffer the great Men who made Difcoveries in the Indies to perfect them; and therefore as foon as they had opened the Road to new Countries, and had overcame the firft, which are always the greateft, Difficulties, it was his conftant Method to fent fome of his own Creatures to reap the Fruits of their Labours.
The Perfon he had fixed upon, before the Arrival of Balboa's Agent, to go Governor of Caftilla del Oro, was one Don Pedro Arias d'Avila, whom the Spanifs Writers, by joining his two firft Names, commonly call Pedrarias, a Man of Birth, of a Court Education, which had furnifhed him with feveral Qualities very fuitable to the Climate of Spain, but not at all calculated for the King's Service in the Indies: He was haughty and proud to the laft Degree, naturally infincere, and a very artificial Diffembler, barbaroufly unjuft, and cruel beyond Expreffion, one who thought the only Compenfation that could be made for leaving his native Country, was to raife a vaft Fortune, which, as he wanted Talents to do in an honeft Way, he refolved to bring about by the Methods he undertood, which were Violence, Fraud, and Oppreffion; in all of which he was a complete Mafter.

We have his Character drawn to the Life by the Hand of the Bimop of Cliapa; who reprefents him as the wickedeft Monfter that was ever: fent into thofe Parts; but -out of Refpect to his Patron the Bifhop of Burgos, after giving fo true a Character of him he does not name him. Such was the Perfon that was fent over to take Poffeffion of that Country which Balboa had difcovered.
10. This new Governor, Pcdrarias, failed from spain the I2th of April $_{3}$ I5 14, with a Fleet of fifteen Sail, with two thoufand Soldiers on board, and a Fryar, one Fobn de Quevedo, who had been confecrated ${ }_{8}$ before his Departure, Bifhop of Darien, and many other Perfons, in other great Offices; and amongft the reft Encifo, the mortal Enemy of Balboa, was his Provoft Marfhal. He arrived in the latter end of the Month of $\neq u l y$, in the Gulph of Uraba, and from thence proceeded to Santa Maria, where he was received with all imaginable Refpect, by the famous Nunez de Balboa, of whom he had heard fo much, and for whom he cared fo little.

He was very much furprized at his Appearance, and at the State in which he found the Colony. There was indeed" a very ftrong Fort, and four hundred and. fifty brave Fellows to defend it; but the Governor's Houfe, or if you will, his Palace, confifted but of three Rooms, and his Drefs correfponded with his Dwelling: He had a Pair of Canvas Drawers, and a Cotton Waiftcoat over his Shirt, and that was all. His Diet was of a piece with the reft; a Joint of roaft Pork, fome Greens and Fruit, was all his Table afforded ; at which no other Liquor was drank but good Spring-water. Such were the Manners of this Conqueror, who fared nothing better than the meaneft of his Soldiers ; but there was no Murmuring, no Complaints; he maintained his Authority by the Means which had acquired it, his Merit; and his Soldiers loved him, and feared him as a Father. His fole Fault was his Ambition, that had led him to do fome unwarrantable things to obtain Power ; but when obtained, none ufed it better.
His Accounts were clear; he made good every Point he had written to Spain, and opened a Paffage to the South-Seas, and fubdued all the Country between them and his Colony; in return for which good Services Pedrarias committed him clofe Prifoner to the Cuftody of Encifo, and did not fet him at Liberty till he had fined him in above half his Fortune. In order to juftify this Proceeding he fent over a very falfe Report to the Court of Spain, and expected that this fhould have procured him a Power of going greater Lengths; but in this he was miftaken. He had brought over fome honeft Men with him, who ventured (which was ftrange) to fend the naked Truth to Court; and, which was ftranger ftill, it net with all the Credit that it deferved.

When the King's Letters came to be opened, his Majefty declared in them, that he was perfectly fatisfied with the Conduct of Nunez do Balboa, that therefore he had created him Lord-Lieutenant of the Countries on the South-Seas; that he expected the Governor fhould take his Advice ; and that the Meafure of his Obedience to his Orders would appear from the Refpect he fhewed to Balboa. Pedrarias, equally difpleafed and difappointed, took care to conceal both, and, like a true Courtier, refolved to conform, in Appearance, to his Mafter's Orders, but to difobey them in effect, and to leave no Means untried, to work the Deftruction of the Man he hated, in which, as we fhall fee, he fuicceeded to the full.

In order to leffen the Character of his Predeceffor, and raife his own, the new Governor fent feveral of his Officers to make Excurfions into the Country, which he thought mutt produce new Difcoveries, as indeed they did, but not to the Advantage of the Colony or of the Crown of Spain, fince they contributed only to fhew the Avarice and Cruelty of the Spaniards in the moft glaring Lights: His Officers knew the only Method to obtain his Favour and Protection was to make him large Prefents, and to plunder all the Caziques without Mercy ; so that in a few Months time, that Reputation for Honefty and kind Ufage which Nunez de Balboa had been at-fo much Pains to eftablifh, was entirely loft, and War between them and the Natives broke out afrefh with greater Fury than ever, fo that there were no great Hopes of his making anyProgrefs; which when he came ferioufly to confider, he entered upon a new Scheme, and, by the Affiftance of his Bifhop Quevedo, reconciled himfelf to Balboa, who very fincerely applied himfelf, as he had done formerly, to the public Service, and that too with his ufual Succeis,

## Chap. III.

in the Neighbourbood of DARIEN.
which received, as might be naturally expected, the Envy of Pedrarias, notwithftanding that Nunez had promifed to marry his Daughter, and he had thereupon called, and in public treated, him as his Son.

The Bufinefs in which he had employed him, was the building a Town, eftablifhing a Port, and from thence fitting out Ships upon the South-Seas; all which, with incredible Labour and Fatigue, he at length accomplifhed, which added to the great Reputation he had before acquired. Pedrarias feeing this, and that moft People in his Government were inclined to remove, and to fettle in the Town built by Nunez de Balboa, as foon as it was finifhed, refolved no longer to delay the removing out of his way a Man, whofe Superiority became more and more confpicuous; he fent for him therefore to Santa Maria: And Nunez de Balboa made no Difficulty of obeying his Order, either becaufe he did not fufpect his ill Intentions towards him, or that, relying upon his own Innocence, he thought it out of the Governor's Power to hurt him.

Upon his Arrival, however, Pedrarias commenced a frefh Profecution againft him on the fame Pretences for which he had fined him before ; and to thefe he added another very extraordinary Accufation, which was a treafonable Intention to ufurp the King's Domain, founded upon nothing more than his having cut down, without the Governor's Licence, fome Timber for erecting public Edifices; and upon this Charge he condemned him to fuffer Death, to the Amazement of the Colony and the Terror of all the Inhabitants. He perfifted however in his Defign, and caufed this unfortunate Gentleman to be publicly beheaded. Such was the Fate of Vafquez Nunez de Balboa, who, in the forty fecond Year of his Age, fuffered as a Traytor, for having ferved his Prince with too much Zeal and Fidelity. The Royal Audience at Santo Domingo condemned this Action of Pedrarias, as a downright Murder; but it does not appear that he was ever called to any Account for it; but, on the contrary, was permitted to go on in the fame bale and barbarous Track for many Years together. This happened in the Year I5I7, and in the third of Pedrarias's Government.
12. When he had thus, at the Expence of Law and Juftice, freed himfelf from a Man whom he both hated and feared, Pedrarias refolved to fettle a new Colony at Panama; notwithftanding that, from the Heat and Moifture of the Country about it, it was very unwholfome; but, as it food commodious for Trade, and was a Place very convenient for the Difcoveries then making, the Governor remained fixed in his Refolution, built a Palace there, and made it the Seat of his Government. Upon this others came thither to dwell, fo that by degrees it grew a tolerable Place, and increafed in its Inhabitants very faft, becaufe it was pretty well fortified, and becaufe the Harbour is very fpacious, where the Ships upon the Ebb are left. dry. The Circumference of the City is fmall, by Reafon of a Morais that enclofes it on one Side, and the Damps that rife from it render the Place very unhealthy: It ftretches out from Eaft to Weft, fo that when the Sun rifes there is no going along the Streets, becaufe there is no Shade; and the Heat is fo offenfive, that it occafions many Diftempers. Though it has been feveral times propofed to remove it to fome better Place, it has not been done on Account of the great Price the Houfes bear, and that the ancient Inhabitants are dead; and fuch as live there now are generally Traders, and ftay there no longer than they can acquire enough to go fomewhere elfe.
There is a River runs near the City, and the Diftrict is large, in which there are many Farms, and fore of black Cattle, the Soil being proper for them; feveral Sorts of Spanifb Fruit have been planted, and there are of the Country very good, as Pine-apples, Plantain, Guayabas, befides others about the Fields. The Rivers afford Gold, which was found in plenty upon the firft building of the City. It is well fupplied with Provifions, being furnifhed from both Seas. Neither Wheat nor Barley grow within its Diftrict, but there is much Maize or Indian Corn carried from Spain and Peru. There are good Fifh in the Rivers, and in the Sea, though different from

Vol. II. Númb. LXXIX.
what are found in Spain: Near the Houfes along the Coaft there are vaft quantities of Cockles'; by the Natives called Cbucba; and it is thought, that for the Sake of them the Spaniards at firt built the City there, as being fome Supply in time of Want. In the Rivers of this Province, there are vaft Numbers of Alligators; fo large, that they are hideous to look at; and one has been found in the River of St. George, that was twenty five Foot long: The Flefh of them, which the Spaniards were wont to eat for want of better, when they were upon their Difcoveries? is bad and ill-fcented: The Creatures themfelves are fierce and frightful, and have devoured many Sponiards and Indians, and even Horfes, while croffing Rivers. There are few of the Natives in the Territories of this City, having been deftroyed in the Wars: The Trade there is extraordinary, rich Ships coming in continually from Peru, laden with Gold and Silver.

The Commodities carried from Spain, on board the Fleets, are conveyed thither on numerous Teams kept for that purpofe; a confiderable Part being fent up the River Chagre, within five Leagues of Panama, which lies in between eight and nine Degrees N. Latitude. This Place being confiderable, the King ordered many Religious Men to be fent over to convert the Indians, and made it a Bifhopric. Yet it is faid, that during the firft twenty eight Years after the Conqueft of Peru, above forty thoufand Men were computed to have died there, of violent Diftempers: Soon after, fames fibetez founded another Town at Nombre de Dios, which was alfo famous for many Years, thofe two being noted for the Trade between the North and South Seas; and here, as well as at Panama, many thoufand Spaniards perifhed by the bad Air.

In the Reign of King Plilip II, to avoid the faid Mortality, Nombre de Dios was quite abandoned, and the Inhabitants removed to Porto Bello, where the Trade now continues. As foon as thefe two Towns were founded, Orders were taken for making a Road between them, being the neareft between the two Seas; though the Mountains were very uncooth, on which there were then infinite Numbers of Lyons, Tygers, and other wild Beafts, and fuch a multitude of Monkies of feveral Sizes, as deaffened their Ears with their Cries; which, running up the Trees when any People paffed by, were wont to throw Stones at them, but the Spaniards kept them ink awe with their Crofs-bows.
13. It muft be allowed that this Pedrarias did not want Talents fuitable to his Office; for he had Courage, Diligence, and a ftrong Defire to do great things; and yet, notwithftanding all this, in the Compars of eight or nine Years, he did little or nothing, which the Spaniards attributed to the juft. Judgment of God, for his cruel Ufage to Nunez de Balboa. There is no doubt that God is always juft; but perhaps we are not wife enough todiftinguifh his Judgments, and, therefore, it may be as well to refer the want of Succefs in this Governor's Ad-: miniftration, to Caufes more manifeft, without excluding. however, the divine Juftice, which has certainly connected Mifery and Vice, and plagues the Neglest of moral Duties, by a continual Train of Misfortunes. The Truth of the Matter is, that his Vices defeated all his Schemes, and rendered all his Undertakings abortive. Inftead of treating the Indian Caziques as his Predeceffor Nunez had done, with Civility and Juftice, he behaved cowards them like an imperious Mafter, and yet he was not able to extort half the Quantity of Gold that had been freely beftowed on Balboa in Prefents. He granted Licences to various Perfons to undertake Difcoveries; but on fuch hard Terms, and with fo many Reftritions, that they had no better Succefs than himfelf; and all their Endeavours had no other Effect than to wafte great Numbers of Men, and to bring an Odium upon Expedisions into the South-Seas.

But what chiefly employed the Care of this Governor, was reducing Urraca, Cazique of the Mountains, whofe Country was very rich in Gold; and whos after the De-ceafe of Nunez, would have nothing to do with the Spaniards, prefuming, as he faid, that they could mean no good to others, who perfecuted and murdered each

Oo
other.
other. Pedrarias made war upon him for five Years togethier, and in that Space of time deftroyed a great Number of his Subjects, yet was never able to fubdue or render him tributary. On the contrary, this Indian Prince was frequently too hard for the Spaniards; his Subjects were ftout and warlike, the Situation of his Dominions gave him great Advantages; for the Spaniards could nèver act againft him with Horfe, and with all this he was himfelf a Prince of great good Senfe, extreamly brave and enterprizing, one who forefaw Advantages as foom as any Man, and there were very few who could manage them better. This the Reader will eafily believe, when he is told that Pedrarias loft more Men in the Courfe of this War, than Cortes in the Conqueft of Mexicos, without getting a Foot of Land, or an Ounce of Gold by the Bargain. But he made himfelf fome amends by his grievous Extortions, upon fuch of the Caziques as had fubmitted to the Spaniards; and, with the Gold he forced from them, maintained fo great an Intereft at Court, that notwithftanding every Enterprize of his was attended with Lofs, yet every new Project he fent over, was approved and applauded.
This will appear the more extraordinary, when it is confidered that never any Man met with more Oppofition than he did; for, on the one Hand, he was hated to the laft Degree by the Indians, for whofe Sake the Bifhop of Cbiapa went in Perfon to Madrid, to follicit Relief. The Spanifb Officers were likewife uneafy, and wrote home a true Reprefentation of his Conduct, which was fuch as would have ruined the Fortune of any other Man. Befides all this, he was upon very bad terms with the Royal Audience at St. Domingo, which was then, what it ftill is, the fupreme Tribunal in the $W e f$-Indies; and the chief Reafon for his removing the Seat of his Government from Santa Maria to Panama was, that he might be farther out of their Reach. Thus it plainly appears, that this Man's felfifh, haughty, and overbearing Temper, was very near as fatal to himfelf and his Dependents, as to others that he had to deal with; and that he might have been infinitely more happy, as well as made others fo, if he had behaved better; which might prove an uffeful Leffon to other Governors, if they were a Sort of People capable of learning any Good from the Examples of their Predeceffors, or of liftening to fuch Truths as they might always learn from the Voice of the People.
14. We fhall have occafion to mention this Man fometimes in the following Pages; but as we fhall have no Opportunity of continuing the Hiftory of his Adminiftration to its Clofe, we will take leave of him here, by relating another extraordinary Exploit of his, while he continued in full Poffeffion of Power. He was informed, about the Beginning of the Year 1526 , that the Court of Spain, wearied with continual Complaints againft him, was at length refolved to fend him a Succeffor. As he knew no Means of avoiding this, and yet had no Mind to part with his Power, he began to caft about in his own Mind, where to find another Eftablifhment. There was only one Expedition which had met with any kind of Succefs under any of his Creatures, and that was the Conqueft of Nicaragua, by Francis Hernandez, who acted under his Licence, and he had alfo been at fome Expence in fitting him out.

He refolved therefore to retire into this Country, for two Reafons : Firft, that he might fecure it for himfelf, though of right it belonged to him who had fubdued it; and next, that he might avoid delivering up his Province to his Succeffor in Perfon, for fear he fhould treat him as he had done Balboa. One would have imagined, that when his Affairs were in fuck a Situation, he fhould have abated fomewhat of his Pride, or at leaft of his Cruelcy; but whether it was that he had no Power over his Temper, or, that he knew he had ftill Intereft enough with the Minifters to prevent his being called to an Accounit for fo fmall a Matter as a Murder, fo it was, that he committed one more bafe and barbarous, if poffible, than that of Nunez de Balboa.

The thing happened thus: He pretended, as foon as he came into the new Province, that he had Information his Deputy had a mind to revolt, he therefore fent for him to anfwer to this Charge. Francis Hernandez, who knew there was not a Word of Truth in it, came with that Boldnefs that is natural to Innocence; and Pedrarias had him no fooner in his Power, than he caufed his Head to be ftruck off, alledging that there was no other Way for a Government to be fafe againft Pexfons in Power, when their Fidelity was once fufpected. As black and heinous as this Fact was, he efcaped being queftioned for it; and was confirmed in his Government of Nicarasua, as if the gratifying his own unjuft Refentments had been an indifputable Proof of his Attachment to the Crown of Spain, and Zeal for its Service.
15. I fhall clofe this Section with remarking that there never was an Obfervation more true than that which was laid before the Reader when we opened this Hiitory of the Spanifh Conquefts in America, which was, that they were entirely owing to the Abilities of particular and private Perfons, called forth by Accidents, and never to the Wifdom or Forefight of the Spanifa Minifters; who, on the contrary, were fo ready to cramp fuch as they ought to have encouraged, that they really made the Difobedience neceffary, which they pretended to correct, and gave Birth by their ill Management to thofe Inconveniencies they endeavoured to avoid.
I am not at all afraid of owning that I firt made, and now repeat, this Obfervation with a View of fhewing how weak and foolifh a thing it is for Men who want Genius to think of limiting and circumfcribing fuch as are endowed with it. It is a Sort of Policy not much unlike erecting Banks to ftop a Torrent, which is the fureft Way to increafe the Mifchief. That natural Fire, which a warmer Writer perhaps would have filed Divine, and we call Genius, is a noble and generous Flame, that, like the Rays of the Sun, cherifhes and enlivens all within their Reach, and which becomes dangerous only when artificially contracted. We have feen what Cortes did, and how he was treated. In the next Section, which is the laft that regards the Spaniards, we fhall fee feveral Inftances of the fame kind, all which prove that it is infinitely more advifeable for Statefmen to ufe fair and gentle Methods, with Perfons of fuch extraordinary Abilities, and rather lead them by propofing the juft Rewards of Glory, than pretend to compel them by little Arts which are equally vain and fatal, either to thofe by whom they are ufed, or the Nation in whofe Service fuch Talents are exerted. Had Velafquez and the Bifhop of Burgos been able to circumvent Cortes, the Mexican Empire had ftood, and the Spaniards had loft thofe Treafures which it has fince yielded. Had Nunez de Balboa efcaped the Snares that were laid for him, Peru had been fooner fubdued; and if Francis Pizarro had not been wife enough to take Warning by his Example, it had very probably never been fubdued at all.
Heroes, like other Men, have their Faults, but, perhaps, their Faults merit more Indulgence: Thofe who have none of their Excellencies, have frequently more Faults and blacker Vices. Envy is not the Produce of a rank, but of a barren, Soil; and Malice is a Weed that fprings in dirty Minds, as the mof poifonous Plants are found in Marfhes. Whoever reflects on the pitiful Creatures that extinguifhed fo great a Genius as our Sir Walter Raleigh, will pardon this Digreffion, and forgive a Man for indulging his Defire of fecuring future Merit from thofe Mifchances which have been fatal to it in former times. It is all that lies in the Power of one who is immerfed in Books ; it is the utmoft Service his Pen can render to thofe whom his Mind adores; and if by celebrating the Memory of great Men, who are gone, he can contribute to excite others to an Imitation of their Actions, and recommend Virtue to the Practice, as well as the Praife, of Pofterity, it is the utmoft Extent of his Wifh, and it is the only Way he knows to be ufeful to Mankind and his Country.

## SECTION XV.

## The Hifory of the Difcovery and Conqueft of the Empire of Peru by Francis Pizatro together with the Difcovery of Chili, and the Conqueft of that Country alfo.

1. An Account of the frrf Notice which the Spaniards bad of Peru and of the Copartnerfbip of Pizarro, Almagro, and Luquez, for the Conqueft of that Country. 2. The Terms upon which that Agreement was made, and the Shares of the refpective Parties. 3. Francis Pizarro undertakes the Difcovery with the Afjitance of Almagro, and meets with many Hardflips. 4. They refolve to profecute their Defigns notwithfanding thefe Difcouragements. 5. They proceed to the Port of Tumbez, and the Riches of this Country engages them to fond Pizarro into Spain, for which Purpofe they return to Panama. 6. The Voyage of Francis Pizarrouto Europe, bis Commiffon from the Emperor and Return to America. 7. The Difficulties be found in refuming the Difcovery, and what followed on bis failing for the Coaft of Peru. 8. His furprizing Succefs wobich Jpread the Terror of the Spanih Arms throughout all that Empire. 9. The State of the Incas of Peru at this Time, and the Hiftory of the Brothers Huefcar and Atahuallpa. 10. This Subject continued, to the Time of their Application to Pizarro. II. The Interviere between Atahuallpa and the Spanifh Embaffadors. 12. Atahuallpa goes to vijit Pizarro in Perfon, and the Confequences of that Vifit. I3. Difcords and Divifons among the Spaniards. 18. The noble Difpofitions of Mango Inca, with other Particulars. Ig. The Dijcovery of Chili by Diego de Almagro, and the Return of Ferdinand Pizarro from Spain. 20. A civil War breaks out between the Marquis Francis Pizarro and bis Collegue Almagro, in which the latter is at frrft fuccefsful. 21. The Marquis Francis Pizarro obtains a fignal Victory, and thereupon puts bis old Collegue Almagro to death, which is follorved by new Troubles. 22. A Baftard Son of Almagro fets up for bimfelf, and caufes the Marquis Pizarro to be affafinated. 23. Vaca de Caftro is fent by the Emperor Charles V. into Peru, who defeats the young Almagro and puts bim to death. 24. The Wi fdom and Firmnefs of this new Governor extinguibles all the Troubles in this Province. 25. A fuccinct Account of the fubfequent Difcoveries of the Spaniards in America. 26. This Subject continued and concluded. 27. Obfervations and Remarks upon tbis Section, and upon the State of the Spanifh Empire in the Weft-Indies.

'THE Defigns formed by Men of fuperior Abilities do not perifh with them ; for Envy, being fatisfied when they are no more, cherifhes their Memory, and preferves their Schemes, in order to deprefs and keep under fucceeding Pretenders to Merit. This was the Cafe of Vafquez Nunez de Balboa, who firlt formed the Project of extending the naval Power of Spain on the Soutb-Seas, and at the fame Time enlarging her Conquefts by Land into the Empire of Peru, of which he had procured fome tolerable Accounts before he died. It was the Defire that Pedrarias had of wrenching this Project out of the Hands of its Author, that put him upon treating Balboa as he did; but, as we have thewn before, all his Expeditions failed, and fo did thofe of feveral Perfons, to whom he granted Licences, for profecuting their Difcoveries. At laft, in the Year 1524, three Gentlemen, all Inhabitants of the new City of Panama, rich, far in Years, and of great Reputation, offered to venture upon this Undertaking at their own Rifque and Expence, provided they might be allowed fair and reafonable Terms; fuggefting, at the fame Time, that it was more honourable for the Governor to grant them fuch Conditions, than to look for new Adventurers, out of the Bounds of his own Jurifdiction. Pedrarias liftened very readily to this Propofal, nor did he at all fcruple granting them as eafy Terms as they could defire, believing that he ran no Hazard in fo doing, fince, if they mifcarried, as every body thought they would, he was to lofe nothing; and, on the other Hand, if they fucceeded, he flattered himfelf that he fhould always have Force fufficient to maintain his Authority, and fecure to himfelf the Fruits of their Enterprize.
In order to conceive rightly on this Affair, it will be requifite to give fome Account of thefe Undertakers. The firt of them was Francis Pizarro, whom we have mentioned more than once before: He was a Native of the Town of Truxillo; and moft of the Spanifb Writers agree, that he was a Man of Quality. But how noble foever he might be by Birth, moft certain it is, that he quitted his Country and went into the $W$ Tef-Indies, in order to repair his broken Fortune. He ferved firt
in the Wars of Hippaniola and Cuba, and failed aftera wards with Hojeda to the Gulph of Darien, and was left by him as his Lieutenant, in the Colony which he fettled there. He ferved afterwards under Vafquez Nunez de Balboa, and in the Courfe of feveral Years, that he bore Command in thefe Parts, he had juftly gained the Character of a bold, enterprizing, and experienced Officer : He had likewife attained to a very confiderable Fortune ; and on the firt Building of Panama fettled there, and feemed difpofed to have paffed the Remainder of his Days in quiet. The fecond of thefe Adventurers was Diegode Almagro, who took his Name from the Town in which he was born in Spain, and thereby did it Honour ; for as to his Family, it was fo obfcure, that even the Glory of his Exploits could not afford Hiftorians Light enough to find out who was his Father; but he was a Man of Genius and Experience, and, at the Time he entered upon this Affair, of Fortune likewife. The third was a Prieft, one Ferdinand de Luques, or, as fome Writers call him, Lugne, a Man likewife in Years, of great Parts, and a much larger Fortune than either of the former; for he was Proprietor of the Inand of Tabago in the Bay of Panama, had a good Eftate befides, and a very large Sum in ready Money. This Partnerhip made a great Noife, as it was indeed a very fingular thing in its Kind, for three private Men to undertake raifing a joint Stock for conquering a great Empire; and, like other Projects above the Reach of common Minds, it was treated as a wild and vifionary Scheme, which would certainly end in the Ruin of the Projectors.
2. Thefe three great Men did not however give themfelyes much Pain about what other People faid; in which they fhewed themfelves wife and firm. The Manner in which they fealed and ratified their Agreement, was no lefs fingular than the Agreement itfelf; for they repaired folemnly to high Mafs, which was celebrated by the Prieft Ferdinand de Luques, who having broke the Wafer into three Pieces, took the firt himfelf, and gave the others to his Companions, in Token that they flould purfue this Defign with the fame Zeal and Steadinefs as they did that of their Salvation. It is now proper to fee what the Nature was of this Agreement;
of which the beft Authors report, that they entered into Articles never to abandon each other, for any Hazards or Difappointments they might meet with in the Enterprize, till they had made a Conqueft of Peru; and folemnly took their Oaths in public, for the Confirmation of thefe Articles ; each of them being affigned a particular Part, in conducting and, executing the Scheme : Francis Pizarro was to command the firtt Party that wient upon the Difcovery; Almagro was to carry him Recruits, and reinforce him from Time to Time ; and Ferdinand de Lugne was to remain at Panama, and lay in Ammunition and Provifions to fupport the Enterprize; and whatever Gold, Silver, precious Stones, or other Effects Should be acquired, after the Charges, and the Emperor's Fifths, paid, were to be divided equally amongft them.

They took care to make the beft Enquiries they could into the Caufes of the Mifcarriages which had formerly happened, that they might the better avoid them ; they were likewife very affiduous in finding out Perfons who had been employed in former Undertakings, that they might have the Benefit of their Experience ; and they bought for the Service of this Expedition a fine new Ship, that had been built by the Direction of Vafquez Nunez de Balboa, and which was jurt finifhed as he died. Their Pilot was Francis Penate; Nicholas de Ribera was Treafurer; Fobn Carillo had the Charge of keeping an account of the King's Fifths; and one Salzedo was next in Command under Pizarro. The whole Number of Men employed were no more than one hundred and fourteen; and exclufive of Officers they had but fourfcore, the moft inconfiderable Body furely that ever had the Boldnefs to undertake fuch an Enterprize.
3. About the Middle of the Month of November 1524, all Things being ready, Pizarro embarked, and proceeded to the Inand of Tabago, diftant from Panama about five Leagues, from whence he failed to the Pearl Ifands, in the Middle of that Bay, where he took in Wood, Water, and Hay for his Horfes, and failed to Port Pinas, or Prineaple, upon the Continent, on the South Side of the Bay of Panama. Here Pizarro went on Shore, with his Soldiers, and endeavoured to penetrate into the Country; but meeting with nothing but Bogs or Mountains, over-run with Wood and Deluges of Rain, as they approached the Equator; and the People having fled from their Habitations, fo that no Provifions were to be had, Pizarro ran farther down the Coaft to the Southward, and then landing again found the Country no better ; and loft a great many of his Men by Sicknefs, want of Provifions, or the Hardfhips they fuffered in their Marches and Counter-Marches. Whereupon he fent the Ship to the Ifle of Pearls for Provifions; and, in the mean time, was followed by Almagro, with two other Ships, and a Recruit of fixty Men and upwards. Thefe two Captains meeting upon this wretched rainy and unwholefome Coaft, and landing their united Forces, had fome Skirmifhes with the Natives, in which Almagro loft an Eye ; but happening, in fome of their Excurfions, to meet with a Parcel of Gold, of the Value of fourteen or fifteen thoufand Crowns, they refolved, notwithftanding all the Difficulties and Hazards they underwent, to proceed in the Enterprize, in which they were the more encouraged by the Pilot de Ruyz, who (while Pizarro marched with the Soldiers on Shore) ran down as far as Cape Paffaro, under the Equator, and taking fome Prifoners, was affured by them, that the Treafures of Peru were much beyond any thing that had hitherto been reported of them, whereupon he returned to Pizarro with the agreeable News. In the mean time, that General fuffered incredible Hardfhips in the Abfence of Almagro, who was gone to Panama with the Gold they had got, to procure another Reinforcement of Troops and Provifions, without which it was very evident that nothing could be done.
4. At the Time of his returning to Panama, Almagro found Pedrarias removed from his Government, and fucceeded by Peter los Rios, who permitted him to raife what Men he could to reinforce Pizarro; whereupon he embarked again with forty Soldiers more, fome Horfes and Arms, Cloaths, Shoes, Provifions, and Medicines,
and returned to Pizarro, whom he found in a very mifer rable Condition, great Part of his Men being fick or dead: They removed therefore from that unhealchy part of the Continent, and put their Men on Shore in the Inand of Gallo ; ' here they remained fifteen, Days, and then returned towards the Continent again, running along the Coaft further to the Southward; however, they ftill met with fuch a drowned Country, and bad Weather, that it was once propofed to return back to Panama. Even Pizarro's Heart failed him, and the two Commanders, it feems, were upon the Point of drawing their Swords, fo hot was the Conteif for and againft the proceeding in the Enterprize; but at length it was agreed, that they fhould go to the Inand of Gallo again, where Pizarro fhould remain with the Men 'till Almogro went to Panama for Recruits; and great Care was taken that none of the Men fhould write home, and difcover their wretched Condition; for moft of them had fhewn an Inclination to defert the Service whenever they fhould have an Opportunity, and threatened to apply to the Governor of Panama to be recalled from an Expedition which had confumed fuch Numbers of them, and, if profecuted, would probably deftroy the reft; and, notwithftanding all the Care their Commanders took, one of them found Means to fend a Paper fubfcribed by moft of them, defiring to be recalled, which was enclofed in a Bottom of Cotton Yarn, and thereby concealed from the Knowledge of their Officers.

This Paper coming to the Hands of the Governor of Panama, he was fo far from fuffering Almagro to levy any more Recruits, that he fent a Ship with a Commiffary on board to the Inand of Gallo, on purpofe to bring back all the Men that furvived: The Commiffary arriving, Pizarro begged of him that he would, however, fuffer as many of them to ftay with him as were willing to remain in the Enterprize; which the Commiffary confenting to, Pizarro drew a Line with the Point of his Sword, and haranguing his Men, told them, they were at Liberty to return to Panama, if they thovght fit; but it grieved him, that they fhould now abancon the Enterprize, when they were upon the Yoint of reaping the Reward of all their Sufferings: As for his Part, he would perifh in the glorious Undertaking rather than defert it ; and thofe that voluntarily remained with him, fhould fhare with him the Treafures of which they had fo near a Profpect, defiring thofe that were willing to proceed in the Enterprize to come over the Line he had drawn. But fuch were the Sufferings of thefe poor Wretches, that much the greateft Part of them forfook him; only thirteen Men and a Mulatto came over the Line he had drawn, the reft embarked and returned to Panama with the Commiffary.
5. The Affairs of Pizarro never feemed in a worfe Situation than at this Time; for he was not only deprived of all Hopes of performing any thing remarkable for the prefent, but had alfo a very indifferent Profpect for the future. In this Diftrefs he removed to the Inland of Gorgona, in order to fupply himfelf with frefh Water : There he remained till he was joined by Almagro and his Pilot, with fome few Recruits, which they, with fome Difficulty, had prevailed upon to enter into this Expedition. With thefe Men they embarked, and failed ftill along the Coaft 'till they had paifed the Equator, and found themfelves in the Latitude of $30^{\circ}$ South; having fpent about two Years in making a Voyages which may very well be performed, now the Currents, Trade, Winds, and their Seafons, are known, in as many Weeks. In this Paffage, however, they took feveral Indian Floats, with Cargoes of confiderable Value ; and gained fuch Intelligence of the Situation of Things upon the Coaft, that Pizarro refolved to fend one Peter de Candia, fo called, becaufe he was born in that Ifland, to Tumbez, in order to learn whether the Informations they had hitherto received might be depended upon or not; which was a very well contrived Expedient.

This Man had a great deal of good Senfe, a very fair Character, and was fo expert in his Conduct, that he found Ways and Means to render himfelf fo agreeable to the Indians, that he executed his Commiffion as effectually as could be defired, and returned fafely to Pizarro,
with a full Account of all that he had feen. By which it plainly appeared, that the Riches of this Country very far exceeded even the Reports they had received concerning them. For he declared, that he had feen their public Edifices erected with wonderful Art and Skill, and fo exceffively rich, that the very Walls of them were covered with Gold and Silver, with many other Things of the like Nature.

After hearing this Man's Relation, they held a kind of Council amongft themfelves upon the prefent State of their Affairs, and unanimounly agreed, that the wifeft Courfe they could take would be to return all together to Panama, where they made no Queftion that the News of fuch important Difcoveries would effectually reftore their Affairs, and procure them fuch Supplies, as would enable them to profecute their Defign with all the Succefs imaginable. This Refolution once taken, they proceeded to put it in Execution; being thoroughly fatiffied that in the Situation they were in, they could undertake nothing; and that by remaining upon this Coatt, they fhould lofe all their Men by degrees, and thereby bring an irretrievable Difgrace upon the Project, which would not only ruin themfelves, but difcourage all future Attempts of this Nature.
6. Upon the Return of Francis Pizarro to Panama, with many indubitable Proofs of his Difcoveries, it occafioned a vaft Itir in that Colony; for thofe who had before derided this Project as abfurd and impracticable were now convinced of their Error, and that it was likely to prove a much more confiderable Difcovery than any hitherto made by the Spaniards; yet the Oppofition made by the new Governor to his levying Men for the carrying on his Defign, and fome other Accidents, made it evident, that it would be impoffible for him or his Affociates to proceed farther, without the Affiftance of a fuperior Authority. It was therefore agreed by them all that Pizarro hhould go in Perfon to Spain, in order to obtain the neceffary Powers from the Crown, for removing all thofe Difficulties; and it was likewife agreed, that he fhould follicit for himfelf the Title of Governor ; for Almagro that of Adelantado, or the King's Lieutenant ; and for Lugne, the Protectorfhip of the Peruvians, and the firf Bifhopric of that Country. Pizerro accordingly fet fail, and, arriving in Spain, proceeded to the Court of the Emperor Cbarles V. which was then at Toledo; here he met with a very gracious Reception, on his prefenting his Imperial Majefty with fome Peruvians in their proper Habits, two or three Peruvian Sheep, and feveral Gold and Silver Veffels and Utenfils of the Fafion of the Country.
The Eimperor was pleafed to hear him relate the Difficulties he had met with in thefe three Years Voyage; and in the End referred the Overtures he made to the Council of the Indies; who having framed their Report, Pizarro was ordered to proceed in the Conqueft of Peru for the Space of two hundred Leagues to the Southward of Tumbez, which lies at the Bottom of the Bay of Guiaquil: He procured alfo the Title of Governor and Captain-General to be conferred on him for Life, with the Offices of Adelantado, or Lord-Lieutenant, and of Alguazil-Major ; he was alfo empowered to erect four Caftles in Peru, where he thought proper, and retain the Government and Inheritance of them to him and his Pofterity. He obtained for Ferdinando de Lugne, that he Thould be recommended to the Pope to be made Bifhop of Tumber; and, in the mean Time, conftituted Pro-tector-General of the Peruvians. Almagro was conftituted Governor of Tumbez, and a twentieth Part of all the Profits and Revenues of the Country, when conquered, were to go to Pizarro and Almagro; two Thirds thereof to the former, and one third to the latter; Almagro was made a Gentleman, and his Baftard Son legitimate : The thirteen Men that remained with Pizarro in his Diftrefs on the Inland of Gallo were made Gentlemen, if they were not fo before ; and thofe that were Gentlemen then were ordered to be knighted.

There Commiflions and Powers were executed at Toledo on the 26 th of $\mathcal{J} u l y$ 1528, and fix Dominican Friars were ordered to go over with Pizarro as Miffionaries, to affift in the Converion of the Peruvians; and

Vol. II. Numb. 79.
thus this great Affair was finifhed much to the Satisface tion of our Adventurer, who found himfelf vefted with a legal Authority to purfue his Conqueffs, which was all he wanted, and no lefs to the Satisfaction of the Court; which gained thereby a Profpect of annexing another Empire to their Dominions in America, without being at any Expence. It may not be amifs to remark here that the Spaniards had a Felicity in making their Conquefts, which never attended any other Nation; fince neither Columbus, Cortes, Balboa, or Pizarro, who brought fo many Millions of Piftoles into the royal Coffers, ever received fo much as a Marvedy from thence towards the Charge of their refpective Expeditions.
7. When Francis Pizarro had received his Commiffions of the Tenor before-mentioned, he repaired to his native Town of Tuxillo in Eftremadura, in order to raife Forces, and to vifit his Family, of which it may not be amifs to fay fomething farther in this Place. His Father Gonzalo Pizarro, firnamed T'be Long, becaufe he was very tall, was a Man of Family, and had ferved as a Captain of Foot ; he married a Woman of Family likewife, by whom he had two Sons, Fobn and Ferdinand, but as for Francis he was illegitimate, and the Son of a Country Girl, who was afterwards married to an honeft Farmer, by whom the had Francis Martin de illcantara. Old Gonzalo Pizarro had alfo another natural Son, of his own Name; and the whole Family being well beloved in their Neighbourhood, they made great Difpatch in providing all that the new Governor wanted, which having effected, he embarked at Serille, witit his four Brothers, viz. Ferdinand, Fobn, Gonzalo, and Francis, in the Month of Fanuary 1530, and arrived at Nombre de Dios on the Coaft of Terra Firme, from whence he marched with his People to the City of Panama.
But his ingroffing all the Honours and Commands to himfelf, fo difguted Almagro, that he refufed to affift in the intended Expedition, 'till Pizarro promifed to relinquifh the Title of Adelantado, and to give him an equal Share in whatever they fould acquire; and upon thefe Conceflions, Almagro promifed to affitt him as formeriy, and fmothered his Refentment for the prefent, that the Service might not fuffer; but they were never thoroughly reconciled, as will appear hereafter. At length Pizarro embarked at Panama in three Ships, taking with him one hundred and eighty-five Soldiers, thirty-feven IIorfes, and fuch a Quantity of Arms, Ammunition, and Stores, as might enable him to fix Colonies on the Peruvian Coaft; but meeting with the like contrary Winds as he had done in the firft Voyage, and finding it very inconvenient, and indeed impracticable to keep his Horfés longer on board, he was obliged to land above an hundred Leagues to the Northward of Tumbez; and now, thinking himfelf ftrong enough to drive the naked In" dians before him, he fell upon them, plundered their Towns, and made many of them Prifoners without any manner of Provocation, whereupon the reft fled from the Sea Coaits up into the Country; and Pizarro was afterwards fo diftreffed for Provifions, and loft fo many Men by Sicknefs and Hardhips, and the fatiguing Marches through Bogs and Thickets of Mangrotes in this extraordinary hot Climate, that his Forces were exceedingly diminifhed; and he now too late perceived his Error, in not courting the Natives, being in no Condition to make a Conquelt of Peru with the Forces he had left.

He took therefore moft of the Treafure he had plundered the Indians of, and fent his Ships back with it to Panoma, to raife more Recruits; inviting, at the fame Time, fome Adventurers from Nicaragua, and other Parts of North America, to come and join him, promifing them a Share of the vaft Treafures he was now af. fured of finding in Peru; which had a very good Effect, and procured him foon after a very confiderable Reinforcement. In this Expedition he had already gained fo much that he was able to fend thirty thoufand Pezoes in Gold to Pquama, befides a confiderable Quantity of fine Emeralds; and might have fent many more, if it hod not been for the Folly of fome of his People, who took it into their Heads that thele precious Stones were as hard
as Diamonds, or at leaft ought to be fo, fo that in trying them with Hammers they broke abundance of them to Pieces.
8. Francis Pizarro refolved to continue in Action till his Recruits arrived ; and, having in fome Meafure informed himfelf of the State of the Country, he judged it very poffible to make fome Advantage of the Difputes that reigned at this time, between the Inhabitants of $\mathcal{T} u m-$ bez and thore of the Inand of Puna. He endeavoured to gain the good Will firf of the Inanders; but finding them to be a very falfe and perfidious People, he attacked and routed them, which he hoped would have opened a Means of contracting a clofe Alliance with the Tumbezenes; becaufe he found fix hundred of them, together with one of the moft confiderable Perfons of the City, Prifoners amongft thefe People, whom he fet at Liberty, and fent home, together with three of his own People; who, if the Spani/b Writers are to be believed, this barbarous Nation facrificed to their Idols, which however was not known immediately to Pizarro, who continued to reckon the Tumbezenes as his Allies upon whofe Affiftance he might depend at all times.
In the mean time Almagro having fent Pizarro a confiderable Reinforcement from Panama, and Ferdinand de Soto, and other Adventurers, arriving with their Troops from Nicaragua, he thought himfelf in a Condition to carry on the War upon the Continent, efpecially as he had fome Reafon to expect to be fupported by the Tumbezenes: Accordingly, having provided a fufficient Number of Floats or Barklogs, he tranfported his Troops to Tumbez, in which he lof fome Men on going a-fhore by the Roughnefs of the Sea, which runs very high on that Coaft; and fome of his People were attacked and cut off by the Natives, which was a Surprize to him as he took them to be his Friends. The Spanifb Writers give various Reafons for this Alteration in the Conduct of the Natives of Tumbez; who, but a very little before profeifed themfelves their very good Allies and Confederates. Some relate, that, obferving the Spaniards had enflaved the Natives of the Inand of Puna, and perfectly fubverted their Religion and Government, demolifhed their Temples, and every thing they held facred, they expected to be treated in the fame Manner by the Spawiards, and therefore thought fit to oppofe their landing in their Country.

Others inform us, that while the Spaniards were engaged in the Reduction of Puna, a very great Alteration in the Face of Affairs happened upon the Continent. Atabuallpa had defeated the Forces of his Brother Huefar the Emperor; cut in Pieces moft of the Inhabitants of Tumbez and the neighbouring Provinces for adhering to him; and the Troops that oppofed Pizarro's landing in Tiumbez, were thofe detached by Atabuallpa to that Province, on purpofe to repel the Invafion of the Spaniards. But whatever was the Reafon of the Peruvians oppofing the Defcent of thefe Strangers, it is evident that they were put in fuch Confufion by the Spanifb Horfe and Artillery, that they fled as the Spaniards advanced; and, after the Slaughter of fome thoufands of them, were forced to abandon the Town and Cafle, and even the whole Valley of Tumbez; leaving behind them all the Gold and Silver Plate, Emeralds, Pearls, and other rich Spoils which lay heaped up in the Temple of the Sun, and the Inca's Palace, being fo vaft a Treafure, that the Spaniards could fcarce believe their Eyes, when they found themfelves fo fuddenly poffeffed of it; and fuch was the Coniternation of Atabuallpa and his whole Court, when the Fugitives related what Slaughter the Thunderer's Ordnance had made among them, and how impoffible it was to efcape the Spanifb Horfes, to which Animals their Fears had added Wings; that they concluded, if the Spaniards were not Gods, as they at firt conjectured, they were certainly Devils, and that it was not pofible for any human Force to defend their Country againft them; of which Pizarro receiving Intelligence, refolved to take Advantage of the Terror they were in, and march immediately to find out Atabuallpa, while he remained under that Delufion.
But he found it neceffary to defer his March, till he had erected a night Fortrefs upon the Sea Coaft (to which
he gave the Name of St. Micbael) for receiving the Recruits that he expected, and to ferve him for a Place of Retreat and Security, in cafe any unforefeen Accident fhould happen." This was the firt Spanifh Colony planted in Peru, and here the firt Church was erected, in the Year 1531, and F. Reginald de Pedraga was conftituted Protector of the Indians, Ferdinand de Lugne being unable to execute that Employment, on Account of his Indifpofition. This Meafure was certainly the wifeft that he could take; for he not only wanted fuch a Settlement for the Reception of his Recruits, but fhewed likewife his Judgment in the Choice he made, fince there was no Place fo proper for his Purpofe upon the whole Coaft.
He took another Step that was equally judicious; he divided all the Gold and Silver in his Poffefion ffairly amongft the Soldiers ; and to fuch as were to remain in the Colony, he delivered their Shares without Abatement, that they might have wherewithall to fubfift, and to carry on their Trades ; but for fuch as continued to march with him, he gave them only Acknowledgments of his having fo much in his Hands, with a Promife to pay it when they came to Panama. By this Eftablifhment, he fhewed plainly his Intention to remain in the Country, which it was evident he could not do but by Force ; and therefore the very News of his erecting a Town, fortifying that Town, and compelling the Indians who lived near it, to obey not him only, but the meaneft of his Spaniards, as Lord, foon filled the whole Empire with the Noife of this Enterprize, and engaged the two Brothers, who were contending for the Empire, to turn their Eyes upon thofe who might very foon have that Empire to give, fince the Terror of their Arms was already fpread among Nations of whom the Spaniards had not the leaft Knowledge.
9. As the Differences between thefe two Brothers proved their Ruin, and the chief Caufe that this great Empire fell into the Hands of the Spaniards, it is abfolutely neceffary that we fhould give fome Account of them, in order to render this Hiftory perfectly intelligible; and this fhall be done in as few Words as the Subjeet will admit. Huana Capac, or as fome of the Spanib Writers call him Guana Cava, was the Sovereign of Cuzco, and had annexed to his Empire many Provinces, fo that his Dominions were five hundred Leagues in extent from his capital City. The Country of Quito, which was ftill governed by its natural Princes, grew next the Object of his Ambition; he refolved to make himfelf Mafter of it, which, confidering the Superiority of his Force, was no hard Mater for him to do: He did it accordingly, and, having vifited it as a new Conqueft, he was fo much charmed therewith, that he refolved to make it the Place of his Refidence ; and accordingly, leaving his eldeft Son Huefar, Mango Inca, and other Children at Cuzco, under proper Guardians, he transferred the imperial Refidence to Quito, where he married the Daughter of the deceafed Prince, and thereby gained a legal Title to a Country, the Poffeffion of which he had acquired by Force. In Procefs of time, however, finding that great Inconveniencies enfued from his quitting his ancient Refidence, he returned thither for a time, and left his Son Atabuallpa, whom he had by the Princefs of 2uito, and for whom he had the greateft Tendernefs, under the Care of the moft eminent Perfons in that Principality, whither he propofed fhortly after to return, as he did, and then to fettle the Affairs of that Principality, and pafs the Remainder of his Days at Cuzco; but Providence otherwife difpofed of him, and he died at 2uito, having left the beft Part of his Treafures, and the old imperial Army, at Cuzco; declaring by his Will, that as 2uito never made a Part of the Empire of the Incas, there was no Reafon that it fhould defcend, together with the Empire, to his legal Succeffor, and therefore he beftowed it upon his younget Son Atabuallpa, whom the Spanifa Writers generally call Atabaliba, who was, indeed the Heir of it by his Mother.

After his Death, the young Prince fecured the Army and the Treafures of his Fither, and then fenr an Embaffy to Huefer, to fignify the Nature of his. Father's Will,

## Chap. III.

 of PERU and CHILI.to render Homage to him in his Name, and to defire from him the Confirmation of the Kingdom of Quito, which he was willing to hold from the Incas. Huefcar was by no means pleafed with this Embaffy, and therefore fent his Brother Word that he fhould fuffer the Troops to return to their Duty; that he fhould quit the Sovereignty of Quito, which being a frontier Province of his Empire, he could by no means leave in his Hands; and, that after doing this, if he repaired to Cuzco, he would give him a Share in his Father's Treafures, and affign him Lands for his Subfiftance. He added, that in cafe he did not accept thefe Propofals, he would certainly make W ar upon him, and recover the Poffeffion of Quito by the fame Method his Father acquired his firt right to it. Upon receiving fo unkind a Meffage from his elder Brother, Atabuallpa called the principal Perfons his Father had intrufted with his Education, to Council; who advifed him, fince Peace could no longer he preferved, to take the Field firft; fince that was a Meafure by which he might gain much, and could lofe nothing at all.
10. Atabuallpa, or Atabaliba, embraced this Propofal, as indeed it was the wifeft that could be offered, and the moft fuitable to his Circumftances; and with the Army his Father had left, immediately entered the Dominions of his Brother. Huefar, on his Part, brought a more numerous Army into the Field, and it was not long before a general Engagement enfued, which lafted for three Days, and was as bloody as it was obftinate. It ended however in the Defeat, and which was ftill worfe, in the Imprifonment of Atabualloa, who was taken upon the Bridge of the River Tumibamba, and Thut up in a Palace which bore the fame Name. But obferving that the Soldiers, elevated with their late Victory, were entirely given to Feafts and Sports, he took his Opportunity ; and, having provided himfelf with the neceffary Inftruments, pierced a Hole through one of his Apartments, and thereby made his Efcape. He returned to his own Subjects, whom he found broken and difpirited by their laft Defeat; but he revived their Courage in an Inftant, by affuring them, that his Father had appeared to him in his Prifon, changed him into a Serpent, and thereby gave him an Opportunity of fliding through the Wall. What to a fenfible People would be ridiculous, is to a fuperftitious and credulous Multitude, a Miracle. The News was fpread throughout the whole Principality; the People in general quitted their Habitations to take up Arms in his Service, and he had, in a very fhort Space of Time, a much greater Body of Troops than before. He defeated with thefe, two or three Armies that oppofed him; took, and levelled with the Ground, the Place where he had been imprifoned; and having by his Victory vaftly augmented his Conquefts, he drew from the Provinces he fubdued prodigious Numbers of Troops. When he arrived at Tumbez, he purpofed to have made himfelf Mafter of the Inand of Puna, in which however he failed. This did not at all difcourage him ; but leaving that War to be renewed at fome happier Juncture, he marched with all his Forces to give Huefcar battle, who, he was informed, was coming againft him with a prodigious Army.

When Atabuallpa was come to Caxamalca, he fent two of his beft Officers with three or four thoufand light-armed Troops, to reconnoitre his Brother's Army; 'thefe drawing very near to the Camp of Huefcar, found it neceffary to quit the high Road, to prevent being difcovered. It happened very unluckily for Huefcar, that, to march more at his leifure, and without being difturbed by the Noife of the Army, he had taken the fame Bye-road with about feven hundred of his principal Officers, and who formed at once his Court and his Guard. The Officers of Atabuallpa knew the Imperial Standard, and foon faw how Matters ftood: They laid hold therefore of this Opportunity of making a fhort End of the War, and attacked Huefoar and thofe about him with fo much Fury, that after a Chort Difpute the Inca was made Prifoner. The Victors were foon in as much Danger as the Vanquifhed, for the Army of Huefcar being informed of what had happened, furrounded this Handful of Men, and threatened to cut them to Pieces immediately. In this Diftrefs
they were obliged to have Recourfe to a very natural Expedient; they told Huefcar, that if he did not order his Troops to retire, they muft be obliged to fecure themfelves from Shame at leaft, if not from Death, by cutting off his Head, and then fighting it out to the laft Man. The Officer who delivered this Mefiage, obferving that it had a great Effect on the Mind of Huefcar, added, That as it was a neceffary, fo he would find it both a juft and profitable, Meafure; for that as his Brother pretended to nothing more than his own little Sovereignty of $2 u i t 0_{3}$ fo if he could refolve to gratify him in that Particular, there was no doubt of his reftoring him to Liberty, and even acknowledging him as his Sovereign; but that he muft refolve fpeedily, fince there was not a Moment's Time to be fpared. Huefcar, finding himfelf in this Diftrefss and feeing no other way to efcape, fubmitted to the Terms prefcribed, and, making a Signal to his Forces to forbear charging, directed the principal Officers to come to him, and ordered them to march with the Army back to Cuzco. They implicitly obeyed the Commands of their Sovereign. And this was the Situation things were in, when both the Brothers had recourle to Francis Pizarro, and claimed his Affiftance.

It is evident enough from what has been already faid; that fcarce any People could be more fuperfitious than the Inhabitants of Peru, and certain it is, that the Fables upon which their Religion was founded, proved of greater Confequence than any other thing to Pizarro and his Affociates, who otherwife would never have reduced them. One Inftance of this fhall fiffice, and indeed that is fo extraordinary that there is no need of adding another: They were thoroughly perfuaded that their Incas defcended from the Sun, and they very foon came to believe that the Spaniards were the Children of the Sun likewife ${ }_{g}$ in which the Story I am going to tell fully confirmed them. The eldeft Son of the Inca Yabuarbuacac beheld in antient Times, as their Tradition taught them, a very ftrange Phantom, different in Afpect and Drefs in the highef Degree from the Peruvians; for whereas they have no Beard, and the Cloaths they wear come no lower than their Knees, this Spirit, who called himfelf Virachoca, had a long Beard, and his Robe reached down to his Feet; and he likewife led in his Hand an Animal abfolutely unknown to the young Prince. This Fable, univerfally fpread, and generally received, operated fo ftrongly upon the Minds of the People, that they no fooner faw a Spaniard with a long Beard, his Legs covered, and his Horfe in his Hand, than they cried out: Look, look, there is the Inca Virachoca, the Son of the Sun.
II. It was immediately after the fettling of the new Colony by the Spaniards, that the Embaffadors from Atabuallpa arrived, and fignified to Erancis Pizarro, the greatDefire their Mafter had to cultivate a good Correfpondence with him; upon which he immediately took a Refolution to advance towards Caxamalca, where he underfood the Inca was, in order to vifit him. It fo fell out, that the Rout between thefe two Places lay through a burning Defart of about twenty Leagues over; in paffing through which the Spanifh Soldiers fuffered exceffively; but however, when they came to Motapa they met with rich Vallies, and a plentiful Country; wherein they refrefhed themfelves, and then continued their Journey. They met foon after with certain Embaffadors; that had been difpatched by Atabuallpa to compliment Pizarro, who prefented him, on the Part of the Inca, with a Pair of Gold Bufkins very finely wrought, and Bracelets of the fame Metal fet with Emeralds; which they defired him to put on when he had Audience of the Emperor, that by the Sight of his own Prefents he might know him. The Chief of this Embafly was himfelf of the Race of the Incas, and fhewed much Ceremony and Politenefs in his Behaviour. He brought, befides thefe Prefents for the General, Provifions and Gifts for the Army, the former in great plenty, and very acceptable: the latter rich, and therefore no lefs fatisfactory; which raifed the Minds of the Spaniards prodigiouny, inafmuch as they atrributed it wholly to the Fear of that Monarch and his Subjects, in which without doubt they were right,
and yet not in the Senfe in which they underftood it; for it was not fo much the Fear of their Arms, as the Dread the People had of them on a religious Score, as fuppofing them the Offspring of the Sun.

It fell out unluckily for thefe Embaffadors, that the Spaniards had no Interpreter but an Indian of Puna, baptized by the Name of Pbilip, and on the Score of his Youth called Pbilipillo, i. e. Little Pbilip, a mean, villanous Rafcal, born of the Scum of the People, and whofe Mind was yet more dirty than his Original : He had not Senfe enough to comprehend the Compliment of the Inca; and therefore, inftead of the true Meaning of it, delivered Pizarro fome Nonfenfe of his own. After the Embaffador was departed, the Spaniards deliberated upon his Meffage; fome fufpected, that the Inca had bad Defigns; others fwore, that as his Gold was good, they had no Reafon to doubt of his Intention: In the End, they refolved to continue their March, and they did fo, meeting every where with a kind Reception ; and being extremely well entertained at the public Expence. In the mean time, Atabuallpa employed his Time very indifferently, endeavouring to fecure the Poffeffion of the Empire, by murdering moft of the royal Family, and fuch as were moft attached to the Prince his Brother. When they came to Caxamalca, they found the Inca gone, but to a Place not far diftant, whither the General fent, as his Embaffadors, his Brother Ferdinond Pizarro, and Ferdinand Soto.

They were received with great Ceremony, and immediately introduced to the royal Prefence; which ftruck the Spaniards at once with Reverence and Joy; for not only the Inca himfelf, but all who were near him, glittered with Gold and Jewels, and the Embaffadors were ferved with perfumed Liquors, by two beautiful Princeffes, in Veffels of Gold fet with Emeralds. Ferdinand Pizarro made the Inca a long Compliment ; in which he told him, or rather would have told him, of the great Kindnefs done him by the Pope and the King of Spain, who had fent them expreliy, to deliver him and his Subjects from the Tyranny of the Devil; but the Interpreter, who underftood nothing of this, delivered fuch ftrange Stuff of his own, that the Inca could comprehend little or nothing of his Meaning. He fhaped however the beft Anfwer to this Speech that he could; in which he recommended his Subjects to their Favour and Protection, befeeching them, as they were the Children of the Sun, to be gracious and beneficent as their Father ; but the Interpreter murdered this Speech too, in fuch a manner, that though the Tendernefs of it drew Tears from the Officers attending upon the Inca, yet neither of the Spanifb Captains were able to make any thing of it ; and therefore all they could fay at their Return to Pizarro, was, that they had been very kindly entertained, and that the Inca's Court was fplendid beyond Defcription, and almoft beyond Imagination; which raifed the Hopes, and fharpened the Defires of the Spaniards exceedingly; and they likewife told him, that the very next Day, the Inca intended to come in Perfon, and pay him a Vifit in his Camp, attended by his Guards and his Nobility.
12. Francis Pizarro divided his Cavalry, which amounted to no more than fixty Men, into three Troops of twenty each, commanded by Ferdinand Pizarro, Ferdinand Soto, and Sebafician Belalcazar, whom he ordered to draw his Men up under the Cover of an old Wall, that they might not be feen at firft; and that, difcovering themfelves fuddenly, the Indians might be the more furprized. He put himfelf at the Head of the Foot, which confifted but of one hundred Men, and fo waited for the Inca in order of Battle. Aiabuallpa, on his Side, advanced in as regular Order with his Army, which was divided into four Battalions, confifting of eight thoufand Men each; and, as foon as they drew near, the Inca faid to his Officers, thefe People are Meffengers of the Gods, let us be fure to do nothing that mayy offend them; but, on the contrary, ufe our utmoft Endeavours to gain them by repeated Civilities. The Perfon who advanced to harangue him from the Spaniards, was Father Vincent de Valverda, who carried in one Hand a Crofs, and in the other his Breviary.

The Figure of this Man furprized the Emperor very much; however, he ordered him a Chair, and then the reverend Father began a long wretched Difcourfe, which was to be delivered again by a more wretched Interpreter. This Harangue of his was divided into two Parts; the firtt confifted of an Account of all the Myfteries of the Chriftian Faith, the Mifion of $\mathfrak{f} e f u s$ Cbrift, and his Miffion of the Apoftles, of whom he told him St. Peter was the firtt and Head. In the fecond Part of his Difcourfe he held forth the Power of the Pope as the Succeffor of $S t$. Peter, and talked likewife much of the univerfal Monarchy of the Emperor Cbarles, to which it was neceffary that the Inca fhould fubmit; for otherwife God would harden his Heart as he did Pbaraob's, and then the Spaniards were to inflict upon him all the Plagues of Egypt. We may eafily guefs what ftrange Stuff this mutt be, when paffing through the Canal of fuch a Fellow as Pbilipillo, who delivered it fo fadly, that the Inca himfelf perceived his Ignorance, and therefore delivered his Anfwer not in the Court Language as he would otherwife have done, but in the vulgar Tongue; which, however, did not hinder Pbilipillo from murdering it fo effectually, that the Prieft knew no more of the Emperor's Meaning; than the Emperor did of his.

Thus the whole was a ftrange Scene of Confufion, which, however, ended much worfe than it began ; for the Spaniards obferving an Indian Idol upon a Tower exceffively adorned with Silver, Gold, and precious Stones, their Avarice would not fuffer them to wait any longer, fo that they fell to pillaging it as faft as they could; in which the Indians were going to oppofe them, but the Inca commanded them not to refift, let the Spaniards do what they would. Father Vincent hearing this Noife, turned about, rofe from his Chair, and running to appeafe the Spaniards, threw afide his Crofs and dropped his Breviary, which greatly increafed the Confufion ; the Spaniards pretending that they apprehended the Indian Monarch had infulted the Crofs; but without doubt the Infult was on their Side, who thus fcandalounly betrayed and prophaned their Religion, and made the Gofpel of Peace a Pretence for perpetrating the moft, barbarous, the moft perfidious, and moft inhuman Cruelties, by naughtering thoufands of poor Creatures, fo obedient to their Prince, that they did not move a Hand in their own Defence.
13. There is fome Doubt whether Pizarro engaged himfelf at the Beginning, but it is certain, that when this Confufion rofe to fuch a Height, he caufed his Horfe to pour in, and advanced in Perfon to feize Atabuallpa, of whofe Robe he laid hold; and, falling down himfelf, dragged the Inca after him from his Chair, at which time one of the Spaniards ftriking at him with his Sword, wounded Pizarro, who was the only Spaniard that loft any Blood in this difhonourable Fray; for certainly it could not be called a Battle, fince the Indians fell like Sheep, without offering the leaft Refiftance. The Spanifb Writers differ widely from each other in their Accounts of this Tranfaction, at which we need not wonder; for, being naturally proud, and unwilling to injure the Reputation of their Countrymen, they endeavour all they can to difguife the Truth, and to hinder their Readers from feeing a Series of Facts utterly inexcufable. The Defire of impofing Falhoods will always beget Confufion; for let the Parts or Abilities of Men be what they will, there is no giving Confffence or Connection to a Bundle of Lies.

Herrera informs us, that Pizorro, before Atabuallpa and his Indians entered the Square, commanded his Mufketeers to take Poft, and that, upon a Signal given them, the Captains Ferdinand Pizarro, Ferdinand de Soto, Sebafitan de Belalcazar, and Cbrifopber de Mena, who commanded the Cavalry, fhould fall upon the Indions, and the Foot fhould do the like; and directed them before the Execution began, that they fhould permit a certain Number of the Enemy to enter the Gates, which they fhould afterwards take fpecial Care to fhut and fecure: That Father Vincent having made his Speech to the Inca, told Pizarro he was treated with Contempt, and that the Tyrant demanded Reftitution of the Gold and Silver the

Spaniards had plundered his Subjects of; whereupon, fays Herrera, Pizarro did not think fit to lofe more Time, for he had before refolved what to do, being a Man that had ferved twenty Years in the Wef-Indies; and, knowing the Vietory depended on feizing the Perfons of the Sovereigns, he lifted up the white Cloth, which was the appointed Signal for executing the Orders he had given; and thereupon Peter Candia fired the great Guns, and the Mufketeers their Pieces, to the Amazement of the Indians; and the more fo, becaufe it was unexpected: Then the Drums beat, the Trumpets founded, the Horfe fell in three feveral Ways among the Indions, while the Infantry made a Slaughter of them with their crofs Bows, Pikes, and Swords; and Pizarro, in Perfon, with fifteen chofen Men, marched up to the Chair on which Atcbuallpa was carried, and, killing thofe that fupported it , with many more that crowded to fupply their Places, after a very great Slaughter of the $I_{n}$ dians, feized the Inca, and pulled him down from his Chair; after which the Peruvians fled and were purfued by the Spaniards, who did not leave off killing them till the Fugitives broke down part of the Wall of the Square, by which Means fome of them efcaped.

De la Vega, who was himfelf an Inca, or a Defcendant from the Family of thofe Princes, whofe Hiftory he writes, obferves, that the Spanifh Generals pretended the Indians were treacherous, that Atabuallpa had formed a Defign to furprize the Spaniards, and put them all to the Sword ; and that F. Vincent complained to the General, they refufed his Invitation to become Chriftians, and treated him and the Crofs with Contempt, and thereupon incited the General to fall upon thein. But in thefe Accounts, fays de la Vega, the General and Captains were not fincere; they endeavoured to put the beft Glofs upon their Actions, leaving out of the Narrative they fent to the Court of Spain all their cruel and unjuftifiable Proceedings, and adding whatever had a fair Appearance ; it being confirmed, fays that Hiftorian, by feveral other Writers, that Atabuallpa commanded his Subjects not to refift the Spaniards; for if the Inca had not commanded them not to fight, certainly, faid he, they would never have endured to fee their Prince overthrown and taken, having Weapons in their Hands; they would all rather have died in his Defence, as many of them did in endeavouring to fupport his Chair, and not have fuffered an hundred and fixty Spaniards, whom they were able to have.fubdued with Stones, to commit fuch Outrages; whereas, there was not one Spaniard either killed or wounded, unlefs Francis Pizarro the General ; who received, as has been faid, a little Hurt in his Hand by one of his own Men, as he went to feize on Atabuallpa.
The Truth is, the Indians did not fight, becaufe they held every Command of the Inca to be a Part of their Religion, and of the Divine Law, though it was to lofe their Lives and Eftates. Such are the Variations with which this Story is told, by the moft confiderable Writers; and indeed, take it in what Light we will, or can, it admits of very little Excufe, and ought to be confidered as an Inftance, that the Thirft of Wealth corrupts even the nobleft Minds. But we have not room to expatiate upon the Subject; our Bufinefs is to purfue the Hiftory, and to fhew the Reader what the Confequences were of this barbarous and bloody Action.
I3. When all was over, Pizarro, having feized the Inca, and conveyed him to his own Quarters, directed the Spoils of the Field to be brought to him, which were great; confifting of large Gold and Silver Veffels, Utenfils, fine Garments, Jewels, and Ornaments, belonging to the Inca, the Royal Family, and great Officers; there were taken alfo feveral Ladies, Wives of the Caziques and Orejons, and forme of the Mamaconds, or confecrated Virgins ; and Pizarro directed Thankfgiving to God to be obferved that very Day, being the 3d of May 1533, and in that very Field where the Ground was covered with the dead Bodies of the miferable Indians they had thus murdered and plundered. Next Day he fent out a Detachment of his Forces to plunder the Inca's Camp, where he met with another rich Booty ;
Vol. II. Numb. 79.
though, it is faid, the Perwivian Generals had carried of three thoufand Loads of Gold and Silver before the Spaniards arrived there; therefore, in order to induce the Indians not to carry off or conceal any more of their Treafures, he caufed it to be proclaimed that their Inca was alive, and that they were at Liberity to come and attend him, and perform their ufual Services; whereupon feveral of the Indian Generals and great Officers returned to Caxamalca to attend their Captive Sovereign. He alfo caufed the Inca's Women to be brought to him, and fuffered him to be ferved in the fame Manner he ufed to be before this Misfortune : Though he ftill kept him in Fetters, which made the Inca apprehenfive they would take away his Life in the End, unlef́s he could find fome way to obtain his Liberty.
Having obferved therefore the infatiable Thirft of the Spaniards after Gold and Silver, he promifed to give them as much of thofe Metals as a great Room in the Caftle of Caxamalca would hold for his Freedom; and, that the Spaniards might not doubt the Performance of what he offered, he propofed fending fome SpaniJb Officers, with his People, to Cuzco, to the Temple of Pacba Cbamac, and other Places, to bring the Treafures repofited there to Caxamalca; and, at the fame time, iffued his Orders, that the Spaniards who were difpatched to thofe Places fhould be hofpitably entertained, in the Countries through which they paffed, and receive all the Affiftance his Subjects could give them.

In the mean time, Almagro having lifted an hundred and fifty Men in his Service at Panama, embarked with them for Peru to reinforce Pizarro; but was obliged, by contrary Winds, to land at Cape Francijco, to the Northward of the Equator, where he was joined by another ftrong Party of Spaniar ds, that were going to fhare Pizarro's Fortunes, making together a Body of between two and three hundred Men ; but being obliged to pafs fo many Moraffes and Mouths of Rivers, and march through continual Rains under the Equator, he loft thirty or forty of his Men, and fell fick himfelf: However, furmounting all thefe Diftreffes and Difficulties, he arrived at length at the Spanifa Colony of St. Micbael's, near the Bay of Guiaquil, and there he underttood that Pizarro had made the Emperor Atabuallpa Prifoner, and poffefled himfelf of a vaft Treafure ; whereupon, it is faid, Almagro confulted with his Officers, whether they fhould join Pizarro or go upon fome further Difcoveries, independent of him, if he refufed to let them fhare the Treafure he had got; and Almagro's Secretary, it feems, fent Pizarro Intelligence, that his Mafter had no good Intentions towards him.
But Pizarro, either believing he fhould not be able to keep fo large an Empire as Peru in Subjection, with the few Troops that were with him, or that Almagro, having more Forces than he commanded, might join a Party of the Indians, and take, his Booty from him, and fet up for himfelf, fent very obliging Meffages to Almagro, inviting him to advance and join him ; and, at the fame time, acquainted him with the Arts that were ufed to fet them at Variance, and thereby ruin their Enterprize on Peru, which was not to be carried on but by their united Forces and Endeavours; and particularly, he acquainted Almagro with the Treachery of his Secretary, who thereupon ordered him to be hanged up, and immediately began his march towards Caxamalca. There was certainly a great deal of Policy in this Conduct, and Pizarro thewed himfelf therein a Perfon of deep Penetration, and great Parts ; but, at the fame time, there was fomething in it of Ingratitude; fo that we ought to place it among the Number of thofe Actions of his, which inftead of deferving Praifc ftand in need of Excufe.
14. The coming of Almagro made a very great Noife, and the Inca Atabuallpa, receiving Advice that another Body of Spaniards was arrived upon the Coaft, began to reflect that this would not be to his Advantage; for Pizorro would now no longer be under a Neceffity of carrying Matters fair with him ; being enabled, by this Reinforcement, to maintain his Conquefts by force. He haftened therefore the bringing in the 1 reafure he had offered for his Ranfom, that he might obtain his Liberty before

Qq
Pizarro

Pizarro was joined by Almagro; but another Accident happened about the fame Time, which he apprehended might be ftill more fatal to him.
The three Spanifb Officers that were fent with his People to Cuzco, lappening to pafs through the Town where Huefoar, his Brother, was Prifoner, went to 'fee him ; and acquainting Huefcar with what Atabuallpa had offered for his Ranfom, that Prince informed them how unjuftly he had been depofed by Atabualipa, his Brother, who had no Right to the Empire or the Treafures he had promifed; and as he underftood one principal Defign of the Expedition of the Spaniards, was to relieve the Diftreffed, and to do Juitice to thofe that were oppreffed, he did not doubt but they would releafe him from his Captivity, and reftore him to his Throne; which he fhould not only gratefully acknowledge, but would furnifh them with much more Treafure than the Ufurper could poffibly do ; for his loyal Subjects had buried moft of their Gold and Silver Plate after the Battle, wherein the was made Prifoner, to conceal it from the Rebels, but would readily produce it again, and pay it to the Spaniards for his Ranfom, if they required in.
Pizarro's Meffengers feemed to liften to his Overtures, and promifed the Inca that Juftice fhould be done him ; but left that Prince, however, in Priifon, and continued their Journey to Cuzco ; and Advice being immediately carried Atabuallpa, of the Conferences between the Spanifb Officers and his Brother, he foon faw that he Thould be undone, unlefs Huefar was immediately defpatched out of the way, knowing that the greateft Part of the Subjects of the Empire were little in his Intereft; and, as they would infallibly be fupported by the Spaniards, to whom his Brother had difcovered his Treachery, and promifed fuch Mountains of Gold and Silver, they would certainly facrifice him to their Avarice, if they had no regard to the Juftice of his Brother's Caufe; but reflecting, if he fhould order his Brother to be put to death, the Spaniards might make this a Pretence for taking away his own Life, he was forced to act with Caution.
He refolved, in the firt Place, to found how Pizarro ftood affected towards Huefar ; which he did by feigning he had Intelligence, that the Officers who had his Brother in Cuftody, had put him to Death without his Knowledge, for which the Ufurper expreffed a very great Concern. But finding Pizarro was not moved at the Relation, and that he only faid, This was the Fortune of War, and the Lives of Captives were at the Conqueror's Difpofal; Atabuallpa difpatched an Exprefs for putting Huefcar to Death, and his Orders were immediately executed, though it remains uncertain what Death he died; for fome Writers affirm he was burnt, others, that he was drowned, and fome, that his Body was cut in fmall Pieces, that his Subjects might not pay thofe Honours to the Corpfe of their deceafed Inca as were ufuàl. However he fuffered, there is one Thing worthy of Remark, which is, That when the Murderers came into his Prefence, and Fuefcar underftood their Bufinefs, he expreffed himfelf in thefe Words: "My Reign is indeed "s but fhort ; but the Perfon by whofe Orders I am put " to death, who was born, and ought to have continued " my Subject, will not live to enjoy long that Power "s which he endeavours to purchafe at the Expence of "c the Blood of his Brother and his lawful Prince."
The Peruvians, however, made great Lamentations for him as foon as his Death was known, crying to Heaven for Vengeance on his Murderers: Some alfo defired the Spaniards to revenge it on the Ufurper Atabuallpa. In the mean time, the three Officers that were fent to Cuzco being arrived there, were adored by that People as the true Defcendants of the Sun: But the Spaniards lamented that they were Men of mean Parts and Education, who knew not how to preferve that Refpect and Veneration the Peruvians had conceived of them, which was then fo neceffary to facilitate their future Attempts. The Indians, we are told, foon perceived they muft deduce the Original of the Spaniards from fome bafer Fountain than the Sun, and the Efteem and Affection they at firft entertained for the Chrittians, on the mighty Pro
felfions they made of their Juftice and Honour, was on a fudden converted into Dread and Averfion.
They were afflicted to find fo vicious and profigate a Race of Men, who trampled on every thing that was facred, and whofe Avarice feemed to exceed all Bounds, hould become Mafters of their Country; and from that time meditated how they might throw off that intolerable Yoke which they found the Spaniards were about to impofe upon them. However, they durft not difobey the Commands of their Inca Atabualipa; but having amaffed a confiderable Quantity of Treaiure, they loaded it on the Backs of their Tamenes or Porters, and conveyed it to Caxamalca, with a View, polizibly, of afferting their Liberties to greater Advantage, when they hould have procured the Releafe of their Inca : But the moft valuable Treafure, confifting of Gold, Silver, and Emeralds, being lodged in the Temple of Pacba Camac, the invifible God, as Pizarro was informed, he difpatched his three Brothers thither, with the Peruvian Officers Atabuallpe deputed, to fetch it to Caxamalca.
But the Priefts of Pacba Cannac receiving Advice how the Temple of Cufa had been ruined by the Spaniards that went thither, to prevent the like Misfortune fent away four hundred Loads of Gold, Silver, and Jewels before the Spaniards arrived, which were buried in the Earth, or carried to fuch a Diftance that the Spaniards could never difcover them; however, Ferdinand Pizarro found as much Plate in this Temple as amounted to ninety thoufand Crowns befides what the Soldiers embezzled, and returned with it to Caxamalca.
The Marfhal Almagro, being advanced by this time into the Neighbourhood of that Place, Pizarro, the General, went out to meet him, and congratulated his Arrival, received him with all the Marks of Affection and Efteem imaginable, and offered him fuch a Share in the Spoils as made him perfectly eafy; but his Soldiers, who expected to divide the Booty with tliofe that ferved under Pizarro, were told, they were intitled to no Part of it, as not having been prefent in the Action when the Inca Atabuallpa was made Prifoner, which was near creating a Mutiny amongft them ; but they were pretty well appeafed when Pizarro agreed to diftribute an hundred thoufand Ducats among the Men which came with Almagro. The reft of the Plunder, after the Emperor's Fifth was deducted, was divided by Pizarro among his Officers and Soldiers, in fuch a Proportion as he faw fit, in which he pretended to have a great Regard to the Merit of the refpective Adventurers. And it is faid, after he had referved the Inca's golden Chair to himfelf, he diftributed as much Gold and Silver Plate amongft the Soldiers, as amounted to 1, 500,000 Crowns and upwards; which, confidering the Value of Gold and Silver at that Time, was more than fifteen Millions at this Day. But as large as this Sum appears in round Numbers, it will be yet found more extraordinary and furprifing, if we confider amongft how finall a Number of Men it was divided.
We cannot exactly fay what every private Man's Share came to, but we learn from good Memoirs, that each Horfeman had near two thoufand Ounces of Gold for his Share, and the Foot in Proportion; fo that I fee no Reafon to doubt of the Truth of what I once faw in a MS. of Sir Fobn Harvkins: That the meanef of Pizarro's Soldiers had two thoufand Pounds for his Share, and fome of them, that is, of the Foot, twice that Sum ; and yet it is agreed, that the whole Money then divided did not exceed a Fifth part of Atabuallpa's Ranfom, which, at this Rate mult have amounted to more than one Million and an half of our Money. After the Divifion was made, about fixty of the private Men infifted upon their Difcharge, that they might go home and live in peace upon what they had got. Almagro oppofed this vehemently, alledging, That it would greatly weaken their fmall Army; and moft of the Council were of his Opinion. Francis Pizarro, who had more Senfe than Almagro and all the Council put together, agreed to the Demand, and gave this wife Reafon for it : That when once it appeared that private Men could get fo much in fo little a time, there was no doubt to be made, if one

# Chap. III. 

Man went away they hould have ten come in his Place; and having given this Reafon there was no farther Difpute about it.

As Ferdinand Pizarro was the Perfon made choice of to go over to Spain with thefe Men, and this vaft Mafs of Treafure, he went to take his Leave of Atabuallpa, with whom he was in much greater Efteem than any of the Spanib Officers. The Emperor received the News with great Sorrow and Concern, and could not help fpeaking his Sentiments freely. My Lord, faid he, you are going home, which is certainly matter of Joy to you, though tis matter of Grief to me; for I already apprehend, that before your Return, that Fellow with one Eye, meaning Almagro, and that other Fellow with the great Belly, which was the King's Treafurer, will fend me to my long home, and therefore let us take our laft farewel.

He made a very right Judgment in this; for when the Spaniards, who had been fent for the reft of Atabuallpa's Ranfom, made a Report of the prodigious Quantities of Gold they had feen, and the Reafons they had to believe that much greater Quantities were concealed, Almagro gave it as his Opinion, that they thould wait no longer, but get red of the Inca as foon as they could; and then make as much hafte as pofible to get Poffeffion of all the Gold in Peru. A bafe and bloody Refolution, which, though Francis Pizarro at. this time rejected with Horror, yet it was not long before he approved and agreed to it.
15. The Fate of Atabuallpa is undoubtedly one of the moft memorable things that falls within the Compafs of this Section, and therefore it is requifite that we fhould give a clear and diftinct Account of the Fact, tho' in as few Words as pofible; and this is what we fhall labour to perform with the ftricteft Impartiality, and the greateft Regard to Truth. There were various ReaCons why Francis Pizarro, though a very brave and gallant Man, had not that Tendernefs for this Indian Monarch, that Cortes had for Motezuma; but that which governed him principally was, a fort of Contempt with which Atabuallpa treated him, and the vifible Preferrence he gave in point of Eiteem and Regard to other Officers in the Spanifb Army. The Caufe of this Behaviour is one of the mof fingular Paffages that occurs in all the Spanifb Hiftories of the Conqueft of Peru, and cannot fail of giving great Pleafure to the judicious Reader.

Atabuallpa, however cruel to his own Family, appeared to be a Prince of great Wifdom and Penetration; and one who laboured to inform himfelf as thoroughly as it was poffible, with refpect to the Manners, Cuftoms, fuperior and inferior Qualities of the Spaniards, that he might be the better able to deal with them, if upon the Payment of the Sum propofed for his Ranfom they fhould actually reftore him to his Liberty. That which moft of all perplexed his Enquiries and difturbed his Meditations, was their Art of Writing and Reading, as to which he could not comprehend whether it was a natural Endowment, or whether it was acquired by Labour and Application. In order to fatisfy himfelf in this Point, he afked one of the Spanifb Soldiers whether he could exprefs the Name of God upon his Thumb-nail. The Man readily faid he could, and did accordingly; after this the Inca went about to feveral of the Captains and Soldiers, and fhewing them his Thumb-nail, afked them if they knew what that Mark fignified; and from their Anfwers, he began to entertain an Opinion that reading and writing were natural to this Nation, which he thought a very great Advantage: But unfortunately he afked the fame Queftion of the General, who, not being able to read it, was put greatly to the Blufh, which not only chariged Atarouallpa's Opinion, with refpect to reading and writing, which he now faw plainly were the Fruits of Education, but gave him likewife a very low Opinion of the General, fuppofing that he muft have been of a very mean Original, fince he was lefs knowing in this Refpect than many of his Soldiers.

This Contempt that he fhewed for Pizarro, begat a Prejudice is him, which very foon turned to the Dif-
advantage, and in the End proved the Rain, of the Inca. It fell out that Pbilippillo, or Pbilip the Interpreter, fell in love with one of Atabuallpas Wives, which incenfed. that Monarch fo much, that he fignified to Pizarros that he ought not only to punifh fuch a Fellow, but even to put him to Death; which the General was fo far from doing, that he only made a Jeft of the whole Affair s. in which without doubt he fhewed as little Regard to his own Character, as to that of the Emperor's. Pbilippillo took the Jealoufy of Atabuallpa much to Heart; and as all fuch low Fellows fuffer Hate and Fear to compound their Refentments, fo he determined in himfelf to deftroy that Monarch immediately out of the Way, as the fole Means of providing for his own Safety. It was with this View that the Villain infinuated to Pizarro that he ought to be very watchful of the Inca's Motions, becaure he was actually contriving the Deflutution of the Spaniards: This wild and ridiculous Story was digefted into a formal Accufation, by the Direction of the General and his Favourites, who appointed Commiffioners to try Atabuallpa; directing Sancbo de Cuellar to take upon him the Office of Attorney General, to exhibit a Charge againft the Inca, which he did; and it confifted of the following Particulars, viz. That Huefcar, Inca, being his eldeff Brother and lawful Sovereign, and himfelf a Baftard, he had caufed Huefcar to be depofed and imprifoned, and afterwards ufurped his Throne: That he had caufed his faid Brother to be murdered, fince he became a Prifoner to the Spaniards: That Atabuallpa was an Tdolater: That he caufed his Subjects to facrifice Men and Children: That he had raifed unjuft Wars, and been guilty of the Blood of many People: That he kept a great many Concubines: That he expected Taxes and Tribute of the Peruvians, fince the Spaniards poffeffed his Country, and coniumed and embezzled the public Treafure: That he had incited the Indians to rebel and make War againft the Spaniards, fince he had been their Prifoner.

The very reading there Articles fufficiently proves that they were not calculated to bring a bad Man to Juftices but to give the Colour of Law, and the Form of a fair Tryal, to one of the wickedeft and vileft Contrivances that ever entered the Heart of Man. Yet black and villanous as this Affair was, it is very doubtful to fay whether it reflects more Honour or more Infamy uport the Spanif Nation. For no fooner was this dark Defign fet on Foot, than almoft all the Perfons of Famis ly and Diftinction that ferved in the Army, declared againft it; and declared in Terms that fpoke them equally Men of Senle and Men of Honour: They declared that they, knew no right the Spanifh Nation had to make themfelves Judges of an Indian Prince, or of his Title to his Dominions; that with regard to the Spaniards, he had behaved fo well, and done them fo many Kindnefles; that to treat him in this Manner, was not only the higheft Barbarity, but the moft flagrant Ingratitude; that if after all they were refolved to be rid of him, the beft thing. they could do was, to fend him into Spain, together with their Charge, and leave the Caufe to be decided by the Emperor. But Pizarro and his Council were determined to go on, and though the other Party delivered a Proteft in Writing againft all their Proceedings, and appointed one Fobn de Herreda Protector of the Emperor's Perfon, yet they perffifed in trying him; and affigned him one of their Party for an Advocate; who to be fure made fuch a Defence as did no great Serviee to his Client.
The Iffue of this Bufinefs was, that after a mock Shew of Juftice, they condemned the Incia to fuffer Death; which at firft they refolved fhould be by burning; and to this Sentence, to give it a fairer Appearance in Spains where it might very well be expected that it would be reviewed, they procured the Approbation of Father Vincent, who proftituted his Character as an Ecclefiaftic in this bloody Affair; and, which was much worfe, proftituted, as tar as in him lay, the Chriftian Faith, and the Credit of the Gofpel; for which his Memory ought to be infamous in every Country where the People call themfelves Chriftians. Yet this cruel and blood-thirfty Friar. after being fo great in Inftrument in his Sufferings, un
dertook
dertook the Converfion of Atabuallpa, and the Argument he ufed to induce him to be baptized, was worthy of fuch a Preacher. He told him that if he would confent to die a Chriftian, he fhould not be burnt, but ftrangled only, which had the defired Effect, and he was accordly baptized in the Evening, and ftrangled the next Morning, to the eternal Difhonour of all who were concerned in fo iniquitous and fcandalous a Proceeding.
There are fome who pretend that this Murder of the Inca was chiefly owing to the Indians themfelves, who were for revenging the Death of their lawful Emperor Huefcar ; and thereby fulfilling the prophetic Threatning of that Prince at his Death, which has been already mentioned, and this has been very gravely infifted upon as an Apology, if not a Defence, for the Conduct of Pizarro and his Officers. A little Confideration, however, will fhew us that there could be no Truth in this: Firt it appears, that notwithftanding his Brother's Death, Atabuallpa was univerfally ack nowledged and obeyed as the lawful Inca throughout the whole Empire, which does by no Means agree with this Story of the Indians defiring to have him put to death. It may indeed be faid that things may be true, though they are not probable, but then we cannot know them to be true without Proof, of which none of the Hirtorians who report this bring us any, either good or bad.
Secondly, if it had been fo, the Spaniards would certainly have made the Indians his Profecutors, or rather have fet up the Inca his Brother, who had a fair Title to the Crown, and have left them to have taken Vengeance for that Crime, which, if they could have done it, would have anfwered their Purpofe, and faved their Credit; and as they did not do it, we may very fairly prefume that no fuch thing was in their Power. It muft indeed be allowed that thefe are only negative Arguments, but yet Arguments they are, whereas what is faid on the other Side is meer Suggeftion.

But thirdly, there is the cleareft Proof of the contrary; for as foon as Atabuallpa was murdered, the Indians began every where to act offenfively againt the Spaniards, which they had never done before; and this fhews that the former Conduct was the Effect of Duty to that Prince whom the Spaniards would have us believe they difowned; and the latter is as clear a Mark of their univerfally detefting that Crime, which it is pretended was done at their Perfuafion. If therefore we take thefe Confiderations together, there can be no longer any Doubt but what the Spaniards have advanced is a pure Fiction, contrived to give fome Sort of Colour to an Action too foul to be avowed, even by thofe who committed it.
16. The Events that followed upon the Death of the Inca Atabuallpa, very plainly fhewed that human Nature is the fame in all Countries and Climates; that fome Men from Principles of Honour, Fidelity, and Love to their Country, adhere to what is right, whatever feeming Advantages may invite them to purfue a contrary Conduct, while others, after gaining to themfelves Character, Credit, and Employments, by putting on a fpecious Appearance of Virtue, fhew their natural Difpofitions at once, when tempted by the Hopes of Gain, and releafed from the Fear of any other Punifhment than what refults from the Confcioufnefs of having done Evil.

Rumnari, one of Atabuallpa's Generals, who retired from the fatal Slaughter at Caxamalca, with the Rearguard of his Army, made himfelf Mafter of Quito; and, as foon as he heard of his Mafter's Death, cut to pieces fuch of his Officers as he believed loyal to the deceafed Prince, and endeavoured to keep what he could for himifelf. 2uifquis, another of thefe Generals, acted much the fame Part; but, having a better Army under his Command, fecured a greater Part of the Country, and yet fhewed himfelf far from being valiant, by flying before a handful of Spaniards who were fent in purfuit of him, and gave a farther Proof his Cruelty, which is a quality infeparable from Cowardice, by murdering a few $S p a$ niards, who, by their Temerity in puhing on too far, had fallen into his Hands.

This Man, jufly apprehending that it would be impoffible for him to maintain himfelf againft the other In-
dian Commanders, as well as againt the Spaniards, while his Power had no other Authority than what it derived from Force, contrived to get into his Hands a younger Brother of the Inca's, whofe Name was Paullh, whom he would have perfuaded to have taken the Titte of Emperor, hoping under the Shadow of his Title to have preferved the Power he had obtained. But this Prince, though very young, difcovered a Greatnefs of Soul truly admirable, and worthy of the higheft Praife; for difdaining a Crown, which he knew could not be worn but at the joint Expence of his Family and his Country; he generouly refufed it, telling Q $_{2 i j}$ quis that he fcorned to derive from the Mifery of the Empire, that Authority which he could not hope for in better Times; and, that he efteemed it far more honourable to be thought a worthy Man, than a bad Monarch; which had fuch an Effect even on $Q^{2 u i} q u i$, that, though he had him in his Power, he did not attempt to feize his Perfon, but allowed him to retire, as he did, to Francis Pizarro, towards whom he behaved with the fame Dignity and Firmnefs. He told the General that the true Heir of the Empire was his elder Brother Manco Capac; and that if he had any fuch Purpofes as he pretended, of doing Juftice, and protecting fuch as had right on their Side, he ought to fhew it by declaring in favour of that Prince who had already a good Army about him; and who, with the Affitance of the Spaniards, would infallibly reftore the Luftre of the imperial Diadem; which, as we fhall fee hereafter, had the defired Effect. I mention this, though it carries me a little beyond that Period of time of which I was feeaking, that I might not omit altogether fo fingular an Example of Virtue and good Senfe.
As for Quifquis he fill went on in his old Way, and having had Information that the Spanifb General had left but a fmall Body of Men to guard Requelma, the royal Treafurer, with all the Riches he had taken in his Hands, he made a very bold Pufh in Hopes of furprizing him, but met with fo brave a Refiftance, that he was obliged to retire without carrying his Point; and this flews us another thing, that there are in all Nations Men of fuch low and profligate Difpofitions, as not to be afhamed of encreafing the Calamities of their Country, by attending folely to their private Intereft in Times of public Confufion ; when a little Reflection would fhew them that acquiring Wealth is only expofing themfelves to greater Dangers than fuch are in who have lefs, and confequently is acting as much againft their Intereft as againft their Duty and the Public. All Paffions indeed obfcure Fore-fight, but Avarice makes Men ftone blind.

It is impoffible to conceive a Country in a worfe Condition than Peru was now in, or a Nation in greater Diftraction than its Inhabitants. On the one hand they were difpirited with fuperfitious Fears of the Spaniards, which hindered them from confidering, in a proper Light, their Force, and the Strength they were able to bring againft them; on the other, they were no lefs confounded with tefpect to their own Government, fome following one of the Incas, and fome another; and thus, when Union alone could afford them any Chance for Safety, they fplit themfelves into Factions and Parties, and thereby drew on their own Ruin. This is a Leffon worthy of Attention; for what was then the Condition of Peru, may be that of any other Country upon the Globe, and confequently the Behaviour of its Inhabitants may ferve to inftruct all other Nations. But it is now time to return to the Progrefs of the Spaniards, and the Effects of their Arms; from which we digreffed only with a View to ftate fome Points to the Reader, as agreeable to the Subject, and no lefs worthy of his Attention; which Tafk having thus fulfilled, we will refume the Thread of our Narrative.
17. Pizarro, however, did not carry his Refentment fo far, but that, after he had taken and killed, he thought fit to treat, the Corps of the Inca with the Refpect due to a fovereign Prince; he celebrated the Inca's Funeral with great Solemnity, and went into Mourning for him ; but he foon difcovered how deteftable this Murder rendered him among the Natives. The two Factions immediately
united againft him, under Manco Capac, the Brother and Heir of Huefar, whom they proclaimed Emperor of Cuzco. Whereupon Pizarro proclaimed Toparpa, a Son of Atabuallpa, Emperor; caufed him to wear the Imperial Coronet, and to be treated with the fane Honours his Father had been, iffuing fuch Orders in his Name, as might beff ferve the Intereft of the Spaniards; but this Inca died foon after; and fo Pizarro conjecturing that nothing could tend to eftablifh the Spanif Dominion in Peru, more than his poffeffing himfelf of the capital City of Cuzco, he began his March thither with all his Forces, confifting of near four hundred Men, befides fuch as were ftiled confederate Indians.
In the mean time Ataucbi, Brother to the late Emperor Atabuallpa, having collected a great Quantity of Treafure, to purchafe his Brother's Ranfom, brought it to Caxamalca; but finding Atabuallpa murdered, and the Spaniards marched from thence, determined to be revenged on them, and joining his Forces with fome Peruvian Generals, furprifed the Spaniards upon their March to Cuzco, killed fome of them and made feveral Prifoners, and amongft the reft Sencho de Cuellar, who had drawn up the Proceís againft the late Inca Atabuallpa, and attended his Execution. With thefe Prifoners the Indian Generals retired again to Coxamakia, where they ftrangled Sancho the Spaniard, at the' very fame Poft where their Emperor was put to death; but undertanding that Francis de Cbaves, Ferdinando de Haro, and fome of the reft of their Prifoners, had protefted againft the Inca's Death, they refolved to give them their Lives and Liberties, entering into the following Articles of Peace and Friendfhip with the captive Spaniards before they difmiffed them : Viz. That neither Party fhould, for the future, offer any Violence to the other; and particularly, That the Spaniards fhould not attempt to depofe Mainco Capac, who had been proclaimed at Cuzco, and was the lawful/Heir of the Inca Atabuallpa; That both Sides fhould releafe their Prifoners; and, That the Spianiards fhould not treat the Indians as Slaves, but Freemen: That the Laws of their Country flould be obferved inviolably when not repugnant to thofe of Chriftianity ; and that this Treaty fhould be ratified by the Spanifs General, and his Sovereign the Emperor of the Romans.

The Spaniards infifted, on their Part, That the $I_{n}$ dians fhould profefs the Chriftian Religion: That a Part of the Country fhould be affigned them for their Subfiftance; and, That they might retain the Indians as hired Servants, though not as Slaves; which the Indians agreed to; and difmiffed their Prifoners with rich Prefents. But Pizarro and Almagro, at firf, pofitively refufed to ratify the Articles, and would hear of nothing but an abfolute Sübmiffion, and an entire Surrender of their Country and their Perfons, to the Will of the' Chriftians: Which occafioned long and bloody Wars afterwards. Whereas the Spanifs Hiftorians admit they might have eftablifhed Chriftianity in Peru without fpilling a Drop of Blood, if the Ambition and Avarice of the Adventurers had not prevented it. The General Pizarro, continuing his March towards Cuzco, was again attacked by feveral Parties of the Indians at fome difficult Paffés in the Mountains; but, finding themfelves unable to refift theFire-arms and Hories of the Chriftians, they fled, after a faint Refiftance, to the capital City, declaring it was in vain for any human Force to oppofe the Spaniards, who were armed with Thunder and Lightning, and could kill their Enemies at $f 0$ many hundred Yards diftance. Whereupon the People of Cuzco, without offering to defend the Walls, or that impregriable Cafte already mentioned, fled with their Wives and Children, and what was moft valuable to them, Eo the Woods and Mountains; and Pizarro entered the City without Oppofition, in the Month of Oftober, 1532, where he met with a prodigious Booty, notwithitanding the Citizens had fo much time to carry off their Goods and Treafures.
We have not room here to enter into a long Account, either of the Particulars, or of the Amount, of the immenfe Wealth, which the Spaniards fay was found in this City; but fhall content curfelves with obferving, that as it was the Cuftom in this Country to bury with their great Men the beft part of the Riches of which they died poffeffed,
Vol. II. Numb. 79.
fo their Conquerors, who made no fort of Difficulty of rifling Sepulchres as well as Temples, found not only as much Wealth in the Dwellings of the Dead, but rather more, than in the Habitations of the Living; fo that fuch as rate the Plunder of this City at the loweff, compute it at the full Value of Atabuallpa's Ranfom. When the General Francis Pizarro had thus got into his Hands the Capital of Peru, from whence the Inca Manco Capac, and the greateft part of the Inhabitants were fled, he thought fit to invite them to return to their Dwellings, apprehending, if they were made defperate, that the whole Power of the Empire might affemble againft him, and reduce him to great Streights by curting off his Provifions, though they durft not meet him fairly in the Field.

The Indians, áccepting Pizarro's Invitation, returned to their Houfes in Cuzco, and even the Inca made fome Overtures to him, intimating, that he flould be content to emberace the Chrifian Religion, and hold his Dominions of the Emperor of the Romans, provided, that neither he rior his Subjects fhould be molefted for the future, in their Perfons or Eftates: And, being encouraged by Pizarro to believe he fhould have the Terms he demanded, the Inca came in Perfon to Cuzco, and had an Interview with the Spanifh General, who caufed him to be crowned, and invefted in the Empire, by binding thie royal Wreath, or Coronet about his Head, and proclaiming him Inca in the fame manner his Predeceffors uffed to be inaugurated into that Dignity ; and affured the Inca he would frrictly obferve the Capitulation made by Francis de Cbaves. Thefe pacific Meafures the Spaniards found themfelves under a Neceffity of taking at this time, not only becaufe they faw all the fouthern Provinces of Peru affembling againft them under the Inca Manco Capac; but becaule Rumuavi, 2uifquis, and other Peruvian Generals, had collected a very great Army in the fouthern Provinces, and poffefed themfelves of 2 inito, which obliged him to fend out a confiderable Detachment of his Forces, under the Cornmand of Sebaftian Belalcazar, to reinforce the new Colony at St. Michael's, and to make Head againft the Peruvion Generals in Quito.
This Meafure was taken with great Wifdom and Prudence, and the Commander laft mentioned, upon his Arrival at St. Michael's, found there a great Reinforcement of Volunteers, who came from different Parts of the Spanifh Settlements, in order to obtain a Share in the Riches of Peru. Out of thefe he chofe one hündred and twenty Foot, and fourfcore Horfe; which having incorporated into his own Army, he marched directly to 2 quito, in order to make himfelf Mafter of the Riches of the deceafed Atabuallpa, moft of which he knew remained there. The Indian General, who commanded in that Province, did all that lay in his Power to harrafs and fatigue the Spanib/ Army, and to prevent their coming to a decifive Action; but this turning to no Account, and finding that Belalcazar continued to advance directly to the Capital, he caufed all the Riches of the late Emperor to be brought into the Hall of the Palace, to which he fet fire: and then, abandoning the City, marched off with his Troops, and left the Spaniards in poffeffion of the Place: But while Francis Pizarro and his Officers were thus employed in the Reduction of the feveral Provinces of the Empire, they were fuddenly interrupted by an unexpected Invafion from their Countrymen in Mexico, who on the Report of the vaft Wealth obtained by thefe Adventurers, refolved to come in for a Part. The Story is too remarkable, and too clofely connected with our Subject to be entirely neglected, and therefore we fhall endeavour to give the Subftance of it in the concifelt manner pofiible.
The famous Peter de Alverado, of whom we have faid fo much in the foregoing Section, was the Perfon who formed this Project, and the Condition he was in at that time, gave him a fair Opportunity of putting it in Execution: He was poffeffed of the Province of Guatimala, where he fitted out feveral Ships, and, to increafe his Force, he feized upon two Veffels more that were actually fitting out in one of the Ports of Nicaragua, for the Service of Pizarro; and on board thefe Ships he embarked five hundred Horfe and Foot, as good Troops as any that
were at that time in America; and with thefe, in the Year 1535, he landed at Puerto Vejo, after having endured very great Hardfhips in his Voyage. He found himfelf next, obliged to traverfe a rough mountainous Country near the Equator, in which March if all the Spanifh Writers may be believed, he fuffered fill greater Calamities, and loft no lefs than fixty of his Mern, by the unexpected Severity of the cold Weather.
However, as he had been'very long in the Service, and was accuftomed to all Sorts of Dificulties and Dangers, he continued to profecute his Defign ; and arriving in the Neighbourhood of the Spanijh Colony of St. Michael, he there refrefhed his Forces, and difpofed every thing for continuing his Progrefs into the Heart of that Country; but, in the mean time, Pizarro had fent Almagro to reinforce Belalcazar, and they had together a confiderable Body of Troops, with whom they had performed fome great Exploits againft the Indians, but were now refolved to act againft Alverado, in cafe he continued obftinately bent on the Profecution of his Defign, and would not return into his own Government. The two Spanifb Armies advanced 'till they came in Sight of each other in the Valley of Riobomba, where it was expected a Battle would have enfued; but Alverado forefeeing the Confequences that muft attend an Action, let Victory remain on which Side it would, willingly liftened to a Negotiation, which very foon ended in an Agreement between him and Almagro, in the Management of which they fhewed themfelves to be both very able Perfons ; for they agreed, that two Treaties fhould be drawn, one of which only was to be made public, whereby it was ftipulated that both Parties fhould be at Liberty to profecute the War againft the Indians, and the Difcovery of diftant Countries, with like Freedom, by which Alverado feemed to carry his Point ; and by which he really carried thus much, that he provided for fuch of his People as defired to remain in Peru, who were put upon the fame Footing with the Forces of Pizarro.

But by the fecret Treaty he agreed to return into his own Government, and to accept the Sum of one hundred thoufand Pefos in Gold, in confideration of the Expences he had been at in fitting out his Fleet and Forces ; and at the fame Time he promifed never to return to Peru fo long as either Pizarro or Almagro lived: Thefe Treaties thus fettled, they marched together towards Cuzco, the Capital of Peru, in order to confirm them with Pizarro, and to receive the Money from him. But when Pizarro was informed of this Tranfaction, he took a Refolution of preventing Alverado's Vifit by going to meet him, becaufe he was a little doubtful whether the Sight of Cuzio and the rich Country about it might not revive the Ambition of his Competitor, and render him lefs willing to execute his Agreement, of which he very well knew the Value, and therefore highly approved it: But before he could accomplifh his Intention, there happened fome other Events, which had like to have changed the Face of Affairs, and renewed both the general and civil War, which, however, by his Prudence and Generofity he prevented.
18. We have before mentioned the generous Manner, in which one of the Indian Princes of the Royal Family refufed to affume the fovereign Dignity, becaufe of Right it belonged to Inca Manco; which Prince, notwithtanding what had befallen Atabuallpa, refolved to go to Pizarro to obtain the Ratification of that Treaty, which had been made with his Subjects by the Spanifh Prifoners in the Mianner before-mentioned ; in which he fucceeded, and lived upon very good Terms with the General. Quifquis, the Indian Commander, remained all this Time at the Head of a great Body of Forces, yet declared he was ready to lay down his Arms, and fubmit, as foon as he knew of the Ratification of the Treaty before-mentioned. While he waited for this, Alverado. and Almagro came into his Neighbourhood with their Forces, and, knowing nothing of this Negotiation, prepared to attack him; the Indian General retired for fome Time, in Hopes they would receive contrary Orders; but when he perceived they continued to advance he
refolved to venture upon a Battle, in which he was defeated, with great Lofs; which might have renewed the Indian War, if the reft of the Chiefs of that Nation had not been partly fo frighted by his lofing an Engagement, in which he was greatly fuperior in Number, that they durft undertake nothing, and partly fatisfied from the Affurances given them by Pizarro, that this Accident thould not hinder their having the fame Terms they were promifed before.

The rich Booty obtained by this Victory might alfo have renewed the Difputes amongtt the Spanifs Generals, if Francis Pizarro had not refolved to perform all that Almagro had promifed immediately; and accordingly, leaving Cuzco to the Care of the Inca and his Brothers he fet out with a Party of Horfe and a Detachment of Indians, and arrived at the Valley of Pacba Camac, where he met with Alverado and Almagro; and to in gratiate himfelf with the former, gave him the Command of all the Troops while he remained there, commanding all the Officers to obey Don Alverado's Orders, and acknowledge no other General while he continued in Peru; and was fo much better than his Word, that he paid Alverado twenty thoufand Pefos more than he had ftipulated for the Expences of his Journey; befides, a great Number of Turquoifes, Emeralds, and Veffels of Gold, for the General's particular Ufe; whereupon Alverado returned to Mexico, entirely fatisfied with his Reception, and the Treafures he had acquired, efpecially when he faw all the Gentlemen that had accompanied him in his Enterprize well provided for.

This Matter being thus fettled, Pizarro, leaving the Care of the Frontiers to Almagro, employed himfelf in building Towns and fettling Colonies on the Sea Cóafts, particularly Lima, which is now the Capital of Peru, though this City was originally called the City of the Kings, becaufe the firft Stone of it was laid upon the Feaft of the Epiphany in the Year 1534, and was inhabited by Spaniß Gentlemen, who had the Indians of the Neighbourhood affigned them to do their Drudgery, which they looked upon as a very great Hardfhip, and which was directly contrary to the Inftructions fent to the Governors of all the Provinces of the Weft-Indies; though I do not believe, that this was agreeable to the Defigns of the Spanifb Court. After the General had built the City of Lima he advanced a little farther, in order to difcover the Country effectually, while he laboured to do fomething of the like kind nearer Home. Then he marched Southward, and founded another fair City, which from the Place of his Birth he called Iruxillo, affigning his Spaniards Lands and People, according to their feveral Conditions, as he had done before at Lima.

While Pizarro remained at his new City of Truxillo, Advice came from Spain that his Brother Ferdinand had, in a great Meafure, fucceeded in his Negotiation at that Coutr ; for whereas Don Francis Pizarro had petitioned his Imperial Majefty to extend his Government 200 Leagues farther Southward, to grant him the Province of Atabillios in Peru, with the Revenues thereof, the perpetual Vaffalage of 20,000 Indians, and the Title of Marquis; his Brother wrote Word, that the Emperor had conferred the Title of Marquis of that Province, and enlarged his Government confiderably to the Southward ; but as to the Command he defired over the Indians, he would inform himfelf of the Cuftoms of that Country, and of what Damage or Prejudice fuch a Conceffion might prove, and then he would fhew him all the Grace and Favour in that particular that was confiftent with Juftice. And as to Almagro the Title of Marhal of Peru was confirmed to him, and a Government of two hundred Leagues Extent of Country conferred on him to the South-: ward of the Country affigned to the Marquis Pizarro.

Almagro refiding at the City of Cuzco at this Time, and receiving Advice that the Government of the Country which lay South of the Marquis's Government was conferred on him ; and obferving that Cuzco was not within the Limits affigned to Don Pizarro, he immediately took upon him the Title of Governor of Cuzco and the Diftrict belonging to it, in his own Name, and no more acted in Subordination to the Marquis.

Fobn and Gonzalo Pizerro, Brothers to the Marquis, oppofed this Ufurpation, as they called it ; and their Differences rofe to that Height, that they entered into War with Almogro at Cuzco, and feveral were killed on both Sides, of which the Marquis receiving Intelligence, caufed himfelf, to be carried in a Hammock on the Shoulders of Indians, who, relieving one another at proper Stages, carried him thither with fuch Expedition, that he arrived at Cuzco before he was expected by either Side ; and reprefenting to both Parties, that thefe Feuds would probably end in the Deftruction of themfelves and their Enterprize, if they were not fpeedily accommodated, he entered into a Treaty with Almagro, for adjufting all their Differences ; and firft, he obferved that Almagro was miftaken in his Opinion, that Cuzco was without the Limits of his Jurifdiction, for the Emperor had made him a new Grant of the Country, which lay South of that conferred on him by the firf Grant.

The Marquis alfo fuggefted to Almagro, that the Country which lay to the Southward of the Diftrict of Cuzco, was richer in Gold and Silver than any that had been yet difcovered, of which he was contented Don Almagro fhould take the Government upon him, and that he fhould march at the Head of the beft Part of their united Forces, and poffers himfelf of it; and, in the mean Time, he would apply to the Emperor to get him confirmed in the Government, to which they gave the Name of Nerv Toledo, extending it from the Diftrict of Cuzco. to the Country of Cbili, which lies South of Peru. The Marquis alfo ftipulated that if the Emperor did not think fit to confer that Government on Almagro, he would divide that of Peru with him, with which Overture Don Almagro and his Party were then well fatisfied, and immediately made Preparations for an Expedition to the Southward.

About the fame Time another Detachment of Spaniards and Indians were fent to reinforce Don Belalcazar in Quito, to enable him to finifh the Conqueft of that Province ; and a third Body marched to the North Eaft, to reduce fome Provinces bordering on the Ridge of Mountains called the Andes; thus the Spaniards fhewed very plainly what their. Defigns were, and how far it was from their Intentions to perform the Agreement they had made with the Indians; yet they endeavoured fill to keep fair with thefe People, and to amufe them with Promiles, that they might make ufe of their Affiftance in the Performance of fuch Enterprizes, as very far furpaffed the Strength which they had in this Country.

19: It was in the Year 1535, that Almagro refolved to carry into Execution the Project formed in Concert with Francis Pizarro for penetrating into Cbili; and for the facilitating fo arduous an Enterprize, he demanded the Affiftance of Inca Manco, who ftill confiding in the Spaniards, notwithftanding the Manner in which he had been treated, offered to do for him all that was in his Power: As a Proof of this, he appointed his Brother Paullu, with whofe Character we have before acquainted the Reader, to accompany him in this Expedition, and joined with him the High Prieft of the Indians, called in their Language Villacbumu, from whence the Spaniards found the Word Villahoma, which is the Name we find him mentioned by in their Hiftories. He added, under the Command of thefe Chiefs 15,000 Men, in hopes, that by rendering them fo notable a Service, he fhould prevail upon the Spaniards from Principles of Honour and Gratitude to fulfil their Treaty towards him. Almagro, with this Body of Men, began his March Southwards, and marched as far as the Province called Cbarcas, which he found a very barren and inhofpitable Country, and therefore flighted it, as not worth keeping ; but it has fince proved the moft valuable of the Spanijh Acquifitions, fince therein lies the famous Mountain of Potoft, from whence more Silver has been brought into Europe than from all the other Places in which Mines of that rich Metal had been before difcovered.

In this Province the Adelantado :Almagro was informed that there were two Paffages into Cbili, both of them attended with Difficulties, though directly oppofite in their Nature; the one long and tedious, through a fandy Defert, where his People would be fure to feel great In-
conveniencies from Heat and Thirft ; the other much fhorter, but expofed to ftill greater Inconveniencies in the Judgments of his Guides, fince it lay through the Mountains, which were not only exceffively fteep and rugged, but covered likewife with Snow, which rendered them exceffively cold and impaffable, except at one Seafon of the Year. Almagro, confidering that this was the fhorter way, and the Cold however fharp, more fupport-able to European Conftitutions than exceffive Heat, refolved to take this Rout, notwithftanding all that the Indians could fay to diffuade him from it. In their Paffage they found the Cold fo exceffive, that it coft the Lives of ten thoufand Indians and one hundred and fifty Spaniards, exclufive of fuch as efcaped with the Lofs of their Fingers and Toes.
They likewife loft all or the greatef Part of their Baggage, but at length they came down into the Plains, where fuch of the Inhabitants as had formerly obeyed the Incas fubmitted to the Spaniards out of Refpect to Paullu and the High Prieft, but thofe who had hitherto remained free determined to continue fo; and it was not till long after, and in Confequence of many bloody Wars, that they were reduced under the Spanifh Yoke. But while Almagro was thus employed, all things fell again into Confufion in Peru.

Francis Pizarro finding the Inca Manco a little impatient under the bad Ufage he had received, thought proper to deliver himfelf from his Remonftrances by fhutting him up in Prifon, which was fo far from frighting him into a tame Submiffion, that it induced him to undertake what he was fufpected of before he was imprifoned. But as it was impoffible for him to execute his Defign of raifing the whole Indian Nation, unlefs he was at Liberty, he contrived a Method to get out of Prifon, which was fingular enough. He applied himfelf to Ferdinand Pizarro, now returned from Spain, a Perfon of great Generofity, and who bore much Affection to the Indians, defiring his Leave to go to a folemn Feaft, and promifing to bring him, at his Return, his Father's Statue, which was all of folid Gold.

In the mean time, the Indians that were with Almagro grew difcontented at the ill Ufage they fuffered, and complained to one another of the Barbarity of the Spaniards; and in thefe Conferences, none had a greater Share than the Interpreter Pbilippillo, who at laft engaged in a Plot againft Almagro's Life; but, being no lefs a Coward than a Villain, when he reflected on the Danger to which he was expofed, he endeavoured to fecure himfelf by flight. He was foon retaken, and then he attempted to inform againft the Inca Paullu; but, being put to the Torture, he confeffed that to be a Lie, and owned likewife, that by falfe Suggeftions he had procured the Death of Atabuallpa, for all which he fuffered a moft cruel Death, as he well deferved. In order, however, to underftand this Matter clearly, it is very requifite the Reader fhould know the Nature of this Plot or Confpiracy againft the Spaniards, which in Fact was this : The Inca Manco had now not only loft all Confidence in the Spaniards, but was likewife fo fenfible of the Injuries he received, and of the little Hopes there were of ever being better treated by thefe haughty People, that he determined to try what could be done by Force ; and as he was fatisfied that his Subjects were as brave and as faithful as the Spaniards, he judged it better to rely upon the Juftice of his Caufe and the Affiftance of his People, than upon the Promifes of thofe who had fo bafely broke their Words to his Brother, and had never kept the Conditions they made with him.

His Feaft, to which he went with the Leave of Ferdinand Pizarro, was in reality a kind of Affembly of the States of Peru, in which it was debated how the Strength of the whole Empire might be the fooneft raifed, and the moft effectually employed; this Queftion was foon refolved, for every one of the Indian Chiefs undertook to raife their Troops in an Inftant, and indeed they were very foon as good as their Words, fo that the Inca was able to take the Field at once, with three confiderable Armies. He took the Caftle of Cuzco, and clofely blocked up the City with the firft; the fecond marched againf the General Francis Pizarro, who lay in the

City of Lima with a good Body of Troops; and the third was intended to act againft Almagro, of which Notice was fent to the High Prieft, who took Meafures for making his Efcape, in which he was fo lucky as to fucceed; and for his Concern in there the Spanifh Interpreter was put to Death.

The Inca Paullu had alfo Notice given him of the Situation his Brother's Affairs were in, and what was expected from him towards putting them in a better Condition; but he rejected thefe Propofitions totally, and declared, that he would never break his Faith to the spaniards; which Secret the Interpreter having difclofed with his laft Breath, Almagro declared Paullu Emperor ; and though he refufed that Title before, yet for the Sake of Safety, and that his Nation might not want a Protector, he now fuffered it to be given him. Thefe Misfortunes engaged Almagro to haften out of Cbili with the Spaniards under his Command, notwithftanding that he had received fome Reinforcements ; and this March was not performed without confiderable Lofs, notwithftanding he took the other Road, to avoid the Inconveniencies he had met with in entering this Country: But, as in his firft March he fuffered by Cold, fo in the fecond his Army endured all the Miferies of exceffive Heat and Thirft, notwithftanding all the Pains and Precautions that could be taken to avoid them; but, however, their Lofs was not fo great as before, and he returned into Peru with a better Army than was left in it.
20. The Affairs of that Country were now in a dreadful Situation, and grew daily worfe and worfe, a double Civil War breaking out in its Bowels. The Inca Manco ftill continued to befiege Cuzco with an Army of two hundred thoufand Men; the Spaniards in the Place were but feventy, yet having fome Horfe and a good Train of Artillery, they vigorounly defended the Place, and, which is ftill more wonderful, they made feveral Sallies, with great Succefs, in one of which Jobn Pizarro loft his Life ; as for the General he fent from Lima four feveral Detachments, amounting in the whole to near three hundred Horfe, under the Command of four experienced Generals, who were notwithftanding fo unlucky as to lofe themfelves, and their refpective Parties, under their Orders. This not only troubled but weakened the Governor at Lima, to fuch a Degree, that he was obliged to call in all his Garrifons, and even then had been too weak to have done any thing confiderable, if he had not declared all the Indian Vaffals and Slaves free, who would ferve the Spaniards againft their Mafters and Countrymen, which had a very good Effect, and put him very foon in a Condition to raife both the Sieges of Cuzco and Lima, and this was the firft Civil War wherein the Natives of Peru ferved againft each other.
It was followed by another between the Spaniards, who one would have thought fhould have chofe any other Time rather than this to have quarrelled amongft themfelves. But Almagro finding himfelf at the Head of fo powerful a Body of Troops, refolved to renew his old Claim to Cuzco, and in Cafe he could make himfelf Mafter of that City, determined to make it the Seat of his Government, and in this Difpofition marched directly towards it. The Inca Manco, about this Time, took a very furprizing Step, for he refolved to difband his Army and return to the Mountains. All his chief Officers endeavoured to diffuade him, by reprefenting that as the Spaniards were quarrelling amongt themfelves, he had now the faireft Opportunity of recovering his Dominions ; to which he anfwered, that while he kept the Field, the Spaniards would undoubtedly endeavour to compromife their Differences; but if he withdrew, as he defigned and intended, what they fuggefted might very twell come to pafs, and that then it would be time enough to think of proper Meafures for renewing the War, to which they affented, and the Indian Armies accordingly difperfed.

Almagro being arrived before the Walls of Cuzco , and finding the Indians drawn off, fent a Summons to Don Ferdinand Pizarro, the Spanifb Governor, to deliver up that Capital to him ; but he anfwered, he held that City by a Commiffion from the Marquis, and fhould not
deliver it up without his Orders, efpecially as he knew it to be within the Limits of his Brother's Government, and immediately proceeded to put the Place in a Pofture of Defence ; but part of the Garrifon being Friends to Almagro, and holding a Correfpondence with him, introduced his Forces into the Town, at Midnight ; and Ferdinand and Gonzalo Pizarro were furprized in their Beds and made Prifoners, by which Almagro became poffeffed of Cuzco, with little or no Blocdfhed, and moft of the Troops which had ferved the Pizarro's entered into his Pay. In the mean Time, the Miarquis Pizarro hearing no News from his Brothers at Cuzco, and concluding all the Parties he had fent thither to reinforce them had been cut off by the Indions, determined to fend fuch a Body of Troops thither as floould be able to force their way againft all the Oppofition the Indians could make; and having affembled five hundred Spanifb Horfe and Foot, gave the Command of them to Don Alonfo de Alverado, with Orders to march with all Expedition. Peter de Lerma was alfo ordered to march with his Detachment, as Captain of a Troop of Horle, though he was an older Officer than Alverado, and had done great Service in thofe Wars, which fo difgufted de Lerma, that from this Time he meditated the Ruin of the Enterprize.

Alverado continuing his March with the utmoft Diligence, moft of the Indians that were preffed to carry his Baggage, amounting to upwards of five thoufand, perifhed in the firft Part of the Journey by the intolerable Fatigue, being loaden and driven beyond their Strength, infomuch that he was forced to halt till he could prefs fome thoufands more of the Indians, to fupply the Places of thofe he had loft. Almagro receiving Intelligence at Cuzco that Don Alonfo Alverado was advancing, fent fome Spariards of Quality to him, to reprefent that Cuzco belonged to his Government, according to the Divifion the Emperor had made of Feru between him and the Marquis Pizarro; and therefore advifed him to retire to Lima again, till he and the Marquis fhould adjuft the Limits of their Governments; but Alverado, not entertaining any fuch Thoughts, made all the Gentlemen Prifoners who were fent to treat with him; whereupon Almagro took the Field, conftituting Orgonez his Lieutenant-General, and having made a Party of Alverado's Horfe Prifoners, underftood by them, that great Part of his Troops were better affected to him than they were to the Pizarro's, particularly Peter de Lerma, who, with a great many of his Friends, would defert Alverado the firft Opportunity.

He advanced therefore as far as the Bridge of Abancay on the other Side, whereof Alverado lay encamped; fo that there was nothing but a fmall River that parted their Forces: They remained quiet, however, without endeavouring to attack each other all Day ; but in the Night Orgonez, fording the River at the Head of Almagro's Horfe, put Alverado's Forces into great Confufion, and giving Peter Lerma and the reft of their Friends, by this Means, an Opportunity to join them, Almagro gained an eafy Victory, with very little Bloodfhed, making Don Alonfo his Prifoner, with whom he returned in Triumph to Cuzco, on the 20th of Fuly $1537^{\circ}$ Some of the principal Commanders advifed the Conqueror to fecure his Peace for the future, by putting the Pizarro's to Death, and then march with his victorious Army againtt Lima, which, however, he refufed to do; alledging, that it was a Shame for a Gentleman and a Soldier to put People to Death in cold Blood, and that by attacking Francis Pizarro in the City of Lima, he Thould plainly become a Rebel to the Emperor; fince he neither had, nor pretended to have, any Claim upon that Part of the Country: He held, however, that nothing could be more juft or realonable, than that he fhould march towards the Sea-fide, to eftablifh there a Colony that might maintain his Correfpondence with the other Spanifh Settiements, that from them he might from Time to Time draw Recruits.

He began to move very foon from Cuzro towards the Coaft, that he might execute his Defign of fecuring a Port before the Marquis could have any Intelligence, or at leaft be able to collect a Force fufficient to withftand
him.
him. In this, however, he failed, though by an unforefeen Accident; for the Marquis, not hearing from Alonfo Alverado, began to apprehend that the Indians had blocked him up in the Mountains, and therefore, collecting his whole Force, which did not much exceed four hundred Men, he marched with them towards Cuzco but on the Road he received full Intelligence of all that had happened, and that Almagro was in the Field, carrying with him his Brother Ferdinand Pizarro as his Prifoner, but that his other Brother, Gonzalo, was left with Alverado Prifoner at Cuzco.

This gave the Marquis great Uneafinefs, becaufe of the fmall Force he had with him ; fo that he plainly faw himfelf at the Mercy of his Enemy, who, By advancing to Lima, might have carried all before him: However, he behaved himfelf with great Prudence and Dexterity in this time of Diftrefs; for marching directly back to Lima, he began there to recruit his Forces, and in the mean time fent Commiffioners to amufe Almagro with a Treaty, offering to compromife Matters with him, upon fuch Terms as he fhould think reafonable; tho' this was done only to prevent his attacking him before he was prepared. In the mean time, Gonzalo Pizarro and Alverado made their Efcape from Cuzco, with about one hundred Spaniards of their Party, and not long after a new Treaty was fet on foot, in Appearance, for fettling the Differences between thefe two great Generals; but in reality, with a View to engage Almagro to fet Ferdinand Pizarro at liberty, which was become the more neceffary, becaufe Almagro's chief Officers preffed him daily to put that Man to death. The Method taken by the Marquis to procure his Liberty was as fingular as it was fuccefsful.

He fent to Almagro, to let him know that if he perfinted in carrying Arms in that Country, which plainly belonged to him by the Emperor's Grant, he would find the other Spanifb Settlements would confider him as a Rebel ; but that, if he meant no more than to obtain Juttice to himfelf, and pay due Obedience to the Laws, he was content that Things fhould remain as they were, till fuch time as the Emperor fhould decide them, and would likewife provide Almagro with a Ship, to carry his Agents wherever he thought fit, provided his Brother Don Ferdinand was immediately fet at liberty. Almagro readily accepted this Propofal, and, to his own great Prejudice, reftored Freedom to Ferdinand Pizarro; after which the Marquis did not fhew himfelf very ready to comply with this Treaty ; but, on the contrary, put his Brother at the Head of all his own Forces, joined to a great Succour he had a little before received from Panama, and the other Spanibs Settlements.
21. Almagro faw too late the Error that he had committed, and how difficult a thing it would be to repair it : He gave Orders, however, for fortifying Cuzco, and taking all poffible Precautions to cover himfelf from the ambitious Defigns of the Marquis. In this he fucceeded in fome meafure ; for he got back to Guzco before Ferdinand and Gonzalo, the Marquis's Brothers, could reach that City, with the Forces the Marquis intended fhould befiege. it. But here again, the Cautions of Almagro proved fatal to him; fortho' he had it in his Power to have ftarved and deftroyed his Enemies in the Mountains, yet he neglected it, either from an Unwillingnefs to hurt his Countrymen, or from a Confidence in his own Force ; neither was he lefs to blame, when thofe Commanders, at the Head of feven hundred Horfe and Foot, invefted the City of Cuzco; for as the Place was ftrong, and the Garrifon very numerous, he muft have deftroyed the Enemy if he had contented himfelf with acting upon the defenfive ; but this he fcorned to do, as looking upon it beneath his former Actions, and therefore he marched out with all his Troops to the Salinas, or falt Mines, with a full Refolution to give the Enemy battle, fuppofing that their Army had been new raifed Men, and confequently much inferior to his own in Point both of Courage and Difcipline; but here once more he was miftaken, the Enemy proving fuperior to his Troops in all refpects; for, firft, they had the Advantage in Numbers; in the next place, they were better armed, being for the moft part Mufketeers; whereas Almagro's Men had only Crofs-bows and
Vol. II. Numb, LXXX.

Swords ; and lafly, inftead of being raw, new raifed Soldiers, they were regular Troops that had ferved in Flanders.

The Battle however was extremely bloody and obftinate, but in the End Almagro was totally defeated, mof of his Captains killed, and himfelf, who was fo weak that he was carried into the Field in a Litters obliged to take Shelter with a Handful of Men he had left in the Caftle of Cuzco; which he could not keep long, but was obliged to furrender at Difcretion, which he did the rather, becaufe he hoped that Ferdinand Pizarro would return the Kindnefs he had fhewed him when fo long a Prifoner in his Hands. In this too he was greatly miftaken; for tho' he was upwards of feventy Years of age, and withal very infirm; yet FerdinandPizarro, knowing his great Courage, and the many Friends he had in the Army, was exceffively afraid of him, and therefore confined him clofely, and fuffered none of the Officers to vifit him.

He likewife took care to fend away moft of the other Prifoners to Lima, and difpatched on different Expeditions fuch of his own Officers as expreffed any kind of Tendernefs or Concern for Almagro. After he had remained Prifoner fome Months in Cuzco, the Lawyers were employed to draw up Articles againft the old General ; the principal whereof were, That he had feized on Cuzco by force; that he had entered into a fecret Treaty with the Inca; that he had encroached on the Government granted to the Marquis, and fought two Battles with the Emperor's Forces under the Command of the Marquis, the one at the Bridge of Aboncay, and the other at the Salinas: And, his Enemies fitting in Judgment on him, he was capitally convicted and condemned to die, though he appealed to the Emperor, and applied. in very moving Terms to Ferdinand Pizarro to fave his Life: He bid him remember that he had fpared his Life, and even refufed to put to death any of his Relations, on Account of the Friendihip he bore him and the Marquis; that he would do well alfo to remember how inftrumental he had been in enabling his Brother to make thofe Conquefts, and raifing him to the Honours he poffeffed ; defired the Pizarros would confider he was an old gouty Man, who could not live many Years, and fuffer him therefore, after the innumerable Hardfhips he had fuftained, to die a natural Death. But they, looking upon their old Companion and Fellow-Soldier as the only Obfta
their Glory and Ambition, and believing by his Death they fhould obtain the fole Dominion of Peru without a Rival, were deaf to his Intreaties; and having order ed him to be ftrangled privately in Prifon, they afterwards ordered his Head to be cut off on a Scaffold in the great Square of Cuzco.

His Body lay all Day expofed almoft naked on the Scaffold, his Friends not daring to bury him, left they fhould incur the Difpleafure of the mercilefs Ferdinand Pizarro, and his Enemies not thinking it worth while to give themfelves any trouble about his Funeral : But towards the Evening a poor Negro, who had been a Slave to the Deceafed, brought a courfe Sheet, and with the Help he had of fome Indians, who had been Servants likewife to that General, wrapped up the Corpfe and carried it to a Church, where the Friars buried it under the high Altar.

As the Defign of this Work is to give the Englifis Reader a full and fair View of the Tranfactions of thefe Conquerors in America, together with juft Characters of thofe Heroes who were at the Head of their Armies, it is requifite to fubjoin to this Account a true Picture of this unfortunate Commander: James Almagro was of low Stature, but well fet and ftrong; his Enemies faid he was of mean Parentage, which might be Matter of Fact, and yet it was more than they knew or could know; fince he was found in the Streets, and, being never owned by any Body, went by the Name of the Town in which he was found. His Education was of a piece with his Birth; that is to fay, we find it very uncertain what it was, or where he received it: He became a Soldier almoft as foom as he became a Man, and his Behaviour was fuch that he forced a Paffage even to fuperior Commands: He was

Sf
truly
fruly brave, without valuing himfelf much upon it: He had a wonderful Prefence of Mind, fo that no Danger could difconcert him; he had fo much Fortitude, that no Difficulties could difcourage him. He was very kind to his Soldiers, liberal in Rewards, now, and not fevere, in Punifhments, yet he maintained a very ftrict Difcipline, meerly from the Force of his Example; for he was very èxact in doing his own Duty, and, though he kept a good Table for his Officers, he fared himfelf as hard as any private Man in the Army; and when fome fpake of this as an Affectation, he faid Monks were prefcribed to by their Rules, fick Men by their Phyficianis, and that his was the Diet of a Soldier. He was very loyal to his Prince, merciful to the Spaniards, generous in the higheft Degree, and knew not what it was to frame a bafe Defign; but with all this he was haughty and ambitious, very cruel at firft to the Indians, but living fome time with an Indian Woman, by whom he had his Son Fames, he grew firft mild, and at laft fo kind to them, that they loved him better than any other Spaniard.
Ferdinand Pizarro, after his Death, went over to Spain to juftify it ; but, though he corrupted moft of, the Minifters, he had much ado to avoid paying for it with his Life; for fames Alverado, who was Guardian to the young Almagro, profecuted him fo fteadily, that it is thought he took him off by Poifon, notwithftanding which he fuffered an Imprifonment of three and twenty Years, which afforded him time for true Repentance.
22. The Death of Almagro, though covered with all the Appearances of Juftice, was extremely refented by the Spaniards; and, inftead of extinguifhing, as was expected, increafed his Faction; which fhews, that Cruelty, or even Severity, is far from being the beft Remedy for civil Diffentions, which it often irritates and feldom cures : But this was not the only Mifchief that followed this Action. The Lofs of fo able a Commander proved a great Prejudice to their Affairs, retarded their Difcoveries, and gave a Check to their Conquefts; and this, not only by hindering their Proceedings, and diverting them from compleating what he had begun, but by raifing them up new Enemies. For thereupon the Indians, obferving the Divifions among the Spanifb Generals, had recourfe to Arms again; and though the Spaniards in $P_{\text {er }}$ amounted to two thoufand and upwards, they found it more difficult to maintain their Ground at this time, than at firft, when noţ four hundred Men; for the Ter ror the Indians were under from the Fire-arms and Horfes, which they had never feen before, was in a great Meafure worn off, and they had learned of the Spaniards how to ride and handle their Arms; and, having taken fome Horfes, were not afraid to fight the Spaniards at their own Weapons, nor did there want Inftances of fome Parties being defeated by them; and had not the Indian Slaves and Vaffals ftuck clofe to the Spaniards, difcovered the Paffes and Places of ftrength, and from time to time brought them both Provifions and Intelligence, probably Pizarro had been obliged to have abandoned his Conquefts at laft.

The moft confiderable Acquiftion made after the Death of Almagro, was the Conqueft of the Cbarcas, in which lay the invaluable Mines of Potof; whofe Treafures drew fuch Multitudes of Adventurers thither, that the Indians of that Province were compelled at length to fubmit and become Slaves to the Spaniards. But they were not fo fucceffful in Cbili, that brave People difputed the Ground with the Spaniards by Inches, nor could they ever make themfelves entirely Mafters of it. And even in the Province of Los Cbarcas, Gonzalo Pizarro, and his Forces, were fo furrounded and diftreffed by the Indians, that the Marquis was forced to march in Perfon, with the Garrion of Cuzco, to his Relief. The Conqueft of Los Cbarcas being finifhed, the Marquis founded the Town of La Plata, fo named from the Silver Mines, and divided the City and the Country about it, with the Indians that inhabited it, amongft the Conquerors: To his Brother Ferdinand Pizarro, who was then in Spain, he allotted a very large Share; and to his Brother Gonzalo, another Part of the Country, in which, fome time after, the Silver Mines of Poto $/ \bar{z}$ were difcovered.

Ferdinand Pizarroalfo had a Share in thefe Mines, as a Citizen of La Plata. And a particular Part of it being affigned to his Officers, they difcovered fo rich a Vein, that 'tis faid they digged from it the fineft Silver without any Alloy.
This Divifion of the Country was made in the Year 1538 and 1539; and now the Marquis found himfelf poffeffed of a Territory feven or eight hundred Leagues in Length, viz. from the Equinoctial to the South Part of Los Cbarcas, in which were more rich Mines than in all the World befides; and yet was not his Ambition or Avarice fatisfied, but in an extreme old Age he employed his Brother Gonzalo in the Conqueft of other Nations. This Gentleman, who had all the Qualities of a great Commander, was at this time Governor of 2wito; and the Method he took for Difcovery, was to frike off to the Eaftward, that they might know fomething of the Breadth of America; but his Endeavours were obftructed by very great Difficulties, under which he had like to have perihhed; but one of his Captains, whofe Name was Oreallana, by his Direction failed down the great River of the Amazons, quite to the Mouth of it, and from thence returned to the $S p a n i / b$ Settements on the other Side of the Continent of America; which, confidering the Time at which it was performed, muft be acknowledged as great and furprizing as any of the Spanifh Enterprizes in the new World, and opened a Way to the Difcovery of Countries as rich and valuable as any that had been yet found.

As for the Marquis Pizarro, after he had difpatched his Brother Ferdinand to Spain, and employed his Brother Gonzalo in the Manner before mentioned, he applied himfelf folely to fecuring and eftablifhing his Authority; in order to which he thought it neceffary to continue thofe Severities which had been ufed againft the Party of Almagro, and even to encreafe them; for he not only difcharged many, and difcouraged all the Officers that had been attached to the old Marthal, but likewife reftrained them from going home to Spain on any Pretence whatever; and at laft, feeing them reduced to live upon the Alms of fuch of their Countrymen as were more in his Favour, he refolved to deprive them even of this pitiful Subfiftance; and with this View he publifhed an Edict, forbiding any to relieve them; which threw thofe unhappy Perfons into Defpair, and him into greater Danger from their Diftrefs, than he could ever reafonably have feared from their Power.

For after the Publication of this Edict they grew wild and defperate, and feeing no End to their Miferies, but by difpatching themfelves or the Marquis, or by a general Infurrection ; they refolved upon this laft, and attempted it in this Manner:
The braveft of the Almagrians, fingly, or two or three at a time, reforted privately to the capital City of Lima, where they did not want Friends who concealed them in their Houfes, till they found they amounted to two or three hundred Men, all hardy Veterans, and feveral experienced Officers amongtt them, who refolved to attack the Marquis as he went to the great Church on Midfummer-day, 154 I ; but he, having fome Intelligence of the Defign, did not go out of his Palace that Day; and the Confpirators, upon this Difappointment, had refolved to wait for the Arrival of Vaca de Caffro, whom they underftood the Emperor had fent over. But being informed that their Plot was difcovered, and they were in Danger of being facrificed to the Fury of the Marquis, if they did not prevent it by fome bold Attempt, twelve of them met at the Houfe of young Almagro, which ftood on the Side of the great Square in Lima, on Sunday the 26 th of $\mathcal{F} u n e$, at Noon, and with their Swords drawn marched crofs the Market Place to the Palace of the Marquis, crying out " Long live the King, but let the Tyrant die." Nor were they oppofed by any, though there were not lefs than a thoufand People affembled in the Square; nay not a Man firred to give the Marquis Intelligence of it; infomuch that the Confpirators found the Gates of the Palace, and all the Doors, open; and the firlt Notice the Marquis had of their Approach, was by one of his Pages, after they had entered the Houfe;
where-
whereupon he ordered fome Doors to be thut, imagining he fhould be able to defend himfelf till Affiftance came in.

But Francis de Cbaves, who was then with the Marquis, neglecting to faften the Door, and believing it had been fome ordinary Tumult that would have been eafily fuppreffed by his Prefence, went-out, and, meeting the Confipirators upon the great Stair-cafe, demanded the Reafon of that Infolence, which they anfwered only by feveral mortal Wounds they gave him; and rufhing forward, the Servants and all the Company that were with the Marquis fled, except his Brother-in-law, Don Francis de Alcantara, and two of his Pages who defended the Doorway of the drawing Room whither the Marquis was retired for fome time. But at length the Confpirators broke through and killed the Marquis and his Brother, and the two Pages, who behaved themfelves, however, very bravely, and defperately wounded four of the Almagrians before they fell.
Then the Confpirators went into the Market-place again, declared the Tyrant was dead, and proclaimed the young Almagro Governor of Peru; for all the Almagrians immediately affembled when the twelve attacked the Marquis in his Palace, fecuring his Guards, and preventing any Affiftance coming to him. They alfo fecured all the Horfes and Arms in the City, and commanded all the Inhabitants that refufed to join not to ftir out of their Houfes without leave. They alfo plundered the Houfes of the Marquis, of his Brother Francis de Alcantara, of his Secretary Pizarro, and fome other of the principal $\mathrm{Pi}_{-}$ zarrits, wherein they found an immenfe Treafure. In the Marquis's Palace alone, 'tis faid they found to the Value of one Million of Crowns in Gold and Silver, but did not meddle with the Furniture, leaving it ftanding for the Ufe of the young Almagro, whom they had carried thither, after they had proclaimed him their Governor. Thus fell Don Francis Pizarro, in the capital City of Lima, which he had founded ten or eleven Years before, and was privately buried by his Servants, by the young Almagro's Permiffion; no Perfon of any Figure daring at this Juncture to attend his Funeral, left it fhould give Offence to the prevailing Party.

His Fate was very like that of his unfortunate Affociate, Almagro. He died a violent Death like him ; like him was a ViCtim to Ambition; and like him went to the Grave in Obfcurity, after a Life of Splendor! The Marquis Pizarro was never married, but had feveral Indian Concubines, fome of them Daughters and Sifters of the Incas. He was undoubtedly brave, prudent, endowed with public Spirit, and had almoft all the Qualities that are thought neceffary in a great Man, together with that effential Ingredient, a blind and boundlefs Ambition; which alone rendered him dangerous to others, and thereby made the Refentment of others fatal to him: For few fall by the Sword who know how to forgive.
23. As foon as it was publicly known that the Marquis Pizarro was dead, Lima, Cuzco, and moft of the principal Towns, declared for Don Diego de Almagro, the natural Son of old Almagro. Some Places, however, refufed to acknowledge Almagro's Authority, but expected the coming of Vaca de Caftro, with the Emperor's Commiffion, in which they were encouraged by Pedro Holguin, and feveral other Generals and Officers; who affembled a good Body of Troops, and took Poffeflion of Cuzco again, which they gave out they would hold for the Emperor, and declared War againft Almagro. Alonfo de-Alverado affembled another Body of Troops, between Lima and Quito, and declared alfo for the Emperor; and thefe two Generals preparing to unite their Forces, Almagro marched out of Lima, at the Head of fix Hundred Horfe and Foot, towards Cuzco, with an Intent to retake the Place, or give Battle to Pedro Holguin, before he fhould be joined by Alonfo de Alverado.

This new Governor de Caftro was, in all Refpects, a very Ingular Perfon. He was a Gentleman by Birth, and by Profeffion a Lawyer; but it is faid he made no great figure in that Profeffion on account of the great Strictnefs of his Notions as to Juftice, which would not allow him to undertake any thing that was not
perfectly right, or to take any Steps in Favour even of a good Caufe which were not frricly juft as well as legal. The Emperor, being informed of this Man's Abilities, refolved, without confulting his Minifters, to make ufe of them in a Manner much fuperior to their Owner's Expectations. I will free, faid he, the Bar from this ftrange Fellow, and fee what his Probity will be able to do in the Indies. He came without Moncy or Forces, but, by the Accident before mentioned, found two Armies ready to receive him, upon which he went directly to Lima, where he caufed himfelf to be proclaimed Governor of Peru; but fuch a Governor America had never feen before. He fhewed himfelf an abfolute Stoic; he threatened no body, he flattered no body; he acted like a Governor, but he lived like a private Perfon: He fhewed no Refpect to Perfons, nor made any Diftinction between Indians and Spaniards.

The People were amazed at firft, but in a few Weeks he was obeyed with that Submiffion no Tyrant ever exacted, merely becaufe the People faw he meant nothing but their Good. He marched againft young Almagro, in September, 1542, with a very powerful Army; upon which that young Gentleman fent two Deputies to treat of a Peace, and to propofe various things in his Name; feveral of his Officers writing to the Governor on his Behalf and their own, reprefenting that they had been always good Subjects, and were defirous of continuing fo; that they were driven into their prefent Condition by the Cruelties of the Marquis, and that they were willing to fubmit upon reafonable Conditions. The Governor would never talk upon the Subject; he faid he had all the Authority from the Emperor that Prince could give, that he had done no body any hurr by Virtue of that Authority; but had done, and would do, all the Good he could. He faid farther, that fuch as obeyed him were the Emperor's good Subjects, to whom he would behave as their Governor; that for fuch as acted otherwife they were Rebels, who in time would find a Judge that would never depart from the Letter of the Law, but would punifh as that directed him to do; for, though as a Man; he was compaffionate, yet,' as an Officer of Juftice, he knew not what Pity was.

The Report of the Governor's Conduict was far enough from giving Satisfaction to young Almagro, and thofe about him; therefore Orders were fent to his Deputies to make ftill greater Offers, in cafe Almagro might be fuffered to refide at Cuzco, and to enjoy his Father's Government without Moleftation, till the Emperor fhould decide this great Controverfy, having already all the neceflary Lights given him by the Agents on both Sides, by Fames Alverado and Ferdinand Pizarro, from whom News was fuddenly expected, which might prevent the Effufion of Spanifb and Chriftian Blood: But Vaca de Caftro, inftead of treating with Almagro, endeavoured to gain his Officers, and induce them to defert him ; which Almagro difcovering, both Parties prepared for Battle, and drew up their Troops in the Vale of Cbupas. Thefe little Armies were both compofed of Veteran Officers and Soldiers. The Governor had the Advantage in Point of Numbers; his Troops confifting of feven hundred Spaniards befides Indians, and Almagra's of five hundred Spaniards; but then the latter had the Advantage of a Train of Artillery, and of good Ground, and would probably have gained the Victory if all his Officers had been true to him ; for his Artillery was fo pointed that the Enemy could not. approach his Camp on any Side without confidewable Lofs. However, to his Amazenvent, when the Cannon were fired, they did no manner of Execution, and the Enemy advanced as if they had nothing to fear from the Artillery: Whereupon Almagro made up to Pedro de Candia, who commanded the great Guns, and, fufpecting Treachery, killed him with his own Hands, and levelling one of the Cannon himfelf cut off a whole Rank of the Governor's Troops, putting the Army in Diforder.

But the Enemy were now advanced too near his Train of Artillery to fuffer from them, and his Men had quitted the Ground where they were fo advantageonlly drawn up to meet the Enemy, which occafioned the Lofs of the Battle, though it was fought with great Obitinacy till
two Hours within dark, when Aimagro, finding his Troops over-powered, retired out of the Field with Manco Inca, and three or four Spanifb Officers, intending to have taken Refuge in the Mountains with the Inca and his Indians, -till he fhould meet with a favourable Opportunity of recovering his Government ; but taking Cuzco in his Way, with a Defign of carrying off his Treafure, and fuch of his Effects as would have been moft ufeful to him in his Exile, the very Men in whofe Hands Almagro had put the Government of the City, hearing he had loft the Battle, apprehended him, and delivered him up to the victorious Governor, to make their own Peace with him; and young Almagro, who was not much above twenty Years of age, was formally tried, condemned, and executed in the fame Place, and much in the fame manner, as his Father had been, and was afterwards buried by fome Friars of the Convent of Merced, in the fame Grave with his Father, having obtained a much greaterFame for his Humanity, Parts, and Education, tho' his Conduct and Experience in War could not be fuppofed equal to his Father's; and indeed it $\cdot$ was unfortunate hewas fo young and unexperienced, and confequently had fo little Influence and Command of his Troops, every Officer almoft imagining he merited the chief Command in the Army, and that Almagro was infinitely obliged to him for taking his Part, while others were contriving to purchafe their own Peace by betraying their General. They had but very indifferent Succefs, however, from the Practice of thefe bafe Meafures; for the Governor proved as inexorable as he profeffed himfelf, and as he gave no Quarter in the Field of Battle, fo he did not think the taking off Almagro's Head a fufficient Atonement for his Rebellion and its Confequences; but, on the contrary, caufed fuch as had been his principal Counfellors to be apprehended, tried, and put to Death without Mercy, by which Means he totally extinguifhed, not only the Rebellion, but the Faction that had raifed it.
Yet there was no Sufpicion that he mingled any thing of private Malice, or particular Refentment, with his Zeal for the public Service; for he behaved very kindly to fuch as had in due time returned to their Obedience ; and though no Governor ever had a fairer Opportunity of raifing his Fortune by the vaft Conffifations made in his Time ; yet fuch was his Contempt for Money, that he took nothing; but contented himfelf with his own Appointments, and employed the Wealth he faved out of them, which was very great, for the Service of the Crown and the Good of the People. This had fuch an Effect, that though Multitudes deplored the Fate of thofe unhappy Men who died by his Sentences, yet they bore no Dinike to him; but acknowledged, that what he did was the Effect of an honeft Zeal, and not of any Cruelty in his Nature, and many of the Criminals profeffed this to be their own Sentiments in their very laft Moments: The only People who fhewed any Difcontent, were the Officers and Soldiers of Pizarro's Party, who thought they were not enough confidered, and told him, as much; but he told them in return, That he did not come there to fupport or reward any, but to extinguifh all Parties ; and that they ought to think themfelves happy, that in Confideration of their late good Behaviour, he forgot what was paft, fince they muft be fenfible that he punifhed in Almagro's Partizans no other Crimes than thofe of which themfelves had been guilty.
24. The Peace of the Province being reftored by this ftrict Diftribution of Juftice, the Governor de Caftro difbanded the beft part of his Troops, laid afide all his Severity, and began to cultivate with the utmoftDiligence the Arts of Peace: He caufed the old Colonies to be better fettled, and was mindful to have new ones planted: He took care to have the old Mines improved, and fuch as were daily difcovered, to be wrought, for the Benefit of his Mafter and the lawful Proprietors: He was very attentive to the Adminiftration of Juftice: He erected Colleges and Schools in all the Cities and great Towns. He obliged the Clergy to labour diligently in converting the Indians, relieved moft of their Grievances, and in the Space of little more than a Year, made fuch Alterations as could fcarce have been expected in fifty. He would have done ftill more, but that the Sponijh Minifters,
whom he neither courted nor bribed; prevailed upori the King to erect a kind of Royal Audience in Peru, and to give very great Powers to Commiffioners who compofed the Audience, who made it their Bufnefs to crofs the Governor in every thing; which begat new Difturbances, both among the Spaniards and the Indians, and frefh Complaints to the Court of Spain, with which perhaps the Minifters were not difpleafed, becaufe whenever they came the Money came along with them. Whereas in the Governor de Caftro's Time, though the Emperor received large Sums from Peru, yet the Minitters got nothing; and when Things went once wrong they quickly grew worfe and worfe, and Matters were in Danger of falling once more into Confufion.

The Emperor being informed of the Revolts in Peru, and the ill Ufage of the Indians, he difplaced his Commiffioners there, and chofe others, giving them an Oath to deal juftly, and to order Things uprightly. He made forty Laws, and figned them at Barcelora, the 20th of November, 1542 ; but thofe Laws were ill taken in Peru. They were certainly well intended, and very agreeable to the Rules of natural Juftice and Equity; but in the Situation Things were in, by no Means expedient to be publifhed in Peru, where Things grew daily more perplexed: Befides Blafco Nunez Vela, who was appointed Viceroy in 1544, and who had Directions to fee thefe Orders put in execution, was a Man no way qualified for his Employment. On his Arrival he caufed his Predeceffor, who was a much wifer Man than himfelf, to be imprifoned, and behaved in every Refpect fo feverely that he gained no Friends, though he provoked many to become his Enemies. Three of the Judges who fhould have fupported him, confpired againft him, and caufed him to be imprifoned, while in the mean time Gonzalo Pizarro drew together Troops, and difpofed all Things for a Rebellion.

The Difputes between the Judges and the Viceroy facilitated his Defign; for tho' the latter quickly recovered his Liberty, and drew one of the Judges to his Party, yet the reft of the Judges continued to act by their own Authority, and behaved fo cruelly, and fo tyrannically, that at length, perceiving they had no other Remedy, they were glad to admit Gonzalo Pizarro Governor of Peru, to fend him a Commiffion in the King's Name, and to receive him with all Demonftrations of Refpect into the City of Lima. The Viceroy returned into the Province of Quito, where he difcovered, in his Adverfity, much greater Abilities, and many more Virtues, than in his Profperity ; and though his Forces were confiderably inferior to thofe of the Rebels, yet his own Intrepidity, joined to that loyal Difpofition, which is natural to the Spaniards, enabled him to make a long Difpute. At length, however, a decifive Battle was fought between him and Gonzalo Pizarro, on the Igth of Famuary, I546; in which the Viceroy, being wounded and taken Prifoner, had his Head ftruck off; for whofe Death, thoughdone by his own Command, Pizarro hypocritically wore Morning. Henceforwards this Man behaved himfelf rather as a fovereign Prince than a Governor, bufying himfelf in amaffing Wealth, and in taking all the Precautions he could think of for fecuring himfelf and his Affociates from the Effects of the royal Refentment, which without queftion they had reafon to dread. In the mean time, the Emperor, juftly alarmed at the Confequences of thofe Seditions, which threatened the Lofs of fo confiderable a Territory as that of Pcru, came at length to a Refolution of trufting rather to the Wifdom of one Man, than to the Force of many.

This Manwas the Licenciate Peter de la Gafca, who had the Title of Prefident of the Royal Court of Peru, and a Commiffion fo ample, that, had it not been fome way limited by his Inftructions, he would, in effect, have had royal Authority: But to balance this he had neither Men nor Money, the Court trufting altogether, though furely not very prudently, to his great Capacity. He was, in few Words, a Man of unfhaken Courage, deep Prudence, mild Behaviour, unblemifhed Probity, and abfolutely difinterefted; he was not afraid to go in a Manner naked, againft infolent and victorious Rebels; and all the Reward he demanded for the Services he
hould
fhould perform, was, that, having fettled the Province in Peace, he might be at Liberty to depart into Spain. Gafca arrived at Nombre de Dios, and carried himfelf mildly, faying, he came not to make War ; but, according to his Profeffion; to make Peace, and rebate the Rigour of the Laws that caufed the War. From Panama he fent the Emperor's Letters, and wrote himfelf to Pizarro, telling him, he was come to pardon all Offences, to draw him to Obedience, to give Satiffaction to his People, and if he refufed this Grace, but not till then, to make War.

Pizarro was enraged at the Receipt of thefeLetters, and would not fuffer the Perfon who brought them to fit down, which the Gentleman took for a great Affront. Pizarro called for his Friends, to know what Anfwer to give to the Prefident's Letter. Carvajal, the chief Incendiary, was abfent, and therefore it was hoped he would accept of Grace; yet every Man delivering his Opinion, fome advifed to take and raze Panama and Nombre de Dios, that the Prefident might have no Places to receive his Men and Shipping; and they having all the Ships in the Soutb-Sea, might keep Peru to themfelves, and then they doubted not but to make Nero Spain revolt too, or at leaft they would rob all the Towns on the Sea Coaft, and live by Spoil and Rapine ; which indeed they might have done, having the General of the Sea true to them. At laft Pizarro cunningly anfwered Gafca's Letter, by confent of thirty of his Men, under their Hands, That they underftood of his coming by Hinojofa, General of the Sea, and the fair Shew of Good he pretended ; but it was too late, after fo many Murders, occafioned by the Viceroy's Cruelty ; perfuading him to return, to inform the Emperor that they would receive no Governor but Pizarro, and offering to fend fome Men of Quality into Spain to make their Cafe known to the Emperor.

Carvajal returning, diverted Pizarro from all good Intentions, and would not fuffer him to make any Acknowledgments to Spain; they fent thefe Letters to Gafca, and offered to give him a great Quantity of Money to return Home, and if he refured it, they wrote to the Admiral Hinojofa, to apprehend him. Thefe Letters being brought to $\mathrm{Pa}-$ nama, put Gafca in Fear that he fhould be killed, for they abfolutely refufed to receive him in Peru. But Gafca dealt fo cunningly with Hinojofa, that he brought lim to fubmit himfelf and Fleet, and become a true Servant to the Emperor. This was the Overthrow of Pizarro, and Hinojofa was continued General, and none of his Captains difplaced. Gafca now prepared again for War, and furnifhed himfelf for his Journey to Peru ; and before his Arrival fent a Pardon to all the common Sort. In his Expedition he carried himfelf courteounly and friendly. Gafca's Carriage, and the Submiffion of the Ships, made a great Change among the Rebels, for happy was he that could appear for the Emperor. Pizarro was much grieved to hear of thefe Alterations; but like a courageous Captain fent to all his Friends to come to him with their Forces, but moft Part of them forfook him ; and the Towns of Lima, Cuzco, and the reft, took Part with the Emperor.
When Fobn de Cafta came to Pizarro to Arequipa, they confulted what to do, having four hundred and fifty Men and the whole Country againft them: He refolved to go to Cbili, where never Spanierd had been; but he was followed by one Centeno, with a loyal Party for the Emperor, between whom was fought a cruel Battle. Pizarro, gaining the Victory, loft two hundred and twenty Men, and Centeno many more. Centeno fled, but the others, having fo great a Lofs, did not follow him. Pizarro, upon the Victory, divided his Forces into feveral Parts. Cepeda, a principal Man on his Side, perfuaded him to make Conditions with Gafca, which he would not do, but was angry at the Motion, and grew fulpicious of him; who out of pure Kindnefs had propofed it. Gafca came into Peru with two thoufand Men, where he heard of the Overthrow Pizarro had given Centeno; and his Men being fickly, and finding the Corn green, and not to be eaten, they were much difcouraged; but Centeno coming with the Remainder of his Forces put them in Heart, whereupon he went in
Vol. II. Numb. 80.

Purfuit of Pizarro; but had great Trouble in paffing the River Apurrima; but Pizarro being apprized of it, departed from Cuzco with one thoufand Soldiers. A little before this Donna Maria Calderon fpeaking againft the Ty ranny of Pizarro, Francis Calderon entered her Chamber one Morning, and ftrangled her in her Bed.

Now came their Armies in View of ohe another, every one taking Advantage of the Place. Gafca delayed giving Battle, in hopes that moft of Pizarro's Men would leave him, but they did not ; and he being forced by Snow, Cold, and Hunger, engaged in a general and bloody Action. Cepeda, who, as I faid, before advifed to accept of Conditions, fled to Gafca whichs, much difheartened Pizarro's Side ; this Example, and others, that did the like, made moft of them yield. Pizarro feeing it, chofe rather to fubmit than fly, and yielded himfelf to Villa Vicentia, Serjeant-Major, who carried him to Gafca. Never was fuch a Battle fought, in which the Heads and chief Commanders were Doc $\rightarrow$ tors and Scholars. Gafca fent Forces to cut off thofe that efcaped in their way to Cuzco, and to fecure the Town. The Day following, being the gth of April 1548, Gafca committed the Caufe of Pizarro and other Offenders to Judges, who condemned him and thirteen more to Death; whereof Francis Carvajal was one, and in: deed the chief Promoter of all the Miichief in thefe Parts; he was 84 Years of Age, and had been an Enfign in the Battle of Ravzuna, had ferved under the great Captain Gonzalo Fernandez, and was the moft noted Soldier in the Indies, yet never efteemed valiant or fkilful s it was a Bye-word, as cruel as Carvajal, becaufe he had been the Executioner of four hundred Spaniards, Pizarra caufed to be put to Death after Blafio Nunez came into Peru, carrying Blacks with him continually for that Purpofe. Pizarro was never overthrown but in this Battle, though he had fought many. Gafca's Soldiers looked for a better Reward than was given them, though indeed they were well dealt with; yet they mutinied upon it, but were foon quieted again. Gafca took a Courfe for the pacifyin. of the Indians, and reducing them to the Chriftian Religion, as alfo for the peaceable Government of the Kingdom.

When Gafca arrived at Nombre de Dios out of Spain, he brought not an hundred Men with him, nor had he any Money, but procured Credit; and at his going away paid all Debts, and carried with him to the Emperor almoft twó Millions, but for himfelf not a Penny ; being the firt Man, in Authority, that ever did the like; for Covetoufnefs was the Bane of all the Spani/b Affairs 'till his Time. Indeed any Nation muft be quickly ruined where the Men great afpire to Authority, with no other View than to make themfelves rich. As for this celebrated Governor, when he had thoroughly fettled Things in Peru, he prepared for his return into Spain, and came to Panama, having much Wealth there, which he could not carry; but it happened that two Sons of Rodrigo Conberas, Governor of Nicaragua, with two hundred Soldiers, entered the Town and took that Treafure, and as much more as they could get. One of the two Brothers' put himfelf with his Wealth oo board two or three Ships, the other followed Gafca, thinking to rob and kill him ,murdered many, and few a Bifhop; becaufe he fent to their Father in Spain an Account of their Villanies. They drew to them all factious and diifcontented People, that favoured the Party of Pizarro. Gafca hearing of thơe Diforders returned with Speed, fought with and overcame them : one of the Brothers was drowned in-paffing a River ; and he difpatched Ships after the other, and took him and all his Wealth.

This proved a fortunate Affair to Gafca, and gor him great Honour : He embarked at Nombre de Dios for Spain in 1550, with much Wealth for others and Repu* tation to himfelf. His going, coming, and ftaying, was little more than four Years. This Man compleated what Vaca de Caftro had only beguns, and left every thing in tolerable good Order ; for which, upon his Return the Emperor gave him the rich Bifhopric of Placentic, and fent for him into Germany, that he might receive a clear and diftinct Account of the State of his

Tt
Affairg

Affairs in America. It is very remarkable, that thefe Governors, who did fuch wonderful Things ; and inftead of enriching themfelves promoted the Welfare of the Crown, and provided for the Revenues of the Peo--ple, were not Courtiers but Lawyers, not Men of great Nobility, not yet mere Adventurers, not the Creatures of any Miniftry, or fupported by any Minifter, but owing their Preferment entirely to their Reputation, which made them known to the Emperor, their Mafter, and fecured his Choice.

We fhall here end our Account of the Difcovery and Conqueft of Peru, which has been fo fully treated ; that the Reader cannot but have a very clear Idea, as well of the Maxims, upon which the Spanifh Court proceeded, as of the Characters of thefe great Men, by whom thefe Difcoveries and Conquefts were atchieved, and of the Troubles that were afterwards occafioned by their exceffive Ambition. But, as the Purfuit of this Method, with Refpect to the other Provinces of the Spanifb Empire, in the new World, would fwell this Work to too great an Extent ; we fhall content ourfelves with giving as concife an Account as is poffible of the Times when, and the Perfons by whom, the reft of the moft confiderable Difcoveries and Conquefts were made, without entering into any fartherParticulars, that we may have the more Room to fpeak of what other Nations have performed in thofe Parts, and thereby render this Part of our Work as compleat as poffible.
25. While Hernan Cortes was employed in reducing, under his Obedience, all the Provinces of the Mexican Empire, and while Francis Pizarro was occupied in Peru, there were other great Captains and experienced Seamen employed in the Difcovery of feveral other Parts of America: As for Inftance, Sebaftian Cabot, a Venetian born, and who had been long in the Service of the Crown of England, entered about the Year 1526 into that of Spain; and the fame Year failed up the great River of Plate, and difcovered Part of the Country of Paraguay. The Year following Francis de Montejo fettled and fubdued the Country of Fucatan; and about the fame Time, Fobn Bermudez firft faw one of thofe Inands, which have fince borne his Name, and make at prefent a Part of our Poffeffions in the Weft-Indies. From the Year 1528 to 1533 various Difcoveries were made by the Captains of Francis Pizarro, both on the Eaft and Weft Coafts of South America; and within this Space it was, that Peter Heredia caufed the Foundation to be laid of the City of Cartbagena, to which he gave that Name from the Refemblance it bore in its Situation to the City of Cartbagena in Old Spain.
In 1535, Peter de Mendoza founded the Town of Buenos Ayres, on the River Plata, which City was twice abandoned, and twice rebuilt. At this time the famous Hernan Cortes made, in Perfon, an Expedition by Sea, to difcover the Northern Coafts of the Kingdom of Mexico, and was himfelf the firft that took a View of California, which then, and long after, was efteemed to be an Inand. In 1537, the Province of Nerw Granada was entirely difcovered : And in 1539 , as if the Difcoveries Northwards were to keep exact Pace with thofe of the South, the great Kingdom of Cibola was firft made known to the Spaniards by a Francijcan Friar; which Difcovery at firft was very little regarded, but has been fince found to be of as great Confequence, or rather of greater, than any of the Difcoveries on the Northern Continent in America. In 1540, one Peter de Baldivia made his Expedition into Cbili, and reduced a great Part of that rich Country.
The very next Year, Fobn Cabrillo a Native of Portugal, in the Service of Spain, difcovered the moft Northern Parts of California, and gave to a great Cape or Headland, in the Latitude of 44 Degrees, the Name of Cape Mendocina, in Honour of Don Antonio de Mendoca, at that timie Viceroy of Nere Spain. In 1543 , Leweis de Alverado difcovered the great River of MifififAppi, which he clearly defcribed, though he did not give it any Name. In the Year 1545 , the Mines of Potofs were firt opened; and in 1554 , the Spaniards difcovered thofe of St. Barbe and St. Fobn. In the Year $5_{574}$. Fuan Fernandez difonvered, in the South-Sea,
the two Iflands that have been fince known by his Name; though in the old Spani/h Maps there are four laid down, the other two being called the Iflands of St. Felix and St. Ambrofe, lying fomewhat more to the North than thofe to which we generally give the Name of Juan Fernandez. In 1582 , the Spaniards completed the Difcovery of that great Country to which they have fince given the Name of the Kingdom of New Mexico. In 1589, Don Pedro Sermiento made that famous Settlement in the Streights of Magellan, of which we have given fo large an Account in our firft Volume. In the Years 1638 and 1639, fome Spani/b Miffionaries travelled through, and defcribed moft of the Countries that lie upon the great River of the Amazons; and confidering the Report they made of the Fertility and Riches of thofe Countries, it is furprifing that the Spaniards did not make this Difcovery turn to greater Acconnt ; but perhaps this may be alcribed to their. Want of People, at leaft in Proportion to fuch a vaft Extent of Country.

In 1675 , fome Miffionaries difcovered, in the Heart of Soutb America, the Country of the Moxas, of which to this Day we have no farther Account than what thofe Miffionaries have given us. This Country lies in the Torrid Zone, from ro to 15 Degrees of South Latitude; and it is believed that there are Mines of great Value therein, though hitherto it has been vifited only by the Priefts, who have erected the fame fort of Sovereignty there which they poffefs in Paraguay.
26. In the Year 1 701, F. Eufebius Kino, a Jefuit, difcovered that the Country of California was not an Inand, as till that time it had been fuppofed, but was feparated from the Continent of new Mexico only by a River, over which he paffed without much Trouble. And thus we have given the Reader a fhort Account of the Spanifl Difcoveries, in the Order of Time in which they were made, from their firft Entry into the new World, down to our own Days; and if it appears that fince their having eftablifhed fo great and powerful an Empire in this Part of the Globe, they have difcovered much lefs in Proportion than when they firt came thither, we muft not attribute it either to their having abfolutely furveyed all Parts of thofe two vaft Continents, of which they are reputed Mafters, or that they have loft that Thirf after Gold and Silver with which they were fo ftrongly poffeffed in paft Times: For the Truth is, that both in North and in South America, there are vaft Tracts of Country of which they know very little; but then the Provinces of which they are at prefent in Poffeffion afford them fuch certain Supplies of Gold and Silver, and at the fame Time they find that the Prefervation of thefe Countries requires fuch. a ftrength of People, that they are cautious of extending their Settlements for fear of leffening their Security; and therefore the great Maxim of theirPolicy is to conceal the Notices they from time to time receive of new Mines, that they may not come to the Knowledge of Strangers, whofe Neighbourhood they dread, and not without Reafon; fince if any hardy and induftrious Nation fhould ever fix themfelves effectually in any 'Part of either of thefe Continents, the Spaniards would foon feel what they fo much fear, the Impoffibility of keeping the Countries they poffefs at prefent. But it may not be amifs before we conclude this Section, and part with the Subject, to give the Reader a general Notion of the Advantages derived to Spain, from the Conquefts made by her Subjects in the two America's.
The common Opinion is, that his Catholic Majefty poffeffes larger Dominions than any Prince in the World, and without doubt it is very well founded; for, with regard to America, the whole Coaft from thirtyfeven Degrees of North Latitude, to fifty-three Degrees of South, is on one Side entirely theirs; and on the other there are only the Portugueze Colonies in Brazil, with a few inconfiderable French and Dutcb Settlements, but what belongs to them or to the Natives. In a Word, the Spaniards command in the South Seas the moft extended Coaft in the new World, that is, from Cape St. Sebaftian, the moft Northern Point of California, to the Streights of Magellan, at leaft two thoufand Leagues, or between fix and feven thoufand Miles: They likewife poffers the
largeft
largeft and moft valuable Inands, viz. Cuba, Part of Hijpaniola, and Porto Rico.

It is an Opinion commonly received amongtt us, that the Spanifh Weft Indies are very unwholfome, but, like many other general Propofitions, this may be faid to be true and falfe at the fame time; a very confiderable Part of Mexico and Peru are in the TorridZone, and yet, where they have the Advantage of a favourable Situation, are both healthy and pleafant; but befides thefe there are many fair Provinces in both the temperate Zones: Neither can the habitable World boaft of more delightful Regions than there are in the Kingdom of Nere Mexico in the North, and about Buenos Ayres in the South, as the Reader will be told. more particularly hereafter; the Truth is, that the Country about Porto Bello is extremely aguifh and unwholfome, and fo is part of the Sea Coaft of Cbili, by Reafon of the great Rains which fall there, and the want of Inhabitants. And from hence we form an Idea of the reft, though very unjuftly. Perhaps too, the Luxury of the Spaniards, and the Inactivity of their Lives may contribute to fhorten their Days, and thereby difcredit the Places they inhabit; but as it is certain that the Indians, before their Arrival, lived to a good old Age, and many who are temperate do fo ftill, I fay, all this confidered, we may conclude, that if any active and induftrious People were to fettle in thefe Countries, they would not be very much incommoded by the Climate.
As to the Soil of the Countries in general, it is wonderfully rich and fruitful, producing Corn in abundance, and fuch Paftures as are no where elfe to be feen; Trees for Fruit, Beauty, and Ufe; Shrubs odoriferous, and of phyfical Virtues; Herbs and Roots, in plenty; and, in thort, every Thing that can be fought for, either grows naturally or may with very little Pains be produced here. In the Bofom of the Earth all Sorts of Metals are found, efpecially thofe which Men value moft, Silver and Gold; Springs and Rivulets are every where to be feen: And then, for the Conveniency of Navigation, there are the nobleft Rivers which the World can boaft; fuch as the River of Plate, the Amazons River, and many others. If the Spanifb Councils were turned for the Encouragement of Trade, there are in thefe Countries fuch a vaft Variety of valuable Commodities as might furnifh the Pcople poffeffed of them with inexhauftible Treafures; for befides Gold and Silver, of which prodigious Quantities are annually exported, both from Mexico and Peru, here are Emeralds, Pearls, and various other forts of Stones ; not to fpeak of Copper and other bafer Metals: Rich Drugs of all Kinds, Logwood, Santal, Redwood, and many other forts of Materials for dying: Tobacco, Ginger, Sweet-meats of all Kinds, with a vaft Variety of luxurious Articles: And then, as to Things of more neceffary Ufe, Vigonia Wool, the Hides from Buenos Ayres, Tortoife-fhell, Indigo, and many more, might be enumerated. Neither is the Country deficient in Seaports, efpecially in the North-Seas, where there are feveral fafe and fpacious Harbours, befides goodRoads, Bays, and Creeks. Yet thefe in the South-Seas are, in a great meafure, wanting, and the Spaniards, not without Reafon, efteem it an Advantage, becaufe it makes it the eafier for them to defend the Coaft againft Strangers ; and in Relpect of one part of the Country trading with the other, this is no preat Finderance ; becaure they have a good Port for the carrying on of their Eaft-India Trade, which is what they chiefly value on this fide. And if ever they fhould increafe their Shipping fo as to make new Ports requifite, Engineers would foon put them in a Way to improve the imperfect Efforts of Nature: But while they continue to act on the Maxims which they have hitherto purfued, they are not likely to think their Havens on the Soutb-Sea too few. We ought now to fpeak of the Number of Inhabitants, becaufe therein confifts the trueWealth and Strength of a Government: But we muft ingenuoufly confefs, that with any tolerable Accuracy it is not eafy to fettle it. The Spanifh Writers are remarkably filent on this Head, and as to what others report on this Subject, it deferves lefs Credit than any other Part of their Relations, be-
caufe it is impofible that what they affert fhould confift with their own Knowledge.

This however is certain, that the Spanifh America is but thinly peopled if we confider its Extent; and, on the other hand, it feems to be as certain, that it is much better peopled than we commonly imagine, of which I will give feveral apparent Proofs: Sir Francis Drake made his firf Expedition in $\times 578$, and with a very flender Force; acquired immenfe Riches, and did prodigious Damage to the Spaniards. In 1587, Candifh did the like, in a Veffel of One hundred and twenty Tons, though he had not in her above thirty Men; landing in feveral Places, and bringing away as much Riches as he could carry. Thefe Succeffes eftablifhed an Opinion, that the Spaniards were very weak in thefe Parts, yet all the following Expeditions, which were undertaken with much greater Force, miferably mifcarried ; which induced that wife Princefs, Queen Elizabeth, to reftrain her Subjects from fuch Attempts. This, however, did not difcourage the Dutch, who in 1623 , fitted out a grand Fleet for the Soutb-Seas; it confifted of fifteen ftout Ships, and there were three thoufand picked Men on board. They came happily into thefe Parts of the World, and made feveral Defcents, but to noPurpofe, being conftantly repulfed, fo that they returned with great Lofs and Shame. Our Countryman, Gage, perfuaded Cromwell, and indeed the Englifh Nation, that the Conqueft of the Weft-Indies was a very practicable Defign, but it did not prove fo in the Event ; for though we made ourfelves Mafters of Famaica, yet whoever confiders the mighty Force that Penn and Venables had,' will rather wonder that much more was not done, than admire what they did; fo that it feems to be a Thing out of difpute, that it is not fo much the Weaknefs of the Spaniards as the Weaknels of their Councils, which has occafioned their Loffes in thofe Parts. And, to fay the Truth, we can farce doubt of this, if we reflect that they have found a Way to make their American Colonies contribute to the Deftruction of their Power at Sea. Though the fame Caufe is the great Source of ours, and is the only one that can create a naval Force to France.

But to return to the Point ; viz. the Number of People in the Spanifb Settlements: A certain Author has gueffed, that there may be in the whole three Millions of Spaniards, Mulattoes, and Negroes; befides which, there are certainly a much larger Number of Indians; for though it may be, and without doubt it is true, that the'Spaniards practifed intolerable Cruelties when they firft arrived in thefe Parts, yet we are affured that this was done contrary to the exprefs Direction of their Catholic Majefties, and that they have long fince altered their Policy in this Refpect, though many Indian Nations are ftill their implacable Enemies, and fo are likely to continue. When thefe Countries were firft reduced, the fettling many Ecclefiaftics might be a very proper Meafure, fince it is certain they were, in thofe Days, very zealous not only in converting, but in protecting the Indians; interpofing on all Occafions in their Favour ; but as Times are altered fince, they and their Meafures fhould have altered accordingly. Monafteries and Nunneries, if they are not contrary to the Spirit of Chriftianity, are at leaft incompatible with that of fettling Colonies, and fo they have been found: Priefts, generally fpeaking, proceed upon narrow and felfifh Views, and fo do all religious Orders, particularly the Fefuits, who therefore are the leaft qualified for Miffionaries, though deficient in no other Refpect, as fully appears from their Conduct in Paraguay, where the Fathers have eftablifhed a much more regular Government than fubfifts any where elfe in America, and are able to raife a greater Number of regular Troops in a Week, than could be affembled by the Viceroy at Peru in a Year.
The Corruption and Tyranny which reigns among all the Officers who derive their Authority from the Crown, fenfibly affects the State, fince it not only ruins the Revenue, but difcourages Induftry and extirpates Public Spirit. An unaccountable Fondnefs for Gold and Silver is another Prejudice to the Spanifb Settlements; has pre-
vented.
vented the Government from encouraging new Difcoveries, and fpread fuch a fordid Spirit through all its Subjects as is vifibly productive of the worft Effects ; for tho' Mines may be moft beneficial to the Sovereign, and to the Mother Country in the firft Inftance, yet, taking all Things together, they are leaft fo ; of which the prefent State of Spanifb America is the ftrongeft Proof.
27. We have now treated this Subject fo fully and fo clearly, that we hope she Reader has nothing farther to expect. We might indeed have confined ourfelves within narrower Limits, and have run through the Story of thefe great Events in fewer Pages; but then che Account mult have been very fuperficial, and inftead of fatisfying, it would only have raifed the Curiofity of the ingenious Perufer ; whereas now we dare affure him that with refpect to the Difcovery and Conqueft of Mexico and Peru, he has feen as good an Account as we were able to give him, after perufing and comparing the beft Spanijb Writers; and we have always thought that it was our Duty to execute Things to the full, and not leave People under the Neceffity of confulting many other Books, in order to come at what they might juftly expect from its Title to have found in this.

There are fome fpeculative People that have taken Pains to depreciate the Character of the Conquerors of the new World, by pretending that the Advantages derived to Spain by the Countries added by them to her Dominions are fcarce an Equivalent for the Mifchiefs fhe has fuftained by the draining away fuch incredible Multitudes as have tranfported themfelves to America, fince thofe Conquefts were made ; but, with their Leave, this does not fo much concern the Conduct of thofe Conquerors, as that of the Spanifh Miniftry, which we never took upon us to vindicate, and in which we fhould moft certainly have failed if we had: But the great Point which deferves notice, and which can alone enable our Readers to form a true Judgment of this Matter, is the Profits that might accrue to the Crown of Spain from thefe prodigious Acquifitions, if the had known how to have managed them with Skill and Prudence proportionable to that Wifdom and Spirit which thefe brave and active Officers difcovered in bringing fuch extenfive, and fuch valuable, Provinces under her Dominion.

In order to give them fome Opportunity of doing this, it may not be amifs to inquire, as far as it is in our Power to do, what thefe two great Empires of Mexico and Peru really produce ; for when this is once known, we may very well judge who is in the Fault, and whether, in refpect to the Spanifb Nation, the boundlefs Ambition of thofe Conquerors, or the ill Management of thofe who have received the Benefits that have arifen from thefe Conquefts, deferves the Blame.
To begin then with Mexico: The Ecclefiaftical State of the Country at prefent confifts of an Archbifhop, and eleven Suffragan Bifhops, whofe Revenues, computed according to their own Returns of their Tenths, which we may be fure do not exceed the Value of them, amount to one Million and a Half Sterling per Annum. It is farther computed, that their Revenues make about a Fourth of thofe belonging to the Clergy, and that the Eftates of the Ecclefiaftics may be reckoned a Fourth of the Whole Province or Viceroyalty ; according to which Computation the Total Revenues of Mexico may be taken at twenty-four Millions of our Money. But there is another Way of calculating the Wealth of Mexico, which I will prefent to the Reader, becaufe I am pretty confdent he will find it nowhere elfe: There was brought into the King's Exchequer at Mexico, in the Year 1730 , fomewhat better than a Million of Marks of Silver. This was the King's Duty from the Mines, which ought to be one Fifth of the Metal taken out of them. It is true, moft People think the King is pretty roundly cheated; but becaufe this does not appear to us, we will fuppofe he is honeftly paid, and that this is a Fifth Part of what is dug out of the Mines; the Whole therefore muft amount to five Millions of Marks (a Mark is equivalent toeight of our Ounces); fothat if we compute this Silver
at five Shillings per Ounce, then the Inhabitants of Mexico receive annually from their Mines ten Millions in Money.

With refpect to the Riches of Peru, we cannct give quite fo diftinct an Account; but, however ${ }_{3}$ we will give the Reader the beft Account we can; and firft, as to the Mines of Potofi, we have a clear Relation of them for fifty Years, that is, from their firf Difcovery, to the Year 1595: Within which Space they had produced forty-four Millions of our Money; but it is allowed, that fince that time, they have funk very much in their Value, and it is no lefs certain that other very rich Mines have been fince difcovered. The Gold and precious Stones, brought from this Country and Cbili, are of incredible Value; and, if we may truft to the Accounts that are given us of the City of St. Jago, in the laft mentioned Country the Wealth of the Inhabitants is fo great, or rather they have fuch a Plenty of Gold, that almoft all their Utenfils, for common Kitchen Service, are made of that rich Metal. After all, if we had the cleareft Accounts of the Produce of their feveral Mines, they would not go a great Way towards fatisfying us as to the Advantages that Spain reaps from thefe Countries, inafmuch as the Spaniards fettled in America are known to have vaft Hoards of Plate; fend annually prodigious Sums in Silver to the Eaft-Indies; and employ much larger Quantities in a Contraband Trade with the Englifh, French, and Dutch. But we have a tolerable Account, after all thefe Deductions are made, of what is annually returned to Spain in Time of Peace; and therefore, upon this, we fhall chiefly infift: The Galleons bring home about three Millions in Gold, and the Flota one: In Silver, the ordinary Cargo of the Galleons is twenty Millions, and of the Flota ter: : In precious Stones, fuch as Pearls, Emeralds, Torquoifes, $\mathcal{E}^{2} c$. they export about half a Million; in other rich Commodities, firch as Cochineal, Indigo, Logwood, $\mathcal{E}^{2} c$. about three Millions and an half; fo that taking all thefe together, they bring home thirtyeight Millions, without reckoning what comes by regifter Ships, and in a clandeftine Way; which thofe who are beft acquainted with it, have eftimated at twelve Millions more: Upon the whole therefore, keeping ourfelves within the ftricteft Bounds of Moderation, we may venture to affert that Spain draws now from feven to ten Millions Sterling from thefe Countries every Year, and muft formerly have drawn much more.

If fhe is able to keep very little of this, which is very pofitively faid, and I believe may be very true, it does not at all leffen the Value of thefe Acquifitions: She might' keep every Penny of it if fhe would, by fetting up and encouraging proper Manufactures in her Dominions. As fhe does not, it is become the common Intereft of all the trading Countries in Europe, that fhe fhould be maintained in thefe rich Poffeffions, not for her Sake, but for their own; and indeed, as things are now managed, the waftes her unhappy Subjects the Indions, and her ftill more unhappy Negro Slaves, in digging Gold and Silver for other People. Such, according to the wife Difpofitions of Providence, are the Rewards of Induftry, and the Punifhments of Idlenefs, Luxury, and a People's want of Attention to their own Concerns.

But if a few wife and good Princes were to rule in Spain, the Cafe would very foon be altered; they would firt make ufe of their Treafures to erect Manufactures in their European Dominions, and next lay open this rich Trade to all their Subjects in thofe Dominions. Such a Conduct would, in the Space of a few Years, change the Face of their Affairs entirely; and nothing could hinder their becoming again what they once were, the mort formidable maritime Power in this Part of the World.

It would then appear what vaft Advantages accrued from the Difcoveries and Conqueits of Columbus, Velafquez, Balboa, Cortes, Pizarro, Almagro, Baldivia, and all the other Heroes, that ftand recorded inSponifh Hiftories: Heroes, who, without doubt, merit all the Praifes that have been beftowed upon them; and who, with prodigious Labours, with infinite Hazards, and at the Expence of the Lives of many thoufands of brave Men,
purchafed

Chap. III. of PERU and CHILI.
purchafed thofe Treafures which have been wafted away in gratifying the Pride of Princes; the Lufts of Priefts; and the innumerable Vices of a long Train of weak and wicked Minitters. Happy would it be for all other Nations if Spain alone was infamous for this kind of Extravagance and Madnefs! Happy for them; if after following they would grow wifer by her Example! Happy for them, that fhe is not yet fenfible of her Faults!
The Miftakes that have been made by the Spaniards; however ftrange, however amazing, they may appear, when thus examined and pointed out upon Paper, are fuch as any other Nation may be very eafily betrayed into, when her Circumifances become like thofe of the Spaniards. All Colonies are a kind of political Children, and, as fuch, contribute to the Honour, Safety; and Riches of their Parents, if thofe Parents are not wanting to themfelves ; it is, however, very common for Governments, as well as private Perfons, to fall into many great Errors upon this Head; fuch as treating young Colonies with vait Tendernefs and Indulgence, forming from thence very fanguine, and fometimes very unreafonable Expectations; and, becaufe thefe are not anfwered as foon as expected, falling out with, and difregarding, thofe Colonies, at the very time when, if they had been attended to, they might liave more than anfwered their Expectations. It is likewife common with them, as well as Parents, to grow unreafonably, I was going to fay ridiculoufly, jealous of their Off-fpring; by this foolifh Conduct, actually producing thofe Mifchiefs they endeavoued to avoid, and which could have been produced only by fuch Endeavours.

They are apt to fancy, that, becaufe thefe Children are fettled at a Diftance, they forget that they are Children; and, full of this idle Fancy, they foon forget that they are Parents, and begin to treat them with an arbitrary Authority; becaufe they live at aDiftance, and fupport themfelves by their own Labours, they make it their Study to draw from them wherewith to maintain the Luxury and Prodigality of thofe Childen who live at home with them, and are thereby become the Objects of an irregular Affection, which very foon degenerates into an exceffive Indulgence. Hence arife all thofe Mifchiefs that are fo warmly deplored by thofe, who, if they would act with proper Care and Spirit, might eafily amend them; for it is with Colonies as it is with Children, nine times in ten their Errors fpring from the Ufage they have met with; and they are blamed for their Mifcarriages by thofe who are in reality the Authors of thofe Mifcarriages, and ought therefore to blame themfelves.

An ancient and almoft incurable Miftake this has been; but it is neverthelefs a Miftake for all that, and a Miftake which it imports every great and wife People to amend. A Nation that has great Colonies abroad can never want Trade, Riches, or maritime Power, unlers fhe is wanting to herfelf. A familiar Example will illuftrate this, and that in fuch a Manner as muft convince every Perfon of the Truth of this Remark. A Man who has a large Eifate and no Children, mult of necefity employ many Servants, of whofe Fidelity he cannot be altogether, or at leaft always, certain; and, with refpect to a Nation, Subjects obtained by the Sword, that is, by Conqueft, or Slaves purchafed by Money, are in the Nature of Servants; but the natural Subjects of a State, by which I mean fuch as have been born or bred up under its Laws, are to all political Purpofes Children, let them live where they will; and, if due Care be taken of them, will difcharge the Duties of Children. But if Parents, who are in this Condition, inftead of feeking the Advantages they might attain from it, employ their Cares another Way, and divert their Thoughts and their Affections from their Children to Servants and Strangers, it is no Wonder that their Affairs go wrong.

Now this was precifely the Cafe of the Spaniards: The Emperor Charles V. happened not to be born in Spain, and, which was ftill more fatal to that Country, was chofen Emperor of Germany, which quite turned his Thoughts from Spanifb Affairs; fo that though he was as great a Captain, as able a Statefman, and as wife a Monarch as ever fat upon that Throne, yet with all his Vor. II. Numb. 80.

Virtues and all his Abilities ho laid the Foundation of their Misfortunes, at the very Time when he thought he was laying the Ground-work of an univerfal Monarchy ; and at a Time too, when; by attending clofely to the Affairs of Spain, he might have made it a gireater,' happier's and more potent Nation, than ever the Perfians; Greeks; or Romans had been. His Son Pbilip heightened all thefe Misfortunes, though he purfued quite a different Conduct ; but then he purfued it to the fame End; that is to fay, by affecting univerfal Monarchy he ruined his own.
He was generally and very jufty reputed a Prince as. weil verfed in Politics as any of his Age, or perhaps of any other; yet he was fo much taken up in endeavouring to reduce the Netherlands, enflave Italy; conquer England, over-tun France, and in annexing Portugal to his Dominions, that he never confidered his Subjects int the Spanifh Amcrica, farther than as they enabled him by conftant Supplies of Money to carry on thefe his vaft. Defigns. From what has been faid it is evident; that however wife, however penetrating, thefe Prinices might be; they certainly over-fhot themfelves in their Schemes concerning the Weftern Indies. Inftead of looking upon it as an Eftate, they feemed to think it only a Farm, of which they were to make prefently what they could. In doing this it muft be owned they acted with Skill and Vigour, for they drew immenfe Sums from thence; which they wafted in Europe, to difturb others, and in the End to deftroy their own State. Mr. Lewis Robert:s Author of the Map of Commerce, an excellent Book for the Time in which it was written, tells, that it appeared by the Records in the Cuftom-houfe of Seville, that ind the Space of feventy-four Years, computing backwards; from the Time in which he wrote, the Kings of Spain had: drawn into that Country, from America, two hundred and fifty Niillions of Gold, which make about ninety-one Millions Sterling. He alfo obferves, that this very Prince, Pbilip II. of whom we liave been fpeaking, fpent more in his Reign than all his Predeceffors in the whole of their refpective Reigns, though no lefs than fixty-two Kings had reigned before him. Yet this cunning, this ambitious, Monarch left his Subjects in a manner quite exhaufted; and, by eftablifhing a moft pernicious Syitem of Politics, left the total ruining of his Dominions, by way of Legacy, to his Succeffors ; a Point which, with wonderful Obftinacy, they have fteadily purfued ever fince;

All who are in any Degree acquainted with the Fiflory of Europe know, that, for a long Courfe of Years; Spain maintained at once Wars in Flanders, Germany; Italy, and fometimes in Ireland, which created a prodigious Expence of Treafure and of Troops, neither of which from the Death of Cbarles V . they were in any Condition to f pare: As Families were reduced by the Expence of ferving in the Army, they were induced to feek new Fortunes in the Wef-Indies; and thus Numbers went over thither, not to cultivate the Country, or to improve Trade, but to frrip and plunder thofe who went before them. Other great Families again concurred with the Meafures of the Crown, in hopes of Vice-royalties and other valuable Offices in its Conquefts ; but, if ever their Schemes were beneficial to their Families, which may admit of doubt certain it is, that they contributed more and more to the Ruin of the Spani/b Nation. For though his Catholic Majefty once pofferfed Noples, Sicily, Sardinia, Milan, with other Territories in Italy, befides the Low Countries and fome other Provinces, which are now loft; yet, for want of attending to Commerce, and by having no Sort of Oeconomy, all this turned to his Prejudice; and it plainly appeared, towards the Clofe of the laft Century, that with all their boafted Sagacity and Firmnefs the Spaniards had ruined thenrfelves, by acquiring too great Power; and rendered themfelves Beggars, by abufing their immenfe Riches: With fivelling Titles, and wide Dominions, they were defpicably weak, and fcarce any but Copper Money was to be feen, in a Country which received above twenty Millions annually from its Plantations.

Before I quit this Topic I muft take notice of another Thing, which is certainly very extraordinary. This wrong Turn in the Spanish Policy had a wonderful Effect: It made all the Enemies of that Nation rich, and all its $\mathrm{U} u$

Friends

Friends poor. Every body knows that the United Provinces not only made themfelves free and independent, but rich and powerful alfo, by their long War with Spain. Our Maritime Power was owing to the fame Caufe. If Pbilip the IId had not difurbed Queen Elizabetb, our Fleet might have been as inconfiderable at the Clofe of har Reign as it was at the Beginning, when we were peftered with Pirates, even in the narrow Seas. Our Plantations abroad were chiefly owing to Expeditions againft the Spaniards. Our Manufactures at home were the Confequence of affording Refuge to the King of Spain's Proteftant Subjects. When Queen Elizabetb's Succeffor clofed with Spain, he fuffered by it, while France, the only Country then at War with Spain, was a Gainer. I fay nothing of Cromzell's Breach with Spain, and the Advantages he drew from it; becaufe the World feems well enough apprized of all I could fay on that Subject already.
But I cannot help obferving, that both the Dutch and we were at vaft Expences after the Reftoration, to preferve the Spanifb Flanders, while the Spaniards themfelves were inactive, and left all to be done by their Allies. As foon as the Tables were turned by the Acceffion of King Philip V. the French became great Lofers by fiding with this Nation, though they had always got by fighting againft them ; infomuch, that all the true Patriots in France complained, that while Leweis XIV. Shewed himfelf an excellent Parent, in his Family, he difcharged but indifferently his Truft, as the Father of his People ; but to what End fhould I look abroad, when it is plain, for our own Situation, that we were never Friends with her, but at our Coft; and never Foes, but at her's. By fo long a Series of Mifmanagement the Spaniards have brought their Affairs into fo wretched a Situation, that they neither have, nor can have, any yery great Benefit from their vaft Dominions in America. They are faid to be Stewards for the reft of Europe; their Galleons bring the Silver into Spain, but neither Wifdom or Power can keep it there. It runs out as faft as it comes in; nay, and fafter; infomuch, that the little Canton of Bern is really richer, and has more Credit than the King of Spain, notwithftanding his Indies.

At firt Sight this feems to be ftrange and incredible; but, when we come to examine it, the Myftery is, by no Means impenetrable. The Silver and rich Commodities, which come from the Indies, come not for nothing (the King's Duties excepted) and very little of the Goods and Manufactures, for which they come, belong to the Subjects of the Crown of Spain. This fhews how the Wealth
of the Spanifh Indies becomes the Property of other Nations; and how the Prefervation of their Dominions becomes as much the Concern of their Neighbours, as it is their own. It likewife fhews how teribly they are hurt by the ambitious Schemes of their Court, in Europe; and how every frefh War in Italy ferves to weaken Spain, and exhauf her Colonies; fo that, in the End, fome great Revolution will happen there, but of what Kind, it is not eafy to forefee; but certain it is, that the Spanifb Power gradually declines, and many of their beit Settlements are already funk to nothing.
As for Inftance, Florida is become a Burthen to them; they having nothing there of Confequence but Fort $\delta t$. Auguffine, which they keep to cover the Paffage of their Plate Fleets; the Inand of St. Domingo is impoverifhed, to the laft Degree, and the City of that Name had been long enough ago left defolate, if it was not for the general Tribunal of Juftice held therein, which is its fole Support: Yet the French have a large and fourifhing Colony on the fame Inland; and if ever they fhould, as 'tis more than probable they will, elbow out the Spaniards from thence, it will change the Face of Affairs in the WeftIndies extreannly. The Ifland of Cuba is no longer what it was; and, in fhort, their Affairs decline fo faft, under their prefent Management, that, unlefs fome timely Remedies are applied, the Ruin of their Colonies muft follow very foon.
This is a Leffon fit to be confidered by other Nations; and it was for that Reafon I have infifted upon it fo much. It would, however, be no difficult Tafk to proceed ftill farther, and to examine the Confequences that may follow, in cafe the Spaniards fhould either be deprived of their Inands in America, or fhould abandon them, which I look upon as the more likely Event of the two : But I have already beftowed too much Time upon this Subject, and I am fenfible, that fuch a Difcourfe might appear too grave to fome, and too chimerical to others; and therefore I fhall not infift upon it here: However, as I have Reafon to hope, this Work will long outlive its Author, I flatter myfelf that, whenever the Event happens, Pofterity will take notice of my Conjecture; and it will be very happy for the Britijb Nation, if right Meafures are taken in Time to fecure thofe Advantages that may be derived from fuch an Event; or at leaft to avert thofe Dangers to which our Colonies mult be expofed, if, whenever it happens, our Strength in the Weff-Indies fhould not be great enough to enable us to feize a confiderable Share of what they forfake.

## S E C T I O N XVI.

A concije Hifory of the Difcovery, Settlement, and Cultivation of Brazil by the Portugueze ; the Conqueft of the greateft Part of that Country by the Dutch, the Recovery thereof by the Portugueze, and the vaft Advantages that bave accrued to them of late Years from this noble Colony.

1. A boort Introduction, Jherwing the Nature, Neceflity, and Importance of this Section. 2. The Difcovery of this Country, A. D. 1500 , by Don Pedro Alvarez Cabral. 3. The finall Advantages expected fronz Brazil, when firft vijited by the Portugueze. 4. Some Account of its antient Inbabitants, and their Manners and Cuffoms, from Dutch and Portugueze Writers. 5. The Methods taken to fettle it frift by Europeans, 6. The Eftabliftoment of a regular Colony under a Governor General from the Crown of Portugal. 7. The Attempts made by the French to eftablifs themfelves in this Country, and the Manner in wobich they mifcarried. 8. Anoiber Attempt of the fame Nature, by the fame Nation, attended with no better Succefs. 9. The Dutch undertake, under Colour of their War againft Spain, to make themfelves Maflers of Brazil. 10. Their woonderful Succefs and the furprizing Progrefs of their Arms in that Country. Ir. The Endeavours ufed by the Portugueze to repel thefe Invaders, and to maintain themflelves in the Poffefion of Brazil. 12. Count Maurice of Naffau is fent over by the States General and the Dutch Weft-India Company, to take upon bim the Government of their new Conquef. 13. His wife and prudent Adminifration, by which the bef Part of that noble Couniry reas fecured for and Settled on the Bebalf of the Dutch. 14. Their Treaty with the Portugueze; they recal Count Maurice, and begin to act tyrannically in that Country. I5. The Portugueze again take up Arms, fall upon the Dutch in their Settlements, and after a long War drive

Chap. III. of BRAZIL by the PORTUGUEZE. 167
them entirely out of Brazil. I6. The IIffory of this Colony contimued from thence down to the prefent Times; zwith fome curious Remarks on the Gold and Diamond Mines difcovered tbere. 1\%. Objervations and Reflections upon the principal Events in the foregoing Section.

IF we confider the admirable Situation of this Country, its great Extent, and other Advantages derived from Nature, we might readily pronounce, that a Settlement there muft be attended with almoft all the Benefits that Men ufually feek or defire in fuch Eftablifhments ; and though it be very true, that this Country was not only difcovered and fettled by the Europeans, near two hundred Years before any important Difcovery was made of the rich Gold Mines which it contains, yet this only fhews, that Judgments built upon Reafon, and the natural Structure of this terraqueous Globe, are not only as found and certain, but even more fo than fuch as are grounded on Experience. If towards the Middle of the laft Age, a Man of the greateft Reading, and foundeft Underftanding, had declared, that there were Gold Mines in this Country, he would have been looked upon as an Enthufiaft, one of thofe whom too much Learning had made almoft mad ; for it would have been faid, That after inhabiting this Country for near two Centuries, the Europeans would certainly have difcovered fuch Mines, if they had been there ; but the Fact comes out quite otherwife: Thofe Mines were there, and yet they were not difcovered; and it feems to be a very high Reflection upon the boafted Knowledge of Mankind, that, with refpect to Europeans as well as Indians, moft of thefe valuable Difcoveries have been made by Chance.

If thofe Relations which are printed under the Name of Americus Vefpucius were really his, we mutt be obliged to own, that he pretended, amongft other Things that he never performed, to the Difcovery of this Country; but the Matter of Fact is, that all the Dates in thefe Pieces fo manifeftly give the Lye to the Matters contained in them, that the only Way to fave the Honour of this famous Man is, to deny that they are his: Some alledge, that the old Admiral, Columbus, gained fome Knowledge of the Coaft in the Year 1499, in his third Voyage ; but, not to dwell upon Uncertainties, we will fix the Difcovery to the fucceeding Year, wherein we have the concurrent Authority of both Spanifb and Portugueze Writers to fupport us ; and we thall next enter into a regular and fuccinct Hiftory of this Colony from that time to this, which is certainly a Thing not to be met with in our Language, or perhaps in any other.
2. Don Pedro Alvarez Cabral, a Man of Quality es well as of great Abilities, failed in the Month of March, 1500, with a Fleet of thirteen Veffels of various Sizes, for Sofala; from whence he was to have continued his Courfe to the Coaft of Malabar ; but, after paffing the Cape de Verd Inands, he flood fo far out to Sea, in order to avoid the Calms, fo common on the Coatt of Africa, that on the 24 th of April, he fell in with an unknown Coaft on the Weft, and as the Sea ran very high he was obliged to fail along that Coaft as far as the Latitude of I5 Degrees South, where he found a good Haven, to which he gave the Name of Porto Seguro, or the Safe Port, and the Country itfelf he called, the Land of the Holy Gboft, which Name was afterwards changed for that of Brazil, on account of its abounding with a kind of Wood of that Name, which had been fo called in Europe about three hundred Years before this Country was difcovered. Don Pedro having fent People on Shore, to examine this new Land, and they reporting that it was extremely well watered, very fertile, full of FruitTrees, and inhabited by a mild and gentle People, he refolved to land his Men there, in order to refrefh them.

He did fo accordingly, and found it exactly agreeable to what his People had reported; and that the Savages were fo far from offering any Infult to the Portugueze, that they received them with more Kindnefs and Good-will than they had Reafon to expect. It fo fell out, that Don Pedro had with him fome condemned Criminals, whofeSentence, by the Clemency of the King of Portugal, had been changed from Death to Tranfportation; of thefe
he thought fit to leave two in the Country, to learn the Language, to make farther Difcoveries, and to acquire the beft Knowledge they could of the Land, and its Inhabitants; but believing, as he very well might; from the very firt View of this Country, that the Difcovery he had made was of very great Importance; he refolved to lofe no Time in giving an account thereof to his Mafter, and therefore difpatched immediately one of his Veffels back to Lifbon for this Purpofe, with fome Perfons on board upon whofe Fidelity he could depend, together with one of the Savages of that Country", to be inftructed in the Portugueze Language, to facilitate the perfect Knowledge of this new found Land. He likewife fet up a Stone Crofs, as a Monument of his havirig been there, and of his having taken Poffeffion of that Country in the Name, and on the Behalf ${ }_{\text {p }}$ of his Majefty the King of Portugal, a Thing at that Time the more neceffary, becaufe of the Difputes that were then fubfifting between the Spaniards and Portugueze; about their Difcoveries.

It was in confequence of this Account, that the King of Portugal fent feveral Perfons to difcover upon thefe Coafts; who very foon found that this was Part of the Cortinent of America; upon which, as might have been very eafily forefeen, there arofe great Difputes between the two Crowns, about the Extent and Boundaries of this Country; but at laft it was fettled, that from the River of Maranon to the River of Plate, fhould be yielded to the King of Portugal.
3. It cannot be fuppofed that thefe firf Difcoverers could form any diftinct or juft Notion of the Nature and Importance of fo vaft a Country, which, according to its prefent Boundaries, may be fairly reckoned two thoufand four hundred Miles, from North to South; and two thoufand from Eaft to Weft ; tho' the Portugueze have farce penetrated five hundred Miles, any where, even to this Time. The Northern Parts of the Country lie near the Equator, are fubject to great Rains and variable Winds, more efpecially about the Months of Marcb and September, when they are frequently difturbed with moft dreadful Hurricanes and Tempefts, by which the Country is frequently under Water, and muft confequently be very unwholfome. Here, therefore, the Portugueze content themfelves with the bare Edge or Sea-Coaft, without endeavouring to penetrate deeper into the Country, defiring only to maintain their prefent Poffeflions and thereby keep out Foreigners.
In the middle Part of Brazil, from the Latitude of five Degrees South to the Tropic, it is obferved that the Winds and Seafons are the Reverfe of thofe in other Parts of the World within the fame Latitudes; for whereas in them a dry Seafon comes on when the Sun goes Northward, and the wet Seafon begins when the Sun returns to the Southward; here the wet Seafon begins in April, when the South-eaft Winds fet in with violent Tornadoes, Thunder and Lightning; and in September, when the Wind fhifts to Eaft-north-eaft it brings with it a clear Sky and fair Weather; and this is the Time of their Sugar Harveft. There are but two Winds blow upon this Coaft; viz. the South-eaft from April to September, and the North-eaft from September to Aprit again; but thirty or forty Leagues at Sea they meet with the conftant Trade-wind, which blows in the Atlantic Ocean all the Year round, from the Eaftward, with very little Variation. There is no Country, between the Tropics, where the Heats are more tolerable, or the Air more healthful than this, being contantly refrefhed with Breezes from the Sea, and abounding with Lakes and Rivers; which annually overflow their Banks; and in the Inland Part of the Country, the Winds from the Mountains are ftill cooler than thofe that blow from the Ocean.

That part of Brazil which lies ftill more to the South, and without the Tropic of Capricorn, is one of the fineft in the known World, in all Refpects; but
the Portugueze Dominions are but narrow here, confining on the Spanifh Territories on the River la Plata. We have taken this Opportunity of defcribing the whole Country as it lies ; but the Reader will eafily conceive that it was fubdued and planted by Degrees, and that the Accounts tranfinitted from Time to Time to Lifbon were agreeable to the Alterations in the State of the Colony. It was from the Nature of thefe Reports, that Things at the begiming went on flowly. The firf Portugueze Inhabitants were fenfible enough, that the Soil was fertile, the Air temperate, and the Country well watered; but alas! they could report no more. Brazil appeared to them no otherwife than as a pleafant, fruitfui, and well fituated Country, capable indeed of furnifhing Abun-dance-but not of Gold and Silver--very fit for any Sort of Improvement ; but deftitute, as they fuppofed, of Mines.

Upon thefe Reports the Miniftry did not indeed order it to be deferted; but they tranfported wicked People thither, according, as from Time to Time their Crimes brought them under the Cenfure of the Law, which had two very bad Effects; for firft it difcredited the Colony in the Eyes of the Portugueze Nation; and next, it proved the Means of corrupting the poor Indians, who were much more apt to catch the Poriugueze Vices, from their Example, than to receive the Chritian Religion by their Teaching; and indeed in all Colonies. I am atraid the Lives of Chriftians are fuch as may be juftly efteemed the Source of untractable Infidelity among the Indians.
4. But, to apprehend this nore thoroughly, we muft have fome Acquaintance with the Natives of Brazil, and their State and Condition at the 'Time of which we are fpeaking. Thefe Savages differed very little in Stature or Complexion from the Portugueze themfelves, but they much exceeded them in the Strength, Robuftnefs, and Vigour of their Bodies. The Manner of their Living, however, was barbarous enough; for they lived in the wide Plains, fome in Villages, and others moving about, according to their Humours. Their Villages confifted only of three or four very large Houfes, not unlike our Barns, in which a whole Family or Tribe lived together, under the eldeft Parent, in the State of Nature; but, however, we can fay nothing as to the Extent of their Authority.

They made ufe of Fowling and Fifhing for their Subfiftence, and made up the reft of their Diet with the Fruits of the Earth; fo that though they had not any Iuxurious Plenty, yet, in fo fertile a Country, they could not fuffer any great Degree of want. But, what feems fomewhat extraordinary, they were, notwithftanding this feemingly frugal and temperate way of Living, continually at War with each other ; but for what Caufes it is not eafy to imagine; unlefs we fhould admit what fome old Writers affirm, that they made thefe Wars chiefly, that they might kill and eat each other, efteeming human Flefh the greateft of Dainties. But perhaps the Teftimonies of thofe who own themfelves gruilty of extirpating thoufands of thefe poor Creatures, to whom they could have no Quarrel worthy of rational Beings, ought not to be received, or at leaft not received in its full Extent; for there is a certain kind of Malignity in human Nature, which leads us to calumniate and mifreprefent thofe that we injure ; as if by aggravating their Vices we could juftify, or at leaft excufe, our own.

But, at the Bottom, this will be found a Doctrine equally falfe and abfurd, for we ought to reclaim bad Men, and not to murder them; and Experience fhews us, that with regard to other Indians, who have been painted in as black Colours as the People of Brazit, they derived their Characters rather from the heated Imaginations of European Writers, than from any bad or brutal Conduct in them all. But let us defcend a little into Particulars from fuch Authorities as we have. The Portugueze and Dutch Writers give the Name of Tapuyers to the Natives which inhabit the North Part of Brazil, and the Name of Tupinambies or Tupinamboys, to thofe who dweli in the South of Brazil; but divide thefe again into feveral petty Nations, differing in Lan-
guage, but not much in Manners and Cuftoms; and therefore, I fhall only treat of them under the two firf grand Divifions of Tapuyers and Tupinombies.

The Tapuyers are Men of good Stature, and as they inhabit a hot Climate, almoft under the Equator, are of a dark Copper Colour, their Hair black, and hanging over their Shoulders; but they fuffer no Hair on their Bodies or Faces, and go almoft naked; the Men only inclofing the Penis in a Cafe, as fome other Americans do, and the Women concealing their Nudities with Leaves. The Men have alfo a Cap or Coronet of Feathers, but I don't perceive the Women have any Covering on their Heads. Their Omaments are glittering Stones, hung upon their Lips or Noftrils, and Bracelets of Feathers hung about their firms ; fome of them paint their Bodies of all Manner of Colours; whereas, others, rubling their Bodies with Gums, ftick beautiful Feathers upon them, which makes them look more like Fowls than human Creatures, at a Diftance. The Tupinambies, who inhabit the South of Brazil are of a moderate Stature, and not of fo dark a Complexion as their northern Neighbours, who lie nearer the Line; but neither the one or the other are fo dark as the Africans are, who lie in the fame Latitude, it having been more than once obferved, that there were no Negroes in America, till they were tranfported thither by the Spaniards and Portugueze.

The Tupinambies, however, refemble the Africans in their flat Nofes, which are not natural, but made fo in their Infancy; a flat Nofe being efteemed a Beauty among them. They have alfo black curled Hair on their Heads, but fuffer no Hair to grow on their Bodies and Faces, any more than the Tapuyers, and paint themfelves like the northern Brazilions. The general Food of the Brazilians was the Caffavi or Mandioaka Root dried to Powder, of which they make Cakes like our Sea Bifket. They carried this Flower with them alfo on Journies, and it ferved them infufed in Water both as Meat and Drink ; but I don't find they had any Sort of Corn till the Europeans carried it thither. They ufed alfo to feed on other Roots, Fruits, and Herbs, and fuch Venifon as they could take in Hunting, as alfo on Fifh and Fowl, if they lived near the Water ; and with every thing eat a great deal of Pepper. Some have added, that they were Cannibals, and eat human Fleft from one End of Brazil to the other, but late Travellers obferving no fuch thing, little Credit can be allowed to this, for Reafons already given

The general Liquor the Natives drink is Spring-Water, of which 'tis faid they have the beft and the greateft Variety in the World; but there are other kind of Liquors, which have a very good Body, made of their Fruits, preffed and infufed; or of Honey; with which they fometimes get very drunk, fitting whole Days and Nights over their Cups. They are charged alfo with being a very lazy Generation, that will never work or hunt, but when Neceffity compels them. And as to Arts and Sciences, they were fcarce Mafters of any, unlefs the Art of Spinning and Weaving, and forming their Arms (which confifted of Bows, Arrows, Lances, and Darts) and the Art of Building, which was but mean; for their Houfes did not need any great Contrivance. As for Letters, Characters, and Arithmetic, they were perfectly ignorant of them. They had fome Knowledge of the Virtues of Ceveral Herbs and Drugs, which they frequently adminiftered with Succefs to the Sick; but, a certain Writer relates, that when they defpaired of recovering the Patient, all his Relations agreed to knock him on the Head, which they thought much better than a lingering Death, and this probably may be juft as true as their devouring human Flefh.
Hunting, Fifhing, and Fowling, were rather their Bufinefs than Amulements, being abfolutely neceffary for the Support of their Families, in a Country where they had no tame Cattle or Corn. Drinking, Singing, and Dancing, were more properly their Diverfions; thefe they practifed on their rejoicing Days, for a Victory, or the Birth of their Children. They are great Smoakers, and take the ftrongeft Tobacco. Their Pipes are a hollow Reed or Cane, the Bowl a large Nut-Mell, that holds almoft a handful of Tobacco. They, are a tractable

## Chap. II. of BRAZIL by the PORTUGUEZE.

and ingenious People, ready to learn any Art or Science the Portugueze will teach them: And take nothing fo kindly of the Fathers as the inftructing their Children, which has given the Fefuits an Opportunity of making abundance of Converts; and thofe who live under the Portugueze generally conform themfelves to their Cuftoms in eating, drinking, cloathing, $\mathcal{E}^{2}$. few of thefe go naked.

Such were, and fuch are, the Natives of this famous Country, little addicted to Labour, becaufe not at all infected with Avarice; their Defires but few, and thofe eafily gratified; their greateft Vice, the Defire of Revenge, and that eafily raifed. But let us now return to our Hiftory, and the Steps by which the Portugueze Settlements in Brazil became fo confiderable as we now find them ; in fpite of the many Difficulties they had to Atruggle with, particularly one, of which, though far from being the leaft, I do not find any Notice has been taken; by which I mean the vaftDifproportion between the Mother Country and the Colony ; the Country of Brazil being three hundred times as big as that of Portugal; I do not, however, intend by this, the Country the has fettled in America, but that whole Tract of land to whicl fhe lays claim, and which paffes therefore in the Maps under the Name of Brazil.
5. To facilitate the new Eftablifhments made here, the Crown had firft of all recourfe to the making very extenfive Grants to fuch as were enclined to go and fettle there, or who had a Power of fending others thither. Upon this Plan it was that fome of the richeft and moft powerful of the Nobility had Diftricts given them equal in Extent to Poriugal itfelf. This was for fome time attended with little Inconveniency ; for the Crown might very well give to others what was ufelefs to herfelf, and what was to be improved and made ufeful without her being at any Expence. In fhort, there was little more referved than Quit-rents, and thefe too of no great Value; the State being content with the Sovereignty, and leaving the Property in a Manner wholly to the Subject.

Thefe Methods were extremely neceffary at that time, when the Eaft Indies took up the whole Attention, not only of the Minifters, but of the Nobility; who found Means to repair their Chattered Fortunes, by obiaining Governments in that Part of the World where they foon acquired to themfelves vaft Eftates. Thofe who were content to try their Fortune in this new Colony, found many Obftacles in their Way; the Natives had not, indeed, any Notions of Liberty; but, upon their firft feeling of Slavery, they grew defperate, and, if any Credit be due to the Portugueze Hittorians, killed and eat without mercy every Chriftian that fell in their Way.

But the Fertility of their Country made fome amends for thefe Inconveniencies, and drew abundance of People from other Parts of America to fettle there; where they erected a new kind of Government among themfelves, which, perhaps, fprang, like moft other Governments, from downright Neceflity, the very Nature of which Neceffity prefcribed the Form of their Conftitution; in fhort, every Mafter of a Family was a Planter and a Soldier. In the former of thefe Capacities he laid out as much Land as himfelf and his Family could cultivate, in the latter Profeffion he was no lefs affiduous, performing his Functions duly and vigorounly, becaufe in Defence of his own Property ; and hence it was that every Diftrict in the new Colony had the Title of a Captainthip, which Title they ftill retain, though the State of things is abfolutely changed; and from being the bravelt and moft martial, they are now become the moft lazy, moft luxurious, and moft effeminate People in the World.

But in thofe early times, when Honefty and hard Labour were the only ways of thriving, they grew apace, and in the Space of fifty Years they fpread over, a very large Space of Country, and erected abundance of good Towns, amongft which the five principal were thefe, Tamacara, Fernambuca, Ilheos, Porto Seguro, and St. Vincent, each of which had a well peopled and a well cultivated Territory about it. The Hourifhing State of Brazil foon awakened the Attention of the Court, and

Vol. II. Numb. 80 .
the Crown began to repent of having been fo liberal in its Grants, when it appeared that thofe Grants were become fo profitable: A thing common enough in all Countries as well as Portugal, though there are very few Countries in which Governments have acted with the fame Spirit as that of Portugal did upon this Occafion
6. It was in the Reign of King Fobn III. that thefe great Improvements were made, or at leatt that the Crown became fo fenfible of them; and therefore the firft Step that Monarch took, was to revoke all the Grants made to the original Proprietors, which he did in the Year 1549. The fame Year he fent over Tbomas de Soufa with the Title of Governor-General of Brazil; he carried with him abundance of Officers civil and military, with a confiderable Borly of Soldiers on board a Fleet of fix Sail of Men of War s he carried over likewife fix Fathers of the new Order of $\mathcal{F}$ efiits, to convert the Indians, and an entire new Plan of Power, adjufted according to the Will and Views of the Court. He was alfo inftructed to build a new Town in the Bay of All Saints, and to take the rieceffary Meafures for fecuring the Colony againft its Enemies, and to do every thing that might increafe either its Trade or its Reputation.

He arrived in the Month of April that Year, and bei gan very foon to enter upon the Execution of what he was directed to perform, making War upon the Savages, building the Town of St. Salvador, and Monafteries for his fefuits. What he could not finifh, his Succeffor Edruard Acofta faw compleated; fo that in his Time the Number of Towns was doubled, together with the Inhabitants. He was obliged to think likewife of ftrengthening thefe Towns, by raifing better Fortifications than thofe with which they had been till then furrounded; and this, becaufe other Nations began to think of fettling in America, and fharing with the Spaniards and Portugueze thofe Advantages they faw derived to them from their Colonies.
He executed this Defign with all the Precaution neceffary, demolifhing the old Fortifications of Earth as faft as he was able, to raife ftronger of Brick and Stone, and to furnifh them with Artillery, which, however requifite for his Purpofe, were furnifhed him but very nowly from Portugal. It was not long before the Expediency of this new Method of fortifying, which Reatón had fuggefted, was juftified by Experience, the Frencls making more than one bold Attempt to difturb the Portugueze in their Poffeffion of this Country.
7. It is a Piece of Hiftory of which the bare reminding our Readers is fufficient; that in the Reign of Henry the IId. of France, the Affairs of that Kingdom were in great Confufion; the Difputes between the Catholics and Hugonots being then at the greateft Height, which threw the Natives of the Kingdom into Parties', and made Numbers of active and induftrious People willing to leave their native Soil, and feek an eafier and more contented State in diftant Climates. Amongft thefe there was one Nicbolas Durant, Lord of Villegagnon, a Man of good Family, fome Fortune, a Knight of Malta, and who had ferved at Sea with very great Reputation, which fo far entitled him to the Favour of the Government, that he was made Vice-Admiral of Bretagne. But though this Preferment was rather honourable than lucrative, yet it created him fo much Envy, and he was fo ill treated at Nantes, that he took a fudden Refolution to quit the Kingdom at all Events, and carry a Colony into fome diftant Part of the World. "He had by Chance received fome tolerable Accounts of Brazil, and, having weighed them attentively, he drew up a Scheme for fixing a Settlement in that Country, and a View of the Advantages that might be expected from it; both which he prefented to Gafpar de Colligny; then Admira! of France; and demanded his Affiftance towards the fitting out a Squadron capable of making fuch a Settlement as he intended.

The Admiral was a Man of great Abilities and great Virtues; he was zealous for the Proteftant Religion; and knew that the Sicur de Villegagnon was no very warm Catholic; he therefore very readily accepted of his Propofal and promifed to give him all the Encouragement in hi

X x
Powe

Power. The more the Admiral converfed with this Gentieman, the better he was pleafed with him; he found him brave and enterprizing; a Man of found Senfe, eloquent, and a good Scholar ; therefore he opened to him freely the Caufe of his taking this Affair fo much to heart ; which was, the fettling in a good Soil and wholfome Air, a Proteftant Colony : That in Cafe the Affairs of his Friends fhould ever come to be totally ruined in France, they might have fome Place to which they might repair out of the Reach of their Enemies. The Sieur de Villegagnon very readily approved what his Patron defired, and undertook the Execution of it. Upon which the Admiral reprefented Things fo to the King, that three Veffels of convenient Size were fitted out in the moft effectual Manner, with a fufficient Number of Seamen, as well as Adventurers, on board: And in the Month of May, 1555, this fmall Squadron failed from Havre de Grace for Brazil, where, after a tedious and, troublefome Voyage, they arrived in November. At firft they landed upon a Rock, which they found to be uninhabitable, and therefore, marching farther within Land, they fixed upon a very commodious Spot of Ground almoft under the Tropic of Capricorn, where they erected a convenient Fortrefs for their Security, both againft the Natives and the Portugueze, which they called Fort Colligny. When they were there fixed, the Sieur de Villegagnon fent the Admiral a large Account of his Proceedings and Situation; he defcribed to him both the Country and the Inhabitants ; obferved to him, that it was extremely practicable to maintain themfelves there, and to make it both a ufeful, and a thriving Colony; but at the fame time he remarked, that fuch as were fent over to him, muft not expect the Delicacies of Europe; that they had no other Bread there but what was made of a certain Root ground to Powder, no Wine, much Fifh, and fome Venifon; and that People who could live contentedly upon fuch Provifion would be welcome to him, and find a fecure Retreat at his Fort in Brazil.

The Admiral, as foon as he had received this I cetter communicated it to the famous $\mathfrak{F o b n}$ Calvin of Geneva, who prevailed upon a Dozen of zealous Proteftants of that City, to engage in the Defign of improving this new Settlement. One Du Pont, a Man of good Senfe and Character, was put at the Head of this Affair, and with him were joined two Minifters, Peter Ricber, who had been formerly a Carmelite, and William Cbartier; very good Men, but withal great Zealots: They fet out all together, from Geneva, in the Month of September, 1556 ; and went firf of all to Cbatillon, where they were very kindly received by the Admiral, and by his Affiftance, joined to their own Intereft, foon got together three hundred Men, who embarked at Fionfleur on board three Veffels well provided, about the Middle of November following. They arrived at Fort Colligny on the 7 th of March, 1557, and were received with great Joy and Satisfaction; but it was not long that Things continued in this State, for the Sieur deVillegagnon and the Minifter Ricber fell out about Religion, and their Difputes rofe fo high, that the former drove the latter, and all his Adherents, out of the Colony; upon which they failed up the Rio Faneiro, and eftablifhed themfelves upon the Continent, where they continued about eight Months, and then, either through the Difficulty they found in fubfifting, or from their being weary of a Country which to little anfwered their Expectations, they return'ed home to France; where they did not fail to reprefent the Sieur de Villegagnon in the blackett Colours, as a Traitor and Apoftate. This did his Bufinefs effectually with the Admiral, who, as he had no other View than ferving the Proteftant Caufe by protecting this Eftablifhment, fo when he found it would not anfwer that End, he gave himfelf no farther Concern about it.

The Sieur de Villegagnon, finding himfif thus abandoned, loft all Patience, and, taking the beft Meafures he could for the Security of the Colony in his Abfence, returned to France, where he publifhed an Apology for his own Conduct, in which he painted out the Minifters in a Light as bad as that in which they had placed him; and finding this produced no Good, he retired to a

Commandery of his own Order, and fpent the remainder of his Days in writing againft the Proteftants. The Portuguze, in the mean time, laid hold of this Opportunity to rid themfelves of their new Neighbours, and the very next Year, 1578, Emanuel Sa, then Governor of Brazil, cut off the French that were left behind, and demolifhed their Fort. I have dwelt the longer upon this Story becaufe it is very inftructive, and fhews the Folly of attempting to raife Colonies upon any other than a national Intereft. Before I quit this Point, there is one curious Circumftance which I muft rolate, for the Information of the Reader: The French, during the thort time they were poffeffed of this Settlement, made a greater Progrefs in Trade, and eftablifhed a more friendly Correfpondence with the Natives than the Portugueze had been able to do in about fifty Years; fo that the Lofs of this Colony was a very great Difadvantage to that Nation.

We muft not, however, attribute this to better Conduct, or Superiority of Genius; for it was owing to neither, but the Effect of a very odd Accident: Abour twenty Years before, a Ship from Normandy had been loft upon that Coaft; fome of the Men got afhore, were well received by the Natives, married amongft them, grew as much Savages as themfelves; and having perfectly learned their Language, without abfolutely forgetting their own, did the new Colony, in quality of Interpreters, great Service; yet I do not find that they joined it, or laid hold of this Opportunity to return to France; which I the lefs wonder at, becaufe I have always obferved that the French have a greater Propenfity to thefe fort of Meafures than any other Nation, and it is this that fecures them fo great an Intereft with all the Savages bordering upon their Settlements in Nortb America. But to return.
8. The Portugueze after this, continued to enjoy their Settlements quietly, till the Year 1612 , when they were again difturbed by the French. It is true, that in this Space of Time there happened fome Difputes between them and the Spaniards, but thofe were about Limits only, had no extraordinary Confequences, and were quickly adjufted; but in regard to the French, it fell out quite otherwife: One Capt. Riffaut, who had been cruizing on the Spaniards, happened to touch at the Inand of Maragnan, on the Coaft of Brazil, and there contracted fo great an Intimacy with the Indian Chief of the Ifland, that he invited him to bring a fufficient Number of his Countrymen to fix a Settlement there, affuring him in the firft place, that it would turn to a very good Account ; and in the next, that he would give him all the Affiftance in his Power in fupport of fuch a Defign. Which Offer the French Captain readily embraced, and promifed to make Ufe of all the Intereft and Credit he had to carry this Scheme into Execution.

Accordingly, in the Year 1594, he found means to equip three Ships, and thofe too fo effectually, that there might have been juft Grounds to have hoped fome extraordinary Succefs from the Expedition; but, whether it be really an eafier matter to deal with Savages, than with thofe who take themfelves to be the moft civilized People in the World, fo it was, that Captain Riffaut had three or four Mutinies to quell before he could reach his intended Inand; upon the Coaft of which, either by Accident, or by the Quarrels among his own People, the biggeft of his three Ships ran afhore and was loft, which obliged him to return to France without doing any thing; but, however, fome few of his People, and amongft them one Mr. de Vaux, chofe to flay with the Savages, who made them very welcome. This young Gentleman was very brifk and active, liked the Climate, and continued there fome time very well pleafed. His Behaviour to the Brazilians was fo engaging, and he proved ufeful to them in fo many Refpects, that they made the fame Applications to him as the Indian Chief had formerly done to Captain Riffout, which at laft engaged him to think ferioully upon the Subject; the Confequence of which was, that he took the firft Opportunity of going home, in order to bring about what his Friends feemed to defire fo earneftly.

On his Arrival in France, he applied himfelf to King Henry IV. and endeavoured to perfuade him that vait Advantages would flow from fuch an Eftablifhment. That Monarch, who had the Good of his Subjects at Heart, as much or more than any Prince that ever fat upon his Throne, was very far from rejecting the Propofal; but, not caring to rifk much on the Faith of a young Adventurer, he directed a fmall Veffel to be equipped; and gave Orders to a Perfon of great Merit and good Senfe, upon whofe Report he could perfectly depend, whofe Name was Monfieur la Rivardier, to go over with Mr. Vaux, which he accordingly did in the Spring of the Year 1604, and remained fix Months in Brazil; where having informed himfelf of all things neceffary, he returned to France; from whence he made feveral Voyages back to Brazil, before the Government could come to any Refolution on the Head of a Colony, becaufe the Propofitions he made were fuch as required confiderable Expence; and he declared, if lefs were done, it would be thrown away.

At length, however, the thing was refolved upon, and Preparations were actually making for fending a ftrong Squadron thither, when the Murder of Henry IV. put a ftop to it, and all things of the like Nature; however, Mr. Rivardier was fo fond of the Place, and fo much perfuaded that a Settlement there would turn to Account immediately, that he embarked his whole private Fortune, and drew feveral of his Friends to do the like, in order to carry this Scheme into Execution. By this Means he found a Way to equip three ftout Veffels, and to engage about three hundred Men to go to Brazil; having obtained from the Queen Regent the neceffary Powers for that Purpofe; and, on the igth of March, 16 I2, he embarked with them at Cancale, on the Coaft of Bretagne.

A Storm, however, forced them into Plymouth, from which Port they failed again in April, and arrived, in Fuly following, at the Inland of Maragnan. There he began to erect a Fortrefs, on the Summit of a Hill, near the beft Port in the Ifland, and between two fine Rivers which wafhed both Sides of the Mountain, and ran from thence into the Sea. Upon the Baftions of this Fort they mounted twenty-two pieces of Cannon; and every thing feemed to promife them all the Succefs they could defire; when, about two Years after their firft Arrival, a ftrong Squadron prefented itfelf before the Bay, fent by Don Ferom de Albuquerque, the Portugueze Governor of Brazil, who foon forced them to furrender; and, according to his Orders, the Place was inftantly, and abfolutely, demolifhed; which cured the French of all farther Thoughts of fettling in that Country, or difturbing its Inhabitants for the future.
9. The Crown of Portugal devolving on the Head of Pbilip II. King of Spain, in the Year 158 I , he became thereby Poffeffor of Brazil; which he left to his Succeffors, together with the War againft the Inhabitants of the Seven United Provinces in the Low Countries, who had formed themfelves into a Republic, and fhaken off their Dependance on the Crown of Spain. The Progrefs of this new Republic was fo rapid, that, after forming an Eaft India Company, which in a very fhort Space of Time brought prodigious Advantages to its Proprietors, they, in 1624, proceeded to fet up a Weft India Company likewife, which proved fatal to the Portugueze from its firf Inftitution. James Willikens, and the famous Sea Captain L'Ilermite, were fent to cruize upon the Coaft of Portugal, where they took abundance of rich Prizes; and, upon their Return, it was determined to equip a new Squadron the very next Spring, in order to attack Brazil.
The Dutch were very well apprized of the State of that Country, and of the fmall Refiftance they were likely to meet with in it. The Coafts, which were no lefs than twelve hundred Leagues in Extent, were not like to be every were well fortified; the People, who had for fo long a Tract of Years enjoyed a profound Peace, thofe Attempts of the French, before mentioned, only excepted, could fcarce be thought martial; and almoft all the great Families in Portugal having fome of their younger Branches fettled in that Country, they might very well
hope to meet with vaft Riches. And, befides all this; the Dutcb had taken great Care to carry on a kind of Smuggling Trade there, for feveral Years, by which they had many fair Opportunities of penetrating into the Secrets of the Country; and, having been fo often received as Friends, the coming of their Veffels upon the Coafts was not like to create immediate Apprehenfions of an Enemy.

Such was the Situation of things when Fames Willikens entered the Bay of All Saints, with a Squadron under his Command; and began to fhew, very clearly, what his Intentions were; which fo frighted the Portugueze, that they immediately ufed all poffible Methods to carry off, and fecure, their Effects, inftead of providing for their Defence. The Dutch, taking Advantage of their Confternation, landed immediately; and their Admiral, without much Difficulty, made himfelf Mafter of the great City of St. Salvador, which was the Capital of Brazil. The Portugueze Governor, Don Diego de Mendoca, had neither the Courage to defend the Place, nor the Prudence to withdraw himfelf in time; and his Behaviour, though very bad in itfelf, appeared fo much the worfe, from the Conduct of another Perfon; who, though in like Circumftances, fhewed himfelf of quite a different Temper: This was the Archbihhop Michael Texeira, of one of the beft Families in Portugal, and in Years; who fummoned all the Clergy and Monks about him; and, having reprefented to them the Neceffity there was of laying afide their clerical Capacities at fuch a Juncture, prevailed upon them to take up Arms; and, though deferted by the Governor, his Soldiers, and the Inhabitants, they made for fome time a very gallant Defence, and at laft made a good Retreat to a neighbouring Town; where, after acting the Part of Soldiers fo well, they turned Pioneers; and, under the Conduct of their Archbifhop, fortified the Place, and gave the Enemy as much Trouble as if they had been the moft regular Troops in the World; which Inftance fhews, at once, the Danger of having a Coward; and the Advantage of having any Man of Spirit, at the Head of a Colony, let the Force he commands be what it will.
But the Dutch, by the taking this Town, befides acquiring an immenfe Booty, became Mafters of the largeft and beft peopled Diftrict in the whole Country; fo that it looked as if they were in a fair Way of making a compleat Conqueft, in a very fhort Space of Time, of the whole Colony; which it is very probable they would have done, if it had not been for the heroic Archbifhop, who took upon himfelf the Quality of Captain General; which he faid came to him from Heaven, in the legible Characters of public Neceffity; and every Man of Spirit in Brazil thought this Authority fufficient.

As foon as the News of this Misfortune reached Portugal, it threw, not only the City of Lijbon, but the whole Kingdom, into Confufion; and fo much the greater, becaufe moft of the Nobility fufpected that the Spanifh Miniftry were not much difpleafed at an Event which might leffen the Wealth and Power of their great Families, and abate fomewhat of that high Spirit which they had hitherto fhewn, ever fince they fell under the Dominion of the Spanifb Monarchs. This was, indeed, probable enough, for at that time two thirds of the Portugueze Nobility had their Eftates, or at leaft the beft Part of them, in Brazil; fo that, by the Lofs of that Country, they muft have been brought very low.

But, however, it very foon appeared, that this refined Notion had nothing in it of Truth; for King Pbilip IV, in whole Reign this fatal Affair happened, fhewed himfelf as much concerned as any Portugueze Prince could have been, when he was informed of this Defcent of the Dutch. He immediately fent his Orders to Portugal for equipping a Fleet for the Recovery of St. Salvador: and, at the fame Time, wrote a Letter, with his own Hand, to the Nobility, defiring their Affiftance on this Occafion, and promifing to fend a ftrong Spani/b Squadron to join whatever Flect they could fit out. This revived the Spirits of the Nation, and the Portugueze Lords exerted themfelves fo effectually, that in three Months time they had a Eleet of twenty-fix Sail, well equipped, and thoroughly manned, ready to put to Sea. The Spa-
niards were not quite fo hafty in their Preparations; but, however, in 1626, fo early as the Month of February, their Fleet joined that of Portugal. The whole was commanded by Don Frederic de Toledo Oforio, Marquis of $V$ aldue $\int a$, and there were on board it fifteen thoufand Men.

But it is now Time for us to look over to Brazil, where the Dutch being in Poffeffion of St. Salvador, and the Country about it, began to extend themfelves very rafhly on every Side, either from Contempt of the Portugueze, who had behaved fo ill, or from an extravagant Thirft of Plunder. The brave Archbihop foon convinced them of their Miftake; he had now got together fifteen hundred Men, and with thefe he not only cut off moft of their Parties, but at laft fairly drove them into the Town, cut off their Provifions, blocked them up, and reduced them to great Diftrefs. As foon as he had done this, however, he put the Army under the Command firft of Nunez Marino, and then of Don Francis de Mauro; for he declared, that his own Commifion expired with the Neceflity that beflowed it.

In thefe Circumftances were Things in this Country, when the Spanib and Portugueze Flect arrived in the Bay of All-Saints. Don Emanuel de Meneffez landed immediately four thoufand Men, and with thefe joined the Army before the Place, which, as we may eafily apprehend, did not hold out long; though, to do the Dutch Governor Juftice, he was inclined to defend it to the laft Extremity; but the Garrifon, differing from him in Opinion, mutinied, and forced him to furrender oll the 20th of April, upon which the Spanifh and Portugueze Fleet returned triumphant, fuppofing the War to be at an End ; and that the Dutch like the Frencb would have a care how they made Attempts again upon Brazil.
10. In this, however, they were greatly miftaken, for the rich Plunder of St. Salvador being brought by Admiral Willikens into Holland, the People were continually enquiring whether there were not other great Cities in Brazii, and when they hould go and take them. This Spirit, which at that Time of Day did not at all difpleafe the Government, encouraged the Weft India Company to think of making another Expedition. Accordingly in 1629 they began to equip a very ftrong Squadron for this Purpofe, which was to be commanded by Admiral Lonk, and was to take a confiderable Body of Land Troops on board under General Wardenbourg. This Fleet, which confifted of no lefs than forty-fix Sail of Men of War, arrived in Sight of Fernambuca on the 3d of February 1630 ; and on the 15 th of the fame Month General Wardenbours landed with near three thoufand Men, and marched directly towards the City of Olinda. He found it covered by three good Forts, in each of which there was a numerous Garrifon. He attacked, however, and carried them all, but not without a vigorous Refiftance ; but this Succefs in taking thefe Forts, fo effectually frighted the Inhabitants of the City, that they immediately fubmitted, though the Natives fhewed a great deal of Spirit, and behaved on this and every other Occafion with great Courage and Fidelity.

I cannot lofe this Opportunity of making one Remark, which, however, has been made before by the ingenious Mr. Salmon; which is, that the Portugueze have loft nothing by the great Pains they have taken in converting the Brazilians, fince by making them Chriftians of their own Communion, they have made them good Subjects; and thereby added great Strength to their Colony, which has proved a Means of fecuring it againft all Enemies; and one would think much might be done by fome other Nations, if they would follow the fame Method, inftead of extirpating the Indians in the Countries where they are fettled, or, which is much the fame Thing, leaving them in a State of Infidelity, and allowing them to extirpate each other, which if they were Chriftians they-would not do, but join the Eurcopans as they did here.

While the Dutcb General was thus employed on Shore, the Dutch Admiral was no lefs active by Sea; and as the Portugueze had no naval Force to refift him, or at leaft none in Comparifon of that employed againft them; it is no great Wonder, that they reduced ail the Sea-Coaft to the South of Olinda, which they did in a very fhort

Space of Time, and likewife took care to fecure and fortify every Place that fell into their Hands, being refolved not to fall into the fame Error which had been fatal to them before; but to obtain fuch a Footing in the Country, as might enable them to keep their Ground againft the whole Force of the Portugueze, and lay a folid Foundation for the Execution of the great Defign they had formed, of making themfelves Mafters of the beft Part of Brazil; which, it mun be confeffed, was a very bold Undertaking, confidering the Portugueze had been fo long in Poffeffion of this Colony, and were become fo numerous. It was with this View that Admiral Lonk refolved to make himfelf Mafter, at all Events, of a very ftrong Poft, which feemed the fitteft for his Purpofe ; and of which, therefore, it is neceffary, that we fhould give the Reader fome Account. The whole Coaft of Brazil is as it were guarded, or defended, by a long thick flat Ridge of Rocks, in fome Places twenty, in others thirty, Yards broad: If it were not for Breaks and Paffages here and there in this rocky Intrenchment, it would be impoffible to approach the Shore. There is a very large Paffage two Leagues to the North of Olinda; but almoft before this City this Ridge of Rocks appears again, and the Inhabitants pafs to it in Boats at High-Water, for at low the Rocks even in the Paffage are vifible enough.

This Part of the Ridge the Portugueze call Reciffo, and the Dutcl Receif. On the North Point was an open Paffage for the Ships to approach the Shore, very narrow, and at Spring-Tide not above twenty-two Foot deep. Between this Ridge of Rocks and the Continent lay a fandy Ifland, about a League in length, which was called the Sandy Receif, to diftinguifh it from the ftony. It lay in the Latitude of $8^{\circ} \cdot 20^{\prime}$. South, and had a good Caftle, called Fort St. George, well furnifhed with Artillery, and efteemed impregnable; this was the Place the Dutch Admiral fought to make himfelf Mafter of, which he did; and it was in a great Meafure the Caufe of the City being taken. After the Dutch were poffeffed of it they made the Receif very ftrong, and the chief Seat of their Commerce; fo that it became one of the moft confiderable Places in Brazil, efpecially after they had demolifhed the City of Olinda, that they might not divide their Forces too much, as they muft have done, if they had long endeavoured to keep it.

I I. The News of this fecond Attempt upon Brazil by the Dutch, and their having actually conquered the Captainfhip of Fernambuca, alarmed the Portugueze and Spaniards exceffively, and obliged them to think of fending thither immediately, fuch a Force as might be able to drive out the Enemy, and fecure the Country effectually for the future. It happened at a very bad Time for them, as the Difaffection of the Portugueze to the Spanifh Government was, at this Juncture, greater than ever ; but the Neceffity was fo ftrong, and fo apparent, that, notwithftanding the many Difficulties they had to ftruggle 'with, and the Weaknefs of their Government, a Fleet and Army was ordered for this Service. But the equipping of the one, and the raifing the other, took up a great deal of Time, which the Dutch employed in fortifying themfelves in extending their Conquefts, and taking all the neceffary Precautions for the Defence of them, in which they proceeded with all that Induftry and Vigilance, for which, in thofe Days, their Nation was famous.

Before we proceed farther, it will be proper to take notice of thofe Caufes, which induced the Dutch Weft-Indic Company to become fo extremely fanguine in their Endeavours to make themfelves Mafters of this Country; which I am the better able to affign, having feen a Copy of a Memorial, prefented by that Company to the States in the Year 1643 , containing the very Reafons in fupport of their Conduct in this Particular. In the beginning of this Memorial it is faid, that the Caufes which can beft juftify launching into an extraordinary Expence, for acquiring any Place whatever, are reafonable Views of immediate Profit, which ought to be very confiderable, or future Profpects of Gain, that ought to be ftill more fo; and both thefe, they affirm, induced them to profecute with fo great Zeal the Conqueft of Brazil. As to the
former,

## Chap. III. of BRAZIL by the PORTUGUEZE.

former, they alledged three Things : Firft, the Wholefomenefs of the Climate, the Pleafantnefs and Fertility of the Country, which renidered it, of all others yet known, the fitteft for receiving and maintaining a confiderable Colony ; they next take notice of its convenient Situation for Trade, as being in a manner at an equal Diftance,'or at leaft in a more equal Diftance than any other Country, from Europe and the Indies: And thirdly, they mention the rich Product of this Country in Sugars, as alone deferving all the Expence they had been at about it, fince they were better in Quality, made with much lefs Expence, and tranfported with far greater Eafe from hence, to all Markets where this valuable Commodity could be fold, than from any other Place. As to the fecond Point, what might be hereafter expected from their being in Poffeffion of this Country, they likewife took notice of three feveral Heads: Firft, they laid it down as a Thing evident, that the Poffeffion of Brazil was of equal Confequence, in time of Peace and in time of War: In regard to the former, it would afford the Means of raifing very large and very convenient Magazines, for the Supply of fuch Ships as might either touch there in long Voyages, or be driven into their Ports, as very often happened from Diftrefs of Weather. And as to the latter, it would afford-greater Advantages in equipping, refitting, and fheltering, either whole Squadrons of Men of War, or Privateers, than any other Place in the known World. They next alledged, that it was fo placed as that not only their Eaft and Weft India Fleets might touch there very conveniently for Refrefhments ; but that they muft be obliged to put in there, and could not eafily, or at leaft not fafely, proceed in fuch diftant Voyages without having fuch Affiftance. And laftly they fuggefted, that no Place in the World was fo happily feated for commanding, at once, both the Eaft and Weft India Trades, and confequently the whole Commerce of the Globe. It is true, that thefe Reafons were given to the States ten Years after the Time of which we are now writing; but without doubt they had occurred to, and been confidered by, the Directors of the Weft India Company long before, which induced us to place them as we have done.

It is very probable that either thefe Reafons, or fome of a like Nature, were laid before the States by the $W_{e} \mathbb{A}$ India Company about this time, fince we find the utmoft Readinefs exprefled to affift and fupport them. It was with this View, that as foon as their Fleet returned from Brazil, Admiral Pater was fent thither with a much itronger Force, in order to put the Dutcb in a Condition to conquer that whole Country. He arrived in Sight of the Coaft of Fernambuca on the firt of May 1631, where he found the City of Olinda in the Poffeflion of his Countrymen, but clofely blocked up by the famous Portugueze General Albuquerque, with a numerous Army. The Admiral thought fit, thereupon, to land four hundred Men, under the Command of an experienced Officer, to take a View of the Enemies Works, that he might be the better able to judge how to attack them. But the Dutch Garrifon, in the City, no fooner faw his Fleet come to an Anchor, and there Troops debarked, than they made fuch a vigorous Sally upon the Befiegers, as forced them to retire from before the City with confiderable Lofs. After this, Admiral Pater landed two thoufand Men; and, at the fame time, acting upon the Sea Coaft with his Fleet, enabled his Countrymen to extend their Conquefts very confiderably, efpecially towards the South, having an Intention to enter the Bay of All Saints, and attack the City of St. Saluador by Land and Sea; but while he was thus executing great things, and projecting greater, he had Intelligence that the Spanijb and Porturueze Fleet was actually at Sea, and of a Strength fufficient to undertake the Relief of Brazil.
This. Fleet, which was commanded by Admiral D'Oquendo, had failed from Spain in a very indifferent Condition, though it confifted of about thirty Sail At the Canaries it was joined by fifteen more, and in the Height of the Cape de Verd Inlands, met with fuch an Accefiion of Force, as rendered it fifty four Sail of large Ships. The Dutch Admiral had but fixteen, but he was Vol. II. Numb. LXXXI.
jealous of the Honour of his Country, and therefofe refolved to fight at any rate. It was with this View, that he might render his Countrymen the greater Service, that he refolved not to wait for, but to meet, the Enemy, which he accordingly did in the Latitude of fix Degrees South. As foon as they appeared in Sight, and the Dutcb Fleet faw how unequal the Difpute was like to prove, ten of their Captains bore away, and left the Admiral with fix Ships only, to fight an Enemy almoft ten times his Strength. Admiral Pater had two Flags under him, who, to their immortal Honour, were two of thofe who joined him; fo that there were three Admirals to fix Ships.

The Battle was long and bloody; abundance of the Portugueze were funk; and it plainly appeared that if the other ten Ships had ftaid, Victory would have declared for the fmaller Number; but at laft, Admiral Thys, in the Prince William, was funk ; and not long after, a Portugueze Man of War difcharging a Broad-fide at the Dutco Admiral, a Ball unluckily fell in the Powder Room, by which the Ship was blown up, and that brave Man loft. The four Dutch Ships that remained, retired upon this, and did it with fo much Courage and Addrefs, that they not only arrived fafely at Olinda, but likewife carried off a Portugueze Man of War that they had taken; fo that, upon the whole, it may be fafely affirmed there never was a more glorious Action than this, fince the Dutch became a maritime Power. When Admiral $D^{\prime}$ Oquendo arrived, he contented himfelf with fending Refrefhments and Reinforcements to the Army of Albuquerque, but attempted nothing againft the City of Olinda; and confequently left things in very little better State than he found them; which he excufed from the great Lofs he had fuffered in the Battle; amounting, in the whole, to no lefs than thirteen Sail taken and funk.
In the Month of October he fet fail for Liboon, but had the Misfortune to meet in his Paffage with four Dutch Men of War well manned, who made no fcruple of attacking him, though he had ftill forty Sail, and moft of them large Ships. He loft in this Engagement the Captain of his own Ship, twenty two Captains more, his Vice-Admiral, three Men of War, two Frigates, and about feven hundred private Men; fo that he brought home the wretched Remains of a Fleet unfortunate from the Beginning, and yet without any Impeachment of his own Character; the Blame falling entirely upon the Minifters, who had obliged him, in fpite of his Remonftrances, to fail with Ships half equipped and half manned.
However, when the Misfortune could not be remedied, thefe Minifters declared that they were willing to do all that was left in their Power, which was, to repair it ; and therefore Orders were given for providing a greater Fleet, and for equipping and manning thereof, as it ought to be; the Command of which was to be given to Don Frederic de Toledo, whofe Reputation was remarkably high, and not without Reafon. But, after abundance of Pains taken, it was found that nothing could be done that Seafon, and therefore it was deferred till the next Spring; when it was refolved to fend fuch a Force as fhould put an End to the War at once; but as it is much eafier to talk of fuch things, and to lay fine Schemes in the Cabinet, than to carry them into Execution; fo, notwithftanding this famous Admiral actually proceeded on his Voyage with a very large Fleet, every way well provided; yet he did fo little, that none of the Authors I have met with have recorded what he did.
12. Thefe Delays to which the Spanif/ Affairs have been always liable, proved extremely prejudicial to them in Brazil; where the Dutch, having the Advantage of feveral good Officers both by Sea and Land, made a moft furprizing Progrefs; reducing, in the Space of feven Years, four intire Captainfhips under their Dominions, viz. Fernombuca, Tamaraca, Paraiba, and Rio Grande; and the Importance of thefe Conquefts very quickly appeared in the Mifchiefs done to the Spaniards in this and other Parts of America, of which we have a very exact Computation: From whence it is evident, that from the Time of the Dutch Weft India Company's being erected, to the Year '1637, they had deftroyed and taken, in Mo ney and Merchandize, to the Value of forty-five Millions

Y Y

## 174

 The DISCOVERT and CON QUEST Book I.of Florins, or four Millions and an half of our Money; and of eight hundred Ships, which the Crown of Spain had fitted out againft them, they deftroyed or took five hundred and forty-feven. Thefe extraordinary and unexpected Strokes of good Fortune raifed the Spirits of the Directors of the Dutch Company to fuch a Degree, that they refolved to put themfelves at once upon a level with the Eaft India Company; and to do this effectually, they could think of no better Way than to make choice of fome Perfon of great Quality and Intereft, whom they might put at the Head of their Affairs, and whofe Credit and Power might add a greater Strength to their own.

It was with this View that they caft their Eyes on Count Fobn Maurice de Naffau, who was nearly related to the Prince of Orange, and who had ferved the States for feveral Years, in their Armies, with great Abilities and Applaufe. He very readily accepted the Propofal that was made him, and, with the Confent of the Prince of Orange and the States-General, was declared Governor of Brazil and South-America, with the fame Powers given to the Governor-General of the Eaft Indies in all Affairs Civil and Military. That this new Officer might take Poffeffion of his Dignity in a Manner fuitable to his Quality and Character, thie Company refolved to fit out a Fleet of thirty-two Sail of large Ships, and to embark a Body of two thoufand feven hundred Land-Forces; but as this took up a good deal of Time, and Count Mauirce was impatient to be gone, he failed from the Texel on the 25 th of OEtober, 1636 , with four Ships only, and no more than three hundred and fifty Soldiers on board; with which fmall Squadron he arrived on the Coaft of Brazil on the 23 d of Fanuary, 1637 , with Adrian Vander Duffen, who had joined him near the Inand of Madeira: He was foon after followed by the Captains Selan, Carpenter, and Gifelin, who were to ferve under him, and very foon took the Field with two great Bodies of Troops, the one confifting of near three thoufand Men, with which he prepared to act againft the Portugueze Army ; and the other of fix hundred, which was to be employed in various Expeditions, to divide and diftract the Enemy.

On the other hand, as they could not help perceiving that their All was now at Stake, the Portugueze had a great Army in the Field under the Command of the Count de Banjola, an Officer of great Courage and Experience, who had ferved under the Marquis de Spinola in Flanders; and another Body of light-armed Troops under one Cameron, who was a Brazilian by birth, had raifed himfelf by his Merit, and always ferved them with equal Reputation and Fidelity. They had aftrong Garrifon at Porto Cavallo, with which they harraffed the Dutcb in the CaptainThip of Fernambuca extremely; and as they did not doubt this would be the firft Place attacked, they affembled the Bulk of their Forces under Count de Banjola for the Defence of it. It very foon appeared that, in this Refpect, they had formed a very right Judgment ; for Count Maurice had no fooner put himfelf at the Head of his Army, than he marched directly towards Porto Cavallo; upon which a Battle enfued, wherein, after a very obittinate Refiftance, the Porturueze were defeated and afterwards forced in their Camp, though it was very ftrongly intrenched. Upon which the Count de Banjola retired with the Remains of his Forces under the Cannon of the Citadel of Povacaon ; from whence however he retired on the Approach of the Dutch, who befieged that Fortrefs in form: There was in it a Garrifon of fix hundred Men, who very bravely defended the Place for a Fortnight, and were then obliged to capitulate.
Count Maurice purfued this Succefs, and advanced with his Army to the Town of Openeda on the River of St. Francis, at the Diftance of about fix Miles from the Sea, which he took, and built a Citadel there, and another at the Mouth of the River, by which he effectually covered his new Conqueft. He then returned to Olinda, and having provided for the fettling the Civil and Military Government in the manner directed by his Commiffion, he refolved to fit out two Fleets; one under the Command of Admiral Licbthart, with Orders to attack the SouthCoaft of Brazil, the other under the Command of Commodore Hankins, which was deftined to a Service
of fill greater Importance, and of which therefore I think myfelf obliged to give an exact, though concife, Account. From the very Time that the Dutch Wef India Company made their firft Attempt upon Brazil, and were fo fuccefsful in taking the City of St. Salvador, they, hàd meditated the bold Defign of fixing themfelves likewife on the other Shore of Africa, fuppofing that if they could once make themfelves Mafters of the two Points of the oppofite Continent, they fhould be able to bridle the Ocean, and by having the Command of this Paffage to the Indies, diftrefs the Spaniards, Portugueze, Englifh, and, in fhort, all other Nations in the North. There was fomething very wife and very great in this Project, fomething equal to the Genius of a trading Nation; and in fhort, fomething worthy of being imitaied; which is the Reafon that I have mentioned it.

But though with a View to execute this Scheme, they had fearched all the Coafts from Cape Verd to the Cape of Good Hope, yet they had found no Place proper for that Purpofe: At laft it was agreed, that nothing could anfwer this End fo well as the Caftle of St. George de la Mina, on the Coaft of Guinea, in the Poffeffion of the Portuguzze. This Place accordingly they attempted in the Year 1625 , but mifcarried with very great Lofs, which however did not difcourage them. For, having a ftrong Settlement in that Neighbourhood, their Governor, whofe Name was Nicholes Von Yperen, fent to advife Count Maurice, that now was the proper Time, and if he fent him a fmall Squadron with a competent Body of Troops on board, he made no queftion of his being able to carry this important Project into Execution.

It was with this View that Commodore Homfins was difpatched: He joined the Dutco Governor on the 25 th of $\begin{aligned} & \text { fuly, and they attacked the Cafte with fuch Refolu- }\end{aligned}$ tion, that though it was one of the fronget Places in that Part of the World, yet it furrendered on the 2 g th of Auguft; fo that Commodore Hanfins returned to Olinda in the Month of OEtober following, and was received by Count Mourice with all the Marks of Honour and Refpect that the Performance of fo important a Service deferved. The Campaign in 1638 was equally glorious for the Dutch; the Count de Banjola had again afembled a very numerous Army, for the Defence of the Captainfhip of Segerippa, which however Count Maurice attacked and defeated ; after which he took the Capital, and reduced the whole Province.

This great Run of Succefs made fuch a Noife in that Part of the World, that the Inhabitants, or rather the Natives, of Siara, one of the Northern Captainfhips, declared for the Dutch; and, upon a Promife of being left free, offered to affift them againtt the Portugueze. A Body of Troops was accordingly fent to join them, under the Command of Captain Gartman, who with the Help of a Brazilian Prince, Algodojo, reduced that whole Diftrict. It is, however, to be obferved, that it was the Infidel Brazilians that were Enemies to the Portugueze, for thofe whom they converted remained always firm to them, and began even at this time to raife Infurrections in their Favour in the Captainfhips of Para: ${ }^{\text {a }}$ a and Rio Grande, which the Dutch had fubdued; and this obliged Count Maurice to reduce and demoliih feveral of thir beft Towns, and, the better to keep them under, he likewife found it neceffary to rebuild and fortify the Town of Pbilipina, which he called Frederickftadt, in honour of the Prince of Orange.
Count Maurice, having been fo fortunate in all his Undertakings, refolved now to put in Execution the repeated Orders he had received from the Wef Indic Company, for attacking St. Salvador in the Bay of All Saints, which was looked upon as the Capital of all Brazil: He embarked for this Purpofe all the Troops he could draw togetur at Olinda, and he landed with them in the Bay beforementioned on the 8th of April, 1638 ; thinking to have furprifed the Portugueze. The Count de Banjola was in the Neighbourhood with a fmall Body of regular Troops, with which he immediately threw himfelf into the Place, though the Governor of it was his Enerny, and it was upon the Differences known to fubfift between thern, that Count Mourice chiefly reckoried. The Portugueze Governor at firft difputed the Command with Colint

Banjola,

## Chap. III. of BRAZIL by the PORTUGUEZE.

Banjola, but that Nobleman told him, their Quarrels could only ferve to ruin them; whereas, if they agreed, each of them might become as great as he could wifh. To which Propofal the Governor anfwered: Sir, I perceive you are a woifer Man tban I, and no body Joall obey your Orders more puncitually.
Count Maurice attacked, and, without much Refiftance, made himfelf Mafter of the ftrong Fort of Albert, that of St. Bartbolomere, and the famous Caftle of St. Pbilip. This Succefs encouraged him to erect two Batteries againft the City of St. Salvador, and to attack at the fame Time Fort Rofes, which covered the City on one Side; and a Hornwork, which was its principal Strength, on the other: There lay between thefe a Piece of Ground covered with Shrubs and Bufhes: Count Banjola advifed the Governor to poft himfelf there with four hundred of his own Troops, while he made a Sally with his Forces. This Scheme had the Effect he defired, for, after an obftinate Difpute, the Dutch, endeavouring to retire through that Piece of Ground, were attacked in the Rear ; and, befides three hundred of their bef Men, loft four Officers of Diftinction, and their principal Engineer. Upon which Count Maurrice abandoned the Caftles he had taken, and raifed the Siege with fome Precipitation.
This proved in many Refpects fortunate for the Portusueze, who otherwife were in the utmoft Danger of being totally undone. In the firft Place, it fhewed that neither Count Maurice nor his Dutch Troops were invincible ; but that if other Men did their Duty they might be overcome ; in the next, it totally reconciled the Portugueze Generals ; who perceiving, that the Count de Banjola was far enough from depreciating other Mens Merit; and that, on the contrary, he afcribed much of that to their Courage, which in reality was due to his own Conduct, they changed their Meafures immediately, and, from thwarting his Councils, received and executed his Orders with the higheft Refpect. Laftly, it hindered the favage Brazilians from taking Arms in favour of the Dutch, which was what the Portugueze, of all Things, feared the moft; becaufe they knew that a little Difcipline made them excellent Soldiers, at leaft for that Climate.
But as Misfortunes feldorn come alone; fo on the very Heels of this Mifchance on Shore followed another at Sea, no lefs to the Lofs, and much more to the Difcredit, of the Dutch Arms. We have, in another Part of this Work, fpoke of the taking the Sparij/ Plate Fleet, by Peter Hein, which was the greateft Action performed under the Aufpice of the Dutch Weft India Company; and, next to that, was their taking St. Salvador, which made them fo eager to fee both thefe great Actions repeated. We have already fhewn what became of the Attempt to gratify them in one; and, though, we digress a little from our Subject, yet the Reader will probably be glad to learn what was the Fate of the latter. Thus then the Cafe ftood. The States General and the Weft India Company equally approved the bold Spirit and fage Conduct of Cornelius Yol ; who, by mere Dint of Merit, had raifed himfelf from the loweft Station in the Fleet, to be thought worthy of the Command of it ; and he it was that, about this Time, they pitched upon to repeat the glorious Action of Peter Hein, and to bring the Spanifh Treafures, once more, into the Low Countries ; a Commiffion which he readily accepted, and to which, it was thought, they had no Seaman, in their Service, more equal.

He failed from the Texel the 14th of April 1638 , and, touching at Brazil, communicated to Count Maurice the Inftructions he had received, who thereupon furnifhed him immediately with fix hundred good Men, and Provifions for feven Months, after which he failed in Search of the Spanish Fleet. He fell in with them a little to the Weft of the Inand of Cuba, but efcorted by a greater Number of Ships of War, and thofe too larger and better equipped than he expected; his Squadron confifted but of thirteen Sail; with which, however, he ventured to attack them, and there is little Doubt to be made, that he would have given a good Account of them too, if thofe who ferved under him had followed his Example; but when the Difpute grew warm all his Squadron left
him and their Vice-Admiral, except two Ships, who fought very gallantly, till their Captains were killed.
Correlius $\mathfrak{F}$ ol difengaged his four Ships from thofe of the Enemy, and, returning to his own Squadron, fent for the Officers on board, difmiffed fuch as had behaved worft, reprimanded the reft, and exhorted them all to do their Duty better the next Time, as he was determined to renew the Attack: He did fo accordingly, but it was with the like Succefs; his Captains abandoned him again, and he again difengaged himfelf, but with more Difficulty : He fent for his Officers the fecond Time ; and being now perfuaded, that. it was not fo much through Fear of the Enemy, as Averfion to him, that they mifbehaved; he treated them with greater Gentlenefs, difplaced none of them, but engaged them all to fign a Refolution to fight the Enemy, when they fhould be next commanded fo to do, and to obey their commanding Officer exactly, and with Alacrity, which they did chearfully.

Highly pleafed with this Pledge of their Fidelity, he fell upon the Spaniards a third time, when they behaved a little better at firft, but foon after fhewed that they were more afraid of Danger than of Perjury; for they abandoned him again, which fo provoked that gallant Officer, that he cafhicred five of his Captains, gave their Ships to inferior Officers, and went in fearch of the Spaniards for the fourth time. He then found his Opportunity was loft, the Spaniards were feparated and retired into feveral Ports, fo that he was able to do nothing. He then divided his Fleet into three fmall Squadrons, ftationed one before the Havanna, detached another to Brazil, and returned home with the third, where he was received with Honour and Refpect ; his Mafters declaring that they were intirely fatisfied with his Conduct, and that they did not impute the Mifcarriage to him, but to thofe who out of Fear and Pride had difobeyed his Orders.
I3. After Count Maurice returned from his fruitlefs Expedition againft St. Salvador, he applied himfelf with the utmoft Diligence to the Effablifhment of good Order and perfect Difcipline in all Parts of his Government; reviewing his Troops in Perfon; appointing experienced Officers to command them; fortifying all the fronties Places; and giving all Sort, of Encouragement to fuch of the Natives as fhewed an Inclination to affift him, and to live peaceably under the Protection of the Dutch; by which wife and prudent Meafures he prevented the Enemy from making thofe Advantages that might have been expected from their late Succefs. The Spanifh Government, having received an exact Account of the State of Affairs in Brazil, came to a fettled Refolution of repairing their paft Miftakes, by fending thither fuch a Fleet, and fuch an Army, as fhould effectually put an End to the War, by obliging the Dutch to abandon all their Conquefts in that Country.
This Fleet of theirs confifted of twenty-fix Galieons doubled manned, and provided with every other Neceffary in the fame Proportion; twenty large Men of War, and five thoufand regular Troops, under the Command of a Portugueze Nobleman of a great Family, and whofe Virtues were ftill more illuftrious than his Birth, the famous Don Fernandez Mafcarenbas, Count de la Torres, who failed in the Autumn of 1639 , and received confiderable Reinforcements in his Paffage; but, being detained by Calms upon the Coaft of Afric, the exceffive Heats produced a Plague on board his crowded Ships, which fwept away above three thoufand Men before he reached the Bay of All Saints; and the reft of his Troops were in fo bad a Condition, that he was under a Neceffity of putting them into Quarters of Refrefhment, which certainly faved the Dutch, who were at that time but in a low Condition, expecting with great Impatience thofe Succours from Holland that foon after arrived, and by means of this Accident arrived in time. The Vigilance, however, of Mafcarenbas was fuch, that in the Month of January, 1640, he put to Sea with a Fleet of ninetythree Sail great and fmall, and twelve thoufand Men on board.

Count Maurice, on the other hand, was far from being negligent; and, having drawn together forty-one Men of War, well manned and provided in every Re-
fpect,
fpect, he waited within four Miles of the Port of Olinda for the Enemy; the Fleet being commanded under his Excellency, by William Loos a Dutch Admiral, reputed as brave a Man, and as good a Seaman, as any at that time in the Service of the States. On the I2th of the fame Month the Fleets met, and engaged between the Illand of Tomaraca and the River Gojana; and fought from one in the Afternoon till it was Night. The Lofs fuftained by the Dutch was not great; for they had but four Men killed, and as many wounded, and one Ship rendered unferviceable. Amongft thefe four Men, however, was their Admiral William Loos, who might be truly faid to die in the Arms of Victory. He was replaced the next Day by Fames Huyghens, who engaged the Spanifb Fleet a fecond time; and, by dint of his fuperior Skill as a Sea Officer, obtained great Advantages. On the I 4 th he attacked them a third time on the Coaft of Paraiba, where he had ftill greater Advantages; but the great Victory of all, was after the fourth Day's Fight, wherein they fuffered exceffively, and were at laft driven' where the Dutch durft not follow them, that is to fay, upon thofe Sholes on the Coaft, to which the Portugueze have given the Name of Baxes de Rocbas; where many perifhed by Shipwreck, and more by Hunger and Thirft. The Remainder that efcaped endeavoured to return home; but, great Difputes arifing amongft their Commanders, they feparated; and of all this mighty Fleet only four Galleons and two Men of War arrived fafe in the Ports of Spains; and thefe too efcaped with much Difficulty a Dutch Fleet that was fteering for Brazil.

While thefe great Tranfactions happened at Sca, the Portugueze, being very well informed that Count Maurice had embarked his whole Strength on board his Fleet, affembled a Body of regular Troops, under the Command of Don Fobn Lopez Vervailbo, an Officer of great Experience and Courage, and a great Body of Brazilians under their Countryman Colonel Cameron; who, falling into the Dutch Settlements, unexpectedly took feveral Places, and did a great deal of Mifchief. It was not long, however, before Hankins, who had the Title of Colonel on Shore, as well as Commodore at Sea, put himfelf at the Head of a Body of Planters, and with them very foon gave a Check to thefe infolent Invaders. A flort Time after Admiral Lichtbart, and Commodore Cornelius $\mathcal{F} 0 l$, arrived with great Reinforcements from Holland; the former was immediately fent by Count Maurice into the Bay of All Saints, to deftroy the Country, which he did with a Barbarity not to be defcribed, and confequently not to be excufed. Commodore fol acted the like Part on the Country near the River St. Francis; and this Manner of making War appeared to the Count de Montalvan, at that time Viceroy of Brazil, fo abominable, that he could not be brought to believe that a Perfon of Count Maurice's Quality could be pleafed with it; and therefore he fent Deputies to reprefent to him the Barbarity of fuch a Behaviour, and to defire that they might fettle a Cartel, by which the Proceedings of the War might be regulated; and fuch horrid Scenes of Murder and Devaftation prevented for the future, as proved equally ruinous to both Parties.

As Count Maurice, in giving thefe Orders, had followed the Company's Inftructions againft his own Inclinations, he very gladly embraced this Opportunity of fhewing his own noble and generous Temper, which was ever averfe to fuch kind of Proceedings. He therefore readily embraced the Propofal, and offered to fend Commiffioners immediately to St. Salvador, to fettle fuch a Provifional Treaty with the Viceroy, for the common Benefit of the Subjects of both States: But, juft as thefe Deputies were on their Departure, there arrived two Gentlemen of Diftinction from the Viceroy; who, at an Audience they demanded, and obtained from Count Maurice, acquainted him with the amazing Revolution that had happened in Portugal, which was likely to have a great Effect on the general State of Affairs, and might probably put an End to the War in Brazil, fince hitherto it had not been carried on by the Dutch againt the Portugueze Nation, but againft the Portugueze as Subjects to the Crown of Spain; and therefore it was very natural to
fuppofe that the Dutch would no longer confider them as their Enemies, when they could be no longer confidered as the Subjects of that Crown, but rather as an independent Nation, inclined, both by Nature and Intereft, to cultivate a good Correfpondence with the Subjects of the States General. At leaft, thefe Meflengers from the Viceroy were charged to reprefent things in this Light to Count Maurice, who gave them a very patient Hearing, and difmiffed them with a favourable Anfwer, though refolved to do what was moft for his Mafters Service.
14. It was in the Month of December 1640 , that 70 obn Duke of Braganza, feated himfelf on the Throne of Portugal, which was that of his Anceftors; and tools the Title of Fobn the IVth. This Revolution, one of the mof fudden, and moft fuccefsful the World ever faws pur into his Hands immediately the whole Dominions of Portugal, the little Town of Ceuta in Africa excepted, and the Conquefts made by the Dutcb in Brazil, and elfewhere It was not long before Count Maurice had a very exact Relation of the whole Affair; and, forefeeing that this Revolution would certainly be attended, either with a Peace, or a Truce, between the States General and the new King; he refolved to do all that he could in the fhorteft Time poffible, that whenever the Peace or Truce was concluded, it might find the Dutch with their Hands full. I fhall not pretend to juftify this Refolation of Count Maurice, or to reconcile it to the Laws of Nature, and of Nations; but, we know, that great Captains are feldom great Cafuifts, and perhaps this might be his Cafe.

He put this Defign of his in Execution almoft as foon as he had formed it, making himfelf entirely Mafter of the Captainfhip of Segerippa, which the Portugueze had recovered; he fent away Admiral $\mathfrak{J} o l$, with a Fleet of twenty-one Sail, and above three thoufand Men on board, to reduce the Ifland of Laonda, on the Coaft of Congos and that of St. Thomas, immediately under the Equinoctial; both which Services he performed: The latter, however, coft him his Life; for while he was bufy in fettling the' Affairs of his new Conqueft, a Diftemper broke out in his Fleet, which carried off a great Number of Men, and amongtt them the Admiral and fix of his chief Captains. He was buried with great Military Pomp in the Cathedral of Pavoafan, which is the Capital of that Inand, and left behind him the Reputation of being the boldeft, moft refolute, and ftricteft Officer of his Time; but withal, one of the rougheft in his Behaviour that ever bore Commiffion; yet he was a Man of fuch nice Honour, that, in his Expedition, the Year before, on the Coaft of Cuba, being driven to great Diftrefs for Provifions, and in no Condition to take them by Force, he fent to the Spani/b Governor for a Supply ; who, out of Regard to his perfonal Merit, granted him all, and more than he defired; upon which he immediately quitted the Coaft, declaring, that he could no longer act againtt an Enemy, who had treated him with fuch Generofity.

Count Maurice, in purfuance of his Inftructions, which reprefented to hini the Captainfhip of Maragnan as a Country extremely wholefome, abounding with Sugar, Cotton, Ginger, Tobacco, and other rich Commodities, as well as very convenient from its Situation, refolved to feize it likewife. He difpatched, for this Purpofe, Admiral Lichtbart and Commodore Hankins, with a Fleet of fix Sail of Men of War and fix Frigates, with which they foon reduced the Inand of Maragnan, and the Town of St. Louis, upon which the reft of the Diftricts fubmitted without Refiftance; fo that at the Clofe of the Year 164I, the Dutch were actually in Poffeffion of feven of the fourteen Captainfhips, into which the Country of Brazil was divided.

But Things did not long remain in this State; for; partly by Revolt, and partly by Conqueft, thefe Countries returned again to their old Mafters.

It is now neceffary to look over into Europe, in order to fee how thofe Events came about, which furnifhed the Means of making as fudden a Revolution in Brazil, as ever happened in a Country fo well fecured; and in the Recital of which, it will appear, that the Dutch themfelves taught thofe Arts, by which they fuffered; and firft

## Chap. III. of BRAZIL by the PORTUGUEZE.

practifed thofe Frauds, that proved afterwards fo fatal to themfelves. King $\neq \mathrm{bn}$, defirous of being acknowledoed by as many Kingdoms and States as poffible, in Quality of rightful Pofieffor of the Crown of Portugal, as undoubtedly he was, fent Don Triftan de Mandoca Huriado, his Embaffador, to the Hague, to reprefent to the StatesGeneral the Reafonablenefs of owning his Title, and the Advantages that muft accrue from their living in a good Correfpondence together. The firt was readily admitted by the Dutch Statefmen; and, by Degrees, they came likewife into the Second; but, as they thought themfelves Gainers by the War, and a vaft Over-match for Portugal, unfupported by Spain, they put off the Conclufion of the Treaty as long as they could.
At laft, on the $13^{\text {th }}$ of $\mathcal{F}_{\text {une }} 164 \mathrm{I}$, they figned a League offenfive and defenfive, with the Crown of Portugal, for what regarded the Dominions of both States in Europe ; and a Truce for ten Years in the Eaft and Weft Indies: This laft was conceived in very general Terms; for it was to comprehend all the Dominions of both Parties, and was to commence from the Day of the Publication of the Truce; it was likewife ftipulated, that Commiffioners fhould meet in eight Months, in order to conclude a definitive Peace, and to fettle the Pretenfions of both Parties ; but, at the fame Time, the Dutch took care to provide, that if this Treaty fhould prove ineffectual, the Truce, and free Trade between the Dominions of both States, fhould ftill continue; only the Portugueze fhould not be at Liberty to export any of the Commodities of Brazil into Holland ; and, on the other Hand, the Dutch were to be under the like Reftriction, with Refpect to the Dominions of Portugal. It is evident, from the very Frame of this Treaty, that the States contrived every thing for their own Advantage; and that the King of Portugal fubmitted to it, from pure Neceffity. Experience, however, foon made this more vifible. On Complaints, that feveral Places were taken from the Portugueze after the Publication of the Truce; Reftitution was refufed, as to fome ; and though Orders were given, as to others, agreeable to the Spirit of the Treaty, yet they were drawn up in fuch a Manner, that moft of the Dutch Governors refufed to comply with them.
The Portugueze Viceroy, and the reft of that Nation in Brazil, entered eafily into the Politics of the Dutch; and inftead of attempting to do themfelves Juftice, by Force, they practifed exactly the fame Method for their own Advantage: They magnified the Wifdom of the Dutch Government, confided in the Promifes made them, and took in good Part all the Excufes that were made for Non-performance of them ; by which Means they fo over-reached Count Maurice, in the two laft Years of his Government, that he perfuaded himfelf, and eafily engaged the Directors of the Weft India Company, to believe, that their Territories were effectually fettled, and that they had nothing to fear in Brazil, either from the Natives, or from the Portugueze; who thought themfelves happy under their Adminiftration, and were as much attached to it as the Dutch themfelves.
-But the Contrivances of their Enemies might probably have proved abortive ; if the Managers of the Dutch Weft India Company had not entered into a Confpiracy againft themfelves. They found that they were now poffefled of what they had fo long fought ; feveral ftrong Forts on the Coaft of Africa, and a very large Part of the rich Country of Brazil; and they were defirous of makeing the greateft immediate Profits poffible of both. It was from this Notion, that they fent over repeated Orders to Count Maurice, to take fuch Meafures as might increafe their Revenue, and prove the Importance of Brazil, by fending over vaft Quantities of Sugar and other valuable Effects, and not fuffering fuch as were in Debt to the Company to pay in fmall Sums, or at different Terms, but fpeedily, and at once. Count Maurice obferved to them, that the Execution of thefe Orders would be attended with many Inconveniencies ; that a long War had been carried on ; that the Country had been but lately reduced; that moft of thofe who were in Debt to the Company were Portugueze, who had fettled in their Territories, and who had hitherto behaved well

Yol. II. Numb. 8 I.
and ought therefore to be kindly treated, and not drivefi to Extremities, which might put them upon Things that otherwife would not have entered into their Heads. But this was talking to the Deaf; the Company had heard that Brazil was very rich, they were poffeffed of a great Part of it, and could fee no Reafon why all that it produced fioould not be immediately fhipped for Holland.

There were fome other Things alfo that gave them great Uneafinels. Oppofite to the Recerif there lay a very commodious Ifland, upon which their Governor caufed a new Town to be built, chiefly out of the Ruins of the Portugueze City of Olinda, fortified it thoroughly, and gave it the Name of Mauriceburgb; which, in a fhort Time, was grown a very confiderable Place, and which he united to the Receif, which was become the Centre of the Dutch Commerce, by a Stone Briage This firf and laft coft forty thoufand Pounds. Now; though all this was done for the Benefit and Convenience of the Dutch Inhabitants, and to fecure the Company's Capital in that Country from Danger, yet they could not help grudging the Expence.

But what put them moft out of Humour was the Palace Count Maurice built for himfelf. It was indeed a very ftately Structure, ftanding in the moft commodious Part of the Town, in the midft of very fine Gardens, elegantly laid out, and curiounly planted with Cocoas of all Sorts, as well as Lemons, Citrons, Pomegranates, Figs, and other Fruit-trees. Thefe Gardens were certainly very expenfive; and as to the Palace, it was faid to have coft fix hundred thoufand Florins; and fo contrived, as to command the moft admirable Profpect both by Sea and Land. Before the Front of this noble Structure there was a Battery of Marble, rifing gradually from the Riverfide, upon which were mounted ten large Pieces of Brafs Cannon. Without the City, Count Maurice had alfo a moft magnificent Villa or Country Palace, furrounded with fine Gardens, and adorned with curious Fifh-ponds; but withal encompaffed with ftrong Walls, and the whole fo difpofed, as to ferve at once for the Governor's Pleafure, and for the Defence of the City, which was covered by it, as a Fort, on that Side ; and it proved extremely ufeful to them when the War broke out again. He likewife made many other Improvements, fuch as laying out Parks and Meadows within the Fortifications, which, while duly taken care of, produced all Things neceffary for the Subfiftence of the Garrifon; and were, in all refpects, equally commodious and beautiful.

In this Manner Count Maurice employed thofe Treafures, which were the Fruits of his many Victories and extenfive Conquefts; and which, a Man of a lefs generous Temper, would have found Means to have tranfported to Holland, as his private Fortune. But thofe Marks of Greatnefs of Mind, and public Spirit, which ought to have extinguifhed, nourifhed that Envy, which had been conceived againft him, and while he was labouring to extend and fecure the Power of the Company in Brazil, the Directors of that Company in Holland were employed in cenfuring his Conduct, and in magnifying his Ex> travagance, in laying out fuch vaft Sums, while the Colony produced fo little to the Company's Stock. Such was the Situation of Things, and fuch the excellent Reafons which induced the Directors to form a Defign of recalling Count Maurice, as the only Means of making the Colony turn to an Account, and bring in fuch a Revenue, as might be proportionable to the Views and Expectations of the Company ; which wife Project of theirs, they at laft brought to bear ; Count Maurice himfelf affifting them therein, being grown to the full as weary of their Management, as they were of his; fo that on the I Ith of May I 644 he took leave of the Council, quitted the Government, when he had held it eight Years, and returned into Holland, on board a Flect of thirteen Sail of large Ships, with near three thoufand Soldiers on board; eighteen Companies only being left for the Defence of the Dutch Settlements, agrecable to the Inftructions he had received, and to that Scheme of frugal Management, which was now to take Place, and by which they hoped to repair that Extravagance and Profurion, with which they charged Comnt Maurice.

I have taken as much Care as it was poffible to inform myfelf fully as to thefe Particulars, and have reprefented this whole Tranfaction to the Reader exactly in the Light it appeared to me, and I flatter myélf it will give him as great Satisfaction as I have felt in writing it ; by fhewing him how the moft dangerous Miftakes arife from Narrownefs of Thinking, how eafily the beft Defigns of the very beft Men may be mifreprefented, and with what an Appearance of Wifdom, Difintereftednefs, and public Spirit, fuch Meafures may be cloathed, as in reality are big with public Ruin.

After Count Maurice's Return, the Government of Brazil was put into the Hands of fuch great and able Men as the Weft India Company could confide in; for that, at this Time, was the Phrafe in more Parts of the World than one; and perhaps it will not difpleafe the inquifitive Perufer to have a fhort Account of the Illuftrious Perfons who were the Succeffors of the great Count Maurice of Naffau, one of the ableft, braveft, and moit worthy Men of that Family, fo famous for producing Heroes: The Chief of them then were, Mr. Hamel, a Merchant of Amferdam; Mr. de Baflis, a Goldfmith of Haerlem; and Mr. Bulleftraat, a Carpenter of Middleburgh; all Men of very good Senfe, and great Fidelity to the Company; whofe Diligence and Activity in its Service, we find greatly commended by fome Dutch Writers, who certainly meant as honeftly as they did; but unfortunately for the Service of the Republic, as well as of their Mafters, they miftook their Talents, and by wading out of their Depth became the Authors of a thoufand Mifchiefs, which to be fure they never intended.

They were bred to Trade, and undertood it thoroughly; but this kind of Underftanding did not fo well anfwer the Purpofe as a Governor's. They forced the Portugueze that lived under them, to pay what they owed the Company in a fhort time; but by the Methods they took to do this they loft their Hearts for ever. They furnifhed thefe very Portugueze with Fire-arms and Powder, but they fold both very dear; fo that the Company were great Gainers by the Bargain. They fent over to Holland the Produce of thofe Lands which Count Maurice had affigned for maintaining the Fortifications, which in the mean time ran to ruin. They gave Licences upon very eafy Terms to the Soldiers to return home; which leffened the Expence of the Army. In fhort, they brought the whole Charges of the Government into a narrower Compafs than could be expected; but by doing this they brought the Government itfelf into fuch a Degree of Danger, as invited thofe to rebel, who by this very Management were oppreffed in their Perfons, and the Proprietors of moft of their Plantations fo intangled by their Debts to the Company, that very few of them were worth a Groat. A very fober Dutch Writer, who was there upon the Spot, tells us, That in 1645 there was a greater Quantity of Sugar fent to Holland than at any time before, which he attributes to this wife and frugal Adminiftration, and which, to fpeak the Truth fairly and in plain Englijh, was not either more or lefs than felling all Dutch Brazil for one Year's Purchafe.
15. The PortuguezeViceroy at that Time was Don Antonio Tellez de Silva, a Man who feem'd formed by Nature for the Execution of that Employment at this Juncture: He had great Parts, but greater Prudence; much Penetration, more Sagacity; but excelled moft in diffembling to Perfection. In private Life, and in all common Occurrences, a Man of ftrict Honour, humane, eafy of Accefs, familiar with all forts of People, but without lofing his Dignity. As foon as he was informed that Count Maurice was gone, and had carried with him two Thirds of the Force of Brazil, he formed a Defign of getting rid of the Dutch intirely; but this he never communicated to his Friends, to the Enemy he always denied it.

He infinuated to the Portugrieze that were Subjects to the Duich, that they were only labouring for Strangers, and Strangers of another Religion; whereas they might be Mafters of ail they now farmed at a high Rent, and enjoy good Employments befides, if their King was reftored to his juft Rights. Thefe Suggeftions had their Effect, and thoif who heard them could not avoid being moved by them.

But the Perfon who undertook to manage this whole Affair was one Fobn Fernandez Viera, a very extraordinary Man, and of whom I fhall give a very fhort Account : He was originally a Butcher's Boy, from whence he was raifed to the Rank of a Page to one of the Magiftrates of Olinda, while in the Hands of the Portugueze. He became a kind of Factor, or Manager for the Dutch, and by his Induftry and Art grew exceffively rich, being Mafter of four Sugar Plantations, and intrunted with the Management of many more.

He had an excellent Head, laid the Whole of the Confpiracy himfelf, and fent it over to Portugal by a Perfon who was not at all acquainted with the Defign; after which he fent a Relation of his to Court, with a Letter recommending him to the King of Portugal, by which he got a Troop of Horfe, and acted there as Agent for the Confpirators. He forefaw that this mutt reach the Ears of the Dutch; and when it did fo, he went directly to the Council, owned the Thing, produced his Letter, and offered to give Security for his good Behaviour, which he did without much Trouble; two of the richeft Portugueze in the Dutch Territories becoming bound for him, who were as deep in the Confpiracy as himfelf.

It may be juftly wondered that, in fuch Circumftances, this was accepted; but the Wonder will ceafe when it is known that he owed the chief Perfons in the Adminiftration upwards of two hundred thoufand Florins, which rendered it advifeable for them not to fee him ruined. By this adroit Contrivance he moft effectually fecured his Liberty, which he made Ufe of to carry on this great Defign with all the Dexterity imaginable; in which he was affifted by two Perfons, who made a great Figure in the Province, Antonio Cavalcante, and Amador Argoufa, equally deep in the Management of the Dutch Affairs; and determined, like him, to raife their Fortune upon the Deftruction of thofe who trufted them.

The Day fixed for the Execution of this Plot was, the 24 th of Fune, 1645; when one of the Daughters of Antonio Cavalcante was to be married, and a great Feaft given at the Houfe of Viera, to which moft of the Officers and principal Perfons in the Company's Service were invited, and where, without doubt, they would have been all feized, if not murdered, if the Defign had not been difcovered the very Evening before it was executed. A Ship that arrived from Amferdam, brought Letters from the Directors of the Weft India Company; with an Account, that the Minifter from the States General at the Court of Portugal had difcovered, that a great Confpiracy was carrying on in Brazil; and that they would do well to enquire what Supplies had been lately fent from Lifoon to the Portugueze in thofe Parts.

This Enquiry produced fuch Difcoveries as ftruck the Dutch with univerfal Confternation; which gave Viera and his Affociates time to make their Efcape into the neighbouring Woods, where they took up Arms. There Fobn Fernandez Viera affumed the Character of General and Commander in chief, affifted by Colonel Diaz, with a few Portugueze Troops, and Colonel Cameron at the Head of a much more numerous Body of Brazilians. With this fmall Army he fixed his Head Quarters at Pojug, a Town between the Reccif and Cape St. Augufine; fo that the Dutch had the Misfortune of feeing the War break out, not only unexpectedly, but in the very Heart of their Dominions. At the fame time Antonio Cavalcante raifed another Part of the Country; and Amador Aragoufa, at the Head of a flying Party, was burning and deftroying all the Dutch Plantations without Mercy. In this dreadful Situation the Council affembled all the Troops they could; and, at the fame time, publifhed a Proclamation, whereby they promifed Pardon and Peace to all who fhould fubmit and return to their Duty, excepting only Viera, Cavalcante, and Aragoufa. The Perfon they made Choice of to command their Forces, was Lieutenant-Colonel Huys, to whom they gave the Title of General ; but it would have been better if they could have given him an Army, fince the Troops he got together were few in Number and very ill provided.

But befides this, the Council had a mind to negociate, and therffore they fent two Captains, Fandor Voord, and
Dircb

Dirch de Hoogfrate, to the Viceroy, at the Bay of All Saints, to complain of the Infraction of the Truce, between the Crown of Portugal and the States General, which had ftill four Years to come. The Viceroy received them with great Civility, and anfwered them with much Prudence. He faid that he was refponfible for the Conduct of the Inhabitants of that Part of Brazil fubject to the Crown of Portugal; and, if they had broke the Truce, he would give them what Satisfaction they could defire; but, with refpect to the Portugueze fettled in the Dutch Dominions, if provoked by Oppreffions they had taken Arms, it was what he could not help, and for which it was very unjuft to make him anfwerable.

This was what he faid in public, but in a private Conference he had with Captain Hoog ftrate, he drew him over to his Intereft, and prevailed upon him to refolve upon giving up the important Poft of Cape St. Auguffine, of which he was Governor. In the mean time General Huys attacked Colonel Cameron, but had the Misfortune to be beat, with the Lofs of one hundred Men. Soon after this the Portugueze Fleet, under the Command of Admiral Salvador Correa de Banavides, appeared on the Coaft; and, though it was very numerous, yet the Dutch Admiral, Licbtbart, offered them Battle, though he had but five Men of War; but the Portugueze Commander refufed it, pretending he had no Orders to act againtt the Dutch; and that all his Bufinefs was to land a Body of Men in his M. fter's Dominions, which he accordingly did; but thofe Men, without any Ceremony, entered the Dutch Territories, and made themfelves Mafters of all the Places that fell in their Way.
The Duich Council, upon this, fent Orders to their General Huys to retreat ; but he, ftaying for one Captain Black, whom he had fent away for feveral Ladies and rich Effects out of the Country, had the Misfortune to be furrounded by the Porturueze, beaten, and taken Prifoner; which the beft Dutch Accounts that I have met with attribute to his Want of Conduct and Courage.

Upon this Orders were fent to Admiral Lichtbart to attack the Portugueze Ships whenever he had an Opportunity, and he exerted upon this Occafion the fame Spirit and Courage which he had fo often fhewn upon others; for, wit! four Ships, a Frigate, and a Bark, he attacked the Portugueze Fleet of feventeen Sail, took three of the largeft Ships, together with the Admiral; killed feven hundred Men, and burnt and funk almoft all the other Veffels; which raifed the Hopes of his Countrymen not a little, and they began to fatter themfelves they fhould have better Succefs for the future, than they had hitherto had from the Begimning.

But thefe Hopes were very foon dafhed, by their receiving the unexpected News of the Lofs of St. Augufine, which was given up by Captain Hoogfrate, in confequence of the Agreement which, as we have before mentioned, he had made with the Viceroy, when fent to treat with him by the Dutch Council as their Minifter. He received for this infamous Action the Sum of 18000 Florins, which Sum he employed in raifing a Regiment of fix hundred and fifty Brazilians, of which he was made Colonel by the Portugueze, and wanted not Impudence enough to appear at the head of it, againft his Country; and, which was ftill more aftonifhing, behaved bravely and with great Fidelity in the Service of his new Mafter.

Their great Superiority enabled them to make a quick Difpatch in moft of the Expeditions they undertook; fo that in fhort Time almoft all the ftrong Places in the Captainhip of Fernambuca furrendered to them. At laft they blocked up the Receif, always the ftrongeft, and now the only ftrong Place the Dutch had left; and reduced thofe who were in it to fuch Hardfhips, that they muft have been flarved out, if they had not been relieved by the Arrival of a Fleet from Holland. When the News of thefe Proceedings arrived in Folland, the Mob was exceffively irritated, and in their firt Fury furrounded the Houfe of the Portugueze Embaffador; which, but for the prudent Interpofition of the Prince of Orange, they had certainly pulled down. That Miniter, however,
endeavoured to perfuade the States General that his IVafter had no Concern in this Rebellion; that he abfolutely difapproved it ; and that the Viceroy had never given any kind of Countenance to Viera. But the Dutcb Statefmen were too wife to give any Credit to him: On the contrary, they equipped a Fleet of fifty-two fail of Mer of War, under the Command of Mr. Bankert, Admiral of Zealand, whom they declared Admiral of Brazil, Guinea, and Angola; with him they fent Colonel Schuppen and Colonel Henderfon, who had ferved under Count Maurice with great Reputation; and thus an open War begun between Portugal and Holland, on the other Side the Line.

But never any Fleet met with fo many unfortunate Accidents as this did; for, within two Days after they failed from the Texel, they were forced to anchor in the Dorons, where they loft two Ships in a Storm; they failed again, and were forced into the Ille of Wight; where, the firft Sight they faw, was the Wreck of a great Ship, which proved a Dutch Merchantman from Brazil, with a Cargo of the Value of two Millions, which was entirely loft; and, out of three hundred Perfons, only thirty faved; int the Port of St. Helen's they remained wind-bound feven Weeks, and at laft met with a Storm on their putting again to Sea, by which they fuffered extremely: Many more fuch Checks they met with before they arrived at the Receif; where the People were reduced to fuch Extremity, that they were on the Point of throwing themfelves upon the Enemy, to feek a certain Death by the Sword, rather than expect a lingering one by Famine.

By the Help of thefe Reinforcements the War was ftill kept on Foot, and fome fimall Advantages gained; but, in the Beginning of the Year 1647, they were again blocked up in the Receif, where their whole Force confifted but of one thoufand eight hundred Men, with which they made a gallant Defence; but at length, on the 16th of May, they refolved to fally with their whole Strength, and to attack the Enemy in the Field; which they did, at firft, with fome Degree of Succefs; but, being overpowered by Numbers, were at length beaten; and, in their Fight and Flight, loft one thoufand one hundred Men, moft of their Officers, nineteen Colours, and all the Artillery and Ammunition they had carried with them. This great Misfortune hindred them, indeed, from making any more Sallies; but by leffening their Numbers fo much, enabled them to make a longer Defence, fince their Provifions fufficed now for feven Months, which would otherwife have lafted them but three.

I have dwelt the longer upon this Part of the Story; becaufe I conceive it cannot be confidered as either unpleafant or ufelefs; and I have obferved, with fome Degree of Amazement, that this kind of Hintory is very little known here in England; where the being able to difcourfe pertinently of Greek and Roman Hiftory, paffes for Learning; and an Acquaintance with the Story of Italy in the middle Ages, has its Admirers amongft the Virtuofi ; both which I hold equally laudable and fenfible; but ftill I am perfuaded that this kind of Hiftory is of more Confequence than both, to the Inhabitants of a Country flourifhing by Trade; and therefore $I$ have taken fo much Pains to reduce thefe Matters into Method and Order, that the Study of maritime Hiftory might become more pleafant and eafy, and confequently grow more into Repute and Fafhion, amongft a Nation that fo defervedly value themfelves upon the glorious Title of a maritime Power. The true Meaning and real Import ance of which Title, can only be learned by the Perufal of Works like thefe. But to return from Refections to the Current of our Hiftory.

The Progrefs of the Portugueze was fo great, and fo irrefiftible, and the Difafters that attended the Dutch followed fo clofe on each other, that nothing feemed capable of preventing the total Ruin of the Dutch Affairs in that Part of the World. This naturally might, and indeed did, produce a kind of national Defpair ; which haftened, though I think it did not caufe, that Ruin which it forefaw. The Province of Zealand recalled their Admiral Bankert, with whom came home moft of the Officers they had fent with him, heartily difguted with the

Service. The Difficulties they met with in their Paffage, when outward bound, were repeated in that which brought them home; fo that Bankert died before the Fleet arrived in Holland, and fo did feveral of his Officers almoft as foon as they came afhore; but the Sieur Sbuk, who was fent home by the Adminiftration in Brazil, furvived; and upon his Application to the States, and his moft particular and affecting Account of the Pofture of things in that Country, they refolved to make one general and great Effort for the Prefervation of fo valuable an Acquifíion ; and accordingly gave Orders for equipping a ftrong Fleet of fifty Sail of large Men of War, and embarking therein fix thoufand regular Troops, the Command of which they gave to Admiral Witte-Wittezen, at that Time efteemed the ableft Officer in their Service.

This Armament alarmed the Crown of Portugal to fuch a Degree, that Orders were fent to the Embaffador then refident in Holland, to promife the States any thing that might prevent their profecuting this Defign, which, at firft, had fome Effect; but the Dutch, receiving at this Time the melancholy Account of what had happened at the Receif, determined not to be the Dupes of fuch a Negotiation; and therefore, towards the End of the Year 1650 , they not only difpatched Admiral WitteWittezen with his Fleet, but likewife projected the fending another Fleet after him, with an additional Supply of between five and fix thoufand Men more. One would have imagined, Succours like thefe, exceeding, if I am not miftaken, any thing that has been done by other Maritime Powers, in Support of any fingle Colony, would have anfwered the End effectually, more efpecially as Portuigal did not arm in any Proportion, or fend over any regular Troops, at this Time, to Brazil: But, however, all proved vain and ineffectual; for the Elements declared as fierce and as inflexible a War againft the Dutch Fleets and Armies, as the Portugueze, the Negroes, and the Brazilians. The Climate, which feemed natural to all thefe, proved abfolutely mortal to the Dutch. The former living there on the natural Produce of the Country, were healthy, hearty, and robuft ; intermarrying with the Natives, they multiplied apace, and had but one common Intereft, whereas the latter fubfifting entirely on the Provifions fent them from Europe, grew pale, wan, and feeble, and died in great Numbers.

Hence it came to pafs, that when the great Fleets before mentioned, after fuffering much by Storms and Tempefts in their Paffage, arrived at length on the Coaft of Fernambuca, they found, inftead of a Colony, a mere Hofpital of fick, maimed, and infirm People; and, in the room of thofe Fortreffes they were to have relieved, a Collection of Church-yards filled with the Bodies of thofe who had been before fent on the fame Errand; the Sight of which affected the Admiral in fuch a Manner, that, notwithftanding the precife Orders he had received, he determined with himfelf not to bury the remainder of his People there, which from his firft Arrival he began to do apace, but to return home without delay, which he accordingly did, leaving things in a much worfe Condition than he found them; and the Weft India Company, befides all the reft of its Misfortunes, oppreffed by a very heavy Debt, contracted on the Score of his unfortunate Expedition. We need not wonder, therefore, that upon his Return there was a dreadful Out-cry fet up againft him ; to allay which, the States were obliged to commit him to Prifon; but he very foon juftified himfelf to their Satisfaction, and indeed to the Satisfaction of every body but the Proprietors of the Weft India Company, on whofe Directors at home, and in Brazil, he laid the blame of all thefe Mifcarriages.

It would be needlefs to purfue this Subject more particularly from this time to the total Exclufion of the Dutch, becaufe it would contain only a Repetition of the fame kind of Facts, and confequently prove far enough from being entertaining or inftructing. It may therefore fuffice to fay, that towards the clofe of the Year 1653 , the Portugueze, who now publickly owned the Caufe of Fobn Fernandez Viern, fent a Fleet of fixteen large Men of War to attack the Receif by Sea, and to blow up Part of its Fortifications; which fo terrified the Dutch Gar-
rion, that they abfolutely refufed to fight; fo that the next Year they furrendered every thing they poffeffed; and, in 1655 , they returned to Holland. It is inconceivable what an Uproar this raifed in that Country, and with what Heat and Fury the People demanded Juftice againft General Sigifmond Scbuppen, who had commanded in Chief for many Years, and who was Governor of the Receif when it furrendered. The States, perhaps, cut of favour to him and his Officers, fent them to Prifon; and they could not, in refpect to Juftice, refufe him the only Grace he afked, which was to make a public Defence; wherein he laid open, fo clearly, his own long and faithful Services to the Dutch Nation, recapitulated all the Succeffes they had under the Adminiftration of Count Maurice, and gave fo true a Picture of the Miferies and Misfortunes they had fuffered fince he went thither laft, that the People wept, and the Judges acquitted him.
There is fomething fo ftrange, fomething fo unaccountable in this Tranfaction, from the Beginning to the End of it, that I cannot think it will be looked upon as either tedious or impertinent, if I point out clearly, and in a narrow Compafs, the Caufes of this extraordinary Revolution, which I take to have been principally three. The firft, and indeed the principal one, was recalling Count Maurice of Naffau, and changing the Government; which I muft beg leave to explain, for the Sake of fuch of our Countrymen as may not fully apprehend it. Count Maurice was a great Captain, and a true Politician; he very well knew, that in a conquered Country a military Adminiftration was as requifite as a civil one; and fo contrived his own, that it was a proper Mixture of both. His firft Care was to extend the Dominions of his Countrymen, that they might have room enough to fix a potent Colony, and a fertile Territory fufficient to maintain it. On the Frontiers he built ftrong Fortreffes, brought the Native Brazilians to relifh living according to their own Manner, under the Dutch Protection, and to be willing to work for Wages; he likewife filled the Country with Negroes, from his Conquefts in Africa; and, when he had thus fecured a large, pleafant, and fruitful Country, and People enough to fublint in it, he began to build his new City of Mauriceburgh, to raife his admirable Palace, to lay out his fine Gardens, and to do every thing that might encourage Art and Induftry ; and, by adorning and inriching the Country, fix fuch Pcople as came to get Eftates there, to their Eftates when got. By this Policy of his, it muft allowed that he did not fill the Company's Coffers, but he ferved his Country and the Company too very effectually, by putting the Colony upon a right Eftablifhment, and giving it fuch a Force within itfelf, as all the Power of his Enemies could not have overthrown: This he was able to do from the extenfive Authority lodged in his Hands, by his Commiffion from the States; and yet the Extent of his Power could only reach to what was good; had he endeavoured to carry it farther, his Council might, and would, have interpofed: But it was quite otherwife with the Government that fucceeded him; for they had a boundlefs Power of doing Mifchief, and very little Capacity of doing Good, as appeared very clearly from their whole Adminiftration, and indeed it could not well be otherwife ; for, whereas Count Mourice came naturally from commanding at home to a Government abroad, thefe Men were fetched from behind Counters to act the Part of Soldiers, Seamen, and Statefmen. I do not fay this to difparage Trade, but to thew the Folly of fuppofing that the greateft Mafters of Trade fhould be able by Inftinct to manage thofe Trades they were not bred up to, and confequently upon their own Principles cannot underftand. They were of excellent Ufe to Count Maurice, as his Council, and I firmly believe he could not have done without them ; but then I hope I fhall efcape Cenfure for affirming, that they knew as little how to do without him.

The fecond Caufe of the Declenfion of the Dutch Affairs, was the too hafty Defire of the Company to draw a great Revenue from this Colony, which put them upon moft unreafonable Reductions of their Expence. The firft

## Chap. III. of BRAZIL by the PORTUGUEZE.

Point was, that of a Governor Genetal, who, by keeping a kind of a Court, feemed to be an intolerable Burden upon fuch as were at the Expence of it ; buit if they had confidered that this Governor, who kept this Court, acquired for them the beft Part of that Colony, and put the reft of it into fo good a Situation, they would have judged the Services of fuch an Officer a fufficient Recompence for the keeping Him. Their next Reformation was in the Military Eftablifhment, which in 1641 Count Maurice had fixed at upwards of feven thoufand Men, and which, immediately upon his Removal, they very frugally reduced to two thoufand feven hundred, and even allowed fuch of thefe Soldiers as would pay for it, to go home: The Magazines, that were always well filled in the Time of Count Maurice, and from which, as we have feen, he furnifhed feveral Fleets for diftant Expeditions, they emptied, to raife Money by the Sale of their Contents, and very foolifhly fuffered their Servants and Soldiers to live upon European Provifions, inftead of accuftoming themfelves to live upon the Produce of the Brazilian Territories. It was likewife a great Fault that they laid high Taxes upon the great Manufacture of the Country, Sugar, which threw it entirely into the Hands of the Portugueze, their own Subjects being afraid to meddle with a Trade in which the firft Mifcarriage was attended with total Ruin. Another notorious Blunder was, their fending over a vaft Number of Yews, who, finding the People finking under heavy Taxes, brought in that excellent Cordial of high Ufury, to keep up their Spirits. By thefe; and fuch Iike Miethods, they, in the Space of a few Months, brought all Things into Confufion; and, from that Time forward, never took one fenfibte Step towards bringing them out.

The third Caufe of the Ruin of this Colony was, that the States did not interpofe in time, and take the Care of the Dutch Brazil into their own Hands, inftead of leaving it to a Company whicl had fhewn themfelves fo unequal to what they had undertaken; and therefore, for their own Good, as well as for that of the Public, this very important Concern fhould have been taken out of their Hands. But by continuing the fame Government, the States and the Company pinned down the unhappy People that were left there, labouring under Miferies and Misfortunes of all kinds, without Remedy and without Hope! If they had fent over in time a new GovernorGeneral, Things might have been reftored; but for want of this, they ran continually from bad to worfe, as it was very natural for them to do; fo that after ten Years Struggle, as well againft their own Weaknefs and ill Management, as the fuperior Force of their Enemies, they fuffered the Colony to expire; but, when they found their Malady incurable, they had better have taken the Brazilian Method, and, without waiting Extremities, knocked it on the head at once.
But to conclude this Subject with a fhort State of both Adminiftrations: When Count Maurice, after eight Years refiding in Brazil, quitted the Government, he left them feven Captainhhips, one City, thirty great Towns, fortyfive regular Fortreffes, ninety Sail of good Ships, three thoufand regular Troops, twenty thoufand Dutch of all Ages and Sexes, fixty thoufand Negroes, and above twice as many Brazilians : At that Time the Colony yielded twenty-five thoufand Chefts of Sugar annually, and a Carpenter, Cooper, or Smith, could earn five or fix Guilders a-day, and live very comfortably upon one; And, after expending Millions upon this Colony, for ten Years together, and the Lofs of feveral thoufands fent thither from time to time, there returned to Holland, in 1655, beween fix and feven hundred Perfons, of all forts, not worth a Groat.
Upon-this the States declared War againft Portugal, by which their Eaff-Tndia Company were great Gainers, but the Dutch Nation fill Lofers; fo that, after five Years, they were glad to make a Peace, under the Mediation of our King Cbarles II. which was figned the 6th of Auguft, r660, in which the principal Articles relating to our Subject are thefe that follow : That the Crown of Portugal thall be obliged to pay to the States the Sum of eighty
Fox: II. Numb. 8 I:

Tons of Gold, either in ready Money or Sugar, Tobacco or Salt, or elfe affign the faid ready Money upon the Portuoueze Cuftoms: That the Places taken on each Side fhould remain to thofe who were then in Poffefion of them : And that a free Trade fhould be allowed to the Dutch in Portugal, Africa, and Brazil, without paying any more Cuftoms than the native Portugueze.
16. The Poriugueze have, fince this time, remained in quiet Poffeffion of all this vaft Country, which is the Reafon that it is very difficult, if not impofible, to give any diftinct Account of what has paffed there fince this Time: For the Portugueze are, in the firft place, not much addicted to Writing; and in the next, they are not extremely willing that the World fhould be acquainted, farther than they mult be from Facts, with the State of their Colonies in Brazil ; and it is for this Reafon, that they fuffer no Ships to trade thither but their owri; a Point in which they are extremely precife, infomuch that they have made it a kind of capital Maxim in their Policy. But it is with them as it is with all other Nations of this Stamp; they flatter themfelves that this Rule which they lay down is inviolably adhered to ; yet it is certain that the Fact is otherwife, and that fometimes Englifh Interlopers, and now and then French and Dutch, fell their Cargoes in Brazil, efpecially in time of War; and in time of Peace, when there is not an Opportunity of carrying on a clandeftine Trade in this manner, they find out another, which is, fending thither Goods, under the Name of fome Portugueze Merchant, in the very fame manner that the Goods are fent to the $S$ panifb Colonies, under the Name of Spanif乃 Merchants.

In both Cafes they are no more than Brokers; but, to their immortal Credit, the faireft and the moft honourable in the World; for they are never known to break their Faith, or to injure thofe who truft them. As to the Trade which the Portugueze themfelves carry on to this Colony of theirs, it has for thefe laft hundred Years been fo great, that it is thought to have been the principal Caufe why they have fighted that of the Indies, as we have fhewn in its proper Place; tho' formerly it confifted principally in Sugar, Tobacco, Brazil Wood, and other Commodities of great Value; yet within thefe laft forty Years they have received from thence Commodities of till greater Value, or rather, to fpeak in the Language of our Times, of the greateft Value, fuch as Diamonds, and Gold; and of this precious Metal we have been thought to have fo large a Share, that without it we could fcarce have carried on the laft general. War, and the expenfive Meafures that have fucceeded it ; and though this may not be ftrictly true, yet there is certainly fo much of Truth in it, that it ought to make us curions in the in' quiring after, and obtaining the beft Account we can of thefe Plantations, which is fo much the more neceffary, becaufe hitherto the A'ccounts we have had are as far from being fatisfactory as Accounts well can be. The Pains I have taken upon this Subject, have not indeed enabled me to give the Reader fo exact a View'of all the Portugueze Settlements in Brazil as I could wifh ; but, however, as I fhall have no Occafion to treat of this Country again, I will take this Opportunity of giving him the moft particular and fatisfactory Accounts I have met with, till fomething better fhall be publifhed upon the Subject.

All the Trade of the five northern Captainfhips of Brazil, viz. Paria, Maragnan, Siara, Rio Grande, and Paraiba, is carried on in the laft mentioned Port, which lies on a River of the fame Name, at the Diftance of about five Leagues from the Sea; it is a fair and populous Town for that Country; and there are annually about feven or eight Ships fent hither from Liflon and Oporto, of the Burden of two hundred and fifty Tons each. Their Lading confifts chiefly in Sugar, of which they make more in thefe northern Captainhips, than in the South; efpecially fince the Difcovery of the Gold Mines, which has made the Inhabitants of thofe Parts of the Country negligent. There was a Time when the Trade of Brazil, in this Commodity, was fuperior to any in the World; for the Sugar of Brazil was the firft that was known in Europe; and the Portugueze are faid to have fet up their Works in this Comintry, about

Aa a
the Year 1580; and their being fo long in Poffeffion has made them more careful and exact in it, than any other Nation; fo that even now the clayed Sugars from Brazil , are whiter and finer than ours; and yet the Method they take of doing this, is neither a Secret, fo as not to be known, nor difficult, fo as not to be attained; for in plain Englifh it is no more than this:

When their Sugar is put into their Pots, and, by the draining out of the Moloffes, they are funk two or three Inches below the Brim; they fcrape off that thin hard Cruft that is found on the Top of the Sugar; and then they pour in their Mixture for refining it; it is nothing more than a fine foft white Clay, beat and mixed with Water, till of the Confiftency of Cream, with which they fill up the Pan. The white Water in ten or twelve Days paffes quite through, and whitens the Sugar as it paffes; the thick Body of the Clay lodges on the Top of the Sugar, and is eafily taken off with a Knife. Befides Sugar in this State, they bring likewife dying Woods, feveral Sorts of Drugs, and other valuable Commodities from Paraiba; which, however, is the leaft frequented Port in Brazil, though it is generally allowed that thefe northern Captainfhips are the beft peopled; and that the Inhabitants are very eafy in their Circumftances, though there have not as yet been any Mines found, or at leaft wrought, in thefe Parts. Though fome Spanifh Writers affirm, that, from the Appearance of the Soil on the Sides of their Mountains, it is highly probable they are rich in Silver; which, perhaps, they are reftrained from fearching for by the Orders of the Viceroy; or at leaft this was the Cafe forty Years ago, when fome Sparijb Deferters made a Propofal of this kind to the Portugueze Governor of this Captainfhip.
Tianarca, which lies next to Paraiba and the Captainfhip of Fernambuca, carry on their Trade from the City of Olinda, which we have mentioned before. It is feated on a Hill not far from the Sea; and this Situation renders the Streets very uneven and very incommodious. The Port too is but narrow, and the Entry into it extremely difficult; yet there is a confiderable Refort thither of Ships from the other Parts of Brazil, and from the Canaries; and the annual Fleet from Lijbon confifts generally of about thirty Sail, efcorted by a Man of War. Thefe Merchantmen are generally about the fame Size with thofe fent to Paraiba, and their Cargoes are compofed chiefly of Sugar and Brazil Wood; which laft is fuppofed to be the beft of its kind in the World; and therefore we fhall fpeak of it fomewhat more particularly: Many, otherwife correct Writers, having fallen into very grofs Miftakes upon this Subject.

It is an Opinion commonly received, that the Country of which we are fpeaking gave its Name to this Wood, and that it was called Brazil becaufe it came from thence; nay, we are told fo in the very laft Edition of the Dictionary of Commerce, and in one of the new Articles; but, however, the Fact is directly otherwife; and, as we have faid elfewhere, the Colony was fo far, from giving its Name to the Wood, that, on the contrary, the Country was firft called the Land of the Holy Ghoft; and from its abounding with this kind of Tree, loft the Name impofed upon it by its firft Difcoverers, and took that of Brazil. If the Proof of this is demanded againft the Authority of abundance of Books, which fay directly the contrary, we may cite $\mathcal{F} 0$ bn de Barros, the famous Portugueze Hiftorian; who fays exprefly what we do, and was likely to know as much of this Matter as any Man. But that learned Prelate of France, Peter Huet, Bifhop of Avranches, has put the Matter entirely out of doubt; for he affures us, that the famous Rabbi, $D a$ vid Kimobi, in his Commentary on the Cbronicles, affirms, that the Hebrew Word Algummim, ought to be tranflated Brazil ; now it is certain that this learned Few wrote before the Country of Brazil was difcovered, and confequently the Wood was fo called before any of it came from thence.

There are alfo different Sorts of this Wood; fuch as the Brazil of Fapon, Brazil of Lamon, Brazil of St. Martba, and Braziletto from Famaica and the Ieeward Ilands; but the very beft comes from this Country, and the beft in this Country from Fernambusa. The Brazil-Tree
grows generally in dyy barren Places, and among? Rocks; it is very thick and large, and the Timber ufually crooked and knotty; the Flowers it bears are of a moft beautiful bright red, have a very fragrant Smell, and, inftead of hurting, as moft Perfumes do, they cherifh and ftrengthen the Brain: Though the Tree is very large, it is covered with fo thick a Bark, that when the Brazilians have taken it off, a Tree as big as a Mar's Body is left no thicker than the Calf of his Leg. The Wood is very heavy, dry, and hard; it crackles much in the Fire, and fcarce raifes any Smoak when it is burned, becaufe it has fo little Moifture; there is no Pith in it, except in what comes from Fapon; and therefore it may be doubted whether this be really the fame kind of Wood or not.

That is held to be the beft which is thickeft, foundef, hardeft, and without any Bark fticking to it ; it ought likewife upon fplitting to turn from a pale to a deep red; and laftly, upon chewing the Chips of it, the beft Sort yields a fweet fugary Flavour. This Wood is put to various Ufes by the Turners, and takes a very good Pollifh; but it is principally employed in dying, in which it yields a very fine bright Red. It is from the Brazit Wood that one kind of Carmine is made, by beating it in a Mortar with Leaf-Gold, and fteeping it in White-Wine-Vinegar, and afterwards boiling it; when it yields a thick Scum, which, carefully taken off and dried, becomes, when reduced to a Powder, Carmine, but very far inferior to what is made by another Method, from Cochineal.

The next Captainfhip of Brazil, is that of the Bay Babia, as the Portugueze call it, or Bay of All Saints; which is about twelve Leagues over, but in feveral Places is fcarce navigable, on account of Sand-Banks and Sholes: There are in it feveral fmall Inands, on which the Portugueze have Tobacco and Sugar Plantations, and they have likewife very good Fifheries on the Coaft of thefe Inands, and on the Banks. I have an Account of a Voyage to Brazil by a French Gentleman, in the Year I717, which is very curious, and from which I fhall give the Reader fome very entertaining Particulars, which I do not remember to have met with any where elfe, or at leaft not in our Language; and becaufe I am not able to put them in a better Drefs, I will give them exactly in his Words.
"There is not a Place in the World, Cbina only ex"cepted, from whence I came, where there is fo much "Trouble to get on Shore, or to know how to act when " one is on Shore, as in Brazil. We came into this Bay " on the I6th of November; and when we were within a
"League of the City of St. Salvador, we were reftrained
" from proceeding any farther, by a Gun fired from a lit-
"s tle Fort ; upon which we came to an Anchor, and fent
" our Supercargo afhore in our Boat. He was a "s very fenfible Man, and withal had a great deal of "Gravity, a Quality of all others the moft neceffary, " for one who has any Bufinefs to tranfact with the Por-
"tugueze: As foon as he came afhore, he was conduct"s ed to an Audience of the Viceroy, who received him "s with a great deal of State; and yet fhewed him, af the
" fame Time, as much Civility as he could expect.
" He told his Excellency that he came on behalf of three
"French Ships homeward bound from the Eaft Indies,
"s that were in many refpects greatly diftreffed, and had "c no Hopes of performing their Voyage, but from his " affording them his Protection and Relief.
"The Viceroy continued for fome Minutes filene, 66 and then gave him his Anfwer to this Effect: That "s he was very forry for their Misfortune, becaufe " his Mafter's Orders were very precife againft admit"s ting any foreign Veffels into the Port; and that he " was the more concerned to hear that they were French, " becaufe it was chiefly on their Account that thefe Or" ders were given; becaufe feveral Veffels of their Na6. tion, that had been admitted into the Ports of that "Country upon the very fame Pretences; had carried "s on an illegal Trade, directly contrary to the King's "Orders, and had fhipped great Quantities of Tobacco. "He told them farther, that the King's Orders were to "f feize and confifcate without Diftinction, whatever

## Chap. III. of BRAZIL by the PORTUGUEZE.

ss foreign Veffels entered that Port, unlefs it plainly "s appeared they were in fuch a Condition as not to be ss able to keep at Sea; that therefore they were to have
s6 twenty-four Hours given them to confider whether
os they would come and anchor under the Guns of the
${ }^{6}$ Fort in order to be examined, or to put to Sea with-
${ }^{66}$ out receiving any Relief at all. He added, that if the
${ }^{66}$ Cafe was fuch as our Agent reprefented it, he might
es very freely enter the Port; and, upon Examination,
© all the Care fhould be taken to affift and fupply him,
"s that he could defire; but that he would do well to
${ }^{6}$ s remember that the Portugueze were not to be impofed
© upon.
"s As our Ship was really in fuch a Condition that we
" had no Reafon to fear any Examination, we made
*Sail immediately on the return of our Supercargo, and
"s came to an Anchor under the Fort. The next Day the

* Judge came on board, attended by feveral Secretaries
sc and other Officers, all of them very grave fober-look-
os ing People, who examined every thing with all the
" Nicety and Strictnefs of an Inquifition. They called
" for our Journals, queftioned our Pilots, Mariners,
sc and even the Cabbin-Boys, particularly as to this
a Point, Whether we had not formed a Defign of touch-
" ing at Brazil before we were in fuch Diftrefs? They
sc all anfwered in the Negative ; but ftill we had fo lit-
s tle Hopes, that every one in the Ship, who had it in
" his Power, made them fome Prefent or other, which
* they took indeed, but fcarce gave us Thanks. At
" laft they took their Leaves, and fent fome Carpenters
s6 on board, to whom our Captains made fuch an Ap-
"plication, that they reported our Leaks to be fo
s dangerous, that the Crew were very much alarmed,
** and were afraid of finking before they got out of the
sc Ship.
"s As foon as this Report was made, we had Leave
se to go on Shore, which was refufed us before; and we
sc had alfo Leave given us to take Lodgings where we
sc thought fit in the City, but with ftrict Caution not to
" attempt any kind of Trade on Pain of forfeiting both
s Ship and Cargo. TheOfficers put on board the Veffel
st talked the fame Language at firft, but feeing the Im-
os preffion it made, and that our People were very exact
sc in that Particular, they were fo kind as to explain
os themfelves the third Day, telling us that this was all
" a Farce ; that the Judges themfelves knew it ; that
© they underftood by our Prefents, we were a good fort
st of People, and, that we hould have, every Night,
"Boats come off with all forts of Merchandize; and
" that they would take care we fhould run no fort of
"Rifk, either in buying or felling. The Boats came
* accordingly, and though at firft we were a little fuf-
" picious, yet in one Week's time their Language was
" perfectly underftood, and Trade went on brifkly every
${ }^{6}$ Evening, as foon as it was dark:
" We imagined there would be no Difficulty in pro-
" curing Carpenters and other Workmen, if we gave
si them good Wages, but we were miftaken; for none
*s of thefe People durft take our Money till they had
" Leave, and that Leave was not to be had but by dint
" 6 of Prefents; which being properly beftowed the Car-
" penters came on board and went to work. It is lite-
"s rally true in Brazil, that Money will do all Things;
${ }^{6}$ and that nothing is to be done without Money. We
" ftaid there four Months, and found few honeft Men
ss except the Viceroy.
${ }^{6}$ He was the firft that ever had that Title, all the "former Governors being called Captains-General ; s6 and his Title was not only higher, but his Power much
" greater than theirs; which was intended to redrefs the
" many Corruptions and Iniquities that had crept into
"s the Government. The Nobleman graced with thefe
"Honours, was the Count de Villaverda, one of the
«s greateft Families in Portugal, who had ferved as Ge-
" neral of Horfe in the lait War, and was in every re-
"f fect a Man of as much Worth and Honour as his
"s own, or any other Country, could boaft. He found it
*s very difficult to execute his Inftruetions, but he certainly
${ }_{6}^{6}$ fet all his People a good Example; for in the corruptelt
" Country in the World he behaved with the gfeatel
" Probity Man could do, and laboured all that was in
" his Power to prevent the bad Effects of a contrary
"Conduct in others. But it may be naturally expected
sf that I fhould give fome Account of this great City; " and I thall accordingly do it as exactly as I can :
"St. Salvador is fituated at the Entrance of the Bay of "s All Saints, and has a very fine Port, which might be "6 made ftill more commodious than it is, if Art and "Induftry gave a little Affiftance to Nature: The press fent Viceroy has attempted this, and it is moft certain "s that if they execute his Defign in its full Extent; "s the Harbour of St. Salvador will become the beft in © America.
"The City is divided into the Upper and the Lower:
"We will begin with the fecond, in which live all the
" Merchants, and People of Bufinefs; and perhaps
" there is not in the World a Place, for its Size, of "s greater Hurry or greater Trade: It lies at the Foot of "s a Hill which is not very high, but exceffively fteep.
"6 There is in it a royal Arfenal, befides the King's Ware-
's houfes and Magazines ; which are large, well filled;
" and kept in excellent Order. There is likewife a very
" fine Yard for building Ships; and it is very wonderful,
" that the Policy of the Portugueze; in this refpect, is
"s not imitated by other Nations that have Colonies in
" America; for Ships are not only built here; at a much
" eafier Rate than in Europe; but are likewife better, and "s more ferviceable, becaufe the Timber is excellent in " its Kind, and incorruptible in its Nature, fo that the
"Worms, which in the Mediterranean and the Weff Indies,
" make a fwift and certain Deftruction in all our
" Veffels, how well foever they may be fheathed, are " not able to penetrate thefe. The fame Thing is
" practifed in almoft all the other Parts of Brazil,
" which is certainly a very wife, and a very profitable Re"s gulation. And as, on the one hand, we may be
" very well furprized, that other Nations have not imi-
" tated the Portugueze in this refpect ${ }_{3}$ fo, on the other
" hand, there is no lefs Reafon to be aftonifhed; that a
" Nation fo prudent and politic in this Particular, fcarce " acts with common Senfe in any other.
"The upper Town is feated on the Summit of the " Mountain; the Houfes are large enough, and fome 's are pretty convenient; but the Inequality of the " Ground on which they ftand fpoils their Appearance, " ${ }^{6}$ and renders the Streets very difagreeable: The grand "Place, or greatSquare, is in the Middle of the Town; ${ }^{6}$ and the Viceroy's Palace, the Town-houfe, the Mint, "s and other public Buildings, occupy four Sides, " which are handfome enough, but have only this fingu" lar in them, that they are built of Stone brought from "Portugal, for in all this Country they have none fit for the " Purpofe: The Fefuits College is, beyond all Difpute, " the largeft, faireft, and moft finifhed Building in the © City, more efpecially the Sacrifty, which is lined " throughout with the moft beautiful Tortoife-fhell, " wrought and fixed together in the moft elegant "s manner, fo that nothing can be conceived more agree" able to the Eye, or more fatisfactory even to the " niceft Tafte : There are feveral other fine Churches; "s and that of the BenediEtine Abbey, which is now " building, will rival, if not exceed, the Church of the " Fefuits; but the Cathedral, which without doube " ought to be the nobleft Structure; and which really
"feems to be fo at a Diftance; is however far from ap
" pearing either neat or regular when one comes tơ 's examine it ; yet, if the Richnefs of Gilding may " entitle a Church to be thought fine, this muft be ac-
" knowledged to furpafs not only all the Churches here,
" but throughout the greateft Part of America.
"There is alfo amongft the Convents in this Capital, " one very remarkable of the Order of St. Clare, and s6 another, deftined to the Ufe of fuch young Girls as are "6 expofed and abandoned by their Parents. It is amaz" ing to fee how much thefe Foundlings are confidered " 6 in this Country; the Kings adopts them all, and the " Ladies of the firft Quality frequently take thern ${ }^{66}$ Home, when at a proper Age, and breed them up as
"s their own; which is certainly a very laudable Cha-
's rity; but is, in fome Cafes, attended with great In-
${ }^{6}$ conveniencies. The City of St. Salvador is the Seat
"c of an Archbifhopric, which is ufually filled by fome
ss Ecclefiaftic of the beft Family in Portugal, as well on
" Account of its large Revenue, as becaufe of the Share
" that Prelate has of the Government. The City is
«s much longer than it is broad, and, if we fpeak of it
"s only within the Walls, it is but fmall; but if we take
${ }^{6}$ in the Suburbs, it may pafs for a pretty large Place ;
s the Number of Houfes having been computed at two
" thoufand, and that Computation is, perhaps, rather "s below than above their real Number.
"The Viceroy has two Councils, one of Criminal, the "t other of Civil Affairs, in which he prefides ; but " Juftice goes on very nowly, and there is not a Coun-
"s try in the World where fo much Paper is blotted by
"s the Lawyers as here, before any final Judgment is
" obtained. In former times it was here as in the Spanifh
" Governments, the Captain-General durit not punifh,
${ }^{6}$ : much lefs put to Death, any Native of his Mafter's
" Dominions in Europe; but the prefent Viceroy has
" broke through this, and ventures to condemn Mur-
" derers and fuch like Criminals, to fuffer the Punifh-
${ }^{6}$. ments they deferve ; but the Proceedings are ftill fo
" now, and the Precautions taken fo many, that there
s\% is no fort of Danger of any Man's being fent to the
© Gallows there, before he very richly deferves it ; and
"s the only Scandal to the Government is, that the Road
"s thither is not quite fo much beaten as it ought to be; "6 for it would be certainly much better that five were "6 hanged every Year, than ten murdered with Impunity.
"The Commerce of Brazil is very confiderable, and "c the Luxury of the Inhabitants as great as can well be
" imagined. There is an annual Fleet comes from Por-
©s tugal with European Goods, configned by the Mer-
"' chants of Lifbon to their Factors here, where they "s never wait long for their Cargoes, which confift of
"Sugar, Tobacco, and Gold Dutt, all of which are
${ }^{6}$ commonly laid up in their Magazines ready againft
© 6 the Arrival of the Fleet, with the Contents of which
is they are alfo perfectly well acquainted ; fo that to
" land the Commodities of Europe, and to Thip thofe \&s of the Country, is almoft all they have to do. The
${ }^{6}$ Inhabitants may be divided properly enough into three
${ }^{6}$ Sorts of People, viz. Planters, Factors, and Mari-
${ }^{6} 6$ ners. The fortmer buy as many Slaves as they can
is employ in their Sugar and Tobacco Works, or in the
'6 Mines; and when the Lifbon Fleet comes they fhip
is their Commodities on board it, and receive an Equi-
©s valent in European Goods and Manufactures by the "' next Year's Fleet. The Factors keep Magazines of " 6 all Sorts of Goods that come from Portugal, with
is which they purchafe Sugar, Tobacco, and Gold, of
${ }_{4} 6$ fuch Planters as want an immediate Supply of the
"Things they deal in, without waiting for next Year's
\&Fleet. As for the fea-faring People, the chief of their
$\%$ Bufinefs confifts in making frequent Trips to the
"Coaft of Guinea to purchafe Slaves. I do not fpeak
"6 here either of the Lawyers or the Soldiers ; and my
$\leqslant$ Reafon for it is, they being generally either Planters 6\%. or Merchants.
«6 The Guinea Trade is very confiderable ; thofe em"s ployed in it from this City or Bay, bringing over " ufually twenty, or five and twenty thoufand Negroes ${ }^{6} 6$ every Year ; and of thefe, fifteen thoufand, at leaft,
${ }^{6}$ are difpofed of amongtt the Inhabitants of St. Salva-
${ }^{46}$ dor. There is not a Portugueze there, who has not,
"s at leaft, a dozen Blacks in his Service, and they very
is often employ them in fuch Offices as are equally con-
${ }^{66}$ trary to the Intereft of Religion, and of the State. They
"s arm, for Inftance, fuch of them as are clean-limbed
"s well-made Fellows, each with his Sword and Dagger ;
${ }^{66}$ and as they have a Sort of brutal Fiercenefs, which
"s fome mifcall Courage, they are capable of doing any
"s thing they are commanded, of what Kind foever;
"6 and, by this Means, they acquire fuch a Habit of
"s doing Mifchief, that they very frequently do it with-
"s out any Commands at all. There are alfo Abundance
"s of thefe Fellows that are free; that is to fay, have "s either obtained their Liberty, as a Reward of their "Services, or, have purchafed it with Money. It is "s really aftonifhing, all Things confidered, that fome " dreadful Revolution has not happened to the Portu"s gueze in this Country, from their weak and ill-judged. "I Indulgence for thefe Negroes, who are much more nu-
" merous, as well armed, and, if it be pofible, more
"s wicked than themfelves.
"It may feem ftrange that I fay this, but it will
"furely appear ftranger, when I affirm, that in faying
" this, I do not at all exceed the Truth. In fhort, the "far greater Part of the Portugueze fettled here, are
"Hypocrites in Points of Religion, and totally defti-
s tute of Morals; Thieves and Sharpers by Profeffion;
" and very frequently Murderers from Refentment.
" There is no Order, no Decency, no Obedience known
s amongtt them ; every Barber, Shoemaker, and Tay-
© lor, ftruts with his Sword and Dagger, and looks
" upon himfelf as equal to any Officer in the Colony, " becaufe his Face is of the fame Complexion. The
"s prefent Viceroy is fenfible of, and detefts, this Con" duct. When he firft came over he laboured to reform s it ; but Cuftom has fo ftrongly eftablinhed it, that hi"s therto his Labours have proved vain.
" Of late Years, and fince the Difcavery of the Mines,
" they have formed a kind of new Syftem of living,
" which fome Time or other will prove fatal to them ;
"for, inftead of cultivating their Plantations, they fend
" moft of their Slaves to the Mines, upon thefe Con-
6 ditions : Their Mafter finds them a Pound of Meal a
" Day, and if they eat any thing elfe they buy it them-
" felves ; in return, the Slave is bound to pay his Maf-
" ter daily fuch a Quantity of Gold; if he happens to get " more, he lays it by, to make up for Deficiencies, or,
" by living hard, he faves enough to purchafe his Free-
s dom. Thus the Mafters are at a kind of Certainty,
" with refpect to their Eftates; for fo many Slaves pro-
" duce fo much Money certain: But, in the mean
"Time, their Sugar and Tobacco is decaying; and, " which is much worfe, they are in Danger of wanting
" neceffary Subfiftence; for which they now depend
" chiefly upon the Fleets from Portugal; and perhaps " at Lifbon this may be looked upon as an Advan" tage, becaufe it is a very ftrong Tie upon the Co-
" lony; fince, if they do not continue good Subjects,
" they muit be content not to eat. As it is, indeed, few
"People live worfe, fince the greateft Part of their Vic-
" tuals is falt Meat, or dried Fifh, and all the Bread
"s they have is made of a powdered Root, fo that there " is fcarce a Country in Europe where a Man cannot live " better upon Half a Crown a Day, than he can in Bra" zil for twenty Shillings.
«. The Truth of the Matter is, that the People of "Brazil love Shew and Magnificence, fine Cloaths, " Jewels, and a large Train of Servants, better than " what we call Good-Living. Yet fome Feafts they " have, but Feafts that bring after them a long Train " of Fafts ; for every Man has his Guardian Saint, " upon whofe Annıverfary, perhaps, he fpends his " whole Year's Revenue, or, at leaft, the beft Part of s it, and never has a good Dinner afterwards, except at " his Neighbour's, upon the like Occafion. Yet there " are prodigious Sums of Gold pafs through thefe Peo" ples Hands, though undoubtedly they were much " happier before the Mines were difcovered, and would " be fo again, if there was not a Grain of Gold Duft c in the Colony. The Plate Fleet, this Year, from " Rio Faneiro, was faid to be worth thirty Millions, " that is, about a Million and an half of EnglighiMoney; " but the Fleet from the Bay carried but twenty-four ss thoufand Arobes of Sugar, whereas they had formerly " made fixty thoufand, and their Tobacco Trade decays in "Proportion: Yet, I believe, it may be doubted whe"s ther Portugal is much the richer for all this Gold, " fince the Englifo and Dutch furnifin all the Manufac" tures, or, at leat, the greateft Part of them that are "fent to Brazil; whereas, when they brought over «s only Sugar, Tobacco, Brazil-Wood, and other fuch-like
"Commo

## Chap.III. of BRAZIL by the PORTUGUEZE.

"Commodities ; they had confiderable Returns made "s them in Money.
"They feem to be ftill under great Apprehenfions
"s of being, fome Time or other, attacked in this Coun-
" try, againft which they are provided pretty effectu-
"c ally, fince there are very few Colonies better fortified,
" in all refpects, than this, as will appear from the
"Account I am going to give you of their Works for
"the Security of the Bay. In the firft Place, they
${ }^{\text {sc }}$ have at Point St. Antomio a great fquare Fort, and
"below it a fmaller, with ten large Pieces of Cannon,
ec which two Fortreffes command the Mouth of the
"Bay. They are likewife tracing Ground for a new
"Fort, which is to be called The Cafle of St. Peter,
"c and, when built, will be very ftrong. In the Middle
os of the Harbour they have a large Fortrefs, which of
" late they have repaired, and have now augmented.
*The Arfenal is flanked by two ftrong Baftions, which
"command the whole Port. On the other Side, between
"Monferat and this City, they have erected a fine Ci-
"tadel, which is a regular Square, admirably fortified
is in every refpect, and well furnifhed with Brafs Ar-
" tillery. At the Point of Monferat again, they have a
" fmall, but ftrong Fort, with twelve Pieces of heavy
sc Cannon. There are yet two other Fortreffes to be
" mentioned, one between St. Antonio and the City,
"s where they make their Gunpowder, and the other the
"Powder Warehoufe, which lies on the other Side of
"the City, and commands a large artificial Lake made
" by the Dutch; fo that the City of St.Salvador is cover-
"ed by the Sea on one Side, and by the Lake on the
"c other. The Garrifon confifts of two Regiments of
© Foot, three Regiments of Militia, and a Regiment
"s of free Negroes, befides fome Cavalry which the
" Viceroy keeps up to reftrain the Banditti, who are
"very troublefome and do a great deal of Mifchief in
${ }^{68}$ the diftant Parts of the Colony.
"After having thus related to you the principal things
${ }^{\text {sf }}$ I have feen here, though with little Method, yet

* with much Truth, I ought now to conclude; but as
"c there are ftill fome things that have efcaped my Pen,
"t though not my Obfervation, I think it may not be
" amifs to add them here, though without much Or-
"der, rather than omit them entirely; the rather as
" they will contribute to explain fome Paffages that have
"gone before, and render the whole of my Account
" more perfect. The better Sort of People in St. Sal-
"vador very much refemble the Cbinefe, that is to fay,
"* they are exceffively civil and complaifant to Strangers,
" with a View to obtain from them Prefents and Gra-
"c tifications of much higher Value than the Trifles they
" beftow; and if their Expectations on this head are
" not anfwered, they never fail to give Strangers as
" flrong Proofs of Refentment at the End of their Ac-
"quaintance, as they did of their Politenefs at the Be-
" ginning. Their Forces in Brazil are, at prefent,
"s much fuperior to any thing that can be fent againft
${ }^{\circ}$ " them ; and.what I take to be the chief of their Strength
${ }^{\text {sc }}$ is, their being ufed and feafoned to the Country; fo
" that I am fully perfuaded that an Attempt to difpoffefs
" them by any Nation except one, would be vain and
" fruitlefs, and ferve only to create a valt Expence of
"Blood and Treafure to no end or purpofe: But for ali
" this, it is very certain that either Privateers or f fmall
"Squadrons of Men of War might diffrefs them very
" much upon their Coafts, and, perhaps, enrich them-
"felves confiderably, by taking fome of their Maritime
* Places.
" At the very Time I was there a Pirate did a great
${ }^{86}$ deal of Miifchief, and took abundance of Ships with
"Impunity. The Crew, as is ufual in fuch Veffels,
" was compofed of People of all Nations; and it was
"commanded by a Spaniard from the Inand of St.
${ }^{\text {Es }}$ Domingo. The Force of this Ship was far from being
" great; for, according to the Accounts the Portugueze
"gave of her, he carried but thirty Guns, and her
${ }^{6}$ "Crew confifted but of three hundred Men; yet the
"6 whole City of St. Salvador was alarmed at the Re-
" port; and though the Viceroy immediately equip-
"6 ped a fine new Frigate, which he had caufed to be Vol. II. Numb. 8 s.
" built there, yet fhe was manned fo flowity, that the "Pirate had time enough to bear away with her Prizes. "In a Word, there is nothing of the old Spirit and "Bravery of the Portugueze Nation to be feen here; but, sc on the contrary, the Pcople are all lazy, indolent, sc and quite given up to their Pleafures; this I take to " be owing to their being ferved by Negroc Slaves; for " the'Servility of thefe poor Creatures makes their Maf" ters infolent; and moft of them keeping Seraglios "s of black Women, become enervate in their Bodies, is and lofe all Firmnefs and Grandeur of Mind; a thing " which as it occurred to me from Experience, fo I be " lieve it will appear yery natural to you, from your " own good Senfe and thorough Knowledge of human " Nature.
" Upon the whole, therefore, I am inclined to believe "that, unlefs by a conftant Succeffion of wife and good " Governors, the Manners of the Inhabitants are chang" ed, and their ill Cuftoms abolifhed, there will, fome " time or other, either from their Want of Provifions, "the Infolence of the Negroes, or fome fuch, like Caufe, " happen an Infurrection or Revolution, which will "change the Face of Affairs here; for that a Country, "where the Inhabitants are plunged into Luxury and "Corruption, fhould enjoy, for a long feries of Years, "uninterrupted Tranquility, is contrary to all Maxims " of Policy; and, indeed, that private Crimes and Public " Peace fhould conftantly dwell together, is not very "reconcileable to Common-Senfe." Thus far my Author, to whofe Account I fhall prefume to add a few Particulars that I have collected elfewhere.
The City of St. Salvador lies in the Latitude of $14^{\circ}$ South, and is at prefent the Centre of the Portugueze Trade in this Part of the World. Authors differ very much in the Accounts they give us of the Fleets fent hither annually from Liflon; for fome make them double what others report them; but the Reafon of this is, that the one fpeak of the whole Brazil Fleet, which generally affemble in the Bay of All Saints, in order to return together to Europe; and the other of the Fleet from Li/bon, exprefly deftined for the Bay, which may be about thirty Sail efcorted by two Men of War, and. which ufually fail about March.

The Commodities they carry are Wine, Brandies, Meal, or Flower; Oil, Cheefe, Cloths, Stuffs, Linnen, Iron rough and wrought; Paper, all kinds of Kitchen Utenfils, Laces, and moft kinds of Apparel. On the other hand, they bring from thence the beft Tobacco in Brazil, which is fo much efteemed in Europe; Sugar, Indigo, Balfom Copahu, or Copaiva, Ipecacuanha, Pareira Brava, Cinnamon, long Pepper, Ginger, Woods for dying, and fome for inlaying; Ambergreafe, and other rich Drugs and Perfumes; befides thefe they alfo export from hence raw Hides, Train-Oil, and WhaleFins, abundance of thefe Creatures being taken upon this Court, and, for this forty Years latt paft, Gold, Amethyfts, and Diamonds. There are likewife fome Silver Mines in Brazil, which, though not wrought to fuch Profit as to allow the exporting much of this Metal to Portugal, yet furnifhed fufficient for home Circulation; and of this Silver that Money is coined at St. Salvador, which is current through the whole Colony; and which bears on one Side the Arms of Portugal, and on the other a Crofs charged with a Sphere, with the following Motto: Under tbis Sign will I ftand.

All the reft of the Captainflips which iie farther to the South, carry on their Trade by the Rio Faneiro, fo called for its having been difcovered in the Month of Fanuary 1515 ; and which, from being fcarce known to, is at prefent become one of the moft famous and confiderable Rivers in, the World. The Banks of it are as beautiful and pleafant as can be imagined; the Climate fine; the Soil extremely fertile, producing Sugar, Indigo, Tobacco, and Cotton, all in very great Perfection. It has been likewife found, that European Corn will grow here with very little Trouble, and to great Perfection ; but, for the Reafons already affigned, this, and all other Improvements, have been difregarded, tho', independent of the Gold Mines which have been difcovered in this and the neighbouring Captainfhips of $S t$.

Bbb
Vincent:

Vincent, this might be confidered as the very richeft Part of Brazil. The Portugueze that are fettled here are quite a different Sort of People from thofe in the Bay of All Saints; for they are active, induftrious, well inclined to Foreigners, and fuffer the Indians, who live amongft them, to enjoy as much Freedom as themfelves, which renders the Country a perfect Paradife ; and it is not eafy to imagine, what vaft Cargoes were brought from the Rio faneiro before the Gold Mines in that Country were difcovered.

The City of St. Sebaftian, which is the Capital of this Country, ftands very commodiouny in 23 Degrees of South Latitude, on the Weft Side of the River, about two Leagues from the Sea. This City, which is very well fortified, is the Seat of a Portugueze Governor, and a Bifhop's See, Suffragan to the Archbifhop of St. Salvador; there are likewife feveral other confiderable Towns on the Rio Faneiro, all of which have a large Share of Trade, as may appear from the Number of Ships, which compofe the Fleet fent hither annualiy from Portugal, which confifts of between twenty and thirty Sail of Veffels, of 500 Tons Burden, which are ufually efcorted by two Men of War. The Commodities brought from hence are, generally fpeaking, the fame with thofe brought from the Bay of All-Saints, Diamonds only excepted. After faying this, it may be naturally expected that we fhould give the Reader fome Account of the Diamond Mines here; which, however, is a Thing very difficult to do, there being very little known of them, with any Degree of Certainty ; but the few Circumftances that we have been able to draw together, in relation to this important Article, are thefe.

It is about forty Years ago, that fome precious Stones were brought to the City of St. Sebaftian, taken out of a fimall River lying Weftward of that City, which were, at firft, judged to be very fine Pebbles; but it was not fo foon that they were brought over to Europe. About the Clofe of the laft general War thefe fine Pebbles were found in greater Quantities; and we are told, that fome rich Planters began to employ their Slaves in digging the black heavy Earth, on the Sides of the Mountain, from whence this River defcended, and then thefe Stones were found in greater Plenty; fome of them were very large, but moft of them of a black or yellowifh Caft, which hurt their Luftre, and funk their Value; yet notwithftanding this, many of the yellow Stones were brought to Lifbon, and fold for Topazes.

Afterwards, the Crown of Portugal interpofed, and the working of thefe Mines was forbidden; which, however, did not hinder their coming in confiderable Quantities; for fometimes it was faid, they were found in this or that River, and not dug out of any Mine; fometimes they had other Names given them, and many of them were fent to St. Salvador, and from thence exported to Europe, under a Notion of their coming by the Goa Fleet from the Eaft-Indies. This involuntary Fraud raifed their Value ; and, at laft, the Crown of Portugal became convinced, that fuch as pretended to great Skill in Stones had deceived them ; and that fome of thefe Brazil Diamonds were fcarce to be diftinguifhed from Oriental Stones: Upon this they altered their Meafures, and it was permitted to fend over rough Diamonds in the Rio Faneiro Fleet, under certain Reftrictions; which Licence making the Value of thefe Jewels ftill more and more apparent, the King of Portugal refolved to put this Trade under a new Regulation; which, as far as I know, has fubfifted ever fince. This new Order took Place in the Year 1740, when his Portugueze Majefty let thefe Mines to a Company at Rio Janeiro, for an ammul Rent of one hundred thirty eight thoufand Crufades, which is twenty fix thoufand Pounds of our Money, upon Condition, that they employed no more than fix hundred Slaves at thefe Mines; which Condition plainly proves, that they are far greater and more con-. fiderable than they have generally been efteemed to be.
It is very probable, that the coming of thefe Stones into Europe may fink the Price of Diamonds confiderably; but it mutt, at the fame Time, be allowed, that it cannot but prove highly advantageous to the Portugueze, fince it will operate very effectually in their Favour, in
regard to the Balance of Trade; for if they difpofe of there Stones to any Nation, upon whom they have already a Balance, they mut bring Money into the Kingdom ; and if, on the other Hand, they can find a way to fell them, either to us, or to the Dutch, this will leffen the Balance in our Favour, and prevent the Exportation of Gold, which muft have been otherwife fent abroad, to pay that Balance; fo that, take it either Way, the Difcovery of thefe Diamond Mines, is of very high Confequence, and, if wifely managed, may prove of prodigious Advantage to this Nation.

But lat us now proceed to what little remains of the Hiftory of this valuable Colony. Southward from the Captainfhip of Rio Janeiro lies the Captainhip of St. Vincent, which I take to be the richeft Country in Bra$z i l$, perhaps in all South America; and therefore I hall defcribe it more particularly. It is bounded on the North by the Captainfhip of Rio Faneiro; on the Eaft by the Ocean ; on the South by the new Captainfhip, or that ftiled Del Rey; and on the Weft by the Mountains of la Plata and Countries inhabited by various favage Nations: It extends from the Latitude of 22 Degrees to 27 Degrees South; and is in length from North to South, about three hundred Miles, and in Breadth, from Eaft to Weft, in fome Places, near one hundred and eighty Miles, but the greateft Part of it is not above half fo broad.
The Town of St. Vincent is fituated on a very fine Bay of the Atlantic Ocean, or, as fome of the beft Maps I have feen reprefent it, on a kind of Peninfula, very well fortified; a little to the North-weft lies the Town of Santos, which fome look upon to be the Capital of the Province ; and which, as I have found, in the Memoirs of a Spanifh Traveller, has as fine a Port as any in the Weft Indies, capable of holding the largeft Ships, and which might be fortified in fuch a Manner, as to be able to refift any Strength, that either in this Part of the World, or from Europe, could be brought againft it. The fame Writer, who was in thefe Parts, towards the End of the laft Century, has given us a very full Account of them, with which I was furnifhed by an ingenious Gentleman, who thought it might be of ufe to me in the Hiftory of Spanifb America, which I was then writing, and which I fhall infert here, as in its proper Place; the rather, becaufe I think there is no Part of the World lefs known, or which, therefore, it can be more agreeable to the inquifitive Perufer to find accurately defcribed.
"The Portugueze, fays my Author, had not fhewn "s any great Concern, either for extending or improving " their Territories in Brazil after the Expulfion of the " Dutch, till a certain Statefman advifed Don Pedro, about " the Year 1685 , to think of improving his American "Dominions ; and more efpecially, the two Extremi"s ties of Brazil. That Minifter fuggefted, that the Cliss mate, at the Bay of Aill Saints, would fruftrate what" ever Endeavours might be ufed to render the People "s active and induftrious; but that it was otherwife, "s both with the northern and fouthern Extremities of "Brazil; where a wife Government, and a little En"couragement, might render the Country of much " greater Advantage to the Crown of Portugal, than " hitherto it had been. This Advice was received and "followed; which gave Birth, on one Hand, to the " eftablifhing the Portugueze Forts and Settlements to" wards the River of Amazons; and on the other, to " 6 the Improvement of the new Colony at Santos, which " was then but very fmall.
" The Miethod taken for this Purpofe was fingular "s enough, moft of the Perfons made Choice of were of "s the mix'd Herd, or, as the Portugueze call them, "Meftices, who married Brazilian Women ; and the " Perfon intrufted with the Government of thefe new " Planters, were Priefts and Monks; but they were " fent exprelly from Portugai, and Care was taken that "s they fhould be fit for the Purpofe. The Captain"General of Brazil, and all the Officers in the fou"s thern Captainfhips, had Orders to treat thefe People "6 kindly, and to give them no Difturbance in their "Meafures. It very foon appeared, by the Effects,
"s that this Plan was very wifely concerted; for they "s multiplied prodigioufly, and, in the Space of about "s fifteen Years, the Priefts added feveral hundreds of
" Families to their Colony; extending Weftward four-
" fcore, or one hundred, Miles farther than the Por-
"s tugueze had any Settlements before that Time. By
" Degrees they purchafed Slaves, more efpecially the
"Ecclefiatics, whom they employed in the Silver
" Mines; and, treating the Negroes better than mort of
"s their Neighbours, they foon became very rich; fo
" that feveral Parifh Priefts, in the Captainfhip of St.
" Vincent, were worth from ten to fifty thoufand Cru-
"fades; that is, from fifteen hundred to eight thou-
" fand Pounds apiece.
"They paid the King's Fifth very regularly, and ${ }^{66}$ this was the beginning of the Riches drawn from this
" Part of the World. But when it was once known,
"s that fo much Wealth was to be had in thefe hitherto
${ }^{6}$ uncultivated Regions, there began very foon to refort
ss thither abundance of Adventurers, of all Countries,
${ }^{6} 6$ and of all Characters; when I fay of all Countries,
is I mean Spaniards, as well as Portugueze, free Negroes,
" Mulattoes, and all the different Mixtures that are to be
"s met with in Brazil, down to the Carribocos, who are
"s the Offspring of Brazilian Savages, by Negroe Wo-
"s men; and by different Characters, I mean Monks as
" well as Laymen, Soldiers, Mechanics, broken Planters;
"s and, in fhort, all that Sort of Men, who are ready to
"s go any where, or to do any thing to get a I iving. As
"s thefe were quite a different Race from thofe of the
"s new Colony before-mentioned, it is not to be fup-
"s pofed that they could dwell together, more efpecially
sc as the former were the quieteft, and moft fimple; the
"s latter the moft riotous and turbulent People in the
© World.
" Thefe Adventurers, therefore, took care to look "c out for a new Settlement, and they found one of the "s propereft Places in the World for their Reception, at ss no great Diftance. This was the thick and vaft Foreft "s of Parnabaccaba, which overfpread all the Mountains is at the Back of this Captainfhip, and in which hitherto "s none but wild Beafts took up their Dwelling. They
cs foon cleared a Part of this Wildernefs for their Habi-
© tation, in which they eftablifhed not only a new
" Town, which they called San Paulo, but a new Re-
"s public alfo, in which they lived after the Manner they
"s liked beft. At firft this was overlooked, becaufe the
"Country was judged of no great Value, and the adja-
"cent Captainfhips were very well pleafed to be rid of
's thofe Sort ofFolk, who reforted thither. In the Space,
"c however, of a very few Years, they grew too ftrong
" to be dealt with; for, receiving, as they did, all Sorts
ss of People, they quickly increafed from two or three © hundred, to as many thoufand, Men; and being a
"s bold, hardy, enterprizing, and daring Crew, the Go-
"s vernors knew not how to deal with them. In the
ss firft Place, they took care to fortify the Avenues to
© their Territory, which were naturally ftrong; and
©s they feldom ventured abroad, but in Bodies of four-
s fcore, or one hundred, Men, and in fuch Parties
ss they frequently traverfed the whole Extent of Brazil.
sc Thefe were the People who firt difcovered and wrought
"s the Gold Mines, which muft be exceffively rich, fince
s they were able to obtain fuch vaft Quantities of Metal,
ss without any of thofe Affiftances which the Spaniards
"s have in their Settlements in Cbili. As this required,
"s however, a great Number of Hands, they feized
" upon all the ftraggling Indians and Negroes they could
" meet with, and compelled them to undergo fuch
" Fatigues as they thought proper.
"This new and extraordinary Commonwealth was " denominated, from the Place of their Denomination,
"Paulits, and they would not fuffer any of the Por-
" tugueze Officers to enter their Territories; yet they ac-
" knowledged the Sovereignty of the Crown of Portugal,
"s and paid regularly what they faid was the Fifth of
" the Gold they obtained; which, in the Year 1691,
${ }^{66}$ amounted to one thoufand Marks, or eight thoufand
" Ounces; which fhews, that at that time they drew an-
" nually from the Rivers and Mountains in their Poffef-
" fron, forty thoufand Ounces of Gold; they took cares "6 however, every time they paid the Tribute, to de"clare, they did it freely, and of their own Accord, "s out of Refpect to the Crown of Portugal, and not " from any fort of Fear or Senfe of Obligation. The "Tyianny of the Governors of Brazil, and the Op: " preffion of the Spanifh Governors in the adjacent Pro-
" vinces, furnifhed this new Stare with abundance of
" Members, fo that at laft it became a very difficult
"s thing to get Admittance amongft them, and the Me -
" thod in this Refpect was fingular enough to deferve
" Notice.
"s They obliged fuch as prefented themfelves upon their " Frontiers, which they never fuffered any Stranger to " enter, to fubmit to a very firict Examination, that
"s they might know whether they were fit for their Com" munity, and be fure they were not Spies, or Perfons " who intended to betray them ; upon the bare Sufpi"s cion of which they made no Scruple of beating their " Brains out: But if, upon this Examination, they judg" ed they might prove ufeful Members; they obliged " them to bring in two Slaves for their Support ; affign"s ing them a Dwelling and Plantation, by which they "c commenced Paulifts, and were to continue fo to the " End of their Lives; for any Attempt to defert was "s punifhed with Death without Mercy. They made no " Exception of Country or Complexion; a Savage was as "s welcome to them as a European; and every Man after " his Admiffion was at liberty to lead what kind of Life "" he liked beft, provided he did not difturb the Peace " of the Society. The Jefuits of Paraguay, either out: "s of Concern for the Souls of thefe People, or moved by "s the Report of their great Riches, made feveral At" tempts to gain Admittance anongtt them, but to no " fort of Purpofe ; yet they lived upon very fair Terms " with this ftrange Society; and the Portugueze fhrewd" ly fufpected, that the reverend Fathers furnifhed them " with Fire-Arms and Ammunition, becaufe they knew " not how they could be furnifhed any other way."

Our Author proceeds no farther, and therefore it is impoflible to fay when or how this little Republic was fubverted; but it is certain, that all this Country is now in the Hands of the Portugueze, and as much under the Obedience of the King of Portugal as any other Part of Brazil; but the City of St. Paul is ftill looked upon as the Centre of the Mines, and a Garrifon is maintained there, for their Security. We know not, however, in what manner the Gold is wrought or refined there ; but, in all Probability, their chief Works are Lavadero's, which have been largely defcribed in the firft Volume, fince we do not hear of their ufing Quickfilver, as the Spaniards do; but it is very certain, that they are much increafed in Value, fince the King of Portugal's Fifth amounts very commonly to one hundred and fifty thoufand Pounds per Annum : And it appears by the lateft Accounts, that thefe Mines are continually improving.

The only Captainfhip to the Southward of that of St. Vincent, is that of del Rey, extending from the Latitude of 28 to 34 Degrees, 30 Minutes, South, being about. four hundred Miles in Length, but not above one hundred broad in any Part of it. The Country is fruitful and pleafant ; but the Portugueze abfolutely neglected it till the Difcovery of the Mines of St. Vincent put them upon planting and fecuring it, by erecting feveral Forts on the North-fide the River la Plata, to which the Spaniards formerly pretended, and upon which they are fill fuppofed to caft a jealous Eye. The Country in this Province is as pleafant and fruitful as any in Brazil, and as capable of Improvement; but as it has not been fo long inhabited as the other Captainfhips, it is far from being thoroughly peopled. 'There are only a few Villages upons the Sea Coait, and fome Fortreffes on the River of Plate.

The chief Advantage which the Portugueze draw as prefent from this Province, is a kind of fmuggling Trade, which they carry on with the Spaniards, whom they furnifh with Rum and Tobacco of their own Growth, and with Wines, Brandy, Cloaths, Silks, and Linnens from Europe, which occafions Quarrels and Difputes between the two Nations, though in reality the true Ground of their

Contentions, is the Thirft of Gold in both Parties, and the Defire that each has of becoming fole Poffeffors of that large Ridge of Mountains which are the Weftern Boundaries of this Province and that of St. Vincent, and are fuppofed to be full of Mines. Some fpeculative Politicians have infinuated, that it is not impofible that the Spaniards may, fome time or other, carry their Point; but if they do they mutt begin with reducing the Paraguay Indians, who are at prefent fubject only to the Fefuits; for otherwife it is very certain, that they cannot taife Men enough to give the Portugueze any Uneafinefs, who, though they have not Poople to fpare for fettling this laft Diftrict in Brazil, have however fuch Numbers in the adjacent Captainfhip of St. Vincent, as would very foon repel any Invafion from their Neighbours, who, after all, it is very certain, are on this Side rather weaker than themfelves. So that Struggles of this Nature if ever this fhould happen, may be reputed at a great Diftance, and if the Portugueze were as free from any Apprehenfions of inteftine Diforders, it might be affirmed that fcarce any Colony is more fecure than that of Brazit.
17. Thus we have given the Reader, according to our Promife, a full and methodical Hiftory of this Country, from the very firf Difcovery thereof to this Day; that is, for upwards of two hundred Years; and have Shewn by what Methods it was firf peopled, from a Country fcarce equal in extent to one of its Captainfhips ; how the new Planters grew exceffively rich; and how the Envy of the French brought them to attempt an Eftablinhment on the fame Coaft, with all other Tranfactions relative to this Colony; fo that, what we have to fay by way of Remarks, will be but very fhort; but we hope, notwithStanding that, they will afford the Reader both Pleafure and Profit. When the Spirit of Trade and Difcovery, which exerted itfelf in Portugal in the fifteenth Century, firft appeared, the Crown made no other ufe of its Prerogative, than to point out, proportion, and procure, furitable Rewards for fuch as diftinguifhed themfelves in promoting the public Intereft ; and then every Enterprize was carried on with Vigour, every Expedition was attended with Succefs. The little Country of Portugal, which had hitherto made fo inconfiderable a Figure among the Kingdoms of Europe, began to take the Lead of them all; and, from creeping along the Coarts of Africa with a few little Veffels, her Fleets began to ftretch to the Eaft Indies, and to embrace that Trade which was the Object of Alexander's Ambition. The Eaft Indies, by the Rout of the Cape of Good Hope, was their proper Difcovery; and, though Columbus had a little the Start of them, yet the finding and fettling of Brazil plainly proves that America could not have lain long hid from their Refearches. The Fruit of thefe great Difcoveries and Conquefts, was a prodigious Trade, immenfe Riches, and an amazing naval Power, all deduced from a right turn in the Government, which eftablifhed its Power in the Extention of that of its Subjects, without exerting a tyrannical Authority over them. This created Fleets, Armies, and a Dominion fuperior to any thing the Europeans had enjoyed, from the Deftruction of the Roman Empire. But as a true and laudable Ambition raifed the Portugueze to fuch a Height, a falfe and baftard Ambition made way for their Ruin. Sebafiian King of Portugal was a Hero, he had all the Virtues incident to that Character; but they took a wrong Turn: He embarked the whole Force of Portugal in a War upon the Continent for his own Glory, and to ferve no national Purpofe whatfoever; there he perifhed, and all his Army with him; which, in iffelf, was a great Misfortune to his Subjects, but in its Confequences a much greater; for this threw them under the Dominion of Spain, which, as we have abundantly fhewn in the foregoing Section, was the greateft Mifchief that could befal them; for, after this, there appeared no public Spirit in the Government; all their Conquefts in the Eaft-Indies were either given to Men who had an Intereft at the Court of Spain, or to fuch as that Court defired to get out of their Way.

There was no longer any Spirit of Virtue, Generofity, or Concern for public Good, either left or encouraged;
the enriching of private Families took Place of this: and, while a few of thefe carried their Point, the Dutch ftript them of their Empire in the Eaft Indies, and bid fair for making themfelves Mafters of Brazil; which, if they had, Portugal had remained a Province of Spaitr, and not a very confiderable Province reither. When the Portugueze recovered their former Government, we fee they recovered Spirit enough to preferve Brazil; but; fince that Time, the Court has been infected with the Spanifb Policy; and, the Defire of extending their royal Power has, in a great Meafure, extinguifhed that Spirit which once made them a great People. But, to confine our Reflections to Brazil, the great Point in the Portiigueze Councils at prefent is, to fecure this Trade, or at leaft the Profits of it, to the Crown; in order to which the feveral Fleets deftined for Paraiba, Fernambuca, the Bay of All Saints, and Rio Faneiro, fail as regularly as the Spanifb Galleons, and in the very fame Manner. If this Trade had been left more open, the Number of Ships would have been vaftly greater, and there would have been no need of Men of War to efcort them, or of another Squadron being fent to look out for, and bring them home, as is at prefent the Cafe every Year, and yet the Algerines frequently pick up fome. This Method is the laft dying Effort of a maritime Power; Convoys and Efcorts are pitiful things; the Flag of a maritime Power ought to be a fufficient Protection, and no Nation ought to be efteemed fo that fuffers another to infult a Cock-boat.

Yet all this Policy is far from producing mighty things, as we fhall fee from a few Examples; Brazil Wood is now a royal Commodity, that is to fay, it is fold for the Advantage of the Crown only; and it produces about 100000 Crufades, which is fomething better than 15000 Pound, annually. We have already feen what the Diamond-Farm brings in; and take the whole of the King's Fifth from the Gold Mines, and it will never be found to exceed half a Million of our Money: To remedy thefe Mifchiefs, they had recourfe to Methods that increafe them ; for they have fet up feveral Companies for the doing what might be better done without any Company at all: For inftance, they have an African Company for fupplying Slaves at Rio Faneiro, a Company to manage the Mines, and an Eaft India Company, now they have almoft loft the Trade to the Eaft Indies. But if, inftead of thefe Schemes, they would redrefs the Grievances of their Subjects in Brazil, encourage Plantations rather than Mines, open their Ports to all Nations, and allow of a free Trade thither from Portugal; inftead of fewer than one hundred Ships that are now annually employed in that Trade, they would very foon have many hundreds, and Brazil would quickly have ten times as many Inhabitants as at prefent; confequently the Country would be better cultivated, and their Dominions more extended, which would produce a much larger Revenue to the Crown than it enjoys at prefent.

There was, indeed, a Project of quite another kind fet on Foot for the Improvement, as they call it, of this Trade in Portugal, of which I fhall give a very fhort Account. In the Year i 709 the King of Portugal, perceiving that the vaft quantities of Gold that came from Brazil did but juft touch at Liflon, and then travelled over all the Countries of Europe, directed this Matter to be very feriounly examined in his Council: Suppofing that if a Method could be found out to prevent this Gold from ftraying, the Bufinefs would be done, and himfelf become, at once, the richeft Prince in Europe. His Council accordingly examined this Point very carefully, and they reported that the Englifh and Dutch ran away with all the Gold, in Confequence of their furnifhing the Goods and Manufactures that were fent to Brazil; they therefore propofed, that the ufing thefe Goods, and the wearing thefe Manufactures, fhould be prohibited in tha Colony; and that the People fhould be content with what could be fent them from Poriugal. This was confidered as a great Stroke of Policy, and was on the very Point of being put in Execution, when it was prevented by the following Method:

The famous Lord Galway was then there on behalf of
this Nation, and had the Confidence of the King, of whom he demanded a particular Audience upon this Occafion, at which he delivered himfelf in the following Manner: "s Your Majefty cannot be fufficiently commended is for that fteady Attention which you have always fhewn is to the Affairs of your Government, and the Pains you " have lately beftowed in examining into the Ballance of "Trade, is a new Proof of that Merit which would " entitle you to the Crown, had it not defcended to "y you from a long and glorious Line of Royal An"ceftors. But permit me, Sire, to obferve, that there is "s a greater King, one by whom all Kings reign, and "whofe Providence is over all his Works. According
"to his Diftribution of things, Riches belong to fome
" Nations, and Induftry to others ; and by this Means "s the Liberality of Heaven is made equal to all. Vain,
"Sire, are all human Councils when oppofed to his Wif-
" dom, and feeble the Efforts even of royal Power, "s when directed to crofs his Will. You have forbid " Gold to be exported out of your Dominions, and you "s would willingly enforce this Prohibition, but the thing " 6 is impracticable. You may reftrain your Subjects it " is true, but you cannot fet Bounds to their Neceffities. "But fay that this was poffible; fuppofe you could de"s" feat the Induftry of the northern Nations, what would " be the Confequence? Their Hufbandmen, Grafiers, *Weavers, and all that infinite Train of Manufacturers, "s that now labour quietly at home to cloath and feec " your Subjects, would then turn Soldiers; and, inftead " of feeing their Merchantmen in the River of Lifbon, " you would hear of their Fleets conveying them to " Brazil, to fetch much more of that Gold than you " now fetch for them. Befides, Sire, if they are Gainers " by your Trade, they become thereby the natural Gua" rantees of your Dominions: It is not their Treaties "s only, but their Interefts that bind them to your Ser"s vice. You have potent Enemies, and you require "s powerful Friends. The Ambition of France knows no «Bounds: The Pride of Spain will teach her to keep " up a perpetual Claim to your Territories and Crown : " You can have no Recourfe to fruftrate the Views, and ss to defeat the Endeavours, of thofe Potentates, but to the " maritime Powers; and therefore let me befeech your - Majefty to confider, that every Project to diftrefs them, "s is in Effect a Scheme to deftroy yourfelf." This Speech had the defrred Effect; the intended Prohibition was laid afide, and the Englifh Nation has reaped the Benefit of this Trade ever fince. I came to the Know-
ledge of this Fact, which is very imperfectly related by a French Author, by an Accident; and I thought it my Duty, and a Piece of Juftice owing to his Lordfhip's Memory, to relate it fully and fairly, as I have done; and now I fhall take leave of this Subject, in order to give a fhort, but diftinct Account of our own Difcoveries in America, according to what I propofed at the Beginning of this Chapter.

The Labour of collecting thefe is great; that of digefting them into Order ftill greater ; and the reducing the Subitance of large Books into fmall Sections greateft of all : But the Encouragement I have hicherto received by the kind Entertainment of my Writings, and the many friendly Communications that I have met with, and to which their Merit is chiefly owing, will enable me, I doubt not, to go through the reft of this large Tafk, with as much Succefs as I have hitherto done. The Reputation of doing this is the chief Reward I have in View, becaufe I am fatisfied that a Collection of Voyages like theie, where things are regularly connected, and the Subjects treated in their full Extent, will be of conftant Service, as they have been hitherto one of the chief things wanting towards forming a Compleat Body of Hiftory. We have, indeed, very large Collections of Materials in feveral Languages; but then, almoft all Nations have produced Writers extremely partial to themfelves, and our own amongft the reft; but the Bufinefs is to purge thefe partial Relations, to free them from trivial Circumftances and needlefs Particulars, fo as to bring the Knowledge they convey within a reafonable Compais, that it may be both eafily read and eafily underftood, which is what we have endeavoured in the former Sections, and fhall ftudy to perform in what follows. As for large and entire Hiftories of Colonies, they are not to be expected here, as being frequent enough already, and therefore the lefs neceffary, and requiring, beides, much more Room than we can fpare. But in the laft Book of this Collection, we fhall infert fome curious Englifh Voyages, which will fupply the Reader with a full Account of the Actions of thofe great Men of this Inand, whom we are now to compare with thofe Heroes of other Climates, that have been already recorded; and when we have paid that juft Tribute of Praife that is due to their Memories, we fhall proceed in like Manner to a fuccinct Hiftory of the French and Dutch Settlements, which will effectually compleat the View we promifed to give of America, and make the $W e \rho$ Indies as well known as the Eaft.

## S E C T I O N XVII.

The Dijcoveries and Settlements made by the English in different Parts of America, from the Reign of Henry VII, to the clofe of that of Queen Elizabeth; interfperfed with various Remarks on the Progrefs of our Irade and naval Power, and the Difficulties which the Nation had to fruggle with in their firf Attempts.

1. The Hiftory of Madoc, one of the Princes of Wales, and bis fuppofed Dijcovery of America fet in a truie Light, and vindicated from fome groundlefs Reflections made thereon by foreign Writers. 2. The generous Difpofition of King Henry VII, with refpect to encouraging Difcoveries; and the Voyages of John, and Sebaftian Cabot, in his Service, who firft vijhted the Continent of America. 3. The Voyage of Sebartian Cabot, for the Difcovery of a North-weeft Pafjage, in which be failed along the Coaft of that Part of North America, to wobich the Spaniards afterwards gave the Name of Florida. 4. The Voyage of Sir Thomas Pert, Vice-Admiral of England, and Sebaftian Cabot, to Brazil, and otber Parts of the Weft Indies. 5. The firft. Attempt of Mr. Hore, Mercbant of London, to efablifh a Colony in Newfoundland; the frange Misfortunes be met with, and a memorable Inftance of the Juffice and Generofity of King Henry VIII. 6. The feveral Voyages of Captain William Hawkins to Brazil, and a fingular Proof of bis Abilities and Integrity: 7. A fuccinct Account of the Difcoveries and maritime Expeditions to America, under the Reign of King Edward VI. 8. Tbat Hiftory continued during the Reign of Queen Mary, and ber Confort, •-King Philip. 9. The Metbods taken for extending our Trade, and making Settlements in the Reign of 2uen Elizabeth. 10. An Account of Sir Francis Drake's giving the Nome of New Albion, to a Country lying in the northern Part of California, and the Importance of that Difcovery. II. The firft Settlement of Newfoundland, with a jhort Account of the Nature thereof, and the Advantages Vol. II. Numb. LXXXII.
tobich bave accrued from the Fifbery upon its Coafts to this Nation. 12. The jurl Guttenpty to fectle Virginia, under the Direction of Sir Walter Raleigh, with an Account of that Colony. I3. The feveral Voyages of Captain John Davis, and the great Difcoveries made by him in North America. I4. Sir Walter Raleigh's Expedition to Guiana; the Conjequences of that Expedition, and Remarks thereufons 15. Other remarkcule naval Tronfactions, within the Compafs of that Reign, relating to this Subbect. 16. A fuccinct View of the State of our Trade to America, at the Time of the Death of 2ucer Elizabeth. 17. Remarks and Obfervations on the principal Events mentioned in the foregoing Section.
2. TMHE Glory of having firft difcovered far diftant Countries, and adding thereby to the Knowledge and Commerce of Mankind, has always had Charms fufficient to invite different Nations to put in their Claims, even though they have not been extremely well founded. When America was firf made known, it occafioned abundance of Enquiries; and, as it was natural, recalled to many Peoples Remembrances and Confiderations, Stories which had before been deemed fcarce worthy of Notice: Amongtt the reft our Nation put in; and the Tale told in Favour of us, as it is the earlieft in Point of Time, feems to merit Relation as well or better than any other. In fhort, this Story afferts that Madoc, Prince of Wales, was the firt Difcoverer of America, and the Detail of his Expedition runs thus: He flourifhed in the twelfth Century, and was Son of Owen Guyneth, Prince of Nortb Wales ; his Brethren raifing a civil War abouit the Divifion of his Father's Dominions, he chofe rather to go to Sea with a few of his Friends, and feek out new Habitations, than run the Hazard of what might happen in this Difpute. Accordingly, about the Year II70, freering due Weft, and leaving Ireland on the North, he came to an unknown Country, where he fettled a Colony ; and, returning thence into Wales, carried a fecond Supply of People, but was never heard of more.
That the Country he went to was really America, is more, I think, than can be thoroughly proved; but that this Tale was invented after the Difcovery of that Country, on purpofe to fet up a prior Title, is moft certainly falfe. Meredith ap Rees, who died in 1477, and was a famous Welch Poet, compofed an Ode in Honour of this Madoc, wherein was contained an Account of his Difcoveries. Now as this was feveral Years before Columbus made his firft Voyage, we may be fure that this was really a Briti/f Tradition, and no Tale of late Contrivance. Some foreign Writers, indeed, have fuggefted that this was a pare Invention, defigned to prejudice the Reputation of the great Difcovery made by Columbus; but in this they rather fhew their Malice to us, than difcover ours; for beyond all doubt, the Welch had, and have ftill, fuch a Tradition, and therefore fome wifer and better informed Critics have endeavoured to prove that it was not America, but Groenland, to which our Welch Prince failed. In Proof of which they have-obferved that this Country was well known in the ninth and tenth Centuries, though it was afterwards loft.

But with Submiffion to thefe great Men, this Story does not at all anfwer their Purpofe; for, it is evident, the Courfe does by no means agrree; fince, if he had failed to that Country, he could not have left Ireland to the North. I have feen a very ingenious Difcourfe upon this Subject, in which is fuggefted, that Prince Madoc landed in fome Part of Florida; that, in procefs of Time, the Colony he planted there proceeded round by Land, and reached the northern Parts of Mexico, which Country they conquered, and were thofe foreign Anceftors of the Mexicans, of whom we have heard fo much from the Spanifb Writers that have recorded the Adventures of Cories, and with which the Reader is fo well acquainted, that there is no need of our faying any thing more of them here, except it be this, that feveral Britij/b Words have been difcovered in the old Mexican Tongue, and that no other European Nation can fhew a better founded Tradition than this; for the Truth of which, however, I am very far from contending.
2. If there had been really any Defire in the Englifts Nation to conteft the Title of the Crown of Spain to the Country of America, it might have been undoubtedly fixed upon a much better Foundation; for, in the Life
of Don Cbriftopher Colon, written by his Son in the reign of our King Henry the VIIIth, it is exprefly faid, that this great Man fent his Brother Bartholomew into England, to offer his Difcovery to King Henry VII. and he did accordingly prefent a Map, dated the I 3 th of February 14 48 , to that Monarch; and having explained to him his Brother's Defign, and what he propofed thercby, it was readily accepted; and Don Bartbclomero was fent to invite his Brother into Englond, with an Affurance that the King would grant him all he defired. This Agreement was four Years before the Voyage of Colurnbus in the Service of their Catholic Majeifties, and therefore liad we been fo much inclined to hunt for Titles to this new found Country, here had been a fair Pretence. But King Flenyy the VIIth was of another Difpofition; and, though he was a Prince much addicted to encourage fuch kind of ufeful Undertakings, he fcorned to aim at reaping the Fruits of other Prince's Adventures; and therefore he contented himfelf, after mifing by mere Accident Columbus's Difcovery, with inviting other Seamen of known Reputation, to enter into his Service for like Purpofes.
Amongtt thefe was Yobin Cabot, Citizen of Venice, who had been long fettled at Brifol, and who thought himfelf capable of performing, as a Seaman, things little, if at all, fhort of what Columbus had done. He accordingly applied himfeif to the King, who, by Patent inrolled, dated the 5 th of March, in the eleventh Year of his Reign, and in the Year of our Lord I495, granted to the faid Fobn Cabot, and his three Sons, Leweis, Sebafian, and Sancias, Authority to fail with five Ships of what Burtherr and Strength they thought fit, upon Difcoveries to the Eaft, Weft, and North; giving them the full Property of fuch Country or Countries as they fhould difcover, with this Refervation only, that they fhould return to Brifool, and that they fhould pay him the Fifth Part of the neat Profits of their Voyage; in Confideration of which, they were to have the exclufive Right to the Countries fo difcovered, to which no other Englifa Subjects were to trade, but by their Leave and Licence. But the Year before that Patent was granted, that is in 1494, Fobn Cabot, with his Son Seboftian, had failed from Brifol upon Difcovery, and had actually feen the Continent of Nerefoundland, to which they gave the Name of Prima Vifa, or Firft Seen. And on the 24 th of Fune the fame Year he went afhore on an Inand, which, becaufe it was difcovered on that Day, he called St. Yobn's; and of this Inand he reported very truly, that the Soil was barren, that it yielded little, and that the People wore Bear-Skin Cloaths, and were armed with Bows, Arrows, Pikes, Darts, Wooden Clubs, and Slings; but that the Coaft abounded with Finh ; and upon this Report of his, the beforementioned Patent was granted.
3. The nextVoyage made for Difcovery was by Sebaffian Cabot, the Son of Fobn, concerning which all our Writers have fallen into great Miftakes, for want of comparing the feveral Accounts we have of this Voyage, and making proper Allowances for the Manner in which they were written; fince I cannot find there was ever any diftinct and clear Account of this Voyage publifhed, though it was of fo great Confequence. On the contrary, I believe that Caboi himfelf kept no Journal of it by him; fince in a Letter he wrote on this Subject, he fpeaks doubtfully of the very Year in which it was undertaken, though from the Circumftances he relates, that may be very certainly fixed. On the $3^{\text {d }}$ of February, in the 13 th Year of the Reign of King Henry VII, a new Grant was made to Yobn Cabot, by which he had Leave given him to take Ships out of any of the Ports of England, of the Burden of two hundred Ton, to fail upon Difcoveries; but before this could be effected, fobn Cabot died; and Se-
bejtian
baftian, his Son, applied himfelf to the King, propofing to difcover a North-weft Paffage, as he himfelf tells us; and for this Purpofe he had a Ship manned and victualled at the King's Expence at Brifol, and three or four other Ships were fitted out at the Expence of fome Merchants of that City, particularly Mr. Thorne and Mr. Hugh Elliot. But whereas Sebaftian Cabot himfelf fays, that he made this Voyage in the Summer of 1496 , he muft be miftaken, and he very well might, fpeaking from his Memory only; and to prove this I need only obferve, that this Date will not at all agree even with his own Account of the Voyage; for he fays exprefly it was undertaken after his Father's Death; who, as we have Ihewn, was alive in the February following; fo that it was the Summer of the Year 1497 , in which he made this Voyage; and what he afterwards relates of his Return, proves this likewife.

But we have a direct and clear Authority as to this Fact, which is, that of Robert Fabian, who fixes this Voyage of Sebafian Cabot's to the Month of May 14.97. And on the ith of Fune, the fame Year, he failed as high as $67^{\circ} 30^{\prime}$ finding the Sea ftill open, and he thought that he might this way have paffed through into the South Seas, but his Crew mutinied, which forced him to return into the Latitude of $56^{\circ}$ and from thence he ran down to $3^{8^{\circ}}$ along the Coaft of the Continent of America, which, as he exprenly fays, was afterwards called Florida, where Provifions growing fhort, he returned into England, touching by the way at Nerefoundland. On his return, he fays, he found the Nation in much Confufion, and great Preparations making for a War in Scotland, which agrees exactly with Grafton's Chronicle, who places thefe Preparations under the Mayoralty of William Purcbafe, that is, to the Year beforementioned ; and Robert Fabian fays farther, that in the I4th Year of King Henry VII. there were three Men. brought to the King, taken in the new-found Inand, which he before mentioned, who were cloathed in BeaftSkins, eat raw Flefh, fooke a ftrange uncouth Tongue, and were very brutih in their Behaviour ; but he farther adds, that he faw thefe People himfelf two Years afterwards, and that they were then cloathed like Englifhmen, and he could not have known them to be otherwife, if he had not been informed that thefe were the Men brought over by Scbaftian Cabot.

Thus, with the utmoft Exactnefs I could ufe, I have fet this Matter in its true Light, and have thereby fhewn, that he was not only the firft Perfon who attempted a North-weft Paffage; and thewed thereby, that he underfood Columbus's Principles, but was likewife the firft Difcoverer of the Continent of America, which Columbus did not fee till a Year after, as well as the firf Difcoverer of Florida, which Country was not fo called till the Year 1512 ; when, as we have before fhewn, it was vifited by Jobn Ponce de Leon, who took Poffeffion of it for the King of Spain, and ufually paffes for the firtt Difcoverer. It may not be amifs to obferve, that Sebaftian Cabot clearly affirms, that his Voyage was made to difcover a North-weft Paffage ; which Notion of his gave Light, as is acknowledged even by Foreign Authors, to Ferdinand Magellan; and induced him confidently to affirm, that fuch a Pafage might be found by the South, which he happily effected twenty two Years after this Attempt made to the North by Sebaftian Cabot.

I cannct fay that any great Ufe can be made of this kind of Knowledge, but there feems to be no Reafon why we fhould not pique ourfelves upon knowing thefe Matters with as much Exactnefs as Strangers; who, by dipping into our Accounts, pretend to great Knowledge in thefe Matters, and very often impofe upon fuch as will not rake into their own old mufty Antiquities, but pay an implicit Regard to the bold Affertions of modern Authors; by taking the contrary Method, and refolving to be fatisfied, even in Trifles, we come to judge accurately and truly, of the Deferts both of our own and of foreign Nations; fo as to yield the Preference to fome, and maintain our juft Rights againft others. As for Inftance, though we cannot difpute with the

Spaniards the actual Difcovery of America; yet, we may fairly deny, what the prefent Geographer of his $\mathrm{Ca}-$ tholic Majefty afferts, that we rejected Columbus's Propofal; and we may likewife call him to a fevere Account, for placing the Voyages of Sebafian Cabot to Florida, twenty-fix Years later than he fhould have placed them, from the Accounts given by Ramufio, Gomaras Peter Martyr, and other Authors, whom he either had read, or ought to have read, before he took upon him to write on this Subject; of which though he writes fenfibly, yet this will not excufe his writing Untruths.

Sebofician Cabot is by many of our Writers politively affirmed to be an Englifhman, born at Briftol; but the Italians as pofitively claim him for their Countryman, and fay he was born at Venice; which, to fpeak impartially, I believe is the Truth; for, he fays himfelf $f_{y}$ that when his Father was invited over to England, he brought him with him, though he was then very young. His Voyage for the Difcovery of the North-weft Paf fage, gained him fo great a Reputation, that he was invited into Spain, and employed by their Catholic Majefties, Ferdinand and Ifabella, in a Voyage for the Difcovery of the Coafts of Brazil, in which he had much better Succiefs than Americus Vefpucius, who miffed the River of Plate, whereas Cabot found it, and failed up it three hundred and fixty Miles, which gained him fuch a Character at the Court of their Catholic Majefties, that, on his Return, he was declared Piloto Maggiore, or Grand Pilot of Spain; and refided feveral Years at Seville with that Character, and had the Examination and Approbation of all the Pilots intrufted by that Government.
4. Yet, after fome Years, he thought fit to return into England, and was employed by King Henry the VIIIth, in Conjunction with Sir Thomas Pert, who was Vice-Admiral of England; and built a fine Houfe near Blackwall, called Poplar; which Name Itill remains, though the Houfe is long ago decayed. This Voyage of his was in ${ }^{1516}$, on board a Ship of two hundred and fifty Tons with another of the like Size, in which he proceeded to the Coaft of Brazil, and afterwards vifited the Spani/b Illands of St. Domingo, and St. Fobn de Porto Rico; in the latter of which they traded, and paid for what they had by the Exchange of Veffels, made of Pewter, as we learn from Oviedo; who, notwithftanding, afferts that this Veffel was a Privateër, whereas, in Fact, fhe was a Frigate fitted out at King Henry the VIIIth's Expence for Difcovery.

It is a very great Misfortune that we have not a clearer and more diftinct Account of this Expedition; fince it very plainly appears from the Writers of thofe Times, that great Expectations were raifed by it, and that the Mifcarriage occafioned a good deal of Noife and fome Reflections; but they did not fall upon Cabot, as appears from the following Note, taken from a Book, publifhed by Mr. Ricbard Eden, whofe Collections led the way to thofe of Mr. Hackluit, and which Book was publifhed in 1553 . "If manly Courage, faith he, (like unto " that which hath been feen in your Grace as'well in fo" reign Realms, as alfo in this our Country,) had "6 not been wanting in others, in thefe our Days, at fuch " Time our Sovereign Lord of noble Memory, King "Henry VIII, about the fame Year of his Reign, furis nifhed, and fent out certain Ships, under the Govern" ance of Sebafian Cabot, yet living, and one Sir Tho" mas Pert, whofe faint Heart was the Caufe that the Voy"s age took none Effect ; if, I fay, fuch manly Courage, " whereof we have fpoken, had not at that Time been "، wanting, it might happily have come to pals, that that "rich Treafury called Perularia, which is now in Spain, " 6 in the City of Seville, and fo named, for that in it is " kept the infinite Riches brought thither from the new" found Land of Peru, might long fince have been in the " Tower of London, to the King's great Honour and "Wealth of this Realm." I do not find that this worthy Gentleman left England after this; but, on the contrary, remained here, and promoted, to the utmoft of his Power, whatever Defigns were fet on foot for the Encouragement and Extention of our Commerce; fo thats
as I fhall have Occaifon to fhew hereafter, he may be trinly reputed the great Mafter of Englifh Seamen, and the Father of our Colonies and Commerce.

It was this great Man that ftill kept up an Opinion, which, he had himfelf firft entertained, that fome Paffage there was into the South Seas, by the North-weft; and upon this Subject he wrote with fo much good Senfe and Strength of Reafon, that if the Ships, which, while I am writing this Paragraph, have failed in Search of this Paffage, fhould fucceed, the Honour of the Difcovery will redound to him; and therefore it is but juft, to take this Opportunity of reviving his Reputation. His Difcourres had fuch an Effect on King Henry VIII. a Prince of vaft natural Parts, great Learning, and ftrongly inclined to heroic Undertakings, that he refolved to fend another Ship, or more, on the Difcovery, which he did in the nineteenth Year of his Reign. Both Hall and, Grafton, in their Chronicles, fpeak of this; and tell us, that on mature Deliberation, the King fitted out two fair Ships, which failed from the Port of London, on the 20th of May 1527.; but not a Word of the Captain's Name, or of the Strength of thefe Ships; the only Particular we have is, that the King fent feveral cunning Men on board them. We are to underftand, by cunning Men, Perfons ikilled in the Mathematics; who, with the common Sort of People, paffed now, and long after, for cunning Men and Conjurers.

The worthy Mr. Hackluit has taken abundance of Pains to fupply us with fome Circumftances of this Expedition, but to very little Purpofe; and, notwithftanding all his Inquiries from Perfons who lived in and near thofe Times, could obtain no other Satisfaction than this, that a Canon of St. Paul's, who was reputed a great Mathematician, was one of the principal Perfons concerned, and actually had took a Share in the Voyage; but to this reverend Perfon's Name both Sir Martin Frobifaer and Sir Ricbard Allien, 'who were Mr. Hackluit's Authors, were Strangers; one of them, however, remembred the Name of the biggeft Ship, which was Dominus Vobifoum, or the Lord with them, which agrees very well with the other Part of the Story, that the chief Promoter of this Voyage was a Prieft. Thefe Ships failing very far to the Northweft, the largeft of them was caft away in the Mouth of a very large Gulph, very probably in the Entrance to Hudfon's Bay, and there perifhed; the other, having coafted along the Inand of Cape Britton (fo they wrote it then) returned in OEFober following, and brought a large Account of the Places they had feen, and of the Hardfhips they had undergone.

It appears from thence, that thefe early Attempts to difcover new Countries, and extend our Commerce, were attended with great'Difficulties, much beyond thofe that were met with by the Spaniards and Portugueze, which may be attributed to feveral different Caufes, and amongft others thefe: Our Shipping was then but mean, though both the Kings whom Cabot ferved appeared to be very defirous of having a naval Force, fince Henry VII. had fpent fourteen thoufand Pounds in building one large Ship, and his Son Henry VIII. added feveral others to the Navy; ${ }^{1}$ yet I think our Ships were, generally fpeaking, larger than thofe of moft of our Neighbours; but very probably they were built abroad, and neither in Form nor in - Materials were fit for thofe Seas to which they were navigated. The Skill of our Seamen could not be very great at this time; for as in all other practical Cafes, fo in this, nothing advances People fo faft as Experience, and therefore I reckon that the want of this was a great Deficiency in thefe Times; we may add, that we purfued, with incredible Diligence, thofe Difcoveries that carried us into dangerous and difagreeable Climates, which was directly contrary to the Practice of the Spaniards and Portugueze; befides thofe Voyages produced little or no Advantage, fo there was nothing to provoke the common, or even the trading, fort of People, to engage in them : And laftly, King Henry VIII. was bent upon finding a North-weft Paffage, that he might have a Way of his own to the Eaft Indies, and not be obliged to follow the Rout either of the Spaniards or of the Portugueze.
5. It was this Inclination of the King's, that produced
a Spirit in the Nation of difcovering and fettling in thefe Northern Parts, let the Dangers be what they would, or the Difficulties to be overcome ever fo many or apparent; a very ftrong Inftance of which occurred in the twentyeighth Year of his Reign, and is the moft remarkable Paffage in it to our Purpole: One Mr. Hore, a Merchant of London, a Man of good Family, confiderable Fortune, great Courage, and very well verfed in moft of the Branches of the Mathematics, was refolved to undertake a Voyage, and attempt a Settlement on Nerefoundland, and to go thither himfelf. He no fooner made this Intention of his known, than he received all the Countenance and Encouragement from the Crown that he could expect; and as this gave much Credit to the Expedition, fo, in a fhort time, abundance of young Gentlemen, of good Fortunes and diftinguifhed Families, offered to fhare both the Expence and Danger of the Undertaking.

Amongft thefe were Mr. Wickes, a Weft-country Gentleman of five hundred Marks a Year; Mr. Tuck, as Kentißb Gentleman of Fortune; Mr. Tuckfield, Mr. Thomas Butts Son of Sir William Butts, the King's firt Phyfician; Mr. Fardy, Mr. Biron, Mr. Carter, Mr. Raftal, Brother to Serjeant Raftal, and feveral others; who went with Mr . Hore in the largeft of his two Ships, the Trinity, of the Burden of one hundred and forty Tons: In the leffer Ship went Mr. Armizall Wade, a young Gentleman of great Hopes, and much Learning; Mr. Oliver Dawebney of London, Merchant; and other Perfons of Character, to the Number of thirty, in both Veffels. About the End of April, 1536 , all Things were ready; the Trinity and Minion fit to fail, and the whole of both Ships Company, to the Number of one hundred and twenty, muftered at Gravefend; after which they went with much Ceremony on board.

They foon after failed, and arrived in the Space of two Months at Cape Breton; from whence they failed round a great Part of Newofoundland to Penguin Inand, in the Latitude of about 50 Degrees, as they computed; but which lies, truly, in 50 Degrees 40 Minutes; where they found great Plenty of thofe Fowls, from whence the Inand takes its Name: They afterwards went on fhore upon the Eaft-fide of Nerofoundlond, and had an accidental View of a Boat full of the Savages that inhabited that Country, whom they purfued both by Sea and Land, but were not able to overtake them. They ftaid here till their Victuals began to grow very fhort, and being then afraid to truft themfelves at Sea in fuch a Condition, they delayed going on board till they were in fuch Diftrefs that they actually eat one another ; that is to fay, fome killed their Companions privately in the Woods, hid them, and then roafted and eat their Fleh fecretly, till this horrid Practice coming to the Knowledge of their Captain, he, by a moft judicious and pathetic Speech, brought them to refolve rather to live upon Grafs and Herbs than fubfint by this deteftable Method any longer.

But it fell out foon after, that a French Ship put in there well manned and well victualed, of which our Countrymen refolved to take Advantage, being weary of a Country in which they had endured fuch Miferies; and therefore, watching a fair Opportunity, they poffeffed themfelves of the French Ship, and, leaving their own, failed directly for the Coaft of England. They returned fafely, and arrived at St. Fves in Cornwall about the End of OEfober ; and then the Gentlemen, difperfing themfelves, returned to London; but fo much altered by their Fatigues, that Sir Williom Butts; and his Wife, could not know their Son, but by a particular Mark upon his Knee. We had never known a Word of this ftrange Adventure, if it had not been for Mr. Ricbarid Hackluit, who rode two hundred Miles to gain thefe Particulars from the Mouth of Mri. Tbomas Butts, the only Perfon then living, who had a Share in that Expedition; and no wonder, fince it was fifty-three Years afterwards that he obtained this Communication: There is another Circumftance relating to this unfortunate Enterprize, which muft, by no Means, be omitted.

Some Months after, the Frenchmen came to England, with a dreadful Complaint, that the Englifs had ran away with their Ship, and had left them to ftarve, if they had

Chap. III. of the ENGLISH in AMERICA.
not fupported themfelves by fifhing. King Henry examined very clofely into the Affair, and finding that extreme Want was the fole Caufe of an Action, otherwife inexcufable, he fatisfied the French, to the full Extent of their Demands, out of his own Coffers, and pardoned, in his own Subjects, that Wrong which Neceffity forced them to commit. Thefe were very hard Beginnings; and yet to thefe we owe our Nevefoundland Trade ; and, I think, it is much to the Honour of the Englifb Nation, that without having any of thofe Encouragements, which the Spaniards met with from the very beginning, they contintled to purfue thofe Expeditions for Difcovery; till in the End they met with thofe Rewards which they fo well deferved.
6. Within this dark Period of Time, for the Accounts of our rifing Navigation have been moft imperfectly tranfmitted to Poferity, there were Numbers of Englifhmen, who, with very little Profpect of private Advantages, fpread themfelves, by the Help of foreign Shipping, into all Parts of the World; that, by their Enquiries and Obfervations, they might be able to underitand how Trade was managed, and Maritime Affairs conducted, in otherCountries; that, in time, by their Informations, the like Advantages might accrue to their own, of which Voyages and Travels, there are many fhort Notes collected in Hackluit ; which do great Honour to thefe Times, and ought to perpetuate the Memory of the worthy Perfons ; who, with fo much Labour and Hazard, laid the Foundation of our naval Strength and Glory.

Thefe Notices foon roufed active and induftrious Perfons, to try what Ufe could be made of fuch Helps, and perhaps the Reader will not think his Time mifpent in reading an Inftance of this Kind. Mr. William Hawkins, the Father of the famous Sir Fobn Hawkins, and the Grandfather of Sir Richard Harokins, both eminent Seamen, was himfelf an Officer in the Navy of King Henry the VIIIth, and for his Merit much efteemed by that Prince, made about the middle of his Reign three profperous Voyages to Guinea and Brazil; in the laft of thefe, having fome Dealings with a Prince or Chief of the Brazilians, he expreffed a Defire of feeing England; but, at the fame Time, fhewed a Sufpicion of his not obtaining Leave to come Home again; to cure which, Captain Hawekins very readily offered to leave Mr. Martin Cockram, of Plymouth, who ftood next to himfelf in Efteem with the Indians, as a Hoftage, which Offer was readily accepted.

This Brazilian Chief he brought over, and prefented to his Mafter King Henry, who received him kindly, entertained him courteounly, and difmiffed him generounly, after a Year's ftay in England. But it fo fell out, in his Paffage home, that, either through Change of Air, Shortnefs of Provifions, or fome other Misfortune, the Indian Chief died; which threw the Engliß into great Concern, from an Apprehenfion that Mr. Cockram would be either punifhed with Death, or detained during Life, upon account of this Accident: But the thing fell out better; for upon hearing what the Englifh had to alledge; the Savages readily obferving, that it was far from being likely that they would return to their Country if they had treated their King amifs, and that it was not in their Power to preferve his Life, if attacked by Sicknefs; they freely fet their Hoftage at Liberty, kindly entertained the Men, and furnifhed the Ship with a fufficient Cargo for England, which encouraged other Merchants to trade to the unfettled Ports of Brazil, (by which I mean the Forts not yet in the Poffeffion of the Portugueze) and this from feveral Places, viz. Briftol, Southampton, and London, during all the latter Part of this Monarch's Reign, who muft be allowed to have had a very public Spirit with regard to Maritime Concerns, for the Improvement of which he fpared neither Pains nor Treafure.
7. In the Time of King Edroard the VIth the Court was fplit into Factions, which neceffarily occafioned Difputes and Divifions among the People; fo that the Times were by no Means favourable for new and great Undertakings, or even for the Improvement of thofe Branches of Commerce, which were but newly opened;

Vol. II. Numb. 82.
on the contrary, it feems that feveral Perfons, who were intrufted with Offices by the Lord High Admiral, and fuch as had the Care and Direction of the Cuttoms, laid heavy Burdens upon thofe that engaged in the Iceland and Newfoundland Fifheries; and took fuch large Sums for Licences, and under other Pretences, as had like to have ruined the former, which was an old Trade, and greatly difcouraged the latter, which was a new one.

Upon Complaint of this to Parliament, the Matter. fell under a clofe Examination, as appears from fome Papers of Sir Willian Cecil, which are yet in being; for there are no Journals of the Proceedings of the Houfe of Commons fo early as this Time preferved: But from the Pa pers before-mentioned, we are informed, that this Complaint was made by the Weft-country Members, and by a Burgefs from Karmouth, in Norfolk; and thereupon a Law was made in the Year I548, and the fecond of that Prince's Reign; by which it was enacted, that every Officer, who fhould, 'for the Time to come, extort, procure, or receive any Sum of Money from a Merchant, Mafter of a Ship, Factor, or Fifherman, for, or under Colour of, granting him Leeave, or Licence, to fifh in the North Seas, on the Coafts of Iceland, or on the Banks of Nevefoundland, fhould, for the firft Offence, forfeit treble the Sum fo extorted; and for the fecond, fhould fuffer Fine and Ranfom at the King's Pleafure:

The fame Year the King was pleafed to grant to Sebaftian Cabot, his old Servant, by the Advice and Council of his Uncle, Edward Duke of Somerfet, the Office of Grand Pilot of England, with a Fee of one hundred fixtyfix Pounds thirteen and four-pence, to be paid him Quarterly at the Exchequer; which fhews, that thefe kind of Services were ftill regarded; and that in fuch Intervals of Peace, as the Miniftry then had, they were mindful of the Intereft of their Country, and inclined to do what lay in their Power to promote Navigation and Commerce. But they were ftill hurt by a too earneft Defire to grafp at the whole Trade of the Indies, which induced them to liften to all the Propofals made for difcovering either a North-eaft or a North-weft Paffage ; and by bending all their Strength that way, neglected thofe Undertakings that were eafier, and which might have been carried into Execution at a much lighter Expence. This was owing to Mr. Sebaftian Cabot, who firf ftarted the Notion of a Paffage into the South Seas by the North-weft, and who fell very readily into the other Project of finding a Paffage into the Indian Ocean by the North-eaft.

He was at that time Mafter of the great Company erected for the Benefit of Commerce, under the Title of Mercbant-Adventurers for the Discovery of Nere Lands, and the great Oracle, as he deferved to be, of all the feafaring People; and this gave him an Opportunity of pufhing that Point which he had moft at Heart, the Importance of which he underftood better than any Man, and in the Execution of which no body had gone farther, or managed an Expedition with greater Difcretion. But this Turn diverted the whole Attention of the State to this Point, and this alone, as if nothing had been worth difcovering but a Paffage to the Spice Iflands; while in the mean time the Spaniards attacked and fubdued a very great Part of both the Continents of America. If, inftead of this, the Endeavours of the Seamen in that Reign had been applied to the profecuting what Cabot had fo well begun, I mean the intire Difcovery of Florida, and the Countries adjacent, it muft have ended in a Settlement on the Gulph of Mexico, which might probably have been attended with very great Advantages.

It cannot however be denied, that the Schemes which were profecuted had a very fair Appearance of Succefs, and I think it may be allowed alfo, by fuch as take the Pains to perufe Mr. Cabot's Inftructions to Sir Hugb Willougbby, that no Man ever conceived with greater Strength of Judgment, or expreffed himfelf in clearer Terms, than he did. I might, to prove this, give an Extract of thefe Inftructions; but it would be befide my prefent Purpofe, and giving the Reader no more than what he may already find in Hackluit; whereas I aim at affording him new Lights, without tranfcribing other People's Labours, except where I am under a Neceflity Ddd
of doing it. It muft be admitted, that tho the Profecution of thefe Projects, for finding a North-eaft and a North-weft Paffage, were not either of them attended with Succefs, and tho' they confumed a great Treafure, and which is much more to be regretted, were attended with the Lofs of feveral excellent Captains and many able Seamen, the Profits which the Nation reaped, might be truly faid to countervail, in fome meafure, even the vaft Expences thefe Voyages occafioned..
As for. Inftance: We opened, by our Attempts to find a North-eaft Paffage, the Trade to Archangel; and, for fome time, engroffed the valuable Commerce of the Ruffan Empire: And even to the North-weft our Difcoveries were of great Confequence, and led us to a more diftinct Knowledge of that Part of the World than any other Nation has attained, infomuch that I think it may be truly faid, it is of all our Labours that which has thewn our Excellency in Point of Seamanhhip moit; and, if our prefent Attempt for difcovering a Paffage through Hudjons ${ }^{3}$ Bay fhould prove fucceffful, as I fincerely believe it will, we fhall have no reafon to blame thofe who from time to time have pufhed this Defign with fo much Vigour; becaufe I am thoroughly perfuaded, that whenever it is attended with Succefs, it will, in a very few Years, repay this Nation all that the has expended for Ages upon this Account.

We may from hence fee, how much thefe Expeditions for Difcovery are preferable to much more expenfive Expeditions in purfuit of Projects dictated by political Views; for in thefe laft we wafte Ships, Men, Treafure, and all to little or no Purpofe; whereas, with Refpect to the former, whether we fucceed or not in our main Point, we are fure of making fuch incidental Advantages as, fooner or later, make'us ample Amends for the Pains we take; fo that a maritime Power cannot follow a wifer Courfe than to encourage all fuch Projects, or employ her naval Force better, than in attempting fuch of them as have a probable Appearance; becaufe this nourifhes and keeps alive that active, penetrating, enterprifing Spirit, which is fo neceffary to a State like ours, and which will always be attended with Advantages upon the Whole, tho' in many particular Inftances it may not be attended with Succefs. But it is now time to proceed from thefe Reflections which naturally flow from the Confideration of what was done by our Statefmen in the Reign of King Edward, to thofe of the like kind that occupied the Thoughts both of our Politicians and. People, in the Reign of his Sifter and Succeffor; in fpeaking of which, tho' a beaten Topic, I hope to ftrike out feveral Things that are new.
8. As there were feveral of King Edruard's Minifters employed by Queen Mary, fo we find that in the Reign of this Princefs the fame Meafures were purfued, and the fame Attention fhewn for new Difcoveries, and for giving all the Affitance that was in the Power of the Crown, to fuch as engaged in thefe Undertakings. But after the Marriage between the Queen and King Pbilip of Spain took place, we began to grow much better acquainted with all Circumftances relating to the Weft Indies, than in former Times, and it became fafhionable at Court to read and undertand whatever had been publifhed, in any Language, relating to the Conquetts and Difcoveries of the Spaniards; but becaufe the Number was not great of fuch as could perufe and underftand thofe Works in the original Languages, feveral Perfons took Pains to trannate them into Englifh, and to epitonife them, that they might be read with the greater Facility ; amongtt thefe were Mr. Ricbard Eden, who compofed one of the firft Collections of Travels that was ever publifhed in our Language, and which was afterwards revifed, corrected, and augmented, by Mr. Edvaard Willes. Several other Pieces of the fame kind came abroad, and feveral of the Spanifo Officers that attended their King hither, took a great deal of Pains to fet forth the Exploits of their Nation in the Weft Indies; and our Sea-Officers, with whom they converfed, did not fail to make their Advantage of thefe Difcourfes, and to gain fuch Knowledge of the Situation Things were in throughout all their Dominions in America, as afterwards coft the Spaniards very dear.
This Intercoufe with that Nation, alfo furnifhed many

Enclifmen with Opportunities of going to their Settlements, and of obtaining fuch Lights -with refpeat to their Navigation and Commerce, as proved afterwards of the higheft Ufe. But notwithftanding all this, our Trade and Naval Power fuffered deeply by this Connection between the two Nations, which not only hindered, during that Reign, thofe Voyages we had formerly made to America trom being purfued, but involved us likewife in a tedious, dangerous, and unneceffary, War with France; by which we not only loft the important Fortrefs of Ca lais, but alfo fuffered decply in our Shipping; fo that it appears by fome Fragments which ftill remain of Speeches made in the Houfe of Commons, that loud Complaints were made on this Subject in Parliament by the Citizens of London efpecially, whofe Loffes were greater than thofe of the reft of the Kingdom by thofe mifaken Meafures.

Yet fuch Branches of our Commerce as did not inmediately interfere with that of Spain, were greatly favoured in this Reign, in which the Rufian Merchants were incorporated, and Sebaftian Cabot appointed their Governor for Life, and a Ruyfian Embaffador, who came over hither, was treated with great Diftincion, both by the King and Queen ; which procured us fuitable Returns, by the granting extraordinary Privileges to fuch Merchants, and Subjects of England, as traded in any Part of that extenfive Empire. The Trade to Guinea, likewife, met with fome Countenance from the Court, by which Means the Shipping engaged therein was increafed, and many more Traders drawn to be concerned therein; fo that as great a Spirit in this Refpect appeared as could well be expected; while the trading Corporations throughout the Kingdom were expofed to great Inconveniencies, by taking their Ships for the public Service ; for fo, at that Time, affifting King Pbilip was called, tho' it was evidently againft the Intereft of the Nation, and it was our want of Succefs in that War which faved the Balance of Europe, which muft have been totally loft, if he had compaffed his Defign, and ruined the Power of France; fo that in fact, our naval Force was employed againft itfelf, of which the Queen's Minifiters were fenfible; but as for the Queen herfelf, the was governed by an odd Principle, which was that of making the beft Wife in the World, to one of the wortt of Hufbands; but, very luckily for the Nation, fhe was fo fenfible of the Miffortunes that attended this injudicious War, and particularly of the Lofs of Calais, that it broke her Heart, and thereby made way for that great and glorious Reign which reftored the Face of our Affairs, revived our languifhing Commerce, re-eftablifhed our naval Power, and, ly the happy Iffue of a long and bloody, but neceffary and profperous, War againft Spain, fecured our own Liberties and preferved thofe of Europe.
9. Queen Elizabeth fucceeded to the Crown by the Death of her Sifter, in the Month of November, $155^{8}$; and, from the very beginning of her Reign, made the neval Power of this Nation her peculiar Care: She began with putting the fimall Remains of the Navy into the beft Condition poffible; provided a fafe Harbour in the River Medrocy for their Reception, and erected a new Cafle for their Protection. She likewife took care to have a fmall Squadron at Sea as foon as poffible, and knowing that by a hafy Breach with Spain, fhe might, and indeed muft, expofe her Naval Strength to the Danger of being crufhed by a fuperior Force, the very wifcly chofe to diffemble her Refentments againt that Crown, and to provide for the Increafe of the Seamen and Shipping of her Kingdom, before fhe difcovacd choie Refolutions which fhe carried afterwards into Execution with fo much Honour to herfelf, and fo much Advantage to her People. I the rather take notice of this, becoufe it is the only Stroke of the Queen's Policy which has efcaped our Hiitorians, who either overlooked or mifunderftood it, and therefore, as it very nearly concerns my Subject, I fnall fet it in a full and clear Light.

At the Beginning of her Reign the Queen had feveral Enemies to deal with; fome who declared openly againft her, and others who fecretly fought her Ruin : Among the former were the French, to whom at that Time Scotland, in Virtue of a Marriage between Queen Mary and

Chap. III. of the ENGLISH in AMERICA.
the French King, in fome meafure belonged. At the Head of the latter was King Pbilip of Spain, one of the greateft Politicians that ever fat upon a Throne, who knew the Value of England, had in fome meafure poffeffed it, and, which was not at all wonderful, had no Mind to lofe it. His firt Project for keeping it was, by marrying Elizabeth, as he had done her Sifter, in which finding himfelf deceived, his next Project was to conquer it, from which he never departed. The Queen, when the rejected the firft, forefaw the laft, and refolved to provide againft it, which fhe knew could no other way be done but by obtaining a great naval Force.

To arrive at this, fhe firt of all contrived to amufe Spain by carrying on the War with France, in which fhe did the fame thing her Sifter did; and yet, the one was the wort, the other the wifeft Meafure that ever was taken. Queen Mary really meant to ruin and diftrefs the French, and was above all things defirous of recovering Calais; and this from a miftaken Zeal for the Intereft of the Nation. Queen Elizabeth made an artificial War againft France to increafe her own naval Strength, by encouraging her Subjects to take Prizes, and that fhe might have an Opportunity of fecuring Scotland; but, though exceffively provoked, fhe never thought of hurting France, and when offered Calais, the refufed it; and all this, becaufe fhe knew the true Intereft of the Nation. She knew, that while fhe continued to act againft the French, the fhould have the Spaniards for feeming Friends; that this War was not againft the Humour of her'People, or againft Juftice ; that it would raife a vaft Number of Seamen, becaufe every Port in England fitted out Privateers ; and that it would raife the Reputation of her naval Power, by reducing Scotland; for all which Ends, as fhe wifely provided, fo the met in them all the Succefs fhe could defire. She knew; however, that France was not her natural Enemy ; that from the Difputes about Religion, which ran high in that Kingdom, the was in no Danger from its Power ${ }^{\circ}$ and that whenever fhe came to declare againft Spain, fhe fhould ftand in Need of its Affiftance; for which Reafon the made a very harmlefs War, and gave fuch broad Intimations of her being willing to compofe all Differences, as in due Time produced a Peace. She likewife knew that the Poffeffion of Calais was a mere popular Advantage; that, in reality, it was attended with an Expence which could not well be afforded ; that if fhe was poffeffed of it, it would be a continual Bone of Contention with France, and that, how much foever it might be afterwards her Intereft to part with it, it would be an unpopular, and therefore an improper, and an imprudent, Thing to give it up. This that great Princess knew, and therefore the wifely refufed it; but upon making a Peace fhe referved her Rights to it, and procured fuch Conceffions from the French, as proved a continual Check upon them, and were oftentimes of more Ufe than the Fortrefs itfelf.

In the mean Time The continued her Care of the Navy, and neglected nothing that might keep up and promote a maritime Spirit among her People; fhe fought out and diftinguifhed the Sea-Officers that had ferved under her Father ; fhe was continually fitting out, on one Pretence or other, little Squadrons, at a fmall Expence; fhe gave the Command of them to different Officers, that fhe might excite a Spirit of Emulation, but what principally conduced to aggrandize her Power was the Pleafure fhe fhewed, whenever any Occafion offered of rewarding her Subjeets, who undertook, at their own Expence, fuch Expeditions as contributed to extend their Commerce, and open new Branches of Trade. We have a ftrong Inftance of this, in the Countenance the fhewed to Capt. Jobn Hawkins, who between the Years 1562 and 1568 made three Voyages into the Weft Indies, and in all but the laft had very great Succefs, though he carried on his Trade partly by Force. She promoted the Trade to Rufia, and through that Empire to Per $i a$ and the Indies, to the utmoft of her Power, and managed it with fuch Prudence and Dexterity, that the Reputation of her Government was very high, in that, and in other Countries, in which the reft of the Kingdoms and the States of Europe were hardly known. The Trade to Gui-
nea was likewife fo much her Care, that, finding the Porm tugueze gave her Subjects much Difturbance, the enquired into the Caufes of thofe Difputes, and took Care to remedy them by a Treaty with that Crown,

All this time her Differences with Spain fubfifted, and though there was no open War between the two Crowns, yet there could farce be faid to be either Eriendhip or Peace between their Subjects; and the Queen, perhaps, was not very follicitous that there fhould; for having now attained what fhe aimed at, a very confiderable Naval Force, and being willing to let the Spaniards fee, that though the declined a War, the had no Reafon to be afraid of it, the took Advantage of the King of Spain's Marriage with Anne of Aufria, his Niece, to give fuch an Inftance of her Generofity and Power, as did great Honour to her Adminiftration; for the caufed that Princefs to be conducted to Spain by an Englifh Navy; this was a plain Demonftration, that her Sparingnefs, upon other Occafions, was not the Effects of any Nearnels of Temper ; but that, by a conftant Frugality, fhe might have it always in her Power to be royally magnificent upon proper Occafions.

But this extraordinary Mark of Civility was far enough from meeting a proper Return, and the Spaniards' went on in difturbing the Trade, and diftreffing the Navigation, of her Subjects; which induced the Queen to fuffer her Subjects to ufe the beft Meafures they could for redreffing themfelves; in which they were not wanting. In the Year $157^{2}$ Capt. Francis Drake made his famous Expedition into the Weft Indies, with two Ships, one called the Dragon, of feventy-five Tons, the other the Swan, of twenty-five Tons, and on board them both he had no more than feventy-three Men ; and yet, with this Force, he ventured to declare War againft the King of Spain, for the Injuries he had received in his Voyage with Capt. Hawekins to the Weft Indies. In this Voyage he performed wonderful Things; for, befides taking feveral large Ships, he fairly took the Town of Nombre de Dios, by Storm, gained an immenfe Treafure, and had a Sight of the South Seas; after which he returned fafely to Plymouth, and made a fair Diftribution of the Profits of his Voyage among his Owners,

This glorious Event encouraged others to follow his Example; fo that, in a very fhort Time, the Englifo Privateers made various Voyages into all Parts of America, and every little Port in England fwarmed with Seamen, who were perfect Mafters of their Profeflion ; and Pilots capable of navigating Ships to any Part of the known World became fo numerous, that there were daily new Projects fet on foot, which in the former Age would have been thought impracticable; but in this were carried into Execution at the Charge of private Perfons, without any Expence to, or Afiftance from, the Crown, though they had all the Countenance and Encouragement they could defire: But amongft all thefe, there was none fo confiderable in itfelf, fo clear a Proof of maritime Skill, and fo honourable, in every Refpect, to the Nation, as the next Expedition of Capt. Francis Drake in 1577 , in which he failed round the Globe, as we have fhewn at large in the firft Part of this Work, and therefore need not repeat here. But one Part, however, of that Voyage fo immediately concerns the Subject of this Section, and relates to fo confiderable a Difcovery, that, as we then promifed, we fhall, as in its proper Place, fpeak of and explain it more particularly here.

Io. Capt. Drake failed from Plymouth, with five fmall Ships, the biggeit but of one hundred Tons, on the I 3 th of December 1577 , and it was the 5 th of September following before he entered the Soutb Seas, where having performed feveral glorious Actions, and gained prodigious Riches, he proceeded to the moft Northern of the Spanifb Settements; with a View to difcover, if pofible, that Paffage which had been fo much talked of from our Noxthern into the South Seas, by a Strait like that of Mageh lan's to the North-weft. This was certainly a very wife and great Undertaking, and a prodigious Improvement upon the Defign of his Voyage; for, as yet, no Englifamana had had the Opportunity, and perhaps it never entered into any Man's Head, to fearch for fuch a Paffage on this Side ; tho' it is moft likely, that by this Method it may
be found. Our Author's Endeavours, however, were ftrangely croffed by the unexpected Severity of the Weather, of which the Reverend Mr. Francis Fletcber, who was Chaplain in this Voyage, gives us a large Account ; and, as it relates to a Subject of great Importance, and contains a Multitude of curious Circumftances, thoughnot delivered in the moft polifhed Stile, we fhall give it the Reader, for the Sake of Exactnefs, in his own Words.
"From Guatulco we departed the Day following, viz. "April the I6th, fetting our Courfe directly into the Sea,
" whereupon we failed five hundred Leagues in Longi-
" tude to get a Wind, and between that and $\mathcal{F} u n e$ the " 3 d 1400 Leagues in all, till we came in 42 Degrees
" of North Latitude, wherein the Night following we
" found fuch an Alteration of Heat into extreme and
" nipping Coid, that our Men, in general, did griev-

* ounly complain thereof, fome of them feeling their
"Heatths much impaired thereby; neither was it that
"this chanced in the Night alone, but the Day follow-
" ing carried with it not only the Marks, but the Stings
" and Force, of the Night going before, to the great Ad-
" miration of us all ; for befides that the pinching and
" biting Air was nothing altered, the very Ropes of our
"Ship were ftiff, and the Rain which fell was an unna-
"t tural and frozen Subftance; fo that we feemed rather
" to be in the frozen Zone, than any way fo near unto
"the Sun, or thefe hotter Climates.
"Neither did this happen for the Time only, or by
" fome fudden Accident, but rather feemed, indeed, to " proceed from fome ordinary Caufe, againft the which
" the Heat of the Sun prevails not; for it came to that
"Extremity in Sailing but $2^{\circ}$ farther to the Northward in
" our Courfe, that tho' the Seamen lacked not good Sto-
" machs, yet it feemed a Queftion to many amongft us,
" whether their Hands fhould feed their Mouths, or
"rather keep themfelves within Coverts, from the
" pinching Cold that did benumb them? Neither could
"we impute it to the Tendernefs of our Bodies, though
" we came lately from the Extremity of Heat, by rea-
" fon whereof we might be more fenfible of the pre-
" fent Cold, infomuch that the dead and fenfelefs
"Creatures were as well affected with it as ourfelves.
"Our Meat, as foon as it was removed from the Fire,
"w would prefently, in a Manner, become frozen up;
" and our Ropes and Tackling, in a few Days, were
" grown to that Stiffnefs, that what three Men before
" were able with them to perform, now fix Men, with
" their beft Strength and utmoft Endeavours, were
" hardly able to accomplifh; whereby a fudden and great
"Difcouragement feized upon the Minds of our Men,
" and they were poffeffed with a great Minike, and
"doubting of any good to be done that Way; yet
"would not our General be difcouraged, but as well by
" comfortable Speeches of the divine Providence, and of
" God's loving Care over his Children, out of the
"Scriptures, as alfo by giving other good and pro-
" fitable Perfuafions, adding thereto his own chearful
" Example, he fo ftirred them up to put on a good
"Courage, and to acquit themélves like Men, to endure
" fome fhort Extremity; to have the fpeedier Comfort,
" and a little Trouble to obtain the greater Glory; that
" every Man was thoroughly armed with Willing-
" nefs, and refolved to fee the uttermoft, if it were pof-
"f fible, of what Good was to be done that Way.
"The Land in that Part of America bearing farther
" out into the Weft than we before imagined, we were
" nearer on it than we were aware, and yet the nearer
\%. fill we came unto it, the more Extremity of Cold did
" feize upon us. The 5th Day of June we were forced
" by contrary Winds to run in with the Shore, which
" we then firlt defcried, and to caft Anchor in a bad
"Bay, the beft Road we could for the prefent meet
©i with, where we were not without fome Danger, by
"r reafon of the many extreme Gufts and Flaws that beat " upon us; which if they ceafed and were ftill at any time,
" immediately upon their Intermiffion there followed
" moft vile, thick, and ftinking Fogs, againft which "the Sea prevailed nothing, till the Gufts of Wind again
"removed them, which brought with them fuch Extre-
" mity and Violence when they came, that there was "s no dealing or refifting againft them. In this Place "was no abiding for us, and to go furtherNorth the Extre"s mity of the Cold (which had now utterly difcouraged " all our Men) would not permit us, and the Winds, be" ing directly againft us, having once gotten us under "Sail again, commanded us to the Southward, whether "we would or no; from the Height of $48^{\circ}$, in which " now we were, to $38^{\circ}$, we found the Land by coafting "it'to be but low, and reafonably plain; every Hill " (whereof we faw many, but none very high) though " it were in fune, and the Sun in the neareft Approach " unto them, being covered with Snow.
"In $38^{\circ} 30^{\prime}$ we fell in with a convenient and fit Har"bour, and Fune the 1 yth came to an Anchor therein, " where we continued to the 23 d of Yuly following; " during all which Time, notwithftanding it was in the " height of Summer, and fo near the Sun, yet we were "continually vifited with like nipping Colds as we had " felt before; infomuch, that if violent Exercifes of our " Bodies, and bufy Employment about our neceffary La" bours, had not fometimes compelled us to the contra" ry, we could very well have been contented to have " kept about us, frill, ourWinter Clothes; yea, (had our "Neceffity fuffered us) to have kept our Beds; neither "could we at any Time, in the whole fourteen Days toge" gether, find the Air fo clear as to be able to take the " Height of Sun or Star.
"And here, having fo fit Occafion (notwithftanding " it may feem to be befides the Purpofe of writing the "Hiftory of this our Voyage) we will a little more di" ligently enquire into the Caufes of the Continuance of " the extreme Cold in thefe Parts; as alfo into the Pro" babilities or Unlikelihoods of a Paffage to be found " that way. Neither was it (as hath formerly been "touched) the Tendernefs of our Bodies coming fo late" ly out of the Heat, whereby the Pores were opened, " that made us fo fenfible of the Colds we here felt. " In this refpect, as in many others, we found our God " a provident Father and careful Phyfician to us; we " lacked no outward Helps nor inward Comforts to re" ftore and fortify Nature, had it been decayed or weak" ened in us; neither was there wanting unto us the " great Experience of our General, who had often him" felf proved the Force of the burning Zone, whofe "Advice always prevailed much to the preferving of a " moderate Temper in our Conftitutions; fo that even " after our Departure from the Heat, we always found " our Bodies not as Sponges, but ftrong and hard, " more able to bear out Cold, though we came out of
" Excefs of Heat, than a Number of Chamber-Compa" nions could have been, who lie on their Feather-beds " till they go to Sea, or rather, whofe Teeth in a tem" perate Air do beat in their Heads at a Cup of cold "Sack and Sugar by the Fire.
"And that it was not our Tendernefs, but the very " Extremity of the Cold itfelf, that caufed this Senfible" nefs in us, may the rather appear in that the natural "Inhabitants of the Place (with whom we had for a long
"Seafon familiar Intercourfe, as is to be related) who
" had never been acquainted with fuch Heat, to whom " the Country Air and Climate was proper, and in " whom Cuftom of Cold was as it were a fecond Na" ture, yet ufed to come fhivering to us in their warm "Furs, crouding clofe together, Body to Body, to re"ceive Heat one of another, and fheltering themfelves " under a Lee Bank if it were poffible; and as often " as they could, labouring to fhrowd themfelves under " our Garments to keep them warm: Befides, how " unhandfome and deformed appeared the Face of the "Earth itfelf? fhewing Trees without Leaves, and "the Ground without Greennefs in thofe Months " of $7 u n e$ and $\mathcal{F} u l y$. The poor Birds and Fowls not "daring (as we had great Experience to obferve it) fo " much as once to rife from their Nefts after the firtt "Egg laid, till it, with all the reft, be hatched, and " brought to fome ftrength of Nature able to help it" felf: Only this Recompence has Nature afforded them, "r that the Heat of their own Bodies being exceeding
«Great,

## Chap. III. of the ENGLISH in AMERICA.

"g great, it perfecteth the Creature with great Expedist tion, and in fhorter Time than is to be found in any " other Places. As for the Caufes of this Extremity, "6 they feem not to be fo deeply hidden, but that they ${ }^{6}$ may, at leaft in Part, be gueffed at; the chiefeft " of which we conceive to be the large fpreading of
"s the Afian and American Continents, which (fomewhat
© Northward of thefe Parts) if they be not fully joined,
${ }^{66}$ yet feem they to come very near one to the other;
" from whofe high and Snow-covered Mountains, the
${ }^{66}$ North and North-weft. Winds (the conftant Vifitants
${ }^{66}$ of thefe Coafts) fend abroad their frozen Nymphs to
"s the infecting of the whole Air with this infufferable
"Sharpnefs; not permitting the Sun, no not in the Pride " of his Heat, to diffolve that congealed Matter and
${ }^{6 c}$ Snow which they have breathed out fo nigh the Sun,
${ }^{6}$ and fo many Degrees diftant from themfelves. And
sc that the North and North-weft Winds are here conftant " in Fune and Fuly, as the North Wind is alone in $A u$ "guft and September, we not only found it by our " own Experience, but were fully confirmed in the Opi-
${ }^{56}$ nion thereof by continual Obfervations of the Spa-
ss niards.
"Hence comes the Squalidnefs and Barrennefs of the "Country; hence comesit, that in the midit of their Sum${ }^{6}$ mer the Snow hardly departeth even from their Doors,
" but is never taken away from their Hills at all; hence
©c come thofe thick Mifts and moft ftinking Fogs, which
" increafe fo much the more by how much higher the
«Pole is raifed, wherein a blind Pilot is as good as the beft
${ }^{6}$ Director of a Courfe; for the Sun ftriving to perform
" his natural Office in elevating the Vapours out of thefe
s inferior Bodies, draws neceffarily abundance of Moifture
"c out of the Sea; but the nipping Cold (from the former
"Caufes) meeting and oppofing the Sun's Endeavours,
${ }^{6}$ force him to give over his Work imperfect, and, inftead
"s of higherElevation, to leave, in the loweft Regions wan-

* dering upon the Face of the Earth andWaters, as it were
" a fecond Sea, through which its own Beams cannot "pofibly pierce, unlefs fometimes when the fudden Violence of the Winds doth help to fcatter and break thro'
${ }^{6}$ © it, which thing happeneth very feldom, and when it
"6 happeneth is of no Continuance. Some of our Mariners
" in this Voyage had formerly been at Wardboufe, in 72
" Degrees of North Latitude, who yet affirmed that they
sf felt no fuch nipping Cold there in the end of Summer,
"s when they departed, thence, as they did now in thefe
${ }^{66}$ hotteft Months of $\mathcal{F u n e}$ and $\mathcal{F}$ uly. And alfo from thefe
${ }^{6}$ Reafons we conjecture, that either there is no Paffage
${ }^{66}$ at all through thofe Northern Coafts (which is moft
${ }^{6}$ © likely) or, if there be, yet it is unnavigable. Add
"6 hereunto', that though we fearched the Coaft diligently,
*s even unto the forty-eighth Degree, yet found we not
${ }^{46}$ the Land to trend fo much as one Point, in any Place,
${ }^{66}$ towards the Eaft; but rather running on continually
" North-weft, as if it went direetly to meet with Afic ;
"s and even in that Height, when we had a frank Wind
sc to have carried us through, had there been a Paffage,
"s yet we had a fmooth and calm Sea, with ordinary
${ }^{36}$ flowing and reflowing, which could not have been, had
${ }^{86}$ there been an Opening, of which we rather infallibly con-
${ }^{56}$ cluded than conjectured that there was none."
This fhews us clearly Mr. Fletcher's Opinion, and he gives us likewife a very large and full, to fay the Truth, a very tedious and trifling, Account of their Landing and Stay here; of their being taken for Gods by the Natives, and of their attempting to offer Sacrifices to them, with which, I fuppofe, the Reader will eafily difpenfe; but after this he comes to the Point, and tells us, That thefe People behaved extremely well during their Stay; and that their King; in teftimony of his Refpect for, and Submiffion to, Captain Drake, prefented him with the Enfigns of his Regal Dignity; which he received as a Refignation of his Kingdom to the Queen his Miftrefs, in whofe Name, and on whofe Behalf, he took Poffeffion of it, and fet up a wooden Crofs, with a Brafs Plate and a proper Infeription, in Teftimony thereof. This Country he called Nero Albion, and this for two Reafons; the firft was, becaufe of its

Vol. II. Numb. 82.
white Cliffs; the other, that it might have fome Aff nity, as Mr. Fletiber exprefles it, in Name with our own Country, which was fome time fo called.

He afterwards acknowledges, that upon taking a View of the Inland Parts, they found them very rich and fertile, contrary to their Expectations; but as to the People, he allows, that, both on the Coait and within Land, their Behaviour was perfectly uniform, and they had no Reafon to complain of them, but rather to commend and applaud them. It is very true, that Mr. Fletcher's Account of Sir Francis Drake's Voyage is by much the largeft, but I am far from efteeming it the beft: I inferted. fo long a Paffage from it, that the Reader might be able to judge of his Performance as well as my Sentiments. He has given us a very extraordinary Defcription of the exceffive Cold they met with both at. Sea and on Shore, and difcourfes on it more largely, to fhew his Capacity and Judgment; yet I do not find that Experience has at all confirmed this, as the Reader will perceive by turning to the other Voyages of Candijh, and thofe who followed him, and who went to California as well as Sir Francis Drake.

I mention this the rather, becaufe Candifs was there fo foon after Sir Francis Drake; for I find by the original Account of his Expedition, that he was there in November 1587, but do not find that he faid one Word of its being cold ; and tho it may be objected, that he was in the Southern Part of California only, yet the Difference is fo inconfiderable, that it is impoffible to reconcile the two Accounts, fuppofing them both to be exact. ' Again, in Sir Francis Drake's Voyage, printed by Hackluit, it is only faid, That in the Latitude of 42 Degrees the Men were extremely pinched with Cold; and finding it increafe as they failed farther North, it was refolved to alter their Courfe, and ftand in for the Land more to the South; where they found a good Bay, and a very gentle, friendly, and honeft People; yet the Truth of the Matter is, that the Spaniards had, thirty-feven Years before, failed along this Coaft to the Heighth of 44 Degrees, as far as Cape Mendocino; and they afterwards difcovered Cape Blanco beyond that, which is a plain Proof that the Cold is not fo intolerable as Mr. Fletcher would make it. But the real Defign of all his Remarks is, to difcourage all Hopes of finding a Paffage this Way into the North Seas, which however was not Sir Francis Drake's Opinion, if we may credit what other Writers have told us; and indeed fo many Abfurdities have been difcovered in Mr. Fletcher's Defcription of New Albion, that Father Cbarlevoix makes no Scruple of calling it a fabulous Country, and from hence takes Occafion to make fome Reflections upon Sir Francis Drake, which that Gentleman did not at all deferve.

But to fhew the Reader the true Defign of dwelling fo long upon this Subject I muft obferve, that his Account difcredits Drake's Difcovery extremely, which not only turns to the Prejudice of that great Man's Character, but may likewife prove difadvantageous to this Nation, by giving them a very mean Opinion of what ought to be confidered as a very noble Acquifition. The Difcovery, as I conceive, 'confifted chiefly in' his marching up into the Country, which before that Time, it is probable, the Spaniards had never done ; and with refpect to our Title to this Country, I conceive it to arife from the Good-will and voluntary Submiffion of the People, Facts as well proved as in the Nature of Things we can expect, and which certainly give us as good (if not a better) Claim to New Albion, as the Spaniards can fhew for any Part of their Poffeffions.

The Country too, if we might depend upon what Sir Francis. Drake or his Chaplain fays, may appear worth the feeking and the keeping, fince they affert that the Land is fo rich in Gold and Silver, that upon the flighteft turning it up with a Spade or Pick-ax, thofe richMetals plainly appear mixed with the Mould. It may be objected that this looks a little fabulous; but to this, two fatisfactory Anfwers may be given; the firf is, That later Difcoveries on the fame Coaft confirm the Truth of it, which, for any thing I can fee, ought to put the Fact out of queftion: but if any Doubts fhould remain,

Ee e
my.
my fecond Anfwer will overturn thefe. For I fay next, That the Country of Nero Mexico lies directly behind New Albion, on the other Side of a narrow Bay, and in that Country are the Mines of Santo Fe, which are allowed to be the richeft Silver-Mines in North America: Here then is a very valuable Country, to which we have a very fair Title.
But perhaps it may be akked, How fhall we come at it, fince, as Things ftand at prefent, it feems to be the Country in the World moft out of our Reach ? But if it had been fo, I would not have given myfelf or the Reader fo much Trouble about it ; and therefore I am next to tell him, that if Mr. Artbur Dobbs's Expedition for difcovering a North-weft Paflage fucceeds, New Albion will be a Country very much within our Reach, and, I dare fay, prove to the full as habitable as the Coaft of Hudfon's Bay; and therefore I hope that this Example will fully fhew the Ufe and Value of good Collections of Voyages, becaule it is impoffible to forefee all the Advantages that may arife from any Difcovery or Settlement at once, nor is it eafy to pronounce, that any Difcovery, how unpromifing foever in its firf Appearance, is abfolutely ufelefs, and not worth minding.
This is a Caution of a very ferious Nature, fince there is nothing eafier than for Men of quick Wits and tolerable Learning in other Refpects, to ridicule Voyages to cold, barren, defarts Countries, and to reprefent that as Folly and Madnefs, which is in truth a moft noble kind of public Spirit, which, if pufhed ftill farther than it has ever been; would be attended with Confequences of fill greater Advantage to Mankind, than thofe that have flowed from it already; and yet thefe have been very beneficial to this and other Nations, as any judicious Man will very eaffly and clearly difcern, by comparing the State of thofe Nations, before they addicted themfelves to Commerce, and fince they have reaped the Profits of it.

I I. We have already fhewn the Right this Nation has to Nerefoundland; which is an Inand of a triangular Figure, about the Size of Ireland; and, according to the beft Computation that can be made, about eight or nine hundred Leagues in Circumference: On the North it is feparated from the Continent by the narrow Streights of Bellijle; on the Weft it has the Bay of St. Laurence; on the South, Cape Breton and the Banks; and on the Eaft it has the Ocean. It lies about fix hundred Leagues from the Land's-end in England, and the great Bank is generally looked upon as half way to Virginia. There is no Country in the World better furnifhed with Harbours, and it is abundantly fupplied with frefh Water. The Climate is very hot in Summer, and very cold in Winter, fo that the Snow lies upon the Ground for four or five Months at leaft. This is the beft Account that we are able to give with Certainty about it; for if we read the different Relations written of this Country, by Perfons who ought to have been beft acquainted with it, we fhall find them fo oppofite and contradictory, that it will be very hard to judge from them, whether it be one of the beft or worft Countries in the World.

But by confidering the Views with which thefe feveral Accounts were written, and adverting to the Situation of this Country, between 47 and 52 Degrees of Northern Latitude, we may be eafily perfuaded that it is no Paradife ; and yet it is more to the South than our own Illand; but lying off a Continent very little better than frozen, the Winds which blow over muft bring along with them Weather very different from ours. It is, however, very certain, that Filberds, Strawberries, fome Kinds of Cherries, and other fuch-like Fruits, grow here; and, though Corn and Hay fucceed but indifferently, yet there is great Plenty of Venifon, wild Fowl and Finh ; fo that with dry Food in plenty from Europe, People may live here very comfortably even in Winter, fince the Country produces Fuel of feveral Kinds in abundance.
The great Advantage, however, refulting from our Poffeffion of the Place never depended much upon its Produce; fo far from it, that one of the beft Writers upon the Trade of this Nation gave his Opinion clearly, that it was more for our Intereft there fhould be no Settlements upon it at all; which, in my Judgment, he has by
unanfwerable Arguments made good; but' the Value of Nerefoundland to this Crown and Country refults from the Fifhery upon its Coafts, and upon the Banks near it, which has been, and ftill is, of ineftimable Benefit, for Reafons that fhall be prefently given. It is very certain, that we did not profecute our Difcoveries in and about this Inand, or attend to the Advantages that might be made from the Fifhery, in many Years after Cabot had taken Poffeffion of it; but I do not however believe, that we ever left or deferted it, as fome Writers would have us believe, and that we did not claim it again till the Reign of Queen Elizabeth. I am, on the contrary, perfuaded, that fome of our Eithing Veffels reforted yearly to this Coaft, though perhaps not many ; and this, for two Reafons; firtt, becaufe the unfettled State of our Affairs kept the beft part of our Seamen one way or other in the public Service; and next, becaufe we had a great Fifhery, at that time, on the Coait of Iceland.
But that we really kept Poffeffion of the Newfoundland Fifhery all that time may, I think, be undeniably proved by two Arguments likewife : The one taken from the Act of Parliament before-mentioned, in the fecond Year of the Reign of Edrward the VIth, which would have been needlefs, if this Fifhery had not fubfifted; and the other from the Account given us of the State of this Fifhery in 1578 , by Mr. Parkburf, which is very curious, and yet little taken Notice of He tells us, that in this Year there were about fifty Sail of Engli/h Ships employed upon that Coait ; but he tells us likewife, that there were one hundred Sail of Spaniards, befides twenty or thirty Sail of Bijcayneers, fifty of Portugueze, and one hundred and fifty French. He adds another Circumftance, which is ftill more to our Purpofe ; and it is this, that wherever the Englifb fifhed, they were reputed Lords of the Harbour, and exercifed an Authority over other Nations, by making ufe of their Boats when they had Occafion for them; which makes it plain to me, that we conftantly kept up our Title, for otherwife it is impoffible to give any Reafon why we fhould have exercifed this Dominion, where we were fo far from being the moft powerful. An immemorial Cuftom was Foundation enough for fuch a Practice, and nothing but this could be efteemed fo.

He tells us alfo, that our own Ships were the ftrongeft, largeft, and beft equipped; and that, by this Means, we protected our own Trade and the Trade of other Nations, which is a Confirmation of what I have obferved; he fays, that next to ours the Spaniards were the beft equipped, and he computes the Tonnage of theife Veffels at about fix thoufand, and the French at about feven thoufand, Ton; but the Portugueze; he fays, were the worft equipped of all. As for the Eifcayneers, they were chiefly employed in Whale-Fifhing, and in making Train-Oil. The great Confequence of this Trade to our Nation arofe from hence; that, in the firft Place, it raifed a vaft Number of Seamen, and thofe the beft and ableft that were any where bred, fo that, even at this time, there could not be fewer than two thoufand employed therein. Next, it gave Bread to a valt Number of Manufacturers and Mechanics, fuch as Ship and BoatBuilders, Esc. Thirdly, it produced a great deal of Money from the Sale of the Fith. Fourthly, almoft all the Provifions confumed in Nerwfoundland, fuch as Bread, Beef, Pork, Butter, Cheefe, Linnen, and Woollen, Cloths, Nets, Hooks, and Lines, were all furnifhed from England; to which we may add, that thefe Veffels being fitted out in March, and returning in September, they not only brought Home a Number of People full of Money, which they fpent in England, but they alfo left us a certain Proportion of ftout able Seamen, frefh Men going out in their room, and becoming in a Voyage or two as good Mariners as themfelves.

Thus it clearly appears, how this bleak, barren, and inhofpitable Country came to be of fuch Confequence; which was very foon difcerned by the wife Miniftry of Queen Elizabeth, towards the Clofe of whofe Reign it grew to fuch a Height that we employed yearly two hundred Sail and upwards of Fifhing-Veffels, and on

## Chap. III. of the ENGLISH in AMERICA.

board them upwards of eight thoufand Seamen, a clear Proof of the Improvements that were then made in the Space of twenty Years; and which confirms, beyond Queftion, what I remarked at the Clofe of the preceding Paragraph, that all Difcoveries are of ufe, and every Branch of Navigation worth looking after, and keeping. If the Reader confults other Accounts of Nerwfoundland, within this Period of Time, he will fee that I have not been much affifted by them, but that I have fet the Subject in a new Light, from Facts of which they have taken little or no Notice.
But I come now to fpeak of thofe that are more generally known, and of the famous Patent of Sir Humphrey Gilbert, which is one of the firt of them. This Gentleman was a Native of Devon/bire, had a good Fortune, was well allied, had a competent Knowledge both of military and maritime Affairs, and a generous Defire to raife his private. Fortune by the Purfuit of the public Service. It was with this View that he reprefented to Queen Elizabeth the Expediency of fettling all thofe Countries upon the Continent of America, which had been formerly difcovered by Jobn and Sebaftion Cabot, becaufe, otherwife, it was not at all unlikely that the French, who had often reviewed thefe Places, would be defirous of fupplanting the Englifh, and becaufe it was very far from being improbable that thofe Countries abounded with very rich Minerals. Upon thefe Suggeftions very full Letters Patents were granted by the Queen to Sir H. Gilbert, his Heirs and Afligns, with free Leave, not only to difcover, but to plant and fettle, and even to fortify and build Caftles, in any of thefe northern Countries, not then in the Poffeffion of any Chriftian Prince, with Authority to govern fuch Colonies, according to the known Laws of the Land, with feveral other Claufes, equally well contrived for fecuring this Grant from becoming any way injurious to the Public.

After obtaining this Favour from the Queen, our worthy Knight applied himfelf to his Relations and Friends, in order to frame a Society capable of carrying this Defign into Execution ; and he met with fuch Succefs therein, that he thought himfelf very foon in a Condition to undertake a Voyage for this Purpofe ; yet, when it came to the Point, Things fell out very crofly; for fome of his Affociates began to form particular Projects inconfiftent with his general Scheme, and others abfolutely failed in performing their Engagements; which, however, did not hinder this gallant Gentleman from putting to Sea, with fuch of his Friends as had ftuck clofe to their Promifes ; but the Voyage proved very unfortunate, and was attended with the Lofs of one of his beft Ships, in which was Mr. Miles Morgan, whom he much efteemed, and feveral other Perfons of Worth and Figure. This was a fevere Blow, which he was the lefs able to fuftain, as having already fuffered extremely in his Fortune, by the Money he had been obliged to advance to fupply other Mens Deficiencies; and therefore he was conftrained to affign part of his Patent to other Perfons, who were to make Settlements in the northern Parts of America about the River of Canada; but thefe People proving likewife very dilatory, he found himfelf obliged to think of another Expedition, in Perfon ; becaufe his Patent was to expire, if within the Space of fix Years he had not actually gained Poffeffions under it.

In the Spring of the Year 1583 he had again brought this Defign into fome Order, and to furnifh the neceffary Expences thereof he was obliged to fell his Eftate, though he had great Affiftance from his Friends; and feveral Gentlemen of Rank and Fortune agreed to go with him in Perfon; with this View a fmall Squadron was fitted out, confifting of the following Veffels, viz. the Delight (or George), of one hundred and twenty Tons, Admiral, in which went Sir Humpbrey himfelf, as General, William Winter, Captain, and part Owner, and Richard Clark; Mafter; the Bark Raleigh, fitted out by Mr. Walter Raleigh, of two hundred Tons, Vice-Admiral, Mr. Butler, Captain, and Robert Davis of Brifol, Mafter; the Golden Hind of forty Tons, Rear-Admiral, Capt. Edward Hayes, Commander and Owner, and Wil-
liam Cox, of Limeboufe, Mafter; the Swailow, of forty Tons, Maurice Brown, Captain; the Squirrel, of ten Tons ${ }_{3}$ William Andreros, Captain, and one Cade, Mafter. In all thefe Veffels were fhipped about two hundred and fixtyMen, among whom were many Shipwrights, Mafons, Carpenters, Smiths, Miners, and Refiners. The Refolution of the Proprietors was, that the Fleet fhould begin its Courfe northerly, and follow as directly as they could the Trade-way to Nerefoundland, from whence, after having refrefhed and fupplied themfelves with all Neceffaries, their Intent was to proceed into the South, and not to pafs by any River or Bay, which, in all that large Tract of Land, fhould appear worthy their looking into; they likewife agreed upon the Manner of their Courfe, and the Orders to be obferved in their Voyage, which were delivered to the Captains and Mafters of every Ship in writing.
The rith of Fune they fet fail from Caufet Bay, near Plymoutb; but, on the $13^{\text {th }}$, their large Ship the Raleigh, under Pretence that her Captain and a great Number of her Men were fuddenly taken ill of a contagious Difeafe, left the Fleet and returned to Plymoutb; fome fay in great Diftrefs, but others, that it was done with a Defign to break the Voyage. After her Departure the Golden Hind fucceeded her in Place as Vice Admiral. The 3oth of Fuly they had the firft Sight of Land, as they computed it about $5 \mathrm{I}^{\circ}$, but with fuch foggy Weather, that they could not poffibly perceive the Land, nor take the Sun's Heighth : From thence they followed the Coalt to the South, with clear Weather, till they came to the Ifland called Baccalaos; here they. met with the Swallow, which had been feparated from them in the Fog, but were furprized to fee her Men in a different Garb from what they had on when they left them; upon Enquiry, they found they had met a Newlander fifhing Bark returning homewards, which they had rifled of Tackle, Sails, Cables, and Provifions, and the Men of their Apparel. Continuing the fame Courfe Southward, they cane the fame Day, being the third of Auguft, to the Harbour of St. Jobn; where they found the Squirrel, which had likewife been feparated from them, riding at Anchor at the Mouth of the Harbour ; having been refufed Entrance by the Veffels which were fifhing within, to the Number of thirty-fix fail of all Nations. Sir Humphrey was preparing to make good his Paffage by force of Arms; but having firf fent in his Boat to inform the Mafters of the fifhing Barks, that he had a Commiffion from the Queen to take Poffeffion of thefe Lands for the Crown of England, they were fatisfied, and fubmitted to the levying a Tax of Provifions from each Ship, for fupplying the Wants of Sir Humphrey's fmall Squadron. Going into the Harbour, the Admiral's Ship was by the Careleffnefs of the Men run upon a Rock, which lay vifible above Water: But, by the Affiftance of the Fifhermens Boats, fhe was got off again, with little or no Damage.

On the 4 th Sir Humpbrey, whom they called the General, and his Company were conducted on Shore by the Mafters of the Englifh fifhing Veffels, and their Owners or Merchants who were with them. On the 5 th the General, having caufed a Tent to be fet up in view of all the Ships in the Harbour, to the Number of between thirty and forty Sail, and being accompanied by all his Captains, Mafters, Gentlemen, and Soldiers, fummoned all the Merchants and Mafters, both Englifb and Foreignerss to be prefent at his taking a formal, and folemn Poffef fion of thefe Territories. Being affembled he caufed his Commiffion, under the great Seal of England, to be openly read before them, and to be interpreted to thofe who were Strangers to the Engliß Tongue.

By Virtue of this Commiffion, he declared that he took Poffeffion of the Harbour of St. Jobn, and two hundred Leagues every way invefted her Majefty with the Title and Dignity thereof; and having had (according to Cuftom) a Rod, and Turf of Soil delivered to him, entered Poffeffion alfo for himfelf, his Heirs, and Affigns, for ever. He fignified to thofe who were prefent, and through them to all Men, that from thenceforward they fould look upon thofe Territories as apper-
taining to the Queen of England, and himfelf, authorized under her Majefty to poffefs and enjoy them, with Power to ordain Laws for the Government thereof, agreeable (as near as conveniently could be) to the Laws of England; under which, all People coming thither for the future, either to inhabit, or by way of Traffic, fhould fubmit and be governed. Some Writers have attributed all this Solemnity, which, however, was attended with many other Ceremonies, to a high degree of Vanity, in our Weft-country Knight; and have ridiculed feverely his Pretences to improve the Trade of this Kingdom and enlarge the Queen's Dominions, by cutting a Turf; in which, however, they injure this poor Gentleman's'Memory extremely, and fhew how little they are qualified to give their Readers a true Account of things of this Nature.
The plain Reafon of Sir Humphrey's Conduct throughout this Affair, was his Concern for his Grant, which was perpetual to him and his Heirs, in cafe he took Poffeffion of any Countries within fix Years, and otherwife it was void: There were now but a few Months to come. He had fold his Eftate in England, and it concerned him very nearly to fecure an Eftate fomewhere elfe; and therefore it was not from any Principle of Vanity, but rather of Prudence and good Oeconomy, that he did this; as appears by his granting feveral Parcels of Land to Perfons, who covenanted to pay a certain Rent to him and his Heirs, and to maintain Poffeffion by themfelves and their Affigns.

There now remained only to gather in the Tax of Provifions granted by every Ship which fifhed upon the Coaft adjoining; and while fome of the Men were doing -this, others were fet to repair and trim the Ships; and the Remainder the General fent to enquire into the Commodities and Singularities of the Country, which were to be found by Sea or Land. They found no Inhabitants in the South Parts, which probably the Natives had abandoned, upon their being fo much frequented by Europeans. In the North there were Savages of, a very harmlefs Difpofition ; among other Inquiries, the General had, in a particular Manner, recommended a Search after Metals. They had in their Company a Saxon Miner, who at firft brought a fort of Ore to the General, which had more the Refemblance of Iron than of any other Metal. Soon after he found another Sort of Ore, which he delivered with a Shew of great Satisfaction to Sir Humpbrey, and affured him, upon the Peril of his Life, that if Silver was what he and his Companions fought, there it was, and they need feek no farther. We learn all thefe Circumftances from Captain Edward Hayes, who feems, by his Writing, to have been a very intelligent Perfon; and therefore he enquired very ftrictly about this Silver-Mine, which procured him fuch an Anfwer from the General, as fhewed that he was abfolutely fatisfied on that Head; and I muft own I fee no Reafon to doubt there being Silver-Mines in this Country, fince we know they are generally found in cold Climates, and in a hungry barren Soil ; and, as to the northern Situation, we are certain that there are rich Silver Mines in New Mexico, a Country not far to the Southward of Newofoundland; and Silver Ore has been found in Scotland feveral Degrees farther to the North than it is fuppofed to have been found here.

But though Sir Humphrey was very well fatisfied with the Account his Saxon gave him, yet he thought himfelf obliged to proceed in his Difcoveries Southward; for which while he was providing fome of his Men fell fick, fome deferted, fome died, and fome fell to plundering and Piracy: In fhort, the Number of his People was fo leffened, that he was conftrained to leave the Sreallore behind him. The Captain of his Admiral going home, Captain Brown of the Swallow took the Command of the Admiral, and the Captain of the Squirrel deferting likewife the Expedition, Sir Humpbrey went on board that little Veffel himfelf; as thinking her the fitteft for obferving and difcovering the Coait, becaufe the could run into every Creek, which a larger Ship could not do. All things being now ready, and plenty of Provifons of all Sorts being put on board, they failed on the 2oth of Auguft from the Harbour of St. Jobn,
with three Ships, the Delight, the Golder Hind, and the Squirrel, and proper Boats and Pinnaces for Difcovery. Before their Departure they made an exact Obfervation of St. Fobn's Harbour, and found it to be in the Latitude of $47^{\circ} 40^{\prime}$ North. The next Night they reached Cape Race, which is twenty-five Leagues diftant ; and from thence failed about eighty-feven Leagues towards Cape Breion.

All this time they had the Wind indifferently good, but never could get Sight of the Land, being hindered by the Currents; at laft they unhappily fell into thofe Flats and Sholes in which moft of them perifhed. On the 27 th the General ordered his Men in the Frigate to found, and found thirty-five Fathom white Sand, in the Latitude of $44^{\circ}$. The Wind coming South, the next Evening they bore in with the Land, all the Night Weft North-weft, contrary to the Advice of Mr. Cox, Matter of the Golden Hind. On the 2gth the Wind blew vehemently at South and by Eaft, with Rain, and fo thick a Mift, that they could not fee a Cable's-length before them. Early in the Morning they found themfelves in the midft of Sholes and Sands, among which they found fometimes deep, fometimes fhole Water, every three or four Ship's-length. After they began to found, a Signal was immediately given to the Delight to caft about to the feaward, but it was too late; for fhe ftruck immediately, and her Stern and Hind-Quarters prefently beat to Pieces. Upon which the Golden Hind and the Frigate caft about Eaft South-eaft, bearing to the South, which carried them to the feaward, and with much Difficulty got clear of the Sholes.

In the Delight perifhed Captain Maurice Brown, wit.: near one hundred Perfons: The Captain might probably have faved his Life, if he would have left the Ship. when fhe firft ftruck, but he would not be the firft to fet an ill Example. In the mean Time fourteen Perfons leaped into a fmall Pinnace of a Ton and a half burden, no bigger than a Thames-Barge. They looked out fome time for the Captain, but not feeing him took in Mr. Clark, the Mafter of the Delight, and one more: Being now fixteen in Number, they cut the Rope and committed themfelves to the Mercy of the Waves, without any Provifions, or a Drop of frefh Water, and nothing to work with but one fingle Oar. The Boat feeming to be over-loaded, one Edruard Headly, thinking it was better for forne to perifh than all, propofed to caft Lots, and that four of the Number, upon whom the Lot might fall, fhould be thrown over-board to lighten the Boat: But he was over-ruled by Mr. Clark; who, though it was propofed that he fhould be excepted from the Number, perfuaded his Comerades rather to fubmit to Providence. The Boat was driven before the Wind fix Days and fix Nights, during which time thefe poor Wretches had no other Suftenance than their own Urine, and fome Weeds which fwam on the Surface of the Water; and in this Extremity of Cold, Wet, Hunger, and Thirft, only Headly and one more perifhed the fifth Day; but the other fourteen lived till they were driven the feventh Day on Shore, on the Coaft of Nerefoundland; whence they got in a French Ship to France, and fo to England, before the Year's-end. During their feven Days dangerous Courfe they had the Wind always at South, which faved their Lives; and it is very remarkable, that in half an Hour after they were on Shore it came about and blew full North.
After the Lofs of the Admiral the Men being generally difcouraged, and in want of Neceffaries, Sir Humphrey Gilbert propofed returning to England, having, in his Judgment, made Difcoveries fufficient to procure Afiftance enough for a new Voyage in the Spring. His People, when he made this Propofal, were at firft a little backward, but, upon hearing his Reafons, they fubmitted; and, according to his Advice, on the laft of Auguft they altered their Courfe and returned back for England. On the fecond of September they paffed in Sight of Cape Race, and had afterwards frequently very bad Weather, with fuch high Seas, that they in the Hind often expected to fee the Squirrel fwallowed up; notwithftanding which, Sir Humpbrey would by no means be perfuaded to leave her. On the $g$ th, the Storms and Swelling of the Seas in-
creafing

## Chap. III. of the ENGLISH in AMERICA.

creafing, he was again preffed to leave the Frigate, but his Anfwer was, We are as near to Heaven by Sea as by Land. About Midnight the Squirrel being a-head of the Golden Hind, her Lights were at once extinguifhed, which thofe in the Hind feeing, cried out, Our General is loft! and it was fuppofed fhe funk that Inftant, for the was never more heard of.

The Golden Hind arrived in fafety at Falmouth, on the 22d of September, more fortunate than her Companions; not only as the returned, but as the loft but one Man during the whole Courfe of this unfortunate Undertaking. Such was the End of this Expedition, very difaftrous to its Author; who loft firft his Fortune, and then his Life, by it ; to which, if the Sallies of fome diftempered Mens untimely Wit could effect it, we might add his Reputation alfo. Yet to this Expedition I make no Cruple of imputing all our fucceeding Colonies in America; and the Grounds of this Opinion of mine, which I mult confefs is new, I lay down thus:
12. We have before fhewn that Sir Humphrey Gilbert was a Man of great Intereft and Alliances: For, befides his eldent Brother Sir Fobn Gilbert, and his younger Brother Sir Adrian Gilbert, who were of the whole Blood, he was, by the Mother's Side, Brother alfo to Sir Walter Raleigh, who had a great Concern in this Undertaking; and who is on good Grounds allowed to have been one of thofe true, brave, and fteady Friends, who went to Sea with him in his firft Attempt, which there is juft Reafon to believe was in 1579 . This great Man, after Sir Humpprey Gilberi's Mifcarriage and Lofs in his laft Voyage, procured his Patent to be renewed to himfelf, which was dated the 25 th of March 1584, and he refolved immediately to carry it into Execution; to which purpofe he made Choice of two very able Sea Officers, Captain Pbilip Amadas, and Captain Artbur Burlow; who, in two fmall Barks fit for Difcovery, failed from the Weft of England upon the 27th of April following, fhaping their Courfe for the Canaries, which they paffed on the roth of 7 une, and proceeding from thence to the Iflands of America, they croffed the Gulph of Mexico, and foon after difcovered the Coaft of Florida. Some Authors who have written of this Expedition, and who are pleafed to fpeak in very high Terms of Sir Walter Raleigh's Skill in maritime Affairs, venture neverthelefs to affirm, that the Perfons he employed were fo ignorant of Navigation, that, by the Computation of able Seamen, they went above two thoufand Leagues out of their Way; but as I am very well fatisfied they purfued Sir Walter's Inftructions, fo I cannot help thinking this Imputation of Ignorance ought to be wiped away ; and this may be very eafily done, by fhewing the true Caufe why this great and knowing Seaman directed this Courfe: He had obferved that all the Attempts hitherto had failed, by the Adventurers purfuing their Difcoveries from the North, which was one Reafon why he chofe another Rout; befides which, he had a better and ftronger Motive ; for, confidering all the Lands on the Continent of America from the laft Settlements of the Spaniards to $60^{\circ}$ North, as lying within his Grant, he very prudently chofe to fettle thofe firft, which lay neareft thofe Spanif Settlements; and this was the clear and certain Caufe of his directing his Servants to take this Courfe; which was fo far from being a Proof of their Ignorance, that it is a full and fair Teftimony of their Mafter's exten five Knowledge

It was on the 2 d of Fuly they fell in with the Coaft of Florida, in fhole Water, where they fmelled a mot delightful Odour, as if they had been in the midf of a Garden, abounding with the moft fragrant Flowers, by which they fuppofed they were near, though they faw no Land. On the $4^{\text {th }}$ they difcovered the Continent, and failed along the Coaft 40 Leagues, till they came on the $13^{\text {th }}$ to a River, where they anchored, and, going on Shore, took Poffeffion in right of the Queen, and for the Ufe of the Proprietors. This Place they afterwards found to be the Mand of Wokoken, on the Coaft of the Country fince called Virginia, in $34^{\circ}$ Lacitude; and in it they found Deer, Rabbets, Hares, Fowls, Vines, Cedars, Pines, Saffafras, Cyprefs, and Maftic Trees. The Author of the Hiftory of Virginia fays,

Vol. II. Numb. LXXXIII.
they anchored at the Inlet of Roenocke; at prefent under the Government of North Carolina. They went to the Tops of the Hills which were neareft the Shore, from whence, though they were not high, they difcovered the Sea on all Sides, and found it to be an Inland of twenty Miles in Length, and fix in Breadth. It was the third Day before they faw any of the Natives; but then, a little Boat, with three of them, appeared: One of them going afhore, they rowed up to him, and he not only waited their coming without any Signs of Fear, but went on board, where they gave him a Shirt and Hat, with fome Wine and Meat, which he expreffed a liking to: After he had, with a feeming Satisfaction; narrowly viewed the Barks with all that were in them; he went in his own Boat to above a quarter of a Mile's Diftance, where he fifhed, and in half an Hour loaded his Boat with Fifh, as deep as it could fwim, and came again to the Point of Land; where, to fhew his Gratitude, he divided it into two Parts; and, making Signs that he defigned it for the two Ships equally, he departed.

The Natives from the Continent, after this, repaired to their Ships frequently, and exchanged feveral Sorts of Skins, white Coral, and fome Pearls, for fome tin things, and other Baubles of inconfiderable Value. The very next Day after they faw the three Indians, feveral Boats apa peared in view; in one of which was the King of the Country's Brother, attended by forty or fifty Men of a tolerable good Appearance. They made him, and four of his Chiefs, Prefents of feveral Toys, which he accepted of very kindly; but he took all himfelf, and gave them to underftand that none there had a Right to any thing but himfelf; two Days afterwards they let him fee their Merchandize, of which nothing feemed to pleafe him more than a pewter Difh, for which he gave twenty Deer-Skins; and, making a hole in the Rim of it, hung it over his Neck for a Breaft-plate, making Signs that it would defend him againft the Enemies Arrows. The next thing he bought was a Copper Kettle, for which he gave fifty Skins. As long as he thought fit to traffic with them, none, but fuch as like him wore Plates of Gold or Copper on their Heads, were allowed either to buy or fell; but as foon as they had done every Man had his Liberty. They offered very good Exchange for Hatchets, Axes, and Knives, and would have given any thing in Truck for Swords; but the Englijh would not part with any. The King's Brother came afterwards frequently on board, and would eat; drink, and be merry with them ; and once he brought his Wife and Children with him, who afterwards came frequently with their Followers only.

They often trufted the King's Brother with Goods upon his Word, to bring the Value at a certain time, which he never failed of doing. He had a ftrong Inclination to have a fuit of Armour and a Sword, which he faw in one of the Ships; and would have left a large Box of Pearls in pawn for them, but they refufed it ; that he might not know they fet a Value upon them, till they could difcover whence he got them. They underftood from the Natives, that their Country, which they found to be very fruitful and productive of all things, in fo very fhort a Time as is hardly credible, was called by the Name of Wingandacoa, and their King Wingina. When they went on Shore they were entertained with extraordinary Civility, and once in particular by the King's Brother's Wife, at a little Village in Roenocke. They were told of a great City where the King refided, fix Days Journey on the Continent, which, however, they did not fee; they made no long Stay, nor proceeded any farther on Difcovery, only juft to the neighbouring Parts, in their Boats; and, being fatisfied with what they had feen, returned to England about the Middle of September, pleafed with the Advantage they had made in this fhort and profperous Voyage; and, with the Hopes of the future Advantages they fhould make, efpecially as they found all things here entirely new and furprizing.
They gave a very advantageous Account of Matters, by reprefenting the Country fo delightful and defireable, fo pleafant, and abounding with all the Neceffaries of Life; the Climate and Air fo temperate, good and

Eff
wholefome
wholefome, the Woods and Soil fo charming and fruitful, and all other Things fo agreeable, that Paradife itfelf feemed to be there in its native Luftre. They gave particular Accounts of the Variety of good Fruits, fome whereof they had never feen before; efpecially, that there were Grapes in fuch abundance as were never any where known; fately tall large Oaks, and other Timber; red Cedar, Cyprefs, Pines, and other Ever-greens and fweet Woods, for Tallnefs and Largenefs exceeding all they had ever heard of. Wild Fowl, Deer, Fifh, and other Game, in fuch Plenty and Variety that no Epicure could defire more than this new World feemed naturally to afford. To make it yet more defireable they reported, that the Native Indian's, who were then the only Inhabitants, were fo affable, kind and good-natured; fo tractable in learning Trades and Fafhions; fo innocent and ignorant in all manner of Tricks and Cunning, and fo defirous of the Englifh, that they rather feemed ready to take any Impreffion, than any ways like to oppofe the fettling of the Englijb near them.

Upon this fair Reprefentation of the Effects of their Voyage, and of the noble Difcovery that had attended it, Queen Eliaboth was pleafed to promife what Affitance it fhould be neceffary for the Crown to give for promoting and perfecting this Settlement; and fhe was likewife pleafed to beftow the Name of Virginia upon this new found Country; "but whether, as is commonly believed, in regard to its being difcovered under a Virgin Queen, or in allufion to the uncorrupted State of the Land and its Inhabitants, is a Queftion I will not pretend to decide; but perhaps the former was the Senfe impofed by Sir Walter, the compleateft Courtier fhall I fay, or rather the compleateft Man, of his Time; and the latter the Senfe in which the Queen would have had it underftood: But however that matter be, we mult not confound the Virginia of Sir Waller Raleigh with the Province now fo called; for, without all queftion, it was in thofe Days a very different Thing, and comprehended the whole Country claimed by the Crown of England, from the Southern Limits of the new Province of Georgia, to the utmoft Fxtent of our Difcoveries Northwards, agreeable to the two Patents granted to Sir Humplorey Gilbert, and to his Brother Sir Walter Raleigb.

It was not long before the Proprietor refolved to fit out a much more confiderable Fleet than had hitherto been employed in fuch Undertakings, that fomething might be done worthy of the Nation, on whofe Behalf this Settlement was, to be made, of the powerful Queen who had protected it, and of himfelf, who was the Author and Patron of this Scheme; Sir Walter intended to have commanded in this Expedition himfelf, and to have carried with him a fufficient Number of Forces to have completed this Defign of makeing a Settlement there; but being at that time jealous that his Abfence might be prejudical to his Intereft at Court, which the Earl of Leiceffer fought all Occafions to leffen, he committed the Conduct of this fecond Enterprize to his Lieutenant, Sir Richard Greenville; who, on the 8th of April, fet fail from Plymoutb with feven Ships fitted out by the Company, of which himfelf and feveral Gentlemen were Members ; and this Company was the firft of that kind that was eftablifhed in Europe: Thefe King Fames incorporated by the Name of the Governor and Company of the Weft Indies; which, for their Mal-adminiftration, was diffolved by his Son King Cbarles I.

On the 26 th of Fune, 1585 , Sir Richard Greenville anchored at Wokoken, and in Auguft following they began to plant on the Inland of Roenocke, five Miles diftant from the Continent; where Sir Richard landed one hundred and eight Men, under Governor Ralpb Lane, and Captain Pbilip Amadas, who was conftituted Admiral of the new Colony, tho' I do not find he had fo much as a Bark left with him.
Sir Ricbard did not remain above three Weeks longer in thofe Seas; but having made fome Difcoveries to the Southward, and having traded with the Indians for Skins, Furs, Pearls, and other Commodities, he failed on the 25 th of Auguf on his Return to England, in which he took a very rich Prize; fo that this Voyage appeared to
the Eyes of the Nation no lefs profperous than the formers' and the new Virginia Company began to entertain very fanguine Hopes of their Undertaking. Let us now return to the firt Planters in Virginia, and give an Account of what happened to the firt Colony the Englifls eftabliffied there, or in any Part of America. Sir Ricbard Greenville was no fooner failed, than the People whom he left behind applied themfelves with Diligence to what had been recommended to them by Sir Walter Raleigh, which was the difcovering the Continent, and with this View they travelled eighty Miles South, and one hundred and thirty North from that Part of the Main oppofite to their Ifland; but in thefe Expeditions, venturing indifcreetly too high up the Rivers, and too far into the Country, the Indian Governors grew jealous of their Defigns, and began firf to be weary of their Company, and then to cut off their Stragglers when they fell into their Hands: and they alfo formed a Confpiracy to deftroy the reft, but were happily prevented.

The Journals of the Colony's Proceedings were duly entered, and afterwards delivered to the Company in England, who were not fo careful as they fhould have been to fend them Supplies of Provifions, and the Englifh, not underftanding the Nature of the Climate, neglected to gather Food in Seafon as the Indians did, by which Means they were reduced to great Streights. The Natives never after kept Faith with them, bus watched allOpportunities to cut them off. And as this obliged them to be more wary in their Enterprizes on the Main, fo it hindered them from having any Supply from thence; however, 'they endured all with incredible Refolution, and extended their Difcoverics near a hundred Miles along the Sea-coafts. They kept the Indions in Awe by threatening them with the Return of their Companions and the Reinforcement of Men; but no Ships coming from England in all that Winter, nor in the Spring following, nor in Summer, they difpaired of being able to fupport themfelves any longer, the Natives beginning to defpife them, when they faw them as it were abandoned by their Countrymen; and the Englifhexpected every Day to be facrificed to their Cruelty. In this Diftrefs their chief Employment was to look out to Sea, in hopes of finding fome Means of Efcape, or Recruit; and, when they were almoft fpent with W ant and Watching, Hunger and Cold, in Auguff they difcovered Sir Francis Drake's Fleet, who was returning from an Expedition againft the Spaniards in North America, and had been commanded by the Queen to vifit this Plantation in his Way, and fee what Encouragement or Affiftance they wanted.

The Sight of Sir Francis's Flect was moft joyful to thefe poor People: Their firf Petition to him, was to grant them a Supply of Men and Provifions, with a fmall Ship or Bark to attend then?, that, in cafe they could not maintain themfelves where they were, they might embark in it for England. Sir Francis granted their Requeft; and they fet all Hands to work to fit the Ship he had given them, and furnifh her with all manner of Stores for a long Stay; but a Storm arifing, which drove the Veffel from her Anchor to Sea, and the Ship fuffering fo much in it that fhe was not fit for their Ufe, they were fo difcourarged, that, notwithftanding Sir Francis offered them another Ship, they were afraid to ftay, and earneftly intreated him to take them with him, which he did: And this put an End to the firft Settlement.
It was not at all owing to any Negligence in Sir Walier Raleigh that this Misfortune happened; for he continually preffed the Company to reflect on the Neceflity of fupporting the Colony in time, and fo follicitous he was in this Bufinefs, that, finding the Flect which was preparing under the Command of Sir Richard Greenville went on but flowly, he propofed that the firft Ship that was completely manned and equipped, fhould be fent, without ftaying for the reft, which was done; but when fhe arrived at the Inland Roenocke, fhe found it deferted. A few Days after came Sir Ricbard Greenville with his Squadron of three fmall Veffels, and found not a Man upon the Place, to his great Difappointment ; however, he refolved to fettle again, and therefore left behind him fifty Men, with Directions to build a Houfe, or rathes

## Chap. III. of the ENGLISH in A MERICA.

Fort, for their own Security, furnifhing them befides with all Neceflaries for two Years, and giving them the ftrongeft Affurances, that they fhould be conftantly and regularly fupplied.
This fecond Colony had no better Fortune than the firf, for the Indians, taking Advantage of the Smallneis of their Number, and the Difficulties they had to ftruggle with; attacked, and cut them off; fo that when Mr. Fobn White came thither with three Ships and confiderable Supplies, on the 22 d of $7 u n e, 158 \%$, he found their Fort demolifhed, fome Huts they had erected near it deftroyed, and not far from them the Bones of a dead Man. In all thefe Revolutions Manteo, the Indian, remained firm to the Englifs Intereft, and it was from his Information that Mr . White learned what was become of this laft Colony.

The Misfortunes that had attended thefe two Settlements, would certainly have difcouraged a Man of lefs Conftancy and Fortitude than Mr. White ; but he had a Commiffion to be Governor, and Sir Walter had ftrongly recommended to him the keeping Poffeffion of the Place. He therefore erected a new Habitation, and, chufing eleven of the moft capable Perfons that came along with him, conftituted a regular Society, to which he gave the Title of the Governor and Court of Affifants of the City of Raleigh in Virginia, hoping they might be able to retrieve the Credit of this Undertaking, and conduce to the Improvement of the Commerce and Navigation of his Country, and thereby anfwer the Expectations of his honourable Patron, whofe Name he had given to his new Plantation. On the i $3^{\text {th }}$ of Auguft. Manteo, the faithful Indian, was chriftened, and created by the Governor Lord of Daffumonpenk, an Indian Nation fo called, as a Reward of his Fidelity and Service to the Englijs; and on the 18th of the faine Month was born the firft Child that was the Iffue of Chritian Parents in that Place, being the Daughter of Mr. Ananies Dare: She was after the Name of the Country chriftened Virginia. Good Government and Induftry foon rendered Mr. White and his Men formidable to the Indians, who courted their Friendfhip, and made Leagues with the Corporation, which they kept or broke as they thought themfelves too weak or too ftrong for the Englifb, who, as much as they feemed to thrive, underwent fo many Hardfhips for want of due Supplies from Europe, that nothing but the invincible Conftancy, which is the diftinguinhing Character of their Nation, could have fupported them in the midft of fo much Mifery.
Yet fo far were they from repenting of their Undertaking, or defiring to return, that they difputed for the Liberty of remaining at Roenocke, and obliged Mr. White their Governor to return for England, and follicit the Company to fend them Recruits of Men and Provifions. Mr . White undertook to negociate their Affairs; and, leaving 150 Men in the Corporation, fet fail for England, where he arrived in Safety, and was two Years there before he could obtain a Grant of the neceffary Supplies. At laft he had three Ships fitted out for him, with Provifions and more Men for the Colony. And on the I $5^{\text {th }}$ of Auguft he arrived at Cape Hatiaras; and, landing on the Inand Roeriocke, found by Letters cut on Trees, in large Roman Characters, that the Englifh were removed, but he could not tell where. They faw the Letters C. R. O. on feveral Trees; and, fearching farther, on one of the Palifadoes of the Fort which they had quitted, they found cut in large Capital Letters the Word Croaton, one of the Inands forming the South, about twenty Leagues fouthward of Roenocke. On this Advice, they embarked in queft of their Fellows at Croatan; but they were fcarce all of them aboard, before a dreadful Storm arofe, which feparated the Ships one from another. They loft their Anchors and Cables, and durft not venture in with the Shore, fo they all fhifted for themfelves, and, with various Fortunes, arrived in England and Ireland.
This dreadful Blow proved the Ruin of the third Settlement, of which I do not find that the Company took any farther Care, or that any new Attempt was made for preferving the Poffeffion of this Country to the Crown of England, which had been fo highly magnified, and the Advantages thereof painted in fuch ftrong Colours at the Beginning. Some have attributed this to Sir Wal-
ter Raleighb's Troubles; but furely they were but indifferently acquainted with his Hiftory, fince it was during the latter Part of Queen Elizabeth's Reign that he food in the higheft Credit at Court, and was moit capable of procuring Favour from it. But that I may not leave this Subject altogether dark and imperfect, I fhall venture to fuggeft what appears to me to be the true Reafon why there was no more Care taken of fo promifing a Scheme as this was of which we are writing. Sir Walter Raleigh, as very clearly appears from his manner of conducting it, had the public Service alone in View, which induc'd him to throw the Concerns of this Colony into the Hands of a Company, in which, no doubt, he thought he had provided for them effectually, and therefore turned his own Thoughts and moft vigorous Endeavours to other Purpofes, in which he was fo entangled, that he found it impoffible to difengage himfelf, when he faw their Negligence, and forefaw the Confequences of it, which were fatal to a Settlement that coft him fo much Pains, and of which he had once fo great Hopes.
13. But neither the Bufinefs of Planting, nor the Profits refulting from military Expeditions, could hinder fuch as were addicted to the Study of Maritime Affairs fromz wifhing to fee the new Paffage to the Indies fairly opened。 And notwithftanding many Attempts had been naade to very little Purpofe, yet no confiderable Mariner, no Man of Reputation for Cofmographical L.earning, could propófe any reafonable Scheme for this Purpofe, but there were Merchants enough ready to lend their Affiftance, and to lay down whatever Money was requifite for carrying it into Execution, This Freedom and Readinefs of venturing their private Fortunes for the Public Service, was certainly very honourable and commendable, but they did ftill more, for they did not only profecute fuch Attempts like Merchants, but adhered to them with a philofophic Firmnefs; fo that when a Man returned without Succefs, and plainly fhewed that he had done his Duty, and that there were ftill Hopes, they encouraged, they rewarded, they fitted him out again and again : But this was an Age of public Spirit ; the People went eagerly into whatever great Minifters propofed; moft of thoie Minifters had only the Service of their Miftrefs at Heart; and the Queen herfelf was truly the Mother of her People.
In fuch a Reign it was natural that Wonders fhould be done, and it happens very luckily for thofe who celebrate thefe Wonders, that they are able to maintain all that they affert, by inconteftable Evidence; an Inftance of which we fhall give in a fuccinct Account of the Voyages of Capt. Fobn Davis, for the Difcovery of the North-weft Paffage ; which, however, fhould not have been brought in here, but have been referred to another Section, if we had not found them neceffary to thew the Limits of ourDifooveries in the northern Parts of America; and having thus opened the true Defign of his Attempts, we fhall proceed to the Narrative of them, in fuch a Manner, as to render the Nature and Succefs of his Enterprizes, as clear as it is pofible. In order to this, it is requifite to obferve, that before his firf Voyage was undertaken, there was a Defign of attempting to difcover a North-weft Paffage formed by fome Traders of the Weft of England; who, when they underfood that the like Project had been fet. on foot at London, propofed joining their Forces, which was accepted, and Mr. William Sanderfon, Merchant of London, who was both a principal Man in the Undertaking, and a large Contributor towards the Expence, recommended Capt. Fobn Davis, as a proper Perfon to have the Direction of this Enterprize; and he was accordingly appointed Commander of the Sun-/bine of London, a Bark of 50 Tons, on board of which were three and twenty Perfons, and, in Conjunction with the Moon-fine, of Dartmoutb, a Veffel of thirty-five Tons, with nineteen Perfons on board, they failed from the laft mentioned Port on their Voyage for Difcovery. フune 7,1585 .
On the 14 th of the fame Month they were forced into one of the Sylley, or, "as it is now written, the Scilly IJands, where being detained for a Fortnight, Capt. Davis fhewed his active and indefatigable Genius, by
making
making an accurate Chart of them $\mathrm{m}_{\text {; }}$ which was a thing; at that time, very much wanted. On the 28 th they failed from thence, and continued their Courfe to the North-wef, till on the igth of fuly they came into a whirling Tide, which fet Northwards, and failing about half a League into a very calm Sea, which bent South-fouth-weft, they heard a mighty Roaring, as if it had been the Breach of fome Shore, which could not but be very terrible, fince the Weather was fo foggy that they could not fee from one Ship to another, though at a very fmall Dittance. Upon this the Moon-fine was ordered to hoift her Boat out to found, but they could find no Ground in three hundred Fathoms and better ; then the Captain, the Mafter, and Mr. Fane, who wrote this Account, went towards the Breach to fee what it was, and it proved to be feveral Inands of Ice which were broke loofe, and floating in the Sea; they got out upon thefe, and walked upon them, and when they went back into their Boat, they carried feveral large Pieces of Ice, which melted into very good frefh Water.

On the 2oth the Fog breaking up they difcovered the Land, which looked like a Sugar-loaf, and made fo uncomfortable, or rather fo horrid an Appearance, that Capt. Davis called it the Land of Defolation. On the 2 ift they were forced to bend their Courfe South again, to clear themfelves of the Ice, which they did, and then ran along the Shore. On the 22 d the Captain endeavoured to go afhore, but was hindered by the Ice; the Water on the Coaft was very black, and though the Seamen made ufe of their Lines, they could catch no Fifh. On the 24th the Captain caufed the Mens Allowance to be increafed, to encourage them ; but it is very remarkable, that he affures us the Weather was far from being cold, but like ours in April, very fharp, when the Wind blew from the Shore; and on the contrary, very hot, when it blew from the Sea.

On the $25^{\text {th }}$ they bore away North-weft, and continued their Courfe for four Days. On the 2gth they difcovered Land in the Latitude of $64^{\circ} 15^{\prime}$ North, the Sea quite free from Ice, and the Weather very temperate. Upon viewing the Coaft they found many pleafant Bays and commodious Ports, but judged it not a continued Land, but rather an Archipelago, and therefore they refolved to go athore on one of thefe fmall Iflands, in order to fearch for Wood and Water, and to gain a better Know'ledge of the Country; they were no fooner on Shore, than they found evident Marks of the Country's being inhabited, by there lying upon the Ground a fmall Shoe, feveral Pieces of Leather fewed with Sinews, a Piece of Fir and Wool, like Beaver. They went next upon another Inand, where, getting upon a high Rock, they were feert by the People of the Country, who fet up thereupon a mof hideous Howling; when they perceived this, the Engli/b likewife made a Noife, to give Notice of what had happened, to their ciwn People; upon which Capt. Bruton, of the Moon-ßine, prefently came to their Affiftance, with a good Number of his Seamen; and prefently after their Arrival there appeared ten Boats full of the Natives coming from a neighbouring Inland, and two of thefe Canoes advanced fo near the Shore, that they could eafily talk with thofe that were in them; their Language was much in the Throat, and their Pronunciation harfh and unpleafant; one of them, however, feemed inclined to come on Shore, but firft pointed to the Sun, and then ftruck his Breaft fo hard, that they could hear the Blow; upon which, Mr. Fobn Ellis, Mafter of the Moon-fine, was appointed to treat with him; and he going to the Sea-ficde, pointing to the Sun, and ftriking his Breaft, as the Savage had done, he at length ventured on Shore , and they threw him Caps, Stockings, Gloves, and what elfe they thought might pleafe him; but the Night drawing on, they took their Leaves on both Sides.

The next Morning there carne thirty-feven Canoes rowing by their Ships, calling them to come afhore. The Englifh, however, did not make great Hafte ; upon which one of the Savages leaped on Shore, and went to the Top of a Rock, where he danced and beat a Drum, to fhew his Joy. The Einglif then manned their Boats,
and came to them to the Water-fide, where they waited in their Canoes ; and after the formal Ceremony of fwearing by the Sun, the Savages made no Scruple of trufting them; but, on the contrary, fhewed all poflible Signs of Kindnefs, and even of Politeners ; for when the Author of this Voyage offered to fhake Hands with one of them, he firft took his Hand and kiffed it. They readily parted with any thing they were afked for, and were content with whatever was given them, fhewing no Signs of Greedinefs, much lefs of Treachery or Infidelity. They bought of them five of their Canoes, and feveral of their Stockings and Gowns, which were made, fome of Seal and other of Bird Skins, all of them well dreffed, and neatly made ; fo that it plainly appeared they had various Trades amongft them. They had plenty of Furs; and when they faw that the Englifs admired them, they gave them to underftand, by Signs, that they would go up into their Country and come down and bring them more, but the Wind proving fair in the Night, Capt. Davis, defpifing Profit, on the ift of Auguft failed ftill farther to the North-weft ; and on the 6 th of the fame Month they entered into a very fair Road, free from Ice, in the Latitude of $66^{\circ} 40^{\prime}$, where they landed under a high Mountain, the Cliffs of which fhone like Gold.
Captain Davis, having taken a view of every thing, began to think of beftowing Names on the Places he had difcovered. He gave to the Hill the Name of Mount Raleigh; the Road where the Ship lay he called Totnefs Road; the Sound, at the Foot of the Mountain, Exeter Sound; the North-foreland, Diers Cape; and the Southforeland, Walbingbam. Here they difcovered four white Bears of a prodigious Bignefs, two of which they killed and brought on board; the Fore-paw of one of which meafured fourteen Inches. They faw a Raven upon Mount Raleigh, and at the bottom of the Hill they found fome Shrubs and Flowers like Primrofes; the Coaft, however, was very mountainous, and altogether barren, affording neither Wood nor Grafs, nor fo much as Earth; the Mountains being all of Stone, but the braveft Stone, fays our Author, that ever we faw. Yet this Account concludes nothing againft the Fruitfulnefs of the inland Part of the Country, which might be very good for all that, and, indeed, probably was fo, fince the Bears were very fat, and yet it appeared, upon opening their Stomachs, and upon viewing their Dung, that they were not ravenous, but fed upon Grafs.

They weighed on the 8th from Mount Raleigh, failing ftill along the Coaft, which lay South-fouth-weft, and Eaft-north-eaft. On the Irth they came to the mont foutherly Point of this Land, which they called the Cape of God's Mercy, and here they were furprized with a very thick Fog; upon the breaking up of which, they found that they were thut into a very Streight or Paffage, in fome Places fixty Miles broad, in others ninety; the Weather very fine and temperate, and the Water of the fame Colour with that of the Ocean, which filled them with Hopes. They failed through this Streight for fixty Leagues, and then difcovered feveral fair Inands in the midft of it, with an open Paffage on both Sides, through which they failed. One Bark taking the North, the other the South Side ; but the Wind changing, and the Weather growing foggy and foul, they were forced to lye by for five Days, in thofe which have been ever fince called Davis's Streights. On the 14th they went afhore, and faw evident Marks of the Country's being inhabited; for they found Part of a Stone-Wall and a human Skull. On the $15^{\text {th }}$ they heard a great Howling on Shore, which they fuppofed to be Wolves, and therefore went afhore to kill them ; when they came to Land they found the Creatures they had taken for Wolves were Dogs, and they came inftantly running to the Boat to meet them, wagging: their Tails, and fhewing other Signs of Joy, as it is ufual for thofe Animals to do at the Sight of Men. There were twenty of them in all, and as they were of the Size of Maftiffs, with fhort Ears and long burfy Tails, the Seamen being afraid of them, fired and killed two, one of which had a leather Collar on. They found likewife there two Sledges, one made of feveral kind of Boards that were fawed, and the other of Whalebone. They likewife faw

Larks, Ravens, and Partiges: On the 17 th they went ahore again, and, in an Oven built with Stones, they found a fmall Canoe made of Wood, an Image, a Bird made of Bone, Beads for Necklaces, and other Trifes. The Coaft made no very promifing Appearance, as having neither Wood nor Grafs; but the Rocks were of a fine bright Stone, like Marble beautified with Veins of different Colours. Upen the Shore they found a Seal or Sea-Calf jurt flead and thrown under a heap of Stones.

Captain Davis and his Mafter were extremely well pleafed with the Appearance of this Streight, though they began to doubt whether the Seafon would permit them to continue long in it; which neverthelefs they took for the very Channel into the South Seas, in fearch of which they came, and refolved to report fo much upon their return to England. The Reafons which confirmed the Probability of there being a Paffage in this Streight, and upon which they grounded their Hopes of future Succefs, were, ift. That this Place was all Iflands, with great Sounds between them. 2 d . That the Water remained all of the fame Colour with the main Ocean, without altering; whereas they never came into any Bay before nor after, but the Colour of the Water was altered very blackifh. 3d. Becaufe they faw to the Weft of thofe Inands three or four Whales in a Skull, which they imagined came from the Weftern Sea, becaufe to the Eaftward they had feen no Whales. 4th. Becaufe as they were rowing into a very great Sound lying Southweft, from whence thofe Whales came, there came fuddenly a violent Counter-check of a Tide from the Southward, againft the Flood which they came in with, not knowing from whence it received its Source. 5th. Becaufe in failing twenty Leagues within the Mouth of this Entrance, they had founding in ninety Fathoms on a grey and oufy Sand; and the farther they ran into the Weftward, the deeper was the Water: So that among the Inands they had near the Shore no Ground in three hundred and thirty Fathom. 6th. Becaufe it ebbed and flowed fix or feven Fathom, the Flood coming from divers Parts, fo that they could not with any Certainty difcern the chief Source of it.

On the igth it was refolved by the Officers to continue the Profecution of their Difcoveries; but the Wind changing on the zoth, they were obliged to remain at Anchor; and the Weather growing very foul, they, on the 24 th, hoifted Sail for England. On the roth of September they fell in with the Land of Defolation; on the 27 th they had Sight of the Englif Coaft, and in a Storm loft the Moonbine that Night. On the zoth Captain Davis came lafely into Dartmouth, where he found the Moonfinine, which arrived about two Hours before. Upon his return to London, Captain Davis gave a very clear Account to his Owners, of his Expedition, and of what he had done; obferving, that at the Time he put to Sea, he had only general Inftructions to fearch for a Paffage to North-weft, without any Intimation where that Paffage was moft likely to be found; that he had accordingly entered a Streight which he thought might pofibly be that Paffage; but the Weather changing, and the Seafon of the Year being two far advanced, he judged it requifite to return home.

His Owners were fo well fatisfied, that they procured him an Audience of Secretary Walfingbam; who approved very much of the Enterprize, and of the Manner in which he had conducted it; but at the fame Time recommended it to him to complete this Difcovery, to which he was alfo preffed by thofe who were concerned in his former Undertaking, and by fome Merchants of Exeter, who defired to join in the Expences neceffary for a fecond Expedition; to which he willingly confented, and accordingly undertook it; and as he has written himfelf an Account of this Voyage, which was a very remarkable one, I fhall give it the Reader, as near as may be, in his own Words.

On the 7 th of May, 1586 , I fet out from Dartmouth "s with four Sail, viz. The Mermaid of I 20 Tons, the "Sunfoine of 60 Tons, the Moonfhine of 35 Tons, and "s a Pinnace of 13 . Tuns, called the Nortb Star. We s6 coafted the South-fide of Ireland, and on the I 3 th VoL. II. Numb. 83.
"fteered away North-weft, till we came to the Latio "tude of 60": At which Time I divided my Flect, and ' ordered the Sunfine, and the North Star; to feek a Paf' fage Northward, between Groenland and Iceland, to the "Latitude of $80^{\circ}$; if Land did not hinder them. I de"parted from them the 7 th of $7 u n e$, and on the 15 th. ' difcovered Land in $60^{\circ}$ Latitude, and in Longitude "from the Meridian of London Weftward $47^{\circ}$. The "Ice lay, in fome ten, in fome twenty; in fome fifty, "Leagues off the Shore; fo that we were conftrained " to bear into $57^{\circ}$ to double the fame, and to get a free "Sea, which through God's favourable Mercy we at " length obtained.
" On the 2gth, after many Storms, we again difcover"s ed Land, in Longitude from the Meridian of Londora " $58^{\circ} 30^{\prime}$, and in Latitude $64^{\circ}$, being Eaft from us, into " which fince it pleafed God by contrary Winds to force "s us, I thought fit to bear in with it, and to fet up our "Pinnace, which we had provided in the Mermaid to "s be our Scout for this Difcovery, and fo much the ra" ther, becaufe the Year before I had been in the fame "Place, and found it very convenient for fuch a Pur"c pofe, being inhabited by a People of tractable Con"s verfation, and the Sea void of Ice. The Ships being " within the Sounds, we fent our Boats to fearch for "Shole-water, where we might anchor, which in this " Place is very hard to find. The People of the Country, "efpying them, came in their Canoes towards them "w with Shouts and Cries; but when they faw in the " Boats fome of our Company that were there the laft "" Year, they rowed to the Boat, and, taking hold of the "Oar, hung about the Boat, expreffing a great deal of "Joy; and making Signs that they knew all thofe that " had been there the Year before. I went afhore with * others of the Company, and took with me twenty "Knives. We had no fooner landed but they leaped out "s of their Canoes and came running to us; and embraced " us with many Signs of hearty welcome ; there were " eighteen of them, and I gave to each of them a "Knife, and they offered me Skins for a Reward; but
"I made Signs that they were not fold, but freely "s given to them; and fo difmiffed them for that Time, ${ }^{6}$ with Signs that they fhould return after certain Hours. "The next Day, with all poffible Speed, the Pinnace "w was landed upon an Inland, there to be finifhed; and "s while it was fetting up the People came continually to "us, fometimes a hundred Canoes at a time, bringing " Seal-fkins, Stag-fkins, White Hares, Seals, Salmon" Peal, fmall Cod, dry Caplin, with other Fifh, and " fome Birds. I fent one of the Boats to fearch one Part "s of the Land, while I went to another Part, with ftrict "Command that there fhould be no Injury offered to "s any of the People, nor any Gun fhot. They formed "Tents made of Seal-fkins, wherein was Store of dried "Caplin, being a fmall Fifh, no bigger than a Pilchard, " fome Bags of Train-Oil, many little Images cut in "Wood, and Seal-fkins in Tan-Tubs, whereof théy "s diminifhed nothing. When they had paffed ten Miles within the fnowy Mountains, they came to a plain "s champaign Country with Earth and Grafs, like to our
" moory and wafte Grounds in England; they went ten
" Leagues up into a River, which in the narroweft Place "was two Leagues over, finding it fill to continue " "they knew not how far. But I with my Company " took another River, which, although at firt it afford"s ed a large Inlet, yet it proved but a deep Bay, the End whereof I attained in four Hours; and there leav" ing the Boat well manned, went with the reft of the " Company three or four Miles into the Country, but " found nothing, nor faw any thing but Gripes, Ravens, " and fmall Birds, as Larks and Linnets. The third of Fuly I manned my Boat, and went with fifty Canoes 'attending upon me into another Sound, where the People, by Signs, willed me to go, hoping to find their Habitation. At laft they made Signs that I fhould go " into a warm Place to neep; at which Place I went on "Shore, and defired they would leap with our Men, " which they agreed to, but ours did over-leap them; 6f from leaping they went to wreftling; we found them

Ggg
ftrong
*ftrong and nimble, and to have Skill in wrefting,

* for they caft fome of our Men that were good Wreft-
${ }^{6}$ lers.
"On the 4 th the Mafter of the Mermaid went to " certain Inands to ftore himfelf with Wood, where he
${ }^{6}$ found a Grave with divers buried in $\mathrm{it}_{3}$ covered with
os Seal-Skins only, and a Crofs laid over them. The
" People are of good Stature, well proportioned, with
" fmall nender Hands and Feet, broad Vifages, fmall
"Eyes, wide Mouths, the moft Part unbearded, great
* Lips and clofe-toothed; they are much given to
© bleed, and therefore ftop their Nofes with Deers Hair,
" or that of an Elan. One of them kindled a Fire after
${ }^{66}$ this Manner: He took a Piece of a Board wherein was
" a Hole half through; then he put into the Hole the
* End of a round Stick like a Bed-ftaff, wetting the
${ }^{66}$ End thereof with Train-oil, and (as your Turners do)
${ }^{6}$ with a piece of Leather by the violent Motion he
"s fpeedily produced Fire; this done he made a Fire with
66 Turfs, into which, with many Words and ftrange Gef-
${ }^{66}$ tures, he putdivers things, which we fuppofed to be a Sa-
${ }^{66}$ crifice; they defired me to go into the Smoak, and I
${ }^{6}$ willed them likewife to ftand in the Smoak, which
os they would by no means do; I then thruft one of them
"s into the Smoak, and commanded one of my Men to
${ }^{6}$ tread out the Fire and fpurn it into the Sea, to fhew
' them that we did contemn their Sorcery. They are
"s very fimple in their Converfation, but marvelounly
"c thievifh, efpecially of Iron, which they have in great
"efteem. They cut away the Moon-ßine's Boat from
"s her Stem; they cut our Cables and our Cloth where
"s it lay to air, though we did carefully look to it;
sc they ftole our Oars, a Caliver, a Boat, a Spear, a
sc Sword, with divers other things, which fo grieved the
${ }^{6}$ Company, that they defired me to diffolve this new
" Friendfhip; whereupon I ordered a Caliver to be fhot " among them, and immediately upon the fame a Fal-
${ }^{6}$ con ; which ftrange Noife did fo amaze them, that
${ }^{66}$ they departed with all Speed; but within ten Hours
"s they returned and intreated a Peace, which being grant-
${ }^{6}$ ed, they brought us Seal-Skins and Salmon-Peal, but
${ }^{66}$ when they faw Iron they could not forbear ftealing;
"s which when I perceived, I commanded that in no
"Cafe they fhould be any more hardly ufed, but that
"s our own People Chould be more vigilant to keep their " things.
os They eat all their Meat raw; they live moft "ipon Finh, drink Salt-water, and eat Grafs and Ice " with Delight; they make Fifhing-nets with Whale"Fins; 'tis probable they have Wars with thofe on the " main Land, many of them being fore wounded, which "Wounds they received upon the main Land, as by "Signs they gave us to underftand. The isth of 7uly "I went afhore in our new Pinnace, and with the moft " Part of my Company went to the Top of an high " Mountain, hoping from thence to fee into the Coun"6 try ; but the Mountains were fo many and fo lofty " that we could not fee far; we returned to our Pinnace and faw a ftrange Sight, which was a mighty Whirlwind, continuing three Hours with little Intermifion, which taking up the Water in great Quantities, furioully mounted it into the Air. The next Morning, the Storm being over, we failed into a mighty great River, directly into the Body of the Land, and found it to be no firm Land, but huge, vaft, and defert Inands, with mighty Sounds and Inlets paffing between Sea and Sea. On the gth we returned to our Ships, where our Mariners complained heavily againft the People, that they had folen an Anchor from us, had cut one of our Cables very dangerouny, and fpared not to fling Stones at us of half a pound Weight: The next Day I went afhore and ufed 6c them with much Courtefy, and when I returned they
"f followed me in their Canoes; I gave fome of them
"Bracelets, and feven or eight of them came on Board,
"s whom I ufed kindly, and let them depart; as foon as
${ }^{66}$ Sun was fet they began to practife their devilifh. Nature,
${ }^{6 c}$ and with Slings threw Stones very fiercely into the
${ }^{6}$ Sun-fine, and knocked down the Boatfyain; where-
"upon we purfued them with our Boats, and fhot at "them; but they rowed fo fwiftly, that we could not " reach them.
"On the inth five of them came to make a new ${ }^{6}$ Truce; the Mafter acquainted me with their coming, " and defired they might be kept Prifoners until we " had our Anchor again; but when he faw the chief
"Ring-leader and Mafter of Mifchief was one of the
" five, he was then very urgent to have him feized, and
ss fo it was determined to take him ; he cane crying
${ }^{66}$ Ilioout, and, friking his Breaft, offered a Pair of
${ }^{66}$ Gloves to fell ; the Mafter offered him a Knife for
" them: So two of them came to us, one we difmiffed,
" but the other was foon made Captive among us; then
" we pointed to him and his Fellows for our Anchor,
" which being had, we made Signs to him he fhould be
"fet at Liberty; about an Hour after the Wind came fair, " "nd we fet fail and brought him away with us. One " of his Companions, following our Ship in his Canoe st talked with him, and feemed to lament his Condition; " we ftill ufing him well, and faying to him Iliaout, " i.e. we mean no harm; at laft he aboard fpake four " or five Words to the other, and clapped both his "Hands on his Face, the other did the like, and fo " parted; we judged the covering his Face, and bow" ing down his Bodys fignified his Death; after fome " Time he became a pleafant Companion among us; "I gave him a new fuit of Frize of the Englifb Fafhion, " of which he was very fond; he trimmed up his Darts "c and all his fifhing Tools, and would make Okam, and "fet his Hand to the Rope's-end; he fed upon Caplin " and dry Nerwland Fifh. The 17 th, being in Latitude " of $63^{\circ} 8^{\prime}$, we fell in with a mighty Mafs of Ice, very "6 high, like Land, with Bays and Capes; and, fuppofing " it to be Land, we fent our Pinnace to difcover it ; but, " on her return, we were affured that it was only Ice, " which caufed great Admiration to us all, and the ra" ther, becaufe in this Place we had very tickle and " ftrong Currents. We coafted this Mafs of Ice till the " 30 th, finding it a great Bar to our Purpofe. The " Air was now fo foggy, and the Sea fo peftered with "Ice, that all Hopes of proceeding was banifhed; for " on the 24 th of Fuly our Shrouds, Ropes, and Sails, " were fo frozen and compafied with Ice, only by a " grofs Fog, as feemed to us very ftrange, who the
" laft Year found this Sea free and navigable without " Impediments.
"Our Meir, through this Extremity, began to grow "fick and feeble, and withal hopelefs of good Suc" cefs; whereupon, very orderly and difcreetly, they in" treated me to regard our prefent State, and withal " advifed me, that in Confcience I ought to preferve my " own Life and theirs; and that I fhould not, through my "6 own Boldnefs, leave their Widows and fatherlefs Chil" dren to give me bitter Curfes. This did move me " to commiferate their Condition, yet confidering the " Importance of this Difcovery if it could be accom" plifhed, the great Hopes of a Paffage by what we had " feen the laft Voyage, and that there was yet a third Way " to be attempted, I thought it would turn to my Dif"s credit if the Action fhould fail through my Neglect, "s therefore refolved to profecute it; and confidering " the Mermaid, by Reafon of her Burden, was not fo " nimble and convenient for this Purpofe as a fimaller "Bark, and was 100 l. a Month Charge to the Adven"6 turers; I determined to revictual the Moon-ßine, and "proceed as God fhould direct me: Whereupon I al" tered my Courfe to recover the next Shore, where this " might be performed; and the ift of Auguft difcovered "Land without Snow or Ice, in Latitude $66^{\circ} 33^{\prime}$, and " in Longitude, from the Meridian of London, $70^{\circ}$.
"On the 2d we anchored in a very good Road, where, " with all Speed, we graved and re-victualled the Moon" Bine; we found it here very hot; and we were very " ${ }^{6}$ much troubled with Mufkitos, which did fting griev" ounly. The People of the Country caught a Seal, and, " with Bladders faft tyed to him, fent him to us with " the Flood, fo as he came right with our Ship, which "s we took as a friendly Prefent from them. On the

## Chap. III. of the ENGLISH in AMERICA.

* $5^{\text {th }}$ I went on Top of a Hill, and efpying three "Canoes under a Rock, went to them, and found in "them Skins, Darts, $\underbrace{*} c$. whereof we diminifhed no" thing ; but left upon every Boat a Silk Point, a Bullet " of Lead, and a Pin. The next Day the People came " to us without Fear, and bartered with us for Skins; " our Savage kept clofe, and made Shew that he would " fain have another Companion. Being thus provided, I
"d departed on the i2th, leaving the Mermaid at Anchor;
" her Crew finding many Occafions of Difcontent, and
" being unwilling to proceed, here forfook me.
"The r 4 th, failing Weft fifty Leagues, we difcovered
"Land, in Latitude 66 Degrees 19 Minutes; and " the next Day we ftood to the South; and on the
" 18th difcovered a very fair Promontory North-weft
" from us, in 65 Degrees, having no Land on the South,
" which gave us great Hopes of a Paffage. The 20th
" I went to the Top of a high Hill, whence I perceived
" that this Land was all Inands ; we coafted this Ifland
" towards the South, from 67 to 57 Degrees. The 28 th,
" having great Diftruft of the Weather, we arrived in a
© fair Harbour, and failed ten Leagues into the fame,
" being two Leagues broad, with fair Woods on both
"Sides: Here we continued to the ift of September, in
" which time we had two very great Storms; I went
" fix Miles into the Country, and found the Woods were
" Fir, Pine-apple, Elder, Yew, Withey, and Birch. Here
" we faw a black Bear, and Store of Birds, as Pheafants,
"Partriges, wild Geefe, Bucks, Blackbirds, Jays,
"Thrufhes, and other fmall Birds. The ift we fet
"fail, and coafted the Shore with fair Weather. The " 4 th we anchored in a good Road, among many
" Inlands. Eight Leagues to the North of this Place we
" had ftrong Hopes of a Paffage, by reafon of a mighty
"Sea paffing between the two Lands, Weft; we greatly
"defired to go into this Sea, but the Wind was directly
"c againft us.
"' The 6th we fent five young Men afhore to an
" Inand, to fetch fome Fifh which we had left there
"covered all Night. The Savages who lurked in the
" Woods fuddenly affaulted our Men, which we per-
" ceiving let nip our Cable, and, under our Fore-fail,
"c bore in to the Shore, and difcharged a double Muiket
" upon them twice; at the Noife of which they fled,
" having killed two of our Men with their Arrows, and
" grievounly wounded two more; the other efcaped by "d fwimming, with an Arrow fhot through his Arm.
"This Evening it pleafed God farther to increafe our " Sorrows with a furious Storm at North-north-eaft, " which lafted to the 1oth: We unrigged our Ship, and " intended to cut down our Mafts; the Cable of our "Sheet-Anchor broke, fo that we expected to be driven " on Shore, and become a Prey to the Cannibals; yet, in "this deep Diftrefs, God gave us Succour, and fent us a
${ }^{\text {sc }}$ fair Sea, fo that we recovered our Anchor again, and " new moored our Ship; where we faw that God had " manifefly delivered us, for two Strands of our Cable "" were broken. The irth, the Wind coming fair at "Weft-north-weft, we departed with Truft in God's
"Mercy, fhaping our Courfe for England, and arrived "c in the Weft-country the Beginning of Oitober, where
" the Sunfline arrived a few Days before us; the had been
"a at Iceland, and from thence to Groenland, and fo to
"Efotiland, and thence to Defolation, where fhe traf-
" ficked with the People, ftaying in the Country twenty
" Days. They ioft Sight of the Pinnace, called the
"North-Star, on the 3 d of September, in a very great
"Storm, and lay a-hull to tarry for her all the next
" Day; but faw her no more: The faid Pinnace never " returned home."
We find annexed to this Account of Capt. Davis"s fecond Voyage, a Letter of his to Mr. William Sanderfon, who feems to have been his Patron; in which he excufes his Want of Succefs in this Voyage, declares his confident Hope, that fuch a Paffage might yet be found, the Improvement of his Knowledge by this laft Voyage, and his Refolution to profecute this Difcovery to the utmof, though it fhould coft him the little paternal Fortune he had in the Weft; and concludes with an Affurance, that
he would communicate to him a fair and clear Chart of his Voyage, which would give him a perfed Comprelienfion of the Arguments he had to offer in fupport of his Notion, that this Paffage, fo often attempted in vain, might ftill be found. This Letter is dated from Exeter, the 14th of Oitober, 1586 ; and it had all the good Effects that Capt. Davis could expect from it, fince his Friena ftill continued to have as good an Opinion of him as ever, and fo it appears the reft of his Owners had; but it went no farther than the Approbation of his Conduct in his laft Voyage, for when he came to propofe a third Expedition, the Weft-country Merchants, and moft of thofe in London, grew weary of the Expence, and would be concerned no longer. He propofed, however, to the reft of the Adventurers, a new Scheme, which took Effect, and it was this: That they fhould fit out three Veffels, one of which only fhould be employed on the Difcovery, and the other two in Fifhing; by which he propofed to defray all, or at leaft the beft Part, of the Expence. It is very remarkable that Mr. Bruton, who ferved with Capt. Davis in his firft Voyage, accompanied him alfo in this, and fo did Mr. Fobn Fane, who has been his Merchant or Supercargo, and many of his old Seamen; which fhews the Confidence they had in his Skill, and how fenfible they were of his Care and good Ufage.
The Veffels provided for this laft Voyage were the Elizabeth of Dartmouth, the Sunßbine of London, and the Ellen which was but very fmall. As for the Hiftory of the Voyage, which is but fhort, we fhall give it as we did the former, in the Words of the Author. "S We de" parted from Dartmoutb the roth of May, and difcover" ed Land on the 14 th of $\mathcal{F u n e}$. On the 16 th we an"chored among many low Inands which lay before the " high Land; the People came to us crying, Tliaout; " and fhewing us Seal-Skins. On the 2oth I left the " two Ships to follow their Fifhing, taking their faithful " Promife not to depart till I returned unto them, which " fhould be in the End of Aurufi; but they, finifhing their Voyage in fixteen Days, prefently returned for England, without regarding their Promife, whilft I, not diftrufting any fuch hard Meafure, proceeded on the Difcovery. On the $24^{\text {th, }}$, in Latitude 67 Degrees, 40 Minutes, the Weather was very hot, thirty Savages came to us in their Canoes, twenty Leagues from the "Land, intreating us to go afhore. I coafted the Shore of Groenland, from the 2 Ift to the 30 th, having theSea all open towards theWeft, and the Land on the Starboardfide, Eaft from me, the Weather extremely hot and very calm. The Sun was five Degrees above the Horizon at Midnight, Latitude 72 Degrees 12 Minutes; " the Compars in this Place varied 28 Degrees towards the "Weft. The 3dof fuly we fell in again with Ice; and on " the 6th put our Bark through it, feeing the Sea free on the
"Weft fide; and when we had failed five Leagues Weft " we fell in with another mighty Bank of Ice which we could not pafs; therefore returning again, we got clear on the 8th at Midnight, and recovered the open Sea "through God's Favour, by giving us fair Winds and and calm Weather. On the 15 th, in Latitude 67 Degrees 45 Minutes, a great Current fet us to the Weft fix Points from our Courfe.
"On the 19th we had Sight of Mount Raleigh. On the zoth we ${ }^{\circ}$ croffed over a great Inlet or Paffage, being twenty Leagues broad, and fituate between 62 and $6_{3}$ Degrees, in which Place we had eight or nine "great Races, Currents, or Over-falls, like the Water under London-bridge, and bending their Courfe into the Inlet. The 3 rft , in Latitude 62 Degrees, coming clofe by a Foreland, we fell into a mighty Race, where an Inand of Ice was carried by the Force of the Current as faft as our Bark could fail with all Sails bearing. This Cape, as it was the Southern Limits of the Gulph we paffed over Yefterday, fo was it the North Promontory, or Beginning of another great Inlet which we paffed over this Night, where we faw the Sea falling down towards the Inlet with a mighty Over-fall, and circular Motion, like Whirlpools, in the fame manner as forceable Streams force through the Arches of Bridges. On the ioth of Auguffo as we were feeking
${ }^{66}$ our Ship, that went to fifn, being among many Iflands;
${ }^{\text {ct }}$ we ftruck on a Rock, and had a great Leak: The
${ }^{66}$ next Day we ftopped our Leak, in a Storm ; and on
${ }^{66}$ the 15 th, being in Latitude 62 Degrees 12 Minutes,
©s and not finding our Ships, nor (according to their
${ }^{6}$ Promife) any Mark or Beacon which I willed them
"to fet up, and they promifed to do, upon every
${ }^{66}$ Headland or Cape within twenty Leagues every Way
${ }^{\text {as }}$ 'from their Fifhing-place, and we having but little
cs Wood in our Ship, and but half a Hogfhead of frefh
"s Water, I fhaped my Courfe for England, and arrived
"能 Dartmoutb the 15 th of September."
Upon his Return from this, as after his fecond Voyage, he wrote a Letter to Mr. Sanderfon, dated from Sandridge, Septeriber 16, 1587; wherein he tells him, That he had returned fafe with all his Company: That he had failed fixty Leagues farther than he intended at his Departure : That he had reached the Latitucle of 73 Degrees North, finding the Sea ail open, and the Streight forty Leagues broad; concluding from thence, that the Paffage was moft certain, and the Execution moft eafy; but, as we thall fee hereafter, he was in this miitaken, which howcver, "does not at all leffen his Merit or the great Difcoveries he made, by which he entitled his Country to all this Coaft of North America, the Value of which may hereafter prove as great as any Difcovery made in this Reign. Neither ought we to efteem it any Diminution of his Merit, that he was fo confident of finding a Paffage this Way to the very laft ; becaufe as far as he, or any Man, could judge, there was indeed great Probability of the Thing, and nothing but fuch a Spirit as his will ever be able to effect this Difcovery whenever it fhall be made.

But he was not only an able Officer and a moft fkilful Seaman, but had likewife a Head perfectly well turned for making all poffible Advantages of the Service in which he was employed; as appears from the Minutes of a Memorial of his which I have feen, addreffed to Secretary Walfingbam; wherein he tells him, That he found many ignorant and malicious People had a very mean Opinion of what he had done, becaufe his Voyages had not anIwered the Expence; but he perfuaded himfelf that fo wife and honourable a Statefmain, would think in a manner different from the Vulgar, and efteem his Services capable of producing great Advantages to the Nation, even fuppoifing that no fuch Paffage as he expected fhould be found ; in Support of which he laid down the five following Points.
I. That it would redound very much to the Honour of the Queen and her Subjects, if the People in thefe Northern Regions were converted to the Chriftian Faith ; in which pious Work many of thofe bufy and fiery Spirits might be profitably employed, that, by their factious Stirrings at Home, ferved only to create Confufion in Church and State: For if thefe People, who feemed neither deftitute of Wit, Induitry, or valuable Commodities, were once brought over to the Chriftian Faith, they might foon be brought to relifh a more civilized kind of Life, and be thereby induced to take off great Quantities of our courfer Woollen Manufactures ; which would employ the Poor at Home, increafe our Shipping, and augment the Number of our Seamen.
II. That in the Judgment of fuch as were beft acquainted with the Fifhing Trade, the Cod he caught were the fatteft and fineft that were ever feen; and that the Plenty of thefe Fifh was fo great as might well encourage the eftablifhing an annual Fifhery at the Mouth of the Streigbts, which would afford immediate Profit, and might lead to future Difcoveries of greater Importance.
III. That notwithfanding the Shores of the Countries he had feen were bleak and barren, yet the inner Part of the Country might, notwithftanding, be very rich and fertile: That as the People he had converfed with had fome of them Utenfils of different Metals, it might be prefumed there were Mines of Value in thefe Countries; and that how little Profit foever thefe People might make of them, they might be wrought to great Advantage by fuch as underfood them better.
IV. That it was very evident from the feveral Voyages he had made, that there was nothing intolerable in thefe
northern Climates, and that it would be of great Service to the Nation to keep up a conftant Succeffion of Enterprizes on this Side, fince it might be done with very little Expence at firf ; would contribute to make thefe Parts of the World better known, and fecure the Advantages derived from them to the Engli乃; whereas; if they were difcontinued or abandoned, other Nations would not fail to make Attempts of the like kind, and fo come in procefs of Time to reap the Fruits of other Mens Labour.
V. That the Firs brought from thence were much efteemed, and allowed to be richer and more valuable than any that came from Mufcovy; and that if the Fafhion of wearing them at Court were encouraged, it might prove a means, when all others failed, of promoting this Commerce; for you know right well, moft honourable Sir, concludes he, that it is a great Secret in Policy to make the Follies of the Extravagant, and the Vanity of the Ambitious, contribute to the Maintenance of Induftry; fo that even the Vicious and the Lazy, may of their own Accord furnifh the Rewards of Labour and Virtue.

I finall, hereafter, take Occafion to fhew, that he has very wifely and fenfibly recommended the propagating the Chriftian Religion, as the moft proper Means for extending, as well as eftablifhing, our Colonies, and rendering them highly beneficial. There is no Queftion that the fending a few Preachers to convert any of thefe Nations to Chriftianity, would be a thing of greater Confequence to this Nation, than building many Forts to fecure our Commerce with Savages; for thefe People would then live in Towns, wear Cloaths, cultivate their Lands, and, inftead of deftroying and extirpating each other, as at prefent, they would live peaceably, and confequently grow daily more numerous; which would occafion fuch a Confumption of our Manufactures of all kinds, and fuch a Return of their Commodities, which is the only true and juft Standard of Trade, as neither Fraud nor Force can any other way attain. His Reflections, with refpect to the Expediency of keeping up this northern Navigation, are highly fenfible, and it would have been much for our Intereft, if, even at the public Expence, they had been continued; for then Sir Fofiab Cbild would not have fet down this North Fifhery among the Number of our loft Trades, as he does with juft Reafon. That our Neighbours would be wifer in this Refpect than ourfelves, was in itfelf a very fhrewd, and in Fact has proved a prophetic Obfervation; for the Dutch and other Nations ftill frequent Davis's Streigbts, which we have in a manner deferted, and emploj thereby a valt Number of People at home, befides raifing annually frefh Supplies of fkilful and well feafoned Seamen, which a maritime Power ought to regard as a Point of the higheft Confequence, and in that View ought to favour moit fuch Branches of Commerce as are known to contribute thereto, efpecially if they are not at a great Diftance. With thefe Remarks we fhall difnifs this Subject for the prefent, and, as the Nature of our Plan directs, proceed from thefe Difcoveries in the mot northern Parts of America, to the Attempt made for fixing a Settlement more to the South than any we have yet obtained.

14: The fpeaking of this Southern Settlement brings us back to Sir Waleer Raleigh, a Gentleman whofe Name muft often occur in all Books that any way relate to Englifh Hiftory, and whofe Memory will be ever celebrated by fuch as can diftinguifh any kind of Worth; for he had all and excelled in all. Amongtt the reft, the compleateft Courtier of his Time, which perhaps drew upon him more Envy than all his other great Qualities; and I am induced to think fo from the Nature of thofe Calumnies by which he was moft hurt; for though deeply malicious, they were fo indifferently forged, that they could not bear the leaft Infpection; fo that notwithftanding they coft him his Favour often, and his Life at laft, from the Credulity of Princes, yet they never had any Effect upon his Reputation with wife Men in his Life-time, nor have injured his Reputation in the leaft with Poferity.

He was always ufeful to his Country, but moft fo

## Chap. III. of the ENGLISH in AMERICA.

when he had leaft Credit at Court. At fuch Times he did not relinquifh Bufinefs to go and hide himfelf in Country Retreats, and thence write pitiful Letters and Poems to fcrew himfelf again into the Affections of the Queen his Miftrefs, as fome other of her great Men did, and which he could have done better than any of them nor did he form Intrigues againft her Minifters, and force himfelf into. Power and his Sovereign's Prefence; but he took another Road peculiar to, and worthy of, Sir Walter Raleigh: He applied himfelf to contrive, and not to contrive only, but to execute, fuch great and glorious Enterprizes, as raifed his Fame fo high, that the Whifpers of Envy could be no longer heard; and, when the Queen recalled him to her Favour, it never appeared as an Act of Grace, but as a Stroke of Juftice; fo that after thefe Receffes, he fhone at Court with double Luftre, and his Miftrefs, haughty as the was, could not help appearing upon thefe Occafions proud of the Poffeffion of fuch a Man, and afhamed of his Abfence.
It was in one of thefe voluntary Exiles that Sir Walter Raleigh executed a Defign he had long meditated, I mean his Expedition to Guiana, an Expedition great in itfelf, though unfortunate in its Confequences; formed upon the moft noble Principles, and performed with equal Valour and Prudence, and in a Word every way equal to the Genius of its Author, and, Experience has fince fatally fhewn, fuperior to every Genius but his. He faw, with Regret, the Plantation of Virginia abandoned, and he faw that the Want of immediate Profit was the Caufe; he refolved theręfore to ftrike out the Means of fettling a new Colony in another Part of America, which fhould be free from this Inconvenience, and which fhould transfer the richeft Products of that Country to the Englifh, if they had but Courage and Conduct enough to fetch them. In order to this he enquired, with the greateft Diligence, into the State of the Country before mentioned; he fought from Books and Papers all the Affiftance that could be had of that kind; he drew from per fonal Informations, which were more in his Power than perhaps they ever were in any other Man's, all the Notices that they could give; but he drew the greateft Lights from his own profound Knowledge and extenfive Experience.

He was undoubtedly as well verfed in all Parts of Philofophy and natural Hiftory, as any Man of his time, and perhaps much better ; for, befides all the Knowledge which refults from Reading, he had likewife a great practical Skill, whence, without doubt, arofe his confident Belief, that this Country of Giiona was the richert in America, and by confequence, according to the Opinion of thofe times, and indeed of thefe, the richert in the World. He did not go thither therefore to fatisfy his own Mind upon that head, but that he might furnifh himfelf with the means of fatisfying others; for he very well knew that it would have been an idle and ridiculous thing in him to think of moving People to attempt a Plantation meerly by a rational and philofophical Argument, which he knew few would be able to underftand, and of thofe that did, many would oppofe his Sentiments from Pride, and more from Prejudice. He chofe therefore to treat the Riches and Value of this noble Country in the plaineft way, and as a Point of fact; and forefeeing that it would be objected, that if it were 10 , and the Facts fo notorious as he reprefented it, the Spaniards would certainly have fettled there, and not have left it to fall into the Hands of any other Nation; this induced him to draw up a very clear and fuccinct Account of the feveral Methods ufed by the Spaniards to difcover and gain this Country, which at once anfwered the Objection, and proved to fuch as had an high Opinion of the Judgment formed by the Spaniards of the Wealth and Importance of thefe Countries, that Guiana was one that deferved the higheft Commendations.

Thefe Accounts of his are difperfed through various Pieces written by him upon this Subject; but, for the Eafe of the Reader, we thall collect and range them in their natural Order, by which means they will become a kind of Supplement to what has been already delivered of the Spani/h Difcoveries and Conquefts; this be-

Vol. II. Numb. 8. $3^{\circ}$
ing the fole Reafon of our omitting them there, becaufe we forefaw the Neceffity of repeating, or at leaft of reca= pitulating, them here, for the Sake of explaining Sir Wal ter Raleigh's Expeditions: We have fhewn in that Chap ter how the Marquis Pizarro overthrew the Empire of the Inca's, and made himfelf Mafter of all their Territories and of a great Part of their Treafures ; and we have like wife fhewn that this was fo far from fatisfying his Avarice and Ambition, that he propofed to extend his Conquefts beyond the Limits of Peru, in order to penetrate into the Heart of South America, from the Hopes he had conceived of finding richer Countries there than any he had yet met with.

It was with this View that he ordered his Brother Gonzalo, after he had taken Poffeffion of Quito, which was the laft Conqueft of the Inca's, to continue his Expeditions on that Side, though he was fenfible that he could receive little or no Affiftance from the Informations of the Natives; his Brother accordingly entered the Province of Los Quixos; and, after making himfelf Mafter' of that Country, the People of which were downright Barbarians in Comparifon of thofe of Peru, he determined to pafs the high Mountains which bound that Province on the North, and affembled a great many $I_{n-}$ dians, and a good quantity of Cattle for that Purpofe; but, when he had afcended half way up thefe Mountains, he found that he had taken his Meafures wrong, and that the Cold was fo intenfe, that it would be imponible for him to profecute his March in that Manner. He therefore quitted his Cattle and the beft Part of his Bag gage, refolving to make all the hafte he could into the plain Countries on the other Side, and truft to the Provifions he might meet with there.

Accordingly he defcended into the Valley of Zumaque, which he found very plentiful, and in which therefore he refrefhed his Forces for two Months, endeavouring then to continue his March Northward; but, finding the Road extremely rough and mountainous, he turned directly Eaft, in Hopes of mecting with an eafier Paflage; this opened a Way into a new Province well peopled and very rich; the Inhabitants of which were dreadfully amazed at the coming of the Spaniards amongt them, and indeed they very well might, for they behaved towards them in a Manner barbarous beyond Expreffion; for Gonzalo Pizarro exercifed the greateft Cruelty imaginable on the Inhabitants of thefe Regions, infomuch that he gave Men to be eaten alive by his Dogs. This engaged all the Natives to put themfelves in Arms againft him, fo that he was obliged to encamp himfelf as in an Enemy's Country; and his Cruelties, together with the Defpair he was in of ever being able to find what he was feeking after, had like to have put an End to his Enterprize at once. He was encamped on the Bank of a River, which fwelled fo much in one Night that if the Sentinels, who perceived the Water was a-pace getting Ground, had not warned them of their Danger, they had been all drowned; but at the Alarm they foon fecured themfelves, by making towards the Cottages of the wild People; and Pizarro refolved to return to $Z_{6}$ maque, not knowing what other Courfe to take. From thence he proceeded again with all his Men, and after a March of four Leagues he met with a great Village called Ampua, governed by a Cazique, and found a great Number of the Inhabitants in a Pofture of Defence expecting their Enemy; but there was another and great er Obftacle in his Way than this Cazique and all his Troops, and that was a River fo wide and deep that he could have no Thought of venturing to fivim over it He could therefore find no better Expedient than to enter into a Treaty with the People of the Country, and to defire the Help of their Canoes to crofs this River.

The Cazique received this Propofal with great Civility, offered them what they afked, and gave them as many of thefe little. Boats as they defired; and on this, Pizarro made him a Return of a great many little Spanifb Toys, by way of requital. This Cazique having received Advice of the ill Treatment many of his Neighbours had received from the Spaniards, thought of nothing more than how to get rid of them, and to de-
liver himfelf from the Danger of fuch bad Guefts, endeavoured to make them believe there were great Riches to be found among the People that dwelt upon the River; fome Days Journey lower. Pizarro, by his Actions and by his Guides, who were his Interpreters, returned hina Thanks for his Countefy; but, finding no Appearance of thofe pretended Riches, he returned to Zumaque very much difatisfied with his Expedition; however, he had too much Courage to retire back to Quito juft as he came. He had a Mind therefore to attempt fome great Exploit, and, by the Difcovery of fome other Part, to render himfelf as confiderable as the Marquis Pizarro, his elder Brother : He opened his Mind to Francis Orellona, a Gentleman of Truxillo in Spain, who was comé to join him in the Valley of Zumaque; and, having taken one hundred effective Soldiers, and fome Indians for Guides and to carry Provifions, he marched directly to the Eaft.

Either the Ignorance of his Guides, or the Hatred they bore him, engaged him in a Country all full of Mountains, Forefts, and Torrents, fo that he was conftrained to make Ways where he found none, and to open himfelf 'a Paffage through the Woods with Hatchets, where none had ever gone before. At length, after many Days March, he pierced through as far as the Province of Coca; the Cazique of which Province came to meet him, and offered him all the Accommodations the Country afforded for his Refrefhment; Gonzalo promifed himfelf much from this kind Entertainment, and by the Affiftance of his Guides entered into Converfation with the Cazique: He informed him, that the Country through which he had paffed, which was fo full of Mountains;
Forefts, and Brooks, was the only Paffage he could have Forefts, and Brooks, was the only Paffage he could have
taken to come thither, that, it was extremely dificult to get thro it ; but that if he was willing to embark on the River he faw before him, or to follow it by Land, he might affure himfelf, that, along the Banks of another River much greater than this, he fhould find a Country abounding with all Things, whofe Inhabitants were covered with Plates of Gold. There was no need of faying any thing more to Pizarro, to incite him to any kind of Enterprize, who prefently fent two of his Guides to Zumaque, with Orders to his Officers to come and join him, who marched immediately ; and, furmounting all the Difficulties of the Way, arrived, much fatigued, at the Town of Coca.
Pizarro having refted fome few Days, afterwards pui them in Battalia before the Cazique, who was fo much terrified with them, that he amaffed almoft all the Provifions of his whole Province to make a Prefent of them to Pizarro, that by this Magnificence he might civilly acquit himfelf of his new Acquaintance, who was more impatient of his Stay than the other ; and the next Morning, having filed his Troops along the River, he took his Leave of the Cazique, prefenting him with a finie Sword, and put himfelf at the Head of his Cavalry, and followed the pleafant Courfe of the River. This good Way did not laft long, but they had Rivulets to fwim over, and were forced to march in uneven Ways, and for forty-three Days, without finding any Provifions, or any Fords, or
Canoes by which to pafs the River. This long March Canoes by which to pafs the River. This long March having mightily fatiguied our Travellers, they were ftopped by a very furprifing Sight; the River was preffed by
two Rocks, and on each Side its Paffare two Rocks, and on each Side its Paffage, at no more than twenty Feet Diftance from one another; and the Water going through this Streight precipitated itfelf into a Valley, and made a Leap of two hundred Fathoms: Here it was that Pizarro caufed that famous Bridge to be made for his Troops to pais over, which is fo much boafted of by the Sponifh Hiftorians.
But finding the Way not at all better on the other Side, and the Provifion growing more and more fcarce every Day, Pizarro refolved to make a Brigantine, to carry by Water all his fick Men, Provifions, Baggage, and the
Gold which they had got amongft them. This was no Gold which they had got amongtt them. This was no fmall Difficulty; but Induftry and Neceflity furmounted it, and the Vefel being finifhed, Pizarro embarked all
in it that hindered his March, and gave the Command of it in it that hindered his March, and gave the Command of it to Francis Orellana, with fifty Soldiers; giving him exprefs

Order not to part far from him, but to come every Night to the Camp. He obferved this Order exactly, till his General, feeing all his Men much pinched with Hunger; commanded him to go and feels fome Provifions and Cottages, where his Men might be refreihed. Orellana had no fooner received his Orders, but he launched out into the Middle of the River, and the Rapidity of the Stream carried him as faft as he could wifh, for he made above one hundred Leagues in three Days; without the Ufe of either Sails or Oars.

The Current of Coca carried him into another River which was much larger, but not near fo fwift: He made his Obfervations of it one whole Day, and feeing that the farther he went down, the more the River widened ; he made no doubt but this was that great River which had been fo often, and in vain fought after. The Joy he con-
ceived at his good Fortune fo ceived at his good Fortune fo tranfported him; that it made him quite forget himfelf, fo that, dreaming only of the Enjoyment of this good Succefs, and trampling upon his Duty, Oath, Fidelity, and Gratitude, he had now nothing in View but to bring about the Enterprize he was contriving. To this End he perfuaded his Companions, that the Country was not the fame with that which their General had defcribed; that it had not that Plenty the Cazique had told him he fhould find at the joyning of the two Rivers; that they mult certainly float along farther, to find that pleafant and fertile Country, where they might frore themfelves with Provifions ; and befides, that they all faw there was no likelihood of getting up this River again which they came down in three Days, but, as he believed, could not make the fame Way back again in the Space of a whole Year ; that it was much more reafonable to wait for their Company on this new River ; and that, in the mean time, it was neceffary for them to go and feek Provifions.

Thus concealing his Defign, he hoifted Sail; and; abandoning himfelf to the Wind, to his Fortune, and to his Refolution, he thought of nothing but purfuing the Courfe of the River, till he fhould difcover it quite to the Sea. His Companions were amazed at the Manner of his putting in Execution the Defign he had been propofing to them, and thought themfelves obliged to tell him, that he went beyond the Orders of his General; and that in the extreme Want he was in, they ought to carry him the little Provifions they could find; and that he had given fufficient Evidence he had fome illDefign, becaufe he had neglected to leave two Canoes at the Bank of the two Rivers, as the General had appointed him, for his Army to pafs over in. Thefe Remonftances were made chiefly by a Dominican Friar named Gajpar de Carvajal, and by a young Gentleman of Badajos in Spain, called Fernand Sancbes de Vargas. The Confideration they had for thefe two Perfons, occafioned a Divifion in the Company, in this little Veffel,
into two Parties; and from Words they into two Parties; and from Words they were like to have fallen to Blows, but that Orellana, ftifling their Gratitude by his Diffimulation, by fair Proteftations, and great Promifes, appeafed this Diforder.

By Means of his Friend he had in the Veffel, he gained moft of the Soldiers that were againft him to his Side; and feeing the two Heads of the other Party left almoft alone, he caufed Fernand Sanches de Vargas to be fet afhore, leaving him quite alone, without Victuals and without Arms, in a difmal Wildernefs; bounded, on one
Side, with high Mountains, and with a River on the other. He had more Prudence than to treat the Friar after the fame manner, yet he gave him to underftand, that it was not for him to penetrate any more into the Intentions of his Commander, unlefs he had a Mind to be feverely chaftifed. After this he continued his Voyage; and the next Day, being willing to know if he might depend upon all that were with him for the Succefs of his Refolutions, he let them know that he afpired
to a much higher Pitch of Dionity to a much higher Pitch of Dignity than what he might have obtained in the Service of Pizarro: That he owed every thing to himfelf and to his King; and that his Fortune having, as it were, led him by the Hand to the greateft and moft defirable Difcovery that was ever made in the Indies, namely, the great River upon which they were failing; which coming out of Peru, and running

## Chap．III．of the ENGLISH in AMERICA．

from Weft to Eaft，was the fineft Channel in the new World，through which they might pafs from theSouthern to the Northern Sea；that he could not，without betray－ ing them all，and without ravifhing from them the Fruits of their Voyage and Induftry，make others thare in a Favour which Heaven had referved for them alone．By this Means he eafily quieted thefe Murmurs，and brought his Men to have a Share of that Ambition which flamed in his own Breaft．His Neceffities forced him afhore for Provifions，and，as he did not take thefe with that Gen－ tlenefs and Prudence that became him in a ftrange Country；the Natives，unanimounly took up Arms， and with great Boldnefs fell upon the Spaniards，who defended themfelves with much Courage，and killed many of their Antagonifts with their Crofs－bows；and upon infpecting their Bodies，found that feveral of them were Women ；as indeed it was no uncommon thing for the Indian Women，in that Country，to fight by the Sides of their Hufbands；but our Spaniard，having a romantic Head，improved this flight Incident into a formal Hiftory of a great Nation of Amazons，fettled upon this River：By which Fable he overturned his great Defign of beftowing his own Name upon it，and thereby perpetuating the Memory of his Paffage；for from this Story of his it received the Name which it ftill bears，and will always bear，of the River of Amazons．

He took care，in the remaining Part of his Paffage， to behave with more Prudence and Mildnefs to the Peo－ ple he met with，among whom were many gentle，and even polite Nations，as well as others fierce and warlike． In fine，he paffed quite down the River to the Sea；and having coafted about a Cape，now called the North Cape， which by the way is the Name the French have beftowed on the Country of Guiana，two hundred Leagues from the Inand of Trinidada，he failed directly thither，and there bought a Ship to carry him to Spain；where he made fuch a Report of the Countries he had feen，to the Emperor Cbarles V．that he obtained as ample a Com－ miffion as he could defire ；and，in the Year 1549，failed with three Ships for the River of Amazons；but this fecond Expedition was the very reverfe of the firft，as being un－ fortunate from the very Beginning；for a contagious Diftemper fpreading among his Men，obliged him to quit two of his three Ships，and afterwards his Company was fo reduced as to fail in a fmall Bark，with which he propofed to profecute his Difcovery；but being fhip－ wrecked on the Coaft of the Caraccas，he there loft the reft of his Men，and foon after died himfelf on the Ifland of St．Margaret，of downright Defpair．

The ill Succefs of Orellana＇s Voyage cooled the ardent Defire the Spaniards had for the Difcovery of the River of Amazons，and it feemed quite extinguifhed by the civi Wars of Peru，till the Marquis de Caguete，being Vice－ roy of that Kingdom，a Gentleman of Navarre，named Peter de Orfua，who had always entertained Thoughts worthy of his great Courage，turned his Defigns on this great River，and believed he fhould be more fortunate than Orellana．He prefented himfelf to the Viceroy，and propofed his Defigns to him，who being well acquainted with his Merit，commended his Refolution ；and was perfuaded that if fo difficult a Matter fhould fucceed，it mult be by the Conduct of fo wife and brave a Commander．Moft of the Gentry came to offer their Service to Orfua，who was fo much in every one＇s Efteem，that there was no Soldier fo old but would leave his Retirement with pleafure，to ferve under fo excellent a General；he made Choice of fuch amongft them as were fit for his Purpofe ；and to carry on the famous Conqueft he defigned he made all neceflary Pro－ vifions，to which all the Lords and Inhabitants of the Town contributed with a great deal of Liberality，being well perfuaded that Orfua had Qualities that well deferved to be obliged．
He departed from $C u \int_{60}$ in 1560 ，with the Acclamations and good Wifhes of all the Inhabitants of that Place： He was attended with above feven hundred good Soldiers， and with a confiderable Number of good Horfes．Be－ ing well verfed in the Map of Peru，and having been for fome time laying the Scheme of his Journey，he marched diredly to the Province of Mofilones firfts to meet the

River Moyabamba；by which he was fure of entering inta the River of Amazons．One would have hoped，an At； tempt fo wifely laid，and fo univerfally approved；fhould have had a happy Iffue，yet never was any Project more unfucceffful；for Orfua had taken with him one Don Fernand de Gufman，a young Man lately come from Spain，and another more advanced in Years，named． I：opez d＇Aguira of Bifcay，a little ill favoured $\mathrm{Man}_{3}$ whom he had made his Enfign．Thefe two Wretches fell in love with their General＇s Lady，whofe Name was Agnes，and who had accompanied her Hufband in all his Travels；and thinking they had a favourable Occafion to，fatisfy their Luft and Ambition together，they engaged Orfua＇s Troop to revolt，and affafinated． him．

After the tragical Fact，the Traitors who committed it，who to the Number of feven or eight were in a ftrict Confederacy，elected Don Fernand de Guman for their King，whofe Mind was vain enough to receive that Ti － tle which became him fo little；but he did not enjoy it long；for thofe very Perfons that had given him the Quality of King，gave him his Death＇s Wound too ；and $d^{3}$ Aguira fucceeded him，who made himfelf King，not－ withftanding the Remonftrances of others．He gave all thofe he had gained to his Party to underftand，that he intended to make himfelf Mafter of Guiana，of Peru； and of the new Kingdom of Grenada；and promifed them all the Riches of thofe great Kingdoms．His Reign was fo bloody and barbarous，that the like Ty－ ranny was fcarce ever heard of in the World．Therefore the Spaniards，to this Day，called him the Tyrant．How－ ever he cominanded Orfua＇s Veffels，and went down the River Coca into Amazon，hoping to obtain one of thofe Kingdoms，and to make a confiderable Progrefs into it： But having entered the Amazon，he was not able to mafter the Current of it，and fo was conftrained to fuffer himfelf to be carried down to the Mouth of the River above a thoufand Leagues from the Place where he embarked，and was driven into the great Channel which goes to the North Cape，being the fame Way Orellana had taken before him．Going out of the Ama－ zon he came to the Inland of St．Margaret，which is to this Day called the Tyrant＇s Port．There he killed． Don Irean de Villa Andrada，Governor of the Inand，and Don Fohn Sermiento his Father．

After their Death，with the Affiftance of one Fobri Burg，he made himfelf Mafter of the Inand，plundered it entirely，and there committed unheard of Barbarities； he killed all that oppofed him，and paffed from thence to Cumana，where he exercifed the fame Cruelties．He after that defolated all thofe Coafts that bear the Name of Caraccas，and all the Provinces along the Rivers $V e_{-}$ nezuella and Bacho．He then came to St．Martba，where he put all to the Sword，and entered the new Kingdom of Grenada，defigning to march from thence through Quito into Peru．In this Kingdom he was forced to a Battle，in which he was utterly defeated and put to Flight，and all Ways being ftopped，when he found he muft perifh，he thereupon begun his Tragedy with a Sort of Bar－ barity without Example．He had a Daughter by his Wife Mendoza，that had followed him in all his Expeditions； and whom he loved entirely ：Daughter（faid he to her） I muft kill thee；I defigned to have placed thee on a Throne，but fince Fortune oppofes it I am not willing thou fhouldft live to fuffer the Shame of becoming a Slave to myEnemies，and of being called the Daughter of aTy－ rant and a Traitor：Die my Cbild，die by the Hand of thy Father，if thou baft not Courage enough to die by thy own： She，furprized at this Difcourle，defired him，at leaft，to give her fome time to prepare for Death，and to beg of God the Pardon of her Sins．This he granted，but， thinking her too tedious in her Devotion，as the was praying upon her Knees he hot her through the Body with a Carbine；but having not killed her outright，he ftuck his Dagger into her Heart，and The falling down at the Stroke，cry＇d，Ab Father，＇tis enough．Soon after her Death he was taken Prifoner and carried to the Ifland la Trinidada，where he had a confiderable Eftate．His Procefs was made，and he condemned to be quartered． He was publicly executed；his Houfes razed to the

Ground

Ground, and the Places where they ftood fowed with Salt.
I chofe to mention the Attempts of the Spaniards to penetrate into this Country on the South-fide ; firt, that I might end with thofe Attempts made by the fame Nation upon the North, by the great River Oronoco, or, as moft of our Englifl Writers write it, after the French Manner, Oronoque, by which alfo Sir Walter Raleigh made his Attempt. The firft Perfon we read of who engaged in this Defign of finding and making himfeif Mafter of the Inca's new City of Monoa, was Diego de Ordaca, who failed from Spain with a great Force for this Purpofe, in the Year 1531; which, by the way, fhews how early this Notion was taken up, and that it was not, as is commonly believed, invented by the Indians, to rid themfelves of Gonzalo Pizarro. This Diego de Ordaca, with fix hundred Foot and thirty Horfe, reached the Oronoco, where, by a Series of unlucky Accidents, too long for us to relate, his Expedition was totally ruined: Yet one of thefe Accidents proved the means (as the Spaniards pretend and believe) of making a full Difcovery of this famous City ; and the Story is thus told: When Ordaca came firf upon this Coaft, and anchored in the Harbour of Morequito, his Magazine of Powder, by fome Mifchance, blew up; and this being imputed to the Carelefnefs of fuon Martinez, his Mafter Gunner, he was condemned to be fhot for it; but the Seamen prevailed to have this Punifhment changed into his being put alone into a little Canoe, with his Arms only, and without any Provifions, and fo committed to the Mercy of the Wind and Waves.

In this wretched Condition he was found by fome of the Indians or Savages, who, having never feen a white Man before, paffed him about from one Place to another, till he came to the royal City of Manoa, where the King no fooner faw him than he knew him to be a Chriftian and a Spaniard, for this happened but a very litele after the Marquis Pizarro had deftroyed the Empire of the Inca's in Peru. This Prince, however, -received him civilly enough, though he was far from forgetting the Cruelties exercifed by the Spaniards on his Countrymen. He kept him feven Months at Marioa; but in all that time he was never fuffered to go without the City, or even to pafs through the Streets of it, without a Guard, and a Cloth bound over his Eyes. At the End of this Space, when it was perceived that Martinez had acquired, in fome Meafure, the Language of the Country, the King fent for him, and propofed two Things to his Choice, viz. either to remain with him as long as he lived, or to return into his own Country, and he chofe the latter ; upon which the King fent him under a Guard the fhorteft way to the River Oronoco; but, at the Time he difmiffed him, he was pleafed to beftow on him, as a Mark of his Favour, a confiderable Quantity of Gold, which, however, was taken from him by the Savages on the Frontiers, and by the Oronocoponi, a Nation fo called from their living upon the Banks of that great River. They left him, however, two large Bottles, in which they thought he kept his Drink, but which were really filled with Gold Duft, and thefe he brought along with him to the Ifland of Trinidada, from whence he went afterwards to St. Fuan de Puerto Rico, where he lived for fome Time, and from whence he intended to have procured a Paffage to Spain; but being feized there with a mortal Difeafe; after he had received the extreme Unction, and faw no Hopes of Life, he caufed his two Bottles of Gold to be brought, and the Account he had written of his Voyage : The Gold he gave to the Church for Maffes to be faid for his Soul, and the Relation of his Voyage was entered, at large, in the Regifters of the Chancery of St. Fuan de Puerto Rico.

To this Martinez the Spanifh Writers unanimoufly afcribe the Difcovery of this famous City, which he ftiled Manoa el Dorada or the Golden Manoa, on account of the prodigious Quantities of that Metal which he had feen there, in their Palaces, Temples, and other public Edifices, but more efpecially in their drunken Feafts, of which he gave the following very fingular Account : That thofe who drank with the King were quite naked, and having their

Bodies rubbed over with a kind of thin gummy Balfam, they were then powdered with Gold Duft, fo as to be gilt from Head to Foot; this Relation, whether true or falfe, proved of very fatal Confequence to the Spaniards, for it gave Occafion to, fome fay twenty, others fixty, feveral Expeditions in fearch of this golden City, all of them with very indifferent Succefs. Fuon Cortez attempted it with thirty Men, but neither he nor they were ever heard of more. Gafpar de Sylua, and his two Brothers, failed with two hundred Men from the Canaries to reinforce Diego de Ordaca; and, after taking a great deal of Pains, to no Purpofe, returned to the Illand of Trinidada, where they died.
Another Adventurer, in the fame way, was Don Pedro Hernondez de Serpa, who landed at Cumana, and afterwards marched by Land on the Banks of the Oronoco till he came to an Indian Nation called Wikiri, who oppofed his further Paffage, and attacked his Men with fuch Fury that only eighteen of his Spaniards efcaped from the Battle; yet this Enterprize was of particular Service to Sir Walter; for it fell out that when Captain Amias Prefion took the City of St. Fago de Leon by Storm, he made one of thefe Adventurers Prifoner, who gave him a large Account of the vaft Riches the Spaniards hoped to find in this Country, which coming to the Ears of Sir Walter Raleigh, induced him to make diligent and ftrict Search into the Original of this Story, whence he came to collect a Multitude of Hiftories, relating to this Matter of which we have given the Reader only a few, that he might fee upon what Grounds this Expedition was undertaken, or rather what Reafon Sir Walter Raleigb thought fit to affign for his Voyage, in order to draw fuch an Approbation of it as was neceffary, from thofe whom nothing but a Shew of vaft and immediate Profit could tempt; for, I mult confefs, it feems very doubtful to me, whether Sir Walter Raleigb gave entire Credit to thefe Accounts, or not ; but whatever his own Opinion was, he had certainly a Right to ufe them as popular Arguments for promoting his Defign, fince no Politician ever doubted that it is lawful to cheat Men as well as Children for their own Good. But he took care to provide Reafons of another Nature, for Mien of other Minds: He fhewed them that of all the Countries in America the moft profitable, the beft fituated, the eafieft planted, the moft defenfible, was Guiana. Thefe Notes of Excellency I have collected from his Writings upon this Subject, which are very artfully immethodical, and, under an apparent Carelefnefs of Stile and Order, are fo wrote, as to affect the IMind of the Reader with an Opinion, that he has made Difcoveries in Sir Walter's Treatife, by penetrating into thofe Secrets, which he meant to conceal ; while, alas! the true Secret is, that he meant thus to catch us, and make every Man's Underftanding revolt in his Favour.
It was neceffary, in his Time, and more efpecially to him ; and therefore his Defign is as commendable as his Execution is inimitable. But that he might proceed cauticuly in an Affair of fuch Importance, he fent before him one Capt. Wbiddon, to take a View of the Coaft, that he might be perfectly informed of the State things were then in, and thereby become more able to take the proper Meafures for overcoming thofe Difficulties, which a Man of lefs Sagacity would have efteemed-infuperable. This Gentleman did his Bufinefs effectually, though he met with fome Obftruction from the Force, and fuffered much greater Inconveniencies from the Frauds, of the Spaniards, who were at that time bent upon the fame Defign, and labouring with the utmoft Diligence to difcover and fecure this valuable Country.

Among other Adventurers there was one Gonzales Ximenes de Cafada, a Man of greater Courage than good Fortune; who, after having had a large Share in the Conqueft of Nero Grenada, attempted to penetrate into Guiana; but after a great Expence, and incredible Fatigue, to no Purpofe, was obliged to return, difappointed indeed, but not in Defpair. This Gentleman had an only Daughter, whom he married to Don Antonio de Berreo; to whom, - with a large Fortune, he bequeathed this Expedition, taking from him an Oath, that he would profecute the Difcovery and Conqueft of Guiana,

## Chap. III. of the ENGLISH in AMERICA.

to the laft Hour of his Life. He, to fulfil this Obligation, undertook this Enterprize, with feven hundred Horfe, attended by a vaft Number of Indian Slaves; but after marching five hundred Leagues in Purfuit of this Project, he was obliged to return, but brought with him from the Frontiers of Guiana forty Plates of Gold, and many other valuable Curiofities, fufficient to fortify him in his Refolution not to abandon the Defign. It was this Berreo that Captain Wbiddon had to deal with, and of whom he made a very bad Report on his return.
When Sir Walter's P'oject was ripe for Execution, he was affifted by the Lord Admiral Howard and Sir Robert Cecil, fo that in the beginning of the Year 1595 he was ready to proceed ; and it appears, from his Relation, that he had in the whole five Ships. He does not tell us the Name of his own, which he commanded in Perfon ; though, as to the reft, he diftinguifhes them plain enough; fo that we perceive the Lion's Whelp, which was the Lord Admiral's, was commanded by Captain George Gifford; Captain Keymis had the Command of a Galego, befides a Bark, which was committed to Captain Crofs, and another to Captain Calfeld. The whole Number of Men in this Fleet is not mentioned; but the felect Company of Officers, Gentlemen, and Soldiers, he ufed in his Difcoveries, exceeded not one hundred.
Thus prepared he departed from Plymouth on the 6th of February following, and failed to the Grand Canaries, and fo to Teneriff, where he waited a while for the Lion's Whelp, and for Captain Amias Prefon. But this Captain difappointed him, and went upon another Adventure, which proved fome Difadvantage in the Profecution of his Difcoveries. After waiting feven or eight Days, to no Purpofe, he failed with his own Ship and a Bark, commanded by Captain Crofs, to the Inand of Trinidada, where he arrived the 22 d of March, and fpent a confiderable Space of Time in viewing that Inland, examining all its Ports and Havens, and even every little Creek, with infinite Care and Exactnefs. The Reafons which moved him to this Stay, were two ; the firft, that he might revenge himfelf upon Berreo for the Injuries he had done Captain Wbiddon's People, eight of whom he betrayed into his Hands, and then ufed them barbaroully; the other was, that he might obtain fome Account of the Continent, and of the moft proper Method for entering into Guiana, in both of which he fucceeded, in fpite of all the Care the Spanifo Governor could take to hinder it. At laft, perceiving that the Spaniards were contriving Meafures for his Deftruction, and knowing there could be nothing more fatal than to leave an Enemy at his Back, he refolved to make himfelf Mafter of this Place, which he knew would gain him the Friendfhip, as well as fecure him the Obedience, of the Indians, who by the Spaniards were moft cruelly oppreffed. Accordingly he fent Captain Calfeld to attack the Main-guard with fixty Men, and, following himfelf with forty more, reduced the Town of St. 70 ofeph without much Trouble.

The Inhabitants he fet at Liberty, keeping only the Governor and his Spaniards Prifoners; and afterwards, at the Requeft of the Indians, burnt the Place; but though he gratified them in this Refpect, yet, in all others, he acted towards his Prifoners, and more efpecially towards the Governor, with fo much Civility and Kindnefs, that he drew from him a faithful Account of all his Adventures in Purfuit of the Defign before-mentioned. The fame Day that Raleigb made his Conqueft arrived Captain Gifford and Captain Keymis, and in their Ships divers Gentlemen, and others, which to his little Army was a great Succour and Solace. Then, proceeding upon his Difcovery, Raleigh firt called all the Chiefs of the Ifland together, who were Enemies to the Spaniards; for fome of them Berreo had brought out of other Countries, and planted there to eat out and wafte the Natives; then by the Indian Interpreter, whom he carried out of England, he made them underftand, "He was the Servant of a Queen, who was the great${ }^{\text {}}$ "e ft Cazique in the Noirth, and a Virgin, who had more Caziques under her Command than there were Vol. II. Numb, LXXXIV.
"Trees in that Inand; that flie was an Eneriny to the "Caftelans, in regard of their Tyranny and Opprefs "fion; and, having freed all the Coafts of the northerra " World from their Servitude, had fent him to free "s them alfo; and withal, to defend the Country of "Guiana from their Invafion and Conqueft." Then he fhewed them her Majefty's Picture, which they fo admired and honoured, that it had been eafy to have made them idolatrous thereof.
The like and larger Speeches he made in a fơtemn Manner to the reft of the Nations, both in his Paffage to Guiana and to thofe of the Borders, fo as in that part of the World the Queen of England's Fame was diffufed, with great Admiration. This done, Raleeigb returned to Curiapan ; and though he had learnt of Berreo that Guiana was fome hundred Miles further than the Accounts he had received of Captain Wbiddon had reprefented it, he kept the Knowledge thereof from his Company, who he much feared would have been difcouraged thereby from profecuting the Difcovery. When Raleigh had further gathered from Berreo the Proccedings of the paft Adventurers and his own, he told him he was come upon the fame Defign, and was refolved to fee Guiana. Berreo ufed many Arguments to diffuade him; as that he muft venture in very light and fmall Boats, to pafs fo many dangerous Shallows, and could not carry Victuals enough above half the way ; that none of the Country would fpeak with him, and if he followed them would burn their Towns; befides, the Way was long, the Winter at hand, and the Rivers beginning to fwell; but above all, that the Kings and Lords who bordered upon Guiana, had decreed that none of them fhould trade with any Chriftians for Gold, becaufe the fame would be their own Overthrow. Raleigh, refolving however to make trial, directed his Vice-Admiral Captain Gifford and Captain Calfeld to turn Eattward againft the Mouth of the River Capuri, and gave thern Inftructions to enter at the Edge of the Shole, and upon the beft of the Flood to thruit over, but they laboured in vain, nor did the Flood continue fo long, but the Water fell before they could pafs the Sands, tho' they ufed all the Skill and Diligence they could.

Then Raleigh fent one King, Mafter of the Lion's Whelp, to try another Branch, called Amana, if either of the fmall Ships would enter ; but when he came to the Mouth, he found it like the reft ; after him went Hobn Dorvglas, who difcovered four fair Entrances, but all fhole and fhallow in the Bays leading to them. In the mean time Raleigh, fearing the wort, caufed his Carpenter to cut down an old Galego Boat, to fit her with Banks for Oars, and fo as fhe might draw but five Feet. In this went Raleigh with Gentlemen and Officers, to the Number of threefcore; in the Lion's Whelp-Boat and Wherry they carried twenty; Captain Calfield, in his Wherry, carried ten; and a Barge of Raleigb's ten more; this was all the Means they had, having left their Ships at Curiapan, to carry a hundred Men with Weapons and Provifions for a Month, expofed to all the Extremes of the Weather, all the Hazards of the Water, to lie open to the Air, and upon hard Boards by Night in Storms of Rain, or under the burning Sun'by Day, to fimell the wet Clothes of fo many crowded together, the dreffing of their Food, and that moftly ftale Fifh, in the fame Place, to be in fuch a Labyrinth of Rivers, in fuch a remote unknown Region; what Prifon could be more loathfome and unhealthy, what Profpect more fearful and defolate? At firft fetting out they had twenty Miles of a high Sea to crofs in thefe crazy Boats, fo that they were driven before the Wind into the Bottom of the Bay of Guanipa, inhabited by inhuman Cannibals, who fhot poifoned Arrows, and from thence to enter one of the Rivers of which Dowoglas had brought Tidings. After four Days they got above the Force of the Tide, and might have wandered a Year about, and never been able to extricate themfelves; in fuch a general Confluence or Rendezvous of Streams were they now bewildered, and fo refembling one another, as not to be diftinguifhed, but imperceptibly circulating and driving them about into the fame Place where they had been before, paffing between many Iflands and Streights, whofe

Borders

Borders were fo thickly arched and overfhadowed with Trees, as bounded their Sight to the Breadth of the River and the Length of the Avenue, while the Gloominefs of the Profpect added Horror to the Loathfomnefs of the Places in which they were confined.

At length, on the 22d of May 1595, they fell into a River, which, becaufe it had no Name, they called the Red Crofs River, there being the firft Chriftians who ever entered the fame: When they drew into a Creek, which led to a Town upon this River, their Indian Pilot, named Ferdinando, landing, was fet upon by his Countrymen, who hunted him with Dogs; whereupon Raleigh feized an old Man paffing that way, and threatened to cut off his Head, if he did not procure his Pilot's Liberty; but he, by his Agility, foon efcaped them, and fwam to Raleigh's Barge; however, they kept the old Man, and ufed him kindly, affuring themfelves of ufeful Information from a Native, fo long converfant in thofe Parts. And indeed, but for this Accident, they had never found their Way forward to the Country they fought, nor back to that where their Ships lay; the old Man himfelf being often in the utmoft Perplexity which River to take, fo numerous and intricate they were. The People who inhabit the Countries at the Mouth of this great River, are comprehended under the general Name of Tivitivas, a bold and hardy Race of People, who know the Value of Liberty, and have Courage enough to defend it: They live in Houfes during the Summer, or dry Seafon, but in the Wet or Winter Months they live in little Huts, which are built upon Trees, a Thing common enough on this Coaft and even in the Eaft Indies where the Countries are exceffively wet.

After this 'Raleigh's Barge ran a-ground, and that with fuch force, that it did not feem very probable they fhould be able to get her off; fo that the Difcovery feemed at a ftand; but on the fourth Day after this Accident happened they fet her on float, and, ftriking into the Amana, one of the nobleft Branches of the Oronoco, they continued their Voyage, but with incredible Fatigue. As they were now within five Degrees of the Line, Sir Walter was forced to keep up their Spirits by directing his Pilots to give them Hopes from time to time that their Labours would foon have an End. At length the old Indian Pilot they had on board, perceiving that their Provifions were quite exhaufted, and that they were in Danger of perifhing without an immediate Supply, told them, that if they would venture up a River on their right Fiand, he would bring them to a Town where they might be fure of Refrefhments, and be able to return before Night. Sir Walter took him at his Word, and went immediately into his Boat with eight Mufketeers, followed by the Captains Gifford and Calfeld in their Wherries, with eight Men a-peice. But it appeared that the Indian Pilot had learned Sir Walter's Art, for they not only rowed all Day, but all Night, without feeing any Town, and a lefs prudent Captain than he would have been tempted to have punifhed the Pilot for giving them falfe Hopes. Yet about one the next Morning they reached this long expected Town, and obtained thofe Supplies of which they ftood fo much in need. In the mean time the Company in the Galley manned out a Boat in fearch of them, but next Day they returned and continued their Courfe. After they had made this hungry and hazardous Voyage for fourfcore Miles in that River, which, befides other ftrange Fifhes of marvellous Bignefs, abounded with Crocodiles, whence the People named it the River of Lagartis, Raleigb had a very proper young Negro attending upon him in his Galley, who, leaping out to fwim in the Mouth of this River, was in the Sight of them all inftantly devoured by one of thefe amphibious Animals.

Not long after, being again in want of Victuals, they took two Canoes laden with excellent Bread, being run afhore by the Indians in them, called Arreaycas, who fled to hide themfelves in the Woods, fearing, through the Prepoffeffions of the Spaniards, that Raleigh and his Company were Cannibals. Raleigh, purfuing them in Hopes of fome Intelligence, found, as he was creeping through the Bufhes, a Refiner's Bafket; in which were Quickfilver, Salt-petre, and divers other Materials for
the Trial of Metals, and alfo the Duft of fome Ore that had been refined. But in two other Canoes that efcaped them, they heard of a good Quantity of Ore and Gold. Raleigh then landed more Men, and offered $500 \%$ to any of his Soldiers who fhould take one of the Spaniards. He found the Arwaycas hiden in the Woods, who had been Pilots to the Spaniards, of which Raleigb kept the Chief for his Pilot, and carried him to Guiana; by whom he underftood in what Parts the Spaniards laboured for Gold, which he divulged to two of his Company, knowing both the Seafon of the Year and other Conveniencies would be wanting to work any Mine himfelf. After recruiting his People with wholefome Refrefhments, he continued his Voyage: The Men feemed now quite as well pleafed as their Commander had been from the Beginning, and of their own accord offered to go as far as he would; fo that on the I 5 th Day from their leaving their Ships he entered the great River Oronoco, and had an Opportunity of fatisfying himfelf as to the Number and Names of the Indian Nations that inhabited both Sides of it.

After having paffed the Mountain Aio, and a great Ifland which he mentions he reached on the fifth Day of his entering the great River aforefaid, as high as the Province of Aromaia, and anchoring at the Port of Morequito, which is full three hundred Miles within the Land, upon the faid great River Oronoco, he fent a Meffenger to the old King of Arumaia, named Topiowary, who came the next Day before Noon on Foot from his Houfe, and returned the fame Evening, being twentyeight Miles backwards and forwards, though himfelf was one hundred and ten Years of Age. He had many Attendants of both Sexes, who came alfo to wonder at the Englifh, and brought them great Plenty of Flefh and Fifh, with divers Sort of Fruits. When the old King had refrefhed himfelf a while in the Tent, which $R a$ leigh had caufed to be pitched for him, they entered by the Interpreter into Difcourfe about the Murder of Morequito his Predecefior, and the other Barbarities of the Spaniards. Then Raleigh acquainted him with the Caule of his coming thither, whofe Servant he was, and that it was his Queen's Pleafure he fhould undertake this Voyage for their Defence, and to deliver them from the Tyranny of the Spaniards, dilating at large (as he had done before at Trinidada) on her Majefty's Power, her Jutice, and her Clemency towards all oppreffed Nations; all which being with great Reverence and Attention received, he began to found the old Man touching Guiana, as what Sort of Commonwealth it was; how governed; of what Strength and Policy; of what Extent; with whom in Alliance or Enmity; laftly, the Diftance and way to enter the Heart of the Country. The King gave fuch an ample and perfect Account of thefe Particulars, that Raleigh wondered to find a Man of fuch Gravity, Judgment, and good Difcourfe, without the Help of L.carning or Breeding.

After his Departure Raleigh failed Weftward to view the famous River Caroli, both becaufe it was fo wonderful in itfelf, and led to the frongeft Nations of all the Frontiers, who were Enemies to the Epuremei, Subjects to the Inca or Emperor of Guiona, and Manoa: Even when he was fhort of it, or lower down than the Port of Morequito, he heard the roaring Falls of this River; but when he entered it with his Barge and Wherries, thinking to have gone up fome forty Miles to the Cafiagotos, he was not able, with a Barge of eight Oars, to row one Stone's-throw in an Hour, and yet the River is as broad as the Thames at Woolwich. Therefore encamping on the Banks, he fent off an Indian to acquaint the Nation upon the River of his Arrival and his Purpofe, and that he defired to fee the Lords of Canuri, who dwelt in that Province. Then one of the Princes came down, named Wanuretona, with many of his People, and brought great Store of Provifions, as the reft had done. By him Raleigh found the Carclians were not only Enemies to the Spaniards, but moft of all to the Epuremei, who abounded in Gold; and that there were three mighty Nations at the Head of that River which would join them againft them; he was further informed, by one Captain George whom he had taken with Berreo, that near the Banks of this River there was a great Silver Mine, but the Rivers were now

## Chap. III. of the ENGLISH in AMERICA.

all fo rifen, that it was not poffible for the Strength of Men, with any Boat, to row againft the Stream. Therefore he difpatched a Party of between thirty and forty to coaft the River by Land, while himfelf with a few Officers and half a dozen Shot, marched over Land to view the ftrange and.wonderful Overfalls of the faid River Caroli, which roared at fuch a Diftance, and the Plains adjoining' with the reft of the Province of Canuri.
When they had got to the Top of the firft Hills, overlooking the River, they beheld that prodigious Breach of Water which poured down Caroli, and how it ran in three Streams for twenty Miles together ; no lefs than ten or a Dozen of the fteep Cataracts appeared in Sight, each as high above the other as a Church Tower, which rufhed down with fuch Violence, that the very Rebound of the Waters made the Place feem as if it had been all over covered with a great Shower of Rain; and in fome Places they took it at firft for a thick Smoak which had rifen out of fome great Town, till they drew nearer down in the Valley to this Thunder of Waters, where they better difcerned and diftinguifhed the Effects of it. And here Raleigh fays he never faw a more beautiful Country, nor more lively Profpects; the Hills fo raifed up and down about the Valleys; the Waters winding into fuch various Branches; the Plains fo clear of Brufh and Shrub, and covered all with fair green Grafs; the Ground of hard Sand, and eafy for the March either for Horfe or Foot ; the Deer croffing in every Path; the Birds towards the Evening finging on every Tree a thoufand feveral Tunes, with Cranes and Herons, of White, Crimfon and Carnation, perched along the RiverBanks; the Air refrefhed with gentle eafterly Breezes; and every Stone they flooped to take up, promifing either Gold orSilver by its Complexion. His Company, at their Return, brought feveral of thofe Stones home, which they rather found coloured outwardly like Gold, than any of that Metal fixed in them; for thofe who had leaft Judgment or Experience, kept only fuch as glittered, and would not be perfuaded but they were rich, becaufe they fhone; and thereby bred an Opinion that all the reft were no better. Yet fome of thofe Stones Raleigh fhewed afterwards to a Spaniard of the Caraccas, who told him it was El Madre del Oro, that is, the Mother of Gold, and that the Mine was farther in the Ground: He received alfo many other Informations from thefe People, fome of which, however, feemed to border upon thofe fabulous Accounts delivered by Antiquity, but always fufpected by Men of Senfe; which Raleigh reports, but with due Caution.

While he lay at Anchor near the Banks of the Caroli, he fpared no Pains that were requifite to gain a thorough Knowledge of the Names and Manners of the feveral Indian Nations that lay farther within the Country, which was all, in that refpect, left in his Power; there being many Reafons which rendered his farther Stay improper, and his Return to his Fleet a Point of abfolute Neceffity; for he had been now abfent above a Month, had wandered in that Space above four hundred Miles from the Sea Coafts; and befides the Winter was comeing on very faft, and the great River began to rife. Befides all this, they had no Inftruments with them to open Mines ; and if they advanced farther, were to act againft a numerous, civilized, and warlike People; fo that, having done more with a handful of People, and that too in fewer Days than the Spaniards had been Years in fearching for this Country, he very wifely refolved to fubmit to Neceffity, and feek the fhorteft Way back to his Ships. Yet as he returned to the Eaft, he fpent fome Time in difcovering the River towards the Sea, which he had not furveyed, and which he thought alfo neceffary to do; in a Day's time he arrived again at the Port of Morequito; for, gliding down the Stream, he went without Labour, though againft the Wind, little lefs than one hundred Miles a Day ; when he came to anchor, he was very defirous of farther Conference with old Topiowary, who foon came with a Multitude of his People flocking down to Raleigb's Tent upon the Shore, loaded with Prefents.
When the old King was refrefhed, and the Croud reEired, Raleigh, by his Interpreter, entered into a long

Conference with him; telling him; that as both the Epures mei and the Spaniards were his Enemies, the one having conquered Guiana already; and the other endeavoured to get it from both, he defired to be inftructed, both in the beft Way to the golden Parts of Guiana, and the civilized Towns of the Inca. The King anfwered, He could not perceive Raleigb meant to proceed to the great City of Manoa, becaufe neither the Seafon of the Year; nor the Strength of his Company, would enable him; for he remembred that in the Plains of Maqureguarai, the firt Town of Guiana, where all the Gold Plates were made which were fcattered over the neighbouring Nations, and above four Days Journey from his own, three hundred Spaniards were deftroyed who had no Friends among the Borderers ; he therefore advifed Raleigb hever to invade -the ftrong Parts of Guiana without the Help of all thofe Nations which were their Enemies. Raloigh afked, If he thought the Company he had with him were fufficient to take that Town? The King thought they were, and offered to affift him with all his Borderers, if he would leave him a Guard of fifty Men upon his Departure:
But Raleigh, knowing if they fhould efcape the Guianians, the Spaniards, expecting Supplies, would repay upon him his Treatment at Trinidada, very plaufibly excufed himfelf. Hereupon the King defired he would forbear him and his Country at this Time; for if the Epuremei fhould know he had given Raleigh any Aid or Intelligence, he fhould foon be over-run by them, nor could he avoid the Spaniards if they thould return, who had before led him, feventeen Days, in a Chain like a Dog, till he paid a hundred Plates of Gold and feveral Chains of Spleen-ftones, for his Ranfom; but if Raleigb would return in due Seafon next Year, he would engage all the Borderers in the Enterprize; for that he could not more defire to make himfelf Mafter of Guiana, than they to affift him, having been plundered in their Wars by the Epuremei, of their Womer, whom to recover, they would willingly renew the War, without Hopes of farther Profit ; for the old King complained of it as a Matter of grievous Reftraint, that now they were confined to three or four Wives apiece, who were wont to enjoy ten or a Dozen, while the Lords of their Enemies had no lefs than fifty or a hundred ; but they feem to have had a political Reafon for this Recovery, to ftrengthen their Alliance, and increafe their Forces ; thofe Frontiers having been much depopulated, between the Subjects of the Inca and the Spaniards.
Raleigh, after farther Confultation, finding it abfolutely improper, either to leave any of his Company, or to attempt War upon the Epuremei till the next Year, applied himfelf now, only to learn how thofe People wrought thofe Plates of Gold, which were difperfed about, and how they divided it from the Stone. The King told him, that moft of their Plates and Images were not fevered from the Stone ; but that, on the Lake of Manoa, and many other Rivers thereabouts, they gathered the perfect Grains of Gold, and, mingling a Proportion of Copper, the better to work it, put it in a great earthen Pot, under which they increafed the Fire by the Breath of Men through long Canes faftened to the Holes under the faid Pot, till the Metal diffolved, which then they caft into Moulds of Stone and Clay, and fo made thefe Plates and Images; whereof Raleigb brought two Sorts into England, more to fhew the Manner of them, than the Value ; for he gave more Pieces of Gold of the twenty Shilling Coin, with the Queen's Effigy upon them, among thefe People, to wear in Honour of her Majefty, and to engage them in her Service, than he received, fo little did he make his Defign of Gold known to them. He brought away with him, however, various Samples both of the Spar and of the Ore, which were fufficient to juftify his Reports of the Riches of this Country; and he likewife brought with him the higheft Teftimony that could well be given him of the fincere Love and entire Confidence of the Natives, fince old Topiorvari, one of the wifeft, and none of the leaft powerful; Princes in that Country; fent over his own Son Cayworaco into England, where he was baptized with much Ceremony by the Name of Gualtero. On the other hand, Sir Walter left behind him, at their own Requeft,
two of his Company, viz. Francis Sperry who was an excellent Draughtfman, and undertook to defcribe, as he did, all the Country very exactly; and Hugh Goodwin, a Boy who waited upon Sir Walter, and who was to learn the Languages of the Indian Nations, which he did to great Perfection, but was unfortunately devoured by a wild Beaft.

After this, a Cazique whofe Name was Putoma, and another whofe Name was Warapana, offered to conduct him to a Gold Mine, which they accordingly performed; but the Weather being extremely bad, Sir Walter was defirous to make as much hafte back as it was poffible to his Ships, which he accordingly did ; but when he found himfelf on the Sea Coaft, and in a manner at the End of his Labours, he met with a moft dreadful and dangerous Storm, which drove them almoft to their Wits-end ; and at length, in a dark Night, and in the midft of the Tempeft, he quitted his Galley, which he found amongft Sholes and Sands, and in his Boat thruft out to Sea with fo much good Fortune, however, that the next Morning, by Nine o'clock, they had Sight of the Inland of Trinidada, and rowing cautiounly under the Shore, arrived fafely at Curiapan, where their Veffels lay at Anchor. In all this tedious and furprifing Expedition, wherein they went through fuch a Variety of Dangers, being always alike expofed to the Severities of the Weather, and to the Attempts of their Enemies, abfolutely wanting moft of the Conveniencies, and frequently even the Neceffaries, of Life, except the Negro devoured by the Crocodile, he loft not fo much as a fingle Man, which amazed the Spanifb Governor Berreo, to the higheft Degree, who opénly profeffed his Admiration of Sir Walter's Conduct and Courage, which fo vifibly furpaffed thofe of all the Spanifb Captains employed in this Service, from Orellana down to himfelf.

After a fhort Stay, to put his little Squadron in order, he failed from Trinidada on his Return to England, and in his Paffage home, landed and burnt feveral of the Spanifh Towns upon the Coaft; and on the 13 th of $7 u l y$ he met with Captain Prefton, under Cape St. Antonio, in the Ifland of Cuba; and on the 20th of the fame Month purfued his Voyage to England, where he fafely arrived, his Expedition being exceedingly applauded in Profe and Verfe by all the reputed Wits of thofe Times.

But it was not long before thofe who envied Raleigh began to circulate new Calumnies, framed on Purpofe to depreciate his Difcovery. It is of fome Confequence, even at this Day, to examine and expofe thefe lying Stories, becaufe they have moft unaccountably found fo great Credit. with the Generality of Mankind, that though they commend Sir Walter's Defign, as fuppofing it againft the Spaniards, yet they queftion his Veracity, with regard to the Produce, Value, and Expediency of fettling Guiana, which is the Reafon (at leaft it ought fo to be) why it was not afterwards attempted, when the Importance of Plantations were better underftoud. The firft Suggeftion was, that this was a favourite Scheme, perhaps a pleafing Vifion of Sir Walter Raleigb's; and there was no Reafon to yield implicit Credit to any Man's Dreams, how wife and learned foever. It is really ftrange, how far fuch foolifh Infinuations as thefe prevail, and how bafely Mankind repay the greateft Services that can be done them. When Columbus opened his Scheme in Poriugal, it was reputed a mere Fancy and a Contrivance to gain Employment; when Faufus invented Printing, he was treated by fome as a Conjurer, and by others the Art was condemned as prejudicial to the Book-Scriveners; and at the Time Harvey taught the Circulation of the Blood, he was almoft generally run down; and that, according to the Phyficians of thofe Times was treated as a ridiculous Fiction, which is now regarded as the very Foundation of the Art of Phyfic. The Truth feems to be, that what is pervaded and clearly comprehended by a firft-rate Genius, is a mere Cloud, Vifion, or airy Appearance, in the Judgment of common Men, who, either really forgetting, or affecting not to diftinguifh, this Difference in Capacities, would have their Judgments take Place, and the Ignorance of the Many rather reputed Wifdom than the Sentiments of a fingle Man ; and thus, between Folly and Arrogance,
the Advantages which might be drawn from fuch high and rare Spirits, if due Diftinction were made, are abfolutely loft, and the Difcoveries in the World of Science (always atchieved by fuch Men) poftponed for Ages. Sir Walter Raleigh was aware of this, which induced him to take fo much Pains in tracing the Know. ledge of the Spaniards, and in making what they knew, and had endeavoured on this Subject, public, by which he thought he plainly proved this was no Invention of his, but only an Improvement on the Notions of other Men. He obferved likewife, that the French, at the very Time he attempted it, had a View to this Difcovery; and, it is very certain, that fince his Time, Count Pagan recommended fuch a Settlement to Cardinal Richelieu, fo that the calling this a Whim of Sir Walter's, as many did then, who are believed; now is to talk childifhly and ignorantly on a very important Subject.

The next Infinuation was, that there was no fuch thing as Gold Duft, Gold Plates, or Gold Mines there, but that all was mere Invention, calculated to recommend the Project. To this Sir Walter oppofed three Reafons, each of which was a fair and full Anfwer, and indeed wholly deftroyed the Objection. For firt, he fhewed from the Situation, it was impoffible this Country fhould not be rich, as having Nere Grenada on one Side, Peru at its Back, and in that Climate which affords the richeft Mines of Gold and Silver in America; to which, we may add, the Difcovery of the Brazil Treafures unknown in his Age. He next pleaded the Authority of the Spaniards; and that with refpect, not to Opinions only, but as to Facts; for he annexes to his Voyage Certificates of confiderable Quantities of Gold, which they had drawn from that Country, and which made them fo eager to difcover it fully. This too has been confirmed by Father D'Acugbna, and other Writers, fince his Days, who very pofitively maintain the very fame thing. He laftly urges his own actual Experience, producing very ample Specimens of Gold Ore from thence. Upon fome Doubt whether the Stones by him produced were Gold Ore or not, he caufed them to be examined by Refiners. From fome Mr. Weftroood, who lived in Wood-freet, drew at the Rate of twelve or thirteen-thoufand Pounds a Ton; fome, tried by Meffrs. Bulmar and Dimock, held after the Rate of twenty-three thoufand Pounds a Ton, and fome, examined by Mr. Palmer, Comptroller of the Mint, and Mr. Dimock, held almoft twenty-feven thoufand Poundsin a Ton. Yet after all this another Queftion was ftarted, whether Ralcigh did not carry this Gold from Africa as well as bring it from Guiana; to which he anfwered, that from the very Mines in that Country, he helped to dig it himfelf, though with no fitter Inftrument than his Dagger.

Another Head of Calumny was, that he chiefly aimed at attacking and plundering the Spanifb Towns upon the Coafts; and that thefe were in reality Raleigh's Gold Mines in Guiana. But this was fo far from the Truth, that one principal Reafon, which Sir Walter affigns for fixing here, was, that the Catholic King had neither any Right to, or Poffeffion of, this Country. It is alfo moft evident from Sir Walter's own Accounts, that, except at San-Fofepb in Trinidada, he took nothing in the Placeswhich he plundered in that Country, and from this very Inftance he recommends planting rather than privateering. On the whole, therefore, this Affair has been miftaken from firft to laft: Sir Walter's Propofal was wife and well founded; his Defcription of this Country true and very exact, his Expectations, though fanguine, perfectly well grounded; and his own Voyage a very pregnant Proof that fuch an Eftablifhment is highly practicable. If any fhould enquire what Views I have in labouring this Topic fo much, I fhall fairly anfwer, many: I thought the Nature of my Subject led me to it ; I conceived that Sir Walter's Memory demanded this Piece of Juftice ; and I remembered that we, are at War with Spain, Guiana ftill unfettled; and that we may, as the Phrale once was, T A K E and HOLD.
15. We are now to fpeak briefly of fuch other Tranf actions under the Reign of this great Princefs, as may contribute to explain fome Paffages in this Section, and

## Chap. III. of the ENGLISH in AMERICA.

fet what follows in a clear Light. She encouraged Privateers immediately after her coming to the Crown, as the moft effectual Means of raifing a Fleet in a fhort time; but when the found this End anfwered, fhe brought that Practice under due Regulations. She was extremely careful in giving all poffible Encouragement for Difcoveries, and it was with this View that fhe promoted, as we fhall fee hereafter, feveral Enterprizes for finding out a Paffage to the Eaft-Indies, by the North-eaft and by the Northweft. The Ruffia Trade the encouraged ; and her Conduct in refpect to that Nation was fuch as raifed her Credit in thofe Parts of the World, to the higheft Degree that can be imagined. The King of Sweden was fo charmed with what Fame reported of the Queen, that he put himfelf into the Number of thofe who were Suitors to her for Marriage. The King of Denmark afked her Leave to tranfport Corn through the narrow Seas, which, to fhew her Dominion over them, fhe once refufed ; and the HanseTowns having prefumed to fend a Fleet through them without her Leave, fhe feized and confifcated their Ships; as for the Dutch, they more than once offered to fubmit themfelves to her Government, and in the moft public manner acknowledged that they owed the Recovery of their Liberty to her Succour and Protection ; but the was wife enough to forefee, that as they grew in Power they might alter their Notions, and fhe took care to provide againft this, by procuring the Keys of Holland and Zealand to be put into her Hands, by which Means fhe was able to lock up their Commerce, and naval Force, at her Pleafure.

She kept France in great Awe, even when it was governed by Henry IV, the wifeft, braveft, and beft Monarch of the Houfe of Bourbon. She ruined the naval Power of Spain, then the moft formidable in Europe, and under the Direction of a Prince whofe Abilities were equal to every thing but his Ambition : She encouraged Expeditions to the Weft Indies, as long as they proved beneficial to her Subjects ; and when they appeared to be no longer fo, fhe very prudently reftrained them. It was under her Reign, that the Englifh firf attempted the Paffage into the South Seas by the Streights of Magellan; which proved of great Confequence, not only in that Part of the World, but alfo in opening a Way to the Eaft Indies, as we have already fhewn in the former Parts of this Work, to which thofe Paffages properly belonged.

She brought, by affording the Means of employing them, the building of Ships into Ufe, and by Degrees to great Perfection, which was of infinite Benefit to the Nation, and at the fame time delivered us from the heavy Inconvenience of hiring Veffels from Foreigners whenever the public Occafions demanded a large Fleet; but moft of thefe Things (though incident to my Purpofe) have been already infifted on by others, and therefore I am content barely to mention them, that I may have room to mention fome other Things of no lefs Importance, though not fo much attended to. We have fhewn how wretched a Situation Things were in at the Beginning of her Reign, and how fuddenly and how effectually fhe changed the Face of our Affairs ; and we have in fome meafure pointed out the manner in which this was done ; but there remain fome other Points worthy the Reader's Confideration, which I fhall next handle with all imaginable Brevity.

Queen Elizabetb taught all her Subjects Induftry and Application by her perfonal Conduct; The was conftantly attentive to every Branch of her Government ; knew exactly what was done, what might be done, and what was omitted; fhe underftood moft Things herfelf, and what fhe did not underftand, the committed to the Infpection of fuch as were reputed to be bert acquainted with them; the was now in refolving, and quick in Execution; the heard all that could be faid for, or againft, Sir Froncis Drake, before the went on board his Ship, or gave him any public Marks of her Favour ; but afterwards fhe would never permit his Conduct to be cenfured.
She was fparing in her Honours, becaufe the was refolved to ufe them as Rewards; and fhe knew that in order to this it was requifite they fhould not become
cheap; fhe never employed any but capable Minifters: for the had Men for Shew, and Men for Service ; and in nothing demonftrated her great Capacity more than in her Choice of Servants. Secretary WVIFngbam, and after him Secretary Cecil, had the Department of the Marine, and both underftood it well, fo that whoever applied to them, was to make out the Reafon and Probability, as well as the Profitablenefs, of his Project. This produced the many excellent Pieces which are preferved in Hackluit, particularly Sir Fumip brey Gilbert's Difcourfe of the Northweft Paffage, Sir George Peacbam's Benefits of weftern Planting, with Mr. Harriot's Account of Virginia, and many fuch Things. By this Means a Spirit of ufeful Knowledge was promoted and kept up; all Things were thoroughly fifted before Encouragement was given, and due Regard had to what fucceeded, to what did not, and to the Reafon and Caufes of both.

She took fome Share of moft Expeditions of Confequence, as well to keep up the Spirits of thofe concerned, as, in Cale any good Prizes were made, that the Public might have its Part, in which we find her always ftrict, and fometimes a little fevere: But, with all her Frugality and good Management in this Refpect, fhe found War an expenfive and ruinous Thing, which demanded conftant and great Supplies, bringing in but flowly and inconfiderably. She was the better able to difcern this, becaufe the took care to have the Treafury-Books as regularly kept as thofe of a Merchant, whence fhe was very well able to tell how far her Revenues anfwered her Expences, in what Articles her Exceffes were incurred, and even the Lofs and Gain on particular Expeditions : As forInftance, that of Cadiz, or Cales, reputed the moft fortunate in her long Reign, which neverthelefs coft fixty-four thoufand Pounds more than it brought in. The Balance, in this Refpect, was always againft her, notwithftanding the vaft Sound her Prizes made in the World; for, according to a Minute of an Account made up by the famous LordTreafurer Burleigh, from the thirtieth to the thirty-fourth Year of her Government, it appears, that the bare Expence of the Navy amounted to two hundred feventy-five thoufand, feven hundred and fixty-one Pounds, and all received by Prizes within thofe Years, which were the moft profperous in that Refpect of the whole S'pani/b War, came to no more than fixty-four thoufand and forty-four Pounds.

Yet, confidering what Mifchief was done the Enemy, how much his Commerce was embarraffed, his Merchants ruined, his Credit leffened, and his Power decreafed, there was no great Caufe to repine; and, in truth, we no where find the Queen did fo, but fhe always endeavoured to put her Nobility upon fuch Enterprizes, as well to keep them employed, as to throw a Part of the Expence upon fuch as fhe judged were much more able to afford it than the common People.

But there was another great and ufeful Effect which flowed from this affiduous Care in the Queen, and this generous Conduct in her Nobility, and that was, the eftablifhing a juft Regard for Public Spirit. It was the Mode in her Days, to do every thing with a View to the Welfare of the State, and it was impofible for any Man to make a Figure at Court, or to appear with Diftinction in his County whofe Actions as well as Words did not difcover fomewhat of the Patriot. Some of the Nobility ferved in Holland, to learn the Trade of War, at the fame time that they contributed to break the Power of Spain, and to raife the Englifb Reputation for Courage, Steadinefs, and other Military Virtues. The Earl of Eflex, and other Men of Quality, ferved the Queen at Sea in various Expeditions of great Importance. Others again, fuch as the Earl of Cumberland, embarked in particular Enterprizes at their own Expence; and by this Means, after the formidable Invafion in 5588 , the King of Spain found himfelf fufficiently employed at home, and perceived, when it was too late, that he had wafted the Blood and Treafure of all his Kingdoms to raife up two new Powers in Europe, viz. England and Holland, which neither he nor his Succeffors would be able to cope with.

- But the Queen and her Minifters, when the Dangers of War were thus removed or kept at a Diftance, knew how to divert the fame Spirit to other good and falutary

Kkk
Purpofes:

Purpofes. In former Reigns there had been little Care taken to explore the Riches of this Kingdom ; but now every Part of it was examined, and every kind of Improvement fet on foot. The Lord-Treafurer fent for feveral Germans over, who were employed in erecting Ironworks, in difcovering and working Lead Mines, and in making Saltpetre. We formerly exported moft of our Commodities raw and unwrought, but now the Perfecution in the Low-Conntries furnifhed us with Multitudes of able Workmen in every Branch of the Woollen Maniufactory, who had all imaginable Encouragement given them, and with very confiderable Privileges were fettled in different Parts of the Kingdom, more efpecially at London, Norwich, Colcceffer, and Canterbury. The like Care was taken with refpect to other Trades, and this was attended with fuch Succefs, that, whereas in the Beginning of the Queen's Reign we bought our Artillery abroad, towards the End of it we furnifhed all Europe with Ordnance; fo that at length it grew a Queftion, Whether it might not be requifite for the public Safety, to put a Stop to the Exportation of Iron Cannon.

There was now fcarce a Seffion of Parliament held in which there were not Acts paffed for promoting new Branches of Trade, or for preferving or regulating the Old ; and though it may be, and I believe is, true, that fome of the Laws, then made, have become in Procefs of Time rather dangerous and deftructive, than profitable or advantageous, to Commerce, yet certainly they were made with a good Intent; and we have Reafon to believe were well enough fuited to thofe Times; fo that we have no Reafon to cenfure thofe who made them, on Account of the Inconveniencies they produce, but ought rather to blarne ourfelves for not repealing them. By thefe Steps the Face of Things in this Country was quite changed: Inftead of being ferved by the Venetions and Genoefe, with all the Commodities of the Eaft, we brought them Home ourfelves, and even furnifhed them to others; inftead of fuffering all our Domeftic Trade to be managed as formerly by Germans and other Foreigners, we began to fettle Factories abroad, and there was hardly a Nation in the known World, with which before the Death of this Queen we had not fome Correfpondence.

Yet inftead of fetting down quietly with thefe Acquifitions, and falling into a nominal Trade amongft ourfelves, like the Modern Stock-Jobbing; we were then continually contriving and executing new Schemes, either for improving our Country, or exporting its Produce ; our People, even then, began to think the Trading World too narrow for them, and admired nothing fo much as finding out new Markets, where Goods always fell beft, where Noveity and Variety often procure high Prices, even for indifferent Commodities. We need not at all wonder, therefore, that in thefe Times there were Men of fuch extenfive Abilities produced, as feemed to grafp the whole Circle of commercial Knowledge ; fuch as Sir Walier Raieigh, Sir Robert Dudley, Sir Thomas Greflam, and many others; fome of whom have left us Treatifes in this way, that are both read and admired in more enlightened Times. We may therefore fafely pronounce, that the Seeds of all our Traffic, which have fince fo happily come up, and from which the Nation has reaped fuch mighty Profits, were fown in this Reign, and cultivated, when they needed Cultivation moft, by the Royal Hand of the matchlefs Elizabetb; the Mother of her Subjects, the Terror of her Enemies, and the Benefactor of Pofterity.
16. We are now to take a View of the State of Englifh Affairs in regard to America, at the Clofe of this Queen's Reign, when it will appear, that there was fcarce any Part of it, whether of the Northern or Southern Continent, or Iflands, with which we had not fomeAcquaintance; though we had made no Settlements any where. Drake and Candijb examined the whole Backfide of America from South to North, and it appears very clearly from Sir Ricbard Hawkins's Hifory of bis own V oyage, that we were almoft as well acquainted with thofe Countries as the Spamiards themfelves; this will appear lefs ftrange, when it is obferved, that fome of our Seamen being furprifed, others
being fent afhore by their Commanders, and feveral ftraggling when landed in Parties, on particular Defigns, fell into the Hands of the Speniards; and being fent from Place to Place, travelled through more Countries than moft of the Spaniards that were fent thither by their Government, or were driven thither by their Neceffities, fome of whom, coming home, related, and feveral of them, particularly Miles Pbillips and David Ingram, wrote Accounts of, their Adventures, as we fhall have Occafion to fhew in another Plaee.

By this Means we gained very clear and diftinct Defcriptions of the Countries bordering on the Streigbts of Magellan, of Cbili, Peru, the Bay of Panama, the feveral Provinces of the Kingdom of Old Mexico, fome Knowledge of the New, and even of California: Nor were we lefs acquainted with the other Side of the Continent, as the Reader may learn from the Englifs Voyages of the firft Chapter of this Work, in which are contained very diftinet Accourts of the moft Southern Parts, from the River of Plata to the Mouth of Magellan's Streighbts. We have likewife a fufficient Knowledge of the great Country of Brazil, from Mr. Knivet, and other Travellers; though it mult be allowed that they gave great Scope to their Imagination, in what they have written, or at leaft what is publifhed by Purchos, if it was by them written, upon this Subject. As to Guiana, or the Country of the Amazons, Sir Walter Raleigh, and Capt. Laurenco Keymifb, whom he fent thither foon after his Return, have written as good Defcriptions of them, if not better, than any that are extant in other Languages.

As for the Coaft, from the Illand of Trivity up to Cartbagena, it was the chief Scene of mont of our Privateer Expeditions in this Reign, fo that we had repeated Relations of all that was necenfary to make this Part of the new World perfectly known. The remaining Part of the Coaft, as far as the Gulph of Honduras, was likewife explained and defcribed by feveral Englijbmen, who had vifited thofe Coants, particularly Capt. Barker ; and as for the Bay of Mexico, it was often reforted to ; but more particularly by Captain, (afterwards) Sir Fobn, Hawwins, in the Year 1568 , at which time he fet on fhore David Ingram, before-mentioned, at about one hundred and forty Leagues Weft-by-north from the Cape of Florida. From thence he travelled with feveral other Perfons of his Company by Land, to within fixty Leagues of Cape Breton; where they found a Paffage home by a French Ship, in 1350, and foon after their Arrival, David Ingram, Richard Brown, and Ricbord ITwede went to vifit Capt. Harwkins, who had fet them on fhore, and related to him their Adventures. I have been more particular on this Head, becaufe this Ingrana has given the cleareft Account of any Man concerning the North-weft Paffage, as the Reader will fee hereafter in its proper Place, where I fhall give his Account at large. The remaining Part of the Coatt of North America, from the Cape of Florida to the utmoft Extent of the Continent northward, was examined by feveral of our Seamen, as appears by what has been already faid in this Section, and will farther appear from the Account we are yet to give of fome Voyages that were made in the laft Years of the Queen, and which I thought proper to referve for this Place.

The firft of thefe, in Order of Time, is the glorious Expedition of Capt. William Porker of Plymouth, who undertook, at the Expence of a few private Perfons, an Enterprize againft the Spaniards, in which he was accompanied by Capt. Giles and Capt. Ward, Land Officers; and by the Captains Fugars, Loriman, Afby, and feveral other Gentlemen as Volunteers, which, all Circumftances confidered, will appear one of the hardeft Undertakings, as well as one of the moft fucceifful, in that Reign, or indeed ever attempted by our own Nation or any other of which there remains an Account in Hiftory. This Squadron of his confifted but of three fmail Barks, fcarce equal in Strength to a Fifth-rate Mian of War; of thefe the Prudence, ftiled the Admiral, was of the Burden of one hundred Tons, and a hundred and thirty Men, commanded by Mr. Parker himfelf; the Pearl, Vice-Admiral, of fixty Tons, and fixty Men, Capt. Roberi Rewolins Commander; the Pinnace of twenty Tons and eighteen Men. They
failed in November 1601, and off the South Cape had the Misfortune in a violent Guft of Wind to lofe their Pinnace with all her Men but three; fteering their Courfe from thence to the Inands of Cape Verd, they landed one hundred Men , and took one of them called St. Vincent, with a Town of the fame Name; and, after having given the Spoil of it to the Soldiers, fet fire to the Place. Hence they haled over to the Coaft of the Continent, and coming to la Rancberia, or the Pearl Fifhery, in the fmall Inland Cubagua, they there found the Governor of Cumana, with a fmall Company of Soldiers. This did not difcourage them from landing, and though at firft they were received with great Warmth, they got at laft the better of them, and took the Place with feveral Prifoners, Barks, and Boats, all which they ranfomed for the Value of five hundred Pounds, which was paid them in Pearls.
They failed from thence directly for Cape de la Vela, where they took a great Portugueze Ship of 250 Tons, coming from Angola and Congo, and bound for Cartbagena; which, having little of Value in her, except three hundred and feventy Negroes, they ranfomed for $500 \%$. After this they went to the Inand of Cabecas, where they embarked one hundred and fifty of their Men in two fmall Pinnaces and two Shallops, and failed to the Baftimentos, where they landed, and picking up fome Negroes for their Guides, with their Boats and Pinnaces, they entered the River of Puerto Bello the 7 th of February 1602 ; it being Moon-light the Watch difcovered them at their very firft Entrance into the Haven, and haled them by the ftrong Caftle of St. Pbilip; in which were thirty-five Brafs Guns, and Soldiers enough to manage them. Having fome on Board who fpoke the Spani/h Tongue, they pretended they were Spariards coming from Cartbagena.

The Officer of the Caftle bid them come to Anchor, which they did, but about an Hour after Captain Parker gave them the llip with his two Boats and above thirty Men, leaving the Pinnaces at Anchor before the Caftle. With this Force he went direclly to the Suburb of Triana, and, though the Alarm was given, landed his thirty Men, and fetting it on fire left it burning, and marchedinto the great and rich Town of Puerto Bello. As foon as he entered, he marched directly to the King's Treafury, where he found a Guard of Soldiers drawn up to receive him, with two Brafs Field-pieces on their Carriages; the Fight was long and obftinate, and Parker lad loft the beft Part of his Men, when Captain Fugars and Captain Loriman, who commanded the Pinnaces, hearing the Noife, came timely to his Relief, with one hundred and twenty Men. This Affiftance foon turned the Scale, and the Spaniards began to think of fecuring themfelves by Flight; a good Number of them got into the King's Houre, which they defended very refolutely for four or five Hours ; but at length the Englifb became Mafters of that, as well as of the whole Town. They found but ten thoufand Ducats in the Treafury, though there were often fix Millions in it; and if they had been feven Days fooner they would have found one hundred and twenty thoufand, which had been embarked in two Frigates for Cartbagenn.

The Spoil of the Town, which in Money, Plate, and Merchandize, was confiderable, was by Captain Parker, given to the Soldiers. But two Frigates, which he took farther up the River, he carried away with him; after having kept Poffefion of the Town two Days, 'Captain Parker generoully fpared it with its Churches, Buildings, and Forts, from burning; and releafed the Prifoners, among whom were Don Pedro Melandez, the Governor, the King's Secretary, and feveral Perfons of Quality, without Ranfom ; fatisfied with the Honour of having taken with a handful of Men, in fo little Time, and with fo inconfiderable a Lofs, one of the fineft Towns the King of Spain had in the Weft Indies. His Reafon for this was to give the Spaniards an Example of civil and generous Deportment towards their Enemies ; and the Governor he releafed, becaufe he had fought fo bravely, having received eleven Wounds in the Action.

The Town had at this Time two Churches, fix or feven fine Streets, three fmall Forts on one Side, befides the
great Cafte of St. Pbilip; all which they might have demolifhed, and have left the whole a Heap of Ruins During their Stay in Town they had not the leaft Difurbance from any Forces of the Spaniards, nor any Alarm given; only as they were failing away the Enemy began to appear, but it was only to exchange a few Bullets, and to take leave of each other from the Mouths of their great Guns. Thus Captain Parker returned fafely home with much Honour, and not without reafonable Profit; and not only our own, but Spani/h Writers, fpeak of his Expedition in very honourable Terms.
The next Year fome of the Virginia Company refolved to fit out a Veffel for that Country, and accordingly made Choice of Captain Bartbolomerw Gofnold for their Commander, who had been formerly there. He failed from Falmouth on the 26th of Marcb 1602, in a fmall Veffel, and no more than thirty-two Perfons on Roards of whom it was propofed that twelve fhould fay behind and form a Settlement, in cafe he fhould meet with any Place which he flould judge convenient for that Purpofe. This Captain Gofnold was an excellent Mariner, and therefore he did not go the former Courfe, but a much fhorter one; and on the IIth of May he arrived in the Latitude of 42 Degrees and fome few Minutes, among the Inands, forming the North Side of Mafjecbuset'si. Bay in Nero England; where, not finding the Conveniencies he defired, he fet fail again; and when he thought he had got clear of the Land, he fell upon the Bay of Cod, now Part of Nerw England. He went afhore on a fmall uninhabited Ifland, which he called Elizabets Ifland, and on another Inand, which he named Martba's Vineyard, where the Natives had left fome Marks of their Habitations. Here fome of his Company fowed Englifh Corn, and faw it come up very kindly; he built a little Fort for his, and his Mens, Security, and Trade from thence with the Savages, to whom Europeans were no Strangers; for the Commander of the firt Body of them that came to trade was dreffed with Waiftcoat, Breeches, Shoes, Stockings, Hat, and all Accoutrements befitting an Englijhman; but his Attendants had only Deer-Skins about their Shoulders, and Seal-Skins about their Waifts ; their Hair was very long, and tied up with a Knot behind; they were painted all over, but their natural fwarthy Colour was eafy enough to be difcerned.
On the North-weft Side of Elizabetb's Ifand the Captain found a Lake of frefh Water, about a League in Circumference, and very near the Sea; in the Midit of which was another little Inand of about an Acre of Ground; and this they pitched upon as the mot commodious Place for building their Fort above-mentioned, and they begun it accordingly. About this Lake they found an infinite Number of Tortoifes, with feveral Sorts of Fifh and Fowl; fo that thofe who propofed to fettle there had a fair Profpect of having Provifions enough. They vifited the main Land adjoining to this Inand, which they found, in all Refpects, as charming as Meadows, Groves, Brooks, and Rivers could make it. They had fome Communication with the Indians of the main Land, who came and bartered with them for fome of their European Rarities, and there was nothing harclly but what was fo to thefe People. The Commodities they gave in exchange for Knives and other Toys, were Beavers, Lucains, Martens, Otters, Foxes, Conies, Seals, Deer, and Skins. The Affairs of this Plantation might have gone on very well, had all the Planters been unanimous and eafy in their Settlement here; but they were intent upon their private Interefts, and contrived to make only a profitable Voyage. The Captain labonred againit it, but to no purpofe; fo having gotten a large Cargo of Saffafras, Cedar-wood, Furs, and other good Commodities, they fet fail for England. They left their little Fort on the 18 th of Tune, and they arrived at Plymouth the 23 d Day of fuly following, A. D. 1602.

What the Confequences were of this Voyage and Dif covery will appear in the next Section; and therefore we fhall pafs on to the laft Voyage, which we are concerned to take Notice of here; and that was made in the fame Year 1602, by one Captain Mace of Weymouth, fitted out by Sir Walter Raleigh; and as the fhort Account we
have remaining, ferves to correct all that has been faid by different Authors upon this Subject; and does a very fingular Piece of Juftice to the Memory of Sir Walter, who might feem to have abandoned thofe who went upon his Faith to fettle in Virginia; I have judged it both reafonable and requifite to infert the whole Paper here, with this farther Oblervation, that Mr, Ricbard Hackluit received, as he acknowledges, great Affiftances from Sir Walter Raleigh, in compiling his excellent Collection, and the Papers of Mr. Hackluit falling upon his Death into the Hands of Mr. Samuel Purchas, he made fuch ufe of them as he thought fit, having by no Means a Capacity adequate to his Undertaking; and from his fourth Volume, Page 1653, we tranfcribe the Account before mentioned, which feems to be no more than a Memorandum from a larger Relation of the Voyage to which it refers; and which, if it had been given us at length in the Manner that fuch things were given by Mr. Hackluit, would very probably have furnifhed us with other curious Particulars. As it is, thus it runs:

A Brief Note of the fending another Bark this prefent Year 1602 , by Sir Walter Raleigh, for the fearching out of his Colony in Virginia.
"Samuel Mace of Weymouth, a very fufficient Mar"s riner, an honeft fober Man, who had been at Virginia " twice before, was employed thither by Sir Walter Ra -
" leigh, to find thefe People which were left there in the
"Year I587; to whofe Succour he hath fent five differ-
" ent times at his own Charges. The Parties by him fet
"forth performed nothing, fome of them following
${ }^{8}$ their own Profit elfewhere, others returning with frivo-
" lous Allegations; at this laft Time, to avoid all Ex-
"c cufe, he bought a Bark, and hired all the Company
" for Wages by the Month, who departed fromWeymouth
" in March laft, 1602 , fell forty Leagues from the South-
"s weitward of Haterafke in 34 Degrees, or thereabouts;
"s and having there fpent a Month, when they fhould
"s have come along the Coaft to feek the People, they
"s did it not, pretending the Extremity of Weather, and
" Lofs of fome principal Ground-tackle, forced and fear-
"s ed them from feeking the Port of Haterafke, to which
is they were fent. From that Place where they abode, they
" brought Saffafras, Radix China, or the Cbina Root,

* Benjamin, Caffia lignea, and the Bark of a kind of a
${ }^{6}$ Tree more ftrong than any Spice as yet known, with
" diverfe other Commodities, which hereafter, in a large
"Difcourfe, may come to light."
I7. It may be very natural for the Reader to think that I ought to have changed the Order of the two laft Paragraphs, and that I fhould have concluded my Account of the Voyages to Anzerica, before I had drawn up a general View of fuch naval Tranfactions as happened in the Reign of Queen Elizabeth; but I dare affure him that I confidered this attentively, and that I quitted what I faw was the regular Method, in order to obtain what appears to me to be the great End of Me thod, Clearnefs, and being perfectly underftood. By drawing together the naval Tranfactions in the Time of this famous Queen, I have hewn how the was occupied throughout the whole Courfe of the Government, fo, as not to have it in her Power to attend to the Eftablifhment of Colonies, which are a Work of Time, of Leifure, and of Recollection. But what the Nature and CircumItances of her Adminiftration would allow her to do for Trade, the moft certainly did; and that the did it by Fits and Starts, was owing not to any Fault in her or in her Minifters, but to the Faults of the Times, which did not permit her to do it otherwife. This, as I have difpofed the Thing, will to the Reader appear at firft Sight to be the Truth, becaufe he will fee that in the latter Part of her Reign the Defire of planting revived, and in the Courfe of it all the different Parts of America, fome from one Motive, and fome from another, were vifited and difcovered.

This I take to be the true State of the Matter ; for though there are many Writers, who, in their general Characters of that Queen, have afcribed to her the Be-
ginning of our Plantations, yet undoubtedly they were therein either miftaken themfelves, or delivered their Sentiments in fuch a Manner as occafioned their being miftaken by others. The Glories of that Period of Time are fo many, and fo great, that they need no falfe Colours to heighten them; on the contrary, they are leffened thereby: For when, upon Enquiry, it is tound that Part of them are mifreprefented, it naturally leads Pcople to doubt of the reft; and, as in all other Cafes, fo here, Flattery debafes what it meant to exalt, and really leffens what it feems to extol. The Bufinefs of Planting is indeed highly advantageous; and I believe it will appear from the following Sections, that no Na tion has gained more by it than our own; but then it is the Bufinefs of peaceable and fettled Times, when Nations grow full, and Difcharges of People become neceffary, which was not furely the Cafe under this great Princefs. The great and real Excellency of her Adminiftration confifted in this, that the always, and in all things, confulted the Good of her People; and theWifdom of her Minifters is vifible chiefly from hence, that they did not obftinately purfue good things in Seafon and out of Seafon, but chofe, as the Circumftances of things directed, to do the beft for the Nation that their Situation would allow. It was the Opinion of feveral great Men in her Time, and upon their Authority it has grown to be a received and fettled Notion fince, that the Queen went rather too far into the Spanifh War, and that her Subjects would have been greater Gainers, if fhe had either avoided that War entirely, or if fhe had ended it fooner, which perhaps might be true:

But after confidering, as maturely as it is poffible for me to do, all that has been faid by Sir Robert Cotion and other able Writers upon this Subject, I am thorouighly convinced that the Queen acted upon right Principles, and that fhe began and continued the War with no other View than the Good of her People. I am at the fame time, however, perfuaded that fhe extended her Views in this Refpect, very far beyond her own Times, and that the was fenfible enough the might have ended the Conteft with Spain earlier, and with a Profpect of much more Quiet to herfelf, than to her dying Day fhe enjoyed. But this was not the Difpofition of Elizabeth; if it had, the whole Turn of her Conduct would have differed widely from what it was; and fhe facrificed willingly and knowingly the Tranquility of her own Government, to fix the Welfare of her Subjects upon a folid Foundation. In this confifted the Strength of her Mind and the Greatnefs of her Genius; whoever confiders her in another Light will miftake her Character. She faw plainly that extenfive Trade and fuperior naval Force were things neceflary to the Felicity of the Inhabitants of this Inand; but fhe law at the fame Time that it was impoffible thefe fhould be attained, if the Power of Spain was not deftroyed. This therefore became her fettled Point, which once gained, fhe knew the other muft follow, and therefore from this fhe never departed; the was very fenfible that if the Spanifb Power was once removed, the Trade and naval Force of this Nation would have room enough to grow and profper, and therefore the refolved to remove it: She could not but know that this would prove a Work of great Difficulty ; that it would expofe her to a long and expenfive War abroad, and which was worfe ftill, to many Commotions, Plots, and Confpiracies, at home; but that did not at all move her; fhe was bent upon doing what the Safety and Well-being of the Nation required; and though fine could not but forefee that the Advantages fhe laboured to procure muft belong rather to Pofterity, than to the People fhe governed, yet fhe refolved to hazard all Things to procure them.

This was her Syftem, vaft and extenfive in itfelf, big with Difficulties and Dangers, extremely liable to be mifunderfood, mifinterpreted, and miffeprefented; full of Incertainties, and requiring a great Length of Time, and a conftant Series of Labours, to accomplifh it. If it had been poffible to have fet fuch a Scheme as this before the Eyes of a Monarch of ordinary Qualities and Virtues, it would, without doubt, have raifed Afoniftment and Terror: but to a. Mind like hers, capable of looking
through
through the Mift of prefent Events, and difcerning the Face of things beyond them; though few, Obftacles were hid, yet none feemed unfurmountable; the Toil was great; the Journey long, the Road extremely rough, and it was impoffible for her to know how far fhe fhould be able to proceed; but however, fhe thought it neceffary to feet forward, and though for a Time things grew worfe and worfe, yet fhe knew that by perfifing they muft grow better and better. This Refolution, this Conftancy, this Magnanimity, carried her through all, and the had the great Comfort of feeing before fhe died all the great Ends accomplifhed, which, in the Dawning of her Govern ment, her admirable Underftanding had prefented to her View; and, like the Sun, fhe fet when fhe had accomplifhed that Round propofed at her rifing

We are told of Augufus, that he boafted of leaving Rome built with Stone, whereas he found it of Wood only. Queen Elizabeth might have boafted of much greater things, and with much greater Truth; for fhe did not rife to Empire through Blood and Ufurpation, but came to it by Succeffion, and with the Acslamations of all her People: Acclamations that were, fure Omens of Succefs; for without doubt there never was a Kingdom in a lower, meaner, and more dejected State than this; when the Crown was placed upon her Brow, and her Subjects could not have either Joy or Hopes, but what arofe from feeing it fixed there. She chofe for her Motto, Semper Eadem; that is, Always the fame ; and I hope I have flewn what the meant by it. Her Conduct is the eveneft that we meet with in Hiftory ; fhe met with many Difficulties, but the created none; fhe experienced Misfortunes, but they were Trials and not Punifhments; the met with much Profperity, but all vifibly derived to her by the Bleffing of God upon her wife Endeavours.

We will fupport a few of thefe Particulars by Facts. She found fcarce any Navy; fhe left a great one. She found the Government much in Debt, and though poffibly her Power might have born her out, if fhe had expunged it ; yet the paid it, even to the Penfions granted by her Father, to thofe who were excluded from their Monafteries. She found her People poor and herfelf neceffitous ; yet fhe fpared them till they grew rich; and in the mean Time grew rich herfelf, by managing frugally a very fmall Revenue; for at the Time fhe entered into the War with Spain fhe had feven hundred thoufand

Pounds in her Coffers. She fpent above two Millions iriz the War. She lent the States eight hundred thoufand Pounds at different Times, and half that Sum to the French King, and yet fhe did not raife quite three Millions upon her Subjects. She faw the Inhabitants of her Capital City doubled in her Life-time; as appears from the Computations, publifhed by Sir Witliam Petty. She found the Cuftoms producing no more than thirty-fix thoufand Pounds per Annum; fhe left them worth more than double that Sum, without heightening of Duties. At the Time of her Acceffion there were fcarce any Englifb Merchants in England; but before her Death there were confiderable Traders in every Port of England. It is very true, that at the Death of Queen Elizabeth our Commerce was very trifling, to what it is ; but it is no lefs certain, that if fhe had not lived, our Commerce would have fallen very far fhort of what we find it.

The next Section will fully fhew that our great Im provements were made in the two fucceeding Reigns; but, in this, we have made it evident, that no fuch Improvements could have been made if this Reign had not gone before them. It was in Queen Elizabetb's Time that the Foundation of Englifh Commerce was laid; though the Superftructure was raifed in the Days of King Fames and King Cbarles. It was under her that our Ships vifited all Parts of the known World. It was She that protected the Rufla Company ; one of the moft ufeful ever formed in this Nation, and beyond Comparifon the beft conftituted. She founded the Company trading to the Eaft Indies; and, in a Word, fhe encouraged every Branch of Trade that had been opened before her Time; projected many, and made way for all. The Room I had was much too little, to afford a juft Account of all that we owe in this Refpect to her Memory, but I have made the beft Ufe of it I could, and am only forry that I could not make a better. If what I have done expreffes my Senfe of the Advantages derived to us, and which will defcend to our Pofterity, from what fhe and her Minifters, who were truly fuch; I mean the Inftru= ments, and not the Directors of their Miftrefs, did, it will afford me great Satisfaction ; for to praife Quieen Elizabeth, with Judgment, is a Character fufficient to gratify the Ambition of the moft afpiring Author, and to have attempted it is the greateft Merit I Thall have to plead.

## S E C TI O N XVIII.

## The Hifory of the Difcoveries, Settlements, and other Tranfactions of ibe Einglish Nation in America, from the Acceflion of King James I. to the Reforation.

1. A fuccinct View of the State of Affairs at the Acceffion of King James; the Voyages of Captain Martin Pringe, and of Captain Gilbert, to Virginia, and the Confequences of their Difcoveries. 2. The Earb of Southampton, and Lord Arundel of Wardour, Send Captain Weymouth thither; bis propperous Voyage, and the Patent granted by the King for erecting two Virginia Companies." 3. The London Company fit out Captain Chriftopher Newport with a fmall Squadron, rwbo fettles a Colony at James-Town in Virginia, in 1607, and the various unlucky Accidents that befel this Colony, 4. They defert James-Town, embark for England, and are met at the Mouth of Chefepeak Bay by Thomas Weft, Lord de la War, robo carries them back, refettles them, and effectually Secures this valuable Country to the Crown of GreatBritain. 5. A Joort Defcription of tbis Colony, Jerwing its feveral Advantages, the Nature of its Trade, and its great Confequence to this Nation. 6. The firft Attempts of the Jecond, or North Virginia Company, to fettle within the Bounds of their Grant, and the Difficulties and Difcouragements they met with in thofe Attempts. 7. The Colony is at laft fettled, under the Direction of the famous Captain Smith, and the Country named by Prince Charles (afterwards Charles I.) New England. 8. A fuccinct Account of the Tranfactions in this Colony, from its Eftablifment to the Reforation. 9. The Situation, Climate, Soil, Produce and Trade of New England, briefly reprefented, and the Importance of this Colony fet in a true Light. 10. The Difcovery and firft Settlement of the Bermudas, or Summer Inlands, with fome Account of them before they came into our Poffefion. II. A Joort Defcription of thofe Iflands, weith an Account of their Commodities, and their. Trade to England and to the Plantations. 12. The Difcovery of Hudfon's Bay, and the Countries in America, to which the Names of New North-Wales, and New South-Wales, were given by the firft Difcoverers. 13. The Recovery of Acadia, or Nova Scotia, and

Vol. II. Numb. 84.
the Hiftory of this Country witbin this Pcriod, wherein is demonfrated our clear and indubitable Right the Ifland of Cape Breton. 14. The feveral Voyages to Guiana, down to the Death of Sir Walter Raleigh, after bis laft Expedition thitber, and an Account of our Settlement at Surinam. 15. A bort Account of the firlt planting the rich and fruitful Thand of Barbadoes. 16 . The Hiftory of this adrantageous Settlement, down to the Reforation. 17. The Situation, Climate, Soit, Produce, and incredible Advantages that bave accrued to Great Britain from this Colony, robich is proved to be the beft in the World. 18. The Difcovery, Conquef, and Settlement of St. Chriftopher's, Nevis or Mevis, Monterrat, ©ंc, 19. The Grant of the Province of Maryland to the Lord Baltimore, and the Settlement of that Country,
weith other Particulars relating to it woithin the Compals of this Period. weith other Particulars relating to it within the Compafs of this Period. 20. The Expedition by the Direction of the Protector Cromwell, for the taking Hifpaniola from the Spaniards, with the true Caufes of its Mifcarrioge. 21. The Hifory of the Conqueft and Settlement of the moft noble and moft important Iland of Jamaica. 22. A Joort Defcription of the IJland, a Viere of the vala Profits derived to Great Britain from the Pofeffion of it, and other Particulars. 23. The Conclufion of the Section, with fome Rew marks and Obfervations on the principal Events mentioned therein.

. AT the Time of King Fames's Acceffion to the Englifh Throne, there were the fairett Opportunities offered for extending and fecuring the Commerce of this Inand that could be wifhed; and therefore we need not be furprized at finding fuch vaft Improvements made, and fuch mighty Advantages gained to this Nation, under a Government that has not hitherto been reprefented in the faireft Lights to the People. We muft, however, obferve, that the peaceable Temper of King fames was of greatUfe to the trading Part of his Subjects; for the Power of Queen Elizabetb had raifed fuch a Veneration in fome, and fruck fuch a Terror into others, that there was fcarce any Nation which did not willingly embrace the Friendthip of King fames, and offer him whatever Terms could be thought moft fuitable to the commercial Views of his Subjects ; which was extremely agreeable to the Englijh, at that Time, who began to entertain very true Notions of Trade; to fee its Importance, above all Things, and to wifh for the Means of promoting and extending it on all Sides, to which they began to think a Peace with Spain would not a little contribute. At the Time of the Queen's Deceafe there was a Fleet preparing under the Command of Sir William Monfon, intended for the Spanijb Coaft; for it was a wife and juft Policy in that Princefs, to keep the War at a Diftance from her own Dominions, to find her Enemies work enough at Home, and thereby prevent their difturbing any of her Territories. But upon the Acceffion of King Fames this Fleet was countermanded; and, it feems, not without Reafon; for the Archduke, who was then Governor of the Lowe Countries, thought fit to recall his Letters of Reprizal, and thereby opened a free Trade between England and Flanders, a thing highly fatisfactory to the Merchants, who immediately reaped the Benefit of it.
There was likewife another Defign on foot at the Time of the Queen's Demife, which was the profecuting the Difcoveries and Trade to Nortb America, in which feveral Gentlemen and Merchants of Brifol were concerned, and amongft them the Reverend Mr. Hackluit, whom we have fo often mentioned; and who, having a Prebend in the Cathedral Church of Brifol, and having a great Genius for promoting fuch Enterprizes, was fixed upon to apply in behalf of himfelf, and the reft of the Perfons concerned, to Sir Walter Raleigh, who was ftill looked upon as the Proprietor of Virginia, in order to procure his Licence for this Trade. Upon his Application to that worthy Perfon, they received all the Encouragement they could defire; for he not only granted them a Licence under his Hand and Seal, but alfo made over to them all the Profits which fhould arife from the Voyage.
After they were thus impowered, they raifed a joint Stock of a thoufand Pounds, and fitted out two fmall Veffels, the one called the Speedrwell, commanded by Capt. Mattbere Pringe, of the Burthen of fifty Tons, with thirty Men and Boys; the other a Bark of twentyfix Tons, called the Difcoverer, commanded by Mr. William Broven, who had under him a Mate, and eleven Men, and Boys befides. Thefe Veffels were victualed for eight Months, and had a large Cargo on board, confifting of all forts of Goods that were thought proper for that Country. They failed from King's-Road, near Brifol, on the zoth of March, 1683 . Being hindered
by contrary Winds, they put into Milford Haven, where they continued till the ioth of April following, and thers continued their Voyage. The Rout they took was by the Azores, and they arrived without any remarkable Accident on the Coaft of North America, in the Lat. of 43 Degrees; and, after having examined the Coatt, on which they' found nothing for their Purpole, they failed on Southweft in fearch of that Pars' of the Country where Capt.
Gofnold had been. Gofnold had been.
At length, they found in the Latitude of 4 I Degrees, and fome few Minutes, a very coivenient Bay, to whiclr they gave the Name of Wbitfon's-Bay, in honour of Mr. Fobn Wbitfon, who was then Mayor of Brifol. Here they landed, and cut a good Quantity of Saffafras, and carried it on board; but, left they fhould be furprized in the Woods by the Natives while they were at Work, they erected a little Fort or Redoubt, wherein they left their Effects, and four or five Men to guard them, while the reft were at work. The Natives came and trafficked with the Englifh, forty or fifty in a Company, and fometimes upwards of an hundred, who eat and drank, and were very merry with our Adventurers; efpecially when they obferved a Lad in their Company playing upon a Guitar, they would get round about him, and, taking Hands, dance twenty or thirty in a Ring, after the American Manner.

Our Seamen obferved, that the Natives were more afraid of two Maftiff-Dogs they carried with them than of twenty Men; and when they defigned to get rid of their Company, they let loofe one of thefe Maftiffs; whercupon the Natives would fhriek out, and run away to the Woods. But 'tis probable this Ufage, and the erecting a Fortification in their Country, made the Indians at length look upon the Englifb as their Enemies: For our Adventurers inform us, that a Party of Indians came and furrounded their Fort a few Days after, when moft of them were abfent, and would probably have furprized it, if the Captain of the Ship had not fired two Guns, and alarmed the Workmen in the Woods, who thereupon returned to the Relief of the Fort.
The Indians pretended indeed they had no hoftile In-' tentions, but our People never cared to truft them afterwards: And the Day before the Englifb embarked, the Natives came down again in great Numbers, and fet fire to the Woods where they had cut the Saffafras; which, 'tis probable, was defigned to let the Engliff know they would preferve nothing in their Country which fhould invite fuch Guefts to vifit them again ; for no doubt the great Guns and Fire-arms had rendered the Englijo very terrible to them, as well as their Dogs. The Account thefe People gave of the Country and the Inhabitants was, as might very well be expected, much the fame with what had been given before by Capt. Gofnold, and thofe who had failed with him into thofe Parts, and therefore we need not dwell upon the Subject. Amongtt other Curiofities they brought back with them, the moft remarkable was, one of the Boats ufed by the Inhabitants, made of the Bark of a Birch Tree, fowed together with Twigs, the Seams covered with Rofin or Turpentine; and tho' it was feventeen Foot long, four broad, and capable of carrying nine Perfons, it did not weigh fixty Pounds. Thefe Boats the Inhabitants rowed, or rather paddled, with two wooden Inftruments like to our Bakers Peels, by the

## Chap. III. of the ENGLISH in AMERICA.

Help of which they went at a great rate. About the middle great confeguence, and very woody along the Shore i of fune they had compleated the Freight of their Bark; which they fent home before them into England. After her Departure, they madie all the Difpatch they could in loading their own Veffel; for which they procured a very valuable Cargo of Skins and Furs; in exchange for the Commodities they carried. On the gth of Auguft they quitted the Coaft of Virginia, and failed for England, arriving in the Mouth of the Channel in five Weeks; but meeting there with contrary Winds, they could not reach King's-Road before the 2d of October; but they had the Satisfaction of finding that their Bark was fafely arrived a Fortnight before them.

There was another Attempt made the fame Year, upon the fame Account, which, however, did not end fo fortunately. This Voyage was performed by the Elizabeth of London, a Bark of fifty Tons, commanded by Capt. Bartbolomew Gilbert, who had been the Year before at Virginia with Capt. Gofnold. They departed from Plymouth the Ioth of May, and in their Paffage traded at St. Lucia, Dominica, and Mevis, at the latter of which they cut about twenty Tons of Lignum-vitæ. The third of Guly they fet fail from thence for the Coaft of Virginia, and particularly for Cbefepeak Bay, which Capt. Gilbert was very defirous of failing to, that he might make fome Enquiry after the People near thofe Parts. On the $25^{\text {th }}$ they came near the Mouth of that Bay.

But the Wind blowing hard, with a high Sea, though they beat about for two or three Days, they could not make it, and were obliged to bear more to the eaftward. The 29th, being not far from Shore, the Captain with four of his beft Men landed in their Boat, and, being provided with Arms, marched fome way up the Country; but in this March, being fet upon and overpowered by the Inhabitants, they were all killed; and it was not without Difficulty that the Boat, with two young Men who were left in her, reached the Ship again to bring the News. They, being now in all but eleven Men and Boys in the Ship, were afraid to venture the Lofs of any more of their fmall Company; and their Provifions growing fhort, the Mafter, Henry Sute, who had taken the Command, refolved, though they were in extreme Want of Wood and Water, to return homewards, which they did, and arrived in the River of Thames about the End of September.

The Peace being concluded with Spain, in 1604 , removed feveral Obftacles that ftood in the way of the Britifb Trade; and at the fame time opened to our Ships a free Accefs to many Iflands, Countries and Ports, to which they had not before reforted; which occafioned a great Increafe in our Exportations, and gave much Encouragement to fuch as were employed in the different Branches of the Woollen Manufacture. As for the Bulinefs of fettling and planting on the northern Continent of America, that too was laid open, by the Attainder of Sir Walter Raleigh, which happened at the beginning of this Reign, on account of a Plot, which appeared very improbable then, and with refpect to him efpecially, very ridiculous ever fince. The Reports made by thofe who were concerned in the three latt Voyages being very favourable to the Country, and the Profits made by them being very confiderable, induced feveral Perfons of Diftinction to think feriounly of promoting thefe Difcoveries, infomuch that fome of the Nobility refolved to engage in an Undertaking of this kind.
2. Accordingly Henry Wriotbefy Earl of Soutbampton, and Thomas Lord Arundel, of Wardour, refolved to fit out a Ship for this Expedition. This Veffel was called the Archangel, and was commanded by Capt. George Weymouth, an experienced and fkilful Seaman, who failed on the laft Day of March, 1605, from Dartmouth, and met with nothing of confequence, till fuch time as they judged themfelves to be very near the Coaft of Virgimia; but the Winds carrying them to the northward, in the Latitude of $41^{\circ} 30^{\prime}$, and their Wood and Water beginning to grow extremely fhort, they grew very defirous of feeing Land. By their Charts they had reafon to expect it, and therefore bore directly in with it, according to their Inftructions, yet they found none in a Run of almoft 50 Leagues. After much Expectation, on the 16th of May they obtained Sight of an Inand, of no but by the Fruits they found it appeared no barren nor defpicable Spot, more efpecially as there were Streams of freth. Water running down the Clifs in great plenty, vaft numbers of Fowls, and Fifh enough all along the Shore. This mand is now called Long- Ifond, and it was upon the eaftern Parts of it they fell, to their great Satisfaction. From hence they could difcern a great many other Illands, and the main Land ftretching from the Weft-fouth-weft, to the Eaft-north-eaft. Several of the Illands adjoining to the Continent they vifited, and found very full both of Timber and Fruit-trees, of feveral Sorts.

Among thofe Illands they met with a Harbour, in which Ships of any Burthen might lye, defended from all Winds, in fix to ten Fathom Water, upon a tough Clay Ooze. This they called Pentecofl-Harbour, becaufe it was about Whitfuntide they difcovered it. The Firtrees, which were in great numbers on thefe Illands, yielded an exceeding fweet Turpentine; and the Mufcles; which they found about the Rocks, afforded fmall Pearl in abundance, and fome that were large and orient; and the Shell of thefe Pearls on the Infide refembled Mother-of-pearl; but they wanted proper Tackle to dredge for them, and therefore could not take any confiderable Quantity. The Natives from the Continent came oft in their Canoes to trade with them while they lay in this excellent Harbour, their Commerce being much the fame as in former Voyages, all forts of Skins and Furs in exchange for Knives, Beads, and fuch like Trifles: And fo good Chapmen were they at that time, that they would give the Value of ten or twelve Pounds in their Goods, for five Shillings-worth of Englih Iron Ware. We fhall not enlarge on the Manners, Habits and Cuftonis, $\mathcal{E}^{3} c$. of the Natives, which were the fame we have already feen. Their Bows, Arrows, and Canoes, had nothing in them but what was common among other Savages. Their Tobacco-Pipes were fometinies made of Clay, and fometimes the Claw of a Lobfter only, but always of a Capacity to hold as much as ten or twelve of ours.

They grew pretty familiar with thofe People, but found, as others had done, that, amidft all their fpecious Shews of Friendfhip, they were very treacherous, and fought every Opportunity of betraying them. Of this they had one very evident Proof; when thofe Savages, having invited them on Shore to traffic, had very near drawn them into an Ambuhh of near three hundred Men, armed after their Manner, with Bows and Arrows; but they difcovered their Treachery in time, and efcaped the Snare. But the moft extraordinary Difcovery made in this Voyage was that of a River, efteemed by thofe who found it the mof beautiful in America. They went up it with their Ships feveral Leagues, and gave this Account of it; that as it runs up the Main, it keeps a good Breadth for forty Miles together, in moft Places a Mile, in fome three Quarters, but never lefs than half a Mile: It flows fixteen or eighteen Feet; at low Water it is from fix to ten Fathom deep; it has abundance, of Harbours for Ships of all Burthens, and will fecure them better from Wind and Weather than any known in Europe. On both Sides there are, at a fmall Diftance one from another, many fine Coves; fome of them capable of containing more than an hundred Sail, where the Ground is foft Coze, with a tough Clay underneath for Anchor-hoid. Nature alfo has made feveral convenient Places, likeDocks, to grave and careen Ships of all Burthens, and fecure them from all Winds ; the neighbouring Land trends along on both Sides in a fmooth Line, and, inftead of Rocks and Cliffs, is bordered with green Grafs, and tall Trees of different Sorts. After they had remained here about fix Weeks; and during all that Time carried on a very profitable Trade with the Natives, they thought of returning to England; with which View they hoifted Sail June the 16 th , and arrived that Day Month in Sight of the Land's-End of Englond. This profperous Voyage induced many Perfons of high Rank, and many more of great Fortune, to defire to fee this new Trade thoroughly ettablifhed, who appired to the Crown for fuch legal Authorities as were neceffary; which Defire of theirs was very foon complied with, and two Companies formed for fettling this large Tract
of Land, which for the prefent was divided into North and South Virginia, and were fo ftiled many Years after. It was to this Intent King $\mathfrak{F a m e s}$, by his Letters Patents dated the Ioth of April 1606, reciting, that Sir Tbomas Gates, and Sir George Summers, Knights, and Ricbard Hackluit, Clerk, Prebendary" of Weftminfter, Edward Maria Wingfield, Thomas Hanbam, and Raleigh Gilbert, Efquires, William Parker and George Popbam, Gentlemen, and divers others his loving Subjects, had petitioned him for Leave to fend Colonies to Virginia, and fuch other Parts of America as either appertained to his Crown, or which were not actually poffeffed by any other ChriStian Prince or People, and lying between thirty-four and forty-five Degrees of northern Latitude ${ }_{9}$ and within an hundred Miles of the Sea-Coaft: And for the fpeedy Accomplifhment of the faid Plantation, intended to divide themfelves into two feveral Companies, the one confifting of the Adventurers of the City of London, who were defirous to fix themfelves between thirty-four and forty-one Degrees of North Latitude; and the other confifting of the Adventurers of the Cities of Briftol and Exeter, and the Town of Plymouth, who were defirous to fettle between thirty-eight and forty-five Degrees on the Coaft of Virginia in America. His Majefty, in order to promote fo noble a Work, which might tend to the Glory of God, by propagating the Chriftian Religion among the Infidels and Savages, and bring them to Humanity and Civility, did graciouny accept their Petition, and for himfelf, his Heirs and Succeffors, did grant and agree, that the faid Sir Thomas Gates, Sir George Summers, Ricbard Hackluit, and Edward Maria Wingfield, Adventurers of the City of London, and all others that Thould affociate with them, fhould be called the firft Colony, and might begin their firft Plantation at any Place upon the faid Coalt of Virginia, or America, where they fhould think fit, between 34 and 4I Degrees of Latitude; and fhould have all the Lands, Woods, Rivers, Ports, Fifhing, and Hereditaments whatfoever to the fame belonging and appertaining, from the firf Seat of their Plantation, for fifty Miles either Way along the Coaft, North and South, and an hundred Miles to the Weftward, within Land, with all the Inands over againft the faid Coaft for the Space of an hundred Miles at Sea; with all the Lands, Ports, Rivers, Harbours, Fifhings, and Mines thereunto belonging or appertaining ; and Liberty to plant, build and fortify therein; and that no other Subjects of this Crown fhould be permitted to fettle themfelves in the Lands to the weftward of this Colony without their Leave. And his Majefty did grant to the aforefaid Tbomas Hanbam, Raleigb Gilbert, Willian Parker, and George Popbam, of the Cities of Brifol and Exeter, and the Town of Plymouth, in the County of Devon, and all others that fhould affociate with them, that they fhould be called the fecond Colony, and might begin their firft Plantation upon the faid Coaft of Virginia, or America, where they fhould think fit between 38 and 45 Degrees of Latitude; and enjoy all the Lands, Ports, Rivers, Fifhings, and Hereditaments thereto belonging, with the like Extent of Land and Sea, from the Seat of their Plantation, as was granted to the firft Colony. And it was provided, that the faid refpective Colonies fhould not plant within the Space of one hundred Miles of each other ; that each Company fhould have a Council, confifting of thirteen Perfons, in whom the Covernment fhould be lodged, but limited by certain Articles under the Privy Seal; they were impowered alfo to dig Mines in and beyond their refpective Limits to the Weftward, paying the Crown a Fifth of all Gold, and a Fifth of all Copper Ore they fhould get; they were alfo impowered to feize all Ships that fhould trade within their refpective Limits; to coin Money, raife Forces for their Defence, $\varepsilon^{2} c$.
3. The Patentees firft named were commonly ftiled the London Company, and thofe laft named the Weftern Company, who no fooner received this Authority from the Crown, than they began in earneft to provide for making effectual Settlements within the Bounds prefrribed by their refpective Grants. With this View the London Company fitted out three Veffels, one of an hundred Tons, another of forty, and a Pinnace of twenty.

On board of which they embarked an hundred and ten Land-Men, with every thing requifite for fettling a Colony. The Command of this fmall Squadron was given to Capt. Cbrifopber Neroport, an experienced Seaman, well acquainted with the Weft-India Navigation; but to prevent any Difputes in the Paffage, the Orders which regarded the Government of the Colony, and the Names of the Council who were to be intrufted with the Adminiftration of it when fettled, were delivered to them in a Box fealed up; with Directions not to be opened till they were on Shore.

They failed from London on the 20th of December, 1606 ; but, by feveral unlucky Accidents, were, for feveral Weeks, detained on the Coaft of England. At laft they continued their Voyage, and, having taken in frefh Water and other Neceffaries at the Canaries, proceeded to the Caribbee I/ands, where they arrived on the 23 d of February, and ftaid amongft them, but chiefly on the Ifland of Nevis, about five Weeks. On the 3d of April they failed for Virginia, and arrived on the 26 th of the fame Month at the Mouth of Cbefepeak-Bay. The firft Place on which they landed was the Southern Cape of that Bay, where they built a Fort, which they called Cape and Fort-Henry, as they did the Northern Cape Cbarles, in honour of the two Princes; and the firft great River they fearched, the Indian Name of which was Powbaton, they called 'Fomes-River, after the King's own Name.

Of this River they made a full Search, before they would come to any Refolution about a Settlement, and then, by unanimous Confent, they pitched upon a Peninfula about fifty Miles up the River, which, befides the Goodnefs of the Soil, was efteemed moft capable to be made a Place both of Trade and Security, two thirds of it invironed by the main River, which affords good Anchorage all along, and the other third by a fmall River, capable of receiving fmall Vefels of one hundred Tons Burden quite up till it comes within thirty Yards of the great River again, and where generally, in Spring-tides, it overflows into the main River; for which Reafon the Land they chofe to pitch their Town upon had obtained the Name of an Inand. In this back River Ships and fmall Veffels may ride lafhed to one another, and moored afhore, fecure from all Wind and Weather. They gave the fame Name to the Town as to the River, viz. FamesTown. The whole Ifland thus inclofed contained about two thoufand Acres of high Land, and many thoufand of very good Marfh, and is extraordinary good Pafture as any in that Country. By means of the narrow Paffage, this Place was of great Security to them from the Indian Enemy; and, to ftrengthen it the more, they built Caftles and a Fort there. This was the firft Plantation of the Englifh that fucceeded, and which has continued to this Day.

As to the Colony, the firft Bufinefs they entered upon, after they landed, was, to open their Orders, where they found the following Gentlemen appointed of the Council, viz. Bartholomew Gofnold, Edward Wingfield, Cbriftopher Newport, Fobn Smith, Jobn Ratcliffe, Fobn Martin, and George Kendall, of whom Wingfield was chofen Prefident; but they thought fit to leave Capt. Smith out of the Council: For it feeems the reft of the Gentlemen were fo fet againft him, that they had confined him Prifoner ever fince they left England, which Purchas infinuates was occafioned by their Envy at his fuperior Talents, and becaufe the Company in England feemed to rely more upon his Skill and Experience than upon any of the reft; and it appears, that the Planters themfelves were fo convinced of his Abilities afterwards, that they were obliged not only to admit him into their Council, but in a manner refign their Adminiftration into his Hands after they had, by their perpetual Jars and weak Management, almoft ruined the Company's Affairs. After about five or fix Weeks Stay before this their intended new Town, the Ships being difpatched, Capt. Nersport departed with them for England about the Middle of Fune, leaving upwards of one hundred Men fettled in the Form of Government already mentioned; but, when the Ships were gone, the fame Feuds and Diforders broke out again with frefh Violence.

## Chap. III. of the ENGLISH in AMERICA.

In the Midft of thefe Feuds, however, they fell to planting, fowing, building, and fortifying; but, above all, they carried on a very advantageous Trade with the Natives. They might neverthelefs have made much greater Gains of it, and managed it more to the Satisfaction of the Indians, as well as to the great Eafe and Security of themfelves, if they had been under any Rule, or fubject to any Method in Trade, and not at liberty to out-bid one another. By this they not only leffened their own Profit, but created Jealoufies and Difturbances among the Indians, by letting one have a better Bargain than another; for they being unaccuftomed to barter, fuch of them as had been hardeft dealt by in their Commodities thought themfelves cheated and abufed. Thence they conceived a Grudge againft the Englifs in general, and made it a national Quarrel, which feems to have been the original Caufe' of moft of their fubfequent Misfortunes from the Indians. Thefe Indians proved much the fame as they had been found to be in other Places, fair and friendly at firt, but treacherous and deceitful in the fequel. However, it was chiefly by the help of their Provifions that the Englifs fubfiited till the Return of their Ships.
The next Year two Veffels were fent thither full Freighted with Men and Provifions for the Supply of the Plantation: One of them arrived directly; but the other, being beat off to the Caribbee Iflands, did not arrive till the former was failed back for England. But what gave the greateft Interruption to their Trade was, an Object which drew their Eyes and Thoughts entirely not only from that, but even from taking the neceflary Care for their Prefervation, and for the Support of their Lives, which was this: They found, in a Neck of Land on the Back of Fames-Tormn Ifland, a frefh Stream of Water, fpringing from a fmall Bank, which wafhed down with a yellow fort of Duft Ifing-glafs, which, being cleanfed by the frefh ftreaming of the Water, lay fhining at the Bottom, and ftirred up in them an unreafonable Defire after Riches; for they, taking all to be Gold that glittered, ran into the utmoft Diffraction, neglecting both the neceffary Defence of their Lives from the Indians, and the Support of their Bodies by fecuring Provifions, abfolutely relying upon the Power of Gold, and thinking that, where this was plenty, nothing could be wanting. Nay, they began to be fo infatuated with the Hopes of Mountains of Wealth, that they defpifed the Mines of Peru and Mexico, in comparifon of their own ineftimable Stream.
They foon, however, grew fenfible of their Error, and found that, if this gilded Dirt had been really Gold, it could then have been of no Advantage; for, by their Negligence, they were reduced to an exceeding Scarcity of Provifions, and that little they had was loft by the burning of their Town, while all Hands were employed about this imaginary golden Treafure; fo that they were obliged to live, for fome time, upon the wild Fruits of the Earth, and upon Crabs and Mufcles, and fuch like, not having a Day's Provifion beforehand. By this Neglect, likewife, they, many of them, became a Prey to the Cruelty of the Indians, and the reft durft not venture abroad, and fo were forced to be content with what they could get. In this miferable Condition they were, when the firft of the two Ships arrived from England to their Affitance. They neither thought or fpoke of any thing but Gold; and therefore they put into this Ship all the yellow Dirt they had gathered, and what Skins and Furs they had bartered for, and, filling her up with Cedar, fent her away. When the other Ship arrived, they ftowed her likewife with this imaginary Gold Duft, and filled her up with Cedar and Clapboard.
But being at length perfuaded that they might apply themfelves to other Labours as profitable, as well as more neceffary than collecting yellow Sand, which, fuppofing it valuable, would be always in their Power, if they took care to fortify themfelves effectually, they began, to befiir themfelves for that Purpofe, and, by the good Management and Direction of Capt. Smith, they made feveral Difcoveries in Games-River, and up Cbefe-peak-Bay; and, in the Year 1608, they firt gathered Indian Corn of their own planting. While Capt. Smith
Vol. II. Numb. 84 .
was out on his Expedition among the Savages, he was treacheroufly fallen upon by three hundred of the Indians, under the Command of one of their Kings, called $P_{G Z}$ maunker, who put all his Men to Death, and taking him Prifoner, carried him to Powbatan, their chief Kings who would have put him to Death, had he not been faved at the Interceffion of Porvbatan's Daughter, Pacabunta.

Being releafed he returned to Fomes-Fown, where Mr. Ratcliff refigning his Prefidenthip, he was unanimourly deiired to accept of that Office. While thefe Difcoveries were making by Captain Smith, Matters run again into Confufion in Fames-Toron; and feveral uneafy People, taking Advantage in his Abfence, attempted to defert the Settlement and to run away with the fmall Veffel which was left to aitend it ; for Captain Smitb was the only Man among them who could manage Difcoveries with Succefs, or who could keep the Setlement in any Order. Neverthelefs, amidft all thefe Inconveniencies which they brought upon themfelves, the Plantation being increafed to near five hundred Men, they made two other Settlements, one at Nanfomond in Yomes-River, above thirty Miles below fames-Town; and the other at Powbatan, fix Miles below the Falls of Games-River; which laft was bought of Powvbatan for a certain Quantity of Copper, each Settlement confifting of one hundred and twenty Mien ; and foon after they made a fourth Settlement at Kiguotan, near the Mouth of Fames-River. Captain Smith obferved that two thirds of the Adventurers came over with a View of having every thing provided to their Hands, without any Care or Labour of their own, and were fubfifted by the Labours of the other Induftrious third, until he compeiled them all to take Share in the Work; and then he foon planted Ground. enough to fubfift the Colony in Plenty, and, by moderate Exercife and good Food, faw them not only reftored to their Healths, but in a very flouriffing Condition; and, as there was now no longer Neceflity of procuring Food from the Indians by Violence, they lived and trafficked. very amicably together, and Porobatan fuffered him to make feveral other Settlements in the Country.

When their Affairs were in this profperous Situation there arrived fix or feven Ships from England, with between three and four hundred Planters, and fuch ample Supplies of Ammunition and Provifion, as would have enabled the Colony to have made an entire Conqueft of Virginia, or, at leaft, to have procured what Terms they faw fit of the Indians, if they had been under any Command; but as things were managed, this 'Supply only brought the Colony into Confufion. Upon Report of which the Company in England, imagining the Divifions among the Council in Virginia, in whom the Government there was lodged, were the Occafion of moft of the Mifmanagements that had happened, procured a new' Patent from King Fames, whereby they were impowered to appoint, a Governor with a more ample Authority than they had by the preceeding Patent; and prevailed on the Lord de la War to accept of the Government of their new Colony; who thereupon made Sir Thomias Gates, Sir George Summers, and Captain Newoport, 'his Deputies, until his Arrival; and thefe Gentlemen fet fail for England with nine Ships and five hundred Mien, in the Month of May 160 g .

All the three Deputy-Governors, being embarked in one Ship, were unfortunately caft away on the Illands of Bermudas, being then uninhabited, but they and all the People efcaped to the Shore; where, finding Plenty of Provifions, they took Poffefion of thefe Inlands for the Crown of England, and from Sir George Summers they have been ever fince called the Summer Iflands. In the mean Time the reft of their Fleet arrived fafe in the Bay of Cbefepeak, with the Reinforcement above mentioned; where they found Captain Smitb Prefident; but both old and new Planters gave out they were not obliged to obey him, for there was another Commiffion granted which had fuperfeded his, and they expected the Arrival of the Deputy-Governors every Day.
But notwithfanding thefe Jars, Captain Smitb made a
Mm m
hift to keep them in fome Order while he remained among them, for otherwife the Colony had been deferted over and over; but as this Gentleman was extremely active, and almoft continually employed in fome Service or other, he had the Misfortune to be blown up by Accident; which, though it did not cof him his Life, yet he was fo wounded and maimed thereby, that it was found abfolutely neceffary for him to return to England with the Veffels that failed not long after; a thing, happy for himfelf, but extremely difadvantageous for the Settlement; fince he was no fooner on Ship-board than every Man took upon him to do what feemed right in his own Eyes, which had defperate Confequences, fo that thofe who had given him moft Trouble while he was amongt them, deeply regretted the Lofs of him; and yet this Senfe of their own bad Behaviour did not at all incline them to Amendment, or to the fetting up any other Perfon with fuch Powers as might enable him to do what Captain Smith had done.
On the contrary, they emptied their Magazines and lived in the greateft Profufion, till that brought on Want; and then they rambled without Order, and under no Command, through the Country; taking Provifions by Force from the Natives, who failed not to employ all their Cunning, of which they had enough, to deftroy and cut them off; fo that when the Deputy-Governors arrived, in two Sloops which they had built in Bermudas, they found them in a moft deplorable Condition; War, Sick nefs, and Famine, having reduced them from upwards of four hundred, to fewer than fourfcore, and thefe too uneafy and difcontented. Sir Thomas Gates, and Sir George Summers, took all the Pains they could to quiet thefe Uneafineffes, and to bring things once more into Order; but it was all in vain; and the People fhewing their empty Warehoufes, their ruined Settlements, and the Number of Sick amongt them, induced thofe Gentlemen to confent to their embarking for England, as the only Means of faving thofe who were left; which they accordingly did, to the great Joy, no doubt, of the $I n$ dians.
4. But juft as they were failing out of the Bay of Cbesepeak, they met with their new Governor, who obliged them to return to fames-Fown to repair their Habitations and Forts there, and to difpofe every thing for maintaining the Settlement. This worthy Governor was the Right Honourable $T$ 'homas Weft, Lord de la War, of an ancient, as well as noble, Family; in which Prudence feems to have been hereditary, as well as Title. He was endued with the Virtues moft requifite for his Station, as Governor of an infant Colony; for, with great Mildnefs and Humanity, he had the warmeft Courage and the greateft Firmnefs of Mind, and was equally capable of perfuading by Words, animating by Example, and awing by the juft Ufe of his Authority. He accepted of this Commiffion from the Company, with a View of putting an End to thefe Diftractions, which had hitherto difappointed all their Expectations, and defeated all their Endeavours, and which they juftly attributed to the Want of having there fome Perfon in fupreme Authority ; who might be able to direct the Induftrious, encourage the Deferving, and punifh the Factious and Difobedient.
As foon therefore as thefe old, or rather new, Planters, were once on fhore again, his Lordhip, in a free and plain Difcourfe, fet before them the Folly and Madnefs of their Proceedings, reproving them for their Divifions, Idlenefs, and ill Conduct, which had occafioned their Misfortunes ; advifing them to reform, or he fhould be compelled to draw the Sword of Juftice, and cut off the Delinquents ; declaring, however, he had much rather draw his own Sword in their Defence; and telling them for their Encouragement, that he had brought them fuch Plenty of Provifions, that they would be in no Danger of wanting for the future, if they were not wanting to themfelves, in providing fuch things as the Country produced; then he proceeded to conftitute a Council, confifting of Sir Thbomas Gates, his Lieutenant General; Sir George Summers, his Admiral; the honourable George Piercy, one of his Captains; Sir Ferdinand

Wenman his Mafter of the Ordnance, and Cbrijtopber Newport his Admiral: Thefe, and the reft of his Officers, having taken the Oaths to the Government, and entered on their feveral Employments; his next Care was, to furnifh his People with Flefh, for notwithftanding there were not lefs than five or fix hundred Hogs in the Plantation, when Capt. Smith went to England, there-was not one left alive at this time; they had either been eat by the Colony, or deftroyed by the Indians, who, to diftrefs them, had driven all the Deer, and other Game, out of the Country; and the Englifh were fo ill provided with Nets, that though there was Plenty of Fifh in the Rivers, they knew not how to take them.

The Company had fent over a Supply of Cloathing, Bifket, Flower, Beer, and other Liquors; but, taking it for granted, that they had Hogs, Venifon, Fowl,' and Fifh enough in the Country, had made no Provifion of Flefh ; whereupon Sir George Summers, the Admiral, was difpatched to Bermudas, to bring over live Hogs from thence, for of thofe Sir George found Plenty in that Ifland when he was caft away there, though there were no People upon it. The Governor alfo fet fome to fifhing within the Bay, and others without, where there were Shoals of Cod-fifh; but their Nets and Tackle were fo defective, that they could not catch any. Hereupon he endeavoured to fettle a Correfpondence with Porwbaton and other Indian Princes, that he might purchafe Flefh of them for Englifh Goods; and in fome of thefe Negotiations he fucceeded, particularly with the King of Patowmack, one of the moft potent of the Indian Princes ; but notwith ftanding he reprefented to Powbatan that he had already promifed to acknowledge the King of England for his Sovereign, accepted of a Crown and Sceptre, and other Enfigns of Royalty from him ; with Prefents of great Value; this Prince would give hin no other Anfwer, but, That he expected the Englifb fhould depart his Country, or confine themfelves within the Limits of $\mathcal{F}$ amesToron Ifland, and not range through every Part of the Country, as they continued to do, only with a View of fubduing it, as he apprehended; threatening to iffue his Orders to cut them off and deftroy them, if ever they were found without the Limits he prefrribed them ; and commanded the Meffengers his Lordfhip fent to him, not to fee his Face again unlefs they brought him a Coach and fix Horfes; for in thefe, he had been informed by fome Indians who had been in England, their great Weroances were drawn.
The Lord de la War finding he was to expect no Friendfhip from Porwbatan, determined he fhould fear him : Having taken an Indian Prifoner, therefore, he cut off his Right-hand, and fent him to his Mafter Porwhatan, letting him know, that he would fend all his Subjects in that manner, and burn all the Corn in his Country (which was ripe at this time) if he did not forbear all Acts of Hoftility for the future ; which had fo good an Effeet, that the Colony lived in Peace and Plenty for fome time, every Day making frefh Difcoveries, and forming new Alliances with fome Indian Princes.

And thus the Company's Affairs being happily eftablifhed again by the Conduct of Lord de la War, Sir Thomas Gates was fent to England, to give an Account of the State of the Colony ; the Ships being freighted home with Cedar, black Wallnut, and Iron Ore ; which Returns appeared fo inconfiderable, that the Company were in Sufpence, whether they fhould not fend for the Lord de la War and the Colony home. However, they firft defired Sir Thomas Gates's Opinion upon it ; who told them that thefe were not the only Returns they were to expect; that if they would fend over Men who undertood how to make Pitch and Tar, and plant Hemp and Flax, they might furnifh England with all manner of naval Stores ; and that it would be very eafy alfo to fet up a Manufacture of Silk, the Country abounding in Mulberry Trees as well as Silk Grafs; that the Soil was exceeding fruitful, producing Corn, Grafs, Grapes, and other Fruits in abundance ; that European Cattle and Corn multiplied prodigiouny; and that there was great Plenty of Venifon, Fifh and Fowl, which they would never want when they could be provided with Boats, Nets, and Engines to take them. The

Company

## Chap. III. of the ENGLISH in AMERICA.

Company need then to be at very little Charge to fuipport the Colony; on the contrary, they would in a fhort time meet with Returns anfwerable to their Expectations. Whereupon the Patentees refolved to proceed with Alacrity to improve their Virginia Plantation, in which Refolution they were confirmed by the Lord de la War, who eturned to England about this time ( 1610 ) for the Recovery of his Health.
He left behind him the honourable Mr. Piercy, as his Deputy ; and, while he refided in England, took as much Care of this Plantation as if it had been his paternal Eftate; and was no lefs follicitous about the Welfare of its Inhabitants than if they had been his neareft Relations: To fay the Truth; it was to the Wifdom and Forefight of this worthy Lord that this Nation owes the preferving fo great and fo beneficial an Acquifition; as it was to his Courage and Steadinefs they. were indebted for the Plantation itfelf. In fhort, he fpent the whole remainder of his Life, which was about eight Years, in the Service of the Company and the Colony, and actually died in his Voyage back to Virginia in 1618 , with a great Supply of People, Cloathing, and Goods, for that Settlement, which, however, arrived fafe. As I have now given an Account of the fettling this Country, I have executed all that falls within the Compafs of my Defign ; but, as I apprehend that it maay be both entertaining to the Reader, and better anfwer the Defign of this Collection, I fhall juft run over a few of the principal Facts relating to the Hiftory of this Province, and then give a fhort Defcription of it as it ftands at prefent; in order to fhew what Advantages have accrued to the Nation from an Eftablifhment which it coit fo much Labour and Pains to effect: And the fame Method I fhall take in regard to other Plantations, as moft earneftly defiring to render this Work as agreeable, as ufeful, and as perfect, as it is in my Power to make it.

While Lord de la War was in England the Colony was governed by his Deputies, who, applying themfelves to bring about a peaceable Correfpondence with the Natives, advanced it at laft fo far, that feveral Intermarriages took Place, and amongft thefe the Indian Princefs Pacabunta efpoufed Mr. Fobn Rolf, an Englijs Gentleman, whofe Pofterity enjoy, at this Day, the Lands defcended to them from this Lady. In the Year 1616 one Captain Yardly was at the Head of Affairs ; and the Reafon I take notice particularly of his Adminiftration is, becaufe under it they firft began to cultivate Tobacco, which is fince become the Staple Commodity of the Colony. He was fuc ceeded by Capt. Argoll, afterwards Sir Samuel Argoll; who was a Man of a military Turn, whom we fhall have Occafion to mention frequently hereafter: He repaired the Forts that had run to ruin, and put the Colony into fuch a State of Defence, that there was no great Danger of any Attempts that could be made againft them by the Indians.

After the Death of Lord de la War, Capt. Yardly, who was likewife in England, and who, being knighted by King Fames, had the Title of Sir George Yardy, was fent over with the Title of Governor ; and a very good Governor he proved, for to him the People owed their being made as free as their Countrymèn in this Inand, fince he augmented the Number of the Council, and allowed the Planters to fend their Reprefentatives to the Affembly, the firft of which fat at Fames-Toron, in May 1620. In his Time Negroes were firtt brought into Virginia, the Lands divided, Salt-works erected at Cape Cbarles, and an Iron Mine wrought with good Effect. He was fucceeded, in 162I, by Sir Francis $W_{\text {yat }}$, a young Gentleman of a very good Difpofition, who endeavoured all he could to promote the Welfare of the Colony, yet in his Time it was that this Settlement ran a very great Hazard of being totally deftroyed; for the Indians, who had lived amongtt them now for feven or eight Years with greatFreedom and Familiarity, formed a Defign of extirpating them entirely, on account of one of their War-Captains being killed, though he had committed Murder and Robbery, and died in defending himfelf from falling into the Hands of Juftice. The Method they took to revenge this was, by a general Maffacre, which they fixed for Friday, the 22d of March, 1622 , and, in all probability, it had effectually
anfwered their End if it had not been difcovered by a converted Indian, the very Day on which it was to have taken place; fo that the advanced Plantations could not receive Intelligence time enough, which gave the Natives an Opportunity of cutting off three hundred and thirtyfour Perfons. The Englijh revenged this in a manner very unbecoming them, fince, pretending to be reconciled to the Indians, and thereby gaining their Confidence, they marfacred likewife in their Turn, and purfued their firft Blow fo effectually as to drive moft of thefe poor People to feek for new Habitations.
But it was not long before the Englifh gave them an Opportunity of fatisfying that Vice which is deepeft rooted in their Nation, I mean Revenge; for dividing amongft themfelves, and falling into Factions and Parties; and, at the fame Time, running out new Settlements ; the Indians fell upon them again, and cut them off in great Numbers. As this Misfortune was chiefly owing to the imprudent Grants made in England ; it occafioned loud Complaints; and the fatal Confequences of the Company's Mal-Adminifitration cried fo loud, that King Cbarles I. coming to the Crown of England, expreffied a tender Concern for the poor People that had been betrayed thither, and loft; upon which Confideration he diffolved the Company in the Year 1626 , reduceing the Country and Government under his own immediate Direction, appointing the Governor and Council himfelf, and ordering all Patents and Procefs to iffue in his own Name, referving to himfelf a Quit-Rent of Two Shillings for every hundred Acres of Land, and fo pro rata. The Country being thus taken into the King's Hands, his Majefty was pleafed to re-eftablifh the Conftitution by a Governor, Council, and Affembly, and to confirm the former Methods and Jurifdictions of feveral Courts, as they had been appointed in the Year $16_{20}$, and placed the laft Refort in the Affembly; he likewife confirmed the Rules and Orders made by the firft Affembly, for apportioning of Land, and granting Patents to particular Adventurers.
This was a Conftitution according to their Hearts Defire, and things feemed now to go on in a happy Courfe, for Encouragement of the Colony; People flocked thither apace, every one took up Land, by Patent, to his liking ; and, not minding any thing but to be Mafters of great Tracts of Land, they fettled themfelves feparately on their feveral Plantations. Nor did they fear the Indians, but kept them at a greater Diftance than formerly; and they, for their Parts, feeing the Englijh fo fenfibly increafe in Number, were glad to keep their Diftance, and be peaceable. This Liberty of taking up Land, and the Ambition each Man had of being Lord of a vaft, though unimproved Territory, together with the Advantage of the many Rivers, which afforded a commodious Road for Shipping, at every Man's Door, has made the Country fall into fuch an unhappy Settlement and Courfe of Trade ; that, to this Day, they have not any one Place of Cohabitation among them that may reafonably bear the Name of a Town. The next Governor after the fettling of this new Conftitution, was Sir Yobn Harvey, who proved of a Spirit very improper for fuch an Employment, fince he began early to differ with his Council; and foon after oppreffed the People to fuch a Degree, that they were refolved to be rid of him, at all Events; and accordingly in 1639 they feized him, and fent him Home Prifoner, with a long Charge againft him, accompanied by two of the Council, appointed to manage the Profecution againft him... But as foon as he came to London, the King, who highly refented this Outrage on his Prerogative, fent Sir Yobn back again, with the fame Authority as before ; but the very next Year removed that oppreffive Governor, and appointed Sir William Berkley to fucceed him.

This Gentleman held the Government longer than all his Predeceffors put together, and deferved it ; he was, in all Refpects, an excellent Governor; fo careful of the Colony, and fo kind to the People, that he preferved Loyalty in Virginia long after it was loft at Home; nor did he fubmit to the Rump, till he was forced to it ; and then withdrew to his own Plantation, where he lived as a
private
private Perfon, and would have no Concern in public Affairs at all; but he was ftill refpected by the Inhabitants for the great Things he had performed. He had purfued the War with the Indians fill he had reduced them fo low as to be no longer troublefome, after having made their Emperor Prifoner ; he encouraged the makeing of Pot-Ahhes, Soap, Salt; Planting of Flax, Hemp, and Cotton; and the Manufacture of Silk, which he brought to great Perfection. After he retired from the Government there were three Perfons fent from England, who ruled one after another feven Years; the firft of them was Colonel Diggs, who acted under the Parliament's Authority; then Mr. Bennet was fent over by Oliver; and afterwards one Mr. Mattberes, who died Governor ; and, upon this Accident, the People of Virginia defired Sir William Berkley to refume the Adminiftration of Affairs. He had a Commiffion from King Charles II. then in exile ; but he abfolutely refufed to act, unlefs the People would acknowledge his Mafter, to which they very readily confented, which will appear the lefs furprizing, when it is confidered, that Abundance of Gentlemen, who had been ruined in the Support of the Royal Caufe, had retired into this Colony from England.

In Confequence therefore, of this Refolution, King Cbarles II. was proclaimed in Virginia, before he was acknowledged in any of his three Kingdoms ; but it happened very luckily for Sir William that his Mafter was foon after reftored ; and as a Mark of his Affection for the Province, he wore at his Coronation a Robe of Silk, fent from Virginia. Soon after Sir William went over to compliment the King upon his return, and left Colonel Francis Morrifon, his Deputy; who behaved, in his Abfence, to the general Satisfaction of the Plantation. He ordered the Laws to be revifed and collected into a Body, to be laid before the Affembly, at their next Seffion. He took the fame Care of the Church as he did of the State ; he regulated the Parihhes, fettled the Minifter's Allowance, got a Revenue for the Support of the Government, and other Lews for the Encouragement of the Linnen and Woollen Mianufactures, the breeding of Silk-Worms, Tanning, and Salt-Works.

Whilft the Deputy-Governor was fo bufy for the Ser'vice of the Colony, Sir William Berkley was in England, taking his Inftructions from the King for his future Conduct. His Majefty ordered him to promote Iufbandry, Manufactures, Silk and Vineyards, that all Ships trading to Virginia thould go to fames-Town, and be entered at the Cuftom-Houfe there before they broke Bulk; which Orders were given, with an Intent, that by them the People might be tempted to come thither, and dwell there for the Converiency of Trade; and had they been obeyed it might have increafed the Number of Buildings in that City, which is now much lefs than it was fourfcore Years ago ; every body coveting to live at his Plantation, and fettle where he thinks he fhall have the beft Crops and Conveniency of Shipping. This is the Reafon that there are fo few Towns in Virginia, and thofe that are there fo very fmall. Sir William, being fully inftructed by the King how to proceed on his return to his Government, fet fail from England to Virginia, where he arrived in the Year 1662, and immediately put the People upon improving their Plantations, and advancing Manufactures. He fummoned an Affembly, and got an Act paffed for building Fames-Town; each County was to build fo many Houfes, and fome actually built their Quota; which, notwithftanding the Act, were converted into Taverns and Eating-Houfes, and the Town was very little the bigger for them. Sir William Berkley, at his return, gave a Sanction to the new Body of Laws, and took all the Care he could to carry them into Execution, which was all that he coulld do, or that indeed could be expected from him. And, as we are now come down in the Hiftory of this Colony as low as this Period will permit, we are next to give a fuccinct Account of the Na ture and Condition of this Plantation, that it may appear how well it deferves the Pains that have been taken about it, and how amply it rewards this Nation for all the Care and Expence beftowed in planting of it, which will
alfo acquit us of all the Promifes made to the Reader upon this Subject.
5. The Situation of Virginie is remarkably happy and convenient, having the River Potowmac upon the Northeaft, the Atlantic Ocean on the Eaft, the Province of Carolina on the South, and the Apalachion Mountains on the Welt, which feparate it from Florida. It lies from $3^{6}$ to $39^{\circ}$ North Latitude, and between 74 and $80^{\circ}$ of Weftern Longitude, it extends about 240 Miles in length from North to South, and may be in breadth 120 Miles from Eaft to Weft. As to the Air of this Country it depends very much on the Winds. The North and North-weft are either very fharp and piercing, or boifterous and ftormy, the South-eaft and South being hazy and fultry. The Winter is dry and clear, which makes. it very pleafant, Snow falls in great Quantities, but it feldom lies above a Day or two, and their Froits though quick and fharp, yet feldom laft long. Their Spring is fomewhat earlier than ours; in April they have frequent Rains; May and Fune are very pleafant Months, the Heat being greatly tempered by cooling Breezes; July and Auguft are fultry hot, the Air growing in a Manner ftagnant, which produces dreadful Thunderings and Lightning; in September the Weather breaks, and there fall prodigious Showers of Rain, at which Seafon it is that the Inhabitants are moft fickly. It ought, however, to be obferved, that in this, and indeed in all our Colonies, the Climate grows daily better, and thefe Thunder Seafons lefs violent, which the Inhabitants very juftly afcribe to the clearing the Country, and cutting down the Woods, which gives the Air a free Paffage, and is attencled with many other Conveniencies.

As to the Soil it is generally low towards the Sea Coafts, and for one hundred Miles up into the Country there is hardly a Hill or Stone to be met with, except that here and there fome Rocks of Iron Ore appear above the Ground, and fome Banks of a kind of petrified. Oyfter-fhells, that are of a prodigious Thicknefs; the whole Country before it was planted was either Foreft or Morafs, which in the Wef Indies they call Swamps. The Bay of Che eepeak runs directly up the Country, almoft due North, for three hundred Miles; at the Entrance it is efteemed about twenty-one Miles broad, or fomething more; and it continues navigable as long as it wafhes the Coaft of Virginia, and much farther; into the Weftfide of this Bay fall four great Rivers, which rife in the Apalacbian Mountains, all of them running from the Northweft to the South-eaft: The moft Southerly of thefe is Fames-River, the Indian Name whereof was Powbatan, being generally about two Miles over, and navigable, at leaft, fourfcore Miles. York-River, whofe Indian Name was Pamaunkee, is a little to the Northward of Fames-River, and in fome Places they approach one another fo near, that they are not five Miles afunder. To the Northward of York-River is the River Rapbanack, which in fome Places is not ten Miles diftant from YorkRiver, and either of them as broad or broader than FamesRiver. North of Raphanack is the great River of Patowmack, which in fome Places is not above feven Miles diftant from Rapbinack-River, and in other Places upwards of fifty. This River of Patowomack is navigable above two hundred Miles, being nine Miles broad in fome Places, but generally about feven. The Mouth of the River Patoromack, and that of fomes-River, are about one hundred Miles afunder; but the Head's of all the four Rivers rife in the fame Hills, pretty near each other. There are great Plenty of Springs in all Parts of the Country, but the Water is fomewhat harfher than in England.

As to Animals, there were neither Horfes, Cows, Sheep; or Swine, before the coming of the Englifh, but they have now plenty of them all; and their Horfes are very ferviceable, and travel at a great Rate. They have likewife Elks, but not common, Red-Deer in great Plenty; Hares, Squirrels of feveral Kinds, Mufk-Rats, Rackoons, wild Cats, Beavers, Wolves, Foxes, and feveral Sorts of Dogs. As for Reptiles, they have Lizards, feveral kinds of Snakes, particularly the Rattle-Snake, of which an Account will

## Chap. III. of the ENGLISH in AMERICA.

be given hereafter. As to Birds, they have Eagles of three Sorts: The firft is the grey Eagle about the Size of a Kite; the fecond the bald Eagle, fo called becaufe the upper Part of the Neck and Head is covered with a Sort of white Down; the third a black Eagle, refembling thofe in England, very ravenous, and which do a great deal of Mifchief; moft Sorts of Hawks, two kind of Owls, both very large; and the white Owl very beautiful, all the Feathers of her Back and Breaft being bright as Silver, except a black Spot immediately below the Throat. They have a large Bird of Prey, which they call a Buftard, but it is rather a kind of Kite; they have wild Turkies very large, fome of them weighing forty Pounds; their Partriges are fmaller than ours, but to the full as well tafted; they have a Bird called the Mocking-Bird, of two Sorts, grey and red, efteermed the fineft finging Bird in the World; it receives its Name from imitating the Notes of all other kind of Birds it hears : The humming Bird with a long Bill and very fine Feathers. As to Water-Fowl they have of all Sorts, fuch as Herns, Bit terns, Curlews, Wild Swans, Geefe, Ducks, Teal, Wigeons, Cormorants, and Gulls.
As for Fifh, no Country in the World has greater Plenty: In February, March, April, and May, there are Shoals of Herrings come up into their veryBrooks, fome of the Size of ours, but for the moft Part much bigger. There are alfo plenty of Cod-fifh and Sting-grafs; which laft is faid to be peculiar in this Country, being fo called from having a Sting in its Tail; it is efteemed good Food. In their Rivers there are the old Wife, the Sheep's-head, an excellent Fifh; Trouts, Green-fifh, Sturgeons in great Plenty ; Plaice, Flounders, Whitings, Carp, Pikes, Mullets, and Perch. And for Shell-fifh, they have Oyfters, Crabs, Cockles, and Shrimps. Of thofe that are not eaten, they have in their Seas Whale, Dog-fifh, Sharks, Porpuffes, Gar-fifh, and Sword-fifh: There is alfo a Fifh they call the Toad-fifh, from his fwelling monftrounly when taken out of the Water; and the Rock-fifh, fome Species whereof are poifonous, and have been fatal to thofe that have eaten them; though others, which are not eafy to be diftinguifhed from the former, are very wholefome Food; the Skip-jack, fo called from his flkipping out of the Water, is tolerable good Food; and fo is the Tobacco-pipe-fifh, fo called from its being long and flender, like a Tobacco-pipe. They have many Infects, fuch as Mufketoes, Buggs, Seed-ticks, Red-worms, which lie only on old Trees and rotten Logs; on which, fa Man fits down in the Midft of Summer, he is fure to catch them, but they are eafily got off with warmWater. We may add to thefe the Worm that eats Plank, which has a kind of Horn or Screw in its Head, with which it forces a Paffage through any Wood to which it fticks; and as we have heard much of thefe Worms, and perhaps not a little concerning them that is wide of the Truth; it may not be amifs to give an Account of them, from a Gentleman who refided long in Virginia, and made very exact Obfervations. In the Month of Fune, annually, there rife up in the Salts vaft Beds of Seedling Worms, which enter the Ships, Sloops, or Boats, wherever they find the Coat of Pitch, Tar, or Lime worn off the Timber, and by degrees eat the Plank into Cells, like thofe of an Honeycomb. Thefe Worms continue thus upon the Surface of the Water, from their Rife in Fune, until the firft great Rains after the Middle of Fuly; but after that do no frefh Damage till the next Summer Seafon, and never penetrate farther than the Plank or Timber they firft fix upon.
The Damage occafioned by thefe Worms may be four feveral Ways avoided; Ift, By keeping the Coat (of Pitch, Lime, and Tallow, or what ever elfe it is) whole upon the Bottom of the Ship, or Veffel; for thefe Worms never faften or enter but where the Timber is naked. 2dly, By anchoring the large Veffels in the Strength of the Tide, during the worm Seafon, and haling the fmaller afhore ; for in the Current of a ftrong Tide the Worms cannot faften. 3 dly, By burning and cleaning immediately after the Worm Seafon is over, for then they are but juft ftuck into the Plank, and have not buried themfelves in it; fo that the leaft Fire in the World deftroys them entirely,
and prevents all Damage that would otherwife enfue from them. 4 thly, By running up into the Frefhes with a Ship or Veffel, during the five or fix Weeks that the Worm is thus above Water; for they never enter, or do any Damage in frefl Water, or where it is not very falt.

We come now to fpeak of what is produced by their Soil. And firft with refpect to Trees; of which, we may affirm, few Countries are better ftocked, or afford greater Variety. As to Timber, they have Oaks, Cedars, Firs, Cyprefs, Elm, Afh, and Wallnitt ; fome of their Oaks meafure two Feet fquare and fixty Feet in height. They have alfo Beach, Yoplar, Hazel, E ${ }^{\circ} c$. befides Saffafras, Sarfaparilla, and many other fweet Woods, and fuch as are ufed in Dying. Their Fruits are, Grapes of feveral Kinds, Cherries of various Sorts, Plumbs from the Bignefs of a Damfon to that of a Pear; Peaches in fuch Plenty that in fome Places they feed their Hogs with them; Quinces in abundance, and Apples and Pears in as great Plenty as can be wifhed. Their Corn is of two Sorts, Englijh Wheat, Barley, Oats, Rye, which ail thrive very well, and yield from fifteen to thirty fold Increafe ; and Maize, or Indian Corn, which is not unlike our Peafe in Tafte, but grows in a great Ear or Head as big as the Handle of a large Horfe-whip, having from three hundred to feven hundred Grains in one Ear, and fometimes one Grain produces two or three fuch Ears or Heads; it is of various Colours, Red, White, Yellow, Blue, Green and Black, and fome fpeckled and ftriped, but the White, and Yellow, are moft common ; the Stalk is as thick as an ordinary walking Cane, and grows fix or eight Feet high, in Joints, having a fweet Juice in it of which a Syrrup is fometimes made, and from every Joint there grow long Leaves in the Shape of Sedge Leaves: The manner of Planting is in Holes or Trenches, about five or fix Feet Diftance from each other; the Earth is opened with a Hoe (and of late Years, with a Plough), four Inches deep, and four or five Grains thrown into each Hole, or Trench, about a Span diftant from each other, and then covered with Earth: They keep it weeding from time to time, and as the Stalk grows high they keep the Mould about it like the Hillocks in a Hop-Garden: They begin to plant in April, but the chief Plantation is in May, and they continue to plant till the Middle of fune: What is planted in April is reaped in Auguft; what is planted in May is reaped in September; and the laft in October.
But as the great Produce of this Country is Tobacco, and as that of Virginia is looked upon as the beft in the World, it is but juft that we fhould give a more particular Account of it. It is certain that the Country produced vaft Quantities of it before any Europeans went thither, and that the Ufe of it was taught them by the Natives; but in what manner they cultivated it, or how they cured it, is now no longer known, fince at prefent they buy what they confume from the Englifh, and therefore it is of their manner of Managing this Plant, that we fhall fpeak. The Tobacco Seeds are firft fown in Beds, where having remained a Month, the Plants are tranfplanted into the little Hillocks, like thofe in our Hop-gardens, the firft rainy Weather; and being grown a Foot high there, within the Space of another Month they top them, and prune off all the bottom Leaves, leaving only feven or eight on the Stalk, that they may be the better fed; and thefe Leaves, in fix Weeks time, will be in their full Growth; the Planters prune off the Suckers, and clean them of the Horn-worm twice a Week, which is called Worming and Suckering; and this Work lafts three Weeks or a Month, by which time the Leaf from Green begins to turn brownifh, and to fpot and thicken ; which is a Sign of its ripening: As faft as the Plants ripen, they cut them down, heap them up, and let them lie and fweat a Night, and the next Day they carry them to the Tobacco-houfe, where every Plane is hung up at a convenient Diftance one from another, for about a Month or five Weeks; at the End of which Time they frike, or take them down, in moift Weather, when the Leaf gives, or elife it will crumble to Dutt ; after which they are laid upon Sticks, and covered up clofe in the Tobacco-houfe for a Week or a Fortnight to

Nna
fweat
fweat; and then opening the Bulk in a wet Day, the Servants frip and fort them, the top-leaves being the beft and the bottom the worft Tobacco ; the laft Work is to pack it in Hogheads, or bundle it up, which is alfo done in a wet Seafon; for in curing of Tobacco, wet Seafons are as neceflary as dry to make the Leaf pliant.

Yet Tobacco is very far from being the only Thing of Value which this Country produces; on the contrary, they have Flax, Hemp, and Cotton; and Silk they might have if they were not fo extremely addicted to their ftaple Commodity, as never to think of any thing elfe, if Tobacco can be brought to a tolerable Market. They have likewife Silk-grafs, of which they make very little Advantage, though, no doubt, under proper Management, moft profitable Manufactures might be raifed from it, fince its Threads are finer than thofe of Flax, and ftronger than Hemp. We may add to this, that all kind of naval Stores might be produced in Virginia with great Eafe, and in vaft Plenty: Such as Plank-Timber, Mafts, Yards, Pitch, Tar, Rofin, and Turpentine, befides Sails, Cordage, and Iron. It is commonly faid, and there are fome who have lived in Virgimia ready enough to affirm it, that there is hardly a Stone to be found in the Country; but, however, this is far enough from being true; for at the Water-falls there are Stones enough of different kinds fit for paving, and other Ufes; and towards the Hills there are Quarries of Slate, and of a kind of Freeftone; there are likewife a Sort of fhining Pebbles, not at all inferior to Kerry-ftones and though generally fpeaking they are foft, yet I have heard that when long expoled to the Air, they become very hard, and if polifhed are extremely beautiful. As to Mines, they have feveral of good Iron in almoft all Parts of the Country, more efpecially in the Northern Neck, which belongs to Lord Fairfax. There was once a Lead Mine difcovered, but loft in the firt Maffacre ; there has been likewife a Talk of Silver and Gold Mines ; but it is certain, that they have a great many Coals, Antimony, and other Things of Value, in the Bowels of that Country, which they would not fail to fearch out if Tobacco alone did not fupply them plentifully.

Thus far we have defcribed the Country itfelf : Let us next enquire into its Condition as a Colony ; and in this Light we find it divided into twenty-five Counties, fome fay, twenty-nine; of thefe the firft is Fames County, lying on both Sides fames River, which contains five Parifhes and the only Two Towns that are in Virginia. The firt is Fames Towen, on the North fide of the River, and about forty Miles from the Mouth of it; it is very far from being confiderable, as it does not contain above fixty or eighty Houfes at moft, and of thefe, as we obferved before, the greater Part are Taverns or public Houfes, for the Entertainment of feafaring People, the Gentlemen of Virginia making it their Choice to live on their Plantations, in order to fee how their Eftates are managed; and in thefe Seats of theirs they live fo handfomly, and fo hofpitably, that how much foever Strangers may difapprove, their Method before they come into the Country, they are quickly reconciled to it afterwards. The fecond is Williamfourgh, to which the Seat of Government is now transferred, and yet it does not confift of above forty Houfes. The reft of the Counties are denominated as follows: Henrico County, Prince George, Cbarles County, Surry, Ile of White, Nanfamond, Norfolk, Princefs Amee, York County, Warvoick, Elizabeth, Nerw Kent, King William, King and Queen, Gloucefer, Middlefex, Efex, Richmond, Stafford, Wefmoreland, and Lancafter, Nortbumberland, Acomack, and Nortbampton.

The Number of People in thefe Counties, taken all together, Men, Women, Children, and Negroes, may amount to about half a Million; of thefe, one hundred and twenty thoufand are Freemen, or their Wives and Children, and above twenty thoufand are capable of bearing Arms. As for the Indians, there are ftill many Nations of them; but fome of them fo fmall, that they do not exceed four or five Families; and it is thought, that amongft them all, they could fcarce raife feven hundred, fome think, not five hundred fighting Men. As to the Government, it refembles that of Englund; for the legilative Autho-
rity is lodged in the Governor, or Council and Affembly : The Governor reprefents the King; gives his Affent to Laws, and has a negative Voice. As Governor, he is at the Head of the Civil Adminiftration, and being by his Commiffion a Lieutenant-General and Vice-Admiral, the Military and Naval Power are likewife in his Hands. In other Refpects, the Government is wery well regulated, and the Church alfo is well taken care of; neither has any Plantation belonging to us been under better Management, or the People more happy than thofe of Virgivia; and this appears very plainly from the Face of the Country, though there are no great Towns in it, and but very few Villages; for the Gentlemens Seats are very thick, all of them good convenient Houfes, many of them large and magnificent. The Roads are no where better, the Country being, for the moft part, level, and fcarce any rugged or deep Ways; fo that it is a common thing to travel forty or fifty Miles in an Afternoon, and fometimes an hundred in a Summer's Day. They have likewife as great Conveniencies with refpect to Water-carriage as any Country in the World, and it is this that has chiefly hindered them from living in great Towns, which, though prejudicial to the Manufactures, has certainly proved very advantageous to their Plantations, which are larger, more frequent, and better fecured, than in almofi any other Colony; and as it has flourifhed extremely hitherto, fo at this time it is as thriving a Colony, and as likely to continue fo, as any that belong to this Nation.

The laft Thing we propofe is, to give the Reader fome Idea of the Advantages that arife to the Nation from this particular Plantation, which I mult confefs is a very difficult thing to do ; but, however, I fhall labour to give as much Satisfaction as I can, and if I fhould be fo fortunate as to meet with any farther Informations, Care fhall be taken that the Public fhall not lofe the Benefit of them, fince they will come in properly enough in the latter Part of the Work. In the firf Place it muft be obferved, that as the Value of Labour differs in feveral Parts of this Kingdom, fo the Labour of a Man in moft of the Plantations is not only as advantageous to his native Country as if he worked at home, but much more fo: I believe, upon a moderate Computation, we may reckon, that fuch a Perfon contributes to the public Stock, by which I mean, the Income and Wealth of the Britifh Nation, four times as much : So that we may with Reafon reckon, that the White People in Virginia, one with another, produce twelve Pounds to this Nation; the Reafon of which will appear, when we confider the Nature of their Commerce more particularly. But befides this, the Negroes are of great Advantage to this Kingdom, though of infinitely lefs than White People would be, if they were employed in the fame Worlk; for every one of thefe poor Creatures confume yearly two Hilling-hoes, two Weedinghoes, two Grubbing-hoes, befides Axes, Saws, Wimbles, Nails, and other Iron Tools and Materials. On the Whole, there can be no fort of Quieftion, becaurf it appears a plain Matter of Fact, that thefe People neceflarily take off the Sum of one hundred and fifty thoufand Pounds, in the Commodities of this Country. How far it might have been more expedient for the Infant-Colony to have intermarried with the Indians, and thereby fo increafed their Numbers as to have been in a Condition to manage their Affairs without Slaves at all, I will not take upon me to determine; but this feems fo clear as to admit of no Difpute, that fuch a Settlement would have been by far more beneficial to the Mother-Country, and out of Comparifon more commodious and fecure for the Planters themfelves. But I mention this only incidently, and that it may pafs the Confideration of Perfons better verfed in thefe Things than I pretend to be; and, from juft hinting how Things might be, return to the Detail of how they really are.
I have before ftated (agreeable to what able Authors have afferted upon this Subject) fome general Principles of Computation, fuch as that every Head in this Plantation may be reckoned worth twelve Pounds a Year to this Nation, which muft feem prodigious, and indeed fo does every thing grounded on Calculation, to fuch as have not applied themfeives thereto; and fo they always

Chap. III. of the ENGLISH in AMERICA.
will unlefs clearly explained, which is what I fhall next attempt, as defiring to inculcate ufeful Truths, capable of influencing Men's Practice, and not to write paradoxical Difcourfes for my own, and other Peoples Amufement. In order to untie thefe Knots, we muft confider that the People in Virginia live exactly as we do, or rather more freely, in that generous, open, hofpitable, and confequently expenfive Method, that prevailed here in the laft Age. But as they are fupplied both with Neceffaries and Conveniences, with the Inftruments of Labour, as well as the Means of Luxury, from England; it follows of Courfe that they muft employ an infinite Number of Hands to provide thefe. For it is generally known that thefe Demands muft be fupplied from thofe Handicrafts and Mechanics that have moft Hands in their Service; fuch as Weavers, Shoemakers, Hatters, Ironmongers, Turners, Joiners, Taylors, Cutlers, Smiths, Bakers, Brewers, Ropemakers, Hofiers, and indeed all the Mechanics in England; their Manufactures being good Merchandize in Virginia. The Commodities fent thither, befides Linnen, Silks, India Goods, Wine, and other foreign Manufactures, are Cloth, coarfe and fine Serges, Stuffis, Bays, Hats, and all Sorts of Haberdafhers Ware; Hoes, Bills, Axes, Nails, Adzes, and other Iron Ware; Cloaths ready made; Knives, Bifket, Flower, Stockings, Shoes, Caps for Servants, and, in fhort, every thing that is made in England.

But if they employ thefe People they muft feed them likewife, and pay them their Wages; and not only them, but thofe who take the Pains to go between the Planters and thefe Workmen; by which I mean the Agents, Merchants, or Factors; who, though fewer in Number, yet have their Servants and Dependents; who, from the Nature of their Employments, expect to be paid at a better rate. Neither is this all, for when things are made and brought to the Factor, they are never the nearer to the Planter in Virginia, but muft be put into the Hands of a new fet of People, who are to be paid for the Carriage of them; fo that now I think the moft common Capacity may underftand how the Labour of every Head in any Plantation muft be worth four times as much to the Community of his Mother Country, as if he wrought at home; for if he fpends fo much, and pays for what he has, both of which are undeniable, his Labour muft produce fo much. This fhews the Benefit of Plantations to their Mother Country; and I hope there is no need to fay that this fhews how much Regard and Refpect is due from thofe who manage the Affairs of the Mother Country, to thofe who live and labour for her in the Plantations. But becaufe it is not impoffible we may err a little in the Meafure of thefe Computations, and as I am far from defiring to magnify thefe Advantages beyond the Truth, I fhall lay it down as a thing certainly to be depended upon, that every white Perfon in Virginia, one with another, is worth to this Nation ten Pounds, which will make the Value of the whole Plantation equal to an Annuity of 1,200,000 $\%$ to Great Britain.

This I think is already, in a great Meafure, demonftrated ; but as I am very fenfible that many People will fill think full Satisfaction is not given upon this Head, if they are not fhewn how this, or at leaft the greateft Part of it, is received ; that we may not do things by halves, my next Care thall be to remove this Difficulty likewife. In order to this, we muft confider that the Trade of this Colony, as well as that of Maryland, confifts almoft entirely of Tobacco; for though the Country would produce feveral excellent Commodities fit for Trade, yet the Planters are fo wholly bent on planting Tobacco, that they feem to have laid afide all Thoughts of other Improvements. This Trade is brought to fuch Perfection, that the Virginia Tobacco, efpecially the fweet-fcented which grows on York River, is reckoned the beft in the World, and is what is generally vended in England for a home Confumption; the other Sorts, called Oronoac, and that of Maryland, are hotter in the Mouth, but they turn to as good Account, being in demand in Holland, Denmark, Sreeden, and Germany; it is therefore from this Commodity that we
are to look for the beft Part of that valt Sunf which we have mentioned; and if we proceed diligently; and with Attention, I dare fay we fhall not fearch in vain.

In Time of Peace, I am perfuaded from feveral dif ferent Calculations, and from the Comparifon of the Informations I have fought and received from fuch as are, or ought to be, beft acquainted with thefe Matters, that there is very little lefs than one hundred thoufand Hogfheads of Tobacco exported every Year from this Colony; that between three and four hundred Ships are employed in this Trade; and upwards of four thoufand Seamen. If we take things upon this Foot, then the hundred thoufand Hogfheads of Tobacco will produce about the Sum at which I have fixed the Produce of this Colony to the Nation; but it may be faid, that if we take Tobacco for the Commodities and Manufactures that we fend to Virginia, it differs very widely from an Annuity; and that inftead of receiving $1,200,000 \mathrm{l}$. from the Perfons inhabiting this Plantation, we return them the moft valuable things we have, to $60,000,000$ of Pounds of Tobacco, which in itfelf is no Neceffary of Life, and which we might very well do without: Thus we are all at Sea again, and it is my Bufinefs to fet us. once more afhore; and if I am able to clear up this laft Mift, I hope there will, for ever after, be fair Weather for the Plantations.
In anfwer therefore to this Objection, which feems to deftroy all, and to demolifh entirely that Structure which I have been erecting, I fay, that ftrictly confidered, it makes more in favour of the Colony of Virginia, than all that I have been faying for it; and this I fhall be able to make as plain as any thing can be made, in a very few Words. It is, I think, generally agreed, that Sir Walter Raleigh firft brought Tobacco into England, or rather, as I apprehend, had it brought over to him from this Colony; and we find the Ufe of it much recommended by the learned and worthy Mr. Hariott, whom he fent over thither. But we muft not infer from thence that Virginia Tobacco was always ufed here, fince the contrary is very certain; for, as the Reader has been told, it was Sir George Xardly who introduced the planting and cultivating Tobacco in that Country by the Eurropeans, in the Reign of King Fames I.

Yet before this Time the Practice of taking Tobacco was become fo common in England, that King Fames wrote a Book againft it. I do not concern myfelf in the Controverfy, whether he was right or wrong in his Oppofition to this Practice; but I mention it to fhew that it was become common, and that the Fafhion of ufing it was growing ftrong. We had moft of our Tobacco then from Brazil, and fome from the Spanifb Plantations ; the Price of it was from four to feventeen Shillings a Pound, and if we had come to ufe as much of it as we do of the Virginia Tobacco, and had paid for it at the rate only of five Shillings, this fingle Article of Luxury would have ftood us in upwards of feven Millions every Year. I very readily allow that this would be a very abfurd and improbable Suppofition, fince it cannot be imagined that in fuch a Cafe, the common Sort of People either could or would have fmoaked Tobacco ; but then let us confider what a Number of People there are to whom the Dearnefs of this Commodity would have proved no Reftraint; and let us fuppofe that we fhould, in this Refpect, have been no, wifer than our Neighbours, which I look upon to be a very modeft and rational Suppofition, we might then, inftead of forty thoufand Hogfheads, have confumed ten or twelve thoufand, which would have amounted to a Million or upwards, and confequently fo much ready Money is hindered from going out of the Nation by the bringing in of Virginia Tobacco, which, viewed in this Light, is equivalent to the importing of fo much Silver.
But to proceed, befides the Money faved to the Nation by the Ufe of this Tobacco, we export one way or other fixty thoufand Hogfheads, which, at five Pound per Hogfhead, amounts to 300000 l. exclufive of the Duty of this Tobacco, which is not drawn back. I might have taken another Method of Reafoning upon this Subject, by fhewing that whatever Exchange of Commodities contributes to the Maintenance and Employment of
a certain Number of People, is not only equal to, but is and with him Squanto, the Indian, as an Interpreter, really much better than an Annuity, that would maintain the fame Number of People in the fame Way, had I not been inclined to render this Matter as evident as it is poffible. After this I thall make but two fhort Obfervations, and fo quit this Part of my Subject.

The firft is, that in Cafe what we receive from Virginiia in Tobacco thould fall fhort of the Sum I have computed we derive from thence, this Deficiency is certainly made up fome other Way; or, in other Words, the Virginians fend us other Commodities, or pay us with the Balance of their Trade with other Places. The fecond Obfervation is, that there is not the leaft Danger of feeing this Country over-peopled, and thereby finking the Value of Tobacco, becaufe there are a multitude of things to which the People may turn their Hands; feveral of which have been enumerated already, and therefore I fhall only obferve that in the Articles of Silk and Iron, the Inhabitants of this Colony might fave us $300000 \%$. a Year, and bring us in very near the fame Sum from other Nations. But it is now Time to quit this agreeable Topic, which however is a very hard Tafk, for one who has any Tincture of public Spirit, in order to proceed with the proper Bufinefs of this Section.
6. In what we have delivered concerning Virginia, wé have purfued the Hiftory only of the firft Company eftablifhed by King James's Patent, called alfo the London or South Virginia Company; but we are next to account for the Conduct of the other Adventurers, or the Weftern or Plymouth Company, as they are ftiled by the Writers of thofe Times, who contented themfelves for fome Years with trading with the Natives of North Virginia for Furs, and fifhing upon that Coaft. 'Two Ships being employed in this Fifhery in the Year I6I4, commanded by the famous Captain Fobn Smith, and Captain Thomas Hunt: Captain Smith went on Shore, and took a particular View of the Country of the Maflacbufets, and had fome Skirmifhes with the Natives; after which he returned to England, ordering Huint to fail with the other Ship to Spain, and difpofe of the Fifh he had taken there; but Hunt, propofing to make a Market of the Natives themfelves as well as of their Fifh, after Captain Smith was gone, enticed twenty-feven Men of the Indians on board his Ship, and then fetting fail with them to Malaga, fold them there to the Spaniards for Slaves, at the rate of twenty Pounds a Man, among whom was an Indian called Squanto, afterwards very ferviceable to the Englifo.

This Outrage was fo refented by the Indians for the prefent, that all Commerce with them became impracticable; nor was this the firf Time the Natives had been thus' violently carried away by the Englifh; for Captain Harlow, in the Year 16II, furprized one Epenow, and two more of his Countrymen, and brought them to England; where Epenow learned Englifh enough to impofe upon his Mafters; and underftanding that the Hopes of acquiring Mountains of Gold was the principal Inducement the Englifh had to vifit his Country; the cunning Indian in order to get thither again, pretended there was a rich Gold Mine not far from the Country where he was born, which he would guide them to if they thought it worth their while to fit out a Ship on fuch an Expedition. This Overture had the Succefs Epenow expected, and Captain Hobfon was difpatched the next Year with Provifions, Tools, and Materials, proper to make a Settlement, and open the Mines Epenow had given them Intelligence of. This Ship arriving on the Coaft of Maffachufets, feveral Indians. came on board, promifing to return again the next Day with Furs and other Merchandize; and they did, indeed, return, but in an hoftile Manner, with twenty Canoes full of armed Men; and Epenow, beckoning to them to approach nearer the Ship, jumped into the Sea, and made his efcape to them; whereupon the Englifs fired upon the Canoes, and were anfwered with a flight of Arrows, and feveral were wounded on both Sides, among whom was Captain Hobfon himfelf; after which, the Captain, without attempting àny thing farther, thought fit to return to England.

In the Year 16 Ig Capt. Dormer was fent to New England,
to endeavour to make Peace with the Natives, and fettle a Colony in the Maflachafets-Bay, but to no Purpofe; the Indians would not be reconciled, and, in a Skirminh with them, Dormer received farcher Wounds, whereupon he proceeded to Virgivia, leaving Squanto on Shore in Nere England. The Patentees, having met with fuch Difcouragement, were, at laft, fo much difheartened, that they gave up all Thoughts of making a Scttlement; however, other Adventurers carried on a Trade to Newo England; eight Ships were employed in it by the Merchants of London and Plymoutb this, and the next, Year, and the Succefs was fuch, that the Seamen, who were Sharers alfo, had each Iy $\%$. in fix Months Time, as much as 30 l . now, and as good as 5 l . a Month, or Mafter's Pay. It is very probable, that the Commerce might have gone on in this Manner for feveral Years, without any Thoughts of planting, though that was the Motive upon which their Patent was granted, fo early began the Fafhion, with Companies, to make that their leaft Care for which they were conftituted. But it fo fell out, that a Congregation of Independents or Brownifts, that for the Sake of their Religion had retired to Holland, and formed themfelves into a Church under one Mr. Jobn Robinfon, who was their Minifter, found themfelves more uneafy there than they had been in England; and therefore formed a Project of feeking an Eftablifhment in the New World, where they imagined they might enjoy Peace and Quiet; yet before they could carry this Defign into Execution, it was neceffary to have King James's Licence, not only in regard to the Rights of the Crown; but to fecure them, when fettled, from being turned out either by their own Countrymen or Strangers. In order thereto they got Sir Robert Nanton to procure the King's Confent for their tranfporting themfelves to America. Sir Robert anked his Majefty that fuch a People might enjoy Liberty of Confcience under his gracious Protection in America, where they would endeavour the Advancement of his Dominions, and promote the Gofpel: 'The King replied, It is a good and boneft Propofal, and yielded to it.

This Congregation, by their Agents in England, treated firft with the Council at Plymoutb for a large Tract of Land towards Norembegua and Nere Scotland; but upon better Confideration they abandoned their Purpofes, and refolved to feat themfelves more to the Southward on the Bank of Hudfon's River, which falls into the Sea at Nerw York. To this End, they contracted with fome Merchants, who were willing to be Adventurers with them, in their intended Settlement, and were Proprietors of the Country; but the Contract bore too hard upon them, and made them the more eafy in the Difappointment they met with in fettling on Hudfon's River; feveral of Mr. Robinfon's Congregation fold their Eftates, and made a common Bank for a Fund to carry on this Undertaking. The Agents hired the May-Flower, a Ship of 180 Tons, which was freighted with proper Goods and Merchandize, and ordered to Soutbampton, where fhe took aboard the Company that came from Holland with Mr . Brerefter. The whole Company, about izo Perfons, failed from Plymoutb the 6th of September, and fell in with Cape Cod on the gth of November, an ill Time of the Year to begin building, planting, or indeed any hard and difficult Labour; and nothing could be more difficult and hard than theirs was like to be : Here they refrefhed themfelves about half a Day, and then tacked about to the Southward for Hudjon's River; but Jones, the Mafter of the Speedroell, having been bribed by the Hollanders, who intended themfelves to take Poffefion of thofe Parts, as they did fome Time after, inftead of putting out to Sea, entangled them among the dangerous Sholes and Breakers, where, meeting with a Storm, the Ship was driven back again to the Cape, upon which they put into the Harbour, and refolved, confidering the Seafon of the Year, to attempt a Settlement there, and to proceed forward to the Bay. But Cape Cod not being within the Limits of the Land they had a Grant for under the Patent, they affociated themfelves into a Body Politic, by a formal Infrument, in which, having declared themfelves Subjects

Chap. 1II. of the ENGLISH in AMERICA.
of the Crown of England, they folemnly engaged Sub- in no lefs need of his Friendfhip to eftablifi themfelves miffion to the Laws that fhould from time to time be made for the good of the Colony.

The Place they made choice of to build a Town on; was very commodious, and the Country about it not leis agreeable; fo they refolved not to trouble themfelves or their Friends about obtaining any farther Licence, but to rifque their Fortunes where Providence had caft them ; in Confequence of which Refolution they went hard to work in raifing their new Town of Plymouth, for that was the Name they gave it, and which lies in the Latitude of 42 Degrees North. The Planters defigned to ftay in the Country, including Women and Children, were about an hundred, of whom only one Boy died in the Paffage. Their Hiforians mention no more than nineteen Families that fettled at Plymouth, and give us the Names but of forty one effective Men, among whom the Chief were Fobn Carver, whom they chofe Governor, William Bradford, Edward Winflow, Fobn Brewter, Affiftant to Mr. Robinfon, and ruling Elder of his Church, Ifaac Alerton, Miles Standifh, Fobn Howland, Ricbard Warren, Stephen Hopkins, Edward Tilly, Cbriftopher Martin, William White, Richard Clack, and Thomas Engliß. But fuch were the Fatigues this infant Colony underwent the firft Winter, that out of an hundred Planters fifty died within the Space of two Months; and had the Indians attacked them, they had probably all perifhed, but they met with no Difturbance.

After they had fixed themfelves at Plymouth Bay, they faw very few of the Natives till the Middle of March, when Samofet, one of their Sagamores, or Captains, came to them in a friendly Manner, and gave them to undertand they were welcome into the Country, and that his People would be glad to trade with them; and coming again the next Day with other Indians, they informed the Englifb that their great Sachem, whom they called Maffaffoiet, had his Refidence but three Days March to the Northward, and intended them a Vifit. And accordingly Maffafoiet arrived the 22d Day of March, with a Retinue of fixty People; and, being received by Captain Standifh at the Head of a File of Mufketeers, was conducted to a kind of Throne they had prepared in one of their Houfes. This Monarch was of a large Stature, middle aged, of a grave Countenance, and fparing in his Speech; his Face was painted red, and both Head and Face fmeared over with Oil ; he had a Mantle of Deer-Skin, and his Breeches and Stockings, which were of a Piece, were all of the fame Materials ; his Knife or Tomahauk hung upon his Breaft on a String, his Tobacco Pouch behind him, and his Arms covered with wild Cat-Skins, and in the fame Garb were his principal Attendants. They did not obferve any Marks of Diftinction between this Prince and his Subjects, unlefs it were a Chain of Fifh Bones, which Mafjaffoiet wore about his Neck. Soon after the Prince was feated, Mr. Carver, the Governor, came in with a Guard of Mufketeers, whereupon Maffalfoiet rofe up and kiffed him, after which they both fet down, and an Entertainment was provided by the Indians, of which no Part appeared more acceptable than the Brandy, the Sachem himfelf drinking very plentifully of it. In Maflafoiet's Retinue was Squanto, who had been carried to Europe by Hunt, and brought to Newe England again. This Indian, it feems, had a very great Affection for the Englifh, among whom he had lived feveral Years; and it was to his favourable Reprefentation of the Colony, that the Sachem was induced to make them this friendly Vifit; and, at this firt Meeting, to enter into an Alliance, Offenfive and Defenfive, with the Englifh, and even to acknowledge King $\mathfrak{F}$ fames for his Sovereign, and to hold his Dominions of him; and, as an Evidence of his Sincerity, Maflafoiet granted Part of his Country to the Planters and their Heirs for ever.

This Alliance, being founded upon the mutual Interefts of the contracting Parties, was maintained inviolably many Years. The Sachem, who had been informed by Squanto, how powerful a People the Englifh were both by Sea and Land, promifed himfelf their Affiftance againft the Naraganfet Indians, his Enemies; and the Englib food

Vol. II. Numb. 8 §.
in that Country. The Treaty being concluded, Maffaf. foiet returned to his Capital, leaving Squanto with the Colony, who was extremely ferviceable to them, not only as an Interpreter, but by inftructing them how to plant and manage their Indian Corn, in piloting them along the Coaft, and fupplying them with Fifh; Fowl ${ }_{j}$ and Venifon. The Englifh ftill remained fickly, and many of them dyed; among whom was Mr. Carver; their Governor, in the Month of April, 162 I . The Seamen alfo had their Share of Illnefs, infomuch that they were not in a Condition to fail till May, when the Ships returned to England to give their Friends an Account of the Circumftances of the Colony:

While thefe Ships were gone to; or remained in, the Britifl Dominions, the Colony made choice of Mr. Bradford for their Governor, who enjoyed that Poft for many Years, and faw the Plantation thoroughly eftablifhed: notwithftanding that, in his Time, there arofe fuch Differences about Religion as actually occafioned great Feuds and Jealoufies, and feemed to threaten worfe Confequences. It may be expected, that I fhould give fome competent Reafon for the quick Progrefs of this Colony beyond that of Virginia, which met with no fuch Suc-cefs; and this feems to be the rather neceffary, becaufe at firft Sight one might be inclined to think that it ought to be attributed to the fuperior Diligence and Application of the Weftern Company, in Comparifon of that of London; which is, however, fo far from being true, as in reality this Company had no Share at all in the fending over, or eftablifhing this flourifhing Plantation. On the contrary, it was raifed by the Spirit, Vigilance, and Ardour of the Malcontents in the Reign of King Cbarles I. who, before the breaking out of the civil War, and wher they had little Hopes of getting the Government into their own Hands, projected the fecuring to themfelves a fafe Retreat in Neru England, which induced them to fend thither fuch regular Supplies, and thofe too under the Direction of Men very capable of anfwering the Ends for which they were fent thither. We have feen with what wonderful Succefs their firt Attempts were attended, and how foon their new Colony was in a Condition to defend and fupport itfelf, not only without any Affiftance, but almof without any Notice, from the Crown, which in the beginning they did not defire; but afterwards, forefeeing many Inconveniencies that were like to attend this Manner of Proceeding, they very prudently refolved to alter it, and to procure to themfelves fuch farther Security as appeared to them requifite towards attaining thofe Ends of which they were in Purfuit.
This therefore being the Cafe, and the Colony of Plymouth ftill remaining without a Patent, or any Title to the Lands they poffeffed from the North Virginia (or Nerw England) Company, fent over Mr. Winflote, one of their Number, to follicit for both in the Year 1624 ; and this Gentleman fucceeded beyond their Expectation; for the Charter he procured, enabled the Planters to elect a Governor, a Council, and Magiftrates, and to make Laws, provided they were not oppofite to ours, or encroached on the Prerogatives of the Crown. After conducting the Hiftory thus low, and fhewing how, where, and when, the firft regular Englifb Settlement was founded and fixed in this Country, now the largett, beft improved, and moft populous of our Plantations upon the Continent, I muft excufe myfelf from going farther in this way, becaufe it would extend this Section to an unproportionable Length ; and becaufe the Hiftory of New England has been already written by feveral able Men, much better informed thereof than I can pofibly be ; and therefore I fhall be very well content with endeavouring, in as fmall a Compafs as I can, to do as much towards explaining the State of this Colony, as I have already done for that of Virginia.
7. In order to this, it will be neceffary to explain what is meant by Nerw England, fince it differs thus far from all our Colonies, that, in reality, it is a general Name for feveral of them, though there is no particular Plantation, or even Province, properly fo called. We are therefore to obferve, that under this Denomination was originally

000
comprehended
comprehended that part of the Continent of North America, which had been formerly ftiled North Virginia and Norembegua, and the way it acquired this Name, was thus: When Captain Smith made his Voyage thither, which has been before mentioned, he went afhore, with no more than eight Perfons; and at that time drew a Plan of as much of the Country as he had feen. This, as I apprehend, was in the Year 1614 ; and upon his return he thewed the Prince of Wales his Account of the Country, and the Map he had drawn of it. His then Royal Highnefs, afterwards King Cbarles I. read the one, and examined the other, giving feveral Englifb Names to Places, diftinguifhed by Indian Appellations in the Book; and from Captain Smith's Information of the Soil and Climate of the Country, called it New England; which Name it has ever fince borne. This Work, thus feen, perufed, and approved by the Prince, Captain Smith publifhed to the World, under the Title of $A$ Defcription of New England, in which he gave a very fair and true Account of it, as well as of the Advantages that might be hoped from a Settlement there; in attempting of which, however, he had the Misfortune to be taken Prifoner by the French; but notwithftanding this, his Treatife produced the intended Effect, and actually brought about that Eftablifhment, of which we have already given the Hiftory. He likewife wrote and publifhed another Book, which he called Nero England's Trials, which was very well received, infomuch that we may fafely aver, that all the Advantages derived fince to Great Britain, from the feveral Settlements made in this large and fruitful Country, are originally due to the Virtue and Induftry of this indefatigable Man.
The Name and Bounds of this Country being thus fettled, it is neceffary next to take notice of the feveral Plantations made in Nere England in the proper Order of Time, and then we fhall fhew, in what Situation they now ftand. We have already given an Account of Nerw Plymouth, which was the firft of them; and we are next to fpeak of that which, tho' later in Point of Time, is now become the moft confiderable in every Refpect, and which had its Beginning and Progrefs much in the fame manner with it. For in the Year 1625 (as the Nere Enyland Hiftorian relates) Mr. White, Minifter of Dorcheffer, obferving the Succefs of the Plymouth Colony, projected a new Settlement in the Maffacbufets Bay in Nero England, and prevailing with Mr. Conant, and fome others, to go over, and make choice of a proper Settlement, he and hisFriends purchafed, or procured, a Grant from the NoribVirginia, or New England, Company, in the Year 1622, to Sir Henry Rofreell, Sir Fobn Young, Knights; Tbomas Soutbcot, Fobn Humpbreys and Simon Newcomb, Efquires; their Heirs, Affigns and Affociates, of all that Part of New England which lies between the great River Merimack and Cbarles River, at the Bottom of the Maffacbufets Bay, and all Lands, $\mathcal{E}^{2}$. three Miles North of Merimack River, and three Miles South of Cbarles River, and in Length, or in Longitude, between thofe Rivers, from the Atlantic to the South Sea; and obtained a Patent from King Cbarles I. to hold the fame as of his Manor of Eaft Greenzeich in common Soccage, yielding and paying to his Majefty a fifth Part of fuch Gold and Silver Ore as thould be from time to time found within thefe Limits. Thefe Gentlemen, having taken in Sir Richard Saltonfal, Mr. Ifaac Fobnfon, Samuel Addefly, Jobn Van, Matibew Cradock, Thomas Goff, George Harwood, Samuel Moor, and feveral more, the following Year, 1628 , procured a new Patent with the Names of the laft-mentioned Gentlemen inferted, as the Proprietors; by which Patent they, and all others who fhould join with them, were incorporated by the Name of, The Governor and Company of the Maffachufets Bay in New England; and were impowered to elect a Governor, Deputy-Governor, and Magiftrates, and make Laws for the Good of the Plantation, not repugnant to the Laws of England; and Liberty of Confcience was granted to all that fhould fettle there. The Adventurers, by Virtue of this Patent, elected Mr. Cradock their Gowernor, and Mr. Endicot their Deputy-Governor, and fent over the latter immediately to reinforce Mr. Conant, who was fettled at Neumkeak, now Salem, fituated on the

Coaft of Nerv England, between the Promontories of Marblehead and Cape Anne.

This new Colony was fupported with the fame Spirit and Vigour as the former, and fuch mighty Embarkations made for its Service, as fhewed plainly enough of how great Confequence it appeared to thofe who were its Protectors in England; and fo much they were fet upon having fome Man of Diftinction on the Spot, that in the Year 1630 they chofe Jobn Wintborp, Efquire, Governor, in the Room of Mr. Cradock, who declined going over, and he appointed Mr. Thomas Dudley his DeputyGovernor; both of them embarked the fame Year, with Sir Ricbard Saltonftal, Ifaac Fobnfon, Equire, and the Lady Arabella, his Wife, Mr. Eaton, and feveral other Patentees, on board a Fleet of ten Sail of large Ships, with about two hundred Planters every way completely furnifhed: So that foon after their Arrival they erected two new Settlements ; the one ftyled Cbarles-Town, on the North-fide of Cbarles River; and the other Dorchefter, at the Bottom of Maffacbufets Bay; and in a fhort time part of the Inhabitants of Cbarles-Torm, pafling over to the oppofite Shore, erected Bofon, which is now the Capital of Nere England. As new Planters arrived every Year, the Colony quickly became over-ftocked; and Divifions breaking out amongtt them, one Mr. Roger Williams, who was Paftor of a Church of Brownifts, went and fettled without this Government ; and called his new Plantation Providence, which afterwards was united to the Government of Rbode Ifland ; of which we fhall Speak in its proper Place.

In 1635 , arrived a larger Fleet from England than at any time before, and amongft otherPerfons of Diftinction, who came over in it, was Henry Vane, Efquire, Son to Sir Henry Vane, Secretary of State to King Cbarles I. with whom the People were fo taken, that they elected him Governor, in the Room of Mr. Wintborp; but as he had the Misfortune to have a very roving and extravagant Genius, he quickly loft his Credit with them, and faw his Predeceffor reftored: Upon which he formed a Project of erecting a new Plantation to the North-weft of the Maffacbufets; which, however, he did not carry into Execution; but returning into England, was knighted, and made an extraordinary Figure under the Name of Sir Henry $V$ ane the younger, as every body knows that is acquainted at all with our Hiftory. But the Project for a Plantation on ConneEticut River was not dropped, though SirHenry $V$ ane did not proceed in it. This Settlement was become the more neceffary, becaufe the Pequet Indians began to grow very troublefome ; and as the building a Town and Fort on that River, would make a good Frontier on that Side, Agents were fent to view the Country, who made fuch an advantageous Report of the Fruitfulnefs of the Soil, and Largenefs of the River, as made many of the Planters of Newton, Dorchefter, Weatherion, and Roxbury, entertain Thoughts of tranfplanting themfelves thither, being already ftreightened for Room where they were.

Mr. Hooker, Minifter of Neroton, put himfelf at the Head of thefenew Adventurers, about a hundred in Number, who fet out in the Month of $\mathcal{F u l y}$, and travelling on Foot with their Children and Baggage, about nine or ten Miles a Day, came in ten or eleven Days to the Banks of the River, where they began a Town, which they called Hartford; after thefe came another Draught from Dorcbefter, who built a little Town, which they called Windfor; a third Detachment from Waterton, built Weotbersfield; and a fourth from Roxbury, built Springfield. The Towns the Planters built on this River were fifty and fixty Miles from its Mouth, fo that the Ship freighted with Provifions for thefe Planters at the Maffacbufets, came fo late in the Year that it was frozen up at the Mouth of it, fixty Miles from the Plantation; upon which, many of the new Adventurers travelled back in the Depth of Winter, and others who attempted it were frozen to Death. The Calamities which attended them, are fuch as all new Setlements are liable to ; but, however, thofe that had Courage to ftay till the Spring, carried on their Settlements with fuch Succefs, that they were not only in a Capacity of fubfifting, but making head againf their Enemies.

They had a fort of Commiffion from the Government of the Maflacbufets Bay; but finding they had extended their Plantations beyond the Limits of that Colony, they entered into a voluntary Affociation to obey the Laws that hould be made by proper Perfons, for the common Good, and chofe Edrward Hopkins, Efq; their Governor; and in this Situation they remained as to Conftitution, till Fobn Winthorp Junior, Efq; obtained an ample Charter for them from King Cbarles II. authorizing them to elect their own Governor, Council, and Magiftrates; and enact fuch Laws as they thought moft advantageous to the Colony, not oppofite to the Laws of England; the Benefit whereof they enjoy to this Day.
8. By that Time this Settlement was brought into tolerable Order, George Fenveick, Efq; was fent to NewoEngland, in order to make choice of the moft commodious Spot he could find, for the Heads of that Party, which had hitherto fupported all thefe Colonies; and it was conceived he would execute his Commifion the more readily, fince the Lord Vifcount Say and Seal, and the Lord Brook, two Heads of the Party, held Lands on Connecticut, by Virtue of a Grant from the Earl of Warwoick, another Puritan, who held a*Patent for all that Part of the Country, extending from the River Naraganjet forty Leagues, in a ftrait Line near the Sea-fhore, towards Virginia, as all the Continent South of Nerw-Enland was then called, as far as Florida. The Earl of Warrwick affigned his Grant to thefe two Lords, Brook and Say, Charles Fiennes, Efq; Brother to the Lord Say, Sir Natbaniel Rich of the Warwick Family, Sir Richard Saltonsfall, Richard Knigbtly, Efq; Fobn Pym, Efq; Fobn Hampden, Efq; and Herbet Pelbam, Efq; Mr. Fenwick feated himfelf at the Mouth of the River, and built a Town which he called Saybrook, in which he was affitted by Mr. Wintborp Junior, Son of the Governor of the Mafacbufets; but the Gentlemen, for whom Mr. Fenwick acted, finding Matters grow more to a Head at home, and forfeeing they fhould be more ufful there for their Country and their Caufe, gave over the Thoughts of removing to Nerw-England, and authorized Mr. Fenroick to difpofe of their Lands to the Colony of Cornezticut, who were the more willing to buy them becaufe they had no Title to their Plantation without the Limits of the Moffacbufets Patent, than what Poffefion gave them. The very next Year there came over fuch Numbers of People to fettle in New England, that the old Colonies were over-ftocked, and there was an abfolute Neceffity of looking out for new Plantations.
Amongft thofe who put themfelves at the Head of fuch as were inclined to remove in the Summer of the Year 1637, were Thboophilus Eaton, Efq; a noted Merchant of London, and the Reverend Mr. Davenport. Thefe Gentlemen finding there was not room at the Maffachufets, and being informed of a large Bay to the South-weft of Connecticut River, commodious for Trade, purchafed of the Natives all the Land that lies between that River and New York, or Hudfon's River; thither they removed, feated themfelves in the Bay over againft Long Ifland, and built New Haven; from whence that Colony, Province, and Government, were fo denominated, as alfo Guilford, Milford, Stanford, and Brainford; they alfo went over to long Ifland, and made there feveral Settlements, erecting Churches in all Places where they fettled; but being without the Limits of the Malfachufets Jurifdietion, they had no Charter, and no other Title to the Lands than what they had from the Natives; the Men who fettled in this Colony were generally Londoners and Merchants, who applied themfelves firt to Trade, after the Example of Governor Eaton, who had been an Eaft Country Merchant, and, travelling into Demnaark, was employed by the King as his Agent at that Court. But the new Comers met with fo many Loffes, either as Novices in the American Trade, or fome unfortunate Accidents, that they were difcouraged in their Trade, and were going to tranfport themfelves to Maryland or Ireland, until at laft turning to Furbandry, they thrived wonderfully, and thought no more of removing.
While the South-weft Parts of New England were thus filling with Inhabitants, the North-eaft were not neglect-
ed: The Englifh very much frequented the Coaft for the Benefit of fifhing and the Fur Trade, for which that Part of the Country lay convenient. This put fome of them on attempting a Settlement between the Rivers Merimack and Sagadabock, and it fucceeded fo well in a few Years, that there were two Counties laid out, Neto HampBire and Main, and feveral Towns built, as Dover, Hampton, Wells, Kittery, \&cc. Thefe Planters and Traders being fettled without the Limits of the Mafacbufet's Colony, entered into a voluntary Combination, and formed themfelves into a Body Politic, after the Example of Connerticut Colony; thus they continued, till being wearied out with Feuds and Divifions, they petitioned the General Court of the Maffacbufets to be brought within their Jurifdiction, which was done : Yet, in 1684, they made an abfolute Refignation of their Charter, and the Government has remained in the Hands of the Crown ever fince. Thus the Reader has feen, in few Words, the Rife and Progrefs of the feveral Plantations raifed in Newe England, which had a quicker Growth than any that were ever attempted from hence, or perhaps from any other Country; for, in the Space of about twenty Years, they had above. twice as many good Towns, well fettled, and the People in a very happy and thriving Condition; and, indeed, it muft be allowed, the Inhabitants were the moft laborious and induftrious, that were any where fettled in America; for though they had fcarce any ftaple Commodity, yet they made every thing turn to Account, and that chiefly, as I have been informed, by purfuing fteadily thefe two Maxims; firft, to fix themfelves well, and to raife one or more good Towns in convenient Places, and next to build and freight Ships with fuch Commodities as they had, and to fend them any where to find a proper Market.
9. The Country of Nerw England comprehends, at pre- ${ }^{-}$ fent, four confiderable Colonies, or Governments, viz. the Mafacbufets, which with Nerw Plymouth and the Main are now included in one Charter; Nere Hampfbire, which remains a feparate Government; Connecticut, which likewife comprehends New Haven; and Rbode Ifand, with Providence Plantation. The whole Country extends from 41 to 45 Degrees North Latitude, and lies betwixt 67 and 73 Degrees of Weftern Longitude; bounded on the North-weft by Canada; on the North-eaft by Nova Scotia; on the Eaft and South by the Atlantic Ocean, and on the Weft by Nerw York; ftretching in Length fomewhat more than three hundred Miles, and in fome Places it is near two hundred in Breadth. The Air of this Country is fharper than ours, though it lies fo much farther to the South, and the Winters are longer and feverer than they are here; but then their Summers are warmer, though fhorter than ours ; and, at the fame Time, the Inhabitants have the Advantage of a clear Sky, which renders the Country very wholfome; fo that none of our Plantations agree better with an Englifb Conftitution. Their longeft Day at Bofton is about fifteen Hours, and their fhorteft about nine ; the Land, next the Sea, is generally low, and in fome Places marfhy; but farther up, the Land rifes into Hills; along the North-eaft the Country, is rocky and mountainous.
As it is wafhed by the Ocean on the Eaft and South; it has many good Harbours, fome of them fo capacious as to be able to receive large Fleets. There are few Countries better watered; for, befides feveral finall Lakes and Rivulets, there are no lefs than feven navigable Rivers. The mof Weftern of thefe is Connecticut ; which, rifing in the North of New England, runs almoft directly South, till it falls into the Sea, and runs, at leaf, two hundred Miles, and navigable to a great Height, having at its Mouth two large Towns, called Saybrook and Lime: To the Eaft of this lies the River of Thames, though lefs confiderable than the former; it likewife runs South, and falls into the Sea a little below Nero London: The River Patuxet rifes in the North-weft of the Country of Maffacbufets, and, running South-eaft, falls into a noble Bay near Sroanfey: The River Merimack rifes in the North of Newe England, and runs directly South for near one hundred Miles, and then, turning Eaft, falls into the Sea between Salijoury and Nerwbury: The River Pifcata-
way runs from Weft to Eaft, and falls into the Sea at Port finouth, where the Opening is fo large, that it affords a Port capable of receiving the largeft Ships: The River Saco rifes in the North of Nerw England, and, running South, falls into the Sea between the Capes Porpus and Elizabeth: The River Cafor runs parallel thereto, till it falls into a Bay of its own Name.

It is owing to the Conveniency of fo many fine Rivers that this Country is fo full of large and populous Towns; and in the Country between the Rivers there is fuch plenty of fmall Brooks and Springs, that there is fcarce any Place where Water may not be had, by finking a Well to the Depth of ten Foot; and, which is another fingular Advantage, the Water is almoft every where good and fit for all kinds of Ufes.

As to Quadrupeds, or four-footed Animals, they are here in great Plenty, both tame and wild; among the former are Cows, Sheep, Goats, Hogs, and Horfes, all originally brought from England, but now very numerous here; the latter are, generally fpeaking, of a much fmaller Breed than ours, but they are fomewhat larger than the Welfs: They are, notwithftanding the Inferiority of their Size, extremely ferviceable; and, though they have but one Pace, and that too not very agreeable, being a kind of a Shuffe, yet they go at a very great Rate; fome fay, not lefs than twenty Miles an Hour, which would be a little incredible, if fome New England Horfes had not been brought over to Britain, which are faid to have put the Matter beyond Difpute; but though there are plenty of thefe Horfes, yet they fell at a good Rate, twenty Pound being looked upon to be a very low Price for a found Horfe, at the Prime of his Age. As for Beafts of the Fareits, they have almoft all Sorts, fuch as Deer, Elks, Rackoons, Bears, Wolves, which feem to be only a kind of wild Dogs; which, when they are taken very young, may be made tame ; Foxes, Hares, Rabbets, Squirrels, Beavers, Martins, Opoffums, which are fmall Beafts about the Size of a Fox, and grey as a Badger; remarkable for having a falfe Belly, in which they hide their Young, and from whence they may be taken without any Prejudice either to them or to the Beaft itfelf. They have alfo a great many Cur-Dogs, but thefe I fuppofe were originally from Europe. When the Englifs firft fettled here, they made a great Profit of Furs, but they are fince much fallen in their Value. I have been the fhorter in the Accounts of thefe Creatures, which are common enough in other Countries of America, that I might have the more Leifure to defribe a Creature which is peculiar, almoft, to Nerw England; and which feems therefore to deferve a more particular Defcription.
