He had fuch an Efteem andFriendfhip for Q. Elizabeth, that he took hold of all Opportunities to fliew it. It was thought by fome Perfons of thofe Times, who pretended to be very good Politicians, that he defired to marry her, though we fuppofe they had very little Grounds for their Conjectures; nor was it likely, that the greateft and moft polite Princefs of Europe, would marry a Barbarian; however it was faid, when his Affairs were in a bad Condition, and he was obliged to fly with his Treafures to Wologda, which City he fortified, that he defigned to make his Efcape to England, in cafe he had been forced to quit Mufcovy, of which he was not without Fear, in a Tumult of the People, and an: Incurfion of the Tartars; but he triumphed over all his Enemies. It was this Prince who ordered a foreign Embaffador's Hat to be nailed to his Head, for daring to wear it in his Prefence. Notwithftanding which Sir Feremy Bows, the Queen of England's Embaffador coming to Mofowe foon after, not only put on his Hat before him, but cocked it boldly: The Emperor afked him, if be bad not beard bore anotber Embelfador had been ufed for the like, or lefs Prefumption? Sir feremy replied, Yes, Sir; but I am the Embaljador of Queen Elizabeth of England, who neitber takes off ber Bonnet, nor Atands barc-beaded to any Prince whatfoever: Her Perfon I reprefent, and 乃ee will revenge to the utmoft webatever Affront is put on ber Miniffers. Upon this the Emperor turned about to his Courtiers, and faid: Here's a brave Man for you, that dares talk and aid tbus for the Honour and Interefo of bis Miftrefs: Which of you would do as mucb for me?

Sir feremy Bozus was envied by the Boyars on this

## Chap. II.

 Northern Coafts of Europe.Account, and thofe of them who had the Czar's Ear moft, perfuaded him to give the Knight a wild Horfe to back, hoping he would break his Neck in attempting it. Bowes undertook the Tank, and managed the Beaft with fuch Addrefs, that he mounted him, rode him, and fo tired him, that he lay down under him, loft his Mettle, and did not long furvive the Experiment. After which the Czar highly honoured Sir fercmy, and gave him feveral particular Marks of his Efteem.

Fobn Baflowitz making a Progrefs through feveral Provinces of his Empire, divers Boyars, and fome other Perfons, prefented him with fuch Gifts as they thought would be moft acceptable to him. Among the reft, a Shoe-maker confulted with his Wife what Prefent he hould make his Majefty; a Pair of Lopkies, or Shoes, the thought was too little by itfelf, and the advifed him to root up a great Turnip they had in the Garden, and carry it with the Lopkies to the Czar. The Emperor was fo well pleafed with the Prefent, that he ordered all his Attendants to buy Shoes of him, and to give him for them, twice as much as they were worth: He bought a Pair of them for himfelf. By this Means the Shoemaker got into a Condition to drive a better Trade, and growing rich in a fhort time left off his Shop. His Children, who inherited his Eftate, became Gentlemen, and are known to this Day by the Name of the Lopoftkies. There is a Tree near the Place where the Houfe ftood, which, when any one comes by, he throws off his old Shoes, in Remembrance of the Shoemaker: A Gentleman who underftood how well it had fared with this honeft Man, thought if he prefented the Emperor with fomething confiderable he might have a proportionable Recompence; fo he gave him a very fine Horfe; and the Czar, in return, made him a Prefent of the Turnip the Shoemaker had given him.

This Emperor difguifing himfelf one Day, rambled into the Country near Mofcow; and coming to a Village enquired at it for a Lodging: Every body refufed to take him in, except a poor Man whofe Wife was crying-out, and was delivered in the Prefence of the Emperor. He returned to Mofow early the next Morning ; promifing his Landlord to bring him fome Godfathers and Godmothers the next Day:He was as good as his Word; he went to his Houfe attended by his whole Court, made him feveral rich Prefents, and fet fire to all the Houfes in the Village, except his, only warning the Inhabitants to be more charitable for the future, telling them that the beft Way to teach them how to treat Strangers hereafter was, for them to experience themfelves how pleafant it was to be driven to Neceffity and lie out in the Air in Winter.
He often took delight in affociating himfelf with Robbers. He advifed them once to rob the Enperor's Treafury, afturing them he knew how it was to be done: How? fays one of the Thieves, giving him a Box on the Ear, You Rafcal, you, Would you rob the Emperor, who is fo good and generous a Prince. Had we not better fall upon one of the rich Boyars, who cheat and plunder him every Day? The Czar was fo well pleafed with his Anfwer, that he changed Caps with him, and bad him meet him the next Day at Duretz, a Place by which he ufed to go frequently; he told the Thief they would be very merry, and drink a Cup of Brandy and Metheglin together. The Robber came at the Time appointed; the Czar feeing him, called him to him, and advifed him to change his Courfe of Life; gave him a Place at Court ; and made ufe of him to difcover and punifh the other Rogues of his Gang.
17. The Word Czar is fo like that of Cafar, that it is apparently derived from it, and fignifies Emperor in the Mufcorite Tongue: The Ruflans fay it means a Title above a King: They called David Czar, and the other King of Europe, Kyrlos, which feems to come from Carolus Quintus, whofe Hiftory they have among them. The Name of the Czar now reigning is Alexis Micbaelowitz Romanore, i. e. Alexis the Son of Micbael the Roman. He has feveral Titles; thofe in the Great-Seal run thus: We Alewis Michaelowitz, by the Grace of God, Great We Alewis Michaelowitz,
VOL. II. Numb. CII.

Lord, Czar, Duke of Great, Litile, and Wbite Rufra, Sovereign of Miofoov, Kiovia, Uladomir, and Novogorod, \&zc. Czar of Cajan, Czar of Afracan, Czar of Siberia, Lord of Plafcow, Great Duke of Smolenfleo, Twer $\sqrt{2} 0$, Ugofko, Perinko, Vealko, Bolgariko; Lord and GreatDuke of Novogorod, of the Provinces of Cbarnigora, Refan, Roftore, ' Yaraliave, Bclouzer, Odouria, Obderia, and Condinea; Lord of all the Countries lying to the North; Lord of the Land of 2 averia, of all the Duchies of Cartileran, of Grenzintan, and of feveral other Countries and Sovereignties Eaft, Wef, and North, which we inherit of our Lord and Monarchs our Predeceffors, our Father and Grandfather.

TheCzar's Arms are the fame with the German Emperor's, viz. a Spread Eagle; but the Ruffan Spread Eagle has a St. George on Horfeback on its. Breaft, and a Mitre with a Crown on it between the two Meads. Some Perfons pretend Fobn Bafilowitz added the George to his Coat, on Account of the Order of the Garter, which he received from Queen Eilizabetb of England. The Czar never marries a Woman out of his own Dominions; he chufes one to his Liking, generally among the Nobility, fometimes among the Gentry and Commonality: Eliah, the Emperor's Father-in-law, kept a Tavern twenty Years ago, and his Daughter, the Emprefs, fold Mufhrooms in the Market. As foon as the Czar's Wife is dead, all her Family lofe their Credit, and all their Hopes die with her. The Emperor never fhews himfelf to his People but on certain Days of public rejoicing: When he appears it is always with Pomp; he is very magnificently dreffed, his Robes glittering with Gold and Jewels; and his Attendants are numerous, all of them handfomely apparelled: It is very feldom that he dines in public; when he does, his Nobles dine in his Prefence; his Guards are pofted all round his Palace ; they ftand like fo many Statues, not daring to ftir or fpeak, for fear of making a Noife. One would think, by the profound Silence that is always there, that the Place was a Defart; no-body enters the Innercourt, but his Domeftics, and fome Lords, whofe Offices require their perfonal Attendance in the imperial Palace.

He is very fober, drinks little or nothing, and fometimes puts Oil of Cinnamon or Cinnamon-water into his fmall Beer, to make it the more pleafant; for Cinnamonwater is as much ufed by Perions of Quality, in Rufia, as Rofe-water is elfewhere. The Smell of Ambergreafe, or Munk, is not much valued by them; they have a Drink called Brague, which he commonly drinks; it is what in England is called Oat-Ale. His Bread is all made of Rye, which the Ruffans imagine to be more nouriming than Wheat. When he has a Mind to treat his Domeftics, he commands them to fit round about him, and plies them with a Sort of ftrong Water double and treble diftilled. Thofe that are not ufed to it are apt to be very fick with it. He will often put a little Opium in it, and takes Pleafure in making them drunk. At each Meal he fends a Difh from his Table to his Favourites. On Eafter-day all the Courtiers, and the Nobility and Gentry in and about Mofoore, wait upon him, kifs his Hands, and he gives them Eggs. He never paid a Vifit to any one of his Subjects except his Governor, and he being fick he went once to feéhim.

When he goes out of Town, the eaftern Gate of the outer Wall is fhut, and fo remains till he comes back again; he generally goes out at that Gate, unles upon an extraordinary Occafion, as happened a few Years ago, when the Wall fell down on that Side, and fo he was forced to go another Way: He lies in his Shirt and Drawers, under a rich Quilt make of Marten-Skins; he has but one Sheet under or over him. His greateft Recreation is in Hunting Fallow-Deer; he does not mind killing of them, provided he can but hunt them down: He lowes Fowling, has three hundred Faulconers, and the beft Ger-Faulcons in the World; they are brought out of Siberia. He hunts wild Ducks with them. The Son of the Emperor is called Czarowitz, and fo are all hisChildren. When the Emprefs is brought to-bed, the People, to fhew their Joy, prefent the Czar with fomething or other: which he commonly returns: If he likes any Prefent,

6 E
and
and keeps it, he pays a great deal more for it than it is worth.
18. As the Czar's Dominions are very large, fo likewife are his Revenues. In the firf Place, he is Mafter of the Eftates and Goods of all his Subjects. No Heir can enter upon his Father's Lands, on his Death, without the Emperor's Confent ; to obtain which, he muft prefent a Petition to a Court erected for that Purpofe, to give Poffeflion to the Children of fuch as die, and have made their Wills; and to feize the Eftates of fuch as die inteftate, or without Heirs, or are convicted of any Crime, by which their Eftates become forfeited to the Czar. Secondly, His Cuftoms on all Goods exported, or imported, are very confiderable. Thirdly, The Ca bucks, or Shops where Brandy is fold, as alfo thofe of Strong-beer, belong to him, and he lets them at what Rent he pleafes. Some pay one thoufand Piftoles, and others two thoufand, a Year, according to their Abilities and Trade. Fourthly, His Baths and Stoves bring him in a good deal; becaufe the Mufcovites, both Men, Women, and Children, are obliged to bathe often, out of a Principle of Religion. When the Water of the Bath is too hot, they throw cold Water upon thofe that are in it. And fome of them, before they enter the Stove-Chamber, rowl themfelves in Snow. Fifthly, The Emperor is the chief Merchant in his Territories. Sixthly, The Trade of Siberia, in Marten and SableSkins raifes prodigious Sums; thofe that are fent to get them, are either Slaves or Criminals. In fhort, there is a Tax almoft upon every thing in Ruffa; that on the Caviare of Afracan only, of which I fhall fay more hereafter, is enough to maintain the Expence of his Houfe. All that hold Lands immediately of the Emperor, are obliged to furnifh him with Provifions. He ingroffes all the Merchandize that is brought to Mofcore, by the Greeks and Perjíns. He fends vaft Quantities of Furs to Arcbangel; as alfo Pot-ahes, Hemp, and Flax, which he barters for Silk, Sables, Velvets, and Cloths of Gold, Satin, broad Cloth and Damafk; which Commodities he wants moft, becaufe he makes all his Prefents of thofe things. All the Servants of his Houfhold, have each a Portion of Meal, Oats, Honey, Fifh, Nut-Oil, Beer, and Metheglin, delivered out to them.

The Strelficks and Lanlarics, who are regular Troops, have nothing but Corn and dryed Fifh, of which the Czar has very large Stores; they have very little Money given them, becaufe they trade and have great Privileges allowed them. The imperial Palace is very large, and all built of Stone and Brick, except the Czar's Winter-Lodgings, which are three Stories high; thefe are built with Timber, becaufe boarded Floors are reckoned, with them, more wholefome in coldWeather, than others; filthy Damps being apt to afcend from the Vaults of thofe Stoves, where the Walls are Stone. The whole Palace is incompaffed with a Brick-Wall, in the Circuit of which there are fourfcore Churches and Chapels, the greateft Part of which have Cupolas and gilt Croffes upon them. The Princes and prime Minifters have alfo their Palaces within this Wall; as, Facob, a Circaffan Prince; Boaris Fuanowitz Morolos, who was the Emperor's Governor, during his Minority; Knez Alexis, Mafter of the Fur-Office; Irebotky, General of the Czar's Army; Eliab Danelowitz, the Emprefs's Father: Knez 'Juan Vaffilowitz, a Prince of the Blood, and others of the firt Rank. There, are five Monafteries, two or three Nunneries, the greateft Part of the Precauces or Courts of Juftice, and the Magazine of Arms and Ammunition for War. The Tower called Velichy, ftands by itfelf; it is built of Brick and Free-ftone; Fobn Baftloreitz began it, and his Succeffor finifhed it, as it is at this Day; there is a very fine gilt Cupola upon it, and a Ring of Rells in it; it is as high as St. Mark's Tower at Venice.

The Czar, as well as other Princes, has his Minifters of State, but they are not fo much refpected as in other Places. The Gentlemen of his Bedchamber never enter it; they wait two or three Rooms off, and further when he is at Dinner. The City of Mofcow takes up a great
deal of Ground; it is incompaffed with three Walls, befides that about the imperial Palace. The firft, and that which is neareft the Heart of the Town, is of red Brick; the next to it is of white, and the third of Earth, fupported by Planks and Boards of Fir ; it is fifteen or fixteen Miles about, and was built in four Days, on Report of the Approach of the Cham of Crim Tartary. Since the Czar's Journies that he has lately made to Poland, where he faw the Manners and Houfes of the Poliß Princes and great Lords, his Court is grown a little more magnificent; his Apartments are hung with Tapeftries, very rich and beautiful; and he has feveral Country Houfes and Palaces. There is no Prince in the World has more Jewels than he; it is true, moft of them have Flaws in them, but the Ruflans don't mind that, provided they are large.

All the Difference between the Czar's Cloaths, and thofe of his Nobles, is, that the Emperor's is a little richer ; it is the fame with the Emprefs, and other Women of Quality; her Head-drefs is only a little higher than that of other Ladies, and her Shift-Sleeves a little longer. They are about fix or feven. Ells in Length; and her Gown, and the Gowns of her Ladies of Honour, are made like our Judges. The Emprefs generally travels in a Chariot, and by Nioht, attended by moft of her Ladies of Honour, her Women of the Bedchamber, her Embroiderers, and ali her Women Attendants, that are neceffary to her Perfon. Lately they rid on Horfe-back, very much a Cuftom, mightily ufed formerly amongft them, but was a long Time difufed upon the bringing in of Chariots into Ruflia. The prefent Eimprefs has revived it: She and her Train-ride as Men do, aftride, when they hunt; which is very rarely: They then wear a white Hat on their Head, and a Skain of Silk about their Necks. Men or Women, rich or poor, drefs after one Manner. There is but one Language, and one Religion, thoughout all that vaft Empire. They differ from all other Nations, even in the leaft Actions, and are no more like the other Northern Kingdoms, than they are to the Southern or Weftern.
19. They wear their Shirts above their Drawers, tied round about their Middles, a little above the Navel. They believe a Girdle makes them ftrong, and that if they did not wear one, they fhould be unlucky. When they fpit, one would think they fneeze. Their Language and their Accent are quite different from other People's. They whiftle with their Teeth, and not with their Lips. They fhake their Heads, when they fhew a Sign of Admiration. It is a great $\operatorname{Sin}$ in them, as they fancy, not to wafh their Hands after making Water. Even in their neceffary Occafions, they do not do like other Men; they make no ufe of Paper, but have little Spatula's of Tin, well fmoothed, to fupply the Place of other Conveniencies ufed elfewhere. As the Hands of our Clocks turn round, in theirs, the Hours turn about the Hand. They imagine it a very finful thing, for a Mufcovite to lie with an Englifb or Dutch Woman; but they believe a Ruffian Woman may lie with any Strangers, without committing a Crime worth taking notice of, becaufe the Children the has by them, are born and bred up in the Ruffian Religion.

They love Rye better than Wheat, for the Reafon I have already mentioned; and ftale Fifh better than frefth. They count their thoufand by fo many four-fcores and tens, and not by fo many hundreds. The firt of September is their New-Years-Day. Their Æra from the Creation amounts to feven thoufand and fixty odd Years. They are very credulous, and any thing will go down with them, let it be never fo incredible; things that are probable and reafonable, do not find fo eafy Belief among them. When they kifs a Woman they do it on the right Cheek. Lands that have not been above twenty Years in a Family, fall to the younger Children, proportionably with the eldeft. When they fow, they thrunt the Needle in with the Fore-finger. They eat Carrots without fcraping, and Peafe without fhelling. They don't gather them as we do, but tear them up Roots and all, and fo fell them in the Market. To fay that a Man has an inconftant Wife, they fay he lies on a Bank
of Sand. A Man's bare Word that has got a Beard, is more valued among them, than an Oath of one that has none.

Their fineft Pieces of Painting are not better than what is commonly done on Dutch Chimneys with red Oker and Spanifb white. They are as careful to keep their Teeth black, as we are to whiten ours; they have an Art of painting them, as alfo their Eye-balls. They reckon long Eyes, and little Foreheads, handfome. The Ruffan Women hide Part of theirs in their Coifs. Little Feet, and a flender Shape, are Deformity with them. They do their utmoft to grow fat; for which purpofe they eat exceffively, and will lie in Bed whole Days together; that they may increafe in Bulk, by much eating and much fleeping. Brandy, which one would imagine fhould rather walte than plump them, is thought to be a great Fatner by them. There is fo much Confufion in the Ways of Proceeding of the Ruflan Judicature, that it is almoft impoffible to give a clear Account of it.

There is a Precauce, or Court of Juftice, in each Province, in which a Boyar, or Lord, prefides, to reprefent the Emperor's Perfon. He has under him a Chancellor, a Dyack, or Secretary ; feveral Sub-fecretaries and Clerks. If a Plaintiff brings a Suit before the Judge, and he is not corrupted by the Defendant, the former is almoft fure to carry the Caufe; for that it is fuppofed the Right commonly lies on his Side. Criminals are feldom condemned to Death in Ruffia; they are feverely whipt; and, befides, there is a Sort of Punifhment worle than Death. A Murder may be bought off with Money. If one Man kills another, and no-body profecutes him, the Magiftracy takes no Notice of it. If there be a thoufand Witneffes againtt a Man accufed of a Capital Crime, he cannot be convicted, unlefs he confefles himfelf. It is true, to extort that Confeffion from him, he is expofed to the moft cruel Torture that can be inflicted on the Body of Man. They firft give him the Strapado. If he confeffes nothing he is whipt, and the Hangman does it fo terribly, that he can kill the Criminal with fix or feven Lafhes. Sometimes they pierce his Sides with red hot Irons, or elfe they flit his Bones, falt them, and put them, hanging to his Body, on the Fire to broil. If he fays nothing ftill, they cure him as well as they can; and twenty Days after, if he furvives the Torment, they renew it again. Sometimes they will half flea them, and if they endure all with Refolution, which rarely happens, they pour boiling Lead, Drop by Drop, on the Crown of his Head, clofe fhaven, which is the laft Trial of his Conftancy.

The Punifhment of Coiners, is to melt fome of the Metal of which their falle Money was made, and force them to fwallow it. A young Man fhooting an Owl in the Court of the imperial Palace, had his left Leg and his right Hand cut off; becaufe fome of the Shot glanced into the Emperor's Chamber. If a Confpiracy againft the Government be detected, the Confpirators are feverely tortured ; after which they are fent to Siberia, and are either fuffered to ftarve to Death with Cold on the Way, or elfe have their Eyes plucked out, or their Ears cut off; and are left in that difmal Province fifteen hundred Miles from Mofcoro. It is but lately that the Rufrans have hanged their Criminals; the Reafon why they would not permit any fuch Execution before, was out of a foolih Fancy, that when the Man was ftrangled, his Soul departed downwards, and that defiled it. The Criminal ties the Rope about his own Neck, and flings himfelf off from the Ladder, when the Executioner bids him. The Hangman's Place is hereditary, and he is careful to inAtruct his Children in his Trade; which, however, is not fo reputable as in fome Parts of France, where the Executioner pretends to be a Gentleman by his Office. The common People in Mufcovy are very ignorant, and much given to Idolatry. Thofe that live in the Northern Provinces, about Arcbangel, Cola, \&x. know no other God but St. Nicholas, who, they believe, governs the World. They affirm he failed upon a Mill-Stone, from Italy to a Place near Arcbangel, now called. St. Nicbolas's Port; and if a Ruffian feemed but to fufpect the Truth of this Story, he would be in no fmall Danger of his Life. They
celebrate the Feftivals of their own Saints with more Devotion than thofe of the Apoftles. St. Nicbolas, they fay, is Nafba Bradt, i. e. one of their Bretbren, who, being of their own Country, has more Kindnefs for them than either St. Peter or St. Paul, who never knew them. Thofe who have made Inroads on other Nations, or plundered Strangers, think they expiate all their Offences, by building a Church, furnifhing it with a good Ring of Bells, and Store of St. Nicholas's, adorned and fet off with Jewels. The greateft Part of the Ruffians are rude and barbarous, except fome of them, who are civilized by their Commerce with Foreigners, or who have travelled to Poland and feen that Court.
20. The Poles are lefs barbarous than the Mufcovites. Some of them improve their Minds by Study ; and Arts with the Ruffans, Enemies to the Sciences, are never encouraged. The Gentemen of Poland are at Liberty to travel whereever they pleafe. The Mufcovites cannot go out of their own Country without Leave of the Emperor, which is not eafly obtained. However, with all thofe Advantages, the Poles are not fo refined a People as other Nations. They are proud, infolent, felf-conceited, and have high Opinions of themfelyes, and their cwn County, which they fancy excels all others. They are whimfical in their Drefs, vain, prodigal, and very oftentatious. Their Horfes are fine, and their Furnicure magnificent. They affect this, becaule it is what is mof feen. They are civil to Strangers, and entertain them very handfomely, for two or three Days, till they have feen all they have to fhew them, and have made them drunk for four or five times. They drink harder than the Ruffans, and are fo quarrelfome over their Liquor, that there is fcarce a Gentleman, in the whole Kingdom, but one time or other has' been wounded in a Debauch. Their Laws are barbarous to the laft Degree. Murder is only punifhed by a pecuniary Mulkt.

They pay no more than four or five Crowns for killing a Clown; the Price rifing higher according to the Diftinction of the Perfon murdered. Their Kings are, in Truth, but Shadows of Monarchs. Henry III. was King of Poland before he reigned in France. He had Reafon to be weary of their Crown, and would not, by any'Perfuafions they made ufe of, be prevailed upon to keep it. A thing of the highelt Confequence, when debated in their general Diet, may be ftopped by one Senator's Vote, who has Power to proteft againt it, without giving his Reafons for it. The Ceremony is, he fets his Hand to his Scymitar, and that fignifies he is ready to oppofe that Propofition, in difpute, to Death; which damns it for that Seffion; and though, perhaps, the next Day the protefting Senator changes his Opinion, yet he cannot revoke his Proteftation. The Pox is very common and dangerous in Poland.

The Mufcouites got it of the Polif Women, at the Time they conquered Vilna, and fome other Towns and Provinces on the Frontiers of Poland; before which Expedition the Ruffians did not know what that Difeafe was. The Scurf, or Plica, is ftill more common than the Pox. The Caufe of it is, that moft of their Springs are poifoned by Mines of Arfenic, very frequent in thofe Parts; by which it is almoft impoffible to travel thither and not have it. When once it gets into a Family, it goes round it, no-body efcapes the Infection. It is the filthieft and loathfomeft Diftemper in the World. A Man cannot look upon fome Polanders, who have it in Extremity, without turning his Stomach. Befides that, the Symptoms of this Diftemper are terrible to the Eyes, the Stench of it is abominable; there is no old Wound or Ulcer fmells fo intolerably. I have feen fome Monks, whofe Heads have been all over Scurf, and their Hair clotted together, than which there can be nothing more beaftly and fhocking to the Sight; neverthelefs it is taken no Notice of in Poland; the Poles, thinking it a Sign of Healch; and Gentlemen being moft troubled with it, it is alfo taken for a Token of their Quality. Thofe Horfes that have it, whofe Mianes are matted, and whoe Tails are glewed together with it, are efteemed the more bold, and the moft fit for Service; and if never fo little of this Scurf is cut off, the Beafts die, or run mad, immediately, on
elfe fall lame or blind. It is faid the Poles were the firft who brought up the Fahion of powdering Hair to hide their Plica, which is the more probable, as Starch is the Manufacture of Poland. They are more faithful in obferving their Treaties than the Ruffons, the Latter making no Scruple to break the moft folemn Alliances, when it is for their Interefts: And yet in their private Negociations, the Mufcovites are very exact in making good what they fwear to, and careful how they take a falfe Oath, or indeed how they take any.

The Polifh and Rufran Languages differ one from the other, as the Englifb does from the Scots. The Polifb Tongue paffes for the more copious and polite; and yet the Pronunciation is not fofter, nor the Orthography lefs rude than the Ruffan Language. In fome of their Words there are fix Confonants for one Vowel; they can hardly fpeak without fputtering in the Faces of thofe to whom they Tpeak. They are flately in their Salutations, and do not bow fo low, as the Rufians. The Tartars falute their Superiors by embracing their Knees. The Common People falute one another, by putting the Fore-finger on the Mouth of the Perfon faluted, and thaking the Head a Jittle. The Manner of the Circalfans in this Cafe, is odder fill ; they afk the Man whom they would falute, if his Servants, his Cows, his Sheep, his Horfes, his Goats, his Hogs, his Cocks, his Hens, and his Turkeys, are all fafe and well.

2I. I thall not pretend to write a complete Hiftory of the Houfe of Komanzore now reigning in Mufcow, what is faid here hiftorically, being a fort of Digreffion; but believing the Reader will be diverted with a hort Account of the prefent Czar's Family, I thought fit to give it ${ }_{2}$, and fome other entertaining Occurrences which I met in the Memoirs fo often mentioned before. It would be too tedious to give, as the Gentleman who wrote them has done, a long Etymology of the Word Czar, and how the firft Romanzorw was advanced to the Title, or how Bafilowitz, having reduced all the petty Dukes that had Sovereignties in Mufcovy,' erected a Monarchy on their Ruins. Fobn Bafilowitz, his Son, followed his Steps, was fuccelsful, and fubdued the Kings of Cafan, Aftracan, and Siberia. To write all thefe Events, would make a long Hiftory of itfelf, Bafilowitz reigning many Years. And though he was the greateft Tyrant in the Word, he was alfo one of the moft happy Monarchs, if Victory alone can make a Prince happy.

The Czar Micbael, Father to the prefent Czar (Anno ${ }_{1}$ 670) was a very merciful, religious and good Prince, courteous to Strangers, and one who delighted in maintaining a friendly Correfpondence with all Chriftian Potentates. Count Wolmer, the laft King of Denmark's natural Son, would have married his Daughter, but the Clergy of Rufia oppofed it, faying, Wolmer was a Heretic, and therefore the Princefs could not lawefully marry bim. The Danib Prince refenting that the Rufian Priefts fhould oppofe his Match, challenged them to difpute with his Chaplains, whofe Religion was the trueft, his or theirs. The Ruflans refufed his Challenge. The Czar was highly enraged againft them for it, demanding, wbat Sort of Faith they profeffed, that they could not defend it by Reajon and Argument: Some Daysafter, as he was going to Bed, he was taken with a Vomiting, and died the next Morning, not without Sufpicion of being poifoned, the Priefts apprebending he would maike Innovations in their Religion. The Czarina or Emprefs, did not long furvive him, and Count Wolmer thereupon gave over all Thoughts of the Marriage.

This Emperor often recommended to his Son Alexis Nicbaelowitz to follow the Advice of Boaris Fuanowitz his Governor. There is an odd Story of the Fate of this Boaris's Father, being a Widower, and the Emperor Baflowitz's Favourite. He defired him to beftow one of his Concubines upon him in Marriage. Bofilowitz granted his Requeft, without naming any of them in particular. The Favourite having a Licence at large, took the handfomett of them all. At which Bafilowitz fell into a violent Paffion; and hearing they were retired together to one of his Stove-Chambers or Hummums, to enjoy themfelvas with the greater Liberty, as they thought they
might lawfully do, having the Emperor and the Prieft's Confent ; the Czar commanded. a Bear to be let loofe upon them; which was done; and the two Lovers were immediately devoured by him. Boaris and Cleab, the unhappy Favourite's two Sons, were bred up with the Emperor Micbael: And Boaris gained fuch an Infuence over him, by a long Familiarity, that he governed all things as he thought fit, and was more abfolute than his Mafter. He leffened the Czar's Officers; and thofe he kept in their Pofts were glad to ferve for half Pay; even the very Embafiador's Penfions were retrenched: He impofed new Taxes, and fent thofe Dukes, who having been Sovereigns formerly were moft dangerous, to diftant Governments, as to Pripnin, to Bolgorod, to Coraibin, and to Cafan: In fhort, he was fo fevere in his Miniftry, that the Nobility hated him as much as they envied him; and he, defpifing their Intrigues to depofe him from his exalted Station of chief Favourite and Minifter, depreffed them to raife his own Creatures.

The People murmured at the new Impofitions; there was an Infurrection upon it ; they required Juftice, and that the Emperor fhould deliver Boaris over to them to be made an Example on for his Mal-Adminiftration. The Czar was furprized at their Demands, not expecting any fuch Infolence from his Slaves, for fo his Favourite had reprefented all his Subjects. He endeavoured to molify thofe of them who were moft outrageous. And to gain time, and fave his Favourite's Life, he fwore he would banifh him from Court for ever. This Compliance appeafed them; Boaris was ordered to retire, and the Nobility were reftored to the Czar's Favour, which they managed as little to the People's Satisfaction as Boaris had done, who being a cunning Statefman, obferved their Difcontents, and improved them to his Advantage, by encouraging the Clamour againft the Nobility, who oppreffed the People fo much, that thofe who were lately moft for banifhing the Favourite, were now hotteft for recalling him. They found it no difficult Matter to fucceed in their Enterprize; the Czar, on their Petition, did readily what they would have him do; fent for Boaris to Court: And he was afterwards very kind to thofe that had been inftrumental in his Reftoration. Ever after, he careffed the People on all Occafions, and favoured them to the utmoft of his Power : He undertook to protect all Foreigners, and was equally beloved by Natives and Strangers. He died about fixteen Years fince, i. $e$. in 1650, in a very old Age, beloved by his Prince, and regretted by his People. Hie had the Character of an able Politician, whofe Councils were fuccefsful. He died lamented by every body but the ancient Nobility, whofe ambitious Defigns he always thwarted.

It was he that made Eliah Danelowitz General of the Czar's Army; who, before he had a Fit of the Apoplexy, was reckoned a Man of great Worth and Capacity. He was bold, daring, and vigilant: His Memory was fo good, that he knew every one's Bufinefs in all the Employments Civil and Nilitary. He could 'diftinctly tell the feveral Quarters of an Army of fourfcore thotifand Men: He could tell the Names and Characters of all his Officers; but the Accident that happened, as we have already faid, weakened him extremely both in Body and Mind: And his Memory is now fo bad, that he hardly remembers thofe Perfons with whom he was moft familiar. He was Treafurer, and held five or fix more great Offices, which he managed with equal Skill and Succefs. 'Tis true, he plundered a great deal, and the Emperor, who feared more than he loved him, winked at it more willingly, becaufe whatever Eliab fcrap'd up, would fall to him in right of his Wife, Elich's Daughter. Neverthelefs, after the Death of Dovelowitz's Wife, obferving that he was too kind to fome Tartarian and Polifh Women, he ordered him either to marry or leave the Court. On which Occafion, I cannot help remarking, that Marriages are in high Eiteem in' Rufia, either out of Policy to encourage what helps to people the Country, or to prevent the Ruflazs abandoning themfelves to Boys and Beafts, to which they are not a little inclined; nor is that Crime punified with Death there, as in other Countries.

## Chap. II.

Northern Coafts of Europe.

It is called Ne Niibeay, and it got that Name by this Means: A young Rafcal which was furprized committing an abominable Action with a Cow, cryed out to the Perfon that fpied him, Ne Mibeay, Do not difturb me. This was done about eight Years ago; and ever fince, that horrid Sin has been fo called.

Eliab's Misfortune would have been regretted more, had not Na/bokin fucceeded him in the Adminiftration of Public Affairs. This Lord is one of the wifeft Minifters in Europe; he is a Man of Temper and Integrity; he is indefatigable in the Difcharge of his Offices committed to his Management, and a hearty Afferter of monarchical Government; he is Chancellor of the Office of Embaffadors, and Governor of Rufla Minor; and has feveral other Employments, which his Predeceffor Eliab held before him. It was Najbokin that concluded the Peace with Poland, very honourable to his Mafter. He alfo formed the Swedifs Alliance, and erected the Silk Manufacture throughout all Rufict; and by his Means Rufia is made the Mart of the Silk Trade; moft of that Commodity either from Perfia or the Indies being brought thither, and fent from thence into other Parts of Europe; but this Commerce did not laft long.
His next Work was to reform the Emperor's Houfhold, and the Laws of the Empire. He contrived it fo, that no Suit fhould be long depending; and every Governor of a Province, affifted by his Council, had a Power given him of Life or Death. Before that Order, Criminals of all forts were brought to Mofcow to be tried, which was very troublefome and inconvenient for the Czar. The laft Summer a Feres, who had turned Turk, and was Interpreter to the Perfian Merchants, accufed Nafhokin on their Behalf, before the Emperor, for doing them fome Injuftice in the Precauce, or Court of Embaffadors, of which he was Chancellor : The Emperor anfwered, That Nafhokin had the Management of all Affairs relating to Trade; that he referred them to him; and if he was unjuftly accufed, their Interpreter fhould pay dear for it. The Czar was as good as his Word; the A ccufation being found to be groundlefs; and the Renegado Ferw had thirty Lafhes with a Whip, which threw him into a miferable Condition. Na/bokin has often told my Author, That it was the Czar's Intereft to keep up a friendly Correfpondence with the King of England, more than with any other Prince in Cbriftendom; and it will not be improper in this Place to mention fomething relating to him. Some Englifb Merchants petitioned Nafbokin, that they might land fome Goods which were on board the Ships lately arrived from England:
" He told them, he had a Paper printed, giving an " Account of the Plague in London; that probably " this Merchandize might come out of Houfes that " were infected, and they knew very well a Spark s might fet a whole City on Fire; that he thought "their way of publifhing their Infirmities was very
os ftrange ; adding, that if the poor and miferable expofe
"s their Mifery and Poverty, it is to excite Compaffion, ${ }^{6} 6$ and get fomething by it; but the Englifh, fpread os it about every where, that the Plague laid their © Country wafte, and gave the World a fair Warning "6 not to have any thing to do with them ; as Lanthorns
${ }^{\text {ss }}$ or Light-houfes near the Coafts warn the Pilots not "t to come near them for fear of being fhipwrecked." He faid one Day, "He wondered any Princes fhould © fend Letters of Recommendation in Favour of their "Subjects, demanding Juftice in their Behalf, as if the "Czar did not know how to deal jultly by Strangers as "well as by his own Subjects. Sure fuch mult be very "s cheap in Denmark, continued he, becaufe I receive * more from thence than from any other Kingdom. I "I I do not know what they might coft in England, but - I am very well fatisfied they are all to no Purpofe. "The Mufcovites do not govern themfelves like the "Englifh, by the Cuftom of their Countries; and if the "Ruffian Drefs becomes them, theirs will never become "the Ruffians." Being once difcourfing on the Affairs of England, and particularly on the Succours fent by the Kings of France and Denmark to the Dutch againtt the King of England, he declared, "He could not penetrate © into the Politics of thofe Monarchs, who in other

Yol. II. Numb. 102.
"s things were difcrect, in doing fo prepofterous an Acs "s tion; that in his Opinion, the beft thing for them "s had been to have joined with the King of England, "s and other Princes of Europe, to form an Alliance for "s the rooting up all Republics, which are good for "s nothing, but to ferve for an Afylum to Rebels and " Heretics."

There have lately been a greát many feres admitted into the Czar's Court, by means of a Fervifh Surgeon, who pretends to be a Lutheran. He was bred up in Poland, and advanced himfelf in the Court of Mufcovy, by furnifhing Bogdan Matfeig, high Steward of the Emperor's Houfhold, with PolighGirls, of whom he is very fond. This Minifter was the Companion of the Czar's Youth, and has infinuated himfelf fo far into his good Graces, that for fome Time he has been the reigning Favourite ${ }_{3}$ and managed all the Concerns of the Houmbold as he pleafed. His Wife obferving his Intrigues, and underftanding that he met Polifh Girls, and other handfome young Women, Slaves, as well as thofe that were free, was fo jealous of him, that her Ill-humour became infupportable to him, and he poifoned her to get rid of it. The People murmured at the Murder, and the Czar commanded Matfeig, either to quit his Poft or marry, and leave his 'Miftreffes. It is faid he intended to take one of his Concubines to be his Wife. He cannot agree with Nafbokin, and does not love the Englifh, becaufe the Dutch have drawn him to their Intereft by rich Prefents.
22. The Czar has lately built a Work-houfe, about a League from Mofcow, where the Poor are employed in Manufactures of Hemp and Flax. The Houfe is beautiful, large, and fo well contrived, that all the Beggars in his Empire may be employed there; for whofe Maintainance the Emperor has fettled Lands upon it, to a confiderable Value. The Czaritza, or Czarina, manages the Woman's Work, and employs them for her own Benefit. The Czar is every Day bufy in contriving the Increafe of Manufactures, how to invent new ones, or improve the old. His Workmen coft little or nothing for their Subfiftance; he rather gets than lofes by them; So that he faves his Revenues arifing by the Cabacks, the Bagnio's, and Stove-Chambers, Pitch, Hemp, Flax, Honey, Wax, Caviare, Sturgeons, and the falted and dried Fifh that comes from Aftracan, Cafan, the Lake of Belfire, and feveral other Lakes and Rivers in his Dominions, particularly in Siberia, where there are abundance of them, and. yield plentifully.

The Czar goes every Year, about the End of May, to a Country Houfe about three Miles from Mo fcow, called Obrafank/ky, or the Transfiguration, to which it is dedicated in Obedience to what is faid by the Evangelift St. Luke, Cbap. ix. I3. Mafter, it is good for us to be bere, let us make tbree Tabernacles, one for thee, one for Mofes, and one for Elias, \&c. The Emperor ordered feveral magnificent Tents to be fet up; his own was of Cloth of Gold, lined with Sables; that of the Czarina of Cloth of Silver, lined with Ermine; and thofe of the Princes and chief Lords, of other Stuff, and other Linings, according to their feveral Ranks. The Czar, and Czari$n a$ 's Tents, thofe of their Children, ten in Number, and their five Sifters, were round; in the Middle ftands one which ferves for a Church, and, all together, make one of the fineft Sights in the World. Guards are pofted round about them, at a Mufket-fhot Diftance.

There are Pallifadoes placed to keep off the People. None durft pafs beyond thefe Bounds; for the Czar will not fuffer his Recreations to be prophaned by vulgar Eyes. When the Emperor goes into the Country for his Pleafure, no Man is permitted to prefent any Petition unto him. A Captain of White Rufla, when Peter Selticoro, Governor of the Province, refufed his Pay for above three Years, not knowing how to have Juftice, thought his beft Way was to addrefs himfelf immediately to the Emperor. He came up to him where he was in the Country, and approaching too near his Coach to give him his Petition, the Czar miftrufting he had fome ill Defign, perhaps that it was to affaflinate him, thruft him to the Heart, with a Cane that had an Iron Spike at the End of it. He fell down dead on the Spots
and the Emperor ordering him to be fearched, to fee what Arms he had about him ; there was nothing to be found but the Petition. The Emperor having read it, fmote his Breaft, and appeared mightily concerned that he had murdered an innocent Perfon, faying, "His Blood fhall lie at Selticoro's Door, who was the real Caufe of his Death." He fent for him, and not being fatisfied with giving him a fevere Reprimand, banifhed him the Court, turned him out of all his Places, which he gave to Nafookin, with an Exprefs command to enquire out Selticoro's Mifdemeanours.

This Accident happened not long ago, and yet is not much talked of. For it is Death to tell what is faid or done in the Czar's Court. The Author going once to view the Workhoufe, built for thofe that were to manufacture Hemp and Flax, juft as it was finifhed; and afking the Workmen, what Ufe it was defigned for, not one of them durft make any Anfwer, though they knew what was the Defign well enough? All that he could get out of them was, That God and the Czar only knew. The Czar ufed every Night to vifit the Chancellor's Regifters, to examine what Decrees had paft, and what Caufes were depending. Such poor Gentlemen as have nothing to maintain them, but what he gives them, are his Spies, of whom he has many in all Places. In his Armies, at all wedding Feafts, in all Embaffadors Houfes, in all public or private Affemblies, they tell him what they hear or fee, and he governs himfelf accordingly. The Czar's Children are ferved by other Children, who are bred up with them, and are well educated in all Sorts of Knowledge, fuitable to their Birth.

Trade is now very low in Mufcory; two ffths of all the Inhabitants having perifhed in the late War ; befides the new Impofitions laid on all Merchandize, the Cuf-tom-houfe Officers take away Merchants Goods by Force, and compel then to fell them for Copper Money, which has funk the Price of feveral Commodities, and raifed others as inuch, and put a Stop to the Currency of Commerce in general. Several great Traders were undone by it ; fome of them fell fo in Defpair upon it, that they hanged themfelves; and others fpent what they had, in Cabacks and Brandy-fhops, to drive away Care; which not being ufed to before, their Debaucheries foon put an End to their Lives. Englifh Cloth is not fo good a Commodity in Rufla, as that of Holland; and though the Latter Chrinks above a fixteenth Part when 'tis wet, yet the Ruffans prefer it to the former, becaufe they are of Opinion that it is only new Cloth which fhrinks. The Englifh are to blame to give way to their Fancy, and to carry on a Trade with them, which the Hollanders manage fo much more to their Intereft; their ordinary Cloth and Trifles turning to better Account than the beft Commodity the Englifb can bring them, by the wrong Judgment of the Ruffans. If the Trade for Silks to Perria and the Indies fhould increafe, the Englifh will find it a hard Matter to recover their former Privileges and Immunities in Ruffa; for the Ruffians are grown fharper, and corrupted by the Duich correfponding lo long with them. They are more numerous in Mufcooy, and richer than the Englifh. They jpare for nothing to ruin the Trade of England in RuJfra, and fucceed in it more than fome imagine. They bribe the Nobility, by Prefents, to defend and protect them, and render the Eugli/h contemptible and ridiculous, by fcandalous Libels and abufive Pictures.

They looked upon the Englifh, a few Years ago, as a loft and undone People. They are fuch perfect Slaves, that they have a mean Opinion of all thofe who are free. The Dutch would fare no better, did not they pay dearly for the Friendfhip of the Favourites and Minifters in Mufcovy. They reprefent the Englifh Nation by a Lion without a Tail, with three Crowns on his I-Iead, turned upfide down, or by Maftiffs, with their Ears and Tails cut off. Thefe foolifh droll Pieces were done at a Time when they had no Reafon to fpeak very well of the Enelifh, who had begun a War with them for the leaft Provocation in the World. The only Way for the Englifs to recover their Reputation and Trade in Ruffa, and to leffen the Credit and Commerce of the Dutch, would
be for them to fuffer no-body to deal there, but fuch as could trade with ready Money, and not upon Truft, as their Merchants have done for this twenty Years; and to fend an Embaffy to the Czar; to inform him of the flourifhing Condition of the Englifh Dominions; of their Strength, Greatnefs, Revenues, and their Colonies in both the Indies; to fhew him Maps of all their Territories over the whole Earth, and Plans of their Forts and Cities. They ought alfo to undeceive Affanafty Nalbokin, to whom their Nation has been vilely mifreprefented by the Hollanders, and to prefent Cogden Matfeig with fome Curiofities that he loves. The firt would make it a Point of Policy to encourage them, when he underftood the true Nature of the Cafe; and the other would procure them the Emperor's Favour, of which he is always fure. The Author's Arguments on this Subject are of no Weight now; the Figure the Englifh Nation has made abroad fince the Revolution, needs no Embalfy to found its Fame. The Enc's of the Earth have heard of it with Wonder, and the Czar, as the Queen of Sbeba did to Ferafalem, came in Perfon to be a Witnefs of its Glory.
23. Siberia is a large Province, the greateft Part of which is Terra Incognita, which reaches to the Walls of Cathay. Befides what Account of it I had from the Gentleman of Lorrain, I met with feveral Perfons in my Travels in thefe Parts, who had been over a great Part of Siberia, and on whofe Relations I can depend. One of them in particular, had travelled fo far, that he traded with the Cbinefe; and the other, who was more ignorant, though not lefs faithful, affured me that he went fo far, that he faw a Sea with Ships, and Men aboard them, who wore no Hair but on their upper Lips, who were richly dreffed, and covered all over with Gold and Jewels. Their Garments being quite different from thofe of the Ruffans, by the Defcription he gave of them, in all Probability, they muft be Cbinefe Merchants; for the Sea could be, no other than that of the Kaimocbites, on the North-eaft Part of Great Tartary, or that of the Gulph of Nankin in Cbina. The latter brought fome Cbay and Bourdian out of Siberia with him. The former is what we call Tea, the latter, Anifum Indicum Stellatum, a phyfical Drug.

The Cbinefe Merchants have taught thofe of Siberia to drink the Chay with Sugar as we do ; and they take it to be an excellent Remedy for all fuch as are troubled with any Difeafe of the Lungs, with Hypochondriacal Flatus's, and ill Difpofition of Stomach. They bring it to them in Papers, containing each a Pound, the Weight and Name being written on each Paper, in Cbine ee Characters. Thofe that would travel through Siberia, are fix Years on their Journey, occafioned by the extraordinary Heat and Cold of the Climate, which obliges them to lodge all the Winter in certain Places, and all the Summer in others. Tumbut, or as others fay, Siber, is the Capital of this valt Province ; here the chief Wayvod, or Viceroy, refides. Furs, Marten-Skins efpecially, which are to be had nowhere elfe, are the principal Commodities of this Country. They eat dried Finh inftead of Bread, which is not to be feen in all the Province, unlefs the Traveller carries it along with him. There is plenty of all Manner of Fifh in their Lakes and Rivers, in which they abound. They feed their Dogs with it, and even their Cows in cold Weather, which is exceffive in Siberia, by which means their Milk, generally fpeaking, has a fifhy Tafte.

There is abundance of Filbert-trees of a prodigious Bignefs, and the Kernel of the Nut is of a Size anfwerable to that of the Tree that bears it. They go a hunting in Troops, for fix or feven Weeks together, covered over with three or four Skins, and drawn along in a Sledge, by thirty or forty huge Dogs. They lie in the open Fields all Night, in the midft of Winter; but they make good Fires about them to warm themfelves, and broil their Fifh. Their Dogs are very expert in finding out Martens; and when they have found them, they never mifs taking them. When once the Siberians have fhot them, which they do with a Culs, fo dextroully, that they always wound them in the Nofe, that they may not prejudice the Skin. Befides, if they do not hit them in that Part, it is rare that they catch
them;
them; for it is a robuft Animal, and will efcape them, fometimes, though he be fhot quite through the Body. The River Ob runs through this Province; it is very broad, and falls into the Mare Glaciale; it is ftored with Sturgeons and Belugas. The latter is a Fifh, twelve or fifteen Feet long, refembles a Sturgeon, but is not fo pleafant, tafted when it is falted, as the former. The Meat is whiter than Veal, and as delicious as Marrow, while it is frefh.

The Volga is ftored with that Fifh, and with Sturgeon, moft of all the Rivers in the North. When the Flood comes down the Mountains, by the melting of the Snow, and the Stream grows the more rapid, thefe Fifh fwallow great Stones to make them the heavier, that they may ftem the Torrent the better. They throw them up again when the Waters abate, and the Current is not fo ftrong. It is out of the foft Roes of thefe Beluga's and Sturgeons, mingled together, that the Peo. ple of Aftracan make Caviare, in this Manner: They put their Roes in a heap of Salt, and when they have fermented a little, they fqueeze them, and barrel them up. There are fome who. will not fqueeze them at all. That Caviare is the moft delicious, but will not keep fo long as the other. The Turks make it with the Eggs of the Sturgeon, which are black and clammy. This the Rufians call Fekra. There is another Sort, which is nothing but the Roe of a Beluga. The Armenians, who I believe firf made Caviare, do it after another Manner. They begin with cleaning the Roe, and throwing away all that is ufelefs in them, then falt and lay them on crooked Planks, that the fat oily Parts may be drained off; after which they pack them up in Barrels, and beat them down till they are hard. The Beluga has one hundred and fifty Roes, and two hundred weight of Eggs, which the Armenians call Arminfko Fekra.

The Northern Part of Siberia is called Samojedia, or Tafambeida, which fignifies Canibals or Men-eaters, becaufe the Inhabitants are faid to eat all the Prifoners they take in War. They live in round Tents, covered with Mats and Stags-Skins. They make their Fires in the Middle, and lie about them. There is but one Hole to a Tent, befides the Door, and that is on the Top, to let out the Smoak. In Summer-time they remove to the Banks of Rivers, for the Conveniency of fifhing. They live altogether upon Fifh, which they often eat raw. In Summer they dry it, to keep for their Winter ftore. Young Dogs are accounted one of their niceft Difhes. Their Cuftoms, Language, and Religion, are entirely barbarous. They worfhip the Sun and Moon. Both Men and Women are dreffed in Cloaths made of Stags-Skins, theHair outwards, which they fancy is the warmeft Way of wearing it. The Men have no Beards. The Women are abominably ugly, and fo hard-favoured, that they can fcarce be diftinguifhed from the Men, the one being often taken for the other by Strangers. Yet as deformed as they are, they do well enough for the Canibals, who like them better than thofe we think handfome. The Riches of the Samojedas confift in Stags. There are fome of them fo tame, that they graze in Troops, ftand ftill to be harneffed, and draw Sledges fourfcore Miles a Day, fo incredible fwift are thofe Creatures.

Before the Inhabitants go a hunting of Stags, they confult a Prieft, who tells them the Place where they Shall find their Game; and it is rare that they are out in their Guefles. Young Girls are a confiderable Part of their Father's Wealth; they are never feen till they are betrothed in Marriage, and that is frequently done when they are fix or feven Years old; for at that Age, fomebody or other will buy them for a certain Number of Stags, that they may be fure to have their Maidenheads. Hutbands are there fo jealous of their Wives, that they lock them up clofer than they do in Italy; and when they go a hunting, they have a Device to fecure them from making them Cuckolds in their Abfence. The Emperor does not chink thefe People worthy of living under his Government; they are liable to no Impofts; what they pay is voluntary, and generally is in Stags; which from Time to Time they deliver to the Czar's Officers on the Frontiers. No-body underftands their

Language, nor their Laws, which they execute with great Severity. When they fell a Stag to a Foreigner, they preferve the Enttails and eat them, even the filthieft Part of them, after they have fqueezed out the Excrement. Thofe who underftand Magic, are the moft honourable Perfons among them. They are very dextrous in that fallacious Art, and exercife it very commonly towards Strangers; but they dare not play the Ruffians any Tricks for fear of being feverely punified. An Englifh Merchant inviting fome of them to Dinner, one 'f them got fo drunk that he could not ftand; fpeak, nor fit; and his Drunkennefs continued for, till an old Woman touched his Forehead, and muttered fome Words in his Ear; after which, if we may give Credit to Eye-witnefles, from whom I had it, he grew as fober as ever he was in in his Life.
24. In the South Part of Siberia there is a Foreft, or ${ }_{3}$ as called by them, a Step about fix or feven hundred Wrefts long, where there are few Rivers; and yet the Soil is extremely fertile. One may ride there feveral Days Journey in vaft Fields full of Cherry-Trees not above two or three Feet high; not that they won't grow taller, but they were hindered by the Negligence of Travellers, who having made Fires in the Middle of the Fields, go their ways without think: ing of putting of them out, andithe Grass of the Foreft being very loing and very'dry, catches Fire, and burns up every thing that lies in its way. It is no uncommon, thing to fee a Fire burn for thirty or forty Wrefts together, and purfue Travellers fo nimbly that often they have not time to fave themfelves. Thefe Cherry-Trees bear red Cherries fair to look to, but four. The Fruit of fome of thefe Trees that have been tranfplanted has been very good. I have talked with feveral Perfons who have feen Tulips, red Rofes, Rofes like Damank-Rofes, Afparagus larger and finer than ours, Onions, Marjoram, Thyme, Succory, Sage, Endive or white Succory, and other Flowers, Herbs, and Roots in the Foreft, which we with a great deal of Care raife in our Gardens. The Turnip is very frequently met with there; they have good Carrots and Parfnips in Samojedia, and the Merchants of other' Nations export a great deal of Nitre and SalGemet from thence. Elks are larger there than any where elfe. There is a little Animal called Zouricks, and another whofe Name is Perivoßicks, which are pretty Creatures.
The Zourick is fomething maped like a Badger, but different in the Face; his Skin is of an agreeable Colour ; it is black, fleek, and fpotted a little, and his Legs fhort, his Back almoft a Foot long ; they live like Coneys in Burrows under Ground. The Ruffrons tell a great many Stories of the Wars of thefe Animals, one with another's of their Dexterity in taking Prifoners, and fending the Enemy away into Captivity; that they force their Slaves to fetch in Hay and Oats for them to lay up againft Winter : It is faid their Burrows are very clean, neat, and artfully contrived; and if one of them dies the others carry out his Body and bury it elfewhere. Colonel Craivford's Regiment quartering near the Place where they are to be found, thefe Creatures met one Day, to a prodigious Number, and made fuch a frightful Noife as terrified the Soldiers and their Horfes fo much that they ran away from their Pafture near the Place ten Miles, without ftopping. The Perivofkicks Skin is brown inclining to yellow, being a Mixture of white and black: The Ruffans make Coats of them, but they are not mucla valued becaule the Fur is not. long, nor the Skin warm. I have heard; they take a great deal of Pleafure to carry Squirrels and Ermines from one Side of the River to the other, on their Backs; from whence they derive their Name Perivofkicks, i. e. to carry a Thing from Place to. Place. Several Perfons have affured me, that the Squirrels in Siberia, when they can get nothing to eat on one Side the Water, will pafs over to the other on a little Piece of Wood, and make ufe of their Tails inftead of a Sail. If the Wind fets fair, they get over fometimes; but if it changes they are infallibly drowned. There are many more Reports as extravagant, which have been averred to be true, relating to Siberia; but I will not impofe farther on the Faith of the Reader.

There

There is a Bird in the Neighbourhood of Cafan and Affracan, about the Bignefs of a Woodcock, whofe Beak and Legs are like a Snipe's, and his Neck like a Cock's both for Feathers and Size: They fight like the Game-Cocks in England; they ftand on their Guard when they put their Beaks to the Ground, and when they can do it to Advantage they leap at the Enemy with Vigour, and attack him as violently as the Enolifh Cocks of the Game do. They are better to eat than Quails. Sometimes one may catch this Bird near Arcloangel; where is alfo to be found a Bird as big as a Blackbird refembling a Hawk; like him he fies after little Birds, takes them, pulls them, cleanfes them, and then eats them. There is another Sort of Fowl as tall as a Swan, which is brought from Aftracan ; his Body and Feet refembles thofe of a Swan, his Neck is fhort, thick, and fo wide, that he will fwallow a Fifh fix Inches broad.

Some Travellers make mention of a Plant in thofe Parts called the Lamb; which deftroys all the Herbs that grow near it, and then dies; but as this Quality agrees very ill with its Name of a Lamb, fo the Story is accounted fabulous by Perfons of Judgment. This deferves to be more particularly confidered, and therefore we fhall take the Liberty of adding fomewhat to the Author's Remarks upon this Subject : This vegetative Animal is called Borometz, or Barannetz; the latter is the true Name, the Word Baran fignifying, in the Sclawonian Tongue, a Sheep, and the Word netz being a Diminutive makes it fignifies a little Sheep or Lamb: The Baron de Heberftein defcribes it thus: He fays, That it is of the Figure of a Lamb, grows to be very large, with a very foft Down, and deftroys all the Grafs round it. We have Relations of the fame Kind in other Travels, which are to the full as ftrong, and fome of them are pretended to come from Eye-Witneffes. We thall perhaps have Occafion hereafter to mention fome of thefe Accounts in fpeaking of the Countries to which they belong; but at prefent it may be fufficient to clear up this Wonder, with which fo many Naturalifts have been puzzled, and fome very ingenious and well-meaning Travellers abufed.

The Truth then of the Matter is this: Some People in thefe Countries, for the Sake of Gain, have had Recourfe to a moft wicked and barbarous Practice: They have opened their Sheep when at the very Point of Yeaning, and then taking out the Lamb they flea it, cleanfe the Wool ; and while the Skin is wet extend it gently, and on all Sides, as faft as they are able to ftretch it upon the Grafs; and then, by the Affiftance of Dew and four Milk, with which they fprinkle it as it grows dry, bleach it in the Sun-fhine till it is as white as Snow itfelf. By thefe Contrivances they obtain a Lamb-fkin wonderfully thin, fmooth and foft, and extremely fit for lining the under Garments of the Great and Wealthy. But as in all Mobammedar Countries, they look upon the Skins of Beafts as an impure kind of Cloathing, and therefore abftain from them on the Score of Religion, the People who take all this Pains have been forced to invent this Story of a vegetative Lamb, a Kind of Plant-Animal. And Travellers feeing the Skins, and hearing the Tale roundly affirmed, have fuffered themfelves to be fo far impofed upon as to lend their Authorities to impofe this Cheat upon Mankind, than which, without doubt, there never was a greater or more groundlefs; which is the Reafon that we have taken the Pains to expofe it ; as we fhall not fail to do whatever occurs of the like kind in any of the Voyages or Travels that we publifh; for Credulity and Incredulity are alike dangerous, and without a cautious and judicious Enquiry not eafy to be diftinguifhed. As in the prefent Cafe it would be equally wrong to believe, that no fuch Skins as Travellers fpeak of were ever feen or met with, as on the other hand it would be to fwallow the whole Story upon the Credit of fuch Skins having been feen.
25. The City of Crim, from whence the Prince of Tartary is ftiled the Grand Cham of Crim, the Capital of his Empire, is fituated on the Tartarian Sea, built of Stone and Brick, and encompaffed with ftrong Walls. The Tartars are tributary to the Turks; and it is not long
fince that the Czar of Mufcouy paid the Cham of Tartary Homage, as being obliged by Oath to feed his Horfe with Oats out of his Cap. The City of Mofcow alfo paid the Tartarian a Tribute of ten thoufand Coats made of Stags-Skins. The Mufcovites have for ten Years palt refufed paying it, alledging, that the Tartars made void the Treaty by Inroads into Rufia, and Robberies on their Borders. Indeed they are very troublefome Neighbours; if they are routed they vanifh in a Moment, and difperfe; notwithftanding which they meet again at Night at the Place of Rendezvous, and the next Day renew their Incurfions with as much Violence as ever: They will march fourfcore Miles a Day, in which time they change Horfes thrice, each of them having three or four Horfes. If any one of their Cattle dies, either of Fatigue or Sicknefs, they cut the Flefh out in Pieces and diftribute it amongft their Comerades, who eat it with as much Appetite as we do Beef or Mutton; they often devour it raw, but their common Way of cooking it is to put it between the Saddle and the Back of the Horfe, on which the Tartar rides, and that foddens the Flefh enough for them to feaft upon.

Thofe Horfes that are in the Fields are very difficult to be caught, becaufe it is almoft impoffible to take them from their Company. If a Tartar falls fick, they give him Mares-Milk, and the Blood of a Horfe, whofe Veins they open on purpofe. The reafon why they eat no Bread nor Salt, is that they believe Bread to be coarfe Feeding, which renders fuch as eat it heavy and unactive ; and that Salt is bad for the Eyes. It is certain their Sight is better than any Peoples in the World; they can fee forty or fifty Miles when the Profpect will admit it, and can difcern a fingle Man at the fame Diftance where the Ruffans could not difcern a Troop of Tartars. They are excellent Horfemen; they ride with a loofe Rein; lift themfelves up in their Stirrups, and thoot backwards on their Enemies that purfue them. The Colmuck Tartars, among whom Tamerlane was born, have a large Extent of Territory: They dwell in Tents, and live in their Paftures: They are bigger and more fwarthy than the Crim Tartars, and are not at all like them in the Face: Some Part of their Country is fubject to the Emperor of Rufia: Their Women are as fit for War, and accuftomed to it as well as their Men : Lately an Army of them defeated the Crim Tartars, who had carried away fome of their Children into Captivity.

The Crim Tartars are flat-nofed; their Eyes are little and funk into their Heads ; their Foreheads are narrow; their Shoulders low and broad; they are middle-fized; as to their Shapes and their Make, they are every way fo fingular, that it is eafy to difcover a Tartar at firft Sight among an hundred other Men. They flat the Nofes of their Children as foon as they are born, thinking it to be a Piece of Folly to let their Nofes ftand in their Light: They are all Mobommedons; they laugh at theW orfhip the Mufcovites pay their St. Nicbolas; and maintain that they had better adore the Sun, who is a glorious Body, the Life and Light of the World, than fall down before wooden Images. "See, fay they, what your Gods come " to. When the Painting is worn out, you throw them " into the River with a Coptack or two, and a little Bit " of Olibanus; thus they fail down the Volga to the "Cafpian Sea; there we take them up, dry them, and "s burn them to roaft our Horfe-flefh by the Fire. Are " not they very fine Gods that ferve us inftead of Fag" gots, and that cannot refift thofe that deftroy them ?" Before I have done with my Relation of Ruflia, I will fay a Word or two of feveral forts of Mufhrooms that grow there and no where elfe in that Form. There are feven which are moft remarkable in their Figures and Qualities. The fort called Rizbiees, are a little black and red, and fpring iup in a Night in the Marfhes. The Smitz/kies or Honey Mufhrooms, which Gerrard calls Fungi farinof $\mathfrak{t}$, reckoning them among Poifons, are excellent, and very dear in Ruffa; it is the moft delicate Difh that is brought to the Tables of Perfons of the higheft Quality ; they put it in Soups and Pies. They come up before the other forts in April and May.

The Gribbeys are of a brown Colour, or rather of a black Yellow; the Tail of one is like a Pilafter, and
fwells

## Chap. II.

fwells out in the Middle; they come up before the Somizfies. The Volnitzies are brown and black, mixed with red, and grow tharp at top. The Grouzbdys are the biggeft fort of all of them, as hollow as a Honey-comb; and whiter than a Tulip when they are dead: Before they are boiled they are full of Juice, fo tart and bitter, that it will blifter the Mouth of thofe that tafte it. I thought I fhould have died after I had put a little of it within my Lips. The Maftamicks are fo called from Mafta, which fignifies Butter, Oil, Sewet, or any thing that is fat and oily. Mafta Conova is Milk or Butter. Denavanna mafta is Oil of Olives, or rather the Oil of a Tree; for Denawa is in Englifh a Tree. There are fo many forts of Mulhrooms belides, and fo many of thofe I have mentioned, that I have been told, a thoufand Waggon Loads a Year are brought to Mofcow: The Poor live upon them, and the Rich make them a fecond Courfe. Almoft all the Ruffian Mufhrooms are good to eat, and there are very few of thofe kinds which the Botanifts call venomous. But to return to our Voyage.
26. We took our Leaves of thefe unhappy Exiles with reciprocal Tears, and mounting our Sledges, travelled on three Hours before we met with any Habitation: We then difcovered five or fix Huts together, in which were about a dozen Perfons: We anked by our Interpreter, if they had any thing to truck for our Money or Brandy? They brought us out what Skins they had, and we dealt with them for them. We followed the Courfe of the $\mathrm{Ri}-$ ver Petzora, which gives the Name to the Town; and near the Banks of it came to fmall Villages pretty often; in fome of which we found Inhabitants, in fome others none. Where we met with any body to trade with us, we bought their Furs with Money of fome, but more with Brandy. They would not part with their Sables for fear of being detected by the Governor of Papinogorod, whither we were going, who always fearches whatever Merchandize is brought thither, to fee if there are no Sables among it. We croffed the Mountains which divide Borandia from Siberia. That was one of the worit Journeys we had in all our Undertaking ; thofe Mountains being difficult to pafs, and fo barren, that no Creature, Man or Beaft, can live upon them: Befides, they are almoft always covered with Snow; and towards the Afcent and Defcent, there are fuch vaft Numbers of Bears and white Wolves, that we were afraid of our Lives, expecting every Minute when they would have fallen upon us; though, perhaps, we needed not to have been in fo much Fear, for thofe Animals were, probably, as much terrified at us, as we at them.

They fled before us, fome on one hand, and fome on the other, miftaking us by the glittering of our Arms to be Hunters, and not Merchants. We were twelve Hours in croffing the Mountains, and our Cattle had much ado to draw us over them. At laft we reached the Defcent, and arrived in a Village in Siberia, where the Inhabitants were all cloathed in Bears-Skins, with the Hair outwards, having Linnen Shirts on and clofe Bufkins, by which we perceived we were come among People that were not fo barbarous as thofe we had parted from: They, in Effect, received us more civilly, afked whence we came, and whither we were going. We eat and drank together of the beft we and they had; ours was Rice-cake and Brandy; theirs, dried Wolfs and Bears Flefh, Ginger-bread and Spirits. We bought all their Furs, except their Sables, with ready Money.

We refted in their Houfes, which were built after the manner of the Laplanders. We flept on Bears-Skins, after having drank each of us a Cup of Brandy. When we awaked, we got upon our Sledges, and travelled without any further Delay for about twenty hours together, till we came to Papinogorod. The Governor of the Place, hearing of our Arrival, ordered us to come to his Caftle to examine for what, and from whence, we came. We waited upon him as we were commanded, and entered the Caftle; he faluted us in a very friendly manner; and our Accountant, who underftood the Mufcovite Language, gave a fatisfactory Anfwer to all the Queftions he demanded of him. When he knew that we were Danes, and Dealers, whofe Bufinefs it was to buy Furs, he entertained us as handfomely as he could; and to fhew us

Vol. II. Numb. ioz.
that he had a great Kindnefs' for, and Confidence in's uss he fent for his Wife to come and fee us; which fhe did; bringing in one Hand a Bottle of Brandy, and in the other a Silver Cup, according to the Mufcoviice Fafhion as alfo a Plate of Ginger-bread, which a Maid brought after her. We faluted her, as is the Cuftom of the Country; by bowing our Heads. She prefently untied the Knot of her Smock-Sleeve, and let it fall to the Ground: Our Supercargo prefently took it up, and kiffed it, and our Accountant did the like, and fo did I; then fhe furled it up again with the left hand; and taking the Bottle and Cup, which the had fet down to pay this Ceremony gave to each of us a. Brimmer of Brandy, and a Piece of Ginger-bread, herfelf ftanding at the End of the Table, by the Side of her Hufbanid. She then returned to her own Chamber, and the Governor afterwards regaled us with good Cheer.

When we had done Supper, we were condueted to our Lodgings prepared for us in the Caftle, and, confidering the Country, lay in very good Beds. We flept about feven Hours, and then rofe; which the Governor having Notice of by one of his Servants, he got up, and came to fee us, and brought alfo a Bottle of Brandy with him; one of his Domeftics held another in his Hand, and filled us out a great Cup for our Morning's Draught. We each of us drank one; after that, we fell to Bufinefs. The Governor demanded if we would buy his Skins? our Supercargo faid he would, if he liked them, and could agree on the Price. His Furs were extraordinary well chofen, and though they were the deareft we met with in all our Travels, yet they were the beft worth our Money. Having feen them bought and paid for them, he ordered one of his Men to call in fome of the Inhabitants who had Skins to difpofe of; but he would not fuffer them to fell one fingle Skin till he had driven his Bargain. While our Supercargo was dealing with the Governor and his Neighbours, I walked up and down the Town.

It is fituated in a very fine commodious Place, in a little Plain, the Country about it fruitful, furrounded with high Mountains, and near it runs a large River, well ftocked with Fifh; the Houfes are built very poorly, they are low, and the Walls are of Wood or Mud; caulked between the Beams with Mofs. The Town is paved with Pieces of Timber laid clofe together. The People of Fafhion in Papinogorod are dreffed in Breeches and Stockings of Cloth, and a long Robe over them of the fame, which comes down to their Toes. Their Sleeves are made as clofe as poffible, fome of one Colour; fome another: Their Shoes are like the Polanders, they are rather Boots than Shoes, buttoned a-top, and the Leather is dyed, fome of it blue, fome red, and fome yellow : Upon their Heads they wear Cloth-Caps, lined and bordered, fome with black Fox-Skin Fur, fome with Ermines, and fome with Sables. As for the Women, they are beautiful, fair, and fat; their Hairs are of a light Chefnut Colvur, and their Mien gallant for Mufcovites; their Robe or Upper-Garment, like the Mens, comes down to the Toes; it is alfo made of Cloth, either red, blue, or Violet Colour ; the Shape of it refembles our long Waftecoats ; it is lined with white Fox-Skin or Sable; they have long Sleeves pinned to it, for they cannot put their Arms into them, becatufe their Smock-Sleeves are of fuch a prodigious length; fome of them are five Ells long; they are made of fine Calico, and plaited up from their Wrifts to their Shoulders; their Head-drefs is an oval Cap, their Hair hangs a long way down their Backs: their Shoes are made of Ruffa Leather, and they have a Girdle of Pearl, pretty large, round their Waftes. Thofe that are Natives of Siberia, differ as to their manner or way of Living from the Samojedas, Borandians, and other Natives of the North. All the Mufcovites are Nicbolatians by Religion.

They are grave, robuft, fwift, and dextrous at fhooting with the Crofs-Bow. There are no Pettyfoggers in Rufia; no. Villains who rob the Poor, under Pretence of recovering theirRight; who ruin the Fatherlefs by feigned Attempts to fave their Inheritance, and enrich their own Families with the Spoils of their Neighbours. The Mufco* vite Law is all Equity, and all Courts of Juftice are Courts of Chancery; but there is fuch Care taken to expedite of Chancery; but there is fuch Care taken to expedite

Caufers.

Caufes, that there is no Occafion of Complaint given, as in fome Countries more polite. Falfe Witneffes are feverely punifhed, fo are Traitors and Robbers; and the Friends of the Deceafed profecute Murderers. The Ruflians, efpecially in Siberia, aré ignorant, felf-interefted, Drunkards, churlifh, and fo jealous, that their Wives are almoft always locked up in theirChambers; nor dare they to ftir out when they are more at Liberty, unlefs they are commanded by their Hufbands: They are afraid to thew the leaft kind Look or Action to Strangers; and if their Hurbands do not beat them, it is fo cuftomary to do it, that they believe they do not love them. When we had bought up all the Furs we liked at Papinogorod, confifting of white Wolf-Skins, white Fox-Skins, black of the fame, Lynxes, and Sables (for fome we had of the Governor by Stealth) Ermines and grey Squirrels, we packed up; and with what we bought at Petzora, had enough to load one Sledge, and almoft half another. We had ftill fome Tobacco, and about five thoufand Ducats left; wherefore our Supercargo refolved to go farther to get more Furs, and to return to our Ships through Samojeda.

Our Brandy falling fhort, we bought the beft the Governor, our Hoft, had, and bargained with him for Provifions fufficient to laft twelve Days, and for Rain-Deer to carry us to our Journey's End. When we had quite done dealing, and paid our Money, we muft have a drunken Bout at parting; without which, there is no getting away from a Houfe in Ruffia. We eat and drank for ten Hours together, and then lay down to reft eight more, when we got up and harnefled our Rain-Deer, baled and loaded our Merchandize and Provifions, we mounted our Sledges, took our Leaves of our Hoft, and departed. We ran feventeen Hours; and all the way we went bought up what Furs we could light on of the siberians. We then croffed the Riphoan Mountains in fix Hours more, after which we entered Samojeda, a defolate mountainous Country, full of Juniper Trees, Pine Trees, and Firs. It abounds in Mofs as well as Snow, Wolves, Bears, and Foxes, all white, we met every Moment, to our no fimall Terror. When we afcended the Mountain Stolphoen, out of which rifes the River of Borfagatz, we came to eight or nine Houfes, where we ftopt, as well to bait our Cattle as to reft ourfelves. We trucked with the Inhabitants Brandy for white and black Wolf and Fox-Skins, Caftor and Otter-Skins ; they had feveral Dozen of Ermines, which they would not fell us upon any Terms, notwithftanding our Boravdian Guide affured them with a thoufand Proteftations, that there was no manner of Danger, we being Traders that were going to our Ships, and could not be fearched before we got to the Coafts, becaufe we were not to pafs through any Place where there were any Officers to fearch for prohibited Goods. They would not hearken to us till we had drank them all down; and when the Liquor was gotten up into their Heads, they grew bold, brought out their Sables, and fold us the beft and moft that we picked up in our whole Journey.

We ftaid to reft ourfelves in one of the chief Huts of the Village ; the Mafter of the Houfe, his Wife, and Children, lay all together, without Diftinction, and we among them, on Bear-Skins. After we had flept four or five Hours, I awoke at a Noife our Hoft made to raife his Family. They all rofe and went out; I had the Curiofity to obferve them; I followed them at a little Diftance, and perceived they all fell down on their Knees behind the Cottage, lifting up their Hands and Eyes to Heaven to adore the Sun, whom they believe to be God. The Samojedas are fhorter and thicker than either the Laplanders or Borandians; their Heads are big, their Faces flat, as alfo their Nofes; they have fcarce any Hair at all, and are as fwarthy as the Ground itfelf; their Drefs is a round Cap, furred like a Lamb-Skin, a Pair of Breeches, and a white Bear-Skin Coat that comes down no farther than their Knees; they wear about their Middle a Girdle four Inches broad; their Shoes and Stockings are made of the fame fort of Skin, with the Hair outwards; under their Shoes they wear a fort of Skates two-foot long, made like a Gondola, with which they nide prodigiouny faft on the Snow, that lies almoft always on the Moun-
tains; inftead of a Cloak, they hang a Bears-Skin with black Hair upon it over their Shoulders, the Feet dangling down at the four Corners; it hangs more on the left Side than on the right, to leave their Hands at Liberty for the Management of their Bows. Upon this Skin they tye their Quivers.
The Samojedian Women are uglier than the Men; they will endure a great deal of Hardfhip, and take care to breed up their Children well in the handling of their Bows; at which they teach them to be very dextrous; they are dreffed like Men, only their Upperr-Garment is a little longer; their Caps are the fame with the Mens; and all the Difference in their Head-drefs is, that the Women have a Lock of Hair twifted, which hangs down on their Shoulders; at the End there is a Knot of Ribbons made of the Rind of a Tree, and that reaches down to their Heels: This is all their Finery; they hunt as ivell! as the Men, and are armed with Bows and Arrows, as they are; the Hurbands are true to their Wives, and the Wives to their Hufbands. If any one among them is found guilty of Adultery, either Man or Woman, the Criminal is immediately foned to death.
27. Having traverfed Samojeda, bartered all our Wares, and loaded ourfelves with Skins, we returned, and met with no Adventures worth remarking. We made what hafte we could, and reached the Coafts of Borandia. In twelve Days after our Departure from Papinogorod, our Ships rendeלvoufed at a Place on that Shore, where we had appointed them to meet us. We loaded all our Merchandize aboard them, paid off our Borandian Guide, and embarked. We weighed Anchor two Hours after, and failed with a fair Wind for Zembla, where we arrived the next Day in the Afternoon: We caft Anchor in a convenient Place, near which we fpied, upon the Shore, a Company of about thirty Perfons, with Quivers at their Backs, on their Knees, worhipping the Sun that was then fetting. Our Mafter and Supercargo confulted together, what Courfe they fhould take to come at the Speech of them. They thought them to be more wild than any they had yet feen, and that it would be difficult to get them to deal with us. They refolved to fend out three Long-boats, with ten Men, well armed, in each, to defend themfelves in cafe they were attacked. I was commanded to make one among them. We rowed to Shore; when we came about a quarter of a Mile off Land, all the Savages, who were filil on their Knees, got up, let fly at us; after which they ran away, like fo many Stags before Hunters. They fhot at us when we were at too great a Diftance from them to receive any Hurt by their Arrows.

We landed, and purfued them to the Place whither we thought they were fled, in Hopes that we might be able to catch one or two of them, which, however, was not to be done. We loft. Sight of them, and could not tell which Way they were gone; yet we followed them till we came near fome Mountains covered with Snow. We advanced farther into the Country, where, on a fimall Hillock, we perceived a Piece of Wood cut out in the Figure of a Man, but very wretchedly. Before it were two Zemblians on their Knees, their Arms lying by them. They were worfhipping this Idol, as the others on the Shore were adoring the Sun. They fled from us, and it growing Night, we did not care to purfue them very far; they ran into a Fir-wood, and we thought it would be in vain to go after them. Wetherefore concluded our beft Way was to return to our Ships, and make a Report of what we had feen and done. This Idol is called Fetizo; one of our Mafters had been there before, and feemed to believe that the Devil entered the Idol fometimes, and from it pronounced his infernal Oracles.

Seven or eight Hours after I was got aboard again, I was taken with a violent Pain in my Head, and a Vomiting, which lafted three Hours; after that I had a fore Throat, infomuch that I could fcarce fwallow any thing. The Glands were fwoln to a high Degree. I felt a great Ebullition of Blood, and an Itching over all my Body; my Gums fwelled, and bled mightily; my Teeth fhook; and I was fo faint, that I could fcarce keep upon my Legs. I loft my Stomach, and eat nothing;

## Chap. II.

Northern Coafts of Europer
became extreme weak, and had a Fever almoft always upon me. My Breath was fhort and offenfive. I was very dry, and to quench my Thirf I often drank Water and Vinegar. Perceiving my Diftemper continued the two following Days, and confidering that it was caufed partly by excelfive Cold, and partly by eating falt Meats, which had inflamed my pituitous Glands in fuch a Manner, that my Phlegm had infected my other Humours, inftead of Oxycrate, or Water and Vinegar, I refolved to take fome Brandy and Syrup of Liquorifh, of which I drank a Spoonful every Hour. I eat no falt Fifh, all my Food was frefh. I gargled my Mouth fometimes with Brandy, and fometimes with Vinegar, to ftrengthen my Gums, and rubbed my Teeth with Mel Rofat. The greateft Part of our Ship's Crew was taken with the fame Difeafe as well as myfelf. I prefcribed the fame Remedy; and in fifteen Day's Time I cured them and myfelf too. Our other Ship's Crew were as much troubled with it as our own; their Surgeons did whatever their Art fuggefted to them, by way of bleeding and purging to cure them; but thofe Remedies rather increafed than helped the Difeafe; two of their Sailors died of it, and one of their Accountants was likely to die of it, as alfo feveral other Mariners, upon which I was fent for to a Confultation. I advifed them to do as I had done, and to give over purging and bleeding, which are mortal in that Cafe.

It was obferved, in a very hard Winter, in France, that in this Diftemper, which fome took for the Plague, and was occafioned by the Rigour of the Seafon, that feveral Perfons, died immediately upon bleeding, which is of no Ufe in Cacochymical Diftempers. Bleeding and purging in fuch Cafes, are good for nothing but to weaken the Sight, to injure the Nerves, to confume the radical Moifture, to diminifh the natural Heat; and ${ }_{3}$ in hort, to diflodge Mens Souls from their Bodies, fooner than they ought to go; and to fill the Church-yards. However, I would not be underftood to fpeak againft bleeding; in fome Diftempers it is good, as in all hot and plethoric Cafes, provided it is not ufed above twice or thrice. Being once at Algiers, feveral of our Crew were taken with this Difeafe, which I call the Scurvy; their Glands were fo fwoln, that one would have thought that they had had a Piece of Flefh in their Throats. They had the fame Symptoms as I had on the Coafts of Zembla; their Phlegm was fharp and corrolive, it affected their other Humours, and efpecially the Mafs of Blood, as the Pox does, which is a Species of it; and I was forced to deal with my Patients as if they had really been poxed, not with Mercury, which by its cold, moift, and venomous Quality, exafperates the Humours of the Body; and infects the Ventricles of the Brain, inftead of cleanfing them, caufing a Flux at the Mouth, by which, without Danger, one may cure the Itch, but not the Pox; the latter being caufed by a cold, moift, venomous Humour, oppofite to the Nature of Mercury ; and this the Mercurialitts cannot deny.

This Scurvy, with which fea-faring Men are fo troubled, proceeds from grofs Vapours which come from the bad Water they drink, the bad Bread, and the bad Victuals they eat; the melancholy, clofe, and foul Air which they breathe: And the Infection of Scorbuticks is only to be remedied by Cordials. I could not forbear making this Reflection, which, as it relates to the Diftempers incident to fuch as go the Northern Voyage, I hope it will meet with a favourable Reception.

We ftaid fixteen Days on that Part of the Coaft of Zembla, where we at firft caft Anchor; where our Crews were all cured, except three or four, who were on the mending hand. Our Mafters feeing there was a fair and frefh Gale, refolved to fail to Weygatz to fifh for Walrus, the Fifh by us called a Sea Horfe. We failed about fix Leagues, then cruifed up and down for the Conveniency of our fifhing. We kept near Shore, and put out our Long-boats, and fent our Harponiers and Fifhers in them, eight in each, without reckoning the Rowers. We were three Days a fifhing, without catching any thing ; at laft we fpied two large Fifh approaching us one of them had a Horn in his Forehead, that was of
a good Length ; our Fihers prepared to feize him; they came within a Stones's Caft of him; our Harponiers threw their Harping-Irons at him, fome on one Sides and fome on the other, letting loofe the Ropes by which they were faftened, and then they got off as nimbly as they could, for fear of the Monfter. When our Harponiers and Fiffers faw that the Harping-Irons ftuck in the Fin, they made towards our Ship's Sides, being fure they had him faft, becaufe he fwam above Water' which is a Sign of his Weaknefs; they drew him nearer and nearer, by the Ropes that were faftened to the Harp-ing-Irons. The Monfter endured all without ftruggling ; he had loft fo much Blood, he had no Strength left.

The Fifhers doing their Office, cut off his Head; which we kept, and flung the Body into the Sea, it being neither good to eat, nor for Oil. People fifh for the Sea-Horfe, purely for the fake of his Teeth, which are as good as Ivory, and fomewhat in a Pound dearer, being whiter than Elephants Teeth, and not fo apt to turn yellow as Ivory is. The Horn of the Sea-Horfe we took, was ten Feet long, very heavy, winding, and as big as a Man's Arm near the Shoulder; very fmall and fharp a-top, growing bigger and bigger downwards to the Root. One of our Boats coming too clofe to the other Fifh, thinking to make fure of him, the Monfter, as foon as he felt the Iron in his Sides; ftruck his Tail againft the Boat with fuch Violence, in ftruggling to free himfelf, that he over-fer the Boat ; and the other Boats were fo far off, that before they could get thither to take up the Men, two of them were drowned; for whofe Deaths we were troubled, the Prize being by no means a Recompence to us for the Lofs. The Fifh was taken and his Head cut off, as the other was. I faw it had no Horn, but, to make amends, his Teeth were whiter and larger than that of the former.

We cruized up and down four Days before we fpied any more Fifh, wherefore it was refolved to change our Station. As we were preparing to depart, we faw four of the fame Fifh, which feemed to be bigger than thofe we had caught ; fo we furled our Sails, and made our Harponiers go out in our Long-boats; with the other Fellows that were employed in the Fifhery. We took three of them ; one efcaped us; that which our Fifhers brought aboard the Ship I belonged to, had no. Horn ; neither had the other two any. Twelve Hours after we difcovered five Fifh more. Our Harponiers and Fifhermen got prefently into their Boats, to endeavour to take them, efpecially one of them, which had a Horn in his Head. But though the Fellows did whatever Men could do to catch then, three of them made their Efcapes; among which was the horned Fifh; and the other two were taken, and had their Heads cut off. Two Hours after we fpied three more; our Fifhers went out after them ; they took one, whofe Head was brought aboard us, and was fo big, that each of his great Teeth weighed twenty-nine Pounds:

Two Days after we faw feven or eight more of thefe Fifh, and a horned one among them. We put out all our Boats, and our Fifhers were fo fortunate as to catch five of them, of which one was the horned Fifh; it was our Lot to have him; his Horn was like that of the firft Fifh we caught, but not fo heavy or fo large, it being farce feven Feet long. We ftaid there five Days longer, and feeing nothing all that while, took Advantage of a North-north-eaft Wind, which fprung up, and failed towards Weygatz, in Hopes to pafs thofe Streights. We kept our Courfe pretty well for thirty-fix Leagues; but then we could go no farther, becaufe of the huge Pieces of Ice that oppofed our Paffage, and the Mountains of Ice covered with Snow, called Pater Nofters, which lie at the Mouth of the Mare glaciale (the frozen Sea) and the great Sea of Tartary. If a Ship could pafs through thofe dreadful Streights, a Paffage to the Eaft-Indies would not be above a Quarter fo long, as it is now, through the Allantic Ocean. For this Reafon the Streight is called Weygati, as much as to fay, in Engli/h, a Place one cannot pars through.
28. We came to an Anchor in thole Streights, near
the Shore, on the Eaftern Coaft of Zembla; one of our Seamen landing there, and going about his neceffary Oc.cafions, a Bear came behind him, and ftruck him down with his Paw, and would have certainly deftroyed him, had we not perceived it. We immediately fired a Fuzee, and by good Fortune fhot him dead, otherwife the poor Sailor would not fo eafily have got out of his Clutches; he was not fo foon eafed of his Fears, and the reft of his Comerades were fo terrified by his Example, that they durft not venture afhore. A little while after there came three Bears to our Ship-Sides, and ftrove to come aboard. We cut off the Paws of one of them, with our Hatchets, and fhot the other with a Mufket. While we were difpatching thefe two, the third mounted the Side of our Ship, and entered it ; a Sailor who ftood near him, cryed out as if he were about to be devoured; and well he might, for the Bear was at his Heels. We all took up Oars and Pieces of Timber, with which we knocked him down, others fhot at him, and two more that were fwimming towards us, and killed them. We thought this Deftruction would hinder any more from coming towards us, but we were miftaken; for four or five Hours afterwards we difcovered eight or ten more upon the Ice, and taking the Water they fwam towards us, which obliged us to handle our Arms, and fire at them. We aimed fo well that not one of them efcaped us. More and more ftill approaching from the high Mountains, as if they had declared War with us, we refolved to retreat before fuch a terrible Enemy.

We weighed Anchor, and returned to the Place where we firft anchored, on the Weftern Shore of Zembla. After fifteen Hours fail, we got out of the Streight, by favour of an Eafterly Wind. We had much ado to avoid running againft Rocks of Ice that lay in our Way. At the Mouth of the Streight there is an Inand which looks very green, covered with Fir and Juniper-Trees. Some of our Crew went afhore, and faw a fort of Birds there fo big they could hardly, fly. They came and told us what they had feen; upon which I defired Leave to go afhore, with about forty Men detached from the Crews, to hunt thofe Birds, and make Difcoveries. We killed about fixty of them, fome we fhot, and fome we knocked down with Clubs; their Carcaffes were carried aboard with us. The Mafter of our Ship, called thefe Birds Penguins. They are not much higher than Swans, but a great deal bigger. They are Tharp-beaked, of a brown Colour ; their Feet are webbed like thofe of a Goofe, and at their Gullet there hangs fomething like a Bag, about a Foot long; it begins juft under their Beaks, and comes down to their Breaft, widening as it lengthens; it is not unlike an Urinal, only it is bigger. In this Bag they put their Victuals, and take it out of it when they have a Mind to eat. We were forced to fkin them before we could eat them; their Skin being very tough, and we had much ado to pull them and drefs them. The Flefh was extraordinary good, it taftes like that of wild Duck, only it is fatter. We eat heartily of it, and had not had fuch a Feaft in all our Voyage. We ftaid at Anchor off of the Inand, where we caught the Penguins two Days, and then a South-eaft Wiud fpringing up, we weighed again, and held on our Courfe North-north-weft; in a few Hours we got out of the Streight, then the Wind varied, and we coafted it along to a high Cape, where we arrived in about thirty Hours. That Cape is not far from the Place where we faw the Zemblians adoring the Sun.
His Dani/b Majefty having commanded our Captains and Officers to bring off fome Zemblians, if they could ponibly, that he might learn of them what was the Growth and Riches of their Country, they dropped Anchor, and refolved to do the utmolt to obey the King's Command. As foon as we were ready, fome of us went athore, in our Long-boats, to fee what we could difcover; there were thirty Perfons in all, of whom I made one. We had fcarce got over the Ship's Side before we difcovered a Zemblian in his Canoe, about half a League off Land; who, feeing us make towards him, rowed fo nimbly, that it was impoffible for us to get up with him; as foon as he fet foot ahore, he took up
his Canoe and ran away with it on his Shoulder, fo fwiftly, that we perceived it would be a difficult Matter for us to overtake him'. He held his Dart in his Hand all the while, and yet did not feem to be incumbered in his Flight. We landed, and purfued him towards a Hill which we faw him mount, but he was nimbler than we, and it was in vain for us to follow him, when we had once loft Sight of him. We therefore gave over all Thoughts of taking him, and returned to our Ships, very forry that we had miffed our Prize. As we were failing back to our Ships we faw two Zemblians in a Canoe out at Sea, they fpying us rowed toward the Promontories and Rocks, on the Coafts, to hide themfelves; but we took to our Oars fo brifkly, that we came up with them as they were rowing, with all their Might, towards a Rock. We furrounded them, being in four Boats; and when they found they could not efcape us, they fet up a hideous Howling, the moft horrid Noife that ever I heard in my Life. We carried the Men aboard with us, towed the Canoe along, having faftened it to one of our Boats. It was like a Gondola in Form, fifteen or fixteen Feet in Length, and two and an half in Breadth. It was made of the Rib-bones of Fifh, very artificially; the Sides were of Finh-Skins fewed together, it all looked like a huge Purfe, from one End of the Canoe to the other; the Bottom was of the fame Materials with the Sides. The Zemblians are fhut up in it as high as their Waftes; a drop of Water cannot get into it ; and they expofe themfelves in the fouleft Weather, without Fear of foundering. We perceived one of the Zernblians we had taken was a Man, and the other a Woman. We made all the friendly Signs we could to them, and careffed them, to find out where their Habitations were, but we could learn nothing.

Upon this thirty of us landed again, took feveral Days Provifions with us, and went in two Troops, well armed, at about an hundred Yards Diftance one from another, 10 try if we could meet with any more of the Inhabitants. We hid ourfelves in Caverns under the Rocks, pofting Sentinels near Trees, in open Places, proper for difcovering, if any of the Zemblions came that Way; where we intended to feize them, and force them to Shew us their Habitations. We were two Days before we could hear of any thing to our Purpofe; at laft our Sentinels gave us Notice that they fpied two coming down a Hill, fowards the Sea fide. Six of our Company ftaid in the Cavern; five more, and myfelf, removed to one a little farther off; and a quarter of an Hour after, thefe two Zemblians paffed by our Caverns without perceiving us; one of our Companions thot off a Fuzee, to give Notice to thofe in the other Cavern, that they were hemmed in between us and them; when they came near their Cavern, they fallied out, and we did the like from ours. The Savages being thus trapped, faw it was in vain to Ay, fo we eafily took them. Their Garments were of Penguins-Skins, the Feathers outwards; they had each a Pair of ftrait Breeches on, which came down no farther than their Knees; a Waftecoat of the fame; the Sleeves no longer than to the Elbows. The reft of their Arms was naked; their Waftecoats were picked before and behind; their Caps were in the Form of a Sugar-loaf; their Stockings of the Skin of a Sea-Calf, the Hair outwards. Though their Drefs was the fame, yet we foon perceived which was the Man, and which the Woman. The Man feemed to be about twenty-four Years of Age, his Face like the reft of thofe Savages, was very broad, his Complexion fwarthy, his Nofe lat; he had neither Beard on his Chin, or Hair on his Head. At his Back hung a Quiver full of Arrows, and on his Shoulder he carried an Axe ; in his other Hand he held a Bow. The Woman was about twenty Years old, her: Hair hung down on each Shoulder, twifted in two Locks. She had blew Streaks on her Chin, and four or five on her Forehead; her Ears and Noftrils had Holes bored in them, in which fome blue Stones, or Rings of Finh-bone, were hung. Thofe in her Ears were as big as a Filberd, and thofe in her Nofe as a Pea. She held a Dart in her Hand.

We tried all the Ways we could think of to oblige

Chap. II.
Northern Coafts of EUROPE.
them to thew us where they dwelt, but they would not give us the leaft Token to direct us; they were as ftubborn as thofe we had taken in the Canoe, and we were forced to carry them on board without making any further Difcoveries: When we brought them to their FellowPrifoners, we perceived they knew one another, though their Garments were quite different : Thofe we took in the Canoe being dreffed in Sea-Calf Skin Cloaths ; and there in Pengnins Skins. The Hair of the Sea-Calf Skin was put outwards; the Waftecoats of thefe Zemblians were made of two Skins joined together, the Tails dangling, the one before and the other behind, almoft as low as their Knees; their Drawers were very ftrait: The oldeft was about fifty Years of Age; he had a round Beard of a Chefnur Colour; he had no Hair on his Head. The Woman that was with him, feemed to be about thirty Years old; her Ears and Nofe were bored, as the other Woman's were, and blue Stones hung in them ; her Hair was twifted, and dangled like the Country Woman's: They were both extreme ugly, and the Man and Woman fhorter and fquatter, than either the Laplanders, Samojeds; Borandians, or Siberians: They had fqueaking Voices, and ftinking Breaths, which latter was caufed by eating of Fleh without Salt, or Fifh dipped in Fifh-Oil. They drank nothing but Water. We could never make them eat any Bread, falt Meat, or Fifh, nor drink any Beer ; they talted Brandy now-and-then, but hated the Smell of Tobacco: Their Needles, the Points of their Darts and Arrows, and all their other Intruments were made of Fifh-bones : The Wood-work of their Bows and Darts was very heavy, of a red-brown Colour ; that of their Arrows is much lighter and whiter. When they go, they waddle along like a Duck, and are the moft defpicable Creatures I ever faw of the Race of Men.
29. The Summer Seafon being very far advanced, for it was now the latter End of Auguf, and the Days growing thorter, we having half an Hour's more Night than we had; the Cold alfo increafing, and all our Companions longing to fee their own Country again, we weighed Anchor, the Wind at North north-eaft, and held our Courfe South-weft. We failed before the Wind feveral Hours, and then veered to the South-fouth-eaft, which obliged us to make our Way northward, to endeavour to reach fome Shore. We coafted along with a South-fouth-eaft Gale till we came to Greenland, where the Wind fhifted again to Weft-fouth-weft, and forced us to drop Anchor near a Fleet of Frencb and Dutcb Ships that were come thither a fifhing; the Whale-fifhery being the Trade of that Place. The Ships did not lie far off Shore, for the Whate, as well as the Sea-horfe, is caught near Land; they are taken after the fame manner as we took the Sea-horfes, and when they are caught they are cut to Pieces, and the Greafe taken out of them; which is put into an huge Kettle, and melred to Oil; near fome Huts which the Fifhermen built for their Conveniency along the Sea Shore. It was very wel! for our Zemblians, that we came where there was fome Whale-oil to be had: They had loft their Stomachs, and could eat nothing for want of it ; they could get nothing down unlefs it was foaked in that Oil ; and all our Store was out.

I faw a Whale dreffed that had no lefs than three hundred and fifty Pound-weight of Bone in her fit for Bodicemakers, befides the Oil that came out of her Greafe. We ftaid but two Days in Greenland. The Wind fpringing up North-eafterly we weighed Anchor, and proceeded on our. Voyage homewards. We had a fair Gale all that Day and the following Night till five $0^{3}$ Clock the next Morning, when we faw three Suns in the Heavens one above the other; thefe Meteors were fo like the Sun in Brightnefs that we could not diftinguifh the one from the other; we alfo perceived foul Weather gathering from the fouthward, and foon after we were overtaken by a violent Storm, which obliged us to furl moft of our Sails, and fire a Gun, for a Signal to our Company of the Danger we were in, thereby warning them to do as we had done. We gave ourfelves over for loft, and entirely fubmitted to the Will of Heaven; three Hours after it blew terribly South-fouth-eaft; it thundered with louder Claps than ever I heard it before.

Vol. II. Numb. CIIL.

The Sea was fo rough, and our Ship fo tofled that wie could only carry our Mizen-fails the Yard lowered almoft to the Ship's Deck; two Sailors were forced to tug at the Oar with Ropes, we having much to do to manage the Ship. We failed thus all that Day; and the next Night the Wind continuing as ftiff as at firt; our Captain commanded one of the Men to get upon the Main-top; to fee if he could fpy Land, and difcover whereabouts we were : The Sailor looking round him, cried out he faw a great Fire; our Mafter laid it was Mount Hacla in Iceland, a Mountain that burns like 庄tna and Vefuvius. The Weather being ftill foul, we refolved to make Land as faft as we could, though we had nothing to do there; we were afraid to keep out to Sea, our Ships having fuffered much by the Storm. We arrived near the Shore about Night; and as we lay by, heard dreadful Noifes at Land; they were like the Fire of feveral Cannons, after which we faw Flames iffue out of Mount Hecla in abundance. We found fo many Rocks on the Coaft of this Ine, and the Sea was fo rough, that we did not care to venture nearer the Land than a League; but our Pilot affuring us he underftood the Coafts well, we made into Cape Heri, where by the Skill and Care of the Pilot we anchored in Safety. One of our Company broke her Beakhead againft a Rock, and had like to have fplit; the other received no more Damage than we did. We immediately went afhore; our Mafter, Supercargo, myfelf, and fifteen of our Crew, the Mafter and Merchants of the other Ships acs companying us.

We landed at a Village called Heri, and hence we went to Kirkebar, a little City or large Town of Iceland, where we met eight or nine Danijh Merchants ; who were fur. prized to fee us there. They entertained us very cordially; and told us, that the Day before the whole Inand fhook foo violently that they thought they fhould be all fwallowed up; They gave us good Wine, good Bread, and good frefh Meat. There is Plenty of all Sorts of Cattle in this Inland, which abounds in rich Paftures ; and the Beafts that feed on them delight fo much in Caitopbe Herb, that the Inhabitants are forced to ftint them to fuch a Meafure, or they would eat till they burlt; which they would certainly do if they were fuffered to eat their Fill, as in other Countries.
30. Our Captain, Supercargo, and the others of our Company, gave the chief Merchant at Kirkebar an Intimation, that they would fain fee what was to be feen in the Ifland that was rare. The Merchant prefently ordered Horfes to be got ready for all of us that were wil. ling to go far into the Country: I faid I would make one, and we mounted eight in all; the reft, not having fo much Curiofity as we, chofe rather to ftay and drink at this Merchant's. The Merchant fent one of his Servants and two Inanclers along with us, to be our Guides, and furnifhed us with a Horfe-load of Proviftons. We tra: velled two Days together in Bye-ways very difficult to pafs, rugged, and unfrequented: At laft we came near Mount Hecla ; five Miles off it we found the Ground ftrewed with A fhes and Pummice-Rtones ; over which we paffed, by the Foot of the Mountain. The Weather was very ferene and calm, and we faw neither Fire nor Flames come out of the Mountain: Upon this we refolved to go up to the Top; but our Guides informed us that; if we went farther, we fhould be apt to fall into Pits of fiery Fumes, and it was impoffible to pull us out. Thus all our Company except myfelf declared againft proceed. ing. I told them if they would ftay for me, I would go up myfelf: They promifed they would; fo I alighted, and prepared to afcend the Mountain. One of the Dani/b Merchants whom we met ar Kirkebar, and who accompanied us out of Curiofity, faid he would go along with me.

We gave our Horfes to our Guides, who ftaid behind with the others who came out with us: We footed it over Afhes and Pummice-ftones, and fometimes we were up to the Calves of our Legs in Afhes, and yet we ftill went forward, as we refolved to reach the Top of Hacla. We had not gone far before we efpied a Flight of Crows and Vultures, that had their Nefts in the Top of the Mountain: We afcended half a League, and then felt the 6 I

Ground

Ground fhake under tis; we alfo heard fuch a terrible Noife in the Bowels of the Earth, that it feemed as if it would burft open : At the fame time there appeared, on all Sides, Chinks; out of which there iffued bluifh Flames, which fmelt like the Stench of burning Brimftone. This Sight made us turn back, for fear of being confumed to Anhes by them. We had fcarce got down thirty Yards, before a black, fmoky Cloud afcended out of the Mountain, fo that it darkened the Light of the Sun, and covered us fo that we could not fee one another; our Fears grew upon us every Step we took; for behind us. came Flames of Fire, Showers of Afhes, and Pummice-ftones, which fell as think as Hail; and this dreadful Storm was attended with horrible Noifes, which made us cry out in a frightful Manner, fancying that the infernal Furies were coming out of the Mountain to devour us; befides, we expected every Moment that the Earth fhould open, and fwallow us up, which added Wings to our Flight, and we ran as faft as we could, to efcape the Danger, to which our idle and ridiculous Curiofity had expofed us.
Fear made us fo nimble, that in a Quarter of an Hour we defcended fo much of the Mountain as we were a full Hour in afcending. When our Companions perceived us come down fo faft upon them, they burft out a laughing at us, and their Laughter grew louder when they faw us in fuch a Pickle, as black as if we had been plunged in Soot ; but their Mirth abated as foon as we came nearer them and dropped down dead, for fo they thought us, we being neither able to ftir nor fpeak. They rubbed our Temples, Noftrils, and Hands with Vinegar, and did what they could to bring us to our Senfes again: It was not long before we came to ourfelves; they gave us a good Cup of Canary; and when we recovered Strength, we told them what had happened to us ; and they rejoiced that we came off fo well. We all left the Foot of the Mountain, to go to fee two Fountains ten or twelve Miles off; the one is always boiling, and the other always fo cold that it turned every Thing that was put into it to Iron. About a hundred Yards off the Foot of the Mountain we found a Pummice-Stone as big as a Wine-Hogthead, which had lately been caft out of Hecla. Our Guides feeing that we were aftonifhed at the Bignefs of the Stone, faid, they had feen feveral much bigger than that, which ten Men could not flir ; and that inftead of Flames, Arhes, and Pummice-Stones, there fometimes iffued out Floods of Water, as out of Spouts; formetimes nothing but Flames, fometimes nothing but Afhes, and fometimes nothing but Stones. After three Hours riding we drew near to the Fountains ; they are about thirty Yards Diftance from each other: We came to the cold one firft, and put in a little Cane I had in my Hand, when I took it out again I was furprized to fee the End of it which bad touched the Bottom, metamorphofed into Iron, and weighing as heavy as that Metal.

From thence we went to the boiling Fountain. $\cdots$ At ten Yards Diftance from it we faw a Parcel of Animals as big as Ducks, moft of them red, whichwere frifking about and playing together. We ftood looking on them awhile, pleafed with the Novelty of the Sight; when we came nearer to the Place we faw nothing, and when we were gone they appeared playing and frinking, as before. They do fo when they fee no-body, but if any body appears they plunge down to the Bottom of the Fountain, which, as our Guides informed us, is fixty Fathoms deep. From the boiling Fountain we travelled towards the Seafide, and arriving within half a League of it, we heard Noifes like the Voices of Perfons complaining. Our ignorant Guides, Natives of the County, would fain have perfiuaded us that thefe Noifes were the Lamentations of the Damned whom the Devil tormented, and that when he had roafted them in the Flames of Hacla, he cooled them in the Ice of. the Coafts. Though we did not give much Credit to this Iceland Tradition, we refolved to fee thofe Seas of Ice which bound that Part of the Inand and no other. When we arrived at the Coaft, I found that thofe imaginary Complaints were occafioned only by the Agitation of the Wind and Water, the Ice beating againft it, and the Ice againft the Rocks. This Ice, fay
our Guides, comes on their Coaits in $\bar{F}$ une, and goes away the fifteenth of September.
It was the thirteenth when we were there; and having feen all that was worth feeing, we returned to Kirkeber, where we arrived three Days after; we faid a few Hours in Town, and then went aboard; where we found the Governor of the Ihe accompanied by the Bifhop of Sceltbott, who came to fee our Ships, and difcourfe with us, znderftanding we had been at Zembla. The Inlanders for the moft part dwell in Caverns cut out of Rocks, the reft live in Huts built after the Manner of thofe in Lapland fome with Fifh-bones, and others with Wood covered with Turf: They and their Cattle lie under the fame Roof: They are all ugly, both Men and Women; they are fwarthy, and dreffed like the Norwegians; their Shifts and Smocks are made of Packing-Cloth, or Sarplier ; and fome few wear Coats made of Sea-Calf-Skins, with the Hair outward. They live very plainly, as do all the Nations of the North; they lie on Hay or Straw in their Cloaths with Skins upon them, and make but one Bed for the whole Family. All their Work is fifhing; they are nafty and brutal; they are almoft all of them Wizards or Witches. They worfhip the Devil by the Name of Kobald: It is faid he often appears to them under a human Figure. They have alfo a Sort of IIoufhold God or Idol cut out of a Piece of Wood with a Knife, very hideous to look on, which they adore privately, and hide for fear of the Lutberan Priefts, who teach them as they can, the Chriftian Faith, and endeavour to deliver them from the Bondage of Satan: But thefe Barbarians were fonder of their diabolical Idol, and more conftant to him than fome Chriftians to the Profefion of their moft holy Religion. Though the Fields in Iceland look fair, and there is Plenty of Pafture, no Wheat grows there, nor any other Grain fit to make Bread with; the Cold is fo extreme it kills the Seed, or green Corn, by a North-eaft Wind; which is very violent in thofe Parts.
31. Three Days after our Return from our Journey to Mount Hecla, and that we were a Ship-board, we took the Opportunity of a North Wind which ftood fair for us, weighed Anchor and fet fail, holding our Courfe South-fouth-eaft. We failed before the Wind feveral Days, and then it blowing a very ftiff Gale, it drove us on the Conft of Norway, where we made the Promontory of Talfo, a little City built on an Eminence four Leagues from the Sea, there is a fine Caftle in it ; and we rejoiced that we were fo near Land, hoping that we fhould foon fee an End of our Voyage. We coafted along Shore about twelve Hours, and then the Wind changed with the Moon, which obliged us to keep out to Sea, for fear of being driven back; notwithftanding our Caution, it blew fo hard that we were forced to drive before the Wind forty Leagues backward.
Then the Weather grew a little more caIm ; foon after that, we had not Wind enough in our Sails to ftir us. Nothing is fo tedious to a Sailor as a Calm, efpecially upon a long Voyage, when he has been out a confiderable Time, and is impatient to reach home; a Storm would be more welcome to him: He cannot tell how to erreploy his Time, all his Thoughts run upon his Country, made dearer to him by many Months Abfence; and his Impatience to fee it, torments him more under the Delay of a Calm, than the Fear of Shipwreck in a Tempeft. In about two Hours we had a Water Cloud to the South-weft; our Marincts were prefently ftruck with a dreadful Confternation, apprehending it would fall upon us. We were obliged to furl all our Sails, and lower our Yards down a Port, fearing it would pour upon uis; but it did not come nearer than two Leagues; we faw it fall at about that Diftance. Thefe Clouds are in Form like a black Column or Pillar, 'which appears in the Heaverns over the Sea; and if by Chance they fall on Ships, they fink them to the Bottom, with the Flood of Water, which pours down from them like Cataracts, efpecially if it chance to fall perpendicularly. The Wind fpringing North-north-eaft, we proceeded on our Voyage, fo happily, that in ten Days Time we arrived at Copenbagen; where, having faluted the Cafte, we dropped Anchor, put out our Boat, and went to Shore.

When

When we entered the City, his Majefty being informs ed that we had brought fome Zemblians with us, he commanded us to bring them to Court; which we did, every body gazing at them as if they had been born in another World. The King himfelf admired the Oddnefs of their Drefs, and the Strangenefs of their Figures. He ordered the Steward of his Houfhold to give Directions that they might be carefully kept and provided for, and be taught the Danifb Language, hoping he might then get fomething out of them, relating to their Country, that would be beneficial to his own. He commanded us to give him an Account of the feveral Places we had been at; of the Manners of the People, and their Way of living. We gave his Majefty full Satisfaction in all his Demands, and went then to wait upon our Owners, to inform them what Markets we had met with, and what Returns we had brought them home; which proved mightily to their Advantage and Content. Our Ships were ordered up to Cbrifian Haven, to be unladen, which was done in two Days time. One of the chief Merchants of the Company trading to the North, prefented the King in the Name of the reft, with the two Sea Horns, which we brought home with us. He received them as Rarities, that were of ineftimable Price, believing they were really Unicorns-Horns, of which abundance of Authors have written, and pretended there is a great Virtue in them. The King commanded they fhould be depofited in the Treafury Chamber, and promifed to grant the Company, in return, as many Privileges as it was in the Power of his Prerogative to beftow on them. The Merchant who prefented the Horns, was rewarded with a Chain of Gold, with his Majefty's Picture hanging to it ; and had a Licence to trade, Cuftom-free, for a certain Term of Years.
32. As I have mentioned the Unicorn, whofe Horn is fo much fpoken of, and valued for, the Virtues that are attributed to it, I fhall take this Occafion to fpeak my Thoughts of this Matter, after I have given the Reader an Account of the Sentiments of others. It is very difficult to decide what Creature it is which is properly the Unicorn. There are feveral Animals, called by the Greeks, Monoceros;' and by the Latins, Unicornu. Among the four-footed Beafts, feveral wild Affes, and wild Bulls, particularly the Bull of Florida. Among Serpents, it is the horned Afp, and the red Salamander. Among Fifh, the Sea-horfe, and many more, whofe Names are unknown to Europeans. There are fome Fowl, and even fome Infects, that have been thought to be Unicorns; fuch as the Flemiff and Englifh Beetle, both which are frequently mentioned by Naturalifts; and befides thefe, other Animals of different kinds in the Indies have been, by fome, cancied to be the Creature, called by the Laiins, Unicornu. Some Authors will have it to be a Land-beaft; others aWater-Animal; and fome again an amphibious Creature, that lives either on Land or in Water.

Pliny fays, the Unicorn is like a Bull, fpeckled with white Spots; her Hoof hard, and clofed like a Horfe's. Munfer writes, that it refembles a Colt of three Years old, of the Colour of a Weazel; her Head like a Stag's; her Legs and Feet little, and her Horn growing out in the Middle of her Forehead, about two Cubits long. Marco Paulo, the Venetian, fays, fhe refembles an Elephant, only fhe is fomething lefs; that her Colour is the fame, and alfo her Shape or Form, excepting her Tail, which is like a Bull's; and her Head like a Hog's, but fo heavy, that the cannot' hold it up; this evidently is the Rinoceros. Pbiloforgius writes, that her Head is like a Dragon's; that in the Midf of her Forehead, her Horn grows out of an indifferent Size, refembling that of a Snail; that the has a Beard like a Goat; a long. Neck; her Feet like thofe of a Lion, and the reft of her Body much like that of a Stag, excepting her Skin, which is like a Snake's. Helidorus adds, that he is fo nimble a Beaft, the Hunters can never come at her. Louis Paridis will have it, that fometimes fhe is taken, and that her Food, afterwards, is Peafe, Lentils, and Beans; that Ihe is not much bigger than a large Greyhound, but is not of fo flender a miake; her Skin, in Colour, like a

Caftor's, only fleek; her Neck fmall, but long; and her Feet cloven, like a Stag's; her Tail hort; her Muzzle like a Cow's; her Eyes great; her Ears little; and between them grows her Horn, about a Foot long.
'T"bevet affirms, that the Unicorn is as big' as a BullCalf fix Months old, that her Legs and Feet refemble thofe of an Afs; her Ears like a Rain-Deer's, and that her Horn grows up ftrait on the Top of her Head. Louis de Bartheme imagines the Unicorn is like a Bay Horfe, cloven footed; and that her Horn grows in the middle of her Forehead. Some fay, that the Rinoceros is the Unicorn ; Kircher, that it is the Sea-Horfe, which he alfo calls Lamia; wherein he is very much miftaken; for the Lamia is another Sort of Fifh, called by the Englifs Rahen, of which the Inhabitants of Martinicos Guardaloupe, St. Cbrifiopbers, and the other American Inands, ftand in great fear; for they are in danger of being devoured by them, as often as they bathe in the Sea.

Authors differ widely about the Size and Shape of this Horn. Albertus fays, that at the Bottom, or Root, it is as broad as one's Hand; that from thence it rifes taper to a Point, and that it is ten Foot long. Mumfer will have it only three Cubits in length, which is only four Feet and a half. Marco Paulo fhortens it to lefs than two Foot. Paradis reduces it to a Foot and a half. Nicolaus Venetus brings it down to a Foot: And the famous ferom Cardan will have it the length but of three Inches. We find as great or greater Differences as to Colour. Pliny is very clear that the Unicorn's Horn is black. Solinus fays it is of a purple Colour. Paradis fays it is red, or of a reddifh yellow. Albertus Magnus thinks it may be like a Stag's Horn : But other Writers are very pofitive that it is much whiter than any Ivory. We are likewife affured, by fome, that it is quite frait and fmooth ; others perfuade us, that it is finely wreathed, and fhines as if it was polifhed ; neither are there Authorities wanting to prove, that fome are very finely fpot- ted with brown and black, but they do not tell us where. When I reflect on the feveral. Opinions of thofe who have written of the Unicorn, and how they differ from one another, I fometimes believe that each of them fpoke after his own Invention, to raife the Admiration of the Reader.

As for the imaginary Virtues of the Unicorn's Horn, they are confequently fictitious; but fuppofing that what has been pretended to be the true Horn was really fuch, I will venture to affirm, there is no more Virtue in it than in that of a Stag, a Goat, or Elephant's Tooth, which is made ufe of to ftop the fpitting of Blood and à Bloody-flux, which is done by the aftringent Quality of thefe Horns, and that cannot fo properly be called a Virtue as a Malignity. The Unicorn's Horn, or what has been faid to be fo, has neither Smell nor Tafte, and of courfe can have nothing in it of fuch cordial Virtue as is pretended.

Since my Voyage to the North I have looked over feveral Charts drawn by the moft celebrated Geographers, and I wonder to fee they placed Zembla no farther to the Eaft-north-eaft of Laplond. It is more to the Northward than they make it. They are alfo in the wrong to divide it from the Continent, and to place it twelve hundred Leagues from Greenland, as many of them do ; for indeed it is contiguous with it. The Coafts of Greenland join to thofe of Zembla; and were it not for the prodigious Snows that fall there, and the Rigour of the Seafon, which render the Place uninhabitable, one might eafily go from Greenland to Zembla by Land, and from Zembla pafing the Pater Nofers, a Ridge of vaf Mountains, enter Samojeda, and thence either into the Great Tartary or Mufcory.

I admired alfo, that they did not make the Streights, called Weygatz, above ten French Leagues long; whereas they are five and thirty German Leagues in length. They fhew by their Charts that Ships may by that Streight enter the great Sea of Tartary; which, whatever they pretend to, is not to be done. Some have faid, that in the Days of Prince Maurice a Ship paffed the Streights of Weygatz, and failed into the Tartarion $\mathrm{Se}_{\mathrm{a}}$, which is a
plain
plain Fallity, as I fhall make appear. This Streight, as I have faid, is bounded by the Pater Nofer Mountains, the leaft of which is half a League high ; and it is agreed, on all Hands, that they are of Ice which never melts. I am of the fame Opinion, having been in the Streights near thofe Mountains in the Dog-Days, the hotteft Seafon of the whole Year, and was as cold then as ever I was in France in the coldeft Winter; which Seafon lafts there all the Year.
33. The many curious Particulars contained in thefe Voyages and Travels may very well attone for fome Deficiencies and Miftakes in them. It appears from hence, that there are no Countries in the World through which Men travel with more Expedition than in thofe frozen Climates, where one would imagine that Men could fcarce travel at all; and this induces one to wonder, that they have not been more thoroughly and effectually examined, efpecialiy confidering with how great Eafe this might be done, if the Court of Ruflia interefted itfelf in the Matter. Our Author appears to be a Man of great Sincerity, and relates every thing he faw diftinctly; and at the fame time tells us his Sentiments of the Matter. The Account he has given us of Ruffia is prior in Point of Time to the Reign of Peter the Great; who, in fome meafure, changed the Nature of his Subjects: But, however, as this has been done very flowly, there is good reafon to believe, that with refpect to the Bulk of the People in the diftant Provinces of the Ruffian Empirc, they are not much altered from what they were. It is not eafy to guefs what part of Circaflia he means, when he fpeaks of the Inhabitants of it in the manner he does; and for my own Part, I am apt to think he calls the People of the Ukraik, Circaffians; and myReafon for thinking fo is, that both in their Language and in that of the Poles, the Word Colfack fignifies a regular Soldier, a Man trained to War, and in conftant Pay. It is very true, that we now confider the Coffacks as a Nation, and not as a Militia; and this with Propriety enough, becaufe the Poles having given that Country to their Soldiers, they ftill retain the Name of Coffacks. Though they are no longer regular Troops.

By the way, it may not be amifs to obferve, that it was breaking through their military Tenures, and endeavouring to make thefe People pay a rack Rent for their Lands, that induced them to rebel againft the Poles, and to put themfelves under the Protection of the Czar. His Account of Siveria is very entertaining and curious, and the Tinquifes he fpeaks of are the Inlabitants of the very Extremity of Afa, towards the Sea of Fapon, a very brave, though a very barbarous Nation, with whom the Mufcovites have been long at War, but whom hitherto they could never fubdue. The manner in which the Exiles live in that dreadful Country, is alfo very well and very truly defcribed. The Mines that have been fince difcovered there, have indeed furnifhed another and
more laborious kind of Employment. But the fhooting wild Beafts and collecting their Furs, ftill continues to be the principal Bufinefs of the unhappy Perfons who are banifhed thither ; and thefe are not only Men of as great Rank as any this Gentleman mentions, but fome alfo of much fuperior Quality; fuch as Prince Menzicoff, the Duke of Courland, the High Chancellor Ofterman, whom we remember fent into thofe Defarts as Vietims of State rather than Criminals.
The Account he gives us of Nova Zembla is very curicus and circumftantial ; and what he fays about the Eirors in the Maps publifhed before his time may be very juft, but we have had better fince that. I cannot, by any Means agree, that this Country is contiguous with that of Spitzbergen or Greenlend, though it may be true, that it extends itfelf farther to the North than is generally imagined : Neither do I think that the Seas beyond this Country, are always choaked up with Ice; but if a Parfage is to be fought this way, my Opinion is, that inftead of fearching the Coafts of Zembla, the thorter and better Method would be to make the South Point of Greenland, and then to fteer North-eaft, into as high a Latitude as fhould be judged convenient ; Experience having fhewn that the Weather is not more rigorous, or the Ice more troublefome, the farther People fail towards the Pole.
What he fays concerning Unicorns and their Horns, feems rather calculated to difplay his Learning than for any other Purpofe; fince it is now univerfally agreed, that the Horns which are fhewn in Europe under this Title are the very Horns he fpeaks of, and are taken from the Heads of Fifh called Sea-Unicorns; but which, in reality, are a kind of Sword-Fifh. The Shape of their Body is like a Seal, but the under Fins and the Tail refemble thofe of a Whale. They fwim in Shoals, and generally carry their Horns out of Water, but then they fwim fo fwiftly, that they are very feldom taken; there is another kind of Sword-Fifh, which may be alfo ftiled a Unicorn, but is generally called a Saw-Fifh, becaufe the Bone is filled with Teeth or Pegs from the Root to the Top. It was formerly thought that thefe Horns had great Virtue ; but Experience has fhewn, that they are of no farther Ufe in Phyfic than as Abforbents; and in this refpect Oyiter-fhells or Crabs-eyes do as well. There is one Obfervation more that may be made on this Section worth Notice, and that is, the Poffibility of making fuch Voyages for Difcovery, they bearing their own Expences, as this plainly did; and a great deal of public Spirit there would be in fending a Ship or two now and then to trade in this way, which fooner or later, would produce us more Advantages than we are able to forefee : Of this, at leaft, we are certain, that by Voyages of this kind we eftablifhed a Trade to Arcbangel, which was the Foundation of our Ruffia Company; but it is now time to proceed. to Countries better known, and into Climates more agreeable than thofe of which hitherto we have been fpeaking.

## SECTION HI:

## A fuccinct and impartial Account of the Kingdom of Sweden, weith refpect to its Cli= mate, Soil and Produce; as alfo of the Temper, Genius, Cuftoms, Policy, Form of Government, Force, and Trade of its Inbabitants.

## Collected from the Writings of an Englifh Minitter refiding theré

1. A fort but necefiary Introduction to the fubfequent Section. 2. A clear and comprebenfive. Vieco of the Kingdom of Sweden and Duchy of Finland; the Soil, Climate, Woods, Lake, Rivers, Produce, Birds, Beafs and Fijh found thercin. 3. An Account of the Mines in Sweden, their Value, Metbods of woorking them; as alfo of the Weather and Seafons of the Year in Sweden. 4. A more particular Account of the feveral Provinces and Cities of this King dom, efpecially that of Stockholm. 5. A difinct and copious Detail of the Courts of Yufice, Lawes, and Domeffic Government, as adminjifered in the Time of Charles XI. 6. The Tcmper, Genius, Manner's, Cuftoms and way of living of the People in that Country. 7. A fuccinct View of the Ecclefaffical State of Sweden; the Arcbbifhoprics, Bifaoprics, Deaneries, Parocbial Benefcess, Number and Maintenance of the Clergy. 8. The Confiritution, Government and Revenues of the Kingdom. 9. A curious and circumfantial Relation of the Military Efablifment and Force of the Kingdom of Sweden, the only Country in wwich a large flanding. Army is kept up, weitbout any Danger to the Liberties of the People. Io. Of their Trade more particularly woith England, its Atvantages and Difadvantages, and fome particular Grievances to whicch Mercbants are fubject in that Country. II. A few additional Obfervations and Remarks upon the foregoing Seciion, and on tbe Alterations whicb bave jince bappened in the Government of that Country, and the Condition of its Inbabitants.

THE fhort Stay that Travellers make in Countries through which they pafs, very feldom affords them an Opportunity of looking into the Temper, Genius and Cuftoms, nuch lefs into the Religion, Laws and Government of the People with whom they converfe; which is the Reafon that in moft Books of Travels there are a kind of Blanks leff for thefe important Paffages ; or if they are filled up, it is done at random, according to the good or bad Imprefiions of the Author, received from the particular Ufage he met with, or from hearfay : So that if either our Traveller has a bad Tafte, or has the ill Luck to keep indifferent Company; we, who are his Readers, are fure to feel the Effects of it, and to have all Things impofed upon us, under the fair and fpecious Pretence of a clear and candid Relation of the naked Truth.

But to prevent the bad Effects of this, and to provide againft both Evils; that is to fay, the want of thofe Informations, which a judicious Perufer would be mooft defirous of finding; and to fecure him from meeting with hafy or falfe Reprefentations in their Stead, we have thought it our Duty in refpect of the northern Kingdoms ; the Conflitutions of which are beft worth our Knowledge, and yet are very fuperficially treated in moft Books of Travels, to have recourfe to Authors of known Veracity and Experience, who have had - Leifiure and Opportunity to confider the Subjects of which they wrote, and a fincere Intention to treat them as they ought to be treated. By this means the Defeets will be fupplied which occur in the fubfequent Travels; and the Reader will be enabled to judge, with critical Exacteref, of the Truth or Falfity of the Remarks and Obfervations thofe Writers make; a farther Advantage, becaufe thefe Countries lie at too great a Diftance to be frequently vifited, and yet near enough for us to be confiderably affected by whatever Revolutions happen in them, with refpeet either to their Syltems of Politics or Government. We will begin with sweden, a Country always famous for the Bravery of its Inhabitants, and perhaps by a natural Conifequence, no lefs famous for its Conquefts Abroad and Changes at Home, than which no Nation of its natural Force has either atchieved or fuffered greater.

The following Remarks were made by a Minifter of our own, who reficed there on the Part of King William in the Reign of Cbarles XI. a Man in all Refipects qualified for his Minitity in that Country, as having a folid Underftanding, great Uprightnefs of Heart, and a hearty
VoL. II. Numb. io3.

Defire to ferve both Nations. In order to this, he thought no Method fo proper, as that of inquiring ftrictly, and forming an impartial Notion of the Manners, Laws and Policy of the People amongt whom he refided. It was with this View that he undertook the compofing that Work, the moft curious and ufeful Parts of which we have digefted into this Section; and as the Nation, to whom it relates, are very fteady in their Tempers, and are not much affected in their Cuftoms by their Coms merce with other Nations; it is like to preferve its Character for Truth, as long as they preferve theirs as a People. Thus much by way of Introduction; let us now proceed to this worthyPerfon's Account, for the moft part in his own Words.
2. The Kingdom of Sweden and Dukedom of Finland have the Baltic Sea on the South, the unpaffable Mountains of Norway on the Weft, Lapland on the North, and Mufcory on the Eaft; being extended from 56 to 69 Degrees of northern Latitude, and from 32 to 55 Degrees in Longitude, and confequently are more than twice as big as the Kingdom of France; but the Abatements that mult be made for feveral Seas and many great Lakes, fome whereof are above eighty Englijh Miles long and twenty broad; as alfo for Rocks, Woods, Heaths, and Morafles that cover much of thefe Countries, will reduce the habitable Part to a very fmall Portion comparatively to the Extent of the Whole. The Soil, in Places capable of cultivating, is tolerably fruitful ; though feldom above half a Foot deep, and therefore more eafily ploughed, as it frequently is by one Maid and an Ox, and is generally beft where there is leaft of it, that is, in the little Spaces betwixt the Rocks; and frequently the barren Lands are enriched with Afhes of Trees growing on the Places, which are burnt, and the Seeds baked amongtt the Afhes produce a plentifil Crop without further Cultivation.

This Practice is fo antient, that their Writers derive the Name of Sweden from a Word in their Language that expreffes it; but the Danger of deftroying the Woods has of late occafioned fome Laws to limit that Cuftom. If the Inhabitants were induftrious above what Neceffity forces them to, they might at leaft have Corn fufficient of their own; but as Things are managed, they cannot fubfint without greatImportations of all forts of Grain from the Country of Leifland, and other Parts of Germany adjacent to the Baltic Sea. And notwithftanding there Supplies, the pooreft Sort, in manyPlaces remote from Traffic, are forced to grind the Bark of Trees to mix with their Corn, and make Bread, of which they have not always plenty.

6 K
The

The Cattle, as in atl other northern Countries, are generally of a very fmall Size; neither can the Breed be bettered by bringing in larger from Abroad, which foon degenerate ; becaufe in Summer the Grafs is lefs nourinhing than in the Places from whence they come, and in Winter they are half ftarved for want of Fodder of all Kinds, which often falls fo very fhort that they are forced to unthatch their Houfes, to keep a Part of their Cattle alive. Their Sheep bear a very coarfe Wool, only fit to make cloathing for the Peafants. The Horfes, efpecially the fineft, though fimall, are hardy, vigorous, ftrong, fure-footed, and nimble Trotters; which is of great Ufe to them, becaufe of the Length of their Winters, and their Fitnefs for Sleds, which is the only Carriage in that Seafon; and the Soldiers pretend, that in War they are not only able to refift, but to break a Body of the beft German Horfe. Of wild Beafts, which are very plentiful in thofe Parts, Elks, Deer, and Hares, are hunted for their Flefh ; as alfo together with Wolves, Foxes, wild Cats, $\mathcal{E} c$. for their Furs and Hides.

They hunt with lefs Ceremony than elfewhere is ufed, taking all Advantages to fhoot their Game, at which they are generally dextrou\$: Parks there are but few, and meanly focked; the Charge of feeding Deer all Winter exceeding the Profit, and abating the Pleafure of them. There are no Rabbets in thefe Countries but what are brought in for Curiofity, and kept tame. In Winter Foxes and Squirrels fomewhat change Colour, and become greyifh but Hares turn white as Snow. Fowl, both wild and tame, are very plentiful, and good in their Kind, except Sea-Fowl, which feed and tafte of Fifh ; the moft common are the Orras and Keders, the former of the Bignefs of a Hen, the other of a Turkey: As alfo Partriges, and a Bird fomewhat refembling them, called Yerpers. There are taken in Winter great Numbers of fmall Birds, as Thrufhes, Blackbirds, and Sydenfewans, the laft of the Bignefs of Fieldfares, but better Meat; fuppofed to come from Lapland or yet farther North, and have their Name from the Beautifulnefs of their Feathers, fome of which are tipped at the Point with Scarlet : Pigeons there are, thofe of the Woods very fcarce, becaufe of the Hawks and of the Houfe Pigeons none but what are kept tame, becaufe their Food is fcarce, and the Danger of the Hawks very great if they go abroad. Eagles, Hawks, and other rapacious Fowl, abound moft in the northern and defart Parts, whither Nature feems to call them, as may be gathered from a Story credibly related of a large Hawk fhot fome Years ago in the northern Parts of Finland, which had on one Leg a fmall Piece of Gold with this Infcription $\mathcal{F} e$ fuis au Roy, on the other, one of Silver, with thefe Words, Duc de Cbevereufe me garde.

The chiefeft Lakes in Sweden are, the Vetter, the Werner, and Wafter ; the firft in Oftrogotbia, remarkable for its foretelling of Storms by a continual thundering Noife the Day before in that Quarter whence they arife; as alfo for fudden breaking of the Ice on it, which fometimes furprifes Travellers, and in half an Hour becomes navigable; for its great Depth, in fome Places above three Hundred Fathom, though no Part of the Baltic Sea exceeds fifty ; it fupplies the Motala, which runs through Norcopingh, where it has a Fall of about 30 Foot; and fome Winters is fo choaked up with Ice, that for many Hours no Water paffes. The fecond is in Weftrogotbia, from which iffues the River Elve, that falling down a Rock near fixty Foot, paffes by Gottenburgh. The third empties itfelf near Stockholm, furnifhing one Side of the Town with frefh Water, as the Sea does the other with falt. There are abundance of other Lakes, whereof many, like Ponds, have no Vents, and are called $I n$-Seas; are not ill ftored with Variety of Fifh; Salmon, Pike, Tench, Perch, Eels, and many other Sorts unknown elfewhere, of which the moft plentiful is the Streamling, a Fifh lefs than a Pilcher, taken in great Quantities, and falted in Barrels, and diftributed over all the Country.

Befides the North Bottom or Bay that feparates Sweden and Finland, abounds with Seals, of which a confiderable Quantity of Train-Oil is made and exported; and in the Tuakes in Finland are vait Quantities of Pikes, which be-
ing taken are falted; dried, and fold at very cheap Rates. Thefe Lakes are of great Ufe for the Conveyance of Carriages, both in Summer by Boats, and by Sleds in Winter; and among them, and on the Sea-Coafts, are almoft innumerable Inlands of different Sizes; whereof there are, in Sweden, above fix thoufand that are inhabited; the reft are either bare Rocks, or covered with Wood; Gotland, Oland, and Aland, are Ines of large Extent, one being fixty Miles long, and the other two litcle lefs: TheirWoods and vaft Forefts, overfpread much of the Country, and are for the moft part of Pines, Fir, Beech, Birch, Alder, Juniper, and fome Oak, efpecially in the Province of Bleaking, the Trees growing in moft Places fo clofe together, and lying to rot where they fall, that the Woods are fcarce paffable: Thefe afford a plentiful and cheap Firing, and being generally very ftrait and tall are eafily convertible into Timber fit for all Ufes. In the Parts near the Mines, the Woods are much deftroyed; but that Want is fo well fupplied from diftant Places, by the Convenience of Rivers and Winter Carriages, that they have Charcoal above fix times as cheap as in England, though indeed from the manner of making, it is not fo good.
3. Of Mines in Sweden: There is one of Silver, into which Workmen are let down in Bafkets to the firf Floor, which is one hundred and fifty Fathoms under Ground. The Roof there is as high as a Church, fupported by vaft Arches of Ore. The next Defcent is by Ladders and Bafkets to the lowelt Minc, above forty Fathoms, where they now work. They have no Records fo antient as the firft Difcovery either of this, or the Copper Mines, which mult needs have been the Work of many Ages. The Ore feldom yields above four per Cent. and requires great Pains to refine it. They are alfo at the Charge of a Water-mill to drain the Mine, and have the Benefit of another that draws up the Ore. It yearly produces about twenty thoufand Crowns of fine Silver, of which the King has the Pre-emption, paying only one fourth lefs than the real Value.

The Copper Mine is about eighty Fathom deep, of great Extent, but fubject to Damage by the Falling in of the Roof; yet that is fometimesrecompenfed by the Abundance of Ore that the ruined Pillars yield, though moft commonly the Lofs in that Cafe is very great: The Occafion of which Falls is attributed to the throwing the Earth and Stones brought out upon the Ground over the Mine, by which the Pillars become overcharged, and give way; and the Reafon of this is faid to be, that the Profit arifing to thofe that are concerned is fo little that they are not able to carry it off as they ought; and unlefs the King abates a confiderable Part of the Profit arifing to the Crown from this Mine, it is believed it will, in a few Years, be at a Stand, efpecially if the Defigns of making Copper, that are on foot elfewhere fhould take any tolerable Effect.

The Copper yearly made out of this Mine amounts to the Value of about two hundred thoufand Pounds, of which the King has a fourth Part, not by way of Preemption, but in Kind; befides that, upon the Remainder he has a Cultom of twenty-five per Cent. when it is exported unwrought. Lately a Gentleman of Italy came to Sriveden, with Propofals to make Copper a fhorter and cheaper Way than has hitherto been practifed, as to make that in four Days which before required three Weeks, and with one fifth Part of the Charge, and with fewer Hands. The Bargain was made, and his Reward agreed to be a hundred thoufand Crowns; and the firft Proof he made fucceeded to Admiration : But when he came to work in earneft, and had got his new-invented Ovens made to his Mind, the Miners, as he complained, picked out the very worft Ore, and were otherwifefo envious anduntractable that he failed of Succefs, and loft his Reward, and not without Difficulty obtained Leave to buy Ore, and practife his Invention at his own Charge, as he now does. Iron Mines and Forges are in great Numbers, efpecially towards the mountainous Parts, where they have the Convenience of Waterfalls to turn their Mills. From thefe, befides fupplying the Country, there is yearly exported Iron, to the Value of near three hundred thoufand Pounds; but of late Years the Number of thofe Forges has been fo much increafed,

## Chap. II.

that each endeavouring to underfell others, the Price has been much lowered; and fince the Prohibition of Foreign Manufactures, in exchanging of which Iron was plentifully taken off, it is grown Io cheap that it is found neceffary to leffen the Number of Forges. Neither has that Contrivance had the Effect intended; but, on the contrary, many more are like to fall of themfelves, becaufe they cannot work but to Lofs, in which Cafe many Thourands of poor People whofe Livelihoods depend upon thefe Forges and Mines will be reduced to a flarving Condition.
The Seafons of the Year, though regular in themfelves, do not altogether anfwer thofe of other Climates. As a French Embaffador obferved, who, in raillery faid, there were in Sweden only nine Months Winter, and all the reft was Summer; for as Winter commonly begins very foon, fo Summer immediately fucceeds it, and leaves little or no Space to be called Spring. The Productions of the Earth, therefore ought to be, as they are, more fpeedy in their Growth than in other Parts. The reafon of which feems to be, that the Oil and Sulphur in the Earth (as it appears by the Trees and Minerals it produces) being bound up all the Winter, are then of a fudden actuated by the Heat of a warm Sun, which almoft continually fhines, and thereby makes amends for its fhort Stay, and brings to Maturity the Fruits proper for the Climate; yet withal, its Heat is fo intenfe, that it often fets the Woods on Fire, which fometimes fpreads itfelf many Leagues, and can fcarce be ftopt, till it comes at fome Lake or very large Plain. In the Summer-feafon the Fields are cloathed withVariety of Flowers, and the whole Country overfpread with Strawberries, Rafpberries, Currants, and the like, which grow upon every Rock.
In their Gardens Melons are brought to good Perfection in dry Years, but Apricocks, Peaches, and other Wall-Fruits are almoft as rare as Oranges. They have Cherries of feveral Sorts, and fome tolerably good; which cannot be faid of their Apples, Pears and Plumbs, that are neither common nor well tatted. All Kinds of Roots are in Plenty, and contribute much to the Nourifhment of the poor People. The Sun at higheft is above the Horizon of Stockholm, eighteen Hours and an half, and for fome Weeks makes a continual Day. In Winter the Days are proportionably fhorter: The Sun being up but five Hours and an half, which Defeet is fo well fupplied as to Lights by the Moon, and the Whitenefs of the Snow, and the Clearnefs of the Sky, that travelling by Night is as ufual as by Day, and Journies begun in the Evening are as frequent as in the Morning. The want of the Sun's Heat is repaired by Stoves within Doors, and warm Furs abroad. Inttead of which, the meaner Sort ufe Sheep--kins, and other the like Defences, and are generally better provided with Cloathing befitting their Condition, and the Climate they live in, than the common People of any Part of Europs; though, where any Neglect or Failure happens it ufually proves fatal, and occafions the Lofs of Nofes, or other Members, and fometimes the Lofs of Life; unlefs the ufual Remedy to expel the Froft, when it has feized any Part, be early applied, which is to remain in the Cold, and rub the Part afficted with the Snow 'till the Blood return to it 2 gain.
4. This Country is divided into twenty-five Provinces ; each of which is governed by an Officer called LandJoofding, whofe Authority comprehends that of Lord Lieutenant and Sheriff together, except where there is a general Governor, as in Finland or upon the Borders of Denmerk and Norrway, to whom the Governor of each Province is fubordinate, and has thereby a more reftrained Authority. Thefe Officers are placed by the King, and take an Oath to keep the Province for his Majefty and his Heirs, to govern according to the Laws of Sweden, and fuch Inftructions as they fhall receive from his Majefty, and to quit the Province whenever he fhall call them thence. To them and their fubordinate Officers (who are all of the King's chufing) the Execution of judicial Sentences, the Collection of the King's Revenues, the Care of Forefts, Parks; and other Crown Lands, $\begin{gathered} \\ c\end{gathered}$. is committed.

Of Cities, thofe of Stockbolm, Gotteinburgb, Calmars, and two or three more may deferve that Name; the other Corporations, which, in all, make not an hundred, fcarce exceed fome Villages in England. They are all governed by Burgomafters and Counfellors, chofen by the King out of their own Body, or at leaft fuch as are of the Quality of Burghers; no Gentleman accepting of thofe Employments. Their Offices and Salaries are for Life, or rather during their good Behaviour. The Privilege of Cities are derived from the King, and for the moft Part are owing to the Wifdom of Guftavus Adol* pbus, the Author of their beft and moft regular Conftitu+ tions at Home, and as well as of their Glory Abroad.
The City of Stockholm lies in 59 Deg. 20 Min. N. Lat. and about 4 I Longitude. About three hundred Years ago it was only a bare Inland with two or three Cottages for Fiihers ; but upon the building of a Caftle there, to ftop the Inroads of the Ruffians, and the Tranflation of the Court thither, it grew, by Degrees, to furpafs the other more antient Cities, and is at prefent the Metropolis of this Kingdom, and fuppofed to be as populous as Britol. The Caftle here, which is covered with Capper, is a Place of no Strength or Beauty, but of great Ufe, being a fpacious Building, that befides entertaining the Court, furnifhes Room for moft of the great Offices ; the national Court of Juftice, Colleges of War, Chancery, Treafury, Reduction, Liquidation, Com-s merce, Execution; as alfo an Armory, Chapel, Library, Archives, $\xi^{\circ} c$. It lodges very few of the inferior Officers and Servants of the Couirt ; they, together with the Foot-Guards, being quartered upon the Burghers at their Landlord's Charge, for Lodging, Fire and Candle. In this City there are feven large Churches built of Brick and covered with Copper, befides two more now in building, and three or four wooden Chapels. The Palace of the Nobility, which is the Place of their Affembly at the Convention of Eftates, and the Depofitory of their Privileges, Titles, and fuch other Records as concern their Body, is a very ftately Pile ; as is alfo the Bank, built at the City's Charge; which, together with feveral magnificent Houfes of the Nobility are covered with Copper, and make a handfome Profpect. Moft of the Burghers Houfes are built of Brick, except in the Suburbs, where they are of Wood, and therefore expofed to the Danger of Fire ; which commonly, when it gets to a head, deftroys all before it in the Quarter where it happens: To repair which Misfortune they fometimes fend the Dimenfions of the Houfe they intend to Finland; where the Walls and feveral Separations are built of Pieces of Timber laid one upon another, and joined at the Corners, and afterwards marked, -taken down, and fent by Water to Stockbolm, there to be fet up and finifhed; and when they are kept in good Repair will laft thirty or forty Years, and are warmer, cleaner, and more healthful than thofe of either Brick or Stone.
To prevent the Danger of Fire the City is divided into twelve Wards; and in each of thefé is a Mafter and four Affiftants, who upon Notice of any Fire are immediately to repair to it, as alfo all Porters and Labourers, and to range themfelves under the Mafter of their refpective Wards. There is alfo a Fire-Watch by Night, who walk about only for that Purpofe; and in each ChurchSteeple Watch is kept, and a Bell tolled upon the firft Appearance of any Fire. The Government of this City is in the Hands of the great Stadtholder, who is alfo a Privy Counfellor. He fits once a Week in the Townhoufe, and prefides alfo in the College-houfe of Execution, affifted by an under Stadtholder and the Bailiff of the Caftle. Next to him are the four Burgomafters, one for Juftice, another for Trade, the third for the Policy of the City, and the fourth has the Infpection over all public and private Buildings, and determines fuch Cafes as arife on that Account. With them the Counfellors of the City always fit and give their Votes, the Majority of which concludes. Their Number is uncertain, but ufually about twenty, moft Merchants and Shopkeepers, or fuch as have ferved the King in fome inferior Employments; and befides their Salary they have an Immunity from
fuch Impofitions as are laid on the Inhabitants to fupport the Government of the City, which pays all its Officers and Servants, and maintains a Guard of 300 Men, and defrays the Charge of all public Buildings and Repairs.

To fupport this Expence, befides a Duty belonging to the City upon Goods imported and exported (which is above four per Cent. of the Cuftoms paid the King, and amounts to about four thoufand Pounds per Ann.) the Magiftrates impofe a yearly Tax on the Burghers, in which they are affitted by a Common Council of fortyeight (which chufes its own Members every Spring) to proportion the Payments for the enfuing Year. On the richer Traders they ufually impofe forty, fifty or fixty Pounds Sterling; and upon others of a meaner Condition, as Shoemakers, Taylors, E ${ }^{2}$ c. five or fix Pounds, and no Houfekeeper lefs than fifteen Shillings, befides quartering the Guards, inferior Officers, and Servants of the Court with other lefs Charges, which all together would be thought a great Burthen, even in richer Countries ; neither is it otherwife efteemed by the Inhabitants of this City, who can fcarce be kept in Heart, by the Privileges they enjoy, as well in Cuftoms as the Trade of the Place which muft needs pafs through their Hands. The Nacives of other Parts of the Kingdom as well as Foreigners being obliged to deal only with the Burghers, except thofe of the Gentry that make Iron, who have a Privilege to fell it immediately to Strangers. This City is in a manner the Staple of Sweden, to which moft of the Goods of their own Growth, viz. Iron, Copper, Wire, Pitch, Tar, Mafts, Deals, $\mathcal{E}^{2} c$. are brought to be exported. The greateft Part of the Commodities imported from Abroad come to this Port, where there is a Haven capable of receiving a thoufand Ships, and has a Bridge or Key near an Englifh Mile long, to which the greater Veffels may lie with their Broadfides. The only Inconvenience is, that it is ten Miles from the Sea, and the River very crooked, and no Tides.
5. The Laws of Sweden were antiently as various as the Provinces were numerous; each of which had Statutes and Cuftoms peculiar to itfelf, enacted, as Occafion required by the Laghman or Governor of the Province ; who was chofen by the People, and invefted with great Authority, efpecially while the King was elective; his Suffrage concluding the Province he governed. This Variety was neceffarily attended with great Confufion; for Remedy whereof, about fourfcore Years ago one Body of Laws was compiled for the Direction of the whole Kingdom : Yet this Collection is but an imperfect Piece, and the Laws fo few, and conceived in fuch general Terms, that in moft Cafes they need the Affiftance of the Civil Law; and after all, the final Determination depends much upon the Inclinations of the Bench; which in a poor Country, where Salaries are fmall, is often filled with fuch as are of weak Parts, and fubject to Corruption on very fmall Temptations.

The Effects of this would be more vifible, if each fuperior Court did not keep a Check upon the Lower, and the King's Court of Revifion over-awe them all ; to which all Civil Caufes, exceeding the Sum of feventy Pounds, are appealable; and very few. end before they have been brought thither. In this Court the Prefident of the Chancery and two or three other Privy Counfellors alfo fit, fo does the Chancellor of the Court (an Officer next in Degree to the Privy Counfellor) who is Prefident of the under Revifion, where he and two Secretaries put Bufinefs into a Method fit to be brought before the King. The Courts of Juftice inferior to this are of three Degrees ; of the loweft Degree, or firt Inftance, there is one in each Corporation (befides Stockbolm, in which there are three) as alfo in each Diftrict or Territory, whereof every Province contains feveral, fome above twenty. In the former (Cities) an Alderman or Counfellor prefides, and has fome of his Brethren for Affiftants; in the latter the Governor of the Territory with a ftanding Jury; his Courts being ambulatory are ufually near or upon the Spot where the Fact or Trefpafs was committed. In thefe Courts Examinations are taken, and Matters not exceeding forty Shillings are determined, the rett tranfmitted to the next fuperior Court; of which
in every Corporation the Prefident thereof retains the Name of Laghman, without other Authority than that of a Judge. From thefe all Caufes of Blood muft be tranfmitted to the refpective national Courts, where they are determined without farther Appea! ; and thither alfo all Civil Actions, not exceeding twenty Pounds, may be appealed.

Of thefe national Courts there are three, one for the Kingdom of Sweden, held at Stackbolw, another for the Kingdom of Gotbia, kept at Jencopingh, and a Third for the Dukedom of Finland; in each of thefe a Privy Counfellor is Prefident, and above half the Affeffors are to be Gentlemen. All thefe Courts fit continually, or at moft have but fhort Vacations, and not being peftered with too much Formality, give Caufes a fpeedy Difpatch, unlefs they be retarded by fome underhand Engagements. Actions relating to the Sea are tried in the ordinary Courts, according to their Sea Laws founded upon thofe antient Ones of Wifby in Gotbland, which have formerly been as famous in the Baltic Sea as the Laws of Rbodes and Oleron in other Places. The Court of Admiralty has not any peculiar Jurifdiction in the Adminiftration of thefe Laws, but only in fuch Matters as directly concern the King's Fleet, and in fome Places that belong immediately to the Admiralty.

For Caufes Ecclefiaftical there is a Confiftory in each Diocefe, of which the refpective Bifhop is Prefident ; where Caufes of Baftardy, Contracts of Marriage, and other Caufes of that Nature are tried, and Church Cenfures of Penance, Divorce, $E_{6}$. inflicted. Thefe Courts have no Power to adminifter an Oath, nor to inflict any corporal Punifhment; from them there lies an Appeal to the refpective national Court; and in fome Cafes to the King, as is in all other Matters.

For Matters relating to the Mines, befides inferior Courts and Officers fettled in the refpective Parts of the Country, a general Court, called the College of the Mines, fits at Stockbolm, of which moft commonly the Prefident of the Treafury is Chief, with a Vice-Prefident and other Affeffors. The Laws, in this Regard, are more ftrict and particular than in other Matters, and for the moft Part Juftice is very carefully adminiftered. The Power of executing all judicial Sentences is lodged in the Governors of Provinces, the Stadtholders of Stockbolm, and other Places, and from them'derived to inferior Officers, who are accountable to the national Courts, whither they may be convented and punifhed upon plain Proof of Default ; but the Proof being difficult, and Minifters of Juftice apt to favour one another, they take great Liberty to delay Exccution, or to arbitrate and put their own Senfe upon Sentences; fo that their Part of Juftice is adminiftered the worft of all others, and has an Influence not only at Home, but leffens the Credit of the Swedifh Subjects Abroad, againft whom Juftice cannot be obtained without great Difficulty.

The ordinary Charges of I aw Suits are no where more moderate than in Sweden; the greatef Burthen arifing from a late Conftitution, that allDeclarations, Acts and Sentences muft be written upon fealed Paper, of different Prices, from Two-pence to Seven Shillings a Sheet, according to the Quality of the Caufe; the Benefit of which accrues to the King, and is computed to bring in about 3000 . a Year. Other Charges are very few, every Man being permitted (in criminal Actions compelled) to plead his own Caufe. Accordingly the Practice of the Law is below a Gentleman, and rather the Refuge than the Choice of meaner Perfons, who are very few in Number, and for the moft Part very poor. The Cuftom of a Jury of twelve Men is fo antient in Sweden, that their Writers pretend it had its Original among them, and was thence derived to other Nations; but at prefent it is difufed every where, except only in the lower Courts in the Country, and there the Jurymen are for Life, and have Salaries. They have this peculiar to themfelves; that among them there muft be an unanimous Concurrence to determine a Caufe, which in other Courts is done by a Majority of Voices. Titles to Eftates are rendered more fecure, and lefs fubject to Contefts, by the Regifters that are kept of all Sales and Alienations, as well as of other Engagements of them,

Chap. II.
and its INHABITANTS.
the Purchafer running the Hazard of having an afterBargain take Place of his. If he omit the recording of his Tranfaction in the proper Court in criminal Matters where the Fact is not very evident, or where the Judges are not very favourable, the Defendant is admitted to purge himfelf by Oath, to which is oftentimes added the Oath of fix or twelve Men, who are all Vouchers of his Integrity. Treafon, Murder, double Adulteries, Burning of Houfes, Witchcraft, and the like heinous Crimes, are punifhed with Death, which is executed by hanging of Men, and beheading of Women. To which burning alive or dead, quartering and hanging in Chains, is fometimes added, according to the Nature of the Crime. Criminals of the Nobility and Gentry are generally fhot to Death.

The Punifhment of Stealing, is of late, inftead of Death, changed into a perpetual Slavery; the guilty Party being condemned to work all his Life for the King in making Fortifications or other Drudgery, and always has a Collar of Iron about his Neck, with a Bow coming over his Head, to which a Bell is faftened, that rings as he goes along. Duels between Gentlemen, if the one Party be killed, are punifhed by the Survivor's Death, and a Note of Infamy upon the Memory of both; if neither be killed, they are both condemned to a Prifon with Bread and Water for two Years ; to which is added, a Fine of one thoufand Crowns, or one Year's Imprifonment, and two thoufand Crowns. Reparation of Honour, in Cafe of an Affront, is referred to the refpective national Courts, where Recantation and public begging of Pardon is ufually inflicted. Eftates, as well acquired as inherited, defcend to the Children in equal Portions, of which a Son has two and a Daughter one ; nor is it in the Power of the Parents to alter this Proportion, without the Intervention of a Judicial Sentence. In Cafe of their Childrens Difobedience only, they may bequeath a tenth of their acquired Poffeffions to fuch Child or other as they will favour : Where an Eftate defcends imcumbered with Debts, the Heir ufually takes two or three Months Time, as the Law allows, to fearch into the Condition of the Deceafed's Eftate, and then either accepts the Inheritance or leaves it to the Law, which in that Cafe adminifters.
6. The Nature of the Climate, which is very healthful and dry, as well as Charp, difpofes the Natives to a very vigorous Conftitution; and that confirmed by a hardy Education, coarfe Fare, and hard Lodging, qualifies them to endure whatever uneafy Circumftance befalls them, better than thofe that are born in a milder Climate, and more indulgently bred. 'But, on the other Side, it feems as if the Severity of the Clime does, in a manner, cramp the Faculties of their Minds, which feldom are found endued with any eminent Pregnancy of Wit ; yet, by Induftry, Experience and Travelling, not a few of them arrive at a mature and folid Judgment, being led by their Genius to ferious Things, in which fuch as have Patience to go through with the Studies they apply themfelves to become excellent, and merit the Title of great and able Men : But this feems not to be the Talent of this Nation, for they are more apt to fit down with fuperficial Acquifitions than to purfue their Studies to the utmoft Extent.

Thefe Difpofitions of Body and Mind, qualify them more for a Life of Labour and Fatigue, than of Art and Curiofity ; and the Effect of it is vifible in all Orders of Men amongft them. The Nobility moftly apply themfelves to a Military Life, in which they are more diftinguifhed for Courage, and enduring Hardfhips, than for Stratagems and Intrigues. They that are employed in the Adminiftration of Civil Affairs, though they are indeed laborious and indefatigable in their Bufinefs, yet they feldom raife their Speculations above what the Neceffity of their Employments require, their Abilities proceeding not fo much from Study as Experience in the Courfe of Bufinefs.

In Point of Learning, they, like their Neighbours the Germans, are more given to tranfrribe and make Collections, than to digeft their own Thoughts ; and commonly proportion their Studies to their Occafions. In

Vol. II. Numb. 103.

Matters of Trade they rather undergo the Drudgery? than dive into the Myftery cither of Commerce or Manufactures; in which they generally fet up for Mafters before half taught; fo that in all fuch Things as require Ingenuity; Neatnefs, or Dexterity, they are forced to be ferved by Strangers. Their common Soldiers are allowed to endure Cold and Hunger, long Marches, and hard Labour, to Admiration; but they learn their Duty very nowly, and are ferviceable more by Obedience to command, and ftanding their Ground, than by any great Forwardnefs to attack their Enemy; or Addrefs, in executing their Orders; and fo their Peafants are tolerably laborious when Need compels them, bur have little Regard to Neatnefs in their Work; and are hardly brought to quit their old flow Methods for fuch new Inventions as are more dextrous and eafy. The Difpofitions peculiar to the feveral Degrees of thefe People are: That the Nobility and Gentry are naturally Men of Courage and of a warlike Temper; have a graceful Deportment, incline to value themfelves at a high Rate, and make the beft Appearance they can, that they may gain the Refpect of others; and are therefore more exceffive in the Number of their Attendants, fumptuous Buildings, and rich Apparel, than in the Plentifulnefs of their Tables, or other lefs obferved Occafions. They never defcend to any Employments in the Church. The Practice of Law, or Phyfic, or the Exercife of any Trade; and though to gain Experience in maritime Affairs they fubmit to the loweft Offices in other Counties ; yet, at home, there is but one Example known of a Genleman that accepted the Command of a Merchant Ship.

The Clergy are but moderately learned, and little acquainted with Difputes about Religion, as having no Adverfaries to oppofe. They affect Gravity and long Beards, are efteemed for their Hofpitality, and have great Authority among the common People. The Burghers are not intelligent in Trade, nor able to do their Bufinefs without Credit from abroad; inclined to impofe upon thofe they can over-reach, rather than follow their Calling in a fair Way. The Peafants, when fober, are more obfequious and refpectful ; but Drink makes them mad, and ungovernable: Moft of them live in a very poor Condition, and are taught by Neceffity to practife feveral Arts in a rude Manner, as the making their Shoes, Cloaths, $E^{2} c$. and the feveral Inftruments of Hufbandry, and other Neceffaries, they cannot fpare Money to buy. And to keep them to this, as alfo to favour the Cities, it is not permitted for more than one Taylor, or other Artifan, to dwell in the fame Parifh, though it be never fo large, as many of them are above twenty Miles in Compafs. In general, it may be faid of the whole Nation, that they are a People very religious in their Way, and Frequenters of the Church, eminently loyal and affected to Monarchy ; grave even to Formality, fober more out of Necefity than Temperance ; apt to entertain Sufpicions, and envy each other as well as Strangers ; more inclined to pilfering, and fuch fecret Frauds, than to open Violence, or robbing on Highways; Crimes as rarely committed in this, as in any Country whatever.
7. The Chriftian Faith was received in Sweden about the Beginning of the ninth Century, and in Finland about three hundred Years after ; and firft preached, or at leaft firft eftablifhed, by Englifh Divines, of whom the chiefeft was St. Sigifrid; who, as their Hiftories relate, quitted the Archbifhopric of York to become the Apoftle of the Goths. With him three of his Nephews that he brought were martyred by the Heathen Gotbs; fo alfo was St. E.fkill and other Englifh by the Sroedes: And about the Year 1150, St. Henry, an Englifh Bifhop, accompanied St. Erick, King of Sroeden, in his Expedition into Finland, which the King conquered, and the Bifhop converted. He alfo was martyred by the Infidels, and lies buried at $A b o$, the Metropolis of that Country. The Reformation there, as in Denmark and Norway, began foon after the neighbouring Parts of Germany had embraced Lutber's Tenets, and was eftablifhed according to his Platform. The Tyranny of King Cbrifiiern the Second, gave an Opportunity to Gufavius, the Founder of the prefent Royal Family, to alter Religion,

6 L
and
and advance himfelf to the Regal Dignity, which till that Time was elective, but was made hereditary to his Family, in which it has fince continued.

As the Lutberan Religion has alfo been, never but once, difturbed from Abroad, and fince that Difturbance never diftracted at Home with Non-conformity ; fo it becomes the Bufinefs of their Preachers rather to perfuade the Practice of Piety than oppofe the Doctrine of others, or defend their own. The Church is governed by an Archbifhop, and ten Bifhops, whofe Studies are confined, to their own Employments, being never called to Council but at the Affembly of the States, nor troubled with the Adminiftration of fecular Affairs. Their Revenues are very moderate. The Archbihopric of Upfall is not worth 400 l . a Year, and their Bifhoprics are in Proportion. Under them are feven or eight Superintendants, who have all the Power of Bifhops. And over each ten Churches is a Provoft or rural Dean, with fome Authority over the inferior Clergy, of whom the Total may be computed by the Number of Churches, which in Sreeden and Finlasd are about two thoufand; to which the Addition of Chaplains and Curates will increafe the Clergy to near two thoufand five hundred Perfons. They are all the Sons of Peafants or Burghers, and can therefore content themfelves with their finall Income, which, befides more inconfiderable Dues, arife from Glebe Lands, and one third of the Tithes, of which the other two Thirds are annexed to the Crown, to be employed in pious Ufes: However, the Clergy have generally wherewithal to exercife Horpitality, and are the conftant Refuge of poor Travellers, efpecially Strangers, who go from Prieft to Prieft, as elfewhere from Conftable to Conitable.

The Clergy of each Diocefe, upon the Death of their Binhops, propofe three Perfons to the King, who chufes one of them, or fome other to fucceed in that Office, which is alfo practifed in the Choice of Superintendants. In the Choice of an Archbifhop all the Chapters vote, but the Determination is in the King's Breaft. His Majefty hath alfo the Patronage of moft Churches; fome few being in the Difpofal of the Nobility. Many of their Churches are adorned with Variety of Sculptures, Painting, Gilding, $\mathcal{E}^{\circ} c$. all of them are kept clean and in good Repair, furnifhed as well in the Country as City, with rich Altar-cloths, Copes, and other Veftments. For the regular Government of the Church, it has been found neceflary to caufe the antient Ecclefiaftical Laws and Canons to be revifed by a Committee of the feveral Bodies, and the Eftates having fpent fome Years in that matter, at laft prefented the King with a new Syitem of Church Laws, wherein his Majefty having caufed fuch Alterations to be made as he thought fit, approved, and publifhed them. By this means, the Church-Affairs of Sweders have been fo well and fo effectually regulated, that in a long Courfe of Years they have gone on peaceably and quietly, beyond any thing of the fame Nature in any other Country, if we except Denmark; which, as it refembles Sweden, in the Nature of its Church Government, fo the like Confequences have followed there.
8. As to the Government and Revenue of Swedera they are like thofe of other Places, fubject to fo many and fo great Changes that one would imagine our Author's Account fhould, at this Diftance of Time, be almoft out of Date ; but there is one Advantage attends whatever has the Appearance of a Parliament, which is, that how much foever it may fink and be depreffed by Fraud, or Force, under certain Conjunctures, it has neverthelefs Strength to rife again, in more favourable Seafons, and even to recover all that it has loft. In our Author's time the States of Sweden were but Inftruments of the King's Authority, and only met to fanctify fuch Acts of Power as the Crown did not care to take upon itfelf. At this Day things have quite changed their Face; the Kings of Sreden have wholly loft their abfolute Power, which remains where it ought to remain, in the Reprefentatives of the Nobility, Clergy, and People of the Kingdom. The ufual Time of affembling the States is once in three Years, or oftner, if Affairs require it. The Letters for calling them together are fent to the Go-
vernors of Provinces, who thereupon write to each No bleman and Gentleman, and to the Bifhops, who caufe the fame to be publifhed in all Churches.

The Body of the Nobility and Gentry are reprefented by one in each Family, of which there are about a thoufand in Sroeden, and with them the Colonel, Lieutenant Colonel, Major, and one Captain of each Regiment fit and vote. For the Clergy, befides the Bifhops and Superintendants in each rural Deanery, or ten Parifhes, one is chofen and maintained at the Charge of his Electors. Thefe make a Body of about five hundred. The Reprefentatives of the Burghers are chofen by the Magiftrates and Common Council of each Corporation, of which Stockbolm fends four, others two, and fome one; who make about one hundred and fifty. The Peafants of each Diftrict choofe one of their own Quality to appear for them, whofe Charges they bear ; and give him Inftructions, in fuch Matters, as they think need Redrefs; they are about two hundred and fifty. The firf Meeting, when at Stockbolm, is in a large Room in the Caftle, called The Hall of the Kingdom; where his Majefty being feated on the Throne, and the Privy Counfellors fitting at fome Diftance, the Prefident of the Chancery makes them a Compliment in the King's Name, and then a Secretary reads the King's Propofals to them; in which they are acquainted with the State of Affairs fince their Recefs, and the prefent Occafion of their Advice and Affiftance. To which, firft the Marfhal of the Nobility, who is chofen by the King, returns an Anfwer, and kiffes the King's Hand, and after him the Archbifhop in the Name of the Clergy; the firft Burgomafter of Stockbolm in the Name of the Burghers; and one of the Peafants for his Brethren. They then feparate into four different Houfes, and chufe a Secret Committee, compofed of an equal Number of each Body, who receive from the King's Minifters fuch further Informations of his Majefty's Pleafure, as are not thought fit to be communicated in Public; and thereupon prepare fuch Matters as are to be propofed to the feveral Bodies. In each Houfe Matters are concluded by Majority of Voices, and if one or more of thefe Bodies differ in Opinion from the reft, they are either brought over by Perfuafions, or the Point remains unconcluded.

When the Affairs propofed by the King are finifned. they then infinuate their Grievances. Each Body feverally. To which the King returns fuch Anfwers as he thinks fit ; and to each Member of the three inferior Bodies an authentic Copy is delivered, as well of the general Conclufion made by the whole States, as of the King's Anfwer to the Grievances of his refpective Body, which he carries Home to his Electors.

The ftanding Revenues of Sweden arife from Crown Lands, Cuftoms, Poll-Money, Tithes, Copper and Silver Mines, Proceedings at Law, and other lefs confiderable Particulars, which are calculated in all to near a Million a Year ; of which the Lands make above one Third, and the Cuftoms almoft a Fourth. The PollMoney is paid only by the Peafants, each of which above Sixteen and under Sixty pays above twelve Pounds a Year. In the Treafury-Chamber a Prefident, with four Chancellors, and other Officers, fit and aft as a Court of Juftice, in fuch Matters as relate to the King's Revenue, or rather that of the State.

As for the Adminiftration of the Government, at the Time when the Dyet is not fitting, it is invefted in the King, affifted by the Senate, without whofe Confent he cannot legally do any thing of great Importance. As to the Number of Senators; we know, by Experience, that the States of the Kingdom think themfelves at Li berty to augment or diminifh it at Pleafure; but, at prefent, it is fixed to fourteen. Thefe Senators are not only at Liberty to give their Sentiments upon all Affairs that are brought before them, but are intrufted alfo with the entire Management of public Concerns, in cafe of the Indifpofition or Abfence of the Prince. A Senator prefides in each of the great Courts of Juftice in the Kingdom, and are ufually placed at the Head of all particular Commiffions, Civil and Military. Their Salaries, as Senators, amount to about three hundred Pounds a Year ; but their being generally poffeffed of the moft
beneficial
beneficial Employments, enables them fufficiently to fupport their Dignity with becoming Magnificence.

The King is not at Liberty to fill up the Number, upon a Vacancy, but muft wait till the Dyet affembles; when the Secret Committee propofes to his Majefty the Names of three Perfons for each Vacancy, one of which he appoints. The Order of Peafants was formerly excluded from the Secret Committee, which they thought very hard, and made frequent Struggles in order to gain Admittance ; in which, till within thefe few Years, they were always unfuccefsful. But the laft War with Ruffia enabled them to carry their Point, and to gain Entrance for their Deputies; the other Orders, however, attempted to exclude them again in the prefent Dyet, but mifcarried; fo that in all Probability they will be conftantly admitted for the future.
9. The Conquefts made by Sweden in the laft Age, were not fo much owing to its native Strength, as to the foreign Affiftance of Germans, French, Englijh, and efpecially Scots, of whom they have ufed great Numbers in all their Wars with Mufcory, Poland, Germany, and Denmark; and by them the Art of War and Military Difcipline has been by Degrees introduced into this Nation, that in former Times had only the Advantage of Courage and Numbers : For though the original Conititution of the Country, and its Divifion into Hundreds and other large Portions, that ftill retain Military Names, feems to have been the Work of Armies, and the frequent Expeditions of the Gotbs, and other Inhabitants of thofe Parts, fhew that in all Ages they were addicted to War and Violence, yet it was in a tumultuous manner, their Infantry always confitting of unexperienced Peafants raifed for the Occafion, and difbanded as foon as it was over.

The Feudal Laws indeed provided for a competent Number of Cavalry; all Eftates of the Nobility and Gentry being held by Knights-Service: And while the Kingdom was elective, the Kings were bound to maintain fome Horfe out of the Revenue of the Crown. But this Eftablifhment had been in a great meafure corrupted, and the Kingdom fo fhattered by domeftic Broils, that it made a very inconfiderable Figure, and was little known in Europe till the Crown became hereditary, and the Intereft of the Royal Family confifted in the Strength and Profperity of the Nation. Since that Time the ftanding Forces of the Kingdom have been augmented, yet not fo effectually eftablifhed as its Neceffities required; for it generally happened that the Nobility and Gentry were fo backward in fitting out their Horfe, and the Levies of Foot not being to be made without the Confent of the Peafants in the Affembly of the States, it was fo hardly obtained, that the Regiments were very thin, and Recruits extreme difficult; nor were the Officers Salaries fo punctually paid as to enable them to be in Readinefs on all Occafions.

To remedy thefe Inconveniences, Cbarles the XIth, on whom the States had conferred an abfolute Power to put the Militia into fuch a Miethod as he fhould think fit, made fuch Regulations in all the Particulars relating to this Matter, as were required to bring it to Perfection. The new Injunctions he made about the Cavalry that the Nobility and Gentry furnifhed, are fo exact, that it is not in their Power to put either the Men or the Horfe, that are once lifted, to other-Employments than what are there fpecified; but muft have them in a continual Readinefs whenever they are called upon, with fuch Arms and Equipage as his Majefty hath directed; in default of which, fevere Penalties are inflicted, and the Eftates they hold by that Service, fubject to Confifcation.

For the Infantry the King has taken the like Care; and whereasformerly Levies could not be made but by Confent of the States, and that but by fmall Parcels at a time, and with fuch Difturbance, that on thefe Occafions it was ufual for half the Peafants to run into the Woods and other hiding Places, to efcape being Soldiers: This has been remedied by the King's Commiffioners, who have diftributed the Infantry of each Province proportionably to the Number of Farms, each of which of the Value of above fixty or feventy Pounds a Year (not being appropriated to the Officers or other peculiar Services) is
charged with one Foot Soldier, who receives from the Farmer, Diet, Lodging, ordinary Cloths, and about twenty Shillings a Year in Money; or elfe a little wooden Houfe is built for him at the Farmer's Charge, who muft alfo furnifh him with as much Hay as will keep a Cow in Winter, and Pafture in Summer, and plough and fow for him fuch a Parcel of Ground as will afford him Bread: They that are married generally accept this latter Condition. The unmarried Soldiers ufually lodge with the Farmer ; but are not bound to do him any Service without Wages. When they have once taken the Farmer's Money, and are lifted into the King's Sertice, they can never quit it fo long as they are able to ferves and if they defert are punifhed with Death.

The firf Inftitution of this Method was very burdenfome to the Peafants, who were at great Charge to hire, their Men, which coft fourteen, and fometimes twenty Pounds apiece; and the fame whenever their Soldiers died. This in peaceable Times will not be fo chargeable as it is in Times of War, when Men are unwilling to ferve, and Recruits more frequently needed. As all the common Soldiers are thus provided for at the Country's Expence, fo all Officers both of Horfe and Foot, are maintained by the King, who hath appointed fo much of the Lands lately reunited, or formerly belonging to the Crown, to that Purpofe: So that every Officer hath a convenient Houfe and competent Portion of Land to live upon, fituate in that part of the Country where the Regiment he belongs to is quartered; as alfo the Rent of fo many other Farms as make up his Pay eighteen Pounds, though it be fomewhat lefs than formerly; yet, being punctually paid either in Money, Corn, or other Commodities, they find it more profitable than when they were to follicit for it at the Treafury: A Colonel of Foot has of thefe Lands the yearly Reint of about three hundred Pounds, and the reft proportionably ; which amounts to about two thoufand five hundred Pounds a Year for all the Officers of one Foot Regiment ; and there being in Sweden, Finland, and Leifland, twenty Regiments of Foot under this Eftablifhment, the Maintenance of all the Officers belonging to them cofts the King about fifty thoufand Pounds a Year. What Charge the Cloathing of the common Soldiers once in two or three Years' their Arms and other Neceffaries may put the King to, cannot be fo eafily computed.

The Officers of Horfe are provided for after the fame manner, with fuch larger Allowance as is requifite : There are fifteen Regiments of Horfe thus eftablifhed, and the Maintenance of their Officers is computed to be about eighty thoufand Pounds a Year ; all which arifes from the Rents of Crown-Lands, as do alfo the Wages of Civil Officers in the Country, who have Farms annexcd to their Employments in the fame Manner as the Militia. The Laws the King has made for maintaining this Conftitution are very exact, and provide with great Caution, that neither the Peafants fhall be oppreffed, nor the Lands and Houfes ruined; to which End all fuch Lands are yearly vifited, and the Poffeffor compelled to make fuch Repairs as are found needful : And as every Officer upon his firft coming to fuch an Eftate, fubfcribes an Inventory of it, fo upon Advancement he cannot take Poffefion of another Charge till he hath put the Eftate into as good a Condition as he found it ; and in Cafe of Death, his Heirs cannot inherit till that be done.

In Times of Peace, all Trefpaffes committed by the Soldiery fall ordinarily under the Cognizance of a Civil Magittrate, who has the fame Authority over them, as over the reft of the King's Subjects, except when they are encamped, or in Garrifon, or any way under flying Colours ; in all which Cafes, as alfo in Matters that relate folely to their Profeffion, their Officers have Jurifdiction over them, without whofe Leave a private Soldier is not permitted to lodge out of his Quarters, or be out a Day from the Parifh he belongs to.

The inferior Officers cannot be abfent from their Charge but by the Colonel's Permiffion; nor Captains, nor thofe above them, without the King's Leave; and the good Effect of the Officers conftant Refidence upon their refpectiveCharges, appears in the quiet and peaceable Beo.
haviour
haviour of the Soldiers, who have not hitherto broke out into any Enormities, nor given the common People any great Occafion of Complaint. To keep them in Difcipline, each Company meets, and is exercifed once a Month, and every Regiment once or twice a Year ; at which time only they wear the King's Cloaths, which, at their Return, are carefully laid up in the Churches. For their Government in Time of War, the King hath lately caufed the Articles of War to be reviewed and printed, together with a new Eftablifhment of Courts Martial, and Inftructions for the Auditors, Governors, and other Officers concerned in the Miniftration of Juftice; and for his Majefty's Information on all Occafions, a Book hath been lately made, fpecifying the Names of every Military Officer in the King's Army, the Time when they firft came into the' Service, 'and by what Steps they have rifen; by which Means, at one View, his Majefty knows the Merit and Service of any Officer. The whole Body of the King of Sreeden's Forces, according to the beft and moft exact Accounts are as follow :

## The eftablibed Militia in Sweden, Finland, and Liefland or Livonia, are

Cavalry, fifteen Regiments, is
Infantry, twenty-eight Regiments, is
Foot-Guards, one Regiment, is
Foot-Guards, one Regiment, is - - - -
Forces in Pomoren and Bremen, fix Regim. (now loft)

## In all fifty Regiments, is

Men
17,000 35,000 2,000 6,000
10. Sweden has in all Times furnifhed Europe with thofe Commodities it abounds with; yet either the Warlike Temper, Idlenefs, or Ignorance of the Inhabitants formerly, kept them from being much concerned in Trade, and gave Strangers the Management and Advantage of it ; which for a long time the Hanfe-Towns fituate on the Baltic Sea monopolized, till the feven Provinces of the Netberlands were erected into a Republic, and became Sharers with them. Before that Time very little Iron was made in Sroeden; but the Ore being run into Pigs, was carried into Dantzick, and other Parts of Prufla, and there forged into Bars; for which Reafon the Country Smiths, in England, call foreign Iron Dantzick or Spruce Iron. This Nation owes the greateft Improvements it has made in Trade, to the Art and Induftry of fome ingenious. Mechanics that the Cruelty of the Duke of Alva drove into thofe Parts. Their Succefs invited great Numbers of reformed Walloons to tranfplant themfelves thither, whofe Language and Religion remain in the Places they fettled in ; where they erected Forges and other Conveniencies for making of Iron Guns, Wire, and all other Manufactures of Copper, Brafs, and Iron; which for the moft part are ftill carried on by their Pofterity.
The Sreedifh Navigation was very inconfiderable till Queen Cloriftiona, at the Conclufion of the Wars in 1644, obtained from Denmark a Freedom from Cuftoms for all Ships and Goods belonging to Swedi/h Subjects in their Paffage through the Sound, and eftablifhed in her own Dominions that Difference in Cuftoms that ftill fubfifts between Swedifh and foreign Ships, and is in Proportion of four, five, fix; the firft called Whole Free ; the fecond, Half; and the !aft, Unfree: So that where a Whole Free Swedifh Ship pays four hundred Crowns, Half Free pays five hundred, and a foreign Veffel fix hundred. But as great as this Advantage was it had but little Effect, till the Engli/h Act of Navigation bridled the Hollanders, and opened the Intercourfe between England and Siveden. Since that Time, their Commerce has been much augmented as well as ours, that Way; and Goods tranfported by both, or either Party, according to the various Junctures of Affairs.
When Sweden has been engaged in a War, the Englif Ships have had the whole Employ; but in Times of Peace, the Advantage is fo great on the Swedifh Side, and Merchants fo much encouraged by Freedom in Cuftoms to employ their Ships, that Englifh Bottoms cannot be ufed in that Trade, but while Sweden is unprovided with a Number of Ships fufficient for the Tranf-
portation of their own Commodities: The chief Com+ modities of Sveden are Copper, Iron, Pitch, Tar, Mafts, Deals, and wooden Ware, to the Value of about feven hundred thoufand Pounds a Year. In Return of which they receive from Abroad, Salt, Wines, and Brandy, Cloths, Shifts, Tobacco, Sugar, Spices, Paper, Linnen, and feveral other Sorts of Goods; which are fuppofed commonly to balance their Importations, and fomerimes exceed them. Their Trade to Portugal for Salt is accounted moft neceffary, as without great Quantities of which they cannot fubfift. That with England is more beneficial, becaufe it takes off almoft half their own Commodities, and brings in near two thirds of Money for one of Goods. The worft is their French Trade, as it rather fupplies their Vanities than their Neceffities, and gives little or no Vent to the Commodities of the Country.

The general Direction of their Trade belongs to the College of Commerce; which confifts of the Prefident of the Treafury, and four Counfellors; who hear Caufes of that Nature, and redrefs any Diforders that happen. The Bank at Stockbolm is of great Benefit to Trade, as well in regard that the King's Cuftoms for that City are paid in there ; as alfo that the Merchants ordinarily make Payments to each other by Bills drawn upon it, which eafes them of a great deal of Trouble in tranfporting their Money from Place to Place, that would otherwife be very difficult and chargeable. The Management of the Trade of Sweden has always been in the Hands of Strangers, moft of the Natives wanting either Capacity or Application, and all of them Stocks to drive it: For without Credit from Abroad, they are not able to keep their Iron Works going; and therefore at the beginning of Winter they ufually made Contracts with the Englifh, and other Foreigners, who then advance confiderable Sums, and receive Iron in Summer.

Were it not for this Neceffity foreign Merchants would have but little Encouragement, or fcarce Permiffion, to live and trade amongtt them; and even, as the Cafe ftands, the Treatment of them is as rigorous as in any Country, occafioned chiefly by the Burghers ; who cannot, with any Patience, fee a Stranger live among them. This is the lefs fenfible to the Dutch and others, who fome become Burghers, and the reft by their near way of Living are lefs fubject to Envy; but is more efpecially the Cafe of the Englifis Merchants, who find it not their Intereft to becomeBurghers, and ufuallylive fomewhat too high. The Intereft of England in the Trade of Sweden, may be computed by the Neceffaries to us, and the Vent of ours there: Their Copper, Iron, Tar, Pitch, Mafts, $\mathcal{E} c$. cannot be had elfewhere, except from Amoerica, whence it has been fuppofed fuch Supplies were furnifhed; and, if fo, this Confideration ought in reafon to have an Influence on the Sreedifh Counfels, and engage them to make the Englifh Trade with them as eafy as poffible, that the Merchants be not driven upon new Defigns. As to our Importations thither, it has already been faid that they fcarce amount to one third of what we export from thence, and confift chiefly of Cloth, Stuffs, and other woollen Manufactures, of which there have been formerly vended yearly there, to theValue of about fifty thoufand Pounds. Befides thofe, Tobacco, Nerwcaftle Coals, Pewter, Lead, Tin, Fruits, and Sugar, with feveral other of our Commodities, are fold at the Market ; as alfo good Quantities of Herrings from Scotland, with other of their Wares: That in all, we are fuppofed to vend Goods to about one hundred thoufand Pounds a Year. If any more than Half be paid for it is looked on as very extraordinary.

But the making of Cloth in Sveeden to fupply the Army, $\varepsilon^{3} c$. which has been formerly endeavoured without Succefs, being now encouraged and aflifted by the Public, and undertaken, has of late, and does now, prove a great Hindrance to the Vent of our Cloth there. And to favour this Undertaking, Engliß Cloth now (unlefs it be fuch finer Cloths as cannot be made there) is clogoed with fuch exceffive Duties as render the Importation impracticable. Thefe Undertakers have got Workmen from Germany, and fome from England; and befides the Germon Wool they ufe, they receive great Quantities from

Scotland, (fuppofed to be purchafed out of England) without which they cannot work ; yet, as at prefent, the Engliflo Trade in Sreeden is of the Importance abovementioned, notwithftanding the Abatements aforefaid. It is, however, confiderable, and will be fo while their Commodities continue to be neceffary, and thofe that are concerned in it will deferve, as they need, Protection and Encouragement:

The laft Treaty of Commerce between the two Nations, expired feveral Years ago, and that of an older, neither fuits the prefent State of Things, nor has been thought by the Sweded to fubfift; tho' now, for their own Intereft, they infift upon the contrary: Accordingly their Treatment of the Englifh only, in reference to their own Convenience ; and as the Subject of former Complaint ftill remains, fo new Burdens are frequently impofed upon them. Sometimes they have-demanded of Merchants that were leaving the Country, a fixth Part of their Eftates they had got in it, and arrefted their Effects upon that Account. And befides others, that more directly concerns their Trade, the quartering of Soldiers, and paying of Contributions, have been enacted for fome Years, and fometimes the Englifb are forced to fubmit to it. In the Year 1687, they petitioned the King, for Redrefs of thefe Impofitions, which were then very high; upon fome above fifty Pounds, upon others forty, thirty, E' $c$. Befides that, fuch of them as kept Houfe had Soldiers quartered upon them, fome three, fix, or eight. In anfwer to their Petition, • a Placart was publifhed, declaring, that they fhould be exempt from thefe Payments, but withal, that no foreign Merchant fhould continue to trade in Sweder above two Months in a Year, unlefs he would become a Burgher.

In purfuance of which Refolution, their Warehoufes were fhut up for fome time, and the Swedes feem refolved to proceed to Fxtremity, but have not put that Refolution generally in Execution, though they feem to wait for an Opportunity, and now and then they try it upon particular Perfons, to fee how foreign Princes will take it. The Law that exacts the third Part of fuch foreign Merchants Eftates as die in Sweden, has not in effect been fo beneficial to the Swedes, as frightful to the Merchants, who for that and other Reafons, never think of marrying and fettling there fo long as their Affairs are in good Order, and they in a Condition to return home with a competent Eftate, and Credit too; from which Account England feems to be lefs concerned to endeavour the Repeal of that Law, it being more ufeful to have

Sweden a Nurfery for young Merchants, than a Place of Settlement for thofe that have got Eftates.
I r. ThefeObfervations and Remarks upon the Kingdom of Sreden were written about fifty Years ago, and yet Ijudged it proper to infert them here with very few Alterations: and this the rather, becaufe having taken fome Pains to make myfelf Mafter of the Subject, I have been from thence led to judge, that it is not eafy to obtain any thing relating thereto more perfect in its kind. The Judgment of its Author fhines through the whole Piece, and fhews that he was a very fenfible, intelligent, and capable Perfon; one who underftood both Mankind and Governmens perfectly well, who had many more Opportunities to make, as well as much more Leifure to digeft, his Inquiries than ordinary Travellers can be prefumed to have, and therefore his Accounts are more to be depended on, and his Reflections deferve greater Regard than thofe that occur in common Books of Travels.

It muft be allowed that great Alterations have happened in Sweden fince his Time. Upon the Death of the late King Cbarles XII. the Swedi/h Nation very wifely laid hold of that Opportunity to recover their ancient Conftitution, to reftrain the Power of the Crown within juft Bounds, to reftore that of the States, and of the Senate; and they have made the beft Ufe that could be of this Alteration, by electing a Prince of the Royal Family to be the Succeffor of the prefent King, and making the Crown hereditary in his Family; but in fuch a Manner as is confiftent with their Freedom. They have likewife taken very juft and prudent Precautions for preferving, increafing, and extending the Commerce of their Country, which, though at prefent lefs confiderable than it formerly was, is, however, in fuch Circumftancés as feem to promife the Recovery of its former interior Strength, which muft be attended fooner or later with the Reftoration of its ancient Grandeur, fince both Reafon and Experience teach us, that when due Care is taken for fecuring the Peace, the Freedom, and Profperity of any People at home, they certainly become refpected by their Neighbours, and confequently as confiderable abroad, as it is confiftent with their own Intereft and thofe of their Neighbours that they fhould be. After thus prefenting the Reader with a fair Idea of the State and Condition of Sweden, it is requifite that we fhould proceed to that of the next northern Crown, of which we fhall fpeak as clearly and as fuccinctly as may be, without adhering to any particular Author, that we may take in a great Variety of Oblervations, and bring thefe within the narrower Compafs.

## S E C TION III.

The prefent State of the Dominions of the Crown of Denmark, and of its Subjects, in reSpect to their Manners, Cufoms, Lawes, Forces, Revenues, Commodities, and Commerce; with occafional Obfervations and Remarks.

## Collected from the Writings of Mr. Molefworth, and other Authors of Credit.

1. An Introduction, Jwewing the Nature and Importance of this Section; and the Authorities upon whick it is founded. 2. The Climate of the Several Parts of the Danim Dominions, the Seas by which they are bounded, and the Nature of the Toll which the Danes exact in the Sound. 3. The Soil and Produce of the feveral Countries and Illands belonging to the Crowen of Denmark. 4. Of the Commodities and Come merce of this Country. 5. Of the Forces of the Danes by Sea and Land. 6. Of the King's Revenues, and the Manner of Living and the Amount of them. 7. The Temper, Genius, Manners and Cuftoms of the Danes. 8. The Laws in this Country, with refpect to Civil, Ecclefaftical, and Commercial Affairs. 2. The prefent State of Religion, and of their Clergy; with other Matters of the like Nature. IO. The Nature of the Tenures in Denmark, and the Manner in which Eftates are beld there; with other Par ticulars relative to that Subject. II. 'Obfervations and Remarks upon the foregoing Section; with fome. Conjectures as to the future State of this Country and its Inbabitants.

THERE is fcarce any Country in Europe, or at leaft. in the North, with which we ought to be better acquainted than with Denmark, confidering that the Inhabitants of it were once Mafters of a great Part of this Ifland, that our Princes have frequently intermarried with the ${ }^{\circ}$ Families of the Dani/b Kings, and that we have fill as great Connection with this Kingdom and Court as with any of the Northern Powers. But notwithflanding this it fo happens that we are very far from being generally well informed as to this Nation and its Concerns. It is true that Mr. Molefworth, who refided at Copenbagen in the Reign of the late King William, has written a valuable and much efteemed Treatife upon this Subject; in which he very fully explains the Caufes of, and the Manner in which, that great Revolution happened, whereby the Kings of Denmark from being elective and limited became hereditary and abfolute in 1660. And by the Way it may not be amifs to obferve, that this is the only legal abiolute Monarchy, perhaps, in the W orld ; the King being declared fo by the States of the Kingdom, who had that Power by the Conftitution.
It is indeed true that there was a Force put upon the Nobility; but it was a Force put upon them by the People, who knew that they made a very bad Ufe of the Authority they enjoyed in virtue of their old Conftitution; and therefore made it their Choice to live under an abfolute King, rather than under a tyrannical Ariftocracy. We may learn, from hence, feveral Things worthy of our Obfervation; and, among them, thefe: That when, in a mixed or limited Government, any Part of it gains fuch a Superiority over the reft as is deftuctive of the End of fuch a Government, which is the Good of the Whole, it cannot long fubfirt; but muft infallibly be diffolved, either by the Ufurpers of fuch Power being in a Condition to preferve it, or by the juining of the oppreffed Parts of the Government, as in this Cafe, to raife up another Power capable of controlling fuch an Ufurpation. That as a Democracy, or popular State, is, of all others, fooneft corrupted; fo an Ariftocracy, or Government by a few, is, when corrupted, the leaft to be borne, efpecially in States which have a vifible Head; and that, in fuch Revolutions, the Change is feldom, if ever, from a tyrannical to a mixed Government; but ever, from a tyrannical to a mithed But though the Book before-mentioned ftates thofe Points very clearly, and, for the Time in which it was written, is certainly as good a one as can be wifhed; yet it is now, in fome Meafure, out of Date : And, therefore, in order to have a tolerable Idea of the prefent State of this Country, we muft have recourfe to other and later Obfervations.

The Dominions of the Crown of Denmark confift of the great Kingdom of Norreay, of which forme Account las been given in the former Section, and therefore we hall fay but little of it here; of the Peninfula of Futland, which, from the Frontiers of Germany to its utmoft northern Bounds, is about two hundred and feventy Miles in Length, and of different Breadths ; of the Duchy of Holfein, which the King of Denmark holds jointly with the Duke of that Title; of the Danifh Inands, the Chief of which are Zealand, Funen, and Iceland; and of feveral Countries in Germany, fuch as Oldenbourg, Delmenborft, aud other Places, partly the hereditary Dominions of the Royal Family, and partly obtained by Conqueft. We may eafily difcern, from hence, that this Crown muft always have a confiderable Share in the general Syttem of Things in Europe, as well as in the particular Diftribution of Power in the North; and confequently, though its Dominions lie a little out of the way, and we do not very frequently hear of the Effects either of the Power or Policy of the Kings of Denmark, yet the Nature of their Dominions, and the Temper of their Subjects, is very well worth the knowing. For fuch is the Nature of Things in this World, and fuch the conftant Fluctuation of Intereft and Power, that we can never rely, with any Certainty, on the prefent Syftem; nor can we eafily forefee what Turns or Changes may happen, fo as to judge, with any Degree of Accuracy, which of the Powers, at prefent great, fhall decline; or which of thofe, that are now low, thall rife, and become confiderable, unlefs we look into their refpective Conditions narrowly, and thereby gain fome tolerable Notion of the

Chances they have of changing their prefent Situations, either for the better or the worle. After hewing, as we have done, the Ufe and Importance of the prefent Section, let us now proceed to the proper Bufnefs of it, with as much Clearnefs and Brevity as poffible.
2. The Air of Denmark is not good, efpecially near Copenhagen, which is fuppofed to proceed from its low Situation, and the frequent Fogs there. The Air of Slefwick and Holfein is better than that in the northern Parts, and the Country more defirable upon many Accounts, as will appear hereafter. The fame Obfervations are made as to the Seafons in Denmark as in Sweden, viz. That the Year is divided into Winter and Summer ; that they have no Spring, and very feldom any Autumn; but they proceed immediately from an extreme Cold to an Extremity of Heat; and, in the latter-end of the Year, from violent hot Weather to an Extremity of Cold. During the Months of Fune, Fuly, and Auguft, the Heat is more intenfe than in England, and the Nights not near fo cool as with us, though they are fo many Degrees to the Northward; nor do they enjoy a clear Sunfhine during thofe Heats, but thick Vapours all the time between them and the Sun : And indeed it is a general Obfervation, that the Heaven is much brighter and more ferene far within the Continent, than it is near the Sea-coaft; nor is the Air lefs clear and pleafant at Sea, a great Diftance from Land, than it is in the Middle of the Continent. But this Obfervation holds more true within the Tropics, than it does either in the Northern or the Southern Latitudes. The Air of Norway is exceffive cold; but efpecially within the Polar Circle, which is inhabited by the Laplanders. The more Southerly Part of the Country differs but little from Sweden, from which it is feparated only by the Doffrine Hills.
The Seas bordering on the Denifh Dominions are the German Ocean, the Baltic, in which is that famous Streight or Paffage into the Eaft-Sea, called the Ore Sound, or generally the Sound of the Baltic. It hath been obferved, that there are no Tides in it, and that its Waters are frefher than the Ocean, fuppofed to be occafioned by the Rivers that run into it. The Sound is about four Miles over, having the Illand of Zealand on the Weft, and the Continent of Schonen on the Eaft. In the narroweft Part of the Streight, on Zealand, or Demmark Side, ftands the Town of Elfenore, and the ftrong Caftle of Cronenbourg, before which there is a tolerable Road for Shipping. On the Side of Scbonen, in the Poffeffion of the Swedes, is the Town of Helfingbourg, and a fmall Battery of Guns, which ferve only to falute the Ships which pals by it. Between thofe two Places fail all the Shipping bound to the Baltic. The Danes, however, only reccive the Toll of all Merchantmen who pals by it ; though the Swedes are Mafters of the oppofite Shore, by virtue of the Treaty concluded when they yielded up Scbonen to them. But the Swedes themfelves were exempted from paying any Duties, till the laft Peace in the Year 172 I , when the Affairs of the Swedes were in a very defperate Condition, and then they condefcended to pay a Toll to Denmark, as other Nations did, on their paffing the Sound.

This Duty is fuppofed to have arifen from the mutual Confent of the Merchants trading to the Eaft Country, who at firt contributed a fmall Sum towards maintaining of Light-houfes on the Coaft for their own Security; and thereupon this Paffage of the Sound came to be more ufed than that of either Belt to the Weftward of the Ine of Zeeland, which, in other RefpeCts, feem as commodious as this. From fome fuch Beginnings the Danes proceeded to demand large Sums, and that as their undoubted Right, being Mafters of both Shores. The Emperor Cbarles V, in behalf of his Subjects of the feventeen Provinces of the Low Countries, came to an Agreement with the Danes, That every Ship of two hundred Tons and under, paffing the Sound, fhould pay two Rofe Nobles going and coming from the Baltic; and every Ship above that Burden, three Nobles; which Agreement remained in force until the United Provinces fet up for independent States; after which the Danes obliged the Dutch to pay extravagant Rates.

But the Hollanders and Lubeckers oppofing thefe Exactions
actions about the Year 1600 , obliged the Danes to accept of more moderate Duties. The firft folemn Treaty the Dutch made with the Danes concerning this Toll was in the Year 1647 , wherein they agreed to pay about twenty-five Pounds for every Ship of two hundred Tons paffing the Streights for forty Years, at the Expiration of which, the firft Agreement with the Emperor was to be in force. And the Engli/h, in their Treaties with Denmork, agreed to pay Toll as the Dutch and other Nations in friendfhip with them did. As to the free States of England and Holland, they afk no Permiffion of the Danes to pafs the Sound; for the Caftles on the Shores are at too great a Diftance to prevent it, and, if they had not a Squadron of Men of War ready to compel the Merchant to pay the Toll, he might pafs by unhurt. Befides, the Paffage called the Great Belt, between the Mlands of Zealand and Funen is much wider; and that of the Leffer Belt, between Funen and the Continent of Futland is not at all impracticable.
3. The Nature of the Soil, in Dominions fo far extended, and fo much disjoined, as thofe of Denmark are, muft be various. The Inand of Zealand, wherein the capital City of Copenbagen ftands, produces no Corn, but Rye, of which moft of their Bread is made. Of this they have enough for the Subfiftance of the Inhabitants, but not to export. There is not much Meadow or Pafture Ground in the Ifland; but what they have is thort and fweet. One fourth Part of the Country is Foreft, and referved for the King's Game, fuch as Stag's, wild Boars, $\mathcal{E}^{\circ} c$ : which no Subject dares meddle with, though he finds whole Herds of them devouring his Corn, and the Farmers are generally great Sufferers by them. In a wet Seafon they have the greateft Plenty of Grain in Zealand. Their Cattle are fmall, and lean in the Winter, kept within Doors for feven or eight Months of the Year, and fed with Grains, Roots, Weeds, and fuch Stuff as their Owners can provide ; but, in Summer, when there is Grafs to be had, their Beef is pretty good. Near Copenbagen the Sea is not ftored with Fifh, which is fuppofed to proceed from the Water not being fo falt as that in other Seas. The Ifland of Funen produces Corn and Wood fufficient for the Natives, and they have Cattle for theirUfe ; but it affords nothing for Exportation, except a few Horfes. Laland is a plentiful Ifland, and produces all Sorts of Corn in Abundance, particularly Wheat, with which it fupplies Copenhagen, and all other Parts of Denmark, in fmall Quantities; for Wheat is a great Rarity among them.

The Inands of Falffia, Langland, and Mona, are reckoned tolerably fruitful; Arroe and Alfen produce Annifeeds, which they mix with their Bread, and ufe it in feafoning their Meat. Futland hath Corn enough for the Natives, and abounds in Cattle. The Horfes and Hogs of this Country are reckoned very good, and black Cattle are tranfported lean from hence to Hollond, where they grow fat in a fhort time, of which the Dutch make a confiderable Profit. The Country of Slefwick hath a fufficient quantity of Corn, Cattle, and Horfes, with which they furnifh their Neighbours. Holfein is a pleafant, fruitful Country, faid to refemble England in its Variety of Hills, Woods, Rivers, Meadows, and Corn Fields. Stormar and Ditmarch lie down near the Eilb, being a rich Soil, compared to Holland for Fertility and Improvement of its Lands, which are fometimes overflowed, however, by the neighbouring Ocean. Oldenbourg alfo is a flatCountry, much expofed to Inundations; but abounds in Cattle, and hath a Breed of Horfes efteemed for being of a white or cream Colour; tho' they have generally tender Feet, and laft but a little while. Delmenbor $f t$ is a more hilly Country than Oldenbourg, and pretty well wooded. Norreay and Lapland having been largely defcribed in the firft Section of this Chapter, there is no Need of dwelling upon them here.

The Illands of Iceland, Fero, and Schetland are almoft as barren as Norway; Corn will fcarce grow in any of them; but they abound in Cattle. The Natives of Iceland feed on the Flefh of Bears, Wolves, and Foxes, and Bread made of dried Fifh beat to Powder. They barter their dried Fifh, Tallow, and Sulphur for fuch other Commodities as they want. There are not, either
in the IMands of Iceland or Fero, any Trees, except Jus niper-fhrubs, Birch, and Willows; but they have Roots; and other Garden-ftuff, which, with their Fifh, are their greateft Support. They hive good Pafture, and a toles rable Breed of Black Cattle, fmall-fized Horfes, and fome Flocks of Sheep, and almont all manner of Roots and Herbs which grow in other Kitchen-gardens ; and are pretty well ftocked with Fifh and Fowl. But the Cold is very fevere in all thefe Inands, and their Winter is dark, as may eafily be gathered from their Situation.
4. As to the Manufactures of Denmark and Norway, there are none, except that of Iron; which is not very confiderable. Holfein and Slefroick feem to be extremely well fituated for foreign Trade, lying both upon the Baltic and the Ocean; but reap little Advantage from their Situation at prefent. Hamburgb on one Side, and Lubec on the other, which border upon Holfein, are indeed Towns of great Trade, and the Dame fometimes pretends to the Sovereignty of Hamburgh; but, by the Countenance of the neighbouring Powers, that City hath hitherto preferved her Liberties. Futland and Holftein export nothing but Horfes and Cattle. From Norway, indeed, there are great Quantities of Fir-timber, for Maits, Yards, and Planks exported, with Pitch, Tar, Stock-fifh, Oil, and Iron, for which they receive ready Money chiefly of the Englift; but, of the French, Wine, Brandy, Alamodes, and other Trifles.

The Danes have fome inconfiderable Factories in the Weft-Indies, and on the Coaft of Guined; and in the Eaft-Indies, they are Mafters of the City and Fort of Tranguebar, one of the moft confiderable Towns on the Eaft-fide of the Continent; and from hence are fent home, fome Years, two or three Ships. The Dutch have, for many Years, been endeavouring to undermine the Danes in the Eaft-Indics, and make themfelves Mafters of the Town of Tranguebar, inciting the Natives to lay flege to it; and the Danes were in great Danger of lofing it about five-and-twenty Years ago; but were generounly fupported by Mr. Pitt, the Governor of Fort St. George, as we have fhewn at large in our former Volume. The Danes are reckoned to have more Shipping than the Swedes, the Reafon whereof may be, that Norway furnifhes a confiderable Number of hardy Seamen, who are ufed to thofe boifterous Seas; and the Dutcb alfo maintain great Numbers of Norivegians in their Fleets, where they live better than on their own barren Coafts, which makes thefe Pcople apply themfelves more to the Seafervice than any other Subjects of Demmark; and there is always a confiderable Number of them ready to man the royal Navy: Which brings us to enquire into the Strength and Forces of the Danes by Sea and Land.
5. We cannot enter upon this Head without making the fame Reflections that Mr. Molefworth does. It is certain that the levying Taxes here is not more grievous to the People, than the Reafon for which they are levied; the Maintenance of a great fanding Army. The People are made Contributors to their own Mifery, and their Purfes drained in order to maintain their Slavery. The Frencb King has taught the Princes of Europe that pernicious Secret of making one Part of the People bridle and fcourge the other; which, in time, muft needs end in a general Defolation. The King of Denmark hath even endeavoured to exceed his Original, in raifing more Men than his Country will maintain; and, at prefent, the Northern and German Princes eftimate their Wealth not by the Fertility or Extent of their Territory, by the Trade or Induftry of the People, but by the Numbers of Horfe and Foot in their Service ; for the Subfiftance of which, after they have eaten up their own Subjects, they make ufe of an hundred cruel and unjuft Pretences to ruin and encroach on their Neighbours; and, when they cannot accomplifh fuch Projects, foment Quarrels among other Princes, that they may have an Opportunity of letting out their Troops for Hire; and have found the Art of receiving Pay, without interefting themfelves in the Quarrel; which hath been the conftant Practice of the Danes, and fome nelghbouring Princes, for many Years paft. Thofe Practices, however, have been very pernicious to Denmark.
Nor have the Danes fucceeded in any of their Attempts
againft the City of Hamburgh; but, in the laft War, taking Advantage of the Diftrefs the Sroedes were reduced to by a potent Confederacy, the Dane made himfelf Mafter of Bremen and Verden, which he afterwards conveyed to the Sovereign of Hanover; and feized alfo on the late Duke of Holftein's Territories, in his Minority, which he fill keeps. It is computed that Denmark, Holfein, and Oldenbourg maintain five thoufand four hundred and fifty Horfe, fifteen hundred Dragoons, and feventeen thoufand Foot. Norway maintains twelve hundred and thirty-fix Horfe and Dragoons, and fourteen thoufand three hundred Foot, making in all a Body of near forty thoufand Men. The Foot Soldiers, both Officers and private Men, are generally Foreigners, of all Countries, Poles, Germans, Swedes, Scots, \&c. There are more Reafons than one for not employing too many of the Natives; but the principal, left they fhould fhew too much Affection to their own Country, and not fo readily obey the arbitrary Commands of their Princes. Officers of Horfe receive no more Pay, in time of Peace, than thofe of the Foot. The Horle are ufually Natives, and maintained every one by a Free-holder or Farmer, who is obliged to provide him and his Horfe Meat, and fix Shillings a Month in Money, half of which the Colonel takes towards his Mounting; and in Holfein they have fomething better Pay than in Denmark. In Norway little Money is expended in paying the Forces; the private Soldiers being quartered by the Boors, and, which is an heavy Burthen, fubfifted by them.

For the Sea-Service three thoufand Mariners are conftantly maintained at Copenbagen, as well in Peace as War ; having a weekly Allowance of Salt, Flefh, Stock-Fifh, or Meal, Grout, $\mathcal{E}^{c} c$. for themfelves and their Families, and about eighty Rix-Dollars a Year in Money. And there are feveral Streets of little Houfes, or Barracks, near the Walls where they live, and where their Wives and Children refide while they are at Sea. Their Bufinefs, in time of Peace, is to work in the King's Yards and Docks, which are over-againft the Palace in Copenbagen, where they take it by Turns to ferve in all laborious Works relating to the Shipping; and once a Year it is ufual to equip a fmall Squadron of Men of War, and fail with them two or three Months for exercifing the Sailors. All the Officers in the Fleet are in conftant Pay, as well in Peace as War ; and the Danes compute, that they can rig out thirty Sail of Men of War and upwards at a very fhort Warning.
6. The King's Revenues arife from the Duties paid by his own Subjects, the Cuftoms paid by Foreigners, the Crown Lands, Fines, and Confifcations. The Taxes paid by his Subjects are either fixed or variable; that is, the Prince, in fome Cafes, chufes to follow a certain Rule, eftablifhed by himfelf; which, he may, however alter, if he fees fit, and in others he frequently varies. Of the firft Sort are the Duties of Import and Export, and the Excife commonly called Confumption laid upon every thing that is eat or drank in the Kingdom. There are alfo Duties paid for Marriage Licences, Duties on Stamp-Paper ; on which all Bargains, Contracts, Proceedings at Law, $E \mathcal{C}$ c. are written; fome of thefe Duties amounting to feveral Rix-Dollars per Sheet. Duties are alfo laid upon Brewing and Malt, and Corn that is ground on Mills. Thefe Duties are certain, or feldom altered. The uncertain Duties are the Taxes on Land, which are not affeffed by the Acre, but according to the annual Value of the Farm. Poll-Money impofed upon every one according to the perfonal Eftate he is fuppofed to have, which is fometimes levied twice a Year. Money levied for erecting or repairing the Fortifications.

An occafional Tax, raifed only when a Daughter of Denmark is to be married, whofe Portion is ufually an hundred thoufand Crowns. A Tax laid upon every Tradefman for the Liberty of exercifing his Calling, and the Gain he is fuppofed to make by it, who is obliged alfo to quarter Soldiers. The Ground-Rents, in all Cities and Towns, which the King taxes, according to the Value of the Houfe or the Ability of the Poffeffor. In Holftein the Eands are taxed according to the Ploughs, each Plough paying a certain Sum every Month. Not many Years
fince an Eftimate was made of all the Houres in the Cities and Towns in the King's Dominions; and all the Lands were meafured, that the Crown might the better underftand their Value; and the Ground-Tam, in the Cities and Towns, was affeffed at Four per Cent. of the whole Value the Ground was rated at, if it was to be purchafed; and the like Proportion was obferved towards others, in regard to their Houfes and Profeffions. The moft moderate Affeffment of their Poll-Tax is according to the fol lowing Proportion, viz. A Citizen worth eight or ten thoufand Rix-Dollars pays four Rix-Dollars for himfelf, four for his Wife, two for every Child, and one for each Servant, and for every Horfe a Rix-Dollar. An Alehoufekeeper pays one Rix-Dollar for himfelf, another for his Wife, twenty-four Stivers for every Child, and fixteen for every Servant. The Fortification Tax is ufually high. A Merchant worth fix or eight thoufand Rix-Dollars, hath fometimes paid fixty-eight Dollars, an ordinary $\mathrm{Ci}_{-}$ tizen Eight or Ten, and others in Proportion.

A late Writer hath computed the Revenues of the Crown of Denmark, as follows: The Toll of the Sound at 65,000 Rix-Dollars per Ann. The reft of the Toll of Denmark farmed at 165,000 Rix-Dollars. The Confumption or Excife of Copenbagen, farmed at 140,000 Rix-Dollars. The Confumption of the reft of Denmark at 140,000 Rix-Dollars. The fimaller Taxes of Derzmark at 100,000 Rix-Dollars. Poll-Tax, FortificationTax, Ground-Rents and Land-Tax, at 100,000 Rix Dollars. The whole Revenue of Norway at 700,000 Rix-Dollars. The Crown-Lands, Confifcations, Ejc. at 200,000 Rix-Dollars. The Revenue of Iceland farmed at 27,000 Rix-Dollars. Oldenbourg and Delmenborf 8000 Rix-Dollars ; and the Toll upon the Wefer 5000 Rix-Dollars : So that the whole Revenue of Denmark amounts to 2,622,000 Rix-Dollars per Ann. But as the Gentleman, who makes this Calculation, obferves, that the Poll-Tax and Fortification-Tax are never raifed the fameYear; we muft, upon that Account, deduct 400,000 Rix-Dollars out of the Sum total, and the whole Revenue will then amount to two Millions two hundred twentytwo thoufand Rix-Dollars, or about five hundred thoufand Pounds of our Money, which in that part of the World will go near as far as three Times the Sum with us, confidering the Cheapnefs of Provifion and Labour in Denmark and Norway.
7. As to the Perfons of the Danes they are generally tall, and ftrong limbed; their Complection good; their Hair fair, yellow, or red; and as few of the Men wear Wigs, they take a great deal of Pains in curling their yellow Locks; neither Men nor Women are afhamed of red Hair, or endeavour to change the Colour. They have bad Shapes, and their Mien is not to be admired. When we fee the Danifh Women-fitting in a Coach or Chair, fome of them appear exquifitely beautiful ; but if they rife and attempt to walk they fpoil all. Both Ladies and Gentlemen in Summer affect to imitate the French Drefs; but in Winter wrap themfelves up in Furs or Wool, like the reft of the Northern People. They are neat in their Linnen, changing it often, and affect too much Magnificence. It is obferved that Denmark feldom produces a great Genius ; they are not good at Invention or Imitation, and are neither deeply learned, nor exquifite Mechanics. Polite Learning they are perfect Strangers to, and few Books are found amongtt them, except thofe of controverfial Religion.

Mr. Molefworth, in fumming up their Character, fays, he never knew a Country where the Minds of People were more upon a Level. As we find none of extraordinary Parts or Qualifications, or excellent in particular Studies or Arts, fo we fee no Enchufiafts, Madmen, natural Fools, or whimfical People; but a certain Equality of Underftanding reigns among them; every one plods on in the ordinary Track of Common-fenfe, without deviating to the right or left. The common People, however, in general, write and read, and their Clergy ufually talk Latin, but not in the greatelt Purity. The Vices the Gentry are moft addicted to, are Gluttony and Drunkennefs. When they fit down to eat and drink, they never know when to rife, but the Debauch fome-
times
times continues whole Days and Nights: The firft Thing a Friend is prefented with at his coming into the Houle is a Dram of Brandy; and they are no fooner fet down to Dinner, but every Man and Woman hath alfo a Glais fet by their Plate, and on the propofing a Healch take off their Glaffes together, and by that means make a quick Difpatch. The Women indeed retire after Dinner ; but the Men fit it out 'till they have loft (which is not foon done) their little Senfe.

The Liquors drank by People of Condition are RhenihWines, Cherry-Brandy, and all Sorts of French-Wines. The Men are fond of them, and the fair Sex do not refufe them. The poor People indulge in bad Beer and Spirits extracted from Malt or Barley. Nor do the Norzuegians who can afford it come behind the Danes; 'tis the Cuftom of the Country; and both among the Gentry and common People, Lewdnefs and Intemperance pals for Wit and ingenious Converlation. As to their Eating, the Tables of People of Condition are covered with a Variety of Difhes; but the Flefh, except Beef and Veal, is generally lean and ill tafted; their tame Fowls and wild Ducks are fcarce eatable. There are no fallow Deer, Woodcocks, Pheafants or Rabbets; and red Deer are the King's Game, and not to be purchafed. Their Hares and their Bacon are excellent, as are their frefh-water Finh, particularly the Carp, Perch, and Craw- fifh; but Sea-filh is fcarce and ill tafted; and in general their Cookery is not agreeable to an Englifh Palate. The common People in Town and Country live upon coarle Rye Bread, lean Salt Fifh, Stock-Fifh, Roots, and very bad Cheefe, feldom tafting frefh Fifh, and hardly ever Flefh. As to the Character of the common People, they are poor, and mean-fipirited, far from the warlike Temper of their Anceftors, inclined to cheating, and intolerably jealous and fufpicious that others have a Defign upon them; which may be obferved to be the Cafe of moft Men of limited Undertandings. In our Age, fays Puffendorf, the Danes have loft much of their ancient Glory, becaufe the prefent Nobility and Gentry are rather for enjoying their Revenues in Eafe. and Luxury, than for undergoing the Fatigues of War; and the Commonality have followed their Example.
The Norwegians undergo ail kinds of Hardhips with more Courage and Vigour, to which they are inured by the Climate they live in; but the Danes, ever fince they have been Mafters of Norway, have endeavoured to deprefs and keep that People under, by taking from them all the Opportunities of exerting themfelves; and there are now very few of the ancient Nobility left in Norway. The Danes travel either in Waggons, on Horfeback, or in Sledges; and there is an Officer who regulates the Prices of Carriage, and punifhes thofe who extort more than their Due. If any Gentleman can procure a Warrant from the Court, when he is about to undertake a Journey, the Peafants or Farmers are obliged to furnifh him with Horfes and Carriage, in every Country, through which he paffes, without being allowed any thing, as they do for the King and Court whenever they travel. The Danes have their Playhoufe for their Diverfion; they take their Pleafure alfo in their Sleds upon the Ice in Winter. But downright Drinking is their favourite Recreation ; the moft ferious Affairs fubmit to this, the great Bufinefs of the Day and Night. Nor do the Danes indulge more in Eating and Drinking than in their Lodging ; for as there is no Place where there is greater Plenty of good Feather-beds, they lay one under, another over them, all the Winter Seaion. But Lodgings for Strangers are procured with Difficulty in private Houfes, and in Public-Houfes they are obliged to eat and fleep, in common, no Man being allowed a Room to himfelf, except his Quality be very high indeed.
8. The King of Denmark is the great Interpreter of his Laws, and can change them at Pleafure. He is the fupreme Judge and Prefident of the High Court of Juftice, when he pleafes to fit there, which is not often: However, whether prefent or abfent, the Advocates always addrefs themfelves to the King. The Princes of the Blood, and the Nobility, and Gentry, are commonly tried in this High Court ; and the Superintendants, or Bifhops, hare YoL. II. Numb. CIV.
the fame Privilege, if charged with Herefy, or any other notorious Crime. Where any Perfon calumniates the Government, or the Adminiftration, he is declared infanious? and his Goods confifcated; but if fuch Difcourfes tend to a Sedition, they are to be puniffied with the utmot Severity. As to thofe who endeavour to defame a Magiftrate, either Civil or Ecclefiaftical, or injure the Reputation of a Perfon of Honour, by Writing, or otherwife, they are to pay eighty Rix-Dollars to the Party grieved, and a Fine of three Marks to the Crown ; and in Default of Payment are condemned to the Pillory, and to carry Stones for the Repair of the Fortifications and public Buildings. If any Perfon refufes to take up Arms, and ferve the Government, either by Sea or Land, in Cafe of an Invafion, when he is fummoned to attend the Royal Standard, he is to be declared infamous, and to forfeit his Eftate.
A Perfon guilty of Theft is not only fentenced to be whipped, and to hard Labour in the publicWorks, but to reftore double the Value of the Goods folen to the Owner. Coining is punifhed with the Lofs of Life and Honour, and Confifcation of the Eftate of the Offender, and the fame Punifhment is inflicted on him who removes an antient Landmark. He who counterfeits the Hand and Seal of another, or forges a Writing, is fentenced to have his Head cut off; his Goods confifcated and declared infamous. The Torture is feldom ufed in Denmark, but in Cafes of High Treafon ; and then only upon Perfons already convicted of the faine Crime, in order to make them difcover their Accomplices. Duels, and even the challenging another to fight is punifhed with the Lofs of Life and Eftate, and Seconds, who do not endeavour to prevent it, are punifhed in like manner. He who is killed in a Duel is not fuffered to be buried in confecrated Ground ; whoever reflects upon another for refufing a Challenge, is punifhable, and declared infamous by a Donijh Law. In Cafes of Shipwreckc, the Danibs Subjects are required to give all imaginable Affiftance to thofe in Diftrefs, and to preferve the Goods for the Owner's Ufe.

The Ships which guard the Coafts are directed to fave what Effects they can, for which they have a moderate Reward; and the Owners are permitted to fell them in the Country, or embark them on board other Veffels. If a Ship or Goods be driven on the Coaft, and no body appears to claim them, the King's Officers, or the Lord of the Manor takes care to preferve them ; or if they are perifhable Goods they fell them to the beft Advantage, and reftore them to the Owner; but if they are not reclaimed within a Year and a Day, they become the Property of the King; or the Lord of the Place. If the Mafter of any Ship finds Goods floating on the Sea, he is to take Care of, and deliver them to the next Magiftrate, who muft keep them a Year and a Day, to fee if any one can claim them; and if no body owns them they belong to the King, and if any conceal or embezzle fuch wrecked Goods, he is to be punifhed as a Felon, and the Law is much the fame where a Perfon finds Goods or Cattle upon the Road; for he is obliged to publifh them in the Court of the Diftrict, and can have no Property in the Goods till a Year and a Day be paft, where no body comes in to reclaim them.

There being but one Univerfity in Denmark, a Divinity Reader is appointed to refide in every Cathedral, to expound the Scriptures to the People; and thefe Divinity Readers, as well as the Mafters of Colleges, are examined by the Profeffors of the Royal Academy of Copenbagen before they are admitted to officiate ; private Schools are exprefly prohibited by the Laws of Denmark, and none allowed but thofe eftablifhed by public Authority in the Cities and great Towns; and they have two or three Mafters belonging to each School, who have taken their Degree of Mafters of Art at leaft, as well as the Rector. The firt Mafter, or Reqor, is chofen by the Superintendant, or Bifhop, having paffed an Examination before him and the Minifter of the Parifh. The Under-Mafters are appointed by the Rector, with the Approbation of the Minifter of the Place. The leffer Schools, where only Writing and Accompts are taught, are appointed by the 6 N

Magi-

Magiftrate ; the Teacher having been firft examined by the Prieft of the Parifh, who is alfo to take Care that they are inftructed in the Lutberan Doctrine.
No Perfon is at Liberty to fend a Tutor to travel with his Son, who hath not been firft examined by the Superintendant of the Diocefe, and found to be Orthodox in Religion ; and the fame is required where one takes a Tutor into his Houfe, who alfo ought to be a Student of the Univerfity of Copenbagen. As no other Method of Teaching is allowed, than that prefcribed by the Government; fo no other Books may be read, but fuch as are approved by Authority, which are compofed by the Profeffors of their Univerfity. The Importation of Books is alfo prohibited, efpecially thofe which treat of any other Sort of Religion, than that eftablifhed amongtt them. No other Calenders or Almanacks are allowed to be publifhed than thofe made by the Order of the Rector and Senate of the Univerfity, on Pain of Confifcation of Goods ; they are prohibited alfo, to infert in them Predietions relating to War, Plague, or Famine, or any other Calamities.
9. The Clergy of this Kingdom are divided into three Claffes, viz. Super-intendants or Bifhops, Intendants, which fome compare to our Arch-deacons, and Curates or Parifl Priefts. The Super-intendant is obliged to vifit his Diocefs once every Year, and to lie in che Perfon's Houre, when he comes to any Place; who is to entertain hinz, Servants and four Horfes, gratis. The Super-intendants are confecrated by the Bifhop or Super-intendant of Zealand, affifted by five or fix Priefts; but are all nominated by the King. The Peafants, who pay Tithes of all their Corn, Cattle, Poultry, and Bees, pay one Third thereof to the Crown, another to the Bifhop and other Ufes of the Church, and the remaining Third to their Parifh Clerk. But of Grafs and Fruits which grow fpontaneounly no Tithes are paid; there are fome other Dues alfo payable to the Clergy by the Peafants, for Confeffion, Burials, Marriages, छic.
The Super-intendant holds a kind of Synod twice a Year, confifting of the Intendants in his Diocefe, where the Governor of the Province prefides for the King. The Overfeers are chofen by the Parifh Priefts of each County or Diftrict, in Conjunction with the Super-intendant; and he is obliged to vifit all the Parifles under his Infpection once a Year, at leaft, and hath a Power of cenfuring the Lives and Converfations of the Prielts in their refpective Divifions. They fee that the Churches are kept in repair, and that their Revenues are not alienated or mifapplied. No Perfon can be admitted into Priefts Orders until he hath a Cure provided for him. He muft have a Certificate alfo from the Divinity-Profeffor of the Univerfity, concerning the Progrefs he hath made in his Studies, 'and his Qualifications for the Pulpit; and if he do not come inmediately from the Univerfity, he muft have them from the Overfeer and Parih Prieft, where he refides; and if the Superintendant approves of the Clerk, he is inftituted and inducted as with us. But their Law requires, that none be admitted into Priefts Orders who are under five and twenty Years of Age; and the giving any Money, or Confideration, either for Orders or the Prefentment to a Living, is forbidden. And they are obliged to perform Divine Service according to the eftablifhed Form or Ritual, obferved. at St. Mary's in Copenbagen.
They are obliged to pray for the King and Magiftracy, and for the Propagation of the Gofpel ; and are prohibited to admit any to the Sacrament, who have not firft been at Confeffion. But the Penitent, it is faid, need not give an Account of every particular Sin. A general Confeffion, according to the Order the Commands ftand in, intitles him to Abfolution. The Prieft is alfo forbid to take any Money, which the Lutberan Minifters frequently do notwithftanding. The Prieft may not divulge the Confefion of any one, where it is particular; unlefs in Cafes of High Treafon, or for the Prevention of fome great Mirchief by fuch Difcovery, on Pain of Deprivation; and in this Cafe the Name of the Penitent ought to be concealed as long as poffible. The Danes look upon all who have any Service appointed them in
the Church as Ecclefiaftics ; and they are accordingly ta* ken from among the Students, whether they be Clerks, Sextons, or Singingmen, and wholly depend on the Priet or Curate of the Parifh. The Lands of every Perfon convicted of turning Papift are forfeited to the next Heir, unlef's he difpofes of them before he changes his Religion, and fuch Apoftate is banifhed the Danifs Dominions. Whoever hath received his Education from the Jefuits is difabled to have any Employment, Ecclefiaftical or Civil, and Popifh Priefts are prohibited to enter the Dani/b Dominions, on Pain of Death ; nor is their Law lefs fevere againft thofe they denominate Heretics. Fcres are forbid to come into the Kingdom without a Royal Licence; and whofoever difcovers a Yew is entitled to a Reward of fifty Crowns. Their Laws alfo are pretty fevere againft Gypfies and Fortune-tellers, who pretend to foretell future Events, and to be acquainted with the Stars; Banifhment being the Pain of the firf Offence, and the fecond Capital. Blafphemers of God and Religion are'fentenced, firft, to have their Tongues cut out, and afterwards to lofe their Heads; and if a Prieft or Ecclefiaftic is guilty of profaning the Name of God; or of any other notorious Vice, his Punifhment is heavier than that of a Layman.
Their Laws concerning Marriage, require that the Confent of the Relations be had as well as the Woman's. And if the marries without the Confent of the Guardian, he fhall receive the Profit of her Fortune during his Life; but if a Guardian neglect to marry his Ward till fhe is paft eighteen Years of Age, the Magiftrate is impowered to relieve her. Their Marriages are diffolvable, and a Divorce may be obtained in Denmark for Adultery; on a voluntary and malicious Elopement; and for Impotence ; but in cafe of Adultery the Crime muft be well proved by Witneffes, or Circumftances, the Confeffion of the offending Party not being fufficient, fince many have falfely accufed themfelves, in order to obtain a Separation: The Dani/b Law alfo requires, that the Party who brings the Accufation be innocent ; for otherwife no Divorce can be obtained; unlefs it appear, that the ill Ufage of the Fulband hath occafioned the Wife to offend ; and if the Hurband, after he has difcovered his Wife to be guilty of Adultery, flall cohabit with her afterwards, a Separation will not be granted. Where a Woman is divorced for Adultery, fhe may marry again after three Years are elapfed, with a Royal Licence, provided fhe has lived chaftly-during that Time; but fle may not marry, or refide within the fame Town, or Diftrict, where her former Hufband lived; and the like where the former Hurband is divorced for Adultery, committed by him ; but the innocent Party is at Liberty to marry fo foon as the Sentence of Divorce is pronounced. What they term a malicious Elopement, is where one of the Parties abfents him, or her felf, from his, or her Spoufe, by the Space of three Years ; but if the Party deferted hath cohabited with another in the mean time, a Divorce cannot be obtained on this Account.

1o. A Man is not to fell or alienate his Lands before he is five and twenty Years of Age, without the Confent of his neareft Relation ; and a Woman, whether fhe be Maid or Widow, can never part with her Lands, but muft leave them to defcend as the Law direfts. An uninterrupted Poffeffion of twenty Years is held to make a good Title, and they are not permitted to run farther back in a Tryal of the Right. All Obligations alfo, and perfonal Debts are held to be void if not renewed within twenty Years; for Notes, and Bills of Exchange, are of equal Force with an Obligation; but the Law allows eight Days for all kinds of Payments to be made beyond the Time prefixed, and if that Time be elapfed four and twenty Hours, the Creditor may 'proteft it, and have Proceffes thereon againft the Original Debtor or Acceptor. No Perfon is obliged to pay any Money loft at Gaming.
The Tenure of Villainage ftill prevails in many Parts of Denmark; and their Vaffials, or 'Tenants, who hold by this bafe Tenure, are purchafed, and defcend with the Lands they live upon, like Fifh in the Waters, or Deer in a Park; nor can thefe Peafants leave the Lands they belong to, and retire elfewhere ; if they do, the Lord of
the Soil may reclaim them, with their Goods; nor can any Town or Place receive them, unlefs they produce a Licence from their Lord, and a Certificate from the Minifter of the Parifh where they laft inhabited: And if a Peafant of this Clafs endeavours to conceal himfelf, his Lord may feize him, and put him in Prifon, or remove hin to any other Tenement or Farm, by way of Punifhment. And if the Wife of one of thefe. Peafants be brought to-bed on the Lands of another Lord, the Child fhall, however, belong to the Lord where the Father lives. Although the Lord has a Power to infranchize his Peafant, or fell him with the Land, yet he cannot fell him fingly or feparate from the Manor or Eftate. The Children of the Ecclefiaftics of the Peafants Race are free, and fo are all Students in the liberal Arts.

A Peafant-cannot have the Freedom of any Town till he is firft infranchifed by the Lord ; but if he hath refided ten Years in any City unreclaimed, and becomes a Tradefman, or Artificer, or applies himfelf to the Sea, he is free. A Peafant alfo who hath lived twenty Years in a foreign Village out of the Lord's Land, thereby procures his Freedom; or if he goes into the Army and obtains a Commiffion, this gives him his Freedom. As to Game Laws, every Freeholder may hunt, and fifh in his own Grounds; and the Nobility and Gentry have the Privilege of hunting in common or wafte Grounds within ten Miles of their Seats, except in the King's Parks; and they may fifh in Lakes and Ponds which are not the King's ; but if any Lord hunt, fhoot, or fifh, in any Place belonging to his Majefty, he forfeits for every Stag one thoufand Rix-Dollars, for a fallow Deer eight hundred, for a Hare four hundred; and for every Swan, Goofe, Duck, Partridge, or other Fowl two hundred. And whoever is convicted of hunting in another's Lands, forfeits an hundred Ounces of Silver for every Offence.

The People in this Country being pretty much addicted to drinking, all Bufinefs is prohibited to be tranfacted in Taverns, and the fitting in public Houfes very much difouraged ; if they will drink, it muft be at home: And the Reaion of it is fuppofed to be, left the People in their Cups fhould be too free with the Government. It is obferved alfo, that the Subjects ufually endeavour to imitate the Court: If it happens to be a fober Reign, the People are lets given to Excefs; and where they have luxurious Princes and Minitters, the lower Part of Mankind do not fail to follow the lewd Example their Superiors fet them; which is alfo practifed in other Places. If any Perfon fends his Effects or Money out of the Kingdom, to be lodged in foreign Banks, the King claims a fixth Part, and he is obliged to pay a tenth to the Magiftrates of the Town, or the Lord of the Soil where he refides; even foreign Merchants have been obliged to fubmit to thefe Exactions in their returning home, notwithftanding their refpective Sovereigns have infffted upon an Exemption.
11. The great Alteration that has happened in Denmark, from the changing the Monarchy from elective to hereditary, and from being the moft limited, into the moft abfolute of any in Europe, has had a very ftrong Effect upon all Ranks and Degrees of People in that Country; and may be faid, in fome meafure, to have made a total Change in their Temper, and in the Nation. The Nobility of Denmark who were formerly as remarkable for their military Virtues as any in Europe, are now very feldom mentioned; and thofe of Norway are in a manner extinguifhed. The Danes have a better Army it is true, than they had formerly, but it is an Army entirely in the Difpofition of the King, and not, as before, fufficient to make any great Conquefts. The naval Force of Denmark is more confiderable; but yet it does not appear capable of ftriking any great Terror into its Neighbours; whence we may conclude, and that too very juftly, that the Crown of Denmark is far from being fo formidable as it was in former Times; yet, with refpect to its own Security, it feems to be as well or better provided than ever; for whereas the Swedes in the latt Age, were more than once on the very Point of deftroying this Kingdom, there is not now the leatt Danger either of their under-
taking or effecting any fuch Defign ; becaufe the Neigh bours of Denmark, and the maritime Powers are bound, both by their Treaties and their Interefts, to fupport this Crown if it fhould be attacked. It is indeed true, that if the Houfe of Holftein fhould fucceed to the full and peaceable Poffeffion of the Ruffian Dominions, Denmark might be in great Danger from thence, as well on Account of the fuperior Forces of that Empire, as becaufe the Houfe of Holfein have very confiderable Claims upon Denmark, which are hitherto unadjufted. But on the other Side, it is to be confidered, that as yet that Succeffion has not taken place, and that in all probability it will be found more for the Intereft of the Rufian Empire to adjuft thofe Difputes ámicably, before that Succeffion takes place, than to run the Hazard of a War about them ; which might, and indeed muft, be attended with many dangerous Confequences, confidering how many Powers are interefted in the Support of Denmark, even with Regard to thefe very Claims of the Houfe of Holfein upon her.

According therefore to the beft Maxims of Policy, we may very fairly conclude, that in cafe the Kings of Denmark act with the fame Prudence and Caution that they have done for many Years paft, they will be in a Condition to preferve what they at prefent enjoy, and be alfo at Liberty to promote and improve the domeftic Profperity of their Subjects. By this I mean, their Application to Manufactures and Commerce, which have been greatly encouraged of late Years, and this Encouragement has been likewife attended with all the Succefs they could reafonably expect. We have fhewn, in fpeaking of Groenland, that the Subjects of Denmark have eftablifhed confiderable Colonies there, and are in Poffeffion of a very beneficial Trade upon thofe Coafts. We may fay the fame thing with refpect to Iceland, the Trade of which is entirely in their Poffefion, and that of Norway alfo is much improved and extended: But befides all this, as we have fhewn in a former Volume, an Eaft-India Company has been long fettled at Copenbagen, and is now in a flourifhing Condition. We are alfo to obferve, that within thefe few Years the Danes have opened a Trade to the Mediterranean; and as the prefent Monarch feems to follow clofely the Examples of his Predeceffors, in avoiding as muft as poffible entering in any Degree into the Troubles and Difputes that for feveral Years have kept Europe in a Flame, with a View not only to preferve the Quiet of his Subjects, but to cultivate alfo the Arts of Peace; we have Reafon therefore to conclude, that in the Space of a few Years, the good Effects of this wife Conduct will appear, and the People become much richer than formerly. It is alfo very likely, that when thele happy Confequences of a growing and flourifhing Trade become more confpicuous, the Government will find it expedient and even neceffary, to relax fome of thofe fevere Laws which are moft likely to bear hard upon Perfons engaged in Traffic ; for without fuch Indulgences it is impoffible that the Schemes the Darif/ Monarchs feem of late to have fo much at heart, fhould be ever brought to perfection.

We may add to all this, that the Benefits immediately refulting to the Crown from the Increafe of the Commerce and Navigation of its Subjects, will fo fully compenfate for fuch Diminutions of Power, that it is impofible any juft and good Prince, or any wife and able Miniftry fhould doubt, as to the Propriety of fuch reafonable and moderate Changes. By thefe Methods the interior Strength of the Kingdom will be daily augmenting; the Shipping, and confequently the naval Force, of Dermark continually increafing, and though thefe Advantages may be flow in their Nature, yet they are at the fame time fo very certain, and of fuch high Importance, that I make no Scruple of affirming they will, if fteadily profecuted, change the whole Face of Affairs in this Country; and before the Clofe of the prefent Century, reftore the antient Luftre of the Crown of Denmark, and perhaps raife its Sovereigns to a higher Rank, than hitherto they have ever held amongft the European Powers.

## SECTION IV.

A comprebenfive Account of the Kingdom of Poland, the Situation, Extent, Climate, Soils, Produce, and Commerce of that Country, together with the Laws, Cufoms, Manners, Form of Government, and Genius of the Inbabitants; the Privileges of their Nobility, and Power of their Kings.

Collected chiefly from the Writings of Dr. Bernard Conner, who refided in that Kingdom in Quality of Phyfician to King Yobn Sobiefki.

1. The Situation, Extent, and Limits of the Polifh Dominions, including the grand Duchy of Lithuania and that Part of Pruffia which belongs to Poland. 2. The Soil, Climate, Proauce, Commodities, \&c. of the Country. 3. The Nature of its Damefic Trade and Foreign Commerce, and the Reafon why the latter is $f 0$ inconfiderable. 4. An Account of the Dyet of Poland, the Perfons wobo compofe it, and the Reafon woby Poland is called a Republic. 5. The legal Powers, Prerogative, and State of the King of Poland. 6. A farther Account of the fame Subject, and of the Revenues of this Monarch; from wobence it appears that be is far from being fowcak, or fo refrained, as is generally imagined. 7. The Rights, Immunities, Privileges, extenfive Power and Authority of the Nobility or Gentry of Poland; with the Reafon of their declining Titles; and particular Infances of the vaft Power and large Eftates of fome of the Grandees of Poland. 8. An Account of the Condition of the Peafants, and of the Services they owe their Lords; with Remarks on the Patience and Submifion of thofe unbappy People. 9. The natural Temper, Difpofition, Cuftoms, Manner of Living, \&cc. of the Polifh Nobility and Commons. 10. This Subject continued, particularly with regard to the Ladies, and fome Remarks on the Ceremonies at Marriages, Funerals, and other fuch like Occafions. II. Of. the State of Learning and the Sciences in this Kingdom; and of the Difeajes common in Poland. 12. A fuccinct Hijfory of the Cbanges that bave bappened in the Government of Poland, and in the Power and Succeffion of their Kings. 13. Obfervations and Renarks upon the foregoing Section.

THE great Kingdom of Poland next demands our Confideration, as being naturally, both with refpect to the Situation and Produce of the Country, and the Force of the Inhabitants, none of the leaft confiderable; though it is very far from being the beft known in Europe. It is thought to extend in Length from Eaft to Weft, about feven hundred Miles; and in Breadth, from North to South, about fix hundred. On the North it has Livonia and other Provinces of the Mufcovite Empire. On the Eaft it is alfo bounded by the Rufian Dominions and Leffer qartary. On the South by Moidavia, Iranflvania, and Hungary; and on the Weft by Pomerania, Brandenburg, Silefia, and Moravia. By this Defcription, it appears, that the Inhabitants of Poland, have, for their Neighbours the Ruffians, Turks, Tartars, Hungarians, and other Subjects of the Houfe of Aufria, and thofe of the King of Prufia. The Air of this Country is in general temperate and heaithful, but exceeding ferene, and more fettled both in Winter and Summer, than in thofe Countries, which border on the Ocean. The only Sea which wathes any Part of Paland is the Baltic, which lies to the Northward of it; but it is well watered, however, by Lakes and Rivers.
Their Lakes lie chiefly in the Greater Poland, Cujavia, and the Territory of Lublin; and both Lakes and Rivers abound with Fifh. Their principal Rivers are the Weifel, or Vifula, which rifes in the Crapatch or Carpatbian Mountains, which divide Hungary from Poland; its Courfes are partly to the Eaftward, but generally it runs from South to North, watering many great Cities, particularly Cracow, Lublin, Warfaw, Thorn, Marienburgh, and Dantzick, after which it difcharges iffelf into the Baltic Sea. The Warta or Varta, which rifes in the Lefer Poland, and running towards the North-weft, paffes by Kolifcb, Pofran, and feveral other great Towns, after which it falls into Oder. The Nieper or Boriffbenes, which dividing the Dominions of Mufory from thofe of Poland, in feveral Places, falls at length into the Black Sen, near Oczakose. The Neifter or Tyra, which rifes in Red Rufia, and running to the South-eaft through Podolia, paffes on to Bender in Turkey, and falls into the Black Sea, about fixty Miles to the Northward of the Mourt of the Danube.
The Divina, which divides Livonia from Courland,
and falls into the Boltic near Riga. The Bog which rifes from a Lake in Podolia, and bending its Courfe to the South-eaft, unites its Waters with the Nieper, a little before that River falls into the Black Sea. Near the Mouth of thefe two united Rivers ftands the Fortrefs of Koficarmen, which the late Czar of Mufcory took from the Turks; and by that means, is opened a Communication with the Black Sea; buthe was obliged to reftore this Place as well as AJoph to the Grand Seignior, upon the Defeat he met with on the Banks of the Prutb. Niemen or Ruffe rifes in the Palatinate of Novogrodeck, and taking its Courfe to the North-weft paffes by Grodno, and at length falls into the Baltic.
2. The Dominions of Poland are ufually divided into eight large Provinces, viz. Proper Poland, the great Dukedonn of Litbuania, Pruffia, Samogitia and Courland, Warfovia, or Mufjovia, Polacbia and Polefia, Red or Little Rufia, Podolic, and Volbimia, and the Ukrain. The Soil for the moft Part is champain and open; but towards the Borders of Hungary mountainous and woody; fo that the Places furtheft diftant from Hungary are moot fruitful. There is only one great Mountain in the Middle of Leffer Poland, called Mons Calvus. It has a Monaftery on the Top; famous, as they pretend, for the real Crofs of Christ; what other Hills one meets with here, are rather rifing Grounds than Mountains ; the Eaftern Parts of the Kingdom are full of Woods, Forefts, Lakes, Marfhes, and Rivers, which afford a delightful Profpect to that open Country ; almoft all of it, is faid to have been overgrown with Wood, but now being cultivated by the Inhabitants is very fertile, and produces every where all kind of Fruit, Corn, and Herbs. A great Part of the Corn made ufe of in Holland comes from this Country by way of Denmark.
They have a good Breed of Horfes, fo that their Cavalry is numerous, and well mounted. Their Paftures are good, and feed a great many Cattle, which they export to foreign Countries; the Forefts abound with wild Beafts, and alio with Bees, that afford vaft Quanties of Honey and Wax. They have alfo abundance of Flax and Hemp, and Vines in many Places, whofe Grapes are grateful to the Tafte, efpecially if the Summer and Harveft be favourable ; but the Wine is generally very fharp when drawn off. In the Mountain there are Mines of

Lead,

Chap. II.
and its INHABITANTS.

Lead, Silver, Copper, and Iron, with other kinds of Minerals, as Quickfilver at Tuffen in Red Rufio, and Vitriol near Biecz in the Palatinate of Cracovia; , but the moft confiderable of all are the Salt Mines at Bochnia and Velifca in Leffer Poland, which are the chief Riches of the Country. They work in thofe Mines as we do in our Coal-Pits; the Salt is generally of a bluifh Colour, but fome of it white and tranfparent, like Cryftal; when it is new dug it has a brackifh Tafte, but when expofed to the Air becomes brittle, and more fweet ; they have alfo fome Veins of Sal Gemme. The Woods are well ftored with Hares, Coneys, Squirrels, Deer, Foxes, Bears, Wolves, and Boars. The Mafovian Forefts have Plenty of Eilks, wild Affes, Buffaloes, and Bifonets, which in Shape and Horns refemble an Ox ; have Mains like Horfes, Beards on their lower Jaws, Tongues rough like a File, and very hard, a Bunch on their Backs, and their Hair fmells like Munk. They are incredible ttrong; the Polifb Nobility hunt them, and efteem their Flefh when powdered a great Dainty. The Urus, called by the Polonders Thur, is a kind of wild Ox; bigger, ftronger, and fwifter than the tame; he has a mort black Beard, a Bufh of Hair upon his Forehead, and Horns very wide and large : Pliny fays, the Romons made Lanthorns of them. The Eilk, called by the Poles Lofs, by the Germans Elland, which fignifies miferable, becaufe of the Falling-Sicknefs, is about the Size of a large Horfe, bodied like a Stag, but broader, its Legs longer, and its Feet cloven and large ; their Hoofs are reckoned a Specific againft the Falling-Sicknefs.

In the Deferts near the Nieper, there is a Sort of wild Sheep, called Sollack, fhaped like a Goat, but with fhorter Legs, and Horns growing ftraiter up. They are exceeding fiwift, and leap very high. They have a Sort of wild Horfes in the Ukrain, called by them Dzikiekonil, which their Nobles eat for a great Rarity. In Lithuonia and Muscovy there is a voracious unferviceable Beaft not found elfewhere, called Rofiomoko, with the Body and Tail of a Wolf, and the Face of a Cat; it feeds on dead Carcaffes, and eats till its Belly is fwelled to the utmoft Stretch, then it fqueezes itfelf betwixt two Trees, forces the Load from its Stomach, and returns to its Prey, devouring and difgorging fucceffively till all is confumed.
3. The weftern Parts of this Kingdom produce a great deal of Corn, of all Sorts, which is exported from Dantzick; as alfo Honey, Wax, Amber, Hides, tanned Leather, Mufcovite and Polifh Furs, Oak, Wainfcot, Mafts, Planks, Fir, Deal, Pitch, Tallow, Salt, Hops, Hemp, Flax, Salt-petre, Pot-ahhes, Opium, Prufiain Wool, for coarfe Manufactures; Vitriol, Lapis Lazuli, Vermilion, Brafs, Lead, Iron, Copper, Glafs, and Earthen-ware, Oxen, Sheep, Hogs, Esc. to different Parts of Eturope. They import Stuffs, Silk, and Wortted; Englifh Cloths, Tapcftry, Jewels, Sables, SaltFifh, Tin, Steel, Martens, Evc. Iron-ware, Rbenifh, Erench, Spanifb, and Hungarion Wines, Spirits, Aqua Vitæ, Brandy, Spice, of which they make great Confumption. They might be much richer, if they were induftrious and frugal, and applied themfelves to Manufactures ; but the Poles are little inclined to either ; for the Gentry are abfolutely forbid to follow Trade, of any Kind, on Pain of forfeiting their Honour; and the Commonality commonly want Funds, fo that all the Trade there is chiefly carried on by foreign Merchants; befides, fuch of the Poles as have any Fortunes, fpend too much of their Revenues in coftly Habits and Luxury, to be able to undertake any confiderable Traffic. Nor - have they any good Ports, except Dantzick, which is not enough to improve the Trade of fo large a Country. It is to this want of Commerce with other Nations, that the Poles owe moft of their Defects in their Government ; for if they were once convinced of them, there is not a Nation in Europe more capable of correcting them, as we may gather from a very familiar Inftance: One of their Monarchs being in Germany, and not having it in his Power to converfe with Strangers in Latin; he was fo renfible of the Defect, that upon his Return to Poland, he

Vó. II. Numb. IO4.
caufed a Grammar-School to be crected in every Town throughout the Kingdom; 'fo that now there is not a Country in Europe where Latin is fo generally undertood as it is here.
4. From the'Time of Lecbus, the Kings of Poland have been elected to the Crown in a regular Defcent, though not by an hereditary Title. They have really been abfolute, and their Will went for Law ; for they made Peace and War when they pleafed, levied Troops as they thought fit, punifhed or pardoned at Pleafure ; and all the Adminitration, either of public or private Affairs, was fo wholly lodged in the King's Hands, that the Poles themfelves fay, That Sigifmund II. the laft King of the Fagellon Family, was, to the full, as abfolute as either the King of France or Denmark is now. Whilft the Kings of Poland thus maintained a fupreme Power over their Subjects, they exceedingly enlarged their Dominions, were feared Abroad and beloved at Home, commanded numerous Armies, executed Enterprizes fpeedily, and were always fare of Succefs ; and this, becaufe, they did not then, as now, depend upon the lingering and tedious Conclufions of a turbulent Dyet. But the Family of Fagello being once extinct by the Death of Sigifmund II. who had refigned his Kingdom to the Senate and Polifb Gentry, and given them full Power and Authority, to difpofe thereof as they thought fit ; the Crown of Poland was declared once more -elective; to the End, that all the Princes of Cbrifendom, who had due Merits and Qualifications, might have a Right to afpire thereunto.

This has given Occafion to mof of the Princes of Europe ever fince to court the Polifh Nobility, either to get the Election determined in their own Favour, or elfe to have fome of their Friends advanced to that great Dignity ; but this commonly, with regard to their own private Interefts, rather than out of any Refpect to the Perfon they defired to promote. 'The Gentry of Poland therefore obferving, that feveral Princes always afpired to their Crown ; and confrdering that none of them had more Right than the reft, and that it lay altogether in their own Power to choofe whom they pleafed, refolved unanimoully to elect none but fuch as could condefcend, nay fwear, to obferve the Terms and Conditions they propofed. By this mëans, the Poles have clipped and limited the antient Power of their Kings, and have reduced them to the Bounds we now find them, that is, barely to a third Part of the Dyet. For the Poles knew that no Prince would be fo imprudent as to fcruple fubmitting to any Conditions, to become Mafter of fo confiderable a Kingdom, to which he had no Right, either by Birch or any other Claim; and more efpecially, fince thefe Conditions are neither rigonous nor difhonourable, but fuch as are confiftent enough with the regal Character he is to be invefted with.

Thus the Polifh Gentry, of an abfolute monarchical Government, have in time made a perfect Republic, confifting of three Orders. The King; Senate, and Nobility. The Polifh Nation is divided into two Sorts of People. The Nobility, Gentry, or Free-born Subjects, who are hardly a tenth Part of the Kingdom; and their Vaffals, who are no better than Slaves; for they have no Benefit of the Laws, can buy no Eftates, nor enjoy any Property; and this, becaufe, fome Ages fince, the common People revolting againft their Lords, and having driven them out of the Nation, the Gentry came with a foreign Power, and reduced them to greater Subjection than before, in which they have been kept ever fince: So that the Government of Poland, at prefent, comprehends only the King and the Nobility. By a Gentleman, or Nobleman of Poland, is underfood, a Perfon, who himfelf, or his Family, has Poffeffions in Land, for they - never intermarry wirh the common People. All the Gentry, from the King's Sons to thofe that are Mafters of an Acre, are equally noble, both by their Birth and the Conftitution of the Kingdom; for nobody is born either a Palatine, Senator, or Lord, but their Titles are always annezed to Employments, which the King gives to Perfons advanced in Age, and recommended by theis Merit.

The Dyet of Poland is compofed of two Houfes; the Houfe of Senators, anfwerable to our Houfe of Lords; and the Houfe of Nuncios, not unlike our Houfe of Commons; the Senators are the Bifhops, Palatinates, Caftellans, and the ten great Officers of the Crown; in all about one hundred and forty-two. In the Upper-houfe the Senators fit, not by any Writ of Summons, or Letters Patent, as in England; but only by Virtue of the great Preferments in the King's Gift, which they enjoy for Life; fo that the King conftitutes the whole Upper-houfe, but the Lower, are the Reprefentatives of the Gentry, elected by them alone in their refpective Provinces, without the Concurrence of the common People, who have no Privilege in their Election; infomuch that nine Parts in ten of the People in Poland are excluded from any Share in the Government.

The grand Dyet of Poland is nothing elfe but the King, Senators, and. Deputies, affembled in any Part of the Kingdom his Majefty commands. Without this great Affembly of the States, the King can neither make nor repeal Laws, declare War, conclude a Peace, make Alliance with any foreign Prince, raife Troops, impofe Taxes, or coin Money; in a Word, determine no Matter of any Importance, without the unanimous Concurrence of this Parliament, which they ftyle the free States of Polanid. Several Motives have inclined the Poles to eftablifh this Kind of mixt Government; which they take to be a juft Temperament, of whatever is to be found moft excellent in the feveral Monarchies, Ariftocracies, and Democracies that have been in the World. It has however appeared from Experience, that their Endeavours in this refpect have not been very fuccefsful, fince there is hardly a Conititution in the World, or at leaft in Edrope, that anfwers the Ends of Government worfe than theirs; which is very often the Cafe where Pcople aim at fuch a Degree of Perfection as is not to be attained in human Affairs.
5. The Republic is divided into two States, the Kingdom of Poland, and the great Duchy of Lithuanie; both which are but as one Body, having the fame King, the fame Dyet, the fame Laws, the fame Privileges, the fame Religion, and, as the natural Refult of all thefe, the fame Intereft: Thefe two States are fo very well united, that a King cannot be elected, a Law made, or any thing of confequence done, without the mutual Confent of both. The $\mathcal{P}$ oles are too proud to agree to defpotic Power: And therefore thofe pernicious Maxims of Tyrants, Si lubet licet, oderint chum metuant, and the like, would be but ill received among People that have all along fecured their Liberties by their Valour. As for the Kings of Poland, they may reft in Security in the Bofom of their Country, either without or within their Dominions, fince they have always their Subjects for their Guards, through indifpenfable Inclinations; for what contributes chiefly to the Happinefs of thefe Princes, is the loyal Obfervance and voluntary Obedience paid to them even by thofe that are at liberty to do the contrary.

Monfieur de Polignac, the French Embaffador, ufed to fay at War fore, That he thought a King of Poland more happy in his Perfon and Condition than a King of France; neverthelefs, this Authority of the King of Poland is fo limited by the Laws of the Land, that it does not exact more from the Nobles or Gentry than they think he deferves; for though their Behaviour be generally obfervant, yet do they tacitly feem to call in queftion his Power. The Polifh Nobility make no Difference between the King's Right and thofe of the Senate and Deputies, affirming that fince three Members compofe but one Body, they ought equally to fhare in the fame. The fmall Authority therefore of their Kings, and the Impoffibility of their act-- ing, have expofed Poland to the Infults of their Neighbours, and the Rage of their own People; as may be feen in the Civil Wars of the Coffacks, and the Treachery and Sedition of the Confederates; which could never have arrived at fo great a Height if the King had had fufficient Power to fupprefs them. Alfo the great Marfhal of the Crown, Lumber $/ k i n$, would never have had the Boldnefs to have oppofed King Cafmir's Defigns fo openly, and to have formed fo many Factions againt the Court, had he
not had Affurance of remaining unpunimed. We have divers Inftances of the Poles Love for their Kings, and particularly their long enforcing the Right of Sigifmund III. to the Kingdom of Sreeden in an obftinate War, which they revived feveral times; as likewife the fupporting afterwards the Pretences of Uladifaus VII. to Mufcovy; to omit divers others of a more antient Date.

This Refpect of theirs obliges them to come and fpend their Eftates at Court, to augment their Prince's Grandeur by their Prodigality and Magnificence. This appears by a Miftake made by a King of Bobemia, at the Interview between him and Cafimir the Great, at Glogau (which Place the former had demanded to bound the Limits of Silefia) when he faluted a private Gentleman, fplendidly cloathed, for the King of Poland: The Inclination of the Poles towards honouring their Prince is fo ftrong, that all they are able, even to the hazard of their Lives and Fortunes, they are willing to lavifh in his Service, without expecting any greater Recompence than the Glory of waiting on his Majefty's Perfon. A King of Poland, when he is juft, liberal, and religious; one, who obferves the Laws and Conititutions, and, in a word, who has no other Intereft but the Good and Safety of his Subjects, is as much refpected, and as faithfully obeyed in times of Peace and War, as moft Princes in Europe. As to what relates to War, no Monarch has greater Advantages; for he is neither at the Trouble of raifing Forces, or Expence in maintaining them; his Bufinefs being only to convene the Dyet, and they do all thefe Things. After War declared, he can continue the fame either by himfelf or his Generals, can regulate his Troops, and fee his Army paid out of theTreafury of the Republic; he has great Reafon to hope for Succefs in his Expeditions, becaufe he not having undertaken them on his own Account, thofe that engaged him will infallibly fupport him in them, and the rather, by reafon that what was done was done with their Confent. This has proved the Caufe of almof never failing Succefs to the Polifh Army till of late Days, when the King and his Subjects have not been in fo good Intelligence with cach other as formerly.
6. When the King is in the Army he has the fupreme Authority, gives battle when he pleafes, and befieges Towns as he thinks fit, and commands abfolutely all the Gentry to follow him into the Field on Horfeback at ever fo little Warning. At Home he has the Nomination of all ecclefiaftical Benefices, and of all fecular Employments, as well Military as Civil, through the whole Extent of his Dominions, with a great Number of royal Demefnes; which together with the State Dignities, he confers on thofe that have deferved them. He can beftow as confiderable Preferments as any Prince in Europe, and oblige and raife the Fortunes of whom he pleafes. He has a Right in naming Cardinals as well as other Roman Catholic Kings. He can fend and receive Embaffadors privately, in Matters relating to himfelf; but as to what concerns the Republic, the Senate muft have their Share in it. He can call, prorogue, and diffolve the Dyet at pleafure: In a word, the Poles term him the Protector of their Laws and Privileges, the chief Diftributer of Honours, the Head of their Republic, and fupreme General of their Forces.

The Poles attend his Perfon uncovered. The chief Senators generally ferve him at Table; firft tafting of the Cup before they prefent him with it. His Subjects never fit before him, nor cover theirHeads any where but in the Dyet, and there too the Senators are only allowed that Liberty, for the Deputies ftand behind with their furred Caps in their Hands. All Sorts of Gold, Silver, or Brafs Coin, are ftamped with his Image. All Juftice is adminiftered in his Name ; and at Church they pray for the King and Royal Family. When he is crowned, the Dyet allows him a Penfion of about $140,000 \mathrm{l}$. per Ann. which, together with his Patrimonial Eftate, maintains him a very fplendid Court. He has his Polifh, Germon, and Hungarian Guards, and has the fame Officers of his Houhold, as other Kings have. While the QueenDowager lives, the Queen-Confort maintains her Court at the 'King's Charge. But after the Queen Dowager's Death, or Marriage, or the King?s Death, the has a Re-
venue anfigned for that Purpore, over and above the Penfion, which the Dyct fettles upon the King and Queen; which, in that cheap Country, ferves to maintain them as high as our Kings live here.

The King of Poland has great Incomes of his own ; for the Poles never care to elect a poor Prince, for fear his Children may come to be a Charge to them after his Death. He gets befides vaft Sums of Money for Nominations to Employments ; which the late King did not fruple to fell, thongh directly contrary to the Conftitutions of the Kingdom; nay, the Ecclefiaftical Benefices, which are very confiderable, are alfo put under Contriburion by fome cunning Artifice or other ; thus the Promowion of the Bifhop of Cracow, whofe Bifhopric is worth cight thoufand Pounds Sterling per. Annum, which will go further than twenty thoufandPounds in England; was, in the Reign of King Jobn Sobiefki procured, by laying a Wager with the Queen of fifty thoufand Crowns, that he did not obtain that Preferment, which as foon as the King knew he beflowed upon him, and fo the Queen won her Wager. The Crown Revenues axife from Cufoms and Excifes, from Part of the Duties of the Port of Dontzick, from the heavy Tax laid upon the Feros, and from the Salt Mines, which all together bring in rather more than lefs than three hundred thoufand Pounds of our Money annually. But the King's Power in beftowing Preferments does not extend to Foreigners ; neither can he ake away any Poft that he beftows, or leffen its Revenues or Privileges. His eldett Son has the Title of Prince of Poland while his Father lives, but he lofes it upon the Acceffion of a new King, and is ftiled Prince, by the Name of his Family ; and fuch Precautions are taken, that it is very difficult for a King of Poland to make the Crown hereditary in his own Family.
7. We come now to fpeak of the Nobility of Polond, which comprehends all the Gentry in that Country, and even all thofe whom in England we file only Freeholders. Of thefe every Gentleman or Nobleman has his Coat of Arms granted by the Republic; but then he, or fome of his Family, muft have an Eftate in Land. They are capable of the greateft Offices in the Kingdom, and may buy Lands where they pleafe, and have a Right to be elected King, if their Credit and Intereft can procure it. Every Gentleman is a fovereign Prince in his own Lands, and has Power of Life and Death over his Tenants, who have no Laws nor Privileges to protect them. They dare not leave his Lands to go to others, on Pain of Death, unlefs he fells them ; and if he do his Tenants pafs with his Lands. But if their Lords ravifh their Wives, or Daughters, the Tenants may leave his Service.

If one Lord kills another's Servant he is not punifhed for it, but only obliged to give him another in his room, or as much Money as will buy one, and to maintain the Family of him that is killed. If he kills one of his own Slaves he only pays a Fine; nay, if one Gentleman kills another, he cannot be apprehended or imprifoned, unlefs convicted by a Court of Jutice, which gives him Time enough to elcape, and when condemned he cannot be executed without the King's Confent. No Soldiers can be quartered upon the Gentry ; if any Officer does it, the Dyet either fentences him to die, or declares him infamous. The Houfes of the Nobility are Sanctuaries, fo that no Delinquent can be taken there by force, though he has been arrefted. If a Nobleman will fwear that his Goods were not bought; but are the Produet of 'his Lands, he may fend them any where out of the Kingdom, and without Cuftom ; and after he has fworn, his Certificate fuffices, to exempt the Purchafer from the Duty. In Prufla the Nobles are not only free from Cuftoms, but likewife all other Inhabitants by the Magna Cbarta of Cubm. The Polifh Noblemen have alfo the Privilege of Pre-emption. All the Gentry of Poland are equal by Birth, and therefore they don't value Titles of Honour ; but think that of a noble Pole, or Gentleman of Poland, the greateft they can have. Neither the King nor the Republic beftow the Title of Prince, which belongs only to the Sons of the Royal Family ; for though fome are made Princes of the Empire, and as fuch enjoy
the Title of Prince; they have no Precedency upon that Account. Nor have they any Dukes, Marquifes, Counts, Vifcounts, or Barons, but what have foreign Titles, which the reft generally defpife; for they do not value any borrowed Character, or external Denomination: but fay, that it is intrinfic Worth and Scrvice done to their Country, that deferves Preferment. King Sigifs mund III. eftablifhed an Order of Knighthood of the immaculate Conception, created feveral Knights, and allowed them Privileges and Superiority above others, but they were fo much undervalued and defpifed by the reft of the Gentlemen, that the Order (in fpite of the royal Protection) foon came to nothing.

Thofe great Privileges make the Poliß Gentry powerful; many of them have large Territories, with a defpotic Power over their Tenants, whom they call their Subjects; fome of them have Eftates of five, fome fifteen, fome twenty, and fome thirty Leagues in extent. But the poor Gentry have their Votes in the Dyet as well the richeft. Some of them are hereditary Sovereigns of Cities, with which the King has nothing to do. Lubow mirf $k i$ pofefies above four thoufand Towns and Villages; fome of them can raife five, fix, eight, and ten thouland Men, and maintain them at their own Charge. The Gentry of Note have Horfe and Foot Guards, which kcep Centry Night and Day at their Gates. They make an extraordinary Figure when they come to the Dyet; fome of them have five thoufand Guards, fome had formerly ten thoufand. They cfteem themfelves, efpecially the Senators, above any Prince in Geriaany, and want nothing of fovereign Power, but the Liberty of coining Money, which is referved to the Republic. Foreign Embaffadors are obliged to make a great Figure here, otherwife the Geintry defpife them. When great Men have Suits at Law, the Dyet, or other Tribunals decide them ; yet the Execution of the Sentence mut be left to the longeft Sword; for the Juftice of the Kingdom is commonly too weak for the Grandees. Sometimes they raife five or fix thoufand Men of a Side, plunder and burn one another's Cities, and befiege Caftles and Forts; for they think it below them to fubmit to the Sentence of Judges without a Field Battle; yet formeriy, their Noblemen were little better than Slaves. Cromercus fays, that they were obliged to keep the King's Dog. The firt Rife is afcribed to the Privileges granted by Bolefous the Chafte to the Clergy, and afterwards when Poland was harrafied by Civil Wars; the Gentry obtained many Privilcges from their Kings, which they have fince taken Care to get augmented at every new Election.

The moft flourifhing Families in Poland are thofe of Radzivil, which has the Title of Prince; the Dukes of Wifnicwec and Zharare, one of which Family was elected King of Poland in 1664; the Prince of Lubomirky, whofe Family are Princes of the Empire ; the Princes of Czartoriky; the Princes of Sapieta, great Governors of Litbuania, the Family of Lezienfi; the Family of Fablenore/ki ; the Family of Priyemal $k$; and that of Lip/ki. Thofe that are not noble by Birth, may be created Noblemen. This was formerly at the King's Pleafure, but of late is at the Difpofal of the Senate or Dyet. All the little Dyets of the Republic mut give their Confent; and this muif afterwards be approved by the great Dyet, before they have their Patent. A Fero is made a Gentleman by marrying a Chriftian, and by fignalizing himfelf in the Wars; but the King muft propofe it, and the Dyet approve it. The new made Nobility are liable to feveral Impofitions and Inconveniencies, from which others are exempted; if any one be a Magiftrate in Cracow or Vilna, he and his Pofterity are noble. Nobility is forfeited here three Ways; by fome heinous Crime; for Inftance, when a Nobleman permits one that is ignoble to ufurp his Coat of Arms; by exercifing any Trade or Merchandize ; fometimes Pofterity are reftored, when Parents have quitted their Title through Poverty, and by bearing Office in any City that is not privileged. All the Nobility love to make a Shew, and to be fplendidly clad.

They formerly delighted in foreign Fafhions; when they had Wars againft the Mufcovites they followed
theirs, and when with the Turks they took up their Habits. Their prefent Garb is a Veft, that reaches to the Middle of their Legs, with a long Robe lined with Fur, and tied about their Middle with a Safh, little Boots, with Iron Heels, Fur Caps, and a Sabre by their Side. When they ride they have a fhort Cloak, like an Irib Mantle, furred within and without. The better Sort have rich Furs from Mufcovy, but the poorer Gentry content themfelves with the Skins of Tygers, Leopards, Panthers, and a kind of grey Furs. The fineft of their Fur-fuits coft above a thoufand Crowns, are worn only at Dyers, and defcend from Father to Son. Some of the Poligh Gentry imitate the French Fanion, and wear Linnen, Lace, Perukes, and Swords. The ordinary Sort of Gentry put Chaff into their Boots. Some of their Nobles have fifty Suits of Cloaths, all as rich as poffible, and they love to have their Servants as well apparelled almoft as themfelves.
8. As to the Peafants they are born Slaves, have no Notion of Liberty, but live well fatisfied without it ; in Courland they are as fubject to their Landlords as in Poland, and in both Countries almoft adore them. They love their Landlords, fight for them, and all they have is abfolutely at their Devotion. When they debauch their Wives, or Daughters, thofe poor Wretches do not think their Women the worfe, or that they themfelves are difhonoured by it. They have fcarce any Religion, but like Brutes, work on Sundays for their own Subfiftence, being obliged to work three or four Days in a Week' for their Mafters, without Meat or Wages. Each of them earns his Mafter, at leaft, ten Pounds per Annum. They have no Property, nor can they be made free, except they go into fome Convent, and are ordained Priefts, or their Mafters ravifh their Wives, or Daughters. When a Lord lets any Ground to a Peafant, he orders his other Peafants, at their Charge, to build him a Houfe, to give him a Cow, Hens, Geefe, and as much Rye as will keep him a Year. A Slave cannot fend his Son to the Univerfity without Liberty from his Lord. They reap their Mafter's Corn, and have rigid Tafk-mafters over them, who punifh them feverely, if they do not do as much as is required of them. Their Mafters commonly boaft of their Clemency, and fay, that though they have an abfolute Power over them, they feldom make ufe of it any more than other Chriftians do over their Horfes and Dogs.

Doctor Connor informs us, he afked fome Polifh Noblemen, why they fo inhumanly treated and undervalued their Boors; who anfwered, that formerly all the Boors revolted from their Landlords, and confpired to extirpate them, and murdered fo many, that the reft were obliged to hide themfelves, or to leave the Kingdom. But, at laft, the Gentry getting together from all Parts, and being amfited by their Neighbours, quelled the Peafants, who intended to have fet up a Commonwealth of their own, and brought them to fuch Extremities, that ever fince they have been contented to live like Slaves. In Winter they wear a Sheep-fkin with the Wool inwards, and in Summer a clofe-bodied Coat of coarfe Stuff, of a Colour much like our Chimneyfweepers, with forry Caps; their Boots are the Rinds of Trees wrapped about their Legs, with the thicker Parts to guard the Soles of their Feet againft the Stones; they cut their Hair clofe, like Monks, and fhave all from their Faces but a large Whinker. They walk gravely with a Pole-Axe in their Hand, and a Sabre by their Side', which they never put off till they go to Bed; it hangs by a Strap of Leather, to which there is faftened a Handkerchief, Knife, and Sheath, and a fmall Stone to whet their Knives.

In Litbuania the Boors Shoes are of the Barks of Trees, and their Stockings of thinner Bark, which they wrap about the Calves of their Legs. Before they enter any Town, they always take care to put on frefh Shoes; they alfo wear a Sort of afh-coloured Habit, with Sleeves, woven all of a Piece. The Boors here are more miferable than in Poland; for Gentlemen commonly go into Boors Houfes, though not their own, take all they have, and beat and wound them, becaufe they are not
able to bribe fuch as have Power to do them Jufice The Pruffan Gentry are not fo gaudy in their Habits as thofe of the more fouthern Parts of Poland; their Peafants differ alfo in Habits from thofe of Poland. and wear fometimes long ftrait Coats of Leather.
9. The Poles never live above Stairs, and their A partments are not united; the Kitchen is on one Side, the Stable on another, the Dwelling-houfe on the Third, and the Gate in the Front. Their Houfes are for moft part of Wood, but they have fome of Brick and Stone. Their Rooms are generally hung with Tapeftry, or Arras, but towards Tartary they keep no extraordinary Furniture, becaufe of the Incurfions of that barbarous People. They content themfelves with a few fmall Beds, with Taffaty Curtains ; and if any one lodge at their Houfes they muft carry their Bedding with them. The Moveables of the Peafants are a few earthen and wooden Difhes, a hard Bed, and a wretched Coverlid; their Children are not allowed Beds till they marry, but lie upon Boards by the Fire ; they have no Chimnies, but little Holes in the Tops of their Houfes. The Peafants Children go naked till they are four or five Years old, and frequently eat in the fame Trough with the Pigs. They crawl on their Hands and Feet till they are ftrong enough to walk, and when they are dirty the Mother wafhes them in cold Water, which makes them exceeding hardy.

The Peafants of Litbuania and Samogitio, build their Ioufes round, narrow, and open at top to let out the Smoke and Stink; they are generally covered with Boards, Straws, Bark of Trees, and live with the Fiamily and Cattle under the fame Roof. The Polifh Gentry have feldom any Gardens or Orchards, though their Country be very proper for it, and might, by making Cyder and Perry, fave a great deal of Corn which they confume in Beer. Their ordinary Meat is Beef and Veal; for they leave the Mutton to their Servants. They have Store of grey but no red Partriges; many Hares, but no Rabbets, than which they fay they would rather eat Cats; but they breed white Rabbets for the fake of their Furs; they have many Roebucks, but few Stags; Plenty of wild Oxen, wild Boars, Hogs, Pcultry, Pidgeons, $\mathcal{E} c$. There are manyHeathcocks anid Pheafants in Litbuania, and Buftards in Pruffa. The Baltic Sea has fearce any Fifh; but that Defect is fupplied by great Plenty of frefh Water Fin, from Lakes and Rivers. The Poles have a peculiar Way of preferving Cabbage ; they chop it fmall, put it into a Tub berween Lays of Salt, prefs it very hard, and afterwards pour warm Water upon it, which makes it ferment and ferves them for Pickle: This they preferve all Winter, and fometimes the whole Year ; though it fmells ftrong even at a Diftance, yet they think it a great Rarity.

Their ufual Drink is Beer, which in Prulfia is made only of Malt ; but in the reft of Polond, of Wheat ground fimall and boiled with Hops. Sometimes they mix it with Oats and Spelt, a Kind of Wheat which grows in Italy and Flanders; in Litbuania, Rufia, and Ukriin, they make both a red and a white Liquor with Honey, which they call Mead; at Warfaw they mix it with Spice, and Juice of Cherries and Blackberries. The Litbuanians and Poles have Wine from Hungary, Italy, France, and Germany; that of Hungary exceeds Spanifb Wine in Strength, is brought to Cracowv over the Carpatbian Mountains in large Canks drawn by Oxen, and fold at twenty Shillings the Polifb Pot, which is about three Quarts; the Italian Wine is alfo brought over Land, and on that Account is dearer than the other. In the Morning, both Men and Women generally drink Ginger, Yolks of Eggs, and Sugar, boiled in Beer; they are immoderate Lovers of rufty Bacon and Peafe; they eat all manner of Mufhrooms, and preferve them for Pickles; they eat great Quantities of Poppy-feed, drink the Milk of them, and make it into feveral Difhes and Sauces; they make likewife abundance of Oil of the Seeds of Hemp and Flax, which they eat on Faftdays ; they ufe Spice to that Excefs, that fome great Mien fpend twenty-five hundred Pounds per Anmun in that fingle Commodity: They ufe Spice and ickles in all their Sauces, which differ much from ours; fome of them are yellow, made with Saffron; others white, made with Cream, fome grey, made of

Onions, and others black, made of the Juice of Plumbs. They have Choice of all Sorts of Pot-herbs, and fome that were found nowhere elfe; they have alfo Sweetmeats of feveral Kinds, and make much Ufe of Piftachio Nuts.

They generally eat a great deal of Meat to a little Bread, though they have Plenty of Corn, efpecially Rye, which is much better than in other Countries. They are great Admirers of Roots, have a Difh called Crakat, made of coarfe Flower of Wheat, Barley, Millet, or Oats, and fometimes of a fmall Grain they call Manna ; on Flefh-days they eat it with Milk and Butter, and on Faftdays with Oil. When the Boors want Bread, they make it of Acorns dried and ground. Near the Mountains of Hungary there are wild Goats, which they admire as very good Meat : They alfo make a Difh of Beavers-Tails; Bears-Paws pickled they reckon a great Dainty. When they kill Elks, they do not gut them for fourteen or fifteen Days, and in Winter, not in a Month. When the Grandees come to the Dyet, they bring them in their Skins and Guts, and hang them at their Windows by five or fix at a time, till they grow rank, then they roaft fome, and drefs others like Beef A-la-mode; and none but great Men have this Difh at their Tables. The Poles are generally courteous and hofpitable to Strangers, invite them to their Houfes, converfe with them freely, and endeavour to imitate them. The Slavery of their Boors is fo much the more tolerable to them, becaufe they feldom want Victuals and Drink ; they have generally three or four Sorts of Things at a Meal, one Difh of Peafe with niced Bacon, another of Crakat, and two more of feveral Sorts of ftrengthening Roots, which they have in great Plenty in Litbuania; their Bread is coarfe and black, made of Rye, fmutty Wheat and Barley, all ground together.

They have abundance of Flefh, Fifh and Fowl; and Cattle, or Poultry, they think they cannot keep inW inter, they kill in Harveft. They are good Marks-Men, and maintain their Families, in a great meafure, by Fowling. Every Houfe has four or five Hand-mills to grind their Corn. The Peafants of Samogitia are not fo laborious as thofe of Litbutania, and confequently have not fuch Plenty; inftead of Bread they eat a Sort of Turnips as big as one's Head, which grow of themfelves, without Cultivation. They quench many red hot Stones one after another, in their Beer, Metheglin, and Mead, after they have boiled it a whole Night, in order to make their Bellies foluble; this Liquor they put in Veffels made of the Barks of Trees. They reward the ftouteft Drinkers at Feafts with a Shirt, Handkerchief, Frock, or the like. They live longer here than in Litbuania, and many of them reach a hundred and twenty Years. Formerly the Pruffians dwelt in Waggons or Huts made of Boughs, and the Peafants are not yet much improved in Architecture, for they generally live in Hovels built of Stakes, Roof and all,' twifted over with Rods, without any Covering; their Furniture is not much better, for the old Pruffans flept on the Ground, or on the Skins of Beafts, and thefe lie upon the Straw : They are content with fpare Diet, and more addicted to Sloth than Gluttony, yet, like the Poles and Litbuanians they drink hard, efpecially at Feafts; their former Drink was Water, or Mares Milk mixed fometimes with Blood; but now it is Mead and Beer. Their ordinary Food is Fifh they knew not the Ufe of Roots till the Knights of the Teutonic Order came among them ; but now the Peafants make them their chief Dainties.

When the Gentry make a Feaft, they never fupply their Guefts with Spoons, Knives, or Forks ; they muft bring them with them: They have a broad Piece of itarched Linnen fewed round the Table-cloth, for Napkins; the Reafon they give for it is, to prevent their Servants ftealing. Their Servants have their Meat reached them by their Mafters, which they eat behind their Backs: They bring twice as much Wine as their Mafters need, and drink the Remainder themfelves; they feize on what is left after Dinner, and their Ladies each of them carry a Napkin for dried Sweat-meats or Fruits. Their Feafts are nuade by Friends and Neighbours by Turns; Brimmers are much in ufe among the Poles; they will fcarce excufe a Man

VoL. II. NuMb. IO4.
except he pledges them. This Vice reigns equally irt Feafts and Taverns; and Saints-days are not excepted out of their Drunkards Calendar. Thefe Diforders are tolerated becaufe of the great Excife they bring to the State. The Mafter of the Feaft is efteemed a Niggard that does not allow his Guefts as much as will fuddle them.

The Inns in this Country are long Stables built up with Boards, and covered with Straw, without Furniture or Windows ; there is a Chamber at one End, but none can lodge there ; becaufe of Flies, Fleas, and noi-s fome Smells; fo that Strangers chufe rather to lodge among the Horfes, where there is alfo an intolerable Smell of rotten Cabbages, which thefe People keep always by them. Travellers are obliged to carry Provifions with them; and when Foreigners want, they apply themfelves to the Lord of the Village, who forthwith fupplies them. Poland being for moft part a champaign Country, a Calafh and two Horfes will rid a good deal of Ground there in a Day. Travellers ought to take more than ordinary Care as they pafs Bridges in this Country, becaufe they are generally very bad, and feldom repaired. When they go a hunting for Bears they catch thofe of the biggeft Size with Nets, and when they have hampered him, all the Hunters ride about him, and having pinned down his Head and his Feet with great wooden Forks, they bind him fo about with ftrong hempen Cords that he is not able to ftir then they rowl him into a great wooden Cheft; the Knots of the Cords are fo contrived, that with one pull they may be untied. The Bear is kept thus, till they have a mind to hunt him, and then they let him out at a Trap-door made on Purpofe.

They furround wild Bulls with a great Number of Horfemen, when each of them rides $u p$ and darts an Arrow at him ; upon this the Ox purfues his Enemy; then another darts him behind, and as he turns about to purfue him, they dart him fo by turns, till the Beaft being tired with purfuing fo many Affailants, falls down, and is eafily taken or killed. They have another way of hunting, by making the Boors fell a great Number of Trees; each Hunter fecures his Poft affigned him, at which they throw Darts, and as the Bull runs towards his Enemy, the Hunters from behind give him his Death's Wound; but if he breaks through the Inclofure, the next Hunter holds out a Piece of red Cloth, againft which the Beaft having an Antipathy, he immediately leaves that Perfon and runs at another, who being provided for him, commonly kills him.
10. The Poliff Ladies are generally very modeft, and not very apt to abufe the great Liberty allowed them. They feldom fir out of Doors without a Coach and Six to Church, or to vifit a near Neighbour, and are always attended by a great Number of Servants. When they go abroad at Night, they have twenty-four or more Flambeaux carried before their Coach. Their Train is borne up by He or She-Dwarfs ; and they have always an old Woman to attend them, whom they call Governante, and an old Gentleman for their Ufher. Notwithftanding all thefe Honours, they are entirely managed by their Hufbands, and difpofe of no Money without his leave. When they want any thing they muft afk him for it, kneeling, embrace his Knees, and call him their Benefactor: But fome few Trifles are allowed them of Courfe. The Fafhion of the Womens Cloaths comes nearer to that of the Men than in moft other Countries. They formerly wore Garlands on their Heads, compofed of Gold, Jewels, Flowers, Silk, and the like; but now they wear Silk Caps, lined with Fur, like the Men; in King Jobn III's Time they imitated the French Mode, becaufe the Queen was of that Nation.

The Peafants Daughters are fo extremely referved, that they will draw a Knife at any Man that offers to kifs them; befides, their Mothers have a watchful Eye over them, and make them wear little Bells before and behind, to give Notice where they are, and what they are doing; but thefe Precautions do not always fecure them. The Countrywomen are habited as in other Countries; but their Petticoats are very fhort; thofe in Red Ruffia go generally in Summer with an Apron before them that reaches lower than ordinary. The
wedding
wredding Feafts of the Gentry laft commonly three Days. If a Lady marry any of her Waiting-Maids, the cofts her almoft, as much as one of her Daughters. On the fecond Day all the Guefts prefent the Bride with fomething new, which makes a good Part of her Portion. The Princefs of Poland, when married to the Elector of Bavaria, had above one hundred thoufand Crowns prelented her.
Among the Boors a Maid never marries till the be twenty-four or thirty Years of Age, and has wrought, with her own Hands, feveral Bankets full of Cloths, of different Sorts; which, at the time of her Efpoufals, The is to diftribute among the Guefts that her Hufband brings with him. She muft alfo have ferved her Mother for a certain time. The fame Right is obferved with refpect to their Sons ; it is alfo obfervable, that thofe employed to make up the Match, always enquire more Arictly into the Manners and Behaviour of the Perfons, than as to their Stock of Corn and Cattle. Their Godfathers and Godmothers are always accounted-Relations, though they be nothing a-kin, and they cannot marry fach Kindred without a Difpenfation from the Bifhop.

The Burials of thofe of Quality are celebrated with Fuch Pomp and Magnificence that they are more like Triumphs. The Corpfe is carried in a Hearfe, or Chariot, with fix Horfes, all covered with black; the Coffin has a large black Velvet Pall over it, with a Crofs of red Sattin in the Middle, and fix long black Silk Taffels, fupported by as many of the deceafed domeftic Servants in clofe Mourning; feveral Priefts, Monks, and others, march before the Hearfe ; each of which carries a white Wax Torch in his Hand. Immediately before the Hearfe come three Men on Horfeback, who carry the Arms of the Deceafed; one his Sword, another his Lance, and a third his Dart. After the Burial Service is over, thofe who carry the Armour enter the Church on Forfeback, and riding furioufly to the Coffin, break the Arms of the Deceafed upon it, after which the Body is interred. Then there is a Feaft, where the I ay-Guefts not only drink to excefs, but likewife force the Clergy to follow their Exanaple. When the King dies he is laid on a Bed of State ; and a certain Number of Senators, Ecclefiaftical and Temporal; are appointed to attend his Corpfe. The Republic defrays the Expences out of the Revenues of the Crown. The deceafed Queen has the fame Ceremonies and Honours allowed her. When Women of Quality mourn they wear a coarfe black Stuff, and their Linnen is not much finer than Canvas; and the greater their Quality their nourning Weeds are the coarfer. All Senators, Deputies, and others, that appear at the Diet for electing the new King muft be in black.
11. The I, anguage of the Poles is the Sclavonian; but there are fo many different Dialects of it fpoken in the feveral Parts of this Kingdom, that one Part of the People farce underftand the other; they all agree, however, in multiplying Confonants; and if they did not foumd more Vowels when they fpeak, than are contained in the Words they write, it would be impoffible to utter them. The Latin is almoft as univerfally fpoken as the Sclavoniont, there being a School in every Village for the teaching it ; and the Girls learn it in the Nunneries. Their Terms of Art are chiefly German, and indeed there are whole Towns and Villages in Pruflia which are of Germon Extract, and ftill fpeak the German or High Dutch Tongue. The Armenian, Perfan, and Tartarian Languages, are alfo fpoken upon their Frontiers; and the Feres have introduced the Hebrere in fome Places; but with all thefe Languages, it is obferved, that their Learning is but fuperficial.

As to their Divines, their Learning, it is faid, confifts in adapting Ariftotle's Logic and Metaphyfics to their School-Divinity; and they value themfelves more on being verfed in the Signification of logical Terms, than in the Nature of the Things they reafon about. They enquire but little into Church-Hiftory, or the Practice of the Primitive Times, but feem to have an implicit Faith, and to be entirely governed by the Decifions of the Church of Rome; nor will they fuffer any

## Perfon

## Tenets

There are few native Poles that fludy Phyfic. The Phyficians are generally Germans, French, or Italions. An illiterate Quack of this Kingdom, Doctor Connor mentions, however, who lived in a Wood about fix Miles from Warfaw, undertook to cure the Venereal Difeafe in feven or eight Days by Bathing and Sweating. In the Water the Bath was made of, he boiled feveral Plants, which the Man made a Secret of; but the Doctor fays, as well as he could difcover, the chief of them were Hellebore, After, and the Capillus Veneris or Maiden-hair. That he bathed his Patients in a hot Decoction of thefe Herbs for four Days together, and made them drink of it-while they were in the Bath frequently ; that for four Days afterwards he laid them over the Tub to receive the hot Steams, covering them with Blankets, and making them drink of the Decoction as before. And thus by fweating, bathing, and drinking; he was affured he had done many wonderful Cures in venereal Cafes; and for the whole Cure demanded but two Rix-Dollars, which is lefs than ten Shillings Englifb. They feldom ufe Salivation in this Country, though venereal Diftempers are very common.

The Difeafe peculiar to the Poles, is that called the Plica, in which the Hair of the Head is matted together, and grows fo long, that it fometimes reaches down to the Middle, covcring their Backs, but generally it hangs in twifted Ropes; others have their Hair only matted clofe to their Heads, without growing to any length; and the Hair will be thus intangled and matted together in one Night's time, though never fo much Care is taken to prevent it; if the Hair be cut off it occafions a Dimnefs in the Sight, and fometimes a total Blindnefs; it alfo occafions Pain in the Head and Limbs, and Puftules to come out all over the Body ; the Foreigners that have been infected with this Difeafe, relate, that they have cut off their Hair without any Inconveniency attending it. The Bifhop of Pofen acquainted Doctor Connor that he was afflicted with this Diftemper in his Youth, and that cutting off his Hair, unknown to his Friends, he felt a thoufand racking Pains, which left him as his Hair grew again, but then the Diftemper returned. He obferved alfo, that on the cutting off his Hair he could fenfibly perceive a volatile Matter pafs in great Abundance through the Tubes of his Hair, which twitted and contracted the Locks, that when he put a Cap on his Head, it occafioned an intolerable Pain and Heat, which he fuppofed proceeded from the Preflure, by which the Humours were repelled, and forced back upon the Head. As to other Difeafes, it feems, the Poles are very little troubled with them. The Scurvy, or malignant Fevers, and Pleurifies, are feldom of fuch ill Confequence in Poland as in other Countries.

By the Laws of Poland the Eftate of the Father is equally divided among his Children, except any of them go into a Monaftery, and then their Parts are equally divided among the reft ; and the young Children here, as in other Popith Countries, are encouraged by their Parents to take the Vow upon them, that their Eftatcs may be preferved entire to the eldeft Son, which would otherwife dwindle away to nothing, where there happens to be a numerous Iffue.
12. We are fo apt to be biaffed in our Sentiments, by what happens in our own'Times, and as it were under our own Eyes, that we can fcarce bring ourfelves to think things ever were otherwife than as we now perceive them. But it is certain, that as reftlefs and turbulent as the Poles now are, they were formerly of a different Difpofition, and very much attached to the Perfons and Families of their Princes: Thus for feveral Ages they obeyed the Family of Piofius, who was raifed to the Throne by his Merit ; and upon the Death of Lewis, King of Poland and Hungary, the laft Male-Heir of his Family, they chofe his Daughter, and refolved to beftow their Crown upon her Hufband, who was Fagello, Duke of Lithuania, who took upon him the Name of Uladiflaus, by whofe Pofterity they were governed
till the Death of Sigifmund II, who was the laft of that Family, and died in 1574, when they chofe Henry de Bourbon, afterwards Henry III, of France, for their King; upon a Promife, that he would marry the Princers Anne, Sifter to their late Monarch.

When he abdicatui they made choice of Stepben Batori, Prince of Iranfilvania, who actually married the Princefs before-mentioned, but had no Iffue by her. Upon his Death in 1586 , they made choice of Sigifmund de Vafa, Prince of Sweden, becaufe he was the Nephew of Sigifmund II, and confequently by the Mother's Side of the Race of their antient Kings. The laft of his Race was Cafimir, who abdicated the Government and retired to France; and in 1670 they chofe Michael Wiefnoreijki, whofe Succeffor was Fobn Sobiegi; upon whofe Deceafe in 1696 , the Poles, contrary to their ufual Cuftom, rejected his Family, and made choice of Auguftus, Elector of Saxony, the Father of the prefent King Augufus III. The Faitions that have long reigned in Polond, have hindered thefe laft Monarchs from making that Figure in Europe, which their Predeceffors had done; but it does not follow, from hence, that the Poles will always continue uneafy and difcontented.

On the contrary, they feem now to have a juft Senfe of the ill Confequences of their Divifions, and are endeavouring to put an End to them by deciding as faft as poffible the Quarrels amongft their Grandees, which is the fureft way of reltoring the public Tranquility: And whenever this fhall be effectually brought about, there is no Queftion to be made, that the antient Glory of the Polijb Nation will revive; for they are ftill poffeffed of very large Territories, capable of great Improvements, and are very able to raife a Force fufficient to defend themfelves againft the Incroachments of any of their Neighbours, and even to render themfelves as formidable as any of the northern. Powers. It is indeed true, that in their laf Election they were awed by the Ruffians; but this did not fo much proceed from the fuperior Power of that Empire, as from the want of Union among the Poles; and perhaps before their Throne again becomes vacant, they may be in a Condition to repair their paft Errors, and to make a free Choice of fome Prince, capable of governing them, according to their Conftitution, and thereby extinguifhing thofe Feuds and Jealoufies, which have rendered them fo inconfiderable fince the Days of Fobn Sobie $\sqrt[k i]{ }$, the laft of their Monarchs under whom they made any Figure; and whofe Covetoufnefs, which proceeded from the Defire of fixing the Crown in his Family, was the chief Reafon that Defign of his did not take Place.

The unfortunate Stanilaus Lezinfin who fill wears the Title of King of Polend, was endowed with all the Qualities requifte to make his People happy, brave, generous, pious, juft, and affable to all Ranks of People; he was only unhappy in being the Inftrument of Sweden firt, and afterwards of France; which rendered him very juftly fufpected to a great Part of his Countrymen ; fo that we may reckon it an Happinefs to Poland that he has no Male Ifue, and that his Daughter, the French Queen, has but one Son ; fince this might otherwife prove a new Source of Trouble, not to this Country only, but to all
its Neighbours ; for though in Time of Peace Poland has been little regarded, yet the Difturbances there have proved more than once the Caufe of Wars in many other Parts of Europe.

I3. We will clofe this Section with obferving, that nothing fhews more elearly the Folly of that kind of modern Policy, which confifts in weakemins and diftreffing our Neighbours, than the prefent State of plend This Country, as well by its Situation as from the natural Genius and Difpofition of its Inhabitants, is the proper Bulwark of Chriftendom againft the Turks, whom they have refifted with as much Succefs, and over whom they have gained greater Victories, than almoft any other Nation. If we confider them in this Light, it is very eafy to fee that it can never be the true and natural Intereft either of the Houfe of Auftria, or of the Ruflans, to promote Troubles in this Kingdom, becaufe the more powerful and formidable the Poles were, the lefs able the Turks would be to alarm either of thefe Potentates. The Grand Signior indeed has mewn a true Spirit of Policy, in never attempting to difurb this Nation even in its loweft Circumfances; but contented himfelf with the Security that he reaps from their Confufions; fince, if he had ever attacked Polond, it would probably have put an End to them; and though at firt he might have made great Conquefts, yet when the Spirit of the Nation was once roufed, he would have been quickly driven out of them, as he knew, from the Experience of former Times.

If the Poles could once fo fettle their Affairs as to have time to confider the Advantages that might refult to their Country by the extending their Commerce, it is not at all impoffible they fhould fucceed therein, though they have neglected it fo long. I have been led to this Remark by the Knowledge I have of a Project that was formed by the late King Augufus, for opening a Trade with Afia by the Help of the Crim Tartars, and tranfporting the Commodities that are brought from the Black Sea by the Niefter and the Bog. He had other great Views with Regard to Ruifia, and though at prefent they feem to have died with him, the Time may comie when they fhall revive again, and be carried into Execution by fome Polifs Monarch, either of his or fome other Family.
That Luxury and Wantonnefs, which are the natural Effects of Plenty, as that generally fprings from Trade, commonly produce fuch a Spirit of Idlenefs and Profufion, as is inconfiftent with the Prefervation of Manufactures and Commerce ; and this occafions thofe Changes in thefe Bleffings, which appear abfolutely unaccountable to the unthinking Part of Mankind. The Country of Poland abounds with natural Commodities, if the-Inhabitants knew how to make ufe of them; and with a numerous and laborious Race of People, who would foon become rich if they were properly employed. We have reafon to expect therefore, that fome time or other, awakened by their own Neceffities, or provoked by the Example of their Neighbours, they will think of improving their Lands, working up their Commodities, and vending them in different Parts of Europe; which, whenever they do, will infallibly make them a rich and happy Nation.

# SECTIONV. A frort Account of the UKRATN, and of its Inbabitants the Cossacks. 

Bavaria had -1 Collected from the Writings of Mr. Beauplan, and others.

#### Abstract

5. An Account of the Etymolory of the Name and Origin of the People called Coflacks, weith the regular Detail of their Hijory to the Time of tbeir being dijperfed, and obliged to put themfelves under the Protection of the Mulcovites, Turks, and Tartars. 2. A hoort Defoription of the Ukrain, and of the principal Places therein; the Nature and Extent of the Country, and the Manner in wbich it was Settled, and innabited by the Coffacks, wobile they acknowledged themjelves Subjects to the Crown of Poland. 3. The Temper and Genius of the People; their fingular Cuyfoms, and oddWay of Living; as alfo of the Rarities and Remarkables in tbeir Country. 4. The Manner of tbeir making War botb by Sea and Land, the Terror Spread by them througb the rwbole Turkihn Empire, and even tbrougb Conftantinople itfelf, and the dextrous Metbod they ufe for marcbing through a flat Country, in Sigbt of fuperior Bodies of Horfe. 5. Of the prefent State and Condition of the Coffacks; with Remarks and Obfervations upon the foregoing Section. Section.

-ACcording to fome Authors, the Word Coffack, in the Ruflian Tongue, fignifies Free-booter or Banditti ; others derive it from Cofa, fignifying a Goat, becaufe of their Nimblenefs. Some fay, that Cofa, in the Sclavonian Language, fignifies a Scythe, their ordinary Weapon. They are thought to have come firt from the Inlands of the Boriftbenes, near the Mouth of that River, and were called Zaporowejki, or Zaporienfes, from the Porowis, or Cataracts and Rocks in the Nieper. The Turks ufually call them Ruffans. They dwell in a Part of Red Ruffa in Poland, and in Bafferabia, betwixt the Rivers Boriftbenes and the Niefter. They are terrible to the Turks, becaufe of their Invafions by the way of the Black Sea. In 1548 , in the Time of Sigimmund I, King of Poland, thefe Colfacks were only Volunteers of the Frontiers of Rufia, Volbinia, Podolia, and the other Provinces of Poland. Who affembled together partly to defend themfelves from the Tartars, by fecuring the Paffes of the Nieper, and attacking them, as they returned with their Prey ; and partly to rob upon the Black Sea, where getting rich Booty, they drew more into their Affociation. Sometimes they made Defcents upon Natolia, and plundered the great Towns, as Trebisond and Sinope; at other Times they have advanced within two Miles of Confontinople, and brought off Booty and Prifoners.
At firft they were about fix thoufand, under Euffachicus Dofcovitus, their General ; but their Numbers were quickly increafed by their Neighbours, becaufe of the Gain they made by their Piracies, Part of which they laid up in their Magazine, and the reft they brought Home to their Houfes. About the End of the Seafon, thefe Adventurers feparate, and agree upon the Time and Place of Rendezvous next Spring in the Ines and Rocks of the Nieper, whence they return to their Piracy. Stepben Batori, King of Poland, who began his Reign in 1576 , confidering the Service that might be made of thofe Thieves, for guarding the Country and Frontiers againft the Inroads of the Tartars, formed them into a regular Body ; and they ferved him as Foot-Soldiers; for the Polifs Army confifts chiefly of Horfe. He gave them the Town and Térritories of Tetchtimorow, about eighty Miles in length, in the Palatinate of Kiow, upon the Boritthenes ; which Town they made their Magazine, and the Refidence of their Governor-General, whom they named, and gave him Power to chufe Subalterns. Stephen Batori alfo joined two thoufand Horfe to this Coffack Infantry, to whofe Maintenance he affigned the fourth Part of his Royal Revenues, whence they are called 2 uartani. Thefe Forces fo weil fecured the Frontier, that the Country beyond Brefaw, Bar, and Kiow, betwixt the Niefter and Nieper was re-peopled, the Towns rebuilt, and Colonies planted there from the neighbouring Places.
The Coffacks being thus brought into good Difcipline, did confiderable Service to the Crown of Poland, but have fince done the Republic much Mifchief by their frequent Rebellions; for the Coffacks knowing their own

Strength, and of what Importance they were to the Poles, began to fet up for themfelves, and would not obey the Orders of their Superiors, and acknowledge the Power of the Poles over them. Their firt Rebellion was in 1587, under their General Fobn Podkowa, who was taken, and his Head ftruck off. In ${ }^{1} 596$, Sigijnund III, upon the Complaints and Threats of the Grand Signior, forbad them to pillage any more upon the Black Sea. They obeyed his Orders for a while, but then turned their Force againft Rufia and Litbuania, under the Command of their General Nalevakio; and having had fome Advantages over the Polifh Army, commanded by General Zolfkioroki, they looked upon themfelves as invincible; yet that noble. Warrior found means to block them up fo clofe, that he forced them to deliver him their General, who was beheaded.
In 1637 was laid the Ground of a new War with the Coflacks, their Numbers being greatly increafed by the Multitude of Boors, who frequently went over to them, to fhare their Privileges. Some great Men in Poland who had got Eftates in the Places appointed for the Quarters of the Colfacks, were of Opinion, that their Revenues would be confiderably increafed, if the Liberties of the Coffacks were abridged. Whereupon they advifed the King to reftrain them, and began to ufe the fame Severity to the Coffacks as to the Polifb Boors, who are obliged to work three Days in a Week with Man and Horfe for their Lords, and to pay fo much Corn, Poultry, $\mathcal{E}^{3} c$. to carry Home their Mafter's Wood, to pay him fo much Money, and the Tenth of their Poffeffions. The Polijb Lords being abfolute at Home, and not punifhed for killing their Slaves, they reprefented, That the Caffacks deprived them of all Advantages they could expect from their Lands in the Ukrain ; for when the Boors were difobliged they went to them. Therefore they refolved to build a Fort at Kudac, at a Point where the River Zivamer falls into the Nieper or Borijfbenes, and therefore very convenient to bridle the Coffacks; who undertanding the Defign, cut in Pieces two hundred Men, that guarded the Building ; but being attacked by the Polifb General Potofki, and divided among themfelves ; they were routed at Korfum, and forced to deliver up their General, and four more of their chief Officers, who were put to Death at Warfarw, though Potoki had promifed them their Lives. After this, all their former Privileges were taken from them, wih their Fortrefs Tetcbtimorow, and in their Stead a new Body of Militia was fettled there. This inraged the Coffacks, who again tried their Fortune with Potofki, but were worted, though they fought with great Bravery. Then they fortified themfelves upon the River Mareza, beyond the Boritbenes. After this, the Poles having loft fo many Men, by endeavouring to fuppreís them, they were forced to promife that their ancient Privileges Mould be reftored, and that their Militia of fix thoufand Men, fhould be re-eftablifhed under a General appointed
by the King. The Coffacks returned to their Homes, and laying down their Arms upon the Faith of their Treaty, were killed or plundered by the Polifh Soldiers, and another Militia fet up, excluding the true Colfacks, and among other oppreffive Methods the Poles took from them fome of their Greek Churches.
But the Tartars afterwards ruining a great Part of the Ukrain, convinced the Poles of the Necefity of reftoring the Coffacks. Uladijlaus IV. making War upon the Tartars, was very careful to fee it done, and gave them for their General Theodore Cbimielinki, and granted him a Privilege to build fome Mills; but a Poliff Gentleman, named $\mathcal{F}$ arinki, burnt them, ravifhed his Wife, and afterwards killed both her and her Son. The Coffacks were alfo provoked by their Landlords, who farmed out their Lands to the Feress, who monopolized all the Trade of the Country, and got fo much Power that they would not fuffer them to marry, or baptize, but upon their own Terms. Thboodore and his Coffacks obtaining no Redrefs, or Satisfation, for thofe Injuries, raifed an Army of above twenty thoufand Men, burnt, plundered, and ravaged the Country, and did what Mifchief they could to the Polifs Nobility. Upon which the Senators defired the King to march againft them ; who anfwered, that they ought not to have burnt their Mills. King Fobn Cafimir favoured them underhand, and defigned to make ufe of them for the Conqueft of Crim Tartary, at which the Poles, being diffatisfied, levied an Army of fifty thoufand Men, whom the Coffacks defeated, killed ten thoufand upon the Spot, and took the City of Kiow. To revenge this Affront, the Poles fummoned the feventh Man throughout the Kingdom, and marched againft the Coffacks, without the Confent of the King, and were again defeated by them.

But while Cbimielin/ki was celebrating the Nuptials of his Son, with the Daughter of the Prince of Walacbia, at Kiow, the Poles furprized the Colfacks, plundered the City, and took the Grecian Patriarch Prifoner. The Coffacks fent to the King to know whether this had been done by his Authority? He anfwered, no; and that it was done by the Nobility out of Revenge. Upon this Cbimielinki called in the Crim Tartar with one hundred thoufand Horfe, againft whom the King went in Perfon, at the Head of the Nobility, and totally routed them, "though they were three to one ftronger than the Poles. Cbimielinski gathered up the Remainders of his fcattered Army, 'and continually harraffed the Country, fo that the King was obliged to make an Agreement with them; but the Nobility were difcontented at it, and alledged, the King had granted too much: This Peace was made in 1649 . Cbimielinski fearing the Poles would not obferve that Treaty, made an Alliance with the Grand Signior and the Prince of Moldavia, and at a Dyet he propofed fuch Terms as fhewed he intended to make himfelf an abfolute Prince, under the Protection of the Turks.

Thus a new War broke out in 165 I , when the Coffacks, and their Confederates, befieged Smolensko, took it next Year, and ravaged Litbuania; they took Wilna, and fome other Cities, where they committed great Barbarities: It was chiefly owing to them that the Mufovites got Poffeffion of the Provinces of Smolensko and Siberia, and the greateft Part of the Palatinate of Kiovia, whieh were confirmed to them by the Treaty of Oliva, in 1666. They have fince thofe Days fuffered many Changes of Fortune, as well as Diminution in Numbers; but at this time however they are tolerably free, fome under the Proteation of the Turk, others under the Poles; but the greateft Part of them own themfelves Subjects to Rufia. After giving their Hiftory, which is fingular enough, and very well deferves the Reader's Attention, we will next confider the Country in which they live, and which from the Flatneifs of it, has been fuppofed, not without great Probability, to have been left partly by the Sea, and partly by the great Rivers that run through it, in the fame manner as the Ancients report of Lowerer Egypt, and as we know that Tract of Country was certainly lef, which is called Marfbland, in the County of Norfolk.
2. The Word Ukrain fignifies a frontier Country, and lies betwixt 48 and 52 Degrees of North Latitude, the

Vol. II. Numb. 104.

Niefter is their weftern, and the Nieper their eaftern, Boundary. According to fome Authors Kiow is the chief Town; and belongs to the Mufcovites, being taken from the Poles in 1633, by the Confederate Army of the Mufcovites and Coffacks. This City gives Name to the Palatinate of Kiorv, which had Princes of its own till it was reduced to a Province by Cafmir III, who began his Reign in the Year I 333. The Ruins of the Walls fhew it to have beers eight Miles in Compafs: Here are to be feen fill the Ruins of many Arches, high Walls, Churches, and the Sepulchres of many Kings, with Greek Infcriptions. The Church of St. Sopbia, whofe Walls are lined with Mofaic Work; and that of Sc. Micbael, remarkable for its gilded Roof, are ftill in a tolerable Condition.
Betwixt this Town and the Nieper lies New Kiow along the Banks of the Nieper, which has about fix thoufand Inhabitants. ThePapifts have four Churches, and the Greeks ten, with a fort of an Univerfity. The fecond Town of note is Pereflare, on the Eaft-fide of the Nieper, upon the River Trubicz, which falls into the Nieper two Miles below it: It lies ten German Leagues South-eaff from Kiow; is a ftrong Town, and contains fix thoufand Families. Here the Coffacks have a Regiment, and another at Kaniorw, a little lower on the Eaft-bank of the Nieper: On the fame fide is Cirkacfe, the Center of all their Retreats; which was burnt by the Polanders in 1637.

On the fame Side lies Krilow, and below that Cremierczow, the loweft Town upon the River, all the Country below it being defert. Further down the River there are many Ines, moft of them uninhabited, becaufe overflowed in the Spring ; but much frequented by Fifhermen. Several other Rivers increafe the Nieper at Romonow, but chielly Samar, which fupplies the Country not only with Fifh, but with other Commodities, as Honey, Wax, Venifon, and efpecially Timber: The Coffacks call this River the Holy River: In the Spring they catch Sturgeons and Herring here.
A little below this, the Poles in ${ }_{1} 635$, built a Fort at Kuda, which is the firft of the Porouki, Conftantinow on the River Sliez,which runs into the Nieper. Porowi or Porouki in the Ruffian Language, fignifies a Rock: Of thefe there are thirteen Chains that crofs the Nieper, and render the Navigation from the Ukrain to the Black Sea impracticable; fo that though the Ukrain be fruitful in Corn, yet the Inhabitants not being able to export it, fuffer much of it to lie untilled. Of thefe Rocks, fome are under Water, fome above, as big as Houfes, very near to one another, and ftop the Courfe of the River; fo that when it is low they make Cataracts fometimes of fifteen Feet high; but in the Spring, when the melted Snow fwells the River, all the Rocks are covered with Water, except the Seventh, which ftill hinders the River from being navigable ; near the loweft Poroki the River is not above a hundred and fiftyPaces broad, and therefore is the beft Paffage for the Tartars.
Below, there lies Tomakouka, the Place where the Cof= facks rendezvous, but their principal Retreat is below the Czertomelick, upon an Inand furrounded with a vaft Number of fmall ones; fome of them dry, and others overlowed in the Spring; fome of them are Morafles, but all of thent covered over with Reeds and Canes as big as Pikes, which hides the Paffages between the Inands, and makes it a Labyrinth, known only to the Coffacks, who call it Scarbniza-W oyskorwa, or the Treafury of the Army: Here they lay up their Money and Ordnance: The Turks have loft many Galleys among thefe Iflands, which not being able to difintangle themfelves, fell into the Hands of the Coflacks. From thefe Porouki the Coffacks are called Zaperouski, which is, the great Body of the Nation; and none can be lifted among their Number, till he has paffed in his little Boat all the Porouki's, and from thence, by the Mouth of the Nieper, to the Black Sed.

The River there is three Miles broad; yet both the Coffacks, and others, pafs it in this manner: They furnifh themfelves with flat-bottom Boats, at the Stern of which they faften crofs Poles of a good Length, to which they tie the Heads of their Horfes, as many on the one Side as on the other, to balance them; and putting their Baggage in the Boat, they row over, their Horfes fwim ming after them.

6 Q
The

The Ukrain is a very fertile Country, though the third Part of it is fcarcely cultivated; it produces fuch a vaft Quantity of Grain of all Sorts, that the Inhabitants are at a Lols how to confume it ; they cannot export any of it, becaufe their Rivers are not navigable. They abound in Honey, Wax, Wood, Cattle, Fowl, and Fifh. Hungary, Tranfylvania, Wallacbia, and Moldavia, fupply them with Wine; they alfo make good Beer, and Aqua Vite, out of their Corn; they have much Mead; the Salt-pits near Cracow furnifh them with Salt; they have alfo fome out of the Country of Pokutia, on the Borders of Moldavia and Iranfyluania, where there are Saltfprings: Their Houfes are of Wood, and their Fortifications of Earth and Wood, which they account better againft Cannon, than Brick Walls ; but they are foon fet on Fire.

The Rivers of note here are the Boriftbenes or Nieper, the Bog, Tyras or Neifter, the common Border betwixt them and Wallacbia, the Dezna, the Rofs, the Horin, the 'Stouez, and the Ster, near which was fought the laft Battle between the Poles and ColJacks, in 1651 ; which obliged the Coffacks to feek Protection among the Mufcorites and Turks. The Language of the Coffacks is a Dialect of the Polifh Tongue, as the Polif is of the Sclavonian; but that of the Colfacks is much more fmooth, and full of Diminutives, which makes it very agreeable.
3. The common People are of the Greck Church : Their Worfhip is the fame with that of the Ruffans; their Metropolitan refides at Kiow, is confecrated by the Patriarch of Confantinople, and fubject to him; the whole almoft of their Religion confints in Feafts and Holydays; but the greater Part of the Gentry are Papitts, and a few Proteitants. It is very common in this Country for Maids to woo the Men; if a young Woman be in love with a young Man, fhe is not afhamed to go to his Father's Houfe, and reveal her Paffion in the moft tender Expreffions, and promifes all Obedience if he pleafe to accept of her in Marriage : If fhe be rejected by the young Man becaufe he is too young, or not difpofed to marry, or the like, fhe tells him that the is refolved never to go out of the Houfe till he confent, and accordingly takes up her Lodgings there: To force her out, would be to provoke all her Kindred; nor would the Church fuffer them to ufe any Violence to her without inflicting heavy Penance, and branding the Houfe with Infamy; fo that after two or three Weeks the Parents, or the young Man himfelf, being moved with the Conftancy of the Woman, accommodate Matters as well as they can, and make up the Match.

Their Manners are like thofe of Soldiers, not follicitous for what is to come, but fpend freely what they have among their Companions, and leave Futurity to fhift for itfelf; they are very inconftant, mutinous, and purfue their prefent Advantage rather than their Faith and Promife; they are great Drinkers, but by reafon of their Labour and Hardfhips, they have fo much Health that Phyficians are of little Ufe among them : They are of a good Stature, ftrong, nimble, great Lovers of Liberty, uneafy under any Yoke, and indefatigable: They are much given to fifhing and hunting. None know better the way of preparing Saltpetre, and making Gunpowder, their Country abounds with it, and feveral Parts of Europe are furnifhed from thence. This Territory was almoft a Defart till improved by the Induftry of the Coflacks, and other Colonies; the many Rivers which run through it add much to its Fruitfulnefs.

They have fome Animals peculiar to their Country, fuch as a Beaft called Bobac, not unlike a Guiney Pig; it makes Holes in the Earth, which it enters in October, and never comes abroad till April; within thefe Holes there are many little Apartments for their Provifions, Lodgings, and Dead; eight or nine Herds of thofe Beafts live together in fuch Caves. They are eafily tained, and are very diverting. When they go out for Provifions, they place a Sentinel, who as foon as he fpies any Body gives a Signal, and they all run to their Caves. The Founaky is a Kind of Goat, remarkable for his beautiful Fur, refembling Sattin, and a white Skin and fmooth Horns; be has no Horn in his Nofe, as fome report, but as he
feeds goes backwards.. They have many wild Horfes, of no Value but for their Flefh, which they fell in their Markets, and think it better than Beef or Veal: When thofe Horfes come to be old, their Hoofs, never pared, fo contract their Fect that they cannot go; in Summer they are mightily incommoded with Flies and Grahoppers, in fuch vaft Numbers, that they form a Cloud of five or fix Leagues long, and three or four broad, darken the Air in the cleareft Day, and deftroy all the Corn they light on in lefs than two Hours time.
4. When they rendezvous upon the Inands of Scarb-niza-Wa/kowa, the firft thing they do is to chufe their General for that Expedition; and to make their Boats. which they call Colna, of about fixty Foot long, twelve Foot deep, and as many wide. They are built very light, one Plank pinned on the Edge of another, and widening upwards. They have a Stern at each End, and abour twelve or fifteen Oars of a Side. They have no Deck; but to prevent their Sinking, though full of Water, they compafs them round with a Border of Reeds, as big as a Barrel, tied together, and faftened to their Boats with Ropes ; they have a forry Maft and Sail, but feldom ufe them, except in very fair Weather. Their Provinion is a Ton of Bifket, which they take out of the Bung as they ufe it ; a Barrel of boiled Millet, and another of Pafte, made with Water, which they eat with their Millet; every Boat carries about fixty Perfons ; every Man having two Guns, and each Boat five or fix Falconets or fmall Pieces of Cannon. They fet out about the Beginning of Fune, and return about the firft of Auguft.

They wait for a dark Night, that they may pafs undifcovered by the Turks Galleys, which lie at Oczakow to intercept them. With thefe Boats they cruize over all the Black Sea. If they fpy a Galley, they keep at a Diftance till Night, obferve the Courfe of the Veffel, and when it is dark come up and board it; they take out all the Cannon, Money, and Merchandize, and then fink the Ship, becaufe they have neither Skill nor Opportunity to ufe it. No fooner have the Turks Intelligence that the Coffacks are at Sea but the Alarm is taken immediately, which reaches quickly to Conftantinople ; from thence Couricrs are difpatched to the Coafts of Natolia, Romelia, and Bulgaria, to bid them be upon their Guard; but the Coffacks are generally too nimble for them, and are forty Hours on the Coafts before them. If a Galley fpy them in the Day-time (which is very uncommon; for their Veffels are not above two Foot and a half above Water) they avoid fighting, by rowing away from her, or retiring to Shallows among Reeds, where the Galleys cannot follow them.

This was their way of living till the Grand Signior obliged Sigifmund, King of Poland, to prohibit thofe Piracies. It was bad Policy in the Poles to let them chufe their own General; for this General being abfolutely their own Creature, is forced to comply with their Methods. They handle their Guns very dextroufly, and have Scythes fet long-ways upon Poles, with which they fight very fiercely, and at the fame time fkilfully; fo that regular Troops are often beat by them. They are very indifferent Horfemen, but excellent Soldiers on, Foot. They are inured to all manner of Fatigues and Hardfhips, obedient to their Commanders, active, and dextrous in intrenching themfelves, not only in the ordinary way, but alfo by making a Fence of their Baggage Waggons, which cover them as they march. Thefe moving Intrenchments are abfolutely neceffary for them, when they march without Horfe in open Plains in the Defarts of the Tartars, againtt whom they are forced to ftand wherever they meet them. There have been feveral Inftances, that one thoufand Coffack Foot marching betwixt their Chariots and Waggons, have, in a Plain, repulfed five or fix thoufand Tartars on Horfeback. Their Horfes, though fwift, are but weak, and ftopped by the leaft Barricade. But, however, this way of marching, in the midft of their Baggage and Ammunition Waggons, would fcarcely be practicable in any other Country but Poland and the Defarts of Tartary, which lie upon a level.
5. It is eafy, from thefe Accounts, to form a juft Notion of the original and ancient State of the Coffacks; but fome farther Explanations will be neceffary, in order to have a juft Idea of the Condition of this People at this Day. We will begin with what is requifite to be faid of their Country. In its utmoft Extent, it may be confidered as three hundred Miles long, and in fome Places above a hundred broad; but then this comprehends the Territory, inhabited by all the Coffacks; for they are, at prefent, diftinguifhed into various Nations. When we reflect on the Manners of the Mufcovites, Poles, Turks, and Tartars, and remember that their Dominions border upon each other, we fhall very eafily conceive, that the Frontiers could not afford very fafe or pleafant Habitations, and fhall not be furprized to hear :that they were defert. Hence it was, that this otherwife large and confiderable Tract of Country, came to be ftiled the Ukrain, which, in our Language, properly fignifies the Marches. The People who firft fettled on the Rocks in the Nieper were Vagabonds from all Countries, who built their Huts in the moft inacceffible Places, and were from thence called Coffacks or Goats, becaufe, like them, they dwelt out of reach.

But, by Degrees, as thefe People became numerous, they began to plant and improve their Country, which is naturally one of the richeft and fineft in Europe; but from its very Situation, fo liable to be ranfacked and eat up, whenever any Wars break out among the neighbouring Nations, which are none of them polite, or well governed, that we cannot expect it hould ever be brought into any tolerable Condition. Befides, the Coffacks, like the Buccaneers in America, were Planters only by Accident ; they looked upon living at Home as a Hardfhip, unlefs in the Time they wanted WinterQuarters; for their proper Bufinefs was War, and they grew rich, not by Induftry but Plunder. They were from hence regarded as Barbarians, and in that Senfe very juftly ; becaufe, to live by fpoiling others is the higheft Barbarity ; inafmuch as it is that Sort of Life moit repugnant to Reafon and the Laws of Nature. But there is another Signification of the Word barbarous, which implies Stupidity and Ignorance ; and chis cannot, with any Degree of Juftice, be charged upon the Coffacks, who have made as great Improvements in the Art of War as any Nation in the World. It is very true, that with refpect to us, and our manner of making War, thefe very Improvements appear barbarous, but that is for want of Confideration in us; for, if we reflect upon the Situation of their Affairs, and on the Contrivances made ufe of by the Coffacks for their own Security, we cannot but perceive the greateft Ingenuity in them ; and I think a little Time will not be ill be= fowed to fet this matter in a clear Light.

It has been before laid down that War was their Bufinefs ; and this was of two Kinds, defenfive by Land, and offenfive by Sea. In refpect to the former, the Country round about them was flat, and the Enemies they had to deal with were Poles and Tartars, who brought great Bodies of Horfe into the Field; to oppofe there with inferior Bodies of light-armed Foot, the Coffacks invented the Tabor, or Waggon, in thefe they carried their Baggage, Ammunition, and Provifions upon a March; and when they encamped, they took Care to have a River in Front, and a Morafs in the Rear ; covering their Flanks with an Intrenchment of Waggons ; and by the Help of this Difcipline, they have defeated Troops, that would have appeared terrible, even to the moft regular Armies; nay, to fuch a Degree, they carried this Art of fortifying with Waggons, that Field-Marfhal Munich, who was an Officer of great Skill and Experience, thought fit to adopt their Method in his laft War againit the Turks; and that with fuch Succefs, as enabled him to come off with Honour and Victory, when attacked by the moft numerous Armies the Ottoman Power could bring into the Field. This fhewed great Skill and military Prudence in that Officer, who alfo brought feveral Regiments of Coffacks into the Rufian Service: I will not fay as regular, but I may fay as fettled and eftablifhed Troops, and they have been
found very ferviceable. We muft, however, diftinguint between the Coffacks in the Pay of Ruffa and the Coffacks under the Protection of Rufia; the former are a Body of Troops of between ten and twelve thoufand Men, that may be marched any where, as Occafion thall require ; but the latter are-a great People, capable of bringing fifty or fixty thoufand Men into the Field, for the Service of the Ruflans, againft the Turks or Tartars, but as foon as the War is over they will expect to return Home.

In their offenfive Wars, which, as we have fhewn, the Coffacks carry on by Sea, the Invention of their Boats is admirable; for, in the firft Place, they are very light, fo that they may be cranfported from Rock to Rock with great Eafe. In the next Place, they are capacious, fo as to hold a great Number of Men, which gives them fuch a Power in boarding and attacking Places on the Sea Coafts, as it is hardly poffible to refift. Their Method of Building without Keels, and Sheathing with Reeds, defends them from finking, even if full of Water. Befides this, it makes their Boats, when filled with Men, lie fo deep in the Water, that they are not to be feen at any great Diftance, and yet they go at a prodigious Rate, fo as to be in no Danger, when purfued by any kind of Shipping in ufe among the Turks.

If indeed we take thefe Bark Boats out of the Water, and confider them independent of the Coffacks, who ufe them, and of the Ufes they make of them, they will appear very poor and defpicable Things, and we may fay the fame of their Waggons; but notwithttanding this, when all Circumftances are duly weighed, when we remember that thefe People are poor, weak, and defencelefs, in Comparifon of their Neighbours, have very few Fortreffes, and thofe compofed only of Wood and Earth; and that notwithftanding thefe Advantages, they have made a Shift to cover their Country fo well, and defended themfelves fo obftinately, as to make the Poles and Tartars weary of their Wars with them; we muft allow them fome Merit, with refpect to military Skill; on the other Hand, when we call to mind, that they have no Trade, no Veffels, no Ports to receive them, if they had any ; no Yards, little Timber, no Docks, Carpenters, or Seamen, we cannot help owning that the naval Exploits of fuch People, are in a great Meafure aftonifhing.

Their Government is entirely military, infomuch that in Time of Peace they have hardly any Magiftrates or Laws; but when the Nation, by whom they are protected (and at prefent fome of them are under the Poles, fome under the Turks, but the far greateft Part of them under the Rufrans) propofe they fhould rife and take the Field ; the firft Step is to give them leave to elect a General, who in their Language is called HETMAN or HATMAN, which fome modern Writers have miftaken for a proper Name; whereas, in reality, it is the Stile of Office, and anfwers to that of Imperator amongft the ancient Romans; and he has the abfolute Command fo long as the War continues; neither is it eafy to depofe him afterwards; for in this, as well as in all other Countries, Power has in it fomething fo pleafing, that no fmall Difficulty is found in reducing him, who has been once a Prince to the Rank of a private Man.

In the Hiftories of the Wars in the North, from the Beginning of the prefent Century to the Death of Peter the Great, Emperor of Rufia, the HATMAN of the Coffacks is often mentioned, and fome of them made a great Figure ; but of late, and indeed in all Times of Peace, we hear of no fuch Perfon; but when the Circumftances of Things fhall alter (and nobody knows how foon this may happen) it is very probable we thall hear of them again; as the Croats, Pandours, and Talpatches, with many other barbarous Nations, lay hid in their Dens and Marfhes, till the prefent War called them Abroad, and thewed more civilized Nations the dreadful Appearance of thefe terrible Militia. But it is right to enquire after, and have fome tolerable Knowledge, even of the mof obfcure Nations, that when thofe Accidents, which are always in the Womb
of Time, bring them upon the Stage; we may not be amazed at their Names, or in Doubt about their Force.

It was the Praife of Ulyffes, the wifeft Man in his Day in Greece, That he had feen and was acquainted with the Laws and Cuftoms, the Manners and Modes, of different Places and People. And this was a great Commendation, worthy the Pen and Pains of the immortal Homer, who has juitly celebrated the Labours and Travels of that excellent Man: But it is the Felicity of modern Times, that every Man may be an Ulyffes in his Clofet; may fail over the Ocean in his Elbow-chair, and travel all the World over in his Study. Neither is this a Flight of Oratory, a lively or extravagant Picture ; but a plain, certain, and undeniable Truth: Books and Maps will do theWork effectually; and a fmall Degree of Application, and that only for a few Months, will enable us to acquire more real and ufeful Knowledge than it was poffible for any of the Ancients to become Mafter of in the Courfe of his Life ; and therefore if we do not excel them, is not more their Glory than our Fault: He who bas never travelled, fay the Turks; be who bos never read, may we fay, thinks all the World like bis Father's Houfe; that is, has fuch narrow and confined Notions, as are unworthy of the human Mind, and fubject him to Wonder and Amaze, the moft fhameful Marks of Ignorance and Folly, upon every new Event; for to him all Changes are ftrange, and every Incident, becaufe unlooked for, is furprizing.
It was proper to throw together thefe Reflections at the Clofe of this Section, becaufe it is the laft in which we thall have Occafion to treat this Subject; for we are now to look Abroad into more civilized Countries, where every thing has a fofter Air, and the Inhabitants are learned and polite. It is true, that the vifiting Countries, like thefe, feems to be moft expedient for modern'Travellers, who are fent abroad to acquire a genteel Manner and a correct Tafte ; but for fuch as travel at home, though it is certainly more delightful and entertaining, to read the Defcriptions of fair and fruitful Countries, thoroughly planted and carefully cultivated, abounding with rich Cities, great Towns, and pleafantVillages, adorned in all Quarters with elegant Structures, and affording every where pleafing Objects to the wandering Eye of the inquifitive Beholders, yet to thofe whofe Studies tend io higher Purpofes, this will feem no more than an Amufement; for to them the Variation of Power, the Change of Circumftances, the rifing and falling of Nations in the Balance of found Policy, feems to he the great, if not the only rational, End of fuch Enquiries. An Inftance will render my Meaning in this Refpect perfectly clear. The Beauties of Italy are very far from declining, her Artifts are as famous as ever, and her Virtuofi more fo; but it unluckily falls out, that while the Italians grow more polite, they fink more and more in their Power. There was a Time when the Italian Liberty was talked of, and before that there was a Time when it exifted, but now the Difcourfe of it is as little heard as the Thing itfelf is feen. The great Topic now, is the Bałance of Power ; which is no other than a Contrivance to render Slavery lighter, or at leaft make it appear fo, by dividing it into feveral Hands. The Expedient is neceffary and therefore proper enough, fince a foreign Yoke cannot be thrown off, or the antient Freedom of the Italian States reftored. But this is not the Cafe in the North, and amonglt Nations of whom moft People are content to know but little: It is to combat thefe Notions that we venture upon thefe Remarks, in order to infpire our Countrymen with an Inclination to examine into Matters of more real Importance, and which will very foon, perhaps while the prelent Generation fubfilts, more nearly concern us.

The Power of Ruffa is not yet of fifty Years ftanding ; but, in that time, it has made a prodigious Progrefs; and, at this Day, appears with formidable Greatnefs. From being infulted by the Poles, trampled on by the Swedes, and over-run by the Tartars, it has not only
grown frong enough to keep all thefe Nations in awe but has likewife made confiderable Conquefts upon Perfia, given a Check to the Turkijh Power, alarmed the Cbinefe Empire, and fpread the Terror of its Arms among the Faponeze, who have fcarce heard the Names of other European Powers. It is worth while, therefore, to enquire into the State and Forces of this Empire, and to learn fomething of that Policy, by which thirty Millions of People are kept in Subjection. We fhall take a proper time to examine this. It is indeed true, that the Power of Sweden is very much decreafed, but we cannot fay the fame thing of their Trade. They have lately opened a Paffage to the Eaft-Indies; and their Dyets are very intent upon promoting every Branch of their Commerce ; nor is there any Reafon to fufpect, that their Pains will be thrown away. The fame Spirit exerts itfelf, with at leaft equal Vigour, in Denmark; and when once the prefent War is over, and the Power of Prufia thoroughly eftablifhed by a general Peace, I dare prophefy, that fome Attempts, of the fame Kind, will be made on that Side. By Methods like thefe, the whole Face of the North will be changed, Induftry and Navigation will become the Bufinefs of People that heretofore knew nothing of eitner, and in the Space of a few Years, that Emulation which appears fo ftrongly among thofe Princes, muft neceffarily produce great Effects. All the old Ports in the North will be opened and improved, and new will be heard of, that at prefent want Names. Every Creek will be rendered advantageous, and every fifhing Town will become a Place of Trade; new Commodities will be raifed, new Manufactures fet on Foot, and new Schemes formed, to render thefe beneficial to the Subjects of thefe States, under whofe Protection they rife.
I do not pretend to fay, that fuch Changes, or Alterations, will prove detrimental to Great-Britain; I hope they will not. I am far from fuggefting, that they fhould become Grounds to us of Jealoufy, or Envy ; but what I aim at, is to prove, that they are Objects that demand our Attention. While Defigns, like thefe, are in their Infancy, they may be bent, and turned, by a fuperior maritime Power, to its Advantage. We may perhaps be Gainers by the Variation, that will be occafioned thereby in the State of Commercial Affairs, and the Rife of thefe new trading Countries may be made very profitable to our own: But, in order to this, their Views muft be confidered in time, and muft be conf1dered with great Coolnefs and Deliberation ; that we not attempt to oppofe what may turn to our Intereft, or to be drawn in to promote Projects beneficial to others and detrimental to ourfelves. Thefe are Motives, that fhould incline us, to look very circumfpectly into the Condition of the North. We gained a great Part of the Trade we have at prefent, by doing this, in the Reign of Queen Elizabeth; and we loft a Part of our Trade, by that Negligence; which, among other mifchievous Confequences, attended our fatal Civil War. It imports us now to provide againft any new Misfortunes of the fame Kind ; which can be only done by a provident Application to our own Interefts, and ufing, in due Time, the moft effectual Means to prevent the Current of Trade from running too ftrongly into the North; a thing that muft be attended with extraordinary Confequences, which it will be for the Reputation of our Governors to forefee; and in refpect of which it is their Duty to provide. That thefe Hints may prove fome way ufeful to fo great and falutary a Purpofe, and prevent: that Spirit from being extinguifhed here, which begins to be fo confpicuous amongft our Neighbours, is the fole View of their Author ; who, fince he can be no otherwife ufeful to his Country, thinks it incumbent upon him to exprefs his good Will towards it, by furnifhing Remarks worthy the Notice of thofe, who have more in their Power, and to whom he moft ardently wifhes Prudence, Diligence, and Succefs.

## C H A P TER III.

Comprehending Travels through the middle Parts of Europe, particularly, the United Provinces, the Aufrian Low Countries, Germany, Italy, Switzerland, Savoy, and the Territories of the Republick of Genoa.

## SECTION I.

The Travels of Mr. Maximilian Misson, through Part of Holland, the Spanifh Low Countries, Germany, Tyrol, and the Bi/boprick of Trent, in bis Way to Italy, containing a difinct Account of whatever appear'd to bim remarkable in the Places through which be paffed; together with Political, Hiforical, and Critical Remarks upon Perfons and Things, as be bas Occafion to mention them.

1. A flort Introduction, containing fome Account of the Autbor, the Occafion of bis Travels, the Nature and Defign of his Work, the feveral Editions it has gone through, and what is to be expected from this Abridgment. 2. A Defcription of the Country of Holland, the Neatnefs of the Cities and great Towns, the Conveniences of Travelling, togetber weith Jome Account of the two great Cities of Amfterdam and Rotterdam. 3. A Profecution of the fame Subject, including a Defrription of the Town of Delft, the celebrated Village of the Hague, the Univerfity of Leyden and its Curiofities, and the Town of Haerlem. 4. A more particular Defcription of the great City of Amfterdam, the publick and private Buildings there; an Account of an Order of Nuns called Beguines, and other Things woortby of Obfervation. 5. The Autbor's Fourney from Amfterdam to Utrecht, Defoription of the Places upon the Road, and Remarks on the Harmony wwhich Jubffes in Germany between Perfons of different Religions. 6. A circumplantial Defoription of the great City of Cologne, the Capital of the Arcbbijopprick and Elecitorate of that Name, the publick Edifices therein, zeith Some judicious Remarks upon popijo Superfition. 7: The Autbor's Pafjage on the Rhine from Cologne to Mentz, Defcription of the Country and Villages on both Sides that River, reith. a Correezion of a vulgar Mifake about the Tomb of Drufus at Mentz. 8. His Paflage on the Maine from Mentz to Franckfort, Defcription of this City; a very curious Account of the Golden Bull, the Original of which is kept there, and other Particulars. 9. His Fourney from Franckfort to Worms; a large Account of the laft mentioned Place, as alfo of Frankendal, Manheim, and Heidelberg. 1o. His Pafage from the laft mentioned City, tbrough a very pleafant and agrecable Country, to Nurembergh; a Defcription of that Place, and of the Diadem of Charlemagne kept there; of a Book printed by Fauftus in. 1446, and anotber in 1449; weith Some Remarks on the Invention of Gunpowder, and otber Curiofities. II. $A$ Defoription of Ingolftadt, Neubourgh, and a very particular Account of the Imperial City of Augsbourg, the publick Edifices therein, the Drefs, Cuffoms and Manners of its Inbabitants. I2. An Account of the Country of Bavaria; of the Capital City of Munich, the Electoral Palace there, and other Curiofities. I3. A Defrription of the Country of Tyrol, of the City of Infpruch, of the Houfe there the Porch of which is faid to be covered woith Gold, the Country Palace of the Archdukes at Amras. 14. A View of the remaining Part of the Country of Tyrol, and of the BiJooprick of Trent, with a Defoription of the City of that Name, and of whatever is therein remarkable. 15 . Remarks and Obfervations upon the foregoing Section.
a Defcription. His Work was originally fmall to what it now appears, but as it was very well received, he reviewed it more than once, and made large Additions from Time to Time to the feveral Editions of it that were printed in French; all of which are 'preferved in the laft Englijb Tranflation, in which we find a Multitude of Paffages corrected, or render'd more cleai 'nd explicit, than in any of the former, and therefore we have taken Care; in reviewing this Abridgment, to compare it therewith, fo as to render it as compleat as it is poffible, as well as to free it from the numerous Mi ftakes that had crept into the former Extract of it pub. lifhed by Dr. Harris,
[^1]The Author divided his Work in the Original into Letters, which are dated from feveral Places; but to render it more agreeable to the Form of this Work, we have digefted it in the fame Manner with the other Parts of it; which, we fatter ourfelves, will render it more eafy and intelligible to our Readers. The great Number of Infcriptions, literary Differtations, hiftorical and critical Difcuffions, with which the Author, from time to time, augmented his original Performance, fwelled it to four Volumes; and though many of thefe are very curious and ufeful, yet as they did not fuit either the Defign of our Work, or the Bounds within which we are obliged to confine it, we have contracted them as far as it was neceffary, to bring the whole into a reafonable Compafs, with as little Prejudice as might be to the Sentiments of the Aurhor.

It is requifite farther to obferve, that thefe Travels were made in $168 \%$, and 1688 ; fo that the Reader will make the proper Allowances for the Alterations that have happened; in refpect both to Perfons and Things fince that Time. The Rout he took has been efteemed, by the ableft Judges, one of the beft, for making what is called the Grand Tour, in order to give 'young Travellers a View of the moft remarkable Parts of Europe, and the Method he has taken in defcribing the Countries and Cities through which he paffed, has been looked-upon as equally inftructive and entertaining ; fo that hitherto nothing of the fame Kind has appeared, either fo extenfive in its Defign, or fo well executed in the feveral Parts of it. Our Author was a very zealous as well as learned Proteftant, and he has left us great Marks of both in this Performance, which ftirred up fome Perfons abroad to criticife various Paffages in his Travels; but he was, generally fpeaking, fo much in the Right, and in the Difcourfes beforementioned, which may be ftill found in the laft Englifh Tranflation of his Book, he has defended himfelf fo well, that his Adverfaries have had no great Occafion to triumph. Thefe Particulars, which were neceffary for the Reader's Satisfaction, being difpatch'd, there is no Neceffity for enlarging any farther this Introduction, and therefore we thall proceed, as near as may be, in the Author's own Words, after putting the Perufer in Mind, that the Plainnefs and Familiarity of the Stile is fuch as may be expected, and has been always allowed to Epiftolary Writings.

${ }^{2} \cdot \mathrm{H}$Olland being a flat Country, like a continued Meadow', as we approach'd the Shore, the Pinacles of the Sreeples and the Trees appear'd as rifing out of the Water. The whole Country is cut into Canals and Ditches with incredible Labour, without which the Grounds would be fo foak'd with Water, as would render it not habitable; whereas now, by the Induftry of its Inhabitants, it is the richeft and beft peopled in the World, in Proportion to its Extent: Some make their Number amount to Two millions five hundred thoufand Souls, in the fingle Province of Holland; fome account only Two millions in all the Seven Provinces.

The Cities of Holland are generally very neat and beautiful, their Inhabitants fparing no Pains or Coft for that Purpofe, as appears by their conttantly wafhing them; and having the Infides of their Houfes curiounly painted; and their Windows, generally of Glafs, as clear as Cryftal: Their Cleanlinefs extends even to their Shops and Stables, which are kept neater here, than the beft Aparments are in fome Countries. Their Streets are fo clean, that you fee the Women walk almoft conftantly in Slippers; and the Canals being on both Sides planted with Trees, afford a molt delightful Thady Paffage through all the chief Streets of the Cities, and of fome of the Towns and Villages alfo. They reckon in the United Provinces one City (Amfterdam) of the firft Rank, about twenty of the fecond, upwards of thircy of the third, two hundred large Towns, and eight hundred Villages. But to return to their Canals.

Thefe are very convenient for travelling, which is generally perform'd in large Boats cover'd againft the Injuries of the Air, and drawn by Horfes, which go off and bring you to your Journey's End exactly at certain

Hours; they ferve for the Tranfportation of Commodities from one Place to another: And fome of thefe Canals afford tolerable Store of feveral Kinds of Fifh.
Notwithftanding all thefe Advantages, there are many Things wanting in Holland, their Supplies of Wines, nay, even of Corn, and moft other Things neceffary for the Suftenance of Life, are derived from foreign Countries, which occafions their having fuch a prodigious Number of Ships, fo that fome have computed them equal to all the reft that Europe can produce. But as on one Side they are chiefly oblig'd to the Sea for their Riches, fo on the other Hand it proves the Occafion of almoft irreparable Defolations; for though they take all poffible Precautions to maintain their Dams and Mills for the emptying of the Water, yet fometimes the Impetuofity of this Element breaks through all thefe Fences, which has coft at feveral Times the Lives of fome Millions of People. Thus, April 17,1429 , a Hundred thoufand People were drown'd about Dort. In 1446, there were fifteen Parifhes overflowed in the Village of Scheveling, 121 Houfes were carried away, and the Church, now clofe by the Sea-fide, ftood in the Middle of the Place.

Another Inconveniency is, the fudden Change of the Weather from Heat to Cold, a Thing not agreeable to thofe who are not ufed to it. Their Impofitions are alfo very heavy, which confequently occafions a Dearnefs of all Sorts of Victuals; but their Plenty of Trade feems to make them a fufficient Amends for this and every other Inconveniency.

We were not a little furpriz'd with the firf Sight of Rotterdam, for its Canals being, for the moft Part, fo deep and broad, that they are capable of receiving Veffels of a great Bulk; this affords the moft agreeable Profpect of a Mixture of Trees, Tops of lofty Houfes and Mafts, which at a Diftance appear wonderfully beautiful.

The City of Rotterdam has not always been in the fame flourifhing Condition, which makes it now challenge a Place among the Cities of the fecond Rank, its Port being both large and commodious, the City rich, populous, pleafant, and extreamly flourifhing; their Storehoufes for the Navy, the Townhoufe, and the Bank, are beautiful Structures; their Glafs-houfe (famous through all the Seven Provinces) manufactures abundance of little enamel'd Bowls, and fuch-like Baubles, curioully done, which are fold to prodigious Profir to the Savages in the Indies.
There are two French Churches here: The Statue of Brafs of Erajmus is fix'd on a Pedeftal of Marble in the Place called the Great Bridge, furrounded with Iron Rails. Erafmus is drefs'd in his Doctor's Robe, with a Book in his Hand ; and near it you fee the following Diftich, wrote over the Door of a little Houfe where he was born, Octob. 27, 1467. but died at Bafil? Fune 12, 1536 .

## Edibus bic ortus, mundum decoravit Erafmus Artibus ingenuis, Religione, Fide.

There has been due Care expreffed in this Refpect, for the firft Statue was erected 1540, of Wood; after that another of Stone, 1657; and this of Brafs, 1622.

We made a little Journey from hence to a fmall Village called Leckerkeck, about three Leagues from the City, upon the River Leck, where the Lord of the Manor told us, that the Salmon-fifhing (the fifth Part whereof belongs to him) ufed formerly to produce Twenty thoufand Livres per Ammum for his Share, but of late Years the Salmon having left that River, the Fifhing (which they are forced to continue only to maintain their Right) does not defray the Charges.

At the fame Place they fhewed us a Woman, who was the Year before, i.e. 1686, brought to Bed of fix Sons at one Birch, four of them were baptiz'd, and the eldeft lived four Months after.

At the Lord of the Manor's Houfe, we faw alfo a Servant-maid, named la Bonte, who under that Name was mufter'd, and ferv'd no lefs than feven Years in the Quality of a Mufqueteer.

## Chap. III.

We were credibly inform'd, that a few Years before there died in this Place one Gerard Baftianfon, a Fifherman, who was full eight Foot high, and though a very lean Perfon, weigh'd five hundred Weight : The Doors of his Houfe, and his Clothes, which were fhewn, fufficiently confirm'd what they told us of his Size.

The Tower of the great Church here is very remarkable. It leaned formerly on theNave of the Building; that is, bent towards the North-Eaft three Feet and a half, but by opening the Foundation, they have found Means to fet it up quite ftreight, as appears by a profe Infcription in Dutch; which alfo acquaints us the Ground was opened September the 25 th, 1651 , and was clofed again April the $22 \mathrm{~d}, 1655$. The Architect who performed this fingular Piece of Work, was one Nicholas Feremy Perfoons. Dion Caffus, under the Reign of Tiberius, mentions fomething of the fame Sort done, and that the Artift was but ill rewarded.
3. The ordinary Paffage-boat carried us in two Hours to Delft, a City that holds the third Rank in the Affembly of the States of Holland. One of the chief Curiofities they fhew you in this City is, the Tomb of Willianz Prince of Orange, affaffinated here by Baltbafar Gerard, 1584. The Arfenal, the Townhoufe, the Siadtbolder's Palace, the Grand Place, and the great Hofpital, with its Gardens, are well worth the Sight of a Traveller The Canal betwixt this City and the Hague is not above a League in Length, in Sight of Referyck and Voer burgb, two pleafant Villages, and adorn'd on both Sides with moft delightful Summer Villa's, fine Walks, and noble Gardens.
The Hague, being without Gates or Walls, is reckon'd among the Villages, notwithftanding which, as it enjoys the Privilege of a City, fo its Grandeur and Beauty feems to deferve that Name, being befides this the Refidence of the Princes of Orange when Stadtholders, of all the foreign Minifters, and the Place of Affembly of the 'States General; befides that, the great Concourfe of Foreigners of all Sorts, renders the People more obliging and fociable than in any other Place of Holland. Add to this, that the Air is very good, the Wood near the Town extremely delightful, and the Walk from thence to the Village of Scbeveling; near the Sea-fide, very diverting. Here they fhew a Chariot furnifh'd both with Wheels and Sails, which is carried along by the Wind upon the Sea-hore, very pleafant to walk on, it being both hard and level.

Its Situation is certainly the moft pleafant of any Place in Holland, having the before-mentioned Wood to the North, very fertile Meadows to the South, good arable Lands to the Eaft, and the Sea to the Weft.
The Princes of Orange keep their Refidence in the Palace of the ancient Earls of Holland; but that called the Old Court, where they formerly lodg'd, is by much the more regular Scructure ; the Houfes of Pleafure about the Hague are generrally very beautiful.

We took, among other Things, a View of the Church of the Village of Lofdun, fo famous for the two Bafons of Brafs preferved there, in Memory of the Three hundred fixty five Children of the Countefs of Hennebergh, Daughter to Florent IV. Earl of Holland, that were baptiz'd in them. The Story goes, that the faid Countefs having reproach'd a Beggar-woman with having too many Children, the poor Wretch, by way of Imprecation, wilh'd her as many as there were Days in the Year ; which being fufill'd, they were all chriftened, (the Boys by the Name of fobn, the Girls Elizabetb) and buried in the Church of Lofdun. The whole Hiftory is painted at large in the faid Church, on both Ends of which Picture the two Bafons are fix ${ }^{3}$ d The Truth of it is attefted by Erafmus, Vives, Guicciardine, and others.
From the Hague we went forward to Leyden, a Place not fo much frequented by Courtiers and Officers, nor fo much difturbed with Bufinefs and Traffick as the Hague and Rotterdam, but exceeding charming by its intrinfick Beauty and Quiet, fo that you feem to enjoy the Benefit of a Country Life in the Midft of a great City : Its chief Trade confifts in the Woollen Manufactory, which, together with the Univerfity, makes it
one of the moft confiderable Cities in Holland. There are commonly about 1500 Students.

In the Anatomy-Hall they fhew you a great many Skeletons both of Men and Beafts, abundance of Plants, Fruits, Animals, Arms, Habits, Pictures, Mummies, Urns, Images, E cc. and among the reft, the Picture of a Prufian Peafant, who having fwallowed a large Knife, the fame (as they tell you) was cut out again of his Stomach, and he lived eight Years after.
In the Gallery of the Phyfick-Garden, and the adjoyning Cabinet, called the Indian Cabinet, we faw divers natural Curiofities, among the reft a wing'd Cat and Ape ; the Hand of a Mermaid ; a vegetable Priapus, a moft curious Plant; a Monfter produced from a Hen's Egg ; a Piece of Money of Paper, made during the Siege of Leyden by the Spaniards in 1574, with this Infcription on one Side, Hac libertatis ergo; on the other, Pugno pro Patria: An East-India Serpent, on whofe Skin are to be feen, as fome fancy, feveral natural Figures refembling Arabick Characters; befides a great Number of Animals, Infects, and other Things, preferved in Vials fill'd with Spirit of Wine.

Before I take my Leave of Leyden, I muft not forget to give you an Account of the Rbine, which is loft near its Mouth, where moft other Rivers are at the largeft ; for the Rbine dividing itfelf into two Branches near Scbenkerfchoniz; one of them takes the Name of Wakle, the other a little above Arnbeim, that of XJ Jl ; and continuing its Courfe about feven or eight Leagues below that City, as far as Duerstadt, is there again fubdivided into two other fmall Channels, the chiefeft whereof takes the Name of the Leck; and the other Rivulet, which turns more to the Right, retains the Name of the Rbine ; till coming to Utrecbt, it emits another Branch, which taking its Courfe to the North, is known by the Name of the Vecbt ; and the other continuing its Courfe, by the Name of the Rbine, to Worden, it at laft lofes itfelf in two or three Canals at Leyden. The Caufe of this odd Fate of the Rbine, is attributed to an Earthquake, which throwing Part of the Dovens into the Mouth of this River, fhut it ever fince, the Waters were driven back, and confequently enlarg'd and deepened the Channel of the Leck as you fee it now.
They fhew you here the Shopboard belonging to that noted Taylor called Fobn of Leyden, (where he was born) the chief of the Anabaptists. His true Name was Fobn Bucold.
From hence to Harlem is five Hours travelling by the Paffage-boat, the Canal being lined with a great Number of Councry-feats and Summer-houfes.

Harlem is a large and pleafant City, and, for its agreeable Situation, may challenge the Preference before Leyden, moft of its Canals being mix'd with the little River Sparm. This City is chiefly famous for the Linnen Manufactory, and that of Tape, though of late Years they have made alfo great Quantities of Silkftuffs. The great Church (the largeft in all the Seven Provinces) and the Town-houfe, are ftately Structures ; and the Wood without the City is a great Addition to its pleafant Situation; for which it is defervedly admired.

Lawerence Coffer, who challenges the firft Invention of Printing, was a Native of this City ; though Fobn Guttenbergb of Strasburgh, and Conrade and Arnoid, two Brothers of Mayence, challenge that Honour before him. However, thofe of Harlem, in refpect to their Townfman, keep in their Townhoufe the firft Book that ever was printed, in a Silver Cafe wrapt in Silk, the Keeping whereof is committed to the Care of feveral of the Magiffrates; and the Statue of Lawerence Cofer is to be view'd in the fame Place. This Infcription is to be feen in golden Letters over the Door of the Houfe where the faid Lawerence Cofter lived.

MEMORIASACRUM,
Typograpbia ars artium omnium Confervatrix, bic primum inventa circa annum 1440

Meyer affures us, that in 1403. a Mermaid was caft afhore by a Tempeft near Harlem, who was brought to feed upon Bread and Milk, taught to fpin, and lived for many Years. Fobn Gerard of Leyden adds, that The would frequently pull off her Clothes, and run towards the Water, and that her Speech was fo confufed a Noife, as not to be underitood by any body: She was buried in the Church-yard, becaufe fhe had learnt to make the Sign of the Crofs. He fpeaks this upon the Credit of feveral Perfons that had feen her.
4. As it would require a long Continuance in the City of Amferdam to learn every Thing that belongs to it, and a large Volume to defcribe it all, I will content myfelf with giving rather a Scheme than a Defrription of a Place, which is, beyond all Difpute, one of the moof beautiful and confiderable Cities in the World; however, for its Extent it is in no wife to be compared to London, there being, according to a good Calculation, in London about Seven hundred thoufand Souls, but in Amsterdam not above Two hundred thoufand; but for Riches and Trade it may vie with any City in the World, witnefs their Eaft-India Company, which was founded in 1594, and has waged Wars againft very potent Princes, without any confiderable Interruption of their Trade.
This City is built upon Piles fix'd in the Marfes on the South Side of the River $Y_{e}$ or $T_{y e}$, which is a Branch of the Zuyder-Zee. Its Fortifications are very confiderable, confifting of many Baftions faced with Brick, furrounded with a Ditch eighty Paces broad, filld with running Water, which, together with the Sluices, whereby they can lay all the adjacent Country under Water, renders it almoft impregnable; befides the ordinary Garrifon, the Militia or Train'd Bands of the City confift of fixty Companies of a hundred and fifty Men each, commanded by Citizens.
The Town-houfe, which is reported to have coft three Millions, is a fpacious and moft magnificent Structure, of hewn Stone ; 'its Length is a hundred and ten Paces, and its Breadth twenty four: It is highly efteem'd for its regular Architecture, many are of Opinion, that the Foundation coft as much as the Fabrick above Ground ; however, the Doors which give Entrance to this great and fplendid Palace feem to be too fmall, in Proportion to the Whole, and the Square or Space before it is not either neat or regular.

The principal Church of the City was formerly dedicated to St. Catherine, but is now called The Nere Cburch: It is not fo large as either of the great Churches at Leyden or Harlem; for as Amferdam was no more than a poor Village within thefe five hundred Years, and its Condition, even in our Age, was not comparable to what you fee it now, this Church was built anfwerable, to its State at that Time. They affirm, that the Pulpit, made of Wood of Gotbick Carving, with its Canopy, coft Two hundred thoufand Crowns; and the Organs (which are extraordinary fine) at leaft a hundred thoufand Crowns; the Steeple intended to be erected remains imperfect. On the Glafs Windows is painted the Hiftory of the Emperor Maximilian V. who beftow'd; the Imperial Crown upon the Arms of this City. The Tomb of the famous Admiral de Ruyter, in this Church, is a fine Piece. The Synagogue of the Portuguefe feres is a fately Fabrick; but that of the HighDutch is but very indifferent. It is obfervable, that notwithtanding the Inquifition of Spain and Portugal, the Agents from both thefe Crowns at Amferdam were feres in 1687.

One of their Hourfes of Correction, called the Rafpbuys, is for the young Debauchees, where they are kept to their Tasks, under the Penalty of Whipping. There is another fuch a one for the Whores, filed the Spinbuys, who are not treated with the fame Severity. But there are enough of them alfo at Liberty here as well as in other great Cities.
The Roman Catbolicks enjoy Liberty of Confcience as in other Parts of the Seven Provinces, tho' their Number is not fo confiderable as fome have endeavour'd to perfuade us; for I have been inform'd by Perfons of

Knowledge and Credit, that the Roman Catboiicks, and all other Sectaries together, do not make a fourth Part of the Inhabitants of Amferdam.
In this City remains ftill a Convent of certain Nuns call'd Beguines, an Order erected A.D. 1207, compofed of Maidens and Widows, who have no Children, and who need no other Qualifications to be admitted into this Society, than a Teftimonial of their good Behaviour, and a Competency to live upon, either by themfelves or in Conjunction with one or more of the Sifters, as they find it moft fuitable to their Purpofe. Their Convent (which contains about a hundred and thirty Sifters) is built like a little City with a Wall and Ditch about it, within which ftands a Church, where they are obliged to perform their Devotions at certain Hours. They wear an odd looking black Habit, receive and pay Vifits, and quit the Convent when they pleare.
The Houfes of Amferdam being founded upon wooden Piles, this is the Reafon they will not allow any Coaches here, except to Phyficians and to fome Strangers of Note; inftead whereof, they make Ufe of a Kind of Sleds made like Coaches ; but this Carriage being but flow and uneafy, is not generally in Fafhion.

We faw at Amsterdam a French Opera, but in Want both of good Machines and Actors ; fo that we were not much delighted with it.

The Mufick-houfes of Amjferdam, fo much talk ${ }^{\circ} \mathrm{d}$ of, are publick Houfes or Taverns, where young Fellows of the Dregs of the People, come under Pretence of Dancing, but in Effect to pick up lewd Women, who refort thither in great Numbers, and carry them to other convenient Lodgings, thefe being intended oaly for their meeting Places. They are generally vifited by Strangers, out of Curiofity; and you muft either drink what they offer, or pay as if you did.
The Exchange of Amsterdam is two hundred Foot long, and a hundred and twenty broad: The Galleries above are fupported by forty fix Pillars, but are not fo fpacious, nor are the Shops fo many, as thofe over the London Exchange.
The Academy, ftiled the Illuftrious Scbool, is alfo an elegant Structure, divided into feveral Schools for Divinity, Philofophy, Hiftory, Law and Phyfick.

There are five high Towers in this City, which have each a great Clock, and are placed at fuch a convenient Diftance, as that the Hours of the Day are fhown-all over the Town.
I took another Turn to Lofdun, where I obferved, that the Infcription in the Church of this Village differs from the Paffage, relating to this Matter, found in the Annals, where the Bihop that baptized the three hundred fixty five Children is call'd Guido, Suffragan of Utrecht; whereas in the Annals he is ftiled William, Suffragan of Treves; but this might be occafioned by the Careleffnefs of the Tranfcribers.
5. We pals'd feven Hours upon the Canal betwixt Amferdam and Utrecbt very pleafantly; leaving on the Right Hand the old Caftle of Abeow, and the Village of the fame Name, the Boundary of the Province of Holland on that Side, about three Leagues from Amsterdam: We no fooner came to Utrecbt, but we found it to fall very much fhort of that extream Neatnefs we obferved in the Province of Holland, and yet it retains a fufficient Share of it too.
This City is famous for its Antiquity, its Univerfity, and the Union made here in 1579 , which was the Foundation of the whole Dutch Republick. The Steeple of the Cathedral is very high, and the Church contains many Relicks highly valued by the Roman Catholicks.

The Mall, and the Walks about it, without the Gates of the City, are infinitely pleafant, being upon that Score fpared by the French King's exprefs Command, when his Troops ravaged all the Country round about. A certain Gencleman of Utrecbt told me, that there were no lefs than forty eight Towns within the Reach of a Day's Journey from this City, and among them thirty three to which you may go, and come back the fame Day. The Country about Utrecbt has a far dif-
ferent

## Chap. III. Low-CoUNTRIES, GERMANY, EG®. <br> The Anfwer of the Archbifhop is as follows

ferent Face from what you fee in Holland, their Fields being for the moft part plough'd Lands enclofed with ftrong Hedges.

Two Hours from Utrecht we pafs'd in Sight of Zeift, and of the Caftle on the Right Hand: It is a very handfom Structure, enclofed with a Ditch full of running Water, adorn'd with Labyrinths, Gardens, Statues, Fountains, and other Ornaments, being built not many Years ago by one of the richeft Lords of this Country. The Fields betwixt Rbenen and Arnbeim are for the moft part planted with Tobacco, propp'd by Stakes ; and at Rbincom, a Village three Hours on this Side of Rbenen, you fee a Stone, which is the Boundary betwixt the Lordfhip of Utrecbt and the Province of Guelders.

Arnbeim has nothing remarkable but its Fortifications. Two Hours and a half beyond it we pals'd the $r \int \mathrm{Jel}$, divided into three Branches near each other; and afterwards continuing our Journey through Doefburgh, (a little City on that River, in the Province of Zutpben) we dined in a poor Village, if Milk with Bifcuit may be call'd a Dinner; but the worft is, that our Fare was no better at Night, when we lodg'd at $Y[J e l-$ burgh, a fmall difmantled Town upon the Borders of Cleves.

Between this laft Place and the City of Wefel the Country is fandy, and full of Woods: Its Fortifications are but indifferent, but they were then bufy in erecting a Citadel betwixt this City and the Fort of Lippe upon the Bank of the Rbine. It is under the Juriddiction of the Elector of Brandenburgh, who, by vertue of a Treaty made with the Duke of Nerwburgh, (now Elector Palatine) grants Liberty of Confcience to the Roman Catbolicks, the fame being allow'd reciprocally to the Protestants in the Dutchies of Fuliers and Berg, under the Elector Palatine's Jurifdiction. The Calvinists have two Churches, the Lutberans and Roman Catbolicks each of them one, for the Exercife of their Divine Worfhip. The Fews have likewife a little Synagogue there.
About half an Hour beyond Wefel we pafs'd the River Lippe, which joins its Waters with the Rbine, and arrived before Night at Duisburgh, a City of the fame Bignefs with Wejel, but without any Fortifications: It has however an Univerfity, but no great Concourfe of Scholars. The great Church belongs to the Proteftants, but the Roman Catbolicks enjoy alfo the fame Exercife of their Religion, and have even the Liberty of carrying the Hoft in publick Proceffion, though they refrain from doing it, for Fear of giving Occafion of Difturbance.
Not above half a League beyond Duisburgb we entred the Country of Berg, and in two Hours after pals'd through the little City of Keyerrwaert, feated upon the Rbine, and very well fortified.
Hence we continued our Journey to Duffeldorp, the Refidence of the Electoral Prince Palatine. It is much larger and better peopled than Duisburgh, and its Fortifications in a very good State, but has no Suburbs, any more than Keyferwaert.
6. The City of Cologne affords a moft agreeable Profpect at a Diftance, by its Situation in a plain and level Country, and the vaft Number of Steeples, which make a moft glorious Shew. Though it be of prodigious Extent, yet is it furrounded with a Wall, Towers, Baftions, and a dry Ditch. It has twenty four Gates, thirteen to the Land, and eleven on the Rbine. It is an Imperial City, govern'd by its own Magiftrates, though the Archbihop and Elector of that Name has fome Share both in the Civil and Criminal Jurifdiction, and a Prerogative of pardoning Criminals. The Oath, which the Citizens take to this Prince, feems to be a Kind of Homage, conceived in thefe Terms :

We the free Citizens of Cologne do this Day, for now and for ever, promife to A. B. Archbiboop of Cologne, to be faitbful and favourable to bim, as long as be Jaall preferve, in our Rigbts and Honour, and in our ancient Privileges, Us, our Wives, our Cbilderen, and our City of Cologne. So God and his Saints help us.
Yole II. Numbero.5.

We A. B. by the Grace of God, Arcbbilhop of the holy Cburch of Cologne, and Arch-Cbancellor of the Empire in Italy, to the End that an amicable Confederacy, extire Confidence, and fincere and lafting Peace, may be cultivated betwixt Us and our dear Burgeffes of the City of Cologne, do make known by there Prefents, and promije and declare fincerely, zeitbout Fraud, that we do confirm all their Rights and Privileges, written or not written, old or new, weithin or weitbout the City of Cologne, wobich bave been granted to it by the Popes, Emperors, Kings, and Archbilbops of Cologne, without ever doing any Tbing to wiolate the Jame. In Tefimony whereof, \&xc.

The whole Chapter of Cologrie is compofed of fixty Canons, who mult be Princes or Counts, but the twenty four eldeft are the Capitularies. -According to the Golden Bull, the Electors of Cologne ufed to crown the Emperor; but thefe Archbifhops not having been Priefts for a confiderable Time, thofe of Mentz have perform'd the farme in their Stead, and fince that challenge it as a Right.
There are a confiderable Number of Proteftants in this City, who have a Church not far thence, in the Territories of the Duke of Nerwburgh, they ftile them Gueux or Beggars to this Day, by the fame Name that was given at Bruifels to the firft Authors of the Agreement by the Count de Barlemont.
The Townhoufe is a vaft Fabrick, after the Gotbick Manner : Here they fhew whole Rooms full of Bows, Arrows, Crofs-bows, Bucklers, and fuch Sort of antick Arms. One of thefe Crofs-bows was of Whalebone, and twelve Foot long, eight Inches broad, and four Inches thick. From the Tower of this Houfe there is a moft delightful Profpect of the whole City and of the adjacent Country. That Part which lies oppofite to the City, on the other Side of the River, is chiefly inhabited by the feres, and belongs to the Territories of Newburgb. The Cathedral Church (or rather its Beginning) is fo fine, that it is a thoufand Pities it fhould not be brought to Perfection. Here lies entomb'd, as is pretended, the three Kings of the Eaft, that came to worfhip our Saviour, being transferr'd hither from Milan, A. D. 1162, at the Time when Frederick Barbaroffa laid that City defolate. They report here abundance of Miracles wrought by them ; and among the reft, that an exceffive Dearth having been occafioned by a great Drought in Hungary, abundance of that Country came hither to implore the Afiflance of thefe three Kings, who promifed them Rain, which following foon after in great Plenty the Hungarians, in Remembrance of this Miracle, come every feven Years in Pilgrimage to Cologne, where they are entertained by the Magiffrates for a Fortnight, in a handfome Houfe build for that Purpofe.
In the vaulted Roof of this Church, almoft over the Chapel that contains thefe precious Relicks, is a Hole of three or four Foot wide, round the Opening of which you fee thefe Words; Anno 1404. 30 OEF. Ventus de nocie flat ingens, grandem per teetum lapidems pellit; i. e. On the 30 th of O\&tober, 1404 , the Wind blew very bard in the Night, and forc'd a great Stone through the Roof: The Stone is ftill to be feen upon the Floor near this Chapel; they call it the Devil's Stone, becaufe they were of Opinion that the Devil threw it out of Malice. Over one of the Doors of the fame Church we faw thirty fix gilt Staves about three Foor long each, with this Diftich under them :

Quot pendere vides Baculos tot Epicoopus Amos Huic Agrippine prafuit Ecclefia.

Upon Enquiry we found, that the prefent Eleetor was then in the thirty feventh Year of his Reign, but could not learn either the true Original or Ufe of this Cuftom.

In the Church of St. Urfula they fhew you the Tombs of the eleven thoufand Virgins that were maffacred by the Huns at Cologne, in the Year 238 , together with this Saint, unto whofe Memory is dedicated this

Church.

Church. They tell you, that the Earth will not admit of any other dead Corps; for Inflance of which, they fhew the Tomb of a Daughter of a certain Duke of Brabant, who being interr'd there, rais'd up herfelf, and remaining thus in the Air, they were forc'd to put her in this Tomb, fix'd upon Iron Supporters, two or three Foot from the Ground, againft one of the Pillars of the Church. In a great Chapel on one Side of the fame Church, you fee the Bones of thefe Saints hung up in as decent a Manner as you fee the $S$ words and Piftols ranged in the Guard-chamber of St. Fames, or in any other Armoury; thefe Bones have no Ornaments except the Heads, fome of which are kept in Cafes of Silver, others are cover'd with Stuffs of Gold, and fome have Bonnets or Caps of Cloth of Gold, Velvet, rich Silks, $\mathcal{E}^{3}$. Hence it is that the City of Cologne challenges the Title of Cologne the boly; and its Arms are, Argent eleven Flames Gules, woith a Cbef of the Second, charg'd with three Croowns Or; the eleven Flames intimating the eleven thoufand Virgins, and the three Crowns the three Kings. But this idle Story, which was grounded on the ignorant Miftake of the following Infcription, SS.URSULA et UNDECIMILL $A, V . M$. which means no more than the Saints Urfula and Undecimilla Virgins and Martyrs; for Sancta Urfula E undecima millia Virginum Martyrum, that is, St. Urfula and eleven thoufand Virgins and Martyrs; has been fo fully refuted by Archbifhop Ufher, and other learned Men, that no body now pays any Regard to it.
In the Church of the Maccabees is a Crucifix, with an everlating and miraculous Perriwig on its Head; for though the Hungarian Pilgrims, at their coming to Cologne, each cut a Lock of Hair off, yet has it not been diminifh'd hitherto, by all this Polling.

At the Entrance of the Church of the Troelve Apoftes, is to be feen a Picture, which is remarkable chiefly for the Story it reprefents: They relate, that a Burghermatter's Wife of this City, being, in 157 I , buried in this Church, with a Ring of great Value on her Hand, the Sexton made bold to vifit the Grave afterwards for the Ring's Sake, but was not a little amaz'd, when he found the fuppofed dead Lady grafp him by the Hand, which made him retreat very fpeedily; However, the Lady having made hard fhift to get out of the Sepulchre, went to her own Houfe, where knocking at the Door, the call'd to a Servant, and related unto him the whole Adventure; but the Servant taking her for a Ghoft, ran in a Fright to recount unto his Mafter what had happened; who told him, that he would as foon believe his Horfes in the Garret : He had no fooner faid thefe Words, but a great Noife being heard in the Garret, the Servant went up, and, to his great Amazement, found fix Coach-horfes there: By this Time the Woman had made Shift to get in, and by the Care of her Servants was fo well recovered, that there was no great Likelihood of her returning to the Grave for that Time; and the Horfes were the next Day let down out of the Garret by certain Machines. They fhew you to this Day, in the fame Garret, feveral wooden Horfes, faid to be covered with the Skins of thofe that were feen there; and in the Church of the Twoelve Apoffles, there is a great Piece of Linnen-cloth, which, they fay, was of this Woman's fpinning after her Releafement from the Grave, which fhe furvived feven Years. We find fome authentick Teftimonies of the Truth of this memorable Story, but in them the Epilode of the Horfes is entirely left out, as being an evident and very abfurd Fiction.
There are fome Families now in Cologne, who deduce their Genealogies from the Roman Race, that fettled a Colony here the firft Time.
7. The Roads betwixt Cologne and Mentz being extremely bad, we chofe to embark upon the Rbine : The firft Town we came to was Bonn, a fimall inconfiderable Place, the Fortifications whereof lie neglected, and the Electoral Palace of Cologne made but a very indifferent Appearance.
As we came nearer to Andernach, at which, as well as at Keyerwaert, they receive a Toll; a Burgher-mafter of that Place told us, that there were certain Gen-
tlemen belonging to that City, who have the Title of Free Knigbts, and enjoy peculiar Privileges.

Coming to Coblentz, we obferved its Situation upon a Neck of Land made by the Mofelle, where it joins its Current with the Rbine, by which it is render'd very agreeable. We were told, that it is very well fortified on the Land-fide, but near the Water-fide we faw only a fingle Wall. The Caftle of Ebrenbreitstein, i. e. the Rock of Honour, built juft over againft it, upon a rifing Ground on the other Side of the River, is very ftrong both by Art and Nature, its Foundations being laid upon the Ruins of the old Fort of Hermantein, the Remains whereof are feen on one Corner only of the Rock on which the Windmill ftands. It is always well provided with a good Garrifon, and Ammunition in Proportion. The Palace (where the Elector of Cologne commonly refides) is at the Foot of the Hill, upon the very Bank of the Rbine, juft under the Caftle.
About half a League on this Side of Baccbarach, directly overagainft Coub, (a Town under the Jurifdiction of the Elector Palatine) ftands an old Cafte in the Middle of the Rhine, called Pfaltz, whence fome, but improperly, have derived the Titles of the Pfaltz Graves, or Counts Palatines.

Baccbaracb is a fmall City belonging to the Elector Palatine, built on the Side of a Hill, chiefly famous for its excellent Wines that grow thereabouts. We dined with one of the Minifters of the Place, who would needs frame the Etymology of Baccbarach from Bacbi ara, or the Altar of Baccbus; and for a Confirmation of his Opinion, told us, that in the fame Neighbourhood there were four other ancientTowns which ow'd their Name to Bacchus, viz. Steegbach, which lying on a Hillock, fignifies as much as Scala Baccbi, or the Ladder of Baccbus; Diabach, i. e. Digitus Baccbi, or the Finger of Baccbus ; Handbach, or Mannersbach, i. e. Manus Baccbi, the Hand of Baccbus; and Lorcb, i. e. Laurea Baccbi, or the Bays of Baccbus.

Soon after we were pafs'd Baccharacb, a furious Tempeft obliged us to feek Shelter a-fiore; a little on this Side Rudefeim. In our Way we pafs'd by an old ruin'd Caftle or fquare Tower, known by the Name of the Tower of Rats, whither, they fay, a certain Archbifhop of $M$ entz retreated (its Situation being on a little Ine in the Rbine) to avoid the Rats, that devour'd him at laft. Some look upon it as a Fable, becaufe the old Chronicles of the Country mention different Names and Times when this Accident happened; but others, who confider it as a Truth, (as it is generally taken for fuch hereabouts) alledge in Behalf of their Opinion, feveral Hiftories of this Nature related by Authors of unqueftionable Authority.

From Bonn, as far as Binghen, three Leagues on this Side Mentz, the Rbine carries its Current through the Mountains, at the Foot of which you fee all the Country on both Sides cover'd with Vineyards, interfpers'd with a great Number of fmall Cities, good large Vilages and Caftles, of the laft of which I counted forty fince I parted from Cologne, built, for the moft Part, upon the Afcents of the Mountains, and fome on the very Points of the Rocks. The Country People, in thefe Parts, but efpecially the Women, appear in a very odd Drefs; on their Heads they wear little Caps of fome colour'd Stuff, border'd with an Edging of a different Colour, their Hair hanging in Trefles quite down their Backs. Their Waftes appear very fhort, half a Foot below which they gird themfelves with a broad Leather Girdle, and underneath it is a thick Roll, which bears up their Petticoats almolt as high as their Knees.

From Bingben to Mentz the Rbine is very broad: Here you go over a Bridge of Boats, and as foon as you enter the City, the Electoral Palace prefents itfelf to View, a Fabrick of a reddifh Stone, embelifh'd with divers Ornaments, wanting neither Regularity nor Magnificence, though built after the old German Fafhion. They told us, that in the Middle of the Citadel was to be feen the Ruins of a Tower called commonly the Tomb of Drufus: 'Tis true, Drufus Germanicus, the Brother of Tiberius, died in Germany,

Chap. III. Low-Countries, Germany, ©o゚c. 527
but not near the Rbine, and he was buried in the Campo Martio at Rome ; fo that in all likelihood this was one of the Statues or triumphal Arches erected near the Banks of the Rbine to his Memory, after the Senate had beftowed upon him the Sirname of Germanicus.

The Church Ornaments in which the Elector fays Mafs, are remarkable for their Riches ; and the Canopy under which the Hoft is carried, upon certain Feftivals, in Proceffion, is all cover'd with Pearls.

Every one of the Electors of Mentz bears the Arms of his own Family, but he quarters Gules a Wheel Argent, which are the Arms of the Electorate, the Original of which they deduce from the firft Elector, who was the Son of a Wheelwright.

In the Cathedral you fee a great many magnificent Tombs of the Electors interr'd here. The Chapter confifts of forty two Gentlemen, twenty four of which only are Capitularies. The Proteftants are allowed Habitations at Mentz, but not the Exercife of their Religion. The City is fufficiently large, but indifferently peopled, neither is the Univerfity in any great Efteem now : However, its Situation is very pleafant, in a moft excellent Country. The Elector of Mentz is the firft among the Ecclefiaftical Electors, Chancellor of the Empire, and Dean of the Electoral College ; in Right of which he prefides in the Diets, and at Imperial Elections.
8. After having crofs'd the Rbine at Mentz, we embark'd on the River Maine in the ordinary Paffage-boat, which carried us in one Day to Frankfort, a City much exceeding Mentz in Beauty, Riches, Bignefs, Number of Inhabitants, and Strength, being fortified with eleven Baftions, which though they have fome Defects, yet they are in fome Meafure repaired by its Situation in a flat Country: The Houfes are generally built of the fame red Stone I mentioned before, or elfe of Wood, or Plaifter cover'd with Slates. The Maine, a confiderable large River, leaves it on the Right, and a Stone Bridge of four hundred Paces in Length joins it with Sakerbaufen. The Territories of this City are of no great Extent: The Senate, as well as the greateft Part of the Inhabitants, are Lutberans, though the Roman Catbolicks are poffefs'd of the Cathedral Church, where the Ceremony of anointing the Emperor is perform'd; however, they are not allow'd to make any publick Proceffions. The Calvinifts inhabiting here, have a Church at Bocbenbeim, a fmall Hour's Walk from thence, in the Country of Hanaw, but are obliged to marry and to chriften their Children in the Lutberan Churches.

In the Townhoufe is the Apartment where the Solemnity of the Election of the Emperor is perform'd, and where one of the Originals of the Golden Bull is preferv'd. It is hung only with Tapeftry, and furnifh'd with fome Elbow Chairs of black Velvet, and a large Table cover'd with a green Carpet. On one Side of this Apartment is a Hall, where certain Ceremonies are perform'd immediately after the Election, which being over, the Emperor goes from thence to the Church, where he is crown'd.

The Golden Bull is a Book in Quarto, of twenty four Leaves in Parchment ftitch'd together, and covered with a Piece of Vellum, without any further Ornament. The Seal, which is about two Inches and a half broad, and cover'd with Gold, is faftened to it by a String of twifted Silk of divers Colours; upon this Seal, which appears not unlike a Medal, you fee the Effigies of the Emperor Cbarles IV. feated and crown'd, with a Scepter in his Right Hand, and the Globe in the Left, having the Shield of the Empire on his Right, and that of Bobemia on his Left, with this Infcription round it.

Carolus Quartus Divinâ favente Clementia Romanorum Imperator Semper Auguftus.

And on each Side near the two Scutcheons, Et Bobemix Rex. On the Reverfe is a Gate of a Caftle betwixt two Towers, which denotes Rome, as is apparent by the following Infcription about it.

Roma Caput Mundi regit Orbis frena rotundi.

And upon the Gate betwixt thefe two Towers,

## Roma Aurea.

This Bull, intended to be the Foundation of the Conftitution of the Empire, was made at Nuremburgb. by Cbarles IV. with the general Confent of the States, in 1356, and contains the Manner of the Election of the Emperor, and of the King of the Romans, as alfo. many Things relating to the Rank, Affemblies, Rights; Immunities and Succeffions of the Electors, and in what Manner every one of them is to perform his Function. Frankfort is by this Bull appointed for the Election of the Emperor ; notwithftanding which, Henry II. was elected at Mentz, and Henry III, at Aix la Cbapelle; fome others have been chofen at Cologne ${ }_{3}$ Augsburgh, and Ratisbon, not to mention feveral other Innovations introduc'd fince that Time, efpecially by the Treaties of Weftphalia.
At Dr. Peter's, who makes the famous Treacle of Frankfort, we faw many Curiofities, and among the reft, a Stone taken out of a human Body, of the Bignefs of a Man's Head, which he bought for Sixteen hundred Crowns.
There are abundance of Fews at Frankfort, but they are not near fo rich as thofe of Amferdam, being ufed in a Manner like Slaves here, viz. to fetch the Water when any Fire happens to break out in the City; for the reft, their chief Employment is to go from one Inn to another to fell their Commodities to Foreigners, and fo pick up a poor Living.
I need not tell you, that the three annual Fairs of Frankfort contribute not a little to its Fame and Riches.

The Univerfity acknowledges for its Founders, Foascbim and Albert of Brandenburgh, in 1506.
9. As we were taking Coach to leave Frankfort, we obferved the Coachman to put fome Salt upon each of his Horfes, which he told us was a never-failing Antidote againft Witchcraft, and other unlucky Accidents.
Having paffed the Rbine at Gernfbeim, we entred a Wood, where the Roads prov'd very bad; but after that, for two Leagues, till we came to Worms, ex* ceeding good.
The City of Worms is feated about three or four hundred Paces from the Rbine, on the Left, in a moft fruitful Country, having no other Fortifications but a double Wall: It was formerly an Archbihoprick, till the See was removed to Mentz by Pope Zacbary, but ftill remains a Bifhop's See, and that Prelate has great Authority there though it is an Imperial City. It is not inferior in Bignefs to Frankfort, but ill peopled and poor. I faw a Houfe that was fold for a thoufand Crowns, which had yielded formerly as much annual Rent; and there are fo many void Spaces within the Compaifs of the Place, that the Vines planted there are computed to produce every Year fifteen hundred Fuders of Wine, a Fuder being a Cask that holds no lefs than two hundred and fifty Englifo Gallons. This Wine is in fuch high Efteem in thofe Parts, that they have turn'd it into a Proverb, and fay, It is freeter than the Virgin's Milk; whence queftionlefs is alfo arifen the Cuftom of prefenting it to Perfons of Note that travel that Way, with fome Fifh, $E^{3} c$. and this is ftiled Wine of Honour. Befides that, the Lutberans have one Church for their own Ule here; they preach by Turns with the Romanits in the Dominican Church, all the reft being in the Poffeffion of the Roman Catbolicks, who don't carry the Hoft in publick, nor make any Proceffion, except on the Day after Eaffer. The Calvinifts have a Church at Nerobausel in the Palatinate, about half a League from Worms, where the Lutberans now and then chriften their Children, quite contrary to what is practifed by the Lutberans at Frankfort.

The Church of St. Paul, as well as that of St. Fobn, are very ancient Structures, the beft of the two being built of vaft fquare Stones, in a very irregular Mannners with narrow Windows, and Galleries all round the Outfide juft under the Roof; the Walls are twelve

Foot thick, and feem as if they were not at firft defigned for a Church, but rather for a Fortrefs. The Cathedral is both very long and lofty, adorn'd with a Tower on each of the four Corners; it is a ftrong Fabrick with fome Ornaments after the Gotbick Way. Over one Door of this Church they fhew you the Figure of a ftrange Animal of the Bignefs of an Afs, with four Heads, one the Head of a Man, the fecond of an Ox, the third of an Eagle, and the fourth of a Lyon; the two firft ftand upright, and the two others hang downwards; the right Fore-foot is of a Man, the left of an Ox, and the two hinder of an Eagle and a Lyon; a Woman fits on the Back of it. The People here tell you very odd Stories concerning it, but we may fuppofe it to be an Hieroglyphick compofed of the four Beafts in the Vifion of Ezekiel, and the Woman to reprefent the Gofpel. Over the Altar of one of the Chapels of the fame Church I obferved a Picture, in which the Virgin received Chrift as he was defcending from the Crofs, whilft the Angels were carrying the Inftruments of his Crucifixion to Heaven. But the Picture at the Entrance of St. Martin's Church, juft over a moveable Altar, is of any here moft worth the peculiar Obfervation of a Traveller ; it is about five Foot fquare, and in it God the Father is reprefented on the very Top of one Corner, from whence he feems to addrefs himfelf to the Virgin Mary, who is on her Knees in the Midft of the Picture, holding the Infant Chrift by the Feet, and putting his Head into the Hopper of a Mill, which is turn'd by the twelve Apoftles Hands by the Help of a Wheel, affifted by the four Beafts of Ezekiel, who give a helping Hand on the other Side. Hard by the Pope is painted upon his Knees, receiving the Hofts, which fall ready made from the Mill into a golden Chalice or Cup, one of which he prefents to a Cardinal, who gives it to a Bifhop, the Bifhop to a Prieft, and the Prieft to a Layman. There are two publick Edifices in this City, one intended for the Senate, where they meet twice a Week about Matters of State, the other for the Courts of Juftice. It was in the firft that Lutber made his folemn Appeal, concerning which they tell you, that the Doftor being much heated with the Eagernefs of the Difpute, as alfo by a Fire that wàs near him, he defired a Glafs of Wine ; which being brought, he forgot to drink it, but being ftill eager in the Purfuit of his Difcourfe, fet it down upon a Bench, where foon after it broke without being touch'd by any body, which made it pafs for current, that there was fome Poifon mix'd with the Wine, of which the Lutberans were fo fully perfuaded, that they broke the Bench on which the Glafs ftood into Shivers, and kept fome Pieces of it, which are till preferved in Memory of Lutber's Deliverance. We alfo took a View of the Houfe call'd the Mint, where, among ocher Curiofities, they flew'd us a fquare Piece of Parchment in a Frame, upon which there are twelve Sorts of Hands written with divers Miniatures and Draughts excellently done with a Pen, by one Thomas Scbuveiker, only with his Feet, he being born without Arms, as the following Infcription teftifies:

## Mira vides, pedibus 9 uvenis facit omnia recta Cui pariens Mater bracbia nulla dedit.

In a fpacious Portico belonging to this Houfe you fee a vaft Number of Bones and Horns hanging betwixt the Arches: The firft, they fay, are the Remnants of Giants, and the laft of the Oxen which drew the Stones with which the Cathedral was built. The Outfide of the Houfe was adorn'd with Variety of Pictures, and among the reft with many arm'd Giants, which, in the Infcription underneath, are call'd Vangiones: That this Part of the Rbine was inhabited by a Race of People call'd Vangiones, is evident from Tacitus and others; but how they became Giants, I am not able to tell. Proceeding on our Journey, we pals'd by Frankendal, the Fortifications of which Place would not be defpifeable, if they were faced with Brick; wheras now they are nop'd too much, by reafon of the Softnefs of
the Earth, which could not be fupported otherwife, but would fink into a Heap.
The fame Defect, but in a higher Degree, is evident in the Fortifications of Manbeim, both which belong to the Elector Palatine, and are not above two Hours diftant from each other; but the laft has a confiderable Advantage by its Situation in a flat Country, and its being almoft inclofed by the Neckar and the Rbine. The moft remarkable Piece in Manbeim is the Temple of Concord, founded by the Elector Cbarles Lereris, Father of Cbarles, the laft of that Race, who being a Perfon of no harfh Difpofition, efpecially in Matters of Religion, order'd, that the Lutberans and Calvinists fhould by Turns exercife their Divine Worfhip in this Church; and the prefent Elector Palatine, who is a Roman Catholick, has thought fit to join the Romanifts with the others ; fince which Time, the Minifters of three different Religions perform, each in their Turn, their Religious Service in the Cburcb of Concord; fo that in three fucceffive Sundays, each of the three Minifters has the Privilege of beginning firt. The Church is not very large, but exceeding neat; the Pulpit common to all three. The Roman Catbolicks, after they have faid Mafs, draw a Curtain, and fo hide the Altar, at which they have perform'd it.
Manbeim was about forty Years ago no more than a Village, and owes its Increafe to Frederick the Father of Cbarles Lervis, who at the fame Time built and fortified it : The Streets are very ftreight and regular, and fome of them planted with Trees, as in Holland. After having paffed the Neckar at Manbeim, over a Bridge of Boats, we travel'd for three Hours thro' a fertile Plain, extending to the Foot of the Mountains of Heidelburgh, which, by a continued Ridge, feem'd to intercept our Paffage; but that the Neckar paffes thro' an Opening, and fhews you a direct Way to Heidelburgh, by a cover'd Bridge which brings you to the other Side, where this City is feated very pleafantly among the Trees and Rocks. But as to its interior Beauties, we cannot boaft, for the City is neither fine nor well built, moft of their Houfes being of Wood, tho they dwell among the Rocks : The Electoral Palace is of hewn Stone, fome Parts whereof are of good Architecture, but none of them quite finifhed. They have made divers fine Gardens among the Rocks, but at the beft they are irregular.
Not long before the Dutchefs of Orleans, Sifter to the laft Elector, and Heirefs to Part of his perfonal Eftate, had taken the Furniture of this Palace away, at the fame Time they fold every Thing, even to the Wine of the famous Tun of Heidelburgh. This fo much celebrated Tun is thirty one Foot long, and twenty one high, unto which you afcend by a Pair of Stairs of fifty Steps, to a Kind of Platform or Balcony of twenty Foot long, inclofed with Rails : The Elector's Arms are placed on the Front of the Tun, and Bacchus on the Top, attended by Satyrs, Drunkards, and fuch-like. Vines, Grapes, Glaffes and Leather Jacks make a great Part of the Ornaments of this Tun, in baffo relievo. Abundance of Jefts and Apothegms, relating to the fame Subject, are to be feen, in High Dutch, or divers Parts of this enormous Tun.

The various Chances of War have reduced this Country to a poor Condition, tho' naturally very good. All Religions are tolerated, but the Magiftrates are generally Protestants, as in other Parts of the Palatinate. The great Church of this City contains many magnificent Tombs of the Counts Palatines, and among the reft that of Robert King of the Romans, the Founder of the Univerfity of Heidelburgb. You know by what ill Fate this City loft its famous Library, which, in 1622, was tranfported thence to the Vatican.
9. We were fcarce two Hours riding from Heidelburgh, buc we met with nothing but whole Forefts of Fir-trees, and a Country fo poor, that about Wifeloth and Sintzbeim, you might buy a wheaten Loaf of eight Pounds for two Pence ; and in four Days Journey we did not fo much as get Sight of one confiderable Town: The beft of them is $W$ in/beim, an Imperial City, as well as

Wimphen,

Chap. III
Low-Countries, Germany, فoc

Wimphen, both inhabited by Lutberans. What diverted us moft in all this Journey was, a Meeting of the Magiftrates of the little City of Palemburgh, which happening to be in the fame Inn where we dined, we were well diverted with the Sight of twelve or fifteen Peafants with high-crown'd Hats, cover'd with green and yellow Ribbon, with red or blue Vefts, Ruffs of black Taffata, their Hair cut round clofe juft below their Ears, and their Beards like thofe of the Capucbins: In this Habit we faw them fitting together, with their Elbows relting on a Table, and explaining the Law (after their Manner) each with a good Glafs of Wine in his Hand, every one ftriving to get the better of another more by Strength of Voice than of Argument.

It is not to be wonder'd, that Drinking fhould be fo common in this Country, confidering the Temptations they lie under here, for you buy four great Pots of Wine for a Penny; and if a Paffenger happens to ask for a Cup of Wine, they bring him a large Jack, fcarce knowing what a little Meafure is. As you travel from the mountainous Country into the Plains that lead to Nurenbergh, the Tobacco and Hops fucceed by Degrees the Vineyards: We had a fair Profpect of this beautiful City at a confiderable Diftance, as we were travelling along the Banks of the River Pegnitz, which runs from it, but ferves only to turn fome Mills, whereas without any great Difficulty it might be made navigable, and confequently much increafe the Grandeur of this City, fo that the Coft of making it fo would be amply repaid.
However, this Defect does not hinder Nurenbergb from being a Place of great Trade, great Riches, and well peopled; and for its Bignefs it is reputed to be twice as large as Franckfort upon the Meine, and contains under its Jurifdiction feven other Cities, and four hundred and eighty Boroughs and Villages: It has fix Gates, two hundred twenty eight large Streets, and one hundred and eighteen Fountains and Wells: Fortifications after the ancient Manner, which are of no great Confideration, its Situation in the very Heart of Germany being its chief Security, and indeed this little Republick generally enjoys Peace. Nurembergb is a very handfome City, its Houres being generally lofty and ftrong, of hewn Stone, and many adorn'd with Pictures on the Outfide, after the Gotbick Manner, and confequently not very regular : Befides this, it has many good brafs Fountains, one whereof we faw at the Artificer's Houfe, the Statues of which alone coft feventy thoufand Crowns. The Streets are broad, clean, and well paved, but not ftreight. One of the Towers of the Caftle bears the Name of Nero's Tower, whence fome would look for the Original of this City as far as Nero, whereas 'tis more probable, that Noriberga, or Mons Noricorum, as it is called in Latin, has its Etymology from the Norici, the old Inliabitants of the Country, and Berg, i.e. a Mountain. The Caftle is feated on a high Rock, though all the reft of the City be very flat; it is irregular, being built according to the unequal Shape of the Rock. They fhew'd us a Well, which they affirm'd to be fixteen hundred Foot deep, and that the Chian of the Bucket weigh'd three thoufand Pounds, but we did not believe them.

In one of the Halls of this Caftle are to be feen four Corintbian Pillars forty five Foot high, which were brought (fay they) from Rome by the Devil, upon a Challenge which a Monk made him. On the Stones of the Parapet of the Cartle, they fhew the Print of a Horfe's Shoe, where they fay a Conjurer leap'd over the Ditch. The Ornaments ufed at the anointing of the Emperors are preferved in the Church of the Horpital ; the Diadem of Cbarlemagne (called the Infu$l a$ ) is of pure Gold, weighing fourteen Pounds, and covered with precious Stones, being not clofed on the Top, as the Imperial Crowns are generally reprefented, but fuppofe, inftead of the Fleurets on Ducal Coronets, you fee Plates rounded on the Top, which, being joined by the Sides, make the Compars of the Bonnet; of thefe there are feven, that before exceeding the reft in the Luftre of the precious Stones; on the Top of all is a Crofs, and a Semicircle, fupported by the two Head-plates behind, raifed above the Bonnet, and join-
Vol. II. Numb, 105.
ed to the Top of the Crofs. The Scepter and Globe are of Gold, and the Sword is faid to have been brought from Heaven. The Robe of Cbarlemagne is of a Violet Colour, embroider ${ }^{3} \mathrm{~d}$ with Pearls, and the Imperial Cloak edged with the fame; and ftrewed with Eagles of Gold, and a great Number of precious Stones. Here are alfo the Cope, the Stole, the Breeches embroider ${ }^{5}$ d with Stones, the Stockins and the Buskins cover ${ }^{3}$ d with Plates of Gold.
Amongft divers other Relicks, they keep in this Church the Iron Head of St. Longinus's Launce; and becaufe they are not ignorant that the fame is fhewn in above ten other Places in the World, they fay all thefe are Counterfeits, and that theirs was found by St. An= drew, and brought from Antiocl to this City.

Their Arfenal is one of the moft renowned in Germany; in the two great Halls (each two hundred and fifty Paces long) we faw three hundred Pieces of Cannon, and among them many of a very large Bore, the Biggeft whereof carried a Ball of three hundred Pounds; but to fpeak the Truth, the reft, being Arms of more Antiquity than Ufe, ferve only for a Shew. The publick Library is in a Cloyfter formerly belonging to the Dominicans, and contains, as they fay, twenty thoufand Volumes: The moft ancient Manufcript is of nine hundred Years, being a Copy of the Gofpels, with the Prayers and Hymns formerly ufed in the Greek Church ; the Characters are very different from what is ufed now : They alfo fhew'd us a Book printed at Spires 1446, but it feems as. if there had been an Error in the Cyphers ; for at the fame Time we were fhewn another of the Impreffion of Fouffus at Mentz in 1459, which had, by way of Advertifement, annexed to it, That this Book was not written by the Hand, but was printed by an admirable Secret nevely invented. They keep in this Library many Rarities, but the Cabinet of Mr . Viati exceeds them, it being almoft impofible to conceive how a Man of a private Fortune could heap together fo many Things brought from all Parts of the World. There is one great Apartment fillsd with the divers Arms of all Countries; from whence you go into another ftored with excellent Pictures, Medals, curious Works both ancient and modern, Idols, Shells, Plants, Minerals, and other natural Productions. He fhew'd us a Wind-Gun, wherewith confiderable Mifchief may be done at a Diftance without any Noife.
The Town-houfe is a fpacious Fabrick, with a beautiful well-proportion'd Front, but no Court before it. And from hence we were carried to the publick Cellar, which is two hundred and fifty Paces long, and contains twenty thoufand middle-fiz'd Tuns (they call them Auns) of Wine, a Provifion the Germans always take extraordinary Care of; for it mult be confefs'd, that the Germans are the moft civil and obliging People in the World, but exceffive Drinkers. You fcarce enter a Houfe to make a Vifit, but before you can fpeak three Words, you are faluted with a favoury Collation, and large Jacks of Wine: To refufe a Health, or to leave a Drop in your Glafs, is a capital Fault; by which Means the Cup never ftands ftill. This made the Duke of Rboan fay pleafantly of the Germans, That they bad found out the Perpetual Motion in their Cups, wobich puzzled all the Matbematicians in the World: Hence it is that Glaffes of all Sizes are in fo high an Efteem with them, that they are ranged in good Order in fome of their beft Apartments, and make a Part of their ornamental Furniture.

In the Evening we had the Opportunity of feeing Part of the Celebration of a Wedding: The Bridegroom, attended by his Friends and Kindred, march'd firft on Foot from a Houfe to the Church, which was not above two hundred Paces diftant, his future Spoule following foon after, with her Friends, from the fame Houfe. Being come into the Church, the Bridegroom fate down with his Relations on one Side, and the Bride on the other oppofite to him; over each of their Heads againft the Wall, being painted the Figure of Death : From thence they both approach'd to the Minifter, who food in the Midft of the Choir, who had no fooner perform'd the Ceremony; but four or

Give Trumpets founded from the Top of the Steeple; and fo the new-married Couple return'd in the fame Manner and to the fame Place from whence they came. The Bridegroom appear'd all in black, with Cloak trim'd with Lace, a great Ruff, and a little Crown of Gold Plate-Lace, upon his Perriwig ; but the Bride's Drefs is not fo eafy to be defrribed; the beft Way to give you an Idea of it, is, to fancy a Head-tire compofed of Plate-Wire gilt, like a Bobperriwig, half a Foot higher than the Forehead, and Frizled out on the Sides; thefe Threads or Wires are fo clofe together, that there is no more Diftance between them than is juft fufficient to faften to them an infinite Number of very fimall thin Plates of Gold, round, polifh'd and bright, which hanging both within and without, wave with the leaft Motion, and, in the Opinions of thefe Pcople, are very ornamental. Her Habit was a Kind of black Veft with long Skirts, refembling the Hongrelines ufed not long ago in France; and the Body of this Caffock, which was cut very fhort, was cover'd with Gold Lace all over the Scams, as the Skirts were with little clofe Knots of black Satin Ribbon, and the ftreight Cuffs reach down below the Wrifts. Over this the wore a Neckband of very fine antique Lace, fhap'd before like a Man's Band, bút ending behind in a Point, which reach'd down to the Middle of her Back : About her Shoulders ihe had a Gold Chain like the Collar of fome Order; and fuch another Chain inftead of a Girdle. The Petticoat was pretty fhort, trimm'd towards the Bottom with Gold Fringe and black Bone Lace. We faw this Bride dance at the Wedding with one of the Senators in a great Ruff; 'and, to tell you the plain Truth, the Cuftoms I oblerved at this Feaft were fo very different from ours, that I rather fancied myfelf in Cbina than in Europe. It would be an endlefs Piece of Work, if I fhould defcribe to you all the other Habits I faw here ; but I will only tell you, that as odd and fantaftical as they appear at firt Sight, they are not unbecoming, as indeed what are? on agrecable Perfons.

Nurenbergh can boaft of better Artifans and greater Numbers than perhaps any City in Europe: Some have attributed to them the Invention of Fire-arms, and of Gunpowder, by Bertold Swartz a Monk; tho' others would have the fame to owe its Origin to the City of Chioggia in the Venetian State, and others to Denmark. But the curious Works of Nurenbergh of Wood, Ivory, Alabafter, nay, of Paper and Starch, are famous over ail Europe. Their Houfes are both fpacious and neat, and I never faw one Ceiling in all the City, but what had fome Underfetting of curious Joyners-work. They have here a peculiar Refpect for Horns, for with them they adorn even their beft Apartments and Chambers. All the Way betwixt Heidelburgh and Nurenbergh we met with very poor Entertainment, but the Inns of $N u$ renbergh made us an ample Amends for it, where, among other Things, we had every Day a Defert of late Fruit, and Plenty of very good Fifh, at very reafonable Rates. In the Church of St. Sebald you fee a wooden Crucifix, which is efteemed a great Mafter-piece; but the Church of St. Lawerence exceeds all the reft in Bignefs. They are both built after the Gotbick Manner, but the laft has eight Doors. The great Church-yard is worth the Obfervation of a Traveller, for it has above three thoufand Tombs with Epitaphs and Coats of Arms wrought in Brafs. The Feros are reftrained so a Village near the City, from whence they may come daily into the Town for a fmall Piece of Money, but mutt return before Night. The few Roman Catbolicks - that inhabit here have the Privilege of performing their Religious Service in one of the Lutheran Churches, at certain Hours when their Service is over. The Calvinifts have their Cburch a League from the City, in the Marquifate of Anfpach, and baptize their Children in the Lutberan Churches, as at Franckfort.
10. From Nurenbergb: the Roads are very bad and woody till you come towards Ingolfad, where you meet with a well-cultivated champaign Country. Ingolfad (under the Juridiction of the Elector of Bavaria) itands upon the Dambe, of an indifferent Bignefs and Strength,
with broad, ftreight, and well-pav'd Streets, and pleafantly fituated, but poor and ill peopled; the Houfes are on the Outfide, for the moft part, painted white. They told us Wonders of their Arfenal, but as they were very unwilling to fhew it, I fuppofe its Fame furpaffed its Worth, it being generally obfervable, that Things of this Nature are feldom kept from the Sight of Strangers, unlefs not worth their feeing. I took Notice at Ingolstad (as in many other Cities of Germazy) of certain Veffels of Wood or Brafs mounted upon four Wheels, near the Fountains, which are kept to carry Water when any Fire breaks out, and for that Purpole are very convenient.

From Ingolfad we travel'd to Newburgb, a little City without any Strength, feated on the right Bank of the Danube, where this River begins to be pretty broad and rapid : We pafs'd it over a Bridge, which brought us into the City, where, at our firft Entry, we took a View of the Caftle, built on a Rock, the Apartments whereof, efpecially on the Ground-floor, are very handfome and convenient, tho' all the Furniture had been lately removed from thence to the Caftle of Heidelburgh, there remaining only a Cabinet full of rare Pictures and other Curiofities ; among the reft I obferved a round hard Stone, which weigh'd four Pounds, and was found in the Body of a Horfe. This, in my Judgment, might be called Bezoar. The Church of the Fefuits is the handfomeft in the City, tho' that of St. Peter has of late Years render'd itfelf famous by a pretended Mi racle that happened to the Capucbin, Mark de Avilano, who made himfelf fo much talked of during the Hungarion War. This Father coming fome Years ago to Newburgh, and perceiving an old Noftre dame of Wood in one Corner of the Church of St. Peter, that was all cover'd with Duft, the good Father proftrated himfelf before it, and whillt he was offering his fervent Prayers, he cried out on a fudden, A Miracle! protefting that the good Lady had lifted up her Eyes towards him: The Story, back'd by the Reputation of the Father, foon got fuch univerfal Credit among the Inhabitants, that they went in Proceffion to St. Peter's Church, whence they took the Statue, and having clean'd and drefs'd it in a fumptuous Habit, placed her on the high Altar, where fhe is vifited by a great Number of Pilgrims from all Parts, and is famous by the Title of Our Lady of Newburgh.

The Country betwixt Newburgh and Augsburgbi is very fruitful and pleafant, except that near the laft, the Grounds are boggy and barren ; notwithftanding which, the Augsburgbers boaft their City to be the faireft in all Germany, and that in Bignefs it exceeds Nurenbergh itfelf, tho' they own it not fo well peopled; befides, tho' their Streets are broader and ftreighter: their Houfes are not near fo handfome, few of them being built with hewn Stones, but for the moft Parc plaifter ${ }^{\circ} \mathrm{d}$ only, and whiten'd without, and fometimes adorn'd with Pictures; however, the Floors of their Apartments are for the moft Part paved with a Kind of yellowinh Marble, brought thither from Tyrol; and their Ceilings are either of curious Joyners-work divided into Compartments, or of a certain Cement well polifh'd, which is very durable: The worlt of their Buildings is, that their Chambers have no regular Figure, the Stairs which lead to them taking away all their Uniformity.

Augsburgb is the Metropolis of Swabia: Auguffus, fent thither a Colony, and gave it the Name of Augufte Vindelicorum, from the Vindelici, a People inhabiting about the Rivers Vindo and Licus, called at this Day the Werda and Leck, between which alfo the City of Augfburgh is feated, to diftinguifh it from Augijta Irevio rorum, Taurinorum, \&c. but this City having been fo often pillaged, (efpecially by Attila) there are farce any Remainders of Antiquity to be found here. However, not long fince there was dug out here a Pillar of five or fix Foot high, with the Figure of a Pineapple on thet Top of it : They alfo found certain Medals of Auguftus with fuch a Pillar on the Reverfe: It is very probable that this Pillar was intended to mark out the Boundary of the Empire on that Side: For it

## Chap. III. Low-Countries, Germany, $\mathcal{C}^{6}$ c. 53 I <br> being a conftant Cuftom among the Romans to diftin- <br> Traces of the Tool wherewith they are turn'd, which

guifh the Limits of a new-conquer'd Country by fome Mark or other diftinet from the reft, and by fomething relating more peculiarly to that Country; it is likely that they chofe the Pine-apple for this Pillar, becaufe this Part of Germany abounds in Firr and Pinetrees; and it is perhaps for the fame Reafon that Augfburgb bears the Pine-apple in its Arms

Tho' the Fortifications of this City are not very confiderable, the Inhabitants of this City have endured divers Sieges with a great deal of Bravery. The Senate here is compofed of Half Lutberans and Half Romon Catboricks, tho' the Bifhop has alfo a confiderable Sway, who has a Palace in the City, (but he refides generally at Ditlengen) and is Mafter of the greatef Part of the Territories belonging to this City. The Roman Catbolicks make publick Proceffions here, and carry the Hoft thro' the Streets, which the Lutberans falute by pulling off their Hats; for as they live in a good Correfpondence with each other, fo they avoid all Opporcunities of giving Scandal, the Poor of both Religions being maintain'd in one Hofpital. The Feros are confined to a feparate Place, and for every Hour they ftay in the City are obliged to pay a Florin, which amounts to three of our Shillings.

The Town-houfe is a lofty and fpacious fquare FaBrick, of very fine hewn Stones; the Portal is of Mar ble, and almolt all the Rooms wainfootted and ceiled with Polifh Afh, which looks very fine. The great Hall makes a very noble Appearance, being a hundred and ten Foot long, fifty eight broad, and fifty two high, with a fine Jafper Floor. The Walls are adorn'd with Paintings intermix'd, according to the Germon Cuftom, with Emblems and Devices relating to the Government; but the Roof exceeds all the. reft for its fingular Beauty, being compofed of regular Compart ments, the Squares and Panels whereof are enrich'd with Sculptures richly gilt, and beautified with curious Pictures and other Ornaments. The Arfenal is alfo a very large Structure ; the two Halls below are full of Cannon, moft of which are of Brafs ; but among the reft, there is a Culverine, a fix Pounder, of Leather, twenty fix Foot long; the other Arms are kept above Stairs During the Wars of this laft Age, the Augsburgbers ufed to keep frequently their Gates fhut, for Fear of a Surprize, but at laft, for the Conveniency of admitting Strangers and others without Danger into the City, they contrived a fecret Gate, which remains ftill, with all its Locks and Engines, the Defign of which is very nicely and well contrived, but too tedious and difficult to defcribe.

Augsburgh was formerly a City of great Traffick, whilft all the Merchandize from the Mediterranean was landed at Venice, and from thence, by the Way of Augsburgh, difperfed thro' all Germany: But fince Holland has almoft engrofs'd all that Trade, Augsburgh bears its Share in the general Lofs, as well as Venice, Milan, Antwerp, and many other Cities, that were formerly famous for Commerce. In the Bifhop's Palace they fhew you the Apartment where the Confeflion of Augf burgb was prefented to the Emperor Charles V. in 1540 , by Lutber and. Melaneibon. The Cathedral here has Gate of Brafs, over which are reprefented feveral hiftorical Paffages of the Holy Scripture in baffo relievo. In the Hittory of the Creation the Virgin Mary is reprefented framing Eve out of one of Adam's Ribs; which paffes here for a great Elegance.

The Artifans of Augsburgh are not inferior to thofe of Nurenbergh:; nay, they even excel them in Clocks, Goldfimiths Work, and in Ivory. They fhew'd us here feveral Clocks valued at fifteen or twenty thoufand Crowns a-piece; but the worft. is, they are fo very nice, that they are not durable. Their Ivory Work is no lefs admirable, and among the reft certain Cups hollow'd and well thap'd, with a Ring made of the fame. Plece in turning, which plays betwixt the Foot and the Bowl of the Cup, without Poffibility of coming off. Of thefe there are an hundred, with their Rings in a Pepper-corn of an ordinary Size: I have fome of them. Upon Examination I oblerved diftinctly the
fhews it a pure Work of the Eyes and Hand, and no Artifice. They have another curious Bauble, viz. Fleas faftened about the Neck with Chains of Steel, fo Gnely wrought, that though they are a Span long, they are fo light, that a Flea will lift it up when it leaps. They fell one of thefe Fleas, with Chain and all, for ten Pence.

The Singularity and Variety of Habits is fill more confpicuous at Augsburgb than at Nurenburgb, that Affair being fo exactly regulated here by the Magiftrates, that the Difference of Religion, and Quality of People, is for the moft Part feen by their Clothes. As for Inftance, I faw a Roman Catbolick Merchant's Widow in Mourning for her Husband; the had a Kercher well whited and ftarch'd, with Wings and Cornets belonging to this Drefs; a black Petticoat, and black Cloak, made like that of a Man, reaching down to her Knees; a great white Veil behind, hanging at the Tail of the Kercher down to her Hecls, enlarging itfelf by Degrees; a Piece of the fame Linnen with the Kercher, four Foot long, and at leaft two broad, which is very much ftarch'd and ftretch'd on a fquare Wire Thread, faftened juft below the Hips, and covers all the Forepart of the Body.
They have found Means to turn a Branch of the River Leck into the City, the Waters whereof are exceeding clear and good. Upon this Channel ftand four or five Towers, on the Tops of which are certain Cifterns ${ }_{2}$ which are fill'd by the Help of feveral Pumps mov'd by Mills, from whence the Water is convey'd into all Parts of the City. A Thing not to be admir'd only, but imitated. I muft not forget to iell you, that Augsburgh has many Fountains, fome of which are not inferior to the magnificent Fountain of Nurenbergh, which I formerly defcribed.
II. As we were leaving Augsburgh, we took Notice upon the Road, that they cover the Vines and Figtrees hereabouts with Straw or Mats againft the Cold, which is fharper than in England, though they do not lie fo far to the North. The Country is all upon a Level betwixt Augsburgb and Munich, but none of the beft, being full of Woods of Fir-trees.

Munich is a beautiful City, built A.D.965, but very indifferently fortified, farce half fo big as Augsturgh, and of no Trade, the chief thing it has to boaft of being the Refidence of their Prince, and his magnificent Palace. The firlt Thing we did, was to vifit the Fefuits Library, of which we had heard Wonders, but found it far below our Expectation; and the Librarykeeper; or his Deputy, who was order'd to fhew it us, was fo prodigious a Blockhead, that we could farce imagine there could be fo much Ignorance found among thofe of that Order. However, both their Convent and Church are exceeding fine, and the laft very large, light, and lofty; the Veftry is very rich, and among their Relicks they fhew a Joint as big as that of an Elephant, which, they told us, whs one of St. Cbrifopher's Joints of the Back-bone. In the Aufins, Church they have many excellent Pictures; and that of the Cajetons is an handfome Structure. The City of Munich bears a Monk in its Arms, which feems to confirm the common Opinion, that it got the Latin Name of Monacum or Monacbium, from a Monattery that flood formerly on the Place where it was built.

In the Church of Noftre Dawe is the magnificent Tomb of the Emperor Lereis IV. beautified with many marble and brals Figures. About ten or twelve Steps from the Entrance of the great Door of the Church, one of the Stones of the Pavement is mark'd with a double Crofs; and if you ftand upright upon this Stone, you find the Pillars of the Church fo placed, that you can't fee one of the Windows of the Church. The Outfide of the Electoral Palace is no way anfwerable to the Beauty of its Infide, tho', at the fame time, mof of its Apartments are not very regular; for this valt Structure being not built by one Perfon, nor at the fame Time, it differs according to the various Fancies of the Perfons that had the Management of iss Eronts; notwithftanding all which, it is, on the whole, a very beautiful Fabrick, The great Hall of the Elector's

Apartment

Apartment is an hundred and eighteen Foot long, and fifty two broad ; it is truly magnificent, efpecially in refpect of its curious Pictures, which are all Hiftories, the facred on one Side, and the profane on the other, every Hifory having a Latin Infcription in Verfe, one of the beft of which is the Diftich annex'd to that of Sufannab.

Cafa Sufanna placet; Lucretia cede Sufanna,
Tu poft, Illa mori maluit, ante fcelus.
In the little Chapel belonging to the Apartment of the Electorefs, you fee Nothing almoft but Gold, Pearls and Gems. Among the Relicks they fhew you a Piece of Gold Mohair, which they pretend to be Part of the Virgin's Robes. The Parlour of Perfpectives is extremely fine ; but the Hall of Antiquities, that were brought hither from Rome, exceeds all the reft; we counted no lefs than one hundred ninety two Bufts, and four hundred other Pieces here, all highly efteem'd for their exquifite Workmanfhip and Antiquity. The Furniture of this Palace is rich beyond what can be imagined, and they told us, that befides the Tapeftry in Ufe, there were laid up in the Wardrobe to the Value of eight Millions of Crowns; but here, I am afraid they overfhoot the Mark. The Treafury contains whole Services of Gold, and many other precious Veffels, vaft Quantity of Pearls, Diamonds, Rubies, and other pre cious Stones, befides an infinite Number of rare Pic tures, curious Works, Medals, and valuable Rarities; among the reft is a Cherry-ftone, upon which you fee diftinctly engraven one hundred and forty Heads; and a Gondola of Palm-tree Wood turn'd into Stone, with this Infcription :

## Palma fui, coepi lapidefcere, cymbula nunc fum,

 Si non Neptunus, Navita Baccbus erit.Where-ever you turn your Eyes in this Palace, you fee nothing but Marble, though, to unravel the Secret, it is to be told, that this is only a certain Compofition, which they know how to harden and polifh fo artificially, that it appears like and lafts as well as Marble. They have divers fubterraneous Walks or Galleries, leading from the Palace to all the Churches and Convents of the City. The Arfenal was at that Time almott unfurnifhed, moft of the beft Arms and Cannon being carried from thence into Hungary. They fhew'd us here the Grand Vizier's Tent, taken in the laft Battle, which was more remarkable for its Bignefs than its Beauty ; the Materials were only of painted Calico, with fine Sattin Strings, cover'd with Silk Braid, and the Lozenges of the fame, interwoven betwixt the Strings. This Country produces no Wine, and as they know no other Religion but the Roman, fo they look upon thofe of another Perfuafion as Monfters rather than Men.
12. After we had travel'd for fome Time along the Banks of the River Ifer, (upon which Munich is feated) we paffed through a Foreft, and immediately on our coming out from thence, difcover'd the fnowy Tops of the Alps, which at a Diftance appear'd like the foaming Waves of a raging Sea : We came the fame Day to a Village call'd Legrem, feated near a fmall Lake of frefh Water at the Foot of the Mountains; we eat here fome Fifh of a Kind which we had never feen before. We coafted along the Mountains for two Hours, and by Degrees got within the Rocks cover'd with Fir-trees and Snow, being a mof defolate Place, and deftitute of Inhabitants, except that near two or three Lakes you meet with a few Fifhers Huts, made of the Roots of Fir-srees well joined together, their Boats being made of the fame Trees hollow'd our, like Indian Ca noes. At the Village of Mittenzeald, three Leagues within the Mountains, feated in a pleafant Valley furrounded with Rocks, they treated us with fome Goats Flefh and Salmon Trouts. Our Hoft hewed us a cer tian Kind of round Stones of the Bignefs of a Hen's Egg, which he affured us were found in the Stomach of their Goats, and refembled a foft, imperfect Bezoar ; he ask'd ten Crowns a-piece for them.

We were not gone far from this Village, but we met a Troop of Beggars acting the Hiftory of the Fall, for they had planted a Tree loaden with red Fruit in the Way, climbing up againft which, was a little Devil in the Shape of a Crocodile, whilf a Girl with long dithevel'd Hair approach'd towards it, and an old Fellow clad in Black, with a young Boy clad in White, holding a Sword in his Hand, flood at a little Dī̀ ftance, and upon our Approach the Play began. The little Boy with the Dagger reprefented Micbael the Arcbangel; I need not fay in what Character the Oub Man appeared, tho he told me in very plain Terms. The Reader will eafily judge what terrible Effects, in regard to true Religion, fuch Follies muft produce.

Within a Quarter of an Hour after, we paffed by the Fort Chernitz, built betwixt two inacceffible Rocks, being the common Boundary of Tyrol, and the Bifhoprick of Freifngen, the firtt whereof belongs to the Emperor, the laft is Part of the Country of Bavaria. At Night we came to the Village of Leefeld, where is a Convent of Austia Fryars: In their Church they fhew you two or three pretended Miracles, and among the reft, a chew'd and bloody Hoft, in a Repofitory of Glafs : They tell you, that a Gentleman named Milfer, Lord of the Caftle of Scblesburgh, being fo vain as to oblige them to give him the great Hoft, which is only for the Ufe of the Clergy, he had no fooner put it into his Mouth, but it caft out a Flood of Blood, and at the fame Time his Legs funk into the Pavement up to his Knees; they fhew you the Hole to this Day in the Pavement near the Altar, and the Print of his Hand on one of the Stones of the fame Altar, where he would have fupported himfelf. His Repentance however faved him, and left thefe Veftiges to deter others from attempting the like mighty Crime in the Sight of the Priefts. This Hoft alfo works Miracles, amongft which we may very well reckon the Inhabitants believing implicitly every Word of this Story.

About two Leagues beyond Seefeld we began to defcend into a Valley, at leaft a Mile in Breadth, fprinkled with divers pretty little Villages, water'd by the River Ibn: We paffed only on the right Side of it, along the Foot of the Mountain, where, after we had travel'd a League further, they fhew'd us a ftreight and craggy Rock, called the Emperor's Rock, above a hundred Fathoms high, (as they affured us) at about three Quarters of the Height of which we could obferve a Nich dug, in which ftood a Crucifix, with a Statue on each Side: They tell you, that the Emperor Maximilian I. being in Chafe of a wild Goat, purfued her to this Place, where alighting from his Horfe, he durft not remount it, but was forc'd to be brought down by the Help of Engines. There is indeed another Account of this Matter, which has received the Sanction of many great Names, particularly, of Stephen Piggbius, who relates, that the Archduke Maximilian, after remaining two Days and two Nights in the Sight of Multitudes of People, in the Place where this Crucifix now ftands, was at length conducted fafely back by a Perfon unknown, and therefore fuppofed to have been an Angel, in Memory of which thefe Monuments are placed. Our Author added this Story in his later Editions, and brought fome Inftances to fupport it, yet to many Readers, no doubt, his firt Account will a ppear the moft fatisfactory.
Infpruck, a City feated upon the River Ibm, about two Hours beyond the Middle of the before-mention'd Valley: Before you enter the City, you pafs that River over a Bridge, whence it received the Name of Infpruck, i. e. The Bridge of the Ibn, and Enipons or Enipontum in Latin. The Houfes of Infpruck are very fine, but their Roofs are built after an odd Manner, being flat on the Top, and the Rafters, inftead of rifing to a Point, are revers'd, fo that the Rain fettles always in the Middle of the Roof. The Palace of $\operatorname{Inf}$ Pruck, where the Duke of Lorrain refided as Governor, is both convenient and large, but neither beautiful nor regular, having been built at different Times. There is one Thing particular here, of which I will endeavour to give you the beft Account I can : There ftands in the Middle of the City a Houfe, call'd the Chancery, the Roof of

## Chap. III. Low-Countries, Germany, Goc. 533

the Porch of which, they tell you, was cover'd with Plates of Gold, by Archduke Frederick, after he return'd from his Exile. I made the beft Obfervation I could concerning the Truth of this Story, and found that Plates of Brals were faftened to the Timber inftead of Tiles, and that each of thefe Tiles was cover'd with another thin one of another Metal, which, if they be not Gold, I am fure they are gilded; the Roof being about fifteen Foot fquare, it could not by Calculation amount, fup'pofing them to be Gold, to above two hundred thoufand Crowns. The twenty eight magnificent Brafs Statues in the Church of the Cordeliers, were the Gift of the fame Frederick: They are bigger than the Life, and reprefent Emperors, Archdukes, Dukes of Burgundy, two Einpreffes, and two Princeffes; the Nantes of whom they are not able to tell you, as much as they reverence that Family.

About half an Hour from Infpruck, at the Foot of 2 Mountain, ftands Amras, called in Latin, Arx Ambrofana, a Country Seat of the Archdukes, being remarkable only for its Situation and the Curiofities they fhew to Strangers. There is a large Hall fill'd with all Sorts of Arms, which were more curious than ufeful; and among other Things, a Launce ufed by Archduke Ferdinand in Turnaments. They tell you moft furprizing Things of the Strength of this Prince; as for Inftance, That he could ftop a Coach with fix Horfes, by taking hold of a Spoke of the Wheel; and would break two Crown Pieces joined together. In an adjacent Gallery we faw the Effigies of many Princes mounted on their Horfes in Armour, with all the Ornaments ufed in Turnaments ; and the Skin of a Serpent fifteen Foot long, taken near Ulm, upon the Banks of the Damube. At the End of this Gallery is an Apartment fill'd with the Spoils and Arms taken from the Turks. Here you fee a Bafla and an Aga of the Fanizaries reprefented on Horfeback, in the fame magnificent Habits and Harneffes, embellifh'd with Gold, Silver, and precious Stones, they had when they were taken Prifoners.

In another Gallery they fhew'd us a double Rank of Cupboards, join'd by the Backs and Sides, extended all along the Middle of the Gallery, there being but a little Room left to walk on both Sides : The three firft were full of curious Works of all Sorts, as Alabafter, Glafs, Coral, and Mother of Pearl ; the fourth contain'd Medals, and Gold and Silver Coins; the fifth, Veffels of Porcelain and feal'd Earth ; in the fixth were many rare little Cabinets richly inlaid, the Drawers whereof were fill'd with Medals and little Curiofities of Agate and Ambergrife. Befides thefe, you fee here feven large Volumes, bound in black Velvet, with Edges and Clafps of Silver, which, inftead of Leaves, contain'd fmall Boxes fill'd with a great Number of Medals. The feventh Cupboard has many very ancient Arms curiounly wrought; and amongft the reft, a Crofsbow with thirty four leffer Bows within its Compafs, difcharging as many Arrows at a Time. The eighth is fill'd with Animals, Plants, and fuch-like natural Curiofities; here you fee a Horn of an Ox of fix Inches Diameter. The three following Cupboards are furnifh'd with Works of Ivory, of Wood, and of the Pen; the twelfth with Manufcripts and rare Books; the thirteenth with Works of Steel, and particularly Padlocks, and other Locks of a rare Invention: In the Fourteenth they thew'd us Stones reprefenting Trees, Fruits, Shells and Animals, all the pure Productions of Nature: In the fifteenth and fixteenth, all Sorts of Clock-work and mufical Inftruments. The feventeenth contains a confiderable Quantity of precious Stones unpolifh'd, and of metallick and mineral Oars. The eighteenth, a good Number of fmall Veffels of pre. cious Materials, and of the rareft Shells in the World. The nineteenth furpaffes all the reft in Riches, being fill'd with Veffels of Gold, Cryftal, Agate, Chalcedony, Onyx, Cornelian, Lapis Lazuli, and other precious Stones, enrich'd with Gold and Diamonds in baffo relievo, and other rare Workmanfhip. The twentieth and laft contains Antiquities of all Sorts, Sepulchral Lamps, Urns, Idols, $\mathcal{E}^{\circ} c$. and among the reft a Piece of a Rope about the Length of a Hand, which, they

YOL. II. NUME. IO5.
tell you, is Part of the fame wherewith Fudas hang'd himfelf. On the Walls and Ceiling you fee an infinite Number of other Curiofities; among which the Bow of Noab is an admirable Piece of Painting, for which, they affirm, the Great Duke of Tufcany offer'd an hundred thoufand Crowns; and in a great Cheft you fee a whole Cart-load of Medals laid up together ; a fure Sign they are not valuable. From hence they carried us into the Library, which we found much out of Or: der; and from thence into another Gallery full of Statues, Bufts, and other Pieces of Antiquity; befides a great many other Apartments adorn'd wich Pictures of a great Value. At our Inn (the Golden Hart) we faw a middle aged Clown, who wonld lay his Arm fretch'd upon the Ground, upon which a lufty Fellow flanding with both his Feet, he lifted him up with the fame Hand only, and carried him crofs the Room.
13. About a League beyond Infpruck we reeenter ${ }^{\text {d }} \mathrm{d}$ the Mountains, and by a troublefome and tedious Afcent of feven Hours, came late at Night to a little Village (not quite at the Top of the Mountain) call ${ }^{\text {d }}$ d Grufs, i. e. Salutation, having acquired its Name from the Meeting of the two illuftrious Brothers near it, viz. Cbarles V. and his Brother Ferdinand, the whole Account whereof you find engraven on a Marble Stone two hundred Paces from the Village, the exact Place where they firft faluted each ocher. They treated us at Night with feveral Sorts of Wild Fowl and Venifon; all the Hares, Foxes and Bears are white here, as well as moft of their Partridges : They abound alfo in Heath Cocks and Hens, Pheafants, and another Kind of large Wild Eowl, call'd by them Scbneebabn or Snowgoof. All thefe Sorts of Wild Fowl have their Feec velveted about the Claws, with a Kind of Furr which is neither Hair nor Feathers, but fo thick, that the Snow cannot penetrate it, a Point of natural Hiftory that very well deferves Notice.

This Mountain is call'd the Brennerberg, i. e. the Burna ing Hill, by reafon of the piercing and burning Winds, which (together with bothThunder and Lightning) reign frequently there in the Summer Seafon. Thefe Winds forcing their Paffage thro' the Hollownefs of the neighbouring Mountains, as it were thro ${ }^{3}$ Pipes, raife fuch furious Hurricanes, as fometimes overthrow both Trees and Rocks. Having travel'd about two Hours the next Day, we came to the Top of the Mountain, where we difcover'd a remarkable Spring, which difcharging itfelf upon a Rock, there feparates into two Currents, which foon after become confiderable Rivers, one turning to the South, and joining with the Ibn near InSpruck, the other to the North, after it has paffed Brixert and Bolfano, difcharges iffelf into the Adige a little above Irent. We dined at Steerzingen, where we eat the Fleft of a certain Creature call'd by them Steinbocks or RockGoats, (Rupe Capra) Creatures betwixt a He-goăt and a Doe, which were moft excellent Meat.

From hence, the direct Way to Trent being very rough, we took that over Brixen, which is lefs dans gerous: We met this Day above a hundred Waggons drawn by Oxen, the cloven Feet whereof were hod with Iron; they came from the Fair of Bolfano. We faw alfo, in thefe Monntains, Abundance of fmall Carts with two Wheels, which the Peafants draw themifelves and chiefly make Ufe of to fetch Salt from Hall, a little City in the Valley of Infpruck: It is made of Wa: ter boil'd into Salt. The Habits of thefe Motintaineers are very odd, fome wearing green, others yellow, and others blue Hats, and that with fuch little Difference in their Garments, that the Women are fcarce to be dia finguifhed from the Men. Brixen is a very fmall City in the Country of Tyrol, though it is the Refidence of the Bifhop. They keep their beft Apartments here in the higheft Stories, but for what Reafon I know not.

From hence to Bolfano is only feven Hours traveling; but as the Road lies betwixt the River and the high Mountains, if a fudden Thâw happens to melt the Snow, it rowls down from the Precipices with fuch Violence, that it fwallows up both Nian and Beaft. whence it is, that on the Road you fee fo many fmall Monuments, fill'd with the Hiltories of fuch as bave
gither
either elcaped narrowly, or perifh'd by thefe Accidents; and hence alfo it is, that the Churches hereabouts, and efpecially our Lady of Newburgh's, are almoft overladen with Prefents. We were not a little furprized when we found the Valley of Bolfano, in the Middle of the Winter, cover'd with green Willows, Rofes and Mulberry-trees, the Reafon whereof may be attributed to the Situation of the Valley, which on all Sides is fhelter'd from the Winds.

The City of Bolfano belongs alfo to the Bifhoprick of Irent, but is of very little Compafs; its chief Traffick arifes from four Fairs a Year, each of which lafts fifteen Days, in which they exchange the Commodities brought thither from Germany and Italy. They fhew'd us a round Hole of three Foot diameter in the Roof of the Church, furrounded with a Garland of Ribbons of different Colours, on which hang a great Number of large Wafers : They told us, That an Opera being acted in that Church on Afcenfon-Day, the Perfon that reprefented Chrift was taken up into Heaven thro' this Hole. The Valley of Bolfano is full of Vineyards, which produce a Wine much efteemed thereabouts, but is not fo pleafing to Strangers, by reafon of its fulfome Sweetnefs. The Road betwixt Bolfano and Trent (juft a Day's Journey) is planted all along the Valley with Vines, where you fee, at certain Diftances, little Straw Hutts, fupported by three high Firr-poles, like a Trevet, from whence they kill the Bears with Fufils, that come from the Mountains to eat the Grapes.
Trent is much of the fame Bignefs as Bolfano, and feated after the fame Manner, on a flat Rock of a Kind of red and white Marble, which alfo furnifhes the Materials for their Houfes. This City is fubject to moft dangerous Inundations, not only from the Overflowing of the River, but allo from the Brooks of Levis and Ferfena, which fometimes difgorge themfelves with fuch Impetuofity from the adjacent Mountains, that they force great Rocks along with them even into the Town. Trent is fortified only with a fingle Wall, wafh'd by the River Adige. The Bridge and Bifhop's Palace are much boafted of by the Country People, tho' the laft is low and but indifferently large. The Bifhop is both a Temporal and Spiritual Lord, and his Territories are of a confiderable Extent. Some place this Country in Germany, others in Italy, becaufe the Bifhop is a Prince of the Empire ; but the common Language of Trent is Italian, and the Inhabitants of the Country reckon it Part of Italy, in which, however, they are not follow'd by their Neighbours. In one of the Chapels of the Cathedral they fhew a Crucifix as big as the Life, which, they very gravely fay, bow'd its Head at the Time of the Councils being fworn and proclaimed under it, to fhew its Approbation of the Veracity of their Decrees. They add, That no body knows the Materials of which it is compofed; and for that Reafon would have you believe it was made without Hands. They are building a moft magnificent Chapel, where it is to be placed, this being fomewhat dark: They call it the Holy Crucifix.

The Church of St. Mary major, where this Council fate, is a little Church, built of a kind of bafe Marble. The Organs here are worth taking Notice of, for they not only play'd to us many new Airs, but alfo counterfeited the Cries of divers Beafts, the Beat of Drums, and feveral other Things of this Nature, which feem'd to us inconfiftent with the Gravity of fuch a Council, the Hiftory whereof is painted near it.

In the Church of St. Peter they fhew the Chapel of the little Saint Simonin. They tell you, that in 1276. the Feres ftole their Simonin, (or little Simon) a Shoemaker's Son, in the 28 th Month of his Age, and after having kill ${ }^{1}$ d the Child in a moft cruel Manner, to drink the Blood at one of their Feafts, threw his Carcals into a Water-pipe, (which now paffes to the Houle where the Thing was committed, and where their Synagogue was at that time) which being thence carried into the River, and found by fome Fifhermen, the whole Bufinefs was difcovered, the Feres convicted, Thirty nine of them executed, and the reft for ever banifh'd the City: Pope Sixtus IV. canoniz'd the

Child, who being embalm'd, is now to be feen in a Cafe upon the Altar of a Chapel dedicated to his Niemory, with a Knife, Pincers, and four great Iron Needles they made Ufe of in tormenting him, and two Silver Goblets, in which they drank the Blood.' The fame Story is painted at Frankfort on the Main, under the Bridge Gate. In the later Editions of our Author's Book there are many Hiftories of the fame Nature mentioned, to fhew, that this is not altogether incredible.
15. The Additions and Alterations that our Author has made in the Courfe of numerous Editions through which his Book has pafs'd, renders it extremely diff. cult to make fuch an Abridgment of it as was requifite for our Purpofe; fince in order to this, we are obliged to run through all his Volumes, that we may bring together and unite the many different Paffages in them that relate to the fame Place; yet after all this is done, there remain fome Things ftill to be mention ${ }^{9}$ d for the Satisfaction of a judicious Reader. As for Inftance, at the End of his fecond Volume, our Author has added a diftinct Treatife under the Title of, In Aructions to a Traveller, which at the Time he wrote it, was certainly one of the moft ufeful and entertaining Parts of his Work ; but we know by Experience, that the Length of Time has hurt it extremely.

He tells us therein, what Carriages a Traveller fhould make ufe of, the Times when they fet out and come in, and their Expence ; but we know with Certainty that Things are much altered fince, and that in this Refpect, the wifent Thing a Traveller can do, is to provide himfelf with a Dutch Almanack for the Year in which he travels, where he will find every thing fet down of that Nature as it ftands at prefent. We may fay the fame Thing with refpect to the beft Inns at every Place, and the Houfes where they fpeak Frencb and Englifh, which alter fo frequently, that they would be of little or no Ufe in a Collection of this Nature. He fuggefts likewife the Enquiries a Traveller ought to make, which is quite befide our Purpofe, and are alfo fubject to many Variations.

We the rather mention thefe Particulars, that it may appear we confider'd well what we were doing, and that we have left nothing untouch'd from Hafte or Inadvertency. There are alfo fome long Differtations of his upon various Subjects, founded only upon Hints that he met with in his Travels; fuch, for Example, as the Hiftory of the Art of Printing, in which there are many Things curious and ufeful, but the taking in there would fwell our Work far beyond its proper Bounds, or would oblige us to exclude other Things that the Publick have more Reafon to expect from us, and after all, they would not anfwer very well the Intention for which they are introduced, fince they really require much more Room than he has allowed them. But it may not be amifs to obferve, that what has been lately publifhed to the World as a new Invention in this ufeful Art, under the Title of Block Printing, is in reality no more than what was firft practifed by Coster and Fauftus, and which was juftly laid afide upon Mentel's inventing the Art of cafting feparate Letters. For according to the ancient Method, which is ftill in Ufe in Cbina, the Letters were cut in Blocks of Wood or of Metal, from which the Sheets were wrought; but then it was neceffary to cut Plates for every Page of a Book, which were of no Ufe but for the printing of that Book; and befides their being very expenfive, took up a vaft deal of Room, and after all, could never be brought to furnifh fuch neat, beautiful, and correct Impreffions, as we have from the Method that is now practifed.

In regard to the Alterations that have happen'd in the Places through which he paffed, with refpect to their Change of Mafters or Forms of Government, it would be equally needlefs and endlefs to aim at Corrections, becaufe we muft then write the Hiftory of every City and Territory, which would require many Volumes. All that in this refpect could be done, was to retrench fuch Paffages as are no longer either ufeful or entertaining upon account of fuch Changes, and preferving only thofe that are and will be inftructive and
pleafant

## Chap. III. Low-Countries, Germany, $\mathcal{E O}^{\circ}$ c. 535

pleafant as long as the Places remain to which they refer.

Thefe Obfervations and Remarks are placed at the End of this Section, that the Reader may the better judge of the Reafons upon which they are founded, as well as to fpare ourfelves and him the Trouble of repeating the fame Things, where thofe Reafons have made the fame Conduct neceffary in the remaining Part of his Work, of which it is but Juftice to fay, that moft of its Imperfections are fuch as no Performance of
the fame Kind can be exempted from, and that moft of his Superfluities are owing to his Endeavours to render his Book complete; which from the Nature of Things, neither it nor any of its Kind ever can be; for while Things are fubject to perpetual Alterations, it is impoffible to frame any Defcriptions of them that will laft for any confiderable Length of Time; this therefore we hope, will be a fufficient Apology both for him and for us, and fhall, for that Reafon, infift upon this Subect no longer, but return again to our Author's Travels.

## S E C T I O N II.

The Travelis of Mr. Maximilian Misson, tbrough a great Part of Italy, with a diftinct Detail of whatever is curious or worthy of Objervation in the Places be vifited, and many judicious and important Remarks on the Manners, Cuffoms, \&c. of the Inbabitants.
I. A Defcription of what is remarkable in the Road to Verona; of that City and of the cbief Edifices; and otber Things that are remarkable therein. 2. An Account of bis Fourney from thence to Vicenza; a Defcription of that City, and of Padua, with abundance of Remarks upon the ancient and modern State of that famous Univerfity. 3. The Autbor's Paflage from thence to Venice ; a very large Account of that famous City, and of all the publick Buildings, and other Places of Note therein. 4. This Subject continued, with various Remarks upon a Multitude of curious and entertaining Topicks. 5. The Conclufion of this Subject, interfpers'd weith Obfervations upon the Government of the Republick, and the Hiftory of the feveral Dukes of Venice. 6. A Defcription of Rovigo, Ferrara, Ravenna, Rimini, Pefaro, and Fano, with an Account of what is remarkable in each of them, and in the Country about them. 7. A very copious and circumftantial Defcription of Loretto, of the boly Houfe there, with many curious and entertaining Reflections. 8. Tbe Autbor's Gourney from Loretto to Rome, with a Defcription of all the Places of Note be pafled tbrougb in bisway, with Oblervationsupon their Situation, Produce, ancient and modern Condition, \&x. 9. An Account of whatever is remarkable in the Way between Rome and Naples; a Defcription of the Roman Higb-ways, and fome Account of the City of Naples. 10. That Subject continued, together with a particular and mof entertaining Relation of the Author's Journey to Mount Vefuvius, and other remarkable Places in the Neigbbourbood of that City. 11. A very large and ufeful Collection of Remarks and Obfervations on the City and Republick of Venice, occafioned by a long Letter weritten to the Autbor during bis Stay in Italy, in which are contained a Multitude of very important Particulars, and wherein many vulgar Errors are enumerated and refuted.

r. FR OM hence we travel'd on to Roveredo, a little City famous for its Trade in Silk, and fo on to Borguetto, the laft Village in the Territory of Trent, and to Offenigo, the firft belonging to the Venetians, a little wooden Crofs being the Mark that fhews the Boundary of thefe two States. On this Side of the firt mentioned City, you travel thro' the Wood of Roveredo, as they call it, tho' there is fcarce a Shrub to be feen all the Way, the Ground being cover'd with Rocks, that lie fcatter'd up and down, at fome Diftance from one another:- It is a dangerous Paffage for Travellers, as well as the Foreft of Vergnara, between Offenigo and the Fort of Guardara, by Reafon of the Multitude of Robbers that frequent thefe defart Places. It being too late to reach the Fort Sclufe, we were forced to lodge in the little Village of Seraino. The Fort is feated at the Foot of a high Rock, the Way leading to it being cut out of the craggy Rock, which is a Precipice on the Backfide, at the Bottom whereof the Adige runs with a fwift Current.
After we had paffed the Fort, and had coafted for fome Time the Banks of the faid River, which here glides along among the Rocks, we came at laft into a vaft Plain, which is ftony and barren in divers Places, tho ${ }^{\circ}$ in others you fee it well planted with Olive and white Mulberry-trees for Silk-worms, as well as with Vines, the laft of which are planted at the Foot of Cherry-trees and young Elms, and join themelves from Tree to Tree, forming thereby a very agreeable Profpect. Having pafis d the Adige in a Ferry-boat two Leagues from Seraino, we difcover'd foon after the City of Verona, where we arrived the fame Day.

On that Side where we entred the Gates, we found a great many void Spaces, and the Grafs growing in the Streets, which were fcarce half paved; and tho the reft is fomething better, yet, generally fpeaking, it is a poor Place, and very indifferently peopled. The Houfes are commonly low and unequal, the Balconies for the moft part of Wood, and the Streets dirty and generally very narrow; however, its Situation is infinitely pleafing, and the Air very good. The Adige divides it in two Parts, which are joined again by four Stone Bridges: The Caftle of St. Peter being feated upon a rifing Ground, affords a moft admirable Profpect of the adjacent Country. The Fort of St. Felix is behind that of St. Peter, and both together command the City ; the reft of the Fortifications are both irregular, and much out of Repair.
The Amphithentre of Verona is all deftroy'd as to the Front or outward Wall, but the Benches have been kept in tolerable Repair : There are forty four of them, the Circumference of the higheft I found five hundred and thirty Paces, and of the loweft two hundred and fifty ; each Step is a Foot and a half high, and twenty fix Inches broad. At each End of the Arena, betwixt the Benches, is a Portal of twenty five Feet high, by which you may enter out of the Street into the Arena; and above each of thefe Portals, a Balcony of twenty Foot long and ten broad, furrounded with Marble Rails.
In the Cathedral, which is a little dark Building; you fee the Tomb of Pope Lucius III, with this Infription only:

Ofla Lucii III. Roma pulfus invidia. i. e.

## T"be Remains of Lucius III. enviously driven from Rome.

The Church of St. Zeno at Verona acknowledges $P e_{\text {- }}$ pin the Son of Cbarlemagne for its Founder; it has moft wretched Carving on the Frontifpiece. On the Portal I took Notice of two Birds that, I fuppofe, were made for Cocks, holding between them a Creature with a long Tail, intended perhaps for a Fox, by which, fome believe, is reprefented Pepin and Cbarlemagne, (two Frenchmen) who difpoffefs'd Didier King of the Lomberds. On the fame Portal is another Hieroglyphick, viz. a Man on Horfeback in baffo relievo, over whom the following three Verfes are engraved, in half Roman and half Gotbick Characters :

> O Regem Aultum, petit infernale tributum, Moxque paratur equus, quem mift Demon iniquus. Exit aque nudus, petit infera non rediturus.

But though we guefs'd at the Rebus of the Cocks and Fox, yet I mult own I could not meet with any Body that could give me an Interpretation of this Devil's Horfe. Near the Church of St. Mary the Old you fee many magnificent Tombs of the Scaligers, who were Princes of Verona before this City was forc'd to fubmit to the Venetians, and from whom the learned Gulius and $\mathcal{F o j e p h}$ Scaligers pretended to derive themfelves.
The Cabinet of Count Mascardo, confifting of a Gallery and fix Chambers full of Pictures, Books, Rings, Animals, Plants, Metals, moniftrous or extravagant Productions of Nature, and the moft exquifite Pieces of Art, is fo admirable, and their Number fo great, that even a Catalogue of them would fill a goood Volume; however, I can't forbear to mention fome of them, not fpoken of before: It has many Inftruments and Utenfils ufed in the Pagan Sacrifices, and divers Figures of Brafs, which they ufed to hang up in their Temples in Remembrance of fome fignal Deliverance; divers Pieces of Workmanfhip out of the Stone Amiantbos, or the Aboestos, fpun into Thread like Cotton. Here I obferv'd alfo many of thofe Parts of Trees ufed among the Ancients before the in venting of Paper; two Trees of black Coral three Foot high each ; a Hen's Egg of this Figure ( $=$ ) ; a Circumcifion Knife, ufed by the Ferws to thore Children that died before the eighth Day.

We faw a very fingular Funeral at Verona, the Body being dreft all in Black, with a white Linen Cloak, a fine Perriwig upon the Head, and a Hat adorn'd with a Garland of Flowers, was thus laid upon a Quilt, with a Counterpane of flower'd Silk yellow and red, and a Pillow of the fame Stuff. It was carried thus open by four Men thro' the Streets, the Company following two by two, and fuch as were never married wearing Garlands, in Imitation of the Ancients, who had their Corona Pudicitic, or Garland of Cbaftity. One Mr. Montel, a French Merchant living at Verona, and fince in London, gave me an Account of a Proceffion he had often feen, which I can't but give you; the Story runs thus.
Jefus Cbrift having a Compaffion for the Afs he made his Entrance upon into ferufalem, gave her a Key to the Fields, where fhe was to feed quietly all her Life-time after; but the Afs, it feems, being tired with her own Country Pafture, had a Mind to try thofe of foreign Countries, and coming to the Sea, the Waves became fmooth and folid, fo that with little trouble fhe vifited the Ines of Cyprus, Rbodes, Candia, Maltba and Sicily, and thence coming to the Gulph of Venice, ftaid for fome Time in the fame Place where Venice was built fince ; but finding the Air not very healthy, and the Marfhy Paftures not fweet enough for her Palate, fhe march'd up the River Adige to $V_{e}$ rona, where fhe liv'd and ended her Days. This you obferve is the Legend ; now for the Proceffion.
To preferve the Memory of this renown'd Afs, they have put his Relicks into the Belly of an artificial Afs, which is kept in the Church of Nostre Dame of the Organs, and which is carried two or three Times every

Year, by four of the ftrongef Monks of the Convent, in Pontifical Habits, in Proceffion round the City. This I believe is more than was ever done in Arcadia, where they had a fingular Veneration for this Animal, and may be juftly ftiled the Procefion of Affes.

I have jutt now made a fecond Vifit to the Cabin of the Count Mofcario; and the obliging Perfon who received me was pleafed with my Curiofity, inftead of looking upon it as a Trouble. He affured me that he never thought any Part of his Time fo agreeably employed, as that which he fpent in thewing his Curiofities to thofe who love them, and that he was extreamly pleafed he could entertain me alone without being difturbed by the Crowd, which for feveral Reafons he faid, made him always very uneafy. We began immediately to take another View of many Rarities and Curiofities, and I found him more communicative than the firft time I faw him, for he talk'd very muct, all he faid fhewing a great Deal of Knowledge and Literature. We fell upon Drawers of precious Stones, and he fhewed me very fine Amethyfts, and quoted feveral Authors, who affirm that $\mathcal{F o f e p h}$ prefented one fee in a Ring to the Virgin, when he efpoufed her; and when I was looking upon the Sapphires, he cited a Paffage of St. Epippanius, who believed that God; wrote the Decalogue upon a Sapphire. The Virtues that are afcribed to thofe and other Stones, furnifhed us with Matter for a new Converfation. He has a confiderable Number of the Stones which he calls Saette, Fulmini, Pietre cerounei, and Thunderbolts. This is a Matter of Fact, that if true, deferves to be examin'd, and perhaps I may another Time give you a more pofitive Account relating to this Subject.

But at prefent I muft make hafte to finifh my Letter. I took Notice of fome Mirrors of mix'd Metal that were dug up near Verona, and are probably very ancient. The Ufe of Mirrors made of Glafs, is an Invention that one may reckon amongft thofe that are new; but thofe that have written, without any Manner of Diftinction, that Mirrors in general were unknown to the Ancients, are fallen into a grofs Miftake, for both facred and profane Books make frequent Mention of them. Among the great Variety of Coins that are to be feen in the Cabinet, there are fome of Leather, but fo disfigur'd, that I could not make any certain Judgment of them. I remember the obliging and learned Mr. Hearne, one of the Keepers of the famous Bodleian Li brary at Oxford, has fhewn me one which was better preferved in the Cabinet of the Schola Academica, of which Cabinet he has the Care and Management. No Man is ignorant of the Ufe that has been made of this Sort of Money at feveral Times, and on different Occafions.
2. As we travel'd from Verona to Vicenza, we found the Country very fertile, well cultivated, and generally level : Their Trees they plant here Lozenge-wife, on which they raife their Vines. We dined at the little Village La Torre, the Boundary betwixt the Veronefe and Vincentin Territories: Their Wines are fulfome and fweet ; their Bread, tho' made of excellent and very white Flower, is as heavy as a Lump of Earth, for Want of good Management ; and the reft of our Dinner was only a Difh of grey Peafe fry'd in Oil, a Thing furprizing enough in fo plentiful a Country, when we had better Fare among the Mountains.
Vicenza is fcarce half fo big as Verona, and but flenderly fortified with an old Wall. There are four Rivulets meet near it, but none are navigable. Among their Churches, the Coronata is finely paved and wainfcotted; and that of the Religious of St. Catberine is remarkable for three very fine Altars, as the Cathedral is for divers good Pictures. Their Town-houfe, though much boafted of by the Italians, is but an indifferent Structure, as indeed are many others, which pafs among them for mighty magnificent Buildings, there being nothing more natural to the Italians, than to be laviff in their Titles, whence they give frequently the Name of a Palace to thofe Structures that would fcarce pafs for a handfome Seat in other Parts; as they often itile that a Cbomber of Audience, which in England they call

# Chap. III. Low-Countries, Germany, G̛o. 

a large Parlour. Among other Fabricks, we faw a little Country Seat belonging to the Marquifs of Capra, about half a League from the City : It is a fquare Build ing, in the Midft whereof is the Hall, under a fmal Dome; having at each Angle of the Square two Chambers and a Clofet: It has fome good Pictures, and its Situation on an Afcent makes it very pleafant.

In our Return we look'd upon the Church of our Lady of Montberic ; the Prior gravely told us, that this Image of our Lady came out of the Earth, in the fame Place where fhe now ftands, and from whence fhe is not to be removed; for if you will believe him, ten thoufand Men have been employ'd to carry her to Vi cenza, but could not perform that Task. The Picture by the Hand of Paul of Verona, in the Dining-Room, reprefenting St. Gregory at Dinner with fome Pilgrims, is a moft excellent Piece. The Ruins of the old Amphitheatre at Vicenza are hid under other Buildings. The Theatre, which is in the Academy of the Olympicks, is the Work of the great Architect Palladio; as is the Triumphal Arch without the Gates that lead into the Plain call'd the Field of Mars, in Imitation of the Ancients.

The Garden of the Count Valmanara is a Thing much boafted of among the Vincentins: It is, indeed, true, it has a handfome Canal, curious Divifions, Knots, and Clofets, and a moft delightful Alley of Oranges and Citrons; but, after all, it wants much of being an accomplifh'd Piece, fuitable to the Infcription over the Garden Gate, which begins (and is continued) in the following pompous Strain.

Stop, dear Traveller, thou who Searcbeft for rare Things and encbanted Places, for bere thou maift find Satiffaction: Enter into this delicious Garden, and take a full Taste of all Sorts of Pleafures; the Count de Valmanara gives thee Leave, \&c.

The Road betwixt Vicenza and Padua is much the fame as betwixt Verona and Vicenza. We paffed the Tezenza about an Hour after we left Vicenza, and the Brenta an Hour' on this Side of Padua, call'd, on Account of -its Univerfity, the Learned, a large and yet a very poor City, feated in the Midft of a moft fruitful Country, having many void Places without Houfes, and many Houfes without Inhabitants; which is alfo the Cafe of fome other neighbouring Places. This City fell into the Hands of the Venetians in 1406, and in 1519, they included the Suburbs within the Fortifications, which are now ready to fall. The Streets of this City are lined on both Sides with Portico's or Piazza's, which, tho' they afford a convenient Shelter againft the Rains and Sun-beams, make them narrow and dark, and give Opportunity to many Murthers, Robberies, and other Infolencies committed by the Scholars, known by the Name of the Qui-va-li of Padua.

Thefe Scholars had a Cuftom of going abroad arm'd in the Night-time in whole Troops, and lurking bezween the Pillars of thefe Piazza's, affault fuch as happen to pafs by that Way; for whilft one asks the Queftion, Qui-va-li? Another immediately cries, Qui-via-la? And $\mathrm{fo}_{\text {, }}$ without giving Time to the Paffenger to recollect himfelf, knock him down, and fometimes break an Arm or a Leg, or perhaps give him a Paffort to the other World. Some underftanding Perfons in thefe Parts are of Opinion, that Padua was formerly a Seaport, by reafon of its ancient Grandeur and Riches, and that now they fometimes dig Mafts and Anchors out of the Ground ; but thefe may perhaps be the Remnants of Ships left in a Canal leading to that City.

The Paduans boaft of Antenor as their firt Founder; but not to infut upon the Improbability of this Affertion, or enquire whether Padud be the Patavium of Antenor, I will only tell you, that their pretended Tomb of Antenor is a meer Impofition upon the World ; for, about four hunctred Years ago, as they were laying the Foundation of an Hofpital, they happened to dig up a leaden Coffin, near which lay a Sword ; the Coffin was without any Infcription, but the Sword had fome Verfes

Vol. II. Numb. CVI.
in barbarous Latin, having but very little Relation to what was ufed in Antenor's Days: Notwithftanding which, the Paduans in general, but, efpecially one $\mathbb{L} u$ putus, a Man of fome Learning; and who was one of their Magiftrates, were fo much prepoffefs ${ }^{\text {d }}$ with the Conceit of their pretended Founder, that they would needs erect this Monument at the Entrance of St: Lare rence's Street, and beftow the Title of Antenor's Tomb upon it, with the following Infcription in Goticick Cha: racters:
C. Inclyius. Anterior palriam vom nifa quietem. Iranstulit buc Enetum Dardanidumque fugis
Expulit Euganeos, Patavinam condidit Urbem Quem tenet bic bumili, marmore cefa domus.

Several Criticifms have been made upon this Infrip tion, but among all the reft, nobody has been able to find out yet the Intention of the $\mathbf{C}$. at the Beginning of thefe Verfes. The Tomb of Lupatus ftands juft by that of his dear Antenor, to whom he gave a Name; thos not a Being.

The Church of St. Antbony of Lisbon, otherwife call' ${ }^{\prime}$ St. Antbony of Padua, is both very large and exceeding magnificent in Carving and Painting, and many very fumptuous Tombs; among the laft are that of Alexander Contarini, the Venetian Admiral, and of Count Ho. ratio Sicco, kill'd at the laft Siege of Vienna. The Picture in Frefco in the Chapel of Sr. Felix, done by the famous Giotto, is a moft admirable Piece : But the moft confiderable Piece of all in this City, is, the Chapel of St. Antbony, which is forty Foot long, and twenty five broad ; his Body lies entomb'd under the Altar, which is very magnificent and rich: They pretend that his Bones fend forth an odoriferous Scent, for which Reafon there is kept a Place behind the Altar, which being not well joined, it is no difficult Matter to put fome Balfam into the Opening. The Chapel is cover'd all over with a Balfo relievo Work of white Marble; reprefenting the Miracles wrought by this Saint, the Works of Tullius Lombardus and Sanfovin. Before the Altar hang thirty fix great Silver Lamps, which burn Night and Day; to the Honour of this Saint.

The Church of St. Fuffina is both very large and very magnificent, tho' not brought yet to its full Perfection; the Pavement is compofed of red, black, and white Marble Squares ; and the Roof of the great Church hath feven Domes, which afford it both Light and Ornament; and two more on each Arm of the Crofs: In it there are twenty four fine Marble Altars, all of a different Colour, befides the great Altar, which is a moft magnificent Work : They fuffer no Monuments to be erected in this Church. The Baffo relievo of the Benches of the Choir, reprefenting the Prophecies of the Old Teftament concerning Chrift, with their Accomplifhment in the Nerw, is almoft furprizing: It was not finifhed in lefs Time than twenty two Years The Hiftory of the Martyrdom of St. Fufina over the great Altar, is of the excellent Hand of Paul of Ve rona: The Monaftery is a vaft Pile of Building; having no lefs than fix Cloyfters, and as many Courts and Gardens : I will not trouble you with the Story of the Image of the Virgin, which flew from Conflantinople when the Turks became Mafters of that City, no more than with an Account of the other Saints that are kept in this Church. The great Place near it, 256 Foot long, and 86 broad, wais formerly called the Field of Mars, but has fince changed its Name into that of Prato della Valle, or the Meadow of the Valley: The Hall of the Town-houfe is a hundred and ten Paces long, and forty broad, but dark: It contains many Monuments of illuftrious Perfons. The Paduans have had no lefs Succefs in finding the Tomb of their Countryman T. Livius, than in that of Antenor, for in 1413. a Shrine of Lead having been found in the Gardens of St. Jufina, they did not in the leaft queftion but that this Coffin mut be that of Titus Livius, confidering this noted Hiftorian was the Prief of Concord, and that this Monaftery of the Benedicines of St. Justina was built upon the Ruins of the ancient Iemple of Concord.

6 X
To

To be fhort, this pretended Coffin of Livius being changed for one of Wood, was cảrried with a great deal of Pomp to the. Palace of Juttice, where they erected the fame Monument that is feen to this Day, and afterwards added the following Infcription, which was found in the Neighbourhood of the Place where the Temple of Concord formerly itood:

V. F. (*)<br>Titus Livius<br>Livic T. F.<br>Quarta L.<br>Halys<br>Concordialis Patavi<br>Sibi E fuis<br>Omnibus.

(*) Vivens Fecit.
Over this Infcription they have placed a Head of Marble, which paffes for that of Titus Livius; but tho' both the Head and the Infcription are ancient, yet Orfato has, in his late Differtation, fufficiently proved, that the Titus Livius, mentioned in this Infcription, was no more than a freed Man, of one of the Daughters of Titus Livius the Hiftorian. But fatisfying the Learned and the People are two Things.
To leave the Fables and Incertainties of Antiquity, I fhall give you an Account of another Monument which we faw in the fame Hall, and which is worthy of Obfervation. Some have exalted Sufannab above Lucretia; but it may be juftly faid, that the Marchionefs de Obizzi furpaffed Sufamnab and Lucretia both. Since when fhe faw Death prefent before her, fhe refolved to fuffer it courageoully, rather than to permit her Chaftity to be violated. A Gentleman of Padua was paffionately in Love with this young and beautiful Lady, and found an Opportunity to get into her Chamber when the was in Bed, in the Abfence of the Marquifs d'Obizzi her Husband. It is probable that he tried the fofteft and moft gentleWays before he proceeded to Acts of Violence : But at laft, when he faw he could not prevail, his Love turned to Fury, and he was fo tranfported with Rage, that he ftabb'd this virtuous Lady. Here is the Infcription.

> Venerare, Hofpes, Pudicitice Simulacrum Eo Vifimans, Cui banc Aram Patavini erexere Proceres:
> Lucretiam, flicet, De Dondis Ab Horologio, 2ue Latinam Lucretiam Intemerati Thori Gloria vicit.
> Hac, inter Noctis Tenebras Maritales afferuit Iedas, Et furiales recentis Tarquinii faces, Cafo Cruore extinxit.
> Per Januas Saucii oris juguli PeEtorifque Impia Novacula reforatas, Candidam eflavit Animam. Tam fortis Heroince
> Qum Numen Pio ANE ex OBIZZONIBUS, Orciani Dynafte Connubio junxit, Glorofis Manibus, Patria Lacrymis, Italia Atramento Parentavit. Anno M.DC.LXXII.

You will, doubtlefs, commend the Paduans for taking Care to eternize the Memory of fo rare a Virtue, that met with fuch a barbarous Treament : And perhaps your Curiofity will prompt you to defire the Continuation of the Story. When the Marchionefs was furprized in her Bed, her only Son, about five Years old, was with her; but the Murderer having carried him into a neighbouring Chamber before he perform'd his horrid Villany, the Child could not fee all that paffed. The Thing being brought to Light, the faid Murderer was taken into Cuftody upon Sufpicion. It was known that he had an Inclination to the Marchionefs. The Child gave fome Information: Some Neighbours affirm'd, they had feen the Gentleman in that Part of the City. They found a Button of his

Sleeve upon the Bed, Fellow to that which he fill wore; and thefe Things were ftrong Prefumptions of his Guilt. They then put him to the Torture, both ordinarily and extraordinarily ; but he ftill denied the Fact, and after fifteen Years Imprifonment, his Friends, by their Importunity, faved his Life, and even, as I fuppofe, obtained his Liberty, which yet he enjoyed not long; for fome Months after his Deliverance, the young Marquifs, which was the Child I fpoke of, fhot him with a Piftol in the Head, and fo revenged the Death of his Mother. He is at prefent (1687) in Germany in the Emperor's Service.
The Amphicheatre of Padua exceeded that of Verona; however, nothing is to be feen of it now, but an Heap of Ruins. I muft tell you, to fhew how different People's Notions are, that going into a Tennis-court here, I found the Walls white, the Balls black, and the Rackets of the Bignefs of a large Sieve.
3. We left Padua the zoth of December, and came to Venice the fame Night in good Time. By the Way we faw many good Villages and fine Country-houfes belonging to Noble Venetians. Coming to Meftre, a little City on the Shore of the Gulph, five Miles from Venice, we took a Gondolo, which carried us in an Hour and a half thither.
To give a true Idea of Venice, I muft fay fomething of the Waters, in the Midft whereof it is built. It is certain, that the Grounds upon which Venice now ftands were, thirteen or fourteen hundred Years ago, drowned by the Sea, till afterwards they were railed out of the Water, and Chanels made betwixt them, for the more convenient Approach of Veffels to the City, fome of them being capable of admitting Ships of the greateft Burthen; whereas fome cannot carry Veffels of above two hundred Tuns. To empty the Mudd out of thefe Chanels, they have Mills and other Engines, and have turn'd the Mouth of the Brent and other Rivers, to prevent their forcing the Sands into the Lagunes or Chanels, for Fear the. Earth fhould gain upon them, who put their greateft Safety and Strength in their watery Situation : But as they are obliged on one Side to keep the Dipth of their Waters, fo on the other hand, it is not for their Intereft that thefe Chanels fhould be of an equal Depth in all Places, this being one of their main Securities, which has ftood them in good Stead at feveral Times, witnefs the Mifcarriage of Pepin's Veffels in there Chanels, and of the Genoefe Fleet about three hundred Years ago.
Imagine then, a City with thirty or forty tall Steeples to rife from among thefe Chanels, at a League and a half Diftance from the Continent, without any other Defence than the Waves of the Sea, and you will have a tolerable Idea of Venice.
I know that all Geographers agree, that Venice is compofed of feventy two Ines; nor will I controvert fo received an Opinion: But I muft confefs, that I can by no Means conceive where thefe feventy two Ines fhould be ; and I dare affure you, that this Account gives a falfe Notion of the Situation of this City. It fhould feem by this Defcription, that there were feventy two litcle Hills, one near the other; and that thefe little Eminencies being all inhabited, had at laft formed the City of Venice; which is not true. Venice is generally flat, and built on Piles in the Water, which wafhes the Foundations of the Houfes, to the Height of four or five Feet. It is true, they have made the beft Ure of feveral Spaces of Ground of a reafonable Bignefs, which may, indeed, give Occafion for one to believe, there was formerly fome Land there; but not feventy two Ines, or any Thing like them. For the Streets, they are very narrow, and the moft Part of them feem to have been filled up, and raifed with Mud and Rubbifh, efpecially along the Canals; but it is not at all probable, that they have a folid natural Ground at the Bottom. If all the Divifions, which the Canals make, were reckoned for Ines, we fhould find near two hundred inftead of feventy two. It muft be farther obferved, that the Number of thefe Ines might be arbitrarily increafed, and new ones made in any Place, by fixing Piles, and building Houfes upon them, as Bridges

## Chap. III. Low-Countries, Germany, ©oc. 539

are built, by Means of Bafterdeaux, in the deepeft and moft rapid Rivers; nay, even in the Sea alfo, as at Pozzuolo and Dunkirk, befides feveral Moles. So that taking the Thing after this Manner, they could make fuch artificial Inlands where-ever they pleafed.

We are not to give Credit to what is commonly faid of the Extent of Venice; fome reckon it eight Miles in Circuit, and others allow but feven; as for me, I affure you, Venice is not either eight or feven Miles in Compafs, they reckon five Miles from Mastre to Venice, which Way we came in an Hour and an half with two Rowers, and we took a Turn about Venice in the fame Space of Time with two other Rowers, who made neither more nor lefs Hafte than thofe of Mestre. Judge then by this of the Circuit of that City; confider too, that our Gondola was frequently obliged to defcribe a larger Compafs, to avoid the little Capes which the City makes in feveral Places; and by Confequence the Line that it made, was much greater than the true Circuit of the City. Add to all this, that to mark the Circumference of a City, without confidering its Figure, is not a competent Way to determine the Largenefs of its Extent. One might eafily demonftrate, without great Help of Mathematicks, that a City which is eight Miles in Compafs, for Example, may contain a lefs Number of Houfes, than a City which is only four Miles or lefs, if you pleafe. This depends upon the Regularity or Irregularity of the Figure.

The Number of Inhabitants is another Thing which has often been determined, but feldom well examined. It is commonly reported at Venice, that there are two hundred thoufand Souls in the City, and fome have advanced the Number to three hundred thoufand ; but we muft not rely upon thofe frivolous Opinions: When the Trade of Verice flourifhed, it is probable enough that the Number of its Inhabitants was much greater than it is at prefent, but if we may give Credit to the Report of a Perfon who hath been fettled here for a long Time, and affures me that his Calculation is very exact, Venice does not at prefent contain more than an hundred and thirty or forty thoufand Souls, comprehending the Ine of Giudeca. Thofe who pleafe themfelves with reprefenting Venice as a very populous City, take great Care to putus in Mind, that it has neither Gardens, void Places, or Church-yards; and that the Streets are very narrow. But when, on the other Hand, they would defcribe the Beauty of Verice, they magnify its Gardens, its Places or Squares, and the Breadth and Number of its Canals. I read the other Day, in a Venetian Author, that he counted in Venice fifty three publick Places, and three hundred and thirty five Gardens. Thus you may fee how variounly Things are reprefented. But to fpeak freely, there is a Mixture of Truch and Falfhood on both Sides. I will not deny that there may be fifty three Spaces, great and fmall, to which this Author hath thought fit to give the Name of Places; and the fame might be faid of his Gardens; but if we take a particular View of thofe Places and Gardens, we muft conclude him to be too prodigal of fuch honourable Titles. To fpeak properly, there is but one Place at Venice, the famous and magnificent Place of St. Mark. But let us allow him the Liberty of that Name to five' or fix void Spaces more, which are neither large nor beautiful ; yet all this comes far fhort of fifty three Places. There are alfo fome Gardens here, and particularly towards Santa Maria del' Orto, but if we fet afide fifteen or twenty, or fhould even allow thirty or thirty five to be fo called,-I can pofitively aver, that the three hundred which remain would not, one with another, be ten Foot fquare ; and are not thefe very noble Gardens? Nor is the other Account exactly true, for befides the Gardens and void Spaces that are in $V_{e}$ nice, there are many Places very thinly inhabited. It is true indeed, there are no Church-yards.

As for the Argument that is brought from the Narrownefs of the Streets, it is a Sophifm eafy to be cleared. The Streets are narrow, I confefs, and fo narrow, that the Jufling of Elbows, in the moft frequented of them, is very troublefome; but then, fure, the Canals ought to be reckoned inftead of Streets? If the Ca-
nals were filled and paved, the Narrownefs of the Streets could not be alledged. I mult tell you, fince we are on this Subject, that all the City is fo divided with thefe Canals and Streets, that there are but few Houfes which you may not go to by Water as well as by Land, though every Canal is not bordered with a double Quay, as in Holland; for the Conveniency of thofe who go on Foot, there are indeed fome of thofe, but very often the Canal takes all the Space from one Row of Buildings to another. The Streets are in the little Ines that are borrowed from the Canals, and there are about four hundred and fifty Bridges difpers'd among thofe Canals, fo that there are few Parts of the City to which one may not go either with or without a Gondola. It is true, all thefe little Paffages, and all the Turns that muft be made to find the Bridges, make Venice a true Labyrinth; but the beft Way of giving you a true Idea of the Plan of Venice, is to fend you a Draught of it, which is the moft exact of all thofe that have been feen by me.
The firft Place we vifited was the Palace of St. Mark, the Glory of Venice ; the Church of St. Mark fronts one Endof it, and that of St. Geminian the other; and betwist both thefe Churches, the Procuraties, or Inns of Court and Offices of Lawyers, built very regularly of fine Marble, border both Sides of it with lofty Piazzas. This Place is two hundred and eighty Foot long, and one hundred and ten broad. As you are going from the Church of St. Geminian towards that of St. Mark, and inftead of entring there, to the right Hand you come into another Square two hundred and fifty Paces long, and eighty broad, called the Broglio, the Extremity of which reaches to the Sea-fide. The Dog'e's Palace takes up one Side of it, and the Procuraties are continued on the other.
The Tower of St. Mark being near the Angle of the Square within, does in fome Meafure fpoil the Symmetry of the Place ; its Height is three hundred and fixty Foot, including the Angel that ferves for aWeathercock; formerly it was finely gilt, and could be difcerned thirty Leagues at Sea, but the Gold being now worn off, it appears at no great Diftance. The Broglio is the Place where the Nobles walk, who fometimes take one, fometimes the other Side, according to the Conveniency of the Sun or Shade, and no body elfe is admitted to mix with them on that Side the Walk, but the other is free for every body; they are fo nice in this Point, that when a young Nobleman comes to an Age that qualifies him for the Council, and to take the Robe, four Noblemen of his Friends introduce him the firft Day into the Broglio; and if any Nobleman is excluded from the Council, he is no longer admitted into the Broglio.

About the ninth Age, the Merchants of Venice tranfported the Body of St. Mark from Alexandria in Egypt to Venice; and as Chrift is faid to have faluted this Evangelift in Prifon with thefe Words, Peace be unto thee Mark, my Evangelijt; fo the Body of this Saint was received with the fame Words by the Senate of Venice; who order'd the fame to be written in the open Book held by the Lyon of St. Mark in the Arms of Venice, and the Church of St. Mark to be built to his Honour ; though at the fame Time they were fo carelefs in obferving his Shrine or Tomb, that now they can't precifely tell where it is. I will not detain you with the Story of his Apparition, when he fhew'd his Arm to the Doge, and beftow'd upon him the Golden Ring, which is carried with great Solemnity in Proceffion every Year on the 28 th of 9 fune, becaufe it is fabulous.

The Patriarchal Church, dedicated to St. Peter and St. Mark, is no more than the Doge's Chapel, and the Primicerio or Dean of the Canons of St. Mark wears a Mitre and Rochet like a Bifhop, and has no Dependance on the Patriarch; I faw him officiate in great Pomp on Cbriftmas-Day; he muft be always a Noble Venetian, and his annual Revenue may be about a thoufand Pounds Sterling.

The Church of St. Mark is a fquare Structure after the Greek Way, being a Crofs fhortned, but not very lofty, and fomewhat dark; its chief Ornaments confitt in excellent Mofaick Work and Marble; the Roof has
fevera!
leveral Domes, antong which, that in the Middle exceeds the reft: It has a vaft Number of Statues on the Outfide, among which, the Adam and Eve, by Ricedo are chiefly remarkable: I don't fpeak, in this Place, of the four Brazen Horfes over the Porch, as being foreign Pieces brought thither by Accident. A certain learned Antiquary told me, that thefe Horfes belong'd formerly to the Chariot of the Sun, which was made as a fingular Ornament to a triumphal Arch erected by the Roman Senate to the Honour of Nero, after his Vietory over the Partbians; Confantine the Great carried them from Rome to Confantinople, where they ftood in the Hippodrome till the Venetians brought them from thence : One may ftill fee they were gilt, when firlt erected. But the greateft Curiofity belonging to the Church of St , Mark, is the vaft Quantity of Mofaick Work wherewith both the Roof and Pavement is cover'd. To give you fome Idea of this Work; it deduces its Origin from Greece, tho' they tell you that its Ufe has been in Italy near two thoufand Years; for Vitruvius (who liv’d under Auguyfus) calls it Opus fectile, Pavementa fectilia, Opera musca and mufiva; by others it is call'd Opus varniculatum or tefalatum. All Works therefore compos'd of fmall inlaid Pieces, whether of Stone, Wood, Ivory, or any other Matter, let their Reprefentations be what they will, come within the Compafs of what is call'd Molaick Work : The moft curious Works made out of Florence Stone, come alfo under this Denomination; but inftead of natural Stones, which would take up too much Time to be polifh'd and prepar'd, they have made Ufe here of a certain Compofition of Glafs and Enamel, melted together in a Crucible, which takes a moft lively and bright Colour, that never fades nor ftains. Every Piece of the Mooaick of St. Mark is a little Cube; the Field is Mofaick finely gilt, and incorporated in the Fire, upon the Superficies of one of the Faces of the Square, all the Figures (with their Draperies and Ornaments) being colour'd according to Nature, by the artificial joining together of all the Pieces of the Work, accordding to the Defign which the Workman has before him, being nicely fixed in the compound Matter or Plaifter prepared to receive them, which immediately after becomes fo hard and folid, that this Work has latted near eight hundred and fifty Years without lofing any Thing of its Beauty.
The Pavement of the Church is not inferior to the Roof, being compofed of Fafper, Porphyry, fpotted-green, Marble of feveral Colours, which make Compartments different from each other. Among all the Relicks, miraculous Images, and other holy Rarities kept here, I will mention only the Rock which Mofes ftruck in the Wildernefs, in the Chàpel of Madona della Scarpa, at the End of the Font, of a greyifh Marble; the 'three Holes out of which the Water iffued, are placed triangular-wife, about two Inches afunder; but as each of them is no bigger than a Goofe Quill, how thefe could furnifh Water fufficient, in fo fmall a Time, to quench the Thirt of fix hundred thoufand Men, with their Wives, Children and Cattle, is what I am not able to determine. In the Middle of the Portico of the Church, over-againft the Door, they fhew a Piece of Porphyry enchas'd in the Pavement where Pope Alexander III. fet his Foot on the Neck of the Emperor Frederick Barbarofla.
From the Church of St. Mark we were conducted to the Treafury, of which three Procuratots of St. Mark are always Guardians, and which is never open'd but in the Prefence of one of them. In the firft Apartment they thew you fome Relicks, feveral Pieces of the true Crofs, the Hair and Milk of the Virgins. Thence you go into another Room, where the real Treafure is kept, moft of which was brought from Constantinople with the before mentioned brazen Horfes. The moft confiderable Pieces here, are the two Crowns of the Kingdoms of Cyprus and Candia, abundance of precious Veffels of Agate, the Root of an Emerald and of Rock- Cryftal ; all thefe, shey tell you, belong'd to Conftantine's Cupboard : A Seal eight Inches deep, and as many in Diameter, made of one fingle Granate; a Saphyr weighing ten Ounces; twelve Croflets of Gold, adorn'd with Pearls; as many Head-tires in Eorm of a Crown, worn upon certain

Feftivals by the Maids of Honour to the Emprefs Helen a Cup made out of a fingle Turquoife, with Egyptian Characters; it is feven Inches Diameter, and three and a half deep; a Picture of Sc. Ferome in curious MoSaick; and many other rich Things of this Nature : Bu the Duke's Corno is, in my Opinion, the fineft Piece of all, (which Comerarius values at no more than two hundred thoufand Crowns) the Circle is of Gold, the Bonnet of Crimfon Velvet, enrich'd all over with precious Stones and Pearls of a large Size : Cbarles Pafcioal is of Opinion, that this Corno is the Pbrygian Bonne or Trojan Mitre brought into Italy by Antenor, the Figure whereof is exprefs ${ }^{\prime} \mathrm{d}$ in feveral ancient Pieces, as in the Statue of Ganymede, which is to be feen in the Porch of the Library of St. Mark, upon fome Medals of the God Lumus; in fome others whiere Eneas carries Ancbifes upon his Back, and in the Miniatures of the ancient Manufcript of Virgil in the Vatican.

This Manufcript puts me in Mind of another, viz. the fo much celebrated Goppel of St. Mark, kept in this Treafury, which I had Leave, by a fpecial Favour, to confider all over; its Leaves are of Parchment loofen'd from each other, very much worn and torn, defaced, and fo rotted, that where-ever you touch it fomething will ftick to your Fingers; it is very hard to difcern any thing diftinctly of it; it was in Quarto, of the Thicknefs of two Fingers, and the Remnants of this precious Treafure are kept fhut up in a Box of Vermilion gilt, made in the Shape of a Book. Here and there you may itill difcern the Traces of fome imperfect Characters upon the moift Parchment, but fo as fcarce to be diftinctly feen what they were; by a nice Infpection I difcover'd three or four Letters well form'd, and met with the Word KATA diftinctly written as you fee it here. The Abbot Lith, Library-keeper of St. Mark, affifted me in turning over, with a great deal of Exactnefs, all the Leaves, but could difcover nothing material, except that it had a very broad Margin, and the Lines were placed at a great Diftance from one another, rul'd with two parallel Lines, to make the Writing equal and flreight. The before-mention'd Word KATA, with one $\Delta$ and one $\Sigma$, which we alfo plainly difcern'd, prove that it is a Greek Manufcript; AlpbonJus fays 'tis Latin, and Baronius confirms it ; but that it fhould be of St. Mark's own Hand-writing, I can't find fufficient Reafon to believe, being rather of Opinion, that (the Manner of Writing confider'd) it is the Work of fome profeffed Tranfcriber; and as for the reft, we mult rely upon Tradition and common Fame, that it is the Gofpel of St. Mark; it being fö much defac'd by the Injuries of Time, that few Letters can be decypher'd in it, and confequently it is a difficult Task to prove or difprove whether it really be, or not, what they pretend it is,
In the Year 1427 , one Stamati, a Candiot by Birth, robb'd this Treafury, and broke the Wall, but was taken, and every thing recover'd, and he fentenc'd to be hang'd, which was executed accordingly betwixt the Marble Pillars which ftand at the Entrance of the Palace over-againft the Lagietta: They fay, he bego'd of the Judges that he might be hang'd in a golden Haltar, which was granted. Next adjoining to the Church of St. Mark, is the Palace of St. Mark, a great Mafs of Building after the Gotbick Manner, but neverthelefs very magnificent: It has been very often defac'd by Fire, fo that the Reparations made at divers Times, have made it not fo uniform as it would be otherwife. That Part which faces the Canal, is built of a very hard Kind of Stone brought from Ifria, and excellently well defign'd ; were all the reft like this, it might pafs for an exquifite Piece of Architecture ; as it is, it is very venerable. It is in this Place that the Duke keeps his conftant Refidence ; and here it is that the Council of State and the other Affemblies meet. The Apartments are fpacious and lofty enough, and well wainfcotted, but want Light in refpect to our modern Way of Building.

The Hall appointed for the Meeting of the Great Council (where, in Effect, the Sovereignty is lodg'd) is of a large Size, and adorn'd with curious $P_{\text {ainting }}$;

## Chap. III. Low-Countries, Germay, $80^{\circ} \mathrm{C}$.

here you fee the Pictures of all their Dukes; the Hiftory of the taking of Conftantinople in 1192, but was loft again within fixty Years after; among the reft they fhew you the Hiftory of Pope Alexander and Frederick Barbarofla, with the Pope's Foot on the Emperor's Neck, of rather his Shoulder, as it is expreffed here. If you remember the Story of the Rebellion of Bajamonta againtt the Senate, in 1210 , I muft tell you, that this was the Occafion of the little Arfenal kept in this Palace, from whence there is a Paffage to the Hall of the Great Council where the Nobility affemble, that in Cafe fuch another Defign fhould break out whilft they are affembled in Council, they might readily be fupplied with Arms from thence for their Defence. It was upon the fame Score that they built the little Judgment-Seat called the Loggietia, at the Foot of St. Mark's Tower, in Sight of the Palace and the Grand Council Chamber: Here are always fome Procurators of St. Mark upon the Watch whilit the Great Council meet and deliberate of Matters of State, for the Security of the Republick

This Arfenal is provided with a good Number of Fufils and Mufquets ready charg'd, befides many other Arms. Here they have an Engine that will light five hundred Matches at once: They preferve here alfo fome very curious. Arms of an ancient Make, and among the reft, the Sword of the famous Scanderbeg. Here alfo they fhew you the Buft of Francis Carrara, the laft Lord of Padua, who for his Cruelties was ftrangled, with four of his Children, by the Command of the Senate of Venice, in 1405. I obferved likewife a little Trunk with fix little Guns, which the fame Carrara fent for a Prefent to a Lady, and was fo contrived by certain Springs, that upon opening of the Trunk the Guns all fired at once, and killed the Lady. They alfo fhew'd us fome little Pocket Crofs-bows and Arrows of Steel of this Tyrant with which his Cuftom was to kill fuch as paffed by, without knowing from whence they received their Wounds; and various whimfical Sorts of Locks and Bolts he ufed to keep his Concubines confin'd. Here I alfo faw the two little Statues of Adam and Eve, which Albert Durer made in Prifon with the Point of his Penknife only, and which purchafed him his Liberty. We muft not forget the antick Mouths under the inner Portico of this Pa lace, and in divers Places of the Galleries, into the Throat of which any body may caft a Note, to give Advice or Notice of any Thing he is able to the Inquifitors, who have the Keys of thefe Boxes, and fometimes reward thofe who make what they call the Secret Accufation, who, to difcover themfelves, tear a Piece off the Billet, and by joining it again are known.

The Library is kept in the Procuraties oppofite to the Palace, on the other Side of the Broglio; it is none of the moft numerous, rare, and beft condition'd, and has but few Manufcripts, which are, for the molt Part, Greek; though they alfo fhew you a Treatife, entituled, De Confideratione Dei, attributed to St. Austin; but to make Amends, it has many excellent Pictures, done by Titian and other great Mafters, and Ceveral exquifite Greek Statues, as that of Ganymede, a Venus, an Apollo, and two Gladiators. It is the Opinion of fome, that Venice has as many rare Pictures as Rome; I will not pretend to determine that Matter, but only tell you, that the three moft celebrated Pieces we could fee, either in the Churches or in any other publick Place, are the Wedding of Ganab by Paul Veronefe, in the Refectory of St. George Major ; the Prefentation of the Virgin in the School of Charity; and St. Peter Martyr, in St. Fobn and St. Paul's, both by Titian. Venice is the propereft Place in Europe for young Painters to improve themfelves, for in both the Academies they have the Opportunity of viewing naked Perfons of both Sexes, in what Pofture they pleafe.

In Anfwer to your Queftion concerning the Flux and Reflux, I can only tell you, that the Sea flows fix Hours, and ebbs as many; it is later every Day about three Quarters of an Hour, as it is generally upon the Coafts. The Tide commonly rifes at Venice four Foot, or four and a half, fometimes more, fometimes lefs. The Shore beyond Venice is extremely pleafant, the long and marrow Ines enclofing this City from North to

Yob. II. NuM B. IOG.

South, in the Form of a Semicircle. The main Sed affords fome Shell-fifh, and abundance of Oyiters, but they are neither fo favoury nor fo wholfome as ours.
The Venetians boaft much of their Policy and Libertys: for the Proof of the firft they generally alledge, that they have maintain'd themfelves for thirteen hundred Years. This Reafon might perhaps ftand; if they could boaft to have maintain'd the fame Form of Government; whereas it is beyond all Contradiction, that the Government of Venice has often chang'd its Conftitution, fince their Dukes were heretofore as abfolute as Cafar was at Rome not long before his Death. Another Confideration is, that the Republick of Venice being confin'd to fuch narrow Bounds, in Comparifon of the more powerful States of Europe, and furrounded by Neighbours lefs potent than itfelf, it feems not to require fuch profound Maxims of Policy to maintain itfelf, by living quietly and peaceably with the reft; and notwithftanding all this, the Senate of Venice have, with all their Policy, not been able to prevent the Declenfion of their State at divers Times. As for their Liberty, of which they fo loudly talk, it amounts chiefly to this; that provided they don't intermeddle with State Affairs, and commit no enormous Crime, that muft of Neceffity, or by its Notoriety, fall under the Cenfure of Juftice, every body is at Liberty to live as he pleafes: Hence it is that the Greeks, Armenians, and Jopers, are allowed the publick Exercife of their Religions; and all the other Sects are tolerated, or at leaft connived at, provided they manage with a little Difcretion: It is true, the worfhipping of Images and Relicks, and fuchlike Supertitions, abound as much among the common People of Venice, as in other Places, but the better Sore fet no great Value upon them. They are now as jealous of the Liberty of the Venetian Church, as the French were of the Gallican; and it is for this Reafon they keep the Jefuits fo much in Awe; they allow none in their Convents but their own Subjects, and will not admit any Superior, except a Native of the City. They do not hefitate to pers mit thefe Fathers to wear Masks during the Carnival, to entertain their Concubines, to fing on the Stages, and what elfe they think fit, provided only they keep their Fingers out of publick Affairs.

Concerning the Faith of the Greeks here, I can't but be of Opinion, that they differ in many Points from the Greek Churches of the Eaft, though they exclaim heavily againft the Ufurpation of the Church of Romes they declare for Tranfubitantiation; they make ufe of common Bread, mingle Water with Wine, and communicate under both Kinds. In their Churches they have two Altars, one called the Altar of Preparations, the other of Confecration; the firft they make ufe of to cut the Bread with a Knife fhap'd like the Iron Point of a Launce, where they alfo mix the Water and Wine, and the Prieft takes it with a Sponge out of the Veffel in which it was firt mix'd, and afterwards fqueezes it into the Chalice. They embrace one another before they have communicated, and the Communicants receive the Bread fteep'd in the Wine, the Prieft putting it with a Spoon into their Mouths: Of all this I was an Eye-witnefs. The Archbifhop officiated in 2 Mitre not unlike an Imperial Crown, and all his Ornaments were exceeding magnificent, and were changed feveral Times, according to the different Parts of the Service. They abound in myfterious Ceremonies; whenever the Bifhop bleffes the People, he has in his Right-hand a three-branch'd Candleftick, with as many lighted Tapers; this, they fay, is an Emblem of the Trinity, as the Candleftick with two Branches he holls in his Left, is of the two Natures of Fefus Cbrift. They divide their Churches into four feveral Parts; the Altars ftand at one End, which they call boly, none but the Prieft who officiates, and his Attendants, are admitted there ; the next to that is appointed for the other Service; the third is where the Men are feparated from the Women by little Balifters; the Women fitting behind Lettices at the other End of the Church, or in the Galleries. They perform their Divine Service in the vulgar Greek, and highly condemn the Ufe of an unknown Language in the Church. They worfhip

6 I
ftandinga
ttanding, bow their Heads, and put their Hands at the fame Time on their Breafts. Marriage is among them no Bar to Priefthood, but if they are fingle at the Time of their being admitted into Orders, they muft not marry afterwards, and they forbid the fourth Marriage for Decency-fake, deny the Popifh Purgatory, and yet pray for the Dead. They ufe Confeffion, but not after the Manner of the Romanifts. Concerning the Article of the Proceeding of the Holy Gbost, they fay as little now as they formerly difputed upon it, looking upon it as a Point that has more of Nicety than Ufe; they alfo preferve Relicks, but never worfhip them.

I have made the beft Enquiry I was able about the Doctrines of the Armenians, but their Church being repairing at prefent, I have had no Opportunity to fee their Worfhip, nor to learn the Truth of it from others, except that a Friend of mine told me, that they were of very different Opinions in refpect of feveral Articles, but that thefe four or five were moft generally received among them, viz. They communicate under both Kinds, they give the Sacrament even to Infants, acknowledge the Sequeftration of Souls as the Greeks do, allow of Divorces, and believe, that at the Time of the Refurrection there will be no Difference of Sexes.
4. Before I leave Venice, I muft add fome few other Obfervations to what I have already faid concerning this City, and all the Curiofities therein. The Bridge of Rialto challenges the firt Place, founded on ten thoufand Elm Piles, and which coft two hundred and fifty thouland Venetian Ducats. It is built over the Middle of the great Canal which divides this City in the Figure of an $S$. The Venetians are fo much taken with this Bridge, that they often want Ternas to exprefs its Grandeur, whereas it is certain that it has Nothing extraordinary belonging to $i t$, except that it is built upon one Arch: As I took particular Care to meafure it, fo I can give you an exact Account of it. The Compafs of the Arch makes the third Part of a Circle ; the whole Extent, from one Extremity of the Arch to the other, on the Level of the Canal, is ninety Foot, and its Height twenty four. I know fome have blam'd the Architecture, which, according to the ftrict Rules of Art, might, for its greater Strength, be an exact Semicircle; but, in my Opinion, this Objection may foon be anfwer'd, it being reafonable to fuppofe, that the remaining Part of the Semicircle is taken up in the Foundation under Water. It is ftrongly built of great Pieces of a kind of white Marble; it has two Rows of Shops, which divide it into three Streets, viz. one large one in the Middle, and two other little ones, between the Rails and the Backfides of the Shops. Almoft all the other Bridges of Venice have but fingle Arches, and Steps of a white and hard Stone, and moft commonly very flippery, which in Part has given Occafion to the common Proverb of Venice,

## Bereare bere, of White Stones, Whores, Priests, and Pantaloons.

## All the beft Houfes ftand on both Sides of the Great

 Canal, among which are the magnificent Palaces of Pifani, Morofni, Loredano, Rofini, Vandramino, and Grimani, but their chief Beauty confifts in their Frontifpieces, which commonly are of two or three Sorts of Architecture, the reft being but very indifferent. The Lagunes contribute not a little to the Unwholfomnefs of the Air of Venice, though the Venetians are very unwilling to own it, but their Water is generally bad; for among an hundred and fifty Springs they have here, there are not above two or three that afford good Water, which is the Reafon that moft private Perfons of Note are forc'd to preferve the Rain-water in Cifterns. The Wines generally drank here are either fulfomely fiveet, or fower and eager: Their Bread is alfo very ill made, for let it be never fo frefh, it is as hard as a Bifcuit, and muft be broken with a Hammer. The little Oppórtunity a Stranger has of converfing with the Venetians in their Houres, makes me give you no Account of their Manner of Houfe-keeping, but it puts me in Mind of what I read the other Day in a Prefaceof Henry Stephens, That in his Time, a Woman that appear'd bare-neck'd abroad, was look'd upon with a very indifferent Eye in France; whereas in Italy, and efpecially in Venice, every old Hag fhew'd her wither'd Neck, but at prefent none but declared Whores fhew their Necks bare; nay, the Women of Quality do not even fhew their Faces in the Churches, the only Places where they appear in Publick; and the ordinary Women wear over their Heads a great Scarf, opening only a little about the Eyes. Their Females they educate in the Convents, from their tender Age till they are married, which is done commonly by their Parents or Kindred, without letting them fee 'their future Husbands : For it is to be obferved, that among Perfons of Quality there are no Regards in Reference to chis Point, but a good Family and Riches, the reft being left to Chance: Whence it is that the Men commonly remedy the Defects of their Wives, by maintaining Concubines: They have here a peculiar Way of colabiting with certain Women, much ufed among thofe of a tender Confcience: It is a Kind of clandeftine Marriage, the Ceremony whereof is not perform'd fometimes till many Years after they have lived together, and often not till a few Days or Hours before the Death of one of the Parties: But the moft general Way is, to keep their Miftrefs at a certain Allowance as long as both Parties agree; and this is fo frequently practifed here, that fuch as are not able to keep one fingly, join with two or three more, who enjoy the Woman, without the leaft Jealoufy, each in his Turn.

This Kind of Libertinifm is fo general at Venice, that the Mothers of young Noblemen are commonly the firt who agree with a poor Maiden's Father or Mother, for the Ufe of their Sons, at a certain Rate, to be paid monthly or yearly, as they can agree beft. I have it from credible Hands, and Roman Cathoiicks, that the Confeffors look upon this as fuch a Trifle, that they take not the leaft Notice of it in their Confeffions. For Strangers and Paffengers you have whole Streets fill'd with Ladies, eafily diftinguifhed from others by their Habits, being dreffed in red and yellow, with naked Breafts, painted Faces, and Nofegays above their Ears; whereas all the other Ladies appear in black. The Carnival commences here the fecond Holiday in Cbriftmas; then it is they begin to wear Masks, and open their Play-boufes and Gaming-boufes: The Place of St. Mark is fill'd with Mountebanks, fack-puddings, Pedlars, Whores, and fuch Sort of Cattle, who flock thither from all Parts. In the Beginning they act with fome Moderation; but the nearer they come towards Sbrove-Tuefday, the more their Madnefs encreafes. The Senate of Venice allow thefe Extravagancies, to divert the People from feeling the heavy Burthen of their Government, which, without fuch-like Amufements, would be infupportable to them : Befides that, the vaft Number of Strangers, which come from all Parts to Venice, to the Diverfions of the Carnival, brings a vaft Sum of Money to the City: I was credibly inform'd, that during the laft Carnival, there were no lefs than feven Sovereign Princes, and thirty thoufand other Foreigners there.
To give you my Opinion of the Opera's and Comedies of Venice, in refpect to thofe of Paris, I muft be plain with you, That the Ornaments of the firf are infinitely inferior to thofe of France: Their Habits are mean, without Dances, and generally without any Machines or Illuminations, except here and there a few Candles, fcarce worth mentioning. I will not venture to contradict the general Opinion of the World concerning the Italian Mufick; and it muft really be confeffed, that they have fome excellent Airs, and moft exquifite Voices: But, to tell you my Sentiment of the Matter, there is a certain unpleafant Confufion in feveral Songs of their Opera's, and they dwell many Times longer in one Quavering, than in finging four whole Lines, and immediately after they run fo faft, that you cannot tell whether they fing or fpeak, or do both by Turns. It is certain, that the overftrained Scream is not fo pleafing to Foreigners as to the Italians. The Orcheftre is much lefs than at Paris ; but this may per-

## Chap. III. Low-Countries, Germany, $\sigma^{\circ}{ }^{\circ}$ c.

haps be efteemed rather a Perfection than a Fault. There is another Thing I cannot pals by without a Remark, I mean the prepofterous Figure which their Eunuchs make on the Thearre: It is a very odd Sight to fee one of thefe mutilated Fellows act the Part of a Bully with his effeminate Voice ; and another to reprefent a young Lover, with his withered wrinkled Face.

There are at prefent no lefs than feven Opera's at Venice, which by Foreigners are frequented chiefly for the good Company's Sake: They have a Buffoon in every Opera, who intermixes his Fooleries, withour Difcretion, with the moft ferious and tragical Part of the Play. Their Comedies are fill'd with fuch ridiculous Buffooneries, that in other Parts they would not pafs for tolerable Farces, Harlequin being commonly the Head Actor, who is back'd in his Grimaces with the moft rank Bawdry that can be invented, to make the Spectators laugh; and for Fear they fhould be difappointed in their Aim, they admit whole Troops of the Gondoliers, or Watermen, into the Playhoufe for nothing, when they are ready to begin : Thefe are very diligent on this Occafion, by bawling and clapping their Hands, to extort, as it were, a general Applaufe from the Spectators. Thefe Thearres belong to fome Noblemen, who make a confiderable Profit of them during the Carnival.
Their Affemblies, where they play at Baffet, they call Ridotti, which are kept open as long as the Theatres: They allow none but Noblemen to cut: You fhall, fee fometimes ten or twelve Rooms on a Floor, with Gaming-tables in all, crowded with Gamefters masked, with Courtefans and Ladies of Quality, who, under this Difguife, have the Privilege of enjoying all the Diverfions of the Carnival, provided they can get a little out of the Way of their Spies or jealous Husbands. They have alfo certain Rooms, where they fell Liquors, Sweetmeats, and fuch-like Things, to relieve fuch as are fatigued with Standing. Every one thus masked, provided he be in good Appare!, has the Liberty of talking to the Ladies even of the higheft Quality, nobody, not even the Husband himfelf, taking Notice at that Time what is faid to his Wife, becaufe the Mask is facred; though this fometimes gives Occafion to an Intrigue, in a Place where the Scarcity of Opportunity prompts them to do more with the Wink of an Eye, than in other Countries with a longer Courthip.
But the chief Place for Mafquerading is the Place of St. Mark, where you may put yourfelf in what Difguife you pleafe, pravided you can maintain the Figure of the Perfon you aflume; for here you fee the Harlequins jeer one another handfomely; thofe who perfonate Doctors, difpute learnedly; and fo with the reft: But fuch as have no Inclination to venture upon there Engagements, may appear in the Habit of a Nobleman, or fome foreign Drefs, and be only Spectators. All the Mafquers mult appear without Swords. Here you fee, befides Puppet-players, Rope-dancers, and For-tune-tellers, whofe little Stages are fill'd with Globes, Spberes, and other Afronomical Inffruments: They make Uie of a Tube of Tin to fpeak into the Ears of thofe who confult them ; and it is a pleafant Sight to fee the Priefts and Monks more frequently taking up the Tube than the reft.

I will not pretend to give you an Account of their Bull-baitings, Goofe-bunting, Wrefling, or Boxing, Balls, Races upon the Water, or of their Feaft on SbroveTuefday, when they cut off a Bull's. Head in the Prefenice of the whole Senate, in Memory of a Victory in Friuli: But I muft not omit to tell you, that the Carnival is not the only Time when Masks are in Requeft at Venice, there being no Feaft of Pleafure where they are not ufed more or lefs, as at the Audiences of Ambaffadors, on Afcenfion-day, \&xc. All thefe Days are very profitable to the Watermen, who knowing all the Turns and By-ways, keep Correfpondence with the Waitingwomen, and for a good Reward will furnihh Ladders of Cords for an Intrigue, one of their main Bufineffes being Pimping; in which Art they are fo well verfed, that they will depofit a Sum of Money, as a Security,
that their Ware flall prove good. They hire the Venes tian Gondola's, or Boats, either from Place to Place, or by the Hour, or by the Day. You may have one of the beft for five or fix Shillings a Day. Thefe Boats are prettily contrived; and very light : Their Length is generally thirty or thirty two Foot, and their Breadth four or five, in which you may fit with a great deal of Conveniency, under a Cover like a Coach, with Glaffes on both Sides; the left is reckoned the beft Place; becaufe there you can beft fee the Boatman, and command him as you pleafe. Thefe Fellows are very dextrous in their Bufinefs, and will, with a furprizing Facility, manage their Oars, flanding with their Faces towards the Place where they are to go. All the Gondola's, or Boats, muft be black, even the little Chama ber, which is generally cover'd with black Cloth or Serge; but Foreigners are not fo frictly tied to this Rule; the Gondola's efpecially of the Ambaffadors are generally exceeding magnificent: They have com= monly four or five, and make their Entries in them.
The Arfenal of Verice challenges Precedence among the firft of Europe ; but as it muft be confefs ${ }^{3} \mathrm{~d}$, that 亩 is a Place of great Confequence, fo on the other hand it ought to be confider'd, that it is the only one the Venetians have in Italy, and that in its Enclofure it comprehends all their Ammunition, Stores for their Navy, Cafting-houfes, Rope-yards, Forges, Lodges for the Galleys, and Galeaffes, and the Buicentoro ittielf, befides the Docks for refitting their Ships: And notwithftands ing all this, you muft not believe above half they tell you upon this Head. I remember that our Guide would fain have perfuaded us, that it contain'd no lefs than two thoufand five hundred Pieces of great Cannon; Arms for a hundred thoufand Foot, and compleat Accoutrements for twenty thoufand Horfe s but thefe are only Words. Among their Men of War, that call'd The Redeemer is the biggeft, and, as they told us, carried eighty Pieces of Cannon and fourteen Pattareroes; and is now at Sea. Their Galeafles have three Rows of Guns in the Prow, but only two in the Poop; their Complement of Slaves is ninety two, fix on a Bench. The Bucentaure is a large Galeafs of State finely carved and gilt, in which the Doge and Senate, with many of the Nobles, go out to Sea every Year on Afcenfionday, to perform the Ceremony of marrying the Sea.
As to the Rank the Noblemen of Venice afpire tos which they have pufh'd to that Degree, that they pretend their Nobility to comprehend all other Titles, fo as even to compare themfelves with Princes of Royal Blood; I muft tell you, that it appears to me rather founded upon Opinion than folid Reafon. It is true ${ }_{5}$ that confidering the Noble Venetians, by Right of Inheritance, are Members of the great Council, which gives Life to all the reft; they are born with fome Character of Sovereignty, but at that Rate the Nobility of Genod might challenge the fame Prerogative ; and, after all their Boafting, the Commands, great Offices, Wealth, and ancient Extraction, make new Diftinctions among them; and they are not fo nice, but that they will fell this Title for a certain Sum of Money. They never appear in Publick but in their Robes, which are of black Cloth, and ought to be lined with greyifh Cloth in the Winter, and Ermins in the Summer. The Stole is of the fame Cloth, as well as the Girdle, which, being abour four Inches broad, is adorno ed with Silver Buckles and Plates. Their Bonniets are no more than a Kind of Caps of black Worfted, with a Fringe of the fame Stuff, which they commonly bear in their Hands, becaufe they are unwilling to incommode their great Perriwigs s however, the Procurators of St. Mark, the Sacri Grandi, and fome others of the great Officers of the State, are diftinguifhed by their peculiar Habits: Thofe that have been Ambaffadors have the Privilege of wearing a Stole of Cloth of Goid, and Golden Buckles on their Girdles, but they generally content themfelves with a little Gold Galloon upon their black Stole.
The Pbyficians, Adrocates, Notaries, and all thofe they call Cittadini, wear the fame Habits as the Nobles; they challenge the Title of Excellenicy, and the Manner
of faluting them is to kifs their Sleeve, which about the Elbow is as big as a moderate Sack, and ferve fometimes to carry Provifions in from the Market, becaufe they fcarce ever appear with any Attendance at their Heels. They are never faluted in the Street, except by thofe who wear the fame Robe, being rather fear'd than lov'd by the People, not fo much on account of the Hardfhips they fuffer from them, as for want of knowing them, the Nobles being not permitted to converfe familiarly with any body. The Nobility of Venice is not reftrained to the eldeft Sons, as in England, but they are not permitted to traffick, much lefs to marry with Foreigners. Thofe Marquifes, Counts, and other titular Nobles belonging to the VenetianState, are no Noblemen of Venice, but either fuch as really enjoy'd thefe Dignities in their refpective Countries before they became fubject to the Venetians, or by the Venetians, fince their Conquefts, have been dignified with thefe Titles to humble the reft, and by a Confufion of new. Titles, abate the Pretenfions of the ancient Nobility of thofe Countries. There are a third Sort of titular Nobility in the Venetian State, whofe Anceftors, though not fully entitled to thofe Dignities, yet had fome Pretenfions to them, and upon the Change of the Government, affumed thefe Titles by the Connivance of the Venetians.

Your Information concerning the Duke or Doge of Venice, is wrong in all its Parts; for, I can affure you, he bears only the Figure of a Prince, and the Shadow of Greatnefs without any real Subftance; much in the fame Manner the Dukes of Aquitain and Normandy do at the Coronation of a King of England. It is true, he has fome outward Marks of Grandeur annex'd to his lofty Title, but thefe are beftow'd on him no otherwife than as he is a Reprefentative of the Republick, as Ambaffadors are of their Mafters. That this is true beyond allContradiction, you will very clearly perceive, if you confider, that all his Councellors have a conftant Eye over all his Actions, and have an Authority to vifit his Clofet every Hour. It is not in his Power to pardon any Criminal ; he can't fo much as pafs over to the Continent without Permifion from the State; and he no fooner fers Foot afhore on that Side, but his Ducal Authority and Dignity ceafe, and he is confider'd as Nothing more than a bare Nobleman of Venice; immediately all his Kindred, that were before in any Offices, are turn'd out, and when he dies, there is no fuch Thing as the leaft publick Mourning upon that Occafion. He is, befide this, as much fubject to the Law as the meaneft Perfon, and the Inquifition of State is chiefly level'd at his Power, which is fo ftreightned, that except two or three inconfiderable Privileges, he poffeffes Nothing beyond other Noblemen ; thefe are, that he has a double Voice in the Grand Council, and the Difpofal of divers little Offices belonging to the Palace, and the Nomination of the Primicerio and Canons of St. Mark. The Honours, as I told you before, which are paid to him, being nothing elfe than the Marks of the Sovereignty of the Common-wealth in their Reprefentative; it is in this Senfe he bears the Title of Duke and of His Serenity, (a Title efteemed here beyond that of Highnefs) and when he appears abroad upon any folemn Occafion, has a Torch carried before him, a folding Chair (having two Arms and no Back) with its Cuhhion, eight Silver Trumpets, and as many Standards with the Arms of Venice, and perhaps fome Hautboys: Of thefe Standards two are white, two red, two violet, and two blue, which; they fay, fignify, Peace, War, Truce, and the League They fhew'd us that the two red ones were carried firft, the State being then engaged in a War againft the Turks, whereas in Time of Peace, the white ones precede the reft. He has alfo a Kind of Umbrello carried after him.

Upon thefe Occafions the Doge is generally accompanied by the Nuncio, and the Ambaffadors refiding at Venice, except the Minifter of Spain, who never appears at thefe Solemnities, to avoid difputing with the Frencb Ambaffador about Precedence; all thefe Minifters have their Hats on; the Dulke never pulls off his ducal Cornet,
except when the Hoft is elevated, or when he is vifited by a Prince of Royal Extraction, or by a Cardinal, who fits in a like Chair with the Duke, and even on his right Hand. After thefe march the chief Senators, before whom is carried the Sword of State, as an evident Mark of the Sovereignty of the Council. It is true, upon their Coin the Duke's Name is ftamp'd, but on the Reverfe you fee him on his Knees, at the Feet of the Primicerio, who fits and reprefents St. Mark; of him the Doge takes the Oath of Fidelity, with the Mafsbook in one Hand, and with the other receiving the Standard of Venice; fo it is evident, that his Image bears no more Marks of Honour here than that of the Primicerio. The Letters of foreign Princes are alfo directed and delivered to the Doge, but he is fo far from having any Power of opening them, that he muft deliver them to the Council: The fame Thing is obferved in refpect to Ambaffadors; for after Matters have been deliberated and concluded in the Council, the Anfwer is put fo exactly into the Duke's Mouth, that fhould he commit the leaft Miftake, he is corrected upon the Spot. Thus in all Acts or Declarations, of State, he is no more than the Herald, who has the Honour of publifhing what is enacted by the Senate:
I will not pretend to unravel to you the Myfteries of the Venetian Common-wealth, the fame being above my Purpofe, and even out of my Knowledge, for want of fufficient Time to be fully inftructed in fo many Things: I will only add concerning the Patriarch of Venice, that after he is elected by the Senate, he receives his Confirmation from the Pope : Though his Station is very eminent, yet his Authority is kept within very narrow Bounds; for, except two or three Benefices, the People of each Parifh chufe their own Curates, and the Clergy acknowledge no Superiority but that of the Senate. This Prelate muft always be chofen out of the Nobility, and his Garment is of a Violet Colour; he ftiles himfelf Divini Miferatione Venetiarum Patriarcha, i. e. by God's Mercy Patriarch of Venice; but not as others do, Et Sanile Sedis Apostolice Gratia; and by the Grace of the Holy Apoffolick See ; the Venetians acknowledging no fuch Superiority. For the reft, this Election is commonly carried on by Intereft and Intrigue, as in the chufing of a Pope, little Regard being had to Merit ; and it is beyond all Difpute, that the Ignorance of the Clergy here is greater than what can well be exprefs'd or imagin'd ; to remedy which, as alfo their Licentiournefs, and the too free Converfation with the Nuns, Cardinal Barberigo, Bifhop of Padua, a wife and venerable Perfon, has taken a great deal of Pains of late Years, but to little Purpofe.

I murt not forget to tell you a pleafant Secret they make ufe of here, in Behalf of fome Priefts that are Muficians : You are not ignorant, that one of the main Qualifications belonging to a Prieft, is to be a compleat Man ; but as the Sweetnefs of the Voice is of great Ufe, both in their Opera's and Churches, they have found out this Expedient, that a Prieft thus fitted for Mufick, may exercife the Functions of Priefthood, provided he carry the fame Implements that belong ${ }^{2} \mathrm{~d}^{2}$ to his Body in his Pocket. Is not this a moft religious Diftinction!
Father Mark Aviano, whom I mention'd in my Letter from Augsburgb, is here at prefent, but 1 could never hear him preach, the Crowd of the People being fuch, that they were forc'd to break a Hole through the Wall of the Church, to let him go into it from a neighbouring Houfe.
5. It is one of the Peculiarities of Venice, that fome of the Churches are dedicated to Saints that were never canonized, fuch as the good Man $\mathcal{F o b}$, the Prophets Mofes, Samuel, Feremiab, Daniel, and Zacbary, to whom there might be fome others added. I had the Curiofity to vifit the Temples that are confecrated to thofe illuftrious Names, but could not find any Thing more extraordinary in them, than their Dedication. One of the fineft of thofe facred Structures is that which is dedicated to St. Mofes; it has a majeftick Front, which was built by Alexander Tremignone, at the Charge of the Procurator Vincint Fini. They preferve feveral Re-

# Chap. III. Low-Countries, Germany, $\sigma^{\circ} c^{\circ}$. 

licks in this Church, and pretend, that they are both very authentick and potent; however, fince they confift only of Arms, Legs, and Jaw Bones, I will not trouble you with a Catalogue of them: But when I meet with fome holy Curiofity; which deferves to be particularly taken Notice of, as fome Foreskin of a Pbilifine, fome Peare of St. Francis's Iffue, or a Shoe of the Trojan Horfe, you may expect to hear of it. As for the Church of St. Samuel, 'it will be fufficient to tell you, that there is nothing remarkable to be feen in it: St. $\mathcal{F o b}$ 's is a very fine Building. In the Veftry they keep a Body of St. Luke, and the Benedictins of St. Fustina at Padua, have another : But fince the Pope declared for the former, the Monks of Padua have very prudently taken the Refolution to be filent.

At St. Feremy's, which is a fine Edifice, they have one of that Prophet's Teeth, and it is reafonable they fhould have a Relick of their Nation. If the reft had imitared fo judicious an Example, we might, perhaps, have had the Pleafure to have feen one of Mofes's Horns and 70 's Scabs. The great Altar, and the Tomb of St. Fobn the Maxtyr, Duke of Alexandria, are the moft remarkable Things I obferved at St. Daniel's. St. Zacbary's is a fine Building. The Architecture is not modern, but the Front is enriched with fine Marble, and the Infide beautified with many Ornaments. There are alfo magnificent Altars in it. The famous Church of St. Mark is fo inriched with Mofaick Work, that, in this Refpect, the Churches of St. George Major and della Salute ought not to come in Competition with it : But if we confider the Architecture of St. Mark, it is an obfcure Place, in Comparifon to thofe Churches. The beft Judges give the Preference to St. George's, but common Eyes find fomething in the Church della Salute that is more agreeable to them. The Defigns are quite different: St. George's is not unlike to St. Jufina's at Pa$d u a$, for the Contrivance or Gufto is the fame in both. It is true, St. Fufina's is larger, and perhaps more magnificent within, but its Outfide is naked; whereas the other is adorned with an admirable Front. The great Altar in this Church is enriched with Marble of the fineft Sort, and curiounly wrought : It is alfo adorned with feveral Statues, the chief of which are the four Evangelifts fupporting a World, on which there is a Padre Eterno. The Whole is of Brafs gilt. The Seats of the Canons round the Choir are of Walnut Tree, on which the Life of St. Benedici is defcribed in very fine Baffo relievo, where the Rules of Perfpective are well oblerved. In a Chapel near the Tomb of the Procurator Vincent Morofini, thofe, who have good Eyes, obferve on a Marble Pillar, and on fome Places on the Balifters, Fifhes, Birds, and other Things naturally figured, and even an entire Crucifix; I mean the Eyes of Imagination; for there is nothing like it in Reality, though certain little Books, that are to be bought at Venice, fay To.

In this Church they have the Body of St. Stepben the Proto-martyr, which a pious Woman called Fuliana, brought from Gerufalem to Confantinople, from whence it was afterwards tranfported to Venice by one Peter a Monk. The whole Story is defcribed at Length in two long Latin Infcriptions, which I had the Patience to tranfcribe, but I am afraid you would not have the Patience to read. The Choir, Altars, Floor, Dome, and Veftry, of the Church della Salute, are all extremely beautiful: The Foundations of this Structure were laid March the 25 th, 1631 , two Years being fpent in fixing the Piles. The Occafion is related in an Infcription which was placed on the firft Stone; importing, a Vow to the Virgin for Deliverance from the Plague. This Church was built by Baltbafar Longbena: It is adorned both without and within with about one hundred and thirty Marble Statues. It was erected at the Charge of the Publick; whereas mot of the other Churches were built by private Families, and confequently may be look'd upon as fo many Marks either of their Vanity or Piety, and at the fame time, of their vaft Riches. On the great Altar there is a Statue of the Virgin holding the little Jefus in her Arms. 'The Genius of Venice on her Right Hand imploring her Affiftance to ftop the Progrefs of Vol. II. Numb. iog.
that mortal and contagious Diftemper : On the other Side is Pefilence flying, purfued by an Angel with a Torch in his Hand. St. Mark is prefent with the bleffed Lawrence, Fuftiniani, and feveral others. All thefe Statues are of fine Marble, and wrought by a curious Hand. I dare not undertake to detcribe all the Embellifhments of this noble Structure.

St. James de Rialto is faid to be the firft Church that was built on thefe Spots of Ground on which Venice is founded; but it has been fo often deftroyed and rebuilt, that it may be reckoned a new Church; notwithftanding all its boafted Antiquity. The Altar in the great Chapel is of white Marble, and adorned with a fine Statue of St. James by Alex. ViEtoria. St. Mark's Church is but a Chapel to the Doge's Palace. St. Peter di Caftello is the Epifcopal and Patriarchal Church, pretty large, and the Front deferves to be taken Notice of for its beautiful Simplicity ; and though no extraordinary Care has been taken to embellifh this Church, there are fome very confiderable Ornaments; and feveral remarkable Things to be feen in it. The great Altar was erected by the Senate, in Purfuance of a Vow they had made during the War againft the Turks in 1649 . It is dedicated to the Beaio Lorenzo; and the Body of that Demi-Saint is placed there, in a fately Marble Tomb, fupported by Angels and Apoftles. The Statue of Beato ftands upon the Tomb, and that contains his Bones. I have feen fome devout Perfons kifs a Stone Chair, which is kept in this Church, on the Right Hand as you enter berwixt the fecond and third Altar, by the Wall. They pretend that St. Peter made Ufe of it when he was at Antioch; and a Sacriftan informed me, that it was a Prefent of Michael Palao logus, Emperor of Confantinople. The fame Perfon told me a Story of a Brazen Crofs that was found floating in fome Part of the Lagunes, and brought with a great deal of Ceremony to this Church. They have a Veneration for it, but the Crofs could never tell them what kept it from finking when it was in the Water and though it is evidently miraculous, nobody may fay that he remembers to have feen it working any Mi a racle : So that notwithftanding every Church, and almoft every Chapel, is abundantly provided with Pieces of the true Crofs, this brazen one, as extraordinary as it is, is fomewhat neglected.

The Monks of St. Micbael, betwixt Venice and Mus rano, have, in the Chapel of the Family Priolo, a fine one, which is endued with a particular Virtue to appeafe Tempefts : The Hiftory of it is full of furprifing Wonders : It is written on a Scroll of Vellum in fo antique a Manner, that this Confideration alone would be fufficient to prove the Truth of the Relation, though they had no other Arguments to confirm it. It was in Ufage heretofore, that never any Veffel fet Sail from the Port of Venice, till the Pilot and all the Ship's Crew had recommended themfelves to the Protection of this miraculous Crofs: But the Heat of this Devotion is much abated, for it feems it is the Misfortune of Venice, as well as of other Places, that good Cuftoms are fooner forgotten than bad ones. The Choir of the Church is much commended for the Richnefs and Beauty of the Work. In a little Chamber near the Choir there is a Map of the World drawn with the Hand, and adorned with Miniatures, which is certainly a curious Piece. He that made it was a Monk of this Convent, as it appears by the Medals that were ftruck on that Occafion, with this Motto, Frater Maurus So Micbaelis, Morianenfs, de Venetiis, Ordinis Camaldulenfos, Cofmograpbus incomparabilis. The Monk, who thewed us thefe Things, carried us to a little but magnificent Chapel near the Church: He faid, the People generally believed that it was built by a Courtezan, with the Profits of her Vocation ; yet at the fame Time he afo fured us, in ftrong Terms, that they were miftaken. But what fignifies it, whether true or falfe. Solon buils a Temple to Venus, with the Money that was earned by common Proftitutes; and why fhould they not do the fame at Rome and Venice, where fuch lewd Women are not only tolerated, but invited, protected, countenanced, and publickly allowed? The Convent can-
not be termed a magnificent Structure, but it is certainly a great Building and agreeably fituated, for from hence you have the Profpect of Venice, Murano, Lido, Terra Firma, and feveral Places in the Lagunes, without mentioning the Walks and Gardens that belong to the Convent. In the Year 1497, a Spanifh Ambaffador was fo charmed with the Beauties of this Place, that he refolved to fpend the Remainder of his Days in it: They made us take Notice of his Epitaph, which they told us was written by the famous Aldus Manutius.

I will not trouble you with any Account of the other Tombs and Epitaphs that are to be feen in this Place; but fince we are fo near the Glafs-houfes of Murano, I thall take this Occafion to make fome Remarks upon them. Murano is one of the largeft and moft agreeable Inands in the Lagunes, about a fhort Mile from Venice: It contains fifteen Churches, comprehending thofe of the Convents. There are fome fine Houfes in it, and a great many more Gardens proportionably than at $V e-$ nice. There is a Canal which runs crofs the Illand, which is larger than the other Canals in the fame Place, and the famous Glafs-houfes which you have heard fo often mentioned, are feated on this Canal. You mult not imagine that there is any Thing at all extraordinary in thefe Buildings; they are divided into feveral Lodgings, Halls, Warehoufes, Furnaces, $\mathcal{E}^{c} c$. as in other Places. Formerly, the Glafs called Venice Cryftal was the fineft in Europe, but at prefent it does not merit that Title, not that it is coarfer than before, but becaufe they have found the Secret in other Places to make Glafs at leaft as fine as that of Venice. Mr. de S. Didier writes, that he heard a Mafter of a Glafs-houfe at Venice offer an hundred thoufand Franks to any Man that would teach him the Secret of making Glafs as white as that of a Cup that was brought from Paris; and one of my Friends affured me, that a few Years ago having carried a Vial of the fineft Cryftal of Murano to London, the Workmen there were fo far from looking upon it as extraordinary or inimitable, that they faid they could, and fometimes did, make finer Work. The Skill they have acquired in other Countries, and the Manufactures they have erected, have almoft ruined the Trade of Murano. Their whiteft and pureft Glafs is made of certain Stones that are found in Fefma, the Afhes of feveral Herbs that are found in the Country about Tripoli in Barbary, and the other ufual Ingredients; they make it alfo of certain Stones that they found in the Adige, and the Sand that is gathered on the Shore of the Gulph on the Dalmatian Side : But this is only for common Glafs. The Glafs-makers of Murano ftile themfelves Gentlemen, fince they were enobled by Henry III. who had the Curiofity to fee them at Work when he paffed through Venice, and they enjoy all the Privileges of the Gitadinance.

But let us return to our Churches. I will not lofe Time in defcribing that which bears the Name of St. Nisholas of the Lettice, which was founded by the famous Nicbolas Leono, on Occafion of his being cured by the fanctified Lettices that were fent to him by the Monks. Nor that of St. Maria Colestis, which took its Name from an Image that fell from Heaven, and is enriched with a precious Leg of St. Lawrence, which ferves to extinguifh Fire; nor will I trouble you with an Account of Fonas's Head, which is kept at St. Apollinaris's; nor of St.Claras's Nail ; nor of the Coif at St. Larorence's; nor of other Rarities of the fame Nature, which perhaps you would look upon as Trifles. Sancta Maria Gloriofa is another of the principal Chuches in Venice; it is large and very much embellifh'd with divers Ornaments. They pretend that the Seraphick St. Francis, in proper Perfon, mark'd the Place where it fhould be built. I fpent two whole Afternoons in viewing and decyphering the Epitaphs that were to be feen in it, but I only tranfcribed two of them; one of a Woman, which is the only Monument of that Kind I obferved there; and the other of a Doge, who is made to fpeak his own Elegy. It is Francis Fofcari who was depofed, or rather remov'd from his Seat of Authority and Power to that of a private Perfon, in the 84 th Year of his Age, as not being capable of performing longer any Function belonging to his Ducal Office, in which he had honourably acquit-
ted himfelf for the Space of thirty four Years. In all States they depofe their Princes when they become traiterous to their Country, and declare themfelves Enemies inftead of nurling Fathers and Protectors of it, according to natural Equity, and the folemn Oath they are obliged to take on Day the of their Inftalment. They depofe alfo Fools and Madmen, fuch as Alpbonfo of Portugal, Uncle to the prefent King; and when they fall into an irrecoverable State of Infirmity, why thould they not exhort them to make an honourable Refignation of their Power ? Does a General of an Army that grows old and infirm, make any Scruple of refigning his Poft to another? I fhall take this Occalion to obferve, that by the Epitaphs I have feen in this Place, I find that a confiderable Number of the Perfons on whom they are written, died above 80 Years old ; a Sign that the Air of Venice is not fo bad as is commonly reported.
I liked much the greater Altar of St. Fuftina's, with the Tabernacle; the devout Adorers of that Saint are always careful to vifit the Stone where fhe left the Print of her Knees when fhe faid her laft Prayer before her Martyrdom, as the Story is related in an Infcription beneath the Stone. Thofe who chufe the huge St. Cbrifopber for their Patron, have an extraordinary Veneration for a Statue of that Saint, which is to be feen in the Church of St. Maria del Horto, on the great Altar: It was made by an excellent Sculptor, according to the Proportion of a Bone of the Original, which was heretofore brought from England by a very curious Perfon, who was a nice Judge of Relicks; fo that a devout Spectator has the Pleafure to behold the exact Dimentions of that Saint ; and this Confideration has fo enhanced the Value of the Statue, that thofe who have moft Experience in Affairs of this Nature, are confident that it will quickly begin to work Miracles. I could eafily reckon up a vaft Number of fine Paintings with which the Churches are adorn'd, but I know not whether you would have the Patience to read fuch a dry Catalogue, nor will I undertake to give you an Account of thofe half facred Places, which are here called Scuole ; there are publick Edifices divided into Chapels, Halls, Chambers, and Lodgings, which belong to Fraternities of Monks, or fome other particular Societies. I have feen at leaft thirty five of them, and I doubt not but that there are more. Among the reft there are fix called Scuole grandi, which are embellifhed with fo much Art and Coft, that they may vie with the fineft Churches both in the Richnefs and Beauty of their Ornaments.
In many Churches and Fraternities, there are annual Funds eftablifhed to raife Portions and procure comfortable Matches for poor Maids ; and generally over all Italy Care is taken by fuch charitable Foundations to provide for the Neceffities of the Sex. After I have given you my Obfervations on the Chriftian Churches, you will perhaps expect an. Account of the $\mathcal{F}$ ewifb Synagogues ; but all that I can fay on this Subject is, that there are feven of them, and that the beft of the feven is not near fo fine as the Portuguefe Synagogue in London. If we give Credit to the vulgar Computation, there are about two thoufand $\mathcal{F}$ ews at Venice; fome of them are Rich, but few in Comparifon to the Poor. They are obliged to wear red Hats; but I find by Martinelli in his Ritratto, that they may be exempt from that difagreeable Diftinction by paying a fmall Sum of Money. They have a Sort of Court that determines petty Suits among themfelves. They are generally a Kind of People that never refufe any Sort of Employment, and are made ufe of on feveral Occafions, efpecially by the Nobles, who are a very great Support to them. They may take the Degree of Doctors in Medicine at Padua, and practife Phyfick any where in the City and State of Venice.
6. The only Thing worth raking Notice of betwixt Padua and Rovigo is the Country, which is flat and fruitful, adorned with Vineyards, Groves, Meadows, and well-till'd Grounds, and water'd by many Rivulets. Upon the Road you fee fome Houfes of Pleafure belonging to the Venetians, but the Country People about Rovigo dwell only in Huts made of Reeds. The City of Rovigo itfelf is very poor, and of no great Extent,

## Chap. III. Low Countries, Germany, goc.

and yet it is the Refidence of the Bifhop of Adria, that aldus, and S. Audrere have many ftately Pieces of Mar: famous City, which imparted its Name to the Gulph, though now no more than a half-drown'd Village.
Ferrara is a large and beautiful City, but poor and ill Peopled: We went on Purpofe to one of the beft Places of the whole City; where four Streets meet, but could not perceive one Perfon in any of them, though the Country about it is one of the beft in Lombardy, but wants Tillage for Want of Inhabitants, this fruitful Country being almof defolate, by the Severity of the Papal Government. Ferrara was united to the Ecclefiaftical State under the Pontificate of Clement VIII. who built a very ftrong Citadel, which is ftill in good Repair. Of the ancient Univerfity of Ferrara, there remains only a poor College, belonging to the 7efuits. Near the Cathedral ftand fome Statues on Horfeback of Brafs; and directly over againft the Palace of the Nobility is one of Duke Hercules II. on Horfeback, on the Pedeftal of which is an Infcription granting a Sanctuary to Criminals for Twenty Paces round it. We alfo faw the Ducal Palace, the Houfe of the Marquefs de Villa, and divers Churches and Convents, which have all their peculiar Beauties; and, among the reft, took Notice of the Tomb and Epitaph of Ariofo, in the Church of the Benedietins. In the Opera we heard a pretty little Songftrefs of Twelve or Thirteen Years of Age; moft of the Boxes were fill'd with Jefuits and Clergymen.
From Ferrara to Ravenna is Fifty Miles; all the Way we faw not one Town or Village worth taking Notice of. The firft Day's Journey was very paffable, but afterward the Road becomes very deep, betwixt the Branches of the Adige and the Po: The ancient Geographers defcribe its Situation like that of Venice, amongt the Waters, and it is certain that this was the beft Harbour the Romans were Maiters of in the Adriatick Gulph, but fince that time the Lagunes are dried up, and the Sea is at leaft three Miles from it, the City being now furrounded with the moft fruitful Fields of Italy: Neither is there the leaft Doubt, but that the prefent Ravenna flands in the fame Place where the ancient Ravenna was, there being in the Walls that face the Sea-fide many great Iron Rings, by which they ufed formerly to faften their Veffels; and the Ruins of the ancient Beacon are to be feen to this Day. This City is feated in a flat Country, is not above half as big as Ferrara, but meanly built, and as thinly peopled. Without the Walls, near the ancient Harbour, you fee the Maufoleums erected to the Memory of Theodoric King of the Oftrogotbs, by Amalafntba his Daughter; it is fince turned into a little Church call'd the Rotunda; it is covered with one hewn Stone of Thisty eight Foot Diameter, and Fifteen in Thicknefs, on the Top of which food the Tomb of Theodoric, furrounded by the Statues of the Twelve Apoftles, which were deftroyed during the laft Wars of Levois XII. together with the Tomb of Porpbyry, which fince has been fix'd in the Wall of an ancient Palace within the City:
The Cathedral is a very ancient Structure, fupported by Fifty fix Pillars of Marble of the Archipelago, placed in a double Range on each Side. The Choir is vaulted with excellent Mofaick Work, where they fhew you, as a precious Relick, one of the Stones with which St. Stepben was martyr'd. But the great Door of this Church is the moft curious Thing, and deferves moft a Traveller's Obfervation, being made of Planks of Vines, fome of which are twelve Foot high, and Fourteen or Fifteen Inches broad; for it is to be obferv'd, that hereabouts, in thofe Places that were formerly covered by the Sea, the Vines grow to a prodigious Bignefs. In the Church of the Theatins (or fefuits) they fhew a little Window juft over the Altar, with the Figure of a white Pigeon upon it, placed there, as they tell you, in Memory of a Miracle that happened at the Election of the fecond Bilhop of Ravenna, after the Death of S. Apollinarius, when a Pigeon coming into the Window, perch'd upon him who was to be elected; and the fame Thing happened Eleven Times after fucceffively.

The Churches of S. Vitalis, S. Apollinarius, S. Romu;
ble and Porpbyry, brought from Greece during the Time of the Exarchy, or while under that Name is continued a Province of the Greek Empire. The Tomb of Galla Placidia, the Daughter of Theon dofius. the Great, is to be feen in the Church of S. Celo fus, between thofe of Valentinian and Honerius.

In the Grand Place you fee a noble Statue of Brals of Pope Alexander VII. And at the other End of the fame Square, two Columns, on which formerly ftood the ancient Patron and the Arms of Venice, whilft Ravenna was under their Jurifdiction; the like Columns they erect in all Cities belonging to their State'; but fince that Time the Pope has put the Statutes of S. Vifior and Apollizarius upon the fame Columns. Near them, under a Portico, they fhew the Gates of Brafs, and fome other Spoils, thofe of Ravenna took from thofe of Pavia.

We had farce travel'd a good Hour from Ravenna, but we enter'd a Foreft of Pine-trees, which is four Miles long, after which we travell'd within Sight of the Sea to the left, and the Marfhes to the right.
Having paffed the River Savio in a Ferryboat, we continued our Journey thro' the little City of Cervia, feated among the Bogs; the Inhabitants live by making of Salt. We dined at Cofenate, near the Sea-fide, and before we had made three Miles more, came to the Banks of the famous River Rubicon, call'd alfo the Pijatello, and by fome the Frumicino; and we were not a little furpriz'd to fee our Coach pafs it without a Bridge or Ferry-boat, yet Lucan in his Time gives it the following Character:

## Fonte cadit modico, parvifque impellitur undis.

Within an Hour after we travel'd clofe along the Sea-fhore, which was even, fandy and firm, without any Rocks or Shells, till within a Mile of Rimini, where we were forc'd to travel deeper into the Country, for the Conveniency of paffing the River Ariminum, which wafhes the Walls of the City of Rimini; it is now call'd Marecbia.

Rimini is a fmall and poor City, feated in a rich Country. On the Bridge of Marble are two entire Infrriptions, intimating, that Augustus and Tiberius were the Founders of this City, and that the triumptal Arch was built by the firft. Behind the Gardens of the Capucbins are to be feen the Ruins of an Amphitheatre, and Five hundred Paces thence, without the City, a Brick Tower, which was the Pharos of the ancient Harbour, but is now encompaffed with Gardens, the Sea being retir'd at leaft half a Mile thence.
The Church of S. Francis was built out of the Ruins of the Harbour, which was once one of the beft in Italy. The Library of the Count de Gambalonga is numerous, but without any rare Books that deferve Notice. In the Midft of the Market is a Marble Pedeftal with thefe Words upon it, Caius Cafar DiEt: Rubicone Juperaio civili bell: Commilit: fuos b̂̀c in foro Ar: adlocutus. In another Place you fee the brazen Statue of Poul V. and near it a curious Marble Fountain.

From Rimini we travel'd for fifteen Miles along the Dorons betwixt the Sea and the Fields. As we paffed thro' the Village Catbolica, we found over the Portal of the great Church an Infcription, by which it appear'd that this Village receiv'd its Name from certain Orthodox Fathers, who, during the Council of Rimini in 359, compos'd, for the moft part of Arians, ufed to perform their religious Service here, in Spite of that Affembly. About ten or twelve Miles thence, towards the Apennines, we difcover’d the City and little Republick of Marino on the Top of a Mountain, at the Foot of which are the Limits of its Territories This fmall and inconfiderable Commonwealth being below the Envy and Jealoufy of its Neighbours, has maintain'd its Liberty for many Ages. The Country between Catbolica and Pefaro is for feven Miles together very well inhabited and cultivated.

The City of Pefaro exceeds Rimini as well in Big-
hefs and the Pleafantnefs of its Situation, upon an eafy Aicent, as in the Neatnefs and Beauty of its Buildings. Nothing can be more pleafant to the Eye, than the little Hills that furround it, with the agreeable Mixture of Paftures, Vineyards, and Orcbards. Their Olives are very good, but their Figs are abfolutely efteemed the beft in Italy. Meat is fo cheap here, that you may buy a Pound (which contains eighteen Ounces here) for lefs than a halfpenny; Bread and Wine are cheaper in Proportion than Meat; and as both the Sea and Rivers furnifh them with Plenty of Fifh, fo this City abounds in all Things neceffary for Life. Its Fortifications are none of the wort, confidering they are after the old Fafhion. In the Market-place is a fine Fountain, and a Statue of Pope Urban VIII. under whofe Pontificate this City and the Dukedom of Urbin were incorporated with the Ecclefiaftical State, as they have ever fince continued.

From Pefaro we continued our Journey along the fandy Shore for feven Miles, as far as Fano. We faw Abundance of Walnuts, Chefnuts, Rufies, and many other Things, forced by the Winds from the neighbouring Rivers to this Shore. One of our Company, among the reft, took up here a certain little Fifh call'd Cavaletto by the Italians, in France, Cheval Marin, or the Sea-borse: It is frequently to be met with in Cabinets, being eafily dried and preferved; its Head and Neck has fome Refemblance to thofe of a Horfe. The Italians attribute to it a peculiar Quality of curing the Bite of a mad Dog, if eaten roafted, and applied to the affected Part, skin'd and beaten with Honey and Vinegar. Fono itfelf is a fmall but neat City, having nothing in it worth taking Notice of, except one Triumphal Arch, but the Infcription on it is quite defaced. It is compofed of three diftinct Gates.

About a Mile from Fano we travel'd over a wooden Bridge five or fix hundred Paces long, built over the feveral Branches of the Pongio, which overflow all the circumjacent Country, when the Snow begins to melt on the Apernines; afterwards coafting along the Seafide for fifteen Miles, we came to Senegallia, an old City, enclofed with a ftrong Wall, and fome Baftions, but not very regular. Our Wearinefs, after a tedious Day's Journey, proved the Occafion of our good Fortune, without which we had run the fame Danger that befel feveral of the Inhabitants, who were the fame Night at a Play acted at the Governor's Houfe, but the Arch, which fupported the Stage, with fome of the neareft Seats, being overladen, gave Way, and above thirty Perfons were kill'd, and many more wounded by this Accident.
From Senegallia we kept flill all along the Shore, but for feventeen Miles met with no Houfes, except an old Caftle and fome Inns, about a hundred Paces from the Sea-fide: Near a little Village call'd Turreet, about three Miles from Ancona, we turn'd into the Land-way, where we arrived in good Time. This City is feated upon a double Hillock, at the very Point of the Cape, being much larger than any of the four or five laft-mentioned Cities, but not much richer, though the Excellency of its Harbour, and the Fertility of the adjacent Country feems to entitle it to Traffick, of which it had a fufficient Share formerly, but is much decayed of late Years, by being under the papal Dominion. The Streets of Ancona are both narrow and dark, and their Buildings but indifferent; befides that, its Situation up and down Hill renders it very inconvenient. The Citadel is feated on the firf Hill, which commands both the City and Harbour ; and on the other, which makes the Point of the Cape, flands the Church of St. Cyriaca, being a low dark Fabrick, the Front whereof is of Marble, but without any Ornament. Here they boaft of the Body of St. Urfula, as well as thofe of Cologne, befides many other Saints and Relicks in high Veneration among the People. From hence we had a very delightful Profpect of the Sea, City, and Country at once.
At the Entrance of the Mole is a magnificent triumphal Arch of white Marble, erected to the Honour of Trajan, by the Senate, in Acknowledgement of the Charge he had been at in repairing this Harbour, as
the Infrription, which is not in the leaft defac'd, tells the Reader; but it was with fome Difficulty defended from the Monks, who would often have demolifh'd it to repair their Convents. The Exchange where the Merchants meet, is built in the Nature of a Portico of an indifferent Bignefs ; at the four Corners ftand as many Statues, reprefenting Faitb, Hope, Cbarity, and Religion, the laft of which was thrown down by an Earthquake, and the reft fhaken. Before I leave Ancona, I muft tell you fomething of the Oddnefs of the Drefs of the Inhabitants : We faw the chiefeft Burghers, on a Holiday, appear in a black Cloak lin'd with green, with blue or philamot Stockins, Shoes whiten'd with Chalk, and tied with Ribbons of all Sorts of Colours; their unbutton'd Doublets were embroider'd with divers Colours, and the great Sleeves of their Shirts hung down to their Fingers Ends. The ordinary Sort of Women wear a Kind of Coif, with a long Fringe hanging over their Faces; the Body of the Gown is generally, red or yellow, faften'd on four Sides with Laces, and trimmed all over with colour'd Galloon; their Waitcoats and Petticoats are both very fhort, and of various Colours. The Ladies of Quality imitate in their Diefs the French Fafhion, but after fo aukward a Manner, that they appear more ridiculous than the others in their own Country Drefs.
We obferv'd another Cuftom upon this Road, which, they told us, runs from Ferrara all over Italy; I mean their Paper Windows, whicl being always torn, prove very inconvenient in the Winter, and afford a very odd Profpect to Foreigners, as well as very inconvenient. To compleat our Mifery, they would commonly bring a Fricacy of three Eggs, and perhaps as many Pilchards, for a Supper for five or fix Perfons, and at laft make us pay as dear as if we had had extraordinary good Cheer, our Dinner and Supper amounting generally to four Shillings a Head. The Flux and Reflux of the Sea increafe and decreafe according to the Diftance from the Extremity of the Gulph; for at Venice the Tide rifes about four Foot, near Ravenna to three, at Pefaro two, and farce above one at Ancona, and fo decreafes till at laft it comes to nothing.
7. The Country between Ancona and Loretto is the beft in Italy, but the Roads the worlt, which oblig'd us to alight feveral Times to eafe the Coach. I don't queftion but you have feen feveral Accounts of our famous Lady of Loretto; but fince Matters of this Nature are varioufly reprefented, the Curiofity of the Thing deferves very well an exact Abridgment of what I was able either to learn or fee, which I will give you with grear Fidelity. This Houfe, fo much celebrated among the Roman Catbolicks, is the fame (if you will take their Word for it) in which the Virgin was born, where fhe was betroth'd and married to 70 feph, where fhe receiv'd the Salute of the Angel, and where the Son of God was incarnate. This Houfe was from Nazaretb tranfported by the Angels into Dalmatia, and placed on the Hill of Terfatto, 10 May, 129 I , where, after it had continued for three Years and feven Months, the Angels removed it from thence into the Middle of a Foreft in the Territory of Recanati, Part of the Marquifate of Ancona; but this Wood being famous for many Robberies committed thereabouts, this boly Houfe was, after eight Months, removed a third Time from thence, to the fame Hill on which it now ftands ; but foon after a Controverfy arifing betwixt two Brothers, Coheirs of the Ground on which it ftood, about the Poffeffion of this Houfe, it was in four Months after placed by the Angels fome Paces from thence, in the high Road, where it is to be feen to this Day.
To prevent all Inconveniencies that might happen to fo facred a Place, they built a moft fumptuous Church about it, in the Middle of which it ftands free from all Injuries; and for its better Prefervation, they have fince erected four Walls, which enclofe it on all Sides like a Box, without touching the Walls of the Santa Cafa, or Holy Houfe; all that Painting, Sculpture, and Arehitecture, were able to perform in the Beginning of the laft Age, has been beftow'd on this Fabrick, which is built of white Marble of Carrara, after the Corintibian Order,
adorn'd

Chap. III. Greatef Part of ITAL\%.
adorn'd with the moft exquifite Baffo relievo, in which the whole Hiftory of the Virgin is reprefented. Between the double Pillars are two Niches, one above the other ; the ten Niches below contain the Statues of the ten Prophets, and thofe above, the ten Sybils. In the Middle of this, the Santa Cafa, or boly Houfe, is enclos ${ }^{\circ} \mathrm{d}$, which is only a fingle Chanber forty four Palms long within, eighteen broad, and thirteen high, each Palm and a half being equivalent to thirteen Inches of our Englifh Meafure. To make the Story of the Removal of this Hall or Chamber the more probable, they pretend it to be built of fome unknown Stones; but, upon the fricteft Examination I could make, I found the fame to be true Brick, of a different Bignefs and unequal Shape, mix'd with fome flat, greyifh, or reddifh Stones, which are very common here ; the whole is cemented with Lime and Sand, but the Pieces are ill join'd, as if it had been done in great Hafte: The Mafon's Work is almoft open to View on the Infide, except in fome Places, where you fee certain Fragments of Plaifter-work cover'd with Painting, reprefenting the Virgin, with the little Jefus between her Arms ; this appears plainly in five or fix different Places. The boly Houfe ftands from Eaft to Weft, a Thing not much ufed in Italy; on the Eaft Side is a little Chimney, over which, in a Niche, ftands the Image of the great Lady of Loretto, made, as they fay, of Cedar Wood, and by the Hands of St. Luke, being about four Foot high. Her Ornaments are of an ineftimable Value, and if we may believe thofe that live thereabouts, fhe has a great many Robes for Change, and feven different Mourning Habits for the Holy Week : Her triple Crown, which is all over cover${ }^{3} \mathrm{~d}$ with precious Stones, was the Prefent of Lewis XIII. King of France; they told us this Di'Atich was engraven upon it';

## Iu Caput ante meum cinxisti; Virgo, Coronde Nunc Caput ecce tenet nofira Corona tuum.

## He gave alfo a Crown to the Infant.

On both Sides of the Niche are Cupboards fill ${ }^{\circ} d$ with ancient Ornaments of this Statue ; and in a little Window in the Wall, on the South-fide, they fhew you fome earthen Difhes which were ufed by the holy Family; fome of thefe Veffels have fince been edg'd with Gold, but that which they thew'd us was a Porringer with a filver Foot at the Bottom, done on Purpofe to perfuade the World that it was made of a ftrange Earth, whereas it is no more than Potters Ware, the Glazing whereof is not fo nicely taken off, but that fome Parts of it remain to be difcover'd by a curious Eye. At the Weft-end, juft oppofite to our Lady, they Shew you a Window of about three Foot fquare, through which the Angel enter'd: The prefent Arch of this Houfe being of a modern Fabrick, I ask'd them what was become of the old Roof, but they could tell me no Tidings of it. Here are alfo two remarkable Things, which, they fay, were tranfported at the fame Time with the Houfe, viz. the Altar made by the Apoftle's own Hands, and the Stone on which St. Peter celebrated Mafs the firft Time; it is cover'd with Silver, and kept as a precious Relick under the Altar where they ufually officiate. The Floor of the Santa CaSa is of Squares of red and white Marble ; but this is not the old Floor, becaufe that was left, together with the Foundations, at Nazareth. This facred Place has three Doors, two of which are at the End facing the Eaft, and give Paffage to crofs from North to South ; here the Pilgrims are let in : The other is on the South-fide, and leads to the Sanctuary, i. e. the Space between the Altar and the End of our Lady's Chamber.

To enumerate all the Riches of this Place, would be an endlefs Piece of Work, the infinite Number of precious Stones wherewith the Mantle of this Image is adorn'd, are alone fufficient to dazle the Sight of the Spectators, befides that, all about you fee nothing but Lamps, Statues, Bufts, and other Figures of Gold and Silver, not including the twenty eight Candlefticks of Silver and Vermilion, and the twelve of maffy Gold of twenty feven Pounds Weight each. They have a Cutom

VoL.II. Numb. CVII.
of expofing the laft Offering of Value for a ceptain Time, before the Eyes of our Lady, in a Place made for that Purpofe. That which we faw there was an Angel of Gold, with a Heart of the Bignefs of an Egrg in his Hands, fet all over with Diamonds of a great $\mathrm{Va}-$ lue. Our Conductor being an Englifh Jefuit, did not forget to tell us, that it was a Prefent of the Queen of England, and that the faid Princefs had conceiv'd at the fame Minute the faid Prefent was offer ${ }^{\text {b }} \mathrm{d}$ to our Ladys and was then big with Child. He had taken the Painsto make a whole Copy of Verfes upon this Snbject; by way of Dialogue between our Lady and the Angel and took a great deal of Care to recite them to us more than once with a audible Tone, and would at laft force a Copy of them upon me. This Queen was Mary of Efte, Confort to Fames II.

Round the Walls of the Chapel that enclofe the boly Houfe, you fee a vaft Number of branch'd Candlefticks, to illuminate the whole Fabrick. But the greateft Curiofity is the Proceffions of thofe Devotees, who crawl round the boly Houfe upon their Knees, fome five, Times, others feven, and others twelve Times, accor ding to the different Degrees of their Devotions; fome of thefe creep along from one Side, whilft others meet them coming from the other, buit all furnifh'd with Beads, and muttering Pater nofters; but as they all covet to come neareft to the holy Place, this fometimes occafions no fmall Confufion, which is the Reafon that this is never done but when there is only a flender Number of Pilgrims. The chief Refort is at Eafter, and the Virgin's Nativity, which they celebrate in September : I had it from credible Hands, that in fome Years they have had here above two hundred thoufand Pilgrims during thefe two Feafts. It is no unpleafant Sight to obferve the Caravans of thefe Pilgrims of both Sexes, who commonly come in Societies: As for Inftance ; a certain Body of Men join at Bologna, eat of whom has a Frock of coarfe Linnen, and a Cawl of the fame made like a Strainer for Hippocras, which covers their Head, leaving only three Holes for the Eyes and Mouth. They appear in different Colours, each Society chufing their own, but are all provided with Beads; Girdles, Pilgrims Staves, and the Armis of the Society, which are either painted or wrought ön the Back and Breaft of every Member of the Fraternity. They commonily ride on Affes. The Women appear in as rich Apparel as poffibly they can, and fix to the Bodies of their Gowns a little Pilgrim's Staff of the Length of a Hand, fome of which are of Gold and Silver, adorn'd with Gems and Pearls, others of Ebony, Ivory, $\varepsilon^{2} c$ artificially wrought. The Ladies commonly fide in Calafhes, attended by whole Squadrons of Afs-troopers.

After all the extraordinary Things that have been faid of the boly House, the Treafury infinitely furpaffes it int Riches; this is a fpacious Chamber or Hall, wainfcot ted, with ten large Preffes with folding Doors, the arched Roof being a moft curious Sort of Plaifter, divided by gilt Compartments, beautified with excellent Pictures. Formerly they were glad to keep Abundance of Silver Work here, but the fame having fince given Place to Gold, is laid up elfewhere in great Heaps in private Places, and perhaps for private Ufes. Thefe Prefles therefore are now quite fill ${ }^{d}$ d up with nothing put pure Gold; precious Jewels, among which they fliew a Pearl of an ineftimable Value, fhap'd after the Faffion of a Gondola, or fuch Veffels and Ornaments as exceed the Value of Gold and Gems, by their Rarity. It would be a Piece of Folly to attempt a particular Account of what exceeds even Imagination itfelf ; the beft Idea I am able to give you of this Treafure is, that you muft confider, that all the People, Princes and States, who acknowledge the papal Authority, have, for thefe four hundred Years paft, endeavour'd to outvie each other in beftowing the richeft Prefents that could be had upon this boly Houfe. They have, befides this, a fettled Revenue, and vaft Tracts of Land belonging to it ; and the Boxes in which they gather the Alms of the Pilgrims; furnifh them every Year with more Money to make frefh Purchafes. To excite the Charity of the Pilgrims, they do nor forget to give it out; that the annual Charges
of maintaining all that belong to the boly Houfe, amounts to no lefs than 38634 Crowns, whereas their ordinary yearly Revenue is no more than 27000 Crowns.

From the Treafury we were conducted to a little Arfenal, which has fcarce any thing remarkable but fome Arms taken from the Turks, who about fifty Years before (under the Reign of Mabomet II. and Selim) made a Defcent thereabouts, to plunder this facred Place, but were ftruck blind by our Lady, as they were endeavouring to break into the Houfe. From the Windows of this Arfenal they fhew you that Part of the Sea over which the Houfe was carried by the Angels; and our Jefuit made moft folemn Proteftations, that ever fince there remains a certain white Tract on the Water, and that he had often obferved it. I can't pafs by in Silence, that as we were going towards the boly Houfe, the Rabble flock'd about us, telling us, that we mut not approach the holy Place without confefling and communicating, unlefs we would throw ourfelves into manifeft Danger of fudden Death.
From hence we went to the great Wine Cellar, ftor'd with an hundred and fifty Tuns of excellent Wine. And in the Apotbecary's Office they fhew'd us an hundred and forty five earthen Veffels, highly efteem'd, becaufe they believe them to have been painted by Rapbael. On five of the largeft are painted St. Paul and the four Evangelifts, the reft being adorn'd with the Hiftories of fome Saints, the Metamorphofes of Ovid, $E^{2} c$. The City of Loretto is but fmall, yet well fortified, and has the Title of a Bifhoprick. In the Great Place ftands a moft noble Fountain of Marble, beautified with divers Brafs Statues, and another erected by the Citizens of Loretto, in Acknowledgment of certain Privileges granted them by Pope Sixtus V. The Inhabitants get their Livelihood by making and felling Medals, Rofaries, fanctified Beads, Images, Agnus Dei's, Meafures of the Height of the Image of our Lady, and fuch Trifles. They fell here Chaplets, the Beads of which wers as big as Goofe-Eggs, and are ufed on Days of extraordinary Devotion. The Tradition of the Removal of the boly Houfe is fo ftedfaftly maintain'd in this Place, that there is fcarce an Inhabitant fo mean, but pretends to be defcended from the Race of thofe that faw the boly Houfe fix'd where now it is, by which Means they tranfplant this Tradition from Father to Son in infinita.
8. Travelling from hence through Recanati, a little City feated on the Top of Hill, three Miles from Loretto, I look'd into the great Church, where I could fee nothing worth mentioning but the Tomb of Pope Gregory XII. who was depofed from the Pontificate by the Council of Pifa. Ten Miles further, in a moft fertile Country, on the Bank of the Potenza, we paffed thro' the Ruins of the City formerly known by the Name of Helvia Ricina, where we $\mathfrak{f a w}$ vaft Fragments of an Amphitheatre built of Stone and Brick mingled together. We travel'd' on this Side of the River for two Miles among the Hills, till we came to Macerata, where we lodg'd that Night ; it being foul Weather, we could not ftir abroad, but were told by the Inhabitants, that it was a pretty large and pleafant Place. The Country between Macerata and Tolentino lies all upon a Level, and is extremely fruitful, but very indifferently peopled. They prop their Vines with Reeds, and plough with Boufflos, thefe Beafts being ftronger than Oxen, and eafier fed.

Tolentino is feated on a rifing Ground ; for the reft, a Place that has nothing remarkable belonging to it. The next Place we came to was Belfort, built all of Stone: A Mile beyond it begins the Province of $U_{m-}$ bria, where we enter into the Apennine. I remember we fell into the Company of a Gentleman, who was going from Macerata to Foligno, who, after fome Difcourfe relating to the Lady of Loretto, told us, among other Things, that they were extremely pleafed in Italy at the News they had lately received from England, that their King was turn'd Chriftian. I defir'd him to explain his Meaning, which he did in fuch Terms, that I could not but ftand amaz'd at his Ignorance, his Notions of the Protestants being very near the fame the Pagans entertain'd of the Primitive Claritions, fo that
with all the Art I had, I could not perfuade him that we ufed Baptifm among us: This Simplicity is fo uni verfal in this Country, that they are more ignorant of our Religion than the Cbinefe themfelves, in which they are encourag'd by their Clergy, who leave no Stone unturn'd to make the Proteftants odious to the People at any rate.

After we had left Tolentino, we travel'd for forty Miles among the Rocks; the chief Villages we took Notice of in our Way, were Valcimara, Ponte di Trava, Matia, Dignano, Colforito, Cafa Nuova, \&xc. We left the Mountains near the Village of Pala, from whence we difcover'd the Plain of Foligno, which affords the moft delightful Profpect from the Hill, being water'd with many Rivulets, well inhabited, and extraordinafily improv${ }^{2}$; fo that we had no fooner quitted the Mountains, but we found ourfelves, as it were, on a fudden, in a fweet and agreeable Climate, where we faw the Almond-trees already in Bloffom, after we had farce recover'd our felves from the Cold of the frofty Rocks. Having continued our Journey for four Miles in a continual eafy Defcent, we came into a narrow level Way, on one Side whereof runs a fmall and clear River, at the End of which lies Foligno, in the moft fertile Country in the World; it has the Reputation of a better Traffick than moft of the other Cities in the Ecclefiaftical State ; their Trade confifts chiefly in Draperies, Gold and Silver Laces, Silk Stuffs, and Spices. Soon after we came out of Foligno, we difcover ${ }^{\circ}$ d, on the other Side of the Plain, upon an Eminency, the Town of Montefalco, famous for the Interment of St. Clara. They fhew here the three Stones of the Bignef of fmall Nuts, faid to be found in the Heart of that Saint, upon which the Hiftory of the Paffion is engrav'd. Near the Village of Pefignano, between Foligno and Spoleto, at the Foot of the Hill which enclofes the Plain, a large Spring arifes through four feveral Outlets from under the Rocks, which make a fmall Lake by their Conjunction, and thence fend forth a pleafant Rivuler, which waters the adjacent Country.

Not above two hundred Paces from the Spring-head, you fee, near the Road, a fmall Temple of the Corintbian Order, called St. Salvatore, where the Bifhop of Spoleto fays Mafs once a Year. We obferved the three following Infcriptions on the Front, and on both Sides;
(1.) + S. C. S. Deus Profetarum qui fecit Redemptionems
(2.) Deus Angelorum quifecit Refurrectionem.
(3.) + S. C. S. Deus Apoft * * *
the reft being quite defac'd; which together with its Manner of building Crofs-wife and Eaftward, as moft other Churches, and the Croffes carv'd in divers Parts of the Pediments, fufficiently contradift the Opinion of thofe who would have this Temple to have been confecrated to Clitumnus, though perhaps it may have been erected upon or out of the Ruins of that of Cli tumnus. But it is much more probable what I heard a skilful Antiquary fay at Spoleto, viz. that the River be-fore-mentioned is the Clitumnus mention'd by the Ancients, and among the reft, by $\mathrm{Virgil}_{2}$ in the fecond of his Giorgicks.

From Pefignano to Spoleto you travel for feven Miles in a plain Country, at the Foot of the Hills, full of Inhabitants. Spoleto is feated within the Mountains, beyond the before-mention'd Plain, a poor, ill-built, and thinlypeopled City. The Cathedral is celebrated for its Height, which however is not extraordinary. The Pavement is inlaid with fmall Pieces of Marble, like St. Mark's Church at Venice, and the Pediment of the great Portal is very fine Mofaick Work on a golden Ground. The Caftle is feated on the higheft Ground, and has nothing to boaft of but its Situation. About five hundred Paces without the City, is a Church confecrated to Concord, and fince called the Chapel of the Crucifix. Spoleto has alfo fome Remnants of Antiquity, a triumphal Arch half ruin'd, and the Fragments of an Amphitheatre with divers loofe Marble Stones,
withous
without Infcriptions, except that the Arch ftill retains a few Characters. The moft remarkable Thing here is, the Aquaduct, which joins the Mountain of St. Francis to that of Spoleto. It is a Gotbick Work, and remains entire and ufeful to this Day: Its Length is three hundred and fifty Paces, and its Height, from the Bottom of the Valley, two hundred and thirty.

Three Miles beyond Spoleto we pafs'd the higheft Mountain hereabouts, called Semma; and after we had travel'd about five or fix Miles among the barren Rocks, we found the fucceeding Hills, for four or five Miles, covered with Lawrels, wild Olive Trees, Tamarinds, Junipers, ever-green Oaks, and divers other fempervirent Trees and Shrubs, which is very pleafant. At our Approach to Terni, the Mountains, which had enclofed us in a ftreight Paffage upon the Brink of a Torrent, which runs at the Bottom of the Valley, extended themfelves by Degrees to a great Foreft of Olivetrees laden with Fruit, which they generally fuffer to hang till they drop off themfelves: The Olives for Pickling are gathered before they are ripe, and their Bitternefs is removed by Art; the ripe are as bitter as the green ones, notwithftanding which they produce the fweeteft Liquor that can be imagined.

From this Wood of Olives we travel'd for a Mile in an agreeable Plain, which brought us to Terni, feated upon the River Nera, in a moft fruitful Country. This City is not fo large in Compafs as Spoleto, but much more populous; they fell Abundance of Oyl : We were told, that during fix Months of the Year they make here an hundred Charges of Oil every Day, each Charge weighing fix hundred Pounds, and is generally fold at the Rate of twelve Englijh Crowns. By an Infription to be feen on the Porch of the Seninary near the Cathedral, it appears, that it may contend for its Antiquity with Rome itfelf; the Infrription being made for Tiberius, is dated thus;

## Pof Interamnam conditam DCCIIII.

Terni being anciently called Interamna and Interamnium, from its Situation inter ammes, or the two Branches of the River that waters it. On the Bridge is to be feen another Infrription, put there in the Time of Pope Urban the Eighth, intimating, that this Bridge was built by Pompey the Great. About three Miles from Terni is the famous Waterfal of Mount del Marmore; the Way that leads up to it is very rocky, fo that we were forced to alight often from our Horfes. By the Way we obferved, on the South Side of the Mountain, divers Corners, which never felt the Rigour of the Win-ter-Seafon, and among the Bufto's Abundance of Fefmins, Lawerels, Myrtles, Rofemary as frefh then (in February) as they are with us in April.

As we were afcending the Hill Papinio, we obferved, in a Valley near the Bank of a River, a Tract of Ground planted with at leaft feven hundred Orange-trees,' a Thing rarely to be feen in the open Field, where they have no Shelter. But to return to our Cataract. The River Valerio has its Rife among the Mountains, twelve or thirteen Miles from the Place where the. Water falls down. At about nine Miles from its head Spring it falls into the Lake of Luco, whence continuing its Current, witl a much larger Streami than before, to a Plain, which, in refpect of the Depth below it, proves a Mountain, it falls with great Force down from a craggy Rock three hundred Paces high, into the Concavity of another Rock underneath it, againft which the Waters break with fuch a violent Agitation, that it rifes like a Cloud of Duft twice as high as the Fall, and occarions a Kind of perpetual Rain in all the adjacent Parts: The Repercuffion of the Sun-beams in this pulverized Water produces an infinite Number of Rainbows, according to the various rebounding and fpurting of this watery Cloud, the Sight whereof fills the Spectators with Amazement; at laft all thefe Waters gather into an Abyfs, occafioned by the continual Falling down of the Waters, and from thence break forth with incredible Force through the Crevices of divers Rocks, and fo concinuing their Courle with a murmuring Noife a little fur-
ther, at laft join themfelves with the little River Neras which is much enlarged by the Acceffion of thefe Waters.
From Terni to Norni you travel for feven Miles thros a plain and fertile Country; it affords an indifferent good Profpect from the adjacent Hills on the Side you come from Terni, but deceives you in your Expectation after you come into it, being in a Manner deftitute of Inhabitants, with narrow dirty Streets, and fo uneven, that you cannot go five Steps without afo cending or defcending; and their Paper Windows make a verry beggarly flow. I took Notice en paffant of two tolerable handfome Fountains of Brass. The Emperor Nerva was a native of this City. A little before you enter the City, you fee the Ruins of a Bridge, faid to have been built under the Reign of Augustus: It is admirable both for its Height and Structure, becaufe, after having joined the Mountain of Spoleto to another neighbouring Mount, it ends in the high Road towards Pemfa. The vaft Pieces of Marble, which are the Materials of this Bridge, are joined together without any Cement or Iron-work: It hath four or five Arches, of which only one remains entire, the Top of the Mould of the largeft being broken. I was credibly inform'd, that this Arch is a hundred and feventy Foot in Extent, which, if fo, far exceeds the celebrated Bridge of Rialto.

We had no fooner left Narni, but we found ouro felves again ${ }^{F}$ among the Mountains. Thus traveling on for eight Miles, we came to the Town of Otricoli, near which, at the Entrance of a Plain, are to be feen the Ruins of the ancient Ocriculum; but we could find no ${ }^{3}$ thing worth our Obfervation among them. Not long after we paffed the Tyber over a Stone Bridge that owes its Foundation to Sixtus V. and its Perfection to Urban VIII. as the Infcription tells you. We came very late to Citta Caffellena, and departed again early in the Morning, this Place having nothing that could invite us to ftay therein. Near to Regnano we found the old Via Flaminia, with its Pavement entire, having not perceived any Footfteps of it before fince we left $R i=$ mini, to which Place it extended itfelf, as ancient Authors inform us. After we had dined at Castel Nuova, an inconfiderable Place as well as Regnano, we continued our Journey to Rome, through an infinite Number of ancient Ruins; but moft of the Country lay untill'd, and almoft deftitute of Inhabitants. Having repafs ${ }^{\circ}$ d the $T_{y} b e r$ by the Pons Miviurs, (as the ancient Authors call it) fince by Corruption call'd Ponte Molle, we came upon a paved Way, which brought us betwixt many Gardens and Summer-feats, to the famous City of Rome.
9. After we had rambled two or three Days about Rome, good Company invited us to haften our intended Journey for Naples, which is reckon'd eight Days diftant from Rome. About twelve Miles from this City we came to Marino, a great Town now belonging to the Prince Colonna, and formerly known by the Name of Villa Mariana. From Marino we afcended a rocky Mountain, where we faw nothing but Wood and Boufflos: Of the Lake of Caffel Gandolfo, which we coafted near an Hour, we fhall have Occafion to fpeak in our Return. About five Miles after we had left the Lake, at the Defcent of the Mountain, we difcovered the Sea, and on our Right Hand, on a little Hillock, the City call'd Citta de la Vigna, being the ancient Las nuvium, a Municipal City, which gave Birth to Antoninus Pius, but not the Lavinium of Eneas, according to the common Opinion : Lavina littora is twelve Miles thence, towards Prattica.
It was late before we reached Velitri, a little City feated on a Hill, and furrounded by a Wall; it was anciently a confiderable Place', when it durft ftrive with Rome itfelf, but now makes a very indifferent Figure. The People here are generally of Opinion, that Auo guffus was a Native of this City ; and one of the Sero vants in the Inn was fo communicative as to tell us fo : but being ask'd who that Augustus was, he anfwer'd, He was the firft Chriftian Emperor; for you nuuft obferve, that nothing is more common in Velitri, among the

Itilians,

Htalians, than to canonize all the illuftrious Men of Antiquity, whether Cbrifians or Pagans. It is certain that Auguftus was born at Rome, under the Confulate of Cicero and Antbony, as Suetonius polfitively affirms: It is however true, that his Family deduced its Origin from Velitri, Gentem Oataviam Velitris pracipuam olims fuiffe, multe declarant. The fame Author tells us, that the Chamber in which he was nurs'd, near Velitri, was held in the fame Veneration as now the boly Houfe of Loretto: Huc introire, fays he, ni $\sqrt{2}$ neceffariò हृ caftè religio est. Temerè adeuntibus metus $\mathcal{E}$ borror objiciebatur. In the Midft of the Market-place of Velitri ftands a curious Brazen Statue of Pope Urban VIII. fitting, as generally all the Statues of Popes are reprefented, to denote (as I fuppofe) their Superiority over other Princes. The Marquefs de Ginetti's Houfe is worth viewing, both for its pleafant Situation, and the many Antiquities preferved there; which are fine and judicioully chofen.
Defcending from the Hill of Velitri, we took Notice of a great many Caves dug on purpofe to keep their Wines cool; after which we travel'd for fifteen Miles through a poor Country, to the Foot of the Mountain, on the Top whereof ftands the little City of Lermonetta, built upon the Ruins of the old Lera. About four Miles further we faw, on the Left Hand, about fifty Paces from the Highway, certain ancient Ruins, which they told us were the Remains of the Place called by St. Paul the Tbree Sbops, but now the Three Taverns. On the Right Hand we difcover'd the Cape called now-a-days Monte Circello, fuppofed by fome to have been an Inand formerly: Here it was that the jealous Circe changed her Rival Scylla, the Miftrefs of Glaucus, into a Sea Monfter, and Ulyfes's Companions into Hogs. A little Way from the Tbree Taverns you fee the City of Letia, feated on a Mountain ; its ancient Fame for the Goodnefs of its Wine is now quite loft, the Mountain producing nothing of that Nature at prefent. It is true, the Woods, wherewith thele Mountains are almoft covered, produce Abundance of thofe Trees, called Ficus Indica, fome of which grow up to the Height of thirty or forty Foot, with Trunks as thick as a Man: Law. rels and Myrtles you find in great Plenty in the Hedges; and Abundance of Orange Trees in the open Field.

Not far from Letia, at the Village of Cafa Nuova, you may take Boat upon the Lake, which brings you to Terracina, but we continued our Journey by Land, and turning to the Left, entred into a Valley, which brought us to the Mountain and City of Piperno. In our Paffage thither I obferved a Churchyard planted with Orange-trees, a Thing not ufually feen in Italy, where all People of Fafhion have their Chapels or Vault in fome Church or Convent, and the poorer Sort are buried in fome private Corner, without the Cities; befides, whenever they have any Churchyards, they plant them with Pines, Yew-trees or Cypreffes, but never with Orange-trees.

Piperno is a modern City, built near the Place where the ancient Privernum flood, the Metropolis of the VolSei, and the Refidence of their King Metabus, Father to the famous Camilla. The Bifhoprick of Piperno was united with that of Terracina, by reafon of its Poverty: They keep the Bithop's Chair in the Choir of the Cathedral. In the Church of St. Benedict they fhew you an Image of our Lady, made by St. Luke, which, they fay, could not be burnt at the Time of the Conflagracion of Piperno. On the Hill of Piperno, called Colle roffo, the Lilies and Daffodils grow naturally in great Plenty: This Hill alfo affords a peculiar fine Earth for Potters Ware. From the Top of this Hill you may fee a little City called Mayença, near which is a Lake, the Waters whereof rife confiderably two Days before Rain.

From Piperno we travel'd over fandy Hillocks, cover'd with various Sorts of fempervive Shrubs; we got afterwards into a Wood, where we faw Abundance of Corktrees much refembling an ever-green Oak , and, to fpeak Truth, I believe it to be a Kind of Oak, fince施 bears Acrons: It has this peculiar Quality, that the mose you Itrip it of its Bark, the fronger it grows,
and produces immediately a new one, which renders it very profitable. Soon after we came out of the Wood, we went to fee the Abby of Folfo Nuova, faid to be built upon the Ruins of the Forum Appii, about fome three hundred Paces from the high Road. The Story the Monks told us concerning Tbomas Aquinas is a very odd one; they affirm, that the faid Thomas Aquinas, in his Way from Fondi to the Council of Lyons, finding himfelf very ill, alighted from his Mule, and faftning a Stick in the Ground, tied his Mule to it, whilft he laid himfelf down to fleep in a Corner of the Wood not far from the Church; the Mule getting loofe, ran frait to the Church, and fetting his Feet in the Choir, funk in an inftant into the Pavement, where he died. They fhew you the Print of his Feet, over which they have laid an Iron Grate. However, as they fearch'd after the Mafter, to chaftife him for his Negligence, they met with St. Thomas, who was fo afflicted at the Lofs of his Mule, that he died within a few Days after in this Convent, where his Body was entomb'd in the Church, and was from thence afterwards removed to Fondi, and from Fondi to Tholoufe.

About ten Miles thence we began to difcover certain Remnants of the ancient high Road call'd Via Appia, made by Appius Claudius when he was Cenfor: You fee it come out of a deep Marfh , which is at prefent inacceffible, whereas formerly it was the direct and common Road from Capua to Rome; a convincing Infance of the perpetual Viciffitude of worldly Things. The fame Thing we obferved in our Way betwixt Citta Castellana and Rome, of the Via Flaminia, of which we faw now and then confiderable Tracts preferved entire, as on this Side Regnano, and towards Caftel Nuova, fifteen Miles from Rome; whereas in other Places it mounts up to inacceffible Mountains, and in other Places it is fwallowed up in deep Marhes and Valleys, occafioned queftionlefs by Winds, Rains, great Floods, Earthquakes, and other fuch-like Accidents, which produce fuch ftupendious Changes upon the Surface of the Earth.

In my Opinion thefe famous Roads are more furprizing than moft other Pieces of Antiquity, confidering that an infinite Number of Paffengers, Horfes and Chariots fhould inceffantly, for fo many Ages, tread on this Pavement, and yet fo many confiderable Fragments of it remain entire. The Stones which compofe this Pavement are not all of the fame Bignefs, (Procopius fays they were all fquare, but he is in an Error) of a grey and reddifh Colour, not unlike rufty Iron, very hard, and ten or twelve Inches thick; generally fpeaking, thofe of the largeft Size are above two Foot, and the leaft not lefs than one. Notwithftanding the great Difference in their Shape and Figure, they have been join'd fo nicely, that in thofe Places, where the Pavement is quite entire, you cannot thrult the Point of a Sword betwixt them. Thefe Ways, which they call Vice Confulares, had on each Side Borders of the fame Stone raifed about two Foot above the reft : I have obferved them very entire in fome Places: They called them Cippo or Margines, or Marginationes Viarum; and it is betwixt thefe Borders the true Breadth of thefe Highways ought to be taken, according to which I found the two Ways, Via Appia and Via Flaminia, twenty Palms broad, with very little Difference, which makes fourteen Foot, bating four Inches, Englijb Meafure. In fome Places you fee Ruts made by the Chariot-wheels three or four Inches deep, the Tract whereof, from one Pavement to another, is the fureft Mark of its ancient Situation ; for the reft, the Pavement is whole and even, without any vifible Impreffions made by the Horfefhoes. They told us, that the Foundation of this Pavement was another very thick Lay of Stone, fix'd on a Bed of Sand, which keeps it from finking. All along the Road to Terracina are to be feen the Ruins of many ancient Monuments, erected formerly for Ornament Sake, as on other great Roads.

Tracbina (fo call'd from its Situation upon a Rock of difficult Accefs) or Terrracina is the Anxur of the Ancients, now a poor and ill-peopled Place, feated in a defolate Country, A little beyond Terracina one may
plainly
plainly difcover divers Parts of the Pavement of the Via Appia to have been cut through the Rock called Pifca Marina, which being near a hundred twenty fix Foot high, the ancient Cyphers are mark'd from ten to ten in a capital Roman Character, on the Infide of the Rock, which is cut perpendicular ; fo that the Cypher on the Top is CXX. A certain Antiquary of Rome told me, that having meafured thefe Diftances, he found them almoft all unequal; whence fome conjecture, that thefe Marks were only made for the Direction of the head Workman, without any farther Defign. Others are of Opinion, that the Diftance of each Cypher marks the Divifion of the Work of every ten Days, and that the Inequality mult arife from the greater or lefs Difficulty the Workmen met with in cutting the Stone. The Narrownefs of the Rock towards the Top, and the greater Diftance in Proportion to it, feem to confirm this Opinion, were it not that, according to this Suppofition, the firft Tenth muft have been mark'd above, and the Cypher CXX at the Bottom, it being very probable that they begun at the Top of the Rock. We continued our Journey over the Hills cover'd with Cork-trees, the Marfhes and the Sea on our Right; and thus keeping near the old Pavement, we arrived at Night at Fondi. In our Way, about three Miles beyond Terracina, we faw an old Wall, which, they told us, was the Boundary between the Ecclefiaftical State and the Kingdom of Naples.
Fondi is feated in a flat Country, not far from a Lake bearing the fame Name, which extends itfelf into a large Compafs among the Marfhes, betwixt the Hills and the Sea. The Eels of this Lake are highly celebrated for their extraordinary Bignefs. This City was entirely ruined in 1534, by Hariaden Barbarofa Admiral of the Turkj/b Fleet, the Hiftory of which is painted in the Church of the Annunciata. Fondi is paved with the Stones taken from the Via Appia, but are not near fo exactly joined. Not far from the Caftle they fhew you a Garden which (they fay) belonged to Cicero. The Dominicans preferve, with a great deal of Veneration, the Chamber and Auditory of Thomas Aquinas, as alfo an old Orange-tree which he planted; he died in 1273 , fo that certainly this is the oldeft Orange-tree that ever was heard of. I remember they told us flrange Things of this Tree, and among the reft, that its Leaves were of a quite different Shape from thofe of other Orange-trees; but we could not find the leaft Difference, and were convinced by our own Eyes, that the Winter had not fpared the Oranges of this Tree, any more than the reft in other Places. After we had left Fondi, we travel'd for ten Miles upon the old Pavement to Mola, among the Mountains.
Near Itru, a fmall City feated upon a Rock about fix Miles from Fondi, I took Notice of certain large Trees, called thereabouts Soucelle ; the Fruit is a Cod of half a Foot long, of the Thicknefs of a Bean-cod; they dry them, and then they tafte like Honey or Manna; their true Name is Carobba. About Ten o'Clock in the Morning we came to Mola, a little City feated upon the Sea-fhore : Here are to be feen valt Heaps of Marble Stones and other Ruins, of Formice once a glorious Place, built by Antipbates King of the Leftrygons. The Air is infinitely fweet here, and the Hills on the Gulph between Cajeta and Mola produce moft excellent Fruits and Wines, as the Sea affords them vaft Quantities of Fifh. They fhewed us in particular the Ruins of a certain old Palace, which, they tell you, belonged to Cicero, and was for the moft part deftroyed by the Sea. The various Pieces of Mofaick, which are plainly to be diftinguifhed yet in feveral Parts, fufficiently teftify it was no ordinary Structure; and they affure you, with a great deal of Confidence hereabouts, that certain Infrriptions have been taken from thence, which made it plainly appear to be Cicero's.

It blowing then a very brisk Gale, we were at a Stand whether we fhould venture over the little Gulph (which is four Miles broad) to Gaïeta, feated on the very Point of the Cape, directly oppofite to Mola; but at laft having refolved on the Paffage, we found Gaieta of a pretty large Extent, frong by Art and Nature, by

VOZ. II. N UMB. $10 \%$.
its difficult Accefs upon the high Rock. The Harbour is alfo very good. Here is to be feen the Tomb of Cbarles of Bourbon, Conftable of France, who was flain in the Sacking of Rome by the Imperial Forces: And the ancient Maufoleum of Munatius Plancus, commonly called the Tower of Orlando. The Epitaph of the firft is as follows:

> Austo Imperio, Superatâ Italia, deviizto Gallo, pontifice objefo, Romã captâ, Bourbonit boc marmor cineres continet. i. e.

The Empire enlarged, Italy fubdued, the Gaul beaten, the Pope befeged, Rome taken, the Afbes of Bourbon, (by wobom all tbis was done) this Marble con-. tains.

From hence we were conducted to the Cleft Mountain called La Spaccata, juft at thie Edge of the Seafhore : It is feparated from the Top quite to the Bottom, where it is about four or five Foot afunder, but grows broader and broader towards the Height : The Concavities on one Side, and the Protuberances on the other, directly oppofite to one another, feem to be evident Marks of its being really divided, which, they fay, happened at the Time when our Saviour gave up the Ghof. Upon one of the Infides of this Rock they fhew you the Print of a Hand, which foftened under it on the Challenge of a certain incredulous Perfon: Beneath it you fee this Diftich :

## Improba mens verum renuit, quod fama fatetur Credere : at hot digitis saxa liquata probant.

## Tb'unbelieving Mind the Truth denies

Tradition proves : The Rock new Proof Jupplies.
This Rock being a famous Pilgrimage, there are fmall Steps contrived, which lead down to a little Chapel dedicated to the holy Trinity. The Curate would have given us fome Pieces he cut off with a Hammer ; but finding us not willing to overcharge ourfelves with fuch Sort of Baggage, he feem'd to be offended at our Refufal, and at the lofing his own Pains.

From thence taking our Way to the Cathedral, we were fhew'd, among other Antiquities, a pretended Pillar of the Temple of Solomon; four fuch-like are to be feen at the high Altar of St. Mark's Chapel at Venice. Here is alfo a very ancient Veffel of white Marble, faid to have been found at Mola, which now ferves inftead of a Font in the Baptiftery: It is a moft curious Piece, and moft admirably preferved : Its Shape refembles a Bell about four Foot high, fupported by four Lyons of the fame Materials. The Baffo reliero is efteemed excellent Workmanfhip, efpecially the little Baccbus rifing out of 7 fupiter's Thigh, put by Mercury into the Hands of Ino. All round it you fee Satyrs and Baccbanals, and among the reft a Faunus playing on two Pipes at once, as I have feen the Shepherds do in Tyrol; the Workman's Name is engraven on the Veffel, zanios aөhnaios eitoihez. Not far from the Garden of the Francijcans, call'd Zoccolanti, is a Bufh of Thorns, which has fcarce any Pricks, which they fay has grown thus ever fince St. Francis rowl'd himfelf there to extinguifh his Luft. Near the Place called Della Foglia, they fhew you where he preached to the Fifh.

As you go up by the little Door of the Epifcopal Palace, over-againft the Altar of the Holy Sacrament, there is a Marble Statue of about four Palms high, reprefenting an old Man fetting his Feet upon a little Dog, underneath which is a Death's Head, and a Serpent whofe Tail is placed on the Dog, wraps itelf about the old Man, and refts on his Head, and has an Eagle on his. This is generally fuppofed to be the Statue of $\operatorname{Ef}$ culapius, with his Serpent, the Dog fignifying Vigilance required in a Phyfician, and the Eagle the Empire of God ; the Death's Head is an Emblem of human Nature, fubject to that Deity, or the Objeet of the Art of Phyfick. After a hort Stay at Gaieta
we teturn'd to Mola, and then coafting the Sea upon the Fia Appia for eight Miles, came to the Ruins of the ancient City of Minturna, in the Neighbourhood of which Marius fhelter'd himfelf after his Army had been defeated by Sylla, as Hiftory informs us.

We took Notice in our Paffage of the Ruins of an old Amphitheatre, and the Remnants of an Aqueduct which came from the little City of Tajetto, two Miles further on the Left Hand. The River Garigliano (formerly call'd Lyris) runs juft by Minturna; we pals'd it in a Ferry-boat, and quitting the old troublefome and flippery Pavement, travel'd through the Meadows to the Village of St. Agatba, where we lodg'd that Night. The Country between this Village and Capua (which is fixteen Miles) is very level, and extremely fruifful near Capua. Not far from St. Agatba they fhew'd us, at fome Miles Diftance, the Hills which formerly produced the famous Falernion Wine, that infpired the Roman Poets, but are at prefent barren.

Capua is feated upon the Bank of the Volturno, the chief River of the Kingdom of Naples, though of an indifferent Bignefs; it has various Infriptions and Marble Stones, brought thither from the ancient Capua, the Ruins whereof we vifited, about two Miles from thence, near the Mountains to the Eaftward, the Town called St. ATary's being built out of the Ruins of this once fo celebrated City: The many little Temples and old Cafles, the Remnants of two Amphitheatres, one of the Gates, and a great Number of broken Pillars, and other magnificent Fragments of Architecture, are undeniable Proofs of its former Grandeur. The Country People brought us Variety of Medals to fell, but as they are cunning enough to carry the beft to the Antiquaries of the neighbouring Cities, who pay them a good Rate for them, fo they feldom offer any Thing but their Refufe to Travellers. The Campaign betwixt Capua and Naples (which is fixteen Miles, and Part of the Province of Terra di Louro) is perhaps the moft fruitful Soil in the World, whence it is that they have given it the Name of Campagna Stellata, to fignify the benign Infuence of the Stars upon this Country, as if Fertility proceeded wholly from thence. Among other Places we paffed through Averfa, built (as they tell you) out of the Ruins of Atella by the Normans, after they had driven the Saracens and Greeks out of Naples.
The City of Naples was rebuilt by the Cumani, who gave it the Name of Neamonas, to diftinguifh it from the Remnants of the high City, unto which they gave the Name of пlanaicianois, for both were before that Time called Partbenope, from the Mermaid Partbenope, who, after Ulyyes and his Companions had efcaped her Snare, threw herfelf, out of Defpair, headlong from a Precipice, and was interr'd at Palaiopolis ; though fome others derive its Etymology from Parthenope the Daughter of Eumeius King of The faly, who fettled a Colony there, and changed its ancient Name into that of Partbenope. Thefe Grecian Names feem fufficiently to evince, that the Greeks were the Founders of this City, which is very large and populous, though $I$ am not able to give you an exact Account of the Number of its Inhabitants: Its Figure is very irregular, and its Circuit, according to the Computation of fome who have walk'd round the Wall, is about nine Miles, not including the Suburbs, which, amounting to nine more, make the whole Circumference up eighteen: It is pav'd all over with fquare Stones of the fame Bignefs, the Streets being generally ftreight and broad, the Houres lofty, flat-roof'd and uniform, in which it exceeds the Buildings of London, Paris, Venice, and even Rome itfelf, all which have very fine Palaces, but thefe are mix'd with a great Number of ordinary Houfes, whereas at Naples they are, generally fpeaking, very handfome Fabricks. To the South it is enclofed by a little Bay, and to the North by very fertile Hills, which rife, by an eafy Afcent, into Campagna Felice; to the Eaft lies the Plain which leads to Mount Vefurius, and on the Weft Side the bigh Town, where are the Cbartreux, and the Caftle of St. Erafmus, the Profpect of which Afcent is very charming to the Beholders.

Befides thefe fine private Houfes, there are a great many may be rank'd among the Number of the beft Palaces ; as for inftance, thofe of the Dukes of Natalone, Gravina, Airola, and de la Tour; of the Princes of St. Agatba, Montmilet, Boiera, and Cellamare; the Palace of the Viceroy ftands in a Great Place, its Front is very regular, and adorned with three Orders of Architecture; its whole Length is near four hundred foot, and was built by the famous Montana. The three Caftles of Noples, the Academy called Studii Nuovi, the School for riding the great Horfe, the Convents in general, the Hofpitals, the Arfenal, and the Magazines for their Galleys, are all very remarkable Strutures. The whole City is adorn'd with a confiderable Number of Fountains, among which three are of an incomparable Grandeur and Beauty: But the Churches here, both for their Number and Beauty, furpafs all the reft; their Frontifpieces, Portals, Chapels, Altars and Tombs being the moft exquifite Pieces of Architecture that Art ever produced; they are filled with Pictures, Sculptures, and Gold and, filverVeffels, and their Arches, Wainfoots and Walls are covered with the moft precious Marble curiounly laid together, or with Compartments of Baffo relievo, or of gilt Joyners Work, and beautified with the Performances of the greateft Painters. To be fhort, wherever you turn your Eye, you are dazled with the curious Works of Yyaper, Poypbyry, and Mofaick of all Sorts, and the moft exquifite Products of Art. The Church of the Jefuits is an excellent Fabrick, embellifh'd with magnificent Ornaments from Top to Bottom. The Painting of the Dome is the Work of Lenfranc; that of St. Mary of the Ammunciata is not inferior to it; and the famous Hofpital (which has two hundred thoufand Ducats annual Revenue) is exceeding rich, as are thofe of St. Pbilip of Neri, St. Maria la Nuova, St. Severin, St. Paul, St. Dominick, the Church and Convent of Mount Olivet, the Church of the Holy Apoltes, St. Fobn Carbonara, of the little Hoopital, and Sr. Maria della fanita, not to mention many more, which are all very fair, and have their Veftries and Treafuries crowded with Riches. I remember that two Theatines, as they were conducting us into their Church of the Holy Apostles, made heavy Complaint of the Poverty of their Order, (they having no Poffeffions, and at the fame Time not being permitted to beg like the Mendicants) but after they had fhewed us the Magnificence of their Church, and fourteen large Cupboards in the Veftry filled with Gold and Silver Veffels, and ocher precious Things, we had fufficient Reafon to believe that they had no great Occafion to go a Begging. In Italy all Monks are at once Mifers and Mendicants.

The fpacious Convent of che Cbartreux of St. Martin is every where full of curious and magnificent Pieces; and the Church, though none of the largeft, yet is a compleat Piece, both for the Materials and Exquifitenefs of the Art. The Monks that were our Conductors affur'd us, that under one Priorate there were beftow'd among them above five hundred thoufand Ducats in Silver Plate, Sculptures and Pictures: The Nativity of Chrift is a moft exquifite Piece, done by Guido; the four Piftures of the Latt Supper are of the Hands of Efpagnolet, Hanibal Caracche, Paul Veronefe, and Cavalier Maffimo, the laft of which has reprefented Chrift fanding, giving the Sacrament to his Apoftles, who are upon their Knees; befides many other Pieces of high Value, and exquifite in their Kind.

The Pavement of the Cloyiter (which is an hundred Paces fquare) is of Marble inlaid in Boughs and fuchlike Ornaments, the four Galleries being fupported by fixty Pillars, each of one entire Piece of the beft white Marble of Carrara. Every Frier has his own Chamber, a Clofet and Library, befides a little Garden ; and the Prior's Lodgings are fit for the Reception of a Prince: Here it is they fhew the famous Crucifix of Micbael Angelo, done, as they fay, to the Life after a Peafant, who, to that End, was crucified by the Painter : it is of Wood, and not above half a Foot high : It is obfervable, that the Crucifix holds his Head ftreight, which looks not very like the Pofture of an expiring

Perfon

Perfon on the Crofs. They have alfo a St. Lawerence, by Titian; and fome Defigns of Rubens and Albert Durer, which are valued at a high Rate, and are very fine.
From this Afcent you have the moft delightful Profpect that can be well conceiv'd ; you have at one View the Sea and many Illands, and among thefe that of $\mathrm{Ca}-$ prece, the famous Seraglio of Tiberius, as likewife the whole City of Naples, with its three Caftles, viz. of the Egg, the new Caftle, and that of St. Elmo; the Harbour, Mole, and Lantern ; and along the Sea-fhore, the Creeks and Inlets mix'd with little Capes, as alfo a great Number of Villages built along the Sea-fide ; towards the Land-fide, the Gardens and fertile Hills Ieading into Campania Felice are the moft agreeable Objects in the World ; and at a greater Diffance you may behold the horrible Smoke of Mount Vefurvius. To defrribe all the Relicks, Statues, or miraculous Images, as they ftile them, would be endlefs; I will only mention a few of them : At St. Lervis they keep fome of the Virgin's Milk, which becomes liquid on all our Lady's Feftivals; at St. Fobn Carbonora, the Blood of St. fanuarius is boil'd up when any one approaches his Shrine, as the Blood of St. Jobn Baptist (preferv'd at St. Maria Donna Romita) does, whilft they fay Mafs for his Beheading. I pafs by the Pieces of the true Crofs, the Nails, the Branches of the Crown of Thorns, the Images faid to be made by St. Luke, and fuch-like Rarities. At St. Dominick the Greater, they fhew the Crucifix that fpoke to St. Tbomas Aquinas; and another in that of the Benediztins, which, if you will believe them, 「poke more to Pope Pius V. At the Church of St. Agnello, in the Chapel of the Monaci, they fhew you alfo a fpeaking Crucifix, with a long Infcription underneath relating to the Story ; and another in the fame Church, which, they tell you, ufed to hold Dialogues with 7 Fane the Mother of St. Agnello, and with St. Agnello himfelf; this they ftile the Image of St. Mary of Intercefion. Among the miraculous Crucifixes here, that of St. Mary of the Carmelites mult not be paffed by in Silence; for when D. Pedro d'Arragon befieg'd Naples in 1439, it bow'd its Head at the Sight of a Cannonball, which only beat off the Crown of the Crucifix.

The Churches contain a vaft Number of Tombs and Epitaphs: In that of St. Fobn the Evanyelist, are fix or feven Epitaphs made by Fob. Fovianus Pontanus, among which one is for his Daughter Lucia, another for his Son, and two more for his Wife and himfelf. At St. Clara's you fee the Epitaph of King Robert, firmamed the Good and the Wifle. At St. Domin. maj. one for a Lord of the noble Family of Caraffa, and another for the Cardinal d driano of the fame Houfe. In the Veftry of this Church you fee many of the Tombs of the Kings and Queens of Naples, among which, thofe of Ifabel of Arragon, Daughter of Alpbonjus I. and Wife of Yobin Galeazzo Duke of Milan, and of Foan the firtt Queen of Ferujalem and both the Sicilies, deferve to be remember'd : The firft runs thus :

## Hic IJabella jacet, centum Sata fanguine Regum,

 Quâcum Majeftas Itala prifca jacet;Sol qui luftrabat radiis fulg entibus orbem, Occidit, inque alio nunc agit Orbe diem.

Obiit die II Febr. 1524.

## The fecond thus:

> Inclyta Partbenopes jacet thic Regina Joanna Prima; priùs felix, mox mi eranda nimis 2uam Carolo genitam, mulicavit Carolus alter 2ua morte illa virum fuffulit ante furin.

She was the Daughter of Cbarles of Sicily, Dake of Can labria, and was ftrangted by Cbarles Durras, whom fhe had adopted, and who rebelling againft her, accufed her of having fltangled Andrew of Hungary, her firft Husband, whofe Tomb is to be feen in the Cathedral.
In the fame Place is alfo to be feen the Tomb and Epitaph of the famous Marquifs of Pifcara, by Ariofo and in the Church of St. Mary of Concord, a long In-
fcription upon the Tomb of a King of Fez, who having embracid the Roman Faith, and fought under the Imperial and Spani/b Banners, died an hundred Years old in 1641. The Tomb of Innocent IV, who died at Naples in 1254, is to be feen in the Cathedral, with two long Epitaphs, one whereof is in Leomine Verfe. In the Church of St. Agnello is the following Epitaph for a Bifhop who refured the Cardinal's Cap.

> Sigimundo Pappacude Franc. F. Tropeienfum Preful, viro opt. E Furijconfulto, qui cum in cetum Cardinalium fuifet a Clemente VII. adfcitus, maluit in Pas tria Epijcopus vivere. Vixit Ann.80. M. б. D. 10. Obiit 1536 .

In the Church of St. Severin of the Bentediains, in the mont beautiful Chapel belonging to the Family of Si. Severin, are to be feen the Tombs and Infriptions of three young Lords, Brothers, poy fon'd by their Uncle; as alfo that of their Mother, lamenting the untimely Death of her Sons. Directly oppofite to the Church of the Carmelites you fee a Kind of Chapel, erected by Order of Charles I. King of Naples, in the fame Place where he caufed the Head of the unfortunare Conradin to be cut off, and at the fame Time that of his Coulin Frederick Marquifs of Baden and Duke of Aufria, with five or fix other Lords, the whole Hiftory of which is painted in Frefco on the Infide of the Walls of the Chapel, in the Middle of which ftands a Pillar of Porpbyry, and round about it this Diftich :

## Aluris ungue Leo, pullum rapiens Aquilinum Hic deplumarit, Acephalunque dedit.

The Carmelites fhew'd us in their Convent the Place where the famous Rebel Tbomas Aniello (commonly called Mafaniello) was flain, after he had been the Head of the Rebels eighteen Days: I have a Piece of Money that was coin'd whilf this Rebellion lafted, with this Infription, S. P. Q. N. As we paffed by the Church of St. Mary major, our Conductor told us, there was a brazen Hog to be feen there, made by Pomponius Bifhop of Naples; it feems the Place where this Churcli now ftands was haunted by the Devil in the Shape of a Hog, which fo terrified the Inhabitants, that they left their Houfes, till this holy Bifhop being bid by the Virgin to build a Church for her in the fame Place, the infernal Hog difappear'd.
10. The City of Naples having been fubject to fo many Mafters and various Revolutions, has loit the greateft Part of its Antiquities; however, in the Front of $S$. Paul major you ftill fee the Frontifpiece of the ancient Temple of Apollo, afterwards dedicated to Cafor and Pollux by one Tiberius Fulius Tarfus, his Name being to this Day diftinctly to be feen on one of the Friefes of this Frontifpiece.

> TIBEPIOE IOXAIOE TAPSOE

The Portico refts upon eight twifted Pillars of the Cos rinthian Order, and the Pediment is adornsd with Bafjo relievo, reprefenting the Deities. The Columns of the Rifituta are faid to have been taken from the ancient Temple of Neptunc. Here are alfo to be feen fome Ruins of an Amphitheatre, and an ancient Statue of the Nile upon a Crocodile. The Houfe of D. Diomedes Caraffa contains many Sculptures and ancient Inferiptions; in the Court you fee the Head and all che Creft of a brazen Horfe, that had no Bridle, which being an Enblem of the Liberty of Naples, whillt yet a Common-wealth, food in one of the great Places, but King Conrad having ordersd a Bit to be put on this Horfe, directed the following Diftich to be fet on the Pedeftal:

## Hactenus effrenis, Domini nunc paret babenis Rendomat bunc aquus Partberopenfis equutro.

On the Hill, where it is fuppofed the ancient Palcopolis ftood, are a great many old Ruins, and divers Collec.
tions of Medals, which contribute not a little to the true Underftanding of the Hiftory of Naples, are to be found in the Cabinets of the Antiquaries of this City, and efpecially in that of Mr. Ricbetti. Of the Catacombs I fhall have Occafion to fpeak hereafrer.

After Pope Sixtus V. had cleared the Ecclefiaftical State of the Banditti, they became more numerous in the Kingdom of Naples; fo that even within thefe few Years Travellers were forced to go in Caravans to fecure themfelves againft their Infolencies; but the Honour of freeing this Countty from thefe dangerous Vermin is due to the Marquifs del Carpio, late Viceroy of Na ples, who put a great Number of them to Death ; and I remember we faw lately above five hundred of them at Work in the Arfenal, who had furrender'd under Condition that their Lives fhould be faved, and not to be made Galley-flaves. But notwithftanding all this, it muft be owned, that the Generality of the Neapolitans are a very wicked Generation. We were credibly inform'd, that in two Prifons only there were no lefs than four thoufand Malefactors at that Time. This has queftionlefs given Occafion to the noted Proverb, That Naples is a Paradife inhabited by Devils.

Befides this, notwithftanding all the outward Grandeur of this City, it has feveral Things which not a little overcloud its Luftre; for Women are as hard to be feen here, as in any Part of Italy. The Habits and Equipages of Perfons of Quality are all black, not being allow'd the Wearing of Gold and Silver, and the greateft Lord has no more than two Footmen; befides, moft of their Coaches are drawn by Mules; and they generally appear in the Spani/s Drefs. The Viceroy's Court is very filent and melancholy: Their Trade is alfo much decayed, their chiefeft Commodities at this Time being Soap, Snuf, Stockins, Waiftcoats, fome Silk Manufactories $E^{\vartheta}$ c.
From Naples to the Top of Mount Vefuvius is eight Miles, of which I thall endeavour to give you a more exact Account than you have feen hitherto. The firft four Miles, as you pafs along the Sea-coaft, you go through many good Villages, and the Grounds are very well cultivated; yet from Place to Place you fee great Stones, thrown thither by the Eruptions of that Mountain : The laft of thefe Villages is called Refina; when turning to the L.eft, we began to alcend, but ftill on Horleback for two grood Miles further, among loofe Stones, and Heaps of burnt Earth; the nearer you come to the Top, the more you find the Ground crack'd and cover ${ }^{\circ}$ d with thefe burnt Stones; and in fome Places you fee the Tracts of the Chanels of Sulphur, which have been forced down from the Top towards the Bottom. About the Middle, the Afcent beginning to grow extream rough, you muft alight to pafs on Foot, which is not done without a great deal of Difficulty, the Afhes, or rather calcined Duft, not affording any fure Footing: But at laft, after feveral fmall Reftings, we came up to the ancient Gulph or Hollownefs, for of late confiderable Alterations have happened in this Mountain. The Circumference of this firft Gulph has about a Mile in Diameter, to the beft of our Guefs; the Edges being worn into feveral rugged Elevations, you may go down into it feveral Ways about a hundred Paces below the firft Circle, being the whole Depth of this old Mouth; for this vaft Abyls was by an extraordinary Eruption, almoft quite fill'd up with a Mixture of Sulphur, Alom, Bitumen, Saltpetre, and Nitre, which, after the Violence of the Eruption was paft, turning into a hard Cruft, produced a Level in this Gulph not above a hundred Paces below its exterior Brims; but fome Time after, a furious Eruption having fhaken and broken through this Cruft, tumbled the hardened Pieces one upon another, as we fee the broken Ice of a Pond congealed by a fudden Froft. This unequal Superficies is interfperfed with burning Funnels, which emit continual Exnalations ; and in fome Places we could feel the Heat through our Shoes. You mult know, that in the Middle of this Superficies (which is almoft of a circular Figure) another moft violent Eruption has forced its Paflage, and caft up a
new Mountain, which is likewife round and about Quarter of a Mile high.

After we had traverfed that rough Space of about three hundred Paces broad, between the greater and leffer Mountain, we afcended this little Mountain with as much Pains as we had done the firft, which we found full of fmoaking Chinks, and in many Places lay a pure Sulphur mixed with a Kind of Sal Armoniac, of a Citron Colour. In fome Places we faw a reddifh porous Subftance, like the Dregs or Scum of Iron as it comes from the Smiths Forge. The Top of this leffer Mountain hath its Mouth as well as the great one, which is about one hundred Paces broad, and the In let to this vaft fubterraneous Abyls, fends forth a thick Flood of Smoak, which fills up the whole Concavity; the Winds forcing it fometimes on one Side, and fometimes on the other, we had an exact View of the Height of its Entrance or Brink, which is perpendicular within, except in one Place, whete it is noaping enough to defcend into it, which we did after our Guide for fixty or eighty Paces, when coming to the very Brink of this Precipice, we rowl'd down many Stones we broke off near it: We found them fometimes to ftop at the firft or fecond Falling, and fometimes to take a long Courfe rebounding with a great Noife. We could not perceive any confiderable Increafe of the Smoak by the Tumbling in of thefe Stones ; and if they had been much bigger, they would perhaps have produced no other Effect, there being no great Reafon to imagine, that the fulphurous Lake is perpendicularly under the Opening of this Mountain: I know fome have had the Curiofity to blow up Part of there Rocks with Gunpowder ; but this feems to me a dangerous Piece of Curiofity, where it is not fafe to ftay too long, by reafon of the fudden Eruptions that happen now and then; witnels the famous Pliny, who was furprized with fuch an one, though at a confiderable Diftance ; and the furious Eruptions in 1682, 1685 ? and 1687 , not to mention thofe recorded by the more ancient Authors.

The little Time we had to ftay about Pozzuolo did not permit us to take fo particular an Account of all the Curiofities there, as we might have done, had we been more at Leifure; however, I do not queftion relating fomething that is new concerning this Journey. In our Way from the Suburbs of Naples to Pozzuolo we faw the Hill known by the Name of Pauflypus: To confefs the Truth, it is moft delicious, of an infinitely charming Situation, extreamly well cultivated, full of Summer Seats, and planted with moft excellent Vines. The Afcent to this Hill was not fo fteep, but that it might have been made eafy enough, but, moved by an extravagant Humour, they refolved to pierce the Mountain, and by that Means made indeed a fhorter Way, and of an extraordinary Contrivance, but much more troublefome than the Afcent would have been. This Cave is generally call'd the Grott of Pozzuolo, being in fome Places cut through the Rock, in others through the Sand; its whole Length is near a Mile, the Height between thirty and forty Foot, and eighteen in Breadth, affording an eafy Paffage for two Coaches: It has no other Light than at the two Extremities, and a little Hole in the Middle over the Oratory, which is made in the Rock by enlarging that Part fomewhat beyond the reft. The Duft which is raifed by the Paffengers is very troublefome, to avoid which you cover your Face with a Handkerchief; and to avoid running againft each other, you cry as you pals along, To the Rigbt, or to the Left? This is an ancient Work, Seneca in his Time complained of its Duft and Darknefs; it is attributed to one Coccejus, who (according to fome ancient Annals) is faid to have imployed a hundred thoufand Men in it, who finim'd it in fifteen Days; but it is not known who this Coccejus was, fome believe him to be a Prince or Governor of that Part of the Country, fome only the Head Workman, or Undertaker of the Defign.

A little beyond Paufilypus lies the Lake of Agnano, between two Hills, almoft round, and two Miles in Circumference : The Water is very clear, and without any
ill Tafte, and though it feems continually boiling, produceth not the leaft Heat, but abounds with great Plenty of Tench and Eels. Near the Banks of this Lake are the two celebrated Caves, known by the Names of the Batbs of St. German, and the Grotta di Cane, or Grott of the Dog; the Etymology is fo fabulous, that I will not pretend to enlarge upon it; thus much is certain; That after you have defcended three or four Steps into thefe Batbs, you on a fudden feel Heat, and a fulphureous $S$ mell, which put you immediately into a Sweat, and is accounted very falubrious to gouty Petfons, and thofe aflicted with fome other Difeafes, who come hither in Crowds for that Purpofe.

The Grotto of the Dog is no more than the opening of a Cave, at the very Foot of a Hill, being no more than nine Foot long, four and a half broad, and five high, and not made by Art; the Bottom is pure Earth, and the Sides have nothing but what is natural: I obferved fome Drops falling from above, which, they told us, were produc'd by the Condenfation of the Exhalations or Vapours raifed from below; though I am rather of Opinion, that they diftil from the Mountain, and pierce the Top of the Cave, out of the Bottom of which arifes a fubtile penetrating Exhalation, without any vifible Smoak, being a fulphureous Steam, which ftops the Breath in a Minute. We faw him who keeps the Key of this Cave, as well as of the aforefaid Baths, make the Experiment with a Dog in the following Manner. He enters as upright as he can, proceeds to the Middle of the Cave, where bowing and kneeling by Degees, holding his Head as upright as he can, he fits down upon his Heels, fo that with his Hands he can hold a Dog by all his four Feet down clofe to the Ground : The poor Creature is feized in an Inftant with violent Convulfions, ftretches himfelf without crying, and becomes ftiff, when he that holds him throws him out of the Cave, and being prefently caft into the Lake, which is not above twenty Paces diftant, he recovers his Breath in a Minute, and fwims out of the Water. The fame Experiment has been made upon Men and feveral Sorts of Animals with the fame Effect ; the Viceroy D. Pedro de Toledo made it with two of his Slaves, who died. Two.Foot from the Ground, and even lower, there is nothing to be feen of this Nature. The Keeper fhew'd us another Experiment with two lighted Torches, one of which he put near the Ground, and it was extinguifhed immediately without the leaft Smoak ; then lighting it by the other, he put that near the Ground as the former; which being likewife put out, he rekindled that by the firft, and fo by Turns.

The like fulphureous Exhalations are faid to be in a Cave at Zoli in Hungary; and Pliny calls this we are fpeaking of now, Spiraculum Puteolanum. All the adjacent Country feems to be filled underneath with Brimftone, efpecially about Monte Sesco and Solfatara, where we faw fubterraneous Holes fill'd with Sulphur and Allom, which fend forth Flames and Smoak with the fame Smell and Noife as we fee in Vefurius. They prepare Abundance of Rocb-Allum on the Solfatara, which is a yellow and white Mountain, dried up and confumed by its own Fire ; they work in fmall Hutts, and the Cauldrons boil only by the Heat coming out of the Openings. The Top of this Hill has a Kind of oval Bafin about 1250 Foot long, and a Mile in Breadth, the Exhalations of which are often fimelt at Naples, and blacken their Marble and other Ornaments, nay, even corrupt the neighbouring Waters; whence it is that the Capucbins of St. Januarius, who live near it, have been forced to raife their Cifterns from the Ground upon Pillars. Moft of the Inhabitants in the City, and about it, will tell you, that thefe fmoaking Holes of Solfatera are actually the Chimneys of Hell itfelf: Capaccio is of the fame Opinion, and affures us, that the Capucbins hear often moft dreadful Howlings, and are frequently difturbed with Hobgoblins.

From hence we defcended towards Puzzoli, anciently a famous City, as a vaft Number of ftately Ruins fufficiently teftify, though at prefent it is but an inconfiderable Place. . Near to St. Fames's Church you fee the

Vol. II. Numb. 107.

Ruins of a magnificent Amphitheatre, the Arend whereof was an hundred feventy two Foot long, and eighty eight broad; built of hewn Stone : Here they tell you St. Fanuarius, with fix other Cbristians, being thrown before the Beafts, they ador'd inftead of devouring them $\frac{b}{3}$ but not long after thefe feven had their Heads cut off near Solfatara, in the fame Place where the Church dedicated to St. Famuarius now ftands. On the Altar yous fee thefe Words :

Locus de collationis S. Faniuarii छ̉ fociorinn ejus. i. e.
Tbe Place wbere St. Januarius and bis Companions were bebeaded.

Clofe to the Amphitheatre remain fill vaft Ruins, bue buried almoft under-ground, look ${ }^{i}$ d upon by fome as the Remainders of a Labyrinth, though I am rather inclined to believe it a Fifhpond like the Pifcina Mirabilis. The Cathedral is built not only upon the Ruins of the Temple of Fupiter, but alfo of Part of its Materials. In the Frontifpiece you fee thefe Words, Calfurnius Luc. Fil. which fhew evidently by whom it was built.

Between the City and the Amphitheatre are to be feen alfo the Ruins of the Temple of Diana: In tempeftuous Weather the Sea throws affore, near the Dominitans of Fefus Maria, many new Marks of the ancient Magnificence of Puzzoli, as Cornelians, Agates, Fafpers, Amethists, as likewife divers other Sorts of Stones, upon which are found engrav'd all Sorts of Figures, as Cocks, Eagles, Swans, Hares, Serpents, Grafsboppers, Ants, Vine-brancbes, Grapes, Ears of Corn, Heads of Men, and Motto's in Greek and Latin. The Sand of Puzzoli, ufed in their Building, is much commended both by Vitruvius and Pliny; and, in effect, if mixed with a certain Sort of Mortar, become as hard as Marble, even in the Sea itfelf. As we paffed along in our Boat to go the Lake of Lucrin, two Miles dif= tant from Puzzoli, we had the Opportunity of taking a full View of the famous Arches, generally fuppofed to be the Remnants of a Bridge built by Caligula from Baje to Puzzoli, whence to this Day they are known by the Name of Caligulas's Bridge among the Inhabitants ; but if we will attend to the Words of Suetonius, nothing is more evident than that this pretended Bridge of Caligula, was not of Stones or Brick, but of Boats; thefe are his Words: Bajaram medium intervallum Puteolanas ad Moles trium millium E fexcentorum ferè paffurm ponte conjunxit, contractis undique onerariis navibus, $\mathcal{E}$ ordine duplici ad ancboras collocatis, fuperjectoque aggere terreno, ac directo in Viee Appice formam. \&xc. The Words Puteolanas Moles plainly difcover what thefe Arches we now fee were, viz. belonging to a Mole that defended the Harbour againft the Violence of the tempeftuous Waves: Neither is it a fufficient Objection to fay, that we do not build our modern Moles with Arches, fince Things of the fame Nature may be done varioully at fo great Diftances of Time; befides that, fome will maintain, that a Mole with Arches might be more durable than one without, and be neverthelefs. fufficient to break the Waves, and to defend the Harbour.

The Lake of Lucrin, fo famous in ancient Times, is now no more than a little Pond of about one hundred Paces broad, and a Quarter of a Mile long, being for the moft Part fill'd up with the Nero Mountain. It is now about fixty or eighty Leagues from the Sea, whereas anciently it join'd with it; for if we may credit Pliny, they were forced to make Ufe of many Engines to feparate them : The Water of this Lake is always falt ; it was highly celebrated among the Ancients for its Oyfters : Nuptic videbant Oftreas Lucrinas, faith Varro; and Concba Lucrini dilicacior Aagni, Martial. I fuppofe you remember the Story related by Pliny and feveral other Authors concerning a Dolphin, frequently fed with Bread by a Boy that went every Day to School from Baje to Puzzoli, became at laft fo familiar with the Boy, that he ufed to carry him often on his Back over the little Bay ; Appian tells us, he was an Eyewitnefs of it, befides many more that flock'd from all Parts to Puzzoli to fee it; and Solinus affirms, that at laft
it was fo common, that'it was fearce regarded as an extraordinary Thing. I remember, that in my Travels I faw a Sea-calf, fo very tame, that it would do as many Tricks as a Spaniel.
In the Year 1538 , in the Night between the 19 th and 20th of September, the Earth produc'd on a fudden a certain Mountain never feen before, which for that Reafon has fince retained the Name of Monte Nuovo or the New Mountain. Thofe who have meafured it, make its Height perpendicularly four hundred Toifes, and its Circumference three large Miles. The Gulph or Opening of fifty Paces diameter on the Top of this Nere Mountain, fufficiently proves its Production to have been caufed by an Eruption, though it never fent forth either Fire or Smoke fince its firft Eruption, which was attended with a moft dreadful Earthquake, that put all the neighbouring Country under a great Confternation, the Sea recoiling, many Churches and Houfes being burnt or fwallowed up, a vaft Number of Men and Beafts perifhing by this prodigious Birth of the New Mowntain. Your Mountain of Markle-bill, in the County of Hereford, was ufher'd into the World after a much eafier and more pleafant Manner, becaufe it mov'd with a gentle Pace for three Days and Nigbts, with Houfes and Trees, for about four hundred Paces.
On the other Side of the Lucrin Lake, you fee another famous Hill called Monte di Cbrifto, the Story whereof runs thus : A molt violent Earthquake having made an Opening in this Hill, which reach'd from the Superficies to the very Limbus Patrum, Fefus Cbrist enter'd through this Cavern, where being joyfully receiv'd by the Souls that were deftin'd to heavenly Felicity, he led them through this Paffage up to the Top of the Mountain, from whence they were lifted up to Heaven. A fine Italian Fable!
The Lake of Averno is not above a Mile from the Lake of Lucrin, being much about the fame Bulk as the Lake Agnano; it is beyond Queftion, that what Virgil, Lucretius, Pliny, and others fay of its deadly Vapours, is not fo at prefent, the Birds flying over it without the leaft Detriment, which is the Reafon that Pliny is reckoned by fome modern Authors to have advanced a manifeft Falfhood. But if the Matter be truly weigh'd, it will fuficiently appear, that Pliny only quotes Varro in what he fays of this Lake, but fpeaks not as an Eye-witnefs; for, difcourfing of the Lakes which have extraordinary Qualities, he cites Ctefias, a Greek Hiftorian, who mentions a Lake in the Indies on which nothing fwims, and afterward alledges the Teftimony of Varro about the Averno. Add to this, that Strabo attributes the Caufe of this Stench in the Averno to the Thicknefs and Number of the Trees that furrounded it on all Sides, which, he fays, being removed by Auguftus, the Air became pure and fweet : And Boccace, who liv'd not above three hundred Years fince, affures us, that fome fubrerraneous Chanel of Sulphur being mixed with the Waters of the Averno, they became ftinking, and killed many of the Fifh, which he faw with his own Eyes: Two manifeft Inftances, that this Lake hath been at different Times in very different Conditions. Virgil derives the Word Avernus from Aornus, notwithftanding which, this Name feems to have been the ancient Appellation of fulphureous Gulphs in general, which makes Lucretius call thefe Kind of Pools Averna Loca.

The Ruins to be feen to this Day about the Averno, plainly demonftrate, that the adjacent Hills were well peopled after the before-mentioned Trees were cut down. The Antiquaries do not agree, whether the Ruins next to the Lake belong'd to a Temple of Mercury, or of Neptune; but certain it is, it could not be the Temple of Apollo. As we approach'd the Averno, I could plainly perceive fomething of a naufeous Smell, but whether it proceeded from the Lake, or not, I will not pretend to determine; for the Lake abounds with Fifh, its Waters are frefh and pretty clear, only inclining fomewhat to a Blue; I tafted them in divers Places, and found them to have a pretty fharp Twang of fome Mineral, but what I could not diftinguifh.

Not far from hence is the fubterraneous Paffage and Cavecommonly known by the Name of the Sybil's Grott, che chief Entrance whereof is faid to have been neas

Cuma, four Miles from Averno, but it is all filled up on that Side. We went into it through a narrow Pa!fage, every one with a lighted Torch in his Hand, the Paflage being on both Sides overgrown with Briars and Thiftles. This fubterraneous Paffage is dug under Hillocks, without any Ornaments, except in the Place I am going to defcribe to you: It is about ten Foot broad, and twelve high. After you have gone two hundred and fifty Paces in a ftreight Line, you meet with a fquare Grott on the right, and feventy or eighty Paces further a little Cell of fifieen Foot lon/ , and eigho or nine broad. You may perceive by various Remains, that the Roof was formerly painted and the Walls adorned with Mofaick Work. After I had read the learned Treatife of Mr. Blondel concerning thefe pretended Sybils, and their Writings, I was fufficient Proof againtt all the vulgar Opinions of this Grott; notwithtanding what divers ancient Authors have told us concerning the Sybilla Cumea and her Cave, which by the Italians has been applied to this fubterraneous Paflage, I am not ignorant of the Defcription of Virgil,

## Quo lati ducunt aditus cenium, oftia cerntum <br> Unde ruunt totidem voces

but at the fame Time am convinc'd, that Virgil fpoke of it only as a fabulous Tradition; for what elfe will you fay to the centum aditus, and centum oftia, which are not to be found here or any where elfe? In my Opinion; this might be fuch another Paffage as the Grote of Paufilippus, and the painted Cell appropriated to fome Deity. Strabo relates, upon the Credit of Ephorus, 23 ancient Hiftorian of Cuma, that the Cimmerians of Italy, (to diftinguifh them from thofe inhabiting near the Bofpborus) did inhabit in fubterraneous Caverns beween Baje and the Lake Averno, from whence they fallied out in the Night-time to perpetrate their Murders. The digging of this Cave feems more properly to belong to them, were it not that the Mofaick Work in the Cell hath as little Refemblance to their Way of living, as to the Habitation of a pretended Mad-woman, fuch as the Sybil is fuppofed to have been.
From this Cave we took a Turn to Baja, the moft pleafant and magnificent Place in the World in ancient Times; Horace, Martial, Fosepbus, Seneca, Albinus, and others, have left us fuch a Character of it, as might put this Affertion beyond all Queftion, were not the Ruins of many Temples, Baths, and Palaces, which are to be feen round the Bay, and even in the Sea itfelf, undeniable Proofs of its former Grandeur. The Bay of Baje is infinitely pleafant, the Air exceeding fweet, and the adjoining Hills with eafy Afcents charming beyond what can be exprefs'd or imagin'd ; but alafs, that vaft Number of Summer-feats which adorn'd the Neighbourhood of this City, are now nothing but a valt Heap of Ruins, and a difmal Solitude. Between Bajee and Mifeno is the Precinct call'd Bauli, where you fee the Tomb of Agrippina, and near it the Remnants of the Fifhpond of 2. Hortensus, Collegue of 2. Cecil. Metellus.

Not far from this are very great Ruins, commonly called Mercato di Sabbato, which fome pretend to be the Remainders of a Circus. At the very Sea-fide are to be feen conficierable Ruins of the Country Houfe of Hortenfus; and near his Fifhpond, the Remainders of a Temple faid to have been dedicated to Diana. Not many Years fince, a moft noble Statue of Venus, twice as big as the Life, was dug up in this Neighbourhood, holding a Globe in her right Hand, and three Oranges in the left. Capaccio, who has given an exact Defcription of it, fays, that this Statue was found in the fame Place where anciently ftood the Temple of Venus Genitrix. From Baje it is nor above a large Mile to that delightful Plain called the Elyfan Fields, fituate between the Sea and that ftinking Marfh Acberon, called by Virgil, Tenebrofa Palus, now Lago della Coluccia. I might farther fpeak of the Academy of Cicero, now turned into an Ox-ftall, of the Baths of Tritoli, the Tomb of Agrippina Mother of Nero, of the Pifcina mirabilis, or Fimpond of Agrippa, and the other Fihpond called

Cento

## Chap. III.

Greatef Part of IT A L Y .

Cento Camerelle, befides a great many other remarkable Remnants of Antiquity, but that I had not fufficient Leifure to make fo exact an Obfervation of them as was fufficient to give you a full Defcription of them.

From Baja we took Boat to Puzzoli again, and thence went on Horfeback to Naples. But before we depart; I mult fay a Word or two of the Tomb of Virgil. At the Entrance of the Grott of Paufilypus; which leads to Puzzoli, ftands an ancient Monument fhaped like a Pyramid, but above half deftroyed. Some modern Hifcorians affure us, that in their Time there were nine fmall Columns of Marble in the little Chamber of this Maufoleum, which fupported an Urn of the fame Subftance, with this Diftich upon it:

## Mantua me genuit, Calabri rapuiere, tenet nunc Partbenope; cecini, pafcua; rura, Duces.

But now there are neither Columns nor Urn to be feen here. The Maufleum is built of very large fquare Stone, notwithftanding which, it is almoft cover ${ }^{3}$ d with Bufhes and Shrubs, that have taken Root between the Stones; among the reft there grows a Lawrel on the Top of it, which, if you will believe the Inhabitants, has been often cropp'd and pluck'd "up, but always grows again.
Virgil is look'd upon by many of the Inhabitants of this Country as a great Sorcerer ; whence it is that they have attributed to him the making of the Grott of Pouflypus, as alfo of the brazen Horfe, the Head whereof, as I told you before, is ftill preferved at the Palace of D. Diomedes Caraffa. Unto this Horfe they attributed, for the fame Reafon, a fecret Virtue of curing all Sorts of Difeafes in Horfes, and of preferving them from finifter Accidents, and for a confiderable Time ufed to bring their Horfes from the remoteft Parts of the Kingdom of Naples, to lead them in Proceffion round this pretended Horfe of Virgil'; till at laft the Horfe was, by the Order of a certain Archbifhop of that Kingdom, removed from thence, and a great Bell caft of its Body, which remains in the Ca thedral, and is of fomewhat more Ufe than the Horfe. The Houfe of Sannazarius, which ftood on the Seafide, at the Foot of the Hill of Pauflypus, being defroyed by the War, a Church was built in the fame Place, dedicated to the moft boly Birth of the Motber of God, where his Tomb is now to be feen in one of the Chapels. The Tomb is of white Marble, done by the excellent Hand of St. Croce: Upon it you fee the Buft of Samnazarius crowned with Lawrel, and on each Side the Statues of Apollo and Minerva, which they commonly call David and Judith. I fuppofe you are informed, that fames Sannazarius changed his Name into that of Aztius Sincerus, according to the Cuftom or rather Affectation of thofe Times.
11. Your Letter I received with a great Pleafure', in Return whereof I will endeavour to fatisfy your Curiofity, in refolving your Queftions concerning Venice, in the fame Order you have propofed them; after which I will proceed to give you an Account of Rome.
I. Whatever your Friend may fay on Pretence of his being a Citizen of Venice, of the Number of Inhabitants in that City, which he makes amount to 250,000 , I cannot allow him a competent Judge; though on the other hand I muft tell you, that you carry the Matter too far, when you declare, that it is impofible to know the exact Number of Inhabitants in great Cities, Sir William Petty having propofed to us a rational Method of making fuch a Computation, without any remarkable Error. I ought however not to pafs by in Silence, that in my Computation I included the Inhabitants of the Ine of La Giudeca, but not the Ine of Murano.
II. The two Columns of Granite in the Place of the Broglio, fome fay, were brought from Egypt, others from Confantinople, (perhaps they were brought from Egypt to Constantinople.) Upon one of thefe Columns ftands the Arms of Venice, viz. the wing'd Lion of St. Mark holding an open Book, with the Infcription of Pax tibi Marce. On the other you fee the Statue of St. Theodore. The like Columns the Venetians erect in all the
great Cities under their Jurifdiction, as Trophies of the Republick. The fame Venetian allo mifinform'd yout about the three great Banners fet on Feftival Days upon the brazen Pedeftals oppofite to St. Mark's Church; riz: That they reprefent the Venetion State, and the two Kingdoms of Cyprius and Candia, the Republick's Arms being to be feen without the leaft Alteration in all the three Banners. Another vulgar Error is, That the Venetion Signiory has no Coat of Arms; though the Lion is to be feen in all thofe Places where the Arms of a State are generally to be feen. The Lion of St. Mark takes its Origin from the Vifion of Ezekiel, and not from the imaginary Transformation of St. Mark into a Lion; tod check the inceftuous Love of his Sifter. Herice it is, that the Venetian Ambaffador being ask'd, what Country it was that produced thofe wing ${ }^{3} d$ Lions? replied; The fame that brought forth the double-headed Eagles alluding to the Arms of the Empire, Ruffia, and other Sovereignties.
III. What I told you concerning the Air of Venice muft be taken with fome Grains of Allowance, though the Air of Venice is none of the wort. In the Lagunes it is fo bad, that the Inhabitants of the leffer Ifles commonly leave their Habitations in the hot Seafon, and retire elfewhere. But this is not peculiar to Venice, but is alfo common in feveral other Parts of Italy, efpecially in the Country about Rome.
IV. That the Doge of Venice continues for Life; whereas the Doge of Genoa reigns only for two Years, is fufficiently known. The Revenues of the Doge of $V_{e}$ : nice, fo far as I was able to learn, do not amount to quite 3000 l. Sterling per Annum; but the Frugality wherewith the Venetions manage their Government, has taught them not to allow their Spoufes any Share in thofe ufelefs Honours they pay to their Husbands.
V. Concerning the Libertinifm in the Monafteries of Venice, as I will not profefs myfelf to be acquainted with it in particular, fo I can ondy tell you, that it is generally acknowledged here, that the Nuns are often vifited by Perfons in Mafquerade at the Grates ; that they go to Plays and other Places in Difguife; that they have made Tables on Purpofe for Entertainments, one half within, and the other half without the Grates ; nay, that they are often engaged in Intrigues; and that the Friers are guilty of fuch Debaucheries as can fcarce be imagined. Thefe, I fay, are common Reports; but I do not affirm them:
VI. What your Friend has been pleafed to alledge againft the Sovereignty of the Doge, is not worth taking Notice of, the fame being fufficiently known to all that have had any Infight into the Veinetian State, or enquired into the Principles of their political Conftitution.
VII. The whole Revenue of this Commonwealth, according to the beft Computation, amounts annually to fix Millions of Crowns, including the Sale of Offices and Nobility, Confifcations, \&er
VIII. They permit fome ferws to live at Venice, who are rich, efpecially the Portuguefe : Their Quarter is called $I l$ Gbetto, or the ferory; their Hats are cover'd with Scarlet, lined and edged with black. The poorer Sort are contented with waxad Linen. By the Help of Money this Badge may be difpenfed, with.
IX. The whole Number of their Nobility, arrived to a proper Age of fitting in the Great Council, amounts to about thirteen hundred sut one half of them being generally abroad in Civil or Military Employments, this Affembly farce ever exceeds fix or feven hundred $;$ yet thefe feem too many for the Management of thofe Matters of Confequence that come before them, which hath given Birth to this Proverb, Troppo Teffe, troppo Fefte, troppo Tempeste; Too many Heads, too many Festivals, and too many Tempefts: And as the firft is meant of the Great Council of Venice, fo their Fefivals are foi frequent, that they exceed thofe obferved in France by one third Part, and they are commonly pefter ${ }^{2} d$ with Storms in the Summer.
X. The Golden Book 1 have mentioned, contains a Catalogue of all the Noblemen in their State; and as all the Brothers of every Family have an equal Share
in the Nobility, fo their Names are regiftred in this Book as foon as they are born. Upon this Occafion I cannot forbear to add fomething in Reference of what has been told you againft the Account I gave you of the Haughtinefs of the Venetian Nobles: There is fcarce any Body that is acquainted at Venice, but will eafily agree with me, that the Venetian Nobles are not only extreamly conceited of their Nobility, but alfo very difficult of Accefs to Strangers of great Note; though the laft may be attributed either to Cuftom, or rather to the Politicks of their Government : And though they are not very fparing of Salutations when they are walking at the Broglio, yet they always appear very referved and proud in the Company of the Citizens; nay, they give and receive but few Vifits among themfelves. It muft however be confeffed, that in private Converfation, efpecially if their Intereft be concerned, they will be as obliging as moft Men, and will fometimes enter into a familiar Acquaintance with Strangers, provided both Sides be not of more than ordinary Quality, for this would have ill Confequences.
What I told you concerning the great Sleeves of the Noblemen, that they ferve inftead of a Basket at certain Times, was not a bare Jeft; for I remember I faw once a good Sallad, and at another Time an excellent Cod's-tail, thus carried out of the Market. There are befides this, about two or three hundred Barnabotes, fo call'd from a cheap Place in the City, where they live, (a Sort of poor Gentlemen, that ferve for a Foil to the richer) who both beg about the Streets, and would be glad to earn a Penny in carrying home Provifions for other People. In the Summer thefe Noblemen have their Vefts without Furrs, but the turning up on the Edges, remains always furr'd.
XI. It was not from my Ignorance of your Inclination, or rather Love to Painting, that made me guilty of that Negligence with which you upbraid me, in giving you fo imperfect Account of thofe curious Pieces that are to be feen at Venice. However, in Obedience to your Defire, I fhall endeavour in fome Meafure to fupply that Defect, by adding fome new Obfervations, though I am afraid my Memory will not furnifh me with many.
There were formerly, in the Hall of the great Council, fome Pictures done by Gentil Bellini, and 70 bon his Brother, which excelled the beft Pieces of that Age, but they were confumed, with almoft the whole Palace, in 1577 . The fame Hiftories were copied five Years after by Frederick Zucchero, and fet up again in the fame Order in which they ftill remain. Pordenone's Pictures in Frefco, in the Cloyfter of St. Stepben, are very much efteemed, as are likewife his St. Sebastian and St. Roch, at St. Gobn de Rialto. Pordenone was an excellent Painter; his Defigns are efteemed very judicious, and his Colours admirably well managed. He emulated Titian, and with fome Degree of Succefs.
The St. Peter Martyr of Tition, is reputed to be one of the fineft Pictures that ever was made, but it begins to be much defaced. The beft Judges are charmed with this Piece, though it has loft all that Luftre which ravifhes an unskilful Eye. They think they can never énough admire the Beauty and Richnefs of its colouring, and judicious Difpofition of the Lights, the Roundnefs of the Figures, the Paffion and Life that is obferved in the Face, and Strength of Expreffion which reigns through the whole Piece. There are feveral other Pictures by the fame Hand in the Churches, St. Mark's Palace, the Library, Convents and Fraternities. There are alfo fome Pieces by Scbiavoni in the Library, which have been frequently taken for Titian's. Horace Vecelli his Son has almoft equal'd him in fome Works, and the Picture in the Hall of the great Council, which reprefents the Battle fought by the Romans againft the Troops of Frederick, is the Work of Horace, though it is commonly afcribed to his Father.

The Wedding Dinner at Cana by Paul Veronefe, in the Refectory of the Benedizine Monks in the Ine of Si. George, is efteemed to be the Mafter-piece of that Painter, who, you know, is famous for the fame Excellencies that we admire in Titian. His Works are
particularly remarkable for the beautiful Difpofition of the Figures, judicious Choice of Colours, a fublime Genius, vaft Ideas, the greateft Eafinefs imaginable; and the moft charming Variety. This Piece takes up all the bottom Wall of the Refectory, it is two and thirty Foot broad, and contains one hundred and twenty-five Figures.

In the Church of St. Sebaftian, the Feaft of Simon the Leper is one of the moft celebrated Pieces of the fanme Artift. There are alfo three other Pictures by the fame Hand in the Arch of St. Mark's Library, which, if my Memory do not deceive me, reprefent Geometry, Arithmetick, and the Glory which is acquired by Learning.

The Paradife, by Tintoret, in the Hall of the Great Council, is. a famous Piece. It was faid of Tintoret, that he united the Defigns of Micbael Angelo with the Colouring of Titian, which certainly was a very noble Character. Befides, he had the mott fruitful Invention, and at the fame Time the quickeft Hand of the Age. A Painter who was with me in the Fraternity, or, as they call it at Venice, the School of St. Roch, made me obferve with Admiration that rare Picture which Tintoret finifhed almoft in a Moment, while Paul Veronefes Salviati, and Frederick Zuccbero, his Competitors in the fame Work, were ftill bufy upon the rough Draught which was to be prefented to thofe who defigned to employ them. I have feen feveral Pieces by the fame Hand in the above-mentioned Scbool, at St. Maria dell' Oro, at St. Mark's Scbool, and other Places. There are fome of Balfani's Works at St. Mary major. Schiavoni's Pictures in the Library are, I think, Emblems of Valour, Sovercignty, and Sancity.
XII. I told you, if I remember right, that their Gondola's or Boats have black Tilts ; I will add, that no body (except the Doge) can be attended by Servants in Liveries; tho' the Ladies of Noblemen, during the firft and fecond Years of their Marriage, are allowed to give what Colours they like beft to their Gondoliers or Boatmen, and to ufe Jewels; but that Time being once expired, this Courtefy ceafes, and they are not permitted to appear in Jewels unlefs on fome high Feftivals, and during the Carnival ; whence it is that the rich Courtezans rather pay the Fine than debar themfelves of thefe Ornaments. What you heard affirmed by fome, that the Venetion Ladies enjoy a greater Share of Liberty than thofe of England or France, feems to me to be the Effect of a fond Spirit of Contradiction; for, fuppofing the Ladies of Venice have the Liberty in Carnival-time to go to Plays, Opera's, Fairs, or Gaming-houfes, in Difguife, what Advantages can they reap from the Diverfion of fo fhort a Time, efpecially confidering that all this while they are conftantly attended by their Husband's Spies, who cannot but put them in Mind of the Slavery they are to undergo for ten or eleven Months in the Year? What Comparifon is there between this Confinement and the entire Liberty the Englifb and Frencb Ladies enjoy in their Walks, Vifits, Meetings, and Divertifements, withouc the leaft Reftraint?
XIII. The young Noblemen are permitted to be as fplendid in their gold and filver Laces, Stuffs, Plumes, and Embroideries, as they think fit: They put on the Gown at fifteen Years of Age, tho' they have no Vote in the grear Council till they are five and twenty. They have alfo the Liberty of wearing what Habits they like beft on the Continent, the Jurifdiction of the Tribunal that regulates Habits, not extending beyond the Laguna's.
XIV. When we were viewing the Treafury, no Mention was made by our Guides of St. Mark's Thumb, and that he was difmembred to prevent his being a Prieft ; but they were not fo forgetful as not to tell us the Tradition of the Lofs of his Ring, and how it was recover'd, and the Story runs thus: In the Year 1339, three Men came to a Gondolier in very tempeftuous Weather, and having conftrained him to carry them two Miles to the Lido, they found there a whole Shipful of Devils, that were bufied in raifing a Tempeft by their Enchantments ; but thefe three Men had no fooner
given
given them a fevere Reprimand, but the Tempeft ceafed. The firft of thefe three Perfons made the Boatman carry him back to the Church of St. Nicholas, the fecond to that of St. George, and the third to that of St. Mark; but the laft, inftead of paying the Boatman, gave him a Ring, ordering him to carry it to the Senate, and told him at the fame time, that he who went on fhore firft was St. Nicbolas himfelf, the fecond St. George, and that he was St. Mark. The Boatman, aftonifh'd at his Words, related the whole Matter to all the Senate, who, receiving the Ring, beftowed a confiderable Reward upon him.
XV. They fuffer Proteftants to be buried in their Churches ; the Reafon is, becaule they take no Notice of them here as Proteftants, all fuch as are neither Fewes, Greeks, nor Armenians, being reputed Roman Catbolicks.
XVI. Your Admirer of the Palaces of Venice hath miftaken my Aim, becaufe I did not deny that there were fome ftately Palaces there, and made particular Mention of feveral of them ; but notwithftanding all this, what I faid of the Italian Palaces in general, is
true beyond Contradiction: And becaufe you own that he hath no Skill in Architecture, you will do very well not to rely too far upon his Judgment in this Point, any more than in what you have been informed concerning the Machines in the Venetian Opera's, and that Venice is, for Neatnefs, to be compared to Holland.
XVII. I told you, that there is a Paftage by Water to all the Houfes in Venice; I am well fatisfied you did not take this Part abfolutely according to the literal Senfe, becaufe there may be perhaps about five or fix in a thoufand that can't be approach'd but by Land, and in this I fpeak the outfide; for what your young Traveller has affur'd you, that there was no Canal within five hundred Paces of the Houfe where he lodg'd, and that there are twenty fuch Places in the City, is a Contradiction in itfelf, for at this Rate, how many Spaces of a Mile in Diameter muft there be in Verice? And whether this is poffible, I leave to your own Determination, if you will carefully examine the Platform of this City, which I fend you, and is founded upon unqueftionable Evidence.

## S E C TIO.N III.

The Travels of Mr. Maximilian Misson continued, from bis Arrival at Rome, to bis Departure out of Italy ; with ObServations and Remarks.

1. A fuccinct Defcription of Rome; a more particular Account of the famous Cburch. of St. Peter ; a a View of the Palace and Library of the Vatican; weith various Remarks and Obfervations. 2. The Author's Dijit to 2ueen Chriftina of Sweden ; the Defrription of Rome refum'd, wwith a Multitude of curious Particulars refulting from the Autbor's Obfervations wwile refident in that City and in its Neighs bourbood. 3. The Solution of various 2ueries relating to the Antiquities of Rome ; the Story of Pope Joan ; an Account of Albano, and otber Places in the Vicinity of that great City. 4. Some farther Remarks on the Hifory of the Female Pope; the State of the Greeks, Armenians, and Jews, at Rome; togetber with additional Remarks on the Antiquities and Curiofties there and thereabouts. 5. The Autbor's Travels refun'd; an Account of Viterbo, Siena, Pifa, Leghorn, Lucca, and feveral otber Places. 6. The noble City of Florence deforib'd, the Great Duke's Palace there, the moft remarkable Chur ches, and Monuments in them; wivith otber curious and entertaining Particulars. 7. $A$ Viewo of the Country between Florence and Bologna, the laft mentioned City defcribed, and the mof remarkable Places thercin; and the Autbor's Gourney from thence to Modena. 8. An Account of Reggio, Parma, Placentia, Cremona, Mantua, Brefcia, Bergamo, and Several otber Places. 9. The large and famous City of Milan defcribed, weith a diftinct Viero of its principal Ediffees; an Account of Pavia, and otber Places. 10. The Autbor's Gourney from Pavia to Genoa; Hiforical Obfervations on tbat City and Republick. II. A Defcription of Alexandria, Cafal, Turin, and of the Country of Piedmont. 12. Some Obfervations of the Autbor in relation to Italy in general. I3. Remarks upon the two foregoing Sections; weith an Account of fome of tbe principal Mijfakes, cbarged upon our Autbor. by later Writers, and thofe Charges impartially difoufs'd.

. WE will now come to Rome, which being thoroughly defrrib'd by feveral Perfons of Note, who had all pofirible Opportunities of giving the beft Account of it, I will pretend to no more, than to give you a general Idea of this great and famous City, together with what Obfervations I was able to make upon fuch Matters as were then altogether new, or but little known, and have Relation to your Queftions. I need not tell you, that before the Reign of Servius Tullius it comprehended no more than feven Hills, whence it got the Name of Septicollis, or Seven Hills; but being much enlarg'd fince, contains no lefs than twelve; viz. Monte Capitolino, Palatino, Aventino, Celio, Effuilino, Viminato, Quirinale or Monte Cavallo,
Iaviculd Janiculo, Pincio, Vaticano, Citorio, and Giordano; however, you mutt not imagine them to be huge Mountains, but only little Hills, the Afcent whereof is fcarce difcernable.
Vopifcus (who flourihh'd under Dioclefan) would make us believe, that the Walls of Rome, built by Aurelian, were no lefs than fifty Miles in Compafs; but there mult be an enormous Error in this, feeing that the prefent Walls of Rome are very near the fame with
Vol. II. Numb. $10 \%$.
thofe Aurelian erected, and yet are not above thirteen Miles in Circumference, this being the largeft Compafs Rome ever had, though its Suburbs perhaps extended far beyond them on all Sides. But of what is enclos'd within the Walls, there is not above one third Part inhabited at prefent, the reft, (viz, to the South and Eaft) being either Gardens or Ruins. Moft of the Houres are of Brick, and plaifter'd over on the Outfide; the Roofs are ridg'd, but the Angle on the Top is very obtufe; and fome are built, as we call it in France, à la Manfarde. Neither the Houres nor Streets are very beautiful, and the Pavements narrow and not very neat.
Which Way foever you approach Rome, you may difcover St. Peter's Cathedral above all the other Spires and the Tops of the higheft Edifices. The Courle of the Tyber (which makes a lietle Inand here) is from North to South : That Part on the right Side, called Traffavera, is not above the fixth Part of the orher. The firt Profpect of this great City does not furprize the Traveller, but the longer he flays in it, the more frequent Opportunities he will meet wish of obferving fomething worth his Attention, in ruminating upon the Remnanss of the Spoils of the Univerfe, which made
once the Porpharies, Granites, and the pureft Oriental Marble, to be more common at Rome, than the Bricks or Stones out of the neighbouring Quarries; the Colofes, Temples, Palaces, Anphitbeatres, Arcbes, Batbs, Cirques, Columns, Fountioins, Aquedutzs, Obelisks, Maufoleumms, and other magnificent Structures, being for the moft Part of thefe precious. Materials, which tho buried now in Ruins, yet ftill retain fome Remains of their ancient Splendor.
The Country about Rome, for ten or twelve Miles, is flat, but uneven, ill peopled, unheallthy, and barren in many Places. As to the Number of the Inhabitants, they are generally computed to be two hundred thoufand ; but I will not be anfwerable for this Computation, there Things being founded upon uncertain Conjectures, fo that even the Paffages in the ancient Roman. Authors are very hard to be reconcild in this Point, fome telling us of Three millions one thoufand and thirty feven, under the Reign of Ausuffus, others of four or five Millions, whereas Suetonius computes no more than One million and fix hundred thoufand under Tiberius, the immediate Succeffor of Auguffus; and I remember that Werner Roowwink, in his Faficiculus Temporum, does not hefitate at making them amount to Twenty feven millions and eighty thourand. I fuppore he included all fuch as had the Privilege of Roman Citizens in his Account.
Two Days after our Return from Naples, we happen'd to. fee the Ceremony of making either Wives or Nuns, of three hundred and fifty Maidens, the Fund for which. was raifed by a Club of fixty charitable Gentlemen. This Ceremony is perform'd every Year on the Fertival of the Annunciation, when the Pope and the facred College meeting at the Mizierva, the Pope, (or in his Abrence fome Cardinal) fays High Mals, and all the Girls conferf, and receive the Sacrament, being cloath'd in. white Serge, with Veils over their Heads, having only one Opening for their Sight ; they enter thus two and two into the Choir, where proffrating themfilves at the Pope's or Cardinal's. Feet who officiatés, near whom flands an Officer with a Bafon full of little white Bags, each of which contains either a Bill of fifty Crowns for fuch Maidens as chure Marriage, of a Bill of an hundred Crowns for thofe that are will ling to embrace a religious Life. Each Maiden having declared her Choice, receives her Bag hanging on a little String, with a Kifs, and fo goes off to make Room for another. Thofe that have chofen a religious Life are crown'd with Garlands of Flowers, and have the firt Place affigned them in the Proceffion. At that-Time there were no more than thirty two of thefe among the three hundred. and fifty.
Having taken a full View of the Minerva, (where we faw the famous Statue of Chritt embracing the Crofs, the Work of Micbael Angelo) we went to the beautiful Borgbefe Palace, the Portico of which is fupported by ninety fix antique Pillars of Egyptian Granite. In the lower Rooms alone are no lefs than feventeen hundred original Pictures, by the beft Mafters of $E u$ rope, among which, that of Venus blindfolding Cupid, done by Tition, far excels the reft. The Piture of Paull V. (who was of this Family) in moft exquifite Mofaick. Work, is reputed to contain above a Million of Pieces, which however I cannot find by my Calculation. We alfo faw here a Crucifix of the fame Bignefs with that fhewn us by the Cartbuffans at Naples, and they affured us that this is that celebrated Original of Mickael Angelo. The Name of Rotundo was given to the Pantbeon by common People, by reafon of its circular Figure. Boniface.IV. dedicated it to the Virg in and-all the Martyrs, whence he call'd it St. Maria ad Martyres: And another Pope would needs comprize all the Saints with the Maxtyrs. The Origin of its ancient Name is likewife fomewhat doubfful, fome deriving the Etymology of the Pantbeon and afrribing its Convexity to the Refemblance of the Heavens; others alledging, that it was dedicated to Yupiter, and Cybele the Mother of the Gods, others, to Yupiter, and all the Gods. This latt Opinion feems to be founded upon the many Niches which are feen in the Infide, and were (queftion-
lefs) full of Idols: But if we may believe Varro, who tells us of no lefs than thirty thoufand Gods worfhin ped at Rome ; and the Philofopher Bruxillus, who, in his Speech to the Senate, makes them amount to no lefs than two hundred and eighty thoufand ; there are not near Niches enough to accommodate all thefe Deities.
This Temple, though defpoiled of its beft Ornaments, yet is one of the faireft and moft entire Pieces of Antiquity in Italy. The Columns of the Portico of this Church are all of one Piece of Granite, of the Corinttbian Order, not equally big, but, according to the molt exact Meafure I could take, they were fifteen Inches in Compafs, fome few Inches lefs or more : That Piece of Granite, in which the Opening of the great Gate is cut, is forty Foot high, and near twenty broad. The two Lions under the Portico of the Pantheon ftood formerly on the Front of the Temple of Ifis. La Guillitiere (who is follow'd by Meurfius) would needs perfuade us, that the Pantbeon of Atbens furpaffes that of Rome in Magnificence, having miftaken the Temple of Minerva for the Pantbeon, into which Error they have been mifled by the erroneous Account of $T$ beodofius Zygomala, in his Letter to Martin Crufius; or perhaps by the miitaken Name of Partbenion, which Pausfanias gives it.
It being not my prefent Purpofe to give you a particular Deffription of Churches, I will only communicate to you my Obfervations upon them. That of St. Peter has the Reputation of the moft magnificent and largeft Church in the Univerfe: He that is willing to give a true Judgment of it, mult not be fparing of his Pains in viewing it frequently, as well on the Top into the very Baill, as the Church under Ground. You no fooner enter this great Structure, but your Eyes are furprized with the incomparable Proportions of the niceft Pieces of Architecture, and a moft exact and unparallel'd Order, rather to be admired than defcribed: And fince you are pleafed to rely upon my Fidelity and Judgment; I will fend you the principal Dimenfions of this Structure, as I have taken them with the Affitance of very skilful Perfons, more than once. I. The Length of the Church, taken on the Outfide, including the whole Portico and the Thicknefs of the Walls, 722 Engl. Feet. 2. The Length of the Church within, not reckoning either the Portico or the Thicknefs of the Walls, 594 Feet. 3.The Length of the Crofs of the Church on the Outfide, 490 Feet. 4. The L.ength of the faid Crofs within, 438 Feet. 5. The Breadth of the Body of the Church, 86 . Feet, 8 Inches. 6. The perpendicular Height of the Body of the Church, 144 Feet. 7. The Bignefs or outward Circumference of the Dome, 620 Feet. 8. The Diameter of the Dome within, 143 Feet. 9 . The Breadth of the Front of the Church, 400 Feet. 10. The compleat Height of the Church, from the Floor to the Top of the Crofs, which is over the Ball, 432 Feet. II. The Diameter of the Ball, 8 Feet, 4 Inches. 12. The Height of the Statues on the Cornifh of the fecond Order of the Front, 18 Feet. Michael Angelo and Bramante were the two chief Architects of this noble and majeftical Structure, the firft under Pope Paul III, the fecond under fulius II. The Chair of St. Peter is fupported by the four Doctors of the Church: The Statues of Brafs gill, and the Tombs of Urban VIII, Paul III, Mlexander VII, and the Countefs Moud, are moft magnificent and curious Pieces of Workmanfhip, worthy of the Edifice in which they are placed.
In fhort, where-ever you turn your Eyes, you meet with nothing but gilt. Work, excellent Pi\&tures, and Statues of Brafs and Marble, and thefe difpofed in fo excellent an Order, that their Multitude does not caufe the leaft Confufion. The Infide of the Capola is of Mofaick Work, and the Arch of the Nave of a certain fine Clay, with Comparments of raifed Work gilt ; all the Pilafters are defigned to be over-caft with the fame Matter, as well as the remaining Part of the Infide of the Church. The High Altar ftands in the Midft of the Crofs, directly under the Dome, the Pavilion being fupported by four wreath'd Pillars of

Brafs,

Brals, beautified with Foliages and Bees, the Arms of Pope Urban VIII. On each of thefe Columns fands a Brafs Angel feventeen Foot high, and on the Cornifh you fee Children playing and walking up and down: The whole Height amounts to ninety Feet. Under this Altar is a Pair of Stairs leading to the Chapel under Ground, where St. Peter's Body is kept, and to fome other facred fubterraneous Places belonging to this Church. At the Entrance down thefe Stairs 1 faw a Bull engraven in Marble, forbidding any Woman to enter there, except on Wbitfun-Monday, when Men are prohibited to enter, under Pain of being anathematized: The Place being very dark, we were told by the Sexton, that this Prohibition was occafioned by an amorous Intrigue. An Indulgence of feven Years is granted for every Step of the Stairs leading to St. $P_{e t e r ' s ~ C h a p e l, ~ t o ~ a l l ~ f u c h ~ a s ~ d e f c e n d ~ t h e m ~ w i t h ~ D e-~}^{\text {De }}$ votion.

The double Row of Pillars (286 in Number) which furround the Great Place before the Church, and lead to the fame by a double Portico on each Side, is a furprizing Piece to behold. The two magnificent Fountains in this Place are highly worth a curious Traveller's Obfervation, as well as the Obelisk that ftands in the middle of one entire Piece of Gramite feventy eight Foot high, with either the Pedeftal or Crofs placed on the Top of it by Sixtus V. when he fet up this ancient Monument here, which in 1586 . weighed 956,148 Pounds without the Bafe. It is a general (but erroneous) Opinion, That the Globe of Brafs, which was there formerly, contain'd the Afhes of Auguffus; but Dominicus Fontana, the famous Architect, upon Examination, found it not fit for that Ufe, but to be only an Ornament to this Obelisk; which was confecrated to Augusfus and Tiberius; as is apparent from the Infcription, which remains ftill undefaced:

Divo Cafari, divi Fulii F. Augufio
Tiberio Cafari D. Aug. F. Augufo facrum.
The Palace of the Vatican, fo call'd from the God Vaticomus, who gave his Vaticinia or Oracles here, is conveniensly feated for the Pope near St. Peter's Church; but by its too near Neighbourhood takes off Abundance of the Profpect, as well as fome other Edifices near it. This. Palace is not one entire regular Structure, but a Compofition of many beautiful Pieces, faid to contain 12500 Chambers, Halls and Clofets, which may in fome Meafure be difcover'd in the Model which is flewed of it in Wood.

The Belvedere, belonging to the Vatican, received its Name from its: delightful Profpect: We were fo furpriz'd with the moft excellent Pieces of Rapbael, Micbael Angelo, , Fullius Romanus, Pinturicio, Rolidorus, Fobn diUdina, Doniel. Wolterra, and other great Mafters, and they found us fo much Diverfion, that we neglected to take Natice of all the other Perfections of this beautiful Edifice. I have often, with a great deal of Delight, feen the moft curious Perfons in Rome gaze with great A. mazement upon the Hiftory of Attila, (the Work of the incomparable Rapbael, who was born 1483, and died when he was thirty feven Years old) and admire its Beauty and Perfections, nay, even put their Wits on the Rack to find out Expreffions fuitable to the feveral Excellencies of this marvellous Piece; when after all, fome nice Judges have, and not without very good Reafon, found Fault with the Drefs in which Rapbael has thought fit to reprefent Leo I. and two Cardinals, being after the fame Manner as they are worn by them now-a-days; whereas it is evident, from the Hiftory of thofe Times, thar Pope Constantine, and the other Popes, (two hundred, and fifty Years after Leo I.) wore plain Camblet Garments. Thus Tition hath painted Rofaries at the. Girdles of the Two Difciples that met Chrift in his. Way to Emaus; and anorher celebrated Painter, Roffo, has reprefented Monks in their Habits as Guefts at the Virgins Weddings. I remember that at Soeff, a Town of $\bar{W}$ elfphalia, there is a Picture of our Saviour's Laft Supper painted in a Glafs Window of a Church, wherein that Painter has put a Gamnon of Bacon initead
of the Pafchal Lamb. Nay, even Micbael Angelo, in his moft celebrated Piece of the Laft Judgment, has introduced many indecent Poftures, Angels without Wings; nay, even the Ferryman Cbarori with his Boat full of Souls.
In the Hall where the Pope gives Audience to Ambaffadors, are three large Pictures reprefenting the Hiftory of the Admiral Coligni; the firlt fhews you the Admiral as he was carried to his Houfe, after his being wounded by the Ruffian Morevel, (fifty thoufand Crowns were fet upon his Head) at the Bottom whereof you read this Infeription :

Gajper Colignius Ammiralius, accepto vulnere domums
refertur. Greg. XIII. Pontif. Max. 1572 . i. e.
The Admiral Galper Coligni carried bome wounded.
The fecond reprefents him murder'd in his own Houfe, with his Son-in-law Teligny and others, with this Motto underneath :

## Cades Coligni $\mathrm{E}^{\circ}$ Sociorium ejus. <br> i. e. The Slaugbter of Coligni and bis Adberents.

In the third the News of this Murder is brought to the King, who fhews a Satisfaction in his Countenance; with this Infrription :

## Rex Coligni necem 'probat:

i. e. The King approves of the Slangbter of Coligni.

Befides thefe Trophies of fo barbarous an Action, the fame Pope caufed Medals to be coin'd with this Infcription, Gregorius X1II. Pont. Max. an. I. and on the Reverfe an Angel with a Crofs in one Hand, and a Sword (with which he feems to thruft) in the other, with this Infcription, Ugonottorum Strages 1572 , i. e. The Slaugbter of the Hugonotts 1572. I obtained one of thefe Medals; though they are become very rare of late Years.
Of the Gardens of Belvedere, and the Statues there; I will put you in Mind only of the invaluable Marble Statue (of one entire Stone) of Laocoon, the Work of Agefander, Polydorus and Atbenadorus, three Greciant Sculptors; of the Trunk without Head, Arms or Legs, with the Sculptor's Name engraven on the Pedeftal,

Amoalonios nhetopos aghnaioz i.e. Apollonius, the Son of Neftor; an Athenian.

The Vatican Library owes much of its Contents to that of Hydelbergh, and of the Duke of Urbino; the Number of Books it contains is fo varioufly reported, that I thought it beft to determine nothing upon that Head. The Pictures reprefent for the moft Part the Sciences, Councils, noted Librarics, Inventors of Letters, and fome Pieces relating to the Life of Sixtus V. The old MS. of Virgil is in Quarto, but of greater Breadth than Length, in capital Letters, without Points, or any other Diftinction of Words. The Gotbick Letters, as well as the Miniature, fhew it not to be written in the firft Ages of Antiquity, as fome would have it. Among: the Manufcripts of the latter Ages, I took Notice of foine Letters written to and by Cardinals, wherein they give one another no other Title than Mr. Peter and Mr. Julius. They alfo fhews ${ }^{\text {d }}$ d us Volume in Quarto, of the Thicknefs of a Finger, containing Letters from King Henry VIII. to Anne Bullen. I alfo took particular Notice of the German Bible which you mention'd, and, as they fay, tranflated by Lutber; and written with his own Hand; which might have fome Probability of Truth, were it not that a certain extravagant Prayer, written apparently with the fame Hand, at the End of it, did deftroy it; the Words are thus in the Original :

> O God, durcb deine Gute Befchere uns Kleider and Hute, Aucb Mäntel and Rócke Tette Kälber and Bókke,

Oxen, Scbafa and Binder, Viele Weiber, wenig Kinder; Slecbte, Spaife and Trank Machet cikem das $Y$ abr lang.
i. e. O God, thro' thy Mercy, grant us Clotbes and Hats, Cloaks and Gowns, fat Calves and Goats, Oxen, Sbeep and Bulls, many Wives, and ferw Cbildren: Indifferent Meat and Drink makes the Year pafs aroay very flowly.

In the Arfenal, they tell you, the Pope preferves conftantly Arms for forty thoufand Foot and twenty thoufand Horfe; but I am fure there were not half enough for that Number, and thofe very indifferent. I told you that the Pope may, with great Conveniency, defcend from the Vatican to St. Peter's Church ; and on the other Side he may, with the fame Eafe, make a fecret Retreat from thence into the Caftle of St. Angelo, through a Gallery built by Alexander VI. It was Urban VIII. fortified it with four Baftions, unto which he gave the Names of the four Evangelifts. In the Chapel you fee a Picture reprefenting Pope Gregory I. proftrated at the Feet of an Angel that appear'd to him on the Top of the Moles Adriani, or Adrian's Maufoleum, and heathing his Sword, foretold the Pope the Deliverance of the City of Rome from a moft violent Peftilence ; whence this Place received the Name of St. Angelo.

In the little Arfenal belonging to this Caftle, we faw, befides the Papal Triple Crown, an Armoury full of prohibited Arms, taken, for the mof Part, from fuch unfortunate Perfons as were executed on that Account. Among the reft, they thew'd us the Piftols of Ranuccio Farnefe, Son and Heir of Alexander Farnefe, Duke of Parma and Governor of the Netberlands, who ufually carrying Piftols about him, contrary to the exprefs Prohibition of Sixtus V. who being a rigorous Perfon, and of a Difpofition very forward to maintain his Authority, order'd Ranuccio to be feized in one of the Chambers of the Palace, as he was going to defire Audience of his Holinefs, and to be carried Prifoner to the Caftle of St. Angelo. Cardinal Forne/e, Ranuccio's Uncle, left no Stone unturn'd to procure his Liberty, but in vain; for one Evening, about Ten o'Clock, whilft the Cardinal was foliciting his Releafement with the Pope, he fent his Orders to the Governor of the Caftle of St. Angelo, to have the Prince Ranuccio beheaded: This done, the Pope not queftioning but that his Orders had been executed immediately, and willing to make a Shew of obliging the Cardinal, gave him a new Order about Eleven a Clock, enjoining the Governor of the Caftle to fet $R a$ nuccio at Liberty. The Cardinal, who knew nothing of the firft Order, made all the Hatte he could thither, but was highly furpriz'd when he found his Nephew preparing himfelf for prefent Death in the Arms of a Confeffor, the only Reafon that had delay'd his Execution; but the Cardinal, overjoy'd to have nick'd the Time fo exactly, and producing his new Order to the Governor, had his Nephew put into his Hands, who, by his Uncle's Procurement, took Poft immediately, and fo efcaped the Hands of his Executioners.

During our Stay here, there was a certain Prifoner of Nute kept in the Caftle of St. Angelo, named Borri, a Gentleman of Milan, and a good Phyfician and Chymift, accufed of Herefy in receiving the Errors of the Collyridions in the fourth Age, who paid a Kind of Adoration to the Virgin, nay, fome fay that he made her a fourth Perfon in the Godhead: However, he has the Liberty of vifiting fome of his Patients of the beft Quality in the City, being fuppofed not to be in his right Wits at certain Times.
I am not well able to refolve your Quention concerning Dr. Molinos, for though I have feen thofe Propofitions that are faid to be his, yet will I not prefume to give my Judgment of them, unlefs I could hear Molinos himfelf; however, as they are publifhed, fome of them are dangerous, others ambiguous, feveral of them indifferent, and many very reafonable and orthodox. As to his Perfon, he has a very bad Character, being reputed a Villain and lewd Eellow, who, by his pre-
tended Infenfibility and Extafy, has deluded a great Number of Nuns, of which they tell you a thouland Stories, which have procured him his ignominious Confinement to a Cell for his Life. I have however obferved, that his moft inveterate Enemies have a much better Opinion of his Followers, who have embraced Quietifm, and other Opinions you have heard fo often attributed to Molinos.
2. The Queen of Sweden, Cbriftina Vafa, is a Princefs about fixty Years of Age, of a low Stature, and very fat; her Complexion, Voice, and Countenance are mafculine, with a great Nofe, large and blue Eyes, and yellow Eye-brows; her double Chin is ftrew'd with fome few long Hairs, and her under Lip fticks out a little; hër Hair is of a light Chefnut Colour, of a hand-breadth long, powder'd and curl'd up in Puffs, without any other Head-drefs; her Air is very pleafing, and feldom without a Smile. As for her Habit, imagine a Man's Fuftaucor of black Sattin reaching to the Knees, and button'd quite down; a very fhort black Petticoat, which plainly difcovers a Man's Shoe; a Knot of black Ribbon inftead of a Neckcloth, and a Girdle above the 7 uftaucor, which fupports the Belly. The Queen having left us, we took a View of the Palace Riari her Refidence, where we met with many ancient Pieces; the moft exquifite of them are, the Augustus, of the rareft tranfparent oriental Alabafter, but the Head and Feet are modern, and of Brafs gilt ; fixteen ancient Columns of Giallo, with two Pillars of tranfparent oriental Alabafter feven Foot high; the Venus, whofe mangled Legs are fo admirably fupplied by new Pieces, that the Joining is not to be perceived; the Caftor and Pollux on each Side of their Mother Leda, all of one Piece of Marble; the Sons are bigger than the Mother: The Altar of Bacclous, of beautiful white Marble, is adorn'd with moft exquifite Sculptures in Baffo relievo. Old Silenus going home drunk from the Feaft of his Fofter-child, fupported by two Men; the Baccbantes appearing in the Pofture of Mad-women. In another Place we faw a Goat fleas d alive, for cropping the Vines; and a Boar, which is wafh'd in order to be facrificed.

Among the Pictures, the Piece of Correggio, reprefenting the Intrigue of Fupiter with Leda in the Shape of a Swan, is exceeding fine; as are the Virgin, with the Infant $\mathcal{F} e f u s$; the llttle Sc. Fobn, by Rapbael; and Danae, by Carracbio; befides feveral other rare Pieces of Titian, Paul Veronefe, Guido, and other great Mafters. It would be much beyond the Compafs of a moderate Treatife to enter upon a Defcription of all the rare Medals to be feen in this Palace, I will therefore content myfelf with mentioning only the beft: The Otho, of Brafs, an Egyptian Piece, with Serapis on the Reverfe of it; the Pertinax, a fmall Latin Medal, on the Reverfe whereof you fee that Emperor offering a Sacrifice; the Antoninus Pius, another Latin Medal, having on the Reverfe ViEZory and Plenty offering him Fruit; another little Medal of the fame Antonin, called by Mr. Bellori, L'Anno Nuovo, or, the New Year, from the four Letters A. N. F. F. which he interprets Annum Novum, Faufum, Foclicem; and a Medal of Nero, with Hercules on the Reverfe; the Cicero, of Onyx, the Head white on a brown Ground, a moft curious Piece. But we will pafs from hence to fome other Curiofities: In St. $S, a-$ bina's Church, on Mount Aventine, we faw a great Stone, which, they tell you, the Devil of Colen hurl'd down from the Top of an high arch'd Roof, to knock out St. Dominick's Brains, after he had been difappointed in his Defign of beating down the Chapel of the Three Kings.

The Crucifix in St. Poul's Church, which fpoke to St. Bridget, was the Work of P. Cavallini ; it was made in the Year 1360 ; befides which, they have feveral other talking Images at Rome, as, the Crucifix of St . Mary Iranfportin's, which fooke feveral Times to St. $P_{e_{-}}$ ter and St. Paul ; our Lady of St. Cofmo and Damian, (formerly the Temple of Remus and Romulus) which chid St. Gregory for paffing by without faluting her : They fhew you certain Latin Verfes (attributed by fome to the Abbot Joachim, by others to Beda) containing
the whole Dialogue betwixt the Image and the Saint: Another at St. Mary's the Emprefs, and one more in St. Gregory's on Mount Celio, have now and then given fome Proofs of their Faculty of fpeaking, as divers others (if you will believe them) have not been fparing with their Teears; as at St. Mary's of Peace, St. Mary's in Valicella, and another St. Mary's call'd del Piento, and that in the Church of the Holy Gbof, has fhed whole Floods of Tears, as thefe credulous People believe. The Image of Chrift at St. Syluefter's in the Campo Martio, done by himfelf, as they fay, and fent by him to King Abagarus, is the rareft Pieture in Rome. Eufebius mentions the Letter pals'd between Chrift and Abagarus, but fays nothing of the Image, the Story being of much later Date.

This City abounds alfo in Variety of Relicks; as', the Ark of the Covenant, Mofes and Aaron's Rods, and the Fountain of Chrift preferved at St. Fobn Lateran; a Piece of the fame Money $\mathcal{F}$ udas received, his Lanthorn is alfo fhewn at St.Dennis in France, and the Crofs of the Good-Ibief, are fhewn at the Church of the Holy Crofs of ferufalem, with the Tail of Balaom's Afs and St. Poul's Thorn ; St. Rocb's Bowels are kept at St. Marcell's. The Beams of the Star that conducted the Wifemen have been evaporated of late Years, as well as the Sound of the ferujalem Bells; but Mofes's Horns, it feems, are ftill preferved at Genoa. The Navel of Chrift is preferved at St. Maria del Popolo, cêncerning the Foundation of which they tell you the following Story: In the very fame Place ftood a large Walnuttree, on the Branches of which ufed to perch a certain Troop of Devils, who guarded the Afhes of Nero in an Urn near it: This being very injurious to the Neighbourhood, they prevailed with Pope Pajcibal II. to rid them of this helliih Company: After fome Time fpent in Fafting and Prayer, it was revealed to him, that he fhould pull up the Tree by the Root, and build a Church ; and this being done accordingly, he gave it the Name of St. Mary of the People.

In the Church of St. Giacomo Scoffa-Cavalli, or St. Fames Sbake-borfes, they fhew the Stone, on the Altar of the Prefentation, on which Chrift was circumcifed, with the Impreffion made by one of his Heels upon the Marble; as alfo another Marble Table on St. Anne's Altar, on which Abrabam intended to facrifice his Son: Thefe Relicks, they fay, were fent by the Emprefs Helena, to be kept in St. Peter's Church; but the Waggon was no fooner come near St. Fames's Church, but the Horfes ftop'd; fo that the Drivers not being able to make them go one Step farther, fome Myitery was fuppofed to be hidden in this unaccountable Accident; and it being confider'd at laft, that St. Paul call'd St. Tomes, as well as St. Peter, the Pillar of the Cburch, they refolved to leave them at $S$ t. $\mathcal{F}$ ames's, and to preferve the Memory of the Miracle, gave that Saint the Name of Scofa-Cavalli, or Sbake-borfes.

You may eafily imagine, that my Curiofity might lead me to hear fome of their Preachers, who, generally fpeaking, exprefs themfelves more in fantaftical Geftures, wry Mouths, and odd-compofed Faces, than in their Arguments, or a fine Difpofition of Words, ferving more for Diverfion than Inftruction. I muft farther tell you, that each Order has its peculiar Way of preaching; the $\mathcal{F}$ efuits declaim very well, without thofe Geftures and Motions the reft are guilty of, but their Stile is extravagant. The Capucbins thunder out nothing but Hell and Deftruction, and make a hideous Noife ; whence it is that a certain Italian Author fays pileafantly, That when a Capucbin preaches, the Dogs run out of the Church. In fhort, their Difcourfe has neither Strength nor Gravity, a confufed Noife and Heat, without Senfe or Reafon. I remember I heard once a Carmelite preaching before the Penitent Whores of the Holy Crofs, concerning Mary Magdalen, who fpent at leaft a Quarter of an Hour in reprefenting all her Features to the greateft Nicety, not like a Preacher, but like a Painter.

The Queftion you put to me, Whether there are more Courtefans at Rome or Venice, I am not able to anfwer; for though I fee not fo many here as at Venice,

I have it from credible Perfons, that their Number is almoft infinite.' Sixtus $V$. endeavour'd to root out this Evil; but after he had done all he could with Banifhments and otherwife, was forced to recal them again, as Sixtus IV. did before, to prevent, as they fay, greater Diforders. Upon this Occafion I cannot but remember an ancient Picture of a Wedding at the Aldobrandin Palace. This is a Piece of Frize, brought hither with the fame Part of the Wall on which it is painted, being highly valuable both for its Antiquity and Workmanhip. I need not tell you; that the Marriage Ce remonies were very different among the Romans, the Bride being feated fometimes upon a Sheep's Fleece; fometimes on a Figure of the God Priapus, fometimes in another Pofture. In this Picture the is feated on the Bed-fide, her Head hanging down'with an Air of Coynefs, whilft a Matron fitcing by her puts her in Mind, with a fmiling Countenance, of her Duty. The Bridegroom, in an odd Drefs, with an Ivy Garland on his Head, is feated near the Bed, waiting, with an eager Impatience exprefs'd in his Looks, for the Compliance of his whining Spoure, whilft divers Maids are bufy in preparing Baths and fweet-fcented Ointments, and a The-Mufician plays upon the Harp, whilft another feems to fing fome Hymenia! O Hymence, fome Epitbalamium, of lafcivious Song, to difpel the Charms. This Picture on the Frize, and another on the Pyramid of Ceftius, are the only Remnants of the true ancient Painting in Rome. This Pyramid is fquare, ending in a fharp Point ; ' it is of Brick, but cover'd with white Marble ; it was repair’d 1673, and reftored to its former Beauty by Alexander VII. and, as appears by the Infeription, was erected to the Memory of C. Cestius, one of the Seeven Magiftrates appointed to take Care of Religious Feafts.

You enter the Maufoleum through a narrow Opening: in the Middle of the Thick Wall, and thence, into a vaulted Room nineteen Foot long, thirteen broad, and fourteen Foot high, plaifter'd over with a certain white polifh'd Mortar, on which are feen feveral Pictures of Women, Veffels, and other Ornaments.
To enter into a particular Defcription of fo diffiult a Subject being beyond my Scope, I will content myfelf to tell you, that I found the Antiquaries here of different Opinions in reference to thefe Figures, fome pretending that they reprefent the Preparatives for a Funeral Show, others a Banquet, as a Memorial of the Office of the Deceafed. One of the Figures holds a Veffel, into which fome others pour luftral Water, and ochers Wine. Another Figure you fee with large Pipes, defigned, as fome fay, for Mirth, and according to fome, for Mourning, both Parties pretending to back their Opinions by this Diftich in Ovid's Fasti.

## Cantabat Fanis, cantabat Tibia Ludis Cantabat moffis, Tibia funeribus.

There is one Thing, viz. the different Colours of the Fis gures, which feem to intimate, that thefe Habits were not intended for Funeral Ceremonies; and as, according to the Infcription of a Pedeftal dug up near this Pyramid, this Ceffius died in the Beginning of Augufus's Reign, for it is beyond Difpute, that the Women were cloath'd in White at the Funerals in his Reign, the Fafhion of Mourning in Black being abolifh'd in the Beginning of Ciefar's Dictatorfhip. Perhaps thefe Pictures were defigned only for an Ornament to the Tomb, without the leaft Refpect either to Feafts or Funerals, as the Sepulchre of the Nafo's has many fuch hiftorical Ornaments, the bare Product of the Painter's Fancy. The like is to be feen in feveral other Tombs, and efpccially' Urns. The greateft Curiofity in thefe Pictures is the Durablenefs, efpecially of their Colours, which were only mixd with Water, and do not even penetrate the Plaifter; befides that, Painting in Oil is an Inventiori of the latter Ages, by Fobn de Bruge, about 1450.
This Pyramid is about two hundred Paces diftant from the Hill call'd Doliolo or Monte Testaceo, i. e. the Hill of Potheards, which fome would have derive its Name from the broken Pieces thrown there by the Pot-
ters, that were obliged to live near the Tyber, to prevent its Inundation on that Side, by cafting together the Pieces of the broken Idols, Batbing-tubs, Statues, Tiles, and other Sorts of earthen Veffels, which amounting to a vaft Quantity in fo great a City, produced this Hillock.
But as probable as this Opinion appears at firft View, I have upon ftrict Examination of the Matter, obferv'd Things which induce me to believe otherwife; for having feen, at feveral Times and at feveral Places, the People dig Caves under this Hill to keep their Wine in, I could never obferve them bring out any Fragments of Images, Tiles, \&cc. but only the Remnants of Urns; whence I conjecture, that whilft the Cuftom of burning the Dead continued, a prodigious Quantity of earthen Urns were made for the common People, and as of Neceffity many of them molt be broken, the Reverence they had to thofe Veffels, that had contain'd the Athes of the dead Bodies, had induced them to affign a certain Place for thefe Fragments to be laid up in a Heap, juft as we, out of Refpect to the Dead, preferve their Bones.
Your Curiofity concerning the famous Pafauin and his Antagonift Marforio, I will fatisfy as well as I can: This Pafguin was a Taylor, a jovial fmart Fellow, at whofe Houfe the Newfmongers ufed to meet; his Lampoons were called Pafquinades, and thefe, as well as all the other Libels of the Town, were affix'd to a Statue which ftood near his Gate: It is a mangled Statue, thought by fome to be a Roman Soldier; it ftands leaning againft a Houfe at the Corner of a Place where feveral Streets meet. Pope Alexander VI. being advifed to throw this Pafquin into the Tiber, he anfwer'd, I Thould be afraid it roould turn into a Frog, and trouble me Day and Nigbt reitb its Croaking. Marforio is likewife a maim'd Statue, faid by fome to be made for 7 fupiter, others for the Rbine, or for Nera, which runs by Terni : It ftands in one of the Courts of the Capitol; and Marforio commonly asks the Queftions which are refolved by Pafquin.
You will perhaps expect me to relate Wonders of $T_{i}$ voli and Frefcati, and it is not to be denied but that they are pleafant, or (if you will have it fo) fine Places, but if Things are beft diftinguifhed by Way of Comparifon, (as for Inftance, betwixt Frefcati and Verfailles, or even fome other that are not Royal Seats) I dare boldly affirm, that both Tivoli and Frefcati, and all the other celebrated Places about Rome, in refpect to their Gardens and Watervoorks, are only Toys. Frefcati is a fmall Town feated on the Brow of a Hill, twelve Miles from Rome ; it has feveral beautiful Country Seats, the three principal of which are, Monte Dracone, belonging to Prince Borgbefe; Belvedere, to the Prince Pampbilio; and the Villa Ludovifa, to the Dutchefs of Guadagnola, the Conftable Colonna's Sifter; all which are in Comparifon to Verfailles the fame as Frefati is to Rome. Monte Dracoine is a very large Structure, feated on an Afcent, from which you may fee Rome and the interjacent Plain; but las the City lies at too great a Diftance, and the Plain is not embellifh'd with that Variety of things which render a Landfhip agreeable, fo the Profpect of Paris from St. Clou is infinitely more delightful: On the Side of Monte Porcio there is much greater Variety in the Profpect, but more ftraitned. The Avenues to the Houfe are but indifferent, and very difficult, and the Gardens and Fountains much out of Order. The Situation of Belvedere is near the fame with Monte Dracone; it has a pretty Cafcade and a Grotto, where you fee Apollo with the Nine Mufes on Parnafus. The chief Ornament of the Villa Ludovifa is the Cafcade; but the Furniture of all thefe Houfes were but very indifferent.
Tivoli is fuch another fmall Town, about eighteen Miles from Rome: Here is a Country Seat belonging to the Duke of Modena, commonly in the Poffeffion of the Cardinals of that Family; it is very fpacious, but wants both convenient Apartments and good Furniture; the beft Thing belonging to it are three Rooms painted in Fresco by Rapbael, and fome ancient Statues: The Gardens, though but fmall, yet are adorn'd with
moft delightul Terrafs Walks and curious Waterworks, far beyond thofe of Freficati, and perhaps all other Works of this Nature in Italy; but at prefent, what with the Stoppage of the Canals, and the Defect of the Pipes, every Thing is fo much out of Order in this Houre that you fee only the Remains of its Beauty. This Sight, as well as of moft other celebrated Country Seats, put me in Mind, after the furprizing Things I had heard concerning the Italian Waterworks, that if formerly they did furpals thofe of France, the Face of Affairs is much altered now; and allowing even what they fay of the Palace de Efte, that the Waterworks coft no lefs than three millions, it is neverthelefs beyond all Difpute, that the Waterworks and other Beauties of Verfailles abundantly exceed all thofe at Tivoli. The Cafcade or Cataract of the River Treverona (which produces white fmooth Flints call'd the Hailfoot of Tivoli) in this fmall Town is very pleafant, being not very high. Near it you fee the Ruins of an ancient Structure, reputed by fome to have been the Sybils Houfe, by others a Temple of Hercules: In the Court ftand twa ancient Statues of a reddin Granite fpeckled with Black, reprefenting (according to Mr. Spon's Opinion) the Goddefs $I / j s$, which he fuppofes to have been brought by Adrian out of $\notin g y p t$, to adorn his Country Seat.
The Hill near this Place has many Ages ago, and ftill affords moft of the Stones ufed in Rome, called common Travertin by Corruption, inftead of Tiburtin : The Front of St. Peter's Church is built of the fame, as well as the Collifeum, which is quite cover'd with it : The Stone is very excellent, but yellowifh and porous, and not fo ferviceable as your Portland Quarry, and thofe of Paris and. Caen. Alexander Taffoni, in his Various Thougbts, fays, That fome Workmen having cleft a great Piece of one of the Stones of $T_{i}$ voli, found in the Middle of it, in an empty Space, a Crayfib weighing four Pounds, which they boil'd and eat. Alexander $a b$ Alexandro affures us, that he found a wrought Diamond in the Heart of a great Piece of Marble, and at another Time a confiderable Quantity of fweet-fcented Oyl in another Piece of Marble, Bapiija Fulgofus fpeaks of a Worm found in the Middle of a Flint. The be-fore-mentioned Tafloni relates, (to fhew the Spirit of the Man) that a Cat fuckled a Rat at Tivoli.

About three Miles from Tivoli we faw a fmall Lake called Lago de Bagni, or Solfatara, called by the Vulgar the Sixteen Barges, from the fame Number of fmall floating Ines that are upon it: It is no more than a large round Pond, of about two hundred Paces diameter, the Water whereof is very tranfparent, and of a blueifh Colour; ; it gives Rife to a fmall Rivulet which, after a fhort but rapid Courfe, joins its Waters with the Anieno; they fay the Waters of the Anieno whiten the Teeth. The Lake as well as the Brook emit a very ftrong fulphureous Scent. The late Cardinal d ${ }^{D} E f t e$ in vain attempted to found the Depth of this Lake, though two Divers were prevailed upon to enter into it, one of whom never returnd, and the other related, that coming at a certain Depth, he found the Water fo hot, that he was not able to endure it, though on the Surface it is very cold: The Sound caufed by the treading of the Horfes thereabouts, makes it apparent, that there is a Hollownefs underneath the Ground near the Banks of this Lake. It is not unlikely that the Circumference of this Lake is only the Mouth of a much larger Abyfs extending a great Way under-ground on all Sides, and that the Diver, who was never feen again, happened to be carried into the fubterraneous Gulph, and could not find out again the Entrance of the Lake, for he never appeared afterwards upon the Surface of the Water. Near the Bank of this Lake are feen fome Ruins, fuppofed by many to be the Batbs of Agrippa The largeft of the floating Inands is of an oval Figure, not above fifteen Foot long: As the leaft Touch puts them in Motion, fo they are eafily carried by the Wind which Way foever it blows. Two of our Company got upon the leaft of thefe Illands, and pufh'd it from the Bank only with the Points of their Swords.

The Villa Borgbefe is in my Opinion one of the moft pleafant and the bett kept of any about Rome; it is all

## Chap. III.

 Greatef Part of ITALY.cover'd on one Side with moit curious ancient Pillars of Bafo relievo, fo naturally difpofed, as if they had been made for thofe Places where you fee them. All the 'Apartments are fill'd with admirable Statues and Pictures, among the firft, the Gladiator made by Agafias Son of Dofitbeus the Epbefian, as the Greek Infcription on the Bafe expreffes it, a Copy whereof in Brafs ftood at the End of the Canal in St. Fames's Park in London, (fince removed to Hampton Court) is an excellent Piece, as well as the funo of Porpbyry; Romulus's Wolf of the fineft Egyptian Marble; the Bufts of Hannibal, Seneca, and Pertinax; the Hermapbrodite ; the old Silenus, with Baccbus in his Arms; the David throwing a Stone out of his Sling at Goliath, EEneas carrying his Father, and the Transfiguration of Dapbne, three modern Pieces of Bernini, yet deferve to be rank'd among the beft of the former Ages. Among the Pictures, which are numberlefs here, the St. Antbony by Caracchio, and the dead Cbrist by Rapbael, are preferr'd before all the reft. In fhort, the Villa Borgbefe is a moft delicious Seat, and if it wants fomething of that Royal Magnificence, which gives a Luftre to fome Palaces, its fweet and natural Beauties feem to make an ample Amends for it: Befides that, for Statues and Sculptures the Seat of a Roman Gentleman may challenge the Precedency before all the other Palaces in the Worid. In the Garden, the Gardener flew'd us a double white Hyacintb, the Root of which, he told us, coft five hundred Crowns the Year before; a Thing not much furprizing to me, when I had known the Fondnefs (to fpeak no worfe) of fome People to proceed to that Extravagancy in Flowers, as to give four or five hundred Piftoles for a Tulip-root in Flanders.
The Villa Ludovifa, though much out of Order otherwile from the Poverty of the Prince of Piombino its Mafter, yet is very remarkable for a vaft Number of Statues, and thofe for the moft Part very ancient and valuable. The Faufina embracing a Gladiator, her Lover ; the two Gladiators, one a dying Mirmillo, and the other repofing limfelf after the Engagement. The Statues of Baccbus, Mercury, and Concord are all moft curious Pieces: The choiceft Pittures and richeft Furniture are removed from hence to other Places, the only Thing of Value remaining there, being the Bedfead, which (they fay) coft twenty thoufand Piftoles, but was much out of Order. In the fame Chamber they fhew'd us fome Bones, which, they would make us believe, were the Skeleton of a petrified Man; but, upon a ftrict Search, I found thefe Bones not petrified, but cover’d only with a ftony Cruft; not that I believe it impoffible for Bones to be liable to Petrifaction as well as other Things, having in my Travels had the Opportunity of feeing great Variety of petrified Fruits, Flowers, Trees, Wood, Plants, Fifhes, 'broad Pieces of Flefh, and Animals of all Sorts: Parcus fpeaks of a whole Child petrefied in the Mother's Womb ; and Kircher relates the fame of the Town of Biedoblo in Afric, that it was petrified in one Night, with Men, Beafts, Trees, and every Thing that was in it.
The Villa Cbigi is famous for its curious little Waterfpouts, and the Cabinet of Curiofities, in which the Adrian of oriental Jafpar excels the reft, and is really invaluable. The curious Walks of the Villa Montalto or Savelli, are not inferior to any of Rome for valuable Statues and Pietures; among the firft, the Germanicus, the Pefcennius Niger, the Scipio, the Goddefs Nenia, the Adonis, and the Gladiator, are moft excellent Pieces of Antiquity ; and among the Pictures, the dead Cbrist by Raphal, the St. Francis by Caraccbio, the Virgin and the Baccbus by Guido, and the St. Fobn by Pomarancio. I obferved here an unufual Figure of Abrabam's Sacrifice, by l'Eppagnolet, who, inftead of a Cymetar, or fhort two-handed Sword, as Abrabam is commonly painted with, has, more agreeable to Truth, given him a plain facrificing Knife, to cut his Son's Throat.

The Gardens of the Villa Pampbilia would, for their Exactnefs and orderly Difpofition, challenge the Preference before many others, were they kept in better Repair, the Houfe being adorn'd on the Outfide with
excellent Baffo relievo, like that of the Villa Borgbefes and is as well furnifh'd within, but that the beft Statues are much diforder'd by an odd Accident; for the Prince Pampbilio being very young, and much bigotted to the Fefuits, thefe holy Fathers, under a Pretext of Devotion, prevail'd upon him fo far, as to have all his Marble Statues, Men, Women, and Children, quite laid over with Plaifter-work in divers Parts of their Bodies, except a little Baccbus, who had the good Fortune to efcape their ill-placed Zeal; and a poor Venius, the Mafterpiece of Caraccbio, but her Beauties hid by Smutt from Head to Foot. After fomeTime, however the Prince, being got out of the Hands of thefe pretended Zealots, order'd the nafty Clay or Plaifter to be taken off again, which was done accordingly, but he found, to his no fmall Regret, that the clumfy Plaifterers had mangled feveral Parts of the Statues to make their. Clay ftick the better
The Vigne Madame; a Country feat belonging to the Dike of Parma, is neither fpacious nor magnificent, but very regular and pleafantly feated, being the Defign of $\mathcal{F u l i u s}$ Romanis : On one Side it has a moft delightful Profpect of Rome, with many Gardens and adiacent Seats; and on the other, a moft beautiful Lanidskip of little well-cultivated Hills. Over againft it you fee the Tyber flow through the pleafant Meadows and Fields, and at a Diftance the fnowy Tops of the Apernines rifing up among the Clouds; behind it is a Wood of tall Trees, divided into cool and Thady Walks'; the Gardens rife by Degrees into Terrafs Walks, and are well adorn'd with Statues and Fountains. Having fufficiently tired your Patience with the Defcription of Statues and Pictures, I will fay nothing of the Houfes of Medicis, Mattbai, Lanti, Cafarini, Fuffiniani, and many others.
3. I will at prefent begin with anfwering your Queftions concerning the Tyber. As on one Hand it owes its chief Reputation to that famous City that was buile upon its Banks, fo on the other Hand, it has been reprefented by fome with too much Contempt, its Breadth being by a general Computation at Rome about three hundred Feet, as may be feen by the Bridges of St. Angelo and of Sixtus; the firft is three hundred and thirty, and the laft three hundred Foot long : befides that, it has a rapid Current, and a confiderable Depth. What fome Antiquaries would maintain, that it was unlawful to erect Houfes upon the Banks of the Tyber, may be fufficiently refuted out of Claudian and other Authors. Suetonius fays, that Augufius order'd it to be clean'd, and enlarged its Chanel, to render the Paffage eafier to the Current; whofe Example has been follow'd by feveral other Princes, to prevent its Inundations, but without any remarkable Succefs; for the South-Eaft Wind off the Mediterranean (here call'd the Sea Wind) fometimes blows with fuch Violence, that it ftops the Waters of the Tyber at its Outlet, which if it happens at a Time when (either by continual Rains, or the Melting of the Snow in the Apennines) the Torrents of the leffer Rivers that join with the Tyber are fwoln, this Concatenation of Accidents produces thofe Inundations, which are look'd upon as the Scourge of Rome, as the fulphureous Eruptions of Mount Vefuvius are the Scourge of Naples; and of there, one of the moft fatal happen'd under Clement VIII. in December 1698.

The Waters of the Tyber appear always muddy and yellowifh, but if they are fet by for a Night to fettle, they will become clear and limpid, and are then accounted very good; notwithftanding which, the Romans have been anciently, and ftill are, at a vaft Charge to convey other Waters to Rome, through the Mountains, by the Means of coftly Aqueducts. The Aqua Felice coft Pope Sixtus V. near four hundred thoufand Crowns to bring them twenty Miles to Rome; and as the Waters of the Fountain of Montorio were carried as a greater Diftance by Pope Poul the Fifth, 1612 ; fo is is probable they coft a great deal more Money in the Materials neceffary for their Carriage.

On the High Altar of the Church of the Francijcans at Montorio, is to be feen that molt excellent Piece of
the Transfiguration, which is the laft Work and Mafterpiece of RapbaelUrbin the greateft Painter of his Time.

Not far from thence flands the Chapel, built in the fame Place, as they believe, where St. Peter was crucified; for which Realon they fhew a deep Hole in the Chapel, where they affirm the Crofs was fix ${ }^{3}$ d. The Picture of this Crucifixion, with the Head downwards, is to be feen at Sc. Paul's at the three Fountains, by the Hand of Guido; where they alfo fhew you the Pillar, on which, they fay, St. Paul was beheaded. In the Cloyfter of St. Yobn de Lateran they fhew the Column on which St. Peter's Cock crew ; and another, which, they tell you, was cleft afunder from the Top to the Bottom, on the Day of Chrift's Paffion: Here you fee alfo the Meafure of Chrif's Height, and the Stone on which Pilate's Soldiers caft Lots for Chrift's Garments ; it is of Porphyry, four Foot long, and three broad; the Dice they pretend to be kept at Umbriatico in Calabria. I will not trouble you with many other Curiofities pretended to be preferved here, but cannot forbear to mention the Chair I faw there, being a kind of arm'd Chair of one fingle Piece of Porphyry, about which you defire to be inform'd, as being that which was formerly made ufe of in the Ceremony inflituted to prevent all. Doubts concerning the Pope's Sex.
I will not be too curious to enquire into the Reafon and End of that Search, but fince you have given me fufficient Occafion to make the beft Reflections I can upon the Subject of the She-Pope, I muft frankly confefs, that I have not hitherto met with the leaft Solidity, either in your Objections, or any made by others, againft the Truth of this Hiftory; though I am.not ignorant that fome Protestant as well as Roman Catbolick Doctors of the laft Ages, have rejected the fame as a Fable. For, what Reafon can be given to rank this among many ocher extraordinary Events recorded in Hi Itory, when feventy or eighty Authors (Blondel fays feventy one Greek and Latin, fome too canoniz'd Writers) all Men of Senfe, not prompted either by Intereft or Honour, have related the fame at divers Times; nay, when the Intereft of Religion, and Fear of Punifhment, might, in all Likelihood, rather have deterr'd them from publifhing the fame? It is a very fender Objection to alledge the Difficulty of the Thing, the fame not being fufficient to difprove a Matter founded upon fo unqueftionable Authority, efpecially if we give fome A1lowance for the Diverfity of Times, it being certain, that People living then in an Age of Ignorance and Stupidity, they might be fooner impos'd upon than in this crafty Age ; befides, that Things which feem'd to be involv'd in infurmountable Difficulties, have neverthelefs been brought about by Time and Chance; witnefs Foan of Arc, known by the Name of the Maid of Orleans, born in the Village of Damremy, in the Year 1429, who at the Age of eighteen or twenty, from a poor Shepherdefs, became at once a great General : Befides, the Difficulties objected by our Adverfaries are of fuch a Nature, as cannot render this Hiftory fabulous, all the Circumftances attending the fame, being, if not altogether probable, or at leaft within the Compafs of Pofibility.

The beardlefs Chin objected to ber Holiness is of little Validity, when we confider that the papal Chair has at other Times been filled with beardlefs Youths, witnefs Benedict IX. and Fobn XII. the firtt of whom was chofe. at ten or eleven, and the laft at eighteen Years of Age. Perhaps this She-Pope might be of the Number of thofe Viragoes, who have not only a mafculine Mien and Beard, but alfo the Courage and other Qualifications of great Men ; and why might not fuch a one, in Difguife, have as fair a Pretenfion to the papal Chair as a begging Vagabond, fuch as Adrian IV. or a Swineherd, like Sixtui V ; And others who might be mentioned ? But, fay they, how could a Woman hide her great Belly fo long, and at laft expofe herfelf to the Danger of being deliver'd in a folemn Proceffion? As to the firft Part of your Objection, What Difficulty is there for a Woman that is taken for a Man to hide her great Belly, any more than for a Man that has a fwell'd Belly to be imagined to be with Child? And as to the
pretended Imprudence of our Sbe Pope, it is to be confider'd, that certain Things in this World are involv ${ }^{3}$ d in fuch Difficulties as muft be overcome at any Rate, maugre all the Danger that attends them; befides that, it is no hard Matter to fuppofe that fhe might be deliver'd before her Time.
You alledge the different Calculations of the Time, but the Reafon is obvious, thofe who have expung'd the Popefs's Name out of the Catalogue of Popes, being forced to extend the Reigns of the preceeding Popes, to fill up the Breach they made: themfelves. The next Objection, concerning her Voyage to Atbens, when the was but a young Scholar, is founded upon a frivolous Suppofition, which I may foon anfwer, by telling yout, that perhaps fhe was old enough to be admitted among the Auditors of the Atbenian Philofophers ; befides that, it is not all the Authors who mention her, fpeak of her going to Atbens: And though from thefe various Relations of my Authors you may feem to hope for an Advantage on your Side, I muft tell you, that even in Sacred Hiffory there are not wanting Inftances of Variations in Circumftances of this Nature, and that thefe Variations, provided they do not amount to Contradictions, do not in the leaft weaken, but rather ftrengchen the Credit of fuch a Relation; for had there been a Combination fet on Foot on Purpofe to ufher a fabulous Story, as that of Pope foan is pretended to be, they would have certainly agreed in all the Circumftances relating to the Story
The ftrongeft Argument (in your Opinion) againft us, is the Silence of thofe Authors who were Contemporaries of Pope 7 oan; but you will find this as weak as the reft, if you confider that Maricions Scotus, who died at Fulda in Germany, 1086 ; Sigebert a learned Monk, who died in the Beginning of the tweifth Century, and divers other more ancient Authors, did in alt Probability take it from thofe Authors that had mentioned the fame before them, there being not the leaft Likelihood that they invented it, for the Reaions beforementioned: Befides, let me tell you, your Argument is built upon a wrong Bottom; for the Editions of Anaftefus (furnamed the Bibliotbecary, who was a Romana Abbot, a Perfon of Learning, and Contemporary of Pope foan) which have efcaped Caftration, give a very circumitantial Account of the whole Matter. But fuppofe they did not, what Wonder is it, if Fear and Sbame did impofe Silence to the Writers of that Age, when the Invention of Printing was unknown as yet in the World, which could not be kept fecret afterwards? As we fee that the worft of Princes have been flattered during the Age they liv'd in, whom afterwards Pofterity, not cow'd by Fear, hath painted in their true Colours. I can't fee why the Church of Rome fhould make fuch a Stir to hide this Difgrace, when Baronius beftows the Title of Monfers upon feveral other Popes, and not without Reafon, confidering the Enormities the Popes have been guilty of, in diftributing Scepters, and treading crown'd Heads under their Feet, notwithftanding they retain'd the Quality of Priefts; and what is worfe than all the reft, to fet a certain Rate of Abfolution upon the moft abominable Crimes that can be committed, as appears from the Book entituled, The Rates of the Apofolical Cbamber, which I bought fome Days ago. It is true, they have fince endeavoured to fupprefs the Book, by inferting it in the Index Expurgatorius of the Council of Trent, but continue neverthelefs in felling their Difpenfations.

## Templa, Sacerdotes, Nenaina nobis, <br> 

Igris, Tbura, Praces, Celum eft venale, Deufuue.
i. e.
B. Mant.

Priefts, Temples, Altars, all with us are fold,
Fire, Incenfe, Pray'rs, Heaven, God bimjelf for Gold.
I will appeal to all unbiafs'd Perfons, when once Pofterity fhall read the Hiftority of the Perfecution of France, as reprefented by Maimbourg, Varillas, the Bifhop of Meaux, and others of the fame Stamp, I fay, when they fhall read the fame in thefe Authors, whether
they would not be apt to imagine that thefe poor Wretches were ufed with all imaginable Moderation, if it werenot manifeft from irrefragable Authority, that thefe unfortunate Creatures fuffer'd all the Cruelties that could be invented by their implacable Enemies. Before I take my Leave of Pope Foan, I cannot forbear mentioning what Mezeray fays (in the Life of Cherles the Bald) upon this Subject, viz. That tbis Opinion was generally received as an undoubted Iruth for five bundred Tears togetber. If you are curious to know the Reafon why the Ufe of this Chair is laid afide now-a-days, the following Epigram of Pannonius will fatisfy your Curiofity.

## Non poterat quifquam referantes, Etbera Claves Non exploratis, fumere Teficulis :

Cur igitur noftro mos bic nunc tempore cefat? Ante probat quod se quilibet effe marem.

The Senfe is this:
The facred Keys none could of old obtain
Unlefs by Search bis Manbood was made plain;
Why does not to our Days tbis Rule extend?
More certain Signs they give e'er they pretend.
Pafquin, in his Verfes on Paul II. and Innocent VIII. gives you the fame Reafon;

Pontificis Pauli Testes ne Roma requiras,
Filia quam genuit, Sat docet efe marem.
In Englijh:
That Paul's a Man Rome need no Proof require, Except the Maid that calls the Pontiff Sire.

Octo Nocens pueros genuit, totidemque puellas, Hunc merito poteris dicere Romæ patrem.

That is,
Eigbt Bays, eigbt Girls, begot; He weell may claim, Tho' not a holy, yet a Father's Name.
'The Church of St. Fobn Lateran is celebrated for its Spacious Magnificence, and the Title fhe bears of The Head and Motber of all Cburcbes, according to the Infcription engraven on the Portico:

## Dogmate Papali, datur Simul Imperiali Ut Sim cunctarum mater Ecclefarum.

Sixtus V. built a large Palace near this Church, but it was never inhabited. Next adjoining to this Seructure is the Sanzia Scala, fo called from the twenty eight Steps of white Marble, pretended to be the fame by which Chrift afcended into Pilate's Houfe, which no body is permitted to afcend but kneeling, thoughin there are two little Stairs, on each fide one, by which every one is permitted to walk up into the Chapel called Sanita Sanctorum, or the Holy of Holies, except Women, who are forbid to enter there. It has this Name from an Image of Chrift, which, they fay, was made by Angels : I faw it, and can affure you it is very ill-fhapen, and very un worthy of the pretended Workmen.
From hence we paffed by St. Mary major, a fumptuous Fabrick. A certain devout Roman Lord being warn'd in a Dream to go to Mount Efquilin, and there to build a Church to the Honour of the Motber of God, in the Place where he fhould find Snow; and Pope Libcrius having at the fame Time fuch another Vifion, they walk'd thither the next Morning; and notwithflanding it was then in Auguft, Anmo 355, they found Snow, which they removed with their own Hands, and laid the Foundation of a Church in that Place. The Chapel of Sixtus V. the Work of Dominick Fontana, which coft feven hundred thoufand Roman Crowns, and of Paul V. are very magnificent Structures; in the Iaft of which they fhew you the Manger of Betblebem, and the Picture of the Virgin done by St. Luke. Near it flands the little Church of St. Antbony, where all the Horfes of the City receive Benediction every Year on that Saint's Feftival. Soon after we took a Turn to Caftel Gondolfo, fixteen Milles from Rome, a Palace belonging to the Pope, but has little remarkable in it,
VOL. II. NuMe. 108.

About a Mile from this Cafle we faw the little Town of Albano, where in former Ages ftood the famous City of $A l b a$, which, they fay, extended from the Lake of Caftel Gondolfo to this Town of Albano ; but this is a Matter of Fact, queftion'd by fome.
We were thewn at Albano the Ruins of a Maujolauns not unlike an old Tower, called commonly the Tomb of Afcanius, but with the fame Uncertainty. There is another very ancient Tomb near Albano, fuppofed to be the Sepulchre of the two Horatii, and the three Curiatii, occafion'd, queftionlefs, by the five Pyramids ftanding on this Tomb; but Livy exprefly contradicts this Opinion, viz. that their Sepulchres were erected in the fame Places where each of them expired, viz. thofe of the Horatii near Alba, and thofe of the Curiatit not far from Rome. They told us that the Lake of Caffel Gondolfo was fix or feven Miles in Circumference, enclofed on all Sides with rifing Grounds in the Formz of an Amphicheatre. In two Places the Depth of this Lake cannot be founded, and fometimes the Waters of this Lake fwell on a fudden to the very Brink of thefe high Banks, occafion'd, without doubt, by fome fubs terraneous watery Receptacles which difcharge themfelves into it. Near Genfama, about half a Mile from this Lake, is another little one, called by the Moderns the Lake of Nemi, but by the Ancients Speculums Dianc, from a Grove and Temple confecrated to that Goddefs, which formerly were very near the Banks of this Lake.
Between Albano and Cafel Gondolfo are to be feen the Ruins of an ancient Amphitheatre; and we were not a little furpriz'd to fee feveral large Trees, that had taken Root without, to have forc'd their Paffage thro', and cleft afunder the beft cemented Stone and Brick. The Country about Albano and Genfana is very fertile; affording the beft Wines and Fruits, and the Inhabitants ftill hold their moft ancient Cuftom of cultivating Leeks and Onions ; Mittit pracipuos nemoralis Aricia porros. Mart. Before I leave the Roman Palaces, I muft tell you alfo fomething of thofe within the City, which I will do with all the Brevity that is poffible.

At the Palace fuffiniani there is a Catalogue of Anz tiquities of 1867 Pieces, and of 638 curious Pictures, the moft excellent of which are, the Nero's Head, the Minerva, Venus coming out of a Bath, and the three little Cupids fleeping and leaning one upon another. Cardinal Cbigi's Palace is fcarce inferior to any in Rome, the Gates are over-crufted with an old green Marble: The Statues of the two Venus's, of Marrias flea ${ }^{\circ}$ d, and of the dying Gladiator, are admirable Pieces. The Farnefian Palace was begun by Antonio de S. Gallo, but brought to Perfection by the famous Micbael Angelo ${ }_{\xi}$ the Front being in Breadth one hundred and eighty Foot, and ninery Foor high. The Gates, Cornerpieces, Crols-bars of the Windows, Cornifh, and in fhort, all the principal Stones of this beautiful Structure, were the Spoils taken from the great Collifeum, which admirable Monument of Antiquity has furnifh'd Materials alfo not only to the Palace of the Cbancery and St. Larerence's Church, but alfo to fome Part of the City Walls. Thus Innocent VIII. deftroyed the Gordian Arch to build a Church ; and Alexander VI. that moft beautitul Pyramid of Scipio, to pave the Streets with the Stones.
The Marble Steps to the Church of Ara Celi bea long'd formerly to the Temple of Romulus: St. Blaife's Church owes its Ornaments to the Spoils of the Temple of Neptune, as S. Nicbolas of the Souls was built out of the Ruins of the Circus Agonalis ; and had it not been for Sixtus V. we might now look in vain for any of the precious Remnants of Antiquity in Rome.
The Hercules and Bull in the Farnefan Palace are celebrated throughout the World; and the Gallery by Caraccbio, the Hall by Salviati, and the Vemus and Adonis by Titian, are alfo excellent Pieces. The Library in the Palace of Altieri contains a good Number of the beft Books. The whole Staircale, and efpecially the Statue of a Captive King at the Foot of it, (found five hundred Years ago in the Place called

Narona)

Navona) is very fine. It has very fpacious Apartments well filled with curious Pictures and rich Furniture. I faw here a Looking Glafs of Rock Cryftal, ten Inches long, and fix broad, in a Frame of Gold fet with precious Stones of a confiderable Value. They alfo fhew'd us a little earthen Difh carefully kept in a rich Frame, as being fuppofed to be the Work of Raphael, and is of the fame Kind with the Veffels of Loretto; but difcourfing upon this Subject with the noted Carlo Maratti, he affured me, that Rapbael never drew a Stroke on any of thefe Difhes, but that, by the Refemblance of the Way of working, fome of his Scholars painted the the fame, in Imitation of his Defigns.
The Palace Barberini, called the Palestrina, containing four thoufand Chambers, is the largeft in Rome next to the Vatican, and has abundance of Antiquities; the little Diana, of Oriental Alabalter, is of great Re pute ; the Tullia, Daughter of Servius Tullius, and Wife to Tarquin the Proud, is very rare, and faid to be the only one of that Kind in Rome : Here I alfo faw the God Ofris, with his Hawk's Head on a human Body, which was found with the Obelisk of Minerva, under the Ruins of the Temple of Ifss; and a Marble Buft of Pope Urban VIII. made by a blind Man, and yet the beft that is extant of that Pope. The other Palace of Barberini, towards the four Fountains, is fill'd up with Rarities, Antiquities, and Curiofities of all Sorts: They told us, that the Library contains four thoufand Volumes. In the Hails of the Palace Colonna you fee the Pictures of two Popes, Adrian I. and Martin V. two of the beft that ever fate in the Chair, nineteen Cardinals, and fifty four Generals, all defcended from the Houfe of Colonna. In this Palace are nine very fpacious Apartments, eight thoufand original Pittures, a little Arfenal, Bunts, antique Baffo relievo, Statues, and rich Furniture, in confiderable Quantities.
As for their Way of Building in general, I told you before, that they cover their Houfes with ridged Roofs, found out by our famous Manfard, and much preferable to flat Roofs; and upon this Occafion I muft intreat you to lay afide that partial Opinion you feem to have conceiv'd of the entire Perfection of the Roman Arcbiteciture, which, as well as in other Places, varies according to the Difference of the Age and peculiar Mode of the Country, and is not always fuited to the Regularity and Magnificence of juft Architecture. The Obelisks in Rome are quadrangular, ending in a fharp Point, their Angles refpecting the four Corners of the World, and denoting the four Elements, as the whole refembled the Rays of the Sun, the chief Divinity adored by the Egyptians under the Name of Ofris. The Hieroghyick Cbaraiters on thefe Obelisks, fuppofed by fome to have been the Elogies or Hiffories of great Actions, erected by the Egyptians in Honour of the Heroes of their Nation, have fince been clearly demonitrated to contain the Secrets of their Divinity, Affrology, Metapbyjicks, Magick, and fuch other Sciences as were in Vogue among the Egyptians: All thefe Obelisks, (not one of them being made at Rome) are of Granite, a Kind of very hard Marble, which, they fay, will refift the Fire for a confiderable Time, and without Queftion induced the ancient Egyptians to make Choice of it for fuch lafting Monuments. The Obelisk of St. Fobn Lateran has ftood three thoufand Years, and that of St. Peter nine hundred Years longer : The firft, which is the biggett of the two, is an hundred and eight Foor high, without including the Pedeftal or the Crofs. There are alfo fome Granites of Corfica in this Place, but their Grain is much coarfer than thofe of Egypt.
4. Since you defired me to give you my Obfervations upon what Mr. Cbevreau hath alledged, in his Hittory of the World, concerning Pope Foan, I will write you my Sentiments upon this Head. That Gentleman acknowledges, That a considerable Number of famous Autbors bave mention'd that Story, and poftively afferted the Trutb thereof: And what Reafon, I pray, can he alledge, why fo many unbiafs'd Witneffes of unqueftionable Credit, who unanimounly atteft that Matter, fhould not be credited? He fays, The more judicious
and cautious Part of Mankind, relying on the Silence of feveral otber Autbors, bave examined and rejectied the fame. It is certainly a very weak Way of arguing, to fay, that a Thing attefted by the unanimous Voice of feventy or eighty Men, all of the Roman Catbolick Religion, moft of them Clergymen, and fome canoniz'd Saints, all which is confefs'd by the Romanists, fhould be invalidated by the Silence of fome other Authors. But, fays Mr. Cbeoreau, Anaftafius the Bibliotbecary makes no Mention of the Sbe-Pope Joan : But this Author, as well as Onupbrius, who alledges the fame Ar gument, is miftaken. If you will be pleafed to confule Mr. le Sueur's Ecclefiastical Hijtory, and Colomeffus's Historical Mifcellanies, you will hear there of an Anaftafus in the French King's Library, containing a circumftantial Account of this female Pope; befides two other Copies of the fame Author, feen by the great Salmajus at Augsbourg, and another at Milam, which give an Account of the fame Pope Foan. Thefe before-mentioned Books tell you further, that the Jefuits of Meniz having only fuffersd two Copies to be wrought off conformable to the Original, (which they do not deny themfelves to be true) fupprefs'd what difpleafed them in the reft of the Edition. Upon this Occafion, I cannot but put you in Mind to weigh ftrictly the Authority of the Teftimony of Anaftafus, (he wrote the Lives of the Popes to Nicbolas I. the Succeffor of Benedict III.) who being a Man of fingular Learning, lived at Rome, and was Contemporary with this female Pope.
I cannot forbear, in the next Place, to give you my Thoughts upon the Reflections made by Mr. Cbevrean on Martinus Polonus, or the Pole, Archbifhop of Cofen$z a$, and Penitentiary to Innocent IV. and (according to the Opinion of fome) to Nicbolas III. whom he calls a filly Monk; and, I pray, for what Reafon? Since, fays he, in bis Treatije of the Wonders of Rume, be mijtakes the Gate of Oftia or of St. Paul, and of Capenna and St. Sebaftian, for another wobich be calls Collina, infead (as we may probably fuppofe) of Collatina or Pinciana, the Pantheon for a Temple of Cybele, and the Amphitheatre for a Temple of the Sun, we may the eafer forgive his Blunder in Hiftory woben be miftakes a Pope for a Popes. If this Argument holds, That fuppofing M. Polonus bad miftaken one Gate for anotber, therefore be mult take is Pope for a Popefs, I might with the fame Reafon retort it upon Cberreau himfelf, that Jince kis Reflecitions on M. Polonus are groundlefs, therefore be miftakes a Popefs for a Pope. That his Reflections are groundlefs, appears, (I.) That Mr. Cbevreau himfelf knew not that there was fuch a Gate at Rome as the Collina, when he fays, that Polonus took the Gate of Oftia, and tbe Gate Capena, for another wobich be calld Collina, instead of Collatina, or Pinciana; it being certain that Collina was the Name of a Gate as well as Collatina, and had its Name à Colle Quirinali, mention'd by Ovid:

Templa frequentari Colline proxima porte Nunc decet,

Faft. 4.
being now call'd Salarco. (2.) The Gate Collatina, fo called from the Town of Collatium, is different from the Pinciana, as F. Nardin hath fufficiently demonftrated. (3.) Mr. Cbevreou has as little Reafon to find Fault with Polonus for calling the Pantbeon the Temple of Cybele, the fame being founded upon the Opinion of feveral learned Antiquaries, who believe it to have been confecrated by Agrippa to Fupiter the Avenger, and to Cybele the Mother of all the Gods, who was fometimes wormipped under the Names of Ops, Rbea, Vefa, Berecyntbia, Dindymene; fometimes under the Names of Tellus, Magna Pale, Magna Mater, and frequently ftiled Natura Rerum Parens. (4.) Mr. Cbevreau fpeaks fo ambiguouny concerning the Roman Ampbitbeatre, that his Meaning is not eafily to be underftood; for fince there were feveral Amphitbeatres, the Ruins of fome of which are ftill remaining, I fuppofe he means the great Ampbitbeatre called Collijeum, built by Vefpafian, and dedicated by Titus. (5.) It is certainly too great an Abfurdity to believe, that Polonus could miftake this Collifeum for the Temple of the Sun; which makes me
imagine,

## Chap. III.

Greatef Part of ITALY.
imagine that fome of his Expreffions muft not be well underftood, and that inftead of faying the Collifeum as a Temple of the Suri, he might feeak of the Temple near the Ampbiibeatre.
You tell me, you have feen a Manufcript of Polonus, where this Story is written in the Margin by another Hand; and what can be infer'd from thence, except, that the Author having been mutilated by fome body or other, a more equitable Perfon fupplied the Defect, Bellarmine himfelf making not the leaft Scruple to confefs, that M. Polonus wrote the Hiftory of the Po* pefs? For the reft Mr. Cbevreau being not a little puzzled to give the World a probable Account of the firft Rife of this Story, is forced to have Recourfe to Onupbrius, (though he conceals his Name) who pretends, that Pope Fobn was nick-nam'd Foan, from a favourite Concubine he had of that Name; though neither of them can produce any other Authority for this Affertion than their own, or make it appear that Pope Fobn had fuch a Concubine: It is true, they cite Luitprand in their Behalf, but erroneoully, the Widow's Name he fpeaks of being Amne, and not Foan. And Mr. Cbevreau, it feems, was ignorant that Mr. du Plef/is Mornay had already made a Difcovery of this Forgery of Onuphrius, and that this Pope fobn fill'd the Chair a hundred Years after Pope Foan.
What he affirms of the Cbair not being bored, I can contradict as an ocular Witnefs, having feen it more than once ; and it is bored after the Manner of Clofeftools. There are two of them, (both of Porphyry) one broken and the other entire, both made after the fame Manner. Platina affirms pofitively, after Cbalcondylas an Atbenian, who flourifhed abour the Middle of the fifteenth Century, and other approved Authors, that the new-elected Pope was placed in the bored Chair, and that the youngeft Deacon ufed to thruft his Hand through the Hole, to feel whether he had the true Marks of Virility. This was, queftionlefs, the primitive Ufe of this Chair ; and though this Cuftom was laid afide by Degrees, they continued however for fome Time to fet the Popes on the fame Chair, to put them in Mind, as Mr. Chevreau affirms after Fauchet, that they were ftill fubject to the common Infirmities of human Nature.
What Mr. Cbevreau tells us concerning the Deputies of the Council of Soiffons, fent to Pope Leo IV. who was deceafed before their Arrival, is of little Confequence, fince he mentions a Council of Soifons without any peculiar Diftinction, and without the leaft Proof, which ought to have been founded upon Manufcripts of uncontroverted Antiquity and Credit, to extricate himfelf and his Adherents out of the Labyrinth in which they have entangled themfelves, by confounding the Succeffion of the Popes that preceded and followed the Popefs foan; whence it is, that whereas Platina, Garenza, and other unbiafs'd Hiftorians, compute twenty four Popes that bore the Name of Fobn, (the reft count but ewenty three) and thus introduce an irreparable Confufion in Hiftory. But it is Time to have done with Mr. Cherreau; I will only add, that it ought not to feem flrange to you, that our Popefs is fometimes called Anglicus, fometimes Moguntinus ; the Author of the Fagciculus Temporumi (Werner Wolninck a Wefphalian) has unfolded the Riddle in thefe Words, Goames $A n$ glicus cognomine, Sed natione Moguntinus': Her Name was Joan Englifh, but was born at Mayence. Neither muft the Variations obferved in Maninfcripts difturb you, who are not ignorant of a thoufand Inftances of what Forgeries have been introduced by'Tranicribers, any more than the doubtful Expreffions you meet with in fome Authors that relate this Hiflory, it being to be confider ${ }^{2}$ d, that as the Force of Truth prompted them to fpeak, fo Fear, on the other hand, was a fufficient Bridle to reftrain them from fpeaking, too freely of the Matter : But as, notwithftanding all this, fome Authors have broken through all thefe Obftacles; and given us a poficive and circumftantial Account of the whole Matter, all the negative Autborities in the World cannot be fufficient to counterbalance the Credit of fo many autbentick Witneffes, and of a Relation fo generally and fo-
lidly attefted. To bring up the Rear of your Arguio ments, you have called to your Aid fome of the Pro: teftant Doczors, who deny the Story of Pope Foan, and among the reft the famous David Blondel, a Man of Learning and Wit: But, to deal frankly with you; as the Author's Name is the ftrongeft Argument in his Book; fo it is an unaccountable Piece of Prejudice to build blindly upon the Opinion of any Man not divinely infpired, let his Name be ever to great in the World, for Learning and Knowledge:
For my Part, I cannot reconcile his Argument wheri he confeffes, that the Hiftory of the Female Pope is con: tain'd in the Augsburgh Copies of Anaftafus, but in Oppofition to thefe pretends to cite (and that without quo: ting any entire Paflage) a certain private Copy of Auaf tafus, to be met with (which we muft take upon his Credit) at Paris, the Certainty whereof he feems to queftion himfelf, when he tellis us, that it bas often been mistaken for Platina; fo that in the Main this Book may, without much Difficulty, be refuted by itfelf, the reft being a confufed Medley of Chronological Cavils; and an Heap of needlefs Quotations, ferving more for Oftentation and to confound than demionftrate the Matter he has taken in Hand, to ftand either one Way or other. To conclude the Whole, and to tell you my Thoughts with all imaginable Freedom, I have a great deal of Reafon to believe, that it was rather Intereft and Oftentation than the Love of Truth that engaged our Author in this Defign; for I was affured by a Perfon of Honour at Paris, who knew the Author very weill, that he had it from the firft Hand, that he was hifed to write a Treatife againtt the History of Pope Foan. And as my Author is a Perfon of unqueftionable Reputation, fo the only Thing that can be faid upon this Head is, that Mr. Blondel is not the firf Mart that has been overcome by the Force of Gold.

All that I am able to anfwer to your Queftions concerning the Armenions and Greeks is, That as they have each their peculiar Ceremonies, fo they officiate according to their own Rites; but before they can fettle at Rome, are obliged to acknowledge the Pope's Supremacy. Some Antiquaries fay, the little Armenian Church was formerly one of the Temples of the Suit and $\neq u p i t e r$. Before the Pontificate of Paul IV. the Feros lived pretty eafy in any Part of Rome, but this Pope confined them to a certain Quarter of the City, whither they were to retire at Sun-fet, forced them to fell their Poffefions, and allow'd them to deal only in old Clothes, and for Diftinction Sake to wear yellow Hats. Gregory XIII. obliged a cerrain Number of them to hear a Cbriftian Sermon every Saturday in the Aftere noon ; but I had no Opportunity to fee this Affembly. The Italian Yeros, and efpecially thofe of Rome, religiounly obferve that Cuftom of marrying before the twentieth Year of Age : Their Number may amount ind Rome, to about fix or feven thoufand ; but they are generally poor and defpifed.
If any 'Jew or other Infidel has a Mind to be bapo tized, the Ceremony is generally put off to Saturday in the Holy Week, and is then perform'd in the Church of St. Fobn Lateran, becaufe they believe Confantine the Great was baptized here. We faw fix Turks baptized ; they wore white Damask Cloaks, and a large Band ${ }_{5}$ with a Silver Crofs hanging at their Necks; the Cardinal that was to officiate, attended by the Canons of the Church, began the Ceremony with bleffing the Was ter; then the new Converts being prefented by their refpective God-fathers, advanced one after another, and having declared their Willingnefs to receive Baptifm; they lean'd over the Font, and the Cardinal baprized them by pouring Water upon their Heads with a large Silver Spoon; and having given each his Name; they were, with Wax Tapers in their Hands, conducted to the Chapel of the Baptiftery, to be confirm'd, and from thence went to hear Mass in the fame Church.

The Thurfday before we were prefent at the Ceremony of wahing the Feet of thirteen Pilgrims in oñe of the Chapels of the Vatican: They appear'd all in white, with a Kind of Hood and fquare. Cap, feated in ac Row upon a Bench, After they had pull'd off their Shoes
and Stockins, a great Bafin was brought, and Ewers of Vermilion, one for each Pilgrim; then the Cardinal that officiated inftead of the Pope, putting their Feet in the Bafon, wafh'd and rubb'd them with his own Hands, and at laft wip'd and kifs'd them : Soon after, each of them being regaled with two golden Medals, they went all together to an Apartment of the Palace, to partake of a magnificent Entertainment prepared for them; they were placed in one Row at a Table, the Cardinal dining at the fame Time at another in the fame Room.

The Pope [Innocent XI.] though really old and infirm, yet often makes the Want of Healch ferve for a Pretence to excufe his Abfence at thofe numerous Ceremonies ufed at Rome. I had it from very credible Perfons, that he did not approve of the French Way of converting People by Dragooning, and Thew'd a great deal of Averfion to thofe who pretended to propofe certain Methods of Accommodation to him with the Crown of France. His Retirement is the Occafion he is feldom feen by Strangers; nay, it is a Rarity to meet any of his Coaches, Footmen, or others belonging to his Retinue. If he happens to ftir abroad, it is in a large Litter lined with Crimfon Velvet, without and within adorn'd with Gold Galoons and Fringes, the Harneffes of the Mules cover'd with the fame Stuff. He fits always alone in his Litter, with a little Table before him. All the Popes have the fame Livery, viz. Scarlet, with a double Velvet Galoon of the fame Colour ; even the Apartments of the Vatican and Monte Cavallo are hung with red Damask intermixed with Edges of Gold Galoons, and adorn'd above with Gold Fringes.

The Situation of the Gardens of Monte Cavallo is very delightful, but their Contrivance is not very regular, nor are they well kept. The two Marble Horfes before this Palace are generally reputed to be made by Pbidias and Praxiteles, whofe Names are engraven upon them.

## Opus Pbidias, Opus Praxiteles.

Some will have them to be the Statues of Bucepbalus the Horfe of Alexander, which thefe Artifts made in Emulation of each other ; but there is a Miftake in this Tradition, confidering that Pbidias flourifhed a whole Age before Praxiteles, and Alexander the Great reign'd fifty Years after Praxiteles. The two Marble Horfes in the Court of the Capitol, were brought thither from the Theatre of Pompey, and the Equeftris Siatua of Brafs, placed here by Paul III. is fuppofed to be the Statue of Marcus Aurelius. The Capitol is a modern Structure, built not only upon the Ruins, but even upon Part of the Foundations of the ancient Fabrick, the old Foundations ftill appearing.

The Antiquities here being fo many, that a Defcription of them would require an entire Volume, I will only mention fome of the principal: The Sbe-Wolf giving Suck to the two Brothers, on which is to be feen the Mark of the Thunderbolt mentioned by Cicero, (Orat. 3. contr. Cat.) four great Baflo relievo's reprefenting divers Paffages of the Hiftory of M. Aurelius; the Columna roftrata of Duilius, the firft that was honour'd with a naval Triumph at Rome; the Meffenger pulling out a Thorn in the Senate-houfe; the Buft of Cicero with his Vetches; the four ancient Meafures, one for Oil, two for Wine, and the fourth for Grain; the Butt of Virgil; Nero's Nurfe holding him by the Hand; the Goddefs of Silence; the God Pan; the three Furies; a Statue of Ccefar in Armour; another of Augufus ; thofe of Caftor and Pollux; the Fragments of the Coloffes of Apollo, Domitian, and Commodus; the Lion devouring a Horfe; and the Trophies of Trajan, but believ'd by others to have belong'd to Marius. The Pictures in Frefoo in the great Hall are of Cavalier $70-$ feph's Hand; in my Opinion they reprefent the Battle of the Romans with the Sabines.
I am fomewhat doubtful what Account to give you of the Pillar called the Milliarium; it is of white MarGle eight Foot and a half high, with a Cypher [I]
mark'd on the Top, and on the Chapiter a brais Globe of two Foot Diameter : It is the general Opinion, that this Pillar ftands in the Center of Rome, from whence they ufed to compute the Diftances from that City, dio vided into Miles by other Pillars erected on all the great Roads of Italy; but there are feveral Arguments which contradict this Opinion, for the Column in the Forum Romanum was, according to Suetonius, Tacitus, and other ancient Roman Authors, either of Brafs or Brafs gilt, with the Names of the great Roads and Diftances of the chief Cities engraven upon it, Nothing like which appears on the Milliarium in the Capitol. If you object, that perhaps the brazen Milliarium being loft, this was fet up inftead of it ; the Infcription engraven on one of the Faces of the Pedeftal will tell you, that it was found near the Appian Highway.
S.P.Q.R. Columnam Milliariam primi ab Urbe lapidis indicem ab Imperatore Vefpafiano E Nerva reftitutam de ruinis Suburbanis Vice Appice in Capitolium tranftulit.

And it feems not likely that this Column was from the Center of the City tranfpos'd to a Mile's Diftance from the Walls; then which Way can you give a true Explication of thefe Expreffions, primus, or Secundus, ab Urbe lapidis, if thefe Stones or Pillars.were not without the City, the Words ab Urbe fhewing plainly that they were not within? And fince this Milliarium was found in one of the Suburbs near the Highway, I cannot but perfuade myfelf that it then ftood in its proper Place, and that the Number of thofe firft Columns was equal to that of the great Roads. Whether we fuppofe the gilt Milliarium to be the only firf Pillar, and the fecond Columns to have been placed at the Diftance of one Mile from it ; or that the gilt Column in the Center of the City was the Head-mark from whence all the Diftances were computed, and that the next Columns were called the firft Milliariums, and mark'd with an Infcription like that you fee in the Capitol; it is evident from either of thefe Suppofitions, that confidering the Extent of Rome, none of thefe firft or fecond Columns but muft be within the City; and that confequently this Expreffion, primo ab Urbe lapide, could not take Place, but infte ad thereof, the primus lapis mult have been in Urbe, and not $a b$ Urbe.

There is a very ancient Infcription in the Palace call'd Palostrinum, which contains the Statues of a College of $E \int$ culapius and of Health, unto which Salvia Marcellina bequeath'd a Temple, a Place or Court, and a Walk, the Whole fituate on the Appian Way, near the Temple of Mars, Intra milliarium primum Ej Secundum ab Urbe euntibus, i. e. Between the firt and fecond Mile as you go from the City; which Words, join'd to the Opinion of the beft Antiquaries, that there was a Temple of Mars without the City, and on the Via Appia, are a fufficient Inducement to convince me, that the gilt Milliarium was erected as a publick Mark to know where all the great Roads begun, and to compute the Diftance of great Cities; but that all the firft Columns were each one Mile diftant from the Walls of Rome. The two following Infcriptions are engraven on the Body of the Milliarium in the Capitol :

IMP. CEESAR VESPASIANUS PONTIF. MAXIM. TRIB. POTESTAT. XVII. IMP. XVII. P. P. CENSOR. COS. VII. DESIGN. VIII.

## IMP. NERVA C庣SAR AUGUSTUS PONTIFEX MAXIMUS TRIBUNITIA POTESTATE COS. III. PATER PATRIE REFECIT.

Adjoining to the right Wing of the Capitol is the Church known by the Name of Ara Cali: They tell you, that Augufus having for a confiderable 'Time, but in vain, follicited the Oracle of Delpbos to know his Succeffor in the Empire, the Oracle at laft declared, that his Mouth was ftopt by the Hebrere Child, who was the Son of God, and God himfelf; and that Augufus, finding this to agree with Sibyllin Prophecies, order'd an Altar to be built in the Capitol to the Honour
of the Hebrew Child, unto which he gave the Namie of the Ara primogeniti Dei, The Altar of the Firft-born of God. The before-mentioned Church being built in the fame Place where Augufus's Altar ftill remains near the Quire, had thence the Name of Ara Cedi.

Near unto this Place is a Chapel called St. Pietro in Carcere, built in the fame Place where St. Pe ter and St. Paul were kept in Prifon, after their Condemnation, and, according to the Opinion of the beft Antiquaries, is the Tullianum finifh'd by Servius Tullius or Tullius Hoffilius, and ufed as a Prifon for condemned Malefacsors only. Here they fhew you a Spring (they tell you that the Water has a milky Tafte) which, they fay, gufhed out of the Rock at the Prayer of St. Peter, in order to baptize certain Profelytes; as allo an Impreffion in the Wall, made (as they fay) by that Apoftle's Face, the Stone yielding as he was thruft with his Head againft it by a Soldier.

Among the Multitude of ancient Ruins behind the Capitol, is the famous Tarpeia, (fo called from one Tarpeia a Roman Lady) that once fo dreadful Precipice, which is now not above twenty Foot high. The Triumphal Arch erected to Titus after his Conqueft of Ferufalem, the Bafo relievo reprefentiug the Candleftick, Table, Trumpets of the Jubilee, and fome Veffels taken out of the Temple, is highly worth a Traveller's Obfervation. The Arch of Constantine is very near entire, except that you fee fome Statues thereon without Heads, fuppofed to be carried privately by Lawerence de Medicis to Florence; and as the niceft Judges have obferved a confiderable Difference in the Beauty of the Bafo relievo, it is fufpected that fome of the beft Pieces were taken off when it was erected. The Lake of Curtius was in the Middle of the Forum Romanum, but was already loft in Ovid's Time :

## Curtius ille Lacus, ficcas qui fuftinet aras Nunc folida eft tellus: Sed fuit antè Lacus.

The vaft Ampbitbeatre call'd Collijfum, from a Coloffus that was near it, is of a circular Figure on the outfide, though the Areno is oval; it was capable of containing eighty five thoufand Spectators, not including the twenty thoufand Excumeati who food in the Paffages, and confequently four Times as many as the Amphitheatre of Verona. The Pillars of the third Order, and the Pilafters of the fourth, had Corintbian Chapiters. Though I cannot engage to anfwer your Queftions concerning the Senate of Women inftituted by Heliogabalus, yet I can thus far fatisfy your Curiofitity, that the little Edifice at Monte Cavallo, by fome fuppofed to have been the Temple of the Sun, by others the Temple of Health, is furpected to have been the Meeting-place of that fage Affembly.

The Columns of Trajan and Antoninus are truly magnificent Monuments of Antiquity, adorn'd with moft excellent Bafo relievo, afcending in a fpiral Line from the Bafe to the Chapiter, and reprefenting the great Actions of thofe great Princes. The firt is compofed of twenty four Stones, each containing eight Steps, erected by the Senate to the Honour of Trajan, and ferved afterwards for his Maufoloum, his Afhes being placed in an Urn of Gold, on the very Top of it; in lieul of this Urn was afterwards placed the Statue of St. Peter, of Brafs gilt, by Sixtus V. The whole Height of the Body of this Column is 128 Roman, or 124 Englijh Feet; and you afcend to the Top by 123 Steps. The fecond, compofed of twenty eight Stones, was likewife built by the Senate, to the Honour of Antoninus Pius, with the Statue of that Emperor on the Top of it, but has fince been forced to make Way for St. Paul, whofe Statue of Brafs is now placed there, and gilt like that of St . $\mathrm{Pe}_{-}$ ter on Trajan's Pillar. The Body of this Column is 160 Roman, or 155 Englijh Feet high; and the Stairs leading to the Top confift of 206 Steps.

One Day as we were vifiting the Caves, known generaliy by the Name of Catacombs, we entered into the Moufoleuin of Cecilia, the Daughter of Metellus, firnamed Creticus, where, at the very Entrance of it, we were fhewn a Hole, into which, but a few Weeks

Vol. II. Numb. 108.
before, a certain Gentleman (D. Mälatefia Strinati of Cefena) happened to tumble deep under Ground, unperceived by his Company; his Friends being amazed and not knowing what was become of him, after they mifs ${ }^{s} d$ him, went in Search of him; but whether it was the Dephth of the Pit, or that he was flunn'd by the Fall ${ }_{3}$ he was not able to cry, or at leaft not loud enough to be heard by them, fo that they were forc'd to return without him: The poor Gentleman having continued in this deplorable Condition for fixty Hours, at laft found Means to open a Paffage, and fo clambering out of the Pit with a great deal of Difficulty, got to an adjacent Houfe, where being comforted with fome good Broths; he foon after recover'd his Strength. I am apt to believe there is no Place in the World that can compare with Rome for fubterraneous Paffages; and though the Earth has ftopt up the Entrances of fome; yet there are ftill left a prodigious Number of Caves, generally known by the Name of Catacombs among the modern Authors, though they cannot well fupport the Etymologies they produce.

Thefe Catacombs are not fingle Vaults, but rather whole fubterraneous Cities, with Turnings and Windings like Streets; as for Inftance, thofe of St. Agnes, St. Sebafition, \&c. There are fome Caverns ; as, thofe of the Gate Pinciana, and thofe near St. Fobn and St. Pauls which feem never to have been made Ufe of as Burialplaces, and are known by the Name of Grotto 's.

The Catacombs of Rome extend under all its Suburbs, but thofe of Naples only under one Part of that City; thefe are dug out from among the Rocks, each Paffage being commonly betwixt fifteen and eighteen Foot wide, and twelve or fifteen Foot high: The hollow Niches in both Sides of the Walls are fhaped like Chefts, of divers Sizes, placed in Rows above one another with. out the leaft Order, in which were laid the Bodies without any Coffins, cover'd only with flat Stones like Tiles, cemented with a Kind of Mortar or Mixture of Chalk and Sand. Befides thefe, the Catacombs of Na ples have divers Tombs of an indifferent Bignefs, with feveral Figures of Heads, Half Lengths, $\xi^{\circ} c$. with the Names of the Perfons entombed, as Paulus, Nicolaus Proculus, $\mathcal{E}^{3}$. and fometimes bic jacet, or quiefcit underneath it.
On one of there Tombs I faw a blue and yellow Crofs with the following Characters.

Where it is to be obferved, that the Greeks wrote their $\Sigma$ almoft like our Latin C, during the three firt Ages. Among all the Catacombs of Rome, thofe of St. Sebaftion are the greateft; their Height is the fame as thofe of Naples, but the Paffages are not above two Foot and a half broad, by reafon the fandy Ground could not be eafily underprop'd, of which thofe at Naples, hewn out of the Rock, do not ftand in Need. We faw one of thefe Niches opened, where we found a Skeleton moulder'd away into whitifh Afhes, yet we could perceive that the Corps had been laid on its Back.

The Roman Catbolicks have taken a great deal of Pains to perfuade the World, that thefe fubterraneous Vaults weve dug by the Cbrifians in primitive Times, to bury their Dead in, with the Exclufion of all Pagans; that they ufed to perform their Religious Worfhip in them dusring the Times of Perfecution; and that confequently they contain an inexbaustible Store of Relicks of Saints and Martyrs interr'd in them.
Though the Proof of this Affertion lies at the Door of the Romanists, and hitherto they have fcarce attempted any Thing on that Head, yet will I fubjoin fome few

Obfervations which feem to contradiet this Opinion. The firft Thing I have to offer upon this Subject is, a Defcription of Horace of the Puteculi, or publick Buryingplaces of the poorer Sort, which is exactly applicable to the Catacombs ;

## Huc prius anrulfis ejecta Cadavera Cellis <br> Confercius vili portanda locabat in arcâ:

Hoc miferce plebi, stabat commune Sepulchrum.
The fecond Obfervation are the Words Fata, Diis manibus, Domus aterna, and fuch-like, found in the Epitaphs of fome Tombs in the Catacombs, which I cannot conceive to have been in the leaft fuitable to the Simplicity and Piety of the Infcriptions of Chriftian Tombs in primitive Times. I remember Mr. Spon, that moft celebrated Antiquary, is of the fame Opinion, in his Voyage to Greece, where he looks upon the Words AEthera and Superis as fufficient Proofs to fhew, that the Tomb, which contain'd them, belonged to a Heathen.

The glafs Vials and little metallick Veffels frequently found in the Catacombs, feem to be additional Marks of Paganifm; and though the Romanifts pretend thofe Veffels formerly contain'd the Blood of the Martyrs, (this is rather a Conjecture than a Proof) whereas it is certain, that the Roman Pagans ufed to put Lacbrymatories (in which they gather'd the Tears of certain Women hired for that Purpofe) into their Urns and Tombs. I remember a certain Paffage in Tertullian's Apologetic, which does not at all agree with the Pretenfions of the Roman Church; he fays, The Pagans ufed to take the dead Bodies of the Cbristians out of their Tombs, and drag them about the Streets; whence it feems very probable, that they would have deprived them of their Caves, had they difcover'd them. Befides, how can it be conceived that the Cbristians fhould be able to dig thofe vaft fubterraneous Paffages without being perceived ? And, how could they difpofe of the Rubbifh ? They will tell us perhaps, that they did not do it in fecret, and that the Sand of the Catacombs was fold by the poor Cbriftians, who, for this Reafon, were nicknamd Arenarii ; but this is not applicable to the Catacombs of Naples: Befides that, it does not appear that the poor Cbristians were the only People that employed themfelves in the Selling of Sand about the City.

The Cyphers of the Name of Cbrif, Palm-branches, Doves of Peace, Croffes, Crowns, and other Marks of Chriftianity, to be feen upon the Stones of thefe Sepulchres, are fo far from proving, that thefe Burialplaces were peculiar to the Cbriftians, that they rather appear to be intended as Marks to diftinguifh them from the Infidels. The fame may be faid of the Cbrifian Epitaphs, the Queftion being, not whether the Bodies of fome Cbristians were buried here, (which is beyond all Difpute) but whether all others were excluded from being interr'd in the fame Vaults, fet apart for the Dregs of the People. The Pietures and Altars of different Sorts and Ages, found in the Catacombs of Naples and Rome, have been the Product either of the zealous Covetoufnefs of the Popes, who, looking upon the Catacombs as a profitable Source of Relicks, have repair'd and made fuch Alterations in them, as they found moft agreeable to encourage the Concourfe of the Pilgrims. Pancirollus gives us a large Account of thefe Reparations. Moft of the Bodies now to be feen in the Catacombs of Naples, were buried there forty Years ago, during the great Plague that raged in that City.

About a hundred and fixty Paces diftant from the Catacombs of St. Agnes, ftands an ancient Temple of a circular Figure, reputed by fome to have been the Temple of Baccbus, on account of the Reprefentations of certain Vines on the Roof, and fome Vine-branches, Grapes, Veffels, and fuch-like Inftruments on a Tomb of Porpbyry in the fame Temple; but it being certain that Baccbus did not die at Rome, its Nearnefs to the Church of St. Agnes (built by Confantine) feems to be a fufficient Proof, that it was built by the fame Em-
peror, to ferve for a Baptiftery to the faid Church. The 'Tabernacle of St. Agnes's' Church is fupported by four Pillars of the beft polifh'd Porphyry: The Statue of Agnes you fee there, is fuppofed to have been anciently the Statue of fome Pagan Deity, the Mantle whiereof is chiefly remarkable.
As it is beyond the Compafs of a moderate Ireatife to comprehend an exact Defcription of all the Antiquities and other Curiofities I obferved in the Cabinets here, fo I will content myfelf with mentioning only the moft remarkable of thofe in the Cabinet of Mr. Bellori, which, for their Number, exceed all that ever I faw of this Kind. His Fortuna Pantbea of Brafs is not above half a Foot high, this little Goddefs being a Compofition of all the Characters of Divinity appropriated to other Gods, for the appears with the Beauty of Venus, Juno's Crown, Diana's Crefcent, the Mitre of Ifis, the Horn of Plenty of Ceres, Minerva's Robe, the Wings of Fame, Cupid's Quiver, the Goat-skin of Baccbus, the Serpent of Efculapius, Fortune's Rudder, and feveral other Characteriftical Marks of different Deities ; the Faufina deified with her Veil frew'd with Stars ; the Magna Mater, or Natura rerum parens, fuckling Animals of different Kinds at all her Breatts ; the Godders Fortune with the Horn of Plenty in one, and the Nail of Neceffity in the other Hand ; the Buft of a young Roman, with his Golden Bull hanging at his Neck; the Cifrum, or an Inftrument ufed by the Egyptions to call the People together to the Sacrifice, and afterwards introduced among the Romans for the fame Purpofe: It is a moft curions Piece of Antiquity, refembling a fmall Racket, the Wood pierced with four Pieces of Brafs like Cords or Rods, which play and make a Noife; an ancient brown earthen Veffel extreamly fine, and of the fame Sound as the true Porcelane, with Pictures upon it reprefenting the ancient Cuttoms of Bathing: Among others, you fee a Woman holding in one Hand a Strigil or Inftrument for rubbing off Sweat, and in the other, a Guttum or Veffel with fweet-fcented Liquors, not to mention the Urns, Sepulchral Lamps, Lachrymatories, Piषtures, \&c.
Father Kircher's Cabinet was once one of the moft celebrated in Europe, and notwithftanding its being garbled of late Years, retains ftill a good Collection of natural Curiofities and mechanical Engines. The Roman College, or chief Houfe of the Fefuits, (where it is to be feen) is perhaps one of the fineft Palaces in Rome: The Library is numerous, but without any ancient Manufcripts, or other Rarities. In the Great Hall of this Society you fee the Picture of the famous Jefuit Garnet, who was executed in England on Account of the Gunpowder Plot, with an Angel at his Side fhewing him the Way to Heaven, open'd to receive him. This Hall is adorn'd with the Pictures of many other Jefuits that fuffer'd Martyrdom.
During the laft three Days in the Holy Week, we faw the Streets of Rome crowded with Proceffions and Penitents with Hoods over their Heads, fome in white, others in violet Colour, blue, yellow, and other Colours; fome lafhing their naked Bodies with Whips of fmall twifted Cords, which made more Noife than they did Execution: It is fufficiently known that fome of them are hired for this Purpofe. However, the Concourfe of Pilgrims was not fo great this Year as it had been at fome other Times. I remember I read, in an Account of Trinity Hofpital, that in 1600 , (being the laft Jubilee Year) that Houfe entertained or provided for (according to Cuftom) $440,500 \mathrm{Men}$, and 2500 Women. The Italian Pilgrims are entertain'd here three Days, but Foreigners four Days, and are feryed at Table by Princes, Princeffes, Cardinals, and the Pope himfelf. One Thing I muft not paifs in Silence, viz. that we never met the Sacrament in Rome, or any other Town of Italy, except at Venice, where we faw it twice carried in great State under a magnificent Canopy, attended by a great Number of Torches.

I muft do this Juftice to the Italians, that they are not poffefs'd with the Spirit of Perfecution, at leaft againft Strangers; and I don't remember that in all our Travels through Italy, not excepting even Rome and

Loretto,

Loretto, we were in the leaft affronted on the Account of not worfhipping Relicks or Images, the worft we ever heard upon that Scbre being ftiled now and then, Non Jano Cbriftiani, no Sound Cbrijtions.
5. The Way between Rome and Viterbo has little remarkable, except fome Remnants of the Via Emilia, which we found of the fame Breadth with the other Confular High-roads, The ancient Lacus Cyminus (now Lake de Vico) is at the Foot of a very high Hill, but of an eafy Afcent, bearing the fame Name with the Lake. It is almoft covered with Sycamores and Chefnut-trees, and produces valt Quantities of Primrofes, Narcifus's, Hyacintbs, and many other Flowers. The City of Viterbo is built of Stone, and furrounded with a Wall : Befides its Steeples, it has eight or ten fquare Towers, built by the Inhabitants for Retreats during the inteftine Commotions of the Guelph and Gibellin Factions. The following Infcription on the Town-houfe, gives you an Account of the Reftoration of the ancient Tufcan Name Viterbo.

Defiderius ultimus Infubrium Rex Longulam, Vetuloniam atque Volurniam manibus cingit : E Etruriæ priore Nomine inducto, Viterbium, mulaa capitis indiete, appellari jubet. Sal. An. DCC.LXXIII.

Scbroder fays he faw another ancient Infcription.
> M.T. Ciceronem ob egregias ejus virtutes fingularefque animi dotes; per totum Orbem nofris armis virtuteque perdomitum; falvum ES incolumem effe jubemus.

In the before-mentioned Place is to be feen another authentick Infrription, confirming the Donation made by the Countefs Maud to the See of Rome:

## Eterna memorice inclyte Matbildis, qua ob praffabile Religionis ftudium, ac pietatem, Sedi Pontificia fuum boc patrimonium, Divi Petri in Tbufcia dein nuncupatum elargitur. Et in veterem Urbis ejus fplendo rem intuens, Pafchalis II. Bleden Pontif. Max. ejus Metropolim, ut ante Viterbium confituit. An. S.I 1 I3.

It would be a fine Thing for the Romanits, if they had fo good a Plea for the Donatoon of Confanizine; the Latin Verfion of it is to be feen in Barth. Picerna and Aug. Steucbus, pretended to be done after the Greek Original in the Vatican; it is alfo inferted in Gratian's Decretals, but St. Antonin of Florence affures us it is not in the old Decretals; and divers noted Authors have refuted this Fable.
This puts me in Mind of a witty Repartee of Hieronymo Donato, Venetion Ambaffador to Alexander VI. who being ask ${ }^{\circ} \mathrm{d}$ by the Pope where their Title of Sovereignty to the Adriatick Gulpb was recorded? reply'd, That bis Holinefs might find their Title written on the Back of the Donation of Conflantine. Notwithftanding the Infcription of Defiderius mentions only three Cities united under the Name of Viterbo, yet I remember that this City is fometimes ftiled $\tau_{\text {etrapolis, }}$ and its Inhabitants Quaterni Populi; the Names of the four Cities are ex. prefss ${ }^{3}$ d in a Diftich written on the Top of the Staircafe in the Town-houfe:

## Hanc Fanum, Arbanum, Vetulonia, Longula quondamz Oppida, dant Urbem: prima Elementa. F. A.U. L.

Some deduce the Origin of the ancient Viterbium From Ifis and Ofiris, for which they produce fome Greek and Latin Infcriptions; but being inform'd by credible Perfons that they were fuppofititious, and fuppos'd to have been contrived by fobn Ammius the Dominican, known commonly by the Name of Annius $\mathrm{Vi}_{-}$ terbienfis, an Author of no Reputation, I will not infert them here.

In one of the Halls of the Town-houfe you fee a Picture reprefenting an innumerable Swarm of Locults, which darkened the Sun and cover'd the Earth, devouring every thing they met with upon the Ground about Viterbo. This happened in 152 b. Mezeray relates fuch
another Story, which happened in France in 873 , and was followed by a great Plague; and Oforius anothet Inflance of the fame Nature, which, he fays, happen'd in Africk in the Year of the World 3825.

We were no fooner come within Sight of Montefiaf. cone, a little Town feated on a little Hill within eight Miles of Viterbo, but the Children came out and ask ${ }^{3} \mathrm{~d}$ us, whether we would not take a View of the $E A$, e $f_{5}$ eff? The Story, I know, has been mention'd by others, but perhaps not with all. its Circumftances : A certain Abbot or Bifhop travelling from Germany to Italy, ufed to fend a Servant before, to know in which Inn he could meet with the beft Wine, and to mark it with the Word Eft over the Door. Coming to Montefiafiones, the Servant was fo highly pleas'd with the Mufcatello, that he writ three Efts over the Door, which inviting his Mafter to drink more plentifully than he ufed to do ${ }_{s}$ he fell fick and died on the Spot; his Monument ftands in St. Flavian's Church, about two hundred Paces from the Town ; he is reprefented with a Mitre on his Head, with two Scutcheons (quarterly in the firf a Lion, in the fecond two Fefles, the Sbield not blazon'd) and as many. Drinking-glaffes on each Side of him at his Feet you fee the following Infription in Gotbick. Characters, by Way of Epitaph, made in all Probability by his Servant :
$E f f_{s} E f, E f$, propter nimium Ef, Joh, de Fuc. $D$, meus mortuus eft.

That is,
Eft, Eft, Est, by taking too much of Est,
John de Fuc, my Lord, died like a Beast.
His true Name was Fobn de Fucris, and he was of a great Family in Augsburgh.
All the Way between Montefafoone and Bolfena, we pafs'd near the Banks of the Lake of that Name; it is of an oval Figure, and forty Miles in Compais; it contains two Inlands, called Martana and Pafentina; the firft is celebrated for the Banifhment of Amalefuntba, the Daughter of Theodoric King of the Gotbs, who was afterwards murther'd, there by the Command of hes Coufin Theodat, whom fhe had made her Affociate in the Government. Bolfena is a very indifferent Town. formerly an Epifcopal See, till it was tranfated to Orvieto. Behind it you fee the Ruins of the ancient Volfinium, which, as Pliny relates, was burnt by Lightning. The Country between Bolfena and Aquapendente, is the wortt in the whole World ; the laft of thele two is poor and almoft defolate, yet retains the Title of an Archbihoprick ever fince the Deftruction of Caftro. Centino, a little Village at the Foot of the Hill Radicofani, is the utmoft Boundary of the Pope's Dominions on that Side; the Town and Citadel, built by Defiderius the laft King of the Lombards, bearing the Name of the faid Hill upon which they ftand, are for half the Year conceal'd in the Clouds. In our Way hence towards Siena, we faw for, eight or ten Miles nothing but barren Mountains ; but as we came towards St. Quirieo, the Country began to grow better and better, though this lafted not long, for near Torrinieri the Land grew worfe than before, and continued thus, with fome fmall Alterations. till we came to Sienc.
Siena, the third City, and perhaps the moft pleafantly fituated in all $\mathcal{T}$ fcany; its Air is excellent, the Streets though not level, yet very neat, being pav'd with Bricks laid fideways; the Houfes are handromely built, and the Water very good ; befides that, the Tufcan Language is fpoken here in its utmoft Purity, without the Roughnefs of the Floremtine Dialect.
The Cathedral of Siena is a Gotbick Structure, but very beautiful, and one of the moft perfect among all the great Churches of Europe, being cover'd within and without with Marble ; the Pavement is of black and white Marble a la Mofaique in the Choir. On the Corridor running round the Body of the Infide of the Church, are to be feen the Statues of the Popes, and among the reft there is one fmooth-chin'd Creature, which, as is faid, was placed there in the Room of the Popefs Foan: Baronius fays, it was taken away and broken to Pieces; Launoy fays it was to be feen in 1634 and Blondel aca
knowledges
knowledges the fame, as alfo the Statue erected in the Place where Pope Foan was deliver'd; Father Mabillon confeffes the fame Statue, and fays, that the Name fobannes VIII. Fcomina Anglice was added to it. All the Authors that ever I faw, who inveigh againft the Story of this female Pope, and mention this Statue, acknowledge that it is fill remaining, or at leaft, that it really fubfifted heretofore. This Structure was begun by Duccio, and finifh'd by Dominic Beccafumi. That Part next the Choir is beautified with the Pictures of Abrabam's Sacrifice, and the Paffage of the Ifraelites through the Red-Sea; the arch'd Roof is azur'd, intermix'd with Stars of Gold. From the Church you pals into the Place where the Library was kept formerly; here we faw thofe glorious Pieces in Frefco reprefenting the Life of Pius II. defign'd by Raphael, but painted by Peter Perugin his Malter, with Bernardin and Pinturiccbio; moft of the Faces reprefent Perfons then alive; among others, the Pope's Soul foaring upwards in the Shape of a Paradife Bird, and the Hermit gazing on it, is an exquifite Piece.

I will not detain you with the Story of St. Katherine of Siena, but I can't pals by in Silence the old Citadel with fifteen or twenty fquare Towers; among thefe the Tower of Mangiana is mightily extoll'd for its Height, but it is by thofe who have feen but few others. The Arms of Siena are, the famous Sbe-wolf that gave Suck to Romulus and Remus, founded upon a Fable, that Si ena was built by the Children of Remus. Travelling between the City of Siena and the River Arno, we found the Ground, grow better and better the nearer we came to the River, efpecially about Camiano, Granayola, Ponte $d^{\circ}$ Era, and between Pontgibon and Pifa. Near Pontgibon or Poggi-bonzi (famous for its Tobacco) we met whole Troops of Girls going from Houfe to Houfe finging and wifhing a merry May; their Songs are compofed of a Number of pleafant Wifhes, every Stanza concluding with a merry, merry, May.

On feveral fandy Hills near Certaldo, we faw great Quantities of feveral Sorts of Shells, as we had before at Monte-Mario, a Mile from Rome, in the Alps in France, and other Places; the fame have been obferved by Olearius, Steno, Cambden, Speed, and others. I received your Obfervations with a great deal of Satisfaction, but, to deal frankly with you, I muft tell you, that I differ with you in Opinion ; for if thefe Shells were the Remainders of the Deluge, I fee no Reafon why the fame fhould not rather have been left in the Valleys, and more univerfally fpread upon the Surface of the Earth; whereas now they are only gather'd into Heaps in certain Places. Nor fee I any fufficient Caufe to have Recourfe to fuppofed Inundations, Tempefts, and Eruptions; for though fome fuch Thing might rationally be concluded in reference to certain Places fubject to Earthquakes, (as for Inftance, the Nerw Vefurius, or Monte Nuovo) yet as the fame Reafon does not hold in all other Places where thefe Shells are found, fo the Solution of this Pbenomenon may with much more Eare be look'd for in the fame Property upon the Land which produzes thefe Shells at Sea. You will perhaps tell me, that Shells are infeparable from Fifhes, Snails, $\mathcal{E}^{2} c$. but you may eafily anfwer your felf, if you will but confider, that Shells have been found in the Stomachs, Kidneys, and other Parts of human Bodies. But we will proceed on our Journey.
$P_{i} \sqrt{a}$ is the fecond City of Tufcany, formerly a confiderable Republick, feated in a level Plain on the River Arno, dignified with the Title of an Archbifhoprick and an Univerfity ; its Streets are fpacious, ftreight, and well pav'd with broad Stones, and generally well built. The Arno, which is navigable here, and twice as broad as the Tyber at Rome, divides the City into two Parts; it is at prefent very poor and ill-peopled, its defolate Condition mult be attributed to their Wars with the Florentines, who, after the Conqueft of this Place, founded the great Mart of Legborn upon the Ruin of PiJa. The Cathedral here is very like that of Siena, but not quite fo large ; it is a regular Structure, and over-crufted with curious Marble. The Baptiftery is of a circular Figure an hundred and eighty Foot in Circumference, and
arch'd, furmounted by a Cupola: By an Infcription on a Pillar of this Baptiftery it appears, that the Church was finifh'd II53. Here is an Eccho, which magnifies a Noife to fuch a Decree, that the Sound thereof lafts as long as the Tinkling of a great Bell. Travellers make a great Wonder of the Leaning Tower, which fome pretend to appear leaning on all Sides, by a peculiar Art of the Architect, when, in Effect, its Inclination is only on one Side, occafioned by the Sinking of the Foundation : Its whole Height is a hundred and eighty eight Feet, and is of the Figure of an exact Cylinder. I let down a Plummet from the Balcony on the Top, on that Side where it inclines moft, and after feveral Tryals both to the Right and Left, found that the Lead touch'd fifteen Foot diftant from the Foundation.
The famous Burying-place of Siena, call'd Campo Santo, (becaufe the Earth was brought from the Holy Land 1228.) is a Kind of Cloyfter, one hundred and ninety Paces long, and fixty fix broad. On a Wall under one of the Portico's I faw an Infcription, being a Decree of the Senate of Pifa upon the Death of Cafar, ordering their Subjects to appear in Mourning for a whole Year, and to abftain from all publick Divertifements. I will not trouble you with their Phyfickgarden, as having nothing memorable in it ; but I muft not quite forget the Knights of St. Stephen, who have their Refidence here : They muft be of noble Blood, and born in Wedlock : They vow Conjugal Chaftity, and fay a hundred Pater Nosters and Ave Maria's every Day. This Order was founded by the Great Duke Cofmo I. 1561, the fixth of Auguft, after he had gain'd the Battle of Marciano; his Statue ftands directly oppofite (in the Place) to the Church.

Leghorne is about fourteen Miles diftant from Pifa, the Country between them being very level, but woody, fill'd with Oaks, Cork-trees, and wild Myrtles: They tell you, that thefe Woods were formerly all cover'd by the Sea, which reach'd within three Miles of PiJa, where you fee a large Church at the Entrance of thefe Woods, which, they tell you, was built in the fame Place where St. Petcr was fhipwreck'd one Day when he was fifhing. I need not tell you, that Leghorne is a modern City, built on a level Ground, and ftrengthened with good Fortifications faced with Brick-work; its Streets are large, ftreight, and uniform, the Houfes generally of the fame Height, and painted on the Outfide. In our Journey from Legborne to Lucca, paffing a fecond Time through Pifa, we faw, three Miles on this Side of it, the craggy Mount St. Fulian, the Boundary betwixt TJufany and the Republick of Lucca.

The City is moft pleafantly feated in a fruitful Plain of fifteen or twenty Miles in Extent, enclofed by very rich and well-cultivated Hills; its Fortifications are regular, and faced with Bricks: We walked round the Ramparts in an Hour's Time: But though it is not fo big as Pifa, it contains many ftately Houfes, and is very well peopled. They fhew'd us the Palace of the Republick, where the Gonfalonier, or Standard-bearer, with the feven Anziani, or Counfellors, lodge and eat together. The State of Lucca is a Fief of the Empire; its Government is Ariftocratical, managed by the Council of two hundred and forty Nobles, divided into two Bodies, who rule alternately every fix Months, with the Gonfalonier at their Head. This chief Magiftrate bears fome Refemblance to the Doges of Venice or Genoa, but continues no longer than two Months in this Dignity; from whence he reaps no other Profit but maintaining of his Table at the publick Charge : His Drefs is a Robe of Crimfon Velvet, with a Bonnet and Stole, and his Title, His Excellency; his Guard confifts of fixty S'ritzers, and he may not be chofen to the fame Dignity till after fix Years. Their Arfenal is abundantly provided with Arms, and thofe very well kept.

In the Cathedral we faw the Chapel of the Volto Santo. They tell you, that Nicodemus having feveral Times attempted in vain to paint the Crucifix, was at laft affifted by the Angels, who guided his Pencil to finifh it : They are not able to tell you how this Picture came to St. Fredion's Church, but are pofitive that it remo-
ved from thence to the Cathedral, where it hung in the Air, in the Place where we faw it, till they built an Altar under it, on which it refted, and about which they afterwards built a magnificent Chapel. This Crucifix is in fuch high Efteem with them, that they ftamp it on their Coin, with the Arms of the Signiory. In St. Fredian's Church is a Marble Table feventeen Foot long, fix and a half broad, and fourteen Inches thick; the whole Story whereof is exprefs'd in the following Infcription:

O quifquis legis, lapis es, ni lapis bic moveat in admirationem छ' cultum D. Frediani, qui templo buic confruendo, molem banc in montibus ad quartum lapidem nacius, viribus impar, fed Spiritu fervens; mirâ facilitate manibus bumerifque fuis, $\mathcal{E}$ Canonicorum in plauftrum binis indomitis vacculis trabendum impofitum, fexto falutis facuio, bâc in ede statuit facrum monumentum.

In the IVlidet of the fame Church is to be feen a Tomb-ftone with this Infcription:

> Hic jacet Corpus Sancti Riccardi Regis Anglic.
> Here lies the Body of St. Richard King of England.

Who this Royal Saint was, I am not able to imagine ; for Ricbard I. (firnam'd Lyonbeart) died in France, and was interr'd in the Abbey of Fontevraut; Ricbard II. was, after his dethroning, ftabb'd at Pomfret, and buried firft in St. Paul's, from whence he was carried to Langley, and afterwards to Westminfer; and Ricbard III. being flain in the Battle of Bofworth in Leicefterfbire, his Body was interr'd in the City of Leicefter. I do not remember ever to have heard any Thing of a King Ricbard before the Heptarchy.

In the Church of St. Austin you fee an Image of our Lady, with the little Jefus in her left Arm, concerning which they tell you the following Story: A certain Soldier having loft all his Money at Dice, fell into fuch a Rage, that after having given a great many ill Words to the Image of our Lady placed then againft the Wall of the Guard-houfe, he threw a Stone level'd directly at the Head of the little Jefus; but our Lady perceiving the Danger, tofs'd the Child in an Inftant from her right Arm into the Left, where it remains ever fince; the infolent Soldier was fwallow'd by the Earth, the Hole being fhewn to this Day. About the Time of the Reformation divers noble Families retired from Lucca to Geneva, where fome ftill flourifh.

Half Way betwixt Lucca and Florence ftands Piftoya, viz. twenty Miles from each; the Country thereabouts is extreamly fertile, and well cultivated, but the City is almoft defolate, having loft all its Trade with its Liberty: It is much bigger than Lucca; and its large and regular Streets and beautiful Buildings are fufficient Teftimonies of. its former Grandeur.

The Inhabitants of Pifioya have a moft profound Veneration for St. Fames and his Relicks; the Altar of his Chapel in the Cathedral is cover'd with Plates of Silver, and adorn'd with very rich Lamps. Here I obferved, in a peculiar Prayer directed to him, thefe Words, Iu qui primatum tenes inter Apostolos, imo qui eorum primus; i. e. Thou that waft the firf, nay, the chief annong the Apofles, \&cc. There are not a few who pretend to look for the Original of the Guelph and GibelIin Factions among the Pifoyans, where, they fay, lived two Brothers called Guelph and Gibel, the elder of which fided with Pope Gregory IX. whilft the younger embraced the Intereft of the Emperor Barbaroffa; but, in my Opinion, thofe come much nearer the Mark, who derive the Names of thofe two famous Factions from the illuftrious and potent Families of the Guelpbs and Gibellines, (upon the Borders of Germany and Italy) who were at open Enmity, a confiderable Time with each other, before one declared for the Emperor and the other for the Pope.
6. My laft being written the next Day after our Arsival at Florence, I will in this give you a brief DefcripVo i. If. Numb, IO8.
tion of this City, and afterwaids communicate fuch Obfervations as I have had Occafion to make during our Stay. Florence, the capital of Tiuscany, dignified with the Title of an Archbifhoprick, and the ordinary Refidence of the Great Dukes, is feated upon the River Arno, as it were within the Arence of an Amphitheatre, being enclofed at four or five Miles Diftance, (except on the Side toward Pifoya) with very fruitul Hills, rifing by an eafy Afcent till they unite with the high Mountains: If you take a full View from one of the Towers of Florence, of the Villages and Houfes of Pleafure in the Plain and Hills, it feems to be only the Continuation of Suburbs, this Valley being perhaps the beft peopled Place of that Kind in the Univerfe.

I was credibly inform'd, that the Circumference of the Walls of Florence is 15,240 Fathoms, and that the River Arno; which runs through it; is 500 Fathoms broad ; fo that adding the double Breadth of the Ri-. ver to the Compafs of the Walls, the whole Circuit of Florence amounts to 16240 Fathoms; three of which are equivalent to five Feet eight Inches Englib Meafure, according to which Computation it amounts to 36,675 Feet: It is almoft of a circular Figure. The fame Perfon told me, that there are in Florence about eight thoufand eight hundred Houfes, fixty thoufand Souls, twenty two Hofpitals, eighty nine Convents; eighty four Fraternities; one hundred and fifty two Churches, eighteen Halls belonging to Merchants; feventy two Courts of Juftice, fix Columns, two Pyramids, four Bridges, feven Fountains, feventeen Places or Squares, and one hundred and fixty publick Statues: The Streets are paved with broad Pieces of a grey Stone called Pietra-forte, and moft of the Houfes are built of the fame ; thefe are brought from the neighbouring Quarries.

The Great Duke's Palace (called Pitti) is a mof noble Structure, but has this Difect, that the Court is not fpacious enough in Proportion to the Edifice; which being one hundred and twenty Foot high to the Cornifh of the third Order, cannot be feen without Trouble in any Part of the Court, which is only one hundred and fixty Foot long, and one handred and forty broad. As we were entring the old Ducal Palace, (the Receptacle of the fo much celebrated Curiofities) we took a full View of the four Statues of white Marble on the Bridge of the Trinity, reprefenting the four Seafons of the Year, made by Micbael Angelo. The chief Curiofities we obferved here were, the David, the Work of Michael Angelo; the Fuditlo; by Donatello; the Sabin Women carried off by Vio: lence, by Folon of Bologna ; the Perfeus of Brafs, by Coligni ; the Hercules and Cacus, by Bandinelli; and the Brafs Statue on Horfeback of Cofmo I. by Fobn Bologna all thefe are moft exquifte Pieces. The three Baffo relievo's on the Pedeftal of that Statue reprefent CofmoI. k neeling before the Pope as he was giving him the Title of Great Duke; the fame Prince entring. Florence in a triumphant Chariot; and the Refignation of the Sovereignty to him by the Senate of Florence. The great Gallery of the Palace is four hundred Foot long; where we pals'd between two Rows of ancient Statues and Bufts. Above them, againft the Wall, we faw the Pictures of the ancient Philofophers on one Side, and thofe of great Generals on the other.

Among thefe Statues, that 'fuppos'd to be Scipio's, in a Robe of Brafs, excels all the reft, the Characters on the Hem of his Garment are of the old Hetrufcan ; the Leda embracing 7upiter with a Pleafure mix'd with Shame; the Bacchus, with a Copy of the fame by $M_{i}$ s chael Angelo, not inferior to the Original; Fulia the Daughter of Augufius, the Pomana, the Venus, the Dias na, the Apollo, another Baccous, the Peafant ftriking a Boar, the Bufts of all the Emperors to Galienus, and ef. pecially thofe of Adrian, Pertinax, and Severus, are ex cellent Pieces.

In the Chambers behind this Gallery, we obferved in the firft a great branch'd Candleftick of Amber, an adm mirable Column of OrientalAlabatter, a Rbinoceros's Horra of an extraordinary Bignefs, Abundance of Bafo relievo"s
and a great Number of ancient Sculptures, Medals, Idols, fepulchral Lamps, Stones, Minerals, and other natural Curiofities: The fecond is fill'd with Pictures; the third, called the Matbematical Cbamber, (here ufed to be kept the Iron Nail, one half of which was pretended to be tranfmuted into Gold, but is not hewn now, it having been found to be no more than a Sodering) has, among other things, Globes and Spheres of feven Foot diameter : The fourth has likewife nothing but Pictures, which excel thofe of the fecond, except the Ornaments of Ivory, Amber, and precious Stones in a peculiar Cabinet, and among the reft, a large rough Emerald rooted in its Rock, and the Platform of Legborn on a Table of Lapis Lazuli : In the fifth Chamber you fee the Pictures of moft of the illultrious Perfons of the prefent Age; among the Generals are Cromwell, Monk, and the late Earl of Offory The fixth contains an hundred and thirty feven Pictures of the moft famous Painters, done by themfelves: The feventh is filled with Porcelane Veffels, and the five fol lowing with all Manner of furprizing Curiofities, and great Quantities of Arms of all Countries ; the Horfetail of twenty Foot long, prefented to the Great Duke by the late Cbarles Duke of Lorrain, is none of the leaft among thefe Rarities; but the moft precious Things are preferv'd in an octagonal Apartment called the Tribune, built by Buontalenti, being twenty Foot in Diameter; the Floor is pav'd with Marble of divers Colours, artificially join'd like inlaid Work ; the Hangings are of crimfon Velvet, the Windows of Cryftal, and the Infide of the Lanthorn cover'd with Mother of Pearl. You have, queftionles, heard of that moft celebrated Diamond, which weighs $\mathrm{I} 39 \frac{1}{2}$ Carats; Tavernier fays, it is Pity that the Water is yellowih. Arrong the other Rarities, the following are the choiceft; an antique Head of Fulius Cafar, of one entire Turquoife of the Bignefs of an Egg; a Cupboard filled with Veffels of Agate, Lapis Lazuli, Cornelian, and Rock-cryftal fet with Gold and precious Stones; a large Table and Cabinet of inlaid Work of Oriental Jafper, Calcedony, Rubies, Topazes, and other precious Stones, excellently well contrived; a Collection of the beft Medals; a vaft Number of carv'd and engraved Pieces nicely kept ; fome Mafter-pieces of the moft excellent Painters; fix very beautiful Grecian Statues ; two Wreftlers ; the Peafant whetting his Bill, and at the fame time liftening to the Confpirators, Cataline's Affociates; a Tauro, a Cupid neeping, a Venus fix Foot high, and another five Eoot, both of white Marble, the fineft Piece of Workmanhhip in the World, the Head turns a little towards her left Shoulder, with her right Hand before her Bofom, yet at fome little Diftance, and covering her Nudity with the other, but without touching; fhe ftands bowing gently with her right Knee forward, the better to hide herfelf. This bafhful Pofture is accompanied with all the Marks of Modefty and Chaftity in her Face, and with an incomparable Beauty, Sweetnefs, and youthful Air ; her Neck is exceeding beautiful ; and, in fhorr, this Mafter-piece is the moft exquifite Imitation of the Perfection of Nature. On the Marble Bafe are thefe Words :

KAEOMENHE AMOAAOAOPO乏 AOHNAIOE EHIEEEN.
Cleomenes, Son of Apollodorus the Athenian, made it.
From this Palace paffing through a fmall Gallery, we came into the ancient Palace of the Republick, where the Great Duke's Wardrobe is kept ; and among other Things we faw there the rich Coach made for the Solemnity of the Great Duke's Marriage. The Hall of this Palace is a hundred and feventy two Foot long, and feventy four broad. The Cathedral is a large and ftately Building, though for the moft Part of a Gotbick Architecture, being over-crufted within and without with the fineft polifh'd Marble of feveral Colours: Its whole Length is four hundred and ninety Feet, and its Height, to the Top of the Crofs on the Globe, three hundred and eighty Feet; the worft is, that it has no Frontifpiece. The rareft Statues in this Church are, St. James, by Sanfovin; the Adam and Eve, by Bandinello; the Statue of God the Fatber; the dead Cbrith, and an Angel fupporting him, by the fame Hand, on the high

Altar: The Eve is fomewhat larger than Adam. The Refurrection painted in the Dome is a moft excellent Piece, though the Criticks find Fault with Fred. Zucchero, who made it, becaufe he has reprefented the rifing Bodies with Clothes on: Befides this, we took No tice of a greater Blunder in the fame Church, committed by no lefs famous a Painter than Paul Urcello, who has painted Sir Fobn Hawekreood, whom the Italians call Acutus, an Englifbman, General of the Pifans, on Horfeback, and his Horfe refting on two Legs on the fame Side, while the other two are in Motion.

The Pieces of the Rods of Aaron and Mofes, fhewn in the Cathedral, are queftion'd by fome, becaufe thefe Rods are faid to be entire at the Church of St. Jobra de Lateran. The Steeple (near the Church) is a Tower of one hundred and eighty Feet high, over-crufted with fquare Pieces of red, black, and white Marble, and beautified with feveral excellent Statues: The old Bald Man, by Donotelli, is highly efteem'd.

The Baptiftery is not unlike that of Pifan and cover'd like the Church; fome fay ir was anciently the Temple of Mars, and that after its being converted into a Baptiftery, it was dedicated to St. Fobn Baptist. The Mofaick Work on the arch'd Roof is efteem'd excellent and among the Statues here, the Magdalen of Wood, by Donatelli, excels all the reft : But the moft furprifing Pieces are, the three Gates of Brafs, whereon are reprefented fome facred Hiftories in Baffo relievo. The Back-Gate, with this Infcription, Andreas Ugolini de Pijis me fecit 1330, is not altogether fo beautiful as the other two, which put Micbael Angelo into fuch a Rapture, that he faid, they deferved to be placed at the Entrance of Heaven:

> Dum cernit valvas aurato ex are nitentes In templo Michael Angelus, obstupuit ; Attonitufque diu, Sic alta Şlentia rupit;

> O Divinum Opus! O Fanua digna Polo!

The Senfe of which is,
Thefe Gates of burnibs'd Brafs wiben be bebeld, Great Angelo, best Fudge of what excell'd; Amaz'd be flood, long filent, and then figb'd! O Work Divine! O wortby Heaven! be cry'd.

The Statue of Juftice near the Church of the Trinity is fupported by a Column of Porphyry faid to have ftood formerly in the Pantbeon. In the Court before the middle Gate of the Baptiftery, you fee two Columns of Porphyry at fome Diftance from each other, and yet chain'd together, which, they fay, were brought from Majorca, and beftow'd upon the Florentines by the Pifans, for the Affiftance they gave them in the Conqueft of Part of that Ine. Near them ftands another Column erected in Memory of a pretended Miracle wrought by the Body of St. Zenobius, when it was removed from St. Larvrence to the Cathedral Church, for his Shrine touching by Chance the Trunk of a dry Tree that lay upon the Ground, it bloffom'd immediately, and produced Fruit.
The Church of St. Lawrence is both fpacious and rich, and the Chapel, I muft confefs, when finifh' $d_{2}$ will be the moft exquifite Strucure that ever was feen of this Kind; it is both very large and magnificent : In the Middle of each Face of the Hexagon ftands a double Pilafter of Jafper, with a double Chapiter of Brafs gilt, the Bafe being the fame. The Emblematical Figures on the Pedeftals of thefe Pilafters are very artificially made of precious Stones: In the fix Angles are placed as many rich Tombs of Porphyry, Oriental Granite, and fome other of the moft precious Kinds of Marble; on each Tomb lies a great Pillow of Jafper, valued each at fixty thoufand Crowns, enrich'd with precious Stones, and upon each Pillow ftands a Crown, exceeding in Richnefs the Pillow itfelf: The Bafe fupporting the Tombs is over-crufted with Porphyry and Calcedony, on which will be engraven the Epitaphs of the Princes for whom thefe Tombs are defigned, and their Statues of Brafs gilt, twice as big as the Life, are to be placed in the Niches of black Marble that are over the

## Chap. III.

Greatef Pari of ITALy.

Tombs. The inner Roof of the Dome is intended to be covered with Lapis Lazuli intermixed with Rofes and other Carvings gilt; and the reft of the Walls are over-crufted in Comparments with the fineft Agate, Granite, Onyx, and other precious Stones, each Pannel being divided into Squares, embellifh'd with various Sorts of Ornaments of Copper gilt ; and the high Altar is likely to furpafs all the reft.

The Library of St. Lawrence, which is eighty Fathom long, and twenty broad, is celebrated for its Manufcripts; as for Inftance, that of Virgil of the Age of Theodofius, and a very ancient Greek MS. of the Chirurgery of the Ancients, of Hippocrates, Galen, Arclepiades, Bitbynus, Apollonius, Arcbigenes, Nyniphodorus, Heliodorus, Diocles, Rufus Epbefius, and Apollodorus Citionfis, with the Manner of curing Dinocations, and Figures painted on Vellum, the only ancient Work of this Nature now extant. Mr. Magliabeccbi, the Bibliothecary, was very forry he could not communicate to me St. Cbryfofom's Letter to Cafarius, having received exprefs Orders to the contrary from the Great Duke; but he pofitively affur'd me, that the Paffage cited by Martyr is contain'd verbation in that Manufcript.

In the Church of the Holy Crofs we faw the Tomb of Micbael Angelo, which, in my Opinion, bears no Proportion to the Merit of fo famous a Perfon. In this Church is a Chapel belonging to the Family of the Zanchini, on the Altar of which is a Picture of Chrift delivering the Souls of the Fathers, and among them many female Spirits, the Work of Angelo Bronzini: Some are of Opinion, that the who reprefents Eve is the true Refemblance of Bronzini's Miftrefs, and that the Man in the right Corner of this Piece, gazing upon this pretended Eve, is the Painter himfelf; juft as Pinturiccbio painted in the Vatican, Pope Alewander VI. proftrate at the Feet of Julia Farnese, under Pretence of adoring the holy Virgin.

In the Annunciata are kept two of the thirty Pieces Fudas received to betray his Mafter; and in the Church of the Carmelites, the Crucifix that fpoke to St. Andrere d'Urfini. Among the feveral fine Seats belonging to the Great Duke, we had only the Opportunity to fee Poggio Iraperiale and Pratinola; it muft be confeffed they are very delightful Places, and have even a fufficient Share of Beauty; but fince our Gardens and Waterworks are advanced to that Height in France, the only Way to maintain the ancient Reputation of the Italian Seats, is to pafs by in Silence their pretended miraculous Ornaments.
The Arfenal and Citadel of St. Fobn Baptist are kept in very good Order, but the Forts of Belvedere and St. Miniato are much out of Repair. The Great Duke allo maintains various Kinds of wild Creatures, and Nurferies for them. In the Hofpital ad Scalas is the Tomb and Epitaph of a human Monfter, with two Heads and four Hands on one Body, named Peter and Paul; one of thefe Heads would often weep, whillt the other laugh'd, and this flept often whilft the former was awake. The Mountains near Florence produce certain Stones, which being faw'd in the Middle and polin' ${ }^{\text {d }}$, reprefent fometimes Trees of divers Sorts, fometimes whole Towns, and the Ruins of old Caftles ; the firt are called Dendrites by Kircher.

To conclude, I muft tell you, that though Florence, for its Situation, and other Advantages, may be reckoned among the fineft Cities in the World, yet to thofe who know the Pleafures of Society, and efpecially of Converfation with the fair Sex, the infupportable Conttraint, and unavoidable Ceremonies ufed at Florence, appear an intolerable Burthen, except to thofe that are inur'd to this Kind of Slavery from their Infancy.
7. The Road between Florence and Bologna being one continued Ridge of the Apennine Mountains, and confequently not very fit for Calathes, we were forced to hire Horfes, all the Littermen being taken up in carrying Monks (by what Accident I know not) over the Mouncains. For two Days together we paffed through a barren and mountainous Country ; the higheft Mountain we met with in our Paffage, was that called Monte
fuovo; however, the Valleys of Sarperia and Fiorenzolis (which fome think to be the Fidentia of the Ancients) are not quite fo defolate as the reft ; the firft is famous for Knives and other Cutlers Work made there ; it was deftroy'd by an Earthquake in 1642 . We took Notice, that near the Village of Pietra Mala the Air fparkled. in the Night. At the Village of Scarica l'Affno, between the laft nam'd Place and Loyano, we faw a Poft the Boundary of the Pope's and Great Duke's Territos ries, the Arms of the firft being affixed on one, and the Florentine Arms on the other Side. From the Top of the laft Hills of the Apennine, as we approach ${ }^{\circ} \mathrm{d}$ Bologna, and arrived by an eafy Defcent near that City, we had the moft glorious Profpect in the World, of the extenfive and delightful Plain of Lombardy, extending along the $P O$, from the Apennines to the $A l p s_{0}$

Bologna, the Seat of an Archbifhop, who has the Title of a Prince of the Empire, and the fecond City in the Ecclefiaftical State, is feated at the Foot of the Apennine Hills, at their opening into the Plain, upon the Via Emilia. The faireft Profpect of Bologna and the adjacent Country is from the Convent of St. Micbael in Bofco, where at the fame Time you may have the Pleafure of feeing one of the moft magnificent Monafteries in Italy, comparable for its Beauty to moft of the Royal Palaces of Europe ; and to fpeak the Truth, as Bologna is larger and more populous, nay, even richer than Florence, fo its Convents are generally very fpacious and exceeding magnificent. The City is furrounded only with a fingle Wall without a Citadel; for when they furrendred to Pope Nicbolas in 1278 , it was under Condition, that they fhould not be bridled by a Citadel, their Eftates not be liable to any Confifcations, and fhould be allow'd an Auditor of the Rota, and an Ambaffador of their own at Rome ; which Privileges have not been hitherto infringed. The Univerfity acknowledges for its Founder Theodofius the younger, in 425 , but owes its chief Splendour to Cbarles the Great; hence it is that the Motto Bononia docet, is feen on the Coin of this City, as the Word Libertas is in their Arms.

In one of the Halls of the Univerfity College is a Monument erected to the Memory of a certain noted Chirurgeon named Gabriel Taglicozzo, who made artificial Nofes, Lips, Egc. of Flefh, mentioned by Butler in his Hudibras. The Canal which joins the Arno with the $P_{0}$, is a great Conveniency for the Commerce of this City, the Inhabitants of which trade in Wax, Hemp, Flax, Hams, Sauciges, Soap, Tobacco, and Perfumes, befides that they have near four hundred Silk-mills; formerly they ufed to fell their little Dogs at a high Rate. The Houfes of this City are generally of Stone, or Brick plaifterd over; the Streets have Portico's on both Sides, like thofe of Padua, but are higher and larger, and are for the moft Part very ftraight; the Women are handfome, and not kept under fo much Reftraint as at Flo. rence; the better Sort are inclin'd to follow the French Mode. In General Caprara's Palace, one of the beft in the whole City, we faw many rich Spoils taken from the Turks.

The publick Palace of this City is appointed for the Lodging of the Cardinal Legate, and the Gonfalonier and his Counfellors. Over the Portal ftands a Brafs Statue of Gregory XIII. and on one Side of it that of Boe niface VIII. with this Infcription;

Bonifacio VIII. P. M. ob eximia erga fe merita, S. P. Q.B. Ann. MCCC.

Here you are alfo fhewn the Cabinet of Curiofities of Ulyffes Aldrovandus, join'd with that of the Marquis of Cofti, both belonging to the Publick. Among the reft we took Notice of the Picture of a certain Woman, who (as Aldrovandus fays of his own Knowledge) had a long and thick Beard like a Capucbin. M. Lotier, a Banker of this City, has alfo an excellent Collection of Medals, in which are to be feen two Otbo's in Brafs of unquef tionable Antiquity. In a Chamber near it they mewed us one hundred and eighty feven Volumes in Folio, all of Aldrovandus's own Hand-writing, and about two hun-
dred Bags full of loofe Papers; the Margins were pretty large, and the Lines not very clofe.

On the Front of this Palace, between the Statues of the Popes, is a Latin Infcription, intimating, that the Emperor Cbarles V. and Pope Clement VIII. meeting at Bologna in November 1529, reftored the Peace of Italy, and that afterwards the faid Emperor was crown'd King of Lombardy in the Church of St. Petronius; the Emperor had been crown'd before, OEF. 22, 1520, at Aix la Cbapelle. In another Place of this Palace, you fee the Picture of one named Ugolino, on the Wall, hanging by one Foot, with this Subfrription, Ugolino traditore, filatugliero alla Patria; perhaps this might be Count Ugolin of Pija, one of the Heads of the Guelpos. In another Place you fee an Infcription beginning thus: Adefte $O$ Sol $\mathcal{E}$ Luince Teftes, Rxc. relating to a Miracle wrought by an Image of our Lady, who deliver'd Bo$\log n a$ from the Peftilence. That great and ftately Fountain which faces this Palace, is the Work of the famous Architect and Sculptor Jobn of Bologna, faid by fome to have coft feventy thoufand Crowns.
In the Church of St. Petronius (the biggeft in the whole City) is to be feen the fo much celebrated Meridian Line of Caffini, engraven on a Copper Plate of 222 Foot long, and fixed in the Pavement. It begins at the Entrance of the great Body on the left Hand, and paffes between the Pillars, without the leaft Obitacle, to the End of the little Nave of the Church, the Situation of which is almoft Eaft and West. In the arch'd Roof of the laft Nave is a Hole, directly over the Noon-point of this Line, through which a Ray of the Sun entring, marks the Solftices and Equinoxes upon the Line. The fame Operation may, without much Difficulty, be perform'd in any other convenient Place, the whole Myftery confifting only in meafuring the Degrees on the Line, proportionably to the Height of the Hole through which the Ray enters.

In the Church of Corpus Domini they thew an embalm'd Body of St. Catberine Vigni, which has wrought many Miracles : But the Image of our Lady, faid to be made by St. Luke, is in much greater Veneration with them; her Refidence is at the Mount la Guardia, eight Miles from the City (they were then making a cover'd Way to that Mountain) from whence they bring her at certain Times in Proceffion into Bologna with more than ordinary Magnificence, attended by the feveral Companies of the Artifans, the Fraternities, Convents, Heads of the Parifhes, Magiftrates, the Gonfalonier, and the Legate himfelf: The Image is always carried under a rich Canopy, the People upon their Knees faluting it as it paffes by, with the molt zealous Ejaculations that can be conceiv'd.

In the Church of the Dominicans you fee the moft magnificent Chapel and Tomb of St. Dominic ; the inlaid Work of different Colours on the Benches of the Choir, done by Damian of Bergamo, a Monk, are highly efteem'd to this Day, though it is beyond all Difpute, that fince the finding out of the Art of imprinting natural Colours on Wood, this Kind of Work has been brought to a much greater Perfection. In the fame Church is to be feen the Tomb of Hentius or Enzelin King of Sardinia and Corfica, natural Son to the Emperor Frederick II. The Epitaph gives you an Account of his being taken Prifoner by the Bononians, who detain'd him twenty two Years, nine Months, and fixteen Days in Captivity, till his Death, which happen'd in March 1272. The Tower called Garifenda is about 130 Foot high, and leans like that of $P i f a$; it is a fquare Tower built of Brick, and its Inclination to one Side proceeds, queftionlefs, from the fame Reafon (viz. from the Sinking of the Foundation) as does that of Pifa. The bright Stones, known by the Name of Bononian Stones, are the Product of the Hill of Paderna, about three Miles diftant from the City.

The Heats being almolt as troublefome here as in the Apennines, the Men ufe Fans as well as the Women, fome of which are of Paper, and fold for a Penny apiece. In our Inn they had a Way of driving away the

Flies by a Machine; they often treated us with Lake Tor zoifes of the Bignefs of a good Trencher; their Flefh is pretty firm, and not ill tafted.

Leaving Bologna about Sun-fet, we traveld ten Miles to Samogia, a fmall Village about half Way between this City and Modena. They told us, that from this Place to the $A l p s$, the Country is as level as a Bowlinggreen, and that the Roads are lined on both Sides, either with Cornfields or Vineyards ; the Vines are fupported by Fruit-trees planted Chequer-wife, as we had feen them already in feveral Parts of Lombardy, and afforded a very delightful Profpect at firf, but at Length grew offenfive to the Eyes of us Travellers, for Want of that Variety which is diverting to the Sight, and without which nothing is diverting. The fame Night, as we came near to the Village, we were furprized with the Sight of a prodigious Quantity of fining Flies, called Lucciole, with which the Hedges were cover'd to fuch a Degree, that they feem'd to be on Fire; they are not unlike the Locufts in Shape, but not fo large the fhining Part is a certain yellow hairy Down under the Belly, which being Aretch'd at every Motion of their Wings, fends forth a bright Glance like Fire.

Early in the Morning we purfued our Journey to Modena, where we arrived in two Hours. In our Way we paffed by the Fort of Urban VIII. defended by four Baftions bearing the Names of St. Mary, St, Peier, St. Paul, and St. Petronius; and a little on this Side of it we crofs'd the River Panaro, the Boundary between the Bolonian and Modenefe Territories. The City of Modena itfelf is feated in a fertile Country, but for Want of Trade makes but an indifferent Appearance; for its Fortifications are much decay'd, the Streets are narrow and dirty, the Portico's on both Sides of them low and narrow, and even the Churches contain nothing worth taking Notice of; fo that were it not for its ancient Reputation, and the Refidence of the Dukes of that Name, it would fcarce deferve a Place among the Cities of Italy. The old Palace is an inconfiderable Edifice, but the new one promifes much better.
8. We travel'd in Calafhes in four Hours from Modena to Reggio, a City as barren in Curiofities as Modena, but better built, and its Situation very pleafant. The Inhabitants tell you Wonders of their Churches, but thefe Things they muft tell thofe that have not feen Rome or Naples; their chief Pretenfions lie in the Work manfhip of Bones, of which they make feveral Sorts of Toys not worth the mentioning, and fold miferably cheap. They told us of certain ancient Infcriptions found at Reggio, in which this City was called Regium Lepidi, the other Reggio in Calabria ulterior, being known by the Name of Regium $\mathcal{F u l i u m}$, and its Inhabitants Regienfes, whereas thofe of the firft were called Rbegini. They ftile their Prince Duke of Reggio and Modena, juft as in Scotland (before the Union) they put the Name of their Country before England in the Title of the King. About eight Miles from Reggio we pals'd the Bridge over the River Lenfa, on the other Side of which begins the Dutchy of Parma, being a plain Country, moftly Pafture, whereas about Bologna and Modena the Grounds are generally till'd.

The City of Parma is feventeen Miles from this Bridge, very pleafantly feated, and feen at a confiderable Diftance, by reafon of the Straightnefs of the Road leading to it, and the Height of its Spires. Over the Gate, through which we enter'd, we faw the Arms of Pope Paul III. the fame who beftow'd the Dukedoms of Parma and Placentia upon his natural Son Lewis. The River of Parma divides it into two Parts, but is not navigable; its Fortifications are very good, and the Citadel defign'd after the Model of that of Antwerp, formerly efteem'd a Mafter-piece.

The Ducal Palace is a very indifferent Building, but the new one is likely to be much larger and handfomer. The Wardrobe is well furnifh'd, and fo are the Stables, and the Coaches very rich. The great Theatre is beyond any of that Kind I ever faw, either at Paris or Venice ; the fofteft Whifper may be heard through any Part of it, though it is of a very large Extent; there are no Boxes, but only Benches rais'd one above the
other,

## Chap. III.

Greatef Part of ITALY.
other as in an Amphitheatre. The Pit is alfo very facious, and may be filled with Water to the Height of three Foot, in which they reprefent Naval Combats with whole Squadrons of little gilt Boats.

Befides the Schools of the Univerfity, they have here a College, wherein they receive young Gentlemen of all Nations, but none except fuch as are capable of being admitted Knights of Maltba. They eat together according to the different Sciences they learn; their Number at this Time amounted to two hundred and thirty. The Dome of the Cathedral is painted by the Hand of Correggio, and in the Churches of St. Fobn and St. Antbony are various excellent Pieces. At the Race we faw Abundance of very good Company taking the Tour à la mode in their Coaches; but they obferve here the fame Cuftom that is practifed upon this Account at Rome, viz. that the Wonien never go with the Men in the fame Coach, but always appear in Coaches by themfelves. In our Journey from hence to Placentia, we faw not any Village or River worth mentioning, except the little difmantled Town of St. Domino, tho' they are thirty five Miles diftant one from another.

The City of Placentia is feated in a pleafant Plain about fix hundred Paces from the $P_{0}$; its Circumference is larger than that of Parma; the Houfes are of Brick, neatly built, but very low, and on each Side of the Houfes Foot-ways fenced with Pofts, as in London, efpecially in the Race-freet, which is as ftreight as a Line, of an equal Breadth from one End to the other, and three thouland Foot long. The Statues of the famous Alexander Farnefe, Governour of the Netberlands, and of his Son Ranuccio I. adorn the Great Place, or, in plain Englifh, the great Square. From the Top of one of the higheft Steeples we had a full View of the Country round about, embellifh'd with the various Windings of the Po, and could plainly difcern Cremona, though at ewenty Miles Diftance. The Cathedral has fome Pictures, done by the Hand of Caracbe ; and that of St. Sixtus, an Image of our Lady, by Rapbael. To conclude, Placentio is ill-peopled, and the Fortifications are but indifferent, though much extolled by the Italians; and their Weights, Meafures, and Coins, are different from thofe of Parma. We coafted the Banks of the Po, but at fome Diftance from the River, following the Current till we came over-againft Cremona, where we paffed in a Ferry-boat, for there are noBridges upon the Po below Turin.

The City of Cremona is feated on the Milanefe-fide of that River ; it is very large, but poorer and lefs populous than Placentia. The Cantle, though much extoll'd by the romantick Italians, is an antick fhapelefs Heap of Ruins; the Inhabitants of this City boaft exceedingly of its Anciquity, but can produce no authentick Proofs for it. This City is forty Miles from Mantua, and in the Way between both you meet with no confiderable Town except Buizzolo, a fmall City furrounded with fome inconiderable Works, which among fome People pafs for Fortifications; however, it bears the Title of a Dukedom, and its Prince is at the fame Time Sovereign of the adjacent Country for four or five Miles about it. We paffed the River Oglio, which rifes with a large and rapid Current out of the Lake of Ifco, and falls into the Po.

Almoft all Defcriptions I ever faw of Mantua, have given a very imperfect Account of the true Situation of this City, which is generally reprefented to be in the Midft of a Lake; but to fpeak the Truth, this pretended Lake is no more than the Waters of the River Mincio, arifing from the Lake of Guarda, which overflowing the flat Country, makes a kind of Marh fourteen or fifteen times longer than it is broad, in which, but toward one Side of it, the City of Mantua is built on a firm Tract of Ground. The Cawley over which we paffed, was between two and three hundred Paces long, but on the Side towards Verona it is of a larger Extent. In fome Places of thefe Marfhes, the Water is always in Motion, but as it ftagnates in moft Places, the beft Part of the rich Inhabitants leave the City during the Summer Seafon. Mantua has only a Wall for its Defence, but the Citadel is very ftrong: For the reft, it

VOL. H. NUMB. CIX.
is about the fame Bignefs as Cremona, but much better peopled; the Streets are broad and ftreight, but the Houfes indifferently built.

The Italians will tell you ftrange Things of the Mag* nificence of the Palace, though, in Effect, it has neither Beauty nor Regularity, and the beft Idea I can give you of it, is to compare it to Whiteball, viz. that it is large and commodious, without the other, Qualifications belonging to a Royal Palace. We were affur ${ }^{2}$ d, that this Palace was moft magnificently furnifh'd before it was pillaged by the Imperialifts, $\mathfrak{F u l y} 18,1639$, but even as you fee it now, the Duke's Lodgings want nothing of what is requifite to render them both convenient and fplendid : The Hall is filled with rare and ancient Pictures, and the Cabinet of Curiofities wants not Ma terials to entertain the induftrious Traveller. The Duke of Mantua has feven or eight Country Seats, among thefe we only faw la Favorite and Marmirol, the laft of which is very pleafantly feated near a delightful Brook and Wood, and well furnifh ${ }^{5}$ d with Pictures and Antiquities, with Gardens, Orange-walks, Aviaries, and mort curious Fountains belonging to it. In the Churcks of St, Andrew, they thew the St. Longin, with fome Drops of that miraculous Blood found in this City in the Time of Leo III. which afterwards gave the Occafion (viz. in 1608.) to the Inftitution of the Order of Mantua by Vincent Gonzaga, who felected twenty Knights to be Companions of this Order. The other remarkable Things in Mantua are, the Churches of the Jefuits, of St. Barnabas, St: Maurice, St. Sebafitian, St. Urfula, and St. Barbara, the Town-houfe, Theatre, Manufactory Halls the Mill of the twelve Apoftles, the Synagogue and Shambles. But before we part with Mantua, we muft remember the Village of Andes near this City,'s which gave Birth to Virgil;

## Mantua Mufarum Domus, atque ad Jidera cantu Evecta Andino. <br> Sil. Ital. I. 8.

Leaving Mantua, we travel'd for twenty two Miles; till we came to the River which is the common Boundary between that Dukedom and the Venetian States and eighteen Miles further came and $l^{\circ} \mathrm{odg}^{\circ} \mathrm{d}$ the fame Night at Brefcia. We were not a little furpriz'd at the Sight of the Women in the Streets and Shops, a Thing we had not feen fince our Arrival at Verona. Brefcia is pretty well pecpled, and indifferently large; its Citadel, which is very ftrong, ftands on an adjacent Hill near the Foot of the Alps; the other Fortifications are of no great Moment. The Palace of fustice is a noble Structure, of a certain Stone not unlike Marble; on the Pediment of the Front you fee thefe Words;

## Fidelis Brixia Fidei Eo Gufitic confecravit.

The Armourers Shops are directly oppofite to this Palace, under a Portico of five hundred Paces long; the Fire-arms of Brescia being accounted the beft in Italy. This City is watered with many fine Springss and a commodious Rivulet, which have their Rife among the Alps.

In the Cathedral they fhew you what they call Confiantine's Oriftame, which they told us was the fame blue Crofs that appear'd to Conftantine, with this Motto, Ir boc Signo vinces. But how is it poffible that an Apparition in the Air could be preferv${ }^{2}$ ? And how could it be called an Oriflame, which fignifies a Kind of gile Standard or Banner? Some deriving its Etymology from Flammula, a Banner, and aurea, golden, becaufe it was affix'd to a gilt Launce; others from a Sort of gold and flame-colour'd Stuff; it was adorn'd with green Taffels. I remember Mezeray tells us, that the fecond Race of the French Kings ufed to have St. Martin's Cope born before their Armies, but that the Capets made UKe of the Banner of St . Dennis, called Oriflame, kept in that Saint's Church. Perhaps this Oriflame of Brescia is the Labarum in which Confantine, after his Victory over Maccatius, order'd a Cypher, which con fifts of the initial Letters of the Name of Chrift, to be inferted,

As we travelled from Brefcia to Bergamo, we paffed conftantly along the Ridge of the Alps on our right Hand, at the Diftance of two or three Miles,

At Palazzuolo, a Place feated half Way between both thefe Cities (viz. fifteen Miles diftant from each) we paffed the Oglio a fecond Time. Coming to Bergamo, we found it both a trading and a ftrong Town, its Situation being at the Foot of the Alps. The Fortifications are well faced and kept, and the Citadel, with fome Outworks, defend the rifing Grounds about the City, which has no lefs than five good Suburbs. In the Cathedral you fee the Tomb of the great Bayth. Cogliano, General of the Venetian Forces againft the Milanefe; and in that of the Aufin Friers, the Tomb of the famous Ambrofe Calepin, a Native of Calepio, a Village not far from Bergamo. In the Choir of the Cathedral you fee fome inlaid Work on the Benches, done after the fame Manner, and by the fame Hand, as that we faw in the Church of the Dominicans at Bologne. The Bergamefe Jargon is very grofs, befides which, the Inhabitants have, for the moft Part, fcrophulous Tumors on their Throats, which appear very naufeous to Strangers, though to them it appears fo natural, that they queftion whether it be a greater Perfecto have or be without thefe Tumors, and are inclined to hold the former.
The Grounds about Bergamo, and generally all over the Milanefe, being watered with many Rivulets arifing from the Alps, the Country People have from thence derived an infinite Number of Channels, whereby they prevent the Inconveniency of Drought, and render their Grounds fertile. The River Adda (arifing out of the Lake of Como) having at this Time overflown its Banks, we were obliged to quit our Calafh at Canonica, a Village about twelve Miles from Bergamo, and to pafs the River in a Boat, not without fome Danger, by reafon of the Violence of the Current. Two Miles above Ca nonica, on the oppofite Side of the River, lies Trezzo, where we embark'd on the Canal called Navilio della Marrefana, which reaches in a ftraight Line within half a Mile of Milan, its Length being about twenty Miles, It is fupplied with Water by the Adda, which River having in many Places very fteep Cataracts or Waterfals before it comes into the flat Country, is near Canonica twenty five or thirty Foot lower than the Canal ; which is the Reafon that fo many Attempts were made in vain to bring the Waters of the Adda to Milan, till at laft that moft celebrated Architect and Engineer Leonardo da Vinci undertook this Work, and brought it to Perfeetion. Mr. Felibien gives this great Florentine the following Character ; That he was of a very large Stature, and of fuch Strength, as to be able to twift the Clapper of a Bell with oneHand; he was an excellent Horleman, a fine Dancer, and very dextrous in the Management of Arms, and all other Gentleman-like Exercifes; he was one of the beft Painters of his Age; he and Micbael Angelo having engaged Raphael to leave his firt Way of Drawing ; befides which, he was a skilful Architect, a good Sculptor, and great Engineer ; a learned Mathematician, Mufician, Anatomift, Philofopher, Poet, and Hiftorian ; all which, join'd with his courteous and generous Behaviour, certainly render'd him one of the moft accomplifh'd Perfons the World ever faw. He died in the 75 th Year of his Age, in the Arms of Francis I. King of France, who giving him a Vifit, and our illuffrious Leonar do endeavouring to fhew his Acknowledgment by raifing his Body in the Bed, the King advanc'd with his Arms to hinder him, and To he expir². From this Canal we had à moft delightful Profpect of the adjacent Country, border'd in many Places with Summer-houfes, 'Gardens, and Orchards, like fome of the Canals in Holland.
9. Scarce any City in Europe hath been fo entirely deftroyed by the two terrible Scourges of Mankind, War and Pestilence, as Milan; notwithftanding which, it may at this Day be rank'd among the fineth Cities in the World: It was quite deftroy'd by Frederic Barbarofa in 1162 . It is almoft of a circular Figure, about ten Miles in Compafs, and is faid to contain no lefs than thirty thoufand Inhabitants. There are but few

Inftances of fuch great Cities built in the Middle of the Land without the Conveniency of either the Sea or a River, the Defect of which is fupplied by many Springs and Rivulets that water the Country adjoining, and the Canal deriv'd from the River Adda fills the Ditch of the inward Enclofure of the City with running Water: The Fortifications, or outward Enclofure, were made fince the Deftruction of this City by Barbaroffa. Near the Gate of Pavia is to be feen the Begimning of a Canal, intended to be drawn from thence to the City of Pavia, by Galeazzo Vijconti, but the Execution thereof was ftopt by his Death. A certain Latin Author (Werner Roolwink) derives the Etymology of Mediolalun, à Sue dimidia lanata, i. e. from a Sow half cover’d with Wool, found in the fame Place where this City was founded.
The firft Thing we thought worthy our Attention, was the famous Cabinet of the late Canon Manfredi Settala, a Man equally learned and judicious, not only in his Choice, but alfo in working many curious Things with his own Hands. We faw here various Machines, invented for the Difcovery of the Perpetual Motion : Looking-glaffes of feveral Sorts, Dials; Mufical Inftruments ancient and modern, and fome of his own inventing ; Books, Medals, curious Locks and Keys, Seals, Rings, Pictures, Indian Works, Muramies, Arms, flrange Habits, Lamps, Urns, Idols, and a great Number of all Sorts of Antiquities; Fruits, Stones, Minerals, Animals, Variety of Shells, Curiofities in Steel, Wood, Amber, and Ivory; a Piece of Cloth made of the Stone Amiantbos, Monfters, $E c_{0}$ But the Difh of yellow Amber, two Foot in Diameter, is a moft exquifite Rarity : There are divers other Pieces of rough Amber with Ants, Flies, Spiders, and other Infects, enclofed in the Subflance of them, a convincing Proof, in my Opinion, that Amber is a Kind of Gum or Bituminous Matter harden'd by the Air, the Sea, or fome other Caufe, fo that when (for Inftance) an Ant happens to light upon a raw and clammy Piece of this Bituminous Matter, fhe is entangled in this unctuous Subftance, and it growing harder and bigger by Degrees, the Infect is enclofed in it. This Opinion is exactly the fame Martial had of it;

## Dum Pbaëtonteâ formica vagatur in umbrâ <br> Implicuit tenuem fuccina Gutta feram: <br> Sic modo qua fuerat vitâ contempta manente

Funeribus facta ef nunc pretiofa fuis.
There are three or four pretended Unicorns Horns in this Cabinet; for though, beyond all Difpute, they are properly no more than the Teeth of a certain Fif found in the Nortbern Seas, yet here, as well as in the Venetian I'reafury, and other Places where they are preferv'd, they retain fill the Opinion, that they grow on the Head of that imaginary Creature. There are alfo fome Foffil Horns exactly like thofe that grow on Fifhes, though of a very different Matter. The Remora, a Fifh about the Bignefs of a Herring, fhewn in many Cabinets, is of the fame fabulous Kind; I am fure I have feen no lefs than twelve of them in feveral Places, but never two of the fame Kind.
The Cathedral, founded by Fobn Galeas Vifconti, firft Duke of Milan, I 3 Fune I 386. and which fands in the Center of the City, is a Structure of a prodigious Bulk, though (according to my Computation) a fixth Part lefs than St. Peter's at Rome', but is infinitely beyond it in the Curiofity of the Ornaments and Sculptures, wherewith it is cover'd both within and without, there being not the Breadth of a Hand to be feen in the whole that is unwrought. It is built after the Gotbick Manner, and to form a true Idea of this Edifice, you mult reprefent to your felf a valt Collection of Rofes, Trees, Animals, Grotefques, Pyramids, Nicbes, Statues, and a thoufand other Varieties, affording an agreeable Confufion to the Eye: However, there are only fome Parts of this Church compleatly finifh'd, the Canons of the Chapter thinking it their Intereft not to proceed with too much Vigour in a Thing of this Nature, which brings valt Sums of Money by Donations,

Chap. IIİ.
Greatel Part of ITALY.

Legacies, \&c. into their Coffers, Part of which they know how to employ to other Ufes. According to an Infcription in Gold Letters, engraved on a Piece of Marble in the fame Church, one Fobn Peter Carcannis, a Native of Milan, left by his Will the Sum of 230,000 Crowns of Gold, toward the Building and Adorning the Front of this Church, which, neverthelefs, remains to this Day almoft naked. There may, perhaps, alfo be another Reafon why the fame is not finifh'd ; for confidering that there are two Sorts of Architecture in that Part of it which is already begun, it feems as if the Undertakers were not a little puzled how to reconcile the Uniformity of the Architecture to the Gotbick Structure of the whole Body of the Church.

Martin the Fifth's Statue ftands in the Choir of this Church, without a Beard, and a very young Face, tho' he was near fifty Years old when he was chofen Pope; the Infcription fays, it exceeds Praxiteles:

## Praftantis Imaginis author,

Dè Tradate fuit Gacobinus in arte profundus,
Non Praxitele minor, Sed major, farier aufin.
Near it is the Statue of Pius IV. Behind the Choir are two Marble Tables, containing a Catalogue of all the Relicks preferved in this Church, among which is a Piece of Mofes's Rod, though at the fame Time they pretend to have it entire at St. Yobn de Lateran's. Befides this Piece, there is another preferved at Florence, and Baronius fays another was found at Sens roo8. On the great Altar you fee the Nail of the Crucifixion, of which it is faid Confantine made a Bit for a Bridle ; five Lights burn conftantly round it Day and Night.

The Pavement of this Cathedral is more curious and more folid than that of St. Peter's at Rome, the Marble whereof being very thin; is almoft worn out. The whole Charge of this Pavement (when finifhed) is computed at 66,290 Crowns, not including the Choir. We had from the Steeple of this Church a full View of Milan, befides other Cities in the Plain of Lombardy, and the Conjunction of the Alps and Apennines near Genoa. The great Bell, called St. Ambrofe, is feven Foot in diameter, and weighs thirty thoufand Pounds. In the great Square before the Church we obferved generally about thirty Coaches; but their ordinary Tour à la Mode is a fpacious unpaved Street, (called Strada Marina) ffrinkled every Day with Water.

The Ambrofian Libraty obtained its Name from being dedicated to St. Ambrofe, by Frederick Borromeo Archbifhop of Milen. A certain Author, in his Defcription of this Library, printed at Tortona, makes the Number of its MSS. amount to 12,000 , and the printed Volumes $7^{2,000}$; but the Library-keeper told us, there were not above 40,000 in all. Among the firt, Ruffinus's Verfion of fofepbus challenges the Precedency for its Antiquity. The great Hall is feventy five Foot long, and thirty broad; it is kept open two Hours in the Forenoon, and as many in the Afternoon. Among other Rarities, we were fhewn a large Volume of mechanical Draughts, done, as they faid, by Lieonardo da $V$ incis's own Hand; the Writing is fo bad, that it is not to be read without a Perfpective-glafs. An Infcription on the Wall near it tells you, that a King of England offered three thoufand Piftoles for it, but mentions not his Name. In the Academy for Painting, adjoining to this Library, we faw a Piture of Clement X. refembling a Print fo exactly, that we were all deceived in it. The Cittadel is a regular Hexagon Fortification, well faced, and ftrengthen'd with a good Ditch and Counterfcarps. The principal Structures, befides the Churches and Convents are, the two Palaces of the Governor and Archbifhop, the Houfes of Marquis Homodeo, Count Barth. Arefe, and Signior Martini.
The Seminary (founded by Cbaries Borromeo) has a double Portico 176 Foot three Inches long, and 16 Foot io Inches and a half broad, extending round the Infide of the great fquare Court; the firft Order is Doric, the fecond is Ionic. Over the high Portal you fee the Statue of Piety. The Torenboufesand the Great

Hofital, the great Court of which is 120 Paces fquare, about the Infide whereof are two Rows of Portico's', fupported on each Side by forty two Pillars of a certain Kind of Marble found in the Alps, each Pillar confifting of one fingle Piece of Stone. The Body of the Structure is of Brick; the old Hofpital is united with it, but the Lazaret or Hofpital for infected Perfons lies about chree, hundred Paces without the City; Bramante was the Architect. This large Structure is compofed of four Galleries joined in a Square, each of which contains ninety two Chambers, about twenty four Foot broad; fo that the whole Length of each Gallery (including the Walls) amounts to eighteen hundred Feet. The Infide is furrounded with a Portico fuftained by Marble Pillars, and the Square within is a Meadow, water"d by feveral Springs and Brooks, in the Middle of which ftands an Altar under a Dome, fup. ported by Pillars, by which Means the Sick may fee Mafs faid from their Chambers.
The Church of St. Ambrofe hath many Statues and Pictures, which were the Production of the ignorant Ages: Among the reft, you fee here a Dragon of Brafs, refting upon a Column of Marble; fome think it to be the Serpent of Efculapius, others an Emblems of the Serpent in the Defart; but the common Opinion is, that this Dragon was caft out of the Fragments of that Serpent ; which makes many Pilgrims fock thither to worfhip it, as Boffi and Cbarles Torre affure us by their own Experience. In the Church of St. Eustorgia they fhew fill the Tomb that contain'd the Bodies of the three Kings that were afterwards removed to Cologne; they pretend, that it retains to this Day a certain Virtue of curing Diftempers; for it is to be obferved, that the Inhabitants of the Milamefe are not behindhand with the reft in magnifying their Relicks, of which they have Abundance, for at St. Alexander's there are no lefs than 144,000 Martyrs of the Catacombs of St. Seb̄aftion.
The chief Curiofities made in Milan are Works of feveral Sorts in Steel and Rock-Cryftal; with which they are furnifh'd by the neighbouring $A l p s$; of the largeft Pieces they make Looking-glaffes; bur they are feldom above a Foot fquare. It is to the Curiofity of their Workmanhip that fome attribute the Original of the old Proverb, viz. He that reifbes well to Italy, muft destroy Milan: meaning, that thereby its Riches would be difperfed through the whole Country; though fome explain the fame Proverb of the fatal Wars that have aflicted Italy on the Account of this City, it having been forty Times befieged, and two and twenty Times taken. The Houle of the Marquis of Simonetta, two Miles without the City, hath an Eccho which repeats the laft Syllable about forty Times: We heard it in a cover'd Gallery in one of the Wings of the Buildings, where the Eccho anfwering from the other Wing, we found the Sound to decreale like the Reboundings of an Ivory Ball.
In our Way from Milan to Pavia (which is only fifo teen Miles) we went to take a View of the famous Convent in the Plain of Barco, founded by Fobn Galeazzo Vifconti firlt Duke of Milan. The Church is of a Gotbick Architecture, but the Chapels and Altars not inferior to any in Italy; the Cloyfters are wonderfully handfome, and the Gardens, Parks, Brooks, and Avenues exceeding delightful ; it contain'd then about fifty eight Friers, who lived there very deliciounty. The once famous, but now inconfiderable, City of Paria is fo much fallen from its ancient Luftre, that its poor Remains bear fcarce any Refemblance to what in ancient Times its Buildings were, when the Metropolis of a Kingdom, and the Refidence of no lefs than twenty Monarchs, the Caftle being now no more than an old Heap of Stone, and the Fortifications quite neglected. The Univerfity (founded by Cbarlemain, and re-eftablifhed by Cbarles IV.) is not much better than the Town; it hath, however, five Colleges, among which that of Borromeo is worth taking Notice of, for the Beauty of its Structure; the Scholars of every College wear dif. ferent Gowns ; which Diftinction is of great Service.

The Cathedral is a low, dark, and very old Edifice ;
over-againft it is an Equeftrian Statue of Brals, called the Regifol, which fome think to be the Statue of $A n$ toninus Pius; Platina gives it the fame Name, and fays, it was brought from Ravenna after that City had been fack'd by King Luitprand, the fame who (as they fay) brought St. Austin's Body from Sardinia to Pavia, where it was buried in St. Peter's Church, now in the Poffeffion of the Aufin Friers, though it is certain that they cannot fhew the Place where the Body lies, the Marble Tomb in the Chapel on one Side of the Church being erected only in Honour of that Saint. Bernard Saccus, (l. 10. c. 3.) a Native of Pavia, in his Hiftory of that City, gives us the following Account of the Tranflation of St. Auftin's Body: In templo D. Petri à Luitpranda edificato conditum Augustini corpus fuit; E® ne facile refciri polfet, ferunt Luitprandum tribus locis effofls, structijque, fepulcbris, alibi deinde nocie, paucis operi adbibitis, julfife corpus condi, omnibus Sepulcbis eadem noEte, occlufis, ut certa corporis Sede ignorata, difficilior in avum fieret occafio, ejus perquirendi rapiendique. Confructum deinde alio faculo facellum D. Augufino fuit, juxta Templum D. Petri, in quo facello Arca marmorea E celebris, compofita eft, Augqufini Sepulcbrum reprefentans. The fame Author makes the following Obfervations concerning Pavia, That the Grounds thereabouts produce naturally Afparagus twice every Year, which are eaten raw by the Country People; and that the $P_{0}$, which now is five or fix Miles from that City, reach'd formerly within five hundred Paces of it; which explains feveral Paffages in the ancient Geographers, who place Pavia near that River: Padus, adds Saccus, Sepe totus ab alveo profliens alium fibi extemplo alveum fine fofforibus eruit. Si ab Apennino aquarum copia irruat, fluctus in adverfam ripam torquet, contra vero $\sqrt{3} a b$ Alpium latere aquarum impetus fiat: $\sqrt{2}$ ex utraque parte, effertur fupramodum.

Coming out of Pavia, we pafs'd the River Tefin ( $T_{i}{ }^{3}$ cinum) over a cover'd Bridge, being the moft rapid and largeft River of all that fall into the Po. It is fubject to great Inundations, which fometimes prove fatal to the adjacent Fields; they fay, that if thefe Inundations continue for eight Days, (which, however, happens rarely) the Coldnefs of the Waters deftroys the Herbs to that Degree, that they farce recover in feveral Years after.

The River Ticinum had formerly communicated its Name to the City of Pavia, built upon its Bank; Saccus fays, in the Year 472 , its Name was changed in the Time of Odoacer, who, after he had deftroyed it, granted Immunity for five Years to the Inhabitants, in order to rebuild the City; whence the City was call'd Papia quafi piorum patria, from the Piety of its Citizens, who went to Ravenna to implore the King's Pardon, not for their embracing the Chriftian Religion, which they had done long before. Me $\sqrt{2}$ audieritis, faid one of their Envoys after their Return, nomen inveniemus, quod nostre pietatis officia in patriam refituendam, paucis follabis pofteritati atteftabitur, $\mathcal{O}^{\circ}$ Ticini nomen aquis reftituetur. Papia piorum Patria, \&c. I Thall add only, that Pavia is famous for the Misfortune of two Kings taken Prifoners there, viz. Defiderius by Cbarlemain, and Francis I. by Cbarles V.

IO. We dined at Vogbera, a Town about fifteen Miles from Pavia, and lodged the fame Night at Novi, a City feated at the Foot of the Apennines, thirty Miles from Genoa, under whofe Jurifdiction it is; the Road betwixt borh is very mountainous. The Situation of Genoa is at the End of a Gulph, partly on the Brow of a Hill, which forms a Crefcent round the Gulph, and partly on a little Plain betwixt the Foot of the Hills and the Sea-hore; the Streets are narrow, and the Houfes in the lower Part of the City fix or feven Stories high, but are lower by Degrees as the Afcent rifes; this affords a pleafant Profpect at a Diftance, but carries with it divers Inconveniencies, efpecially for Coaches, which for that Reafon are not much in Fafhion here, the Ladies being generally carried in Litters, and Gentlemen ufing Calames they drive themfelves. It is Atrengthened by a double Fortification, reaching on both Sides to the Shore, the innermoft inclofes the Body of the City,
and the fecond the rifing Grounds about it. When I had taken a View of the City of Genoa, I could not but be furprifed at what is commonly reported of it, viz. that it is built all of Marble, whereas it is beyond all Contradiction, that (except fome Houfes in the Strade Nuova, that are either adorn'd with, or have whole Fronts of Marble) their ordinary Materials for Build ing are Brick and Stone, or both together, and their Houfes are generally plaifter ${ }^{\circ}$ d over on the Outfide. Notwithttanding this, Genoa is not deftitute of beautiful Structures, efpecially in five or fix of the beft Streets, and in the Suburbs of St. Pietro d'Arena; be.fides that, Genoa has this Advantage in Building, that: Slates and Glais are as plentiful here as they are rare in other Parts of Italy.

The pretended Gardens in the Air in Genoa, com: par'd by fome to the penfile Gardens of Semiramis, owe their Original to nothing elfe but the Scarcity of Ground, which obliges the Inhabitants to put their Flowerpots in their Balconies, and fometimes to cover them with Earth. The beft Edifices of Genoa efcaped the Fury of the French Bombs, which being leivel'd againft the middle Part of the City, did moft dreadful Execution, there being to this Day (1688) above five hundred ruin'd Houfes in that Part of the City. In the Church of our Lady of the Vineyards they fhew'd us a Bomb which fell there without the leaft Detriment; had not the French Bombs thrown down four or five Churches and as many Convents at the fame Time, they would certainly make the World believe that the Bombs had a Refpect for fo facred a Place. During this Conflagration, the Doge, with thirty Perfons more, fhelter${ }^{2}$ d themfelves in the great Hofpital called more, bergo, whither many of the Inhabitants alfo carried their beft Effects. To prevent the like for the future, they are at prefent bufied in making a third Mole, which is to ftretch further into the Sea than the two former. The Harbour of Genoa is capacious enough, and of a good Depth, but is expos'd to the Lubeccio or the African South-Weft Wind, the moft dangerous that reigns in this Part of the Mediterranean. This oblig'd them to make another leffer Port within the great one, for the Security of their Galleys, which are now 'reduced to fo fmall a Number as fix, an infignificant Squadron in Comparifon of what the Genoefe Navies were in former Times.

Thofe that intend to have a compleat Idea of $G e$ noa, muft view it diftinctly from three feveral Places, from the Top of the Pbaros or Water-Tower; from the Sea at a Mile's Diftance ; and from the Top of the Hill. The publick Palace, or Palazzo Reale, where the Doge and fome of the Senators lodge with their Families, is a very large Structure. In the little Arfenal of this Palace we were fhewn a Roftrum of an ancient Roman Ship; it was of Iron, with a Boar's Head at the End of it: The Infcription tells you, that it was found in the Harbour of Genoa, as they were cleanfing it. Here are alfo fome Curaiffes, faid to have belong ${ }^{\text {d }}$ to certain Ladies of this City who fought againtt the Turks.

The Ladies generally drefs themfelves after the French Mode, but the ordinary Sort make Ufe of a Kind of little Fardingals. The Noblemen, though not obliged to any particular Habit, yet wear for the moft Part Black and Cloaks; they affume the Titles of Dukes, Marquifles, Counts, \&c. which the Venetian Nobility do not, but they wear no Swords.

The Doge (who muft be fifty Years old at leaft) is ftiled His Serenity, the Senators Their Exceltencies, and the Noblemen Most Illustrious, a Title of no great Moment in Italy. The Doge is crown'd with a Crown of Gold, and holds a Scepter in his Hand, by reafon of the Kingdom of Corfica under the Jurifdiction of this Republick, but his Power is as much limited as that of the Doge of Venice; befides that, at the End. of every two Years Deputies are always fent to his Serenity, to give him to underftand, that his Time being expired, he muft leave the Palace. We faw once the whole Senate in their Formalities at the Procef fion on the Feat of Corpus Cbristi, where the Doge ap-
peared

mpay mo 2ys

## Chap. III.

 Greate/t Part of ITALY:peared in a crimfon Robe, with a kind of fquare Bonnet on his Head; before him' were carried two Battle Axes and a Sword in the Scabbard', a Senator marching on each Side of him in a black Gown, but of the fame Make with that of the Doge; the Streets were ftrew'd with green Herbs, and lined on both Sides with Ta peftry; in the. Windows we faw the Ladies drefs'd in their beft Attire, with Baskets full of Flowers; which they threw among thofe that follow'd the Proceffion, according to their feveral Inclinations, the Gentlemen receiving thefe Favours with low Reverences from the Hands of the fair Diftributors.

The Church of the Annunciata, though the faireft in Genoo, yet in Beauty and Magnificence is much inferior to many we have had Occafion to defcribe before. The moft remarkable Thing that belongs to it is, that it owns for its Founder a Citizen of Genoa of the Family of Lomellino, who built it at his own Expence.

I will not detain you with the Dialogue between the Crucifix at St. Ferome and St. Bridget, any more than with an ample Defcription of the great, Difh made of one fingle Emerauld, in which, they fay, Chrift eat the Pafibal Lamb, (Beda fays it was a Silver Difh) Du Tol would have this Emerauld Difh to be one of the Prefents made by the Queen of Sbeba to Solomon.

At St. Mary of the Coflle there is another Jpeaking Crucifix; for a certain Gentleman, it feems, having made a Promife of Marriage to his Miftrefs in a Place of the City where a Crucifix food, which he afterwards refufed to fulfil; the Lady accufed him before the Judges, where, being upon the Point of lofing the Caufe for Want of fufficient Witnefs, the appeal'd to the faid Crucifix; and fome Perfons being fent thither, and the Queftion propofed to the Crlicifix, it anfwer'd with a Nod, which made the Judges determine in Favour of the injured Lady; which is the Reafon that this Crucifix is particularly reverencd by Maids. But I cannot fay how far it is trufted. The Afhes of St. Fobn Baptift are preferved in the Cathedral, in a Shrine fupported by four beautiful Columns of Porphyry, brought from Smyena in 1098. This Saint and the Emperor are the two Protectors of Genoa, and the Image of the firft is flamp'd on its Coin, which is the faireft and beft in Italy, commonly called Genouines.

The Traffick of Genoa confifts chiefly in Velvets, Points, Gloves, Ancbovies, dry Confections, and various Sorts of Fruits, but is much decay'd; for though fome private Perfons are ftill exceeding rich, yet the Generality grow poor; the Government monopolizes the Trade of Wine and Corn, fo that the Tavern and Innkeepers mut buy their Wines out of the Cellar of the State, and the Bakers fetch their Corn from the publick Granaries

1r. Taking our Way from Genon towards Cafal, we came back the fame Way we went as far as Novi, where, hiring a Coach to Turin, we dined the next Day at Alexandria, a little City, provided with flender Fortifications; notwithftanding, which, it maintain'd a Siege of fix'Months againtt Frederick Barbarofla, who gave it the Name of Cafarca, which Alexander III. changed into Alexandria. What fome affirm, viz. that the Emperors ufed to be crown'd here with a Crown of Straw, is a meer Fable, whence (they fay) it got the Name of Alexandria di Paglia or of Straw, which, indeed, it retains to this Day, though the Reafon of it is not known. Cafal is a ftrong City, feated on the right Bank of the Po; befides the old Caple, it has a new Citadel, fortified with fix Royal Baftions; Halfmoons before the Curtains, and a large and deep Ditch full of Water, and an Arfenal fored with Arms for ten thouland Men. Since the French have been in Poffeffion of this Citadel, they have made confiderable Alterations in the Fortifications, efpecially in the Baf tions, which being very large, they made a fecond Rampart, and new Baftions within the other.

From Cafol we pafs'd the Po a fourth Time, the Banks of which our Coach follow'd for a confiderable Time; we pafs ${ }^{9}$ d in Sight of Ierni, a fmall fortified Place in that Part of Monferrat under the Juridiction of the Duke of Savoy. Verrue lies on the right Side of the $\mathrm{PO}_{2}$

VoI. II. NUMB. 10 g .
and is much ftronger than the other. After we had travel'd eight Miles from Cafal, we entred Piedriont, the Ground being fill level, but nor long after found ourfelves among the Mountains, in a large and flat Valley, almoft furrounded with the Aips: The Grounds in fome Parts of this Plain are exceeding rich, but in fome others very indifferent. In our Paflage we faw two or three large Spots of Ground, where two Days before had ftood the fineft Corn in the World, now laid quite Watte by the Hailfones, the very Straw being beaten into the Ground, and the Vines, Walnut and other Trees broke all to Pieces: It is generally reckon'd but forty five Miles from Cafal to Turin, but the Montferrat Miles, as well as thole in Piedmont, are much longer than thofe in Lombardy.

The City of Turin is feated in a Plain upon the Ris ver Doire, three hundred Paces from the Po; not only the Town, but alfo the Avenues leading to it, are very pleafant; but what moft pleafes Strangers is, that here they are rejoye'd with the frank Converfation of the Inhabitants, after they have been almont tired out with the ftarched and jealous Refervednefs of the Italians, it being certain, that their Manner of living at Turin, may be compar'd to the moft polite City of France, and that Language is as commonly fpoken here as the Italiar, the People generally following the fame Steps in their Converfation, and it may be faid without the leaft Exaggeration, that the Court of Savoy is as fprightly and gay as any in Europe, The, old Part of Turin is fomewhat indifferently built, but to make Amends for this, the new Part has broad ftraight Streets, and the Houfes are large, high, and pretty uniform. The Street that paffes through the two Squares, and reaches from the Caftle to the new Gate, is one of the faireft in Europe. The Houfes in the new Square are adorn'd with large Portico's that enclofe them on all Sides. The Duke's Palace has very good Apartments, though it appears with no great Luftre on the Outfide. The Palace of the Fefuits, and of the Prince of Carignan, (but lately finilh'd) are both magnificent Structures. Turin is but of an indifferent Bignefs, enclos ${ }^{2}$ d with a regular Fortification by the prefent Duke; but the Citadel exceeds the reft both in Strength and Beauty, but was not quite finifh'd. The Walks of Oaks on the Ramparts are very delightful to behold at a Diftance, and afford an agreeable Shade to thofe that divert themfelves here, with the moft delicious Profpect towards the Rivers; but the general Meeting-place of the Gentry is near Valentia, a Country Seat of the Duke upon the Banks of the Po, about a Mile from Turin, befides which the Duke has feven or eight more, all well furnifh'd. Before we leave Turin, we mult not forget to fay fomething of the new Chapel dedicated to the boly Handkercbief, in the Cathedral; it is, beyond all Queftion, a very glorious Piece of Workmanfhip, but what fome have pretended, viz. that it excels the Chapel of St. Lawrence at Florence, is fo far from being true, that it is not comparable to it they are indeed both of the fame Figure, but that of Turin is much lefs, and will be embellifind only with black Marble. I muft upon this Occafion put you in Mind, that inftead of one there are at leaft five or fix of thefe pretended boly Handkercbiefs, viz. two at Rome, in St. Peter's and St. Fobn de Lateran; one at Cadoin in Perigort; one at Befongon, one at Compeigne, one at Milan, and another at Aix la Cbapelle ; they all produce papal Bulls to maintain their Titles, in which Point the Handkerchief of Cadoin has the Preference, being authorized by no lefs than fourteen Bulls, whereas that of Turin has only four:
12. Since we are going to leave Itoly, I have a Mind to entertain you with fome Obfervations, which I had not the Opportunity to infert in any of my former Letters. Our fhart Stay in the Places through which we paffed, would not fuffer us to fpend much Time in making Acquaintance with the People of the Country : and confequently, we could not be fo particularly informed of their Cuftoms; neither do I intend to enter on that Subject, but only to communicate fome Remarks to you, without any other Order than as they fhall
offer
offer themfelves to my Memory. I could not give you an Account of thofe Academies of the Virtuof 2 , that are eftablifhed in almoft all the Towns in Italy, becaufe I had not Time to enquire particularly about them; but if I may give Credit to the Information I received from feveral Perfons, they are certainly, notwithftanding the Noife they make about them, but very inconfiderable Societies, as I have intimated before. The affected Oddnefs of their Titles are very whimfical, they are not much unlike the Names which the Grooms in France and England give to their Horfes. I fhall only mention a Dozen of them. Thus the Academifts of Genoa call themfelves Addormentati, i. e. Drowefy; thofe of Naples, Ardenti, i. e. Burning ; thofe of Alexandria, Immobili, i. e. Immovable; thofe of Rome, Fantaftic and Humorifti, i. e. Fantaftical or Humurous; thofe of Viterbo, Ostinati, i. e. Obfinate; thofe of Siena, Intronati, i.' e. Giddy-beaded, or Block-beads; at Peruja they ftile themfelves Infenfati, i. e. Mad; at Parma, Innominati, i. e. Harmlefs ; at Bologna, Otiof, i. e. Idle; at Milan, Nafcofi, i. e. Conccaled; at Ancona, Caliginati, i. e. ObScure and confufed; at Mantua, Invagbiti, i. e. Eafy or Pliable; and at Macerata, Catenati, i. e. Cbained. I perceive I have skipped from Place to Place without any Order, but that is not material in a Thing of this Nature.
We were treated with a great deal of Civility and Kindnefs by the Italians, as far as we could judge by outward Appearances; but to deal plainly, their Complaiiance is a Mixture of Flattery and Defign. We found alfo by Experience, that the People of this Nation are very fober. The Inns in the little Towns, ef pecially on certain Roads, are very ill furnifhed with Provifions. The firt Courfe they call the Antipasto, is a Difh of Giblets boiled with Salt and Pepper, and mixed with Whites of Eggs ; after which Courfe, comes two or three fmall Difhes, one after another, of different Ragous. Between Rome and Naples the Traveller is fometimes regal'd with Buffaloes and Crows. Some Hiftorians relate, that the firtt Buffaloes that were feen in Italy, were brought thither Anno Dom. 595 ; the 'Buffaloe's Flefh is black, ftinking, and hard; there are none but the moft beggarly $\mathcal{F}$ eres at Rome who eat it, and the Beaft muft be hunted, otherwife it is impoffible to chew its Flefh. They have all the various Kinds of Wine in Italy, but the beft Sorts are fcarce. About Rome there is the Wine of Genfano, Albano, and Cafle Gandolfo, in which Places the Soil is the fame the Greco of Naples and the Lacryma Cbriftiare ftrong, but the fmall Afprino bianco, and the Cbiarello piccante, feemed more agreeable to our Tafte, though they are much lefs efteemed. At Florence and Montefiafone the richeft Wines are pleafant, and have no more Fire than what is convenient for ordinary Drink; but there is no great Quantity of them. The Great Duke's delicate Mofcadello grows in a little Vineyard, and is confecrated to his own Ule, or to be fent as Prefents, but never difperfed through the Country. There are alfo fome good Sorts of Wine near Verona, and in the State of Genoa. About Loretto the Casks are made fhort and broad, like a Dutch Cheefe, but towards Pavia their Length is about feven Times their Diameter. Towards Parma and Placentia, where there are excellent Paftures, they make Cheefe of all their Milk. Butter is fcarce in Italy, inftead of which they ufe Oil in all their Ragous and Fricafies ; but though they draw it from their own Olive-trees, it is oftentimes worfe than in thofe Countries where none of thefe Trees grow; for what will yield the Price and keep longeft is always tranfported for the Sake of Gain, We have not feen the chief Seafon for Fruit in this Country. At Venice, where we ftaid two Months in Winter, we had white Grapes of Bologna, very firm, and of a moft delicious Tafte. At Naples we eat Winter Melons, and at Genoa we were entertained with all Sorts of fmall Fruits, and I never faw fo good and large Cherries as there. The Riviera di Genoa is peculiarly famous for excellent Fruit; it may be truly faid of Genoa, thait its Hills are without Wood, but all the reft of the Proverb is falle, Men woithout Feith, Ladies weithout Sbame, ond Sea weitbout

Fifbes. There are both Rogues and honeft Men every where, and we found by Experience, that there are very good Fifh in the Sea of Genoa. I took Pleafure two or three Times to go in the Morning to fee the Fifh-market at Naples, Venice, Aucona, and Legborn, and other Places, where I obferved feveral Sorts that I had never feen in other Places. The Gulph of Cajeta abounds with Sturgeon, fome of which are alfo found in the Tiber ; it is excellent when roafted frefh.

In all our Travels through Italy, we never faw either a Hare or Partridge in the Fields; and I might alfo add, we faw as few in the Inns. It is very ftrange, in my Opinion, that thefe Animals are not more plentiful, fince the Country is not wholly deftitute of them. There are large Extents of Ground in Italy, which are almofs uninhabited, and confequently ought to abound with Game, proportionable to the like Places in the reft of the World. And again it might be reafonably fupfuppofed, that the Game thould be more here than in other Places, becaufe the Lords of thefe Grounds are never wont to refide on them, and yet are no lefs jealous of their Rights than the Gentlemen of other Countries. In England and France, there are many Perfons of Quality who pafs their Time in the Country, but that is not the Cuftom in Italy, where all Perfons of Note live in the Cities, out of which there are no Caftles or great Houfes to be feen, which belong to private Perfons, or at leaft they are very rare, efpecially if we compare this Country with France and with England. To return to our Game; it muft be acknowledged, that Quails are not fo great Rarities here as Partridges, for on the Approach of Spring they come in Bevy's from Africa and cover the whole Country. Thefe poor little Creatures are fo tired with their long Paffage, that they throw themfelves into Ships, and where-ever they can find a Place to repofe themfelves. They may be caught in Heaps withour the leaft Trouble; but fince they are extremely lean, they who take them ufually feed them, for fome Time, before they eat them. I believe it is a Queftion nor yet refolved, whether thefe Birds fly over the Sea at one Flight, or wherher they do not fometimes fwim to take Breath? It is indeed hard to conceive that the Quail, which has not a ftrong Wing, and flies heavily, ihould be able to continue its Flight fo long. But on the other Side, I am inclined to believe, that the Water would fo moitten and drench the Feathers, that it could never fpread its Wings again; and befides, its Leannefs and Wearinefs, the Dangers to which it expofes itfelf, and its Eagernefs to find a Refting-place, are, in my Opinion, convincing Arguments, that it fies all the Way without Intermiffion, though, it muft be confeffed, this Notion is fubjeet to Difficulties.
I faw but one Scorpion in Italy, and I could not learn that thefe Animals are very mifchievous in this Country: There are feveral Ways to guard againft them ; but I never faw any of thofe hanging Beds that are ufually talked of as common there. The People about Verona make Ufe of Iron Bedfeads, which they place at fome Diftance from the Walls, that thofe Infects may neither breed in them, nor be able to come upon the Beds, and the Feet of the Bedfteads are filed and polifhed for the fame Reafon. If the Animal iffelf can be caught and bruifed, on the Part which it ftung, it is a certain Remedy; and there are alfo Salts and Oils extracted out of it, which produce the fame Effect : But after aii, the Stinging of Scorpions is not mortal in Italy; and befides, fuch Inftances happen fo very rarely, that they who are defirous to travel into that Country, ought not be difcouraged by them. There are two Sorts of Animals to which the Italians give the Name Tarantula; one is a Sort of Lizard, whole Biting is reputed mortal ; it is found efpecially about Fondi, Cajeta, and Capua: But this is not that, which other Nations call Tarantula. The true Tarantula is a Spider, and lives in the Fields; there are many of them in Abruzzo, Calabria, and they are alfo found in fome Parts of Tufcany. Such as are flung by this Creature, make a thoufand different Geftures in a Moment; for they weep, dance, tremble, laugh, grow pale, cry, fwoon

## Chap. III.

Greatel Part of Italy.
away, and, after a few Days of Torment, expire, if they be not affifted in Time. They find fome Relief by Sweating and Antidotes, but $M u f f i c k$ is the great and fpecifick Remedy. A learned Gentlemen of unqueftionable Credit told me at Rome, that he had been twice a Witnefs both of the Difeafe and of the Cure. They are both attended with Circumflances that feem very ftrange ; but the Matter of Fact is well attefted, and undeniable. I think I could produce natural and eafy Reafons to explain this Effect of Mufick; but without engaging myfelf in a Differtation that would carry me too far, I fhall content myfelf with relating fome other Inftances of the fame Kind: Every one knows the Efficacy of David's Harp to reftore Saul to the Ufe of his Reafon. I remember Leweis Guyon, in his Lefons, has a Story of a Lady of his Acquaintance, who lived one hundred and fix Years without ever ufing any other Remedy than Mufick; for which Purpofe the allowed a Salary to a certain Mufician, whom fhe called her Phyfician; and I might add, that I was particularly acquainted with a Gentleman, very much fubject to the Gout, who infallibly received Eafe, and fometimes was wholly freed from his Pains by a loud Noife. He ufed to make all his Servants come into his Chamber, and beat with all their Force upon the Table and Floor; and the Noife they made, in Conjunction with the Sound of a Violin, was his Sovereign Remedy. Highway Robbers (about which Reports prevail fo ftrongly) are not more frequent or dangerous in this Country, than Scorpions or Tarantula's, for there have not been any Banditti at Rome fince the Pontificate of Sixtus V. And I think I told you, that the Marquis del Carpio hash extirpated them out of Naples. I do not remember that ever any Perfon was put to Death in all the Places through which we travel'd, during the Time we ftaid in them. There is not a City, perhaps, in the whole World, where Executions are fo rare as at Venice. They who are under the Patronage of a Nobleman, which is a Thing very eafily obtain'd, may do what they pleafe ; only they muft take Care never to commit a Villany in a publick Place, or that may make too great a Noife. At our Entry into moft Cities our Pittols were taken from us; but we always found them at the other Gate at our Departure. This is a troublefome Thing, for at the End of the Voyage the Charge amounts to as much as the Piftols are worth. It is not lawful to wear Swords either at Genoa or Lucca, but that Privilege is readily granted to Strangers, when they defire it ; and both this and the former Cuftom are daily declining, fo that, in all Probability, they will be very foon out of Date.
The Bayonet is prohibited in Cities, but in the Country every one may wear what Arms he pleafes; and even thofe who travel on Horfeback, oftentimes carry Fufees. The Stiletto's of Milan are famous, for they do their Work effectually. Love and Jealoufy are the two Furies that fhed moft Blood in Italy. The Italians are faid to be jealous without Reafon, and the leaft Sufpicion puts them into a Fit of implacable Rage. Not only at Venice, but every where elfe, the Girls are fent to Nunneries in their Infancy, and they are ufually married, or at leaft contracted, without feeing their future Husbands; the Girls of the loweft Rank are fuffer'd to remain with their Parents, and for that Reafon it is not without much Difficulty that they are able to find Husbands. I am not fo well acquainted with the Cuftoms of other Places, but at Rome there are feveral Funds eftablifhed, either to marry poor Maids, or to confine them for ever to a Convent. There Charities are diftributed with almoft the fame Ceremonies that are obferved at the Minerva, which I defrribed. I obferved in the Churches at Rome, that in Lent the Women hearing Sermons, are fhut up in a Place under che Pulpit, with an Inclofure of well-joined Boards fix Foot high. There are feveral Trees and Plants in Italy, which grow neither in England nor, for the moft part, in France, unlefs perhaps in the Southern Parts of it. The Palm-tree is a Stranger in Italy, and rarely bears Fruit there. In the Garden of Simples at Pifa, there is a Male and Female Palm-tree planted together,
agreeable to the ancient Error of thofe who thoughe fuch a Marriage was neceffary to make thofe Trees fruitful. But this is a meer Fable, for I obferved a Palm-tree alone full of Dates at the Villa Madome on Mount Mario at Rome. We went to the Pope's Chapel on Palm Sunday, where all the Cardinals were affembled; and he who officiated for the Pope, prefented a Palm Branch to every one of the reft. Thefe Branches were almoft five Foot long, and the Leaves were woven together into Knots of feveral Figures with great Art. We faw that which was fent to the Pope. All the Prelates and other Ecclefiafticks had alfo Branches ${ }_{\text {s }}$ which were either greater or fmaller, according to the Dignity of thofe who bore them ; the Laicks ufe only Olive Branches. In M. Badouer's Garden at Verona, there are Cyprefs-trees an hundred Foot high, and two hundred Years old; the Citrons of Florence, called Cedratti, are the moft excellent of all this Kind of Fruit. Silk-worms were brought into Italy from Fapan and Cbina. I have already told you, that we obferved feveral Sorts of Trees commonly planted in the Ground in Italy, which they are forced to put into Pots or Boxes in the colder Countries, that they may carry them in Winter into Green-Houles, to preferve them from the Rigour of the Seafon. Such are the Orange-trees and Lemon-trees, the Pomgranatetrees, the Olive-trees, the Myrtles, the Ficus Indica, the Caper-trees, and many others. They have commonly alfo the Plane-tree, the Cork-tree, the Scarlate Oak, the Jujub-tree, the Carob-tree, Cyprefs, Sena, Lentisk, $\xi^{\circ} c$. The Roads are lined, in feveral Countries in Italy with white Mulberry-trees, for the Nourifhment of Silkworms. Thofe, who love Simples, will find enough to gratify their Curiofity on the Appernine Mountains between Loretto and Rome, and every where in the Alps, but they muft have more Time than we had.
I gathered certain Sorts of Sponges on the Sea-fide towards Terracina, of which, two were in a Manner rooted on very hard Flints, the reft lay loofe on the Shore. There Sponges put me in Mind of Pumiceftones; and I muft not forget to tell you, that I fpent fome Time to no Purpofe, in fearching for thofe Stones on Mount Vefuvius, though it is generally faid, and even by very learned Men, to be full of them. This is a very grear Miftake, there are indeed many porous and calcined Stones, which have fome Refemblance to Pu mice-ftones, but the Difference is foon perceived, tho ${ }^{\circ}$ Pumice-ftone is a Production of Nature, and it is fo far from being true that they are made fo by the Fire of Vefurius, or any other, that fuch a Fire wauld certainly deftroy them, as ir deftroys all ocher Subftances that are within its Reach. Over-againft the Cape of Mycene there is a little Inand where thofe Stones grow. When the Sea is agitated by a Storm, it loofens and carries away fome of them that are fwimming, and the Wind drives afhore a great many fmall Pieces between Puzs zola and Cuma, efpecially towards Baja, where I have gathered fome that were very fine. You may then be aflured, that there are no Pumice-ftones to be found about Vefuvius, and that all that you have read about it in the Books of Travellers and Naturalifts, oughs to be Ireckoned among the groffet popular Errors. The Mountains of Italy and particularly the Apennine Hills, abound with Metals, Mineral Waters; Cryftal, Alabafter, a Kind of Agate, and feveral Sorts of Marble, but the Marble of the Arcbipelago has brighter Co. lours. The white Marble of Cararo is one of the fineft Sorts in Italy, and a great deal of it is tranfported to France. The Winter had been very long and fharp, almoft all the Oranges and Citrons were frozen, and the Ground under the Trees was covered with them in the above-mentioned Places, where thefe Fruits are moft common.
I obferved that they take a great deal of Care at Rome to preferve themfelves from the Inconveniencies occafioned by the Heats which are ufually very troublefome in that Place. The People of Quality have low Apartments, where the Sun never appears, which are paved with Marble, and furnifhed with Fountains and Water Spouts; and befides, the Doors and Windows
are fo contrived, that they are never without a kind of cool Breeze. The Beds are encompaffed at fome Diftance with a Curtain of Gaufe or Tiffany, which is joined clofe to the Boards of the Floor and Cieling above and below, and hinders them from being tormented with Gnats. It is alfo the Cuftom to fleep two Hours immediately after Dinner, but they never lie down, for they have a Sort of folding Chairs which have Backs that rife and fall with a Spring. The Ufe of Umbrello's is common every where. The Serain, or Evening Dew, in the Campagna di Roma, is efteemed mortal during three or four Months in the Summer, and great Care is taken to avoid it. Travellers double their Pace to arrive at Rome in Time, or ftay at the Diftance of eighteen or twenty Miles from it. I found the following Verfes over the Gate of a Houre at Rome; they contain the Rules that ought to be obferved for the Prefervation of Health in that City, according to the Opinion of the Author.

## Enecat infolitos refidentis Peffimus Aer

 Romanus; Solitos non bene gratus babet.Soppes ut bic vivas, lux Septima det medicinams Abjit odor fadus; fat modicufque labor.
Pelle Famam \& Frigus, Fruitus, Femurque relinque, Nec placeat gelido fonte levare Jitim.

## That is,

The poishous Air of R O M E, all Strangers fear, Nor wobolly fafe e'en thofe eftablifs'd bere. Would'gt thou efcape? Take Pbyjck once a Week, Ill Smells avoid, nor too much Labour Seek.
Fly Hunger, Cold; from Fruit, from Females, Ay, Nor taste Spring Water, -if you do-you die.

You may obferve by the Way, that the Author chofe rather to run the Hazard of a falee Quantity, than to lofe the Jingle of his four $F$ 's; he might have faid Venerem inftead of Femur, the firt Syllable of which is fhort. I have not given you an Account of the Antiquity of feveral Cities, though Enquires of that Nature are fometimes curious; but befides, that they require a great deal of Time and Labour, and have been profecuted already by very able Pens. I find that thefe Contioverfies are very often Queftions only about the Places where thofe Cities ftood, for in many of them there is not the leaft Remains, or any Proof of their firit Foundations. They have been fubject to the fame Alterations which the Veffel of the Argonaunts underwent of old; befides, the Sight of the Places might perhaps raife a Traveller's Curiofity, but wears off by Degrees when they are only the Objects of his Imagination. I muft tell you now I chink on'r, that in all Italy we obferved but one Windmill, or rather the Ruins of one, at Legborne. They ufe no Tin Veffels in this Country, becaufe of the Scarcity of that Metal ; all their Veffels are made of Earth leaded, or of Earthen Ware; we have feen it made in feveral Places, but they have none that refembles Cbina fo exactly as that of Delft. Whereas we place the Beginning of the natural Day immediately after Midnight, the Italians make it begin after Sun-fetting, and their Clocks ferike always four and twenty Hours, from one Sun-fetting to another. You may eafily perceive, that according to this Computation the Hour of Noon varies daily, for when the Sun fets at Four $0^{\prime}$ Clock according to our Calculation, chey reckon One when we count Five, and confequently it is Noon at twenty Hours ; and in, like Manner when'the Sun fets at Eight on our Dials, it is One $0^{\circ} \mathrm{Clock}$ with them when we reckon Nine, and it is juft Noon at Sixteen Hours. Neverthelefs, with refpect to the artificial Day between Sun-rifing and Sunréting, they ufe the Words Yefterday and To-morrow as we do. The Bobylomians began their natural Day at Sun-rifing, and the feros at Sun-fetting, as the Italians do at prefent. The Inhabitants of the Province of Umbria, with Ptolemy, and fome others, in former Times, reckoned the Beginning of the Day at Noon, and the Egyptians at Midnight, as we do. The ancient Romans allo began the Day at Midnight, but their Hours are
unequal. I cannot forbear acquainting you, that we left Rome without feeing the Pope; there were, doubte lefs, fome Reafons, that would not permit him to appear in Publick: and there were others that hindred us from paying him a Vifit. I thall conclude this Account with telling you, that we bought fome modern Medals at Rome from the famous Homeranus, who is reputed to excel in that Sort of Workmanfhip. Of all the Me dals we faw of Queen Cbrifina, this, in my Opinion, is the mof heroical, and moit worthy of that great Prin. cefs. Her Dominions are on the Reverfe, with the whole Hemifphere, and this Motto, Ne mi befogna ne mi bafta, I don't want them, and they are not fufficient to mie. Alexander the Great could ufe the laft Part of this Motto, but inftead of reigning over himfelf, his Ambition made him defire more Worlds.
15. The Account we have of our Author's Voyages, contains alfo the Hiftory of his Return through Swifferland, Part of Germany, and the Low-Countries ; but as we have a much better Defcription of thofe Countries by Bifhop Burnet, who without Queftion had his Head better turned for writing upon fuch Sebjects, and for giving his Readers ufeful and important Relations, rather than a bare Detail of Roads, Churches, Inns, Tombs, and Infcriptions, we have chofen rather to omit the Remainder of his Travels in Hafte through thefe Places, and to give thofe of that learned Prelate, who though he was the Author of many Books, upon a great Variety of Subjects, all of which have been received with Applaufe, at leaft by a great Part of the World, yet perhaps there are none of them that will do him greater Honour with Pofterity than the Letters he publifhed containing the Account of his Travels.

But before we part entirely with Mifon, it may not be amifs to make fome few Obfervations upon his Writings, for the Sake of doing Juftice to Truth, to our Readers, and to his Reputation. It muft be confefs' $d_{2}$ that there are a great Variety of curious, ufeful and entertaining Remarks to be met with in his Travels, and that as his Defign was to render them as ufeful as poffible to the World, fo the Pains he took for that Porpofe were very great and very laudable; but on the other Hand it muft be alfo allowed, that his Method is very far from being fo juft or fo judicious as might be wifhed.
The Reader will eafily obferve, and, indeed, he confeffes it himfelf, that he made but a very fhort Stay in many Places; but then he vifited many of thofe Places afterwards, which gave him an Opportunity of enlarging; altering, and correcting thofe Obfervations; but then the Method in which he has done this is alfo none of the beft, for inftead of reviewing and reforming his firf Book, he has inferted new Letters, Supplements, Differtations, critical Difcourfes, and perpetual marginal Notes; which fo diftract and difturb the Narration, that one is frequently obliged to run over his whole four Volumes, in order to draw together his difperfed Accounts of the fame Thing.

We have removed, as far as it were in our Power, this Difficulty in the Abridgment we have given of his Travels; but without Doubt it would give a great $\mathrm{Sa}_{\text {a- }}$ tisfaction to the Publick, and add very much to the Value of this Work, if, in the next Englifh Edition of it, Care was taken to digeft the Whole into Chapters rather than Letters, to bring the feveral Notes, Differtations and Supplements into their proper Places, and to throw out all the unneffary Repetitions, which would at once reduce the Size, augment the Credit, and add to the Utility of the Book, which would be then much fuperior to any Thing of its Kind.

We have already obferved, that in the Author's Lifetime his Book had been attack'd by feveral Writers, againft whom, however, he defended himfelf with equal Spirit and Succefs; and where-ever he found himfelf in the Wrong, he took Care immediately to correct it. There were, however, fome Things in his Difpofition, which led him to write upon fome very tender Subjects, not to be touch'd even by the niceft Hand, without giving Offence to great Bodies of People: As for Inftance, his laying open the fuperftitious

Follies

## Chap. III.

Follies of the Papifts, the Artifices of their Priefts, the Credulity of the common People, and the Injuries done to the Chriftian Religion by fuch Practices on the one Hand, and Bigottry on the other.
He has been condemned for this as a very partial Writer by the Romanifts, which is natural enough, but he has not been refuted. It is no Wonder at all, that in the Reign of King Fames II. when the Papifts thought themfelves fecure of reviving their Religion in England, Men firmly attached to the Proteftant Caufe fhould likewife fhew their Zeal; and it was ftill the more excufable in Mr. Mi Con, as he had been very lately banifh'd out of his native Councry on the Score of Religion. The learned Father Labat cannot forgive him the Pains he has taken to reftore the Credit of the Pope or Popefs Foom. He fays very truly upon that Subject, that feveral learned Proceftants have given it up befides David Blondel, fuch as Cbamier, Du Moulin and Bocbart: But what then? Can there be a clearer Anfwer given to this than that which Mr. Miffor has given, viz. That this Story was written and believed for many Ages by the Papits themfelves? We may add to this, that it would be no difficult Task to fhew, that fome very learned Papifts ftill believe it.

Mifon has very honeftly and very ingenuounly confeffed, that the Fact is of no great Importance with refpect to any religious Difpute; and furely this was as much as could be expected from him, and is a very great Mark of his Impartiality.. With regard to his Arguments, there has been little or nothing faid againft them; and I am perfuaded that it would be a very difficult Matter to overturn them. The fame Writer, I mean Father Labat, is very angry with him about the Sella fercoraria, or Clofe-ftool Chair, but he does not contradict him with refpect to the Feet, he only fays it is a Kind of Clofe-ftool, and that the Ufe of it was to put the Pope in Mind that his Exaltation to that Dignity did not releafe him from the Infirmities incident to human Nature. This he gives us as his Opinion, and a very probable Opinion it is, but I do not fee why Mifon was not as much at Liberty to give us his Sentiment upon the fame Subject, more efpecially as he gives his Authorities, which very plainly prove, that what he thought upon this Point was once the common Opinion of the Romanifts themfelves, and therefore it is hard to affign a Caufe for blaming him upon this Head.

It muft however be obferved, that Labat, in many other Places, commends the Travels of Mifon, and is only in Pain, that an Author who wrote fo well, fhould treat various Subjects in fuch a Manner, as to expofe the Caufe which he found himfelf bound to efpoufe, and at the fame Time he has himfelf taken the Liberty to treat very freely the ridiculous Superftitions of the Italians; and if with all his Refpect for their Faith he has ufed this Freedom, one cannot help being furprized that he fhould take it ill, that a Proteftant Writer carried his Remarks a little farther, and much more that he flould charge him with Impiety, fince throughout his whule Book there is Nothing that has the leaft Tendency that Way; and upon many Occafions he fhews himfelf very ready to refure vulgar Prejudices, and to do Juftice to the Papits. As for Inftance, he allows that they are very far from having a Spirit of Perfecution in Italy, and that he never knew them carry their Refentment farther againft Proteftants, than faying they were not found Chrifians.

The Hiftorical Remarks he has given us are, genesally fpeaking, very correct as well as curious, though now and then he falls into Miftalkes ; as for Example, when he fays that Francfort has an Univerficy erected by the Houfe of Brandenbourg, he is fpeaking there of Frencfort upon the Maine; but the Univerfity he means is at Francfort upon the Oder. It is no Wonder at all that in fuch a Multitude of critical Remarks, he fhould now and then be guilty of an Overfight. He retained all his Life a fincere Love for his Councry, which difcovers iffelf frequently in his Writings, more efpecially in preferring the Palaces and Gardens of Fiance to thofe of Italy. There might, perhaps, in this, be a little Partiality, and yet, generally fpeaking, he is in the right, and the
VOI. II. Numb. Iog.

Noife which the Italians have made about the Wonders that are to be found in their Country, might well enough deferve the critical Remarks he has made upon them;
As for his Digreffions with Refpeet to Natural Hiftory, they may very well be tegarded as the moft curious Pieces in his Work, and are fo allowed to be by the beft Judges. His Conjectures in relation to the Formation of Shells in Mountains; and other Places at a Diftance from the Sea, are very judicious as well as highly probable. We may fay the fame Thing with regard to the Curiofities of this Country, and particularly what he has inferted in Relation to the Tarantula, about which however there have been very warm Difputes; but he lays down nothing but from Authority, and therefore is not at all interefted in the Event of thofe Difputes, fo that his Character cannot fuffer in the Judgment of the Learned, however they may be at laft determined.
As he mentions only fuch Curiofities as came in his Way, and he had an Opportunity of vifting; examining and enquiring, we need not wonder at his Silence as to many curious Particulars. As for Example, that we may conclude this Section with fomething more entertaining than dry Remarks, let us mention one, Grotz ta dei Serpi is a fubterraneous Cavern, near the Village of Saffa, eight Miles from the City of Braccano in Italy, defrribed by Kircber thus:

The Grotta dei Serpi is big enough to hold two Perfons; it is perforated with feveral fiftular A pertures, fomewhat in the Manner of a Sieve, out of which, at the Beginning of the Spring Seafon iffue a numerous Brood of young Snakes of divers Colours; but all free from any particular poifonous Quality. In this Cave they expofe their Lepers, Paraliticks, and elephantiack Patients, quite naked, where the Warmth of the fubterraneous Steams refolving them into $S$ weat, and the Serpents clinging varioufly all around, licking and fucking them, they become fo thoroughly freed of all their vicious Humours, that upon repeating the Operation for fome Time, they become perfectly reftored.

This Cave Kircher vifited himfelf, and found it warm, and every Way agreeable to the Defeription given of it: He faw the Holes, and heard a clamerous hiffing Noife in them, though he miffed feeing the Serpents, it not being the Seafon of their creeping out; yet he faw a great Number of their Exuvice or Sloughs, and an Elm growing hard-by laden with them. The Difcovery of this Cave was by the Cure of a Leper going from Rome to fome Baths near this Place, who lofing his Way, and being benighted, happened upon this Cave, and finding it very warm, pulled off his Cloaths, and being weary and fleepy, had the good Fortune not to feel the Serpents about him, till they had wrought his Cure.

One might fufpect, that our curious Traveller had not heard of this Curiofity, which, by the Way, is now totally loft, and loft by the ftrangeft Means in the World, otherwife one could hardly think he would have omitted .it. But we will repair that Miftake from the Works of his Antagonift Father Labat, who travel'd through Italy twelve or fourteen Years later than Miffon, and vifited this Cave in Perfon; but it had then loft its Virtue and its Serpents, as he affures us in the following Manner.

It was found neceflary, in order to difpofe the Patients quietly to endure the Operation neceffary to theie Cure, to compofe them by a Dofe of Opium, and, for this, Recourfe was had to the Phyficians, who perceiving that their Bufinefs was much leffened by this new Method, fo that $/$ feulapius was in Danger of being devoured by his own Serpent, they refolved to outdo the Cave, and to prevent fuch Patients from having any Difeafes for the Future. In flort, they gave fo much Opium to their Patients that were fent to the Groto, that they not only lay fill for a Night, but for ever.

This Scheme, though well laid, did not take, the People continued obftinate, and were refolved rather to truft the Serpents than the Doctors. They took therefore their Opium at home, and the Cures were as frequent and as effectual as ever. The Phyficians had then

Recourfe

Recourfe to a new and more fuccefsful Contrivance than the former ; they had in vain tried to keep the People from the Serpents, they refolved to try next, whether it might not be poffible to keep the Serpents from the People : And with this View, in the Midft of a dry Summer, they caufed the Bufhes to be fet on Fire that grew upon the Mountain, by which that Generation of Serpents was totally deftroyed; and the Grotto has remained uílefs ever fince.

Let us now take Leave of this Subject, and of the Travel of Miffon, obferving only, that in a fubfequent Voyage of his, he had the Misfortune to be taken by a French Privateer, and carried to Dunkirk, where he fuffered a fevere Imprifonment, chiefly on the Score of his being a Proteltant, and having on that Account, as
we oblerved before, been banifh'd France. Bur his Friends having applied themfelves to the King on his Behalf, he was immediately fet at Liberty, which contributed not a little to confirm that high Spirit of Loyalty with which he had been poffefled, and of which he has left abundant Teftimonies in his Works, by defending, as much as in his Power lay, the Character of Lewis XIV. for though he could not prevail upon himfelf to be a good Catholick, yet a better Frencbman or a better Subject that great Monarch had not in all his Dominions; which is a plain Proof that Lervis XIV. with all his Policy, ferved the Priefts much more than himfelf or his Family, in driving fo many Thoufands of Proteftants out of his Territories.

## S E C TIO N IV

Travels through Swifferland, Part of Italy, fome Provinces of Germany, and the Low-Countries, in which are contained many curious Hiftorical and Political Remarks on the Manners of the People, the Forms of Government, and the State of the Countries before mentioned.

Extracted from the Letters of Doezor Gifbert Burnet, (afterwards Bihop of Salisbury) to the Honourable Robert Boyle, Efq; written in the Years 1685 , and 1686.

1. The weretched Condition of the Country between Paris and Lyons; Antiquities obfervable in thofe Parts, with fome literary and critical Remarks. 2. A large Defoription of the City of Geneva, of the Manners and Cuffoms of the Inbabitants, and of the Form and Maxims of Government in that little Republick. 3. A Defiription of the City and Canton of Bern, the Manners of its Inbabitants, their Ricbes and Induftry, the Modefty of their Women, and the martial Virtues of their Men. 4. The Reafons which induced the Swifs to overlook the Conqueft of the County of Burgundy by the French, which bas proved 10 much to their Detriment. 5. The Hiftory of the War between the Proteftant and Popih Cantons in the Year 1656, and the Means by which thofe Dijputes were compromifed. 6. A mof curious and entertaining Account of the fcandalous Cheat and Impofure of the Dominicans at Bern in 1509. 7. A Comparifon between the Country of France and that of Swifferland, with fome $R e-$ marks upon the Government in both Countries, Jewoing that Tyranny reill turn a Paradije into a Defert, and Liberty convert a Wildernefs into a Land of Plenty. 8. Of the miferable Bigottry of the People in the Popifs Cantons, from the Number of the Jefuits and Monks, and of their immenfe Wealth in thofe Countries. 9. Of the Canton of Zurich, its Wealth, Forces, Manufactures, Trade, Frugality in the Adminifration of Publick Affairs, and otber Particulars. 10. Some general, ufeful and entertaining Remarks on the State of the Swifs Cantons, and a full Difplay of the pernicious Spirit of Popery. II. A Defcription of the Country of the Grifons, with an Account of the City of Coire, and of the Character of the Bihbop at that Time. 12. A difinct View of the Government of the Grifons, the Manner of their obtaining their Liberty, the Divifion of their Country, and of their Diets. I3. Of the Valteline, Chavannes, and Bormio Territories which they poffers in Italy, and bore they obtained them; with an Account of the Fertility of the Soil in the Valteline, and of the Liberty that thofe DiAricts enjoy under the Leagues. 14. Of the Maffacre in the Valteline, of the War that followed it, and of the State of that Country. 15. Of the Remains of the ancient Waldenfes, the true Cbaracter and religious Sentiments of the People fo called. 16. Of Chavannes, with an Account of the moft obfervable IFillages upon the Road, of its Situation, the Fertility of the Soil, Eafnefs of the Government, Plentifulnefs of Provifions, with an Account of the Nature of their Wine, and the Manner how they make and preferve it, with otber Particulars. 17. Some other Curiofities in this Part of the Country, togetber with an Account of a Town and all its Inbabitants overwbelmed by the Fall of a Mountain. 18. A Defcription of the Borromean Iflands, effeemed beyond Comparifon the mof beautiful Part of Europe. 19. A large Account of Lombardy, and the City of Milan, with many curious Obfervations made by the Autbor during bis Stay in thofe Parts. 20. A Collection of ufeful, judicious, and entertaining Remarks on feveral Parts of Italy, in which Care is taken to avoid repeating any thing contained in the former Section. 21. The fame Subject continued in relation to other Parts of Italy not bitberto mentioned. 22. Conclufion of thofe Obfervations and Remarks, comprebending the Cbaraczers and Hifories of feveral remarkable Perfons, zeritten with great Impartiality and Freedom. 23. A Defcription of Marfeilles, and Jome Reafons given for the extenfive Commerce and great Wealth of that Port, in Comparifon of any other in Frauce. 24. Some other Objervations on the Country tbereabouts. 25. De-
foription of the Towon of Bafil, the Places mofer worthy of Notice there, togetther with the Manneers. Cuifons, and Government of the Inbabitants. 26. An Account of Huningen, Brifac, and Strasbourg, weith a particular Account of the Mainer in wobich the French made themjelves Maflers off this laft mentioned City. 27. An Account of the Fortrefs of Phillipsbourg, and its great Importance to the Empire. 28. A Defription of the City and BiJboprick of Spire, and of the Cointry thereabouts. 29. A large, difinct, and entertaining View of the Lower Palatinate, of the famous City of Heidelberg, and the Hifory of fore of the Electors Palatine. 30. The pleafant and delight full Country Betwien the laft mentioned City and Francfort; weith otber Remarks and Objervations. '31. The 'like Defcription of the City and Electorate of Mentz, with a clear Account of the Revenuies, Strenigth, and Trade of that Country. 32. Alarge and curious Account of the City and Electorate of Cologne, of the Cities of Duffeldorpe, Keyferfwart, and Wefel. 33. Obfervaitions made by the Autbor in bis Yourney tbroug't the Dutchy of Cleves, the Town of Nimeguen, and other Places in the Low-Countries.

TT is fo common to write Travels, that for one who has feen fo little, and as it were in Hafte, it may look like a prefumptuous Affectation to to be reckon'd among Voyagers, if he attempts to fay any Thing upon fo fhort an Excurfion, and concerning Places fo much vifited, and which are confequently fo well known : Yet having had Opportunities that do not offer themfelves to all that travel, and having join'd to thofe a Curiofity almoft equal to the Advantages I enjoy'd, I fancy it will not be an ungrateful Entertainment, if I give you fome Account of thofe Things that pleafed me mott, in the Places through which I have pafs'd. But I will avoid faying fuch Things as occur in ordinary Books, for which I refer you to them. For as you know that I have no great Inclination to copy what others have faid, fo a Traveller has not Leifure, or a Difpofition fuited for fo dull an Employment.
As I came all the Way from Paris to Lyons, I was amaz'd to fee fo much Mifery as appear'd, not only in Villages, but even in big Towns, where all the Marks of an extreme Poverty fhew'd themfelves both in the Buildings, the Cloaths, and almoft in the Looks of the Inhabitants ; and a general difpeopling, in all the Towns, was a very vifible Effect of the Hardhips under which they lay.

I need tell you Nothing of the irregular, and yet magnificent Situation of Iyons, of the noble Rivers that meet there, of the Rock cut from fo valt a Height for a Prifon, of the Cartbufians Gardens, of the Townhoule, of the Fefuits College and Library, of the famous Nunnery of St. Peter, of the Churches, particularly Sc. 'Irenee's, of the Remnants of the Aqueducts, of the Columns, and the old Mofaick in the Abbey Dene.
The Speech of Claudius, engraven on a Plate of Brafs, and fet at the End of the low Walk in the Townhoufe, is one of the nobleft Antiquities in the World, by which we fee the Way of Writing and Pointing in that Age very copiounly. The Shield of Silver of twenty two Pounds Weight, in which fome Remains of Gilding do yet appear, and that feems to reprefenc the generous Action of Scipio, in reftoring a fair Captive ro a Celiberian Prince, is certainly the nobleft Piece of Plate that is now extant; the emboffing of it is fo fine and fo entire, that it is indeed invaluable; and if there were an Infcription upon it, to put us beyond Conjecture, it were yet much more eftimable.
A great many Infcriptions are to be feen of the late and barbarous Ages, as Bonum Memorium, and Epitapbium bunc. There are twenty three Infriptions in the Garden of the Fatbers of Mercy, but fo placed, as thew how little thofe who poffefs them either underftand or value them. I fhall only give you one, becaufe I made a little Reflection on it ; though perhaps not too well grounded, becaufe none of the Criticks have confider'd it. The Infeription is this:

## D. $M$.

Et Memaric Eterna
SUTI EANTHDIS, Que vixit amnis xxv. M.XI.D.V. Que dum Nimia Pia fuit, faica eft Impia:
Et Attio Probatiolo, Cecalius Calistio
Conjux $\mathcal{P}$ Pater,
Et fibi vivo ponendum curavit,
Et Jub afcià dedicavit.

This mutt be towards the barbarous Age, as áppeats by the falfe Latin in Nimia. But the Infcription feems fo extravagant, that a Man dedicating a Burial-ftone for his Wife and Son, and under which himfelf was to be laid with Ceremonies of Religion, fhould tax his Wife of Impiety, and give to extraordinary an Account of her becoming fo through an Excefs of Piety, that it deferves fome Confideration.
It feems the Impiety was publick, otherwife a Husband would not have recorded it in fuch a Manner ; and it is plain, that he thought it arofe from an Excefs of Piety. I need not examine the Conjectures of others'; but will chufe rather to give you my own, and fubmit it to your Cenfure.
It feems to me, that this Sutia Antbis was a Chrintian; for the Chriftians, becaufe they would not worhip the Gods of the Heathens, nor participate with them in their facred Rites, were accufed both of Atheifm and Impiety. This is fo often objected, and the Fathers in their A pologies have anfwered it fo often, that it were loft Labour to prove it. So this Wife of Cecalius Calistio having turn'd Chriftian, it feems he thought he was bound to take fome Notice of it in the Infription : But by it he gives an honourable Character of the Chriftian Doctrine, at the fame Time that he feems to accufe it, viz. that through an Excefs of Piety his Wife was carried to it; fince a Mind, feriouny poffefs'd with a true Senfe of Piety, could not avoid fatling under a Diftafte of Paganifm, and becoming Chriftian.
At Grenoble there is not much to be feen. The learned Mr. Cborier has fome Manufcripts of confiderable Antiquity. In one of Vegetius de Re Militari, there is a clear Correction of a Paflage, that in all the printed Editions is not Senfe. In the Chapter of the Size of the Soldiers, he begins, Scio femper menfuram a Mario Confule exabtam. A is in no Manufcript, and Mario Confule is a Miftake for trium Cubitorum; for III. which are for trium, have been read for $M$; and $C$, which ftands for Cubitorum, as appears by all that follows, was by a Mirtake read Confule. So the true Reading of that Paffage is, Scio menfurams triums cubitorim fuiffe Semper exaciam. He thew'd me another Manufcript of about five or fix hundred Years old, in which St. Fobn's Revelation is contain'd, all exemplified in Figures; and after that comes $\not \subset J o p$ 's Fables likewife, all defigned in Figures; from which he inferr'd, that thofe, who defigned thofe two Books, valued both equally, and fo put them together.
I will not defcribe the Valley of Daupbine, or entertain you with a Landskip of the Country, which deferves a better Pencil than mine, and in which the Height and Rudeners of the Mountains, that almoft fhut it up, together with the Beauty, the Evennefs and Fruiffulnefs of the Valley, that is all well water'd with the River Liferre, make fuch an agreeable Mixture, that this valt Diverfity of Objects at once fill the Eye, and give it a very entertaining Profpect.
Cbambery has nothing in it that deferves a long Defription; and Generva is too well known to be much infifted on. It is a little State; but it has fo many good Conftitutions in it, that the greateft may jufly learn of it. The Chamber of Corn there has always two Years Provifion for the City in Store, and forces none but the Bakers to buy at a fixed Price; and fo it is both neceffary againft any Extremities under which
the State may fall, and is likewife of great Advantage ; for it produces a good yearly Income, that has helped the State to pay a Debt of near a Million, contracted during the Wars ; and the Citizens are not opprefs'd by it, for every Inhabitant may buy his own Corn as he pleafes, only publick Houres muft buy from the Chamber.

At Rome the Pope buys in all the Corn of the Patrimony; for none of the Landlords can fell it either to Merchants or Bakers. He buys it at five Crowns their Meafure, and even that is flowly and ill paid; fo that there was eight hundred thoufand Crowns owing upon that Score when I was at Rome. In felling this out, the Meafure is leffened a fifth Part, and the Price of the Whole is doubled; fo that what was bought at five Crowns, is fold out at twelve; and if the Bakers, who are obliged to take a fettled Quantity of Corn from the Chamber, cannot retail all that is impofed upon them, but are forced to return fome Part of it back, the Chamber difcounts to them only the firf Price of five Crowns: Whereas in Geneva, the Meafure by which they buy and fell is the fame; and the Gain is fo inconfiderable, that it is very little beyond the common Market-price : So that upon the whole Matter, the Chamber of Corn is but the Merchant to the State. But if the Publick makes a moderate Gain by the Corn, that and all the other Revenues of this fmall Commonwealth are fo well employ'd, that there is no Caufe of Complaint given in the Adminiftration of the publick Purfe, which, with the Advantages that arife out of this Chamber of Corn, is about an hundred thoufand Crowns Revenue. But there is much to go out of this: Three hundred Soldiers are paid, an Arfenal is maintain'd, that, in Proportion to the State, is the greateft in the World, for it contains Arms for more Men than are in the State. There are a great Number of Minifters and Profeffors, in all twenty four, befides all the publick Charges and Offices of the Government. Every one of the leffer Council of Twenty-five having an hundred Crowns, and every Syndick having two hun-dred-Crowns Penfion; and, after all this, come the accidental Charges of the Deputies, that they are obliged to fend often to Paris, to Savoy, and to Switzerlond; fo that it is very apparent no Man can enrich himfelf at the Coft of the Publick: And the Appointments of the little Council are a very fmall Recompence for the great Attendance that they are obliged to give the Publick, which is commonly four or five Hours a Day: The Salary for the Profeffors and Minifters is indeed fmall, not above two hundred Crowns; but to balance this, thofe Employments are here held in their due Reputation; and the richeft Citizens in the Town breed up their Children fo as to qualify them for thofe Places.' And a Minifter, that is fuitable to his Character, is thought fo good a Match, that generally they have fuch Eftates either by Succeffion or Marriage, as fupport them agreeable to the Rank they hold. And in Genera there is fo great a Regulation of Expences of all Sorts, that a fmall Sum goes a great Way. It is a furprifing Thing to fee fo much Learning as one finds in Geneva, not only among thofe whofe Profeffion obliges them to ftudy, but among the Magiftrates and Citizens; and if there are not many Men of the firft Form of Learning among them, yet almoft every body here has a Tincture of a learned Education, infomuch that they are Mafters of the Latin, they know Hiftory and the Controverfies of Religion, and are generally Men of good Senfe.

There is an univerfal Civility, not only towards Strangers, but one another, that reigns all the Town over, and leans to an Excefs : So that in them one fees a Mixture of a French Opennefs, and an Italian Exactnefs; but there is, indeed, a little too much of the laft.

The publick Juftice of the City is quick, and is more commended than the private Juftice of thofe that: deal in Trade; a Want of Sincerity is much lamented by thofe that know the Town well. There is no publick Lewdnefs tolerated, and the Diforders of that Sort are managed with great Addrefs. Notwithftanding their Neighbourhood to the Switzers, drinking is very
little known among them. One of the beft Parts of their Law is the Way of felling Eftates, which is Iikewife practifed in Switzerland, and is called Subhaftation, from the Roman Cuttom of felling fub bastâ. A Man, that to is buy an Eftate, agrees with the Owner, and then intimates it to the Government, who order three feveral Proclamations to be made fix Weeks after one another of the intended Sale, that is to be on fuch a Day; when the Day comes, the Creditors of the Seller, if they apprehend that the Eftate is fold at an Under-value, may out-bid the Buyer ; but if they do not interpofe, the Buyer delivers the Money to the State, who upon that grant him his Title to the Eftate, which can never be fo much as brought under a Debate in Law; and the Price is paid to the State, and is by them given either to the Creditors of the Seller, if he owes Money, or to the Seller himfelf.
This Cuttom prevails likewife in Srwife, where twelve Years Poffeffion gives a Prefcription; fo that in no Place of the World are Titles to Eftates fo fecure as here. The Conftitution of the Government is the fame in Geneva and in molt of the Cantons. The Sovereignty lies in the Council of Two Hundred; and this Council choofes out of its Number $\tau^{2}$ enty-five, who are the leffer Council; and the Cenfure of the Troenty-five belongs to the Great Council. They are chofen by a Sort of Ballot, fo that it is not known for whom they give their Votes ; which is an effectual Method to fupprefs Factions and Refentments, fince no Man can know who voted for him or againft him ; yet the Election is not fo carried, but that the whole Town is in an Intrigue concerning it; for fince the Being of the little Council leads one to the Sindicate, which is the chief Honour of the State, this Dignity is fought for here with as active and folicitous Ambition, as appears elfewhere for greater Matters. The Two Hundred are chofen and cenfured by the Twenty-five; fo that thefe two Councils, which are both for Life, are Checks upon each other : The Magiftracy is in the former, and the Sovereignty in the latter. The Number of Twenty-five is never exceeded in the leffer Council ; but for the greater, though it paffes by the Name of the Council of Two Hundred, yet there are commonly eight or ten more; fo that notwithftanding the Abfence or Sicknefs of fome of the Members, they may ftill be able to call together near the full Number. There is another Council befides thefe two, compofed of fixty, confifting of thofe of the two hundred that have born Offices, fuch as Auditors, Attorney-generals ; or thofe that have been in other Employments, which are given for a certain Number of Years. This Court has no Authority, but is called together by the Twenty-five, when any extraordinary Occafion makes it advifeable for them to call for a more general Concurrence in the Refolutions they are about to take. And this Council is of the Nature of a Council of State, that only gives Advice, but has no Power in itfelf. The whole Body of the Burgeffes choofe the Syndics the firft Sunday of the Year; and there are fome other Elections that likewife belong to them. The Difference between the Burgeffes and Citizens is, that the former Degree may be bought, or given to Strangers, and they may be of the two hundred ; but none is a Citizen, but he that is the Son of a Burgefs, and that is born within the Town.

This little Republick's chief Support is in the firm Alliance that has fubfifted folong between it and the Can. tons of Bern and Zurich; and it is fo vifibly the Intereft of all Switzerland to preferve it, that if the Cantons had not forgot their Intereft fo palpably, in fuffering the French to become Mafters of the Francbe Comté, one would think that they would not be capable of fuffering Genera to be touch'd : For all that can be done in fortifying the Town, can fignify no more, than to put it in a State to refift a Surprize or Scalade ; fince if an Army comes to befiege it in Form, it is certain, that unlefs the Switzers come with a Force able to raife the Siege, thofe within will be able to make but a very fhort Refiftance.
2. From Generva I went through the Country of Vaud, or the Valley, and Laufame its chief Town, in my Way
to Bern. The Town of Laufanne is fituated on three Hills, fo that the whole is Afcent and Defcent, and that very fteep, chiefly on the Side on which the Church ftands, which is a very noble Fabrick. The South Wall of the Crofs was fo fplit by an Earthquake about thirty Years ago, that there was a Rent made from Top to Bottom above a Foot wide; which was again fo clofed up ten Years after by another Earthquake, that now one only fees a Crack where the Breach was. This extravagant Situation of the Town was occafioned by a Legend of fome Miracles wrought near the Church ; which prevail'd fo much on the Credulity of that Age, that by it the Church, and fo in confequence the Buildings near it, were added to the old Town, which ftood on the other Hill, where there was a Town made on the Highway from the Lake into Switzerland, to which the chief Privileges, particularly the Judicature of Life and Death, ftill belong. Between Geneva and this lies the Lake, which at one End is called the Lake of Geneva, at the other the Lake of Laufanne. I need not mention the Dimenfions, which are fo well known, only in fome Places the Depth has never been found. The Banks of the Lake are the moft beautiful Plots of Ground that can be imagined, for they look as if they had been laid out by Art; the Sloping is fo eafy and fo equal, and the Grounds are fo well cultivated and peopled, that a more delightful Profpect cannot be feen. The Lake is well ftock'd with excellent Fifh, but their Numbers fenfibly decreafe, and one Sort is quite loft. It is to be afcribed not only to the Ravenoufnefs of the Pikes that abound in it, but to another Sort of Fifh that they call Moutails, which were never taken in the Lake till within thefe fix Years laft paft. They are in the Lake of Neufchâtel, and fome of the other Lakes of Switzerland; and it is likely, that by fome Conveyance under Ground, they have come into Channels that fall into this Lake. The Water of the Lake is all clear and frefh. It is not only a great Pond made by the Rbone, that runs into it, but does not pafs through it unmix'd, as fome Travellers have fondly imagin'd ; becaufe fometimes a foft Gale makes a Curling of the Water in fome Places, which runs fmooth in the Places over which that foft Breath of Wind does not pafs, the Gale flifting its Place often; but it is believed, that there are alfo many great Fountains all over the Lake. Thefe Springs may very probably flow from fome vaft Cavities that are in the neighbouring Mountains, which are as great Cifterns, that difcharge themfelves in the Vallies which are covered over with Lakes. And on the two Sides of the Alps, both North and South, there are fo great a Number of thofe little Seas, that it may be eafily gueffed they muft have vaft Sources, that feed fo conftantly thefe huge Ponds.

One Hill not far from Geneva, call'd Maxidit, or Curfed, of which one Third is always cover'd with Snow, is two Miles perpendicular in Height, according to the Obfervation of that incomparable Mathematician and Philofopher, Nicolas Fatio Duilier, who, at twenty two Years of Age, is one of the greateft Men of his Age, and feems born to carry Learning beyond what it has yet attained.

But I will now entertain you a little with the State of Bern; for that Canton alone is above a third Part of Switzerland. I will fay nothing of its Beginning or Hitory; nor will I enlarge upon the Conftitution; which are all well known. It has a Council of two bundred, that goes by that Name, though it confifts almoft of three hundred; and another of tweenty five, as at Geneva. The chief Magiftrates are two Advoyers, who are not annual, as the Syndics of Geneva, but for Life, and have an Authority not unlike thar of the Roman Confuls, each being his Year by Turns the Advoyer in Office. After them there are the four Bannerets, who anfwer to the Tribunes of the People in Rome; then come the two Burfars or Treafurers, one for the ancient German Territory, the other for the Frencb Territory, or the Country of Vaud; and the two laft, chofen of the twenty five, are called the Secrets; for to them all Secrets relating to the State are difcovered; and they have an Authority of calling the two bundred togecher
when they think fit, and of accuing thofe of the Mas giftracy, the Advoyers themfelves not excepted, as they fee Caufe; though this falls out feldom.
3. The whole Canton of Bern is divided into feventy two Bailiages ; and in every one of thofe there is a Bailiff named by the Council of treo bundred, who muft be a Citizen of Bern, and one of the two bundred, into which Council no Man can be chofen till he is married. Thefe Bailiages are Employments both of Honour and Profit, for the Bailiff is the Governor and Judge in that Jurifdiction; fince though he has forme Affeflors, who are chofen out of the Bailiage, yet he may by his Authority carry Matters which Way he will againft all their Opinions, and the Bailiffs have to their own Ufe all the Confifcations and Fines; fo that drinking being fo common in this Country, and that producing many Quarrels, the Bailiff makes his Advantage of all thofe Diforders; and in the fix Years of his Government, ac= cording to the Quality of his Bailiage, he not only lives by it, but will carry perhaps twenty thoufand Crowns with him back to Bern, on which he lives till he can carry another Bailiage : For one is capable of being twice Bailiff; and though fome have been thrice Bailiffs, this is very extraordinary. The Exactions of the Bailiff are the only Impofitions or Charges to which the Inhabitants are fubjected; and thefe, falling only on the Irregularities and Diforders of the debauch'd, makes this Grievance, though in fome particular Cafes it preffes hard, yet not fo univerfally felt; for a fober and regular Man is in no Danger. Many in this Can= ton are Lords of Caftles or Manors, and have a Jurifdiction annex'd to their Effates, and name their Magif trate, who is called the Caffellan. In Matters of fmall Confequence there lies no Appeal from him to the Bailiif; but beyond the Value of two Piftoles an Appeal lies; and no Sentence of Death is executed, till it is confirmed at Bern. There lies alfo an Appeal from the Bailiff to the Council at Bern. There are many Complaints of the Injuftice of the Bailiffs; but their Law is fhort and clear, fo that a Suit is foon ended; two or three Hearings are the moft that even an intricate Suit amounts to, cither in the firft Inftance, or in the fecond Judgment at Bern: The Citizens of Bern confider there Bailiages as their Inheritance ; and they are courted in this State perhaps with as much Intrigue, as was ufed among the Romans in the Diftribution of their Provinces: And fo little fignify the beft Regulations, when there are radicated Difeafes in the State, that though there is all poffible Precaution ufed in the Nomination of thefe Bailiffs, yet that has not preferved this State from falling under fo great a Mifchief by thofe little Provinces ; that as it has already in a great Meafure corrupted their Morals, fo it may turn in Conclufion to the Ruin of this Republick. All the Electors give their Voices by Ballot, by which they are free from all Aftergame in the Nomination of the Perfon. All the Kins dred of the Pretenders, even to the remotef Degree, are excluded from Voting, as are alfo all their Creditors ; fo that none can vote but thofe who feem to have no Intereft in the Iffue of the Competition: And yet there is fo much Intrigue, and fo great a Corruption in the Diftribution of there Employments, that the whole Bus finefs, in which all Bern is continually in Motion, is $s_{\text {; }}$ the Catching of the beft Bailiages, on which a powerful Family will have its Eye for many Years before they fall. For the Counfellors of Bern give but a very fmall Share of their Eftates to their Children when they marry them; all that tliey propofe is tö make a Bailiage fure to them; for this they feaft and drink, and fpare nothing by which they may make a fufficient Number of Votes; but it is the Chamber of the Bannerets that admits the Pretenders to the Competition. When the Bailiff is chofen, he takes all poffiblè Methods to make the beft of it he can; and lets few Crimes pafs with Impunity, that produce either Confifcations or Fines: His Juftice alfo is generally furpected. It is true, thofe of the Bailiage may complain to the Council at Berin, as the oppreffed Provinces did ancient= ly to the Senate of Rome; and there have been fevere Judgments againtt fome Bailiffs; yet as Complaints are

7 M
not made, except upon great Occafions, which are not often given, fo it being the general Intereit of the Citizens of Bern to make all poffible Advantages of thofe Employments, the Cenfure will be but gentle, except the Complaint is very crying.

In Bern there is very little Trade, only what is neceffary for the Support of the Town, They maintain Profeffors in the Univerfities of Bern and Laufanne; the one for the German Territory, which is the ancient Canton, and the other for the new Conqueft, which is the French: In the former there are about three hundred Parihes; in the latter there are about one hundred and fifty: But in the Benefices of the German Side, the ancient Rights of the Incumbents are generally preferved fo, that fome Benefices are worth a thoufand Crowns; whereas in the Païs de Vaud the Provifions are fet off as Salaries, and are generally from one hundred to two hundred Crowns. It is vifible that thofe of Bern truft more to the Affections and Fidelity of their Subjects, than to the Strength of their Walls; for as they have never finifh'd them, fo what is built cannot be efteem'd a regular Fortification; and is not preferv'd with any Care, nor furnifh'd with Cannon; but if they have none on their Ramparts, they have Abundance in their Arfenal, in which, they fay, there are Arms for forty thoufand Men.

The Peafants are generally rich, chiefly on the Germon Side, and are all well armed. They pay no Duties to the Publick, and the Soil is capable of great Improvements ; in which they fucceed fo well, that I was thewed fome that were by Accident at Bern, who, as I was told, had Eltates to the Value of an hundred thoufand Crowns, but that is not ordinary ; yet ten thoufand Crowns for a Peafant is no extraordinary Matter. They Jive much on their Milk and Corn, which in fome Places, as about Payern, yields an Encreafe of fifteen for one. They breed many Horfes, which bring them in a great deal of Money. The worft Thing in the Country is the Moifture of the Air, which is occafioned by the many Lakes that are in it, and by the neighbouring Mountains that are cover'd with Snow, fome all the Summer long, and the relt till Midfummer, alfo by the vaft Quantity of Fir-trees, which feem to fill very near the Half of their Soil: And if thefe were for the moft Part rooted out, as they would have much more Soil, fo their Air would be purer; yet, till they find either Coal or Turf for their Fuel, this cannot be done. I was told that they had found Coal in fome Places; if this Coal is conveniently fituated, fo that by their Lakes and Rivers it may be eafily carried over the Country, it may fave them a great Extent of Ground, now cover'd with Wood, and their Air become thereby the more clear and the more wholefome.

They have fome Fountains of Salt Water, but the making Salt confumes fo much Wood, that hitherto it has not turn'd to Account.

The Men are generally fincere, but heavy: They think it neceffary to correct the Moifture of the Air with liberal Entertainments; and they are well furnifh'd with all neceffary Ingredients; for as their Soil produces good Cattle, fo their Lakes abound in excellent Fifh, and their Woods in Fowl; the Wine is alfo light and good. The Women are generally employ'd in their domeftick Affairs; and the Wives, even of the chief Magiftrates of Bern, look into all the Concerns of the Houfe and Kirchen, as much as thofe of the meaneft Peafants. Men and Women do not generally converfe together; and the Women are fo much amufed with the Management at home, and enter fo little into Affairs, that among them, as an eminent Phyfician told me, they know not what Vapours are, which he imputed to the Idlenefs and the Intrigues that abound elfewhere; whereas, he faid, with them the Blood was cleanfed by their Labour; and as that made them fleep well, fo they did not amufe themfelves with much Thinking, nor did they know what Amours were. The third Adultery is punifh'd with Death ; which is alfo the Punifhment of the fifth Act of Fornication, of which I faw an Inftance while I was in Bern: For a Woman, who confees'd herfelf guilty of many Whore-
doms, and defign'd to be revenged on fome Men that did not furnifh her with Money as the expected, was upon that condemned and executed. The NIanner was folemn; for the Advoyer comes into a Place prepared in the Middle of the Street, and for the Satisfaction of the People, the whole Procefs is read, and Sentence pronounced in the Hearing of all; the Counfellors, both of the great and leffer Council, ftanding about the Advoyer, who, after Sentence, took the Criminal very gently by the Hand, and pray'd for her Soul; and after Execution there was a Sermon for the Inftruction of the People.
4. The whole State is difciplined for War; for every Man that can bear Arms is lifted, and knows his Poft and Arms; and there are Beacons fo laid over the Country, that the Signal can run through the whole Canton in a Night ; and their military Lifts are to laid, that every Man knows whether he is to come out upon the firft or fecond, or not till the general Summons. They affured me at Bern, that, upon a general Summons, they could bring above eighty thoufand Men together. Thele Men are robuft and ftrong, and capable of great Hardfhip, and of gaod Difcipline, and have generally an eager and quick Senfe of Liberty, and a great Love to their Country ; but they labour under a Want of Officers. And though the Subjects of the State are rich, yet the Publick is poor ; they can well refift a fudden Invafion of their Country, but they would foon grow weary of a long War; and the Soil requires fo much Cultivation, that they could not fpare from their Labour the Men neceflary to preferve their Country. They were, indeed, as happy as a People could be, when the Emperor had Alface on the one hand, and the Spaniards had the Francbe Comté on the other: They had then no Reafon to fear their Neighbours; but now that both thofe Provinces are in the Hands of the French, the Cafe is quite alter'd; for as Bafll is every Moment in Danger from the Garrifon of Hunningen, that is but a Cannon-fhot diftant from it; fo all the Païs de Vaud lies open to the Francbe Comté, and has neither fortified Places nor good Paffes to fecure it. Their Error therefore in fuffering this to fall into the Hands of the French was fo grofs, that I took fome Pains to be informed concerning it, and will give you this Account that I had from one who was then in a very eminent Poft; fo that as he certainly knew the Secret, he feemed to fpeak fincerely to me. He told me, that the Duke of Lorrain had often moved in the Councils of War, that the Invafion of France ought to be made on that Side in which France lay open, and was very ill fortified. This he repeated often, and it was known in France; fo that the King refolved to poffefs himfelf of the Comté, but ufed that Precaition, that fearing to provoke the Switzers, he offered a Neutrality on that Side: But the Spaniards who judged right, that it was as much the Interef of the Cantons, as it was theirs, to preferve the Comté in their Hands, refufed to confent to it; but they took no Care to defend it, and feem'd, for that Reafon, to leave that' to the Switzers.
In the mean while, the French Money went about very liberally at Bern; and after thofe that were moft likely to make Oppofition were gain'd, the French Mi nifter laid before them the Neceffity in which his Mafter found himfelf to fecure that Side; but that ftill he would grant a Neutrality on their Account, if the Spaniards would agree to it ; and with this, all the Affurances that could be given in Words were offered to them, that they fhould never find the leaft Prejudice from the Neighbourhood of the French, but, on the contrary, all poffible Protection. There was juft Caufe given by the Spaniards to confider them very little in their Deliberation; for they would neither accept of the Neutrality, nor fend a confiderable Force to preferve the Country, fo that it feemed almoft inevitable to give Way to the French Propofition. But one propofed that which an unbiafs'd Affembly would certainly have accepted, that they fhould themfelves feize the Country, and by fo doing fecure the Neutrality, which was all that the French pretended to defire ; and they might

## Chap. III.

eafily fatisfy the Spaniards, and reimburle themfelves the Expence of the Invafion, by reftoring the Country to them, when a general Peace fhould be made. He laid out the Mifery to which their Country mult be reduced by fo powerful a Neighbour, but all was loft Labour; fo he went out in a Rage, and publifh ${ }^{\text {id }}$ through the Town that the State was fold, and all was loft. They now fee their Error too late, and would re pair it if it were poffible ; but the Truth is, many of the particular Members of this State do prey fo much upon the Publick, that unlefs they, with one Confent, refolve to reform thofe Abufes, they will never be in a Condition to do much; for in many of their Bailiages, of which fome are Abbies, the Bailiffs not only feed on the Subjects, but likewife on the State, and pretend they are fo far fuper-expended, that they difcount a great deal of the publick Revenue (of which they are the Receivers) for their Reimburfement. Which made Mr. D'Erlack once fay, when one of thofe Accounts was prefented, that it was very ftrange, if the Abbey could not feed the Monks. It is true, the Power of their Bannerets is fo great, that one would think they might redrefs many Abufes. The City of Bern is divided into four Bodies, not unlike our Companies of London, which are the Bakers, the Butchers, the Tanners, and the Blackfmiths; and every Citizen of Berm muft incorporate himfelf into one of thefe Societies, which they call Abbies; for it is likely they were anciently a Sort of religious Fraternity. Every one of thefe choofes two Bannerets, who bear Office by Turns, from four Years to four Years; and every one of them has a Bailiage annexed to his Office, which he holds for Life. They carry their Name from the Banners of the feveral Abbies, as the Gonfaloniers of Italy; and the Advoyers carry ftill their Name from the ancient Title Ecdicus, or Advocate, that was the Title of the chief Magiftrates of the Towns in the Times of the Roman Emperors. The Chamber of the four Bannerets that bear Office hath a vaft Power; they examine and pafs all Accompts, and they admit all the Competitors to any Offices; fo that no Man can be propofed to the Council of two bundred without their Approbation; and this being now the chief Intrigue of their State, they have fo abfolute an Authority in fhutting Men out from Employments, that their Office, which is for Life, is no lefs indeed, but rather more confiderable than that of the Advoyer, though they are inferior to him in Kank.

They manage Matters with great Addrefs, of which this Inftance was given me in a Competition for the Advoyerfhip not long ago. There was one whofe Temper was violent, that had made it fo fure among thofe that were qualified to vote in it, as being neither of his Kindred nor Alliance, that they believed he would carry it from the other Competitor whom they favour'd; fo they fet up a third Competitor, whofe Kindred were the Perfons that were beft affected to him whole Advancement they oppoled, and by this Means they were all Chut out from voting, fo that the Election went according to the Defign of the Bannerets. The chief Man now in Bern, who was the reigning Advoyer when I was there, is Mr. D'Erlack, Nephew to that Mr. D'Erlack who was Governor of Brifack, and had a Brevet to be a Marfhal of France. This is one of the nobleft Families in Bern, that acted a great Part in Thaking off the Auftrian Tyranny; and they have been ever fince very much diftinguifh'd there from all the reft of their Nobility. The prefent Head of it is a very extraordinary Man; he has a great Authority in his Canton, not only as Advoyer, but by the particular Efteem which is paid him. For he is thought the wifeft and worthieft Man of the State ; though it is fomewhat ftrange, how he fhould bear fo great a Sway in fuch a Government; for he neither feafts nor drinks with the reft. He is a Man of great Sobriety and Gravity, very referved, and behaves himfelf more like a Minifter of State in a Monarchy, than a Magiftrate in a popular Government; for one fees in him none of thofe Arts that feem neceffary in fuch a Government. He has a great Eftate, and no Children; fo he has no

Projects for his Family; and does what he can to cors rect the Abufes of the State; though the Difeafe is inveterate, and feems paft Cure.
5. He had a Misfortune in a Wat that was thirty Years ago (in the Year 1656) between the Popifh and Proteftant Cantons; the Occafion of which will engage me in a flort Digreffion. The Peace of Switzerland is chiefly preferved by a Law agreed on among all the Cantons, that every Canton may make what Regulations concerning Religion they think fit, without Pre= judice to the general League. Now the Popifh Cantons have made Laws, that it fhall be capital for any to change their Religion; and on a fet Day every Year they go all to Mafs , and the Mafters of Families fwear to continue true to the State, and firm in their Religion to their Lives End; and fo they pretend they punith their falling into Herefy, with Death and Confifcation of Goods, becaufe it is a Violation of the Faith which is fo folemnly fworn. But on the other Hand, in the Proteftant Cantons, fuch as turn are only obliged to go and live out of the Canton; but for their Eftates, they flill preferve them, and are permitted to fell them. One cannot but obferve more of the merciful Spirit of the Gofpel in the one than in the other. In two Cantons, Appenzel and Glaris, both Religions are tolerated and are capable of equal Privileges; and in fome Bailiages that were conquered in common by the Cantons of Bern and Friberg, in the Wars with Savoy, the two Cantons name the Bailiffs by Turns ; and both Religions are fo equally tolerated, that in the fame Church they have both Mafs and Sermon fo peaceably, that on one Sunday the Mafs begins, and the Sermon follows, and the next Sunday the Sermon begins, and the Mafs comes after, without the leaft Diforder, Murmuring, or other Inconvenience.
But in the Year 1656 , fome of the Cantons of Scbroitz changing their Religion, and retiring to $Z u$ rich, their Eftates were confifcated; and fome others that had alfo changed, but had not left the Canton, were taken and beheaded. Zurich demanded the Eftates of the Refugees, but inftead of granting this, the Canton of Scbroitz demanded their Subjects, that they might proceed againft them as Delinquents; and they founded this on a Law by which any of the Cantons are obliged to deliver up the Criminals of another Canton, if they are demanded by the Canton to which they belong. But thofe of Zurich and Bern thought this was both inhuman and unchriftian; tho' the Deputy of $B a f l$ was of another Mind, and thought that they ought to be delivered up, which extremely difgufted thofe of Zurich. Thofe of Scbwitz committed fome Infolencies upon the Subjects of Zurich, and refufed to give Satisfaction; upon which a War followed between the Protefant and Popibl Cantons. The Cantons of Bern and Zurich raifed an Army of twenty-five thoufand Men, which was commanded by. Mr. D'Erlack, but was difperfed in feveral Bodies; and the Papists, who had not above fix thoufand, furprized Mr . D'Erlack with a Body much fuperior to theirs. Both Sides, after a hort Engagement, ran ; the Cannon of the Canton of Bern was left in the Field a whole Day; at laft thofe of Lucern, feeing that none ftaid to defend the Cannon, carried them off. This Lofs raifed fuch a Tumult in Bern, that they feemed refolved to facrifice Mr . D'Erlack; but he came with fuch a Prefence of Mind, and gave fo fatisfactory an Account of the Misfortune, that the Tumult ceafed, and foon after the War ended. Upon this many thought, that though the Papifts acted cruelly, yet it was according to their Laws, and that no other Canton could pretend to interpole or quarrel with thofe of Scbreitz for what they did upon that Occafion. Within thefe few Years there were fome Quarrels like to arife in the Canton of Glaris, where it was faid, that the equal Privileges agreed on to both Religions were not preferv'd ; but on this Occafion the Pope's Nuncio acted a very different Part from that which might have been expected. For whereas the Minifters of that Cours have been commonly the Incendiaries in all Difputes that concern Religion, he acted rather the Part of a Mediator. And whereas it was vifible, that the Injuf-
tice lay on the Side of the Papifts, he interpofed fo effectually with thofe of Lucern, which is the Chief of the Popifl Cantons, that the Difference was compofed.
But to return to Bern. The Buildings have neither great Magnificence, nor many Apartments ; but they are convenient, and fuited to the Way of living in that Country. The Streets not only of Bern and the bigger Towns, but even of the fmalleft Villages, are furnifh'd with Fountains that run continually, which as they are of great Ufe, fo they want not their Beauty. The great Church of Bern is a very noble Fabrick; but being built on the Top of the Hill on which the Town ftands, it feems the Ground began to fail, fo to fupport it they have raifed a vaft Fabrick, which has coft more than the Church itfelf; for there is a Platform made which is a Square, to which the Church is one Side, and the farther Side is a vaft Wall fortified with Buttreffes about an hundred and fifty Foot high.- They told me, that all the Ground down to the Bottom of the Hill was dug into Vaults. This Platform is the principal Walk of the Town, chiefly about Sun-fet; and the River underneath affords a very beautiful Profpect. For there is a Cut taken off from it for the Mills; but all along as this Cut goes, the Water of the Aar runs over a floping Bank of Stone, which they fay was made at a vaft Charge, and makes a noble Cafcade.
The fecond Church is the Dominican Chapel, where I faw the famous Hole that went to an Image in the Church from one of the Cells of the Dominicans, which leads me to fet down that Story at Length : For as it was one of the moft fignal Cheats that the World has known, fo it falling out about twenty Years before the Reformation was received in Bern, it is very probable that it contributed not a little to the preparing of the Spirits of the People for that Change. I am the more able to give a particular Account of it, becaufe I read the original Procefs in the Latin Records, figned by the Notaries of the Court of Delegates that the Pope fent to examine the Matter. The Record is above one hundred and thirty Sheets, writ clofe on both Sides, being indeed a large Volume. And I found the printed Accounts fo defective, that I was at the Pains of reading the whole Procefs, of which I will give here an authentick though concife Abftract.
6. The two famous Orders, that had poffefs'd themfelves of the Efteem of thofe dark Ages, were engaged in a mighty Conteft. The Dominicans were the more learned; they were the moft eminent Preachers of thofe Times, and had the Conduct of the Courts of Inquifition, and the other chief Offices in the Church in their Hands. But on the other Hand, the Francijcans had an outward Appearance of more Severity, a ruder Habit, ftricter Rules, and greater Poverty, which gave them fuch Advantages in the Eyes of the fimple Multitude, as were able to balance the other Honours of the Dominican Order. In fhort, the two Orders were engaged in a high Difpute; but the Devotion towards the Virgin being the prevailing Fafhion of thofe Times, the Francifcans had great Advantages. The Dominicans being all engaged in the Defence of Thomas Aquinas's Opinions, were thereby obliged to affert, that he was born in original Sin. This was propofed to the People by the Francijcans as no lefs than Blafphemy; and by this the Dominicans began to lofe Ground extremely in the Minds of the People, who were ftrongly prepoffefs ${ }^{3}$ d in Favour of the immaculate Conception.
About the Beginning of the fifteenth Century, a Francifcan happened to preach in Franckfort ; and one Wigand, a Dominican, coming into the Church, the Cordelier feeing him, broke out into Exclamations, praifing God that he was not of an Order that profaned the Virgin, or that poifoned Princes in the Sacrament (for a Dominicon had fo poifoned the Emperor Henry VII.) Wigand being extremely provoked with this bloody Reproach, gave him the Lie, upon which a Difpute arofe, which ended in a Tumule that had almoft colt the Dominican his Life; yet he got away. The whole Order refolved to take their Revenge, and in a Chapter held at Vimpfen in the. Year 1504, they contrived a Method for fupporting the Credit of their Order, which was
much funk in the Opinion of the People, arid for bearing down the Reputation of the Francifcans : Four of the Junto undertook to manage the Defign; for they faid, fince the People were fo much difpofed to believe Dreams and Fables, they muft dream on their Side, and endeavour to cheat the People as well as others had done. They refolved to make Bern the Scene in which the Project flould be put in Execution; for they found the People of Bern at that Time apt to fwallow any Thing, and not difpofed to make fevere Enquires into extraordinary Matters. When they had formed their Defign, a fit Tool prefented itfelf; for one Fetzer came to take their Habit as a Lay-Brother, who had all the Difpofitions that were neceffary for the Execution of their Project; he was extreme fimple, and much inclined to Aufterities; fo having obferved his Temper well, they began to execute their Project the very Night after he took the Habit, which was on Lady-day, 1507. One of the Fryers conveyed himfelf fecretly into his Cell, and appeared to him as if he had been in Purgatory, in a ftrange Figure; he had a Box near his Mouth, upon which, as he blew, Fire feem'd to come out of his Mouth. He had alfo fome Dogs about him, that appeared as his Tormentors. In this Pofture he came near the Fryer while he was in Bed, and took up a celebrated Story that they ufed to tell all their Fryers, to beget in them a great Dread of ever laying afide their Habit, which was, that one of the Order, who was Superior of their Houfe at Solotburn, had gone to Paris, but laying afide his Habit, was kill'd in his Lay Cloaths. The Fryer in the Vizard faid he was that Perfon, and was condemned to Purgatory for that Crime ; but he added, that he might be refcued by his Means; and he feconded this with moft horrible Cries, expreffing the Miferies which he fuffer'd. The poor Fryer Fetzer was exceffively frighted; but the other advanced, and required a Promife of him to do that which he flould defire, in order to the delivering him out of his Torment. The Fryer promifed all that he ask'd of him. Then the other faid, he knew he was a great Saint, and that his Prayers and Mortifications would prevail; but they muft be very extraordinary : The whole Monaftery muft, for a Week together, difcipline themfelves with a Whip, and he muft lie proftrate in the Form of one on a Crofs, in one of their Chapels, while Mafs was faid in the Sight of all that fhould come to it; and he added, that if he did this, he fhould find the Effects of the Love that the Bleffed Virgin bear him, together with many other extraordinary Things; and faid he would appear again, accompanied with two other Spirits; and affured him, that all he fuffer'd for his Deliverance fhould be moft glorioully rewarded. Morning was no fooner come, than the Fryer gave an Account of this Apparition to the reft of the Convent, who feem'd extremely furprized : They all prefs'd him to undergo the Difcipline that was enjoin'd him, and every one undertook to bear his Share; fo the deluded Fryer performed it exactly in one of the Chapels of their Church. This drew a valt Number of Spectators together, who confider'd the poor Fryer as a Saint ; and in the mean while the four Fryers that managed the Impofture, magnified the Miracle of the Apparition to the Skies in their Sermons. The Fryer's Confeffor was in the Secret ; and by this Means they knew all the little Paffages of the poor Fryer's Life, even to his Thoughts, which help'd them not a little in the Conduct of the Matter. The Confeffor gave him an Hoftie, with a Piece of Wood, that was, as he pretended, a Piece of the true Crofs; and by thefe he was to fortify himfelf, if any other Apparitions fhould cone to him ; fince evil Spirits would be certainly chained up thereby. The Night after that, the former Apparition was renewed, and the mafqued Fryer brought two others with him in fuch Vizards, that the Fryer thought they were Devils indeed. The Fryer prefented the Hoftie to them, which gave them fuch a Check, that he was fully fatisfied of the Virtue of this Prefervative.

The Fryer, that pretended he was fuffering in Purgatory, faid fo many Things relating to the Secrets of his Life and Thoughts, which he had from the Con-
feffor,
feffor, that the poor Fryer was fully poffeffed of the he fmelt an Ointment with which the anointed it Reality of the Apparition. In two of thefe Reprefentations, that were both managed in the fame Manner, the Fryer in the Mafque talked much of the Dominican Order, which he faid was exceffively dear to the bleffed Virgin, who knew herfelf to be conceived in original Sin , and that the Doctors who taught the contrary, were in Purgatory: That the Story of St. Bernard's appearing with a Spot on him, for having oppofed himfelf to the Feaft of the Conception, was a Forgery; but that it was true, that fome hideous Flies appear'd on St. Bonaventure's Tomb, who had taught the contrary : That the Bleffed Virgin abhorr'd the Cordeliers for making her equal to her Son: That Scotus was damned, whofe Canonization the Cordeliers were then foliciting at Rome; and that the Town of Bern would be deftroy'd for harbouring fuch Plagues within their Walls. When the injoined Difcipline was fully performed, the Spirit appeared again, and faid, he was delivered out of Purgatory; but before he could be admitted to Heaven, he muft receive the Sacrament, having died without it ; and after that he would fay Mafs for thofe, who had by their Charities refcued him out of his Pains. The Fryer fancied the Voice refembled the Prior's a little; but he was then fo far from fufpecting any Thing, that he gave no great Heed to this Sufpicion. Some Days after this, the fame Fryer appeared as a Nun all in Glory, and told the poor Fryer that the was Saint Barbara, for whom he had a particular Devotion; and added, that the Bleffed Virgin was fo much pleafed with his Charity, that fhe intended to come and vifit him. He immediately call'd the Convent together, and gave the reft of the Fryers an Account of this Apparition, which was entertained by them with great Joy; and the Fryer languifh'd for the Accomplifhment of the Promife that St. Barbara had made him. After fome Days the long'd for Delufion appear'd to him, cloathed as the Virgin ufed to be on the great Fearts, and indeed in the fame Habits. There were about her fome Angels, which he afterwards found were the little Statues of Angels, which they fet on the Altars on the great Holidays. There was alfo a Pulley faftened in the Room over his Head, and a Cord tied to the Angels, that made them rife up in the Air, and float about the Virgin, which encreafed the Delufion. The Virgin, affer fome Endearments, extolling the Merit of his Charity and Difcipline, told him that fhe was conceived in original Sin, and that Pope Fulius II. that then reign'd, was to put an End to the Difpute, and was to abolifh the Feaft of her Conception, which Sixtus IV. had inftituted; and that he was to be the Inftrument of perfuading the Pope of the Truth in that Matter. She gave him three Drops of her Son's Blood, which were three Tears of Blood that he had fhed over ferufalem; and this fignified, that the was three Hours in original Sin, after which fhe was by his Mercy delivered out of that State. For it feems the Dominicans were refolved fo to compound the Matter, that though they fhould gain the main Point, of her Conception in Sin, yet they would comply fo far with the Reverence for the Virgin with which the World was then poffeffed, that fhe fhould be believed to have remained a very fhort while in that State. She gave him alfo five Drops of Blood in the Form of a Crofs, which were Tears of Blood that the had fhed while her Son was on the Crofs. And to convince him more fully, fhe prefented an Hoftie to him, that appeared as an ordinary Hoftie, and of a fudden it appeared to be of a deep red Colour. The Cheat of thofe fuppofed Vifits was often repeated; at laft the Virgin told him, that fhe was to give him fuch Marks of her Son's Love to him, that the Matter fhould be paft all Doubt. She faid, that the five Wounds of St. Lucia and St. Catberine were real Wounds, and that fhe would alfo imprint them on him; fo the bid him reach his Hand. He had no great Mind to receive, a Favour in which he was to fuffer fo much; but fhe forced his Hand, and fruck a Nail through it. This Hole was as big as a Grain of Peafe, and he faw the Candle clearly through it. This threw him out' of a fuppofed Tranfport into a real Agony: But the feem'd to touch his Hand, and he thought

VoL. II. Nume. CX.
though his Confeffor perfuaded him that that was only an Imagination; fo the fuppofed Virgin' left him for that Time.
The next Night the Apparition return'd, and brought fome Linnen Clothes, which had fome real or imaginary Virtue to allay his Torment; and the preterided Virgin faid, they were fome of the Linnen in which Chrift was wrapped; and with that fhe gave him a foporiferous Draught, and while he was faft afleep, the other four Wounds were imprinted on his Body in fuch a Manner, that he felt no Pain.
But in order to this, the Fryers betook themfelves to Charms ; and the Sub-prior fhewed the reft a Book full of them ; but he faid, that before they could be effectual, they mult renounce God; and he not only did this himfelf, but by a formal Act in Writing, figned with his Blood, he dedicated himfelf to the Devil: If is true, he did not oblige the reft to do this, but only to renounce God. The Compofition of the Draught was a Mixture of fome Fountain Water and Chrifm, the Hairs of the Eyebrows of a Child, fome Quickfilver, fome Grains of Incenfe, fomewhat of an Eafer Wax-candle, fome confecrated Salt, and the Blood of an unbaptized Child. This Compofition was a Secret, which the Sub-prior did not communicate to the reft. By this the poor Fryer fetzer was made almoft infenfible. When he was awake, and came out of this deep Sleep, he felt this wonderful Impreffion on his Body; and now he was ravifh'd out of Meafure, and came to fancy himfelf to be acting all the Parts of our Saviour's Paffion: He was expofed to the People on the great Altar, to the Amazement of the whole Town, and to the Mortification of the Francijcans. The Dominicans gave him fome other Draughts, that threw him into Convulions; and when he came out of thofe, a Voice was heard, which came through that Hole, which yet remains, and runs from one of the Cells, along a great Part of the Wall of the Church : For a Fryer fpoke through a Pipe, and at the End of the Hole there was an Image of the Virgin's, with a little fefus in her Arms, between whom and his Mother the Voice feemed to come. The Image alfo feem'd to fhed Tears; and a Painter had drawn thofe on her Face fo lively, that the People were deceived by it. The little Yefus asked, why the wept? And fhe faid, it was becaufe his Honour was given to her, fince it was faid that fhe was born without Sin. In Conclufion, the Fryers fo overacted this Matter, that at laft even the poor deluded Fryer himfelf came to difcover it, and refolved to quit the Order.

It was in vain to delude him with more Apparitions, for he well-nigh kill'd a Fryer that came to him perfonating the Virgin in another Shape with a Crown on her Head. He alfo over-heard the Fryers once talking among themfelves, of the Contrivance and Succefs of the Impofture, fo plainly, that he difcover'd the whole Matter ; and upon that, as may be eafily imagined, he was filled with all the Horror with which fuch a Difoovery could infpire him.
The Fryers fearing that an Impofture, which was carried on hitherto with fo much Succefs, fhould be quite fpoil'd, and turn'd againft them, thought the fureft Way was to own the whole Matter to him, and to engage him to carry on the Cheat. They told him in what Efteem he would be, if he continued to fupport the Reputation that he had acquired; that he would become the Chief of the Order ; and in the End they perfuaded him to go on with the Impofture. But at aft, fearing left he fhould difcover all, they refolved to poifon him ; of which he was fo apprehenfive, that once a Loaf being brought him, that was prepared with Spices, he kept it for fome Time, and it growing green, he threw it to fome young Wolf's Whelps that were in the Monattery, which died immediately. His Conftitution was fo vigorous, that though they gave him Poifon five feveral Times, he was not deftroyed by it. They alfo prefs'd him earneftly to renounce God, which they judged neceflary, that their Charms might have their Effect on him; but he would never confent to that. At laft they forced him to take a poifoned

Hoflie,

Hoftie, which yet he vomited up foon after he had fwallowed it. That failing, they ufed him fo cruelly, whipping him with an Iron Chain, and girding him about fo ftrait with it, that to avoid further Torment, he iwore to them in a moft imprecating Scile, that he would never difcover the Secret, but would ftill carry it on ; and fo he deluded them, till he found an Opportunity of getting out of the Convent, and of throwing himfelf into the Hands of the Magiftrates, to whom he difcovered all.

The four Fryers were feized and put in Prifon, and an Account of the Matter was fent firt to the Bifhop of Laufanne, and then to Rome; and it may be eafily imagin'd, that the Francijcans took all poffible Care to have it thoroughly examined. The Bifhops of Laufanne and Zyon, with the Provincial of the Dominicans, were appointed to form the Procefs. The four Fryers firt excepted to $\mathfrak{Y e l z e r}$ 's Credit; bnt that was rejected: Then being threaten'd with the Queftion, they put in a long Plea againft that; but though the Provincial would not confent to that, yet they were put to the Queftion : Some endured it long, but at laft they all confeffed the Whole of the Impofture. The Provincial appeared concerned; for though Yetzer had opened the whole Matter to him, yet he would give no Credit to him ; on the contrary, he clarged him to be obedient to them; and one of the Fryers faid plainly, that he was in the whole Secret; and fo he withdrew, but he died fome Days after at Confance, having poifoned himfelf, as was generally believed. The Matter lay afleep fome Time, but a Year after that, a Spani/b Bifhop came, authorized with full Power from Rome, and the whole Cheat being fully proved, the four Fryers were foleminly degraded from their Priefthoods, and eight Days after, it being the laft of May, 1509 , they were burnt in a Meadow on the other Side of the River, over-againft the great Church. The Place of their Execution was thewed me, as well as the Hole in the Wall through which the Voice was conveyed to the Image. It was certainly one of the blackeft, and yet the beft carried-on Cheat that has been known; and, no Doubt, had the poor Fryer died before the Difcovery, it had paffed to Pofterity as one of the greateft Miracles that ever was ; and it gives a fhrew'd Sufpicion, that many of the other Miracles of that Church are of the fame Nature, but more fuccefffully finin'd.
7. Swuitzerland lies between France and Italy, both Countries incomparably more rich, and better furnifhed with the Conveniencies of Life than it; and yet Italy is almoft difpeopled, and the People in it are reduced to Mifery that can fcarce be imagined but by thofe who have feen it: And France is in a great Meafure difpeopled, and the Inhabitants reduced to fuch Poverty as appears in all the Marks in which it can fhew itfelf, in their Houfes, Furniture, Cloaths, and Looks.
On the contrary, Switzerland is full of People, and in feveral Places, in Villages as well as in Towns, one fees all the Marks of Plenty and Wealth. Their Houfes and Windows are in good Order, the Highways are well maintained, People are well cloathed, and every one at his Eafe. This Obfervation furprifed me ftill more in the Country of the Grifons, where there is hardly any Soil at all, the Vallies being almoft wafhed away with the Torrents that fall down from the Hills, and fwell their Brooks fometimes fo fuddenly, that in many Places the whole Soil is carried away; and yet thofe Vallies are well peopled, and every one lives happy under a gentle Government: Whilft rich and plentiful Countries are reduced to fuch Mifery, that as many Inhabitants are forced to change their Seats, fo thofe who ftay behind can farce live, and pay thofe Impofitions that are laid upon them. The common People generally reafon very fimply of Government; but they feel truly though they argue falfe. So an eafy Government, though in a Country with an ill Soil, and accompanied with great Inconveniencies, draws, or at leaft keeps People in it; whereas a fevere Government, shough it may in Speculation appear reafonable, drives its Subjects even out of the beft and moft defireable Seats.
8. In my Way from Bern, I paffed by Solotburn, and I came through Fribourg in my Way to Bern. There are two of the chief Popifh Cantons after Lucern; and one fees in them a Heat and Bigotery beyond what appears in France or Itcaly. Long before they come within the Church, they kneel down in the Streets, when Mafs is faying. The Images are extreme grols. In the chief Church of Solotburn, there is an Image of God the Father, as an old Man with a black Beard, having our Saviour on his Knees, and a Dove over his Head. Here alfo begins Devotion at the AveMary Bell, which is farce known in France, but is practifed all over Italy: At Noon, and at Sun-fer, the Bell rings, and all fay the Ave-Mary. But whereas in Italy they content themfelves with putting off their Hats, in Switzerland they kneel down in the Streets, which I faw no where practifed except at Verice, and there it is not commonly done. But notwithftanding this, all the Switzers fee their common Intereft fo well, that they live in a very good Underftanding one with another. This is chiefly owing to the Canton of Lucern, where there is a Spirit in the Government very different from what is in the other Popilh Cantons. The Jefuits begin to grow as powerful in Switzerland, as they are elfewhere; they have a noble College and Chapel in the beft Place of Fribourg. It is not long fince they were at Solotburn, where there was a Revenue of a thoufand Livres a Year fettled for the Maintenance of ten of them, with this Provifion, that they fhould never exceed that Number. But where once fertled, they find Means to break through all Limitations ; and are now become fo rich there, that they are raifing a Church and College, which will coft, before finifhed, above four hundred thouland Livres, to which the French King gives ten thoufand Livres for the Frontifpiece; for as this is the Canton in which his Ambaffadour refides, he thought it for his Glory, to have a Monument raifed by an Order, that will never be wanting to flatter their Benefactors, as long as they can find their Account in it.
In the fame Canton there is an Abbey, that has one hundred thoufand Livres of Revenue; there is alfo a very rich Houle of Nuns that wear the Capuchins $\mathrm{Ha}_{\mathrm{a}}$ bit, that has fixty thoufand Livres of Revenue, and but fixty Nuns in it, who, having a thoufand Livres a-piece, may live in all poffible Plenty, in a Country where a little Money goes a great Way. But that which furprifes one molt at Solotburn is, the great Fortification they are building about the Town, the nobleft and folideft that is any where to be feen. The Stone with which it is faced, is a Sort of coarfe Marble, but many Stones are ten Foot long, and two Foot thick: But though this will be a Work of Expence and Beauty, yet it would fignify little againft a great Army that attack'd it vigoroully. The Wall is finithed on the Side of the River, the Ditch is very broad, and the Counterfcarp and Glacis are alfo finifhed, and they are working at a Fort on the other Side of the River, which they intend to fortify in the fame Manner. This has coft them near two Millions of Livres, and this Expence has made them often repent the Undertaking; and it is certain, that a Fortification able to refilt their Peafants in cafe of a Rebellion, is all that is needful. This Canton has two Advoyers, as Bern; the Little Council confifts of thirty-fix : They have twelve Bailiages, which are very profitable to thofe that can carry them ; one Burfar, and but one Banneret. All the Cantons have Bailiages; but if there are Diforders at Bern in the Choice of Bailiffs, there are far greater among the Popifh Cantons, where all Things are fold, as a foreign Minifter told me; who, tho he knew my Religion, did not ftick to own frankly, that the Catholick were not near fo well governed as the Proteftant Cantons. Juftice is generally fold among them ; and in Treaties with foreign Princes, they have fomerimes taken Money both from French and Spanifh Ambaffadors, and have figned contradictory Articles at the fame Time.
9. Baden has nothing in it remarkable, except its convenient Situation, which makes it the Seat of the General Diet of the Cantons; tho' not one of them, but a Bailiage that belongs in common to eight of the an-

## Chap. III.

 through SWISSERLAND, $\sigma^{\circ} \mathrm{C}$ 。cient Cantons. At laft I came to Zurich, which as it is long, and the Preachers have departed from the firft the firft and moft honourable of all the Cantons, fo with relation to us, it has a Precedence of a higher Nature, it being the firft that received the Reformation.
This Canton is lefs than Bern, yet the Publick is much richer; they reckon that they can bring fifty thoufand Men together on twenty four Hours Warning; their Subjects live happy, for the Bailiffs here have Appointments, and have oniy the Hundred Penny of the Fines; fo that they are not tempted as thofe of Bern, to whom the Fine belongs entirely. And whereas at Bern, the conftant Intrigue of the whole Town is concerning their Bailiages; here it is a Service to which the Citizens are bound to fubmit, according to their Conftitution, but to which they do not afpire. The Government is almoft the fame as at Bern, and the Magiftrate called the Advoyer at Bern, is here called the Burgomafter. The Revenue of the State is juftly accounted for, fo that the Publick is much richer than at Bern; the Arfenal is much better furnifhed, and the Fortifications more regular. There is a great Trade ftirring; and as their Lake, that is twenty four Miles long, and two or three broad, fupplies them with Provifions, fo the ir River carries their Manufacture to the Rbine, from whence it is conveyed as they pleafe. One of their chief Manufactures is Crape, in all Refpects the beft ever faw. I will not defrribe the Situation of the Town, but content myfelf with telling you, that it is very pleafant, the Country about it mountainous, and the Winters hard; for the Lake freezes quite over, only in fome Places Ice never lies, which is efteemed a Mark that Springs rife there and caufe that Heat. So alfo in the Lake of Geneva, tho' never quite frozen, yet Flakes of Ice lie in feveral Parts, but are never feen in fome Parts of the Lake; which is fuppofed to flow from the fame Caufe.
But to return to Zurich: One fees here the ancient Simplicity of the Switzers, not corrupted with Luxury or Vanity. Their Women not only do not converfe with Men, except thofe of their near Kindred, but even in the Streets make no Returns to the Civility of Strangers ; for it is only Strangers put off their Hats to Women, but they make no Courtefies; and herě, as through all Switzerland, Women are not Saluted, but the Civility is expreffed by taking them by the Hand. There is one Thing fingular in the Conttitution of Zu rick, that is, their Little Council confifts of Fifty Perfons, but there fit in it only $\tau$ wenty-five at a Time; and fo the Halves of this Council, as each of them has his proper Burgomafter, have alfo the Government in their Hands by Turns, and they fhift every fix Months, at Midjummer, and at Cbrifimas. The whole Canton is divided into nine great Bailiages, and twenty-one Cafrellaneries; in the former the Bailiff refides conftantly; but the Caftellan, who is alfo one of the Great Council, has fo little to do, that he lives at Zurich, and goes only at fet Times of the Year to do Juftice.

The Virtue of this Canton has appear'd in their adhering to the ancient Capitulations with the French, and not flackening in any Article, which has been done by all the other Cantons, where Money has a Sovereign Influence; but here it never prevailed. They have converted the ancient Revenues of the Church more to pious Ufes, than any where elfe. They have many Hofpitals well endowed; in one, as I was told, there was fix hundred and fifty Poor kept: But as they fupport the real Charities which belong to fuch Endowments, fo they defpife that vain Magnificence of Buildings, which is generally affected elfewhere; for theirs are plain; and one of the Government faid to me very fenfibly, that they thought it enough to maintain their Poor as Poor, and not lodge them as Princes.

The Dean and Chapter are ftill continued as a Corporation, and enjoy the Revenues which they had before the Reformation; but if they fubfirt plentifully, they labour hard; for they have two or three Sermons a Day, and at leaft one ; the firft begins at Five o'Clock in the Morning. At Geneva, and all Switzerland over, there are daily Sermons, which were fubflituted upon the Reformation. But the Sermons are generally too

Defign of thefe Sermons, which were intended to be an Explication of a whole Chapter, and an Exhortation upon it; and if this were fo contrived, that it were in all not above a Quarter of an Hour long, as it would be heard by the People with lefs Wearinefs, and more Profit, fo it would be a vaft Advantage to the Preachers; for as it would oblige them to ftudy the Scriptures much; fo having once made themfelves Mafters of the practical Parts, fuch floort Difcourfes would coft them lefs Pains than thofe laboured Sermons do, which confume the greateft Part of their Time, and often to little Purpofe.
I told you, in Bern the Bailiages are given by a Sort of Ballor, which is fo managed, that no Man's Vote is known : But I muft add, that fince I was firft there, they have made a confiderable Alteration in the Way of Voting, when Offices are to be given ; which approaches much nearer the Venetion Method, and which expofes the Competitors more to Chance, and may put an End to the Intrigues that are fo much in Ufe for obtaining thofe Employments. There are Balls put into a Box, equal to the Number of thofe that have a Right to vote, and are prefent; of thefe one Third are gilt, and two Parts are only filver'd; fo every one takes out a Ball, but none can vote, except thofe who have the gilt Balls; fo that a Man may have more than two Thirds on his Side, and yet be difappointed in a Competition.

1o. There is one Thing, for which the Switzers, in particular thofe of Bern, cannor be too much commended : They have, ever fince the Perfecution began in France, open'd a Sanctuary to fuch as retired thither, in fo Chriftian a Manner, that it deferves all honourable Remembrances that can be made of it. Such Minifters and others, as were at firft condemned in France for the Affair of the Cerennes, have not only found Reception here, but all the Support that could be expected, and indeed much more. For they have affign'd the French Minifters a Penfion of five Crowns a Month if unmarried, and have increafed it to every one who had a Wife and Children, fo that fome had above ten Crowns a Month Penfion. They difperfed them all over the Païs de Vaud, but the greateft Number ftaid at Laufame and Vevay. In order to the fupporting of this Charge, the Charities of Zurich and other Proteftant States were brought hither. Not only the Proteftant Cantons, but the Grifons, and fome fmall States that are under the Protection of the Cantons, fuch as Neufcbâtel, St. Gall, and fome others, have fent their Charities to Bern, who difpenfe of them with great Difcretion, and bear what farther Charge this brings upon them. And in this laft total Difperfion of thofe Churches, the Country has been animated with fuch a Spirit of Compafion, that every Man's Houfe and Purfe has been opened to the Refugees, who have paffed in fuch Numbers, that fometimes there have been above two thoufand in Laufanne alone, and of thefe at one Time near two hundred Minifters ; and they all met with a Kindnefs that look'd more like the primitive Age, than the Degeneracy of that in which we live.

The only confiderable Tax under which the Switzers lie, is, when Eftates are fold, the fifth Part of the Price belongs to the Publick, and all the Abatement that the Bailiff can make, is to bring it to a fixth. This they call the Lod, which is derived from Alodium; only there are fome Lands that are frank-alod, which lie not under this Tax. But this falling only on the Sellers, it was thought a juft Punifhment and a wife Reftraint on ill Husbands of their Eftates.
I was the more confirm'd in the Account I have given you of the Derivation of Advoyer, when I found that in fome fmall Towns in the Canton of Bern, the chief Magiftrate is ftill fo called, as in Payerne: So that I make no Doubt, but as the ancient Magiftrates in the Time of the Romans, that were to give an Account of the Town, were called Advocates; and afterwards the Judge in Civil Matters, that was named by the Bifhops, was called at firft Advocate, and afterwards

Vidam or Vicedominus ; fo that this was the Title that was ftill continued in Bern, while they were under the Austrian and Gorman Yoke, and was preferved by them when they threw it off.

I have touch'd too flightly on the laft Difference in Sviitzerland, which related to the Canton of Glaris. In the Canton of Apenzel, as the two Religions are tolerated, fo they are feparated in different Quarters; thore of one have the one Half of the Canton, and thofe of the other Religion have the other Half; fo they live apart, but in Glaris they are mix'd ; and now the Number of the Papifts is very low; one affured me, there were not above two hundred Families of that Religion ; and thofe fo poor, that their Neceffities difpofe fome every Day to change their Religion. The other Popith Cantons feeing the Danger of lofing their Intereft entirely in that Canton, and being fet on by the Intrigues of a Court that underfood the Policy of embroiling all other States, made great Ufe of fome Complaints of the Papifts of Glaris, as if the prevailing of the other Religion expofed them to much Injuftice and Oppreffion ; and upon that they propofed that the Canton thould be equally divided as Apenzel was. This was extremely unjuft, fince the Papifts were not the tenth, perhaps not the twentieth Part of the Canton. It is true, it was fo fituated, that the Proteftant Cantons could not eafily come to their Affiftance; but thofe of Glaris refolved to die rather than fuffer this Injuftice; " and the Proteftant Cantons refolved to engage in a War with the Popinh Cantons, if they impofed on their Brethren of Glaris. At laft this Expedient was found, that in all Suits between thofe of different Religions, two Thirds of the Judges fhould be of the Religion of the Defendant. But while this Conteft was on Foot, thofe who fomented, if they did not fet it on, knew how to make their Advantage of the Conjuncture; for then was the Fortification of Hunningen at the Ports of Bafil much advanced, of which they are now very apprehenfive when too late. There are fix noble Families in Bern that have this Privilege, that when any of them are chofen of the Council, they take Place before the ancient Counfellors; whereas the reft take Place according to the Order in which they were chofen.
II. After a hort Stay at Zurich, we went down the Lake, where we paffed under the Bridge at Ripperfrood, which is a noble Work for fuch a Country. The Lake is there about half a Mile broad, the Bridge about twelve Foot broad, but hath no Rails on either Side ; fo that if the Wind is high, which is no extraordinary Thing, a Man is in great Danger of being blown into the Lake. This Defect I found in almoft all the Bridges of Lombardy, which feem'd very ftrange; for fince that Defence is made at fo fimall an Expence, it was amazing to fee Bridges fo naked ; and more furprifing in fome Places, where the Bridges are both high and long: Yet I never heard of any Mifchief that follow'd ; but thote are fober Countries, where Drinking is not much in Ure. After two Days Journey we came to Coire, the chief Town of the Grifons, and where we found a General Diet of the three Leagues fitting; fo that having flaid ten Days there, I carne to be informed of a great many Particulars which are not commonly known. The Town may contain between four and five thoufand Souls. It lies in a Bottom upon a fmall Brook, that a little below the Town falls into the Rbine. It is environed with Mountains, fo that they have a very fhort Summer; for the Snow is not melted till May or $7 u n e$, and it began to fnow in September when I was there. On a rifing Ground at the Eaft End of the Town is the Cathedral, the Bifhop's Palace, and the Clofe where the Dean and fix Prebendaries live : All within the Clofe are Papifts, but the Town are Proteftants, and they live pretty well together. Above a Quarter of a Mile up the Hill, one goes by a fteep Afcent to St. Lucius's Chapel: My Curiofity carried me thither, though I gave no Faith to the Legend of King Lucius, and his coming fo far from home to be the Apoftle of the Grifons. His Chapel is a little Vault about ten Foot fquare, where there is an Altar, and Mas' is faid upon
ome great Feftivals. It is fituated under a natural Arch in the Rock, which is given out to have been the Cell of a Hermit. From it fome Drops of a Fountain fall down near the Chapel. The Bifhop affured me it had a miraculous Virtue for weak Eyes, and that it was oily; but neither Tafte nor Feeling difcover'd to me any Oilinefs. I believe it may be very good for the Eyes, as all Rock Water is. But when I offer'd to fhew the good old Bifhop that the Legend of Lucius was a Fable, and moft remarkably fo in that which related to the Grifons, that we had no Kings in Britain at that Time, but were a Province to the Romans; that no ancient Authors fpeak of it, Bede being the firft and that the pretended Letter to Pope Eleutberius, with his Anfwer, bear evident Characters of Forgery; it fignified nothing to the Bifhop, who affured me, that they had a Tradition in their Church, and it was inferted in their Breviary, which he firmly believed. He alfo told me the other Legend of King Lucius's Sitter, St. Emerita, who was burnt there, and of whofe Veil there wa yet a confiderable Remnant among their Reliques. I confefs I never faw a Relict fo ill difguifed, for it is a Piece of worn Linnen Cloth lately wafhed, and the Burning did not feem to be a Month old; and yet when they took it out of the Cafe, there were fome there that with great Devotion rubbed their Beads upon it. The Bifhop had fome Contefts with his Dean, and being a Prince of the Empire, he had profcribed him. The Dean alfo behaved himfelf fo infolently, that by an Order of the Diet he was put in Prifon as he came out of the Carhedral. By the Confent both of the Popinh and Proteftant Communities, a Law was long ago made againft Ecclefiaftical Immunities ; this Attempt on the Dean was made four Years ago. As foon as he was let out, he went to Rome, and made great Complaints of the Bifhop, and it was thought the Popinh Party intended to move in the Diet, while we were there, for the repealing that Law, but they did it not. The Foundation of the Quarrel between the Bihhop and Dean was, the Exemptions to which the Dean and Chapter pretend, and upon which the Bi fhop made fome Invafion. I took Occafion to fhew him the Novelty of thofe Exemptions, and that in the Primitive Church it was believed, that the Bifhop had the Authority over his Presbyters by a divine Right; and if it was by a divine Right, then the Pope could not exempt them from his Obedience. But the Bifhop would not carry the Matter fo high, but contented himfelf with two Maxims: one was, that the Bifhop was Chritt's Vicar in his Diocefe; and the other, that what the Pope was in the Catholick Church, the Bifhop was in his Diocefe
He was a good-natur'd Man, and did not make ufe of the Auchority that he had over the Papifts, to fet them to live uneafily with their Neighbours of another Religion. That Bifhop was anciently a great Prince, and the beft Part of the League, that carries ftill the Name of the House of God, belong'd to him ; though I was affured that Pregallia, one of thofe Communities, was a free State above fix hundred Years ago ; and that they have Records extant that prove this: The other Communities bought their Liberties from feveral Bi fhops fome Time before the Reformation, of which the Deeds are yet extant; fo that it is an impudent Thing to fay, that they fhook off his Yoke at that Time.

The Bifhop hath yet a Revenue of about a thoufand Pounds a Year, and every one of the Prebendaries hath near two hundred Pounds a Year. It is not ealy to imagine how the Riches of this Country are raifed; for one fees nothing but vaft Mountains, that feem barren Rocks, and fome little Vallies among them not a Mile broad, and the beft Part of thefe wafh'd away by the Rbine, and fome Brooks that fall into it. But their Wealth confifts chiefly in their Hills, which afford much Pafture ; and in the hot Months, in which all the Pafture of Italy is parched, the Cattle are driven into thefe Hills, which brings them a clear Revenue of above two hundred thouland Crowns a Year. The Publick is indeed poor, but particular Perfons are fo rich, that I

## Chap. III. through SwISSERLAND, ©Oc.

knew a great many there, who were look'd on to have Eftates to the Value of one hundred thoufand Crowns. Mr. Schovefeiń, accounted the richeft Man in the Country, is believed to be worth a Million of Livres. The Government here is a pure Common-wealth; for in the Choice of. their Magiffrates, every Man above fixteen Years old hath his Voice, which is alfo the Conftitution of fome of the fmall Cantons. The three Leagues are, the League of the Grifons, that of the Houfe of God, and that of the Ten Yurijdicions.
12. They believe, that upon the Incurfions of the Gotbs and Vandals, as fome fied to the Venetion Inands, out of which rofe that famous Common-wealth, fo others came and fhelter'd themfelves in there Vallies. They told me of an ancient Infcription lately found on a Stone, where on the one Side is graven, Omitto Rbetos indomitos, and Ne plus ultrà is on the other; which they pretend was placed by Julius Cefar. This Stone is upon one of their Mountains ; but as I did not pars that Way, fo I can make no Judgment concerning it. After the firt forming of this People, they were caft into litcle States, according to the different Vallies which they inhabited, and in which Juftice was adminittred; and fo they fell under the Power of fome little Princes, that became fevere Mafters. But when they faw the Example that the Switzers had fet them, in Ahaking off the Austrian Yoke, above two hundred Years ago, they combined to fhake off theirs ; only fome few of thofe fimall Princes ufed their Authority better, and concurred with the People, and fo they are ftill Parts of the Body; only Haldenfein is an abfolute Sovereignty. It is about two Miles from Coire to the Welt, on the other Side of the Rbine. The whole Territory is about half a Mile long, at the Foot of the Alps, where there is fcarce any Breadth. The Authority of thefe Barons was formerly more abfolute than now; for the Subjects. were their Slaves: But to keep together the little Village, they have granted them a Power of naming a Lift for their Magiftrates, the Perfon being to be named by the Baron, who hath alfo the Right of Pardoning, of Coining, and every Thing elfe that belongs to a Sovereign. I faw this little Prince in Coire, in an Equipage not fuitable to his Quality; for he was in all Points like an ordinary Gentleman. There are three other Baronies that are Members of the Diet, and fubject to it; the chief belonged to the Archdukes of Infpruck; the others to Mr. Schovenffein, and Mr. de Mont ; they are the Heads of thofe Communities of which their Baronies are compofed; they name the Magiftrates out of the Lifts that are prefented to them by their Subjects, and have the Right of Pardoning, and to Confifcations. That belonging to the Houfe or Aufria is the biggeft : It hath five Voices in the Diet, and can raife twelve hundred Men. One Travers bought it of the Emperor in the Year 1679; he entered upon the Rights of the ancient Barons, which were fpecificd in an Agreement that paffed between him and his Peafants, and was confirmed by the Emperor. Travers made many Encroachments upon the Privileges of his Subjects, who made their Complaints to the League ; but Travers would have the Matter judg'd at In/pruck, and the Emperor fupported him in this Pretenfion, and fent an Agent to the Diet. I was prefent when he had his Audience, in which there was nothing but general Compliments. The Diet-ftood firm to their Conftitution, and afferted, that the Emperor had no Authority to judge that Matter, which belong'd only to them: So Travers was forced to let his Pretenfions fall.

All the other Parts of this State are purely Democratical: There are three different Bodies or Leagues, and each of thefe an entire Government; and the Affembly or Diet of the three Leagues is only a Confederacy, like the United Provinces, or the Cantons. There are $\beta_{\text {Ixty }}$ feven Voices in the Diet, which are thus divided: The League of the Grijons hath twenty eigbt Voices, that of the Houfe of God twenty four, and that of the 7urifdictions fffteen. The Furijdicizions belonged anciently to the Houfe of Aufria; but having fhaken off that Authority, were incorporated into the Diet: But in the

Vó. II. Numb.ile.
laft Wars of Germany, the Auffrians thought to have brought them again under their Yoke; yet they defended their Liberty with fo much Vigour, that the Austrians thought the Conqueft would not quit the Coft. They were affrighted by two extraordinary Actions; in one Village, which was quite abandoned by all the Men, who left the Women in it, fome Hundreds; as I was told, being there quattered, were apprehenfive of no Danger from their Hofteffes: But the Women intended to let their Husbands fee, that they were capable of contriving and executing a bold Action, though it mult be confefs'd it was a litele too barbarous for the Sex. They enter'd into a Combination to cut the Throats of all the Soldiers at one Time. The Woman that propofed this, had four lodged with her, and fhe, with her own Hands, difpatched them all; and fo did the reft, not one Soldier efcaping to carry away the News. In another Place, a Body of the Aufrians came into a Valley that was quite abandoned; for the Men having no Arms but their Clubs and Saves, had got up to the Mountains : But they took their Meafures fo well, and poffeffed themfelves of the Paffes in fuch a Manner, that they came down upon the Soldiers with fo much Fury, that they defeated them, fo that very few efcaped : and it is certain, that the fubduing them would have proved a very hard Work. It is true, they are not in a Condition to hold out long, the Publick is fo poor ; fo that though particular Perfons are rich, yet they have no publick Revenue, but every Man is concerned to preferve his Liberty, which is more entire here than even in Sweitzerland ; but often fwells too high, and throws them into Convulfions. The League of the Grijons is the firft and moft ancient, and is compofed of eight and twenty Communities, of which there are eigbteen Papifts, and the reft are Proteftants. The Communities of the two Religions live neighbourly together, yet do not fuffer thofe of another Religion to live among them; fo that every Community is entirely of the fame Religion; and if any changes, he muft go into another Community. Each Community is an entire State within itfelf, and all Perfons meet once a Year to chufe the Judge and his Affiftants, whom they change or continue from Year to Year, as they fee Caufe. There is no Difference between Gentleman and Peafant, and the Tenant hath a Vote as well as his Landlord; nor dare his Landlord ufe him ill when he votes contrary to his Intentions, for the Peafants would confider this as a common Quarrel. An Appeal lies from the Judge of the Community to the Affembly of the League, where all Matters end; for there lies no Appeal to the General Diet of the three Leagues, except in Matters that concern the conquer'd Countries, which belong in common to the three. There is one chofen by the Deputies for the Affembly of the League, who is called the Head of the League, that calls them together as he thinks proper, and can bring a Caule that hath been once judged to a fecond Hearing. Ilants is the chief Town of this League, where their Diet meets. The fecond League is that of the House of God, in which there are four and twenty Communities. The Burgomafter of Coire is always the Head of this League, which at this Tme is almoft wholly Proteflant; and the two Vallies of the Upper and Lower Engedin, are pointed out by the Papifts as Canibals towards fuch Catholicks as come among them. But Fryer Sfondrato, Nephew to Pope Gregory XIV. whofe Mother the Marquis of Bergominiero, that was in England, married, found the contrary of all this to be true, to his great Regret. About eighteen Years ago he was believed to have wrought Miracles; and he became fo much in Love with the Crown of Martyrdom, that he went through the Engedin, not doubting but he would find there what he defired. His Brother had come fometime before into the Country to drink the Mineral Waters, and was well known to the Gentry; fo fome of thefe hearing of the Fryer's coming, went and waited on him, and he was entertained in their Houfes, and conveyed through the Country, though he took all poffible Methods to provoke them; for he was often railing at their Religion, but to all that they made
which
no Anfwer, only they continued their Civilities; which fo enraged the warm Fryer, that he went to Bormio, and there died of Grief.' An Accident fll out five Years ago, that the People of the Country efteemed a Miracle. The Papifts, in their Proceffions, go out of one Community into another; and when they pafs through Proteftant Communities, they lower the Crofs, and give over finging till they come again upon Popifh Ground; but then they went on bearing up the Crofs, and finging ; upon which the Proteftants ftopp'd them. They, finding that they were not equal in Number to the Proteftants, fent to a Catholick Community, and defired their Affiftance. Two thoufand came, and in all Appearance the Difpute would have had a bloody Iffue; for the Proteftants were refolved to maintain the Rights of their Community, and the others no lefs refolved to force their Way. But an extraordinary thick Mift rofe, and through it the Papifts fancied they faw a vaft Body of Men, which was no other than a Wood; but terrified with the Appearance, they retired, and this faved a Battle that probably would not only have ended in the Shedding much Blood, but might have diforder'd the whole Conftitution of their Leagues. The Papits of Quality endeavour to keep their People in Order; but they acknowledge, that the Proteftants are much more peaceable than the Catholicks. The Jurifdictions have fifteen Votes in the General Diet; yet they are generally called the Ten Jurifdictions, and the greater Part of them are llkewife of the Proteltant Religion: For upon the general Computation of the three Leagues, the Proteftants are about two Thirds. In their Diets there are three Tables, one in the Middle, and two on either Side. At every Table fits the Head of the League, and a Secretary near him ; and from the Table there go down Benches on both Hands for the Deputies from the Communities of that League. They hold their Diets by Turns, in the chief Towns of the feveral Leagues, and it happened to be the Turn of the Houfe of God, when I was there; fo they met at Coire.
13. The three Leagues, or Grifons in general, have a conquered Country in Italy, divided into three Diftricts; the Valteline, Cbavennes, and Bormio. When Fobn Galeafle poffeffed himfelf of the Dutchy of Mi lan, and drove out Barnabas; Mafinus, one of Barnabas's Sons, to whom his Father had given thofe three Branches of the Dutchy of Milan, retired to Coire, and being hofpitably received and entertained by the Bifhop, when he died, he gave his Right to thofe Territories to the Cathedral of Coire; fo the Prelate had a Title, without a Force able to make it good. But when the Wars of Italy were on Foot, the three Leagues being much courted by both the Crowns, fince they were Mafters of all the Paffes, through which either the Switzers or Germans could come into Italy, they refolved to lay hold on that Opportunity: Yet they had not Zeal enough for their Bifhop, to engage upon his Account; but agreed to pay him fuch a Revenue, and he transferred his Title to them, and they were fo confiderable to the Spaniards, that they yielded thofe Parcels of the Dutchy of Milan to them, and by this Ceffion they are poffefied of them. Thofe Acceflions to this State are much better than the Principal; for as the Valteline, which is above forty Miles long, and two broad, is one of the richeft Vallies in the World, in which there are three Harvelts fome Years; fo the Cbavennes and Bormio, though not fo good as that, are much preferable to the beft Vallies of the Grifons. Yet the Engagement that Pcople have to their Homes appears fignally here, fince the Grifons have not forfaken their Country, that they might plant themfelves fo advantageouny: But they love their rugged Vallies, and think the Safety they enjoy in them, beyond the Pleafures of their acquired Dominions; which they govern by Bailiffs and Podeftas, and other Officers whom they fend among them; and all the Advantage that they draw from them is, that the Magiftrates they fend enrich themfelves in the fame Manner as the Bailiffs in Switzerland. All thofe Offices go round the feveral Communities, which have the Riglit of Nomination in their Turn: But if there is none of the Community
proper, any one of another Community may buy of them the Nomination for that Turn, and the Community diftrioute among them the Money that he gives them. The Publick draws nothing out of thofe Parts, except the Fines, which in fome Years amount to no confiderable Sum; and ten or twelve thoufand Crowns is thought a great deal to be raifed in a Year: So that their Subjects live happy, and free of all Taxes, which made their laft Revolt appear the more extraordinary. It was, indeed, the Effect of a very furprifing Bigottry, when a People, who had no other Grievance, but that now and then their Magiftrates were of another Religion, and that Proteftants were tolerated amongft them, would therefore throw off their Rulers, cut the Throats of their Neighbours, and caft themfelves into the Hands of the Spaniards, who are the worft Mafters in the World.
14. To give a more particular Relation of that Matter, and tell the Circumftances which feem a little to leffen that Rebellion and Maffacre, I muft give an Account of a Part of this Conftitution that is very terrible, and which makes the greateft Men tremble. The Peafants come fometimes in great Bodies, and demand a Chamber of Jultice from the Diet, and they are bound to grant it when thus demanded, which happens generally once in twenty Years. This Tumult of the Peafants is fet on by fome of the Malecontent Gentry, and generally there are a great many Sacrifices made. This Court is compofed of Ten Judges out of every League, and twenty Advocates, who manage fuch Accufations as are prefented. It is fuperior to all Law, and acts like a Court of Inquifition: They give the Queftion, that is, put to the Torture, and do every Thing that they think neceffary to difcover the Truth of fuch Accufations as are prefented to them; and the Decifions of this Court can never be brought under a Review, though there is one Exception to this; for about a hundred Years ago, one Court of Juftice reverfed all that another had done. The Peafants are in as great Jealoufy of the Spaniards, as the Switzers are of the French; and the good Men among them are fenfible of a great Corruption of Morals, that the Spanifb Service brings among them. For there is a Grifon Regiment kept in Pay by the Spaniards; there are in it twelve Companies of fifty a-piece, and the Captains have a thoufand Crowns Pay, though they are not obliged to attend the Service. This is a Penfion paid under a more decent Name to the moft confiderable Men of the Country ; and is thared among them without any Diftinction of Proteftant and Papift, and is believed to fway their Councils too much. The Peafants are apt to take Fire, and to believe they are betray'd by thefe Penfioners of Spain; and when Rumours are blown about among them, they come in great Numbers to demand a Chamber of Juftice. The common Queftion that they give, which is alfo ufed through all Switzerland, and in Geneva, is, they tie the Hands of the fufpected Perfon behind his Back, and pull them up to his Head, and fo draw them about; by which the Arms, and chiefly the Shoulder-blades, are disjointed. And when a Perfon put to the Queftion confeffes his Crime, and is upon that condemned to die, he is obliged to renew his Confeffion, upon Oath, at the Place of Execution; and if he goes off from it then, and faith, That his Confeffion was extorted by the Violence of the Torture, he is put again to the Queftion; for this paffes for a Maxim, That no Man muft die, unlefs he confeffeth himfelf guilty. Generally when the Fury of demanding this Chamber fpreads among the People, the Gentry run away, and leave the whole Matter in the Power of the Peafants; for they know not where it will end : And fo the Peafants being named Judges, the Juftice goes quick, till fome Sacrifices appeafe the Rage. Two Years ago, upon the Sale of a Common to the Bifhop of Como, to which he had ancient Pretenfions, the Peafants, having no more the Liberty of the Common, were enraged at their Magiftrates, and a Report was fpread abroad, of which the Author could never be difcovered, that the Spaniards had fent a hundred thoufand Crowns among
them

## Chap. III.

them to corrupt all their Magittrates. Upon this they were fo on Fire, that it was generally thought there would have been many Sacrifices made: But the Gentry happened to be then fo much united, that there was none of them engaged among the Peafants, or that directed their Rage. A Chamber of Juftice was granted, but the Matter was fo ordered, that it did not appear that any was guilty: Yet fome that had dealt in that Tranfaction were fined, not fo much for any Fault, as to raife a Fund to pay the Expences of the Chamber. And becaufe they could not find Colour to raife fo much out of the Fines, there was a Fine of five hundred Livres laid on every one of the Spani/b Companies.

In the Year 1618, there was a Report that the Spaniards had a Treaty on Foot to take away the Valteline from the Leagues. This was fupported in Credit by the Fort Fuentes, that the Governor of Milan was building upon the Lake of Como. Near the Valteline there was one Ganatz a Minifter, but a bloody and perfidious Man, that managed the Rage of the Peafants; and there was great Reafon to fufpect fome under-hand Dealing, though he threw it which Way he pleafed. A Chamber of Juftice was appointed to fit at Toffane, which is a confiderable Town, twelve Miles from Coire, on the Road to Italy, near Alta Rbetia, which is an high but fmall Hill, to which there is no Accefs but on one Side, where there are the Ruins of a Caftle and a Church, and which they believe was the Palace of Rbetus, the firf Prince of the Country. There was fevere Juftice done in this Chamber; a Prieft was put to the Queftion, and fo ill ufed, that he died in it, which is a crying Thing among them. The chief Sufpicion lay upon one Pianta, who being of one of the beft Families of the Grijons, was then one of the Captains in the Spanijh Regiment : He withdrew himfelf from the Storm; but the Peafants, led on by Ganatz, purfued him fo clofe, that at laft they found him, and hewed him in Pieces, Gonatz himfelf ftriking the firft Stroke with an Ax, which was taken up, and preferved by his Friends ; and four and twenty Years after, fifty or fixty of this Gentleman's Friends fell upon Ganatz in Coire, and killed him with the fame Axe. Ganatz had, during the Wars, abandon'd both his Religion and his Profeffion, being a Difgrace to both, and had ferved firft in the Venetion, and then in the Spanifb Troops. After the Peace was made, he became fo confiderable, being fupported by the Spani/h Faction, that he was chofen Governor of Cbavennes, and was come over to Coire to a Diet, being then in fo important a Charge. Yet he was fo much hated, that though the Murthering of a Magiftrate in Office, and at a publick Affembly, in fo terrible a Man. ner, ought to have been feverely punifh'd; yet no Enquiry was made into the Crime, nor was any Man fo much as queftioned for it. In that Chamber many that were put to the Queftion confeffed enough to hang them; fome endured the Queftion, and efcaped with the Lofs of the Ufe of their Arms. Thore of the Valteline have pretended this Severity was that which gave the Rife to the Maffacre ; and it is very probable this might have drawn in fome that would have been otherwife more moderate, and that it did likewife precipitate that barbarous Action. But it was afterwards difcovered, that the Plot had been formed long before ; fo that the Induftry and Rage of the Priefts, managed by Spanijh Emiffaries, working upon the Bigottry of the People, was the real Caufe; and this only made Ure of as a Pretext to give fome Colour to the Maffacre, which was executed fome Months after this Chamber was diffolved. It began while the Proteftants were at Church : There were fome Hundreds deftroyed, the reft got all up into the Mountains, and fo efcaped into the Country of the Grifons; and thofe of Cbavennes got likewife up to the Hills, for they are fituated juft at the Bottom of them.

I hall not profecute the reft of that War ; the French faw of what Advantage it was to them, not to let this Pafs from Italy into Germany fall into the Hands of the Spaniards; fo Bafompiere was fent to Marrid, and obtained a Promife, that Things fhould be pur into the
fame State in which they were before the Year 1618 But when that Order was fent to the Governor of Mis lam, it was plain he had fecret Inftructions to the contrary, for he refufed to execute it. So a War followed, in which the Grifons found it was not eafy for them to fupport the Charge of it, without having Recourfe to the Afiftance of the French. But the Spaniards pretended to have no other Intereft in the Affairs of the Val teline, than the Prefervation of the Catholick Religion; and to thew their Sincerity, they put the Country into the Pope's Hands, knowing that he could not preferve it but by their Affiftance, or reftore it without fecuring it from all Change of Religion. The French willingly undertook the Caufe of the Grifons, and becaufe the Duke of Roban was like to be the moft favoured General, as being of their Religion, he was fent to command fome Forces that march'd thither. But he faw, that if the French once made themfelves. Mafters of the Paffes of the Country, it would turn to their Ruin; and finding the Grifons repoled an entire Confidence in him, he thought it unbecoming him to be an Inftrument in that he faw mult be fatal to them. The Spaniards feeing the French engage in the Quarrel, and fearing they thould poffels themfelves of the Paffes, offered to reftore all the Territory in Italy; for Cbavennes and Bormio had likewife revolted, only the Proteftants got away fo quick upon the Diforders in the Valteline, that they prevented the Rage of the Priefts. The Spaniards ftood upon the fe Conditions; That an Amnelty fhould be granted for what was paft: 'That there fhould be no Exercife of the Proteftant Religion tolerated in the Country: And that the Bailiffs and other Magiftrates of that Religion, who were to be fent into the Valteline, fhould not openly practife their Religion: And as for other Perfons, that none of that Religion might ftay above fix Weeks at a Time in the Country. The Duke of Roban, feeing that Conditions of fo much Advantage to the Leagues were offered to them, did under-hand advife thofe of that Religion to accept of them, at the fame Time that he feem'd openly to oppofe the Treaty fet on Foot on thofe Terms; and that he might get out of this Employment with the lefs Difhonour, he advifed their clapping him up in Prifon, till they had finifh'd their Treaty with the Spaniards. So that they very gratefully to this Day own, that they owe the Prefervation of their Country to the Advices of that great Man. Many that were of that Religion returned to their Houfes and Eftates; but the greateft Part have fince changed their Religion, others fold their Eftates, and left the Country; fome ftay ftill, and go two or three Hours Journey to fome of the Proteftant Communities, where they have the Exercife of their Religion; and though they may not ftay in the Valteline above fix Weeks at a Time, yet they avoid that by going for a Day or two out of the Country once within that Time; nor is that Matter at prefent fo feverely examined, becaufe there is a Calm among them as to thofe Matters. But when it comes to the Turn of the Proteftant Communities to fend one of their Religion to thofe Employments, he is often much embarraffed by the Bihhop of Como, to whofe Diocefe thofe Territories belong: For if the Bifhop fancies that they do any Thing contrary to the Eccleffaftical Immunities, he excommunicates them. And tho, this may appear a ridiculous Thing, fince they are in a worfe State by being Hereticks, yet it produces a very fenfible Effed; for the People, who are extremely fuperftitious, will not come near fuch Magiftrates: So that about three Years ago, a Bailiff found himfelf obliged to defire to be recalled, though his Time was not out, fince being excommunicated, he could no longer maintain the Government.

Among the Grifons the Roman Law prevails, modefied a little by their Cuftoms: One a little particular was executed when I was there. A Man, that hath an Eftate by his Wife, enjoys it after her Death as long as he continues a Widower; but when he marries again, he is bound to divide it among the Children he had by her. The Juftice is fhort, but it is thought that Bribes go here, though but mean in proportion to their Po.
verty,
verty, as well as in other Places. The married Women fcarce appear abroad, except at Church; but the young Women have more Liberty before they are married. There is fuch a Plenty of all Things, by Reafon of the Gentlenefs of the Government, and the Induftry of the People, that in the ten Days I faid at Coire, I was but once ask'd an Alms in the Streets. There are two Churches; in the one there is an Organ, that joins with their Voices in the Singing of the Pfalms; and there was for the Honour of the Diet, while we were there, an Anthem fung very regularly. In all the Churches both of Swoitzerland and the Grifons, except in this, the Minifter preaches covered, but here he is bare-headed. And I obferved a particular Devotion ufed here in faying of the Lord's Prayer, that the Minifters, who wear Caps, put them off. The Women, as in Bern, turn all to the Eaft in Time of Prayer, and in their private Devotions before and after the publick Prayers: Many alfo bow at the Name of Jefus. They chriften difcovering the whole Head, and pouring the Water on the Hind-head, ufing a trine Afperfion; which is allo the Practice of the Switz. It was Matter of much Edification, to fee the great Numbers, both here and all Swoitzerland over, that come every Day to Prayers Morning and Evening. They give here, in the Middle of the Prayer, a good Interval of Silence for the private Devotions of the Affembly. The Schools here go not above Latin, Greek, and Logick; and for the reft they fend their Children to Zurich or Bafl. The Clergy are very meanly provided; for the the moft Part they have nothing but the Benevolence of their People. They complained much to me of a Coldnefs in their Pcople in the Matters of Religion, and of a great Corruption in their Morals. The Commons are extreme infolent, and many Crimes go unpunifhed, if the Perfons that commit them have either great Credit or much Money. The poor Minitters here are under a terrible Slavery; for the Griifons pretend a Prefcription not only for the Patronage of their Churches, but a Power to difinifs their Churchmen as they fee caufe. How it is among the Papilts I cannot tell; but the Dean of the Synod of the House of God told me, they had an ill Cufom of ordaining their Minifters without a Title, upon Examination of their Abilities, which took them up generally fix or feven Hours; and when this Tryal was difpatch'd, if the Perfon was qualified they ordainec him; and it was too ordinary for thofe to endeavour to undermine the Minifters already in Employment, if their People grew difgufted at them, or they became difabled by Age; and often the Intereft and Kindred of the Intruder carried the Matter againft the Incumbent without any Pretence; and in that Cafe the Synod was bound to receive the Intruder. In one Half of the Country they preach in High Dutch, and in the other Half in a corrupt Italian, which they call Romanifh, that is, a Mixture of Frencb and Italian. In every League they have a Synod; and as the People choofe their Minifters, fo, in Imitation of the Switz, every Synod choofes, their Antiztes, or Superintendent. He is call'd the Dean among the Grijons, and hath a Sort of Epiicopal Power; but he is accountable to the Synod: The Office is for Life; but the Synod, upon great Caufe, may make a Change. The People are much more lively than the Switzers, and they begin to have a Tincture of the Italian Temper. They are extreme civil to Strangers; but it feems, in all Commonwealths Innkeepers think they have a Right to exact upon Strangers; which one finds here, as well as in Holland, or in Switzerland.
15. If hall conclude what I have to fay of the Grifons with an extraordinary Story, which I had from the Minifters of Coire, and feveral other Gentlemen, that faw in April I685, about five hundred Perfons of different Sexes and Ages, that paffed through the Town, who gave this Account of themfelves. They were the Inhabitants of a Valley in Tyrol, belonging the Archbifhoprick of Salizburg, but fome of them were in the Diocefes of Trent and Breffe. They feemed to be a Remnant of the old Wetdenfes; they worfhipped neither Images nor Saints, and they believed the Sacrament
was only a Commemoration of the Death of Chrit ; in many other Points they had their peculiar Opinions, different from thofe of the Church of Rome: They knew nothing either of Lutberans or Calvinits; and the Grijons, though their Neighbours, had never heard of this Nearnefs to the Proteftant Religion. They had Mais faid among them; but fome Years fince fome of the Valley going over Germany to earn fomewhat by their Labour, happened into the Palatinate, where they were better inftructed in Matters of Religion; and thefe brought back with them into the Valley the Heidelburg Catechifm, with fome other German Books, which ran over the Valley; and they being in a good Difpofition, thofe Books had fuch an Effeet upon them, that they gave over going to Mafs , and began to worfhip God in a Way more fuitable to the Rules fet down in Scripture. Some of their Priefts concurred in this Change ; but others who adhered fill to the Mafs, went and gave the Archbifhop of Salizburg an Account of it ; upen which he fent fome to examine the Matter, to exhort them to return to Mafs, and to threaten them with Severity, if they continued obftinate : So they feeing a terrible Storm ready to break on them, refolved to abandon their Houfes, and all they had, rather than fin againft their Confciences; and the whole Inhabitants, old and young, Men and Women, to the Number of two thoufand, divided themfelves into feveral Bodies; fome to go to Brandenburg, others to the Palatinate, and about five hundred took the Way of Coire, intending to difperfe themfelves in Swoitzerland. The Minifters told me, they were much edified with their Simplicity; for a Collection being made for them, they defired only a little Bread to carry them on their Way. From Coire we went to Toffano, and from thence through the Way that is juftly called Via Mala. In lies through a Bottom between two Rocks, through which the Rbine runs, but under Ground, for a great Part of the Way: The Way is cut out in the Middle of the Rock in fome Places; and in feveral, the Steepnefs of the Rock being fuch, that a Way could not be cut, there are Beams driven into it, over which Boards and Earth are laid. This Way holds an Hour ; after that, there is for two Hours a good Road, and we pafs'd through two confiderable Villages, finding good Lodging in both : From thence there is, for two Hours Journey, terrible Way, almoft as bad as the Via Mala; then an Hour's Journey good Way to Splugen, which is a large Village of two hundred Houfes that are welld built, and the Inhabitants feem to live at their Eafe, though they have no Soil but a littlé Meadow Ground about them. This is the laft Proteftant Church that was in our Rout: It was well endow'd; for the Minifter had near two hundred Crowns. Thofe of this Village are the Carriers between Italy and Germany, and drive a great Trade; for there is here a perpetual Carriage going and coming ; and we were told, that there pals generally a hundred Horfes through this Town, one Day with another; and there are above five hundred Carriage-horfes that belong to it. From this Place we went mounting for three Hours, till we got to the Top of the Hills, where there is only one great Inn. After that, the Way was tolerably good for two Hours; and for two Hours there is a conftant Defcent, which, for the molt part, is as fteep as if we were going down Stairs. At the Foot of this is a little Village, called Campodolin; and here we found we were in latay, both by the vaft Difference of the Climate, (for whereas we were freezing on the other Side, the Heat of the Sun was uneafy here) and by the Number of the Beggars ; though it may feem the Reverfe of what one ought to expect, fince the richeft Country of Europe is full of Beggars; and the Grijons, one of the pooreft States, have no Beggars at all. One Thing is alfo ftrange, that among the Grijons, the rich Wine of the Valteline, after carried three Days Journey, is fold cheaper than the Wine of other Countries at the Door; but there are no Taxes nor Impofitions here. From Campodolin there are three Hours Journey to Cbavennes, all in a flow Defcent, and in fome Places the Way is extreme rugged and flony.
16. Cbavennes

## Chap. III.

 tbrough Swisseriand, \&c.16. Cbavennes is very pleafantly fituated at the very Foot of the Mountains; there runs through the Town a charming little River. It is nobly built, and hath many rich Vineyards about it; and the Reverberation of the Sun-beams from the Mountains fo increafes the Heats, that the Soil is as rich here, as in any Part of Italy. Here one begins to fee a noble Architecture in many Houfes: In fhort, all the Marks of a rich Soil and a free Government appear here. The Town food a little more to the North about five hundred Years ago, but a Piece of the Alps came down upon it, and buried it quite ; and at the upper End of the Town there are fome Rocks that look like Ruins, about which there hath been a very extraordinary Expence, to divide them one from another, and to make them fit for Forts and Caftles: The Marks of the Tools appear' d all over the Rock in one Place. I meafured the Breadth of the one from the other, which is twenty Foot, the Length is four hundred and fifty Foot; and, as we could guefs, the Rock was two hundred Foot high, cut down on both Sides in a Line, as even as a Wall; towards the Top of one, the Name Salvius is cut in large Letters, a little Gotbick. On the Tops of thofe Rocks, which are inacceffible, except on the one Side, and to that the Afcent is uneafy, they had Garrifons during the Wars of the Valeline: There were fifteen hundred in Garrifon in that which is in the Middle. There fall down frequently Pieces from the Hills, that extremely fatten the Ground which they cover, fo that it becomes fruitful beyond Expreffion: And I faw a Lime-tree that was planted eight and thirty Years before in a Piece of Ground which has been fo cover'd, two Fathom and an half in Compafs. On both Sides of the River, the Town and the Gardens belonging to it, cover the whole Bottom between the Hills; and at the Roots of the Mountains they dig great Cellars and Grottos, and ftrike a Hole about a Foot fquare', sen or twelve Foot into the Hill, which all the Summer draws a frefh Air into the Cellar, fo that the Wine of thofe Cellars drinks as cold as if it were in Ice; but this Wind-pipe did not blow when I was there, which was towards the End of Septewber: For the Sun opening the Pores of the Earth, and rarifying the exterior Air, that, which is compreffed within the Cavities that are in the Mountains, rufhes out with a conftant Wind; but when the Operation of the Sun is weakened, this Courfe of the Air is lefs fenfible. Before, or over thofe Vaults, they build little pleafant Rooms like Summerhoufes, and in them they go to Collations generally at Night in Summer. I never faw bigger Grapes than here ; there is one Sort larger than the biggeft Damafcene Plumbs that we have in England.

There is a Kind of Wine here and in the Valteline, which I never heard named any where elfe, that is called Aromatick Wine ; and as the Tafte makes one think it muft be a Compofition, (for it taftes like a ftrong Water drawn off Spices) fo its Strength, being equal to a weak Brandy, difpofes one to believe that it cannot be a natural Wine: Yet it is the pure Juice of the Grape without any Mixture. The Liquor being fingular, I informed myfelf particularly of the Way of preparing it. The Grapes are red, though it appears white. They let the Grapes hang on the Vines till November, when they are extreme ripe; then they carry them to their Garrets, and fet them all upright on their Ends by one another for two or three Months; then they pick all the Grapes, and throw away thofe in which there is the leaft Appearance of Rottennefs, fo that they prefs none but found Grapes: After they are preffed, they put the Liquor in an open Veffel, in which it throws up a Scum, which they take off twice a Day; and when no more comes up, which, according to the Difference of the Seafon, is fooner or later, (for fometimes the Scum comes no more after eight Days, and at other Times it continues a Fortnight) then they put it in a clofe Veffel. Eor the firft Year it is extreme fweet and lufcious, but at the End of the Year, they pierce it a little higher than the Middle of the Veffel, almoft two Thirds from the Bottom, and drink it off till it cometh fo low, and then every Year they fill it

Vol. II. Numbe IIO.
up anew : Once a Year (in the Month of Marcb) it ferments, and cannot be drank till that is over, which continues a Month"; but their other Wine ferments not at that Time. Madam de Salis, a Lady of that Country, who entertained us three Days with a Magnificence like London or Paris, had Wine of this Compofition that was forcy Years old, and was fo very ftrong, that one could hardly drink above a Spoonful ; and it tafted high of Spicery, though fhe affured me there was not one Grain of Spice in it, nor of any other Mixture. Thus, as I conceive, the Heat that is in this Wine becomes a Fire, and diftils itfelf, throwing up the more fpirituous Parts of it to the Top of the Hoghead.
Both here, and in the Country of the Grifons, the Meat is very juicy; the Fowl are excellent, their Roots and Herbs very well relin'd; bur the Fifh of their Lakes are beyond any Thing I ever faw. They live in great Simplicity as to their Habit and Furniture; but they have Plenty of all Things, and are very rich. The Family, where we were fo nobly entertain'd, is believed to be worth about two hundred thoufand Crowns. Here the Italian Cuftom, of one only of a Family that marries, begins to take place. There is a Sort of Pots of Stone that is ufed not only in all the Kitchens here, but almoft all over Lombardy, called Lavege; the Stone feels oily and fcaly, fo that a Scale fticks to one's Finger that touches it, and is fomewhat of the Nature of a Slate: There are but three Mines of it known, one near Cbavennes, another in the Valicline, and the third in the Grifons; but the firft is much the beft. They generally cut it in the Mine round, about a Foot and a half diameter, and a Foot and a Quarrer thick; and they work it in a Mill, where the Chiffels that cut the Srone are driven about by a Wheel that is fet a going by Water, and which is fo ordered, that he, who manages the Chiffel, very eafily draws forward the Wheel out of the Courfe of the Water. They turn off firft the outward Coat of this Stone, till it is exactly fmooth, and then they feparate one Pot after another by thofe fmall and hooked Chifiels, by which they make a Neft of Pots, all one within another, the biggeft being of the Size of an ordinary Beef-pot, and the inward Por being no larger than a finall Pipkin : Thefe they arm with Hooks and Circles of Brafs, and fo they ufe them in their Kitchens. One of the fe Stone-pots takes Hear, and boils fooner than any Pot of Metal; and whereas the Bottoms of Me. tal-pots tranfmit the Heat fo entirely to the Liquor within, that they are not infufferably hot, the Bottom of this Stone-pot, which is about twice fo thick as a Pot of Metal, burns extremely. It never cracks, or gives any Sort of Tafte to the Liquor that is boiled in it; but if it falls to the Ground, it is very brittle; yet this is repair'd by patching it up; for they piece their broken Pors fo clofe, though without any Cement, by fewing with Iron-wire the broken Parcels together, that in the Holes which they pierce with the Wire, there is not the leaft Breach, except that which the Wire both makes and fills. The Pafage to this Mine is very inconvenient ; for they mult creep into it for near half a Mile through a Rock, that is fo hard, that the Paffage is not above three Foot high; and thofe, that draw out the Stones, creep along upon their Belly, having a Candle faftened in their Forehead, and the Stone laid on a Sort of Cuhtion made for it upon their. Hips: The Stones are commonly two hundred Weight.
17. But having mentioned fome Falls or Breaches of Mountains in thofe Parts, I cannot pals by the extraordinary Fate of the Town of Pleurs, that was about a League from Cbavennes to the North in the fame Bottom, but on a Situation that is a little more raifed. The Town was half the Bignefs of Cbavennes; the Number of the Inhabitants about two and twenty hundred Perfons, but it was much better built; for befides the great Palace of the Francken, that coft fome Millions, there were many other Palaces erected by feveral rich Factors of Milan, and the other Parts of Italy, who liked the Situation and Air, as 11 as the Freedom of the Government ; fo they ufed to come hither
$7 P$
during
during the Heats, and gave themfelves all the Indulgences that a vaft Wealth could furnifh. By one of the Palaces that was a little diftant from the Town, which was not overwhelmed with it, one may judge of the reft. It was an Out-houfe of the Family of the Francken, and yet it may compare with many Palaces in Itoly; and certainly Houfe and Gardens could not coft fo little as one hundred thoufand Crowns. The Voluptuoufnefs of this Place became very crying, and Madam de Salis told me, that fhe had heard her Mother often relate fome Paffages of a Proteftant Minifter's Sermons, preached in a little Church which thofe of that Religion had there, which warned them often of the terrible Judgments of God which were hanging over their Heads, and that he believed would fuddenly break out upon them. On the twenty-fifth of Auguf, 1618, a Perfon came and told them to be gone, for he faw the Mountains cleaving ; but he was laughed at for his Pains. He had a Daughter, whom he perfuaded to leave all and go with him; but when fhe was gone out of Town with him, fhe called to Mind that fhe had not lock'd the Door of a Room, in which fle had fome Things of Value, and fo fhe went back to do that, and was buried with the reft; for at the Hour of Supper the Hill fell, and buried the Town and all the Inhabitants, fo that not one Perfon efcaped. The Fall of the Mountains fo fill'd the Channel of the River, that the firt News thofe of Cbavennes had of it, was by the failing of their River; for three or four Hours there came not a Drop of Water, but the River wrought for itfelf a new Courfe, and returned to them. I could hear no particular Character of the Man who efcaped, fo I mult leave the fecret Reafon of fo fingular a Prefervation to the great Difcovery of the laft Day. Some of the Family of the Francken got fome Miners to work under Ground, to find out the Wealth that was buried in their Palace ; for befides their Plate and Furniture, there was great Quantity of Cahth and many Jewels in the Houfe. The Miners pretended they could find Nothing ; but they went to their own Country of Tirol, and built fine Houfes, and a great Wealth appeared, of which no other vifible Account could be given but this, that they had found fome of that Treafure. The chief Factors of Italy have been Grifons; and they told me, that as the Trade of Banking began in Lombardy, fo that all Europe over a Lombard and a Banker fignified the fame Thing; fo the great Bankers of Lombardy were Grifons, and to this Day the Grifons drive a valt Trade in Money; for a Man there of a hundred thoufand Crowns Eftate, hach not perhaps a third Part of this within the Country, but puts it out in the neighbouring States: And the Liberty of the Country is fuch, that the Natives, when they have made Eftates elfewhere, are glad to leave even Italy, and the beft Parts of Germany, and come and live among thofe Mountains, of which the very Sight is enough to fill a Man with Horror.
From Cbavennes we went for two Hours through a Plain to the Lake of Cbavennes, which is almoft round, and is about two Miles Diameter. This Lake falls into the Lake of Como, over-againft Fort Fuentes; when we paffed, the Water was fo low, that the Boat could not eafily get over a Bank between the two Lakes. The Lake of Como is about eight and forty Miles long, and four board, and runs between two Ranges of Hills. I did not flay long enough in Comzo to give any Defription of it. The beft Thing in it is a fine Chapel, which the prefent Pope Innocent XI. who is a Native of Como, is building. From Como we went eight Miles to Codeloggo, beionging to the Swizzers, and from thence to Lugane we had eight Miles on the Lake. This Lake doth not run in an even Current, as other Lakes that rife under the Alps, but the Situation of the Hills about it throws it into feveral Courfes.
The Sroitzers have here feveral little Provinces, of which, during the Wars of Italy between the two Crowns, in Francis I. and Cbarles V's Time, they poffeffed themfelves as a Pledge for Payment of their Arrears; and they were then fuch confiderable Allies, that they made both the Competitors for the Dutchy of Milan court
them by Turns, and became the peaceable Poffefors of almof all that Tract that lies between the Lake of Como to the Country of the Valeffic, or the Vallies. The Inhabitants here are fo well ufed, live fo free of all Impofitions, and the Government is fo gentle, that I muft tell you another Paradox; this is the worft Country, the leaft productive, the moft expofed to Cold, and the leaft capable of Trade of all Italy; and yet it is by far the beft peopled of any that I faw in all Italy. There belongs to the Bailiage of Lugane alone ninety nine Villages, of which a great many are very large, and all full of People. The twelve ancient Cantons have their Turns of all the Bailiages and other Offices here; but when it comes to the Turn of thofe of the Religion, their Bailiffs mult be content with private Devotions in their own Houfe, but can have no publick Exercifes, nor fo much as a Minifter in their Houfes. For here, as in the Valteline, when the Spaniards confirmed the Right of the Cantons, they made an exprefs Provifion, that no Religion, except the Popih, fhould be tolerated here; fo that the Bailiff, who is the Prince, often hath not the free Liberty of his Religion in thefe Parts. The Bailiffs make their Advantages, as well as in the other Parts of Sveitzerland, yet with more Caution; for they take great Care not to give the Natives any Diftafte, though the Miferies to which they fee all their Neighbours expofed, and the Abundance and Liberty in which they live, might, in all Appearance, deliver their Mafters from any great Apprehenfions of a Revolt. A great many Mechanicks of all Sorts live in thefe Parts, who go all Summer long over Italy, and and come back hither with what they have gained, and live free from all Taxes. I was told, that fome Nephews of Popes, in particular the Barberini, had treated with the Swoitzers to buy this Country from them, and fo to erect it into a Principality ; and that they had refolved to offer twelve thoufand Crowns to each of the twelve Cantons; but they found it would certainly be rejected, fo they made no Propofition to the Diet of the Cantons, as they once intended. And it is certain, whenever this Country is brought under a Yoke, like that which the reft of Italy bears, it will be foon abandoned; for there is nothing that draws fo many People to live in fo bad a Soil, when they are in Sight of the belt in Europe, but the Eafinefs of the Government.
18. From Lugane I went to the Lago Maggiore, which is a noble Lake, fix and fifty Miles long, and in moft Places fix Miles broad, and a hundred Fathom deep about the Middle of it; it makes a great Bay to the Weftward, and there lie two Iflands, called the Borromean Inands, which are certainly the lovelieft Spots of Ground in the World. There is nothing in all Italy that can be compared to them ; they have the full View of the Lake, and the Ground rifes fo fweetly in them, that nothing can be imagined equal to the Terraffes here. They belong to two Counts of the Borromean Family. I was only in one of them, which belongs to the Head of the Family, Nephew to the famous Cardinal, known by the Name of St. Carlo. On the Weft End lies the Palace, which is one of the beft iin Italy for the Lodgings within, tho' the Architecture $s$ but ordinary. There is one noble Apartment above four and twenty Foot high, and there is a vaft Addition making to it; and here is a great Collection of noble Pictures, beyond any Thing I faw out of Rome. The whole Ifland is a Garden, except a little Corner to the South, fet off for a Village of about forty little Houfes. And becaufe the Figure of the Illand was not very regular by Nature, they have built great Vaults and Portico's along the Rock, which are all made grotefque ; and fo they have brought it to a regular Form, by laying Earth over thofe Vaults. There is firt a Garden to the Eaft, that rifes up from the Lake by five Rows of Terraffes, on the three Sides of the Garden, that are watered by the Lake; the Stairs are noble, the Wails are all covered with Oranges and Citrons; and a more beautiful Spot of a Garden cannot be feen. There are two Buildings in the two Corners of this Garden ; the one is a Mill for fetching up the Water, and the other is a noble Sumner-houle all wainforted
with Alabaiter and Marble, of a fine Colour inclining to red. From this Garden one goes on a Level to all the reft of the Allies and Patterres, Herb and Flowergardens, in all which there are Variety of Fountains and Arbours ; but the great Parterre is a furprizing Thing : For as it is well furnifhed with Statues and Fountains, and is of a vaf Extent, and juffly fituated to the Palace, at the furcher End of it there is a great Mount; the Face of it, that looks to the Parterre, is made like a Thearte, all full of Fountains and Statues, the Height rifing up in five feveral Rows, about fify Foot high, and about fourfcore Foot in Front; and round this Mount, anfwering to the five Rows into which the Theatre is divided, there run as many Terraffes of noble Walks. The Walls are all as clofe covered with Oranges and Citrons, as any of our Walls in England are with Laurel. The Top of the Mount is feventy Foot long, and forty broad : and here is a valt Ciff tern, into which the Mill plays up the Water that furnithes all the Fountains. The Fountains were not quite finifhed when $I$ was there ; but when all is compleat, this Place will look like an inchanted Inand. The Frelhnefs of the Air, it being both in a Lake, and near the Mountains, the fragrant Smell, the beautiful Profpect, and delightful Variety that is here, makes it fuch a Habiataion for Summer, that perhaps the World hath nothing like it.
19. From hence I went to Sefio, a miferable Village at the End of the Lake; and here I began to feel a mighty Change, being now in Lombardy, which is certainly the beautifullett Country that can be imagined, the Ground lies fo even, is fo well watered, fo fweelly divided by Rows of Trees, inclofing every Piece of Ground of an Acre or two in Compafs, that it cannot be denied that here is a vaft Extent of Soil, above two hundred Miles long, and in many Places an hundred broad; where the whole Country is equal to the lovelieft Spots in England and France; it hath all the Sweetnefs that Holland or Flanders have, but with a warmer Sun, and a better Air. The Neighbourhood of the Mountains caufes a Freflheefs here, that makes the Soil the moft defireble Place to live in that can be feen, if the Government were not fo fevere, that there is nothing but Poverty all over this rich Country. A Traveller in many Places finds almott nothing, and is fo ill furnifhed, that if he does not buy Provifions in the great Towns, he will be driven to a very poor Diet, in a Country that feems to flow with Milk and Honey : But of this 1 fhall lay more hereafer. The Lago Maggiore difcharges iffelf in the River Tefno, which runs with fuch a Force, that we went thirty Miles in three Hours with a fingle Skuller, and the Water was no Way fwelled. From hence we went into the Canal which Francis I. cut from this River to the Town of Milan, which is about thirty Foot broad, and on both its Banks there are fuch Contrivances to difcharge the Water when it rifes to fuch a Height, that it can never be fuller of Water than it is intended it flould be : It lies alfo fo even, that fometimes for fix Miles together one fees the Line exactly before one. It is thirty Miles long, and is the bef Advantage that the Town of Milan hath for Water-carriage.
I will not entertain you with a long Defrription of this City, which is one of the nobleft in the World for an inland Town, that hath no Court, no Commerce either by Sea, or any navigable River, and that is now the Metropolis of a very fmall Country; for that, which is not mountainous in this State, is not above fixty Miles fquare, and yet it produces a Wealth that is furprizing. It pays for an Etablifhment of feven and forty thoufand Men, and yet there are not fixteen thoufand Soldiers effectively in it ; fo many are eat up by thofe in whofe Hands the Government is lodg'd. But the Extent of the Town, the Noblenefs of the Buildings, and above all, the furprizing Riches of the Churches and Convents, are Signs of great Wealth : The Dome hath Nothing to commend it of Architecture, it being built in the rude Gotbick Manner; but for the Vaftnefs and Riches of the Building, it is equal to any' in IIaly, St. Peter's itreff not excepted. It is all Marble, both Pavement
and Walls, both Outfide and In , and on the Top it is all flagged with Marble ; and there is the vafter Number of Niches for Statues of Marble, both within and without, that are any where to be feen. Juft under the Cupola lies St. Carlo's Body, in a great Cafe of Cryftal, of valt Value, but I could not come near it; for we were there on two Holidays, and there was a perpectual Crowd; and the Superfition of the People for his Body is fuch, that on a Holiday he runs a Hilazard that comes near it without doing fome Reverence. His Canonization coft the Town an hundred thoufand Crowns. They pretend they bave Miracles too from Cardinal Frederigo Borromeo ; but they will not fet about his Canonization, the Price is fo high. The Plate and other Prefents made to St. Cerlo, are Things of a prodigious Value; fome Services for the Altar are all of Gold, fome fet with Jewels, others fo finely wrought, that the Fafhion is thought equal to the Value of the Metal. The Habits, and all the other Ornaments for the Function of his Canonization, are all of an incredible Wealth. He was indeed a Prelate of great Merit ; and according to the Anfwer that a Fryer made to Pbilip de Cominies, when he asked him, how they they came to qualify one of the worlt of their Princes with the Title of Saint, in an Infription which he read, which was, that they gave that Title to all their Benefaftors ; never Man deferved of a City this Title fo juntly as Cardinal Borromeo did ; for he laid out a prodigious Wealth in Milan, leaving Nothing to his Family, but the Honour of having produced to great a Man, which is a real temporal Inheritance to it. For as there have been fince that Time two Cardinals of that Family, fo it is efteemed a Cafa Santa, and when-ever it produces an Ecclefiaftick of any confiderable Merit, he is fure, if he lives, to be railed to this Archbihhoprick : For if there were one of the Family capaible of th, and that did not carry it, that alone might difpofe the State to a Rebellion ; and he were a bold Man that would venture on a Comperition with one of this Family. He laid out a great deal on the Dome, and confecrated it, though the Work will not be quite finifhed for fome Ages; that being one of the Crafts of the Italian Prietts, never to finih a great Defign, that, by keeping it in an unfininhd State, they may be always drawing valt Sums from the Supertition of the People. He built the Archbilhop's Palace, which is very noble, and a Seminary, a College for the Sivitzerss, feveral Parifh Churches, and many Convents. In fhort, the whole Town is full of the Marks of his Wealch. The Riches of the Churches of Milan ftrike one with Amazement, the Building, the Painting, the Alars, and the Plate, and every Thing in the Convents, except their Libraries, are Signs both of great Wealth and Superfition ; but their Libraries not only here, but all Italy over, are fcandalous Things. The Room is often fine, and richly adorn'd, but the Books are few, ill bound, and worle chofen; and the Ignorance of the Priefts, both fecular and regular, fuch, that no Man, that hath not had Occafion to difcover it, can eafily believe it. The Convent of St. Vizitor, that is without the Town, is by much the richeft; it is compofed of Canons regular, called in Itaty, The Order of Mount Olive, or Olivetan. That of the Barrabites is extreme rich ; there is a Pulpit and a Confefional, all inlaid with Agates of different Colours, finely fpotted Marbles, and Lapis Lazuli, that are thought almort ineftimable. St. Lawrencece has a noble Cupola, and a Pulpit of the fame Form with that of the Barnabites. The Yefuits, the Theatines, the Dominicuns, and St. Sebastians, are very rich. The Citadel is too well known to need a Defreption; it is very regularly built, and is moft effectual to keep the Town in Order. The Hofpital is indeed a Royal Building ; I was told it had ninety thoufand Crowns Revenue. The old Court is large, and would look noble, if it were not for the new Court that is near it, which is two hundred and fify Foot fquare, and there are three Rows of Corridors, or Galleries, all round the Court, one in every Stage, according to the IIalian Manner, which makes the Lodgings very convenient, and leaves a Gallery before every Door. It is true, thefe take up a great
deal of the Building, being eight or ten Foot broad but then here is an open Space, that is extreme cool on that Side where the Sun doth nor lie; for it is all open to the Air, the Wall being only fupported by Pillars, at the Diltance of fifteen or twenty Foot one from another. In this Hofpital there are not only Galleries full of Beds on both Sides, as is common in all Hofpitals ; but there are alfo a great many Chambers, in which Perfons, who were formerly of a diftinguifhed Condition, are treated with a particular Care There is an Out-houfe, which is called the Lazaretto, which belongs to this Hofpital; it is an exact Quarter of a Mile fquare, and there are three hundred and fixty Rooms in it, and a Gallery runs all along before the Chambers ; fo that as the Service is convenient, the Sick have a cover'd Walk before their Doors. In the Middle of this vaft Square there is an octangular Chapel, fo contrived, that the Sick, from all their Beds, may fee the Elevation of the Hoflie, and adore it. This Houfe is for the Plague, or for infectious Fevers; and the Sick, that want a freer Air, are alfo removed hither.
I need not fay any Thing of the curious Works in Cryftal that are feen in Milan; the greateft Quantities, that are in Europe, are found in the Alps, and wrought here. It is certain, the Alps have much Wealch fhut up in their Rocks, if the Inhabitants knew how to fearch for it: But I heard of no Mines that were wrought, except. Iron Mines; yet, by the Colourings that in many Places the Fountains make as they run along the Rocks, one fees Caufe to believe that there are Minerals fhut up in them. Gold hath been often found in the River Arve that runs by Geneva.
The laft Curiofity that I fhall mention of the Town of Milan, is the Cabinet of the Cbenoine Settala, which is now in his Brother's Hands, where there are a great many very valuable Things both of Art and Nature. There is a Lump of Ore, in which there is both Gold and Silver, and Emeralds, and Diamonds which was brought from Peru. There are many curious Motions, where, by an unfeen Spring, a Ball, after it hath roli'd down through many winding Defcents, is thrown up, and fo it feems to be a perpetual Motion: This is done in feveral Forms, and it is well enough difguifed to deceive the Vulgar. Many Motions of litcle Animals, that run about by Springs, are alfo very pretty. There is a Loadftone of a vaft Force, that carries a great Chain. There is alfo a monftrous Child, that was lately born in the Hofpital, which is preferved in Spirit of Wine : It is double below, hath one Breaft and Neck, two Pair of Ears, a valt Head, and but one Face. As for the Buildings in Milan, they are large and fubftantial, but they have not much regular or beautiful Architecture. The Governor's Palace hath fome noble Apartments in it. The chief Palace was built by a Banker. There is one Inconvenience in Milan, which deftroys all the Pleafure that one can find in it : They have no Gla.s Windows, fo that one is either expofed to the Air, or fhut up in a Dungeon; and this is fo univerfal, that there is not one Houfe in ten that hath Glafs in their Windows. The fame Defeet is in Florence, befides all the fmall Towns of Italy, which is an Effect of their.Poverty; for what by the Oppreffion of the Government, what by the fqueezing Opprefion of their Priefts, who drain all the reft of their Wealch, that is not eat up by the Prince, to enrich their Churches and Convents, the People here are reduced to a Poverty that cannot be eafily believed by one that fees the Wealch that is in their Churches; and this is going on fo conftantly in Milan, that it is fcarce accountable from whence fo vaft a Treafure can be found; but Pargatory is a Fund not eafily exhaufted. The Wealh of the Milamefe confifts chiefly in their Silks; and that Trade falls fo mightily by the vaft Importations that the Easi-India Companies bring in to Europe, that all Italy feels this very fenfibly, and languifhes extremely, by the great Fall that is in the Sills Trade. There is a great Magnificence in Milan; the Nobility affect to make a noble Appearance in their Cloaths, their Coaches, and their Attendants ; and the Women go

Abroad with more Freedom here, than in any Town of Italy.
20. Twenty Miles from Milan we pafs'd through Lodi, a milerable Garriion ; but indeed the Frontiers, both of the Spaniards and the Venetions, as well as thole of other Princes of Italy, fhew, that they are not very apprehenfive one of another. And when one paffes through thole Places, which are reprefented in Hiftory as of great Strength, capable of refifting:a long Siege, he muft acknowledge, that the Sight of them brings the Idea that he had conceived a great many Degrees lower. For Lombardy, which was 10 long the Seat of War, could not refift againft a good Army now, fo many Days as it did then Years. The Garrifon of Crema, which is the firft, of the Venetian Territory, is no better than Lodi, only the People in the Venetian Dominions live happier than under the Spaniard.

The Senate fends Podeffas, like the Bailifss of the Sweitzers, who order the Juftice and the Civil Government of the Jurifdiction affigned them. Thiere is alfo a Captain - General, who hath the Military Authority in his Hands; and thefe are Checks upon each other, as the Bafhaws and the Cadis are among the Turks. But here in Crema the Town is fo fmall, that both thefe are in one Perfon. We were there in the Time of the Fair; Linnen Cloth and Cheefe (which though it goes by the Name of the Parmefan, is made chiefly in Lodi) are the main Commodities. The Magnificence of the Podefa appeared very extraordinary; for he went through the Fair with a great Train of Coaches, all in his own Livery; and the two Coaches, in which himfelf and his Lady rode, were both extraordinary rich: His was a huge Bed-coach, all the Outide black Velvet, and a mighty rich gold Fringe, lined with black Damask, flowered with Gold. From Crema it is thirty Miles to Brefcia, which is a great Town, and full of Trade and Wealth. Here they make the beft Barrels for Piftols and Muskets in Italy. There are great Iron-works near it ; but the War with the Turk had occafioned an Order, that none might be fold without a Permiffion from Venice. They are building a noble Dome at Brefcia. I was fhewed a Nunnery there, which is now under a great Difgrace. Some Years ago a new bifhop coming thither, began with the Vifitation of that Nunnery: He difcovered two Vaults; by one Men came ordinarily into it, and by another the Nuns that were big went and lay-in. When he was examining the Nuns feverely concerning thofe Vaults, fome of them told him, that his own Priefts did much worfe. He fhut up the Nuns, fo that thofe who are profeffed live ftill there, but none come to take the Veil ; and by this Means the Houfe will foon come to an End. The Citadel lies over the Town or a Rock, and commands it abfolutely. Both here and in Crema the Towns have begun a Compliment, within thefe laft ten or twelve Years, to their Podefas, which is a Matter of great Ornament to their Palaces, but will grow to a valt Charge ; for they erect Statues to their Podeftas; and this being once begun, muft be carried on, otherwife thofe to whom the like Honour is not done, will refent it as an high Affront; and the Revenges of the noble Venetions are dreadful Things, efpecially to their Subjects. This Name of Podefta is very ancient; for in the Roman Times, the chief Magiftrates of the leffer Towns were called the Poteftas, as appears by that of Jivenal.

## - Fidenarum Gabiorumve effe Potefas.

From Brefcio, the Beauty of Lombardy is a little interrupted; for as all the Way from Milan to Brejcia is a Garden, fo here on the one Side we come under the Mountains, and we pals by the Lake of Guarda, which is forty Miles long, and where broadeft, twenty Miles over. The Miles indeed all Lombardy over are extreme flort; for I walk'd often four or five Miles by Way of Exercife, and I found a thoufand Paces made their common Mile ; but in Tufcany, and the Kingdom of Naples, the Mile is fifteen hundred Paces. We pals ${ }^{2} d$ through a great Heath for feven or eight Miles on this Side Verona, which begins to be cultivated. Verona

Chap. III.
through SWISSERLAND, $Q^{\circ} c$.
is a vaft Town, and much of it well built. There are many rich Churches in it; but there is fo little Trade ftirring, and fo little Money going, that it is not eafy to change a Piftole without taking their Coin of bafe Allay, which won't pass out of the Veronefe: For this feems a ftrange Maxim of the Venetians, to fuffer thofe fmall States to retain ftill a Coin peculiar to them, which is highly inconvenient for Commerce. The known Antiquity of Verona is the Amphitheatre, one of the leaft of all that the Romans built, but the beft preferved; for tho' moft of the great Stones of the Outfide are pick'd out, yet the great noping Vault, on which the Rows of the Seats are laid, is entire : The Rows of the Seats are alfo entire; they are four and forty Rows ; every Row is a Foot and a half high, and as much in Breadth, fo that a Man fits conveniently in them under the Feet of thofe of the higher Row ; and allowing every Man a Foot and a half; the whole Amphitheatre can hold twenty three thoufand Perfons. In the Vaults, uvder the Rows of Seats, were the Stalls of the Beafts that were prefented to entertain the Company. The Thicknefs of the Building, from the outward Wall to the loweft Row of Seats, is ninety Foot: But this noble Remnant of Antiquity has been fo often and fo copiouny defcribed, that I will fay no more of it. The next Thing of Value is the famous Mufcum Calceolarium, now in the Hands of Count Mafcardo, where there is a whole Aparment of Rooms all furnifhed with Antiquities and Rarities. There are fome old Infcriptions made by two Towns in Africk to the Honour of M . Crafus; there is a great Collection of Medals and Medaillons, and of the Roman Weights, with, their Inftruments for their Sacrifices; there are many Curiofities of Nature, and a great Collection of Pictures, of which many are of Paulo Veronefe's Hand. There is a noble Garden in Verona, that rifes up' in Terraffes the whole Height of a Hill, in which there are many ancient Infcriptions which belong to Count Giusto. As we go from Verona to Vincenza, which is thirty Miles, we return to the Beauty of Lombardy ; for there is all the Way a Succeffion of Gardens: The Ground is better cultivated than I faw it in any other Part of Italy, but the Wine is not good; for at the Roots of all their Trees they plant a Vine, which grows up winding about the Tree to which it joins; but the Soil is too fat to produce a rich Wine, for that requires a dry Ground. There is near the Lake of Guarda, a very extraordinary Wine, which they call Vino Santo, which drinks like the beft Sort of Canary ; it is not made till Cbriftmas, and from thence it derives the Name of Holy Wine ; and it is not to be drunk till Midfummer, for it is fo long before it is quite wrought clear ; but I have not marked how long it may be kept: We had it there for a Groat an Englifh Quart ; I wonder'd that they did not trade with it. All the Cattle of Italy are grey or white, and all their Hogrs are black, except in the Bolognefe, and there they are red. I will not enquire into the Reafons of thefe Things; it is certain Hog's Flefh in Italy is much better than it is in France and 'England; whether the Truffles, on which they feed much in Winter, occafion this or no, I know not; the Husks of the preffed Grapes are alfo a mighty Nourifhment to them; but Cattle of that greyifh Colour are certainly weaker: The Carriage of Italy is commonly performed by them, and this is very hard Work in Lombardy, when it hath rained ever fo little ; for the Ground being level, and there being no raifed Highways, the Carts go deep, and are very hardly drawn.

Vincenza hath ftill more of its ancient Liberty than any of thefe Towns, as Padua hath lefs ; for it fub mitted itfelf to the Venetions, whereas the other difputed long, and brought it often very low. One fees the Marks of Liberty in Vincenza, in the Riches of their Palaces and Churches, of which many are lately built : They have a modern Theatre made in Imitation of the ancient Romans. Lombardy differs in Climate from the Southern Part of Italy, for here they keep their Oranges and Citrons in great Boxes, as we do in England, that fo they may be lodged in Winter, and defended from Vol. II. Numb. ifo.

Breezes that blow fo fharp from the Alps, that they would kill thofe delicate Plants ; whereas in Tufcany they grow as other Trees in their Gardens ; and in the Kingdom of Naples they grow wild without any Care or Cultivation. We were at Vincenza upon a Holiday, and there I faw a Preparation for a Proceffion that was to be in the Afternoon: I did not wonder at what a Franch Papift faid to me, that he could hardly bear the Religion of Italy, the Idolatry in it was fo grofs. The Statue of the Virgin was of Wood, fo finely painted, that I thought the Head was Wax; it was richly clad, and had a Crown on its Head, and was fet full of Flowers. How they did when it was carried about, I do not know ; but in the Morning all People ran to it, and faid their Prayers to it, and kiffed the Ground before it, with all the Appearances of Devotion.

From Vincenza it is eighteen Miles to Padua, all a Garden : Here one fees the Decays of a vaft City, which was one of the biggett of all Italy: The Compals is the fame that it was, but there is much uninhabited Ground in it, and Houfes there go almof for Nothing. The Air is extreme good ; and there is fo great a Plenty of all Things, except Money, that a very little of that goes a great Way. The Univerfity here, though fo much fupported by the Venetions, that they pay fifty Profeflors, yet finks extremely: There are no Men of any great Fame in it, and the Quarrels among the Students have driven away moft of the Strangers that ufed to come and ftudy here ; for it is not fafe to ftir abroad after Sun-fet. The Number of the Palaces is incredible; and though the Nobility of Padua are almoft quite ruined, yet the Beauty of their ancient Palaces fhews what they once were. The Venetians have been willing to let the ancient Quarrels, that were in all thofe conquer'd Ci ties, concinue ftill among them; for while one kills another, and the Children of the other take their Revenges, both come under the Bando by this Means, and the Confifcation goes to the Senate. At fome Times of Grace, when the Senate wants Money, and offers a Pardon to all that will compound for it, the Numbers of the guilty Perfons are incredible. In Vincenza, and the Country that belongs to it, I was affured by Monfieur Patin, that learned Antiquary, that hath been many Years a Profeffor in Padua, that there were five and thirty thoufand pardoned at the laft Grace; this I could hardly believe, but he bid be write it upon his Word. The Nobility of Padua, and of the other Towns, feem not to fee what a Profit their Quarrels bring to the Venetians, and how they eat out their Families ; for one Family in the fame Man's Time, who was alive while I was there, was reduced, from fourteen thoufand Ducats Revenue, to lefs than three thoufand, by its falling at feveral Times under the Bando. But their Jealoufies and Revenges are purfued with fo much Vigour, that, when thefe are in their Way, all other Things are forgot. There is here the Remnant of the Amphitheatre, though nothing but the outward Wall. There is here alfo, as well as in Milan, an inward Town, call'd the City, and an outward without that, call'd the Burgo ; but though there is a Ditch about the City, the great Ditch and Wall goeth abour all, and Padua is eight Miles in Compars; it lies almoft round: The publick Hall is the nobleft in Italy: The Dome is an ancient but mean Building: The Church of St. Antbony, but efpecially the holy Chapel in it, where the Saint lies, is one of the beft Pieces of modern Sculpture ; for round the Chapel the chief Mi racles of that Saint are reprefented in mezzo relievo, in a very furprizing Manner. The Devotion that is paid to this Saint all Lombardy over is amazing; he is called, by Way of Excellence, Il Santo, and the Beggars generally afk Alms for his Sake. But among the little Vows that hang without the holy Chapel, there is one that is the higheft Pitch of Blafphemy that can be imagined, Exaudit, fpeaking of the Saint, quos non audit $\mathcal{G}^{2}$ ipfe Deus; i. e. He bears thofe wbom God bimfelf doth not bear. St. Fufina is a Church fo well ordered within, the Architecture is fo beautiful, it is fo well enlightned, and the Cupolas are fo advantageounly placed, that, if

7 Q
the
the Outfide anfwer'd the Infice, it would be one of the beft Churches of Italy; but the Building is of Brick, and it hath no Frontifpiece: There are many new Altars, made as fine as they are idolatrous, all full of Statues of Marble. This Abbey hath an hundred thoufand Ducats Revenue; and fo by its Wealth one may conclude that it belong'd to the Benedicitine Order. Cardinal Barberigo is Bifhop here; he feems to fet St. Carlo before him as his Pattern; he hath founded a noble Seminary for fecular Priefts; he lives in a conftant Difcipline himfelf, and endeavours to reform his Clergy all he can ; but he is now on ill Terms with his Canons, who are all noble Venetians, and fo allow themfelves great Liberties, of which they will not willingly be abridg'd. He is charitable to a high Degree, and is, in all Refpects, a very extraordinary Man.
In the Venetian Territory their Subjects live eafy and happy, if they could be fo wife as to give over their Quarrels; but though the Taxes are not high, they opprefs their Tenants fo feverely, that the Peafants live miferably. Yet on all Hands round about them, the Oppreffions being more intolerable, they know not where to fly for Eafe; whereas on the contrary, the Miferies under which their Neighbours groan, chiefly thofe of the Ecclefiattical State, fend in Numbers among them, fo that they are well ftock'd with People. But the Venetians are fo jealous of their Subjects underftanding military Matters, which may difpofe them to revolt, that they never make any Levies among them for their Wars. This Jealoufy is the true Ground of that Maxim, though another is pretended that is more plaufible, which is, their Care of their own People, whom they fudy to preferve; and therefore they hire Strangers, rather than expofe their Subjects. It is certain, a Revolt here were no hard Matter, for the Garrifons and Fortifications are fo flight, that thofe great. Towns co:ld eafily fhake off their Yoke, if it were not for the Factions that reign among them, by which one Party would choofe rather to expofe the other to the Rigour of the Inquifitors, than concur with them in afferting their Liberty: And the Inquifitors, in fuch Cafes, proceed fo fecretly, and fo effectually, that none dares truft another with a Secret of fuch Confequence; and the oppreffed Nobility of thofe States retain ftill fo much of their old and unfubdued Infolence, and treat fuch as are under them fo cruelly, that the Venetions are as fecure, as if they had many ftrong Citadels and numerous Garrifons among them. From Padua down to Venice, all along the River Brent, 'there are many Palaces of the noble Venetians on both Sides of the River, built with fo great a Variety of Architecture, that there is not one like another. There is alfo the like Diverfity in the laying out of their Gardens; and here they retire during the hot Months, and fome allow themfelves all the Exceffes of diffolute Liberty that can poffibly be imagined. From Lizza Fucina, which is at the Mouth of the Brent, we pafs for five or fix Miles on the Lagunes, or Shallows, to Venice. Thefe Shallows fink of late fo much, that the preferving Venice ftill an Illand is like to become as great a Charge to the Venetians, as the keeping out the Sea is to the Dutch; for they ufe all pofible Induftry to cleanfe the Channels of the Lagunes, and to keep them frill of Water: And yet many think, that the Water hath failed fo much in this laft Age, that if it continues to abate at the fame Rate, within an Age or two more, Venice may become a Part of the Terra Firsma. It is certainly the moft furprizing Sight in the whole World to fee fo vaft a City fituated in the Sea, and fuch a Number of Illands fo united together by Bridges, brought to fuch a regular Figure, the Pilotty fupplying the Want of Earth to build on, and all fo nobly built, which is, of all the Things that one can fee, the moft amazing. And though this Republick is much funk from what it was, both by the great Loffes fuffered in their Wars with the Turks, and by the greas Decay of Trade, yet there is an incredible Wealth, and a vaft Plenty of all Things in this Place. I will not offer to defcribe either the Church or the Pa-
lace of St. Mark, which are too well known. The Painting of the Walls, and the Roofs of the Halls and publick Rooms in the Palace, are of vaft Value. Here I faw that Story of Pope Alexander III. treading on the Neck of the Emperor Frederick Barbarofla. The Noblenefs of the Stair-cafes, the Riches of the Halls, and the Beauty of the whole Building, are much prejudiced by the Beaftlinefs of thofe that walk there, and leave their Marks behind them, as if this were rather a common Houre of Office, than fo noble a Palace.
I went to the Convent of the Servi, but I found Father Paul was not in fuch Confideration there as he is elfewhere. I asked for his Tomb, but they made no Account of him, and feemed not to know where it was. It is true, the Perfon to whom I was recommended was not in Venice, fo perhaps they refined too much in this Matter. I had great Difcourle with fome at Venice concerning the Memorials out of which Father Poul drew his Hiftory, which are, no doubt, preferved with great Care in their Archives; and fince the Tranfactions of the Council of Trent, as they are of Importance, fo they are become now much controverted, by the difffitent Relations that Father Paul and Cardinal Pallavicini have given the World, the only Way to put an End to Difputes, in Matter of Fact, is to print the Originals themfelves. A Perfon of great Credit at Venice promifed me to do his utmoft to get that Propofition fet on Foot, though the Exactnefs that the Government hath always affected, as to the Matter of their Archives, is held fo facred, that this made him apprehend they would not give Way to any fuch Search. The Affinity of the Matter brings into my Mind a Converfation I had with a Perfon of great Eminence at Venice, that had been long at Confantinople, and was learned far beyond what is to be met with in Italy. He was at Confantinople, when the Enquiry into the Doctrine of the Greek Church was fet on Foot, occafioned by the famous Difpute between Mr. Arnaud and Mr. Claude: And being a zealous Roman Catholick, was dealt with to affift in that Bufinefs; but as a Man of great Honour and Sincerity, he excufed himfelf, and faid he could not meddle in it. He hath a very bad Opinion of the Greeks, and told me, that none of their Priefts were more inveterate to the Church of Rome, than thofe that were bred up at Rome; for they, to free themfelves of the Prejudices that their Countrymen conceive againft them, by reafon of their Education, affect to fhew an Oppofition to the Latin Church beyond any other Greeks. He told me, that he knew the Ignorance of the Greeks was fuch, that as they did not know the Doctrines of their own Church, fo a very little Money, or Hope of Protection from any of the Ambaffadors that came from the Weft, would prevail with them to fign any Thing defired of them. He added one Thing, that though he firmly believed Tranfubftantiation himfelf, he did not think they believed it, let them fay what they pleafed. He took his Notions of the Doctrine of their Church, rather from what they did, than from what they faid; for their Rites, not being changed for a great many Ages, were the true Indications of Doctrines received among them; whereas they were ignorant of Tradition, and apt to prevaricate when they faw Advantages or Protection fet before them. Therefore he concluded, that fince they did not adore after the Confecration, that was an evident Sign they did not believe the corporal Prefence, and was well able to balance all their Subferiptions. He added, he was often fcandalized to fee them open the Bag in which the Sacrament was, and fhew it with no Sort of Refpect, more than when they fhewed any Manufript; and he looked on Adoration as fuch a neceffary Confequent of Tranfubftantiation, that he could not imagine that the latter was received in a Church that did not practife the former. To this I will add what an eminent Catholick at Paris told me, that the Originals of thofe Atteftations were in too exact and too correct a Style to have been formed in Grecce. He affured me they were penn'd at Paris, by one that was a Mafter of the Puri-
sy of the Greek Tongue. I do not name thefe Perfons, becaufe they are alive, and this might be a Prejudice to them.

One of the Ornaments of Venice, was the young Woman that fpake five Tongues well, of which the Latin and Greek were two. She paffed Doctor of Phyfick at Padua, according to the Forms ; but, which was beyond all, The was a Perfon of fuch extraordinary Virtue and Piety, that fhe is fpoke of as a Saint. She died fome Months before I came; fhe was of the noble Family of the Cornaros, though not of the three chief Branches, which are St. Maurice, St. Paul, and Calle, who are defcended from the theee Brothers of the renowed Queen of Cyprus, but the Diftinction of her Family was Pifcopia. Her Merit made all People unwilling to remember the Blemifh of her Defcent on the one Side; for though the Cornaros reckon themfelves a Rank of Nobility beyond all the other Families of $V e-$ nice, yet her Father having entertained a Gondalier's Daughter fo long, that he had fome Children by her, at laft, for their Sakes, married the Mother, and paid a confiderable Fine to fave the Forfeiture of Nobility, which his Children muft have undergone by the Meannefs of the Mother's Birth. The Cornaros carry it fo high, that many of that Family have made themfelves Nuns, becaure they thought their own Name was fo noble, that they could notinduce themfelves to change it for another: And when lately one of that Family married the Heir of the Sagredos, which is alfo one of the ancienteft Families, and extreme rich, and fhe had fcarce any Portion at all, (for the Cornaros are now very low) fome of their Friends came to wifh them Joy; but they rejected the Compliment, and bid them go and wifh the Sagredos Joy, fince they thought the Advantage was on their Side.
There are of the truly ancient noble Families of $V_{e}$ wice four and twenty yet remaining; and among thefe, there are twelve that are thought fuperior to the reft in Rank. Since the firt Formation of their Senate, they have created many Senators. In their Wars with Genoo, they conferred that Honour on thirty Families; feveral of their Generals have had it given them as a Reward of their Service: They have alfo offered it to fome Royal Families; for both the Families of Valois and Bourbon were Nobles of Venice; and Henry III. when he came through Venice and Poland, to take Poffeffion of the Crown of France, went, fat among them, and drew his Ballot as a noble Venetian : Several Popes have procured this Honour for their Nephews; only the Barberini's would have the Venetians offer it to them without asking it, and the Venetions would not give it without they asked it, and fo it ftuck. But during the War of Candia, Cardinal Francis Barberini gave twelve thoufand Crowns a Year towards the War; and the Temper found for making them noble Venetions was, that the Queen-mother of Frence moved the Senate to grant it. In all the Creations of Senators, before the laft War of Candia, they were free ; and the Confiderations were either great Services, or the Dignity of thofe on whom they beftowed this Honour : Thofe new Families are divided into thofe called Ducal Families, and New Families: The Reafon of the fore mer Defignation is not rightly underftood; all thofe Families, fay fome, that are called Ducal, have had the Dukedom in their Houre ; but as all the old Families have had the fame Honour, though they carry not that Title, fo fome of the new Families have alfo had it, yet are not called Ducal. Others fay, that thofe Families that have had Branches made Dukes without their being firft Procurators of S. Mark, or that have been chofen to that Honour, without their pretending to it, are called Ducal. But the true Account of this is, that from the Year 1450, to the Year 1620 , for an hundred and feventy Years, there was a Combination made among thofe new Families to preferve the Dukedom ftill among them ; for the old Families carrying it high, and excluding the new from the chief Honours, nineteen of the new Families entred into mutual Engagements to exclude the ancient Nobility. . It is true, they made the Dukedom fome-
times fall on new Families that were not of this Affo ciation; but this was indifferent to them, as long as the ancient Families were fhut out, and it appeared that they bore the chief Sway in the Election. This Combination was a Thing known to the very People, tho ${ }^{3}$ the Inquifitors did all they could to break it, or at leaft to hide it ; fo that I never met with it in any Author. But this failed in 1620, when Memmio was chofen Duke, and was defcended of the ancient Nobility; which was fo great a Mortification to the Cafe Ducale, that one of them (Veniero) hang'd himfelf through the Rage to which that drove him ; but his Man came in Time before he was dead, and cut him down, and he lived long after in a better Mind. Since that Time one of the Bembos, two of the Cornaros, one of the Contarinis, and the prefent Prince of the $\mathcal{f u f i n i a n i}$, the firt of that Family that hath had that Honour, have been Dukes, who are all of ancient Families; fo that this Faction is fo entirely buried, that it is not generally known (even in Venice itfelf) that it was ever amonglt them. And thus Time and Accidents bring about happy Events, which no Care nor Induftry could produce; for that, which all the Endeavours of the Inquifitors could not compafs, came about of itfelf. It is true, the Factions in Venice, though violent enough in thofe who manage them, are not derived by them as an Inheritance to their Pofterity, as formerly among the Florentines; who though they value themielves as much above the Venetians, whom they defpife as a dull Race of People, yet thewed how little they underftood to conduct their State; fince by domefick Heats they loft their Liberty, which the Venerians have had the Wifdom to preferve. The Faction of the Cafe Ducale was perhaps willing to let the Matter fall, for they loft more than they got by it; fince the ancient Families in Revenge fet themfelves againft them, and excluded them from all the advantageous Employments of the State. For they being only united in that Point relating to the Dukedom, the ancient Families let them carry it; but in other Competitions they fet up fuch Candidates againft the Pretenders of the Ducal Families, as were more efteem'd than they, fo that they fhut them out of all the beft Offices of the Republick. Such a Faction as this, if it had been ftill kept up, might have proved fatal to their Liberty.
It is indeed a Wonder to fee the Dignity of the Duke fo much courted; for he is a Prifoner of State, tied to fuch Rules, fo feverely reftrained, and fhut up as it were in an Apartment of the Palace of St. Mark, that it is not ftrange to fee the greateft Families, in particular, the Cornaros, decline it. All the Family, how numerous foever, muft retire out of the Senate, when a Duke is chofen out of it; only one, that is next a-kin fits ftill, but without a Vote: And the only real Privilege that the Duke hath is, that he can, without communicating with the Savi, propofe Matters either to the Council of Ten, to the Senate, or Great Council; whereas all other Propofitions muft be firf offered to the Sari, and examined by them, who have a Sort of cribunitian Power, to reject what they dinike; and though they cannot hinder the Duke's making a Propofal, yet they can mortify him when he hath made it ; they can hinder it from being voted; and, affer voted, they can fufpend the Execution till it is examined over again: And a Dulke that is of an active Spirit mutt refolve to endure thefe Mortifications; for it is certain that the Savii do fometimes affect to fhew their Authority, and exercife a Sort of Tyranny in rejecting of Propofitions, when they intend to humble thofe who make them: Yet the greateft Part of the beft Families court the Dukedom extremely. When Sagredo was upon the Point of being chofen, there was fo violent an Outcry againft it, becaufe of the Difgrace they thought would arife, if they had a Prince whofe Nofe had mifcarried in fome Diforders, the Senate complied fo far with the People, though the Inquifitors took Care to hang or drown many of the Chief of the Mutineers, as to let the Defign for Sagredo fall; upon which he retired to a Houre he had in the Terra Firma, and never appeared more at Venice : During which Retirement he wrote two

Books:

Books; the one, Memoire Ottomaniche, which is printed, and he is accounted the beft of all their modern Allthors; the other was, Memoirs of the Government and Hiftory of Venice, which hath never been printed; and fome fay it is too fincere and too particular, fo that it is thought it will be referved among their Archives. It hath been a Sort of Maxim for fome Time, not to choofe a married Man to be Duke ; for the Coronation of a Dutchefs runs high, and hath colt above one hundred thoufand Ducats.

Some ancient Families have affected the Title of Prince, and have called their Branches Princes of the Blood; and the Cornaros have done this more than others, yet fome, on the Account of Principalities that their Anceftors had in the Inands of the Archipelago, have alfo affected thofe vain Titles: But the Inquifitors have long fince obliged them to lay afide all thofe high Stiles; and fuch of them, as boatt too much, find the Dinlike which that brings on them very fenfibly; for when they pretend to any great Employments, they are always excluded. When an Election of Ambaffadors was propofed, or to any of the chief Offices, it was wont to be in Terms, that the Council might choofe one of its principal Members for fuch an Employment. But becaufe this look'd like a Diftinction among the Nobility, they changed it five and twenty Years ago ; and inflead of Principal, they ufe now the Term Honourable, which comprehends the whole Body of their Nobility, without any Diftinction. It is at Venice, in the Church, as well as in the State, that the Head of the Body hath a great Title and Honours; whereas this is a meer Pageantry, and under thefe big Words there is lodged only a Shadow of Authority; for their Bifhop has the founding Title of Patriarch, as well as the Duke is called Prince and His Serenity, and hath his Name ftamped upon their Coin; fo the Patriarch hath really no Aurhority, for not only St. Mark's Church is entirely exempt from his Jurifdiction, and immediately fubject to the Duke, but his Authority is in all Things fo fubject to the Senate, and fo regulated, that he hath no more Power than they pleafe to allow him : So that the Senate is as really the fupreme Governor over all Perfons and in all Caufes, as the Kings of England in their own Dominions fince the Reformation. But befides all this, the Clergy of Venice have a very extraordinary Sort of Exemption, and are a Body like a Presbytery independent of the Bifhop. The Curates are chofen by the Inhabitants of every Parifh; and no noble Venetion is'fuffer'd to pretend to any Curacy; for they think it below that Dignity, for one of their Body to engage in a Competition with one of a lower Order, and to run the Hazard of being rejected. I was told the Manner of thofe Elections was the moft fandalous Thing poffible; for the feveral Candidates appear on the Day of Election, and fet out their own Merits, and defame the other Pretenders in the moft fcurrilous Manner imaginable the Secrets of all their Lives are publifhed in moft reproachful Terms ; and nothing is fo abject, that is not put in Practice on thofe Occafions. There is a Sort of an Affociation among the Curates for judging of their common Concerns ; and fome of the Laity of the feveral Parifhes affift ; fo that here is a real Presbytery The great Libertinage that is practifed by moft Sorts of People at Venice, extends itfelf to the Clergy to fuch a Degree, that though Ignorance and Vice feem the only indelible Characters that they carry over all Italy, yet thofe appear here in a more confpicuous Manner than elfewhere, and upon thefe popular Elections all comes out.

The Nuns of Venice have been under Scandal for a great while; there are fome Nunneries that are as famous for their Strictnefs, as others are for the Liberties they take; chiefly thofe of St. Zacbary and St. Lawrence, where none but noble Venetians are admitted, and where it is not fo much as pretended they retired for Devotion, but merely that they might not be too great a Charge to their Family: They are not veiled; their Necks and Breafts are bare, and they receive Company: but that which I faw was in a publick Room, in
which there were Grills for feveral Parlours, fo that the Converfation is very confufed; for there being a different Company at every Grill, and the Italians fpeaking generally loud, the Noife of fo many Talkers is very difagreeable. The Nuns talk very ungracefully, and allow themfelves a Liberty in rallying, that in other Places none could bear. About four Years ago the Pa triarch intended to reform thofe Houfes; but the Nuns of St. Laurence told him plainly they were noble Venetians, who chofe that Way of Life as more convenient, but they would not fubject themfelves to his Regulacions; yet he came and would have fhut up their Houfe, upon this they went to fet Fire to it ; upon which the Senate interpofed, and ordered him to defift. There is no Chriftian State in the World that hath exprefled fuch a Jealoufy of Churchmen's getting into publick Councils as the Venetians; for as a noble Venetion that goes into Orders lofes his Right of going to vote in the Great Council, fo when any of them are promoted to be Cardinals, the whole Family muft, during their Lives, withdraw from the Council, and are alfo incapable of all Employments ; and by a Claufe which they added when they received the Inquifition, which feemed of no great Confequence, they have made it become a Court abfolutely fubject to them ; for it being provided, that the Inquifitors hould do Nothing but in the Prefence of fuch as fhould be deputed by the Senate to be the Witneffes of their Proceedings, thofe Deputies will not come but when they think fit, or ftay longer than they are pleafed with their Proceedings; fo that either their Ablence, or their Withdrawing, diffolves the Court ; for a Citation cannot be made, a Witnefs examined, or the leaft Point of Form carried on, if the e Deputies are not prefent. And thus, though there is a Court of Inquifition at Venice, yet fearce any Perfon is brought into Trouble by it; and there are many Proteftants that live there without any Difturbancee; and though there is a Congregation that have their Exercifes of Religion very regularly, yet the Senate gives them no Trouble. It is true, the Hoftie's not being carried about in Proceffion, but privately by the Prieft to the Sick, makes that uneafy Difcrimination of Proteftant and Papift not offer itfelf here, as in other Places; for the Narrownefs of the Streets, and the Channels through which one muft go, makes this impracticable in Venice, as it is elfewhere; and from Venice this Rule is carried over their whole Territory, though the like Reafon doth not hold in the Terra Firma.

The Venetians are generally ignorant of Matters of Religion to a Scandal ; and they are as unconcerned in them, as they are Strangers to them : So all that vaft Pomp in their Ceremonies, and Wealth in their Churches, is affected as a Point of Magnificence, or a Matter of Emulation among Families, rather than Superftition; for the Atheifin that is received by many here is the dulleft and coarfett Thing that can be imagined. The young Nobility are fo generally corrupted, and fo given up to fupine Ignorance, that a lMan cannot eafily imagine to what a Height this is grown; and for Courage, there is fearce fo much as the Ambition of being thought brave among the greater Part of them. It feem'd to me ftrange to fee the Broglio fo full of graceful young Senators and Nobles, when there was a War on foo with the Turks; but inftead of being heated in Point of Honour to hazard their Lives, they think it an extravagant Piece of Folly for them to go and expofe them, when a little Money will hire Strangers that do it on fuch eafy Terms: And thus their Arms are in the Hands of Strangers, while they ftay managing their Intrigues in the Broglio, and diffolving their Spirits among their Courtizans: And their Service is of late Years fo much funk, that it is amazing to fee fo many come to a Service fo decried, where there is little Care had of the Soldiers, and fo little Regard paid the Officers: The Arrears are fo flowly paid, and the Rewards are fo fcantily diftributed, that, if they do not change their Maxims, they may come to feel this very fenfibly: For their Subjects are not acquainted with War, their Nobility have no Ambition that Way, and Strangers are extremely difgufted. It is chiefly to the

Conjuncture

Conjuncture of Affairs that they owe their Safety ; to the Feeblenefs of all their Neighbours, the Turk, the Emperor, the King of Spain, and the Pope, preferves them from the Apprehenfion of an Invafion, and the Quarrels of their Subjects fave them from the Fears of a Revolt; but a formidable Neighbour would put them hard to it. One great Occafion of the Degeneracy of the Italians, and particularly of the Venetian Nobility, is a Maxim, that for the Prefervation of their Families it is fit that only one fhould marry; to which I will not add, that it is generally believed, that the Wife is in common to the whole Family. By this Means the younger Brothers that have Appointments for Life, and no Families, are not ftirr'd up by Ambition to fignalize themfelves, and fo give Way to all the Lazinefs of Luxury, and are quite enervated by it; whereas the beft Services, done in other States, flow from the Neceffities of younger Brothers, or their Families, whofe Blood qualifies them to pretend, as their Pride and Neceffities pufh them on, to acquire firft a Reputation, and then a-Fortune. But all this is a Myftery to the Venetians, who apprehend fo much from the active Spirits of a neceffitous Nobility, that, to lay thofe aneep, they encourage them in all Things that may deprefs their Minds; and Youth naturally hates Letters as much as it loves Pleafure, when fo far from being reftrained, that it is rather pufhed on to all the Licentioufnefs of unlimited Diforders.

Yet I muft add one Thing, that though Venice is the Place in the whole World, where Pleafure is mof fundied, and where Youth have the greateft Wealth, and moft Leifure to purfue it ; yet it is the Place that I ever faw, where innocent Pleafure is the leatt undertood. As for the Pleafures of Friendfhip, or Marriage, they are Strangers to them; for the horrible Diftruft, in which they all live, makes it very rare to find a Friend in Italy, but mott of all in Venice; and though we have been told of celebrated Friendihips there, yet thefe are now no more. As for their Wives, they are bred in fuch Ignorance, and converfe fo little, that they know nothing but the Supertition on Holidays, in which they ftay in the Churches as long as they can, to prolong the little Liberty they have of going Abroad, as Children do their Hours of Play. They are not employ'd in domettick Affairs, and generally underftand no Sort of Work; fo that I was told, they were the infipideft Creatures imaginable. They are, perhaps, as vicious as in other Places, but it is among them down-right Lewdnefs; for they are not drawn in by Amour ; but in them the firf Siep, without any Preparative, is downright Beafllinefs. And an Italian, that knew the World well, faid a very lively Thing to me, that their Jealoufy made them reftrain their Daughters and their Wives fo much, that they could have none of thofe domeftick Entertainments of Converfation and Friend:hip, that the French or Englifh have at Home. It is true, thofe he faid hazard a little the Honour of their ${ }^{`}$ Families by that Liberty; but the Italians, by their exceffive Caution, deprived themfelves of the true Delights of a married State ; and notwithftanding all. their uneafy Jealoufy, they were ftill in Danger of a contraband Nobility. Therefore he thought they would do better to hazard a little, when it would produce a certain Satisfaction, than to watch fo anxioully, and thereby have an infipid Companion, inftead of a lively Friend, though fhe might perhaps have fome ill Moments. As for their Houfes, they have nothing convenient at Venice ; the Architecture is almoft all the fame, one Stair-cafe, a Hall that runs along the Body of the Houfe, and Chambers on both Hands; but no Apartments, no Clofets, or Back-fairs: So that in Houfes that are of an exceffive Wealth, they have yet no Convenience. Their Bedifteads are of Iron, becaufe of the Vermin their Moilture produces. The Bottoms are of Boards, upon which they lay fo many Quilts, that it is a Step to get up to them. Their great Chairs are upright, without a Slope in the Back, hard in the Bottom, and the Wood of the Arms not cover'd. They mix Water with their Wine in their Hogtheads fo that, for Half the Year, it is either dead or four.
Vol. II, Numb. CXI,

They do not leaven their-Bread, fo that it is heavy and the Oven is too much heated, fo that the Crumb is Dough, when the Cruft is as hard as a Stone. In all Inns they boil the Meat fiff before it is roafted : and thus they make it tender, and quite taftelefs and infipid. And as for their Land-carriage, all Lombardy over, it is extreme inconvenient; for their Coaches are faftened to the Perch, which makes them as uneafy as a Cart. It is true, they begin at Rome and Naples to have Coaches that are faftened to a Sort of double Perch, that runs along the Bottom of the Coach on both Sides, which are fo thin, that they ply to the Motion of the Coach, and are extreme eafy ; but thofe are not known in Lombardy. And befides this, their Calafhes are open; fo that one is expofed to the Sun and Duft in Summer, and to the Weather in Winter But though they are covered as ours are, on the other Sides of the Appennines, yet I faw none that were cover'd in Lombardy. And thus, by an Enumeration of many of the innocent Pleafures and Conveniences of Life, it appears, that the Venetians purfue fo violently forbidden Pleafures, that they know not how to find what is allowable. Their conftant Practices in the Broglio are their chief Bufinefs, where thofe that are neceffitous are fuing for beneficial Employments, and thofe full of Wealth take a Sort of Pleafure in croffing their Pretenfions. The Walk in which the Nobility tread, is left to them entirely; and they change the Side of the Square of St. Mark, as the Sun and Weather direct. Perhaps a Derivation that Mr. Patin gave me of Broglio from the Greek Peribolaion, a little corrupted, is not forced ; and fince they manage all their Intrigues in thofe Walks, I am apt to think that Broils, Brouillons, and Imbroilments, are derived from the Agitations in thofe Walks.
As for the late created Nobility of Venice, I came by fome Particulars that are not yet feen in Books, which I fuppofe will not be unacceptable. It is certain, that if the Venetians could have forefeen, at the Beginning of the War of Candia, the vaft Expence in which it engaged them, they would have abandoned the Ine, rather than wafted their Treafure, and debafed their Nobility. This laft was highly fenfible to them; for as the Dignity of the Rank they hold is the more eminent, as it is reftrained to a fmall Number; fo all the beft Employments and Honours of the State belonging to this Body, the admitting fuch a Number inco it, as muft rife out of feventy-eight Families, was, in Effect, flaring their Inheritance among fo many adopted Brothers. This had been lefs difagreeable, if they had communicated that Honour only to the ancient Citizens of Venice, or to the Nobility of thofe States that they fubdued in the Terra Firma: For as there are many Citizens, as ancient as the Nobility, only their Anceftors not being of that Council that af fumed the Government four hundred Years ago, they have not that Honour ; fo there had been no Infamy in promoting fome of them to be of the Nobility. It had been alfo under Confultation long ago, upon the Reduction of thofe States in the Terras Firma, whether, according to the Maxims of the Romans, it was not fit to communicate that Dignity to fome of their chief Families, as the fureft Way to give Contentment to thofe States, it being a real, as well as a cheap Security, when the chief Families in thofe Cities were admitted to fhare the Honours of the Republick. It is true, fome of thofe Nobility thought they had Glory enough by their Birth, and Zambara of Brefcia refufed this Honour from thofe that had robbed his Country of its Liberty; but his Pofterity are of another Mind; for they came and bought in this laft Sale of Honour that which was offer'd to their Anceftor, and by him rejected.

When the Senate found itfelf preffed for Money, it was at firft propored, that fome Families, to the Number of five, might be enobled, they offering fixty thoufand Ducats if Venetians, and feventy thoufand if Strangers. There was but one Perfon that oppofed this in the Senate; fo being paffed there, it was prefented to the Great Council, and there it was like to have paffed without Difficulty: But one Perfon oppofed
it with fo much Vigour, that though the Duke defired him to defift, fince the Neceffities of the War required a great Supply, yet he perfifted; and though one of the Savi fet forth with Tears the Extremities to which the State was reduced, he fell upon a new Conceit that turned the whole Council. He faid, they were not fure, if five Perfons could be found, that would purchafe at fuch a Rate, and then it would be a vaft Difgrace to expofe the Offer of Nobility firft to Sale ; and then to the Affront of finding no Buyers when it was offered: And by this Means he put by the Refolution for that Time. But then another Method was taken, that was more honourable, and of a more extended Confequence. Labia was the firft that prefented a Petition to the Great Council, fetting forth his Merits, and defiring that he might be thought worthy to offer a hundred thoufand Ducats towards the Service of the State; that is, to be made noble at that Price. Delfino faid, he thought every Man might be well judged worthy to offer fuch an Affiftance to the Publick, and that fuch as brought that Supply might expect a fuitable Acknowledgment from the Senate, who might afterwards, of their own Accord, beftow that Honour on thofe that expreffed fo much Zeal for the Publick; and this would maintain that Degree, which would be debafed, if it were bought and fold. But it feems the Purchafers had no Mind to part with their Money, and to leave the Reward to Gratitude ; fo the Petition was granted in plain Terms, and the Nobility fo acquired was not only to defcend to the Children of him that was enobled, but to his Brothers, and the whole Family, to a certain Degree.

After Labia, a great many more came with the like Petitions, and it was not unpleafant to fee, in what Terms fuch as came to buy this Honour, fet forth their own Merits; which were, that they had furnifh'd the Republick with Things neceffary for its Prefervation. There was a Sort of a Triumvirate formed, of a Fere, a Greek, and an Italian, who were Brokers, and found out Cuftomers, and at laft brought down the Price from a hundred to fixty thoufand Ducats ; and no Qualificacions were required, if they had Money enough. For when Correge faid to the Duke, that he was afraid to afk that Honour for Want of Merit ; the Duke afk'd him, If he had a hundred thoufand Ducats? And when he anfwered, The Sum was ready, the Duke told him, That was a great Merit. At laft feventy eight purchafed this Honour, to the great Regret of Labia, who faid, that if he had imagined fo many would have followed him, he would have bid fo high, that it fhould have been out of their Power. It is true, many of the Purchafers were ancient Families; but others were not only Merchants, but of the loweft Sort of them; who as they had enrich'd themfelves by Trade, then impoverifh'd themfelves by the Acquifition of an Honour, that as it obliged them to give over, and put them in a higher Way of living, fo it hath not brought them yet any Advantage to balance that Lofs; for they are fo much elefpifed, that they are generally excluded, when they contend with the ancient Nobility; tho' this is done with that Difcretion, that the old Families do not declare always againft the new: For that would throw the new into a Faction againft them, which might be a Prejudice to them; for the new are much more numerous than the old. Another great Prejudice by this great Promotion. is, that the chief Families of the Citizens of Venice, who had been long practifed in the Affairs of State, and out of whom the Envoys, the Secretaries of State, and the Chancellor, that is the Head of the Citizens, as well as the Duke is the Head of the Nobility, are to be chofen, having purchafed the chief Honour of the State, there is not now a fufficient Number of capable Citizens left for ferving in thofe Employments; but this Defect will be redrefs'd in Time.

But if this Increafe of the Nobility hath leffen'd the Dignity of the ancient Families, there is a Regulation made in this Age, that preferves a confiderable Diftinction of Authority in their Hands. Crimes againft the State, when committed by any of the Nobility, were always judged by the Inquifitors, and the Council of Ten: all other Crimes were judged by the Council of

Forty: but in the Year 1624, one of the Nobles was accufed of Peculation committed in one of their Governments, and the Avogadore, in the Pleading, as he fee forth his Crime, called him a Rogue and a Robber. Yet though his Crimes were manifeft, there being but fix and twenty Judges prefent, twelve only condemned him, and fourteen acquitted him. This gave great Offence ; for though he was acquitted by his Judges, his Crimes were evident, fo his Fame could not be reftored: For the Depofitions of the Witneffes, and the Avogadore's (or Attorney General's) Charge were heard by the People: It was propofed to make a Difference between the Nobility and other Subjects; and fince all Tryals before the Forty were publick, and the Tryals before the Ten fecret, it feemed fit to remit the Nobility to be try'd by the Ten. Some forefaw that this would tend to a Tyranny, and raife the Dignity of the ancient Families (of whom the Council of Ten is compofed) too high ; therefore they oppofed it upon this Ground, that fince the Council of Forty fent out many Orders to the Governors, it would leffen their Authority, if they were not to be Judges of thofe who were to receive their Orders. But, to qualify this, a Provifo was made, that referved to the Council of Forty a Power to judge of the Obedience given to their Orders; but other. Accufations of the Nobility were remitted to the Courcil of Ten; and the Body of the Nobility were fo pleafed with this Diftinction between them and other Subjects, that they did not fee this really ennaved them the more, and brought them under greater Danger ; fince thofe who judge in Secret give freer Scope to their Paffions, than thofe in Publick; and who, in Effect, are to be judged by the Publick, which is a very effectual Reftraint upon Judges themfelves. But the Council of Ten being in the Hands of the Great Families, whereas all Sorts are of the Council of Forty, formerly the chief Judicatory of the State, and much ancienter than that of Ten; It had been more wifely done, to have been ftill judged by the Forty: And if they thought it for their Honour to have a Difference made in judging the Nobility and other Subjects, it had been more for their Security to have brought the Tryals of all other Offenders on with open Dcors, and the Nobility, when they were judged, to have the Doors fhut, which is what they very much defire now, but without Hope of obtaining it: For this Power of judging the Nobility is confider'd as the Right of the Ten; and if any Man would go about to change it the Inquifitors would be very quick with him, as a Mover of Sedition, and, in that Cafe, prove at once Judges and Parties. Yet the Inquifitors, being apprehenfive of the Diftafte that this might breed in the Body of the Nobility, have made a Sort of Regulation, though it amounts not to much; which is, that the Nobility fhall be judged before the Council of Ten for enormous Crimes; but that for other Matters, they are to be judged by the Forty ; yet the Council of Ten draws all Cafes before them, and none dare difpute with them.

This leads me to fay a little to you of that Part of this Conftitution fo much cenfured by Strangers ; but is really both the greateft Glory, and chief Security of this Republick ; which is, the unlimited Power of the Inquifitors, that extends not only to the chief Nobility, but to the Duke himfelf, who is fo fubject to them, that they may not only give him Reprimands, but fearch his Papers, make his Procefs, and put him to Death, without being bound to give an Account of their Proceedings. This is the Dread not only of Subjects, but the whole Nobility, and makes the greateft among them tremble, obliging them thereby to an exact Conduct. For though it cannot be denied, that, upon fome Occafions, they may have been a little too fudden, as in the known Story of Fofarini; yet fuch Severities have occurred fo feldom, that the Wifdom of this Body, in making and preferving fuch an Inftitution, cannot be enough admired. In ihort, the Infolence, the Neceffities, and Ambition, that muft needs poffers many Members of fo valt a Body, as the Nobility of Venice, muft have thrown them often into many fatal

Convulfions,

## Chap. III.

through SWisserland, \&c.

Convulfions, if it were not for the Dread in which they ftand of this Court, which has fo many Spies Abroad, among the Gondaliers, Iwho cannot fail to difcover all the fecret Intrigues of Venice: Befides the Advices that are thrown in at thofe Lion's Mouths, that are in feveral Places of St. Mark's Palace, within which there are Boxes under the Keys of the Inquifitors; that it is fcarce poffible for a Man to be long in a Defign againft the State, and not to be difcovered. And when they find any in Fault, they are fo inexorable, quick, and fevere in their Juftice, that the very Fear of this is a Reftraint, that perhaps the long Prefervation of Venice, and of its Liberty, is owing to.

The Inquifitors are Perfons fo diftinguifhed for their Merit, all of different Families, and their Authority lafts fo fhort a Time, that the Advantages of this vaft Authority, lodged with them, are conftant and vifible; whereas the unhappy Inftances of their being impofed on, and carrying Sufpicions too far, are fo few, that whenever the Nobility grow weary of this Yoke, and throw it off, one may reckon the Glory and Profperity of Venice at an End. It was terribly attack'd not long ago by Cornaro, when Ferom Cornaro was put to Death for his Correfpondence with Spain. He was not a-kin to the great Family of that Name; yet they thought their Honour was fo much touch'd, when one of its remoteft Branches was condemned of Treafon, that they offered a Hundred thoufand Crowns to have faved him, and preferved the Family from that Infamy. But tho' this was not accepted (for he fuffer'd, as he well deferved) yet it was fo vifible, that none of the Family were involved in his Crimes, that it did not at all turn to their Prejudice: But, upon the firft Oc cafion that offered after that, to quarrel with the Inquifitors they laid hold on it, aggravated the Matter extremely, and moved for Limiting their Authority: But the Great Council was wifer than to touch fo facred a Part of the Government; fo they retain their Power but manage it with all poffible Caution. A Foreigner, many Years in their Service, told me, that the Stories with which Strangers were frighted at the arbitrary Power vefted in thofe Inquifitors, were night Things in Comparifon of the Advantages they found from it; and after Eleven Years fpent in their Service, he faid, he never had fo much as once received a Reprimand from them. And if the Nobility, that have any Commerce with Strangers, confefs it, they are in no Danger; but if they conceal it, or any Circumftances, their Procefs will be foon difpatched. I give no Credic to that which a Perfon of great Eminence affured me was true, that there was a Poifoner-general in Venice, that had a Salary, and was employ'd by the Inquifitors to difpatch thofe againft whom a publick Proceeding would make too great a Noife. This I could not believe, tho' my Author protefted, that the Brother of one that was follicited to accept of the Employment difcovered it to him. There is no Place in the World where Strangers live with more Freedom, and I was amazed to fee fo little Exactnefs among the Searchers of the Cuftom-houfe; for tho' we had a Mule's Load of Trunks and Portmanteaus, yet none offered to ask us, either coming or going, what we were, or what we carried with us? But the beft and nobleft Entertainment that Venice afforded, while I was there, was the Company of M. de la Haye, the French Ambaffador, who, as he hath fpent his whole Life in publick Anabaffies, fo he has acquired fo great a Knowledge of the World, with fo true a Judgment, and fo obliging a Civility, that he may well pafs for a Pattern; and it is no Wonder to fee him engaged in a conftant Succeffion of publick Employments: And his Lady is fo wonderful a Perfon, that I pay them but a very fmall Part of what I owe them, in this Acknowledgment of their extraordinary Civilities: And indeed, without the Advantage of fuch a Rendezvous, a Fortnight's Stay at Venice had been a very tedious Matter.

2I. From Venice we went again to Padua, and thence to Rovigo, which is a fmall Town, and fo to the Po, which divides the Republick from the Ferrarefe, now
the Pope's Territory; and here one fees what Difference of a good and bad Government makes in a Country: for tho' the Soil is the fame on both Sides of the River; and the Ferrarefe was once of the beautifulleft Spots of Italy, as Ferrara one of its beft Towns; while they had Princes of their own, who for fome Ages were Princes of fuch Virtue, and of heroical Noblenefs, that they were really the Fathers of their Country; nothing car be more changed than all this is now. The Soil is 2 . bandoned and uncultivated, nor were there Hands $e=$ nough to mow their Grafs, which we faw withering in their Meadows, to our Wonder. We were amazed to fee forich a Soil thus forfaken of its Inhabitants; and more when we paffed thro ${ }^{3}$ that valt Town, which; fhews what it was about an Age ago, and now fo much deferted, that there are whole Streets without Inhabitants; and its Poverty appears fignally in the Churches, which are mean and poor, for the Superftition of Italy is fo ravenous, and makes fuch Progrefs; that one may juftly take Meafures of the Wealth of Places from the Churches. The Superftition or Vanity of this Age is fo much beyond that of the paft, that all the vaft Buildings of Churches, or rich Convents; and the furprizing Wealth that appears in them on Feftival Days, are Donatives of the prefent Age. So that it is a vulgar Error fome have taken up, who fancy that Superftition is at a Stand, if not in Decay; unlefs it be acknowledged, that the Craft of Priefts hath opened a new Method to fupport their Riches, when the old ones of Purgatory and Indulgences were become lefs effectual; and that is, to engage Men in an Emulation in enriching their Churches, as much as other Italions have in enriching their Palaces; fo that they have a Pleafure as well as Vanity, in feeing fo much dead Wealch in their Houfes and in their Churches. But to return to Ferrara: I could not but ask, how it came, that fo rich a Soil was fo abandoned? Some faid, the Air was become unhealthy, that thofe who ftay, were fhort-lived; but it is well known, that Fourfcore Years ago it was well peopled, and thence it feems the ill Air is occafioned by the Want of Inhabitants; for there not being People to drain, and to keep the Ditches clean, this makes a great deal of Water lie on the Ground and rot, which infects the Air, as is obferv'd in that rich, but uninhabited Champaign of Rome: So that ill Air is the Effect, rather than the Caufe, of the difpeopling the Pope's Dominions. The true Caufe is the Severity of the Government, the heavy Taxes, and frequent Confifcations, by which the Nephews of Popes have devoured many Families of Ferrara, and have driven away many more. And this appears more vifibly, by the different State, as well as Conftitution of Bologna, which is full of People that abound in Wealth ; and the Soil, as it is extreme rich, fo is it cultivated with all due Care; for Bologna fub mitted itfelf upon a Capitulation, by which there are many Privileges referved to it. Crimes are only punifhed in the Perfons of thofe who commit them; but no Confifcations of Eftates ; and though the Authority in criminal Matters belongs to the Pope, and is managed by a Legate and his Officers, yet the civil Government, the Magiftracy, and the Power of Judicature in civil Matters, is entirely in the Hands of the State : And by this Regulation it is, that the Riches of Bologna amaze a Stranger, though it is neither on a navigable River, nor the Center of a Sovereignty, where a Court is kept; and the Taxes the Popes fetch from thence are fo confiderable, that he draws more from this Place of Liberty, than from thofe where his Authority is unlimited and abfolute: For the Greatnefs of a Prince rifing from Numbers of Subjects, thofe Maxims that retain the Subjects, and that draw Strangers are cero tainly the trueft for advancing the Greatnefs of the Ma. fter; and I could not but with Scorn obferve the Folly of fome Frencbmen, who made ufe of this Argument to fhew the Greatnefs of their Nation, that one found many Frencbmen in all Places to which one came: whereas there were no Englifh, Dutch, nor Sroittzers, and very few Germans ; but this is jutt contrary to the Confequence that ought to be drawn from this Obfer-
vations s
vation; for it is certain, that few leave their Country to fettle elfewhere, if they are not preffed at home fo, that they cannot well live among their Friends and Kindred.

But to return to the Wealth of Bologna, it appears in every Corner of the Town, and round it, though its Situation is not very favourable; for it lies at the Foot of the Appennines, on the North Side, and is very cold in Winter. The Houfes are built as at Padua and at Bern, fo that one walks covered under Piazzas; but the Walks here are both higher and larger than elfewhere. There are many noble Palaces, and the Churches and Convents are incredibly rich: Within the Town the richeft are the Dominicans, which is the chief Houfe of the Order, where their Founder's Body is laid in one of the beft Chapels of Italy; and next to them are the Francifcans, the Servites, the Fefuits, and the Canons Regular of St. Salvator. In this laft there is a Scroll of the Hebrew Bible, which, though it is not the tenth Part of the Bible, they fancy to be the Whole; and they were made to believe by fome Few, that hath no doubt fold it at a high Rate, that it was written by Ezra's own Hand, and this hath pals'd long for current ; but the Manufcript is only a fine Copy, like thofe the Feros ufe in their Synagogues, that may be, perhaps, three or four hundred Years old : That Part on which I caft my Eye, was the Book of Efther; fo by the Bulk of the Scroll, I judg'd it to be the Collection of thofe fmall Books of the Old Teftament, that the Fews fet after the Law. But thofe of the Houfe fancy they have a great Treafure in it; and perhaps fuch Jeres as have feen it, are willing to laugh at their Ignorance, and fuffer them to go on in their Error. The chief Church of the Town is St. Petrone's, and there one fees the curious and exact Meridional Line, which that rare Aftronomer Cafini laid along a great Part of the Pavement in a brafs Circle: It marks the true Point of Mid-day from Fune to Fanuary, and is one of the beft Performances that perhaps the World ever faw. In the great Square before the Church, on the one Side of which is the Legate's Palace; among other Statues, one furprized me; it was Pope $\mathrm{Foan}^{3} \mathrm{~s}$, or is fo named by the People: It is true, the learned Men fay it is the Statue of Pope Nicbolas IV. who had a womanifh Face; but as I looked at this Statue very attentively, through a little Perfpective that I carried with me, it appeared plainly to have the Face of a young Woman, and was unlike that of Pope Nicholas IV. which is in St. Maria Maggiore at Rome; for the Statue of that Pope, though it hath no Beard, yet hath an Age in it that is very different from the Statue at Bologna. I do not build any Thing on this Statue, for I do not believe that Story at all ; and I myfelf faw in England a Manufcript of Martinus Polonus, who is one of the ancient Authors of this Matter, which did not feem to be written long after the Author's Time ; in it this Story is not in the Text, but is added on the Margin by another Hand.

On the Hill above Bologna ftands the Monaftery of St. Micbael in Bofco, which hath a moft charming Situation, and is one of the beft Monafteries in Italy; it has many Courts, and one that is octangular, which is fo nobly painted in Frefo, that it is a great Pity to fee fuch Work expofed to the Air ; all was once retouch'd by the famous Guido Reni, but it is now much decay'd : The Dormitory is very magnificent, the Chapel is little but very fine, and the Stalls are richly carved. On the other Side of Bologna, in the Bottom, the Cartbufans have alfo a very rich Monaftery. Four Miles from Bologna there is a Madona of St. Luke's ; and becaufe many go in great Devotion there is a Portico building, which is carried on almoft half way; it is walled towards the North, but ftands on Pillars to the South, and is about twelve Foot broad, and fifteen Foot high: It is carried on very vigoroully, for in eight or ten Years half is built, and this may prove the Beginning of many fuch Portico's in Italy; for Things of this Kind want only a Beginning, and when they are once fet on Foot, they quickly fpread in a Country that is fo entirely fubdued by Superitition and the Artifices of Priefts. In Bologna they reckon feventy thoufand Perfons; I faw not one of the chief Glories of this Place, for the fa-
mous Malpigbius was out of Town. I faw a Play there, but the Poefy was fo bad, the Farces fo rude, and all fo ill acted, that $I$ was not a little amazed to fee the Company exprefs great Satisfaction in that which would have been hils'd off the Stage either in England or France. From Bologna we go eight Miles in a Plain, and then advance inco that Range of Hills that carry the Name of Apennines; though that is ftrictly given only to one that is the higheft. All the Way to Elorence this Track of Hills continues, though there are feveral Bottoms, and fome confiderable Towns in them, but all is uphill and down-hill, and Florence itfelf is juft at the Bottom of the laft Hill. The great Roads all along thefe Hills are kept in fo good Order, that in few of the beft inhabited Councries one finds the Highways fo well maintained as in thefe forfaken Mountains; but this is fo great a Paffage, that all concerned in it find their Account in the Expence they lay out upon it. On the laft, in a little Bottom in the Midft of the Hill ftands Pratolino, one of the Great Duke's Palaces, where the Retreat in Summer muft be very agreeable, for the Air is extreme thin and pure. The Gardens in ltaly are coftly, the Statues and Fountains are very rich and noble, the Grounds well laid out, and the Walks long and even; but as they have no Gravel as we in England, fo the conftant Greennefs of the Box fo much pleafes them, that preferring the Sight to the Smell, their Gardens are fo high fcented by Box-plots, that it is no Pleafure to walk in them; they alfo lay their Walks fo between Hedges, that one is confined in them.

I faw firft, in a Garden at Vincenza, that which I found afterwards in many Gardens in Italy, which was very convenient; there went a Courfe of Water round the Walls. About a Foot from the Ground in a Channel of Stone, along the Side of the Wall; and in this there were Holes, fo made, that a Pipe of white Iron or Wood put into them, conveyed the Water to fuch Plants as in a dry Seafon wanted watering ; and a Cock fet the Water a running in this Courfe, fo that without the Trouble of drawing Water, a fingle Perfon could eafily manage a great Garden. Florence is a beautiful and noble Town, full of great Palaces, rich Churches, and ftately Convents. The Streets are pav'd in Imitation of the old Roman Highways, with great Stones bigger than our Pavement Stone, but much thicker, which are fo hollowed in their Joinings to one another, that Horfes find Faftening enough for their Feet. There are many Statues and Fountains in the Streets, fo that in every Corner one meets with many agreeable Objects. I will not entertain you with a a Defcription of the Great Duke's Palace and Gardens, of the old Palace, and the Gallery that joins it, and of the vaft Collection of Pictures, Statues, Cabinets, and other Curiofities, that mult needs amaze every one that fees them; the Plate, and in particular the Gold Plate and great Coach, are fuch extraordinary Things, that they would require a very copious Defcription, if that had not been done fo often. The great Dome is a magnificent Building, but the Frontifpiece to the great Gate is not finifhed: The Cupola is after St. Peter's, the greateft I faw in Italy; it is Three hundred Foot high, and of a vaft Compafs; and the whole Architecture of this Fabrick is very fingular, as well as regullar; only that which was intended to add to its Beaury, leffened it in my Thoughts; for the Walls, that are all of Marble, being white and black, laid in different Figures and Orders, looked too like a Livery and had not the Air of Noblenefs, which in my Opinion becomes fo glorious a Fabrick. The Baptiftery, that ftands before it, was a noble Heathen Temple ; its Gates of Brafs are the beft of that Sort that are in the World ; there are fo many Hiftories fo well reprefented in Bas-relieves in them, with fo much Exactnefs, the Work is fo natural, and yet fo fine, that a curious Man could find Entertainment for many Days, if he would examine the three Gates of this Temple with a critical Exactnefs. The Annunciata, St. Mark's, St. Croce, and St. Maria Novella, are Churches of great Beauty and vaft Riches; but the Church and Chapel of St. Laurence exceeds them all,

## Chap. III. through SwISSERLAND, Gّ̛c.

as much in the Riches within, as it is inferior to them in the Outfide, which is quite flay ${ }^{\text {s }} \mathrm{d}$, if I may fo fpeak, but on Defign to give it a rich Outfide of Marble. In a Chapel within this Church, the Bodies of the Great Dukes lie depofited, till the famous Chapel is finifhed; but I was much fcandalized to fee Statues with Nudities here, which I do not remember to have feen any where elfe in Churches. I will not offer at a Defcription of the glorious Chapel, which as it is, without Doubt, the richeft Piece of Building that perhaps the World ever faw, fo it goes on fo flow, that tho' there are many always at Work, yet it doth not feem to advance proportionably to the Number of Hands that are employed in it.

Among the Statues that are to be in it, there is one of the Virgin, made by Mickael Angelo, which reprefents her Grief at the Paffion of her bleffed Son, that thath the moft Life in it of any Statue I ever faw. But the famous Library, that belongs to this Convent, took up more of my Time than all the other Curiofities of Florence; for here is a Collection of many Manufcripts, mont of them Greek, that were gather'd together by Pope Clement VII. and given to his Country: There are very few printed Books mixed with them; and thofe Books are fo rare, that they are almoft as curious as Manufcripts. I faw fome of Virgil's Poems in old Capitals. There is a Manufcript in which fome Parts both of Iacitus and Apuleius are written; and in one Place, one in a different Hand had writ, that he had compared thofe Manufcripts; and he adds a Date to this in Olibrius's Time, which is about Twelve hundred Years ago: I found fome Diphthongs in it caft into one Letter, which furprized me; for I thought that Way of Writing had not been fo ancient. But that which pleafed me moft was, that the Library-keeper affured me, that one had lately found the famous Epif tle of St Cbryfostom to Cefarius, in Greek, in the End of a Volume full of other Things, and not among the Manufcripts of that Father's Books, of which they have a great many: He thought he remembered well the Place where the Book ftood; fo we turned over all the Books that ftood near it, but I found it not: he promifed to look it out for me, if I came back that Way ; but I changing my Defign, and going back another Way, could not fee the Bottom of this. It is true, the famous Magliabeccbi, who is the Great Duke's Library-keeper, and is a Perfon of wonderful Civility, and full of Candor, as well as learned beyond Imagination, affured me, that this could be no other than a Miftake of the Library-keeper's; he faid, fuch a Dif covery could not have been made without making ifo much Noife that he muft have heard of it: He added there was not one Man in Florence that either underftood Greek, or that examin'd Manufcripts ; fo that I could not build on what an ignorant Library-keeper had told me. Florence is much funk, for they do not reckon that there are above fifty thoufand Souls in it ; and other States, that were once great Republicks, fuch as Sienna and Pija, while they retained their Liberty, are now fhrunk into nothing; it is certain, that all three together are now not fo numerous as any one of them was Two hundred Years ago. Legborn is full of People, and all round Florence there are a great many Villages; but as one goes over Tufcony, it appears fo difpeopled, that one cannot but wonder to find a Country, that hath been the Scene of fo much Action, and fo many Wars, now fo poor, and in many. Places the Soil is quite neglected, for Want of Hands to cultivate it; and in other Places where there are more People, they look fo poor, and their Houfes are fuch Ruins, that it is farce accountable how there fhould be fuch Poverty in fo rich a Country, which is full of Beggars; and the Style a little altered from what I found it in Lombardy; for whereas they begged for the Sake of St. Antiony, here all begged for the Souls in Purgatory; and this was the Style in all other Parts of Italy through which I paffed.

In fhort, the difpeopling of Tufcany, and moft of the Principalities of Italy, but chiefly the Pope's Domi-
Vol. II. NUMB. III
nious, which are more abandoned than any other, feemed to flow from the Severicy of the Government, the Decay of Trade, and the Weight of the Taxes, which, notwithftanding that Decay of Trade, are fill kept up befides, the vaft Wealth of the Convents, where the only People of Italy are to be found, that live at their Eafe, and in great Plenty, and makes many forfake all Sort of Induftry, and feek fuch a Retreat; fo that the People do not increafe fant enough to make a new Race, inftead of thofe whom a hard Government drives away. It muft needs furprize an attentive Traveller, to fee not only the Venetian Territory, which is indeed a rich Country, but the Bailiages of the Swizers, and the Coaft of Genoa, fo full of People, when Tufcany, the Patrimony, and the Kingdom of Naples have fo few Inhabitants. In the Coaft of Genoa there is, for many Miles as it were, a conftant Tract of Towns and Villages, and all well peopled, though they have fcarce any Soil at all, lying under the Mountains, that are barren, and that expofe them to a moft uneafy Sun, and lie upon a boifterous Sea, that is almoft always in a Storm ; that affords very few Fifh; yet the Gentlenefs of the Government draws fuch Mulcitudes thither, and thofe are fo wealthy that Money brings but Two per Cent. But to balance this, fo ftrange and wild a Thing is the Nature of Man, at leaft of Italians, that I was told, the worft People of Italy are the Genoefe, and the moft corrupted in their Morals, as to all Sorts of Vice ; fo that though a fevere Government and Slavery are contrary to the Nature of Man, and to human Society, to Juftice and Equity, and to that effential Equality among Men ; yet, on the other Hand, all Men cannot bear that Eafe and Liberty that become the human Nature. The Superftition of Italy, and the great Wafte of Wealth in their Churches, particularly thofe prodigious Mafles of Plate with which their Altars are covered on Holidays, fink their Trade extremely; for Silver being in Commerce, what Blood is in the Body, when fo much is dead, and circulates no more, it is no Wonder if fuch an unnatural Extravafation of Silver occafions a great Deadnefs in Trade. I had almoft forgot a Remark that I made on the laft Hill of the Apennines, jult above Florence, that I never faw fuch tall and large Cy preffes any where, as grew all over that Hill; which feemed a little ftrange, that Tree being apt to be ftarv'd by a cold Winter among us, and there the Winters are very fevere. All the Roads in Tufcany are very rugged, except on the Sides of the Arno; but the Uneafinefs of the Road is much qualified by the great Care that is had of the Highways, which are all in very good Condition. The Inns are wretched, and ill furnifhed both for Lodging and Diet : This is the Plague of all Italy, for except in the great Towns, one really fuffers fo much, that the Pleafure of Travelling is much abated by the Inconveniencies that one meets in every Stage through which he paffes.
22. I am now in the laft Stage of my Voyage; for fince my laft, I have not only got to Rome, but have been in Naples; and have now fatisfied my Curiofity fo fully, that I intend to leave this Place within a Day or two, and go to Civita Veccbia, and from thence by Sea to Marfeilles, and avoid an unpleafant Winter's Journey over the Alps. It is true, I lofe the Sight of Turin, Genoa, and fome other Courts ; but though I am told thefe deferve the Pains of the Journey, yet when one rifes from a great Meal, no Delicacies, how much foever they might tempt at another Time, can provoke his Apperite : So I confefs freely, that the Sight of Na ples and Rome have fo filled my Stomach that Way, that the Curiofity of feeing new Places is now very low with me ; and indeed thofe I have of late feen are fuch, that Places, which at another Time would pleafe me, would now make but a flight and cold Impreffion.

All the Way from Florence, through the GreatDukess Country, look'd fo fad, that I concluded it mutt be the moft difpeopled of all Italy; but I changed my Note when I came into the Pope's Territories at Pont Centino, where there was a rich Vale all uncultivated, and not fo much as ftocked with Cattle. But as I paffed from Mont Fiafcone to Viterbo, this appeared Atill more ama.

7 S
zing;
zing; for a vaft champaign Country lay quite deferted, and that wide Town, which is of fo great a Compafs, hath fo few Inhabitants, and thofe fo poor and miferable, that the People in the ordinary Towns of Scot land, and worft Places, make a much better Appearance. When I was within a Day's Journey of Rome, I fancied that the Neighbourhood of fo great a City muft mend the Matter, but was much difappointed; for a Soil that was fo rich, and lay fo fweetly, that it far exceeded any Thing I ever faw out of Italy, had neithe Inhabitants nor Cattle to the tenth Part of what it could bear: The Surprize that this gave me, increafed upon me as I went out of Rome on the other Side, chiefly all the Way to Naples, and on the Way to CivitaVeccbia; that vaft and rich champaign Country that runs along to Terracina, which from Civita Veccbia is above one hundred Miles long, and in many Places twelve or twenty Miles broad, is fo abandoned, that as far as one's Eye can carry one, there is often not fo much as a Houfe to be feen, but on the Hills that are on the North Side of this Valley : And by this difpeopling of the Country, the Air is now become fo unwholfome, that it is not fafe to be a Night in it all the Summer long; for the Water that lies upon many Places not being drained, it rots ; and in the Summer this produces fo many noifome Steams, as are felt even in Rome itfelf; and if it were not for the Breezes that come from the Mountains, the Air would be intolerable: When one fees all this large but wafte Country, from the Hill of Marino, twelve Miles beyond Rome, he cannot wonder enough at it. It is the Rigour of the Government that hath driven away the Inhabitants ; and their being driven away, hath reduced it to fuch a Pafs, that it is hardly poffible to repeople it ; for fuch as would come to drain and cultivate it muft run a great Hazard; and few can refolve on that, when they can hope for no Reward of their Induftry.

It is the greateft Solecifm in Government, for the Prince to be Elective, and yet abfolute; for an hereditary Prince is induced to confider his Pofterity, and to maintain his People fo, that thofe that come after him may fupport the Rank which they hold in the World : But an Elective Prince hath Nothing of that in his Eye, unlefs he hath a Generofity which is not or dinary among Men, and leaft of all among Italians, who have a Paffion for their Families not known in other Places : And thus a Pope, who comes in late to his Dignity, which by Confequenee he cannot hope to hold long, very naturally turns to thofe Councils, by which his Family may make all the Hay they can during this Sun-fhine. And though anciently the Cardinals were a Check upon the Pope, and a Sort of a Council, without whom he could do Nothing even in Temporals, yet now they have quite loft that ; and have no other Share in Affairs than that to which the Pope thinks fit to admit them; fo that he is the molt abfolute Prince in Europe. It is true, as to Spirituals, they retain fill a large Share; fo that in Cenfures and Definitions the Pope can do Nothing without their Concurrence, though it is certain, that they have not fo good a Title to pretend to that, as to a Share in the temporal Principality. For if the Pope derives any Thing from St. Peter, all that is fingly in himfelf, and it is free to him to proceed by what Method he thinks beft, fince the Infallibility, according to their Pretenfions, refts in him alone; yet becaufe there was not fo much to be got by acting arbitrarily in thofe Matters, and a fummary Way of exercifing this Authority might have tempted the World to have enquired too much into the Grounds on which it is built; therefore the Popes have let the Cardinals retain ftill a Share in this Supremacy over the Church, tho' they have no Claim to it, either by divine or ecclefiaftical Warrants: But as for the Endowments of the See of Rome, to which they may juftly lay Claim, as being in a Manner the Chapter of that See; there is fo much to be got by this, that the Popes have engroffed it to themfelves. And thus it is, that the Government of this Principality is very unfteady. Sometimes the papal Family are glorious and magnificent; at other Times they think of nothing but of eftablifhing their

Houfe. Sometimes the Pope is a Man of Senfe himfelf; fometimés he is quite funk, and, as the laft Pope was, becomes a Child again thro' old Age: Sometimes he has a particular Stiffnefs of Temper, with great Slownefs of Underftanding, and an infatiable Defire of heaping upWealth, which is the Character of him that now reigns. By this Diverfity, which appears eminently in every new Pontificate, that commonly avoids thofe Exceffes that made the former Reign odious, the Councils of the Popedom are weak and disjointed. But if this is fenfible to all Europe, with Relation to the general Concerns of that Body, it is much more vifible in the Principality itfelf, that is fubject to fo variable a Head There hath been in this Age a Succeflion of four ravenous Reigns; and tho' there was a fhort Interruption in the Reign of the Rofpiglioff, that coming after the Barbarini, the Pampbili, and the Ghigis, did not enrich itfelf; and yet it diforder'd the Revenue, by the valt Magnificence in which he reigned, more in Twenty nine Months Time, than any other had done in fo many Years. The Altieri did in a moft fcandalous Manner raife themfelves, in a very fhort and. defpifed reign, and built one of the nobleft Palaces in Rome.

He that reigns now doth not raife his Family avowedly, but he eafes not the People of their Taxes; and as there is no Magnificence in his Court, or any publick Buildings now carrying on at Rome; fo the many vacant Caps occafion many empty Palaces ; and by this Means there is fo little Expence, that it is not poffible for the People to live and pay the Taxes; which hath driven, as is believ'd, almoft a fourth Part of the Inhabitants out of Rome during this Pontificate. And as the Pre-emption of the Corn makes, that there is no Profit made by the Owners out of the Cultivation of the Soil, all that going wholly to the Pope; fo there are no Ways left here of employing Money to any confiderable Advantage ; for the publick Banks, which are all in the Pope's Hand, do not pay in Effect. Three per Cent. tho' they pretend to give Four per Cent. Intereft: The Settlement is indeed Four per Cent. and this was thought fo great an Advantage, that Actions on the Pope's Bank were bought at an Hundred and fixteen per Cent. But this Pope broke through all, and declared he would give all Men their Money again, unlefs they would pay him Thirty per Cent. for the continu ing of this Intereft: And thus for a Hundred Crowns principal, one not only paid at firft an Hundred and fixteen, but afterwards Thirty, in all, an hundred forty fix for the Hundred; which is almoft the half loft; for whenfoever the Pope will pay back their Money, all the reft is loft. And now, there is a Report, that the Pope is treating with the Genoefe for Money at Two per Cent. and if he gets it on thofe Terms, he will then pay his Debts ; and the Subjects, that have Money in this Bank, will by this Means lofe Six and forty per Cent. which is almoft half of their Stock. A Man of Quality at Rome, and an eminent Churchman, who took me for one of their Clergy, becaufe I wore the Habit of a Churchman, faid, it was a Scandal to the Chriftian World, and made one doubt the Truth of the Chriftian Religion, to fee more Oppreffion in their Territory, than was to be found in Turkey; tho' in the Hands of Cbrift's Vicar. And I can never forget the Reflection a Roman Prince made upon the Folly of thofe fevere Oppreffions, which as they drive away the Inhabitants, fo they reduce thofe that are left to fuch Degeneracy of Spirit by their Neceffities. The Spaniards, whofe Dominions look fo big in the Map, are brought fo low; that if they had ftill kept the Poffef fion they once had of the United Netberlands, they would fignify no more towards their , Prefervation, than their other Provinces did, which, by their unfkilful Conduct, they have difpeopled and exhaufted Whereas, by their lofing the Seven Provinces, thofe States have fallen upon fuch wife Notions of Government, and have drawn fuch Wealth, and fuch Numbers of People together, that Spain itfelf was preferved by them, and was faved in this Age by the Lofs of thofe Provinces in the laft: And thofe States, that, if they had remained fubject to Spaing would have figni

## Chap. III.

fied little to its Support, did now more confiderably, by being Allies, than they could have done, if they had not fhaken off their Yoke. Indeed, if Spain had been fo happy as to have fuch Viceroys and Governors, as at this Time in Naples, their Affairs could not have declined fo faft as they have done. The Marquefs of Carpy, in his Youth, intended to have taken fo fevere a Revenge of an Injury that he thought the late King of Spain did him in an Amour, that he defigned the blowing him up by Gunpowder, when he was in the Council-chamber. But that Crime was difcovered in Time, and was not only forgiven him, in Confideration of the Greatnefs of his Family, he being the Son of Don Lewis de Haro, but after that he was made for feveral Years Ambaffador at Rome : He is now Viceroy of Na ples, and is the only Governor of all the Places through which I paffed, that is, without Exception, beloved and efteemed by all Sorts of Pcople; for during the few Years of his Miniftry, he bath redreffed fuch Abufes as feemed paft Cure, or that required an Age to correct them. He hath repreffed the Infolence of the Spaniards fo much at Naples, that the Natives have no Occafion to complain of the Haughtinefs of their Mafters; for he proceeds againft the Sponiards with no lefs Severity, when they give Caufe for it, than againft the Neapolitans. He hath taken the Pay of the Soldiers fo immediately into his own Care, that they, who, before his Coming, were half naked, and robbed fuch as paffed thro' the Streets of Naples in Day-light, are now exactly paid, well difciplined, and fo decently clothed, that it is a Pleafure to fee them. He examines their Mufters 'fo exactly, that he is fure not to be cheated by falfe Lifts. He hath brought the Markets and Weights of Naples to a true Exactnefs; and whereas the Bread twas generally too light, he has fent for Loaves out of feveral Places of the Markets, and weighed them himfelf; and by fome fevere Punifhments on thofe that fold the Bread too light, he hath brought this Matter to a jult Regulation. He hath alfo brought the Courts of Judicature, that were thought generally very corrupt, into Reputation again; and 'tis believed he hath Spies to watch in Cafe Bribes are ftill going on. He hath fortified the Palace, which was before his Time fo much expofed, that it would have been no hard Thing to have made a Defcent and feized it.

But the two Things, that raife his Reputation moft are, his extirpating the Banditti, and the Regulation of the Coin. It is well known, what a Plague the Banditti have been to the Kingdom ; for they, in Troops, not only robbed the Country, but were able to refift an ordinary Body of Soldiers. Thefe travelled about feeking for Spoil all the Summer long; but in Winter they were harboured by fome of the Neapolitan Barons, who gave them Quarters, and did not only thereby protect their own Lands, but had them as fo many Inftruments ready to execute their Revenges on their Enemies. This was well known at Naples, and there was a Council that had the Care of the reducing the Banditti committed to them, who, as they catched fome few, and hanged them, fo they fined fuch Barons as gave them Harbour; and it was believed, that thofe Fines amounted to near a Hundred and Fifty thoufand Crowns a Year: And thus the Difeafe went on, only now and then there was a little Blood let, which never went to the Bottom of the Diftemper. But when the prefent Viceroy entered upon the Government, he refol ved to extirpate all the Banditti ; and he firft let all the Barons underftand, that, if they harbour'd them any more, a little Fine would not fave them, but that he would proceed againft them with the utmoft Severity; and by this Means the Banditti could find no Winter Quarters, which drove them to fome Faftneffes among the Hills, and they refolved to make good the Paffes, and to accommodate themfelves the beft they could amidft the Mountains. The Viceroy fent a great Body againft them, but they defended themfelves for fome Time vigorounly, and in one Sally killed Five hundred Men: but at laft, feeing that they were hard prefs'd, and that the Viceroy intended to come againft them in Perfon, they accepted of the

Terms that he offered, which were, a Pardon for what was paft, both as to Life and Gallics, and Sixpence a Day for their Subfiftence in Prifon during Life, or the Viceroy's Pleafure ; and fo they furrender'd themfelves: They are kept in a large Prifon, and now and then, as he fees Caufe for it, he fends fome few of them up and down to ferve in Garrifons. And thus, beyond all Mens Expectations, he finifhed this Matter in a very few Months; and the Kingdom of Naples, that had been fo long a Scene of Pillage and Robbery, is now fo much changed, that no Place in Europe enjoys a more entire Security. As for the Coin, it, as all the other Spanifh Money, is fo fubject to Clipping, that the whole Money of Naples became light, and far below the true Value; fo the Viceroy refolved to redrefs this. He confiders, that the Crying-down of Money; that paffeth upon the publick Credit, is a robbing thofe in whofe Hands the Money happens to be, when fuch Proclamations are iffued; and therefore he takes a Method that is more general, in which every one bears his Share, fo that none will be crufhed by it: He laid Taxes on the whole Kingdom, and got a great many to bring in Plate to be coined: and when he hath thus obtained fuch a Quantity, as may ferve for the Circulation that is neceffary, he intends to call in all the old Money, and to give new for it. Thus this Viceroy fets fuch a Pattern to the other Minifters of the Crown of Spain, that, if many would follow, the State of their Affairs would be foon altered.
The Kingdom of Naples is the richeft Part of Italy; for the very Mountains, that make near half the Soil, are fruifful, and produce either Wine or Oil in great Abundance. Apulic is a great Corn Country, but it is exceffive hot, and in fome Years is all burnt up. The Jefuits are the Proprietors of near half Apulia, and they treat their Tenants with the fame Rigour that the Barons of this Kingdom generally ufe towards their Farmers: For the Commons here are fo miferably oppreffed, that in many Places they die of Hunger, even amidft the great Plenty of their beft Years: For the Corn is exported to Spain, but neither Spaniards nor Neapolitans underftand Trade fo well, as to be their own Merchants or Carriers ; fo that the Engliff generally carry the Profit of this Trade. The Oil of this Kingdom is fill a vaft Trade, and the Manufactures of Wool and Soap in England confumes yearly fome Thoufands of Tuns. The Silk Trade is fo low, that it only ferves themfelves, but the Exportation is inconfiderable. The Sloth and Lazinefs of this Nation render them incapable of making thofe Advantages of fo rich a Soil, that more induftrious People would find out. For it amazes a Stranger to fee in their little Towns, the Men walking in the Market-places in their torn Cloaks, and doing nothing. And though in fome large Towns, fuch as Capua, there is but one Inn, yet even that is fo miferable, that the beft Room and Bed is fo bad, that our Foormen in England would make a grievous Outcry, if they were no better lodged. Nor is there any thing to be had in them; the Wine is intolerable, the Bread ill baked, no Vietuals, except Pigeons, and the Oil flinking. In fhort, except one carries his whole Provifion from Rome or Naples, he muft refolve to endure a good deal of Mifery in the four Days Journey that is between thofe two Places. And this is what a Traveller, that fees the Soil, cannot comprehend. But as they have not Hands enough, fo thofe they have are generally fo little employed, that it is no Wonder to fee their Soil produce fo little, that in the Midft of all that Abundance, Nature hath fet before them, they are one of the pooreft Nations in Europe. But befide this which I have named, the vaft dead Wealth, that is in the Hands of the Churchmen, is another evident Caufe of their Mifery. One that knew the State of this Kingdom well, affured me, that if it were divided into Five Parts, upon a flrict Survey, it would be found, that the Churchmen had four Parts of the Five; which he made thus out. They have in Soil above the half of the whole; which is Two and a half; and in Tithes, and Gifts, and Legacies, they have one and a half more : For no

Man dieth without leaving a confiderable Legacy to fome Church or Convent. The Wealth that one fees in the City of Naples alone, paffeth Imagination. There are four and twenty Houfes of the Order of the Dominicans, of both Sexes, and two and twenty of the Francifcans; feven of the Jefuits, befide the Convents of the Olivitanes, the Theatines, the Carmelites, the Benediczines ; and above all, for Situation and Riches, the Cartbufians, on the Top of the Hill that lieth over the Town. The Riches of the Annunciata are prodigious; it is the greatef Hofpital in the World; the Revenue is faid to be four hundred thoufand Crowns a Year. The Number of the Sick is not fo great as at Milan, yet one Convenience for their Sick I obferved in their Galleries, which was confiderable, that every Bed ftood as in an Alcove, and had a Wall on both Sides, feparating it from the Beds on both Hands, and fo much void Space on both Sides of the Bed, that the Bed itfelf took up but half the Room. The young Children that they maintain are fo many, that one can hardly believe the Number they boaft of; for they talk of Thoufands that are not feen, but are at Nurfe. A great Part of the Wealth of this Houfe goes to the enriching their Church, which will be all over within crufted with lovely Marble, in a great Variety and Beauty of Colours. The Plate that is in the Treafury here, and in the Dome (which hath a noble Chapel, and a vaft Treafure) and in a great many other Churches, is fo prodigious, that upon the modefteft Eftimate, the Plate of the Churches of Naples amounts to eight Millions of Crowns. The new. Church of the Jefuits, that of Sc. Fobn the Apoftle, and that of St. Paul, are furprizingly rich. The Gilding and Painting that is on the Roofs of thofe Churches have coft Millions; and as there are about an hundred Convents in Naples, fo every one of thefe, if it were in another Place, would be thought well worth feeing.

A new Governor of the Annunciala is annually chofen, who perhaps puts into his own Pocket twenty thoufand Crowns ; and to make fome Compenfation, when he goes out he gives a vaft Piece of Plate to the Houfe, a Statue for a Saint in Silver, or fome Colofs of a Candleftick; for feveral of thofe Pieces of Plate are faid to be worth ten thoufand Crowns. And thus all the Silver of Naples becomes dead and ufelefs. The Jefuits are great Merchants here ; their Wine-cellar is a valt Vault, and holds above a thoufand Hogfheads, and the beft Wine in Naples is fold by them; yet they do not retail it fo fcandaloufly as the Minims do, who live on the great Square before the Viceroy's Palace, and fell out their Wine by Retail. They pay no Duty, have extraordinary Wine, and are in the beft Place of the Town for this Retail. It is true, the Neapolitans are no great Drinkers, fo the Profits of this Tavern are not fo great as they would be in colder Countries ; for here Men go for a Draught in the Mornings, or when they are dry ; yet the Houfe grows rich, and has one of the fineft Chapels in all Naples; but the Trade feems very unbecoming Men of that Profeffion, and of fo ftrict an Order. The Convents have a very particular Privilege, for they may buy all the Houfes that lie on either Side, till the firft Street difcontinueth the Houfes ; and there being fcarce a Street in Naples in which there is not a Convent, by this Means they may come to buy the whole Town : And the Progrefs that the Wealth of the Clergy makes is fo vifible, that if there is not fome Stop put to it, within an Age they will make themfelves Mafters of the whole. It is amazing to fee fo profound an Ignorance reign among the Clergy; for though all the fecular Perfons here fpeak of them with all poffible Scorn, yet they are the Mafters of the People. The Women are infinitely fuperftitious, and give their Husbands no Reft, but as they draw from them great Prefents to the Church.

It is true, there are Societies of Men at Naples, of freer Thoughts than can be found in any other Place of Italy. The Greek Learning begins to flourifh there, the new Philofophy is much ftudied, and there is an Affembly that is held in D. Fofeph Valeta's Library where there is a valt Collection of well-chofen Books)
compofed of Men that have a right Tafte of true Learning and good Senfe. They are ill looked on by the Clergy, and reprefented a Set of Atheifts, and as the Spawn of Pomponatius. But I found no fuch Thing; for I had the Honour to meet twice or thrice with $z$ confiderable Number of them during the fhort Stay that I made. There is a learned Lawyer, Francifco. Andria, that is confidered as one of the moft inquifitive Men of the Affembly. There is alfo a Grandchild of the great Alciat, who is very curious as well as learned. Few Churchmen come into this ; on the contrary, it is plain, that they dread it above all Things. Only one eminent Preacher, Rinaldi, Archdeacon of Capua, affociates himfelf with them. He was once of the Jefuits Order, but left it; and as that ferved to give a good Character of him to me, fo upon a long Converfation, I found a great many other Things that poffeffed me with a high Value for him. Some Phyficians in Naples are brought under the Scandal of Atheifm ; and it is certain, that in Italy, Men of fearching Underftandings, who have no Idea of the Chriftian Religion, but that which they fee received, are very naturally tempted to disbelieve it ; for finding fuch notorious Cheats as appear in many Parts of their Religion, they are, upon that, induced to disbelieve the whole. The Preachings of the Monks in Naples are terrible Things. I faw a Jefuit go in a Sort of Proceffion, with a great Company about him, and calling all that he faw to follow him to a Place where a Mountebank was felling his Medicines, near whom he took his Stand, and entertained the People with a Sort of a Farce, till the Mountebank got him to give over, fearing his Action fhould grow tedious, and difperfe the Company that was brought together. There are no Preachers or Men of Learning among the Jefuits. I was told they had not Men capable to teach their Schools, and were forced to hire Strangers. The Order of the Oratory hath not that Reputation in Italy as in France ; and the little Learning that is among the Clergy in Naples, is among fome few fecular Priefts.

The new Method of Molinos fo much prevails in Na ples, that it is believed he hath above twenty thoufand Followers in this City. And fince this hath made fome Noife in the World, and yet is generally but little underftood, I will give you fome Account of him. He is a Spanifh Prieft, that feems to be but an ordinary Divine, and is certainly an ill Reafoner, when he undertakes to prove his Opinions. He hath wrote a Book, which is entitled, Il Guida Spirituale, which is an Abftract of myftical Divinity ; the Subftance of the whole is reduced to this, That in our Prayers, and other Devotions, the beft Methods are to retire the Mind from all grofs Images, and fo to form an Act of Faith, and thereby to prefent ourfelves before God; and then to fink into a Silence and Ceffation of new Acts, and to let God act upon us, and fo to follow his Conduct. This Way he prefers to the Multiplication of many Acts, and different Forms of Devotion; and he makes fmall Account of corporal Aufterities, and reduces all the Exercifes of Religion to this Simplicity of Mind. He thinks this not only fit to be propofed to fuch as live in religious Houfes, but to fecular Perfons, and by this he hath propofed a great Reformation of Minds and Manners, He hath many Priefts in Italy, but chiefly in Naples, that difpofe thofe who confefs to them to follow his Method. The Jefuits have fet themfelves much againft this Conduct, as forefeeing that it will much weaken the Empire Superftition hath over the People, make Religion become a more plain Thing, and open a Door to Enthufiafm. They alfo pretend that his Conduct is factious and feditious, which may breed a Schifm in the Church. And becaufe he faith in fome Places, that the Mind may attain fuch a Simplicity in its Acts, as that it may rife in fome Devotions to God immediately, without contemplating the Humanity of Chrift, they have accufed him of laying afide the Doctrine of Chrift's Humanity ; though it is plain, that he fpeaks only of the Purity of fingle Acts: Upon thefe Motives they have fet themfelves much againft Molinos; and alfo pretend, that fome of his Difciples have

## Chap. III.

through SWISSERLAND, \&c.
infured into their Penitents, that they may communicate as they find themfelves difpofed, without going firt to Confeffion; which they thought weakened the Yoke whereby the Priefts fubdue the Confciences of the People to their Conduct ; yet he was much fupported both in Naples and in Sicily, and had many Freinds and Followers at Rome. So the Jefuits, as a Provincial of the Order affured me, finding they could not ruin him, got a great King, that is now extremely in the Interefts of their Order, to reprefent to the Pope the Danger of fuch Innovations.

It is certain, the Pope underftands the Matter very little, and that he is poffeffed with a great Opinion of Molinos's Sanctity ; yet upon the Complaints of fome Cardinals, that feconded the Zeal of that King, he and fome of his Followers were clapp'd into the Inquifition, where they have been now for fome Months; but they are well ufed, which is believ'd to flow from the good Opinion the Pope hath of him, who faich ftill, that though he may have erred, yet he is certainly a good Man. Upon this Imprifonment, Pafguin faid a pleafant Thing. In one Week, one Man had been condemned to the Gallies for fomewhat he had faid ; another had been hanged for fomewhat he had writ; and Molinos was clapp'd in Prifon, whofe Doctrine confifted chiefly in this, That Men ought to bring their Minds to a State of inward Quietnefs, from which the Name of 2 uietifts was given to all his Followers. The Pafquinade upon all this was, Si parliamo, in galere ; fi fcrivemmo, impiccati; $\sqrt{2}$ fiamo in quiete, all' fant' officio: e cbe befogna fare? "If we fpeak, we are fent to the Gal" lies; if we write, we are hanged; if we fland quiet, " we are clapp"d up in the Inquifition; what muft we do then ?" Yet his Followers at Naples believe he will come out of this Trial victorious.

The City of Naples is the beft fituated, lies in the beft Climate, and is one of the nobleft Cities of Europe; and if it is not above half as big as Paris or London, it hath much more Beauty than either of them. The Streets are large and broad, the Pavement is great and noble, the Stones being generally above a Foot fquare ; and it is full of Palaces and great Buildings : The Town is well fupplied by Markets, to that Provifions are freh, and in great Plenty. The Wine is the beft in Europe, and both the Fifh and Flefh are extreme good. It is fcarce ever cold in Winter, and there is a frelh Air comes both from the Sea and the Mountains in Summer. The Viceroy's Palace is no extraordinary Building, only the Stair-cafe is grand, but it is now very richly furnihed with Pictures and Statues. There are in it fome Statues of the Egyptian Deities, of Touchftone, that are of great Value. There are no great Antiquities here, only there is an ancient Roman Portico, that is very noble, before Sc. Paul's Church: but without the City, near the Church and Horpital of St. Gennaro, are the noble Catacombs ; which becaufe they were beyond any thing I faw in Italy, and to which the Catacombs of Rome are not to be compared, I fhall defribe them more particularly.
They are vaft long Galleries cut out of the Rock, three Stories one above another: I was in two of them, but the Rock is fallen in the loweft, fo that one cannot go into it, but I faw the Paffage. Thefe Galleries are generally about twenty Fooc broad, and fifteen Foot high ; fo that they are noble fpacious Places, not little and narrow, as the Catacombs at Rome, which are only three or four Foot broad, and five or fix high. I was made to believe, that thefe Catacombs of Naples went into the Rock nine Miles, but for that I have it only by Report; yet if true, they may run towards Puzzuolo, and fo may have been the Burial-places of the Towns on that Bay; but of this I have no Certainty. I walked indeed a great Way, and found Galleries going off on all Hands without End: And whereas in the Roman Catacombs three are not above three or four Rows of Niches, that are cut out in the Rock one over another, into which the dead Bodies were laid ; here there are generally fix or feven Rows of Niches, and they are both larger and higher : Some Niches are for Children, and in many Places there are in the Floors, as it
Vol. II. Numb. inio.
were, great Chefts hewn out of the Rock, to lay the Bones of the dead, as they are dried, in them ; but $t$ could fee no Marks either of a Cover for thefe Holes, which lookd like the Bellies of Chefts, or of a Facing to fhut up the Niches when a dead Body was laid in them; fo that it feems they were monftrous, unwholfome, ftinking Places, where fome thourands of Bodies lay rotting, without any thing to thut in fo loathfome a Sight, and fo odious a Smell; for the Niches fhew plainly, that the Bodies were laid in them wrapped in the dead Cloaths, being too low for Coffins. In fome Places of the Rock, there is as it were' a litile Chapel hewn out in the Rock, going off from the common Gallery, and there are Niches all round about, but I faw no Marks of any Wall that thut in thofe Places; though I am apt to think thefe might be Burying places for particular Families.
There is in fome Places on the Walls and Arch old Mofaick Work, and fome Painting; the Colours are frefh, and the Manner Goitick ; which made me conclude, that this might have been done by the Normans about 600 Years ago, after they drove out the Saracens. In fome Places there are Palm-trees painted, and Vines in other Places: The Frefhnefs of the Colours fhew thefe could not have been done while this Place was employed for Burying; for the Steams and Rottennefs of the Air, occafioned by fo much Corruption, muft have diffolved both Plaifter and Colours. In one Place there is a Man painted with a little Beard, and Paulus is written by his Head; there is another reaching him a Garland, and by his Head Laud is written; and this is repeated in another Place right againft it. In another I found a Crofs painted, and about the upper part of it thefe Letters, J.C.X.O. and on the lower part NIK.A. are painted. A learned Antiquary agreed with me, that the Manner of the Painting and Characters did not feem to be above Six hundred Years old; but neither of us knew what to make of thefe Letters: The Lower feemed to relate to the laft Word of the Vifion, which it is faid that Conftantine faw with the Crofs that appeared to him: But tho' the firft two Letters might be for 'fefus, it being ordinary in old Coins and Infcriptions to put a C for an $S$, and X ftands for Cbrift, yet we knew not what to make of the $O$, unlefs it were for the Greek $\Theta$, and that the little Line in the Bofom of the Theta was worn out, and then it ftands for Theos; and thus the whole Infcription is, Fefus Cbrift God overcometb.

Another Picture in the Wall had written over it Sta Fobannes, a clear Sign of a barbarous Age. In another Place there is a Picture high in the Wall, and three Pictures under it; that at Top had no Infcription ; thofe below it had thefe Infcriptions, $S$. Katbarina, $S$. Agape, and S. Margarita: Thefe Letters are clearly modern; befides that, Margaret and Katbarine are modern Names; and the Addition of ta a little above the $S$, were manifeft Evidences that the higheft Antiquity that can be afcribed to this Painting is Six hundred Years. I faw no more Painting, and I began to grow weary of the Darknefs and the thick Air of the Place; fo that I faid not above an Hour. This made me reflect more particularly on the Catacombs of Rome than I had done; I could imagine no Reafon why fo little mention is made of thofe of Naples, when there is fo much faid concerning thofe of Rome; or give myfelf other Account of the Matter, than that it being a Maxim to keep up the Reputation of the Roman Catacombs, as Repofitories of Reliques of primitive Chriftians, it would much leffen their Credit, if it were thought that there were Catacombs far beyond them in all Refpects, that yet cannot be fuppofed to have been the Work of the primitive Chriftians; and indeed, no thing feems more evident, than that thefe were com mon Burying places of the ancient Heathens; one enters into them without the Walls of the Towns, according to the Laws of the Twelve Tables; and fuch are the Catacombs of Rome that I faw, which were thofe of St. Agnes, and St. Sebaftian, the Entry into them being without the Town: This anfwers the Law, though in Effect they run under it; for in thofe Days, when they had not the Ufe of the Needle, they could

7 T
not know which Way they carried on thofe Works, when they were once fo far engaged under Ground as to lofe themfelves. It is a vain Imagination, to dream the Chriftians in the primitive Times were able to carry on fuch a Work; for as this prodigious Digging into fuch Rocks muft have been a very vifible Thing, by the Mountains of Rubbifh that muft have been brought out, and by the valt Number of Hands employed in it ; fo it is abfurd to think, that they could hold their Affemblies in the Midft of fo much Corruption. I found the Steams fo ftrong, that though I am as little fubject to Vapours as moft Men, yet I had all Day long, after I was in them, which was not an Hour, a Confufion, and as it were a Boiling in my Head, that difordered me extremely; and if there is now fo much ftagnating Air there, this muft have been fenfible in a more infufferable Manner, while there were vaft Numbers of Bodies rotting in thofe Niches. But befides this Improbability from the Nature of the Thing, I called to mind a Paffage of a Letter of Cornelius, that was Bifhop of Rome after the Middle of the third Century, which is preferved by Eufebius in his fixth Book, in which we have the State of the Church of Rome at that Time. There were forty-fix Presbyters, feven-Deacons, as many Subdeacons, and Ninety-four of the inferior Orders of the Clergy among chem: There were alfo fifteen hundred Widows, and other Poor maintained out of the publick Charities. It may be reafonably fuppofed, that the Numbers of the Chriftians were as great when this Epifle was writ, as at any Time before Conftantine: For as this was writ at the End of that long Peace, which both St. Cyprian and Laftantius mention, of above an Hundred Years; fo after there were fuch a Succeffion of Perfecutions, and thefe came fo thick, that we cannot think the Numbers of the Chriftians encreafed much beyond what they were at this Time:

There are two Particulars in this State of the Clergy, upon which one may make a probable Eftimate of the Chriftians ; one is, their Poor, which were but fifteen hundred; now upon an exact Survey it will be found, that where the Poor are well look'd to, they are generally the thirtieth or fortieth Part of Mankind; and this may be believed to be the Proportion of the Poor among the Chriftians of that Age ; for as their Charity was vigorous and tender, fo we find Celfus, Fulian, Lucian, Porpbyry, and others, object this to the Chriftians of that Time, that their Charities to the Poor drew vaft Numbers of the lower Sort among them, that they might be fupplied by their Brethren. So that this be ing the State of the Chriftians, we may reckon the Poor the thirtieth Part ; and the whole five and forty thoufand: And. I am the more inclined to think that this rifes near the full Sum of their Numbers, by the other Character of the Amount of the Clergy; for as there were forty-fix Presbyters, fo there were ninety four of the inferior Orders, who were two more than double the Number of the Priefts; and this was in a Time when the Care of Souls was more exactly looked after, than it has been in the more corrupted Ages, the Clergy having then really more Work on their Hands, the inftructing their Catechumens, the vifiting their Sick, and the comforting the Weak, Tasks that required fo much Application, that in fo vaft a City as Rome in thofe Days, in which the Chriftians were fcatter'd over the City, we make a Conjecture, that every Presbyter had perhaps about a choufand Souls committed to his Care ; this rifes to fix and forty thoufand, which comes very near the Sum gathered from the other Hint taken from their Poor: So that about fifty thoufand is the higheft to which we can reafonably raife the Number of the Chriftians of Rome in that Time; and of fo many Perfons, the old, the young, and the Women, make more than three fourth Parts; the Men therefore in Condition to work were not above twelve thoufand, and by Confequence were in no Condition to undertake and carry on fo vaft a Work. If Cornelius in that Letter fpeaks of the Numbers of the Chriftians in exceffive Terms, and if Tertullian in his Apology hath alfo fet out the Numbers of the Chriftians of his Time in a very high

Strain, that is to be afcribed to a pompous Eloquence which difpofeth People to magnity their own Party; and we muft allow a good deal to an Hyperbole It is true, is is not fo clear when thofe valt Cavities were dug out of the Rocks: We know that when the Laws of the Twelve Tables were made, Sepulture was then in Ufe; and Rome being grown to a vaft Bignefs, no Doubt they had Repofitories for their Dead; fo that fince none of the Roman Authors mention any fuch Work, it may not be unreafonable to fuppofe thefe Vaults had been wrought and cut out from the firlt Beginnings of the City, and fo later Authors had no Occafion to take Notice of it. It is alfo certain, that though Burning came to be in Ufe among the Romans, yet they returned back to their firft Cuttom of burying Bodies long before Conftantine's Time; fo it was not the Chriftian Religion that produced this Change. All our modern Writers take it for granted, that it happen'd in the Times of the Antonines; yet there being no Law made concerning it, aud no Mention in an Age full of Writers, of any Orders that were given for Burying-places, Velferus's Opinion feems more probable, that the Cuftom of Burning wore out by Degrees; and fince we are fure that they once buried, it is more natural to think, that the Slaves and the meaner Sort of People were ftill buried, that being a lefs expenfive and more fimple Way than burning, which was both pompous and chargeable; and if there were already Burying-places prepared, it is much eafier to imagine how the Cuftom of Burying grew univerfal without any Law made to inforce it. I could not for fome Time find out upon what Grounds the modern Criticks take it for. granted, that Burying began in the Times of the Anlonines, till I had the Happinefs to talk with the learned Gronovius, who feems to be fuch a Matter of all ancient Learning, as if he had the Authors lying always open before him: He told me that it was certain the Change from Burning to Burying was not made by the Chriftian Emperors: For Macrobius fays, in plain Terms, that the Cuftom of burning Bodies was quite worn out in that Age; which is a clear Intimation, that it was not laid afide fo late as by Conftantine; and as there was no Law made on that Head, fo he and the fucceeding Emperors gave fuch Toleration to Paganifm, that it is not to be imagined, there was any Order given againft Burning; fo that it is clear, the Heathens changed it of their own Accord; otherways we fhould have found that among the Complaints made of the Grievances under which they lay from the Chriftians. But it is more difficult to fix the Time when this Change was made. Gronovius fhewed me a Paffage of Pblegon's, that mentions Bodies that were laid in the Ground; yet he did not build on that, for it may have Relation to the Cuftoms of Burying that might be elfewhere ; and fo Petronius gives the Account of the Butial of the Epbefian Matron's Hufband: But he made it apparent to me, that Burying was commonly practifed under Commodus; for Xipbilinus tells us, that in Pertinax's Time, the Friends of thofe whom Commodus had ordered to be put to Death, dug up their Bodies, fome bringing out only fome Parts of them, and ochers raifing their entire Bodies. The fame Author fays, that Pertinax buried Commodus's Body, and fo faved it from the Rage of the People; and here is a pofitive Evidence that Burying was the common Practice of that Time.

The fame learned Perfon has fince fuggefted to my two Paffages of Feftus Pompeius, that feem to determine this whole Matter ; and tell us by what Names thofe Catacombs were known in the Roman time, whereabouts they were, and whai Sort of Perfons were laid in them: We have alfo the Defignation by which the Bearers were known, and the Time when they carried out the dead Bodies: and it appears particularly by them, that in the Repofitories, of which that Author makes Mention, there were no Care taken to preferve the Bodies that were laid in them from Rotting. His Words are : Pu. ticulos antiquiffimum genus Sepulture appellatos, quod ibi in puteis fepelirentur bomines; qualis fuerit locus, quo nunc cadavera projici Solent extra portam ESquilinam: que, quod ibi putefcerent, inde priùs appellatos exiftimat Puticulos

## Chap. III. through SwISSERLAND, Gorc.

Alius Gallus, qui ait antiqui moris fuife, ut patres-familias in locum publicum extra oppidum mancipia vilia projicerent, atque ita projecta, quod ibi ea putefcerent, nomen effe factum Puticuli. The other Paffage runs thus: $V$ Vpce EJ vefpillones dicuntur, qui funerandis corporibus officium gerunt, non à minutis illis volucribus, sed quia vefpertino tempore cos efferunt, qui funebri pompâ duci propter inopiam nequeunt. All this agrees fo exactly, that it will not be hard to perfuade one, that thofe Burying-places, now graced with the pompous Title of Catacombs, are no other than the Puticuli of Eeftus Pompeius, where the meaneft Sort of the Roman Slaves were laid, and without any farther Care about them, were left to rot.

It is very probable, that as we fee fome of the Roman Families continued to bury their Dead, even when Burning was the more common Cuftom ; fo perhaps others continued after this to burn their Dead, this Thing being indifferent, and no Law made about it ; and therefore it was objected to the Chriftians after that Time, that the abhorred they Cuftom of burning the Bodies of the Dead, which is mentioned by Minutius Falix; but this, or any other Evidences that may be brought from Medals after this Time, will only prove that fome were burnt, and that the Chriftians practifed burying univerfally, as expreffing their Belief of the Refurrection; whereas the Heathens held the Thing indifferent. It is alfo clear, from many genuine Infcriptions that have been found in the Catacombs, bearing the Dates of the Confuls, that thefe were the common Burial-places of all the Chriftians of the fourth and fifth Century; for I do not remember that there is any Date ancienter; and yet not one of the Writers of thofe Ages fpeak of them as the Work of the Primitive Chriftians: They fpeak indeed of the Burial-places of the Martyrs; but that will prove no more, but that the Chriftians might have their Quarters and their Walks in thofe common Bu-rial-places, where they laid their Dead, and which might have been known among them, though it is not likely that they would, in Times of Perfecution, make fuch Infcriptions as might expofe the Bodies of their dead Friends to the Rage of their Enemies : And the fpurious Acts of fome Saints and Martyrs are of too little Credit to give any Support to the common Opinion. Damafus's Poetry is of no better Authority; and though thofe Ages were inclined enough to give Credit to Fables, yet it feems this of the Catacombs, having been the Work of the Primitive Chriftians, was too grofs a Thing to be fo early impofed on the World : And this Silence, in a fuperftitious Age, has much Force in it, for fo vaft a Work mult have been well known to all the Romans. It were eafy to carry this much farther, and to fhew that the Bafs Relieves that have been found in fome of thofe Catacombs, have Nothing of the Beanty of the ancient Romon Time.

This is alfo difcernible in many Infcriptions that are rather Gotbick than Roman ; and there are fo many Infcriptions relating to Fables, that it is plain thefe were of later Times; and we fee by St. Ferome, that the Monks began even in his Time to drive a Trade of Reliques; no Wonder then, that to raife the Credit of fuch a Heap as was never to be exhaufted, they made fome miferable Sculptures and Infcriptions, and perhaps Thut up the Entries with Care and Secrecy, intending to open them upon fome Dream, or other Artifice, to give them the more Reputation; which was often practifed, to the drawing much Wealth and Devotion even to fome fingle Relique ; and a few being in this Secret, either thofe died, or by the Revolutions that happen'd in Rome, might have been difperfed before they made the Difcovery: And thus the Knowlege of thefe Places was loft, and came to be difcover'd by Accident in the laft Age, and ever fince fupplied with an inexhauftible Magazine of Bones, which are no other than the Bones of the Pagan Romans, though they are now fent over the World to feed a Superftition that is as blind as it proves expenfive. And thus the Bones of the Roman Slaves, or at leaft thofe of the meaner Sort, are fet in Silver and Gold, and entertain the Superftition of thofe who are willing to be deceived, as well as thofe who feek to deceive the Worid. But becaufe it cannot be
pretended there was fuch a Number of Chritians at Na ples as could have wrought the Catacombs ; and if it had been thought that thofe were the common Burial. places of the Heathens, that might have induced the World to think that the Roman Catacombs were fo too; therefore no Care was taken to examine thef.

I will not enter upon a Defcription of that which is fo well known, as Mont Vefuvio: It had roared fo loud about a Month before I came to Noples, that the Inhabitants could hardly fleep in the Nights, and fome old Houfes were fo thaken by the Convullion of the Hills, that they fell to the Ground; and the great Convulfion above fifty Years ago was fo terrible, that there was no fmall Fear in Naples, for though it lies at the Diftance of feven Miles, they are very timorous, but now the Storm was choaked under Ground; for tho' it fmoak'd much more than ordinary, yet there was no Eruption. It was indeed fmoaking, not only in the Mouth of the little Mount, formed within the great Wafte that the Fire hath made, but along all the Bottom that is between the outward Mouth of this Mountain (which is four Miles in Compafs) and that inward Hill. When one fees the Mouth of this Fire, and fo great a Part of the Hill, covered fome Feet deep with Afhes and Stones of metallick Compofition, that the Fire throws out, he cannot but ftand amazed, and wonder what can be the Fewel of fo lafting a Burning, that hath calcined fo much Matter, and fpewed out fuch prodigious Quantities. It is plain, there are vaft Veins of Sulphur all along in this Soll, and it feems in this Mountain they run thro' fome Mines and Rocks; and as their flow Confumption raifes a perpetual Smoke, fo when the Air within is fo much rarified that it muft open itfelf, it throws up thofe Maffes of Metal and Rock that are fhut in it. But how this Fire draws Air to nourifh its Flame, is not fo eafily apprehended, unlefs there is either a Conveyance of Air under-ground, by fome undifcover'd Vacuity, or a more infenfible Tranfmiffion of Air through the Pores of the Earth. The Heat of this Hill operates fo much upon the Soil that lies towards the Foot of it, that it produces the richeft Wine about Naples, and it alfo purificth the Air fo much, that the Village at the Bottom is thought the beft thereabouts; fo that many come thither from Naples for their Health. There is a Hill in Ifcbia, an Inland not far from Naples, which fometimes fpews out Fire. On the other Side of Naples, to the Weft, one paffeth through the Cave that pierceth the Paufalippe, and is four hundred and forty Paces long; for I walked it on Foot. It is twenty Foot broad, and at firft forty, afterwards but twenty Foot high. The Stone cut here is good for Building; fo that as this opened the Way from Puzzuolo to Naples, it was alfo a Quarry for the Building of the Town, All the Way one difcovers a ftrange Boiling within the Ground; for a little beyond this Grott of Paufalippo, as we come near the Lake of Aniano, there is on the one Hand a Bath, occafioned by a Steam that rifes fo hot out of the Ground, that as foon as one goes a little into it, he finds himfelf in a Sweat, which is very proper for fome Difeafes, efpecially that which derives its Name from Noples. And about twenty Paces from thence, there is another little Grott, that fends out fo poifonous a Steam, that it puts out a Candle as foon as it comes near it, and infallibly killeth any living Creature within a Minute; for in half that Time a Dog, upon which the Experiment is commonly tried, (the Grott from thence called Grotio di Cane)) fell into a Convulfion. From that one goes to fee the poor Remains of Puzzuolo, and of that Bay, once a continued Tract of Towns, being the Retreat of the Ro. mans during the Heats of the Summer. All the Rarities here have been fo often and fo copioully defcribed, that I am fenfible I can add Nothing to what is fo well known. I will fay Nothing of the Amphitheatre, or of Cicero and Virgil's Houfes, for which there is nothing but dubious Tradition. They are ancient brick Buildings in Roman Tafte, and the Vaults of Virgil's Houfe are ftill entire. The Sulfatara is a furprizing Thing; here is a Bottom, out of which the Force of the Fire, that breaks forth ftill in many Pla-
ces, in a thick Smoke full of Brimftone, threw up about an Hundred and Fifty Years ago a vaft Quantity of Earth, which was carried about three Miles thence, and formed the Hill called Monte Novo, upon the Ruins of a Town overwhelmed by this Eruption, which is of a very confiderable Height. They told me, that there was before that Time a Channel that went from the Bay into the Lake of Averno, of which one fees the Beginnings in the Bay, at fome Diftance from the Shore; it carrieth ftill the Name of ${ }^{\prime}$ fulio's Mole, and is believed to have been made by Fulius Cafar: But by the Swelling of the Ground, upon the Eruption of the Sulfatara, this Paffage is ftopp'd, and the Averno is become now frefh Water. It is eighteen Fathom deep. On the Side of it is that amazing Cave, where the Sybil is faid to have given out her Infpirations: The hewing it out of the Rock appears to have been a prodigious Work; for the Rock is one of the hardeft Stones in the World, and the Cave goeth in feven hundred Foot long, twenty Foot broad, and, as I guefs, eightieen Foot high : and from the End of this great Gallery, there is a narrow Paffage of three Foot broad, two Hundred foot long, and feven high, to a litcle Apartment, in a conftant floping Defcent from the great Cave. Here are three little Rooms; in one of them there are fome Remains of an old Mofaick, with which the Walls and Roof were laid over: There is alfo a Spring of Water, and a Bath, in which it is fuppofed the Sybil bathed herfelf; and from this it is faid, there runs a Cave all along to Cuma, which is three long Miles, but the Paffage is now choak'd by the falling in of the Rock in feveral Places. This Piece of Work amazed me. I did not much mind the popular Opinion that is received here, that all this was done by the Devil. The Marks of the Chiffel in all Parts of the Rock fhew, that it is not a Work of Nature. Certainly they had many Hands at their Command, who fet about it; and it feems to have been wrought with no other Defign, but to fubdue the People more entirely to the Conduct of the Priefts who managed this Impofture; fo bufy hath the Ambition and Fraud of Priefts been in all Ages, and in all corrupt Religions. But of all the Scenes of noble Objects in the Bay of Puzzuolo, the Remains of Caligula's Bridge are moft amazing; for there are yet fanding eight or ten of the Pillars, and of fome of the Arches the half is yer entire. I had not a Line with me to examine the Depth of the Water, where the furtheft Pillar is built ; but my Waterman affured me, it was fifty Cubits. I have fince inftructed one going thither in this Particular, and have received this Account from him: That he had taken Care to plum the Water at the furtheft Pillar on the Puzzuolo Side, and found it feven Fathom and a half deep; but he adds, that the Watermen affured him, that on the other Side before Baia, the Water was twenty-fix Fathom deep: But as he had not a Plummet long enough to try that, fo he believed a good deal ought to be abated; for the Watermen had alfo affured him, that the Water wasten Fathom deep on the Puzzuolo Side; and by this Meafure one may fuppofe that the Water is twenty Fathom deep on the other Side : So that it is one of the moft aftonifhing Things one can think of, that Pillars of Brick could have been built in fuch a Depth of Water. It is a noble Monument of that profufe and extravagant Expence of a brutal Tyrant, who made one of the vafteft Bridges that ever was attempted, over three or four Miles of Sea, merely to facrifice fo great a Treafure to his Vanity. As for Agrippina's Tomb, it is no great Matter, only the Basrelieves are yet entire. The marvellous Fifh-pond is a great Bafon of Water, wrought like a huge Temple, ftanding upon eight and forty great Pillars, all hew'd out of the Rock, and laid over with four Crufts of the old Plaiter, which is now as hard as Stone. This is believ'd to be a Work of Nero's. And about a Quarter of a Mile from thence, there is another valt Work, which leads into a Rock, but at the Entrance there is a noble Portico built of Pillars of Brick; and as one enters he finds a great many regular Rooms hewed out of the Rock, and covered over with Plaiter, which is
fill entire, and fo white, that one can bardly think that it hath not been wafhed over fince firit made. There are a vait Number of thofe Rooms; they are faid to be a Hundred, from whence this Cave derives the Name of Centum Camera, i, e. Hundred Cbambers. This hath been as expenfive a Work as it is ufelefs. It is afcribed to Nero, and they fay here he kept his Prifoners. But there is nothing in all this Bay that is both fo curious and fo ufful as the Baths, which feem to flow from the fame Caufe with thefe Eruptions in the Vefurio and Sulfatara, and the Grottos formerly mentioned, that as this Heat makes fome Fountains boiling hot, fo it fends up a Steam through the Rock, that doth not break through the Pores of the Stone where it is hard; but where the Rock is foft and fpungy, the Steams come through with fo melting a Heat, that a Man is very foon dif folved, as it were in Sweat: But if he ftoops low in the Paffages that are cut in the Rock, he finds no Heat, becaure there the Rock is hard. Thofe Steams, as they are hot, fo they are alfo impregnated with fuch Minerals as they find in their Way through the Rock; and near this Bath there are Galleries hewed out, and faced with a Building, in which there are, as it were, Bedfeads made in the Walls, upon which thofe, that come to fweat for their Health, lay their Quilts and Bed-clothes, and fo come regularly out of their Sweats.
It is certain, that a Man can no where pals a Day, both with fo much Pleafure, and with fuch Advantage, as he finds in his Journey to Puzzuolo, and the Bay. But tho' anciently this was all fo well built, fo throughly peopled, and fo beautifully laid out; yet one fees no where more vifibly what a Change Time brings upon all Places; for Naples hath fo entirely eat out this Place, and drawn off its Inhabitants, that as Puzzwolo itfelf is but a fmall Village, fo there is now no other in this Bay, which was anciently built almoft all round; for there are feven big Towns upon it. I cannot pafs by that noble Remnant of the Via Appia, that runs along thirty Miles of the Road between Naples and Rome, without making fome Mention of it. This Highway is twelve Foot broad, all made of huge Stones, moft of them blue, and they generally a Foot and half large on all Sides. The Strength of this Caureway appears from its long Duration; for it hath lafted above eighteen hundred Years, and is in moft Places, for feveral Miles together, as entire as when firt made ; and the Mending fuch Places as have been worn out by Time, Thews a vifible Difference between the ancient and the modern Way of Paving. One Thing feems ftrange, that the Road is level with the Earth on both Sides; whereas fo much Weight, as thofe Stones carry, fhould have funk the Ground under them by its Preffure. Befides, that the Earth, efpecially in low Grounds, receives a conftant Increafe by the Dutt which the Winds or Brooks carry down from the Hills; both which Reafons fhould make a more fenfible Difference between thofe Roads and the Soil on both Sides; and this makes me apt to believe, that anciently they were a little raifed above the Level of the Ground, and that a Courfe of fo many Ages hath now brought them to an Equality. Thofe Roads were chiefly made for Foot Paffengers; for as Nothing is more pleafant than to walk along them, fo Noching is more inconvenient for Horfes and all Sorts of Carriage ; and indeed Mules are the only Bealts of Burthen that can hold out long in this Road, which beats all Horfes after they have gone it a little while. There are feveral Remains of Roman Antiquities at the Mole of Cajeta; but the Ine of Caprea, now called Crapa, which is a little Way to Sea from Naples, gave me a ftrange Idea of Tiberius's Reign; fince it is hard to tell, whether it was more extraordinary, to fee a Prince abandon the beft Seats and Palaces of Italy, and thut himfelf up in a little Inand, in which I was told there was a Tradition of feven fmall Palaces that he built in it; or to fee fo vaft a Body, as the Roman Eimpire, governed by fuch a tyrannical Prince, at fuch a Diftance from the chief Seat, fo that all might have been reverfed long before the News of it could have reached him. And as there is nothing more wonderful in Story,

## Chap. IIII.

than to fee fo vait a State, that had fo great a Senfe of to the Eye that one finds elfewhere. The Flooring of Liberty, fubdued by fo brutal, and fo volupthous a Man as Antbony, and fo raw a Youth as Augufius; fo the Wonder is much improved, when we fee a Prince, at an Hundred and Fifty Miles Diftance, fhut up in an Illand, carry the Reins of fo great a Body in his Hand, and turn it which Way he pleafed.

But I come now to Rome, which as it was once the Emprefs of the World in a Succeffion of many Ages, fo in it there are at prefent more curious Things to entertain the Attention of a Traveller, than in any other Place in Europe. On the Side of Tufcany the Entry into Rome is very furprizing to Strangers; coming along for a great many Miles upon the Remains of the Via Flaminia, which is not indeed fo entire as the Via Appia; yet there is enough left to raife a jult Idea of the Roman Greatnefs, which laid fuch Caufeways all over Italy. And within the Gate of the Porta di Populo there is a noble Obelifk, a vaft Fountain, two fine little Churches, like two Twins, refembling each other, as well as placed one near another, and on feveral Hands one fees a long Vifto of Streets. There is no City in our Part of the World, where the Churches, Convents, and Palaces, are fo noble, and where the other Buildings are fo mean ; which, indeed, difcover very vifibly the Mifery under which the Romans groan. The Churches of Rome are fo well known, that I will not venture on any Defcription of them; and indeed I had too tranfient a View, to make it with that Degree of Exactnefs which the Subject requires. St. Peter's alone would make a long Letter, not to fay a Book: Its Length, Height, and Breadth, are all fo exactly proportioned, and the Eye is fo equally poffefs ${ }^{\circ} \mathrm{d}$ with thefe, that the Whole, upon the firft View, appears not fo vaft as it is found to be upon a more particular Attention; and as the four Pillars, on which the Cupola rifes, are of fuch a prodigious Bignefs, that one would think they were ftrong enough to bear any Superftructure; yet when one climbs to the Top of that vaft Height, one cannot help wondering what Foundation can bear fo valt a Weight; for as the Church is of a great Height, fo the Cupola rifes four hundred and fifteen large Steps above the Roof of the Church. In the Height of the Concave of this Cupola there is a Reprefentation, that though it can hardly be feen from the Floor below, and fo it doth not perhaps give much Scandal, yet it is a grofs Indication of the Idolatry of that Church; for the Divinity is there pictured as an ancient Man compaffed about with Angels. I will fay nothing of the great Altar, of the Chair of St. Peter, of the great Tombs of Paul III. Urban VIII. and Alexander VII. nor of the vaft Vaults under this Church, and the Remains of Antiquity that are referved in them; or undertake a Defcription of the adjoining Palace, where the Painting of the Corridori, and of many of the Rooms by Rapbael and Micbael Angelo are fo rich, that one is forry to fee a Work of that Value laid on Erefoo, and which mutt by Confequence wear too foon, as in feveral Places it is almoft quite loft already. I could not but obferve in the Sala Reggia, that is before the famous Chapel of Sijto V. and that is all painted in Frefoo, one Corner that reprefents the Murther of the renowned Admiral Cbafitllon, and that hath under it thefe Words, Rex Colinii necem probat. The vaft Length of the Gallery on one Side, and of the Library on another, furprize one. The Gardens have many Statues of exceffive Value, and fome good Fountains; but are ill maintain'd both here and in the Palace of the $2 u i$ rinal. And, indeed, in moft of the Palaces of Rome, if there were but a fmall Sum laid out to keep all in good Condition, that is brought together at fo vaft a Charge, they would make another Sort of Show, and be looked at with much more Pleafure. In the Apartments of Rome, there are a great many Things that offend the Sight; the Doors are generally mean, and the Locks meaner, except in the Palace of Prince Borgbefe; where, as there is the vafteft Collection of the beft Pieces, and of the greateft Mafters that are in all Europe; fo the Doors and Locks give not that Diftafte Vo L. II. N U Mb. CXII.
the Palace is all of Brick, which is fo very mean, that one fees the Difproportion between the Floors and the reft of the Room, not without a fenfible Dinlike. It is true, they fay their Air is fo cold and moift in Winter; that they cannot pave with Marble ; and the Heat is fometimes fo great in Summer, that a Flooring of Wood would crack with Heat, as well as be eat up by Vermin that would neft in it: But if they kept in their great Palaces Servants to wafh their Floors, with that Care that is ufed in Holland, where the Air is moifter, and the Climate more productive of Vermin, they would not find fuch Effects from wooden Floors as they pretend to fear. In a Word, there are none that lay out fo much Wealth all at once, as the Itatians upon Building and Finifhing of their Palaces and Gardens, and afterwards beftow fo little on the Preferving of them. Another Thing I obferved in their Palaces; there is indeed a great Series of noble Rooms one within another, of which their Apartments are compofed; but I did not find, at the End of the Apartments, where the Bed-chamber is, fuch a Difpofition of Rooms for Back-ftairs; Dreffing-rooms; Clofets, Servantsrooms, and other Conveniences as are neceffary for accommodating the Apartment. It is true, this is not fo neceffary for an Apartment of State, in which Magnificence is more confider'd than Convenience; but I found the fame Want in thofe in which they lodged : fo that, notwithftanding all the Riches of their Palaces, it cannot be faid that they are well lodged in them; and their Gardens are lefs underftood, and worfe kept than their Palaces. It is true, the Villa Borgbefe ought to be excepted, where, as there is a prodigious Collection of Bas Relieves, with which the Walls are covered over, that are of a valt Value; fo the Statues within; of which fome are of Porphyry, and others of Touchftone, are amazing Things. The whole Ground of this Park, which is three Miles in Compafs, and in which there are fix or feven Lodges, are laid out fo fweetly, that I thought I was in an Englifh Park when I walked over it. The Villa Pampbilia is better fituated, upon a higher Ground, hath more Water-works, and twice the Extent of the other in Soil ; but neither the Houfe nor Statues approach to the Riches of the other, nor are the Grounds fo well laid out, or kept: But for the Furniture of the Palaces of Rome, the publick Apartments are all covered over with Pictures; and as for thofe Apartments in which they lodge, they are generally furnifh'd with red Velvet or Damank, with a broad golden Galloon at every Breadth of the Stuff, and a gold Fringe at Top and Bottom; but there is very litrle Tapeftry in Italy.

I have been carried into all this Digreflion, from the general View that I was giving you of the Pope's Palace. I named one Part of it, which will engage me in a new Digreffion, as it well deferves, that is, the Library of the Vatican. The Cafe is great, but what is lodged in it much greater ; for here is a Collection of Books that fill a Man's Eye: There is firft a great Hall, and at the End there runs out on both Sides two Galleries of fo vaft a Length, that though the Half of them is already furnifhed with Books, yet one would hope, that there is Room left for more new Books than the World will ever produce. The Heidelberg Library ftands by itfelf, and fills one Side of the Gallery, as the Duke of Urbin's Library of Manufcripts fills the other. But though thefe lait are very fair and beautiful, yet they are not of fuch Antiquity as thofe of Heidelberg. When it appear'd that I came from England, King Henry VIII's Book of the Seven Sacraments, with an Infcription upon it with his own Hand to Pope Leo X. was fhewed me, together with a Collection of fome Letters that he writ to Anna Bullen, of which fome are in Englifb and fome in French. I that knew his Hand well, faw clearly that they were no Forgeries. There are not many Latin Manufcripts of great Antiquity in this Library; fome few of Virgil's I faw writ in Capitals.

But that which took up Half of one Day that I
fpent at once in this Place, related to the Difpute on Foot between Mr. Schelftrat the Library-keeper and Mr. Maimbourg, concerning the Cnuncil of Conftance: The two Points in Debate, are the Words of the Decree made in the fourth Seffion, and the Pope's Conrfimation. In the fourth Sefion, according to the French Manufcripts, a Decree was made, fubjecting the Pope, and all other Perfons whatfoever, to the Authority of the Council, and to the Decrees it was to make, and to the Reformation it intended to eftablifh both in the Head and the Members; which, as it implies that the Head was corrupted, and needed to be reformed, fo it fets the Council fo directly above the Pope, that this Seffion, being confirmed by the Pope, puts thofe who affert the Pope's Infallibility to no fmall Straits : For if Pope Martin, that approved this Decree, was infallible, then this Decree is good ftill ; and if he was not infallible, no other Pope was infallible. To all this ScbelArat anfwers from his Manufcripes, that the Words of a Reformation in Head and Members are not in the Decree of that Seffion ; and he did fhew me feveral Manufcripts, of which two were evidently writ during the Sitting of the Council, and were not at all dafh'd, in which there Words were not. I know the Hand and Way of Writing of that Age too well to be eafily miftaken in my Judgment concerning thofe Manufcripts : But if thofe Words are wanting, there are other Words in them that feem to be much ftronger for the Superiority of the Council above that Pope; for it is decreed, that Popes and all other Perfons were bound to fubmit to the Decifions of the Council, as to Faith ; which Words are not in the French Manufcripts; upon this I told Mr. Schelffrat, that I thought the Words in thefe Manufcripts were ftronger than the other, fince the Word Reformation, as it was ufed in the Time of that Council, belonged chiefly to the correcting of Abufes, it being often applied to the Regulations that were made in the monaftick Orders, when they were brought to a more exact Obfervation of the Rules of their Order : So though the Council had decreed a Reformation both of Head and Members, I do not fee that this would import more, than that the Papacy had fallen into fome Diforders that needed a Reformation; and this is not denied even by thofe who affert the Pope's Infallibility. But a Submiflion to Points of Faith, that is exprefly afferted in the Romon Manufcripts, is a much more pofitive Evidence againft the Pope's Infallibility; and the Word Faith is not capable of fo large a Senfe, as may be afcribed to Reformation. But this Difference in fo great a Point, between Manufcripts concerning fo late a Tranfaction, gave me Occafion to reflect on the vaft Uncertainty of Tradition efpecially in Matters that are at a great Diftance from us; when thofe that were fo lately tranfacted, are fo differently reprefented in Manufcripts, and in which both thofe of Paris and Rome feem to carry all poffible Evidences of Sincerity. As for the Pope's Confirmation of that Decree, it is true, by a general Bull Pope Martin confirmed the Council of Coniftance to fuch a Period; but befides that, he made a particular Bull, as Schelistrat affured me, in which he enumerated all the Decrees that he confirmed, and among thofe, this Decree concerning the Superiority of the Council is not named. This feemed to be of more Importance, and therefore I defired to fee the Original of the Bull, for there feem to be juft Reafons to apprehend a Forgery here: He promifed to do his Endeavour, though he told me that would not be eafy, for the Bulls were ftrictly kept ; and the next Day when I came hoping to fee it, I could not be admitted; but he affured me, that, if that had not been the laft Day of my Stay at Rome, he would have procured a Warrant for my feeing the Original: So this is all I can fay as to the Authenticity of that Bull. But fuppofing it to be genuine, I could not agree with Mr . Sclelffrat, that the general Bull of Confirma. tion ought to be limited to the other that enumerates the particular Decrees: For fince that particular Bull was never difoovered till he found it out, it feems it was fecretly made, and did not pafs according to the Forms of the Confiftory, and was a fraudulent Thing, of
which no Noife was to be made in that Age; and therefore in all the Difpute that followed in the Council of Bafil, between the Pope and the Council, upon this Point, no Mention was ever made of it by either Side and thus is car have no Force, unlefs it be to difcover the Artifices and Fraud of that Court: That at the fame Time in which the Necefficy of their Affairs ob liged the Pope to confirm the Decrees of the Council, he contrived a fecret Bull, which in another Age might be made ufe of to weaken the Authority of the general Confirmation that he gave ; and therefore a Bull that doth not pafs in due Form, and is not promulgated, is of no Authority, and fo this pretended Bull cannot limit the other Bull. I will not give you here a large Account of the learned Men at Rome ; Bellori is de fervedly famous for his Knowledge of the Greek and Egyptian Antiquities, and for all that belongs to the Mythologies and Superftitions of the Heathens, and hath a Clofet richly furnifhed with fuch Things. Fabretti is juftly celebrated for his underftanding the old Roman Architecture and Fabricks. Padre Fabri is the chief Honour of the Jefuits College, and is much above the common Rate both for Philofophy, Mathematicks, and Church Hiftory. And he to whom I was the moft obliged, Abbot Nazari, hath fo general a View of the feveral Parts of Learning, though he has chiefly applied himfelf to Philofophy and Mathematicks, and is a Man of fo engaging a Civility, and ufed me in fo particular a Manner, that I owe him, as well as thofe others whom I have mentioned, and whom I had the Honour to fee, all the Acknowledgments of Efteem and Gratitude that I can poflibly make them.

One fees in Cardinal Eftrée all the Advantages of a high Birth, great Parts, and a generous Civility, and a Meafure of Knowledge far above what can be expected from a Perfon of his Rank: But as he gave a noble Protection to one of the moft learned Men that this Age hath produced, Mr. Launoy, who lived many Years with him, fo it is vifible, that he made a great Progrefs by the Converfation of fo extraordinary a Perfon; and as for theological Learning, there is now none of the College equal to him. Cardinal Howard is too well known in England to need a Character from me: The Elevation of his Condition hath not in the leaft changed him; he hath all the Sweetnefs of Temper that we faw in him in England, and he retains the unaffected Humility of a Friar, amidft all the Dignity of the Purple. And as he thews all the generous Concern for his Countrymen that they can expect from him, I mes with fo much of it, in fo many obliging Marks of his Goodnefs, that went far beyond a common Civility, that I cannot enough acknowledge it. I was told, the Pope's Confeffor was a very extraordinary Man for oriental Learning, which is but little known in Rome. He is a Mafter of the Arabick Tongue, and hath writ, as Abbot Nazari told me, the molt learned Book againft the Mabometan Religion, that the World hath yet feen, but is not yet printed: His Learning is not in Vogue: and School Divinity, and cafuiftical Learning, being that for which Divines are moft efteemed, he whofe Studies lead him another Way is not fo much valued as he ought : and perhaps the fmall Account that the Pope makes of learned Men turns on him ; for it is certain, that this is a Reign in which true Knowledge is very little encourag'd. Upon the general Contempt that all the Romons have for the prefent Pontificate, one made a pleafant Reflection to me. He faid, thofe Popes that intended to raife their Families, as they faw the Cenfure this brought upon them, ftudied to leffen it by other Things that might foften the Spirits of the People. No Man did more for finifhing St. Peter's and the Library, and for furniming Rome with Water, than Pope Paul V. though at the fame time he did not forget his Family. And though other Popes, that have raifed great Families, have not done this to fo eminent a Degree, yet there are many Remains of their Magnificence: whereas thofe Popes that have not raifed Families, have thought that alone was enough to maintain their Reputation, and fo have not done much, either to recommend their Government to their Sub.
jects, or their Reign to Pofterity : And it is plain, that the prefent Pope takes no great Care of this. His Life hath been ceraiainly very innocent, and free from all publick Scandal ; and there is at prefent, a Regularity in Rome, that deferves great Commendation; for publick Vices are not to be feen there. His perfonal Sobriety is alfo fingular. One affured me, that the Expence of his Table did not amount to a Crown a Day; though this is fhort of $S j \not f_{0} \mathrm{~V}$. who gave Order to his Steward, never to exceed five and twenty Bajokes, that is, eighteen-pence a Day for his Diet. The Pope is very careful of his Health, and never expofes it; for, upon the leaft Diforder, he fhuts himelf up in his Chamber, and often keeps his Bed, for the leart Indifpofition, many Days : But his Government is fevere, and his Subjects are ruined.
And here one Thing comes into my Mind, which perhaps is not ill grounded, that the Poverty of a Nation not only dirpeoples it, by driving the People out of it, but by weakening the natural Ferrility of the Subjects ; for Men and Women well cloathed, and well fed, that are not exhaufted with perpetual Labour, and with the Anxiecies that Wantobrings with it, mult be much more lively than thofe that are diflteres'd ; fo it is very likely that they muft be much more difípofed to propagate than the other. And this appeared evident to me, when I compared the Fruitfulnefs of Geneva and Switzerrand with the Barrennefs over all Italy. I faw two extraordinary Intances of the copious Productions of Genevo. Mr. Tronchin, Profeffior of Divinity, and Father to the judicious and worthy Profeffor of the fame Name that is now there, died at the Age of feventy fix Years, and had an hundred and fifteen Perfons all alive, that either defcended from him, or by Marriage with thore that defcended from him, called him Father. And Mr . Calendrin, a pious and laborious Preacher of that Town, that is defcended from the Family of the $C a$ a, lendrini, who, receiving the Reformation about an hundred and fifty Years ago, left Lucca, their native City, with the Turretini, the Diodati, and the Bourlamambib, and fome others, came and fetled at Geneva: He is now but feven and forty Years old, and yet he hath an hundred and five Perfons that are defcended of his Brothers and Silters, or married to them ; fo that if he livech but to eighty, and the Family multiplieth as it hath done, he may fee fome hundreds that will be in the fame Relation to him ; but fuch Things as thefe are not found in Italy.
There is nothing that delights a Stranger more in Rome, than to fee the fine Fountains of Water, that are almort in all the Corners of it. That old Aqueduct, which Paul V. reflored, comes from a Collection of Sources five and thirty Miles diftant, that runs all the Way upon an Aqueduct in a Canal that is vaulted. It breaketh out in five feveral Fountains, of which fome yield a Difcharge of Water about a Foot fquare. Thiat of Sixtus V. the great Fountain of Aqua Travi, that hath yet no Decoration, but dicchargeth a prodigious Quantity of Water. The glorious Fountain in the $P_{i-}$ azza Navono, that hath an Air of Greatnefs in it that furprizeth: The Fountain in the Piazza de Spagna, thofe before St. Peter's, and the Palazzo Farnefe, with many others, furnifh Rome fo plentifully, that almort every private Houfe hath a Fountain. All thefe, I fay, are noble Decorations, that carry Ufefulnefs with them that cannot be enough commended, and give a much greater Idea of thofe who have taken fuch Care to fup. ply this City with one of the chief Pleafures and Conveniences of Life, than of others, who have laid out Millions merely to bring Quantities of Water to give the Eye a little Diverfion.

There is an univerfal Civility reigns among all Sorts of People at Rome, which, in a great Meafure, flows from their Government ; for every Man being capable of all the Advancements of that State, fince a fimple Ecclefiatick may become one of the Monfgrgori, may thence come to be a Cardinal, and fo be chofen Pope; this makes every Man behave himfelf towards all other Perfons with Exactefs of Refpet ; for no Man knows what any ocher may grow to: But thiss makes Proferf.
fions of Efteem and Kindnefs go fo promifcuouny to alf Sorts of Perfons, that one ought not to build much on them. The Converfation of Rome is generally upon News; for though there is no News printed; yet in the feveral Anti-chambers of the Cardinals, one is fure tó hear all the News of Europe, together with many Speculations upon what paffes. At the Queen of Sweden ${ }^{s} \mathrm{~s}_{3}$ all that relates to Germany, or the Nortb, is ever to be found; and that Princefs, that muft ever reign among all that have a true Taite either of Wit or Learning; hath in her Drawing-Rooms the beft Court of the Strangers; and her Civility, together with the vaft Variety with which fhe furnifhed her Converfation, makes her the Chief of all the living Rarities that one fees in Rome. I will not ufe her own Words to myfelf, which were, That She now grew to be one of the Antiquities of Rome. The Ambaffadors of Crowns, who live here in anothes Form than in any other Court, and the Cardinals and Prelates of the feveral Nations, that all meet and center here, make more News in Rome than any where; for Priefts; and the Men of religious Orders, write larger and more particular Letters than any other Sort of Men. But fuch as apply themfelves to make their Court here, are condemned to a Lofs of Time that had Need be wel recompenfed. As for one that ftudies Antiquities, Pictures, Statues, or Mufick, there is more Entertainment for him at Rome, than in all the reft of Europe; but if he hath not a Tafte of thefe Things, he will foon be weary of a Place where the Converfation is always general, and where there is little Opennefs practifed and, by Confequence, where Friendfhip is little underftood. The Women here begin to be more converfable, though a Nation naturally jealous will hardly allow a great Liberty in a great City that is compofed of Ecclefiafticks, who being denied the Privilege of Wives of their own, are fufpected of being fometimes too bold with the Wives of others. The Liberties that were taken in the Conflable of Naples's Palace, has difgufted the Romans much at that Freedom, which had no Bounds. But the Dutchefs of Bracciano, a Frencbwoman, hath, by the ExaEtnefs of her Deportment, amidft all the innocent Freedoms of a noble Converfation, recovered, in a great Meafure, the Credit of thofe Liberties that Ladies beyond the Mountains practife with all the Strîtnefs of Virtue; for fhe receives Vifits at publick Hours, and in publick Rooms; and by the Livelinefs of her Converfation, makes her Court the pleafanteft Affembly of Strangers that is to be found in any of the Palaces of the Italians.
I will not engage in a Defcription of Rome, either ancient or modern; this hath been done with fuch Exactnefs, that nothing can be added to what has been already publifhed. It is certain, that when one is in the Capitol, and fees thofe poor Remains of what once is was, he is furprized to fee a Building of fo great Fame funk fo low, that one can fcarce imagine that it was once a Caftle upon a Hill, able to hold out againft a Siege of the Gauls. The Tarpeian Rock is now fo fmall, that a Man would think it no great Matter, for his Diverfion, to leap over it; and the Shape of the Ground hath not been fo much altered on one Side, as to make us think it is very much changed on the other : For Severus's Triumphal Arch, which is at the Foot of the Hill on the other Side, is not now buried above two Foot within the Ground, as the valt Amphitheatre of Titus is not above three Foot funk under the Level of the Ground. Within the Capitol one fees many noble Remnants of Antiquity ; but none is more glorious, as well as more ufeful, than the Tables of their Confuls, which are upon the Walls; and the Infcription on the Columna Rostrata, in the Time of the firlt Punick War, is, without Doubt, the moft valuable Antiquity in Rome.
From this all along the Sacred Way, one finds fuch Remnants of old Rome in the Ruins of the Temples, in the Triumphal Arches, in Portico's, and other Remains of that glorious Body; that as one cannot fee thefe too often, fo every Time one fees them, they kindle in him vaft Ideas of that Republick, and make him reflect on what he learn'd in his Youth with great Pleafure. From
the Height of the Convent of Araceli, a Man hath a full View of all the Extent of Rome, but literally it is now Seges ubi Roma fuit; for the Parts of the City that were moft inhabited anciently are thofe that are now laid out in great Gardens, or, as they call them, Vineyards, of which fome are half a Mile in Compafs. The Vaftnefs of the Roman Magnificence and Luxury is that which paffeth Imagination: The prodigious Amphitheatre of Titus, that could conveniently receive eighty five thoufand Spectators: The great Extent of the Circus Maximus; the Vaults where the Waters were referved that furnifhed Titus's Baths; and above all, Dioclefan's Baths, though built when the Empire was in its Decay, are fo far beyond all modern Buildings, that there is not fo much as Room for a Comparifon. The Extent of thofe Baths is above half a Mile in Compars; the Vaftnefs of the Rooms in which the Bathers might fwim, of which the Cartbuffians Church, that yet remains entire, is one, and the many great Pillars, all of one Stone of Marble, beautifully potted, are Things of which there latter Ages are not capable. The Beauty of their Temples, and of the Portico's before them, is amazing, chiefly that of the Rotunda, where the Fabrick without looks as mean, being only brick, as the Architecture is bold; for it rifeth up in a Vault, and yet at the Top there is an Open left of thirty Foot in Diameter; which, as it is the only Window of the Church, fo it fills it with Light, and is the hardieft Piece of Architecture that ever was made. The Pillars of the Portico are alfo the nobleft in Rome; they are the higheft and biggeft that one can fee any where, all of' one Stone: And the Numbers of thofe ancient Pillars, with which not only many of the Churches are beautified, chiefly St. Mary Maggiore, and St. Fobn in the Lateran, but with which even private Houfes are adorned, and of the Fragments of which there are fuch Multitudes in all the Streets of Rome, gives a great Idea of the' Profufenefs of the old Romans in their Buildings; for the hewing and fetching a few of thofe Pillars muft have coft more than whole Palaces do now, fince moft of them were brought from Greece. Many of thefe Pillars are of Porphyry, others of Jafper, others of granated Marble, but the greateft Number are of white Marble.

The two Columns, Trajon's and Antonin's ; the two Horfes that are in the Mount Cavallo, and the other two Horfes in the Capitol, which have not indeed the Poftures and Motion of the other; the Brafs Horfe that, as is believed, carrieth Marcus Aurelius ; the Remains of Nero's ColofJus; the Temple of Baccbus near the Catacomb of Sc. Agnes, which is the moft entire and the leaft altered of all the ancient Temples. The great Temple of Peace, thofe of the Sun and Moon, that of Romulus and Rbemus (which I confidered as the ancienteft Fabrick that is now left; for it is little and fimple, and ftandeth in fuch a Place, that, when Rome grew fo coftly, it could not have been left alone unchanged, if it had not been that it was reverenced for its Antiquity) the many other Porticos, the Arches of Severus, of Titus and Conftantine, in the laft of which one fees, that the Sculpture of his Age was much funk from what it had been, only in the Top there are fome Bafs-relieves, that are clearly of a much ancienter time, and of a better Manner: And that which exceedeth all the reft, the many great Aqueducts that come from all Hands, and run over a vaft Diftance, are Things which a Man cannot fee too often, if he would form in himfelf a juft Idea of the Vaftnefs of that Republick, or rather Empire.

There are many Statues and Pillars, and other Antiquities of great Value, dug up in all the Quarters of Rome, thefe laft hundred and fourfcore Years, fince-Pope Leo X's time; who, as he was the greatef Patron of Learning and Arts, that perhaps ever was, fo he was the moft generous Prince that ever reign'd : And it was he that firft fet on Foot the enquiring into the Riches of old Rome, that lay, till his Time, for the moft part hid under Ground. And indeed, if he had been lefs fcandalous in his Impiety and Atheifin, of which neither he, nor his Court, were fo much as
afhamed, he had been one of the moft celebrated. Perfons of any Age. Soon after him, Pope Paul III. gave the Ground of the Monte Palatino to his Family: But I was told, that this large Piece of Ground, in which one flould look for the greatef Collection of Antiquities of the higheft Value, fince this is the Ruin of the Palace of the Romon Emperors, hath never yet been fearched into with any Exactnefs. So that when a curious Prince comes, that is willing to employ many. Hands in Digging up and down this Hill, we may expect new Scenes of Roman Antiquities. But all this Matter would require Volumes, and therefore I havè only mentioned thefe Things, becaufe I can add nothing to thofe copious Defcriptions that have been fo oft made of them. Nor will I fay any Thing of modern Palaces, or the Ornaments of them, either in Pittures or Satues, which are Things that carry one fo far, that it is not eafy to fet Bounds to the Defcriptions into which one finds himfelf carried, when he once enters upon fo fruitful a Subject. The Number of the Palaces is great, and every one of them hath enough to fix the Attention of a Traveller, till a new one drives the former out of his Thoughts. It is true, the Palefrina, the Borgbefe, and the Farnefe, have fomewhat in them that leaves an Impreffion, which no new Objects can wear out; and as the laft hath a noble Square before it, with two great Fountains in it, fo the Statue of Hercules and the Bull, that are belows and the Gallery above Starrs, are invaluable. The Roof of the Gallery is one of the beft Pieces of Painting that is extant, being all of Carracchio's Hand; and there are in that Gallery the greateft Number of Heads of the Greek Philofophers and Poets that I ever faw together. That of Homer, and that of Socrates, were two that ftruck me moft ; chiefly the latter: Which, as it is, without Difpute, a true antique, fo it carries in it all the Characters that Plato and Xenophon give us of Socrates: The flat Nofe, the broad Face, the Simplicity of Look, and the mean Appearance which that great Philofopher made, fo that I could not return oft enough to look upon it, and was delighted' with this more than with all the Wonders of the Bull, which is indeed a Rock of Marble cut out into a whole Scene of Statues; but as the Hiftory of it is not well known, fo there are "fuch Faults in the Sculpture, that thongh it is all extream fine, yet one fees it hath not the Exactnefs of the beft Times.

As for the Churches and Convents of Rome, as the Number, the Vaftnefs, the riches of Fabrick, Furniture, Painting, and other Ornaments, amaze one; fo here again a Stranger is loft, and the Convent, that is laft feen is always the moft admired. I corifefs the Minerva, which is the Dominicans, where the Inquifition fits, is that which makes the moft fenfible Impreffion upon one that paffeth at Rome for an Heretick; though except one commits great Follies, he is in no Danger there; and the Poverty, that reigns in that City, makes them find their Intereft fo much in ufing Strangers well, whatever their Religion may be, that no Man needs be afraid there: And I have more than ordinary Reafon to acknowledge this, who having ventured to go thither, after all the Liberty that I had taken in Writing my Thoughts freely, of the Church and See of Rome, and was known by all with whom I converfed there; yet met with the higheft Civilities poffible among all Sorts of People, and in particular among the Englifh and Scottif Jefuits, though they knew well enough that I was no Friend to their Order. In the Gallery of the Englijh Jefuits, among the Pictures of their Martyrs, I did not meet' with Garnet; for perhaps that Name is fo well known, that they would not expofe a Picture with fuch a Name to all Strangers; yet Oldcorn, being a Name lefs known, is hung there among their Martyrs, though he was as clearly convicted of the Gúnpowder-treafon as the other: And it feemed a little ftrange to me, that at a Time, in which, for other Reafons, the Writers of that Communion have not thought fit to deny the Truth of that Confpiracy, a Jefuit, convicted of the blackeft Crime that ever was projected, hould be reckoned among
their

## Chap. III.

through Swissertand, \&c.
their Martyrs. I faw likewife there the Original of thofe emblematical Prophecies relating to Engband, that the Jefuits had at Rome near fixty Years, and of which I had fometime ago procured a Copy, which I found was true. I happened to be at Rome during St. Gregory's Fair and Feaft, which lafted feveral Days. In his Church the Hoftie was expofed ; and from that, all that came thither, went to the Chapel, that was once his Houfe, in which his Statue, and the Table where he ferved the Poor, are preferved. I faw fuch vaft Numbers of People there, that one would have thought all Rome was got together: They kneeled down to his Statue, and, after a Prayer faid to it, they kiffed his Foot, and every one touched the Table with his Beads, as hoping to draw fome Virtue from it. I will add nothing of the feveral Obelifks and Pillars that are in Rome, of the celebrated Chapels that are in fome of the great Churches, in particular thofe of Sixtus V. and Paul V. in Santa Maria Maggiore ; of the Water-works in the 2 uirinal, the Vatican, and in many of the Vineyards: Nor will I go out of Rome to defribe Frefcati (for Tivoli I did not fee.) The young Prince Borgbefe, who is indeed one of the Glories of Rome, as well for his Learning, as for his Virtue, did me the Honour to carry me thither, with thofe two learned Abbots, Fabretti and Nazari, and entertained me with a Magnificence that became him better to give, than me to receive. The Waterworks in the Aldobrandin Palace have a Magnificence in them beyond all that I ever faw in France; the Mixture of Wind with the Water, and the Thunder and Storms that this maketh is noble. The Water-works of the Ludovifio and the Monte Dragone, have likewife a Grandeur in them that is natural. And indeed, the Riches that one meets with in all Places within-doors in.Italy, and the Poverty that one fees every where Abroad, are the moft unfuitable Things imaginable: But it is very likely, that a great Part of their moveable Wealth will be e're long carried into France; for as foon as any Picture or Statue of great Value is offered to be fold, thofe that are employed by the King of France prefently buy it ; fo that as that King hath already the greateft Collection of Pictures that is in Europe, he will very probably in a few Years more carry off the chief Treafures of Italy.

I have now given an Account of all that appeared remarkable to me in Rome. I fhall add a very extraordinary Piece of natural Hiftory, that fell out two Years before, which I had firft from two learned Abbots Fabretti and Nazari, and afterwards more authentically confirmed to me by Cardinal Howard, who was of the Congregation of Cardinals that examined the Matter. There were two Nuns, one in the City, and the other not far from it, who, after they had been for fome Years in a Nunnery, perceived a ftrange Change in Nature, and that their Sex was altered, which grew by Degrees to a total Alteration in one; and though she other was not fo entire a Change, yet it was vifible the was more Man than Woman : Upon this the Matter was looked into: That which naturally offereth irfelf here is, that thefe two had been always what they then appeared to be, but that they had gone into a Nunnery in a Difguife, to gratify their Appetites. But to this, when I propofed it, Anfwer was made, that as the Breafts of - Woman, that remained ftill, did in a great Meafure take off that Objection, fo the Proofs were given fo fully of their having been real Females, that there was no Doubt left of that, nor had they given any Sort of Scandal on the Change of their Sex: And if shere had been any Room left to furpect a Cheat or Difguife, the Proceedings would have been more fevere and more fecret; and thefe Perfons would have been burnt, or at leaft put to Death in fome terrible Manner. Some Phyficians were appointed to examine the Matter, and at laft, after an exact Enquiry, they were judged to be abfolved from their Vows, and were difmiffed from the Obligations of a religious Life, and directed to go in Men's Habits. One of them was a Valet de Cbambre to a Roman Marquefs when I was there. I heard of this Matter only two Days before I left Rome, fo that I had not Time to enquire after it
Vol. II. Numb. ifz.
more particularly; but I judg'd it fo extraordinary; that I thought it was worth communicating to fo curious an Enquirer into Nature.

And fince I am upon the Subject of the Changes that have been made in Nature, I fhall add one of another Sort, that I examined while I was at Geneva, There is a Minifter of St. Gervais, Mr. Gody, who hath a Daughter fixteen Years old; her Nurfe had an extraordinary Thicknefs of hearing; at a Year old the Child fpoke all thofe little Words that Children begin ufually to leain at that Age, but fhe made no Progrefs s. yet this was not obferved till too late; and as fhe grew to be two Years old, they perceived that the had loft her Hearing, and was fo deaf, that though fhe hears great Noifes, yet fhe hears noching that one can fpeak to her. It feems, while the Milk of her Nurfe was more abundant, and the Child fuck'd more moderately the firft Year, thofe Humours in the Blood and Millk had not that Effect on her that appeared after the came to fuck more violently; and that her Nurfess Milk, being in lefs Quantity, was thicker, and more charged with that Vapour that occafioned the Deafnefs! But this Child hath, by obferving the Motions of the Mouths and Lips of others, acquired fo many Words, that out of thefe fhe hath formed a Sort of Jargon, in which fhe holds Converfation whole Days with thofe that can fpeak her own Language. I could underftand fome of her Words, but could not comprehend a $\mathrm{Pe}-$ riod, for it feemed to be a confufed Noife. She knows nothing that is faid to her, unlefs fhe fee the Motion of their Mouths that fpeak to her; fo that in the Night, when it is neceffary to fpeak to her, they muft light a Candle: Only one Thing appears the ftrangeft; fhe has a Sifter, with whom the has practifed her Language more than any other ; and in the Night, by laying her Hand on her Sifter's Mouth, fhe can perceive what fhe favs, and can difourfe with her in the Night. It's true, her Mother told me that this did not go far, and that fhe found out only fhort Periods in this Manner. Thus this young Woman, without any Pains taken, has, merely by a natural Sagacity, found a Method of holding Difcourfe, that doth in a great Meafure leffen the Mifery of her Deafnefs. I examined this Matter critically, only the Sifter was not prefent, fo that I could not fee how the Converfation pafs'd between them in the Dark.
23. From Civita Veccbia I came to Marfeilles, where if there were a Road as fafe as the Harbour; and if the Harbour were as large as it is convenient, it were certainly one of the moft important Places in the World. All is fo well defended, that it is, with refpect to Storms or Enemies, the fecureft that Port can be feen any where. The Freedoms of this Place, though now at the Mercy of the Citadel, are fuch, and its Situation draws fo much Trade to it, that there one fees an Appearance of Wealth greater than I found in any Town of France; and there is a new Street lately built there, that for Beauty and Largenefs, is the nobleft I ever faw. There is in that Port a perpetual Heat, and the Sun was fo ftrong in the Cbrijtmas Week, that I was often obliged to quit the Key. I made a Tour from thence through Provence, Languedoc, and Daupbine. I will offer you no Account of Nijmes, nor of the Amphitheatre in it, or the Pont du Garde near it; which as they are ftupendious Things, fo they are copiounly defcribed by many, and are generally known to the Engli/b Nation, that if you never went that Way yourfelf, yet you muft needs have received fo particular a Relation of them from thofe that have feen them, that I judge it needlefs to enlarge upon them; nor will I fay any Thing of the Soil, the Towns, or other remarkable Things that I found there.

I have a much flronger Inclination to fay fomewhat concerning the Perfecution, which I faw in its utmoft Rage and Fury; and of which I could give Inftances, that are fo much beyond all the common Meafures of Barbarity and Cruelty, that I confefs they ought not to be believed, unlefs I could give more pofitive Proofs of them, than are now fitting, and the Particulars that I could tell you are fuch, that if I fould relate them with 7 X
the neceflary Circumflances of Time, Place, and Perfons, might be fatal to many that are yet in the Power of their Enemies, that reftrains me. In hort; do not think there ever was fuch a Violation of all that is facred, with Relation to God or Man; and what I faw and knew there, from the firft Hand, hath fo confirmed all the Ideas that I had from Books, of the Cruelty of that Religion, that I hope the Impreffion this hath made upon me, fhall never end but with my Life. The Applaufes that the whole Clergy give this Way of Proceeding, the many Panegyrieks that are already written upon it, and the flattering Sermons that are preached upon this Subject, are fuch evident Demonftrations of theirSenfe of this Matter, that what is now on Foot may well be termed, the Act of the Clergy of France, which yet hath been hitherto efteemed the moft moderate Part of the Roman Communion. If any are more moderate than others, and have not fo far laid afide human Nature, as to go entirely into thofe bloody Practices, yet they dare not own it, but whifper it in Secret, as if it were half Treafon; but for the greater Part, they do not only magnify all that is done, but they animate the Dragoons to higher Degrees of Rage: And there was fuch a Heat fpread over the Country on this Occafion, that one could not mix in any promifcuous Converfation, without finding fuch Effects of it, that it was not very fafe for fuch, as were touch'd with Compaffion for the Miferies that the poor Proteftants fuffered. Some perhaps imagine, that this hath not been approved in Italy; and it is true, there were not any Rejoicings upon it at Rome, no Indulgences, nor $T_{e}$ Deum's were heard of : And the Spanibl Faction being fo prevalent, it is not ftrange if a Courfe of Proceedings, without Example, was fet forth by all that were of that Intereft in its proper Colours ; of which I met with fome Inftances myfelf, and could not but fmile, to fee the Spani/s Faction fo far forget their Courts of Inquifition, as to argue againft Converfions by Dragoons as a Reproach to the Catholick Religion: Yet the Pope was of another Mind; for the Duke d'Eftrée gave him an Account of the King's Proceedings in this Matter very copioully, as he himfelf related it; upon which the Pope approved, and expreffed a great Satisfaction in every Thing that the King had done in that Matter ; and the Pope added, that he found fome Cardinals (as I remember, the Duke d'Eftrée faid two) were not pleafed with it, and had taken the Liberty to cenfure it; but the Pope faid they were to blame : The Duke $d^{\prime}$ Estrée did not name them, though he faid, he believed he knew who they were, and it is very likely that Cardinal Pio was one; for I was told that he fpoke freely of this Matter. I muft add one Thing, that I do not fee the French King is to be fo much blamed in this Matter, as his Religion, which, without Queftion, obliges him to extirpate Hereticks, and not keep Faith with them; fo that, inftead of cenfuring him, I only lament his being bred up in a Religion that obliges him to divent himfelf of Humanity, and to violate his Faith, whenever the Caufe of his Church and Religion require it ; or if there is any Thing in this Conduct, that cannot be entirely juftified from Principles of Religion, it is this, that he doth not put the Hereticks to Death out of Hand, but forces them, to fign an Abjuration, that all the World muft fee is done againft their Confciences; and being the only End of their Miferies, thofe that would think any Sort of Death a happy Conclufion of their Sufferings, feeing no Profpect of fuch a glorious Iffue out of their Trouble, are prevailed on by the many lingering Deaths, of which they fee no End, to make Shipwreck of the Faith: This Appearance of Mercy, in not putting Men to Death, doth truly verify the Character that Solomon giveth of the tender Mercies of the Wicked, that tbey are cruel.
I pafs'd the Winter at Geneva with more Satisfaction than I thought poffible any where out of England; tho' that received great Allays from the lamentable Stories every Day from France; but there is a Sorrow by which the Heart is made better. I ought to make the mott publick Acknowledgments poffible for the extra-
ordinary Civilities that I met with in my own Particular ; but that which pleafed me moft was of a publick Nature; before I left Geneva, the Number of the Engiifh there were fuch, that I found we could make a fmall Congregation, for we were twelve or fourteen; fo I addrefled myfelf to the Council of Twenty-five, for Liberty to have our own Worfhip in our own Language, according to the Englif/ Liturgy. This was immediately granted in fo obliging a Manner, that as there was not one Perfon that made Exception to it, fo they fent one of their Body to me, to let me know, that in cafe our Number fhould grow to be fo great that it were fit for us to affemble in a Church, they would grant us one which had been done in Queen Mary's Reign ; but till then, we might hold our Affemblies as we thought fit : So after that Time, during the reft of my Stay we had every Sunday our Devotions according to the Common-prayer, Morning and Evening; and at the Evening-prayer I preach'd in a Room that was too large for our fmall Company: But there being a confiderable Number in Genera that underttand Engli/b, and in particular fome of the Profeffors and Minifters, we had a great many Strangers; and the laft Sunday I gave the Sacrament according to the Way of the Church of England; and upon this Occafion I found a general Joy in the Town for this, that I had given them an Opportunity of expreffing the refpect they had for our Church: And as in their publick Prayers they always prayed for the Churches of Great-Britain, as well as for the King, fo in private Difcourfe they fhewed all poffible Efteem for our Conftitution; and they fpoke of the unhappy Divifions among us, and of the Separation that was made from us upon the Account of our Government and Ceremonies, with great Regret and Dinike. I fhall name only two of their Profeffors, that, as they are Men of great Diftinction, fo they were the Perfons with whom I converfed the moft; one, Mr. Turretin, a Man of great Learning, that by his indefatigable Study and Labour has much worn out and waited his Strength, amidft all the Affuence of a great Fortune to which he was born : One difcerns in him all the Modefty of an humble and mortified Temper, and of an active and fervent Charity proportioned to his Abundance, or rather beyond it ; and there is in him fuch a Zeal for Religion, as the prefent Conjuncture calls for, with all the Serioufnefs of Piety and Devotion, which fhews itfelf in private Converfation, and in his moft edifying Sermons, by which he enters deep into the Confciences of his Hearers. The other is Mr. Troncbin, a Man of a ftrong Head, and of a clear and correct Judgment, who has all his Thoughts well digefted ; his Converfation has a Charm in it, that cannot be refifted; he is a Man of extraordinary Virtue, and of a Readinefs to oblige and ferve all Perfons, that has fcarce any Meafure: His Sermons have a Sublimity in them that ftrike the Hearer, as well as edify him; his Thoughts are noble, and Eloquence mafculine and exact, and has all the Majefty of the Chair in it, tempered with all the Softnefs of Perfuafion; fo that he not only convinces his Hearers, but fubdues and triumphs over them. In fuch Company ir was no Wonder if Time feemed to go off too faft, fo that I left Genera with a Concern that I could nothave felc in leaving any Place out of Britain.
From Geneva I went a fecond time through Switzer land to Bafil. At Avanche I faw the noble Fragments of a great Roman Work, which feems to have been the Portico to a Temple. The Heads of the Pillars are about four Foot fquare, of the Ionick Order: The Temple hath been dedicated to Neptune, or fome SeaGod; for on the Fragments of the Architrave, which are very beautiful, there are Dolphins and Sea-Horfes in Bas-relieves; and the Neighbourhood of the Place to the Lakes of Iverdun and Morat make this more evident. There is alfo a Pillar ftanding up in its full Height, or rather the Corner of a Building, in which one fees the Remains of a regular Architecture in two Ranks of Pillars. If the Ground near this were carefully fearch'd, no doubt it would difcover Remains of
that Fabrick. Not far from this is Morat; and a little on this Side of it is a Chapel full of the Bones of the Burgundians, that were killed by the Switzers, when this Place was befieged by the famous Cbarles Duke of Burgundy, who loft a great Army before it, entirely cut off by the Befieged. The Infcription is very extraordinary, efpecially for that Age: For the Bones being fo piled up, that the Chapel is quite filled with them, the Infcription bears, that Cbarles Duke of Burgundy's Army having befieged Morat, Hoc fui monumentum reliquit, left that Monument behind it. It cannot but feem ftrange to one that views Morat, to imagine how it was poffible for a Town fo fituated, and fo flightly fortified, to hold out againf fo powerful a Prince, and fo great an Army, that brought Cannon before it. I met with nothing remarkable between this and Bafl, except that I ftaid fome time at Bern, and knew it better; and at this fecond Time it was, that my Lord Advoyer $D^{5}$ Erlach gave Order to thew me the original Records of the famous Procefs of the four Dominicans: Upon which I have retouch'd the Letter I wrote to you laft Year.
25. Bafll is the Town of the greateft Extent of all Sreitzerland, but it is not inhabited in Proportion to its Extent. The Rbine maketh a Crook before it, and the Town is fituated on a rifing Ground, which hath a noble Effect on the Eye, when one is on the Bridge, for it looks like a Theatre. Little Bafll, on the other fide of the Rbine, is almoft a fourth Part of the whole. The Town is furrounded with a Wall and Ditch, but it is expofed on many Sides, and hath now o dreadful a Neighbour within a Quarter of a League of it, the Fort of Hunningen, that it hath nothing to truft to, humanly fpeaking, but its Union with the other Cantons. The Maxims of this Canton have hindred its being better peopled than it is: The Advantages of the Burgerfhip are fuch, that the Citizens will not Share them with Strangers, and by this Means they do not admit them. For I was told, that during the laft War, that Alfatia was fo often the Seat of both Armies, Bafll having then a Neutrality, it might been very well filled, if it had not been for this Maxim. And it were a great Happinefs to all the Cantons, if they could have different Degrees of Burgerihip, fo that the lower Degrees might be given to Strangers for their Encouragement to come and live among them; and the higher Degrees, which qualify Men for the advantageous Employments of the State, might be referved for the ancient Families of the Natives. Bafll is divided into fixteen Companies, and every one of thefe hath four Members in the Little Council, fo that it confifteth of Sixty-four : But of thofe four, two are chofen by the Company itfelf who are called the Malters, and the other two are chofen by the Council out of the Company; and thus, as there are two Sorts of Counfellors chofen in thofe different Manners, there are alfo two chief Magiftrates.

There are two Burgo-mafters, that reign by Turns, and two Zunft-Mafters, that have alfo their Turns, and all is for Life; and the laft are the Heads of the Com panies, like the Roman Tribunes of the People. The Fabrick of the Stadt-houfe is ancient. There is a very good Painting in Frefco upon the Walls. One Piece hath given much Offence to the Papifts, though they have no Reafon to blame the Reformation for it, fince it was done feveral Years before it, viz. in the Year 1510 It is a Reprefentation of the Day of Judgment, and after Sentence given, the Devil is reprefented driving many before him to Hell, and among thefe there is a Pope and feveral Ecclefiafticks. But it is believed that the Council, which fat fo long in this Place, afting fo vigoroufly againft the Pope, engaged the Town in to fuch a Hatred of the Papacy, that this might give the Rife to this Reprefentation. The more learned in the Town afcribe the Beginning of the Cuftom in Bafil, of the Clocks anticipating the Time a full Hour, to the fitting of the Council: And they fay, that in order to the advancing of Bufinefs, and the fhortening their Seffions, they ordered their Clocks to be fet for-
ward an Hour, which continueth to this Day. The Cathedral is a great old Gotbick Building; the Chamber, where the Council fat, is of no great Reception, and is a very ordinary Room.
Erafmus's Tomb is only a plain Infcription upon a great Brafs Plate. There are a great many of Holbein's Pictures here, who was a Native of Bafil, and was recommended by Erafmus to King Henry VIII. The two beft are a Corpo, or Cbrist dead, which is certainly one of the beft Pictures in the World. There is another Piece of his in the Stadt-Houfe (for this is in the publick Library) of about three or four Foot fquare, in which, in fix feveral Cantons, the feveral Parts of our Saviour's Paffion are reprelented with a Life and Beauty that cannot be enough admired. It is valued at Ten thoufand Crowns. It is on Wood, but hath that Frefhnefs of Colour ftill on it, that feems peculiar to Holbein's Pencil. 'There is alfo a Bance that he painted on the Walls of an Houfe where he ufed to drink, that is fo worn out, that very litcle is now to be feen, except Shapes and Poftures; but thefe fhew the Exquifitenefs of the Hand. There is another longer Dance, that running all along the Side of the Convent of the Augufinians, which is now the French Church, and that is Death's-dance. There are above threefcore Figures in it at full Length, of Perfons of all Ranks, from Popes, Emperors, and Kings, down to the meaneft Sorts of People, and of all Ages and Profeffions, to whom Death appeareth in an infolent and furprifing Pofture: And the feveral Paffions that they expref are fo well fet out, that this was certainly a great Defign. But the Frefco being expofed to the Air, this was fo worn out fome time ago, that they ordered the beft Painter they had, to lay new Colours on it ; but this is fo ill done, that one had rather fee the dead Shadows of Holbein's Pencil, than this coarfe Work.

There is in Bafil a Gunfmith, that makes WindGuns, and he fhewed me one, that as it received at once Air for ten Shot, fo it had this peculiar to it, which he pretends is his own Invention, that he can difcharge all the Air that can be parcelled out in ten Shot, at once, to give a home Blow. I confefs thofe are terrible Inftruments, and it feems the Intereft of Mankind to forbid them quite, fince they can be employed to affaffinate Perfons fo dexteroully, that neither Noife nor Fire will difcover from what Hand the Shot cometh. The Library of Bafil is by much the beft in all Switzerland. There is a fine Collection of Medals in it, and a very handfome Library of Manufcripts. The Room is noble, and difpofed in a very good Method. Their Manufcripts are chiefly the Latin Fathers, or Latin Tranflations of the Greek Fathers; fome good Bibles. They have the Gofpel in Greek Capitals, bur they are viciounly writ in many Places. There is an infinite Number of the Writers of the darker Ages, and there are Legends and Sermons without Number. All the Books that were in the feveral Monafteries, at the Time of the Reformation, were carefully preferved; and they believe, that the Bifhops, who fat here in the Council, brought with them a great many Manufcripts which they never carried away.

Among their Manufcripts, I faw four of Hufs's Letters, that he writ to the Bobemians the Day before his Death, which are very devout, but exceffively fimple. The Manufcripts of this Library are far more numerous than thofe of Bern, which were gathered by Bongarsius, and left by him to the publick Library there. They are indeed very little confidered there, and are the worft kept that I ever faw. But it is a noble Collection of all the ancient Latin Authors. They have fome few of the beft of the Roman Times, writ in great Characters, and there are many that are feven or eight hundred Years old. There is in Bafll one of the beft Collections of Medals that ever I faw in private Hands, together with a noble Library, in which there are Manufcripts of good Antiquity, that belong to the Family of Fefch, and that go from one learned Man of the Family to another : For this Inheritance can only pafs to a Man of Learning; and when the Family pro-
duceth none, then it is to go to the Publick. In Bafil, as the feveral Companies have been more or lefs ftrict, in admitting fome to a Freedom in the Company, that have not been of the Trade, fo they retain their Privileges to this. Day. For, in fuch Companies, that have once received fuch a Number that have not been of the Trades, as grew to be the Majority, the Trade hath never been able to recover their Intereft. But fome Companies have been more cautious, and have never admitted any but thofe that were of the Trade; fo that they retain their Intereft ftill in the Government. Of thefe the Butchers were named for one; fo that there are always four Butchers in the Council. The great Council confifteth of two hundred and forty, but they have no Power left them, and they are only affembled upon fome extraordinary Occafions, when the Little Council thinks fit to communicate any important Matter to them. There are but fix Bailiages that belong to Bafil, which are not Employments of great Advantage; for the beft of them affords to the Bailiff only a thoufand Livres a Year. They reckon that there are in Bafil, three thoufand Men that can bear Arms, and that they could raife four thoufand more out of the Canton; fo that the Town is almoft the half of this State, but the whole making thirty Parifhes. There are eighteen Profeffors in this Univerfity; and there is a Spirit of more free and generous Learning ftirring there, than I faw in all thofe Parts. There is a great Decency of Habit in Bafl; and the Garb of the Counfellors, Minifters, and Profeffors, their ftiff Ruffs, and their long Beards, have an Air that is venerable and auguft. The Appointments are but fmall, for Counfellors, Miniiters, and Profeffors have but one hundred Crowns a-piece: It is true, many Minifters are Profeffors, fo this mends the Matter a little; but perhaps it would go better with the State of Learning there, if they had but half the Number of Profeffors, and if thofe were a little better encouraged. No where is the Rule of St. Paul better obferved than at Bafil; for all the married Women go to Church with a Coif on their Heads, that is fo folded, that it comes down fo far as to cover their Eyes, and another Folding covers alfo their Mouth and Chin, fo that nothing but their Nofe appears; and then all turns backward in a Folding that hangs down to their Mid-leg: This is always white; fo that there is fuch a Sight of white Heads in their Churches, as cannot be found any where elfe. The unmarried Women wear Hats turned up in the Brims, before and behind; and the Brims of the Sides being about a Foot broad, ftand out far on both Sides: This Fafhion is alfo at Strasburg, and is worn there alfo by the married Women.
26. I mentioned formerly the conftant Danger to which this Place is expofed, from the Neighbourhood of Hunningen: I was told, that at firft it was pretended that the French King intended to build only a fmall Fort there; and it was believed, that one of the Burgomafters of Basfl, who was thought not only the wifeft Man of that Canton, but of all Swifferland, was gained to lay all Men afleep, and to affure them, that the fuffering this Fort to be built fo near them, was of no Importance; but now they fee too late their fatal Error; for the Place is great, and will hold a Garrifon of three or four thoufand Men. It is a Pentagon, only the Side towards the Rbine is fo large, that if it went round on that Side, I believe it muft have been an Hexagon. The Baftions have all Orillons, and in the Middle of them there is a void Space not filled up with Earth, where there is a Magazine built fo thick in the Vault, that it is Proof againft Bombs. The Ramparts are ftrongly faced; there is a large Ditch, and before the Cortin, in the Middle of the Ditch, there runs a Horn-work, which is but ten or twelve Foot high; and from the Bottom of the Rampart, there goes a Vault to this Horn-work, for conveying Men for its Defence. Before this. Horn-work there is a Half-moon, with this that is peculiar to thofe new Fortifications, that there is a Ditch that cuts the Halfmoon in an Angle, and maketh one Half-moon within another: Beyond that there is a Coun-
terfcarp about twelve Foot high above the Water, with a cover'd Way, and a Glacis defigned, though not yet executed. There is alfo a great Horn-work befides all this, which runs out a huge Way with its Outworks towards Bafl. There is likewife a Bridge laid over the Rbine, and there being an Ifland in the River where the Bridge is laid, there is a Horn-work that fills and ftrengthens it. The Buildings in this Fort are beautiful, and the Square can hold above four thoufand Men: The Works are not yet quite finifhed, but when all is complete, this will be one of the fronget Places in Europe. There is a Cavalier on one or two of the Baftions, and there are Half-moons before the Baftions; fo that the Switzers fee their Danger now, when it is not eafy to redrefs it. This Place is fituated in a great Plain, fo that it is commanded by no rifing Ground on any Side of it. I made a little Tour into Alface, as far as Mountbelliard; the Soil is extreme rich, but it hath been fo long a Frontier Country, and is by Confequence fo ill peopled, that it is in many Places overgrown with Woods. In one Refpect it is fit to be the Seat of War, for it is full of Iron-works, which bring a great deal of Money into the Country. I faw nothing peculiar in the Iron-works there, except that the Sides of the great Bellows were not of Leather, but of Wood, which faves much Money; fo I will not ftand to defrribe them.
The River Rbine, all from Bafll to Spire, is fo low, and is on both Sides fo covered with Woods, that one, that comes down in a Boat, hath no Sight of the Country. The River runs fometimes with fuch a Force, that nothing but fuch Woods could preferve its Banks, and even thefe are not able to fave them quite; for the Trees are often wafhed away by the very Roots, fo that in many Places thofe Trees lie along in the Channel of the River. It hath been alfo thought a Sort of a Fortification to both Sides of the River, to have it thus faced with Woods, which makes the paffing of Men dangerous, when they muft march for fome Time after their Paffage through a Defilé. The firt Night, from Bafil, we came to Brifac, which is a poor and miferable Town ; but it is a noble Fortification, and hath on the Weft Side of the River, over which a Bridge is laid, a regular Fort of four or five Baftions. The Town of Brifac rifeth on a Hill, which is a confiderable Height. There were near it two Hills, the one is taken within the Fortification, and the other is fo well levelled with the Ground, that one cannot fo much as find out where it was. All the Ground about, for many Miles, is plain; fo that from the Hill, as from a Cavalier, one can fee exactly well, efpecially with the Help of a Perfpective, all the Motions of an Enemy in Cafe of a Siege. The Fortification is of a huge Compafs, above a French League, indeed almoft a German League. The Baftions are quite filled with Earth ; they are faced with Brick, and a huge broad Ditch full of Water round them: The Counterfcarp, the cover’d Way, which hath a Pallifade within a Parapet, and the Glacis, are all well executed: There is a Half-moon before every Cortin ; the Baftions have no Orillons, except one or two, and the Curtins are fo difpofed, that a good Part of them defend the Bartion. The Garrifon of this Place, in Time of War, muft needs be eight or ten thoufand Men. There hath not been much done of late to this Place, only the Ditch is fo adjufted, that it is all defended by the Flanks of the Baftions.
But the nobleft Place on the Rbine is Strasburg; it is a Town of a huge Extent, and hath a double Wall and Ditch all round it ; the inner Wall is old, and of no Strength, nor is the outward Wall very good; it hath a Faulfebraye, and is faced with Brick twelve or fifteen Foot above the Ditch : The Counterfcarp is in an ill Condition, fo that the Town was not in Cafe to make any long Refiftance; but it is now flrongly fortified. There is a Citadel built on that Side that goeth towards the Rbine, and is much fuch a Fort as that of Hunningen; and on the Side of the Citadel towards the Bridge there is a great Horn-work that runs out a
great
great Way with Out-works belonging to it. There are alfo fmall Forts at the two chief Gates that lead to Al face, by which the City is fo bridled, that thefe can cut off all its Communication with the Country about, in cafe of a Revolt. The Bridge is well fortified ; there are alfo Forts in fome Inands in the Rbine, and fome Redoubts; fo that all round this Place there is one of the greateft Fortifications in Europe.

Hitherto the Capitulation, with relation to Religion, hath been well kept; and there is fo frall a Number of new Converts, and thefe are for the greateft Part fo inconfiderable, not being in all above two hundred, as I was told, that if they do not employ the new-fafhion'd Miffionaries à la Dragomne, the old ones are not like to have fo great a Harveft there as they promifed themfelves, though they are Jefuits. The Lutberans, for the greateft Part, retain their Animofities almoft to an equal Degree both againf Papits and Calvinifs. I was in their Church, where, if the Mufick of their Pfalins pleafed me much, the Irreverence in Singing (it being free to keep on or put off the Hat) did appear very ftrange to me. The Churches are full of Pictures, in which the chief Paffages of our Saviour's Life are reprefented, but there is no Sort of religious Refpect paid them: They bow when they name the Holy Ghoft, as well as at the Name of Jefus; but they have not the Ceremonies that the Lutberans of Saxony ufe, which Mr. Bebel, their Profeffor of Divinity, faid was a great Happinefs; for a Similitude in outward Rites might difpofe the ignorant People to change too eafily. I found feveral good People, both of the Lutberan Minifters, and others, acknowledge, that there was fuch a Coraruption of Morals fpread over the whole City, that as they had juftly drawn down on their Heads the Plague of the Lofs of their Liberty, fo this having touch'd them fo little, they had Reafon to look for feverer Strokes.

One fees, in the Ruin of this City, what a mifchievous Thing the popular Pride of a free City is: They fancied they were able to defend themfelves, and fo they refufed to let an Imperial Garrifon come within their Town; for if they had received only five hundred Men, as that fmall Number would not have been able to have opprefs'd their Liberties, fo it would have fo fecured the Town, that the French could not have befieged it without making War on the Empire : But the Town thought this was a Diminution of their Freedom, and fo chofe rather to pay a Garrifon of three thoufand Soldiers, which as it exhaufted their Revenue, and brought them under great Taxes, fo it proved too weak for their Defence when the French Army came before them. The Town begins to fink in its Trade, notwithftanding the great Circulation of Money that the Expence of the Fortifications hath brought to it ; but when that is at an End, it will fink more fenfibly; for it is impoffible for a Place of Trade, that is to have always eight or ten thoufand Soldiers in it, to continue long in a flourifhing State. There was a great Animofity between two of the chief Families of the Town, Dietrick and Obrectbt ; the former was che Burgo-mafter, and was once almoft run down by a Faction that the other had raifed againft him ; but he turned the Tide, and got fuch an Advantage againft Obrecbt, who had writ fomewhat againft the Conduct of their Affairs, that he was condemned and beheaded for writing Libels againft the Government. His Son is a learned Man, and was Profeffor of the Civil Law ; and he, to have his Turn of Revenge againft Dietrick, went to Paris, and that he might make his Court the better, changed his Religion. Dietrick had been always look'd on as one of the chief of the Frencb Faction, though he had been at firft an Imperialift, fo it was thought that he fhould have been well rewarded; yet it was expected; that to make himfelf capable of that, he fhould have changed his Religion; but he was an ancient Man, and would not pay his Court at that Rate; fo without any Reafon given, and againft the exprefs Words of the Capitulation, he was confined to one of the midland Provinces of France (as I remember, it was Limofin:) And thus he that had been thought the chief Caufe of this Town's falling un-
der the Power of the French, is the firf Man that hath felt the Effects of it
The Library here is confiderable ; the Cafe is a great Room very well contrived; for it is divided into Clofets all over the Body of the Room, which runs about thefe as a Gallery, and in thefe Clofets all round, there are the Books of the feveral Profeffions lodged apart: There is one for Manuffitipts, in which there are fome of confiderable Antiquity. I need fay Nothing to you of the vaft Height and Gotbick Architecture of the Steeple, and of the great Church, nor of the curious. Clock, where there is fo vaft a Variety of Motions; for thefe are well known. The Bas-relieves upon the Tops of the great Pillars of the Church are not fo vifible, but they are furprizing; for this being a Fabrick of three or four hundred Years old, it is very ftrange to fee fuch Reprefentations as are there. There is a Proceflion reprefented, in which a Hog carrieth the Pot with the holy Water, and Affes and Hogs in priefly Veftments follow to make up the Procefion : There is alfo an Afs ftanding before an Altar, as if he were going to confecrate; and one carrieth a Cafe with Reliques, within which one feeth a Fox; and the Trains of all that go in this Proceffion are fupported by Monkies. This feems to have been made in Hatred of the Monks, whom the fecular Clergy abhorred at that Time, becaufe they had drawn the Wealth and the Following of the World after them ; and they had expofed the fecular Clergy fo much for their Ignorance, that it is probable, after fome Ages the Monks falling under the fame Contempt, the fecular Clergy took their Turn in expofing them in fo lafting a Reprefentation to the Scorn of the World. There is alfo in the Pulpit a Nun cut in Wood lying along, and a Fryar lying near her with his Breviary open before him, and his Hand under the Nun's Habit, and the Nun's Feet are fhod with Iron Shoes. I confefs I did not look for thefe Things, for I had not heard of them; but my noble Friend Mr. $A b-$ lancourt view'd them with great Exactnefs while he was the Frencb King's Refident at Strasburg, in the Company of one of the Magiftrates that waited on him ; and it is upon his Credit, to which all that know his eminent Sincerity, know how much is due, that I give you this Paricular.

The Habits of the People here, but more efpecially of the Women, are very fingular, and furprize Strangers greatly; they are without Doubt very antique, and there is good Reafon to believe that the Tyranny of Fafhion has never born hard upon thefe honeft People. They are ftrongly of Opinion, that as Cloaths are intended to hide Nakednefs, fo the Manner of Cloathing ought to be fuitable to the Condition; and upon this Principle it is, that you fee every body regulate their Drefs here ; fo that when you are once acquainted with their Cuftom, you may diftinguifh by the Garb of every Woman you meet what Condition of Life the is in. As for Inftance, a Country Farmer's Wife wears fhort Petticoats, a Kind of Boddice, and over thefe a Sort of long Jacket, which in the Winter Time is lined with Lambs-skin for Want of better Furs. Her Hair is curled with her beft Skill, and upon her Head fhe weárs a Hat deck'd with Flowers. The lower Sort of Country People wear a Kind of Coif, under which their Hair is gathered up tight. A Tradefman's Wife in Mourning makes a very folemn Figure; her Petticoats are long, fhe has a ftiff-bodied Gown, clofe Sleeves, with Cuffis that turn up almoft to the Elbows, and a Piece of fine Cloth turns up under the Chin over their Mourhs, fo that between that and a very clofe round Cap, you fee Nothing but their Nofe and their Eyes. A Burgher's Wife is till a more extraordinary Spectacle, for the has a white Robe that covers all her Cloaths, a Hood and Fore-head-cloch upon her Head, the Corners of which are ftiffened and ftick out on both Sides, "fo that a ftranger Figure can hardly be feen. Ordinary Women mourn in Black, but with a white Veil before them, which reaches up to their Mouths, and below cheir Knees. A Doctor's Wife has a Garb not eafily exprefs?d, her Petticoats are very long, her Sleéves flounc'd upon her Shoulders, clofe on her Arms, and

7 Y
Elbows

Elbows, ftraiter at the Wrifts with Cuffs of white Linnen, and Rings and Bracelets in Abundance. The Body of the Gown is very ftiff with Wings that reft upon their Shoulders, a round Ruff about their Necks, and a monftrous large Head-drefs, beyond the Size of a Turbant. Their young Women, however, have a more agreeable Habit, their Sleeves are open, they wear very fine Linnen, ftiff-bodied Gowns, their Necks clofe covered, Petticoats fo long that Nothing appears under them but the very Points of their Shoes, and on their Heads they wear very large Hats, like thofe before defrribed in fpeaking of the Women of Bafil. Thefe Dreffes will be better comprehended by feeing them in a Print, than by any Defcription that can be given, and this is the more reafonable, becaufe now there is nothing of this Kind to be feen, the French Cuftoms genetally prevail, and Strangers can difcover no Difference between the Habits of the Women at Strasbourg, and thofe of other Frontier Towns in the Frencb Dominions。
27. From Strasburg we went down the Rbine to Pbilipsburg, which lies at a quarter of a Mile's Diffance from the River; it is but a fimall Place, and the Baftions are but little; there is a Ravelin before almoft all the Cortins; and there lie fuch Marfhes round it, that in thefe confift the chief Strength of the Place. The French had begun a great Crown-work on that Side that lies to the Rbine, and had caft out a Horn-work beyond that; but by all that appears, it feems they intended to continue their Works quite round the Town, and to make a fecond Wall and Ditch all round it, which would have enlarged the Place vaftly, and made a Compaifs capable to lodge ten thoufand Men; and this would have been fo terrible a Neighbour to the Palatinate, and all Franconia, that it was a Mafter-piece in Cbarles-Lewers, the late Elector Palatine, to engage the Empire in this Siege: He faw well, how much it concerned him to have it out of the Hands of the French; fo that he took great Care to have the Duke of Lorrain's Camp fo well fupplied with all Things neceffary during the Siege, that the Army lay not under the leaft Uneafinefs. From thence, in three Hours, we came to Spire, which is fo naked a Town, that if it were attacked, it could not make the leaft Refiftance. The Town is neither great nor rich, and is fubfifted chiefly by the Imperal Chamber that firteth here, though there is a conftant Difpute between the Town and the Chamber concerning Privileges; for the Government of the Town pretends, that the Judges of the Chamber, as they are private Men, and out of the Court of Judicature, are fubject to them ; and fo about a Year ago they put one of the Judges in Prifon: On the other Hand, the Judges pretend, that their Perfons are facred. It was the Confideration of the Chamber that procured to the Town the Neutrality that they enjoyed all the laft War. I thought to have feen the Forms of this Court, and the Way of laying up and preferving their Records, but it was not then fitting. The Building, the Halls, and Chambers of this famous Court are mean beyond Imagination, and look more Jike the Halls of fome fmall Company, than of fo great a Body; and I could not fee the Places where they lay up their Archives. The Government of the City is Lutberan ; but not only the Cathedral is in the Hands of the Bifhop and Chapter, but there are likewife feveral Convents of both Sexes, and the Jefuits have a College there. There is little remarkable in the Cathedral, which is a huge Building in the Gotbick Manner, of the wortt Sort. The Tombs of many Emperors that lie buried there are fingular only for their Meannefs, they being barely great Flag-ftones laid on fome fmall Stone Ballifters of a Foot and an half high : There are alfo the Marks of a ridiculous Fable concerning St. Bernard, which is too foolifh to be related; yet fince they have taken fuch Pains to preferve the Remembrance of it , I fhall venture to write it. There are from the Gate, all along the Nave of the Church up to the Steps that go up to the Choir, four round Plates of Erafs, above a Foot Diameter, and at the Diftance of thisty foot one from another, laid in the Pavement; on the firft of thefe is engraven O Clemens, on the fecond O Pia, on the third O Felix,
and on the fourth Maria! The laft is about thirty Foot diftant from a Statue of the Virgin; fo they fay that St. Bernard came up the whole Length of the Church at four Sieps, and that thofe four Plates were laid where he ftepp'd ; and that at every Step he pronounced the Word that is engraven on the Plate; and when he came to the laft, the Image of the Virgin anfwered him, Salve Bernarde; upon which he anfwered, let a Woman keep Silence in the Church; and that the Virgin's Statue has kept Silence ever fince. This laft Part of the Story is certainly very credible: He was a Man of Learning that fhewed me this; and he repeated it fo gravely to me, that I faw he either believed it, or at leãt that he had a Mind to make me believe it; and I asked him as gravely, if that was as firmly believed there? He told me, that one had lately writ a Book to prove the Truth of it, as I remember, it was a Jefuit: He acknowledged it was not an Article of Faith, fo I was fa tisfied.
28. There is in the Cloifter an old Gotbick Repiefentation of our Saviour's Agony in Stone, with a great manyFigures of his Apoftles and the Company that came to feize him, that is not ill for the Time in which it was made, it being fome Ages old. The Calvinifts have-a Church in this Town, but their Numbers are not confiderable. I was told there were fome ancient Manufripts in the Library that belongeth to the Cathedral ; but one of the Prebendaries, to whom I addreffed myfelf, being, according to the German Cuftom, a Man of greater Quality than Learning, told me, he heard they had fome ancient Manufripts, but he knew nothing of them; and the Dean was abfent, fo I could not fee them, for he kept one of the Keys. The lower Palatinate is certainly one of the fweeteft Countries in all Germany; it is a great Plain till one comes to the Hills of Heidelberg; the Town is ill fituated, juft in a Bottom, between two Ranges of Hills, yet the Air is much commended. I need fay nothing of the Caftle, nor of the prodigious Wine-cellar, in which, though there is but one celebrated Tun, that is feventeen Foot high, and twenty-fix Foot long, and is built with a Strength more like that of the Ribs of a Ship, than the Staves of a Tun; yet there are many other Tuns of fuch a prodigious Bignefs, that they would feem very extraordinary if this vaft one did not eclipfe them. The late Prince Cbarles-Lervis fhewed his Capacity in the Peopling and Settling this. State, that had been fo entirely ruined, being for many Years the Seat of War ; for in four Years time he brought it to a flourifhing Condition: He raifed the Taxes as high as was poffible without difpeopling his Country; all Men's Eftates were valued, and they were taxed at Five per Cent. of the Value of their Eftates; but their Effates were not valued to the Rigour, but with fuch Abatements as have been ordinary in Emgland in the times of Subfidies; fo that when his Son offered to bring the Taxes down to Two per Cent. of the real Value, the Subjects all defired him rather to continue them as they were. There is no Prince in Germany, that is more abfolute than the Elector Palatine; for he layeth on his Subjects what Taxes he pleafeth, without being limited to any Forms of Government. And here I faw that which I had always believed to be true, that the Subjects of Germany are only bound to their particular Prince; for they fwear Allegiance fingly to the Elector, without any Referve for the Emperor; and in their Prayers for him, they name him their Sovereign. It is true, the Prince is under fome Ties to the Emperor, but the Subjects are under none. And by this D. Fabritius, a learned and judicious Profeffor there, explained thofe Words of $P_{a-}$ reus's Commentary on the Romans, which had refpect only to the Princes of the Empire, and were quite mifunderftood by thofe who fancied that they favoured Rebellion; for there is no Place in Europe where all rebellious Doctrine is more born down than here.
29. I found a great Spirit of Moderation, with Relation to thofe warm Controverfies that have occafioned fuch Heat in the Proteftant Churches reigning in the Univerfity there, which is in a great Meafure owing to the Prudence, the Learning, and the happy

Temper

Temper of Mind of D. Fabritius, and D. Miek, who, as they were long in England, fo they have that generous Largenefs of Soul, which is the noble Ornament of many of the Englijh Divines. Prince Cbarles-Lewis faw that Manbeim was mark'd out by Nature to be the moft important Place of all his Territory, it being fituated in the Point where the Neckar falls into the Rbine; fo that thofe two Rivers defending it on two Sides, it was capable of a good Fortification. It is true, the Air is not thought wholfome, and the. Water is not very good, yet he made a fine Town there, and a noble Citadel, with a regular Fortification about it ; and he defigned a great Palace there, but did not live to build it. He law of what Advantage Liberty of Confcience was to the peopling of his Country; fo as he fuffered the Fews to come and fettle there; he refolved alfo not only to fuffer the chree Religions tolerated by the Laws of the Empire, to be profeffed there, but he built a Church for them all three, which he called the Cburch of the Concord, in which the Calvinits, Lutberans, and Pa pifts had, in the Order of which I have fet them down, the Exercife of their Religion; and he maintained the Peace of his Principality fo entirely, that there was not the leaft Diforder occafioned by this Toleration: This indeed made him to be look'd on as a Prince that did not much corfider Religion himfelf. He had a wonderful Application to all Affairs, and was not only his own chief Minifter, but he alone did the Work of many.

But I were unjuft, if I fhould not fay fomewhat to you of the princely Virtues, and the celebrated Probity of the prefent Prince Elector, upon whom that Dignity is devolved by the Extinction of fo many Princes, that in this Age compofed the moft numerous Family of any of that Rank in Europe. This Prince, as he is in many Refpects an Honour to the Religion that he profeffes, fo he is in nothing more to be commended by thofe who differ from him, than for his exact adhering to the Promifes he made his Subjects, with relation to their Religion ; in which he has not (even in the fmalleft Matters, broke in upon their eftablifh'd Laws; and though an Order of Men that have turned the World upfide down, have great Credit with him, yet it is hitherto vifible, that they cannot carry it fo far, as to make him do any thing contrary to the eftablifh'd Religion, and to thofe facred Promifes that he made his Subjects. For he makes it appear to all the World, that he does not confider thofe, as fo many Words fpoken at firft to lay his People afleep, which he may now explain and obferve as he thinks fit, but as fo many Ties upon his Confcience and Honour, which he will religioufly obferve. And as in the other Parts of his Life he has fet a noble Pattern to all the Princes of Europe, fo his Exactnefs to his Promifes is that which cannot be too much commended; of which this extraordinary Inftance has been communicated to me fince I came into this Country. The Elector had a Proceffion in his Court laft Corpus Cbrijti Day; upon which one of the Minitters of Heidelberg preached a very fevere Sermon againt Popery, and in particular taxed that Proceffion perhaps with greater Plainnefs than Difcretion. This being brought to the Elector's Ears, he fent prefently an Order to the Ecclefiaftical Synod to fufpend him : That Court is compofed of fome fecular Men and fome Churchmen; and as the Prince's Authority is delegated to them, fo they have a Sort of an Epifcopal Jurifdiction over all the Clergy. This Order was a Surprize to them, as being a direct Breach upon their Laws, and the Liberty of their Religion; fo they fent a Deputation to Court, to let the Elector know the Reafons that hinder'd them from obeying his Orders ; which were heard with fo much Juftice and Gentlenefs, that the Prince, inftead of expreffing any Difpleafure againft them, recalled the Order that he had fent them.
30. The Way from Heidelberg to Francfort is, for the firtt twelve or fifteen Miles, the beautifulleft Piece of Ground that gan be imagined; for we went under a Ridge of little Hills that are all covered with Vines; and from chem, as far as the Eye can go, there is a beautiful Plain of Corn-fields and Meadows, all fweetly divided and enclofed with Rows of Trees, fo that I fancied I was
in Lombardy again, but with this Advantage, that here all was not of a Piece, as it is in Lombardy; but the Hills, as they made a pleafant Inequality in the Profpect, fo they made the A ir purer, and produced a pleafant Wine. The Way near Darmftadt, and all forwards to Francfort, becometh more wild and more fandy. There is a good Suburb on the South Side of the Maine over-againft Francfort, which hath a very confiderable Fortification. There is a double Wall and a double Ditch that goes round it ; and the outward Wall, as it is regularly fortified, fo it is faced with Brick to a confiderable Height. The Town of Francfort is of a great Extent, and feemed to be but about a third Part lefs than Strasburg. The three Religions are alfo tolerated there, and though the Number of the Papifts is very inconfiderable, yet they have the grear Church, which is a huge rude Building; they have allo feveral other Churches, and fome Convents there. There are feveral open Squares for Market-places, and the Houfes about them look very well on the Outfide. Among their Archives they preferve the Original of the Bulla Aurea, which is only a great Parchment writ in High Dutch, without any Beauty anfwering to its Title ; and fince I could not have underftood it, I was not at the Pains of defiring to fee it ; for that is not obtained without Difficulty. The Lutberans have here built a new Church, called St. Katbarine's, in which there is as much Painting as ever I faw in any Popifh Church; and over the high Altar there is an huge carved Crucifix, as there are painted ones in other Places of the Church ; the Pulpit is extreme fine, " of Marble of different Colours, very well polifhed and joined. I was here at Sermon, where I underftood nothing ; but I liked one thing that I faw both at Strasburg and here, that at the End of Prayers there was a confiderable Interval of Silence left, before the Conclufion, for all People's private Devotions. In the Houfe of their puba lick Difcipline they retain ftill the old Roman Piftrina, or Hand-mill, at which lewd Women are condemned to grind, that is, to drive about the Wheel that maketh the Mill-ftones go. There is a great Number of Jezes there, though their two Synagogues are very little, and by Confequence, the Numbers being great, they are very nafty. I was told, they were in all above twelve hundred. The Women had the moft tawdry Embroidery of Gold and Silver about them that ever I faw, for they had all Mantles of Crape, and both about the Top and the Bottom there was a Border above a Hand's Breadth of Embroidery. The Fortification of Francfort is confiderable; their Ditch is very broad, and very full of Water ; all the Baftions have a Countermine that runneth along by the Brim of the Ditch, but the Counterfcarp is not faced with Brick as the Walls are, and fo in many Places it is in an ill Condition: The Cover'd Way and Glacis are allo in an ill Cafe. The Town is rich, and driveth a great Trade, and is very peafantly fituated. Not far from thence is Hockam, that yieldeth the beft Wine of thofe Parts. Since I took Francfort in my Way from Heidelberg to Mentz, I could not pals by Worms, for which I was forry

I had a great Mind to fee that Place where Lutber made his firt Appearance before the Emperor and the Diet; and in that folemn Audience expreffed an undaunted Zeal for that glorious Caufe in which God made him fuch a bleffed Inftrument. I had another Piece of Curiofity on me, which will perhaps appear to you fomewhat ridiculous. I had a Mind to fee a Picture, that, as I was told, is over one of the Poping Altars, which one would think was invented by the Enemies of Tranfubftantiation, to make is appear ridiculous. There is a Windmill, and the Virgin throws Chrift into the Hopper, and he comes out at the Eye of the Mill all in Wafers, which fome Prieits take up to give to the People. This is fo coarfe an Emblem, thatone would think it too grofs even for Laplanders; but a Man that can fwallow Tranfubftantiation itfelf, will digett this likewife.
3r. Nentz is very nobly fituated, on a rifing Ground, a little below the Conjunction of the two Rivers, the Rbine and the Moine: it is of coo great Compals, and too ill
peopled, to be capable of a great Defence. There is a Citadel on the higheft Part of the Hill that commands the Town; it is encompaffed with a dry Ditch that is confiderably deep. The Walls of the Town are faced with Brick, and regularly fortified; but the Counterfcarp is not faced, to all is in a fad Condition, and the Fortification is the weakeft on the Side of the Elector's Palace. There is one Side of a new Palace very nobly built in'a regular Architecture, only the Germans ftill retain fomewhat of the Gotbick Manner. It is of a great Length, and the Defign is to build quite round the Court, and then it will be a very magnificent Palace, only the Stone is red; for all the Quarries that are upon the Rbine, from Bafl down to Coblentz, are of red Stone, which does not look beautiful. The Elector of Mentz is an abfolute Prince; his Subjects prefent Lifts of their Magiftrates to him, but he is not tied to them, and may name whom he will. The ancient Demefne of the Electorate is about forty thoufand Crowns, but the Taxes rife to about three hundred thoufand Crowns; fo that the Subjects here are as heavily taxed as in the Palatinate. There are twelve thoufand Crowns a Year given the Elector for his Privy-purfe, and the State bears the reft of his Expence. He can arm ten thoufand Men, and there is a Garrifon of two thoufand in Mentz. This Elector has three Councils; one as he is Chancellor of the Empire, confilting of three; the other two are for the Government and Adminiftration of Juttice in his Principality: He and his Chapter have Months by Turns for the Nomination of the Prebends. In the Month of fanuary he names, if any die; and they, fuch as die in February, and fo all the Year round. The Prebendaries, or Dome-beers, have about three thoufand Crowns a Year a-piece. When the Elector dies, the Emperor fends one to fee the Election made, and he recommends one, but the Canons may chufe whom they pleafe; and the prefent Elector was not of the Emperor's Recommendation. Befides the Palace at Mentz, the Elector hath another near Francfort, which is thought the beft that is in thofe Parts of Germany.
The Cathedral is a huge Gotbick Building; there is a Cupola in the Weft End, and there the Choir fingech Mafs. I could not learn whether this was done only becaufe the Place here was of greater Reception than at the Eaft End, or if any Burying place and Endowment obliged them to the Weft End. Near the Cathedral there is a huge Chapel of great Antiquity, and on the North Door there are two great Brafs Gates with a long Infcription, which I had not Time to write out, but I found it was in the Emperor Lotbarius's Time. There are a valt Number of Churches in this Town, but it is poor and thinly inhabited. The Rbine here is almoft half an Englijh Mile broad, and there is a Bridge of Boats laid over it. From Meniz all along to Baccharach, there are a great Number of very confiderable Villages on both Sides of the River. Here the Ratstower is fhewed, and the People of the Country all firmly believe the Story of the Rats eating up an Elector ; and that though he fled to this Inand, where he built a fmall high Tower, they purfued, fwimming after him, and eat him up : And they told us, that there were fome of his Bones to be feen ftill in the Tower. This extraordinary Death makes mee call to Mind a very particular and unlook'd for Sort of Death, that carried a poor Labourer off the Ground a few Days before I left Geneva. The Foot of one of his Cattle, as he was Ploughing, fruck into a Neft of Wafps, upon which the whole Swarm came out, and fet upon him that held the Plough, and killed him in a very little Time; and his Body was prodigiouny fwell'd with the Poifon of fo many Stings.
But to return to the Rbine: All the Way from Baccharacb down to Coblentz, there is on both Sides of the River, hanging Grounds, or little Hills, fo placed, as if many of them had been laid by Art, which produce the rich Rbenifb Wine. They are indeed as well expofed to the Suin, and covered from Storms, as can be imagined; and the Ground in thofe Hills, which are in fome Places of a confiderable Height, is fo culti-
vated, that there is not an Inch loft that is capable of Improvement ; and this brings fo much Wealch into the Country, that all along there is a great Number of confiderable Villages. Coblentz is the ftrongett Place that I faw of all that belong to the Empire; the Situation is noble, the Rbine running before it, and the Mofelle paffing along the Side of the Town. It is well fortified, the Ditch is large, the Counterfcarp high, and the Cover?d Way is in a good Condition : Both Walls and Countericarp are faced with Brick, and there are Ravelins before the Cortins: But on the Side of the Mopelle it is very nighely fortified, and there is no Fort at the End of the Stone-bridge that is laid over the MoJelle, fo that it lies quite open on that Side, which feems a ftrange Defeet in a Place of that Confequence: But though the Fortifications of this Place are very confiderable, yet its chief Defence lieth in the Fort of Hermanftan, which is built on the Top of a very high Hill, that lieth on the other Side of the Rbine, and which commands this Place fo abfolutely, that he who is Mafter of Hermanftan, is always Mafter of Coblentz. This belongs to the Elector of Triers, whofe Palace lies on the Eaft Side of the Rbine, jult at the Foot of the Hill of Hermanftan, and over-againft the Point where the Mofelle falls into the Rbine; fo that Nothing can be more pleafantly fituated; only the Ground begins to rife juft at the Back of the Houfe with fo much Steepnefs, that there is not Room for Gardens or Walks. The Houfe makes a great Show upon the River, but we are told, that the Apartments within are not anfwerable to the Outfide. I fay, we were told; for the Germen Princes keep fuch Forms, that, without a great deal ado, one cannot come within their Courts, unlefs when they are abroad themfelves: So that we neither faw the Infide of the Palace at Mentz, nor this of Hermanstan.
32. It is but a few Hours from this to Bonne, where the Elector of Cologne keeps his Court. The Place hath a regular Fortification, ihe Walls are faced with Brick ; but though the Ditch, which is dry, is pretty broad, the Counterfcarp is in fo bad a Condition, that it is not able to make a great Defence. This Elector is the nobleft born, and the beft provided of all the German Clergy; for he is Brother to the great Maximilian Duke of Bavaria, and befides Cologne, he hath Liege, Munster, and Hildefbeim which are all great Bifhoprick. He hath been alfo fix and thirty Years in the Electorate. His Palace is mean, confifting but of one Court, the half of which is calt into a little Garden, and the Wood-yard is in the very Court. The lower Part of the Court was a Stable; but he hath made an Apartment here, that is well furnifhed with Pictures; where as there are fome of the Hands of the greateft Mafters, fo there are a great many Foils to fet thefe off, that are fcarce good enough for SignPofts.

The Elector has a great many Gold Medals, which will give me Occafion to tell you one of the moft extravagant Pieces of Forgery that perhaps ever was, which happened to be found out at the lant Siege of Bonne; for while they were clearing the Ground for a Battery, they difcovered a Vault, in which there was an Iron Cheft, that was full of Medals of Gold, to the Value of one hundred thoufand Crowns, and of which I was told, the Elector bought to the Value of thirty thoufand Crowns. They are monftrounf large, one weighed eight hundred Ducats, and the Gold was of the Finenefs of Ducat Gold: But though they bore the Impreffions of Roman Medals, or rather Medaillons, they were all Counterfeit; and the Imitation was fo coarfely done, that one muft be extreme ignorant to be deceived by them. Some few that feem true, were of the late Greek Emperors. Now it is very unaccountable, what could induce a Man to make a Forgery upon fuch Metal, and in fo vaft a Quantity, and then bury all this under Ground, efpecially in an Age in which fo much Gold was ten times the Value of that it is at prefent; for it is judged to have been done about four or five hundred Years ago.

The Prince went out a Hunting while we were there, with a very handfome Guard of about fourfore Horfe well mounted; fo we faw the Palace, but were not fuffered to fee the Apartment where he lodged. There is a great Silver Cafolette gilt, fet with Emeralds and Rubies, that though they made a fine Appearance, yet were a Compofition of the Prince's own making. His Officers alfo fhewed us a Bafon and Ewer, which they faid were of Mercury, fixed by the Prince himfelf; but they added, that for many Years he has not wrought in his Elaboratory. I did not eafily believe this; and as the Weight of the Plate did not approach to that of Quickfilver, fo the medicinal Virtues of fixed Mercury (if there is any fuch Thing) are held to be fo extraor dinary, that it feemed very ftrange to fee twenty or thirty Pound of it. made up in two pieces of Plate. A Quarter of a Mile without the Town, lies the beft Garden of thofe Parts of Germany, in which there is a great Variety of Water-works, and very many noble Alleys in the French Manner, and the whole is of a very confiderable Extent. But as it hath no Statues of any Value to adorn it, fo the Houfe, about which it lies, is in Ruins: And it is ftrange to fee, fo rich and fo great a Prince, during fo long a Regency, hath done fo little to enlarge, or beautify his Buildings. Bonne and Coblentz are both poor and fmall Towns. Cologne is three Hours diftant from Bonne: It is of a prodigious Extent, but ill built, and worfe peopled in the Skirts of it; and as the Walls are all in an ill Cafe, fo it is not poffible to fortify fo valt a Compafs, as this Town makes, as it ought to be, without a Charge that would eat out the whole Wealch of this little State.

The Feros live in a little Suburb on the other Side of the River, and muft not come over, without Leave obtained, for which they pay confiderably. There is no Exercife of the Proteftant Religion fuffered within the Town, but thofe of that Communion are fuffered to live there, and they have a Church at two Miles Diftance. The Arfenal here is fuitable to the Fortifications, that is, very mean and ill furnifhed. The Choir of the great Church is as high in the Roof as any Church I ever faw; but it feems the Wealth of this Place could not finifh the whole Fabrick, fo as to anfwer the Height of the Choir, for the Body of the Church is very low. Thofe, that are difpofed to believe Legends, have enough here to overfet even a good Degree of Credulity, both in the Story of the three Kings, whofe Chapel is vifited with great Devotion, and flands at the Eaft End of the great Choir; and in that more copious Fable of the eleven thoufand $U_{r} f f_{\text {lins }}$, whofe Church is all over full of rough Tombs, and of a valt Number of Bones, that are piled up in Rows about the Walls of the Church. Thefe Fables are fo firmly believed by the Papifts there, that the leaft Sign of Doubting of their Truth, paffeth for an infallible Mark of an Heretick. The Jefuits have a great and noble College and Church here. And for Thouler's Sake, I went to the Dominicans Houfe and Church, which is alfo very great. One grows extreme weary of Walking over this great Town, and doth not find enough of Entertainment in it. The prefent Subject of their Difcourfe is alfo very melancholy. The late Rebellion that was there is fo generally known, that I need not fay much concerning it. A Report was fet about the Town by fome Incendiaries, that the Magiftrates eat up the publick Revenue, and were like to ruin the City. I could not learn what Ground there was for thefe Reports; for it is not ordinary to fee Reports of that Kind fly through a Body of Men, without fome Foundation. It is certain, this came to be fo generally believed, that there was a horrible Diforder occafioned by it. The Magiftrates were glad to fave themfelves from the Storm, and abandoned the Town to the popular Fury, fome of them having been made Sacrifices to it; and this Rage held long. But within this laft Year, after near two Years Diforder, thofe that were fent by the Emperor and Diet to judge the Matter, having threatned to put the Town under the Imperial Bann, if it had frood longer out, were received, and have put

Vol. II. Numb. 112 。
the Magiftrates again in the Poffeffion of their Autho: rity, and all the chief Incendiaries were clapp'd in Prifon. Many have already fuffered, and a great many more are in Prifon. They told us, that fome Executions were to be made within a Week, when we were there.

Duffeldorp is the firf confiderable Town below Cologne: It is the Seat of the Duke of Yutiers, who is Duke of Newburgh, eldeft Son to the prefent Elector Palatine. The Palace is old, and Gotbick enough; but the Jefuits have there a fine College, and a noble Chapel, though there are manifet Faults in the Architecture. The Proteftant Religion is tolerated, and they have a Church built here within thefe few Years, that was procured by the Intercefion of the Elector of Brandenburg, who obferving exaclly the Liberty of Religion that was agreed to in Cleve, had Reafon to fee the fame as duly obferved in his Neighbourhood, in Favour of his own Religion. The Fortifications here are very ordinary, the Ramparts being faced but a few Foot high with Brick. But Keiferfwart, fome Hours lower on the fame Side, which belongs to the Elector of Cologne, though it is a much worfe Town than Duffeldorp, yet is much better fortified. It hath a very broad Ditch; and a very regular Fortification: The Walls are confiderably high, faced with Brick, and fo is the Counterfcarp, which is alfo in a very good Condition. The Fortification of Orfoy is now quite demolifhed. Rkineberg continues as it was, but the Fortification is very mean, only of Earth, fo that it is not capable of making a great Refiftance. And Wefel, though it is a very fine Town, yet it is a very poor Fortification; nor can it ever be made good, except at a vaft Expence ; for the Ground all about it being Sandy, nothing can be made there that will be durable, unlefs the Foundation go very deep, or that it be laid upon Pilotry. In all thefe Towns one fees another Air of Wealch and Abundance, than in much richer Countries that are exhaufted with Taxes. Rees and Emmerick are good Towns, but the Fortifications are quite ruined, fo that here is a rich and a populous Country; that hath at prefent very little Defence, except what it hath from its Situation. Cleve is a delicious Place, the Situation and Profpect are charming, and the Air is very pure; and from thence we came to Nimeguen in three Hours.
I will not fay one Word of the Country into which I am now come; for as I know that is needlefs to you on many Accounts, fo a Picture that I fee here in the Stadt-houfe puts me in Mind of the moft perfect Book of its kind that is perhaps in Being; for Sir William Temple, whofe Picture hangs here at the upper End of the Plenipotentiaries that negotiated the famous Treaty of Nimeguen, hath indeed fet a Pattern to the World, which is done with fuch Life, that it may jufty make others blufh to copy after it ; fince it muft be acknowledged, that if we had as perfect an Account of other Places, as he hath given us of one of the leaft, but yet one of the nobleft Parcels of the Univerfe, Travelling would become a needlefs Thing, unlefs in were for Diverfion; fince one finds no farther Occafion for his Curiofity in this Country, than what is fully fatisfied by his rare Performance: yet I cannot give over Writing without reflecting on the Refiftance that this Place made, when fo many other Places were fo bafely delivered up; though one does not fee in the Ruins of the Fortification here, how it could make fo long a Refiftance; yet it was this Town ftemm'd the Tide of a Progrefs that made all the World ftand amazed; and it gave a little Time to the Dutch to recover themfelves out of the Confternation, into which fo many Blows, that came fo thick one after another, had ftruck them.

But then the World faw a Change, that though it hath not had fo much Incenfe given to it, as the happy Conjuncture of another Prince hath drawn after it with fo much Excefs, that all the Topicks of Flatery feem exhaufted by it, yet will appear to Pofterity one of the moft furprizing Scenes in Hiftory, and that which may be well matched with the Recovery of the
7 Z
Romana

Roman State after the Battle of Canne. When a young Prince, that had never before borne Arms, or fo much as feen a Campaign, who had little or no Counfel about him, but what was fuggefted from his ownThoughts, and that had no extraordinary Advantage by his Education, either for Literature or publick Affairs, was of a fudden fet at the Head of a State and Army, that was funk with fo many Loffes, and that faw the beft half of its Soil torn from it, and the moft powerful Enemy in the World, furrounded with a viftorious Army that was commanded by the beft Generals that the Age hath produced, come within Sight, and fettle his Court in one of its beft Towns, and had at the fame Time the greateft Force, both by Sea and Land, that hath been known, united together for its Deftruction: When the Inhabitants were forced, that they might fave themfelves from fo formidable an Enemy, to let loofe that which on all other Occafions is the moft dreadful to them, and to drown fo great a Part of their Soil for the Prefervation of the reft; and to complicate together all the Miferies that a Nation can dread; when to the general Confternation with which fo difmal a Scene poffeffed them, a Diftraction within Doors feemed to threaten them with the laft Strokes; and while their Army was fo ill difciplined, that they durft fcarce promife themfelves any thing from fuch feeble Troops, after a Peace at Land of almoft thirty Years Continuance; and while their chief Ally, that was the moft concerned in their Prefervation, was, like a great Paralytick Body, more like to fall on thofe that it pretended to fupport, and to crufh them, than to give them any confiderable Affiftance: When, I fay, a young Prince came at the Head of all this, the very Profpect of which would have quite damp'd an ordinary Courage, he very quickly changed the Scene; he animated the publick Councils with a generous Vigour; he found them finking into a Feeblenefs of hearkening to Propofitions for a Peace that were as little fafe as honourable; but he difpofed them to refolve on hazarding all, rather than to fubmit to fuch infamous Terms.
His Credit alfo among the Populace feemed to infpire them with a new Life: They ealily perfuaded themfelves, that as one Wiliiam, Prince of Orange, had formed their State, fo here another of the fame Name feemed marked out to recover and preferve it : It was this Spirit of Courage, which he derived from his own Breaft, and infufed into the whole People, as well as into the Magiftracy, that preferved this Country, Something there was in all this that was Divine. The publick Councils were again fettled, and the People were at quiet, when they faw him vefted with a full Aurhority for that Time with relation to Peace and War, and concluded they were fafe, becaufe they were in his Hands. It foon appeared how faithfully he purfued the Intereft of his Country, and how little he regarded his own. He rejected all Propofitions of Peace that were hurtul to his Country, without fo much as confidering the Advantages that were offered to himfelf (in which you know that I write upon fure Grounds) he refufed the Offer of the Sovereignty of its chief City, that was made to him by a folemn Deputation, being fatisfied with that Authority which had been fo long maintained by his Anceftors, with fo much Glory, and being juftly fenfible how much the breaking-in upon eftablifhed Laws and Liberties is fatal even to thofe that feem to get by it : He thus began his publick Appearance on the Stage with all the Difadvantages that a Spirit afpiring to true Glory could wihh for; fince it was vifible he had nothing to truft to but a good Caufe, a favourable Providence, and his own Integrity and Courage: Nor was Succefs wanting to fuch noble Beginnings; for he in a fhort Time, with a Conduct and Spirit beyond any thing that the World hath yet feen, recover'd this State out of fo defperate a Diftemper, took fome Places by main Force, and obliged the Enemy to abandon all that they had acquired in fo feeble a Manner. And if a raw Army had not always Succefs againft more numerous and bet-ter-trained Troops; and if the Want of Magazines
and Stores in their Allies Country, which was the chief Scene of the War, made that he could not poft his Army and wait for favourable Circumftances, to that he was fometimes forced to run to Action with a Hafte that his Neceffities impofed upon him ; yet the forcing of the Beginnings of a Vietory out of the Hands of the greateft General of the Age, the facing a great Monarch with an Army much inferior to his, when the other was too cautious to hazard an Engagement ; and, in fhort, the forming the Dutch Army to fuch a Pitch that it became vifibly fuperior to the French, that feemed to have been fed with Conquefts ; and the continuing the War till the Prince, that had facrificed the Quiet of Europe to his Glory, was glad to come and treat for a Peace in the Enemy's Country, and in this very Place, and to fet all Engines on work to obtain that, by the Mediation of fome, and the Jealoufies of other Princes : All thefe are fuch Performances, that Pofterity will be difpofed to rank them rather among the Ideas of what an imaginary Hero could do, than with what could be really tranfacted in fo fhort a Time, and in fuch a Manner. And in Conclufion, every Place that belonged to thefe States, and to their Neighbours along the Rbine, together with a great many in Flanders, being reftored, thefe Provinces now fee themfelves, under his happy Conduct, re-eftablithed in their former Peace and Security. And though fome Scars of fuch deep Wounds may ftill remain, yet they find themfelves confidered on all Hands as the Bulwark of Chriftendom againft the Fears of a new Monarchy, and as the Prefervers of the Peace and Liberty of Europe.
Here is a Harveft, not for forced Rhetorick or falfe Eloquence, but for a fevere and fincere Hiftorian, capable of affording a Work that will far exceed all thofe lufcious Panegyricks of mercenary Pens : But a fmall or a counterfeit Jewel muft be fet with all poffible Advantages, when a true one of a great Value needs only to be fhewed, in order to have that Value known.

If one was to offer a proper Manner of writing Voyages to the Confideration and Example of thole that travel, I do not conceive, that a better Model could well be found, than thefe Letters of Bifhop Burnet's. The great End of Travelling is to form right Notions of the Countries one fees, and of the People who inhabit them, and this End our Prelate plainly propofed to himfelf, and to the honourable Perfon to whom he wrote, who was likewife a great Judge of the Truth and Fidelity with which he wrote, fince he had himfelf travelled through thefe Countries, and refided a confiderable Time at Geneva. But at this Diftance of Time we are better judges of his Penetration and Sagacity; for as he reprefents the Conftitution and political Affairs of the Swiffers impartially, fo he very truly forefaw the Diforders that have fince happened in that Country as well as at Genera. As thofe Diforders juftify his Political Capacity, fo they fully convince us of the Truth of the Maxim by him laid down, That Ambition will produce the fame Effects, let the Object of it be great or fimall, and the Defire of Governing a Bailiage will have juft the fame mifchievous Confequences in a fmall Republick, that the Thirf of prefiding over a great Province has in a larger State. So that in all Governments thus conftituted, the very Principles of their Grandeur are alfo the Seeds of their Deftruction, if thefe Governments are not yet diffolved; this is owing to the Care of their Neighbours, and to fome other Accidents; but that they fhould be torn by Divifions, and once in a Century brought to the Brink of Diffolution, is very natural, and what has really happened within the Compafs of our own Memory, when the State of Geneva was faved by the Interpofition of France and the Swiffers, the Government brought back to its firft Principles; and the Government fet right another Age at leaft.

His Prediction with Refpect to Lombardy, and the other Spanifh Povinces in Italy, have been alfo fulfilled. The late King Pbilip V. entred into the quiet Pofferfion of them as Succeffor in the Spanib Monarchy, and was fupported in the Poffeffion of them, not only by the Forces of that Crown, but alfo by thofe of France;
and
and yet in a very few Campaigns he was deprived of them by the Germans, under the Command of Prince Eugene, and himfelf and his Grandfather were glad to enter into a Treaty for the total Evacuation of Italy. It is indeed true, that this very Meafure contributed not a litcle to the Prefervation of Spain, of which he had been likewife deprived, if, by ending the Itclian War in this Manner, he had not fecured a new Body of Auxiliaries for its Defence. The Entrance which the Spaniards fince have gained into that Country, in virtue of the Succeffion of the Queen Dowager as Heirefs of the Houfe of Parma, afforded a new Proof of the Solidity of his Conjecture; for we have feen Milan, Parma, Placentia, and all the ftrong Places in Italy, which made fuch a Figure in former Ages, taken and retaken in fucceffive Campaigns; fo that as he rightly judged, the modern Art of War has made a great Alteration in Things, and we have no Reafon to expect that any Sieges for the future will refemble thofe of former Times, any more than that of Troy. A regular Method of attacking, and a large Train of Artillery, foon does the Bufinefs, in Spite of numerous Garrifons and the ftrongent Fortifications.
His Obfervations in refpect to the Territories of the Venetians, and other States of Itely, have been alfo verified. That they ftill continue declining, all modern Travellers agree: That the great Cities which were rich and popolous while free, are now falling to Decay, and in a Manner become Deferts, as well as the Diftricts about them, is not to be difputed; and that it cannot be long before they are either fwallowed up by their powerful Neighbours, or change their Mafters by fome fudden Revolution, is a Thing morally certain; an Event which it is highly probable the prefent Generation will fee. For tho' political Bodies refemble natural ones in many Circumftances; yet in fome they differ, for the latter are often worn out and perifh by Confumptions; yet this happens very rarely to the former, where the Diffolution of one Government, generally fpeaking, makes Way for another; fo that it may be truly faid, a State has many Lives, or which is the fame T hing, though it perifhes in one Form, it is again revived in another, becaufe the Country, and fome Inhabitants at leaft, remain in Spite of all Revolutions; and as in one Age we fee fmall States deftroyed and conquered by gifeat Monarchies ; fo in fucceeding Ages alfo thofe great 'Monarchies fink under their own Weight, and their Dominions crumble again into feparate States. 'ithus the true Politician fees through all thefe Changes, penetrates their Caules, fees the greateft Events at a confiderable Diftance, and is never fubject to Admiration or Surprize, which are Weakneffes incident only to limited Underftandings and narrow Minds.

The Account he has given us of the deplorable State of the People who dwell at prefent in the fineft Countries in Europe, ferves to give Credit to the Accounts we daily received of their Poverty and Diftrefs, which would otherwife furpafs all Belief. It is however worthy of Notice, that within thefe few Years, the Popes themfelves, as well as other Princes of Italy, begin to be fenfible of the Evils refulting to their Subjects, from their Bigotry to their Religion, which they have endeavoured to remove, or at leaft to foften in many Refpects. The late King of Sardinia, one of the wifeft, and greateft Princes of his Time, began this, and thereupon fome Differences arofe between his Majefty and the Court of Rome. The Memorials he fent thither on that Occafion opened the Eyes of the late Pope, and fome of the moft intelligent Cardinals, who thenceforward became willing to make ufe of the fame Methods that Monarch had practifed for the Eafe and Emolument of the Inhabitants of the Ecclefiaftical State; but the natural Slownefs of that Court in all its Motions, and the Fear of the Confequences that might attend any Relaxation of religious Difcipline among a People, naturally fo corrupt as the Italians generally are, has hitherto retarded fo good a Work, though the Thoughts of it are not quite given up, the Pope having lately attempted to fupprefs not only many but almoft all the Holidays peculiar to his Church, which however has not been
found eafy to carry into Execution. The very Attempt however fufficiently fhews, that in the Opinion of the Papifts themfelves, their Faith becomes a political Grievance, againtt which they are obliged to ufe fuch Pre= cautions as are fuggefted by Reaion, which fufficiently diftinguifhes between that Part of their Religion which is grounded on Revelation, and what is no better founded than on the Authority of the Church, or in plain Englifh, the Invention of Priefts. For evident it is, that God will command Nothing that is not for the Good of his Creatures; and as Reafon teaches, fo Experience juftifies this Truth ; for the Chriftian Religion, in its moft effential Points, flourihes no where better than in thofe rough and barren Countries, where our Prelate oblerves ${ }_{3}$ that the People are both happy and rich in Spite, as it were, both of the Soil and Climate; but in the Coun= tries, where Popery is predominant, neicher Soil nor Climate can contribute to render them populous, or the People that are left in them happy. The Inference I would draw from this is, that by Degrees it is more than probable, this great Evil will cure irfelf. For as the Papal Dominions feel it moft, and as it is well known, that the beft Politicians in Europe are generally found at Rome, for Reafons which our Prelate has very judicioully affigned, it feems highly likely from thence, that the Reformation of thefe Abufes, when they come to be intolerable, will be begun here; and when once this is brought about, there is no Room to queftion, that Precautions of the like Nature will be freely taken by all the Princes of the fame Communion, who as they have fuffered themfelves to be lead wrong, will be, no doubt, as ready to be fet right by the Example of this Court. Thus the temporal Intereft of the Pope may prove the Means of redreffing the Diforders occafioned by his firitual Authority.

There has been an Obfervation made by Travellers of all Nations, who have paffed through all Italy, that the People grow worfe and worfe; as you advance, and better and better as you come back, which is another Proof of the Principles before advanced; fince ins thofe diftant Parts of the Country, but more efpecially in Naples and Sicily, the People are univerfally under the Dominion of their Priefts, and indeed the Clergy are the Proprietors of the greater Part of the Lands of thofe Countries, which is the principal Reafon that there is no Trade in Places that feem the fitteft for it ; and that thofe Countries are left uncultivated, which are - naturally the moft rich, and the moft fruitful. But when-ever it fhall happen, as happen it certainly will, that Naples and Sicily fhall fall under the Dominion of an independent Prince, who will ttudy only the Benefit of his Subjects, and the Advantage of his Family, thefe Grievances will be taken away, and the People put in Poffeflion of thofe mighty Privileges, which feem to have been intended them by Nature. For it is impof fible to confider the convenient Situation, the rich Commodities and the feveral Ports that are in thefe two Kingdoms, I mean of Naples and Sicily without flanding amazed, that they are no better peopled; that they have fo few Ships belonging to them, and that all the valuable Commodities they produce, are carried away by Foreigners at an under Rate, and manufactured and exported afterwards to enrich the Inhabitants of other Countries.

The great Dutchy of Tufcony is fince fallen into a worfe Condition than when it was vifited by our Author. The Princes of the Houfe of Medicis, always retain fomething of the Merchant; and though they wanted not Ambicion, and were ftudious enough for the Advancement of their own Interefl, yet they kept always in View the Good of their Subjects, as being truly fenfible, that a Prince could never be great or rich if his Dominions were thinly inhabited, or his People poor. It was with this View, that by the Affiftance of Sir Robert Dudley, an Englijfoman, Son to the great Earl of Leicefer, that took fo much Pains to build the Town, and open the Harbour of Livorno, which we taking our Pronunciation from our Sailors, call Legborn, and which they afterwards declared a free Port. In this, and in other Meafures of the fame Na-
cure, they purfued the $\mathbb{M}$ axims that had been laid down while Florence remained a free State; but there was this Mifchief attended the Change of the Government from a Republick, that its Fate depended no longer upon itfelf, but upon that of the reigning Family, which has brought it into the Circumftances we fee it at prefent, which are very extraordinary, fince it no longer is the Inheritance of that Family, or of the Heirs of that Family, but by Way of Exchange has been given to the Duke of Lorrain, who is at prefent Emperor, and thus labours under two additional Misfortunes; for as it had loft its Liberty before, fo now it has not only loft its Native Princes, who were always the Parents of their People, and fallen under a foreign Yoke, but has actually no Prince at all, and is become a Province lying at a great Diftance from the Refidence of its Sovereign. Thefe are, without Doubt, very grievous Misfortunes, the Confequences of which will be feen daily more and more.

The other States of Italy have alfo fuffer'd much fince they were vifited by our Author; the Dutchies of Mi lan, Mantua, and Guaftalia, are no more ; and it is doubtful whether the fame Thing may not be faid of Niodeno and Mirandola. The Republick of Genoa is certainly undone, if not fubverted; and the two laft general Wars have gone farther in depopulating diftreffing, and impoverifing Italy, than all fhe fuffered in the two Centuries before, and yet in that Time her Sufferings were not fmall. But notwithftanding all this, and though it is farce poffible for a Country to be more wretched than this really is at the Time we are writing, there is no Doubt that a few Years of Peace, and the rifing up of good Princes, might ftill recover it to as good a State as ever it was in for the fe five hundred Years. The Reader will from hence difcern the true Reafon, why the maintaining a Balance of Power in this Country is fo much the Intereft of all the Princes and States that are its prefentPoffeffors, and why the reft of the Crowns of Europe, and the maritime Powers more efpecially, have alfo an Intereft in maintaining that Balance, which is of fo great Confequence to the Commerce of Europe, which can never be well regulated if that Balance fhould be overturned, and, by Addition of Conquefts, the greateft Part of this Country fall under the Dominion of any Prince much more powerful than the reft. We may alfo fee how wife and how right an Expedient it would be, if all the Italian Powers would unite in a Confederacy for preferving the Peace of that Country, by eftablifhing a perpetual Neutrality, which, as it would prejudice no one Power in Europe, to if thofe concerned would go about it heartily, there could be no Doubt of their fucceeding; and this might not only lay a Foundation for their particular Happinefs, but prove a very good Precedent for eftablifhing the univerfal Tranquility of Chriftendom; which if it be a Bleffing that we have fmall Hopes to fee, we may however have Leave to wifh, and pleafe ourfelves with the Profpect of what would certainly prove the greateft and the moft univerfal Good.

Thus we have taken Pains to accommodate the Accounts, Obfervations, and Remarks of Bifhop Burnet, made threefcore Years ago, to the prefent Times, at leaft with refpect to Italy. It is very much to be regretted, that he did not give us a larger Account of his Journey through France, notwithitanding the Reafons affigned by him for omitting it. He fhews himfelf very impartial in attributing the Perfecution of the Proteftants, to the Religion of the French King, rather than to the Haughtinefs and Cruelty of his Temper, and perhaps there was fomething of Juftice in this, becaufe
it is certain, that in other Refpects, this Prince was very far from thewing himfelf of a Blood-thirtty Temper, for there was but one Man of Quality put so Death, during his whole Reign; the Chevalier de Roban; and the King banifhed his Mother for not demanding his Pardon, which at the fame time he declared he would have granted. It is very remarkable that our Queen Mary; who was a moft violent Perfecutrix, was allo a Woman of a mild and gentle Temper; which thews, that the beft Princes are capable of doing as bad Things, as the worft, when under the Influence of bad Counfels. But perhaps it may not be amifs to inform the Engli/h Reader, that the French Memoirs of this Reign, fuggeft a very different Reafon for this Perfecution, and though they do not lay it upon the King, they lay it as little upon the Priefts; for the Account they give of it is this. Lewis XIV. was very defirous to fee the Proteftants converted, as he called it, and for that Reafon gave great Encouragement to fuch of the Clergy as applied themfelves to this Work. This gave Occafion to the Archbifhop of Paris, and the King's Confeffor, Father le Cbaife, to have frequent private Audiences of his Majefty; which lafted an Hour or two at a Time. This gave fuch Umbrage to one of his Minifters, Mr. Louvois, that he determined to put an End to it at any Rate, which induced him to propofe the new Method of converting by Dragoons, as the fhorteft and the moft effectual. If there be any Truth in this, as in deed there is too great Reafon to believe that this was the real Secret of that bloody Bufinefs, then it plainly fhews, that both Princes and Priefts are liable to be impofed upon, and made the Tools of wicked and ambitious Statefmen, who confider Nothing but their own Intereft, and ftick at Nothing that may promote it. It was the fame Perfon that filled the Head of that Prince with thofe dangerous and deftructive Views, that were fo fatal to the Peace of Europe; the Pretence was his Mafter's Glory, and the Intereft of the Crown of France, but the true Caufe was the Senfe he had, that it was impoffible for him to preferve his Power, or make himfelf neceffary to his Mafter, but in Times of War and Confufion, which therefore he made it his conftant Study to promote. The Surprizing of Strasbourg, and the erecting of Hunningen, were both his Schemes, and in fhort, fo were all the bad Schemes in his Time. Befides, he firft taught the French Minifters how to practife upon the German Princes, which they have continued to do ever fince ; and he made it his Boaft, that in a Time of full Peace he had added more to the Dominions of France than the greateft of her Generals in Time of War by their Conquefts: And indeed this was fo true, that he brought four of the Electors to become in a Manner dependent upon that Crown, equally to the Difgrace and to the Danger of the Empire. But Reflections of this Kind may lead us too far, and therefore we will put an End to them here, and with them to this Section, that in the next we may carry the Reader into France, and give him a fhort View of a Country, which in Point of Situation, Climate, and Produce, fcarce yields to any in Europe; the Monarchs of which are the lefs excufable for aiming at univerfal Dominion, fince the Poffeffion of it would hardly put more into their Power, than by quietly enjoying their own Territories, and attending only to the Welfare of their Subjects, they might, without Envy, Trouble, or Danger, find within their Reach. But Ambition is a Perfpective that diminifhes Objects that are near, as much as it magnifies thofe at a Diftance, and confequently, fhews both in falfe Lights.

Travels through the Low-Countries, and Germany towards Italy, interfperfed with curious Obfervations, Natural, Topographical, Moral, Phifiological, Philological, ©®o.

By the late Reverend and Learned Mr. J о н н RAy, F. R.S.

I. An Introductory Account of the Autbor and of bis Performance, in order to heewo the Difference between it and otber Books of Travels. 2. A Defcription of Calais, Dunkirk, Gravelin, Newport, and otber Places in the Spanifh Flanders. 3. An Account of Bruges, Ghent, Bruffels, Louvain, and Antwerp, weith occafonal Remarks on wwhatever is fingular or worthy Notice in any of thole Cities. 4. The Same Obfervations continued, with a copious Defrription of the Nature of Foreign Univerfities. 5. A Defcription of Fort Lillo, the City of Middleburgh, Fluhhing, Ter-Veer, Ber-gen-op-Zoom, Breda, Dort, and Rotterdam. 6. Tbe Defcription of Delft, witht the Monumental Eulogies of William I. Prince of Orange, and 'Admiral Van Tromp. 7. A Defrription of Leyden, zvith an Account of the Univerfity, and of the Grove of Sevenhuys, and the Metbod of making Turfs. 8. The great City of Amfterdam defcribed, weith a very exact Account of its Government. 9. The Autbor's Yourney from thence to Utrecht, weith an Account of the remarkable Places in its Neighbourbood. io. Bois-le-Duc, Haumont, Maeftricht, and otber Places, defcribed. II. The Manners, Culfoms, and peculiar Difposition of the Dutch Nation, togetber with the curious Obfervations made upon that Subject by Mr. Barnham, Secretary to the Lord Hollis. 12. A large Defcription of Liege, witt the Monumental Infcription of Sir John Mandeville. I3. An Account of Spa, Limbourg, and Aix la Chapelle, including the Antiquities and Form of Government of the laft mentioned City. 14. An Extract from Dr. Francis Blondel's Obfervations upon tbofe Baths, efteemed the beft Account ever publijbed of them... 15. A Defcription of Juliers, and of the City of Cologne, and an Account of the Government of that Place. 16. Andernach, Coblentz, and many. otber Places defcribed, weith a particular Account of the Country. 17. A Defcription of Mentz, Francfort, Worms, and Frankendahl. 18. An Account of Spire, Manheim, and Heidelberg, including the. Defcription of the Palatinate. I9. Philipsbourg, Strasbourg, Brifac, and the Country adjacent, defcribed. 20. The City and Univerjity of Bazil defcribed, with various Critical and Hiftorical Obfervations tbereon, and on the Places adjacent. 21. Zurich, Schafthauffen, Conftance, and tbe Coomtry about them, defcribed very exactly. 22. An Account of Lindaw, and otber Torens in Bavaria. 23. A Defrription of Munich, Augsbourg, and Donawert. 24. The Country of Anfpach, and the City of Nuremberg, defcribed. 25 . A Defrription of Regensberg or Ratisbon, Straubingen, and Paffau. 26. A large Account of the Country of Auftria, with a particular Defrription of the Capital City of Vienna. 27. An Account of the Autbor's fourney from thence to the Frontiers of Italy.

'IT is imponfibe to have a jurt Notion of the $\mathbb{N}_{2 a}$ ture and Value of the following Travels, without having fome Account of the learned Perron who wrote them, whofe Name will always do Honour to this Nation. His Farher was a Blackjmimb, at Black Nottey in EJfex, where Mr. Ray was born and died. The firft of thefe Events happened the 29 th of November, 1628. He received his firt Education at the Grammar-School at Braintree, and from thence was removed to Cambridge, where he diftinguifhed himelf by his indefatigable Diligence in his Studies, and his particular Turn to Botany, which was the principal Caufe of all his Travels. In 1658, he made the Tour of Wales and the Weft of England; in 166 I , he vifted the North, and examined the beft Part of Scotland ; in 1662, he made another Journey to Cbefer, and from thence through Wales, into Corrwaull, Devonflire, Dorfetthire, Hampphire, Wilfbire, and returned to London through Berkbire. In 1663, he travelled with Mr. Willougbby, Mr. Skippon, and Mr. Bacon, through the Countries which will be mentioned in the following Pages; and after his Return to England, he made many other Journies into different Parts for the Sake of Botanical Obfervations, of which he left behind him very large Accounts, that hitherto remain unpublifhed. In 1677, he returned into his native Country, and built a Houre in the Parifh of Black Notley, where he paffed the Remainder of his Days. He wrote and publihed a great Number of very Iearned and valuable Pieces, which are too well known for us to give any Account of them. He was jutly efteemed one of the honefteft and molt confciencious Men of the Vol, II. Numb, CXIII.

Age in which he lived; he fuffered in his Youth for noo taking the Solemn League and Covenanht, and loft his Living affer the Reftoration, becaufe he would not take the Abjuration Oatb then impofed in relation to that Solemn League and Covenant, which declared it not binding on thofe who did take it ; and thus he was generally efteemed a Nonconformift, though always not only a Member, but a Deacon and Prieft of the Church of England, in which Communion he died, fanuary 17, 1705. His Travels are written in a very peculiar Stile, and in a very fingular Maniner; he is generally copious, and always exatt, but at the fame Time there is hardly any Thing to be met with in his Accounts that hath been recorded by others; fo that though he defrribes the famie Places with many other Writers, yet the Reader will meet with very few or no Repetitions, which was the principal' Reafon of our inferting his Travels in this Collection, which have been always, and fill are very juftly admired, and generally efteemed. One Thing more it is neceffary to obferve, which is this, that we have omitted his Catalogues of Profeffors, the Times and Subjectss of their Lectures in the feveral Univerfities through which he paffed, as being long ago out of Date, and fo tending neither to the Entercainment, Dor Inftruction of the Reader ; and we lave likewife left out his Catalogues of Plants, becaufe foreign to our Purpofe, though they will ale ways add confiderably to the Value of the larger Collection publifhed under his Name, which being grown fcarce, has been reprinted within thefe few Years.
2. We
2. We went in the Packet-Boat April 18 th, 1663. from Dover to Calais, formerly belonging to the Englijh, fince to the Spaniards, and foon after furrendered to the French, in 1598. Its Situation is very advantageous, and the Fortifications of Earth, with a deep Ditch and Ci tadel to the Land-fide. It exceeds Dover in Bignefs, and the Market-place is a very fpacious Square; the Government of the Place being adminiftred by a Major and four Aldermen.

April 2 1. We continued our Journey, by Way of Gravelin to Dunkirk; the firft is a Place but indifferently built and peopled, feated in a watry Country, and enclofed with a good Number of Out-works and broad Ditches: The fecond may be compared for Extent to Cambridge, being very populous and well fortified. It is one of the four Port-Towns of Flanders.

We travelled along the Sea-fhore from thence to Oftend, taking our Way by Neuport: This latt is another of the Flemiff Ports, having a capacious and fecure Harbour, but will admit of no Ships of any great Burthen; the Streets are broad and uniform, but the Houfes are low, and built of Timber. Ostend is another of the Harbours of Flanders, confiderable both for Strength and Conveniency; being capacious and fecure againft the Violence of the Winds, and capable of receiving Ships of confiderable Burthen ; the Buildings are likewife but low here, yet pretty uniform, and the Streets regular and ftreight, being built all at once, after the famous Siege of three Years, before it could be taken by the Spaniards. Sluys, is another Sea-port Town of this Country, but under the Jurifdiction of the United Provinces; its Harbour exceeds all the before-mentioned for its Capacity, but is growing daily fhallower, and will in Time be choaked up.
3. April 24. Having taken us Places in the Track-boat, bound for Bruges, and drawn by Horfes, we came about a League and an half from Oftend, to one of thofe Locks (called Softegni by the Italians) which are genenerally made at a great Declivity of a Fall of Water, to keep up the Water, and thereby render a River navigable, which either wants Water, or has too fteep a Defcent. Such there are in Guildford River in Surry in Ensland. The City of Bruges is about four Leagues diftant from Oftend, well built, and of a great Circumference, having been formerly a very confiderable City for Trade. Here, when we faw Pieces of Linnen faftned to the Ring of the Doors, where Women were lying in; it put us in Mind of what Erafmus had taken Notice of upon this Head in his Colloquies. But what delighted us much, was a certain Engine made ufe of here, for the drawing up of Water in great Quantities for the Ufe of the City. This is perform'd by Means of a Chain, unto which are faftned Cylindrical Buckets of Iron; the Chain being round in form of a Wheel-band, and put over a large Axis, deeply furrowed, from whence hanging down into the Well below it, and being turn'd about by the Axis, the defcending Buckets have their Mouths downward, take up the Water as they pafs through the Well, which afterwards afcending with their Mouths upwards (yet a little inclining from the Chain outward) they carry up to the Axis, to which as foon as they are come, they muft, by Reafon of their Pofition, turn it out into a Trough placed lower than the Axis, by which it is conveyed into a Ciftern, and thence by Pipes through the City. The deep Furrows in the Axis are made to hold up the Buckets, without which, the Chain would be apt to nip back, by Reafon of the Weight of the afcending Buckets. I have feen many of this kind in France, Spain and Italy. This City has but Seven Parifh Churches, but Convents in a great Number: In the Church dedicated to Our Lady, you fee the Monument of Cbarles, firnamed the Hardy, Duke of Burgundy, who (as the French Infcription tells you) was flain in the Battle of Nancy, 1476. and his Body tranflated thence by the Emperor Cbarles V. We faw here a very tall Fellow, and well-fhap'd; from his middle Finger to his Elbow 25 Inches, the Length of his Hand to the Wrift II Inches, his middle Finger 7 Inches,
ane reft of his Limbs pioportionable: He was af terwards fhown in England.

According to Boetius, a Native of this Place certain fubterraneous Woods are digg'd up ten or twelve Ells deep in the Earth, with the Trunks, Boughs, and Leaves fo apparent, that the feveral kinds of them may be eaflly diftinguifh'd. The like I have been inform'd, are found in Friefland and about Groningen, efpecially in the fenny Ground, where they dig for Turfs. In England they are called Mo/s-roood, and are likewife found in moorifh and boggy Grounds : It is very probable, that in moft ancient Times, before all Records, thefe Places were Woods on the Continent, and being overwhelm'd by the Sea, continued under Water, till the Rivers and Floods brought thither fo much Earth and Mudd, as by Degrees cover'd thefe Trees, and rejoined them to the Continent. As for the Seas often encroaching upon the Continent, it is manifeft on our Coaft of Suffolk about Dunzoich, there being very ancient and authentick Records, which mention a certain Wood a Mile and a half to the Eaft of Duniwich, which is now a great Way in the Sea. And, as to what concerns the filling. up of fuch Places, I have fome Reafons to believe, that if not all, at leaft a great Part of the Low-Countrics have been thus gained from the Sea. I remember that Varenius mentions, that at the finking of a Well in Amferdam, of 100 Foot deep, they met with a Floor of Sand and Cockle-Thells, a convincing Argument that the Bottom of the Sea lay there in former Ages, and that in Procefs of Time, thefe hundred Foot of Earth were accumulated and brought thither by fome confiderable Rivers which depofited the Sands its Stream had wafhed from the high Grounds hereabouts. Of this we have divers other Inftances in the Flats about Venice, and in the Camarg, or the Ine of the River Rbofne, near Aiw in Provence, where (as we were credibly informed) the Watch-Tower had been three Times removed nearer to the Sea, within the Memory of fome People, by Reafon of the Acceffion of Land on that Side. Some object concerning the Trees digg'd up in England, that, as they are generally taken for Firs (a Tree that never grows well in England) this Argument will not hold in refpect of our Country; but till we are better convinced that the Trees they fpeak of are really Fir Trees, the Solution of this Objection meets with no great Difficulty.

We travelled April the 27th, by Water, from Bruges to Gbent, a City which ftands on a great Tract of Ground, but fcarce half built. It has only Seven Parifh Churches, but Fifty-five religious Houfe.

From hence we continued our Journey, April the 3oth, to Bruffels, by the Way of Aloft (a fortified Town) the firt being the Capital City of Brabant, and the Refidence of the Governors of the Spanißh Netberlands. The Inhabitants here, as well as in divers other Cities of the Low-Countries, have Dogs to draw their little Wheelbarrows or Carts, in which they fell Fruits and other fmall Commodities.

May 2. We came to Louvain, a City which for its Circuit exceeds that of Gbent by three Rods, but contains, like that, abundance of void Ground, and is but indifferently built; the Town-houfe, which is very Itately, being the only Structure worth mentioning. It has 43 Colleges, but does not now make the Figure it did.
The Students are diftinguih'd by their Habits, according to their Profeffions, the Divines wearing conftantly Gowns and fquare Caps, which the reft are not obliged to, except at publick Exercifes ; yet none are al lowed to wear Swords in the City. In the four Padagogies, Philofophy only is taught by two Profeffors ; the firt is ftiled Primarius, the other Secundarius. The Primarius reads in the Morning, from half an Hour after fix till half an Hour after feven, and from ten to eleven a Clock. The other in the Afternoon, from half an Hour after one, till half an Hour after two ; and from half an Hour after four, till half an Hour after five. They take the Profeffors Lectures ; (which are divided into Dielata or Thefes, and Propofitions, and Amotata,

# Chap. III. through the Low-Countries, Gec. 

or Objections and Solutions) in certain Note-Books. The Gentlemen Students are placed in a peculiar Form, called Scamnum Nobilium. As foon as the Students come to the Univerfity, they muft enter their Names, with the Prefident of their College; every time they are abfent from a Lecture, they pay a Penny, for each Time of Abfence from a publick Exercife, three Pence, and if they mifs when they are to perform a publick Exercife themfelves, twenty Pence. The Profeffors of each Podoogogy chufe every Year twelve of their beft Scholars, and after they have been publickly examined, out of their Number twelve are felected to be Burfes, and to have their Lodgings, Diet and a good Stipend in what College each of them pleafes, and to choofe what Profeffion they like beft, and it is out of thefe commonly the Profeffors are chofen. Their Degrees here are Batcbelor, Liccntiate, and Doctor. After two Years ftanding in Divinity, they may be created Batchelors or Baccalaurei currentes, and at one more Baccalaurei formati, but can't be Licentiates till feven Years after ; thefe immediately after their Creation, are reputed Gentlemen, and have Liberty to choofe a Coat of Arms. Doctors are feldom created till they are 50 Years of Age, unlefs they have given more than ordinary Proof of their Abilities.
May 4. We took a Walk for half a Mile from Lourvain, to take a View of the Duke of Arefchot's Palace, and the Convent of the Celestines adjoining to it. At Louvain, we faw three Things we had not met with before, viz. Storks, Women Porters, and Troopers begging on Horfeback.
May 5. Leaving Lourain, we travell'd to Mecblin (Malines) a very neat Place, being the Seat of an Archbilhop, and Capital of one of the Seventeen Provinvinces under the Name of the Lordfhip of Mecblin, tho' it has not above nine Villages under its Jurifdiction The Inhabitants are very induftrious in their Manufactories; and among the reft, there are three whole Streets full of Tanners. We continued the fame Day our Journey to Antwerp, by Boat, which fome compare to Florence, but exceeds it in my Opinion for Beauty. It is encompars'd with Fortifications of Earth, faced with Free-Stone, of a confiderable Thicknefs, and a broad and deep Ditch, which together, with its Situation in a level Ground, makes it very ftrong The Citadel built by the Duke of Alva, is a Pentagon The Houfes are generally lofty, and of Brick; the Chapel of the Jefuits very rich and ftately; and the Steeple of St. Mary's Church a curious piece of Architecture, as is alfo the Town-houfe. Our Royal Exibange of London, was built after that of Antwerp, but the Copy much exceeds the Original; this City being much fallen from its Traffick fince the vaft Encreafe of Wealth in the United Provinces. Plantin's Printing-Houfe is the beft of that kind I ever met with.
4. May 15. We embark'd on board a fmall Veffel at Lillo Fort, upon the Scbelde, three Leagues below Antwerp, belonging to the United Provinces: Having a favourable Wind and Tide, we made 54 Englijh Miles, and arrived before Sun-fet at Middleburgb, the Capital City of the Province of Zealand: In our Paf fage we faw feveral Sea Calves upon the Sands. This City is feated in the very Center of the Ine of Walcheren (whence it derives its Name) being of a large Compafs, well fortified, populous and wealthy. It has a Channel reaching from the Town through that Part of the Ine which looks towards Antwerp, capable of receiving Ships of great Burthen, which are brought into the very Streets of the City. It has about 20 Churches, the Lutberans, French, Proteftants, Anabaptifts and 7 feres, having alfo the publick Exercife of their religious Worfhip allowed them here. This is one principal Caufe of their Wealth and Trade. We took a Walk thence to Flufbing, about three Englifh, Miles; It is neither fo large nor fo handfomely built as Middleburgh, the Streets being much narrower; but the Convenience and Goodnefs of its Harbour, together with its Strength and Riches, make it very confiderable.

May 19. We took a Walk to the Fer-Veer, about the fame Diftance from Middleburgh to the North; it doth not come near to Flufing in Bignefs, yet has two very good Harbours, and feveral Wharfs and Keys: As we pals'd along, we found the Banks of the Seafhoar covered with a Kind of Matting of Rufhes or Flags, ftaked down as high as the Tide commonly rifes, to prevent their being wafhed away by the Strength of the Current.
May 20. We pars'd in a Boat from Middleburgh to Bergen-op-Zoom; and in our Way went by the ftrong Fort call'd Rammekens, fituate at the Entrance of the Channel leading to Middleburgh, a Place remarkable for its Fortifications, which are ftrengthned by many Half-Moons, Horn-works, $\mathcal{E}^{c}$. and is look'd on as one of the beft Fortreffes in this Country.

May 2 I. We travelled to Breda, eight Hours from Bergen, which makes about 24 Englijh Miles; it being the Cuftom of the Dutch to meafure their Miles by Hours. This Place may ftand in Competition with moft in thofe Parts for its Strength, Bignefs, and Number of Inhabitants, being enclofed by very good Fortifications, and two broad Ditches, one of which is always fill'd with Water. It belongs to the Prince of Orange, whofe Palace is feen here, and there is a good Garrifon in the Town.

May 22. We continued our Journey by the Way of Gertrudenburg (a fmall but weill fortified Place, belonging to the Dutch) to Dort or Dodrecbt, a City rich, populous, large, and for its Buildings, to be compared with Antwerp itfelf; the Streets being very neatly pav'd (as in all other Cities of Holland) with Stone in the middle, and on each Side with a peculiar kind of yellow Brick, fet Edgeways. The Englifa enjoy great Privileges here, and have two Churches, whereas the French have but one. We faw the Room in the Gun-ners-Hall, in which the Synod, held in this City 1611, was affembled, the Seats thereof being ftill preferved.
6. May 23. We pafs'd in one of their Track $\int_{\text {choots }}$ or Boats drawn by Horfes, to Rotterdam in five Houts. This City is of a triangular Figure, and, next to Am Jterdam, vies with all the other Cities of the United Provinces, not excepting Leyden itfelf, having been confiderably augmented of late, by the Addition of many new Streets. Not far from St. Lawe rence's Church, you fee a fmall Houfe, which having given Birth to the learned Erafnuus, his Picture is fec over the Door, with this Diftich on one Side of it much inferior in Merit to its Subject.

## Etibus bis ortus mundum decoravit Erafmus Artibus insenuis, relligione, fide.

And another thus:

## Fatalis feries nobis invidit Erafinum, At Defiderium tollere non potuit.

His Statue in Brals ftands in the great Market-place, with a Book of the fame Metal in his Hand. As the Inhabitants of Rotterdam enjoy the Conveniency of a very good Harbour, fo Ships of great Burchen are carried into the very Streets, and they addict themfelves chiefly to Naval Commerce. Their Civil Government is adminiftred by a Prefident, four Burgermafters, and twenty four Aldermen or Seriators, which they call the Vroet fobap: Thefe continue in theirStations during Life, choofe all the publick Officers out of their own Number, and if any one dies, have the Privilege of choofing another in his Room ; fo that the Govern ment here, as well as in other Cities of the United Provinces, is a Kind of Ariffocracy with this Difference only, that in fome, the Number of thofe who compofe this Vroetfcbap is more, in others lefs.
5. May 25. We went into one of their Trackfoboots, which go every Hour in the Day from hence to Delft, where we arrived in two Hours. This City is alfo very large, with fair Streets and Water-Channels in them
as in moft other Places in Holland. The Stadtboufe is a ftately Structure, and the old and new Churches are very large. In the middle of the Quire of the laft of thefe, you fee the fumptuous Tomb of William Earl of Naffaw, Prince of Orange, who was affaffinated by the Spaniards, as this following Infcription tells you:
D. $O$. $M$.

Et
Sternce memorice
Gulielmi Naflovii,
Supremi Araufionenfium Principis, Patr. Patr.
Qui Belgii fortunis fuas poftbabuit, Et fuorum.
Validifimos exercitus ere plurimum privalo
Bis confcripfit, bis induxit ;
Ordinum aufpiciis Hifpanice tyrannidem propulit:
Verce religionis cultum, avitas patrice leges Revocavit, refituit:
Ipfam deniq; libertatem tantum non affertam Mauritio Principi,
Paterna virtutis beredi filio, Stabiliendam reliquit; Herois vere filii, prudentis, inviczi;
Quem Pbilip. 1I. Hifp. R. ille Europe timor, timuit, Non domuit, non terruit;
Sed empto percuffore fraude, nefando Sustulit.
Fcederat. Belg. Provinc.
Perenne memor. monum.
Fec.
In the Quire of the old Church is the Tomb of the Famous Van Tromp with this Infcription:

## Aterna Menzoric,

2ui Batavos, qui virtutem at verum laborem amas, lese ac luge.
Batave gentis decus, virtutis bellice fulmen bic jacet, qui vivus nunquam jacuit, $\mathcal{E}$ imperatorem ftantem debere mori fuo exemplo docuit; Amor civium, bostium terror, Oceani ftupor, Martinus Harperti Trompius: 2uo nomine plures continentur laudes, quam bic lapis capit fanè aǹguftior; Et cui Scbola Oriens $\mathcal{E}$ Occidens, mare materia triumploorum, Univerfus Orbis theatrum glorice fuit: Prcdonum certa pernicies, commercii falix affertor, familiaritate utilis non vilis, poftquam nautas ac milites,

## Over his Arms was written the following Diftich.

Urbs * Pbobi cineres jaEtat, fed currus \| bonores Ingreditur quoties egrediturque mari.

> * i. e. Delpbi. \| Pbobbi nimirum fou folis.

One Mr. Mere an Apothecary of that City had a fine Musaum of natural and artificial Rarities, and among the reft, the Dens Hippopotami (though I queftion whether there be fuch an Animal) the Horns of the Hircus Bezoardicus, and the Cornua \& Pedes Alcis, call'd the Elk in Englifh; the fame I fuppofe, which in Nere-England and Virginia, is call'd Moofe; a Species of Deer of a tall and large Size, the Horns being without Brow-Antlers, but only a broad Palm of feveral Shags upon it. I faw one of thofe Horns at Lewes, at Mr. Holney's an Apothecary, that weighed twenty five Pounds, and the Skin of an Elk ftuft, in the Great Duke of Florence's Gallery. In the Anatomical Theatre we alfo faw many Rarities, too many to be inferted here. Delft is famous for its Earthen Ware, which is made in great Plenty there, in Imitation of Cbina. The Government is adminitter'd by a Protor or Scbout,
wo Burgomatters, feven Efcherins, and forty Senators, which they alfo call the Vroetfcbap.

May 28. We pafs'd by Water, in lefs than an Hour's Time, to the Hague, being rather a Village than a City, and not enclofed with Walls or any thing elfe; but for the Fairnefs of its Streets and beautiful Houfes, and Number of People, may challenge the Preference before many Cities. The Grove which is near it, is exceeding pleafant, and here I firft faw the Monophyllum grow wild, as I found at Schereling, a Village on the Sea-fide, near the Hague, a Species of Spartum maritisnum, much larger than our Englifh kind. Whillt we were at the Hague, we took the Opportunity of viewing the Burial Place of a certain Lady of Zealand, in the Church of Laufdun, a Village about five or fix Englifh Miles from the Hague, who, as the Infcription tells you, was Margaret the Wife of Herman, Earl of Hennenbergh, and Daughter of Florentius, Earl of Hol land and Zealand, and Sifter to William King of the Romans, \&c. This Lady being about 40 Years of Age, and meeting with a poor Woman that had Twins in her Arms, told her that fhe muft have been difhoneft to her Husband, as not believing that two Children could be begot at once; at which the poor Woman being highly concerned, wifh'd that fhe might bring forth as many Children at a Birth, as there were Days in the Year; which was fulfilled in 1276 , when at one Birth the was brought to Bed of 365 Children of both Sexes, who were baptiz'd by Guido, Suffragan of Utrecht, in two Brafs Bafons, the Sons having the Name of Fobn, and the Daughters that of Elizabeth given them; and foon after died all in one Day, as did alfo the Mother, and were buried in this Church of the Village of Lanfdun. This Infcription is to be feen in Latin, over the two Bafons, in which they fay, thefe Children were baptiz'd, and beneath it this Diftich:

## E. tibi monfrofum nimis \& memorabile factum, Quale nec à mundi conditione datum.

7. May 3r. We went in one of their Paffage-boats in three Hours from hence to Leyden, being, next to Amflerdam, the largeft City in Holland. The great Church of St. Peter contains many Monuments of learned Men, and in the French Church is among others, that of 7ofeph Scaliger. The Schools for publick Lectures is a Structure of three Stories high, of Brick, having two Rooms on a Floor; the two lower being affign'd for Divinity and Phyfick; middlemoft for Law and Philofophy; and the uppermoft contains the Printing-Houfe, fo well known by the Name of Officina Elzeviriana. Every Year a Catalogue is printed in Latin, and affixed to the School-Gates, containing the Names of the Profeffors, and what publick Lecture each of them is to keep the Year following. Behind the School-Yard is the Phyfick-Garden, which enclofes about an Acre of Ground in the Square, and has a confiderable Number of exotick Plants; the Catalogues of which are alfo frequently publifhed here. They have no more than two Colleges here, in the Nature of Hofpitals, for the Suftinence of poor Scholars, the reft of the Students living upon their own Purfe, without any Gowns or Caps, but walk the Streets with their Swords, and appear in the Schools, and perform their Exercifes in them, with their Heads uncover'd. Thofe that have a Mind to be Members of the Univerfity, apply themfelves to the ReEZor Magnificus (refembling the ViceChancellor of our Univerfity) who enters them into the Book, and gives them a Seal, by which they are freed from paying of Excife, yet under a certain Limitation. Befides the publick Lectures, each of the Profeffors allot certain Hours for reading in private (which they call Collegia) for which the Auditors pay a Gratuity. Degrees (of which they have only thofe of Master of Arts and Doctors) are conferr'd here, without the leaft refpect to the ftanding of the Candidates. He that is to commence in any Faculty, propofes only certain Thefes upon a felected Subject in Print, which he is obliged to maintain againft all Opponents, every one
having

## Chap. II1. through the Low-Countries, $\mathscr{C}^{9} C$.

having the Liberty (after Leave ask'd from the Profeffor that prefides) to oppofe the Candidate. Each of thefe Profeffors have a Salary of 200 and 300 l . per Annum allowed them. Befides the Univerfity, there is a great Manufacture of Woollen Cloth fettled in this City. For the reft, the Houfes are very well built, with very fteep Roofs on Purpofe to caft the Rain Water into Cifterns, wherein it is preferved for Uife. Its Streets are for the moft part very, broad, large, and ftreight, furnifh'd with Water Channels. In the Night time certain Watchmen go about the Streets, and making a Noife with a Rapper, tell every Hour what Time of Night it is. In the anatomical Theatre, we faw many Skeletons of Men and Beafts, and among other Rarities, a Box, containing the Skeleton of the Head of an Indinn Creature, half a Stag's, half a Hog'shead; many Leavc of the Betble, not unlike the great Satyrion Leaf; an Ant-Eear; and in the Library, the Manufcripts of Fofeph Scaliger. Leyden is enclofed with a good Earth Wall, and a Ditch, which being furrounded by Rows of Lime-Trees, make very pleafant Walks.

Before we parted from Leyden, we took a Turn to a Village call'd Sevenbuys, about four Leagues thence, to view a very pleafant Grove near it, excellently well ftor'd with wild Fowl, fuch as Scbolfers, call'd Sbags in England, being not unlike Cormorants, but fomewhat Iefs; we were much furprifed to fee them build upon Trees. Lepelaers, call'd Platere and Pellicani by Gefner, fome call them Spoonbills in England. Quacks, call'd Nigbt-Ravens by the Germans, becaufe they always make a Noife in the Night Time, and Reyers or Herons. Befides which this Wood affords valt Numbers of Ravens, Wood-Pidgeons and Turtle Doves. By the Way, we took Notice of Lyfmachia lutea flore globofo, and the Arum five Dracunculus growing in the Ditches. All the Grounds between this Village and Leyden, are Jow, fenny, and full of Pools. We faw the Country People hereabouts bufied in making of Turf: They rake with a Kind of Hoop-net, faftened to a Pole, the Mud up from the Bottom of a ftanding Pool, wherewith having laden a Boat, they throw this Mud with long Shovels on an even Piece of Ground, making of it a Bed of an equal Bignefs as near as they can guefs; this, after it has lain long enough to dry, they tread with pieces of Boards faftned to their Feet, to make it clofe and finooth; then they cut the whole Bed with a Spade into Pieces of the Bignefs of a Brick, and pile them up in Stacks or Ranks, fo that one may fee through them, to give a free Paffage to the Air and Wind, to dry them further, and afterwards are laid up in Barns, the Sides of which are made up with wooden Bars at fome Diftance from one another, to make them fir for Firing.
Gune 6. We continued our Journey in one of the Boats that go from this Place to Harlem, where we arrived in four Hours; being a populous, ftrong and pleafant City; provided with very fair Channels in feveral of its Streets: It has moft delightful natural Groves on that Side where it looks towards Leyden. In the Garden of the Prince's Houfe is a SummerHoufe, where you fee the Pifture of Lawerence Cofer, in a furr'd Gown, holding the Letter A in his Hand, with this Infcription over it:
M. S. Viro Confulari, Laurentio Coftero Harlemenfi alteri Cadmo, छ Artis Typographice circa Annum Domini MCCCCXXXX, Inventori primo.

The Statue and Infrription which was on his Houfe in the Market-place, are no more to be feen, the Houfe being fold. The chief Trade in this City is in Weaving of Silks, Damasks, Velvets, Sattins, Linen Cloths, Ejc. The Sea Coaft near Harlem, and all Nortb Holland, are covered againft the Sea with green Downs.
8. Juure 8. We went hence in two Hours by Boat to Amsferdam, where we met at the Gate no more than two Soldiers, one without, the other within: This City, as it is the biggeft of all the Low-Countries, fo for Riches Vol. il. Numb. 1 I 3 .
and Traffick may compare with any in Europer. At that Time I look'd upon the Extent of it to be the fame with Venice, and confequently lefs by one half than London, but as they were then bufied in enclofing a very large Tract of Ground with a ftrong Wall and deep Ditch (which I hear is fince fill'd up with fately Houfes) it will bid fair for being numbered among thofe of the firft Rank for Bignefs. The chief publick Buildings here are, the Stadtboufe, a moft magnificent Square Pile of Buildings, facd without with Free-ftone; the Foundation of which, as they told us, coft $100000 \%$. Sterling, the Structure being built upon I. 3659 great Piles or Trees driven into the Ground. The Exchange a large oblong Square, frequented by vaft Numibers of all Nations. The Admirally-Houfe, a noble Structure, with fair Rooms. The Magazine and various Hofpitals and Houjes of Correezion. In this City is alfo a publick School, in which are kept Lectures in feveral Faculties, by fix Profentors, efpecially in the Summer Time. The feres, who are richer here than in any other Place, amount to twenty thoufand: In this City are alfo tolerated moft other Religions (not excepting the Roman Calbolick) but none, except thofe of the eftablinh'd Religion, are permitted to erect any Steeples, or to make ufe of Bells for the affembling of the Congregation. In that Itately Structure, called the New Cburch, you fee a very fair Monument, erected to the Memory of Fobn van Galen, with this Infcription:

## Generofifimo Heroi fobanni à Galen $E \int J e n / 2$

2 2ui ob res fortiter $\S f$ feliciter gefas, fexies uno anno Dunkirkanorum predalorum navem captam, © à Barbaris opina fpolia reportata, Ordinum Claff in Mari Mediterraneo Prefectus, memorabili pralio ad Livornam, Deo auxiliante, Anglorum navibus captis, fugatis, incendio et fubmerfione deletis, commercium cum dizti maris accolis refiturit, idibus Martii Anno M.DC.LIII. Et uno pede trauncatus, nono post vietoriand die, annos natus X LVIII. obiit, ut in Jecula per gloriam viveret.

Illuftriff. \& Prepotent. Federati Belgii
Ordinum decreto,
Nob. छ Pot. Senatus Arcbitbalaf:
Qui ef Amfelodami
M. $H$. $\quad P$.

The Pulpit of this Church is valued at eten thoufand Pounds sterling, and there are twenty four eftablifhed Minifters belonging to this City.

The Government is adminifter'd here by the Pretor or Scbout, four Burgomafters, nine Efcbevins, and thirty fix Counfellors or Senators, which they call the $V$ roet $f$ chap. The Prator has the firft Place upon the Bench of the Efchevins: He is elected by the Burgomafers (with the Approbation of the Vroet (cbap) for three Years, bur may be continued in his Office from Time to Time: He is not eligible to this Dignity unlefs he has been a Freeman feven Years. His Bufinefs is to make Laws in Conjunction with the Burgomafters and E/chevins, to apprehend and imprifon Criminals, and he prefides as Chief Juftice in civil as well as criminal Caufes; and with the Approbation of the Burgomafers and Efchevins, determines all Matters before them, and pronounces Sentence againft Criminals, and fees it put in Execution. In other Cities, the Prolor's Concern reaches no farther than to apprehend and profecute Malefactors. The whole Number of Burgomafters confifts of twelve, but four only are regent at a Time, which is a Year: They muft at the Time of their Election be forty Years of Age at leaft. For every Year, the Burgomafiers that have been EJcbevins, chufe by the Majority of Votes, three out of the twelve to be Regents, which three felect one out of the four that reigned the Year before, a fourth, who tenders them the Oath, and officiates as Prefident the firft three Months. The remaining eight Burgomafers are employed in other great Of fices, fuch as Treafurers, Mafters of Hofpitals, and one is fent in Quality of Deputy to the Affembly of the States at the Hogue, one for a Member of the Council
of the Admiralty of Amferdam, \&c. The Office of
the Burgomaflers Regent is, to take Care of the Gothe Burgomafers Regent is, to take Care of the Goment and Peace of the whole Differences between private Perfons, to be Surveyors of the Fortifications, Streets, and publick Buildings. If one of the twelve Burgomafers happen to die, it belongs to the Vroetfobap to chufe another. When the Ef cbevins are to be elected, the Vroetcicap propofes fourteen Perfons, out of which the Burgomaffers feleat feven; but one Condition is, that they muft not be near of Kin either to the Scbout, or any of the Burgomafers Regent. Unto thofe feven the new and old Burgomafters, together with the new elected Efchevins, by the Majority of Voices, add two out of the Number of the Ejcbevins chofen the laft Year, which two for that Year have the firft and fecond Rank among the Efcbevins, who are Judges both in civil and criminal Caufes. The Council of thirty fix, or Vroetfcbap, continue in their Places for Life, and as often as one of that College dies, the reft chufe another in his Place, but no body under twenty five Years of Age is admitted. They not only have the Power of prefenting the fourteen Perfons out of whom the Efcbevins are chofen, but are alfo called together by the Burgomafiers, when any Thing of great Moment is to be debated or refolved upon; fo that the fupreme Power feems to be lodged in them. Not many Years ago, according to the Conftitution of this City, no Body could be Burgomafter, unlefs his Father had been a Freeman a Year and fix Weeks before he was born ; but now any who will pay five hundred Gilders, may be made a Freeman, and after feven Years is qualified to be a Burgomafer; but fuch as do not afpire to this Dignity, may be made Free for fifty Gilders. The City Trained Bands confift of fifty four Companies, divided into four Regiments, of eleven Companies each, one hundred and fifty Men in a Company, which amounted to 8250 . Two Comipanies are drawn out every Night to guard the Ciry, which makes, them fit for Service.
9. Fune the 16 th , we profecuted our Journey to Utrecht by the ordinary Paflage-boat, where we arrived in fix Hours. This is the capital City of the Province of the fame Name; a large Place, furrounded with a good earthen Wall and deep Ditch; but its Streets are not comparable for Neatnefs or Cleannefs to thofe of the Province of Holland, though the Water-channels are alfo conveyed through feveral Screets. The Univerficy here was eftablifhed by the States General in 1636 ; the Profeflors of which, as well as thofe of Leyden, publifh a yearly printed Catalogue of their Names and iniended Leetures. For the Adminiftration of the Government, they have an Upper and Lower Scbout and four Burgomafers, two of whom are new chofen every Year.
Hence we paffed by Boat to Vianien, refembling the Mint, a Place for Refuge belonging to the Lord of Brederode. We faw here a certain Engine for the Weaving of Tape by the Motion of many Shuttles at a Time, at once curious, expeditious and profitable.
We continued our Journey the fame Day 'thro' Leerdam, (about three Hours diftant from Vianen) and the 19th of $\begin{gathered}\text { fune, through Afperen, below which we croffed }\end{gathered}$ the River Wale or Vabalis in a Ferry-boat, and came to a very pleafant walled Town called Bommel, feated in an Inand ;'a fmall Diftance thence we "ferried over the Maefe, and pafing in Sight of two ftrong Forts near the River fide, one called Crevecreur, and the other Engelen, came in four Hours to Hertogenbocch, Sylva Ducis, or Bois-le-duc, as the Frencb call it, and by which Name it is generally known. As this City is feated upon a Kind of a Hill, furrounded with Fens of a large Extent; the greateft Part of which was then (and is generally) covered with Water, we paffed upon Caufeways through a Moat, and over two Draw-bridges, before we entred the Town. Befides which, being ftengthened by a good Wall and deep- Ditch; and defended by a regular Citadel, this, with its Situation, feems to render it impregniable, and yet it has been taken in the late Wars, In the Choir of the Church of St. Yobn, are to be feen the Arms of many of the Knights of the Colden Fleece, and over the upper Stalls
an Infcription in Frencb, importing, That Pbilip, firnamed the Good, Duke of Burgundy, Lorrain, and, Bra bant, had, in 1429, inflituted in the City of Bruges, an Order of Honourable Knights, unto whom he had given the Name of Knigbts of the Golden Flecce, limiting their Number to twenty four, their Chief to be the Duke of Burgundy; or Supreme Lord of the Low Countries for the Time being. The Houfes here are for the moft Part covered with Boards on the Oatfide ; the Marfhes about it produce great Abundance of Wild-fowl, and the fandy gravelly Banks the Herniaria birfuta.
10. Fune the 20th, we travelled in a Kind of Waggon in fix Hours to Eindboven, and thence in four Hours more to Houmont, both fmall but walled Towns, the laft of which belongs to the Bifhop of Liege.
Fune the 2 ift , we travelled for three Hours through Heaths to Bry, a fmall walled Tơwn, and afterwards afcending the Hills, had a full View of Maefricbt, and the River Maefe, where we arrived that Evening, after feven Hours riding. It is a ftrong well fortified City, Itrenthened with very good Out-works. The Magiftracy here are half Protestents and half Romonits, and of the laft are the greateft Part of the Inhabitants ; though the Dutch Proteftants have alfo three Churches, and the Englifh and Frencb one, which they ufe by Turns. The Catbolicks have twenty Convents here, and are allowed the publick Exercife of their Religion. Moft of the old Houfes are of the fame Fabrick with thofe of Hertogenbofob, but many new Brick Houfes have been built of late Years. They were then alfo building a very ftately fquare Structure, intended for their Townhoufe. The River Maefe, which divides the City into two Parts, is joined to both by a large Stone Bridge, fultained by nine Arches, and the leffer Part on the other Side is called the Wick, being not inferior in Strength to the other Part.
As to what relates to the common People of Holland, it muft be confè $\mathrm{s}^{\prime} \mathrm{d}$ they are furly and ill bred, which is the Reafon that no Strangers that know the Country will deal with Inn-keepers, Waggoners,' Boatmen, Porters, and fuch-like, without bargaining before-hand. The Men are generally very large boned and bulky, and thefe, as well as the Women, are conftantly eating as they travel. At their common Entertainments, a Sallad leads the Van, a Kind of ftew'd Meat is the main Part of the Dinner, and it concludes with fome boil'd and butter'd Herbs. The chief Food of the ordinary People is Cod-fifh and pickled Herring, which they cure better than the Englifh. In the publick Houfes you commonly meet with fmoaked Beef, cut in thin Slices, good Bread and Butter, and four or five Sorts of Cheefes. Their ftrong Drink (they call it Dick Beer, and very properly, for it is feldom clear) is fold for three Pence a Quart; the Dearnefs of which arifes partly from the heavy Excife laid upon this, as well as all other Provifions; partly from the Plenty of Money in thofe Provinces, which makes Land fold here at between thirty and forty Years Purchafe. Moft of their Beds are made clofe like Cabins, narrow and fhort, and yet you pay an exceffive Rate for them in the Inns. Their Houres are kept exceeding neat, even to the Outfide of Pots and Pot-hooks, nay, the very Tiles of the Pent-houfes; yet has it been obfervable, that in dreffing their Meats, they are not fo clean and curious as the Englifb. They ufe Organs in moft of their Churches, collect Money for the Poor in Sermon-time, with a Purfe faftened to a Scick, and a Bill hanging to it, The Pfalms to be fung are fet down upon Slates, hung upon the Walls of the Church for that Purpofe. They feldom travel on Horfeback, but generally in Waggons, fome cover'd, others not, but mott by Water; and this on Suridays as well as other Days. Beggars are very feldom feen in Holland, notwithtanding the vaft Multitude of People, this Province containing no lefs than twenty four walled Towns and Cities; fix of which (befides Amifterdom) are bigger than any in England, except London. And upon this Occafion, I cannot durt give you the Heads of fome Obfervations made by Financis Barabam; Efq; who was in Holland, with my

Eord

## Chap. III. ibrough the Low-Countries, ©ic. <br> of the Miners, Labours, who come here to get Stone,

Lord Ambaffadour Hollis, which have been efteemed fenfible and curious.
ir. " There is, fays he, a continual Watch kept * on the Steeples in all the Cities of the United Pro" vinces: The Differences arifing among Boatfmen and " Waggoners, who ihall go firtt, are decided by caft" ing a Die. They gather the Rain Water by Pipes "f from the Houfes, and preferve it in Citterns, as they "do in Venice. The Dutch ftand much in Awe of "their Superiors, becaufe Juftice is done there without "Delay. They are ftrangely addicted to Novelties, " and mightily taken with any thing that is gay. They " are extremely greedy of Profit, yet very jutt in their " Bargains. The Knowledge how to get Money, is "what they efteem above all other Things, and fcaice "c ever apply themfelves to any Thing befides that and " Politicks, in which they are generally well verfed ; "the meaneft of them being qualified by his Birth"right to become a Burgomafter. They fight brave" ly at Sea, though naturally they are of a phlegmatick "Temper, and confequently not fit for brave Exploits
" by Land. They allow of Liberty of Religion, but
" keep a watchful Eye over them to fecure the publick
"Peace; which is the Reafon that it is more difficult
" to hatch a Plot here, than in other Parts; though at
"the fame Time, the People fay and print almoft what "t they pleafe, the fame being included within the ge" neral Notion of Liberty. Moft of them have little "Senfe of Honour or Generofity, being guiided merely "by the Profpect of Advantage or Intereft. They "don't profecute Murder with fo much Violence as "Theft. The Dutch are always careful to folemnize " any great Action done by them, with all the publick "Marks of Honour and Rejoicings, to imprint into " the common People an Idea of the Ability and Wif"dom of their Governors:; which is the Reafon they "f frequently ereet Monuments to thofe who have de" ferved well of the Common-wealth. The ordinary " Sort of Women (if not all) feem to be inore pleafed "s with obfcene Difcourfes than the Englifh or French; "they have alfo the Reputation of making not fo fe"vere an Account of Chaftity before Marriage, but of
" being very faithful to their Husbands. Even the bet" ter Sort of Women are not backward of admitting " Men, though of very little Acquaintance, to a Sa-C " lute; and Kiffing paffes current here, not only at " Parting and Returns, but alfo in Frolicks and fami" liar Converfation. Mof Women are let into all " the Actions of their Husbands, who feldom under" take any thing without their Knowledge and Ap" probation. They have abundance of Chiming in " their Cities, and valt Multitudes of Storks building "their Nefts upon the Tops of the Chimneys. This " however is not only obfervable in Holland, but alfo at "Lourain, and in orher Towns of the King of Spain's "Dominions, as well as in feveral Places belonging to " fovereign Princes in Germany, which contradicts that "commonly received Opinion, that thofe Birds never " build their Nefts but in Common-wealths."
Fune the 22 d , We went from Maeftricht to Liege, four Leagues diftant. As we paffed up the Hills, we obferved at fome Diftance from Maestricbt an arched Paffage into a Vault, but being by the wet Seafon prevented from taking a View of it ourfelves, I will here give you the Senfe of our Royal Society concerning it. This Quarry, fay they, lies within a Cannon-fhot of Maestricht, being cover'd with twenty five Fathoms of Rock or Earth; its Length along the River towards Liege being of fome Miles, and having one Entry near the River Side, Carts can, with a great deal of Eafe, unload the Stones upon the Banks of the River, the Qaarry within lying parallel to the Horizon or Level, and very little elevated above the River. After you have entred the Vault with Torches, it affords a moft furprizing Profpect to the Beholders, who fee fome thoufands of fquare Pillars in fpacious level Walks, generally twenty Foot (and fome more) high, fo regularly wrought, that one would imagine that the whole was defigned for one of the fubterraneous Palaces of the ancient Roman Emperors; whereas the whole is no more than the Effect

This noble Quarry has another remarkable Ule, ferving People for a Retreating-place when Armies are marching that Way, being able to hold forty thoufand Merto who by the many Pillars and Labyrinths, are able to defend themfelves with their Fire-arms, againft any Power that may artack them.

Further upon the Downs, we obferved three or four more of thofe Paffages, and came before Night to Liege, a City, though very large, yet for Beauty and Riches not comparable to any of thofe of Frolland ; the Houres being cover'd on the Sides either with Boards or Clay, and the Streets narrow and very ill kept. The River Maefe divides itfelf, and runs through the Town in two or three Branches, which are joined by feveral Bridges. It is however very pleafantly fituated, but furrounded with Hills, on one of which ftands the Citadel, the Sides of thofe Hills cover'd with ${ }^{-}$Orchards and Vineyards: Provifions are very cheap here, and the People very courteous: The Women are not fo fair as in Holland, and do a great deal of Drudgery. They have Coal-pits near the Town, fome of which are an hundred and fifty Yards deep: The Cathedral Church dedicated to St. Lambert, has fixty Canons or Prebendaries, who mun be all of noble Extraction, except ,that they admit a few Men of Learning among them. Thefe elect the Bithop of Liege. Befides thefe, there belongs to it twelve Canonici mediocres, and twelve more tiled minores five parvoe Mensa. The three States of this Diocefe, compofed of the Clergy, Gentry; and Commons, have' a confiderable Share in the Government, no Tax being to be impofed, or orher Matters of great Weight tranfacted without their Concurrence and Approbation.
This City is in a Manner filled up with Religious Houfes : In the Englijh Jefuits College Garden we faw feveral. Dials, the Invention of the ingenious Francifous Linus; and in the Cloifter of the Williamites, without the Walls, the Tomb-ftone of our Countryman Sir Yobn Mandeville, with this Infcription:

## HIC JACET VIR NOBILIS DNS JOES DEMANDEVILLE AL': DICTUS AD BARBAM MILES

 DNS DE CAPDI NATUS DE ANGLIA, MEDICIN, PROFESSOR, DEVOTISSIMUS ORATOR, ET BONORUM LARGISSIMUS PAUPERIBUS EROGATOR, QUI TOTO QUASI ORBE LUSTRATO, LEODII DIEM VITE SUE CLAUSIT EXTREMUM ANNO DNI $\mathrm{M}^{\circ}$. $\mathrm{CCC}^{\circ}$. LXXI . MENSIS NOVEMBRIS DIE XVII.On the fame Tomb-ftone was alfo to be feen the Figure of an armed Man treading on a Lion, with a forked Beard, and his Hand lift upwards in a Bieffing Pofture, with thefe Words going out of his Mouth, Vos ki palfeis for mi, pour lismour Deiu prcyes por mi ; which being old French, fignifies, You that pafs over sne, for the Love of God pray for me.
13. We left Liege the 26th of func, and travelling for feven Hours over hilly and rocky Places, arrived at the Spina, a pleafant little wall'd Place, fituate in a deep Valley. It is very well built, by reafon of the Concourfe of many Strangers here, for the drinking of Mineral Waters, of which there are four feveral Springs.

We purfued our Journey, fune the 28 dh , to $A k \mathrm{en}$, through Limburgb, three Hours from the Spàa, a Place of great Strength for its Situation, being fituate on the Side of a very difficult Accefs, but it has but one Street, and the Houfes only of Wood. Aken, or Aix la Cbapelle, as the Frencb call it, to diftinguifh it from Ais in Provence, is a large and ftrong Place, and a free Imperial City, being Grengthened by a double Wall, and adorned with no lefs than thirty Churches. The Chair wherein the Emperor fits when he is crowned here, has its Sides of Ivory, and they fay, that the Bottom is made of a Piece of Wood belonging to Noib's Ark. The Government of this City is adminiftred by a Major, two Burgomaflers, fourteen Efchevins, and one hundred and twenty Counfellors. The Major has the

Prefidence

Prefidence among the Elcheivins, is put in by the Duke of $\mathfrak{F u l i e r s}$, and continues in his Place quam diu fe bene gefferit. The Burgomasters are elected by the Majority of the Companies of the City, and adminifter this Office two Years, a new one being chofen, every Year. The Efcherins officiate in Quality of Judges, during Life, another being chofen in the Place of him who dies. The Counfellors are alfo chofen by the feveral Companies (of which there are fourteen or fifteen). The Territories belonging to this City are very large, comprehending near two hundred Villages, enclofed on all Sides with Mountains; which producing abundance of Lapis Calaminaris, this is employed here in great Quantity to turn Copper into Brafs. But what renders this Town moft famous, are the Mineral bot Baths, fome of which are within, the reft without the Town, at a Village called Borcet; thefe latter, both in Heat, and in Abundance of Water, much exceed ours in England, being fo hot, that one may boil an Egg in them. Their Tafte was faltifh, and they were ufed both inwardly and outwardly. One Day as we were walking to Borcet, we faw a certain Pool whofe Waters were lukewarm, by reafon of a fmall Stream of one of the Springs of the hot Baths paffing through it ; they told us that it bred very good Fifh, but that they were obliged to put them into cold Water for two Months before they eat them. Of the Nature, different Kinds, Ingredients, and Ufes of thofe Baths, both within and without the City, Francis Blondel, M. D. has treated admirably, as well as at large, in his Epiftolary Difcourfe, publifhed in French, of which the Subftance follows :

## 14. An Extrait from Dr. Francis Blondel's Difcourfe concerning the Batbs of Aix la Chapelle.

Not to trouble the Reader with the various Opinions of ancient and modern Philofophers concerning the Caufe of the actual Heat of natural Baths, our Author's Account thereof in Reference to thefe of Aken is in Brief as follows.
Thefe Waters (faith he) paffing through a certain argillaceous Earth, pregnant with a kind of nitrous Salt, almoft of the fame Tafte with the Waters of the Baths (which is to be found in good Quantity in the Lands about this City) charge themfelves therewith, and fo become a Menstruum capable of diffolving fuch mineral Metals as are contained in the Veins of the Earth thro' which they run. This Solution he conceives is made by piercing and corroding the Minerals after the fame Manner as Spirit of Nitre and other Aque Stygice are wont to do, which ufually caufes a great Ebullition and Heat. So then the actual Heat of chefe Springs proceeds from the Mixture and Encounter of their Waters (impregnated as is before intimated) with the mineral and metallic Subftances, Juices, and Spirits contained in the Veins of the Earth through which they have their Courfe. The nitrous Salt beforementioned may perhaps be the Hermetic Salt of Monficur Rochas, or the Efurine Salt of Helmont: Now the Water once heated, being contained in the Vaults of the Mountains as in a Stove, continues hot a long Time, the Eruption thereof being, it is likely, at a good Diftance from the Place where it did at firft conceive its Heat.

At the long Continuance and Duration of the Heat of thefe Waters, for fo many Ages paft, no Man need Wonder: For Firft, It is generally taken for granted, that all Sorts of Mines grow and increale purely by Addition, converting the more refined, fubtile part of the Earth, and which hath a feminal Difpofition to fuch a Change, into their own Nature. Secondly, The nitrous Salts, the firft Ingredients of thefe Waters, are alfo reftored in their matrices, after the fame Manner as we fee it happens in the Coput mortuum of Vitriol, which though the Vitriol hath been once or twice extracted from it, will, by being expofed to the Air, again recover more and more; whether it be by Converfion of its Matrix into its own Nature, by a kind of Aggeneration and Tranfmutation, or by imbibing and retaining thofe
fubtile and volatile faline Exhalations, which continually afcend out of the Earth, or wander up and dowa in the Air.

As for the Ingredients of thefe hot Waters in general, he faith, that befides a threefold Salt-nitre fixed, volatile, and mingled, or Armoniack, they partake of a fixed and volatile Sulpbur, a Manna of Allum, fome Vitriol, divers Metals, as Copper and Iron, a very. little volatile Earth, a certain Argilla, Sand and Calaminary Flowers. That they participate of Copper he provess in that, the Territory of Aken abounds in divers Places with Lapis Calaminaris, which is, as it were, the Aliment of Copper: For being mingled in the Furnaces with red Copper, it augments it by the Addition of thirty Pound Weight per Cent. and gives it a yellow or golden Tinc. ture. As for Iron, the many ferrugineous Springs, that are found within and without the City, are an evident Teftimony that there are Plenty of Iron Mines hereabout ; and therefore moft likely it is, if not certain, that thefe hot Waters charge themfelves with that Metal. That they contain a three-fold nitrous Salt, he proves from their natural Evaporations. Firft, The fixed is found in the Wells, of Borcet, and the Emperor, chryftallized into fmall fhining Square Grains, mingled with a litte Flower of Sulphur, fticking to the Covers of thote Wells, which have not been of a long time opened. It may be alfo found in the chemical Examination of the Waters by Evaporation or Diftillation. Secondly, The volatile is carried up by the volatile-Sulphur, as it is hereafter fhew'd in the Defcription of the firtt Sort of thefe Baths. Thirdly, The Mingled, or Armoniac, is daily feen in all the Waters of the City, and of Borcet, fwimming in little Cylinders on the Surface of the Waters, and this is that Cream, or Scum, which is ordinarily found upon the Waters in the Bafons. That they contain the reft of the beforementioned Ingredients, fhall be fhewn in the Defcription of the particular Baths: The Waters where of our Author reduces to four Sorts.
Firft, Nitro-fulphureous, fuch are thofe of the Emperor's Bath, the little Bath, and St. Quirin's Bath. Secondly, Sulphureo-nitrous, fuch are thofe of Compus, or the Poor-men's Bath, the Rofe, and St. Cornelius's Bath. Tbirdly, Sulphureo-nitro-vitriolic, fuch is another Bath of the fame St. Cornelius. Fourtbly, Salfo-alumino-nitrous, viz. thofe of Borcet, a Village adjoining to Aken.

Firft, As for the Nitro fulphureous kind, thole of the Emperor's Bath, and the little Bath, are but one Water, coming from the fame Source, and collected in one and the fame Well.: That Part referved in the Emperor's Bath is divided into five great Bafons, or Receptacles: That in the little Bath into three. All which might be renewed daily, if Time would permit, the Spring is fo copious. But by reafon of the exceffive Heat of the Waters, it is neceffary oftentimes that they ftand in the Bafon fixteen or eighteen Hours to cool, before they be fit for the Patient's Ufe. Notwithftanding when they are come to a juft Temper, one may bathe in in them, and endure them a long time, as thofe of Borcet, without any Inconvenience. This Source hath this Quality peculiar to itfelf, that in its Well one may find diftinctly a Quantity of Nitre coagulated, and good Plenty of Flowers of Sulpbur very light, purely fine, and well fcented. The Nitre fticks to the Sides of the Well, and fo do the Flowers of Sulpbur above that: The which fometimes, whether by the extraordinary boiling up of the Fountain, or by the Impetuofity of the afcending Vapours, or by their own Weight are broken off, and fall back into the Source; from whence being no more diffolved by the Water, they come forth intire into the Bafons. If you take of this Water, and let it ftand in a veffel certain Days, it will precipitate of thefe yellow Flowers of Sulpbur, to the Bottom of the Veffel. Befides thefe volatile Flowers, thefe Waters contain alfo fix'd Flowers of Sulpbur, a comperent Quantity of Nitre both volatile, fix' $d$, and $m i x^{\prime} d$, or Armoniac, a little Allum, lefs Vitriol, the Spirits and Principles of Copper and Iron, a very littie volatile Earth, Argilla and Sand: No Bitumen, for let them

# Chap. III. through the LOW-COUNTRIES, \& C C. 

ftand as long as you pleafe, you thall find no fatty Subfance fwimming upon them, as upon the Spare Waters. The volatile Sulpbur evaporates fo ftrongly, that it carries up with it a Quantity of Nitre, as one may fee after the Solution of the Vapours, congealed and frozen in Winter time, when it remains incorporated upon the Walls, in the Places where the Icicles were. Thefe Waters are in Weight equal to thofe of the Spare; coming frefh out of the Source, they appear whitifh, or bluifh, but having ftood a-while and grown cold, greenifh. They-are very pure, and leave no kind of Mud, or Lutum thermale, behind them; in cooling they yield a fmall Scum or Cream of Nitre. Far from their Source, béing wrought upon by the Air, they let fall a little whitifh Sediment as thofe of Borcet do a blackifh one. They preferve the Colour of Rofes put into them, and caufe them not to wither, as doth common Water. The Vapours afcending from them make Silver Plate black, as thofe of Bercet make it white. The other Source of St. Quirin's Bath differs from thefe in no other Refpect, fave that the Water thereof is cooler. It is referved in three Bafons. In this Well you find neither Sulpbur nor Salt-petre fticking to the Sides, probably becaufe it is open or uncovered.
II. The fecond, or fulpbureo-nitrous Sort of Compus, \&cc. though they fpring up in feveral Places, and have different Wells, yet is the Nature of them all, their Compofition, and mineral Ingredients the fame. The Poor-Men's Bath hath one great Bafon or Receptacle, the Rofe Bath four, whereof two only are ufed, and St. Cornelius's Bath of this Mine two. Thefe Waters are fit for ufe at all Seafons, being of a temperate Hear, more efficacious, and of greater Force in their Operations, than the firft Sort; they weigh two per Cent. more than they, and are of a ftronger Scent. In thefe is never found any Sulpbur condenfed, no not in their Wells, though they be covered: But when they are emptied, and new Water let in (as in the Rofe Bath) the Water running down along the Walls and Seats, into the Bottoms of the Bafons or Confervatories, the external Air prevailing upon it, fo fpread, and in fuch little Quantity arrefts, fixes and condenfes its Sulpbur all along the faid Walls and Seats, refrefhing the Eyes of the Spectators with its Beauty and Luftre. But the Water rifing in the beforementioned Bafons, and covering the Seats and Walls, the Sulphur again unites and incorporates with its Diffolvent, and difappears and hides itfelf therein. The Water of there Sources contains great Quantity of Sulphur, vere fine and fweet, lefs nitrous Salt, a little Vitriol, and lefs Allum, more of the other Minerals and Metals, than of the firft Sort, or thofe of Borcet. So that they are more compounded, oleous and bituminous, than any of the other Sources; and though they come out of the Earth very temperate, as to actual Heat, yet can fick Perfons hardly endure them for any long Time, for the moft part fcarce half an Hour.
III. The third Sort, which I call Sulpbureo-nitro-vitriolic, and is alfo of St. Cornelius, differs from the Precedent, in that the Tafte is a little more acid, the Smell fweeter, and liker that of Spirit of Vitriol, and the Touch lefs oily. It is of lefs Efficacy in Ufe than the fecond Sort, and of more than the firtt. Of this Source there are three Bafons, which, with the two others of St. Cornclius beforementioned, make five in this Houfe. Thefe Waters agree much in their Compofition with the Precedent. They are very pure and clear, efpecially in their Wells; and though they feem troubled in their Bafons, yet taken in a Glafs, they appear clear.
IV. The fourth, or Salfo-alumino-nitrous kind, are thofe of the Neighbourhood, or Borcet. Thefe come out of the Earth extream hor, and in great Abundance, are all of the fame medicinal Quality, have feveral Wells, and are referved in ten or twelve Houfes, each whereof hath two Bafons, or Receptacles; befides which, there is a common Bath expofed to the Air, for the Ufe of poor People. There Waters caft off a copisus Excrement or Tartar, which yet is not Stone, but only a Sand mingled with, and united to the ni-

Voi. II. Numb. if 3 .
trous and aluminous Salt of the Watef, coagulated by the Beating of the cold Air on its Superficies, to which alfo concurs the Cold of the Walls expofed to the fame Air. Thefe Excrefcences are found in the fubterranean Conduits, not only of thefe, but the other Baths in the City; being held to the Fire, they foon become friable, and are nothing but a pure round Sand like the common. The higher Houfes and Bafons have the more of this Tartar, yet is it fo little, that it is not to be feen or perceived in the Water. Thefe Waters are of a different Species, Virtue, and Operation, from thofe of the City, are very eafy to fuffer, and ferve often for Divertifement and Recreation to Perfons that are in Health. The Contents of them are a great Quantity of Sea-Salt and Allum, lefs nitrous Salt, very little Sulphur, and not much of metallick Subftances.

Concerning the Virtues and Effects of thefe Waters inwardly taken, he difcourfes to this Purpofe :

Thefe Waters taken inwardly are very available in the Phthifick, Afbma, or Difficulty of Breathing, occafion'd by tough Phlegm lodging in the Branches of the. Wind-pipe; againtt the Wealsnefs of the Stomach, Indigeftion, Crudities, Flatulencies, Vomitings, Hiccoughs, and inveterate Cholicks. They diffipate and dry up all Manner of Catarrhs and ferous Defluxions; and are very proper to be drunk by thofe that are troubled with the Palfy, before the Ufe of the Baths. They quicken the Appetite, cleanfe the Blood, and open the Obftructions of the Mefentery. They are of excellent Ufe againft hypochondriacal Maladies, efpecially in fuch as have weak and cold Stomachs. They mollify the Hardnefs of the Liver, Spleen and Mefentery. They diffolve and bring away the Gravel of the Reins, and leffer Stones: And here he produces many Examples of fuch as voided Stones upon the Drinking thefe Waters, and among the reft, of fome that had drank the Spare Waters, and came from thence without receiving any Benefit. They cleanfe the Ulcers of the Bladder, diffolving not only the grofs, phlegmatick and vifcous Humours which coagulate the Stone, but even the Stone itfelf, whilft it is yet tender. They have fometimes cured intermittent Fevers of long Continuance, and fcrophulous Tumours. They dry up and heal the Itch, Leprofy, and other Affections of the Skin. They ftop the immoderate Flowing of the Menfes in Women, and cure the Jaundice, the Palenefs and Difcolouring of the Skin in Virgins: And finally they give Eafe and Relief in the Gout. Of all thefe Faculties, he brings Inftances and Examples of Perfons that have been cured. Particularly, thar thefe Waters drunk may have a Power of diffolving the Stone, he proves by this Experiment: Taking a Stone voided by a Man about two Years before, and infufing it in Water hot from the Fountain, for the Space of three Days, we found it (faith he) mollified and reduced into a foft Phlegm. Which Virtue of the Waters was further confirmed to us by a late Accident: For opening the Vault of a Well, there was found a certain Glue or Mucilage, which, it is to me probable, came from the Solution of the Mortar of Lime and Sand in long Time, by the volatile and diffolvent Spirits of the Waters; efpecially there being found no other Cement between the Stones, and in that this fame Glue or Mucilage mingled itfelf intirely with the Waters of the Fountains, without any Appearance of Scum or Fat fwimming on the Top, as Gum of Cherry, or the like is wont to do in Water, and being caft into the Fire burnt not, but dried up. Thefe Experiments and Obfervations were made upon Occafion of a Burgomafter of Riga (who being afflicted with the Stone, drank thefe Waters) his pafing his Urine through a Linen Cloth, and finding therein a certain thick Phlegm left behind, which, being kept a while upon Paper, hardend into a ftony Subitance.
15. From Aken we continued our Journey to Fuliers, five Hours thence, a fmall bur neat City, the Houfes low, but of Brick, the Streets are fomewhat narrow, yet it has a fair Market-place. Its Fortifications are confiderable, but the Citadel, in which is the Dical , Palace, may compare for Beauty, Bignefs and Strength,
wich
with any of Etrope. The chief Employment of the Inhabitants here is the making of Malr. Fune the 30th, we went hence towards Cologne, and paffing thro, Berchens, a little walled Town, met by the Highways, among the Woods and Hedges, with Mezercon Germanicum, Mollugo montana latifolia ramofa, Pulmonaria mas culofa, Galeopfis five Uritica iners flore purpurafcente majore, folio non maculato, and among the Corn, with Vaccaria Germ.

Cologne, dignified with the Title of an Archbifhoprick; is a free Imperial City, and perhaps the biggeft in all Germany, in which however are included three hundred Acres, planted with Vines, befides many other empty Spaces. The middle Part of the City is very. well built, having two handfome Market-places: The Walls are lofty and of Stone, with two deep Trenches and feveral Out-works. In the Cathedral of Sc. Peter are preferved the Bodies of the three Wife Men, that came to bring their Offerings to our Saviour, enclofed in a Cheft of Gold. The Number of the Noble Canons belonging to this Church, confifts of fifty four, befides eight Canons Presbyters ; thefe fixty two, in Conjunction with the Dean (who has two Voices) and two Burgomafters Regent (who have four Voices) of this Cuy, chufe the Archbimop. The Government of the City is in the Hands of fix Burgomafters, feven Efchevins, and one hundred and fifty Councellors; they all continue during Life; but of the firft two are only Regents at a Time for a Year: The Efchevins are chofen by the Archbifhop, as the Counfellors are by the Companies of the City, and fifty only are in Power yearly, fo that it returns to the fame Perfons every third Year. If a Burgomafter dies, the Counfellors have Power to chufe another in his Room. The Inhabitants are generally Roman Catbolicks, yet have the Lutherans a Church within the Walls, but the Calvinifts are obliged to go to Church on the other Side of the Rbine. At Cologne we took a Boat, drawn by $\mathrm{Men}_{3}$ which carried us up the Rbine to Vidich, an inconfiderable Village ; hereabouts we found among the Corn, Delpbinium fore purpuro-caruleo vulgare, and Nigella arvenfis; and in the barren Grounds adjoining to the River, Stacbas citrina Gernanica latiore folio.
16. Next Morning we pafs'd by Bonn upon the fame River, the ordinary Refidence of the Electors of Cologne, and lodged at Night at a poor Town called Brifaca. Fuly the 6th, we paffed by Kbineck to our Right, and came to Andernach, over-againft which is the Caftle of Hammerfein, belonging to the Elector of Treves. Further we pafs'd betwixt two Caftles belonging to the Count de Weets, that on the right Hand being feated upon a high Rock, with a Cloifter adjoining to it. Two Leagues from Andernach we paffed by Engers, and the fame Night came to Coblentz.

This City, which is the moft confiderable belonging to the Archbifhop of Treves, is called in Latin, Confuentes, from its Situation at the Conflux of the Rivers the Morelle and the Rbine ; over the firft of which there is a Bridge here of thirteen Arches, as there is over the Rbine a Bridge of Boats to the ftrong Caftle of Hermanftein, fituate upon a Rock, with a very fumptuous Palace below it, belonging to the fame Archbifhop. Not far from Cobleniz are the mineral Springs, near Helfenftein Caftle, of which Kind there are feveral in thofe Parts; as for Infance, one at Anthony's Stone, four Hours from Andernach, and another at Zwolbach, four Miles from Francfort; they are generally drank mix'd with Wine, unto which they give a pleafant Tafte and purging Quality, but I did not obferve in them what Dr. Blondel affirms, that they fmoak, or are hot when they are mixed with Wine.

Fuly the 7th, we paffed by feveral Caftles and fmall Places upon the Rbine, as the Town and Caftle of Rodefaim on the Left, and Capelle on the Right Hand; next the fmall Town of Rens and Browbach, Boppart on the fame Side, and the Caftle of Bornbolm on the Left. Taking up our Quarters in the Village of Hertfrach, we came, $J u$ uly the 8 th , in the Morning, to St. Goer, a pretty fmall Town, under the Jurifdiction of the Landgrave of Hefle, who has a very handfome Caftle herea
built upon a Rock. The Magiftrates and moft of the Inhabitants are Calvinifts, yet the Lutherans, as well as the Catbolicks, have each their Church. Juft oppofire to St. Goer you fee the Town and Caftle of Wellnich, and further to the Right, the Town and Caftle of $W_{e}$, Sel, under the Jurifdiction of the Elector of Treves; and higher up on the Left Hand, the Town and Caftle of Cub, the latter upon a Rock belonging to the Elector Palatine. The next Place of any Note we came to was Bacharach, a walled Town, adorned with many Towers, famous for the Excellence of its Wine, as is likewife a certain Tract of Ground about Rbingaw, a Town near Mayence. Our Boatmen paid Toll in this, as well as feveral other Places on the Rbine.. We pafs'd the fame Day in Sight of fome mean Townsand Villages; and Fuly the 9th, by Afpithouse Caftle, and immediately after by the Moufe-Tower, built in a little Illand of the Rbine. Further up the River on the Right Hand we left Bing, a tolerable good Town, and paffing by Rbodes, Gifon, Elveldt, and Wallop, to the Left Hand, arrived the fame Night at Mayence or Mentz.

From Cologne, as far as to the Village Vidich, the River is very broad, but thence up to the Moufe-Tower much narrower, from the many Hills and Rocks on both Sides, fome of which are cover'd with Woods; others with Vines and Orchards. The Vines are ty'd to Poles much lower than thofe we ufe in our Hopgardens. The City of Mayence (or as we now call it Mentz) is very large and well fortified; but the Houfes are very old, the Screets narrow and ill paved: The Cathedral of St. Martin's has twenty four Canons, all Noble, who chufe the Archbifhop. The Arms of this Archbihoprick is a Wheel, which they derive from Willigefus, a Saxon, their firf Archbihop, who being a Wbeelright's Son, gave this Wheel for his Arms. Near this Place, the River Maine joining irs Current with the Rbine, we went up the firft of there two Rivers in a Boat, and paffing by Rudheim, a well-built Fort on the Right-hand, belonging to the Landgrave of Hefle Darmfadt, and another walled Town called Hocf, to the Left, arrived the 13th of fuly at Francfort, five Leagues diftant from Mayence or Mentz.

This City is very rich and populous, and not illbuilt, though moft of the Houfes are of Timber: Its Fortifications, which confift in divers ftrong Baftions and a deep Ditch, are very conffderable and well kept : The River Maine dividing the City into two Parts, that which lies oppofite to Francfort is called Saxonbaufen, which are joined by a very noble Stone Bridge, fuftain'd by fourteen Arches. In the great Marketplace are three noble Fountains. The Emperors are in our Days chofen here in the Senate-houfe, and crown'd in the Church of St. Bartholomerv.

I had the good Fortune to get Sight of the Aurea Bulla or Golden Bull, of the Emperor Cbarles IV. which inftead of a Seal had a large golden Medal hanging on it, with the Effigies of Cbarles IV. on one Side, with this Infcription, Carolus quartus, divinâ favente clementia, Romanorum Imperator femp. Aug. on the Reverfe the City of Rome, and underneath, Aurea Roma, and round it this Verle, Roma coput mundi regit orbis frena rotundi. The Government of this City is in the Hands of a Pretor, twelve Burgomasters, fourteen Efchevins, and forty two Councellors. The whole Senate is divided into three Scamna or Benches, Firft, Sabinorum, Secondly, Literatorum, and Thirdly, Opificum: When a Place happens to be vacant in the Bench of the $E f-$ chevins, it is fupplied out of the fecond Bench of the Literatorum; but the Scamnum Opificum rifes no higher. The Senate has the Power of choofing yearly two Burgomaters out of their own Number. The feres, of whom there are great Numbers here, have their peculiar Quarters affigned them, from whence they dare not ftir in the Night-time; they wear a Piece of yellow Cloth to diftinguifh them from other People. The Magiftracy and moft of the Inhabitants are Lutberans, unto whom belong five Churches. Yet have the Romans the free Exercife of their Religion here, and are poffefs'd of two Convents for Men and one for Wo-
men;

## Chap. III. through the Low-Countries, foc。 65

men; but the Calvinists have their Church a good Way from the Town; the Engli/b Church, firft eftablifh'd here under the Reign of Queen Mary; is fallen much to decay, as well as the Engli/h Houfe, which is turned into a Store-houfe. In the Country hereabouts, which is exceeding pleafant, we found growing wild, Gramen amoris dictum, E Ifchermon vulgare, Portulaca fylveforis, and in the Hedges, the Alcine baccifera, which I met with no where elfe in all my Travels.

July 17. We took the Poft-Coach going to Frankenthal; we had fcarce left Francfort half an Hour, when we travelled all that Day, for three German Leagues, through Pine-Woods, and lodged that Night at the Village of Geir/beim.

Fuly 18. We ferried over the Rbine at Kernbeim, and at fix Leagues End came to Worms, a large and ancient City, but much decayed. The Canons of the Cathedral (who are twenty in Number) choofe the Bifhop. The Government of the City is in the Hands of the Lutberans. From hence we came, after an Hour's travelling, to Frankentbal, a Place chiefly confiderable for its Strength, being fituate in a Plain near the Rbine, and provided with good Walls and Out-works: It is under the Jurifdiction of the Elector Palatine; and has three Churches; one Higb-Dutch, another Lorv-Dutch, and the third French.

Fuly 20. We travelled along the Banks of the Rbine, by the Way of Ober/beim to Spire, two Leagues and a half diftant from Frankentbal. Spire, though dignified with the Title of a Bifhoprick, yet is an imperial City, under the Government of its own Magiftrates. The Houfes here are generally large, but not very convenient, and of Wood: The chief, if not the only Thing that makes this Place confiderable, is the Imperial Cbamber, which is kept here, confifting of an Imperial Prefident and thirty fix Affefors, befides three other Prefidents, chofen by the Emperor out of the Delegates; each of the Electors, as well as the ten Circles, fending two Delegates or Affeffors. There is fuch another Chamber belonging to the Imperial Court at Vienna, either of which (without any Appeal from one to the other) determines Controverfies arifing betwixt the Princes and States of the Empire, and betwixt them and their Subjects in fome Cafes: But the Elector Palatine enjoys the Prerogative, Fus non appellandi, of not being cognizable by thefe Tribunals.
Fuly 21. We pafs'd the Rbine to Manbeim, feated upon the very Conflux of the Rbine and Neckar; it belongs to the Elector Palatine, ftrongly fortified, and now ftrengthening by a new Citadel, almoft finifh'd. Who was the Founder of this City, you will fee out of the Infcription over the Neckar Gate :

> Quod felix faxit Jebova,
> Fredericus IIII. Elector
> Palatinus Rbeni, Dux Bavaria,
> E veteri Pago Manbemio
> Ad Rbeni Necrique confurviums
> Fufta fpatiorum dimenfone
> Nobilem Urbem molitus,
> Vallo, fofla, mura claufit,
> Portam bonis civibus aperuit,
> Anno Domini M. DC. X.

From hence we continued our Journey to Heidelberg, where we pafs ${ }^{3} \mathrm{~d}$ over the Neckar into the City by a wooden Bridge, covered over with a Teitum to preferve the Timber. Heidelberg, is not a very large, but a neat and populous City, the Capital of the whole $P a$ latinate and Refidence of its Princes; the Houfes are of Wood, but handfomely built; it is feated at the Foot of a Hill, on the right Side of the River Neckar, and is divided into five different Jurifdictions, independent of one another, Firf, Aulica, under which are all the Princes and Noblemen; the Martial of the Court fits here as Prefident. Secondly, Cancellaria, under which belong all Councellors, and other Officers of the Courts, Advocates, Doctors, Esc. Thbirdly, Bellica, for the Soldiers where the Geieral prefides. Fourtbly, Academica, for the Students, the Rector Magnificus, or Vice-Chan-
cellor for the Time being; is their Prefident; and Fiftbly, Civica for the Citizens. The Members of each of thefe Jurifdictions are not obliged to appear before any other Court but their own. The City is alfo divided into four Wards, under the Government of a Pretor and Burgomatter.

About the middle of the Afcent of the Hill calld Koningstbal, ftands the Royal Palace, a large and ftately Structure, enclofed with a Wall and deep Ditch, hewn out of the Rock, which they may fill with Water when they pleafe; here the Prince keeps his Court. According to the Infcription in High-Dutch upon the Gate, it was begun to be built by Lerois V. in I5I9, but feveral Pieces have been added fince, one of which is called the Englifb Building. In a Cellar under one of the Towers belonging to this Caftle ftood the famous great Tun of Heidelberg, containing 132 Fudders, one of which is equal to four of our Hogtheads; but this Tun is taken to Pieces of late and a new one Building, which is to contain 150 . Fudders or 600 Hogheads. We were invited to dine in the Palace, where we obferved every Thing to be done with great Regularity, and after Dinner the Elector was pleafed to fhew us the Curiofities of his Clofet, and among the reft, a Purfe made of Alumen plumofum, which being made red hot, received not the leaft Harm, but appear'd the fame it was before, after it was cool'd : Two Unicorn's Horns of eight or ten Foot long, wreathed, and hollow to the Top being the Horns of a Fifh, and not a Quadruped, as the ancients vainly imagin ${ }^{3} d$. An Imperial Crown and Globe, belonging to the Emperor Rupert (who was of this Family) richly fet with precious Stones: A choice Collection of ancient and modern Coins and Medals; and among the reft a Copper Swedifl Dollar, of the Bignefs of a fquare Trencher, with the King's Arms and Effigies flampt at the four Corners. The great Church (which formerly contained the famous Library of this Place) as alfo that of the Francifcans, have feveral very noble Monuments of the Princes of this Family, as that of Sc. Peter fhews many of learned Perfons.

The Univerfity of Heidelberg, was founded, $A$. D. 1346. and has three or four Colleges for the Subfittance of poor Scholars. The whole Management of it is committed to the Academical Senate, compofed of Sixteen Profeffors, viz. three for Divinity, four for the Law, three for Phyfick, and fix for Philofophy, but no more than four of them fit in the Senate, for Fear they fhould make too 'ftrong a Party. If a Profeffor dies, the Senate prefents two Perfons to the Prince, out of whom he choofes one. The Senate alfo choofes every Year a Rector magnificentifimus, a Honorary Title, not unlike that of Chancellor of our Univerfity, as the Rector Magnificus, the-chief of the Senate is equivalent to Vice-Chancellor; befides which, they elect two or four more Officers out of their own Number, to manage the Concerns of the Univerfity. The Senate hath its own Jurifdiction, and unlimited Power in criminal Cafes, extending to Life and Death, the Prince referving to himfelf only the Prerogative of Pardoning after Sentence paft. In Philofophy they have no other Degrees but Mafters, and thofe but few of late Years; In Law and Medicine they create both Licentiaites and Doctors; and in Divinity, Batcbelors, Licentiates and Doctors. They have not the leaft Regard to the ftanding of the Candidates, all they have to do being to undergo two Examinations, one of which is called the Examen tentatorium, before the Faculty, in which he is to commence, and in, the Prefence of the Recior Magnificus; the fecond the Examen rigorofum, before the whole Body of the Profeffors and the Recior Magnificus. After all this, he is to hold a publick Difputation fub Prafide, to make a Lecture in his own Faculty, and a Speech. The Ceremony is performed with a great deal of Pomp, and concludes with a fumptuous Feaft, at which are prefent all the Profeffors, and fometimes the Prince in Perfon, or elfe he fends the Marfhal of his Court to reprefent his Perfon, which is the Reafon that oftentimes, when the Candidates have not very ftrong Purfés, two or three join to fave

Charges.

Charges. Here alfo the Profeffors publifh an annual Catalogue of their Names and intended publick Lectures.

The Elector Palatine is abfolute in his Dominions, having alfo the Supremacy in Ecclefiaftical Affairs, which formerly belonged to the Bifhop of Spiers, but fince the Reformation the Ecclefiaftical Jurifdiction has been annexed to the Sovereignty: He is the univerfal Patron of all vacant Benefices, tho' he permits the Ecclefiaftical Council, (compofed of two Clergymen and two Laymen) to prefent unto him two, out of whom he chufes one. The Generality of the Palatinate are of the Reformed Religion, and divided into three PrafeEtures (the biggeft of which is fubdivided into lefs) each of which has an Infpector, who is one of the Paftors of that Profecture, and differs not from the other in Rank or Power, but hath only a larger Salary. Each confiderable Town has alfo a peculiar Prafecture, or Presbytery Thus that of Heidelbergh is compofed of five Minifters of that City, two Deputies from each of the before-mentioned Jurifdictions, except the Aulica, and two from each of the four Wards of the City, making in all twenty one, in which the Laymen have equal Voices with the Minifters, thefe enjoying no other Prerogative in this Point, than that one of them prefidesalways in his Turn. They can't inflict any Church Cenfure, unlefs it be making the Tranfgreffor fubmit to a publick Confeffion at the Church Door, and to promife Amendment, the reft is left to the Determination of the Civil Magiftrate. As the Elector is univerfal Patron, fo he is Mafter of all the Tithes, which for Conveniency fake, he allows to fome Minifters in certain Places, but provides fettled Salaries for the reft out of the Church Revenues.
19. Fuly 25. We hired a Coach, which was to carry us in three Days to Strasburgh: We had farce travelled three Leagues, but we pafs'd in Sight of the celebrated Fortrefs of Pbilipsburgh, feated in a Plain near the Rbine; a League further we pafs'd through Graffe, and lodged that Night at the Village of Linknom.

July 26. After a Journey of four Leagues, we baited at Rafpach, two Leagues further paffed through Stolboven, and a League more through Licbtenaw, all in confiderable Places; we lodged that Night at the Village called Sertz.

Fuly. 27 . We crofs'd the Rbine over a Bridge laid over the two Channels, made of Fir-trees laid clofe together, inftead of Boats, and foon after came to Strasburgh. In our Journey thither we faw Abundance of Indian Wheat planted, as alfo fome Latbyrus fativus, and Cartbamus, or baftard Saffron. The Blattaria, Solidago Saracenica, are wild hereabouts, and in the adjacent Meadows of Strasburgh, Carduus Pratenfis Tragi.

Strasburgb is a free Imperial City, rich and populous, of a great Circumference, and well fortified with regular Out-works. It is govern'd by two Councils, one con fifting of feventy one, in which are fix Burgomafters, as many Stadtmafters, fifteen Patres Patrix, and thirteen felected out of the Militia. The greater Council is compofed of three hundred Citizens, chofen by the feveral Companies of the City. The Women are generally handfome, and the Inhabitants Lutberams, though the Roman Catbolicks have alfo a Church and four Convents, two for Men, and two for Women. The Reformed have their Church at fome Diftance out of the Town. It is an Epifcopal See; the Bihhop has a Palace in the City, but is not allowed to ftay there above three Days at a Time, but may continue in an Inn for eight Days together. The Armory or Arfenal here, may compare with any in Germany, and is not much inferior to any I faw elfewhere. The publick Granaries, Store-houfes, and Wine-cellars, are worth feeing. The Domo, or Cathedral Church, is a noble Structure, with a Pair of folding Doors of Brafs at the Weft End. Here is the famous Clock defcribed by feveral Authors, which is a Piece of moft excellent Workmanfhip, made by a Citizen of this Place, whofe Name was Ifaac Harbrecbt. But what is moft remarkable, is the Steeple, the higheft that ever I met with, and curiounly built of carved Stone, having fix hundred fixty two Steps from the Bottom to the Top: we went up fix hundred and forty Steps to a Place
they call the Crown, from whence we took a View of the adjacent Country at a great Diftance.

About ten Hours diftant from Strasburgh, towards the Side of Stutgard, are very good acid mineral Springs, the Waters of which they drink here and in other Cities with Wine. In this, as well as other Imperal Cities in thofe Parts, the Inhabitants, but efpecially the Women, adhere ftill to an odd Way of Dreffing, which yet is very different one from another, each having their peculiar Habits; fo that their Condition may be diftinguifhed at Sight. Judy 31. We continued our Journey towards Bafil, paffing the fame Day through the Village of Tivelßeim, and Auguft i, through Marklefbeim, and two Leagues thence in Sight of the ftrong Town and Fortrefs of Brifac, feated upon a Rock, and lodged chat Night at Lodefbeim.
20. Aug. 2. After a League and a half riding, we arrived at $B a j l l$, a large and nable City, well built of Stone, the Houfes very high, and painted for the moft Part on the Outfide. It is divided by the River Rbine into two Parts (that on the North-fide being called Little Bafil) join'd together by a Bridge fuftained by fourteen Arches. The chief Ornaments of this populous and rich City are its Fountains, of which it has above three hundred. It is one of the XIII. Swifs Cantons, its Territories comprehending above one hundred Villages. The Bifhop of Baden has not the leaft Jurifdiction in the Town, being not fuffered to lodge here one Night, but keeps his Refidence at Broudint. The Government is adminiftred by a greater and leffer Council ; the laft confifts of fixty four Perfons, chofen by the fifteen Companies, and the greater, of all the Magiftrates and the leffer Council. The Univerfity of this Place was founded by Pope Pius II. in which are feventeen Profeffors, three of Divinity, three of Law, three of Phyfick, and eight in Philofophy and polite Literature. They keep Lectures every Day in the Week in Term-time, except Tbur/days and Saturdays, but have very fmall Salaries. The Ecclefiaftical Goverment is in the Hands of three Profeffors of Divinity, four Scbolarcbee, and the Minifters. The Senate have the Power of nominating three Perfons to any vacant Benefice, out of whom the Minitters chufe one. In thefe Cities the Minifters live upon their yearly Salaries, but in the Country they have half in Tythes and the other half in Money. The Minifters here are at Liberty to change their Profeflion and become Laymen when-ever they pleafe. They are of the Reformed Religion, as are all the other Proteftant Cantuns.
Erafinus lived Part of his latter Days, and ended his Life in this City; his Monument, which is of Marble, on the North Side of the Communion Table in the great Church, being to be feen to this Day. He was the Founder of a College in Bafil for twenty Scudents of Divinity (in which Number are however comprehended the the Beadle and a School-matter) ten of whom are to be Natives of Bafll; they may ftay there as long as they continue unmarried, though the Magiftrates have a Power to command any of them thence, if they think it convenient. They are under the Infpection of a $\mathrm{Re}-$ gent, without whofe Leave none of them dare flay out of the College one Night. In the fame Church where Erafmus lies inter ${ }^{2}$ d is alfo his Library, commonly called Bibliotheca Amberbacbiana, becaufe Erafmus gave it by his laft Will to one Mr. Amberbach. I faw the faid Teftament written with his own Hand in half a Sheet of Paper, bearing Date 12 Feb. 1536 . In this Library are alfo feveral very curious Pieces of Painting, done by that famons Mafter Jobannes Holbenius, a Native of this City; fome Diplomata of the Pope to Erafmus, his Seal and Ring, a fine Gold Medal fent to him by the King of Poland, befides other good Coins and Medals, both ancient and modern ; three Rappers of Copper (worth about a Farthing a-piece) turned into Gold, as they fay, by that famous Alchymift Leonard Turnitius, who tranfmuted the famous Nail of Florence; feveral ancient Entaglio; fome Manufcripts of Amberbach, containing the Antiquities of Augufa Rauracorum, anciently a great City, but now turn'd into a Village called $A u g /$, near Bafll. The Profeffors and Minifters wear Ruffs, and a Kind of Caps painted like Sugar-loaves

## Chap. III. through the Low-Countries, coic.

(in which they are imitated by the graver Sort of the Inhabitants) and Gowns which reach juft below their Knees. The Women wear their Petticoats very fhort, and Caps not unlike the young Scholars at Cambridge, with a Tin Girdle. We took alfo a View of the $M u$ faum of Dr. Platerus, where we met with many both natural and artificial-Curiofities of Minerals, Stones, Metals, Animals preferv'd, $\mathcal{J}^{\circ}$. The famous Phanatick David George ended his Days in this City. We found divers Plants growing wild about Bafl, the chief of which were, Scropbularia, Ruta canina dita, and Pafferina Tragi, among the Corn, Pbalangium parvo fore ramofus, Blitum minus album, among the Hedges, Cymbularia Italica bederacea, on the Town Walls near the Strasburg Gate, Stabe major colyculis non fplendentibus, in the Ĝrounds betwixt Frankentbal and Bafil, Polium montanum Lavendula folio, Confolida media Genievenfis $\mathcal{E}$ Cneorum Matthioli feu Tbymelca minor Cordi. But of thefe and other Plants growing abour Bafil, fee C. Baubini Catalogus Plantarum.

We went hence, Auguft the roth, towards Zurick, and in our Way, about a German League from Bafil, paffed through Augst, fuppofed by Amibacbius, to be the ancient Augufla Rauracorum of the Romans, where we faw the Ruins of an Amphitheatre. We travelled afterwards in Sight of a wall'd Town upon the Rbine, and many Hills covered with wild Fir-trees, and paffing through Bruck, a pretty handforme well built, but fmall Town, lodged the fame Night at the Batbs of Baden, about fix German Leagues from Bafil; here we firft got Sight of fmall green Tree Frogs. Thefe hot Baths, about Sixty in Number, are not above half an Englijh Mile from Baden, a City feated upon the River Limagus, on the Side of a Hill, famous for the general Meetings of the Swifs Cantons here.
21. From hence we continued our Journey Auguf $f_{\text {, the }}$ $\mathbf{x}$ th, along the Limagus on one, and very fair Vineyards on the other Side, to Zurick, another City belonging to the Swifs Cantons, fcarce fo big, but much more populous than Baden. Its Fortification is extraordinary pleafant, near the Zurick-Sea or Lake, being divided by the River Limagus (which owes its Rife to this Lake) into two Parts, which are joined together by two Bridges, one for Foot-Paffengers, the other for Carriages, and very broad. The Houfes here, though of Timber and Clay, yet are well built, handfomely painted, and lofty; the Streets indeed are none of the broadeft, but very well paved, and the whole Body of the City enclofed with a ftrong Wall and many Outworks of Earth, after the modern Way; the River Sele (which below this City falls into the Limagus) ferving for a Ditch on the South-fide. The Inhabitants, are Proteftants, much addicted to Commerce, and generally rich. What is worth a Traveller's Curiofity here is, the Colour of the Zurick-Sea, which is green approaching near that of Sea-water, thoigh it has not the leaft brackifh Tafte, to which in Sea-water this Colour is commonly afcribed. Finding afterwards the Water of the Rivers and Lakes near the Alps of the fame Colour, we could not attribute it to any other Caufe but the melted Snow of thofe Mountains, with which they are (at leaft the higher Parts of them) covered for fix Months in the Year, which containing a nitrous Salt, may be fufficient to give the Water this Colour, though not to affect our Tafte.
The Government of this City is adminiftred by two Councils, viz. The greater and the leffer. The laft is compofed of fifty Members, viz. twenty four Tribunes, chofen by the twelve Tribes or Companies of the City, two out of each: Thefe they call the Treelvers, becaufe twelve of them have only their Share in the Government at a Time ; twelve Senators, viz. one out of each Company, chofen by the leffer Council, as Simler tells us, but according to our Information, by the great Coìncil, fix Members more taken indifferently out of the Commonalty, and thofe likewife chofen by the great Council, as we were credibly told; but according to Simler, by the leffer; four Tribunes and two Senators chofen from among the Gentlemen, and two Burgomafters elected by the great Council of 200. Half this Council Vol. II, Numb. CXIV
governs by Turns, and that part which rule, is ftiled Concilium novum; or the nerw Council, as that which goes out is called Concilium vetuls, or the old Council: Xet If any Decree be to be made, the fame is dated in the Prefence of both, for which Reafon the whole Fifty meet once a Week; For the reft, one half of this Council is chofen every half Year, viz. at Midfummer and Cbriftimus, and as the Concilitum vetus goes out, it choofes the Concilium novum, compofed for the moft Part of the fame Perfons that were chofen before:

The whole Council of Fifty determines civil Actions (though Simler fays, no more than eight felectitd out of their Number) as the new Council judges in criminal Cafes alone. The greater Council is compofed of 200 Perfons, viz. Twelve out of each Tribe, making in all fortyfour, eighteen chofen by the Gentlemen, from among themfelves, twenty-four Twelvers, four Tribunii nobilium; two Senatores nobilium, the fix before-mentioned chofen by the great Council out of the People. Thefe choofe Governors (call'd by them Landooghts) and are always confulted upon any Emergency, which relates to the whole Commonwealth. They alfo chufe four Proconfuls out of the twenty-four Matters of the Companies; and two Treafurets, either out of the Number of the twelve Senators, or of the tivelve Tribunes of the nero Council.

Auguft i2. In our Way from Zurick to Scbaffoupen we pals'd by 'a Cataract or Water-fall of the Rbine; which is fo dangerous for the many Rocks that lie under Water, that the Veffels muft unload here, and by the Way found the Orobus fyluaticus purpureus vernuls, the Hepatica nobilis, and Ulmaria major five Barba capri, growing wild. The City of Scbaffbaufen is fituate upon the River Rbine, over which is a Bridge, half of Wood, half of Stone, and fo are moft of the Houfes, very well built ; efpecially in the two great Sireets, which are handfomely paved. The Citizens of this Place, as well as of Zurick, wear Swords conftantly: Thofe of the firft being divided into twelve Companies, each of thefe elect two Tribuni Plebis, and thefe twentyfour make up the leffer Council, having each a yearly Allowance of fifty-two Florins, and nine Meafures of Corn.

The great Coincil is compofed out of thofe twentyfour, and fixty more, (viz.) five chofen out of each of the Tribes. Thefe elect every Year twó Burgomafers, two Treafurers, one Proconful, and one $\mathbb{E}$ dilits, but for the moft part the fame Perfons: A Father and Son, or two Brothers, cannot be chofen at the fame tirse into this Council.
From hence we travelled to Conifance, Auguf the I 3 th, a free imperial City, in a fmall Plain near the Rbine, at the End of the Boden Ska, or Lake of Confance, known anciently under the Names of Lacus Brigantinus, and Lacus Acroniuis, over which is laid à very long Bridge, part of Wood, and part of Stone: The Streets here are very regular and handfome, and the Buildings of Stone. But what makes this Place moft famous is the Council that was held here, 1417. in which the Doctrine of Gobn Hus was rejected, and he condemned to the Fire. It is very frong by Situation, having the Lake on one, and the Fens on the other Side, but its Fortifications are very old and inconfiderable.
22. Auguft 15. We paffed over the Lake in a Boat, to the City of Lindaw (in Sight of the ftrong Town of Oberlingen) fituated in the Middle of the Lake, and furrounded by its Waters on all Sides; being join'd to the Continent by a Bridge of two hundred and ninety Paces long, one half of which is of Stone, the other, viz. that to the Town-fide, of Wood, fo that it may be taken down in cafe of Neceffity. This Place, befides its natural Strength of Situation, is fortified with ftrong Bulwarks, and Stakes driven into the Ground to prevent the Approach of any Boats. It is for the moft part handfomely built, and the Streets are adorned with Fountains, yet thefe laft are not fo facious, or their Buildings fo lofty as at Conftance: It has on one Side a double Wall, between which is enclofed a large Space of Ground planted with Vines, which produce commonly, as we are told, about three hundred Englijh Hogheads per Annum. They have eight Villages belonging to their Jurifdition.

8 D
Auguf

Auguf 17. Taking Poft-horfes at Confance, in order
our Journey to Munich; we changed our Horfes at to our Journey to Munich; we changed our Horfes at Lindaw, an Imperial City, two Germans Leagues thence; at Laykirk, another Imperial City, two Leagues further; at Memmingen, both for Strength and Bignefs, one of the chief of the Circle of Suabia, and dignified with the Title of a free Imperial City, and at MindleBeim, where we lodged that Night. From hence we traveli'd to Landsberg, four Leagues further, a very fair Town, with a handfome Fountain in the Market-place; after which, withous meeting with any confiderable Town, we pals'd by the Lake of Ammerfee, in Sight of the Alps, to Muncben or Muruich.
23. This being a frong and well fortified City, and the ordinary Refidence of the Electors of Bavaria, no Strangers are permitted to enter the Gates without the Confent of the Governor: Cluverius is not in the wrong, when he calls this City the faireft of all Germeny, the Splendor and Beauty of its Buildings, both publick and private, efpecially of the Electoral Palace (which may compare with any in Europe) and of feveral magnificent Churches and Convents, being' fuch as furpaffes any Thing in Germany for its Bignefs, its Streets being the broadeft and moft regular I have met with. Among other Varicties, you fee in the Electoral Gardens a valt Number of Aloc-trees (for fuch they may be called by reafon of the Bignefs of their Stalks, which fhoot up. in one Year) the like perhaps all Europo can't produce in Number both for their Stalks and Flower. Here alfo we met with a Convent of Engrijat Nuns, and found in their Churches Pews and Seais, as is cuftomary in England, whereas otherwife, the lRomanists make ufe only in their Sermons of moveable Chairs and Benches, and clear the Churches fo foon as Sermon is over.
We took a Turn from hence to Augsbourg, and paffing by the Abby of Bernarcines called Pruck, and the little Town of Fridbergh, arrived there the 2 Ift of suguf.
This is a ftately and flrong City, feated upon the River Lech, being about eight Englifh Miles in Compais: Its Eloufes are well built, its Streets fair, and beautified witio many Fountains. Its Arfenal confifts of twelve Rooms, not inferior to that of Strasburgh, as its Townhoufe may challenge the fecond Rank next to that of Amferdan: the upper Room efpecially being very remarkable for its Loftinefs, Gilding, and Paintings, in which it exceeds any 1 have yet feen. The Inhabitants are partly Romanists, partly Lutberans, but the laft are double the Number of the frif, though thefe are in Poffeffion of feven Convents' here, among which there is one Euglifh: Some Calvinifts there are here, but few. It is a free Imperial City, under the Jurifdiction of its own Magiftrates; yet feems fomewhat decayed of late Years, the Number of its Inhabitants being fcarce proportionable to its Bignefs; in the Plains near Augsburgh, leading to Munchen, we faw many rare Plants.
Auguft 28. We left Augsurgh, and travelling three Days out of our Way, in order to take a View of the Farnous City of Nurenbergh, we crofs'd the Danube the firt Diy, about fix Leagues from Augsburgh, at a Place called Donazvert, belonging to the Elector of Bevaria, where there is a wooden Bridge over that River. The 2gth, we paffed through Manbeim and Papenbeim, two pretty wall'd Towns, and having made five German Leagues that Day, lodged at Weiflenbergh, an Imperial City, inhabited by Lutbercins; near which is alfo a ftrong Fort upon a Hill, belonging to the Marquefs of Anfach, a Lutberan Prince.
24. The 3oth, We paffed through a fmall Town called Pleinfeldt, and after a Journey of three Leagues further, clofe by another little walled Town called Rotte, and fo, after two Hours Riding more, arrived at Nurenbergh, which we were no fooner in Sight of, but we highly applauded the Epithet Cluverius befowed upon ii, when he ftiles it Germonicarum fuperbifimam, it being beyond Queftion, that for its Buildings, which are very flately, it exceeds all, and for its Bignefs may compare with any in Germany ; and were its Houfes, which are of Free-ftone, as uniform as the Buildings in the LowCountries, would even out-vie them for Beauty; bew
fides, that under its Dominion, are at leaft an hundred Towns and Villages. It is true, the Ground where it is fituated is very barren, and the River upon which it flands but very fraall, and not navigable; notwithftanding which, by the Induftry of the Inhabitants, who are generally very excellent in all Sorts of Handicraft Works, this City is very rich and populous. They are gerierally Lutberans, and their Churches more adorned and beautified after the Faflion of the Romanifs, than ever we faw in any other Place where this Religion is profefs ${ }^{\circ} \mathrm{d}$. The Roman Catbolicks have one Church allowed them, but the Reformed none. Their great Market-place, and the Town-houfe, are worth a Traveller's Obfervation; it is fortified with a good Wall and Ditches: Their Senate and their whole Government is faid to approach very near that of the Venetions, being for the reft a free Imperial City.

September 3. We fet out from Nurenbergb towards Ratisbon, and came to Altorff, a Town and Univerfity under the Jurifdiction of Nurenbergh. It has a very good Phyfic-Garden, the Catalogue of the Plants therein, as well as another of what Plants grow wild hereabouts, the World ftands indebted for to Dr. Maurice Hoffman. Over the Cloitter of the College, in which are maintained thirty fix Sudents, at the Charge of the City of Nurenbergh, you fee an Infcription in Latin, giving a fhort Account of the Foundation of this Univerfity and College, viz. That the faid College was founded by the Senate of Nurenbergh in 1575, under the Reign of the Emperor Moximilian II., that in $157^{8}$, under the Reign of Rodolpb II. a Gymnafum was eftablifhed here, which in 1633 , under the Reign of the Emperor Ferdinand II. was dignified with the Title and Privileges of an Univerfity.

Dr. Hoffman fhewed us feveral. Cornua Ammonis, or Serpént-ftones, befides many Cockle and Muffel-fhells found near Altorff, of which we alfo faw fome the next Day in our Way to Nieu-markt; upon which Occafion I can't forbear to give, by way of Digreffion, a brief Account, (I.) In what Places they are found. (2.) The different Opinions concerning them. In England, thofe petrified Shells are found at Wbitby or Whitebay, in the North-riding of Yorkfire; at Huntley-Neb, more Northward on the fame Coaft ; at Alderley in Gloucefferfbire; at Cainflom in Somerjethbire, not far from Alderley; at Farnbam in Surry; at Ricbmond in Yorkbire; and in feveral other Places; as for Inftance, at Lyme in DorjetBire, Adderbury in OxfordJire, at Brickwortb in Northamptonfire, about Daventry, Verulam in Hertfordloire, Sbuckkorough in Warwickhire, nay, even the Peak of Derbyfire. Befides thefe petrified Shells, other congenerous Bodies are found in feveral Parts of England, viz. I. The Star-foones, called by fome Afroites, Lapis fellaris, and Stella judaica. 2. St. Cutbbert's Beads, or Trocbites, and, 3. The Capfone, or Ecbinites, called Lapides Brontice by fome, and confidering that Sharks are often taken upon our Coaft, it is a Wonder that no Gloffopetre flould be found in England. As for the Star-foones (fo called from their five Angles refembling fo many Rays) they are found at Sbuckborougb in Warwoick/bire, at CafSington near Gloucefer, and Belvoir Cafte in Lincoln/bire. The Trockites are to be met with on the Weftern Shore of the Holy Ifland, and in the Chinks of fome Stones found in the Bottom of the Channel of the River Tees, the common Boundary between York/bire and the Bilhoprick of Durbam; thefe are of a rotund Figure, and not angular like the former. The Ecbinites or Brontice, are found in divers Places of England, of fevera! Magnitudes and Shape ; and beyond-fea, at Brefcia in Lombardy, upon the Banks of the River Tanaro in Piedmont, four Miles below Afe, but efpecially in the Ine of Maltba, where are alfo many Glofopetra, refembling Sharks-teeth, petrified.

As for thefe laft, Boetius fays, they are found near Deventer, in the Province of Overyjfel; and in Germany, in the Alum-mines near Lunenburgb. Gropius Becanus tells us, that they were digged up in the Ditches of Antwerp, and are found in great Numbers on a Hill near Aix la Cbapelle in Germany, which he ufes as an Argument, that they can't be real Sharks Teeth petrified.

## Chap. III.

 through the Low-Countries, $\theta_{0} c$ 。fied. Georgius Agricola affirms, that the petrified Cockles, and other Sea-Shells, are found in the Stone Quarries of Galsenbergh, and in thofe beyond Mount Maurice, in the Bihoprick of Hildefbeim in Germany. (2.) At Alfeld, a Town of Saxony. (3.) At Hanover, in the Lime-Pits, and near the Village of Lindaw. (4.) In a Village called Rabccbyls, near the Rivulet of Trobitio in Mifnic. (5.) At a Place called the RofeGarden in Prisfia. (6.) Near the Cafte of Spangenbergh in Haflia. (7.) In a Mountain of Italy near Verona. (8.) On the Banks of the River Elfa; and (according to Paufanias) in the Quarries near Megara, and they are alfo found in Tbelfaty, Macedonia, and the Mountains of Calabrio. Bernardus Poliffius fays, tha thofe petrified Shells are found in Fronce, near the Suburb of St. Martiol near Paris ; in the Mountains of the Foreft of Arden, but efpecially about Sedan, in the Provinces of Valois, Xantogne and Cbampaign, and in the Mountains near Soifons.
Foannes de Laet tells us alfo of a Kock near Dijon in Burgundy, and fpeaks much of the Fields about Souivignac, upon this Account. Beffides the beforementioned Places of Italy, they are found in the Mountain of Nicani, in the Modenese, and in the Channel of a Rivulet near Udine in Friuli; Geropius Becanus names Limburgh, Liege, Namur, Tournay, and divers other Places in the Lotw-Countries : Befides all which Places, there is not the leaft Queftion, but that, if firict Obfervations were made in the other Parts of the World, the fame might be difoovered there as well as in Europe.
We will now proceed to give you a fhort Hint of the Opinions maintained concerning them. The firft, and which was generally received among the Ancients, was, That they were originally the natural Bones or Shells of living Creatures, bred in the Sea, which by Deluges, Inundations, Earthquakes, or other fuch like Means, being caft up into thofe Places, being filled with Clay, and fome petrifying Water or Subitance, were in Tract of Time, hardened into the fame Shape and Figures they bore before ; this Opinion they fupport by divers Experiments, as the finding of a petrified Pearl-bearing Shell, in Tufcany, with the Pearl yet fticking to the Shell : Of a Piece of the greater Seanacre (Pimna marina) in which the filk-like Subftance within the Shell being confumed, the Colour of that Subflance remained in the Clay that had filied the Shell. Another Experiment is, that about the City of Volterra, there are many Beds of Earth not flony, but full of true Cockle-fhells, which have fiot undergone the leaft Alteration, though they have lain there at leaft three thouland Years, from whence they would evince, that Tufcany was in former Ages cover'd by the Sea, and confequently fo might thofe other Countries in which thofe petrified Shells are found. Againft this Opinion are two confiderable Objections, not eaffily to be refolved.

The firft is, that at this Rate the whole Body of the Earth muft once have been covered with Water, fince thefe petrified Shells are found at a vaft Diftance from the Sea, nay, even upon the very Tops of the Alps. Some pretend to anfwer this by the general Deluge; but as that proceeded from the Rains, thefe were more likely to carry off into the Seas thofe Shells, than to bring them in. What fome argue from the Words of the Scripture, (The Fountains of the deep were broken $u p$ ) will not anfwer the Point neither; for fuppofing that by the breaking in of the Rivers and Seas, thofe Shells were brought, the fame muft of Neceffity have been. fcattered indifferently over the whole Surface of the Earth. Others are for folving this Difficulty, by referring the fame to fome particular Inuindations, alledging, That thofe Places, where they are found now, might, in moft ancient Times, have been low Places, which, by Earthquakes, have been raifed up to Mountains; but tho' this, perhaps, may tale Pláce in refpect of fome inconfiderable Eminencies or Hills, it is not applicable to thofe mountainous Bulks, fuch as the Alps, Pyrenees, Apemines, it being evident from the moft ancient Records, that though the Face of the

Earth may have undergone fome Change ; yet the fame Mountains, Ilands, Promontories, Rivers and Lakes of any Note, are ftill remaining; without any, Removal in their ancient Stations:

The fecond Objection againft this Opinion is, That among all thefe petrified Cockles or Shells, there are many Sorts not to be found any where now; nay; fome go farther, that among all our Shell-Fifhes, thêre are none found like thofe perrified Shells; unto which; if it be anfwered, that thofe Species are loft, it is a Thing which will fcarce be admitted by many, for though it might be granted, that fome few Species were loft, yet it feems next to an Impoffibility; that a whole Genus, of which there were fo many Species fcattered in fo many far diffant Places from one another, fhould be utterly extinct. As for Inftance, of che Serpentine Stones, or Cornua Ammonis, I have myfelf feen at leaft fix feveral Species, and fome of them of a Foor diameter, being much beyond the Bignefs of any ShellFifh now living in our Seas. Hence it is, that many of our modern Naturalifts have atrributed thefe Bodies to the Effects of a plaftic Power in the Earth, and that they are produced and framed after the fame Mianner as precious Stones, Cryitals, and coagulated Salts, by flhooting up into divers Figures. What makes for their Opinion is, that in the Earth are found many figured Stones, fuch as the Lapides Lyncuriz, Belemnites; Lapides 7 fudaici, Trocbites, and others, which have not the leaft Refemblance to any Shells, Bones, Roots, or Fruits ; to falve up which, no other Recourfe is to be had, than to the before-mentioned Lofs of thofe Species out of the World.
I cannot but mention; upon this Occafion, what I was told by a very credible Perfon, viz. That he had feen a Stone refembling a Cocklefhell, found in the Stomach of an Ox, which, if it be admitted, there is not the leaft Doubt, but that the like may be fo gene. rated in Quarries and other Places. Thefe two different Opinions have given Occafion to a third, viz. That fome of thofe Shells have been truly petrified, and that others are really Stones formed by fome Platic Power in the Earch, imitating the others in their Shapes and Figures. But as this feem to be rather a Shift than a Diffolution of the Objections to be made againf either of the two former Opinions, I am inclinable to adhere to the firft, as feeming to me more confonant to the Nature of the Thing, though at the fame Time I thould be very glad to hear the Objections made agnainft it, more folidly anfwered than they have been hitherto. The Academical Senate of Altorff was compofed at that Time of thirteen Profeffors, three in Divinity, as many in Law, two in Phyfick, and five in Philofophy, who publinh every Year a printed Catalogue of the Lectures they intend to keep the next enfuing Year
25. September 4. We fet out froin Aliorff for Regenfpurgh, or Ratisbon, and paffing through Nieumarkt and Heinmare, two little walled Towns, came to Ratisbon the 5 th at Night, by a fair Bridge built here over the Danube. This City, which receives its Name from the River Regen, which here joins its Current with the Dambe, is very large and well-built with Stonehoufes, the Roofs of which are flat, after the Italian Manner. It is well fortified, but the Streets fomewhat narrow. As it is an Imperial City, it is under the Government of its own Magiftrates; who, as well as the greateft Part of the Inhabitants, are Iulberans, though thieir Bifhop is of the Romib Religion, the Members of which have fome Convents here, and a College of Jefuits.' It is chiefly famous for the Imperial Diet, which is ufually held here.
September ir. We took Boat for Vienna, and paffed on the Left-hand of the River, by a Village and ffony Cafte on the Hill called Thonafein, and three Leagues and a half below Ratisbon, in Sight of the Caftle of Wert, feated at the Confux of the River Wifent, and the Donube, belonging to the Bihop of Ratisbon; we took up our Quarters one German League and a half thence, at Straubingen, a handfome wall'd Town, belonging to the Elector of Bavaria.

September 12. In the Morning we paffed by Pogen and four Leagues below Stranbingen, under a wooden Bridge laid over the Danube, fomewhat lower we faw the fmall City of Dreckendorf, belonging to the Elector of Bavaria, and having pass'd by the Mouth of the River Ifer, and in Sight of Osterboven on our Left-hand, and the Caftle of Hilkersberg on the fame Side, we lodged that Night at a little wall'd Bavarion Town called Vilhoven.
September 13. We came to Paffau or Paffovia, four Leagues diftant from Vilboven, a City confiderable for its Strength, Bignefs, and noble Buildings, the laft of which were very near all confumed by Fire, about nine Months before our Arrival. It is under the Jurifdiction of the Archduke of Infpruck, fituate at the Confluence of the Rivers In and the Danube, over the firt of which is a Bridge to the Town of Infadt. Below Pafou, the Danube being ftreightned by Hills and Rocks on both Sides, begins to run with a much fwifter Stream than before; feven Leagues below Pafau, paffing by the Caftle of Nerwboufe, we took up our Lodgings at the Village of $A / b$, on the right Side of the River.
26. September 14. Paffing through an open Country on both Sides, for four Leagues together, we came to Lintz, a City neatly built after the Italian Manner, with a fquare fpacious Piazza, adorned with two noble Fountains, the Imperial Palace flanding upon a rifing Ground, from whence you have a fair Profpect of the Danube and adjacent Country. Three Leagues below it we paffed by a very fine Village called Matbaufen, and in Sight of the City of Intz, feated on our Right-hand upon the River Ens, feven Leagues below Lintz, the Country begins to be hilly again on both Sides of the Danube, near the Caftle of the Prince of Licbtenfein, by a Village called Greine ; a little below which Place we paffed a Kind of Cataract, the Current being nearly enclofed between the Rocks on both Sides, and render'd boifterous by thofe under Water ; and fomething lower a Whirlpool is made there by the jetting out of Rocks into the River. Afterwards, paffing by a fmall Town called Ips, we lodged that Night at the Village of Morpatch, about eleven German Leagues from Lintz.

September 15. Early in the Morning we paffed in Sight of the rich Convent called Melk, on our Righthand, and about fix Leagues further the Seat of Count Dietricblfein on our Left, within Sight of the rich Abby of Ketrein, famous for its ftony Situation, and the brave Refiftance it made againft the Swedes. Nine Leagues from our laft Night's Lodging, we paffed under a wooden Bridge, near the City of Stein, not far from whence we came to Krembs, a very handfome, ftrong, well-built City, feated at the Foot of a Hill. From hence, being an open Country, the Channel of the River began to be much broader. Six Leagues below Krembs, we paffed by a fmall City called Deuhn, and in Sight of the Caftle of Greitenstien, fituate upon a Hill, at fome Diftance from the River, on the Lefthand, and we faw alfo the City of Cornburgb. Here, and afterwards in other Places, we faw Abundance of Mills in Boats, the Wheels lying betwixt two Boats, placed at a convenient Diftance one from another; fo that the Stream being by Degrees ftreightned between the Boats, forces the Wheel to turn. One of the Boats is with Chains, or ftrong Cables, faftened to the Bank. Within a League and a half of Vienna, we paffed by the noble and rich Abby called Cloyfter Nerwburg, with a little walld Town of the fame Name belonging to it; and having by the Swiftnefs of the Current made nineteen German Leagues that Day, arrived at Vienna, the Capital of Austria, and now the Capital of the Empire.

This City, which, in Proportion to its Bignefs, is the moft populous we had feen yet in our Travels, is the ordinary Refidence of the Emperor, feated upon the Danube, though it receives its Name from the River Wien, which below it, viz. on the Eaft-fide, falls into the former. The Body of the City is not above four or five Englijb Miles in Compars, but the Suburbs are very fpacious, fome of the Houfes of which were lately pulled down, upon the Approach of the Turks towards

Presburgh (not above forty Englift Miles from thence) after the taking of Newobeufel. Vierina has a mott regular Fortification, the Wall of Earth, but very high and thick, faced with Bricks, Itrengthened by a broad and deep Ditch, and defended by many Half-moong and Horn-works. The Houfes are lofy and well-built, with flat Roofs, after the Italian Way: The Markets very well furnifhed with Provifions, but the Streets none of the broadeft. The Emperor's Palace, the Cathedral, and other publick Buildings, are very magnificent. The Emperor himfelf (Leopold) is low of Stature, of a very dark Complexion, black Hair, and thin vifaged, with a thick hanging Under-lip, not unlike his Effigies on his Coins In the Market we firft met here with the Fruit of Sorbus legitima, with Tortoifes, for Six-pence a-piece, found here in muddy Places; and here we alfo faw the Silurus, or Shest-fifb, the biggeft of all frefh Water Fifh I ever faw, fome of them weighing near an hundred Pounds.
27. September 24. We took Coach for Venice, and lodged that Night at a great Village called Trayskerk, four Leagues thence; by the Way we faw great Store of Absintbium Auffriacunn tenuifolium, Claur.
The 24th, after we had travel'd four Leagues, we came to Newestadt, (Neapolis Auftricea) a pretty ftrong fquare Town, well built, but of no great Extent ; having a fair Market-place, and very regular Streets. At three of the Corners it is defended by fo many Baftions, but on the fourth it has a Caftle or Citadel. Near this Place I met with the Afperula carulea, After we had travel'd two Leagues beyond Neresfadt, we began to enter among the Hills, and lodged that Night at Glucknitz, four Leagues from Nervjfadt.
The 26th, We had fcarce made two Leagues, when coming to the Village of Sbadwin, our Coachman hired ten Oxen (which were ready at hand for that Purpofe) to draw the Coach up the fleep Hills, which are the common Boundaries betwixt Au/fria and Stiria. After we had travel'd for fome Time among the Hills, we pafs'd through Mertzfucblag, a fmall City feated upon the River Muercz (where we faw many Mills) and afterwards through Langenwaang and Kriegla, each of which have a Caftle built on Hills. We crofs'd the River near the laft, and paffing through a pleafant Valley furrounded with woody Mountains, lodged that Night at the Village of Kimberg, fix long German Leagues from Glocknitz.
The 27 th, We continued our Journey through the fame Valley, through the Valley of Kapfuberg, in Sight of feveral Villages, Caftles, and Councry-Seats upon the Sides of the Hills, and at three Leagues End came to the City call'd Pruck en der Murre, i. e. Pons'Mures, a neat Place, defended by a Wall, having a fpacious Market-place : The Inhabitants are moftly concerned in Iron-work. Here we pals'd the River Mure twice, and after we had left Lewben, pais'd over a Hill, and fo following the Courfe of the River among the Mountains, lodged that Night at the Village called St. Micbael. Here it was we faw many Men and Women with large Tumours hanging down under their Chins and Throats, fome of which were fingle, fome double, call'd in Latin, Broncbocele, and by fome Englijh the Bavarian Pokes. This, it feems, is a Difeafe natural, and of old belonging to the Alpine Inhabitants: Quis ummidum guttur miretur in Alpibus? Though the Grijons inhabiting the higheft Parts of thefe Mountains, are either not at all, or at leaft not near fo much fubject to this Diftemper. Some attribute the Source of this Evil to the Snow-water which comes from the Alps; others to the virulent mercurial Particles which are mix ${ }^{2} d$ with thefe Waters ; but as this Diftemper is not frequent among other Nations inhabiting mountainous Countries, where the Snow lies as long as here, nay, where their Waters are nothing but melted Snow, neither among the Hungarians and Tranfllvanians, (where they abound in Minerals, and efpecially in Mercury) we had better fufpend our Judgment, till fome ingenious Phyfician, refiding in thofe Countries, fhall affign us the true Caufe and Cure of this Diftemper. We alfo faw more Idiots and delirious Perfons here than any where elfe, which

## Chap. III. through the Low-Countries, \&cc.

I attributed chiefly to the venomous and malignant mercurial Vapours, which will, beyond all Queftion, affect the Brains and Nerves, as is obvious in Goldímiths, Gilders, Miners and Painters; though they generally attribute this to the Ufe of Snow-water, and of the vaft Quantity of Cabbage, which is their daily Food here.

The 28 th, We continued our Journey for three Leagues along the River Mure to Knittlefield, a fmall City, and then paffing through a Valley in Sight of many Noblemens Seats and Caftles, lodged that Night at the Village of St. Georgio, upon the Mure, four Leagues from Knittlefield. The 29th, We continued our Journey along the River Mure, through the fame Valley, as far as Nermarket four Leagues from St. Georgio, and following the Tract of another River, which near Volckmarck falls into the River Drave, we paffed through Freifach, a confiderable City in thofe Parts, feated in a little Valley, betwixt high Hills, and after a League's travelling further, lodged at Heirt in Carintbia.

The 30th, For three German Leagues after, we travell'd ttill through rocky Valleys as far as St. Veit, where the Emperor has a Mint: Three L.eagues further we came to Vilkircken, a Town of Note, but quite ruined by an accidental Fire three Years before. OEFober the ift, We paffed over rugged Rocks, and Mountains all along the Lake Offukerfea, at the further End of which Count Dietrichflein has a ftrong Caftle built upon a Hill. After that, pafing through a pleafant Valley, we crofs'd the River Drave, which begins to be navigable here; and wafhes the Walls of Villach, a Town of Note in this Country, three Leagues from Vilkirck. At fome Diftance from Villach, we pafs'd the River Guile, which joins its Current with the Drave. Hence we travelled again over very rocky Mountains to Orlesteiona, where we lodged that Night.

OEtober the 2 d , We travell'd on for two Leagues through the Mountains to Klein Tarvis, and thence to the River Timent, which exonerates itfelf into the Adri-stick-Sea, and took up our Quarters that Night at Pontieba, the laft Place in the Emperor's Territories, Part of it being fubject to the Emperor, from whence it is called Pontieba Imperiale, as that Part which belongs to the Venetians is thence called Pontieba Veneta; here we were obliged to take a Bill of Health. Between this Place and Klein Tarvis obferving feveral Herds of Goats following the Goat-herds like Dogs, it put us in Mind of what our Saviour fays, And be goeth before bis Sbeep, and they follow bim, for they know bis Voice; which proves that the fame was ufual in thofe Days in Judea. October the 3d, we paffed the River Timent by a Bridge, which here parts Carintbia from Friuli. About a German League thence, we came to a fmall Fort, called Claufen, where they ftopped us till we delivered our Bill of Health. As we travell'd on along the River, we faw many Timber Trees floating down the Stream, which being fell'd in the Alps, are brought to the next Rivulet or Brook, and when the next ftrong Rain Shower falls, forced down into the greater Rivers. We paffed the fame Day through Venfonga, a pretty little City, and lodged that Night at the Village of Hof. pitaletto, and fo entred Italy.

The Circumftances of this worthy Gentleman, at the Time of his going Abroad, were of a Nature that qualified him to enter into fuch Enquiries, and to make fuch Sort of Obfervations as are moft worthy of a Reader's Attention, as being moft likely to convey to him the Advantages of Travelling; without the Fatigue of it. Mr. Ray was in the Flower of his Age; he had reaped all the Advantages of a learned and general Education. He had feen the greateft Part of his own Country before he went into foreign Parts, and the fole Reafon of his going thither, was, for his own Improvement. It is very natural, therefore, to expect from fuch a Man, Remarks and Reflections, very different from thofe of other Travellers; and the Reader will find, that his Expectations in this Refpect are fully anfwered. All his Remarks are curious and important, moft of his Reflections are very fenfible and judicious; he did not VoL. II. NO II4.
dwell on the Superficies of Things, but went to the Bottom. He knew before he went Abroad, all that was worth knowing of the Countries he vifited from Books, and he made it his Bulinefs to prepare the $\mathbb{M}$ aterials for his Enquiries, before he came to the Places where they were to be made; fo that we find him fometimes commending and fometimes correcting the Authors that he had read; which enable us to judge of other Books as well as his own, as it alfo enabled him to bring together, in a very narrow Compafs, an infinite Number of curious and learned Obfervations. It is indeed true, that this gives an Air of Singularity to his Writings, which differences chem extreamly from moft other Books of like Titles; bat this is fo far from being any Way prejudicial to, that in the Opinion of the beft Judges, it adds greatly to the Merit of his Per. formance.

Another Advantage Mr. Ray had beyond moit Travellers, which was derived from the Company in which he travelled; and in Order to place this in a proper Light, it becomes neceffary for us to fay fomewhat of his Fellow-Travellers. Francis Willougbby, Efq; Anceftor to the prefent Lord Middleton, was a Gentleman no lefs diftinguifhed by his eminent Virtues and Knowledge, in all Degrees of Learning, chan by his Defeent from an ancient and honourable Family, and his Poffeffion of a large hereditary Eftate. He was from his Childhood addicted to Study, and when he came to the Ufe of Reafon was fo great a Husband of his Time, that he fuffered no Opportunities of improving himfelf, to flip unemployed; and though he had a Tincture of moft other Sciences, yet thofe that were the chief Ob jects of his Affections were the Mathematicks and natural Philofophy. In order to cultivate thefe, he undertook this Journey with Mr. Ray, in which he kept his Pencil continually in his Hand, and drew with great Exactnefs whatever offered itfelf to his View, worthy of Obfervation. His accurate Hiftory of Birds, his noble Specimen of the Hiftory of Fifhes, both of which were publifhed after his Deceafe, by the Care of his learned Friend, are the lafting Monuments of his Fame and Learning, together with Abundance of curious and learned Effays that are to be met with in the Pbilofopbical Iranfactions; and thefe will appear to us the more extraordinary, when we reflect that he died but a young Man, on the 3 d of Fuly, 1672 , at the Age of Thirty feven. As to Mr, Skippon, afterwards Sir Pbilip Skippon who was allo a Companion with Mr. Ray in thefe Travels, we.fhall have Occafion to mention him more par ticularly, when we come to feieak of his Journey through Spain, and therefore it is only requifite to obferve hêre, that his Talents, his Induftry, and his Accuracy, were not inferior to thofe of his Companions; from whence we may fafely collect, that though thefe Gentlemen had each of them his particular View, to which he chiefly attended, yet their Converfation contributed not a little to help each of their Enquiries, and enabled them to pufh their Difcoveries much farther than they could have done, if they had travelled alone, or if they had travelled in Company, where, while fome were engag ${ }^{\circ}$ d in ferious and folid Studies, others had purfued only fenfual Pleafures, or trivial Amufements.

It muft be acknowledged; that many Paffages in this Section, and many more in the fucceeding Sections, relate to Places already mentioned and defcribed, and therefore it may feem fomewhat unneceffary, more efpecially confidering how much we are ftraitned for Room, to fuffer thefe Repetitions. "But to this, feveral Anfwers may be made, as for Inftance : There is fuch a Connection runs through the whole of Mr. Ray ${ }^{2}$ s Travels, that the Reader will very eafily difcern there was no Choice left for us to make, but whether we would receive or reject all; and he will certainly fee good Reafon to think that he had been very ill treated, if the latter had been our Refolution. It muft be alfo obferved, that his Obfervations are of a very different Nature from thofe of Miffon or Burnet, more efpecially as we have taken Care to leave out a few Paffages, which it was impoflible thould not be the fame in Re-

8 E
lations

Jations refpecting the fame Places; fo that by this Means, Repetitions are for the moft part avoided, at the fame time that the Connection, neceffary for underftanding Mr. Ray's Narrative of his Travels, is maintained throughout. Lafty, it contributes not a little to the Variety and Entertainment, as well as the Utility and Inftruction of a Work like this, to bring together as great a Diverfity of Travels as is poffible, becaufe as the old Proverb fays, Many Men, many Minds. One Traveller makes his Remarks in one Manner, another in another; one fhews himfelf an Antiquary, another is an Hiftorian, a third a Critic, a fourth a Politician, a fifth a Philofopher; and in reading their feveral Remarks, we profit by them all. Befides, it ought to be remembred, that as Travellers differ in their Notions, fo Readers vary alfo in their Sentiments of Things. Such as have a View to traverfe thefe Countries themfelves, cannot avoid fetting a high Value upon Miffon's Manner of Writing ; fuch as have a Tafte for Hiftory and Politicks, muft be charmed with Burnet's Method; and thole again, who are in Love with philofophick Enquiries, moral Reflections, and Difcoveries that are
ufeful to Society, will very probably prefer the Accounts given by Mr. Ray, to Miffon and Burnet both. General Readers who grafp at all, will receive Satisfaction from comparing thefe different Methods, and find in Variety, what they would have miffed, if we had given them the very beft Relation that could have been felected, and that in its utmoft Extent. It was our Bufinefs to gratify the Defires of every Reader, and this alone is a fufficient Apology for the Method that is here taken. A Library of Voyages and Travels implies that fuch Method fhould be taken, and it always has been, and fhall be our Study to fulfil the Title of this Work, to make it as far as we can all that we have promifed, fo as to leave no Room for objecting, that we have been fparing in our Pains to accomplifh what we propofed, and to comply with the Expectations of the Publick, which in all Cafes is unjuft, and in ours would be highly ingrateful, confidering the kind Reception we have hitherto met with, and which as it encourages, fo it lays us under an Obligation to ufe our Endeavours at leaft, to deferve it.

## S E C T I O N VI.

The Travels of the Reverend Mr. John Ray, through the Dominions of the State of Venice, Lombardy, Tufcany, the Kingdom of Naples, the Iflands of Sicily and Malta, the Ecclefiaftical State, the Bifhoprick of Trent, the Country of the Grifons, Switzerland, EOc.

Interfperfed tbrougbout with Hifterical, Political, Pbilofophical, Pbyjfical, and Moral Reflections, togetber with an Account of Abundance of Curiofties Seen and examined in the Courfe of the Autbor's Voyages and Travels, and many otber entertaining and inffructive Particulars.
3. An Introductory Account of what is to be expected from the following Section. 2. Obfervations on the Situation, Extent, Number of People, Revenues, $\mathcal{F}^{c}$. of Venice. 3. Some curious Remarks on the Government of that Republick. 4. Curiofities of different Kinds feen by the Autbor there, with a very difinct and particular Account of the Art of making Venice Soap. 5. A fuccinct Defcription of Padua, and of the Hot Baths at Abona. 6. An Account of Vicenza, and of the chief Commodities in the Country round it. 7. The Cave of Cuftoza defcribed, together with the Manner of making Ventiducts. 8. The City of Verona, and the Country about it defcribed. 9. Some very curious Remarks on the State of Mantua. IO. Ferrara and Bologna defcribed, with an Account of the Country and Trade. II. Some Remarks on the Dutchy of Modena, and of the reigning Family. 12. The Cities of Reggio, Parma, and Placentia, defcribed, with many ufeful Remarks. I3. An Account of Brefcia, Bergamo, and of the Country about thofe Cities. I4. Remarks upon Milan, and the Curiofities the Author faw there. I5. A Defcription of Turin, and of the Country of Piedmont. 16. A very large and accurate Defcription of the City and Republick of Genoa. 17. The Autbor's Journey from thence to Leghorn, including a Defcription of the principal Places in the Grand Dutchy of Tufcany. 18. The Autbor's Voyage to Naples, giving an Account of that City and Kingdom. 19. A Defcription of the principal Places in the Ifland of Sicily. 20. The Autbor's Voyage from thence to the Ifland of Malta, and a Defcription of that Place, its principal Commodities and Manufactures. 21. An Account of the City of Valetta, of the Knigbts of Malta, together with various Remarks on the Country and Inbabitants. 22. The Autbor's Return to, and farther Obfervations in, the Ifland of Sicily. 23. His Voyage from thence to Naples, with fome curious Remarks on the different Provinces of that Kingdom through which be paffed. 24. A Defcription of Florence, with fome biforical Notes as to the Family, Power, and Revenues of the Grand Dukes of Tufcany. 25. The Author's Fourney from Florence to Rome. 26. His.Obfervations on the principal Edifices in that famous Capital. 27. A fuccinct Defcription of the Place, and of the Country adjacent. 28. The Autbor's Fourney from thence to Ancona, with Remarks upon fuch Places as be paffed tbrough in bis Way. 29. An Account of bis Fourney continued from Ancona to Trent. 30. A Defcription of that City, with the Copy of a remarkable Infcription relating to the laft General Council beld there. 31. Several Remarks of our Autbor on the Country, Produce, and Manufactures of Italy, and on the Difpofition, Manners and Cuftoms of its Inbabitants. 32. Obfervations on the Swifs-Cantons, and on the City of. Geneva. 33. Conclufion of this Section, and Remarks.

## Chap. III. through the State of Venice, ©co

THE Defign of this Section is to extract fo much of Mr. Ray's Travels through Italy, as may inform the Reader, in many Partilars, that were either omitted by, or did not occur to the Authors whofe Works have been already inferted, as alfo to enlarge the Accounts already given, with the Defcriptions of the Kingdoms of Naples, the Inands of Sicily and Malta, and many other Places thro' which he paffed, and which were not mentioned by the former Writers. The Reader will alfo obferve, that in regard to the Curiofities of Art and Nature which are mentioned in thefe Travels, they are more clofely and thoroughly examined than in thofe of Mifon, Burnet, or indeed any other; becaufe they were what thefe Gentlemen particularly fought after, and perfectly unflerfood; neither may it be improper to take Notice, that in Confequence of many ufeful Difcoveries made by them in their Travels, and communicated to their Countrymen after their Return, feveral ufeful Trades were fet up, and new Manufactures introduced in this Kingdom. It were to be wifhed, that the fame beneficent and publick Spirit was more common among modern Travellers, and that they would accuftom themfelves to think of bringing home fome valuable Invention, in Return for great Sums of Money fpent in their Travels, and which muft be confidered as intirely thrown away, by fuch as carry their Views no higher than bare Amufement. But let us now return to our Author, and continue the Story of his Travels as near as may be in his own Words.
Oitober 4, Quitting the Mountains, we entred the Plains of Friuli, paffing by Limonia, fituated at the Foot of the Mountains, and fome Leagues further through St. Daniele; after which we forded the River Timent in feveral Places, though in Time of Rain, or when the melted Snow comes down from the Mountains, it is of a confiderable Breadth. The firft Time we paffed the River we came to Spilemberg, feated upon a Cliff, where we faw Cloifters under the Houfes on both Sides of the Streets (a thing common in Lombardy) and after ten Italian Miles travelling, took up our Lodgings in the Village of St. Avogio.

October 5, We travell'd for ten Miles to a walled Town call'd Saribe, encompafs'd by the River Livenza, which divides itfelf into two Branches. We travelled for two German Leagues, and lodged at Conegliano, a fmall City, feated on a Ridge of a Hill. Whilft we travelled in Italy, we met rarely with any wheaten Bread, that which we ufed, being made of Sorgbum, a certain Grain, the Blade of which grows feven or eight Foot high, of the thicknefs of a Finger, bearing a large Pannicle on the Top, the Seed being bigger than Wheat, of a dusky Colour.

OEtober 6. A German League from hence we ferried over the River Anaxus (Piave) and ten Italian Miles further came to the large and famous City of Trevifo, the Capital of the Province call'd Marca Trevifana. Hence we continued our Journey through á fertile Country to Meftre, a fmall Place, feated near the Lagunes, or Flats about Venice, which are dry at low, but covered with Water at high Tide. From whence we pafs'd in a Boat to Venicc. Throughout the greateft Part of Friuli, the Marca Trevijana, and Lombardy, we faw the Corn-fields planted with Trees as thick as our Orchards, againft each Tree a Vine, the Branches of which draw from Tree to Tree in Rows, and make a kind of a Hedge; their Soil being fo rich, that it duffices for the Production of Corn and Grapes, the Trees not giving the leaft Hindrance to the Corn, either by their Droppings or Shadow, becaufe little Rain falls here in the Summer, and the Leaves keep off the fcorching Heat of the Sun, which notwithftanding this fuffices to bring it to Maturity. This part of 1taly has for its Beauty and amazing Fertility, juftly deferved the Name of the Garden of Europe.
2. The famous City of Venice is built upon feveral little Inlands in the middle of Shallows, furrounded by the Sea, called by them Lagunes. Thefe Lagunes are feparated from the Gulph of Venice by a certain Land-
bank (which they call the Lido) about, thirty-eight or forty Miles in Extent, and refembling the Space contained in a bent Bow, fuppofing the firt to be the Continent, and the String the Lido. Venice itfelf is at an equal Diftance of five Miles from each : The Lido ferves as a Fence againft the Violence of the Sea, and has feven Inlets or fmall Harbours, two only being capable of receiving Veffels of any great Burthen, viz. Thofe of Malamocro and Lio. Not far from the Laa gunes moft of the confiderable Rivers of Italy difcharge themfelves into the Gulph, viz. Padus the Po, Atbefis or Adige, Meduacus major or Brenta, Meduacus minor, or Baccbilione, Tiliaventum or Tajamento, Liquentia or Livenza, Silis or Sile, Anofus or Piave; and thefe carrying along with them a vaft Quantity of Earth, may in Time fill up the Lagune; for Gianotti tells us, that in ancient times the City of Verice was ten Miles from the Continent Oriago (Ora lacus) then lying upon the Shoar of the Lagune, which is now five Miles from Fusina, where they take Boat for Venice. The firlt Origin of Venice may be traced as far as the Irruption of the Huns into Italy, under Attila, when many of the beft Families fled for Shelter into thefe Inands, and at laft erected here a noble City. Certain it is, that this City has maintained its Sovereignty thefe 1200 Years, though it be not ftrengthned by any Fortification, but what the Sea affords it, no great Ships being able to approach nearer than the Harbour of Malamocco: thofe Inlets where fimall Veffels may pals, being defended by ftrong Forts; befides, the Channels are fo difficult to pafs, that none but their own Pilots dare venture to navigate through them. The Circumference of Venice (taking in the Giudecba) is of about eight Italian Miles, being divided into two Parts by the grand Cam nal, which paffes through the middle of it in the Form of the Letter S. Each Side is fubdivided into three Wards, called by them Sestieri, viz. Cafello, St. Marco, and Canarejo, on one Side, and San Paolo, Santa Croce and Dorfo duro on the other Side. In the whole it contains 70 or $7^{2}$ Parifhes, and 67 Convents, according to a Survey taken in the Year 158 r . according to which there were then in the City, of Noblemen 1843, Women 1659, Boys 1420 , Girls 1230 : Of common Citizens, Men 2117 , Women 1936, Boys 1708, Girls 1418: Servants 3732, Maids 5753: Of Artifans, Men 32887, Women 31617 , Boys 22765 , Girls 18227: Of Beggars, Men 75, Women 112, Monks 945, Nuns 2508, Priefts 516 , Poor of the Hofpital 1290, Jews 1043. The Sum total of which amounts to $134,87 \mathrm{i}$. Sanforino makes the Number of Souls in his Time to have been 180,000 in which I fuppofe he comprehends the Suburb of Murano and fome other fmall 'Inands. Some of our modern Writers have increafed this Num. ber to 300,000 , but without much Probability, nothing being more common than to magnify the Number of Inhabitants of great Cities; thus I have heard fay frequently, that in Paris there is a Million and a half of People, whereas there is farce half a Million. The whole City is divided into many Iflands, by fmall Channels, thro' which you convey yourfelf and Goods by Boats from one Place to another, there being no Ufe of Carts, Horfes, Coaches, Litters, or Affes, except that they employ now and then Porters in the Alleys, which run a-crofs the City for the Paffage on Foot, for Conveniency of which 450 Bridges are built crofs the Channels of one Arch each, and moft of Stone. The Bridge call'd Ponte di Rialto, is built over the grand Canal, excels all the reft. The Number of Boats for the Convenience of Carriage in the Canal, fome make amount to 10,000 , fome fwell them to 12,000 , fome to 15,000. The Buildings here are generally lofty and beautiful, efpecially thofe along the grand Canal, and the Noblemen's Palaces, which though not very fpacious, yet are very handfomely contrived; they all Itand upon Piles of Wood, like the Houres of Amferdam. The Arfenal of Venice has above two Miles in Circumference, containing a great Store of all Manner of warlike Provifions, 20000 Pieces of great and fmall Cannon, and Arms for 250,000 Men. Here they build and lay up their Galleys (of which, as they fay, they have 200)
and among the reft the Bucentaure, in which the Duke of Venice every Year efpoufes the Sea at three Miles diftance from the City, by cafting into it a Ring, with thefe Words, I efpoufe thee in Token of perpetual Domimion. In this Arfenal are maintained at the Charge of the Publick, 1550 Workmen of all Sorts, fuch as Shipwrights, Carpenters, Smiths, $\mathcal{E J}^{3}$.

This City, according to its Epithet, Venice the Rich, once furpaffed in Wealth all the Cities of Europe, till the Paffage to the Eaft Indies by the Cape of Good Hope was difcovered, at which Time they were not the fole Mafters of the Eaft India Trade only, but were alfo in Poffeffion of all Lombardy and Friuli, of Iftria and Dals matia, on the Continent, befides the Ines of Cyprus and Candia, Zant, Cepbalonia, Corfu, and feveral other Ines in the Arcbipelago: But fince the Lofs of that Trade, and their heavy Wars with the Turks, (in which they loft Cyprus and Candia) their publick Treafure has been much exhaufted, yet the Inhabitants, who have never been fubject to any Ravages or Change of Government, are very rich, and the Government remains ftill in Poffeffion of the following Dominions, viz. I. the Dogado, in which is the City of Venice. 2. The City and Territories of Padua. 3. Of Vicenza. 4. Of Verona. 5. Of Brefcia. 6. Of Bergamo. 7. Of Crema. 8. Marca Trevifana, under which are comprehended the Territories and Cities of Feltre and Belluno. 9. Friuli. 10. Iftria. II. The Territory of Rovigo, formerly belonging to the Duke of Ferrara; the whole extending 250 Miles in Length, and 125 in Breadth. Out of Italy they are poffeffed of Part of Dalmatia, the Inands of Zant, Cephalonia, and Corfu, befide others of lefs Note. We were credibly informed, that the ordinary annual Revenue of the whole Republick amounted to 5,320,000 Venetian Ducats, one of their Ducats being fomewhat lefs than a French Crown: Of which Venice produces 1,400,000 yearly, Breficia 1,000,000, Bergamo 140,000, Padua 140,000, 'Vicenza 200,000, Verona 230,000, Bergamo 140,000, Crema 100,000, Rovigo 70,000, Iftria 150,000, Il Friuli 100,000, La Marca Irevifana 190,000, Gli flati di Mare 450,000, La Zecca 150,000.

Venice abounds in Provifions of all Sorts, efpecially Fifh and Water-fowl, and excepting frefh Water, which muft be brought from the Land, and their rain Water they preferve in Cifterns. The Air of Venice is very fharp in Winter by its Vicinity to the Alps. This City is famous for the beft Treacle, for Paper, Turpentine, Needle-work Laces, Soad, and above all, for the beft Drinking and Looking-glaffes ; thefe are made at Murano, a Town of three Miles in Circuit, in an Ine about a Mile diftant from Venice.

Women of any Fafhion are kept in great Reftraint here, feldom appearing abroad, except it be at Church, when they are fure to have an old Woman for their Guardian. Their Daughters are put at feven or eight Years of Age into fome Nunnery, where they are educated, and feldom. ftir from thence till they are married.
3." The Government is Arifocratical in refpect to the whole, the common People having not the leaft Share in the Government, but in reference to the Nobility may be called Democratical, every one pretending to his Share in it, the Doge or Duke being no more than an empty Title, without any princely Authority. The whole Adminiftration of the Government is in the Great Council, the Senate, or Council of Pregadi, the College, the Council of Ten, and the Signoria; befides feveral other Magiftrates for the Adminiftration of Juf. tice; all which, together with their Method of chufing by Lot, and other Ways of tranfacting publick Affairs, are particularly defcribed by Contarini, Giarotti, and Sanfovinus. The Procurators of St. Mark, though not to be number'd among thofe who have the Adminiftration of the Republick, yet are in great Reputation in this City, this Dignity continuing for Life, and fince its firt Eftablifhment, there having been but few Dukes who were not firft Procurators of St. Mark. In ancient Times there was but one Procurator of St. Mark, whofe Bufinefs was to provide for the Church of St. Mark, and the Treafure belonging: to it, which encreafing by D -
grees, one more was added, and A.D. 1270 , a third and not long after a fourth, till their Number was in creafed to fix, and afterwards in 1423 to nine, and in 1509 to fifteen.
4. Here we faw; firft, the little Diabolus in Carcere; as fome call it, being no more than an Icuncula, or Glafs Bubble, put into a Cylindrical Glafs Tube full of Wa ter, the Bubble having; in the heavier End of it, a little Hole of fuch a Poife, as juft to keep it fmimming upon the Water ; the Glafs-tube being ftopt at one End they clap their Hand to the Mouth of the Tube, and fo preffing down the Air upon the Superficies of the Water, the fame prefles upon the Air in the Bubble which giving Way, makes Room for the Water to enter through the Hole in the Bubble, which becoming heavier, finks to the Bottom, but upon the Removal of the Hand, the Air in the Bubble, by its elaftick Power ex panding itfelf, forces out the Water, and afcends again fo, that in proportioning the Force, they can make it defcend or afcend, as much or as little as they pleafe. For the further Elucidation of which, I refer to Dr Cornelius of Naples, Progymnafmata Pbyjica, in his Epiftle de Circumpulfione Platonica. Among other Curiofities, we faw here a Boy, who by bending his Head becwixt his Legs to the Ground, charged his Belly with Wind, and afterwards difcharged it at Pleafure. A certain noble Venetian alfo fhewed us a fulminating Powder, not much inferior to the Aurum fulminans, of which he gave us the following Receipt. R. Salf of Tartar one Part of common Brimfone two Parts, and Saltpetre three Parts, beat them fine and mix them well: This Powder put into an iron Veffel or Pan, and held over the Fire, as foon as it melts, will explode with almoft as much Noife as the fulminating Powder of Gold,

The fame Gentleman introduced us to a Place where we faw the whole Procefs of making Venice Soap, which is accounted as good as Cafile Soap. The whole Com pofition is made of Oil of Olives, and a certain Lye the laft they make thus: Take of the Ahes of the Herb Kali, known in England by the Name of Beriglia, two thirds; of Kelp, i. e. the Afhes of the ordinary Seawrack, one third; thefe beaten with a Mallet into fmall Pieces, and well mingled, are ground to a Powder in a Mill, not unlike our Cyder Mills, and being fifted afterwards, they mix fome nacked Lime with the Powder, and make it up into Pellets, which they put into Troughs, and pounding Sea-water upon it, (frefh Water would do as well) makes the Lixivium or Lye. The Cauldrons wherein they boil their Soap are very large, the Bottoms of Copper, but the Side made of Stone, bound about with iron Hoops, and enclofed in a wooden Cafe. One third Part of thofe Cauldrons they fill with Oil, and the remaining Part with the Lye, then putting Fire under it, let it boil continually till the Oil be all boiled away, ftill filling up the Defect of the Lye as it boils away; by which Means Part of the Oil, uniting itfelf with the Salt of the Lee, rifes up to the Top in Form of a Scum, which condenfing by the Coolnefs of the Air, produces that which we call Soap. The Trial they make of the Strength of the Lixivium is, when an Egg will fwim in it. The Cruft or Soap they take from the Surface of the Liquor, they fpread upon a Floor, whereon Lime Duft is ftrewed (to hinder the Soap from fticking to it) then fmooth it, and let it dry in a Bed of about the Thicknefs of a good Brick. This, when dry'd, they cut in leffer Pieces, and having cleanfed them by paring the adhering Impurities, feal them with a Seal.
N. B. That Beriglia alone would make the Soap too foft, as the Kelp alone would render it too brittle. The green Colour (of which the Germans are very fond) is given by putting a certain Quantity of Juice of Beet into the Cauldron, with the Oil and Lye.
5. Padua, watered by the two Rivers Brenta and Baccbilio, is of great Antiquity, and if we credit Livy, who was born here, owes its Foundation to Antenor, after the Deftruction of Troy, which is alfo confirmed, not only by Virgil, but alfo by Martial, when he ad dreffes himfelf to Valerius Flaccus, a Poet, and Native of Padua, in thefe Words, Antenorei Spes Evalumne laris. Notwithftanding which,' fome will have the City of

## Chap. III. through the Low-Countries, Eoic.

Altinum to be founded by Antenor, and Padiua by Patavius, a King of Veneti. This City, after having born its Share in the Devaftations made by the Huns and Iombards, and having obtained its Liberty under the Emperor Otbo I. was governed by its own Magiftrates, till Ezzellinus the Tyrant, and not many Years after the Carrarefl lorded it over them, and at laft, in 1405 , fell under the Venetian Jurifdiction. It is furrounded by two Walls, the firft is called to this Day Antenor's Wall, though of a far later Structure, being about three Miles in Circumference, the outward comprehending, with all its Fortifications and Ditches, a Compafs of fix Miles, built by the Venetians, at the Time of the League of Cambray, as may be feen by the Latin Infcription over the Gate of All.Saints.
Hanc antiquifimam Urbem literarum omnium Afylum cujus
agrum fertilitatis Semen natura effe voluit, Antenor con-
didit : Senatus autem Venetus bis belli propugnaculis
ornavit, Leonardo Lauredano Duce Venetorum invic-
tifimo, cujus Principatus varias Fortunce vices excitiens quam gloriofe fuperavit.
However, this City is neither rich nor populous, in any Proportion to its Bignefs, containing, according to my Opinion, not above thirty thoufand Souls, though fome fay, thirty eight thoufand. There is a large and fertile Plain belonging to this City, fo that their Bread is both very cheap and good, according to the Italian Proverb, that Bread of Padua, Wine of Vicerza, Tripe of Trevifo, and Courtezans of Venice, are the beft in their Kind. No Trees are allowed to be planted within a Mile of its Fortifications, the Ground which they call the Wafte, being prelerved for Corn ; for as there is little Ground near this Place for Pafturage, Milk is exceflive dear here. For the Ufe of the Poor, they make Bread of Indian Wheat, and of Sorgum.

It has feveral goodly publick Structures, as, I. The Palazzo della Raggeone, or Town-hall, where the Courts of Juftice are kept, being two hundred and fifty fix Foot long, and eighty fix broad, unto which you afcend by many Steps, having Shops underneath it ; fome will have this to be the largeft Room in Europe, tho', according to our Eye-fight, we thought it not quite fo big as Weftminfer-Hall. 2. The publick Schools. 3. The Church of St. Antbony. 4. The Church of Sc. Fufina, with the Convent of Benediaines. 5. The Palace of the Arena or Amphitheater. 6. The Magazine of Corn and Ammunition. 7. The Ponte Molino, where there are about thirty Mills together upon the River Brenta. 8. The Palace of the Capitaneo. 9. Antenor's Tomb, as they would make us believe, for the particular Defcription of which, I refer to Scbottus and others. There is one remarkable Building here near the Domo, called Mons Pietatis, where they tell you a Stock of Money of forty thoufand Crowns is kept for the Ure of fuch poor People as have Occafion to borrow upon Pawns, for which, if the Sum be fmall, they pay no Intereft, if it be confiderable, they allow only Five per Cent. which defrays the Charges of the Clerks, and other Attendance, the Overplus, if any, being diftributed among the Poor, the Bank always remaining entire. The like Foundations are in many other Cities of Italy.

But what renders this City moft famous is its Univerfity, which acknowledges the Emperor Frederick II. for its Founder, Anno 1220, for a compleat Account of which, I will recommend the Gymnafium Patavinum of Tbomafinus. Such is the outrageous Temper of the Students here, that no Inhabitant or Stranger dare appear in the Streets in the Night-time, which if they happen to do, and meet with a Troop of thofe Nocturnal Vagabonds, they cry to them, Who goes there? and if they anfwer, they bid them turn back, which if they do not inftantly, they muft expect to be faluted with their Piftols they carry with them; nay, Nothing is more common, than if two Parties of thofe Students happen to meet, they retire behind the Pofts of the Portico's or Cloifters, which are on both Sides, and fo let fly one at another.

The Phyfick Garden is well ftored with Simples, but its Fame is chiefly owing to thofe excellent Men which have had the Management of it, as Aloyfus Mundella,

Vol. II. Numb. II4.

Aloyfus Anguillara, Melcbior Guilandinus, Facobus Aiza tonius Cortufus, Profper Alpinus, and foannes Veflingius.

The Government of $P$ adua is adminifter'd by a Podefice or Major, and a Capitaneo, the firft for Civil, the fecond for Military Affairs. They are both fent by the Venetians.
6. From Padua we took a Turn to Albano, ancieritly Apona, five Miles hence, to view the hot Springs there which arifing in a rocky Hillock, confifting of a porous Stone, furnifh fuch plenty of Water, that one of them drives an overfhot Mill; and by the Porofity of the Rock and the Salt it contains; wafhes off certain fmall Particles of the Stone, which by Degrees it lets fall again, and precipitates to the Bottom of the Chan nels through which it runs, fo that they pick Abundance of Stone of a dark grey Colour off the MillWheel every Month. The Water is fo hot; that in one of thofe Springs the Inhabitants fcald their Hogs to get off the Hair, being full of white Salt; which coagulates upon the Surface of the Water. The Waters of Albano are ufed only for Bathing.

February, 3. We continued our Journey to Vicenzaj a City not quite fo big, but more populous than $P$ adua; its Compafs being no more than four Miles, buc containing between thirty and forty thoufand Souls. It is feated upon the River Baccbilio, and watered by the Rero or Eretenus, as alfo by two Rivulets called Afticbello and Seriola, but is of no great Strength, being furrounded only by a Brick Wall. It is inhabited by Nobility and Gentry, of which there are faid to be above two hundred Families here. I will not pretend to give an exact Account of the feveral Changes of their Government, referring my felf as to this Point to Scbottus and Leander Albertus. I will only add, that after they had recovered their Liberty, they fubmitted voluntarily to the Protection of the Venetians, which is the Reafon they enjoy greater Privileges than any of the neighbouring Cities. The Theatre of the Academy, called the Olympic, is a very neat Structure, the Inhabitants live chiefly by Silk-worms, and winding, twifting, and dying of Silks. Their Wines hereabouts are both rich and agreeable, efpecially what they call Dolce \& Piccante.
7. Hence we travelled fix Miles to the famous Cave of Cufloza, being fix hundred and fifty Perches, or four thoufand Foor long, and four hundred and ninety Perches, or three thoufand Foot broad, and about three Miles in Circumference. The whole feems to be Nothing elfe but a Cave left from the Digging of Stones, as Trifinus has very well obferved, it being certain, that the ancient Buildings of Padua and Vicenza are of the fame Stone, and the Roof of this Cave is at Diftances fometimes greater, and fometimes leffer, fupported by above one thoufand huge Pillars of the Quarry, of three Perches fquare ; befides, that to this Day, you fee great fquare Pieces of Stone cut round about, and the Tracks of Cart Wheels, whereas there has been no Cart there in the Memory of Man. We faw great Numbers of Bats clinging to the Roof and Sides of the Cave, and fome ftanding Waters, with a Kind of Fifh, or rather Infect, in them, called by them Squille Venetiance, though they properly were the fame called by the Naturalifts Pulices marini, or aquatici, i. e. Seaflees, or Water-flees.

In the fame Village we had alfo a Sight of the famous Ventiduct belonging to a Nobleman of Vicenza, contrived for the Coolneis of his Palace during the Heat of the Summer: To effect which, Channels are cut thro' the Rocks, from a fpacious high-roof'd Grotto to the Palace, fo that when they intend to let in the cool Air, they fhut up the Gate at the Cave, and by opening a Door at the End of the Channel, convey the Frefco into the Rooms of the Palace, each of which has a Conduit or Hole to receive it.
8. From Vicenza we went to Verona, feated upon the River Atbefis or Adige, which being very broad here, has a Stone Bridge built over $\mathrm{it}_{\text {, }}$ reckoned among the faireft of Europe, befides three leffer ones. Its Circumference (without the Suburbs) is feven Miles, and is very populous and ftrong both by Nature and Art, being defended by good Bartions, Towers, and deep Ditches water ${ }^{\text {i }} \mathrm{d}$ by the Adige, befides which, it is Atrengtio
ned by three Forts. We faw here, among other Things, the Collection of Rarities of an Apothecary, one Mapheus Cufanus, confifting of many Aggyptian Idols, petrified Shells, Coins and Medals, and among the laft, a Maximilian and Dioclefian, with this Infcription on the Reverfe, Veronce Ampbitbeatrum.

Another we faw of $M u \int c a r d o$, a Gentleman of $\bar{V}$ e: rona, who had Abundance of Lachrymal Urns and Lamps, Shells and Fruits petrified, Ores and Gems; but efpecially of Roman Medals, among which he Thewed us an Otho of Gold, telling us at the fame Time, that thofe of Brafs wiere all fpurious. But a Defcription of this Collection being already publifhed in Italian, I will not infift upon the further Particulars thereof, or of the Mufoum of Mario Sala, an Apothecary here, which contains only certain Remnants of the Collection of Calceolarius, publifhed long ago.

The Amphitheatre of Verona is a Structure worth a curious Traveller's Obfervation, being both ftately and fpacious, and in outward Appearance, not inferior for Beauty or Capaciouinels to that of Titus at Rome. Of the outward Wall is left only a fmall Piece, from whence you'may make an Eftimate of the whole. But the Remainder of the other Buildings is kept in very good Repair; the Arena being thirty four Perches (each of which is fomething more than fix Foot) long, and twenty two and an half broad, furrounded by forty two Rows of Stones Benches, raifed above one another in the Nature of Steps, capable of containing twenty three thoufand Perfons. For the more ample Defcription of which, I will refer my felf to Schottus, Torellus Saraina, and Lipfius. This City, as well as Padua and Vicenza, after many Changes of Government, was at laft forced to fubmit to the Venetians. Here are excellent Whitewines, efpecially that they call Garganico. The Air is very ferene and healthy, but fharp in the Winter, from the Vicinity of the Mountains, among which Baldus, has got the greateft Reputation, not fo much for the Variety of the Simples that grow there (for the Alps are not inferior in that Point) but chiefly by the Induftry of the Paduan Herbalifts, who, but efpecially Fobn Pona, an Apothecary here, have, in Refpect to them, obliged the World with a perfect Catalogue. Near Verona is the Lake Lago di Garda, (Lacus Benacus) which affords great Quantities of Fifh, but efpecially Trouts, fome of which were a Foot long.
9. We travelled from Verona to Mantua, Fcbruary the 9 th, being twenty four Miles, through feveral good Villages, but not any Towns of Note. Six Miles on this Side of Mantua, we faw the Duke's Palace at Marmirola, a neat Structure, and well furnifhed with Pictures, and adorned with Statues: This City it felf is very ancient, and ftrong by Situaation, being feated in the Middle of a Lake, and well fortified. It is about four Miles in Extent, but not populous in Proportion, containing fcarce fifty thoufand Souls; it has no lefs than eight Gates. A little Way from this City is a Country Seat belonging to the Duke called Pelazzo del $\mathcal{T} e$, wherein you fee a fquare Room, the Roof arched in the Nature of a Cupola, called the Gyants-ball, in which, if two Perfons ftand in the oppofite Corners, one having his Ear to the Wall, may hear what the other whifpers, with his Face to the Corner ; which he that ftands in the Middle, or in the Corner of the fame Side of the Room, thall not. They told us the Duke of Parma had fuch another Contrivance in his Palace of Caprarola, but our Whifpering-place in the Cathedral of Gloucefter, is of a different Nature. Virgil, the great Latin Poet, was born at Andes (now Petula) a Village near Mantua. Here are two Academies of Virtuof, called the $A c c e \sqrt{2}$ and Timidi. This City, after many Changes of Government, was at laft brought under Subjection in 1328 , by Lewis Gongaza, by the Favour of the common People, from whom the prefent Dukes defcended, this Title being conferred upon Frederick Gonzaga in I530, by the Emperor Sigifmund IV. The Revenue of the Duke is about 400,000 Crowns a Year; but as the Expences of the Dukes have exceeded their Incomes, they are much indebted to the Venetians. The common Peo-
ple have this peculiar Cuftom, that their Children have an equal Share in their Parents Eftates, efpecially fuch as are perfonal: A Widow, after the Death of her Husband, takes her Dowry back; but if fhe dies firt, the fame is divided Share and Share alike among her Children: If the dies without Iffue, one half of her Dowry falls to her Husband, the other to her next Kin. If a Woman has Children by a former Husband, and marries another, and has likewife Children by him, one half of her Dowry goes to the Children of the firf Marriage, the other to thofe of the fecond.

Taking Boat here for Ferrara, we paffed by the Way of the Lake into the Channel of the River Min. cio, which coming out of the Lago di Garda, near a ftrong Fort of the Venetians called Pefcbiera, and coming to Mantria, fpreads itfelf into a Lake of five Miles in Length, and at fixteen Miles End, coming to a Bridge and Sluice at a Place called Gorerno, entred the River Po, and paffing down the Stream; came by Ofia, ten Miles from Governo, and ten Miles farther by Maffa, both on the Left-hand, and feven Miles lower to Stellata, a large Village belonging to the Pope: Eight Miles lower we came to Il Ponte, where leaving the Po, we paffed through an artificial Channel of four Miles long to the very Gates of Ferrara, a City confi. derable both for its Bignefs and Strength, it being reputed, for its Bignefs, the ftrongeft in all Italy, being not only defended by ftrong Fortifications, and a deep Ditch, but feated alfo in a fenny Plain. It was formerly under the Dominion of its own Dukes, but now under the papal Jurifdiction. From hence we went by Boats towards Bologna, and having fhifted our Boat feventeen Miles from Ferrara, at a Place called MalAlbergo, reached another Channel, viz. Rbenus Bononien/is, and paffing through nine Locks, arrived at Bo$\operatorname{logna}$, diftant by Water from Ferrara forty five Miles, the greatef Part of the Country between thofe two Places being fenny, not unlike the Ine of Ely in England.

The City of Bologna itfelf is feven or eight Miles in Circumference, of a rotund Figure, the Houfes not very lofty, but adorned with fair Portico's, on each Side of them, to the Streets. Many of their Houfes, though not promifing much on the Out-fide, yet being very neat and convenient within : Its Inhabitants are computed to be eighty thoufand Souls. The Saufages, Wafhballs, and little Dogs of Bologna, are famous all over Italy and other Parts. Their chief Trade is in Silk, and they have the moft convenient Engines for winding and twifting of it, that I ever faw. The Univerficy of Bologna, for its Antiquity, may compare with any in Europe, being chiefly famous for the Study of the Law, though it has a great Number of Profeffors alfo in other Faculties, as may be feen by their annual printed Catalogue of fuch Lectures, as each of them is to keep the following Year. Here we had the Opportunity of feeing the ancient Exercife of Tilting, ftill practifed here in the Carnaval Time : Thofe who enter the Lifts are mounted on Horíeback, and armed Cap-a-pee, adorned with Plumes and Scarfs, with Launces in their Hands, with which they run at one another a full Gallop, aiming at a particular Part of the Body; he that hits neareft to it carrying the Prize. We faw feveral Launces broken, but no body was either hurt or difmounted.

Dr. Ovidio Montalbano, one of the Profeffors here, fhewed us the Mufcum of Aldrovandus, left as a Legacy to this City, and kept in the Cardinal Legate's Palace. What delighted us moft, were ten Volumes of the Pictures of Plants, and fix more of Birds, Fifhes, and other Beafts, drawn in Water Colours. The fame Perfon alfo introduced us to $\mathcal{F}$ acobus Zenoni, an Apothecary, and very curious Herbalift, who, among other Rarities, fhewed us three Pieces of Rock Cryftal, with fome Drops of Water, enclofed in the Middle of them, as might plainly be difcovered by the Motion of the Cryftals.

The fame Day we vifited the famous Chymift GioSeppi Bucemi, who Thew'd us the Effects of the Pbofphorus, a Compofition, which if expofed for fome time to
the Air, and afterwards put in a darlk Place, will appear like a burning Coal for fome time, till by Degrees its Light flackens and quite vanifhes at laft, till expofed again to the Air. The crude Stone which he fhew'd us was like a kind of Sparre, which as he told us, acquired this Quality by being calcined in a fmall Furnace, the pieces of Stone being laid upon an Iron Grate over a Wood-Fire ; but whatever he told us, we could not make fome of thofe Stones, which he fold us, fhine, though we calcined them exactly according to his Directions. The Pboppborus does by Degrees entirely lofe its flining Quality, as we found by Experience, in thofe we brought along with us.
11. February 22. We continued our Journey towards Modena, by the Way of Castel Franco, a ftrong Caftle, belonging to the Pope, upon the Frontiers of Modena, about twenty Miles diftant from Bologna, a Place of no great Extent, but very populous, being the Dukes ufual Refidence, and tolerably well fortified with a thick Wall, a broad Ditch, and fome Outworks. In this Place, as well as Padua, Bologna, and other Places of Lombardy, we obferved the Houres well built of Brick, but not high, and the Streets cloiftred on both Sides, which feems to intimate, that this was the Manner of Building of the Gotbs or Lombards, who fettled in thofe Parts. The Duke's Palace is no large Structure, but very neat within, the Rooms being richly gilt, and adorn'd with Hangings, and Pictures of the beft Mafters. What moft delighted us was the Chamber of Rarities, Jewels, ancient and modern Coins and Medals, ancient and modern Entaglia's, curious Pieces of turn'd Works, dried Plants pafted upon Boards whitened with Cerus; and a very fine Collection of Defigns of the beft Painters, We faw alfo a human Head petrified; a Hen's Egg, having the Figure of the Sun on one Side; Mofs included in a piece of Cryftal; Silver in another; and a Fly in a piece of Anıber, $\mathcal{E}^{3} c$. The ordinary Revenues of the Duke of $\mathrm{Mo}^{-}$ dena, are computed to 350,000 Crowns per Annum, his Expences not amounting to above half the Sum. About twenty eight Miles from Modena, near Paiuli Caftle, iffues out of a Mountain, a Spring of Petroleum; and in another Mountain call'd Monte Nicani, are found Abundance of petrefied Cockles and other Shells.
12. February 24. We fet out from Modena for Parma, and at feven Miles, having forded the River Serchio, and pafsd by a fmall, but ftrong Town called Rubiera, on the Left-hand, after a Journey of eight Miles further, came to the City of Reggio, of equal Bignefs and Strength with Modena, and belonging to the fame Duke, whofe Title is Duke of Modena and Reggio. This laft being built more at Length than the former makes a fairer Shew at a Diftance, having one long and one broad Street. Here are very good Sculptors and Artizans in carving of Ivory and Wood, for which this Town is celebrated throughout Italy. Ten Miles further, paffing through a long Bridge over the River Lenza, we entered the Territories of Parma, and five Miles more, brought us to the Gates of the City of Parma, which exceeds Modena in Bignefs, having broad Streets, but no Portico's.
February 26, In our Way to Placenza, we ferried at fix Miles diftance from Parma, over the River Taro, and nine Miles farther, came to a Town call'd St. Donin, and eight Miles farther, came to a little Town called Fiorenzuola, near which, paffing the River Arta, we came, after twelve Miles travelling, to Placenza. This City is well fortified, and defended by a ftrong Caftle; in Bignefs it is equal to Parma, but its Buildings not fo fair. The Dukes Revenues are computed to be 400,000 Crowns per Annum, though fome fay 500,000; he being, befides Parma, and Plazenza, Mafter of the Dukedom of Castro, and the Country of Roncigliotine. The 27th, We took Horfe for Crema, and paffing through Caftigno in the Milanefe, and two Miles further ferrying over the River Adda, and two Miles thence the River Serio (which falls into the Adda) we came to Crema, a Frontier City, belonging to the Venetians, about thirteen Miles from Placenza, of no large Ex-
tent, but well fortified; its Situation being in a plair near the River Serio.
The 2gth, We continued our Journey, and paffing through Ofanengo, three Miles from Crema, and by the Caftle of Romanenjo, belonging to the Spaniards, came to Sincin, a confiderable Place in the Milanefe: Not far hence we ferried over the River Oy (Ollius) and two Miles further, rode clofe by a fmall Town cali'd L'orza muovi, but well fortified; under the Venetian JurifdiCtion, Two Miles further we pafs'd a great Village called L'orzi Vecbit, and feveral others of Note, and fo came to Brefcia, which is thirty Miles from Crema. The Country hereabouts was well planted with Flax, very populous, and the Fields fenced with Hedges like our Englija Enclofures.
13. The City of Brefoia, is not altogether fo big as Verona, but better inhabited; its Streets being regular and fpacious, with Bricks fet Edgeways on both Sides (as the Cities in Holland are) as are alfo the Streets of Parma, Placenza and Crema. It has a double Wall, the exterior of which is very ffrong, and encompafs'd with a good Ditch, befides a Caftle ftanding on a rocky Hill, which both defends and commands the Town. The Mountains hereabouts afford very good Iron and Copper Ore, and the Inhabitants are great Mafters in Iron Works, but efpecially in making of Guns, which are in high Efteem all over Italy; as is alfo the Cheefe of Brefcia. As they abound in fruifful Valleys, fo their Markets are well ftored with Provifions. The Territories of this City extend in Length, from Mofo near Mantua to Dialengo, in the upper End of Val Canonica, one hundred Miles, and in Breadth, from Lago di Garde to L'orzi nuovi fifty Miles, being full of Towns and large Villages. This City; like many others of Italy, has undergone many Changes of Government during the inteftine Broils of the two famous Factions of the Guelpbs and Gibellines; after which, it fell to the Dukes of Milan, till in 1426 . they fubmitted to the Protection of the Venetians. On the Sides of the Hill where the Caftle ftands, we found Serpent Stones, or Cormua Ami monis, and cther petrified Shells. Marcb the 2d. We continued our Journey through the Villages of Hospitaletta, Cokai and Palazzuolo, the laft of which is feated upon the Banks on both Sides of the River Ollio.

As we were travelling on to Bergamo, we had a full View of the Alps. This City is confiderable both for its Size and Strength, being fituated on the Side of a Hill, encompafs'd by ftrong Walls and a broad Ditch, but without Water: The Cante, though none of the biggeft, yet is very ftrong by Situation. Without the Walls are five large Suburbs, call'd St. Leonordo, at the Bottom of the Hill, inhabited chiefly by Merchants, the Suburbs of St. Antbony, St. Catberine, St. Tbomas, and that of St. Godard. In the Church of the Austin Friars, we faw the Monument of Ambrofe Calepine, the Author of the famous Dittionary. Over his Cell in the Cloilter was a Latin Infcription, intimating, That he was a Native of Bergamo, and a Monk of this Convent, and that he died here, in I 51 II , in the 7 Iff Year of his Age. This City has alfo been fubject to Changes: They firf fubmitted to the Verietions, in 14.28; but were in 1509 , forced to acknowledge the Sovereignty of the French, after they had made themfelves Maiters of Milan, but thefe being expelled three Years after, it remained under the Jurifdiction of the then Duke of Milan, Maximilian Sforza, from whom it revolted foon after to the Venetions, but was forced to return to its former Obedience, till at laft the Venetians got once more in Poffeffion of it, in 1516. and have remained Mafters of it ever fince. They are governed by a Major, a military Commander, Chamberlain, and Governor of the Caftle fent hither from Venice. Bergamo is of fo great a Reputation among the Itaiians, that by Way of Proverb they fay, If Bergamo food in a Plain, it roould be a fairer City than Milan. From hence we went on Horfeback to Calonica, a Village feared upon the River Adda, in the Milanese, whence we went by Water to Milan.
14. This City, which is one of the four Cities of the firt Rank in Italy, (Rome, Wenice and Naples, being
the other three) is alfo firnamed la Grande, from its Bignefs, having ten Miles in Circumference, and of a circular Figure. It contains eleven Collegiate Churches, feventy one Parifhes, thirty Monafteries for Monks, thirty fix for Nuns, eight of regular Canons, the Number of Inhabitants are faid to be 300,000 , but this laft is fomewhat too large.' Provifions are here fo cheap and plentiful, that the Italians have made it a Proverb, That they eat well only at Milan. The Cathedral here challenges the fecond Place after that of St. Peter's at Rome, both for Bignefs and Beauty; being 250 Cubits long, and 130 broad, and of a proportionable Height; but the Grand Hofpital juftly claims the Preference before all others in Europe, for its magnificent Structure and Bignefs. Among other Courts, it has a Square furrounded with a double Portico, one below, the other above Stairs. Its Revenues are yearly 50000 Crowns, out of which are maintained 4000 poor and infirm Perfons. The Monafteries and Churches here are beautified with many Pictures and Statues of the beft Mafters, and adorned with exceffive rich Church Ornaments, for which I will refer myfelf to Scbottus, and others. The Bibliotbeca Ambrofiana, founded by Cardinal Borromeo, is a noble Edifice, filled with excellent Books, unto which Strangers as well as the Inhabitants, have a free Accefs. But the College call'd Hermatbencum, is a truly noble Building, the Court being adorned with a double Row of Cloifters, one above the other, with double Pillars each; the lower of the Ionic, the upper of the Iufcan Order.

The Citadel of Milan, either for its Bignefs or Strength, may alfo compare with any in Europe. The ancient Caftle has been twice enlarged, firft by the French, who taking in a confiderable Piece of Ground, encompafs'd it with a very thick and high Wall, and a deep Ditch; from hence you have a fair Profpect of the whole City and adjacent Country, as well as thofe Fortifications added by the Spaniards, being of a Pentagonal Figure, with a Baftion at each Angle, and a Half-moon between every two Baftions. Scbottus fays, that the Compafs of the whole Fortifications (not including the Trenches) is 1600 Paces. We were told, that within the Caftle, they have a Watermill driven by a Spring, which arifes within the Circumference of the Caftle.

March 6. We faw the Collection of Rarities of Manfredas Sepialius, Son to Ludoricus Septalius, the famous Phyfician, and among other Things, divers Look-ing-glaffes, which by natural Reflection multiplied the Object almoft infinitely. A plain Glafs, with fpherical Protuberances, which reprefented the Objects as often multiplied as there were Protuberances, and another Looking-glafs of the fame Kind; feveral concave Bur-ning-glaffes of Metal; feveral Automata and Clocks, among which, two of a cylindrical Figure, moved without Weight or Spring, only by being placed upon an inclining Plain; fo that their Motion proceeded from their own Weight; befides many other Curiofities both natural and artificial ; for the Defcription of which, I will refer my Reader to the Catalogue thereof, publifhed by the Owner himfelf. There are great Artifts in this City in working and engraving Cryftals, and other Glaffes and Stones. Their Way of Polifhing is performed by a Brafs Wheel, upon which the Powder Smiris, mix'd with Water, is put ; and to fmooth ir, they ufe the Powder of Saffe-mort, or Rotten-ftone, as they call it, which is a heavy Pebble Stone, which by lying in the Water, dies by Degrees, firft degenerating into a light Pumice, and at laft crumbling to Duft. They told us for a Truth, that moft Stones, by lying long in the Water, will die in this Manner, except the clear pellucid Pebbles.

March 10. We began our Journey towards Turin, along the Bank of the River Navilio, and leaving Biagrafla, a fmall Town, to our Left, we lodged at Bufalora, twenty two Miles from Milan. The rith, we continued our Journey over Novara, a ftrong Place belonging to the Spaniards, to Vercelli, under the Duke of Savoy's Jurifdiction; a large Place, but neither ftrong nor populous. The 12 th, we travelled eighteen Miles,
as far as Sian ; and the I 3 th, being fopt by the Floods, were conftrained to ftay at eight Miles Length, at Cbivas ; and the 14 th, paffing by many Waters, and after we had ferried over at Orco and Stura, arrived at Turin.
15. This City, known to the Ancients by the Name of Augufa Taurinorum, and feated upon the River $P_{0}$, is of no great Extent, but very populous, and the ordinary Refidence of the Dukes of Savoy. The old Buildings are but very indifferent, but one new Street, and feveral other Houfes of late Date, are very handfome and uniform. The Piazza is in the Midft of the Street, being a large Square, with a lofty Cloifter on each Side : And at one End of it another Piazza, fronting the Duke's Palace, which is not yet finifhed. The Citadel has five Baftions. Here we met with fome of the Proteftants of the Valleys of Lucern and Angrona, who had lately obtained Liberty of Confcience from the Duke. They told us, that being about fifteen thoufand Souls, they inhabited fourteen or fifteen Villages only, their fighting Men (who amounted not to above two thoufand, being divided into fourteen Companies) under as many Captains, and that they had killed above five hundred of the Duke's People in the laft War, with the Lofs only of forty or fifty of their own. They are the only Proteftants in Italy, having maintained the Purity of their Religion for above thefe twelve hundred Years. Here is alfo an Univerfity, which challenges the firft Introduction of Printing into Italy. As the plain Country about Turin is very fruitfu], fo all Provifions are very plentiful and cheap here; it being certain, that Piemont, for Plenty of Corn, Cattle, Wine, Fruit, Hemp, and Flax, may compare with the beft in Italy; and the Inhabitants apply themfelves more to Husbandry than Traffick; which according to Leti's Obfervations, makes them live generally well, though none are exceffive rich. The Duke's Revenue, if we may believe the fame Author, amounts to $1,800,000$ Crowns; of which Piemont alone produces $1,400,000$. His Poffeffions in Italy are, befides the Principality of Piemont, the two Marquifates of Saluzzes and Afti, the Dukedom of $A 0 f t a$, and the Countries of $N i z z a$ and Vercelli. There are three very handfome Palaces belonging to the Duke near the City, called the Venere, Millefiore, and Valentine. The firft Invention of oil'd Cloth is attributed to Giacomo Marigi, a Citizen of Turin. March 17. Having provided ourfelves with a good Guide, we fet out from Iurin for Genoa, where we arrived in three Days after. Not above a Mile below Turin we crols'd the $P o$ (which begins to be navigable here) by a Bridge ; and after a Mile's Travelling along the River, we afcended the Hills, under which the River runs, and thefe are of a very difficult Afcent.
16. Mar. 18. We proceeded on our Journey as far as Novi, a pretty large Town under the Genoefe, twenty feven Piedmont Miles from Afte; I think they may well pals for thirty five Engli/h. About four Miles from Afte, upon the Bank of the River Tanar, (which is there very high) and on the Sands, under the Bank, we found great Variety of petrified Shells, as Oyfters, Scallops, Cockles, \&c. as alfo thofe Tubili friati, called by fome Antales, which Seignior Rofacco, a Mountebank in Venice, firf fhewed us; Belemnites, and other rare Sorts of Stones. In the Corn Fields, we paffed through, we obferv'd, Ornitbogalum lutem, C. B. in great Plenty, now in Flower. This Day we paffed by a large Village called Non, and another, which had formerly been walled, called Felizan, then Alexandria, a large Town upon the River Tanar, of more Strength than Beauty, the Buildings both publick and private being generally but mean. It was fo called in Honour of Pope Alexander III. becaufe in his Time it was peopled by the Milanefe, whofe City was then almoft quite deftroyed and made defolate by the Emperor Frederick Barbarofla, for fiding with the Pope againit him. The River (which feemed to me as large as the Po, at Turin) divides the City into two Parts, which are joined by a fair Brick Bridge. In our Paffage through the Town, we took Notice of a triumphal Arch, erected to Philip IV. King of Spain, upon his Marriage.
19. We

## Chap. III. through the State of VENICE, ©c

19. We rode from Novi to Genoa, thirty Miles all the two Collegia, and the leffer Council. Then a Boys over Mountains. About Six Miles from Novi, we paffed through a handfonse little walled Town called Gavi, where there is a ftrong Caftle on a Hill over the Town; and about fix Miles further onward, another elegant and well built Town called Voltagio. From hence we afcended continually for about feven or eight Miles, till we came to the Top of a very high Hill, from whence we had a Profpect of Genoa and the Sea. Then we defcended conftantly till we came to the City. In all this Way, we met with and overtook Mules and Affes going to and returning from Genoa, to the Number of five or fix hundred or more.

March 20. We viewed Genoa; which for the Building of it, is certainly the moft ftately, and according to its Epithet, fuperb, City in all Italy. The Houfes are generally ftately, fcarce a mean Houfe to be feen in Town. The new Street anfwers the Fame that goeth of it, It is but fhort, confifting of eight or ten Palaces built of Marble, very fumptuous and magnificent; the meaneft of them (as Cluverius faith) being able to receive and lodge the greateft Prince and his Retinue. The only Deformity of this City, is the Narrownefs of the Streets unanfwerable to the Tallnefs of the Houfes; and yet they are made fo on Purpofe, partly to fave Ground, which here is precious, and partly to keep off the fcorching Beams of the Sun in Summer time, for the Conveniency of walking Cool, for which Reafon I have obferved many of the ancient Towns of Italy and Gallia Narbonentis, to have their Streets made very narrow. This City lies under the Mountains, expofed to the South, fo that it needs muft be very hot in Summer, as witnefs the Orange and Olive-Trees, which grow fo plentifully here, that they can afford thofe Fruits at eafy Rates, and drive therewith a great Trade; furnifhing with Oranges, Florence and a good Part of Tufcany, and fometimes fending them into England. It is built in Form of a Theatre or Crefcent, encompaffed with a double Wall toward the Land. The exterior or new Wall of a great Heighth and Thicknefs, paffes over the Tops of Mountains, and takes in a great Deal of void Ground. The famous new Mole, which now makes this a fecure Harbour is faid to have coft as much as the new Wall. For a Work of that Nature, I believe it is not to be parallelled in the whole World. The Manners of the Inhabitants are not anfwerable to the Beauty of their Houres, they being noted among their own Countrymen the Italians, for proud, unfaithful, revengeful, uncivil to Strangers, and horribly exacting. There goeth a Proverbial Saying of Genon, that it hath Montagne fenza Alberi, Mare Senza Pefce, Huomini fenza Fede, Eo Donne Jenza vergogna, that is, Mountains reitbout Trees, a Sea weithout Fijh, Men witbout Faith, and Women woitbout Sbame. The Number of the Inhabitants mult needs be great, they having loft in the laft great Plague, as we were credibly informed, to the Number of 80,000 Souls. The chief Trade of the Town is Silks and Velvets; they make alfo pretty turned Works of Coral.
The Government of it, according to the new Laws made by the Pope's Legate, and the Emperors, and King of Spain's Ambaffadors, not long after the Time of Andreas Doria, is thus fettled. There is, i. A Duke, who continues in Office two Years. 2. Two Collegia, one of Governatori as they term them, the other of Procuratori. The Governatori twelve, the Procuratori eight, all elected, befides thofe that of Courfe come in for their Lives. 3. A greater Council of 400. 4. A leffer Council of roo. 5. A Seminary for the two Collegia of 120. The two Collegia of Governatori and Procuratori are, as it were, the chief Senate or Privy-Council, or Houfe of Lords, and are chofen twice a Year, viz, about the middle of $\mathcal{F} u n e$, and about the middle of December, after this Manner. All the Seminarium of 120, have their Names, together with their Surnames, and Fathers Names, written in little Scrollis of Parcliment, and put into an Iron Box, which is kept very fecurely under many Locks. When the Time of Election comes, this Box is brought forth before the Duke,

Vol, II. No CXV, who muft be under ten Years of Age, puts his Hand into the Box, and draws out five Scrolls, which are read, and the three firlt if they be capable, ate Gover natori, the two laft Procuratori. If a Man be 100 Miles of the City, he is incapable of being elected for that Time. Likewife two of the fame Family cannot be Procuratori or Governatori together. Therefore, if the two firt that are drawn out, or the two fecond be of the fame Family, the firft is Governator, and the fecond Procurator; if the two laft be of the fame Family, the firft drawn out is a Procurator, and the fecond is returned into the Box again, and the Boy draws out another. So that every fix Months, five are chofen into the Collegia, and five go out, and every one flays in Office two Years. In the Collegium Procuratorum befides the eight, are all thofe who have been Dukes, and are gorie out of Office, who (modo bene fe gefferint) continue Procuratori during their Lives. To fupply or make up the Seminarium 120 every Year, in the Stead of thofe who are dead, made incapable, or chofen into the two Collegia, the leffer Council chufes a double Number, all which muft have three Suffrages of five; and out of thefe, the greater Council choofe half by the majo Vote. For choofing the Councils both greater and leffer, the leffer Council in Prefence of the Duke, and two Collegia, choofe thirty Electors, (all which muft be of the Nobility) by three Suffrages of five. Thefe thirty choofe both the greater and leffer Council, but the leffer out of the Number of the greater, by a like Proportion of Suffrages. The greater Council is affembled upon important Occafions, and with the Duke and two Collegia make the fupreme Power. The leffer Council takes Care of the leffer and ordinary Concerns of the City and Commonwealth. Thofe who are capable of being chofen into the greater Council, mut be twenty five Years of Age; only the thirty Electors may, if they pleafe, or fee it expectient, choofe to the Number of Sixty, who are but twenty two Years old. Of the leffer Council, the one half muft be thirty Years of Age, the others at leaft twenty feven, excepting Doctors of Law and Phyfick, who, if they be weil qualified, may be chofen two Years younger. Thofe who are capable of being chofen into the Seminarium mult be forty Years of Age.

The Choice of the Duke is in this Manner: The Great Council being affembled, there are put into an Urn ten golden Balls, marked with ten feveral Letters; one of thefe being drawn out, is 'hewn to the Confervators of the Laws, who thereupon put into another Urn ftanding by the Duke's Throne, fifty golden Balls marked with the fame Letter, and fifty filver Balls; thefe being thaken together, the leffer Council of One hundred, excluding the two Collegia, draw out each Man a Ball. He that draws out a golden Ball, fhews it to the Cenfors whio fit by, and prefently writes in a Scroll of Paper the Name of him whom he thinks fit to nominate for Duke, and goes out of the Council. When all the golden Balls are drawn out, the two Collegia bring them into Order, and count them over, and if the Number of the Nominated amount to twenty then they are propounded to the greater Council," who out of them, by major Vote, chufe fifteen. Out of thefe fiften the leffer Council chufe fix by three Suffrages of five. Out of thefe fix again, by major Vote, the greater Council chufe the Duke. Thefe Suffrages are all occult, that is given by putting of Balls into Ballotting Boxes. If in the greater Council for any Perfon the negative and affirmative Suffrages are equal, then five by Lot are to be put out of the Council, and the reft to ballot again. Many other Provifions there are in Cafe of Equality or Difagreement, $\mho_{3} c$. Nothing can be propounded in Council but by the Duke, who during the Time of his Regency, lives in the Palace and hath, according to Sanforimus, a Guard of five hundred Swuizers. The Office of St. George is, as far as I underftand it, nothing but a Company of Bankers, who lend Money to the Common-wealth, for which they are allowed fo much per Cent. and have affigned to them the publick Gabels and other Revenues; and for
further Security have Corffeca engaged to them. This Company chufe yearly out of their own Number eight Protectors, who are to take Care of, and manage the Affairs of all the Creditors. Into this Bank Strangers ufually put in Money, and fo become of the Company, for which they reccive yearly Intereft proportionable to the Improvement made of the whole Stock of Monies then in Bank. The publick Revenue of this State is faid by fome to be 1,200,000 Crowns per Annium, and yet fcarce fufficient to defray the publick Expences. There are many private Perfons here very rich. The Republick is thought to be able to raife an Army of 30,000 Men, and to fet out to Sea twelve Gallies and twenty Ships of War. They hold good Correfpondence with all Chriftian Princes and States, excepting the Duke of Savoy, by reafon of his Pretence to the City of Savona.
17. April 2, We paffed in a Boat from Genoa to Porto Venere, and thence crofs'd the Bay of Spezzia to Lerici, where taking Poft-horfes, we rode to Sarzana, a ftrong Frontier Town belonging to the Genoefe, and lodged that Night at Malfa, a fmall City, but dignified with the Titie of a Principality, the Duke being likewife Lord of Carrara. His chief Revenues come from the Marble Quarries: He is of the Genoefe Family of the Cybo's.
April 3, We travelled through a boggy Valley near the Foot of the Mountains, a kind of a defolate Country, as far as Lucca.
Lucca contains not above three Miles in Circuit, but very populous for its Bignefs, the Eafe of the Government drawing thither abundance of People. Its Situation is very pleafant, in a delightful Valley; and its Fortifications and Out-works ftrong, and kept in good Repair. The Buildings are fair, and their Churches, though not very large, yet neat and well kept. The Inhabitants, both of the City and Country, very courteous, and fo careful to preferve their Liberty, that they omit nothing which they think may contribute to maintain it. Their Women here are not kept fo ftrict as in other Parts of Italy, being allowed to walk abroad with a reafonable Share of Freedom : They are generally handfome enough, and in their Drefs affect to follow the Frencb. The Adminiftration of the Government is by the Great Council of one hundred and fixty, chofen every Year from among the Nobility, (the reft having no Share therein) thefe muft be twenty five Years old at leaft ; nine Antiani, and a Gonfaloniere ; thefe laft are chofen a-new every two Months, and are ftiled the Signioria, the Gonfaloniere being their Head, but no more than by his Title. The City is divided into three Wards, called Terzieri, each of which has its Arms or Banner, called Gonfalone, whence the Name Gonfaloniere: On the Corners of each Street thefe Arms are painted, with the Name of the Ward it belongs to, and what Bulwark they are to defend, in cafe of a fudden Attack. The Council chufes three Antiani out of each of thofe Wards. Their Revenue is computed at 100,000 Crowns yearly. The beft Olives in Italy, grow hereabouts.
The City of Pija, formerly a rich and popolous Commonwealth, is, fince its coming under the Florentine Yoak, become poor and almoft defolate, notwithftanding all the Endeavours of the Great Dukes of Florence, who have erected an Univerfity, founded an Order of Knighthood, and built an Exchange there, for the Encouragement of the Inhabitants. Its Situation, which is in a fenny Ground, upon the River Arno, renders its Air very unwholfome and obnoxious to Strangers. What we thought worth our peculiar Obfervation here, were, I. St. Stepben's Church, dedicated to the Order of that Name, founded here by Cofmo, the firft Grear Duke of Tufcany. 2. The College for Students in Law and Pinilolophy (formerly the Houfe of Bartolus) founded by the Great Duke Ferdinand in 1596. 3. The Cathedral, being a moft magnificent Structure of Marble, the Doors of Brafs, curioully engraven, a double Ifle on each Side of the Nave, and two Rows of Marble Pil lars, beautified with ftately Altars, and felect Pieces of Painting, the Sides hung with red Velvet, and the Roof zichly gilded.

On each Side of the high Altar, you fee a Picture, and under each of them an Infcription, giving a hort Account of two notable Adventures of this City, which are expreffed there.

1. Templum boc, ut aucte potentice ac religionis infigne monumentum posteris extaret, Pijamis ex Saracenorum SpoLiis captâ Panormo adijfcatum, ac Sanctorum reliquiis è Paleftina ufque advectis auctum, Gelafius II. P.M. Solemnè pompa confecravit, An. Dom. M.C.XIX.
II. Pafcale II. P. M. autore, Pifani claffe 300 triremiums Petro Arch. Pif. Duce Baleares Infulas, profigatis Saracenis in ditionem redigunt, Cbriftianòque nomini adjungunt captaque regia Conjuge ac filio preclaram vieforiam illuftri pioque triumpbo exornarunt A. D. II 5.
2. The Baptisterium, in the Center of which you fee a very noble Font of Marble, into which, like a Ciftern, the Water runs continually; the Pulpit is alfo of Marble, with moft curious carved Work. 5. The Campo Santo, or Burying-place, being an oblong Square enclofed with a broad Portico, well painted, and paved with Grave-ftones: The Earth which makes up this Churchyard, is faid to be brought from the Holy Land, and to confume Bodies in forty eight Hours. 6. The Steeple, a round Tower, of a great Height, feeming to encline fo much to one Side, as if it were ready to fall, which fome attribute to the Contrivance of the Builder, others to a Defect in the Building. 7. The Aquaduit, which conveys the Water from the Mountains for five Miles into the City, by 5000 Arches, being begun by Cofino and finifhed by Ferdinand I. great Dukes of Florence: This Water for its Goodnefs, is carried in Flafks to Leghorn. 8. The Phyfick-Garden, then but nenderly provided with Plants.

We took Boat here for Legborn (the Portus Liburnus of the Ancients) about twelve Miles hence. This Town is not very ftately nor large, the Houfes being but low, yet uniform, and the Streets regular, with a large Piazza in the middle: It is ftrongly fortified on the Land fide, and fince the Great Duke has made it a free Port, much encreafed in Traffick and Riches: Its convenient Situation for the Levant Trade having drawn thither great Numbers of Strangers, and efpecially Fews, of the laft of which there are computed to be above 5000. Before it was fo well inhabited, it was reputed a very unhealthy Place, by Reafon of its Situation in a fenny Level, without Mountain, or as much as a Hillock within five Miles of it, but fince that time, the Multitude of Fires, and the Induftry of the Inhabitants, have, by draining thofe Marfhy Grounds, rendred the Air as agreeable here, as in moft Parts of Italy.

The Harbour within the Mole is but fmall, but this Defect is compenfated by the Goodnefs of the Road, where there is fafe Anchorage for Ships. Near the Harbour ftands the magnificent Statue of the Great Duke Ferdinand I. the Pedeftal of which is fuftained by four Brafs Statues of chained Slaves, of a gigantick Stature. The Great Dukes often refide here in Lent, for the great Plenty and Cheapnefs of Fifh, though all other Provifions are here at a dear Rate. We faw many Workmen employed in filling of Mark-ing-fones, call'd in Latin, Lapis galactites $\mathcal{O}^{2}$ morocbtbus, by the Italians, Pietra Lattaria; they are found at Monte negro, fives Miles from Leghorn; of the Duft and Filings of which Stone they make Powder for Hair.

We embarked at Leghorn, aboard a Dutch Veffel, bound for Naples, but the Wind being very variable, we fpent five Days in this Voyage. Our Mafter told us, that it was a general Obfervation here, for the Wind to blow Eaft in the Forenoon from the Land, and in the Afternoon Weft from the Sea. We alfo made this Obfervation, that the Wind generally was quite laid with Sun-fet, and we had but little about Sun-rifing. In our Return from Meflina to Naples, and thence to Legborn, we found the Wind contrary, for the moft Part, which according to the Seamens Saying, is commonly fo here in the Summer. We further oblerved, that

# Chap. IIİ. 生brough the State of VE NICE, \&c. 

that the Wind followed the Courle of the Sun, it proving generally pretty well for us in the Morning, but in the Afternoon againft us, the Land being to the Eaft of us, which confirmed what our Capiain had cold us. He alfo affured us, that when they are to make a Voyage from Holland to the Weft-Indies, they fail up as high on the South of Afric, as the Place whicher they are bound in the West-Indies lies; and then fteer their Courfe Weftward, the Wind blowing conftantly from the Eaf, and the Sea running the fame Way; whereas, when they return, they go round the Bay of Mexico, far to the North, and fo pafs over to Europe; which if true, much ftrengthens the Opinion of the Diurnal Motion of the Earth.
18. The lovely City of Naples, extends in Form of a Crefcent along the Sea-fide, under the Hills, refembling in Form, that of Genoa, except that it is much larger, and more populous; for, though the Circumference of its Walls, exceeds not above feven Italian Miles, yet it has very fpacious Suburbs. The Houfes here are generally lofty Structures, of Stone, fiat roofed, and covered with a certain Plafter, which keeps out the Rain to Admiration. Its Situation is to far to the South, and that under Hills, would make the Heat exceffive here, were it not for the conftant Breezes of Wind about Noon, which fo cool the Air, that, except two or three Days, we found the Weather temperate enough, even at our Return, which was in June, when it rain'd very hard three feveral times, though they look'd upon it as extraordinary: For want of Rain, they have a Way of cooling the Streets every Day, by drawing through them a Tun, with Water, in a Cart, which has many Holes in it. The Dialect of the common People here, is far different from the Tufcane, and not very intelligible. Provifions, but efpecially Fruit, is very cheap here, and among the reft, we faw the Cucurbita anguina, Cucumis anguinus, Mala infana, and Limoncelle, fold in the Marker. All the Neapolitans, and generally the Italians, drink their Wine and Water fnowed, by putting the Veffels in which the Wine is, into another full of Snow or Ice, which is the Reafon, that it is not only fold in Stalls all over the Town, but they carry alfo fmall Barrels, with Snow Water on their Backs, crying, Snowed or Iced Water to be fold.

Beltranus tells us, there are 160 Religious Houfes of all Sorts in Naples, viz. 121 for Monks, and 39 for Women, which maintain 1242 I Perfons. This City is defended, or rather bridled, by four Caftles, viz. by the Caftle d' Ovo, built on a Rock in the Sea, with an artificial Caufeway leading to it; the Caftle St. Elmo, feated on a Hill above the City; Castle Novo, for the Security of the Harbour and Galleys, which lie near it and the Torrione di Carmine, being only a Tower belonging to a Convent of the Carmelites, but famous for its having ferved as a Retreat to the Rebels, under Maflaniello:

Naples is famous for the Beauty of its Churches, which are generally fumptuous, fome of them not only paved with Marble, but alfo the Walls covered with it. Of all Things that ever I faw of this Nature, I never met with any that exceeds the Convent of the Cartbufians, adjoining to the Caftle of St. Elmo, having a fpacious fquare Court, with the fineft Cioifter round it that ever was feen. The Pillars, as well as the Pavement of the Portico's, are of Marble of feveral Colours, fo curiounly wrought and polifhed, and fo neatly kept, that it cannot but furprize thofe that behold it. The Granary of Naples is alfo worth the Obfervation of a curious Traveller, both for its Extent and Conveniencies: They told us that there was generally laid up as much Corn, as would faffice the whole City for feveral Years, in Cafe of Neceffity; and that the Bakers of Naples are obliged to buy 25000 Tomoli (Bufhels) of Corn out of it every Month, at a certain Rate, which indeed enhances the Price of Bread, but makes Room for the laying up of new Corn, which is every Day turned in the Store-houfe, by a great Number of Men kept for that Purpofe.

The whole Kingdom of Naples is divided into twelve Provinces; the Nobility are diftinguifhed into five

Seggi or Societies, viz. of Capua, Nido, Montagna, Porta, and Porta nova; compofed of 87 Princes, 124 Dukes, 159 Marqueffes, and feven Earls. It has in all 20 Arbinhopricks, and 122 Bifhopricks (to 30 of which the King of Spain only nominates; ) and 148 Cities; (I) The Province of Terra di lavoro, (the ancient Cam pania felix) has fourteen Cities, among which Capua, Gaeta, Pozzuoli, Aquino and Averfa, are the Chief. (2) Principato Citra, containing eighteen Cities; among them, Campugna, Capri, in the Ine Caprea, famous for the Retirement of Tiberius Cafar, Cappacio, Laurino, 8zc. (3) Principato ultra, which has fourteen Cities; as, Benevento, Avellino, St. Angelo de Lombardt, Monte marino, \&ic. (4) Baflicata, containing eleven Cities, as; Lavello, Polycaftro, Venofa, Monte pelofo, \&xc. (5) Calabria Citra, which has I2, as, Mantea, Paola, Montalto, St. Marco, \&xc. (6) Calabria Ultra, fixteen, as, Reggio, (the Ancients Rbeoium) Belicaftro, Montilene, Melito, Nicoterra, \&xc. (7) Terra d' Otranto, fourteen, as, Gallipoli, Briudif, Oiranto (the ancient Bydrunium) Caftro, \&x. (8) Terra di Bari, fixteen, as, Andria, Barletta, a very ftrong Place, Bifeglia, Polignano or Putignano. (9) Abruzzo Citra, has five only, viz. Cbieti, Sulmona, Benevento, Borrelle, and Ortona. (10) Abruzzo Ultra, has alfo no more than five, viz. Aquila, Airi, Campli, Civita di Peuna, and Teramo. (11) Contado di Molifi, has four, Bojano Guardia, Alferes, Ifernia, and Trivento. (I2) Capitanata, contains thirteen, as Monte St. Angelo, Afcoli, Lucera, Sanito Severo, Manfredonia, \&xc. Among this great Number of Cities, are many which can't compare with the beft Sort of our Villages in England.

Hearth-Money is a cuftomary Tax in the Kingdom of Naples, each Hearth paying fifceen Carolines (about feven Shillings Engli/h) to the King, except the Sclavonians, who pay but eleven Carolines a Year, the whole Tax, deducting what is to be abated for privileged Places, amounts to $6,554,873$ Ducats and fix Carolines per Amum. The Tax, with the Feudatories pay yearly, inftead of perfonal Services, amounts to 120568 Ducats, befides feveral other Excifes and Taxes, the whole Revenue then amounting yearly to 2,996,937 Ducats; three Carolines, and fourteen Grains.

We had the Curiofity to vifit the Philofophic Academy of Virtuof at one of their Meetings, which was then every Wednefday; in the Palace of the noble Marquis Arena, a truly courteous and obliging Perfon; there were not above fifteen or fixteen of the Members prefent, but triple the Number of other Perfons. They fhewed an Experiment of the Waters afcending above its Level, in flender Tubes, upon which, after they had difcourfed a-while, three of the Society made an Harangue each had ftudied on Purpofe, upon a certain Subject; upon which fome Arguments having been raifed pro and con, they concluded the Meeting. I muft confefs that I was not a little furprifed to fee fuch a Company of learned Men, in a Place, where I was of Opinion, they would fcarce allow a reafonable Latitude of Judgment ; and I muft give them their Due, that they were not only well acquainted with the beft and moft refined Authors of the immediately preceeding Age, fuch as Galilei Galileo, Des Cartes, Gaflendus, Harvey, Verulam, \&xc, but alfo with thofe furviving in the prefent Age, as Mr. Boyle, Sir George Ent, Dr. Gliffon, Dr. Willis, Dr. Wharton, Mr. Hobbs, Mr. Hoek, Monfieur Pecquet, \&xc.

April 24. We went by Water to Pozzuolo called by (the Ancients Puteoli) where the Country People brought us Abundance of Sheils, dry'd Hippocampi, ancient Medals and Entaglia, nay, painted Glafs to fell, which they faid, they had raked out of the Sea. Near this Place you fee many Arches of Stone reaching a good Way into the Sea, which has given Birth to that Opinion, that thefe are the Remnants of the Beginning of Caligula's Bridge over the Bay, and that from the Extremity of this Pile to Baje, the reft of the Bridge was made up of Veffels faftned together, and kept by Anchors on both Sides. But to me this feems to be the Ruins of a Mole or Peer, intended for the Security of the Harbour, becaufe upon every Peer, is to be
feen a great Stone perforated, and jetting out to tie Veffels to. Certain it is, as well from the Manner of its Arches, as from the Bricks, that it was an ancient Roman Work. From hence we pafs ${ }^{\text {s }} \mathrm{d}$ crofs the Gulph to Baje, to defcribe the Antiquities of which Place, would require a Volume alone, for which Reafon we will refer the Reader to fuch, both Latin and Englifb Authors, as have given us a full Defcription of them. I will content myfelf with giving you fome Account of the Grots or fweating Places, call'd by them Bogne (Baths) de Tritoli.

This is a ftrait and long Paffage, like a long Entry, the upper Part whereof is fo hot, that fhould a Man walk long upright, he muft be ftifled by the hot Vapours which fill up the upper Part of this Vault, whereas the lower Part is paffable enough, fo that every one is obliged to ftoop. What I obferved chiefly was, that the lower Part of the Vault, as far as it is tolerably cool, was covered on the Sides with a very folid Stone, whereas the upper Part was an unctuous friable Kind of Clay or Plaitter ; and . what is more obfervable is, that at the very Partition of the Stones and the Clay, on the Sides of the Bath, the Difference of the Degrees of Heat is very perceiveable; fo that where you find the Clay reach lower, you muft rule the Inclination of your Body accordingly. We found a watry Vapour contained in thefe fulphureous Steams, as was fufficiently manifeft from the Drops, which notwithftanding the great Heat, were condenfed on the Sides of the Vault.

In our Return from thence, we took a View of the Nere Mountain, called by fome Monte di Cenere, (Cin-der-Mountain) raifed by an Earthquake in 1538, September the 29th, its whole Altitude being now about an hundred Foot perpendicular. We were told that it produced Nothing, yet we found Myrtle, Maftick Trees, and fome other Shrubs there. It is compofed of a fpongy Earth, which makes a great Sound if you famp hard. By the fame Earthquake the Lacus Lucrinus was fill'd up with Stones and Earth, and turned into a fenny Meadow. As we were coming back from Pozzuolo, we viewed alfo the Mountain call'd Solfotara (anciently Campi Pbilegrai) which burns continually. On the very Top of it is a very large excavated Hole, of an oval Figure, 1500 Foot long, and 1000 broad, where is the Burning; befides which, there are divers other Holes, which convey the Smoke as out of a Furnace. Out of thofe Vents I gathered a kind of Flores Sulphuris, and Sal Armoniac, which ftuck to the Mouths of thofe Holes, and thrufting a Sword into them, or any other Iron, you will find it all bedewed with Drops of Water, an evident Sign that there is a confiderable Share of Water mixed with thofe fiery Exhalations; and what confirmed me the more in this Opinion, was, that thofe Flores would not burn or melt, by reafon of the heterogenous Particles mixed with them. The Inhabitants have a Way of feparating them from the Brimftone, which lies as thick as a Cruft all over the Mountain. As you walk, you hear the Earth found every Step you make, as it were hollow underneath ; and what is more, if every Thing be quiet, you may hear the very boiling and bubbling of the Minerals or other Liquors.

About five Miles diftant from Naples, is the famed Mount Vefuvizs, where we found the Ground all about the Sides of it covered with Cinders and porous Stones, which had been caft thus far during the Conflagration: We alfo perceived great Chẩnnels, fuch as are commonly left after ftrong and fudden Floods, which they told us were the Effects of the Waters, which at the Time of Burning are thrown out of the Mountain. We found fome Acotofa ovilla near the Top, and a little lower Collutea fcorpioides, and fome Shrubs of Poplar. It was very fteep getting up to the Top, where is a vaft hollow Pit of a Mile in Compafs, occafioned by the breaking out of the fiery Subftance, at feveral Times with great Violence. We obferved alfo fome finall Vents or Paffages for the Smoak, but were fcarce confiderable enough to threaten an Irruption.

We alfo took a View of the Grotto di Cane, or Dog's Cave, near the Lake of Agnono: It is both narrow and
hort, and (whatever fome may have pleafed to tel the World) you may go into it, and continue there for a long Time without Prejudice, fome of us ftaying at the further End of it. above an Hour ; becaufe the Vapour, whether fulphureous or arfenical, afcending not above a Foot from the Ground, which you may perceive plainly by the Heat in your Feet and Legs, fo that if you bend your Head towards the Ground, you will be immediately fenfible of a Smell like burning Brimfone, which feizing your Head, makes you ftagger, and may ftifle one. We took a Dog, and holding his Nofe down near the Ground, almoft killed him; then throwing him into the Lake to recover him, we found him too weak to fwim, and fo was drowned. We try'd the fame Experiment with a Pullet, which was killed immediately ; and afterwards with a Frog which likewife did not live long ; and laft of all, with a Serpent, which did not hold out above half an Hour. If you hold a Candle below the Part where the Vapours are, it is extinguifhed immediately. I am of Opinion, that many more fuch Grots might be digged hereabouts.

As we were going to this Grot, we paffed through the artificial Paffage or Vault, through Mount Paufili pus, performed by one Cocceius in fifteen Days. We judged it about half an Englif Mile long, though fome will have it as long again. Where it is loweft which is in the Middle, it is twelve Foot high, and broad enough for two Carts to pafs conveniently by one another. As it is fo dark in the Middle (no Light coming in but at the two Ends) that no body can fee one another, fo thofe that pals through it, cry always Alla Marina if they go to the Sea-fide, and Alla mon tagna if they go towards the Country; fo that each taking the Left Hand, they prevent the running upon one another.
We obferved the Fifh-boats out at Sea with Lights at one End, to draw the Fifh after it, and fo they ftrike them with a Mole-fpear.
19. April 29. We continued our Voyage in the fame Veffel, that had brought us hither, to Sicily, and arrived, May the 2d, at Mefina: We failed by the Aiclides or Vulcanice infula, two of which, viz. Stromboli and Vulcano, ftill burn; we faw the firft all in Flames as we pals'd by in the Night time. It being no eafy Matter to make the Mouth of the Streight, by the Faro of Meflna, by Reafon of the Current, which is very violent here, fometimes running towards Calabria, fometimes towards Sicily; our Matter was forced to hire a Pilor for ten Pieces of Eight, who conducted us fafely through it.

The Harbour of Mefina itfelf is very good, being enclofed by the City on one Side, and on the other by a Neck of Land. As the Houfes along the Sea-fide are loftily built of Stone, they make a noble Show at a Diftance, but are but indifferent within, and the Streets narrow and ill paved, which verifies the Italian Proverb, At Meflina you bave Duft, Flcas, and Whores in Plenty. This City ftands in Competition with Palermo, both pretending to the Title of being the Metropolis of Sicily, which is the Reafon that the Viceroy refides eighteen Months in each, during his Government. The Meffnefe boaft of great Privileges granted by Cbarles V. the Emperor, and pretend to the Monopoly of Silk, which was indeed formerly vended at Meflina, but the Palermitcons having got a confiderable Share of that Trade into their own Hands fince, this caufed great Jealoufies between thofe two Places, which affects the whole Kingdom, fome taking Part with one, and fome with the other of thofe Cities. The Inhabitants of Mefina are none of the moft polim'd, haughty in their Converfation, and very prone to Rebellion. The Spaniards are in Poffeffion of four Caftles in and about the City, and the Mefinefe of as many; for the reft, the City Gates are open at all Times. The Government of this City is adminiftred by fix Perfons, whom they call Furots, four of which are chofen out of the Gentry, and two out of the common Citizens. Their Government is annual, and though the firft have the Majority of Votes, yet can they tranfact Nothing of Moment with-

## Chap. III. through the Low-Countries, $\mathcal{G i}^{\circ} c$. <br> out the Confent of the others ; though the Spaniards <br> out of the Boat into the Sea, and turns the Tortoife on

have taken Care to reduce their Authority into fuch narrow Bounds, that there is no great Occafion of Conteft among them upon that Score.
May 5, We hired a Felucca to carry us to, and bring us back from Malta. May 6, We failed with a brisk Gale as far as Catanea, fixty Miles beyond Mefina, a little Town, having nothing confiderable in it, but two or three good Convents. May 7, We made forty Miles to Syracufa, and failed in Sight of Auguta, famous for the Goodnefs of itsWines. The fmall City of Syracufa, in its prefent State, is only that Part of the ancient Syracufa, called Nñơ, being but indifferently built, and flenderly inhabited, but very well fortified to the Land-fide by the Knights Hofpitallers, after they had been expelled Rbodes by the Turks; but Cbarles V. thought it more expedient to beftow a Settlement upon them in the Ifle of Malta. About two Miles from the prefent City, you fee the Ruins of the ancient Syracufa, and among the reft, the Remnants of an admitable and extenfive Amphitheatre.
We were alfo fhown the Grot, commonly called Dionysuus's Ear, being cut out of the Side of a high Clift; it is high roof'd, but not long, and goes a little Winding. In our Return from Malta, we took a View of one of the Burying-places, or Catacombs of the Ancients, of which there are feveral here and in Malta. This belonged to St. Antbony's Church, and confifted of many vaulted Walks cut out of the Rock, having on each Hand other Vaults at Right-angles with them, the Floors of which were about two Foot higher than the Floor of the main Walk, hewn into Troughs or Ioculi, wherein they ufed to depofit their dead Bodies: In fome of thofe were twenty Loculi, more or lefs. At certain Intervals, you come to round Rooms or Halls in the main Walks, where feveral of them meet together, fo that the whole being of a great Extent, might contain many Thoufands of dead Bodies.
20. May 8. The Wind being contrary, we were forced to make ufe of our Oars, and rowed as far as Capo Paffaro, anciently called Promontorium Pacbynum, forty Miles diftant from Syracufa. Upon the utmoft Point of Land ftands a little Caftle, held by a Garrifon of about twenty Men: This Caftle flands now in a little Inand made fo by the Force of the Sea, which not long fince brake it off from the Land. The Wind being contrary, and blowing a ftiff Gale, made the Sea fo rough, that we dared not venture out, but were forced to reft here two Nights. May 10, we put to Sea again, but the Wind fill continuing contrary, and the Sea very rough, when we were gotten about half Way over the Channel, we were forced to return back again to the primo terreno of Sicily, viz. the Caftle of Puzallu. The Greatnel's of the Waves not permitting us to come afhore there, we rowed fix Miles farther South, and put in at a little Cove called the Harbour of Punto Cericolo. The Weather continuing foul, we were detained here three. Days, having no ocher Shelter but a fmall Hut or two, which the two Centinels (who ftand conftantly at this Point, to watch and give Notice to the Country of the coming of Corfairs) had fet up for themfelves to creep into in flormy Weather. We fihould have been glad of frefh Straw to lie on, having Nothing in our Kennel but oid fhort Straw, fo full of Fleas, that we were not able to fleep in it. Our Diet was the Blood and Flefh of Sea Tortoifes, that our Seamen took by the Way, and Bread we brought along with us: Wine we got at a Houfe about half a Mile off our Lodging, but when our Bread failed, we were forced to fend eight Miles for it and more Fifh, for Flefh we could get none.

May ${ }^{13}$, The Wind ceafing, we put to Sea again, and had a very good Paffage over to Malta. By the Way we faw our Seamen take feveral Tortoifes in this Manner: When they efpy a Tortoife foating on the Top of the Water, as they can eafily do at a good Diflance, with as little Noife as they can poffibly they bring their Boat.up clofe to him, then they either catch him with their Hands and draw him up into the Boat, or if they cannot get near enough to do $\mathrm{fO}_{2}$, one leaps Vou. II. Ne ${ }^{115}$ :
his Back, and then with Eafe drives him before him up to the Boat, the Tortoife being not able to turn or Twim away on his Back. They fay, (and it is not unlikely) that the Tortoife, while he floats thus upon the Water, fleeps; which is the Reafon why they are fo fill, and make fo little Noife in bringing their Boat up to him. One of thefe Tortoifes which they caught, had two great Bunches of thofe they call Bernacle-fbells fticking or growing to his Back, and fome of them the largeft and faireft of that Kind which we have ever feen.
As for that Opinion of a Bird breeding in them, (which fome haveaffirmed with much Confidence, and of which Micbael Meyerus hath written a whole Book) it is without doubt falfe and frivolous. The Berracles which are faid to be bred in them, being hatch'd of Eggs of their own laying, like other Birds; the Hollanders, in their third Voyage to difcover the North-eaft Paflage to Cathaia and Cbina, in 80 Degrees 11 Minutes of Northern Latitude, having found tiwo Inands, in one of which they obferved a great :Number of thefé Geefe fitting on their Eggs, $\mathcal{E}_{c}$. as Dr. Fobnfon relates out of Pontanuis. As for thefe Shells, they are a Kind of Balanus marinus, as Fabius Columna proves, never coming to be other than what they ate, but only growing in Bignefs as other Shells do. All the Ground of this Fancy, as I conceive, is becaufe this Fifí hath a Bunch of Cirri fomewhat refembling a Tuft of Feathers, or the Tail of a Bird, which it fometimés puts out into the Water, and draws back again. We were much furprized to find of this Shell-fifh in thefe Seas, fo Southerly, and far from the ufual Scene of the Bernacle Fable.
The Inand of Molta is twenty Miles long, twelve broad, and fixty Miles in Circuit, diftant from the pris moterreno, or neareft Part of Sicily fixty Miles; from the Cape of Calipia, anciently called Promontorium Mercurii, the neareft Point to the Continent of Africa, two hundred Miles, (as divers of the moft skifful and experienced Pilots did affirn to Abela for an undoubted Truth); from the Cape of Spertivento in Italy, but one hundred and ninety ; fo that upon Account of Vicinitys it is rather to be attributed to Europe than Africa, efpe= cially if we allow Sicily to have been of old Time united to, and fo Part of the Continent. The Reafon why others make it a Member of Africa, is becaufe the prefent Inhabitants of the Country fpeak a Kind of $M_{0}$. resko or Arabick.
The old City, called Cittc Notabile, fituate about the Middle of the Inand, hath 35 Degrees 15 Minutes of Northern Latitude, and the longeft Day there is of fourceen Hours fifty two Minutes. I am not ignorant that Heylin and others, who reckon this among the Ifles of Africa, place it neater the Coaft of Barbary, affign it lefs Latitude, and allow the longet Day no more than fourteen Hours; but I do in thefe and other Particulars, follow the more accurate Obfervations of Fobannes Francifcus Abela, a learned Man, and Native of this Inand, in his Malta Illuffrata, written in Italian, and publifhed in Maita, Anino 1646; in Folio. The whole Inand, from the Shallownefs of its Soil there, being in few Places above two Foot Depth of Earth before you come to firm Stone; and from the Lownefs of its Situation; not much elevated above the Level of the Water, and having no confiderable Hill in it, feems to have been in the moft ancient Times, nothing elfe but a great Rock wholly overwhelmed and covered with the Sea; efpecially if we confider the Multitude of Seafhells of all Sorts, Sharks-teeth, Vertebres of Thornbacks, and other Fiih-bones petrified found all over the Iland, even in the higheft Parts of it, and moft remote from the Shore. For that thefe were formed by fome plaftick Power in the Stone Quarries, being nothing elfe but the Effects and Productions of Nature fporting herfelf in Imitation of the Parts and Shells of thefe Animals, I can hardly be induced to believe.

Nature (which indeed is Nothing elfe but the ordinary Power of God) not being fo wanton and toyifh as. to form fuch elegant Figures without further End and Defign than her own Paftime and Diverfion. But a
very likely Thing it is, that the Sea being fhallow above this Rock for fome Ages before, it came to be uncovered, there fhould great Beds of Shell-fifh, harbour and breed in fo convenient a Place, and the Water leaving them, their Shells remain and petrify. I confers its hard to imagine, how the Carcaffes of fo many Sharks fhould come to be lodged here, as by the Mulcitude of Teeth, that have been for fo many Years paft, and are fill daily digged up, we muft needs grant, unlefs by Chance they remain, of the Heads of fuch Sharks as were caught and eaten by the Fifhermen, who it is likely, after the Difcovery of this Rock, frequented here, and made it a Station for Fifhing before it came to be thoroughly and fully inhabited.

To this Difficulty, Mr. Steno returns anfwer in thefe Particulars, I. That fuch Sharks or Sea-Dogs, have each of them fixty Teeth and more, and that all the Time they live they breed new Teeth. 2. That the Sea agitated by the Winds, is wont to protrude thofe Bodies it meets with towards fome one Place, and there heap them together. 3. That Sharks fwim in great Troops or Shoals, and confequently that the Teeth of many of them, may have been left in one Place. 4. That in the Malta Earth, befides thefe Sharks Teeth, are found alfo fundry Cockle-fhells, fo that if the Number of Teeth fhould incline a Man to afcribe their Production to the Earth, on the other Hand, the Make of the fame Teeth, and the Abundance of them in every Animal, and the Earth, like the Bottom of the Sea, and other marine Bodies found in the fame Place, do favour the contrary Opinion. The Soil notwithftanding the Rockinefs and Shallownefs of it, hath been by the Ancients celebrated for Fertility.

## Fertilis est Melite Aerili vicina Cofyrce Infula. <br> Ovid. Faft.

But undefervedly, if we underfland it of Corn, for there is not much Wheat fown here, and that we faw upon the Grounds was but thin and flight. And though Barley be their chief Crop, and of which the Country People make their Bread, yet have they not near enough of that to ferve the ordinary Ufes of the Inhabitants, fo that they are forced to fetch moft of their Bread Corn out of Sicily. The main Commodities which the Inland yields, wherewith the Inhabitants drive a good Trade, and enrich themfelves are, I. Cumin-Seed which they call Cumino agro, or fharp Cumin, of which are gather'd about three thoufand Cantares yearly, one Cantare being equal to 116 Pound Weight, Englijh. 2. Anife-Seed, which they call. fweet Cumin, of which are gathered and tranfmitted into foreign Parts, 1000 Cantares yearly. Thefe Seeds are fold at feven, eight, or nine Crowns the Cantare, and we were told that the Year before our being there, [Anno 1663.] were vended 7000 Cantares of both Sorts. 3. Cotton-Wool, called in Latin, Xylone or Gofipium, of which they fend Abroad yearly, 14000 Cantares in the Hufk. They have of late begun to plant Indigo, which my Author faith agrees with the Soil, and thrives there very well. He alfo mentions a Sort of Excrefcence, or Mofs, or Scurf, which the Rocks about St. Maria el Aalia, and other Places on the North-fide of the Illand, naturally put forth, called by the Country People Vercella, which they fcrape off wich an Iron Inftrument, and having walhed it with a certain Liquor, and mingled it with other Ingredients, (he tells us not what that Liquor or thofe Ingredients are) they expofe it to the Sun, and ufe it to die Wool of a Carnation Colour. This kind of Miofs called in Wales, Kenkerig, and in England, Cork, or Arcel, is gathered and ufed for the fame Purpofe in Wales, and the North of England. Malta hath been famous of old, for a Breed of little Dogs, called Catuli Mariteei, the Race whereof is quite extinct, and now their Cats are as much efteemed. The Rofes of Malita contend for Sweetnefs with thofe of Peftum, and the Honey with that of Hybla or Hymettus: fo that fome fuppofe this Inand had its Name Melita from Ment, fignifying Honey. The Air is clear and healthful, and the People long lived. Not much Rain falls here, yet
fufficient to fupply Water to feed their Springs, of which there are feveral in the high Grounds, or fmall Hills, about the Middle of the Inland. That thefe Springs proceed from Rain Water only, my Author doth very well prove, becaufe they are found only at the Foot of little Hills, confifting of a certain porous Stone, which the Maltefe call Giorgiolena, or a chalky Earth, which eafily imbibes the Rain: And to fpeak in general, that all Springs and running Waters owe their Rife and Continuance to Rain, feems to me more than probable.
r. Becaufe I never yet faw any Springing of running Waters breaking out, either on the Top of a Hill, or fo near the Top, but that there was Earth enough above them to feed fuch Springs, confidering the Condition of high Mountains, which are almoft conftantly moiftened with Clouds, and on which the Sunbeams have but little Force: And yet I have made it part of my Bufinefs, in viewing the higheft Hills in England and Wales to examine this particular. Nor have I yet ever obferved fuch fpringing and running Waters in any Plain, unlefs there were Hills fo near, that one might reafonably conclude they were fed by them. 2. Man Springs quite fail in dry Summers, and generally all abate confiderably of their Waters. I am not ignorant that fome make a Diftinction between failing Springs, and enduring Springs, and would have the former to proceed from Rain, and the latter from the Sea, but I fee no fufficient Foundation for fuch a Diftinction, and do think that both the one and the other are to be attributed to Rain, the failing and enduring being to be referred either to the different Quantity and Thicknefs of Earth, that feeds them, or to the different Quality, the one more quickly, the other more flowly, tranfinitting the Water, or fome fuch like Accident 3. In Clay Grounds into which the Water finks with Difficulty, one fhall feldom find any Springs, but in fandy, gravelly, rocky, ftony, or other Grounds, into which the Rain can eafily make its Way, one feldom fails of them. 4. They who would have Fountains to arife from, and be fed by the Sea, have not as yet given a fatisfactory Account of the Afcent of Water to the Tops of Mountains, and its Efflux there.
For though Water will creep up a Filtre above its Level, yer I queftion, whether to fo great an Excefs above its Equilibrium with the Air, whereas in Pumps, we fee it will not rife above two or three and thirty Foot, or if it fhould, whether it would there run out at the Top of the Filtre, we not having as yet heard of any Experiment that will Countenance fuch a Thing For the Afcent and Efflux of Sap in Trees, I fufpect may be owing to a higher Principle, than purely Me chanical. As for the Sabulum 2 2uellem, or Arena bulliens of Helmont, I look upon it as an extravagant Conceit of his, and yet fome Ground there is to believe, that there is a kind of Earth lying up and down in Veins, which doth like a Filtre, retain the Water, and carry or derive it along, as it lies from Place to Place, till it brings it to the Superficies of the Earth, where it runs out. In other Places there are fubterraneous Channels, like the Veins in Animals, whereinto the Water foak ing into the Earth is gathered, and wherein it runs as above Ground, out of fmaller Rivulets into greater Streams, and where one of thefe Veins open in the $\delta u$ perficies of the Earth, there is a Spring greater or leffer, according to the Magnitude of the Vein. Nor need we wonder that Springs fhould endure the Length of a dry Summer, for in many Sorts of Earth the Water makes its Way but flowly, fince we fee that in thofe Troughs or Leches, wherein our Laundreffes ufually put Afhes, and thereupon Water to make a Lixivium, the Water will be often many Hours before it gets all thro the Afh, and the Lech ceafes to drop, and in many Chy mical Preparations which are filtred, it is long before the Liquor can free iffelf, and wholly drain away from the earthy and feculent Part. Some attribute the Original of Fountains, to watry Vapours, elevated by fubterraneous Fires, or at leaft by that generally diffufed Heat, which Miners find in the Earth, when they come to fifty or fixty Fathoms under Ground, and condenfed by the

Tops

## Chap. III. through the State of Venice, Eic:

Tops and Sides of the Mountains, as by an Alem-bick-Head, and fo diftilling down and breaking out where they find Iffue. And in Reafon one would think, that generally the deeper one digs in the Earth, the colder one fhould find it, fince the Urinators affirm, that the deeper they dive in the Sea, the colder ftill they find the Water, and yet were there fuch fubterraneous Heats, they are not fo great, as that it is likely they fhould elevate Vapours fo high, through fo thick a Coat of Earth, which it muft be an intenfe Heat indeed will carry them through, which Heat none fay is found near the Superficies of the Earth.
Mr. Hook's Account, viz. that Salt-Water being heavier than frefh, by Reafon of its Preponderancy, it may drive up the frefh as high above the Surface of the Sea, as are the Tops of Mountains, before it comes to an Equilibrium with it, it is very ingenious, and would be moft likely, where thefe continued clofe Channels from the Bottom of the Sea, to the Tops of Mountains not admitting the Air, which I believe will not be found in many Places. What is faid about ebbing and flowing Wells, in Confirmation of it adds no Strength, for none of thofe ebbing and flowing Wells, that I have yet feen, do at all obferve the Motion of the Sea, but reciprocate two or three Times, or oftener, every Hour, excepting one on the Coaft of South Wales, in a fandy Ground, by the Sea-fide, not a Quarter of a Mile from the Water which obferves the Tides; but it is no running Water, nor doth it, I believe, arife above the Level of the Sea. I do therefore fhrewdly fufpect for fabulous, whatever has been written of Wells remote from the Sea, which in their ebbing and flowing obferve its Motion. But for a Reafon of the ebbing and flowing of thefe Wells, I muft confefs I am hitherto at a great Lofs. Whereas fome fay, that Rain finks not above a Foot or two deep into the Earth ; if they underftand it of all Earths, it is manifently falfe, for that we fee in Coal Delphs, and other Mines, in wet Weather the Miners are many Times drowned out, (as they phrafe it) though no Water run down into the Mouths of their Pits or Shafts; and in fandy and heathy Grounds in the greateft Rains, little Water runs off the Land, as on Nere-market-beath, Gogmagog Hills, Salibury Plain, \&c. and therefore it muft needs fink in: And out of the Mouth of Pole-Hole, near Buxton, in the Peak of Derby, and other Caves in the Sides of Mountains, in rainy Seafons, Streams of Water many Times run out, where in dry Weather and Summer-time there are none.

Neither is this Opinion we defend, any more repugnant to the Scripture than the other. For whereas it is faid, Ecclef. i. 7. All the Rivers run into the Sea, yet the Sea is not full; unto the Place from whence the Rivers come thitber they return again; we grant it to be moft true, nay we think fuch a Circulation abfolutely neceffary to the Being of Springs, only we affert it to be performed not under Ground, but above, that is, the Clouds take up Water out of the Sea, and pour it down again upon the Earth, and from Part thereof falling upon, and foaking into the higher Grounds, arife the Springs.
But to return to Malta, the Haven is very commodious and fecure, divided into two by a little Promontory or Neck of Land, fome 1500 Canes long, and 380 broad, upon which the new City is built. Of thefe two, that on the Weft fide the City, is called fimply, and per Automafiam, Marfa, that is, the Haven, and is in Length 180 Canes or Poles, often Palms, the Cane Roman Meafure, and is fubdivided into other Creeks or Sinus's. That on the Eaft-fide, called Marfa Mofcetto, is as large as the other, in a little Inand, within which is the Lazaretto; near it Ships that come from infected Places, keep their Quarantine. The new City called Valetta is divided into twenty Streets, eight in Length, and twelve in Breadth, all ftrait, though they be not paved, yet they need it not, the Town being built upon a folid Rock. They want no Uniformity but being level, which the Place being uneven, up Hill and down Hill, will not admit. The Houfes are all Stone, flatroof'd, and covered with Plaifter, which is fufficient here, there falling but little Rain; though they be not
high, yet are they neat and pleafant. Upon the Roof of their Houfes in Summer time, the People fet their Beds as at Aleppo, and neep in the open Air. The Number of the Inhabitants of all Ages, according to a Survey taken in the Year, 1632 , was 10744 , the Number of Houfes, 1891, which Sum is I believe fince that Time much increaled. Over the Gate of this City, leading to the Land, called Poria Reale, you have an Infcription giving an Account of the firft founding and building of it. It is fortified with impregnable Walls and Bulwarks, efpecially towards the Land, where one would think there are too many, and yet they are ftill adding more; within the outmoft Wall, or between the two Walls and Outworks; they have encloled a great Space of void Ground, whether with Defign to enlarge the City, filling that Space with new built Houfes, or to receive the Country People, in Cafe the Enemy fhould land upon the Inand, I know not. All the Walls and Bulwarks are mined or vaulted underneath, that fo, in Cafe the Befiegers fhould get upon them, they might be blown up, and rendred ufelefs. The Charge of all there Walls; Caftles and Fortifications would be intolerable had they not Stone at Hand, and Slaves to work.

This City is well ferved with all Provifions, there being every Morning, a Market plentifully furnifhed with Bread, Flefh, Fifh; Poultry, Fruits, Herbs, Esc. of the beft in their feveral Kinds, and to be bought at eafy Rates. The moft confiderable Buildings in this City; are, I. The Church of St. Fobn the Baptift, Patron of the Order, wherein are many Chapels and Altar-Pieces, richly gilt and adorned. Here lie buried the Grand Mafters that have been, fince the Order was tranflated hither, in a Vault under Ground, feveral of them having in the Church, Monuments with Inferiptions. This Church is not yet quite finifhed. 2. The Cattle of St. Elmo, which ftood here before this City was built, on the utmoft Point of the Promontory, a ftrong Place; but of no great Capacity. Here we obferv'd the like winding Afcent to the Top, without any Steps or Stairs, as in the Tower of St. Mark, at Venice.

Upon the Top of this Caftle is conftant Watch and Ward kept. When they defcry any Veffel coming toward the Inand, be it great or fmall, they fet up a Flag fuitable to the Bignefs of the Veffel; if two Veffels, two ; if three, three; and fo on according to their Number; fignifying alfo by the Place, where they fet thefe Flags, from what Quarter, Eaft, Weft, North or South, fuch Veffel or Veffels come, fo that the City is prefently advifed what Veffels, and how many are near the Port. In this Caftle are imprifoned fuch Knights as have committed any Mifdemeanour, and held in Reftraint, longer or leffer Time, or further proceeded againft, according to the Degree of their Fault. 3. Before this Caftle are the Granaries, where the Provifions of Corn for the City are kept. Thefe are nothing but Caves hewn out of the Rock, in the Form of a Cupola, or ordinary Bee-hive, having each a narrow Mouth above. They are conftantly provided with Corn enough beforehand, to ferve the whole City for a Year. They have alfo Magazines or Stores of Wine, Oil, and all other Neceffaries. 4. The Albergbs or Halls of the eight feveral Nations (Lingue they call them) of the Order. The Nations are French, Italian, German, Engli/b, Provençal, Auvergnois, Cafilian, and Arragonian.

Thefe Albergbs are moft of them fair Buildings like Colleges, and in each of them, is a publick Hall; wherein the Knights of each Nation dine and fup as many as they pleafe, the others have their Parts or Demenfum, fent to their Lodgings, or difpofe otherwife of it, as they fee good. The Seignior of each Nation is Superior of the Albergh, Grand Prior of his Nation, of the great Crofs, gran Croce they term it, and one of the Privy Council to the Great Mafter. Thefe are diftinguifhed from the reft, by a great white Crofs upon their Breafts made of Silk, fewn into their Garments. Here is an Albergh for the Engli/b Nation, or rather a Piece of Ground, inclofed with the Foundation of an
allberg $\sigma_{2}$

Albergh, the Walls being fcarcely reared up. This Ground we are told, fome of the Citizens would have bought and built upon, but the Grand Mafer and Council refufed to fell it, not defpairing it feems, that one Day our Nation may be reduced again to the Obedience of the Romifh Church.
5. The Armory [Sala di Arma] within the Palace of the Great Maffer, confifting of two Rooms ; the one (which they call the Hall) the faireft and largeft Room, employed for fuch an Ufe that we have any where feen; the other much leffer. In both together are kept Arms for 30,000 Men, fo intire, clean, bright, and fit for Ufe, that we were very much taken with the Sight of them. Here are fome of thofe little Drakes, that may be charged behind a Leather Gun, and other Curiofities, the like whereto we have feen in feveral Armories.
6. The Hofpital [Infrmaria] a fair Building, which they are now enlarging. The Sick Perfons are ferved by the Knights, viz. Such a Number of Knights are appointed to carry them their Meat daily with Cap in Hand, which Thing we faw them do in this Manner. The Meat was all brought into the middle of a great Room, where many of the Sick lay. Then one of the Knights (the Steward I fuppofe he was) read the Names of the Sick, one by one, out of the Phyfician's Bill, wherein was prefcribed each Sick Perfons Diet. As he read a Name, the Cook took his Part whofe Name was read, and Difhing it up, delivered it to one of the Knights, who carried it to his Bedfide, where ftood a Stool covered with a Napkin, having Bread and Salt upon it. This Duty their very Name intimates to belong to them, viz. Knights, i.e. Servants of the Hofpital, and therefore we may be excufed, if we have been more particular and circumftantial in defcribing the Manner of it. If any of the Order falls Sick, he is not to ftay in a private Houfe, but prefently repair hither, where he is moft carefully tended, one or two Knights being appointed to be always by him
The Palace of the Great Mafter, where he hath feveral Apartments for Winter and Summer. There is alfo a Stable of good Horfes, in which befides Coachhorfes and ordinary Saddle-horfes, are kept forty or fifty great Horfes. A Thing worth the Noting in this Inand, where there is a great Scarcity of Horfes, that Knights and Perfons of Quality, ride upon no better than Affes. The Slaves-Prijon, a fair fquare Building, where all the Slaves in the City lodge every Night, fo long as the Gallies are Abroad in Corfo. At the ringing of the Ave-Mary-Bell, which is juft at Sun-fet, they are to repair thither; when the Gallies are at Home, thofe that belong to private Perfons are permitted to lodge in their Mafters Houfes. The Number of Slaves now in Town, was about 2000 belonging to the Order, and 300 to private Perfons, befides thofe that were Abroad in the Gallies.
Befides this new City, there are three confiderable Towns diftant from it, only by the Breadth of the Haven. 1. The Ifola (as they commonly call it) or Town of Senglea, with the Fort of St. Micbaiel, feated in a Peninfula, made by two Creeks, running out of the principal Haven. It contains 994 Houfes, and 4050 Souls. For the flout Refiftance it made to the Turks, in 1565 , it obtained the Name of Citta invitta. 2. The Borgo (as they call it) i.e. Burgo del Coffello à Mare, built likewife on a little Lingua or Neck of Land, between two Creeks of the fame Haven, on the utmo-t Cape whereof ftands the Caftle of St. Angelo, divided, for greater Strength, from the Town by a Ditch of Water cut crofs the Lingua. This Burgh contains 782 Houfes, and 3065 Souls. For its Valour and Fidelity in holding out fo refolutely againft the Ottomen Army befieging it, Anno 1565, it is defervedly honoured with the Title of Citta vittoriofa. Between thefe two Burghs is a fecure Harbour, where the Gallies and moft of the other Veffels of the City lie, which in Time of Danger is thut up with a great Iron Chain. 3. Birmula rather. a Suburb of Senglea then a diftinct Town, it contains 642 Fires, and 2778 Souls.

May 25. We rode out to fee fome Part of the Country, paffing two great Villages (Cafales they name them) we came to the old City, called anciently Melita, after the Name of the Inand now Citta notabile, a fmall Place at prefent, but well fortified, containing no more than 565 .Houfes, 2620 Souls. It hath been formerly much. greater, and incomparably more populous. The new City, as being more conveniently fituate, daily drawing away, and withdrawing its Inhabitants. Here they fhewed us the Pillar of St. Paul (as they call it) where when he ftood Preaching (as they fondly believe, or at leant would perfuade us) his Voice was heard diftinctly all, over the Iland. 2. The Grot of St. Poul Here out of a fmall Cave is taken that white Earth, called, Terra di S. Paolo, and by fome Terra Sigillata Meliten/ts, which they feal, and fell to Strangers, attributing thereto, great Virtues againtt all Poifon and Infections. This Cavern, though there be continually great Quantities of Earth taken out of it, according to their conceited Tradition, retains ftill the fame $\mathrm{D}_{1}$ menfions, becoming no greater than it was at firft That St. Poul fuffered Shipwreck on the Coaft of this Inand, and wintered here, and not on that ocher Melita, in the Adrialick Sea, on the Coaft of Dalmatia, now called Meleda, I think it fufficiently proved and made clear by Cluverius, Abela, and others; but that upon Occaiion of a Viper faftened on his Arm, he changed all the Serpents of the Inand into Stones, and endued the Earth with an alexipharmical Quality; to refirt and expel Poifon, is a foperfitious and ungrounded Fancy.
From the old City we rode to the Great Maferers Bofchetto, where he hath a pretty Palace in Form of a Caftle, from the Top whereof we had a good Proif pect of the Inand. Here are a great Number of Gardens and Orchards, well furnifhed with all Sorts of Fruits and Flowers, good Water-Works, and a Grove of Trees; indeed this Palace wants Nothing for Conveniency or Delight. The Palace is fituared upon a little Hill, and the Gardens lie under it in a hollow or Bottom almoft compaffed about with Rocks. But to fpeak of the Inand: Malta hath been inhabited by feveral Nations, and often changed Mafters.

The moft ancient Inhabitants are by Cluverius taken to have been the Pbeaces mentioned by Homer, who were expelled by the Pbericians. The Pbanicians were moft of them driven out by the Gracians. After this it changed Mafters rather than Inhabitants, being firt fubdued and held by the Cartbaginians, then for a long Time by the Romans : After that the Gotbs came hither, who were driven out by the Eafern Emperors: Next the Saracens poffeffed themfelves of it. The Normans expelled them, and got the Dominion. Then the Germans or Suevi became Lords of it; then the French then the Arragonians and Spaniards; and now laft of all, the Order of the Knights Hofpitallers. The Hitory of all which Changes, if any Man defire to be fully and particularly acquainted with, let him confult Abela. In all there Changes, it followed for the moft part the Fortune of Sicily, as having little Strength to refift any foreign Power invading. It is now fo well fortified and manned, that it would prove a very difficult Matter for the greateft Prince or Potentate in the World to take it by Force, having, when it was in far worfe Condition than now it is, refifted and baffled the Arms of one of the greateft Emperors the Turks ever had: It is very populous, containing between thirty and forty great Caffales or Villages, fome of them above 500 Houfes, more like to great Towns than Villages, and twenty fix Parifh Churches, befide thofe of Gozo.

The Number of Fighting Men was faid to be about 25000 , but I believe there are fcarce fo many, for according to a Survey taken in the Year, 1632 , the whole Number of Souls upon the Inand, befides the Knights, was about 501,12 , of which we cannot reckon much above one fifth Part to be fighting Men. And though fince that Time the Number of Inhabitants be much increafed, yet I think farce doubled.

## Chap. III. through the State of VE N IC E., \&ce.

The Language of the Natives is a corrupt Arabick or Morefco, introduced by the Saracens, the ancient Language before their coming in, probably having been Greek, with a Mixture of Punick; whence I think one may reafonably conjecture, that the Saracens did either deftroy or drive out the former Inhabitants. Howbeit, the People can generally fpeak Italian, there being no other Languague but that and Latin ufed in any of the Courts of Malta. The Great Master of the Order is now Prince and fupreme Governor of the whole Ifland, which with Gozo and the adjacent Inles, after the Lofs of Rbodes, was granted to this Order by the Emperor Cbarles V. in the Year I530. The Government is managed with that Prudence and Juftice, that the Illand is now in a very flourifhing Condition, the Inhabitants enjoying a great Deal of Freedom and Security, being alfo in their Carriage and Converfation among themfelves, and to Strangers, fince the Coming in of the Order, very civil and courteous, however for merly they have been branded for the contrary; fo that few Subjects live more happy than they do. The Great Master, when he goeth Abroad, is attended by many of the Knights, and two or three Pages, of which he keeps, (as we were told) about twenty four. The Knights of the Order are always uncovered in the Prefence of the Great Mafter, excepting thofe fixteen which are of the Gran Croce: They take Place, of what Birth or Quality foever they are, according to their Seniority, from the Time of their Admiffion, fo that there is never any Difficulty or Queftion about Precedency.

All the Knights are of noble or genteel Extraction, none being capable of Admiffion, but fuch as can prove their Nobility for three or four Defcents. The Great Mafter wears a black thort Gown, with hanging Sleeves, the reft of the Knights are habited as they pleafe at Home, but when they go in Curfo (as they call it) upon the Gallies, they wear the proper Habit belonging to their Order. The Number of Knights was faid to be between 2000 and 3000, of which, for the moft Part, the Majority refide in the City, except when the Gallies are Abroad. The Name of the Great Mafter, at our being there, was Nicholaus Colioner, of Majorca, and I fuppofe he is ftill living, not having fince heard of his Death.
About five Miles diftant from Malta Weftward, lies the Inand Gozo, called by the Ancients Gaulos, twelve Miles long, fix and a half broad, and about thirty in Circuit. The Soil, like that of Sicily, is very deep and fruitful of Wheat and other Grain. This Ifland is mountainous, yet all cultivated, furnifhed with Store of frefh Springs. It maintains upon it 3000 Perfons, the Number of Houfes being about 500. It was much more populous before the Turkifh Armada moft inhumanly wafted it in the Year ${ }_{15} 65$, carrying a way Prifoners 6000 Perfons. In the Streight betwixt Malta and Gozo lies a little Inand called Comino, anciently, according to Cluverius, Hepbaftia, about five Miles in Compafs, and well cultivated, for the Defence whereof the Great Maf ter Wignacourt caufed a Fort to be built, oppofite to that on the other Side the Streight in Gozo, to fecure the Streight, and hinder any Veffels paffing between the Inands withour Leave.
That there is great Plenty of Shells and Fifh-Bones petrified found in Malta, I have already intimated. I fhall now therefore only Name thofe which are not at all, or but rarely found with us in England. I. Gioffopetre, which are nothing but Sharks Teeth of feveral Shapes and Sizes. Thefe the Maltefe call Serpents Tongues. 2. The Vertebres of Thornbacks, and other cartilaginous Fifhes. 3. Cats.Heads (as they call them from their Likenefs to a little Skull.) 4. Serpents-Eyes of feveral Figures and Colours, the moft of them red and like to thofe they call Toad-fones, the exterior Superficies being a Segment of a Sphere and fhining, as if it were polifhed, fo that they are commonly fer in Rings. I have feen great Lumps or Maffes of thefe cemented together. That the Toad-fone is nothing elfe but the Jaw-Tooth of a Fin called Lupus marinus, by Schonfeldius, Dr. Merrit in his Pinais hath

V O I. II. N ${ }^{\circ} 115$.
firft publifhed to the World, and I doubt not but there have the fame or the like Original. 5. Serpents-Teet which are ffmall, oblong, ftriate Stones, of a polite Superficies, but no certain Figure ; whither to refer thefe as yet, I know not, as neither 6. thofe they call Ser pents Eggs, which are fomewhat like the former, but not ftriate with Lines. 7. Baftons of St. Paul, [Bacult Sti. Pauli, ] having their Refemblance of fmall fnagged Sticks. 8. Petrified Lentils, becaufe for Colour, Figure and Magnitude, fomewhat like to that Pulfe. Befides I found among the Stones I bought there, fome exactly figured like the Fore-Teeth of a Man, and doubtlef many other Sorts by diligent Search might be found which have not as yet been named or taken Notice of. There are but few Trees growing upon the Inand, the greateft Want they have being of Fewel; to fupply which Defect, they have of late begun to make Ule of Seawreck, to burn in their Ovens, prepared after a cer tain Manner, invented by a Peafant of Malta, for which he is highly commended by Abela, as a great Benefactor to his Country.

Here I firlt noted the Cuttom of nitting up the Noftrils of Affes, becaufe they being naturally ftrait or fmall, fuffice not to admit Air enough to ferve them when they travel or labour hard in thefe hot Countries. For the hotter the Country is, the more Air is rreceffary for Refpiration and Refrefhment of the Body, there being lefs of that Menftruum which ferves to nourinh or continue Fire, and confequently the vital Heat of. Ani= mals (which hath great Likenefs thereto) in hot Air than in cold ; whence we fee that Fire burns furioufly in cold Weather, and but faintly in hot. Whether it be becaufe the Air is thinner in hot Weather and hot Countries, or becaufe the reflected Sun-beanss fpend and confume a good Part of the forementioned MenAtrum, or from both thefe Canfes: That the Air is thinner, and confequently the Menftrium alfo more diffufed in hot Weather, is clear in Experience. I need mention no other Experiment to demonftrate it than the Air inclofed in the Shank of an ordinary WeatherGlafs, which in hot Weather dilates itfelf, and in Cold contracts very confiderably. So then to give an Account of the Raging of Fire in the coldeft Weather, we need not have Recourfe to the infignificant Term of Antiperifafis, the true Reafon thereof being the Denfity of the ambient and contiguous Air, containing Plenty of that Menfruum which nourifhes the Fire.
I omitted to mention the ancient Cometria, or fubterraneous Burying-places, called Calacombs, of which there be many in Malta, becaufe of thele we have al ready had occafion to difcourfe in our Defcription of Syracufa in Sicily. That this Inand produces or nourifhes no Serpent or other venomous Creature the common People affirm; but becaufe I find no Mention hereof in Abela, I give little Credit to their Report; fhould it be true, it would be to me a great Argument that this was not the Ifland upon which St. Paul was caft, when he fuffered Shipwreck, but rather that Melite beforementioned; upon the Coaft of Dalmatia, for which there is alfo fome Ground in the Scripture; for that St. Paul, upon the Viper faftening on his Hand, did by his Prayers obtain of God, that all the Serpents in Malta fhould be turned into Stones, and the Inand for the future wholly free from all venomous Beafts, is a Monkifh Fancy grounded upon the torementioned petrified Fifh-Bones, which they fondly imagined were fome time Parts of Serpents; whereas in other Places where Plenty of fuch Stones are found, there is no Lack of Serpents. I confefs it is difficult to imagine how Serpents fhould come at frit to breed here, if the whole Inland were once (as we conceive) a fubmarine Rock covered with the Sea; and as there is no fpontaneous Generation of Animals, as we alfo believe, becaufe it can be fcarce imagined, that any Man fhould on Purpofe bring over Serpents hither, unlefs perchance to fhew them for a Curiofity.

Whether there be venomous Beafts or no, I am fure there are venomous Infects here, the very Biting or Stinging of the Gnats (with which the City is much infetted) being more virulent than in other Places. For
my Part, I do not remember that in England the Bitiny of a Gnat did ever caufe a Swelling, or leave a Mark behind it in the Skin of my Face, (though I know in fome it doth) but there it both raifed a Swelling, and left a Mark behind it, that was not out for a Month after. The Maltefe eafily defend themfelves from the Annoyance of this Infect, keeping them out of their Beds by large Linen Curtains, lapping over one another. At fifft we were not aware of the Trouble thefe Animals were like to give us, and left our Curtains open ; but Experience foon taught us to correct this Fault.
22. In our Return from Malta to Mefina, we ftaid a Day at Catanea, and there took Horfes and a Guide to bring us up Mount 压tna (now call'd Monte Gbibello) the Top of which is reckoned thirty Miles from Catanea, and is one continued Afcent; the Grounds through which we paffed being very fertile, well cultivated and inhabited, the Cinders which are caft out by the Mountain, being inftead of Dung, (after it is diffolv'd by the Weather) which fattens and enriches the Soil. We advanced as far as where the Snow lies, which reached all up to the Top; we could go no farther, however we were near enough to oblerve, that the very Top or Pinnacle of the Mountain, was furrounded with a Ring of Snow, but had no Snow itfelf.

As to the Sicilians, they have not undefervedly the Reputation of being uncivil and rude to Strangers; and the Banditti or Highway-men, are fo frequent, that there is very unfafe Travelling here; the worft is, that they are not contented with Robbing you of all you have about you, but carry you away into the Mountains, nor fet you at Liberty, till you have paid what Ranfome they think fit to impofe upon you. They have fome peculiar Laws and Cuftoms not eafily met with in other Places. If you carry above the Value of ten Crowns in Money out of the Country, it is forfeited if found; the beft is, that a little Money makes the Cuf-tom-houfe Officer, let Strangers pals unfearch'd. No Calves are permitted to be kill'd in this Inand, fo that you fee no Veal at the Tables of the Sicilians, tho' at Malia (whither they carry it by Stealth) is enough of it. No body ought to take above the Weight of an Ounce of Silver, without weighing of it. No young Perfon under Age, muft enter or travel in Sicily, without peculiar Licence. To carry Pocket-Piftols about one is a capital Crime, though long Guns are not only allowed, but alfo carried almoft by every Body: The Reafon of which is, that by the firft a Perion may be affinated before he can be upon his Guard.

After our Return to Meflina, we took Boat, May 27, over the Fretum, to take a View of the ancient Regium, (Rbegio) which now makes but a very mean Appearance, having farce any Thing to boaft of, except iome Gardens, which indeed afford them great Plenty of the beft Sort of Fruits: Here is alfo Abundance of Bricks made, being reckoned the beft in Italy and Sicily. They fhew'd us a fmall Fragment of St. Poul's Pillar that burned, and told us fo many Stories of it, that we were fooner weary of hearing than they of telling.

May 29. We went in a Boat as far as Scylld, to fee the Fifhing of the Sword-fifh: They place certain Fellows on the Cliffs near the Sea-fide, (Huers our Engli/h Fihhermen call them) thefe either by a Signal, if they are out of hearing, or elfe by their Voice, give Notice to the Fifhing-boats, whereabout they fpy the Fifh: Thefe make what Hafte they can towards the Place, whither they were directed, and placing one of the Boats Crew on the Top of the Maft (which have little Steps made for that Purpofe) he gives, from Time to Time, Direction to thofe at the Oars, whither to take their Courfe, according to the different Motions of the Fifh. Being come near enough, they ftrike him with a. Harpoon, and the Fifh being wounded, fwims up and down, till being fpent with the Lofs of Blood, they draw him into the Boat. The Harpoon Iron is faftned to a Pole, the Point being fharp, with Beards on each Side, like a barbed Arrow, fo jointed, that they go eafily in, but refift the drawing of them out. The

Meflinefe looking upon this Fifh as a fingular Dainty, buy it at the Rate of Sixpence per Pound at firf coming in. In May and the Beginning of June, they are catch'd on the Coaft of Calabria, and towards the latter End of June, come over to the Sicilian Coaft, and are taken near Mefina till Augut. As there are no Rocks near the Faro, they are obliged to place their Huers on the Top of a very high Maft, fet up in a large Boat or Brigantine.

They have in the Beginning of June, a yearly Fefo tival, call'd the Feaft of our Lady of the Letter, which is celebrated with more than ordinary Solemnity; for a whole Week together, all the Houfes being illuminated with Candles, Wax Tapers, Lanthorns, \& ${ }^{\circ} c_{0}$. all the Night long. They call it the Fefival of our Lady of the Letter, becaufe it is celebrated in Memory of a Letter, pretended to be written to them, by the Virgina Mary in Greek, of which they fhow you the Latin Copy (the Original being loft) which runs thus.
Maria virgo Foacbim filia Dei bumillima, Cbrifi Jefu crucifixi mater, ex tribu Fuda, firpe David Meffanenjabus omnibus Jalutem \&o Dei patris omnipotentis benedictionem.

Vos omnes fide magna legatos ac nuncios per publicum documentum ad nos mififfe conftat: Filium noftrum Dei genitum Deum \& hominem effe fatemini ; \& in coelum poft fuam refurrestionem afcendiffe, Pauli Apoftoli electi prædicatione mediante viam veritatis agnofcentes. Ob quod vos $\&$ ipfam civitatem benedicimus, cujus perpetuam protectricem nos effe volumus. Anno Filii noftri XII. Indi\&t. I. III Nonas Junii, Luna XXVII, Feria V. Ex Hierofolymis Maria virgo qua fupra hoc chirographum approbavit.
23. June 6. We took a Felucca at Mefina for Naples, and lodged the firf Night at a fmall Town called Tropia, in Calabria, fixty Miles diftant from Mefina. The 7 th, Lodging at St. Lucido, we met there alfo with the wild Jejube. The 8th, We took up our Quarters at Porto Nicolo, a fmall Creek near Scalea, which is ftrengthned by a Caftle. The 9 th, We lodged at Cbiupo, and the roth came to Salerno, where having quitted our Boat, we ftayed the I th. This City, which is dignified with the Title of an Epifcopal See, is at prefent very inconfiderable, having neither Univerfity, nor Scbola illustris, as far as we could learn. The only Thing worth our Obfervation here, was the Monument of Hildebrand (Pope Gregory VII.) who rendred himfelf famous by introducing Celibacy among the Priefts, and his Oppofition to the Emperor. This is to be feen in the Cathedral of St. Mattbew, in the Porch of which you fee many Roman Grave-ftones, with ancient Infcriptions.

The 12 th, We travelled from Salerno by Land to Naples, and pafs'd that Day through La Cava and Nocera, both Epifcopal Sees, and Scafata, Torre d' Annunciata, Torre di Greco. The 30th, We embarked at Naples for Legborn, and the firlt Day advanced no farther than five Miles, to Nigita, a fmall Ine in the Mouth of the Bay of Pozzuolo; but the fecond Day reach'd Sperlonga, a Iitcle fhort of Terracina (anciently Anxur) fixty Miles.

The 3d Day, we pafs'd in Sight of the Monte Circello, (or Promontorium Circeum) deriving its Name from the noted Enchantrefs Circe, who, as it is faid, dwelt here: The Cape extends a great Way into the Sea. About two Leagues from the Point of this Cape, directly againft it, we obferved a great Number of certain Infects, very like the Cicade, fuch as we never mer with before; our Ship's Crew called them Gronge. The Cicada is commonly in our Englifh Schools, rendred by the Word Grafbopper, whereas the fame is a quite different Infect, of a rounder and fhorter Body, fitting upon Trees, and making a much greater Noife than the Grafhopper, which ought properly be call'd in Latin, Lo cufta. The Cicado are frequent in the hot Countries, but feldom to be feen on this Side of the Alps. We lodged this Night at Afura, where we faw the Ruins

## Chap. III. tbrough the State of VENICE, $80^{\circ} \mathrm{C}$.

of an ancient Town, and of the Foundations of certain Buildings in the Water. Not far thence, we pafs'd the fourth Day, the new Town of Antio, and a Mile diftant thence, we faw vaft Ruins of the old Town, and of a great Mole belonging to the Harbour. We ftaid this Night at St. Micbael, a fmall Town not far from Oftia, near the Mouth of the River Tiber.

The $5^{\text {th }}$ Day, we fail'd with a fair Gale to St. Stephano, not far from Orbitello, paffing in Sight of Civita Veccbia, and Porto Hercole, companfing Monte Argentorato.

The 6rh Day, Being overtaken by a Borafco, or Storm of Thunder and Lightning, we rowed is or 20 Miles to a little Creek, under the Tower of Calo di Furno. On the Sea-hore we faw thofe Opercula concbarum, which by fome Naturalifts, are taken for Stones, and called Umbilici marini, by the Itclians, S. Lucies Eyes. The 7 th Day, We reached the Ine of Troia, and the Wind turning againft us, we took Shelter in a fmall Creek near the Tower of Lo Molino.

The 8th Day, paffing in Sight of Piombino, (a City fubject to a Prince of the fame Namc) Populonia P. Barreto, S. Vincentio, Caftagneto, and Vara, lodged at the Tower of Caftiglione. The gth Day, the Sea was very rough, it having blown hard all the Night before, yet we got fafely into Legborn by Noon.
24. Florence, firnamed the Fair, anfwers its Character by the Beauty of its Buildings, tho', in my Opinion, were it not forthe great Number of Stone Palaces (fuch as the Great Duke's, the Palazzo de Pitti, of the Strozzi, Solviati, and others) Antwerp, and divers other Cities in the Low-Countries, might challenge the Precedency in this Point : For though its Streets are well paved with broad Stones, like thofe of Luca and Cologne in Germa$n y$, yet are they very narrow (to keep off the fcorching Heat of the Sun) and the Paper Windows much fhatter'd in many Places, are no fimall Difgrace to the Beauty of this City. The River Arno runs through the Middle of it, over which are built four Stone Bridges, among which, the Ponte Veccbio, or Old Bridge, has Goldfmiths Shops on both Sides. Its whole Circumference is faid to be fix Italian Miles; but of this, the Duke's Palace and Gardens take up at leaft one Sixth, befides fome Hundreds of Acres made into Vineyards. It has forty four Parifhes, including the twelve Priorates. The Number of Inhabitants is computed by fome at Eighty-five thoufand Souls, by others. Ninety thoufand, nay, an Hundred thoufand ; but in my Opinion they fpeak too large. We were told, that it had fifty-fix Nunneries, and twenty-four Convents of Monks, and 37 Horpitals, one of which, viz. the Orpbanotropbium, has 70,000 Crowns yearly Revenue, and maintains 900 Perfons. The chief Strength of this City confifts in, its three Caitles, among which, that on the South-fide has a good Garriion, and an Armory furnifhed with Arms for 30,000 Men. Another is a Fort in the Great Duke's Gardens. The third we viewed not.

The Churches of Florence, if not in all other Refpects, at leaft in Point of. Architecture, are moft excellent : the Cathedral of St. Maria Florida being accounted the moft exquifite Piece that ever was made, efpecially for the Pillars which fupport the Nave or Body of the Clurch, which ftands at fuch a Diftance one from another, and are fo flender, that they do not obfcure the Inles, and afford a fair Profpect at once of the whole Church. The Cupola, (the firft and the Pattern of all the reft) both for its Compafs and Height, exceeds all in Italy, except that of Sc. Peter's at Rome. The Choir, which is of an octogonal Figure, is under this Cupola. The Walls of the Church are covered on the Outfide with Marble, cut into fmall Pieces, and chequer'd, of divers Colours. Within the Church beyond the Choir, you fee four Infcriptions, I. Concerning the Building of the Church, the Foundation of which was laid in 1280. The 2d, Concerning its Confecration by Pope Eugene IV. March 25, 1436. The 3d, Concerning the Union of the Greek and Roman Churches, under the faid Pope Eugene IV. in 1438 . The 4th, Intimates the Removal of the Body of St. Zenobius from St. Lawerence's Church hither, by Archbi-
thop Andreas his Succeffor. In the fame Church I alfo faw the Monuments of Marfilius Ficinus, and of Gio otto, a famous Architect; who firft revived Painting in Italy, as alfo of Pbilip Erubellefbi, another noted Ar= chitect, who defigned the Cupola of this Church and that of St. Larerences's. On the North Wall of this Church is to be feen the Pieture of an Englif Knight on Horfeback, named Jobn Acutus, which makes fome think his Name to have been Sir fobir Sbarpe, though others would have his Name to be Sir Fo.mn Howekwood, becaufe Guicciardin calls him Aucutus, and defcribes him as a great and valiant Captain. Here alfo you fee on a Table, the Picture of the famous Italion Poet Dante, a Native of Florence, but living in Exile, was buried at Ravenna.
In the Church of St. Croce is to be feen the Monument of that great Man Micbael Angelo Buonarota, the famous Architeet, Sculptor, and Painter ; under his Effigies is a Coffin, and under that three Statues fitting; reprefenting Painting, Sculpture, and Architecture.
In the Church of the Annunciata, you fee the Monument of another great Artift, Fobn Bologna, in a Chapel behind the Choir, built by himfelf.
In the Church of St. Mark is the following fmall Infcription on the Tomb of the famous Fobannes Picus Mirandulanus ;

## Fobannes jacit hic Mirandula, ceitera norunit

Et Tagus et Ganges, forran © Antipodes.
Ob. An. Sal. MCCCCLXXXXIV. vixit An. XXXII.
The Church of St. Lazurence contains the Tombs of feveral of the Great Duke's Family, and to this Church belongs the famous Chapel of St. Lasurence, which, when finifhed, will prove the moft magnificent in the World, the Infides of the Walls being laid over with Jafper of feveral Kinds and Colours, Agate, Lapis Lazuli, Touch-fone, $\mathcal{E}^{3}$ c. all neatly polifhed and inlaid, and wrought into various Figures. This Chapel is an Octagon, the Roof of which is a fpacious Cupola : One Side of this Octagon is left void hitherto, being referved for a moft magnificent Altar oppofite to the Door, the reft of the Sides being for the Statues and Monuments of fuch as have been Grand Dukes ; the firft, beginning on the Left Hand of the Door, being intended for Alexander, who was only Duke of Florence, was not yet made up; the reft have their refpective Names fet over their Effigies, each of which ftands in a Nich, fome of Stone, fome of Brafs, and underneath a Coffin or Cufhion, with a Ducal Crown lying upon it, with the following Infriptions in this Order :

Francijcus Mag. Dux Etruric II. vixit ann. XLVI. ob. XIX. Oitob. M. D. LXXXVII.
Cofmus Nag. Dux Etraria II. vixit amn. LV. ob. XI. Kal. Maii, MDLXXXXIV.
Ferdinandus Mag. Dux Etrur. III. vixit amn. LX. ob. VII, Id. Feb. CID ID CIX.
Cofmus Mag. Dux Etrur. IV. vixit amn. XXX.
ob. XXVIII. Feb. Cio Io CXX.
There is one Side remaining for Ferdinand II. the fifth Great Duke, who died fince our Departure; the prefent Great Duke's Name being Cofmus III.
Betwixt the Tombs are the Arms of two of the chief Cities under their Jurifdiction. There are fo great a Number of Towers, Pillars, Fountains, and Statues of Brafs and Stone, and moft excellent Pietures, at Floo rence, that I will not pretend to enter upon a parcicular Defcription of them here, contenting myfelf with mentioning only the two Statuc Equefires in Brafs, much greater than the Lfie; one of Cofmus I. upon the great Piazza ; the other of Ferdinand I. in the Piazza of the Anmunciata; and fo proceed to give you a fhort Account of the Great Duke's Gallery in the Palace, a very handfome Structure, having the Stables under Ground, and above them fair Portico's to walk in ; over thefe, the Shops of all the Artificers that are employed by the Great Duke; above them is that they properly call the Gallery, where in a Walls free for any to come into,
you fee many ancient, and fome modern Statues; and on each Side of the Walk, the Pictures of Princes and other great Perfons. Here we faw, among the reft the Pictures of Queen Elizabeth, King Fames, Oliver Cromzell, and of the before-mentioned Jobannes $A$ cutus.

The Rarities which we faw were preferved in four Clofets, the chief of which were, a very large terref trial Globe, and a Sphera Armillaris bigger than that feveral Stone Tables curioully inlaid with Fragments of precious Stones of various Colours, reprefenting Flowers, Fruits, Birds, Beafts, and Infects, fo naturally, that the beft Mafters of Europe could fcarce have drawn them more exactly. One of thofe Tables (the richeft I ever faw) was fet with many Rubies and Pearls, and valued at 100,000 Florence Scudi, (a Scudi being fomewhat more than an Englifh Crown;) feveral very excellent Cabinets, the beft of which being valued at 500,000 Scudi, was fet with Gems of the firt Mag. nitude; a Pearl of an enormous Size, but not perfectly round ; with feveral Topazes about the Bignefs of Walnuts, large Rubies and Emeralds, befides other Stones of lefs Value, $\varepsilon^{2} c$. Here alfo they hewed us the Nail, half of Gold, half Iron, Part of which they pretend was tranfmuted by Thurnbaufferus, an Alchymift of Bafil, into Gold, but the Iron and Gold was fo coarfely join'd, that it eafily difcovered the Impofture. Befides many ancient Roman Idols and Lamps of various Shapes, and Pictures and Statues made by the beft Mafters.

In the Great Duke's Armory we took Notice of the Armours of many great Perfons, and, among the reft, of a Headpiece pretended to have belonged to Hannibal, having many Morejco Characters on it; Scanderbeg's Sword; the Hair of a Horfe's Mane feven Yards long, and the Skin of the Horfe ftuffed up; a long Gun and a Piftol, the Barrels of beaten Gold; feveral round Bucklers, on one of which was painted a Medufa's Head, by Micbael Angelo, valued at a high Rate; Italian Locks for Women; a Thong cut out of the Hide of a BufAle, 250 Yards long; a great many Iurkifh Arms, EJc. The Argenteria or Wardrobe contains twelve Cupboards, full of rich Plate; one is fill'd with all Sorts of Veffels of beaten Gold; another has an Altar of Gold, fet with Diamonds and other precious Stones, with this Infcription in Capital Letters made up of Rubies, Cofmuts II. Dei gratia magnus Dux Etrurice ex voto.
If I Thould enter upon a Defcription of the Great Duke's Palace, with its Gardens, Variety of Trees, Fruits, Shrubs, Walks, Fountains, Waterworks, \& ${ }^{\circ} \mathrm{c}$. it would require a Treatife by itfelf; the Choice Plạnts we took Notice of in tranfitu were, DiEZamnus Creticus, Quamoclit Indorum; Tragoriganum; Stramonium peregrinum Ger. i. e. pomo Spinofo rotundo; Pifum cordatum, BalSamina cucumerina, Cbamcrrbiphes, \&c.

In the Duke's Theriotrophium we faw a Lion, T'yger, Leopard, Bear, Wolf, Porcupine, Wild Boar; the Snout of the laft being longer than thofe of tame Hogs, the Ears not quite fo long, of a black Colour, as were the Feet and Tail, the reft of the Body being of a grilly or Irongrey Colour, which is conftantly the fame; it being obferved, that moft of the wild Animals, whether Birds or Beafts, keep the fame Colour.

Mof of the Palaces of Florence are built à la maniera rustica, as the Italians call it, that is to fay, of rough hewn Stones, even protuberating above the Superficies of the Wall: For the reft, this City is in a decaying Condition, in refpect, I mean, of what it has been formerly, proceeding partly from the great Declenfion of their Silk Trade with France, as alfo from the heavy Impofitions laid upon them by the Great Duke, who being abfolute, receives the tenth of its yearly, Value of every Houfe, as well as the tenth of what Lands or Houfes are fold; eight per Cent. of the Portion of all Women that are married; two per Cent. out of every Law-fuit, according to the Sum fued for; for every young Heifer that is fold, a Crown; and on all other Provifions, even to the very Eggs, an Excife in Proportion: Nay, he farms the Monopoly of fine Bread (call'd Pane di Bocca) to the Baker, who furnifhes his Table, and pays 1000 Scudi yearly: Befides thefe,

Impofitions, as they render the Generality of the Inhabitants poor, (there having not been a new Houfe builc in forty Years) fo it makes the Prince very powerful, whofe ordinary Revenue is computed at one Million and a half, and by fome two Millions of Crowns per Annum; whereas his annual Expences do not amount to above half the Money, being very thrifty in his Court, keeping his Servants at Board-Wages, and being at a fet Rate with his Cook, Baker, EJc. one of the chief Maxims of State being to amafs great Treafures; for which Reafon the late Great Duke would often fay of our King Cbarles the Firf, That Want of Money ruined bim!

Very few Gentlemen here, but what fell their own Wines by Retail; not within Doors, but by a Hole made in the Cellar-Wall, where they take in and return the Flafks or other Veffels : Inftead of a Signpoft, they hang out Pieces of broken Flafks at their Palace Gates. Notwithftanding this, they look upon it as a great Difparagement to breed up their Children to the Profeffion of Phyfick; but as for Commerce, it is fo well look'd upon here, that from the Great Duke him felf to thofe of the loweft Rank, they all apply themfelves to it vigoroufly. Befides that they call the old State, comprehending the Territories of Florence and Pifa, and the nerv State, comprehending the Territory of Siena, the Great Duke is Mafter of part of the Ine of Elba (likewife a Fief of Spain) part of Graffignana, purchas'd from the Marqueffes of Malafpina; the Earl dom of St. Fiora, bought of the Strozzi ; the Mar quifate of Scanzano, and the Earldom of Pitigliano and Sorano, once belonging to the Urrini ; and fome other fmall Places which he holds from the Emperor, as he is Feudatory to the Pope; for Radicofani in Tufcany, and Borgo fan Sepulchro in Umbria. He has generally the Reputation of maintaining his Fortreffes in a better Condition than any other Prince in Europe, for the Defence of which he maintains, in Time of Peace, Five thoufand Men in conftant Pay. The Guard of his Body are Germons. They have an odd kind of Race at Florence, efpecially in the Summer time, when a certain Number of the fwifteft Horfes are let loofe, and fo run full Speed through one of the Streets, (which thence is call'd Curfo) without Riders. To make them run, they faften fmall Pieces of Leather ftuck with Pricks upon their Backs.

The Ecclefiaftical Revenue in all the Duke's Territories did, according to a Survey taken thereof 1645 , amount to 765000 Crowns per Annum.

It is a conftant Practice, among the Gentlemen as well as Citizens, of any Note here, to put their Daughters to board in the Nunneries as foon as they come to the eighth or tenth Year of their Age, looking upon this as the cheapeft and fecureft Way to educate thens till they are married.

The red Florence Wine (deeper than ordinary Claret) is a Wine much efteem'd both in Italy and elfewhere; it acquires this deep-red Tincture by the letting it ftand longer than ordinary upon the Husks or Vinacea, the interior Pulp of the Grape being white.

Sept. I, We fet out again from Florence towards Rome, and paffing through Caftiano, eight Miles from thence, after we had travelled four Miles further, left the ordinary Road leading to Siena, rode through St. Buco, to a poor wall'd Town call'd St. Donato, fixteen Miles from Florence, and fourteen from Siena, whither we continued our Journey by the Way of Caftellina di Campi, and had a Profpect of Siena ten Miles before we came at it, the Country hereabouts, as well as all over Tufcany, being mountainous and barren. Siena (being about four Miles in Compafs) is a very fair City, the Piazza of which refembling the Figure of a Coc-kle-fhell, is adorned with ftately Buildings: The Cathedral is a moft magnificent Structure of Marble, with a. moft noble Front, and adorned with the Heads of all the Popes, placed in the Wall, round about the Church; fome part (viz. about the Front part) of this Church is pav'd with Marble inlaid, or rather a moft curious Piece of Mofaick Work, containing part of the Hiftory of the Bible, done by Micberino Sanefe: If it had

Chap. III
through the state of VENICE, Woc.
been finifhed according to the firft Project, it would have exceeded any Thing of that kind in the World; as, the Painting of the Library Walls in this Church, containing the Hiftory of Eneas Syluius, afterwards Pope Pius II. half by the Hand of Peruginus, and half by Rapbaal Urbin, is one of the beft that ever I faw, being as lively now, as if it had been done but a few Days. From the Tower called Torre di mangio, we took a full Profpect of the whole City, which is of a triangular Figure, and enclofes a great many Gardens and Vineyards within its Walls: It is fituate upon a Hill, which, together with the Pavement of the Streets (which is of Brick fet Edgeways, as they do in Holland) keeps them very clean, and affords them this further Conveniency, that having good Cellars, they make lit tle Ufe of Snow or Ice to cool their Drink. There is a Room in the Palace of the Podefta, the Roof and Walls whereof are fo excellently painted by Micherino Sanefe, that it is juftly valued more than the whole Palace befides. This Place is pretty much frequented by Strangers, for its temperate Situation in the Summer time; and as the Inhabitants fpeak the Italian in its Purity, fo they are very obliging to Travellers, and all Manner of Provifions are at a reafonable Rate here.
25. Sept. 23. We left Siena, and paffing through Lucignano, Buon Convento, and Tornieri, came to St . Quiricho, (St. Cyriaci Opidum) where I met with abundance of Lavender Cotton. Hence we rode unto $R a$ dicofani, thirty four Miles from Siena, fituate upon a high Hill, and provided with a Garrifon of three hundred Men, being a well fortified Frontier Town of the Great Duke. In this Day's Journey we faw great Plenty of Abfintkium Romanum, Cær. between St. Quiricbo and Radicofani, Cynara filv. and two other Species of Thiftle, one I guels'd to be Carduus tormentofus Lob. the other 1 knew not ; Acarna flore purpuro-rubente patulo; Veronica Spicata carulea; Winter Savory; Aster luteus Linarice folio; Colcbicum all over the Paftures.

Sept. 4, We continwed our Journey from hence to Viterbo, being thirty eight Miles ; and we had fcarce travelled ten Miles, when we paffed over a fmall River near a Place called Ponte Argentino, which on this Side is the common Border of the Pope's and Grand Duke's Territories ; and travelling on four Miles further, came to Aquapendente, a large old Town, fo called from its Situation upon the Top of an Hill, from whence the Water falls down perpendicularly. We obferv'd all the Villages and Towns of this Country to be built on Hills, for Coolnefs Sake : And no fooner were we en tred the Ecclefiaftical Territories, but we found the Fields full of Trees, intermix'd with pleafant and fruitful Valleys, whereas all that Part of the Great Duke's Country through which we pafs'd was very craggy, without Trees, and appear'd to us very barren. From Aquapendente we went on to Lorenzo, a fmall Place at the Edge of the Lake of Bolfena, (anciently of Volfinii) and travelling for five Miles along the Lake, came to Bolfena, and thence mounted up to Monte Fiafoone, where having refrefh'd ourfelves with that moft excellent Wine that grows here, we travell'd for eight Miles, through a fertile Plain to Viterbo, a Town very fpacious, and well fituated, but indifferently built; we obferv'd only two or three handfome Fountains, and one Tomb of Pope Fobn XXI. in the Dome or Cathedral. The hot Springs hereabouts we had not time to take a View of or enquire about.

From Viterbo we travell'd, September 5, through Ronciglione, (a pretty Place belonging to the State of Ca ftro) to Baccano, being twenty two Miles. September the 6th, We went forward, travelling that Day fixteen Miles, to Rome: We afcended a Mountain not far from Baccano, from whence having a large Profpect of the Campania of Rome, being covered all over with a thick Mift, appeared to us at a Diftance like a huge Lake. About three Miles on this Side of Rome we faw an ancient Monument chey call'd the Sepulchre of Nero, the like we had met with before at Modena. About a Mile fhort of Rome, paffing over the Tiber by the Ponte Molle, (the ancient Pons Milvius) came upon
the Via Flaminia, a well-pav'd ftraight Way, having on both Sides many Country Houfes and Gaidens, which brought us to the Porta del Popolo, one of the Gates of Rome.
26. So many Authors have employed their learned Paing in the Defcription of Rome, both ancient and modern, I fhall be very brief in the following Account of it. The Antiquities worth the Obfervation of the Curious, are chiefly the Ruins and Remainders of Pagan Tiemples, Theatres and Ampbitbeatres, Circi, Baths, Aquaduets, Obelifks, Triumpbal Arches, Pillars, Fora, Maufolca, Statues, Altar and Grave-fones, and other Stones, with their Infcriptions; Medals, Entaglia, or Gems engraven with Figures, Sacrificing Veffels and Infriuments, Sepulw chral Urns, Lacbrymal Urns, Ancient Lamps, Weigbts, Rings, \&cc. Among the ancient Temples, which are ftill entire, we have remaining fome Part of them: i. The Pantheon, commonly call'd Rotunda, from its circular Figure, now dedicated to the Virgin Mary and All-Saints, is 144 Foot high, and as many broad, the Roof being vaulted in Form of a Cupola, having no other Light, but that it receives through a round Hole on the Top, of nine Foot Diameter. Its Porch confifted of fixteen tall and maffive Pillars of feeckled Marble, call'd Oriental Granite, each Pillar having but one Stone, of which there are only thirteen remaining now. Upon the Architrave of this Portico you fee thefe Words inferted in very large Letters:

## M. AGRIPPA L. F. COS. TERTIUM FECIT.

This Temple was covered with Copper, till Pope Urban the VIIIth removed it thence, and to appeafe the Grumbling of the People, order'd the four famous wreath'd Pillars and Canopy of the high Altar in $\mathrm{Sc}_{\text {o }}$ Peter's Church to be made of it; the Clavi trabales, or Nails which faftned the Tiles of the Portico, weighing no lefs than 2800 Pounds, out of which was caft a great Cannon, which is ftill to be feen in the Caftle of St. Angelo, with this Infcription, Ex clavis trabalibus Porticus Agrippe, and the Figure of one of thofe Nails engraven upon it. The whole Body of this Temple remains entire, being defpoiled only of its Ornaments and Statues, among which was the famous Minerva of Pbidias. After its firt Building, it had feven Steps upwards, which furrounded the whole Structure, whereas now you muft defcend eleven Steps to go into it; a convincing Proof that a grear Part of the ancient Rome is involv'd in Rubbifh under Ground. Thofe that fhew'd us the Church were very careful to tell us, That the Lintel and Side-pofts of the great Door of this Church (which indeed is exceeding large in all its Di menfions) were all of one entire Stone; which we thought fit rather to believe, than to give ourfelves the Trouble of examining it. In this Church is to be feen the Tomb of that great Architect and Painter Rapbael Urbin with an elegant Infeription.
2. Templum Foriune virilis, or the Temple of the Moon, as fome will have it, but rather of the Sun and Fupiter, now call'd S. Maria Egyptiaca, where the Armenians have their Service. 3. The Temple of the Sun, or of Vefta, as fome affirm, or as others, Templumb Herculis ViEtoris, ftanding not far from the Precedent, viz. by the Tiber Side, near the broken Bridge, and is now call'd La Madonna del Sole, or St. Stefano allo carozze; a fmall round Structure, with a Gallery of ftriate Pillars round about it: It receives its Light like the Pantheon, through a Hole on the Top. Thefe two laft remain entire. 4. Templum Diance Aventina, now call'd St. Sabino, is very large, twelve ftriare Pillars on each Side, dividing the Nave from the Ines. 5 . Templum Herculis Aventini, now the Church of St. Alexius and Bonifacius, near the former, on the Top of Mount Aventine. 6. Templum Fani quadrifrontis, in the Cowmarket. 7. The Temple of Concord, or rather its Remains, being only aPortico fuftained by eight great Marble Pillars of one Stone each, at the Foor of the Mons Capitolinus. 8. The Temple of Saturn, now St. Adrian's Church, the Frontifpiece of which is only the Remainder of the ancient Temple; it ftands near Severus's Arch, at the Foot

8 K
of the Capitol. 9. The Temple of Antonine and Faufina, now St. Lorenzo in Miranda; of this remains entire the Porico, with its Infcription, and fome of the Walls built of maffy Stones, the Marble Pillars which fupport the Portico having a Grain lying one Way, all cleave like Wood. 10. The Temple of Romulus and Remus, fince dedicated to St. Cofmo and Damiano, has fcarce any thing remaining of its ancient Structure. II. Templum Iffdis $\mathcal{E}^{\circ}$ Serapidis five Solis $\mathcal{J}$ Luna, now St. Maria nuova; the few Ruins remaining of the old Church are behind the Cloyfter, the prefent Church being no Part of it, neither ftanding in the fame Place. 12. The Temple of Peace, the Founder of which was Vefpafian, exceeded all the other ancient Temples of Rome in Bignefs, as may be feen by the Foundation, the Ruins of which may eafily be diftinguifh'd; for the reft, there are no more than Part of three Arches left ftanding: The ftriate Pillar, fet up before the Church of St. Maria maggiore, the greatelt of one entire Stone now in Rome, was taken hence, being one of the eight which fupported the Nave or Body of this Temple. 13. Templum Fovis Statoris, three Pillars now to be feen in the Campo Vaccino, were Part of this Temple. 14. Templum Foris tonantis ; of this three Pillars, for the moft Part under Ground, are fuppofed to be Part; on the Architrave whereof are to be feen thefe Letters, ESTITUER, on the Left Hand of the Clivus, as you go from Severus's Arch to the Capitol. 15. The Temple of Faunus, now called St. Stefano rotundo, from its circular Figure: This large Structure is fuftained by two concentrical Circles of Pillars, the outermoft Pillars being lefs than the innermoft, the firft containing forty four Pillars, and the other exactly half the Number ; befides that, the Pillars of the inner Circle ftand at the fame Diftance from one another as thofe in the outer. 16. Templum Herculis Callaici, now Galuzo, of a diagonal Figure, its Roof being a Cupola not much lefs than that of the Pantheon; it has two Doors directly oppofite one to another, and on both Sides betwixt them, eight Niches for Statues. 17. Templum Baccbi extra portam Piam, now the Church of St. Coftanza, without the Walls: This is alfo a round Structure, having a concentrical Circle of twelve Pillars of a lefs Circumference within. Here you fee an ancient Monument of Porphry refembling a large Cheft, having a Stone to cover: it; it is curioully engraven with Branches of Trees, Boys treading of Grapes, of Birds, $\mathcal{E}^{2} c$. In feveral Places of the Roof are Pictures of Bunches of Grapes, and other Things belonging to Vintage, but the Frefhnefs of the Colours, and Rudenefs of the Figures, makes me fufpect them to be no Roman Workmanfhip. They call this the Monument of Baccbus. 18. The Temple of the Sun; of this there remains only fome great Marble Stones in the Garden of the Columna's, fome of them curiounly engraven. 19. The Temple of Romulus and Remus, now dedicated to St. Theodore; it is of a circular Figure, into which you defcend by Steps, like as into the Pantbeon.

Of the ancient Roman Theatres and Amphitheatres, there are remaining only fome fmall Footfteps of the Amphicheatre of Statilius Taurus, near the Church of St. Croce in Gierufalemme, and fome Part of the Walls of the Theatre of Marcellus, upon which the Palace of the Savelli is built: But of the Amphicheatre of Titus, now called the Colifeo, great Ruins are to be feen to this Day, being round without, and of an oval Figure within: It is capable of containing conveniently 85,000 Perfons. Of Circi, there are only fome תender Remnants of that of Antoninus Caracalla, without the City, and of the Circus maximus, of which you may juft difcern the Figure. Of the Circus Agonalis, (now the Piazza Navona) and of the Circus of Nero in Campo Vaticano; as likewife of the Circus Flaminius, nothing is left but their Names. Of Roman Baths very confiderable Ruins are to be feen, viz. thofe of Dioclefian, which had Seats for three thoufand two hundred Perfons to bathe, without feeing one another; of Antoninus Caracalla, which had fixteen hundred Seats all of polifh'd Marble; the TBermice of Titus, of Agrippa near the Pantbeon, of Conftantine near St. Sylvefter's, of Nero near St. EuftaGbius's Church, of Paulus Emilius at the Foot of Monte

Cavallo, called, Magnanapoli; befides many others, of which fcarce any Footfteps are to be feen now.

Among the ancient Aquæducts of Rome, there are only four that have fomething remaining now, viz. the Aqua Martia, conducted thirty feven Miles; the Aqua Claudia, brought thirty five; and the Aqua Appia and Aqua Virginis, both brought eight Miles; the laft of which being repaired by Pope Nicbolas V. is us'd now-a-days, and known by the Name of Fonte di Trivio. Befides thofe, there are two new Aquæducts built by late Popes, of which the following Infcriptions will give you a fatisfactory Account.

Paulus V. Pontifex maximus aquam in agro Braccianens Saluberrimis è fontibus collectam, veteribus aqua Alfeatince duEtibus refitutis novifque additis XXXV. ab Urbe milliario duxit, Anno Domini MDCXII. Pontificatus fui Septimo.

There are eleven Obelisks remaining, but we took Notice only of nine : I. That which anciently ftood in the Circus maximus, but being broken, was by Sixtus V. fet handfomely together, and placed upon a fine Pedeftal in the Piazza within the Gate called Porta del Popolo, having on each Side an Infcription, and two ancient ones on the oppofite Sides in the fame Words.

## Imp. Cefar Divi $F$. Auguftus <br> Pontifex maximus

Imp. XII. Cof. XI. Trib. Pot. $\overline{\mathrm{XIV}}$.
Egypto in potefatem
Populi Romani redact.
Soli donum dedit.
On the other two Sides are modern Infcriptions. It is engraved on each Side with three Rows of Hieroglyphicks. 2. The Obelisk which now ftands in the Piazza before St. Peter's Church, was taken out of the Circus of Caligula and Nero, and at the Charge of Pope Sixtus V. placed here, as were alfo thofe of St. Maria maggiore and St. Fobn Lateran. This Obelisk is feventy two Foot high, befides the Pedeftal, in all one hundred and eight. It has no Hieroglyphicks upon it. Of the Manner of its Removal, a peculiar Treatife is written; as the four modern Infcriptions on the Pedeftal, and the ancient one on the Obelisk itfelf, may be feen in Roma antica $E^{3}$ moderna. 3. That of St. Fobn Lateran, having three Rows or Files of Hieroglyphicks on each Side of it ; this is one hundred and twelve Foot high, befides the Bafe, where it is nine Foot and an half thick one Way, and eight Foot the other. It is the greateft Obelisk in Rome: From the following Infcription it appears by whom it was brought to Rome, and fer up.

Fl. Conftantius Aug. Conftantini Aug. F. Obelifcum à patre loco fuo motum, diuque Alexandrice jacentem trecentorum remigum impofitum navi mirande vafitatis per mare, Tiberimque magnis molibus Romam convectum in circo maximo ponendum curavit S.P.Q.R.D.D.
4. That of St. Maria maggiore, without Hieroglyphicks, and much lefs than any of the former, was removed hither out of the Maufolerm of Augufus. 5. That of the Piazza Navona, taken out of the Circus of Caracalla, by Pope Innocent X. It has but one Row of Hieroglyphicks, and much lefs than the laft mentioned; of this

Atbanaf.

## Chap. III.

 through the State of VENICE, EOC.Atbanaf. Kircher has written a whole Treatife. 6. That of St. Mabuto, near the Jefuits Church, is only a Piece of the Top of an Obelisk, placed upon four rude Stones; it has fome Hieroglyphicks. 7. That in the Garden of Medicis, is alfo no more than a Piece of the Top of an Obelisk, full of Hieroglyphicks, placed upon a Bafe, without an Infeription. 8. That in the Garden of the Mattei is but very fmall, and broken in two Pieces; the uppermoft has to the Top Hieroglyphicks, but the lotwer Piece none. 9. In the Court of the Palace of the Prince of Paleftrina, you fee an Obelisk lying upon the Ground, broken in three Pieces, with Hieroglyphicks; it feems to have been much longer. Io. Roma antica makes Mention of an Obelisk ftanding at the Foot of the Stairs in the Palace of the Urfini, in the Campo di flore, but we did not fee it. 11. We were alfo credibly informed, that an Obelisk, bigger than any of thofe erected already at Rome, and fuppofed to be entire, was lying under a Row of Houfes in the Campus martius.
Among all thefe Obelisks, thofe that are engraven with Hieroglyphicks are of the fame Kind of Stone, viz. of a hard Marble of a mingled Colour, red and white, which in fo many Ages has not undergone the leaft Alteration by the Weather: Their Figure is taperwife, leffening by Degrees from the Bafis to the Center, yet fo as that they don't terminate in a Point ; but when they are come to that Degree, as to be too fmall to have any Hieroglpyhicks engraven upon them, the Tops are made in the Form of an obtufe Pyramid. It is the general Opinion, and not without a great deal of Probability, that the Hieroglyphicks upon there Obeliks, from the Bottom to the Top, are by Degrees greater and greater, which makes the uppermoft appear of the fame Bignefs with the lowermoft.
Of Triumphal Arches are yet remaining that of Septimius Severus, that of Titus Vefpafian, that of Constantine the Great, that erected in Honour of Antoninus, Septimius's Son, and that of Gallienus and Salonica, called the Arch of St. Vito. We could not find out the Arch in the Via Flaminia, called Arco di Portugallo, in Roma ontica, where you may fee the Infcriptions and Places of thofe Arches.
There are four Pillars yet remaining, viz. the Columna milliaria, which anciently food in the Forum Romanum in the Center of the City, this being the Mark from whence they ufed to count their Miles by a certain Stone fet up at every Mile's End, this Statue being, toward the Top, marked with the Letter I, of a confiderable Bignefs, as the fecond Stone at the firt Mile's End was marked with II, and fo further; fo that ad fecundum lapidem fignified at one Mile's Dittance from this Pillar, ad tertium two, and fo on. It is of no confiderable Bignefs, and now placed on one Side of the Area of the Capitol. The Columna roftrata in the Forum Romanum, erected to C. Duilius, in Memory of the Vietory obtained over the Carthaginians at Sea; the old and long Infcription, which was much defaced, is fupplied in many Places.
The Column of Trajan, of white Marble, which remains ftanding ever fince its firt Eftablifhment, being one hundred and twenty eight Foot high, and the Bafe twelve ; within it you afcend to the Top by a Pair of winding Stairs of one hundred and ninety two Steps, having forty four fmall Windows to give Light; the whole Fabrick is compofed of no more than twenty four entire Stones, each Stone having eight Steps. An Helical Area compaffes the Pillar from Top to Bottom, in Manner of a Screw, on which are carv'd the Actions of Trajan in his Expedition againft the Dacians. The Pedeftal, which was buried under Ground, was laid open again by Pope Paul III. and has the following Infcription :

## S. P. 2. R.

Imp. Cafari Divi Nerve F. Nerva Trajano Aug. Germ.
Dacico, Pont. maximo, Trib. Potef XVI. Imp. VI.
Cof. VI. PP. ad declarandum quante altitudinis mons E' locus tantis operibus fit egeffus.

The Column of Antoninus, much like the former, is
one hundred and feventy five Foot high, has two hunfs dred and fix Steps within, and fifty fix fmall Windows Being miferably broken and defaced, Pope Sixtus $V$. mended and reftored it.

There are but two Mousolea remaining, viz, that of Augufus, and the Moles of Adriant, now called the Caftle of St. Angelo. Of Altar-flones, Grave-ftones and other Stones with Infcriptions, there is vaft Variety all over the City: And of ancient Medals and Entago lie, there are dug up daily, which are fold in the Stiops and Stalls in the Market-places, and great Numbers of them are preferv'd in the Collections of the Virtuofi; where, as well as in the Gardens and Palaces of Perforis of Quality, you may fee great Quantities of fepulchiral Urns of different Shapes and Bignefs, fome of Stone, others of Earth.

Among the Antiquaries of Rome, who have confiderable Collections of thefe before-mentioned Things; as well as of facrificing Veffels and Infruments, Lachrymal Urns, ancient Lamps, Rings, Fizbuld, Teffera hofpitalitatis, Weights, Egc. Leonardus Agulizinus, the Pope's Antiquary, and Fobn Petro Bellori, deferve to be prefer'd before the reft; that worthy and ingenious Gentleman Cavalier Carlo Antonio del Pozzo, fhewed us twenty Volumes in Folio, containing the Figures of moft of the Antiquities in and about Rome, drawn by the Hand with great Exactnefs; and among the reft, we took Notice of the Crepundia Veterum, being Nothing elfe but little Images of Earth refembling Children, Apes, Hares, $\mathcal{B}^{2}$. found in Uris. Of Weights, we faw fome in the Collection of Leonardus Augulinus, made of a dark-red Stone well polifh'd, of the Shape of a Holland Cheefe, of divers Magnitudes, marked on one Side with the Number of Ounces or Pounds it contained. Of thefe Weights, I faw two as big as a large Holland Cheefe, in the Church of St. Maria in Cofmedin, called Schola Graca, and two more in the Church of St. Maria in Traftevere, of which they have a Tradition, that they ufed to tie them to the Martyrs Feet, to fretch and torment them. In the laft-mentioned Collection, we faw alfo a Medal, with the Figure of a Talus on one Side, and this Infcription on the other; 2ui ludit arrbam det quod fatis $\sqrt{2 t}$ : The Fritillus, or Dice-box of the Ancients, like ours ; the Strigiles, a Medal that ufed to be hung about the Slaves Necks, having on one Side the Figure of a She-Wolf giving Suck to Romilus and Remus, and on the other, in three concentrical Circles, thefe Words, Tene me ne fugiam, $\mathcal{O}^{7}$ revoca me in foro Trajani purpuretica ad Pafcafum Dominums meum. A Drinking glafs like a Priapus, of which the Poet, Vitreo bibit ille Priapo. The ancient Roman Timbrel, not unlike our modern ones.
27. Rome is near thirteen Miles in Circumference, but did to us appear not to be fo populous as Venice, Milan, or Naples, as comprehending a great deal of wafte Ground: The Number of its Inhabitants is generally believed to be 120,000 Souls, without Strangers, of which there are great Numbers here; it extends nowadays below the Hills into the Valley by the River-fide, being generally well-built, the Streets ftreight and beautified with màny Palaces, Monatteries and Churches, of which, they fay, there are above three hundred. Provifions are not fo cheap here as at Florence or Na. ples, yet have they great Plenty of them, and exceeding good, their Beef being not inferior to ours in Eng. land. Before they kill their Beafts, they hunt them as we do our Bulls. Their fucking Veal they prefer before all of that Kind in Europe; and their Kid or CCprette, and Pork, is allo excellent good Meat; butt their Mutton is tough and dry. For tame Fowl they may compare with any Part of Europe both in Quantity and Goodnefs, viz. Hens, Capons, Turkies, tame Pigeons, E B. Geefe they have in no great Plenty, buic $^{\text {c }}$ wild Fowl is very cheap, and that of the beft Sort, fuch as Partridges, of two Kinds, the common and red-leged ones, Woodcocks, Snipes, Duck and Mallard, Wigeon, Teal, Quails, Plover, $\mathcal{E}_{c}$, befides what is fold in the Small-bird Market, of Thrufhes, Blackbirds, Larks, $\mathcal{E}^{\circ} c$, nay, even Robin-red. breatts, ${ }^{\prime}$ Finches,

Wag-

Wagtails, Grays, $\mathcal{E}^{3} c$. Befides thefe before-mention'd, you may fee fometimes in the Poulterers Shops, Cranes, Wild-geefe, Shelldrakes, Avofelte, Water-hens, Berganders, and even fuch Birds as are not eaten in England, as Kites, Buzzards, Spar-hawks, Keftrels, Jays, Magpies and Wood-peckers. Neither are they in any Want of Sea or River Fifh, though fold at a dearer Rate than Flefh: Of Frefh-water Fifh, Pike, Carp, Tench, Trout, Eels, Barble, Chevin, and Dace, are the moft frequent; I don't remember I ever faw a Perch at Rome. Of Sea-fifh, they have the Mullus antiquorum, now Triglia, called Rouge by the French, from its Colour; in Cornwall we call them Surmullet : Spiegole, or the Lupus marinus, a Fifh not known in England, Orate, Giltheads; Ceppali, the Mugil of the Ancients, we call it a Mullet in Englifh; Sarde, or the Sprat; Conger or Lamprey; Sole, Plaife, and others of the flat Kind; Merluzzo, we call them Hakes; fometimes fmall Sturgeons; Dog-fih, as alfo Tuny and Sword-fifh.

Wild Boar and other Venifon you fcarce ever mifs in the Market, but their wild Deer (or Capreole) is generally very lean: Sometimes you meet alfo with Porcupine to be fold. Oranges and Lemons are very cheap here, but large Pears and Apples dear, being fold by Weight all over Italy. Their Bread is very cheap, good, and light, though they ufe no Yeaft to raife it. Of Wines they have greater Variety than in any other Place of Italy; as Greco, Lacrime of Naples, Languedoc; Wine of Syracufa and Augufta in Sicily, Orvietano, Jenfana, Monte Pulciano, Monte fiafoone, Cajfelli, Romano and Albanc, more frequently ufed than all the reft. Moft of their Wines are fweet (which they call Abboccati) and fo ftrong bodied, that they will bear half Water. Rough Wines they call Afciuti, though none of theirs are fo harfh as our Clarets, Florence, or red Wines, which are alfo to be had here. Their Olives, though fmall, are exceedingly good and fweet ; of Walnuts, Hazlenuts, and fuch other Fruits as are frequent among us, great Plenty; but our Apples and Pears excel all the reft for Goodnefs.
Rome is alfo noted for various Commodities and Manufactures; as, the beft Viol and Lute-ftrings in Europe, perfum'd Gloves, Combs made of Bufflers Horn, Womens Fans, Vitriol, Effences ; and as for Mufick and Pictures of the beft Mafters, this City may defervedly challenge the Preference before all other Places in Europe. At this Time Cavalier Barberini was the molt noted and the only excellent Sculptor here, and Pietro de Cortona the moft eminent Painter.
The Villa's or Country-Seats of the Princes and other Perfons of Quality of Rome, for Flower-Gardens, Groves, cut Hedges of Cyprefs, Alaternus, Laurel, Bay, Pbillerea, Lourus timus, and other Semper-virent Plants, clofe and open Walks, moft excellent Orchards of Fruit-trees, Labyrinths, Fountains, Waterworks, Statues, Bird-cages, and other Ornaments, but efpecially in their Bignefs, (fome being three or four Miles in Compafs) exceed moft of the Gardens in Cbriftendom; the chief of thofe, (I.) The Villa Borgbefe, efteem'd the beft of all about Rome, though inferior in Bignefs to the (2.) Villa Pampbylia, which lies on the faniculum, without St. Pancras's Gate, being four Miles in Compafs. (3.) The Villa Ludoviraa, belonging to Prince Ludovifio. (4.) The Pope's Garden, called Belvedere, at the Vatican. (5.) The Pope's Garden at Monte Cavallo. (6.) The Villa de Medici, or the Great Duke's Garden. (7.) The Garden of Montalto. (8) The Garden of the Mattei. Each of thefe have their little Pillars, beautified with moft excellent Statues, bafli relievi, Pictures and other Curiofities, for the Defrription of which I refer myfelf to others; neither will I pretend to enlarge upon their publick Structures, but can't altogether pafs by in Silence the Church of St. Peter, being in my Opinion, the moft fumptuous and magnificent Structure that ever was placed upon the Face of the Earth, exceeding in all its Dimenfions the moft famous Temples of the Ancients, being 520 Foot long, and 385 broad, which though it be not fo long as St. Paul's at London, yet as it is much broader, fo this renders it more regular and proportionable to its Length.

The Cupola is of that Aupendious Height and Compais (having the fame Diameter as that of the Rotunde) which fuftaining on the Top a very large Lanthorn, encompafs'd with great Scone Pillars, this renders ir the boldeft and molt flupendious Piece of Architecture the World ever beheld. The Roof is arch'd and divided into fpacious Squares or Panes like Wainfoor, the Ribs and tranfverfe Borders terminating thofe Pannels, being richly gilt, and the Area of each Square fill'd up with a large gilt Rofe. The oval Portico encompaffes a large Area before the Church, confiting of four Rows of great Stone Pillars, fo clofe together, that at a Diftance they refemble a Grove of large Trees. To be fhort, the lofty Porch to which you afcend out of this Area by twenty four Steps, the covering of fome part of the Walls with Marble, finely polifh'd, the excellent Statues, magnificent Altars, moft curious Pictures, and other Ornaments, render this Church the moft majeftick and moft admirable Pile of Buildings in the Univerfe.
Whilft we ftaid at Rome, we took a Tour to Frejcati, twelve Italian Miles thence, anciently call'd Tufculum, where Cicero had a Country-houfe, of which trey fhew as yet fome Remnants: At prefent it is famous for three Villa's, viz. that of Borgbefe, with its Palace call'd Mondragone; the Villa Aldobrandina or Belvedere, belonging to Prince Pampbilio, and the Villa Ludovifa; all which for Walks, Groves, Labyrinths, and other Ornaments, may compare with the beft near Rome; and for Waterfalls and other Waterworks, exceed them. That which pleas'd us moft, (having never feen the like before) was the Imitation of a Tempett, with a Storm of Thunder and Rain, which artificial Thunder they call Girandola. We alfo took a View of Tivoli, the Ancients Tibur, eighteen Miles from Rome; how much Horace delighted in this Place, is evident out of his Verfes. Its Situation is, as well as Frefcati, on the Brow of a Hill overlooking the Campania of Rome. Here are to be feen the Ruins of ancient Temples and other Structures, and a remarkable Waterfall of the River Aniene or Teverone. And the Villa of Efte, for its Gardens, Orchards, Walks, Groves, the Girandola and other Waterworks, may compare with thofe of Frefcati. Not above five Miles from Tivoli, we pafs'd over the Sulphur River, the Water whereof we found of a bluin ${ }^{\circ}$ Colour, and naufeous Smell, not unlike to that of our Sulphur Well at Knaresburgb in Yorkbire; the Channel in which it runs is encrufted with a whitifh kind of friable ftony Matter, which being congeal'd in many Places in the Shape of Sugar-plumbs, they call Confeeli de Tivoli, and fell them in whole Boxes full at Rome. About Frefcati we faw growing wild Abundance of Styrax arbor, which we found no where elfe beyond the Seas.

The Campania of Rome is generally very fertile, but being marihy, and full of ftanding Pools, the Unwholfomnefs of the Air makes that Country but thinly inhabited. One thing more we obferv'd very well worth mentioning during our Stay at Rome, viz, that the Water the Servants brought us in frofty Weather to wafh our Hands, was fo hor, that we thought it had been warm'd on Purpofe by the Fire ; which Phænomenon having been denied by many of our modern Philofophers, who were not fatisfied with the Anliperijtafis of the Ancients, and yet could not give fufficient Reafon for it, we thought fit to be fatisfied of the Truth, by making an ocular Infpection into the Fountain itfelf, the Water whereof we found of an equal Heat with what was brought us. For the reft, the frequent Rains that fall hereabouts make in fome Meafure Amends for the exceffive Drought and Heat of the Summer: And as Rome has fufficient to entertain People of all Tempers, fo it. is a Place well fitted for the Reception of Strangers. As for the Inhabitants, they approach now-adays, in their Furnitures and fome of their Manners and Cuftoms, more to the Englifh thian any of the Italians befides. To enlarge here upon the Court of Rome, the Ecclefiaftical State and Goverment, with that of their Churches and Ceremonies, $\mathcal{E}^{2} c$. as it would require an entire Volume, to without infifting

## Chap. III. through the State of VENICE, \&c.

any further upon thofe Particulars, we will proceed in the Account of our Journey.

Fanuary 24; 1664. We left Rome, and taking our Way towards Venice along the Via Flaminia, pafs'd the Tiber again by the Ponte Molle (Pons Milvius) and at feven Miles Diftance from Rome, through a fniall Village called Prima porta, which fome fuppofe to have been the ancient Boundary of the City on that Side. From thence we travell'd eightMiles further, to Caftel novo, where we took up our Lodgings. All this Afiernoon we kept along the Tiber, upon the Via Flaminia, which reaches as far as Rimini, and is all along pav'd with broad Flints and Pebbles, having on each Side a Border of Stone, and in that Border, at every fecond or third Pace, a Stone ftanding above the Level of the Border. 'In the Fields, as we pafs'd along, we found abundance of Vernal Crocufes in Flower.

Fan. 25. We continued our Journey to Ariano, eight Miles, where leaving the Via Flaminia, we rode round a high Hill, for nine Miles, to a little Town call'd Civita Caftellana, now ftanding on a Hill, not far from whence we had a Profpect of the Duke of Parma's Palace of Caprarola, which feem'd to be no more than two or three Miles off, but was, as they told us, at leaft ten or twelve. After we had travel'd four Miles further, we pals'd the Tiber a little below Boryetto, over a Bridge called Ponte Felice, begun by Pope Sixtus V. and finifhed by Urban VIII. At a fmall Diftance from the River Side we paffed under the little Town of Magliano, built on the Top of a Hill, and travelling for four Miles along the Bank of the River, came to Utricoli, now ftanding upon a Hill, though the Ruins which remain thew the ancient Ocricoli to have extended, at leaft for fome Part, to the River. From hence we rode, for five Miles, over'mountainous and rocky Ways, and a Mile before we reach'd Narni, upon the Brink of a moft dreadful Precipice, extending along the River Nera's fide. Narni (the Nequinum of the Ancients) has borrowed its Name from the River Nar, which paffes below that fteep Rock, upon the Ridge whereof this City is built: It was formerly a Roman Colony, and none of the leaft confiderable ones, but is now very poor and mean. Here you fee the Brafs Statue erected in Memory of Gattamelata, the famous Venetian General, on Horfeback, who was a Native of this Place. Near it you fee the Ruins of vaft Stone Arches, which fome would have to be the Remnants of a Bridge, others of an Aquæduct over the River from one Mountain to another.

Fan. 26. We travell'd thence through a very delightFul and fertile Valley, environ'd with Mountains, and well cultivated, to Terni, anciently Interamna, from its Situation, a near little City, in the Piazza of which ftands a Church which feems to have been an ancient Temple. About four Miles further is the famous Waterfall from the Lake di Pie di Luco. Beyond Terni, at the further End of this Valley, and on all the adjacent Hills, we faw whole Forefts of Olive-trees, and the Country People bufy in gathering them. From Terni we paffed over the Mountains to Tritura; and thence defcended to Spoleto, the Capital of Umbria, thence call'd Ducato Spoletano: The Walls of this City are of confiderable Extent, and the Houfes well built Here are to be feen the Ruins of many ancient Buildings. From hence we paffed through a moft facious and pleafant Valley, enclos'd with Mountains in the Form of an Amphitheatre, the Valley being planted with Trees and Vines after the Manner of Lombardy and the neighbouring Hills full of little Towns and Houfes. About four Miles fhort of Foligno, we paffed under Trevi, a little Town feated on a round Hill. Foligno (Fulginium) is a very pleafant and handfome Town, famous chiefly for Confectioners and good Sweetmeats. Beyond it, at the Extremity of the Valley of Spoleto, we faw fuch another Plantation of Olive-trees as before.

Fan. 27. We afcended from Foligno to a Mountain, by a. Way cut out of the Rock, having a terrible Precipice on our left, and below a Valley furrounded with high and fteep Hills, into which falls a fmall River

Vol. II. ${ }^{\circ}{ }^{0}$ CXVI.
called Dale, which drives fome Paper-Mills. After we had thus travell'd four or five Miles, we reach'd the Top of the Appennine, the Mountains round about us being covered with Snow : On the Top we came into a fmall Plain, having a little Lake or Pool near a Village called Col forito, a very delightful Place in Summer. No fooner had we pafs'd this Plain, buit we began to defcend, and pafling through the Village of Sirravalle, fituated at the Entrance of a narrow Valley, fourteen Miles from Foligno, we continued our Journey through the Mountains, and lodg'd at Valcimarra. Fain. 28, We travelled thro' Tolentino, nine Miles from Valcimarra, a pretty little Town, famous for the Birth-place of that great Critick, Francifcus Pbilelpbus, who was the firft Inventer of the Word Stapes, for Stirrops, which had before no Word in Latin. From hence we rode on ten Miles to Macerata, a large and populous City, the Capital of the Marca Anconitona, and Refidence of the Cardinal Legate. From hence we travel'd thro'Recanati to Loretto. At Recanati we faw a Statue in Brafs of the Virgin Mary in baffo relievo, with a Table having an Infcription upon it giving Thanks to her, that the was pleafed to fettle her Houfe in the Territory of this City.

Loretto itfelf is no more than a fmall City, feated upon a Hill, confifting only of one Street within the Walls, and fuch another without, which makes the Suburb: The Church and College of the Canons ftand at one End of the Street ; and before the Church is a fmall Piazza, having a Cloyfter on one Side, where the Canons have their Lodgings. In the Midft of the Piazza you fee a very fair Fountain, and juft before the Church Door a Brafs Statue of Sixtus V. in a fitting Pofture, with an Infcription, intimating, that it was he who gave a Bifhop and the Title of a City to Loretto. All the Doors of this Church are of Brafs caft, with feveral Hiftories upon them. The Church is built in Form of a Crols, with a Cupola in the middle, directly under which you fee ftanding, the Santa Cafa or boly Houfe, enclos'd in a Cafe of white Parian Marble, curioully engraven with Figures in baffo relievo, reprefenting feveral Hiftories, done by the beft Sculptors of that Age, the full Defcription of which may be be feen in Turfelinus's Hiftory. The Walls of the Houfe itfelf are made of a peculiar kind of Stone (as they would perfuade the World) refembling Bricks both in their Colour and Figure, but to be found only about Nazaretb; which if they could prove to be true, would be the beft Argument to verify their Affertion concerning the Tranfportation of this Houfe from thence; but, in my Opinion, they are real Bricks. But to let the Reader know what Arguments they make ufe of to perfuade the World of the Verity of it, I will here infert the whole Relation as given by themfelves, which being tranflated into thirteen Languages, and hung up in the Church, written on as many Tables, runs thus in Englifh.

## Ave Domina Angelorum.

The miraculous Origin and Iranflation of the Church of our Lady of Loretto.
"The Church of Loretto was a Chamber of the " bleffed Virgin nigh Ferufalem, in which the was born " and bred, and faluted by the Angel, and thereiri "conceiv'd and brought up her Son $\begin{aligned} & \text { fefus to the Age }\end{aligned}$ " of twelve Years. This Chamber, after the Aicenfion " of our Saviour, was by the Apoftles confecrated into " a Church, in Honour of the bleffed Lady: And Sc. " Luke made a Picture to her, likewife extant therein " to be feen at this very Day. It was frequented with " great Devotion by the People of the Country where "s it ftood, whilft they were Catholicks; but when, " leaving the Faith of Chrift, they follow'd the Sect of "Mabomet, the Angels took it and carried it into Scla" wonia, and placed it by a Town call'd Flumen, where " not being had in due Reverence, they again tranfa "ported it over the Sea, to a Wood in the Territory of "Recanati, belonging to a Noblewomen called Loretta, ${ }^{6}$ from whence it took the Name of our Lady of Lo-
"retto:
co retto; and thence again they carried it, by Reafon "s of the many Robberies committed, to a Mountain " of two Brothers in the faid Territory : And from
" thence finally, in Refpect of their Difagreement
"about the Gifts and Offerings, to the common High-
" way not far diftant, where it now remains without
" Foundations, famous for many Signs, Graces and Mira-
"cles; whereat the Inhabitants of Recanati, who often
"came to fee it, much wondering, environ'd it with a
" ftrong and thick Wall ; yet could no Man tell whence
" it came originally, till in the Year 1296, the blefled
"Virgin appear"d in his Sleep to a holy devour Man,
"to whom the reveal'd it, and he divulg'd it to others
" of Authority in this Province, who determining
" forthwith to try the Truth of the Vifion, refolv"d to
"chufe fixteen Men of Credit, who to that Effect
" fhould go all together to the City of Nazaretb, as
" they did, carrying with them the Meafures of this
"Church, and comparing therewich the Foundation's
" Remnant, they found them wholly agreeable; -and
${ }^{6}$ in a Wall thereby engraven, that it ftood there,
"s and had left the Place. Which done, they prefently
"c returning back, publifhed the Premiffes to be true ;
" and from that Time forward it hath been certainly
"s known, that this Church was the Chamber of the
"Virgin Mary: To which Chriftians began then, and
" have ever fince had a great Devotion, for that in it
" daily fhe hath done and doth many and many Mi-
" racles. One Frere Paul de Sylua, an Eremite of great
"Sanctity, who liv"d in a Cottage nigh unto this
"Church, whither daily he went to Mattins, faid, That
"for ten Years Space, on the eighth of September, two
"Hours before Day, he faw a Light defcend from
"Heaven upon it, which he faid was the bleffed Vir-
${ }^{6}$ gin, who there fhew'd herfelf on the Feaft of her
© Nativity. In Confirmation of all which, two virtuous
" Men of the City of Recanati divers Times declar'd
©s unto the Prefect of Terreman, and Governor of the
"aforemention"d Church, as followerh: The one, cal-
es led Paul Renoiduci, avouch'd, That his Grandfather
"faw when the Angels brought it over the Sea, placed
" it in the aforementioned Wood, and had often vifi-
"s ted it there: The other, call'd Francis Prior, in like
"Sort affirm'd, that his Grandfather's Grandfather be-
" ing 120 Years old, had alfo much frequented it
" in the fame Place; and for further Proof that it
" had been there, he reported, that his Grandfather's
" Grandfather had a Houfe nigh unto it, wherein he
"dwelt; and that in his Time it was carried by the
" Angels from thence to the Mountain of the two Bro-
"thers, where they placed it as abovefaid."

By Order of the Right Reverend Monfigor Vincent Caffal of Bolognia, Governor of this Holy Place, under Protection of the moft Reverend Cardinal Moroni.
I. Robert Codrington, Prieft of the Society of Fefus in the Year 1634. have faithfully tranlated the Premiffes out of the Latin Original hanging in the faid Church.

## To the Honour of the ever-glorious Virgin.

29. From Loretto we travel'd, Fan. the 3oth, to $A n$ cona, a populous City much frequented by Merchants, by Reafon of the Conveniency of its Harbour, which formerly was the beft in all the Gulph, but is much decayed of late. Here we took particular Notice of the Ruins of the Stones which fecur'd the ancient Port, where you fee that renown'd triumphal Arch of white Pa sion Marble, erected to Trajan by order of the Senate: The Stones are of a vaft Bignefs.

The Statua equestris of Trajan, which formerly ftood on the Top of this Arch, is removid thence, and fet up over the Gate of the Exchange. Here we were alfo entertain'd with a Difh of Shelfin, of a very pleafant Tafte, call'd Pbolades in Latin, becaufe they live in Holes within a foft kind of Stone, or rather Clay, which being found in great Plenty at Sea, if expos'd to the Air, becomes in Time a perfect Stone: The

## Italians call there Stones Balle di Saffo, and the Fif

 Ballare or Dattyli de mare.Fan. 31. We continued our Journey along the Seacoaft for twenty Miles, to Sinigaglia, (ancientiy Sena Gallica) a fmall Harbour for Barges, but well fortified.
From hence we ftill pais'd along the Sea-fhore for fifteen Miles further to Fano, anciently Fanum Foriunce) a large and well fortified City: Here is a triumpha! Arch erected in Honour of Augufus, which being fomewhat broken and defaced, they have in the Wall by fet a Model of it, as it was entire.

Here was the ancient Temple of Fortune, now the Church of the Augufine Fryars, the Brafs Scatue of For tune, which was there ador'd, ftanding yet in the Palace. The City is govern² by a Senate, confifting of feventy Gentlemen, chang'd every third or fourth Year, but the Governor of the Pope directs all Matters of Moment. This City is by fome accounted the beft fituated of any in Italy.

Feb. r. We continued our Journey feven Miles along the Shore to Pefaro, a very fine City, with a fately Piazza furrounded with fair Buildings, and many Stones with ancient Infcriptions. The Harbour is almof choak ${ }^{* d}$ up, but the Caftle and Fortifications in tolerable Repair. From hence croffing the Country, we pars ${ }^{*}$ d through the Village of Catolica, ten Miles from Pefaro, and from thence along the Sea-fhore for the moft Part, till within two or three Miles of Rimini, when leaving the Shore, we took the Via Flaminia. The Buildings of the City of Rimini are low, but neat, with regular ftrait Streets. Within the Walls of it, we palsid under a high Stone Arch erected to $\mathcal{T}^{2}$ iberius, or according to Scbottus to Augustus' Cafar; the Infcription was much defac'd. In the Piazza they fhew'd us the Stone on which Cafar ftood when he made his Speech to the Soldiers, when he was preparing, to march to Rome: Thefe modern Infriptions are engraven upon it:
C. Cefar Dict. Rubicone fuperato civili bell. commilit. Juos bic in foro Ar. adlocut.
Suggeftum bunc vetustate collapfum Coff. Ariminenfiums Novembris \& Decembr. MDV. Reffit.

In another Piazza ftands a Brafs Statue of Pope Poul V. It being Carnival Time, we faw the Gentlemen here diverting themfelves with Tilting, but they did not run at one another, but at a Pupper of Straw, which they call Bambocrio.

Feb.2. We made a fmall Excurfion to St. Marino, a fmall City and Commonwealth feated on the Top of a very high Hill, about ten Miles from Rimini, the Inhabitants boafting, That they have maintain'd their Liberty uncorrupted for above a 1000 Years. All its Territories are included in one Mountain about three Miles in Length, and nine or ten in Circumference, containing four Villages, viz. Serravalle, Fietano, Monte Giay dino, and Fiorentino; about eight Corn-mills upon the little River Canova, and two Powder-mills. The Arms of this petty Commonwealth are, three Towers upon a Mountain, with this Motto underneath, Libertas perpetua. The Suburb of St. Marin is at the Foor of the fame Hill, whereupon the City is built; here they keep a weekly Market every Wednefday, efpecially for Swine, of which fometimes 5000 are fold in a Day, paying no more than Sixpence Toll for every Drove, whether large or fmall. Befides thefe weekly Markets, they have four great Fairs every Year, the chief of which is on St. Bartbolomerw's Day, where prodigious Quantities of Cattle are fold, to the no fmall Difguft of fome of the neighbouring Princes, whofe Cuftoms are confiderably impair'd thereby. At this Fair they keep a general Mufter of all their Forces. From this Suburb up to the City are two Afcents, the one pretty eafy, and winding about to the furthermoft Gate, by which Coaches may upon an Occafion get up; the other leading to the nearer Gate being very fteep. The City is wall'd on one Side, the other lying at the Brow of a Precipice, being defended by three Towers in a

# Chap. III. through the State of VENIC E, Go C. 

Row; and the Hill, even on that Side where the Walls ftands, is fo fteep, that it is inacceffible, except by the Afcents; neither are there any Hills near it, except what are much lower than that whereon the City ftands. The Streets of the City are narrow, and their Houles but meanly built; they have two Cloyfters within the Walls, one belonging to the Difcalcate Francifcans, the other to the Nuns of the Order of St. Clara, and in the Suburb a Convent of the Capucbins; befides that, the Servite have a very fair Monaftery not above a Mile from the City, which has its own Bifhop, and has always a Protector at Rome; who at prefent is Cardinal Barberini, whom they fometimes prefent with fome Cheefes and Mufcatella. Wine, which grows very well hereabouts, and is in great Efteem with the Italian Nobility. They have no Cows, but Goats and Sheep in Abundance. Their Government is adminiftred by a Council of forty five, which they call Corpo di Prencipe; of thefe fifteen are Gentlemen, (of which they have about twenty Families) fifteen Artifans and fifteen Countrymen, who continue for their Lives, and when one dies, another is chofen in his Stead, by two thirds of the Votes; in the Place of a Gentleman, a Gentleman, and fo with the reft.

Feb. 3. We left Rimini, and taking our Way to Ravenna, paffed that renown'd Bridge over the River Rimino, begun by Auguftus, but brought to Perfection by Tiberius, the Stones of which, they fay, are join'd together without any Cement: Certain it is, that the Sides of it are of valt Stones as high as the Borders, and of a proportionable Breadth, without any Mortar or Cement betwixt them that I could fee: It has a large Infcription, intimating when and by whom it was built. About fifteen Miles from Rimini we pafs'd through Cefenatico, and fifteen Miles further thro' Cervia, a poor City, having nothing to boaft on but the Title of an Archbifhop's See. All the Way from Cervia, till within two or three Miles of Ravenna, we travell'd near a valt Pinewood on the right Hand of us, call'd Pigneda, and, if we may credit Scbottus, bears Fruit enough to ferve all Italy. The City of Ravenna lies enclos'd betwixt two Rivers, viz. the Bedefis and Montone, one running on one, and the fecond on the other Side. It is of a great Circumference, but meanly built: It has five Gates, and an old Caftle of Brick, and three fair Convents, viz. the Claffe, belonging the Monacbi Clafenfes; the fecond call'd the Porto, from its being dedicated to St. Maria Portuonfis, belonging to the Canonici regulares Lateranenjes; and the third to the Benedititine Monks, dedicated to St. Vitale, the Church of the laft being a double Octagon, the one concentrical to and enclos'd within the other ; they fay it was built by Juftinian. Thefe Monks fhewed us alfo two Marble Pillars, adding that the Venetions had offer'd their Weight in Silver for them: They were produced at firf by an Heap of fmall Flints or Pebbles united into one Body by a Cement petrefied as hard as the Flints themfelves, and capable of Politure, which Cement, it is probable, might be the Sediment of the fame Stones mixt with a Fluid, and feparated from thence. I have feen the like in the Library at Zurick, and at Verona, in our Ladies Chapel, in the Garden of Signior Horatia Giufi. To the fame Convent alfo belongs the little round Church (call'd the Rotunda) of the Virgin Mary, a Quarter of a Mile without the City, the Roof whereof being fourteen ordinary Paces in Diameter, yet is made of one Stone, having in the midft a round Hole to let in the Light: Upon the Top of this Church food in former Ages the Monument of Tbeodoricus a Gotbick King, of Porphyry, who is fuppos'd to have built it ; this Monument is as yet to be feen in the Wall of the Monaftery of the Succolanti or barefooted Francijcans, with this Infcription:

Vos boc Porpbyriacum ol. Theodorici Gottor. imp. cineres in Rotundo apice recondens, buc Petro Donato Cafio Narnien. prafule favente tranflatum ad perennem memoriam Sapientes Reip. Rav. PP.C. MDLXIII.
This Convent is one of the faireft I met with belonging to this Order; and their Church dedicated to

St. Apollinaris is remarkable, both for the double Row of Marble Pillars brought from Confantinople by Theodoricus, and the ancient Mofaick Work in the Walls. Of the fame Mofaick Work we faw the Figures of the Archbifhops of Ravenna in the Cathedral, eleven of them having a Dove flanding upon their Heads, being chofen by a Dove alighting upon their Heads, if we will credit Scbottus. Not far from the Convent of the Francijcans you fee the Arch erected in Memory of the famous Poet Dante, with his Effigies under it; and two Infcriptions in Latin Verfe underneath, faid to have been made by himfelf, but fo Menderly done, that had he not compos'd better in Italion, he could fcarce have challeng'd a Place among the famous Poets: This City has fcarce any Thing to boaft of now but its An tiquity, being very ill peopled, ill ferv'd with Fifh, notwithftanding its Vicinity to the Sea, ill provided with Inns, and worfe with Water, which verifies the old Saying of the Poet, Sit cifterna mibi quam vinea maló Ravenne, the Water being all brackifh. In this Journey from Rome to Venice we were very fenfible of the Difference in the Air on both Sides of the Appennine Mountains; being very warm on the other, whereas on this Side we found it as cold as it is in Winter with us, which that it proceeded not from any Change of Weather, we were fufficiently affur ${ }^{\text {i }} \mathrm{d}$ of, not only by Enquiry, but alfo becaufe we found Snow lying in many Places in the low Grounds, which was melted even on the Hills of the other Side: The true Reafon of it, $\mathbf{I}$ think is the Heighth of this Ridge of Mountains ${ }_{2}$ which reaching above the lower Region of the Air where the Sun-beams are reflected, hinders the Mixture of the warm Southerly and Weftern, with the cold Northerly and Eaftern Air; and ftops the free Paffage of the South and Weft Winds on one Hand, which would carry the warm Vapours into the other Part, as they prevent the cold North and Eaft Winds from tempering the Heat beyond thefe Mountains; in the fame Manner as fome Travellers relate of a certain mountainous Ridge in the Eaft-Indies, on one Side whereof it is Summer when it is Winter or the other.

Feb. 5. We travelled from Ravenna along the Bank of the River Montone, till within four or five Miles of Faenza, which is twenty long Miles from Ravenna. Faenza is a little neat City; furrounded with a ftrong brick Wall, but fomewhat out of Repair, it is famous for the beft Earthen Ware in Italy. On St. Tbomas's Day yearly all the Gentlemen meet to chufe Magiftrates; viz. nine Senators and a Prefident whom they file Prior for every Month, fo that they have twelve different Senates throughout the Year. From hence we travell'd ten Miles to Imola, half a Mile fhort of which we ferried over the River Senio. Imola (Forum Cornelii) is not fo big as Faenza, yet has a fair Piazza with a Cloyfter on one Side. From hence we continued our Journey upon the Via REmilia to Bologna, Feb. 6. Here they have a Way of boiling their Wines, to keep them better than if left cold. The firft which they call Vino Cotto, appear'd to us much ftronger than the other which they call Vino Crudo.

Feb. 7. Taking the Florentine Procaccio's Boat to Ved nice, we paffed through nine Softegni or Locks to Mal Albergo, where we fhifted our Boat, going down from a higher to a lower Channel, which brought us to Eerrara, forty five Miles diftant from Bologra. From Ferrara we were tow'd by a Horfe through an artificial Channel as far as Ponte, where entring the River Po, we chang'd our Boat again, and were rowid down the Stream twenty feven Miles to Corbola, where entring the Venetian Territories, we were oblig ${ }^{3} \mathrm{~d}$ once more to change in Order to take a Venetion Boat. We had fcarce gone two or three Miles further down the $P_{0}$, when ftriking into a Channel to the Left, we paffed a Sluce near Loreo, and proceeding fifteen Miles further, pafs ${ }^{s} \mathrm{~d}$ near to Cbioza, and Paleftrina, a large Place built among the Lagune, ftanding upon the Lido, entring into the Lagun at the Haven of Malamocco, and arrived at Venice Feb. 9o of which we have given an Account already.

March

March 13. We fet out from Venice, on our Journey to Generva, taking our Way through Rbeetia and Switzerland. To Mestre we went feven Miles by Boat, from thence twelve Miles further by Coach to Trevifo, where taking Horfe, we fpent two Days and a half in travelling to Trent, being eighty Miles. The firft Day, after twelve Miles riding, we paffed through C. Franco, and thence through a fair champaign Country to Baffano, a handfome City upon the River Brenta, where there are Abundance of Silk-weavers. No fooner were we pafs'd Baffano, but we came among the Mountains, extending for fourteen Miles along the Riverfide: We lodg'd that Night at Pont Sigifmund. The fecond Day we ftill kept along the Bank of the River, and about two Miles from Pont Sigifmund, paffed thro' a Gate, where we paid the firft Duty to the Duke of In fpruck. At this Pafs we faw, hewn out of the Rock, a fmall Cattle called Cauolo, unto which there is no Avenues, both the Soldiers that keep Garrifon there, and their Provifions, being drawn up by Ropes and Pullies: It has a Fountain of frefh Water in it, and belongs to the Archduke of Infpruck, though the Venetian Territories extend four or five Miles beyond it. After having travelled fixteen Miles further, we came to a fmall Town called Borgo: and thirteen Miles more, to a rich and popolous Borough called Berzine, not above five Miles on this Side Trent. Upon the River Brenta we faw divers Saw-mills, and Abundance of Timber floating down the Streams; and as foon as we enter ${ }^{3}$ d the Mountains, we found Stoves inftead of Chimneys.
30. March 16. We got to Trent in very good Time, a little but handfome City, feated upon the River Atbefis or Adda, at the Foot of the Mountains which almoft furround it, were it not for the Valley where the River runs. It belongs to the Archduke of Infpruck, but the Inhabitants fpeak Italian. On the Front of the Choir is to be feen the following Infcription, giving a fhort Account of the Council held in this City.

Sacrofanctum poftremum Oecumenicum generale Concilium fuit in hæc celeberrima civitate celebratum; \& quidem fub Papa Paulo III. Anno MDXLV, 13 Decembris pro felice Inchoatione fuit facta Proceffio generalis per totam Urbem, ab Ecclefia Sanctifimæ Trinitatis ad hanc Eiccleftam Cathedralem, quâ finitâ primus Cardinalis Præfidens, qui poftea fuit Papa $\mathcal{F} u$ lius III. [prout etiam alter Card. Prefidens fuit Papa Marcellus II. nominatus] in hoc loco eminentiore, tumc magis amplo, ad celebrandum Concilium \& Seffiones faciendas deputato, ad altare S. \& gloriofiffimi Mar tyris Vigilii hujus Ecclefiæ patroni celebravit miffam de Spiritu S. Ac reliquis ceremoniis peractis fuerunt fub D. Paulo III. celebratæ octo publicæ Seffiones cum decretis, $\&$ aliæ tres ob vaftam peftem in hac Urbe graffantem Bononice, ubi nihil fuit decretum, Anno MDXLVII. Poitea ceffante pefte \& Bellis fuit reductam hoc Concilium, $\&$ in hoc eodem loco fuerunt fub Papa Fulio III. celebratæ aliæ publicæ fex Seffiones cum Decretis Annis 1551, 1552, quibus interfuerunt tres Sereniffimi Principes Ecclefiaftici, S. R. I. Electores Archiepifcopi, Moguntinus, Ireverenfis, Colonienfis, 1 Die Septemb. 1551. hanc urbem ingreffi; prout etiam Sereniffimus Elector Brandenburgenfis duos oratores huc ablegavit. Demum fub Papa Pio IV. Anno 156r. \& 1563. fuerunt celebratæ ultimæ novem publicæ Sefhones cum Decretis in Ecclefia S. Sacrofancto Spiritui S. omnium Conciliorum directori facratiffima Die Penticoftes, Anno 1639 . dicatum.

The Inclinations; Manners, and Cuffoms of the Italians.
3I. The Italians are, by the general Confeffion of all that write them, ingenious, apprehenfive of any thing, and quick-witted. Barclay, who is not too favourable to them in the Character he gives them, faith, they have animum rerum omnium capacem; and again, that there is Nothing fo difficult, ad quod Itclici acuminis praftantia non tollatur. They are patient and affiduous in any thing they fet about or defire to learn, never giving over till they mafter it, and attain the Perfection of it. They are a ftill, quiet People, as being naturally melancholly, of a middle Temper, between the faftuous Gravity of the Spaniard, and unquiet Levity of the French, agreeing very well with the Englifh, as the Scots are obferved to do with the French, and Spani* ards with the Iriß. They are very faithful and loving to their Friends, mindful of a Courtefy received, and if it lies in their Way or Power, for one good Turn will do you two. This I had from a very intel ligent Perfon, who hath lived and converfed long enough among them to know them thoroughly. Barclay himfelf confeffeth, that where they do truly love ${ }_{z}$ omnia Difcrimina babent infra tam bumani faderis Sancita tatem, underftand it of the better Sort ; for Shopkeepers and Tradefmen are falfe and fraudulent enough, and Inn-keepers, Carriers, Watermen and Porters, as in other Places, horribly exacting, if you make not an explicit Bargain with them before-hand, in fo much that in many Places the State hath thought it neceffary, by publick Bando and Decree, to determine how much Innkeepers hall receive of Travellers for their Dinner, and for their Supper and Lodging. They are not eafily provolked, but will bear long with one another, and more with Strangers than their own Countrymen. They are alfo very careful to avoid all Occafions of Quarrel, not to fay or do any thing that may offend any Perfon, efpecially not to abufe any one by Jefting or Drollery, which they do not like, nor can eafily bear. No People in Europe are more fcupulous and exact in oblerving all the Punctilic's of Civility and good Breeding, (bella Creanza they call it) only methinks the Epithets they beftow upon mean Perfons are fomewhat ex travagant, not to fay ridiculous, as when they ftile 'a Mechanick or common Tradefman, Signor molto magnifico, and the like; when they are in Company together, they do not only give every Man his Turn of Speaking, but alfo attend till he hath done, accounting it a Piece of very ill Breeding to interrupt any Man in his Difcourfe, as hating to be interrupted themfelves; contrary to the Manner of the French and Dutch, who make no Scruple of interrupting one another, and fometimes talk all together. As careful are they not to whifper privately one to another, when in Company, or to talk in an unknown Language which all the Company underftands not. They do alfo fhew their Civility to Strangers in not fo much as asking them what Religion they are of, avoiding all unnecelfary Difputes about that Subject, which are apt to engender Quarrels ; which Thing we could not but take Notice of, becaufe in France you fhall fcarce exchange three Words with any Man before he asks you that Queftion.

It is not eafy for a Stranger to get Acquaintance and Familiarity with the Italians, they not much delighting to converfe with Strangers as not knowing their Humours and Cuftoms ; yet is their Converfation, when gotten, pleafant and agreeable, their Difcourfe profitable, and Carriage obliging. Moft of them, even of the ordinary Sort of People, will difcourfe intelligently about politick Affairs, and the Government and Intereft of their own Country, being much addicted to and delighted in politick Studies and Difcourfes. Moft of them are very covetous of Liberty, efpecially fuch Ci ties as have been formerly Common-wealths, Difcourfes

## Cháp. III <br> through the Siate of VENICE, छסoc.

or Treatifes of that Subject making deep Impreffions on their Minds; fo that in fome Places, not only Books, but alfo Difcourfes about former Revolutions, are prohibited. Borclay allo faith, that they are gloriofe Libertatis cupidi, cujus adbric imaginem vident. Hence the Princes of Italy build fo many Caftles and Citadels in their Territories, not fo much to defend themfelves againt their Enemies; as to bridle their Subjects, and fecure themfelves againt Tumults and Infurrections. A ftrange thing it is, that of all the People of Italy, the Neapolitans, who never tafted the Sweetnefs of Liberty, nor mended their Condition by their Commotions, but always (as we fay) leap'd out of the Frying-pan into the Fire, fhould be the moft tumultuous, and given to rebel againft their Princes.

Leti tells us of one of thofe petty fubordinate Princes of Naples, called Tbowafo Ferrari, who governed his Subjicts, not like Vaffals, but with that Sweetnefs and Gentlenefs, as if they had been his own Children; yet fome of thefe Fellows taking Arms, came into their Prefence, and faid to him, Sir Prince, We are come 10 drive you out of your Palace, and burn all your Moveables. Why, (anfwers the Prince) Can you find Foult with my Government? Are you aggrieved in any Thing, and it fall be redreffed? No, (replied they) But becaufe we understand that many of our Countrymen bave revolted from their Lords, we alfo, to Bew that we love Revolutions, are re foived to rebel against you. The Italians are greatly delighted in Pictures, Statues, and Mufick, from the higheft to the loweft of them, and fo intemperately fond of thefe Things, that they will give any Price for a choice Picture or Statue.

Tho' all of them cannot paint or play on Inttruments of Mufick, yet do they all affect Skill and Judgment in both ; and this Knowledge is enough to denominate a Man a Virtuofo. Many of them are alfo curious in collecting ancient Coins and Medals. They are great Admirers of their own Language, and fo wholly given to cultivate, polifh, and enrich; that, they do in a great Meafure neglect the Latin, few of them now a Days fpeaking or writing well therein, but mingling fo many Italian Idiotifms with it, that you have much ado to underftand what they fpeak or write. As for the Greek few or none have any tolerable Skill in it the Study thereof being generally neglected and laid afide. They are very temperate in their Diet, eating a great deal of Sallet, and but little Flefh. Their Wine they drink well diluted with Water, and feldom to any Excefs. We faw only one Italian drunk for the Space of a Year and half, that we fojourned in Italy.

Whether it be, that in hot Countries Men have not fo good Stomachs as in Cold, or whether Meat, as being better concocted, nourifhes more, or that the ltalians are out of Principle, Temper or Cuftom naore fober and temperate than other Nations. Their Herbs feemed to me more favory and better concosted than ours. Their Water alfo was not fo crude. But for Flefh, ours, in my Judgment, much excels theirs, being much more fucculent and fapid; yet in Rome have I eaten Beef not inferior to ours. But I fuppofe it might be of German Oxen; of which (as we were informed) there are many driven thither, and for fucking Veal, the Romans (as we have already noted) think theirs preferable to any in the World. The Italians, efpecially thofe of inferior Quality, are in all Things very fparing and frugal, whether it be becaufe they are fo educated and accuftom'd, or becaufe the Gabels and Taxes, which they pay to their Governors are fo great, that they cannot afford to fpend much on themfelves, or becaufe, naturally loving their Eafe, they had rather live nearly than take much Pains.

The Nobility and great Perfons choofe rather to fpend their Revenues in building fair Palaces, and adorning them with Pictures and Statues ; in making ftately and fpacious Orchards, Gardens and Walks, in keeping Coaches and Horfes, and a great Retinue of Servants and Staffieir, than in keeping great Houfes and plentiful Tables, giving board-Wages to their Servants and Attendants, which, in my Opinion, is the better Way of fpending Eftates, thefe Things finding poor People

Vol. II. NO CXVI.

Employment, fo that the Money comes to be diftrim buted among them according to their Induftry; whereas the other Way maintain'd in Idlenefs fuch Perfons for the moft part as leaft deferve Relief, thofe that are modeft and deferving choofing rather (if poffible they can) to maintain themfelves and their Families by the Labour of their Hands, than hang about great Houfes for a Meal's Meat. Befides that, great Houfekeeping is very often, not to fay always, the Occafion of great Diforder and Intemperance. Were I therefore God's Steward for a great Eftate, (for fuch all rich Men are or ought to be) I fhould think it more Charity to employ poor People, and give them Money for their Work, than to diftribute my Eftate among them freely, and fuffer them to live in Idlenefs: I mean fuch as are able to labour.

The inferior Gentry affect to appear in Publick with as much Splendor as they can, and will deny themfelves many Satisfactions at Home, that they may be able to keep a Coach, and therein make the Tour à la mode about the Streets of their City every Evening. The Italians when they call, \{peak to, or of one another, ufe only the Chriftian Name, as, Signor Giacomo, Signor Giovanni, Ec. unlefs it be for Diftinction's Sake; fo that you may converfe among them perchance fome Months, before you hear any Man's Sirname mentioned. The Italian Gentry live for the moft part in the Cities, whence it is that the Cities are fo fplendid and well built, fo populous and rich, and the Country fo poor and thinly inhabited; yet are the Noblemen's Palaces rather great and ftately than commodious for Habitation.

In many Cities the Paper Windows (which are for the moft Part tattered and broken) difgrace the Buildings, being unfuitable to their Magnificence: The Houfes are generally built of Stone, thick wall'd and high ronf'd, which makes them warm in Winter, and cool in Summer, but they contrive them rather for Coolnefs than Warmth, and therefore they make the Windows large to give them Air enough. Of the Gentry in Italy, efpecially in Venice, if there be many Brothers of one Houfe, only one ufually marries, and that the eldeft if he pleafes; if he be not difpofed, then any other, as they can agree, among themfelves, the reft do what they can to greaten him that is married to uphold the Family. The Brothers that marry not keep Concubines or Whores, which, though it be a Sin, yet their Confeffors can eafily abfolve them of it.

In moft of the Cities and Towns of Italy there are Academies or Societies of Virtuof, who have at fet Times their Meetings and Exercifés, which are for the moft Part Prolufions of Wit and Rhetoric, or Difcourfes about moral Subjects, curious Queftions, and Problems or Paradoxes, fometimes extemporary, fometimes premeditated. There have their Head, whom they call Prince, and a certain Number of Academitts who are chofen by Ballotting, but they feldom refufe any that offer themfelves to Election. Many of thele Academies affume to themfelves conceited or fanciful Names; and take a fuitable Imprefs or Coat of Arms; as for Example, the Academits of Bergamo call themfelves Eccitati, and their Imprefs is the Picture of the Morning. In Mantua, the Academifts called Accefi, have taken for their Emblem, a Looking Glafs, reflecting the Sunbeams; thofe called Timidi, a Hare. As for the other Cities of Italy; in Rome there are three Academies, the Humoristi, the Lyncei and the Fantafici: In Padua, three; the Ricovartia Infommati and Incogniti: In Bologna, three; Ardenti, Indomiti and one Innominate: in Venice, two; Difcordanti and Gufoni: In Naples, two; Ardenti and Intronati: In Luca, two; Ofcuri and Freddi: In Florence, La Crufca: In Sienna, Intronati: In Genoa, Addormentati: In Vicenza, Olympici: In Parma, Innominati: In Pavia, Affidati: In Milan, Nafcofti: In Ferrara, Elevati: In Rimini, Adagiata: In Cen cena, Offucati: In Ancona, Caliginofi: In Fabriano, Difunito: In Perugia, Infenfati, In Viterbo, Oftinati, in Brefcia, Occulti, in Faenza, Pbiloponn: In Trevifo Perfeveranti: In Fermo, Raffrontati : In Verona, Pbilarmonici : In Maceratia, Catenati: In Aleflandria, Inmobili; In Urbino ${ }_{3}$ Afjorditi.

Mof of the Itatians of any Fafhion wear black or dark colour'd Cloaths, and for the Fafhion of them follow the French, but not too haftily, excepting thofe Countries which are fubject to the King of Spain, which ufe the Spanibh Habit. As for their Vices, they are chiefly taxed for three. I. Revenge, they thinking it an ignoble and unmannerly Thing to put up or pafs by any Injury or Affront. Many Times alfo they diffemble or conceal their Difpleafure and Hatred under Pretence of Friendhip, that they may more eafily revenge themfelves of: whom they hate, by poifoning, affaffinating, or any other Way; for nothing will fatisfy them, but the Death of thofe who have injured thens; and there are Bravo's and Cut-throats ready to murther any Man for a fmall Piece of Money. Befides, which is wortt of all, they are implacable, and by no Means to be trufted, when they fay, they pardon. Hence they have a Proverb among them, Amicitie reconciliate E meneftre rifcaldate non furono mai grate. The Women alfo provoke their Children to revenge the Death of their Fathers, by fhewing them the Weapon wherewith they were murthered, or Cloaths dip'd in their Blood, or the like; by which Means Feuds between Families are maintained and entailed from Generation to Generation. Thefe are the Qualities for which we ufually fay an Englif/bman Italianate is a Devil incarnate. 2. Luft, to which the Inhabitants of hot Countries are, by the Temper of their Bodies, inclined. Hence it is, that all Cities and great Towns do fo fwarm wich Courtezans and Harlots; and, to avoid worfe Evils, the State is neceffitated to give them publick Toleration and Protection. As for mafculine Venery and other Works of Darknefs, I fhall not charge the Italians with them, as not having fufficient Ground fo to do, and becaufe, (as Barclay (aith) Hac fcelera lenebris damnata $\xi^{3}$ negari facilius à confoiis poffunt, $\mathcal{E}$ ab cemulis fingi. 3. Fealoufy, which itrangely poffeffes this People; fo that for every little Sufpicion they will fhut up their Wives in a Chamber, and carry the Key with them, not fuffering them to ftir Abroad, unlefs themfelves accompany them. To falute an Italian's Wife with a Kifs is a ftabbing Matter; and to call a Man Cornuto, or Cuckold in good Earneft, is the greateft Affront or Difgrace you can put upon him. The married Women in Italy, by this Mieans, have but bad Lives, being for the moft Part confined to their Houfes, except when they go to Chureh, and then they have an old Woman attending them; the Doors of their Houfes thut up at Dinner and Supper ; all Vifits and familiar Difcourfes with Men denied them; neither can they fpeak or fmile without Sufpicion. One Reafon of this, among others, may be, becaufe the Husbands knowing themfelves to be fo difhoneft and falfe to their Wives, they prefume, that had they Opportunity, they would not be more true to them. And yet for all this Guarding and Circumfpection, are not the Italian Dames more uncorrupt than the Matrons of other Nations, but find Means to deceive their Hufbands, and be difhoneft in Spight of Jealoufy.
To there I might add Swearing, which is fo ordinary among all Sorts, the Priefts and Monks themfelves fcarce abftaining from Oaths, that I believe they account it no Sin. It is a general Cuftom all over Italy to neep an Hour or two after Dinner, in Summertime; fo that from Two of the Clock till Four in the Afternoon, you fhall fcarce fee any body ftirring about the Streets of the Cities. Indeed if one fits ftill it is very hard to keep his Eyes open at that Time. Either this Cuftom did not prevail when the School of Salerno wrote their Phyfick Precepts, or that Direction Sit breves aut nullus tibi Somnus meridianus, was calculated for England, to whofe King that Book was dedicated. And yet fill the Italian Phyficians advife People, either not to fleep at all after Dinner, or, if they muft fleep, to Atrip off their Cloaths and go to Bed, but only to take a Nod in their Chair fitting.
In many Cities of Italy are Hofpitals where Pilgrims and poor Travellers are entertained, and have their Diet and Lodging for three Days, if they have Reafon
to ftay fo long, gratis, befides a Piece of Money when they go away. There are Hofpitals alfo to receive expofed Children, if I may fo term them, that is, without any Exception, that fhall be brought and put in at a Grate on Purpofe, where, upon ringing a Bell, an Of ficer comes prefently and receives the Child, and asking the Party that brought it, Whether it hath been baptized ? carries it to a Nurfe to give it Suck, and there it is maintained till it be grown up. The Place where it is put in is fo ftrait, as to admit only Children new born, or very young. This I look upon as a good Inftitution in great Cities, taking away from Women the Temptation of Murthering their new-born Children, or deftroying their Conception in the Womb to hide their. Shame. I know what may be objected againft it, viz. That it emboldens them to play the wanton, having fo fair a Way of concealing it, fed ex malis minimum. In Rome, Venice, and fome ocher Cities of Italy, they have a Way of exercifing Charity, little ufed among us ; feveral Confraternities of well-difpofed Perfons raife Sums of Money by a free Contribution among themfelves, which they beftow yearly in Portions for the marrying of poor Maids, which elfe might want Husbands, and be tempted to difhoneft Pratices to maintain themfelves.

This I look upon as well-plac'd Alms, and worthy of Imitation, it being very convenient, and in a Manner neceffiry, that new-married People fhould have iomewhat to furninh their Houfes and begin the World with, and no lefs fitting that young Perfons fhould be encoulraged to marry, as well for multiplying of People, wherein the Strength of the Comtnon-wealth chiefly confirts, as for the preventing thofe Evils to which young and fingle Perfons are ftrongly tempted and inclined. It is a troublefome Thing to travel with Firearms in Italy, you being forced in moft Cities to leave them at the Gate with the Guard, who give you a Tally or 'Token ; and when you leave the City, you bring your Tally, and receive your Arms. This is done to prevent Affaults and Murders, which are fo frequent in many Cities of Italy. For this the Great Duke of $\mathcal{T} u f_{-}$ cany is much to be commended, there being no fuch Murthers and Outrages committed in any of the Cities under his Dominion, as in other Places; fo diligent is he in fearching out, and fevere in punifhing Bravoes, Cut-throats, Affafins, and fuch Kind of Malefactors. As much might be faid for the Pope in the City of Rome, but in other Cities in his Territories there is killing enough.

When you depart from any City, you muft be fure to take a Bill of Healtb out of the Office that is kept every where for that Purpofe, without which you can hardly get to be admitted into another City, efpecially if it be in the Territory of another Prince or State. If any one comes from an infected or fulpected Place, he is forced to keep his Quarantain (as they call it) that is, be fhut up in the Lazaretto or Peft-houre forty Days, before he be permitted to come into the City, fo fcrupuloully careful are they to prevent Contagion.
In Rome, and other Cities of Italy, we have ofren obferved many Labourers that wanted Work ftanding in the Market-places to be hired, whither People that want Help ufually go and bargain with them; which Cuftom illuftrates that Parable of our Saviour, recorded in the Beginning of the Twentieth Chapter of St. Mat thero's Gofpel, wherein the Houfholder is faid to go out about the thbird Hour, and fee otbers flanding in the Mar-ket-place. Verfe 8 ; and in Verfe 6 , he is faid to find others about the eleventh Hour, and to fay to them, coby ftandye bere all the Day idle? and Verfe 7 . they anfwer, Because no Man batb bired us. In Italy, and other hot Countries, fo foon as they have cut down their Corn, they threfh and winnow it ufually, or at leaft a grear Part of it, on a Floor made in the open Air, before they bring it into the Houfe. Hence in the Scripture we read of threfhing Floors as open Places without Roof or Cover. Such, I fuppofe, was that where Boaz winnowed Barley, Rutb iii. 3. Neither is it any Won-

## Chap. III. through the State of VENICE, 6ic. $68 \%$

der that he fhould lie there all Night, for at Aleppo, and even in Malta, in Summer time, they fet their Beds upon the Roof of their Houfes, and neep fub Dio, in the open Air. One Cuftom we have in England, which (as far as I could obferve) is no where ured beyond the Seas, and that is, for Children to beg their Parents and Godfathers Bleffing upon the Knee. One Cuftom which prevails generally in foreign Countries, that is but little ufed in England, that is, to falute thofe that fneeze, by vailing the Bonnet, and praying God to blefs, afiift, or defend them, $\xi^{3}$ c. There is a kind of Sport or Game much ufed to this Day by the Itolions, called, Gioco di mora, which feems to have been ufed by the Ancients, and called micare Digitis. It is for the moft part between two, who put out juft at the fame Time each of them, as many Fingers as they pleafe, and alfo name each of them what Number he thinks fit, and if either of them happens to be the Number of the Fingers, which both of them together threw out, then he that names that Number wins one.

An Account of the Curiofities and Objervations in the feveral Parts of Italy.

In Lombardy and other Parts of Italy, Tartufale, (as they call them) i.e. Tubera Terra, a kind of fubterraneous Mufhroom, which our Herbalifts call in Englifh Trubs, or after the French Name Truftes, are accounted a choice Difh, held by Naturalifts to be incentive of Luft. The beft of ail are gotten in Sicly and thence fent over into Malta where they are fold dear. The Way to get them is to turn Swine into a Field where they grow, who find them by the Smell, and root them up out of the Ground ; and fet one to follow the Swine, and gather them up. Snails boiled and ferved up with Oil and Pepper, put into their Shells are alfo accounted a good Difh : I am fure they are fold dear at $V_{e-}$ nice, and elfewhere, efpecially the great whitifh or afhcoloured Shell-Snails, which we had not then feen in England, but have fince found plentifully upon the the Downs near Darking in Surry; whither, as we were informed by the Honourable Cbarles Howard, Efq; they were brought from beyond Seas by a "Gentleman, whofe Name has flip'd my Memory, and is worn out in my Papers. But Mr. Martin Lifter hath found them on the Banks of that hollow Lane, leading from Puckeridge to Ware. Thefe Snails before Winter, ftop up the Mouth or Aperture of their Sheills, with a thick hard, white Pafte, like a good Lute or Plaifter, and are kept all Winter in Barrels or other Veffels, and fold by the Poulterers. The firft Place where we met them to be fold in the Market, was Vienna in Auffria, where they imitate the Italians, as well in their Diet, as in the Manner of their Buildings.
Frogs are another Italian Viand, which we in England eat not. Thefe they ufually fry, and ferve up with Oil. At Venice they eat only the Loins and hind Legs, as alfo at Florence, and that upon Fifh Days. In fome Places of Lombardy they eat their whole Bodies, and befides their Frogs are of a larger Size than ordinary. Their Flefh inews white and lovely as they lie in the Markets, fkin'd and ready prepared to fry. Howbeit, even there in Italy, Kircher in his Book de Pefee, condemns them as as an ambiguous and dangerous Meat, and I think defervedly; wherefore we do well, having Plenty of better Foods wholly to abftain from them. Lend Tortoijes are accounted with them a better Meat than Sea Tortoifes, and are commonly to be fold in the Markets; they are eaten by thofe Orders of Friers, whofe Rule obliges them to abttain from Flefh, as, Cartbufions, Carmelites, $\mathcal{E}_{6}$. They eat alfo many Sorts of Sbell-ff/b, which we either have not, or meddle not with, as, Purples, Perizimbles of feveral Sorts, Patelle or Limpets, Sea Urchins, which laft are to be found every Day in the Markets at Naples. They eat alfo the Sea Tortoifes, of which the Blood put into the Stomachs, and boiled is the beft Part.
Pofe made into Strings like Packthreads or Thongs of white Leather, (which if greater they call Macaroni, if leffer Vermecelli) they cut in Pieces, and put in their Pots, as we do Oatmeal, to make their Menefra or

Broth, of much Efteem by the Country People. There boiled and oiled, with a little Cheefe fraped upon thems they eat as we do buttered Wheat or Rice. The Mak ing of thefe is a Trade and Myftery, and in every great Town you fhall fee feveral Shops of them. They fcrape or grate Cbeefo upon all their Difhes, even of Fleth; accounting that it gives the Meat a good Relifh which to thofe that are unaccuftomed, makes it rather ṇaufeous or loathfome. Cbefruts roafted and the Kernels ferved up with Juice of Lemon and Sugar, are much efteemed, and by fome called the Piffacbio's of Italy. At Bononia they grind them and make little Cakes of the Flower of them, which, though eaten by the Poor, are no defirable Dainty to a delicate Palate. Roafted Chefnuts are a great Part of the Diet of the poor Peas fants in Italy; as we have elfewhere noted. They eat all Manner of Small Birds as well as the Germans, viz. Wrens, Stares, Titmice, Butcber-birds, and feveral great ones, which we touch not in England, as, Magpies; Fays, Woodpeckers, fackdaws, \&xc. Nay' we have frequently feen Kites and Harwks lying on the Poulterers Stalls, as we have already noted in our Defcription of Rome.

They ufe feveral Herbs for Sallets, which are not yet or have been but lately ufed in England, viz. Selleri, which is nothing elfe but fweet Smallage, the young Shoots whereof, with a litcle of the Head of the Roor cut off, they eat raw with Oil and Pepper; in like Manner they eat Fennel, Artichoak alfo they eat raw with the fame Sauce (the fame Part of it that is eaten boiled.) In Sicily, at the highen Village upon that Side Mount 压tra that we afcended, they gave us to eat for a Sallet, the Stalks of a tall prickly Thiftle, bearing a yellow Flower, I fuppofe it was the Carduus Cbryfantheruus, Dod. which the Ranknefs of the Soil had caufed to mount up to that Stature; befides, in moft of their Sallets they mingle Rockett, Racbetta they call it, which to me gives them an odious Tafte. Curled Endive blanch'd is much ufed beyond Sea, and for a raw Sallet feemed to excel Lettice itfelf; befides, it hath this Advantage, that it may be kept all Winter. Many Fruits they eat, which we either have not, or eat not in England, viz. Fejubes fold by the Huckfters while they are yet Green: Lazarole, the Fruit of the Mefpilus Aronia, of a pleafant acid Tafte, both Fruit and Tree, and exactly like the common Hawthorn, but bigger. Services or Sorbes the true, as big as little Pears; thofe that grow with us are the Fruit of the Sorbus torminalis. Green Figs, both white and blue in great Plenty, a mof delicate Fruit when fully ripe, comparable for the Tafte to the beft Marmalade, and which may be eaten freely without Danger of furfeiting. The Hufks or Cods of Carobs, called in Latin, Siliqua dulcis, in Greek, xegaria, the Word ufed, Luke xv. 16. and therefore by fome fuppofed to be the Hufks the Prodigal is faid to have defired to fill his Belly with. Indeed we thought them fitter Meat for Swine than Men, for though they had a fweet Tafte, yet afterwards they troubled our Stomachs, and purged us, but they have not upon all Men the like Effeet, for the Italians and Spaniards eat them ordinarily without any fuch Trouble, Love-Apples, Mad Apples both raw and pickled: Water-melons which they ufe to eat, to cool and refreft them, and fome Phyficians allow fick Perfons to eat them in Fevers. They are almoft as big as Pompions, have a green Rind, and a reddifh Pulp, with blackifh Seed when ripe; the Italians call there Cucumeri, whereas Cucumbers they call Citrulli.' Several Sorts of Gourds, as, Cucurbita lagenaria, and Cucurbita Flexuof $f_{a}$ five Anguina, which eats very well boild in Pottage, Cucumis anguinis, which is more efteem'd, and indeed better tafted than the Cucumber.
The common People both in Italy and Sicily, eat green chich Peafe raw, as our common People do common Peafe. In their Deferts and fecond Courfes, they commonly ferve up Pine-kernels, and in Time of Year green Almonds, alfo a kind of Sweet-meat or Confection, made up of Muftard and Sugar, which they call Italian Muftard. To cool and refrefh their Wines they ufe generally Snow, where it may eafily be had,
elfe Ice, which they keep in Confervatories all Summer. Without Snow they that are commonly ufed to it, do not willingly drink, no not in Winter. In the Kingdom of Naples and Sicily, they make a Sort of Cheefe which they call Cafeo di Cavallo, i. e. Horfe Cbeefe, for what Reafon I could not learn. Thefe Cheefes they make up in feveral Forms, fome in the Fafhion of a blown Bladder, fome in the Fathion of a Cylinder, and fome in other Figures. They are neither fat nor ftrong, yet well tafted, and acceptable to fuch, as have eaten them a-while. The Pulp or Body of them lies in Flakes, and hath as it were a Grain one Way like Wood. They told us that they were made of Buffalos's Milk, but we believed them not; becaufe we obferved not many Buffalo's in thofe Countries, where there is more of this Cheefe made, than of other Sorts.
In Italy and other hot Countries their Nieat is not only naturally more lean and dry than ours, but, they roaft it alfo till it be ready to fall from the Bones, and there be little Juice lefr in it. Befides, when they roatt their Meat, they draw Coals under the Spit, and let the Fat drop on them, the Nidor whereof perfumes the Meat, but not to our Guft, who are not ufed to it, and what they lofe in dripping they fave in Fewel. Their Roafting differs not much from our Broiling or Carbonading. I fpeak this' of ordinary Inns, and mean People's Houfes; in great Houfes and Inns it is otherwife.
The Italians count not their Hours as we do, from twelve to twelve, beginning at Mid-day and Midnight; but from one to twenty four, beginning their Count at Sun-fet, which is a much more troublefome Way; the fetting of the Sun being a movcable Point or Term, and they being therefore neceffitared to alter and new fet their Clocks every Day; whereas, Midday and Midnight being fix'd Points, the Clocks need no fetting a-new. As for Italy in general, though the Italians imagine it to be the beft Country in the World, and have a Proverb among them, that Italy is the Garden of the World; yet fetting afide Lombardy, Campania felix, and fome few other Places, the reft is mountainous and barren enough: The Earch fo parched up by the Sunbeams, that it bears no Grafs, and (as Barclay faith) feldom yieldeth Grain enough for three Years fucceffively, to fupply the Necefities and Ufes of its Inhabitants, whatever they may boaft of the Itala gleba. The Reafon why the Italians are fo conceited of their own Country is becaufe they feldom travel Abroad, and fo fee not the Beauty and Fertility of others.
I might have taken Notice of the vaft and incredible Number of religious Houfes there are in Italy. I have fometimes thought they might in all of both Sexes, amount to eight or ten thoufand. Of thefe the Gentlemen make Advantage for fuch of their Daughters as either they cannot get Hufbands for, or are not able to give Portions to, fuitable to their Birth and Quality, they can in one of thefe Houfes for a fmall Matter, honourably difpofe of, and fettle for their Lives. The Inftitution of fuch Houfes as thefe, whither young Women of Quality, who, for Want of fufficient Fortunes or perfonal Endowments, cannot eafily provide themfelves fuitable Matches, might retire and find honourable Provifion; would perchance be tolerable, yea commendable, were they purged from all Supertition ; the Women not admitted too young, and under no Vow of perpetual Chaftity, only to leave the Houfe in cafe they married. But becaufe of the Danger of introducing Monkery ; I think it more fafe for a Chriftian State, not to permit any fuch Foundations. Buffes are a common Beaft in Italy, and they make ufe of them to draw their Teams, as we do of Oxen; only becaufe they are fomewhat fierce and unruly, they are forced to lead them by an Iron. Ring, put into their Nofes, as our Bear Wards do their Bears. The Cicada beforementioned. The Flying Glow-rvorms, which are there every where to be feen in Summer-time. Thefe flying or winged Glow-worms, are nothing elfe but the Males of the common creeping or unmingled Glow-worm. Tabuis Columna relates, that Carolus Ventimiglia, of Palermo in Sicily, having out of Curiofity, kept many
unwinged Glow-worms in a Glafs, did put in among them a flying one, which prefertly in his Sight did couple with them one by one, affer the Manner of Silk-worms, and that the next Day, the unwinged ones or Females began to lay their Eggs. That the Males are alfo lying Infects in England, though they do bur: tarely, or not at all fhine with us, we are affured by an Eye-witnefs, who faw them in Conjunction with the common fhining unwinged Glow-worm. Here by the Way it may not be amifs to impart to the Reader, a Difcovery made by a certain Gentleman, and communicated to me by Francis 7 effop, Efq; which is, that thofe reputed Meteors called in Latin Ignes fatui, and known in England by the conceited Names of Fack with a Lantborn, and Will with a Wi/p, are nothing elfe but Swarms of thefe flying Glow-worms. Which if true, we may give an eafy Account of thofe Pbenomena of thefe fuppofed Fires, viz. their fudden Motion from Place to Place, and leading Travellers that follow them, into Bogs and Precipices. Scorpions, which in Italy fling not, or at leaft their Stings are not venemous, as the learned Francijus Redi affirms, though by Experience he found the Stinging of the African Scorpion to be mortal, or at leaft very noxious.

Tarantulas's fo call'd, becaufe found about Tarentum, (though we have feen of them at Rome) which are nothing elfe but a large Sort of Spider, the Biting whereof is efteemed venomous, and thought to pur. People into phrenetick Fits, enforcing them to dance to certain Tunes of the Mufick, by which Means they are cured, long and violent Exercife caufing a great Evacuation by Sweat. There Fits they fay do alfo yearly Return, at the fame Seafon the Patient was bitten. But Dr. Thomas Cornelius, of Cozenza, beforemention'd, a learned Phyfician and Virtuofo in Naples, diligently enquiring into this generally receiv ${ }^{3} d$, and heretofore unqueftion'd Story, that he might fatisfy himfelf and others, whether it were really true in Experience rejects it. Cimici, as the Italians call them, as the French, Punaije. We Englifh call them Chinches, or Wall-Lice, which are very noifome and troublefome by their Bitings in the Night Time, raifing a great Heat and Rednefs in the Skin. They harbour in the Straw of the Bolfters and Mattraffes, and in the Wood of the Bedfteads, and therefore in fome Nofocomia or Hofpitals for fick Perfons, as for Example, at Genoe the Bedfteads are all of Iron. This Infect, if it be crufh'd or bruis'd, emits a moft horrid and loathfome Scent, fo that thofe that are bitten by them, are often in a Doubt, whether it be better to endure the Trouble of their Bitings, or kill them, and fuffer their moft odious and abominable Stink. We have of thefe Infects, in fome Places of England, but not many, neither are they exceffively troublefome to us.
32. We departed from Trent, intending for Coira or Cbur, in the Grijons Country, called in Latin, Curia Rbetorum. We rode ip the Valley where the River Atbefis runs, called Val venofta, every five Miles paffing through a large Village, and one handfome little Town called Burgo, and lodged at a fmall Town called BrunSole. We rode through Bolzan, a confiderable Town, and for Bignefs comparabie to Trent, and ten Miles further Maran, a large Town, and lodged at a Village called Raveland. We paffed through Latourn, Slach, Scblanders, Maltz, all Villages and Towns of Note, and laft of all Cleurn, a pretty great walled Town, and then ftruck up on the left Hand among the Mountains, to a Village called Tavers, where we lodged. We rode on through the Snow to Monafiero, where the Grijons Country begins, and St. Maria, a fmall Terra, and ftopp'd at Gberf, a Village at the Foot of the high Mountains. In this Country the People ufe a peculiar Language of their own, which they call Romansch, that is, Lingua Romana. It feems to be nearer Spani/h than Italian, though diftinct from both: Befides their own Language, they generally fpeak both Italian and Dutch, fo that after we had loft Italian in the Vallies, we wondered to find it here among the Hills. Their Wines they bring all out of the Valtelline from Tirano, about two Days Journey diftant. The Country at this

## Chap. III. through the State of VENICE, \&c.

Time was all over covered with Snow, fo that they are forced to keep their Cattle within Doors for fix Months; yet the People faid, that thereabouts the Snow did not lie all Summer, no not on the Tops of the higheft Mountains. Here we obferved, that to draw their Sleds over the Snow, inftead of Oxen they made ufe of Bulls, one Bull drawing a little Sled. About Tavers we obferved them fowing of Duft upon the Snow, which they told us was to make the Snow melt the fooner: I fuppofe it was rather for Manure. They ufe Stoves in all Places, and good Reafon they have, the Country being very cold. A great Number of Cbamois or Gemps, [Rupi capre] are taken all over thefe Countries upon the high Hills, as though the People had not told us, we mult needs have gathered, from the Multitude of Horns we faw ftuck up in the Houfes where we lodged. Bears there are, and Wolves enough, among the high Mountains, but not very many. The Men generally wear Ruffs, and long bufhy Beards. All the People (as far as we had Experience, or could judge of them, in that fhort Stay we made among them) we found to be honeft, hearty and civil, and the common Sort very mannerly. Their Houfes are built of Stone, and covered with Shingles of Wood, the Walls thick, and the Windows very fmall, to fence againft the Cold. They have no ftrong Holds or fortified Places among them, nor will they permit any to be erected, having fo much Confidence in their own Valour, that they think they need no other Defence: Indeed their Country is fuch, as one would think, none of their neghbouring Princes fhould cover, unlefs for the Security of his own Territories. We paffed the Mountain of Bufalara in feven or eight Hours. In the Top of the Mountain in the Midway, between Cberf and Zernetz, is an Inn called Furno. From Zernetz we rode in the Valley of the higher Engadine, through Zuotz, a great Terra, and two otherVillages, and lodged at a little Place called Poute.
32. The Grijons are divided into three Leagues, each of thefe fubdivided in Communities, which have each feveral Villages, fome more, fome lefs: The Lega Grija has nineteen Communities; the Lega della cafa Dio, twentyone ; the Lega Dieci Ditture, ten. Each Connmunity has its chief annual Magiftrate, (whom in fome Places they call Maefrale, in fome Places Landman) and a certain Number of Affeffors or Judges, call'd $T_{\text {ruacder, }}$ by them. Each Village chufes its Judges by Majority of Vores, every Inhabitant, above the Age of fixteen, having his Suffrage. There Magiftrates are chang'd every two Years, but confirm'd every Year, and may be depofed by the People. The executive Power and Management of publick Affairs is lodged in the Maeftrale or Landman, who affembles the Truader. Every two Years they have two General Diets, one at Micbaelmas Day, when they chufe Governors of Places; the fecond at St. Fobn Baptifts Day, when they take an Account of all their Officers. To thefe Diets each Community fends its Commiffioners, fome one, fome two, who are to act according to the Inftructions given them. Each League has its Head or Chief; as for Inftance, the Burgomafter of Coira is always Head of the League della cafa di Dio. From the Diet lies an Appeal to the Communities. The Grijons pay no Manner of Taxes; the County of Cbiavienna and the Valtoline in Italy are fubject to them, whither they fent two Bailiffs before Pluers was deftroyed by the falling in of an adjacent Mountain; now they fend but one to Cbiavenna; thefe are called CommiJario's. The Valtoline is divided into fix Dittricts or Prafeiture, each of which has its peculiar Governor fent thither by the Grijons; their Names are, Bormio, Tirano, Tellio, Sondrio, Morbegno and Travona. The People of the Valtoline, and of the Country of Cbiavenna, pay no other Taxes but only for the Maintenance of their Governors.

March 24. We left Ponte, and travelled over very high Mountains, in very bad Weather, it fnowing fo exceedingly, that we were fcarce able to open our Eyes; yet by the Way we took Notice, that the People living among thofe cold Mountains were of a more fwarthy Complection than thofe below. March 25, We came to Coira, the capital City of the Grions, ftanding upon

Vof, II. No 116 .
a River which falls into the Rbine about half a Mile below it. It is encompais'd with Mountans, except on that Side where the Rbine paffes through a pleafant Valley of very fine Meadows and Pafture-grounds. The Inhabitants of Coire are Proteftants, except the Bifhop and twenty four Canons, who have no Share in the Government of the Town, the Form of which is much like to that of Zuricb and Bafl ; the Citizens being divided into five Companies, each of which chufes fourteen Senators, who compofe the Great Council of Seventy : The fame are chofen commonly again every Year on St. Martin's Day. The Leffer Council confifts of certain Members of the Great Council, viz. five out of each Company chofen every Year, and five Mafters of the Companies for the laft Year, making up the Number of thirty. This Council, with the Burgomafter regent; (whom they call Stattrougbt) judge in criminal Caufes, as Actions of Debt are determined by the five Mafters of the Companies, and ten Members of the Council of thirty. But from them an Appeal lies to the leffer Council. The Grijons have befides Coire two Towns more, viz. Maysield and Eylandts: Some of their Com. munities are Romanifts, fome Proteftants, but moft of the laft, the Number of which is compured at 17000 Fighting Men.

March 29. We went from Coire to Walenfadt, feated upon a fmall Lake called the Wellenfatter-Sea: This, as well as Sargans, through which we paffed, are Vogbtia's of the feven Cantons. The 3oth, we ferried over the Lake to Wefen, and from thence travelled to Glaris, one of the thirteen Swifs Cantons: Here they fhewed us the Horns of the Ibex, (which they call Steinbuck) not unlike, but fomewhat longer than Goats-Horns; they told us, that they were found in Wallifland, and the Archbifhoprick of Saltzburg in Germany; but of the beforementioned Rupicaprea or Gymfes and Mures Alpini majores, called Marmottoes, they have great Plenty; as well as of the Merulce torquate and Merule aquatica; of the Urogallus, or Cocks of the Wood, and the Lagopus a white Bird like a Partridge, feathered down to the very Claws; but of thefe they have greater Plenty among the Grions. The Inhabitants of the two Cantons of Glaris and Appenzel are mixt, two thirds Proteflants and one third Romanifs; for the reft, the Difference of the Government of the feveral Swijs Cantons may be reduced under three Heads; the firft of thofe who have no Cities, where the fupream Power is lodged in the People, viz. Uri, Swits, Underwalden, Zug, Glaris and Appenzel; the fecond of thofe which have Cities, that were fubject formerly to Princes, where the Form is Ariftocratical, as Bern, Lucern, Friburg and Solotburn; the third of thofe, which have Cities which were always free, where there is a Mixture of both, being divided into certain Companies, by whom the Magiffrates are chofen yearly ; of this Order are Zuricha, Ba/jl and Scbafbaufen.
The Canton of Glaris is divided into fifteen Difrizts, fome of which elect five, others fix Counfellors, fome more, others lefs, which make up the Senare or Courcil of fixty, two Parts whereof are Proteflants, and the reft Romanifts. The Sovereignty is lodged in the People, who meet every Year on the laft Sunday in April, all above fixteen Years of Age having their Votes to chufe by the Majority of Suffrages, I. The Landman. 2. The Stadbalter, or his Lieutenant. 3. A Treafurer. 4. A Standard-bearer. 5. The Head Captain, and in Time of War a Lieutenant. 6. The Head Enfign. 7. Three Secretaries. 8. The Apparitor. Each of which has his particular Station and Share allotted in the Government, with fuch Perfons as are joyned with them in Commiffion, for the further Elucidation of which, I will refer myfelf to Mr. Simler in his Swoifs Republick.
The Territory of Glaris is about twenty four Englifa Miles long, the Number of Freemen, of both Religions, about 2500. In the Cantons of Bafil, Zurich, Bern, Lucern, Scbaffbuufen, Friburg and Solotburn, the Citizens are only Freemen, the Inhabitants of the open Country being Subjects under the Government of Bailiffs, who in fome Places govern two, in others three,
in others fix Years. But in thofe Cantons which have no Cities, each Countryman is a Freeman, as far as they belong to their refpective Cantons, for they have alfo their Subjects govern'd by Bailiffs.

April I, We travelled from Glaris through Nafels, and other Villages near the Lake of Zurich, and after an Hour's riding afcended a high Mountain, where we 'found the Ground cover'd with Snow, and the famous Monaftery of the Benedictine Fryars, call'd Eynfodle, where is the Image of our Lady, who has a peculiar Chapel confecrated to her, vifited by many Pilgrims. This Abby is under the Jurifdiction of thofe of Switz, unto which Place we came April the 2d, being no more than a Village, but comparable to a large Town; its Goverment is the fame with Glaris, being divided into fix Quarters, each chufes ten Senalors, which compoles the Senate, confifting of fixty Perfons. Their Officers are alfo the fame as at Glaris. This Canton, as every one of the reft, fends two Meff or Deputies to the general Diet at Baden, of which the Landman is generally one.

April 3. After we had travelled three Miles along the Lake to Brunen, we embark'd for Altorf, and having fpent three Hours more in our Paffage, had a Mile further to Altorf, there being no travelling from Switz to Altorf, unlefs you will take a Compafs of about fixty Miles. It is larger than Switz, and has a pretty Church and a Monaftery belonging to the Capucbins. Here they told us the Story of William Tell and the Lantvogt; the Statue of the firft we faw on the Top of a Pillar, over one of their Fountains, with his Crofsbow on his Shoulder, leading his Son by the Hand, and at fome Diftance a Tower, on which were painted the feveral Paffages of this Story. The Government is the fame with Switz, the Number of Senators and Manner of Election the fame, except that they have a Mafter of the Artillery, and fix Proctors or Councellors befides.

April 4. We return'd to the Lake of Lucern, and went by Water within an Hour's travelling of Stantz, the chief Village of Underwalden, where we lodg'd. Here is a very fair Church, and two Convents, one for the Capucbins, and one of Nuns. In this Place, and at Altorf, Switz, Lucern, \&c, we faw in the Churchyards, Croffes of Wood and Iron upon the Graves, on fome of which hung a little Copper Kettle with holy Water, and many Women coming, with Bunches of Herbs in their Hands, which they dipt in the Kettle, and Sprinkled the Water upon the Graves. Such is their Ignorance and Superftition!

This Canton is divided in Oberwald and Underwald; the capital Village of the firft being Stanner, as Stantz is of the latter. The lower is govern'd by fixty Senators, chofen by eleven Communities, fome more, fome lefs. Their Officers and Elections the fame as in Switz and Uri, except that here they change their Landman every Year. Oberwald has iis own Landman, Officers, $\mathcal{E}^{c} c$. fo that they would feem to be two diftinet Cantons, were it not that they fend but two Deputies to the general Diet at Baden.

Thefe three Cantons of Uri, Switz and Underwalden have no Corn fields or Vineyards, but only PaftureGrounds, being fupplied with Wine from Italy, which is very dear here; and therefore but little drank. The People are generally very honeft and good-natur'd, and keep their Houfes very clean, but are much given to eating and drinking, having Plenty of plain Things at fmall Coft.

April 5. We travelled to Lucern, croffing part of the Lake. It is a very handfome City, pleafantly fituate upon the Lake of the fame Name, and divided in two Parts by a River, which arifing from the Lake, is cover'd here with three Bridges, one for Carts and Horfes, the other two for Foot-Paffengers, covered with a Roof, one being near a Quarter of a Mile long; befides which, it has a fourth Bridge covered like the other, but longer, leading to the Church. The great Church, which ftands withont the Wall, is a very lofty Structure; over the Weftern Door of which is the biggeft Organ that ever Ifaw, the Hollow of the greater Pipes being capacious enough for a Man to creep into. They told us, that
heir Great Council confifted of an hundred and thirty fix, who continue in Office during Life, and when one dies the reft chufe another in his Place. It has two Prefi dents, whom they call Sculteti, who alfo continue for Life, but prefide in their Turns every other Year. For their Manner of chufing thefe Senators and other Offcers, I will refer myfelf to Simler. All the Inhabitants of the Territories belonging to this City are Subjects, and divided into nineteen or twenty Prefectura, but they pay no more than five Batz, or a Hen a Man per An num to the Governor. From Lucern we travell'd, Aprib the 6th, fifteen Miles to Zugh, (Tugium in Latin) feated at the Side of a fmall Lake, but it is lefs by one half than Lucern. The Government here is popular, like thofe of Uri, Sueitz, and Underwalden; but befides the City, the three Communities of Eyry, Menfinguen and Baar have a Share in the Government. Their Magif trates, Officers and Elections the fame as in Uri and Sroitz. To the General Diet the City fends one, and the three Communities the other Deputy. The No mination of the Landvogts or Governors in the Country belongs once to the City and twice to the Communities
The Lake of Zugb (if you believe the Inhabitants) has greater Variety of Fifh than any other of Switzer land; thofe they named to us were, Eels, Carp, Perch Trouts, Salmons; which is very ftrange, by Reafon of its great Diftance from the Sea; Efch, called Grayling in Englifh, Trijea or the Eel-pout, Pikes, (of which we faw one weighing thirty Pounds) White-fifh or Alberlin which is taken alfo in the Lake of Bala in Merioneth/bire in Wales, and is call'd there Guiniad; and in Huls-roater near Perith in Cumberland, and there call'd Schelly; Hafsler, a Fifh I take to be the fame with our Cbarr in Winandenmere in Weftmorland, and the Torgocb of North Wales; Balla, Nafe, (call'd Nafus by Naturalifts) Breams, Crevifes, \&cc. and many more. In the fhadowy Lakes about Sant and Zug, we found Anblatuin Cordi, or Dentaria aphyllos. From Zug we rode April 7. in five Hours to Zurich, of which we have given an Account before

April 13. We travell'd thence four good Leagues to Mellingen, a free Town, not far from Baden, and paffing through Lenfourg, lodged at Arauro, a confiderable Town upon the Aar, four hort Leagues from Mel lingen. The 14th we pafs'd thro' no confiderable Place till we came to Solotburn, nine Leagues from Araure, which, though the Head of a Canton, is not confiderable either for its Strength or Bignefs. April 15, taking a round-about Way out of the ordinary Road to Geneva, we took a View of Bern, fix Hours riding from Solotburn, that we might not leave Swiferland without feeing it.

Bern is a very handfome City, for though the Houfes be not very high, yet they are well built of Stone. The chief Street which is very long, has Cloyfters on both Sides; it lies ftretched out in Length upon a Hill, refembling a Peninfula, being almoft encompaffed by the River, that fide where it is not being ftrorgly fortified with Baftions and Outworks. The Founder of this City, as alfo of Friburg in Switzerland, and of Friburg in Brifgow, was Bercbtoldus Duke of Zerin, unto whom they have erected a Monument in the great Church, one of the neateft Stone Fabricks in all Sweitzer land. The Territories of this City are of fuch an Extent, as to comprehend one third Part of all the Coun try of the Swifs, being divided into fixty Bailyages, befides four others they have in common with Friburg. The Landrogbts or Bailiffs continue in their Stations for fix Years, which makes them very rich without exacting upon the People. They keep here five or fix Bears in a Pit, which are often climbing up and down the FirTrees that grow in the Pit. The Arms of Bern is a Bear, alluding perhaps to their Name, this City being the firft that coin'd the Money call'd Batze, (fignifying a Bear's Paw ) from the Figure of a Bear ftampt upon it, which was afterwards imitated by all the reft of the Cantons.

April 17. We travelled from Bern to Friburg, a very handfome City and likewife the Head of a Canton; its

Situation

Situation is much the fame as Bern, upon a Hill, almoft furrounded with a River, and encompafs'd with Hills, except on that Side where it is joined to the Land.

April I8. We travel'd from Fribourg through Moulton to Laufanna, a great Town and an Univerfity; and April the 1gth continued our Journey by the Way of Morges, Rolle and Nion, confiderable Towns upon the Lake of Genera and Verfoy, a fmall Place on the Lake near Genera, belonging to the French, and came the fame Day to Geneva, where we ftaid for three Months.

The Governments of Solotburn, Bern and Friburg, are much the fame as that of Lucern. In Solotburn the Great Council confifts of One Hundred and Fifteen, the Leffer of Thirty-five; if one happens to die, the Thirty-four remaining chufe another out of the One Hundred and Fifteen, and his Place is fupplied out of the Citizens. In Bern, the greater Council is compofed of Two Hundred, and the leffer of Fortytwo. In Fribourg the greater Council is of Two Hundred likewife, and the Leffer of Twenty-four. All thefe Cities have two Scouts or Confuls, who rule every other Year each in his Turn. He that defires a more ample Account of the Government of thefe and all other Helvetick Cities, may confult Simler de Rep. Helvet. Each of the Proteftant Cantons acknowledge a certain Saint for their Patron, whofe Innage they famp upon the Reverfe of their Money. The Proteftant Cantons are, Zurick, Bern, Bafll, Schafbouyen, and Part of Glaris and Appenzel. That which breeds frequent inteftine Differences among the $S w i / s$, is the Bufinefs of the common Bailiwicks; for the Popith Cantons, being more in Number than the Proteftants, they fend Bailiffs to thofe Places twice to the Proteftants once, who are often opprefs'd and injured by the Popinh Bailiffs, and the Switzers being very jealous on both Sides in their Religion, binc ille lacbryma. On the other Hand, the Proteftant Cantons, though fewer in Number, yet are the more powerful : Befides that, their Land is better, very like ours in England. The Romanifts are accounted the better Soldiers, and good Reafon they have, being more exercifed in War, ferving the Spanifb and Frencb Kings, as being of the fame Religion. Befides, the Zuricbers, who anciently had the Reputation for Valour, are now much given to Merchandize, and to accumulate Riches, and fo taken off from Martial Studies and Exercifes. The Bernefe, though they have far the greateft and beft Territory of all ; (fo that it is faid they can arm as many Men as the Dutchy of Milan, fend into the Field 100,000 Soldiers, and leave enough at Home to till the Land) yet have they no Reputation for Soldiers : They loft their Credit quite in the late Skirmifh with the Lucernefe, who account them rather Savoyards than Switzers. All the Cantons of Sweitzerland coin Money, except Appenzel, Underwald and Glaris, of which Gloris formerly hath coined, though now it doth not. All the Swoilzers in general are very honeft People, kind and civil to Strangers : One may travel their Country fecurely with a Bag of Gold in his Hand. When we came to our Inns, they would be troubled if we diffrufted them fo far as to take our Portmanteaus into our Lodging Chambers, and not leave them in the common Dining-Rooms. They keep their Houfes very clean and polite, like our Houfewives in England. For Plants, going from Zurich to Mellingen, we obferved common Goosberry in the Hedges and by the Way-fides very plentifully, and in fome Places Barberries. Sigillum Solononis and Herba Paris are the moft common Plants that grow in this Country in the Woods and Hedges every where; Amnonymus flore Colutec on the Mountains near Zurich; from Araurw to Solotburn, Helleborafer Maximus on the Hills Sides, as alfo Cbristopboriana, not to mention Fumarica Bulbo $\sqrt{a}$ every where growing in the flady Lanes.

Genero is pleafantly feated at the lower End of the Lacus Lemanus, now called Geaffer-zee or the Lake of Geneva, upon a Hill-fide refpecting the Lake; fo that from the Lake you have a fair Profpect of the whole

Town. It is divided by the River Rbodanus or $R$ bofne into two Parts, which are joined together by two wooden Bridges, one of which hath on each Side a Row of Houfes, after the Manner of London Bridge, only they are low. The two principal and indeed only confiderable Streets in the Town are, the Low Street, i. e. Rue bas, which runs along by the River and Lake-fide, and the High or Great Street, i.e: Rue Grand, which runs up the Hill. The City is indifferently frong, and they have lately been at great Expences to fortify it , à la moderna, with Ramparts and Battions of Earth. Though it be fmall, yet it is very populous, being fuppofed to contain 30,000 Souls. St. Peter's Church, formerly the Cathedral, is handfome and well-built ; and in it is a ftately Monument for the Duke of Roban.

The Citizens are very bufy and induftrious, fubfirting chiefly by Trading, the whole Territory of this Republick being not fo great as fome one Nobleman's Eftate in England for Extent of Land. All Provifions or Vietuals are very plentiful and cheap at Geneva, efpecially Milk, Meats, the neighbouring Mountains feeding Abundance of Cattle. The Tops of Yura Saleve, and other high Mountains of Savoy, Daupbine, and the Alps, where they are bare of Wood, put forth very good Grafs fo foon as the Snow is melted off them, which ufually is about or before the Middle of May : And then the Country People drive up their Cattle to Pafture, and feed them there for three Months Time. Upon thefe Hill-tops they have here and there low Sheds or Dairy-houles, which ferve the Men to live in, and to make their Butter and Cheefe in fo long as they keep their Beafts above. The Men I fay, for they only afcend up thither, and do all the Dairy Work, leaving their Women to keep Houfe below it, as being too toilfome for them to clamber up fuch fteep Hills. By Realon of thefe Cotts, it is very convenient Simpling upon the Mountains; for if a Man be hungry or thirfty, he may foon find Relief at one of them. We always found the People very kind and willing to give us fuch as they had, viz. Brown Bread, Milk, Whey, Butter, Curds, $\mathcal{E} c$. for which we could fcarce faften any Money upon them. For the Temper of the Air, in refpect of Heat and Cold, Geneva, I think, is very like England, there being no great Excefs of either Extreme. The City is well governed, Vice difcountenanced, and the People either really better, or at leaft more reftrained than in other Places, though they do take a Liberty to fhoot, and ufe other Sports and Exercifes upon the Lord's Day; yet moft of their Minifters difallow it, and preach againft it,
33. We fhall now take our Leave of thefe Parts of Europe, with the Satisfaction of having given the Reader fuch Accounts of them as cannot fail, with any reafonable Degree of Attention, to furnifh him with juft Ideas both of Places and Perfons; of the Country of Italy of the principal Cities and remarkable Places therein, and of their Inhabitants. We might, indeed, have given him later Travels, but againft thefe we had feveral Objections, fome of which it may be proper to mention. Modern Travellers commonly vifit Italy for fome particular Purpofe; one is an Antiquary, and his Bufinefs is to confider Monuments, tranfcribe Infcriptions, collect Medals, and write tedious Accounts of them. Another has a Tafte for Painting, and every City that he paffes through, furnifhes him with a fine Catalogue of Pictures, and which is no lefs valuable, an Opportunity of difcovering to how great a Degree he is a Connoiffeur by his Remarks upon it. A third, perhaps, is furioufly addicted to the Clafficks, and his great Point is to fhred out by Virgil, Horace, Ovid, \&cc. and where-ever he comes, gives you their Defcription inftead of his own: A fourth, it may be, is a Politician, and he entertains you with a Recital of the feveral Families through which every little Principality has paffed, before it fell under the Power of the Houfe of Auftria, the Kings of Spain, the Pope, the Swoi/s Cantons, or the State of Venice. A Fifth, poffibly, may be a Virtuofo, and infifts entirely upon Curiofities,

To as to render his Book a Collection of Difcourfes or Differtations upon a vaft Variety of Subjects extremely agreeable to a few, and abfolutely ufelefs to all the reft of the World.

I would not be underftood to cenfure thefe Writers in a dictatorial Manner, or to prejudice my Readers againft them; each and all of thefe Books may be ufeful, inftructive and enteftaining; but they are not fit for a Collection, becaufe, if we take one we muft take all, in order to render the View complete; and this would fwell our Work not only beyond its due, but beyond all Limits; and, after all, anfwer the Purpofe but indifferently: Befides, in moft of thefe modern Books of Travels, you will find continual References to the Authors that we have ufed, becaufe fuch Writers are themfelves fatisfied, that they cannot give better or more exact Defrriptions; and this being the Cafe with refpect to thofe Things that the Generality of Readers defire moit to be acquainted with, it follows for this very Reafon, fuch Travels ought to be preferred in a Defign of this Nature, and the Treatifes of modern Travellers left to the Perufal of fuch as, from their having a like Tafte to this or that Writer, incline not only to read but to ftudy his Performance.

In regard to the principal and general Ends of vifiting Foreign Countries, in order to take a View of the moft remarkable Places in them, to examine their Situation, Excellencies and Defects, the Nature of the adjacent Territories, and their Produce; to obferve the Governments, Number of People, Revenues, the Condition, Inclinations and Manners of the Inhabitants, and to take Notice of the Particulars for which they chiefly diftinguifh themfelves from other Nations; thefe, as they are the profefs'd Intentions of the Authors we have inferted; fo it muft be allowed, that they have executed them with great Diligence, Fidelity and Spirit. Wherever their different Circumftances, different Qualities and different Manner of Travelling, may be fuppofed to have given them an Opportunity of making different Obfervations or Remarks upon different Places, we have been careful to fupply the Reader with their feveral Works; fo that all their Difcoveries are united in this Body of Travels, with as little Repetition as it is poffible.

As for Inftance, Mifon, Burnet, and Ray, all travelled through Svoitzerland; and yet their Accounts are very different from each other: The firf confined himfelf chiefly to the Road, and defcribes only the Places through which, in their ordinary Rout to Italy, moft Travellers muft vifit. The Second having greater Leifure, and a Mind of another Turn, is lefs folicitous about Places, and more concerned about Perfons; fo that from him we receive as clear and diftinet Informations, as to the Tempers and Manners, their Notions in Religion and Politicks, as if we had paffed as much Time as he did among the Srwifs. The Third differs from them both, fpeaks of Places and Perfons too, and takes in befides Abundance of Points, that from their Attention to their particular Views had efcaped the other two ; fo that this may be juftly reckoned a Kind of Supplement to the other Travels; and, by comparing all three, the Defcription may be render'd compleat.

Again, As to Loretto, and the holy Houfe there, it is mentioned by each of our Travellers, and yet there is little or nothing of Repetition in their Accounts; but there is one Thing very fingular in Mr. Ray's, that inftead of entering into a lcng Detail of all that he faw and heard there, and from thence ;remarking upon and pointing out all the Abfurdities and Inconfiftencies of that extravagant Fable, he contents himfelf with tranfribing, which neither of the other two had done, the authentick Account of honeft Father Codrington in plain Englif/; which furnifhes us with fuch a Hiftory of Things, as renders Reflections and Remarks entirely needlefs. His Travels through Naples, Sicily and Malta, are in refpect to thofe who have gone before, abfolutely new, and carry us to the very Frontiers of Europe on that Side; and with refpect to the laft mentioned Inand, I very much doubt, whether
there is a better Deicription extant in any Language. It muft be, indeed, acknowledged, that he runs fometimes into very long Digreffions upon Points of natural Hiftory; and the Reafon that I did not lopp off thefe Digreffions was, their being of general Ufe, and ferving to illuftrate the fame Points, where-ever they occur; fo that confidered in this Light, they are very ufeful as well as very entertaining.
It was the Defign of Mr. Ray and his Company to have taken a View of all the Provinces of France that lay in their Way to return Home, and to have examined them with the fame Diligence and Accuracy as they had already practifed in their Travels through Italy: But this, Scheme of theirs was defeated by the Difference that happen'd between the two Crowns, the French having thought fit, in the firf Dutch War in King Cbarles the Second's Reign, to declare for that Republick againft Great Britain; and, in Confequence of that Declaration, order'd all the Subjects of the Britijh Crown to quit the Territories of France within a certain Time. This obliged Mr. Ray and his Company to alter their Intention and Manner of Traveling; fo that inftead of looking into and enquiring after every Thing, they were conftrained to make their Journey in the common Way, and to confine their Acquaintance entirely to the publick Houfes where they lodged, and the People to whom they applied for Bills of Exchange, and other neceffary Purpofes, excepting fome few Places, of which Mr. Ray has left us fome Account, and Mr. Skippon a larger, which fhall follow in the next Chapter.
It may not be amifs to take Notice here, that Mr. Skippon kept alfo a diftinet Journal of his Travels thro ${ }^{\circ}$ the Low Countries, Germany and Italy; but as moft of the Particulars in them, is different from what we meet with in Mr. Ray, are either honorary or monumental Infrriptions or Accounts of Engines and Machines, we were unwilling to interfperfe them with Mr. Ray's Obfervations, becaufe they would not only have lengthen'd this Section beyond due Bounds, but alfo have afforded the Reader very little that is new, fince they are already included in another Collection. But it is now Time to finifh thefe Remarks, in order to open the next Chapter, which relates to the two great Kingdoms of France and Spain.
But before we come to this, we fhall take the $\mathrm{Li}-$ berty of fuggefting, that if modern Travellers through the Low Countries would examine the new Manufactures that fince thefe Gentlemen vifited them are introduced there, and are exported from thence not only into Germeny and the North, but alfo into the feveral Kingdoms of Europe and the Plantations in America, dependant upon them, it would be a prodigious Service to this Country. In Germany alfo there are many.Enquiries to be made, that would be highly uffeful and in their Confequences very beneficial in refpect to Mines more efpecially, fince we are well affured, that as moft of the Difcoveries, in relation to the Working them to Advantage, have hitherto been brought from thence, by the Care of the Crazoley Family, and others interefted in Iron Works here; fo there are ftill feveral Methods practied there, which are not yet known, or at leaft not generally known to our Pcople.
In Italy alfo there are many Things relating to the the Silk Manufacture that deferve to be enquired into, and we may very well guers at the Importance of fuch Enquiries, by the Reward given to Sir Thomas Lombe for bringing over that celebrated Invention, which has been fo fuccefffully, executed in the Machine erected at Derby: But exclufive of the Manufactures, it would be of great Confequence to the Publick, if any Method could be found to open new Markets for Raw Silk; the obtaining which, in the Channel whereby it now. comes, flands the Nation in vaft Sums; of which, whatever could be faved, would be fo much clear Gains, and confequently the general Balance of our Trade would be much more in our Favour.
The Trade of Naples and Sicily alfo is very capable of being extended and improved, fince it is certain, that the Frencb draw very confiderable Sums from thofe

Kingdoms

## Chap. III, through the State of Venice, © $c$.

Kingdoms for Commodities and Manufactures which they might receive from us, and though fome People entertain a Notion, that fince thofe Countries fell under the Dominion of the Houfe of Bourbon, we are put under greater Difficulties in dealing with their Inhabitants ; yet it is very certain we have ftill a great Advantage over the French, which might be rendered of higher Confequence than hitherto it has been; I mean, the trading with thefe People for their own Goods and Manufactures, which, as on the one Hand it would give us the Preference with refpect to them, fo on the other Hand it would increafe the Shipping employed by us in this Part of the World, and likewife enable us to export their Commodities into feveral Parts of Europe, as well as to our Colonies in America.
To fpeak the Truth, travelling with a Commercial View, though fo vifibly advantageous to us, has hitherto,
been very little practifed, more efpecially of late Years and yet one would think Enquiries of this Nature may prove very fatisfactory, and even as entertaining as the looking after fine Statues, the Pictures of great Mafters, Medals, Bronzes and other Curiofities; fearching after which take up fo much of the Time of moft of our Travellers. Not that I am by any Means an Enemy to Tafte, but that I think in our prefent Condition, fome Refpeet fhould alfo be had to our Intereft, and that in Proportion, as our Expences are increafed by the Share we take, and are long like to take, in the Affairs of the Continent, fo we Chould contrive, if pof fible, to make ourfelves fome Amends, by enlarging and promoting our Commerce, which, whatever Way thofe Affairs turn, is the only Means by which we can ever. be made the better for them.

CHAP.

## CHAPTER IV.

Containing Travels through Spain, France and Navarre, with Defrriptions of the feveral Provinces and leffer Diftricts of thofe great Countries ; of the chief Cities and Ports in them, and of the Commodities and Manufactures, for which they are principally famous.

## S E C T I O N I.

The Travels of Francis Willoughby, Efq; through the Kingdom of Spain; with Ob. Jervations on the Climate and Soil, as well as Produce of the Country; Accounts of natural Curiofities, remarkable Infcriptions, principal Commodities and Ma. nüfactures, and of the Temper, Genius and Cufoms of the Spanifh Nation. Inter/perfed with Jome Remarks by anotber Hand.

1. An Introductory Account of what is to be expected in the following Section. 2. The Autbor begins bis Fourney from the County of Roufillon, and enters the King dom of Spain tbrougb a very barren and defart Country. A large Defrription of the Manner of Gatbering, as alfo an Account of the UJes and Value of Coral. 3. The Country of Catalonia defcribed, as alfo the remarkable Mine of Amethyfts, at the Hill of St. Sigminont. 4. Of the Salt Mines both wbite and red in this Province; and of the famous Dutchy of Cardona. 5. An Account of the Lead-Mines in Catalonia, and of the poor living and wretched Condition of the Inbabitants. The City of Tortofa, the Jafper Mines, and otber Things remarkable in the Autbor's Yourney to the Banks of the River Ebro. 6. A curious and copious Account of the City and Kingdom of Valentia; the Univerfity there, and of the very low State of Learning therein. 7. An Account of the Sugar Works at Olives and at Gandia, and of the great Fertility of the adjacent Country. 8. Obfervations made by our Autbor in bis Travels through the Kingdom of Murcia, the Poverty of the Country, and groos Ignorance and Superfition of the People. 9. A Defcription of the Kingdom and City of Granada, and of the mof remarkable Places in its Neigbbourbood. 10. The Author proceeds to the famous City of Sevil, an Account of the moft remarkable Things there, weith two famous Infcriptions to the Honour of Ferdinand the Wife, and the Family of the great Columbus. II. Of the Country from Sevil to. Madrid, including a Defcription of the City of Cordova, and Several otber Places. 12. The Autbor's Arrival at, and Defoription of Toledo, his Yourney from thence to the capital City of Madrid, with an Account of what be faw mof remarkable there. 13. His Fourney from thence to Burgos, and from that City to the Province of Guipufcoa. 14. An Account of the Principality of Biccay, and a particular Defcription of the firong Towin and Port of St. Sebaftian. 15. A very large and entertaining Account of the Di/pooftion, Mamners, Culfoms, Pecularities, good and bad 2ualities, \&cc. of the Spaniards. 16. Some additional Remarks by another Hand 17. Conclufion of the Section, and fonle Objervations on the moft remarkable Pafiages therein.

THE great Defire Mr. Willougbby had to travel through and examine fuch Countries as were leaft like his own, that his Obfervations and Remarks might furnifh him with a greater Variety, was the Occafion of this Journey into Spain, in which he parted from Mr. Ray, and the reft of his Company, and joined with fome other Engli/b Gentlemen who were refolved to make the Tour of that Country. It may not be amifs to inform the Reader, that, from the Time of King Cbarles's Voyage to that Country, while Prince of Wales, in Hopes of Marrying the Infanta, the Englijs Nation had acquired fo ftrong, and fo univerfal a Dinike both to the Country, and to the People, that very few of our Gentlemen that went Abroad, inclined to vifit it ; fo that we had but very indifferent Accounts of what was remarkable there, as may be feen, by confulting the Books of Geography, printed here of an elder Date. After the Refloration
a very different Spirit prevailed, King Cbarles the fecond, during his Exile, had travelled much, and among other Countries vifited this, and frequently difcourfed of the Singularities he had feen there, and of the odd Humour and uncouth Difpofition of the People. Thefe Difcourfes of the King's, raifed the Curiofity of many, and excited in them a Defire of viewing Places they had otherwife never wifhed to fee, and converfing with People for whom they had long had both an Averfion and Contempt. But befides there were other Reafons that induced Perfons of very different Tempers to think at this Time, a Journey through Spain might afford Matter of Inftruction, as well as Amulement, which was the Cafe of Mr. Willougbby, who had heard that there were various Mines and Manufactures, as well as a Multitude of natural Curiofities in that Country, which might very well juftify the fpending a few Months in furveying and committing to Paperz an Account of
them,

## Chap. IV.

through SPA I N.
them for the Improvement of others as well as his own Saxisfaction. If the fhort Time that he fpent in his Paffage through this Kingdom, did not allow him to fearch into and after every Thing, in as diligent a Manner and with as much Exactnels as tie defired; yet it muft be allowed, that he has given us i very judicious and accurate Account of all that he faw, fo as to afford a true, if not a pleafing Picture of Spain and its Inhabitants, at the Time he vifited them ; the Reading of which will enable us to form a very juft Notion of the Places and the People, which is the great End of Travelling, and the higheft Advaintage that can refult from the Perufal of Books of this Kind. I have met with a Copy of thefe Travels, which formerly belonged to Sir Pbilip Skippon; and in which there are contained fome Explanations and Additions; which are here taken in, and confequently render thefe Travels more curious and valuable. The Neceffity of keeping within Bounds, renders it improper to extend this Introduction farther, and therefore we will now proceed without Ceremony to the Travels themfelves.
2. Auguf 31, 1664. We left Bagnòls in the County of Roufillon, being the laf Town belonging to the French, and at about three Fourch's of a League's Diftance came to a great Stone erected here for a Boundary between France and Spain, and paffing very bad Way among defolate Mountains, after many Hour's riding; we came to Lanfa, the firft Town of the King of Spain's Country. All along thefe Mountains grow Rofenary, common Furze or Gorfe, and Agnus caffus of two Sorts, the one with a carneous, the other with a blue Flower. From Lanfa we went on the fame Day as far as Cande Creux, five Leagues or twenty Englijh Miles from Bagnols. Among there Mountains we met with no Brooks, and fcarce any Water. Sept. i. We intended to have feen the Coral Fifhing here ; but the windy Weather hinder'd us. The Sea muft be very calm and fmooth, elfe it is impoffible for them to fifh for it. It grows downwards (as the Urinators told us) under the hollow Rocks, and not upwards as Trees. I believe rather, that it grows indifferently, either upwards or downwards, according to the Situation of the Rocks. The Engine they make Ufe of for getting Coral is, a great Crofs of Wood with a confiderable Weight of Lead faften'd at the Center, to which alfo a ftrong Rope is fixed, and at each Corner there are ftout Nets made of fmall Cord: They go out in little Boats, and let down this Crofs; and when they have found a Rock at the Bottom of the Sea, he that manages the Rope, thrults it into the Hollows, getting in one or two of the Corners; and if there be any Coral, it entangles in the Nets at the End of the Crofs, by which it is torn off and brought up. The natural Colour of the Coral, while it is alive and growing to the Rocks, is a pale carneous; but when the Scurf (which anfwers to the Bark on Trees) is rubbed off, it is red. The Coral, that dies or is broken off from the Rocks, Ioofes that carneous Scurf or Bark in the Sea, and becomes red, though fometimes it gets a greenif white Ruft. They fay it is fifty Years before it comes to its full Growth; but that, I conceive, is an ungrounded Conjecture; they fometimes, but very rarely, find Branches of three or four Pounds Weight. It rots, dies, grows light, Worm-eaten, and full of Holes like Wood. They all affirmed it to be hard and not foff, as it grows under Water, contrary to the current Tradition of the Ancients, Mollis fuit herba fub undis. I believe the outward Scurf or Bark may be foft, it eafily crumbling off afterwards, which might give Occafion to the Fable. They told us, that a Piece of Coral having the carneous Scurf upon it (wetted) is juft the fame as when it is firft taken out of the Sea. The beft Coral, rude as it is found, is worth a Piftole the Pound, or two or three Pieces of Eight : Polifhed and wrought into Beads, Bracelets, EOc. at Marfeilles it is fold for thirty, forty, and fometimes fixty Sols, (i. e. fo many Pence) the Ounce. They find here white Coral alfo, but very rärely.
To this Account of our Author, the following Particulars may be added

The Opinion of the Anciënts was clearly that it wás a Plant, but this Notion was afterwards queftioned by feveral very learned and great Men; but at this Time of Day, when Opinions in Matters of this Kind are not fo much regarded, we are fatisfied from Variety of Experimients, that the old Notion is a Matter of Fatt, that it is really a Plant which is petrified, or render'd hard by the Sea-water, that it produces Flowers whicli arè actuall vifible ; that in the Flowers there are feed; though entangled in fuch a Màner in a thick claminity white Juice as not to be difcerned. It does not grow either at the Bottom of the Sea, as Kircher thought, or on the Sides of Rocks, as our Author and moft learned Men have believed, but ar the Top of Rocky Caverns, fhooting directly towards the Center of the Earth. It is not true that it has any Root, for it is fixed to the Rock by a thin fmall Plate, and never fureads iffelf by darting Fibres upwards, but grows by attracting its proper Nourifhment from the Sea-water, though its Pores, which are vifible enough, its Seed are carried by the Waves and the thick glutinous Liquor in which it is contained, ficking to the Rock, affords it thereby the Means of growing, but the Structure of it is fuch, that it cannot grow but vertically in the Manner before-mentioned.

The principal Coral Fifheries are thofe in thie Perfian Gulph; in the Red. Sea, in the Siciliank and Neapolitan Seas, upon the Coaft of Africa, upon the Coafts of Minorca, Corfica, and Provence; but it is agreed that no Place yields either better, brighter, or greater Plenty of Coral, than at Cape Quiers' in Catalonia, which is the very Place our Auchor fpeaks of: The Time in which they fifh for it, is from the Beginning of April to the End of fuly. The beft Account we have of any Coral Fihhery, is that managed by a French Company; at a Place called the Baftion of France, on the Coaft of Africa; and as Experience has taught all that are concerned in this Trade, to purfue it in the fame Manner; or at leaft very nearly in the fame Manner; one Defcription will ferve as well as many. When we fay that thefe are the principal Coral Fifheries, we do not mean that there may not be others; for we know there are both in the Eafl Indies and the Weft, but they are fmall and inconfiderable in Comparifon of thofe that we have mentioned, in Refpect as well to the Coral which is ga: thered, as to the Quantities that are gathered; and perhaps it might be worth while to confider, why Co ral grows plentifully in fome Seas, rarely in others, and in many not at all. But at prefent let us fpeak of the Manner in which this Commerce is carried on.

The Coral Fifhers, or as our Author calls them, Urinators, come a little before the Seafon begins, to the Boftion of France, without either Tackle or Tools, without Veffels, and without Money. The firft Thing they do is to feparate into Crews. The Crew of a Coral Fifhing-boat may confift of feven, but it is generally compofed of eight. The Patron, or Mafter of the Boat, the Man that throws the Crofs, and fix Seamen that manage the Boat and affilt in dragging the Máchine aboard. Upon applying to the Company, they are furnifhed with a proper Veffel, which the Fronch ftile Satteau, that is a long fharp Boat with very large Sails, fo that they go at a great Rate, and are not eafily taken. They are likewife furnified with all Kind of Tackle and Provifions upon Credit. Then they enter into Articles for the Price of the Coral, which is generally fixed at a Frencb Crown a Pourid, or thereabouts, They likewife engage to fell all that they take at that Rate, upon Pain of corporal Punifhment if they are detected in a clandeftine Commerce. Thus equipp ${ }^{\text {s }}{ }^{\prime}$, they proceed to Sea, but they are not obliged to deliver their Coral till the Seafon is over. Then each Boats Crew brings their Stock on Shore, where it is divided into thirteen equal Parts, of which the Mafter of the Veffel has four, he that manages the Machine two, and each of the Crew one ; the thirteenth Part belongs to the Company, and goes in 'Difcharge of the Equipment. In a good Seafon, a Boat will bring twenty five huridred Weight of Coral, from whence the Reader may judge of the Profit which attends this Fifhery; and if he defires to be informed of the total Value, it is enough
to fay, that it is thought a very flourifhing Seafon, when two hundred of thefe Veffels are employed. The Bunefs of Coral fifhing is both laborious and dangerous, it requires great Skill and Dexterity to heave the Crols, and no fmall Labour and Diligence to get it on board again, befides the great Rifk they run from Storms, Accidents in their Fifhing and Pyrates, all which taken together, keep the Coral Fifhers fo poor, that the Company never wants Servants.

As for the Ules of Coral, one may fafely reckon three. Firft, thofe for which it ferves in Phyfick, and there want not many Writers who have raifed thefe very high, and fuggefted, that Wonders might be done by Tinctures, Elixirs, Magifteries, and other Preparations of Coral, which in Procefs of Time, however, have been exploded, and are grown altogether out of Ule. But from the Powder and Salt, and fome other Medicines more eafily made, and of as great Efficacy as the former, fince Coral can only operate as a Sweetner, and as an Abforbent, it is ftill a good Thing in this Refpect, and great Quantities of it are continually vended. The fecond Ufe it is put to, is for Toys, fuch as Necklaces, Bracelets, adorning Rock and Shell-Work, and other Purpofes of the like Nature. Laftly, it is exported into the moft diftant Parts of the World, where it is in very high Eifteem, particularly in Perfia, and among the Tartars. But the beft Market in the World (if it could be got thither) is Japan; where it is efteemed beyond all precious Stones whatever, Emeralds, Rubies and Diamonds themfelves not excepted; and this for the beft Reafon in the World, becaufe all thefe Jewels they have, but Coral they have not. The Coral that is commonly brought to Market is either red or white, the former is employed in Toys, and the latter fold to the Apothecaries; but befides thefe, there are fome Pieces of a flen Colour, and fome Green, but this comes from America. When it is wrought into Beads and Necklaces, it fells in the Lerant for about five Shillings an Ounce, fometimes for more. It has been already obferv'd, that large Pieces of Coral are a very great Rarity, and this the famous Mr. Lemery, and fome other learned Perfons afcribe to the Nature of the Plant, but without any kind of Reafon, except this may pafs for one, that Coral is of a very flow Growth, and that muft be allowed to be the true Reafon. For Coral requiring many Years to reach a large Size, and the Coral Fifhers purfuing their Trade conftantly every Seafon, it muft neceffarily follow, that farce any large Coral can be obtained, becaufe they never fuffer it to grow. Befides this, as the Coral Fifhers are paid by Weight, without any Diftinction between great and fimall Coral, they are not at all folicitous as to the Size, Colour or Quality, but are barely taken up about the Quantity of Coral, that they can take and bring to Market. Thefe feem to be the principal and moft material Points that relate to the Hiftory of the fubmarine Plant. It would be equally ufeful and curious, if we could enter into, and furnifh the Reader with as copious, and as diftinct Accounts of the other Curiofities that occur in our Author's Travels. Where this is in our Power we fhall not fail to do it, but in the mean Time, let us return to his Narration, which we fhall again purfue in his own Words.

Near C. de Creux upon the Mountains, they find a kind of Selenitis, which may be cut or flit into very thin Plates like the common Mufcuvy Glafs. Upon the Shore are thrown up Conche venerece of feveral Sorts, and Magnitudes, and other fmall Shells of Affinity to them, which they call Porcellane. Thefe they put in the Juice of Lemons or Citrons, and fet them out in an open Bottle all Night. The Dew mingling with the acid Juice, diffolves the Porcellane: This Liquor they ufe for a Cofmetic. They catch Fifh about C. de Creux as at Naples, by hanging a Firebrand or other Light at the End of the Boat, which intices the Fifh into the Boats. This Day we paffed by Rofes, a ftrong Garrifon, Villa facra, and lay at Figera.
3. September 2. We paffed Crijpia, Bafalon, Argelagues, and lay at Caffel Foulet, five Leagues. All the Way we obferved Abundance of Pomegranate Trees.

Caftel Foulet is a fmall Garrifon. On the 3 d we paffed by Aulot, where we faw a Bufalore, of which there are divers in that Town. It is a Hole or Cave, out of which continually iffues a cool Air. They keep Bottles of Wine, Fruit, $E^{2} c$. in a little Houfe built over the Cave. 'The Wine here kept drinks as cool as if it were kept in Ice or Snow. They fay that it is the Water running and falling down under the Ground that makes thefe Spiracula, which is not unlikely. They are all on the Left-fide of the River, as you go to Vict on the Right. This Day alfo we paffed Rboda, and lay at Vict, feven Leagues. On the 4 th we went to the Hill where the Amethyfts, or Violet Stones, are found, diftant two Leagues from ViEt, called Sigminont. On the Top of the Hill is an Hermitage and Place of Devotion, where Sigminout, a Burgundian King, did Penance. The Amethyfts are found lower in the Side of the Hills. Vifcount Facque is Lord of the Soil, and whoever opens a Mine, pays him a Piftole and a half per Menfem. They find the Stones by following a Vein of reddifh or black Earth, or a Vein in the Rock fo colour'd. They are all hexangular, and pointed like Chryital. There are of three Sorts, the beft are the blackeft or deepeft Violet; others are alfo quite white; fome, but very rarely, are found tinctured with yellow. They fometimes ftick a great many together to the Rock, like Brifol Diamonds, but thofe are never good, the beft are found loofe in the Chinks of the Rock, in a fat, yellowifh, or reddifh Earth. They fcrape out this Earth with long narrow Knives that enter into the Chinks, and then crumble it in Pieces with cheir Fingers to feel for the Stones. They are afterwards ground and polifhed upon Leaden Moulds, after the fame Manner as Chryftal is. Firft they ufe the Duft of Smirilor Emery, and at laft of Tripoli. All along the Way to this Hill we faw Abundance of Arbutus, and Rbus Coriariorum, called Rbondo. In this Country they ufe not Bark of Oak to tan their Leather, as we do, but the Leaves and Branches of this Shrub, which they firft bruife with a perpendicular Stone, and then mingle with Water, and heating the Water lukewarm, fteep the Skins in it three or four Days. In thefe Mountains are alfo found Emeralds, Gold, and other Sorts of Minerals and Stones, but it doth not turn to Account to fearch for them. Topazes are found in a Lake called the Lake of Silees, not far from St. Colonna, near Girona. They find them upon the Shore of the Lakes. At ViEZ there is a great Market-place, and a Church at a Convent faid to have been built by Cbarlemagne, when he had difcomfited the Saracens, and driven them out of Catalonia. This Night we lodged at Moia, having travelled only three Leagues. On the 6th we rode within Sight of Montferret, broken at the Top into Rocks, ftanding like the Teeth of a Saw, from whence it took its Name. There is a Chapel of our Lady, a Place of great Devotion. This Night we lodged at Cafa della. Pobla, a fingle Inn, five Leagues.

We came to Cardona, two Leagues. All the Way as we rode, the Rocks and Stones were full of round Holes, juft like thofe in the Stones at Ancona, in which the Pbolades harbour, and there is no Queftion but thefe Holes have been made by fome Animal before the Stones were hardened.
4. On the 8 th, we viewed the Mountain of Salt, where were three Officers, one to weigh the Salt, another to receive Money, and the third to keep Accounts. The Revenue of this Salt amounts yearly to about 30,000 Pieces of Eight. For every Quintal, that is 104 Pounds, they pay ten Reals. The Salt is hard and tranfparent, like Chryftal, and when powdered white as Snow. They hew it out with Axes and Mattocks, and make Chaplets, Boxes, Ejc. of it. They fay there is no End of it, but that it reaches to the Center of the Earth. Near the Place where they work, there are two Caves within the Rock of Salt, to the End of one of which they durft never venture. Not far from this there is another Mountain of Salt, where the Salt fticks to the Rocks, and is moft of it tinctured with red. Of this red Salt they make broad Plates like Tiles, which they call Ruggiolas; thefe they heat before the Fire,
but never put them into it, and ufe them to take away Aches, ftrengthen the Stomach, keep the Feet warm, Esc. Well heated on both Sides, they will keep warni for twenty four Hours. Amongtt this red Salt there is a kind of Selenitis (which fome call Ifing-glafs, and the Italians, Geffo, from the Latin Word Gypfum, fignifying Chalk, becaufe when burnt, it is turned into a white Calx) which naturally roches into parallelipipeda, of the Eigure of a L.ozenge. Of which Sort of Stones are found in feveral Places of our Nation. About thefe Mountains of Salt grows great Plenty of Halimus and Limonium.

Cardora is a Dukedom, containing three or four VilJages befides the Town. The Duke thereof is one of the richeft Grandees of Spain, having three Dukedoms, four Marquifates, two Earldoms, Esc. The Name of his Family is Folke. He lives, for the moft Part, at Madrid, but fends every three Years a Governor. The King of Spain hath nothing at all to do with this City, and the Duke never impofes any Taxes, but enjoys only all the Tiches of the Corn, Wine, Esc. There is a Council of Thircy-fix, changed every Year, and he that has been of the Council, muft wait three Years before he can be chofen again. 'The laft Thing the Council does is, to chufe a new Council for the Year following. This new Council is divided into four Ranks, not equally, but as the old Council thall think fit, and their Names are put into four Boxes; out of every Box a Child takes out one to be Conful. He that is drawn out of the firft Box is the firft Conful, and fo in Order. Near the Town is a Caftle, and in the Caftle a Tower, faid to be built by Cbarlemagne. Every Duke hath an Oath given him by the Confuls, wherein is an Article, that he muft refide in the Caftle, which is never kept.
5. September 9. We paffed through Kalab, and lay at a lone Inn a League and a half further, four Leagues and a half diftant from Cardona. On the roth we paffed through St. Columba, Rocoafort, and lay at Sirreal, five Leagues and a half. Sept. in. We paffed by Pobia, a famous ancient Monaftery, about two Leagues diftans from Sirreal. In the Church, there are a great many Monuments. They told us thirteen Queens and eleven Kings lay interred there. Then we paffed Praves, and lay that Night at Coulnouvil, five Leagues. All over Catalonia they reckon a League two Hours, and make Account that four Catalonian Leagues are equal to fix French. We heard that there were Amethyfts alfo found about Praves.

On the 12th, we paffed by Falfot, two Leagues from Coulnowvil, where are a great many Lead Mines. The Ore is very rich, and they melt it juft as it is taken out of the Mine, without beating it to Powder. They fell the Ore for forty Reals of Ardif the Quintal, a Quintal being 122 Pounds. Five Quintals of Ore ufually yield four Quintals of Lead. This Town, and the Mines about it, belong to the Duke of Cardona. They told us, that the Vein of Metal lay always Eaft and Weft. The beft and fineft of this Ore they grind to Powder, and thereof make Varnim to lead earthen Pots and Veffels with, fprinkling the Powder upon the Pots. This Night we lay at Tivifa, four Leagues. On the 13 th we paffed Venu-falet, Tivians, and lodged at Tortofa, fix Leagues. All along the Way we faw a great deal of Palma bumilis Hijpanica non jpinofa. The Fruit grew up in Bunches out of the Ground, like the Berries of Arum, and was not much bigger. Thofe that were ripe were of a reddih Colour, of an oblong Figure, and divided into four Quarters ; thofe that were lefs ripe were yellowifh; the Skin and Pulp very thin, and did but juft ferve to cover the Stone. It hath the Smell and Tafte of Dates. The Stones being broken, are not at all hollow, but have a hard white Kernel or Pearl within them. We obferved alfo Abundance of Garoffus (as they call it) i.e. Caroba five Siliqua dulcis, the Cods whereof they give their Mules inftead of Provender. The Spanib Soldiers, at the Siege of Barcelona, had nothing but thefe Siliquce and Water to live upon. All over Catalonia the People are generally poor. They ufe neither Glafs nor Paper in their Windows, but only Shutters of Wood.

Vol. II. ${ }^{\circ}{ }^{\circ} \mathrm{CXVII}$

Tortofa is a very poor and defolate Town: There is a Bridge of Boats over the River Iberus, now called Ebro, in Sight of which we rode all along from Tivifos hither. At Tortofa they were wont to make Saltfellers, Mortars, Bowls, Beads, $\varepsilon^{2} c$, of a Kind of Marble of a mingled Colour, red and yellow, found near the Town, which they call $7 a f p e r$, and of another greenifh Marble fpotted with black, brought from Genoa.

We went to the Jafper Mine, about two Miles from the Town, with one of the chief Workmen. We faw there valt Pillars hewn out and wrought for a Church in Palermo. He told us, that all the Veins of Marble, Jafper, ESc. went from Eaft to Weft; that they fawed thofe Stones to make Tables, $E_{0}{ }^{\circ}$ c. with only Water and Sand; that when there was not enough red in the Stone, they made little Holes, and fet in red Stones; that the Cement they ufed for all Stones in Mofaick Work, was made of one half Mattich and one half Greck Pitch; that in building, they joined the Stones together with ordinary Lime, but on the Outfide they filled up the Chinks with a Cement made of the Powder of the Jafpar mingled with Sulphur and Mangra ; to make it more white they put in more Sulphur ; to make it more red, they put in more Mangra. The Jafper was hewed out with Chizzles and Hammers, juft as Stone in our Stone Pits: It is afterwards polifhed with Armoril, i. e. the Powder they ufe to polifh Armour with, and to give it a Luftre, fo that one may fee his Face in it with the Powder of the Cinders of the beft Tin. This Day we fet out towards Valence, paffing Ebro by the Bridge of Boats, and lodged at Galere, a ifmall Village two Leagues diftant from Tortofa.
6. Sept. 16. We paffed by Tregera, whereabouts feemed to be the Ruins of an old Roman Way, Mattheau, Salfandail, and lay at Lefcouvas, feven Leagues Near Lefiouvas we found Store of Oleander with a red Flower. On the 17 th we paffed Cabanos, Pobletta, Buriol, Villareale, Amules, feven Leagues. This Journey we faw a great many Rivers quite dried up, and for above a Month together had farce any Rain, that little that was always came juft from the Sea. On the 18th, we paffed Cbinces, Almenara, Noulvedere, Mafa, Magril, Abalade, and árived at Valence feven Leagues. Near Valence the Country is very populous, and well cultivated; Abundance of Mulberry-trees are planted in Rows all the Fields over. As we paffed through the Market-place at Valence, all the People houted at us, and threw Parings of Melons, $\mathcal{E}^{2} c$. on our Cloaks. It feems they are not ufed to fee Strangers and Travellers there. This was the firft Place in Spain where we were fearched. In this City is an Univerfiry. I heard a Profeffor read Logick. The Scholars are fufficiently infolent and very difputacious. One of then asked me, Quid est Ens univerfale? and whether I was of Thomas Aquinas's Opinion? Another, Quid eft Gemus? None of them underftood any Thing of the new Philofophy, or had fo much as heard of it: None of the new Books are to be found in any of their Bockiellers Shops: In a Word, the Univerfity of Valence is juft where our Univerfities were an hundred Years ago.

In the Kingdom of Valence the King of Spain is not abfolute; but to impofe Taxes, raife Soldiers, $\varepsilon^{2} c$. he mult have the Confent of the three Eftates, i.e. I. the Clergy, 2, the Nobility, 3. the Cities and Villages; and if one of thefe refufe to confent, nothing can be done. Thefe three Eftates have fix Deputies, two for cach, who are changed every third Year. Of the two for the Cities, one is for the City of Velentio, and the other for all the reft. Each City chufing a Syndic, one is taken by Lot to be a Deputy. The fix Deputies have the Care and Government of the Militia. Upon any urgent Occafion, the Deputies muft aflemble the three Eftates, $i$. e the chief of the Clergy, the Nobility, and the Syndics of the Cities. The City of Valence is governed by Six Jurats or Confuls. They are taken by Lot out of fix Urns or Burfes, two out of each: In the firf Urn are the Names of all the better Sort of Nobility that have the Title of Dons, in the

8 8
Second

Second Urn, the Names of all the lower Rank of Nobility that have not the Title of Dons; in the Third, the Names of all rich Citizens that are not Gentlemen: They muft have at leaft four hundred Crowns yearly Rent, befides what their Wives bring. Befides thefe, there is a Rationel and two Syndics changed every third Year, fix Advocates for their Lives, and forty Plebeians changed yearly. The City being divided into fifteen Trades or Companies, each Company chufes two, which make thirty; the other ten are chofen, two by the Rationel, and eight by the fix Jurats, and two Syndics, each chufing one. Of all thefe Officers and the Forty Plebeians confifts the Senate. But nothing can be done, unlefs there be Twenty-nine of the Plebeians prefent at leaft. There is alfo, 1. a Judge for criminal Caufes, taken by Turns out of the three Urns, and changed yearly. He hath an Advocate to affift him, who is changed yearly, but fo that all the Advocates in the City have the Place by Turns: And a Lieutenant Criminal raken by Lot out of the Forty Plebeians. 2. A Mutafa, who has the Care of all Kind of Victuals, Corn, Weights, Meafures, $\mathcal{E}^{\circ} c$. He is taken by Lot out of the three Burfes, as the Criminal Judge is, and hath alfo a Lieutenant out of the Forty. There is befides, a Judge for Civil Caufes, taken out of the three Burfes, who has an Advocate like the Criminal Judge: But he cannot decide Caufes of above fifteen Crowns.
The Univerfity is govern'd by the Town, who every third Year chufe a Recior that mult be a Canon. The other Officers are, a Beadle; a Serjeant and a Puntadore, who is to take Notice when any Profeffor fails to read. There are cight Prapofitit in this Univerfity, four for Divinity, two for the Canon Law, and two for the Civil Law, who have each 500 Crowns yearly. There are alfo four Readers for Philofophy, feven for Phyfick, one for the Greek Tongue, one for the Hebrew, and two for the Mathematicks. Thefe have but fmall Stipends; but all their Scholars, who come to hear their Lectures, pay fomewhat yearly. If a Profeffor promote three rich Scholars, that are able to pay the Fees to any Degree, he may promote a Fourth that is poor for nothing. The Degrees are the fame with thofe in our Univerfities, viz. 1. Batchelor after they have finifhed a Courfe in Philofophy; which Degree cofts about twelve Crowns. 2. Mafter of Arts, which cofts eighty. 3. Batchelor in Divinity, Law or Phyfick, which cofts fixteen. 4. Doctor, which cofts one hundred and fifty. They may be Mafters of Arts prefently after they are Batchelors, if they will; and in like Manner Doctors. In the Market at Valence, and all Spain over, they divide Hens and Chickens into Pieces, and tell them by Quarters ; they make great Veffels of Goat Skins to put Wine and Oil in ; and feffer Bottles, which they call Boto's. The Women paint, laying it on fo thick, as if one daubed Minium upon a Wall. No Garrifon nor Soldier here.
7. Sept. 24. We fet out from Valence, and paffing by Mafoneffe, Cataregi and Seille, and lodged at Muljafes, shree Leagues. Coming out of Valence, we were forced to give Money at three Places to avoid Searching. We pafied Cullera where we ferried over a great River, called Xucar, and lay at Gandia. There is a College and an Univerfity, as appears by this Infcription upon the Wall of the College. Sanclus Francijcus à Borgia Dux Gandia, 4, Propofitus generalis Societatis Fefu 3, hoc Collegium $\mathcal{O}^{3}$ banc Univerfitatem a fundamentis erexit. A. D. 1546. At Cullera the Wine firft began to be fweet, and three Leagues off at Gondia the Plantations of Sugar Canes began. 2. Whether the Nature of the Soil that was fit to nourim the Sugar Canes did not alfo contribute to the Sweetnefs of the Grapes? At Gandia we firft found Raifins of the Sun (as they are called in England;) in Spain they call this kind Panfos, and they feem to be the Duracince of the Ancients. They are all white, round and have a tougher Skin than other Grapes. They gather them when fully ripe, and dip them in a boiling Lixivium of Water and Afhes, juft dipping them in, and taking them out again, and then dry them upon Boards in the Sun, taking
them in by Night, or in foul Weather. The Name Raifin comes from Racemus. Figs are dried juit as they are gathered not being dipp'd in any Lixivium.

On the 26 th, I went to Olives where and at Gandia, are the Engines for Sugar Works; the beft are at Olives. By the Way we faw the Sugar Canes growing in feveral Places. They are planted in low wet Grounds well mucked and dreffed, divided into the Beds or Hillocks and Furrows, They cut the Canes clofe to the Roots in November and December, and cutting off the flender Tops, which afford no good fuice, keep them under Ground till March, and then prick them into thefe Hillocks or Beds. Out of every Talea or Cut, hhoot four, five or fix Canes, which will be ripe the next December. The Knots or Joints of the Cane at the Bottom are very clofe together, farce an Inch afunder; but upwards the Diftance is more, as the Cane grows flenderer. Within is a white Pulp or lith, full of Sap fweet as Honey. They fell them at Gandia to eat, and cutting them into Pieces juft in the Middje, between two Knots, fuck the Pieces, at both Ends: To make Sugar after Canes are cleanfed from the Tops and Leaves, and cut into Pieces they are firft bruifed, either with a perpendicular Stone, running round as Apples to make Cyder, or Olives to make Oil, or between two Axes ftrongly capp’d with Iron, horizontally placed, and turned contrary Ways, and then preffed, as Grapes or Olives are. The Juice thus preffed out is boiled in three feveral Cauldrons one after another. In the third Cauldron it becomes thick and black; and is then put into conical Pots, which at the Bottom have a little Hole ftopped only with coarfe and foul Sugar; Mr. Ligon faith, with Plantain Leaves. Thefe Pots are covered, when full, with a Cake of Pafte made of a kind of Earth call'd in Spanifo, Gritty, and found near Olives, which is good to take Spots out of Clothes; which Cap or Cover finks as the Sugar finks. Mr. Surift told me, that the Clay they ufe with us is To-bacco-Pipe Clay, or very like it, and that the Water in the Clay ferved to wafh down and carry away the Molofes, at leaft the Clay helps the Separation and Precipitation of it. Thefe conical Pots are put into other Pots, into which by the Hole at the Vertex, the Juice drains down through the coarfe Sugar at the Bottom. It drains fo for five or fix Months, in which Time the Sugar in the conical Pots grows hard and white, all the Juice being either drunk up by the Lute or run out by the Hole at the Vertex. The Juice is boiled again fo long as it is good for any thing, but at laft it makes only a foul red Sugar, that will never be better. The conical Loaves of Sugar, after they are taken out, are fet to drain over the fame Pots for fourteen or fifteen Days. To make the Sugar more white they mult boil it again, but about one Sixth is loft every Time. A Pound of Sugar of twelve Ounces is fold at Olives for three Sous and a half, refined for five or fix Sous. The Sugar Juice is ftrained through Strainers of Linnen, as it is put out of one Cauldron into another. They take it out of the firft and fecond Cauldrons fo foon as it begins to boil, but in the third Cauldron they let it boil till the Scum rifes, and then take off only the Scum with a Scummer, and put it into a long Trough to cool, and when it is cool, put it into the conical Pots. One Scum rifes after another in the third Cauldron. The Scum when it is taken of is white, bue turns to a black Liquor in the Trough. They never refine the Sugar more than three or four Times. They ufe for the refining of it , Whites of Eggs, putting in two or three Dozen into a Cauldron. They ufe but one Cauldron for refining. When it is refined it grows white and hard in nine or ten Days. The Juice boiled up is eaten with Bread toafted as Honey; the Juice of the refined Sugar is much better than the firft Juice. The Duke of Gandia fends Prefents of this refined Juice to the Queen of Spain. When they refine it they pus a little Water into the Cauldrons, to diffolve it the better. But for a more exact Defcription of the whole Procefs of the Sugar Works, I refer to Pio in his natural Hiftory of Brafl and Ligon, in his Defription of Barbadoes. The Sugar of Olives, is better than the

Sugar

Chap. IV.
ibroug S SPAIN.

Sugar of Gandia. At Mentria in Granada they alfo make a great deal of Sugar. About Valence, Gandia, $\dot{B}^{3} c$. the Earth is always wrought, and never lies fallow or idle. They reckon five Raccolta's or Crops in one Year. 1. Of Mulbery-Leaves for Silk, 2. Whear and other European Grain. 3. Darf, i. e. Maiz or Indian Wheat. 4. Grapes. 5. Olives, and 6. At Gandia, Sugar Canes. After the Wheat is cut they prefently fow the Indian Wheat. They complained that lately for a great many Years together, they had very bad Raccolta's, for Want of Rain, which had almont ruined Spain.
8. On the 27 th, We paffed Benegana, and lay at Cbativer, fix Leagues and a half. Cbativer is an ancient Town of the Moors, and was once Head of one of their little Kingdoms. About a League from the Town began a very remarkable Aqueduct made by them. It was juft over a River along the Side of a Hill in moft Places, not above a yard or two under Ground, and had a great many Funnels like the Tops of Chimnies, to give Vent, and let out of Water when there fhould be too much. The Tops of thefe Funnels were made of a red Clay and pebble Stones. The Water came almoft to the Top in ail of them, but run over in one. On the 28 th , we paffed in Sight of Montefa, a Caftle belonging to the Knight of Montefa, that wear a red Crofs, Ortemente, and lodged at Beebert, fix Leagues. On the 2gth, near Alicant among the Mountains, there is a very good Breed of Falcons. In the Plains near Alicant grows Abundance of Gramen Jpartum Plinii five Sportularum Officinarum. F. B. i.e. Mat-weed, of which the Frails, wherein they put Raifins and other Fruits are made. This in Spain they call Spar, at Marfeilles, Auffe. The Women hereabout gather Abundance of this, and fleep it in Sea-water till it be well foftened. Then they dry it, and carry it by Sea to Marfeilles, where they fell it at eight Crowns the Milliere: Every Milliere confifts of ten Pachieres; every Pachiere of one hundred Manado's or Handfuls. Of this they make Cables for Ships, Bafkets, © $c$. In this Day's Journey we faw a great many Fountains covered with long Arches to hinder them from being dried up. We paffed Elda, Novelda, Appe, Clavillente, AlBitella, and lay at Orivola eleven Leagues.

On the zoth, We came to Murcia, four Leagues. Near Orivola (which City is an epifcopal See) we obferved many Turpentine-trees, fome with Flower, and fome with ripe Berries. Near Elda they dig up a Sort of Selenite, which they put into Wine to clarify it. About a League from Orviola began the Kingdom of Murcia; two Leagues from Orivola, we were ferced to give Money to avoid Searching. Murcia which gives Denomination to this Kingdom, is a pitiful and defolate Town. The FifhMarket bere is fhut up in a Cage or Grate, as at Genoa, the People crowding abour it, and thrufting in their Bafkets as there. Oifober I. we travelled through a miferable defolate Country to Mula, feven Leagues. On the 2d, we paffed through Caravacca, where they drive a great Trade of making little Croffes of Silver, Brafs, Wood, $\mathcal{E}^{3}$. After that Pilgrims, $\mathcal{E}^{3} c$. have bought them, they carry them to the Caftle to touch them by a famous Crofs, which according to their fabulous Legend, defcended miraculounty from Heaven, which forfooth infufes a wonderful Virtue into them, We lay this Night at a lone Houfe, four Leagues off Caravacca, having travelled in all ten Leagues.
On the 3 d , We pais'd by Venta nova, and came to Huefca, eight Leagues. At Huefca, we firt faw a yellowifh White-wine like Sack. The Kingdom of Granada began about four Leagues before we came to Huefca. The Town of Huefca belongs to the Duke of Alva. On the 4 th, we paffed by Bafa, and refted at Venta eight Leagues. We travelled to Guadix an epifcopal See, and ancient Roman Colony. Upon the Gates we took Notice of this Infcription. Recepit Colonia Accitana Gemelienfis Provincice caput prima omnium Hijpanicarum fidem, Cbriszi fesu, rejeczis idolis evangelizantibus fanitis Torcalo © fociis, Anno Salutis 70. Pontijicatus S. Patri, 37. imperii Neronis 13. Urbs Accis patrona fuo Santilfmo D.D. 1593.

Honorati funt Anici tui Deus.

9: On the 6 th, 刻e traveiled to Granada, fix Leagues diftant from Definos, where we lodged the Night before. Here we faw the Caftle called La Lambra, the Seat of the Kings of Gronada. Within the Walls of the Cattle live Abundance of People, which dare not live in the City for D-bt, or other Caufes. There is a fair Palace begun by Cbarles V. and yet unfinificd s the Outfide of it is fquare, but it is round within, having two Rows of Cloifters, one above another, round about the Court. Adjoining to this is the ancient Pa lace of the Kings of Granada; within there is all the fame kind of Morefo Work, wrought in Mortar and Stone, with Gold and Painting. The Cloifters are fupported by long fiender Pillars. In this Palace is an octagonal Chamber, vaulted at the Top with eight Doors, one in every Side. If one fland in one Angle, and whifper to another who fands in the Angle diametrically oppofite, the Voice is conveyed, as in the Whifpering Place at Gloucefler: But if you fland in an Angle that is not diametrically oppofite, you hear nothing. The Reafon of conveying the Voice, is the Vault above, and the Corners being ftreightned into a very fharp Angle or Channel. In Granada are two great MarketPlaces, one cailed Plafa nova, the ocher de villa Rambla. In the great Church are two Monuments, one for Ferdinand and Ifabella, with this Infcription, Mā̄ometica Selta prostralores Heretica pravicacia extimitores Fernardus Aragonum \& Helijabetba Caftilla, vir \& uxor unamines, Catbolici appellati marmoreo clauduntur boc Tumulo. The other is of Pbilippus I. and of Foanni Daughter and Heir of Ferdinand and Ifabella, without an Infrription. In the River Daro, that runs by Granada, they find Gold among the Sand. In the Mountains of Sierra neveda, near Granada, are faid to be divers Sorts of Minerals, which are not at all looked affer. Near Motril, at the Capo di Gatto, there is a Mine of Granates covered with the Sea. They are pointed as Amethyfts and Chryftal, but the beft come from Africa: we faw that Day Monte facro, a Place within half a League of the Town, of great Devotion. In Cafile; Granada, $\xi^{\circ}$ c. the greater Cities have a Corregidore, and the leffer an filcayde, who adminifters Juftice, and are appointed and fent by the King to govern the Towns. All over the Kingdom of Cafile they eat Flefh upon Saturdays, and obferve only Fridays. On the 12th, we left Granada, and pafing by Santa Feda, travelled to Lotta, eight Leagues. 13. At Lotta we were troubled with Soldiers, that came from the Frontiers of Portugal, to take up their Winter Quarters. There had been of this Party 2600 , but this Summer at Alcantara they were reduced to 900 , the reft being flain, or dead of Difeafes. We paffed this Day by Arcbidona, Lalameda, Laronda, and lay at Pedrera, ten Leagues.
10. On the 14 th, We paffed by Ofuna, la Pobla, and lay at Elazabel ten Leagues. This Country was the beft we faw fince we came into Spain, the Land being: for the moft Part well planted and cultivated. On the 15 th, We paffed by Gandula, and arrived at Sevil, feven Leagues. Between Gandula and Sevil there are A. bundance of Olive-trees. Here we firft faw the greater Sort of Olives, which are ufually eaten in England for a Sallet, called the great Spanifs Olive ; all that we had feen in Italy or in S'pain before, being of the leffer Sort. Here is a brave Aqueduct of Brick, which conveys Water from Carmona, fix Leagues diftant: Under the Arches there are Stalacitites, as at the Aqueduct of Pifa. The Galleons bring nothing Home from the West-Indies, but Plate; the Merchant Ships are loaden with Leather, Cocoa, Sugar, Lana di Vigonna, \&cc. Of the Cocoa Nut, they make Cbocolate, thus, firt they toaft the Berries to get off the Hufk, then pound the Kernels to Powder, and to every Milao, i: e. three Pound and a half of Powder, they add and mingle, two Pound of Sugar, twelve Vanilla's, a litcle Pimentone or Guiny Pepper, (which is ufed by the Spaniards only) and a little Accbiote to give a Colour ; but chefe two laft may be omitted. They melt the Sugar, and then mingle all well together, and work it up either in Rolls or Leaves. Sevil hath of late decayed very much, and doth continually Decay more and more, the Trading Part being moft removed to Cales; the

Reafon

Reafon whereof is, becaufe they pay about twentyfeven per Cent. for all Merchandizes at Sevil, and but four or five per Cent. at Cales. The chief Places to be feen in Sevil are, r. The great Church. 2. The King's or Vice-roys Palace. 3. The Archbifhop's Palace. 4. The Steeple of the great Church like St. Mark's Tower at Venice, which you afcend almoft to the Top without Stairs, by gently inclining Plains. 5. The Franci/can Convent. 6. The Longba, where the Merchants meet about the Affairs of the Flote. 7. The Convent of Notre Dame del Peuple. 8. The Bridge of Boats over the Guadalquivir, i.e. the River Batis. The Town on the other Side this River is called Triana. 9. The Inquifition or Caftle of Triana, juft over the Bridge. 10. An old Tower called Torre d'Oro, where St. Ferdinand, that recover'd Sevil, kept Money made with Leather. I I. The Aqueduct. 12. The old Palace and Garden of the Moors. Near the Bridge, along the River Side, they come every Night with their Coaches, to take the Frefco, In the great Church, between two Altars, are three Monuments for St. Ferdinand the Wife, his Wife Beatrice and his Son Alphonfus. The fame Epitaph in Hebrere, Arabick, Greek and Latin.

Hic jacet illuftriffmus Rex Fernandus Caftelli Eg Toleti Legionis, Gallicia, Sibilla, Cordub.e, Murcie, हु Fabeni, qui totam Hi/paniam conquifivit fidelifimus, veraciffmus, confantiflmus, juftifimus, strenuiffomus, devotifimus, liberalifimas, patientifflmus, piiflimus, bumillimus, in timore EO Servitio Dei efficacifimus ; qui contrivit है exterminavit penitus Boftium fuorum proterviam; qui fublimavit Ege exaltavit omnes amicos fuos, qui civitatem Hifpalem, que caput eft EJ metropolis totius Hifpania de manibus eripuit Paganorum Eo cultui restimit Cbritiano, ubi folvens natura debitum, ad Dominum tranfmigravit ultina die Maii, Anno ab incarnatione Domini 1252 .

In the fame Church is Ferdinandus Columbus, the Son of Cbriftopber Columbus, buried, with this Epitaph.

A qui jace el mucho magnifico Signor Don Hernando Colon. el quel expleo y gaito toda fu viday facenda en aumento di los Lettras y en juntar y perpetuar en efta cividad todos los' libros di podas las fciencias, qui in fu tempo ballo y en ridurlos à quatro libros fegun estan à qui Senelados. Falle fio en este cividad à 12 di fulio $153^{2}$. Air de fu edad 50 an. 10 mefes $\mathcal{E} 14$ dies. Fue thyo del valorofo $\mathcal{E}$ memorabile Signor Don Cbrifophoro Colon. primiero Admirante, qui defcubio las Indias y nuevo mondo en vida di los Catbolicos Reys Don Fernando y Donna Ifabella di gloriofa memoria à onze de Ottobre dy mill quatrocentos y noventa y dofarnos y partio del puerio de Palos a defcubrir las contres Carabelas y novenia Perfonas ì tres de Agofo - iuntes bolbio à Caftilla con la vittoria à quattro di Marzo del anno figuente, $y$ torno despues otras dos vezes a poblar lequale fcubrio, y al fin follefcio à Valladolid vente de Maio de mill y quincentos y feys annos, Roged al Semnor por ellos.

Cbocolate is fold at Sevil for 1omething more than a Piece of Eight the Pound. Vanillas, which they mingle with Cocoa to make Cbocolate, for a Real di Plato. Accbiote, which they mingle with the other Ingredients, to give a Colour, is made of a Kind of red Earth brought from New Spain, wrought up into Cakes: It is fold for a Real di Plato the Ounce. All the Oil and Wine they have in the West-Indies goes from Spain, they not being permitted to plant Vines or Olive-trees, that they may always have a Dependance upon Spain. At and near Sevil we paid two Reals de 2uarto for a Bed; Bread, Wine, Flefh, and all other Commodities exceffive dear, excepting only Olives and Pomegranates, which were better here than in any other Part of Spain. There had lately been a great Plague in Sevil, which had very much depopulated and impoverifhed, indeed almoft ruined the City.
11. I fer out from Sevil towards Madrid: The firft Day we travelled to Carmona, where the Aquedut be-fore-mentioned begins, fix Leagues in all; which Way we faw no Houfes, but a great many Aloe-trees. We paffed les Fontes, and lay at Euia, a great Town of above 20,000 Inhabitants. Between Carmona and Euia is a very good Country, with Abundance of Corn and Olive-trees. Offuna is within four Leagues of Euia
where the Duke of Offuna hath a Palace. We travelled this Day nine Leagues. We paffed over the River Xenil, that runs into Guadalquivir, baited at $A r$ rofith, and lodged at Cordova, eight Leagues. About a League from Cordova we paffed another little River that runs into Guadalquivir. Before we entred Cordove, we rode over a great Stone Bridge that here croffes the Guadalquivir. In the Niddle of the Bridge ftands a Statue erected to the Angel Raplanel with this Infcription.

Beatifimo Rapbaeli angelorum proceri, cufodi fuo vigilantiflmo, qui ante annos 300 fub Pafcbale antifite populum pefte depopulante se medicum tante cladis futurum predivit, qui fubinde anno 1578 venerabili Presbytero Andree de las Roelas S. S. M. M. exuvias evulgavit, EJ tandem patefecit Corduvenfium tuielom fibi a Deo demum datam. Quare ut jufta gratitudo diu ftaret S. P. Q. Cordubenfis banc lapideam ftatuam cautus $\mathcal{O}$ pius erexit, mults procuratione Domini Fofepbi de Valdacanas \& Herera हु Domini Gundefalvi de Cea E Rios Senatorum pontifice Innocente X. Hijpan. rege P'bilippoIV. epifcopo domino fratre Petro de Tapia, pratore domino Alpbonfo de flores छु monte Negro, Amno 1651.

The moft confiderable Places in Cordove are, 1. The Bifhop's Palace. 2. The Cavallerifca, where the King keeps a great many Horfes. 3. The Ruins of Almanfor's Palace, the laft King of the Moors. 4. Ploffa di Corridera. 5. The Church of the Augufine Fryers. 6. The great Church, which was anciently a Mofque. It is large, but very low, fupported by a great many Rows of Pillars, in a quadrate Order, fixteen Rows one Way, and thirty another. Upon many of the Pillars are Moors Heads carved in the Stone, and one or two with Turbants on. In the Middle of this Church is the great Chapel, where are Ceveral Bifhops interred. In one of the Chapels, that is now dedicated to St. Peter, in the Moors Time was kept a Thigh of Mohammed; round about the Cornifh of this Chapel, and that Part of the Church next it, is an Arabick Infcription. The People complain grievoully, that Cordova is quite ruined and undone by Gabels and Taxes. On the 27 th we left Cordova, and, after a League or two riding, entred the Sierra Morena, a miferable defolate mountainous Country, and lodg'd at a little Village called Adamus, fix Leagues. On the 28 ch , we travelled all Day through the Sierra Morena, and lay at a Village called La Conquifta, nine Leagues. 29th; In this Day's Journey we Jaw Abundance of Galls upon the Ilices, which were of like Bignefs, Figure, Colour, Confiftency, and other Accidents with thofe that grow upon Oaks. This Day we firft met with red Wine again, which they call Vino tinto. We got fafe out of Sierra Morena, and came to Almedovar del Campo, a tolerable Borrough nine Leagues. About the Middle of Sierra Morena are the Bounds of the Caftilia nova and Andaluzia. On the 3oth, we paffed by Caraquol, Cividadreal, and lay at Malagon, ten Leagues. Between Malagon and Cividadreal, we paffed over the River Anas, now called Guadiana, which was there but a little Brook. In this Day's Journey we met with a great many great Flocks of Sheep and Goats, going towards the Sierra Morena out of Caftile; it being the Cuftom all Summer to feed their Sheep urpon upon the Mountains of Cafile, and in Winter in the Sierra Morena. On the 3 Ift , we paffed by the Ruins of an Aqueduct, about four Leagues from Malagon, chen Kvenas, a good fizeable Village, and lay at Orgas, ten Leagues.
12. November 1, We paffed through Toledo, and lay at Efquinos, eleven Leagues. As foon as ever we paffed the Sierra Morena, we felt a great Change of Weather, the warm Air that comes from Afric and the Mediter ranean Sea being flopped by the Interpofition of the Mountains. This Day there was here a hard Froft, and pretty thick Ice. The moft confiderable Things in Toledo are, 1 . The Bridge over the Tagus, confifting of but two Arches, one great one, and one little one. 2. The Shambles, where notwithftanding the Coldnefs of the Day, I faw Abundance of Flies; which confutes the Story, that there is but one great Fly there all the Year. 3. The great Church, where there are many Monuments of Bifhops, but without Infcriptions: In

## Chap. IV.

the Capella Maggior lie interred two Kings, and in the Privileges. Guipufcoa is under the Bimop of Pampelona. Capella de los Kes, four Kings. 4. The King's Palace. 5. The Ruins of a famous Engine to raife up Water to the King's Palace. There is fo little of it remaining, that it is impoffible thence to find out all the Contrivance and Intrigue of it. Between Toledo and Madrid the Country is very populous, and the Soil very good. All along the Road, from Sevil to Madrid, the common Fare is Rabbets, red legg'd Partridges, and Eggs, which are fufficiently dear. We arrived at Madrid, fix Leagues; near the Town we paffed over the River Xarante. Madrid is very populous, well built with good Brick Houfes, many, have Glafs Windows, which is worth the noting, becaufe you fhall farce fee any in all Spain befides. The Streets are very foul and nafty. There is one very fair Piazza or Market-place, encompaffed round with high and uniform Houfes, having five Rows of Balconies one above another, and underneath Portico's or Cloifters quite round. The chief Things to be feen in Madrid are, I. The Prifon. 2. The Piazza juft now mentioned. 3. The King's' Chapel. 4. The Palaces of feveral Noblemen, as that of the Duke of Alva, that of the Duke of Medina de Tos Torres, \&xc. 5. The King's Palace, where there is the King's Cavallerifoa and the Queen's Cavallerifa. 6. A great Piazza before the Palace, where are Abundance of Coaches always attending. 7. The Engli/h College of t'beatines. 8. Il Retiro, out of the Town, the Efcurial and El Pardo.
13. On the $5^{\text {th, I fet out from Madrid for Port St. }}$ Sebaftian. We paffed within Sight of the Ffourial and El Pardo, and lay that Night at St. Augufin, fix Leagues. On the 6th we paffed Butrago, and lay at Samoferra; all the Way a barren, miferable, mountainous Country, eleven Leagues. On the 7th we paffed Frecedilie, and lay at Aranda, having croffed the River Durius or Duero, eleven Leagues. On the 8th we paffed Babalon and Lerma, where is a Convent of Dominican Fryers, and a Palace of the Duke of Lerma's, and came that Night to Burgos, twelve Leagues. The moft confiderable Things in Burgos are, 1. The Bridge over the River Relarzon. 2. The Gate at the End of the Bridge, where are the Statues of Cbarles V. of Janus Calvus, of Diego Porcellero, of Fernandez Gonfales, of Nuncio Pafures, of Don Carlotte, all famous Men of Burgos. 3. The Market-place. 4. The great Church, in which are a great many Monuments of Bifhops and Canons, two great Monuments of Pedro Fernando di Velafco, Conitable of Cafiile, and his Wife Mercia di Mendoza Countefs of Haro. This Night we lodged at Quintora Villes, five Leagues. On the 1 oth we paffed by Pancorva, a Place very famous for good Water; Miranda, a great Town, where there is a good Bridge over the River Iberus, and after that we had. paffed two other Rivers, Baiis and Sadurra, and. lay at Erminian, cleven Leagues. At Miranda there is a great Market for Wheat.

On the IIth, We travelled to Vittoria. Over one of the Gates is the Statue of King Bamba, and infcribed in Gold Letters, Hac est Vizioria que vincit, four Leagues. Vittoria is the chief City of all the Comntry called Alaba. We paffed this Day by Salines, the firft Town of Guipufcoa, and lay at Efcarias, nine Leagues. In Guipufcoa they pay no Taxes or other Duties to the King, without the Confent of the whole Country. The whole Diftrict is more commonly called Provincia than Guipufcoa; it is canton'd out into a great many Corporations and Villages, every one of which fends one, two, or three Reprefentatives to the general Meeting, when there is any publick Bufinefs. All Offices are annual, and chofen diverlly, according to the differing Cuftoms of the Town. The chiefOfficer in each Town to determine all civil and criminal Caufes is the Alcalda, but from him they may appeal to the Governor of the Province, fent by the King every third Year, and from the Governor to the King's Council at Valladolid. Next to the Alcalda are two Regidones, to look after the Prices of all Commodities, a Bolfer for the Treafury, a Medino for the Prifon, Argozils or Serjeants, Eic. They boaft that they are the Walls of Spain, and therefore have many

Vol. II. $\mathrm{N}^{\circ} \mathrm{II} 7$. In Guipufcoa and Bifcay they have a peculiar Language of their own, and therefore fend their Children to School to learn Spanifb (which, they call Romance) as we do ours to learn Latin. The Searchers having hindered -us, we were forced to travel a great Way in the Night; we were lighted by Tiafor Teas; which burnt as well, and gave as good a Light as Torches. When they went out, they toffed them up and down in their Hands, which kindled them again. Thefe Teas (fo called, doubtlefs from the Latin Word Tada) are very commonly ufed in this Country, and are nothing elfe but Baftons of Wood hacked and cleft, (but fo as the Pieces hang together) and afterwards foundly dried in an Oven or Chimney. Along the Middle they ufe to cleave them almoft quite afunder. They are made of feveral Sorts of Wood of Robla, i. e. Oak; Haia, i.e. Beach-Tree, but the beft of Avellana, i. e. Hazel. I wonder much at this, unlefs they bave fome Way of preparing the Wood by fleeping it in Oil or inflammable Motter The Tcedx of the Ancients weve made only of the Trunks of old and Sappy Pines.
14. On the 12th, We paffed by Mondragone, where there is a Fabrica of Arms for the King, Oniate, Legajpa, Villa real, and lay at Villa Franca, 1even Leaoues. We left St. Adrion, which is the ordinary Road, a little on our Left-hand. This Country is very populous and wooded, all the Hills being covered with Oaks. They ufe no Ploughs, but turn over the Ground with Tridents of Iron; four or five of them working together, and thrufting in their Tridents all together, turn up a Yard or two of Earth at a Time, which they afterwards drefs and level, like Beds in a Garden. The People are fomething better conditioncd than the Spaniards; richer and far more populous; 1. Becaufe there is a better Government, and greater Liberty. 2. There is Abundance of Wood and Iron. 3. More Rain than in the other Parts of Spain. On the 13 th, We paffed Tolofa, and arrived this Night at St. Sebaftian, having travelled eight Leagues. The moft obfervable Things in St. Sebaftian are, I. The Walls and Guns. 2. A great Convent of Dominican Friars, in which there is a famous Pair of Stone Stairs, each Step being of one in tire Stone, and fupported only on one Side. 3. The Haven. The Government of St. Sebajfian confits of a great Council of all that have one or more Houfes, and are married, but none can bear Office unlefs he have two Houfes; of thefe there are not above 150 or 200, though the Town be very populous, containing about 24,000 Souls. Once in a Year all the Names of this 150 or 200 are put into an Urn, and a Child takes out eight to be Electors. Every one of thefe eight chules his Man. The old Magiftrates that are juft then going out, divide thefe eight, that the Electors have cholen, into four Pairs, fitting them as well as they can, v. g: an old Man and a young together, Esc. Thele four Pairs are put into an Urn. The firft Pair that are drawn out, are the two Alcaldas for that Year, the fecond Pair the Deputy Alcaldas, the third Pair the two Regidores; the fourth Pair the two Deputy Regidores. In much the fame Manner they chufe two Jurats, one Syndick or Attorney-General, one Treafurer, $E_{c} c$. All thefe Officers make a leffer Senate, but in Bufineffes of Importance the whole Number meets. There is no Diftinction of Nobiles and Plebeii, but all that are defcended from Guipufcoans that are married, and have one Houfe, are in a Capacity to be Electors; all that have two Houfes to be Magiftrates ; the Jurats Places are moft defired, there being a great many ecclefiaftical Preferments belonging to the Town, the Difpofition whereof, when they come to be vacant, is in them, who ufually beftow them upon their Relations and Friends. Every Winter there are feveral Whales caught upon this Coaft, they coming hither in Winter, and frequenting here, as they do upon the Coaft of Greenland in Summer. They catch them by ftriking them with a Harping Iron, after the fame Manner as they do Sword-fifh upon the Coaft of Calabria and Sicily. Abundance of Cyder made about St. Sebaftion and Bayonne. On the 14 th , From St. Sebastian I travelled through Orogna, Irim, on the Lefs

Hand of which is Fontarabia, a ftrong Fort juft on the Frontiers of Spain. About half a League from Irimz is the River that parts France and Spain. In the middle of this River is an Inland where the Kings of France and Spain met, when Lerwis XIV. the prefent King, married Pbilip the IV's Daughter. The Inand was divided juft in the middle, and a Houfe built, fo that at the Table where they fat to eat, the King of France fat in France, and the King of Spain in Spain.
15. Spain is, in many Places, not to fay moft, very thin of People, and almoft defolate. The Caufes are, 1. A bad Religion. 2. The tyrannical Inquifition. 3. The Multitude of Whores. 4. The Barrennefs of the Soil: 5. The wretched Lazinefs of the People, very like the Irijh, walking flowly; and always cumber'd with a great Cloak and long Sword. 6. The Expulfion of the fewes and Moors, the firlt of which were planted there by the Emperor Adrian, and the latter by the Caliphs after the Conquelt of Spain. 7. Wars and Plantations. In all the Towns, efpecially in the Soutb and $W_{e} /$ Parts of Spain, a great many Ruins of Houfes are to be feen. Within a Quarter of a League of a Town you begin to fee Ground ploughed, otherwife all a wild Country, and Nothing but Rofemary, Ciftus, Juniper, Lavender, Broom, Lentijcus, E$c$. growing in the Fields and on the Hills. Little or no Hay any where in Spain, they feeding their Mules and Horfes with Straw : At leaft one half of Spain is mountainous. The Spaniards are not fo abftinent as fome People take them to be, eating the beft they can get, and freely enough, if it be at another Man's Coft, and in Inns never refufing Partridges, Quails, E $\mathcal{E}^{c}$. for the Dearnefs. Lazinefs and Slooth makes them poor, and Poverty makes them pinch their Bellies and fair hardly.

They feldom mingle Water with their Wine, it being a common Saying among them, Vino poco et puro, though all over Spain the Wine is very hot and ftrong. They delight much in Pimentone, i. e. Guiny Pepper, and mingle it with their Sauces. In roafting of Meat they never ufe a Dripping-pan, but draw the Coals juft under the Meat, which though it be not fo cleanly, yet is the quicker and more thrifty Way for faving of Fewel. They tear Rabbits in funder with their Hands, when they are almoft roafted, and ftew them in a Pot with Water and Pimentone. To toaft Bread they throw it upon the Coals. They long and ask for every Thing they fee, to avoid which, a Merchant that travelled with me was wont to put fomething into his Vietuals which they did not love. They take Tobacco much in Snuff, and if one take out a Box of Snuff, he mult give fome to all the Company. The beft Perfon in the Company, at Table, cuts and tears the Meat in Pieces, and gives to every Man his Share. They are mof impertinently inquifitive whence you come, whither you go, what Bufinefs you have; moft horribly rude, infolent, and imperious, uncivil to Strangers, asking them, What do you come into our Country for? We do not go into yours ; i.e. this is to be underftood of the middle and inferior Sort of People, many of the Gentry being very civil and well bred.
Their Children are the moft unmannerly and ill-bred of any in the World. The Sons of Frencb Fathers and Spanifh Women, when they are grown up, often turn their Fathers out of Doors, having many Privileges above them for being born in Spain. They are extremely given to Lying ; Almuzzos, and fuch Kind of Fellows, not to be believed or trufted in any Thing they promife. They ride altogether upon Mules, and carry their Portmanteaus before them, for fear they fhould be loft or flolen from behind them; they lie between a high Pummel of the Saddle and an Iron Hook. Inftead of Stirrops, Perfons of Quality ufe great Clogs of Wood, of the Shape of Shoes without Heels. They cut away the Mules Hair clofe to the Skin under the Saddles and Portmanteaus to avoid Galling. Of this Baftard Breed of Animals, the Males are ufually bigger than the Females. 2. Whether the Reafon be that they are always bred of a Mare and an He-Afs. They piis very often. 2. Whether the Reafon be the Sharpnefs of their Urine, or the Smallnefs of their Bladder?

They piifs almoft always when they go through Water. They fhoe them with Shoes a deal broader than their Feet, to prevents I fuppofe, the breaking of their Hoofs. Under the Mouths of their Mules of Burthen, they ufually hang a Net with Provender in it. Thefe Beafts are better at climbing of Mountains than Horfes, have a greater Courage to endure long and hard Travel, and, befides, are maintained at lefs Charge.
The Spaniards feldom ride alone, but fay for a Troppas, as they do for a Caravan in Arabia. The common Phrafes or Forms of Salutation, when they meet or pafs by one another, are, Guarda Dios voffes, i. e. vous autres, i. e. God defend you. Adios, i. e. Adieu. Vaga con Dios, i. e. God go along with you. When they are angry, Cornuto, i. e. Cuckold, is the firtt Word, and fometimes Cornutifimo. When they fpeak to their Mules, or Boys they fend of Errands, they fay Anda Cornuto, i. e. Go, cuckold. When they refufe a Courtefy or Complement to drink firt, go firft, or the like, they fay, Nanper vita mea, i. e. no, by my Life. At any Thing ftrange or ridiculous, they cry out, Cuerpo di Dios or di Cbrifto, i.e. Body of God or Body of Chrift. When they call to one to make him hear, inftead of $E$ coutes in French, or Senti in Italian, they cry, $O$ yes, juft as Criers do in England. When they put off a Beggar, not giving him an Alms, they fay, Voltes perdonné, i. e. Good Friend, pardon or excufe me. As for their Religion, the Spaniards are the moft orthodox and rigid Romanifts in the World, it being a Saying among them, Faltando in uno punto à Dios, i. e. If you leave the Church in one Punctulio; God be with you; you mult needs be damned. All over Spain there are Abundance of pitiful wooden Croffes fet up in the Middle of Heaps of Stone. Under all the Pictures of the Virgin Mary is written, Concebida /in peccado originale, i. e. conceived without original Sin. At the Ave Mary Bell, they all fall down upon their Knees; whereas in other Countries they are contented only to pluck off their Hats. When they have done their Devotions, as alfo after their Meals, when they take away, and when they go to Bed, they fay, Sia lodato il fantiflimo Sacramento, i. e. praifed be the moft holy Sacrament.
For Fornication and Impurity, they are the wort of all Nations, at leaft in Europe; alnoft all the Inns in Andalufa, Cafile, Granada, Murcia, \&zc. having Whores who drefs the Meat, and do all the Bufinefs. They are to be hired at a very cheap Rate. It were a Shame to mention their Impudence, Lewdnefs and immodeft Behaviour and Practices. In Catalonia, Guipuscoa, and fome other Places, they are not fo bad. They are fo lazy, that in their Shops they will fay they have not a Commodity, rather than take Pains to look for it, not to be hired to carry a Portmanteau, go of an Errand, $E^{\circ}$ c. but at an exceffive Rate. Mercers never tie up any Thing they fell, and if they allow Paper, they only rudely mumble up the Commodities in it. Of their fantaftical and ridiculous Pride, and that too in the extremeft Poverty, all the World rings. If there be any Employment that you would fet them about, which they think themfelves too good for, they prefently fay, Send for a Frencbman. Indeed, the French do almoft all the Work in Spain. All the beft Shops are kept by Frencbmen, the beft Workmen in every Kind are French, and, I believe, near one Fourth or one Fifh Part of the People in Spain are of that Nation. I have heard fome Travellers fay, that fhould the King of France recall his Subjects out of Spain, the Spaniards would hazard being all ftarved to Death.
Bread is very fcarce and very dear in many Places of Spain, becaufe of the Barrennefs of the Soil, and Want of Rain, but chiefly becaufe of the Sloth of the People in letting a great deal of Ground lie untilled, and in not taking the Pains to fetch Corn and Bread from thofe Places where there is Plenty. So that in a Day's Journey the Price of Bread will be trebled, and in another Day's Journey fall as múch again. This Summer there was a Tumult at Madrid, the poor People gathering about the King's Palace, cried out, Let the King live, but let the ill Government die; let Exactors

## Chap. IV.

through
die, Ecc. juft as they did at Naples under the Rebellion of Mafaniello. Upon which the King fent to all the Towns about for Bread Corn, and in two or three Days Bread was very plentiful and cheap. All over Catàlonia Bread is very cheap. The Spanifo Bread is commended for the beft of the World; and well it may be, if, as we have heard, they pick their Wheat Grain by Grain. At my being at Madrid, there was an Engineer there, fent by the Emperor, that had invented a Plow, called by the Spaniards a Sembrador, to fow Corn at equal Diftances, and one Grain in a Hole ; the Defcription whereof hath been fince publifhed in the Pbilofopbical Tranfarions.

In all Kind of good Learning the Spaniards are behind the reft of Europe, underttanding nothing at all but a little of the old wrangling Philofophy and School Divinity. The People are much difcontented all over Spain, complaining of Taxes, evil Counfellors, $\mathcal{F}^{\circ}$. but they have a good Opinion of, and are generally well affected to their King, whofe Intentions they fay are very good. As for their Habit and Drefs, in that they are to be commended that they are conftant to the fame Fafhions, though they be not the moft convenient that might be devifed. To change for the better, I think it rather commendable than blameworthy; but to change out of meer Levity, or an apifh Imitation of ochers, is foolifh and unreafonable.

They wear great Hats with broad Crowns, and the Top broader than the Bottom. Their Hair moft commonly, and efpecially when they travel, they tie up in a Knot behind, and fometimes braid like Women's. Their Bands lie upon black Collars juft of the fame Bignefs, or a little bigger. They are joined to the Collar, and put on Band and Collar together. They wear very much Cambrick Half Shirts, and have their Sleeves open before and behind, both Winter and Summer: They have great Skirts upon their Doublets; their Breeches are very ftrait and clofe to their Thighs, and button'd down on each Side, and reach a little lower than the Knee. They wear very night wrought black Silk Stockings, that the white Linnen Stockings which they wear underneath, may be feen through them. Their Shoes juft fit their Feet, very light and thin, with low Heels. Over their Doublets they wear a clofe Coat or Jerkin, with open Sleeves like the Doublet, and for the moft Part with hanging Sleeves, like Childrens, yet never reaching lower than their Skirts, a very long Sword and a fhorr Dagger hanging juft behind them; and at laft, over all, a Cloak with a great Cape. The Women wear great Fardingales, ftanding fo far out on each Side, that to enter in at an ordinary Door, they are forced to go Sideways; when they go Abroad are covered with a Veil of black, having only a Hole left for one Eye.

The poor People wear Shoes made of Packthread. The moft noble Sport in Spain is the Feu de Tarreau, or Bull-Fighting, praciifed at Valentia, Madrid, \&c. At Madrid, three times in the Year, where in the MarketPlace, a brave Don on Horfeback, and a great many Pages on Foot, fight with a wild Bull; when one Bull is killed or much wounded, they turn in another. Seldom but fome of the Pages are killed; and with thefe cruel and bloody Spectacles the People are much delighted, as were the Romans of old in the Time of Heathenifm.
16. We fee very plainly from Mr. Willougbby's Account, that Spain is not naturally fo poor a Country as is commonly imagin'd. The Climate is excellent, the Soil very far from being bad, and what Corn is produced in Spain may be truly call'd the beft of its kind in Europe. The only thing that is wanting is, a right Government, for this would encourage Induftry, render the Country more populous, and make the People willing to work hard, in order to fare well. It is highly probable, that the Reader will incline to know what are the principal Faults of this Government, whence it comes to pafs that they have fubfifted fo long, and are like fo much longer to fubfift, and what might be reafonably expected in Favour of the Spanifo Nation, if proper Remedies were applied to thefe Evils.

SPAIN.
In the firt Place then, with Regard to the Government, the King, though he feems abfolute enough, wants Power to take thore Steps that may appear neceffary for the Good of his Subjects. In Spain Forms are not only regarded, but reverenced as facred. There is not a. fingle Nobleman in Spain but has very great Rights and Privileges in his own Lands; on the other Hand, there are very few of the great Nobility that have not confiderable Towns upon their Eftates, to which they have granted Immunities; and in Refpect to either of thefe; there can be no Innovation made, thouigh ever fo much; or ever fo apparently, for the Advantage of the Subjects in general. Thus it appears that there is a great deal of Liberty in Spain, and the People are very tenacious of it. The King alfo has great Power, more efpecially in the Countries that hold immediately of the Crown; he therefore favours them in Point of Trade; and in other Refpects; but the Crown of Spain has been fo long at an exorbitant Expence, boch of Treafure and of Men, that it wants Force to rid itfelf of old Inconveniencies, at the fame time that, from its prefent Weaknefs, new ones are continually growing. It mult indeed be owned, that the Cortes, or Affembly of the States, might remove many of thefe Evils, but Princes; if they can avoid it, are unwilling to borrow Powers from their People and Minifters, much more unwilling to have their Management of Power looked into and examined. To fecure the Peace of the Kingdom, the Defcendants of the Moors were banifhed; this depopulated the Kingdom of Granada, then the richeft and moft fertile Part of Spain; and now for want of thofe induftrious People, the moft barren. Upon a Mixture of religious and political Principles, the Jews were alfo driven out, and with them went all Induftry in the low Arts of Retailing and Pedlary, as well as in the fuperior Branches of the mercantile Bufinefs. In a Word, to exprefs the Thing as clearly as poffible to an Englijb Reader, the firt Meafure was calculated to deftroy the Land, and the latter effectually ruined the Money'd Intereft.

The plain Remedies for thefe Mifchiefs muft be the bringing all the Kingdoms in Spain under one Conftitution and Form of Laws, as they are fubject only to one Prince. The raifing Men and Money ought to be reftrained to Cafes of Neceffity, and then it fhould be done as equally as poffible; for when every Body fuffers alike, it very feldom happens that any Body complains. Titles of Honour, and the Privileges annexed to them, fhould be connected with Property, as well as with Defcent, which amongft the People, naturally proud, would prove the greater Spur to Induftry. The Trade of the new World ought to be laid open to all the Subjects of Spain, under Refrictions that may be complied with, and thofe Reftrictions ought not to be relaxed; as it ftands at prefent, this Commerce is fo far in the Hands of the Crown, as to hinder it from being beneficial to the People; and yet there is fuch a univerfal Corruption reigns amonglt the Officers employed by the Crown, that greatly abridges the King's Profits. If Strangers fettled in Spain had the Means of acquiring Property, and the Privileges that ought to be annexed to Property, Manufactures would rife of themfelves, and the Produce of Spanib Commodities would remain in Spain, whereas now all the Advantages arifing from Trade are collected as it were in a Sieve, fo that as they come in they appear to be very great, but they fpeedily leak through, and that to fuch a Degree that little or nothing is left behind.
The Want of Attention to there plain Maxims has rendered the Government weak and infirm; the purfuing Schemes directly oppofite to thefe Maxims has increafed this Weaknefs into a kind of galloping Confumption, and this has enervated the Monarchy to fuch a Degree, that without a fpeedy Reformation, it muft crumble to Pieces by its own Weight; and that this is not a Conjecture but a Fact, appears plainly from the miferable Scate of Sc. Domsingo, Porto Rico, and other Spanib Settlements; but if fuch a Reformation were to take Place, the Kingdom of Spain has in itfelf vaft Refources. There are in it many fine Ports which
would
would enable its Inhabitants to carry on an extenfive
Commerce, and the Means of carrying them on are alfo in the Hands of the Inhabitants. We will give a few Inftances, which at the fame Time that they inform, cannot fail of pleafing and entertaining an intelligent Reader.
To begin then with the Wooll. All the World knows that Spain produces as good, fome, who are well verfed in that Commodity, fay better, than any in Europe; of this the Englifb ufe a vaft Quantity, and of late the French and Dutcb a much greater. Their Wine is alfo a very confiderable Article; fo long ago as the Year 1690. it appeared by their Cuftom-houfe Books, that they exported fixteen thoufand Pipes annually from Maloga, Alicant, Port Sr. Mary's, Porto Real, St. Lucar, and Rota. They make vaft Quantities of Oil in the Inand of Majorca, and in the Country about Sevil and Malaga. Ceftile Soap is another great Article, and befides this, Pot-Afhes for the Ufe of Glafs-works, and the Whitening of Linnen, a Commodity that deferves Notice.

They have great Quantities of the very beft Sort of Salt, of which they fell a great deal at prefent, but nothing in Comparifon of what they might fell. In the Principality of $B i j_{c a y}$, and in the upper Navarre, they have large Quantities of Iron, and that Iron is juftly efteemed excellent. From Bilboa and Sc. Sebaftions they carry on two or three kinds of Fifheries, and thefe might be extended vaftly. We will add to thefe Articles, that of Fruits, which is very confiderable, fuch as Oranges four and fiweet, Raifins of the Sun, and many others; beffides all the Drugs that they derive from the Weft-Indies, which are at once the richeft and mont faleable, fuch as, Cochineal, Indigo, Vanella's, Jalap, Sarfa Parilla, Jefuits Bark, E'c. The Tobacco Trade, Skins and Hides, and a Multitude of other Things might be added.
All this plainly fhows, that if Spein is very thin of People, it is entirely owing to Errors in Government, fince the Country would have wherewithal to maintain its Inhabitants, if it was ever fo populous, and it might be filled with Inhabitants from other Countries, if fome idle fool:in Cuftoms were taken away; for thefe Cuftoms make Strangers leave Spain, as foon as they have acquired Fortuncs in it, which is doubly difadvantageous to the State ; firft by the Lofs of fo many Subjects, and next by the great Sums they carry off. We may judge of this from the Balance that is faid to arife to France, from what is acquired by itinerant Labourers, that go to Spain in the Spring, and return before Winter, which has been computed, and not extravagantly neither, at half a Million Sterling; yet fuch is the Folly of the Spaniards, that inftead of regretting this Lofs, they vaJue themfelves upon it, and believe, that in Comparifon of the French, they are a rich and great People, to whom others willingly fubmit themfelves, for the Sake of getting Bread by them, without confidering that thete Strangers whom they defpife, eat that Bread which they want, and go Home rich into their own Country, while thofe who call themfelves their Mafters are left to ftarve. If this Fact was not evident and undeniable, it would certainly be incredible.
Give me Leave alfo to obferve, that as Spain is a very large Country, and compofed of Provinces that differ very much from each other in Soil and Climate; fo thofe, who feem to be lefs happy in thefe Particulare, are by much the beft cultivated, and fulleft of Inhabitants: As, for Inftance, the Upper Navarre, for the Lower belongs to France, is very cold and mountainous; yet Pompeluna, which is the Capital, is a fair well-built City, and has a good Trade: The People there, and throughout the whole Country, are active, frugal and induttrious, civil to Strangers, and generally fpeaking, free from moft of thofe Vices that are commonly imputed to the Spaniards. It is the fame Thing in Bifcay, where, though the Land is alfo far from being fercile; yet the People are never in Want; their Farms require Labour and Manure ; the Owners befow it chearfully; and there is more Trade carricd on, in Proportion to the Extent of this Diftriet, than
in all the Kingdom befide. The People alfo of Bicay and Navarre are the beft Soldiers, not only as they are robuft in their Conflitutions, and very hardy, but as they are active, diligent and very capable of bearing Fatigue. The Bifcaneers alfo are excellent Seamen ; their Barks are well built; they are well vitualled, and well manned; they fifh for Cods on the Nerefoundland Banks; they have a Share in the Greenland Fifhery; and whereas the Spanifb Seamen in general are fow and awkward, thefe are as brisk and as capable in every Refpeet as ours. But in Valertia, Murcia and Grenada, Countries that were formerly very rich, and produced vaft Quantities of Grain, the Land lies untilled, and the People are poor and farving, merely becaufe they are idle and will not work. In Andalusfa, indeed, which may be ftiled the Paradife of Spain, there is great Plenty, and the Country has a fine Appearance; but even here vaft Improvements might be made, if the Inhabitants were more induftrious, and did not think four Hours Labour in twenty four an intolerable Fatigue.
That the Spaniards have Genius and Parts is certain, and yet both are commonly mifapplied; for as our Author obferves, they are a Hundred Years behind the reft of Europe, in almoft all Branches of Literature : not becaufe they want Abilities, but becaufe they are attach'd to their old Notions, and had rather go on in the Paths of their Forefathers, though ever for rugged and uncooth, than difhonour them fo far, as to ftrike out into better Roads that are new. In Poetry, Romances, Novels, and fuch Kind of Writings, they fhow a Spirit and an Invention, that is a clear Evidence of their falling fhort in other Things, merely from Want of Attention and Application : Yet with all this, their Reverence and Regard for Authority, they want not a flrong Propenfity to Liberty; and though no People in the Univerfe are more loyal to their Princes, yet they are far from being blind to the Errors in their Adminiftration; which, however, they afcribe confantly to their Minifters, never to themfelves. When they meet in the Evenings, as they commonly do in the great Squares of Madrid, and other Cities, they difcourfe very frankly upon all Sorts of Subjects, and fpare their Superiors as little as in the freeft Countries in Europe.
In thefe little Cabals, the fecret Hiftory and Policy of Spain may be very truly learned, at the fame Time that it gives you a very natural Picture of the real Genius and genuine Difpofition of the People. The Birth, the Rife, Progrefs and Summit of every Minifter's Fortune, are here fairly difcuffed; his private Life, as well as his publick Adminiftration, canvaffed, and the Confequences of his Miftakes either predicted before they happened, or traced to their true Sources afterwards. It muft be owned, that thefe Politicians are but very low People; a Taylor, perhaps, or a Shoemaker, is one of the moof enlightened Members of this Society; but they are ftrangely miftaken, who fhall perfuade themfelves from thence, that nothing great or fenfible paffes in thefe Converfations. The very contrary is ftrietly true: This Cuftom has reigned fo long in Spain, that the whole Nation are become Statefinen, at leaft, to fuch a Degree, as to form a right enough Judgment of a Minifter's Behaviour in Domeftick Concerns; and therefore the famous Conde-Duke de Olivarez, had always his Spies amongft them, whofe Reports he committed to Writing ; and it was againft the Charge drawn from them, that he wrote his famous Juftification, which is beyond Controverfy the beft Apology that ever fell from a Minifter's Pen. The King, at the Time he wrote it, was ftrongly inclined to reftore him to his Favour, but the Mob Politicians of Madrid pronounced him undone; as foon as this excellent Piece appeared: A Favourite, faid they, can never rife again, after Showing that bis Mafer was in the Wrong to let bim fall.

Now we are upon this Chapter of Politicks, I cannot help adding a Thought of my own, which is this, that the indulging the People of Spoin in thefe extraordinary Liberties has been the great Secret by which
they have been kept conitantly loyal, without an armed Force ; for the Kings of Spain are neither crowned, as other Monarchs are, nor do they keep any Guards : The firft they think unneceffary in an hereditary Kingdom; and as for the latter, Pbilip the Third faid truly, that Guards migbt proteet Tyrants, but a jult Prince needed no other Guards thon bis own Subjests. The People being thus indulged in Freedom of Speech, and making Ufe of this Freedom openly, never enter into fecret Cabals; fometimes, indeed, they affemble in Crowds before the Palace, and reprefented their Grievances in very round Terms; but they began and ended with this Exclamation, Let our good King live for ever, but let the wicked Adminijtration go to the Devil. A little Condefcenfion, and the Redreffing a few of the moft notorious Grievances, always quieted them fo, that their Monarchs have never thought themfelves in Danger ; and their Minifters know, upon fuch Occifions, how to purchafe Peace upon reafonable Terms. [The Reader is to obferve, that all that is here advanced relates to the Old Spanish Monarchy under the Kings of the Houfe of Auflia; for fince the Acceffion of the Bourbon Family, the King of Spain has not only had Guards, but a very formidable Body of Houfehold Troops. The long War, occafioned by the Acceffion of the late King Pbilip, gave him an Opportunity of eftablifhing thefe; and it is not probable that he or his Succeffors will ever part with them.]
17. We cannot have, for the Time in which they were written, better Accounts than thofe given us by Mr. Willougbby; nor are the Additions lefs curious, more efpecially with refpect to the Coral Fifhery, our former Relations being very little to be depended upon. There was likewife, in the fame Book, as large and -particular a Detail as to Lead Mines; but the Writing being befaced, it was impoffible to pick it out. But there is one Objection to which this Collection would be liable, if we inferted no other Travels but thefe, viz. that they are many Years old; that Things are much changed fince, and that People would be glad to know how they look nearer their own Times. In order to guard againft this, and at the fame Time to fupply another Deficiency, which is the Leaving feveral Provinces untouch'd, we fhall, in the next Section, prefent the Reader with the Travels of an Englifs Gentleman, not only through Spain, but Portugal alfo; later in Point of Time by about thirty Years, than thofe which have been already given, and which are written with great Plainnefs and Perfpicuity. It is, indeed, to be wifhed, that we had a better Acquaintance with their Author, fince this would very probably give us a better Opinion of the Work itfelf; but as we have not, we muft be content to take it the other Way, and efteem the Author for the Sake of his Work, which will appear more pleafant to a modern Reader, as it is writ-
ten in the Language of thefe Times. We might, indeed, have fmoothed thofe of Mr. Willougbby, and render ${ }^{5}$ d them more graceful in the Eyes of many People, by taking them out of their ancient Garb s but againit this we had many Reafons.
It feems but juft, that a Man, and efpecially a Man of his Quality, flould tell his Tale in his own Language, and after his own Manner, efpecially if there be nothing in it barbarous or uncouth: It is very far from being an eafy Matter to give precifely the Senfé of an Author, who writes in our own Tongue, in any other Words thain his own; for either we fall hort of, or exceed his Ideas ; and to be convinced of this, we need only make a Tryal. There is a great Beauty in feeing thefe Variety of Stiles, which is alfo heighten'd by its Propriety. In a Treatife of Geography, or even in a Hiftory of Voyages, Uniformity is requifite; but it is otherwife in a Collection, and thofe have been always efteemed moft, that have been the exacteft in this Refpect, fuch as Ramufos in Italian, Thevenots in French, and Hackluyts in our own. This laft is a very proper Inftance, for by comparing him with his Succeffor Purchas; we may eafily difcern the Inconveniences that attend a finical Nicety, in an Editor who prefers his own Manner of Writing to that of all other Men. The Reverend Author we have laft mentioned, confider'd himfelf, and was confider'd in his own Times as a Wit ; that is to fay, he had a Humour of playing upon Words, and introducing Burlefque Remarks upon very ferious Subjects; which has brought him into Difcredit with the prefent Age, when a chafter and more correct Stile is grown into Fafhion.
But though I do not think it expedient, that an Editor fhould always new cloath his Author ; yet I muft admit, that there are Cafes where this is not only allowable, but neceffary; and in thofe Cafes, according: to the beft of my Judgment, I have never failed ufing this Freedom. But if there be a Beauty in fuch Variety of Stiles, there is likewife a very great Utility; for by feeing the different Methods which Travellers make ufe of, we learn the Excellencies of fome, and the Deficiencies of others, and know from thence how to copy the one, or to avoid the other, when it becomes our own Turn to write. But thefe Reflexions have, perhaps, carried me a little out of my Way, and made the Conclufion of this Section a few Lines longer than it ought to be. The Reader will confider, that all People are fond of talking of their own Trades, and that perhaps Authors are more liable to fall into this Error than others. The beft Amends I can make, after confeffing my Foible, is to atone for it; and as I have already faid all that is neceffary to be faid of the Perfon to whom we are indebted for the following Section, we will proceed to it without any Introduction.

## S E C TION II.

Travels through Portugal and Spain, with a diftinct Defcription of the principal Cities in both Kingdoms; particularly, Lisbon, Coimbra, Porto, and Braga, in the former; Madrid, Valentia, Alicant, $\& c$. in the latter: With a curious and correct Detail of the Curiofities in the Efcurial, and a fuccinct Defcription of the other Royal. Palaces of their Catholick Majefties.

By an English Gentleman.

1. The Autbor's Voyage to Lisbon, and Thoughts of the Portuguefe upon bis frrf Arritial there, witb fome otber-Particulars. 2. A diftinct Account of the City of Lisbon, and the Country, adjacent. 3. The City and Univerfity of Coimbra particularly defcribed, and more efpecially the famous Convent of VOL. II. $\mathrm{N}^{\mathrm{Q}} \mathrm{IIF}^{2}$.

St. Auftin. 4. A Defoription of the Town of Aveyro, and the Country about it. 5. An Account of the famous City of Porto, and of the noble River upon wobich it is feated. 6. The Autbor's Journey from thence to Braga, reith a Vierw of that City, and of the Towns of Viana and Camena. 7. A DeScription of Valentia (in Portugal) and of the Frontier Country towards Spain. 8. An Account of the Spanif Province of Galicia, and of the Towns of Radontella and Ponte Vedra. 9. His Return into Portugal, and by another Route back to Lisbon. 10. Hisis fecond Yourney into Spain, weith a Defrription of Eftremoze and Elvas. 11. His Yourney through Badajos, Merida, Trukillo or Truxillo, to Toledo. 12. The Autbor's Defcription of Madrid, and of the Palace of the Buen Retiro. 13. An Account of the City and Univerfity of Compoftella, one of the moft fanious in Spain. 14. The celebrated Palace and Convent of the Eicurial defrribed, the Religues, Ricbes, and Ornaments enumerated. 15. An Account of the Pantheon, or Place of the Royal Sepulchres. 16. AViere of the old Chapel and Royal Palace of their Cattolick Majefies, and a Recapitulation of the remarkable Tbings in this celebrated Place. 17. An Account of Aranjuez, and otber Places on the Road. 18. A Defcription of the Town and Cafle of Alicant. 19. The Manners, Cufoms, and Bebaviour of the Inbabitants of Valentia. 20. Some very fingular Inflances of the Ignor ance and Superffition of the Spaniards in general. 21. Obfervations and Remarks upon the foregoing Section.

IN the Year 1693 , I embarked on board a Mer-chant-fhip for Portugal, where we arrived without any Accident but fuch as are ordinary at Sea, in the River of Lisbon, in which City flaying feveral Months, I will give you the beft Account I am able of what Iobferv'd during my Stay.
It is feated on divers Hills, which make the Streets very uneafy and unpleafant; befides, the Dirt and noifome Smells arifing from the Filth that runs from their Kitchens (which are all above Stairs) into them, and by Reafon of their Narrownefs can't be dried by the Sun, makes them fo offenfive, that no body cares much to pals through them.
Arriving there in Lent, I was entertained with the Sight of their monftrous Proceffions, wherein I obferved fome of the true Penitents lah themfelves with that Severity that they frequently die of it; for which Reafon it is that the Priefts are obliged to declare to them, That fuch as procure their Death by this Excefs of Folly, are the Occafion of their owen Damnation. But among thefe true Devotees are to be feen many others, hired on Purpofe by the Religious Societies, to increafe the Number of the Penitents; a Thing fo fcandalous, that even the foreign Catholicks reffiding here blufh at it, there being fcarce any but the moft profigate and debauch'd Wretches that will expofe themfelves to fuch dangerous Mortifications for Lucre-fake: Among the reft, they had at that Time employed a certain lewd Fellow, who us'd to ferve as a Porter to the Engli/h refiding there.
They have a vaft Number of Churches and Convents, but few that are magnificent, the Domo, or Cathedral itfelf, being neithếr large nor handfomely built: Their chief publick Structures are, the Royal Palace, feated upon' the River T.agus, the Model whereof was defigned much larger than it is. It has a Cloyfter behind adjoining to it. The Palace of the Archbifhop of Lisbon is a fpacious Structure, with fome good Statues upon the Stairs, the only Kind of Furniture the Portuguefe delight in, there being even in the King's Apartments nothing to be feen but white Walls. Their Houfts are generally very high and pretty cool, but the Streets fo narrow, that inftead of Coaches they are forced to make ufe of Litters, carried by Mules, which are very ftrong and large in this Councry.
It is an odd Sight to fee the Portuguefe, both young and old, appear with large Spectacles faftened to their Ears in the Streets. Their Diet is generally very moderate, and they feldom or never commit any Excefs in Wine : Their predominant Vice is the Converfation of lewd Women, unto which the Heat of the Climate feems to incline them more than Extravagance. The Women paint here very young, and are confequently obliged to follow it as they grow more in Years. The Men are exceeding jealous, and a Sufpicion of Incontinency in a Woman puts her in Danger of her Life; hence they are feldom allowed to ftir abroad, except when they go to Church on Sundays, Holidays, or their Eves.
The Women of Quality wear their Fardingals here larger than thofe of Italy or Spain; they wear Veils to cover their Faces; they look upon it as the greateft Piece of Immodefty to thew their Feet; for which Rea-
fon they wear very long Petticoats, and their Pages or Footmen hold a Piece of Cloth either before or behind them, as they get in or out of their Coaches or Litters, though at the fame Time they go both with their Bofom, and Shoulders bare. The Men's Habit is a black Coat and a Band of our Colcbester Bays, which they turn the wrong Side outward in Mourning ; this is the general Wear, without any Diftinction of Perfons or Quality, unto which they are all fubject without any Difference, Silver and Gold Laces being exprefy forbid among them. The Inquifition makes them all appear good Chriftians, though it is generally believed there are many conceal'd feres, as their fwarthy Complexion and fiery revengeful Temper are the Remnants of their Moori/b Anceitors.
2. The Situation of Lisbon upon the River $\tau_{a j o}$ or $\mathcal{T}_{a}$ gus, makes it a Place of confiderable Traffick; for, not to mention their Commerce in the Eaf Indies and Brafil, they trade with moft Nations of Europe, but efpecially with the Englijh, who take in Salt there for Nerefoundland, and bring back to them dry'd Cod ; befides that, they exchange many of their Woollen Manufactures for the Wine and Fruits of Portugal.

The Extent of the Tagus into a great Part of the Country, affords them likewife a moft commodious Carriage of their Wines, Oils, Fruits, and other Products of the Country: Their Salt, efpecially that of St. Ubes, is tranfported into moft Parts of Europe, and ufed in vaft Quantity in Sweden.

They abound in Filh at Lisbon, but have fome Scarcity of Flefh, efpecially of Beef and Mutton, the adjacent rocky Mountains affording Food only for Goats; however, their tame Fowl, when well fatted, are very good, and their Pigeons both very large and well tafted.

About Lisbon are many Summer-houfes, and Gardens well planted with Orange-trees, the agreeable Scent whereof perfumes the Air at a confiderable Diftance: A Friend of mine had one of thefe Summer-feats at Luz, about four Miles from Lisbon, with a well planted, pleafant, walled Garden, of three Acres of Land belonging to it , which among other Advantages, had this Conveniency belonging to it, that we could go thither in a Coach, a Rarity among thofe craggy Mountains. I fpent a great Part of the Summer there.

During my Stay here, I took particular Notice, that even in the hotteft Seafon, we were conitantly, toward Evening, refrefh'd with a cool Sea-breeze, a Thing I afterwards obferv'd in moft Places about Lisbon.
From this Country feat I ufed frequently to take a Walk to the once fo much celebrated Nunnery of Odevalla, but much reftrained of late Years both in its Revenues, and the free Converfation allowed to that Order in fome of their Convents.
3. Leaving Lifbon, May 6. 1694, I travell'd towards Porto, to take a View of the Country on that Side ; I pafs ${ }^{\prime} d$ the firt Day through a rocky Country to Sacca Veina, and thence two Leagues furcher to Alucrea, and in the Afternoon through Aliandra, Villa Franca, Povia and Cafinora, where I lodg'd that Night,
but badly enough; the next Morning early I purfued my Journey through the Villages of Villa Nova de Remo, Ambofia, and Caftefia; after Dinner I travell'd on near Sancta Terrena, through a plain and moft delightful Country, abounding in Wine, Oil and Corn, and fo came to Paufinio, where I took up my Lodging for that Night ; the next Day I continued my Journey in a no lefs pleafant and delightful Country, over Campo de Galligong, (a delicious Plain, abounding in Corn and Olive-trees) through Alla nerofa, Pialva, and Fandemafans, to Perucbio, where I lay that Night, and the next Morning over Arujon, Pulga, Tobofal, \&c. getting to Coimbra that Night, after four Days Journey in a Horfelitter, being none of the quickeft in thefe Countries.
Before I entred the Gates of Coimbra, I crofs'd the River over a Bridge very remarkable for its Length, as having no lefs than twenty nine Arches, and its being built upon another Bridge, which is fwallow'd up in the Sand, the River being fo fhallow now that 'tis fear'd it will in Time be quite choak'd up. On this Side of the Bridge ftands a Convent and a Nunnery, both belonging to the Francijcan Order, the firft dedicated to St. Bartbolomere, the other to St. Clara. The City itfelf is computed to contain about 30,000 Sonls, and its Situation is like moft of the great Towns of this Country, upon Hills; it has fixteen Colleges and Convents.

The Univerfity has but two Colleges, viz. thofe call'd St. Peter's and S. Paul's, adjoining to each other like one Building. Their Schools make no great Show, though they keep publick Lectures in them in all Sciences; and I was told they had a good Library. I faw a Fidalgo (or Gentleman's Son) perform his Exercife for his Degree of Doctor in Law in the Hall, which is a handfome large Room, common to both the Colleges, hung about the Walls with the Pictures of the Kings of Poruugal. As the Number of Students here is computed at no lefs than five thoufand, (becaufe they are admitted as foon as they can well read, and are diftributed accordingly in different Claffes) fo none but the Children of Perfons of the beft Rank can have their Chambers in the Colleges, the reft being difpos'd in the Town as they beft.can.

The chief of their Convents is that of St. Cruz, being all Noblemen, and of the Order of St. Aufin. The Church belonging to this Convent is a large Structure, with Altars richly gilt, and adorn'd with Silver Candlefticks of great Value: They preferve here many Relicks, but as they are very fhy of fhewing them to Strangers, I obtain'd this Favour by the Affiltance of an Irifb Father; they fhew'd me the Sword of King Alphonfo, wherewith he kill'd five Moorifh Kings; they tell you that King Sebaftian, when he was jutt upon going to the Wars in Barbary, borrow'd this Sword of the Convent, and that the Sword being loft there, together with the King, they inftituted publick Supplications for the Recovery of this Sword, which was one Day found by a Friar upon the high Altar, as he was going to officiate there. But the chief Repofitory of their Relicks is in a Chapel at the End of the Dormitory; here they fhew'd a golden Crofs fet with precious Stones, which (they fay) contains a Piece of the true Crofs, and ufed always to be fix'd on the royal Standard in their Wars againft the Moors; half of one of the Thorns wherewith our Saviour's Head was crown'd ; a Bone of St. Siepben, another of S.. Aufin, a Finger of one of the Innocents flain by Herod, St. Peter's Chains with large thick Iron Links, a Bone of St. Paul, a Leg-Bone of one of the eleven thoufand Virgins fent out of England to the Indies, to marry and encreafe the Cbriftians there ; an Arm-Bone of St. Blazius, a Bone of St. Sebaftian, the Bones of Theotonius in a Silver Cheft, the Bones of five Martyrs put to Death by the Moors in Barbary, whither they were fent to convert them to the Cbrijitian Faith, likewife in a Silver Cheft; a Bone of St. Lawerence: Moft of thefe, befides many others, were brought out of England immediately after the Diffolution of the Monafteries by King Henry VIII. They were fo cautious in fhewing them, and that at fuch a Diftance, that I could fcarce diftinguifh what they were,
which made me never enquire any further about any fuch Things as Relicks in this Country.
4. After a Stay of three Days I left Coimbra, taking my Way towards Aveyro through a pleafant Country, though fomewhat mountainous and rocky: I found my travelling upon a Mule as tedious as in a Litter, for you go no fafter than your Guide, who is on Foot. Aveyro is a very handfome Town, with clean and pleafantistreets, govern'd by a Juftice, as are moft Country Towns here ; it has three Convents, of Dominicans, Carmelites, and the Order of St. Antbony; and four Nunneries, of St. Antbony, Francifans, Dominicons, and Cerinelites; and four Parifh-Churches: Each of the Nunneries contains above a hundred Perfons, including Servants: and the whole City about fifteen or fixteen thoufand Souls. The Duke of Aveyro lives in Spain, under Pretence that the Family of Braganza has ufurp'd the Crown of Portugal, fo that his Eftate being feized upon for the King's Ufe, his Palace is beftow'd upon the Carmelite Nuns. The Town is fenc'd about with a Wall after the Moorifs Fafhion, and has great Plenty of good Fifh and Fowl: The River is of fuch a Deptin that Veffels of feventy or eighty Tun may ride fafe at Anchor under the Town, to which belong above four thoufand Boats, employed for the moft part in carrying Dung from thence into the Country, where the Ground is barren, and wants much more manuring than the Soil about Lifbon. Much Salt is alfo made hereabouts, which is carried into the Country, and into Galicio.
From Aveyro to Porto is ten Leagues; the firt five I went by Water, for taking Boat at twelve at Night, I came the next Morning to a little Village called Varr, whence I travelled the other five on Horfe, through a barren Country, to Porto, the River of which affords a fafe Harbour, being fo environ'd with Hills, as to protect Ships againft the Violence of any Winds; the Ships may ride urder the very Walls of it, which are very high, but at that Time the City was without a Garrifon.
5. The City of Porto itfelf is very handfomely built, and the Streets neatly pav'd, though feated upon Hills, On the other Side of the River called Sarra, ftands a Convent of Austin Friars, a fpacious Structure, containing about forty five Brothers, who call themfelves Dons: Their Dormitory I found to be two hundred and fifteen Paces long, and five broad. Near it is a Nunnery of St. Dominick. Somewhat lower, on this Side of the River, at a Place called Gaia, (famous in ancient Times for the Palace of the Moorib/Kings) is another Convent of twenty eight Friers, of the Order of S. Anionio. In the Convent of the Serria they fhew'd me a pair of Crutches of a lame Child, which was cured by a certain little Image of our Lady in Bafforelievo in the fame Church: The like you fee in feveral other Churches, as alfo wooden Legs and Arms, nay, fometimes the Pictures of the Perfons pretended to be cur'd near the Saints Image that is faid to have wrought it.
This City has four Parimh-Churches, the Cathedral, which is but fmall in Comparifon of others of that Rank, the Church of S. Nicbolas, of S. Victoria, and S. Peter; they appear${ }^{\circ}$ d to me richer and better gilt than thofe of Lifbon: Seven Convents of Friars, viz. the Francijcans, S. Fobn Novo, S. Eli, (drefs'd in Purple) the Dominicans, Carmelites, Benedistins, and the Tanograpes, an Order following the Difcipline of the $7 e-$ fuits, and upon that Score in much Repute here. They have alfo a College of 7 fevits and four Nunneries, viz. of S. Muncbecba, S. Bento, S. Clara, and the Recollettes, an Order peculiar to this Country, and feidom to be met with but in Seaport Towns, being intended for Seamen to beftow their Wives in till their Return; Orphans are likewife educated here till they come to Years of Maturity to chufe either Marriage or a religious Life; Widows are alfo permitted to enter into this Order after the Deceafe of their Husbands, provided they vow Chaftity for the Future. The whole City is reckon'd to contain fifty thoufard Souls, including the Suburbs, in one of which is another ParifhChurch dedicated to S. Alphorijo. It is a Place of valte

Trade,

Trade, the River (which fupplies them with great Quantities of Provifions, Wines, Oyl, Corn, Fruits, Éc. out of the Country for Tranfportation) having from its Conveniency got the Name of The Golden River. The Bar, through which the Ships come in, is a very narrow Paffage, with Rocks on both Sides. Over againft it, near the Village of St. Fobn, is a Fort kept by a fmall Garrifon.

The Epifcopal Palace near the Cathedral feem'd to be a magnificent Building, but was not inhabited then, becaufe the Bifhop, being at Variance with the Clergy of his Diocefe, was at Lisbon.
6. From Porto I travel'd to Gamarains, over fteep and rough Hills; it is a pretty neat Town, well built upon a Level of a confiderable Compafs; it has five Convents of Monks, viz. the Dominicans, Carmelites, Capucbins, Francifcans, and Aufin Fryars; and three Nunneries, Francifcans, Carmelites, and Dominicans, but no more than two Parifh-Churches. The whole Place is enclofed by a ftrong and high Wall, and there are to be feen here the Ruins of a Caftle, faid to be built for one of the Kings of Portugal's Brothers.

From hence I continued my Journey the next Day to Braga, the moft ancient Archbifhoprick of Portugal, and which to this Day difputes the Precedency and Primacy with the Archbifhop of Toledo in Spain.

Braga is a fpacious City, well wall'd according to the Fafhion of this Country. The Cathedral is fomething bigger than in moft other Places in Portugal, and ftrongly built, as are moft of their Structures; for they have hereabouts a Kind of very durable tho' coarfe Marble, and their Loam very white and fine, and confequently exceeding binding, as may be feen by their old Buildings. In this Church is a Monument of the Duke of Bayonne, (a Thing the Portuguefe do not much regard) who being met upon the Road to this City by a great Number of People to honour his Entry, and dying there foon after, order'd by his Will a confideráble Revenue to be employ'd for diftributing a certain Allowance to the Poor every Morning in the Cloyfters of the Church; adding, That fince be was not able to feaft them, be would take Care they fould not go without a Breakfaft. The Tomb, which is about a Yard and a half high, ftands in the Ine of the Church, being all of Brals, with his Effigies at full Length, which appear'd to have been gilt formerly; the Grates about it hinder'd my reading the Infcription. Not far from the Dome ftands the Archiepifcopal Palace, an old Pile of Building, which made but an indifferent Shew on the Outfide, being not then inhabited by reafon of the Death of the Archbifhop.

The next Place I came to in this Journey was. Viana, one of the pleafanteft Towns in Portugal, feated on the Sea-fide, fo that from the Key you may fee any Ships that fail along the Coaft : It is well paved, the Streets upon a level, with very good Buildings. Its Strength confifts only in a fmall Caftle on the Sea fide, which commands the Harbour, but they had at that Time a Garrifon of a thoufand Foot and two Troops of Horfe, and in the Caftle about thirty-feven Great Guns mounted: There was lately built a Magazine for the King, containing Arms for about twenty thaufand Men, and fome Accoutrements for Horfe. They fhew'd us a fmall low Building within the Precinct of the Caftle, faid to be built for the Imprifonment of King Alpbonfo. For the reft, this is a Place of pretty good Trade, tho' the River is not navigable far, by reafon of the Sands which choak up the Channel.
From this Place I travel'd for three Leagues very pleafantly along the Sea-fide to Camena, feated in a Plain; and though the Frontier Town on the Borders of Galicia, it is of no great Strength, but commonly provided with a good Garrifon ; there ftands, however, upon a Rock near the Entrance of the River, a little Fort, commanding the Paffage toward the Harbour, but it was guarded only by fix or eight CountryFellows at that Time, and had not above three or four Guns mounted; within it is the Convent of St. Antbony. This Place has fome little Trade, two ParifhChurches, two Convents of Dominicans and Francifcans, and one Ninnery of Dominicans.
7. If you intend to go from hence into Galicia, you mult crofs the River, which is the common Boundary between Spain and Portugal on this Side.

I went from Camena to Villa nova de Silvero, an ano cient Town in the Road betwixt Camena and Valentia; as it is a Frontier Town, fo it hath a Wall after the Manner of this Country, with a Garrifon.

Valentia, likewife a Frontier Town, upon the Borders of Galicia, advantageounly fituated for being made a ftrong Place, but almoft without Defence, though fo near to Spain; it is true, fome Works it had, but without Men or Arms to defend them, all the Defence they have being the Fort Lovelio, about a Mile from the City, in Oppofition to which, the Spaniards have one or two on their Side of the River. At this Place the King's Officers make ftrict Search, whether you carry more Money with you than is allow'd; the fame is done on the Borders of Galicia by the Spaniards, in your Return hither, which they do with Severity enough, unlefs you make them civil by a little Money. Here you muft alfo give Security for the Return of your Mule.
8. The firf Spanifh Town you come to after you have croffed the River, is Tine, an Epifcopal Seat, but meanly built, which made me without any Stay continue my Journey to Vigo, a Sea-port Town in Galicia, feated upon a River, and accounted one of the beft Harbours of $S p a i n$, formerly the Rendezvous of the Spani/b $A r$ mada or Fleet, when they made a much better Figure at Sea than they do now. Here their Galeons, and the French Squadron commanded by M. Cbateaurenand, were deftroyed by the Engli/b and Dutch, in the Year 1702. For the reft, the Town is of no confiderable Traffick, few inhabiting here but Fifhermen, which makes their Houles appear very mean. It is reckon'd among the garrifon'd Towns of Spain; but this Garrifon confifts only of fixty Country Fellows, who are fummon'd out of the adjacent Country, for the Defence of fome llight Works provided with a few Guns, and are changed every Day. It has one large Parifh Church, but meanly built, and two Convents, one of Friers, the other of Nuns, both Francifcans. About three Leagues down the River you fee the Inles of Bayonne.

From hence I paffed for three Leagues down a noble River towards Ponte Vedra, lined on hoth Sides with Hills and pleafant Valleys, and fome little Redoubts oppofite to one another, for the Defence of the River. As you pafs along this River, you fee Raduntella, a ftately Town, built upon the Bank of the River, in the Middle of which is an Iland, with a Convent of Francifcans upon it, the Gardens of which being planted with Fruit-trees, made a pretty Show at a Diftance. At the End of this River you muft travel a League and a half by Land before you come to Ponte Vedra, thro' very rough and uneven Ways. Ponte Vedra is a large but meanly built Town, though the River (which difcharges itfelf into the Sea) affords them fome Conveniency for Traffick. The chief Thing worth taking Notice of, is the Church of our Lady, a large Fabrick, and adorn'd on the Infide with fome curious Wrought Work on the Ceiling, and the Pillars, which are Mar ble, a Thing feldom obferved in the Churches of $G a-$ licia. The Front of this Church hath alfo fome very fine Relievo-roork; among the reft, our bleffed Lady on her Death-bed, with the Apoftles and fome of the ancient Fathers about her.
The Archbifhop of St. Fago's Palace here is a large Structure, but appear'd much decay'd: It has two Parifh Churches and three Convents, two of Francifcans, and the third of Dominican Fryers, one of Nuns, and a Jefuits College. The Magazine here had alfo fome good Brafs Guns, and fome Small-arms.
9. Galicia appear'd to me a Country very like Portugal, as well in refpect of the Soil, as of the Manners and Cuftoms of its Inhabitants, who alfo differ but very little from the Portuguefe, even in their Habit and Language; and as there is fcarce any Footfteps of Induftry or Husbandry among them, fo you fee nothing but Poverty where-ever you turn your felf.
The indifferent Ufage I met with in all thofe Places thro' which I paffed, made me foon alter my Refolution

## Chap. IV. through Portugal and Spain.

of going further that Way; fo I return'd to Porto the fame Road I came, but took another Way from Porto to Lisbon; for, after having pals'd Aveyro, inftead of going to Coimbria, I took the Road of Fygera, a fmall Maritime. Town, yet not without fome Trade in Salt and Oyl, Ships of about a hundred Tons being able to come up the River hither: They have a Caftle with fome Guns for their Defence. The Salt is made near this River, and the adjacent Country affords great Abundance of Olives.
Betwixt Aveyro and Fygera is the Town of Mira, much celebrated for vaft Store of wild Ducks thereabouts, which they take in a peculiar Manner, without either Nets or Guns, by throwing Sticks at them as they rife and take Wing, which they do with fuch Dexterity, that they knock down feveral at a Time.
I pafs'd the River near Fygera the 25 th of $7 u l y$, which being on a Sunday, and Sr. Fames's Day, I had fcarce travel'd two Miles to Lavos, where meeting with an Irijs Prieft, he would fain have engaged me to go about four Leagues with him, to a Chapel dedicated to St. fames, where (he told me) was a Family which had this Peculiar to irfelf, that on this Day, when the People of the adjacent Country came to pay their Devotions to the faid Saint, and are regaled with a large hot Cake by the Town; any of them can go to the Oven, though never fo hot, and turn the Cake without the leaft Danger ; but I chank'd him for his Care, and told him, that having no great Faith in fuch Matters, he muft excufe me, if I did not go fo far out of my Way. I came the fame Day to Lazia, the Seat of a Bifhop, whofe Palace is a noble Structure: For the reft, the Town is but indifferently built; it hath three ParifhChurches, the Cathedral, St. Diago, and St. Peter's ; the firft appear'd to be a large handfome Fabrick, but I did not view the Infide of it : They have four Convents of Austin Fryars, Dominicans, Francijcans, and Capucbins, and a Nunnery of Dominicans. Near it, upon a very high Hill, you fee a Caftle belonging to the King, which at a Diftance appear'd to be a noble Building.
In my Way from Lazia to Terena I pals'd by Batalia, where is faid to be the beft-built Church in all Spain, perfected by fome Engli/b Workmen; it contains the Sepulchres and Tombs of the Portuguefe Kings. The Steepnefs of the Rocks, over which I was forced to pafs, together with the Length of the Way, made this the worft Day's Journey I ever had, which made me not get to Terena till late at Night; and having fourteen Leagues to Lisbon, I fet out early in the Morning, and after I had rode two Leagues, embark'd on the River, (fending my Mule by Land) which brought me the fame Day to Lisbon. I obferved a great deal of Poverty in the Country through which I pafs'd, the poorer Sort living for the moft part upon Brow and Water. This Brow is a Kind of courfe yellowifh Bread, made of a certain Indian Corn called Millio; certain it is, that many hundred Families live upon this, without ever tafting Meat in all their Life-time. The Country, through which I pals ${ }^{\prime}$ d, affords farce any Wood for Timber, the Oaks, which are but few, appearing no bigger than Shrubs here; Olive and Corktrees they have in Abundance, and I faw fome pretty large Groves of Pines.

The Autbor's Fourney from Lisbon to Madrid.
10. I fet out, Sept. 1, 1694 , from Lisbon for Madrid ; I went three Leagues by Water on the other Side of the River to Allegalego, whence, continuing my Journey the next Day, I travel'd for eight Leagues through a barren Country to Vento Novo, and the next Day by the Way of Monte Major (a very good Village) to Ryolio, a fmall ruined Town with an old Mooribs Caftle, which affords a fine Profpect into the adjacent Country. The next Day I travel'd on to Eftremoze, a Place noted for Earthen Ware, then garrifon'd with eight Companies of Foot, and three Troops of Horfe. Thence I went to Elvas, the lait Frontier Town of the Portuguefe, bordering upon Spoin on that Side, a Place of good Strength, and famous for the fix Months Siege it fuftained againft the Spaniards, in their laft Wars. Near
Vor. II. $\mathrm{N}^{\circ}{ }^{1} \mathrm{I} \%$.
it is a moft noble Aquaduct, three Leagues and a half in Length, and of a vaft Height in fome Places where the Ground is low ; where, for a confiderable Way together, there were no lefs than four Arches built upon one another with vaft Expence. Not above two Engli/b Miles beyond Elvas you come to a fmall River, which being the common Boundary betwixt Spain and Portugal on that Side, you are no fooner pals'd it, but you come to the Campo or Plain, where was fought that memorable Battle betwixt the Spaniards and Portuguefe in their laft War, with the Lofs of feven thoufand Spaniards; in which Action the Englifs had a confiderable Share, acting as Auxiliaries on the Portuguefe Side.

The firt Town belonging to the Spaniards, on this Side, is Badajos, a ftrong Place, into which you enter over a Bridge of twenty-fix Arches. The next Day I travel'd to Merida, into which you muft pafs over a Bridge of above fixty Arches: This Place affords fome Entertainment for curious Travellers, as the Ruins of fome ancient Roman Buildings, a fpacious Caftle, now turn’d into a Prifon, a noble Arch of van Stones joined without Mortar, the Work of fulius Cafar, a curious Pyramid by Augufus Cafar, the Remnants of rome ancient Roman Aquaducts, and another modern one, by which the Water is convey'd into the Town a great Way. From hence I travel'd to Trukillo, through a woody and mountainous Country: The Town itfelf is very well built, with feveral goodly Structures belonging to Perfons of Quality; it has five Parifh-Churches, as many Convents of Fryars, and four Nunneries : The Villages upon the Road were molt of them very large', but the Dwellings only of Mudd; however, I took Notice by the Way of one fpacious and noble Palace belonging to the Conde de Lopefo: I lodg'd at Telaveyra de Royna, a very handfome Country Town, having eight or nine Parifh-Churches, thirteen Convents of Monks, and five Nunneries.

From hence I travel'd five good Leagues out of my Way to take a View of the City of Toledo, a magnificent Place, nobly built, and adorn'd with fately Churches, very rich in Plate and Jewels. The Image of our Lady in the Cathedral has a Garment cover'd all over with Pearl and precious Scones of an ineftimable Value: The Paintings are anfwerable to the reft. It is the Metropolis of all Spain, and the Archbifhoprick is accounted the moft confiderable for is Revenues in Cbrifendom, though that of Braga difputes the Priority with it. The Cafilian Language is fpoken here in its Purity, and feveral great Councils have been held there. The prefent Archbifhop is a Cardinal. The King's Palace or Castle is a facious Pile of Building, and the Stables belonging to it are capable of containing at leaft five hundred Horfe.
12. Madrid is only a Villagé, but may defervedly be called the largeft of that Kind in Europe ; the Soil round about it is not fo mountainous as in Portugal, but very fruifful, which agrees beft with the nothful Temper of the Spanierds. This Place, though the ordinary Refidence of the Kings of Spain, is not feated in a very wholfome Air, occaaioned, queftionlefs, by the adjacent River, which is often dry: This River is a Branch of the Tagus, rifing near Toledo, whence it continues its Courfe as far as S. Terence, fourteen Leagues beyond Lisbon in Portugal. The Buildings here are generally very good, of Brick, and fome of the Streets regular, fpacious and noble, but very dirty, naufeous, and full of Filth. Their Churches are for the moft Part very fine. The Palace of the Almirante of Caftile is highly remarkable for its excellent Piftures, in the Collection whereof the Spanib Lords fpare no Coft; among the reft I took Notice of one done by Titian, reprefenting Ixion embracing the Cloud; it was pawn'd to this Lord for five hundred Dubloons, much lefs than it was worth.

In the King's Summer-houre, a little Way out of the Town, called Buen Retiro, I took Norice of many curious Pieces of Painting by Tiliin, Rapbael Urbin, Borm domna, Annibal, and Vandyke, but has nothing elfe remarkable either within or without, being built only of Brick, except that in the Garden you fee the Statue of

King Pbilip IV. on Horfeback, finely done in Brafs, placed on a Marble Pedeftal. On the Canals are Plea-fure-Boats, and fome Summer-houfes for the Muficians to divert the King, whilf he takes his Pleafure in thefe Boats upon the Canals. At the Entrance of the outer Court are the King's Stables, that for the Saddle-horfes had at that Time about fixty, chofen out of all Nations ; in thofe for the Coach-horfes were three Setts of Black, as many of light Grey, alf of Flanders Breed, one of dark Grey, and two Setts of very fine Duns, befides fix Setts of Mules. Adjoining to thefe is the Armoury, a facious handfome Room, fill'd with many curious Suits of Armour, belonging formerly to their Kings: Here they fhew you divers Suits, once ufed by the great Cbarles V. with a Sword prefented him by the Pope; his Armour is eafily diftinguifhed from others by our Lady's Image he always wore engraved on his Breait-piece; a Jarge polifh'd Steel Plate the faid Emperor ufed inftead of a Looking-glafs when he put on his Armour, and an eafy Chair, in which he nept, eat, drank, and difpatch'd Bufinefs when in the Camp; feveral other Suits of Fbilip II. PbilipIII. PbilipIV. and among the reft, one for the late King Cbarles II. though it is certain he never wore any; it is double gilt, and fet with precious Stones: Here you fee alfo the Armour of that warlike Cardinal Ildefonfo, and feveral Trophies and Colours taken from the Turks.
The outward Court of the Palace is a large Square, with Cloytters on both Sides, the Stables and Armory fronting the Palace itfelf; it confifts, of two Quadrangles, with Cloyfters both above and below; one of thefe Quadrangles is alloted for the King, the other for the Queen's Lodgings, but are not to be feen unlefs when the Court happens not to be there.

I pafed through three or four indifferent Rooms (as far as they would let me go) to fee the King at Dinner; the Dining Room was large, but indifferently furnifh'd, the Room before it was lefs, but crufted over on the Walls with fine Jafper and Marble. The King has always twelve Difhes at Dinner, and eight at Supper, ferv'd up in as many Silver Plates, and attended by as many Halberdiers, who make every one uncover as the Meat paffes by. There is a glorious Appearance at Court every Day, as well of Coaches as a great Number of People, the Reafon is, becaufe all the chief Courts of Juftice, belonging to the feveral Provinces under the Spanib Dominion are kept in the Palace.
Many of the Streets of Madrid have Fountains, but fuch as have nothing extraordinary in them. The Placa Major, where they keep their Bull-feasts, is a noble Square. The Prado of S. Hieronomo is fprinkled every Evening with Water out of the many Fountains placed there for the Conveniency of the Coaches that take the Tour-a-la-mode there. Crofs the Water the King has ancther Houfe, call'd Cafa del Campo, where he refrefhes himfelf fometimes in the Heat of the Summer under the cool fhady Walks, the chief Conveniency of this Seat.
13. From Madrid I took a Turn to Alcola de Henares, or Compofella, in Latin Complutum, the greateft Univerfiry (next to Salamanca) in Spain, founded by Cardinal Ximenes. The Buildings of the City itfelf are none of the beft: The Univerfity-College, where all publick Exercifs are kept, acknowledges the great Cardinal Ildefonso for its Founder; the other Colleges are, that of Madre di Dios, of Malca, the Trilingue, the King's College, that of Mena, of Manrique, of S. Clesment, of Lugo, that of Arragon, of Verdes, of S. Ambrofe, of S. Catberine, of S. Dennis, that of the Ruffians, and S. George's College, built and well endow'd by a Portuguefe Count, for the Ule of thirty Frijh Students; but the Count dying before it was quite brought to Perfection, the King leiz'd on the greateft part of the Revenues, leaving only a flender Allowance for the Maintenance of eight Students, who are obliged by Oath, after feven Years Stay in the College, to preach the Gofpel in fome of the Northern Parts. There are befides, thefe the Coileges of S. Peter and S. Paul, and that of the Gremmarians.
Their Convents of Monks are, thofe of the Order of S. Aufin, of S. Thomas, S. Bafi, S. Bernard, and that
for the Complutenjes, the Carmelites, the Oratory, the Fefuites, two of the Trinitarians, the Difcalccats, two of The Mercenaries, the Minims, the Agonifonts, the Aufin Friars Difcalceats; the Convent of the Angels of $S$. Diago, S. Fobru de Dios, and that of Leom, befides ten Nunneries. I heard one of their Difputations, and it feem'd very odd to me, that the Refpondent, after having repeated the Opponent's Syllogifm, did not anfwer in Latin, but in his native Tongue. Juft before the high Altar in the Chapel of the Univerfity College fands a white Marble Tomb, containing the Body of the beforemention'd Cardinal Ildefonfo, his Effigies in a cumbent Pofture, all excellently done, and encompaffed with Brafs Grates; Mabomet's. Lamp, and fome Turkib Colours taken by him from the Turks, are liung up in the fame Chapel.
The Cathedral here is a fpacious and noble Fabrick, in which (among others) I took Notice of a white Marble Tomb with a Latin Infcription, erected to the Memory of Dr, F. Gonzales.
This City ftood formerly on the other Bank of the River, at the Foot of an high Hill, but being laid defolate by the Moors, it was afterwards rebuilt in the Place where it fow ftands.
Over the Water, on an high Hill, in a little Chapel, they preferve a red Crofs, which (they fay) was fent down from Heaven and put into the Hand of one of their Kings, as he lay encamped againft the Moors, who were entirely routed. In the Cathedral they fhew you a miraculous Stone, which formerly afiorded fuch Abundance of Oil, that they fupplied att the Lamps of the Church with it ; but thofe who look'd after it making a Gain of it, by felling it for other Ules, the Miracle ceafed.
14. During my Stay at Madrid, I made another Excurfion to take a View of the Efcurial, that Wonder of the World, built by King Pbilip II. purfuant to a Vow he made before the Battle at St. Quintin againft the French, and having obtain'd the Viftory, he dedicated the Convent adjoining to the Palace to S. Larwrence, (it being his Day when the Battle was fought) and placed in it two hundred Friars of the Order of S. Ferome, under a Prior nominated by the King, and a College or Nurfery for young Students. It is feated about feven Leagues from Madrid, among the Mountains in the Kingdom of Toledo, having to the Eaft and Weft very delightful Plains watered with many Rivulets and Springs. Its Form is a large Square, each Side whereof is 2630 Foot long, with a fine Tower on each Corner; the Materials are a Sort of very hard Stone, fpotted with grey; the greateft Part of the Architecture is of the Dorick Order, with fome of the Ionick, Corintbian, Compofite and Tuf. can: The whole Fabrick is fubdivided into four leffer Squares, which have fixteen Gates; the chief Entrance is on the Weft Side, through three Gates, over which ftand the Statues of S. Lawerence, the Patron of this Fabrick, and in the Middle the Arms of Spain.
The firtt Quadrangle is two hundred and thirty foot long, and a hundred and twenty fix broad: The Front of this inner Court is adorn'd with fix Pillars of the Dorick Order fixty eight foot high, upon which are placed fix Pedeftals, and upon them as many Statues of the Kings of the old Teftament, viz. David, Solomon, Fofas, Ezekias, Febofbophat and Mamafes, with Crowns of Brafs on their Heads weighing a hundred Pound each, and the Scepters (of the fame Metal) fifty Pound each; David's Harp, likewife of Brafs, weighs no lefs than three hundred feventy five Pounds. Under each of thefe Kings are the following Infcriptions:

| David | Solomon | Ezechias |
| :---: | :---: | :---: |
| Operis | Templun | Mundata |
| Exemplar | Domino | Domo |
| A Domino | Adificatuma | Pbaje. |
| Recepit. | Dedicarit | Celebravit. |
| Jofias | Jehofaphat | Manaffes |
| Volumers | Lucis | Contri |
| Legis | Ablatis | tus |
| Domini | Legem | Altare |
| Inverit. | Propagavit. | D. Instou |

ravit.

You enter into the Cburch by five Arches twenty eight Foot high and fourteen broad; the Length of the Cburch is three hundred fixty four foot, and its Breadth two hundred and thirty; its whole Height, from the Floor to the Crofs on the Top of the Cupola, is three hundred and thirty foot; the Architecture is of the Dorick Order; it has fix Ines, two of which make a Crofs, the other four meeting into a Square; it has befides this twenty four noble Arches, fifty large Windows, and thirty nine Galleries with Silk Curtains: There are here alfo no lefs than twelve noble Croffes of Jaf-per-flone, fet over fo many Chapels, and forty Altars, in their peculiar Chapels, beautified with excellent Pictures of the Saints.

The Floor of the Church is pav'd with grey and black Marble, and the Ines are illuminated with a vaft Number of large Silver Lamps; the Middle Ine alone has fourteen Balconies of two Yards three Quarters in Length. The grand Chapel is magnificent beyond what can be imagined, its Length is twenty Foot, the Breadth fifty, and the Height an hundred; you afcend into it by the middle Ine, by twelve Steps of the fineft Jafper of Fifty three Foot long; the Chapel is parted from the Body of the Church by curiounly wrought. Rails of Brafs gilt; the Paintings are very excellent here, fuitable to the reft: It contains four Sorts of Architecture, which are ninety three Foot high, and forty nine broad, the firt of the Dorick Order with fix Pillars, the fecond of the lonick with as many, the third is Corintbian, and the fourth the Compofite, with two Pillars fuftaining the Roof and Arches; they are all of the beft Jafper, curioully polifh'd, the Bafes and Capitols of Brafs gilt: In one of the Pillars of the Dorick Order is the Cufodia or Place where the Sacrament is kept; on each Side is an Original of Perugrino an Ilalian, one reprefenting our Saviour's Birth, the other the Adoration of the three Eaftern Kings; the four Evangelifts, in Brafs gilt, ftand on the Sides of the Pillars: In the Ionick Order is painted S. Lawrence's Martyrdom, by the fame Perugrino: On the Sides are two Originals, one of Chrift tied to a Pillar to be fcourg'd, the other reprefenting Chrift bearing the Crofs, by Frederico Zuccbero, and four Statues of Brats of as many ancient Fathers of the Church: In the Corintbion Order you fee the Affumption of our Lady, and on the Sides the Refurrection, and the Defcent of the Holy Ghoft, all Originals, painted by the fame Hand: Between two Fyramids are two brazen Statues of S. Andrew, and S. Fames the Patron of Spain; the Compofite Order has but two Pillars, and in the Middle of them our Saviour on the Crofs, S . Peter and S. Paul on the Infide, and the Virgin Mary and S. Jobn on the Outfides; they are all four of Brafs, gilt, and thirteen Foot high each.

The Cuflodia or Box wherein the Sacrament is kept, is of a round Figure, made of various Stones; its Height is fixteen Foor, and its Diameter feven and a half, fupported by eight Columns of Diafpare, imitating the Rainbow in their various Colours; they fay, that this Stone is not to be wrought but by Diamonds, and that the Workmanhip of this coft eighty thoufand Ducats. Over the Cuftodia you fee the Statues of the twelve Apoftles, and at the Top the Refurrection of our Saviour. You enter into this Chapel (called the Segrario) by two Doors of Jafper, one on each Side, and afcend to the Alcar by ten Steps of the fame Stone, which alfo furnifhes the Materials for the Floor ; it has its Light through a curious Cryftal Window on the Eaft fide with Iron Bars gilt; it is beautified with Pictures reprefenting the Myftery of the Eucharift, 'with a Rainbow and many Angels over it. On the right Side of the Altar you fee five Statues in Brafs upon their Knees, of the Emperor Cbarles V, his Daughter, and two of his Sifters; on the other Side are placed the Arms of Spain, with five Statues underneath correfponding to the others, viz. one of King Pbilip 1I. of his Queen Anne, of two of his former Wives, and of his Son Cbarles. Under this Altar is the Pantbeon or Bu-rial-place of the Kings of Spain of the Aufrian Eamily, of which more hereafter. This Church has re-
ceiv'd much additional Beauty by the excelient Paint: ings of the facred Hiftory by the rare Hand of Lis queforo an Italian.
15. Among their Relicks (of. which, they fay, they have fomething of every Saint) they fhew fome of the Hair of our Saviour and the bleffed Virgin, as alfo fome of their wearing Apparel, fome Thorns of his Crown, and one of the Nails wherewith he was nail'd to the Crofs, fome Remnants of his purple Habit, divers Relicks of St. Fobn the Bapisiz, of the Apoltles; Martyrs, and the entire Body of S. Lawrence, the Head of S. Ferome, and the Herds of feveral other Saints. They tell you, that they have no lefs than five hundred and ffty Pixes and Cbalices of Gold; Silver and Chryftal, among which they fhew one faid to have been of fered to our Saviour by one of the three Eaftern Kings. In the Middle of the Ine is the Cboir, fronting the Chapel; its Length is ninety fix Feet, its Breadth Fifty fix, its Height forty eight, the Floor cover'd with the fame Marble as the Church, and the Walls painted with the Martyrdom of S. Laurence and S. Ferome, the firit by Romulo, the laft by the juf mention'd Luquefio, who has alfo painted the Glories of Heaven on the Top: It is illuminated by a Chryfal Branch of twenty eight Lights, the Prefent of the late King Cbarles II. and has two Orders of Seats curiouny wrought with precious Wood: On each Side is an Organ, with crofs Galleries gilt, and in the Church are fix more, one of Silver, the Gift of Cbaries the Fifti.

The Sacrifly is a hundred and eight Foot long, and thirty broad, the Pavement of Marble of divers Colours, and the Cieling and Walls painted with the beft Originals (thircy four in Number) of facred Hiftory; the Gift of Pbilip IV. by the greatef Mafters in that Art, viz. Titian, 'Rapbael Urbin, Paulo Veronefe, Tintoret, Andrea del Sarto, de Bordonon, Guido Bolvgnefe, Annibal, Caraccbe, Van Dike, and others. Near the Sacrifty you defcend by Steps of the beft Marble into the Pantbeon; containing the Sepulchres of the Kings of Spain of the Auftrian Family, being efteem'd the fineft Piece of this kind in Europe. Over one of the Gates, (which are of Brafs gilt) underneath the Arms of Spain, you fee upor a black Marble this Infcription in golden Letters:

## D. O. $M$.

Locus Sacer mortalitatis exuviis Catbolicorum Regum
A Reftauratore Vite, cujus Aree Max. Auftriaca adbuc pietate fubjacent. Optatam Diem expectantium.
Quam pof fuam Jedem fibi E fuis
Carolus Cafarum Max. in votis babuit,
Pbilippus Ildus Regum Prudentifimus elegit,
Pbilippus IITius verè pius inchoavit, Pbilippus IVtus
Clementia, Conftantia, Religione Magn. Auxit,
Ornavit, abfolvit; M.D.C.LIV.
The Arms of Spain, cut in precious Stone and richly gilt, are placed here between two Statues of Brafs gilt, one reprefenting the Fall of Man the other the Hope of a Refurrection. ThisDoor brings you by the beforemention'd Steps of the fineft Jafper and Marble into the Pantbeon, which is overcrufted with the fame, and moft artificially polifhed; its Form is round withour, and octagonal within, in each of the Squares being repoffted the Urns for the Royal Bodies, four in each Square, there were then in all twenty fix of thefe Urns, of grey Marble, fupported by four Lion's Paws of Brafs gilt ; of the fame Me tal there is an oval Figure in the middle of each of thefe Urns, containing the Names of fuch royal Perfons as are interr'd there, in black Letters. In the Square fronting the Door fands the Altar, and upon it a large Crofs of Brafs gilt, fixed within another of black Marble, of which alfo the whole Altar is compos'd, except that it has fome curious Ornaments of the choiceft Porphyry: On each Side of the faid Crofs ftands a Pillar
of green Genoua Marble, with brafs Bafes and Capitols gilt. On the Gofpel-fide of the Altar lie inter'd the Bodies of Cbarles V. Pbilip II. Pbilip III. and Pbilip IV. and on the other Side fuch of their Queens as brought them forth Iffuie, fuch as die without being not admited to be buried here, but in another Sepulchre allotted for the Branches of the Royal Family. The Pantbeon is enlightened by a curious Branch of Brafs gilt, with twenty four Lights; the Floor is cover'd with the fame Stone as the Walls, and wrought into the Figure of Stars.

The Convent has no fewer than five Cloyiters, the biggeft being no lefs than eight hundred Foot fquare, painted all about with the Life, Death, Refurrection and Afcenfion of our Saviour. The old Chapel affords three excellent Pieces, that of St. Larerence on the Gridiron in the Middle, and on both Sides the Offering of the three Eaftern Kings, and Chrift's Sepulchre, both by $T$ itian, befides divers other Originals of facred Hiftory of the beft Mafters: They boaft here of one of the Innocents Bodies entire, of one of the Waterpots in which Chrift turn'd Water into Wine at the Wedding of Canaan, and of one of the Bars of the Gridiron on which St. Lawerence was broil'd; but thefe are not to be feen by Hereticks. In the Refectory you fee a celebrated Piece, by Tition, of the Lord's Supper, brought hither from England during the Exile of King Cbarles II. and pawn'd for 15,000 l. Sterling.
I had no Opportunity of feeing the Royal Palace, which is not very large, and was told it contain'd little of Moment except the Paintings ; but the Library muft be own'd a noble lofty Structure, two hundred Foot long and thirty fix high, the Stalls of the Books (which are all letter'd on the Back) being of Cedar and other precious foreign Woods: it has feven Pillars of the Dorick Order, the Floor is cover'd with white and grey Marble, and the Ceiling with curious Paintings reprefenting the Arts and Sciences, and the moft celebrated Authors, by Perugrino; but thofe Hiftories of Arts and Sciences you fee under the Cornifhes, are of the excellent Hand of Bartbolomero Carducbo. In the Middle of the fame Room fand feven Tables of Jafper and Marble, and two of Porpbyry, with Globes and Spheres placed upon them. They preferve allo fome ancient Medals and Writings on the Bark of Trees; their moft valuable Manufcripts are, De Baptijmo Puerorum of St. Austin's own Writing, a Piece of St. Cbrysoftom, Apocalypfis de Sancto Amadeo, four Books writ by St. Therefa, a Letter of St. Vincent, the Original of St. Leveis Beltram of the Conception of the Virgin Mary, with divers other Pieces of St. Gregory, St. Anaftaje, and St. Cbry fostom.
The moft excellent Paintings on the Ceiling of the Church, and over the great Stairs, by that great modern Artift Luca Giordano a Neapolitan, and but lately finih'd at the late King's Expence, are no fmall Addition to the Beauty and Glory of this ftupendious Fabrick, which I was told contain'd, with every Thing belonging to it, above thirty-fix Leagues in Circuit; certain it is that there belong to this Structure fifteen Cloyfters, eleven Courts, twenty-five Fountains, thirteen Statues of Stone, and thirty eight of Brafs gilt ; the Number of original and other choice Pictures is computed at 1602 , befides 540 more on the Walls; the Copies of Landfkips, Fruits, $\mathcal{E}^{\circ} c$ are not to be number'd: It has befides this nine Refectories, five Infrmaries, two fine Apartments for the Reception of Strangers, and nine Kitcbens; it was twenty-four Years before it was finifhed, and coft King Pbilip II. fix Millions wanting only two thoufand Ducats, unto which adding the Charge of the Pantbeon and other additional Buildings, and the Reparations made after the Fire happen'd in 1671, the whole Charge has been computed at no lefs than eight Millions of Ducats. I have nothing to add to the Defcription of this wonderful Piece, except the curious Walk of double Rows of Elm-trees, leading from the little Town below to this Royal Foundation.
17. I left Madrid, Dec. 3, 1694 , and lodg'd the firt Night at Valdemore, whence I turn'd fomewhat out of the Road the next Day to go to Aranjeutz, moved
with a Curiofity to view the King's Palace there, the Situation of which among Woodlands (a Rarity fcarce ever to be met with in this Country) put me in Mind of my native Country England. For the reft, the Houfe is but ordinary for a Royal Palace, the Gardens and Walks not very large, yet better contriv'd than any I ever faw either in Spain or Portugal; here are many excellent Statues and Fountains, brought hither from all Parts by the Emperor Cbarles V. and thofe that are more modern are very good ones; the great Number of thefe Statues, of Brafs and Marble, together with the pleafant Fountains all along the fhady Walks and Arbours of large Elms, and fome Oak and Afh, (great Rarities here as well as in Portugal) render this Place very delighful, its Situation being between two Hills, upon the very Banks of the River Tagus, from whence fome Walks run up the Hills for a League together, yet the Air is efteemed not extraordinary healthful. Here the King keeps his beft Male Affes for Breeding.
I lodged the next Night at Ocanno, a Place noted for the beft Caffile-Soap, and the following Night at Corral de Almogner. As the Road betwixt Madrid and Alicant is paffibly good for a Coach, fo the Country is generally fertile in Corn, Oil and Wines, and the rocky Parts produce Abundance of Rofemary, Thyme, and fuch-like Sweet-herbs, wherewith they feed their Sheep and Goats. The next Place I came to was Albarzete, noted for good Knives, Daggers, and Sciffars ; notwithftanding this the extream Poverty of the CountryPeople, and confequently the ill Accommodation one meets with upon the Road, (where you are oftentimes deftitute of Provender for your Horfes, a Bed, nay, Bread and Wine) renders Travelling very difficult and tedious in Spain; however, I got at laft fafe to Alicant, the $13^{\text {th }}$ of December, after a Journey of ten Days in a Calafh.
18. The Town of Alicant is pleafantly feated betwixt Hills along the Sea fide, where there is a continual Paffage of Ships bound to or from the Mediterranean; it fuffered much in the late War with the French, who with three Bomb-Veffels threw in about 4700 Bombs, and deftroy'd fix hundred Houfes; they told it as a great Miracle, that above three hundred of the French Bombs fell upon the Cathedral dedicated to St. Nicbolas, of which one only pierced through the Roof, whereas the whole Miracle was only to be attributed to the flrong Cupola's and Arches which cover it. The French bombarded the Town with incredible Dexterity, throwing their Bombs even over the Caftle, that ftands a good Way above the Town, upon fo high an Hill, that I had enough to do to get up to it, though when I came there I found nothing worth the Trouble I had taken, except a fine Profpect, the whole Spanib Garrifon confifting of only five or fix Guards, and perhaps as many Guns. Alicant is of no Strength, and the People fo unfit to defend it, that at the Time of the French Bombardment they all retir'd into the Mountains, not excepting the Officers themfelves, and had certainly deferted the Place, had not one Mr: Nereland, an Englijb Merchant, ply'd the French with two Guns from the the Mole, and by his Example encourag'd fome of them not to leave the Place to the French.
19. The Gentlemen here of Valentia, both in their Drefs and Actions, much more imitate the Frencb than the Cafilians; they are of a hafty, vain and bafe Temper, and fo bigotted to their foolifh Niceties, or Spanis Punctilio's, that upon a very flender Occafion they will either murther one another themfelves, or hire others to do it, there being many of that Sort of Mercenaries in this Country, who will facrifice any Man for a few Pieces of Eigbt, which they commonly perform by Shooting. There Murthers produce fometimes no fmall Diforders, the Friends of the murtherd Party thinking themfelves oblig'd to revenge his Death, go in ftrong Parties, fome a hundred in a Body, arm'd each with five Guns, (one Fufee, and four leffer ones in the Girdle) and fo going into the Field, furprize one another wherever they can, it being their Principle not to attack their Enemy but upon a manifett Advantage; I was toid there were
at that time two fuch Parties in the Mountains of forty on a Side each, and I was credibly inform'd, that not long ago two fuch-like Fellows were executed at Valen$t i a$, who confefs'd that one of them had murthered thirty three Perfons, and the other no lefs than feventy feven. The Government of the Kingdom of Valentia is adminiftred by a Viceroy, but the Town of Alicant has its peculiar Governor, who commands alfo the Garrifon when they have any, all their ftanding Forces thereabouts confifting in a few Troops of Horfe, and fome Foot Militia, for the Defence of the Coaft.

The City contains betwixt thirty and forty thoufand Communicants; their Civil Adminiftration is by a Juftice, like our Mayors, and fome Aldermen; it has fix Convents of religious Men, viz. the Fefuites, Dominicans, Auftin Friers, Carmelites, Francifcans, and Capucbins; two Nunneries, the Monges de la Sangue and Capucbins; and as many Parihh Churches, S. Nicholas and S. Mary's. For the reft, Spain is at prefent in a very low Condition, through the weak Adminiftration of the Queen-Mother, the King's Want of Education, and the Feuds among the Grandees, which has depriv'd them of all their former Strength both by Sea and Land, for Want of Money, Provifions, and all other Things requifite for the Maintenance of a Fleet and Army ; and what is worfe, without any future Profpect of having thefe Things redrefs'd. It is true, the King's Revenues are very great, but being anticipated, little of them comes into the King's Coffers; for the Spanif Indies are computed to amount to ten Millions a Year in their Revenues to the Crown, and their Seaport Towns mult needs bring in conifiderable Cuftoms, were it not that the Officers are both remifs and corrupted in their Places.
20. About half a League from Alicant is a famous Convent of Nuns, whither there is a great Refort of Pilgrims, to pay their Devotions to the Sancta Faz or Holy Face kept in this Nunnery; among thefe are tipecally many Seamen, who when they leave Alicant, frequently make a Vow of performing their Devotions here after their fafe Return, which they per orm barefooted after a profperous Voyage. The Sinry of chis Holy Face runs thus:

Our Saviour going io his Crucifixion, a certai:, Woman call'd Veronica, who was jut then moulding Dough, and had a Napkin girt about her, coming out of her Houte at the Norle of the People, and feeing our Saviour's Face all dropping with Blood and Sweat, took the folded Napkin and fo wiped his Face, the Impreffion whereof remained upon the three Folds; thefe the Cburch has prelerv'd as holy Relicks, one whereof (they fay) is at St. Peter's at Rome, the other in a Convent near Malaga, and the third here, which (they fay) came hither over Sea, and landing in Valentia, upon the Confines of two Parifhes, a great Conteft arofe which of them it belong'd to ; to decide this Difference it was agreed to blind a certain Perfon, who fhould walk for fome time with the Sancia Faz thereabouts, and that thofe fhould be Mafters of it in whofe Precinct he happened to drop it ; which was done accordingly, and it happening to fall in this Place, a Conwent and Cburch was founded for its Prefervation. Its Virtue was the firft time experienced in a great Drought, when being carry'd in Proceffion, it rain'd immediately, and that in great Abundance. By Permiffion of one of the Fathers I had Liberty given me to look upon it a fecond time, as near as the Glafs in which it is enclos'd would allow of, and found it rather to refemble the Face of a Child, than a Man of that Age, as our bleffed Saviour, at the Time of his Suffering, which made me look upon the whole as fabulous; and I remember, a certain Italian Painter feeing it, did not ftick to fay, It was the worft Daubing be ever fawe. Once a Year, viz. the 17 th of March, there is a great Feaft celebrated at Alicant in Memory of this Holy Face, when 'tis brought into the City, upon which Occafion great Rejoycings are to be feen every where, and the Night generally concludes with Bonfires and a fine Firework. During my Stay at Alicant, I had the Oppor-
V ol, II, NQ CXVIII.
tunity of feeing divers of their Proceffions, and among the reft, that on Corpus Cbrifi Day, one of the moff celebrated in thofe Parts: The firt Pageant reprefented the Hiftory of Adam and Eve, how the Serpent enticid her, how they eat the forbidden Fruit, and were threatned by the Angel with a naked Sword: The nexts Abrabam's Sacrifice of his Son Ifaar, acted by living Perfons, who (as we were told) were Fifhermens Children, and had their Leffons taught by the Priefts, and their Pay from the Town for their acting. Thefe Pageants are made upon Waggons, with Boards laid upon them, both the Stages and Actors being thus drawn by Men along the Streets; there were followed by certain Giants, to perfonate the Gentiles, after whom came a Serpent reprefenting Temptation, and after this a Dragon with his Mouth wide open, to reprefent Hunger : Next to thefe came the feveral Companies of Tradefmen with their Banners; then the Capucbins, Carmelites, Aufin Friars, and Francifcans, each carrying the Image of the Founder of their Order, and that of the Virgin Mary, fplendidly attir'd ; then followed fome Morris-dancers, and after them fome Churchmen of Note, and a few little Children drefs $\mathrm{s}^{3} \mathrm{~d}$ up like Angels, ftrewing Flowers before the Bifhop, who walk ${ }^{9} d$ under a Canopy, carrying the Hoft.

2I. We have in this Section a very good Supplement to the laft, for the Author, who travelled only for his Pleafure, and by Way of Diverfion from the Fatigues of Bufinefs, enters into no deep political Speculations, but keeps pretty much to the Surface of Things, and tells us in what Light they appeared to him, at the Time of his Paffage. What he fays of Portugal is certainly very juft, and we have good Reafon to believe that Things are not much mended there at this Day. Yet this Country is juftly efteemed the fineft Part of Spain, if it be confidered as having belonged to it, both in earlier Times, and little more than one hundred Years ago. It lies very conveniently for Health, for Pleafure and Commerce, along the Sea-fide, feveral large navigable Rivers running through, and emptying themfelves into the Ocean in its feveral Provinces, and thereby making many, and fome of them excellent Ports, at the fame Time that the Trade through the Country is by the fame Means much facilitated.

The Kingdom of Portugal may boaft of as fine a Climate, as almoft any Country in Europe, for though from its Southern Situation it is very hot, yet this is fo tempered by Breezes from the Sea, as not only to become very tolerable, but alfo very pleafant. It may alfo boaft of as much Variety as almoft any Country, for the Northern Provinces are mountainous, and this renders them cool and wholfome, though lefs fruitful than the plain and flar Country about Lisbon; and here, as well as in Spain, it has been remarked that thefe Provinces are more populous and better cultivated than where the Soil is more indulgent, which renders the People vicious and lazy, confequently indigent, and in a wretched Condition. In the former Part of this Volume we have treated fo largely of Brazil, and in our firft Volume faid fo much of the Rife and Progrefs of the Naval Power of Portugal, the Empire fhe once had in the Eaft-Indies, the Manner in which it declined, and the very low State to which it is at prefent reduced, that there is no Neceffity of adding any Thing on thofe Subjects' here. But it may not be amifs to obferve; that, how paradoxical foever it may feem, yet there is good Reafon to doubt, whether the Diamond and Gold Mines that have been difcovered of late Years in Brazil, have been fo very advantageous to this Country as is generally fuppofed.

To explain this Notion it will be fufficient to hint to the Reader, that, independent of its Plantations, Portugal is very far from being a poor Country, or deftitute of the Means of carrying on a very extenfive Commerce. The Proportion in Extent between the Kingdoms of Spain and Portugal is, upon a fair Computation, thought to be as fix to one, and yet it is believed that the Commodities and Manufactures are very nearly equal, that is to fay, though Portugal is but a

8 T
fixth
fixth Part as big as Spain yet the Produce of the former is equal to that of the latter. This confifts chiefly in Wool, Wine, Oyl, Oranges, Lemons, Raifins, Fige, and other kinds of Fruit, with various other Commodities of lefs Value. There is likewife in Portugal a very rich Silver Mine, by good Judges efteemed the beft in Europe, from whence there has been fometimes drawn three hundred thoufand Pounds Sterling a Year. Yet with all thefe Advantages, and though there appears to be a vaft Trade at Lifbon, Porto, and other Places, the Advantages which the Inhabitants derive therefrom, are very far from being fo confiderable as might be expected. The great, indeed almoft the fole Caufe of this is, their having little or no Turn to Trade themfelves; fo that, as in Spain, the whole is in a good Manner managed by Foreigners.
Immediately after the Acceffion of the Houre of Braganca to the Throne, it fell almoft intirely into the Hands of the French, and what little efcaped them, was managed by the Italians. But the Crown of France affecting to treat the late King of Portugal with great Haughtinefs, that Prince, who was a Man of Spirit and of Parts, took fuch Meafures as threw the Commerce of his Kingdom into other Hands, and upon the French King's prohibiting Brazil Tobacco and Sugar, he prohibited, in his Turn, moft of the French Commodities and Manufactures. About the fame Time he fet up Silk L.ooms in Lisbon, and other Places, which deftroyed the Trade of the Genoefe, Venetians and Florentines. The Dutch became then Mafters of this Trade, in which allo we had fome fmall Share; which increafing by Degrees, and the late War about the Spanifb Succeffion giving fair Occafion to a clofer Correfpondence between the two Nations, we foon rivali'd, and at laft furpaffed the Dutch.

But how this Trade flands at prefent, is a Queftion I am not well able to determine : Certain it is, that we feem to have fill a Superiority over all other Nations, and employ in it a great Number of Ships that export vaft Quantities of our own Manufactures. On the other Hand, we import alfo prodigious Quantities of theirs; and though from Time to Time confiderable Sums in Gold come over from thence, which looks as if the Balance was ftill greatly in our Favour ; yet there want not fome Sufpicions, that a confiderable Part of this Treafure arifes not from the Portuguefe Trade, but from the Balance of our Trade with Holland, which is paid us in Portuguefe Gold by the Dutch; and, if there be any Truth in this, it alters the Care greatly. But however, let that Matter be as it will, two very important Deductions may be made from thence; the firft is, that from their not carrying on Trade in their own Bottoms, the Portuguefe are immenfe Lofers notwithftanding the valt Cargoes they bring Home annually from Brazil; the other is, that the Britijh Nation are great Gainers by the Balance of their Trade, whether that Balance arifes from the Dutch or the Poriuguefe; fo that on the Whole we fee, that the fureft Mark of a flourihing Trade is the Number of Ships employed; for while Navigation increafes, Trade increafes; and, whenever it declines, Commerce muft decline with it.
Our Author's Reflections upon what he faw in his Travels through Spain, are very pertinent and natural; and he appears to have reprefented the Country, the Towns and the Inhabitants, with the utmioft Candour and Veracity. It is -certain, that he faw Spain in the very wortt State fhe ever was, or indeed any Country could be in, which was towards the Clofe of the Reign
of Cbarles II. when her Councils were weak and diftracted, her Treafures exhaufted, her People impo verifhed and diftreffed,' her Armies confumed, and her Armada's, from being the Terror, become the Contempt of all Europe. It will appear very ftrange for a Man to advance it feriouly ; yet I muft confefs it is my own Opinion, that the War, occafioned by the Spanif Succeflion, notwithftanding all the Inconveniences that attended it; rather helped than hurt the Spani/h Affairs. The Nation, at the Time of the Death of Cbarles II. was in a Kind of Lethargy; and though this Accident threw her into violent Convulfions ; yet even thefe were Signs of Life, and in that Light favourable Symptoms. Had there been a Reign or two more of thofe feepy Monarchs, their vaft Dominions in Europe, Afrit and America mut have been broke to Pieces; whereas, notwithittanding the War, they remain tolerably whole.

It is indeed true, that their Country became the Scene of Action, which it could not be without fuffer ing from it; but, on the other Hand, this very Circumftance brought great Sums of Money into it, and kept a great Part of their American Treafure at Home, Things unknown in Spain for two Ages before. It may, indeed, be faid, and faid with Truth, that a very large Part of the Treafure that arrived from New Spain, came into the French King's Coffers: But even this was no Detriment to the Spaniards, if the Thing be confider'd in its true Light; for, in the firft Place, none of thefe Treafures could have been received, if they had not been efcorted by French Ships of War ; and, in the next, France employ'd thofe Sums, and more, in Supporting the Intereft of Spain; fo that the Nation loft nothing thereby, but was rather helped.
What proves to a Demonftration, that this is not merely a Conjecture, or a political Notion plaufibly defended is this, that after the War was entirely over, and the late King Pbilip fixed upon the Throne, both his Armies and his Fleets were in a much better Condition than Spain had feen any for a whole Age before; which enabled him to attempt, and would have enabled hinz to have reunited Sicily and Sardinia to his Crown, if the Britifh Fleet had not interpofed and crufhed his newraifed Naval Force in the Streigbts of Meffnc. A very great Stroke, this was efteemed, by thofe who confider'd it barely as a Victory at Sea; but to Men of another Caft of Mind, who meditate the Revolutions of Power, and the Mutations of Empire, it appeared in a much ftronger Light, as it fruftrated the Schemes of Cardinal Alberoni, and compelled his Mafter to part with a Minifter, whofe Genius was capable of reftoring the Forces of that Monarchy, and rendering Spain almoft as terrible under the Government of the peaceable and pious Pbilip V. as it had been under the ambitious and politick Pbilip II.
Since that Time Spain has been govern'd by a Kind of fecond Rate Genii, under the Influence of a female Spirit, reftlefs, ambitious, and at the fame Time avaritious and intriguing; fo that the People are almolt in their old Condition; and while they are flatter'd with the Hopes of conquering Principalities Abroad, and giving Laws to Europe, they are finking under the Weight of a weak and arbitrary Government, into Slavery, Poverty, and Diftrefs at Home. If any Thing can fave them, it muft be a Peace, when King Ferdinand the Sixth will find himfelf in a Condition to act according to his own Inclinations, which are faid to be entirely Spanifs; and that his Defire of fettling the Infant Don Pbilip in Italy, arifes chiefly from their being a Sea between that Country and Spain.

# The Travels of Pbilip Skippon, Efq; afterwards Sir Pbilip Skipponis and the Reverend Mr. Fobn Ray, through the beft Part of the King. dom of France; interfperfed with a great Variety of hiftorical, political, philofophical and mechanical Remarks and Obfervations. 

## Collected from the Journals of thofe ingienious Perfons.

1. An Introductory Account of Sir Philip Skippon, and of the Subject of this Section. Thbeir Departure from the Territories of Geneva, and their Arrival in thofe of France. 2. An elegant and exact Defcription of the City of Lyons, particularly of the Catbedral Church of St. John, the famous Clock there, and the Cabinet of Curiofities belonging to Mr. Servier. 3. Their Yourney to and Defoription of the ancient City of Grenoble, and of the mof remarkable Things therein.- 4. A very curious and circumftantial Relation of the Grand Chartreufe, and of the Manner in whbich the Monks live there. 5. Their Yourney from Grenoble to Orange, with an Account of the principal Places they miet with, and of the Face of the Country between thofe two Cities. 6. The City of Orange particularly defrribed, in the State it was then in under the Minority of the late King William the Third. 7. Their Yourney from Orange to Avignon: A Defcription of this laft-mentioned City, and of the mof remarkable Edifuces therein. 8. The Country between Avignon and Nifmes defcribed. A fulll Account of this City, and of the Antiquities there. 9. An Account of the City of Montpelier, and tbe Obfervations of our Travellers there. The Hijory of the Manufacture of Verdigreafe. The Art of Bleeching Wax. 10. A particular Defcription of the Confectio Alkermes. The Metbod of making Oil from Olives. The Burning Fountain at Peroul. 11. Their Excurfion from Montpelier to Frontignan. The Metbod of making Raimns of the Sun, and other Rajins. I2. Their Travels along the Sea-Coaft, weith an Account of wwat they obferved mof remarkable in their Yourney. 13. Anotber Yourney of theirs, with fome Account of the great Cities of Marfeilles and Toulon. The Mettod of Planting and Curing Capers. II. Their Fourney from Lyons to Paris, and a foort Account of the principal Places they paffed througb upon the Road. 15. A Defcription of Paris by Mr. Skippon, interifjerfed with many curious Particulars. 16 . Remarks upon the French Nation, and a particular Account of a very finn-
gular Tranfaction during the Protectorate of Oliver Cromwell. gular Tranfaction during the Protectorate of Oliver Cromwell. 17. T'be State and Revenue of the Clergy of France. 18. Mr. Skippon's Return to England. 19. Obfervations upon the foregoing Section.

${ }^{\text {r. }}$ WE are now, according to our Promife, to refume the Thread of Mr. Ray's Travels, who, in his Return from Italy, paffed through the Kingdom of France; but for the Reafons which have been already affigned, his Accounts of that Country are far lefs copious and diftinct than thofe he has left us of Italy: Yet this is in fome Meafure fupplied by the Journal of Pbilip Skippon, Efq; afterwards Sir Pbilip Skippon, whom we have mentioned before, and who was the Companion of Mr. Ray, from the Time they left England till this Gentleman left him, for the Sake of returning more fpeedily to England, at Paris. Sir Pbilip Skippon was a Gentleman of great Parts and Learning, as appears from the excellent Journal of his Travels, which being drawn up with regard to his private Ufe only, and not for the publick View, is an exceptionable Teftimony of his Candour, good Senfe, and Impartiality. He was a Man of an ample Fortune, and travelled purely for the Sake of Improvement and Anufement. He was therefore extremely inquifitive, where-ever he came, into all that might furnifh him with Knowledge or Pleafure ; and he kept fo exact an Account of every Thing he faw, and defigned with his own Hand, fo accurately, every Engine or Machine, that he thought worthy taking Notice of, that one cannot help wondering, confidering the Pains he took in viewing Things, how he found Time to defcribe them fo carefully, and to accompany them with his Reflections.

At his Return Home, he led a retired, or at leaft a ftudious Life, as appears from the Books which compofed his Library, and are now difperfed. In the Title Page of each of them is his Name, and the Year when they were bought or given to him, written in a very fair Italian Hand; and many of them have very
learned Notes, judicious Corrections, or pertinent and pleafing Remarks upon their Margins. Thus much it thought due to the Memory of this Gentleman, as having feen many of thofe Books, and poffefs'd fome. We will now come to the proper Bufinefs of the Section, and open it from his Journal, which is much more exact and full than what Mr. Ray thought fit to publifh; though nothing can be better than the Accounts of the latter, which he thought proper for publick View ; and therefore we have brought both into this Section for the Reader's Conveniency, in their Order of Time ; fo that they are intermixed but not blended, that it may be feen to which of thefe Authors the Accounts, Remarks and Obfervations belong.

Wednefday, July 19, (fays Mr. Skippon) we hired Horfes of the Cbaffe Marin, for four Crowns a Piece, (our Diet included) and allowed for the Carriage of our Portmantesu's two Sols for every four Pounds Weight, above what was allow'd, and left Geneva about Eleven of the Clock, then paffed over Pont d'Arve, where there is a Geneva Guard, and over the Bridge is the Duke of Savoy's Guard, that fearches for-Salt, Ecc. We went through two or three Villages belonging to Geneva, and, after two or three Leagues riding, ferried over the Rofne, paying five Sols a Man. Half a League further we came through Coulongi, a Village where the French King's Officers fearch Paffenger's, Portmanteaus, $\xi^{2} c$. Half a League from thence we rode in a narrow Paffage between the Mountains, divided by the Rofne on the left Hand of us, and pafling through a fmall Port called Clufa, (where fix or feven Frenct Soldiers keep Guard) were examined whence we came, $\mathcal{E}^{\circ} c$. About two Leagues thence we obferved the Place where the River Rbofne, in the Winter-time, runs under great Stones for about half a Stone's Caft, after it paffed
through
through a Channel three or four Yards broad. Half a League farther brought us to our Lodging at Cbafstillon.

The 20th, We fet forward about Four in the Morning, and rode thros mountainous Ways, paffing by a Fall of Water called Piffe Vache, which Golnitz, in his Itinerary, fays, runs under Ground into a Lake called la Bougie, that was on our left Hand. La Bougie is divided into two Parts by a Wall, one Part is marhy, belonging to St. Germain, the other belongs to Nantua, filled with Water and ftored with Fiif. We travelled through Nantua, a long Town with Portici like thofe of the Rue-bas at Geneva; it is feated at the End of the Lake we had on our Left Hand. This Place is noted for good Needles. It is three Leagues from Cbastilion. Three Leagues farther we baited ar Cerdon, having rode between Box-hedges and a hilly Way, making a fteep Defcent juft before we arrived at Cerdon, where our Cbaffe Marin changed his Horfes. After Dinner, we afcended a rocky Hill, and then enter'd a Plain which continues to Lyons. Two Leagues from Cerdon we ferried over the River D'Aine, and three Leagues thence lodged at Verbonne. This Day we took Notice of the Shepherds Huts made of Straw, and placed on little Carts.
2. On the 2 Ift , at Break of Day, we mounted, and, after two Leagues riding, came through a walled Place, and three Leagues thence rode through hilly Ways till we came to Lyons, where we firft went through a Suburb full of Victualling-houfes. At the Gate we received a Billet to lodge in the Town, then made a fteep Defcent in a well paved Way, and after weighing of our Portmanteau's, we took up our Lodging at the Efou d'Or, or Crown of France. This is a very fair City, Part fituated at the Meeting of the Soane and Rbofne, and Part on the other Side of the Soane; the Houles are high and well built, only defaced by the Raggednefs of their Paper Windows. There is a great Commerce carried on here, and large Shops full of all Sorts of Wares.

We faid at Lyons till the 25 th of $7 u l y$, and remarked thefe Particulars: The Maifon de la Ville is a very hadfome Fabrick, having a fair fquare Piazza before it, with a large Fountain. On one Side of the Piazza is a ftately Front erecting. The Rooms we faw here have thefe Names; la Cbambre Confulaire, where the Provoft and four Efchevins fit; la Cbambre de la Confervation, where the Merchants fic. In the Great Hall are the Pictures of the fourteen Lereis's, Kings of France; the Roof painted. Another Hall with the Pictures of the Efchevins; a little Chamber for Banquets, $E^{\circ} c$. S. Nicy is a pretty Church. La Cbaritie is the Hofpital, a great Building. N. Dame de Foutrier is on the other Side the Soane, built on the higheft Ground, where there is a fmall Pyramid erected to the Virgin Mary. Here we had a full Profpect of the City. Before another is a fmall Pyramid, and thereon is infcribed the Name of God, and Unity, and Trinity, in feveral Languages.

Without St. Just's Gate is a large Suburb; the Carmelites, that go barefooted, have a pleafant Convent with large Gardens, whence a pleafant View of the Town. The Fryars in this City are very importunate Beggars, coming into Strangers Chambers. The Feaft of St. Yames was kept while we were here, and we faw this Proceffion. Firft went a great Banner, then a great Cake or Loaf, (called Pain Benedit) upon a Fellow's Head; after that two Pipes and a little Drum, which made fome Mufick in the Interval between the Fryars Singing. Belle Cour is a fpacious wide Space, where there is a Mall and a pleafant Walk of Trees by it. Mr. Palmer, Brother to the Earl of Caflemain, was at this Time in Lyons, at the Academy Royal, and who lately turned Papift. The Proteftants are about 2000 Families in this City, and have a Temple at St. Romain, two Leagues up the Soane. Monfieur Moze, an Apothecary and a Proteftant was very civil to us.

The Monument of the two Lovers is on the other Side the Soane; it feems to have been fome Roman Building, and is built of great Stones. Two Forts, la

Pierre Scize on the Soane Side; for St. Jean is on the fame Side with the Body of the City. The Soane is a very flow River, and there are crofs it one Stone and two wooden Bridges. On one of them a Cuftomer demands a Liard of every one that paffes over. St. Fean is the Cathedral, which is large, and remarkable for a Clock with Motions like that at Sirasburgb; every Hour a Cock on the Top claps his Wings twice, and crows twice; after that an Angel comes out of a Door and falutes the Virgin Mary, and at the fame Time the Holy Ghoft defcends, and God the Father gives the Benediction. The minute Motion hath an oval Circle, and yet the Handle or Index always touches the Circumference. Invented by M. Servier.

We had good Luck in feeing this M. Servier's Cabinet, his Humour being very difficult. He was a Soldier in his younger Days; but about twenty-two Years ago he retired hither, and invented many ingenious Pieces of Clock-work, Machines of Water, EGc. which he hath defcribed with his Pen, and bound them up together in a thick Folio, and made the Models of them in Wood with his own Hand. Thefe Things we took Notice of, which we had not before feen in Italy and Germany. The Hand of a Minute Wratch moved every Time the Ball fprings up; in a certain Engine, a Lizard creeping up a perpendicular Rule, fhews the Hour of the Day. A Moufe creeping upon a Rule, placed horizontally, doth the like. There are done by Magnets : An Hour-Glafs that turns of itfelf, when the Sand is run out, and at the fame Time the Hour Figure placed over the Glafs, is changed. Several hydraulick Machines. An Atlas bearing a Globe, and upon its Equator was hewn the Hour of the Day. The Clock upon a declining Plane does not go when placed upon an horizontal Plane. A Ball put in at the Mouth of a winding Serpent runs through it, and afterwards paffes up the Tail of another placed on a moveable Axis, and comes out of his Mouth. A Tortoife put into a Bafon of Water, will never ftand ftill till he points to the Time of the Day. A Balaftra to fhoot Granada's at a certain Diftance. A Circle, with the feveral Humours of Perfons written on it, and if you touch the Gnomon or Index, it will point to the Humour (as is pretended) of him that touches it. A Door that opens both Ways. Two Gates, when one fhuts, the other opens. Two Dials, a pretty Diftance from one another, moving the Index of the one, turns the Index of the other; but when M. Servier took a little Piece of Iron or Load-ftone (colour'd white) out of the Point or End of the Index that was moved, the other would not ftir. A Cannon to fhoot downwards; it is placed on a declining Carriage, an Axis with Cords winds it backwards and forwards, and when the Cannon comes to the further End, a Circle of Lead is round the Mouth. We were told, that the Germans living in Lyons have great Privileges; that they have diftinct Courts to judge Civil and Criminal Matters, and when they make Harangues to the King they fpeak ftanding.
3. The $25^{\text {th }}$, Hiring a Poftilion for a Louis $d^{\circ} \mathrm{Or}$ a Man, we left Lyons, and rode over a long Stone Bridge, crofs the Rbofne, and then paffed through a large Suburb, and entered on a large Plain, where we travelled four Leagues, and after that rode thro' a pleafant Country, caft up into Hillocks, and fix Leagues from Lyons, dined at Artas, having paffed through but one Village before. After Noon we came through Merieu, la Baftie, Cbampier, and at Night lodged in la Frett, three Leagues from Artas. 26th, We rode a good Way in a level Valley, and at two Leagues from la Frett went through Moyran; a little from thence we entered between the Mountains, and travelled through a fruitful Valley, planted like Lombardy, with Rows of Trees and Vines climbing about them; fometimes we mounted ftony Hills, among them paffed through Rives a Village noted for its Iron Works; four Leagues from Moyran, we arrived at Grenoble, riding by a double Pall Mall, jult before we entered the City. This Night it fnowed on the Mountains near Grenoble.

Chap. IV.
through FRANCE.
Grenoble is a large City fituated in a fruitful and pleafant Valley near the Meeting of the River Drac with the Xere. The Houfes are generally meanly built, and the Streets are not handfome. A long Street (on the other Side of the $X$ Sere) joined to the City by a wooden and a Stone Bridge. On the fame Side, upon the Top of a high Hill, is a Fort called la Bafile; a Wall runs up that Hill. The Arfenal is another Fort guarded now by about 150 Soldiers. The Cathedral is a mean Church. The Jefuits are building a neat Chapel. The Proteftants are here about 5000, their Temple is within the Walls, and is of an octagonal Figure, with a tall Roof; within are Seats for Counfellors of Parliament and Perfons of Condition, a little Gallery with wicker Windows, where many Times Popifh Gentry, $\mathcal{G c}$. fit incognito, three Minifters. The Duke of Lefdiguieres's Palace has fine fhady Walks, and a fair Garden.
The Bifhop of this City is a Prince; within the Palace is a Room where the Parliament fits, the Lacqueys will fuffer no Swords to be worn here, except you give them a fmall Piece of Money. Ancient Infcriptions on fome of the Gates which are printed in Golnitz's Itineerary. Three Liards paid for every Horfe that paffes the Bridge with Stone Arches. We vifited a Garden of Simples belonging to a Courifellor of Parliament, (who was civil to us) and Monfieur Bernard, an Apothecary.
4. On the 27 th. Paying four Crowns for two Horfes and a Guide, we immediately rode out of the City, afcended the Mountains, and at a League's Diftance came thro' a Village call'd Sapene, and a League and a half further pafs'd through the Valley of Ckertreufe Village. Thefe Valleys, among the high Mountains or Alps are well cultivated, having great Store of Oats, and other Corn and Meadow Ground. At a narrow Paffage between two high precipitous Rocks, we paffed over a Bridge, crofs a Torrent, and knocking at a Gate, were let in by a Servant belonging to the Monaftery of the Chartreufe; then we afcended a mountainous Way above a Quarter of a League, till we paffed by a large Building, where Perfons of all Trades live, and who are habited like the Fathers of the Cartbufian Orders, and work for the Convent. A good Diftance farther up we arrived at the Grande Cbartreufe, where the Porter afk'd us whence we came, and called a Lay-Brother, who introduced us into one of the Halls appointed to receive Strangers in. At the Gate we left our Swords and Piftols. Seven Hours riding from Grenoble hither.

This Convent is feated under one of the highert Mountains in thefe Parts, and difcovers far and near into the adjacent Countries. As foon as we came into the Hall, Wine, Bread and Cheefe were fet before us, and one of the Fathers, a very intelligent Man, vifited and difcourfed fometime with us about the News of Europe, which he was no Stranger to. A Boy guided us up into the Mountains, and fhewed us a neat Chapel, dedicated to S. Maria de Cafalibus, which is prettily adorn'd with the Letters of her Name in Gold, and with Scripture Epithets: Beyond this we faw S. Bruno's Chapel, built on a Rock. At Night we had our Supper and Beds prepared for us. We obferved the Friars, at Even Song, bowing their Heads as they fat, at the Saying the Gloria Patri, $\mathcal{E}_{c}$. Sixty Fathers, and as many Lay Brothers here. No Women but thofe of the royal Blood can enter this Cloifter. There are two Ways more to come to this Convent, befides that from Grenoble, viz. one from Lyons, and the other from Cbamberry. In their Stable they keep about fixty Horfes, befides Mules and Affes.

28th, We faw their Church, a dark and narrow Building ; before the Altar ftand four tall Brafs Candlefticks, within the Choir the Fathers fit, and without fit the Lay-Brothers. The Fathers rife to their Devotions at Midnight, and are in the Choir three Hours, but then they fleep till Seven or Eight in the Morning, when the Maffes begin. The Cloifter is a very long and narrow Square; we went into one of their Cells which are not kept fo neat as thofe we faw at Venice. At
Vol. II. Nio 118.

Meal Time feveral Servants bring Bread, Wine, Ėc. and open a little Window by the Side of the Cell-Doors and there put in the Provifion. On Fridays they fatt ftrictly, and this Day we faw what they eat, viz. two or three Spoonfuls of cold Peafe boild, four or five Pears, and a few ftewed Prunes and raw Plumbs, befides a fmall Pittance of Bread and Wine, and at Night they had no Supper. In the Refecitoriums are two Tables befides the Priors; at the upper End they dine here together, only on Sundays and great Feftivals.

In the General of the Order's Lodging, we obferved the Pictures of St. Marinn at Naples, the Chertrufe of Paria, and the Convent nigh Avignom, $\xi c$. Places belonging to this Order. In the Chapel is an Altar Piece of great Value. In the Chapter-Room is a large Pifture, how feven of this Order were executed for Treafon (they fay for Religion) in Henry the V(IIth's Days, in England. Cardinal Ricblieu profeffed himfelf firlt of this Order. The Lodgings to entertain Princes in are very neat; the Chapel there is within crufted over with Marble; we gave the Cook a 2 uart d'Escue, and having eaten our Breakfaft, and written our Names in a Book kept by a Porter, we mounted and rode back to Grenoble the fame Way we came.
5. We fayed in Grenoble till Auguf the firft, and one Day rode out, and after twice fording the River Drac (which makes a great Wafh) at a League's Dir. tance, went over Pons de Clef, a large Arch crofs that River, where we paid one Sol a Man; a League further we paffed through a large Village called $V i f$, and about a League thence by S. Bartbolomerv, anocher Village, and Cbaftecu Bernard, where we faw Flame breaking out of the Side of a Bank, which is vulgarly call'd la Fountaine qui Brule ; it is by a fmall Rivulet, and fometimes breaks out in other Places; juft before our Coming, fome other Strangers had fried Egos here. The Soil hereabouts is full of a black Stone like our Coal, which perhaps is the continual Fuel of this Fire.
Auguft the ift, We took Boat for Orange, and went down the Rivers $Y$ fere and the Rbofne, twenty Crowns was given for a Boat, and the Paffengers paid proportionably to the Length of their Journey, fome more fome lefs: Afrer we had left Grenoble three or four Leagues, we durlt not ftir from the Banks fide, a furious Wind arifing and ftopping us for the Space of an Hour. Then nine Leagues from Grenoble, we arrived at our Lodgging in la Faurie, a Village on the right Side of the ITere.
2d. At Break of Day, we entered our Boat, and at two Leagues Diftance paffed under a Bridge with Stone Arches, and a wooden Penthoufe over it; Romans a great walled Place lay on the right Hand thence. We went three Leagues to the Meeting of the Xere and the Rbofne, where we obferved for a good Space the 2 fere kept itfelf unmingled with the $R$ bofne, which was of a whitifh Colour and much troubled, the Xere being much clearer and greenih. A League down the Rbofne we landed at Valence, a poor City and Univerfity, fituated on the left Side of the River: Afterwards we went by the Vivaretz and Sevemues, and paffed by Montlimer on the left Hand, and Viviers on the right, both walled, though mean Places, and at fourteen Leagues from la Fourie lodged at Bourga, a walled Town on the right Side of the River. Many Peages and Tolls paid by the Boatmen as we came along.
3d, After two Leagues we came to Pont S. Ejprit, a ftately Stane Bridge, with eighteen great Arches, and four little ones; between every Arch is a Window. It is curioufly paved with fquare Stones, a Hand broad, two Coaches can go abreaft on it, it is not made ftrait, but bending out againt the Stream. The Town of S. Efprit on the right Hand is walled; a League further we landed at a Peage or Toll-Place belonging to Orange, (we might have landed a League nearer to Orange) where we gave thirty five Sols a piece for a Horle to carry our Things thither. We walked abous two Leagues in a level and fruiffut Country to Orange.

8 U

In Valence, Bourg and other Places, we obferved Meafures of Corn cut in Stone, and little Portals to let the Corn out of them.
6. Orange is but a fmall and meanly built City, and the Walls are not confiderable, but there are Outworks which if well look'd after, would render it very ftrong, by Reafon of its Situation in a Plain. The Caftle is built on the higheft End of a long Ridge of a Hill; it was formerly of greater Strength, when it had walled Bulwarks round about, which the French King, in this Prince of Orange's Minority, caufed to be blown up with Gunpowder, when at the fame Inftant, (thirty) all Roman Catbolicks were overwhelm'd in the Ruins. The Governor is Count de Dbona, but his Deputy or Lieutenant is a Frencloman and a Papift. Within the Caftle were now about a hundred Soldiers, who civilly admitted us into the Caftle, and Thewed us many great Pieces of Cannon, and their Armory ftored with Arms enough for 5000 Men. In the Middle of the Caftle is a very deep Well of good Water, cut out of the Rock. C. Marius's Arch, and la Torre ronde are Antiquities without the Walls; on fome of the Engravings of the Arch was written, BODUIACUS. The Circus is a flately Ruin within the Wall.

The People here are very civil, and of a much better Humour than the French; when the French King had the City in his Poffeffion, many of the Gentry turn'd Papifts. The Univerfity is not confiderable, having about four Profeffors, and one of them is one Guy, I think a Scotchman. The Roman Catholicks have now the Ure of the Cathedral : The Inhabitants of this Principality are at leaft half Proteftants, and who were fenfible of the Change of Governors. On the Tower of the Maifon de la Ville, we faw many falle Weights nailed to the Wall. The Prince hath a Parliament here of both Religions, and hath paffed a publick Amneftia of all Offences, wherein he calls the King of England, and the Marquis of Brandenberg, his Uncles and Tutors. In a poor Woman's Houfe, we faw an old Roman Pavement of Mofaick Work, very curious reprefenting a Cat with a Rat in its Mouth; round about were Squares.
7. 4 th, Giving four Livres and fifteen Sols for three Horfes and a Guide, we travelled a ftony Way two Leagues, in a Country where Thyme, Lavender, Box, E'c. grew plentifully, many Mulberry and Olive-Trees planted in the Fields; we paffed by Cbafteau neuf, on the right $H_{a n d}$ of us, and a League further ferried the River la Nafque, paying for each Horfe one Sol a League, thence riding nigh the Rbofrie, we entered Avignon at Port St. Lazare, upon which Gate was written, Clave Petri tuia. Having thewed our Bolletins of Health, which we took at Grenoble, leaving our Fire-Arms with the Guard, and taking a Note to lodge in the City, we came to a Sign of a Town call'd St. Flour, where we lay till Monday the feventh of Auguft.

In the Cathedral, a fmall Church fituated on the Rocks nigh the Windmills, we faw an ancient Monument of Benedittus XII. Pope, a Miller's Son. The Palace is adjoining, guarded by Soldiers, Cbigi Cardinal Padrone is Legat and Governor, M. Columnia Vice-Legat, who (chey faid) was fuddenly to be removed, becaule he had given fome Sufpicion to the French King, by making a kind of Fort before the Palace Gate, and laying up a large Quantity of Corn. On the Outfide of the Palace where the Prifon is, are pictured, hanging by the Heels, the chief of the late Rebellion againft the Pope; and in the Bando 200 Piftoles are promifed to any Perfon that can bring the Head of any one of them; thele Rebels live in Safety at Villeneuf, a Place t'other Side of the Bridge, juft crofs the Rbofne, which belongs to the Fronch King, who hath threatned to burn alive any that fall offer to lay Hands on them. Monfignor Lomellino is the new Vice-Legat.

The Dominicans Church is a large Building of one Aich. The Cordeliers Church is larger in the Sacrifta; they inewed us a round leaden Box with a leaden Medal, plain on one Side, and on the other the Figure of Laura, and thefe Letters, M. L. M. I. which is interpreted by fome, Madonna laura moria jace. This Me-
dal with Italian Verfes on her, written by Petrach, in a neat Character was found in that Box, lying at her Breaft, when Francis I. took up her Body, who alfo made Verfes on her in French, which are kept with the others. In an obfcure Chapel we faw her TombStone.

In St. Martial's Church we fearched for Cafmir King of Poland's Monument, but could not be informed where it was; nigh the Alar is a very ftately Tomb that reaches almoft to the Top of the Church, and below lies the Figure of a Bifhop, and over him our Saviour and the Apoftles Effigies, and fo upwards are many Marble Figures. The Celefins Church hath a Marble relievo Altar, which they fay is but of one Piece, having many Figures in it: The Picture of a Skeleton drawn by King Renatus, who gave the Altar. In the Middle of the Choir is a handfome Monument of Clement VII. Pope. In a long Chapel adjoining, is the Legend pictured of S. Peter of Luxenbourg.

The Coining-houfe is oppofite to the Palace, and has a new fair Front. The Jefuits have a pretty Chapel, and an indifferent Studium; in the Area of it are Dials, with Directions to know what it is $0^{9}$ Clock; in fuch Cities as are under Kings, and in fuch as are under Commonwealths, the one is called Horologium Regium, the other Ariftocraticum, in which they have placed Geneva. The Gate on the Rbofue Side is open every Day, but befides that, there is but one more open at a Time, and that they change every Week. About 700 Italian Soldiers in the City. Here are fome Palaces and good Houfes, but the Generality of the Buildings are mean, and the Streets narrow; the Inhabitants are in Fear every' Night that the Rogues fhould creep in at their Windows.
8. The 7th, Giving fifteen Livres of France, we hired three Horfes and a Poftilion, who guided us firft over the long Bridge at Avignon crofs the Rbofne, which Bridge is entire on the City Side, but broken on the Side of France, and repaired with Wood. It feems to have been a Roman Work, is built of Stone, and paved (though now much defaced) like that at St. Efprit, and it is more bending againft the Stream. Some Way on the Bridge ftands a Centinel, and the Avignon Searchers lodge there, to ftop and enquire into Merchants Goods. When we were almoft over the Bridge, our Poftilion paid about one Sol a Horfe. At the End of the Bridge is Villeneuf, a Village, and a little Way thence on the River Side, S. Andre, a ftrong Place of the French King's. Leaving thefe Places behind us, (without entering them) we rode among fome Vineyards, and then travelled a ftony Way over little Hills, till we came by Remoulin, a fmall walled Place, about a fhort Englifh Mile thence; we arrived at Pont du Gard, a ftately Antiquity, well defigned by Dr. Bargrave, and defcribed in Golnitz and Deyron's Antiquities of Nifmes. A League from hence we dined at Sefignon, a fmall Village; and in the Afternoon rode a direft and level Way between Olive Fields, (the Olive-Trees were much mortified by the Extremity of the laft Winter) and after three Leagues riding, arrived at Lutzenbourg, a good Inn without the City of Nifmes.

We faw the Amphitheatre, the Outfide whereof is very entire, and is two Stories high, the Steps or Seats are ruined, and the Arena filled with Houfes. Over the great Entrance are two half Bulls in Stone, and on the Outfide is a Wolf fuckling Romulus and Remus; alfo a Triple and Priapus, or Penis winged, and the Figure of a Woman holding by a Bridle. In a private Houfe we faw Eagles excellently well made in Stone; a double Statue of a Woman having two Bodies and four Legs, it was made without a Head, but now they have fixed on it, the Head of an old Man; fome will have this to be the Statue of Geryon, but Deyron contradicts it. A fmall Piazza call'd. Place de Salamandre, from a Pillar with a Salamander upon it. La Maifon Quarre is a fair Antiquity within the City, being one Pile of Building, adorn'd with Statues, Pillars, $\xi^{\circ} c$. Within the Port de la Couronne are many old Infcriptions, and an ancient Statue with his Hands upon his Head.

$$

$$

$$
\cdots-\cdots \quad, \quad \cdots
$$

After a little Walk without the Town, we faw the Ruins of the Temple of Diana, which is under the Side of a Rock, and clofe by is Fons Diane, which firft makes a deep Pond, and fends Water enough to furnimh all the Gardens of the City; in Winter, or any rainy Seafon it overflows very much. La Torre Grande, on the Top of a Hill, is a ruin'd Tower of the old Roman Wall; in other Places are feen the Ruins of the old Wall. The Circuit of this City was but 2000 Paces lefs than Rome, and was built formerly upon feven Hills. The Front of the Cathedral is adorn'd with ancient Carving. A large Plain or Level round the Town, except on one Side, where feveral Hills run along in a Hill. The Splanade is an open Walk without Port de la Couronne, fometimes frequented by a great deal of Company. In the Maifon de la Ville are kept two or three Crocodiles, (dead) which are the Arms of Ni mes, and fignify their Founders came out of Egypt.

In a Court of this Maifon de la Ville, is erected on two Pillars againft the Wall the Monument of Dandalo the General of the Proteftants. The Proteftants of this City are three Parts out of four, and they had two Temples, but one is lately pulled down : Every Morning they have a Sermon, and in the Afternoon Prayers: On Sunday they have four Sermons; they have three Bury ing. places without the Walls, and they had a College and Profeffors, but now the Jefuits are Mafters: The Proteftants have a Bell to ring them to Church.

Thus far we have followed Mr. Skippon's Journey, who, as we obferved in the Introduction, fuffered nothing to efcape him. Whatever he faw remarkable, he committed to Writing immediately, and the Defcription of it to his Journal; whatever was particularly curious, he examined more clofely, and the Refult of his Examination was alfo committed to Writing. In like Manner he recorded whatever was communicated to him that deferved Notice. All this however was done in a hafty and unpolifhed Manner, for the Affitance of his own Memory, and not at all with a View, or even with a Sufpicion that it fhould one Day appear in Print.

It was otherwife with Mr. Ray, who, though he kept fuch a Journal as Mr. Skippon, yet revis'd and improv'd what he fet down in it, and where he had an Opportunity, compared it with the Notes of his Friend Mr. Willougbby. He begins his Defcription of France, with an Account of the City of Montpelier, to which this Introduction was requifite; but now we are arrived at a more copious and polifhed Account of Things, we fhall make Ufe of Mr. Ray's Travels fo far as they go, and thall then take up with Mr. Skippon's Journal again, in Order to fupply the Deficiencies that would orherwife appear in the Courfe of thefe Travels, and which has hitherto rendred Mr. Ray's liable to the Cenfure of being fomewhat abrupt and unconnected. Thus he writes:
9. Montpellier is a round Town ftanding upon a Hill, in the Midft of a ftony Country, fomewhat bigger than Geneva, but not fo populous, the Number of Inhabitants at prefent being about 25000, of which two thirds are Papifts, and one Proteftants. The Proteftants have two Churches (Temples they call them) in Town. The Streets of this City are very narrow, fhort and crooked, without any Uniformity or Beauty at all, fo intricate, that its half a Year's Work to underftand them all, and learn the Way from Place to Place. The Houfes are many of them, well built of free Stone, which were they fet well together in order, would make three or four handfome Streets. No larger Piazza or Marketplace in Town. The Number of Apotbecaries in this little City is farce credible, there being thirty Shops, and yet all find fomething to do ; their Cyprefs Powder, fweet Bags, Caffolets, Treacle, Confection al Kermes, and Hyacintha, having a Name all France over. The Queen of Hungary's Water (as they call it) made here, is likewife much bought up. It is nothing but common Spirit of Wine, in which Rofemary Flowers have been macerated and diftilled from the faid Flowers. The Wines hereabout are very ftrong, and bear Water well.

Their Vineyards are of dwarf Vines, without any Support, the Standards, when the Branches are pruned
off, being like the Standards of our Ofier Gardens. Ac Montpellier, the beft Verdet or Verdegreafe, Viridi aris; is made. They told us that fo good could not be made elfewhere, though they ufed the fame Method and the fame Materials; whether it be to be attributed to the juft Temper of Heat, or the Nature of the Wine they ufe, or fome other unknown Quality. The Manner thus; Firf, they take Grape Stalks well cleanfed from the Raifins, and from all Filth, and putting in the Bottom of a Pot, a Quantity of the beft red Wines they fet Sticks crofs, a little above the Wine, and upon them lay a Quantity of Grape Stalks, firft alfo drenched in Wine, and lei them alone about ffreen Days, more of lefs, according to the Seafon, till they come to make (as they call it) a Rofe, that is, the Outfides become to Appearance dry, and the Middle only wer.

Thefe Grape Stalks being thus prepared, they put in the Bottom of a large earthen Pot of the beft red Wine, that begins to be four, but is not yet come to be Vinegar, to the Quantity of about two or three Inches Depth; fomewhat above the Wine they fet Sticks crofs the Por, and having ready many little Plates of Copper, they lay upon the Crofs-fticks, firft a Layer of the prepared Grape-ftalks, then a Layer of Copper Plates, and fo alternately, S.S.S. i. e. Stratum fuper fratum, till the Pot be full. In the Middle of the Por they ufually leave a Hole all along, for the Vapour of the Wine to afcend, neither are the Copper Plates laid near together for the fame Reafon; when they have filled up the Pot, they cover it, and fet it in a Cellar, and after fome five or fix Days turn the Copper-plates; letting the Pot remain in the Cellar three or four Days more. In eight or ten Days, according to the Seafon, the Verdet will be come.

Then they take out the Plates, and laying them fix or feven on a Heap, put them, in a Trough, and fprinkle the Edges of them with the fame Wine, for three or four Days; next they prefs them with heavy Weights for four or five Days, and laft of all, fcrape off the Verdet with Knives, and moulding it with a little Wine, dry it and fell it. The fame Plates are again put into Pots, and ufed as before. So then the Verdet is nothing but the Ruft or Scurf of the Copper, calcin'd by the Vapour of the Wine.

Here alfo we faw the Manner and Procefs of Blanching of Bees-Wax. Firft, they melt the Wax in a great Copper Cauldron, then they have ready a Mould or Form of Wood, of the Figure of a Sugar-Loaf, or the Block of a Steeple crown'd Hat, which having befmeared over with. Slime of Snails, they dip into the Wax thus melted. This takes up a Skin or Film of Wax, as Candles upon Dipping do.

This they fmooth with their Hands, and dip in Water, and when it is cold take it off the Form, from which, by Reafon of the anointing the Form with the forementioned Mucilage, it will readily flip in the Form of a Cone or long crucible. Thefe Cones (fo let me call them) are fet in a Garden in Ranks, fingly one by one, fuppported with Canes or Reeds, crofling one another on this Fafhion.

Round about they fet Pots with Water, wherewith they frinkle the Wax often, to keep it from melting. In Summer Time, when the Sun lies hot upon it, fome fix or feven Times a Day, otherwife but three or four Times. In fourteen or fifteen Days, the upper End of thefe Cones will grow white, and then they turn them to whiten the other End. In a Month's Time, more or lefs, according to the Weather, they will become White all over.

Then they melr the Wax again in earthen Pans like Metce or Scuttles, and run it fo melted, through the Neb of a Tin Pot, into Water, and as it runs down into the Water, a Man either breaks it with his Hand into. Grains or works it into round Figures like
fpira.
fpiral Wreaths, or Corelle, and thefe they expofe again to the Weather, in the Garden and Order as before, still they become purely white, and then melt into great Pieces to fell. The Mucilage wherewith they befmear the Forms, is made of Snails taken alive, Shells and all, and pounded in a Mortar, till they become a perfect Pap or Vifcus. The Form once befmeared well over with this Pap, will laft dipping many Times. Wax whitened is almoft twice as dear as yellow Wax. Yel low Wax is folutive, and ufed where there is an Inflammation, and the Sore not ripe; white Wax, on the contrary very aftringent. They fay Montpellier is a Place proper for the Whitening of Wax; and that the fame Workmen coming over into England, found the Air of a differenc Temper, and not convenient for this Trade. At Montpellier is made the beft Confectio Alkermes, as Reafon there is it Mould, the Grain which gives it its Denomination, being in no Country of Europe found fo plentifully as here.

The Manner of the Preparation of this Grain, for the making the Confection, you may find fet down in the Pbilofopbical Tranfactions, No XX. p. 362, and I fall therefore here omit. Thefe Grains have formerly been thought to have been proper to the Dwarf or Shrub Ilex, called therefore Ilex Coccifera, and a by Fruit or Excrefeency of the Twigs of that Plant. But my learned and ingenious Friend Mr. Martin Lifter, who hath been very happy in making Difcoveries in natural Hiftory, hath found the like Grains here in England, upon the Twigs of Cherry and ocher Trees, and judged them to be the Work of an Infeet, and by her affixed to the Twigs for Nefts to breed and harbour her young ; and indeed to me they appeared to be fo, eafily receding and falling off from the Wood, when the Young are hatch'd and gone. As for the Grains themfelves, they are fo like the Kernes Grains, that they are farce to be dininguithed, and grow to the Twigs juft in the fame Places and Marner. But for a more full and compleat Hiftory of them, I refer the Reader to Mr. Lifter's Letters publifhed in the Pbilofopbical Tranfacions.

IO. At Montpellier I obferv'd the Manner of making Oil Olive: Firft, they take Olives, whether frefh gathered or laid awhile on a Heap, it matters not (as they told me) and bruife or grind them to a Pafte, as we do Apples to make Cyder, with a perpendicular Mill-ftone running round in a Trough. This Pafte, or the Olives thus bruifed, they put in round thin Baskets, made of Spartum, like Frails, having a round Hole in the Top: But both Top and Bottom clapping together, fo that when preffed they look like a thin round Cake. Half a Score or more of thele Baskets, filled with Olive Pouce, they lay on a Heap in the Prefs, and letting down the Prefs Beam, fqueeze them at firft without any Mixture. Then winding up the Beam they take out the Bafkets, and into each one put a good Quantity of fcalding Water (which they have always ready) and fhaking the Bafket mingle it with the Pouce, and then piling them upon one anorher, as before, prefs them down a fecond Time.

This fecond Operation they repeat again, and then taking out the Pouce, put in new, and proceed as before. The Oil, together with the Water, runs out into Veffels fet to receive it. The Water with the Anmurca finks to the Bottom, and the Oil fwims above it, which they take off with a Copper Difh, like a Fleeting-difh, as good Houfewives fkim the Cream from their Milk. The Water mixed with the red Juice of the Olive becomes red and thick, not at all mingling with the Oil ; fo that it cannot eafly the leaft Drop of it, be taken up without perceiving it. It is faid, that in Provence, they fpread their Olives on a Floor, after they are gathered, and there let them reft thirty Days to dry, and for that Reafon their Oil is better than that of Languedoc. Others lay them on a Heap a-while, to let them fweat as they call it.
It is worth the noting, that, though the Olives be very bitter, and of a very fiery ungrateful Tafte, yet the Oil which is drawn from them is fweet, the like is obferved in bitter Almonds, and it is very likely might be in all other bitter Fruits, which is a fufficient Proof,
that the Tafte of fuch Fruics doth not inhere in the Oil, at leaft which is made by Expreffion; and it deferves Examination, whether the chymical Oil may not alfo be divefted of the Tafte of the vegetable, from which it is extracted: Olives when they come to Maturity, change Colour, and become black as fome other Plumbs do, but it is very late in the Year firt. They are then nowwithftanding of an horrid and ungrateful Tafte, firing the Throat and Palate of one that eats them. They afford moft Oil when full ripe, but beft as they told us when gathered and preffed green. Sometimes they picte ripe Olives, but they will not laft; therefore, thofe which they pickle to fend Abroad, are gathered green. The Pickle they ufe is nothing elfe but a Brine of Salr and Water.

Near Peroul, about a League from Montpellier, we faw a boiling Fountain (as they call it) that is, the Water did heave up and bubble as if it boiled. This Phænomenon in the Water was caufed by a Vapour afcending out of the Earth, through the Water, as was manifeft, for if that one did but dig any where near the Place, and pour Water upon the Place new digged, one fhould obferve in it the like bubbling, the Vapour arifing not only in that Place where the Fountain was, but all thereabout; the like Vapour afcending out of the Earth, and caufing fuch Ebullition in Water it paffes through, hath been oblerved in Mr. Hawkley's Ground, about a Mile from the Town of Wigan, in Lancaßire, which Vapour by the Application of a lighted Candle, Paper or the like, catches Fire and flames vigorounly. Whether or no this Vapour at Peroul would in like Manner catch Fire and burn, I cannot fay, it coming not in our Minds to make the Experiment.
ir. From Montpellier we took a Journey of Pleafure to fee the adjacent Country, and firlt we rode to Frontignon, a little walled Town by the Estang Side, three Miles diftant, which gives Name to the fo famous Mufcate Wine. The Country about this Town, toward the Sea Southward, lies open to the Sun, but toward the Land Northward, it is encompaffed with a Ridge of Hills in Form of a Bow, touching the Sea at each End; fo that the whole is like a Theatre: In the Arena, and on the Sides of the Hills grows the Mufcate Grape, of which this Wine is made.

In this Space are contained two other little Towns, the one called Miraval, the other Vich; this laft gives Name to a mineral Water, fpringing near it, much ufed hereabout. It hath an acid vitriolic Tafte, but nothing fo ftrong as our Spaze Waters, and therefore I guefs the Operation of it is much weaker. At Frontignan and other Places, we faw the Manner of making Raifins [uva pafles, they take the faireft Bunches, and with a Pair of Sciffars frip off the faulty Grapes, and tie two Bunches together with a String, then they dip them in a boiling Ley [Lixivium] into which they put a little Oil, till they are very plump and ready to crack.
Fo. Baubinus faith that they let them continue fo long in the boiling Lixivium, quo ad faccefcant tantum E\% corrugentur ; but we obferved no fuch Thing, for they did not continue the Bunches half a Minute, but prefently took them out again, and wafhed them in a Veffel of fair cold Water; then they put them upon wooden Poles for two or three Days in the Shade to dry, and after that expofed them to the Sun, taking them in the Night Time, or rainy Weather. Cyprianus Ricbovius defcribes the Manner of making Raifins in Spain thus: There are (faith he) two Sorts of Uve paffe, or Raifins, the one of thofe call Raifins of the Sun, of a blue Colour, the other of the Uve paffe Lixa, which they call frail or Pakket Raifins.

In preparing the firft Sort they thus proceed; when the Bunch they defign for that Purpofe begins to grow ripe, they cut the Footftalk of it half afunder, that fo the radical Juice or Moifture may be at leaft in 2 great Meafure detained, and not pafs to the Grapes, and fo they leave it hanging on the Vine. Then by the Heat of the Sun, the Grapes are by Degrees dried. When they are fufficiently dry, they gather them and put them up in Veffels. The fecond Sort they make on this Fafhion: when they prune their Vines,

Chap. IV.
through FRANCE.
they bind up the Cuttings in Faggots, and referve them till the Vintage time. Then they burn them, and of their Afhes make a Ley or Lixivium, which they boil in great Veffels, and therein immerfe the Bunches of Grapes one by one. Afterwards, to dry them, they fpread them upon a paved Floor clean fwept, made for that Purpofe in the Vineyard, that fo they may be more fpeedily dried by the Sunbeams.
When they are fufficiently concocted and dried, they put them up in Frails or Baskets. After the fame Manner they prepare their dried Figs, by dipping them in a Lixivium made of the Afhes of the dried Branches of the Fig-tree, cut off in pruning. But however, they fupertitiounly obferve to make their Lixivium for Raifins, of the Ahes of the Branches pruned off the Vine, $\mathcal{E} c$. I doubt not but the Afhes of any Wood indifferently taken would ferve as well for that Purpofe.
12. From Frontignan we rode to Balleruch, to fee the hot Waters, which are ufed as well inwardly as outwardly. At our being there, which was in the Begin ning of September, the Water was fcarce Lukewarm; they told us that in the Winter it was very hot. The Bath is not above two flight Shors diftant from the Eftang, and the Water thereof taftes very falt and brackin, whether by Reafon of the Seas being fo near it, or becaufe the Water comes from fome Salc Mine, I know not; yet the lattér feems the more probable, becaufe, fhould it come from the Sea, the Water ftraining thro fo much Sand, would probably lofe its Salt by the Way, as we have found by Experiment in England. At Gabian, about a Day's Journey from Montpellier in the Way to Beziers, is a Fountain of Petroleum: It burns like Oil, is of a ftrong pungent Scent, and a blackifh Colour. It diftills out of feveral Places of the Rock all the Year long, but moft in Summer-time. They gather it up with Ladles, and put it in a Barre fet on one End, which hath a Spiggot juft at the Bottom ; when they have put in a good Quantity, they open the Spiggot to let out the Water, and when the Oil begins to come, prefently ftop it. They pay for the Farm of this Fountain about Fifty Crowns per Annum. We were told by one Monfieur Beaulbofte, a Chymift in Montpellier, that Petroleunz was the very fame with the Oil of Jer, and not to be diftinguifhed from it, by Colour, Tafte, Smell, Confiftency, Virtues, or any' other Accident, "as he had by Experience found upon the Coaft of the Mediterranean Sea in feveral Places, as at Berre near Martegue in Provence; at Mefina in Sicily, \&cc.

They make Salt of the Sea-Water drawn into fhallow Pools, and evaporated by the Sun-beams, in Sum-mer-time. Firts, they let the Water into a large fhalJow Plain, like the Cooler in a Brewhoufe, and there being well heated they run it into feveral fhallow Beds, like the Beds of a Garden; when the Sun hath dried up all the Water, they let in more, and fo again three or four Times, till the Salt, remaining at the Bottom of thefe Receptacles, come to be three Fingers thick, and then they take it up with Shovels, and heap it on little Hills; but the whole Procefs of this Operation being exactly defcribed in the Pbilofophical Tranjactions, Numb. 5r. p. 1025.
I fhall forbear to enlarge any further concerning it. Now that I have mentioned Martegue, I fhall add the Manner of making Botargo out of Mr. F. Willougbby's Notes. At Martegue they take Abundance of Mullets [Mugiles not Mulli, as one would be apt to think by the Englifh Name] in their Burdigos, which are Places in the Shallows inclofed with Hedges of Reeds. The Male Mullers are called Allettants, becaufe they fhed the Milt, [Lac pificium.] The Females Botar, of the Rows or Spawn of which Botargo is made. They firft take out the Spawn intire, and cover it round with Salt for four or five Hours, then they prefs it a little between two Boards or Stones, then they wafh it, and at laft dry it in the Sun for thirteen or fourteen Days, taking it in at Nights.
13. December 7 th, 1665 . From Montpellier we made an excurfive Voyage into Provence. The principal Cities and Towns that we faw were, I. Lumel four Leagues
diftant from Montpellier. 2. Arles, a confiderable City; once the Head of a Kingdom, called anciently Arelates ftanding upon the River Rbofne, which; a good Way above this City, divides itfelf into two Branches; and makes an Inand called the Camarg. All this Illand is full of Vermicularis frutex growing by the Ditch Sides all along. Beyond this City, in the Way to Marfeilles; we paffed over a large Plain or Level, all over covered with Stones, called now the Ciraux or les Cbamps pierreux; anciently Campi Lapideito. 3. St. Cbamas, a large Burgh; flanding upon the Ridge, and on each Side a narrow Hill, which is perforated like Pauflypus. 4. Marfeilles; an ancient City, not great but well built, with tall Stone Houfes for the moft part, and very populous:

We were told that the Number of Souls was about 120,000. The Streets are narrow as in moft of the ancient Towns in this Country, to keep off the forching Beams of the Sun in Summer-time. The Haven is the moft fecure and commodious that I have feen; the Entrance into it is fo ftrait and narrow, that a Man may eafily caft a Stone crofs it, but the Haven within large enough to contain 500 Veffels or more; of an oval Figure. On one Side of this Haven the Town is built, which compaffes it more than hialf round, having before it a handfome Kay well paved, which ferves the Citizens for a Walk or Promenade. This Haven is not capable of Ships of above 600 Ton.
On the Rocks near this Town, I found growing plentifully, the fame Colutea I obferved at St. Cbamas: Valeriana rubra Dod. Carduus galacites, I. B. By the Sea-fide, Tragacantba, Maffilienfum plentifully : Aster luteus fupinus, I. B. Titbymalus myrfinites augufifolius; Coronopus Maflienfis, Lob. 5. Baufet. 6. Oliole, two litcle Towns. 7. Toulon, no great Town, but well fortified, and the belt Haven the King of France hath on the Mediteranean Sea, having a large Bay capable of the greateft Veffels, where there is good Riding for Ships. At Toulon they make Holes in their Stone Walls at three or four Foot Diftance near the Ground, and there plant Capers, the Fruit whereof they prepare and pickle after this Fafhion. They gather the Buds or Bloffoms of the Flowers before they be explicated, and fpreading them thin, lay them in the Shade to wither for three or four Hours, to prevent the Opening of the Flower. Then they put them in a Veffel, and pour Vinegar upon them, covering the Veffel with a Board, and fo let them ftand for nine Days, at the End whereof they take them out and prefs them gently, and put them in frefh Vinegar, letting them ftand as long as before : This done the third Time, they put them up in Barrels with Vinegar. Some mingle Salt with their Vinegar, which is the beft Way, and preferves the Capers for three Years, both for Colour and Tafte, as good at the Firft.
I obferved near Baiufet great Plenty of Myrtle in the Hedges; near Olliole, Accantbus Sativus; Altbcaa frutefceus folio rotundiore in cano C. B. Fumaria minor five tenui folia Jurrecza I. B. Acacia trifolia; Teucrium vulgave; Arifarum latifolium Cbryfocome Ger. 8. St. Maximine; near which is the famous Grot of Mary Magdalen, called St. Baulme. 9. Aix, anciently Aque Sextice, from the hot Baths that are there. This is a very ele gant and plearant City, well built with fair Stone Houfes, having broad Streets and handfome Piazzas. 1o. Ses logne, Selonia.
In the Cordeliers Church lies buried Nostrodamus the famous Frencb Prophet, whofe Verfes the Frencbmen efteemed as Oracles. In the Church Wall is placed a Stone with this Infcription to his Memory.
D. M. Cariff offa M. Nosiradomi unius omnium mortdo lium judicio digni, cujus pene divino calamo totius or bis ex aftrorum infuxu futuri eventus confcriberentur Vixit an. 62. m.6. d.10. Obit Salo MDLXVI Quietem pofteri ne invidete. Anna Pontia Gamells Solonia conjugi optimo. $V, \dot{F}$.
II. Aiguemortes, a fmall Town, but of great Strengeh, near the Sea, in a fenny Place, fix Leagues diftant from Montpellier. From Montpellier we returned to Iyons,
from Lyons we travel'd with a Meffenger to Paris, from Paris again to Calais, and fo crofs the Strait to Dover; whence we at firft fet out, and began our Journey.
14. Thus we have run through all that Mr. Ray has left us concerning France; but for the Sake of obtaining more Particulars of that Journey, in which Mr. Ray feems to have been lefs circumftantial than ufual, we fhall have Recourfe to Mr. Skippon's Journal of their Travels from Lyons to Paris, in which the Reader will find very few Repetitions, and many fingular and curious Remarks thar, for any Thing I can difcern, had efcaped the Obfervation of former Travellers, and are not taken Notice of by any that came after them, more efpecially the Story which he tells us of the Son of Count St. Geran ; which he has related very fuccinctly, and that has fince been made the Subject of a confiderable Treatife. It may not be amifs to oblerve, that the young Gentleman, who thus recovered his Title and Fortune, married, and had only a Daughter, who, by the Intereft of the Family, was put into a Convent; by which Means the Eftate defcended very nearly in the fame Way that it would have done, if the Fraud had never been difcovered.

March 6, We gave forty five Livres a Man, for Horfes to a Meffenger, who for that Money maintained us from Lyons to Paris, and allowed him five Sols a Pound, for every Pound our Portmanteaus weighed, above fix Pound, which he carried on a Sumpter-horfe. By the Cocbe d'eau, a Conveyance by the River Soane, we fent fome of our Things, and paid but three Sols per Pound. Dr. Moulins, Mr. Lifter, Mr. Ray and myfelf, were in Company this Journey with fome Frenchmen. We went through a very ftony Way, and paffed over Hills, and three Leagues from Lyons pafied through la Brelle and three Leagues further brought us to our Lodgings in Tarrara. This Day we obferved Oxen thod with Iron. 7 th, We mounted before Day, and rode over the Mountain of Tarrart, where we found Snow. After three Leagues riding we came throngh St. Savorin, and thereabouts obferved a perpendicular Stone moved by Water, to bruife Hemp, held underneath by two Boys. Three Leagues further we dined at St. Nicholas in Roanne, and there ferried over the Louvre, each giving two Sols Marque. We paffed a pleafant Valley, and four Leagues from our Baiting-place, lodged in Pas de Quandiere a fmall Village.
The 8 th, We rode, for the moft Part of four Leagues, thro' hilly Way, and dined at l'Efcu de France in Paliffe, where she Count de S. Geran hath a Houfe. The prefent Count came thus to his Eftate; his Uncle being next prefumptive Heir, made a Compact with a Midwife, who delivered the prefent Count's Mother, but by cafting her into a Sleep, the Midwife perfuaded her into a Belief the was delivered of a dead Child; when the Midwife conveyed away the little Infant, who was bred up by a Country Woman, and being grown to fome Years, the Countefs defired, and took him for her Page, on whom the beftowed very good Breeding; and in the mean Time the Midwife, on her Death-Bed, confeffed the Cheat, and declared the Page to be the Countefs's true Son. This Difcovery occafioned a great Suit between the Uncle and the young Heir; but at laft it was determined by the Parliament of Paris, in Favour of the Heir the Countefs's Son, who is now Count de St. Geran. Four Leagues from Palife, having traveled good Way in a pleafant Country, we lodged at the St. Grorge, without the Walls of Warene, a fmall Town.
On the gth, we traveled feven Leagues, and dined at the Three Moors in Moulins, where many Women came to fell their Sciffars, Knives, $\mathcal{E}^{\circ}$ c. Moulins is an indifferent City, which afforded little of Remark, befides the ftately Monument of Montmorency, who was beheaded in the Maifon de Ville at Touloufe. The white Marble Statues of the Duke and his Lady lay on a Tomb of black Marble ; a fair Marble Statue is on each Side, and over them a Marble Urn, and other Ornaments. We rode feven Leagues from Morlins in very good Way, (as we did in the Morning) and lodged this Night without the Walls of St. Pierre de Montier. Hereabouts began fony Caufeways. On the roth, we
rode five Leagues, paffed a ftone Bridge over the River Loire, and dined at the Flower de-lys in Nevers where the poor People defired us to buy their Bagatells of Glafs. This City is meanly built nigh the Loire on a rifing Ground, and hath an indifferent fair Cathedral where are feveral marble Monuments: The Steeple of this Cathedral is handfomely adorned with Statues, After Dinner we continued our Journey about two Leagues and an half, and tafted of an acid Water fpringing up plentifully in the Middle of a Court, walled about. This Water is much drank in Auguft and is reputed very good for curing the Stone, \&cc. It is near Pogue a Village. This medicinal Well rifes in the Level of a Valley. Two Leagues and a half far ther we reached la Cbarité a walled Place, fituated upon the Loire. Over the Gate we entered at is written,

## Ifi Varietaie Securitas jub Lilio.

Our Inn was handfome, the Sign of the Croix dor.
