The Moofe is found no where but in North America, and is one of the nobleft Creatures in the Foreft: There are two Sorts, the common grey Moofe, by the Indians called Wampoofe, (thefe are more like the ordinary Deer, and like them herd fometimes thirty in a Company) and the large and black Moofe, of which we have the following Account: He is the Head of the Deer Kind, has many things in common with other Deer, in many differs, but in all very fuperior. The Moofe is made much like a Deer, parts the Hoof, chews the Cud, has no Gall, and his Ears large and erect ; the Hair of the black Moofe is a dark grey, upon the Ridge of his Back ten or twelve Inches long, of which the Indians make Belts; he has a very fhort Tail. The Nere England Hunters have found a Stag Moofe of fourteen Spans in Height, from the Withers, reckoning nine Inches to the Span, that is ten Feet and an half; a Quarter of this Venifon weighed more than two hundred Pounds. A few Years ago a Gentleman furprized one of the black Moofe in his Grounds, within two Miles of Bofon: It proved a Doe or Hind of the fourth Year; after the was dead, they meafured her upon the Ground, from the Nofe to the Tail between ten and eleven Feet; the wanted an Inch of feven Feet in Height. The Horns of the Moofe, when full grown, are about four or five Feet from the Head to the Tip, and have Shoots and Branches to each Horn, and generally fpread about fix Feet; when the Horns come out of the Head they are round, like the

Horns of an Ox , about a Foot from the Head they bsgin to grow a Palm broad, and further up ftill wider, of which the Indians make good Ladles, that will hold a Pint. When a Moofe goes through a Thicket, or under the Boughs of Trees, he lays his Horns back on his Neck, not only that he may make his way the eafier, but to cover the Body from the Browfe or Scratch of the Woods. Thefe prodigious Horns are fhed every Year.
A Moofe does not fpring or rife in going as Deer, buit fhoves along fideways, throwing our the Feet like a Horfe, in a raking Pace. One of thefe large black Moofe, in his common Walk, has been feen to itep over a large Gate, five Feet high : After you unharbour a Moofe, he will run a Courfe of twenty or thirty Miles before he turns about, or comes to a Bay; when they are chafed they generally take to the Water. The common Deer, for a fhort Space, are fwifter than a Moofe; but then a Moofe foon out-winds a Deer, and runs much farther. The Meat of a Moofe is excellent Food ; and though it is not fo delicate as the common Venifon, yet it is more fubftantial, and will bear falting ; the Nofe is looked upon as a great Dainty. The black Moofe are rarely found above four or five together ; the young Ones keep with the Dam a full Year. A Moofe calves every Year, and generally brings two ; they bring forth their young Ones ftanding, and the Young fall from their Dam upon their Feet. The time of their bringing forth is generally in the Month of $A$ pril.
The Moofe being very tall, and having very fhort Necks, do not graze, as the common Deer, other Cattle, $\mathcal{F}^{\circ}$. do, and if at any time they eat Grafs, it is the Top of that which grows very high, or on fteep rifing Ground; in the Summer they feed upon Plants, Herbs, and young Shrubs, that grow upon the Iand, bur moftly, and with the greateft Delight, on Water Plants, efpecially a Sort of wild Colt's-foot and Lilly, that abound in their Ponds, and near the Banks of Rivers, and for which the Moofe will wade far and deep; and by the Noife they make in the Water, the Hunters often difoover them. In the Winter they live upon Browfe, or the Tops of Burhes, and young Trees, and being very tall and ftrong, they will bend down a Tree as big as a Man's Leg ; and where the Browfe fail them they will eat off the Bark of fome Sort of Trees as high as they can reach; they generally feed in the Night, and lie ftill in the Day. The Skin of the Moofe, when well dreffed, makes excellent Buff; the Indians make their SnowShoes of them. Their way of dreffing it, which is very good, is thus : After they have haired and grained the Hide, they make a Lather of the Mooles Brains in warm Water, and after they have foaked the Hide for fome Time, they fretch and fupple it.
There is hardly greater Variety and Plenty of Fowl any where, fuch as Turkies, Geefe, Partriges, Ducks, Herons, Storks, Heath-Cocks, Swans, Wigeons, Dapers, Black-Birds; all Sorts of Barn-door Fowl, Crows, Ravens, Cormorants, $\xi^{3}$ c. Vaft Flights of Pigeons come and go at certain Seafons of the Year.
The Fiih in the Sea and Rivers here are excellent, and in vaft Abundance, as Cod, Thornback, Sturgeon, Salmon, Haddocks, Herrings, Mackrel, Smelts, Eels, Lampreys, Sharks, Seals, Porpuffes, Grampuffes, Whales, and other Fifh, great and fmall. The beft Months for fifhing are March, April, May, and Fune. Six or feven Star-Fifh were formerly taken off the Shore near Nantucket, of which Governor Winthorp gave the Royal Society an Account, having obferved that this Fifh divides itfelf into no lefs than 81920 fmall Parts by Branchings, and is one of the moft wonderful Works of the Creation. Some Years fince there ftranded on the Coaft of Nerw England a dead Whale, of the Sort which in Fifher's Language is called Trumpo, having Teeth like thofe of a Mill, its Mouth at a good Diftance from and under the Nofe, and feveral Partitions in the Nofe, out of which run a thin oily Subftance, they candied; the remainder, which proved a thick fat Subitance, being fcraped out, was faid to be the Sperma Ceti. We have fome very curious Accounts, not only of this, but of other kinds of Whales, by the ingenious Mr. Dudley, which for want of Room I omit ; and alfo, becaure, I
fhal!
thall be obliged to mention this Subject again more fprouting. The common way is to mote the Ear toge largely in another Place.

We will now proceed from the Animal to the Vegetable Kingdom, which is in full as flouriming a Condition; and yields very little to any Country in America. There is Plenty of good Timber in the Woods and Swamps of New England; but that Plenty is fo much leffened within ten or twelve Miles from the Sea, that, we are told, there is a Neceffity of a Law, to prevent the Wafte of Woods, which three or fourfcore Years ago the Planters would have been glad to have feen wafted. Oak, Elm, Firr, Afh, Cyprefs, fine Chefnut, Walnut, Cedar, Beech, Afpin, Saffafras, and Shumack, are common here ; their Firr is of an extraordinary Growth for Mafts, Yards and Planks. The Shumack is of ufe for Dyers and Tanners; and, as there is no want of Hides or Skins, nor Bark, there muft be much Leather in Neros England, if thofe Advantages are improved; the Oak has fupplied the Shipwrights for Building; the Firr produces Pitch, Tar, Rofin, and Turpentine. All Sorts of Garden and Orchard Trees grow in Perfection, fo that it is no hard Thing for one Planter to make a hundred Hogfheads of Cyder in a Seafon, ard the Export of Apples to the Sugar Inands is one of the conftant Articles in the Trade of the Province.
It is affirmed, their Apples are larger and fweeter than ours in England; and the fame Obiervation extends to their Plumbs, Cherries, Peaches, Pears, $\xi^{3} c$. All Sorts of Roots for the Table are in great Plenty here, as Turnips, Parfnips, Carrots, Radifhes, much larger and richer than in England, though originally their Seeds came from hence. There are alfo Pompions and Onions, good ftore of Water-Melons; and Squafhes grow here, perhaps, from Seeds that were firft brought from Portugal; whither the Traders here have long fent, and fill fend, their Fifh in great Quantities. Flax and Hemp grow as naturally here as in any Country on the Baltic, and in as great Perfection; Oats, Barley, Peas, Beans, and indeed every thing of this Kind, fucceed as well as can be wifhed ; but amongft them all, there is nothing fo much planted as Indian Corn, of which Mr. Wintborp háving given a large Account to the Royal Society, we fhall take as much as is neceffary for ours, or the Reader's Purpofe, from thence, and infert it here.

The Natives called it Weachin, and in fome fouthern Parts of America, it is known by the Name of Maiis or Maize; the Ear is a Span long, compofed of eight Rows of Grain, or more, according to the Goodnefs of the Ground, about thirty Grains in a Row; 'tis of various Colours, as red, white, yellow, blue, olive, greenifh, black, fpeckled, ftriped, and fometimes in the fame Field, and in the fame Ear ; but the white and yellow is the moft common; the Ear is defended from the Cold and Storms by ftrong thick Hufks, the Stalks grow fix or eight Feet high ; that of New England is not quite fo tall as that of Virginia, and at Canado it is fhorter than at Ners England; 'tis jointed like a Cane, and full of fweet Juice, like the Sugar Cane, and a Syrup as fweet as Sugar may be made of it, as has been often tried ; at every Joint there are long Flags, and at the Top a Branch of Flowers like Rye Bloffoms.
It is generally planted from the Middle of April to the Middle of May. In the northern Parts the Mobawk Corn is not planted till the Middle of Fune, and yet is ripe in Seafon. The Stalks of this Sort are fhort, and the Ears near the Bottom, and are of feveral Colours The manner of planting Maize is in Rows, at equal Diftance every way, about five or fix Feet ; the Earth is opened with a Hoe four Inches deep, and four or five Grains are thrown into it, at a little Diftance from one another in the Breadth of a Hoe, then they are covered with Earth; if they grow the Crop will anfwer. The Corn is weeded at a Hand's length, and the Earth is loofened about it with a Hoe. This Labour muft be repeated as the Weeds come up; when the Stalk begins to grow high, a little Earth fhould be drawn about ir, and on putting forth the Ear fo much as to make a little Hill, like a Hop-Hill. 'Tis ripe about the Middle of September; it muft be ftripped as foon as gathered, unlefs 'tis laid thin, to prevent its growing mouldy, or

Vol. II. Numb. 85.
ther, in long Traces, by fome Part of the Huiks lefo thereon, which is called tracing. Thefe Traces they hang upon Bearers, without Doors, and will keep fo all Winter good and fweet. The Indians thrafh it as they gather it. They dry it well on Matts in the Sun, and bury it in Holes in the Ground, lined with Mols or Matts, which are their Barns. The Englif of late plant it with the Help of the Plow; they turn up fingle Furrows, fix Feet diftance ; then plow a-crofs, at the fame Diftance, throw in the Com, where thefe meet, and cover it with a Hoe, or run another Furrow over it with the Plow.
The Indians boil it till it becomes tender, and eat it with Fifh or Venifon, inftead of Bread; fometimes they bruife it in Mortars, and fo boil it. The moft ufual way is to parch it in Afhes, firring it fo artificially as to be very tender, without burning; this they fift and beat in Mortars into fine Meal, which they eat dry, or mixed with Water. The Englifh mix it into a ftiff Pafte, make Bread of it, which they bake all Day or all Night. The beft Sort of Food which is made of it is called Samp; to make it, the Corn is watered half an Hour, beaten in a Mortar to the Bignefs of Rice, fifted, boiled, and eaten with Milk, or Butter and Sugar, like Rice; and this feems to be fo good and wholefome a Diet, that 'tis a ftrange Sort of Folly in fome that defpife it, becaufe 'tis Indion Corn; and the Indians have no other Corn to eat. The Englifh have alfo made good Beer of it, by malting it, or making it of Bread; when they malt it, it munt chit both ways, Roor and Blade ; to do which, they heap it up at a convenient Time, then take away the Top of the Earth of a Garden-Field, two or three Inches deep; after which they cover the Ground with the Corn and the Corn with the Earth ; when the Plat is green all over with the Corn-Sprouts, which it will be in about ten Days, it muft be taken up, the Earth fhaken from it and dried, and then wafhed and dried again on a Kiln ; this makes the Malt and that the Beer, which will be pleafant, wholefome, and of a brown Colour. The Beer made of Bread is more durable, and altogether as pleafant ; to make this, they cut the Bread into great Lumps, as big as a Man's Fift, math and manage it as they do Malt; adding or omitting Hops, of which they have enough, and as good a Sort of their own as is defired. No Indian Corn grows wild now; but both that and Kidney Beans were found among the Natives. The Indians have a Tradition, that the firt Grain of Corn was brought thither by a Black-Bird, and the firft Bean by a Crow.

We are now to proceed from the Defcription of the Country, and an Account of its Produce, in which we ought, by all Means, to include Iron Ore, ' of which there is in this Country great Plenty; I fay, our Method leads us to go on to the Political State and Condition of this Colony, that the Situation of the Englifb therein may be rendered more obvious, and be the better apprehended. In order to do this as fuccinetly as poffible, we fhall obferve there are very few Countries, in which fo many different Forms of Government have prevailed within fo narrow a Space of Time as in Nerw England. At the firft going over of the People thither they framed a Government of their own, and afterwards procured, as themfelves boaft, or fome of their Writers have boafted for them, the Eftablifhment of a Republic, by Virtue of a Patent from King Fames I. which, how ever, they managed fo indifferently, and were guilty of fuch flagrant Oppreffions, on account of Differences in Religion, that their Charter was in the Reign of King Cbarles II. declared forfeited; and though it was renewed under the Reign of King William, yet it was under various Reftrictions, and with feveral material Alterations; fo that we may fafely affirm, that there are at prefent three kinds of Governments eftablifhed 'by Law in thofe four Colonies; which, as we before obferved, are eftablifhed within the Limits of Newe England. The firft kind of Government I fhall mention is, that old Form of Charter Government, which allows the People to chufe annually their own Governors, Deputy-Governors, Council and Afembly, with all their Officers, Civil and Military, and to make fuch Laws as to them

Ppp
farly

Thall feem expedient, provided they are not repugnant to the Laws of Great Britain. This kind of Government, which, I believe, is more independent than that of any Colony belonging to any other Nation in the World, is enjoyed in its full Extent by the People who inhabit the Plantations of Connecticut and Rbode Ifand; but they make a very different Ufe of it ; for thofe of the firft mentioned Colony are very ftrict in Point of Religion, whereas thofe in Rbode Ifland are the freeft in that Refpect of any in the World; for there are among them People of all Religions, or rather, of all thofe Sects into which Proteftants are divided, but without the leaft Prejudice to their temporal Concerns, every Man being alike capable of Magiftracy ; and with refpect to an Eftablifhed Church there is none, but each Body of Chriftians live according to their own Syftem, and chufe and pay their Minifters as they think fit. The great Colony of Mafachufets, is likewife a Charter-Government, but the Appointment of the Governor, Lieutenant-Governor, Secretary, and all the Officers of the Admiralty, is vefted in the Crown. The People have not only the Choice of the Affembly, but of the Council; upon which, however, the Governor in his Turn has a Negative; and, by virtue of his Commiffion as Captain-General, has the Power of the Militia; fo that here the fupreme Authority refts neither in the Governor nor the People, but in them both, whenever they can agree to exert it. The Government of Nero Hampphire is entirely in the Hands of the Crown, in the fame Manner as that of Virginia, and other Colonies.

The Capital of this Country is Bofor, in the County of Suffolk, and within the Province of Maffachufet proper: It is fituated in the Latitude of 42 Degrees 20 Mi nutes North, and in 71 Degrees of Longitude Weft from London; it tands on a Peninfula about four Miles in Circumference, at the Bottom of a fine Bay of the Sea, at the Entrance whereof are feveral Rocks which appear above Water, and above a Dozen fmall Iflands, fome of which are inhabited. There is but one fafe Channel to approach the Harbour, and that fo narrow that two Ships can fcarce fail through a-breaft; but within the Harbour there is room enough for five hundred Sail to lie at Anchor. The Entrance is defended by the Caftle of FortWilliam, on which are one hundred Guns mounted, twenty of which lie in a Platform, level with the Water, fo that it is fcarce poffible for an Enemy to pafs the Caftle; and, to prevent Surprize, they have a Guard placed on one of the Rocks about two I.eagues diftant, on which alfo there ftands a little Houfe, from whence they make Signals to the Caftle when any Ships come near it: There is alfo a Battery of great Guns at each End of the Town, which commands the Harbour, to the Fire whereof any Enemy would be expofed if he fhould be fo fortunate as to pafs the Caftle.

At the Bottom of the Bay there is a Pier near two thoufand Feet in L.ength, with Warehoufes for the Merchants on the North fide of it ; and Ships of the greatef Burden may come up clofe to the Pier and unload, without the Help of Boats. The greatef Part of the Town of Bofon lies in the Form of a Crefcent about the Harbour, the Country beyond rifing gradually, and affording a moft delightful Profpect from the Sea: There are in it feveral Streets, not much inferior to the beft in London, the chief of which runs from the Pier up to their Town-houfe, or Guild-ball, a handfome Building, where are Walks for the Merchants, as on the Exchange ; and there alfo are the Council-Chamber, the Houfe of Reprefentatives, and their Courts of Juftice, the Exchange, being furrounded with Bookfellers-fhops, who have Trade enough to employ five Printing-preffes. There are ten Churches of all Denominations, of which fix are Independents, the moft prevailing Party in Nero England. And the Number of Souls in the Town of that Perfuafion may be about fourteen or fifteen thoufand. The Epifcopal Church is handfomely built and adorned, and the Congregation faid to be about a thoufand in Number. Their Church Furniture, and fome Pieces of Plate, were given them by K. William and Q. Mary, and their Organ by Thomas Brattley, Efq; There is alfo in this Church a magnificent Seat for the Governor,
who comes thither when he happens to be of the Church of England. Bofon is the moft flourihing Town for Trade in Englifh America, and there are feveral hundred Sail of Ships, Brigantines, and other Veffels, annually loaded here with Timber, Beef, Pork, Fif, and other Commodities, for Europe, or the American Illands : Their Merchants and Tradefmen are a polite fort of People, many of them having travelled into Europe, or converfed with Foreigners of feveral Nations at home: Their Houfes are elegantly furnifhed, and their Tables as well ferved as thofe of the Merchants and Tradefmen of London ; all manner of Provifions being as plentiful as in any Town in Old England.

A late Writer tells us in relation to the Fortrefs before-mentioned, that it is a beautiful Caftle, by far the finef Piece of Military Architecture in Britifb America ; being a Quarry furrounded by a Coveredway, and joined with two Lines of Communication' to the Main Battery, as alfo a Line of Communication from the Main Gate to a Redoubt, to prevent any Enemies landing ; and the Battery is fituated fo near to the Channel, as to hinder Ships coming up to thĕ Town, which muft all come within Piftol-fhot of it. In time of Peace there is but one Company on Duty in the Caftle; but in time of War, there are five hundred able bodied Men, exempted from all other Military Duty, to attend the Service of the Caftle at an Hour's Warning, when the Signal is given from the Night-houfe of the Approach of an Enemy. The Caftle thereupon makes a Signal to the Town, and if five Ships or more appear in time of War, the neighbouring Country is alarmed, by firing a Beacon. In this City commonly the Governor refides; here the General Court and Affembly meet, and almoft all the public Bufinefs of the Province is here tranfacted. The Number of Houfes is computed at four thoufand four hundred; the Number of People, at about twenty-four thoufand ; and the Shipping of this Port is computed at between fix and feven hundred. There are, befides this, feveral great Towns and good Ports and a Multitude of fmall ones, in Nero England; but I have not Room to enter into more particular Accounts.
As to the Number of People Writers differ extremely, and it is not eafy to know which is in the right; but the following, about twenty Years ago, was faid to be the beft Authority, viz. that in the Maffachufets Colony there were eighty thoufand Souls ; in that of ComneEticut, thirty thoufand; and in Rbode Ifand, ten thoufand ; in the whole, one hundred and twenty thoufand: But I am perfuaded that, at prefent, they amount to one hundred and fixty thoufand at leaft.

The Commerce of thefe Colonies is very confiderable, and extends itfelf over all America, and into fome Parts of Europe; they furnifh our Sugar Colonies with Fifh, Cattle, Boards, Hoops, Pipe-ftaves, Bark, Skins, Butter, Cheefe, Oil, Tallow, Corn, Apples, Turpentine, $\Xi^{3} c$. and this in fuch vaft Abundance, that it is computed the Iland of Barbadoes alone, takes off to the Value of two hundred thoufand Pounds every Year; they deal befides with the other Sugar Colonies, fometimes with the French, largely with the Spaniards, and they fhip off prodigious Quantities of Fifh, to Italy, Spain, and Portugal. They take from us all kinds of Mercery Goods; Linnen, Stockings, Shoes, Sail-cloth, Cordage, Haberdathery Ware, and a vaft many other Things ; in Return they build a prodigious Number of Ships, and export a vaft Quantity of Mafts, Plank, and Yards, for the Royal Navy; Pitch, Tar, Turpentine, Skins, Furs, Oil, Whale-Fins, Logwood and other Commodities.

The Obfervations made by the famous Sir Fofiab Cbild, in reference to this Colony, are very well worthy our Notice, as they will lead us to form the trueft Judgment poflible as to that important Point, what the Profit is which refults to this Kingdom, from our Plantations in Nere England; upon which he reafons in the following Manner: " ift, All our American Plantations, except " the Nerw England, produce Commodities of different "Natures, as Sugar, Tobacco, Cocoa, Wool, Ginger, "fundry Sorts of dying Woods, $\mathcal{E}^{2} c$. Whereas Never "England produces generally the fame we have here, viz.
${ }_{6}$ Corn

## Chap. III. of the ENGLISH in AMERICA.

sc Corn and Cattle ; fome quantity of Fifh they do like"w wife kill, but that is taken and cured altogether by "their own Inhabitants, which prejudices our New-
"foundland Trade; where, as has been faid, very few " are, or ought, according to Prudence, to be employ"ed in thefe Fifheries, but the Inhabitants of Old Eng" land. The other Commodities we have from them are "fome few great Mafts, Furs, and Train Oil, of which " the yearly Value amounts to very little; the much " greater Value of Returns from thence being made in "Sugar, Cotton, Wool, Tobacco, and fuch like Com' modities, which they firf receive from fome other ${ }^{66}$ of his Miajefty's Plantations, in barter for dry Cod-fifh, "Salt, Mackrel, Beef, Pork, Bread, Beans, Flower, "Peafe, ESc. which they fupply Barbadoes, Famaica, $\mathcal{E}^{2} c$. with, to the Diminution of the Vent of thofe Commodities from this Kingdom; the great Experience of "s which, in our own Wefi India Plantations, would foon "s be found in the Advantage of the Value of our Lands in England, were it not for the vaft and almoft incredible Supplies thofe Colonies have from New Engse land.
" 2 dly, The People of Nere England, by virtue of "their primitive Charters, being not fo frictly tied to the Obfervation of the Laws of this Kingdom, do fome" times aftume the Liberty of trading, contrary to the "Act of Navigation, by reafon of which many of our © American Commodities, efpecially Tobacco and Sugar, st are tranfported in New Englifh Shipping, directly into Spain, and other foreign Countries, without being landed in Englond, or paying any Duty to his Majefty; which
" is not cally a Lofs to the King, and Prejudice to the
" Navigation of Old England, buit alfo a total Exclufion
" of the Old Englifh Merchant, from the Vent of thofe
"Commodities in thofe Ports where the New Englifb
" Veffels trade; becaufe there being no Cuftom on thofe
"Commodities in Nere England, and a great Cuftom " paid on them in Old England; it mun: neceffarily fol" low that the Nerv Englijh Merchant will be able to " afford his Commodity much cheaper than the Old En" glifh Merchant; and thofe that can fell cheapeft, will " infallibly engrofs the whole Trade fooner or later.
' 3dly, Of all the American Plantations, His Majefty " has none fo apt for the Building of Shipping as New "England, nor none comparably fo qualified for the " breeding of Seamen, not only by reafon of the natu" ral Induftry of that People, but principally by reafon "s of their Cod and Mackarel Fifheries; and, in my poor "Opinion, there is nothing more prejudicial, and, in " Profpect, more dangerous to any Mother Kingdom, "than the Increafe of Shipping in her Colonies, Plan" tations, and Provinces.

Athly, The People that evacuate from us to Bar-
"badoes, and the other Weft India Plantations, as was " before hinted, do commonly work one Englifh to ten
" or eight Blacks; and if we kept the Trade of our faid "Plantations entirely to England, England would have " no lefs Inhabitants, but rather an Increafe of People, " by fuch Evacuation, becaufe that one Englijbman, with " ten Blacks that work with him, accounting what they " eat, ufe, and wear, would make Employment for four " Men in England, as was faid before; whereas, perad" venture, of ten Men that iffue from us to New England or Ireland, what we fend to, or receive from, " them, does not employ one Man in England."
But with great Submiffion to fo knowing a Man and fo able a Judge as he was in thefe Matters, what he has delivered upon this Subject, though hitherto received with general Approbation, is liable to many Objections, which, being duly confidered, will give the State and Utility of this Colony another Afpect. For, with refpect to his firft Head of Objections, it is not the Fault of Nero England that they have not a ftaple Commodity, as well as the Sugar and Tobacco Plantations, but it is our own; fince we might be furnifhed from thence with as great Plenty, and in as great Perfection, as from any Part of the Boltic, with all the naval Stores, which are fo neceffary, and for which we actually pay, yearly, a vaft Sum of ready Money. It is therefore very unjuft to call

New England a ufelefs Province, becaufe we will not make ufe of her Cómmodities, which we might command for our own Manufactures, at our own Time, and on our own Terms, but rather pay our Money for them to Foreigners; who, whenever an Opportunity offers, never fail to force their own Terms upon us. As to the Provifions furnifhed to our Sugar Colonies by the Peo* ple of New England, it is fo far from being a Difadvantage to the Nation, that it is a very great Convenience; for without it they could not pofiibly fubfift. This, at firft Sight, may feem a very bold Affertion, but I am very confident that it is true; for in Time of Peace, if the Sugar Colonies were to draw all their Provifions from hence, it would make their Commodity much dearers and confequently enable Foreigners to beat us out of that Trade entirely, and in Time of War the People in thofe Colonies would be in Danger of ftarving, as the Inhabitants of the French Sugar Illands generally are; to avoid which Inconveniency they are now labouring to render Louvifana as ufeful to their Sugar Colonies, as New England is to ours; and after all, what the Nere England People get by this Trade comes hither. To this we may add; that if we had not fettled New England, the French certainly would, the Confequences of which may be more eafily conceived than defcribed.

The fecond Objection admits of the fame Anfwer. We have the Benefit of all the Trade the People in this Colony carry on in Europe, as well as America; and while we have this certain Advantage, there feems to be no juft Caufe for our difturbing ourfelves with the Thoughts of the Advantages that might be gained if this Trade ran in another Channel; fince thefe are Incertainties, as to which, however, our Government has already taken all the Precautions that are poffible, or at leaft that are practicable, without running into greater Inconveniencies, than thofe they are calculated to guard againft. The breeding of Seamen, and the building of Ships, are not found by Experience, to be attended with the Inconveniencies that were feared from them; but on the contrary, have had many advantageous Confequences, both in time of War and of Peace. The fourth Objection, which feems to have the greateft Weight of any, we know now by Experience has in reality no Weight at all; for, without having Colonies compofed entirely of white Pcople, it would be impoffible for us to defend our other Colonies againft our Enemies in America; and; as we fhall Ihew hereafter in fpeaking of Georgia, inftead of repining at the Want of Negroes in New England, we ought rather to wifh that there were fewer Negroes elfewhere. The Reader will eafily perceive that I do not affect to contradict this great Author, I only exprefs the Reafons why his Arguments do not convince me, and, from the Lights of Experience, fhew that it is not impofible even for the greateft Men to be miftaken.
Sir Jofiab Cbild faw this himfelf, as appears by the Manner in which he finifhes his Remarks, which I look upon to be one of the fineft Paffages in his whole Work. "To conclude, fays he, and to do right to "s that moft induftrious Englifs Colony, I muft confefs, "s that though we lofe by their unlimited Trade with " our foreign Plantations, yet we are very great Gainers "s by their direct Trade, to and from Old England. Our "yearly Exportations of Englifh Manufactures, Malt, " and other Goods from hence, thither, amounting, in " my Opinion, to ten times the Value of what is im"s ported from thence; which Calculation I do not make " at Random, but upon mature Confideration; and, " peradventure, upon as much Experience of this very 6. Trade, as any other Perfon will pretend to do; and " therefore, whenever a Reformation of our Correfpond" ency in Trade with that People fhall be thought on, "6 it will, in my poor Judgment, require great Tender"nefs, and very ferious Circumfpection."

I fhall not dwell much longer upon this Subject, or pretend to give the Reader any Calculation of the Value of thofe Advantages which from this Colony are derived to Great Britain, becaufe I am fenfible that though the Thing may be practicable in itfelf, yet fufficient Informations are not hitherto fallen into my Power; I defire
there-
therefore to leave only thefe three Remarks with the ingenious and impartial Reader : The firft is, that we have it in our Power to bring from this Colony all the naval Stores that we now bring from the Baltic; which, whenever it is thoroughly confidered by our Parliament, will produce fome Law, which cannot fail of rendering this Colony twice as beneficial to the Nation as it has hitherto been, or could be, till enabled by fuch a Law. In the fecond Place I muft obferve, that as we derive a great Part of our Sugars from the Affiftance given to the Colonies which produce them by New England, to this Part of their Produce ought to be placed to the New England Account. I am to remark laftly, that the Complaints which have been made of the Inhabitants of this Colony dealing in Goods, and employing themfelves in Manufactures, which interfere with thofe of Great Britain, is a Complaint, which, though well founded, is ill applied; for though it be true that this may be an Injury to us, yet the Fault lies in ourfelves, and not in the People of Nere England, who only raife and manufacare for themfelves what they cannot purchafe from us; fo that not content with having their All (for, as we have Shewn, the whole Ballance of their Trade comes hither) we feem to be angry that they endeavour to fupply themfelves with what we could fell, and they want wherewithall to purchafe; which Want, however, might be removed, by taking their naval Stores. But it is now fit that we fhould give a fhort View of the Plantation of our next Colony, which though we cannot call it one of the moft profitable, yet it muft be allowed one of the moft pleafant of our Plantations.
10. The Iflands of Bermudas were difcovered by one Jobn Bermudas a Spaniard, after which they were frequently touched at by his Countrymen in their Paffage to the Weft Indies, but were quite unknown to us till the Year 1593, when one Henry May was fhipwrecked upon them in a French Veffel, whofe Report made them very famous ; but they became more fo by the like Miffortune of Sir George Summers, and Sir Thomas Gates, in their Paffage to Virginia in I6og, of which we have before given a particular Account, as well as of his being fent thither a fecond Time to fetch Hogs, when it was with great Difficulty he found thefe Inands, and not long after he breathed his laft in them, being upwards of threefcore, and much fatigued for many Months before. It was from him their Name was changed to Surmers's Ilands, which our Mariners call the Summer Ilands; a Name they very well deferve for their Pleafantnefs and Fertility. Sir George directed his Men to return to Virginia with black Hogs, for the Relief of that Colony, but they refolved otherwife after his Death; and ftoring their Cedar Ship with fuch Provifions as they had, they fet fail for England, where they arrived at Whitchurch in Dorfetfoire, having Sir George Summers's Corps on board, only the Heart and Bowels they left at Bermudas, where Captain Butler, twelve Years afterwards, built a handfome Monument over them.

Thefe Men, at their Return, gave fuch an Account of the Country to the Virginia Company, that they thought it worth their while to eftablifh a Correfpondence between England and Bermuddas; accordingly they fold thefe Inands to one hundred and twenty Perfons of the fame Society, who obtained a Charter from King Fames, and became the Proprietors of them. When Sir George Summers was firft here, two of his Men ftaid behind, having committed. fome Crime, for which they would have been put to Death. They were ftill there when Sir George returned, and had, ever Ince his Departure, fupported themfelves on the Productions of the Place, and built them a Hut, and took Poffefion of St. Gcorge's Ifland. Thefe two Men, whofe Names were Cbriflopher Carter, and Edward Waters, ftaid alfo behind Sir George's fecond Company, of whom they perfuaded one Edreard Chard to remain with them; and now Carter, Waters, and Cbard, were fole Lords of the Country, but foon fell out among themfelyes; Cbard and Waters were coming to a pitched Battle: but Carter, though he hated them both, yet not liking to be left alone, prevented it, by threatening to declare againft the Man who ftruck firft. At laft Neceffity
made them good Friends, and they joined together in making Difcoveries, in one of which Expeditions they found the largeft Piece of Ambergreafe, among the Rocks, that ever was feen, weighing eighty Pounds, befides other fmalier Pieces. This Treafure made them almoft mad; they grew giddy with the Thoughts of it, and, that they might have an Opportunity to make ufe of it, refolved, on the moft defperate Attempt that Men could run upon, which was to build a Boat after the beft Manner they could, to fail to Virginia or Newfoundland, according as Wind and Weather fhould prefent.
But before they could put their Project in Execution, a Ship arrived from England; for Captain Matbew Summers, Sir George's Brother, had promifed to come to them, or fend a Veffel to their Relief. The Ship they difcovered ftanding in with the Shore was the Plough; which had fixty Perfons aboard, fent by the new Bermudas Company to make a Settlement, of which Mr. Richard Moor was Governor, who was an honeft induftrious Perfon. He pitched upon a Plain in St. George's Ifland to fettle on, and there firft built himfelf a Houfe, or rather Cabbin, for the Building was only of Palmeto Leaves; yet he made it large enough for him, his Wife and Family; and the reft of the Adventurers following his Example, it became a fort of a Town, which in Time grew to a confiderable Bignefs, and is now St. George's Town, one of the ftrongeft and beft built in our American Colonies; for all the Houfes are of Cedar, and all the Forts of hewn Stone. This Man proved an excellent Governor in every Refpect ; and, in the Year 1614, difappointed the Spaniards in a Defign they had formed of landing upon, and conquering, thefe Inands.

He was fucceeded by Captain Daniel Tucker, who was a Perfon of better Education, and more Experience in the World, who took upon him to eftablifh a regular Form of Government; to diftinguifh and trace out Plantations; to oblige every Man to build uniformly in the Town, and to plant regularly in the Country; by which Method the Inands were very much improved, and the Exportations for England increafed; he likewife eftablihed a tolerable Militia, and put the Mands in fuch a pofture of Defence, as, together with their Situation, put it out of the Power of any of their Enemies to difembark fuch a Force as might hurt them. But the Severity of his Government was fo grievous to fome licentious Perfons, that five of them executed as defperate a Defign to efcape him, as Weters and his Companions had projected to get away from the Inand. They knew the Governor would not give them leave to go off, and therefore invented this Contrivance to effect it: Hearing Captain Tucker had a great Defire to go'a fifhing out at Sea, but was afraid to do it, becaufe feveral Fifher-boats had been driven off by the Weather and the Men perifhed ${ }_{2}$ they propofed to him to build a Boat of two or three Tons, with a Deck, and fo fitted that fhe fhould live in all Weathers. The Governor confenting to it, they fell to building in a privare Place, pretending it was convenient for getting Timber and launching the Boat. They finifhed it fooner than was expected; and the Governor fent Hands to fetch it, intending to go in it aboard a Ship which he was then difpatching for England. When his IMen came to the Place, neither the Boat nor the Builders were to be found; all that they could hear of them was, that the Boat being finifhed the Night before, thofe that built it went off to Sea in it, to try how it would fail. At laft they found by fome Letters they left behind them, that they were gone for England; 'and the Story of their Adventure is told us in this Manner:

They borrowed a Compafs-dial of a Neighbour, on fome Pretence or other, and went on board the Ship bound for England, where they trucked with the Seamen fuch Things as they had, for Provifions. One of them, at parting, told the Mariners, that though they were forbidden to go with them, yet they hoped to be in England before them. At which the Mafter of the Ship laughed, and away thefe fearlefs Adventurers failed, with a fair Wind and Weather for one and twenty Days; they then met with a Storm, which reduced them to Extremity for eight and forty Hours, and obliging them to

Chap. III. of the ENGLISH in AMERICA. 241
bear up afore it drove them a little out of their Courfe to the Weftward; but the Wind coming fair again, and continuing fo ten Days, they went on chearfully. In that Time they met with a French Privateer, where they went aboard to beg fome Relief; but inftead of helping they plundered them of the little they had, took away even their Inftrument of Navigation, and turned them a-drift. In this miferable Condition they failed on, growing every Day weaker and weaker ; their Provifions were almoft fpent, their Fire-wood quite gone, not a Drop of frefh Water left, nor Food for above a Day, when at laft, in the very Hour they expected to perifh, they made Land to their unfpeakable Joy. This Land was Ireland, where they went afhore in the County of Cork, and were nobly entertained by the Earl of Thomond, to whom they related theirVoyage, which had then lafted forty-two Days.

There were but five Perfons concerned, of whom there was one Mr. Yames Barker, a Gentleman, Richard Saunders, who contrived the Defign, William Goodzvin, a ShipCarpenter, who built the Boat, and Henry Puet, a common Sailor, who undertook to navigate this Veffel. Both thefe Stories may feem a little befide our prefent Purpofe, but I have inferted them as belonging more immediately to a Collecrion of Voyages, and becaufe I look upon both thefe Incidents to be very well worth preferving. Capt. Tucker refigned, in the Year 1619 , to Capt. Butler, who arrived at that time with four good Ships, in which he brought five hundred Paffengers, and there being as many Eng lifh on the Ifland, the Colony began to make a confiderable Figure. This Governor raifed a noble Monument over the Remains of Sir George Summers that were left in the Ifland, depofiting them in the Church in St. George's Town. He divided the Inands into Diftricts; and now the Government, by Governor, Council, and Affembly, was eftablifhed, which before had been only the Governor and Council. The Laws of the Country were alfo fettled, as near as the Circumftances and Conveniencies of the Place would admit, to the Laws of England; as is done in all the Colonies in America. After bringing down the Hiftory of thefe Inands to their becoming a regular and fettled Colony, I am next to give an Account of the Hlands themfelves, in order to fhew the Value of them.
II. There are fome who would perfuade us, that thefe Inands have received their Name from the vaft Quantity of Black Hogs found upon them: Bermudas, in the old Spaniß Tongue, fignifying a Black Hog; but though this Derivation be plaufible, yet the Fact upon which it is founded, is moft certainly falfe; for when the Spaniards firft difcovered them there was not a fingle Hog upon thefe, or perhaps upon any other Inand whatever; neither is it well known upon what Part the Spamiards landed. Thefe Inands lie very contiguous to each other ; but Authors differ fo much as to the Number of them, that it is very difficult to fpeak of them with Certainty; for fome fay there are but three hundred, others affirm there are more than five hundred. They lie in the Latitude of 32 Degrees 30 Minutes North, and in 35 Degrees of Weftern Longitude, at a vaft Diftance from the Continent, fince the neareft Land, which is Cape Hatteras in Carolina, lies at leaft two hundred and fifty Leagues to the Weft of them, and they are above fixteen hundred Leagues from England. The Air here has been always thought extremely wholefome, and the Country wonderfully pleafant, infomuch that People were wont to remove hither from the other Colonies, in order to recover their broken Conftitution. The Heat in Summer is very fupportable, and with refpect to Winter, they have really none ; nay, fome go fo far as to affirm, that there is but one Seafon in the Inland of Bermudas, and this a perpetual Spring; which, however, may be in fome meafure afcribed to the Soil, which though it be thin is very rich and very fruitful, though remarkably foney. The Earth is of feveral Colours, brown, white, and red; the firft is the beft and the laft the wort. Two or three Feet under the Mould they find a white hard Body, which the Inhabitants call the Rock, but which feems more to refemble Chalk, or a Pumiceftone, through which the Roots of their Trees force a Paffage ; and a kind of Clay is generally found under it.
Maize, or Indian Col

Maize, or Indian Corn, which is the main Support
of the People heree, is twice reaped, for what they fow in March, they cut in fuly; in a Fortnight after they fow again, and reap in December. They have all the Plants peculiar to the Weff Indies, and all Kinds of Herbs, Roots, Flowers; and Trees, brought from Europe, thrive to Perfection. They have fome Tobacco, but it is of an indifferent fort, and therefore does not yield them any great Profit ; but certainly, with a little Care, they might be able to produce any kind of Tobacco, or other Vegetable that turns to Account almoft in any Climate. They have Palmeto's, a kind of Wild Palm, that is extremely ufful, the Leaves being eight or ten Feet long, and near as broad, with which they cover or thatch theit Houfes; it produces a very lufcious Fruit, which in Shape, Size, and Colour refembles a Damfon. Laurel, Olive, Mulberry, and Date Trees, are very common; and their Forefts abound with Variety of odoriferous Woods, fome black, fome of a yellow, and fome of a red Colour: The Berries of thefe Trees have the Stiptic Quality of a Sloe, and are much ufed by the Englijh to cure the Flux, which they frequently get by eating the lufcious Palm-berries too greedily. But amongft a Multitude of Shrubs and Trees peculiar to thefe Inands, and equally valuable for their Timber and Fruit, there are two which, though found in other Parts of the World, have a peculiar Excellence here ; the firft is their Orange, which in point of Size, Scent, and Flavour, far exceeds any either in the Weft or Eaft Indies : The fecond is their Cedar, which from the Nature of the Soil wherein it grows is firmer and more durable than any of its Kind that we are acquainted with ; anfwers in every refpect to Oak-Timber, and is found of extraordinary Ufe in Ship-building; fo that the beft Sloops; Brigantines, and other fmall Veffels, both for Sérvice and Sailing, which are in Ufe throughout the Weft Indies, are built at Bermudas.

They have likewife two very fingular Plants, one ufeful and the other noxious, but both fo remarkable as to deferve particular Notice; the firtt is called, the Summer-Ifand Redruood, the Berry of which is as red as the Prickle-Pear, giving alfo fuch a Tincture; out of which Berry come firft Worms, which afterwards turn into Flies, fometimes bigger than the Cochineel Fly, and a medicinal Virtue much exceeding it. The Poifon-Weed is the other frange Plant, which grows much in the fame manner as our Ivy, and if we may depend upon a Gentleman; who lived long in thefe Inands, and fent an Account of what was remarkable in them, to the Royal Society, there is not a more furprifing Production than this in Nature: He fays he had feen a Man fo infected by it, as to have all the Skin of his Face peel off though he paffed by without touching it, and yet he affirms that he had chewed it in his Mouth without feeling any Inconvenience, whence he infers, that it is not hurtful alike to all Conftitutions. In this all who have been upon thefe Inands agree, that this Weed is very prejudical, but then they agree likewife, that there is nothing venomous befides, in any of there Inlands.
As for Animals, there were none in Bermudas but Hogs, Infects, and Birds, when Sir George Summers was fhipwrecked there: He found out that there were fome Hogs in the Ifland, by fending out two or three of his own to feed, and when they rambled home, a huge wild Boar followed them, and being killed was found to be excellent Meat: The Hogs they killed afterwards were found to be all black, and from thence it is concluded that the Spaniards had left them there to breed, becaufe they were of the fame Kind with them they carried to the Continent of America: They now fat them at Bermudas, with Palm and Cedar Berries ; but their Number is very much decreafed. Thefe Inands abound in more and greater Variety of Fowl than any in America. There are Hawks of all forts, Herns, Bitterns, Offspreys, Cormorants, Baldcoots, Moorhenis, Swans, Teal, Snipe, Duck, and Wigeons; Bats and Owls are alfo very common here, with Multitudes of fmall Birds ; as Wood-peckers, Sparrows, $\mathcal{E}_{6}$. The Englijh, at their firft coming, found a fort of Fowl here they called Cowkoes, which bred in the Holes of the Rocks, and in Burrows, like Rabbets, and were fonumerous and gentle, that they were taken by Hand. They are now almoft deftroyed, being very eafy to be caught. This Bird is of the Bignefs of
a Sea,
a Sea-mew. There are alfo the Tropic-Bird, and the Pemlico, feldom feen by Day, and when it is, held to be the unwelcome Fore-teller of a Storm.
Finh there is as plenty as Fowl, of which there are fo many forts that Authors have not yet found out Names for them: They have of the fcaly and the fhelly Kind; the Whale and Sword-filh, and the Threfher ; but particularly the Tortoife abounds to a Wonder, and is as good and great, of the Sort, as any in the World. Whalefifhing has been attempted, but without Succefs. The Whales about Bermudas are found only in the Months of February, March, and April; the Female Whales have abundance of Milk, which the young ones fuck out of the Teats that grow by her Navel ; they have no Teeth, but feed on Grafs growing on the Rocks at the Bottom during thefe three Months, and at no other Seafon of the Year; when this is confumed and gone, the Whales go. There have been Sperma-ceti Whales driven upon the Shore, which Sperma (as they call it) lies all over the Bodies of thefe Whales : Thefe have divers Teeth, which may be about as big as a Man's Wrift. Ambergreafe and Sperma-ceti, have been found here in great Quantities, and Pearl. All which are almoft as rare here now, as elfewhere ; which is a little wonderful.

The Infects in thefe Inands are, generally fpeaking, the fame before mentioned in other Plantations, except it be the Spider, which is thought to be larger here than in any other Country in the World, and fo adorned with beautiful Colours, that it takes off very much, if it does not entirely remove, that Diftafte, which otherwife the Sight of Creatures of this Kind and of fo enormous a Size would naturally occafion. One of thefe Spiders, with its Legs extended, would take up a Space equal to the Breadth of a Man's Hand. Their Bodies are compofed of two Parts, one flat and the other round, not unlike, either in Shape or Size, to a Pigeons Egg. On their Backs they have an Orifice, which ferves as well as in fome kinds of Hogs for a Navel; their Mouths are covered with a kind of grey Hairs, intermixed fometimes with bright red, and on each Side of their Mouths they have a kind of crooked Tooth, of a fine polifhed Subftance, extremely hard, and of a bright fhining black, and therefore they are often fet in Silver or Gold for Tooth-picks. When thefe Creatures grow old, they are covered all over with a kind of dark brown or black Down, fmooth, foft, and fhining like Velvet; on the flat Part they have their ten Legs, five on each Side, each of which has four Joints, and two fmall Claws at the Ends. They caft their Skins every Year, together with thofe hard Teeth-like Subftances before mentioned; they live upon Flies and Gnats, in catching of which they fhew great Cunning and no lefs Agility. Their Webs, which are very large, they fipirt into the Air, by which means they are lodged upon Trees at fome Diftance, and then run along the Threads, and weave them fo ftrong, that Birds of the Size of a Thrufh are fometimes caught in them.
There is fcarce an eighth Part of thefe Iflands inhabited, and all but St. George's, St. Davids, and Coopers Ifles, have only a few Houfes fattered up and down; they all together make the Figure of a Sheep-hook, and are within the Circuit of fix or feven Leagues at moft. There are none of them of any confiderable Bignefs, yet fome much bigger than others; as Time and the Sea continually wafhing upon them, have worn them away in different Proportions. The main or great Inand of all is called St. George's, and is about fixteen Miles in Length, from Eaft-north-eaft to Weft-fouth-weft; 'tis not a League over in the broadeft Place, but is fortified by Nature all round, the Rocks every way extending themfelves a great Way into the Sea. To natural Strength, efpecially towards the Eaftward, where it is moft expofed, the Inhabitants have added that of Forts, Batteries, Parapets, and Lines; the Cannon of the Forts and Batteries being fo well difpofed as to command the feveral Channels and Inlets into the Sea. There are no more than two Places where Shipping may fafely come in, and it is not eafy for a Man to find thofe Places out; the Rocks lie fo thick in fuch a Manner, and fome fo undifcovered,
that without a good Pilot from the Shore, a Veffel of ten Tons could not find the Way into thofe Harbours, which being once known the biggeft Ships in the World may enter. Thefe two Havens are fo fortified, that if an Enemy fhould attempt either, he , might eafily be kept out. The Rocks, at moft Places, appear at low-water; it ebbs and flows there not above five Feet ; the very Shore itfelf is, for the moft Part, a Rock, and it is impoffible to find out any Iflands better guarded by Rocks than thefe; indeed they are all of them fo invironed with them, that they feem to threaten all Ships who venture on that Coaft with prefent Deftruction, and fo many have been fhipwrecked upon them, that the Spaniards gave them the Name of Los Diabolos, the Deril's Illands; this Place having been fatal to them and all Nations.

The Town of St. George ftands at the Bottom of the Haven of the fame Name, covered by no lefs than fix or feven Forts and Batteries, asKings Caflle, Cbarles Fort, Pembrook Fort, Cavendifh Fort, Davie's Fort, Warwick Fort, and Sandy's Fort, mounted with above feventy Pieces of Cannon; and they are fo difpofed, that they can be all brought to bear upon any Ship before fhe can make her Entrance. In this Town there is a fair Church with a fine Library, for which the Inhabitants are indebted to Dr. Tbomas Bray. There are near a thoufand Houfes in it handfomely built, and a State-Houfe for the meeting of the Governor, Council, and Affembly. Befides the Town and Divifion of St. George, there are eight Tribes, Hamilton's Tribe, Switb's Tribe, Deronßbire's Tribe, Pembrook's Tribe, Paget's Tribe, Warwick's Tribe, Southampton's Tribe, and Sandy's Tribe, of which, Devon/bire in the North, and Soutbampton in the South, are Parihes, have each a Church, and a particular Library. In the whole Illand there are Plantations of Oranges, Mulberries, and other Productions of the Country, which render it a very delightful Profpect. There is a Haven in Soutbampton Tribe or Diftrict, which is alfo called Southampton, and other Harbours, as the Great Sound, Harrington's Inlet in Hamilton's Tribe, Paget's Port in Paget's Tribe, and others. There are no Parifh Churches in any of the leffer Inlands, and all the Inhabitants are ranged under one or the other of the eight Tribes. The Number of People in the whole, who inhabit thefe Iflands, has been computed to be nine thoufand, and it is thought they do not much increafe, many of the younger Sort removing, for the Sake of making their Fortunes, into other Colonies.

The Government is like that of Virginia; the Crown appointing both a Governor and Council, but the People, by their Reprefentatives, compofe the Affembly; they have fewer By-Laws than any of our other Settlements, which we impute to the Smallnefs of their Trade ; for this Colony produces no confiderable Commodity by which the Inhabitants may be enriched; and their Commerce confifts chiefly in Timber and Provifions, which they fend to the other Parts of America that ftand in need of them, and fome Tobacco imported to England ; feveral Families retired thither formerly, on account of their Religion, or Health, from. England, and carried confiderable Effects with them. The building of Ships and Sloops is the moft advantageous Branch of their Trade; and the People of Bermudas feem to content themfelves with the Pleafure and Plenty of their Country, with a fafe and quiet Retreat from the. Troubles and Cares of the other Part of the World, without any Ambition to enrich themfelves; and, if they had any fuch Defire, it is to be queftioned whether they have any Opportunity of gratifying it: Be that as it will, the Inhabitants have conftantly maintained a moft excellent Reputation; infomuch that I knew a very ingenious Gentleman as well acquainted with this, and our other Plantations, as thirty Years trading to them all could render him, who was wont to fay that Bermudas was the fineft Country, and inhabited by the beft People he ever knew.

It was this Report of the Place and People that induced the Reverend Dean Berkley, who is fince become, very worthily, a Bifhop of our Church, to think of erecting an Academy there, for promoting ufeful Learning and true Religion in the Weft Indies; and the Society for Propagation of the Gofpel had fo good an Opinion of the

Propofal

Chap. III. of the ENGLISH in AMERICA.

Propofal made them by the Bifhop of erecting a College or Seminary at Bermudas, that they affifted him in procuring a Patent for it from King George I. and contributed to the Expence of the Undertaking. And the Doctor, with three Fellows of Trinity College in Dublin, viz. The Reverend Mr. William Thbomp fon, Fonatban Rogers, and Fames King, Mafters of Art, with feveral of the Doctor's Relations, who were People of Fortune, embarked for Bermudas, in order to lay the Foundation of the intended College; but they were unfortunately driven, by a Storm, to Long Ifland, in the Province of New York; from whence the Doctor, with his Companions, vifited Bofon, and feveral other great Towns in New England, where they preached, and performed other Parts of their Function. But the Defign of erecting a College was laid afide, the Expence appearing larger than it had been firt calculated, and many of thofe who had promifed Subfriptions failing in their Performance; fo that Dr. Berkley found himfelf obliged to return home, and was not long after promoted to the See of Cloyne, in the Kingdom of Ireland, which he ftill enjoys.
There remains nothing farther to be faid of this Plantation, which, though it has flourifhed exceedingly, and is ftill in a very good Condition, yet has no great Trade with Great Brittain, at leaft that we can obtain any Account of, though undoubtedly we receive very confiderable Advantages from thence annually, as the People make ufe of a confiderable Quantity of our Goods, are cloathed with our Manufactures, and employ Tools fent from thence in all kinds of Work. There might, perhaps, if due Encouragement was given, be a Poffibility of raifing feveral rich Commodities in this Country, but more particularly two, for which it feems fitter than any of our Plantations, viz. Cochineel and Silk ; and with this View, as I have been informed, a very worthy Merchant of this City has collected, digefted, and printed, the beft Accounts that are to be met with on thefe Heads, and alfo with refpect to Indigo, and has fent them to be diftributed at his own Expence in Carolina and the Bermudas Inands, which is an Inftance of public Spirit that deferves to be mentioned with Honour, and it is hoped may be likewife thought worthy of Imitation. A very few Attempts of this kind, fupported with Subfrriptions inferior to thofe made for fome Diverfions, might produce immenfe public Advantages to this Nation, and prove the Means of making multitudes of People happy.
12. All the Mifcarriages that had happened in attempting Difcoveries to the North-eaft and North-weft for a new Paffage to the Indies, could not fo far difcourage the Merchants of England, as to oblige them to lay afide their Defigns of that Sort; and therefore when any Opportunity offered they never failed to lay hold of it, in Hopes that fome Time or other they might accomplifh one or both of thefe great Projects. It was with this View that they fitted out Captain Henry Hudfon in $160 \%$, who undertook to fail directly North, which he did to the Height of 8 I Degrees 30 Minutes, on the Coaft of Groenland, where he was on the 16th of Fuly, the Weather being pretty warm. His Scheme, it feems, was to have paffed round that great Tract of Country, which the Danes call Groenland, and falling into Davis's Streights, have returned that way home. After being difappointed in this, he undertook two Voyages for the Difcovery of a North-eaft Paffage, in which his Conduct was very good, though his Succefs no better than that of thofe who went before him ; upon which he refolved to make an Attempt towards the North-weft. He failed on this Voyage April the 17th, 1610; and thus Mr. Pricket defribes the principal Events in that Undertaking :
"We continued fteering North-weft; on the 8th of " Fuly we raifed Land to the South-weft, covered with "S Snow, which our Mafter named Defire Provokes; ly" ing in the Latitude of 60 Degrees. Here we heard "the Noife of a great Overfall of a Tide that came out of " the Land, and were now fenfible that we had been " embayed before; and we were now fo well acquainted "" with the Ice, that in foggy or foul Weather we fought " out the broadeft Illand of Ice, and there anchoring,
"we went out and fported upon the Ice, and filled "Water that ftood in Ponds upon the Ice very fweet " and good, being now in the Tides-way, the Ice " opened, by being firft carried one way and then ano"ther, whereas in Bays it is immoveable; and in that "Bay where we had been fo troubled with Ice, we faw " many of thofe Mountains of Ice a-ground in fixty or "feventy Fathom Water. We fill plied to Weftward "، as the Ice would give us leave, and fearing a Storm, " we found an Harbour at the Weft-End of an Inland, "، whereunto we went at a full Sea, over a Rock, which " had then two Fathom and a half of Water upon it, "، and the next Morning was two Fathoms above Water.
" Our Mafter named it The Ifland of God's Mercies.
" The Water flows here better than four Fathoms, and " the Floods come from the North, flowing eight the "Change Day, Latitude $62^{\circ} 9^{\prime}$. Then plying to " South-weft we were on the 16 th in the Latitude of " $58^{\circ} 5^{\circ}$ ', but found ourfelves embayed and much pef"، tered with Ice; whereupon we ftood to the South-weft "، until we faw the Land, which our Mafter named
"Hold with Hope; and being gotten again into a clear
"Sea, our Mafter ftood to the Weft along the South
"Shore, and raifed three Capes or Head-Lands, lying
" one beyond another, which he named Cape Henry, "Cape Fames, and Queen Amne's Foreland; we alfo " raifed a high Hill, which he named Mount Cbarles. "We paffed on in Sight of the South Shore until we " raifed a fair Head-Land, (which our Mafter took to " be part of the main North Land, but is an Inland) "، and named it Deep's Cape, and the Land on the South "Side now falling away to the South makes another " Cape or Head-Land, which our Mafter called Wor"Senbam's Cape.
"The Mafter fent me, the Carpenter, and fome " others, afhore near Deep's Cape; we there faw fome " Deer, twelve or fixteen in a Herd, but could not "come within Shot of them; we found Plenty of "Sorrel and Scurvy-Grafs, and faw fome round " Hills of Stones like to Grafs-Cocks; and when we " came to them I turned off the uppermoft Stone, and "found them hollow within, and full of Fowls hanged " by their Necks; we turned back, and told the Mafter " what we had feen, and what Refrefhment might be " had ; intreating him to ftay a Day or two in this " Place, but he was not pleafed with the Motion, nor "could be perfuaded to ftay. Then ftanding Southward
" we loft Sight of the main Land that we had all this " while foliowed, and came into fhallow Water, broken " Ground, and Rocks, and paffed down fo far South" ward till we had Land on both Sides, and the Water "f fhoaling a-pace,we cameto an Anchor. From hence we " ftood back again towards the North; and one Day a " Debate ariiing concerning our coming into this Bay, " and how we fhould get out again, the Mafter took "Occafion to revive old Matters, and to difplace Ro" bert Ivet, his Mate, and Boatfwain, for Words fpoken " on the firt great Bay of Ice, and made Robert Bilet " his Mate, and William Wilfon our Boatfwain.
"We plied to and fro from the North to the South, ', and thence to the North again, till we came to the "Shole-Water, where we anchored in feven Fathom, " and there lay eight Days; in all which Time we could " not get one Hour to weigh our Anchor ; but the " eighth Day the Wind beginning to ceafe, our Mafter "would have the Anchors up again againft the Minds " of all that knew what belonged thereunto; fo to it " wewent, and when we had brought it a Peak, a Sea " took her, and caft us all off from the Capftern, and " hurt many of us; here we loft our Anchor, and " if the Carpenter had not been nimble we had loft our " Cable too; but he fearing fuch a Matter, was ready " with his Ax, and fo cut it from thence. We ftood to " the South, and divers Courfes, until we came to a Bay " on the North Shore, where we anchored. While we lay " here we faw a Ledge of Rocks to the Southward, " about a League long, which were covered at full Sea; " for a ftrong Tide fet in here. At Midnight we " weighed, and ftood to go out as we came in, and " had not gone long before the Carpenter told the
" Matter
${ }^{66}$ Marter that if he kept that Courfe we fhould be upon
"t the Rocks; the Mafter conceived that he was paft "them, when prefently we ran on them, and there " fluck faft twelve Hours, but by the Mercy of God " we got off unhurt. We ftood to the Eaft, and an-
"s chored in a Bay; here the Mafter fent me and the
" Carpenter, in a Boat, to feek a Place to winter in, " and it was time, the Days being long and cold, and
" the Earth being covered with Snow, having fpent "three Months, to no Purpofe, and it being now the " laft Day of October.
"On the firft of November we found a Place where" unto we brought our Ship, and haled her a-ground; " on the roth we were frozen in, and now it concerned "us to take care of what we had, and fo to fpend,
" that we might have wherewith to keep us alive, until
" we fhould come at the Capes where the Fowl breed ;
" for there were all the Hopes we had of finding Subfift-
" ence to bring us home. Our Mafter therefore ap-
" pointed a Reward to them that killed Boat-fifh, or
" Fowl. We were victualled for fix Months, in good
"Proportion, and of that which was good; and if our "Mafter would have had more he might have been
" fupplied at Home and in other Places; and it is
"6 ftrange he did not prevent the Hunger we endured,
" which occafioned the Overthrow of himfelf and many "s other honeft Men."
It appears very clearly from this Relation, which is indeed the only one we have of this famous Voyage ; concerning which it is not eafy to determine if it was moft for the Advantage of this Nation or ruinous to the brave Man who undertook it; that he was refolved to ftrike out fomething new, and not to wafte his time, in retraceing other Peoples Footteps; and therefore when he came to the Mouth of Lavis's Streigbts, he continued fteering directly Weft, and then as the Coaft directed him through thofe Streights, that fince bear his Name, till he doubled Cape Worfenbam, and then he failed down the Weft Coaft of Nerw Britain to the very Bottom of the Bay, where he made Choice of a Place to winter in, that was very near as far South as any Part of the Inand of Great Britain, and at the very Back of the French Settlements in Canada. Captain Hudfon was a very good Judge of the Importance and Confequences of his Difcovery, which induced him to winter there, in Hopes of performing fomething very confiderable the next Seafon, which very probably he would have done if his Men had not mutinied, and configned him over to the Savages to be murdered.

The Relation we have of his Voyage from Pricket, is chiefly calculated to give an Account of this Mutiny ; but as it is more to our Purpofe to come at as good an Account as we can of the Voyage itfelf we fhall endeavour to pick out of it what relates to that Matter, and then give a fhort Relation of that Accident which deftroyed Captain Hudfon, and all his Hopes. "It would be tedious, fays " he, to relate the Hardfhips we endured whillt we win-
" tered in this Place; the Cold was fo extreme that it
" lamed moft of our Company, but I muft not forget
"God's great Mercy to us in fending fuch Store of white
" Partriges, during the firft three Months, that we
" killed above one hundred Dozen, befides other Fowl
s\% of fundry forts.
" The Spring approaching the Partriges left us, and
"were fucceeded by other Fowl; as Swans, Geefe,
«Ducks, and Teal, but hard to come by ; they came
" from the South and flew to the North ; but if they be
"taken fhort by a northerly Wind, then they fall, and
"f flay till theWind ferves them, and then fly to the North-
" ward. As the Summer came on the Fowls were gone,
" and few or none to be feen. Then we fearched the
"Woods, Hills, and Vallies, for any thing that might
"f ferve for Food, though never fo vile ; the Frogs (in
"s the time of their engendering, as loathfome as Toads)
" were not fpared, nor the Mofs that grew on the
" Ground ; but amongft divers forts of Vegetables,
"Thomas Woodboufe brought home a Bud of a Tree full
" of a Turpentine Subitance; of this our Surgeon made a
" Decoction to drink, and applied the Buds hot to fuch
"as were troubled with Aches in any Part of their Bodies; and I muft confefs I received thereby prefent Eafe of my Pain. As foon as the Ice began to break out of "the Bays, a Savage came to our Ship, being the firft "s we had feen in all this time; our Mafter entertained " him well, promifing to himfelf great Matters by his " Means, and therefore would have to his own Ufe all " the Knives and Hatchets that every Man had, but re"ceived none except from fobn King the Carpenter, and " myfelf. To this Savage our Mafter gave a Knife, a
"Looking-glafs," and Buttons; who received them "thankfully, and made Signs that after he had flept he "would come again; as he did. When he came again,
" he drew after hin a Sledge, and upon it two Deer"Skins and two Beaver-Skins ; he laid the Knife upon "one of the Beaver-Skins, and his Glafs and Buttons " upon the other, and fo gave them to the Mafter, who "received them; and the Savage took thofe Things the
"Mafter had given him, and put them into his Scrip;
" then the Mafter fhewed him an Hatchet, for which he
"w would have given the Mafter one of his Deer Skins ;
" but the Mafter would have them both, and fo he had;
" but not willingly.
" After many Signs of People to the South and to "the North, and that, after fo many Sleeps, he would "come again, he went his way ; but never came more. "The Sound being now clear of Ice, fo that our Boat "could go from one Place"to another, Wilfon, Green, and " five more, were ordered to go a fifhing with our Net. "They caught the firft Day, five hundred Fifhes as big " as large Herrings, which put us all in good Hopes to " have our Wants fupplied; but thofe were the moft that " ever they caught in one Day, and many Days they " got not a Quarter fo many. In this Time of their "f filhing, Green, Wilfon, and fome others, plotted to take "the Net, and the Shallop which the Carpenter had " newly fet up, and fo to flift for themfelves; but the "Shallop being ready, our Mafter would go in it himfelf "to the South and South-weft, to fee if he could meet " with People ; for that Way we could fee the Woods " burning : So taking with him as much Provifion as " would ferve for eight or nine Days, he went towards the "South, and fet no Time for his Return; becaufe he "" was perfuaded, if he could meet with People, he fhould " have Flefh of them, and that good Store; but he re" turned worfe than he went forth; for although he was " fo near them as to fee them fet the Woods on fire, yet "could he not by any Means come to the Speech of " them.
"Being come on board, he fitted all Things for his "Return ; and firtt delivered all the Bread out of the
" Bread-room, which came to a Pound apiece for every "Man's Share ; and delivered alfo a Bill of Return, " willing them to have that to fhew, if it fhould pleafe " God they fhould come home, and wept when he gave "it to them : But to help us to fome Relief in this poor "Eftate, our Boat went to work on Friday Morning, "and ftaid till Sunday Noon, and brought fourfcore " fmall Fifhes; a poor Relief for fo many hungry Bellies. "Then we weighed, and ftood out of our Wintering" place, and anchored without at the Mouth of the Bay; " where, our Bread being gone, what Store of Cheefe we " had was to ftop a Gap, whereof there were five, at "which time the Company grudged, becaufe by their "Reckoning there fhould have been nine, but thofe that " were left were equally divided by the Mafter, although " he was advifed to the contrary, becaufe there were "fome who could not govern themfelves."
It was this Refolution of the Mafter's, to make all fare alike for the fake of profecuting the Voyage with effect, than which no Man was more like to do it than himfelf, that drew upon him his Deftruction; for his old Mate, one Green, and fome other People in the Ship, refolving to leffen the Number of Hands, and fo get all the Provifions that were left to themfelves, moft barbarounly contrived to turn Captain Hudfon, the Carpenter, and all the fick Men, out of the Ship; after which they determined to make the beft of their Way for England. This they per-

## Chap. III. of the ENGLISH in AMERICA.

formed the 19 th of fune, 16 II , by forcing Capt. Hud fon-and eight more into the Shallop without Provifions, tho moft of them were taken fick out of Bed, who after that time were never heard of, but were either drowned, farved, or murdered by the Savages: Neither did the Leaders of this Mutiny efcape much better; for being obliged to land frequently on the defart Coaft, in order to obtain fome Subfirtance, they fell there into a Fray with the Savages, in which Green and fome others were killed; fo that very few, and thofe too in a miferable Condition, returned to England, where Pricket wrote that Account of the Voyage for his own Juftification, from which we have made thefe Extracts.

At firf there fell great Imputations upon this Man, becaufe he adminiftred the Oath to the Confpirators ; but upon an Enquiry it appeared very clearly, that this Oath contained nothing in it contrary to the Duty of the Seamen; and that the true Reafon why they preferved him was, becaufe that being Servant to Sir Dudley Diggs, who was a Man of great Power and Reputation, they were in hopes he would interpofe, and fave their Lives, which they ought to have forfeited as Pirates. Upon this imperfect Account of Hudfon's Bay, feveral Perfons who had been engaged already.in Expeditions for the Difcovery of a North-weft Paffage, began to hope that now they had a fairer Profpect than ever of bringing this Project to bear, in cafe they could find any able Mariner who would undertake to profecute the Difcoveries made by Hudjon.

His Royal Highnefs Henry, Prince of Wales, was the great Patron of Learning and Virtue at that time; and being applied to by the Perfons concerned in this Project, he refolved to fend one Capt. Button, his own Servant, a Man of great Abilities, Courage, and Expeperience, and having the Countenance of fo great a Perfon, was möft likely to maintain Difcipline amongft his Seamen. Accordingly, in the Year 16 r , he failed on this Expedition, in which he paffed Hudfon's Streights, and leaving Hudfon's Bay to the South failed above two hundred Leagucs to the North-weft, through a Sea above eighty Fathom deep, and difcovered a great Continent called by him NeewWales; where, after much Mifery and Sicknefs, wintering at Port Nelfon, he carefully fearched all the Bay, from him called Button's Bay, back again, almoft to Diggs's Iland. He difcovered the great Inand called Cary's Swans-neft. He loft many of his Men during his Stay in the River called Port Nelfon, in fiftyfeven Degrees ten Minutes North Latitude, though he kept three Fires in his Ship all Winter, and had greatStore of white Partriges, and other Fowl, befides Deer, Bears, and Foxes. Upon his Return from this Voyage he received the Honour of Knighthood, and great Expectations were raifed from his Difcoveries, which had certainly been profecuted with Effect, if Prince Henry had not died foon after.

It was a great Pity that Sir $\mathcal{T}$ bomas Button, who was certainly a very undertanding Man, formed private Views of his own from the Knowledge he obtained in his Voyage; which were of fuch a Nature, that he affirmed he had convinced his Mafter, King fomes, that there was a Paffage this Way into the Soutb Seas. The Reafons upon which this Opinion was founded, as well as Notes of his Voyage, he promifed to give to Mr. Eriggs, the famous Mathematician, who had turned his Thoughts much upon this Subject, but never did; which was the Reafon that all the Expeditions undertaken on that Side afterwards faited; but, however, we have fufficient Grounds to affirm, from the Knowledge derived to us from another Quarter, that the Difcoveries of Sir Thomas Button, if profecuted, might have proved highly advantageous to this Nation, notwithftanding the feerning Rigour of the Climate, and Barrennefs of the Country.

The French were in pofleffion of Fort Bourbon, which we call New York Fort, upon St. Therefa, the Eaftern Branch of Nelfon River, from the Year 1697 to 1714 . Monfieur Yeremie, who was Lieutenant there from 1697 to 1708, and afterwards Governor till he gave it up, in ryifis to us, gives a very particular Account of that River and the adjoining Countries, great Part of which
he affirms to be of his own Knowledge, having travelled a great way South-weft into the Country, among the Rivers and Lakes. The Danijb, or Cburchill's River, upon which the Hufdon's Bay Company have lately built a ftrong Stone Fort, he fays is fituated in 59 Degrees North Latitude, and is about five hundred Paces wide at the Entrance for about a quarter of a League, and very deep; but within, it is much broader, and navigable into the Country a hundred and fifty Leagues; there is but little Wood upon the River near the Bay, except in the Iflands. At a hundred and fifty Leagues Diftance is a Chain of high Mountains, with great Cataracts, and Falls of Water ; but beyond thefe it is again navigable, and has a Communication with a River, called the River of Stags. Fifteen Leagues Northward of this River is the River of Loup Marine, or River of Seals. Betwixt there Rivers is found a kind of Ox , called the $\mathrm{Mu} / \mathrm{Ox}$, which finells, at fome time of the Year, fo ftrong of Murk that it cannot be eat ; they have very fine Wool, which is longer than that of the Barbary Sheep: They are fmaller than French Oxen, with very crooked Horns which turn round like Rams-Horns, and are fo long that they weigh fometimes fixty Pounds; they have fhort Legs, and their Wool trails upon the Ground: They are not numerous.
This River comes from a Nation he calls Plat cotez de Cbiens, who makes War againft the Savanna Indians, who traded with the French. In that Country they have a large Copper Mine fo fine, that without Smelting it they make Copper of it, by beating it betwixt two Stones: He faw a great deal of it, which their Indians got when they went to War againft that Nation. This Nation has a fweet humane Afpect, but their Country is not good. They have no Beaver, but live by fifhing, and a kind of Deer they call Cariboux (Rain Deer) ; the Hares grow white in Winter, and recover their Colour in Spring; they have very large Ears, and are always black; their Skins in Winter are very pretty of fine long Hair, which does not fall, fo that they make very fine Muffs. He fays he can fay nothing pofitively in going farther Northward, but only, that their Savages reported that, in the Bottom of the Northern Bay there is a Streight, where they can eafily difcover Land on the other Side : They had never gone to the End of that Streight; they fay there is Ice there all the Year, which is drove by the Wind, fometimes one Way fometimes another. According to all Appearance, this Arm of the Sea has a Communication with theWeftern Ocean; and what makes it more probable is, that when the Winds come from the Northern Quarter, the Sea is difcharged by that Streight, in fuch Abundance, into Hudfon's Bay, as to raife the Water ten Feet above the ordinary Tides; infomuch that when they find the Waters rife, Ships take Shelter againft thefe Northerly Winds. The Savages fay, that after travelling fome Months to Weft-fouth-weft, they came to the Sea, upon which they faw great Veffels with Men, who had Beards and Caps, who gather Gold on the Shore that is at the Mouths of Rivers. In pafing to the Southward from the Danifs River, at fixty Leagues Diftance, is the River Bourbon or Nelfon, in Latitude 57 Degrees.
There is nothing remarkable in the Country betwixt thofe two Rivers, but a great Number of the Deer, called. Cariboux, which being drove from the Woods by a great Number of Murchetoes or Midges, come to the Shore to refrefh themfelves; they are in Herds of 10,000 together, and fpread through a Country forty or fifty Leagues in extent. They might have as many of their Skins as they pleafed, and fome have been dreffed, which have been very fine. They have there all Sorts of wild Fowl, as Swans, Buftards, Geefe, Cranes, Ducks, and thofe of the finaller Kind in fuch great Numbers that when they rife they darken the Sky, and make fo loud a Noife, that they can fcarce hear each other fpeak. He fays, that this may appear fabulous, but affirms, he fays nothing but what he faw himfelf, for he would not truft to the Report of others, but went himfelf to almoft every Place he mentions. The River St. Therefa, upon which they built Fort Bourbon, is a Branch of Nelfon River, by which the Natives come down to trade. This R 5 5

Rives

River is of fo great Extent that it paffes through many great Lakes: The firft is I50 Leagues from the Entrance of the River, and is 100 Leagues in Circuit ; the Natives call it the Lake of Forts (or rather Forefts). On the North Side a River difcharges itfelf, called the Rapid River ; this takes its rife from a Lake 300 Leagues from the firft, which they call Micbinipi, or the Great Waters; becaufe, in effect, it is the greateft and deepeft Lake, being 600 Leagues in Circumference, and receives into it many Rivers, fome of which have a Communication with the Danifb River, and others with the Plafcotez de Cbiens, about this Lake and along thele Rivers are many Indians, who call themfelves the Nation of, the great Waters, or of Afribibowls; it is to be remarked, that thefe are as humane and affable, as the E $k k i-$ moux are fierce and barbarous, as are alfo all other Nations along Hudjon's Bay. At the Extremity of the Lake of Forefts the River Bourbon continues its Courfe, and comes from another I ake, called the function of the two Seas, becaufe the Land almoft meets in the Middle of the Lake; the Eaft-fide of this Lake is a Country full of thick Forefts, in which are great Numbers of Beaver and Elks. Here begins the Country of the Cbrifinaus.

This is in a much more temperate Climate. The Weft-fide is full of fine Meadows, filled with wild Oxen. The Adinibowls live here; the Lake is 400 Leagues in Circumference, and 200 from the other Lake. 100 Leagues farther Weft-fouth-weft along this River is another Lake, which they call Ounipigoucbib, or the Litthe Sea; it is almoft the fame Country and Climate with the other, inhabited by the fame Indians, the AJribibowls, the Cbrifinaux, and Souteurs; it is 300 Leagues in Circumference; at the further End is a River, which comes from Tacamiouen, which is not fo great as the other ; it is into this Lake that the River of Stags is difcharged, which is of fuch a Length that the Natives have not yet difcovered its Source; from this River they can go to another, which runs Weftward, but all the reft run either into the Bay or River of Canada. He endeavoured to fend the Natives to difcover if it went to the Weftward Sea, but their. Enemies lying in the way prevented them; however, they brought fome of them Prifoners, who faid they alfo were at War with another Nation farther Weft ; thefe faid they had Neighbours with Beards, who lived in Stone Houfes and Forts, that they were not cloathed like them; that they had white Kettles; and fhewing them a Silver Cup, they faid it was of that Metal; they faid they tilled their Land with Tools of that Metal. According to their Defcription it was Maize they cultivated.

The Intendant of Canada was very defirous to difcover thefe Countries from thence; but it is much eafier from Fort Bourbon, as it is fhorter; and though a fine Country full of Beafts and wild Fowl, befides Fruit, which grow wild, as Plumbs, Apples, and Grapes, and great Variety of fmaller Fruit. On the South-weft Side of this Lake Tacamiouen is a River which comes from another, called the Lake of Dogis, which is not far from the fuperior Lake. The River St. Tberefa is but half a League wide where the Fort is built; two Leagues higher is Fort Pbilipeaux, built for a Retreat; there the River begins to be interfperfed with Iflands; twenty Leeagues above the Fort the River divides into two Branches, one which comes from the North-weft Side communicates with Nelfon or Bourbon River, by which the Natives come down to trade, by the Means of a Land Carriage from the Lake of Forefts to this River. Twenty Leagues above the firft Fork there is another that comes from the South-eaft, which the Natives call Guicomatouang, or the Great Fork. This has a Communication with the River St. Huiles; the Weftern Branch, though ftill called St. Thberefa, is but of a fmall Extent, coming from its Source by feveral fmall Brooks, in each of which are great Numbers of Lynx, Beavers, Martins, and others of fmaller Furs. Betwixt the two Forts is a fmall River, called Egaree, from whence they get their Wood for firing, it being fcarce at the Fort. Near the Mouth of the River is another fmall one they call Gargoufle; there comes in at high Water a great Num-
ber of Porpoiffes. The River being narrow here, there might be a good Fifhing, where they might make above fix hundred Barrels of Oil annually.

From this River of St. Huiles, or New Severn, is 100 Leagues South-eaft. It is fituated in Latitude 56 De grees; the Entrance is but fhallow, only capable of Vef fels of 60 Tuns: Here might be made good Houles; for Wood is very plenty here; and there are great Numbers of Beavers higher up the River. As to the Climate of Fort Bourbon, it being in Latitude 57 De grees, is very cold in Winter, which begins about Michaelmas, and ends in May. The Sun fets about three, and rifes about nine in the Winter. When the Days grow a little longer, and the Cold is more temperate, the Sportfmen kill as many Partriges and Hares as they pleafe. One Year, when they had eighty Men in Garrifon, they had the Curiofity to reckon the Number, which amounted to ninety thoufand Partriges, and twentyfive thoufand Hares. At the End of April the Geefe, Buftards, and Ducks, return in fuch Numbers, that they kill as many as they pleafe; they alfo take great Numbers of Cariboux, or Rain-Deer; in March and April, they come from the North to the South; and extend then along the River 60 Leagues: They go again Northward in Fuly and Auguf; the Roads they make in the Snow are as well padded, and crofs each other as often as the Streets at Paris. The Natives make Hedges with the Branches of Trees, and leave Openings, in which they fix Snares, and thus take Numbers of them: When they fwim the Rivers, in returning Northwards, the Natives kill them in Canoes with 1 ances, as many as they pleafe. In Summer they have the Pleafure of fifhing, and with Nets take Pike, Trout, and Carp, and a white Fifh fomething like a Herring, by much the beft Fifh in the World: They preferve thofe for their Winter Provifron, by putting them in Snow, or freezing them, as alfo the Flefh they would preferve. They keep thus alfo Geefe, Ducks, and Buftards, which they roaft with the Hares and Partriges they kill in Winter. So that though it be a cold Climate, there is good living there, by getting Bread and Wine from Europe.

Though the Summer be fhort they had a Garden, and good Coleworts, with Sallads and fmall Herbs, which they put in their Soups in Winter. He had 120,000 Livres Profit out of 8000 fent him in Goods in one Seafon; they have alfo Bears, Elks, and all Sorts of Beafts, whofe Skins and Furs are valued in France; and, according to him, it is one of the moft profitable Pofts in North America, confidering the Expence. Thus far this Frencb Writer, from whom we have borrowed a very clear and copious Account of the Advantages that might have accrued to us, if our original Difcovery of Hudfon's Bay had been properly confidered.

But there were, and will be always, a Race of People decrying thofe Projects they want Courage to attempt; and who, by ridiculing the Pains taken to vifit frozen Climates and barren Countries, hinder thofe Improvements which might otherwife follow from fuch kind of Expeditions. But they ought to confider before they run down fuch Attempts, that we have Numbers of poor People here who want Employment, and for whom Employments ought to be found; that if this be not done, they will either ftarve to our Shame, or ftrike out Ways of living at our Expence; whereas, if they were thus employed, they would both maintain themfelves and benefit the Public: Befides, there is this Advantage that attends Northern Expeditions and Difcoveries, that they breed a Race of hardy and ufeful Seamen, who are nearer at hand, and confequently more capable of ferving their Country upon any Emergency than fuch as are employed in other Branches of Navigation. As to the fuppofed Difficulties that are to be in this way encountered, it is a Shame to hear them mentioned amongft People who pretend to maritime Power.

If Men are afraid of Ice, Cold, and Rocks, they muft relinquifh all Thoughts of being great at Sea, and leave it to thofe who can, not only endure, but even defpife, fuch Hardfhips; the Dutch, the Danes, and the Hamburgbers, fail every Year on the Whale Fifhery, near

20 De -

20 Degrees farther North than the Bottom of Hudfon's Bay; and the French from Canada, travel through, and live in thefe very Countries of which we are fpeaking, with as much Eafe as the Savages themfelves; and, indeed, why fhould they not, or why fhould we imagine that one Man, or one Race of Men, can do more than another? Our Anceftors were of this Opinion, or at leaft they thought that if fuch a Race of Men there were, they might be found in this Inand: And here, if properly encouraged and due Regard fhewn to their Virtue, they will be always found, for it is not the People but their Governors that alter, and therefore we have a Right to blame thofe who took fo little Notice of what Sir Thomas Button performed, and fo little attended to what might be made of thefe Countries, as we certainly ought to commend fuch as contrived or promoted the Law lately paffed for encouraging private Perfons to attempt once more the Difcovery of a North-weft Paffage, by fecuring to them a Reward from the Public, which, without doubt, they will juftly deferve.
13. The next thing that occurs in order of Time, is the afferting our Right to that Part of the Continent of America which lies North from New England, and which is now called Nova Scotia, but was then looked - upon as Part of Nortb Virginia, and as fuch within the Charter of the Weftern Company, who gave ftrict Orders to thofe in their Service to prevent foreign Nations fettling in their Limits; by which means this Country of Acadia, or Nova Scotia, which is of fo great Confequence in itfelf, and for the Security of our other Plantations on the Main, was preferved. The Bounds of this Province are the Ocean to the North, Cape Breton Jfarid, and the Bay of St. Laurence to the Eaft, Canada to the Weft, and Nere-England to the South; it lies from 43 to 5 I Degrees North Latitude, and from the River St. Croix the neareft to New Hampßire, to the great River of St. Laurence, has almoft fix hundred Miles of Coaft, but moft of it uninhabited and defert, the Indians themfelves making little or no Ufe of it.

Sir Samuel Argall, then Governor of Virginia, made a Sort of cruizing Voyage round the Coaft Northwards, as far as Cape Cod in Nere England, in the Year 16 18, five or fix Years before the Englif, who intended to fettle, arrived in that Country. The Indians informed him that fome white Men, like himfelf, were come to inhabit to the Northward of them. Sir Samuel Argall, who took all that Country, as far as it had been difcovered by Cabot, to belong to the Virginia Company his Employers, failed thither, found a Settlement and a Ship riding before it, which belonged to fome Frenchmen; Argall drew fo clofe to it, that, with his fmall Arms, he beat all the Men from the Deck, fo that they could not ufe their Guns, their Ship having but one Deck; among others there were two Fefuits aboard, one of which endeavoured to fire off one of their Cannon, and was fhot. Argall having taken the Ship, landed his Men, marched to, and fummoned, the Fort to furrender: The French afked Time to confider of it, which was denied, upon which they got privately away and fled into the Woods. The Englifb entered it, and lodged there that Night, and the next Day the French came and yielded to Sir Samuel, cancelling the Patents that had been granted them for their Settlement by the French King. Sir Samuel permitted fuch of the French as were fo difpofed to take Paffage for Europe in the fifhing Ships, and took the reft with him to Virginia, according to their Choice.

The French had another Settlement at a Place they called Port Royat, on a Bay on the South-weft Coaft of Acadia, which the two Jefuits had left out of Pique to their Governor M. Biencourt ; and with thefe Frenchmen feparated from the others. Father Biard, the furviving Jefuit, out of Malice to Biencourt, informed Sir Samuel of the Settlement at Port Royal, and the Eafe with which he might reduce it, which he found to be true; and, on the Surrender of the French, he did no Damage to their Houfes, their Barns, and Mills, but obliged them to quit the Country ; they had fowed and reaped, and thofe of them that did not care to return home, re-
moved to the River of St. Laurence, where now is the Capital of Canada or Nerw France.

When Sir Ferdinand Gorges was Prefident of the Newe England Company, he propofed to Sir William Alexander to procure a particular Grant for the Land to the Northward of their Patent, which was eafily obtained of King Fames I. and a Year after, 1622 , Sir William, and fome others whom he had got to be concerned with him; fent a Ship with Paffengers to plant and fettle there. Nerefoundland was then very weil known on account of the Fifhery, and the Ship being late in her Voyage the Mafter put in and wintered there. The next Year they fet fail, and made the Promontory at the North Shore of Cape Breton Ifland: They coafted it along till they came to Cape Sable in Acadia, where they found three good Harbours, and went afhore at one of them, which they called Luke's Bay; in which was a large River chat had eight Fathom Water at ebb. This Ship failed up one of thefe, and, according to the Accounts that were publifhed by thofe that were to be Sharers in the Patent, this Country is defcribed as a kind of Paradife: With a View, no doubt, to have engaged People to go over thither to fettle, to which End Sir William Alexander the original Proprietor, afterwards created Earl of Sterling, wrote and publifhed a Book, and his Sovereign King James erected a new Order, called the Knights of Nova Scotia, to facilitate this Plantation.

But, notwithftanding all the Care that was taken of it, this Project proved abortive, and, which is very extraordinary, modern Authors have taught us to condemn and cenfure fuch as forefaw the Confequence and Importance of this Country to the Britifh Nation, when unfettled and unimproved, and to treat as weak and pufillanimous the Conduct of thofe Times, when in full Peace the French were, by Force of Arms, compelled to quit a Country, which, though fettled by them, was difcovered by us; and from thefe Fugitives it was that the more Northern Settlement of the French took Birth. The Expedition of Sir Samuel Argall was certainly both a vigorous and a right Meafure; and the Grant to Sir William Alexander was a very fenfible thing, though the Defign of it is now not well underftood, or rather forgot; and therefore, though it may take up fome Room, I fhall endeavour to revive and to explain it. It was fuggefted to King Fames that the Tract of Country on the Continent of North America, belonging to his Crown, being very large and not likely to be planted in any reafonable Space of Time by the Englifh, it would be a very wife and prudent Meafure to grant under the Great Seal of Scotlonds a Part of it to his Subjects of that Kingdom, upon a Suppofition that it would be more beneficial for them, and more for the Intereft of the united Kingdoms if they went over and fettled there, than if, as to that Time they had frequently done, they tranfported themfelves to Poland, Sweden, and Ruffra, in which Countries there were at that Time many thoufand Scotch Families,

Such was the original Scheme of fettling and planting Nova Scotia; and if the Courtiers of thofe Times made a Jobb of this, and thereby defeated the Scheme; however this may reflect on their Memories, it ought to draw no fort of Odium on the Project itfelf, which was very well and wifely laid, if it had been as honeftly and wifely executed. There was afterwards another Grant made of the Northern Part of this Country, to $\operatorname{Sir}$ David Kirk, from whom the French King bought it, or at leaft contracted to give him $5000 \%$. for it; a very plain Proof that even the French acknowledged the Right by which he held it; and a French Nobleman likewife bought, many Years after that, Sir William Alexander's Property; It may be enquired why the Crown of England did not interpofe and prevent thefe Sales, as might, no doubt, have been done; and the plain Anfwer to this is, that the Frencb Proteftants being principally concerned in thefe Settlements, the Crown had a Tendernefs for them.

But Oliver Cromwell fent Major Sedgreick to dinlodge the French from Port Royal, which he did, and though the Protector afterwards confented that a French Proprietor fhould enjoy the Country, yet it was upon Con-
dition that he fhould make out this Right by Purchafe from the Earl of Sterling' which he ofterwards did, and then fold it to Sir Tbomas Temple, who was both Proprietor and Governor at the Reftoration: After which the French fettled there again, and remained there in quiet Poffeffion till the Year 1590 , when they were difpoffeffed by Sir William Phips, then Governor of New England; but it was afterwards given up again to the French, by King Willian's Treaty of Ryfwick. It is not, however, to be underfood that either King Cbarles II. or King William III. by their refpective Treaties with France, gave up the Claim of this Nation to that Country, nor did the French fo underftand it, but only permitted that Poffeffion, becaufe, as the Circumftances of things then ftood, they were unwilling to conteft it. In all thefe Changes, however, the Mand of Cape Breton followed the Fate of Nova Scotia, and both continued in the Hands of the French till the Year 1710, when Governor Nicbolfon made himfelf Mafter of Port Royal, which was become a Place of very great Importance in many Refpects, more efpecially in this, that it gave the French an Opportunity of difturbing and diffreffing our Trade to fuch a Degree, that it was very properly filed the Durkirk of America.

We need not wonder, therefore, that the taking this Place was looked upon as a very remarkable Service, or that the Queen fhould beftow her Name upon it to fhew that fhe never meant to part with it. Upon the fame Principle, Colonel Nicholfon, upon his Return to England, had a Commiffion granted him to be Governor of Nova Scotie, and of Annapolis Royal, and Commander of all her Majety's Forces there and in Newfoundland. While things were in this Situation, a Negociation for Peace was fet on foot, which afterwards produced one that has fince made a great deal of Noife, more efpecially with regard to the Stipulations therein, in reference to this Province; and therefore it is requifite for us to fee what relates to Nova Scotia in the Utrecht Treaty, the Words of which, in the twelfth Article, are, "All Nova "Scotia, or Acadia, with all ancient Boundaries, as alfo " the City of Port Royal, now called Annapolis, and all " other things in thefe Parts which depend on Lands " and Inands, together with the Dominion, Property, " Poffeffion of the faid Inands, Lands, and all Rights " whatfoever, by Treaties or by any other way obtained, " $\xi^{\circ} c$." To which the French King added the Exclufion of the Subjegs of France from fifing on the Coaft of Nova Scotia, and within thirty Leagues, beginning from Cope Sable, and ftretching along to the South-weft; there is no doube but this Article, as it is worded, contains the Refitution of Cape Breton, which ought to have gone along with Nova Scotia, as it had hitherto done; neither is this a bare Conjecture, or my particular Notion, but the general Sentiment of fuch as were beft acquainted with this Affair, and with the Negociation that concerned it ; which induced the Queen, in her Inftructions to the late Duke of Sbrecufoury, when he went Embaffador to France, to declare that fhe looked upon Cape Breton to belong to her, and reckoned that Inand a Part of the ancient Territory of Nova Scotia. But notwithitanding this Article in 'the Queen's Inftructions, the French were fuffered to keep Cape Breton, but, moft undoubtedly, this gave them no Right to it.
I am very far from thinking that in this Cafe, I mean in the Cafe of Plantations, Poffefion is the only, or even the beft Right, becaure fuch a DoEtrine might confer Right upon Pirates. The ben Claim of Civilized Nations, with refpect to new Countries, was always allowed to be the firt Difcovery. This Right is that on which is founded our Title, and very jufly; for we have certainly difcovered all the Countries that border on Davis's Streigbts, Hudfori's Boy, and fo forwards to the Limits of Georgia; and this Right being in the Crown of England, and inherited with the Crown of Eugland, could never be granted away, yielded to a foreign Power, or otherwife tranfferred, without the Confent of Parliament; though the temporary Pofferfion might. For, in thofeTreaties by which Acudia was left to France, the Crown only ftipulated not to deprive the French of their Poffefion, during the

Continuance of the Peace, but the Right fill remained in us, and muft always remain in us.

We have before fhewn that the French acknowledged this, as appears by the King of France's purchafing under our Title; nor was it ever difputed till the Treaty of Utrecbt, that the Inand of Cape Breton belonged to Nova Scotia, nor could it be difputed, becaufe the very Charter which eftablinhed Nova Scotia as a diftinct Province, included the Inand of Cape Breton in, exprefs Words. We may add to this, that our Title to Labrador or New Britain is unqueftionable, of which Country Nova Scotia was a Part, till feparated by the Charter ; and our Claim to Necevoundland has been always maintained, as we fhewed in the former Section: So that on the whole it may be juftly affirmed, that our Right to the Inand of Cape Breton is as clear and as unqueltionable as that of any European Nation to any of its Settlements in America, or elfewhere. But if it fhould be demanded of what Ufe this Reafoning is, I anfwer, that having now recovered the Poffieflion of that Inand to which we had always a Right, and out of which we were cheated at the Treaty of Utrecbt, the Frencb have no Colour to demand the Reftitution of it; nor is the Cafe the fame now, that it was when King Cherles II. concluded his Treaty in 1666, when King William concluded the Treaty of Ryyrwick, in 1697, or when the Treaty of Utrecbt was made by Queen Anne, in 1712.
14. We gave a large Account, in the former Section, of the Attempt made by that great Man, and good Patriot, Sir Welter Raleigh, to eftablifh an Englijh Plantation in Guiana; and of his fending, after his Return to England, a Ship to profecute that Difcovery: Of which fecond Voyage we have likewife a long Account, publifhed by Captain Keymi/b: But this Defign met with continual Interruptions; or otherwife, Sir Walter himfelf tells us in his Apology, there had been, before the Death of Queen Elizabeth, a fufficient Number of Englifh fettled in that Part of the World, to have fecured the Poffeffion of it for ever to this Crown and Nation. The very next Year after Sir Walter's Return, he was employed in the Expedition to Cadiz: The two following Years, his Time was taken up in that which was called the Ifland Voyage. Then the great Rebellion broke out in Irclaid, which rendered Queen Elizabetb unwilling to encourage any private Expeditions that required a confiderable Force ; and this Rebellion lafted till the Queen's Death. Immediately after this, Sir Walter himfelf was imprifoned, and fo continued for many Years. Which very fairly accounts for this noble Defign remaining fo long unpurfued.
But Things delayed are not always loft; the Defire of fettling Guiana revived in a few Years after Peace was reftored; and, as I do not know it has ever yet been done, I fhall give a fuccinct Account of the feveral Attempts made to carry this Defign into Execution, to the Time they were wholly given over, and the fmall Intereft we had in that Part of the World furrendered up to the Dutch. In the Year 1604, Capt. Cbarles Leigh undertook a Voyage to Guiana, at his own, and his Brother Sir Olive Leigh's, Charge: He had a Bark of about fifty Tons, called the Olive-Plant; and his Company, about forty-fix Men and Boys. They failed from Woolzoich the 21 It of March, with a Defign to make a more complete Difcovery of the Country of Guicura than had been yet done, and to fix an Englifh Colony there. On the 22 d of May they came into the River of Wyapoco, in the Latitude of 8 Degrees 30 Minutes to the North of the Line, and the Town of Wyapoco, which lies on the Coaft of Guiana, was the Place in which they intended to take up their Abode. Here the Captain came to an Agreement with the Inhabitants, who received him very kindly ${ }_{z}$ that they fhould allow him a good Space of Ground and fome Houfes, for the prefent; in Confideration of which he was to affift them againft their inveterate Enemies the Caribbees, who greatly diftreffed them.

This Agreement was made by Nieans of two of the Natives of Guiana who had been in England, and could fpeak fome Englijh; and for the better Security of Performance on the Part of the Savages, they confented to give

Chap. III. of the ENGLISH in AMERICA.
five of their Body, among whom were two Perfons of dined with them, would have the Englifh go with him to Note, as Pledges to be fent to England. Their firft Settlement was on part of the Mountain that lies on the Weftfide of the Entrance of the River, to which they gave the Name of Mount Howard. The Captain might have lived here a very quiet Life, and been very ufeful to his Country too, had he not had a mutinous and difcontented Company. Thenext Year after, he fent his Ship to England, in the Month of Fune, for frefh Supplies of fuch Things as he wanted, retaining thirty-five of his Men and Boys with him, to fettle his fmall Village, and thereby fet this Colony upon a better Footing than it had till then been. They had fome Trade with the Natives, as well round about their Settlement, as farther up the River ; and the chief Merchandizes they obtained were Wax, fine white Feathers, Tobacco, Parrots, Monkeys green and black, Cotton, Yarn and Wool, fweet Gums, red Pepper, Spleen and Miafate Stones; with feveral forts of Wood, Roots, and Berries, partly for Medicine, and partly for Dying ; but the Flux, and other Diftempers, carried off a good Number of the Company ; and the Captain, being feized with it himfelf juft as he was going on board for England, to fetch a complete Loading of fuch Things as were needful for his Colony, died of it. It was by this unhappy Stroke, the whole Undertaking was quafhed, and every one mifted for himfelf; fome returned to England in their own Veffel, others in a French Ship, and others in two Dutch Ships, very much to the Regret of the Indians, and to the no fmall Lofs of Sir Olive Leigh, and Detriment of the Engli/h Nation.

Sir Olive Leigh refolving to fupport his Brother in the Eftablifhment of his Colony at Guiana, before he had any Account of his Succefs, fitted out another Ship called the Olive Bloffom, under Capt. Catalin and Capt. St. Fobn, to carry him a frefl Supply of Men and Neceffaries. The Ship fet out from Woolwich for Wiapoco, the I 4 th of April, 1605 ; but, between contrary Winds and Currents, by the Unfkilfulnefs of the Mafter, Mr. Ricbard Cbambers, they were put fo far to the Leeward, that they defpaired of ever recovering their intended Port in any due time; and therefore they put in firt at Barbadoes, and afterwards at the Inand of St. Lucia, defigning from thence to return to England: However, examining their Stores of Provifions, and finding not near enough to ferve fo large a Company as they were, for fo long a Voyage, Capt. St. Fobn himfelf, with feveral of the Paffengers to the Number of fixty-feven, refolved rather to ftay, and take their Lot upon that Inand, than to run the Hazard of their being ftarved at Sea.

They foon made an Acquaintance with the Indians, who furnifhed them, in Exchange for Trifles, with Roots, Fruits, and fome Fowls ; and they every Night had an Opportunity, with very little Trouble, of taking delicate Tortoifes upon the Sands; fo that they were in no Want of Food. They lived five or fix Weeks in little Huts, or Houfes which they had built, without making any Excurfions into the Country ; but the Captain feeing one Day certain Plates of Metal upon the Arms of fome of the Indians, and being informed by one Brown a Refiner in their Company, that they were at leaft three Parts Gold; and enquiring of the Indians from whence they had it, they pointed to a very high Mountain, in the North-weft Part of the Inand. Upon this, the Captain himfelf, with feveral of the chief of his Men, went in queft of this golden Mountain, the reft being appointed to keep Guard at home, and affured they would return in a Week's time. When this Part of the Company was gone, the other expected the Indians would have brought them Provifion, as they ufed to do; but they heard nothing of them for three Days together. They had it feemed obferved when the Captain went, followed him, and moft barbarounly cut him off with his whole Company.

They were now intent upon making the fame Difpatch of their Companions, and to this End had got one $A u$ gramart, a defperate Savage, and Captain of the Inand of St. Vincent, to head them in this Enterprize. To cover their Defign, however, they carried it fair to them, and vifited them frequently; till one Day Augramart, having

Vol. II. Numb. 86.
his Quarters; where he promifed to furnifh them with whatever Provifions they wanted. Mr. St. Jobn, with feventeen others, accepted of the Invitation; but inftead of carrying them to their Quarters, they led them into an Ambufh of five hundred Savages; where, being furrounded, and attacked on ever Side with Vollies of Arrows, after doing all that Men could do in their own Defence, they were over-powered, and all hain but one Fobn Nichols, who made his Efcape from this bloody Slaughter, and was forced to hide himfelf in a Wood, then fwimming a Lake, and fo with great Difficulty returned home, juft time enough to give his Companions the Alarm ; for it was not long before they appeared before their Houfes; yet letting fly their fmall Pieces of Ordnance they quickly marched off again. In two or three Days time they returned, to the Number of thirteen or fourteen hundred Men; who, after having attacked their little Fort and Houfes for feven Days together, with little Succefs, thought of throwing in Fire with their Arrows, which in a fhort time reduced the Habitations of the Engli/h, and all they had, to a Heap of A.hes. They continued, however, 'to defend themfelves in fo brave a manner, that the Indians, feeing they could not accomplifh their Defign againft this Handful of Men, refolved at laft to abandon the Enterprize.

After their Departure, fome of the neighbouring Savages were prevailed upon, for a Reward of Hatchets, Knives, and Beads, to furnifh them with an old pitiful Boat; this they fitted up as well as they could, and nineteen of them, the miferable Remains of fixty-eight, of which twelve were wounded, ventured out to Sea in her, without Chart or Compafs, and having only four or five Gallons of Water, with a few Plantains and Potatoes, about twenty Bifkets, and a little Rice; and, what was worfe than all the reft, not one Mariner among them. In this little Boat they were fo over-laden that her Gunnel lay almoft even with the Water: They lived at Sea ten Days, four of them being obliged by Turns to keep fcooping of the Water. "The tenth Day, when all Hopes began to fail them, they difcovered Land; but when they came upon it the Land proved to be an uninhabited Inand, which afforded no manner of Suftenance. In this miferable State they had no Remedy, but to repair their Boat again as well as they could, and to fend five of their Men to the Continent to feek Relief. After many Difficulties thefe Men came to an Indian Town on the Continent, called Tocoyo; from whence, after fifteen Days Abfence, they carried Succour to their miferable Companions. They were now reduced to thirteen, who got together to a Spani/h Town, called Coro, where they were treated with great Humanity; two more of them died; three of them went from thence to Cartbagena, and were followed thither by two more; where they procured a Paffage to Spain; but what became of the reft does not any where appear.

One would have imagined, that fuch a Series of Mif fortunes as had attended the Attempts made for eftablifh ing this Settlement, would have worn out all Defire of running further Hazards; but fuch was the Credit of Sir Walter Raleigh, fuch the fettled Opinion of the vaft Riches to be found in this Part of America, and fuch the Remains of that Spirit which prevailed through the whole Nation in the Time of Queen Elizabeth, that in the Year 1609, a new Attempt was made, at a much greater Expence than the former, with the Participation, at leatt, if not under the Influence of Sir Walier Raleigb. This Voyage was performed under the Direction and Command of Robert Harcourt of Stanton-Harcourt, in the County of Oxford, Efq; and the Veffels employed in it were, the Rofe, a Ship of eighty Tons; the Patience, a Ship of fix-and-thirty Tons; and the Lilly Shallop, of nine Tuns. They fet fail from Dartnoutb the 2gth of March, and arrived the $17^{\text {th }}$ of May in the Bay of Wyapoco. It was not long before feveral Canoes of Indians came to fee what they were; and finding they were Englijh, came on board them without any Fear or Ceremony: Such an advantageous Idea had Sir Walter Raleigh by his courteous Behaviour imprinted in them of the Engligh Nation.

Thefe People, who were very forward and ready to traffic with the Englifh, were of the Town called Caripo, on the Eaft Side of the Hill, at the Mouth of WyapocoRiver. Their King, or Chief, who had been many Years in England, was then with Mr. Harcourt, and another of his Countrymen came Paffenger with him, though he had not difcovered his Quality, till the Joy of his Subjects at the Sight of him made him known. Among the Irdians who came firft on board was one who fpoke the Englifh Tongue perfectly well, and was known to fome of the Ships Companies, having ferved Sir Fobn Gilbert in England many Years; and the Indian who accompanied the King or Chief, having been fourteen Years in England; thefe two were of fingular Service to the Adventurers.
The firft Ceremonies being paft, Mr. Harcourt acquainted them that the Occafion of his coming among them was to fettle a Colony there, and to take Poffeffion of the Country for the King of England, by virtue of their Grant of it to Captain Leigh, and by fome of their Countrymen before to Sir Walter Raleigb; affuring them at the fame time, that his Majefty intended no unjuft Ufurpation over them, nor to treat them in any way like Slaves and Vaffals; but only to be their Friend and Protector, and to deliver them from the Infolencies and Oppreflions of the Caribbees. After fome Debate the Indians gave their Confent that they might live among them, and promifed to furnifh them with Houfes, and all other Neceffaries, as far as they were able; but could not forbear exprefling fome Diffidence in their performing their Promifes, fince Sir Walter Raleigh had been fo dilatory in his accomplifhing thofe he made them.

This being done they all went afhore, where they met with the beft Reception the Indians could give them; and were difperfed up and down the Town, on the Side of a Hill, while their Ships rode at Anchor at the Foot of it. The great Rains, which confined them near a Month, being over, the Captain fet himfelf to difcover the Golden Mountains, which had been the Spurs to this Undertaking; but their Guide, who had promifed fuch great Things, failed in the Performance of them, and either had wilfully deceived them, or had been deceived himfelf; for when he came to the Spot he had built his Hopes upon, nothing was to be found: And yet they were convinced the Country afforded Gold, as well by the Affurances given them by the Natives, who fhewed them certain Images, which upon an Effay appeared to contain at leaft one third Gold, as by ocular Demonftration of great Quantities of the white Spar in which the Gold is contained, and which they found to hold both Gold and Silver; but they had Reafon to believe the $e$ Mines were too far up in the higher Parts of Guiana, and perhaps too ftrongly guarded for them to hope they fhould be able to reach them. And, befides, they had then neither Time nor Power to fearch in the Manner requifite for finding thefe Mines.

This Difappointment had like to have excited a Mutiny, among thofe who came out with no other View than to tumble at once into Riches; but the Captain, with great Prudence and with no lefs Conduct, prevented its running fuch a length; and to keep them employed, not only went himfelf up the River of Wyapoco upon Difcovery, but fent his Brother with fome others on the fame Errand to the River Arrawary, and the Country bordering upon it, which adjoins to the River of Amazons. He went alfo and took Poffefion of the Mountain Gomoribo, which is the utmont Point of Land to the Northward in the WYapoco. This he did, according to Cuftom, by the Ceremony of Twig and Turf, in the Prefence both of his own People and the Indians. After Poffeffion taken, the Mountain was delivered over to an Indian, to hold and poffefs the fame for himfelf and his Heirs, of his Majefty Fames King of England, paying the yearly Duty of a tenth Part of the Tobacco, Cotton, Wood, Annotto, and all other Commodities growing within the Limits of the fame. The Attempt of the Captain's Brother, and Captain Harvey, in Difcovery of the River Arrawary, was attended with great Difficulties and Hazards; for the length they rum by Sea to this

River was neat one hundred Leagues, through terrible Breaks of Flats and Sholes. They went likewife fifty Leagues up the River, and all this only with flat-bottom'd Canoes, fomething longer than the common Thames Wherries, but not fo broad.

The Indions they met with in this River plainly difcovered they had never feen any Europeans before. It was long before they could be brought to any fort of Trade or Converfation with them, though they had other Indians in their Company: But at laft the Sight of their Toys wrought upon them, and induced them to exchange for Provifions; a Want of which however at laft obliged them to return to Wyapoco. They took Poferfion neverthelefs of the Country in Form, as Mr. Harcourt had done of Gomoribo. Not long after this, Mr. Harcourt was obliged to return for England, purely for fear of wanting Cafks to contain fufficient Beer and Water for the Voyage, the Mafter having neglected to have his Cafks Iron-bound before their Departure, which occafioned many of them to burft their Hoops in that hot Country.

Mr. Harcourt left his Brother to command in chief in his Ablence, to whom Captain Harvey was joined as Affiftant, and Mr . Gifford as his Lieutenant, and with them he left fifty or fixty of his Men. He departed the 1 8th of Auguft; and Mr. Harcourt, in his Way homewards, made feveral Difcoveries upon the Coaft, and in fome of the Rivers; returned to Ireland the 29 th of November; and came from thence to England. Being come to London, by the Favour of Prince Henry, he obtained a large Patent for all that Coaft, called Guiana, together with the famous River of Amazons, to him and his Heirs: But he was involved in fo many Troubles, that he was not able to fupply his Colony, and only fent over fome few People, with eighteen Duichmen, but to little Purpofe. Captain Harcourt, however, kept Poffeffion of that Part of the Country in which he was fettled for full three Years, in all which Time he loft but fix of his People.

The Reader will obferve, that we have now brought down the Hiftory of our Expeditions to Guiana from 1595 to 1612 , which is within five Years of Sir Walter Raleigb's laft Embarkation. It is however certain, that fome other Voyages had been made to this Country: For Sir Walter Raleigh, in his Apology, fays, that the Spaniards at St. Thomas's had, fome Years before his laft Attempt, murdered many Englifh, under pretence of trading with them, and fome of thofe who were thus murdered he mentions by Name. He had fuffered a very long Imprifonment in the Tower of London, when, by the Help of many Friends, and per haps by the laying out of a great deal of Money, he procured his Liberty, and therewith a Commiffion to execute his laft Expedition to Guiana. In order to this, he turned into Money the beft part of his own Fortune, which he employed in fitting out Ships for this Service. He engaged many of his beft Friends to do the fame; and embarked feveral of them, and his own eldeft Son, on board the Fleet; and all this from a Perfuafion that the Country he was going to was very rich in Gold, and if they could gain Poffefion of it, would make all their. Fortunes.

The famous Count Gondomar, who was then the Spanifb Embaffador here, and, as all the World knows, had a great Influence over King Fames, did all that lay in his Power to hinder this Expedition; and as he did not fucceed therein, it very plainly proves that King James did not credit what he fuggefted to the-Prejudice of Sir Walier Raleigh. And indced what he gave out upon this Subject, of Sir Walter's having no Intention to make either Difcovery or Settlement, but merely to engage in a piratical Attempt upon the Spanifh Colonies in America, was abfurd and ridiculous, fince no Man had ever a meaner Opinion of fuch Exploits, or had fo fully expofed the Folly of hoping for great Riches from the Plunder of Spanifh Towns, than Sir Walter had done. But in all Probability the Spanif Miniter had not fo much in view the making thefe Suggeftions of his pafs for Truth, as obtaining, by this Means, under Co-

## Chap. III. of the ENGLISH in AMERICA.

lour of refuting this Charge, a diftinct Account of Si Walter's true Defign, and of the Force with which he was to undertake it; in which he had but too great Succefs; for Sir Walter giving the King a fhort but true Scheme of what he intended, that very Paper was deHivered to the Spanifin Embaffador, and found its Way to Guinaa long before Sir Walter Raleigh.

The Commiffion granted to this excellent Man was very full, and free from Limitations, which has been generally underftood to be defigned to his Prejudice. But I muft confefs I fee no Reafon for that Opinion. On the contrary, I am perfuaded that Sir Walter himfelf was well fatisfied with his Commiffion; and that in reEpect to the Law of the Land, and the Law of Nations, it fully juftified the Defign he went upon, and all that followed in the Execution of it. Certain it is that the Contents of his Commiffion were no Secrets, fince, by publifhing them, he brought Numbers at home and abroad to fubfcribe large Sums towards the Support of his Undertaking; which he could never have done, if the Form or Words of that Commiffion had been liable to Exception. It was feven Months after his Commiffion was granted before his Fleet was in Condition to put to Sea.

As to the Strength of this Fleet, it is clear from a Survey taken by the Order of the Earl of Nottingbam, then Lord High-Admiral, that it confifted of feven Sail, of feveral Sizes. It appears that the firft of them, or Admiral, a fine Ship built by Raleigh himfelf, was named the Definy, of four hundred and forty 'Tons, and thirty-fix Pieces or more of Ordnance, Sir Walter Raleigh General, and his Son Walter Captain, befides two hundred Men, whereof fourfcore were Gentlemen Volunteers and Adventurers, moit of them Sir Walter's Relations; which Number was afterwards encreafed. Second, the Fafon of Londom, two hundred and forty Tons, and twenty-five Pieces of Ordnance, Captain Fobn Pennington Vice-Admiral, eighty Men, one Gentleman, and no more. Third, the Encounter, one hundred and fixty Tons, feventeen Pieces of Ordnance, Edward Hoftings Captain (no Men more except the Mafter mencioned); but he dying in the Indies, was fucceeded in the Command by Captain Whitney. Fourth, the Tbunder, one hundred and fifty Tons, twenty Pieces of Ordnance, Sir Warban Sentlegor Captain, fix Gentlemen, fixty Soldiers, ten Landmen. Fifth, the Flying-foan, one hundred and twenty Tons, fourteen Pieces of Ordnance, Jobn Cbidley Captain, twenty-five Men. Sixth, the Soutbampton, eighty Tons, and fix Pieces of Ordnance, Fobn Bayley Captain, twenty-five Mariners, two Gentlemen. Seventh, the Page, a Pinnace, twenty-five Tons, three Rabnets of Brals, Fames Barker Captain, and eight Sailors. But before Raleigh left the Coaft of England, he was joined by as many Ships more; fo that this whole Fleet confifted of thirteen Sail, befides his own Ship.

But for this remaining Part of his Fleet he waited long, and it had been better if he had left them behind, for they proved a Burden to him, and fome of them deferted the Expedition. It was the beginning of July before he left the Coaft of Eizgland, and meeting with a Storm, was obliged to put into Cork, from whence he failed on the rgth of Auguft following. He proceeded from thence to the Canaries, where, though infulted by the Spaniards, he committed no Hoftilities; but, on the contrary, behaved fo well that he obtained a Certificate thereof from the Governour. After this his Ships grew very fickly; and before he arrived at Trinidada, he had loft many of his Men, and was himfelf dangerounly ill. In this weak and low Condition they arrived at the North Cape of Wyapoco on the Inth of November.

The firft thing he did after his Arrival was, to endeavour to find out Leonard the Indian, who had been in England three or four Years with him, but was removed fo far up into the Country there was no procuring him; therefore he ftood away for Caliana on the Coaft of Guiana, at the firf Difcovery called Port-Howard, where the Cazique was alfo his Servant, and had lived with him in the Tower of London two Years. There he arrived in
a Day or two, having paffed the mand noted for $1 t$ Multitude of Birds and Silk-bearing Trees; and from thence fent for his Servant, Harry the Indian; who with other Caziques came and brought him great fore of Caf-favi-Bread, and roafted Millets, with Plantains, Pines, and Piftachio's. But Raleigb ventured not to eat of the Pines, which tempted him exceedingly, till after a Day or two's airing on the Shore, in a Tent which was there pitched for him. Then he alfo eat fome Armadillo and a little Pork, and begun to gather Strength. Here he alfo landed his fick Men, and recovered many; and here he buried Captain Edward Hafings, (the Lord Huntington's Brother) who died ten Days, or more, before; and with him his Serjeant-Major Hart, and Captain Henry Snedale, the Charge of whofe Ship Raleigb gave to his Servant Captain Robert Smith of Cornwall. Here he alfo fet up his Barges and Shaliops, which they brought from England in Quarters, cleanfed his Ship, trimmed up his Cafks and fupplied them with Water; fixed up a Forge, and made fuch Iron Works as they wanted. Thus on that Shore and this River they employed and refrefhed themfelves for about three Weeks, during which time Raleigh was very much careffed by the Indions, of his old Acquaintance aforefaid, and other Natives of this Place, who furnifhed him daily with the beft Provifions that the Country yielded, and offered him all kind of Obedience, even to the making him their Sovereign Prince and Ruler, if he would abide and fettle among them ; fo frefh continued his Memory, and fuch Impreffions of Homage and Refpect had his former Behaviour ftill left upon them ; which offer, he mentions, with the greateft Modefty and Indifference, in the Difpatch he fent foon after this to England.

On the 4th of December they left this River, and on the $5^{\text {th }}$ came to the Triangle Inands, where Raleigb's Ship ran on Shore ; and was, with Difficulty, got off. Here they held a Council to confider what they fhould do next, and as Sir Walter was extremely ill, and it was found impoffible to carry the larger Ships any higher, it was refolved that the five fmaller Veffels, with as many Companies of Foot, of fifty Men each, fhould enter the River. According to this Determination the Fleet was divided ; that is to fay, Captain Wbitney, in the Encounter; Woolafon, in the Confidence; Kings in the Supply; Smith, in a Prick, and Hall in a Caravel. The Companies had for their Leaders Captain Cbarles Parker and Captain Nortb (Brothers to the Lord Mounteagle and the Lord Nortb) young Raleigh, Captain Thornburfs of Kent, Captain Pennington's Lieutenant, who feems to be another Hall, and Captain Cbidley's Lieutenant Prideaux. Sir Warbam St. Legar, Raleigb's Lieutenant, who had the Charge of thefe Companies, fell fick at Caliana, fo it was conferred on George Raleigh, Sir Walter's Nephew, who had ferved with great Commendation in the Lore Countries ; and Captain Keymißh had the chief Charge for their landing within the River : But Keymifh having laid down the Plan of his intended Attempt upon the Mine; and undertaking to difcover it with fix or eight Perfons in Sir '7obn Ferne's Shallop; Raleigb, upon Confideration, dinliked that Method of Proceedure, determined to alter it, and therefore gave him his Inftructions to go to the Mine, bring him a Sample, and avoid fighting the Spaniards if pontible.

With thefe Infructions thofe five Ships fet forward, parting from Raleigh and the reft of the Fluet at the Inands aforefaid, with a Month's Provifion, on the Ioth of December. But when they found a new Spani/b Town, called St. Tbomas, confifting of about one hundred and forty Houfes, though nightly built, with a Chapel, a Convent of Francifcans, and a Garrifon, erected on the main Channel of Oronoco, about twenty Miles diftant from the Place; where Antonio Berreo, the Governor, taken by Raleigh in his firft Difcovery and Conqueft here, endeavoured to plant; Keymifb and the reft, thought themfelves obliged, through fear of leaving the Enemy between them and the Boats, to deviate from their Inftructions, which enjoined them firft to take a frnall Party to make trial of the Mine, under a Shelter of their own Camp; and then to deal with the Town as it fhould give caufe; fo they concluded to land in one Body, and
encamp
encamp between the Mine and the Town, whereby they themfelves were nothing ftronger, their Boats were as much expofed, and the Mine left untried, contrary to Raleigh's Order.

For about three Weeks after their Departure, landing by Night, nearer the Town, it feems, than they fufpected, and meaning to reft themfelves by the River-fide till the Morning, they were, in the Night time, fet upon by the Spanifb Troops, apprized of their coming. This Charge was fo unexpected, and ftruck the common Soldiers with fuch Amazement, that had not the Captains and fome other valiant Gentlemen made a head, and animat-ed the reft, they had all been cut to pieces: But the reft, by their Example, foon rallying, made fuch a vigorous Defence againft the Spaniards, that they drove them to a Retreat; till, in the Warmth of their Purfuit, the Engli/b found themfelves at the Spanifh Town before they knew where they were. Here the Battle was renewed, being affaulted by the Governor himfelf, Don Diego Palameca, and four or five Captains at the Head of their Companies; againt whomi Captain Walter Raleigh, a brave and fprightly young Man, now twenty-three Years of Age, not waiting for the Murketeers, rufhed foremoft at the Head of a Company of Pikes, and, having killed one of the Spanifb Captains, was mortally wounded by another; but preffing fill on with his Sword upon Erinetta, probably the Captain who had fhot him, this Sponiard, with the butt End of his Munket, felled him down to the Ground; and after thefe Words, Lord bave mercy upon me, and profper your Enterprize, young Raleigh fpoke no more: Hereupon Fobn Plefington, his Serjeant, thruft the Spanifh Captain through with his Halbert. Two Commanders more of the Spaniards were flain, one by Fobn of Morocco, another of young Raleigh's Company, and laftly the Governor himfelf alfo loft his Life in the Engagement ; which happened, as Cambden informs us, upon the 2 d of 7 fanuary.

The Leaders being all thus difpatched, and many of their Soldiers, the reft difperfed; fome took Shelter about the Market Place, from whence they killed and wounded the Englifh at Pleafure, fo as they faw no Way left to be fafe but by burning the Town down about their Ears, and driving them into the Woods and Mountains, whence they ftill kept the Engli/h waking in perpetual Alarms; others were more careful to defend their Paffages to their Mines, of which they had three or four not far diftant, than they had been to defend the Town. Captain Keymifh found the Paffages, leading to the Mine he had in his Eye, very difficult, and the Rivers fo low, that he could not approach the Banks, in moft Places near the Mine, by a Mile; and where he found an Afcent, a Volley of Mufkets came from the Woods, and at one time flew two of the Rowers, hurt fix others, and wounded Captain T'bornburf in the Head. Keymifb feeing fo much hazard in attempting to find the Mine, the Paffage to it being full of thick and unpaffable Woods; and thinking the Engli/h, who were left at St. Thomas's, would not be able to defend it, efpecially if the Enemy thould be recruited, the Country being all in alarm, he gave over the Enterprize and returned. Befides the Difficulty of finding the Mine, he pretended, that if he had found it, he had not a Man to work it; and, being a great Way up in the Land, Men would have been got thither with great Danger and Difficulty: But this fhould have been thought of before; and it was ill advifed to take fo much Pains, and run fo much Hazard, to get and poffers that, which when they had it they could not make Ufe of; fo that which Keymifh pleaded, when he returned, for an Excufe, reflected upon him as a great Mifcarriage.

Sir Walter very much blamed him for it, and, among other things, told him if he had but brought one hundred Weight of the Ore, though with the Lofs of one hundred Men, it would have given the King Satisfaction, and preferved his Reputation; and befides, would have given the Nation Encouragement to have returned the next Year with a greater Force, and have held the Country for his Majefty, to whom it belonged. As foon as they returned to St. Thomas's, the Englifb pillaged the

Town, carried away the beft and moft portable things: and the Enemy not daring to appear for the Redemption of it, they fet it on fire, leaving behind them an infinite Mass of Treafure, which, either for want of Knowledge or Power, they could not attain. Sir Walter, upon the News of his Son's Death, and Keymi/b's Return, finding himfelf difappointed thereby of his Hopes, was perplexed to the very Soul, and threatened Keymifs with the King's Indignation, telling him he had undone him, and wounded his Credit with his Majefty paft Recovery, This had fuch an Effect upon him, that it threw him into Defpair, and a few Days after he made away with himfelf. Some fay he retired immediately into his Cabin and fhot himfelf, with a Piftol, into the-Body; but that being two flow for his Fury, defperately thruft a large Knife into the fame Wound up to the Haft.

Thefe Accounts may be faid both to be true, for, after Sir Walter's firft Reproof, he went away difcontented, and continued fo feveral Days. He came then a fecond Time with his Excufes, and fhewed him a Letter which he had written to the Earl of Arundel, in his own Juftification, praying Sir Walter to allow of his Reafons, which he refufing, and telling him he would not favour or colour his Folly; upon that he retired into his Cabin, and immediately committed the Fact. The Defign being thus defeated, the Ships leaky, Victuals failing, and, above all, having miffed thofe golden Showers they gaped after, fome of the Men began to mutiny againft their General, while others were for him; fome would have him go home, others ftay; the major Part forced him not to go home, but with their Confent, and yet his Ships flipped away one after another, till from ten they were reduced to four, and thofe on board would do juft what they lift: Some would go to Italy, fome for France, and fome few for England. When they arrived at Kinfale in Ireland, Sir Walter, it is pretended, would have perfuaded them to go with him to France; but inftead of liftening to this Propofal, they carried him, againft his Will, to Plymouth, where he was arrefted by Sir Lewis Stukeley his Kinfman, by the King's Order, and conveyed to the Tower of London.

All the World knows what followed afterwards, when, under Colour of his former Judgment, Sir Walter was put to Death on the 29th of OEtober, I6I8; an Action' fo black and bafe, fo mean, fo unworthy of a Government, and fo utterly inexcufable, that one really wants Words to exprefs the Foulnefs of the Action; but with regard to the Caufe of his Death, or rather with refpect to the Manner of it, I differ fomewhat in my Judgment from moft of thofe who have written about it; and therefore I fhall take the I iberty of explaining myfelf upon it, in as few Words as I can. It is very certain that King Fames was very well fatisfied that the firf Judgment againft Sir Walter Raleigh, at Winchefter, was very ill founded; and of this Raleigh himfelf was fo fenfible, that he neglected obtaining a Pardon before he left England, which he might have obtained for 700 l . When he came back it was refolved to facrifice him to the Spani/b Match, to the Fears of King Fames, and the Jealoufies of his Minifters; and in order to this, without doubt, it was intended a new Profecution fhouild commence; and in that Cafe there is the greateft Reafon in the World to believe no Jury would have found him guilty; but Sir Walter Raleigh, from an Eagernefs to defend himfelf, wrote an Apology, in which he moft clearly proved that Guiana belonged to the Crown of England; that his going thither was no Breach of Treaty ; that the Spaniards in America always behaved towards the Englifh as Enemies, and confequently ought not to be confidered as Allies; that his whole Defign was betrayed to them from the Beginning, which occafioned their fending Forces into thofe Parts, and all the Blood-fhed that afterwards happened; that even in refpect to this the Spaniards were Agreffors; and that, throughout the whole Expedition, he had done nothing but what he was warranted to do by his Commiffion. This it was that drove the Miniftry from their firft Purpofe, and forced them upon that Meafure, which they afterwards took, of calling him down to his former Judgment, contrary to

## Chap. III. of the ENGLISH in AMERICA.

Law, Reafon, Juftice, and the King's own Senfe of the Thing, as he afterwards teftified under his Hand.
But, however, though by this barbarous Meafure our great Difcoverer loft his Head, yet the Title of the Crown of England, to his Difcovery, remained abfolutely unimpeached, as appears clearly by King Faines's granting a new Commiffion to Captain Roger North, for fettling in Guiana a Year after Raleigb's Death; which, however, he afterwards recalled by a Proclamation, and fent the Lord North, who was at the Expence of that Expedition, to the Fleet, for making too much Difpatch in it. Such a Fluctuation of Councils there muft always be, where a foreign Intereft is regarded, as the Cafe was then, when the Politics of Britain were dictated by Spain. Yet even this did not put an End to all Thoughts of maintaining the Rights of the Crown of England to this valuable Country, where the People itill remembered, and enquired after, Sir Walter, when he had been many Years in his Grave.

The Accounts we have, however, of thefe Expeditions are fo imperfect, that we can fay very little with Certainty till after the Reftoration; when the Lord Willougbby, who was Governor of Barbadoes, obtained a Grant from King Cbarles II. of this Country, and actually made a confiderable Settlement on the River of Surinam, where they might have continued much longer than they did, if it had not been for their own Indifcretion. For when the firft Dutch War broke out, in which the French took Part with the Republic againft us, both thefe Nations would have confented to a Neutrality in thofe Parts; but our People were bent upon a War, which turned to their Ruin. For the Coaft of Guiana, from Cape Orange to near the River Oronoco, was, about the Year 1666 , poffeffed by three European Nations: The Dutch were about the River Aproague; the French had the Inland of Cayenne, and the Rivers of Ovia, Corrou, and-Sinamary; this laft is about twenty-five Leagues North-weft from Cayenne, and fifty-three Eaft from Surinam; and the Englijf had a fmall Colony and Redoubt on the River Maromiy; their chief Settlement being then at Surinam River, which is fo good and deep, that Ships of three hundred Tons run twenty Leagues up it. The Zealanders were poffeffed of the River Berbicbo, and had repulfed the Englifh, who attacked them there, with confiderable Lofs.

The fame Year, 1666 , the States of Zealand being provoked at the Englifh having invaded and taken from them all the Lands they had been poffeffed of in America, except the River Berbiche, fent thither Commodore Creiffen, with four Men of War, and three hundred Men to attack Surinam. He failed from Zealand at the latter End of Fanuary; arrived at Cayenne in March; went thence for Surinam; failed up the River under Englifb Colours, and came to the Fort of Paramorbo, three Leagues up the River, without being taken for an Enemy ; but being difcovered there for want of Signals, the Fort began to fire on his Ships, which he anfwered with Broadfides from all the Veffels, and immediately landed his Forces. The Englifh, who had lived long in profound Security, found themfelves too weak, and the Fort in no pofture of Defence on the Land-fide, and their Habitations being difperfed along the River for thirty Leagues up, the Fort could not be fuccoured but by Water, where the Zealanders were Mafters: Upon which Confideration they furrendered it, capitulating for the Inhabitants of the River of Surinam, and thofe of Kamomioque; ftipulating that all thofe who fhould take the Oath of Fidelity, to the States of Zealand, fhould enjoy their Eftates peaceably; the HIabitations of fuch as abfented themfelves, and thofe belonging to the Lord Willougbby, fhould be forfeited to the faid States; all Foreigners who had no Eftates there, fhould remain Prifoners of War; and all the Englifh to be obliged to deliver up their Arms. When the Capitulation was executed, Creiffen put aboard a Fly-boat he had taken in the River, the moft valuable Part of the Booty he found in the Places that were confifcated, and the Prifoners aboard a Man of War ; and after caufing the Fort to be repaired, and put into a pofture of. Defence, and leaving it in the
VoL. II. NUMB. 86 .

Hands of Sieur de Rome with one hundred and fifty Meris he failed for the Inands.

Afterwards, when the Peace was made at Breda, it was agreed, That the Dutch fhould keep Surinam, and that in return we fhould keep New York, which was then called the New Netherlands. Thus we have traced this Point fairly, from beginning to ending; from the firft Settlement, nay from the very firf Thoughts of a Settlement, to the giving. up of all the Settlements we then had, and which might be ftyled the Legacy of Raleigh to this Nation, into the Hands of the Dutch. It may not be amifs, however, before I quit the Subject, to obferve that the Dutch have fucceeded very happily in a Plantation that was not very beneficial to us; and that if ever we flould be inclined to try our Fortunes again upon this Coaft ; for without queftion our Ceffion of Surinans does not preclude us from vifiting the reft of Guiana; if this, I fay, fhould ever be attempted, it muft be either by the South Sea Company, or under their Licence, fince all this great Country, as well as many other valuable Places, lye within their Charter, which covers them from all the reft of this Nation, and leaves them open. only to all the World befides.
15. We are now to pafs to the Mother-Colony of that which we mentioned laft, the famous Ifland of Barbadoes, which may be juftly efteemed the faireft, beft peopled, and beft cultivated Spot of Ground, not in America only, but in the whole known World: When, or by whom, it was firf difcovered is a Point, not eafily fettled, and, in my Judgment, cannot be determined at all, farther than by Conjecture. The Portugueze were certainly the firft Difcoverers of Brazil, and it is not very probable that they fhould make many Voyages thither, or at leaft fhould eftablifh a regular Commerce with that Country, without falling in with this Inland, which lies fo much in the Way. It is the more probable that they were the firft Difcoverers, from the Name by which this Country has been always known; Barbadoes having apparently a Portugueze Termination, but what it fignifies is very doubtful. Some fay the Inand was fo called from its barbarous Inhabitants; to prove which they fhould have fhewn us that it was inhabited at all, which in thofe Times undoubtedly it was not; but however, it is not impoffible that the Thing might be fo, fince the Caribbees certainly vifited that Inand from St. Vincent, which is within fight, and the Portugueze might poffibly land when they were upon it, and fright them off this Inand, whence they might from thefe People give it the Name of Barbadoes, which it has ftill retained, and is fo called, without any Variation at leaft that I know of, in all the Languages of Europe,

The firft Englifhmen that landed here, it is faid, were fome of Sir William Curteen's Seamen, that were cruizing in thefe Seas in the latter End of the Reign of King Fames I. who reporting, at their Return to England, that the Soil was fruitful, fome Adventurers went thither with Intent to plant it; but finding the Inland covered with Wood, and fcarce any other Animals upon it than Hogs, it did not anfwer their Expectations a great while. The Property of this Inand was afterwards granted by King Cbarles I. to Fames Earl of Carlife, in the firt Year of his Reign; of whom, feveral Adventurers purchafing Shares, tranfported themfelves thither, and firf fell to planting Tobacco; which not thriving here as they expected, they proceeded to try Cotton and Indico, which yielded them a confiderable Profit; but they made little Sugartill I647; when Colonel Modiford, Col. Drax, Col. Walrond, and feveral other Cavaliers, finding there was no living with any Satisfaction in England under the Ufurper, converted their Eftates into Money, and tranfported themfelves to Barbadoes, with fuch Machines and Implements as were proper to carry on Sugar-Works there. Colonel Drax, it is faid, in a few Years acquired an Eftate of feven or eight thoufand Pounds per Anmum, and married the Earl of Carlifle's Daughter, then Proprietor of the Inand ; and the Adventurers fixing their principal Settlement on the greatBay in the South-weft Part of the Illand, gave it the Name of Carlife Bay, in honour of their Proprietor, which it ftill retains.

The Ifland was afterwards divided into four Circuits, and eleven Parifhes, each Parifh being allowed to fend two Reprefentatives to the General Affembly, and every Parifh had its Church and an Incumbent, with a handfome Maintenance affigned him. In the Year 1650 the White Inhabitants of the Inand are faid to have increafed to between thirty and forty thoufand, befides Negroes, who were much more numerous, and frequently plotted the Deftruction of their Mafters; but their Plots were conftantly difcovered, and the moft terrible Punifhments inflicted on the Ring-leaders ; which did but increafe the Difaffection of the reft, and laid the Foundation of frefh Confpiracies. But notwithftanding the repeated Plots of their Slaves, never any Plantation of fo fmall an Extent, arrived to that Riches and Grandeur as Barbadoes did, in the Space of twenty or thirty Years. The Rump apprehended this Inand of fuch Confequence, during their Ufurpation, that they fent a ftrong Squadron of Men of War thither, Anno 165I, under the Command of Sir George Afcue, who compelled the Lord Willougbby, (appointed Governor by King Charles II.) to furrender the Inand upon Condition the Royalifts fhould remain in the Poffeffion of their Eftates and Liberties, and Mr. Searl was appointed Governor by them.

The Dutch War fucceeding foon after, the Colony was prohibited trading with the Hollanders, with whom they had principally trafficked hitherto; for the Dutch it feems conftantly furnifhed the Inand with Negroes till this time, and taught the Barbadians to plant, and manage their Sugars to the beft Advantage, taking moft of it off of their Hands, with which they fupplied themfelves, and the reft of Europe ; but after the Ufurper's Quarrel with the Dutch, the Barbadians were compelled, by an Ordinance of Parliament, to bring all their Sugars directly to England, which was imitated by the Miniftry after the Reftoration of King Cbarles II. and was the Foundation of the Act of Navigation, which requires all the Britifb Colonies to bring their Sugars and Tobacco directly to England, and forbids their trading with Foreigners in thefe, and fome other, ftiled enumerated Articles.
16. In the Year 166i King Cbarles II. purchafed the Property of this Inand of the Lord Kinowl, Heir to the Earl of Carlifle, and appointed the Lord Willougbby of Parbam Governor; ever fince which, Barbadoes has been a regular Government; and the Colony granted a Duty of four and a half per Cent. for the Support of the Civil Government of that Inand, and maintaining the Forces and Fortifications thereof; which Duty (according to my Information) amounts to ten thoufand Pounds a Year: But inftead of being applied to the Purpofes for which it was given, it is difpofed of in Penfions to Courtiers, to the irreparable Damage of that Colony; no other Inand having laid fo high a Duty on their Sugars. In the Year $166_{4}$ de Ruyter, the Dutch Admiral, with a great Fleet of Men of War, treacherounly attempted to furprife the Illand of Barbadoes, tho' England was then in full Peace with Holland; but he was bravely beat off by the Barbadians, and obliged to abandon that Enterprize.

In the Year 1674 Sir Fonatban Atkins, being made Governor, had Orders to feize all the Ships trading in Africa for Negroes, that Trade being granted to the Royal African Company about that Time, exclufive of all others. And feveral Ships belonging to the Merchants of Barbadoes, bringing over Negroes afterward, were condemned and forfeited, being denominated Interlopers; which that Colony complained of as a great Grievance, the African Company fetting what Price they pleafed upon their Negroes; but this was not redreffed till after the Revolution, when that Trade was laid open to all the Subjects of England, paying ten per Cent. towards the Charge of their Forts. The Barbadians alfo fuffered great Lofles by a terrible Hurricane which happened there on the Ioth of Auguf 1674, when three hundred Houfes were blown down, two hundred Perfons killed, moft of their Sugar-works and Plantations fpoiled ; and all their Wind-mills for grinding of Canes were blown down, except thofe that were built of Stone; eight Ships alfo fuffered fhipwreck in the Harbour: infomuch that the

Barbadians were difabled from making much Sugar the two fucceeding Years. Another Calamity with which the Barbadians were afflicted, was an epidemical Diftemper, that feveral Years raged in the Inand, differing very little from the Plague. This began about the Year 1691, and occafioned a great Decreafe amongft the white Inhabitants which they have not recovered from that Day to this. It feems the Miniftry of England, fending a Squadron of Men of War to Barbadoes, with a Body of Land Forces on board, to protect the Trade of the Caribbee Iflands, which had fuffered very much by the Depredations of the French Privateers; the Barbadians, on their Arrival, concerted an Enterprize with the Commanders againft the French Inlands of Guadalupe, Martinico, St. Cbriftophers, \&xc. and joining the King's Forces with fome of their own, formed a Body of four or five thoufand Men; with which they made a Defcent on Guadalupe and St. Cbrifophers, and ruined many French Settlements, but did not make a Conqueft of them, as was expected; and what was ftill more unfortunate, the Diftemper above-mentioned broke out in the Army, which the Soldiers brought back to Barbadoes, and almoft depopulated that Ifland of white Men. The King's Ships alfo loft fo many of their Men, that there were not Hands enough to carry them home.

If we fhould purfue this Hiftory lower, it would nor contribute very much to the Information, Entertainment, or Satisfaction of the Reader, becaufe it would involve us in long and perplexed Relations of the Difputes between the Inhabitants of this Colony and their Governors, A'ppeals from both Parties to the Government at home, and other fuch-like tedious and difagreeable Subjects. We will therefore content ourfelves with obferving, that till fome very different Method is taken from that which has been hitherto in ufe for appointing Governors in this and other Colonies, fo that Men are not fent over with a View to repair their own Fortunes, inftead of enquiring into, and redreffing, thofe Grievances that affect the Properties of the Perfons they are fent to govern, we can never hope to fee the Plantations flourifh, or this Country reap thofe Advantages from them which otherwife fhe might. What is the Nature of thofe Advantages, and what their Degree in refpect to this noble Inland, juftly efteemed the moft valuable Plantation, for its Size, that ever this Nation poffeffed, fhall be our next Bufinefs to explain, by entering into a particular Defcription of this Inland and its Product.
17. The Inand of Barbadoes is fituated in the Atlantic Ocean, in 13 Degrees North Latitude, and 59 Degrees of weftern Longitude, being of a triangular Form; about twenty-five Miles in length from South to North, and fifteen in Breadth from Eaft to Weft, where broadeft : It is a plain level Country for the moft Part, with fome fmall Hills of an eafy Afcent, and fcarce any Wood upon it at prefent ; it was covered with Woods, indeed, when the Englifb firft fent Colonies there, but they are all cut down to make room for Plantations of Sugar Canes, which take up almoft the whole Inand at prefent, nothing elfe being cultivated in any great Quantities. Their very Corn, Flefh, and Fifh, being imported, for the molt Part, from the northern Colonies: There is fcarce an Harbour in the Inland, the beft is that of Bridge-Iown in Carlifle-Bay, on the South-weft Part of the Inland, and this lies open to the Weftward; however it is fecure from the North-eaft, which is the conftant Trade Wind here, and blows from Morning to Evening, except their Tornades and Hurricanes, which happen ufually about Midfummer, and in July and Auguft, and blow from every Quarter. The Ships in the Bay, at fuch times, are in the utmoft Danger of being wrecked on Shore, if they cannot get out to Sea, and therefore feldom attempt to ride out thofe Storms.

The Coaft is defended on the Eaft by Rocks and Sholes, from the Invafion of an Enemy; and on the Weft, where it is molt expofed to a Defcent, Breaft-works and Redoubts are erected for its Security, but the Repair of them is too much neglected. There is fcarce a Stream in the Inand that deferves the Name of a River: however,

Chap. III
of the ENGLISH in AMERICA.
we find two on the Eaft-fide, to which they have given the Names of Scotland River, and Fofeph's River: They have good Water in their Wells almoft all over the Inand, and do not dig very deep for it: They have alfo large Ponds and Refervoirs, where they preferve Rainwater. They have generally fine ferene Weather ; their Rains fall as in other Parts of the Torrid Zone, chielly when the Sun is vertical; and after the Rains are the proper Seafons for planting; their Heats are not fo exceffive as in the fame Latitude on the Continent, being conftantly refrefhed by the Sea Breezes in the Day-time, which increafes as the Sun advances, and abates as the Sun declines. And they have this further Satisfaction, that their Days feldom exceed twelve Hours; but there being no Mountains on the Illand, there are no Landwinds in the Night as in Famaica.

The only Town of any Confequence in the Inland, is that of Bridge-Town or St. Michael's, fituate in CarlifleBay: It was formerly encompaffed with a Morafs which rendered it unhealthy, but this has been drained in a great Meafure ; however, the low Situation makes the Town ftill fubject to Inundations: It is faid to contain a thoufand or twelve hundred Houfes tolerably well built of brick or Stone. They have commodious Wharfs and Keys for loading and unloading of Goods, and three Forts or Caftles of Defence, which, if kept in repair, would render them no eafy Conqueft. The chief Produce and Manufacture of the Ifland, as has been intimated already, is Sugar ; of the Moloffes, or Drofs, whereof they make great Quantities of Rum. They have alfo fome Cotton, Indico, Ginger, and Pimento, and formerly Tobacco was planted here in good Quantities, but very little at prefent, Foreft Trees they have fcarce any left. Their Fruits are Oranges, Limes, Citrons, Pomegranates, Pine-apples, Guavas, Plantains, CocoaNutts, Indian-Figs, Prickle-Pears, Melons, and almoft all manner of Roots and Garden-ftuff, but very few Flowers.

Their Horfes they import from Nere England, \&xc. and have a llight Breed of their own. They have alfo fome Affes, Cows, and Sheep, but the laft do not thrive here. They have a good Number of Hogs, the Flefh whereof is the beft Meat that is eaten in thofe hot Climates. Here are alfo good Sea Fifh and Poultry, but no Frefh-water Fifh ; and, in general, all manner of Provifion is very dear. There is no dining at an Ordinary under a Crown a-head; frefh Meat is a Rarity, and chiefly the Food of People of Condition; the reft are glad of Salt-Beef, Pork, and Fifh, imported from the northern Colonies ; from whence alfo comes their Wheat, Flower, Indian-Corn, Peafe, Beans, Esc. They make Bread alfo of the Caffavi Root, and the Negroes feed on Yams, Potatoes, and other Roots and Fruits. The Liquor drank by the Gentry here, is chiefly Madeira Wine, or Wine and Water, and great Quantities of Punch are drank by the Vulgar. They have alfo ftrong Beer imported from Old and Nere-England, and Liquors made of their Maize and Fruits as in Famaica. The Government here alfo refembles that of famaica, and the reft of our American Illands, having the Governor and Council appointed by the Crown, which, with the Houfe of Reprefentatives, are vefted with a legiflative Power, and make Laws for the Government of the Ifland.

The Numbers of white People are faid to have been once forty thoufand and upwards, and are computed to be near thirty thoufand at prefent. The Negroes, Mulottoes, and Meftive Slaves, about an hundred thoufand. Their Militia confifts of fifteen hundred Horfe, and three thoufand Foot, or thereabouts.

After this general Reprefentation of the prefent State of the Inand, it is requifite that we fhould proceed to a more clofe Enquiry into the ftaple Commodity of this Illand. We are to obferve, that before the Year 1626 , the Portugueze fupplied all Europe with Sugar from their Colonies in Brazil, to their immenfe Profit: But the firft Settlers finding the Soil to be fertile, and the producing of Sugar advantageous, they encouraged more People to come over and plant the fame Commodity. This induced the Merchants, at home, to fend over Ships with

Provifions and other Neceffaries for thofe new Planters, which their Agents and Factors exchanged with them for the Produce of the Country, and from thence a reciprocal Trade and Correfpondence was eftablifhed between Great Britain and this Ifand.

The growing Succefs of this new Sugar Colony promoted the Settlement of the others; and as the Sugar Plantations encreafed, more Hands were required to carry on the Works, than could, at that Time, be fpared from home. This gave birth to the Guinea Trade, for fupplying thofe Colonies with Negroe Slaves; and as the Planters flourifhed and encreafed, fo did their Demands for all Sorts of Britibs Manufactures, and fuch Neceffaries of Life as they could not produce in thofe Climates; which opened another Scene of Trade to the Britifh Merchants, to furnifh thefe new Colonies with Wine from Madeira. Thefe Branches of Trade were of the utmoit Advantage to Great Britain, forafmuch as they took no Money out of the Kingdom, but yearly brought in large Sums for Britiß Manufactures carried out. The Trade to this Inand was commonly open and free; for we find, that before the civil War in England, the Dutch Ships came hither to purchafe Sugars, as well as the Englifb. This Freedom in Trade made the Coun* try flourin, and made Money plenty among the Inhabitants. But fince the Reftoration, feveral Acts of Parliament have been made to confine the Trade of the Sugar Colonies to Great Britain, and Britif Ships only; which Reftraints foon made London the chiefeft Mart in Europe for Sugar ; and as there was yearly more imported than was neceffary for Home Confumption, the Mierchants exported the Surplus to foreign Markets, and by underfelling the Portuqueze, they in Time beat them almoft out of all their Sugar Trade to the Northward of Cape Finitterre.

This Trade of re-exporting Sugars was carried on for many Years with great Succels. Mr. Joßbua Gee fays that by this Trade only fuch an Increafe of Treafure and Wealth was brought into this Kingdom, as yearly added three or four hundred thoufand Pounds to the Stock of the Nation, which in thirty Years Time amounted to upwards of ten Millions Sterling. And a late Author computes the clear Profits, accruing to Great Britain from the Sugar Trade, and thofe other Branches which chiefly depend upon thofe Inlands, to amount ta more than one Million a Year. He tells us farther, that it appears by the Cuftom-houfe in London, that the Value of the Exports from Great Britain to the Sugar Colonies, were a few Years ago upwards of five hundred thoufand Pounds Sterling every Year ; and their Importations from thofe Inands more than twelve hundred thoufand Pounds per Annum. In thefe Computations the Author has taken no Notice of the vaft Quantities of Briti/h Manufactures yearly exported to Guinea and Madeira: But if they were to be added to the Exportations of the Sugar Colonies, where the greateft Part of their Produce is taken off with an Advantage to the Britifb Merchant, it would greatly augment the Sum, and confequently enlarge the Profits. which our Mother Country receives from the Sugar Com lonies, and the feveral Branches of Trade depending on them. I fhall not take upon me to determine whether this, Gentleman's Calculations are exact or not; but it is evident beyond Difpute, that while the Sugar Trade flourifhed, both Planters and Merchants grew immenfely rich, and the Trade and Navigation of Great Britain was carried on to a much greater Height than it ever was before. And this great Source of Wealth and Treafure to their Mother Country, arofe from fo fmall a Beginning as a few Families feeking Shelter in a defolate Ifland.

This hews what may be done by Induftry and Trade rightly applied. Now if the Trade and Navigation of Great Britain have received fuch an Addition from the Sugar Colonies, as added greatly to the Riches and Strength of the Kingdom; and if Barbadoes has the Honour to ftand foremoft in the Sugar Trade (as the firft Founder of it) how well has the deferved of her Mother Country! When the Sugar Trade was at the Height which we defribed above, the flourifing State of Great Britain alarmed her Neighbours, and pur them upon

Ways

## 256

Ways to circumvent her in Trade, as the only Means to put a Stop to the growing Strength of the Kingdom, which they feared might become too formidable, from the great Increafe of Seamen and Shipping employed in the Weft India and Guinea Trades, both flourifhing at the fame time. . Upon a Parliamentary Enquiry into the State of Trade to Africa, in the Year I728, it appeared to the Houre, that in three Years Time only, the Number of Negroes imported at Barbadoes, Famaica, and Antigua, amounted to forty-two thoufand, befides what were carried to St. Cbriftopber's, Nevis, and Montferrat.

But we are now to inquire into the Caufes of the general Declenfion of this Trade. And here I beg Leave further to obferve, that the French fpared no Coft or Labour to rival Great-Britain, they well knowing, if that funk, her Guinea and Madeira Trades muft 'fall with it; for which Purpofe they embraced every Opportunity to enlarge and improve their Sugar Plantations; and, if I am not mifinformed, where the Planter was not able to complete his Works himfelf, proper Utenfils were fent over from France at the Public Charge, and the Crown trufted them for feveral Years without Intereft: What fuch an Affiftance will enable 'Men to do, we may gather from the flouriming State of the Linnen Manufactory in Ireland, fince the Public allowed them a Fund to fupport it. Having by thefe Means eftablifhed their Sugar Colonies, the next Thing they had in View was to beat the Britijb Merchants out of the foreign Markets, for Sugar ; and therefore deftroy their Trade for Exportation; and this they have effected, by giving Liberty for their Ships to carry their Sugars directly to the foreign Markets, while - aurs were obliged to import all into Great-Britain, which enables them to fell fo much cheaper than our Merchants can carry it from London, as has almoft put an entire Stop to that valuable Branch of Trade to their Mother Country; and the utter Ruin of the Britibh Sugar Colonies muft neceffarily follow, unlefs they are relieved fome way or other.

The very firft Declenfion of their Exportation Trade was attended with ill Confequences to the Sugar Colonies. It lowered the Price of Sugar fo much at home, as difcouraged the Merchants from fending to purchafe Sugars here. This obliged the Sugar Planters to turn MerchantAdventurers in a declining Trade, and to thip their Sugars upon their own Account and Rifque: This put a Stop to the Currency of Cafh, which was before brought over yearly to purchafe Sugars, and laid the whole Burden of Freight, Duty, and Commifion, upon the Plantation, that wrere formerly paid by the Britiblo Merchants. And fuppofe but fifteen thoufand Hogtheads of Sugars to be fhipped in a Year from this Inand, on Gentlemens own Accounts; thefe three Articles will amount to upwards of fixty thoufand Pounds Sterling. Another great Evil that has likewife followed from the fame Caufe is, Combinations among the Buyers, by which the Price of Sugars is funk fo low as greatly to prejudice the Planters, and yet turning to the Benefit only of a few private Perfons, who are the firf Buyers, and not at all to that of the Confumers in general; by which that Inand is hurt, and this receives no Benefit, or very little.
Thefe are the Particulars which we have collected from Books; but we will now add fome few Remarks, from the Informations we have reccived, which will ferve to give Light to the prefent State and Importance of this Tland; and thefe will come chiefly under the three following Heads. In the firft Place, we fhall fhew that this Colony throve the fafteft, became the beft peopled, and by far the moft wealthy in America. We fhall next fhew the Advantages formerly derived from thence to the Britifh Nation, clearly, and in a very few Words. And laftly, we fhall take Notice of the prefent Condition of this Illand, and of the infinite Confequence thereof to this Government of Great Britain. In the firft Place then; it is to be confidered that the Inand of Barbadoes is generally efteemed to be a very little bigger than the Ine of Wigbt, and to contain, according to a round Computation, one hundred thoufand Acres. It has been fhewn, that about the Year 1626 this Country was not only unfettled, but actually uninhabitable, as affording nothing for
the Support of Life, and over-run with a brufhy kind of Shrub Wood, which gave a great deal of Trouble to the firft Planters ; yet in the Space of fify Years, this Plantation came to its greateft Height, and by a Calculation that was made with much Exactnefs, there were in it fifty thoufand white People of all Sorts, of whom twenty thoufand were able to bear Arms, and eighty thoufand Negrocs: Nay we are told that in twenty Years after the Colony was fettled they muftered eleven thoufand Horfe and Foot; which would be altogether incredible if we had not fuch Proofs of thefe Facts as put them beyond all Doubt or Queftion.

This fufficiently proves that never any Colony of ours, or any other Nation, was fo populous as this Inand. But to make this ftill clearer to an Englibh Reader, we fhall obferve that Barbadoes is rather lefs than the County of Rutland, the fmalleft County in England ; and that, according to the higheft Computation, the Number of People in that County, in 1676 , did not exceed twenty thoufand: But this may be made ftill clearer, by comparing that whole Inand with this, in Point of Extent; for if England and Wales, taken together, confift of near forty Millions of Acres, then if they were as populous as Barbadoes they ought to contain fifty Millions of People; whereas Sir William Petty, who was a very able Man in Computations, and is thought not to have undervalued this Country, but rather the contrary, never reckoned the People higher than eight Millions; which fhews what a vaft Difproportion there is between the peopling of the two Countries.
But to proceed farther ftill: The fame great Man afferts, that in Holland and Zealand, which are looked upon to be the beft peopled Countries in Europe, there are a Million of Souls inhabiting about as many Acres; and confequently it appears from hence, that even this Country was not fo well peopled as Barbadoes. In Point of Wealth, the Comparifon holds full as ftrong; for in the Year I661 King Cborles II. created on the fame Day thirtecn Baronets in Barbadoes; none of them having lefs than one thoufand, and fome of them ten thoufand, Pounds a Year. At this time their Trade actually maintained four hundred Sail of Ships; and it was computed, that the Running Cafh of the Ifland might be about two hundred thoufand Pounds; and their annual Exportation to Great-Britain, in Sugar, Indico, Ginger, and other Commodities, at leaft three hundred and fifty thoufand Pounds. Thefe are Facts that may be depended upon, that deferve in every refpect the greateft Confideration, and that plainly demonftrate at once the great Value of this Ifland, and the prodigious Confequence of our Plantations in general.

By the gradual Increafe of the Colony upon this Inland, it has, fince we firft poffeffed it, contributed beyond Conception and Belief to the Riches of its Mother Country ; and, as I know not any Subject that either can or ought to give an Englifh Reader more Pleafure than the Confideration of what has been obtained by the Bleffing of God, upon the Virtue and Induftry of his Countrymen; fo, I think, an Endeavour to fhew what has accrued in the whole to Britain, by eftablifhing a Colony here, will be allowed to be equally inftructive and pleafant, uffeful and entertaining.

What has been faid before, gives us a fufficient general Notion of the Importance and Value of the Inand; what we now aim at is, to come at a more particular Account of what it has yielded in the Whole. When this Colony was in its moft flourifhing Condition, which we fix to the Year 1676 , there were four hundred Ships of one hundred and fifty Tons, one with another, employed annually in this Trade; and I believe it will be thought a very moderate Computation, if we reckon that the Scamen, ShipBuilders, and other Trades that live by thefe Veffels, amounted in the Whole to ten thoufand Souls. The Sugars that came from Barbadoes, were either fpent at home or fent abroad ; and I reckon, that in the manufacturing the Sugars, and vending them at home and abroad, there might be twenty thoufand People more employed. To thefe we muft add, fuch as got their Bread by the Goods and Manufactures yearly exported from hence to Barbadoes; for almoft all that the People eat, drink, and wear
three,

## Chap. III. of the ENGLISH in AMERICA.

there, are the Product of England; fo that the Computation cannot be thought to rife too high, if we allow, that in this Way twenty thoufand more got their Bread; which will make about fifty thoufand in the Whole : All fupported here by the Labour and Induftry of the Whites and Negroes in that Country. We are next to compute the Money brought into this Nation by the Export of the Commodities imported from thence, which was that Year allowed to be above two hundred thoufand Pounds, and it was alfo agreed, that as much or more had been gained every Year, between that Time and the Reftoration.

I fhall fay nothing of the Money arifing to the Exchequer from the Duties, though this might be computed at thirty five thoufand Pounds per Annmm; but upon thefe Principles fhall proceed in my Computation thus: I will fuppofe, that from the Year 1636 to 1656 , which is twenty Years, this Colony produced but half fo much, and though it may be true, that before the Year 1640 it did not produce a Quarter fo much, yet, in the remaining part of that Period, it certainly brought in a great deal more ; and therefore we cannot be far from the Truth, in computing that this Nation acquired two Millions in Money, by Barbadoes, in that twenty Years. In the next twenty, that is, from 1656 to 1676 , when it is allowed this Ifland was in its moft flourifhing Condition, there muit have been gained four Millions of Money ; and allowing for the gradual Falling off of this Trade, by a Multitude of unlucky Accidents, but more particularly by the fettling the French Sugar Illands, we fhall compute the laft feventy Years; from 1676 to 1736 , at the fame Rate we did the firft twenty Years, and the Gain will then amount to fix Millions; fo that in the Space of one hundred Years, the Inhabitants of Great-Britain have received twelve Millions in Silver, by the Means of this Plantation; and had fifty thoufand of her Inhabitants maintained by the People in that Colony all the time. It is highly poffible, that in fome of thefe Articles we may be wrong one way, and it is more than probable, that in other Articles we may err the other way; which is fo far from making againft the Credit of our Computation in general, that it really makes for it, fince we may very well fuppofe thefe Errors balance each other, and that the Sum total is very near right.
We are now come to the laft Head, which is, affigning the comparative Excellence of this Colony with regard to our own and other Plantations in America; and this, at firt Sight, may appear a thing very difficult, if not impoffible to be done; however we may come fufficiently near it for our Purpofe. It is thought that Barbadoes contains one hundred and forty fquare Miles, and if fo it is in proportion, as I to 34,77 I in refpect to the Spanish Plantations; as I to 12,000 in regard to our own; as I to ir,000 in reference to the French; as i to 7,000 as to the Portugueze; and as I to 4 as to the Dutch. This I fay, as to the Extent of Territory, is as juft a Comparifon as can be made ; but with regard to the Value of thefe Colonies, it is very eafy to perceive that there is hardly any Computation to be made at all, for we may truly affirm that the Produce of Barbadoes is very near equal to a twentieth Part of what Spain receives from her Indies annually, in time of Peace, and from thence we may eafily judge of the reft.

I have infifted the longer upon this Topic, becaufe it may enable us to form fome Notion of what might be made of our Plantations, if we attended to them as much as they deferve; for though it may be, and perhaps is, impoffible to improve any of them in proportion to what has been done in Barbadoes, yet we may well enough difcern, from hence, that they might be made inconteftably more profitable to us than they now are, or indeed, than the whole Trade that we now poffers; and if, at the fame time we reflect on this, we likewife confider that there is nothing fo abfolutely in our Power, as the Improvement of our Colonies; it will moft certainly appear to be the Point, which, of all others, imports us moft ; and if I have done any thing towards proving this, I fhall account all my Labour well beftowed.
18. We are next to fpeak of the Inand of St. Cbrijo-

Vol. II. Numb, LXXXVII.
pher, which was called Liamuega by the Savager, and was difcovered by Cbritopher Columbus, in the firlt Voyage he made to America. He gave it the Name of $S t_{0}$ Cbriffopber from the Figure of its Mountains, there being in the upper Part of the Inand a very high Mountains, which bears on its Summit another lefs Mountain, as $S t$. Cbriftopher is painted like a Giant, with our Saviour on his Back. It is fituated in the Latitude of 17 Degrees 25 Minutes on this Side the Line, and is about 75 Miles in Circuit; the Caribbeans inhabited it when Sir Thomas Worner, an Englifh Adventurer, went thither. Monfieur Defnambue, a French Gentleman of the ancient Houfe of Vauderop, who commanded for the French in America, arrived at St. Cbrifopber's the fame Day with Sir Thbomas Warner, and both took Poffeffion of the Inand in the Names of their refpective Mafters, that they might have a Place of fafe Retreat, and a good Haven for the Receipt of fuch Ships, of both Nations, as fhould be bound for America, it being well provided with Harbours. The Spaniards ufed to put in there in their Weft India Voyage, to take in frefh Water; and they were on fo good terms with the Caribbeans, that fometimes they left their Sick there, of whom the Savages took a great deal of Care.

The two Gentlemen before mentioned, left fome of their Men upon the Place, and returned, Sir Tkomas Warner to England, and Monfieur Defnambue to France, for Recruits. Their Mafters approved of their Conduct, and fent them back with Supplies of Men and Provifions, and Commiffions to be Governors of the new Settlements. This Company continued in France till the Year 166 r, when they fold St. Cbrijtopber's, and the other Inands, to the Knights of Malta; but in the Year 1664, the Weft India Company, by the King's Orders, bought out the laft Proprietors. Sir Thomas Warner, and Monfieur Defnambue, failed in the Year 1626, and the latter arrived there about fanuary 1627 , having had a long fickly Voyage. The Frencb were about three hundred in Number, the Englijb Colony as many; Sir Thomas had proceeded a good way in his Settlement before Monfieur Defnambue arrived; and the two Governors, to prevent Differences among the People about the Limits of their Territories, figned Articles of Divifion on the 13 th of May ${ }_{1} 627$ : They then fet Boundaries to their feveral Divifions, with this particular Provifo, that fifhing and hunting fhould be equally free to the Inhabitants of both Na tions; that the Salt-ponds, and moft valuable Timber, fhould be in common, together with the Mines and Havens; alfo a League offenfive and defenfive was concluded between them, againft all their Enemies; after which they fet to work, each in his Station, to advance his Settlement, and went on very harmonioufly.

The Englifh received Supplies of Mien and Provifions from London, by which means they throve better than the French, and not only became ftrong enough to keep what they had, but to be able to fpare Men for new Plantations at Nevis; of which Sir Thomas Warner took Poffeffion, and left People upon it for a Settlement, in the Year 1628 . And in that which followed, Don Frederick de Toledo was fent with a Fleet of twenty-four Ships and fifteen Frigates, to difpoffefs the Englifh and French of the Inland of St. Cbrifopher's. The Spaniards were alarmed at the Progrefs of the Englijs in the Caribbee Iflends, and thought it concerned the Safety of their own Plantations, to prevent thofe Nations from fettling in the Neighbourhood. Don Frederick meeting fome Englifb Ships lying near the Ine of Nevis, feized them, and then came and anchored in the Road of Marigot, under the Cannon of the Baffe Terre, where Monfieur Roffey commanded. Neither the French nor the Englifs Forts were in a Condition to oppofe fuch an Enemy; their Stores of Ammunition fell fhort, and their Numbers were not a Match for the Spanifs Army, had they been ever fo well provided with Powder and Shot. Roffey, after a fmall Oppofition, abandoned the Baffe Terre, and retreated to Cabes Terre, another Fort, where Monfieur Defnambue was in Perfon, who could not prevail with his Men , either to defend themfelves there, or to retire to the Forefts and Mountains, where a few Men might have refifted a thoufand. He remonftrated to them
that Don Proderick could not aford much Time, being bound to the Favanuob to bring home the Flota. Yet this was to no purpofe, nothing wouk content them but embarking and leaving the Place, which he was forced to comply with, and fo all the French deforted their Setclement, as did their Allies the Englifh; who were in a great Confternation, and the Diforder encreafed, upon the News of Defnambue's being gone with his Colony; fome endeavoured to efcape by Sea, others 月led to the Miountains, and all who were left fent Deputies to treat with the Spaniards. The Don knowing he had them in his Power, commanded them to leave the Illand immediately, or he would put them to the Sword; he fent them their own Ships, which he had taken at Nevis, to embark in, and was perfuaded to give leave to thofe to fay that had not room in the Slips for themfelves and their Families, till they could be tranfported; upon which Don Frederick weighed anchor, carried with him fix hundred Englifh who were fitteft for his Service, and he was no fooner gone but the Englifh rallied, and refolved to go on with their Settlement. The French, who were got no farther than Antigua and Montferrat, fent a Ship for Intelligence to St. Cbriflopber's, and underftanding the Spaniards were gone, and the Englifh bufy in rebuilding and planting, rejoiced at this happy and unexpected turn of Fortune, failed back to St. Cbriftopber's, and retook Poffeffion of their former Habitations.

The Engli/h continued carrying on their Colany till they were in a Condition to fpare more Men for Settlements, at Barbuda, Mont ferrat, and Antigua, which Sir Thomas Warner peopled and planted. And the fame Year the Dutch made themfelves Mafters of St. Euftace, and the French took Poffeffion of fome other Inands. The Englifh built themfelves good Houfes at St. Chrifopber's,
and had Wives and Families; whereas the French conand had Wives and Families; whereas the French contented themfelves with Huts, after the Caribbean Manner; few of them were married, and confequently took little, Pains to furnifh themfelves with all Things neceffary and convenient for Life. Monfieur Defnambue died about the Year 1637 , and Sir Thomas Warner did not long furvive him. Before the Englifh Governor's Death, the Colony was fo increafed, that there were between twelve and thirteen thoufand Souls of his own Nation in the Inand. He was fucceeded in his Government by Col. Rich, who, by following his Predeceffor's Steps in governing the Colony, invited more People to come and fettle there. The chief Employment of the firf Planters was cultivating Tobacco; by which they got a competent Livelihood; but afterwards, the Quantity that was made bringing down the Price, they fet themfelves in feveral Places to plant Sugar, Ginger, Indico, and Cotton, and in a little time became a rich and flourifhing People, both French and Engli/b living cordially together till the latt War broke out, when the Englifh drove the French entirely from their Settlements; and the Country being yielded to the Crown of Great-Britain by the Peace of Utrecht, all the French Territory was fold for the Benefit of the Public, which muft have produced a very large Sum, fince out of it there were eighty thoufand Pounds paid, for the Marriage Portion of her Royal Highnefs the Princefs of Orange.

There were indeed fome who pretended, that notwithftanding the French Part of the Inand of St. Cbriftopber's was by far the richeft, we were no Gainers by obtaining it; but that, on the contrary, the French received Benefit thereby, becaufe it enabled them to people the reft of their Inands more effectually; but whoever confiders that the Sugars of this Ifland are the very beft in all America; that the Plantations were in perfect Order ; and that the French ventured a War, to prevent our fettling St. Lucia and St. Vincent, will fcarce be brought to believe, that they parted with a Country ready fettled, and more valuable than both thofe Inlands, with their Goodwill. The Treaty of Utrecht was fo indifferent a Treaty that, I think, there is no fort of Neceffity for making it appear worfe than it really was. The fame Perfons who firft fettled St. Cbrifopher's likewife fettled Nevis, or Mevis, about the Year 1628 ; and notwithftanding the Mif-
fortune of being difpofefied by the $\langle$ paniards in the manner before-mentioned, in twenty Years time there were at leaft four thoufand People upon the Inand, and they continued increafing in the fame manner, by a Succeffion of prudent Governors, for a confaderable Space. After the Reftoration, when Trade and Peace flourifhed, this Ine enjoyed its Share of the Benefit, and increafed in Inhabitants and Riches; the only Enemy they had to ftruggle with was the Hurricane, which generally vifited them, once a Year.

On the igth of Auguf, $166 \%$, there was a terrible one in this Ifland; at which time Sir Gobn Berry, Captain of the Centurion Man of War, was in the Harbour with that and feveral other Ships, of which one was commanded by Capt. Langford, who having learned fome of the Prognoftics of a Tornado, from a Caribbean, perceiving them, he told Sir Fobn and the reft of the Commanders of it, who depending on his Intelligence, made their Ships ready, and in the Morning, about four o'Clock, the Wind coming very hard northerly, they put to Sea, and came all back within four or five Days time fafe to the Road again: Captain Langford was afhore, and being confident of the Hurricane, took fuch care in fecuring his Sugars and Goods in the Store-houfe, that when the Iurricane had carried away the Roof of the Houfe, all except one Hogthead of Sugar remained fafe.

When Sir Williams Stapleton was Governor of thefe Iflands he ufually made this the Place of his Refidence. Here Courts were kept, and the Governor living upon it, moft of the Affairs of this Government were tranfacted here; for every one of thefe Inands hath a particular LieutenantGovernor, Council, and Affembly ; and the general Government centers only in the Authority of Captain-General. Sir William Stapleton, who was Governor in King James's Time, made Sir James Ruffel Lieutenant-Governor of this Illand, and he enjoyed the Place till his Commiffion was fuperfeded by that of Captain-General, granted to Sir Na thaniel Fobnfon, who alfo refided at Nevis; and at this Time none of the Leeward Ilands flourifhed fo much as this; it fupplied the others with almoft all their Wines and Negroes, and was computed to have contained at that Time near two thoufand fighting Men, which will make the Number of Souls, by common Computation, to be above ten thoufand befides Negroes, of which Number there were not lefs than twenty thoufand. A prodigious Improvement of an Inand fcarce fix Miles long, to maintain between thirty and forty thoufand Men, Women, and Children !

We are to proceed next to the Inand of Montferrat, which Name the Spaniards gave to this Iland, from the Refemblance it has to a Mountain in Catalonia, not far from Barcelona; famous for a Chapel dedicated to the Blefled Virgin, in the greateft Reputation with the Roman Catholics of any, except that of Lorretto. The Englifs have not thought fit to give it another Name fince they were Mafters of it. It lies in in Degrees North Latitude, is about three Leagues in Eength, and almoft as much in Breadth; fo that it feems to be of a round Figure. It was difcovered by the Europeans at the fame time with St. Cbrifopher's ; but no Settlement was made upon it till the Year 1632 , at which Time Sir Thbomas Warner, firft Governor of St. Cbriftopher's, procured a finall Colony to fettle there, of the Subjects of Englond, for we cannot affure ourfelves they were Englyh Men, this Inand being generally looked upon as an Irifh Colony. This Inand flourifhed at firf nore than Antigua; but fince the Lord Willougbby's Time, the latter has got, and kept, the Start of it. There were feven hundred Men in Mont Jerrat, fixteen Years after it was firf inhabited; the Rolls of the Militia at this Time amounts to three hundred and fixty. We find but one Battery for the Defence of the Coaft, and other old difmounted Cannon at feveral Landing-places. As to the Climate, Soil, Animals, Trade, and Productions of this Ine, they are much the fame with thofe of the other Caribbee Iflands, only this is fuller of Mountains, which are covered with Cedars and other Trees, that make it a lovely Profpect from the Sea: The Vallies are fruitful, and better ftored with fref Water than thofe of Antigua.

According

## Chap. III. of the ENGLISH in AMERICA.

A.ccording to the beit Accounts that have been received from this Inand of late Years, it is rather increafing, both in the Number of People, and in the Value of their Settlements, than not; as to the former, it is computed, there may be about four thoufand five hundred white Perfons, and about twelve thoufand Negroes, in this Country: And as for the latter, I mean the Value of its Produce, we thall have Occafion to fpeak of it hereafter.

The Inand of Barbuda lies in the Latitude of is Degrees 30 Minutes North, is about fifteen Miles long, and lies North-eaft from the Inand of which we were laft fpeaking. The Land is low and fruitful, and the Englifs began to plant it as early as Nevis, Montferrat, or any other of the Leeward Inands, St. Cbriftopher's excepted; for Sir Thomas Warner, who firft fettled there, placed a fmall Colony in this Inand, but the Caribbeans difturbed them fo much, that they were often forced to defert it and their Plantations. There hardly paffed a Year but they made one or two Incurfions, and that generally in the Night, for they durft not attack them by Day; the Damage the Entrlifh fuftained by them, made them weary of dwelling in a Place where they were fo much expofed to the Fury of thofe Barbarians, who diminifhing daily in number, and the Europeans encreafing, the Englifs again poffeffed themfelves of Barbuda, and in a few Years there were five hundred Inhabitants. There are now a thoufand or twelve hundred Souls upon it, and their Number is daily encreafing. The Proprietor is the Honourable Cbriftopher Codrington, Efq; and he puts in a Governor here, having the fame Prerogative as the other Lords Proprietors in their feveral. Jurifdictions in America. This Inand has bred great ftore of Cattle, and the Inhabitants employ themfelves moftly in that fort of Hufbandry ; Corn and Provifions coming almoft always to a good Market in the Sugar Inands. There is plenty of all Sorts of tame Cattle, as in Europe; and the Englifh live here much after the fame Manner as they do in the Countries in England; only their Labour in the Field is not fo hard as here, the Country being fo much hotter.

The next Plantation to this, if it may be properly fo called, is Anguilla, or Snake Ifand, fo called from its Figure, being a long Tract of Earth, but narrow, winding almoft about; near St. Martius, from whence it may eafily be feen: It lies in 18 Degrees i2 Minutes. The Country is level and woody; the Soil fruitful, and the Tobacco that grew there formerly was reckoned very good in its kind. There is not a Mountain in it; where it is broadeft there is a Pond, about which the Englifb fettled in the Year 1650 . Their Bufinefs, like the Inhabitants of Barbuda, was to plant Corn, and breed tame Cattle, for which purpofe they brought Stock with them. They were poor, and continue fo to this Day, being perhaps the lazieft Creatures in the World. Some People have gone from Barbadoes, and other Englifh Caribbee Ifands, thither, and there they live like the firf Race of Men, without Government or Religion, having no Minifter or Magiftrate. They are faid to make up, altogether, about one hundred and fify Eamilies, or nine hundred Souls; and their Condition in that Place is fingular enough to deferve particular Notice, if we had any room to fpare ; but as we have not, it fhall fuffice to fay that they have no great Quantities of Sugar upon the Inand, but addict themfelves rather to farming, in which they have had very good Succefs; and this it is that enables them to live in the old Patriarchal Way, every Man being a kind of Sovereign in his own Family, and no other Government there is in Anguilla.

We have now gone through all the Leeward Inlands, Antigua, or Antego, only excepted, of which we are to fpeak in the next Section, as not having been fettled within the Period to which we have confined this. As ro the general Produce or Value of thefe Inands, which may ferve to fhew of how great Confequence they are to Great Britain, the beft Account I have been able to obtain, is to the following Effect: St. Chrillopher's is the largeft of all the Ilands, but the middle Part of it being extremely mountainous, it is thought that there are not above twenty-four thoufand Acres of Land, fit for Sugar,
in che whole Inand, which produces about ten thotfand Hogtheads of that valuable Commodity. Antego contains about feventy thoufand Acres, and produces fixteen thois fand Hogheads of Sugar yearly. Nevis is faid to be about twenty Miles in Circumference, and produces fix thoufand Hogfheads, Montferrat, which is lefs than any of them, produces two thoufand five hundred, and fometimes three thoufand, Hogtheads of Sugar. In Barbuda they breed Cattle, and in Angwilla they raife Corn.
19. We are now, according to the Method that we have hitherto purfued of fpeaking of our Plantations, in the Order of Time in which they were fettled, obliged to return to the Continent of North America, in order to give an Account of the noble Colony of Maryland, which remained a Part of Virginia till the Year 1632 , which was the eighth of King Cbarles I. when that Monarch was pleafed to grant all the Country to the North of Potores mack River, not then planted, unto Cecilius Colvert, Lord Baltimore, of the Kingdom of Ireland, and his Heirs; and this Part of the Country was afterwards called Maryland, in Honour of the then Queen Confort, Henrietta Maria, youngeft Daughter of the French King, Henty the IVth. The Lord Baltimore having obtained his Grant, fent over his Brother, the honourable Leonard Calvert, Efq; with fome Roman Catbolic Gentlemen, and other Adventurers, to the Number of two hundred, to take Poffeflion of the Country ; who, fetting fail for Einland on the 22 d of November 1633 , arrived at Point Comfort in the Bay of Chefepeak, on the 24th of February following; where, being kindly received and fupplied with Provifions by the Englifh of Virginia, they continued their Voyage Northward, to the River Potowmack, appointed to be the Boundary between Virginia and Maryland, on the Eaft-fide of the Bay.
The Adventurers failed up this River, and landing on feveral Places of the northern Shore, acquainted the Na-tives they were come to fettle amongtt them, and trade with them ; but the Natives feemed rather to defire their Abfence than their Company: However, there were no Acts of Hoftility committed on either Side; and the Englifh returning down the River Potoromack again, made choice of a Place near the Mouth of a River (which falls into it, and by them called St. George's River) to fettle their firt Colony. They advanced afterwards to an Indiana Town called Yeamaco, then the Capital of the Country, and at a Conference with the Weorance or Sovereign of the Place, to whom they made confiderable Prefents, the Weorance confented that the Englifh fhould dwell in one Part of the'Town, referving the other for his own People, till the Harveft was over, and then agreed to quit the whole entirely to the Englifh, and retire farther into the Country, which they did accordingly. And the March following Mr. Calvert and the Planters were left in the quiet Poffefion of the whole Town, to which they gave the Name of St. Mory's; and it was agreed on both Sides; that if any Wrong was done by either Party, the Nation offending fhould make full Satisfaction for the Injury. The Reafons the Yoamaco Indians were fo ready to enter into a Treaty with the Englifh, and yield them Part of their Country, was in Hopes of obtaining their Protection and Affitance againft the Safquabanab Indions, their northern Neighbours, with whom they were then at War ; and, indeed, the Yoamaco Indians were upon the Point of abandoning their Country, to avoid the Fury of the Safquabanab Nation, before the Englifh arrived; from whence it appears that the Adventurers, fent over by the Lord Belizimore, cannot be charged with any Injuftice in fettling themfelves in this Part of America, being invited to it by the original Inhabitants.

The Inhabitants who were thus fettled at St. Mary's; applied themfelves, with great Diligence, to cultivating the Ground, and raifed large Quantities of Indian Corn, while the Natives went every Day into the Woods to hunt for Game, bringing home Venifon and Turkies, to the Englifb Colony, in abundance, for which they received Knives, Tools, and Toys, in return. And thus both Nations lived in the greatelt Friendfip, doing good Offices to each other; till fome of the Englifh in Virginia, envious of the Happinefs of this thriving Colony, fug.
gefted
gefted to the Indians, that thefe Strangers were not really Englifh as they pretended, but Spaniards, and would enflave them as they had done many of their Countrymen : And the Indians were fo credulous as to believe it, and appeared jealous of Mr . Calvert, making Preparations as if they intended to fall upon the Strangers, which the Englifh perceiving, ftood upon their Guard, and erected a Fort for their Security, on which they planted feveral Pieces of Ordnance; at the firing whereof the Yoamacos were fo terrified, that they abandoned their Country without any other Compulfion, and left the Englifh in full Poffefion of it ; who receiving Supplies and Reinforcements continually from England, and having no other Enemy to contend with than Agues and Fevers (which fwept off fome of them before they found out a proper Regimen for the Climate) they foon became a flourifhing People, many Roman Catholic Families of Quality and Fortune tranfporting themfelves thither to avoid the Penal Laws made againft them in England; and Maryland has been a Place of Refuge for thofe of that Perfuafion from that Day to this.

While the civil War lafted in England, the Lord Baltimore's Family were deprived of the Government of this Province, but were reftored to their Right by King Cbarles II. foon after his own Reftoration. Whereupon the Lord Baltimore fent over his Son, Cbarles Calvert, afterwards Lord Baltimore, to be Governor of Maryland, who continued in that Poft upwards of twenty Years, and long after his Father's Death. By whofe Prudence the Colony became almoft as confiderable as Virginia, for its Tobacco and other Products of the Soil; and all the Indian Nations on that Side put themfelves under their Protection. The Indian Chiefs were appointed, or at leaft approved and confirmed in their Commands, by the Lord Baltimore the Proprietor, whofe Succefs is to be afcribed, in a great Meafure, to the Endeavours he ufed to cultivate a good Correfpondence with the Indian Nations, and to give them as little Offence as polfible.

In the reign of King $\mathcal{F}$ ames II. we are told that Father Peters, a Jefuit, whom that Prince admitted into his Councils, which contributed not a little to his lofing firft the Hearts of his Subjects, and after that his Dominions, took fuch a Prejudice to the then Lord Baltimore, though of his own Religion, but a Nobleman of great Wifdom, Juftice, and Moderation, that he refolved to deprive him of the Power of nominating a Governor, by extending the royal Prerogative at the Expence of the Grant made by the Crown, to the Anceitors of his LordThip. But before this could be effected, the Revolution intervened, but the Change of Government did not prove ferviceable to his Lordfhip; for the Crown profecuting the former Project, deprived him of his Power of Nomination, which was fo much the harder, becaufe it is univerfally allowed that no People were ever better governed than the Inhabitants of this Colony, while they depended folely upon this noble Family.

The prefent Lord Baltinaore is a Proteftant, and inherits the Virtues, as well as the Title, of his Anceftors; being in all refpects a Bleffing to that Country, as he is the Proprietor of it. His Lordfhip once took the Pains to vifit his Colony, was received with all due Marks of Refpect on account of his Quality and Intereft in that Country; but when he left it, the People gave him much ftronger Teftimonies of their Affection, and their Regret at parting with him, on account of his Mildnefs, public Spirit, and fincere good Will towards them, of which he gave them fo many Inftances, and teftified upon all Occafions, fuch a Readinefs not only to comply with, but to go beyond, their Requefts; that there was not a Planter in Maryland, who did not confider him rather as a Father and a Friend, than as their Lord Proprietor; and to fay the Truth, they had fo much Experience of him in the former Characters, and felt fo little of him in the latter, that it was extremely natural for them to behave as they did.
Whatever the great Defign might be when this Settlement was firft made, moft certain it is that no Country in America can boaft of having had fewer Difturbances on the Score of Religion. There are, indeed, of all Per-
fuafons in the Colony; but notwithftanding this, they live together in the greateft Tranquility, as if they made it their Bufinefs to forget the Points about which they differ, and to remember that they agree in thofe of being $E_{n-}$ glifbmen and Cbriftians, as fufficiently appears by their kind Behaviour towards the Indians, who have fcarce ever had any Difference with them, and of whom the Colony have no fort of Apprehenfions, though they are much more numetous in that Country than in Virginia. But after fhewing how this Country was firft planted, what remarkable Accidents have fince happened therein, and in what State the Colony now is with refpect to the Government; the next thing is to give a fuccinct View of the Place itfelf, in order to bring it the better to the Acquaintance of every Englifh Reader, who is curious on this Subject.

This Province is fituated between 38 and 40 Degrees of Northern Latitude, and between 44 and 48 Degrees of Weftern Longitude, as is generally computed; but it muft be confeffed the Weftern Boundaries are very uncertain, fome extending them beyond the Apalacbean Mountains. The North End of the Bay of Cbefepeak divides Maryland into two Parts, called the Eaftern and Weftern Shores. It is bounded, at prefent, by Part of Penfyluania and the Atlantic Ocean on the Eaf, by Virginia Proper on the South, and by the Apalacbean Mountains on the Weft. It is feparated from Virginia on the South, by the River Potowmack on the Weftern Shore, and the River Pocomoas on the Eaftern Shore, the Length from North to South being about an hundred and forty Miles, and the Breadth from Eaft to Weft, if we extend it no farther than the Country already planted, will not be fo much, though its future Limits poffibly may extend much farther. As to the Face of the Country, this, as well as Virginia, may be divided into, ift. the Lowlands next the Sea; 2dly, the hilly Country towards the Heads of the Rivers; and 3 dly, the Apalachean Mountains, which are exceeding high, and run parallel to the Atlantic Ocean, viz. from the North-eaft to the Southweft. The Lowlands heretofore confifted of Swamps or Woods, being one continued Foreft almoft, till the Engli/b cleared Part of it, either to make room for their Plantations, or for building of Ships and Houfes, and the making Tobacco Cafks and Pipe-ftaves for Exportation, which has made fuch Havock among their Woods, that fome of them begin to apprehend the Want of Timber, efpecially near their Forts and Rivers; for as to that which lies remote from the Water it is of little ufe to them, the Price of the Carriage exceeding the Value of the Wood. Towards the Meads of the Rivers there is a Mixture of Hills and Valleys, as in Virginia, well planted, with Variety of Timber and Fruit Trees; and where thefe are wanting there are large Neadows or Savanahs, where the Grafs grows to a moft furprizing Height.

This Country, like Virginia, is watered by innumerable Springs and a great many fine Rivers, of which the chief are, Ift, Potormack, which, rifing in the Mountains North-weft, runs to the South-eaft, and feparates Maryland from Virginia on the South-weft, falling into the Middle of the Bay of Cbefepeak. 2dly, The River Pocomoac, which rifing near the Ocean, runs alfo directly South, and then turning to the Weft, falls alfo into the Bay of Chefepeck, near Watkins's Point. A Line drawn from the Mouth of the River directly Eaft, to the Atlantic Ocean, is the true Boundary between Maryland and Virginia on the Eaftern Shore. 3dly, The River Patuxent, which rifing in Anne Arundel County, runs to the South-eaft, and falls into the Bay of Cbefepeak, about twenty Miles to the Northward of the Mouth of Potowmack River. 4thly, Severn River, which rifes on the North-weft Part of Maryland, running South-eaft, falls into the upper Part of the faid Bay. 5 thly, Cbeptonk, which rifes on the Eaftern Shore, runs to the South-wefts and falls into the fame Bay. Gthly, Saffafras River, which rifes in the North-eaft of Maryland, and running almoft due Weft, falls into the North End of the faid Bay. 7thly, Wicomo River, which rifes on the Eaftern Shore ${ }_{z}$ runs to the South-wert, and falls into the Bay almoft againft the Mouth of Potoremack River. The 8th and

## Chap. III. of the ENGLISH in AMERICA.

laft River I fhall mention is St. George, on the Weft-fide of the Bay; which, running from North to South, falls into the Mouth of the River Potorwack. Here the Engli/b firft fettled, and built the Town of St. Mary's. There are a great many more Rivers capable of receiving large Ships, which, with the numerous Bays and Creeks, that indent the Land on every Side, give the Seamen an Opportunity of bringing their Veffels up to the very Planters Doors, to receive their Freight, as in Virginia.

The Air of this Country is exceffive hot fome part of the Summer, and very cold in Winter when the Northweft Wind blows; but the Natives tell us, that they are happily fituated; that their Heats are very feldom troublefome, and then only by Accident, in a perfect Calm ; but that this does not happen above two or three Days in a Year, and then lafts but a few Hours at a time, and even this Inconvenience is made very tolerable by their cool Shades, their open and airy Rooms, Arbours and Grottos ; and in Spring and Fall the Weather is as pleafant as can be wifhed; that their Winters are not of more than three or four Months Duration, and in thefe they feldom have one Month's bad Weather, all the reft they are happy in a clear Air and a bright Sun, and are fcarce ever troubled with Fogs; it is acknowledged they have hard Frofts fometimes, but they laft no longer than while the Wind blows from the North, and North-weft, Points, which is feldom more than three or four Days.

At other times they have no Froft at all ; and their Frofts are attended with bright and ferene Weather; and in the Spring, Summer, and Winter, their Winds are only cool pleafant Breezes. Their Rains, except in the Depth of Winter, are very pleafant and refrefhing; in Summer they laft but a few Hours, and then bright Weather fucceeds : However, it is acknowledged, that the Showers which fall in Summer are very heavy for the Time they laft; and the Part of the Country which lies on the Bays of the Sea, and the Mouths of the Rivers, which is much the beft peopled, is certainly hot and moift ; indeed, higher up the Country, whither the Plantations are now extended, the Air is much more healthful efpecially fince their Lands are cleared of Wood. They have here, however, dreadful Thunder in the Heat of Summer; but as it cools and refrefhes the Air, they rather wifh for it than fear it, though it fometimes does much Mifchief, but lefs than formerly.

Since the Indians transferred, or yielded, this Province to the Englifh, it has been divided into ten Counties, fix on the Weft-fide of the Bay, and four on the Eaft-fide of it ; thofe on the Weft-fide, taking them from South to North, are, I. St. Mary's County. 2. Cbarles County. 3. Prince George County. 4. Calvert Couluty. 5. Anne Arundel County. And 6. Baltinzore County. The Counties on the Eaft-fide of this Bay, lying alfo from the South, are, I. Somersei County. 2. Dorchefter County 3. Talbot County. 4. Cecil County. As for the County of Kent, that, or the greateft Part of it, is now faid to be in Penfyluania. St. Mary, the Capital of the County of the fame Name, and, for fome time, of the whole Province, is fituated on the Eaft-fide of the River St George, in 38 Degrees and fome Minutes North Latitude This, as has been intimated, was the firft Town in Mary land built by the Englifb, who raifed a Fort for its Defence; but in its moft flourifhing State never had more than thirty or forty Houfes in it, and fince the Seat of the Government has been removed to Annapolis, feems to be upon the Decline; for the fame Humour prevails here as in Virginia, of Gentlemens living on their refpective Plantations, and not in Towns.

In this County alfo are the Parifhes of Hervington, St. Clement's, and St. Jobn's ; and here is a noble Seat of the Lord Baltimore the Proprietor, called Meitapany, fituate on the Mouth of the River Patuxent. In Princ Cbarles County, which lies North of St. Mary's, are the Parifhes of Brifol, and Pifcataway; and in that of Prince George, the Parifh of Mafierkout. In Calvert County, which is divided from Cbarles County by the River Patuxent, are theParifhes of Abington, Warrington, and Caiverton. In the County of Anne Arundel, which lies North of Cbarles County, the chief Town is Annapolis, now the Capital of the Province, and formerly called Severn, being fituate on the River of that Name

Vol. II. Numb. 87 .
in 39 Degrees and fome Minutes North Latitude. Here the Courts of Juftice, and the General Affemblies were ordered to be held, in the Year 1699 ; and this has ever fince been the Refidence of the Governor; notwithftanding which, there are not yet an hundred Houfes built in the Town.

In Baltimore County, which lies between Anne ArundelCounty and the Province of Penfywania, is the Parifh of Baltimore, fituate on the North-weft Part of the Bay of Cbejepeak. In Somerfet County, which is the moft foutherly County on the Eaft-fide of the Bay, are the Town and Parifh of Somerfet. In Dorchefter County, which lies North of Somerfet, are the Town and Parifh of Dorchefier, befides a great many Indian Towns. In Talbot County, which lies North of Dorchefter, are the Parimnes of Oxford, St. Michael's, Bolingbrooke, and Cecil, the moft northerly County on the Eaft-fide of the Bay, is bounded both on the North and Eaft by the Province of Penfyluania.

Throughout the whole Colony of Maryland, as in that of Virginia, the Engli/h live at large at their feveral Plantations, which hinders the Increafe of Towns; indeed every Plantation is a little Town itfelf and can very well fubfift with Provifions and Neceffaries; every confiderable Planter's Warehoufe being like a Shop, where he fupplies not only himfelf, with what he wants, but the inferior Planters, Servants, and Labourers; and has Commodities to barter for Tobacco, and other Goods, there being little Money in this Province, and little Occafion for any, as long as Tobacco anfwers all the Ufes of Silver and Gold in Trade. There are few Merchants, or Shopkeepers, who may be properly fo called, and live wholly by their Trade: The Tobacco of this Province, called Oronoko, is ftronger than that of Virginia; and no Englifman, who has not a very coarfe Relifh, will bear it; yet it is as profitable to the Planter, and to the Trade of the Nation in general, being in Demand in the Eaftern and Northern Parts of Europe, where it is preferred before the fweet-fcented Tobacco of $\mathcal{F}$ ames and $\operatorname{Yor} \neq$ Rivers, in Virginia. The Planters in Maryland, finding fo good Vent for their Commodity in foreign Markets, have cultivated it fo much, that the Province is thought to produce as much Tobacco as Virginia. The Soil is here as fruitful as in any Country, being a large Plain; and the Hills in it fo eafy of Afcent, and of fuch a moderate Height, that they feem rather an artificial Ornament to it, than one of the Accidents of Nature.

The Abundance of Rivers and Brooks is no little Help to the Fertility of the Soil, and there is no Grain, Plant, or Tree, which grows in Virginia, but thrives as well here; the Product, the Animals, and every Thing, are the fame here as there, only the black and yellow Bird, called the Baltimore Bird, goes by another Name in Virginia; it had that given it, becaufe the Colours of the Field of the Lord Baltimore's Coat of Arms are Or and Sable. It is thought that the Number of Souls in Maryland, may be about thirty thoufand, or rather more. There are feveral hundred Sail of Ships employed yearly in the Commerce between Great-Britain and this Country, and the Benefit which refults to this Nation from thence, is very large, as may be eafily computed from the Principles laid down in the foregoing Account of the Colony of Virginia; which may likewife ferve with refpect to all the other Colonies that do not interfere with their Mother-Country in their Manufactures.
20. When Oliver Cromzell, after fubverting entirely the Conftitution of his Country, took upon him the Title of Protector, he refolved to obliterate the Memory of what was paft, by undertaking fomewhat that might be of great and lafting Advantage to his Country. It was with this View, and to rid himfelf of many Officers whom he fufpected, that he framed a Project of attacking the Spaniards in the Weft Indies, and of taking from them the noble Illand of Hifpaniola or St. Domingo; in the adjufting of which Defign, he depended chiefly on the Information he received from one Father Gage a Prieft, who had been many Years in the Spanifh America, and who died in thisVoyage; for which tho' greatPreparations were made; yet they went on very flowly, and it. was certainly though the beft conceived, yet the worf exe cuted of all his Enterprizes.
$X \times x$
The

The Squadron commanded by General Penn, being ordered, to rendezvous at Portfmouth, where the Land Forces were to embark, Complaints were made to Venables of Diforders and Difcontents among the People, and more particularly about the Badnefs of the Provifions; which, by his Means, being made known to General Deflorrow, he, by very harh Expreffions, fignified his Difcontent thereat ; and particularly charged Venables with a Defign of fruftrating the intended Expedition, by being the Author of Reports which were falle; while he, on the other hand, endeavoured to juftify himfelf, and to fhew that he intended no otherwife than for the public Good; and there was a fhrewd Sufpicion that Defborrowe's Diffatisfaction herein arofe, from his being concerned with thofe who had the Management of victualing the Navy. After Venables had attended near four Months without any pofitive Affurance whether the Government was determined to go on with the Defign or not, although it was publickly difcourfed of, and the Spaniards had thereby not only the Knowledge thereof, but Opportunities of providing for their Defence; he was fome time after fent to, and directed to hold himfelf in a Readinefs to proceed; and though he then requefted that the Draughts which were to be made out of the Regiments, might be Men, in all refpects, fitting for the intended Service, yet the Colonels were permitted to pick and cull them as they pleafed, infomuch that moft of them were raw and altogether undifciplined, and amongft them many Irifh Papifts; nor had not half of them Arms in any Degree ferviceable: And fo far were the Council from permitting him to ftay till better could be furnifhed in their Room, that they fent him poftive Orders to leave the Town next Day, upon pain of Imprifonment.

Before he came to Portfmouth many of the Troops were embarked, and the reft fhipping off with the utmoft Hafte, fo that he had no Opportunity of viewing, much lefs of exercifing, them on Shore; and thereby informing himfelf of their Condition, with refpect to their Abilities or otherwife; and although he was promifed that the Store-flip, with Arms and other Neceffaries; fhould join him at Spithead, he was at laft told that no Delay muft be made in ftaying for her, but that he might expect her coming to him at Barbadoes. He was likewife affured that he fhould carry out with him, at leaft, ten Months Provifions for ten thoufand Men, but the moft Part thereof was fent back to London, to be fhipped offthere, under pretence that there was not fufficient Room for the fame in the Ships at Portfmouth, although the Officers in the Fleet found Paffage in them for no inconfiderable Quantities of Goods, with which they defigned to traffic when they arrived at the aforefaid Inland.

The Forces being embarked, and the Wind prefenting fair, the Squadron failed, and arrived at Barbadoes on the 29th Day of Fanuary, 1654 ; foon after which, General Venables wrote to the Protector, the Lord Prefident of the Council Laurence, the Lord Lambeth, and feveral others, letting them know in what a miferable Condition the Army was, and how deftitute they were, not only of Provifions, but Arms and other Neceffaries, proper for carrying on the intended Defign; infomuch that they were conftrained to make the hardeft Shifts to fupply them with the fmall Quantities, either of one or the other, that could be had in thefe Parts. The firft thing that was done after the Fleet's Arrival at Barbadoes, was the feizing fuch Dutch Ships and Veffels as were found there, and General Penn appointed a Nephew of his to take an Account of their Cargoes, and all things belonging to them, without admitting any Cheque on him as General Venables defired and infifted on, that fo no Embezzlements might be made.

The I8th of March Venables thought it neceffary to hold a Council of War of the Land Officers, to confider of the State of the Army; and it was refolved to make thefe Propofitions to Penn, among feveral others, viz. ift. That as the Officers of the Army had refolved not to defert the Fleet, he with his Officers would reciprocally refolve not to leave the Army, at leaft not till fuch time as their expected Supplies arrived from England. sdly, That it fhould be propofed to the Commiffioners,
that a fit Quantity of Shipping might be taken up for tranfporting the Forces. 3dly, That they might not proceed on Service with lefs than twenty Tons of Ball, and that they might likewife be furnifhed from the Fleet with two hundred Fire-arms, fix hundred Pikes, befides Piftols, Carbines, and two hundred Half-Pikes. To this Venables received no fatisfactory Anfwer from Penn, and the Stores not arriving from England, he again defired to know from him what Arms, Shot, Match, and other Neceffaries he could furnifh from the Fleet; General Deforrow having affured him, when in England, that the Commiffioners had Power to difpofe of what might be on board the Ships, to the neceffary Ufe of the Army; but to this Penn returned him an Anfwer, that fifteen fhot a Man, and a few Tons of Match, was all he could fpare; befides which, he at length prevailed with him to add thereunto a few Half and Quarter Pikes, which gave Occafion to one of the Commiffioners to let fall fome Words, as if he doubted they were betrayed.
Befides all thefe Difappointments, and the Badnefs of the Provifions fent from England, yet even of them the Soldiers were put to fhort Allowance, while the Seamen were at whole, which occafioned no little Difcontent, and rendered them very fickly and weak ; and as the Commif. fioners were empowered and required to difpofe of all Prizes and Booty taken towards defraying the Charge of the Expedition, and only a Fortnight's Pay was of fered to the Officers and Soldiers in lieu of whatever Booty fhould be taken at St. Domingo (whither they were firft defigned from Barbadoes) it very much increafed the Diffatisfaction of the Army ; for molt of the Officers, when they fet forwards on the Expedition, were in hopes of bettering themfelves very confiderably. At length General Venables prevailed with the Officers and Men to accept of fix Weeks Pay inftead of their Plunder ; and thereupon himfelf and Penn iffued out Orders, reftraining all Perfons from pillaging without Orders, or from concealing the fame on pain of Death, and Forfeiture of their Pay. But although the Officers were willing to fubmit to this, yet the Commiffioners refufed to fign it, infomuch that the Soldiers publickly declared they would return to England, and never more ftrike Stroke where there were Commiffioners who fhould have Power to controul the Army.

The Fleet being now in a Readinefs to fail, General $V$ enables, with fome of the Commiffioners, and the Officers of the Army, propofed that they might proceed to the Harbour of St. Domingo (but for what Reafon it dothr not appear, unlefs it was for want of experienced Pilots). That was refufed, and a Refolution taken to land the Troops at the River Hind; that fo they might endeavour to force the Fort and Trench. It was alfo refolved among the Land Officers, ift. That the Regiments fhould caft Lots which of them fhould go on Shore firft. ${ }_{2}$ dly, That two or three Regiments fhould be landed at once. 3 dly, That the Seconds to each Regiment fhould be appointed. 4thly, That the Ships wherein the Regiments were, fhould keep near each other, for their more regular landing. And it was farther determined, that if the Surges of the Sea ran high, and that the Enemy were prepared to defend the Fort and Trench, the Army fhould be landed behind the fecond Point to Leeward, and that, when on Shore, one Regiment fhould be ordered to march Eaftward of the City; provided General Penn would engage to furnifh the Army with all Neceffaries.
Lots having been caft as aforefaid, it fell to Colonel Buller's Regiment to land firf, and there was one Cox who had lived in thofe Parts many Years, was to have been their Guide, but he had been fent of fome Errand by Penn, fo that he was at this time abfent; and ViceAdmiral Goodfon declaring that he neither had Orders to go into Hind River, nor Pilots to conduct the Ship thereinto; the Army were conftrained to land at the Weft Point (which Venables protefted againft) and by that means were expofed to a tedious March of forty Miles, through a thick woody Country, without any Guide, infomuch that both Horfe and Men, by the Fatigue and Extremity of Heat, fell down with Thirft, and were mife-

Chap. III. of the ENGLISH in AMERICA.
rably afflicted with the Flux, by their eating Oranges and other green Fruit, having no Water to moifter their Mouths with. After four Days March the Army came to the Place where they might firft have been put on Shore, but by that time the Enemy had fummoned in the whole Country to their Affiftance; and even now many of the Soldiers had no more than oneDay's Provifions of the three that had been promifed them from the Ships.

Colonel Buller being fent with his Regiment to a particular Station near Hind River, and ordered not to ftir from thence until the reft of the Army joined him, he was fo far from complying with thofe Commands from the General, that he marched away under the Guidance of Cox, who was now arrived from the Fleet; infomuch that for want of the faid Guide, the General miftaking the Way, marched ten or twelve Miles about; and Buller having fuffered his Men to ftraggle, they fell into, and fuffered much by, the Ambufcades laid by the Enemy. The Hardhips the Forces had undergone for want of Provifions, and their being denied what Plunder they might happen to take at St. Domingo, fo exafperated them, that the Seamen who had been firft fent afhore, and foon after thofe on the Land, were in a general Mutiny: However, in this Condition they forded the River Hind, with a Refolution to march to the Harbour, that fo they might be furnifhed with Provifion and Ammunition from the Ships, but they were Strangers to the Way, neither had they any Water to drink. At length Colonel Buller, and Cox the Guide, joining them, promifed to conduct them to a Place where they might be fupplied with Water. But fome of the faid Colonel's Men having rambled about for Pillage, encouraged the Enemy to lay Ambufcades for them in their March, who, falling upon the Forlorn, routed them, and killed feveral Officers; but they were foon after beaten back with Lofs, and purfued within Cannon-fhot of the Town; yet when the Action was over, many Men, as well as Horfes, perifhed with Thirft.

A Council of War being called to confider of the Condition of the Army, it was fouind that many of the Men had eat nothing for four Days together, unlefs it were fome Fruits they gathered in the Woods; and that they were without Water, the Spaniards having ftopped up all their Wells within feveral Miles of the Town. Neither knew they the Country, or how to get to their Ships, for Cox the Guide was nain in the laft Skirmifh ; however, after mature Confideration, it was refolved to march to the Harbour in the beft Manner they could, and at length arriving there, they ftaid three or four Days to furnifh themfelves with Provifions and other Neceffaries, and then advanced with a Mortar Piece, in order to reduce the Fort; but the Enemy having laid an Ambufcade, they charged the Van, which was to have been led by Adjutant General Fackfon, very vigorounly, and were anfwered in like Manner; whereas Fackfon's Party running away, and the Paffage through the Woods being very narrow, they fell upon the General's own Regiment, who, to no purpofe, endeavoured to ftop them with their Pikes; for they firft difordered that Regiment, and foon after Major General Haynes's: Mean while the Enemy followed very eagerly, and giving no Quarter, the faid Major General, and the beft of his Officers, who preferred Death before Flight, fell in the Action.

At length the General's own Regiment making head againtt them, as alfo that of the Seamen, commanded by Vice Admiral Goodfon, they, with their Swords, forced the Runaways into the Woods, rather chufing to kill them than they fhould diforder the reft; which the Ene-my perceiving, they retreated, and our Men kept their Ground, though the Shot from the Fort killed many of them. The Troops, neverthelefs, were fo very weak and difheartened, that not many of them could be brought to play the Mortar againft the Fort ; and though the General was reduced to a very low Condition, by the Flux, he caufed himfelf to be led from Place to Place to encourage them; but fainting at laft, was forced to leave the Care to Major General Fortefcue, who foon found that he could prevail no more than the General himfelf.

It was refolved foon after, at a Council of War, that fince the Enemy had guarded every pafs, and that the Army were under very great Neceflities for Water, they fhould march to a Place where they had been informed a Supply thereof, and of other Neceffaries, had been put on Shore for them from the Ships. But in that March the Soldiers accompanied their Officers no farther than till they found them in Danger, and then left them, infomuch that the Commiffioners owned, in a Letter they wrote to the Governor at Barbadoes, that had not the Enemy been as fearful as our own Men, they might, in a few Days, have deftroyed the whole Army; and withal they let him know, that thofe who had occafioned the greatelt Diforder, were thofe of Barbadoes and St. Cbrifo tophers, infomuch that they, the faid Commifioners, who were Penn, Winflow, and Buller, had refolved to leave the Place, and try what could be done againft the Ifland of Famaica.

2 I. The Army was accordingly in little Time embarked, but the Sick and Wounded were kept on the bare Decks for forty eight Hours, without Meat, Drink, or dreffing, infomuch that Worms bred in their Sores; and even while they were on Shore the Provifions fent to them were not watered but candied with Salt, notwithftanding they had not Water fufficient to quench their Thirft. Nay, after this Misfortune on Shore; Venables averred that Penn gave Rear Admiral Blagge Orders not to furnifh them with any more Provifions of what kind foever, fo that they eat up all the Horfes, Dogs; and Affes, in the Camp, and fome of them fuch things as were in themfelves poifonous, of which about forty died; and before the Forces were embarked, Adjutant General Fackfon was tried by a Court Martial, and not only fenténced to be cafhiered, and his Sword broken over his Head, but to do the Duty of a Swabber, in keeping clean the Hofpital Ships; a Punifhment fuitable to his notorious Cowardice. The Fleet and Troops arriving at Famaica, Orders were iffued by General Venables, that where it fhould be found any Man attempted to run away, the , next Man to him fhould put him to Death, or that if he failed fo to do, he fhould be liable to be tryed for his Life; and now all the Troops being ready for Service they advanced towards the Fort, which they made themfelves Mafters of with little Lofs; and next Mornirig when the Sun rofe, they began to march towards the Savanah, which was near the Town, when fome Spaniards came towards them, and defired to treat; but the General refufed fo to do, unlefs they would fend them a conftant Supply of Provifions, then much wanted; which they punctually did, according to the Promife they had made. The Articles agreed on at laft were thefe, viz. Ift. That all Forts, Arms, Ammunitions, and Neceffaries for War, and all kinds of Shipping in any Harbour in the Inland, with their Furniture, EOc. as alfo all good Wares, Merchandize, $\dot{\mathcal{F}} \mathrm{c}$. fhould be delivered up to General Venables, or whom he fhould appoint, for the Ufe of the Protector, and the Commonwealth of England. 2dly, That all and every of the Inhabitants of the Inand (except fome that were particularly named) fhould have their Lives granted, and as thofe who inclined to ftay had leave fo to do, fo was it agreed to tranfport the others to Nere Spain, or fome other of the Dominions belonging to the King of Spain in America, together with their Apparel, Books, and Papers, they providing themfelves with Victuals and Neceffaries. 3 dly, That all Commiffion Officers, and none others, fhould be permitted to wear their Rapiers and Poniards. 4 thly, All Artificers, and meaner Sort of People, fhould be permitted to remain on the Inand, and to enjoy their Goods, provided they conformed themfelves to the Laws which fhould be eftablifhed.

By thefe Means the noble Inand of Famaica was fubdued, and though the Spaniards continued to lurk in fome Parts of the Inand for feveral Years afterwards, and once made a bold Attempt to recover the Place;; yet Colonel Doyly forced them to withdraw, and reduced the whole Inland fo effectually, that at the Reftoration the Spaniards yielded it to the Crown of Great-Britain, to which it has belonged ever fince; and is, beyond Quefti-
on, the nobleft Poffefion we have in thefe Parts. The Hiftory of this Country, fince it came into our Pofferfion is fo well known, and would alfo take up fo much room, that we cannot enter into it here, nor indeed is it neceffary, becaufe our chief Bufinefs is to Shew the Value and Importance of our Colonies, with refpect to their Mother-Country, which is always beft done by defcribing the Plantation, explaining the Nature of its Product, and giving as good an Account as may be of the Nature of its Trade and the Number of its Inhabitants ; and as this appears to be the moft material Part, to an Englifh Reader, where we cannot infert all that relates to a Colony, we prefer this Part to any other.
22. We have a very large and accurate Account of this noble Country written by a learned, candid and indefatigable Perfon, who refided long there, I mean Sir Hans Sloone, from whom others have taken their Materials, and fo muft I ; as not knowing where to find any fo good, or that may be fo well depended upon; which Acknowledgment, as it is due to his Merit, Ithink it but Juftice to make, as I hope it will add fome Degree of Credit both to his Work and mine.

It is from him, therefore, that we learn moft of the Particulars, which follow, and are every way fufficient for our Purpofe. Famaica is fituated on the Atlantic Ocean, between I7 and I8 Degrees North Latitude, and between 76 and 79 Degrees Weftern Longitude, about twenty Leagues Eaft of Hispaniola and as many Sóuth of Cuba, and upwards of an hundred and fifty Leagues to the Northward of Porto Bello and Cartbagenc on the Coaft of Terra Firma. This Inland ftretches from Eaft to Weft one hundred and forty Miles in Length and about fixty in Breadth in the Middle; growing lefs towards each End; the Form is pretty near oval.

The whole Ifland has one continued Ridge of Hills running from Eaft to Weft through the Middle of it, which are generally called the Blue Mountains; the Tops of fome are higher than others; one of the higheft is called Mont Diabolo: Other Hills there are on each Side of this Ridge of Mountains, which, however, are much lower. The outward Face of the Earth feems to be different here from what it is in Europe, the Valleys being very level, with little or no rifing Ground or fmall Hills, without Rocks or Stones; the mountainous Part is very fteep, and furrowed by very deep Channels on the North and South Side of the higheft Hills; thefe Channels are made here by frequent and very violent Rains, which every Day almoft fall on the Mountains, and firft wearing a fmall Trough or Courfe for their Paffage, wafh away afterwards whatever comes in the way, and make their Channels extraordinary iteep. The greateft Part of the high Land of this Iffand is either Stone or Clay, which refifts the Rains, and fo is not carried down violently with them into the Plains, as the Mould proper for Tillage and friable Earths are: Hence it is, that in thefe mountainous Places one fhall have very little or none of fuch Earths, but either a very ftrong tough Clay or a Honey-Comb, or other Rock, upon which no Earth appears. All the high Land is covered with Woods, fome of the Trees very good Timber, tall and ftrait ; and one would wonder how fuch Trees fhould grow in fuch a barren Soil, fo thick together among the Rocks; but the Trees fend down their fibrous Roots into the Crannies of the Rocks, where here and there they meet with little Receptacles of Rain-Water, which nourifh their Roots.

It is a very ftrange thing to fee in how fhort a Time a Plantation formerly cleared of Trees and Shrubs will commonly grow foul, which arifes from two Caufes; one, the not ftubbing the Roots, whence arifes young Sprouts, and the other the Fertility of the Soil. The Settlements and Plantations not only of the Indians but the Spaniards being quite overgrown with tall Trees, fo that there would be no Footfteps left were it not for old Pallifadoes, Building, Orange Walks, E'c. which evidently fhew Plantations have been there. There are the fame Layers of Earth, one over another, in the fruitful Part of the Inand, as are to be met with in Europe ; and the fame Difference of Soil appears as in England, in digging of Wells, and other Occafions of opening the Ground. Moft of the Savanahs, or Plains fit for Pafture, and cleared of Wood, are like our Meadow

Land, lye near the South Side of the Inand, where one may ride a great many Miles without meeting the leaft Afcent; fome of thefe Plains are within Land, incircled with Hills. Thefe Savanahs after Rain are very green and pleafant, but after long Droughts are very much withered, and look yellow and parched.

The chief Ports in the Illand are, I. Port Royal, a fine capacious Harbour. 2. Old Harbour, which lies feven or eight Miles South-weft of St. Jago. 3. Port Morant, at the Eaft End of the Inand; and, 4. Point Negril, at the Weft End of this Ifland; befides which, are feveral more on the South and North Sides of the Illand; but it is dangerous approaching the Coaft, without a Pilot, on account of the Coral Rocks, which almoft furround it. There are near an hundred Rivers in Famaica, but none of them navigable; for rifing in the Mountains in the Middle of the Imand, they precipitate themfelves down the Rocks to the North or South, falling into the Sea before they have run many Miles, and carrying down with them frequently great Pieces of Rock and Timber. Yet frefh Water is very farce in dry Years in the Savanahs diftant from Rivers, fo that many of their Cattle die with driving to Water. Near the Sea the Well-water, as at Port Royal, is brackifh; this brackifh Water, which is very common in Wells on Sea Shores is not wholfome, but the Caufe of Fluxes and other Difeafes in Sailors by their drinking it.

Their River Water carries with it much Clay or Earth, and has an odd Tafte, which in St. Fago gives Occafion to the Spaniards to call it Rio Cobre, and the Englifb to fay it is not wholfome, and taftes of Copper; whereas, on the Trial of the Sand, there is no Metal found therein; this River-Water, however, if fuffered to fettle fome Days in Earthen Jars is good; Spring-Water, at a Diftance from the Sea, is preferred to River or PondWater. There are fome Springs as well as Rivers, which putrify their Channels, and ftop their Courfe by a Cement, uniting the Gravel and Sand in their Bottoms. There is a Hot-Bath or Spring near Port Morant, in the Eaft Part of the Inand, fituate in a Wood, which hath been bathed in, and drunk of late Years for the Belly-ach, the common Difeafe of the Country, with great Succefs. A great many Salt Springs arife in a level Ground under the Soils in Cabbage-Tree Bottom, about a Mile or two diftant from the Sea, which united, make what is called the Salt River. Salt is made here in Ponds, into which the Sea or Salt Water comes, and by the Heat of the Sun the Moifture being exhaled, leaves the Salt, which is in great Plenty; at the Salt Ponds about Old Harbour the Salt is not perfectly white, or in fmall Grains, but in large Lumps, and has an Eye of Red in it, as fome Sal Gemmo, from Spain, or what comes from the Inand of Salt Tortuga near the Main of America, which is here reckoned the ftronger and better. Salt Lagunas, or great Ponds, there are many here, one whereof, Riotitoa Pond, receives a great deal of Water by a River, which yet has no vifible Rivulet or Difcharge runs from it ; fome Rivers in the Mountains rife above and go under ground again in a great many Places. Rio daro parcicularly falls and rifes two or three times, and to it is in many others. At Abrabam's Plantation on the North Side is a River, which has fropt its own Courfe by letting a Settlement fall, and putrifying its own Bottom. It is very common to have Cataracts or Cafcades in Rivers among the Mountains fifty or fixty Feet high.

This Ifland being feven Degrees within the Tropic, has the Trade-Wind continually there, which is on the South-fide of the Illand, called the Sea-breeze. It comes about eight $0^{\prime}$ Clock in the Morning, and increafes till twelve in the Day; and then, as the Sun grows lower, it decreafes till there is none at four in the Evening. About eigit in the Evening begins the Land-breeze, blowing four Leagues into the Sea, and continues increafing till twelve at Night, and decreafes again till four. The Sea-breeze is now and then more violent than at other times, as at new or full Moon, and encroaches very much on the Land-Winds; and the Nortbs when they reign, viz. in the Months of December, Fanuary, and February, blow over the Ridge of Mountains with Violence, and hinder the Sea-breeze, which biows ftronger and longer near the Sea, as at Port-Royal, or

Pafjoge

## Chap. III. of the ENGLISH in AMERICA.

Paffage-Fort, than within Land, as at St. Fago de la Vega, or Spanib-Town; as on the contrary the Land-Wind blows harder at the Town tnan at Pafjage-Fort or Port-Royal. The Land-Wind blowing at Ivight, and the Sea-Breeze in the Day-time, no Shipping can come into Port except in the Day, nor go our, but at break of Day, or very foon after.

The INorths, as they call them, come in when the Sun is near the Tropic of Capricorn, and fo fartheft off Southerl $j$, and are very coid and unhealthy Winds, more violent in the Night, becaufe it is then they have the additional Force of the Land-Wind. They check the Growth of Canes, and all Vegetables on the North-fide, but are hindered by the Ridge of Mountains from fhewing much of their Fury on the South, where it felcom rains with this Wind. The South Winds bring the moft lafting Rains. The Rains from the South are lafting on the South-fide of this Inand. As at Sea with the Trade-Winds one meets with Tornadocs, fo at Land here fometimes will be a violen: Weft, directly contrary to the Trade, Wind; but this happens feldom, and is foon over. The Sea-Breeze, when it blows hard, is thought to hinder the Rain from coming to the Plains, it for the moft part then raining on the Hills. On this account it is that there are in the Mountains many Springs and Rivers, and few or none in the Plams. And this is likewife the Caufe why there is never any Want of Wiater in the Rivers coming from them through the Plains, and likewife that, fometimes, Rivers fuffer very great Increafe and Inundations in the llains, when no Rains have fallen in the Places where fuch Inundations appear.

Earchquakes, as they are very frequent in Hifpaniola, where they have formerly thrown down the Town of St. Domingo ; fo they are too common alfo here : The Inhabitants expect one every Year, and fome of them think they folow their great Rains: One happened on Sunday the 19th of February, 1688: As if People had raifed the Foundation of the Houfes, it was felt all over the Ifland about the fame time, fome Houfes being wrecked, and very near ruined, and very few efcaped fome Injury ; the People were in a very great Confternation, and the Ships in Port Royal Harbour felt it: It was obferved, that the Ground rofe like the Sea, in Waves, as the Earthquake paffed along. But this was nothing to the Earthquake which happened at Port Royal in the Year 1692 , by which that Town was almoft fwallowed up. Thunder is heard almoft every Day in the Mountains, with the Rains there, fo that any Perfons in the Plains may hear it, as well as fee the Rain; it does not fo ordinarily accompany thofe Rains that come from the Sea, although when it does it is very violent. Lightning for the moft part precedes Thunder, in this Inand, as elfewhere; and, if it be fair Weather, efpecially in the hotteft Seafons, it lightens almoft all the Night, firft in one Part of the Sky, or Horizon, out of fome Clouds, and then out of others oppofite to them, as it were anfwering one another. Froft or Snow are never feen in this hot Climate; but fometimes Hail, and that very large; it comes with very great Norths, which reach with great Violence to the South-fide, and throw down every thing before them.

The Dews here are fo great within Land, that the Water drops from the Leaves of the Trees in a Morning, as if it had rained; a Man riding in the Night, will find his Cloaths, Hair, $\mathcal{F}^{3} c$. very wet in a fmall time; but there are feldom any Fogs in the Plains or fandy Places near the Sea. The Rains there are violent, and the Drops very large; according to the different Pofitions of Places, fo the Rains are more or lefs violent, and come at different times, but generally fpeaking the great rainy Seafons are in May and OEtober; in which Months, at new or full Moon they begin, and continue Day and Night for a whole Fortnight, fo that the Earth in all level Places is laid under Water for fome Inches, and it becomes loofe for fome Inches deep, and confequently the Roads are almoft impaffable. "In the Town of St. Fago de la Vega, "s in thofe rainy Seafons, I was forced to ride on Horfe" back (fays Dr. Sloane) although but from Door to "Door, to vifit the Sick." And thefe Seafons, as they are called, from being fit to plant in, are generally fo

Vol. II. Numb. $夭 7$
over the whole Ifland, though they are much altered in their Time and Violence of late Years, which arifes from the clearing much of the Country of. Wood. In the Month of Fanuary is likewife expected a Seafon, or Rain; but this is not fo conftant and violent as the other two, and probably may come from the violent Norths, at that time paffing over the Mountains, with part of theis Rains with them

As to the Produce of the Inand of Famaica, it is not eafy to give a very clear Account thereof in a narrow Compafs ; however, I fhall do the beft I can. In the firft place, I fhall mention Cocoa, of which there 'ftil comes more from this than from any of our Plantations; and as it is known to be a very rich and valuable Commodity, the Reader will probably be pleafed with a particular Account of it. Cocoa grows on a Tree in Cods, green, red, and yellow, every Cod having in it three, four, or five Kernels, about the Bignefs and Shape of fmall Chefsnuts, which are feparate from each other by a Subftance like the Pulp of a roafted Apple, moderately fharp and fweet, from which its Nuts are taken when ripe, and by drying cured. The Body of a Cocoa Tree is commonly about four Inches Diameter, five Foot in Heighth, and above twelve to the Top of the Tree. Thefe Trees arevery different; for fome fhoot up in two or three Bodies; others in one; their Leaves are, many of them, dead and moft difcoloured, unlefs on very young Trees; a bearing Tree generally yields from two to eight Pounds of Nuts a Year, and each Cod contains from twenty to thirty Nuts. The Manner of curing them is, to cut them down when ripe. and to lay them to fweat three or four Days in the Cods, which is done by laying them in Heaps; after this the Cods are cut, the Nuts taken out and put into a Trough covered with Plantain Leaves, where they fweat again about fixteen or twenty Days; the Nuts that are on each Cod are knittogether by certain Fibres, and have a white kind of Pulp about them, very agreeable to the Palate, as has been hinted before; by their turning and fweating; their little Strings are broken, and their Pulp is imbibed and mingled with the Subftance of the Nut: After which they are put to dry three or four Weeks in the Sun, and then they become of a reddifh-dark Colour. The Cods grow out of the Body, or great Limbs and Boughs ; at the fame Place there are Bloffoms, and young and ripe Fruit. It is planted firft in the Night, and always under Shade; fome fet them under Caffave, others under Plantain Trees, and fome in the Woocis. The Spaniards ufed a certain large fhady Plant, called by them Madre di Cocoa, the Mother of Cocoa; the Engli/h ufe the others only.

It muft always be fheltered from the Northeaft Winds. The People at Famaica feldom tranfplant it, only when it falls, as it does often, in open, poor and dry Lands; for this Tree requires to have a flat, moift, low Soil, which makes them be planted commonly by Rivers, and between Mountains. 'Tis an Obfervation, that it is ill living where there are good Cocoa Walks. In a Year's time, the Plant becomes four Feet high, and has a Leaf fix times as big as an old Tree, which, as the Plant grows bigger, falls off, and a lefler comes in its place. The Trees are almoft always planted at two FeetDiftance; and fometimes at three Years old, where the Ground is good, and the Plant profperous, it begins to bear a little, and then they cut down all or fome of the Shade The Fruit increafes till the tenth or twelfth Year, when the Tree is fuppofed to be in its Prime. The Root generally fhoots out Suckers, they fupply the Place of the old Stock when dead, or cut down; unlefs any ill Quality of the Ground, or Air, kill both.

The Manner of planting them is, in Order, like our Cherry-Gardens: They place a Plantain by every Tree, and when it is grown up it refembles a Cherry Tree; it delights in Shade, and for that Reafon has the Plantain fet by it. The Cocoa-walks are kept clear from Grafs by hoeing and weeding. The Trees begin to bear at three, four, or five Years, and, did they not almoft always die before, would come to Perfection at fifteen Years Growth, and laft till thirty; which renders them the moft profitable Tree in the World, one Acre of them having cleared above two hundred Pounds in a Year

Y y y
but the old Trees planted by the Spaniards being oone by Age, and few now thriving, as the Spanif Negroes foretold, little or none now is produced worthy the Care and Pains in planting and expecting it. Thofe Slaves afcribe its not coming to Perfection to a fuperftitious Caufe, many religious Rites being performed at its Planting by the Spariards, which their Slaves were not permitted to fee. But 'tis probable that wary Nation, as they removed the Art of making Cochineal, and curing Venelloes, into their inland Provinces, which were the Commodities of the Inlands in the Indians Time, and forbad the opening any Mines in them, for fear fome maritime Nation might be tempted to conquer them; fo in tranfplanting the Cocoa from the Caraccas and Guatamala on the Continent, they might conceal, wilfully, fome Secret in its planting from their Slaves.

There is alfo more Indico produced in Famaica, than in any other Colony, by reafon of the great Quantity of Savanah Land, for it thrives beft in fandy Ground. The Seed from whence it is raifed is yellow and round, fomething lefs than a Tare. The Ground is made light by hoeing; then Trenches are dug like thofe our Gardeners prepare for Peafe, into which the Seed is put about March: It grows ripe in eight Weeks Time, and in frefh broken Ground will fpring up about three Foot high, but in others to no more than eighteen Inches. The Stalk is full of Leaves of a deep green Colour, and will, from its firf fowing, yield many Crops in one Year. When it is ripe it is cut and fteeped in Fats twenty. four Hours, then it muft be cleared from the firft Water and put into proper Cifterns, where, when it has been carefully beaten, it fettles about eighteen Hours. In thefe Cifterns are feveral Taps, which let the clearWater run out, and the thick is put into Bags of about three Foot long, made commonly of Ozenbrigs, which being hung up all the liquid Part drops away; when it will drop no longer, it is put into Wooden Boxes, three Foot long, fourteen Inches wide, and one and an half deep; thefe Boxes mult be placed in the Sun till it is very hot, and then taken in till the extreme Heat is over ; this mult be done continually till it is fufficiently dryed. In Land that proves proper for Indico, the Labour of one Hand, in a Year's time, will produce between eighty and one hundred Weight, which may amount from twelve to fifteen Pounds to the Planter, if no Accident happen; for Indico, as well as other Commodities in thofe Parts, is fubject to many; the moft common are Blafting and Worms, by which it is frequently deftroyed.

Piemento is another Natural Production of Famaica, from whence it is called Famaica Pepper, alluding to its Figure and the chief Place of its Growte: the Trees that bear it are generally very tall, and fpreading, haveing a Trunk as thick as one's Thigh. It rifes ftrait, above thirty Foot high, is covered with an extraordinary fmooth Skin of a grey Colour ; it is branched out on every hand, having the End of its Twigs fet with Leaves of feveral Sizes, the largeft being four or five Inches long, and two or three broad, in the Middle, where it is broadeft, and whence it decreafes to both extremes, ending in a Point fimooth, thin, fhining, without any Incifures of a deep green Colour, and ftanding on Foot-Stalks an Inch long; when bruifed very odoriferous, and in all things like the Leaves of a Bay Tree. The Ends of the Twigs are branched into Bunches of Flowers, and each Stalk fuftaining a Flower bending back, within which Bend are many Stamina of a pale green Colour ; to thefe follows a Bunch of crowned Berries, the Crown being made up of four fmall Leaves, which are bigger, when ripe, than Juniper Berries: At firt, when fmall, greenifh, but when they are ripe, black, frooth, and thining; containing in them a moif, green, aromatic Puip, two large Seeds feparated by a Membrane, each of which is a Hemifphere, and both joined make a fpherical Seed.

It grows on all the hilly Part of the Inand of famaica, but chiefly on the North Side; and wherever thefe Trees grow, they are generally left ftanding when other Trees are felled; and they are fometimes planted where they neyer grew, becaufe of the great Profit from the cured

Fruit exported yearly in great Quantities into Europe. The Gamaica Pepper Tree fowers in June, Juhy, and Au guf, but fooner or later, according to their Situation and different Seafon for Rains; and after it flowers the Fruit foon ripens: But'tis to be obferved, that in clear open Grounds it is fooner ripe than in thick Woods. There is no great Difficulty in curing or preferving this Fruit for Ufe; 'tis for the moft Part done by the Negroes. They climb the Trees and pull off the 'Twigs with 'the unripe green Fruit, and afterwards carefully feparate the Fruit from the Twigs and Leaves, which done, they expofe them to the Sun, from the Rifing to the Setting, for many Days; fureading them thin on Cloths, turning them now and then, and carefuily avoiding the Dews, which are there very great. By this means they become a little wrinkled, and from a green, change to a brown Colour, when they are fit for the Market; being of different Sizes, but commonly of the Bignefs of black Pepper; fomething like in Smell and Tafte to Cloves, Juniper Berries, Cinnamon and Pepper, or rather having a peculiar mixt Smell, fomewhat a kin to all of them, from whence it is called All-fpice. The more fragrant and fmaller they are, they are accounted the better.

It is defervedly reckoned the beft and moft temperate, mild and innocent, of all Spices, and fit to come into greater Ufe, and to gain more Ground than it has of the Eaft India Commodities of this kind, almoft all of which it far furpaffes, by promoting the Digeftion of Meat, attenuating tough Humours, moderately heating and ftrengthening the Stomach, expelling Wind, and doing thofe friendly Offices to the Bowels, which we expect from Spices.

The wild Cinnamon Tree, commonly called, though fally, Cortex Winteranus, grows in this Inand ; its Trunk is about the Bignefs of the Piemento Tree, and rifes twenty or thirty Foot high, having many Branches and Twigs hanging downwards, making a very lovely Top; the Bark confifts of two Parts, one outward and another inward; the outward Bark is as thin as a milled Shilling, of whitifh Afh or grey Colour, with fome white Spots here and there upon it, and feveral fhallow Furrows of a darker Colour running variounly through it, of an aromatic Tafte; the inward Bark is much thicker than Cinnamon, being as thick as a milled Crown Piece, fmooth, and of a whiter Colour than the outward, of a much more biting and aromatic Tafte, fomething like that of Cloves, and not glutinous like Cinnamon, but dry and crumbling between the'Teeth; the Leaves come out near the Ends of the Twigs, without any Order, ftanding on Foot-Stalks, each of them two Inches in Length, and one in Breadth; near the End where broadeft and rougheft, being narrow at the Beginning, from whence it augments in Breadth to near. its End, of a yellowifh green Colour, fhining and fmooth, without any Incifures about its Edges, and fomewhat refembling the Leaves of Bay.

The Ends of the Twigs are branched into Bunches of Flowers, ftanding fomewhat like Umbels, each of which has a Fot-Stalk, on the Top of which is a Calix made up of fome little Leaves, in which ftand five fcarlet or purple Patala, within which is a large Stylix; to thefe follow fo many calyculated Berries of the Bignefs of a large Pea, roughifh, green, and containing, within a mucilaginous pale green thin Pulp, four black fhining Seeds of an irregular Figure: All the Parts of this Tree, when frefh, are very hot, aromatic, and biting to the Tafte, fomething like Cloves, which is fo troublefome, as fometimes to need the Remedy of fair Water. It grows in the Savanah Woods, very frequently on each Side the Road, between Paffage Fort and the Town of St Jago de la Vega. The Bark of the Tree is what is chiefly in Ufe, both in the Englifs Plantations, between the Tropics in the Weft Indies, and in Europe, and is without any Difficulty cured, by only cutting off the Bark, and letting it dry in the Shade. The ordinary Sort of People in the Wef Indies ufe it inftead of all other Spices, being thought very good to confume the immoderate Humidity of the Stomach, to help Digeftion, and expel Wind, E $c_{0}$. Rum loofes its difagreeable Smell if mixed with this Bark.

## Chap. III. of the ENGLISH in AMERICA.

The true Cortex Winteranus, for which the Druggifts fell this wild Cinnamon, was brought by Captain Winter, who accompanied Sir Francis Drake in his Voyage round the World, from the Streights of Mageblan.

There is plenty of Cotton in Jamaica, and it is finer than that in the Caribbee Iflands. The Tobacco that was planted there was better than at Barbadoes; but there's fo little it deferves not the Name of a Commodity. Very good tanned Leather is made there: The Tanners have three Barks to tann with, Mangrove, Olive Barks, and another. They tann better than in England; and in fix Weeks the Leather is ready to work into Shoes. There's abundance of Dyers Woods, as Fuftick, Red-wood, Logwood, and others; with feveral Sorts of Sweetwoods. The Iland abounds in Drugs and medicinal Herbs, as Guaiacum, China, Safaparilla, Caffia, Tamarinds, Venilloes, many forts of Miffeltoe; as alfo in falutary Gums and Roots ; the Plant of which Cochineal is made, grows in famaica; and yet the Inhabitants, for want of Knowledge how to cure it, make no Advantage of it ; befides the Eaft Wind blafts it fo, that it feldom or never comes to Maturity

It is not doubted but that there are Copper Mines in the Ifland; and the Spaniards fay the Bells of the great Church at St. Jago were made of Jamaica Metal; 'tis fuppofed there are Silver Mines in it, as well as at $C u b a$, and on the Continent; and there is a Place in the Mountains of Port Royal, or Caguag, where it is reported the Spaniords dug Silver, but the Engligh have not been fo happy as to find it. The Spaniards alfo found Ambergreafe on the Coaft, but the Engli/h have not often had that good Fortune : Yet fome Years ago an ignorant Fellow found 180 Pound Weight of Ambergreafe caft upon the Shore, at a Place called Ambergrease Point, where the Spaniards came ufually once a Year to look for it. This vaft Quantity was divided into two Parts, fuppofed by rolling and tumbling in the Sea; fome fay it is produced from a Creature, as Honey and Silk; and Mr. Tredway, who viewed this Piece, writes, he faw, in fundry Places in this Body, the Beak, Wings, and Part of the Body of the Creature, which he preferved for fome Time; he was alfo told by a Man, that he had feen the Creature alive, and believed they fwarmed as Bees on the Sea Shore, or in the Sea; others fay it is the Excrement of the Whale, and others, that it iffues out of the Root of a Tree.

But, after all, it is the Sugar Cane that is the Glory of famaica, by which the Inhabitants have acquired fuch immenfe Riches. It is generally faid, that the Sugar from St. Chriftopher's, is the beft in the Leeward Ifands; but, I think, it is agreed on all Hands, that the Sugar made in Famaica exceeds that of all our Plantations, though it is made there with much greater Eafe, fince it cures fafter in ten Days at Famaica than in fix Months at Barbadoes. There were in the Year 1670 upwards of threefcore Mills in Famaica, which were computed to make about two Millions of Pounds Weight of Sugar ; but fome Writers tell us, they make ten Times as much at prefent; whether that Computation be right or not, is imponible for me to decide; but this is certain, that there is Ground enough unoccupied in that Country to make much more, fince it is an hundred and forty Miles long and fixty broad; and it contains, according to a moderate Computation, four Millions of Acres, of which, though there may be about one-fourth, in which Englifh Subjects have Property; yet, it is certain, that not above a fourth of that fourth is actually planted, and a great deal of this is employed to other Purpofes, than that of raifing Sugar. It is impofible to fay precifely what Quantity may be made here, becaufe Seafons differ, and other Accidents intervene; fome have thought they did not rife beyond the Truth, in affirming, that it pro-
duces one hundred thoufand Hodfheads, which, duces one hundred thoufand Hogfheads, which, though it appears a moft prodigious Quantity, yet there are many Circumftances that concur to render it credible. As for the Number of People in this Ifland various Computations have been made; but according to the bert Accounts I have been able to gain, there may be, at this Time, feventy thoufand white People therein, and one hundred and twenty thoufand Negroes.

We may from hence judge of the almof inexprefible Advantages which this Inand affords to Great Britain for, as all our Hiftories of Famaica, and almoft every Voyage thither, that has been printed, fpeaks largely of the Luxury and Expence of all Degrees of People there, which is a plain Proof of their Wealth and vaft Acquifitions; fo we may reft fatisfied, that whatever Shew they may make, whatever Appearance there may be of Magnift cence there; yet the real Produce of all their Labour, and of all their Commerce, comes over here to Britain, and maintains and enriches the induftrious Part of our People; fo that there can be nothing more abfurd, or unreafonable, than to grudge or envy the People fettled there, the great Fortunes they acquire and poffefs, or to repine at the Pomp and Splendor in which they live; becaufe, whatever it may be in Appearance, it is perhaps an indifferent Reward for their dwelling at fuch a Diftance from Home, and for the Hazards and Labours they run through to acquire fuch Fortunes, but this will appear much more clearly if we advert a little to the Situation of Famaica, and confider the vaft Benefits that accrue from thence, in all Times, and under all Circumftances, of War as well as Peace.

As we are at prefent in the former Situation, we will treat firft of that. There is conftantly in time of Wai a confiderable Naval Force kept here, and though this be attended with a great Expence to the Britiß Nation, yet it certainly is, or at leaft ought to be, a great Comfort to us, that our Money is fpent with our Countrymen, that it increafes the Value of their Plantations, and which is ftill more to our Purpofe, 'that, fooner or later, all that is fpent and circulated there, by fome Channel or other returns hither, fo that at the long run the Nation lofes nothing by the vaft Charge fhe is at in maintaining Fleets upon this Coaft. We ought likewife to reflect, that in a Time of War there are many Prizes taken and carried into Famaica, which makes an unufual and almoft incredible Plenty of Silver, and is the true Caufe of the Dearnefs and high Price of Neceffaries in that Country, all which alfo in Time comes over hither ; fo that when we hear of valt Eftates raifed there in a fhort Space of Time, it ought to afford us the higheft Satiffaction; becaufe, thofe who make thofe large Fortunes, or their immediate Defcendants, come over hither, and. either veft their Money in our Funds or purchafe Lands here. Thus a State of War, which implies a Sufpenfion of Trade, produces few of the Inconveniencies that ufually attend fuch a Sufpenfion; becaufe, in Jamaica, the very Confequences of War become a kind of Trade, and the Wealth arifing from them takes the fame Courfe, and runs in the very individual Channels that any other Trade would do, that is, they finally enrich and tend to the Benefit of the Mother-Country.
But, in time of Peace, befides what we draw from Famaica, confidered barely in the light of a Sugar Plantation, we are to confider likewife whatever accrues to the Inhabitants from their Intercourfe and Dealings with other People, fince whatever they gain is for us; and therefore, it may not, in this Place, be improper to fay fomething of the Trade carried on by the Englifs at $\mathrm{Fa}_{\text {- }}$ maica with the Spaniards on the Continent, which is thus managed: The Merchant or Mafter of the Englifs Ship bound for this Voyage being furnifhed with a proper Cargo of dry Goods and Negroes, commonly makes firft for the Coaft near the Harbour of Porto Bello ; and in War at the Grout, within Monkey-Key, a very good. Harbour, within four Miles of the Town; from thence it is ufual for the Merchant or Mafter of the Ship to fend one who can fpeak Spanifb, as many of thefe Traders do to the Town, to give Notice of her Arrival to the Dealers, who appoint the Time and Place for the Spaniards Canoe to attend them; they come accordingly, and having purchafed as many Negroes and as much Dry Goods as they think fit, they return to the Town, fetch the Money, bring it aboard, and take the Goods Here fuch a Ship lies fometimes five or fix Weeks trading with the Sponiards; for after the firft Market is pretty well over, the Dealers, who have foon Information of her being on the Coaft, come from Panama over the Ift bnurs to trade, travelling like Peafants, with Mules bearing
their Silver in Jars; and if any of the King's Officers meet them nothing appears but Meal, which they pretend to be carrying to Porto Bello; but for the moft part they travel through Woods and Bye-Ways for fear of being difcovered by thofe Officers. When they have bought what Negroes and Goods their Money will purchate, which they fell again up in the Country, and get very well by it ; the Goods are made up in little Packs fit for one Man to carry, and the Englifh fupply them with as much Provifions as will ferve them Home, crofs the Iftbmus to the Soutb-Sea, for they come very far off.

A fingle familiar Inftance will make all this very plain. An Englifh Ship lying between Chagre and Porto Novo, a Signal was given from the Caftle of Cbagre, and the anchored two Miles from it. The Spaniards came to her, and one Merchant bought feventy Negroes and a good Quantity of Dry Goods, amounting to three or four thoufand Pounds, which was brought on Mules to the Water-fide, part Gold and part Silver. From the Grout the Englifh Ship failed to the Brew near Carthagena, where the lay to trade with the Merchants of that City, from which it is about eight Miles diftant. The People of the Inand Brew gave their Merchants Notice of her Arrival, and they came and traded as the others did at the Grout; this trading Ship in about two Months difpofed of one hundred and fifty Negroes and a good Cargo of Dry Goods, by which, probably, the Proprietors cleared two thoufand Pounds more than would have been got in any other Market; a plain Proof of the very great Advantage of this Trade between Famaica and Nere Spain, of which we fee the Spaniards are fo fond, that they run as great Hazards in buying the Merchandizes as the Englifh do in felling it to them.

There is likewife in time of Peace a great deal of Money brought into Famaica by the Adrento Trade, or Sale of Negroes, granted to us by the Spanierds in the Treaty of Utrecht, which, whatever it may be in other Refpects, has certainly proved a very beneficial Trade to that Ifland. I have indeed heard fome very able and intelligent Perfons intimate, that if inftead of erecting a new Company for the Management of this Trade, it had been put into the Hands of one already erected, I mean the Royal African Company, it had preferved that once famous Corporation from falling into its prefent melancholy Condition, as well as fecured much larger Profits to the Nation, which are Things that deferve to be confidered before we fet in earneft about any Negotiation with Spain, that we may indemnify ourfelves from the heavy Loffes and vaft Expences of this War by the Fruits of a folid and well regulated Peace; which, without doubt, may be as eafily obtained as one of a loofer and more precarious Nature; it being the Intereft of the Spaniards as well as of ourfelves, to have all Matters fo adjufted, as to prevent not only Wars, but Difputes for the future.
Before I quit this Subject I find it abfolutely neceffary to take Notice of another Branch of Trade carried on from Famaica, which has been made the Subject of much Debate; I mean the cutting of Logwood in the Bay of Campeacby. This Matter came to be confidered with the utmoft Care and Circumfpection by the Board of Trade and Plantations in the Year IクIク, who folemnly reported that we had an undoubted Right to that Trade, in which the Subjects of the Crown of England had been maintained and fupported by former Kings, his Majefty's Royal Predeceffors. They obferve, that Logwood is the Product of Fucatan, a Peninfula that extends itfelf an hundred Leagues into the North Sea, on each Side whereof are the Bays of Campeachy and Honduras, where the Wood is chiefly cut by the Englijh.

The Spaniards are poffeffed only of the Town of Campeachy, and two more fmall Places in this part of America, and that the reft of fucatan was an uninhabited Defart, 'till our Logwood Cutters fettled at Cape Catoch, the North Eaft Promontory of Fucatan, or at Trift, or the Laguna de Terminos in the Bay of Campeacby, before,' or in, the Year 1667, when a Treaty of Peace was concluded between Great Britain and Spain; and thereupon the Privateers of Famaica, who ufed to difturb the Spanifb Trade, being obliged to quit that way of Life, became

Logwood Cutters, and fettled with others of their Countrymen at Trif, and the Lake de Terminos aforefaid, and great Quantities of Logwood were afterwards imported from thence to Old and Nero England.
They obferved that Sir Tbomas Lynch, Governor of Famaica, under whofe Direction that Trade was carried on, in the Year 1671 , gave his Majefty King Cbarles II. the following Reafons for his encouraging this Trade. ift. That the Englifb had then ufed it for divers Years. 2 dly, That the Logwood was cut in defolate and uninhabited Places. 3 dly, That it was a Right confirmed by Treaty with the Spaniards. 4thly, That thereby we excluded the French and Dutch from that Trade. 5 thly, That the Spaniards had not then made any Complaint of it. 6thly, That this Employment made the reducing our Privateers, who ufed to commit Hoftilities againft the Spaniards, more eafy. Laftly, that this Trade employed an hundred fail of Ships annually, and encreafed his Majefty's Cuftoms, and the Trade of the Nation, more than any of his American Colonies.
Sir Thomas Modyford, the fucceeding Governor of Famaica, informed the Lords of the Privy Council, in the Year 1672, that the Englifb Logwood Cutters had ufed that Trade for three Years, and that they had planted Corn, and built Houfes, for their Conveniency; and though they frequently hunted Deer in the Country, they had never feen a fingle Spaniard, or any other Man in that Part of the Country, in all the Time they had been there; and concludes, that their felling of Wood, building of Houfes, and clearing and planting the Ground, was fuch a Poffeffion, as in the Weft-Indies gave them an undoubted Right to the Countries they thus occupied. And Sir Thbomas, to juftify his Conduct in encouraging this Trade, in the Year 1672 (when the Spaniards firft complained of it) fent home the Copies of feveral Depofitions he had taken from the Mafters of Ships, and others concerned in the Logwood Trade, with a Proclamation he had iffued for the Regulation and Security thereof, as a Confirmation of what he had afferted; and the Lords of the Council thereupon let the Governor know that they approved what he had done.
The I.ords Commifioners of Trade further obferved, that there is a Claufe in the abovefaid American Treaty, which provides that the King of Great Britain fliall keep and poffers, in full Right of Sovereignty and Propriety, all Places fituate in the Weft Indies, or any Part of America, which he and his Subjects were then in Poffeffion of; and that they actually were then, and had been for feveral Years, in Poffeffion of Trift and the Lake de Terminos, and feveral other Places in the Province of Jucatan, which the Spaniards began to fet up a Title to about this Time, notwithftanding they enjoyed the full Benefit of what Great Britain ftipulated on her Part, viz. ift. The fecuring the Trade of the Spanifh Weft Indies to them; a Point which had never before been yielded. 2dly, The obliging the Privateers to ceafe their Depredations, whereby the Spanifb Trade had been miferably harraffed; and this had been effected chiefly by the Care of his Majefty's Governors, and the employing thofe People in the Logwood Trade.

That in 1680 the Spaniards proceeded in a hoftile Manner to difpoffers the Englifb Logwood Cutters of their Settlements of Trift, \&'c. and even of the Illand of Providence, a Britifb Plantation to which they had no Pretence ; but thefe were foon repoffeffed by his Majefty's Subjects, and the Logwood Trade, in 1682, was greater than ever, and was maintained and carried on by the Englifh, till the Treaty of Uirecht I7I3; when the Adjuftment and Settlement thereof came again 'under Confideration; and it was ftipulated that only fuch Places fhould be reftored to the Spaniards, as had been taken during the preceding War (in the Reign of Queen Anne) among which, Trift could not be reckoned one, becaufe the Englifh were in Poffelfion of it many Years before that War commenced, and, indeed, had been in the actual Poffeffion of it from 1699 to 1713 , except for two or three Months in the Year 1689 , when the Spaniards furprized and expelled them by Force, as related above.

They farther reprefented it by a Claufe in the Treaty

## Chap. III. of the ENGLISH in AMERICA.

of Commerce, concluded in November 1713. The American Treaty of 1670 is confirmed and ratified; and it was thereby declared that this fhould be underftood to be without Prejudice to any Liberty or Power, which the Subjects of Great Britain enjoyed before, either through Right, Sufferance, or Indulgence; and the Englifs having long enjoyed the Liberty of cutting Logwood, whither through Right, Sufferance, or Indulgence, they are by this Treaty entitled to the fame, in as plain and exprefs Words as can be imagined. Then the Lords Commiffioners proceeded to fhew the Importance of the Logwood Trade to Great Britain, by the following Account of what Logwood had been imported fince the late War.

|  | Tons. | C. | Q. | lb. |
| :--- | :---: | :---: | :---: | :---: |
| In 17I3 | 2 I89 | 15 | 3 | 22 |
| In I7I4 | 4848 | 14 | 3 | 24 |
| In 17I5 | 5863 | 12 | 1 | 14 |
| In 1716 | 2032 | I7 | 2 | 0 |
|  | 14935 | 0 | 3 | 4 |

This is, communibus annis, 374I Tons, which cannot be computed at lefs than 60,000 l. per Annum, though the Price is already reduced from $40 \%$ to $16 \%$ per Ton. And before your Majefty's Subjects were fettled there, it was worth rool. a Ton. Nor is this Trade lefs neceffary than beneficial to your Majefty's Dominions, by Reafon of the great Encouragement it gives to our Seamen and Shipping, which at all times require a particular Attention, but now efpecially ; when it is daily obferved that very many Briti/s Mariners, either through defect of the Laws, or for want of Employment at home, or in hopes of greater Advantage abroad, enter themfelves into foreign Service.

Upon the whole, they gave it as their Opinion, that fome Time before, and long after, the Year 1670 , the Subjects of England were poffeffed of, and quietly enjoyed, Part of the Country of Fucatan, uninhabited by the Spaniards, and confequently the Right of Britijb Subjects, to cut Logwood, and even to Rettle in that Country, was not only certain and apparent, but was alfo fettled and confirmed by Treaty.

This Reprefentation is certainly more than fufficient to convince us, here at home, of our being well intitled to this Trade; and therefore it is a Point that deferves to be maturely reflected upon, before any new Negotiation for Peace, with the Crown of Spain, is commenced; for, without doubt, Care ought to be taken that our Right, in this Refpect, be acknowledged and admitted, in fuch exprefs Terms, that hereafter no Difputes may arrfe about it, or afford Pretences for fitting out Guarda Coftas to impede and difturb our Navigation. We know, and have heard, what high and loud Complaints were made againft the Miniftry in the Reign of Queen Anne, for not obliging the Frencb to reftore Cape Breton, and for not compelling the Spaniards to make fuch Conceffions in favour of our Trade, as were neceffary for the carrying it on with Safety and Advantage. But at - prefent Cape Breton is ours, and the Superiority of our naval Force in the $W e \int \mathcal{\imath}$-Indies is fo great, that it would be, certainly, an unpardonable Omiffion, fhould there be any thing left to object on any of thefe Heads for the future. The capital Trade of this Nation, at prefent, that which employs moft Ships, moft Seamen, and moft Manufactures, is our Commerce to our Plantations; and therefore the fecuring, encouraging, and improving this Commerce, ought to be the principal Object of our Statefmen; who, as they often lay heavy Burdens upon the Subjects, to carry their Projects into Execution, fo they are in Intereft, and in Confcience, bound to pay the utmoft Attention to thofe Points, which regard the filling again the Purfes of thofe to whom they have conftant Recourfe for the public Service.
23. We have now gone through this Section, and have fhewn when, how, and with what Views our Settlements, within this Period of Time, were made. It is 'eafy to perceive from thence, what prodigious Advantages have been derived from chem to the People of this

Vol. II. Numb. LXXXVIII.

Kingdom. If we confider that at the Death of Queen Elizabeth, we had not a fingle Cottage erected in America; and that at the Time of the Reftoration of King Cbarles II. we had fettled from Nova Scotia to the utmoft Bounds of Virginia, befides peopling many of the Iflands, it muft appear an amazing thing. The vaft Change in our Circumftances, in the Space of fixty Years; the mighty Augmentation of our Shipping; the vaft Increafe of our Coin, and all the other certain and indubitable Signs of an extended and profitable Commerce, fufficiently prove the Value and Importance of our Plantations s for I make no fcruple of affirming that we owed them all to thefe. To fay the Truth, the civil War, which was fo ruinous and fatal to thefe Kingdoms, was, by the kind Difpofition of Providence, highly ferviceable to the Plantations. In the firft Ferment of the Nation, we have feen that Newe England was planted and peopled as it were ats once; and in fucceeding times; when the Conftitution was overturned, and the loyal Nobility and Gentry, who were deprived of their Eftates, by thofe the Fortune of War had made their Mafters, and had not even the Liberty of ftarving here in Peace, Virginia and Barbadoes were their Refuge : There the Wicked ceared from troubling, and there the Weary were at reft. The Spirit' and Vigour with which they fet about improving the Places of their Exile, foon changed them into Habitations of Delight, and where they looked only for a quiet and a bare Subfiftance, the Bleffing of God upon their Induftry produced them vaft Eftates.

We may fafely venture to affirm, that a little after the Reftoration the Sugar Colonies rofe to their greateft Height, Famaica only excepted. Since then the Tobacco Colonies have encreafed greatly, and fo have the Bread Colonies likewife; for the Reader is to obferve, that Famaica, Barbadoes, and moft of the Leeward Inlands, are furnifhed with Provifions from the northern Colonies, and with Garden Stuff from the Iflands of Bermudas. But it has fo fallen out, that though thefe Colonies have fuch a natural Dependance upon each other, yet Complaints have arifen, and we have feen both Sides appealing to the Britifb Parliament, the one for Relief, and the other for Protection. The Occafion of thefe Difputes was this :

A Bill was brought into the Houfe of Commons on the Petition of the Merchants and Planters concerned in the Sugar Colonies in the Year 1731, for fecuring and encouraging the Trade of the faid Colonies. The Intent whereof was to enable them to fupply foreign Markets, with Sugar, as cheap as the French, which they fuggefted might be done by prohibiting the Exportation of Horfes, Provifions, and Lumber, from our Northern Colonies on the Continent of America, to the French and Dutch Plantations, and by prohibiting the Importation of all foreign Sugar, Rum, and Moloffes, to our Northern Colonies; for the permiting of this, they fuggefted, was giving the French and Dutch, at leaft, twenty-five per Cent, upon the whole Produce of their Sugar Colonies; and thereby enabled them to afford their Sugar, at foreign Markets, cheaper than our Sugar Colonies can. It was finding them Plantation Neceffaries, as well as Money to pay for them ; that is, the foreign Colonies paid our northern Colonies for their Horfes; Provifions, and Lumber, with Moloffes and Rum, which otherwife the French muft throw away as they did formerly. To induce the Parliament to pais this Bill, the Sugar Colonies endeavoured to thew the vaft Importance thofe Colonies are of to Great Britain, obferving that they produced, at an Average, eighty-five thoufand Hogfheads of Sugar annually at leaft, which, at ten Pound a Hogfhead, amounted to eight hundred and fifty thoufand Pounds. This Sum, or much the greatert Part of it, as they affirm, is fpent here by the feveral Proprietors of Eftates in the Wefi-Indies, who live in England, or is fent out annually in the Manufactures of Great Britain, either directly to the Sugar Colonies, or to the Coaft of Guinea, to purchafe Negroes for the Ufe of thofe Colonies.

Befides this neat Produce of Sugar, another vaft Advantage arifing from the Sugar Colony Trade, is the large Number of Ships and Seamen employed and maintained in the Courfe of our Commerce with them; and they

Z z z
calculate
calculate that there are three hundred fail of Ships fent from Great Britain (not to mention thofe from other Places) every Year, to our Sugar Colonies, which are navigated by about five thoufand five hundred Seamen; and that the Freight from the Sugars, brought hither, amounts to an hundred and feventy thoufand Pounds a Year; and the Duties, Commiffions, $\mathcal{E}^{2} c$. to little lefs than two hundred thoufand Pounds more, which upon the whole is a good one Million two hundred thoufand Pounds a Year Profit and Advantage to Great Britain. But befides this confiderable Article of Sugar, they obferve that thefe Illands produce great Quantities of Cotton, Ginger, Indico, Aloes, $E_{c}$. which are all brought to Great Britain, where the whole Profit of all our Plantation Product, does and muft centre. They have been equal, they infift, to the Mines of the Spanils Weft-Indies, and have contributed, in a particular Manner, to the Trade, Navigation, and Wealth of this Kingdom.
But at prefent they were in a very bad and languifhing Condition: Their Duties high, their Planters poor, their Soil worn out, and their Fortifications deftroyed. They obferve farther, that the French Sugar Inands are much larger, more beautiful, better inhabited, pay lefs Duties, and have greater Encouragement from France than ours have from Great Britain. And that if our Sugar Inands, for want of being put in a pofture of Defence, fhould either be taken, as fome have been, or moulder, and come to ruin, it would be one of the greateft Blows this Kingdom ever received. It would then lofe the Benefit of all their Product imported hither ; it would lofe the Exports of our Woollen and other Manufactures thither, to the amount of feveral hundred thoufand Pounds a Year ; it would lofe, in a great Meafure, the Trade to Guinea; it would lofe the employing and maintaining of many hundred Britifs Ships, and many thoufand Britifb Seamen every Year; and laftly, it would lofe one of the moft confiderable and main Branches of our Funds, the Deficiency of which muft be made good, and the Weight and Burthen fall on our Lands here at home.

To this Bill, however, many Objections were made by fuch as were employed here in behalf of the Northern Colonies, and amongft them the moft material were thefe : Ift, That fuch a Prohibition as was defired by the Bill, would put the French upon fupplying themfelves with Lumber from their own Settlements, and the Britifh Colonies on the Continent would thereby lofe the Trade in which many Ships and Seamen were employed. 2dly, That the Britib Colonies could not take off their Lumber, or fupply them with Rum for their Fifheries, their Trade with the Indians, and what they wanted in the Harveft-time. 3 dly, That the reftraining the Northern Colonies from difpofing of their Horfes, Provifions, and Lumber to the French and Hollanders, might draw them into Employments prejudicial to Great Britain. 4thly, The French would diftil their Moloffes themfelves, and fupply the Fifheries with Rum, if the Northern Colonies did not. 5 thly, If the Northern Colonies did not take off the French Sugars, they would carry them to Market themfelves. 6thly, If the Importation of French and Dutch Rum and Molofes into Nere England was prohibited, and they could go to no other Market for Rum, or fell their Lumber and Provifions any where elfe, the Englifh Sugar Colonies, like other Monopolies, would exact an unreafonable Price for their Rum, and beat down the Price of Lumber, and other Goods, as low as they faw fit. 7 thly, That the French and Dutch Colonies furnifh the Northern Colonies with Money, which they bring to Great Britain and lay out in our Manufactures. 8thly, That the Luxury and Extravagance of the Sugar Colonies was the Occafion of this Decline. And gthly, That the Trade of the Sugar Colonies, was ftill vaftly increafing; inftancing in Barbadoes, which, in the Year 1730 , imported twenty two thoufand feven hundred and fixtynine Hogfheads of Sugar into England, valued at 340,396 Pounds; and that this was the Neat Profit, they infifted, becaufe it was admitted that the Rum and Moloffes of Sugar Plantations bear the Charges of them: The Sugar Planters therefore have no Reafon to complain, when
fo fmall an Inand as Barbadoes produced fo vaft a Neat Profit.

As there is nothing can contribute more to make this Subject thoroughly underftood, and to point out effectually what the Inhabitants of the Colonies take to be their refpective Interefts, I think it will be neceffary to add the Replies or Solutions, given by the Friends of the Sugar Colonies to thefe Objections. As to the firft, That the French, if not fupplied from the Northern Colonies, 'would furnifh their own Settlements with Lumber, they faid, That the French could not be fupplied with Lumber from their own Settlements; or, if they could, it muft be at great Charge and Expence, fince the only Places they can pretend to be fupplied from, are Cape Breton and Quebec. Some indeed have gone fo far, and been fo extravagant, as to imagine that the French Inands may be fupplied with Lumber from the Bay of Apalachi, or the Settlement of Milfyippi: But we mult confider that great Snows are neceffary for drawing down Trees to the Sides of Rivers; and likewife (upon the Snow's melting) for floating them down to the Mills; and, if they had Snows, thefe Countries do not produce any Quantity of fuch kind of Wood as is proper to work into Lumber; nor have they any fuch Mills, which are expenfive to build, and the Labour and Time required to manufacture fuch Trees into Lumber, would make it extremely dear to the French; befides the Navigation to and from fuch Places, to Martinico, and the French Inands fo much to Windward, would be fo difficult and long for fuch Veffels as are proper to carry Lumber, by reafon of the Calms, contrary Winds, and ftrong Currents againft them, that fuch a Project would probably end in the Ruin of the People concerned in it ; which would put an End to fuch Endeavours of the French.

As to Cape Breton, though it has the Advantage of Snows, yet it has no other Conveniency ; it produces little Wood; they have few Rivers, and thofe longer frozen, and fooner dried, than in New England: It is thinly inhabited, and is a fmall, and, in that Light, but an inconfiderable Inland, commodious only for fifhing. And as for Quebec, allowing all the Advantages the other Places want, and all that our Northern Colonies have, with Refpect to Wood, and Mills; yet the Navigation of the River St. Laurence (which is practicable only a few Months in the Year) is fo very long and dangerous, that all the Lumber from thence muft be exceeding dear; and though fome may think that thefe Difficulties in time may be removed, and the Navigation of the River become both fafe and eafy, it may be wifhed the French had no Supply of Lumber till thefe Difficulties were removed; for thofe Difficulties muft always continue from the Nature of the Coaft, the Rocks, Sholes, and Sands, in that River, and from the Inclemency of the Air, and other natural Caufes; which will make that Navigation for ever unfafe. If then the French cannot be fupplied with Lumber, or at leaft not upon any reafonable Terms, How much will thïs give our Sugar Colonies an Advantage over the French? But let us fuppofe the utmoft and worft that can be: That they can be fupplied with Lumber from their own Settlements, yet, What muft the Lumber be bought with? Not with Rum and Moloffes, but with Money : So that if this Prohibition of foreign Rum and Moloffes takes place, fo much will be loft to the French Plantations, becaufe they can have no Vent for their Rum, as interfering with Brandy, the Product of France.

But what ftronger Argument can we have, that the Trade carried on by fome of the Northern Colonies is a prejudicial Trade, than the Permiffion of it by the French themfelves? They underftand the whole Compals of Trade perfectly well, and fteadily purfue their Interefts: They know that their Colonies either cannot be fupplied at all with Horfes, Lumber, and other Neceffaries, or elfe they muft purchafe them at a great Expence: 'They find they have them for Rum and Moloffes, which is all clear Gain to them; that they fave at leaft twenty-five per Cent. in having Lumber and Horfes fo conveniently from the Northern Colonies; and get twenty-five per Cent. by their Rum and Moloffes, which elfe would be all

## Chap. III. of the ENGLISH in AMERICA.

Lofs to them; and what is more, they plainly perceive that this Trade muft fhortly and effectually ruin and deftroy our Sugar Plantations, by inhancing the Price of our Plantation Neceflaries, and ftopping the Product of our Manufacture ; however fpecious therefore the Argument may be in favour of this Trade, nothing lefs than a prohibition of Horfes and Lumber, as well as of foreign Sugar, Rum, and Moloffes, will be of any real Service or Benefit to the Sugar Colonies.

For if you allow them to carry Lumber, what muft they have in Exchange for it but Sugar? And how will it be poffible, on fo long a Coaft as feven or eight hundred Miles, as that of thofe northern Colonies, where there are fo many Bays, Creeks, and Rivers, and fo few Officers, to prevent the Running of thefe Goods, let your Penalties be never fo ftrict. But it may be faid, perhaps, that France will allow them to carry their Rum to their own Settlements on the Continent; but that is altogether as improbable and as unlikely, as that we fhould fuffer Ireland to fupply our Plantations with woollen Manufactures. Thofe Colonies there are abundantly fupplied with Brandy from France, very cheap, and which is a Spirit much better liked, and what they have been ufed to.

As to the fecond Objestion, that the Englifh Sugar Colonies cannot take off the Lumber they have, or fupply them with the Rum they want, they anfwered, if the Trade and Navigation from the Britij/ Colonies on the Continent, to the foreign Colonies, be prejudicial to the Sugar Colonies, and to Great Britain, and if the reftraining it will effectually diftrefs the French in the Sugar Trade, it ought to be prohibited, though fome few Traders fhall fuffer Hardfhips ańd Inconveniency by it. As to difpofing of their Lumber, the Sugar Colonies have more Reafon to apprehend that they fhall find a Want of it, than that the New England People will have much upon their Hands; at leaft, if what they fay be true, and founded in Fact. For we have for many Years been alarmed with Scarcity of Lumber in Newe England, and we have felt the Effects of it in the advanced Price we have paid for it, for fome Time, upon this Pretence. Thofe who were principally concerned there, in the Lumber Trade, complained laft Year, 1730, of the great Want of Oak and Firr near the Rivers on which their Saw-Mills ftand; and as they are reftrained by feveral Acts of Parliament from cutting the King's Trees, they will hardly be able to fupply us long with Lumber, of private Property, at any reafonable Rate, which deferves Confideration. The other Part of this Objection, That our Sugar Colonies are not able to fupply them with a fufficient Quantity of Rum, is as groundlefs as the former. A Gentleman of Diftinction, of St. Cbrifopher's, informed the Committee, that himfelf made two thoufand Gallons of Rum a Year, but that if he had Encouragement he could make twenty thoufand Gallons; and the other Gentlemen of St. Cbrijtopber's, Nevis, and Montferrat, who made little or no Rum now, could make a very great Quantity, if there was a Demand for it. Therefore the Queftion that was afked by a New England Gentleman, whether we have any Rum left on our Hands at the End of the Year, is not at all to the Purpofe, though at firf Sight it feems fo.

The Diftillers in Newe Englond find this Trade in Spirits, made of foreign Moloffes, very profitable, and for that Rearon raife Objections which have nothing in them, in order to make Bofon the great Staple of Rum. For fhould the Prohibition take Place on foreign Rum and Moloffes, then our Sugar Colonies might fend again their Rum to Virginia, Maryland, Carolina, and Nerefoundland, as they did before, and fave the Lives of many hundred of poor Wretches, who, if this Trade be not ftopped, will probably be deftroyed by this pernicious Spirit, made of foreign Moloffes, which is very unwholfome. If we fhould admit, for Argument's fake, that the French Sugar Colonies, and Surinam (belonging to the Dutch) do take off one half of the Nere England Lumber (which by the Way is more than can be proved) the Deficiency then of the Demand of Lumber, will be one Moiety. Now if it can be proved that the Britifb Sugar Colonies, upon a proper Encouragement,
might be improved fufficiently to make as much more Rum and Sugar as they now do, it will follow that the Britijh Sugar Colonies may take off all the New England Lumber.

Barbadoes is allowed to be at its Perfection, and per ${ }^{-}$ haps incapable of being farther improved, fo as to increafe its annual Product of Sugar and Rum. Antigua is capable of farther Improvements, and may enlarge its Product of Sugar, according to the beft Computations, at leaft, one fifth Part per annum; as to the Product of Rum there, it may certainly be enlarged near one half upon proper Encouragement, for the Rum it now makes is not quite one half of its Product of Sugar: That is to fay, if Antigua makes twenty thoufand HogTheads of Sugar per annum, its Product of Rum is not quite ten thoufand. But it is evident from the Experience of Barbadoes, that out of twenty thoufand Hogfheads of Sugar, there ought to be made near fourteen thoufand Hogheads of Rum. And this Increare, both of Sugar and Rum, would certainly be made if there was proper Encouragement. Mont ferrat, Nevis, and St. Cbrijfopher's, for want of Encouragement, do not make one Hogthead of Rum for three Hogfheads of Sugar. Whereas it is evident, by the Experience of Barbadoes, that three Hoghheads of Sugar ought to produce two Hogheads of Rum ; confequently the Product of Rum in thefe three Inands might be, upon proper Encouragement, encreafed to as much more as it now is. Add to this the Improvement to be made in thofe Inlands, by which the Quantity of Sugar would be encreafed. It will follow ftill farther, that the Quantity of Rum which thofe Illands are capable of making, would be as much more as they now make, and confequently the Demand for Lumber would be proporti-. onable. Famaica, the largeft of all the Britifa Sugar Colonies, is yet but in its Infancy; having now as much Land uncultivated, as would produce above three times its prefent Product if cultivated, as it certainly would be upon proper Encouragement.

But farther it appeared by the Cuftom-houfe Books, that all the Rritijs Sugar Colonies do produce about one hundred thoufand Hogfheads of Sugar per anmum; and they ought, in proportion, to make about feventy thoufand Hogfheads of Rum; a Quantity more than fufficient to fupply the Nero England Fifhery, and Indian Trade, even according to their own Computation. But the prefent Product of the Sugar Colonies, under all the incumbent Difadvantages, is more than they of NereEngland can prove to be neceffary to both thofe Trades; nay, on the contrary, they will have a Proof fooner than defired, that their Fifhery and Indian Trade do not take off one half of the Rum, now actually made in the Sugar Colonies. Soutb Carolina trades with eight thoufand Indians, and yet nine hundred Hogfheads is the moft they ever imported in one Year, both to fupply their home Confumption, all their Trade with thefe eight thoufand Indians, and to trade to other Ports with; and yet this is a Colony that is the hotteft, has the largeft Harveft of Rice, $\mathcal{E}^{\circ}$. and is not fo well fupplied with Beer, $\mathrm{E}_{\mathrm{c}}$. as the other Northern Colonies; fo let us allow this Colony of South Carolina thefe nine hundred Hogheads; North Carolina one thoufand HogTheads; Virginia and Maryland three thoufand Hogheads; New York and Pbiladelpbia four thoufand Hoghheads; Rbode Ifland and Nerw England ten thoufand; which Calculations both by their refpective Cuftom-houfe Accounts, and by the greateft Eftimates that ever have been made, are too large, and yet the whole amounts but to eighteen thoufand and nine hundred Hog fheads; whereas the Sugar Colonies produce forty thoufand, and might fifty-five thoufand, Hogtheads. It was obferved alfo, that the Newe England People thus taking from the Frencb their Moloffes, Rum, and Sugar, and fupplying all the other Northern Colonies, as well as Nerefoundland, Great Britain, Ireland, and Africa, with large Quantities, thereof, was a very great Hurt to the Revenue ; for if thefe Places were not thus fupplied, they muft be fupplied by our own Sugar Colonies, and then every thoufand Pounds Value of Rum, or Moloffes, of our own Growth, muft pay his Majefty a Duty of
forty-
forty-five Pounds, and every thoufand Pounds value of Sugar a Duty of one hundred and twenty Pounds. It might have been added that it was likewife a great Hurt to the Trade and Navigation of this Kingdom, as 'well as to the Sugar Colonies, that we cannot fupply thofe Places with Rum, Sugar, and Moloffes of our own Growth, and in Ships and Veffels of this Kingdom, without the Difadvantage of paying for our Rum and Moloffes a Duty of four and a half per Cent. when Nere England can fupply all the Markets with Rum, Sugar, and Moloffes, of foreign Growth, without paying any of thefe Duties. Was it not for this Advantage they have over us, a great many of our Veffels that mifs a Freight of Sugar in the Weft-Indies for London, would take fome Rum, Moloffes, and Sugar, and go to Newefoundland and barter it for Fifh or Oil, and then proceed to fome other Market with it, and might probably employ themfelves to Advantage, or might, with a little Rum, Sugar, and Moloffes, go to North Carolina, \&cc. and barter them for a Cargo of Pitch, Tar, and Skins, and bring them to Great Britain.

As to what is alledged, That the reftraining the Northern Colonies from the difpofing of their Horfes, Provifions, and Lumber to the French and Hollanders, might put them upon fome Employment prejudicial to Great Britain, it is anfwered, That it hath been fhewn already, that there is more Reafon to fear the Inlands will not be fupplied with Lumber as they ought to be, than that the Northern Colonies will want a Vent for their Lumber; but if the Britijb Colonies could not take off their Lumber, they might fend it to Spain, or Portugal, or to Great Britain, where it might be imported Duty-free. They might employ themfelves in raifing naval Stores; the Government hath given them a large Bounty upon that Trade, which would be of vaft Advantage to our Navigation, and fave the Nation three or four hundred thoufand Pounds a Year, which is fent out annually to purchafe naval Stores with from the North. But this favourite Trade with the foreign Sugar Colonies, hath diverted them from that excellent Defign, to the enriching of the French, and to the great Prejudice and almoft Ruin of our own. As to the fourth Objection : That the French would diftil their Moloffes themfelves, and fupply the Finheries with Rum, if the Northern Colonies did not ; it was anfwered, That the French diftil but very little Rum at prefent, and know little of the Matter; Worms, Stills, and other diftilling Utenfils, coft a great deal of Money; and this muft be a Work of Time and very great Expence; however, a Poffibility of an Inconvenience that might happen ought not to have that Regard paid to it, as to prevent our Colonies from being relieved in a Point fo very prejudicial to them, as well as to the Malt Spirits of Great Britain, with which their Fifheries were formerly fupplied.

To the 5th, That if the Northern Colonies did not take off the Frencb Sugars, they would carry them to other Markets themfelves; it was anfwered, The French do already carry many Sugars to foreign Markets; if fo, they may fell to Advantage, and the Surplus which foreign Markets won't take off, goes to our Northern Colonies, to purchafe what is abfolutely neceffary for them, and what they could not have conveniently from any other Place; but even here the Profit of the Freight is gained not by Great Britain, but by the Northern Colonies only ; which is a very fmall Advantage, in Comparifon of the Damage done by this Means to our Sugar Colonies, efpecially as the French can afford their Sugars cheaper than ours, and as the high Duties paid for Sugars in our Plantations, make it impoffible for us to vend any to the Northern Colonies.

To the next Objection: That if the Importation of French and Dutcb Rum and Moloffes was prohibited, and they could have none but what they bought of the Englifh Sugar Illands, or fell their Lumber and Provifions any where elfe, then the Englifh Inands would fet what Price they pleafed upon their Rum, and beat down the Price of their Lumber and other Goods as they thought fit; it was anfwered: If the Cafe was as the

Objection ftates it, the Britiff Sugar Colonies would be only upon a Level with Nere England; for, as that Place is the only Market from whence Lumber is imported to the Sugar Colonies, Nerv England, by a Parity of Reafon, is a Monopoly of the Lumber-Trade, and therefore does exact in the Price of its Lumber. But this is not, nor ever can be, the Truth of the Cafe, either with Regard to New England, or the Sugar Colonies; for as in a Place of fuch Extent as Nero England, where the Lumber Trade is carried on by a Multitude of People, with a View to each Trader's feparate Intereft, a Monopoly of Lumber cannot properly be made; fo in the Sugar Colonies that lie at a vaft Diftance from, and are Rivals to, each other, by the Production of the fame Commodities, a Monopoly is impracticable. The Nerw England Traders have no lefs than fix Britifh Inands to go to for Rum and Moloffes; each of thefe Iflands is as independent on the other in its Polity, as diftant in Situation. There is little or no Intercourfe, and lefs Commerce, between thofe of them which are fituated the neareft, and no Intercoufe at all between the remoteft of thefe Iflands; becaufe the Produce of them all being the fame, there can be no Exchange of Commodities, and confequently no Commerce or Intercourfe. It follows therefore, where there is no Intercourfe there can be no Combination, no Monopoly. On the contrary, each Infand is a Rival to its Neighbour, producing the fame Commodities, and will in common Prudence ufe all proper Means to have its full Share of Trade ; to which End nothing can be more conducive, than to fell its Produce at the cheapeft Rate poffible.
As to the feventh Objection, that the French and Dutch Colonies furnifh our Northern Colonies with Money, which they bring to Great Britain, and lay out in our Manufactures, they anfwered, That there is no Money among the French and Dutch Sugar Colonies. How therefore they can bring Money from Places, where there is not enough for the common Ufes of Life among the Inhabitants, is a Paradox which they muft explain before the World will take it upon their Word. If then that Affertion be not founded on Truth, it follows that they do not lay out Money, brought from thefe Places, in the Manufactures of Great Britain; their Traffic for Fifl in the Streights (a Trade in which they have fupplanted Great Britain) may furnifh them with Money, but we deny that fuch Money is laid out by them in the Manufactures of Great Britain. On the contrary, it is to be prefumed, that their Money is laid out with the French and Dutcb in Europe, for Eaf-India Goods, Frencb Silks, and other foreign Commodities; for, as it appears by their own Evidence, at the Bar of the Houfe of Commons, they import fuch Wares into Newe England; and we muft fuppofe they pay for them in Money or Fifh, till they can prove that Lumber is a valuable Commodity in France and Holland. But fuppofing the Nerv England People do lay out their Product of Fifh in Britijf Manufactures, is that a fufficient Compenfation to Great Britain, for robbing her of the Fifh Trade to the Streights? Do not the Nero England People, by their Confeffion, acknowledge by Implication, that they reap the Profit of it, both in Navigation and Trade up the Streights, which ufed to be enjoyed by great Britain itfelf? What Advantage is it to Britain to have this Money laid out in her Manufactures? Would it not be a far greater to be the Carrier of thefe Manufactures to the Streights, and to bring home this Money in her own Ships, navigated by her own Sailors?

The Inhabitants of the Sugar Colonies, it is faid, are very rich, and very luxurious. That the Product of thefe Colonies are of the richeft Sort, and a Mine to Great Britein, is allowed, and has been fully proved; but that the Proprietors of the Soil and Manufactures are far from being rich, is evident from the Proofs already made to the Parliament, that they do not clear five Shillings for every hundred pound Weight of Sugar they make. This the Nerw England Traders would think but a moderate Profit upon one of their fhort Voyages; but it is too much for an Inhabitant of the Sugar Colonies, who runs infinitely more rifque in the Heat of the

Torriad

Chap. III. of the ENGLISHin AMERICA.

Torrid Zone, does the Duty, and is liable to run the Hazard of a Camp in the Time of War, and in Time of Peace live the hardeft Life of all the Inhabitants under the Sun. That this is truly the Cafe of the Planters in the Sugar Colonies, all Mank ind that are acquainted with them will atteft; but it may be evinced from the Nature of the Weft-Indian Eftate itfelf, which is fubject to Ruin by the French, to Fire from the combuftible Nature of the SugarCanes, which are its Product ; from the vaft Expence of Materials and Edifices for making Sugar and Rum, and from the like Expence in Negroes, Cattle, and Mules; from the Rifque of Mortality in this Part of their Property, which is always half the Value of a well fettled Plantation : And laftly, the Expence of feeding, the Care, Anxiety, and prudent Conduct of governing two or three hundred Negroes, with frrict Juftice and Humanity, and with Advantage to himfelf, is the Station of a Planter: And is not this a Station that requires as much Fortitude, Induftry, and Oeconomy, as catching Fifh, or buying Skins from the Indians of New England? In fhort, without a good Share of all the Qualifications neceffary to conduct an Affair the molt complicated in its Nature, furrounded with Difficulties and Hazards, and in which the niceft Oeconomy and Order muft be obferved, it is impoffible a Planter fhould reap any Profit from his Eftate ; therefore if Planters are rich, they muft be the beft Oeconomifts, and the moft induftrious Men in the World, and therefore deferve what they acquire.

To the ninth Objection, That the Trade of the Englijh Sugar Colonies is at prefent vaftly profitable; for the little Inland of Barbadoes in the Year 1730 imported twenty thoufand feven hundred and fixty nine Hogfheads of Sugar, of which they made $340,396 \mathrm{l}$. clear Profit. It is admitted to be true, when Rum and Moloffes bear a reafonable Price; then a. Plantation may, with the niceft Oeconomy, pay its own Charges out of thofe Articles. But if the Nere England Traders take Rum from Foreigners, and Moloffes to be diftilled into Rum by themfelves, then the Rum and Moloffes will be fo far from bearing fuch a Charge ; that, on the contrary, they will bear no Price at all; but the Moloffes muft be given to the Hogs, as the French ufed to do, 'till Nero England taught them how to make a better Profit of it. Have not then the Barbadians reafon to complain ? By the Affiftance of the Nere England Traders the French now have that great Advantage, and the French Plantations are now increafed above one third of the annual Value, purely by that pernicious Trade. This Increafe to Foreigners is a proportionable Diminution of our own Sugar Colonies, and confequently a Difadvantage to Great Britain. But is the Product of that little Inand Barbadoes no lefs than 340,396 l brought into the Ports of Great Britain, in one Year, what a Fountain of Treafure muft this be to the Kingdom, even by the Confeffion of the Enemies to our Britib Sugar Colonies? Do therefore the New England Traders imagine that the Parliament of Great Britain will facrifice this immenfe Treafure to the Advantage of a few Nere England Diftillers; or if it was a Difadvantage to all Nero England (from whence Great Britain derives no Advantage in comparifon of that) would it not be juft Policy to fupport the Sugar Colonies? but when the prefent Oppofition is confidered, as founded on a Trade with the French, the natural and implacable Enemies of this Kingdom, what honeft Engli/bman will look upon it but with Difdain ? efpecially after it has appeared evident from Reafon, from undoubted Teftimony, and even by the implicit Confeffion of the Nere England People concerned in this Oppofition, that the French have increafed one third per Annum in their Wealth by this very Trade; that our Sugar Colonies have declined in Proportion, as has been proved already; and to compleat the Misfor-
tune, the New England Traders have drained even the Britifh Sugar Colonies of all their current Cafh, for no other Purpofe but to purchafe Moloffes and Rum of the French. This is a Fact known by all the Inhabitants of the Sugar Colonies, who are ready to prove it in the moft folemn Manner.

The two Houfes having heard the feveral Facts ftated, with the Proofs ; and confidered the Arguments and In-
ferences drawn from them; pafted an Act of the follows ing Tenor: That after the 25 th of December 1738 there fhould be paid a Duty of Nine-pence a Gallon for all Rum and Spirits made in the Plantations, not fubject tod Great Britain, on the Importation of them into any of the Britib Plantations; that Six-pence a Gallon fhould be paid for all foreign Moloffes and Syraps imported, and Five Shillings for every Hundred Weight, Engliflo Money, for Sugar and Paneles imported; and that no Sugar, Paneles, Syrups, or Moloffes, fhould be imported into Ireland, unlefs fhipped in Great Britain. And ant Allowance of Two Shillings per Hundred Weight more than heretofore granted, on the Exportation of refined Sugars. But the Importation of Spanibs or Portughede Sugars into Great Britain is fill permitted by the faid Act.

Since the Act, the Merchants and Planters concerned. in the Britijh Sugar Colonies preferred a Petition to the Houfe of Commons, fetting forth, that by two Acts of Parliament paffed in the 12 th and 22 d of Cbarle's II. the Inhabitants of the faid Colonies were reftrained from fending Sugar to Foreign Markets before they are firft landed in Great Britain. That how prudent foever this Reftraint may have been at the Time the Sugar Trade in the WefiIndies was entirely in our Hands, yet now our Sugar Inands are in a declining Condition from the Increafe of the French Settlements, it would be highly beneficial not only to them but to Great Britain to put the Britijb Subject in a Capacity of difputing foreign Marizets with the French, and to permit him to carry his Sugars earlier and cheaper to thofe Markets than he can do, under the Reftraint aforefaid. That the Sugar Colonies iniport yearly into this Kingdom Sugar enough for our Home Confumption, and alfo a large Surplus for Re-exportation to foreign Parts; but the Demand from Abroad has greatly decreafed within thefe few Years, and the Markets for that Commodity have been foreftalled by the French, not only to the Prejudice of the Sugar Trade but alfo of the general Trade of Great Britain, which muft affect the Balance thereof. That if BritibS Ships were permitted to go to foreign Markets under proper Reftrictions without unloading here, the whole Charge, and in a great Meafure, the Rifque, of a double Voyage would be faved; and the obliging fuch Ships to return to Great Britain, unload, and take their Clearance here, before their proceeding on another American Voyage, would be attended with this farther good Effect, that they muft afford to carry Freight at the cheapeft Rates, or return Home empty; fo that this Regulation would extend our Navigation, and contribute to make us the Carriers of Europe, without prejudicing the Revenue, all the Duties on Sugar being drawn back on the Re-exportation of it to foreign Parts. For thefe Reafons the Petitioners prayed that Liberty might be granted of carrying Britifb Sugar from our Sugar Colonies in America directly to any foreign Markets to the Southward of Cape Finifterre; upon the fame Conditions that the People of Carolina are permitted to carry their Rice to the faid Markets, and alfo of carrying fuch Sugars to any forèign Markets to the Northward of Cape Finifferre, after firt touching at Great Britain, before they proceed on another Wef-India Voyage. But the great Tendernefs the Parliament has always had for the famous Act of Navigation, has prevented thefe Indulgences from being granted, that might otherwife perhaps have been yielded to in behalf of the Sugar Colonies.
But the prefent War with France will afford the beft Means of coming at the Truth, in refpect to the Facts afferted in the Papers before-mentioned ; and therefore, whenever a general Peace fhall be made, and the Parlialiament is at leifure to look into Affairs of this Nature, we have all the Reafon in the World to expect that this Commerce will be put upon fuch a Foot as that the Inhabitants both of Great Britain and the Plantations, may reap from it the greateft Advantages poffible. In order to this, the intelligent Reader will eafily difcern that the following Steps are neceffary. In the firft Place, due Care muft be taken to give the Inhabitants of the Sugar Colonies all the Relief that is pofible from any Hiardhips
of which they have, or with good Reafon might have, complained; fuch as heavy and exorbitant Salaries to their Governors, large Sums levied upon them, without being applied for their Service, and the Difficulties they are under, in obtaining fpeedy and effectual Juftice, when Perfons in public Stations are inclined to extend their Power too far, with a View to promote their private Intereft. They fhould likewife have all poffible Encouragement given them for recovering their foreign Trade, and beating out the French and other Nations who have interfered in it; fince, in regard to both Heads, it ought to be confidered that the public Benefit, that is to fay, the enriching the Subjects of Great Britain by the Balance of Trade in general, is the great Point to be held in View ; from the attaining of which, all other incidental Advantages, fuch as advancing the Revenue of the Crown, enriching particular Families, and raifing private Fortunes, would certainly and neceffarily follow, without their entering at all into the Motives, upon which Laws for the Good of the Plantations are enacted. For if it could be once brought about, that either the old Markets for Sugar were retrieved or new Ones opened, there is no doubt that Jamaica and other Inands, where there are Lands, fit for that Purpofe, uncultivated, would be more fully planted, the Inhabitants become more numerous, and their Demands from Great Britain confequently larger than they are at prefent. On the other Hand, the fame Care, the fame Diligence and Alacrity are requifite, with regard to the Colonies on the Continent; but, at the fame Time, it ought to be remembered, that whatever is done to promote the Welfare and Trade of the Sugar Colonies, muft neceffarily tend to the Benefit and Advantage of the Plantations on the Continent, which fupply the Sugar Colonies with Lumber, and other Things requifite for the carrying on their Trade; and if, befides this, Ways and Means could be found to open new Channels for the Benefit of thefe Colonies alfo, it ought moft certainly to be done.

We have fpent a great deal of Time indeed in furveying thus far the Engli/h Poffeffions in the Weft-Indies; but in a Work of this Nature Time could not well be fpent better ; they are, if I may be allowed the Expreffion, the pacific Conquelts of this Nation. Territories acquired, and for the moft part, at leaft, acquired without fhedding Blood, which fhews that Induftry is as capable of rendering a Nation powerful, as a Thirft of War ; and that a
martial is not a more noble than a trading Spirit. What is gained by one War is frequently loft by another ; and even while it is kept, the Expences created by a difputed Title are greater than the Value of the Poffeffion; but what becomes ours, by this Method of planting, remains always ours, and paffes without Debate to our Pofterity, the very Power by which we acquire it fecures its Continuance, and the longer we hold fuch Acquifitions the more valuable they are rendered, and the more effectually annexed to our Empire. They are Out-works well garrifoned, which yet put us to little or no Expence; they are diftant Dominions, and yet clofely connected to us by the Commerce which they create, they are concinually drawing People without Prejudice to their MotherCountry, becaufe the more populous they grow the greater their Demands from hence, confequently the quicker our Trade here, which will always bring over hither People from other Countries.

We may therefore fafely affirm, that nothing can be of fuch Confequence to Britain as the Improvement of her Colonies ; and which, at the fame Time, is a Confideration that muft powerfully recommend this to our Attention, that it lies wholly in our Power. We may be difappointed in our Views, with refpect to other Branches of Trade, by the Intrigues of our Enemies, or from the want of a right Difpofition in our Friends, but with regard to this great Branch of our Commerce, nothing can injure, nothing can difappoint, us, nothing can abridge or defeat our Succeffes therein, if we are not wanting to ourfelves. We can from our Plantations bring moft of thofe Commodities that are requifite for the Support of our foreign Commerce ; and this is, as wells, or rather better, than if we had them here at Home ; we can, from our Colonies, fupply ourfelves with thofe Neceffaries, for want of which only Foreigners could diftrefs us, fuch as Iron, Plank, Hemp, Pitch, and Tar, and if we fo pleafed there are few Things we might not fetch from our Plantations; fince, it is certain, that Indico, Cochineal, and Silk, might be had from our Southern Colonies, and many Things from our Northern Settlements, that have never been fo much as talked of, but might be eafily difcovered; if Men well verfed in Minerals and Metals were fent thither. In a Word, the Plantations were an Honour of the laft Age, and it fhould be our Study to make them the Glory of this.

## S E C T I O N XIX.

## An Hiforical Account of the British Settlements in America from the Reforation of King Charles 11, to the Revolution.

1. A fuccinct Account of commercial Affairs at the King's Return, and of the Circumfances that favoured the fettling newe Colonies. 2. The State of the Country now called Carolina, from the Time of its firft Difcovery to the granting of it to the Lords Proprietors by King Charles II. and thence to the Surrender of that Patent. 3. A fort Defcription of the Country of Carolina and the principal Places in that Colony. 4. An Account of the Produce, People, Commerce, Shipping, and Importance of this Colony to the Britifh Nation. 5. The Grant of the Ifland of Antego to Lord Willoughby, the planting that Ifland, its Produce, Commerce and Sbipping. 6. The Conqueft of Nova Belgia from the Dutch, the Grant of that Country to the Duke of York, wbence is derived its prefent Name of New York, and a Defence of our Title to that Plantation. 7. An Account of that Country, its Situation, Climate and Product. 8. Of its Trade, Interefts, and Importance to Great Britain. 9. The Grant of the Eaft and Weft Jerfeys to feveral Proprietors, and the Extent, Product and Trade of thefe Plantations. 10. The Settlement of the Ifland of New Providence and the Bahama Iflands, their prefent Situation, and the Adrontages that may be expected from them. I I. An account of the Cbarter granted to the Hudfon's-Bay Company for facilitating the Difcovery of a North-wegt Pafjage, and of the Settlements that bave been made under it. 12. The Motives upon wwich were founded the Grant of the noble Country of Penfylvania to William Penn, Efq; by King Charles II. I 3. An Account of the Extent, Climate, Soil, Produce, and State of that flourifling Colony. 14. The Commerce, Interefts, and Importance of Penfylvania to Britain. 15. Remarks and Obfervations on the foregoing Events.

T the Time King Cbarles II. returned to the Pof derftood, and by very few better than the King himfelf, feffion of his Dominions, the Nature of Trade Importance of the Plantations were generally unwho had a Head miohty well turned for the comprehending whatever related to Maritime Affairs ; had improved

## Chap. III. of the ENGLISH in AMERICA.

his Notions on that Subject in Holland, and had converfed much with Perfons of Quality and Character, who had found it neceffary to feek Shelter from their Enemies in thofe Parts of the World. We need not wonder therefore, that foon after the Reftoration various Schemes were fet on foot for enlarging, and effectually peopling, the Colonies already planted in America, as well as for fettling new Colonies, in fuch Places as were not already occupied by our own, or any other European, Nation. The King was advifed by fome, and follicited by others, to grant Charters to new Colonies, from various Motives. Prince Robert, or as we ufuâlly call him, Prince Rupert, Duke of Cumberland, who had fpent fome Years in America, had great Notions of raifing a naval Strength there, capable of diftreffing the Spaniards, and of obtaining a Share of the Gold and Silver they bring from thence. He was likewife perfuaded, that there were very rich Mines in Florida, and was therefore for pomoting, at any Rate, Difcoveries and Settlements in that Country ; the Earl of Clarendon, Lord Afley, and feveral others of his firt Miniftry, confidered. Things in a very different Light: They thought that Plantations might be made ufeful Drains for carrying off warm, and turbulent Spirits; and that by granting Liberty of Confcience there to all the different Sects who were reftained at Home, they might fecure Peace in Britain, and at the fame time procure vaft Profit from America; for it was a fettled Maxim with them, That Induftry was the beft Cure for Entbufafm; which Experience fhewed was extremely well founded.
There were fome other Reafons that contributed not a little to render Projects of this Nature acceptable to the King; for at that time there were Numbers of People that wanted fome Eftablifhment of this kind for their Support, and whom it was much eafier to difpofe of in this manner, than to find Means of rendering them eafy and content at home. As, for Inftance, Multitudes of Royalifts who were undone by the War, and who feeing the Succefs that had attended the Planters in Virginia and Barbadoes, were better pleafed to feek new Fortunes in the Weft Indies, than to continue in a State of Indigence and Neceflity in England. Many likewife of the Army that had been lately difbanded, we alfo inclined to take the fame Method for obtaining a comfortable Subfiftance ; and were not afraid of Danger and Fatigues abroad, to which they had been long inured at home. There were a third fort of People who, either fiom a Difaffection to the Government then newly re-eftablifhed, or for fear of being called to an Account for what they had done in former Times, were very willing to tranfport themfelves into thefe diftant Parts of the King's Dominions, that they might have a Chance of raifing Eitates there, and at the fame time be fecure from any Afterreckonings for what, during our long Scene of public Confufions they had been doing here : We need not wonder therefore, that as foon as the Government was a little fettled, many Propofals fhould be made for gratifying the Friends to the Government, who had very high Pretenfions to the royal Favour, with Grants in America, which coft the Crown nothing, and which afforded. probable Means of inriching particular Perfons at the fame Time that it opened a fure and certain Means of extending the Power, increafing the Trade, and augmenting the Wealth of the Nation. We may add, that befides all thefe Reafons, Expedients, and Advantages, there were likewife fome of Neceffity; for it was evident, even to fuch as were no great Politicians, that if fome Meafures were not taken to prevent it, the Dutch and other Foreigners, would infallibly fix themfelves in thofe Countries which belonged of Right to this Crown, and which had been hitherto neglected; and therefore it was very wifely judged, that the Plantations firft fettled, fhould be in thofe Parts of the Continent that were in moft Danger of falling into the Hands of other Nations.

Upon thefe Confiderations therefore, the Adminiftration liftened very willingly to a Propofal that was made within two Years after the King was reftored, for planting the Country now known by the Name of Carolina; which feemed the more worthy of being fecured, as lying indifputably in the fineit Climate in the World; and thereby
promifing the higheit Advantages to that European Na tion which fhould fettle and cultivate it. Neither was it at all improbable, that when the Property of this Country was once fixed by a Charter from the Crown, and large Privileges offered to fuch as would go thither and fettle; it might be very foon peopled; fince amongt the many Things for which that Country was undoubtedly fit, they were likely to fall upon fomewhat that might fupport and maintain them; it is true, that many Things were given out of the Country at that time, which have not hitherto been verified by Experience; but then, as we fhall Nhew hereafter at large, it feems to be rather imputable to the Want of Induftry and Application in the Inhabitantss than to any Defect in the Soil or Climate: But to have juft Notions of this, and from thence to form a right Idea of the Value of this noble Country, than which the Globe affords not a better, it is neceffary that we fhould enter into a few Particulars, that we may thorougly apprehend. by what Right we poffels it ; how it came to be abandoned by another Nation that feized it while unoccupied by us; after what Nianner our firf Plantations were made ; what great Changes have happened in the Conftitution of the Colony; the State it is in at prefent ; the Benefits which Great Britain reaps from it, and what reafonable Hopes there are, that it may yet turn more to our Advantage. Of all which Heads we fhall treat as clearly and as concifely as it is poffible.
2. The Country of Carolina is Part of that vaft Region of North America which was formerly comprehended under the Name of Florida, a Name beftowed by Fobr Ponce de Leon, in the Year 15 I 2 ; of whofe Adventures and Difcoveries we have already fpoken largely: He advanced, however, no farther Northwards than the River of St. Matbeo, and therefore it is plain, that the Spaniards never had any juft Title to Carolina: But it is, however, very true that they flattered themfelves, that his having touched upon this Continent, gave them a Right to it ; which Notion, if well founded, would give us a better Right, fince Sebafition Cabot had been feveral Years before on the Northern Coaft of this very Country, though it is doubtful whether he advanced fo far South as St. Matbeo. The Spaniards, who defired to fecure it to themfelves eight Years afterwards, fent Vafquez de Ayllon to make a farther Difcovery of it: He came upon the North Coaft, and called the North-north-weft River by the Name of fordon. He did nothing except inviting many of the Natives on board his Ships, where, when he had got them, he hoifted Sail, and carried them into miferable Bondage. In the Year 1526, Charles V. Emperor of Germany and King of Spain, fent Pampbilio Narvaez to Florida, who ftaid fo long in the South-weft Part of this Country, which is the moft barren, that his People eat one another, his Crew having fpent their Provifions. Ten Years afterwards, Ferdinando Soto came hither in Search of Gold and Silver Mines, having a little Army of nine hundred Foot and five hundred Horfe. Himfelf and three Parts of his Soldiers died through Want, by Sicknefs, and the Indians, and the reft, were led back by Lereis Mofcos to New Spoin, though not without great Difficulty, the Natives fetting upon them feveral times in their March, and killing all that fell into their Hands. This unfortunate and expenfive Expedition fo difcouraged the Spaniards, that for feveral Years they made no more Attempts in thofe Parts, and indeed they fearched no farther than that Part of the Continent which lies oppofite to the Gulph of Nerw Spain, and not within, and beyond the Streights of Babama, which is the moft fertile and rich, abounding in many valuable Commodities.

The French perceiving the Spaniords neglected this long Tract of Land, Admiral Coligny, in the Reign of Charles IX. procured two of the King's Ships to be fent thither ; the Command of which he gave to fean Ribaut, who, after a Voyage of two Months, arrived at the River Doipbin, between that of St: Matheo and that of May; lying about the 3oth Degree. The next River to that of May he called the Seine, the next to that, the Somme, then Loire, then the Cbarente and Garonne, at the Mouth of Albemarle River, then called the Great River. The Port being fafe and commodious, he buile a Fort, which he called Cbarles

Fort, and gave it the Name of Port Royal, in 32 Degrees, bordering on Virginia, now North Carolina, where the firft Settlement was made by any European Nation. The Civil War raging in France, Ribaut's Soldiers mutinied for want of Supplies; the Natives, it is true, were very kind to them out of Hatred to the Spaniards; but they could not furnifh them with many Neceffaries that they wanted ; and the Admiral was fo engaged in Politics at home, that he had not leifure to provide for the Wants of his Colony, fo Ribaut, having made fome Difcoveries, in the North-eaft Part of Florida, returned to France ; and in his Return his Company were reduced to fuch Extremity, that they killed and eat one of their own Men, and probably would have done fo by others, had they not accidentally met with an Englifh Ship; the Mafter of which furnifhed them with fome Provifions. A Peace being concluded two Years after in France, between the Papifts and the Proteftants, Coligny, who was then in favour at Court, procured other Ships to be fent to this Country, which was now called Carolina, from Fort Cbarles, as that was from the French King.

The Command of thofe Ships and Men on board, was given to Lewis Laudoner, who was ordered to carry on the Settlement. He arrived here the 20 th of fune, 1564 , with three Ships, and was kindly received by the Inhabitants ; but could find no Gold or Silver, though he fpent much Labour and Time about them. His Provifions being almoft all gone, and the Natives either unwilling or unable to furnifh him with more, Laudoner refolved to return.alfo to France; and as he was preparing to depart, Jean Ribaut arrived with three Ships, which had fo good an Effect on the Indians, that they feemed to be as welcome to them as to the Frencls: The Kings of Homoloa, Servaratri, Almacam, Malica, and Caftri, waited upon Ribaut to congratulate his Arrival, and promifed to conduct him to the ApalacbianMountains, which part Carolina from Virginia. The French conceived great Hopes from this Settlement, but all vanifhed on the Arrival of the Spaniards, who with a Squadron of Ships and Land Forces drove the French out of their Forts, killed Ribaut and fix hundred Men, after having given them Quarter, and obliged Laudoner, with a few. of his Countrymen who remained alive, to return to France.

The French King was lefs moved with this Outrage committed on his Subjects, becaufe they were Proteltants; and indeed, 'tis thought, Coligny intended by this Settlement to fecure a Retreat for himfelf and his Brethren of the reformed Religion in cafe they were conquered in France. Peter Melanda commanded the Spaniards, who diflodged the French, and fo provoked the Indians, by his Cruelty and Injuftice, that they were very ready to revenge themfelves when Opportunity offered, as it did not long after. For Captain de Gorgues, a French Gentleman, at his own Coft, fitted out three ftout Ships, and with two hundred and eighty Men failed to Carolina, where he took the Fort, and put the Spaniards therein all to the Sword. They had built two other Forts, which he eafily reduced, and ferved the Garrifons as he did that of Fort Cbarles; he demolifhed them, and was affifted by the Kings of Homoloa and Servaratri. The French travelled into the Dominions of the Great King of Apalacba, near the Mountains, where they converted many Indians to Chriftianity. Thefe Indians were more civil than thofe to the Northward, their King's Dominions larger, and their Manners, in a great Meafure, refembled thofe of the Mexicans, from whom they were thought to be defcended. We do not find that Monfieur de Gorgues made any Settlement here, or that the Spaniards endeavoured to recover the Country, which from the Year 1567 lay deferted by all European Nations 'till the Reign of King Cbarles II. of England.

In the Year 1622 feveral Englifb Families flying from the Maffacres of the Indians in Virginia and New England, were driven upon thefe Coafts and fettled in the Province of Malica near the Head of the River of May, where they became a kind of Miffionaries among the Malicans and Apalacbites. The King of the Country is faid to have been baptized; and in the Year 1653 ,

Mr. Brigfock, an Englifman, went to Apalacba, where he was honourably entertained by his Countrymen, who were there before him, and from his Relation of the Country ours is taken.

Such was the Situation of Things, and it had been abandoned by the French for near one hundred Xears, when King Cbarles the IId made a Grant thereof, bearing Date March 24, 1663 , to Edward Earl of Clarendon, then Lord High Chancellor of England, George Duke of Albemarle, William Lord Craren, Fobn Lord Berkley, Antbony Lord Afley, Sir George Carteret, Sir William Berkley, and Sir Fobn Colliton, from the Northend of the Inand called Luck Ifland, which lies in the Southern Virginia Sea, and within 36 Degrees of North Latitude, and to the Weft, as far as the Soutb-Seas, and fo foutherly as far as the River San Matbeo, which borders on the Coaft of Florida, and is within 3 I Degrees of North Latitude, and fo Weft, in a direct Line, as far as the South-Seas aforefaid, with all Royal Fifheries, Mines, Power of Life and Limb, and every thing neceffary in an abfolute Propricty, paying a Quit-Rent of twenty Marks yearly. Thefe Proprietors afterwards obtained another Grant, which fomewhat varied the Bounds of the Province, by fixing its Northern Frontier at Carotoch River in 36 Degrees 30 Minutes North Latitude, and extending it to the Latitude of 29 Degrees to the South, within which Bounds both the Carolinas and the new Province of Georgia are included.

Thie Plan of Government for this new Colony was ftruck out by that great Statefman, Antbony Earl of Sbaftgoury, and digefted into Form by the famous Mr. Jobn Lock; fo that great Expectations were raifed by it. But without entering into a long Detail upon this Subject, it is fufficient to fay, that how fair foever it might appear in Theory, it was found by Experience impoffible to carry it into Practice; fo that after ftruggling with the Inconveniencies produced by it for about fixty Years, to the Prejudice of the Planters and Proprietors; the only Remedy that could at laft be found, was to get rid of this fine fpun Conftitution, in which it was pretended all the Errors in our own were cured, and to put the Province under the Protection and into the Hands of his Majefty, which was accordingly done; and this Remedy has anfwered all the Ends that could be expected from it in fo few Years.

This Surrender was made by the Proprietors to Edward Bertie, Samuel Horfy, Henry Smith and Alexis Clayton, Efqrs. in Truft for the Crown. The Proprietors, in their own Right, or in Truft, were then Henry Duke of Beaufort, William Lord Craven, James Bertie, Efq; Doddington Greville, Efq; Henry Bertie, Efq; Mary Danfon, Elizabeth More, Sir Fobn Colliton, Fobn Cotton and Fofepb Blake, Efqrs. who were poffeffed of Seven-Eighths of the Propriety of the Province, and fold it to the Crown for 17500 l. Each Proprietor, who had a whole Share, having 2500 l . The outftanding Quit-Rents, and other Incomes, due to the Proprietors from the People of the Province amounting to fomewhat above 9000 , alfo were fold to the Crown for 5000 l . which was paid to the above-mentioned Proprietors after the Sale and Surrender had been confirmed by a particular Act of Parliament, in the Year 1728, entitled, An Act for eftablifbing an Agreement with Seven of the Lords Proprietors of Carolina, for furrender of their Title and Intereft in that Province to bis Ma jefty. It will appear, by the following Claufe in the Act of Parliament, that the remaining One-Eighth of the Propriety, and Arrears of Quit-Rents aforefaid, were referved to the Right Honourable Fobn Lord Carteret, now Earl of Granville, "Saving and referving always to "s the faid 70 bn Lord Carteret, his Heirs, Executors, Ad" miniftrators, and Affigns, all fuch Eftate, Right, Ti"t tle, Ejc. to One-Eighth Part of the faid Province or

In confequence of the Powers granted to his Majefty by this Act, he has ever fince appointed Governors of Nortb and Soutb Carolina, and there is a great Profpect of its becoming a Purchafe highly beneficial to the Crown, which will, however, in a great meafure depend
on the Capacity and Conduct of the Governors they fend thither, who ought to have true Notions of the Interefts of King and People, and a Firmnefs of Mind equally capable of refifting Flattery and defpifing Clamour, to both which he will be as much expofed in thefe, as in any other Countries in the World, if from what has already paffed, we may form any Judgment of what will happen in fucceeding Times.
3. After having given the Reader an Account of the Time and Manner in which we became poffeffed of this Colony, and the Means by which its Government has been changed fince it was fettled, we are next to enter into an exact Defcription of the Country itfelf, that the Reader may be the better able to judge of the Value of this Plantation, and of the Certainty of thofe Rules, for determining the beft Climates, and the Commodities that may be expected, either from the Bounty of Nature, or the Induftry of the Inhabitants ; with refpect to which, more rational Hopes could fcarce be formed of any Place in our Poffeffion, or, indeed, of any European Nation in America, than of this; which, in Point of Situation, as I have hinted more than once, is as happy as could be wifhed, and in that refpect certainly merits the Reader's particular Attention. Carolina is fituated between the Extremes of Heat and Cold, but the Heat is more troublefome in Summer than the Cold in Winter, their Winters being very fhort, and their frofty Mornings frequently fucceeded by warm Days. The Air is, for the moft Part, ferene and clear, both in Summer and Winter; yet they have theirWinter Rains, and fometimes very heavy Showers about Midfummer ; and efpecially if the Wind changes fuddenly from the South-eaft to the North-weft, for then it blows exceeding cold, and brings Diftempers on thofe who do not take care to guard againt it ; but the Country is generally healthful, where People live regularly, and ufe any Precaution: Thofe, indeed, who after a hot Day expofe themfelves to the cool Breezes of the Evening, ufualIy feel the Effects of it, as others do that indulge their Appetites in eating Fruit, and drinking pernicious Liquors to Excefs.

They are fubject to Hurricanes as well as the Caribbee Iflands, but thefe do not happen every Year; and fometimes are fo favourable as not to do much Mifchief in feven Years. There was a very terrible one which happened in the Year 1729. This Province is now divided into North and South Carolina; and, as we have before hhewn, the Country now known by the Name of Georgia is alfo within the original Limits of this Colony. At prefent we fhall concern ourfelves only with the two firft mentioned Provinces, intending to fpeak more of the laft in its proper Place. North Carolina is bounded by Virginia on the North, the Ocean on the Eaft, by a Line drawn in 34 Degrees from the Ocean to the Mountains on the South, and by that Part of Florida, poffeffed by the Indians, on the Weft, and is fubdivided into fourteen Townfhips or Parifhes. But there is not one Town or Church, as I can learn, in the Country; and it is but very lately that the Society for the propagating the Gofpel has fent itinerant Preachers amongft them. Soutb Carolina is divided from North Carolina, by the abovefaid imaginary Line on the North, by the Ocean on the Eaft, by the River Savannah, which feparates it from Georgia, Weft, being fubdivided into fourteen Parifhes or Town-
We fhips, each of them having a good Church of Brick or Timber.

But the chief and almoft the only Town in both Carolina's, is Cbarles Town, fituate in 32 Degrees 45 Mi nutes North Latitude, and on the Point of a Peninfula,
formed by AJbly and Cooper Rivers; the former of which is navigable for Ships twenty Miles above the Town; and for Boats and Pettyaugers (large Canoes) near 40 Miles. The other River is not navigable for Ships fo far, but for Boats and Pettyaugers much farther ; the Bar Tide, and there is good rixing when a Ship is got clofe to the Town, the Harbour being fecured by a Fort called Jobnfon's Fort, which has about twenty Guns in it, level with the Surface of the Water, The Town was
Vol. II. Numb. 88.
regularly fortified fome Years ago, and, feveral of the Baftions, near the Water, are ftill in being, and in good repair. But the Baftions, Pallifadoes, and Foffe, next the Land, being much damaged by a Hurricane, and deemed of too great an Extent to be defended by the Inhabitants, General Nicholfon caufed them to be demolifhed. The Town now contains upwards of fix hundred Houfes, generally well built, fome of them of Brick, but more of Timber, and moft of them fathed, forming regular and fpacious Streets; and their Church is much the mot magnificent in Englifh America, having three Ines, an Organ, and Gallery all round the Church.

The Town of Beaufort is fituated on the Inand of Port Royal, in 3 I Degrees 40 Minutes North Latitude, an hundred Miles South of Cbarles Town; the Continent and Inand forming a fine capacious Harbour, which might hold the Royal Navy of England. The Inand on which the Town ftands, confifts of near one thoufand Acres, and is navigable all round for Boats and Pettyaugers, and one half of it for Shipping, having four Fathom Water clofe to the high Bluff, fo that Ships may load and unload from the Shore, without the Affiftance of Boats. The Harbour is fecured by a Fort built fomeYears fince, on which twelve Culverins are mounted, but the Town and Ifland have no Fortification; nor is the Harbour fo well fortified as a Place of this Importance deferves, efpecially as it lies fo nigh Spani/b Florida, and is faid to be demanded by the Spaniards as Part of their Territories. There is not, indeed, above fifty or threefrore Houfes in the Town of Beaufort at prefent, but from its advantageous Situation, and the Goodnefs of the Harbour, it is expected that this Town will one Day be the Capital of Carolina: It is already the Station for the Britijb Squadron in thofe Seas. There is another PortTown lately erected at Wingaw, about fifty Miles to the Northward of Cbarles Town, to which they have given the Name of George Town, and the Society for the Propagation of the Gofpel have a Miffionary here.
It would be needlefs to enter into a large Defcription of this Country, or of the Towns that are erected in it ; only it may not be amifs to fay that North Carolina is within this few Years become quite a different Country from what it was, and the Number of People therein is continually increafing; fo that there is good Reafon to believe that whenever the Inhabitants are bleffed with a wife, active, prudent, and public-fpirited Governor, this Country may be fo improved, as to become infinitely more valuable than from any of the Accounts hitherto received of it could be expected. Indeed it may juftly be affirmed, that the Welfare and Profperity of all our Colonies depend fo much upon the Choice of Governors, that we can fcarce conceive any thing of fo great Importance as the Crown's being extremely careful to velt none with fuch Authority, but Men of known Capacity, eftablifhed Reputation, and competent Fortunes.
4. As to the Produce, Strength, and Commerce of Carolina, the beft Account we have, is from Colonel Purry, a Man of great Judgment, Induftry, and Integrity, who went thither with a View to fettle, as he did, and therefore his Accounts may be very fafely depended upon. He obferves that all Sorts of Trees and Plants will grow there as well as can be wifhed; particularly Vines, Wheat, Barley, Oats, Peafe, Beans, Hemp, Flax, Cotton, Tobacco, Indico, Olives, Orange Trees, and Citron Trees, as alfo white Mulberry Trees for feeding of Silkworms; and that the Lands are not difficult to clear, becaufe there are neither Stones nor Brambles, but only great Trees, which do not grow very thick, fo that more Land may be cleared there in one Week, than could be done in Europe in a Month. The Cuftom of the Country is, that after having cut down thefe great Trees, they leave the Stumps for four or five Years to rot, and afterwards eafily root them up, in order to manure the Land. It is therefore very certain that Carolina is in general an excellent Country.
It is true the Ground is fandy, but then it is a Sand impregnated with Salt or Nitre, fo that it brings forth in great abundance, as the like Soil does in diverfe Parts of Europe. But what feems peculiar to Carolina, there
are a great Number of Plantations that have been continually cultivated for near feventy Years, which yet produce great Plenty, without ever being manured by the leaft Dung, for they never lay any on their Grounds; the Planter only turns up the Superficies of the Earth, and all that he plants and fows therein quickly grows and thrives: Thofe who underftand ever fo little of Agriculture will be obliged to own, that if the Lands in Europe were not conftantly manured, their Strength would be fo exhaufted that at length the Crops would not pay for their Seed ; but a Man who has a little Land in Caro lina, and is not willing to work above two or three Hours in a Day, may very eafily live there, even on fo little Labour. Another Confideration deferving our Notice is, the Progrefs of the firf Colonies; their fudden Advance ment ; the Riches of the prefent Inhabitants ; the great Number of public Expences for which they provide; the great Trade they carry on at prefent ; and laftly, their Misfortunes and Loffes, which are entirely repaired. The better to comprehend thefe Matters, we fhall only make the following Obfervations: That there were no People in Carolina till near fourfcore Years ago ; for the Englifb did not fend any thither till the Year 1670: That they had at firft a very fatal Beginning; afflicted with Sicknefs, and even the Plague, which daily diminifhed the Number of the People: That cruel deftructive Divifions broke out amongt them : That they had a very badGovernment under the Lords Proprietors, being alfo without Juftice, Order, or Difcipline: That at a certain Time the Pirates interrupted their Trade and Navigation: That they have often had great Droughts: That a terrible Fire confumed almoft all Cbarles Town: That they have been at great Expence in Fortifications, public Edifices, Churches, $E_{0} c$. That they have often fuftained long Wars with the French, Spaniards, and particularly with the Indians, who once united together to deftroy the whole Province. That notwithftanding all thefe Misfortunes, the People of Carolina, except thofe who give themfelves up to Debauchery, are all rich, either in Slaves, Furniture, Clothes, Plate, Jewels, or other Merchandizes, but efpecially Cattle; which fhews the Goodnefs of the Country they inhabit.

Silk-worms, in Carolina, are hatched from the Egg, about the Middle of March; at the fame time that the Mulberry-leaves, which are their Food, begin to open; being attended and fed fix Weeks, they eat no more; but have fmall Bufhes fet up for them to fpin themfelves into Balls ; which thrown into warm Water, are wound off into raw Silk. Rofin, Tar, and Pitch, are all produiced from the Pine Trees; Rofin, by cutting Channels in the ftanding green Trees that meet at a Point at the Foot of the Tree, where is placed a Receiver ; the Channels are cut as high as one can reach with an Ax; and the Bark is peeled off from all thofe Parts of the Tree that are expofed to the Sun, that the Heat of it may the more eafily force out the Turpentine, which being taken from the Receiver, and melted in Kettles becomes Rofin. Tar is made thus: They prepare a circular Floor of Clay declining a little towards the Center; from which is laid a Pipe of Wood, the Upper-part of which is even with the Floor, and reaches ten Feet without the Circumference; under the End the Earth is dug away, and Barrels placed to receive the Tar as it runs; upon the Floor is built up a large Pile of dry Pine Wood fplit in Pieces, and furrounded with a Wall of Earth, which covers it all over only a little at the Top, where the Fire is firft kindled : After the Fire begins to burn, they cover it likewife with Earth, to the End there may be no Flame, but only Heat fufficient to force the Tar downward into the Floor; they temper the Heat as they pleafe, by thrufting a Stick through the Earth, and letting the Air in at as many Places as they fee convenient. Pitch is made by boiling Tar in large Iron Kettles fet in Furnaces, or by burning it in round Clay Holes made in the Earth.

Black Cattle have mightily increafed fince the firft fettling of the Colony. About forty Years ago it was reckoned a great deal to have three or four Cows, now fome People have a thoufand Head ; and for one Man to have two hundred is very common. The Cows
graze in the Foreft, and the Calves being feparated and kept in Paftures fenced in, they return home at Night to fuckle them : They are firft milked, then thut up in $\%$ Fold all Night, milked again in the Morning, and then turned out into the Woods. Here are Hogs in abundance; they go daily to feed in the Woods, where they rove feveral Miles, feeding on Nuts and Roots; but having a Shelter made at home, to keep them warm, and fomething given them to eat, they generally return in the Evening. The Beef and Pork that are raifed here find a good Market in the Sugar Inlands.

The Trade of Carolina is now fo confiderable, that of late Years there have failed from thence, annually, above two hundred Ships laden with Merchandize of the Growth of the Country, befides three Ships of War, which they commonly have for theSecurity of their Commerce; and laft Winter they had conftantly five, the leaft of which had above an hundred Men on board. It appears from the Cuftom-houfe Entries, from Marcb 1730 to Marcb I731, that there failed, within that Time, from Cbarles Town, two hundred and feven Ships, moft of them for England; which carried among other Goods, forty-one thoufand nine hundred and fitty-feven Barrels of Rice, about five hundred Pounds weight per Barrel ; ten thoufand feven hundred and fifty Barrels of Pitch; two thoufand fixty-three of Tar; and feven hundred and fifty-nine of Turpentine; of Deer-fkins, three hundred Cafks containing eight or nine hundred each ; befides a vaft Quantity of Indian Corn, Peafe, Beans, $\varepsilon^{3} c$. Beef, Pork, and other falted Flefh; Beams, Plank, and Timber for Building, moft part of Cedar, Cyprefs, Saffafras, Oak, Wallnut, and Pine.

They carry on a great Trade with the Indians, from whence they get their great Quantities of Deer-fkins, and of other wild Beatts, in exchange for which they give them only Lead, Powder, coarfe Cloth, Vermillion, Iron, ftrong Waters, and fome other Goods, by which they have a very confiderable Profit. The great Number of Slaves makes another Part of the Riches of this Province, there being above forty thoufand Negroes, which are worth, onewith another, twenty-five Pounds each. Artificers are fo fcarce at prefent, that all forts of Work is very dear; Taylors, Shoe-makers, Smiths, $\mathcal{E}^{3} c$. would be particularly accept able there; a fkilful Carpenter is not afhamed to demand thirty Shillings a Day befides his Diet, and the common Wages of a Workman is twenty Shillings per Day, provided he fpeaks Englifh, without which he cannot be underfood, and confequently not fo ufeful as others; and when a Workman has but ten Shillings per Day, he thinks he labours for almoft nothing, though he has his Maintenance befides; but this is Carolina Money. Moft of their Shoes are brought from England, and generally fell for forty Shillings per Pair; not but that they have Hides enough, and very cheap, an Ox's Hide being fold for twenty Shillings; neither are they deftitute of the Means to tan them, for they make very good Lime with Oyfter-fhells, and the Bark of Oak Trees is fo plentiful, that it cofts nothing but the Trouble of gathering; they therefore want only a fufficient Number of good Tanners and Shoe-makers. I might fay the fame of Leather-dreffers, fince they fend every Year to England above two hundred thoufand Deer-fkins undreffed; yet Carolina produces Oker naturally, and good Fifh Oil may be had from Nere York, or New England, very cheap; fo that they might be dreffed and made up into Breeches in the Country, for which thofe Skins are very proper, being cool in Summer, and warm in Winter. There is not one Potter in all the Province, and no earthen Ware but what comes from England, nor Glafs of any kind; fo that a Pot-houfe and a good Glafs-houfe would fucceed perfectly well, not only for Carolina but for all the Colonies in America. There is a kind of Sand and Earth which would be very proper for thofe Purpofes, as alfo Wood and Fern in abundance, if they had but Workmen to make Ufe of them.

It may feem ftrange to affirm this, in an Age when it is well known, that Men are inclined to go almoft any where, and may be tempted to almoft any thing, from the Hopes of Money. Thefe Facts, however, are very

## Chap. III. of the ENGLISH in AMERICA.

true, neither is it very difficult to account for them; for if without much Labour and Pains not only a bare Subfiftance may be gained, but in time alfo good Eftates may be raifed by Methods already in ufe; we are not to expect that our People in the Colonies will either run Hazards or give themfelves much Trouble to ftrike out new Ways to Wealth, even though they fhould be convinced that fuch Ways, at the fame time they increafed their own Fortunes, would prove beneficial to their Mother-Country likewife. There are indeed fome People who take a Pleafure in running down the Countries we have planted in America, and in making their Countrymen believe that they are amufed with fine Stories, without Truth, or which, at leaft, have but a fmall Mixqure of Truth in them. They fay, for Inftance, that tho' Engli乃 Wheat will grow in Carolina, yet it is apt to mildew, and almoft always runs up into Straw, and produces but a fmall Grain, and that it is very difficult to keep it from the Wevill. Thefe, however, are Inconveniencies felt in other Countries, where very good Wheat grows, for which many Remedies have been found and applied with Succefs, as doubtlefs they might be there, if the Planters went about it. The Truth of the Matter is, that Rice is raifed without fo much Trouble, and as they can exchange this in Penfylvania and New Kork, almoft Weight for Weight for Flour, they are content, and indeed think it a Happinefs they can have Brear without being at much Pains in procuring it.

The fame thing may be faid of Wine, which it is now generally agreed cannot be made there, becaufe their Grapes ripening in Fune, when their great Heats and heavy Rains come on, are very feldom fit for preffing. But it is very certain, that this is no better than an Excufe, fince the wild Grape ripens in OEfober, and Perfons fkilful in Vineyards would foon teach them the Mieans of making ufe of thefe. The very fame Objections were raifed in reference to the Country about the Cape of Good Hope; and it was as pofitively faid that no Wine could be made there, but the Dutch have fhewn what Strength there was in the Objection, by their improving into a Paradife a Place we defpifed, and thought not worth the keeping ; and while Madeira is to be had fo cheap, I am convinced no Grapes will ripen kindly in Carolina. As to Silk, the fame Objection does not lie; for, it is well known, there are Woods of Mulberry-Trees there, upon which the Worms feed and fin as well as in any Place in the World. I may add, that Silk has been brought over from Carolina, as good, in the Opinion of the beft Judges, as any that comes from Piedmont, for which we pay large Sums of Money every Year ; but it falls out unluckily, that from the End of March to the Beginning of May, when the Worms want moft Attendance, all the Hands in Carolina are employed in planting and hoeing their Rice, fo that they have no time to fpare for procuring a Commodity, of which hitherto they do not feem to know the true Value.

But all the Faults do not lye on that Side of the Water ; fince it is true, that though there comes a great deal of Pitch from thence, we have but little Tar from Carolina; whereas, there have been formerly many thoufand Barrels brought in a Year, not at all inferior to the beft Tar from Norreay; which was, by this Means, reduced from three Pounds to fifteen Shillings a Barrel, with which Reduction, it feems, we are content to have recourfe again to the North Country Tar, and no longer make ufe of what might come from this Plantation. We may from thefe few Hints fee clearly, that as great as our Trade to thefe Colonies is, it might ftill become much greater, and that how beneficial foever they may be to Great Britain, we are far from deriving from them all the Benefits we might do; and though confidered, in one light, this feems a little diftafteful ; yet, if we view it in another, it affords us a very comfortable Profpect; fince, when we are difpofed to apply ourfelves heartily to the Improvement of this Commerce, we have a moral Certainty, that our Endeavours will fucceed, and that Great Britain can never feel any fenfible Decay of Trade, while fhe preferves and cherifhes her Plantations.
5. Among other Perfons of Quality and Diftinction who were juftly entitled to the Favour of King Cbarles,
there were few who had a better Title than Francis Lord Willougbby, who was Governor of Barbadoes, and who in $166_{3}$ obtained a Grant of the Inand of Antego, in which he fettled a Colony about three Years after. The Country had been known before; and; if I am not miffaken, Sir Thomas Warner had attempted to fettle it. How it came to pafs that after the Death of Lord Willougbby, who removed hither, this Inand came again into the Hands of the Crown I cannot fay, but without all doubt, the Fact is true, and this Inand now makes a Part of the Government with the reft of the Leeward Ilands; and is faid to owe its prefent happy Situation to the Care ${ }_{\hat{p}}$ Induftry, and Skill of Sir Cbriflopher Codrington, who made it the Seat of his Government when he was General and Commander in chief of thofe Illands. It was here, that in the latter End of the late Queen's Time Governor Park was killed by the People; an Affair that will be ever remembered, both in that Part of the World and this, though it does not feem to be well underftood in either; the Fact moft certainly was barbarous and bloody enough ; but, at the fame Time, it is as certain the Provocations the Pcople had received were great; which was the Reafon that moft of thofe concerned in this Murder efcaped with Impunity.

But our Bufnefs lies not fo much with Men as witla things, and therefore we fhall proceed to the Defcription of the Ifland Antego, or as it is fometimes written Antigucs which lies in I 6 Degrees I I Minutes North Latitude, and in $\sigma_{3}$ Degrees of Longitude Weft from London. It is of a circular Form, about twenty Miles in Diameter, and near fixty in Circumference. The Climate is not to be boafted of, fince it is allowed to be hotter than Barbadoes, and very fubject to Hurricanes. The Soil too is fandy, and a great Part of the Inand is overgrown with Wood; but the worit of it is, that there are but few Springs, and not fo much as a fingle Brook in the whole Inand, fo that the People depend chiefly upon Rain-water, for which they are fometimes diftreffed: Yet, notwithftanding thefe Inconveniencies, it is a very confiderable and a very thriving Plantation.

This Inand is divided into five Parifnes, four of which are Towns; as St. Fobn's Town to the Northward, and Falmouth, Parbam, and Bridge Town to the Southward; the other Parifh is St. Peters. St. Jobn's Harbour is the moft commodious, befides which there are feveral other good Harbours, as Five Ifland Harbour, fo called from five little Inlands to the Weftward of the Ine of Carglile Bay; Engli/h Harbour, at the bottom of which is Falmoutb Town, defended by Cbarles Fort; next to it is Willougbby Bay; on the Eatt Shore is Bridge Toron, the Green Bay, off which is Green Illand ; then Nonfuch Harbour, a fpacious Bay. On this Coaft, on the North-eaft Shore, are feveral little Inands called Polecat Ifands and Goat Ifland, and more to the Northward Goana 1/and, Bird Iland, Long Ifand, Maiden Ifland, and Prickle-Pear Ihand. The Forts are now in pretty good Repair; Monkf: bill Fort is mounted with thirty Pieces of Ordnance; it has a Magazine with about four hundred and ten Mufkets and eight hundred Bayonets; in good order ; the other Fort erected at St. Fobn's Harbour, is mounted with fourteen Pieces of Cannon; there are feven other Batteries raifed for the Defence of fo many landing Places; in all mounted with twenty-fix Guns:

The Capital of the Inand is St. Fobn's Town; which confifts of about two hundred Houfes; and the Number of Souls in all this Colony are one thoufand five hundred at prefent. It has greater plenty of Cattle and other Beafts, efpecially Venifon, than any other of our Caribbee Iflands; the Animals of which are much the fame, as alfo their Productions. Sugar, Indico, Ginger, and Tobacco, were the chief Growths and Commodities of Antego, when it was firft planted, but now Indico and Ginger are very rarely cultivated there. The Sugar and Tobacco were both bad of the Sort; the former fo black and coarfe, that one would fcarce have thought any Art could have refined it; and, as if our Sugar Bakers fcorned to put fuch Dirt into their Coppers, it was generally fhipped off for Holland and Hamburgh, being fold for fixteen Shillings a hundred Weight, when other Muf-
covado Sugars fetched eighteen or nineteen Shillings a hundred. The Planters of Antego have fince improved their Art, and as good Mufcovado Sugar is now made there, as in any of our Sugar Inlands. They have alfo clayed fome Sugar which was not known to have been done in Aniego forty Years ago.

Though there is not much Tobacco planted in this Inand, what there is now is not fo bad as was formerly, when it was fold for no other Ufe but to make Snuff. The wild Cinnamon Tree is faid to grow in the Lowlands, or Savanah Woods in Antego. After Famaica and Barbadoes, this has been confidered by fome as the moft confiderable of our Inlands in America; and as there is ftill a great Quantity of Land capable of Improvement, and it is allowed the People there might make a third more Sugar than they do, we may venture to allow, that it either is, or may be fo; and if we confider what muft have been gained by our Commerce with this Inland for upwards of fourfcore Years, we cannot but judge that it has been highly advantageous to this Nation, and very well deferves all the Care and Concern that can poffibly be expreffed for its Protection and Prefervation.
6. The next Colony in America, which our Method leads us to confider, is that of Nero York, which is ours by a double Right, viz. of Difcovery and Conqueft. It was undoubtedly Part of the Country, the Coafts of which were firft viewed by Sebaftian Cabot, and as fuch made a Part of the original Province of Virginia, I mean the Country known under that Name in the Reign of Queen Elizabeth, and was afterwards within the Limits of the Country, granted by King James to the Weftern Company. But before it could be fettled, that is about the Year 1608 , the famous Navigator Hudfon difcovered that River, which has fince borne his Name, and the Country adjacent, which he afterwards fold to the Dutch who planted there; but this was looked upon as illegal, becaule they had not King Fames's Licence, which it feems they afterwards obtained. There are fome Englifh Writers fo very partial in favour of this Republic, as to be angry that this Settlement fhould be looked upon by us as a kind of Invafion, but furely this is without Reafon; for if the Subjects of any Country were at Liberty to fell and difpofe of Places they had but juft feen, which was the Cafe of Captain Hudfon, the Inconveniencies would be fo great as to produce endlefs Wars, and therefore this Practice muft be underftood to be contrary to the Law of Nations.
But however that Matter might be, King James was fo great a Lover of Peace, that very probably he was glad to rid himfelf of the prefent Difficulty, by granting them a Licence: Yet if we duly confider this, the granting fuch a Licence was a thing very deftructive to the Intereft of Great Britain, and might have proved extreamly prejudicial to our Northern Colonies, and have been fuch a Bone of Contention, as muit have for ever prevented any Harmony between the maritime Powers. Thefe Reflections which rofe naturally out of the Subject, have led me a little from my Purpofe, which was to explain the firft fettling here, which the Dutch made a little before we planted New England; and from their firft coming, being feated in Iflands and at the Mouth of a good River, their Plantations were in a thriving Condition, and they begun, in Holland, to promife themfelves vaft things from their new Colony. The Englifb Puritans in Holland, who firft removed to America, intended to fettle here, having had an inviting Defcription of the River, Climate, and Soil, from the Hollanders, who did not care, however, that the Englifh fhould be fo near their Plantations, as to be tempted to encroach on them, confidering the Flaw that was in their Title. The Englifh that went from Holland, intended to fettle on the Coaft, near Foir Field County in Nere Englond, lying between Connecticut and Hudfon's River, but the Dutch apprehended they would there be too near Neighbours. Thefe Englifh, as has been already related, falling in with Cape Cod, after having refreihed a little, tacked about to the Southward for Hudfon's River: But Fones, who was the Mafter of the Ship they came in, having been bribed by the Hollanders to carry them and land farther to the North-
ward, inftead of putting to Sea entangled them among dangerous Sholes, which made them willing to get afhore where they were, and give over the Defign upon Hudfon's River. The Dutch had, two or three Years before, been infulted here by Sir Samucl Argall, in his Way from Iir ginia to New Scoiland.

He deftroyed their Plantations, and it was to prevent the like for the future, they applied to King fames for his Licence to fay there, to build Cottages, and to plant for Traffic as well as Subfiftance, pretending it was only for the Conveniency of their Ships touching there for frefh Water and frefh Provifions, in their Voyage to Brazil; but they, by little and little, extended their Limits every Way, built Towns, fortifyed them, and became a flouriming Colony. In an Inand, called Manabattan, at the Mouth of Hudfon's River,- they built a City which they named New Amfterdam, and the River was called by them the Great River. The Bay to the Eaft of it had the Name of Noffou given it; about one hundred and fifty Miles up the River they built a Fort, which they called Orange Fort, and from thence drove a profitable Trade with the Indians, who came over land, as far as from $2 u e b e c$, to deal with them. Henry Cbrifitian, the Mafter of a Ship, the fame who gave the Name to Mar tha's Vineyard, which he difcovered, as the Dutch fay, was the firft Governor there, and his Succeffor was Facob Elkin, put in by the Weft India Company in Holland, to whom the States General granted this Country. The firft Bounds of Nova Belgia were Maryland on the South, the main Land, as far as could be difcovered Weftward, which would ftretch to the Nations bordering on the Miffifippi, the great River of Canada Northward, and Nere England Eaftward; but, as will appear hereafter, the Limits of New York are not fo large at prefent.

The Dutch Colonies were in a very thriving Condition when they were attacked by the Englifh, which was at the Opening the firft Dutch War in King Cbarles's Reign. We find fome Writers very willing to reprefent this as a very unjuft War, becaufe Sir Robert Carr, was fent to attack this Plantation before they, in that Part of the World, could have any Notice of the War ; but then it ought to be remembered that it was after the Dutch Admiral, de Ruyter, attacked our Settlements in Africa, and therefore I cannot think that this is fo very bad as it has been reprefented, or that it can at all prejudice our Title to this Country. The Commiffion of Sir Robert Carr, impowering him to act againft the Dutch, was dated on St. George's Day 1664 , but he did not arrive till the latter End of the Year. He brought with him between two and three thoufand Men, and offering Protection to fuch of the Inhabitants as fubmitted, he became Mafter of the whole Country without a Blow; and it does not appear that the People were at all difpleafed at changing their Mafters. His Majefty, after it was reduced, gave leave to fuch of the Inhabitants to itay as were inclined thereto, and fuffered the reft to depart freely with their Effects. The Number of the latter was but very inconfiderable in Comparifon of the former; and Colonel Ricbard Nicbols, who was left Governor of the Province, and continued fo twenty Years, brought the People, not only to relifh, buit to be in love with, the Englifb Government; fo that there never was the leaft Difturbance among the Inhabitants on the fcore of their being Subjects to England.

The Duke of York granted away a Part of this Province, as will be fhewn hereafter; but the Remainder, which is what we now ttile New York, continued a Royal Government, as it ftill is, but very much changed for the better ; fince from being one of the pooreft, it is become one of the moft confiderable that we have in America, in Confequence of the Colony's becoming one of the moft flourifhing, and this, though it has had the Misfortune of being fometimes governed by Men of moft arbitrary Principles, and capable of doing fuch violent things, as nothing but their Diftance from Great Britain could, I think, induce them to venture upon. The laft Governor of the Ferfeys, who is lately dead, felt the Effects of fuch a Spirit, when in another Station, and rofe to that Government by fuffering with Decency and Dignity the

## Chap. III. of the ENGLISH in AMERICA.

Outrages of one cloathed with that Authority; but when he came himfelf to execute that Office, he fhewed, what we very feldom fee, that there are fome Natures which even Power cannot corrupt ; for he behaved fo well as to abolifh the Memory of paft Grievances, and to leave a perfect Model for his Succeffors in that Government.
7. The Country of New York, properly fo called fince it became Engli/h, is thus bounded, viz, by Canada on the North, Nerw England on the Eaft, the Ocean on the South, and the five Nations and Nero Jer fey on the Weft, and is about two hundred Miles in Length from North to South, that is, from the Mouth of Hudfon's River to the Lake of Cbamplain or Corlaer, and it might be extended two hundred Miles farther North if we poffeffed all the Country we claim, as far as the River St. Laurence : But the French having built Forts on the Lake Cbamplain, have, in a Manner, expelled us from the North Part of this Country; the Englifb only poffefs the Country South of that Lake at prefent, and this is exceeding narrow in moft Places; particularly between Connecticut Colony on the Eaft, and Nere Ferfey on the Weft, it is fcarce twenty Miles broad. But to this we muft add the Ifland Manbattan, which the City of New York ftands upon, Staten Jfland and Long Ifland, all which lie before the Mouth of Hudfon's River, and are comprehended in Nero York Proper.

This Province is divided into ten Counties, which going from North to South down Hudjon's River, are Albany, Ulffer, Ducbefs, Orange, King's County, Cbefter, Newe Tork County, Queen's County, Suffolk County, and Richmond County, which are pretty well replenifhed with Provifions and Farms, but have not many great Towns in them. The chief Towns are New York City, Scheneatida, Albany, Weftchefter, $\varepsilon^{2} c$. in all, or moft of which Towns, are Miffionaries, either Minifters, School-mafters, or Catechifts, fent over and maintained chiefly by the Society for the Propagation of the Gofpel, who have taken moft laudable Care in this refpect. Nerw York City is fituated in 40 Degrees 40 Minutes North Latitude, and 47 Degrees 4 Minutes Weftern Longitude, at the South End of York County, being an Inland at the Mouth of Hudjon's River, about fourteen Miles long and two or three broad. As this Town ftands upon an Eminence, and contains upwards of a thoufand Houfes well built with Brick and Stone, with a W.all and Forts, which ferve as well for Ornament as Defence, there is fcarce any Town in North America that makes a better, and but a very few fo good an Appearance. It has alfo an excellent Harbour, furnifhed with commodious Quays and Warehoufes, and employs fome hundreds of Ships and Veffels in its foreign Trade and Fifheries. The public Buildings are the feveral Churches belonging to thofe of the Church of England, to the Swedes of the Lutheran Perfuafion, to the Dutch Calvinits, the French Refugees, and the Englifh Sectaries; but the Church of England may well be looked upon as the eftablifhed Religion, becaufe the Conftitution of the Government is the fame as in England; the reft, however, are tolerated, and capable of Pofts in the Government, and of fitting in the Houfe of Reprefentatives, as I apprehend. The other public Buildings are the Town Houfe, and that were their general Affemblies and Courts of Juftice are held. As to their Fortifications, they are not, I doubt, capable of defending them againft an European Enemy, any more than thofe in the reft of the Plantations, for this unanfwerable Reafon; becaufe they were fome Years ago confeffed to be fo bad, that it was not fit to enquire into the State of them, left Foreigners fhould be acquainted with our Weaknefs on that Side. There are, indeed, four hundred regular Troops fent from England to garrion this, and fome other Towns of this Province; of which two Companies always are, or ought to be, upon Duty in this City; but admitting they were always compleat, and ever fo well difciplined, this feems to be but a very inconfiderable Force to defend a Province of this Importance againft an Invafion, unlefs their Country Militia be more to be depended upon than that of other Places.

As New York may be looked upon to be the frontier Garrifon in the South againft an Invafion from any mari-

Vol. II. Numb. 88.
time Power; fo Scheneetida Town and Fort; in the County of Albany, twenty Miles North of the Town of Albany ${ }_{3}$ may well be deemed their Frontier on the North againft the French of Canada, and their Indian Allies, whos, in the Year 1688 , furprized and almoft demolifhed the Town with the Works about it ; but they have fince been repaired and enlarged, and Fort Nicholfon and fome other Forts erected ; in which, and in 'Albany, the reft of the regular Troops are quartered, for the Defence of that Frontier. Albany is a confiderable Town, fituated on Hudjon's River, an hundred and fifty Miles North of Nerw York, having a Fort erected for its Defence; and here it is that the Sachems, or Kings of the five Nations, meet the Governors of our Northern Colonies, to renew their Alliances, and concert Meafures for their Defence againft their common Enemy, as has been intimated al ready. South-weft of the Inand and County of Neres Tork, lies Staten IJland, being about ten Miles in Length and fix in Breadth, and in it are a great many good. Farms and Plantations, but not one Town that I can meet with in the Accounts of this Province.

Long Ifland lies Eaft of Staten Ifland, and South-eaft of that of Nerv York, oppofite to the Colony of Connecticut, being an hundred and fifty Miles in Length, and generally about twelve in Breadth, and contains three of the Counties above mentioned, viz. Queen's County, Suffolk County, and Ricbmond County; the chief Towns in Queen's County, are Famaica and. Hempftead; in Suffolk County, the chief Town is Oyfter Bay. The Town of Richmond gives Name to Ricbmond County, in which alfo is the Town of Soutbampton; in the South-eaft Part of the Inand; and there alfo are fituated the Towns of North Caftle and New Windfor. There is a celebrated Plain in the Midft of Long Ihand, fixteen Miles long, and four broad, to which they have given the Name of Salifoury Plain; having, as it is faid, as fine a Turf as that on Salifoury Plain in Old England; and there being an excellent Breed of Horfes in the Inand, they have Races here every Seafon, to which the Gentlemen of New England and New Kork refort, as they do to Neromarket with us. There are other good Towns which lie in the County of Weftchefter, on the Continent, Eaft of the Mouth of Hudjon's River, the chief whereof are Weftcbefter and Rye.
8. At the Time we became Mafters of this Country, it was very thinly peopled, in comparifon to what it is at prefent, and in no fmall Danger from the French, who fettled at the back of it, and the Indians who were fettled on its Frontiers, but, at prefent, it is fafe enough from both; the Number of People being vaftly encreafed, fome fay to fifty thoufand, taking in all Sorts, fo that the French apprehend Danger from us in their turn; and the Indians think themfelves very happy under our Protection; and fuch Care has been taken to treat them with proper Kindnefs, as to preferve them in our Intereft, as effectually as if by Force they had been reduced to be our Subjects. They fupply the Englifh, in the Summer, with Venifon, Fifh, and Fowl, very cheap. The Trade from Nerw York to the Sugar Iflands, particularly Barbadoes, which is very confiderable, is in Corn, Flower, Bread, Beef, Pork, Peafe, Bacon Gamons, Smoaked Beef, Apples, Onions, Board and Pipe-ftaves, for which they receive, in return, Sugar, Moloffes, Rum, Ginger, $E^{2} c$.

The New Kork Merchants drive alfo a very advantageous Trade with Madeira and the Azores, in Pipe-ftaves and Fifh, for which they load their Ships back with Wine and Brandy; and, generally fpeaking, there is farce a more profitable Trade in the Britifh Commerce. I am very well warranted in faying this, by what the Agents for the Colony alledged upon the Difpute with the Sugar Plantations, of which we have given fo large an Account. They affirm that their Winters being fevere they take off more of the Woollen Manufactures of this Kingdom, than all the Inands put together, Jamaica excepted; and return more Gold and Silver to pay for them, which I never heard was denied. What they alledge in Juftification of their Dealing with the Frencb Settlements is fingular enough, and deferves particulat Notice. They fay that they trade with what they have,
with thofe who will purchafe it, and that while they do this they fhall live well, clothe themfelves in Englifb Stuffs; and pay for them honeftly ; but if they are deprived of this Trade, the Profits of which enable them to pay for Englifh Cloathing, they muft endeavour to make ufe of their own Wool, and fupply themfelves as well as they can. If this fhould be prohibited, they affirm, they muft abfolutely go naked.

This perhaps is ftraining the Matter a little beyond the Truth ; but beyond all Doubt this Colony is very ufeful to Great Britain, and in Conjunction with the other Bread Colonies, as they are called, the fole Source of our foreign Sugar Trade, as in a few Words may be fhewn. The Sugar Inlands mutt depend for their Subfiftance, either upon the Britijh Iflands or upon thefe Colonies; fince it is very certain, that if they were to draw all their Maintenance from hence, granting that to be poffible, it would make Labour in thofe Inands fo dear that no Sugar at all could be exported. On the other hand, if the People of New York Phould be forced to fet up Manufactures of their own, this would employ fo many Hands as muft neceffarily raife the Price of Provifions, and this confequently would have, in a great meafure, the fame bad Effect in making Labour dear in the Inands. It is therefore the Bufinefs of Great Britain to take care of both, and not to fide haftily with either.
But it is more efpecially our Bufinefs to prevent fetting up Manufactures in the Plantations on the Continent; becaufe this would injure the Trade between us and them, leffen the Shipping employed therein, decreafe the Number of our Seamen, and detach thofe Colonies, in a great meafure, from their Mother Country; which, as they are Evils not to be borne, fo too much Diligence cannot be ufed to avoid them. As things ftand at prefent, there is not a Colony in America which makes a better Figure than New Kork, or where the People feem to have a greater Spirit of Induftry, or more hearty Affection to the Britifs Nation; and it is univerfally agreed, that the City of Nere Kork is, in point of good Government and Politenefs, at leaft equal, if not fuperior, to any thing we poffefs in that Part of the World: And as for the Inhabitants of the Inland Part of the Colony, they are our beit Defence againft the French, and are every Day gaining upon them in point of Trade with the Indians; which are certainly Circumftances that deferve the utmoft Confideration, and ought above all others, to recommend this Plantation to the Protection and Favour of the Briti/h Government ; which no doubt they will always meet with while they continue, as they have hitherto done, to ftudy by every Method to deferve it.
9. The Countries now called the Ferfeys, or, with greater Propriety, the Eaft and Weft Fer Seys, come next in our Way. Thefe fell under the Dominion of the Crown of Great Britain by Conqueft, at the fame time with, and as making a Part of, Nova Belgia; and if to this Right acquired by War, or rather vindicated by it, for I conceive that the Dominion of this Country, which was all that we gained by the War, we had a very juft Title to before; if, I fay, there was any thing wanting to fill up the Meafure of our Claim, it was certainly made up by the Peace, fince an Equivalent was then given to the Dutcb; fo that both Nations had very good Reafon to be content. In order, however, to obtain a juft and clear Notion of the Hiftory and Condition of this Tract of Country, it is neceffary to obferve, that even the Dutch were not the original Inhabitants of it: The feveral Voyages that had been made for the planting of Virginia, made thefe Coafts very well known to Multitudes of Englifh Seamen, and thefe being difperfed into different Parts of the World, carried the News of the $\int$ e rich and pleafant Lands in America along with them wherefoever they went, which infpired Strangers with ftrong Defires of occupying what we feemed to have abandoned, or the fettling of which was beyond our Strength, at leaft at that Time.
The firf Europeans that fettled here were the Sreedes, who had three Towns in this Province, Cbriftina, called by the Indians, Andaftaka, Elinbourg, and Gottembourg. Their Settlements were chiefly on the South-fide of the River towards Penfylvania; opponite to which there is a

Place, to this Day called Fort Elfinbourg ; but the Swedes made very little of their Plantation, and the Dutch, al= ways induftrious for their own Advantage, worked them fo far out of it, that Bergen, the Northern Part of the New Ferfey, was almoft entirely new planted by Hollanders. King Cbarles II. gave this Tract, in his Grant of Nova Belgia, to the Duke of York; but the Englifh never made any Settlement in it till feveral Years after they were in the Poffeffion of that Province, and had mightily extended their Plantations.

The Duke of fork having invefted this Province, by the Name of Nova Caneria, in Jobn Lord Berkeley and Sir George Carteret, they; or their Affignees, agreed to divide it into two Parts; denominated Eaft and Weft Nere Jerfeys, which remained two diftinct Proprieties and Governments for many Years afterwards, as will be fhewn Eaft New Ferfey, or that Part of it which borders on New York, fell to Sir George Carteret; whofe Family being of the Ine of Ferfey, this Province on that Account took its Name from thence. Weft New Ferfey, that Part of it which borders on Penfyluania, fell to the Lord Berkeley. This whole Province, containing the two Ferfeys; is thus bounded; it has the main Ocean on the South-eaft, the River de la IV ar on the Weft, Hudjon's River on the Eaft, and the main Land on the North; it lies between 39 and 40 Degrees North Latitude; extends itfelf in Length on the Sea Coafts, and along Hudfon's River, one hundred and twenty Miles, and is almoft as broad as long where it is broadeft. We muft now take fome Notice of the Province as it was under the Divifion of Eaft and Weft, and was divided into two Proprieties; of there, the largeft and moft inhabited, was Eaft Ferfey, which extended Eaftward and Northward all along the Sea Coaft and Hudfon's River, from Little Egg Harbour to that Part of Hudfon's River which is 41 Degrees North Latitude and Southward and Weftward was divided from Weft Ferfey by a Line of Partition from Egg Harbour, or Cref wick River, Stony River, and the South Branch of Raritan River: It extends in Length along Hudfon's River, and on the Coafts, 100 Miles: In Breadth it is very unequal. It is divided into Counties, for which there was little Occafion, as Bergen County, Effex County, Middlefex on the Northfide of Raritan River, and Monmoutb County on the South. According to fome Writers, Weft Ferfey is divided from the cther by a Line from North to South; contains the like Number of Counties, viz. Burlington, Gloucefter, Salem, and Cape May.

Thefe two Provinces are in the Hands of different Proprietors, who made many Affignments of their Rights, which would take up too much Room to enter into the Detail of here, and therefore we fhall content ourfelves with obferving, that the Proprietors both of the Eaft and Weft Ferseys, on the 22 d of April I7O2, put them into the Hands of Queen Anne, and they have been ever fince governed by the royal Authority, having a Governor, Council, and Affembly; which Governor has Power of appointing a Deputy. We muft alfo remark, that fometimes this Government has been granted by a feparate Commiffion to the fame Perfon intrufted with that of New York ; but at prefent they are in different Hands. The chief Towns in the Ferfeys are Perth Amboy, the Capital of the County of Middlefex, and of all Eaft Ferfey, pleafantly fituated at the Mouth of Raritan River, and, had it been built according to the intended Model, would have been one of the fineft Towns in North America; but Planters have not reforted to it, as was expected; notwithftanding it is fo commodiouny fituated for Trade, that Ships of three hundred Tons may come up in one Tide, and lie before the Merchants Doors: But the Town of Elizabeth, fituate to the North of it, flourifhes much more, and may ftill be deemed the moft confiderable Town; in the County of Bergen, the Capital of the County of the fame Name; Elizabeth Town, Capital of the County of Effex, and formerly of Middlefex; Middleton, Sbrewfoury, and Frebold, in the County of Monmoutb; Burlington or Bridlington, the Capital of the County of Burlington, and of al! Weff Ferfey: This Town is fituate 40 Degrees 40 Minutes of North Latitude, on an Illand in the Middle of the River de laWar, to the Northward of Pbiladelpbia in Penfylua-

Chap. III. of the ENGLISH in AMERICA. 283
nia, and on the oppofite Side of the River: The Houfes are handfomly built of Brick, and laid out into fpacious Streets, with commodious Quays and Wharfs, to which Ships of two or three hundred Tons may come up: It has alfo a handfome Market-place, a Town-houfe or Guildhall, where the Courts of Juftice were heretofore held, and two good Bridges over the River ; the one called London-bridge, and the other York-bridge, and having an eafy Communication with Pbiladelpbia, and the Ocean by the River Salem, which falls into de la War Bay, it is faid to be one of the beft Towns in Weft Ferfey, whether we confider its Situation, Building, or Trade.

The Trade of the two Jerfeys, as alfo the Soil and Conveniences of Rivers and Creeks, are much the fame, except that Weft Ferfey, by its Situation on de la War River, abounds more in the latter. The Country yields Plenty of all forts of Grain, and the Inhabitants are faid to have been fo fcrupulous, that they would not enter upon a new Plantation before they had purchafed it of the $I_{n-}$ dians, which they did at no very dear Rate. It is computed that they are about fixteen thoufand Souls, and about three thoufand Men fit to bear Arms : There are not two hundred Indians in this Province, indeed neither here or elfewhere in the Britifh Empire are the Indians of any Force unlefs in Conjunction with the French at Canada, or the Spaniards in Florida. The Indians are now rather an Help than an Hurt to the Englifh, and here efpecially they wifh there were more of them than there are, fo ufeful have they found them. Befides Provifions for the Sugar Inlands, the Inhabitants drive a Trade in Furs and Skins, and a little in Tobacco; but it would be well if the Colonies cultivated that lefs, and Provifion more, or any other Commodities that are fit for foreign Markets, which are much clogged by the Product of our Tobacco Plantations: They fhip off Train-Oil, Fifh, Corn, and fome other Provifions for Portugal, Spain, and the Canaries: Ships may be built at Perth, but New England engroffes that Trade, and has the beft and the moft Materials for it ; and it muft be owned that New York is the beft Market New Ferfey has, for the buying and felling any confiderable Quantity of Goods of any kind.

This may poffibly keep the ferfeys a little under, but notwithitanding the Difficulties they have had to ftruggle with, it is very certain, that within thefe twenty or thirty Years paft they have increafed prodigiounty, and nothing can give a Check to it, except fome fudden Sufpicion of their dealing in Commodities and fetting up Manufactures which may interfere with thofe of their Mother-Country. I do not deny that if there were any juft Grounds for fuch a Sufpicion, Care ought to be taken and fome Remedy applied, but then this requires great Caution. In former Times, when we were lefs ufed to Trade, we encouraged all ; and provided our People were but employed, and Traders bufy, we took it for granted that Profit muft enfue, and fo very probably it did. But the prefent Age is fo unacquainted with the Caufe of the Increafe of our Riches, that they rather interrupt than encourage it, and inftead of inlarging lay hold of fome fmall trifling Things, which they think may touch their private Intereft rather than promote the general Good ; and if they think any Commodity from the Plantations interferes with fomething we have at Home, fome hafty Step is taken to prevent it ; fo that for the Sake of faving one Penny we often debar ourfelves of Things of a thoufand Times the Value. This Misfortune will happen to any trading Nation, if the Perfons who have the Regulation of the Commerce do not underftand it well enough to diftinguifh nicely between thofe Channels by which the Riches flow in upon them and thofe that carry them away; and therefore, when Things are carried into a wrong Channel by fome of the Planters, Merchants are afraid to mention thofe Diforders for fear the Remedy fhould prove worfe than the Difeafe. The Gentlemen that would judge of thefe Things ought to inform themfelves what this Nation was one hundred and fifty Years ago, how we have increafed in Riches fince that Time, what Price Corn, Cattle and Land bore then, and what now ; and what concurring Circumitances have put us in fo flourifhing
a Condition, who were then fo inconfiderable in Trade ${ }_{3}$ that even London, the Metropolis of this Kingdom; made but a fmall Figure, to what Bruges, Antwerp, and other Hanfe Towns did, as well as the great Cities in the Mediterranean.

If we examine into the Circumftances of the Inhabitants of our Plantations, and our own, it will appear that not one fourth Part of their Product redounds to their own Profit; for, out of all that comes here; they only carry back Cloathing and other Accommodations for their Families, all which is of the Manufacture and Merchandize of this Kingdom. If there is any thing to fpare it is laid up here, and their Children are fent home to be educated; if there is enough to fupport the Family, they come here, and only an Overfeer is left upon the Plantation to direct, and the whole Produce is remitted home; and if enough to purchafe an Eftate, then it is laid out in Old England. All thefe Advantages we reccive by the Plantations, befides the Mortgages on the Planters Eftates; and the high Intereft they pay us, which is very confiderable; and therefore very great Care ought to be taken in regulating all Affairs of the Colonies, that the Plant: ers be not put under too many Difficulties, but encou. raged to go on chearfully. They are born with us, or the Defcendants of fuch, and we know nothing but the Want of the Means to live at home keeps them abroad. There are very few trading or manufacturing Towns in the Kingdom, but have fome Dependence on the Plantation Trade. It is true, thefe, and in general all the Northern Colonies, have not Commodities and Products enough to fend us, in return for purchafing their neceffary Cloathings, $E^{\circ} c$. but are under very great Difficulties, and therefore any ordinary Sort fells with them; and when they are grown out of Fafhion with us, they are new-fafhioned enough there; and befides thofe Places are the great Markets we have to difpofe of fuch Goods, which are generally fent at the Rifque of the Shop-keepers and Traders of England, who are the great Exporters, and not the Inhabitants of the Colonies, as fome have imagined. As the Colonies are Markets for thofe Sorts of Goods, fo they are Receptacles for young Merchants who have not Stocks of their own, and therefore all our Plantations are filled with fuch who receive the Confignments of their Friends from hence; and when they have got a fufficient Stock to trade with; they return home, and other young Men take their Places, fo that the continual Motion and Intercourfe our People have into the Colonies, may be compared to Bees in a Hive, which go out empty, but come home loaded ; by which Means the Foundations of many Families are laid. The Numbers of Sailors, and other Tradefmen, who have all their Dependance upon this Traffic, are prodigioufly great.

Our Factors; who frequient the Northern Colonies, being under Difficulties to make Returns for fuch Goods as they difpofe of, what Gold, Silver; Logwood, and other Commodities they trade for upon the Spanifs Coaft, is fent home to England, as alfo Oil, Whale-Fins, and many other Goods; likewife another great Part of Returns is made by Ships built there, and difpofed of in the Streights, and other Parts of Europe, and the Money remitted to us. Now all thofe Ships are called Nerv England Ships, and our Factors, after they undertake any Bufinefs, are no longer called Englifmen, but New Englanders, and the Ships they build, we are informed, are regiftered as Nere England Ships. I Thall therefore humbly recommend it to fuch Gentlemen as are Guardians of the Trade of the Nation, that our own Intereft is not miftaken for thofe of the Planters for every Reftraint and Difficulty put upon our Trade with them, makes them have recourfe to their own Products, which they manufacture, a thing of great Confequence to us, and ought to be guarded againft; for if they are fupplied with their own Manufactures, a great Part of the Advantages we fhould otherwife receive is cut off; and therefore, as it is elfewhere obferved, if Care is taken to find them Employment, and turn their Induftry another Way, now they are in their Infancy this may with a very little Trouble be avoided.

There is another Advantage we receive by our Planta-
tions, which is hardly fo much as thought of, I mean the prodigious Increafe of our Shipping by the Timber Trade, between Portugal, \&c. and our Plantations, which ought to have all poflible Encouragement, for by it we have crept into all the Corners in Europe, and become the common Carriers in the Mediterranean, as well as between the Mediterranean, Holland, Hamburg, and the Baltic, and this is the Caufe of fo great an Addition to our Shipping, and the Reafon why the Dutch, \&xc. are fo exceedingly funk. But if ever a Stop fhould be put to the building of Ships in Neru England, \&cc. and carrying our Timber from thence, we fhould foon fink in our Navigation, and that of the Dutch flourifh in its former Height and Grandeur. The Numbers of Englifb Ships we fo often read of, that are at Lifbon, or the Streigbts, is a fufficient Demonftration of the Truth of this; doubtlefs a great many of thefe Ships are laden upon Account of the Dutch, for nothing is more common than their hiring our Ships (which difcharge their Loading in the Streigbts) to tranfport their Goods from Spain, \&cc. to Amferdam, and other Places.

We have a great many young Men who are bred to the Sea, and have Friends to fupport them; if they cannot get Employment at home they go to New England, and the Northern Colonies, with a Cargo of Goods, which they there fell at a very great Profit, and with the Produce build a Ship, and purchafe a Loading of Lumber, and fail for Portugal or the Streights, $\xi^{\circ} c$. And after difpofing of their Cargoes, they frequently ply from Port to Port in the Mediterranean, till they have cleared fo much Money, as will, in a good Part, pay for the firft Coft of the Cargo carried out by them; and then, perhaps, fell their Ships; come home; take up another Cargo from their Employers; and fo go back and build another Ship: By this Means multitudes of Seamen are brought up, and upon a War the Nation is better provided with a great Number of Sailors, than hath been heretofore known. Here the Mafter becomes Merchant alfo, and many of them gain, by this Lumber Trade, great Eftates; and a vaft Treafure is thereby yearly brought into the Kingdom, in a Way new and unknown to our Fore-fathers, and, indeed, it is gaining the Timber Trade (heretofore carried on by the Danes and Swedes) our Plantations being nearer the Markets of Portugal and Spain than they are. Thofe Advantages have made fome People think that though we efteem Nerw England, and the Northern Colonies, of fmall Advantage to us, yet if things were truly ftated, they are as profitable as moft other of our Plantations, or, which amounts to the fame thing, the Caufe of the Profits we reap from thofe other Colonies, which, however, coming to us immediately from thence, feem to enrich us more than they really do, at the fame Time that they hide from us the true Sources of their own Wealth. But,

We will now quit this Subject, in order to follow the Thread of our Hiftory, which leads us next to fpeak of the fettling the Babama Ifands, Places that have not hitherto anfwered in any Proportion to the great Expectations that were raifed upon the firft Grant of them; tho ${ }^{3}$ this is certainly fo little to be afcribed to them, that about twenty-five Years ago there was a general Difpofition in the moft knowing People of this Kingdom, to attempt a new Settlement there, which degenerating into a Bubble, all Hopes of that kind feem to be loft. Our Bufinefs, however, is not with the modern, but with the antient, State of thefe Inands; of which, and of the Motives for fettling them, we fhall give the cleareft Account we can.
10. The Lucayos, or Bohama Iflands, are fituated in the Atlantic Ocean, and to the North of the Mand of Cuba, ftretching from the North-eaft to the South-weft, between 21 and 27 Degrees of Northern Latitude, and between 73 and 81 Degrees of Weftern Longitude. The Inand of Boboma, which communicates its Name to the reft, is feated in the Latitude of 26 Degrees 30 Minutes, at the Diftance of about twenty and thircy Leagues from the Continent of Florida. It is about fifty Miles in length, but very narrow, farce any where fixteen, and in many Places not half fo broad, but very pleafant
and fruitful ; the Air temperate and ferene; the Soil remarkably rich, and the Country every where abounding with Brooks and Springs of frefh Water
Though thefe Inands were the firft Fruits of the new World, Columbus arriving firt at Guanabani, which is one of them, and to which he gave the Name of $S t$. Salvador, yet the Spaniards never thought of fettling there, but contented themfelves with extirpating the native Inhabitants; a moft barbarous Proceeding furely, fince at this Time they were the beft People of any Part of all America; fo that they wantonly murdered many thoufands to no purpofe in the world. As there Iflands lie pretty much out of the Courfe of Ships bound to the Continent of America, it was long before we had any Notice of them; but in 1667 Captain William Sayle, being bound to Carolina, was forced by a Storm amongft thefe Iflands, which gave him an Opportunity of examining them carefully, particularly a large Inand, to which at that Time he gave his own Name, and is that which has been fince known by the Name of Nero Providence.

Upon his Return to England, he acquainted the Proprietors of Carolina, with the Situation and Circumftances of thefe Inands; obferving, that in Cafe they were fettled, they might prove a great Benefit to this Nation, and at the fame Time a conftant Bar and Check to the French and Spaniards, in cafe of a Breach with either or both of thofe Nations. Thefe Reafons being fuggefted to King Cbarles the IId. his Majefty was graciounly pleafed to make a Grant of the Babama Inlands, between the Latitudes of 22 and 27 Degrees, to the following Proprietors, viz. George Duke of Albemarle, William Lord Craven, Sir George Carteret, Fobn Lord Berkeley, Antbony Lord AJbly, and Sir Peter Colliton, whofe Heirs or Affigns are, as I take it, poffeffed of thefe Inlands at this Day; by which I mean the Soil and Property, for as to the Government, it has been for fome time in the Hands of the Crown; upon a Suppofition that this Change would render thefe Iflands more beneficial to the Nation, as in Procefs of Time it very probably may ; but hitherto they have not been of any great Service to the Proprietors, the Crown, or the Nation; as we fhall fhew, by entering a little into their Hiftory, from their firt Settlement to the prefent Times, for Reafons that in this Hiftory will appear.

Providence Ifland lies in the Center of fome hundreds of Iflands, fome of them many Miles in Length, others no bigger than Knolls or little Rocks, rifing above Water; fo that one may imagine it muft be very dangerous for Ships to be forced amongft them in Tempefts. The moft confiderable Profit made by the Inhabitants of Providence, was by the Misfortune of fuch as were fhipwrecked, or fuch as, in a Winter Voyage for the Continent of America, were driven to the Babama IJlands, and put into Providence for Provifions; for want of which, after they had lain a long while beating off the Inands, they ufed to be in great Diftrefs. 'Tis true, this Ifland had little or none but what came from Carolina; however, the Traders here kept Store-houfes to fupply thofe that wanted, and they were a great Relief to the unfortunate Mariners, of whom we are fpeaking. The Ifle of Providence lies in 25 Degrees North Latitude, is twenty eight Miles long, and eleven Miles broad, where it is broadeft.
It had the Name of Providence given it by Captain Sayle, after he had a fecond time been driven upon it, when he was bound for the Continent. The firf Governor that was fent thither by the Proprietaries, was Mr. Cbillingworth: The Time of his going there was about the Year 1672; feveral People went from England, and the other Colonies, to fettle there, and living a licentious Life, they were impatient under Government; Mr. Cbillingworth endeavouring to bring them to Reafon, they affembled tumultuounly, feized him, and fhipped him off for Famaica, and lived every Man as he thought beft for his own Pleafure and Intereft. The Proprietaries found they had got an unruly Colony to deal with, and it was a very frall Encouragement for any Man to put himfelf into their Hands, after the Treatment Mr. Cbillingwortb met with from them.
However, fix or feven Years after, the Lords Propric-
taries made Mr. Clark Governor, whofe Fate was worfe ftill than his Predeceffor's; for the Spaniards, at that Time, being jealous of every new Colony of the Englifh towards the South, came upon them in Providence, deftroyed all their Stock which they could not, or would not, carry off; and burnt feveral Houfes that were upon the Place. The Inhabitants deferted it*after this, and removed to other Colonies. Mr. Trott, one of Governor Clork's Succeffors, always afferted, that the Spaniards roatted Mr. Clark on a Spit, after they had killed him ; but perhaps that is faid to increafe the Terror of the Story; but it is certain they killed him, and that after this Invafion the Illand was uninhabited till about the Time of the Revolution, when feveral Perfons removed thither from Europe and the Continent; among whom was Mr . Thomas Bulkley, who has printed a large Account of his Sufferings there, during the arbitrary Government of one Cadroallader Fones, whom the Lords Proprietaries made Governor upon this fecond Settlement of Providence in the Year 1690, where he arrived on the Igth of fune; but his Adminiftration proved very unfortunate both for himfelf and the Colony, in which there arofe fuch Troubles and Diffenfions, that he was once depofed and made Prifoner, and again reftored.

Nicholas Trott, Efq; fucceeded Mr. Fones in his Government, and he built a Fort in the Town of Naflou; notwithftanding which, the famous Pirate Avery, forced the Inhabitants to let him have what Victuals he wanted; but fome Time after, Governor Trott put the Mland of Providence into fo good a Condition, that though the French made feveral Attempts, yet they were always obliged to retire with Lofs. In I697 Nicholas Webb, Efq; was fent to fucceed Mr. Trott, and he held the Government about three Years; in which Time thefe Illands were in a better Condition than they have ever been fince; and there was, in his Time, in Providence and the adjacent Inands, near one thoufand Inhabitants: Some Tobacco was planted ; a Sugar Mill fet up, and other Improvements made: But, as we fhall fee hereafter, thefe were foon deftroyed.

To Mr. Webb fucceeded Elias Hafcott, Efq; who was fo little liked by the Inhabitants, that they took upon them to feize him, and put him in Irons; and, having fent him away, affumed the Liberty of chufing a Governor for themfelves, one Elias Ligbtgood, Efq; in whofe Time the Settlements were deftroyed; for, in $\mathcal{F u l y}$ i 708 , the Spaniards and French, from Petit Guaves, landed, furprized the Fort, took the Governor Prifoner, plundered and fripped the Englifh, burnt the Town of Nafau, all but Mr. Iightgood's Houfe, together with the Church, fpoiled the lort, and nailed up the Guns ; they carried off the Governor, and about half the Blacks, the reft faved themfelves in the Woods; but in October they came again, and picked up moft of the Negroes. Mr. Ligbtgood having procured his Liberty, by Exchange or Ranfom, came to Carolina, and going off thence in a Veffel, on fome Adventure, was never fince heard of The Englifb Inhabitants of the Babamas, after this fecond Invafion, thought it in vain to ftay longer ; fo they removed, fome to Carolina, fome to Virginia, and fome to New England, and other Places.

The Proprietors having appointed one Mr. Birch to go over Governor to Providence, who, not having heard of the Defertion of the Inhabitants, went thither; but finding it a Defart, he did not give himfelf the Trouble to open his Commiffion: He remained there two or three Months, and was all that while forced to fleep in the Woods; after which he returned back; and left the Place uninhabited. This and the other Babama Inands, were looked upon to be fo neceffary for the Security of our Trade in the $W e \Omega$ Indies, that the Parliament of England have not thought them unworthy of their Care, as well to have them cleared of Pirates, as to defend them againft both Spaniards and French, who find their Situation very convenient to annoy, or befriend, their Commerce. In Queen Anne's War both Spaniards and French, over-ran and plundered the Babama Iflands twice. Upon which, in March I7I4, the Houfe of Lords addreffed her Majefty, that the Inand of Providence might be put in a Pofture of

VQL. II. Numb, LXXXIX.

Defence. Their Lordfhips obferving it would be of fatal Confequence, if the Babama Ifiands fhould fall into the Hands of an Enemy, they therefore prayed her Majefty to take the faid Inlands into her Hands; and give fuch Order for their Security, as in her royal Wifdom fhe fhould think fic; but nothing was done. And for the future Guidance of fuch as have it in their Power to do good Offices for our American Colonies, it is not improper to temember that their Lordfhips, four Years after, took notice of that Neglect in an Addrefs to his late Majefty King George; in which they fay there were not any the leaft Means ufed in Compliance with that Advice, for fecuring the Bobamos Iflands, and that then the Pirates had a Lodgment with à Battery on Harbour Ifland; and that the ufual Retreat; and general Receptacle for the Pirates, was at Providence. Hereupon his Majefty was pleafed to give Directions for dillodging thefe Pirates, and making Settlements, and a Fortification for its Security and Defence.

Purfuant to this Addrefs, Captain Woods Rogers was appointed Governor, the fame Perfon which went with the Duke and Duchefs of Brifol to the South-Sea, and made a profperous Voyage, eight Years before. He failed for Providence in April 1718, taking with him a naval Force for fubduing the Pirates; in the mean Time Colonel Bennet, Governor of Bermudas, fent a Sloop to that Inand, requiring them to furrender themfelves, purfuant to the late Proclamation. The Pirates who were then on the Iland, very gladly accepted of the Mercy offered them thereby, and promifed to furrender themfelves as foon as they could get Paffage to the Englifh Colonies; adding that they did not doubt but their Fellows, who were at Sea, would gladly do the fame after their Example. Accordingly Captain Henry Fennings, and fifteen others, immediately followed the Sloop to Bermudas, and furrendered themfelves; and Captain Laffie, and Captain Nicbols, with a good Number of their Pirates, fent Word that they would alfo furrender. The abovementioned Proclamation was brought hither by Captain Peers, in the Pbonix Frigate, then lately ftationed at New York: Befides the above, Captain Hernigold, Captain Burges furrendered, and in the whole, as many of their Men as amounted to one hundred and fourteen, which were followed by many more: However, Piracy was not fuppreffed, nor did Capt. Rogers anfwer the Expectations of thofe that employed him; though at his Arrival here he feemed very zealous in the Service he was fent for.

He arrived at Naflau, in Providence, in Fuly iyi8. $V$ ane, one of the Captains of the Pirates, knowing what Errand he came upon, to reduce thofe Robbers by the Proclamation, or by Force, caufed a French Ship of twentytwo Guns, which he had taken, to be fet on fire, intending to make ufe of her as a Fire-fhip, to burn the Rofa Frigate, which came with Governor Woods Rogers: And, indeed, the Rofe would have been in much Danger, had the not got off in Time, by cutting her Cables. But $V$ ane's bold and rafh Attempt could not have fecured him; for befides the Rofe, there was at hand the Milford Man of War, and another, aboard which was the Governor. Thefe were foon after feen ftanding in for the Harbour of Naffau, upon which Vane, and about fifty of his Men, made off in a Sloop. The Governor fent a Sloop of fufficient Force after them, but the Pirates got off; and the Milford, and the other Man of War run aground. The 27th of Fuly Mr. Woods Rogers came on Shore, took Poffeffion of the Fort, and caufed his Majefty's Commiffion to be read in the Prefence of the Officers, Soldiers, and about three hundred People, whom he found there at his Arrival; which had been almoft daily exercifed in Arms for their Defence, in Cafe of Attack by the Spaniards or French. As for the Pirates, they were not in fo great Fear of them, moft of them having been themfelves of the Fraternity, who had furrendered and made their Peace with the Government. Woods Roger's brought with him above one hundred Soldiers, and this joint Force which was, and might have been ftill farther, recruited, being fufficient to fecure the Babama Iflands, againft any En terprize of the French and Spaniards; Mr. Rogers fet himfelf to regulate the Government, and reftore Order in it, which had' been neglected feveral Years paft.

Of the Adventurers who came with him, fix were nominated to be of the Council, as alfo fix of the Inhabitants, who had never been Pirates themfelves; and thus the Appearance of Government was renewed. As foon as the Governor and Council had fettled the Board, about two hundred of thofe that had been Pirates furrendered themfelves to them, had Certificates of their Surrender, and took the Oaths of Allegiance, as did, voluntarily, the greateft Part of the Inhabitants of Providence; wherein, a few Years after, were computed to be one thoufand five hundred Souls, out of thefe were formed three Companies of Militia, under Officers of their own Inand; thefe Companies took their turn every Night in the Town Guard at Nafjau, and the independent Company was always upon Duty in the Fort here, and another of eight Guns erected at the eaftermoft Entrance into the Harbour.

It was by thefe Methods that the Face of Affairs, in this Part of the World, was entirely changed; the Town of Naffau rebuilt; a regular Force eftablifhed in Providence, and Plantations fo laid out, that the Country looked like an Englifb Settlement. Within a fhort Time after, the neighbouring Ifland of Elutbera was fettled likewife, upon which, about fixty Families fixed themfelves, erected a fmall Fort for their Defence, and raifed a Company of Militia under their Deputy-Governor, Mr. Holmes, by whofe prudent Management Matters were chiefly brought to bear; the like was done in Harbour Ifland, where the Plantation foon grew more confiderable, and a larger Fort was built for the Protection of the Inhabitants. Captain Woods Rogers returning to England, was fucceeded in his Government by Captain Fitz-rilliams, in whofe Time an independent Company, that had been fent thither, mutinied, which had like to have produced fome very fatal Confequences, but was happily fuppreffed; and by the Moderation of the Governor, only a few of the mof Guilty were made Examples.

This happened in the Year 1736 , from which Time, thefe Inands have been improving, though nlowly. It may well be wondered at by confiderate Perfons, that confidering the Number of poor People and Men out of Employment, which before the War peftered the Streets of this City, and of all the great Towns in the Kingdom; fome Methods were not taken for fending them over to thefe Inlands, which would have been a Relief to the People here, afforded them a comfortable Subfiftance, and have contributed to augment the Strength and increafe the Riches of this Nation. I fhall content myfelf with juft hinting this as it falls in my Way, and proceed to the next Corporation formed for enlarging our Commerce within the Period of Time affigned to this Section.
II. This was the Hudfon's Bay Company, erected by King Charles the IId. upon the following Occafion: Monfieur Radifon, and Monfieur Goofelier, two Frencbmen, meeting with fome Savages in the Lake of Aflimponals in Canada, they learnt of them that they might go by Land to the Bottom of the Bay, where the Engli/b had not yet been; upon which they defired them to conduat them thither, and the Savages accordingly did it. The two Frencbmen returned to the upper Lake the fame Way they came, and thence to Quebec, the Capital of Canada; where they offered the principal Merchants to carry Ships to Hudjon's Bay, but their Project was rejected; thence they went to France, in Hopes of a more favourable hearing at Court; but after prefenting feveral Memorials, and fpending a great deal of Time and Money, they were anfwered as they had been at Quebec, and their Project looked upon as chimerical. The King of England's Embaffador at Paris, hearing what Propofals they had made, imagined he fhould do his Country good Service by engaging them to ferve the Englifh, who had already Pretences to the Bay, perfuaded them to go for London, where they met with a favourable Reception from fome Men of Quality, Merchants, and others, who employed Mr. Gillam, a Perfon long ufed to the New England Trade, to perfect this Difcovery.
He failed in the Nonefuch Catch, in the Year 1667 , into Baffus Bay, to the Height of 75 Degrees, and from
thence Southward to 5 I Degrees, where he entered a River, to which he gave the Name of Prince Rupert's River; and, finding the Savages difpofed to a friendly Commerce, he erected a fmall Fortrefs there, which he ftiled Cbarles Fort. The Success of this Expedition was fo remarkable, that the Perfons concerned in fitting out this Veffel, upon the Return of Mr. Gillam, applied themfelves to King Cbarles the IId. for a Patent, who accordingly granted them one, dated the 2 d of May, in the 22d Year of his Reign, A. D. 1670. The firft Directors of what was called the ITudfon's Bay Company, were Prince Rupert, Sir Fames Ilayes, Mr. William Young, Mr. Gerrard Weymans, Mr. Ricbard Cradock, Mr. Jobn Letton, Cbrifopber Wren, Efq. and Mr. Nicholas Hayrvood.

The Bay lies from 64 Degrees North Latitude, to 5 I Degrees, and is io Degrees or fix hundred Miles in Length. The Mouth of the Streights lies in about $6 I$ Degrees North Latitude, and is fix Leagues over. At the Mouth is an Inand called Refolution; Cbarles Ifland, Salifbury Ifland, and Nottingbam are in the Streights, and Mansfield Ifland is in the Mouth of the Bay. Hudfon's Streights, which leads to the Bay, are about one hundred and twenty Leagues in Leagth ; the Land on both Sides inhabited by Savages, of whom we have little or no Knowledge. The South Coaft is known by the Name of the Terra de Labrador, the North by as many Names as Men of feveral Nations have been there, and pretend to the Difcovery. On the Weft Side of the Bay the Englifh made a Settlement, built a Fort at Port Nellon, and all that Country goes by the Name of New South Wales. The Bay here is called Button's and Hudforn's Bay, which is broadeft in this Place, and may be near one hundred and thirty Leagues. On the other Shore, or the Coaft of Labrador, lie feveral Iflands, called the Sleepers Illes, and the Baker's Dozen. The Bottom of the Bay, by which we underftand all that Part of it from Cape Henrietta Maria, in New South Wales, to Redonda, below Prince Rupert's River, is about 80 Leagues long, and all the Way between 40 and 50 Leagues over. Here are feveral Iflands to which the firft Adventurers gave the Names of fome great Men in England, or fome that employed them; as Lord Wefton's Ifland, Sir T'bomas Roe's Iland, Cbarleton Ifland, and others.

The two oppofite Shores are called the Eaft Main and Wef Main, the former is Labrador, and the latter New South Wales. The Continent at the bottom of the Bay is, by the French, pretended to be Part of Nerv France; and, indeed, to crofs the Country from St. Margaret's River, which runs into the River of Canada, to Rupert's River, at the bottom of Hudfon's Bay, is not above one hundred and fifty Miles. At Rupert's River the Englifh built their firft Fort, which they called Cbarles Fort. They never had any Towns or Plantations here, but live within their Forts in little Houfes or Huts, wherein the Builders confider nothing but how to defend them from the Cold and Rains, though they are not fo much difturbed by the latter as by the former. There's an Illand about five or fix Leagues from the Weft Main called the little Rocky The, it being a mere heap of Rocks and Stones, with fome fmall Brufh-wood growing upon it; it is fuppofed to overflow with great North-weft Winds, which make a high Tide all over the Bay; in this Ine is plenty of Gulls and Sea Swallows ; about three Miles from the South-fouth-ean Part of the Inand lies a dangerous Reef of Sand, which is dry at low. Water. Cbarleton Ifland is a dry white Sand, covered over with a white Moss, full of Trees, Juniper and Spruce, though not very large. This Ine affords a beautiful Profpect to fuch as are near it in the Spring, after a long Voyage of three or four Months, in the mof uncomfortable Seas in the World, occafioned by the vaft Mountains of Ice which drive in the Bay and Streights; againft which, if Ships happen to ftrike, they are dafhed in Pieces, as certainly as if they ran againft Rocks; for, indeed, they are Rocks petrified by the Violence of the continual Frofts. To fee one Day the Shore on the Weft Main bare, the Mountains covered with Snow, and Nature looking as if frozen to Death; and the next to behold Cbarletons

## Chap. III.

Ifand fpread with Trees, and the Branches making, as it were, a green Tuft of the whole, is a Change capable of giving the greateft Pleafure, after the Fatigues of an intolerable Winter-Voyage.

The Air, even at the Bottom of the Bay, though by the Latitude it is nearer the Sun than London, being in 51 Degrees, is exceffive cold for nine Months; the other three Months very hot; but on a North-weft Wind the Soil on the Eaft Main, as well as the Weft, bears no manner of Grain: Some Fruits, Goofberries, Strawberries, and Dewberries, grow about Prince Rupert's River. The Commodities for Trade here are Guns, Powder, Shot, Cloth, Hatchets, Kettles, Tobacco, E ${ }^{\circ} \mathrm{C}$. which the Englifh exchange with the Indians for Furs, Beavers, Martins, Foxes, Moofe, and other Skins, and Furs. The great Profits acquired by this Trade, and the Profpect of ingroffing it, wholly engaged the new Company to profecute their Meafures vigoroully, and to do all that lay in their Power to fettle a good Correfpondence with the Natives, whom they found very tractable in that Point, and willing to do any thing they could expect from them upon reafonable Terms; for the Indians about Rupert's River, and other Places in the Bay, are more Iimple than the Canadans, who have had longer Commerce with the Europeans: They are generally peaceable, and not given to quarrel, either amongft themfelves or others, except the Nodways, a wild, barbarous People on the Borders of Hudfon's Streigbts, who fometimes, in flight Parties, make Incurfions on the other Indians, and having murdered eight or ten, return in triumph.

The Indians of certain Diffricts, which are bounded by fuch and fuch Rivers, have each an Okimah, as they call him, or Captain, over them, who is an old Man, confidered only for his Prudence and Experience: He has no Authority but what they think fit to give him upon certain Occafions; he is the Speech-maker to the Englifh, as alfo in their own Councils, when they meet every Spring and Fall to fettle the Difpofition of their Quarters, for Hunting, Fowling, and Fifhing: Every Family have their Boundaries adjufted, which they feldom quit, except they have no Succefs there in theirHunting, and then they join in with fome Family who have fucceeded. Their Notions of Religion are but very flender; they fay, there are two Monetoes, or Spirits, the one fends all the good Things, and the other all the bad. Their Worfhip confifts in Songs and-Dances at their Feafts, in Honour of their Monetoes that have favoured them; but if they are fick or famifhed, they hang fome little Bauble which they fet a Value upon, on the Top of a Pole near the Tent, to pacify the Spirit offended, as they conceive.

But to return to our Hiftory: In the Year 1670 the Company fent over Cbarles Bailey, Efq; as their Governor, who with Mr. Radifon fettled at Ruperi's River, and another Factory was eftablifhed at Fort Nel Jon. Some Years after, William Iydall, Efq; was fent to fucceed Mr. Baily, and one Mr. Bridger was fent to Fort Nelfon. In 1683 , Henry Serjeant, Efq; was made Governor at Rupert's River, with Orders to be very careful of the French, who began now to fhew themfelves very jealous of the Trade carried on by the Englifb Company with the Natives; and at the fame time they were not a little perplexed by fome bad Practices among their own Servants; who confidering the Hardhips they endured in that miferable cold Country, thought they might make bold with fome Part of the Profits which were entirely owing to their Labour and Negociations with the Natives; for the Company, by their Governors and Agents, made fuch Contracts with the Captains, or Kings, of Rivers, or Territories where they had Settlements for the Freedom of Trade there, exclufive of all others, that the Indians could not pretend they had encroached upon them. Thefe Contracts were as firm as the Indians could make them by fuch Ceremonies as were moft facred and obligatory among them.

In the Year 1686 we find the Company in poffeffion of five Settlements, viz. Albany River, Hayes Ifland, Rupert's River, Fort Nelfon, and New Severn: Their Trade at each of them was very confiderable. From Albany River they had generally three thoufand five hundred Beavers
a Year, and by Mr. Serjeont's great Care and Fidelity their Commerce increafed fo much, that the French begani to be afraid all the upland Indians might be drawn down to the Bay. They knew they could do any thing with King James II. who then reigned in England; and therefore they refolved to drive the Englifh out of all their Places in the Bottom of the Bay. Firft they took Hayes Ifland, and then the Fort on Rupert's River. The Frencb Company at Canada procured a Detachment of Soldiers to be fent, under the Chevalier de Troyes, who came over Land from Quebec, and in a Time of profound Peace committed thefe Acts of Hoftilities. It is worth obferving that the French have fo good an Opinion of their American Colonies, as to take not only all lawful, but ever unlawful, Means, to preferve and enlarge them, as contemptible as they are in themfelves; whereas the Englifos who, next the Spaniards, have the richeft Plantations in this Part of the World, have been as negligent of them as if they were not worth keeping.

The 8th of Fuly, the Chevalier de Troyes came before the Fort at Albany River, where the Governor, Mr. Serjeant, then refided. Two Indions having informed him of their having furprifed the Forts at Hayes Ifland and Rupert's River, and had brought with them the great Guns from thefe Places, the Governor did all that was in his Power to defend the Place, but was not able to keep it above a Week, as appears by the Articles of his Surrender, dated 7 uly the 16 th, 1686 , which Articles were but indifferently kept. In 1693, the Hudjon's Bay Company, being affifted by the Government, retook all the Forts and Factories of which the French had deprived them in Time of Peace; but they were foon after driven out of them again by the French.

In the Year 1696 , the Company applied themfelves to King William, reprefenting their own Incapacity to maintain themfelves againft the French, and praying the Affiftance of the Crown for their Support: Upon which two Men of War were ordered to their Affiftance, under the Command of Captain Allen, who coming into the River Hayes fent to fummon all the Forts to furrender; and the French Governor, finding he could not defend them againft the Englifh, capitulated; and on the 2d of Auguft, in the fame Year, furrendered Albany Fort upon certain Articles, the chief of which were, That all thofe in the Fort, as well French as Indians, and one Englifbman, the Governor's Servant, fhould have their Lives and Liberties; and, That no Harm or Violence fhould be done to their Perfons, or any thing that belonged to them: That they fhould march out with their Arms, Drums beating, Colours fying, Match lighted at both Ends, Ball in Mouth, and carry with them the two Guns brought from France: That they fhould all embark with their Cloaths, and Goods, without being vifited or pillaged in any Thing and, if they met with any French Veffels, there fhould be a Truce between the Engliß and them; and the faid French Veffels fhould be permitted to take aboard the Perfons that came out of the fame Fort, with all that belonged to them. Thefe Conditions were a little too honourable to grant, tho' they were complied with. Cap tain Allen took the Governor, and fome of his Men, aboard his own Ship, the Bonadventure; fome he put aboard the Seaford, and the reft aboard a Merchant-man, called the Doring.

In his Return he fought the Mary Rofe Frigate, then a French Privateer of fifty Guns, and was killed in the Engagement ; which gave the Frenchrana an Opportunity to bear away. As to the other two Forts, they followed the Fate of Albany, and Mr. Knigbt was reftored to the Government of Fort Nelfon. Mir. Knight had ferved Mr. Serjeant while he was Governor of Fort Albany, and was acquainted with the Trade. In the Year 1697 , the Hamp/bire Frigate, and Ownors Love Firehip, two of the King's Ships, were loft in this Bay, and all the Men drowned. Indeed the Ice rendered it fo dangerous that the Commerce feemed not to be worth the Rifque that was run for it. Whether thofe two Ships run againft thofe frozen Mountains that float in the Sea, or foundered, is not known; but 'tis certain they were loft, and that all the Men perifhed; which was the Caufe of fome Incon-
venience
venience. After this Time it appears very clearly, that the Trade of the Hudfon's Bay Company declined extremely, but whether from any Advantage gained in Trade by the French, or from any ill Management of their Affairs at home or abroad, I cannot pretend to fay. This, however, is certain, that in the next general War the Firencb had renewed their Attacks upon the Settlements of the Hudfon's Bay Company, and this with fuch Effect, that they foon left them nothing but Fort Albany, which very well accounts for the low State of their 'Trade to the End of the War, and fome Time after. At the making the Treaty at Utrecbl, great Care was taken of this Company, who by the Ioth and I Ith Articles have every thing reftored to them that had been taken from them, and an equitable Satisfaction ftipulated for their Loffes. Since which Time the Trade of the Company has wonderfully encreafed, infomuch that it became, at leaft, treble to what it was at the Time that Peace was made, and is itill in a very flourifing Condition.

It is very natural for fuch as reap the Benefit of any Branch of Trade, to be as filent and fecret about it as poffible, which is the Reafon that till within thefe few Years both the Country and the Commerce of Hudfon's Bay were very little, and indeed fcarce at all, known here, though carried on entirely by this Nation. As for the Frerach, they had fo little Notion of it, that they treated all Mr. Iberville's Projects, upon this Subject, as mere Chimeras; and when a Memorial was prefented to the Regent Duke of Orleans, fetting forth the great Dangers the French Settlements in North America muft run, if the Englifh Phould ever lay open this Trade, or think of tranfporting their Felons into this Part of the World, it was looked upon as a mere Vifion. But fince that Time they are become much better acquainted with this Part of America, as appears from the Account I have already given from one of their Authors.

But as to the Product and prefent Condition of this Country, the beft Account I ever faw of it, is that publifhed by Mr. Dobbs, from the Mouth of one experimentally acquainted with it, and from whom I fhall borrow as much as I think may fuffice to give the Reader a general Notion of its Nature and Importance. "The In-
"s dians being obliged to go afhore every Day to hunt for
"Provifions, delays them very much in their Voyages;
"" for their Canoes are fo very fmall, holding only two
"" Men and a Pack of one hundred Beaver Skins, that
" they cannot carry Provifions with them for any Time.
"" If they had larger Canoes, they would make their Voy-
"a ages fhorter, and carry many more Beavers to Market,
"at leaft four times as many, befides other Skins of
"Value, which are too heavy for their prefent Canoes;
"" this, and the high Price of the European Goods, by
"" the Company in exchange, difcourages the Natives fo
"" much, that if they were not abfolutely under a Necef-
" fity of having Guns, Powder, and Shot, Hatchets, and
" other Iron Tools for their Hunting, and Tobacco,
"Brandy, and fome Paint for Luxury, they would not "go down to the Factory, with what they now carry.
"At prefent they leave great Numbers of Furs and Skins
"behind them. A good Hunter, among the Indians,
"can kill fix hundred Beavers in a Seafon, and can
${ }^{\text {" }}$ "carry down but one hundred; the reft he ufes at home,
"o or hangs them upon Branches of Trees, upon the Death ${ }^{66}$ of their Children, as an Offering to them, or ufe them
" for Bedding and Coverings. They fometimes burn off
"the Fur, and roaft the Beavers like Pigs, upon any
" Entertainments, and they often let them rot, having
"" no farther Ufe for them. The Beavers, he fays, are
"" of three Colours, the brown reddifh Colour, the black,
"" and white; the firft is the cheapeft, the black is moft
"valued by the Company in England, the white the
"" moft valued in Canada, giving eighteen Shillings, when
"c others give five or fix Shillings; ; it is blown upon by
is the Companies Factors at the Bay, they not allowing
" fo much for thefe as for the others, and therefore the
"Indians ufe them at home, or burn off the Hair, when
"s they roaft the Beavers like Pigs, at an Entertainment
"" when they feaft together. He fays thefe Skins are ex-
" tremely white, and have a fine Luftre, no Snow being
" whiter, and have a fine long Fur or Hair. He has feen "fifteen taken of that Colour out of one Lodge or " Pond.
"The Beavers have three Enemies, Man, Otters, and "s the Carcajon, or Quecquehatch, which prey upon them, when they take them at Advantage; the laft is "' as large as a very great Dog, it has a fhort Tail like a "Deer or Hart, and has a good Fur, valued at a "Beaver and a half in exchange. The Beavers chiefeft "Food is the Poplar, or Tremble, but they alfo eat "Sallows, Alders, and moft other Trees, not having "" a refinous Juice. The Middle Bark is their Food ; in " May, when the Wood is not plenty, they live upon a "، large Root which grows in the Marfles a Fathom long, " and as thick as a Man's Leeg, theFrench called it Volet: "B But the Beavers are not fo good Food as when they " feed upon Trees. They will cut down Trees about two "Fathoms in Girth with their Teeth, and one of them "c obferves when it is ready to fall, and gives a great "Cry; and runs the contrary Way, to give room for the " reft to get out of the Way. They then cut off all " the Twigs and fmaller Branches, two or three Fa" thoms in Length, and draw them to their Houfes, "" which they have built in their Ponds; after having. "" raifed or repaired their Pond Head, and made it " ftaunch, and thruft one End into the Clay or Mud, " that they may lie under Water all the Winter, to pre"ferve the Bark green and tender, for their Winter "Provifion. After cutting off the fmall Branches, they "cut and carry away the larger, until they come to "" the Bole of the Tree. The Beavers are excellent Food, " but the Tongue and Tail the moft delicious Parts of "s the whole. They are very fat from November until "s the End of Marcb: They have their Young in the Be" ginning of Summer, at which Time the Females are
"lean by fuckling their Young, and the Males are lean " the whole Summer, when they are making or repair" ing their Ponds and Houres, and cutting down and "providing Timber and Branches for their Winter "Store. They breed once in a Year, and have from "" ten to fifteen at a Litter, which grow up in one Sea" fon, fo that they multiply very faft; and if they can " empty a Pond and take the whole Lodge, they gene"" rally leave a Pair to breed, fo that they are fully "" ftecked again in two or three Years. The Loup Cor"" vier, or Lynx, is of the Cat kind, but as large as a "" great Dog; it preys upon all Beafts it can conquer, as "does the Tyger, which is the only Beaft in that Coun" try that won't fly from a Man. The American Oxen " or Beeves, have a large Bunch upon their Backs, which " is by far the moft delicious Part of them for Food, it "being all as fweet as Marrow, juicy and rich, and "weighs feveral Pounds.
"The Indians Weft of the Bay, living an erratic Life, " can have no Benefit by tame Fowl or Cattle ; they " feldom ftay above a Fortnight at a Place, unlefs they " find plenty of Game. When they remove, after having " built their Hutt they difperfe to get Game for their "Food, and meet again at Night, after having killed " enough to maintain them that Day; they don't go "" above a League or two from their Hut. When "" they find fcarcity of Game, they remove a League " or two farther, and thus they traverfe through thefe "woody Countries and Bogs, fcarce miffing one Day "Winter or Summer, fair or foul, in the greateft "Storms of Snow, but what they are employed in "f fome kind of Chace. The finaller Game, got by "Traps or Snares, are generally the Employment of "Women and Children, fuch as the Martins, Squirrels, "Ermins, $\mathcal{O}^{\circ}$ c. The Elks, Stags, Rein Deer, Bears, "Tygers, wild Beef, Wolves, Foxes, Beavers, Otters, "Corcajon, $\xi^{3}$ c. are the Employment of the Men. The "Indians, when they kill any Game for Food, leave it " where they kill it, and fend their Wives next Day to "c carry it home. They go home in a direct Line, never " miffing their Way by Obfervation they make of the "Courfe they take upon their going out, and fo judge " upon what Point their Huts are, and can thus direft "themfelves upon any Point of the Compars. The

## Chap. III. of the ENGLISH in AMERICA.

's Trees all bend towards the South, and the Branches "s on that Side are larger and ftronger than on the North "Side, as alfo the Mofs upon the Trees. To let their
"Wives know how to come at the killed Game, they
"t from Place to Place break off Branches, and lay them
" 6 in the Road, pointing them the Way they fhould go, "s and fometimes Mofs; fo that they never mifs find${ }^{6} 6$ ing it:
"In Winter when they go abroad, which they muft ${ }^{66}$ do in all Weathers to hunt and fhoot for their daily ' Food, before they drefs they rub themfelves all over ${ }^{\prime 6}$ with Bear's Greafe, or Oil of Beavers, which does "s not freeze, and alfo rub all the Fur off their Beaver " Coats, and then pitt them on ; they have alfo a kind " of Boots or Stockings of Beaver's Skin; well oiled " with the Fur inwards, and above them they have an "s oiled Skin laced about their Feet, which keeps out the ${ }^{6}$ Cold, and alfo Water, where there is no Ice or Snow, "c and by this Means they never freeze or fuffer any thing "s by Cold. In Summer alfo, when they go naked, "s they rub themfelves with thefe Oils or Greafe, and ex"pofe themfelves to the Sun without being fcorched, ${ }^{66}$ their Skins being always kept foft and fupple by "c it, nor do any Flies, Bugs, or Murketoes; or any "s noxious Infect ever moleft them. When they want to "s get rid of it they go into the Water, and rub them"G felves all over with Mud or Clay, and let it dry upon " 6 them, and then rub-it off. But whenever they are free "c from the Oil, the Flies and Mufketoes immediately " attack them, and oblige them again to anoint them"6 felves.
"The Indians make no ufe of Honey; he faw no «s Bees there but the wild Humble-Bee; but they are fo s* much afraid of being ftung with them, as they go naked cs in Summer, that they avoid them as much as they «can. Nor he did not fee any of the Mapple they ufe «s in Canada to make Sugar of, but only the Birch, ${ }^{6}$ c whofe Juice they ufe for the fame Purpofe : Boiling "c it until it is black and dry, and then ufing it with "s their Meat. They ufe no Milk from the Time they "s are weaned, and they all hate to tafte Cheefe, having ${ }^{66}$ taken up an Opinion that it is made of dead Men's
" Fat; they love Prunes and Raifins, and will give a " Beaver Skin for twelve of them, to carry to their " Children, and alfo for a Thrum or Jews Harp.
" He fays the Women have all fine Voices, but have "s never heard any mufical Inftrument. They are very " fond of all Sorts of Pictures or Prints, giving a Beaver ${ }^{66}$ for the leaft Print, and all Toys are like Jewels to "s them. When he got to the Natives, Southward of " Pachegoia, he had about thirty Cowries left, and a " few finall Bells, lefs than Hawks-Bells. When he " fhewed one of them, they gave him a Beaver's Skin sc for it, and they were fo fond that fome gave him ${ }^{\text {es }}$ two Skins, or three Martin Skins, for one, to give "s their Wives to make them fine. The Martins they "s take in Traps, for if they fhoot them their Skins "s would be fpoiled; they have generally five or fix at a " Litter. He fays the Natives are fo difcouraged in ${ }^{s}$ their Trade with the Company, that no Skins are "s worth the Carriage; and the fineft Furs were fold for "s very little, when they came to the Factory in fune "1742. The Prices they took for the Europican Goods ${ }^{*}$ w were much higher than the fettled Prices fixed by the
" Company, which the Governors fix fo to fhew the
«s Company how zealous they are to improve their Trade, ${ }^{6}$ and fell their Goods to Advantage. He fays they ${ }^{6}$ gave but a Pound of Gunpowder for four Beavers ; a "Fathom of Tobacco for feven Beavers; a Pound of
is Shot for one; an Ell of coarfe Cloth for fifteen; a \& Blanket for twelve; two Fifh-hooks or three Flints ${ }^{6}$ for one; a Gun for twenty-five; a Piftol for ten; a com"s mon Hat, with white Lace, for feven; an Ax for four; «s a Bill-hook for one; a Gallon of Brandy for four; a che"quered Shirt for feven; all which are fold at a monftrous "Profit, even to two thoufand per Cent. Notwithftanding ' this Difcouragement, the two Fleets which went down 's with him, and parted at the Great Fork, carried down ${ }^{6}$ two hundred Packs of one hundred each, Ewenty thoutwo hundred Packs of
Vol. II. Numb. 89.
's fand Beavers; and the other Indions who arrived that " Year; he computed, carried down three hundred Packs " of two hundred each, making thirty thoufand; in all fifty
"s thoufand. Beavers, and above nine thoufand Martins.
"The Furs there are much more valuable than the "Furs upon the Canada Lakes, fold at Nerv York; for ${ }^{\text {st }}$ thefe will give five or fix Shillings per Pound, when "the others fell at three Shillings and Six-pence. He "fays that if a Fort was built at the Great Fork, fixty "Leagues above York Fort, and a Factory with Euro"pean Goods was fixed there, and a reafonable Price "w was put upon the European Goods, that the Trade "w would be wonderfully increafed; for the Natives, from "' the Southward of Pachegoia, coul't make, at leaft, "6 two Returns in a Summer, and thofe at greater Dif6 tances could make one, who cannot now come at all ; ${ }^{6}$ and above double the Number would be employed "s in hunting; and many more Skins would be brought " to Market that they can't now afford to bring, for "s the Expence and low Price given for them. The "Stream is fo gentle from the Fork to Xork Fort, on "c either Branch, that large Veffels and Shallops may be " built there, and carry down the bulky Goods, and "" alfo return again againft the Stream; and the Climate " is good and fit to produce Grain, Pulfe, $\sigma^{3} c$. and "c very good Grafs and Hay for Horfes and Cattle; and "c if afterwards any Settlement were made upon Pache:' goia, and Veffels built to navigate that Lake, which " 6 is not more Northerly than the Latitude of 52 Degrees; "s the Trade would be ftill vaftly inlarged and im"s proved, and fpread the Trade not only up the River sc and Lakes; as far as the Lake du Bois and du Pluis; "s but alfo among the ADinibouels, and Nations beyond "s them ; and the Nation de vieux Hommes, who are two "6 hundred Leagues Weftward of Pachegoia. He fays the " Nations who go up that River, with Prefents, to con"f firm the Peace, are three Months in going, and fay they "c live behind a range of Mountains beyond Allwibou" els ; he faw feveral of them, who all wanted a Joint of "t their little Finger, which they faid was cut off foon ¿s after they were born, but gave no Reafon for it.
" Whilft he was at York Fort he got acquainted with "s an old Indian who lived at fome Diftance from Nelfon's "Bay to the Weftward, being one of thofe they call "s the bome Indians, who had, about fiffeen Years ago, "s gone at the Head of thirty Warriors, to make War "s againft the Attimojpiquais, Tete Plat, or Plazcotez de
©s Cbiens, a Nation lying Northward, on the Weftern " Ocean of America; he was the only one that return"s ed, all the reft being killed, or perifhed through Fa"t tigue, or want of Food; upon their Return, when "6 they went they carried their own Families with them, " 6 and liunted and fifhed from Place to Place for two "Winters and one Summer, having left their Country "s in Autumn, and in April following came to the Sea "Side on the Weftern Coaft, where they immediately "' made their Canoes; at fome fmall Diftance they faw " an Inand, which was about a League and a half long; " when the Tide was out, or Water fell, they had no Water " betwixt them and the Inand, but when it rofe, it co"s vered all the Paffage and the Inand, as high as the "Woods upon the Shore. There they left their Wives "s and Children and old Men, to conduct them home, "6 and provide them with Provifions by hunting and " fhooting for them upon the Road; and lie, with "6 thirty Warriors, went in queft of the Enemies of the " Tete Plat.
". After they parted with their Fimilies they came to "s a Streight which they paffed in their Canoes; the Sea "Coaft lay almoft Eaft and Weft, for he faid the Sun "c rofe on his Right-hand, and at Noon it was almoft "s behind him, as he paffed the Streight, and always fet in "c the Sea. After paffing the Streight, they coafted along "s the Sea for three Months, going into the Country " 6 and Woods as they went along to hunt for Provifions. ${ }^{66}$ He faid they faw a great many large black Fifh, fpout" ing up Water in the Sea. After they had thus coafted "s for near three Months, they faw the Foorfteps of fome "G Men on the Sand, by which they judged they were 4 E
${ }^{68}$ not far from their Enemies; upon which they quitted " ${ }^{6}$ their Canoes, and went five Days through the Woods " ${ }^{6}$ and Buthes, which were but very low and fhrubby, and
" fo clofe they could with Dificulty make Way through
" 6 it ; and then came to the Banks of a River; where they ${ }^{6}$ found a large Town of their Enemies: And, after ${ }^{6}$ © making their ufual Cry, they difcharged their Arrows ${ }^{66}$ and Guns againft thofe who appeared; upon which
"t they fled; but upon finding how few they were, they
${ }^{*}$ returned and killed fifteen of them, and wounded three ${ }^{6}$ or four more; upon which they fled to theWoods, and
"6 from thence made theirEfcape to their Canoes before their
"Enemies overtook them; and, after a great deal of
"Fatigue got to the Streights, and after getting over they
${ }^{6} 6$ all died one after another, of Fatigue and Famine, except
${ }^{6}$ this old Man; leaving him alone to travel to his own
"Country, which took him up about a Year's Time, hav-
"e ing left his Gun when his Ammunition was fpent, and
"c loft all his Arrows, and upon his Return had not even
" a Knife with him; fo that he was reduced to live
"6 upon Herbs and Mofs growing upon the Rocks, and
" was almoft famifhed when he reached the River
"Sakie, where he met his Friends, who relieved him
"s when he defpaired of ever again feeing his own " Country."

This, fays Mr. Dobbs, is the Account fo far as $\mathcal{F} 0 \int$ epb la France could inform me of thofe Countries Southward of York Fort, which may be brought to trade there in time. It muft be allowed, that this Relation is equally inftructive and entertaining ; it makes us at once acquainted with the Country, and with the Reafons which fhould induce us think it worth our while to enquire about it ; it fhews us, that thefe Countries are far from being unhofpitable, or uninhabitable ; that, on the contrary, there are many Nations already known, and many more of whom the Europeans have had Notice; all of whom are fufficiently in Want, and have it at the fame time abundantly in their Power to pay us for Supplies. This, I fay, is evidently made appear, fince it is affirmed, and the Fact is fo true as not to be difputed, that the French carry on a great Trade with thefe Indians, and that they are very well able to bear the Rigour of the Seafons in thofe Parts; and if they can bear it, furely fo may we.

It may indeed be objected, that the French are very apt to boaft of much more than they perform, and therefore we ought not to give an implicit Credit to their Relations, efpecially in their own Favour.

But this is eafily anfwered, fince Mr. Dobbs has alfo furnifhed us with Englif Memoirs that prove the very fame Thing; and therefore I fhall quote from him what is fufficient for that Purpofe, and which is no lefs entertaining than the Account given us by Fofeph la France, and of no lefs Authority than his, fince it is given us by an Englifbman of Credit, who reports nothing but from his own Experience and Obfervation:
${ }^{\text {"c }} \mathrm{Mr}$. Froft, who has been many Years employed ${ }^{66}$ by the Company in the Bay, both at Clourcbill and "Moofe River Factory, and who was their Interpreter ${ }_{66}$ with the Natives, and travelled a confiderable way ${ }^{6}$ into the Country, both North-weft of Cburcbill and
"Southward of Moofe River Factory, and has refided at
"Moofe River, fince the Factory was made there in
${ }^{66}$ r730, gives a very good Account of that Climate and
"Country there, and up the River Southward of it: He
©c fays the Factory is built near the Mouth of the River,
${ }^{6} 6$ in Latitude 51 Degrees 28 Minutes, upon a navigable
"River, which, at twelve Miles diftant from the Fort,
${ }^{66}$ is divided into two Branches; one comes from the
"Southward, the other from the South-weft. Upon the
${ }_{66}$ Southern Branch, all fort of Grain thrives, as Barley,
${ }^{66}$ Beans, and Peafe do at the Factory, though expofed
"s to all the chilling Winds which come from the Ice in
${ }^{\text {os }}$ the Bay. Upon the Southern Part, above the Falls, ${ }^{66}$ there grows naturally along the River, the fame Kind ${ }^{6}$ of wild Oats and Rye mentioned already upon the ${ }^{66}$ Lake of Sieno, the Hufk being black, but the Grain ©c within perfectly white and clear, like Rice; the Indians
ee beating it off when ripe into their Canoes, as they pafs
${ }^{\text {® }}$ along the River, it growing in the Water, like Rice.
"In their Woods, at the Bottom of the Bay, at Moofe "s and Albany, as well as at Rupert's River, are very " large Timber-Trees of all Kinds; Oak; Afh, $E^{\circ} c$. as well as Pine, Cedar, and Spruce: They have exceeding good Grafs to make Hay, which improves every Day, as they cut and feed it, and may have every where within Land all forts of Pulfe and Grain, and all forts ${ }_{66}$ of Fruit Trees, as in the fame Climate in Europe; for ${ }^{6}$ all the Sorts they have tried thrive very well.
" The Ice breaks up at Moofe Factory in the Beginning ${ }^{6} 6$ of April, but higher up in the Country in March. It ${ }^{\prime 6}$ is navigable for Canoes a great way up among the Falls; ${ }^{6}$ at a confiderable Diftance there is one Fall of fifty Feet, 's but above that it is deep, and navigable for a great "s way; the Climate above the Fall is very good, and ${ }^{6}$ the River abounds with that wild Rice. The French
"s have got a Houfe, or Settlement for Trade, near the
"Southern Branch, about one hundred Miles above the
"s Factory, where they fell their Goods cheaper than the
"c Company do, although it be fo difficult to carry them
"so far from Canada, and very expenfive; and give 's as much for a Martin's Skin as they do for a Beaver, "* when we infift upon three for one; fo that the French "s get all the choice Skins, and leave only the Refufe for "c the Company. The French have alfo got another "'Houfe pretty, high up upon Rupert's River, by which "6 they have gained all the Trade upon the Eaft Main, "except a little the Company .get at Slude River." He fays, "That upon the South-fide of the great Inland "Sea, upon the Eaft Main, which has lately been dif"covered, there is an exceeding rich Lead Mine, " from which the Natives have brought very good Ore, "c which might turn to very great Advantage, as well as "s the Furs upon that Coaft, which might be vaftly in"creafed if the Trade was laid open, and Settlements " " made in proper Places. He fays, when he was at "C Cburchill, he travelled a confiderable way in the "c Country North-weftward of the River of Seals, that near "s the River and Sea-coaft there were fmall fhrubby Woods; "s but for many Miles, at leaft fixty farther into the "Country, they had nothing but a barren, white Mofs, "s upon which the Rein-Deer feed, and alfo the Moofe, "Buffaloes, and other Deer: And the Natives told him,
"s farther Weftward, beyond that barren Country, there
"s were large Woods. He was acquainted when there, "s about fifteen Years ago, with an Indian Chief, who "s traded at Churcbill, who had been often at a fine "c Copper Mine, which they ftruck off from the Rocks "s with fharp Stones. He faid it was upon Inands at the Mouth of a River, and lay to the Northward of that "Country where they had no Night in Summer.
"As to the Trade at Cburcbill, it is increafing; it "6 being at too great Diftance from the French for them " "o interfere in the Trade: In the Year 1742, it amounted " 6 to twenty thoufand Beavers. There were about one "s hundred Up-land Indians came in their Canoes to trade, "s and about two hundredNorthern Indians, who brought "s their Furs and Skins upon Sledges; fome of them "came down the River of Seals, fifteen Leagues North" ward of Cburcbill, in Canoes, and brought their Furs " from thence by Land. They have no Beavers to the "Northward of Cburcbill, they not having there fuch " Ponds or Woods as they chufe to feed upon; but they
"c have great Numbers of Martins, Foxes, Bears, Rein-
"c Deer, Buffaloes, Wolves, and other Beafts of rich Furs,
" 6 the Country being moftly rocky, and covered with "6 white Mors, upon which the Rein-Deer, or Cariboux, c feed.
"There is a great deal of fmall Wood, of the Spruce "s or Firr Kind, near the old Factory; but the Wood "s improves, as it is farther up the River from the Bay; "6 where they have Juniper, Birch, and Poplar. And "s more Southerly the Timber is larger, and there are " great Varicty of Trees; they are under great Incon"6 veniences at the new Fort, which is upon an elevated "Situation, upon a Rock without Shelter, clofe by the ${ }^{6}$ Shore, furrounded with Snow and Ice for eight Months ${ }^{6}$ in the Year, expofed to all the Winds and Storms that ${ }^{66}$ happen; where they can have no Conveniency of

## Chap. III. of the ENGLISH in AMERICA.

"Grafs or Hay, or Gardening, and yet they had four or five Horfes there, and a Bull, and two Cows, near the Factory; but they were obliged to bring their Hay from a marfhy Bottom, fome Miles up the River, to feed them in Winter; but if a Settlement was made higher up the River Southward, fome Leagues from "the Bay, in Shelter, without the Reach of the chilling Winds, they would have Grafs and Hay fufficient, and " might have alfo Gardens and proper Greens, and Roots, propagated there. They fay there is a Communication betwixt that River and Nelfon's River, at a great Diftance within Land, or a very fhort Land${ }^{66}$ carriage betwixt them; for the Indians who trade " here tell them, each Seafon, what Chiefs, with their "Followers, go down that Year to Nelfon or Albany "River."

We may juftly wonder that we never had before any clear Account of thefe Matters, confidering how long we have had Factories in thefe Parts; and that on the contrary all the Accounts hitherto given reprefent the Coafts of Hudfon's Bay, as the moft forlorn and dreadful Part of the Univerfe, hitherto difcovered; as Regions freezing and frightful, almoft beyond all Defcription, and which it would appear dreadful and cruel to fend even Malefactors to inhabit. But for this the fame Gentleman has fully accounted; and it is requifite that the Public fhould be very well acquainted with the Account that he has given; for fince the great Council of the Na tion has thought fit to encourage an Attempt to difcover a Paffage this Way into the South Seas, it is very reafonable to fuppofe that Endeavours will not be wanting to pufh that Attempt to the utmoft; to facilitate which there is nothing of fo great Importance as the proving that the Difcouragements which have been hitherto reprefented as infuperable, have been over-rated, and that notwithftanding all that has been faid of them, it is not only poflible but probable, that they may be overcome; towards which nothing furely can contribute more than the pointing out the Motives, upon which they have hitherto been conftantly reprefented, in fo ftrong a Light, which is very effectually done in the following Paffage from the fame Author; who, as he has ftudied this Point, fo it muft be allowed he has made it as clear as with Reafon could well be expected.
"The Company avoid all they can making Difcoveries to the Northward of Cburcbill, or extending their Trade that Way, for fear they fhould difcover a Paffage to the Weftern Ocean of America, and tempt, by that Means, the reft of the Englif Merchants to lay open their Trade, which they know they have no legal Right to; which if the Paffage was found, would not only animate the reft of the Merchants to purfue the Trade through that Paffage, but alfo to find out the great Advantages that might be made of the Trade of the Rivers and Countries adjoining to the Bay, by which Means they would lofe their beloved Monopoly. But the Profpect they have of Gain to be " made by trading with the E/kimauk Indians, for Whale-fin, Whale and Sea Oil, and Sea-horfe Teeth, induces them to venture a Sloop annually, as far as 62 Degrees 30 Minutes, to Whale Cove, where thefe Indians meet them, and truck their Fins and Oil with them. But though they are fully informed of a fine Copper Mine on a navigable Arm of the Sea, Northweftward of Whale Cove, and the Indians have offered to carry their Sloops to it ; yet their Fear of difcovering the Paffage, puts Bounds to their Avarice, and prevents their going to the Mine, which by all Accounts is very rich. Yet thofe who have been at Whale Cove, own that from thence Northwards is all broken Land; and that after paffing fome Inlands, they from the Hills fee the Sea open, leading to the Weftward. And the Indians who have been often at the Mine fay it is upon a navigable Arm of the Sea, of great Depth, leading to the South-weft, where are great Numbers of large black Fifh fpouting Water, which confirms the Opinion that all the Whales feen between Whale Cove and Wager River, all come there from the Weftern Ocean, fince none are feen any
${ }^{66}$ where elfe in Hudfon's Bay or Streigbt. All along this "Coaft from the Latitude 62 Degrees to 65 Degreess a ${ }^{66}$ very beneficial Fifhery of Whales may be carried on " with thefe E/kimauk Indians; who, eten without the " Ufe of Iron, can harpoon and kill Whales, and if "they were fupplied with Iron Harpoons; and proper "Cordage, they might be brought to kill great Num" bers of them. At prefent all their Nets, Lines, and "Snares, are made of Whale-bone, and moft of their ' Boats and other Neceffaries of the Seal-fkins, Fifh' bones, and Sea-horfe Teeth, and in making all things " neceffary for them, they are very neat and ingenious." ${ }^{3}$ The fame judicious Perfon, from whom we have borrowed fo much already, has taken the Pains to give, from very authentic Relations, a very clear, as well as a very copious Account of moft of the Indian Nations that lie at the back of our Northern Colonies, and between the French Settlements in Canada, and on the Mififippi River; with the Countries they inhabited, and the Product of thofe Countries, which I efteem a thing of very great Confequence, and as material a Service to this Nation, as has been rendered for many Years; the Account is too long for me to infert, but the Inferences he draws from it are fo juft, and of fo high Confequence, that I think it would be an Injury done the Reader not to report them, as it would certainly be doing both him and the Subject great Wrong; to report them in any other than his own Words, which without farther Preface I fhall ufe; only it is neceffary to premife at the Time this Gentleman publifhed his Book, the War with Fraince was not actually broke out.
" How glorious, fays he, would it be for us at the "s fame Time to civilize fo many Nations, and improve " fo large and fpacious a Country, by communicating " our Conftitution and Liberties, both Civil and Religi" ous, to fo many Numbers, whofe Happinefs and " Pleafure would increafe at the fame Time, that an In"creafe of Weálth and Power would be added to Bri* " tain.
${ }^{6}$ There is, at prefent, a Beginning of this Scheme, "s by the Zeal of Mr. Barclay, who is inftructing and "c civilizing the Mowbawks, among the Iroquefe, who " from a warlike Nation have embarked in Trade, ${ }^{6}$ and entered into Alliances with all Nations round the " Lakes Huron and Errie, and to the Weftward as far as
"s the Miffifippi, which is firmly eftablifhed by the Gain "s they make by the Trade. The Englifh, from Nero " York, have fixed at Ofwega, in their Country, upon "s equitable Terms with all the Indians, who come now " from a great Diftance to trade at that Town; Indians " coming now to Trade there, whofe Names were never " before known to the Englifh. This therefore feems to " be the critical Time to begin this Settlement, on the " Banks of Conde River. If there be a War with France, " as we are at a great Expence to fave the Liberties of "Europe, and fupport the Houfe of Aufria, fince we "can have nothing in Europe beneficial for us; in cafe "s we are fuccefsful at the Conclufion of the War, we "s ought to ftipulate for fomething advantageous in " America; and the leaft we ought to claim is our Right "to the American Lakes, and fecuring the Navigation ' of them. The French have, at prefent, two little Forts, and about thirty Men in each; at Niagara, " and the Streights of St. Fojepb; and a few Men at Mif' Sliackinac, and at the bottom of the Illinefe Lake. Thefe s we ought to have from them, either by Force or Trea-. ${ }^{6}$ ty, which would fecure the inland Trade to us, and ' prevent their future Incroachments, either there or in 'Hudfon's Bay; and to do this effectually, would be to ' make a Settlement near the Lake Errie, which may ' be done with little or no Expence, confidering our " prefent Barrier and Alliance, and Trade with the Na' tives; and whenever our Troops are difbanded, fome c of them may be fent over upon Half-pay, to fix in "s proper Places, and make good our Pofleffions, which "would be a fine Retrear to our Soldiers, wha ' can't fo eafily, after being difbanded, bring them'felves again to hard Labour, after being fo long dif6 whed to it.
*6 By thefe Settlements, and thofe adjoining to Hud'Son's Bay, and by opening the Trade to the Bay, many 'thoufands more would be employed in Trade, and a ${ }^{6}$ much greater Vent would be opened to our Manufac6 tures: Whereas, all the Trade we have at prefent, 's whilft it is thus confined to the Company, is the
${ }^{6}$ Employment of one hundred and twenty Men in all ' their Factories; and two or three Ships in that Trade,
${ }^{6}$ manned perhaps with one hundred and twenty Men in
' time of War, to enrich nine or ten Merchants at their "Country's.Expence, at the fame Time betraying the ${ }^{66}$ Nation, by allowing the French to encroach upon us ' 6 at the bottom of the Bay, having given up by that Means the greateft Part of their Trade there to the
French. It is therefore humbly fubmitted to the Go-
${ }^{6}$ vernment, whether it is not juft, as well as prudent, ${ }^{6}$ to open the Trade to all the Briti/b Merchants, and "refume, at the fame Time, the Charter, fo far as to take from them all the Lands they have not reclaimed or occupied, after feventy Years Poffeffion, leaving ' them only their Factories, and fuch Lands as they " have reclaimed, adjoining to them; and to give Grants, as ufual, in other Colonies, to all who dhall 'go over to trade, and make Settlements in the Country; for no Grant was ever intended to be made to 6 them, to enable them to prevent other Subjects of
Britain from planting thofe Colonies, which they themfelves would not plant or occupy; for fuch a Power, ' inftead of being beneficial, would be the greateft Pre' judice to Britain. It is therefore become a general - Law in all the Colonies, that thofe who take Grants of

- Land, and don't plant them in a reafonable limited
© Time, forfeit their Right to thofe Lands, and a new
Grant is made out to fuch others as fhall plant and
' improve them; and if this Grant be not immediately refumed fo far, and the Trade laid open, and fome
Force be not fent to fecure our Southern Plantations
6 in the Bay by the Government, in cafe there fhould
- be a French War, we fhall fee the French immediately
difpoffefs the Company of all their Factories but
${ }_{66}$ Cburchill, and all thefe Countries, and that Trade, will
${ }^{66}$ be in Poffeffion of the French.
"To the making fuch Settlements fome Objections
${ }^{\text {"c }}$ have been made by the Friends of the Company, as the great Difficulty of getting People to go to fettle and plant in fo cold a Country, and the Difficulty and Danger attending the making Settlements higher up upon the Rivers, and navigating them, as they are fo full of Falls and Rapids, that can only be navigated by the Natives in fmall Canoes, made of Birch Bark, which can't contain above two Men with any Cargo; and in thefe they are often overfet, and are in fuch Danger of being drowned, and of fpoiling their Goods, that
they are often obliged to carry their Canoes and Cargo
from Place to Place, which obitructs greatly and de-
lays the Navigation; and that fcarce five Men out of one hundred and twenty, which the Company now
have in the Bay, will venture themfelves in, or can conduct fuch Canoes, without imminent Danger of being drowned, and confequently thefe Hardihips and
Difficulties will counter-balance the Profit to be made of fettling higher up in the Country, upon the Rivers,
${ }^{66}$ in pleafanter and warmer Climates.
"To this I anfwer, That by the Accounts already gi-
${ }^{6}$ ven here of thefe Climates and Countries, by impartial
${ }^{6}$ Perfons, who don't want to difguife the Truth, it ap-
${ }^{66}$ pears that the Cold is tolerable, even at thefe difad-
${ }^{66}$ vantageous Settlements at prefent in the Bay; and that
${ }^{86}$ upon pafling only five or fix Leagues up the Rivers
${ }^{6}$ into the Country, the Climate is fo altered, as to be
${ }^{66}$ equal to thofe of the fame Latitudes in Europe. And
\%6 that thefe prodigious Accounts of the Effects of Cold, ${ }^{66}$ are calculated only to ferve the Company, in order to ${ }^{66}$ prevent People from going there to fettle, and encroach
${ }^{66}$ upon the Company's Monopoly of Trade. And to the
ss Difficulty they make about navigating thefe Rivers in
${ }^{66}$ thofe fmall Canoes, and the fmall Number employed
*6 by the Company, who will venture in them, or can
${ }^{66}$ conduct them, I anfwer, That their Servants being at
prefent no Gainers by Trade, won't endeavour to learn " to navigate thefe Canoes, where there is any Rifque, " and Care neceffary to prevent the Danger. Befides, the "Company allows them no Time to learn, by confin" ing them to their Factories; whilft the Indian Trade 'continues, and the Navigation is open: And at other "Times keeps them employed in cutting Wood for " firing, bringing it home, fhooting, fifhing, and dig'ging in their Gardens, to fupply themfelves with "Provifions, to leffen the Company"s Expence, fo that " they are allowed no Time to learn to navigate thefe
"Boats, or to go up the Rivers to obferve the Soil and "Climate, or what Improvements might be made in "s the Country. But if they were Mafters of their own ss Time, and could advance their Wealth by Trade, and "s found a confiderable Profit to arife to them by their "s Dexterity in managing thefe Canoes, and the great "Pleafure and Satisfaction they would have by living in " a fine Climate among thefe Lakes and Rivers; they "would be as enterprizing and dextrous as the Cu "s reur de Bois, and be as able to navigate among thefe "Water-falls, as the French. Neither is it impractica"6 ble to prevent even thofe Canoes from overfetting, by "Outlagers or blown Bladders fixed to their Sides, or ' other kind of Boats may be ufed, fuch as are made at 'Torneo in Sreeden, upon the Rivers, falling into the ' Botbnic Gulph, and Laplanders might be prevailed " upon to go there to teach them how to make and ma' nage thefe Boats, and train up Rein-Deer to draw in "Sledges in Winter, and alfo to ufe Lapland Shoes, which are better than thofe ufed in America.
" If the Trade was once made free, the Profit made ' upon it would induce many to go and fettle upon thofe " Rivers, when not only Horfes and other Convenien' cies would be had near the Water-falls, to affift the ' Land Carriage in Summer, but alfo Horfes and Rein' Deer to draw their Sledges in Winter, as in Rufla, ' which is almoft as cheap a Carriage as by Water, when the proper Roads are made through the Woods, " fo that Objection muft be of no Force to prevent our ' opening the Trade, and fettling thefe Countries. But " fuppofing the worft, that we could not manage thefe Canoes, that could not prevent our fettling to Advantage upon thefe Rivers and Lakes above the Falls, for the Natives might ftill be our Carriers, in navigating thofe dangerous Places, and taking our Goods from one Settlement to another, whilf we fhould be employed in Navigation and Trade among the Lakes and Rivers where there are no Falls, in larger Veffels, and pufh our Commerce Southward into better Climates and richer Soils, and put the Natives upon Improvements in Trade, by civilizing and inftructing them in building convenient Houfes, and affociating in Towns, making Gardens, and tilling their Lands; providing them with Horfes and tame Cattle, and Fowl, for their Ufe, and proper Tools which our Trade would furnifh them with.
"A Another Objection is, that it is a difficult and dangerous Navigation into the Bay, and the Trade is not worth the Rifque. To this I anfwer, That the Navigation is not fo dangerous as it is apprehended to be, but appears to be more fo by the Infinuations and Report of the Company and their Friends, who gave it out in order to deter others from venturing and interfering in their Trade, and for that Reafon they oblige their Captains, under a Penalty, not to publifh any Charts of the Bay and Streight. Captain Middle"ton, who was in their Service, made above twenty 6 Voyages to different Parts of the Bay, and never loft a Ship, nor had any Accident in thefe Voyages; nor " have I heard that the Company, in about twenty three Years, have loft any Ships in that Trade, but two, and the Men and Cargo were faved by Captain Middleton. Where Captains are careful in the Ice, there is not much Danger; it is of great Advantage to them that there is no Night at that Seafon they enter "s the Bay, where the Quantity of Ice is greateft; and when they return in September, or even in OEFober, all the Ice is in a Manner diffolved or paffed out of the

66 Streight
as Streight into the Ocean, and none feen that can hinder their Paffage.
ss It is probable that during the whole Winter, from "OEFober to March, there is no Ice in the Streight "s to obftruct their Paffage into or out of the Bay; for "s a Ship which chanced to be clofed up with Ice in an ss Inlet, by breaking of the Ice gotout, and came through ss the Ice at Cbrifmas, without finding any Ice in the *Streight to prevent her Paffage: For the Ice which is ss formed in Bays and Rivers, in Winter, does not "break up and get into the Channel or Streight until "s it begins to thaw upon the Shore in March or April; ss at which Time it is carried by the Winds and 'Tide ss into the Streight, and obftructs the Paffage in May or " Fune, until it is diffolved; yet, even then, good "Pilots know how to avoid it and get into the Eddy${ }^{86}$ Tide, out of the Current; where the Ice is more open, ss and not drove together by the Winds and Current, as $s 6$ it is in the Channel. But thefe Difficulties would ${ }^{6}$ leffen every Day, if the Trade were opened and the « Voyages more frequent, by the great Number of Ships, "s which would make many more experienced Pilots. © And as there is now a more accurate Chart publifhed es of the Streight and Bay, by Capt. Middleton, with is the Inlands, Soundings, Tides, and Variation; the sc Navigation will become lefs dangerous daily, and «Coves, and Places of Shelter for Ships, will be found se out, by the Number of Ships which would then pafs, * and be trading in thofe Seas which are now unknown. * I therefore apprehend that the Danger of the Ice is "s more in Imagination than Reality, when Care and s Judgment are employed; for Ships are moftly insclofed in Ice in calm Weather and Fogs, when the sc Ice prevents the Motion of the Sea; ftormy Weather sc difperfes and breaks the Ice, unlefs they get under the
as Lee of a large Ifland of Ice; and then they faften to os it, and drive along with it whilft the fmaller Ice to * Leeward is drove from them by the Wind, and the sc large Inlands, being many Fathoms deep in the Water, ss come on Ground before the Ships are in Danger of sc being forced on Shore in fhallow Water.
"The greateft Danger and Delay from the Ice is in ss the Entrance into the Streight ; for the firf forty " Leagues from thence the Quantity is lefs, and they st pafs on with lefs Difficulty; and after getting into the «s Bay, the North-weft Side is the freeft from Ice; the "Bottom of the Bay is full of low flat Ice, which is all
se diffolved in the latter end of Summer. Upon the

* Whole, except two Ships, which were loft in King
as William's Reign, and a French Ship, after an Engage-
© ment with our Ships when they attacked Fort Nelfon,
" I have heard of none, except the Ships already " mentioned, which have been loft in the Voyage. The
"Two Ships which went out with Barlow, in 1719,
es to find the North-weft Paffage, contrary to the Incli-
os nations of the Company, if they did not make the
ss Paffage, were probably, in the Winter, furprifed
${ }^{* 6}$ by the Natives, and were not loft in the Ice; for they "f fay that the Natives, in about Latitude $\sigma_{3}$ Degrees,
*s where they fuppofe they were loft, are fhyer fince
"s that Time in trading with the Company's Sloops;
* which they apprehend to be from a Confcioufnefs of
* Guilt, fearing that if it were known they fhould
"still be punifhed for it. Since therefore the greateft
"Danger from the Ice, is in paffing the Streight, and
ss fo few Accidents have happened in fo many Years,
${ }^{35}$ the Navigation, I think, cannot be called dangerous,
*s though it has been fo apprehended; and not equal to
"s the Whale-finhers, who go annually to Spitfierg and
${ }^{* 6}$ Davis's Streigbts to Latitudes 78 and 80 Degrees,
"s without any Objection to that Navigation, either
"sy the Dutch, Hamburgbers, Danes, Bifcayners, or "Englif."
He concludes from thence, that the opening the Trade and fettling in the Bay, would prove a great Benefit to, and great Improvement of, our Trade, which might be vaftly increafed, as well in refpect to Furs as to Mines, and the Whale-Fifhery; all which might be carried on with the Affitance of the Indians, and would turn to a very high Profit, even fuppofing that no

Vol. II. Numb. 89.

Paffage to the North-weft fhould ever be found: -but Thould future Experience demonftrate that this Gentle man's Notions are, in this Refpect, well founded, and this long fought-for Paffage fhould actually be difcovered, it would then certainly follow that this Country, fo lietle known and fo much defpifed till very lately, would become of more confequence to us than almott any Colony in America. Here let me take the Liberty of obferving what hitherto, as far as I lknow, has never yet been confidered: That if fuch a Paffage to the North-weft fhould be difcovered before thefe Countries are tollerably planted, the French would have a fair Opportunity of fupplanting us in the Advantages expected from that important Attempt; and perhaps we fhould then be forced to fight for the Poffeffion of Countries that are now thought not worth the having.

It may likewife deferve fome Thought, whether it be not better to attempt fuch Settlements without Lofs of Time, as muft at all Events be highly ufeful and ferviceable to this Nation, by dividing the French Settlements in Canada, and on the Mififippi, from each other, than to wait till the Importance of fuch Settlements fhall appear in fo glaring a Light, as they muft immediately do if fuch a Paflage fhould be difcovered; for we ought to remember, from the famous Inftance of our being difappointed in our Defign of fettling the Inands of St. Lucia and St. Vincent, that it is a very difficult Matter, in a Time of full Peace, for us to acquire any Advantage in Point of Commerce, at the Expence of the French, who, in fuch a Cafe, would not fail to take the fame vigorous Meafures that they did in the Cafe before-mentioned. I have taken the more Pains to place this Matter in a fair and true Light, becaufe I am perfuaded this is the Time in which only it can be confidered to Advantage; for if the Cafe now in View (I mean the Difcovery of a North-weft: Paffage) fhould ever come, as I am convinced, fooner or later it will come to be the Cafe in Fact, the Face of Affairs will be quite changed, and this new Rout to the Soutb-Seas and Eaft-Indies, will produce fuch an Alteration in the whole Commercial Syftem of Europe, that Things will be feen to be then of the utmoft Confequence, which at prefent moft People look upon as Dreams andVifions, notwithftanding the late Sanction given them by the Wifdom of the Parliament.

But it becomes a prudent and fenfible People, and above all it imports a maritime Power, to confider Things in time, and while what is propofed for their Benefit is eafy, or at leaft practicable; and not to defer and delay Things till from being troublefome and difficult they come to be abfolutely impoffible. We know what harp and cutting Remarks have been made on the Meannefs of King Fames's Spirit, in fuffering the Dutcb to defpoil us of the Spice Trade : We cannot but remember the fevere Reflections on Queen Anne's Miniftry, for not fecuring to us Cape Breton, and therefore we hould be cautious of falling a third time into the fame Miftake, and of running the Hazard of making a great Difcovery, fuch as all the World allows that of the North-weft Paffage would be, rather for other Peoples Benefit than our own, fince it muft pafs for a Blunder, greater than ever was made by our Anceftors, and would render us effectually ridiculous in the Eyes of lateft Pofterity.
12. The Method we have taken in defcribing the Acquifitions of our Nation in America, leads us next to fpeak of the noble Country of Pensylvania; the beft projected, and one of the moft flourifhing of our Colonies on the Continent of North America. We have before mentioned Admiral Penn, who in Conjunction with Col. Venables, conquered the Inand of Famaica for this Nation; he became afterwards Sir William Penn, and ftood in as high a Degree of Credit with King Cbarles II. and his Brother the Duke of Kork, as any Seaman of that Time, as indeed he very well deferved; for, with Abilities fuperior to moft, he had as great Modefty as any Man, and was ready, upon all Occafions, to ferve his Country in any Station that was found practicable. It was this excellent Difpofition of Mind that fecured him from Danger under one Government, and recommended him to Preferment under another: for when the

Duke

Duke of Xork propofed to take the Command of the Englifh Fleet upon himfelf in the Dutch War, as Lord High Admiral; he made Choice of Sir William Penn as the moft experienced, and the moft capable Officer to ferve under him, which he did with equal Satisfaction to his Royal Highnefs, and Credit to himfelf; eftablifhing thereby fuch a Reputation at Court, as lafted during his Life, and proved no lefs ufeful to his Son.

But Sir William Penn did not long enjoy his high Station, and dying in the Weff Country where he was born, was buried in Redcliff Church in Brifol, having, in reward of his Services, had a Promife of the Grant of this Country from King Cbarles the IId. Sir William had a Kinfman who was one of the firft Planters in New England, and it is doubtlefs from him that he had exact and particular Information of the Advantages that might be made of Lands and Settlements in this Continent of America. But young Mr. Penn did not for fome Years apply himfelf ftrenuounly to folicit the promifed Grant, till at laft finding his Friends, the Quakers, were harraffed all over England by firitual Courts, he refolved to put himfelf at the Head of as many as would go with him and remove to this Country, of which he obtained the Grant in the Year 1679.

He gave it the Name of Penfylvania fome Time before he was actually invefted with it, and fo it is called in the original Patent, bearing date March the 4 th 1680. *s It contained all that Tract of Land in America, with all "s the Illands belonging to it, from the Beginning of the " 40 th Degree of North Latitude to the 43 d Degree, ss whofe Eaftern Bound, from twelve Englifb Miles above
"Serwcaftle, alias de la War Town, runs all along upon the "Side of de la War River." Só that 'tis bounded on the Eaft by that Bay and River, and the Eaftern Sea; on the North by Weft New Ferfey, or rather New York, for it runs a great Way above the Ferseys; on the Weft by the Indian Nations, about the Heads of Sufquabanaugh and de la Wor Rivers, by which we fee it ftretches far within Land, that River running through it about two or three hundred Miles; on the South 'tis bounded by Maryland, and reaching from Penfoury near the Falls of the River to Hanlope, near the Mouth of the Bay, above one hundred and fifty Miles directly; but 'tis narrow all along, being very much crowded in the Breadth by $M a$ ryland.

The Bounds and Extent we have mentioned are in the original Grant ; but Mr. Penn having afterwards obtained Part of Nova Belgia of the Duke of York, it was added to the Country in the firft Grant, and both together called Penfylvania, which is divided into three upper and three lower Counties; the three upper Counties, Buckingham, Pbiladelpbia and Cbefter, are the Penfylvania, fo called in King Cbarles's Grant. The three lower Counties, Nervcafte, Kent, and Suffex, are taken out of Nova Belgia, or the Province of Nerw York. The upper Counties end at Marcus Hook, four Miles below Cbefter Town; the lower run along the Coaft one hundred and twenty Miles, and are forty Miles deep towards Maryland. Thus the whole Province of Penfylvania from the Falls Townfip, to twenty Miles below Hanlope or Cape William, is in Length three hundred and thirty Miles, and in Breadth two hundred. The River de la War, above and below the Falls, for a good Length, is called the Frefies, and near the Mouth are the Marfhes, very fertile and profitable.

As foon as Mr. Pern had got his Patent, he invited feveral Perfons to purchafe Lands under it. Though he did not fatisfy himfelf with the Title granted him by Cbarles the IId. and his Brother. He alfo bought the Land of the Indians. The Swedes, who had encroached upon the Dutch, the firf Planters here, as well as at New York, fettled upon, or near, the Frefbes of de la War. The Fins, or Inhabitants of Finland, part of the Kingdom of Sweden, applied themfelves chiefly to Hufbandry. The King of Sweden appointed a Governor here, who had often Difputes with the Governor that prefided over the Dutch. The latter applied themfelves moftly to traffic, living upon, or near, the Bay, and by the Neighbourhood of Nere York. The Dutch alfo were too powerful for the

Swedes, who, finding they could not maintain their Ground, fubmitted to their ftronger Neighbours. Accordingly Fobn Rifeing, the Swedifh Governor, made a formal Surrender of the Country to Peter Styerfont, Governor for the States General, after which this Province continued fubject to their Republic till the Englifh drove the Dutch out of New Amfterdam or Nerw York, which made the Poffefion of thofe Territories the more eafy to Mr. Penn.

There were a few Englifh here before Mr. Penn fent over the firft Adventurers under his Patent, over whom he placed, as Governor, Colonel William Markbam, his Nephew, to whom both Dutch and Swedes fubmitted. Thofe that went over, were generally Diffenters, from London, Liverpool, and efpecially Brifol, for the Weft of England abounded with Diffenters more than other Counties; they fhipped themfelves at Brifol in grear Numbers for Penflluania. Mr. Thomas Gouldney, and Mr. Duddleftone, two Tobacco Merchants of that City, about this Time fitted out the Unicorn, a Ship of three hundred Tons, for this Voyage; which putting into Start, took in a great many from Bridgevater. Mr. Penn had fold twenty thoufand Acres of his Property to Mr . Fames Claypool, Mr. Nicholas Moor, Mr. Pbilip Ford, and others, who formed a Company, and had a Street, and a Side of a Street, fet out for them in Pbiladelpbia, with four hundred Acres of Land in the City Liberties. They fet up a Tannery, a Saw Mill, a Glafs Houfe, and a Whalery, of the two latter I fuppofe they never made any great Profit. The Proprictors Conditions of Sale were thefe: Buyers purchafed after the Rate of twenty Pounds for one thoufand Acres, fo that he put four hundred Pounds in his Pocket immediately, but that was a Trifle to what went out of it for the Grant and Experiments to people and fettle the Country ; the Quit-Rent was twelve Pounds for every hundred Acres. This was cheap enough, but I think the Renters were not fo well ufed, for they were to pay fo much an Acre yearly. Thus thefe twenty thoufand Acres which he fold the Company, would, if rented, have brought him one thoufand Pounds a Year. Since that Time che Value of Land is fo much rifen, that I have been credibly informed it has fold for twenty Years Purchafe, at feveral Miles diftant from Pbiladelpbia; and that near it has gone at a Pound an Acre, and in fome Places at more than a Pound an Acre yearly.

We have mentioned near four thoufand Acres to be at this Time parcelled out for Sale, fome at fixty Miles diftant from Pbiladelpbia; but none of there Parcels will fetch a tenth Part of fuch Rates as thefe. Servants, Mien and Women, were to have fifty Acres when their Times were out, and Owners of Land fifty Acres a Head for fuch Servants, Men or Women. In the Year 168 I Mr . Penn went himfelf to Penfylvania, and carried with him, and there went after him, two thoufand Souls; a prodigious Augmentation in lefs than a Year! And he might with Reafon fay as he did, it was made at once a Country. As foon as he arrived he took the Government into his own Hands, and entred upon Treaties with the Indian Kings, for purchafing his Patent-Lands, and others, as is before hinted. One may affure one's felf he gave but little for them, and if the French and Spaniards fcorned to pay fuch a Compliment to natural Right, and chofe rather to feize the Lands of the Indian Natives by Violence, it was what might have been expected from the Religion and Tyranny of the Countries from whence they came. Twenty Miles of Territory were thus bought of the Indians for lefs than an Acre of the beft Ground about Pbiladelpbia would be valued at now. But the Indians, in a little Time, obferving what Profit the Engliff made of the Land they fold them, and that by the coming over of fuch Numbers every Year, it would be more and more wanted, they raifed the Price ten times as much as as it was at firt, and yet it was unconfcionably cheap, and for a long Time purchafed by the Mile, and not by the Acre. Indeed they knew not what to do with it, they had not Hands enough to cultivate a hundredth Part; and if they could have raifed fuch a Product there was no body to buy it. The Purchafe was all clear Gains to them;
and by the coming of the Englifb, the peiltry Trade became fo profitable, that they were foon in a Condition to better their Manner of houfing, cloathing, and living, as they did very much, and are now in there Articles as weil accommodated as the European Peafantry, in many Places.

When the Province began to be planted, almoff to the Mouth of de la War, it was laid out into the beforementioned Counties, in order to chufe Reprefentatives, and eftablifh Courts for the Diftribution of Juftice. The original Draught of the Conflitution for this Province was made by that great Lawyer Sir Willian Fones, and by it the Governor and People have a legiflative Power. Sir William Fones had too much Underftanding, Virtue, and Honour, to throw the People out of the Queftion, when their Religion, their Liberty, their Well-being in this World and the next, were fo nearly concerned in it. No Law can be here made, nor Money raifed, but by Confent of the Inhabitants. The Rights and Freedom of England were to be in force. They were to make no Law againft Allegiance, and then they might enact what Laws they pleafed for the Profperity and Security of the Province. Mr. Penn held two General Affemblies while he was in the Country, and with fuch Unianimity and Difpatch, that tho' they made Laws by Scores, no lefs than Seventy, yet they had done their Bufinefs in three Weeks time. They prefented the Proprietary with an Impoft on certain Goods, but he remitted it; which was artful enough, to have a Thing given on purpofe to give it away again to thofe that gave it. He eftablifhed Courts of Juftice in every County, with proper Officers, to prevent Law-fuits and Contentions. Among thefe paffive People there are alfo three Peace-makers, chofen by every County Court, in the Nature of common Arbitrators, to hear and end Differences between Man and Man. Every Spring and Fall there is an Orphans Court in each County, to infpect and regulate the Affairs of Widows and Orphans.

Mr. Penn was vifited by the Kings, and Queens, and great Men among the Indians, of whom the greateft did not think himfelf too good to go on the Proprietaries Errands, if he had thought fit to fend him. Both the Dutch and the Swedes, within this Jurifdiction, were very well pleafed with his coming, and his Conduct ; and there were, at that Time, almoft as many Swedes and Dutch in Penfyluania as Englifb. Mr. Penn ftaid here above two Years, till he had fettled Things to his own and the People's Liking ; he then returned to England, to forward the Affairs of the Propriety there, as he had done here: He was.generous and free of his Thoughts and Exprefions, which were not always fufficiently guarded ; and after the Revolution he became fufpected, from his Credit with King fames. That we may form fome Idea of the Manner in which this truly great Man acted in this Part of the World, and eftablihed his Government upon the folid Bafis of a perfect Agreement with the Natives, let us hear what he himfelf fays upon this Subject : Mr. Perm, in a Letter to bis Friends in England, on the Situation of his Affairs at that Time, relates, That he had attended the Indian Kings and their Councils in feveral Treaties, for the Purchafe of their Lands, and for adjufting the Terms of Trade between them. And that their Order was thus: "Their King (fays Mr. Pemn) was "feated in the Middle of an half Moon, or Semi"circle; his Council, the Old and Wife, fitting on each "Hand; behind them, at a little Diftance, fat the " young Men, in the fame Figure: Having refolved "t their Bufinefs, the King commanded one of them to "fpeak to me. He ftood up, and came to me, and " in the King's Name faluted me; taking me by the "Hand, and telling me; he was ordered by his King "to fpeak to me, and that now it was not he, but the
"King that fpoke, becaufe what he fhould fay was the
${ }_{\text {"c }}$ King's Mind. He firft prayed me to excufe them,
"s that they had not complied with me in a former Meet-
" ing: He feared there might be fome Fault in the "Interpreter, being neither Indian or Enggli/h; befides, "s it was the Indian Cuftom to deliberate before they
"refolved; and that if the younger People, and Qwriers " of the Land, had been as ready as he, I had not mee " with fo much Delay." Having thus introduced his Matter, he fell to the Bounds of the Land they had agreed to difpofe of, and the Price. During the Time this Perfon fpoke, not a Man of them was obferved to whifper or fmile ; the Old were grave, the Young reverend in their Deportment; when they fpoke, which was but feldom, it was warmly and elegantly. I have never feen moic natural Sagacity, confidering them without the Help of Tradition; and he will deferve the Name of Wife that is too hard for them in any Treaty about a Thing they underftand. When the Purchafe was agreed, great Promifes paffed between us, of Kindnefs and good Neighbourhood; and that the Indians and Englifb muft live in Love as long as the Sun gave Light. Atter which another made a Speech to the Indians, in the Name of all the Sachems, or Kings ; firft, to tell them what was done; next, to charge and command them to love the Chriftians, and particularly to live in Peace with me, and the People under my Government: That many. Governors had been in the River, but that no Governor had come himfelf to live and ftay there before, and having now fuch an one that had treated them well, they fhould never do him or his any Wrong. At every Sentence of which they fhouted, and faid Amen, in their way.

This Conduct of his had fo good an Effect upon the Indians, that they had him always in the higheft Veneration, as they ftill have to his Memory, of which the Reader will find an exemplary Proof in the following Speech, made to Sir Williams Keith, Governor of this Country in 1722; only it may not be amifs to obferve, that Onas fignifies, in the Indian Language, a Pen; and therefore this is the Name the Indians have given to our Proprietor and all his Succeffors, or Reprefentatives.
" Brother Onas, You told us how William Pern, that " good Man, did, on the firt Settlement of the Pro" vince of Perryylvania, make Leagues of Friendhip "with the Indians, and treated them like Brethren; " and that, like the fame good Man, he left it in " Charge to all his Governors who fhould fucceed him, " and to all the People in Penylvania, that they fhould " always keep the Covenant and Treaties he had made " with the five Nations, and treat them with Love and "Kindnefs. We acknowledge that his Governors and " People have always kept the fame honefly and truly " to this Day. So we, on our Part, always have kept, "s and for ever fhall keep Peace and Friendfhip, with a "good Heart, to all the People of Penjlyluania. We
"thankfully receive and approve of all the Articles in "your Propofition to us, and acknowledge them to be " good, and full of Love: We receive and approve of " the fame with our whole Hearts; becaufe we are not " only made one People by the Covenant Chain, but are " alfo People united in one Head, one Body, and one "Heart, by the ftrongeft Ties of Love and Friendfhip. "Brother Onas, you defire there may be a perpetual "Friendfhip between you and the five Nations, and be" tween your Children and our Children; and that the " fame may be kept as long as the Mountains and Rivers is endure. All which we like well, and on our Parts de" fire, that the Covenant and Union made with a true " and clean Heart between you and us, may laft as long " as the Sun and Moon flall continue to give light. "And we will deliver this in charge to our Children, " that it may be kept in Remembrance with their Chil" dren and Childrens Children to the laft Ages: And we "defire that the Peace and Tranquility that is now " eftabliffed between us may be as clear as the Sun " fhining in its Luftre without any Cloud or Darknefs, " and that the fame may continue for ever.
"Brother Onas, We have well confidered all yous " have fpoken, and irke it well; becaufe it is only the "renewing former Leagues and Treaties, made betweers "the Government of Penfluania, and us of the five " Nations, which we always believed we were obliged " to keep. And as to the Accident of one of our
ss Friend
${ }^{6}$ Friends being killed by fome of your People, which " has happened by Misfortune, and againft our Will; "we fay, that as we are all in Peace, we think it " hard that the Perfons who killed our Friend and Bro-
" ther fhould fuffer; and we do in the Name of all the
" five Nations forgive the Offence, and defire you will
" likewife forgive it; and that the Men who did it may
" be releafed from Prifon, and fet at Liberty to go whi-
" ther they pleafe; and we fhall efteem that as a Miark
ci of Regard and Friendfhip for the five Nations, and as
"a farther Confirmation of this Treaty." Upon thefe Principles, which are more likely to be obferved in this than in moft of our Colonies, the Friendfhip of the Indians may be preferved as long as they remain a People; which fhews how poffible it might have been to have maintained a like Correfpondence with them in other Places, which would not only have faved a great deal of Blood-hhed, and have contributed to the quick Growth of the Colonies fettled in the Countries, inhabited by fuch Indians, but would have been very uffeful in many other Refpects: Since it is allowed where the Indians are treated as in Penylvania, with ftrict Juftice and Humanity, they are as firm Allies as any in the World; and in that Quality more capable of doing Service, than if reduced to be either Slaves or Subjects; becaufe living as they do, they preferve their Strength and Activity, and enjoy all the Liberty they can defire, and are very willing to fight for thofe under whofe Protection they enjoy it.
13. We will now proceed to a more particular Defcription of this famous Settlement, having before given an Account of the Situation of the Country in general, and of its Divifion into Counties. The chief Rivers in Penfyl vania are, the River de la War, which rifing far North in the Country of the Iroquois, takes its Courfe to the Southward, and dividing this Province from that of Nere Ferfeys, falls into the Atlantic Ocean, between the Promontories of Cape May, and Cape Hanlope, being navigable for two hundred Miles and upwards with large Veffels; but has a Cataract or fteep Fall in it above Brijtol, which renders the Navigation impracticable to the Northward of the County of Bucks. The fecond River in this Province, is that of Sufquabanaugh, which, rifing likewife in the Country of the Iroquois, runs South through the Middle of Penfylvania, and falls into the Bay of Cbefepeak, being navigable for large Ships. The third River is Scboolkill, which having its Source in the Country of the Iroquois, runs South almoft parallel to the Rivers de la War and Sufquabanaugh, and at Length turning to the Eaftward, falls into de la War, at the City of Pbiladelpbia. This River is alfo navigable for large Ships as far as the City of Pbiladelphia, and for Boats above an hundred Miles higher. Thefe Rivers, and the numerous Bays and Creeks in the Bay de la War, capable of containing the largeft Fleets, render this Country admirably fituated to carry on a foreign Trade.
In the County of Buckingbam, the moft northerly of any in this Province, the chief Town is Brifol, fituated on the River de la War, oppofite to Burlington in New Ferfey, and twenty Miles North of the City of Pbiladelpbia. In this Country alfo lies the Mannor Houfe of Penjfoury, elegantly built by Mr. Penn, the firt Proprietor, and fituate on an Eminence which commands the Country, being almoft furrounded by the River de la War. The Country of Pbiladelpbia lies South of that of Bucks, and in it is the celebrated City of Pbiladepbia, the Capital of the Province, fituated in 40 Degrees 30 Mi nutes North Latitude, being one of the fineft Plans of a Town that was ever formed. It is an Oblong of two Miles, extending from the River de la War to the River Scboolkill, the Eaft end fronting the River de la War, and the Weft the River Scboolkill, each Front being a Mile in Length. Every Owner of one thoufand Acres has his Houfe in one of the two Fronts, facing the Rivers, or in the high Street, running from the Middle of one Front to the Middle of the other ; and every Owner of five thoufard Acres, has an Acre of Ground in the Front of his Houre, and the reft half an Acre for Gardens and Court Yards. In the Centre of the Town is a Square of ten Acres, furrounded by the Town Houfe, and
other public Buildings, and each Quarter of the City is a Square of eight Acres. The high Strect, whick runs the whole Length of the Town, is an hundred Feet wide, parallel to which run eight Streets, which are croffed by twenty more at right Angles, all of them thirty Feet wide, and feveral Canals are let into the Town from each River, which add to the Beauty and Conveniency of the Place. There is alfo a fine Quay two hundred Feet Square, to which Ships of four or five hundred Ton may come up, with wet and dry Docks for building and repairing of Ships; Magazines, Warehoufes, and all manner of Conveniences for importing and exporting of Merchandize ; there are already fourteen or fifteen hundred Houfes in the City, moft of them well built with Brick, but are ftill a great many more wanting to compleat the Plan: However, more could not have been expected than has been done in fo fhort a Time, the Ground not having been laid out much above fifty Years.

The Town of Oxford is fituated likewife in the County of Pbiladelpbia, where a Miffionary is maintained by the Society, for propagation of the Gofpel. Germain Town, fituated to the Northward of the City of Pbiladelphia, alfo is faid to be a thriving populous Place, inhabited chiefly by the Dutch, or thofe of Dutch Extraction. In this County is the City of Radnor, fituated on the South-weft-fide of Schoolkill River, being the Capital of a large Country, planted by the Welch, and extreamly well improved by them. To the South of the County of Pbiladelpbia lies that of Cbefter, the Capital whereof is the Town of Chefter, fituate on the River de la War, which is about three hundred Miles broad at this Place; and to the Southward of Cbefter lies the Town of Cbicbeffer; either of thofe Ports are capable of receiving and harbouring the largeft Fleets, fecure from Storms; the County of Nerwafflle lies South to that of Cbefer, the capital Town being of the fame Name. This is faid to be a Town of the brifkef Trade in the Province, next to that of Pbiladelpbia, and has an Iron Mine in the Neighbourhood of it. The Town of Apoquinemink lies upon the River de la War, South of Newerafle, and is a Place of good Trade. The County of Kent lies South of that of Nerocaftle, the chief Town whereof is Dover, being a commodious Port. The moft Southern County is that of Sulfex, the capital Town whereof is Lewes, being a fecure Harbour and a Town of Trade.

The Air here is fweet and clear ; the Fall begins about the zoth of Oriober, and lafts to the Beginning of December; frofty Weather, and cold Seafons are frequent; but as in moft Countries where are fuch Seafons the Air is dry and hungry; the River de la War is fometimes frozen over, notwithftanding its Breadth. The Spring lafts from March to Fune, but the Weather then is more inconftant than in the other Seafons, which it generally is in other Countries. The Heats are extraordinary in the Summer Months, ${ }^{\text {Gul }}$ Fuy, Auruft, and September, but alleviated by cold Breezes, which make them very tolerable. The Wind is South-weft during the Summer, but generally Northwefterly, Spring, Fall, and Winter ; which blowing from the frolty and finowy Mountains, and Lakes of the Terra Canadenfis, is, doubtlefs, a main Reafon of the exceffive Cold here in Winter. The Soil in this Tract of Land is in fome Places a yellow and black Sand, and in others a loomy Gravel, in others a fat Earth, like the Vales in England; efpecially by inland Brooks and Rivers, where the Lands in this Country are mofly three to one richer than thofe that lie by navigable Rivers. There is alfo found a black hazle Mould, on a ftony Botom. The Earth is fruitful, fat, and eafy to be cleared, becaufe the Roots of the Trees lie almoft on the Surface of the Ground. Some Allowance muft be made for Mr. Pern's Property in the tempting Defcription he gives us of the Country. We have faid enough of the Rivers and Creeks in it, and fhewn how commodious they are for Navigation and Communication; but among other Waters, Mr. Penn mentions mineral Waters: Thefe Springs are about two Miles from Pbildedelpbia, at a happy Diftance from Water-drinkers, but the Number of them is, fince that, leffened extreamly, and we need not infift on their Virtue.

Here are Trees of almoft all Sorts, Oak, red, white,
and black Afh, Beech, Spanibh Chefnuts, Cedar, Wallnut, Cyprefs, and Swamp; the moft durable of all are Poplar, Gumwood, Hickery, Saffafras; and as for Shrubs, Snakeroot, Sarfaparilla, Salop, Spruce, and Cranberries; Wheat, Barley, Oats, Rye, Peas, Beans, Water Melons, Mufmelons, Apples, Pears, Cherries, Apricots, Carrots, Turnips, Parfnips, Onions, Cucumbers, Quinces, $\xi^{\circ} c$. are in great Plenty here; as alfo Indian Corn, Hemp, Flax, $\varepsilon^{\circ}$ c. It is common for one Bufhel of Corn fown here to yield forty, often fifty, and fometimes fixty Bufhels. One Mr. Edroard Fones had for one Grain of Engli/h Barley feventy Stalks and Ears of that Corn, in his Plantation on the Scboolkill. Of living Creatures there are for Food and Trade, Deer, the Elk as big as a fmall Ox, Rabbits, Raccoons, Beaver ; plenty of Oxen, Cows, and Sheep ; of the latter, it is common for Farmers to have four or five hundred in a Flock. Horfes, fome very good, and handfome enough. Of Fowl here are very fine Buftards forty or fifty Pounds Weight, Pheafants, Heath Birds, Pigeons, Partriges, Clouds of Blackbirds, Swans, Geefe, Braindes, Tucks, Teal, and Snipe. The Fifh here are Sturgeons, Her ring, Eels, Smelts, and Perch; the latter caught in abundance in de la War Bay; and in the River above the Fréfhes, Oyiters, Crabs, Cockles, and Mufcles. There are alfo Rock, Shat, Catfhead, Sheepfhead, and other Fifh, not worth our particular Regard.

We need not wonder, that in a Country fo fruitful and fo pleafant, and where there was fo clear a Profpect of living happily, with moderate Induftry, People fhould refort in fuch Numbers. At firft, without doubt, Religion was a ftrong Motive, and the Quakers willingly followed Mr. Penn, from a Country where they were perfecuted, to a Land of Plenty and Peace. But, in Time, and indeed in a little Time, this Argument ceafed, and People reforted thither as they did to the other Colonies, upon the ordinary Motives of Gain and Trade ; we may, however, venture to affert that Mr. Penn's original Contract, for fo the firft Contitution drawn by him was ftiled, had a very great Influence in procuring Inhabitants, fince it muft be allowed there never was a more beneficent Scheme of Government devifed by the Wit of Man.

By degrees, however, this alfo has been fomewhat altered, not by the Proprietor or thofe acting under his Authority, but at the Defire and on the Requeft of the People, with refpect to whom it may poffibly be true, that fuch Alcerations, in procefs of Time, might become neceffary. The Spirit, however, of Mr. Penn's Inftitution is ftill preferved, and the People here are as free, and as well, and as cheaply governed, as in any part of the known World. A very ftrong Proof of this may be drawn from the greateft Error in Government that was ever committed there, which was laying a Tax of Five Shillings a Head upon all new Comers; which fhews, that they were once in fome Apprehenfion of being over-ftocked; but this Law was very foon repealed, as it ought to be. At prefent it would be a very difficult Thing to pretend to compute the Number of People in this flourining Colony, but we may form fome Notion of it from the following Inftance, "which is very certain, viz. that the Inhabitants of Pbiladelphia in 1740 were full fifteen thoufand.
14. As to the Commerce of Penfylvania with refpect to Europe and America, the Cafe, according to the beft Accounts we have, ftands thus: Their Merchandize confifts of Horfes, Pipe-Staves, Pork, Beef, and Fifh, falted and barrelled up, Skins and Furs; all Sorts of Grain, viz. Wheat, Rye, Peas, Oats, Barley, BuckWheat, Indian Corn, Indian Peas and Beans, Pot-afhes, Wax, $\varepsilon_{c}$. and in return for thefe, they import from the Caribbee Iflands and other Places, Rum, Sugar, Moloffes, Silver, Negroes, Salt, and Wine ; and from Great Britain Houfhold-Goods and Cloathing of al Kinds, Hard-Ware, Tools, and Toys. They have alfo fome Rice, but no great Quantities, and a little Tobacco of the worft Sort. Their Trade with the Indians confifts but in a few Articles; they receive of the Na tives chiefly Skins and Furs of their wild Beafts, for which they givet hem Clothing, Arms, Ammunition, Rum,
and orher Spirits in return. This, as well as other Northern Colonies, has alfo a clandeltine Trade with the Spaniards upon the Coaft of Terra Firma, Esc. furnifhing them with European Goods: and Merchandize, for which they receive chiefly Dollars in return; and they alfo trade to the Bays of Honduras and Campeachy for Logwood, by Connivance, as the Spaniards fay; but the Subjects of Great Britain infift that they have a Right to that Trade, and as we have already thewn, they do not infift upon this, without juft Grounds, in the Opinion of thofe who are the beft and propereft Judges of that Matter. But after all, it mult be admitted, that Penjytranich has no ftaple Commodity, which, however, is not juftly chargeable upon the Inhabitants of this Colony; who; notwithftanding this, have never fet up any Manufac. tures of their own.
But the Point to be enquired into is, Whether they might not have fuch a ftaple Commodity if they went about it themfelves induftriounly, and received from hence proper Encouragement? It is a Point out of difpute, that no Country in the World is more proper than PenSylvania for producing Hemp and Flax; and with refpect to thefe, we ought feriounly to confider, that there is nothing plainer than that Hemp and Flax are fo ufeful in Navigation and Trade that we cannot do without them; the firft for Cordage of all Sorts, the latter for making Sail-Cloth, as well as for the Linen Manufactures carried on in this Kingdom. The Neceffity we are under for thefe Commodities ought to put us upon all imaginable Care how to provide them, that we may not fall under the fame Neceffity for them that we did in the Year 1703 for Pitch and Tar, when the Government of Sweden abfolutely refufed to let us have them for our Ready-Money, otherwife than in their Shipping; from their Tar Company here, at their own Price, and only in fuch Quantities as they thought fit. Upon that Difappointment, the Government, by allowing a confiderable Encouragement for carrying on the Manufactures of Pitch and Tar, had fufficient Quantities from our own Plantations; and it is greatly to be wifhed the like Encouragement was given for raifing Hemp and Flax; and as all Sorts of Naval Stores may be raifed with fo many Advantages to this Kingdom, it would be unaccountable to leave us dependent, and at an Uncertainty for them. It is very well known, that our Land is too dear for Hemp and Flax, and what does grow here (though it is tough, and makes ftrong Linen) neither dreffes fo kindly, nor whitens fo well as that which grows in hotter Climates. In Rufia the beft Hemp and Flax grow in the fouthermof Parts of the Empire, where the Summer is hot and the Air clear, and yet the Flax is not accounted fo good as that which grows in Egypt or Italy. Egypt has always been efteemed for its Linen, and even now fupplies Leghorn with large Quantities, and the Coaft of Syria, Afia Minor, Smyrna, Conftantinople, and other great Cities, have a Supply of Hemp and Flax from thence.

All our Colonies (which run twelve or fourteen hun= dred Miles in length, all the way bordering upon the Sea) have very hot Summers', the fouthermoft Parts of them lie near the fame Latitude with Egypt, and the North Part much about the fame with Ancona or Bologna in Italy, where Hemp and Flax grow; therefore, we have the greateft Profpect to receive mighty Supplies of Hemp and Flax from them. Part of the Land in the Colonies are very rich, and of fo fmall Value, there will be Opportunity of breaking up frefh as often as there is Occafion to change the Ground, which if laid down will recover itfelf again without the Charge of Manuring, as we do here, to the very great Damage of our Ploughing Lands. Nothing impoverifhes Land more than Hemp. and Flax; and though it is manured, that alone will not do fo well, for the Land ought to be changed after three or four Crops, and generally the fineft and fatteft Pieces are converted to that Ufe. Thofe great Conveniencies of having Land fo very cheap, and fo fine a Climate, which we know produces excellent Hemp and Flax, fo commodioully fituated along the Sea Coafts, with fuch Numbers of large Rivers running up the Country to the moft inland Settlements, where Provifions may be raifed
at fo fmall a Charge, and where Work may be done by the Labour of Slaves, almoft as cheap as in India, gives Ground to hope, that we may manufacture Linen here cheaper than any Part of Europe can import them upon us, and the Colonies be as profitable to us, by rairing rough Materials to carry on the Linen Manufacture, as the Sufex and other Downs are, for fupplying Wool for that Manufacture, the Profits of which we have valued ourfelves fo much upon, that we have fet the reft of Europe upon being our Competitors therein.

Now as theWoollen Manufucture, efpecially the coarfe Part, has fpread itfelf of late into feveral Parts of the Kingdom, which has exceeded the Demand, and caufed great Stocks to remain on Hand, if thofe rough Materials of Hemp and Flax were prepared in our Plantations, the People in North Britain, \&cc. would foon find the Advantage of falling upon that Manufacture; the Jaborious and coarfe Part being performed abroad, the reft would invite not only the Poor and Necefitous, but People of better Circumftances to employ their Time in it. If there Propofitions are fufficiently confidered, and heartily put in Practice, we may hope that by providing the aforefaid rough Materials, we fhall have the delightful Profpect of feeing Trade flourifh; for as the Silk and Linen Manufactures, where brought to Perfeetion, are altogether as profitable to thofe Nations as the Woollen is to us; and as we increafe in our Linen Manufactures, thofe of Silefia and all the Hereditary Countries of the Houfe of Auftria, whence we take fuch Quantities, muft abate of courfe; their People alfo will refort to us, and help to carry them on; for it has always been obferved, where new Manufactures are fet up, the Manufacturers will likewife remove. This was the Cafe with the Flemings when Queen Elizabetó gave fuch great Encouragement to have the Woollen Manufacture remove hither; and ours, when we had that Inundation of Cbina and Irdia wrought Silks, our Weavers went to Holland', Flanders, Frence, $\$ c$. fo that feveral Streets in Spittlefields were almoft defolate; but when thefe Silks were prohibited, the Manufacturers returned again.
It is fuppofed the Ruffinins exported to England, and all other Parts, in Hemp and Flax, above the Value of a Million a Year. If Hemp and Flax be fo valuable a Product for Merchandize with them, there feems to be a much greater Profpect of its being fo to our felves, by raifing them in our Plantations, becaufe they will not be fubject to any Land-Carriage, but fhipped immediately from the Place of Growth; becaufe Land is much cheaper in our Plantations than in the South Parts of Ruffic. The Climate, being equal with that in Egypt and Italy, is fuppofed to produce Hemp and Flax preferable to theirs. We have before fhewn, that in the Cafes of Sugar and Tobacco, every white Man employs four at home, that is to fay, finds then. Work to fupply him with Utenfils requifite for his. If Sugar and Tobacco employ fuch a Number of Hands, at home, certainly every Perion employed in the Plantations, in raifing and drefing Hemp and Flax, muft by his Labour there, return more than twice the Advantage that can be produced by Sugar and Tobacco, for they are manufactured in the Plantations: The refining the Sugar and cutting the Tobacco, with the Jittle Quantity that is rolled excepted. Whereas Flax and Hemp are Materials for employing all idle Hands; and of Confequence the Poors Rate will foon be abated, and theNation will find in a little time what they fave yearly thereby, will be more than fufficient to encourage the People to begin that Employment. And if once we come to be employed with Hemp and Flax by the aforefaid Methods, every Place will be filled with Flax-dreffers, and the Overfeers of the Poor of every Parifh where the Woolfpinning Trade is not carried on, may very eafily come at Hemp and Flax, which they will find as profitable to them, as the Woollen is to the other; and the more diftant the Employment is, the better; for many Inconveniences have attended one Manufacture interfering with another; befides, there will be an Intercourfe of Trade created, by one Part of the Kingdom fupplying the other with their diftinct Manufactures. This will give full Employment to the whole Kingdom, and an univerfal Chearfulnefs to every body: For the Poor are
never happier, nor their Minds eaflie, than when they have full Employment; and when they are employed, Riches is diffured throughout the whole Nation.
It is a common Opinion, that we have above a Million of People in the three Nations deftitute of Work; but if thofe rough Materials (fo often mentioned in this Difcourfe) fhould come to be raifed in our Plantations, there need not be one idle Perfon: Now, fuppofe one Million of People were put upon manufacturing thofe rough Materials, and each Perfon earned but one Penny a Day, and allowing but three hundred Working-days in the Year, it would amount to one Million two hundred and fifty thoufand Pounds: A prodigious Advantage to the Nation, which is ftill greatly heightened by confidering that thefe People would be then employed, at leaft in part, and fo far as they were employed, would be the Detter Subjects. That all this might be brought about with lefs Trouble than has been given the Nation by one Baltick or Mediterranean Expedition, and at the tenth Part of the Expence of a Campaign in Flanders, is a thing will be acknowledged by all who are capable of judging of this Subject ; and therefore that it ought to be done, is a Point that cannot be difputed. I would not miflead my Reader by the Comparifon, into a bad Opinion of fuch Expeditions or Campaigns; that is not my Bufinefs, or my Intention; the Juftice of my Comparifon turns upon this, that the Motives to fuch Expeditions and Campaigns are, compàratively fpeaking, near and at hand; whereas we are lefs acquainted, or at leaft lefs affected by the Connection between our Interefts and thofe of the Plantations; though, from what has been faid, I think it will plainly appear, that they concern us as much, and as nearly; as any Interefts can do without the Limits of our own Inand.
15. But it is now time to bring this Section to a Clofe, and after having given the Reader, from the beft Authorities I could find, as clear an Account as I was capable of giving of thefe noble Settlements, I come next to add a few general Remarks, not upon this or that Plantation, but upon the whole Body of our American Settlements taken together. We have fhewn how the Out-lines were drawn, fo early as in the Reigns of King Henry VII. and Henry VIII. We have taken notice of the Schemes and Preparations that were made for fettling the Countries we had a Title to in the Reign of Queen Elizabeth. We have given an Account how far thefe were carried into execution in the fucceeding Reigns. And in this Section, we have plainly exhibited the Manner in which this laft Plan was fully accomplifhed. By this Means the Reader fees, that the Difcoveries of the Cabots, though treated by fome unfkilful Writers as trifling Things, and Matters of no great Moment, were in Reality the Grounds of our Pretenfions, now converted into the actual Pofferfion of that vaft Tract of Country from the Northern Coaft of Hudjon's Streights, down to the Southern Limits of the new Colony of Georgia, or of the old Colony of Carolina; for the Limits are the fame. As for the Illands, I take the Settlement of them to have been occafioned by the old Rout to Florida, which has been fo much ridiculed; but which, notwithitanding, feems to have been the true Source of our Acquifitions in the Leerward Ifands. Fanaica is ours by Conqueft, and which is another Circumftance worth remembring, became fo, in a great meafure, by a Force raifed in our Plantations. Whether it be our Intereft to think of making fuch Expeditions for the future, I fhall not determine; but Care ought furcly to be firft taken of the Colonies we have; which it never can be till the Importance of our Plantations in gencral is thoroughly underftood, by the.Bulk of this Nation. This is the Point I have principally laboured in this Work, and I fhall clofe all I have to fay with the Confideration of three Points; which I hope will make the Matter plain to every Underftanding.
The firt of thefe Points is, What the Condition of tbis Country was before rve bad any Plantations? In regard to this, I think I may fafely affirm that it was very low and defpicable.' In the victorious Reign of Edrward the IIId. there was a Balance of Trade ftruck, and delivered into the Exchequer, by which it appeared that the Exports of
one Year exceeded the Imports by two hundred fifty five thoufand two hundred and fourteen Pounds thirteen Shillings and Eight-pence, which for that Time was a great deal. At the Time Queen Elizabetb entered upon the Government, the Cuftoms produced thirty-fix thoufand Pounds a Year; at the Rettoration they were let to Farm for four hundred thoufand Pounds; and produced confiderably above double that Sum before the Revolution. The People of London, before we had any Plantations, and but very little Trade, were computed at about one hundred thoufand; at the Death of Queen Elizabotb they were increafed to one hundred and fifty thoufand, and are now about fix times that Number. In thofe Days we had not only our Naval Stores, but our Ships from our Neighbours. Germany furnifhed us with all things made of Metal, even to Nails; Wine, Paper, Linen, and a thoufand other things came from France. Portugal furnifhed us with Sugars; all the Pioduce of America was poured into us from Spain ; and the Venetians and Genoefe retailed to us the Commodities of the Eaft Indies at their own Price. In fhort, the legal Intereft of Money was twelve per Cent. and the common Price of our Lands ten or twelve Years Purchafe. We may add that our Manufactures were few, and thofe but indifferent; the Number of Englifh Merchants very fmall, and our Shipping much inferior to what now belongs to the Northern Colonies. Thefe are plain and certain Facts: But as foon as we began to exzend our Trade, and to make Settlements abroad, the Face of our Affairs changed; the Inhabitants of the City of London were doubled by the End of the laft Period, and were again doubled before the End of this; our Shipping encreafed in a ftill greater Proportion; we coined within twenty Years after that Queen's Death about five Millions at the Tower, in twenty Years after that feven, and in the next twenty Years eight, which are indubitable Proofs that we had gained a prodigious Ballance of Trade in our Favour.

The next Point I fhall confider is, What our Condition bas been fince? and, with refpect to this, I may boldly affirm that it has altered for the better, almoft to a Degree beyond Credibility or Computation. Our Manufactures are prodigounly increafed, chiefly by the Demand for them in the Plantations, where they at leaft sake off one half, and furnifh us with many valuable Commodities for Exportation. Inftead of taking the Quantities we were wont to do of Goods from other Nations, we actually export thofe very Goods, and fometimes to the very fame Nations; Sugar, Rum, and Tobacco, are the Sources of private Wealth and public Revenue, which would have been fo many Drains, that would have beggared us, had they not been raifed in our Plantations. It is no longer in the Power of the Ruffans to make us pay what they pleafe for Flax and Hemp. The Swedes cannot compel us to pay their own Price, and that too in ready Money, for Pitch and Tar, nor would it be in their Power to diffrefs us, fhould they attempt it by raifing the Price of Copper and Iron. Logwood is funk feventy five per Cent. Indico, and other dying Materials, are in our Power, and at moderate Prices. In fhort, the Advantages are infinite that redound to us from our American Empire, where we have, at leaft, a Million of Briti/h Subjects, and between fifteen hundred and two thoufand fail of Ships conftantly employed. Such have been the Fruits, fuch is the Condition of our Plantations, and let any Man doubt of the Benefits refulting from them to this Nation if he can; or when he reflects on the Numbers maintained here by their Indultry, and even by their Luxury, let him deny or envy their Wealth if it is in his Power.

When our Plantations were in their Infancy, they were fome Burthen and Charge to this Nation, and then it was that fome wife and public-fpirited Perfons took upon them to become Advocates for a thing which they forefaw would prove highly ufeful and advantageous. I have read many of their Difcourfes with great Pleafure, becaufe I confidered them as written with a kind of prophetic Spirit, in which their Authors have exhibited to the Eye of the Ages in which they wrote, a very juft Picture of what has pafed in fucceeding Times; but with this re-
markable Circumftance, that though feveral of them were Men as remarkable for bold Flights of Imagination, as for Penetration and Judgment, yet in this Cafe they have not reached the Truth; the prefent State of the Plantations exceeding vaftly all that they promifed ${ }_{2}$ or even hoped from them; the Reafon of which I conceive to be their framing Conje ${ }^{\text {Cutures }}$ from the Siate the Nation was then in, and our Trade was at that Time fo inconfiderable in Comparifon of what it is at prefent that I think there is no wonder the Writers who flourifhed in thofe Days fhould fall fo much fhort in their Expectations from our Settlements in America. But, perhaps, it may be objected, that though they did not forefee many things that have fince fallen out in thofe Parts of the World, yet it is very evident that they believed many Advantages would arife from thofe Colonies that have never yet come to pafs; which leads me to the third Point I propofe to mention in thefe Remarks.

This third Point is, The Improvements and additional Benefits that may be fill made in, and accrue from, our Plantations. We ought, in this refpect, to confider of what a vait Extent that Country is, which we actually poffefs in the New World, to which I will be bold to fay this Illand does not bear a greater Proportion than the County of Norfolk, to the whole Kingdom of England; whence we may eafily conceive what room there is for making new Improvements in fuch a vant Tract of Coumtry. It is, indeed, true, that fome of our Sittlements on the Continent, fuch as New England, New York, Penfylvania, Maryland, and Virginia, are already tolerably well peopled; but then Nova Scotio is fcarce fettled, Nere Britain is a vaft Country, and capable of being turned to our Advantage; is fo far from being fettled ${ }^{2}$ that it is fcarce known to us; and the fame thing may be faid of all the Country bordering upon Hudjon's Bay. As to the Southern Colonies, by which I mean the two Carolina's and Georgia, they are very thinly peopled, and very little improved, though beyond all Comparifon the mof valuable Poffeffions we have in thofe Parts. In regard to the Illands of Bermudas and Barbadoes, they are thoroughly peopled, and moft of the Leeward Ifands tolerably inhabited; but then there are feveral Inlands to which we have as clear and as good a Title, as to any of thefe, that are not fettled at all, though from the Nature of their Climate, Soil, and Situation, they are not inferior to any, but on the contrary, fuperior to moft of thofe of which we are poffened, as will be hereafter fhewn. The noble Inand of Famaica, which of itfelf might ferve to inrich any Country to which it belonged, is not a third Part cultivated, fo that there is every where room for us to exert cur Induftry, for the Honour and Advantage of the Britifb Nation; which as it has already drawn fuch immenfe Profits from its Settlements in America, fo beyond all Queftion we may ftill draw much greater, if we proceed with the fame Spirit and Vigour that our Anceftors did, having much more Power in our Hands, much fairer Opportunities than they had, befides the Light and Autlority of Experience, to guide, encourage, and fupport us.

In order to this, and that we may actually add thefe Advantages in profpect to thofe which we at prefent poffefs, the Steps neceffary to be taken fall under the two following Heads: The firt is, Improving fuch of our Colonies as are already weoll Settled; and the next, Providing for the thorough Planting fuch as are at prefent but veity indifferently, or fcarce at all, peopled. It would require a large Treatife to expatiate fully on thefe Heads, and therefore I Thall content myfelf with only a few Hints as to each of them. In refpect to the firft, I cannot conceive that any thing would be more advantageous than providing every Colony with fome Staple Commodity, which would infallibly produce the following defirable Confequences: It would make the Inhabitants of thofe Colonies perfectly eafy, and at the fame Time it would vaftly inrich us. As for Virgivia and Naryland they are poffeffed of the Tobacco Trade, in which, if any Eafe, Encouragement, or Advantage can be granted them, they moft certainly deferve it: But with refpect to Nevo. England, Penfylomia, Nero Rork, and the Jerfeys, Ways and

Means

Means might be found to increafe their Commerce with England directly, by promoting their Inclinations to furnifh us with all kinds of Naval Stores, and with Iron. There was, as to Pitch and Tar, a confiderable Bounty given," and it is very remarkable for many Years this produced no Effect, which might poffibly countenance an Opinion that the Friends to the Plantations were too fanguine in their Notions on this Head; but Experience afterwards fhewed the contrary. For the Circumftances of the Public making it neceffary to try how far this might be practicable, it very foon appeared that the thing could be eafily done; and upon fending over Perfons well acquainted with the Methods of making Pitch and Tar, the People in the Colonies foon fell into it, and fuch Quantities were imported, as not only fupplied our Wants, but enabled us alfo to fupply thofe of our Neighbours; and then upon a Suppofition that the Trade was effectually eftablifhed, the Bounty was difcontinued. The Confequence of this was, that the Importation of thefe Commodities from Ruflia, Sweden, and Norway, was revived; for the People of thofe Countries building large bulky Ships, peculiarly proper for tranfporting thofe Commodities, by navigating thefe Ships cheaper than we can do ours, are thereby able to underfell our Countrymen in the Colonies, by three or four Shilling in a Barrel; fo that to keep this Trade there grew a Neceflity of granting a new Bounty upon Pitch and Tar from America, or laying a new Duty upon what was imported from the North.

We may fay the fame thing with regard to Iron, of which, at prefent, we import very near double as much from Sreeden, as is fold to all the reft of Europe, for which we pay moftly in ready Money; and yet no Queftion can be made of its being very practicable to bring the beft Part of the Iron we want from our Plantations, which has been hitherto prevented by Notions fo frivolous, that I do not care to mention them. Hemp and Flax have been fufficiently infifted upon already, and to thefe we may add Pot-afhes; fo that the Reader will eafily difcern that there is no Difficulty at all in the Way of enabling the Northern Colonies to pay us for our Manufactures, and prevent their fetting up Manufactures themfelves, but our fetting heartily about it. The fame Thoughts may, in a great Meafure, ferve for our Southern Colonies, in which Tar may certainly be made as good as any in the World; but then there are other things peculiar to thofe Colonies, fuch as the planting Coffee, Tea, Cocoa, Indico, and the Shrub that produces Cochineal ; but above all, we ought to think of Silk, for Reafons that fhall be given when we come to treat of the Colony of Georgia: At prefent we fhall only fay that there is this great and extraordinary Conveniency attends the Cultivation of the laft mentioned Commodity, that as it is proper for the fame Soil and Clinate, as Hemp and Flax, fo they may be both carried on together; the Silk Harveft, as they call it, being over before Hemp and Flax are ripe.
As to the Sugar Inands, though they have already a Staple Commodity of very great Value, yet this fhould not hinder us from confidering how that Commodity may be fill rendered more ufeful, I mean to the Planters and to us; and how far other things are capable in the fame Countries of being improved. It was the Opinion of Sir Jofiab Cbild (and I think the Subject well confidered it is not eafy to produce a better Opinion) that Sugar may be as much made the Commodity of this Nation, as the Gold and Silver of Peru and Mexico are the peculiar Treafures of Spain. The Reafons he gives are very ftrong, but it is very certain that we have not fallen upon the right Method of bringing his Doctrine into Practice; fince inftead of exporting one half of the Sugar we bring home, as we formerly did, we do not now export above a fixth, and this not from falling off of the Demand, but becaufe new Markets have been found, at which Foreigners can buy cheaper. To alter this all Heads fhould be fet to work, and all Arts tryed; and till thefe fucceed, it may not be amifs that the Inhabitants of the Sugar Colonies would try to bring fome other Goods to Market.

Thus much for the fint Head, now for the fecond: It has been computed, by fome, that there iș a Million and a half of white People in our Plantations, which Computation has been judged by others fomewhat of the higheft; perhaps it may be fo, but without all doubt it would be our Intereft to have two Millions of white People there; nor do I think that there is any Reafon to fear that this would either drain the Britib Dominions, or at all indanger the Dependancy of the Colonies. I am, on the contrary, very firmly perfuaded, that the Increafe of People in the Colonies, as it would certainly increafe our Trade, fo it muft neceffarily increafe the Number of our People at home ; and that the Methorls proper to be taken for the better peopling our Colonies, and improving them, would infallibly render them more dependent.

But to come clofely to the Point, and hew how this may be done. Give me Leave to obferve, that though the general Propofition that the Number of the People is the Riches of a Country be true, yet it is true only of induftrious and ufeful Pcople; and it is in this Senfe, that the Number of the People in Holland is quoted as an Example; fo that if there be in any Country Numbers of People ufeless, they are fo far from contributing to the Wealth of that Country, that they are in Fact the Caufes of its Poverty. Now, it is certain, that though this Nation might become more powerful and more rich, by being more numerous than it is; yet there is not any more probable Method of bringing this about than by employing our ufeful Hands, which perhaps may be eafier done Abroad than at Home. We have vaft Numbers of Vagabonds throughout the Kingdom, who many of them live by Pity, but moft of them by the Folly of better People than themfelves; there cannot therefore be any Cruelty in fending thefe People where they muft work, and confequently maintain themfelves and be ufeful to others. We have many People convicted of finall Crimes, and from the Ignominy of the Conviction and Punifhment rendered defperate; it would certainly be a great Charity to provide for thefe. We find Multitudes releafed from Time to Time out of Prifons by Acts of Grace, which fet them at Liberty, 'tis true ; but, at the fame Time, leaves them at little better more than the Liberty of ftarving; and who can fay, that it would not be highly laudable to find out fome Means for giving thefe People Bread as well as Freedom? I humbly conceive, that if a proper Fund was affigned for fending thefe People abroad, not like Tranfports or Negroes, but like unhappy Englifbmen, with due Provifion for their comfortable Maintenance in their' Paffage, and a proper Reception in the Places they are fent to, this might be found an effectual way of eafing our PoorsRates, ftocking our Colonies, and enlarging the Trade of the Nation.

But in doing this, great Confideration is to be us ${ }^{9} d$, there ought to be nothing in it of Shame, and as little of Force as may be. The Terms ought to be fuch as may encourage People in Diftrefs to accept them, ard the accepting them might be in the Nature of a Superfedeas to all Criminal Profecutions, not of a Capital Nature. They fhould be fent Abroad for a Term of Years, or till they could repay a certain Sum of Money to the Corporation intrufted with the Management of this Scheme, and confiderable Rewards fhould be given to fuch as behaved well, and gained a competent Settlement during the Time limited for their remaining abroad; and if to this certain honorary Preferments were added, it would be fo much the better. Thefe are the Outlines only of a great Defign, worthy the Attention of the Legiflature, who perhaps may think a Tax on public Diverfions a reafonable Fund for fuch a Service, there being nothing more juft than that Luxury fhould contribute to relieve Necefity, and that thofe who are able to be idle fhould. be made willing to help thofe that muft work.

Such, at leaft, are my Notions of thefe Matters, and of the Means by which our Plantations might be improved, and the Advantages we derive from them increafed and extended. If what I have faid be rational and practicable, or without much Difficulty may be altered in fuch a Manner as to become fo, I hope it will be thought worthy of Confideration; but if otherwife
let fome Perfon better verfed in thefe Things, and more capable of treating this Subject arife, and fet it in its true Point of Light. For this is the critical Time, the Seafon when the Friends of Trade and the Plantations Chould exert themfelves before a Peace takes Place, and a niew

Scene opens, of which it will be impoffible to give our Judgment immediately, and as impofible to think of executing thofe Schemes then, that are eafy as well as practicable now.

## S E C T O N XX.

## The Hifory of the British Colonies in America, from the Revolution to the Death of bis late Majeßy King George I.

1. The Aritices of the French, under the Reign of James II. defeated by the Probiry of Colonel Duns gan, Governor of New York. 2. The Indians, by their Infiggation, and with their Alfitance, attack the People of New England in 16 go, and are repulfed reith Lofs. 3. An Account of Sir William Phipps's unfortunate Expedition againg Quebec. 4. Tbe Hiftory of the Indian War continued to its Clofe, with other remarkable Occurrences. 5. The Society for the Propagation of the Gofpel incorporated by King William III. and the many Advantages flowing from that excellent Eftablifbment. 6. The Affairs of the Brition Colonies, during the Reign of Queen Anne, briefly confidered. 7. The unfortunate Expedition againf Canada, under General Hill and Sir Hovenden Walker. 8. The Methods taken by the Erench for the Benefit of their own Commerce, at the Expence of ours to the Treaty of Utrecht. 9. An Account of bis Grace the Duke of Montague's Scheme for fettling the Iflands of St. Lucia and St. Vincent. Io. The IIfory of the Expedition for that Purpofe, under Captain Uring, and bis Relation of its Mifcarriage. 11. Colonel Braithwaite's Report of bisbeing forced to abandon the Settlement of St. Vincent. 12. The in. dubitable Title of the Crown of Great Britain to thofe Ilands afjerted, and the Importance of maintainings it demonftrated. I3. Remarks and Obfervations on the mof remarkable Paffages in the foregoing Section.

I$T$ is generally agreed, that the very wortt Part of King James's Government was the Inclination that he had to French Counfels, and his falling too readily into French Meafures, which is the more extraordinary in Matters relating to Commerce; becaufe never any Prince underftood them better than King Fames. It muft therefore have been his violent Zeal for promoting the Popifb Caufe, that induced him to go the Lengths he did, in Eavour of France; contrary moft certainly to the Interent of this Nation, as he would have feen fooner than any body, if that Zeal of his had not hindered him. But from hence we fee the Difference between Englif and French Popery. Our deluded Prince, though he underftood Trade, was inclined to facrifice it, in fome Meafure, for the Sake of his Religion; the French King, though of the fame Religion, and pretending to be as zealous for it as King Fames, made ufe of it as a Colour to promote his own ambitious Defigns, and the Trade of his Subjects at our Expence. I know that this is a delicate Subject to handle, and I hould not have mentioned it.all, but from a juft Senfe of its Confequence, and a fincere Love for Truth, and the Intereft of my Country.

The French, in the Beginning of King Fames's Reign, finding their Colony of Canada in the utmoft Danger from the Iroquois, a very warlike Indian Nation, jealous of their Liberties, and very capable of defending them by Force of Arms, refolved, fince Force had hitherto failed, to try what might be done towards fubduing them by the gentler Method of Converfion; in order to which they not only employed a Multitude of artful Jefuits, but contrived likewife, under Pretence of extending the Chriftian Faith, to engage King Fomes to countenance and affift this Project. In order to this an Iribg Gentleman, Colonel Dungan, Son to the Earl of Limerick, was made Governor of New York; and he was directed, by his Mafter, to permit the French Ffefuits to preach to, and convert, the Indians under the Protection of his Government. The Scheme was certainly well laid, and one would wonder how it came not to take effect; which if it had done, mut have proved the Ruin of that Colony at leaft, the Conqueft of which had been for a long Time the Object of the French Policy. But this Colonel Dungan, unfortunately for the French, was a Man of very good Senfe, and of ftrict Honour, he obeyed his Mafter's Commands, though unwillingly, but he kept fo ftrict an Eye upon the French Fefuits, that he very foon faw to the Bottom of their Defigns; and, finding them incompatible with the Welfare of the Colony he governed, he obliged them to retire; telling them that they came to promote the

Vol. II. Numb. XC.

Commerce, rather than the Religion of their Nation and that if his good Friends the Indians were fo muchs in love with $\mathcal{F e f u i t t s}$, that they could not be without them, he would fupply them with thofe who fhould make them good Cbriftians and good Englifmen at the fame Time.

This greatly provoked the French Governor of Canada, Mr. Denonville, who threatened him with the Difpleafure of his own Mafter, and of the Moft Cbriftian King; but this had no Effect upon Colonel Dungan, who would not be either cheated or bullied; and therefore when the French Governor had trapanned fome of the Indian Chiefs, and fent them over to be made Slaves in the French Galleys, by the moft notorious Breach of Faith that ever Man was guilty of ; the Colonel affifted them in the War occafioned thereby, which brought the French Colony within a Hair's Breadth of Ruin. This Story, which is very remarkable, we have from French as well as Englifh Authors, and which is no lefs extraordinary, they agree in every Circumftance of it. Only the former are fo partial, as to treat the Colonel's Character very ill, becaufe he would not facrifice the Intereft of his Country, his own Honour, and Confcience to their Views. After the Revolution, when he was become Earl of Limerick, King William, who was very well informed of his Proceedings, procured an Offer to be made him of a very confiderable Command in the Spanifb Service, but he declined it; and though he liked not the Meafures, chofe to follow the Fortunes, of his Mafter King Fames.

The French, by the fame kind of Artifices had very near difpoffeffed the Hudfon's Bay Company of that Country entirely; and, as foon as the War broke out, they actually did fo, as we have already thewn. They alfo made a bold Attempt upon the Colony of Nere York, with the Affiftance of the Indians in their Interefts, but were repulfed; and Colonel Peier Scbuyler, with three hundred Englifh, and the fame Number of Iroquois, bravely marched from Fort Albany to Quebec, which is four hundred Niles; and finding the French Governor with feven hundred regular Troops, and as many Hurons, an Indian Nation always at their Devotion in the Field, they boldly attacked them, and killed three hundred Men, and thirty Officers, with very little Lofs to themfelves; but having no Artillery, and the French retiring into their Forts, the Colonel made a very honourable Retreat, fatisfied with the Blow he had ftruck, and fecuring his own Country from any farther Depredations. But it was not only on this Side that the French attacked our Colonies at that Time, on the contrary they had framed a Defign of greater Confequence againft the Peo-
ple of Nerw England, of which, as it is a Matter of great Importance; we will give as full and clear an Account of it as we can; for tho' their Intrigues began fomewhat earlier than the Period affigned for this Section, yet as our Expedition was not made till after the Revolution, it comes in very properly here.
2. The French, in a Time of full Peace, and when, as we have obferved, they were folliciting and obtaining Favours from King Fames, excited the Indians on the Frontiers of Newe England, to furprife feveral Out-fettlements, where they committed feveral great Barbarities: Of this Complaints were made to the French Governor at Quebec, who gave very good Words, pretending that he knew nothing of what had happened; but promifed to interpofe, and check the Defigns of the Indians as far as was in his Power, which Promife was very indifferently performed. The Englijh thereupon tried what fair Means, and a peaceable Negociation with the Indians would do; in this likewife they were deceived and amufed, while their Enemies ftill perfifted in their Depredations, though they continued to treat, and pretended that all Difputes fhould be amicably fettled, well knowing that the Colony would take any Meafures rather than engage in an Indian War. During thefe Tranfactions, the Frencb and Indians entered into farther Engagements againft the Englifh, who did what they could with Honour and Juftice, to bring Matters to a peaceable Iffie, which was rendered very difficult by the Intrigues of the French, who upon King Fames's withdrawing to France, reprefented the Englijb Nation as in a rebellious and perilous Condition, which was fufficient Encouragement for the Indians to continue the War, having the Promife of powerful Affitance from 2 uebec.

They furprifed the Garrifon of 2uacbecho, by the Treachery of Mefondonit, a Sachem, whom Major Waldern, who commanded there, had generoufly entertained the Night before; and that Traitor lying in his Houfe, opened the Gates in the Morning to a Party of Savages, that lay in Ambufh not far off, and rufhing in killed the Major and twenty-two Men, burnt four or five of the beft Houfes, and carried away twenty-nine Perfons into Captivity, killing Mr. Brougbton in their Retreat. The Government ordered Capt. Noyes, with a ftrong Party, to march to Penocook, and clear the Country of the Savages; but they cleared it themfelves by running away as foon as they heard News of his coming. Captain Noyes purfued them, cut down all their Corn, burnt their Wigwams, and laid every thing wafte. A Party from Saco was furrounded by a great Body of Indians, and efcaped with Difficulty, having loft fix of their Number ; they afterwards maftered Pemmaquid Fort, by Help of Intelligence given them by one Mr. Starkey, who falling into their Hands thought to get out of them by that Service, and told of the weak Condition the Fort was in by the Abfence of Mr. Giles, and Part of the Garrifon; upon whom they fell at Giles's Farm, and killed him and fourteen Men. They then got upon a Rock, when they miferably galled the Englif, and obliged the Governor, Capt. Weems, to furrender on Promife of Life and Liberty. But the Savages broke the Capitulation, and butchered the greateft Part of them, as alfo Capt. Skinner and Capt. Farnbam, who were coming to the Relief of the Garrifon, and Mr. Pedifall, as he lay in his Sloop in the Barbran. Thefe Loffes caufed the Inhabitants of Sbeepfoot and Kennebeck to abandon thofe Places, and return to Falmouth.

It was time for the Governmentof Nerw England to look about them, and think of oppofing vigoroufly thofe Murders and Depredations of the Indians: They fent Major Swayne with five hundred Men from Malfacbufet, and Major Cburch, one of their beft Officers, from Plymouth, with five hundred more, againft the Enemy in the Eaft, where they had intercepted Lieut. Hutchin, who had drawn off a Garrifon he had in thofe Parts, to fet them to work in the Field. The Savages coming unexpectedly upon them cut them to pieces being feventeen in Number, and then came to the Fort, where were only two Boys, and fome Women and Children; the Boys defended it againft them, wounded feveral ; and when they found that the Barbarians were about to fet fire to the Houfe
that was in the Fort, and to burn them out, they would not yield but on Terms of Life; which there inhuman Wretches granted, and afterwards killed three or four of the Children, with one of the Boys; the other made his Efcape. Capt. Garner purfued the Enemy, but they were too nimble for him. Another Party of them affaulted Cano, killed Capt. Brooks, and had put the whole Town to the Sword, had not Capt. Hell come opportunely with Relief. The Defigns of Major Swayne and Major Cburch were fruftrated by the Treachery of fome Indian Confederates, who being fent out as Scouts, difcovered all that they knew to the Enemy; who underftanding theNumber of the Engli/b fled to their inacceffible Woods and Swamps: So Major Swayne, having garrifoned Blew Point, retired to Winter-Quarters. I enter not into the Particulars of the barbarous Treatment the Englifh Captives met with from the Savages, there being nothing in it but what might be expected from their Rage and Cruelty, and there was no likelihood of their learning Humanity towards the Englifh, by Leffons from their new Allies the French, who were very active in inftructing and difciplining them for the better Management of the War.
It is plain they had improved in it, both in Arms and in Action, and had continual Afliftance from 2uebec, without which the Engli/b would foon have chaftifed them for their Infolence, and taught them to be quiet. To make the French fome Returns for the many Mifchiefs the Engliff had fuffered by their Means, it was refolved in Nere England to carry the War home to them. In purfuance of this Refolution Sir William Pbipps, who commanded the Fleet and Forces, failed from Nero England the 28th of April, 1690, and on the 11th of May following arrived before Port Royal. The French had then a very flourifhing Colony in Acadia, or, as we call it, Nere Scotland, confifting of no lefs than fix thoufand People, who got a Living at leaft by their Trade in Lumber, Fifh, and Skins; but for all that the Place was fo miferably provided for Defence, the Town being covered only by a fight Pallifade, and a little Fort of no Force, that it was very foon reduced; and Sir Williain Pbipps had the Honour of recovering this Country to the Crown of Britcin. The People in Nova Scotia had Leave by the Capitulation, either to retire to Canada, or remain in the Country; and about two thoufand chofe the latter: So that Sir William not only acquired a Country, but a People; yet we did not keep the Poffeffion of either, for any Length of Time. To revenge thefe Loffes, Monfieur Artel, a French Officer from Canada, and one Hoophood a Leader among the Huron Indians, Confederates with the French, with Men of both Nations, affaulted Salmon Falls, killed thirty Perfons, and carried away fifty into Captivity ; which terribly alarmed all Nero England, it being the firf time that the French had acted openly with the Barbarians. And as Quebec was thought to be the Source of all their Calamities in this War, it was therefore refolved to attack that Place, which being reduced, the French would have no City to reft in, and carry on their ill Defigns againft their Chriftian Neighbours.
3. The Succefs Sir William Pbipps fo lately had, recommended him to the chief Command in this Expedition; but it feems to have been as ill laid and managed as the other was well contrived; for it is certain, he had a Strength with him fufficient to have driven the French out of Canada, had it been well ufed: He had thirty-two Sail of Ships, and they had aboard two thoufand Men, a prodigious Armament for fuch a Colony, and failed from Hull near Bofton the gth of Augujf; but came not within Sight of $2 u e b e c$ till the 5 th of October. Thus they were eight Weeks in a Voyage, that with good Winds and Weather, might have been made in two or three. The Englij乃 were fo long making up the River of St. Laurence, that the Governor, Count de Fontenac, had time enough to prepare for his Defence by drawing all the Strength of the Colony to Quebec, which Sir William expected would have been divided by an Army marching over Land, and attacking Mount Royal Fort on the Frontiers of Canada, while he fell upon the Capital.

This Army was to confift of two thoufand Men from

## Chap. III. of the ENGLISH in AMERICA.

Nero Tork, Connerficut, and Plynoutb Colonies; and one thoufand five hundred Indians, to whom the French gave the Name of Iroquois; but the Englifh diftinguifhed them by the Names of their feveral Nations. The Englifb marched as far as the great Lake of Canada; but as there were no Canoes provided for them to pafs it, they returned; and it is very ftrange that there fhould have been no Provifion for their Paffage fecured, fince the Succefs of the Enterprize fo much depended upon it.

When Sir William arrived within Sight of the Place, he fancied that the Conqueft would have been as eafy as that which he had made of Nova Scotia, and therefore he drew up a Paper in the Nature of a Summons to furrender, conceived in very rough Terms; for Sir William was originally a Carpenter, and afterwards a Sailor; fo that he was very blunt and unpolifhed, though a very honeft, and very brave Man : But the French Governor, Count Fontenac, was fo offended at the Style and Subject, that he caufed a Gibbet to be fet up, and would have hanged the Major that brought the Paper, had it not been for the Bifhop's Interceffion. He returned, however, a very infolent Anfwer, calling Phipps and his Company Heretics and Traitors.

On the 8th of OiFober the Englifh landed, under Lieutenant-General Whalley, to the Number of one thoufand four hundred, for to thefe they were reduced by the Small-Pox, and other Difeafes; but had their full Compliment been preferved, what were two thoufand on board the Ships to four thoufand within the City; for fo many Men Fontenac had now with him? Which Wballey underftanding, he re-embarked his Troops, though they would very fain have attempted one Affault: But their Bravery was illtimed, conndering the Inequality of their Number to that of the Enemy. Some Writers make the Lofs of the Englifh from the Oppofition they met with on Shore, to be fix hundred Men; but, I believe, that Oppofition is heightened for the Credit of our Nation, that the Troops might not be thought to abandon this Enterprize without looking the Enemy in the Face. The beft Accounts given by the French Writers of this Matter, do not afcribe the Deliverance of Quebec more to the Courage of their own People than to the Want of Conduct and Difcipline in the Englifh. The Truth of the Matter is, the Scheme was well enough laid, but thofe who undertook to execute it had not Capacities fuitable to a Defign of this Nature ; and befides, there fell out fome Accidents that were fatal to them, as well as wholly unforefeen, and to which in a great meafure we may juftly attribute their Difappointment.

The Small-Pox did not only carry off Numbers in Sir Willian Pbipps's Fleet, but broke out alfo in the other Army, that was to have marched by Land to attack Mount Royal; and this Malady infecting the Iroquois, was the true Reafon why that Expedition was abandoned; and this being foon known to the French, gave them an Opportunity of throwing their whole Force into Quebec, which was much too great for Sir William Pbipps to ftruggle with, if he and thofe who attended him, had been better Officers than they really were ; fo that there is no great Wonder the whole Expedition mifcarried. This fhews, that Matters of a military Nature cannot be carried on, efpecially againft the French, but by military Men and Officers well acquainted with Service; yet the Zeal and Courage of the People of New England, in undertaking and pufhing this Project of theirs fo far as they did, deferves great Applaufe, as it fully demonftrates the Spirit of the People, and very plainly proves that with proper Encouragement and proper Affiftance, they are both willing to endeavour and able to perform all that in their Circumftances a Britifh Government can expect from Britijh Subjects. In the prefent Cafe, their Efforts rather exceeded than fell fhort of their Abilities, for their Fleet and Army were numerous enough, well provided, and well paid; the Expence of this fruitlefs Attempt falling little fhort of one hundred and fifty thoufand Pounds, every Penny of which was furnifhed by the Inhabitants of this Colony, or, which was worfe, they ran in Debt for it, and were left to pay it: Here at home we do not fufficiently reflect upon tbe Inconveniencies that fuch Mif
forturies as thefe bring upon our Settlements, but are too apt to charge them with Want of Vigour,' Want of Application, and Want of public Spirit; whereas, in Truth, thefe Wants, generally fpeaking, lie on our Side the Water ; and it is to cover our own Neglects, that we pretend to find Faults in them of which they were never guilty.

The Ships in their Return met with no better Fortune at Sea than the Men had done by Land; fome of them were driven as far as the Leeward Iflands; one was wrecked, another was never heard of; a third foundered with all her Crew in her, a fourth was driven afhore on the defolate Inland of Anticoftä, where Captain Rinsford and hisCrew, forty at firft, were reduced through Want and Weather to half the Number in a Month's Time, and then faved almoft miraculoufly. The Lofs of Men in this unfuccefsful Enterprize amounted to one thoufand, and thofe as ufeful Hands as any in the Country. During the Progrefs of this miferable Expedition, a Party under Lieut. Clark, venturing out of Cafco, to look for the Enemy, met with a Body of four or five hundred Indians and French, who killed the Lieutenant and thirteen of his Men; the reft efcaping into the Town, were purfued by the Indians and French, who entering the Place reduced it to Afhes. The Garrifon furrendered the Fort upon Conditions of fafe Conduct to the next Englifs Town ; but the French bafely broke the Capitulation, and made them Prifoners of War under a very foolifh Pretence of their being Rebels to their lawful King.

The Governor, Major Davis, and fome of his Men; were fent to Quebec; the reft were murdered by the Savages. The Garrifons of Papocodack, Spawrwick, Black Point, and Blue Point, drew off to Caco, twenty Miles within Cafco, terrified with the Fate of that Place: Their Terror infected that Garrifon alfo, and half of them fled. Hoophood, the Huron, purfued them and deftroyed all the Country, burnt feveral Houfes at Berwick, killed thirteers or fourteen Men at Fort Point; and carried off fix Prifoners ; but Capt. Floyd, and Capt. Greenleof coming up with him routed his Party, wounded and drove him off to a great Diftance. He was afterwards fallen on by the French Indians, who taking him for an Iroquois, killed him and almoft all that were with him. The Indians and French had after that an Advantage over the Englifb under Capt. Wifreell, whom they killed with fifteen of his Soldiers near Wheetwright Pond, the reft were brought off by Capt. Floyd. Flufhed with this Succefs the Indians and French made a Defcent upon Amefoury, near to the Maffachufets, furprifed Capt. Foot and tortured him to death ; but the Townfmen retirning into the Fort, maind tained it againft them. Major Cburch paffed by Sea with three hundred Men to Cafco Bay, where he landed, and paffed directly Pectbpyot, an Indian Fort, which he found deferted, thence tờ Amonofcoggin Fort, forty Miles up Cafco River, which he burnt after having killed twenty Indians; all that ftaid in it, and releafed feven Englifb Captives. Having Notice that the Indians liad agreed to rendezvous on Pecbyfet Plain, in order to attack Wells, he haftened thither to give them Battle; which the Savages avoided, and the Engli/b went into Winter Quarters. Capt. Convers and Capt. Plaiftead, with one hundred Men remaining in thofe Parts, to fcour the Woods; and as the Englifb had no Reafon to be content with the Succefs of the War, fo they were well pleafed at the . Sight of a Flag of Truce, with which the Indians came to Wellss and a Ceffation of Arms till the May following was agreed on by Commiffioners on both Sides.

The Time of the Ceffation of Arms with the Indians was farce expired ; but the Savages, inftead of coming as they had engaged, to reftore the Captives, and turn the Truce into a Peace, began to commit new Hottilities, and killed Ceveral Englif at Berwick, Exeter, and Cape Nidduck. To prevent further Mifchief, Capt. Marel, Capt. King, Capt. Sberburn, and Capt. Waters, with four hundred Men, landed at Macquoit, and marched to Speaky; but thefe Forces not meeting the Enemy, grew fecure, and ftraggled out in Parties, which the Indians obferving, gathered in a Body, attacked them and drove
them to their Ships, with the Lofs of Capt. Sherburn and feveral Men, who could not get aboard in time They killed feven Perfons at Berwick, twenty-one at Sandy.Bear, a Family at Rowly, another at Haverbill, both in Effex County. Thus we find them drawing Southward, and extending themfelves into the Maflachufets, which they had not done before. The Garrifon of Cape Nidduck was fo thinned by Draughts from it, that the Remainder thought fit to defert it, though a ftrong Fort. A Party of Popifh Indians affaulted the Town of York, killed fifty Englifh, and drove away one hundred into Slavery, and the reft fortified themfelves; and though they were but a Handful; yet the Savages, who were feveral Hundreds, durft not attack them. Here Mr. Sbubaal Dunner, the Minifter, was thot at his own Door, to the great Joy of the French Papifts. A Ship was immediately difpatched to Sagadobook, with a Commiffion, and Effects to redeem the Captives, and thofe Men who remained in the Town were now thinking of abandoning it.
Major Hutcibinfon was in June 1692 fent with a ftrong Party under Capt. Convers, Capt. Floyd, and Capt. Thaxter, to affift them, and other Englifhmen on the Frontiers. Capt. Convers was pofted at Wells with only fifteen Men in the flight Fort there, and fifteen more in two Sloops in the River to be affifting to the others upon Occafion. Againft him came no lefs than four Indian Kings, Modenkawando, Moxus, Edgerement, Warumbo, and ftill two greater Men, Monfieur Labrocree and Monfieur Barniff, with fome French Soldiers, and five hundred Hurons. Moxus had not long before attacked Wells with two hundred Indians, and had been repulfed by Capt. Convers, who had not a Quarter of that Number of Men with him, which Modenkawonds hearing, he faid, my Brother Moxus has miffed it now, but I will go myfelf the next Year, and have the Dog Convers out of his Hole. But he was miftaken, for the Englifbmen in the Fort, and Chiefs in the Sloops, behaved fo gallantly, following the Example of their brave Commander Convers, that after feveral fruitlefs Attempts of the Indians and French to mafter them by Land and by Water, Monfieur Barniff, and the four Indian Confederate Princes, were obliged to setire. But Monfieur Labrocree did not live to bear the Reproach of fo fcandalous a Retreat, being killed in the firft of it. The Enemy happened here to take one Fobn Diamond Prifoner, whom they ufed fo barbarounly, that it would occafion too much Horror in the Reader to relate it.

Things continued, however, in this Situation, till Sir William Pbipps came over in Quality of Governor of Nere England, who immediately began to think of erecting a new Fort at Pemmaquid, to cover the Frontiers, which he compleated in fix. Months time, though it was one of the ftrongeft Places in America; but the Expence, which this occafioned, made the People uneafy; who, it feems, never forgave the raifing of the Money it coft, though they could not but be fenfible, that it was entirely laid out for their Safety: But it feems in Nere as well as Old England, and indeed in all other Countries, it is a much eafier thing to ferve a Society, than to make that Society fenfible of one's Service. In the prefent Cafe one might have expected things fhould have taken another Turn, fince by the Care Sir William Pbipps took, the Frontiers of the Plantation were better fecured than in Times paft, and the Indians more than once defeated in general Engagements; if the Difputes of between two and three hundred Men of a fide may be called fo, and I fee no Reafon why they fhould not, if we confider that the Confequences of thefe Engagements were of the fame Importance to both Nations as if they had been fought by thoufands; and I conceive, that it is the Importance of a War, and not the Number of Men employed in it, that renders it worthy of Notice.

Thefe Succeffes, the building the Forts in the Eaft, and the augmenting the Forces there, inclined the Savages to think in earneft of Peace, efpecially upon hearing the Macquas threatened to fall upon them, for killing fome of their Squas or Princeffes on Whortle-bury Plain. The Indian Sachems had a Frencb Embaffador at their Courts, who was a Friar, to ftir them up againtt
the Englifh, and keep them in Heart. This Prief dic his utmoft to perfuade them to continue the War. But the Frencb not affiting them with Men, Arms, and Ammunition, as they promifed, the Friar could not hinder them from begging a Peace, which was concluded at Fort Pemmaquid, by thirteen Segamores and the Enslifh Commifioners, who fet their Names to the Inftrument, Auguf II, 1593. By this Treaty the Indians re nounced their Allegiance with the French, owned themfelves Subjects to the Crown of England, confirmed the Englifh in the Poffeffion of all the Lands they had acquired, and fubmitted the Regulation of their Trade to the next General Affembly, which gave great Satisfaction to the People of New England; the rather, becaufe hitherto the Indians had very honeftly kept their Treaties, but it was not long before it appeared that their new fpiritual Guides the French had taught them other Principles.
4. It was not above a Year before the Jefuits excited their new Converts to break this Peace concluded with Heretics; it is true, there was then a War with France, fo that as Statefmen and Politicians the Jefuits may be juftified, but then they muft lay afide all Pretences to Chriftianity ; for it is certain, there is nothing in our Religion that countenances a Behaviour of this Kind, and therefore we may fafely fay, that all their Labours tended to make thefe poor People rather Tools to France than Chriftians. The firft breaking out of the new War, which happened in the Spring of 1694 , was without any previous Declaration, or even Complaint that the Terms had not been kept on the Side of the Englifh, nor indeed was this ever fo much as pretended. A Body of Indians and French fell fuddenly on Oytter River Towen, and feized near one hundred Perfons, twenty of which were of the Trained-Bands. One Blachford courageoufly defended his Houfe againft them, who defpairing to reduce him before Succours came, left him, and going to Mrs. Cuts's Farm near Pifcatarvay, they murdered her and her Family. They made an Incurfion into MiddleSex County, and affaulted Groton, but were bravely repulfed by Lieutenant Lukin, upon which they fell to plundering the Plantations thereabouts, killed twenty Prifoners, and carried twenty more into Captivity. They killed one of the Children of Mr . Greßam Hobert, the Minifter, and carried off another with them; they murdered three Perfons at work near Spruce-Creek and eight more at Kittery, where they barbarounly ufed a Daughter of Mr. Dorening. The Savages fcalped this young Woman and left her for dead, but fhe recovered, and was living twenty Years after. Mr. Fofeph Pike, of Newburry, Under-Sheriff of Eflex, was murdered by them, between Amefoury and Haverbill in that County.

To balance thefe Loffes the Englifb feized Bommafeen, a famous Segamore, one of thofe that figned the laft Treaty. He pretended to be juft come from Canada, and that he came on Purpofe to put an End to thefe Hoftilities. But it being proved, that he was a principal Actor in the late Murders, he was fent Prifoner to Bofton. The taking of Bommafeen tunned the Indians a little, and they were quiet for fix or feven Months. At laft a Fleet of Canoes came to an Ifland a League from Pemmaquid, and fent Propofals of Peace to the Garrifon. They owned their Guilt in breaking, the laft Articles, but threw the Blame of it on the French. As a Proof of their Sincerity now they delivered up eight Captives, when they had above one hundred fill in Captivity. However, a Truce was granted for thirty Days, and Colonel Pbilips, the gallant Major Convers, and Lietitenant Colonel Howtborn, were appointed Commiffo oners, to treat with them on the Part of the Indians, but becaufe they brought not Bommafeen with them, whofe Releafement was all they wanted, the Indian Commiffioners broke off the Conference, and went away in difguft. They had left the Einglifh Planters in their Captivity contrary to their Promife to releafe them as a Preliminary, which was a plain Indication they were not in earneft. Advice was fent immediately to all the Englifh Garrifons in the Eaft to be upon their Guard : Notwithftanding which, Major Hammond, of Kittery, fell into an Ambufcade, and was taken Pri-
foner:

Chap. III. of the ENGLISH in $A M E R I C A$.

Foner; but having the good Fortune to be tranfported to Canada, he was very civilly treated by Count Frontenac, who bought him of his Indian Mafter, and fent him to Bofton by a Veffel that came to Quebec for exchange of Prifoners. In Auguf a Party of Indians came down to Bellerica on Horfeback; this was pretty far within the Maffacbufets. They killed and took fifteen Perfons, and plundered Mr. Rogers's Houfe. This was the firf Time the Indians ever made ufe of Horfes. They took nine People out of Newbury in E/Jex, and being clofely purfued by Captain Greenleaf, a valiant and diligent Officer, they fo wounded them when they found they could not keep them, that they all died except one Lad, which , was a fignal Proof of their Barbarity.

Capain March, Governor of Pemmaquid Fort, defiring to lay down his Commiffion towards the latter End of the Year, he was fucceeded in it by Captain Cbub. He thewed the Bafenefs of his Spirit, as well as the Weaknefs of his Undertanding, in one of his firft Exploits, after he had the Command of this Garrifon, by murdering Edgeremet and Abenquid, and two other principal Segamores, who had figned the laft Treaty, and came to him on Affurance of Security, to confer about a new one. In Auguf the French landed fome Soldiers out of a Man of War, the Neroport, which they had taken from the Englifh to affift the Indians in his Neighbourhood.

This News fo frightened the Traitor Cbub, that he furrendered the new and ftrong Fort of Peramaquid, with out the firing one Gun, within or without, though he had near one hundred Men in it double-armed. The furprizing News of this Lofs caufed a mighty Confternation at Bofon, and all over New-England. Governor Stougbton, and the Council, immediately ordered three Men of War in purfuit of the French, though it was not probable that thefe Ships could be fitted for that Service time enough to come up with the Enemy, who having done their Bufinefs at Pemmaquid better than they could hope for, were gone far enough out of the reach of the Englifto. Colonel Gedney marched with five hundred Men to the Eaft, but the Indians were gone home, and he could do nothing but ftrengthen the Garrifons there. The Savages, before their Retreat, killed five Soldiers belonging to Saco Fort, who mult not be with their Garrifon. And one may obferve, that the greatef Mifchief the Indians do, is by thefe Amburhes and Surprizes, which, confidering how they were almoft intermixed with them, it is ftrange they fhould not be aware of, and guard againft; for the Country mut by this Time, and this Means, be, in a Manner, as well known to them as to the Savages. Colonel Gedney arrefted Cbub, and brought him to Bofton; but nothing treafonable being proved againft him, the Government only took away his Commiffion, and fent him thence to his Houfe at Andover, in Effex County.

Some Time after this the Indians entered Haverbill, and carried off thirty Captives, one of which was Hannab Dufian, a Woman of a maiculine Spirit. She had lain in not above a Week, yet fhe and her Nurfe walked one hundred and fifty Miles on Foot, to the Town where the Indian fhe was to ferve lived. This Woman being afterwards to travel with her Mafter and his Family to a Rendezvous of the Army of the Savages, where, according to the diabolical Cuftom of them, fhe, her Nurfe, and other Englifh Prifoners, were to run the Gantlet; Hanneb watched her Opportunity in the Night, and having animated her Nurfe, and an Englifh Boy who was with her, they three killed ten of the Indians with their own Weapons, and made their Efcapes; for which Action they received a Reward of fifty Pound from the General Affembly, and Prefents from particular Perfons to a good Value. The Indians continuing their Inroads killed a Man at York, another at Hatfield, a third at Groton, and a fourth at Exeter; which thews us that the New England Pcople were in conftant Danger, and harraffed on every Side. The Indians grew every Day more barbarous and more implacable, as having the Intrigues of the fefuits added to their own Fiercenefs and Thirft of Blood.

They furprized and Thot Major Frof, and his two Sons, at Berwick, as they were coming from Church on:

Vol. II. Numb. 90.

Sunday, and going to his own Houfe about five Miles off. Two Men that rid Poft to carry this unwelcome News to the Governor of Wells, fell into an Ambufcade as they were returning, and were killed, as were three Men near Necharearnic, and a dreadful Defolation threatened the whole Province ; certainly more for want of Management than of Power. The Savages roafted a Man to Death a Mile and a half from Wells. Three Soldiers, at Saco Fort, as they were cutting Fire-wood for the Fort at Caco Ifland, were fhot dead, while Lieutenant Fletcber, with his two Sons, who were appointed for their Guard, were a fowling in the Woods: But the Lieutenant and his Sons paid dearly for their Negligence, for they fell into an Ambufcade as they returned, and were all three taken Prifoners. The Father, and onc of his Sons, died in Captivity, and the other made his Efcape.
In the Beginning of 1697 the Government of Nere England was alarmed with Advice that the French in Canada intended to make a Defcent there; that a Squadron. of Men of War was come from France to fupport the Army of the Indians and French, that was to attack the Englifb by Land. The Lieutenant-Governor, and Council, prepared for a vigorous Defence; the Forts about Bofton were repaired; the Militia throughout the whole Province were raifed and well difciplined. Major March was ordered to the Eaft, with five hundred, to fcour the Woods; the Indians, who were gathering together about Cajco Bay, retired as he approached them; but the Major having put his Men aboard fome Ships, failed up among the Eaftern Iflands, and landed on the Banks of Damafcatos River; a very prudent Meafure, for he could not have overtaken the Indians by Land, before they had been got into their Faftneffes. The Indians feeing this, fell upon his Men as they were getting afhore, but could not hinder their Landing; upon which a fharp Engagement enfued, and the Emgligh drove the Enemy to their Canoes, a Fleet of which was in the River to receive them. The Englifh had about twelve Men killed, and as many. wounded ; the Enemies Lofs was much greater; but the main Advantage to the Engl: $/ b$ was, preventing the Indians joining the French, who were approaching with the Ships of War and Tranfports for a Defcent; but hearing of the Rout of their Confederates, they made the beft of their Way home to Europe, with the French Troops on board, to their no fmall Difcredit.

A Party of Savages made an Incurfion into Middlefex, and plundered Lancafter, killing twenty IMen, among whom was the Reverend Mr. F̛obn Wbiting, the Minifter, and carried five into Captivity. A Month after they killed a poor Man in the Woods, near Oyfer River. In the Beginning of the next Year they made a Defcent upon Andover, and killed Captain Cbub and his Family. They alfo killed Colonel Dudley Bradfreet, took his whole Family, and were carrying them off; but being clofely purfued, they releafed them without doing them any Mifchief. The Savages were now in Motion to the Weftward, and killed a Man and a Boy in the Meadows near Hatficld. They were purfued by a Party of Englifh from Deerfield, of which one was killed by the Indians, who, after that, ran to the Woods. They had attempted Deerfield on Comnecticut River, but were beaten off by the Inhabitants, headed by their Minitter, Mr. Fobn Willioms. Thefe finall Actions feemed to prefage the End of this War, of which the Savages were as weary as the Englifhs and had no Profpect of making any thing of it againit a People fo much fuperior to them in Numbers, Arms and Stores; but they ended it with the better Grace, by Means of the Peace of Ry rwick, between England and France. Upon which Count Frontenac fent to the Sachem of the FIurons, and told them he was no longer to fupport them in their War againft the Englif, and advifed them to make the beft Terms they could for themfelves.

The Earl of Bellamont was by this Time arrived at Nere York, and a Treaty of a Peace with the Indians being fet on Foot, he difpatched Major Convers, and Colonel Pbilips, to confer with the Indian Sachems at. Penabscot. They began the Conferences Oftober the 6th, in which the Sachems excufed themfelves for breaking the Peace,
faying,
faying, The Jefuits would not let them alone till they had done it; and if the Earl of Bellamont, and Count Frontenac, would not banifh thefe Devils, they could not promife the next Peace would laft long. Major Convers, and Colonel Pbilips, concluded it with them on the Foot with the laft Treaty ; to which they added a more formal Submiffion to the Sovereignty of the Crown of England; wherein, after acknowledging themfelves guilty of breaking the laft Peace, and in not fulfilling their Engagements entered into thereby, while they enjoyed the Benefit of it, which they charge upon the evil Councils and Inftigations of the French, they proceed thus:
" Wherefore we, whofe Names are hereunto fubfcribed,
${ }^{66}$ Segamores, Captains, and principal Men of the $I n$ *s dians, belonging to the Rivers of Kennebeck, Amonofcog-
${ }^{6}$ gin, Saco, and Parts adjacent, being fenfible of our
${ }^{6}$ - great Offence and Folly, in not complying with the
${ }^{6}$ aforefaid Submiffion and Agreement, and alfo of the
${ }^{66}$ Sufferings and Mifchiefs that we have hereby expofed
${ }^{66}$ ourfelves unto; do, in all humble and fubmiffive
${ }^{66}$ Manner, caft ourfelves upon his Majefty's Mercy,
${ }^{66}$ for the Pardon of all our Rebellions and Violations of
${ }^{66}$ our Promifes; praying to be received into his Ma-
"s jefty's Grace and Protection; and for, and in Behalf
${ }^{66}$ of ourfelves, and of all the other Indians belonging to
${ }^{66}$ the feveral Rivers and Places aforefaid, within the So-
${ }^{66}$ vereignty of his Majefty of Great Britain, do again
${ }^{66}$ acknowledge and profefs our hearty and fincere Obe-
${ }^{66}$ dience to the Crown of England; and do folemnly
${ }^{66}$ renew, ratify, and confirm, all, and every the Arti-
${ }^{66}$ cles and Agreements contained in the aforefaid recited
\& Submiffion; and in Teftimony hereof, we, the faid
sc Segamores, Captains, and principal Men, have here-
"c unto fet our Hands and Seals, at Cafco Bay, near Ma-
"res Point, the 7 th Day of Fanuary, in the tenth Year
*6 of the Reign of His Majefty King William III.
${ }^{6}$ A. D. $1698-9$. Subfcribed by Moxus, and the reft "c of the Segamores and petty. Princes."

Thus ended, to the mutual Satisfaction of both Parties, the Indian War, with refpect to which the French Writers have undoubtedly given a very falfe Account, and a ftill more falfe Account of the Peace; for they fay pofiEively that the Indians infifted upon it, that they were not fubject to the Crown of Great Britain; that they declared againft their occupying any of their Lands; and that they openly profeffed they were, and would be, Friends to the French; every Tittle of which, as is manifeft by their Inftrument above recited, and cited for that Purpofe, appears to be a direct Falfhood; but in one thing I believe the French Writers fpeak Truth, which is, with regard to the Policy of the Indians, who made ufe of the Small Pox for a Pretence to quit the Englifh Army, in its March to attack the French Colony of Canada by Land, from a Forefight that if this Expedition had been attend ed with Succefs, the French muft have abandoned their Country, and they were unwilling to be left wholly at the Mercy of the Englifh.

Many of our Authors, indeed, reprefent the Indians as not capable of fo great a Stroke in Politics, but I have feen Papers of Governor Dudley, and William Penn, who were very well acquainted with them, that feem to countenance this Opinion; for they fay, they have ftrong natural Parts, undertand their own Intereft thoroughly, and do every thing with great Deliberation. It is, in deed, certain, that they are wedded to their own Sentiments, and to their own Manner of living, and therefore we muft refer their Politics to their Maxims, and not pretend to judge of them by our own, with which they have not the leaft Affinity or Connection.
5. We have, in the Courfe of this Work, given fo full and clear an Account of the Manner in which all our Colonies were fettled, and of the Motives upon which different Sorts of Pcople reforted to them, that the Reader cannot be furprized at hearing their religions Affairs were in a very indifferent Situation, when in refpect to temporal Concerns their Condition was moft flourifhing. Several worthy Perfons, in the Reign of King Cbarles II. had ufed their Endeavours to correft this Evil, but their pious Defires did not meet with proportionable Suc-
cefs, which, however, was far from difcouraging others from following their Example; but though they were fomewhat more fortunate, chiefly from the Affiftance given them by the pious Queen Mary, whofe Character for Religion and Virtue will live as long as there is either Religion or Virtue in the World, yet it was at laft found that nothing could be effectually done, unlefs the Encouragers of this noble Defign of fpreading the Chriftian Faith through the Briti/b Dominions in America, were incorporated by Charter, the Neceflity and Expediency of which Dr. Thomas Tenifon, then Archbifhop of Canterbury, undertook to reprefent to King William III. and upon his Reprefentation a Charter was obtained, dated the I6th of Fune, in the I 3 th Year of his Reign, by which feveral Perfons, equally diftinguifhed by their Titles and Virtues, were incorporated for that Purpofe, under the moft honourable of all Names, the Society for the Propagation of the Gospel in foreion Parts.

This truly, fays the Author of the Hiftory of this Society, Dr. Humpbreys, was an Action fuitable to Archbifhop Ienifon's public Spirit and honeft Zeal for the Proteftant Religion, and exceedingly becoming his high Station and Authority in the Church. The American Colonies, fure, can never, without the greateft Veneration and Gratitude, remember him, when they fhall, many Ages hereafter, feel the happy Effects of having the Chriftian Religion planted among them; and reflect how hearty and forward Archbifhop Tenifon appeared to obtain that Charter, which gave Life and Authority to fo glorious an Undertaking: Nay, that his Zeal and Spirit did not reft here, he continued to promote and guide, by his wife Councils, the Affairs of the Society; he paid them an annual Bounty of fifty Pounds, during his Life, and at his Death bequeathed them a thoufand Pounds, towards the Maintenance of the firf Bifhop that fhould be fettled in America. A Charter being thus obtained, the next endeavour was to carry their laudable Defign into Execution; accordingly his Grace the Archbifhop, as impowered by the Charter, caufed Summons to be iffued for the Members of the Corporation, to meet within the Time limited; and feveral met at the Place appointed, on the 27 th of $\mathcal{F} u n e$ I7OI, and chofe proper Officers for tranfacting the Bufinefs. At following Meetings they made divers Rules and Orders for their more regular Proceedings in the Adminiftrations of their Truft, and fubfcribed, among themfelves, near two hundred Pounds; for defraying the Charges of paffing the Charter, making the common Seal, and other neceffary Expences, they alfo ordered five hundred Copies of the Charter to be printed forthwith, and diftributed amongt the Members, to be fhewed by them to all proper Perfons, the farther to notify the Defign they were engaged in, and to invite more Perfons of Ability and Piety to affift in carrying it on.

This Step was but an Opening of the Matter to the Public; the Society were diligent to confider of farther and more effectual Ways and Means to obtain Subfcriptions and Contributions fufficient to enable them to maintain the Expence of fending many Miffonaries abroad. They immediately agreed that the beft Argument to Mankind was Example, and the moft effectual Means to engage others to contribute, was to lead the Way themfelves, by fubfcribing towards the Support of the Work. Accordingly Archbifhop Tenifon, the Prefident, the VicePrefidents, all the Bifhops and Members then prefent, did fubicribe a yearly Sum to be paid to the Treafurer of the Society for the public Ufes, according to the Form of Subfcription drawn up for that Purpofe; having now made this Advance themfelves, they gave out Deputations, under their common Seal, to feveral of their Members, and other Perfons of Figure and Intereft in the Counties of England and Wales; fignifying their being conftituted and appointed by the. Corporation to take Subfcriptions, and to receive all Sums of Money which fhould be fubferibed or advanced for the Purpofes mentioned in the Charter ; and here it is to be gratefully acknowledged, that feveral worthy Perfons did, with a public Spirit, take thefe Deputations to help on with a Work fo truly for the national Intereft, and the Honour of common Chriftianity; and did, by their Example and

Intances,

## Chap. III. of the ENGLISH in AMERICA.

Intances, fo influence feveral well difpofed Perfons, that confiderable Remittances of Benefactions to the Corporation were foon made, which enabled them to enter on the Work with Succefs. There were likewife feveral confiderable Sums of Money fent in to the Society by Perfons who defired to conceal their Names; and the fame Spirit and Ardour has continued; neither has the Society wanted the Encouragement and Protection of the Succeffors of their Royal Founder, particularly his late Majefty King George I. and the Society have ftill increafing Views of Succefs through the Favour of his Majefty now reigning, from his known Zeal for the Proteftant Religion, and Royal Care for the Colonies, fo confiderable a Branch of the Briti/b Monarchy.

It is a thing that will certainly excite Wonder in the Minds of all calm and confiderate People, let their religious Sentiments or Perfuafions be what they will ; that this Society, with farce any fettled Fund, fhould be able to maintain, for between forty and fifty Years, fo extenfive a Scheme as that of their Charter, which tends to correet almoft all the Errors and Miftakes that have hitherto happened in the Management of our Colonies; for by their prudent and pious Care, great Check has been given to Atheifm and Irreligion, a thing of great Confequence in our Settlements, confidered in a political, as well as Chriftian Light ; for without it there is no reftraining the Indian Traders from being guilty of fuch Immoralities, as render us defpicable in the Eyes of the Heathen Indians; which, as may be eafily conceived, muft tend vaftly to our Difadvantage, more efpecially, if at the fame Time we reflect on the Management of the French in this Particular, who are very careful in their Endeavours to convert the Indians, and keep up a great outward Appearance of Zeal for Religion, which makes ftrong Impreffions on the Minds of the Savages, even though they are not converted, nor have any Inclination to become Papitts. If by fuch Methods they fhould fo far compafs their Ends, as to convert many of the Indians, and by that Means awe and influence the reft ; it muft be accompanied with Circumftances very difagreeable to the Inhabitants of our Colonies, as from the foregoing Hiftory of the Indian War will appear.

But befides the many and great Advantages that would refult from the thorough Eftablifhment of the Proteftant Religion through the Colonies, with regard to the Conduct and Behaviour of the People, and the great Enlargement of Power that would follow in Cafe the Converfion of the Indians was undertaken by Practice as well as Preaching, by the Example of the Laymen, as well as the Exhortations of the few Clergy that are fent thither; there is yet another Point that deferves as ferious Regard. The Negroes in the Service of our Planters, are a prodigious Body of People, and as there are but too many juft Caufes given for apprehending the Deftruction of whole Countries from their Plots and Confpiracies, which have been fometimes prevented by accidental, or rather providential Difcoveries, when they were upon the very Point of being executed; fo it is certain, that if thefe People, or the greateft Part of them, could be converted, it would not only prove a Means of taking away thefe Apprehenfions, but would alfo add a great Strength to the Colonies, in which they are obliged to make ufe of Negroes; for thefe People would then conceive new Notions of their Condition, and confider their being Servants to Chriftians in the Light rather of a Bleffing than a Calamity; it would not only make them eafy, but chearful in their Servitude, and by degrees would be attended with more Advantages than we can forefee, and yet a very ordinary Degree of Forefight will not fail to fhew us a great many. That this is, and muft be, attended with many Difficulties, will be readily granted, but that it is very far from being impracticable, will appear from what Dr. Humphreys tells us has been in this refpect already done, and which I take to be as material a Point as any that occurs in the Hiftory of this Period.

The Negroe Slaves, fays he, even in thefe Colonies, where the Society fend Miffionaries, amount to many thoufands of Perfons of both Sexes, and all Ages, and moft of them are very capable of receiving Inftructions;
even the grown Peffons; brought from Gumeas quickly learn Englifh enough to be undertood in ordinary Matters ; but the Children born of Negroe Parents in the Colonies are bred up entirely in the Englifh Language。 The Society looking upon the Inftriction and Converfion of the Negroes, as a principal Branch of their Care, efteeming it a great Reproach to the Chrifian Name, that fo many thoufands of Perfons thonld continue in the fame ftate of Pagan Darknefs under a Chriftian Government; and living in Chriftian Families, as they lay before under in their own Heathen Countries; the Society, immediately, from their firft Inftitution, ftrove to promote their Converfion, and infomuch as their Income would not cnable them to fend Numbers of Catechifts fufficient to inftruct the Negroes, yet they refolved to do their utmoft, and at leaft to give this Work the Mark of their higheft Approbation. They wrote therefore to all their Miffonaries, that they thould ufe their beft Endeavours ${ }_{j}$ at proper times, to inftruct the Negroes; and fhould efpecially take occafion to recommend it zealoufly to the Mafters, to order their Slaves, at convenient Times; to come to them, that they might be inftructed.

Thefe Directions had a good Effect, and fome hundreds of Negroes have been inftructed, received Baptifms and been brought to the Communion, and lived very orderly Lives. It is a Matter of Commendation to the Cleroy, that they have done thus muchi in fo great and difficult a Work. But alas! what is the Inftruction of a few hundreds in feveral Years, with refpect to the many thoufands uninftructed, unconverted, living and dying downright Pagans? It muft be confeffed, what hath been done is as nothing, with regard to what a true Chriftian would hope to fee effected. But the Difficulties the Clergy meet with in this good Work, are exceeding great. The firft is, the Negroes want Time to receive Inftructions ; Ceveral Mafters allow their Negroes only Sundays for Reft, and then the Minifters of the Parifhes are fully employed. in other Duties, and cannot attend them. Many Planters, in order to free themfelves from the Trouble and Charge of feeding and cloathing their Slaves, allow them one Day in a Week to clear Ground and plant it, to fubfift themfelves and Families; fome allow all Saturday; fome half Saturday and Sunday; others allow only Sundayd How can the Negroe attend for Inftruction, who, on half Saturday and Sunday, is to provide Food and Raiment for himfelf and Family for the Week following: The Negroe will urge in his own Excufe, that the Support of himfelf and all that is dear to him, doth abfolutely depend upon this his neceffary Labour on Saturday and Sunday; but if this be not ftrictly juftifiable, yet it is certain the miferable Man's Plea will engage the Reader's Compaffion.

This is the Cafe in fome Colonies, in others it differs. In fome Places the Negroes do the whole Labour of the Country in the Field, in others they are ufed only as Houfe Servants. Another Dificulty arifes from the Habitations and Settlements of the Mafters being at a great Diftarice from each other in mof Places in the Colonies; for which Reafon neither can a Minifter go to many Families, if the Negroes were allowed. Time to attend him; nor can a proper Number of them affemble together at one Place, without a coniderable Lofs of Time to their Matters. But the greatef Obftruction is; the Mafters themfelves do not confider enough the Obligation which lies upon them, to have their Slaves inftrueted: Some have been fo weak as to argue the Ivegroes had no Souls, others that they grew worle by being taught and made Chriftians. I would not mention thefe, if they were not popular Arguments ftill, becaufe they have no Foundacion in Reafon or Truth.

After the Society had given the general Order mentioned before, to all their Miffionaries, for the Intruction of the Slaves, they agreed to ufe another Method, which they believed would more fuccefsfully promote this Work. They opened a eatechifing School for the Slaves at New Kork, in the Year 1704, in which City there were computed to be about one thoufand five hundred Negro and Indian Slaves, and many of their Mafters well difpofed to have them made Chritians, The Society hoped
this Example fet, might kindle a Zeal in fome other good People, to carry on this Work which they were unable to effect, and to erect Schools for the Inftruction of the Negroes, and to employ Catechifts to teach them at appointed Times; and that the Legillature of the Colonies would by a Law oblige all Slaves to attend for Inftruction. The Society found foon, it was not eafy to procure a Perfon proper to be a Catechift: Mr. EliasNeau, a Layman, then living in New York City as a Trader, was reprefented to be the propereft Perfon for that Office. He was by Nation a Frencbman, and made a Confeffion of the Proteftant Religion in France, for which he had been confined many Years in Prifon, and feven Years in the Galleys: When he got releafed, he went to Nero York, and traded there; and had the Character, from People of all Perfuafions, of a Man of Piety, of fober Deportment and ferious Life. He accepted of the Offer of being Catechift; and his former Sufferings on Account of his Religion did, with great Advantage, recommend him to be a Teacher of the Chriftian Faith, and his Humility enabled him to bear with the many Inconveniencies in teaching thefe poor People.

He entered upon his Office in the Year 1704 with great Diligence. At firft he was obliged to go from Houfe to Houfe to inftuct the Negroes; this was out of meafure laborious; afterwards he got Leave that they fhould come to his Houfe; this was a confiderable Relief. There were two Obftructions ftill; the Time was much too fhort, and the Place inconvenient, for teaching the great Number of Negroes; a little Time in the Dulk of the Evening, after hard Labour all Day, was the whole Time allowed them for Learning and for Relaxation, and to vifit their Wives and Children, which were generally in other Families, not in their Mafters. At this Time their Bodies were fo fatigued that their Attention could not be great. They were dull and fleepy, and remembered they muft rife early the next Day to their Labour; the Place alfo was incommodious, being the uppermoft Floor of Mr. Neau's Houfe, and was not able to hold conveniently a fmall Part of the Slaves that might refort thither. Befides, the Negroes were much difcouraged from embracing the Chriftian Religion, upon account of the very little Regard fhewed them in any religious Refpect. Their Marriages were performed by mutual Confent only, without the Blefing of the Church; they were buried by thofe of their own Country, or Complexion, in the common Field, without any Chriftian Office, perhaps fome ridiculous Heathen Rites were performed at the Grave by fome of their own People. No Notice was given of their being fick that they might be vifited; on the contrary, frequent Difcourfes were made in Converfation that they had no Souls, and perifhed as Beafts.

Mr. Neaus contended with thefe Difficulties, and notwithftanding all proved an Inftrument of bringing many to the Knowledge of the Chriftian Faith : He took great Pains in reading to them, in making fhort Collections out of Books on the Catechifm, and in making an $\Lambda b-$ ftract of the hiftorical Part of the Scriptures; fo that many who could not read, could yet, by Memory, repeat the Hiftory of the Creation of the World, the Flood, the giving of the Law, the Birth, Miracles, and Crucifixion of our Lord, and the chief Articles and Doctrines of Chrifianity. This was a Work of great Pains and Humanity. Mr. Neau performed it diligently, difcourfing familiarly with thofe poor People, and labouring earneftly to accommodate his Difcourfe to their Capacities. His Labours were very fuccefsful. A confiderable Number of the Slaves could give a fufficient Account of the Grounds of their Faith, as feveral of the Clergy, who examined them publickly, before they gave them Baptifm, have acquainted the Society. In the mean time, while the Society was thinking of farther Ways to advance this Work, a Calamity appeared, which mightily difcouraged this Country from promoting the Inftruction of their Slaves.

In the Year IクI2 a confiderable Number of the Negroes of the Carmantee and Pappa Nations, formed a Plot to deftroy all the Englibs, in order to obtain their Liberty, and kept their Confpiracy fo fecret that there
was no Sufpicion of it, 'till it came to the very Exectition: However, the Blow was, by God's Affitance, happily defeated. The Plot was this: The Negroes fat Fire to a Houfe in York City, on a SundayNight in Aprit, about the going down of the Moon: The Fire alarmed the Town, who from ail Parts run to it. The Confpirators planted themfelves in fiveral Streets and Lanes leading to the Fire, and fhot or ftabbed the Penple as they were running to it. Some of the wounded efcaped and acquainted the Government, and prefently by the firing a great Gun from the Fort, the Inhabitants were called under Arms, and prevented from running to the Fire; a Body of Men was foon raifed, which eafily fattered the Negroes; they had killed about eight Perfons, and wounded twelve more. In their Flight fome of them fhot themfelves, others their Wives, and then themfelves ; fome abfonded a few Days, and then killed themfelves, for fear of being taken, but a great many were taken, and eighteen fuffered Death. This wicked Confpiracy was at firft apprehended to be general among all the Negroes, and opened the Mouths of many to fpeak againft giving the Negroes Inftruction. Mr. Neau durft hardly appear abroad for fome Days, his School was blamed, as the main Occafion of this barbarous Plot. But upon the Trial of the Wretches there were but two of all his School fo much as charged with the Plot, and only one was a baptized Mian; and in the Peoples Heat, upon nender Evidence, perhaps, too haftily condemned; for foon after he was acknowledged to be innocent by the common Voice; the other was not baptized. It appeared plain that he was in the Confpiracy, but guiltlefs of his Mafter's Murder, who was Hooglands, an eminent Merchant. Upon full Trial, the guilty Negroes were found to be fuch as never came to Neou's School; and what is very obfervable, the Perfons whofe Negroes were found to be moft guilty, were fuch as were the declared Oppofers of making them Chriftians: However, a great Jealoufy was now raifed, and the common Cry was very loud againft inftructing the Negroes.

The Common-Council of New York City made an Order, forbidding the Negroes to go about the Streets after Sun-fet without Lanthorns and Candles. - This was in Effect, forbidding them to go to Mr. Neau's School; for none of them could get Lanthorns, or come to him before Sun-fet ; but fome time after, the more ferious and moderate People abated of this Violence; it appearing to be a Plot of a few only, not a general one of all the Negroes, no Confequence attended the Action, and the People grew more compofed. Robert Hunter, Efq; the Governor of the Province, obferved their Fears were ill grounded, and that Mr. Neau's Scholars were not the guilty Negroes; and therefore, in order to fupport the Defign of inftructing them, he was pleafed to vifit his School, attended by the Society's Miffionaries and feveral Perfons of Note, and publickly declared his Approbation of the Defign; and afterwards, by a Proclamation put out againft Immoralities and Vice, he recommended to the Clergy of the Country, to exhort their Congregations from the Pulpit, to promote the Infruction of the Negroes. This gave new Life again to the Work, and the Negroes frequented Mr. Neou's School as before; feveral were inftructed, and afterwards examined publickly in the Church before the Congregation, by the Reverend Mr. Vefey; and gave a very fatisfactory Account of their Faith, and received Baptifm.

The Society had Accounts from time to time of Mr. Neou's Diligence and Succefs, particularly one very ample Teftimonial, figned by the Governor (Robert Hunter, Efq;) the Council, the Lord Mayor, and Recorder of New York, and the two chief Juftices, fetting forth, That Mr. Neau had demeaned himfelf in all things as a good Chriftian, and a good Subject: That in the Station of Catechift he had, to the great Advancement of Religion in, general, and the particular Benefit of the Free Indions, Negroe Slaves, and other Heathens in thofe Parts, with indefatigable Zeal and Aplication, performed that Service three times a Week: And, that they did fincerely believe, that as a Catechift, he did in a very erninent Degree deferve the Countenance,

## Chap. III. of the ENGLISH in AMERICA.

Favour, and Protection of the Society. The Society were fully fatisfied with Mr. Neau's Behaviour, and continued to fend him Numbers of Catecbifms and fmall Tracts of Devotion and Inftrućtion, to give among the Slaves and Servants at his Difcretion. Mr. Neau perfevered with the fame Diligence till the Year 1722, in which he died, much regretted by all who knew his Labours.

The Society have been very careful in carrying on that great and good Work, as far as in their Power lay, ever fince; and though they have not been fo fuccefsful as they could have wifhed, yet their Difappointments have not been of a Nature to make them defpair, and we may reafonably prefume, that by degrees, and by a conftant Perfeverance, they will, in procefs of Time, overcome all Difficulties.
6. After the Acceffion of Queen Ame to the Crown, and this Nation's engaging in another general War againft France, it was thought a thing of very great Confequence to fecure the five Indian Nations bordering upon Nerv England and New York; and therefore, inftead of waiting for an Application from the Society, an Order was directed to them from the Privy Council upon this Subject; and they were directed to fend over Miffionaries without delay, with a Promife that they fhould be properly fupported; and this in Terms that very plainly Chewed the Government looked upon it as a Matter that did not only regard the Church, but the State. The Society, upon this, fent over, very foon after, one Mr. Moor, and intended to have fent over other Miffionaries if his Endeavours had met with any Succefs. The Scheme was very wife and very good, yet it did not anfwer in the Execution, for Want, as I conceive, of proper Expence about it. In a national Concern like this, Money fhould not have been fpared, and great Care ought to have been taken in Preparations before any thing had been hazarded in the Execution; fo that a Number of Miffionaries fhould have entered the Indian Countries at once, fome or other of which would certainly have fallen upon the right Way of gaining the Affection of thefe People, which it feems was not the good Fortune of Mr. Moor; who arriving at Nero York in 1704, was very well received by Lord Cornbury, who was then Governor of that Colony, and who alfo gave him all the Affiftance he could defire in his Miffion; but the Mobocks, to whom he addreffed himfelf, did not treat him as he expected; for at firft they feemed to exprefs very great Satisfaction at his Arrival, and to be extremely well pleafed with his Concern for their Salvation; but they trifled with him afterwards, and at laft gave him plainly to underftand, that his coming amongft them would be to little purpofe; for under Pretence that Religion was a public Concern, in which all their Families and little Clans had an equal Concern, fo that he could not be received by any without the common Confent, they put him off from Time to Time, and would have put him off for ever, if, after a Years waiting, he had not returned to New York; where he embarked on board a Ship for England, but was unhappily loft in his Paffage.

Thus was the Attempt fruftrated; but the Society received Accounts that this ill Succefs was owing not only to the Averfion of the Indians to Chriftianity, but was very much occafioned by the Artifices of the French Jefuits, who induftriounly obftructed the Labours of the Englifs Mifionaries among them, and left no Means untried to feduce them from their Fidelity to the Crown of England, and keep them in a continual War with the Englijh. And indeed all the Evils that the Englifh Colonies have undergone during the laft War, have been occafloned by the Indians, that is, thofe Indians which the Jefuits have by their Artifices corrupted; for among the five Nations there is a great Number of French Jefuits, who are incorporated, by Adoption, into their Tribes, and as fuch they oftentatiouny affume Iroquois Names; and the Chief of the poor filly Indions, confidering them as Perfons of their own Blood, do intirely confide in them, and admit them into their Councils, from whence one may eafily imagine what Diforders the Jefuits make in their Affairs. Befides, the Indians border-
ing on New England are the moft cruel and barbarous of all the Savage Nations, and have deftroyed all their innocent Neighbours. They are always unfixed, either rambling for feveral Months together, or hunting, or upon warlike Expeditions; and at their Return to their Villages, have generally forgot all their former Inftructions, and it is impoffible for any Minifter to accompany them in their Rambles of three or four hundred Leagues at a Time. After this good Encleavour was defeated, the Indians remained without Inftruction, except that fome few were taught by the Dutch Minifer at Al bany. But the Year 1 yog produced an Event, which the Society hoped might have had very happy Confequences, and fixed Chriftianity among the Iroquois. Four Sachems, or four chief Perfons of four Nations of the Iroquois, came in the Nature of Embaffadors to England, confirming the Peace made with the Governor of Nerw York, and requefting her Majefty would be pleafed to direct that their Subjects might be inftructed in Chriftianity, and Minifters might be fent to refide amongft them.

The Archbifhop of Canterbury received, thereupon, the following Letter from the Earl of Sunderland, then one of her Majefty's principal Secretaries of State.

## " My Lord, <br> Whiteball April 20, 1710 .

" The inclofed being a Copy of what has been given " to the Queen, by the Embaffadors lately arrived from "s the five Indian Nations; I am ordered by her Majefty " to tranfmit it to your Grace, and to fignify to you her " Pleafure, that you lay it before the Society for propa" gating Religion, that they may confider what may be " the moft proper Ways of cultivating that good Dif" pofition thefe Indians feem to be in for receiving the " Chriftian Faith, and for fending thither fit Perfons for " that purpofe, and to report their Opinion without "Lofs of Time, that the fame may be laid before her " Majefty. $I$ am, \&xc.

Sunderland, \&c."
The Archbifhop was then much indifpofed, and confined to his Houfe with the Gout, and therefore fignified to the Secretary of the Society to call a Committee to meet at Lambeth; a Committee met, and it was agreed there, and afterwards by the Society at a general Meeting, that two Miffionaries fhould be fent to the Mohock and Oncydes's Indians, with a Sallary of one hundred and fifty Pounds Sterling each, together with an Interpreter and School-mafter, to teach the young Indians; and this Opinion was humbly laid before the Queen; her Majefty was farther pleafed to direct that a Fort hould be buiit among the Mobocks, at the Government's Expence, with a Chapel and a Manfion-houfe for the Minifter, for his greater Conveniency and Security, and that the religious Offices might be performed with due Decency; a Fort was foon after built one hundred and fifty Foot Square, and garrifoned with twenty Soldiers and an Officer, and a Houfe and Chapel compleated. The reverend Mr. Andrews was appointed Miffionary, and Mr. Claufen, who had been feveral Years employed as Interpreter by the Government of Nerv Kork, in Tranfactions with the Indians, was received as Interpreter to Mr. Andrews, and Mr. Oliver made School-mafter. Mr. Andretes was particularly directed by the Society, to ufe all poffible Mleans to perfuade the Indians to let their Children learn Enolifb; and the School-mafter was to make it his whole Bufinefs to teach them. The Society was now in good Hopes this Attempt would prove fuccefsful, fince her Majefty was fo gracioully pleafed to provide for the Security of the Miffionary, by building a Fort juft by the Mohocks Caftle, to which the Men and Children might eafily refort to be inftructed; and the Sachems, the chief Perfons of this People, had been in England, received many Marks of Royal Favour, had been Eye-witneffes of the Greatnefs of the Nation, had been nobly entertained here, and carricd home to their own Countries fafely and honourably, and had themfelves alfo-defired their People might be inftructed in the Chriftian Faith.

Mr. Andrews arrived at Albany in November, 1712. The Sachems who had been carried home before he went from England, were convened by Order of the Governor of Nere York, to meet Mr. Andrews and the Commiffoners for Indian Affairs at Albany, in order to give a public Authority and Sanction to Mr. Andreies's Miffion, and that the Sachems might. receive him their Minifter with greater Solemnity. The Sachems came to Albany, met the Commifioners for Indiani Affairs, and Mr. Andretes, the Miffionary, made a long Speech to the Sachems, reminding them how gracious her Majeity was in building a Fort, fending a Minifter to them; put them in mind how earneftly they had requefted it; and fet forth what Advantages they and their Children would reap by being taught our Religion and Learning. A Letter from the Archbifhop of Canterbury was delivered to them, and afterwards read to them in Indian by Mr. Claufen, the Interpreter of the Province. Some of the Sachems made Speeches, and returned Thanks to the Queen, expreffed a great Satisfaction in having a Minifter fent them, and received Mr. Andrewes as fuch, and promifed him all civil and kind Ufage.
The whole Affair was tranfacted with much Ceremony, the Sachems returned home, Mr. Andrews ftaid fome time at Albany to refrefh himfelf; foon after he went up to the Fort, two hundred Miles from New York, accompanied by Robert Livingfon, Efq; the Mayor of Albany, Capt. Matberes, Mr. Siroopman of Schenectady, the Reverend Mr. Barclay, and feveral other Gentlemen: He was prefently vifited by a great many Indians, Men, Women, and Children, who faluted him with abundance of Joy, and bid him welcome to their Country. The Caftle or chief Town of thefe Mobocks is neighbouring to the Queen's Fort, confifting of about fifty Wigwams or Honfes: Thefe Wigwams are Huts made of Mats, or Barks of Trees put together with Poles about three or four Yards high. The Mobocks Cloathing is a fhort Cloke, like a Mantle, made of a Blanket, or Bear-fkin. Their Bed is a Mat, or Skin, laid on the Ground. They paint and greafe themfelves very much with Bears Fat clarified. They cut the Hair off from one Side of their Heads, and tie up fome of that on the other Side in Knots, on the Crown, with Feathers. The Men are very nothful, the Women very laborious, meer Servants to their Hußbands. They carry all Burdens, fetch the Venifon home their Hufbands kill (the Men are too lazy to bring it), get in the Wood to burn and drefs it ; carry their Children on their Backs in their Rambles of many hundreds of Miles; hoe the Ground and plant all the Indian Corn that is raifed. The Language of thefe People is very difficult, their Ideas are very few, and their Words therefore not many, but as long as Sentences, expreffing by a long rumbling Sound what we do in a fhort Word. There is here no manner of Conveniency of Life for a Miffionary; for four or five Months in the Year there is fcarce any ftirring abroad, by reafon of the extraordinary Coldnefs of the Weather, and the deep Snows that fall; and in the Summer-time, the Whies and Mufketoes are almoft intolerable, and the Ratrlefnakes very dangerous: The neareft Place of get aing any Provifions is at Scbeneitady, twenty-four Miles diftant, or from Albany forty-four Miles off. The Road to thefe Places is, for the moft part, only a fmall, rough Indian Path through vaft Woods, where riding is very dangerous, by reafon of the Road being in many Places, ftopped with fallen Trees, Roots, Stones, and Holes befides many feep Hills, and dead Swamps or Bogs in the Way; there was nothing defirable to be feen; the Face of the Earth rude and uncultivated, like the wild Inhabitants; no Pleafure to be found but that of doing good to the miferable Natives.

Thefe were the Circumftances of the Place and People, whither Mr. Andrews was appointed; and notwithftanding all thefe Inconveniencies he refided there, and invited the Indions to come to him; many came: He ufed very often to difcourfe with them, inftructing them in the chief Articles of Faith, and giving them fhort general Accounts of our Religion. This was done by the Help of Mr . Claufen, who always attended and interpreted to the Indians. Mr. Clausen had been formerly taken Pri-
foner by the Indians, lived long among them, and underftood their Language fufficiently. Mr. Andrewos ufed to draw up fhort Accounts of the Chriftian Doctrines, and fome hiftorical Parts of the Bible; particularly the Creation of the World, and Miracles of the Lord. The Interpreter ufed to read them to the Indians, and divine Service ufed to be performed in Englifb to the Soldiers in the Garrifon. The School-mafter, Mr. Oliver, opened his Schoal; the Indians, at firft, fent many of their Children; he began to teach them Englifh; the Parents obftinately refufed to have them taught Englifh; all poffible Endeavours were ufed to perfuade them, they ftill perfifted. Mr. Andrews fent this Account to the Society, and rather than quite break with the Indians, the Schoolmafter, and Interpreter, began to teach the Children a little in Indian. The Society were forced to comply with the Indians Obftinacy: They procured an Impreffion of Hornbooks and Primmers in Indian, for the Children, fent them great Numbers, as alfo Leathern Ink-horns, Pen-knives, a Quantity of Paper of feveral forts, and feveral other little Neceffaries. The Children were now taught in Indian, and were treated with great Kindnefs; no Correction dared to be ufed, for the Parents were fo fond of their Children, and valued Learning fo little they thought it not worth gaining, at the leaft difpleafing of their Children.

To engage them farther to learn, Mr. Andrews ufed to give the Children who came to School Victuals, and fome fmall Utenfils for their Parents. The Children ufed often to come for the fake of getting Victuals, for the Indians are frequently drove to great Extremities on account of their making little or no Provifion before-hand. The Children had a good natural Capacity, and an Aptnefs for Learning ; many of them begun to read, and fome to write. This Method of giving them Victuals, engaged the Parents to fend them for fome time to School. In the mean time Mr. Andrews proceeded to inftruct the grown Indians by help of the Interpreter, in fome of the chief Articles of Faith, and Rules of Life; Divine Service was conftantly performed on Sundays and Hollidays in Englifh, to the Soldiers, and fuch Indians as underfood any Engli/h frequently atrended in the Chapel: The Chapel was very decently adorned; Queen Anne had given a handfome Furniture for the Communion-Table, the Imperial Arms of England painted on Canvas were fixed up in the Chapel. Archbifhop Tenifon gave twelve large Bibles very finely bound, for the Ufe of the Chapel, with painted Tables containing the Creed, Lord's Prayer, and Ten Commandments. Mr. Andrewos was very civil to all the Indians who came to hear him; ufed frequently to entertain them at his Houfe, and give them Provifions home with them when they wanted very much, and that they often did.

The Society, fince they could by no Means prevail with the Indians to learn Engli/h, neither young nor old, laboured to get fome good Tranllations made of Parts of the Scripture, at leaft, into the Indian Language, though exceeding improper to convey a due Idea of the Chrittian Doctrines; as being willing, by all Methods of Compliance, to gain fomething upon them: The Society were much affifted in this by Mr. Freeman, a very worthy Calvinift Minifter; he had been five Years Minifter at Schenectady, to a Dutch Congregation, and had been employed by the Earl of Bellamont, in the Year 1700, to convert the Indians. He had a good Knowledge of the Dialect of the Mobocks, which is underttood by all the Iroquois, who reach near four hundred Miles beyond Albany. The Society applied to him for any proper Pa pers wrote in that Language, which he might have. He acquainted the Society, that he had tran!lated into Indian, the Morning and Evening Prayers from our Liturgy, the whole Gofpel of St. Matbere, the three firft Chapters of Genefis, feveral Chapters of Exodus, feveral P falms, many Portions of the Scripture relating to the Birth, Paffion, Refurrection, and Afcenfion of our Lord; and feveral Chapters of the firft Epifle to the Corinthians, particularly the fifteenth Chapter, proving the Refurrection of the Dead. He very frankly gave the Society a Copy of thefe Tranflations, which were fent to Mr . Andreqes for his

Help:

Help, and they were a great Help to him. He ufed frequently to read fome of thefe to the Indians, and they could comprehend well enough by his reading. But the Society were defirous fome Part of the Scriptures might be printed in Indian, and the Copies given to the Indians, and they taught at leaft to read that; accordingly the Morning and Evening Prayer, the Litany, the Church Catechifm, Family Prayer, and feveral Chapters of the Old and Tew Teftament were printed at New York. The Copies were fent to Mr. Andrews, and he gave them to fuch of the Indians as knew any thing of Letters.

He had Hopes now of fome Succefs in his Miflion; feveral of the Women and fome Men began to lead more orderly Lives. They were inftructed, and retained well in their Memory what the chief Articles of our Faith are, and Rules of Life; , a good Number were baptized, and particular Accounts were fent regularly to the Society. Mr. Andrewes was willing to try what good he could do in another Nation of the Indions; he travelled to the Caftle of Onydans, one hundred Miles diftant from the Mohocks; the Country all the Way was a vaft Wildernefs of Wood, and the Road through it was a narrow Path. He was forced to carry all Neceffaries with him, and at Night to lie upon a Bear's Skin. When he arrived at the Caftle he was vilited by more than one hundred People, who feemed all glad to fee him; he read feveral Papers to them, ftaid fome Time with them, and, after Inftruction, baptized feveral, whofe Names have been tranfmitted to the Society. Mr. Andrews afterwards returned to the Mohocks, his Place of Refidence. In a fhort Time the Indians grew weary of Inftruction: The Men grown would go out in Bodies a hunting for feveral Months, and forget all they had been taught ; and the young Boys, when they grew up, were taken out by their Fathers to hunt, and fo loft all they had got. This roving Life utterly deftroyed all the Miffionary's and School-mafter's Labours.

But befides this Difficulty, and the natural Averfenefs of the Indicms to Learning, two Misfortunes happened which created a Jealoufy, and afterwards a Hatred in the Indians againt all the Engligh as well as againft their Religion. Some Jefuits, Emiffaries from Quebec among the Canada Indians, adjoining to the Iroquois, had infufed into the Minds of thofe People, that the Englifb did not intend, by building a Fort among the Iroquois, to teach them their Religion, but to cut them all off at a proper Juncture; and that a Box had been found accidentally, left by the Englifh when they attempted Quebec, containing Papers which difcovered this Intention of the Englifb. The Canada Irdians believed this idle Story, and fpread it among all the Iroquois. This ftirred up fome Jealoufy, but a farther Misfortune quite fet the Indians againtt the Englifs; fome of the Tufcararo Indians who had fled from Nortb Carolina after the War there with the Englifh, came and Settled in the Country of the Onontages, one of the Iroquois Nations bordering on the Mobocks. Thefe People being enraged at the Einglifh, ftirred up the Onontages againft them, telling them they had been moft barbarounly ufed and drove out of their Country, and the Englifh watched only for an Opportunity to extirpate them too. The other Indions, were too eafily perfuaded to believe every thing the Tufcararo Indians told them; fo that when any of thefe People came by the Mobocks Caftle, and the Queen's Fort, in their Way to Albany, to trade and buy themfelves Neceffaries, they ufed only to mock at Mr . Andrews when he would offer to talk to them about Religion, and when he proferred to go to their abode they abfolutely forbad him.

In a little Time the old Mohocks left off coming to the Chapel to Mr. Andrews, and the Children came no more to School. Mr. Andrews wrote the Society Word of the ill Succefs of his Miffion, though he had fpared no Pains that the hopeful Beginnings proved of no Effect at laft and that he began to defpair of converting the Indians. The Society found now, from feveral Accounts, that the Miffion among the Indians proved fruitlefs; that it was not poffible to teach them the Chriftian Religion, before they were in fome Degree civilized; and they found the following Difficulties did only hinder that. No Way
could be found to engage the Indians to lead a fettled Life, to apply themfelves to cultivate the Ground, to build Towns, and to raife Cattle; they would ftill rove through their vaft Woods many hundreds of Miles? depending for their Subfiftance upon the Game they could kill. They would eat all Sorts of Carrion; and in fome long Rambles, when by various Accidents they could get no Game, would kill and eat one another; even their Wives, and that without any Concern or Remorfe. Generally half of a Hord or Nation went out a hunting or a warring upon a neighbouring Nation together, and on thofe Expeditions forgot all the little they had learned; and at their Return were as meer Savages as ever. They could not be diffuaded from taking Wives and leaving them at their Pleafure ; this not only hindered Religion from being fixed among them, but was the Caufe that a great many aged Men and Women perifhed miferably, as having no one to take any care of them.

They would, in their Wars, ufe the greatef Barbarities, and deftroy all the Prifoners they could take, by fuch extreme Tortures, it would move too much Horror in the Reader to repeat in this Place. It is true, they were very fond of their Children, but they perverted even fo good a Principle; they would not oblige them to learn any manual Art, or our Language, but let them live a lazy beftial Life: Nay fome of the young Children who have by Chance fallen into the Englifh Hands, and lived in Families, been taught our Language, learnt a decent Behaviour, and known fomething of Tillage or Handycraft; when they have grown up have run wild again, have thrown off their Cloaths, and chofe rather to ramble naked almoft in the Woods with their own People, than to live a fober and fettled Life. But the greateft Obftruction to their being civilized, was their Greedinefs of ftrong Liquors, efpecially Rum, and the fatal Effect Drunkennefs hath upon them. When they drink they will never leave off till they have gone to the greateft Excefs, and in this Condition they are moft wretched Objects. They grow quite mad, burn their own little Huts, murder their Wives and Children, or one another; fo that their Wives are forced to hide their Guns or Hatchets, and themfelves too, for fear of Mifchief. And if the Men, through this Excefs, fall into any Sicknefs, they perifh miferably, as having no Methods of helping themfelves by Phyfic or otherwife.
It is, indeed, Matter of great Wonder, that there wretched People who have lived joining to the Engli/fo Settlements fo many Years, and cannot but obferve that the Englifh, by Agriculture, raife Provifions out of a fmall Spot of Ground, to fupport in Plenty great Numbers of People; whereas they, by their hunting, cannot get a wretched Subfiftance out of all their Wilderneffes of feveral hundred Leagues in Extent, fhould ftill refufe to till their Ground or learn any manual Art; fhould ftill live a brutal Life, infenfible of Shame or Honour. It is true, the Engli/b have taken from them exceeding large Countries, yet this, far from being a Prejudice, would be a vaft Advantage to them, if they would but learn the Englifs Language, Arts, and Induftry. They have ftill an immenfe Extent of Land, Part of which, if duly cultivated, is able to maintain many Millions of People more than there are. It might have been imagined the Sachems; that is, thofe petty Kings who were in England in the late Queen's Time, fhould have been fo ftrongly affected with feeing the Grandeur, Pleafure, and Plenty of this Nation; that when they came to their own Countries, they would have tried to reduce their People to a polite Life; would have employed their whole Power to expel that rude Bafbarifm, and introduce Arts, Manners, and Religion but the contrary happened; they funk themfelves into their old brutal Life; and though they had feen this great City, when they came to their own Woods they grew all favage again.

Mr. Andretes wrote feveral Accounts more in $17 I_{8}$, that all his Labours proved ineffectual. That the Indians would not fend their Children to School, and no body came to the Chapel; that the four other Nations of the Iroquois, as they came by the Mobocks Caftle, infulted and threateried him; that the Interpreter
and School-mafter perceived all their Labour was loft, and that they were frequently in Danger of their Lives if they went out of the Fort. The Society received thefe Accounts with much Diffatisfaction, as being extremely contrary to what their good Defires had made them hope. However, they were fo unwilling to abandon this wretched People to themfelves, that they would not difmifs Mr, Andreres from his Mifion, upon his own Reprefentation of his ill Succefs. They wrote to the Governor of New York, Robert Hunter Efq; acquainted him with the Accounts they had received, and requefted the Favour of his Excellency to caufe an Inquiry to be made, whether Mr. Andreres's Labours were fo fruitlefs among the Indians, and fubmitted to his Judgment to difmilis Mr. Andrewes if they :fhould be fo found. The Accounts tranfmitted hither were found true upon Examination, and Mr. Andreres left that miferable Race of Men.
We have chofen to give the whole of this remarkable Account together, that the Reader may fee, and be fully apprifed of the many and great Obitacles that lie in the Way of our bringing the Indians to embrace our Intereft together with our Religion ; but there are ftill Hopes, that as the Society proceeds in the great Defign of fettling a regular Clergy in our Colonies, and thereby influencing the Planters, not only to profefs, but to fhew, themfelves Chriftians; thefe Obftacles will be leffened by Degrees, and the Indians come to have a better Opinion of our Faith, in the fame Proportion that they grow better pleafed with the Juffice and Regularity of our Behaviour towards them; but in the mean Time what has been related fhews that this important Tafk has not remained unattempted, and that if it has been in fome Meafure interrupted, this Interruption was occafioned by Accidents unforefeen, inevitable, and in their Nature hitherto unconquerable.
7. But it is now Time for us to proceed to that great and fingular Expedition, undertaken in the Queen's Reign, for difpoffefing the French of Quebec, and driving them entirely out of Canada. This was firft conceived practicable, and Meafures taken for putting it in Execution, in the Year 1707, at which Time the Earl of Sunderland, then Secretary of State, wrote to the Government of Nerv England, to prepare for giving what Affiftance lay in their Power, towards a Defign of fuch Importance to, and fo often recommended by, the People of that Colony; who from the Time Sir William Pbipps mifcarried in it, were continually wifhing for an Opportunity to recover their Credit, and to revenge their Lofs upon the French, by renewing their Attempts upon Canada. The Perfon then intended to command the Land Troops, was General Maccartney, and every thing was fettled with refpect to his Voyage, when the fatal Battle of Almanza, in Spain, made it abfolutely neceffary to fend the Troops defigned for this Service into that Country, to prevent the total Ruin of the late Emperor's, then King Cbarles, Affairs. The Circumftances of the War in fucceeding Years hindered the Revival of this Project till the Change of the Miniftry, and then it was refolved upon afrefh, as the moft effectual Means of forcing France into a fpeedy and folid Peace.

How it was executed is a very hard Tafk to fay ; but we will make ufe of the Account publifhed by the Secretary of the Admiralty, who had it in his Power to give the fulleft and faireft Relation of this Matter; and if he has not done fo, we know not where to find a better. He tellis us the Queen's Inftructions to Sir Hovenden Walker, Rear Admiral of the White, were dated the Ixth Day of April, IクII, by which he was ordered to take under his Command, the Torbay, a Ship of eighty Guns, the Edgar, Swiftfbure, and Monmouth, of feventy Guns; and Dunkirk, Sunderland, Kingfon, and Moniague, of fixty Guns, with two Bomb Veffels; as alfo the Leopard and Sapbire, one of fifty and the other of thirty Guins, fent before to North America; with all thefe, except the two laft, together with the Store-fhips and Tranfports defigned on the Expedition, he was, as foon as might be, to rendezvous at Spitbead; and when Mr. Hill, General and Commander in chief of the Forces, fhould be embarked, and the Troops on board, he was, with the firt Opportunity of the Wind, to proceed to

Bofton in Nere Emgland, without touching at any Inand, Country, or Place, if it could poffibly be avoided; and as he was required to appoint proper Signals and Places for Rendezvous, in cafe of Separation, fo was he to give ftrict Orders to the Captains of the Ships under his Command, that if they happened to be fo feparated, they fhould not inform the Enemy, or any other, on what Defign they were going.
In his Paffage to Bofton, the chief Town in Nerv England, he was, when himfelf and the General fhould judge it moft proper, to detach one Ship of War or more to convoy directly to New York the Tranfport Ships, in which were laden Artillery, Silks, Cloaths, and Accoutrements, with other Things, for the Ufe of Forces to be raifed there, as well as in the Ferfeys and Penjgl vania; the fame to be delivered as the General fhould direct ; and then the Ships of War were to be ordered to return to Bofton : But if it fhould notbe judged proper to make fuch Detachment, the Tranfports were to be fent to Nere York, under a fufficient Convoy, when he arrived at Bofon; and the faid Convoy, to bring there fuch Neceffaries and Stores as fhould be provided for the Squadron and Forces. When he arrived at New England, he was to take the Leopard and Saphire under his Command, and confider whether it might be neceflary to make any Addition to the Squadron by the Convoy to the New England Maft Ships or others ftationed on the Coaft of America, which he was impowered to do; and if the General fhould, upon advifing with him, think it practicable to fend any of the Tranfports with fome of the new raifed Troops in New England, to garrion Annapolis Royal, lately called Port Royal; and to bring from thence the Marines left there, or any Part of them, or the Artillery, or Stores of War, he was to appoint a fufficient Convoy, with Directions for them to return forthwith to Nere England.
He was, when at Bofon, to take under his Care all Tranfport Veffels, Ketches, Hoys, Boats, and other Neceffaries provided in New England; and as foon as the Forces from thence, and thofe raifed there, fhould be on board, he was to fail with them into the River of St. Laurence up to $2 u e b e c$, in order to attack that Place; and being arrived, to make a proper Difpofition of the Ship's for that Purpofe, as well of fuch as might be fit to be employed before the Town, as others ; upon confulting with the General to pafs the Place, and proceed up the River towards the Lake, not only to prevent any Communication with $Q^{\text {uebec, }}$ but to protect the Canoes and Boats with the Forces from Nerw York, to which End he was empowered to convert fome of the fmall Veffels fent from thence to Nerw England into Frigates, fuitable to the Navigation of the upper-part of the River, and to man and arm them accordingly at Newe England, or elfewhere ; he was to affift the General with Veffels and Boats proper for landing the Forces and embarking them again, but more efpecially upon his Arrival at $Q^{2 u b b e c}$, or frefh tranfporting them from Place to Place.

He was alfo ordered to fend to the General fuch Marine Soldiers as fhould be on board the Squadron, when he fhould demand the fame; which he was to have the Command of while employed on Shore : Befides which, he was to aid him with fuch a Number of Seamen, Gunners, Guns, Ammunition, and other Stores from the Ships, as he fhould demand for the Land Service; which Seamen were to affift in drawing and mounting the Cannon, or otherwife, as fhould be found neceffary. He was ftrietly required to lofe no time in proceeding to Nero Englond, and proceeding from thence to the River St. Laurence; nor in putting in Execution the Service at Quebec; but that on his Part, all Expedition fhould be ufed in the Reduction of the Place, and of the Country of Canada, or Nero France; and in the feafonable Return of the Squadron and Tranfports. Her Majefty impowered him to direct the Commiffary of the Stores to deliver to any Ship or Veffel, whether of War or otherwife, any Provifions or Liquors under his Care: He was likewife to provide any other naval Stores for the Ufe of the Squadron; and in care of Succefs it fhould be found neceffary by him and the General to

## Chap. III. of the ENGLISH in AMERICA.

have a naval Force left in the River of St. Laurence, he was to appoint fuch Part of the Squadron to remain there as might be judged proper for taking Care to make fuitable Provifion for the Maintenance and Repair of fuch Ships; and the like Liberty was given as to any of the fmaller Veffels, fuch as Tranfports or otherwife, or to make ufe of any of the Enemy's Ships that might be taken, if proper, to bring into Europe fuch Governors, regular Troops, religious Perfons, or others whom the General, by his Inftructions, was directed to fend away from Canada, with Commifiaries, Stores, and Provifions for their Tranfportation.

Thefe Services being directed, he was to take on board the General, if he fhould think fit to return, and fuch of the Forces as might not be left in Canada, and hatten with the Squadron and Tranfports out of the River ; and if the Seafon of the Year would permit, he was to proceed to, and fummon and attack, Placentia in Nerefoundland, in fuch manner as General Hill fhould direct; which Service being over, he was to order fuch Ships of War as did not properly belong to the Squadron under his Command, 'to return to their feveral Stations, directing the Mafters of the Tranfports which he fhould have no Occafion for, to go and feek Freight either upon the Continent of America or in the Iflands, to eafe the Public of the farther Charge of them, and for the Benefit of the Trade of Great Britain. Laftly: It was recommended to him, as it was to the General of the Land Forces, to maintain a conftant good Underftanding and Agreement, and on all Occafions to render each other all neceffary and requifite Affiftance ; and if any Differences thould arife between them, upon any Conftruction of Command, or the Nature of Command in the Service, or otherwife howfoever, the Queen was pleafed to referve the Determination of the fame to herfelf, at their Return to Great Britain, without Prejudice to either of them in fubmitting to each other for the Good of her Majefty's Service.

And that he might be fufficiently informed of her Majefty's Defign upon Canada, and of the Preparations directed to be made for the carrying it on, to the Governors of New York and Maffacbufets Bay, and New Hants ; as alro of the additional Inftructions to the Governors of New York, and of thofe to Francis Nicbolfon, Efq; and the feveral Governors of the Colonies of Conneciticut, Rbode Ifland, Providence Plantation, and Penfylvania.

Thefe were the Contents of the Queen's Orders to Sir Hovenden Walker, prepared without fo much as confulting the then Lords Commifioners of the Admiralty, either as to the Fitnefs of the Ships appointed for the Expedition, or the Nature of the Navigation; but on the contrary, the Defign on which they were bound was rather induftriounly hid from them, as may appear by fome Letters to Sir Hovenden Walker, before he failed from Spitbead, by which the Secretary feemed to value himfelf very much, that a Defign of this Nature was kept a Secret from the Admiralty, who, had they been confulted, would not, I am apt to think, have advifed the fending Ships of eighty and feventy Guns to Quebec, fince the Navigation up the River of St. Laurence, was generally efteemed to be very dangerous; nor were their Lordfhips permitted to know any thing of this Niatter, at leaft not in Form, until Advice received, that the French were equipping a confiderable Squadron at Breft, which fome of the Miniftry might be apprehenfive were defigned to intercept Sir Hovenden Walker; but it was too late to take any proper Meafures for preventing it, if the Enemy had really had any fuch Intention. Having thus given a brief Account of what Steps were taken to fet forth this Squadron, which, ere it returned, put the Nation to a very confiderable Expence, it remains that we accompany them on the Expedition, and I fhall give as particular an Account of their Proceedings as the Papers which I have before me, will enable me to do.

Sir Hovenden Walker was under Sail with the Ships of War and Tranfports off of Dunnose on the 2gth of April, I7II; but coming off of the Start the ift of the next Month, a wefterly Wind obliged him to put in at Plymouth; being the Length of the Dead Man the 4 th, he

Vol. Il. Numb. 90.
met with the Kent, Efex, and Plynouth, which Ships lie took with him fome Leagues into the Sea, and then left them to their former Service of cruzing from the Soundings. The 24th of June he arrived at Nantafket, near Bofion in Nere England, having then with him five Ships of the third Rate, fix of the Fourth, one of the Fifth, and two Bomb-Veffels. But not meeting with that ready Amifance which was expected from the Govermment and People of that Country; it was the 3oth of Juty before he failed from thence, and then he was on his Way to Quebec, with the Britifh and New England Forces. The 14 th of Auguft he got the Length of the Bird Illands which lie about two hundred and fifty Leagues from Cape Ann; and having fent the Cbefter, Leopard, and Saphire, to cruize between Placentia and Cape Breton, on the Inand oppofite to Newfoundland, expected their joining him in his Paffage to Quebec; the former of which Ships had taken and fent into Bofton, before he failed thence, a Ship of about one hundred and twenty Tons, with ten Guns, and had feventy Men on board, whereof thirty were Soldiers for the Garrifon of Quebec.

The Leofoff, Fever/bam's Enterprize, and Tryton's Prize, all fmall Veffels, which were ftationed at New York and Virginia, he ordered to join him off of Cape Breton, being impowered by her Majefty's Orders fo to do, if he fhould find it neceffary, and this the rather becaufe they might be of good ufe to him in his Proceeding up the River to Quebec, which Navigation moft of the People with whom he had fpoken reprefented to be very dangerous; and therefore he rightly judged the Humber and Devonßire, which mounted eighty Guns each, too big to be ventured thither; for which reafon he fent them home, and fhifted his Flag on board the Edgar, a Ship of feventy Guns, General Hill removing into the Windfor, which carried ten lefs; but fince he had Information that a Ship of fixty Guns; and another of thirty, were expected from France very fhortly; he ordered the aforefaid Ships, Humber and Devonßire, to cruize in the Opening of the Bay of St. Laurence, until the laft of Auguft, and then to purfue their Voyage home.
He had very fair Weather until he got into the aforefaid Bay, when it came changeable, fometimes thick and foggy, and other while calm and little Winds, and the Navigation appeared to be intricate and hazardous. The I8th of Auguft, when he was off Gafpe Bay, near the Entrance of the River Canada, it blew frefh at Northweft, and left the Tranfports fhould be feparated, and blown to Leeward, he anchored in that Bay; where, ftaying for an Opportunity to proceed up the River, he burnt a French Ship which was a fifhing, not being able to bring her off. The Wind veering wefterly the 20 th of Auguft, he had Hopes of gaining his Paffage; but the next Day Afternoon it proved foggy, and continued fo all Night and the Day following, with very little Wind. till the Afternoon, when there was an extreme thick Fog and it began to blow hard at Eaft-fouth-eaft, which, rendering it impoffible to fteer any Courfe with Safety, having neither Sight of Land or Soundings, or Anchorage; he, by the Advice of the Pilots then on board him, both Englifb and French, who were the beft in the Fleet, made the Signal for the Ships to bring to with their Heads Southward, at which Time it was about eight at Night, believing that in that Pofture they fhould not come near the North Shore, but rather have driven with the Stream in the Mid-channel; but on the contrary, as they lay with their Heads Southwards, and the Wind eafterly, in two Hours Time he found himfelf on the North Shore among the Rocks and Inlands, at leaft fifteen Leagues farther than the Log-line gave, where the whole Fleet had like to have been loft, the Men of War efcaping with the utmoft Difficulty; but eight Traniport Ships were caft away, and almoft nine hundred Officers, Soldiers, and Seamen perifhed.
The French Pilot, who, as it was faid, had been forty Voyages in this River, and eighteen of them in Command, informed him, that when it happens to be fo foggy as to prevent the Sight of the Land, it is impofible to judge of the Currents, or to fteer by any Courfe; for he himfelf had lof two Shipg, and been himfelf near the South, in.
fomuch

Tomuch that it was extremely difficult to procure Men in France to proceed on fo dangerous a Navigation, fince almoft every Year they fuffered Shipwreck. Thus it appeared how things had been mifreprefented in Great Britain, by thofe who pretend to aver that Fleets of Ships might fafely proceed up the River to Quebec; and it was demonftrable that the People of Bofton knew not any thing of what they propofed, when Schemes were laid for fuch an Expedition. After this unhappy Difafter, and when Sir Hovenden Walker had plied two Days with very frefh Gales, between the Weft and the South, to fave what Men and other things he could, he called. a Council of War, and upon enquiring of the Pilots (who had been forced on board the Ships by the Government of Nerw England) and duly examining into every Circumftance, it was judged impracticable for a Fleet to get up to Quebec, fince there were fo many apparent Dangers, and no Pilots qualified to take the Charge; befides it was the Opinion of them all, both Englifs and French, that had the Squadron been higher up the River, with the hard Gales they met with, all the Ships would have been inevitably loft. At this Council of War there were, befides the Rear Admiral, Captain Fofeph Soames, Captain Fobn Mitchel, Captain Robert Arris, Captain George Walton, Captain Henry Gore, Captain George Paddon, Captain Fobn Cockburn, and Captain Auguftine Roufe. The Confultation being over, the Sapbire was fent to Bofton, with an Account of the Misfortune, and the Montague, to find out the Humber and Devonbire, and to ftop all Ships bound up to Quebec; and the Leopard being left with fome Sloops and Brigantines, to take any Men from the Shore that might be faved, and to endeavour to weigh fome Anchors left behind, he proceeded to Spanifh River, in the Inand of Breton, the Rendezvous he had appointed, there to be perfectly informed of the State of the Army and Fleet, and to fettle Matters for their farther Proceedings.

But all the Ships did not join till the 7 th of September ; the Day following, by confent of the General, he called a Council of War of Sea and Land Officers, where it was confidered, whether under their prefent Circumftances it was practicable to attempt any thing againft Placentia, which all of them very much inclined to; but upon examining into the State of the Provifions on board the Men of War and Tranfports, it was found there was but ten Weeks Provifion, at fhort Allowance, in the former, and in the latter much lefs, fo that it was unanimoufly agreed not any thing of that kind could be undertaken; but that it was neceffary the Squadron and Tranfports fhould proceed to Great Britain, fince they had but barely Provifions fufficient for the Voyage, and that there was not any Profpect of a Supply from Nero England, and the Seafon of the Year being too far advanced for navigating fafely in thofe Parts of the World. At this Council of War there were, befides the Sea Officers of the laft, General Hill, Colonel Cbarles Cburcbill, Colonel William Windrefle, Colonel Campenfelt, Colonel Clayton, Colonel Kirk, together with Colonel Vetch, and Colonel Walton, who commanded the Forces raifed in Nere England.

It was in purfuance of this Refolution taken in Spanijb River, that he failed on the r6th of September for England, where he arrived the gth of OEtober following, and not long after his Return, the Edgar, a feventy-gun Ship, on board of which he hoifted his Flag, took fire, and blew up at Spithead, by fome Accident, the Caufe of which was never known; and thus ended an Expedition every Way unfortunate, and which brought nothing but Difcredit and Blame upon thofe who contrived, and thofe who were concerned in the executing, it, and particularly Sir Hovenden Walker, a very honeft plain-fpoken Man; who, if there was any dark Secret in this Bufinefs, was moft certainly ignorant of it. His Opinion always was, and he died in the full Belief of it, that though the Expedition might be juftly ftiled unfortunate, inafmuch as it mifcarried, and the Fleet never reached Quebec; yet it would have been much more fo, if they had got up the River of St. Laurence, and had actually landed their Men, as they were by their Inftructions directed to do; and the Reafons he gave for it are very well worth the hearing,
efpecially at this Juncture, when an Expedition of the fame kind is faid to be under Confideration. The Reafons that he gave for it were thefe: That in Cafe the French had retired from Quebec, they would have carried their Provifions with them, and have deftroyed what they could not carry, fo that the Englifh would have had nothing but a wild, barren, uncultivated Country before them, with the Conquelt of which they might pleafe themfelves; but in which, neverthelefs, they would find it impoffible to fubfift.
"For, continues he, our Peoples Provifions would "s have been reduced to eight or nine (perhaps to fix) "Weeks, at fhort Allowance; no Relief could poffibly
" be hoped for in lefs than ten Months, if fo foon; the "s Fever/bam, and three Store-fhips, laden with the Pro"s vifions defigned for their Supply, being caft away in "s their Paffage; fo that if they had efcaped Shipwreck, "c which would have been a very great Chance, between "s ten and twelve thoufand Men muft inevitably have "c perimed with Hunger and Cold, and the Ship have " become a Prey to the returning Enemy. On the other is hand, had the Enemy held out till our People had "s fpent all their Provifions, they muft have laid down " their Arms, and have furrendered to the French at "Difcretion, to avoid Death in its moft frightful Shape,
" Famine; or if they had taken the Place, either by
"Storm or Capitulation, the remaining Provifions of a "c fmall Garrifon would not have gone far towards fubfift"s ing fo large a Number; nor could they, at that Seafon "s of the Year, have marched through the Country in " fearch of more: And this would have been the Cafe, " had they afterwards attempted Placentia."

How far this Gentleman might be in the Right or in the Wrong, I fhall not at prefent defire the Reader to enquire ; but, moft certainly, what he fays has at the firft Sight the Appearance of Sincerity and Truth, and therefore we ought to be very cautious of running any frefh Hazards of this Nature: But the driving the French from Canada is moft certainly a Thing very poffible and very practicable, provided the Scheme be laid by thofe who are well acquainted with the State and Force of our Colonies, the Navigation of the River of St. Laurence, and the Condition of the Colony we propofe to dinlodge; and if it be executed by Seamen and Officers of Experience in their refpective Profeffions, and who found the Hopes of promoting their private Intereft on the folid Bafis of exerting their utmoft Abilities in the public Service.
8. The French, during the whole Courfe of the laft War, were particularly attentive to the Prefervation of their own Colonies, and annoying of ours, in both which Schemes they were but too fucceffful, which however was not owing fo much either to the Wifdom of their Councils or the Vigour of their Arms, as to the Faults in our Meafures, and the Mifcarriages of our Sea Officers. I fhall not pretend to enter into a ftrict Detail of thefe difagreeable Points, but fhall content myfelf with a few general Points which I flatter myfelf will be fufficient for my Purpofe. At the very beginning of the War, the gallant old Admiral Berbow was facrificed by fome of his Officers who had a Pique to him. He was a Man of great Honour and ftrict Difcipline, but had fome of the Roughnefs of a Tar about him, which rendered him very difagreeable to the fine Gentlemen of the Navy, amongft whom were three of the Captains that deferted him; their Conduct indeed had the Look of Cowardife, and of that they were found guilty by a Court Martial, and fuffered Death for it very defervedly; but they only acted the Cowards and were not fo, for they had behaved gallantly upon other Occafions, and never Man looked Death in the Face with more Intrepidity than Capt. Kirby did, which however was fo far from extenuating, that in my Opinion it heightened his Offence.

The executing fevere Juftice upon thofe three Gentlemen, which certainly was a very wife and right Step, and was taken by the mildeft Government this or perhaps any other Nation ever faw, had a very good Effect, and taught People to fear the Juftice of the Nation, in cafe they facrificed the Concerns of the Public to their particular Refentments or private Views; but that it did
not entirely put an End to the Evil is very certain, fince fomething of the fame kind happened afterwards to Sir Cbarles Wager, and prevented his taking at leaft anothe Galleon. The Admirals alfo, and great Sea Officers, that were fationed at Famaica for the Protection of the Ifland and Security of Commerce, did not behave fo well as they might have done, as appears from thofe authentic Regifters the Votes of the Houfe of Commons, where the Reader will find, that, after long and ftrict Enquiries, in which the Merchants were admitted to make particular Charges, and allowed to fupport them by Evidence, Cenfures were paffed upon thofe Officers who : appeared to be guilty; and both Houfes thewed a warm Zeal for redreffing thofe Mifchiefs occafioned by the ill Conduct of the Navy, and thereby left ample Teftimony of their Regard for the Public, though it was not attended with that Succefs that might have been wifhed.

In the mean time the French went on in quite a different way; and, when they found their Fleets were able to do little againft ours, they very wifely declined wafting their Naval Force in Combats at Sea, and applied it almoft entirely to the protecting their own Trade, and diftreffing ours. They undertook the efcorting the Spanifb Plate Fleets, and were, generally fpeaking, but too fuccefsful in that Undertaking. Notwithftanding our fuperior Force, they attempted a Commerce with the Spanifb Settlements in the South-Seas; and in this too they fucceeded, notwithftanding the dangerous Navigation round Cape Horn, and from thence they reaped two great Advantages, viz. maintaining and improving their Manufactures, even in a time of War; and bringing vaft Sums into France, without which the could not pofI fibly liave continued the War.

Yet, in fome refpects, it manifeftly appeared that her Force was very infufficient for fupporting her Views in the Weft Indies, fince, in an Attempt they made upon Carolina in 1706, they were fhamefully repulfed by the natural Force of that Colony, without any Affifance from hence. And, on the other hand, our People fucceeded in their Attempt to drive the French out of what they poffeffed in the Inand of St. Cbrifophers; which plainly fhewed what might have been done, in that War, towards deftroying their Sugar Colonies, if, as our Interefts moft certainly led us, we had confidered that Point more attentively than we did fome others, which did not concern us near fo much. For, had we ufed the Opportunity that was given us to have driven the French ou of all or moft of their Inlands, it muft have turned fo much to our Advantage, in Point of Trade, that, in all human Probability, we fhould have had no Reafon to regret the vaft Expences of that long and confuming War.

But, inftead of doing this, our Views were almoft entirely confined to Europe, where our 'Succefs was indeed very honourable for our Arms, but was very far from procuring us any Advantages in refpect to Trade which I do not fay with any Defign of reflecting on the Minifters by whom that War was managed, who perhaps might mean us well, and did for us as much as was in their Power; but to fhew where the Fault really lay, which was our entering into many Engagements that were either ufelefs or detrimental to our Commercial Interefts.

Whereas the French, who had but very lately entertained any Thoughts of Trade, kept that continually in : view, both in their Operations during the War, and ir their Negociations for bringing about a Peace. In re fpect to the former, befides what they did againft us in the Weft Indies, they attacked the Portuguese in Brazil, ruined the Commerce between the Dutch and Spaniards, and eftablifhed their own; and, befides all this, when they had actually begun to treat with us, and our Court confidered them in a manner as Friends, they fent a Fleet to diftrefs us in the Leeward Iflands; which exceffively provoked our Miniftry, though they were too far advanced in their pacific Meafures to retreat.
At the Conclufion of the Treaty, the French fhewed the same Care for, and the fame Steadinefs in, fupporting their Commerce. It was with Difficulty that they were prevailed upon to reftore what they had taken from oun Hudfon's-Bay Company. Nowa Scotia we had, and, becaufe
they could not take it from us, they left it to us; bus they plainly cheated us out of Cape Breton. And tho they pretended to renounce all Pretenfions on Newofound land; yet they preferved what they never had any title to, and what, with refpect to that Country, was all they ever wanted. By thefe Arts they fecured great Advantages to themfelves, which were all at our Expence brought a heavy Load of Reproach on the Minifters who tranfacted with them, and left the Treaty of Utrech as a Memorial to all fucceeding Minitters of the Danger of entering into any feparate Negociations with Erance.
9. After the Acceffion of his late Majefty King George I. to the Britifh Throne, there followed feveral Diturbances at home and abroad, which might very well hinder the Minifters from contriving any new Schemes for the Advantage of our Colonies, or from perfecting thofe which had been formerly laid for that Purpofe. The Rebellion in Scotland firt, and after that the Quadruple Alliance, and the Meafures which preceded and followed it, fufficiently occupied their Thoughts, and if they went on in the ordinary way, in protecting them, and providing for their Security, they might very well be excufed for poftponing Thoughts or Projects of another Nature to more favourable Times.
But the French, always watchful for their own Advantage, at the very time when they feemed moft follicitous in cultivating the Friendfhip of Britain, and were daily receiving Benefits from it, projected the Settlement of the Ifland of St. Lucia, which had been always included in the Commiffion of the Governor of Barbadoes; and for that Purpofe the French King thought fit, in the Year 1719, to make a Grant of that Inand to the Marmal $d^{\prime}$ Etree, who immediately made the neceffary Difpofitions for eftablifhing a Colony in that Ifland, and fent over People for that Purpofe. The Governor of Bar badoes, as it was his Duty, oppofed this Settlement vigoroully, and declared roundly, That, if the French per fifted in fettling, he fhould find himfelf under a Necef fity of driving them off that Ifland, which belonged to the King his Mafter, by Force.

At the fame time our Minifter at the Court of Paris prefented a Memorial, in which he fet forth the Title the Crown of Great Britain had to this Inand, and, confequently, the great Injuftice of the French King's Grant, which was very apparent from the following Particulars in relation to the Hiftory of this Inand, in which both Englifh and French Writers agree. The Englifb fettled on the Inand of St. Lucia in 1639 , and lived there near two Years without any Interuption or Difturbance ; but in 1640 they were driven off from the faid Ifland, and the Governor and moft of the Inhabitants killed by the Caribbeans, and, as the Englifb fufpected, by the Inftigation and Encouragemeut of the French which the French Generals, Parquet and de Poincy, however, both difowned. Nor did the French, at that time, or any other time, make any fort of Pretenfion to the Inand. A tacit Acknowledgment undoubtedly of the Right of the Englifs.

The Civil Wars in England breaking out, the Englif neglected this Settlement ; and Monf. du Parquet fent thirty or forty Frencbmen to take Poffeffion of the Ifland. The Sieur de Rouffelan governed here till 1694, and was fucceeded by de la Riviere, whom the Caribbeans killed with feveral of his Men, and carried off his Wife and two of his Children. He was fucceeded by Monf. le Breton, he by Monf. Agremont, who was alfo deftroyed by the Caribbeans. Atter this the Englif made a Treaty with the Caribbeans for the purchafing the Inland from them; and, in $166_{3}$, fent fourteen or fifteen hundred Men on board of five Men of War, who, being joined by fix hundred of the Caribbeans in feventeen Canoes, came before the Ifland in June 1664 , which was delivered to them without Refiftance, on Condition that the French Governor and Garrifon in the Fort, which amounted only to fourteen Men, fhould be tranfported to Martinico, with their Cannon, Arms, and Baggage. In 1666 the Englifh Governor, Mr. Robert Cook, by reafon of the Mortality of his Pcople, Want of Neceffaries, $\mathcal{E}^{\circ} c$. abandoned the Inand, and fet fire to the Fort; yet, two Days afterwards, a Bark arrived from Lord Willougbby,

Governor

Governor and Captain-General of Barbadoes, and the other Englifb Caribb̄ee IJands, to Windward of Guardaloupa, with Provifions, Ammunition, and all Neceffaries for the Colony. In this deferted Condition it remained thenceforward, but was always confidered as a Part of the Britifl Dominions. The Interpofition of our Minifter produced the delired Effect, and the French defifted at that time from their Settlement.
10. This Attempt, however, fo much alarmed our Court, that the Duke of Montague refolved, at a vaft Expence, to fettle that Ifland and St. Vincent, which was fo agreeable to the Miniftry and to his late Majefty, that by Letters Patent, dated the 22 d of $\mathcal{F}$ une, 1722 , both thofe Iflands were granted to his Grace, that he might be encouraged to put fo generous and public-fpirited a Defign in Execution; and for the farther Benefit and Advantage of the new Colonies which he was to fettle, the Duke was alfo conftituted Captain-General of the Mlands of St. Lucia and St. Vincent, which till that Time were included in the Commifion, and remained under the Government of the Governors of Barbadoes. His Grace, having appointed Capt. Uring his Deputy-Governor, and provided feven Ships and Veffels to carry over the Planters, with fuch Provifions and Neceffaries as were requifite to fettle Colonies in thofe Inands, obtained of his Majefty the Winchelfea Man of War, commanded by Capt. Orme, to convoy, attend, and protect the Planters.

Mr. Uring embarked on board the Winchelfea, on the 10th of Sepiember 1722, and failing to Ireland to take in Provifions, made it the 15 th of December before he arrived at St. Lucia. Being come to an Anchor in Pidgeon Ifland Bay, a Barbadoes Sloop foon after arrived from Martinico, the Mafter whereof communicated to Mr. Uring the Copy of a Mandate by the King of France, which he faid was publifned by Order of the French General in all the Churches of that Inand, and in all the Towns by beat of Drum; which contained in Subftance, That if the Englifh did not leave the Iffand in the Space of fifteen Days, they were to be expelled by Force of Arms. The next Morning Mr. Uring weighed from Pidigeon Ifland Bay, and food for the Harbour of Petite Careenage, which they found to be a very good one, and in it feveral Places fit for careening Ships, fheltered from every Wind; in one of which, Ships of fixty Guns and upwards may careen very conveniently: The Land is very hilly all round the Harbour, and in moft places fteep, afcending from the Water-fide. At two in the Afternoon we landed fifty Men to cut down the Trees and Bufhes on the Point that lay fit for a Battery of Guns to command the Entrance of the Harbour. The fame Day he fent Mr. Faulkner to Martinico, with Letters from the Duke of Montague and the Admiralty directed to Capt. Charles Brown, Commander of the Feverfham Man of War, and Capt. Brand Commander of the Hector; who were then at Martinico; and acquainted them, that the Duke had appointed him Deputy-Governor of St. Lucia and St. Fincent, and being come to fettle thofe Inlands under the Protection of the Winchelfea Man of War, he defired that in purfuance of the Orders they had received from the Admiralty for that Purpofe, they would join him as foon as pofible, being apprehenfive the Governor of Martinico defigned to moleft the Colony. In the mean time he proceeded to land his People, Guns, Tools, Planks, and Stores, to fortify the Harbour, and build a large Houfe to fhelter the Workmen

On the 22d of December Captain Brand, and Captain Brown, arrived from Martinico with his Majefty's Ships, the Hecior and Feverfibam, and foon after a French Sloop, which brought a Letter from the French General, to acquaint Mr. Uring that he had heard of his landing Englig Forces in the Illand of St. Lucia, and defired to know his Intentions; and at the fame Time he received the following Copy of the French King's Mandate, viz. A Mandate of the King to the Sieur Cbevalier de Feuquire, Governor and Lieutenant General of the Windward Inands in America. "His Majefty having been inform"ed that the King of Engzand has given the Inands of "St. Vincent, and St. Lucia, to the Duke of Montague, ss has made his Complaint of it to the Court of England,
" and has alledged that neither the one nor the other of "thefe Ifiands belong to that Crown. The firt of them "ought to remain to the Caribbees, according to Con"s ventions made with that People; and the fecond does "s belong to France, who has been willing to fufpend the "S Settlement of that Illand on the requeft of the King of " England; notwithftanding thofe Reafons, his Majefty
"' hath not been informed that there has not been any
" Revocation of this Grant ; on the contrary, he under"flands that the Duke of Montague is repairing to fend "s and take Poffeffon of thofe Mlands, and to tranfport
"s Numbers of Families thither. This Undertaking be" ${ }^{\prime}$ ing contrary to the Rights of his Majefty, his In"' tention is, That in Cafe the Engli/h fhould take Pof " feffion of St. Lucia, and fettle there, the Sieur Cheva" lier de Feuquire fhall fummon them to retire in fifteen " Days, in regard that. Ifand belongs to Fronce; and if "t they do not depart, he fhall compel them to it by "s Force of Arms. He fhall take Care to charge fome " of the wifeft and moft experienced of his Officers with " this Expedition. His Majefty deffres there fhould be "s as little Effufion of Blood as poffible, nor will he have "s any Pillage made; he only wifhes the Englifh would " retire, and not poffefs themfelves of a Country which " belongs to him. Done at Verfailles the 2 ift of Seplem" ber I722, figned, Ejc."

Upon reading the Mandate, and the French Governor's Letter, in which it was inclofed, Mr. Uring fent to Captain Brand, and Captain Brown, to know if he might depend upon their Affiftance if he was attacked by the French; but they would give him no pofitive Anfwer, and foon after failed to Barbadoes; he alfo fent a Letter to the Governor of Martinico, to acquaint him that he had Orders from the Duke of Montague, the Lord Proprietor, under his Britifb Majefty's Patent, to plant St. Lucia and defend it, but propofed fufpending all Acts of Hoftility, till they could hear from their refpective Courts of Great Britain and France. Mr. Uring alfo thought fit to write to the Prefident of Barbadoes, that the Governor of Martinico had threatened to drive the Englifb from the Illand, if they did not depart in fifteen Days, and to defire his Affittance to fupport this Part of his Majefty's Dominions. To which the Prefident anfwered, That he was ready to give him all the Affiftance in his Power.

But the Captains Brown and Brand remained folong abfent from St. Lucia, that the Frencb had an Opportunity of fending between two and three thoufand Men from Martinico, and landing them on the Thand; the Captains of the Men of War alfo refufed to give him Affiftance, towards fortifying and defending the Colony by Land, and a great many of the Planters falling fick, and others deferting over to the French at the fame Time, Mr. Uring had not fourfcore left to bear Arms, which compelled him at length to come to a Treaty with the French General, the Marquis of Chomprgy; and the following Articles were concluded berween thein: Firt, That the Ensli/b fhould quit the Iland of St. Iucia within feven Days, provided that the Ships of the Englif Nation fhould at all times have Liberty to come into the Ports of the faid Inand, and wood and water there, and ferve their other Occafions, as the French alfo might. Secondly, That the Englifh Colony fhould be at Liberty to reimbark all their Cannon, Stores, Arms, Baggage, and every thing belonging to them, without Moleftation. Thirdly, That all Deferters fhould be given up. And, Laftly, That immediately after the Englifh had evacuated the Tfland, the French Forces alfo fhould evacuate it, and that the Inand fould remain in the fame State it was, till the Controverfies between the two Crowns, relating to this Inand, were decided. In purfuance of which Agreement Mr. Uring embarked with his People, and failed to Antigwa, fending the Winchelfea Nian of War, and Captain Braitbrosite, in the Grifin Sloop, to take a View of the Inand of St. Vincerrt, and fee if it was practicable to make a Settlement there. In the mean Time a confiderable Reinforcement arrived at Barbadoes, from the Duke of Montague, with Ammunition and Provifion, and Orders to attempt a Settlement upon St. Vincent, if the Planters were driven from St. Lucia.

## Chap. III. of the ENGLISH in AMERICA.

ir. In order to this he hadi Inftuctions, and a Commiffion given him by Mr. Uring, which were perfectly well adjufted to the Defign upon which he was fent; and in the mean Time Governor Uring remained at Ans tigua, where he had all the Civilities paid him, and all the Services done him by the Governor, and other Perfons in Authority, that he could either defire or expect; which, in fome Meafure, mitigated his fharp Senfe of the Miffortunes he had met with; for he was both a capable and an honeft Man; one who had the Service very much at Heart, and who difcharged his Duty fo punctually, even in this difaftrous Undertaking, as to preferve his Reputation, and to merit a kind Reception from his generous Mafter the Duke of Montague, who was fo wife as to expect no more from a Man than was in his Power, and io good as to commend and reward him who did that, though it was not attended with the happy Confequences that might have been expected from it. This Gentleman did not remain long at Antigua, before he was made fenfible that there was as little, or rather lefs Hopes of making a Settlement at St. Vincent, than he by Experience had found there was of fixing a Colony on St. Lucia; for Capt. Fobn Braitbroaite, returning from his unfuccefsful Expedition, delivered to Governor Uring, in Juftification of his own Conduct, and for the Satisfaction of his Grace the Duke of Montague, the following Account of the Meafures he had taken for executing the Commiffion granted to him, in order to fix a Settlement on his Majefty's Inland of St. Vincent. This Paper being equally curious and important, and alfo entirely hiftorical, we fhall give the Reader an Extract of it in that Gentleman's own Words.

## The Report of Capt. John Braithwaite to Nathaniel

 Uring, $E q_{q}$.s: In Purfuance of a Refolution in Council, and your "Order for fo doing the Day you failed with his Grace's "Colony for Antigua, I failed with the Griffin Sloop, in "Company with his Majefty's Ship the Winchelfea, to "St. Vincent: We made the Inand that Night, and the "s next Morning run along the Shore, and faw feveral "Indian Huts, but as yet no Indians came off to us, " nor could we get afhore to them, by reafon there was no Ground to anchor in. Towards the Evening two Indians came on board, and told us we might anchor in a Bay to leeward, and when we were at Anchor they would bring their General on board. Here we came to an Anchor in deep Water, and very dangerous for the Slop. One whom they called General came on board with feveral others, to the Number of twenty-two. I entertained them very handfomely, and made the Chief fome trifing Prefents; but found him to be a Perfon of no Confequence, and that they called him Chief to get fome Prefent from me. Here two of the Indians were fo drunk that they would not go afhore, but ftaid on board fome Days, and were well entertained. After this, little Winds and oreat "Currents drove us off for feveral Days, but at laft we "s came to an Anchor in a fpacious Bay to the leeward of "6 all the Illand, the Draught of which I ordered to be "taken by our Surveyor, for your better underftand"s ing the Place, being the only one where a Settlement "could be made. The Ship and Sloop were fcarce "come to an Anchor before the Strand of the Shore "was covered with Indians, and amongft them we "s could difcover a white Man, who proved to be a Frenchman. I took Capt. Watfon in the Boat with me, "with a Frenchman, and immediately went on Shore. "As foon as I came amongft them, I afked why they "s appeared all armed, for every Man had aCutlafs; fome "" had Mufkets, Piftols, Bows and Arrows, E®c. They with very little Ceremony enclofed me, and carried me up the Country for about a Mile, over a little "Rivulet, where I was told I was to fee their General: I found him fitting amidft a Guard of about an hundred Indians; thofe nearelt his Perfon had all Mufkets, the "reft Bows and Arrows ; and all obferved a great "Silence: He ordered me a Seat, and a Frenchman food at his Right-hand, for an Interpreter: He demanded Vol. II. Numb. XCI.
is of me, What brought me into his Country, and of "s what Nation? I told him, Englifis; and I was put " 6 in to wood and water, as not caring to fay any thing "s elfe before the Frencbman; but told him, if he would "s be pleafed to come on board our Ships, I would leave "Englibmen in Hoftage for thofe he fhould be pleafed " to take along with him. But I could not prevail "s with him, either to come on board, or fuffer me to "s have Wood or Water. He faid, he was informed " we were come to force a Settlement. And we had no "6 way to remove that Jealoufy but by getting under fail. "As foon as I found what Influence the Frenclman's "company had upon him I took my Leave, after " making fuch Replies as I thought proper, and return"s ed to my Boat, under a Guard; and when I came to "s the Shore, I found the Guard was increafed by a " Number of Negroes, all armed with Fuzees. I got " into my Boat without any Injury, and went on "s board to Capt. Orme, and told him my ill Succefs. "Immediately after I fent afhore the Sloop's Boat "6 with a Mate, with Rum, Beef, Bread, Eic. with " fome Cutlaffes; and ordered a Frenchanan who went "s with the Mate, to defire the Guard to conduct them " 6 to their General, and to tell him, that though he de" nied me the common Good of Water, and a little " ufelefs Wood, neverthelefs I had fent him fuch Re'6 frefhments as our Ships afforded. Our People found "s the Frenchman gone, and that then the Indian Gene"s ral feemed pleafed, and received what was fent him; 66 and in return, fent me Bows and Arrows. Our Peo"s ple had not been long returned but the General fent a "Canoe with ten Chief Indians, who fpoke very good "Grench, to thank me for my Prefents, and to aik
"Pardon for his refufing me Wood and Water, and
"s affured me I might have what I pleafed ; and they " had Orders to tell me, if I pleafed to go athore again "s they were to remain Hoftages for my civil Treatment. " I fent them on board the M an of War ; and with "Capt. Watfon went afhore. I was well received, $s$ and conducted as before: But now I found the Bro"s ther, the Chief of the Negroes, was arrived with " five hundred Negroes, moft armed with Fuzees.
" They told my Interpreter, they were fure we were sc come to force a Settlement, or elfe they would not "s have denied me what they never before had denied any " Englifh, viz. Wood and Water ; but, if I thought fit, " I might take what I pleafed under a Guard. Finding "s them in fo good a Humour, I once more introduced "s the Defire I had to entertain them on board our Ships, "s and with fome Difficulty I prevailed with them by " leaving Capt. Watfon ahore under their Guard as a "Hoftage. I carried them on board the King's Ship, " where they were well entertained by Capt. Orme, who " gave the Indian General a fine Fuzee of his own, and "s to the Chief of the Negroes fomething that pleafed " him. Capt. Orme affured them of the Friendfhip of "s the King of England, \&c. The Negro Chief fpoke " excellent French, and made Anfwers with all the French "Compliments. Afterwards I carried them on board "s theDuke's Sloop; and after opening their Hearts with "Wine, for they fcorned to drink Rum, I thought it a "good time to tell them my Commiffion, and what "6 brought me upon their Coaft. They told me, it was "s well I had not mentioned it on Shore, for their Power 6s could not have protected me; that it was impofible; "s the Dutch had before attempted it, but were glad to " retire. They likewife told me, that two French "Sloops had, the Day before we came, been amongft "s them, and gave them Arms and Ammunition, and " affured them of the whole Force of Martinico for " their Protection againft us: They told them alfo, "s that they had driven us from St. Lucia; and that " we were come now to endeavour a Settlement there; "6 and notwithitanding all our fpecious Pretences, when " we had Power we fhould enflave them; but they de"clared they would truft no Europeans: That they "s owned themfelves under the Protection of the French, " but would as foon oppofe their fettling among them, " or any Act of Force from them, as us. They had.
c lately
" lately given an Example, by killing feveral; and they "s further told me it was by very large Prefents the French " ever got in their Eavour again, but they refolved never " to put it in their Power, or of any Europeans, to hurt "s them: They advifed me to think what they faid was "s an Act of Priendfhip. This being all I could get
"s from them, I difmiffed them with fuch Prefents as his
" Grace ordered for that Service, with a Difcharge of
" Cannon; and received in Return, as regular Vollies of
${ }^{66}$ fmall Shot as I ever heard. In the Night the Winchelfea
${ }^{6}$ © drove from her Anchors, which as foon as I perceived,
${ }_{66}$ and had received Capt. Wat fon from the Shore, I got
${ }^{66}$ under Sail, and ftood to the Man of War; this is a
${ }^{66}$ faithful Report of all I Fobn Braitbrwaite can recollect."
12. Mr. Uring having read the above Report of Captain Braitbwaite, he judged there was like to be little good done at St. Vincent, and the fecond Scheme on 'St. Lucia being laid afide, he determined to unload all the Stores, and difcharge the Veffels, and propofed to Lieutenant General Matiberes, to do it at Antigua; which he faid he thought could be done with more Eafe and Security, and in much lefs Time, and would fave a great deal of Charge and Trouble, and lefs Hazard than at St. Cbrifophers: the Lieutenant General anfwered, that in his Houfe at St. Cbriftopbers was room enough to hold all the Duke's Stores, and fhould coft his Grace nothing; and, that as he had the Government of that Inland, he had fuch an Infuence over the People, that the Duke's Servants would be more fecure there, and that he could better provide for the Officers, than at Antigua; and further faid, that the Servants could be kept together in Chorles Fort, where they might have an Opportunity to difcipline them againit any new Undertaking; and accordingly afked Leave of General Hart to difcipline them, which was granted. Mr. Uring taking Notice of the Advantages that the Lieutenant General propofed, and feeing him fo very earneft for the Stores to be lodged at St. Cbriftopbers, agreed to it, and accordingly ordered them down thither, during their attending the Griffin's Return from her Errand to St. Vincent and Martinico.

Mr. Uring frequently vifited the Tranfports, to fee things were in good Order; Lieutenant General Mattbews went in the Cbarles and Ereemafon, to St. Cbrifophers, with them; and as foon as they arrived at that Illand, he, in Concert with Mr. Uring, cantoned the Officers in feveral Places, as there was Conveniency, and they were ordered to their refpective Quarters. They had now four Veffels to unload at the fame Time, and at a confiderable Diftance, and a difficult Way to carry the Stores to the Store-houfes. Mr. Uring ordered fuch a Number of Servants afhore from the Veffels, as he thought ufeful for carrying up the Stores; and Officers were appointed at different Places in the Avenues, to keep the People from running into the Country; but notwithftanding all the Care they could take, great Part of them were gone by Night. He ordered more afhore next Day, and continued landing the Stores, Cannon, Arms, Ammunition, $\mathcal{V}^{2} c$. and as the Cafks very often came to Pieces in getting up to the Store-houfes, Mr. Uring, for the moft Part, ftood by till they were repaired, and was, at leaft, thirty times a Day from the Landing-place to the Storehoufes, in order to prevent any Embezzlement, and to haften the Work. The Officers thinking the Work too hard for them all Day, though they generally ftood in one Place, Mr. Uring divided them, the one half to attend in the Morning, and the other in the Afternoon; though he was obliged to attend the whole Day, in order to preferve the Stores, which he hoped was in a good Meafure done; the Goods landing from fo many Veffels at one and the fame Time, fo many Sorts loofe, as well as in Cafks, made it no eaîy Matter to keep an exact Account.

The whole Care of every thing, as well as the Stores, was upon Mr. Uring. However the Goods were landed and itored, and after the Ships were unloaded, he fearched every Ship by Warrant, to fee if there remained any thing belonging to the Duke of Montague on board them, which the Mafters faid there did not: Several Provifions were found on board the Cbarles and Freemafon,
which were put afhore. When every thing was landed out of the feveral Ships, his next Care was to put them in good Order ; many of the Cafks being broken, they would not hold the Weight in them, therefore they ftarted them into other found Caiks and Chefts, which were made for that Ufe. He alfo caufed all the Provifions to be turned out of the Store-houfes and looked over, and fuch as were in Cafks, or wanted Pickle, were put into better, and new pickled; and he directed the worft to be firft fpent. He fitted up a Smith's Shop, kept the Smiths and Armourers at Work, and cleaning the Arms. The Men were difciplined, fo that they could do their Exercife very well, and made as regular Fires as the King's Troops.

Mr. Uring paid off feveral of the Seamen belonging to the Grifin Sloop to eafe the Charge, and ordered fuch Servants on board her as were Seamen, and as many more as he dared truft. By that Time they had put things into tolerable Order, the Hoperoell arrived, with about ninety Servants and feveral Officers, a great Quantity of Provifions, with Cannon, Ammunition, and warlike Stores, which were alfo landed 'under the Care of Mr. Uring, who had Letters by this Ship from the Duke of Montague; which informed him that his Grace was in Treaty for five hundred Englijh Families, and five hundred Irifh, which he intended to tranfport to St. Lucia as foon as poffible. The Hopewell brought from Barbadoes a Number of live Sheep, which had been carried thither by the Leopard, which was arrived at that Inand, laden with Boards, Plank, and Frames of Houfes, for the Ufe of the Colony.

When Lieutenant General Mattheros returned to Antigua, he left Mr. Uring his Houfe to live in, where was Room for moft of the Officers. He fent then to acquaint them, that he had Conveniency for them, and defigned to keep a Table for their Entertainment, confidering it would be much more convenient and lefs Charge to his Grace, for them to keep together, than be feparated. All the Servants that were not lent to the Planters were lodged in the Out-houfes, and due Care was taken both of the Sick and the Well, to have their Provifions at proper times, and well ordered. Mr. Uring feldom went to Dinner before he faw all the Sick provided, and well ferved with frefh Meat and Broth, which was for the moft Part four times a Week, and thofe that were fick, every Day. The Lame, though there were a great many of them, he dreffed himfelf for feveral Days, when he had no Surgeon. The Servants were all well fupplied out of the Duke's Stores, with Cloathing and Neceffaries, though they often ftray'd about the Country and fold them, and then complained to the Planters that they were naked; for which they were punifned and again fupplied. He frequently fent out the Sergeants with Parties, to bring in the Stragglers, and had no little Trouble to keep them in a tolerable Decorum ; he alfo put up Advertifements at all the Port Towns, to warn the Mafters of Ships from entertaining or carrying any of them of the Illand; and in the beginning of May fent Captain King in the Griffin Sloop to Barbadoes, to bring down the Runaways from thence, and fuch Letters as were lodged there from the Duke of Montague for him ; and after her return he ordered Captain Watfon to careen her, in doing of which fhe funk.

Mr. Uring having Notice thereof, went to fee her Condition, and hired two Sloops to weigh her, and the Griffin was made again fit for the Sea. Mr. Uring having been informed that many of his Grace's Servants had made their Efcape to St. Euffatia, he wrote feveral Letters to the Governor of that Inand, by Officers of the Dukes, which were fent for that purpofe, to acquaint him therewith, and to defire him to fecure them, that they might be returned to St. Cbriftophers, and accordingly two Men were brought back from thence. He had ordered the Griffin Sloop to Antigua, to lie there during the hurricane Months; when he had a Letter from Lieutenant General Mattberes, which advifed him that the Duke of Montague had impowered him to have the fole Difpofal of all his Affairs in the Wef Indies, and fent him a Copy thereof. Mr. Uring then obferved his Direction,

## Chap. III. of the ENGLISH in AMERICA.

until his Grace had wholly laid afide the Thoughts of any new Settlement ; and had given him Orders to deliver up every thing belonging to him, into the Fands of the Lieutenant General, to whom his Grace had given Direction to difcharge all, and pay them their Salaries to that Time, with an Allowance for their Paffages for England. After Mr. Uring had delivered up all Stores, Arims, Cannon, $\mathcal{E}_{c}$. to the Agent of Lieutenant General Maitbervs, he went up to Antigua, to finifh his Affairs with him, and from thence to Barbadoes, where he was received very kindly by Mr. Worley. He ftaid a Week at that Inand, and then returned to Antigua, and from thence to St. Cbriftopbers, where he took a Paffage for England, and arrived at Dover the 28th of May 1724.

Thus we have given a large and circumftantial Account of this Expedition, from the Beginning to the End of it, from the authentic Papers of the two Gentlemen chiefly concerned in it, and very frequently in their own Words. From whence it appears, that it was in all refpects the greateft and moft expenfive Scheme that was ever undertaken by a Subject of this Crown, or of any other ; for befides the Ships, naval and military Stores, Camnon, fmall Arms, Evc. he maintained four hundred and twenty-five Servants for a Year and a Half, befides eighty-five Tradefmen and Artificers of feveral forts, who had from twenty to thirty Pounds a Year Wages; and upwards of fifty Officers, with Salaries from fifty to 'four hundred Pounds a Year, all duly paid, and themfelves victualed in a very dear Part of the World, during the greateft Part of the Time. The computing therefore of the Duke of Montague's Expence at forty thoufand Pounds is rather under than over doing the Bufineifs; and nothing can induce us to fufpect the Largenefs of the Sum but the very fingularCircumftance that attends it, of its coming out of a private Purfe for the public Service, Thisindced, and the Time at which this Expedition was undertaken, renders it almoft incredible; but whoever confiders that in Seafons of the greateft Corruption (as furely that of the Soulib-Sea, and the Bubbles that attended it, was here) Providence ufually raifes up fome extraordinary Inftances of a contrary Spirit, fuch as Pbocion in the Decline of the Athenian Commonwealth, and the younger Cato when the Roman Republic was on the Point of Ruin, will the more readily credit this, and admire it the more. I fhould infift farther upon this noble and memorable Example but for two Reafons; the firt is, that as the illuftrious Perfon to whom it relates is living, amongft the many Inftances of Freedom of Speech that may be met with in this Work, I fhould be afhamed to mix any thing that might be fufpected of Flattery. The fecond Reafon is, that the Virtues of the Duke are fo well known, and fo univerfally confeffed, that I could do no Honour to any but myfelf, by endeavouring to celebrate them.

But though I am willing to decline a Tafk to which I confefs myfelf unequal, Ithall not be afraid of obferving that this is the only proper time of reviving our Claim to thofe Inands, at leaft to that of St. Lucia, to which our Title is unqueftionable. If we were not the firft Difcoverers, we were at leaft the firft Planters of that Ifland, and befides the Title which this gives us, we have another, and perhaps a better, viz. that of Purchafe from the Natives, and original Inhabitants of it. The French, it is true, have alfo fettled upon that Inand, but as Intruders only, and as fuch were obliged to quit it in the Reign of King Cbarles II. fince which our Rights to that Inand have been confirmed by Treaties. But their laft quitting it, in 1719, is the ftrongeft and cleareft Proof of all. For had they not been fenfible of their having no juft Pretenfions to St. Lucia, it is impoffible to fuppofe that Men who fo vigorounly exerted themfelves to prevent our Eitablifhment, would fo tamely have given up their own. What their Motives might be to fo ftrange a Conduct, in the Compafs of fo fhort a time, I fhall not pretend to guefs, but this I may fafely and honeflly fay, that no Change in their Conduct could poffibly create a Change in their Title or ours: If our Right in 1719 was certain, it muft have been as certain in 1722 , and if certain then, it muft be fo ftill; which
gives us a fair Demand to have this Right of ours acknowledged by the next Treaty of Peace, that can never be concluded on good Terms for this Nation, if while we ftruggle to make Fronce do Juttice to others, we fuffer her to perfift in Acts of Injuftice to ourfelves. We fee, very clearly that the general Exprefions contained in former Treaties avails nothing againt France in Time of full Peace, and therefore common Senfe teaches us, and a due Concern for the Good of our Country requires, that we fhould have Juftice done us on this Head before the Conclufion of the prefent War, becaufe unlefs it be done now, paft Experience fhews us that we can never expect it for the future: That we may very rationally hope for it now, appears to every Man of tolerable Underftanding, who reflects that France, in this Refpect, gives us nothing of which the is in Poffeffion, or to which, in her own Opinion, fhe has any juft Title ; fo that to refufe it when fhe pretends to be in a pacific Temper, muft be a plain Proof that fhe diffembles, and then it would be Madnefs to truft her.
There is, however, one Particular in relation to this Affair that ought to be difcuffed before we leave it, which is, what Proceedings have fince happened between the two Crowns in relation to this Ifland, after the Expedition before-mentioned; and as to thefe, I have received two remarkable Papers while this was printing, which I fhall give the Reader immediately. In the mean time it is requifite to obferve, that his prefent Majefty King GeorgeII. having conftituted and appointed Henry Worley, Efq; Governor and Commander in chief of this Inand, as all his Predeceffors had been, who were Governors of Barbodoes, he was graciouny pleafed to fend him the following Inftruction, in reference to the Difputes that had happened about it.

## GEORGER.

"Trufty and well beloved, we greet you well "Whereas the Frencb for fome Years lave claimed " the Ifland of St. Lucia, and do infift that the Right "to the Iflands of St. Vincent and St. Dominico, under " your Government, is in the Caribbeeans, now inhabit" ing the fame, although we have an undoubted Right " to all the faid Illands; yet we have thought fit to agree " with the French Court, that until our kight be deter" mined the faid Inands fhall be entirely evacuated by " both Nations. It is therefore our Will and Pleafure, " and you are accordingly to fignify the fame to fuch " of our Subjects as fhall be found inhabiting any of " our faid IIlands, that they do forthwith quit the fame " until the Right fhall be determined, as aforefaid; and " that they do comply with this our Order within thirty " Days from the Publication hereof in each of the faid "Inands refpectively, under Pain of our higheft Difpleafure; and you are to ufe your beft Endeavours " that no Ships of our Subjects, or of any other Nation, "do frequent the faid Inands during the time aforefaid " except coming for Wood or Water. But it is our Will " and Pleafure, that you do not execute this our Order " until the Frencb Governor of Martinico, fhall have re"ceived the like Direction from the French Court, and " fhall, jointly with you, put the fame in Execution "without any Exception. And you are hereby further "ordered to tranfinit to us, by the firft Opportunity, a " full Account of your Proceedings, as likewife of thofe " of the French in this Behalf, taking Care by all Op" portunities to inform ourfelf whether our Subjects, and "thofe of the French King, do comply punctually with the "true Intent and Meaning of this Agreement, until fuch "time as the Right to the faid Inands fhall be abfolutely " determined as aforefaid. And for your fo doing this " fhall be your Warrant. And fo we bid you farewel. "Given at our Court at St. Fames's the zoth Day of "November, in the fourth Year of our Reign, by his "Majefty's Command.

Holles Nervoafle.
It appears plainly from this Inftruction, and it will appear ftill more clearly from the French King's Letter upon this Head, that the two Courts had come to an

Agreement about this Matter, that is, about the immediate Settlement, not as to their Rights; for our King declares fully and plainly, that he looked upon his to be wholly unimpeached by this Difpute; and fo to be fure it was, and is. But let us fee the Inftructions from France, which are referred to in the foregoing Paper, which were conceived in the Words following:

The French King's Letter or Mandate, to the Governor of Martinico, dated December 26, 1730.

## Monfieur de Champigny,

"The Englifh have, for fome time paft, laid Pre"s tenfions to the Inand of St. Lucia, which belongs to " me, and to which I have an inconteftable Kight. "The fame Pretenfions they have laid to the Illands of ${ }^{6}$ St. Vincent and St. Dominico, faid to belong to the
"Caribbeeans, Natives of the Country, according to the
"Treaty of the 3 rft of March, 1660 ; and in the Pof-
"s feffion of which it is my Intention to fupport them. I
${ }^{66}$ have, neverthelefs, agreed with the Court of England,
${ }^{6}$ that until thefe Pretenfions fhall be determined, the faid
" Inands fhall be evacuated by both Nations. And this
${ }^{6}$ is to acquaint you, that it is my Pleafure, that you " make it known, $\xi^{\circ} c$." As in the former.

Upon thefe Papers I fhall make but one Remark, which is, that they clearly unravelled and expofed the true Intention and Defign, and, indeed, the whole Workings and Policy of the Court of France. There were many who faw and faid this at the Time, but thought it indecent and improper to publifh fo much, when our Court had confented to accept of this Expedient. But now that Reafon is removed, and we are at full Liberty to fay whatever can be faid with Truth upon this Subject, I cannot avoid doing fo, and fhall difpatch it in very few Words. The Frencb had not, in their own Opinion, any Title to the Ifland of St. Lucia, but what arofe from Expediency. They faw it lay near them, and they very well knew the Confequences that would follow from its being fettledby the Englifo, and this, more than any Advantages they expected from it, put them upon the Attempt to fettle it.

The Reader may poffibly imagine that I only affert this, but the Fact is otherwife; I can really prove it. The French Writers on Geography and Trade, nay the French Politicians, never dreamed of any fuch thing, as appears from the Books; and the famous Mr. Savary, in his Dictionary of Commerce, tells us plainly, that the French poffefs or claim ten of the Caribbee Iflands, eight entirely, and two in Conjunction with the Dutch; all of which he names, but does not include St. Lucia; which fhews that fuch People in France, as muft fooneft have heard of this Claim, if they had any, knew nothing about it. When I fay that this Settlement was made to prevent our gaining the Inland, rather than from any great Hopes of Profit, I mean that thefe were the Motives of the French Miniftry, becaufe they had been long of Opinion that Hifpaniola, or St. Domingo, ought to be the great Object of their Concern in thofe Parts of the World, for many Reafons, which will fall properly in another Place. All therefore that they defired, with refpect to the Iflands, was to prevent our fettling upon them, which, befides àn immediate Lofs, might prejudice their future Views; and therefore they were willing to take Poffeffion of St. Iucia as an Out-work. If they kept it, it was well, but if they kept it only from us it was better; and this was the true Reafon of their propofing the Expedient contained in the foregoing Papers, which aftually anfwered their Ends better than if the Inand had been abfolutely yielded to them by us.

But if the Situation of Affairs in Europe fifteen Years ago was fuch, as made it reafonable for us to fufpend our Right, which I lay down as a Suppofition, but am far from afferting as a Fact; the Face of Affairs is fince changed, and gives us now the faireft Opportunity to eftablifh that Right; if the War continues we may, and we ought to, do it by Force ; and whenever there comes a Peace; the French can affign no Colour or Pre-
tence whatever, againit the confirming that Right, by renouncing their unjuft and ill-founded Claim, to the preventing our fettling on it. If they took Advantage of a paft Conjuncture, when it was not convenient for us to break with them, it is our Bufinefs, as I hinted before, to take the Benefit of the prefent Conjuncture; when, without Queftion, it is the Intereft, and will be confequently the Bufinefs, of France to deny us nothing of this Kind, if we infift upon it, that is to fay, if we fhew we have it at Heart; and that we are determined to exert our naval Power, and to employ our Negociations for the Service of our own Country, for the promoting our Trade, fecuring our Navigation, and extending our Intereft in the Wef Indies.

But the Queftion may be afked, what is the real Value and Importance of the thing for which you would have us contend? What is this St. Lucio worth? What can be made of it? Why fhould we trouble ourfelves about it? In anfwer to this, I can only fay, in few Words, that it has been computed, that the Product and Commerce of this Inand might, in a few Years, be brought to yield Great Britain an annual Rent of two hundred thoufand Pounds; but to thew the Pofibility, or rather the Probability, if not the Certainty, of this Calculation, I fhall give the Reader Captain Uring's Defcription of this Inand, who went thither on purpofe to fettle it; who was a Man of great Underftanding in Matters of this Nature, and whofe Honefty was as little queftioned as his Capacity; fo that I cannot difcern any Objection that can be reafonably made to his Account, which is alfo remarkably plain and fuccinct, and with which, as to this Subject, I fhall conclude.
"St. Lucia is about twenty-two Miles in Length, and "s eleven broad; the greateft Part of it very good Land, "6 and in many Places hilly, and many rich Valleys very "w well watered with fine Rivers all through the Inand,
"6 which makes it exceedingly pleafant and delightful, and
"6 it muft be very healthful, by its being fo narrow; and " the Hills being not fo high to intercept the continual " Trade-winds, that always fan it from the Eaftward, "s whereby the Heat of the Climate is mitigated, and "s made rather agreeable than troublefome. The Variety "6 of Situations that it affords by the Hills and Vales, "6 makes it both convenient and delightful, as well as the "Pleafantnefs of the Profpects; and it is full of all "trees, amongft which are great Quantities of good "Timber, fit for building Houfes and Windmills; " from whence both Barbadoes and Martinico have been
"6 furnifhed with very great Quantities, and are ftill; the "Cacao or Chocolate Nut grows here very well, and " there grows alfo a great deal of Fuftic, and there " is abundance of wild Fowl. It lies Weft-north-weft "6 from the Inand of Barbadoes, about twenty-four "Leagues; South from Martinico about feven Leagues; "and the fame Diftance North by Eaft from St. Vin"cent ; and hath feveral good Bays, and excellent Har" bours for Ships to anchor in: One of which is the "Petite Careenage, where we defigned the firt Settle" ment. This Harbour is on the North-weft Part of "s the Inand, and is much the fineft, and moft conve" nient in all the Caribbee IJands; great Numbers of "Ships may be there fafe in all kinds of Weather, and " 6 it is very commodious for careening Ships of War and " other Veffels. If this Ifland had been fettled, as was "6 intended by his Grace the Duke of Montague, proper "s Forts built, and Garrifons placed therein, for the Pro"stection and Defence thereof, it would have been of "s the greateft Importance for the fecuring the Leeward "I/ands, and even Barbadoes, from being invaded by "France in Time of War; for no Armament can be " made, nor any Expedition carried on by the French at "6 Martinico, againft any of thofe Colonies, but muft be " known at St. Lucia, almoft as foon as the Defign is "formed, by the Nearnefs of its Neighbourhood to that "'Illand; from whence, likewife, Barbadoes, and the Lee"w ward Iflands might have Notice to provide for their " better Defence. If St. Lucia were well inhabited by "s the Englifh, the People of Martinico would know their 'Intereft better than to enter upon any Expedition

## Chap. III. of the ENGLISH in AMERICA.

" againft Barbadoes or the Leeward Iflands, when they "6 had an Enemy fo near them; for they muft needs "s confider, if their Men were fent off that Illand to in" vade the Leeroard Iflands, the Barbadians would join "s the People of St. Lucia, and fall upon Martirico in the "s Abfence of their Men; which would endanger the " Lofs of that Inland, or at leaft the Plunder or fpoiling " of it; and would be more Damage to them than any "Benefit they can propofe to themfelves, by invading the Leeroard IJands, and fo the fame if their Defign " is againft Barbadoes; the Leeward Ilands People join" ing thefe of St. Lucia, Martinico will be in the fame "Danger, and by that Means our Plantations; in thofe "Parts, will be entirely fecured by the Poffefion of $S$ t.
"Lucia, and it will alfo be in the Power of the Englifb " to difturb the French, and not in the Power of the French to hurt the Englifh. But if both Nations fhould " fit ftill without hurting each other, yet St. Lucia will " be of the greateft Advantage to Great Britain, if it " were appointed the Place of Rendezvous for his Ma" jefty's Ships of War ; from whence they might con" tinually relieve each other, if need were, and keep "s always cruizing on the French, that they could not be " able to have a Veffel go in or out of their Harbour, " but what might be intercepted by the King's Ships, " and fo the Trade of our Plantations would thereby " become fecured, and the Martinicans would have no " Reafon to boaft as they did in the late War, that they " maintained their Inlands chiefly by privateering on the "Englifh, which is too well known to the Merchants " that have been Traders to thofe Parts. But in cafe St. " Lucia was fettled, and proper Meafures purfued, it " would entirely prevent fuch Mifchiefs for the future, " and the Englifh would foon grow too powerful for the " French, who at prefent have greatly the Advantage of " the Englifh; and the Leervard IJands are in the greateft " Danger, in cafe of a War with France, of being inva"s ded, which the Englifb Planters are moft fenfible of, "s and it is what the wifeft of them apprehend every " Day."
13. The Remarks that have been already made in the Courfe of this Section, upon the feveral Subjects to which it relates, make it unneceffary for me to detain the Reader very long with Obfervations at the Clofe. But, however, fome things are both fit and requifite to be faid here, for the Information of my Readers in general; and for reminding thofe in particular, who have it in their Power to be ufeful to the Colonies. It is certain, that from the very Time Sir Walter Raleigh, the Father of our Engli/b Colonies, and his Affociates, firf projected thofe Eftablifhments, there have been many who have either found an Intereft, or took a Pleafure, in mifreprefenting or leffening the Value of them. When the Intention of improving thefe diftant Countries, and the Advantages that were hoped for from it, were firft fet forth, there were fome who treated them not only as chimerical, but as dangerous: They faid that it was very uncertain whether we might meet with Succefs, and if we did, it might difpeople the Nation. Thefe, and many other Objections, flowing partly from a Narrownefs of Underftanding, but I am afraid chiefly from a Narrownefs of Heart, have been difproved by Experience, which has fhewn that what was then propofed was practicable in itfelf, profitable in its Confequences, and attended with none of thofe Mifchiefs that thefe timorous or ill intentioned People either apprehended or feemed to apprehend.

The Difficulties which attended, and which will always attend, Settlements at the Beginning, proved a new Caufe of Clamour ; and many fpiteful things were faid about the facrificing fo many Englifbmen, to the obftinate Defire of fixing Colonies in Countries, which at that Time did not produce any great Advantages. But by Degrees, as thefe Difficulties were overcome, thofe Complaints likewife ceafed, and we heard no more of thefe pretended Hardfhips; which, in reality, were no other than the fending fuch, as from the Perverfenefs of their own Difpofitions were capable only of doing Mifchief here; fuch as the Severity of their Creditors would have deftined to

Vol. II. Numb. gi.
perpetual Imprifonment; and fuch as, either from Lazis nefs or Indigence, would have perifhed in our Streetss to be ufeful to themfelves and to the Community in the Colonies.

But when thefe Complaints ceafed, others rofe in their ftead; and when it could be no longer faid that the Colonies were ufelefs, it was alledged that they were not ufeful enough to their Mother Country ; that while we were loaded with Taxes, they were abfolutely free, and that the Planters lived like Princes, while the Inhabitants of Great Britain laboured hard for a tolerable Subfiftance. This produced Cuftoms and Impofitions upon all Plantation Commodities, which if they are grievous to the Inhabitants of the Plantations, muft turn to our Difadvantage as well as theirs, and confequently become a great Prejudice to both. At prefent there is a vaft Change in the Face of Affairs in thefe Parts of the World, which has confequently produced a Change in the Notions and Sentiments of thofe who are fettled there, and ought likewife to produce a Change in our Conduct. The principal Point in this Change is, the furprizing Growth of the French Power in America, from whence we have had many Warnings given us, which certainly were not received with fo much Attention as they ought to have been. If we had confidered, that in the Reign of King Cbarles II. when France had very little Trade, and her Colonies were of no great Confequence, fhe was almoft a Match for all Europe befide, and that too when the maritime Powers were in their moft flourifhing Condition; we might have eafily forefeen to what a Height her Power would increafe with the Help of Colonies and Commerce: But either we did not forefee it, or we fuffered ourfelves to be fo much taken up with nearer Objects, that we did not fufficiently provide againft an Evil, which of all others we ought moft to apprehend.

The very thing that has hitherto hindered us from conceiving as we ought to do of our Danger, in this Refpect, would have convinced us moft fully, if we had viewed it on the right Side, and reafoned upon it as became us. If we find that in Conjunction with the greateft Powers upon the Continent, we have not been able for fifty Years paft, to fet any Bounds to the Ambition of France in Europe, what Limits are we like to fet to her Power in America, when it comes to bear any Proportion there, to what fhe has attained here, and towards which, as we fee fhe has already made large Strides?
It may be anfwered, that at prefent the is very far from being equal to us in Strength in that Part of the World ; that the Colonies are very apt to think themfelves in Danger, long before they are fo; and that if their Fears were really fo great as they would fometimes reprefent them, as they have a Force fufficient, it is fcarce to be doubted that they would at length find a Will to help and relieve themfelves. We may anfwer to this, that if the French had a Power in America, in any Degree approaching ours, our Care might probably come too late, efpecially confidering the great Change that has happened there, where, inftead of having all the World for Allies, we have hardly fo much as a Friend in Appearance, the Spaniards being become Friends to France, and the Dutch having neither Force, nor, perhaps, Inclination to affift us. The Nature of their Government alfo, though it makes their Subjects lefs happy, makes their Colonies more formidable, and enables the Prince to protect them more effectually, and to grant them from Time to Time greater Encouragements; fo that we need not wonder they have overcome fo many Difficulties, or that the Trade of the French Illands fhould be fo much more confiderable now, than it was at the Peace of Utrecht. We may be likewife fure of this, that the more their Trade increafes, the more it will be encouraged; becaufe the French Miniftry pay a particular Regard thereto; and as we have already fhewn in our Hiftory of the Eaft India Company, they are never wanting to fuch as are not wanting to themfelves; but from the great Principle of promoting the Grandeur of France, yield all the Affiftance they can to what they vifibly perceive will increafe the Wealth, and augment the naval Power, of the Kingdom.

As to the Apprehenfions of the Colonies, Time has
fhewn
fhewn they are but too well founded; - our Settlements upon the Continent are, in a Manner, furrounded by them ; the Correfpondence between Canada and Lourifiana is in fome Meafure fettled; and, though a great length of Time may be neceffary to perfect the Defigns they may have formed on that Side, yet if we do not interpofe, as indeed we might eafily do, they will be fome time or other perfected, and then we fhall find our Circumftances very uneafy. This to every Man who will but turn his Thoughts upon the Subject, muft appear very plain and very certain; we fhould not therefore wonder that thofe who both fee and feel it, exprefs themfelves with fome Warmth upon this Topic: And at the worft, our Colonies had better alarm us too foon than number themfelves, and fuffer us to flumber till it is too late The French have already a great Power in the Inands, and if ever they fhould become entirely Matters of Hifpaniola, which we know not how foon they may, the Effects would be fatal to us. We have, at prefent, no Idea of the Importance of that Inand, or at leaft no adequate Idea of it; becaufe the Spaniards, who are poffeffed of the greatef Part of it, either from their Lazinefs or their Weaknefs, make no Ufe of it ; but we fhould find it quite otherwife if the Whole was in FrencbHands; and therefore amongft all our Guarantees, it would be very right to have a general Guarantee for the Spanifb Dominions in the Weft Indies.
As to our Colonies helping themfelves, there is no Doubt they do fo, or their Situation would be very bad. We hear daily of great Things done by their Privateers, but our Squadrons perform very little; and whoever compares the Exploits done by the Buccaneers, who were but Wef-Indian Privateers, with what has been done by regular naval Force, would fcarce believe they were of the fame Nation: Men of War in their Ports, and Commodores and Captains on Shore, do our Colonies very little Service; for they neither protect our own Trade, nor diftrefs that of the Enemy; fo that whatever Expence this may create to us we ought not to charge it upon them. If any Expedition is concerted here, we find the People in famaica and the Leerward Ifands, ready enough to expend both their Treafure and their Blood in the Execution of it ; and in Cafe of Mifcarriages, we have feldom had Reafon to lay the Blame at their Doors. As to the Northern Colonies, we have known them do fome, and attempt many, great Things; fo that it is barbarous to accufe them of being wanting to themfelves.

The Truth is, we want a proper Military Force in America; and I have often wondered that fome Way was not contrived to fend our Half-pay Officers thither: I do not mean to fend them thither upon Half-pay ; but to take fuch Meafures as that they fhould have Whole-pay, one Half from home, and the other raifed there. We might likewife make it worth the Attention of our Invalids, both Soldiers and Seamen, who, if they have common Senfe, would like a comfortable Eftablifhment in New York, Penfylvania, or Virginia, with their Wives and Families, full as well as an Apartment in any College, or being cooped up in our Garrifons, or in the Scilly Illands. If by thefe, or by any other Methods, we could eftablifh a regular Military Force, and even in time of Peace keep the Men fome way or other in Action and Difcipline, our Colonies would be a Match or Overmatch for the French, as Experience fhews from the Colony of Georgia, where we have been always a Match, and once an Over-match for the Spaniards, by mere Dint
of Military Difcipline, though we had but a very Handfull of People.

Thefe are Things that demand immediate and general Confideration. Our Colonies were always of great Confequence, but they are now of the greateft Confequence, to the Nation; for at leaft one Halt of our Commerce depends upon them, as the Whole of our Strength and Happinefs depends upon it: Our Wealth produces Liberty, and our Wealth was produced by Trade; whatever leffens that will therefore effect thefe, and if ever it fhould betaken away, we muft certainly feel what we felt before, Poverty and arbitrary Power. The wifeft Ufe therefore that we can make of Weaith while we have it is to fecure its Sources, by employing our Fleet in that Part of the Worid where their Succels muft be attended with certain and immediate Advantages; for diftreffing the Trade of the French muft benefit ours. In King William's War we had Spain for an Ally, and therefore we could not then take any Advantage from her Wealkneff. In the next general War we were neither her Friend nor Foe; we did her fome Hurt, and ourfelves no Good. But the French have been Gainers by both Wars; they had plundered the Spaniards in the firft, as open Enemies ; they ftripped them of their Money in the laft, by being pretended Friends. In the prefent War we have done pretty well, and the French have perhaps been no great Gainers by their Friendfhip with Spain. This ought to teach us the Wifdom of living with that Nation always either upon the beft Terms or the wort; as cordial Allies or as open Enemies; for whenever we are between both of thefe we are fure to be the Suffercrs, and the Frencb and Dutch run away with all.
It is our Bufinefs therefore to continue always armed in this Part of the World, where we have a fuperior Force, and where we fhould be ever ready to exert it, not againft innocent and inoffenfive Neighbours, but againtt falfe Friends and treacherous' Allies. If our legal Trade with the Spanifs Wef Indies were reftored, we ought to make it our Bufinefs to fee that it be a legal Trade; for it is certain that the Nation neither gets nor lofes, while the fame Quantity of Goods are dilpofed of by different Hands: We ought therefore to convince the Crown of Spain, that we can treat, and mean to treat, them well; and at the fame time, we fhould fhew them, that as it is not their Intereft to treat us ill, fo it is not our Nature to bear it : Illicit Trade and Conventions may do well enough for a feeble Republic, but are beneath a powerful Kingdom ; that, as it owes its Power to, ought to be always able and willing to protect, its Trade. Such are the Sentiments which ought to infpire the Breafts of BritiJs Statefmen. The reft of the World are convinced that we have not the Talents of Negociation; we ought therefore to convince them, that we do not ftand in need of fuch Talents; but that we can do our Bufinefs without them. The Dutch, whatever Language they may ufe in Europe, have always talked in this Tone in the Eaft Indies, and we ought to ufe it in the $W_{\text {eff }}$; while our Power is great there, we fhould exert and increafe it; when once it begins to decline, Advice will come too late, and therefore no Man can be blamed for giving it in time, whether it be followed or not. It is the Privilege of every Freeman to fpeak and write for the Service of his Country, and the Privilege only of a few to aft; but if the former excite, 'and the latter will perform, nothing is clearer, than that cur Country muft be ferved; which in this World is the worthieft End of Men, and therefore what we fhould all purfue.

## S E C T I O N XXI.

## The Hifory of the Rise, Progress, and Presentstate of the Colony of GEORGIA; with the Attempt made upon it by the Spaniards, and their total Defeat. Interfperfed with Original Papers.

1. An introductory Account of the Motives which gave Rife to tbis Defign of Settling to the South of Caw rolina, and the Nature of the Colony propofed. 2. A large ExtraEi of the Cbarter granted by bis prefent Majefty, for incorporating the Truftees, and enabling them to carry their Defign into Execution. 3. The Refolution taken by the Truftees woben incorporated, for fecuring Eftates in Land to the original Planters and their Heirs Male, and for the perpetual Exclufion of Negroes. 4. The firfl Colony fent over under the Direction of James Oglethorpe, Efg; the Torwn of Savannah laid out, and the firf Treaty with the Creck Indians. 5. The Return of Mr. Oglethorpe to England, in 1734, and bis bringing with bim Tomochichi and other Indians; the Acts prepared by the Truftees for the Government of Georgia, approved by the Lords of Trade and Plantations, and ratified by bis Majefy. 6. The great Embarkation, in the Year 1735, on the extraordinary Grant of twenty-five thoufand Pounds by Parliament, grounded upon a Memorial from South Carolina; with a Copy of that Memorial. 7. The Hiftory of the Colony farther continued, togetber with an Account of the Improvement made therein, and Indulgencies granted to the Plantersby the Truftees. 8. The Jame Subject purfued to the Year 1740, and a View of the Number of People Sent over by the Truftees, from the Time their Cbarter was granted to the Clofe of that Year. 9. A Proppect of the Country of Georgia as it is now Settled, the Number, Situation, and Importance of the Towns, Forts, \&c. erected there; with various other Particulars. Io. The Condition of the People int this Colony on the breaking out of the War with Spain, and the Refolution taken of acting in Conjunction with the Carolinians, offenfively, againft the Spaniards. II. A fuccinct Account of the Expedition againf Fort St. Auguftin, and the Confequences of that Expedition. 12. The Grand Invafion on that Colony by the whole Force of New Spain, and the true End of this extraordinary Armament. I3. The total and wonderful Defeat of that great Force by bis Majesty's Forces, under the Command of General Oglethorpe. 14. The Congratulations on the News of this important and decif ive AEtion, from the Governors of our $\int e-$ veral Colonies, to General Oglethorpe ; robich fheros their Senfe of the Confequences of this bappy Repulfe. 15. The prefent State of the Colony of Georgia conjidered, and its Importance demonjtrated, as a Frontier againft the French and Spaniards, as an Afylum for diftreffed Englifhmen, and foreign Proteftants; as a neceflary Means for maintaining a good Correfpondence revitb all the Indian Nations, as an excellent Support to the Iflands of Jamaica and Barbadoes, and as a Colony from whence we may reafonably expect Silk, Wine, Pot-afles, \&e.

"THE laft of the Britib Colonies in Point of Settlement, and of which hitherto we have had no accurate or juft Account, much lefs a clear and authentic Hiftory, is Georgia; of which I intend to treat with as much Perficicuity as poffible, that the Reader may apprehend the Nature of the Country, the Importance of its Situation, the Motives upon which it was fettled, the Progrefs of that Defign, the Attempts and Difappointments of the Spaniards, the prefent Situation of Things there, and the Hopes that we may rationally entertain as to its Fate and Succefs. This is certainly a very extenfive Plan; but at the fame time it is the only Plan upon which we can proceed, in order to give the inquifitive and public-fpirited Reader, a true Notion of the Nature and Importance of this new Settlement; which is undoubtedly of far greater Confequence to this Nation than hitherto it has been generally conceived to be: And therefore fuch a Hiftory as we propofe will be equally neceffary and entertaining; neceffary, as it effectually compleats the Hiftory of the Britifs America, of which this is not only the laft Colony in Point of Time, but the laft alfo in refpect to Situation, inafinuch as it extends as far fouthward as we claim any Right to, and fills up entirely the Difcoveries of the Cabots, which have been fo often mentioned; entertaining, as it confifts almoft wholly of new Matter, and as it fhews that even in this Age, when Luxury and all its Attendants, feem to be fo firmly eftablifhed in Europe, a Scheme has been formed for erecting in the pleafanteft and moft fruitful Part of North America, a Britijb Settlement, upon the trueft Principles of Virtule, Induftry, and Freedom, which cannot fail of friking firm and deep Root, and of flourinhing in fuch a manner as to do Honour to thofe worthy, difinterefted, and public-fpirited Perfons who were firft concerned in laying the Foundation of this Defign, and by whofe hearty and vigorous Endeavours it has been fo far as it is carried into Execution.
In ordier to proceed regularly, it is requifite to obferve, that about fourteen Years ago, when this Nation enjoyed a profound Peace, and when there appeared no juft Caufe to
apprehend its being fpeedily interrupted, fome Perfons of great Diftinction, from Principles of true Patriotifm, and Love to Mankind, obferving what great Numbers of People there were in thefe Kingdoms, who from a Variety of Misfortunes and untoward Accidents, found themfelves in no Condition of fubfifting, at leaft of fubfifting in fuch a Way as to be ufeful to themfelves and the Community, which is the fole Means whereby a Number of People become a Bleffing, generouly turned their Thoughts towards the Means of employing fuch Multitudes of diftreffed and indigent Perfons for their own and the public Good. Thefe Speculations produced at firft fome Thoughts of improving the moft northern Parts of our Plantations on the Continent of America; but upon more mature Reflection, and for very good Reafons, they changed their Purpofes, and turned their Thoughts to the South, particularly to that Part of America which makes properly our Frontier towards the Spaniards and the French, and which, though within the Bounds of the Province of Carolina, as defcribed in its Charter, was in reality no Part of it, as not being at all fettled; and for that Reafon, rather a Burden than an Advantage to the Province to which it belonged. Upon confining their Thoughts to this Country, they very quickly perceived, that though it had been fo long neglected, it was neverthelefs the moft valuable Part of our Poffeffions in North America, and the moit capable of being made a fruitful, populous, and ufeful Country, though at that time lying entirely wafte, overgrown with vaft Woods, which gave Shelter to a few Indians, Runaway Negroes; and other Banditti; affording great Advantages to the Spaniards in time of War, and upon the Extremities of which great Incroachments might be made before this Nation could have proper Intelligence of them. They faw that as to Climate and Situation no Country could claim a better, that it extended feventy Miles from North to South, and that it was three hundred Miles from the Midft of the: Coaft to the Apalacbian Mountains, the Country widening all the way; they were convinced that when a little opened and cleared, there could not
be a pleafanter or healthier Country upon the Face of the Globe ; that the Soil would prove fruitful, and eafy to be cultivated; that therefore People might fubfift there upon very moderate Labour; which Circumftances induced them to think, there could be no Place more proper found for the Habitation of the unhappy People before-mentioned.
But befides thefe Sentiments of private Pity, they were influenced likewife by Motives of public Utility : They forefaw that if this Project could be brought to bear, it would turn vaftly to the Advantage of Nortb and South Carolina, then lately purchafed by the Crown, by providing an effectualFrontier againit the Spaniards and the French, which they had hitherto wanted, and of the Want of which they had loudly complained: They judged by this Means, that new Alliances might be contracted with the Indians; or in cafe that could not be effected, the new Colony muft certainly keep them in Awe, and prevent their being fo terrible as within a few Years before they had been to the People of Carolina: And they faw juft Reafons to believe that this new Colony, when eftablihhed, might cultivate many rich and valuable Commodities for the Service of Great Britain. Thefe, and many other Reafons of like Nature, engaged them to think ferioufly of bringing fo compaffionate, fo practicable, and fo ufeful a Project to bear; in order to which they found it neceffary to apply themfelves to the Crown for fufficient Powers, to enable them to fet this Undertaking on foot. They did fo, and received all the Countenance and Encouragement they could defire or expect, as will appear by the following Extract from the Inftrument by which they were incorporated, and fo put into a Condition of legally executing what they had fo charitably projected.
2. "His Majefty King George II. by his Letters Pa" tent, bearing Date the gth Day of Fune, 1732, reci" ting, amongft other things, that many of his poor "Subjects were, through Misfortunes, and want of "Employment, reduced to great Neceffities," and " would be glad to be fettled in any of his Majefty's " Provinces in America; where, by cultivating the Lands " wafte and defolate, they may not only gain a com" fortable Subliftance, but alfo ftrengthen his Majelty's "Colonies, and increafe the Trade, Navigation, and " Wealth of his Majefty's Realms; and that the Pro" vinces in North America had been frequently ravaged " by Indian Enemies, more efpecially that of South Ca" rolina, whofe Southern Frontier continued unfettled, " and lay open to the Neighbouring Savages; and that " to relieve the Wants of the faid poor People, and to " protect the Subjects of South Carolina, a regular Co" lony of the faid poor People fhould be fettled and "eftablifhed in the Southern Frontiers of Carolina; and "" for the Confiderations aforefaid, conflitute a Corpora"tion by the Name of the Truftees, for eftablifhing the "Colony of Georgia in America, with Capacity to pur"chafe and take Lands; to fue and to be fued; to " have a common Seal, and to chufe Members in the " faid Corporation on the third Thurrday in March year" ly; with reftraining Claufes that no Member of the " faid Corporation fhould have any Salary, Fee, Perqui" fite, Benefit, or Profit, whatfoever, for acting therein; " or fhould have any Office, Place, or Employment of " Profit, under the faid Corporation; with a Direction " to the faid Corporation, every Year to lay an Account " in Writing before the Lord Chancellor, Chief Juftice " of the King's Bench, Mafter of the Rolls, Chief Juftice " of the Common Pleas, and Chief Baron of the Exche"quer, or any two of them, of all Money or Effects by " them received or expended, for carrying on the good "Purpofes aforefaid; with a Power to make Bye-Laws, "Conflitutions, Orders, and Ordinances; and granted, " amongft other things, to the faid Corporation, and "s their Succeffors, under the Refervations therein men${ }^{6}$ tioned, feven undivided Parts (the whole into eight ${ }^{66}$ equal Parts to be divided) of all thefe Lands, Coun"tries, and Territories, fituate, lying, and being, in that "Part of Soutb Carolina in America, which lies from the ${ }^{6}$. moft Northermoft Stream of a River there, called the
"Savannah, along the Sea Coaft to the Southward, unto "s the moft Southern Stream of a certain other great " Water or River, called the Alatamaba, and Weftward " from the Head of the faid Rivers, refpectively in direct " Lines to the South Seas. To have and to hold the "s fame to them, the faid Corporation, and their Suc${ }^{66}$ ceffors for ever; for the better Support of the faid ' Colony, under the yearly Rent of four Shillings Pro"clamation Money of Soutb Carolina, for every hundred
" Acres of the faid Lands, for every of which the faid 'Corporation fhould Grant, Demife, Plant, or Settle, but
" not to commence until ten Years after fuch Grant,
"Demife, planting or fettling; and erected and created
" the faid Lands, Countries, and Territories, into one
" independent and feparate Province, by the Name of
"Georgia; and made the Inhabitants who fhould refide
" therein free, and not fubject to any of the Laws, Or-
"s ders, Statutes, or Conftitutions of South Carolina, ex-
" cept the Commander in chief of the Militia; and au-
"s thorized the faid Corporation, for the Term of twenty
" one Years, from the Date of the faid Letters Patent,
"s to form and prepare Laws, Statutes, and Ordinances,
"s for the Government of the faid Colony, not repugnant
" to the Laws and Statutes of England; to be prefented " under their common Seal to his Majefty in Council,
"for his Approbation or Difallowance; and that the "s faid Laws fo approved of, fhould be in full Force and
" Virtue, within the faid Province. And impowered "s the faid Council for the Time being of the faid Cor-
" poration, or the major Part of them, to difpofe of, ' expend, and apply all the Money and Effects belong" ing to the faid Corporation, and to make Contracts " for carrying on and effecting the good Purpofes there" in intended; and that they hould from Time to Time " appoint a Treafurer, Secretary, and fuch other Offi' cers, Minifters, and Servants of the faid Corporation, "" as they fhould fee proper for the good Management "s of their Affairs, and at their Pleafure to remove them, "s and appoint others in their ftead; and that they fhould "6 appoint reafonable Salaries, Perquifites, and other Re" wards for their Labour or Services; and that fuch " Officers fhould be fworn before they act, for the faith" ful and dwe Execution of their refpective Offices and
"s Places; and declared that the Treafurer and Secretary " for the Time being, fhould be incapable of being
" Members of the faid Corporation ; and granted to the
" faid Corporation, that it fhould be lawful for them,
" their Officers and Agents, to tranfport and convey, "" into the faid Province, fuch of his Majefty's Subjects,
$"$ and Foreigners, as were willing to go and inhabit, and " refide there; and declared all Perfons born within the " faid Province, and their Children, and their Pofterity, " to be free Denizens, as if they had been born within " 6 any of his Majefty's Dominions; and impowered the "s faid Common Council, in the Name of the Corpora" tion, and under their common Seal, to diftribute, "s affign, transfer, and fet over fuch particular Portions " of the faid Lands, Tenements, and Hereditaments, "c unto fuch of his Majefty's Subjects and others, willing "s to live in the faid Colony, upon fuch Terms, and for " fuch Eitates, and upon fuch Rents, Refervations, and "Conditions, as the fame might lawfully be granted; " 6 and as to the faid Common Council, or the major "Part of them, fhould feem fit and proper, provided " no Grant fhould be made of any Part of the raid " Lands, unto, or in truit for, or for the Benefit of, any
${ }^{6}$ Member of the faid Corporation; and that no greater "Quantity of the faid Lands be granted, either entirely " 6 or in Parcels, to, or to the Ufe of, or in truft for, any " one Perfon, than five hundred Acres; and declared ${ }^{66}$ that all Grants made contrary to the true Intent and "Meaning thereof, fhould be abfolutely null and void. 'And granted, that the faid Corporation, for the Term " of twenty one Years, from the Date of the faid Let"ters Patent, hould have Power to erect and confti"s tute Judicatures, and Courts of Record, or other Courts s6 to be held in his Majefty's Name, for the hearing and " determining all Manner of Crimes, Offences, Pleas, ${ }_{6}$ Proceffes, Plaints, Actions, Matters, Caufes, and

## Chap. III.

"things whatfoever arifing or happening within the faid Province, or between Perfons inhabiting or refiding "there; and for awarding and making out Executions "thereupon, and directing the faid Corporation to re" gifter, or caufe to be regiftered, all Leafes, Grants, Plantings, Conveyances, Settlements, and Improvements whatfoever, as fhould at any Time be made of " any Lands, Tenements, or Hereditaments, within the " faid Province; and yearly to tranfmit authentic Accounts thereof, unto the Auditor of the Plantations, or his Deputy, and to the Surveyor of South Carolina, to infpect and furvey the fame, to afcertain the Quit-rents, which fhould become due according to the Referva"tion before mentioned. But not to have or take any "Gratuity, Fee, or Reward, for fuch Survey or Infpection, on Forfeiture of their Office; with a Provifo that all Leafes, Grants, and Conveyances, to be made of any Lands within the faid Province, or a Memorial "containing the Subftance thereof, fhould be regiftered " with the Auditors of the Plantations, within one Year " from the Date thereof; otherwife that the fame fhould " be void. And directed, that all Rents, Iffues, or Pro"fits, which Mould come to the faid Corporation, iffuing or arifing out of, or from, the faid Province, fhould " be laid out and applied in fuch Manner, as would moft improve and enlarge the faid Colony, and beft anfwer the good Purpofes therein mentioned, and for defraying all other Charges about the fame. And directed the faid Corporation, from Time to Time, to give in to one of the Secretaries of State, and to the Commiffioners of Trade and Plantations, Accounts of the Progrefs of the faid Colony. And directed that " the faid Common Council fhould, from Time to Time, for the faid Term of twenty-one Years, from the Date of the faid Letters Patent, have Power to appoint all fuch Governors, Judges, Magiftrates, Minifters, and Officers, Civil and Military, both by Sea "s and Land, within the faid Diftrict, as they fhould "think fit and needful for the Government of the faid " Colony (except fuch Officers as fhould be appointed " for managing, collecting, and receiving fuch of his " Majefty's Revenues, as chould arife within the faid Province) with a Provifo that every Governor, fo appointed, fhould be approved by his Majefty, and qualify himfelf as other Governors in America are by Law required to do, and give Security for obferving the Acts of Parliament relating to Trade and Navigation, and obeying all Inftructions from his Majefty, " or any acting under his Authority, purfuant to the faid Acts. And granted, that the faid Corporation, for the faid Term of twenty-one Years, from the Date of the faid Letters Patent, fhould have Power by any Commander, or other Officer, for that Purpofe appointed, to train, intruft, exercife, and govern a $\mathrm{Mi}-$ litia for the fpecial Defence and Safety of the faid Colony, to affemble in martial Array ; and put in Warlike Pofture the Inhabitants of the faid Colony; and in " Time of actual War, Invafion, or Rebellion, to ufe and exercife the Law Martial, and alfo to erect Forts, and fortify any Place within the faid Colony; and the fame to furnifh with all neceffary Ammunition, Provifion, and Stores of War, for Offence and Defence, and from Time to Time to commit the Cuftody and Government of them to fuch Perfon or Perfons as to "s them fhould feem meet; declaring that the Governo or Commander in Chief of South Carolina, thould have the chief Command of the Militia of Georgia, and that they fhould obferve his Orders. And granted, that " the faid Corporation fhould have Power to import and " export their Goods, at and from any Fort or Ports "that fhould be appointed by his Majefty, within the "faid Province, for that Purpofe, without being obliged "s to touch at any other Port in South Carolina. And "c declared, that after the End of the faid twenty-one " Years, fuch Form of Government, and making of "Laws and Statutes, and Ordinances, for the Govern${ }^{6}$ ment of the faid Province and its Inhabitants, fhould "s be eftablifhed and obferved within the fame, as his ${ }^{66}$ Majefty, his Heirs and Succeffors, fhould ordain and Vol. II. Numb. 9 I.
${ }^{\text {ss }}$ appoint, and fhould be agreeable to Law; and that ${ }^{6}$ after the End of the faid twenty-one Years, the Go"s vernor, and all Officers, civil and military, within the " faid Province, fhould be appointed by his Majefty, " his Heirs and Succeffors."
3. As foon as they had obtained this gracious and extenfive Charter, the following noble and honourable Perfons undertook, in Quality of Truftees, to engage vigorounly in the Execution of this Defign, viz. Antbony Earl of Sbaftfoury, Fobn Lord Vifcount Percival, fince created Eail of Egmont, Jobn Lord Vifcount Tyrconne?, Fames Lord Vifcount Lymerick, George Lord Carpenter, Edward Digby, Efq; Fames Ogletborpe, Efq; George Heatbcoate, Efq; Tbomas Tower, Efq; Robert More, Efq; Robert Hucks, Efq; William Sloper, Efq; Francis Eyles, Efq; Jobn Laroche, Efq; Fames Vernon, Efq; Stephen Hales, A. M. Ricbard Cbandler, Efq; Tbomas Frederick, Efq; Henry L'Apoftre, Efq; William Heatbcaate, Efq; Fobn Wbite, Efq; Robert Kendal, Efq; Ricbard Bundy, D. D. Their firft Care was to obtain a Fund fufficient for the fending over a confiderable Number of People, and providing them with all kinds of Neceffaries, towards which they fubfcribed liberally themfelves; ohtained confiderable Sums by way of Collection from well-difpofed People, and had befides a Grant from the Parliament of $10,000 \%$.

They next turned their Thoughts, as to the moft proper Method of fettling thefe People, when fent over to Georgia, fo as that they might be enabled to live comfortably themfelves, and at the fame Time anfwer all the Ends for which they were fent thither; it being judged highly reafonable, that thofe who were thus provided for, at the public Expence, fhould be made in every Refpect, as ufeful to the Public as poflible. They refolved therefore to confider each Inhabitant in a double Capacity, as a Planter, and as a Soldier, who were confequently to be provided with Arms for their Defence, as well as Tools for the Cultivation of their Land, and taught the Exercife of both. They alfo refolved, that upon the firft fettling of this Colony, Towns fhould be laid out, and Lands allotted each of them for their Maintenance, as near thofe Towns as poffible; that the former might ferve for their Defence, and the latter for their Subfitance. In Confequence of thefe Refolutions, it was agreed that every Lot or Portion of Land, fhould confift of fifty Acres; and that it fhould be granted them in Tale Male, as the propereft Tenure for the Colony in its Infancy, and the fittef to preferve it from thofe Inconveniencies to which it was moft obnoxious; and with refpect to any Hardfhips that might arife from this Tenure, they determined to remedy them occafionally, till fuch Time as the Condition of the Colony fhould render an Alteration neceffary.

They likewife determined to prohibit Negroes, the Ufe of them feeming abfolutely inconfiftent with the Defign of this Colony, and befides this, in many refpects, inconvenient and dangerous. Inconvenient, as the firf Coft of a Negro is about thirty Pounds; a Sum, that it was not to be fuppofed many of the People fent to Georgia could lay out for themfelves; nor was it fit that the Truitees hould do it for them, fince this would pay the Paffage, provide Tools, and defray the Expence of a white Man's Subfiftance for a Year, who would then become a Security to the Province. It was forefeen, that if a white Man kept a Negro, he would be lefs willing and lefs able to labour himfelf. If fuch as were in Circumftances to go over at their own Expence, were allowed to make ufe of Negroes, it was judged that this would difpirit the poor Planters, would incline fuch as were poffefled of Negroes to ablent themfelves, as in other Provinces; might enable them, if fuccefsful, to eat up and opprefs their poorer Neighbours; or tempt them, if unfuccefsful, to mortgage or fell their Lands to the Negro Merchants. Thefe were apparent and great Inconveniencies, but the Dangers were ftill more numerous and more certain. In the firt Place, it was evident that as the Planters in Georgia were to be fent over with their Families, if Negroes were allowed, whenever the Men were abfent from their Plantations upon any Duty, their

Wives and Children would be at the Mercy of thefe Negroes; and thus, befides the Cafe of fecuring themfelves againft foreign Invafions, they would be likewife under a Neceffity of providing for their domeftic Safety. In the next Place, it was forefeen that the Spaniords at $s t$. Augufin would be continually inticing away the Negroes, or inciting them to Infurrections; the former of which would have been very eafy, as they had only a fmall River or two to fwim over, which they might do fingly as well as in Parties; the latter was fo much the more to be dreaded, as an Attempt or two of this kind muft have greatly difcouraged, if not totally fubverted, the Englifb Colony; and the Certainty of thefe Evils was the greater, becaufe in a Time of profound Peace, the Spaniards had practifed both in regard to the Colony of South Carolina, though at a greater Diftance, from whence Negroes had often fled in little Boats to the Spamiards, and been protected; and they have likewife been incited to rife in large Bodies, to the great Terror of the Inhabitants, and to the no fmall Hazard of the Lofs of that Province: Befides, the allowing Negroes in Georgia, would have facilitated the Defertion of the Carolina Negroes, through this new Province; and confequently the Colony, inftead of proving, as it was intended, a Frontier, and thereby adding Strength to the Province of Soutb Carolina, would have proved a Means of drawing away their Slaves, to the great Prejudice of the Planters; and which was much worfe, would add thereby to the Strength of their Enemies at St. Augufin. So that taking thefe Confiderations together, viz. that Wine, Silk, Pot-afhes, and other Produces, which were expected from the new Colony, did not at all require Negroes; as the Introduction of them fo near to a Garrifon of the Spaniards, would weaken, rather than ftrengthen, the Barrier ; and as they would introduce with them a greater Propenfity to Idlenefs among the Planters, and too great an Inequality among the People; it was thought proper to make the Prohibition of them a fundamental Article of the Conflitution.

When the Truftees had made thefe Difpofitions, and were enabled, by Benefactions from the Public, and feveral private Perfons, on the 3 d of October 1732, it was refolved to fend over one hundred and fourteen Perfons, Meri, Women, and Children, being fuch as were in decayed Circumftances, and thereby difabled from following any Bufinefs in England; and who, if in Debt, had leave from their Creditors to go; and fuch as were recommended by the Minifter and Church-Wardens, and Overfeers of their refpective Parifhes ; and fomes Oglethorpe, Efq; one of the Truftees went with them at his own Expence, to fettle them. On the 24 th of the fame Month, the People were all examined, whether any of them had any Objections to the Terms and Conditions propofed to them, which they all declared they had not, but that they were fully fatisfied with them; and executed Articles under their Hands and Seals, teftifying their Confents thereto, which are now in the public Office belonging to the Truftees. But four of them defiring their Daughters might inherit as well as their Sons, and that their Widow's Dower might be confidered, the Truftees immediately refolved, that every Perfon who fhould defire the fame, fhould have the Privilege of naming a Succeffor to the Lands granted to him; who, in Cafe the Poffeffor fhould die without Iffue Male, fhould hold the fame to them and their Heirs Male for ever; and that the Widows fhould have their Thirds, as in England; with which Refolution the People being all acquainted, were very well fazisfied.

The Truftees prepared Forms of Government, agreeable to the Powers given them by the Charter ; they eftablifhed under their Seal a Court of Judicature, for trying Caufes, as well criminal as civil, in the Town of Savannab (the Name which was given to the firf Town to be raifed) by the Name and Stile of the Town Court. They alfo appointed Magiftrates there, viz. three Bailiffs and a Recorder, and inferior Officers, viz. two Conftables and two tything Men. They chofe for Magiftrates, fuch as appeared to them the moft prudent and difcreet; but amongtt a Number of People, who were all upon a Le-
vel at the firt fetting ont, it was impolible to make any Choice or Diftinction, which would not create fome future Uneafinefs among them. As I have no Relation to, or Connection with, the Truftees of Georgia, I fhall take the Liberty of making fome Remarks upon their Proceedings, which otherwife I fhould not have thought becoming either them or me. The Scheme of their Incorporation is entirely new, as was the Project of Mr. Oglethorpe's going over at his own Expence, and purely to fee thefe People put into a Way of living without him, whom he had extricated out of fo many Difficulties, and who, but for this Condefcenfion in him, muft have fallen back into thofe Difficulties again. The Attempts of Sir Walter Raleigh, for fettling of Virginia, were of this Nature with refpect to him; that is to fay, what he did was from a Motive of public Spirit; but what the Virginia Company did, was from a Principle of Gain; whereas this whole Defign rofe from the charitable and beneficent Difpofition of a few worthy and good Men, and has been hitherto conducted according to the fame Difpofition, for the Benefit of the Colony, and of the Public ; and from no other View or Intereft in the Truftees, but the making themfelves happy from the Confcioufnefs of well doing; which at the fame Time that it reflects Reputation upon them, does the higheft Honour to this Age and Country, in which the Defire I have to have fome fmall Share, produced the Pains taken in this Section, which I flatter myfelf will, like its Subject, prove of great Utility to the Public.
4. On the 15 th of November Mr. Ogletborpe fet out for Gravefend, from whence he foon failed for Carolina, where they arrived on the 15 th of January following, and were received at Cbarles Toren by the Governor, with great Kindnefs and Civility; who ordered Mr. Middleton, the King's Pilot, to carry the Ship into Port Royal, and Small Craft to convey the Colony from thence to the River Savannab. In ten Hours they proceeded to Fort Royal. On the i 8th Mr. Ogletborpe wen's afhore upon French's Ifland, and left a Guard upon Fobw's, being a Point of that Ifland, which commands the Channel, and is about half Way between Beaufort and the River Savannah. They had Orders to prepare FIuts, for the Reception of the People in their Paffage from thence. Mr. Ogletborpe went to Becufort Towon, and was faluted with a Difcharge of the Artillery, and had a new Barrac fitted up, where the Colony landed on the 20th, and were chearfully affifted by Lieutenant Wats, and Enfign Farrington, and the other Officers of the independent Company; as alfo by Mr. Ledebar, and other Gentlemen of the Neighbourhood; from thence he went to view the Savamnab River, and pitched upon a convenient Spot of Ground, ten Miles up the River, on which he defigned to build a Town. The Reader will obferve that this was exactly agreeable to the Refolutions taken by the Truftees at home ; and as there was no Time loft in fixing upon the Place, fo on the 9 th of February the Town was marked out, and the firft Houfe begun.

The chief Reafons that determined Mir. Ogletborpe in the Choice of this Place were, Health, Pleafure, and Conveniency. Before his Arrival in the Country, it had the Name of an Indian Nation, viz. Cammacraw, who inhabited here, under the Command of the Chief, Tomochichi, and who readily gave them Place, and entered into a clofe Friendfhip with him; fo much the more agreeable to both Parties, as there was no other Indian Nation within fifty Miles. But Mr. Oglethorpe called the Town by the Name of the River Savannab. It lies, according to Captain Gafcoigh's Obfervations, in the Latitude of 31 Degrees 58 Minutes, which he took off Tybee, an Ifland that lies at the Mouth of the Savannab River. It is diftant from Cbarles Town South-weft, according to the Courfe and Windings of the Rivers and Creeks, about one hundred and forty Miles, but by a direct Courfe feventy-feven, allowing Suilivan's IJand to be in the Latitude of 32 Degrees 47 Minutes; from Augufin North-eaft and by Ealt about one hundred and forty Miles; and by the Courfe of the Rivers is diftant from Fort Moore three hundred Miles; but upon a direct Line but one hundred and fifteen Miles North-

## Chap. III.

of the ENGLISH in AMERICA.
weft and by Weft ; this Bluff is diftant ten Miles from the Mouth of the River on the South-fide; and Parrys burgb is twenty four Miles above it, on the North, and is fo fituated as to have a beautiful Profpect, both up and down the River. It is very fandy and barren, and confequently a wholefome Place for a Town or City, if Savannab fhould ever grow up and rival Pbiladelpkia.

After putting things into order here, and affigning every Man his proper Station and Employment, Mr. Ogletborpe, in Company with Colonel Bull, who came from Cbarles Town to pay him a Vifit, and teftifyed great Satisfaction at the Progrefs they made, fet out for Cbarles Town to follicit Succours for his Colony. Before we take Notice of the Succefs he met with on that Occafion, it may not be amifs to tranfcribe a Paragraph from the South Carolina Gazette, dated Cbarles Tovon, March the $22 \mathrm{~d}, 1732$, in which there is an Account given of a Journey to Georgia, which will fhew the Sentiments of the People of that Colony, at a Time when they were freed from all Prejudices, Apprehenfions, and Prepoffeffions. After defcribing the Town in the Manner we have done, they fay, "When they, that is the new Colony,
arrived, there was ftanding on it, viz. the Place "where the Town now flands, a great Quantity of the beft Sorts of Pines, moft of which are already cut down " on the Spot where the Town is laid out to build "The Land is barren about a Mile back, when you come into very rich Ground; and on both Sides, with" in a quarter of a Mile of the Town, is choice good " planting Land. Colonel Bull told me that he had been " feven Miles back, and found it extraordinary good. " Mr. Oglethorpe is indefatigable, takes a vaft deal of "Pains; his Fare is but indifferent, having little elfe at " prefent but falt Provifions: He is extremely well be " loved by all his People. The general Title they give " him is Father. If any of them are fick, he immediately " vifits them, and takes a great deal of Care of them. If anyDifferences arife, he is the Perfon that decides them: Two happened while I was there, and in my Prefence, and all the Parties went away, to outward Appearance, " fatisfied and contented with his Determination. He " keeps a ftrict Difcipline ; I never faw one of his Peo" ple drunk nor heard one fwear, all the Time I was there. " He does not allow them Rum, but in lieu gives them

Englijb Beer. It is furprifing to fee how chearfully the "Men go to work, confidering they have not been " bred to it. There are no Idlers there, even the © Boys and Girls do their Parts. There are four Houfes "" already up, but none finifhed; and he hopes when he "c has got more Sawyers, which I fuppofe he will have " in a fhort time, to finifh two Houfes in a Week. He "" has plowed up fome Land, Part of which he fowed "" with Wheat, which is come up, and looks promifing. "He has two or three Gardens, which he has fowed with "c divers Sorts of Seeds; and planted Thyme, with other "Sorts of Pot-herbs, Sage, Leeks, Scallions," Celery, "Liquorice, $\mathcal{B}^{\circ}$ c. and feveral Sorts of Fruit-Trees. He "was pallifading the Town, and inclofing fome Part of "t the Common, which I do fuppofe may be finifhed in a "Fortnight's time. In fhort, he has done a vaft deal of "W Woik for the Time; and I think his Name ought to be immortalized."
This fufficiently fhews how well pleafed the People at Carolina were, as indeed they had Reafon to be, with this new Settlement; as a further Teftimony of which, not only the Affembly, but the People in general, contributed largely to the Affiftance of the new Comers five hundred Pounds of which Money Mr. Ogletborpe laid out immediately in Cattle, and having given other Directions for providing at Cbarles-Town what his People might have Occafion for, he very fpeedily fet out on his return for Savamnah, and on his way lay at Colonel Bull's Houfe on A/bly River. There the Reverend Mr. Guy, Rector of St. Fobn's Parifh, waited on him, and told him his Parifhioners had raifed a handfome Contribution. Being arrived at Savamnab, he found that Mr. Wiggan, the Interpreter, with the chief Men of the Lower Creek Nation, had been to treat of an Alliance with the new, Colony. The Loveer Creeks are a Nation
of Indians, who formerly confifted of ten, but now are reduced to eight, Tribes, who have each their different Government, but are allied together, and fpeak the fame Language. They clain from the Savannab River as far as St. Augufins and up Flint River, which falls into the Bay of Mexico. Tomocbicbi, Mico, and the Indians of Yammacraze were of the Creek Nation and Language.
Mr. Ogletborpe received the Indians in one of the new Houfes. They were as follows: From the Tribe of Cowveta, Yaban Lakee, their King or Mico, Effaboo, their Warrior, the Son of Old Brim, lately dead; whom the Spanierds called Emperor of the Creeks, with eight Men and two Women Attendants. From the Tribe of $\mathrm{Cu}-$ fetas, Cufeta, their Mico, Tatcbiquatchi, their Head Warrior, with four Attendants. From the Tribe of Orefeecheys, Ogeefe, the Mico or War King; Neathloutbko and Ougacbi two chief Men, with three Attendants. From the Tribe of Cbeechaves, Outbleteboa, their Mico, Tblautho-tblukee, Figeer, Sootamilla, War Captains, with three Attendants. From the Tribe of Ecbetas, Cbutabeeche and Robin, two War Captains (the latter was bred among the Englijb) with four Attendants. From the Tribe of Polacbucolas, Gillattee, their Head Warrior, and five Attendants. From the Tribe of Oconas, Oueekacbumpa, called by the Englijh Long King, Koowoo, a Warrior. From the Tribe of Eufaule, Tomoumi, Head Warrior, and three Attendants.
The Indians being all feated, Oucekacbumpa, a very tall old Man, foood, and made a Speech, which was interpreted by Mr. Wiggan and Mr. Mufgrove, and was to the following Purpofe: He firft claimed all the Lands to the Southward of the River Savannab, as belonging to the Creek Indians. They then faid, though they were but poor and ignorant, he that had given the Englifh Breath had given them Breath alfo. That he that had made both had given more Wifdom to the White Men. That they were perfuaded that the great Power which dwelt in Heaven, and all around, (and then he fpread out his Hands and lengthened the Sound of his Words) and which hath given Breath to ail Men, had fent the Englijh thither, for the Inftruction of them, their Wives and Children : That, therefore, they gave them up freely their Right to all the Land they did not ufe themfelves. That this was not only his Opinion, but the Opinion of the eight Towns of the Creeks, each of whom having confulted together, had fent fome of their chief Men with Skins, which is their Wealth.

Then the chief Men brought a Bundle of Buck-Skins, and laid eight from the eight Towns before Mr. Ogletborpe. He faid thefe were the beft Things they had, and that they gave them with a good Heart. He concluded with thanking him for his Kindnefs to Tomocbichi, Mico, and his Indians, to whom he faid he was related, and though Tomocbicbi was banifhed from his Nation, that he was a good Man, and had been a great Warrior; and it was for his Wifdom and Juftice that the banifhed Men had chofe him King. He alfo faid, that he had heard that the Cberokees had killed fome Englijpmen, and that if Mr. Oglethorpe would command them, they would enter their whole Force into the Cberokee Country, deftroy their Harveft, kill the People, and revenge the Englijh. When he had done fpeaking, Tomocbicbicame in with the Yommacrawo Indians, and naking a low Obeifance, faid, I was a banifhed Man, and I came here poor and helplefs to look for good Land near the Tombs of my Anceftors, and when the Englifh came to this Place I feared you would drive us away; for we were weals and wanted Corn. But you confirmed our Land to us, and gave us Food. Then the Chiefs of the other Nation made Speeches to the fame Purpofe as Oueekachumpa's.
After which they agreed with Mr. Oglettorpe on a Treaty of Alliance and Commerce, which was figned by him and them. A laced Coat, a laced Hat, and a Shirt, were given to each King, and to each of the Warriors a Gun, a Mantle of Duffils, and to all their Attendants coarfe Cloth for cloathing, and other things. The Articles of Agreement were, I. The Truftees agreed to let their People carry into the Indian Towns all Sorts of Goods fitting to Trade at Rates and Prices fettled by the Treaty. II. Reftitution and Reparation to be made for Injuries on both Sides, and Criminals to be tried and pu-
nifhed according to the Englifh Law. III. Trade to be withdrawn from any Indian Town offending againft Treaty. IV. The Englifh to poffefs all Lands not ufed by the Indians, provided, that upon fettling of every new Town the Englifh fhould fet out for the Ufe of their Nation, fuch Lands as fhould be agreed on between the Englifb beloved Men, and the Head-Men of their Nation. V. To reftore all runaway Negroes, and carry them either to Cbarles Town, the Savannab, or Petacbuchula Garrifon, upon being paid for every fuch Negro four Blankets, or two Guns, or the Value thereot in other Goods, if taken on the other Side Ocorivy River ; and one Blanket if the Negro is killed in taking or endeavouring to make his Efcape. VI. Laftly, They promife, with ftrait Hearts and Love to their Brother Englifh, to give no Encouragement to any other white People to fettle there, and to all this they fet the Marks of their Families. This Treaty being concluded, Mr. Oglethorpe thought fit to return into England, as well to report the Situation things were in, in that Country, as to procure the neceffary Supplies for promoting the new Colony.
5. In the Month of June 1734 Mr. Ogletborpe arrived fafely in England, bringing with him Tomocbicbi, Mico or King of the Sammacraws; Senawki, his Confort, and Toonakowi, the Prince his Nephew, as alfo Hillifpilli, a War Captain, and Apakowtfki, Stimalecbi, Sintoucbi, Hinguitbi, and Umpbycbi, five other Indian Chiefs, with their Interpreter. They were lodged at the Georgia-Office, Old-Palace-Yord, where they were handfomely entertained; and, being fuitably dreffed, were introduced to the Court, then at Kenfington. Tomocbicbi prefented to the King feveral Eagles Feathers; which, according to their Cuftom, is the moft refpectful Gift he could offer, and made the following Speech to his Majefty. "This Day I fee the Majefty of your Face, and "G Greatnefs of your Houle, and the Number of your sc People, I am come for the Good of the whole Na"s tion called the Creeks, to renew the Peace they had "s long ago with the Englifh. I am come over in my " old Days; though I cannot live to fee any Advantage 's to myfelf. I am come for the Good of the Children "s of all the Nations of the Upper and Lower Creeks, that "s they may be inftructed in the Knowledge of the Eng"s lifh. Thefe are the Feathers of the Eagle, which is " 6 the fwifteft of Birds, and who flieth all round our
" Nations. Thefe Feathers are a Sign of Peace in our
"s Land, and we have brought them over to leave them " with you, O! great King, as a Sign of everlafting " Peace. O! great King, whatfoever Words you thall " fay unto me I will tell them faithfully to all the Kings "s of the Creek Nations." To which his Majefty made a gracious Anfwer, affuring thofe Nations of his Protection and Regard.

Thefe Indians, but more efpecially their Mico or Prince, gave evident Marks, during their Stay in England, of good Senfe, and of a fincere Inclination to carry on a friendly Correfpondence between their own Nation and ours; and therefore they defired of the Truftees, that the Meafures, Prices, and Qualities of Goods to be purchafed by them, with their Deer-Skins, might be fettled, as likewife the Weights ; that no body might be allowed to trade with the Indians in Georgia, without a Licence from the Truftees, in order, that if they were in any refpect injured, or defrauded by the Traders, they might know where to complain. And they further defired, that there might be but one Store-houfe in each Indian Town, for fupplying them with the Goods they might want to purchafe, from whence the Traders fhould be obliged to fupply them at their fixed Prices. The Reafon which the Indians gave for this Application was, becaufe the Traders with them had often, in an arbitrary Manner, raifed the Price of Goods, and defrauded them in the Weights and Meafures; and, by their Impofitions, had often created Animofities between the Englifh and Indians, which had frequently ended in Wars between them, prejudicial to both.

In Compliance with this Requeft of theirs, the Truftees prepared a Law, intitled, An ACF for maintaining the Peace with the Indians in the Province of Georgia; which
contained the fame Regulations and Provifions that were made in an Act paffed by the Council and Affembly in South Carolina, in the Year 1731 , which Act would have reached the Country now called Georgia, if it had not been erected into a feparate Province. They likewife prepared another Law, calculated for the fame falutary Purpofe, I mean the preventing any Dangers from the Indians, by the pernicious Effects of fpirituous Liquors, as well as the Health of the People already fettled, and that might be fettled, in their new Colony, which was intitled, An AEt to prevent the Importation and Ufe of Rum and Brandies in the Province of Georgia, or any kind of Spirits, or Arong Waters what foever. They likewife prepared a third Law, upon a very mature Deliberation, and for the Reafons before mentioned, intitled, An AIZ for rendering the Colony of Georgia more defenfible, by probibiting the Importation of Black Slaves, or Negroes, in the fame. Thefe three Acts were laid before the King in Council, in the Month of Fanuary following; and after a Report from the Board of Trade, That they were proper to receive his Majefty's Approbation, they were accordingly ratified. Two Embarkations were made this Year, whofe Numbers are hereafter mentioned, which confifted chiefly of Saltfourghers, who with the Salffurghers that went before, were fettled in a Town called by them Ebenezer, up on the River Savannah, at fome Diftance above the Town and by the Sobriety and Induftry of the People, they prove a very thriving Settlement.
6. In the fucceeding Year, 1735 , the Trutees were en couraged by an extraordinary Supply of twenty-fix thoufand Pounds, granted by Parliament, and very confiderable Benefactions, as well in Carolina as in England, to think of making very confiderable Embarkations for ftrengthening the fouthern Part of Georyia; and to obviate any Objection that might be made, as in Undertakings of this Nature Objections will never be wanting, of their fending ufeful Poor from hence, it was refolved, That thefe Embarkations fhould confift moftly of People from the North of Scotland, and perfecuted Germon Proteftants. The Reader will obferve, that by the Care taken in tinis Refpect, the Nation gained a very confiderable Advantage, fince by this Means the Overfowings of all the Northern Countries of Europe, which are known to breed robuft, hardy and induftrious People, were fecured for our Service, and carried over and fettled in that Part of his IVajefty's Dominions where fuch People were wanted moft; where, from their Circumftances, they were obliged to fulfil (as indeed they have always done) the Ends for which they were fent thither ; and fo became an Acceffion of Strength of great Confequence and Advantage, at a very fmall and inconfiderable Expence. But that the Reader may be fully apprized of, and perfectly comprehend, the true Reafons which induced the Parliament to grant fo much Money, for the Settlement and Improvement of the Colony this Year, and may likewife be enabled to judge of the Weight and Importance of thefe Reafons, it is requifite to inform him, that the Colony of South Carolina drew up a Memorial, dated the gth of April I734, figned by Robert Gobnfon, Efq; their Governor, Tbomas Broughton, Prefident of the Council; and Paul Fenys, Speaker of the Commons; containing a Reprefentation of the State and Condition of that Province, and therein fo full, fo clear, and fo authentic an Account of Facts, equally curious and important, that it is impofible to fet them ciown either in fewer or better Words than are ufed in that Memorial ; Part of which therefore we fhall give here, and fhould very willingly have given the Whole, if the Nature of our Work would have allowed us Room.
"Your Majefty's Subjects of this Province, having "s often felt, with Hearts full of Gratitude, the many " fignal Inftances of your moft facred IViajefty's peculiar "Favour and Protection to thefe diftant Parss of your "Dominions, and efpecially thofe late Proofs of your "Majefty's moft gracious and benign Care, fo wifely "calculated for the Protection of this your Majefty's Frontier-Province on the Continent of America, by " your royal Charter to the Truftees for eftablithing "the Colony of Georgia; and your great Goodn is io
" rightly and timely applied in protecting the Settlement of the Sroifs atPurryfourg. Encouraged by fuch juft Views of your Majefty's wife and paternal Care, extended to your remoteft Subjects ; and excited by the Duty which we owe to your moft facred Majefty, to be always watchful for the Support and Security of your Majefty's Intereft, efpecially at this very critical Juncture, when the Flame of a War breaking out in Europe, may very fpeedily be lighted here, in this your Majefty's Frontier Province, which by its Situation is known to be of the utmoft Importance to the general Trade and Traffic of America: We therefore, your Majefty's moft faithful Governor, Council, and Commons, convened in your Majefty's Province of South Carolina, crave Leave with great Humility to reprefent to your Majefty the prefent State and Condition of this your Province, and how greatly it ftands in need of your Majefty's gracious and timely Succour in Cafe of a War, to affift our Defence againft the French and Spaniards, or any other Enemies to your Majefty's Dominions, as well as againft the many Nations of Savages, which fo nearly threaten the Safety of your Majefty's Subjects.
" The Province of Carolina, and the new Colony of Georgia, are the fouthern Frontiers of all your Majefty's Dominions on the Continent of America; to the South and South-weft of which is fituate the ftrong Caftle of St. Augufin, garrifoned by four hundred Spaniards, who have feveral Nations of Indians living under their Subjection, befides feveral other fmall Settlements and Garrifons near the Appellacbes, fome of which are not eighty Miles diftant from the Colony of Georgia. To the South-weft and Weft of us, the French have already erected a confiderable Town near Fort Thouloufe on the Moville River, and feveral other Forts and Garrifons, fome not above three hundred Miles diftant from our Settlements; and at New Orleans on the Mififippi River, fince her late Majefty Queen Anme's War, they have exceedingly encreafed their Strength and Traffic, and have now many Forts and Garrifons on both Sides of that large River, for feveral hundred Miles up the fame. And fince his mott Chriftian Majefty has taken out of the Miffipppi Company the Government "of that Conntry into his own Hands, the French "Natives of Canada come daily down in Shoals, to fettle all along that River, where many regular Forces have been fent over by the King, to ftrengthen the Garrifons of thofe Places; and according to our beft and lateft Advices, they have five hundred Men in Pay conftantly employed as Wood-Rangers, to keep the neighbouring Indians in Subjection, and to prevent the diftant ones from difturbing their Settlements ; which Management of the French has fo well fucceeded, that we are very well aflured they have wholly now in their Poffeffion, and under their Influence, the feveral numerous Nations of Indians that are fituate near the MiffifSippi River; one of which, called the Cboctawe, by Eftimation, conffifing of about five thoufand fighting Men, and who were always deemed a very warlike Nation, lies on this Side the River, not above four hundred Miles diftant from our Out-fettlements. ' Among whom, and feveral other Nations of Indians, many French Europeanis have been fent to fettle, whom the Priefts and Miffionaries among them encourage to take Indian Wives, and ufe divers other alluring Methods to attach the Indians the better to the French Alliance: By which Means the French are become thoroughly acquainted with the Indian Way of warring and living in the Woods, and have now a great Number of white Men among them, able to perform a long March, with an Army of Indians, upon any Expedition.
s We furth
"We further beg Leave to inform your Majefty, That if the Meafures of France fhould provoke your "s Majefty to a State of Hoftility againft it in Europe, we have great Reafons to expect an Invafion will be here " made upon your Majefty's Subjects, by the French " "6 and the Indians, from thefe Miffifippi Settlements: GThey have already paved a Way for a Defign of that Nature, by erecting a Fort called the Albama Fort, Vob. II. Numb. XCII.
alias Fort Louis, in the Middle of the Upper Creek Indians, upon a navigable River leading to Moville, which they have kept well garrifoned, and mounted with fourteen Pieces of Cannon; and have already been prevented from erecting a fecond nearer to us in that Quarter. The Creeks are a Nation very bold, active, " and daring, confifting of about thirteen hundred " fighting Men (and not above one hundred and fifty
"Miles diftant from the Choclaws) whom though we
"s heretofore have traded with, claimed, and held in our "Alliance, yet the French, on account of that Fort; " and a fuperior Ability to make them liberal Prefents,
" have been for fome time friving to gain them over to " their Intereft, and have fucceeded with fome of the "s Towns of the Creeks, which if they can be fecured in "s your Majefty's Intereft, are the only Nation which your Majefty's Subjects here can depend upon, as their " beft Barrier againft any Attempts, either of the French "s or their confederate Indians.
"We moft humbly pray Leave further to inform your "G Majefty, that the French at Moville, perceiving that they "could not gain the Indians to their Intereft without " buying their Deer Skins, which is the only Commo" dity the Indians have to purchafe Neceffaries with," and " the French not being able to difpofe of thofe Skins', " by reafon of their having no Vent for them in Old "France, have found Means to encourage Veffels from " hence, Nere Kork, and other Places which are not " prohibited by the Acts of Trade, to truck thofe " Skins with them for Indian trading Goods, efpecially
" the Britifb Woollen Manufactures, which the Frencb
" difpofe of to the Creeks and Cboctaws, and other
"Indians; by which Means the Indians are much more
" alienated from our Intereft ; and, on every Occafion, " object to us, that the French can fupply them with " Shrouds and Blankets as well as the Englifh; which " would have the contrary Effect, if they were wholly " furnifhed with thofe Commodities by your Majefty's " Subjects trading among them. If a Stop were there" fore put to that pernicious Trade with the French, the
"Creek Indiens chief Dependance would be on this
"Government, and that of Georgia, to fupply them with
" Goods; by which Means great Part of the Cboczores
" living next the Crecks, would fee the Advantage the
"Creek Indians enjoyed, by having Eritibl Woollen "Manufactures wholly from your Majefty's Subjects, " and thereby be invited, in a fhort time, to enter into " a Treaty of Commerce with us, which they have " lately made fome Offers for, and which, if effected, "s will foon leffen the Intereft of the French with thefe "Indians, and by Degrees attach them to that of your © Majefty.
"The only Expedient we can propofe to recover " and confirm that Nation to your Majelty's Interef, "c is by fpeedily making them Prefents; to withdraw "them from the French Alliance, and by building fome " Forts among them. Your Majefly may be put into " fuch a Situation, that on the firft Notice of Hoftilities ". with the French, your Majefty may be able to reduce " at once the Albama Fort, and we may then ftand "s againft the French and their Indians; which if not "t timely prepared for, before a War breaks out, we " have too much Reafon to fear we may be foon over-
"s run by the united Strength of the French, and the "Creeks, and Cboctares, with many other Nations of " their Indian Allies: For hould the Creeks become " wholly our Enemies, who are well acquainted with all "s our Settlements, we probably fhould alfo foon be de"ferted by the Cberokees, and a few other Imall Tribes " of Indians; who, for the Sake of our Booty, would " readily join to make us a Prey to the Frenct and Sa" vages. Ever fince the late Indian War, the Offences "s then given us by the Creeks, have made that Nation " jealous of your Majetty's Subjects of this Province. "We have therefore concerted Meafures with the Ho"s nourable Fanes Oglethorpe, Efq; who being at the ${ }^{66}$ Head of a new Colony, will, we hope, be fuccefsful ${ }^{6}$ for your Majefty's Intereft among that People. He "s has already, by Prefents, attached the Loroer Creeks to

6 the
" the Service of your Majefty, and has laudibly under-
${ }^{6}$ taken to endeavour the fixing a Garrifon among the
" Upper Creeks; the Expence of which is already in Part " provided for, in this Seffion of the general Affembly
"6 of this Province. We hope therefore to prevent the
". French from incroaching farther on your Majefty's
" Territories, until your Majefty is graciounly pleafed
" further to ftrengthen and fecure the fame.
" We find the Cberokee Nation has lately become very
" infolent to your Majefty's Subjects trading among
" them, notwithftanding the many Favours which the
" Chiefs of that Nation received from your Majefty
"" in Great Britain; befides a confiderable Expence
" which your Majefty's Subjects have been at, in mak-
" ing them Prefents, which inclines us to believe that
" the French, by their Indians, have been tampering with
"them. We therefore beg Leave to inform your Ma-
" jefty, that the building and mounting fome Forts alfo
" among the Cberokees, and making them Prefents, will
" be highly neceffary to keep them fteady in their Duty
" to your Majefty, left the French may prevail in fe-
"d ducing that Nation; which they may the more readi-
" ly be inclined to, from the Profpect of getting confi-
s derable Plunder in Slaves, Cattle, and Commodities,
" which they very well know they have among us. Se-
"s veral other Forts will be indifpenfibly neceffary, to
" be a Cover to your Majefty's Subjects fettled back-
"s wards in this Province, as alfo to thofe of the Colony
" of Georgia, both which in Length are very extenfive.
"For though the Truftees for eftablifhing the Colony
" of Georgia, by a particular Scheme of good Manage-
" ment, faithfully conducted by the Gentleman engaged
"s here in that charitable Enterprize, have put that
"s fmall Part of the Colony which he has yet been
" able to eftablifh, in a tenable Condition againft the Spa-
" niards of Florida, which lye to the Southward; yet
"s the back Expofition of thofe Colonies to the vaft
" Number of French and Indians, which border on the
" Weftward, muft, in cafe of a War, cry greatly aloud
"for your Majefty's gracious and timely Succour. The
" Expence of our Safety on fuch an Occafion, we mult
"s in all Humility acquaint your Majefty, either for Men
" or Money, can never be effected by your Majefty's

* Subjects of this Province, who, in Conjunction with
"Georgia, do not, in the whole, amount to more than
" three thoufand five hundred Men that compofe the Mi-
" litia, and wholly confift of Planters, Traders, and " other Men in Bufinefs."

There are fome other Paragraphs in this Memorial which are ftill more worthy of Notice, and which therefore we fhall give the Reader in the Words thereof. " We muft further beg Leave to inform your Majefty,
" that amidft our other perillous Circumftances, we are
"fubject to many.inteftine Dangers, from the great
" Number of Negroes that are now among us, who
" amount, at leaft, to twenty-two thoufand Perfons, and
"" are three to one of all your Majefty's white Subjects in
" this Province. Infurrections againft us have been often
" attempted, and would at any Time prove very fatal,
" if the French fhould inftigate them by artfully giving
" them an Expectation of Freedom. In fuch a Situa-
" tion we moft humbly crave Leave to acquaint your
" Majefty, that even the prefent ordinary Expences, ne-
${ }^{66}$ ceffary for the Care and Support of this your Majefty's
" Province and Government, cannot be provided for
"s by your Majefty's Subjects of this Province, without
"c your Majecty's gracious Pleafure to continue thofe Laws,
"for eftablifhing the Tax on Negroes, and other Duties,
" for feven Years, and for appropriating the Laws which " now lie before your Majefty, for your royal Affent and
" Approbation; and the further Expences that will be
"s requifite for the erecting fome Forts, and eftablifhing
${ }^{6}$ Garrifons in the feveral neceffary Places, fo as to form
${ }^{6}$ a Barrier for the Security of this your Majefty's Pro-
${ }^{66}$ vince, we moft humbly fubmit to your Majeity.
"Your Majefty's Subjects of this Province, with Fulnefs of Zeal, Duty, and Affection, to your moft gra-
"cious and facred Majefty, are fo highly fenfible of the
"s great Importance of this Province to the French, that
"we munt conceive it more than probable, if a War
" fhould happen, they will ufe all Endeavours to bring
"this Country under their Subjection. They wonld " thereby be able to fupply their Sugar Inands with all 'Sorts of Provifions and Lumber, by an eafy Naviga" tion Trade, which, to our great Advantage, is now " not fo practicable from the prefent French Colonies:
"Befides the Facility of gaining then to their Intereft " moft of the Indian Trade on the Northern Continent, "' they might alfo eafily unite the Canadees and Choctares, " with the many other Nations of Indians which are now " in their Intereft. And the feveral Ports and Harbours " of Carolina and Georgia, which now enable your Ma" jefty to be abfolutely Mafter of the Paffage through the "Gulph of Florida, and to impede, at your Pleafure, the " tranfportation Home of the S'panif Treafure, would " then prove fo many convenient Harbours for your " Majefty's Enemies, by their Privateers or Ships of "War, to annoy a great Part of the Britibs Trade to "America, as well as that which is carried on through " the Gulpb from Jamaica, befides the Lofs which " Great Britain muft feel in fo confiderable a Part of its " Navigation, as well as the Exports of Mafts, Pitch, "Tar, and Turpentine, which, without any Depend" ance on the Northern Powers of Europe, are from " hence plentifully fupplied for the Ufe of the Britifb "Shipping.
". This is the prefent State and Condition of your Ma" jefty's Province of South Carolina, utterly uncapable " of finding Funds fufficient for the Defence of this wide " Frontier, and fo deftitute of white Men, that even " Money itfelf cannot here raife a fufficient Body of " them." The great Length of this Memorial prevents our making many Remarks thereon; fome few, however, are abfolutely requifite.

The Reader will, from hence, fee how well timed, and how well contrived, the new Settlement of Georgia was, in the Opinion of thofe who were the beft Judges; how juft and how prudent the Precaution of the Truftees in prohibiting Negroes; and how wifely and happily for the public Service they contrived to fend over, both from our own Country, and other Parts of Europe, white People, and Proteftants, by which they effectually provided for the Security of all the Northern Colonies behind it ; which, whenever this Country comes to be thoroughly peopled, as it may be in a very few Years Time in Days of Peace, if due Attention be had thereto, will be fuch a Barrier, as neither Spaniards nor French can ever break through, and confequently will for ever put an End to thofe Terrors and Apprehenfions, that are fo ftrongly and fo emphatically expreffed in the foregoing Paper. But to proceed in our Hiftory.

In the Month of Fanuary, I735, the Higblanders arrived in Georgia (and with them feveral of the fame Country, as Servants to private Grantees). They were fettled on the Alatamaba River, about fixteen Miles diftant by Water from the Ifland of St. Simon, which is at the Mouth of the River. They foon raifed convenient Huts till their Houfes could be built; and the Town, at their own Defire, was called Darien, which Name that Diftrict ftill retains; but the Town which they afterwards built they thought fit to call Newe Invernefs.

On the 6th of February following the great Embarkation, under the Direction of Mr . Oglethorpe, arrived, and the People were fettled upon the Inand of St. Simon. The Creek Indians who came down upon this Occafion, in confequence of their claiming a Right to the Country, were treated with, and agreed that the Englif fhould poffefs that, and all the Inands adjacent, which neceffary Step being taken, the Town of Frederica was foon laid out, and the People fet to work in building Houfes. When I call this the great Embarkation, it feems but reafonable that I fhould exprefs the Number of Perfons fent over, which were four hundred and feventy; and it is likewife fit to fay fomething of the Inand upon which they were fettled. In Point of Situation, a better could hardly be wifhed for in that Part of the World, lying as it does at the Mouth of a very fine River; the Size of it too was very convenient, being about forty-five Miles in

Extent, the Soil rich and fruitful, full of Oak and Fickery Trees, intermixed with Meadows and old Indian Fields.

As foon as this Settlement was made, Care was taken for its Security, and for the Fortification of the Southern Barrier, with which View a regular Fortrefs, ftrengthened by four Baftions and a Spur-work, towards the River, was erected at Frederica, and feveral Pieces of Cannon mounted thereon; a flong Battery was alfo raifed for the Protection of Iekyll Sound, where ten or twelve Fortygun Ships may fafely. ride. Another Fort was built on the South-weft Part of Cumberlond Ifand, where are feveral Pieces of Cannon pointed towards the River, fo as to command all Sloops and Small-craft navigating that Paffage; within the Pallifade which furrounds the Fort there are fine Springs of Water, and likewife a well framed Timber-houfe, with large and convenient Magazines under it for Ammunition and Provifions. But while fo much Care was taken of the South Frontier, agreeable as it was conceived to the Defign of the Parliament's Grant, and the Prayer of the before-mentioned Memorial; the Northern Part of the Colony was not neglected, fince Orders were given for erecting a Fort at Augufta, a Place fituated on the River Savannah, which is now become a very thriving Place; where the Traders with the Indians, from South Carolina and Georgia, refort, on Account of its Conveniency for that Purpofe; and where there are large Warehoufes furnifhed with fuch Goods as the Indians want, the Deer Skins taken in Exchange being fent two hundred and thirty Miles down the River, to the Town of Savannab, in Boats, which carry each about nine thoufand Weight. It may be eafily conceived from hence, how neceffary a thing it was to have a good Fort here, which was both erected and garrifoned at the Expence of the Truftees for fome Time; and a HorleRoad was made from thence to the Town of Savarizah one Way, and to the Dwellings of the Cherokee Indians, who live above the Town of Augufa, the other. By thefe Precautions the Trade of both Colonies, with thefe Indians, was facilitated, and the Country on that Side fecured againft any fudden Attempts of an Enemy, which was all that could be expected in fo fhort a Time, and in a Tract of Land in Comparifon of the Colony, of fo large an Extent.
7. The Prefence of Mr. Ogletborpe contributed greatly to the fettling and Prefervation of the Colony; which was already become confiderable enough, not only to draw the Attention, but to excite the Jealoufy, of the Spaniards; who, without all Queftion, would have been glad to have overpowered, and driven out, thefe new-come Neighbours, if it had been a thing in their Power; and if they had not been apprehenfive of the ill Confequences that muft have attended the breaking out of a War between the two Nations, on Account of the Difputes between thefe Frontier Provinces; which Circumftances were fo well improved by Mr. Oglethorpe, and the Indians who had entered into Friendfhip with the new Settlement were fo ftrongly attached to the Englif/ Intereft, that the Governor of St. Augufin, upon mature Deliberation, found it more expedient to enter into a Negociation, and to endeavour to conclude an amicable Agreement with the Englifh Colony; which Mr. Oglethorpe alfo knowing to be very convenient for the Security of Georgia, he negociated, and concluded a Treaty, upon very juft and reafonable, as well as fafe and advantageous, Terms; as will appear from the following Copy of the Treaty itfelf, and the Powers by him given for concluding and figning it.

## "To Charles Dempsey, Efg;

" I have impowered you, by Procuration, dated the 23 d of Fune, 1736 , to treat and conclude, concern" ing certain Matters of Importance, relating to thefe Provinces, with his Excellency Don Francijco del Moral Sanches, Captain General of Florida, and Governor " of St. Auguyfin, and the Council of War of the faid "Garrifon; and having, fince the Dates of thefe Letters, " received Advice from the Governor of St. Augufin, as " alfo a Meffage from his Excellency Don Yuan Fran"cifco Geumes de Horcafitos, Major General in his Ca-
" tholic Majefty's Service, Captain General of the Illand ' above, and Governor of Flavanna, by Don Antomia "de Arredondos they both impowering him to treat con"cerning the faid Matters, I do hereby impower, con" ftitute, and appoint you, to treat, conclude, and fign " the following Articles; and deliver the fame unto the "Governor and Council of St. Augutin, they figning,
"fealing, and interchanoing the faid Articles.
" Firf, That his Excellency the Governor of St. Au" gufin, fhall reftrain his Iudians, Subjects to the King " of Spain, from committing any Hoftilities upon the "Subjects of the King of Great Britain. I will reftrain " the Indian Subjects to the King of Great Britain in "this Province, from any Hoftilities upon the Subjects " of his Catholic Majeety.
"Secondly, That in refpect to the Nationis of free "Indions called Creeks, I will ufe my utmoft amicable "Endeavours upon any reafonable Satisfaction given " them, to prevail with them to abftain from any Hof"tilities whatfoever, with the Subjects of his Catholic " Majefty.
" Thirdly, That with refpect to the Fort built on the " Ifland of St. George, I will draw off that Garrifon, to" gether with the Artillery, and all other things by me " pofted there ; provided that none of his Catholic Ma" jefty's Subjects, nor any other Perfon, fhall inhabit, " people, or fortify, the faid Inand; provided alfo that " no Prejudice fhall arife to the Right of the King my " Mafter, to the faid Ifland, nor to any other Dominions " or Claim that his Britannic Majefty hath upon this Con" tinent. But that his Right fhall remain to the faid "Inand, and to all other Places whatfoever; as if the " faid Garrifon had never been withdrawn; and the faid "Garrifon fhall withdraw within fourteen Days after " the Ratification of thefe Articles.
" Fourthly, I will agree with his Excellency the Go" vernor of St. Avgufin, and the Council of War, That " his Britannic Majefty's Subjects, under my Command, "f fhall not moleft, in any Manner whatfoever, any of his
"Catholic Majefty's Subjects, provided that his Catho" lic Majefty's Subjects do not moleft any of his Bri" tannic Majety"s Subjects, nor his Allies.
"Fifthly, That concerning any Differences that have " or fhall arife, concerning the Limits of the refpective " Government and Dominions of the two Crowns, fuch "Differences fhall remain undecided, till the Determi" nation of the refpective Courts; and that the Subjects of each Crown here, fhall remain in profound Peace, " and not in any Manner moleft each other, until the Determination of the refpective Courts on this Subject.
" Laftly, That no Perfon fhall be received from any "Garrifon in either Government, without a Paffport from " the Governor to whom fuch Perfons belong.
" Given under my Hand and Seal, at Frederica " in Georgia, the 27 th Day of September, 1736.
" By the Power to me given, by his Excellency Fames "Ogletborpe, Efq; Governor and Director General of the "n new Colony of Georgia, by his Exicellency's Procura" tion, bearing Date the 27th Day of OEFober, in the tenth " Year of the Reign of our Sovereign Lord George the "Second, by the Grace of God of Great Britain, France, " and Ireland, King, Defender of the Faith, $\mathcal{O}^{\circ} c$. and in "the Year of our Lord ${ }^{17} 736$ : I do hereby confirm " and ratify the above Articles, with his Excellency Don "Francifco del Moral Sanches Villegas, Captain General "s and Governor of St. Augufin of Florida, and with ' the Council of War of the faid Garrifon of St. Auguf "tin; as witnefs my Hand and Seal, this 26th Day of "OEtober, 1736. ."
The Counter-part of this Treaty, executed by the Go vernor of St. Augufin, by the Advice, and with the Confent, of a Council of War, was certified by Bartbolomere Niotto, Notary-Public, and I have it before me; but as it contains only a Repetition of the foregoing Articles, it feems unneceffary to infert it here, fince what we have already given the Reader very fufficiently explains the

Nature of this Treaty: But it feems the Governor of St. Augufin was not in the Secret of the Court; for the Spanifb Miniftry at Home were very far from being defirous that a fair Correfpondence fhould be eftablifhed between the two Colonies. On the contrary, they aimed at obliging us to defift from our Defign of fetting the Colony of Georgia; and with this View Sir Thomas Geraldino, on the Ift of September, prefented a Memorial to his Grace the Duke of Newocafle, in which, among other Things, he was pleafed to fay, It is indifputable that the Colony of Georgia was fettled upon his Mafter's Dominions; fo that a plainer Proof cannot be had, that the Spaniards were determined if poffible, to oblige the Crown of Great Britain to give up this Settlement.
But as it was not very probable, that we thould be induced to do this by Sir Thomas Geraldino's Memorials, the Spanijb Miniftry were contriving to do it by Force, and by tranfporting Troops into the Spanifa Florida, from the adjacent Inand of Cuba, and other Parts of their Dominions. It is true, that thefe Orders were moftly given before they had any Intelligence of the provifional Treaty concluded between the Governor of St. Augufin and Mr . Oglethorpe; but when they did know of it, they were fo far from laying afide their former Defign, or even from fufpending it, that they highly difapproved of the Governor's Behaviour in that Particular, the rather perhaps becaufe it was altogether inconfiftent with their own Projects and Pretenfions. It is alfo very probable, that as the Spanifh Councils were at that time wholly guided by thofe of France, this might contribute not a little to their forming Views of expelling us from Georgia, which the French without doubt confider as equally dangerous to them and their Schemes, or rather more fo, than to the Spaniards, who on their Side have much more Reafon to be offended with the French Settlements on the River Mifijfippi, than at our new Colony of Georgia. But be this as it will, the Preparations they made were in their Nature fo open and extraordinary, that it was not long they could be concealed from our Governors, and other Officers in the Weft Indies, whofe Duty it was to obferve, and tranfmit Intelligence hither of Things of that Nature.

The Lieutenant Governor of Soutb Carolina, having heretofore acquainted the Truftees by a Letter, dated from the Council-Chamber in Cbarles Town, the 7 th of February, $1636-7$, That he had received Advice from Commodore Dent, of Preparations made by the Spaniards at St. Augufin and the Havanna, in order to make an Attack on the Colony of Georgia; and the Truftees having, in a Memorial to his Majefty, fet forth the Inability of the Colony to protect themfelves againft fuch a Force as was preparing at the Havanna and St. Augufin; his Majefty was gracioufly pleafed to order a Regiment of fix hundred effective Men to be raifed, and fent to Georgic, for the Defence and Protection of it.
As an Encouragement for the Soldiers good Behaviour, the Truftees refolved to give each of them a Property in the Colony, and therefore made a Grant in Truft, for an Allotment of five Acres of Land to each Soldier of the Regiment, to cultivate for his own Ufe and Benefit, and to hold the fame during his Continuance in his Majefty's Service. And for a further Encouragement, they refolved, That each Soldier who at the End of feven Years Service, from the Time of his enlifting in the Regiment, fhould be defirous of quitting his Majefty's Service, and should have his regular Difcharge, and would fettle in the Colony, fhould, on his Commanding Officer's Certificate of his good Behaviour, be entitled to a Grant of twenty Acres of Land.
The Parliament having taken into Confideration the great Expences which the Truftees had been at in making Roads through the Province, and the feveral Fortifications in it, and the Prefents made to the Indians to engage them firmer in the Britijb Intereft, and likewife the Preparations that were making by the Spaniards in order to take or diftrefs the Colony; granted thereupon for this Year the Sum of twenty thoufand Pounds, for the further fettling and fecuring the Colony, the Truftees made another Em-

## barkation, which confifted chiefly of perfecuted Gersanan Proteftants.

In Confequence of fo confiderable an Augmentation of People, all the Towns laid out in Georgia began to be improved, and to receive' confiderable Supplies; and fo mindful they were of their Sccurity, that even at Savamnab, which was leaft expofed to Danger, they traced out, and began to build, a confiderable Fort; and in all the Frontier Places, the utmoft Care was taken to put the Fortifications into the beft Pofture of Defence that the Circumftances of the Province would allow. On the Arrival of the Regiment, of which Mr. Ogletborpe was appointed Colonel, he diftributed them in the propereft manner for the Service of the Colony ; but notwithtanding this was of great Eafe to the Truftees, and a vaft Security to the Inhabitants ; yet Colonel Oglethorpe ftill kept up the fame Difcipline, and took as much Care to form and regulate the Inhabitants with refpect to military Affairs as ever. He provided likewife different Corps for different Services; fome for ranging the Woods; others, light-aimicd, for fudden Expeditions; and he likewife provided Veffels for fcouring the Sea Coafts, and for gaining Intelligence. In all which Services he gave at the fame time his Orders and his Example; there being nothing he did not, which he directed others to do ; fo that if he was the firft Man in the Colony, his Pre-eminence was founded upon old Homer's Maxims : He was the moft fatigued, and the firft in Danger, diftinguifhed by his Cares and his Labours, not by any exterior Marks of Grandeur, more eafily difpenfed with, fince they were certainly needlefs.

The ftrict Attention fhewn by the Truftees for their infant Settlement was fo remarkable, and their Punctuality in fupplying what was neceflary, fo generally known throughout America, that it was not long before it created fome Inconvenience from the Addrefs of fuch as were defirous of turning fuch Inftances of public Spirit to their private Advantage ; for feveral Merchants, and Captains of Ships, had, for their own Intereft, carried into the Colony from New York and other Places, large Cargoes of Provifions, $\mathcal{E}$ c. great Part of which (to fave Merchants from Lofles) were taken at the Store, without proper Authority from the Truftees, and an Expence created thereby, which the Truftees could not eftimate, nor have Ability to difcharge, and for which certified Accounts were returned to them ; and therefore the Truftees publifhed an Advertifement in the London Gazette, and ordered it to be publifhed. in the Soutb Carolina Gazette, and to be affixed on the Doors of the Store-houfes at Savannab and Frederica, that out of a due Regard to public Credit they had refolved, That all Expences which they had ordered, or fhould order, to be made in Amorica, for the Ufe of the Colony, fhould be defrayed and paid for in Georgia, in Sola Bills of Exchange only, under their Seal; and they gave Notice, that no Perfon whatfoever had any Authority from them, or in their Name, or on their Account, to purchafe or receive any Cargo of Provifions, Stores, or Neceffaries, without paying for them in the faid Sola Bills.
Yet they were as ready as ever in expending Money, where it was neceffary and ferviceable to the Colony; for upon a Petition of one Abrabam de Lyon, a Freeholder of Savannab in Georgia, That he had expended a great Sum in the Cultivation of Vines, which he had carried from Portugal, and had brought to great Perfection; and feveral Certificates being produced of his great Improvements, and of the Goodness of his Grapes, and their thriving in the moft barren Lands in the Province, the Truftees affifted him to proceed in his Improvements. But, to be the more able to fupply there Expences, they took Care to be frugal, where it was practicable. And the Security of the Colony being provided for by the Regiment fent over by his Majefty, the Parliament gave eight thoufand Pounds for the further fettling the Colony; therefore the Truftees fent over an Eftimate of all the Expences which they allowed to be made in the Province; by which feveral military Expences which they had been engaged in for the Defence of the Colony, and which were very great, were reduced.

## Chap. III. of the ENGLISH in AMERICA.

In the Year ${ }_{173} 8$ the Truftees fent over the Reverend Mr. Norris to Frederica, with a Salary of 50 l. a Year, and Orders that a Houfe fhould be built for him, and another provided for the Performance of public Wormip, till fuch Time as a Church could be erected. But while their Cares were thus employed, they met with fome Interruption from unforefeen Accidents, both without and within the Province: In refpect to the former, the Affembly of Soutb Carolina, having the laft Year paffed an Ordinance for raifing a Sum to indemnify their Traders, in Oppofition to the Act, which was approved of by his Majefty in Council, for maintaining the Peace with the Indians in the Province of Georgia; upon a Memorial from the Truftees, complaining of the faid Ordinance; and upon the Petition of the Council and Affembly of Soutb Carolina, againft the faid Act, there was a folemn Hearing before the Lords Commiffioners for Trade and Plantations; and afterwards before a Committee of the Lords of his Majefty's Privy Council: Whereupon his Majefty was pleafed to order, that the faid Ordinance of Affembly of South Carolina hhould be repealed, and declared void; and was pleafed to fend an Inftruction to the Truftees, to prepare a proper Act, or Ordinance, for fettling the Trade, carried on by the Provinces of South Carolina and Georgia with the Indians, on fuch a Footing, as might be for the mutual Benefit and Satisfaction of both Provinces. And his Majerty, at the fame Time, was gracioufly pleafed to give an Inftruction to Samuel Horfey, Efq; Governor, and Lieutenant General of South Carolina, to recommend to the Council and Affembly there, to pafs a Law for that Purpofe, in that Province. But Samuel Horfey, Efq; dying foon after, and no other Governor having fince gone to South Carolina, that Affair remained unfettled. The Truftees immediately fent to Colonel Ogletborpe a Copy of his Majefty's Inftructions, and defired that he would confult with Lieutenant Governor Bull in South Carolina; that Plans of proper Acts might be prepared, and fent over to the Truftees, for their Confideration, in order to anfwer the Purpofes of his Majefty's Inftructions; and that, in the mean Time, the Commiffioners of South Carolina, and the Commiffioners of Georgia, might proceed in their refpective Provinces, in concert with each other, to carry on a mutual Trade to the Indians in both Provinces.

In Reference to the other Sources of Difturbance and domeftic Difquiets, they were of different Kinds; but the greateft was owing to a Number of Perfons enjoying the Benevolence due to the Colony, without any real Merit in themfelves, or juft Title thereto; for which, however, a Remedy was fpeedily provided. The Truftees, both by their Letters and Inftructions to the Magiftrates, had conftantly exhorted and encouraged the People to a Cultivation of their Lands, on which they were to depend for their Support; and as they found that many (as well of thofe whom they had fent over as Objects of Charity, as of others, who at different Times had gone into the Country from other Colonies, for their temporary Maintenance) ftill continued in their Idlenefs, and were a Burden upon the Truftees; they gave Orders for ftriking off the Store, all fuch as having had Time to cultivate their Lands had neglected it. This carried from the Colony many of thofe who had gone thither, or joined it from other Parts of America, to gain a Subfiftance for a Year or two, and of others who had not confidered the Hardfhips attending the firft Settlement of a Country, and were weary of their Labour. The Truftees receiving an Account, dated February 12, 1738 , from their Secretary of the Province, of an Uneafinefs among feveral Perfons, upon the Tenor of their Lots being confined to Heirs Male; and they, confidering that the Colony had been fome Time eftablifhed, the People grew more numerous, and a Regiment being ftationed in it, for its Defence, whereby the former Tenures became lefs neceffary ; did, on the 15 th of March following, at their anniverfary Meeting, refolve, that in Default of Iffue Male, the legal Poffeflor of Land, might, by a Deed in Writing, or by his laft Will and Teftament, appoint his Daughter as his Succeffor, or any other Female Relation; with a Provifo that the Succeffor fhould, in

Yol. II. Numb. 92.
the proper Court in Georgia, perfonally claim the Lot granted and devifed within eighteen Months after the Death of the Grantor or Divifor. This was foon after extended to every legal Poffeffor being impowered to appoint any other Perfon as his Succeflor.

The mildeft Governments are often but too fubject to Difcontents ; and though the whole Study of the Trufs tees was to make their People as eafy in their private Ca pacities, as their Duty to, and Concern for, the Public, would permit. Yet this did not hinder ignorant and malicious Perfons, who either could not, or would not, comprehend the true Interefts of the Colony, from endeavouring to raife frefh Diturbances, for the fake of obtaining what they thought might be of Service to them; and which, if they had judged rationally, they mult have perceived would have turned to their Ruins In hort, Part of the People fettled in Georgia, fent over a Memorial to the Truftees, complaining of the Want of a Fee-fimple in their Lands, and of not being permitted the Ufe of Negroes. But thofe who were fettled on the Frontier, and confequently moft expofed to the Spaniards and others, who, by their own Induftry, had improved their Plantations, fo as to draw from them a comfortable Subfiftance, fent over a contrary Memorial ; in which they reprefented the Difadvantages and Dangers that would arife from the Permiffion of Negroes.
It likewife fell out, that at the very Time fome of the People of Savannab were fo clamorous for Negroes (for feventy-five Land and Freeholders, of whom fifty-two were Freeholders, did not apply for them) the Province of South Carolina was under frequent Alarms, upon Account of the Negroes there. They had Intelligence that a Confpiracy was formed by the Negroes in Soutb Carolina to rife, and forcibly make their Way out of the Province, to put themfelves under the Protection of the Spaniards; who had proclaimed Freedom to all that fhould run to them from their Owners. This Confpiracy was difcovered at Winyaw, the moft Northern Part of that Province, from whence as the Negroes muft bend their Courfe, it argued, that the other Parts of the Province muft be privy to it, and that the rifing was to be univerfal; whereupon the whole Province were upon their Guard; the Number of Negroes in Sout\% Carolina being computed to be about forty thoufand, and the Number of white Men, at moft, not above five thoufand. As feveral Negroes who were employed in Perryauguas, and other like Craft (which they carried off with them) had taken the Benefit of the Spaniards Proclamation, and gone to St. Augufin, the Government of Soutb Carolina fent a folemn Deputation to demand their Slaves. This Deputation confifted of Mr. Braitbrwaite, a Member of the Council, Mr. Rudlidge, one of the Affembly; and Mr. Binian, Clerk of the Affembly. But the Governor of St. Auguftin, though in Time of profound Peace, peremptorily refufed to deliver them up; and declared he had Orders to receive all fuch as fhould come thither, and protect them. Upon this, and the Petitions which were fent from the Higblanders at Darien, and the Saltzburgers at Ebenezer, reprefenting the Danger, and the Inconvenience, of the Introduction of Negroes; the Truftees fent under their Seal, an Anfwer to the Reprefentation from fome of the Inhabitants of Savannab.

In this Anfwer, which is dated Fune the 20th, 1739, the Truftees fay, "That they fhould deem themfelves " very unfit for the Truft repofed in them by their Ma" jefty on their Behalf, if they could be prevailed on by ${ }^{6}$ any fuch irrational Attempt, to give up a Conftitu"6 tion framed with the greatef Caution, for the Pre" fervation of Liberty and Property; and of which the " Laws againft the Ufe of Slaves, and for the Entail of "c Lands, are the fureft Foundations; and the Truftees " 6 are the more confirmed in their Opinions of the Un"r reafonablenefs of this Demand, and that they have " received Notions from Darien, and the other Parts "s of the Province, reprefenting the Inconvenience and " Danger which muft arife to the good People of the "s Province, from the Introduction of Negroes; and as "s the Truftees themfelves are fully convinced, that be"f fides the Hazards attending of that Introduction, it
4. $Q$ would
${ }^{6} 6$ would deftroy all Induftry among the white Inhabit${ }^{6} 6$ ants, and that, by giving them a Power to alien ${ }^{6} 6$ their Lands, the Colony would foon be too like its
s6 Neighbours, void of white Inhabitants, filled with ${ }^{6}$ Blacks, and reduced to be the precarious Property of ${ }^{6}$. a few, equally expofed to domeftic Treachery, and ${ }^{6}$ foreign Invalion; and therefore the Truftees cannot sc be fuppofed to be in any Difpofition of granting this © Requeft ; and if they have not, before this, fignified is their Diflike of it, their Delay is to be imputed to ${ }^{6}$ no other Motives but the Hopes they had conceived, ${ }^{6}$ that Time and Experience would bring the Complaincs ants to a better Mind. And the Truftees readily "s join Iffue with them, in their Appeal to Pofterity, " who fhall judge between them, who were their beft "6 Friends, thofe who endeavoured to preferve for them "s a Property in their Lands, by tying up the Hands of " their unthrifty Progenitors, or they who wanted a «Power to mortgage or alien them? Who were the ss beft Friends to the Colony, thofe who, with great La" bour and Coft, had endeavoured to form a Colony s6 of his Majefty's Subjects, and perfecuted Proteftants "s from other Parts of Europe; had placed them on a "s fruitful Soil, and ftrove to fecure them in their Pof" Seffions by thofe Arts, which naturally tend to keep ss the Colony full of ufeful and induftrious People, ca"s pable both to cultivate and defend it ; or thofe, who s6 to gratify the greedy and ambitious Views of a few " Negro-Merchants, would put it into their Power to "s become fole Owners of the Province, by introducing ${ }^{6}$ their baneful Commodity ; which it is well known, "s by fad Experience, has brought our Neighbour Colo"6 nies to the Brink of Ruin, by driving out their white " Inhabitants, who were their Glory and Strength, to sc make room for black, who are now become the ${ }^{66}$ Terror of their unadvifed Mafters?"

The Truftees had great Reafon for proceeding as they did in this Refpect; fince among the Perfons to whom Grants were made, in order to their fettling at their own Expence in the Colony, fome never went over to take them up, or to fettle at all; other's were Gentlemen of Carolina, who neglected the Profecution of their Grants, and never fo much as defired to have their Lands laid out; and of the reft, feveral had quitted their Plantations, and the laborious Life of Planters, to go and refide more at their Eafe at Savannab; where, by the Exercife of their feveral Trades and Profeffions, they brought many of the People in Debt; and befides all this, Horfe-Races and other Diverfions were fet on foot, and fuch a Spirit of Idlenefs began to prevail, as very eafily accounted for their Eagernefs in defiring to have Negroes granted them; and plainly fhewed with what fatal Confequences it muft have been attended, if the Truftees had not remained firm to their firft Refolutions, and had not given fuch an Anfwer as hewed they were refolved to preferve that Spirit in the Colony upon which it was fettled, and which could alone render it worth that Care, which had been hitherto taken of it by the Public. Howeyer, to make the People as eafy and contented as they could, they publifhed an Advertifement in the London Gazette, the 8th of September, 1739, and other Papers, which were continued for feveral Days, and ordered it to be publifhed in the South Caiolina Gazette ; that they had refolved to enlarge their Grants on Failure of Iffue Male, and to make a certain Provifion for the Widows of the Grantees, in the following Manner, viz. That the Lands already granted, and fuch as fhould hereafter be granted, fhould, on Failure of Iffue Male, defcend to the Daughters of fuch Grantees; and in cafe there fhould be no Iffue Male or Female, that the Grantees might devife fuch Lands; and for want of fuch Devife, that fuch Lands fhould defcend to their Heirs at Law, with a Provifo that the Poffeffion of the Perfon who thould enjoy fuch Devife, hould not be increafed to more than five hundred Acres; and that the Widows of the Grantees, fhould hold and enjoy the dwelling Houfe, Garden, and one Moiety of the Lands their Hufband fhould die poffeffed of, for, and during the Term of, their Lives. The Truftees directed in the Advertifement, that thofe who
intended to have the Benefit given them, fhould enter their refpective Claims, in order that proper Grants and Conveyances in the Law might be forthwith prepared and executed for that Purpole; and that no Fee or Reward was to be taken for the entering any fuch Claim directly or indirectly, by any Perfon or Perfons what foever. It appears clearly from thefe Conceffions, how very deffrous the Truftees were of giving the People, fettled in Georgia, all imaginable Satisfaction, confiften with the Scheme they had formed of fecuring thefe Lands to the actual Planters, and thereby prevent thore Inconveniencies, to which others, particularly the fouth ern Colonies, were liable, and which would have been fo much the more fatal in a Colony, the chief Inducement to eftablifh which, was the making a ftrong Frontier.
9. The French, who by degrees grew more and more uneafy at the Settlement of Georgia, and our Intercourfe with the Indians, began to make ufe of every Method they could devife, in order to create Differences and Jealoufies between us and the Creeks, which was no fooner known, than it greatly alarmed, not only the People fettled in Georgia, but the whole Province of Carolina, from a juit Senfe of the Danger they fhould be in, if the French, either by their Artifices or Prefents, fhould draw over the Creek Indians to their Party, as appears by their Applications, both to Colonel Ogletborpe, and to the Government at home. Upon this Mr . Ogletborpe thought it neceffary to enter into a clofe Alliance with this Nation; and therefore refolved upon a Journey to the Coweta Town, though at the Diftance of no lefs than five hundred Miles from Frederica, where he then was, and through a Country very little known to, and very difficult for, Europeans to travel. He provided him, however, with Horfes and Prefents fit for the Purpofe; fet out for that Place, and after a painful and fatiguing Journey, reached it in Safety, where he was received by the Indians with all imaginable Marks of Friendfhip and Refpect ; and where he had an Opportunity of conferring, not only with the Chiefs of all the Tribes of this Nation, but alfo with the Deputies of the Cboctares and Cbickefarws, who lie between the Englifh and French Settlements, and who had fent their Deputies thither with that View. The Confequence of this Meeting was, the making a new, more full, and explicit Treaty with the Lower Creeks, than the former; which was of fo great Confequence, that Colonel Bull, Lieutenant-Governor of Carolina, declared, that if the Creeks could be fecured, they fhould be under no Apprehenfions from the Intrigues of the French with the other Nations; and, that this was effectually done, the Reader will perceive from the Perufal of the Treaty then concluded with that Nation; of which the following is a Copy from an Inftrument, containing the Exemplification of the faid Treaty, under the Seal of the Province of Georgia, with all the neceffary Certificates from the Magiftrates, indorfed thereupon; and which ought therefore to be confidered as the moft authentic Evidence of. that Gentleman's Diligence, Zeal, and Succefs, in the Service of his Country, and of the Britijb Colonies in America.

Proceedings of the aflembled Eftates of all the LowerCreek Nations, beld on Saturday, the IItb Day of Auguft, Anno Domini 1739 .
" By Powers from his moft facred Majefty George the "Second, by the Grace of God King of Great Britain, "France, and Ireland, Esc. General Fames Ogletborpe "being appointed Commiffoner, was prefent in the " Behalf of his Majefty, and opened the Affembly by a "Speech. There were alfo prefent at the faid Affembly "s of Eitates, the Mico, or King, of the Coweta Town; " Cbickley Ninia, Mico of the faid Town; Malacbi, Mico, "Son of Brim, late Emperor of the Creek Nation, and " the chief Men and Warriors of the Corveta Towns; "s the Mico, or chief King, of the Culjitas; and Scikeligo, " Mico, next to the King of the Cuflitas; Ifkeigo, third " chief Man of the Cufitas, and the other chief Men " and Warriors of the faid Town; and alfo Ocakcha-
pacho, and the chief Men of the Town of Polacbucbulas; Kolatto, chief War-Captain, and other chief Men and Warriors; being Deputies, fent with full Powers to conclude all Things neceffary for the faid Town. Tawmawme, Mico of the Ufawles, with feveral other chief Men and Warriors; being Deputies fent with "full Powers to conclude all Things neceffary for the faid Town. Metalcbeko, War-Captain of the Echetees, * with feveral other chief Men and Warriors; being Deputies fent with full Powers to conclude all Things for the faid Toinn. Neatbacklo, chief Man of Ocfachees, with feveral other chief Men and Warriors, fent with full Powers to conclude all Things for the faid Town. Occullavecbe, chief Man of the Cbecares, with feveral other chief Men and Warriors ; being D-puties fent with full Powers to conclude all Things for the faid. Town. Howanawge TBalacko, chief Man of the Ormulges, with feveral other chief Men and Warriors; being Deputies fent with Powers to conclude all Things for the faid Town. The Mico, or chief King, of the Occouys, with feveral chief Men and Warriors, having full Powers to conclude all Things for the faid Town. Nealboclo, a fecond chief Man of the Swales, with feveral other chief Men and Warriors; being Deputies fent with full Powers to conclude all Things for the faid Town. The faid Eftates being folemnly held, and opened at the great Square in the Town of Coweta, and adjourned from thence to the Town Cufletas; and the Deputies having drank black Drink together, according to the ancient Cuftom of their Nation (being a religious Form, tranfmitted down 6 by their Anceftors) the whole Eftates declared, by a ' general Confent, without one Negative, that they ad' hered in their ancient Love to the King of Great Britain, and to their Agreements made in the Year one thoufand feven hundred and thirty-three, with the Truftees for eftablifhing the Colony of Georgia in America; a Counter-part of which Agreement was then delivered to each Town; and the Deputies of st the feveral Towns produced the fame; and farther declared, That all the Dominions, Territories and Lands, from the River Savannah, to the River St. Fobn's, and all the Inlands between the faid Rivers; and from the River St. Fobn's to the Bay Appallache, within which is all the Appallache old Fields; and from the faid Bay of Appallache, to the Mountains; doth by ancient Right belong to the Creek Nation, and they have maintained Poffeffion of the faid Right, againft all Oppofers by War; and can fhew theHeaps of Bones of their Enemies flain by them, in Defence ' of the faid Lands. And the faid Eftates further deos clare, that the Creek Nation hath, for Ages, had the s Protection of the Kings and Queens of England, and that the Spaniards, nor no other Nation, have any Right to any of the faid Lands, and that they will sc not fuffer them, or any other Perfon, except the is Truftees for eftablifhing the Colony of Georgia in "A America, to fettle on the faid Lands. And they do "s acknowledge, by the Grant they have already made s to the Truftees for eftablifhing a Colony of Georgia "s in America, all the Lands upon the Savannab River, :s as far as the River Ogeeche; and all the Lands along the Sea Coaft, as far as the River St. Fobn's, and as high as the Tide flows, and all the Iflands as far as the faid River, particularly the Inlands of Frederica, Cumberland, and Amelia, to which they have given the Names of his Majenty's Family, out of Gratitude to him. But they declare, that they did and do referve to the Creek Nation, all the Land from Pipemakes Bluff, to Havanna and the Inands of St. Catbarina, Offebaw, and Sappalo. And they further declare, That the faid Lands are held by the Creek Nation as Tenants in common. And the faid Commiffioner "s doth declare, That the Englifh fhall not enlarge, or «s take up any other Lands except thefe granted as above "s by the Creek Indian Nation, to the Truftees: And :ss doth promife and covenant, "That he will punifh any "c Perfon that fhall intrude upon the faid Lands which so the Creek Nation hath referved, as above. Given
"s under my Hand and Seal this 2 nt Day of Aurgift, at " the Corveta. Town, I739.

Fames Ogletborpé
At this Diftance, it is a very difficult, if not impracticable, Thing, to give the Reader a clear and diftinct Intelligence of the Difficulties furmounted, and the Advantages acquired by Mr. Ogletborpe's Journey; and his Succefs in concluding this Alliance: We will, however, endeavour to reprefent them as clearly and as fully as we can. In the firft place, his making fuch a Journey as this, gained him a great Reputation with the Indians; impreffed upon them Sentiments of deep Refpect for the Englifh Nation, and of particular Affection for the Colony of Georgia. At the fame time it flruck the French with Amazement ; fome of their Governors of Canada had. indeed made confiderable Journeys from Quebec, in order to confer with the Indians, and to conclude 'Treaties with them ; but then they always thought it requifite to be well attended, and never made thefe Excurfions but at the Head of a confiderable Body of regular Troops. Whereas General Ogletborpe had no fuch Attendants, but relied entirely on the good Faith of the Indians, and of his own Behaviour towards them. He knew the Confequence of their living in fincere Amity with the Englifs; and he was willing to run any perfonal Hazard neceffary to eftablifh it. In fhort, he found it requifite for the Welfare of the Colony which he had fettled, that they fhould be able to place an intire Confidence in the Indians, and the Indians in them; which reciprocal Confidence he actually procured, by repofing himfelf entirely on their Faith; and by the Treaty that he concluded with them.
His coming to the Coweta Town diffipated all their Fears, and extinguifhed all their Jealoufies; they told him fo fairly in their firft Conferences. They faid it had been infinuated to them, that he was come into that Country to deprive them of their Land; and that they had been affured, he was actually preparing to invade them; but they were now convinced that thefe were all Fallhoods and Calumnies; that he really meant them all the Good they could expect ; and that inftead of injuring them by the Settlement he was making, it would prove a new Security to them, as well as to the Englifh; and put it out of the Power of their common Enemies to hurt either. For which Reafon they were, on theirParts, ready to do all that he could expect from them, and were perfectly fatisfied that he would perform hisEngagements towards them, with the like Punctuality. There is no Wonder therefore, if the French were exceffively alarmed on the News of this Conference, and of the Alliance which General Ogletborpe had concluded; fince they could confider it in no other light, than as the firft Step to a general Confederacy with all the Indian Nations that had met at, or fent Deputies to, the Coweta Town; from whence they forefaw many and great Inconveniencs to themfelves; for, in the firf Place, this new Treaty with the Creeks, defeated all the Meafures they had been taking, unravelled all their Defigns, and conneeted that Nation more clofely than ever with the Englifh, which in itfelf was a very great and unlooked for Difappointment.
But that was not all, they clearly comprehended that by this Means we fhould not only keep our old Friends, but draw off alfo fome of theirs. Of all the Nations that bordered upon them, they are moft afraid of the Cbico kefares, whom they look upon as the fierceft and braveit Race of Indians in America, with whom they have never been upon good Terms, more efpecially fince the Year 1731, when they difcovered, or pretended to difcover, a Defign they had formed, to furprife and deftroy all their advanced Settlements. They were alfo in a very great Fear of the Cboctaws, or as the French call them Tcboitas, both becaufe they are a very numerous Nation, and are fo fituated as to be able, at any time, to difturb and difquiet their Settlements. But it foon appeared by Experience, that the new Treaty operated fuccefsfully, fince the Governor of New York, having given Information to Colonel Bull, of Carolina, of the March of a Body of

Frencb Troops, and Indians from 2uebec, with Intent to attack the Indians in Friendfhip with England; but though this put the People of Carolina and Georgia upon their Guard, there followed nothing from it; for the Frencb found the Indians well prepared and difpofed to receive them, and therefore defifted from their Defign, for fear it fhould produce a general War, that might prove fatal to the Colonies on the Mififippi River; the People of which were exceffively apprehenfive of what might happen from the general Confederacy of the neighbouring Indians againft them.
The Truftees proceeded as vigoroufly as it was poffible in the Execution of every Part of their Scheme; and having, with fuch unwearied Diligence, provided for the Settlement of a new Colony, and for the Security of its Frontiers, they began next to employ their Skill and Pains, to promote all kinds of Improvements; and were efpecially foilicitous to obtain from thence fome Specimens of the Poffibility of raifing, in that Country, the Commodities that were expected from it. They very well knew that this required hard Labour, and that nothing had accrued to Great Britain worth fpeaking of, from any of the Colonies in America, in many Years longer than this Settlemient of Georgia had been made. But on the other Hand, they alfo knew that the Englifs Nation was naturally impatient ; that great Sums of Money had been iffued for the Service of this Colony; that great Expectations were had of it; and that, if nothing foon appeared, however certain in themfelves, and juft in their Nature, no Excufes would prevail. They therefore recommended it to their Servants in Georgia, to ufe their utmoft Skill and Diligence in promoting the Culture of Mulberry Trees and Silk, fo that it might be, at leaft, demonftrated, that they were not deceived in their Expectations; but that in due Time, and with reafonable Encouragement, the Nation might hope to fee a full Return in that Commodity, for the Expence fhe had been, and muft be, at, in bringing the Colony of Georgia to Perfection. For they perfuaded themfelves, that from the Methods they had ufed in fending over proper Perfons for the Management of that Bufinefs, their Demands, with a due Degree of Care and Diligence in their Servants, might be anfwered, which would afford them an Anfwer to all Objections.
A Parcel of raw Silk was accordingly brought this Year from Georgia, by Mr. Samuel Aug pourguer, who made an Affidavit, before a Mafter in Chancery, that he received it from the Hands of Mr. T'bomas Fones, the Truftees Store-keeper at Savannah, who told him it was the Produce of Georgia; and the faid Samuel Auggpourguer, who refided in the Southern Part of the Pro vince, faid, That when at Savannab, he faw the Italian Family there winding off Silk from the Coquons. The Silk was fhewed at the Truftees Office, to Mr. Fobn Zacary, an eminent Raw-Silk Merchant, and Mr Booth, one of the greateft Silk Weavers in England, who declared it was as fine as any Italian Sills; and that it was worth, at leart, twenty Shillings a Pound. This Mr. Samuel Augfpourguer, who joined the Colony in the beginning of the Year 1736 , left it in $\mathcal{F} u l y 1739$, with two Men Servants and their Children, on his Plantation, and came over to obtain a Grant of five hundred Acres of Land, and to get fome of his Countrymen from the Canton of Bern in Switzerland, to go with him as Servants, on his return to Georgia, in order to proceed more effectually in the Cultivation of his Lands.

The Truftees, this Year, alfo took further Methods for the Satisfaction of the People in the Province. They exxended the Tenures, by which the Daughter of a Grantee, or any other Perfon, was made capable of enjoying, by Devife, or Inheritance, any Quantity of Lands which did not increafe her or his Poffeffion, to more than two thoufand Acres. A Licence was alfo granted for all the prefent Poffeffors of Land in Geargia, to make Leafes of any Part of their Lots, for any Term not exceeding three Years, to any Perfon refiding in Georgia, and who fhould refide there, during the Term of fuch Leafe. A general Releafe was likewife paffed, by which no Ad-
vantage was to be taken againft any of the prefent Pof feffors of Land in Georgia, for any Forfeiture incurred at any Time before Cbrifmas 1740, to the Tenure or Cultivation of Land; and the Poffeffors of fifty Acres were not obliged to cultivate more than five Acres thereof, in ten Years from their Grants; and thofe of under fifty Acres in Proportion; and the Poffeffors of five hundred Acres of Land were not obliged to cultivate more than one hundred and twenty Acres thereof, in twenty Years from their Grants; and thofe of under five hundred Acres, and above fifty Acres, in proportion, to prevent any Forfeiture for want of cultivating the Quantities required. Under thefe Circumftances it is prefumed that no Complaint can now, with Reafon, be made againft the Tenure, by which the Inhabitiants at this Time hold their Lands, fince they have more Power than is generally given by Marriage Settlements, in which the Grantees are only Tenants for Life, incapable of mortgaging, or alienating, or making any Difpofition by their laft Will: Whereas the Freeholders in Georgia are now become Tenants in Tail-general, and may, with the Licence of the Common Council of the Truftees, upon Application made to them for that Purpofe, mortgage, or alien, and further, without Application, have it abfolutely in their Power, on Failure of Iffue in Tail, to difpofe thereof by their laft Will. At leaft this was all the Truftees thought themfelves at Liberty to do, confidering the Obligation they were under to the Public, as well as to the Settlement; and that they were as much bound to provide, that the Nation had a juft Satisfaction for what fhe difburfed in Favour of the Colony, as that the Inhabitants of Georgia fhould be made eafy in their Settlements, and meet with fufficient Encouragement to proceed with Induftry in all their Undertakings ; and with this double View, to the Service of the Public, and the Welfare of the Settlement, all their Applications at home, and all their Directions abroad, are to be referred.
9. We have now run through the Hiftory of this Province for above feven Years, that is, from the time of projecting fuch a Settlement as this on the South Frontier of Carolina, to the carrying that Defign into Execution, and bringing the new Province into fome tolerable Degree of Order; and, in the Courfe of our Hiftory, we have had occafion to obferve, from time to time, what Care and Circumfpection has been ufed, to render it uffeful to thofe Ends for which it was intended. We háve taken notice of the Senfe which the whole Province of Carolina had of the Neceffity, as well as Expedience, of fuch a Settlement. We have fhewn, that thofe who were fent over were difciplined in fuch a manner, as to be able to defend, as well as acquire, Property. We have fet down the Reafons why Negroes were prohibited; and thofe Reafons very clearly prove, that the Colony could not have anfwered any of thofe Ends for which it was eftablifhed, if Negroes had been permitted. We have given fome Account, and, if the Bounds of this Section would have permitted, we fhould have given a farther Account, of the Jealoufies entertained by the Spaniards and the French on Account of this Settlement, which we conceive to be fo many demonftrative Proofs of its Utility. We have given the Reader a large Extract from the Memorial of the Affembly of Soutb Carolina, fetting forth, in the cleareft and ftrongeft Terms, the Wants of that Province, and the Points in which they flood in need of Affirtance. We have fhewn, by a plain Narrative of Facts, how agreeable the Conduct of Gencral Oglethorpe was to the Demands of that Memorial; and how far, by the happy Succefs attending thofe Endeavours, they have been anfwered, more efpecially by his laft Treaty with the Creek Indians, which, as we fhall have Occafion to fhew hereafter, has effectually anfwered his Ends and theirs, fo as not only to come up to, but even to exceed and go beyond, their Expectations. We have likewif, from time to time, exhibited the Alterations that, in Compliance with the Peoples Defires, the Truftees have thought fit to make in their Conftitution, for the Eafe and Encouragement of the Planters. And we have like wife given an Inftance, that they have not been difap
pointed in their Views as to the Produce of this new Colony; but that it is both poffible and practicable to raife therein as good Silk as we can purchafe with Money (which is, generally fpeaking, the Cafe at prefent) from any Part of the World.

It remains, according to the Plan that we have laid down, to give a Defcription of this new Province in the Manner it is now fettled, that the Reader may fee what the Fruits have been of the Care and Expence of the Leginature, the Prudence and Attention of the Truftees, and the Vigilance and Activity of thofe intrufted by them in the Management of their Affairs in this Part of the World. And though, as yet, they have not received fo copious and fo exact a Defcription of their new Colony as they expect; yet, from what we are enabled to fay upon this Subject, it will inconteftibly appear, that much has been done, that many Towns have been fettled, great Improvements made in the Neighbourhood of each of them, feveral Fortreffes crected, due Care taken of the Frontiers, and, in a Word, as much performed as could be rationally expected in fo fhort a Space of Time, and all Circumftances confidered.

The Town of Savannab is about ten Miles up the River Savannab. There are, befides Warehoufes and Huts, at leaft one hundred and thirty Houfes in the Town. As thefe, for the fake of Air, and to prevent the fpreading of any Fire, are built at fome Diftance from each other, they make feveral fpacious Squares and wide Streets. There is a regular Magiftracy fettled in the Town, which the Truftees are obliged to be at the Expence of fupporting, tiil the Colony arrives at fufficient Strength to do it. There are, in the Town, a Court-houfe, a Store-houfe, a Goal, a Houfe for the Truftees Servants, a Wharf, a Guard-houfe, and fome other public Buildings. A Church is at prefent building, and a Clergyman is fettled there. The Town is excellently fituated for Trade, the Navigation of the River being very fecure, and Ships of three hundred Tons can lie within fix Yards of the Town, and the Worm does not eat into them. About four Miles from Savannab, inland from the River, are the two Villages, Higbgate and Hamfead, which lie at about a Mile diftance from each other: The People fettled there apply themfelves chiefly to Gardening, and fupply the Town of Savannab with Quantities of Greens, and Garden-ftuff: There are twenty Plantations within twenty Miles round Savannah, which have each of them from five to thirty Acres of Land, fhared.

About fifteen Miles from Savannab is a Viliage called Abercorn ; about twenty Miles further up the River is the Town of Ebenezer, where the Salt/burgbers are fettled with two Minifters; one of whom computed, that the Number of his Congregation, in $\mathcal{F u l y} 1738$, confifted of one hundred and forty-fix; therefore, as the Infants could not be reckoned in the Computation, and as feven more have fince been fent and fettled with them, it is believed the Numbers have increafed, efpecially fince the Town is fo healthy, that by a Letter fent to the Society for promoting Chriftian Knowledge, by the Reverend Mr. Bolzius, one of the Minifters at Ebenezer, dated the 26 th of Fune 1740, he declared, That in a Year's time one Perfon only had died, which was a Child fourteen Years old. The People are induftrious and Cober, they raife not only a fufficient Quantity of Corn and other Produce for their own Subfiftence; but they fell great Quantities to thofe at Savannab, who have not been fo careful of their Plantations. They have great Herds of Cattle, and are in fo thriving a Condition that not one Perfon has abandoned his Settlement, or fent over the leaft Complaint about the Tenures, or the Want lof Negroes: On the contrary, they in a Body petitioned againft the Ufe of Negroes; and their Minifters have declared, that their figning that Petition was a voluntary Act ; and at their Defire another Embarkation of their Countrymen, who are willing to go from Germany and join them, is defigned to be fent with all convenient Speed.

About ten Miles from hence, upon a River running into Savannah, is a Place called Old Ebenezer, where is a
Cow-Pen, and a great Number of Catle Cow-Pen, and a great Number of Cattle for the Ufe of
Vor II. Nums. Vol II. Nume. 92.
the Public, and for Breeding. At a confiderable Diftance from hence is the Town of Augufta, before defcribed which, from the great Refort of Traders and Indians, is in a thriving Condition, and is, and will be, a great Protection to both the Provinces of Carolina and Georgia againt any Defigns of the French. In the fouthern Part of the Province is the Town of New Invernefs, upon the River Altamaba, where the Higblanders are fettled. And about twenty Miles from hence, on the Inland of St. Simon, near the Sea, is the Town of Frederica, with a regular Magiftracy, as at Savannab, fupported at the Expence of the Truftees : Strong Fortifications round the Town are almoft finifhed. And at the South-eaft Point of the Inand, are Barracks for three hundred and thirty Men. There are Settlements on the Illands of Iekyl and Cumberland, which lie a fmall Difs tance from each other to the fouthward of Frederica; and on the laft two Forts are built, one of which was defcribed before, and the other was finifhed in April 1740 .
Upon the South-end of the Inand it commands the Inlet of Amelia Sound, is Atrongly pallifaded with Flankets, and is defended by eight Pieces of Cannon: Barracks are built upon this Ifland for two hundred and twenty Men, with Store-houfes, which were finifhed in OEFober 1738. There are fix Forts in the Province, and a Battery of Cannon erected to fecure the Harbour at St. Simon's, under which Ships may fafely lie. The Indians, from the Prefents which they have annually received from the Truftees, and from the Juftice and Humanity with which they have been treated, are fecured in the Britifb Intereft, notwithftanding the Arts both of the French and the Spaniards to feduce them. By this, Soutb Carolina has been free from Wars, in which (as the Preamble to his Majefty's Charter fet forth) they had frequently fuffered, and fo late as the Year IクI5 had been laid almoft wafte with Fire and Sword; and by the Security which Soutb Carolina received by fuch a Frontier as Georgia is to it, very large Tracts of Land have been cultivated in the fouthern Part of that Province, which no Perfon would, venture to fettle on before; and a great Quantity of Rice raifed thereon.

This is a clear Proof of the Injuftice of fuppofing that the Nation hath hitherto received no Advantage from this Colony; fince whatever has been gained by Carolina, in virtue of the Protection fhe enjoys by the Settlement of this new Province, ought to be looked upon and confidered as the Produce of Georgia; and though even this may not be any greatMatter hitherto, yet as it is an Inftance of the Benefits to be expected from this Colony, it ought to be kindly accepted, as an Earneft of better Things. As to the Number of People fent over to, and fettled in, Georgia, within the Space of eight Years,' they amounted to upwards of two thoufand, talking in thofe that went at their own Expence, which, if compared. with the fnnall Number of People that were in Carolina, after it had been fettled forty Years, will enable us to diftinguifh between the Confequences of Attention to private Profit, and Concern for the public Good: To fay the Truth; of all the Methods that have been hitherto tried, in fixing Colonies in diftant Parts of the World, this may very truly and on good Ground be pronounced the beft; becaufe by it due Provifion is made, that the People fent over fhall all be carefully fettled and well taken Care of, and fupported from time to time with proper Supplies; that this Care fhould not ceafe immediately, on their having Plantations, but be continued till the People are in a Condition to fupport themfelves.
By this Method Towns are formed, not at Random and by Chance, but in proper Situations, and for good Reafons; not purely for the fake of immediate Advantages, but with Views to the general Good, and future Benefit of the Colony. By this Means, every Step made by the rifing Plantation may be directed to public Ufe, and every Meafure be calculated for the Service of the Mother-country ; which cannot be expected where Grants are made to the Ufe, and for the Service, of particular People, where Numbers of Men tranfport themfelves for the fake of a better Livelihood, at their own Expence, or where People are tranfported againft their Will; fince. in all thefe Cafes it is to be prefumed, that Men will
follow
follow the Bias of their Inclinations or Interefts; but as in this Cafe, where the Public is at the Expence, and where the Management is intrufted with Perfons of Diftinction for the Benefit of the Public, nothing of this kind can happen ; they will be fure to difcharge their Duty, and in Proportion, as the Colony increafes and anfwers the Ends of thofe who compofe it, it will be likewife fure to anfwer thofe Ends for which it was fettled. Befides all this, the Form of Government, the enacting proper Laws, and the Spirit originally infufed into the People, will render fuch a Colony more dutiful and obfervant to her Mother-country, than any that want thefe Advantages.

Laftly, we may be fure that in fuch a Colony, the Produce will be managed moft to the Advantage of the Country from whence it is fettled; as for Inftance in this of which we are fpeaking, due Care will be certainly taken that they do not run into the Cultivation of fuch Commodities as are already produced in the neighbouring Colonies, but bend their Endeavours to the promoting of fuch as have not been yet raifed to any great Advantage in thofe Colonies, though perhaps their Soil and Climate were fufficiently fit for them. Flax, which as we have before fhewn, may be cultivated here to the greateft Advantage, will be certainly attended to; and fo alfo Potafhes and Silk, which above all Things claim our Care, of which we had formerly great Hopes from Virginia; and with a View of obtaining of which Carolina was actually fettled; but in both we were difappointed for want of fome proper Authority to direct a continued Application in the Planters fettled there for that Purpofe, without which nothing that does not turn to large Profit inmediately can be brought to Perfection; but in Colonies fettled by Truftees, their Recommendation will go far, their Authority farther enforce what they defire, and Premiums enable them with Certainty to procure Succefs; as we fhall have Occafion to fhew hereafter.

Our Aim at prefent is to prove the Excellency of this Method of Settling, which far furpaffes that of eftablifhing exclufive Companies, as will be evident if we confider that they regard their own Profit folely, and as foon as they have fallen into Ways of promoting it effectually, they forget the Obligation received from the Public, as is but too evident in many Cafes, and has juftly occafioned almoft a general Outcry againft fuch Companies; whereas a Board of Truftees conftituted for a limited Time, infpe\&t the Concerns, and promote the Welfare, of a rifing Colony, and by their Commiffion ceafe to have Power over it when their Care is no longer neceffary; but as for Companies, they keep all who belong to them continually in Leading-ftrings, and never confider how Trading may be made beneficial to a Nation in general ; but how it may be ordered fo as to become mof beneficial to themfelves. But it is time to quit thefe Reflections, in order to refume the Thread of our Hiftory, and to fhew how, after a few Years Peace, this Colony became ftrong enough, not only to hold up her Head and preferve her Being; but to repulfe her Enemies, and prove a Security to all her Neighbours in time of War; a Thing wonderful in all Refpects, and of which Pofterity will rpeak with Admiration, though from an unaccountable Negligence, and want of Attention, in the prefent Age, we are fcarce fo well acquainted with that Tranfaction as it deferves.

I I. The Government in Great Britain having, after many repeated Infults and Provocations, found themfelves under a Neceflity of obtaining Satisfaction from Spain by Force, a Squadron for that Purpofe was fent to the Weft Indies, and Orders iffued to the Governors of our refpective Colonies, and others his Majefty's Officers in Anerica, to annoy the Spaniards by all Methods poffible. Thefe Orders were received by Mr. Oglethorpe, in Quality of general Commander in chief, in the latter end of the Month of September, 1739. Whereupon he immediately confidered of Ways and Means for putting them in execution; in order to which he put his own Regiment, and all the Forces he could raife in Georgia, into the beft Condition poffible. He fent to inform the Cherokees, and other Indian Allies, of the Situation that Affairs were in, and to impower them to enter into the

Spanifh Territories. He alfo fent up to Charles-Torom, to acquaint the Governor and Affembly with the prefent Potture of Things ; and to acquaint them with his Readinefs to undertake an Expedition againtt St. Auguftin; for the joint Service of Carolina and Georgia. The plain Reafon that he was defirous of beginning to act offenfively againft the Spaniards was, to raife the Spirits of his own People, to divert the Spaniards from the Defigns which they were forming to our Prejudice, and to keep the War at the greateft Diftance poffible.
It is very clear, that from the Situation of Things in Georgia, it was altogether impoflible for him to obtain a Force fufficient for the Execution of thefe Defigns, without the Affiftance of the Province of Carolina; and as it was of equal Importance to that Province, that thofe Defigns fhould be carried into Execution, it was but reafonable for him to expect, that all the Affiftance poffible fhould be given him. Governor Bull, upon the General's Application, acquainted the Affembly of Carolina with what had been propofed; and as they were very fenfible of the Importance of the Undertaking, of the Views the Spaniards had to their Prejudice, and of the Prepations they were making to annoy both Provinces, they fhewed a Difpofition to give him what Affiftance was in their Power.

But at the fame time that they had thefe Inclinations, they could not help confidering the Situation of the Province, which under its Circumftances at that time, was very far from being in a Condition to enter into a large Expence, unlefs there was a great Probability of Succefs; by which it feems they undertood the reducing the Fortrefs of St. Augufin, with the Strength of which, as it was a regular Fortification, had always in it a good Garrifon, and was highly confidered by the Spaniards, they were very well acquainted; and they knew, befides, that feveral former Attempts upon that Place had been difappointed. That they might act therefore in fuch a manner as might equally fhew their Zeal for his Majefty's Service, and their Regard for the Welfare of their Conftituents, the Afrembly directed, that General Ogletborpe fhould be defired to explain himfelf fully, as to the $\mathrm{Na}-$ ture of the Affiftance he expected, and the Ends he conceived it might anfwer, in cafe they fhould agree to grant him the Affiftance he required.

Upon which the General, by the following Letter, dated at Frederica December the 29th, 1739, laboured to give them all the Satisfaction that was poffible, as well in Regard to the Matters under their Confideration, as with refpect to his own Conduct, in Reference to the Defigns he had in View, and the Affiftance he expected. This Letter was conceived in the following Terms, viz. "I fend up with this an Officer to concert Meafures for " the Siege of St. Augufin; it will be neceffary to have "twelve Cannons of eighteen Pounders each, with two " hundred Shot for each Gun, and Powder proportion" able; one Mortar-Piece, and Bombs, with Powder " fufficient; eight hundred Pioneers, Negroes, or white "Men, with Tools fufficient for that Number of Men; "fuch as Spades, Hoes, Axes, and Hatcheis, to dig "Trenches, make Gabelines, and Fafcines. If they "s are Negroes, there muft be white Men fufficient to " guard them, and overfee them ; Veffels and Boats "fufficient to carry the Artillery-Men, Provifions, $\varepsilon^{\circ} c$. "e We fhall have one thoufand Indians; fix thoufand " Bufhels of Corn will be neceffary to feed them, or Rice " proportionable; alfo as many Horfemen as can be "had, who may pafs over the River Savonnah, and paf" fing the Oakmulgy, and Orony, and from thence to the " Ferry, on the River Alata, where they may pafs over " into the Spanifh Florida. Captain M'Pberfon, or " Mr. Fones of Ponpon, can fhew them the Path; for I " Ahould think the People of Carolina would do very well " to raife a Troop of Rangers, under the Command of " Captain $M^{\prime} P$ berfon, who is a very good Officer. "Captain Warren affured me that he would be very wil" ling to affift in convoying the Veffels, and in carrying "Cannon, $E^{\circ} c$. The Cberokee Indians have promifed
" me to be down in March; I have not heard from the
"Creek Nation lately, but I expect them down about
" the fame Time, and have had a Party of them with me for fome Months. I can march four hundred Men of the Regiment, and leave fufficient for the Garrifons behind me. I have ordered three Troops of twenty Men each to be raifed, but I have been difappointed of Horfes by Captain Cutbbert's Death, fo I have got yet only twelve. If the Carolina People will pay them, I believe they may raife fifty very good Men at Purrifourg. I fhould defire four Months Provifions for four hundred Men of the Regiment, of Rice and Meat, with Boats for carrying it to St. Aufuftin, at the Rate of one Pound of each per Diem for each Man. I have thirty-fix Cohorns, and about eighteen hundred Shells: Of the People of the Province of Georgia I cannot draught many, becaufe I mult not leave the Country naked; and, as they are poor, if they neglect their planting Seafon, it will be difficult for them to fubfift ; therefore I would only raife two hundred, which is equal to the Number of Soldiers I " Phall leave behind, and this I cannot do unlefs I can pay them. I believe they will be content with $9 l$. Carolina Currency per Month, and fix Pounds of Meat, and fix Pounds of Rice, each per Week, befides which there muft be Pay to the Officers. Therefore if the Affembly fhould grant me a Sum fufficient to pay them, and the Provifions, I would raife the Men. This is my Opinion with relation to the Preparations for diflodging the Spaniards at St. Augufin, without which we certainly cannot do it. The leginative Power of Carolina will be the bett Judges of the Service it will be to them. For my own Part, I think that 6 if we do not take this happy Opportunity of attacking 'St. Augufin whilit it is weak, the Havanna being blocked up by our Men of War, which renders them incapable of receiving Succours from Cuba, all Nortb America, as well as Carolina and this Province, will feel it feverely. As foon as the Sea is free, they will fend a large Body of Troops from Cuba. You remember the Account you fent to England, of the Preparations fome Time fince made at Havanna; every thing is there ftill, and if they fhould come up and land in Florida, we muft then make a defenfive War, and they may then chufe who they will attack feparately. They may moleft all North America with their Privateers, and if they can by any Means get the ftart of the Men of War, they can run into Shole-Water, ss where they cannot follow them. I am willing my"s felf to do all I poffibly can for annoying the Enemy "s as his Majefty has ordered, and fhall fpare no perfonal "L Labour or Danger towards freeing Carolina of a Place " from whence their Negroes are encouraged to maffacre " " their Mafters, and are openly harboured, after fuch At" tempts. The Spaniards attacked the Inand of Amelia, " and murdered two Men there: I, to return their Civi" lity, landed in Florida; the Spanifb Horfe with a Party "s of Negroes and Indians advanced as if they intended sc to attack us; but before they were within two Miles "s of us went very faft off. Our Indians purfued them to " their Forts, and killed one of the Negroes who had " run away from Carolina, within a few Miles of St. Au"guftin. I hope you will excufe this long Letter, and " believe me to be, Ėc."

It is very clear from this Letter, that the General meant to make the Affembly of Carolina perfectly acquainted with his Intentions, and with every thing relating to the Execution of them ; and that this might be more fully and effectually done, he went himfelf to Cbarles Town, where, after many Conferences, and much Deliberation on both Sides, a Scheme of Action was agreed upon, and an Act of Affembly was paffed April the 5th 1740, for carrying the fame into Execution ; the Carolina Regiment for this Service was raifed, and put under the Command of Colonel Vanderdulfen, and Mr. Ogletborpe, as General and Commander in Chief, publifhed a Proclamation, fettling the Terms of the Expedition, and amongft other things, declared that he would give whatever Share of Plunder came to him as Commander in Chief, towards the Relief of fuch Men as might happen to be maimed or wounded, towards the Affiltance of the Widows and

Children of fuch as might be killed, and towards rewarding thofe that might diftinguifh themfelves in the Service. All things being prepared for entering upon this Expedition, with the Troops of both Provinces; the Rendezvous for all the Forces was appointed at the Mouth of St. Jobn's River, where, accordingly, moft of them arrived the 9 th of May. But fome Time before this the General had attacked and taken St. Francis de Pupa, a little Spanifb Fort, wherein were a Serjeant and twelve Soldiers, about feventeen Miles from St. Augufin.

From the Mouth of St. Fobn's River the Army marched on the ioth of May to attack Fort Diegos about twenty Miles diftant; which Fort had nine Swivels, two Carriage Guns of two Pound Shot, and fifty Men; and having furrounded it, on the 12 th they fent in a Spanifb Prifoner with a Drum, to fummon the Garrifon, who immediately capitulated on the following Conditions: ift. The Garrifon to furrender Prifoners of War, and deliver up the Fort, with the Guns and Stores, to the King of Great Britain. 2dly, That they fhould have Liberty to keep their Baggage, and not be plundered. 3 dly, That Seignior Diego Spinofa, to whom the Fort belonged, being built at his Expence, and on his Lands, fhould hold his Lands, Slaves, and fuch other Effects as were not already plundered in the Field. 4 thly, That no Deferters or Runaways from Carolina, fhould have the Benefit of this Capitulation, but be furrendered at Difcretion. This Fort was garrifoned by fixty of the General's Forces; and from thence they returned to the Place of Rendezvous, where they were joined by Colonel Vanderduffen, with the reft of the Carolina Regiment, on the 1gth of May, whence they marched again to Diego the 3 Ift; and from thence, in two Days, to Fort Moofa, in view of, and near two Miles diftant from, St. Augufin, and twenty-three from Diego. The Spaniards having deferted Moofa, the General ordered the Gates to be burnt, and three Breeches to be made in the Walls, which was plainly with a Defign to prevent any of his own People from taking Poft within the Place.

They then proceeded with the whole Army to reconnoitre the Town and Caftle, after which they returned back to Diego; from thence the General ordered Colonel Vonderduffen to march with his Regiment, and take Poffeflion of Point Quartell, lying to the North of the Bar, and feparated from Port Moofa by a Creek; while the General, with about two hundred and fixty Men of his Regiment, and the greateft Part of the Indians embarked on board the Men of War, and arrived at the Inand of Anaftatia, oppofite to the Caftle; leaving behind him on the Main but between ninety and one hundred white Men, Higblanders and others, in his Pay, with forty-two Indians, and two commiffioned Officers, to alarm the Spaniards on that Side; but he gave a verbal Command of the whole to Colonel Palmer, a Volunteer from that Province. About the fame Time two hundred Sailors, from the Ships, were landed upon that Illand, which the Spaniards directly abandoned, under the Command of Captain Warren, Captain Law, and the Honourable Captain Townfend, who were all very inftrumental in that Service.
While things were in this Situation, the Spaniards, on the 1 th of fune, marched a very confiderable Body of their Forces from St. Augufin, in the Grey of the Morning, in order to attack the People, under Colonel Palmer, at Moofa, in which they were but too fuccefsful; fince they furprized the People that were there, cut many of them to Pieces, and took Part of the reft Prifoners, which was owing to the Neglest of the Orders given them not to thut themfelves up in a Place which had been difmantled and ruined, on purpofe to thew that the General did not intend to keep or ufe it as a Fortification. But the Conveniency of lying under Cover, tempted them to forget thofe falutary Inftructions, which brought on their Misfortune, and gave the General inexpreffible Concern, more efpecially for Colonel Palmer, who was a Gentleman of Experience and Intereft, as well as a Volunteer, who ferved purely out of Zeal for the public Good, and therefore juftly efteemed.

To prevent any Accident of the like Nature, and the
more effectually to block up the Place, which for want of Numbers they were not able regularly to inveft, the Carolina Regiment was fent over to Anaftatia. In this Inand there were three Batteries erected, all above à Mile from St. Auguftin: But, however, they fired from them warmly, with fome Prejudice to the Place; from whence they were as warmly anfwered, but were moft hurt from the Fire from fix Spanibh Half-Galleys that lay within the Harbour. This induced a Propofal to the Captains of the three Men of War, to attempt the burning of thefe Half-Galleys; and upon a Confultation between them and the Land Officers, this was agreed to ; but afterwards the Sea Captains declared they thought it impracticable, for want of fufficient Depth of Water at the Entrance: Yet this was difproved on the 27 th of Fune, by the going in of Captain Robert Tyerel, and his coming out again on board a Schooner, who reported that there was Water enough ; yet the Majority voted the Defign ftill impracticable, which hindered any Attempt to carry it into Execution, though the Land Oficers confidered it as a Point that would have greatly contributed to the reducing of the Place.

When it was firft propofed to attack the Galleys, it was projected in the following Manner, viz. the General was to make a Diverfion on the Main, by attacking the Town; Colonel Vanderdufen, with Part of his Regiment, was to keep a continual Fire on the Town and Caftle, from the Batteries, while Captain Tyrrel was to have fet upon the Galleys, with the Seamen and the reft of the Colonel's Regiment. The General was accordingly on the Main with his Troops, expecting that Service; but the Commodore difapproving this, and it being yet a fecond Time agreed to be attempted, upon the Remontrances of Colonel Vanderduffen, and Captain Warren; when the Commodore's Lieutenant was to have commanded the Attack, new Difficulties were further ftarted when they came on Shore, and fo it was ftill unattempted. Yet it appears, that foon after the Men of War flipping their Cables, and putting out to Sea in a Storm, the Colonel endeavoured to revive the Attempt on the Galleys in their Abfence: But propofing it to the Commodore's Lieutenant, Mr. Swanton, who appeared to be a Gentleman of Spirit, and commanded the Seamen left on Shore, he was told, "He had Orders left "s not to venture any of them before the Return of the " Shipping."
Towards the End of Fune, fome Sloops, with a Supply of Provifions for the Garrifon, got in fafe at the South Entrance, to the Harbour of St. Augufin, called the Metanfas, without having been difcovered by any of our Men of War, till it was too late to intercept them. How this happened has not been hitherto accounted for, but it was a feafonable Relief to the Garrifon, who had not then above three Days Provifion of Bread-kind in the Place; and the Hurricane Seafon coming on, the Commodore gave Notice to the General, that he muft leave his Station, and fail away with the King's Ships on the 5th of July. Upon this it was reprefented, "That fince the "Men of War were obliged to fail away, it would be ${ }^{6}$ neceffary to fend the two Men of War Sloops into "s the Metanfas, to guard that, and either fecure the Re" treat of the Forces to Anaftatia, if they fhould be re"s duced to one, or affift in continuing the Blockade, till " they fhould be enabled to act more offenfively, by a "f further Affiftance."
To this Propofal it was agreed, provided the Sloops of War had Water enough to get in there; and a Council was held $7 u l y$ the 3 d , wherein fome of the Pilots that had been fent to found,' declared upon Oath, "There ." was not Water enough on the Bar of the Metanfas for 6 the Sloops to go in, and if they could go in, they "could not lie fafe there from a Hurricane, nor could " they fight above one a-breaft, in cafe they were attack${ }^{66}$ ed by the Galleys."

But the Commodore, afterwards afking Mr. Blomfield Barradel, Lieutenant of the Wolf Sloop, who had been along with the Pilots, and happened to be aboard his Ship that Night, with fome Captains, what he had to fay in that Affair? he replied, that the Pilots had given
their Opinion, and that he was not then to be examined; but if they afked his Opinion, he would give it. They then defired he would; he affrmed, "That there was "6 Water enough on the Bar for the Sloops to get in ; "t that they could lie fafe from a Hurricane when in; " and that there was alfo fufficient Room, when in, to "fight three a-breaft, in cafe they were attacked." Upon the Pilots afterwards objecting to their lying fafe, he afked them, "Whether they remembred to have feen "fuch an Inand when they were there?" And when they acknowledged they did, he replied, " That they " ought to know they could lie fafe from a Hurricane " under that Mland." Notwithtanding which, it was refolved afterwards in Council, that they fhould take off all their Men, and fail away, leaving Captain Towenferid at Frederica; which put an End to the Enterprize.

Thus ended this Expedition, which, though not at tended with the Succefs fome expected from it, I mean the taking the Fortrefs of St. Augufin, was neverthelefs of very great Confequence, inafmuch as it kept the Spaniards for a long Time upon the defenfive; when if the Siege had not been undertaken, they would certainly have been otherwife employed; it laid all the Country open, fo that the Indians, in Friendfhip with us, made Excurfions up to the Gates of the Fortrefs; and the War being carried on in this Manner for a length of Time, and in Conjunction with the Indians, bound them fo ftrongly to the Englih Interef, that with a very little Affiftance from the People of Georgia, they kept the War at a Diftance; fo that the Inhabitants of Carolina felt none of its Effects as a Colony, except the Loffes fuffered by their Privateers, till the Spaniards executed their long projected Invafion, in 1742; in which they employed the whole of their Strength, and from which they expected to have changed the whole Face of Affairs on the Continent of America; and even then the People of Carolina fuffered only by their Fears.
12. This Expedition of the Spaniards, as has been already hinted to the Reader, was really meditated before the War commenced, and had very probably taken place, if Reprifals had not been made upon the Spaninids, on Account of the Depredations committed by their Guarda Coftas; at leaft we have Reafon to judge fo, from the Memorial of Sir Thomas Fitzgerald, before-mentioned; in which he afferted, that Georgia belonged to the Crown of Spain, and which he repeated in a fubfequent Memorial. But the Operations of our Fleet in the IVeff Indies, under Admiral Vernon, put a Stop to their Preparations at the Havanna; and the Siege of St. Avgufin, and its Confequences, retarded them likewife for fome time. Yet as the Spaniards are not apt to defift from Projects they have once formed, and as the Minittry at Madrid had very high Expectations from the Execution of this, they ftill kept it on foot, and only waited for a favourable Opportunity for performing what they imagined would have entirely changed the Scene of Things in Nortb America. As to the Manner in which they executed it at laft, and the amazing Difappointment they met with notwithftanding the vaft Force they employed, and the fmallnefs of that by which they were affifted, we had fo full, fo clear, and fo authentic an Account publifhed by Authority, that I know of no Method more fit to convey an Idea of it, or lefs liable to any Exceptions, than tranfcribing it, the rather becaufe as it ftands here connected with the Hiftory of Georgia, the Reader will have all the Lights that are neceffiry to render every Circumfance in it perfectly intelligible. Thus then that Account, tranfmitted to us by General Ogletborpe, ran: "The Be"ginning of May laft the Spaniards fitted out their "Fleet from the Havanna, confifing of fifty-fix Sail and " between feven and eight thoufand Men, with an Intent " to invade Georgia and Soutb Caroliza, and the other " northern Colonies. At their firf fetting out, in turn" ing the Moor Caftle, they loft a large Settee with one " hundred and fifty Men, and a few Days after the Floet " was difperfed by a Storm; fo that all the Shipping did " not arrive at St. Augufin. The latter end of May, or " beginning of Fune, Capt. Haymer of the Flamborcugh, " in his Cruife to the Southward, fent in to General

Ogletborpe
"Ogletborpe for Intelligence; who acquainted him, that he would probably meet with fome Spani/b Veffels to the Southward of St. Augufin; which he accordingly "did, and engaged ten Sail of the Mofquetos and drove fome of them afhore; but in the Action loft feventeen of his Men. He on his return acquainted the General with what had happened, and could not then come in for the Defence of Georgia, but proceeded to Cbarles-Town, to clean his Ship. The General thereupon fent Lieutenant Maxwell by Water, and Lieutenant Hugh Mackay over Land to Carolina, with Advice to the Governor, but no Afliftance came from thence till after the Retreat of the Spaniards. Lieute-nant-Col. Cook was at Cbarles-Toren, in his Way to London, whenLieut. Maxwell arrived with the faid Advice.

The 2 ift of fune, nine Sail endeavoured to come into Amelia Sound ; but the eighteen Pounders from Fort-William, and the Guard-Schooner with eighty Men, commanded by Capt. Dunbar, fired fo brifkly that they fheered off as faft as they could. The General, on this Advice, refolving to fupport the Forts on Cumberland, fet out with a Detachment of the Regiment on board his Boats; fent Capt. Horton with his Company of Grenadiers before, and was himfelf obliged to fight his Way with two Boats, through fourteen Sail of Spani/b Veffels which endeavoured to intercept him in Cumberland Sound. In this Engagement, feveral of the Spaniards being killed, the faid Veffels fet out to Sea, and did not join their Fleet till the Day before they left St. Simon's Sound. Lieutenant Tolfon, who .commanded the Boat of the greateft Strength, inftead of following the General, run into a Marfh, where he remained till next Morning, when he returned to St. Simon's; for which Behaviour he was put in Arreft, in order to be tried. Major Heron, from the Shore, feeing the General furrounded by the Enemy, and hid in Smoke, concluded him loft; but next Day, to the great Joy of the People, he returned in the GuardSchooner to St. Simon's, after having drawn the Command from St. Andrew's, and the Stores and Artillery that were there, and reinforced Fort William, where he left one of the Boats he had with him.
"He having laid an Embargo on all Veffels in the Harbour, took Capt. T'bomfon's Ship, which mounted twenty Guns, into the King's Service, and manned her out of the fmall Veffels which were of no Force. He alfo called in the Highland Company from Darien. Capt. Carr's Company of Marines, and the Rangers, from where they were differently detached; and fent Mr. Mullryne to Carolina, to get all the Men he could. The 28th of Fune the Spani/b Fleet came to Anchor off St. Simon's Bar, who were diverted from coming in, or landing any of their Troops, for feveral Days; in which time the General raifed another Troop of Rangers; and by rewarding thofe who did extraordinary Duty, and promifing great Encouragement to all who fhould fignalize themfelves on this Occafion, he kept up the Spirits of the People, and increafed their Numbers daily. The 5 th of $7 u l y$, with the Tide of Flood, and a brifk Gale, thirty-fix Spanifb Veffels entred St. Simon's Harbour, nine of which were large Topmaft Veffels. We received them with a brifk Fire from our Batteries and Ships, killed fome of them with our eighteen Pounders from the Fort, and our four Pounders from the lower Battery. The Spani/h Commodore, on board a Ship of twenty-two Guns, with a Settee, with an eighteen Pounder and two nine Pounders in her Bow, attempted to board Captain Thomfon's Ship; but he with his great Guns, Captain Carr with his Company of Marines, Lieutenant Wall and Enfign Otterbridge with a Party of the Regiment, made fo brave a Defence, that the Spaniards were obliged to retire with Lofs. A Snow of fixteen Guns at the fame time. attempted to board our GuardSchooner, but was alfo repulfed by Capt. Dunbor; the Engagement lafted upwards of three Hours, in which the Enemy loft feventeen Men, and had ten wounded. They paffed all our Veffels and proceeded up the River, upon which the General held a Council VoL. II. NUMB. 92.
" " War at the Head of his Regiment, where it was " the Opinion of the Whole immediately to march up to "Frederica, for the Defence of that Place.
"6 The General accordingly gave Orders for the Regi" ment to march, and ordered all the Troops that were ss on board the Veffels, to come afhore, and directed "Capt. Thompfon, with the Guard-Schooner and Prize "Sloop, to make the beft of their Way to Cbarles-Town; " and this was all done in Sight of the Enemy. The "General, during this Action, being obliged to be fome' times on Shipboard, fometimes at the Batteries, and " to act as Engineer, found himfelf under a Neceflity " of having a Lieutenant-Colonel with the Regiment; ' he therefore appointed Major Alexander Heron Lieute' nant-Colonel, in the Abfence of Lieutenant-Colonel " Cook, who was alfo Engineer, and the Sub-engineer, 's having attended him to Cbarles-Toson, was allo abfent. "Late at Night the General arrived at Frederica, after " having deftroyed all the Stores at St. Simon's, and funk " the Veffels that might be of Ufe to the Enemy, and ${ }^{6}$ rendered the Guns incapable of Service, and ordered ${ }^{6}$ the Wounded to be carried off on Horfeback. That "6 Night the Enemy landed their Forces on a dry Marfh, " about a Mile and an half from the Camp, under Cover " of their great Guns. They lay all that Night under " Arms, and the next Morning took Poffeffion of the " Camp which we left.
" 1 3. About Noon the Creek Indians brought us five "Spani/bPrifoners, from whom we had Intelligence, that " Don Manuel de Monteano, Governor of St.Augufin, com" manded in chief the Expedition; and that Major" General Antonio de Redondo chief Engineer, and two " Brigadiers, came with the Forces from Cuba; that their ' whole Number confinted of about five thoufand, and " 6 that the Night before they had landed about four thou" fand three hundred Men. One of the Prifoners the "General fent with Mr. Bedon to Cbarles-Town. The " $7^{\text {th }}$ of Fuly, at nine in the Morning, a Ranger of the "Patrol brought an Account, that the Enemy were " marching within a Mile and an Half of the Town. "Whereupon the General immediately ordered four "Platoons of the Regiment to march, and in the mean ' time went himelf with the Highland Company, " who was then under Arms. The Indians, and a Party " 6 of Rangers, came up with the Enemy about a Mile " from the Town, as they were entring the Savannab to " take Poffeffion of a Ditch they had a Mind to ufe as " an Intrenchment, but the Enemy were attacked fo " brifkly that the General foon overcame them; moft ' of their Party, which confifted of one hundred and " twenty of their beft Woods-Men, and forty Indians, ${ }^{66}$ being killed or taken Prifoners. The General took two ${ }^{6}$ Prifoners with his own Hands; Lieutenant Scroggs of "the Rangers took Capt. Sebafian Sacbio, Prifoner, ${ }^{6}$ who commanded the Party. Toeanoeowi, being thot " through his Right Arm by Capt. Mageleto, drew his "s Piftol with the Left, and fhot him through the Head. "6 The General purfued the Enemy near two Miles, ${ }^{6}$ and halted on an advantageous Piece of Ground until " the Party of the Regiment came up; he poited them " with the Higblanders in a Wood, with a large Savan" nah or Meadow in the Front, over which the Spaniards " muft pass in their Way to Frederica. After which he " haftened back to Frederica, and ordered the Rangers, " 6 and Company of Men, to make ready. In the mean " time two Companies of Spaniards of fifty Men each, ' 6 and two hundred more of the Enemies beft Troops, " came up with Shouts, and Drums beating; where" upon the General hearing Platoons firing, immediately " made hafte that way, and met three of the Platoons, " who in the Smoke and drizling Rain had retreated in "Diforder, and the Fire continuing, he ordered his Men " to rally and follow him, who haftening on, found that " Lieutenant Sutberland, with his Platoon, and Lieute" nant Cbarles Mackay, with the Higblanders, had intirely " defeated the faid three hundred of the Enemy, in " which Action Don Antonio Barba was made Prifoner, ' and mortally wounded; feveral others were killed, and ' two Grenadiers were taken Prioners. Capt. Demeret,
${ }^{6}-$ and
"s and Enfign Gibbon, rallied their Platoons, and came
"s up to the Ground. Capt. Carr, with his Company of "Marines, and Lieutenant Cadogan, with a Party of
"s the Regiment, came up at the fame time, and were " followed by Major Heron, with the Body of the Re${ }^{66}$ giment. In both Actions the Enemy loft two Captains,
"s one Lieutenant, and two Sergeants; two Drummers,
"s and about one hundred and fixty private Men; and
"s one Captain and nineteen Men were taken Prifonèrs
"s The General, with the Regiment, halted all Night,
"s about a Mile and a Half from the Enemies Camp, to
"s intercept thofe who had ftraggled in the Woods; and
' expecting the Enemy to make a fecond Attempt to
"s march in the Morning ; but the General having ad-
"s vanced with a Party of Indians, before Day-break,
" towards the Spanifh Camp, found them all retreated
"s into the Ruins of the Fort, and under Cover of their
" Cannon.
"s Next Norning, the 8th of $\mathcal{J} u l y$, the General and
" 6 his Men returned to Frederica, and he appointed a
"G General Staff, viz. Lieutenant Primrofe Maxwell, ${ }^{66}$ and Hugb Mackay, Aids de Camp; Lieutenant Sutber"land, Brigade-Major; and Sergeant Fobn Stuart, "fecond Enfign, for his brave Behaviour in the late ${ }^{6}$ Engagement. The 9 th and roth of $7 u l y$ all Hands "s were employed in the Works at Frederica, and the
"c Indians brought in fome Scalps and Prifoners. The
" IIth of July a Settee and two Quarter-Galleys came
" within Gun-fhot of the Town; but on our firing fome
"Guns and Bombs from the Fort, and the General " going towards them with his Boats, they return" ed to their Fleet, and with the reft drew up in Line " of Battle. The next Morning, being the 12 th of "'Fuly, an Englib Prifoner efcaped from them, who ${ }^{6} 6$ informed us, that the Enemy, on their landing, " had refolved to give no Quarter; but from the "6 Day their Grenadiers were defeated, they were in " great Terror, and intrenched themfelves, and gave
"Orders that none fhould go without their Sentinels,
"6 for fear of being furprized by the Indians. By
st other Prifoners and Deferters we were alfo told, that
" upon their calling over their Rolls, there were two
" hundred and forty Men and nineteen of their Indians
" milingz; that there were great Divifions among
"chem, infomuch that Don Antonio de Redondo, who
"commanded the Cuba Forces, encamped feparate
" from thofe of St. Augufin, and that the Commodore
" had ordered all his Seamen on board. That Night
"s the General and five hundred Men marched within
"r a Mile of the Enemy's Camp, intending to furprize
"s them, but was prevented by the Treachery of a
" Frenclmon, who was got among the Company of
"' Boatmen, and fired his Piece and gave Alarm to the
"s Enemy, and then deferted to them. When the Gene-
"s ral found his Intention difcovered, he ordered all "s his Drums to beat the Grenadiers March, and then re" turned to Frederica.
"TheGeneral the next Day, being the I3th of $F_{u l y}$, "6 in order to defeat the Information of the French De"f ferter, directed a Letter to be wrote, and fent by a "s Spaniff Prifoner, who, for the fake of Money the "G General gave him, and the Promife of Liberty, un"s dertnol to deliver it to the faid Frencbmon, wherein " he was inftructed to acquaint the Enemy's Com" manding Officer of the defencelefs State of Frederica, "s and encourage them to come up by Water under his "s Pilotage ; which Letter the Spainifb Prifoner delivered " to the Governor of St. Auguffin, and it had fo good an "6. Effect, that the faid Frencbman was ifnmediately "s taken into Cuftody, and looked upon as a double
is Spy, and thereupon put into Irons. The next
"s Morning, being the Ith of Fuly, the Spaniards "s burnt the Barracks and Officers Houfes at St. Simon's, s and Capt. Hortori's Houfe on Tekyll; and the fame
" Night they reimbarked with fo much Precipitation, "s that they left a Quantity of Ammunition, Provifions,
"s and fome Guns, behind them. On the 15 th all the
" large Veffels with the Cuba Forces on board failed
${ }^{6}$ Southward, and the Governor and Troops from St. Au"gufin on board the fmall Crait, went within Land,
"s and encamped in St. Andrezo's, and caught fifty Horfes
" with a Defign to carry them away; but on the Gene-
ss ral's appearing in his Boats, the Enemy fhot the faid
"Horfes, and burnt the Fort and Houfes at St. Andrewe's.
"The General the next Day, being the r6th of ${ }^{\prime} u l y$, "followed the Spaniards with all his fmall Craft, bur " was not ftrong enough to attack them. He landed a "Man out of his Boat on Cumberland, who that Night "s paffed the Enemy's Camp, and early the next Morn "' ing came to Fort-Willian, with Advice to Enfign "Stuart that the Spaniords were beat off St. Simon's, "s and that the General was conning with Succours, and "s ordered him to defend the Fort to the utmoft. On ss the 18 th of Fuly twenty-eight Sail of Spanifb appeared ${ }^{66}$ off Fort-William, fourteen of which came within Land, 's and attacked the Fort from their Galleys and othe " Veffels, and attempted to land, but were repulfed by
"s a Party of Rangers from behind the Sand.Hills,
"Enfign Stuart, who commanded with fixty Men "s in the Fort, defended it fo bravely, that after an " Atrack of upwards of three Hours, they were obliged "s to put to Sea with confiderable Lofs.
" The Eignteen Pounders there difabled two of their "Galleys. The 1gth of Fuly the General was on his "Way to Fort-William. The 20th of Fuly the Gene" ral arrived at Fort-William, and fent his Boats and " Rangers as far as the River St. Fobn, who returned "s next Day, and brought Advice that the Enemy was "s quite gone: Upon which the General gave the necef"f fary Ordens for repairing Fort William, and on the " 22 d retarned to Frederica. A few Days afterwards "s the Men of War from Cbarles-Town came off St. Si"s mon's Bar, and Capt. Tbonop fon with fome Volunteers "from Carolina; our Guard-Schooner and two Galleys "s came into St. Simon's Harbour ; and Capt. Hardy, of " the Rye Man of War, receiving a Meffage from the "General, by Lieutenant Mawwell, who went on board " him, fent for Anfwer, that he would take a Cruife "s with the reft of the King's Ships. But the General "s apprehending the Spaniards, upon recovering their " Fright, might return with more Courage and better "Conduct, continued Capt. Thompfon's Ship in the " King's Service, and fent Expreffes over Land to the " Northern Provinces on this Occafion.
" Thefe Forces were commanded by Don Manuel de 6s Monteano, Governor of St. Augufin, Commander in "chief of the Expedition; Major-General Antonio de "Rodondo Engineer-General, two Colonels with Brevits "s of Brigadiers; and confifted of one Regiment of Dra" goons difmounted, with their Saddles and Bridles;
" the Regiment called the Battalion of the Havanna, "s ten Companies, of fifty Men each, draughted off from "feveral Kegiments at Havanna; one Regiment of the "Havanna Militia, confifting of ten Companies of 100 "، Men each ; one Regiment of Negroes, regularly officered "s by Negroes; one ditto of Mulattoes, and one Com" pany of Miquelets; one Company of Train, with "6 proper Artillery; Augufin Forces confifting of about " three hundred Men, ninety Indians and fifteen Ne "g groes, who run away from South Carolina. To thefe "Accounts I fhall add the following Depofition of Samue? "Cloake, formerly belonging to his Majefty's Ship the "Flamborough, and taken Prifoner off St. Augufin by the "Spaniards in May 1742.

## Frederica in

Georcia, is.
" This Deponent, being duly fworn, faith, That he " was put Prifoner on board a Ship called the Pretty
" Nancy, taken by the Spaniards from the Englifh, fit"s ted out with ten Carriage and fix Swivel Guns, which "s was Part of the Fleet that carried the Troops from "St.Augufin for the Invafion of Georgia and South Caro" lina: That the had one hundred and fifty Soldiers on "s board, befides Sailors: That he counted forty-four Sail, " befides the Launches and thofe that went in Land, and " Pettiauguas which carried the Indians: That they failed "from St. Augufin the beginning of Fune, and met with ${ }^{66}$ very hard Gales for threeDays, which difperfed theFleet: «6 That the chief Pilot on board the Commodore was one

Parris, belonging to Port Royal in Soutb-Carolina, and who was married there, and had a Plantation in that Province: That they came to an Anchor with Part of the Fleet off Frederica Bar, to the Northward of it; and the Spaniords faid that they fhould not have found out Georgia, had it not been for Parris their Pilot: That they lay feveral Days at Anchor off the Bar, during which Time the Men were put into fmall Boats in order to land; but feeing feveral Men marching on the Beach, they were afraid to land, as they intended, and came on hoard again ; for about three Days after, holding a Council of War, they refolved not to land any Men "till they had made themfelves Mafters of the Harbour. During the Time they lay off this Bar, the Spaniards often whetted their Swords, and held their Knives to this Deponent's and other Englifh Prifoners Throats, faying, they would cut the Throats of thofe they Thould take at Georgia. They failed on the 5 th of $\mathcal{F} u$ ly with a ftrong Eafterly Wind and Tide of Flood: That the Englifh fired from the Batteries and Ships very brifkly, and the Spaniards faid that the Englifh ftood very well: That a Four-Pound Shot hulled the Ship where the Deponent was; and one Eighteen-Pound Shot from the Battery killed feven Men on board the large Ship: That there were of the Spaniards eight Three-Maft Ships ; the Commodore’s was a Twenty-Gun Ship ; there was alfo a Snow with fourteen Nine-Pounders, and a Galley with three large Guns, one of which he heard was a Twelve-Pounder, which was manned with above one hundred Men; there were alfo feveral Privateers, fome of them with ten Guns, and fome with eight: That the Spaniards "s and fome Iriflomen on board told him, that in the whole " Fleet there were about five or fix thoufand Men, and «s were come with a Defign to take Gcorgia, and after "s that go to Port-Royal in Soutb-Carolina. He farther " fays, that they had a whole Regiment of Negroes, "s with a Company of Grenadiers, in the fame Manner as other Regiments havè, and cloathed in the fame Livery as other Spaniff Regiments; they were com" manded by Negro Officers, and he faw the Officers walking along with the Governor of St. Auguffin afthore; that they were dreffed in gold and filver-laced Cloaths, like other Officers, and that they were kept s in the fame Pay as the other Regiments. He further faith, that the Ship where this Deponent was, was os loaded with Grenadiers and Dragoons, who had on " board Saddles, Bridles, Piftols, and all Accoutre© ments: That they landed all them from on board his "Ship, and put a fimall Guard of ten Men on board: "6 That two or three Days afterwards one of the Captains " and one Sergeant of the Grenadiers came on board, " and this Deponent afking the Sergeant whether he had " been at Frederica, he anfwered, that the Woods were " fo full of Indians that the Devil could not go through " them, and that the Indians had killed about one hun"s dred and fifty of their beft Men, and that there were " but very few Soldiers: Thofe who came on board were ss fo down-hearted that they could hardly fpeak a Word: "s That upon this they were ordered to get Water on " board, in order to get to Sea in a Hurry, which this ' Deponent took the Advantage of, and made his Efape to General Oglethorpe.

Mark.
Samuel $\times$ Cloake.
14. It may be truly faid, that there never happened in this Part of the World, any thing more honourable for the Englifh Nation, or more likely to ftrike a Terror into their Enemies, than this entire and total Defeat of fo formidable an Invafion, by fuch a Handful of Forces. Inftead of raifing and heightening this Succefs, to do Honour to the General's Character, we ought rather to leffen or diminifh fome of its Circumftances, to render it in fuch an Age as this more credible; but we have taken no Liberties at all, the Facts are reprefented Step by Step as they happened; and the Reader is left to judge how far it appears from hence that Georgia is a true Frontier, in refpect to Carolina; and what Advantages are to be hoped for in cafe the new Colony fhould increafe in a
reafonable Proportion, for twenty Years to come; but to help the Reader's Judgment in this Refpect, and to fhew him in what Light this Tranfaction was confidered by all our Colonies in America; the Imhabitants of which were certainly the ableft, and moft equitable Judges; it is requifite to obferve, that Jobn Tinker, Efq; Governor of the Babama Iflands; Lereis Morris, Efq; Governor of Nere Ferfey; William Gooch, Efq; Governor of Virginia; George Clark, Efq; Lieutenant Governor of Neto York; Gabricl Fobnfon, Efq; Governor of North Carolina; Tho mas Bladen, Efq; Governor of Maryland; and George Thomas, Efq; Governor of Penfylvania; all wrote to Ge-neral Ogletborpe upon this miemorable Occafion, to congratulate him upon being the happy Inftrument in fo honourable and fo important a Service; to affure him of the Share they took in the Honour he had acquired, and of the true Senfe they had of the great Deliverance that Providence had wrought for all the Britifh Colonies in North America, by his Conduct and Courage. Stronger: Teftimonies than thefe, with refpect to the Confequence of the Action he had performed, it was impoffible for him to receive, and better Evidence than thefe Letters afford it is likewife impoffible that we fhould have here at home; and therefore to fet this Fact in its true Light, and that the People of Great Britain may have a juft Notion of the Advantages arifing from this wife and well condueted Defence, in which the Bravery of Britibl Soldiers, their Affection for, and Confidence in, their Commander, is fo clearly expreffed, I thought it reafonable to annex the Copies of the Letters written by the three firf mentioned Gentlemen, as being equally honourable for them, and for the Perfon to whom they are addreffed; and if I add no more, it is to avoid being tedious, and that I may have an Opportunity of clofing the hiftorical Part of this Section, with Papers that do fo much Honour to the new Colony of which it treats.

Copy of a Letter from bis Excellency John Tinker, Efq; Governor of the Bahama Inands, to Generdl James Oglethorpe.

S I R,
N. Providencë, Nov. 6. 1742.

I am favoured with both of your Excellency's Letters, of the 3 Ift of 7 uly $y$ and 16 th of September, with an inclofed Account of the Spaniards Defcent upon your Province, and your fortunate Victory over them: Upon which I beg leave to congratulate you, and to affure you none of your Acquaintance can receive more real Satiffaction at an Event that muft contribute fo much to your Honour and Reputation as this laft. I rejoice too for the Public, becaufe I am fure if you had not given fo good an Account of them, the neighbouring Provinces would have been in imminent Danger. ' I know the General had Orders to attack this Inand upon their Return, fo I may juftly thank you for faving me a great deal of Trouble.
If there is any thing in this Government that can contribute to your Pleafure, and facilitate the Continuance of our Friendfhip and future Correfpondence, I fhall, with Joy, embrace the Propofition. The Bearer has been a long Time here, and can give you an exact Account of the Carte du Pais. We are, at prefent, employed in repairing the Fortifications, and making fome additional ones, which will, I hope, be compleated this Winter. I have the Honour to be, with great Regard and Truth ${ }_{3}$

## Your Excellency's <br> moft obedient bumble Servant, <br> (figned) <br> John Tinker:

Copy of a Letter from bis Excellency Lewis Morris, Efq; Governor of New Jerfey, to General James Ogles thorpe.

S I R,
Burlington, the 2 d of Nov. 1 年 42.
I received the Honour of yours of the 3rft of $7 u l y$
laft, by the Exprefs you fent, along the Continent, who is now got thus far back in his Return to you. The Contents of it gave me very great Pleafure, as it informed me of your Health, and of the great (or rather wonderful) Succefs God has been pleafed to give to his Majefty's Arms under your Conduct : And I doubt not has effectually convinced the Agreffors how unable they are to cope with refolute Britifb Troops; and I hope will be a fufficient Difcouragement to a fecond Attempt of that kind; which, if the firft had fucceeded, might prove of dangerous Confequence to his Majefty's Plantations on the Continent, efpecially the moft fouthern ones.

You have gathered unenvied Laurels, and well deferve to wear them. I take Leave to affure you no body can be better pleafed with your Succefs, than,

## $S I R$,

Your moft bumble,
and obedient Servant,
(figned)
Lewis Morris.
ExtraEt of a Letter from the bonourable WILLIAM Gooch, Efq; Governor of Virginia, to General James OgleTHORPE.

## S I R,

October the 12 th, 1742.
I received the Letter of the 3 Ift of $7 u l y$ your Excellency honoured me with, by the Hands of your trufty Courier, Mr. Watkins, and with it a very fenfible Satiffaction: I rejoice to hear your Courage and Conduct have had their deferved Succefs, in fo unequal a Trial. Your prudential Behaviour on the Occafion, cannot be too much applauded, nor Actions fo truly laudable too much admired. The whole Continent is under lafting Obligations to you, for your extraordinary Vigilance and Magnanimity, when, not thinking your Services to your King and Country compleated, nor your Valour fufficiently proved in the Defence of your infant Settlement, againft the repeated Attacks of cruel and inhuman Foes, more than could be expected, confidering their Numbers; with an uncommon Refolution you forced them in the Field to a precipitate Retreat, and effectually defeated the defperate Defigns of an Enemy that had the Vanity to flatter themfelves with the Hopes of making an eafy Conqueft of fome, at leart, of the Britifh Provinces.

As thefe great Actions are to be attributed to your Fortitude, fo in my Judgment the unexpected' and vigorous Oppofition they met with, ending in fo fevere a Rebuff, has thrown them into fuch Diforder, that I am confident thofe Troops, were they all together in St. Auguftin, could not fo foon recover fufficient Courage to animate them to the like Undertaking: The Confufion and Hurry in which they reimbarked, are fuch evident Tokens of their being terrified and difmayed, that with your ufual Watchfulnefs you may reft fecure from further Difturbance, $\varepsilon^{2} c$.

## I am,

$S I R$,
Sour moft obedient,
and moft bumble Servant,

## (figned) William Gooch.

15. We have now compleated the Hiftory of the Englifb Colonies in America, in fuch a Manner, that the Reader cannot help difcerning their intrinfic Value and great Importance; there is therefore no Neceflity of our adding any thing on this Subject here, and therefore we will confine our Remarks entirely to the Colony of Georgia, and endeavour to fhew from what Views, upon what Hopes, and in how great a Degree the Public is interefted in the Maintenance and Support of this new Colony. In the firft Place, we have feen that the Truftees originally defigned it for a Boundary or Frontier to cover
the other Provinces upon the Continent; that it was extremely proper for this, the very Situation of it fhews; that it was extremely wanted we may gather from the Hiftories of the other Provinces, in which we find various Inftances of the Ruin of their advanced Settlements from their leaving fo large a Country as Georgia uncul tivated, a plain Sign of their Fear of becoming nearer Neighbours to the Spaniards; and from the Names of Places, fuch as Bloody Point, which commemorate the Maffacres that have been heretofore committed in thofe Parts; but the ftrongeft and cleareft Proof'of all, is the Memorial from the Affembly of Carolina, in which the Reader has feen this Matter fated in the fulleft and faireft Light; from all which I infer, that the eftablifh ing of fuch a Barrier, was a Point worthy of public At tention; and that the Benefits accruing from it to Carolina, and all the Provinces to the Northward, might very well be confidered as a fufficient Recompence for any Expence that might attend the eftablifhing of fuch a Frontier. That the Public were not amufed in the Hopes that were given them by the Truftees of Georgia in this refpect; that the fending a Regiment thither, was not a needless or ufelefs Expence; and that the Money employed in fortifying there, was not either wafted or thrown away, manifeftly appears by their repulfing the Spaniards in the late Invafion. If this was folely owing to the Bravery, Firmnefs, and Strength of the new Colony, then furely there is no room to find Fault with it; and if the Province is as fome People would have it, thinly peopled, and very little capable of Defence, what Applaufe is due-to the General? Who, without the leaft Affiftance from any other Place, could repel fuch a Force, and thereby fecure all our Colonies in North America: Take it either Way, we are fure of a Barrier while we have Georgia under his Direction.

In the fecond Place, this Country was defigned as an Afylum for diftreffed People in our own Country, and for fuch induftrious foreign Proteftants as fhould be willing to go thither. If we confider the thing in this Light, the fupporting this Defign was no Favour in the Government; for it is the Duty of every Government to provide for fuch of its poor Subjects as are willing to work; and the leaft they can do, is to fend them to the Colonies, fince it muft be owing to their Mifmanagement that they have not Employment at home ; but it is not their Duty only, it is their Intereft alfo; for Men active and induftrious, who can find nothing to do, and are at a Lofs to find any thing to eat, are not apt to remain long in fuch a Condition: And furely it is better to fend fuch People abroad, though at a fmall Expence, than fee them, for want of fuch Care, fend themfelves to the Gallows. In times of general and continued Peace, there will, however, be fuch Overflowings in moft Nations; under arbitrary Princes from Mens Averfion to Slavery, under free Governments from a fuperabundance of People. In both Cafes that Government is to be commended, which laying hold of thefe Cverflowings, applies them to its own Ule. 'To give luch People Territories, is to acquire, though it feems a Solecifin in Speech, the very Territories yous give; for Land without People is of no Ufe; but Land inhabited and cultivated by white People, let it lie where it will, is of great Value; and that Value is much enhanced when that Land is cultivated, and thofe People are fettled precifely where you want them moft. This is the Cafe of Georgia; for the Corolina Memorial tell us, that white Men were not to be raifed there for Money ; which was the fame thing as if they had told the Government, that the beft Way they could employ their Money, was in fending of white People thither. But when we confider the Expence of fending white $\mathbb{M e n}$, and compare it with the Purchafe of Negroes, the Cafe appears ftill more advantageous: Since the white Men come cheaper, and are of much greater Auvane: By fetting them you acquire ufeful Sybjecic, and colnuumdy increafe your Force; by purchafing IVegroes, you only gain fo many Slaves that increafe your Danger and Terror, by leffening your Force. Your own Pcople and foreign Proteftants will be always yours, but Negroes are any body's that
will but promife them better Conditions than they liave under you, which may be very eafily done; and of what ill Confequence this may prove, appears from the Negro Regiment in the Spanifh Service; for had they fucceeded in their Invafion, and once penetrated into a CoIony full of Negroes, they might have raifed new Regiments by barely beating their Drums; Regiments that would have been equally terrible to us, and ufeful to them, from their Knowledge of the Country, and from their Hatred of their old Mafters.

There was a third Advantage propofed in the fettling this new Colony where it is fettled, and from the Terms upon which it was fettled; and that was, the fecuring the Nations of Indians which inhabited the vaft Countries to the South and South-weft of Georgia, in the Britibl Intereft. A thing fo much the more neceffary, confidering the Views that the French had of the fame kind; and of , vaft Importance to all the Colonies, as the maintaining of Friendfhip with there Nations, muft neceffarily interrupt the Correfpondence between the French Colonies of Canada and Louvifinana, upon which their being formidable to us North America abfolutely depends; fince if ever they complete it, every Child that can be brought to comprehend a Map, will fee that they will furround all our Colonies on the Main, from Nova Scotia to Georgia; but by this laft Colony, we have bid fair for interrupting their Defign, by engaging in our Intereft thofe Indian Nations moft capable of doing us good, and them hurt: As for Inftance, the Lower and Upper Creeks, a Nation fo called from their Country being interfected with Rivers, which Country extends from the River Savannab to the Lakes of Florida, Southward and Weftward, to the Cbe(rokee Mountains, and the River Coufa; fo that we may eafily difcern how ufeful their Friendfhip muft be to the Colonies of Georgia and Carolina, more efpecially when it is confidered that they are a very brave, a very numerous, and a very faithful Nation, as appears from their Conduct in the prefent War; in which they have fhewn as heroic Courage as any the Greek Hiftory records, and a Fidelity to their Allies, equal to that of the early Roimans, which has been owing to Alliances concluded with Equity and fupported by Integrity, and the fame Conduct conftantly purfued towards them, will for ever bind them to our Service.

The Cberokees poffefs the mountainous Country Weftwards to the River Miffifpppi, as the Cbickefares do the Plains to the Southweft of the Country of the Cberokees, both brave and numerous Nations, enthufiaftically fond of Liberty; in which it is our Intereft to fupport and maintain them againft the French. Hence it appears, that in this Light the Truftees were both well informed, and have happily fucceeded; the Reafon of the thing, and the Hiftory of the Country, plainly proves this; and, befides, they have the only kind of Evidence in Credit with the Moderns: I mean, that all they promifed themfelves has been verified by the Event.

By the happy Situation of this Country, the Inhabitants of it will not only be enabled to protect and defend the Northern Colonies that lay behind it, but may be alfo of great Ufe to Famaica and the Leeward Iflands. I am fenfible that there are many that will affect to treat the firft Part of this Affertion as ridiculous, and to fneer at the latter as chimerical; but I have confidered very well what I have afferted, and am from thence convinced of the Truth of what I fay. I can very eafily forefee that it may be objected, my own Book fhews that there are thoufands and ten thoufands in Virginia, Penfyluania, New York, the Ferfeys, and New England; and therefore it is a Jeft to fay that thefe great and populous Countries are to be protected by a handful of poor People juft fettled in Georgia: Yet for all this the Fact muft be true, or that Colony abandoned. If we, here at home, continue to protect and to fupport the People of Georgia, and in Confequence of that Protection and Support, induce them to confult their private Intereft, by purfuing fuch Schemes as are moft for the public Advantage, Georgia will very foon be full of Pcople, and of ufeful People, who muft have their Tools, their Cloathing, and other Neceffaries from hence; and who will be in a Con-

Vol. II. Numb. XCIII.
dition to pay us plentifully for all they liave. Georgid, if attended to, may become as populous as Barbadoes, or the Babama Ilands, and that in a very fhort Space of Time; for if a large Bounty were given for a certain Number of Years, upon every Pound of Silk imported from thence, we fhould fee it a rich and thriving Colony, and People would flock thither from all Parts; who, by maintaining their Treaties with the Indians, might eftablifh an effectual Barrier againft both the French and Spaniards, with all their Indian Allies. All this is highly pofible and practicable, nay, and very probable too; and when once it comes to be a Fact, there will be no Sort of Abfurdity in faying the People of this Colony, and their Indian Allies, will afford Shelter and Protection to the Settlements that lie to the North of them. But this is not all, for, as I obferved before, if the Inhabitants of Georgia once become numerous, they will then, in Confequence of their Situation, be moft able to help famaica, by a Supply of ftout, well difciplined, white Men, in Cafe of any Attack by the French or Spaniards; or, which is an Evil they are not altogether fecure from, any fuidden Infurrection of their Negroes. I very readily grant that I argue from an Uncertainty, that is to fay, we are not fure that this Colony will be fo protected and fupported; but if it be, the Confequences are abfolutely certain; and the Confideration of thefe Confequences ought to be no mean Argument with our Government to maintain and fupport it.

We are now come to the very laft Article of our Remarks, which is the Hopes that may be rationally entertained of the Produce of this Country. We will begin with what the Truftees certainly defigned fould be the Staple Commodity of Georgia; I mean Silk: 'That this Country is very happily fituated, that its Soil and Climate render it very fit for producing Silk, cannot be denied by any who are at all acquainted with this rich Branch of Commerce, which fome very good Judges have affirmed to be much more confiderable than either the Linen or the Woollen Manufacture. This Country lies along the Sea-fide, is well watered within Land, has a Soil extremely proper for the Culture of the Mulberry-Tree, and is feated in a Latitude and Climate we might judge would prove agreeable to the Silk-worm. Thefe Circumftances might very naturally lead one to expeet that the Inhabitants might fet about the Production of Silk in this Country, for their own Advantage. With a View to this, proper Perfons have been fent thither : The Experiment has been tried, Silk made in Georgia has been fent over, and Sir Thbomas Lombe, and other excellent Judges of that Commodity have declared, that it is in all Refpects as good, and works to the full as well, or better, than any Piedmont Silk, which ftands us in twenty Shillings a Pound. At the very Time that this Section is under my Hand a Letter has been received from the Reverend Minifter of the Proteftant Congregation at Ebenezer, by which it plainly appears, that Silk may be produced in the greateft Perfection, and without any confiderable Difficulty in this Country, provided the People had proper Encouragement. We are not to underftand by this, that the People in that Country affect to make Terms with us, and refufe to raife Sills unlefs we will give them more for it than it is worth; for the Fact is quite otherwife, the Encouragement they demand, is not fo much on their own Behalf as for the fake of the Commodity.

All Beginnings are hard, and thefe People, in undertaking this Work, are beginning two Things at the fame time, viz. to raife Silk, and to raife a Subfiftance: If thefe interfere with each other, 'tis very plain that the former muft give way to the latter. It is natural for People to wifh to live well, but it is neceffary that they fhould live fome way or other; and therefore this poor Clergyman honeftly tells us, that his People having now got into a Way of winding the Silk off the Cocones, they would apply themfelves more diligently to this Bufinefs, if they were not called off by other Cares, that is, to get wherewithal to live upon. If therefore we really mean to promote the raifing of Silk in general, and aim, inftead of Curiofity, to make it a Commodity, we need only declare a Bounty upon it: This would fpeedily do the Bu-
finefs:
finefs; it would encourage every body there to turn their Hands to this Work, and it is a Work to which all Hands may be turned, Women and Children as well as Men ; and no fuch hard Labour as to render Slaves neceffary. What this might produce we may in fome meafure guefs, from what the Culture of Silk produces in Italy; where four and five Pounds an Acre are common Prices for Lands that bear Mulberry Trees, where the Leaves are fold at a high Rate, and where the poor People willingly give their Time and Labour, in feeding and attending the Worms, for half the Price of the Silk; which is but divided between the Labourer and the Landholder; amounting commonly to between three and four Pounds a Tree. If once this Bufinefs was effectually fet a-going, there is no Queftion but the Progrefs would be very fpeedy, and the Bounty paid for a few Years, would moft effectually eftablinh both Commodity and Colony.

## On the other hand it ought to be confidered, that the

 Price of Georgia Silk, and the Bounty upon it, would be both paid in our own Commodities, whereas we pay now for Piedmont Silk wholly in ready Money; fo that the Difference to the Nation will be but a very Trifle; perhaps I fhould not carry the Thing too far, if I faid nothing. It is very poffible, that when this Trade came to flourifh in Georgia, it might alfo be fet up in Carolina, and even in Virginia, there being no fort of Doubt, that with due Attention and Application, Silk might be produced in both thefe Colonies; neither is this any new Difcovery, but what has been obferved by all the Writers upon the Affairs of the Plantations for many Years paft ; but if it fhould be the Cafe, it would not be at all detrimental to this Nation; but on the contrary, this very Thing will lay us under a new Obligation to Georgia, for then we thould have the Silk Manufacture as much in our Hands, if not more, than we have the Woollen; and how vaft an Alteration this would make in the Balance of our Trade, may be eafily fhewn.It is to be obferved, that in all Silk Manufactures there are two Kinds of Silk employed, one for the Warp or Cane, which is the very Silk that our Colonies would produce; but before this Silk can be ufed, it muft be thrown by an Engine into what is called Organzine, for which there is at prefent but one Engine in this Kingdom, which is the famous Silk-mill at Derby; fince the erecting of which his Sardinian Majefty has prohibited the Exportation of raw Silk from his Dominions; fo that what we have from his Country is Organzine. He has done ftill more for the Benefit of his Subjects; for he has laid fuch high Duties upon our Manufactures, as amount almoft to a Prohibition; fo that as I have more than once faid, we are obliged to pay for this Silk in ready Money, for it is fo neceffary to us, that our Silk Manufactures cannot be carried on without it; and by this Means his Subjects take annually from this Nation about two hundred thoufand Pounds in Money. Befides what we receive from Piedmont, we have likewife confiderable Quantities of raw Silk of the fame Kind with that from Genoa, and other Parts of Italy; which is thrown into Organzine by the Engine at Derby.
As to the other Kind of Silk, which makes the Woof or Shute, it comes to us from many Places, but particularly by the Way of Turky; fo that if we had the former Kind of Silk from our Plantations, it would enable us to confume a much greater Quantity of this other Silk that cometh to us by the Way of Turky, for which we pay in our Woollen Manufactures: So that here is plainly a double Advantage; firft, of faving the ready Money which is paid for one Kind of Silk ; and next, increafing the Exportation of our own Goods, for which we bring Home in exchange that other Kind of Silk; and if once we were in poffeffion of thefe Advantages, there would follow a third, equal, if not fuperior, to both; for we fhould be then inconteftibly able to fabricate all Kinds of wrought Silks at fo cheap a Rate as to under-fell moft Parts of Europe; which would draw a Demand from Germany, Flanders, Spain, and Portugal, to the inconceivable Benefit of the Merchants and Manufacturers of this Kingdom, who are beyond all Queftion, in Con-
junction with the Seamen, who muft thrive when they do, the moft valuable People in it, and by whofe Induftry the reft are maintained. Thus we fee that the Defign of eftablifhing the Bufinefs of raifing Silk in Georgia, is in itfelf a Matter of vaft Moment, not to the Truftees or the Inhabitants of that new Colony only, but to the whole Nation; a Thing that would give a new Turn to our Trade; employ a Multitude of Hands at Home, by promoting both the Silk and Woollen Manufactures; enlarge our Commerce Abroad; increafe our Shipping; augment the Number of our Seamen, and enable us the better to bear thofe vaft Expences into which, it is faid, the Circumftances of Affairs Abroad have neceffarily plunged us.
Before I part with this Subject; I think it becomes me to add fomewhat with refpect to the Conduct of the King of Sardinia, which, from what I have faid above, may be thought in fome meafure unkind towards this Nation ; whereas, properly underftood, nothing of that fort will appear. The firft and great Concern of every Prince, or at leaft of every wife and good Prince, is the Welfare of his own Subjects; and with refpect to the Monarch of whom we are fpeaking, he has purfued it with greatSteadinefs and Prudence. His Duties upon French Commodities are very low; fo that his Subjects are furnifhed from thence with Woollen Manufactures at very reafonable Rates, and by putting our Goods under a very high Cuftom his Subjects fell their Silk dear, and for ready Money : And thus, by the Interpofition of the Government, they make the moft of their Goods; and are as rich as the Nature and Extent of their Country will permit them to be. It muft indeed be allowed, that as Things frand at prefent his Sardinian Majefty's political and commercial Concerns are in a manner oppofite to each other ; but this does not hinder him from purfuing both. The Balance of Power in Italy is a Thing of vaft Importance to him, fince, if it fhould be loft, he would fcarce be able to keep his Dominions ; but the Trade of his Subjects is likewife of very great Importance, for without that his Dominions would be hardly worth keeping. His Conduct therefore, in both Refpects, is wife and juft, though it falls out to be in fome meafure prejudicial to us, and that too in our tendereft Concerns, our Manufactures and our Trade.

But what then, ought we to differ with or blame him ? Nothing like it: We ought, on the contrary, to admire and imitate him; we ought to make the fame Diftinction that he does, between our political and commercial Interefts; we ought to fhew ourfelves firm in fupporting the former, and in order to it we mulf be vigorous in promoting the latter. We fee very plainly and clearly, or at leaft we may fee it if we will, that there is nothing more practicable in the World, than the raifing the Silk Trade in Georgia ; the Country is fit for it, the Climate is fit for it ; we have raifed, and may raife, what Quantities of Mulberry-trees we will: The Silkworm thrives there wonderfully well, which however is the Cafe of very few Countries; and the Silk brought from thence has been found excellent. If all this does not pafs for Demonftration in a Matter of this Nature, it is in vain to look for Demonftration. On the other hand, that the raifing of Silk in Georgia would fill that Country with White People; would fecure to us the Affection, and the Affiftance of the neighbouring Indian Nations, and fo render it an effectual Frontier, is beyond all Difpute; and that the Advantages accruing to this Kingdom, by enabling that Plantation to furnifh us with Silk equal in Quality to the Italian, are fo plain and certain that I make no Scruple of affirming, that if due Care was taken in this Refpect, all the Expence neceffary to eftablifh the Silk Trade there, would not amount to above one Year's Purchafe of the Profits, five and twenty Years hence: By which I mean, that the Advantages accruing from this Colony to Great Britain, in 1771 ; fuppofing the Silk Trade immediately fettled there, and by immediately, I mean no more than as foon as poffible, will equal all that the Public has, or may lay out upon that Settlement before it becomes able to maintain itfelf. We manure our Lands before we expect Crops from them; we manufacture our Goods
before we fend them to Market ; we educate our Children before we expect they fhould provide for themfelves; and why fhould not we take the fame Care of this Colony, before we expect public Advantages from thence?

It has been already fhewn what may be expected from the different Method purfued in the eftablifhing this and other Colonies; and how eafily, and how entirely, it may be turned to the Service of Great Britain, fo as in the Compafs of a few Years to anfwer national Expectations, better than Colonies that have been much longer fettled. But we muft keep thefe Points in View; we muft proceed as we have begun, or all that we have hitherto done will be thrown away; and if it fhould, we can blame no body but ourfelves. We have feen the Silk Trade planted there; we have feen it take Root, and even bring forth Bloffoms, which, if the beft Judges may be trufted, promife the faireft Fruit ; let it not then be loft for a little Care or a little Expence, if that be neceffary, in pruning and watering it.

I might likewife take Notice of the raifing Wine here; indeed I have promifed it, but I have infifted fo long upon Silk, that I can be but fhort upon this Head; yet fomething I will fay. There were great Hopes that this Improvement might foon have been brought to Perfection, but fome Difficulties have been found in the Way, and they are chiefly thefe: The Coat of the natural Grape is not ftrong enough, and therefore when it grows ripe they burft. The Froft, about the vernal Equinox, frequently kills the Vines when they are fhooting ; and as to the European Grapes, it is found that the Infects of the Country deftroy them. Yet Experience has Thewn, that by grafting the European on the wild Vine, all thefe Inconveniencies are in a great Meafure prevented; for then it fhoots later, and fo efcapes the Froft better ; the Grape Skins become thicker and ftronger, and Infects do it lefs Prejudice: So that there are ftill Hopes that Wine may be made there, both in great Plenty, and in great Perfection; and if we reflect on the Miftake we made, with refpect to the Cape of Good Hope, which we abandoned as worth nothing, and which the Dutch, by their Induftry, have made one of the fineft and moft valuable Plantations in the World; we fhall not be hafty in llighting thefe Hopes.

Befides, there is nothing wanting in this Country but a fufficient Number of Inhabitants, to render it, in every refpect, a fertile and a pleafant Settlement. They reap very good Wheat here in May; they mow their Grafs in Fune; they might cultivate Rice here-to great Advantage, if that was judged proper, which, however, for many good Reafons is thought not fo; Olives flourifh there in the greateft Perfection; and fo do Oranges in the South Part of the Province, where (I fpeak on the Credit of Eye-witneffes) an Orange Tree has been known, in feven Years Time, to have been fifteen Foot from the Root to the Branches.

Thefe Confiderations, with Refpect to the Confequences that may follow from the Improvement of this laft Settlement, which I look upon to be the Honour of the prefent Age, have proceeded folely from a regard to Truth, and to the public Service, which are the fame Motives that have directed me through the Courfe of this Undertaking. It appeared to me that there were many things, in relation to moft of the Colonies, and
particularly in refpect to this; about which the World in general was either mifinformed or not informed at all $\frac{1}{3}$ and therefore I thought it would be doing fome Service to Trade, to the Colonies, and to the Public, if thefe Points were fully and fairly treated; for which Purpofe I took Pains to procure the belt Materials I could, and have dis gefted them in the beft Method I was able, but in fuch a way that the principal Facts appear all along with their proper Authorities; fo that the Reader fees to what he gives Credit, and is not obliged to take any thing upon Truft from me; all my Reafonings being fubmitted, as they ought to be, to his Judgment, with full Liberty to admit as little or as much as he thinks fit, when he has duly weighed the Arguments that are offered in fupport of them. It is in this way, and in this way only, that fedentary Perfons can make themfelves ufeful to Society, and in this way they may be very ufeful, by furnifhing others with an Opportunity of viewing and reflecting upon things which otherwife might never have come to their Notice.

One thing more I muft obferve before I conclude this Section, which is, that if there be any thing in it, or in $\rightarrow$ deed in any of thofe relating to the Britifb Plantations, which ought, in a particular Manner, to claim the Attention of the Public; it is, in a great Meafure, due to the Lights afforded by the Honourable Fames Ogletborpe, Efq; from whom, if the Author has caught any Part of that generous Spirit, which inclines a Man to bend all his Thoughts, and turn all his Labours, to the Service of his Country, it is but juft that he fhould acknowledge it; and this he is the more ready to do, becaufe if there be any Merit in his Performance, capable of making it known to, and efteemed by, Pofterity; he would willingly confecrate it as a Mark of his Efteem and Gratitude, for the many Informations he has received, and the right Turn that has been given to his Inquiries, by that knowing and worthy Perfon, who is equally happy in rendering the greateft perfonal Services himfelf to the Community, and by infufing the like Difpofition in others, both by his Example and Converfation.

There remains, in order to complete our Hiftory of the Weft Indies, no more than an Account of the French and Dutch Settlements in that Part of the World, in reference to which we may have leave to be the fhorter in our Relations, as we have already taken Occafion to deliver many things concerning the former, and there cannot be a great deal faid with refpect to the latter. In treating both, however, we fhall endeavour to reprefent all things fairly and agreeable to Truth, without exaggerating, as fome have done, the Power of the French, or as others, the Induftry of the Dutch: Both indeed are worthy our Notice and our Attention, but neither as things ftand at prefent can juftly provoke our Envy, fince there is no Comparifon between our Condition and theirs; nor can we juftly apprehend any confiderable Alteration in our Circumftances but what muft follow from our own Negligence, rather than from any Attempts of theirs; though it mult be confeffed that both are ready enough to catch at any Advantages for promoting their Interefts in that Part of the World, though it fhould be at the Expence of their Neighbours; things that ought to teach us Care and Circumfpection, which are as neceffary to fecure Profperity, as to obtain it.

## S E C TIO N XXII.

A fuccinet Hifory of the Discoveries, Settlement's, and Coneuests, made by the French in America; a View of their Policy, Numbers, Commerce, and Strength, in that Part of the World; and fome Conjectures as to the Event of their Defigns; extracted cbiefly from their own Authors.

1. An introductory Account of the firft Voyages made, or faid to be made, by the French to America, weith a more particular Detail of that of John Verazzano, or Verazani, under the Reign of Francis I. 2. The Voyage of James Cartier of St. Malo's, who difcovered Canada; and a curious Account of the Etymo$\log y$ of that Word. 3. The firft Efablifbment of the French on the Banks of the River of St. Laurence; the building of the Town of Quebec, and the Diffculties found in fixing a Colony in thofe Parts. 4. A Defcription of the Savages, Natives of Canada, their Cuffoms, Manners, Superfitions, and entbufiafic Fondnefs for their cwen Way of Life. 5. A concije Account of the Jllinois, by Mr. Joutel; and a larger Relation of the Cuffoms and Manners of the fame Nation, by Father Marquette. 6. Amore particular Defcription of the Colony of Canada, or New France, the City of Quebec, and other Places therein, with an Account of the French Commerce weith the Indians, and their Force in thofe Parts. 7. The prefent State of that Colony, its Strength, Produce, Shipping, and Importance to France fairly reprefented. 8. The Confequence of Acadia, Placentia, and Inle Royal to France, in refpect to their Fifbery, \&cc. Set in its true Light. 9. The firft Expeditions of the French to the Weft Indies, their Vierus, and the Confequences of thofe Expeditions in relation to Commerce. 10. The Settlements made by that Nation in the Leeward Illands; the Situation, Extent, Produce, Strength and Importance of thofe Iflands. II. Their Trade with our Northern Colonies, their owen, directly to France, and the Value of the Sugars they export, with otber Particulars. 12. A brief Relation of the firft fettling of the Subjects of France on the Iland of Hifpaniola, or St. Domingo; the amazing Progrefs of their Colony there; a true Reprefentation of its prefent Condition and vaft Importance. 13. A Sort Account of the various Attempts of the French, to jeize Part of the Southern Coafts of Florida; their repeated Difappointments; and nere Project of finding the Courfe and Mouth of the great River of Miffiffippi. 14. The Conjequences of the Je Inquiries; the making this Affair a Bubble; the Refolution of Settling Louvifiana croing to that Bubble; the Nature of that Settlement, and what may be probably expected from it in Time, both as to the Benefit and Dijadvantage of the French Trade. 15. A fair Proppect of the prefent Situation of the French Colonies, Affairs and Commerce throughout all America, revith fome Bort Obfervations and Remarks, in order to Set the Subjeet of this Section in the cleareft and jufteft Light pofible.

"THE national Vanity of the French is in nothing more vifible, than in the Accounts that fome of their Authors have given us of their Settlements in America. William Poftel has had the Affurance to affert, that the French were not only the firlt Difcoverers of America, but that the ancient Gauls carried on the Fifhery on the Banks of Nerwfoundland, before the coming of Fefus Cbrif; but, that finding thofe Countries without Corn, without Cities, and but very thinly inhabited, they defpifed and neglected thefe Difcoveries ; which Dream of hiis is as ridiculous and abfurd, as it is groundlefs and without Foundation. We have fome Accounts of Frenchmen who vifited North America at the Clofe of the fifteenth, and the Beginning of the fixteenth, Century ; but the Relations we have are very uncertain, and at moft prove no more than this, that fome French Seamen and Pilots that had been employed in the Nerwfoundland Fifhery, had fome Knowledge of the adjacent Continent, which is not a thing of very great Confequence.

At length, in ${ }^{5} 523$, Francis the Ift, one of the wifett and greateft Monarchs the French ever had, began to think of making Fitablifhments on the Coaft of America; and with this View he fitted out Fobn Verazzano, a Florentine, who had, under his Command, only one Ship, with fifty Men on board, and Provifions for eight Months; he returned to Dieppe in Fuly 1524; but we know nothing of his Difcoveries at that Time. He failed, towards the latter end of the fucceeding Year, on the fame Defign, and arrived on the Coant of North America, and it is not very clear upon what Part of that Coaft he arrived. He feems to have been a timorous Navigator; for he did not care to venture himfelf within any of the Bays or Ports that he faw before him ; but wanting Water, and lying in a Road very near the Shore, he perfuaded one of his Seamen to fwim thither; and by the Help of Prefents, with which he furnifhed him, procure what they ftood in need of from the Natives, who came down in Crouds upon the Strand, to gaze upon the

Ship. The poor Fellow, when he got on Shore, and came to have a nearer View of the Savages, was fo exceffively amazed at their uncouth Appearance, that throwing his Prefents down upon the Ground, he ran as faft as he could to throw himfelf again into the Sea, that without lofs of Time he might recover his Ship. But the Waves difappointing his Defign, threw him back upon the Shore, with fuch Force, that he lay breathlefs upon the Sands, and had, in all probability, been drowned, if the Savages had not haftened to his Relief; they took him up, carried him in their Arms to a Place at fome Diftance, and took all the Pains they could to bring him to himfelf.
But when he recovered his Senfes a little, and faw there were none but Savages about him, he fet up fuch a Cry, as made the Woods ring; and the poor Indians, hoping to quiet him, cried as loud or louder than he, which terrified him ftill more. At laft they began to make a great Fire, before which they undreffed him, admiring greatly the Whitenefs of his Skin, and the Hair on feveral Parts of his Body; the Seaman taking it for granted, that they were going to eat him, or burn him, trembled exceffively, and thofe on board the Ship were alfo very much frightened, for they faw every thing that was done, and expected every Moment when he fhould have been facrificed; by degrees, however, they were all fatisfied that the Savages meant him no manner of Harm; for after drying his Cloaths, they fuffered him to put them on again, and having given him fomething to eat, conducted him, at his Requeft, to the Sea-fide, and, retiring to fome Diftance, looked on till he fwam fafely aboard the Ship, and then quietly departed; as for Verazzano, he returned home to France, reported nothing but this Story, and that it happened in the Latitude of fifty Degrees. This very plainly fhews, that neither he nor his People were of a Difpofition fit for the Tafk they had undertaken.
However, they engaged the next Year in a third Voyage,
but what becane of him was very uncertain; fome fay that he was loft ; others, that he went afhore with Part of his Crew, and that falling into the Hands of the Savages, they killed and eat them, which, however, is very improbable; certain it is, that in this Voyage he was loft: And from what the Reader has feen, he will be of Opinion, that the French have no great Caufe to boaft of his Expeditions, which were thirty Years later than thofe of the Cabots.
2. After this unlucky Adventure, it was fome Years before the French thought of fitting out any more Ships for Difcovery; but at length Admiral Cbabot prevailed upon Fames Cartier, an experienced Pilot of St. Malo's, to undertake another Expedition: Upon which he failed from that Port the 20th of April I 534, with two Ships of fixty Tons each, and one hundred and twenty Men. He arrived on the Ioth of May on the Coaft of Nerefoundland, and finding the Country covered with Ice and Snow, failed to the Southward, and entered into a Bay, which bears, at prefent, the Name of Spanifh Harbour; where, liking both the Country and the People, he went afhore. It is reported that the Spaniards had long before vifited this Coaft, and there are fome Authorities to prove it ; but finding no Signs of any Minerals, they were in a Hurry to go off again, crying out, in their Language, Aca Nada! that is, there is notbing bere, meaning the Country was good for nothing; which Words the Indians retained, and when the French came afhore, cried out Aca Nada! Aca Nada! which they took for the Name of the Country, fo that it has been called Canado ever fince. This is a very ftrange Derivation, but as we find it in the beft French Authors, it is worth fetting down.

He afterwards difcovered a good Part of the Gulph of St. Laurence, and of the Inands that are fituated there in; after which he returned to France, where he arrived fafely on the 5th of September. The next Year he was fent again with three large Ships, in order to make a Settlement ; and becaufe he entered the Gulph on the Feaft of St. Laurence, he gave it that Name, which was afterwards extended to the River, which in his firf Voyage he had called the River of Canada. He was very fuccelsful in this Expedition, and went up as high as the Fall of St. Louis, giving Names to the Inands and Rivers as he thought proper; and it is certain that he fhewed himfelf, in the Courfe of this Voyage, a very expert Seaman. But though at firft he was extremely well pleafed with the Country, yet the Scurvy getting among his People, and bringing them into a very low Condition, fo that twenty-five of them died in a very fhort Space of Time; he began to alter his Sentiments, and to fancy that it was a very unwholefome and bad Climate. At laft, however, when he found himfelf attacked with this Diftemper, he applied to the Inhabitants, and enquired of them, as well as he could, whether they knew of any Cure for this Diftemper? Upon which they taught him to make an Infufion of the Leaves and Bark of the White-thorn-tree, by which they were all very fpeedily recovered.

As foon as the Seafon of the Year would permit, he returned into France, where he arrived in the Spring of $153^{6}$; but there is no obtaining any Certainty as to the Account he gave of the Country which he had difcovered: If we truft to his written Memoirs, it will appear, that he gave King Francis I. a very juft and fair Account of the Places he had vifited, and reprefented the fettling a Colony in that Part of the World, as an Action extremely worthy of the moft Chriftian King; but if we adhere to what is generally reported in France, either he, or fome who came home with him, acted a very different Part, and gave fo difcouraging a View of this new-found Country, that the King looked upon it as not worth the keeping, or troubling himfelf about.
However, three or four Years after, the Project of fettling in this Country began again to be talked of, and a Gentleman of Picardy, whofe Name was Francis de la Roque, Lord of Roberval, undertook to accomplifh this Defign; to qualify him for which, King Francis I. by Letters Patent, dated Fanuary I5, 5540 , granted him

Vor. II. Numb. 93.
abundance of fine Titles, fuch as Viceroy, and Lieutenant General in Canada, Hockelaga, Saguenay, Nerofoundlands Bellifle, Cape Breton, Labrador; the grand Bay and Coatt of of Baccalces; giving him the fame Power and Authority in thofe Places that he had himfelf, which was very eafily done, fince there was not a Frenchman, or a Cottage, ind any one of the Places, nor had he any more Title to moft of them, than to Lands in the Moon. However this Gentleman, who had a good Eftate, and was a Man of Family, refolved to purfue this Expedition, and prevailed upon Fames Cartier, by the large Promifes he made him, to undertake another Voyage to the Coafts of $\mathrm{Ca}-$ nada in Quality of his Pilot.
3. It was this Gentleman that, in two or three Voyages he made, firft fixed fome French Settlements in America, which however were afterwards abandoned. After this Time the Navigation of the River St. Laurence fell into different Hands, and from time to time Voyages were made thither to very little Purpofe. In 1608 , or thereabouts, they laid the Foundation of the City of Quebec. after having fettled, and abandoned; feveral other Places. It was fome time after, that Cbamplain beftowed the Name of Nere France upon this Country; but then he took in likewife Acadia, and other Coafts, that had long before been difcovered by us; for the French, according to a Maxim natural enough with them, thought every Country which they had not feen before, unknown to all the reft of the World, and fo fet up Croffes and the French Arms, to fhew that they had taken Poffeffion of them. It muft be obferved, that moft of thefe Expeditions were made in the Reign of our King Fames I. when the Englif/ Colonies were but thin, and far enough from being ftrong; and yet his Subjects afferted their prior Rights to thofe Places of which the French had takeri Poffeffion, demolifhed their Croffes, drove away the People where they found them, and forced them to confine their Views to the Gulph and River of St. Laurence, where, with much-ado, in the Space of twenty Years, they raifed three or four Settlements, of which 2 uebec was, as it ftill is, the chief.

In 1629 the Englifh, under the Command of Sir David Kerk, followed them even thither, as looking upon Canada to be within the Limits of the Engli/b Dominions, and made themfelves Mafters of Quebec, and of all their Settlements. When this News arrived in Fronce, that new difcovered Country was looked upon to bé of fo little Confequence, that it was long debated in the French Councils, whether they fhould demand the Reftitution of this Colony, though they already had eftablifhed a Company for managing that Commerce ; but at laft it was refolved, that it fhould be demanded; and it was accordingly reftored by the Treaty of $1_{6} 6_{2}$, but in a very bad Condition, and as a Place hardly worth the keeping. Mr. Cbamplain was the firft Governor after it fell again into the Hands of the French, and from this Time forward they purfued their Difcoveries and Settlements in thofe Parts, without any Moleftation from us; but ftill with many and great Difficulties ; fo that though they have often changed their Manner of conducting their Affairs in thefe Parts of the World; have applied to, and received the Protection of the ableft of their Minifters; and have had Company after Company fet up, on purpofe to promote and to encourage their Commerce, yet have they been able to make no greater Matter of it, though, befides their Pains and Attention, thefe Settlements in Canada have actually coft the French vaft Sums of Money.

The Reafons of thefe many and great Difficulties are very eafy to be found; for with refpect to France itfelf, though it be a very large Country, and tolerably well peopled, yet it is the Inhabitants only of Part of its Coatts, that are inclined to naval Expeditions, or, to fay the Truth, are capable of them, and they have not a Force fufficient for any great Undertakings. In the next place, the Country of Canada is very far from being agreeable to French Conftitutions, more efpecially before there were any regular Settlements made there ; fo that of Numbers of People fent thither, a great Part perifhed by the Hardfhips they endured; many of them took the firf Opportunity of returning; and at their Return gave
ruch a dreadful Account of the Colony they had left, as difcouraged others from going thither, and made the Miniftry repent of the Pains they had taken about it ; but the greateft Obftacle of all was, their continual Wars with the Natives, of which they have given us very large Accounts, that, in my Opinion, do no great Honour either to the particular Perfons who have had the Direction of their Affairs in thofe Colonies, or the French Nation in general. Before we proceed, however, to an exact Defcription of this Country, it will be very requifite to fay fomething of its original Inhabitants, their Cuftoms, and Manners, and the rather becaufe what we fhall offer on that Subject, will be equally ufeful and entertaining
4. Among all the French Writers who have taken upon them to treat of this Subject; and to defcribe the Indians with whom they had converfed, the moft fenfible and moft worthy of Credit that I have met with is Mr. Foutel, who accompanied the famous Monf. de Sale, in his Dif coveries on the River Mifferppi. He behaved himfelf in every refpect fo as to obtain an eftablifhed Reputation and as no body had better Opportunities than he to be acquainted with the Nations he defribes, fo I fee not the leaft Reafon to doubt of what he has delivered about them. As to the Accounts of Labontain, and Father Hemnepin, they have been formerly very much admired, yet we are now very well fatisfied that they are rather Romances than Relations, and that their Authors had their particular Schemes fo much in View, that they have made no manner of Scruple of abufing the Confidence of Mankind; fo that if we except fome Parts of their Writings which relate to Matters in which they could not fo well deceive their Readers, they are not much to be depended upon. But for Mr. Foutel, he did not fet up for a great Politician, but confined himfelf barely to the reporting what he faw; which he does in a very plain, natural Way: Whereas moft of the Miffionaries either magnify the Savages at the Expence of Europeans, or elfe mon them down, as if they were very little better than Beafts. Our Author comes neareft to the latter Opinion, which by comparing him with later Writers, appears to be moft confiftent with Truth; and if we follow the Lights he gives us, we muft regard them as Men as much diftinguifhed from the reft of the human Race, as the Country they live in is from the reft of the World : He fpeaks of them thus :

Allowing, fays he, that there are fome Barbarians leis wicked and brutal than the others; yet there are none good, nor thoroughly capable of knowing fuch Things as are above the Reach of our Senfes: There is no relying on them; there is always Caufe to fufpect them: And, in fhort, before a Savage can be made a Chriftian, it is requifite to make him a Man; and we look upon thefe Savages as having neither King nor Laws, and, what is moft deplorable, no God; for if we rightly examine their Sentiments and their Actions, it does not appear they have any fort of Religion, or well formed Notion of a Deity; if fome of them; upon certain Occafions, do fometimes own a firlt or fovereign Being, or pay fome Veneration to the Sun; as to the firt Article, they deliver themfelves in fuch a confufed manner, and with fo many Contradictions and Extravagancies that it plainly appears they neither know or believe any thing of it; and as for the fecond, it is only bare Cuftom, without any ferious Reflections on their Part. The fame Traveller, fpeaking of an Interview he had with the Chiefs of another Na sion, to the weftward of the River Miflfippi, fays, their Elders came to meet us in their Formalities, which confifted in fome Goats-fkins dreffed, and painted of feveral Colours ; which they wore on their Shoulders like Belts, and Plumes of Feathers of feveral Colours on their Heads like Coronets; fix or feven of them had fquare Sword-Blades, like the Spanifh, on the Hilts whereof they had faftened great Plumes of Feathers, and Hawks-bells; fome of them had Clubs, which they called Head-breakers; fome only their Bows and Arrows; others Pieces of white Linen, reaching from Shoulder to Shoulder: All their Faces were daubed with black and red: There were twelve Elders, who walked in the

Middle, and the Youth and Warriors in Ranks, on the right and left of the old Men. Being come up to us in that Manner; he that conducted us made a Sign for us to halt, which, when we had done, all the old Men lifted up their right Hands above their Heads, crying in a moft ridiculous Manner; but it behoved us to have a care of Laughing. That done, they came and embraced us, ufing all Sorts of Endearments. The whole Company conducted us, afterwards, to their Chief's Cottage, and after we had ftaid there a fhort Time, they led us to a larger Cottage, a quarter of a League from thence, being the Hut in which they had their public Rejoicings, and great Affemblies: We found it furnifhed with Mats for us to fit on. The Elders feated themfelves round about it, and they brought us to eat fome Sagamite, which is their Portage, little Beans, Bread made of Indian Corn, and another Sort they made with boiled Flower; and at laft they made us fimoak. The Cottages that are inhabited, are not each of them for a private Family, for in fome of them there are fifteen or twenty, each of which has its Nook, or Corner-bed, and other Utenfils to itfelf, but without any Partition to feparate it from the reft: However, they have nothing in common befides the Fire, which is in the Midft of the Hut, and never goes out: It is made of great Trees, the Ends whereof are laid together, fo that when once light ed, it lafts a long Time, and the firt Comer takes Care to keep it up.

The Cottages are round at the Top, after the manner of a Bee-Hive, or a Rick of Hay; fome of them are fix Foot in Diameter: In order to build them they fet up long Poles as thick as a Man's Leg, tall and frait; and placing them in a Circle, join the Tops together; shen they faften and cover them with Weeds. When they remove their Dwellings, they generally burn the Cottages, and build new ones on the Ground they defign to inhabit. Their Moveables are fome Buffaloes or Bullocks Skins well cured, fome Mats clofe wove, wherewith they adorn their Huts, and fome Earthern Veffels, which they are very fkilful in making, and wherein they boil their Flefh, Roots, and Sagamite Pottage. They have alfo fome fmall Bafkets made of Canes, ferving to put their Fruit and other Provifions in. Their Beds are made of Canes, raifed two or three Feet above the Ground, handfomely fitted with Mats and Bullocks Hides, or Goats Skins, which ferve them inftead of Feather-beds, Quilts and Blankets, and thefe Beds are parted one from another by Mats hung up. Their Tillage confifts in breaking up juft the Surface of the Earth with a wooden Inftrument like a Pick-ax, which they make by fplitting the End of a thick Piece of Wood, which ferves for the Handle, and putting another Piece of Wood fharp-pointed at one End into the Slit. This Inftrument ferves them intead of a Hoe or Spade; for they have no Iron Tools. When the Land has been thus broke up, the Women fow and plant the Indian Corn, Beans, Pompions, Water-Melons, and other Grain and Garden-Stuff. The Indians are generally handfome, but disfigure themfelves by making Streaks on their Jaws, from the Top of the Forehead down the Nofe to the Tip of the Chin, which is done by pricking the Skin till it bleeds, and then ftrewing fine Charcoal on the Skin, which finks in and mixes with the Blood. They alfo make, after the fame Manner, the Figures of living Creatures, of Leaves and Flowers, on their Shoulders, Thighs, and other Parts of their Bodies; and paint themfelves, as has been faid before, with Black or Red, and fometimes both together. The Women are generally well-hhaped, and would not be difagreeable did they adhere to Nature; but they difguife themfelves as ridiculouny as the Men, not only with the Streaks they have like them down their Faces, but by other Figures they make at the Corner of their Eyes and on their Bodies, particularly on their Bofoms. The Women do all the Work in the Cottage, either in pounding the Indian Corn and baking their Bread, drefling their other Provifion, drying, parching, and fmoaking their Flefh, fetching the Wood they have Occafion for, or the Flefh of wild Beafts killed by their Ifufbands in the Woods, which are often at a great Diftance. I did not obferve that their Women were natu-

# Chap. III. of the FRENCH in AMERICA. 

rally given to Leudnefs; but their Virtue is not Proof againft fome of our Toys when prefented to them, as Needles, Knives, and more particularly Strings of Beads, whereof they make Necklaces and Bracelets: That Temptation is rarely refifted by them ; and the lefs, becaufe they have no Religion or Law to prohibit that Practice. It is true, their Mufbands, when they take them in the Fact, fometimes do punifh them, either by Separation, or otherwife.

The Country of thefe Indians being generally warm, almoft all of them go naked, unlefs when the North Wind blows; then they cover themfelves with a Buffalo's Hide, or a Goat's-fkin Card. The Women wear nothing but a Skin, or fome Sort of Clout, hanging round them like a Petticoat, and reaching half way down their Legs before and behind: On their Heads they wear nothing but their Hair platted and knotted behind. As for their Temper, it may be faid of thefe as of all other Irdians of that great Continent, that they are not mifchievous, unlefs wronged or attacked, in which Cafe they are fierce and revengeful. They watch all Opportunities to be revenged, and never let any nip when offered, which is the Caufe of their being continually at War with their Neighbours, and of that martial Humour fo predominant among them. As to the Knowledge of God, they did not feem to us to have any fixed Notion of him ; it is true, we met with fome in our Way, who, as far as we could judge, believed there was fome fuperior Being which was above all things, and this they teftified by lifting up their Hands and Eyes to Heaven, yet without any Manner of Concern, or believing that the faid exalted Being does regard at all what is done here below. However, none of them having any Places of Worfhip, Ceremonies, or Prayers, to manifeft their Devotion, it may be faid of them all, that they have no Religion at all, at leaft, thofe that we faw. They obferve fome Ceremonies it is true, but whether they have any Regard to a fuperior Being, or whether they are only popular, and proceeding from Cuftom, is what we were not able to difcover. Thofe Ceremonies are as follow: When the Corn is ripe, they gather a certain Quantity in a Bafket, which is placed on a Stool dedicated to that Ufe, and ferving only upon thefe myfterious Occafions, which they have a great Veneration for. The Bafket with the Corn being placed on the venerated Stool, one of the Elders hold's out his Hands over it, and talks a long Time; after which, the faid old Man diftributes the Corn among the Women, and no Perfon is allowed to eat of the new Corn till eight Days after the Ceremony. This feems to be in the Nature of offering, or blefling, the firft Fruits of their Harveft.

At their Affemblies, when the Sagamite, or Pottage, which is the moft effential Part of their Meal, is boiled in a great Pot, they place that Pot on the Stool abovementioned, and one of the Elders ftretches out his Hands over it, muttering fome Words between his Teeth for a confiderable Time, after which they fall to eating. When the young Folks firft take upon them to be Soldiers, their Garment, confifting of fome Skin or Clout, together with their Bow, Quiver, and Arrows, are placed on the fame Stool, an old Man ftretching out his Hands over them, muttering the confecrating Words, and then the Garments, Bows, Quivers, and Arrows, are given to the Perfons they belong to. The fame Ceremonies are ufed by them in the cultivating their Grain and Product, but of the Tobacco particularly.

There is one Particular relating to thefe People, which he does not mention ; and that is, the ftrong and general Paffion for Liberty, which prevails through the whole Nation; which is born, and grows up, with them, governs all their Actions, and is never to be extinguifhed but with their Lives. It is their Notion of Liberty, that induces them to prefer their own Manner of living, to that of the Europeans; and they fay fometimes, what is not altogether deftitute of good Senfe, that if they poffefs fewer Conveniences, they have the lefs Trouble in acquiring what they think neceffary, and confequently the more Time to themfelves, which their middle-aged and old Men ufually fpend in converfing together ; and
if we may truft to fome of our own Cotuntry, as well as the French Writers, there are as great Politicians among them, as in any Nation in Europe, the IFalians themfelves not excepted. There is another Indian Nation of whom Mr. Foutel has given us a Relation, which deferives to be confidered, becaufe they are thought to be very different in their Manners from the Iroquois:
5. As for the Manners and Caftoms of the Ilinoiss they are, in many Particulars, the fame as thofe of the other Nations before-mentioned; they are naturally fierce and revengeful, and among them, the Toil of fowing; planting, carrying of Burdens, and doing all other things that belong to the Support of Life, appertains peculiarly to the Women; the Men have no other Bufinefs; but going to the Wars and hunting. The Nations I have fpoken of before, are not at all, or very little, addicted to thieving, but it was not fo with the Illinois; it behoves every Man to watch their Feet as well as their Hands, for they know how to turn any thing out of the Way very dextrounly. They are fubject to the general Vice of other Indians, which is, to boaft very much of their warlike Exploits, that is the main Subject of their Difcourfe, and they are very great Liars. They pay a Refpect to the Dead, as appears by their Care in burying them: This is alfo practifed among the Accanceas, but they differ in this Particular: That the Accanceas weep and make their Complaints for fome Days, whereas the Cbabouanous, and other People of the Illinois Nation, do juft the contrary; for'when any of them die, they wrap them up in Skins, and then put them into Coffins, made of the Barks of Trees; then fing and dance about them for twenty-four Hours; thofe Dancers tying Gourds about their Bodies, with fome Indian Wheat in them, to rattle and make a Noife; and fome of them have a Drum, made of a great earthen Pot, on which they extend a Goat-fkin, and beat thereon with a Stick; during that rejoicing, they throw their Prefents on the Coffin; fuch as Bracelets, Pendants, or Pieces of Earthen-ware, and Strings of Beads, encouraging the Singers to perform their Duty well. If any Friend happens to come thither at that Time, he immediately throws down his Prefents, and falls a finging and dancing like the reft. When the Ceremony is over, they bury the Body with Part of the Prefents, making Choice of fuch as may be moft proper for it: They alfo bury with it fome Store of Indion Wheat, with a Pot to boil it in, and repeat the fame Ceremony at the Year's-end.

With refpect to this People, there is a very large and curious Account in the Travels of Father Marquette, a Man of good Senfe and fair Character ; and therefore I fhall fubjoin it, that we may not be obliged to dwell longer upon this Subject. His Account in his own Words runs thus: "The Word Illinois, in their Lan" ${ }^{\text {g guage, fignifies Men, as if they fhould look upon the }}$ " other Savages as Beafts; and truly it may be confeffed, "6 that they are not altogether in the wrong, for they "' have more Humanity than' all the other Nations that I " have feen in America; the fhort Time I remained with "6 them, did not permit me to inform myfelf as much as "I defired of their Cuftoms and Manners, but here is " what I was able to obferve: They are divided into " feveral Villages, whereof fome are very remote from " thofe that I have feen, they call them Perouarea. But " as they live fo far one from the other, their Language " is alfo very different: However, it is a Dialect of the "Algonquin, and therefore we were able to underftand " what they faid, and to converfe with them. They are " good-natured Men, tractable and eafy. They keep " feveral Wives, and yet they are exceeding jealous; " they obferve with very great Care their Behaviour, and " if they find them in any Fault as to their Chaftity, they " cut their Nofes and Ears; and I faw feveral of them, " who carried upon their Faces thefe Marks of their In${ }^{66}$ fidelity
" The Illinois are very well fhaped, and very dextrous. " They are good Marks-men with their Arrows and " fmall Guns, with which they are fupplied by the Sa${ }^{66}$ vages, and have a Commerce with the Europeans. This ${ }^{66}$ makes them formidable to the other Nations, inhabiting
ss to the Weftward, who have no Arms. The Illinois know-
${ }^{6}$ ing how much they are frighted at the Noife of their
${ }^{6}$ Guns, make Excurfions very far to the Weftward, and
" bring Slaves from thence, which they barter with other
" Nations for the Commodities they want. Thofe Nations
© are altogether ignorant of Iron Tools, and their Knives,
"Axes, and other Inftruments, are made of Flints, and
" other fliarp Stones. When the Illinois go upon any
"Expedition, the whole Village muft have Notice of
" it, and therefore they ufe to make an Out-cry at the
" Door of their Huts the Evening before they go, and
66 the Morning they are to fet out. Their Captains are
"s diftinguifhed from the Soldiers by red Scarffs, made
${ }^{66}$ with the Hair of Bears, or wild Oxen, that are curi-
"s ounly wrought. They have abundance of Game; and
${ }^{6} 6$ their Soil is fo fertile, that their Indian Corn never
" fails, and therefore they never labour under Famine.
"s They fow Beans and Melons, which are excellent, and
${ }^{66}$ efpecially thofe whofe Seed is red.
"s They efteem much their Citruls, though they are
${ }^{66}$ none of the beft; they dry them up and keep them
" till the Winter and Spring. Their Cabbins are very
${ }^{6}$ large, they are made covered, and paved with Mats
© of Marfh Rufhes. Their Difhes are of Wood, but
${ }^{6}$ their Spoons are made with the Bones of the Skulls
${ }^{6}$ of wild Oxen, which they cut fo as to make them
"s very convenient to eat their Sagamite. They have
"Shyficians amongft them, towards whom they are
"very liberal when they are fick, thinking that the
" Operation of the Remedies they take, is proportiona-
"s ble to the Prefents they make unto them, who have
"s prefcribed them. They have no other Clothes but
"Skins of Beafts, which ferve to cover their Women,
"' for the Men go moft of the Year ftark naked. I
" don't know by what Superftition fome of the Illinois,
" and Nadoneflians, wear Womens Apparel; when they
"s have taken the fame, which they do in their Youth,
© they never leave it off. And certainly there muft be
" fome Myftery in this Matter, for they never marry,
${ }^{* 6}$ and work in the Cabbins with Women, which other
" Men think it below them to do. They may go, how-
" ever, to the Wars, but they muft ufe only a Club,
${ }^{6}$ and not Bows and Arrows, which are fit, as they fay,
" only for Men. They affift at all the Superftitions of
"s their Jugglers, and their folemn Dances in Honour of
sc the Calumet, at which they may fing, but it is not
"s lawful for them to dance. They are called to their
" Councils, and nothing is determined without their
" Advice; for becaufe of their extraordinary way of
" living, they are looked upon as Manitoas, or, at
" leaft, for great and incomparable Genii.
"s I muft fpeak here of the Calumet, the moft extraor-
is dinary thing in the World. The Scepters of our Kings
${ }^{66}$ are not fo much refpected; for the Savages have fuch
© a Deference for this Pipe, that one may call it the
"God of Peace and War, and the Arbiter of Life and
's Death. One, with this Calumet, may venture among
${ }^{6}$ his Enemies, and in the hotteft Engagements, they
"6 lay down their Arms before this facred Pipe. The
© Illinois prefented me with one of them, which was
${ }^{66}$ very ufeful to us in our Voyage. Their Calumet of
"Peace is different from the Calumet of War. They
" make ufe of the former to feal their Alliances and
©Treaties, to travel with Safety, and receive Strangers;
6 and the other is to proclaim War. It is made of a
${ }^{6}$ red Stone, like our Marble: The Head is like our : 66 common Tobacco-Pipes, but larger; and it is fixed to "s a hollow Reed to hold it for fmoaking. They adorn " it with fine Feathers of feveral Colours, and they " call it the Calumet of the Suin, to whom they pre-
of fent it, efpecially when they want fair Weather, or
©Rain ; thinking that that Planet can have no lefs Reos fpect for it than Men have, and therefore that they
"thall obtain their Defires. They dare not wafh them-
a Selves in Rivers in the Beginning of the Summer, or
"s tafte the new Fruit of Trees, before they have danced
. 66 the Calumet, which they do in the following Manner:
${ }_{6}{ }^{6}$ This Dance of the Calumet, is a folemn Ceremony

- . 6 annongft the Savages, which they perform upon im-
" portant Occafions, to confirm an Alliance; or make "s Peace with their Neighbours. They ufe it alfo to en${ }_{6 s}$ tertain any Nation that comes to vifit them; and in ${ }^{6}$ this Cafe we may confider it as their Balls. They per"form it in Winter-time in their Cabbins, and in open "Fields in the Summer. They chufe for this Purpofe a "s fet Place among Trees, to fhelter themfelves againft "s the Heat of the Sun, and lay in the Middle a large "Mat, as a Carpet, and fet upon it the God of "s the Chief of the Company who gave the Ball; for "every one has his peculiar God, whom they call "Manitoa: It is fometimes a Stone, a Bird, a Ser" pent, or any Thing elfe that they dream of in their
"Sleep; for they think that this Manitoa will profper
"s their Uundertakings, as Fifhing, Hunting, and other Enterprizes. To the Right of their Manitoa they "s place the Calumet, their great Deity, making round " about it a kind of Trophy with their Arms viz.
"Their Clubs, Axes, Bows, Quivers, and Arrows.
"Things being thus difpofed, and the Hour of Dance" ing coming on, thofe who are to fing take the moft "" honourable Seats under the Shadow of the Trees, or "c green Arbours they make, in cafe the Trees be not " thick enough to fhadow them. They chufe for this
"Service the beft Wits amongft them, either Men or
"Women. Every body fits down afterwards round "s about, as they come, having firft of all faluted the "c Manitoa, which they do by the blowing the Smoke of "s their Tobacco upon it, which is as much as offering " to it Frankincenfe ; every body, one after another, "6 takes the Calumet, and holds it with his two Hands, sc dances with it, following the Cadence of the Songs.
"s This Preludium being over, he who is to begin the " Dance appears in the Middle of the Affembly, and " having taken the Calumet prefents it to the Sun, as if " he would invite him to fmoke; then he moves it into "s an infinite Number of Poftures, fometimes laying it "s near the Ground, then ftretching its Wings as if he "w would make it fly, and then prefents it to the Spec"s tators, who fmoke with it one after another, dancing "s all the while: This is the firft Scene of this famous "c Ball. The fecond is, a Fight, with Vocal and Inftru"6 mental Mufic; for they have a kind of Drum, which "s agrees pretty well with the Voices; the Perfon who " dances with the Calumet gives a Signal to one of "s their Warriors, who takes a Bow and Arrows with an " Ax from the Trophies already mentioned, and fights "s the other, who defends himfelf with the Calumet alone, " both of them dancing all the while. The Fight being "s over, he who holds the Calumet makes a Speech, "6 wherein he gives an Account of the Battles he has sc fought, and the Prifoners he has taken, and then re"ceives a Gown, or any other Prefent, from the Chief "s of the Ball: He gives then the Calumet to another, " who having acted his Part, gives it to another; and fo " to all the others, till the Calumet returns to the Captain, "s who prefents it to the Nation invited unto the Feaft, "s as a Mark of their Friendfhip, and a Confirmation of 6s their Alliance. I cannot pretend to be fo much Mafter "s of the Language, as to judge of their Songs; but " methinks they are very lively and witty."

6. This Country of Canada, as we find it defcribed by the beft French Writers, is faid to be half as big as Europe, reaching from the Latitude of 39 Degrees to that of 65 ; that is, from the Lake of Errie to the North of Hudfoin's-bay, and from the Longitude of 284 Degrees to 336; viz. from the River Mifflippi to that Part of the Continent which fronts Cape Rafe in Nervfoundland. According to this Defcription, it has Hudjon's Bay on the North, the Sea on the Eaft, the Engli/h Colonies on the South, Louvijiana on the South-eaft, and the Territories of the Crown of Spairs on the Weft. This we muft allow is a very large and noble Plan of New France, if it were in any Degree in the Poffeffion of the Subjects of that Crown; but the Truth of the Matter is, that a great Part of this Tract is not fo much as known to them, and, at the very moft, there is not a twentieth Part of the Country that can with any Propriety be faid to be under their Turifdiction. The great River of St. Lau-
rence, which at its Mouth is about fixty Miles big, and runs through the Middle of this Country, but the Source of it is ftill unknown, though fome of the French Buccaneers affirm, that they have gone eight hundred Leagues up it; but then they take it for granted, that it paffes through five or fix great Lakes, which are thofe of Frontiniac, Errie, the Lake of the Hurons, the Upper Lake, the Lake of Leuemipagon, and that of the Afinipouals; beyond which the Indians tell them there is another Lake ftill greater than any of thefe, out of which this River originally comes.

But the Truth however feems to be, that the River of St. Laurence flows from the Lake of Frontiniac, and from thence runs a Courfe of two hundred Leagues, to the Sea. At the Mouth of the River of St. Laurence lies the Illand of Anticofly, which fome fay was formed, but all agree, was very much enlarged by an Earthquake; the French have a very fimall Settlement upon this Ifland, for the fake of trading with the Indion Nations on both Sides, for Seal-fkins and Furs; in exchange for which they give them Fire-arms and Ammunition. The Town or City of Quebec lies upon the great River of St. Laurence, at the Diftance of about a hundred and ten Leagues from the Sea. The Foundation of it was laid, as we faid before, in the Year 1608; and that which is now called the Lower Town, was formerly the Bed of the River, which has fince funk fo far below this Place. It muit be allowed to be both a large Town and a ftrong one, for befides a Fortrefs or kind of Citadel, in which the Gonernor refides, the whole Extent of the Place is covered by a regular Fortification, with feveral Redoubts well furnifhed with Artillery ; there is a Cathedral, and epifcopal Palace, which are very ftately Buildings; the Jefuits have a fine College here, and there are feveral other religious Houfes; but after all, if we confider that this is not only the Capital, but almoft the only Town in New Fronce, it is no great Affair, fince according to the laft Account which the French themfelves have publifhed of it, there are not in it above feven thoufand Inhabitants, and none of thefe are faid to be very rich.

From Queber, which lies in the Latitude of 47 Degrees 56 Minutes, to Montreal, which is in the Latitude of 44 Degrees 30 Minutes, the Banks of the River are pretty well fettled; but without either Towns or Villages; and the French diftinguin this Part of the Country by the Name of the Coafts. Some of their Writers, indeed, making uife of that Licence which is allowed to Travellers, fpeak of two Villages between $2 u e b e c$ and the Illand of Montreal, each of fifty Leagues in Extent, by which they mean, that both Sides of the River are fo thoroughly planted, that the whole on each Bank may be confidered as a Village. The Town of Montreal is ftrong by Situation, but is only furrounded with a Pallifado, and is looked upon to have about a third as many Inhabitants as 2 थebec. The Savages come down hither in Boats, and fell their Skins; for the fake of which Trade the Place was built; but this Commerce is not now any thing comparable to what it was.

The Manner in which this is carried on is fingular enough to deferve Notice: When the Savages who are in Amity with the French come thither to trade, their Chief, firft of all, demands Audience of the GovernorGeneral, and if he is not there, of the Governor of Montreal, to which he is with great Ceremony admitted. This Audience is generally given in the great Square or Court, in the Middle of the Town; where a Chair of State is placed for the Governor, and the feveral Indian Nations, each by itfelf, take their Places round him, with their Pipes in their Mouths: After a due Silence kept, the oldeft Chief of the Indions lays down his Pipe, then ftands up and addreffes himfelf to the Governor, to this Purpofe: "He tells him, that his Brethren are " come to vifit him, and to renew their ancient League
" and Friendfhip with his Nation: He adds, "s and Friendfhip with his Nation: He adds, that having " nothing in View but the Eafe and the Advantage of "the French, they have brought down with them good
"Quantities of Skins and Furs, being fenfible that the
"French could not obtain fo many, or fo good, if they " did not bring them down to their Settlements; that Vol. II. Numb. 93 .
"s they are fenfible how much thefe Things are valued ${ }^{6} 6$ and efteemed in France, and know, that what they ${ }^{66}$ are to take in Exchange are but paltry Things, and of " ${ }^{6}$ little Value ; but however, that their good Friends, "s the French, may not be without Furs, they are con"s tent to deal with them; and therefore hope, that in "6 order to enable them to bring a greater Plenty of their " Goods the next Year, as well as to put them into a ${ }^{66}$ Condition to fall upon the Iroquois, in cafe they "6 fhould attack or difturb their good Friends, they will
" let them have Guns, Powder, and Ball, upon reafonable "Terms." At the Clofe of his Speech he lays a String of Beads, and a Packet of Skins, at the Governor's Feet, and defires " that he will fecure them a free and "fair Trade, and protect them from Thieves." Thers retires to his Place, and takes up his Pipe again. The Governor fpeaks next, affures them of his Protection; and makes them a Prefent in return. The next Day the Trade begins, and is foon over; by which the French gain very confiderably; but they are not allowed to fell either Wine and Brandy to the Savages, becaufe they are extremely apt to drink to Excefs, and are then furious and mad, and at fuch times, if they do any Mifchief to one another, or to the French, they can farce be brought to give any Satisfaction; for they affirm, it was the Liquor, and not the Man that did the Mifchief; and that it is unjuft to punifh a Perfon for what he does when he is out of his Senfes.

Cbambli was formerly as great a Place of Trade as Montreal, and there was a pretty good Town there, but now the French have only a Port, to hinder the Natives, and their own People, from trading with the Englifh. They have, befides, three other Towns, none of them of any great Size, at the three Rivers, at a Place called Tadoufas, and at Ricblieu; and yet, according to theirComputation, there are two hundred thoufand Souls in Canada, but perhaps this is pretty largely reckoned; but their regular Troops and Militia, which are able Men and well difciplined, amount to eight or ten thoufand, and this renders them formidable to their Neighbours, both of the Englib Colonies, and Indians. They fometimestalk of drawing Lines, and extending a Chain of Fortifications from their advanced Settlements to the River Miffispi; but whoever confiders the Extent of that Country, and compares it with their- Force even as fated by themfelves, will plainly fee that this is impoffible and impracticable, or rather, to place it in its true Light, abfurd and ridiculous. But this, however, is no Reafon that we fhould grow carelefs or negligent; for there is no doubt they will extend themfelves as faft as they can, and therefore it is our Bufinefs to interrupt their Defigns as much as it lies in our Power.
7. Though this Country of Canada is fituated in the midft of the North temperate Zone, yet the Air of it is exceffiyely fharp, fo that their Winter, which fets in about the Middle of November, and lafts to the Middle of May, is exceflively fevere. It is not very difficult to affign the Caufes of this Cold, which feems fo little confiftent with the Climate; for we ought to confider, in the firft Place, that the Winds which blow from Hudfon's Bay, and from the Ocean, that is, from at leaft half the Points of the Compafs, pafs over vaft Tracts of Snow and Ice, and are confequently loaded with prodigious Quantities of nitrous Particles, which is one great Caufe of their rigorous Seafons. Secondly, there are vaft Forefts in this Country, of which, but a very fmall Part is cultivated, and this is another great Caufe of Cold; becaufe, as Experience fhews us, in all northern Countries, where the Lands are well broken and tilled, the Climate becomes milder, by the fulphurous Exhalations from the Earth, which are totally bound up in barren Soils, by the Influence of the Cold. I reftrain this to the northern Countries, becaufe Experience has alfo fhewn in the Weff Indies, that the cutting down of the Wood alters the Seafons, and where it is done without Judgment, has a very bad Effect, which is owing to the different Degree of Heat. A third caufe of Cold is, the too great Quantity of Water; the Exhalations from thofe vaft Lakes and Rivers, which are found in this Country, occafion 4 X

Fogs

Fogs, Mifts, and Rains, which are extremely prejudicial. But notwithtanding thefe Inconveniencies, the French boaft very much of the Fertility of this Country, and, indeed, where it is cultivated, it yields Indian, and other Sorts of Corn, Peas, Beans, and, in fhort, all kinds of Herbs and Vegetables in great Plenty.
As for Trees and Fruits, they are much the fame here as in Nero England, and the like may be faid of Animals; fo that with a reafonable Degree of Labour, there is no Doubt that People may fubfift there tolerably well; and as they are not burdened with Taxes, and as the Gentry are allowed great Privileges in their Eftates, the People of Canada live, as the French Authors themfelves exprefs it, very much at their Eafe, and exercife a generous kind of Hofpitality, which is very laudable, and makes them fome amends for living, as it were, out of the World; as to the Produce of this Colony, it confifts of Furs, efpecially Caftors, which they purchafe from the Indians; in feveral kind of Hides or Skins, which they likewife purchafe from the Natives; in Fifheries, which, however, are of no great Confequence; in fome Sorts of Drugs, and in what we call Lumber, that is, Planks, Pipe-ftaves, and other things of that Nature. The greatef Part of the Commerce of the Country is carried on in light Canoes, made of Bark, proper for the navigating their Lakes and Rivers, incumbered with Water-falls, which render them unfit for other kind of Veffels; fo that whatever Improvements are made here, no Increafe of Shipping or Seamen can poffibly be expected from them. In Winter they make ufe of a kind of Sledges, which are drawn either by Horfes, or by Dogs, and are very proper for paffing over vaft Tracts of Snow and Ice, and enable them to continue their Commerce with the Indians all the Winter, which, however, the French tell us is attended with one great Inconveniency.

The Perfons who carry on this Trade muft have Licences granted by the Governors, which are confined to a certain Number every Year; and though this brings them in large Sums, yet by hindering the Refort of Indians to their Fairs in the Summer, when every Man is at Liberty to make the moft of his Goods, this Practice turns to the Prejudice of the Colony in general. The Normans were the firft who ingroffed the Trade of Canada, and for many Years there were no Ships feen in the River of St. Laurence, but from Rouen, Dieppe, and Havre du Grace. The Trade then fell into the Hands of the Inhabitants of St. Malo's and Nantes, and laft of all it is become, in a great Meafure, the Property of the the People of Rochelle, except that fome Ships are fent from Bourdeaux and Bayonne, which are freighted with Wines, Brandies, Tobacco, and all Sorts of Iron and Steel Wares.

There are two Seafons in which Ships fail from France to this Country, viz. towards the End of April, or the Beginning of May, and at the Clofe of Auguf, or Beginning of September; the Reafon of which is, that they may arrive as the Ice is jult broke, or a little before it is formed, for with refpect to the reft of the Year, there is no going thither. The Veffels employed in this Trade export all their Goods from France Cuftom-free, neither are they liable to any Duties in Canada, except for Brazil Tobacco ; upon which there is five Pence a Pound, or about twenty Shillings Sterling per hundred Weight; the Cargo of thefe Veffels is pretty much the fame with what is fent to the French Inands, and as we fhall fpeak of them hereafter, there is no need of mentioning them here; but it is proper to obferve, that Tobacco, Sugar, and fome other Weft Indian Commodities, make a Part of thofe Cargoes, the Soil and Climate of Canada not allowing its Inhabitants to raife any of thefe Commodities for their own Ufe; and we muft likewife remark, that for the fame Reafon there is a Difference in the Woollen Goods exported thither, coarfe Cloths being fent to Canada, and thin and light Stuffs to the Mands; the Profits upon thefe Goods are very large, feldom lefs than fifty per Cent. and thofe that go off beft are of leaft Ufe, fuch as Ribbands, Laces, Snuff-Boxes, Watches, Rings, Necklaces, and fuch kind of things, of which there
are never too many, though they are commonly fold for four times their Worth, all Charges included.

As foon as the Veffels arrive at Quebec, the Merchants there fend away the greateft Part of their Cargoes that are fit for the Indiain Trade to Montreal, and the three Rivers, where they have Factors; but the fineft Goods, more efpecially thofe before-mentioned, remain at Quebec, and are fold amongtt the French themfelves; all thefe different Sorts of Merchandize are paid for in Money, in Bills of Exchange upon the Merchants of Rochelle, in Furs, or in Lumber.

It muft, however, be obferved, that it is feldom or never thefe Ships return full laden into France, becaufe the Colony does not produce what is fufficient for that Purpofe; and therefore, that their Voyages may turn to Account, they generally run down to Cape Breton, and there take on board a large Quantity of Coal for the French Sugar Inands, where they are fure to complete their Cargoes with Eafe. We may gather from all this, that whatever our own, or the French, Writers may fay upon this Head, the Advantages received from Canada, by the French, are very far from being fo great as moft People imagine. If ever there is any Money in the Colony, it comes thither from France, in virtue of the Eftablifhment on the King's Account; this amounts to about one hundred thoufand Crowns of their Money, which makes fomewhat more than twelve thoufand Pounds of ours, which is generally drawn off again by the Over-Ballance of their Trade with Old France. This royal Eftablifhment accounts, likewife, for the Bills of Exchange, but at the fame Time it moft evidently fhews that this cannot be accounted a thriving Colony, when it cannot bear its own Expences, or even keep a Part of the Money that is fent thither to pay the King's Officers; for it appears by the beft Accounts that can be had from thence, that the running Cafh of Canada amounts but to a very inconfiderable Sum, and is fometimes reduced even fo low as a thoufand Crowns, and there is always three fourths of that at 2 uebec. The Calculations of the whole Trade of Canada are fo various, that there is no reckoning upon any of them with tolerable Security; but I perfuade myfelf that I rather exceed than fall fhort in my Computation, when I eftimate the Amount of this Trade at eight hundred thoufand Livres a Year, or at thirty-five or thirty-fix thoufand Pounds Sterling.

The Reader will eafily fee from hence, that the Calculations, with refpect to the People in Canada, which we have taken from French Authors, are exceffive, and that after all there cannot be above half the Number of Souls they fpeak of. The Danger, therefore, of our Colonies does not at all arife from the Trade carried on between Old and New France, but from the Number of Inhabitants in the latter; who, while they can fubfift themfelves there, will be always very dangerous and troublefome Neighbours, and therefore we need not wonder that the People of New England are fo uneafy about them ; but could we once people Nova Scotia, and fecure the Poffeffion of the Inand of Cape Breton, I muft confefs that, in my Opinion, our Fears would be foon over, fince the Trade between Old and Nero France, in the Space of a few Years, would be leffened half in half, and perhaps in a few Years more would decline to little or nothing.
8. While the Frencb were in poffeffion of Acadie, or Nova Scotia, they raifed that Colony to a much greater Degree of Perfection, than they are ever like to do Cand$d a$; and, indeed, a great Part of the Trade of the latter was owing to the former, and to the Settlement of Cape Breton; the Lofs that the French have fuffered by the Ceffions made to us by the Treaty of Utrecht, and the true State of their Affairs in this Part of the World and ours, will beft appear from the foilowing Account taken from Father Cbarlevoix, who is, beyond Comparifon, the moft accurate Writer that I have ever met with upon this Subject; the Perfon who knew moft, and has fhewn the greateft Sincerity in fpeaking what he knew, and not over-valuing things, as is the Cuftom with mot of
the Writers of his Nation, and, indeed, of all other Nations, when fpeaking of their own Concerns.
By the Ceflion of Acadia and Placentia, fays he, to the Englifh, there remained to France no other Place to carry on the Fifhery of Cod-Fifh, or at leaft to dry their Fifh in, but the Inand of Cape Breton, which is now only known by the Name of Ifle Royal; this Inand is fituated between 45 and 47 Degrees of North Latitude, and forms with the Ifland of Newfoundland (from which it is diftant but about fifteen Leagues) the Entrance of the Gulph of St. Laurence; the Streight which feparates Cape Breton from Acadia, is about five common Leagues of France in Length, and about one in Breadth, it is called the Paffage of Fronfac. The Length of the Inand, from North-eaft to South-weft, is not quite fifty Leagues; its Figure is irregular, and it is in fuch a Manner cut through by Lakes and Rivers, that the two principal Parts of it hold together only by an Ifthmus of about eight hundred Paces in Breadth, which Neck of Land feparates the Bottom of Port Touloufe from feveral Lakes, which are called Labrador. The Lakes empty themfelves into the Sea to the Eaft, by two Channels of unequal Breadth, which are formed by the Iflands Verderronne, and la Boularderie, which is from feven to eight Leagues long. The Climate of this Inand is pretty much the fame with that of $2 u e b e c$, and although Mifts and Fogs are more frequent here, yet no one complains that the Air is unwholefome. All the Lands here are not good, neverthelefs they produce Trees of all Sorts There are Oaks of a prodigious Size, Pines for Mafts, and all Sorts of Timber fit for Carpenters Work; the moft common Sorts, befides the Oak, are the Cedar, Afh, Maple, Plane Tree, and Afpin; Fruits, particularly Ap ples, Pulfe, Herbs, and Roots; Wheat, and all other Grain neceffary for Suftenance; Hemp and Flax abound here lefs, but are every whit as good as in Canada.
It has been obferved, that the Mountains may be cultivated up to the Tops, that the good Soil inclines always towards the South, and that it is covered from the North and North-weft Winds by the Mountains which border upon the River St. Laurence. All the domeftic Animals, fuch as Horfes, Horned-cattle, Hogs, Sheep, Goats, and Poultry, pick up a good Living here. What is got by Hunting, Shooting, and Fifhing, is able to maintain the Inhabitants a good Part of the Year This Inand abounds in Coal-pits, which are in the Mountains, confequently the Trouble and Expence of digging deep, and making Drains to carry of the Water, are generally faved; here is likewife Plaifter in great Abundance ; 'tis faid that there is no Part of the World where more Cod-fifh is caught, nor where there is fo good Conveniency for drying it ; formerly this Ifland was full of Deer, they are now very fcarce, particularly Elks; Partriges are here almoft as large as Pheafants, and in their Feathers not unlike them: In a Word, the Fifhery of Sea-Pike, Porpoifes, $E \mathcal{c}$. is in great Abundance here, and carried on with great Eafe.

All its Ports open to the Eaft, turning a little to the South, and within the Space of fifty-five Leagues, beginning at Port Daupbin, and continuing to Port Touloufe, which is almoft at the Entrance of the Paffage of Fronfac. In all other Ports of the Ifland it is difficult to find Anchorage for fmall Veffels, in fmall Creeks, or amongit the Inands. All the Northern Coafts are very high, and almoft inacceffible ; and it is very difficult to land on the Weftern Coaft, till you come to the Paffage of Fronfac, out of which you are no fooner got, but you meet with the Port Touloufe, known formerly by the Name of St. Peter. This Port is Atrictly between a kind of Gulph (which is called Little St. Peters) and the Inand St. Peter over againft the Iflands Madame, or Maurepas. From thence afcending towards the South-eaft, you find the Bay of Gaborie, of which the Entrance (which is near twenty Leagues Diftance from St. Peter's Ifland) is a League broad, between Inlands and Rocks. It is not very fafe to come near thefe Inands, fome of which advance a League and a half into the Sea. This Bay is two Leagues deep, and the Anchorage very good.

The Harbour of Lowifoourg, formerly called the En-
glib Harbour, is not above a League from the above Bay, and is, perhaps; one of the fineft in America; it is near four Leagues in Circumference, and every where there are fix or feven Fathom Water; the Anchorage is very good, and you may; without Danger, run a Ship a-ground upon the Mud. The Entrance is not above two hundred Fathoms wide, and lies between two finall Inlands: It is difcovered at the Diftance of twelve Leagues at Sea, by the Cape of Lorember, which is but at a fmall Diftance from it, to the North-eaft. Two Leagues farther up is the Port de la Baleine, the Entrance of which is very difficult, occafioned by many Rocks which the Sea covers when it runs high; no Ships of greater Burden than three hundred Tons can go into it, but they are quite fafe there when they are got in. From thence, in lefs than the Diftance of two Leagues; you come to the Bay of Penadou, or Medanou, the Entrance of which is about a League broad, and the Bay itfelf is about two Leagues deep. Almoft over againft this Bay, is the Inland Scatari (formerly called Little Cape Breton) which is above two Leagues long; the Bay of Mire is feparated from it by a very narrow Neck of Land; the Entrance of this Bay is likewife near two Leagues wide, and it is, at leaft, eight Leagues deep: It grows narrower the further you go into it; however, large Ships may go into it about fix Leagues, and find there good Anchorage under Cover of the Hills.
Befides the Inland of Scatari, there are many other fmall ones, and Rocks, which the Sea never covers, but may be difcovered a great Way off. The largeft of the Rocks is called the Forillon; the Bay of Morienne is higher up, feparated from the Bay of Mire, by the Cape Brule; and a little higher is I'Ile Plate, or l'Ifle a Pierre de Fufil, dire $\mathcal{E}$ ly in the Longitude of 46 Degrees $8 \mathrm{Mi}-$ nutes. There is, between all thefe Iflands and Rocks, very good Shelter, and you may go amongft them, and near them, without Fear or Danger. From hence proceeding for about three Leagues to the North-weft, you find a very good Harbour, which is called I'Indiane, but is fit only for fmall Veffels; from thence to the Bay des Efpagnols there are two Leagues. This Bay is a very fine Harbour ; its Entrance is but about one thoufand Paces wide, but it grows wider, and at the Height of a League divides itfelf into two Branches, which may 'be failed up for two Leagues; both thefe Branches are excellent Ports, which might be made better at a very fmall Expence. From this Bay, to the leffer Entrance of Labrador, is a Gulph about twenty Leagues long, and is above three or four wide in its greateft Breadth. It is counted a League and a half from the large Entrance of Labrador to Port Daupbin, or St. Anne, and you may come to an Anchor almoft any where amongft the Inands of Cibou; a Neck of Land almoft entirely covers the Port, and leaves Room for no more than for one Ship at a Time to go in. The Port Daupbin is about two Leagues in Circumference, and Ships hardly feel the Wind there, by reafon of the Height of the Mountains which furround it. They may come as near the Shore as they pleafe. All the Harbours and Ports being fo near each other, it would be very eafy to make Roads by Land from one to the other ; and nothing could be more advantageous to the Inhabitants, than thefe Communications, which would fave them the Trouble in the Winter Seafon of going fo far about by Sea.

This is the Defcription given of this Ifland in general, by the above-mentioned Jefuit, who has been a long time there, pretends to be very exact in his Enquiries, and publifhed his Hiftory a very little while before this important Illand was conquered by the Englifh Nation: He afterwards proceeds to defcribe more particularly Come of the above Ports, fuch as that of Louifourgh, and that of St. Anne or Port Daupbin.

After the Ceffion of Placentia and Acadia to the Crown of England, it is certain, the French had no other Place where they could dry their Fifh, or even fifm in Safety, but the Illand of Cape Breton; they were therefore drove by Neceffity to fettle an Eftablifhment there, and to fortify it. They began by changing its Name, and called it the

Royal;

Roval; they next debated upon the Choice of a proper Place to fettle the general Quarters in, and they were for a long time divided between Louifburgb and Port Daupbin. It has been already faid, that the former is one of the fineft Harbours in all Awerica, that it has near four Leagues in Circumference, that there is Anchorage that is good, and that one may run a Ship a-ground in the Mud, without Danger. Its Entrance is not two hundred Fathoms wide between two little Inlands, which may eafily defend it, by having Batteries erected on them.

The Cod-fifhing is there very abundant, and one may fifh from the Beginning of the Month of April to the End of December; but then it was faid, that the Land about this Port is barren, and that it would coft immenfe Sums to fortify it, becaufe all the Materials muft be broughe a great way ; befides which it had it feems been remarked that there was no fandy Bottom in this Harbour for more than about forty fifhing Veffels. It has likewife been obferved, that the Port St. Anne, or Daupbin, has a fure and fafe Road for Ships at.its Entrance, amongft the Inands of Cibou ; and that a Neck of Land, almoft entirely fhuts up the Port, leaving a Paffage for no more than one Veffel at a time.

This Port, thus fhut up, has near two Leagues Circumference, in an oval Form ; Ships may here lie juft as they pleafe; for the I and, and the Mountains that furround it, keep off the Winds in fuch a manner that they 'are hardly felt. They who were for opening this Port for the chief Settlement alledged, that it might be rendered impregnable at an eafy Rate; that more might be done here for two thoufand Livres, than at Louifourgh for two hundred thoufand; becaufe every thing neceffary for building a large City, and fortifying it, was at Hand. It is further certain, that this fandy Bottom is as extenfive here as at Placentia; that the Fifhing is very good; that there is a great Quantity of excellent Timber about this Place, fuch as Maple, Beech, and Wild Cherry-tree, but above all, Oaks of above thirty Feet high, fit for Building, $\varepsilon^{\circ} c$. It is likewife true, that Marble is here very common; that the Lands are generally good; that about the great and fmaller Entrances of Labrador, which are about the Diftance of a League and an Half, its Soil is very good. In a Word, this Port is but four Leagues from the Bay of E/paniola, which is likewife a very good Harbour, where the Lands are excellent, and covered with Woods, fit for almoft all Ufes : It is true that here is no fifhing in fmall Boats, on Account of the wefterly Winds which generally blow here, but one may fifh here, as in Nere England, in large ones; the only Inconveniency in Port St. Anne is, that the Entrance is difficult, and this Inconveniency alone determined the Controverfy in favour of Louifourgh, where, fays he, neither Pains nor Expence have been fpared to render it both convenient and impregnable. With refpect to the former, this Author was right ; but in regard to the latter, Experience fhews us that he was abfolutely in the wrong.

The French reaped many great Advantages from their Poffeffion of this Ifland, and promifed themfelves many more ; which might, however, be all reduced to thefe three Points: Firft, That this Inland might be planted to great Advantage, as containing in itfelf Commodities of confiderable Value; fuch as Cod-fifh, Oil, Coals, Plaifter, Timber, and other Things. Secondly, it was capable of being made a Magazine, or Staple, between Old and Newe France, and of becoming thereby of very great Advantage to both. And laftly, a Fifhery might be erected there, or rather feveral Fifheries, from whence vaft Benefits might be derived. It was with a View to the Execution of all thefe Projects, that fo great Care was taken of this Inand, fuch mighty Fortifications erected at a very large Expence, and fuch Encouragement given to thofe who would fettle there. And as their Plan was well laid, I think there is very good Reafon to believe that the French were actually great Gainers with refpect to every one of the three Heads before laid down, but more efpecially with regard to the laft, though I am alfo of Opinion, that the Calculations that have been made of their Profits by their Fifhery, the Numbers of their Ships, and Seamen employed therein, very much
exceed the Truth; but at the fame time I readily admit; that in the Space of a few Years, thofe Calculations would have been made good.

The Inferences I would draw from all that has been faid on this Subject, are three, which I efteem of very: great Confequence, as being perfectly fatisfied in regard to the Truth of every one of them : The firft is, that Canada confidered independently, and by itfelf, never was, or ever can be, of any great Confequence to the French, either as to its Product, its Commerce, or the Number of Shipping and Seamen that are, or can be, employed thereby. My next is, that Nova Scotia and Cape Breton, which I efteem but one, the latter being but lart of the former, and belonging to us of Right as much as any of our Colonies, were of far greater Ufe and Benefit to France, than Canada, and the Poffeffion of them all that could poffibly have rendered Canada itfelf of any Ufe or Importance, and were, therefore, very dangerous to us, and what we could never fuffer to remain in French Hands, without being wanting to ourfelves, and facrificing, at once, our Honour and our Intereft. Our Honour, as thefe Places were indifputably Part of our American Dominions ; our Intereft, as they were the only Countries by the Poffefion of which the French might be able to increafe their naval Power, and become troublefome to us in that Parrt of the World. The third Obfervation I have to make is, That as Providence has put in our Power to remove thefe Inconveniencies, and to rid ourfelves of thefe Dangers, it would be inexcufable in us not to take the utmoft Care to improve the Advantages gained in this War, or to neglect fecuring them, when a general Peace fhall be made; becaufe by this means we may be entirely fafe, and France can have no right to expect we fhould reftore what we always claimed as our own, and what fhe kept only by deceiving or deluding our Minifters, at the making the laft general Peace at Utrecht. A thing fo notorious to this Nation, that there is no great Reafon to fear any other Miniftry will ever be guilty of the like Miftake, with which Remarks I fhall clofe this Part of my Subject.
9. We have already obferved, in the Account we gave of the Inand of St. Cbrifopbers, that the Englifs and French took Poffefion of that Inand the fame Day, and from thence we are to date the Power of the French in the Weft Indies. The Reader muft remember, that the Leeward Ifands were originally difcovered by the great Columbus; but after the Spaniards had fettled themfelves in Cuba, Hifpaniola, Porto Rico, and other great Iflands, they neglected the reft; and it was the Knowledge that the Englifh and French had of this that induced them to think of fettling thefe leffer Inands. It was in the Year 1625 , that Sir Thomas Warner, on our Part, and Mr. Defnambue, for the French, took Poffeffion of this Inand; but, in the Space of two Years, both the Englifh and the French, who agreed very well together, were attacked and driven out of the Inand by the Spaniords, and this was more fatal to the French than to us; for our Colony, after a fhort Time, returned; the French being once feparated, fcattered themfelves through all the adjacent Inlands, and began to apply themfelves to the very worft Sort of Methods, in order to get a Living; and from this Accident, as the French Writers with great Probability affirm, fprung up two Sorts of People, that proved afterwards the Curfe and Plague of the Weft Indies. We generally fpeak of them under one Name; but the French Writers feem to have diftinguifhed them rightly enough into Boucaniers, or, as we write it, Buccaneers, and Flibrufiers, whom we call Freebooters. The firft of thefe were a kind of Huntfmen, and confifted of fuch of there People as fettled on the North-fide of the Inland of Hijpaniola, where, by killing wild Cattle of all forts, they obtained an indifferent Livelihood; but fome of thefe People growing weary of the Hardfhips to which they were expofed, applied themfelves to the $D u t c h$, to whom they fold their Skins, to furnifh them with Veffels to cruize upon the Spaniards, which they very readily did, and thofe Veffels being originally Flyboats, the Privateers who made Ufe of them received their French Name from thofe Veffels; whereas we affirm from the Trade

## Chap. III.

they carry on of robbing and fpoiling all they meet with, they had the Name of Freebooters, which, as I apprehend, means pretty much the fame thing with Pirates.
But Mr. Defnambuc, who was a Gentleman of a very good Family, was very far from being guilty of any thing of this fort ; but with thofe that remained faithful to him returned to St. Cbrifopher's, fortified himfelf there, and laid the Foundations of a good Colony, for the Support of which there was a Company already formed in France. He faw with extreme Regret, that Sir Tbomas Warner had got the Start of him; that the Englifh Colony was in a much better Condition than his own, and that they had already made themfelves Mafters of feveral of the adjacent Inands. He refolved therefore, and indeed he had no other Choice to make, to fend over fome of the principal Perfons in his Colony to France, that they might fecure Supplies, and chiefly with a View of fettling the Inand of Guardaloupe. Amongft the Perfons he fent over there was one Mr. Olive, a bold enterprizing Man, and one who had nothing in View but his own Intereft. He had it feems fome Notice of the French Governor's Defign, in' which he refolved to fupplant him ; and having entered for that Purpofe into a Treaty with one Mr. áu Plefis, and fome other Merchants of Dieppe, who formed a Company for the Support of this Scheme; thefe two were fent over Governors, with joint Authority to the Illand of Guardaloupe, where they arrived on the 8th of Fune 1635 , with about five hundred Men. It fo fell out that in the very Beginning of their Enterprize they committed two Miftakes; the firft was, they fettled on the wrong Side the Inand, where the Soil was very bad; the fecond, that they fell out with the Natives before their Colony was in a Condition to fubfift. The bad Confequences that actually attended thefe Errors, and the Forefight he had of what muft certainly follow, foon broke the Heart of Mr. du Pleflis. As for Mr. Olive, who was now fole Governor, his Haughtinefs and Pride had certainly brought the Colony to Ruin, if he had not fallen blind. Upon which the Company fent over one Mr. Aubert, a very difcreet and prudent Gentleman, who, in a few Years time, put the Affairs of this Colony into Order, and eftablifhed it fo effectually, that the Inhabitants have fubfifted very happily ever fince. But though Mr. Defnamurc had the Misfortune to fee this Country thus taken out of his Hands; yet he had, the Pleafure before his Death to fettle the Ifland of Martinico, of which, by that Means, he became Proprietor, and by his Laft Will and Teftament left it to his Family.
At this time Cardinal Richlieu came to the Head of the French Councils; and having received an Account of the Advantages that were like to arife from the fettling of thefe Inlands, he thought proper to fend over a Perfon of Diftinction, to take the Direction of the whole Ifland, and accordingly made choice of Mr. de Poincy, a Knight of Malta, whom he fent over thither, with the Title of Governor and Lieutenant General of the Intands in America: He embarked at Dieppe on the 15th of Fanuary, 1639 , and after a very fhort Paffage arrived at Martinico, from whence he went to Guardaloupe, and afterwards to St. Cbriftopber's. He was a Man of very great Parts, had read much, and was well acquainted with the World; and with all this he had the Qualities that rendered him the fitteft Man in the World for his Office: He was very fevere in the Execution of his Authority againft thofe who were for making hafty Eftates, at the Expence of the Public: He was extremely kind and good to the induftrious Part of the Inhabitants who were willing to difcharge their Duty, and let their private Fortunes depend upon the flourifhing State of the Colonies: He had a true Notion of Religion, caufed Churches to be built in all the Inlands, took care that the Priefts were well maintaned; but would have no Monafteries or Monks: He eftablimed alfo an excellent Form of Juftice, granted Commiffions to Privateers, and hanged up Pirates with very little Ceremony. His Concern for the Public Good was fo apparent, that without any Affiftance from the French Government he was in a manner abfolute, and his Orders were obeyed with the utmoft Alacrity, becaufe the People were fenfible that he had nothing in View but

Vol. II. Nemb. XCIV.
their Intereft. In fhort, he changed the whole Face of Things in that Part of the World, fettled defart Inlands, and though he made many hundreds of People rich and happy, contented himfelf with the Pleafure of doing it, without making any Fortune of his own.

But after the Death of Cardinal Ricblieu, and the Difturbances that followed in France, the Colonies funk, by the ill Management of the Company; and then the Chevalier de Poincy, in the Year 1651 purchafed the Iflands of St. Cbrifopber, St. Bartbolomere, St. Martin, and of the Holy Crofs, for the Order of Malta. In the like Manner other Inands were difpofed of by the French Company, to fuch as would give any thing for them; which, as may be eafily conceived, was of very bad Confequence, and brought the Affairs of the French, in that Part of the World, into a very ftrange Situation. The Dutch, always attentive to their own Intereft, takeing notice of the Condition things were in, eftablifhed Magazines at Flufbing and Middlebourgh, for Weft India Commodities; and employed, in the Trade of the French Inands, upwards of one hundred Ships every Year. This continued till about the Year 1664 , when a new Company was fet up in France, which, with the Affiftance of the Government, purchafed back from the Iland of Malta, and from the other Proprietors, the Rights that they had acquired, put an End to the Dutcb Trade, and brought the Commerce of the Colonies once more into a right Channel, which was what the Government had chiefly at Heart; for when after ten Years Poffeffion of their Grant, they began to increafe their own Profit, by Methods prejudicial to the People, the Miniftry thought fit to interpofe again; and as they had made uife of the Company to deliver the Inhabitants from the Oppreffion of Foreigners; fo when once it was difcovered, that they meant to become Oppreffors themfelves, that was put out of their Power, and every thing fo fettled, that fuch as were diligent and induftrious might be fecure of reaping the Fruits of their own Labours, and the Profits of the Trade in general be fecured to the French Nation. Thefe new Regulations took Place about the Year 1680; fince which, the French Inands have been in a very flourifhing Condition, and are, at this Day, of very high Confequence to the Crown of France; as they contribute greatly to the promoting Manufactures at home, and are the Source of a very extenfive and profitable Commerce abroad.
10. This general View of the Manner in which thefe Inands were firft fettled and fecured to France being given, we thall next proceed to a very fhort Account of the Iflands themfelves, as they lie from South to North; and then we. Thall give a more particular Detail of their Commadities, which will fhew the general Value and Importance of thefe Settlements, and rectify fome Miftakes that have been made about them; a thing as ufeful and neceffary to us, as to the Frearbi themfelves.

To begin then with Granada; it is fituated in 12 Degrees North Latitude, about thirty Leagues South-weft of Barbadoes, and about the fame Diftance North of Caribiana, or New Andalufia; this Inand is twenty-five Leagues in Circumference, and has feveral good Bays and Harbours, fome of which are fortified. It is efteemed a fruitful Soil, and well watered; producing Sugar, and fuch other Plants as are found in the reft of the Caribbee Iflands; there are abundance of very fmall Inands that lie at the North End of Granada, which are called the Granadillas.

Martinico is fituated between 14 and 15 Degrees of North Latitude, and in 6I Degrees of Weftern Longi= tude, lying about forty Leagues North-weft of Barbadoes. It is twenty Leagues in Length, but of an unequal Breadth; the inland Part of it hilly, and, at a Diftance, appears like three diftinćt Mountains, being exceedingly well watered by numerous Rivulets, which fall from the Hills; and there are feveral commodious Bays and Harbours on the Coaft, fome of them fo well fortified, that they bid defiance to the Englifh, when they made a Defcent there, with feveral thoufand Men in the laft War. They were forced to return to the Ships
after they had burnt and plundered fome Plantations in the open Country. The Produce of this Inand is the fame with that of Barbadoes, viz. Sugar, Cotton, Ginger, Indigo, Aloes, Piemento, $\varepsilon_{\sigma} c$. and as it is much larger, it has many more Inhabitants, and produces greater Quantities of Sugar than Barbadoes. This Illand was replenifhed with Indians, when the French firft attempted to fettle here, anno 1635 , and many Battles were fought between them and the Natives, with various Succefs. But the French, at laft, overpowered and extirpated the ancient Inhabitants, and it is now the Chief of all the Frencb Caribbee Iflands, and the Seat of their Governor-General.

Marigalante is fituated in 16 Degrees North Latitude, a little to the South-weft of Guardaloupe, and is about five Leagues in Length, and four in Breadth: It was difcovered by Columbus, in his fecond Voyage to America, anno 1493, and named by him Marigalante, or the Gallant Mary, after the Name of his Ship. The French began to fend Colonies thither about the Year 1647; and having expelled the Natives, after feveral Years Wars, the French remained in the peaceable Poffeffion of this Inland, the Produce of which is the fame with the reft of the Caribbees.
Guardaloupe, fo named by Columbus, from its Hills refembling thofe of that Name in Spain, is fituated in 16 Degrees North Latitude, and 6I Degrees of Weftern Longitude, about thirty Leagues North of Martinico, and almoft as much South of Antigua. It is faid to be the largeft of all the Caribbee Iflands, being twentytwo Leagues in Length, and half as much in Breadth at each End; but almoft cut in two by a deep Gulph or Bay on each Side, fo that the Ends are joined together by a narrow Ifthmus. This, like Martinico, abounds in Sugar, Cotton, Indigo, Ginger, $\mathcal{E}^{c}$. and is in a very flourifhing Condition, and, agreeable to the Confequence it is of to the French, they have taken Care to fortify it with feveral regular Forts and Redoubts, which were in fo good a Condition, when the Englif Admiral Benbow made a Defcent here, with a confiderable Body of Land Forces, anno 1702, that he did not think fit to attack them; but he deftroyed a great many of their Plantations, and open Villages. The French began to fend Colonies to this Ifland about the Year 1632 , but knew fo little what the Soil was good for then, that for many Years they were in Danger of ftarving ; and afterwards the Planters, by their Divifions, almoft ruined one another; fo that this Inand did not make any great Figure till the prefent Century; fince the Beginning of which it has vaftly increafed, and makes more Sugar now than any of the Britifh Iflands, except Famaica.

Defiada, or Diferada, the defirable Ifland, fo called by Columbus, becaufe it was the firft Land he difcovered in his fecond Voyage to America, anno 1493. It is fituated about ten Leagues North-eaft of Guardaloupe, a little inconfiderable Ifland, not fo fruitful as fome others which belong to the French. St. Bartbolomew's is a finall Inand, about ten Leagues North of St. Cbriftopber's, taken by the Englift, under the Command of Sir Ti*notby Thornbill, in the Year $\mathbf{1 6 8 9}$, but reftored to the French at the Peace of Ryfwick. St. Croix, or Santa Cruz, another fmall Inand, fituate in 17 Degrees 30 Minutes North Latitude, about twenty Leagues Eaft of St. Cbriftopher's, and has been contended for by the Englifh, Dutch, Spaniards, and French; but it is now in the peaceable Poffeffion of the French Weft India Company. St. Martin's, another Inland of no great Confequence, belonging to the French, fituate a little to the North-weft of St. Bartbolomerv's.

The Illand of Martinico is the chief of the Frencb Settlements : The Governor-General, and Intendant,' refide there; it is alfo the Seat of the fovereign Council, which has Jurifdiction, not only throughout the Antilles, but alfo over the French Settlements in St. Domingo and Tortugo. The Number of People in this Inand, by which we are obliged to compute the reft, are affirmed to be ten thoufand Whites, and twenty thoufand Negroes. It appears from hence, that the French are very numerous in thefe Inlands, and though they have been
expofed to many and great Difficulties in raifing and eftablifhing thefe Plantations, yet they are now brought to a very fair and flourifning Condition, carry on a great Trade, and are daily improved. The principal Commodity they raife at prefent in thefe Iflands, is Sugar, whereas formerly it was Tobacco. Mr. de Poincy, be-fore-mentioned, was the firft who taught them the Are of raifing the Sugar-Cane, and curing the Juice of it. He was a Man of fuch extraordinary Genius, that he improved upon the Methods then in Ufe at Brazil, and the Madeiras; the Mills he caufed to be erected, were ftronger, neater, and better fitted for Ufe; and his Fur= naces likewife were contrived to much greater Advantage; fo that he not only introduced it, but carried the Art of Sugar-making to a very high Degree of Perfection. Befides Sugar, they raife alfo a great deal of Indigo, in which they did not fo foon fucceed as in Sugar which, I find, the French Writers attribute to the intolerable Stench with which the making that Commodity is attended. But they were more happy in raifing Cotton, which requires very little Pains or Labour.

They alfo cultivate Cacao to great Advantage, and draw confiderable Profit from the Ginger, Caflia, and Piemento, which is what we call 7 amaica Pepper, or Allfpice, of which they export confiderable Quantities. They likewife manufacture Rocou, for the Ufe of Dyers, and fend home Variety of medicinal Gums, and wet Sweet-meats of feveral kinds. Thefe Inands produce alfo feveral kinds of valuable Woods, which are ufed for dying, inlaying, and Cabinet-Work; fuch as Rofe-wood, which, when wrought and polifhed, has a very beautiful Appearance, as well as a fine Smell. The Indian Wood is alfo of the fame Nature, and the Iron Wood, fo called from its being exceffively hard, is efteemed preferable either to Cedar or Cyprefs; BrazilWood they have in great Quantities, and Brazilleto, yellow Wood, or Fuftick, and green Ebony, which is both ufed by the Cabinet-Makers and the Dyers. We may add to thefe Commodities, raw Hides, and Tortoifefhell, and then the Reader will have a tolerable Comprehenfion of all the Wealth and Riches of the French Weft Indies. But to execute our Defign effectually, it is neceffary we fhould give an Account of the Commerce of thefe Inlands, which is what we fhall endeavour to do in as few Words as poffible, and in fuch a Me thod, as may take in the full Extent of their Trade, a thing that has not hitherto been attempted, at leaft in our Language.
11. In the firft Place then, it is to be confidered, that though thefe Inands produce fo many rich and valuable Commodities, yet they ftand in need of very large Supplies of various Kinds of Neceffaries, without which they could not poffibly fubfift, fuch as Horfes, and Cattle of all Kinds; Corn, Roots, dry Finh, and all forts of Lumber, of which they receive confiderable Quantities from Canada, and the reft from our Northern Colonies, in Exchange for Sugar, Tobacco, Indigo, and other Goods, which are fent to Canada, and for Melaffes or Moloffes, to our Colonies, where it is diftilled into Rum, of which Kind of Commerce we have fpoken largely elfewhere, and therefore there is no need that we fhould dwell upon it here. The Inhabitants of this Ifland ftand always in want of Negroes, with which they were formerly fupplied by their own African and Senegal Companies, which, as we have already fhewn, have been long ago united to the French Eaft-India Company, by whom this Slave-Trade is now carried on with great Regularity, and much Profit. The Negroes are fent to Martinico, where they are purchafed by the Inhabitants of the other Iflands, at a fettled Price of fo many Hogfheads of Sugar a Head, as in the Spanifb Ports they are bought for fo many Pieces of Eight.

Before we fpeak of the direct Trade between thofe Inlands and France, it will be proper to give a fhort Account of the Quantities of Sugar, that, according to the beft Computations, are raifed in them; becaufe this being the Staple Commodity, it will enable us to form fome fort of Notion of the whole Extent and Value of their Exports. In Martinico it is computed that they make, one Year with another, ten thoufand Hogtheads of Sugar,

## Chap. III of the FRENCH in AMERICA. <br> each of about fix hundred Weight; in Guardaloupe; <br> 12. We referved the Ifland of St. Domingo to be treared

about four thoufand Hogfheads; and in the other Inands, about one thoufand Hogfheads all together. The French, employ in this Trade annually between two and three hundred Ships, from the Burden of one hundred to three hundred Tons. The time in which they fail from France is between September and February, that they may avoid as much as poffible the Hurricanes, and arrive in a fit Seafon for compleating their Cargoes.

The Veffels from Rocbelle and Bourdeaux are, generally fpeaking, laden with falt Beef and Pork, Flour, Brandy, all forts of Wines of the Growth of that Part of France, and alfo. Madeira, which they take in at that Inand; dried Cod, pickled Herrings, Oil, Cheefe, Butter, Tallow, Iron, Linen, and moft forts of Mercery Goods. The Ships from Rouen feldom carry Provifions, but are freighted with Woollen and Linen Goods, Silk, Ribbons, Shoes, Stockings of all Sorts, Hats, Tin, Copper, and Brafs Ware, fmall Arms, and Sword Blades, Pewter, Pins, Needles, Paper, Pens, Cards, and an infinite Number of other Things of the fame Kind. The Ships from Mar $\operatorname{seillles}$ and $\mathcal{T}_{\text {oulon }}$ are freighted with Oils, dried Fruit, Wines, and feveral Kinds of light Stuffs, that are manufactured in Provence. Thus we fee what prodigious Advantages thefe Settlements bring to France, by encouraging Induftry, employing a large Number of Ships, and confequently raifing and maintaining many hundreds of Seamen. It is no Wonder therefore that the French Government pay fo much Attention to this important Branch of their Traffic, and are fo careful in taking every poffible Method to encourage thefe Colonies, and to protect their Trade, which, however, fuffered confiderably in the two laft Wars, and ftill more confiderably at the Beginning of this.

As to the general Amount of their Trade, it is a very difficult thing to make fo much as a probable Calculation, but if we may depend upon that of Mr. Savary, who was allowed to underftand thefe Matters as well as any Man in France, the Goods exported from that Country rife to the Value of about four Millions of Livres, or two hundred thoufand Pounds of our Money, annually; for which he computes they bring home very near double the Value in Weft India Commodities; and if we take in the other Branches of Trade before-mentioned, we may fairly compute the Profits of thefe Inlands at half a Million Sterling, provided the Calculations before-mentioned are tolerably exact.

We may venture, before we quit this Subject, to make fome few Remarks, for the Service of the Engli/h Reader : As for inftance, That it appears clearly from this Account, we were very confiderable Gainers, by fecuring to ourfelves that Part of the Inand of St. Cbriflopher, which had been almoft one hundred Years in the Poffeffion of the French, and in their Part of which they raifed more and better Sugars than in any of the Inands they now poffers, Martinico and Guardaloupe excepted; and perhaps we fhould not carry the Matter too far, if we faid, more Sugar than in all their Inands, exclufive of thofe before-mentioned. We may likewife obferve of how great Confequence it would be to us to plant the other Illands to which we lay claim; as this would increafe our Trade and our Strength in that Part of the World, at the fame time; and contribute alfo, in the Time of a Frencb War, to curb and annoy out Enemies. The French themfelves, for Reafons that have been already affigned, do not feem very defirous of extending their Plantations, and therefore cannot offer any juft Reafons why we fhould be debarred any longer from fettling thofe Illands that belong to us, and which they do not defire to fettle themfelves. We may alfo confider it as a Thing very practicable in any French War, to reduce thefe Inlands to the greateft Extremity, by the proper Diftribution of our naval Force in the Weft Indies, which in Proportion to the Value of their Commerce, would diftrefs the Merchants in France to the laft Degree, and give our own Colonies vaft Advantages in fupplying thofe Markets which are at prefent fupplied by Judges of our Strength and theirs, who think very good might be entirely ruined by us in a few Years.
of feparately, as being a diftinct Government, and indeed a diftinct Concern to the French from all their other Iflands. When this Country was firft difcovered by Columbus, in 1492, it was called by the Inhabitants in their own Language Ayty; but their Followers gave it the Name of Hippaniola, or Little Spain ; the Admiral himfelf intended to call it Ifabella; but the City he founded in 1494 being dedicated to St. Dominic, the Name was firft extended to that Quarter, and, in Length of Time, to the whole Inand; fo that it is now equally well known in Europe and the Weft Indies, by the Appellation of St. Dow mingo, and is generally fo called in Charts: This Inland is reckoned four hundred Leagues in Circumference but if all the Creeks, Inlets, and Bays, be meafured, it will be found fix hundred at leaft; it is allowed to be the moft fruitful, and by much the pleafanteft, in the Weft Indies; the Forefts are vaft in Extent, and the Trees taller and larger, the Fruit more lovely to the Eye, and better tafted than in the other Inlands; the Meadows or Savannahs, as they are called, are extremely large, and in a manner boundlefs, in which there are innume; rable Herds of Black Cattle that belong to the Country, as alfo wild Horfes, and wild Hogs, produced from the Stock of thofe Animals' brought over by the Spaniards. There is farce a Country in the World better watered, either by fmall Brooks or by navigable Rivers, all of which are full of Fifh. Add to this, that there are many rich Mines of Gold, Silver, and Copper, which were formerly wrought with great Profit; but the Spaniards being now too weak to carry them on for their own Advantage, conceal them with all imaginable Care, to prevent any other Nation's driving them out, and reaping the Advantage of thofe Treafures which by their Indolence and ill Management are no longer in their Power.

The Reafons that induced that Nation to abandon fo rich and valuable a Country, were chiefly thefe: Firft, the Severity of the Government; for the fovereign Council of the Indies being eftablifhed at St. Domingo, kept the Inhabitants more within Bounds than in other Places. Secondly, the vaft Riches gained by their Countrymen in Mexico, the Noife of which drew Numbers to forfake this Inland, in Hopes of coming in for a Share of this Wealth that was to be had elfewhere. Thirdly, the great Demands for People to maintain and fecure their Conquefts on the Continent. Fourthly, the Deftruction of the Indians, which put it out of the Power of the Spaniards to cultivate their Lands; for as yet, the Ufe of Negroes had not reached the Spanih Settlements; but was confined intirely to the Portuguefe in Brazil. And, laftly, the Defcents of the Englifb and French on the weftern Part of the Inland, which by Degrees obliged the Spaniards to abandon all the Country between Montcbrito and Cape Mongon.

This made Way for the Settlement of the Buccaneers in thofe Parts, but chiefly in the little Inland of Tortugo, where they foon raifed a kind of Settlement, which, however, the Spaniards deftroyed in the Year 1638 , with inexorable Cruelty; notwithftanding which the Buccaneers were not hindered from returning, and refettling in that Inand, under the Command of Captain Willes, an Englifbman of eftablifhed Reputation, whofe Courage and Conduct foon put them out of Fear of being difturbed by the Spaniards. It was not long however that they continued in this Situation, for Monf. de Poincy, whom we have fo often mentioned, thought fit to fecure this Illand for the French; and with that View fent thither one Mr. Vaffeur, with whom the French Buccaneers that were already in the Inand joining, Capt. Willes, with the Forces under his Command, found himfelf under an $a b-$ folute Neceffity of abandoning the Place.
This put the French in Poffeffion of it for that Time; but the Spaniards harraffed them for many Years, and drove them out of the Inand more than once; however, being conftantly fupported from their Inlands, and being joined from Time to Time by Adventurers of all Nations, they ftill kept up their Claim, and not only fixed themfelves effectually upon this little Inand, but began alfo to make Settlements upon the Weft End of St. Doo mingo; where, in twenty Years Time, they became fo
ftrong, that the Spaniards were glad to live upon good Terms with them. Yet they never confidered them in any other Light, than as Ufurpers, and Men whom Force maintained in a Country to which they had no manner of Right. The Way in which the French fettled themfelves was very fingular, for they might well be divided, and, indeed, the French Hiftorians have divided them into three very diftinct Sorts of People.

Firft, The Buccancers, or Hunters, who, for the Conveniency of killing black Cattle, and felling their Skins, fixed upon the Continent of Hifpaniola, and built fome Villages for their Retreat, and feveral Fortrefles for their Security. Flibuftiers, or Privateers, who were furnimed by Commiffions from the French Governor of Petit Guaves, to cruize upon the Spaniards, and who were moftly at Sea, fometimes in finall Veffels, every Crew - upon its own Account, and fometimes in large Squadrons, with fifieen hundred or two thoufand Men on board them, but of all Nations, and who reforted from Time to Time into the French Ports, to careen their Ships, difpofe of their Prizes, and to recruit. The third Sort of People were, Men of a more fober way of Living, who fettled in the Country, laid out Plantations, in which they raifed Tobacco, and other valuable Commodities, whom the Frencb therefore ftile Inbabitants. Thefe three Sorts of Pcople were very ufful to each other; for the Hunters furnifhed Provifions and Hides in vaft Quantities; the Privaieers brought in Prizes of great Value, and fpent their Money very freely; and by enriching increafed the Number of Inhabitants, fo that in a fhort Space of Time, the French extended their Settlements all along the South-weft Coaft of St. Domingo; and as for the Tortoife Inand, fo called from its being thought to refemble that Animal ; it was very thoroughly planted, and the Tobacco they raifed there was very good, and grew into great Efteem.

It is true, that in Time of Peace, both the Spaniards and the Englifb complained loudly of the Conduct of the Erench Governors, under Colour of whofe Commiffions the Privateers committed great Diforders, took Ships of all Nations, and difturbed the whole Commerce of America. But the French did not give themfelves much Pain upon this Head; on the contrary, though they fometimes gave good Words, and promifed fome Redrefs, yet they fuffered the Governors to go on in the fame Way, becaufe they found that it drew numbers of People to their Settlements, and was like to fecure them the Poffeffion of the Weftern Part of St. Domingo. In $166_{+}$they fet up a particular Company for managing the Trade of thefe Parts, but that was foon found ineffectual; and therefore in about two Years Time they let it fall. It was not till the Year 1697 that they gained a legal Poffefion of this Country, by the Treaty of Ryfroick, by which the Spaniards yielded to them one half of the Inand; and the Boundaries between them and the French were fettled, by a Line drawn crofs the Country, from North to South; fo that the French enjoy all the Weftern half of St. Domingo, which they have fettled very effectually. In the Year $I_{7} 6$ the Number of People there was computed at thirty thoufand Whites, and one hundred thoufand Negroes, and Mulattoes. The principal Place they have on the North Side of the Inland is Cape Francoife, which is very happily fituated, and has a very good Port; the Town is large and well peopled, and is thought to contain four thoufand white, and as many Negro, Inhabitants; on the Weft Side they have the Town and Port of Leogane, which is the Seat of the Government ; and, befides thefe, they have feveral other good Ports and great Towns.

The principal Trade of St. Domingo, for many Years, confifted in Tobacco, in which it is faid there have been from fixty to one hundred Ships employed; but upon the eftablifhing an exclufive Farm of this Commodity in France, the Trade of St. Domingo for that Commodity began to decline, and is, at laft, funk to nothing. Inftead of Tobacco, they fell to planting of Sugar, and though at firft they met with fome Difficulties, which was occafioned by the too great Fertility of the Soil, yet thefe were foon got over, and Sugar became, in a fhort

Space of Time, the itaple Commodity of the Inand; it is, in the Opinion of fome, the very beft Sugar made in the Weft Indies, and, generally fpeaking, yields three or four Shillings a hundred more, than the Sugar from any of their other Iflands, which has occafioned a furprizing Progrefs in the Cultivation of this Commodity in St. Domingo, which, in 1726, food thus: There were then two hundred Sugar Works in the Mand, which, it was computed, yielded, one with another, four hundred Hogfheads of Sugar, each Hogthead of about five hundred Weight. At this Time Sugar yielded, upon the Spot, from twelve to thirteen Livres per hundred Weight; fo that from this Computation, it appears that the Sugar of this Iland produced the French, annually, about two hundred thoufand Pounds, and the Indigo is faid to produce near half as much; they raife, likewife, Cacao, Ginger, and Cotton. Coffee grows there very well, and fome are of Opinion, that Cinnamon, Clove, and Nutmeg Trees might be raifed in this warm Climate; but the great Profit the Inhabitants make at prefent of their Sugar and Indigo, hinders them from running into any new Improvements; and as the French Ships that come hither return well laden with the Commodities beforementioned, and raw Hides, it is very probable they will continue to go on in the Way they are in, till fuch Time as the Price of the Sugar falls confiderably. The French are thoroughly perfuaded that there are confiderable Mines of feveral Sorts in their Part of the Inland, but as one of their. Writers expreffes it, while the Sugar Mine, and the Indigo Mine, produce fo much, and with fuch Certainty, they are never like to look for any other Mines.

Corn has been fown here, but is faid to ripen at different Times, fo that it cannot be reaped with any Profit ; and though their Grapes are very fine, yet it is pretended they will neither make Wine, nor Raifins ; but the Truth of the Matter feems to be, that the Government difcourages raifing either, and this from very juft and reafonable Motives; for fay they, if France takes off all the Sugar and Indigo, made by the Inhabitants of St. Domingo, it is but reafonable that the People of that Colony fhould take Corn and Wine from France; we may very well fuppofe, that from the fame Motive they difcourage Silk, of which the Spaniards made great Quantities, and very good. It is very apparent, from what has been faid of this Inand, and what might be faid of it, that it is, beyond Comparifon, the moft confiderable, and moft important, Colony, that the French have; which is the Reafon they are fo defirous of obtaining the Ceffion of the other half from the Spaniards; which, fome Time or other, it is more than probable they will obtain, unlefs the other Powers of Europe provide againft it, by a fpecial Claufe in their Treaties with the Houfe of Bourbon, which appears to me a Matter of the greatelt Confequence.

For fhould the French once carry their Point, and become fole Mafters of this Illand, we may very reafonably believe, that in the Space of fifty or fixty Years, it would become the richeft and moft valuable Country in that Part of the World, efpecially if the French fhould abandon their other Inlands, and tranfport their Inhabitants thither ; and even in that Cafe, there would be no Danger of its being over-peopled, and its Fertility is fuch, that they would all find Room to exercife their Induitry, and that Induftry would be richly rewarded; befides, this would afford them many Advantages; for whereas their other. Iflands are fubject to many Inconveniences, but more efpecially the Want of Provifions; thefe would be all remedied there, and it would afford them an Opportunity of encreafing their Strength to fuch a Degree, as would put it out of the Power of any of their Neighbours to give them much Difturbance; on the contrary, they would foon become formidable, both to us and to the Spaniards; which is an Evil, that as it has been forefeen in Time, it is hoped Care will be taken to prevent its ever coming to pafs.

Before we quit this Subjer, it is neceffary to obferve, that on the South Side of the French Part of St. Domingo there lies, a little Inand, called Avaches at the Diftance of
about twelve Leagues from the Continent; this Inand is about nine Leagues in Compafs, the Soil very good, and there are two or three tolerable Ports, one of which is capable of receiving Ships of three hundred Ton. This Inland lies very convenient for carrying on a Trade with the Spanifh Colonies on the Continent of America, and fooner or later the French will, in that refpect, make it turn to good Account. It is alfo very commodious for maintaining an Intercourfe with the only Settlement they have on the Coaft of South America, I mean the Ifland of Cayenne, of which it is requifite that we fhould next give the Reader an Hiftory, and Chort Defcription; becaufe that in Time, likewife, this may become a troublefome Settlement, though hitherto the French have not drawn from it any very confiderable Advantages.

The Inand of Cayenne has been a French Colony ever fince the Year 1625 , it lies clofe by the Continent of Guiana, and only cut off and made an Inand by the Rivers Ovia on the Eaft, and Cayenne on the Weft, from which laft it takes its Name, as may be feen in the Map. The Town and Fort where the great Road is, at the Mouth of the River Guiana, are exactly in 4 Degrees 50 Minutes of North Latitude, and 332 Degrees of Eaft Longitude from Ferro. It is reckoned about eighteen or twenty Leagues in Compafs, ftanding high on the Coaft, and looks, at a Diftance, like Part of the Continent. The Length of the Ifland, from the River of Ovia, to the River Cayenne, is about feven Leagues, and the Breadth about three. The River Cayenne fall's into the North Sea, on the Weft Side of it, dividing the Country of the Caribbees, from that of the Galibis. The Inand forms three principal Capes or Promontories, being thofe of Fort Lewris, Seperon, and Matiuri; it has much meadow and patture Ground in feveral Parts, the reft is low and marfhy, efpecially in the Middle, fo as to be almoft impaffable. The Edges of it are moftly covered with Trees, which we call Mangroves, having that peculiar Quality of growing in Salt Water, fo deep, thick, and wide rooted, that from thefe very Roots other Trees rife up without End, fo wonderful clofe, interwoven with one another, that in fome Parts of the Inand a Man may walk Leagues on them without touching the Ground.

About fix Years ago the Ifland was extraordinary unhealthy, by reafon of the long Rains, which lafted above nine Months in twelve, but efpecially from December till Fune; as alfo becaufe the Ground was clofe wooded, and fo marfhy, that it occafioned feveral Sorts of Difeafes among the Inhabitants, which in a more particular Manner affected young Infants, infomuch that many died almoft as foon as born, and others at a very tender Age; for which Reafon the moft fubftantial Planters ufed to fend them over to France very young, to preferve them from the Malignity of that bad Air; which is now nothing near fo pernicious to thofe young Babes, fince the Land has been grubbed up, fo that they grow up healthy and ftrong; befides, the Women are fafer in Childbed, and the generality of the Inhabitants are lefs fubjeet to the Diftempers than they were before the Ifland was cleared of moft of the Wood; however, it is ftill, and always will be, an uncomfortable Place to be in, becaufe of the long rainy Seafon every Year, and fcorching clofe Air Night and Day, which dif-fpirits a Man; and the heavy Showers and Vapours exhaled from the fwampy Grounds, which ftill occafion Diforders in Men and Beafts, though not fo much as formerly ; large Cattle, particularly, can farce live there. They are alfo continually tormented with Gnats, Flies, and Worms, Ants, Bugs, and other Sorts of Vermin; all which, together, render the Place very difagreeable and uneafy; for which Reaion feveral Planters, when grown rich, retire into France, and let their Plantations.

The Soil of Cayenne, by reafon of the continual Rains, produces plenty of Sugar Canes, which, though fmall and fhort jointed, yield very plentifully; alfo Mandioca , or Caffibi, Indian Wheat, Rocou, Cotton, AccajouApples, Banillas, Pete, Ebony, Letter, and Violet Wood, Ananas, Tubèrofes, very fine and large Papaias, and feveral Sorts of Americaiz and European Grain and

Vol. II. Numb. 94.

Seeds, befides Lemons, Oranges, Indigo, and Figs, $\forall \hat{c}$ The Country abounds in wild Boars, called there Packs, Deer, Agontils, Woodcocks, Ortolans, Nightingales, Arras, Occos, Toucans, Parrots, Parroquets, and other Birds, only remarkable for their Feathers: Alfo Flamingos, Birds about as big as a Hen, flying in Swarms like Ducks or Cranes; large wild Ducks with red Tufts on their Heads, Lizards, Cameleons, and very large Serpents, fome of them above twenty-five Feet long, befides many fmaller. The chief Town of Cayenne ftands on the Weft Part of the Ifland, in an advantageous Situation, Nature and Art having equally contributed to the fortifying of it. It is of an irregular hexagon Figure; the Fortifications of the Town, which are extenfive, were moftly caft up with Earth by the Hollanders, after they had driven the French from the Inand, and have feveral Batteries mounted with Cannon, and a dry Ditch quite round, befides rows of Trees that furround it in a Triangle, which makes a handfome Profpect at a Diftance; within this flight Fortification fand above two hundred Houfes, difpofed in fuch a Manner, as to make two different Streets or Lanes; all built with Planks of a certain Tree, by the French called Poirier, and of other Sort of Timber, and thatched: Which is the Reafon they are now and then burned down fo faft, that nothing can be faved, to the great Lofs and Damage, not only of the Owners, but of feveral Inhabitants round the Town. On the North-eaft Part of it, towards the Gate of Armire, the Jefuits have a little Chapel ftanding in an open Place by itfelf, and before it a Grove of Lemon Trees, which afford a pleafant Shade to walk under; the Chapel is adorned with a fmall Spire of Planks, with good Bells.

On a pretty fteep Hill, or Eminence, ftands the Fort of St. Lerwis de Caperoux, built by order of Lewis XIII. King of France, on the Sea-fide, commanding every Way, mounted with forty-two Iron Guns; the Garrifor whereof commonly confifts of four Companies of regular Forces, befides near five hundred Inhabitants, moftly French, and divers Indians, who retire into the Inland with their Canoes, and there make their Cottages and Carbets, living either in the Town, or on the Inand round about, as far as mount Sincry, becaufe of the Goodnefs of the Soil, and the Wholefomenefs of the Air, as it lies much higher than the Ifland. Thefe, upon the leaft Alarm, are obliged to ftand to their Arms; the Signal to give Notice to them to come together, being to fire off fome Cannon, efpecially in the Night-time. The weakeft Places of this Ifland are alfo defended by fome Batteries and Guns. The next Town in the Ifland to this, is Armire, diftant about three Leagues Eaftward, but fmall and thinly peopled, where the Jefuits have a Chapel alfo for the Conveniency of the Inhabitants of that Part of the Ifland; and about a League farther Eaft is the Point Maturi, and near it a very fine Plantation for Sugar, and is a fit Place to land at. Weft of this Plantation ftands an Indian Carbet. There are all the remarkable Towns of Cayenne, except here and there fome few Cottages and Plantations about the Inand; the fourth Part of which is fored with fine large Meadows, or pafture Ground, called Savannabs, and three Rivulets; they have ufually a Watch-houfe, and a Battery of fome Iron Guns at Armire, to give Signals when they difcover Ships coming from the Eaftward. Fort Lerois commands both the Town and the Sea; the anchoring Place for Ships is under the Cannon of the Fort, within Mufket-fhot from Land, in three Fathom and a half muddy Ground, Southweft of the Water-gate, which has four good Guns to defend the Road.

The Colony is partly fubfifted by Provifions brought from France in Merchant Ships by way of Trade, which commonly are Wine, Brandy, Meal, and powdered or falt Meats, for Beef is very fcarce there, befides that: they are not allowed to kill any, nor Calves neither, without Leave of the Governor, or his Subftitutes, that Cattle may multiply in the Inand: All forts of LinenCloathing, Stuffs, Silks, Shoes, and other wearing Apparel, are alfo carried thither from Fronce, for the Ufe of Men, Women, and Children; and all forts of Tools, and fimall Wares, either for the Service of the Colony, or 42
for
for the Amazons and Indion Trade, are bartered for Sugar, Rocou, Indigo, Tortoife-fhells, Tyger-fkins, and other inconfiderable Curiofities of the Country, which did once turn to grear Profit to the Traders there. The other neceffary Provifions of the Product of the Inand are Manetada or Caffibi, and Indian Whear, of which each Planter fows large Quantities, both for the Subfift ance of their own Families and Slaves, and tofell to the other inferior Inhabitants. The Sea and River Fifh, Poultry, Pidgeons, Quefts, or Ring-doves, whereof there is great Plenty, and delicate Turkeys, Venifon, Hares, Agontils, Hogs, and Packs, that is, wild Boars, are alfo a Part of their Subfiftance.

But Lamentins and Sea-Tortoifes are their chief Provifion, and may well be called the Manna to the poorer fort; the Manati's Flefh ufed at Cayenne is brought ready falted from the River of the Amazons, feveral of the principal Inhabitants fending the Barks and Brigantines thither with Men and Salt, to buy it of the Indians for Beads, Knives with white Hafts of a low Price, fome Linen, Toys, and Iron Tools. When thefeVeftels have entered the River of the Amazons, the Indians, who always follow the Manati-fimery, go on board, take the Salr, and with it run up the River in Canoes or Frigates, to catch the Manaties, which they cut in Pieces, and falt as taken, returning with that falt Fifh to the Brigantines, which go not up, becaufe the Portuguefe who dwell to the eaftward, at Para, and other Places of Brazil, claim the Sovereignty of the North-fide of that River, and give no Quarter to the French, or other Europeans, they can take in their Liberties; which has occafioned many Difputes and Quarrels between them. That Controverfy was decided by the Treaty of Utrecbt, in the Year 17I3, which fixed that Boundary.

They have ever fince been ufing all the Arts imaginable, to render this Colony of fome Ufe, but hitherto they have been able to make no great Matter of it, the Expence being fo large, that by their hardeft Labour the Inhabitants find it difficult to gain wherewithal to purchafe their Subfiftance. As for the Trade carried on from France, it confifts chiefly in Provifions, fuch as falt Meats; Flour, Wine, Brandy, Lieen, Stuffs, and Mercery Goods ; in return for which they export Sugar, Dying-woods, and for the moft part, the fame Kind of Commodities they do from the Leervard Iflands. It is thought, that the Number of Whites upon this Inand may amount to twelve or fifteen hundred, and that the whole Number of the People, taking in Soldiers and Slaves, may amount to three thoufand, or thereabouts; amongtt thefe there are fixty or feventy Fews, who, befides cultivating their Plantations, carry on a kind of underhand Trade with the Dutch and the Portuguefe; and what little Quantity of Gold and Silver they have in that Country is in the Hands of thefe People, who notwithitanding are far enough from being rich.
13. We have already, in the Hiftory of the French Eaft India Company, mentioned the feveral Attempts made by Monf. de la Salle, for the Difcovery of the Mifflippi, and therefore we may be allowed to be the fhorter here. This Gentleman was certainly a Perfon of great Worth and good Underftanding; and the Notion he had of fixing Colonies in this Part of the World, was, in general, well enough founded; but it does not appear that he was fo well qualified to govern or conduct a Colony: He had paffed down the River he fought, in the Spring of the Year 1683, to the very Mouth of it ; he afterwards remounted that River, and returned to Canada, in the Month of October the fame Year ; from whence he took his Paffage back to France, where he gave a large Account of the mighty Advantages that would certainly accrue from the fettling of a Colony in thofe Parts; upon which a new Company was formed in the Beginning of the fucceeding Year, for the carrying thofe great Defigns into Execution; and on the 24th of Fune, 1684 , he failed with a Squadron confifting of four Veffels, having on board a fufficient Number of Perfons, and all kind of Goods and Provifions neceffary for the Service of the new Colony, which he propofed to fix at the Mouth of the Miffifippi; but when he arrived in the

Bay of Mexico he was not able to find the Mouth of the River, as he expected; and therefore attempted to fix a Colony at the Bay of St. Lerevis, which is one hundred Miles to the Weft of the River Mififippi; where they endured fuch Hardfhips that moft of them perifhed miferably; while Monf. de la Salle, ftill intent upon Difcoveries, made various Excurfions with fuch of his Company as were ftill able to move; in one of which he was barbaroufly murdered by two of his own People, which put an End to the Defign for the prefent.

Seven Years after, Monf. d' Ibberville undertook to perform all that Monf. de la Salle had promifed; and, as he was a Man who had already performed grear Things, the Court encouraged him; and he was really as good as his Word. He carried his People very fafely and happily to the Mouth of the great River, and there laid the Foundations of the firt Colony the French ever had on the Mififippi. He took Care to provide them with every Thing neceffary for their Subliftance, and obliged them to erect a ftrong Fort, for their Protection againft the Indians, before he would return to France in order to obtain Supplies. The Succefs of his Voyage made him extremely welcome to the King, who promifed him all the Affiftance he could defire; fo that he was foon in a Condition to put to Sea again; and his fecond Voyage was as fortunate as the firft ; but very unluckily for his Colony, he fell fick and died, as he was preparing for the third. This had very near overturned the whole Defign, if it had not been for the Generofity and public Spirit of a private Man, who undertook to fupport it at his own Expence, receiving from the Government an Authority to act.
In the Grant of Louvifiana to Mr. Crozat, by Lewis XIV, anno I7I2, the Bounds of it are faid to be the River and Lake of Illinois on the North, Carolina on the Eaft, the Gulph of Mexico on the South, and Neres Mexico on the Weft. As to Canada, or New France, the French would fcarce admit it had any Bounds to the North on this Side the Pole, till they were limited on that Side by an Article in the Treaty of Utrecbs: which affigns New Britain and Hudjon's Bay on the North of Canada to Great Britain; and Commiffioners after wards on both Sides, afcertained the Limits by an imaginary Line, running from a Cape or Promontory of New Britain to the Atlantic Ocean, in 38 Degrees 30 Seconds, North Latitude, and running from thence South-weft to the Lake Mifcofink or Mifiafim, and from thence farther South-weft directly to the Iatitude of 49 Degrees. All the Lands to the North of the faid Line, being affigned to Great Britain ; and all the South of that Line, as far as the River of St. Laurence, to the French. Thefe are the trueLimits of Louvifiana and Canada.

This Grant to Mr. Crozat did not fubfift long, for it being neceffary to have fome plaufible Pretence for fetting on Foot a Project for changing the Face of public Affairs in France, this Settlement was thought the moft convenient; and therefore all imaginable Pains were taken to reprefent it as a Paradife, and a Place from whence inexhauftible Riches might be derived, provided due Encouragement could be obtained from the Government ; and for this Purpofe it was thought requifite, that a new Company fhould be erected; to make Way for which Mr. Crozat was to refign his Grant, and this he accordingly did, as we have hinted in another Place.
14. This occafioned that Noife that was made abour the Mififippi, not in France only, but throughout all Europe, which was filled with romantic Stories of the vaft Fruitfulnefs of the Banks of this great River, and the incredible Wealth that was like to How from thence. It was thefe Indies in the North Seas that produced our Notions of finding Indies in the South; but in the End both proved Bubbles, partly from the Falfhood of thofe Relations, and partly 'from there being no fixed 'and fettled Refolutions of promoting the Trade to either. This Miififippi or River of St. Lereis, according to the French Account, rifes in the North-weft Part of Canada, taking its Courfe firft to the South-eaft, and in 45 Degrees, turning almoft due South, continues that Courfe till it difcharges itfelf into the Gulph of Mexico in 30 Degrees

North

## Chap. III.

North Latitude, and 95 Degrees of weftern Longitude. By four or five Mouths of feveral large Rivers falling into it, both from the Eaft and Weft, the Mififippi is fwelled into a very large deep River; and fome French Writers add, that it is a gentle Stream, and navigable for large Veffels from the Source almoft to the Mouth; but other French Writers, and fome Englifs Seamen, affirm, that it has a very rapid Stream; and that there are Cataracts in feveral Parts of it, which obftruct the Navigation, and that there are fuch Shoals at the Mouth of the River, that large Ships cannot enter it.

The Country upon the Banks of this great River has nothing very extraordinary to recommend it, except that the Air is milder, and the Soil more fruitful than that of Canada, which might be reafonably expected from its Situation. There is no fort of Queftion that People may live there with the Help of their own Induftry, in Peace and Plenty; but perhaps they might live with as little Pains and Trouble in France itfelf. But as to what was pretended when fuch a Noife was made about the Miffillppi, that the Country abounds with Silver Mines, and that it was not improbable that Gold might be found here, it was a mere Fable; and thofe that have been fent from France to make Trial of the Mines have reported, That they are far from being valuable, and that it would be very difficult, if not impracticable, to work them ; fo that now we hear no more of the Metals in this Country; but they are content to talk of Furs, raw Hides, Tobacco, Corn, and Silk, of which indeed there is more Probability; but no very great Progrefs has been hitherto made in raifing any of them. As this Country lies in the Middle between the Sparifb Settlements on one Side, and the Englifh on the other, the French have fancied to themfelves a Poflibility of driving out both; but this muft certainly arife from their national Vanity, fince there is no great Probability of their becoming in fome Ages very formidable to either, unlefs both fhould become very negligent, and the French more happy than they have hitherto been in their Improvements.
At prefent they have divided this Country into nine Provinces, in each of which they have fome finall Pofts, but the only Place they have of any Confequence is, Nerw Orleans, fo called from the late Regent, who was the Parent of this new Settlement. It is feated about one hundred and twenty Miles from the Mouth of the Mifispppi, in a very fruitful Part of the Country, where the Inhabitants raife Corn fufficient for their Subfiftance, and fome Tobacco. The Expence they have been at from time to time about their Colonies in this Country has been very large, but the Profits clrawn from them very inconfiderable, and no way anfwerable to their Expectations ; yet it muft be allowed, that in its prefent Situation, Nere Orleans is a confiderable Place, both with refpect to its Size and Strength, and the Jefuits fent from Europe thither have taken a great deal of Pains to bring over the Indian Nations to the French Intereft, the only Means by which they can become troublefome to their Neighbours; but notwithftanding this, they are not able to rely much upon their new Converts, there having been frequent Inftances of their revolting, attacking, and deftroying, their new Mafters or Allies, when they leaft expected it: So that on what Grounds they build their Hopes of eftablifhing a powerful Empire in this Part of America, mult be left to their own Writers to declare.

To fay the Truth, I fee but one Way that any Thing worth mentioning can ever be brought about here ; and that is at the Expence of their own Colony of Canada; for if it fhould ever appear that an eafier Livelihood is to be gained in the Colonies on the Banks of the Mififippi, than in thofe on the River of $S$. Laurence, it is not at all impoffible, that the People fettled on the one may by Degrees remove to the other. This would become daily more and more practicable, and perhaps more neceffary, if we proceed, in the Settlement of Nova Scotia, and preferve the Poffefion of the Inand of Cape Breton; for then, as I have before obferved, Canada will rather become a Burden than an Advantage to France; and the wifeft Step the could take would be to remove the Inhabitants hither. At the fame time that I fay this, I defire the Read-
er will confider it as a pure Conjecture, and as a Thing barely poffible; and not at all as a Defign thought of by the French, or that is ever likely to come to pafs: But, however, this we may be allowed to affirm, that if they do not take this Step, it is not at all likely that either of thofe Colonies will become more confiderable than they are at prefent. We have already obferved, that the Computations they have given the World of the Inhabitants of Canada are very extravagant, and much beyond the Truth; and.I doubt the fame Thing may be with equal Truth affirmed, of what they report as to the Numbers of thafe fettled in LouviSiana, which fome of their Authors raife to twelve thoufand Souls, while many intelligent People think there are not much above half that Number.
15. The Obfervations and Remarks upon this Period may be the more concife, fince we have already taken Occafion to deliver fomething of that Nature, in refpect to each of the Colonies we have mentioned. The French have not been very fortunate in the Management of their Interefts in this Part of the World; for their Settlements are as unconnected and ill placed, as their Enemies could wifh them. Canada is at a vaft Diftance from their Iflands, and the Navigation of the River of St. Laurence fo difficult, that they cannot make above two Voyages in a Year. We may fay the fame with refpect to the Inand of Cayenne, which lies out of the way of all the reft of their Colonies, and for that Reafon has little or no Correfpondence with any of them; and it is pretty much the fame with their Settlements on the Mififfoppi, which is a great Difadvantage to them; as may appear from the Confideration of our own Colonies, that flengthen and fupport each other, by their mutual Commerce, there being feveral hundred Veffels employed in the American Trade only, in which the French employ very few or none. We may, therefore, with ftriet Regard to Truth, divide the French Settlements into thofe which are profitable, and thofe which are not; the former including their Inands, and the latter all the reft.
It muft, indced, be owned, that it is very polfible to raife feveral Commodities of Value, both on the River of St. Laurence, and on the Mififippi; but, as the French are at prefent circumftanced, it may very well be doubted, whether they will be ever able to do this, becaufe it does not appear that they could do it to their own Advantage. While our Northern Colonies fupply their Sugar Inands with Lumber, in Exchange for their Moloffes, it will hinder their taking, except in Time of War, thofe kind of Goods, even from their own Colonies, and nothing but an open and advantageous Market can tempt the Inhabitants to raife them. As for Tobacco, Wine, and Silk, in Lowvifana, they may ferve to talk of, but there is little Reafon to fuppofe they will ever apply to the Cultivation of them in earneft. For, firft, in regard to Tobacco, it is not at all likely that they fhould raife it better or cheaper than in Virginia, from whence the French take that Commodity at prefent, in Preference to what might be raifed in St. Domingo, and the adjacent Iflands; and, with refpect to Wine and Silk, though they would be valuable Commodities to us, they could fcarce be fo to them; confidering how much of their own Wine they export to the Colonies, and what Quantities of Silk they raife in their own European Dominions. It is their Iflands therefore that the French chiefly concern themfelves about; and as to the reft, it is rather for the Credit of their Crown, and for the Sake of dif tant and very improbable Expectations, that they make a Point of maintaining their other Colonies.

It may be, if they were to transfer the People of Ca nada to their Settlements in Louvifana, and be at fome Pains to eftablifh a Correfpondence between that and their Sugar Illands, they might render both more beneficial than they are at prefent; but even in that Cafe, perhaps fome infurmountable Difficulties might be found, which are not at prefent forefeen; and though they, are not ${ }_{3}$ yet even the Poffeffion of St. Domingo entire, if ever they Chould obtain it, would make that Commerce decline. Upon the whole, though the Frencb have great Views in Americas and feem indefatigable in purfung thofe Views,

Yet, to fpeak impartially, there is very little Ground to believe, if we mind our own Affairs, and could once come to a right Underftanding with Spain, they will be ever able to fucceed. I may add farther, that if ever we come to form right Notions of the Importance of the Sugar Trade, and in Confequence thereof give all necef-
fary Encouragement to the Inhabitants of our Mands, in Time of Peace, and make it our Bufinefs, in Time of War, to diftrefs the French in this tender Point; it is poffible we may drive them out of a great Part of that Trade, which would be the happieft Event that could be for us, as well as the greateft Difappointment to them.

## S E C TION XXIII.

The Discoveries, Conquests, Settlements, and Present State of the Dutch Colonies in America; the Nature and V alue of their Commerce with the Spaniards, and the Manner in wobich their Returns are made to Europe; to which is added ans Account of the Danih Settlement; the wwole collected chiefly from the Dutch Writers.

1. A bort View of the Scbeme formed by Count Maurice of Naffau, for erecting a Dutch Empire in America, equal, if not Juperior, to that of the Spaniards. 2. The Expedition of General Brewer, in order to the Execution of that Scheme; and bis Succelfes in Chili, to the Time of bis Death. 3. The Hifory of that Expedition continued, in wobich the principal Caufes of its Mifcarriage are clearly pointed out. 4. The Dutch Settlements on the Continent of South America, at Surinam, Boron, Berbice, and Approwack, defcribed; together with an Account of the Commodities raifed there, and the Importance of thofe Settlements. 5. A View of the Iflands poffefled by the Dutch in the Weft Indies, viz. Tabago, St. Euftachius, St. Martin, Curacao, and its Dependencies; their Produce, and the Nature of their Commerce witth Holland. 6. A large and exact Relation of the clandefine Trade, carried on by the Inbabitants of thefe Ifands, with the Spaniards, 7. The prefent State of the Weft India Company in Holland, and the Caufes of its declining Trade. 8. A Defcription of the Ifland of St. Thomas, of the Danifh Settlement there; its Produce, Commerce, and Importance. 9. Obfervations and Remarks on the foregoing Section, which concludes the Hijtory and prefent State of the Continent of America and the Weft Indies. Pains to explain the Rife, Progrefs, and Extent of the Dutch naval Power; which, if I am not altogether miftaken in my Judgment, was much fuperior to any thing of the fame Kind, that we read of in ancient or modern Hiftory; fo that if their Project of eftablifhing aWe fI India Company had fucceeded, as well as that did for erecting one for managing the Trade of the Eaft Indies, I fee no Reafon to doubt of their becoming the moft formidable Power in Europe. It would take up a great deal of Time, which we have not to fpare, to fhew how this mifcarried; but there is a particular Incident, which falls in with the Subject of this Section, that will fully prove the Truth of both thefe Affertions. The Reader may remember that we infiited in the Hiftory of Brazil very largely, on the Conduct and Meafures of Prince Maurice of Naflau, as able a Captain, as great a Statefman, and I muift have leave to fay, becaufe I am convinced of it, the honefteft Man, and the beft Patriot, that Family ever produced. In that Section we clearly proved, that the running him down by the republican Faction in Holland, was the Ruin of their Affairs in Brazil, and, at prefent, it fhall be our Bufinefs to fhew, that it loft an Opportunity of making them as great in the Weft Indies, as they are now in the Eaff; for that Prince had formed a Scheme of raifing fuch an Empire at once in America, as, had it been as fteadily purfued as it was wifely projected, would have defied the Rage of Enemies, defeated the Power of Accidents, and, perliaps, would have efcaped the Teeth of Time itfelf.
He faw plainly, that their Eftablifhment in Brazil, as fair and as flourifhing as it feemed, under his wife and glorious Adminiftration, would fink to nothing, if it was not fupported by new Acquifitions; for he knew that a naval Power is, of all others, leaft at a flay; and that if it did not proceed, it would decline with the fame Rapidity with which it rofe; and, to prevent this, he formed Project after Project, all of which fucceeded but one; and, had that one fucceeded, he knew that there had been need of no more. This Project we are to give an Account of here, and in few Words; it was this: He was informed that the Inhabitants of Cbili, which lies at the back of Brazil, fronting the South Seas, as this does the North, and the richeft Country in America, had revolted from, and driven out, the Spaniards; he conceived therefore a Defign of fixing a Dutch Colony there,
which he thought might be eafily done, under the plaufible Pretences of affifting the Natives againft their late imperious Lords the Spaniards.
He communicated this Defign to the States General ; he fhewed them the Utility of it; he explained to them the Advantages with which it would be attended, and which were chiefly three. Firf, That it would give them the Poffeflion of a large, fruitful, and agreeable Country, abounding with the Neceffaries of Life, and with what is capable of fupplying Neceffaries in any and all Countries, the richeft Gold Mines in the World. Secondly, That it would humble the Spaniards, by diftreffing them in the tendereft Part; fecure, as well as open, a Commerce in the South Seas; and render their two great Empires in Mexico and Peru precarious, unlefs fecured by a Peace with the Dutch. Thirdly, That it would complete, and firmly cement, the Circle of their Commerce; for the Slaves, procured by their Settlements in Africa, would be taken off by that Colony and by Brazil. The Paffage from thence to the Eaft Indies, and from them round to Europe, would, in Time, become common; that this new Trade would fill that Country with People, and facilitate a Correfpondence between their Dominions on both Sides the Continent of Soutb America; which would foon put them in a Condition of rooting out all their Enemies, and enable them to keep the beft and moft valuable Part of the new World entirely to themfelves. Vaft and prodigious as this Defign was, every competent Judge will, at firt Sight, perceive, that in the State things were then, it was both poffible and practicable, and therefore we need not at all wonder that the States General readily embraced it, and chearfully difpofed all things requifite for the carrying it into Execution, without much regarding either the Dificulty or the Expence.
2. The States, however, thought it requifite, that a great Part of the Charge fhould be borne by their Weft India Company, becaule in Cafe of Succefs they were to reap the greateft Part of the Benefit, fince, in' Virtue of their Charter, the new conquered Country was to belong to them; but, however, the regular Troops that were to ferve in this. Expedition were to remain in the Pay of the States. The Perfon fixed upon to command in chief, with the Title of General, was Captain Henry Brewer, a Man of great Abilities, and remarkable for his perfonal Courage; which had, however, a ftrong Tincture of

Chap. III. of the DUTCH in AMERICA.
what the Dutch called Severity, which, in any other Language, would have been denominated Cruelty. He had ferved with Reputation in the Eaf Indies, and was allowed to have a furprizing Power over the Seamen. He had under him four Captains of eftablifhed Character, and his Squadron confifted of five Sail of ftout Ships, on board of which he had eighteen hundred Men, with every thing that was thought neceffary, either for making a Defcent, or for eftablifhing a Colony.

General Brewer, and his Squadron, failed from the Texel the 6th of November, 1642, and arrived at Fernambuco on the Coaft of Brazil, in 9 Degrees of South Latitude, on the 22 d of December following; where, having confulted with Count Maurice of Naffau, General and Commander in chief for the Dutch in Brazil, he failed from Fernambuco with five Ships well equipped, and provided with Neceffaries, on the 16 th of Fanuary 1642-3; and, on the 5 th of March, they came in Sight of the Streights of La Maire, as they were then called, which is only a Paffage between States Ifland and the moft Eafterly Point of Terra del Fugo, in 45 Degrees fome Minutes South Latitude, and fince ftiled Brewer's-Streigbts, in Memory of this Expedition. They came to an Anchor in a Bay of States Ifand, to the Eaftward of the Streights of La Naire; where', having remained till the $25^{\text {th }}$ of Murch, they failed round Cape Horn, fuffering pretty much by formy Weather ; and lofing the Company of one of their Ships, called the Orange Tree, and arrived with the other four on the Coaft of Cbili, on the 30 th of Mpril 1643; and on the gth of May they came to an Anchor in a Bay of the South Sea, in 4 I Degrees 30 Minutes South Latitude, to which they gave the Name of Ereroer's-Haven.

An Officer being fent on Shore with a Company of Soldiers, they difcovered great Herds of Oxen, Sheep, and Horfes, and fome Houfes; but the Inhabitants were fled. However, they fuppofed that Part of the Country to be in the Poflefion of the Spaniards, by the large wooden Croffes they faw fixed at the Entrance of the Houfes; and going afhore the next Day they difcovered a Party of Spanifb Horfe, and fome Cannon-flot were fired at the Boat. A Company of fifty Soldiers being fent afhore again, the 2oth of May, they difcovered the Town of Carelmappa, and had a fmart Engagement with a Spaniflo Party, confifting of ninety Men, Horfe and Foot, whom they defeated; whereupon the Spaniards abandoned the Town of Carelmappa, and the Dutch took Poffeffion of it, where they remained till the 25 th, and then fetting fire to the Town, and killing the Horfes they had taken in the Engagement, they retired to their Ships. They afterwards failed to the Town of Caftro, on the Inand of Cbiloe, where they arrived on the 6 th of yune.

There appeared a good Body of Spanift Horfe and Foot on Shore; but the Dutch no fooner landed fome Soldiers, than the Inhabitants fet fire to the Town, and abandoned it, having before carried away every Thing that was valuable. This Place, called Caftro, had been a fine Spanifh Town, adorned with magnificent Buildings pleafantly fituated on a Hill, furrounded with fruitful Orchards and Gardens, and the Fields beyond well cultivated, and at the Time when the Dutch arrived there, the Fruit then remained on many of the Trees, though it was in the Beginning of their Winter. The Dutch, taking an hundred Sheep and fome Hogs off the Inand, re-embarked on the Iyth of 'June and returned to Brewer's-Harbour. From hence they propofed to fail to the River Baldivia; but the NorthWind blowing hard in their Teeth, they altered their Minds, and came before Carelmappa again; where landing a Company of Soldiers, on the i 6 th of $f u l y$, they took three Spani/b Prifoners, who informed them, that the Winters on that Coaft were ufually tempeftuous, but that the moft ftormy Month was paft: That there were Gold Mines at Orfornio, and more at Baldivia; but that the Mines were not wrought of late, and that at Caftro there were none to be feen, the Indians not having been compelled to work in the Mines fince the general Revolt in 1595.

They learned alfo, from an old Spanifb Woman they
Vol. II. Numb. 94.
had taken, that before the faid general Revolt, the Spar niards lived in great Splendor at Orformo, that the meaneft of them had three'hundred Indian Vaffals at leaft; who were compelled to pay their refpective Lords a certain weekly Tribute in Gold, and were ufed fo cruelly by the Spaniards, that the Cbilefe arofe as one Man, drove them from Orforno, and other Spanif Towns; and they poffeffed little more in this Part of Cbili, than Carelmappa and St. Micbael de Calembuco ; fince which, however, the Indians of. Orforno, Baidivia, Fillerica, Inperial, Jucafel. Aurauco, and Puren, had lived in a pretty good Intelligence with the Sponiards till very lately, when the Indions took up Arms again, and they were actually here in a State of War with the Spaniards, which was confirmed by five Indian Caziques, who came on board the zoth of Fuly, and affured the Dutch they were extremely rejoiced that they were come to afiit them againft their ancient Enemies the Spaniards.

The Dutch anfwered, They had brought good Store of Arms to exchange with their Countrymen of Orforno, Bal. divia, and otherPlaces, for fuch Merchandize as C̈bili afforded, that they might be enabled to carry on that War againft the Spaniards, and were ready to affint them to the utmoft of their Power. The Cbilefe replied, They lived very uneafy under the Spanifb Government of Carelnappa, and were contriving how to get to their Friends at Orforno and Baldivia; but the Spaniards had poffeffed all the Paffes, and the Country was fo overllowed by the Winter Rains, that they found it impracticable to go by Land at prefent ; and therefore defired the Duitch, that they would carry them to Baldivia in their Ships; which the General agreeing to, they returned afhore, to give their Friends an Account of it, and make Preparations for their Voyage. The next Day, more Cbalefe went on board, and one of them brought the Head of a Spaniard with him whom he had killed, and declared they were determined to thake off the Spanifb Yoke. Whereupon the General made a Prefent to them of fome Spears and Swords, as alfo Mufikets with Powder and Ball ; and the Cbilefe fent fome black Cattle on board in Return.
3. Thus far this Expedition had fucceeded perfectly well, as being entirely under the Management of one who was altogether equal to the Project he went upon; for it is effential to great Defigns that fucceed, that they are contrived and concerted by great Men, and that they are exceuted by great Men alfo; for when once People of mean Parts and narrow Underftandings come to be lifted up into Employments beyond their Capacities, they foon ruin all that wifer Heads have been long framing; and this, notwithftanding they do their beft, and ufe their utmoft Endeavours to profecute their Predeceffor's Plan.
The Dutch Officers, who perlaps never confidered this Maxim, were experimentally taught the Truth of it, by the Death of their General Hemry Brezeer, which happened on the 7 th of Auguf ; a fatal Day to them, though they did not perceive it at the Time. He had fet his Heart upon the Undertaking, and died in the full Perfuafion, that it might have been accomplifhed. Though Capt. Hackerman, who fucceeded him in the Cor:mand, might have no lefs Zeal to ferve his Country, yet he certainly mifcarried for want of proper Addrefs. He too foon difcovered to the Natives with what View the Hollauders vifited their Coafts, and created Jealoufies in them, which he found it imponible afterwards to remove, as will appear hereafter. The late General was fo confident of the Succefs of the Enterprize, that he directed his Countrymen to take his Corpfe with them, and bury it at Baldivia, which he had intended to fortify; and appointed the Cbilefe to rendezvous there and meet the Fleet, not doubting of a general Revolt in their Favour. His great Ambition was, to have a Tomb erected in that Place, which might perpetuate the Memory of his being the Author of fo great a Good to his Country. But to proceed: The Dutch having taken four hundred and feventy Cbilefe on board, who had furnifhed themfelves with Corn and Cattle, and other Provifions for the Voyage, fet fail for the River Baldivia on the 2 If of Auguf, where they arrived the 24 th of the fame Month.

The River is about a League over at the Mouth, and 5 A
the Dutch having failed half a League up it, they obferved three Channels, of which, taking the Middlemoft they run aground, and it was two or three Days before they could get all their Ships afloat again; fo that it was the 28 th before they arrived at the Town of Baldivia, where they orily found the Ruins of the ancient Gates, which were very high, and ftrong built; but the Place was now over-run with Bufhes and Weeds, and more like a Wildernefs than a City: Here they found three or four hundred Cbilefe Horfe and Foot armed with Spears, eighteen Foot long, fome of whom came on board, and welcomed them at their Arrival. The Dutch General harangued them by an Interpreter, and acquainted them, That the Hollanders were now in the Poffeffion of Brazil, upon the fame Continent, not above two Months fail from them, and were in a Condition to fupply them from time to time with Arms and Ammunition, and would affift them to drive their Enemies, the Spaniards, out of the Country, defiring they would enter into a League offenfive and defenfive with them. He alfo prefented them with the Letters from the Prince of Orange, of the like Tenour; which were interpreted to the Indians; for it is to be remarked here, that neither the People of the Eaft or Wefl Indies have any Notion of a Republican Form of Government, and therefore the Hollanders, in all Negociations with thofe diftant Nations, pretended to be authorized to treat with them by the Prince of Orange, or fome fingle Perfon, whom they infinuated to be their Monarch.

The Caziques gave the General no other Anfwer to his Propofitions at prefent, but, That they would confult their Brethren of Or forno and Coneo, and then return to Baldivia. Whereupon the Dutck proceeded to land their Soldiers on the ad of Sepiember, and the General took a View of the Ground, in order to erect a Fort. The fame Evening arrived above one thoufand Cbilefe from Orforno and Coneo, to treat with the Hollanders; and the next Day the General, by his Interpreter, made them another Speech: He acquainted them, That the chief Motive of their Voyage was to affitt the Cbilefe, the Fame of whofe great Actions had reached as far as Holland: That the Dutch had been at War with the Spaniards for upwards of fourfcore Years, as well as the Cbilefe, for the Prefervation of their Liberties, and had met with the like Succefs, extending their Conquefts as far as Brazil; and if the Chilefe would now enter into a Confederacy with the Hollanders, they were ready to fupply them with Cannon, fmall Arms, and Ammunition; which they would exchange for the Product of their Country; and the Cbilefe would be enabled thereby, not only to defend themfelves, but to expel the Spaniards from their Coafts. After which a Letter was delivered to every one of the Caziques, as fent them from the Prince of Orange. To which the Caziques anfwered, That they thought themfelves extremely fortunate to meet with a Supply of Arms from fo diftant a Country as Holland, at a Time when the War with the Spaniards was revived; and that they would confider of what was propofed.

The Dutch thereupon enquired if the Cibilese could fupply their Fleet with Flefh and other Provifions, if they continued on their Coaft to protect them againft the Spaniards? To which they unanimounly anfwered, They would not fail to bring them all the Provifions they wanted, for they had Plenty of Corn and Cattle ; provided the Fleet did not fir from the Coaft. And they readily entered into a verbal Alliance Offenfive and Defenfive, with the Hollanders againft the Spaniards; but would not be perfuaded to execute written Articles, which were offered, and interpreted to them ; declaring, That this was not cuftomary amongft them; but, that Promifes were ever looked upon as facred, and of equal Obligation with written Contracts. The Hollanders then proceeded to build a Fort at Baldivia, for their Security; which the Natives did not feem to oppofe; but when the Dutch propofed the Trafficking with the Cbilefe, and exchangeing Arms for their Gold, the Caziques immediately appeared jealous of their new Allies; and declared, they had no Gold Mines, nor was there any fuch Thing as Gold in Ufe amongft them : They remembred indeed
that, heretofore, they had been obliged to pay heavy Taxes to the Spaniards in Gold, on Pain of lofing their Ears and Nofes, as many of them actually did who could not procure as much as was expected; and this had given them fuch an Abhorrence of that Metal, that they could not bear to hear it named amongft them; that they were very far from valuing or coveting it as they found all Strangers did; and that it was the Caufe of many Mifchiefs to them, from which the Indians were free.

The General finding the Natives were not ignorant of his Views, replied they were not come to exact any thing of them, as the Spaniards had done; but were ready to pay them with Arms, or whatever Merchandize they liked beft for their Gold ; and every one was at Liberty to exchange what he pleafed. Whereupon the Caziques ftared at one another without returning one Word of Anfwer; and the Dutch relate, they did not think fit to urge them any farther on that Head, left they fhould imagine they had a Mind to. ferve them as the Spaniards had done, though they were certain there were very rich Mines in that Part of the Country. 'The Dutch General, therefore feeing now he could expect but little Affiftance from the Natives, and that it would be impoffible to maintain his Ground long againft the Spaniards, and the reft of the Cbilefe in Alliance with them, difpatched Captain Cbrifpinfon, with two of his Ships, to Fernambuco, in Brazil, to give their Friends an Account of the State of their Affairs, and to defire a further Reinforcement; and, in the mean Time, continued to fortify the Poft he had taken at Baldivia, where he hoped to defend himfelf till thofe Supplies arrived. In the Letter che Dutch General fent by Captain Cbrifpinfon to Brazil, he informs the Government, that the Spaniards had nor more than fifteen hundred Soldiers, either on the Continent or Inlands of Cbili, viz. three hundred in Valperifo and St. Fago; one hundred in Serena or Coquimbo; one hundred on the Bank of Riolio; eighty in Tucupel; five hundred in the Forts in the Valley of Arauco; one hundred and twenty in the Inand of Cbiloe, Carelmappa, and Calembuco; what the Number of the Spanifb Inhabitants were, he does not fay, only that they were more numerous than the Garrifon Soldiers; and it is evident, that many of the Cbilefe profeffed the Chriftian Religion, and were intermarried with the Spaniards at this Time; and therefore were, in a Manner, one People with them, and that fome Tribes or Clans that were not under the Spanifs Government, were in Alliance with them, though mont of them were in a State of War with the Spaniards. And in thofe Circumftances the Dutch General informs the Government of Brazil, that in Cafe ten Ships, and three Yachts, with eight hundred Soldiers, Seamen, Cannon, and Ammunition in Proportion, were fent to his Affiftance, he did not doubt of making himfelf Mafter of all the Spanijh Settlements above-mentioned; and fhould have no Occafion to be afraid of all the Force the Spaniards had, either in Cbili or Peru ; and if he could make himfelf Mafter of Cbili, by this Means, it might encourage the Natives of Peru to throw off the Spenifb Yoke.

Thefe Indians having entertained an inconceivable Averfion to the Spaniards, he informs lis Employers alfo, that they had received the Advice, that the Natives of the neighbouring Provinces of La Plata, had rofe upon the Jefuits (the then Sovereigns or Ufurpers of that Country) and had murdered many of thofe Fathers, which was looked upon as an Indication of a general Revolution againft the Sponiards; and then repeating his Importunities for a fpeedy and effectual Supply, concludes, that when the War was once kindled on that Side, it might fpread over all the Spanifb Wefs Indies; and the Hollanders might fupplant them in the Weft, as they had done the Portuguefe in the Eaft Indies and Brazil. This Exprefs had not been difpatched a Week, before the Dutch General became fenfible of his Miftake ; and that whatever Mifunderftanding there might be between the Cbilefe and the Spaniards, the Natives were much more afraid of the Hollanders, than of their ancient Enemies, and would probably join with the Spaniards to expel them their Country. For the next Conference he had with the Caziques, they gave him to underftand, that he muft expeet no Pro-
vifions

## Chap. III. of the DUTCH in AMERICA.

vifions from them ; and endeavoured to terrify the Dutch, by reporting that the Spaniards were affembling their Forces, by Sea and Land, to drive them from Baldivia; and it is probable that the Dutch General expected no Affiftance from their new Alliance, but were rather apprehenfive they would betray them to the Spaniards; for he foon after demolifhed his new erected Fortification; and, having reimbarked his People, fet fail for Brazil on the 28th of October, 1643 ; and, having doubled Cape Horn, repaffed the Streights of La Maire on the 2 Ift of November; and on the 28th of December arrived at Fernambuco in Brazil; fo that they were but juft two Months in their Voyage from Boldivia to the northern Part of Brazil.
This fhews how eafily the Communication might have been maintained between the two Colonies, if the Dutch had been fo fortunate as to have effablifhed themfelves in Cbili; but at the Time the Fleet arrived at Brazil, Prince Maurice had refigned the Government; fo that they were no longer at a Lofs for the Reafon of their not bcing fupported in Time, as with great Juftice they expected, and as , the Importance of the Enterprize deferved. We have been more particular and circumftantial in the Hiftory of this Expedition, becaure it appears to have been of the higheft Confequence in itfelf, and in all refpects the beft concerted and contrived, of any in which the Dutch were ever concerned; and in Cafe it had fucceeded, would abfolutely have been a Means of giving, not only a new Face to their Affairs, but to the general Situation of things in Anerica; nor is it eafy to fay with what Confequences it might have been attended. But it is Time to proceed from this Detail of the Ruin of their projected Empire, to an Account of the fmall Remains of their Territories in America; which, though they would be of very little Ufe to any other Nation, are, notwithftanding, highly beneficial to them.
4. We will begin with their Settlements upon the Continent ; the firt, and moft confiderable, of which, is Surinam, that formerly belonged to us, and was the fole Remains of Sir Walter Raleighb's Difcoveries in Virginia, of which we have given an Account already, and of the Manner in which it was exchanged for New York, which we had taken from the Dutch; this Settlement of Surinam, while in our Hands, was a Place of very little Confequence or Advantage; but, however, we met with very little Difficulty in keeping it, as living upon very good Terms with the Natives; whereas the Dutch have been always upon fo bad a footing with them, that they have been obliged to erect a ftrong Fort, and to keep in it a good Garrifon, in order to cover their Settlements ; without the Limits of which, if the Indians meet with any Dutcbman, they are fure to give him no Quarter. The Commodities they raife, are Sugar, Indigo, Ginger, and Cotton; for the Improvement of which they have conflant Supplies of Negroes from their Colonies in Africa; where a Part of their Goods likewife are taken off, and when it amounts to more than the Value of their Negroes, the Ballance is commonly paid in Gold Duft. This, however, returns into Europe, in Payment for the Goods fent over to the Colony, by the Merchants of Amfierdam, who have ingrofled almoft all this Trade to themfelves.
They have, befides this Settlement, three others upon the Continent, viz. Boron, Berbice, and Approwack, which are at no great Diftance fromi each other; and in which they raife, for the moft Part, the fame Commodities as in Surinam, except that at Berbice, befides an extraordinary Quantity of Cotton; they have likewife the Advantage of preparing of a very rich Dye, called Orlane, from an Herb of the fame Name, much in the like Manner as they prepare Indigo. They have likewife the good Fortune to have for their Neighbours in that Colony, a Race of mild and good-natured Indians, with whom they trade for Provifions, Hides, and other kind of Merchandize.
But as thefe Colonies lie on the Frontiers of the Country of Guiana, the Reader will, very probably, be well pleafed to fee fome Account of this Region, from thofe who actually inhabit it ; and the Relations they give
us of it, amount to this: That this Country is, in many Parts, very wild and thinly peopied, efpecially the loweft Lands, which are often over-fiowed by the Rivers; but the upper hilly Countries are very populous, the Soil being watered by fo many Rivers, very commodious for Travellers. The Air in that Up-land Country is much colder than towards the Coaft' ; and the Hills are very rich in Mines of feveral Sorts. Fruit is very plentiful and good; and all Sorts of Grain grow there all the Year round, except Wheat, coming up in a fhort Time, and with little or no Diftinction of Seafons; for there being no Winter, the Trees are always green and fuil of Leaves, Bloffoms, and Fruit. Though this Country is between the Line and the Tropic of Cancer, that is, within the Torrid Zone, the Climate is pretty temperate, and the Air wholefome; the Heats being generally allayed by a frefh eafterly Wind, which reigns the greateft Part of the Year, during the Day; and at Night the LandBreezes prevail, but do not reach to two or three Leagues out at Sea. The Waters are, likewife, excellent, and of fuch a particular Nature, that they will keep fweet and frelh during the longeft Voyages, as has been often found by Experience. On the Sea-Coafts, which, as has been faid, are generally low, there are many large Illands, fit, if improved, to feed Cattle.

The Sea, about the Coafts, abounds in Fifh, the moft common is that which the French call Machoran, and the Englifh Cat-fin, being of a yellow Colour, and very large, fweet Mullets, and Thorn-backs, Lamentynes, and Sea-Tortoifes. Fowl is alfo very plentiful, either tame or wild, and other Game, with all which they fupply the European Settlements at the Sea Coafts, exchanging for Toys and Iron. This Country produces divers Sorts of Phyfical Gunns, Woods, and Roots, as well as feveral Sorts of Woods for dying, and for making of Cabinets, and inlaid Works; among which is the Let-ter-wood, by the French called Bois de la Cbine, and which grows no where in the World but here. Yet the Natives cut and carry it quite to the Water-fide, fo cheap, that a Tun Weight of it does not coft above ten Shillings; and in Europe, a Tun of that Wood has formerly yielded fifty Pounds Sterling, or more, and never under twenty-five or thirty Pounds to this Day. There is Ebony of a different Sort from the Letter-wood, and one Sort called Bois de Violet, and feveral others very common. There are alfó prodigious large Trees, whereof the Indicns make Canoes, which carry twelve or thirteen Tuns in Cafks; befides a prodigious Store of very lofty large Trees, the Wood of which is exceffively hard and weighty, but has the Advantage of refifting Worms in Salt-water.
Here are alfo incredible Numbers of Monkeys of divers Sorts, among which is the Sort, called by the Indians, and after them by the French, Sapajous; a kind of little yellowifh Ape, with large Eyes, a white Face, and black Chin: It is of a low Stature, and of a lively and diverting Nature; but fo tender in cold Weather, that it is, with great Difficulty, they can carry fome over to Europe alive: where they are there much efteemed, and yield a confiderable Price among Perfons of Quality. There are Tamerinds, Sagovias, Parrots, Cameleons, Agontils, Arras, Ocos, Tocaus, or Toucans, Flamans, and wild large Ducks, with red Feathers at their Head, but not in great plenty, which eat very well, being ftewed, and feveral other Birds, which have nothing remarkable in them befides their Feathers. It likevvife abounds in fmall Tygers, Deer, Pigs, little Porcupines, large and moniftrous Serpents, and divers other Sorts of Animals.

As to Fruits, befides Sugar Canes (which grow very well in Guiana) the Cafia, Papaye, Accajou-Apples, Vanillas, Tobacco, Pete, and Rocou, it produces alfo Indian Wheat, Mandioca, Cotton, Indigo, and the other Fruits common in Brazil, and feveral others among the Plants, which the Indians cultivate in their Plantations. Cotton is one that abounds moft, and is ufed by the Women, who adorn themfelves with it, and can fpin it as fine as they pleafe. There is fuch Plenty of it every where, that if it were poffible to have Women enough there to fpin it, to fave the great Trouble and Expence
of trantporting it in the Wool to Europe, which renders the Profit very inconfiderable to the Planters, it might furnifh all Europe, without cofting the Dutch any other Trouble than purchafing it of the Indians, for very inconfiderable Toys, and Haberdafhery Ware of little Value. The Indians efteeming a Grain of Cryftal, to adorn their Necks or Ears, as much as a Diamond of the fame Bignefs is valued among the Europeans; and if the Diforders which have happened in the European Settlements in Guiana, at feveral Times, had not hindered the eftablifhing a regular Commerce, this advantageous Trade would have been already fettled, and a vaft Number of People enriched by it; but in a more peculiar Manner the Inhabitants of Cayenne, becaufe of the Situation of their Inland, their Sea-port Town, and great Intereft with the Indians.

The Pete is an Herb that can be peeled, as Hemp and Nettles with us, but the Threads are finer than Silk, and would have long funce fupplanted it, if it had been allowed to be tranfported into Europe. The Vanilla is a Weed that creeps up Trees as Ivy does; the Leaves are of a bright Green, long, ftrait, thick, and pointed at the Ends. When it has been feven Years fet in the Ground, it begins to bear a kind of Hunks, full of an oily Matter, and Seed much fmaller than that of Poppy, which they ufe there to perfume Liquors and Tobacco, and is ufed in fome Parts of Eutope, in Chocolate. The Papaye is a thick Fruit, tafting fomewhat like a Cucumber, of a round Shape, the Stem tall, but nender, with large Leaves, cleft like Vine-leaves; the Tree is hollow, and grows fifteen Foot high in one Year. The Accajou-apple is long, thick, and of an Orange-red; it has a Tharp Tafte, and is commonly eaten baked. At the End of this Fruit is a green Nut, which taftes like Spanifh Nuts or Filberts, much in the Shape of a litule Sheep's Kidney; the Shell whereof is oily; the Oil ftaining the Skin black, fo as it does not rub off in a long Time, and is medicinal and very laxative. The Plant is a round Sort of Tree like a Chefnut Tree, and the Leaves in Shape and Form refembling thofe of the Bay-Laurel. The Wood is very fine, proper to make all Sorts of Hounhold Goods. The Indians make their long Canoes, which they call Piraguas, of it; though thefe are commonly forty or fifty Feet long. It has been obferved that wherever the Juice of this Apple falls, the Stain cannot be taken away till the Seafon of the Apple is quite over.

We will now proceed from the Country and its Produce, to the People, of whom the Dutch Writers fpeak to this Purpofe: The Indians are generally red, and of a middling or rather low Stature, of a robuft ftrong Conftiuntion, having black, long, and lank Hair, going all naked, their Privy-Parts covered only with a little Cotton-wool hanging down, to the Legs: The Women are fhorter generally than the Men, and of a red Colour, but tolerably handfome; their Eyes for the moft part blue, and very regular Features in their Faces, and well framed; they ufe a Piece of Cloth about fix Inches fquare, which they call Camifa, ufually wove in Stripes of divers Colours, and efpecially white, which is the mont valued among them.

The Men cut off their Beards, dye their Faces with Rocou, and cover their Arms and Faces with feveral Folds of the kind of Cloth before-mentioned. They wear, by way of Ornament, a fort of Crown, or Garland, of Feathers of fundry Colours, and bore a Hole between their Noftrils, where they hang a little Piece of Money or a large green Stone, or rather Cryttal, brought from the River of the Amazons, which they put a great Value on. Thefe Indions are generally of fuch a robuft Conftitution, and live fo long that they reckon a Man dies young at a hundred Years of Age. They are endued with pretty good Senfe, their long Lives ferving them to gain Experience, and improve their Judgments in fuch Things as are within the Reach of the Light of Nature ; they are judicious, ingenious, patient and fkilful in fifhing and hunting, and fpend the greateft Part of their Time in thofe Exercifes, and Spare no Pains to get their Living, being more inclined to Peace than War, which yet they engage in, either upon a jult Quarrel, or Revenge, in

Poine of Honour. They perform their Promifes to eacis other exactly, and will not do to others what they would not have others do to them.
It once happened that feveral of thofe Nations near the River of Amazons entered into a League againft another, and were, about a Year in making great Preparations for War, which at laft ended in one Night's Expedition, by furprizing two or three Carbets, fo they call their Hamlets or Villages, where they burnt about an hundred Perfons of all Sexes and Ages, and returned home as proud and fierce as if they had conquered the whole Country; other Wars are feldom concluded till they make forty or fifty of their Enemies Prifoners, whom afterwards they cither kill, boil in their Pots, and eat as the Noragues do, or fell them to the Europeans at the Coaft, for Slaves. This Barbarity feems in them to be rather the Effect of an ancient ill Cuftom, to eat the Flefh of their Enemies, than a natual Difpofition; for they feem to be ahhamed of it, when the Europeans reprefent to them, in their Language, That by the Laws of God we are forbid to kill an Enemy when he is taken Prifoner, and much more to eat him. And they did not offer to reply to it, and fome of the Alquas have appeared full of Indignation when they heard that fome Galibis infinuated, they would be roafted by them, if the Europeans Should venture to travel through their Country. Whence it may be inferred, that though this barbarous inhumane Practice is fo much eftablifhed and received among thefe Afoquas and Noragues, yet it feems to be no difficult iMatter to reftrain them from it.

They are generally great Eaters, and drink little or nothing at their ordinary Meals till they have done, and then commonly drink one Draught; but when they affemble together for warlike Enterprizes, or to begin a Canos, or to launch it, or to admit one into their Council after they have expofed him to feveral hard Trials, they make extraordinary Rejoicings, which frequently hold three or four Days, continuing till they have drank up all their Liquors; for upon thofe Occafions they make three or four different forts of Drink, fome of which become very ftrong by Fermentation, as that which they call Polinot, which they make of Caffibi, that is, baked more than ordinary; their common Diet is that they call Caffibi, being Cakes made of the Mandioca Root baked on the Embers, as alfo Indion Wheat, Fifh, and Fruit.

Thefe Particulars fhew, that the Accounts formerly publifhed, when it was propofed to fix an Englifb Colony on thefe Coafts, were perfectly well founded, and that there are no very confiderable Obftacles to be furmounted by the Dutch, in order to render Surinam, and the reft of the Places they poffefs on the Coaft of South America, much more advantageous than they are at prefent; the greateft Difficulty is, to quiet the Minds of the Natives ; the greateft Part of the Nations in Guiana having conceived an excefiive Hatred to the Dutch, which is believed to arife chiefly from the Stories told them by the Frencb and Portuguefe Mifionaries, who make no fort of Scruple of affirming any thing that may ferve their Turns, and hinder the Indians from convering or trading with Heretics. We are told that the Natives pretend to this Day a great Efteem and Veneration for the Englifb; and that they tell a great many romantic Stories about them, which are fuppofed to be owing to the Correfpondencies formerly fettled there by Sir Walter Raleigh. In a Time of profound Peace perhaps it might not be impofible to attempt, and fucceed in, fixing an Englifh Colony upon one of the two great Rivers, by which Cuiana is bounded ; at leaft it is right to keep alive the Memory of our having a Right to do this, and that we have a much better Title to this large and agreeable Country than any other Nation in Europe.
5. The Ifland of Tobaga lies in the Latitude of If Degrees $5_{5}$ Minutes North, and is the moft to the Eaft of all the Inlands called Antilles: It is about twelve Leagues in Length, four in Breadth, and thirty in Circumference. It originally belonged to us; for in 1628 we find that King Cbarles I. granted it, together with Trinity Ifland, Barbuda, and St. Bernard, to Pbilip Earl of Pembrcke and Montgomery; but it does not appear that ever any

Chap. III. of the DUTCH in AMERICA.

Settlement was made thereon, in Confequence of this Grant. In 1642, or thereabouts, the Dutch, from Fiufbing, fent a confiderable Colony thither, who fixed themfelves very commodiouny; and though at firft they found the Climate fickly and unwholfome, yet by Degrees, as they cleared it, the Air agreed with them better, and they began to extend their Settlements. The Spaniards, however, from the Inand of Trinity, in Conjunction with the Savages from St. Vincent, fell upon the Dutch, murdered chem to a Man, and deftroyed their Plantations: After which the Inand lay for feveral Years defert.

About the Year 166+ Mr. Adrian Lampsin, a Dutch Eaf-India Director, and his Brother Mr. Cornelius LampSin, Burgomafter of Flu/bing, one of the Deputies to the States-General, from the Province of Zealand, formed a Defign of re-fettling this Mand entirely at their own Expence. Mr. Cornelius Lampfrn, after obtaining a Licence for that Purpofe from the States, applied himfelf to the Crown of France, in order to prevent, if poffible, any Danger to his new Colony from the Subjects of that Kingdom; and Leweis XIV. out of his great Generofity, from a Defire of fhewing his Affection to the Dutch, and from a Principle of Indulgence to Men of noble Difpofitions, created Mr. Lampfin Baron of Tabago, with all the Privileges of a Baron of France, and affigned him alfo a fair Coat of Arms fprinkled plentifully with Flower-de-Luces. Upon thefe Encouragements the two Brothers proceeded, and entirely at their own Charge, and by their prudent Management, from a wafte and defart Country, in the fhort Space of eleven Years, rendered it the moft flourifhing for its Size of all the Leeward Ifarids; they called it, from one of the largeft Ines in the Province of Zealand, New Walcheren, raifed a very good Town, and a flrong Fortrefs, cailed Lampfinberg, and two other good Forts, Beveren and Bellevifte; and, which is very amazing, they fettled, during their Adminiftration, twelve hundred white People in that Inand, where they fucceeded in raifing all the Commodities that are brought from the Wcff Indies, viz. Tobacco, Sugar, Ginger, Indigo, Cotton, Caffia, Cacao, Rocou, Fuftic, Citrons, Oranges, Ananas, E ${ }^{\circ}$. And befides thefe, they had fome very valuable Cominodities which were not in the other Inands; fuch as an excellent Kind of Saffafras, a Kind of wild Mace and Nutmegs, and a great Quantity of Gum Copal.

They raifed, befides, all forts of Grain and Provifions in Quantities fufficient for their own Ufe, and for Exportation to the other Iflands. But in 1678 . Marfhal $d \cdot E f r e e s$, by the exprefs Command of his Mafter Lewis XIV. failed with a great Fleet to deftroy this very Settlement, notwithftandiug it had been made under his Protection, and by his Encouragement; for it feems it is one of the Privileges of the Barons of France to be beggared and deftroyed whenever theirgrand Monarch pleafes, which with fome Difficulty was accomplifhed; for the Dutch defended themfelves obftinately ; but after two hard-fought general Engagements, they werc defeated or rather over-powered by Numbers, and the Colony totally ruined, not more to the Lofs of the induntrious Planters than to the eterna! Infamy of that barbarous Prince, who placed his Glory in making better Men than himfelf miferable. This Ifland was reftored to the Dutch by the Treaty of Nimeguen; and they have repaired fome of their Settlements; but it is now a Place not worth fpeaking of, and very probably will never be, in any Degree, reftored to its primitive Condition, becaufe, lying within Reach of the Savages of St. Vincent and the Continent, it will be a very difficultMatter to fettle there with Safery, unlefs a new Colony was undertaken in the fame Manner, and carried on with the fame Spirit, as the laft.
The Inand of St. Euffacbius lies to the North-weft of of St. Cbrifophber's, in the Latitude of 17 Degrees 40 Minutes North. It is but fmall, being no more than five Leagues in Compafs; it appears, to the fouthward, like a high Mountain rifing out of the Sea, but ftretches out northward into an indifferent good Country. The Dutch took Poffeffion of it in the Year 1635y, and the States granted the Propriety of it to Mr. Vanree, and fome other Merchants of Fhufling, who very foon fettled
Vol. II. Numb. 94.
a Colony there of about fix hundred Families. In the yeat 1665 the Englifh in Famaica difpoffeffed the Dutch, and fent Colonel Morgan with three hundred Buccaneers to keep Poffefion of the Place. He foon after, making an Attempt upon the Frencb Part of the Inland of St. Kitits, was killed; and the next Year the Dutch and French, both ther engaged in a War againft Great Britain, attacked and made themfelves Matters of this Ifland, which by the Treaty of Breda was reftored to the Dutch.
In 1689 it was taken from them by the French, but was reftored to them again by the Treaty of Ryfwick, fince which they have remained in the peaceable and quiet Poffeffion thereof. The Number of Plantations thereon, and the comfortable Condition of its Inhabitants, do very great Honour to the Dutch Induftry; for without Doubt in any other Hands it would be a very indifferent Place; all the Sides of the Hill are laid out into fmall Settlements, and cultivated; the Houfes are well built and well furnifhed; moft of the Inhabitants are in good Circumftances, and have Warehoufes well filled with Eurcpeans Commodities, with which they fupply their Neighbours at a round Price, whenever they are difappointed of Supplies from France and England. They likewife raife greas Quantities of excellent Tobacco, which comes to a good Market in Holland, and fome other Commodities ; yet there is not a Drop of Water in the Inand, but what they are fupplied with from the Clouds', which they preferve fo carefully in Cifterns, that they are very feldom diftreffed. The Top of the Mountain is covered with a vaft Wood, and in the Midft of it, inftead of the Point one would expect, as it rifes in the Form of a Sugar-loaf, there is a wide and deep Cavern, whence fome have imagined that it was formerly a Vulcano, or burning Mountain.

To the North-weft of this Inland lies that of Saba, in the Latitude of 17 Degrees 35 Minutes, which appears at firt Sight to be a Rock; but the Dutch Governors of St. Euftacbius have fent a fmall Colony thither, who have found a tolerable Valley, where they raife Tobacco, and other Things. It is a great Misfortune to both thefe Illands that they have not fo much as a Port; but in the former there is a good Road, to command which there is a pretty frong Fort, and there all the Ships ride.
The Illand of St. Martin lies in the Latitude of 18 Degrees 15 Minutes, is in Length about feven Leagues, and in Breadth four: The Climate is very far from being wholefome, and the Soil cannot be very fertile, fince there are no Rivers, and very few Springs, in the Inand, which are alfo dried up in the hot Seafons; and then the Inhabitants are forced to have recourfe to their Cifterns of Rainwater; yet, as infignificant as this Place may appear, it has been contended for by three, and is actually inhabited by two, powerful Nations; fo that the Hiitory of it is extremely curious, and very, well deferves our Notice. The Spaniards in Right of Conqueft took poffeffion of it, built a Fort there which was very ftrong, not fo much for the fake of what they were able to make of the Illand, as to prevent any other Nation from fettling there; but when they perceived that the French, Englijh, and Dutch, had feized the more valuable Inands, they thought it ridiculous to be any longer at the Expence of keeping this, and therefore refolved to quit it. This Refolution was taken in the Year 1648, and was executed very foon after. They deftroyed their Cifterns, burnt their Houfes, blew up their Fort, and then retired to Porto Rico.
It fo fell out, that in this Garrifon there were four Frencbmen, five Dutch, and a Mulatto, and all thefe ten hid themfelves in a Wood, till the Spaniards were embarked, and then courageounly fallied out and took Porfeffion of the whole Inland of St. Martin. But they very foon made choice of different Places to fettle in, and, by a very folemn Treaty, agreed to divide the Country between the French and Dutch Nations. The Dutch made a little Canoe, and fent one of their Number to St. Euffacbius, to inform the Governor of their Situation ; and they promifed the French, that Care fhould be taken to fend the like Notice to the Governor of St. Cbriftopher's; the former, being their own Affair, was performed very exactly; but the later, concerning their Neighbours only, flipped out of their Heads. The Dutch did not

5 B
neglect
neglect this new Acquifition; on the contrary, one Martin Thomas was fent from St. Eufacbius, to take Poffeffion of their Part of the Inand, with a confiderable Number of new Planters. After this they began to treat the French but very indifferently, who, receiving no News from their Countrymen, began to fufpect the Reafon; and therefore, though with fome Difficulty, found the Means of fending a Perfon to St. Cbrifopber's, to inform M. de Poincy of the Agreement they had made, and the Hardfhips they laboured under; whereupon he fent an Officer and thirty Men, to take Poffeflion for the Crown of France; but the Dutch would not fuffer them to land, declaring, that they looked upon themfelves as the legal Ponteffors of that Ifland.

They founded this Claim upon a prior Poffeffion; of which it may not be amifs to fay fomething. The French were the firft who attempted to fettle this Inland; but, allowing the Dutcb to trade with them, they furprized and drove them out of it, and built a Fort for their own Security; but the Spaniarids, not liking their Neighbourhood, drove them out in their Turn, and erected a ftrong Fortrefs on the Inland, as has been be-fore-mentioned. As foon as the French Officer returned to St. Cbrifopher's, M. de Poincy fent his Nephew, with three hundred Men, to put an End to this Difpute, and he did it very effectually; fo that the Dutch Governor was glad to fettle the Divifion of the Inland, according to the firft Agreement; by which all that Part of the Inland, which looks towards Anguilla, was to belong to the French; and the other Side of the Inand, in which formerly ftood the Spanifb Fort, remained to the Dutch. The former was the better half in every Refpect, except the Salt-pits, which belonged to the Dutch. The Contract was fettled on the Top of an Hill, the higheft on the Inand, which was from thence called la Montange des Acordes.

From this Time, to the War in the Year 1688, the two Nations lived together in ftrict Friendfhip, till the French called off the greateft Part of their Inhabitants to people that Part of the Illand of St. Cbriftopber's, out of which they had driven the Englifh; and being afterwards driven out by them, thefe poor People were, for the moft Part, undone; fo that when they endeavoured to perfuade them in the next general War, to take the fame Step, they would not liften to the Propofal at all, but refolved to remain where they were; and the Dutch and French lived, while that War lafted, in great Quiet and Tranquility; neither would they fuffer the Privateers of either Nation to injure the other. The French Settlement is of very little Confequence; but the Dutch are in a mighty good Condition, have large Warehoufes, and carry on a confiderable Trade, efpecially in Tobacco, which is very much efteemed, and the Place would be ftill more confiderable, if they had a tolerable good Port; but they have only a Road, where Ships are much expofed, and, befides, it lies fomewhat out of the Way, as being too much to the Leeward, which renders the Commerce to the Windward Inands very difficult. There is great Plenty in this Inland of a kind of Tree, which both the Dutch and French call Candleroood. When it grows dry, and fit to burn, it yields a very pleafant Smell ; and the fmall Sticks of it, when lighted, ferve for Candles; and at the fame Time that they light the Room, yield a very pleafant Scent, which arifes from a fragrant Gum in the Tree, which cannot otherwife be extracted.

Thefe are all the Poffeffions of the Dutch in this Part of the World, and it is equally furprizing that they have Lept thefe fo long, and that they have not been able to acquire better; fince it is certain, that they have fucceeded as well as any Nation, in thofe they have fettled, and carry on a confiderable Trade to Holland, in all Kinds of Wefi India Commodities; as on the other Hand, they maintain a very confiderable Commerce in America, from the great Warehoufes of European Commodities, which they keep always full, and have fmall Veffels ready to carry their Goods wherever they hear of a Market, more efpecially in the Time of War between Great Britain and France: for then they have an Oppor6unity of Eupplying the Colonies of both Nationss in ex-
cliange for Sugar, and other Weft India Goods, which they tranfpott in their own Veffels into Furope; fo that in a very few Years fuch a War cannot fail of making all the Dutch Planters prodigiounly rich. We are now to proceed to their other IMands, which lic nearer the Spanifla Coalt, and are confequently of more Value to them.

Curaçao, or as the Dutch pronounce; and fometmes write it, Curraffaw, is a Imall Inand in the Latitude of I2 Degrees 40 Minutes North, about nine or ten Leagues in Length, and about five in Breadth; the Soil of which is far enough from being fruitful, and the Climate fill farther from being either wholefome or agreeable; but notwithftanding thefe Difadvantages, fuch have been the Care and Induftry of the Dutch, that they have always drawn great Advantages from this fmall, and feemingly inconfiderable, Country, in which formerly there were large Paftures, and a great Quantity of Cattle; but of late they have turned thefe into Sugar and Tobacco Plantations, fo that at prefent it is thought the Provifions of all Sorts, that are raifed in this Inand, would fcarce maintain its Inhabitants for one Day; yet fuch is the Prudence of the Dutch Government, that the Inhabitants are fo far from being expofed to Want, that there is not a more plentiful, or better provided, Place in the $\begin{aligned} & \text { eft } \\ & \text { eft } \\ & \text { Indies; }\end{aligned}$ but, at the fame Time, it is to be underfood that every thing fetches a high Price there, which is fo far from being a Difadvantage, that, in reality, it is the principal Source of the great Wealth of the Inhabitants. On the South-fide of the Eaft End of this Inand, there is an Harbour called Santa Barbara; but the chief Harbour is about three Leagues from the South-eaft End, on the South-fide, where the Dutch have a very good Town, and a ftrong Fort. Ships bound in thither muft be fure to keep clofe to the Harbour's Mouth, and have a Haufar, or Rope, ready to fend one End afhore to the Fort; for there is no anchoring at the Entrance of the Harbour, and the Current always fets to the Weftward; but, being got in, it is a very fure Place for Ships, cither to careen or lie fafe; at the Eaft End are two Hills, one of them is higher than the other, and fteepeft towards the North-fide.

The Dutch Town, upon this Mand, is, for its Size, one of the faireft and fineft in America; and there are in it every thing requifite to render it commodious and agreeable, as far as the Climate and Soil will admit ; public Buildings there are of all Kinds, very neat and commodious; the Port is rendered as fafe as it is poffible, and though the Entry is dangerous, yet the Precautions taken for the Service of Strangers, by the Government, are fuch, as not only free them from all Difficulties, but render them alfo, in a great Meafure, infenfible of any Hazard; fo that though Nature has made it as inacceffable as any, yet, by the Skill and Induttry of the Dutch, it is become one of the moft frequented Ports in the Weft Indies. All kind of Labour here is performed by Engines, and that with fuch Dexterity, that Ships are lifted at once into the Dock, where they are carefully and effectually careened, and furnifhed with Provifions, naval Stores, Ammunition, and even Artillery if they want it; and all this is done with equal Readinefs to all Nations, the Dutcb being in perpetual Alliance with ready Money, let it be Englif, French, or Spanifb; as appeared clearly in our late Expedition to Laguira, and Porto Cavallo, where they furnifhed us with Cables, Ammunition, and even Men, for attacking the Spaniords, whom they had before furnifhed with Powder and Ball, fufficient to render that Attack ineffectual, and, but for the Neighbourhood of this Dutch Settlement, the Spani/b Fortreffes before-mentioned had been infallibly reduced, and in our Poffeffion.

Bonaira and Aruba are two Inands likewife in the Poffeffion of the Dutch, and dependent upon the Inland of Curacao; the former, which is twice as big as Curaça, lies ten Leagues to the Eaftward of it, and is about feventeen in Compafs; the Dutch have a Deputy-Governor here, a Guard of Soldiers, and confiderable Number of Indions; of late Years there is a Fort built for the Protection and Security of the Place, in which the Soldiers do Duty. The Indians are Fubandmen, and plant

## Chap. III. of the DUTCH in AMERICA.

Maize and Guiriea Corn, and fome Yams, and Potatoes; but their chiefeft Bufinefs is about Cattle; for this Inand is plentifully ftocked with Goats, and they fend great Quantities every Year in Salt to Curaçao. There are fome Horfes, Bulls, and Cows, but no Sheep or Hogs all over the Inand, or any Animals, but thofe before-mentioned; the South-fide is plain Low-land, and there are feveral Sorts of Trees, but none very large; there is a fmall Spring of Water by the Houfes; which ferves the Inhabitants, though it is brackihn ; at the Weft End of the Inand there is a good Spring of frefh Water, and three or four Indian Families live there, but there is no Water or Houfes in any other Place.

On the South-fide, near the Eaft End; is a good Saltpond, where Dutch Sloops come for Salt, which is now become a very confiderable Commodity, and the Dutch are contriving Methods for turning it to ftill greater Advantage. The Inand of Aruba lies feven Leagues Wert from Cuccao, and is not very confiderable; however, they breed fome Cattle there, and a great many Horfes, which makes it ufeful to their chief Colony; to which it alfo furnifhes a great Quantity of Garden-ftuff, without which the People, at Curaçao, could not fubfift; for amonglt other Methods they have of getting Money, one is, allowing Strangers to erect Hofpitals afhore for their Sick, in which they confume a great many Greens and Roots, and pay for them very largely, as indeed they do for every other Conveniency.
6. As this Inand is not above feven Leagues diftant from the Spanifb Coaft, a more convenient Station cannot be wifhed for the carrying on a clandeftine Trade; it was firt introduced by the Sale of Negroes, brought thither by the Dutch, from their numerous Settlements on the Coaft of Guinea. Thefe the Spaniards brought, in a Manner, openly, and have tranfported, in their own Veffels, fifteen hundred at a Time. But fince the Englifh, from Famaica, have interfered in this Trade, it is funk very confiderably, though they ftill fupply the neighbouring Provinces, and reap a great Profit thereby, becaufe no body underftands the Management of this Bufinefs better than they do, can bring Slaves at a cheaper Rate, or vend them at a higher Price. Some Writers have afferted, that in its moft flourifhing Condition, the Slave Trade alone drew from the Spaniards confiderably above a Million of Pieces of Eight per annum.
The Dealers at Curaça, and their Correfpondents in Holland, were too knowing, and too converfant in Bulinefs, to let the Declenfion of the Slave Trade rob them of the Benefit of this Inand. In order to replace what was loft by the Englifb interfering with them, they built vaft Magazines, and ftored them with European Goods, which had a very good Effect: In the firf Place, it preferved to them the Remainder of their Slave Trade, for the Spaniards knowing that this, of all others, was moft winked at by their Governors, refolved to keep, up a Pretence of buying Slaves, in order to have an Opportunity of purchafing other things. Secondly, It tempted the Spaniards to run all Hazards, that they might, at a reafonable Price, obtain any Sort of European Merchandize they wanted, and that too whenever they pleafe. It is incredible what vaft Sums have been annually traded for in this Way; befides, the Inhabitants of Curaçao, to keep up a good Correfpondence with their Neighbours, and, as far as poffible, to fix their Affections, refufed to fuffer any Privateers to enter their Ports; nor would, upon any Terms, purchafe their Plunder, which, at the fame 'Time, was publicly fold at Famaica, where the Privateers ufually ipent their Money ; this Spirit of Self-denial, however, did not hinder the Traders of Curaçao from directing the Privateers to put into the Inland of St. Thomas, whither they inftantly fent Slaops with Money and Agents on board them, to purchafe what the Privateers had to Kell; taking Care to fend the Effects as foon as pofibie to Europe, that the Spaniards might have no Intelligence of this Contrivance.

It is to be obferved, that in refpect to this clandeftine Commerce, it is chiefly carried on by the Spaniards themfelves, who tun all Hazards, come in Perfon to the

Illand, and carry awdy whatever they have bought, in their own Ships. In proceis of Time, however, fóme Merchants devifed another Way of carrying on the fame kind of Commerce, by Ships fent directly from Europa to the Spanifh Coafts. Thefe Veffels were of fuch Force, that thofe aboard them flood in no Fear of any Precautions the Governors could take; and, on the other Hand, as their Cargoes paffed immediately from their original Owhers to the Spaniards, they could be afforded confiderably cheaper than thofe configned to Factors in America. The Metliod of trading, was by a Signal from the Ships, or from the Shore. The Long-boat was then fent off well manned, brought the Merchants aboard with their Money; and carried them back with their Goods. The Reader has been elfewhere told, with what Obftinacy one of thefe Ships was defended againt two Guarda Coftas, and, to fay the Truth; thofe aboard them chofe rather to fink than be taken; a very extraordinary kind of Courage, for which, however, it is not impoffible to account ; and, as it may be ufeful as well as pleafant, I think: it not amifs to enter into the Particulars thereof.

At the Time one of thefe Ships is fitting out, Notice is given to all Sailors, that they may have an Opportunity of entering; which they do with great Alacrity, there being, generally fpeaking, twice as many who offer themfelves, as cain be made Ufe of; when the Proprietors have their Complement of picked Seamen, they not only allow every Man his proper Cargo to a certain Value, but alfo furnifh it themfelves on Credit, at prime Coft; by this Means every private Man aboard becomes a Proprietor; and if the Ship is attacked, fights for his own Property, which is the Reafon that he will drown fooner than part with it, and is one Caufe why Guarda Coftas are not over-fond of meeting with thofe Veffels, but chufe rather to prey on fair Traders, who have fewer Men, and are of lefs Force. The Scheme I have mentioned is certainly a right one, though in a wrong Caufe. The only Way to fupport the Spirits, and fix the Affections, of ordinary People, is to confult their Intereft; and thofe who imagine that Juftice, Honour, or any thing elfe, will anfwer the fame End, without a due regard to this, muft not expect much Pity when they find their Miftake; fo true in all Cafes is that divine Maxim, That the Cbildren of this World are wifer in their Generation than the Cbildren of Light.

In a Time of full Peace, it has been computed that the Trade of this Inand did not produce lefs to the Dutch than five Millions of Florins per annum, which is about half a Million Sterling; and confidering that they derive this from a Parcel of Rocks; that any but they would fcarce think worth keeping, it is a prodigious thing, and muft, in the Opinion of every competent Judge, pafs for the cleareft Proof of the Dutch Skill and Induftry that can poffibly be given. In time of War the Profit is much larger; for then every Article of their Commerce is vaftly increafed, they fell more Slaves, more naval and military Stores, and more European Goods to the Spaniards; and the Governors are themfelves lefs Itrict in Point of Licences; for thefe are things that muft be had, and there is farce any other Market. Befides, at fuch a Time, they drive a good Trade with the Engli/h Squadrons, that come upon thofe Coafts, and have alfo confiderable Dealings with their Privateers, for which, in Time of War, they always keep a regular Factory at St. Thomas, as will be fhewn hereafter.

The Reader may collect from hence the true Reafon of thofe Difputes, fo often mentioned in the Dutcb Gazettes, between the Crown of Spain, and the Republic; the former looking upon all the Commerce of Curaçao as a kind of contraband Trade, which ought to fubject the Veffels employed in it to frequent Seizures, by the Law of Nations, which the latter will by no Means allow, pretending that the Tobacco, Indigo, and Hides, aboard thofe Veffels, are the Produce of their own Colonies; and that the Silver found in them, is nothing more than the Balance of their Trade with other Nations. The Spaniards, indeed, know, but are not always able to prove, the contrary, and therefore are fometimes obliged to releafe the Dutch Ships, taken by their Guarda Coftas,
and for thofe that afe confifated, though the Dutch always make a great Noife about it, yet they are fenfible enough, that they have not much Reafon; and this is the true Caufe, hotwithftanding all their loud Complaints, that they never proceed to Extremities upon this Subject, but are content with what Reftitution they can get, and ftill keeping up a Claim to what they know will never be reftored.
7. We have, in feveral Parts of this Work, had Occafion to fpeak of the Dutcb Weft India Company, and therefore we thall not repeat here what has been already faid upon that Subject, but content ourfelves with obferving that the $W$ ef India Company, which fubfifts at prefent in that Country, is not the fame that formerly made to great a Figure in the World, were Mafters of Brazil, and the Scourge of the Spaniards; but another Company erected on the Ruin of that, in the Year 1674, into which the Proprietors of the Old Weft India Company were indeed admitted, but admitted upon fuch Terms, as fhewed plainly enough how low they were fallen, and how near becoming Bankrupts, for they were allowed no more than fifteen per Cent. in the new Capital; that is to fay, if a Member of the Old Weft India Company was poffefed there of one hundred Florins in Property, it gave him a Title to no more than fifteen Florins in the new Stock; neither could they think this hard, fince fome of their Creditors bore a great Proportion in the Lofs. Thofe that had lent Money upon the Stock, had no more than thirty per Cent. allowed them ; but as to the fair Creditors, with whom the Company had rin in Debt for the Support of their Commerce, they had their Demands converted into Stock at par ; fo that the Proprietors of the New Company were three different Sorts of People, in Favour of whom the Republic granted all the Privileges and Emoluments which the Old Company had enjoyed; and they entered, likewife, into the Poffefion of all the Fortreffes and Colonies which belonged to the fame Old Company.

The Affairs of this New Company were managed, as they ftill are, by Directors, in the fame Manner as thofe of the Eaft India Company; and though by feveral Calls they raifed confiderable Sums of Money, and carried on their Trade with tolerable Spirit for fome Years, yet they could never retrieve their A ffairs, but have been always endeavouring to unite themfelves to the Eaft India Company, as the only Means left for preferving their Sectlements in Africa and the Weft Indies. As for Surinam, there is a particular Company eftablifhed for the Management of its Commerce ; and the Trade to Curaçao is managed by private Perfons, who pay the Company for their Licences, and a fmall Duty upon all the Goods exported or imported. The only exclufive Trade they now enjoy, is that of Negroes, which of late is very much declined. The Reader will cafily perceive, that the great Caufe why this Company has funk fo low, is the Lols of the Colonies in the Weft Indies; for if they had more Plantations there, and thofe of greater Extent, it would occafion a Demand for Negroes; and as the African Trade is ftill in the Hands of this Company, they would be great Gainers thereby, and a confiderable Part of the Commodities brought from the Weft Indies, muit neceffarily enter their Warehoufes.

As it is, the Dutch drive a large and a beneficial Trade to that Part of the World, fo that the Nation in general fuffers very little, if any thing, by the Company's being in a low Condition; which, in all probability, is the true Caufe why the Republic is at fo little Pains to recover, or reftore, the Affairs of that Company; and, perhaps, would be glad to fee it united to that of the Eaft Indies, as a Means, and, indeed, the only Means, of reviving and fupporting the Slave-Trade. There was a Probability, as we have fhewn in another Place, of feeing this accomplifhed, upon the Propofal made by the Weft India Company for that Purpofe, in IクI4, when they made it appear, that their Funds amounted to near one hundred and fifty thoufand Florins a Year, exclufive of a legal Demand they have upon the Crown of Portural for a large Sum of Money; but, fince that Time, the Affair feems to have been no more thought of, or is it at all likely that it
will hereafter be brought to a Conclufion. Upon the whole, therefore, we have very good Reafon to fuppofe ${ }_{3}$ that as their Affairs now ftand, the Dutch will never make any great Progrefs in this Part of the World; for ${ }_{3}$ except their Colonies upon the Continent, they have none that are either capable of being improved or extended. Tabago can hardly be refettled, uniefs we fhould expel the Indians out of St. Vincent, St. Eufacbius and Saba are down-right Rocks, of which it is wonderful that they. make fo much as they $\mathrm{do}_{2}$ but it is impoffible that they fhould make more; and the fame thing may be faid of Curaçao, and the Inands which depend upon it; fo that how much foever private People may gain by the contraband Trade, carried on from thence with the $S p a-$ niards, yet it is not at all probable that they fhould ever become formidable to us, or to the Frenco in the Wef Indies.

We may add to this, that even a great Part of that Trade is now carried on with the Spaniards from Holland directly, fo that many of the Ships employed therein barely touch at Curaçao, that they may have a Pretence for ftanding over to the Spanifb Main, where, efpecially in Time of War, they find a Way to trade, in the following Manner: They bear away directly for a Spanif Port, and as they enter it make Signals of Diftrefs, pretending, commonly, that they have fprung a Leak, and that they are in imminent Danger of perifhing at Sea, which obliges them to feek for Shelter and Protection in the Port of a Crown allied to the Republic. As foon as they come to an Anchor, the firft thing that is done, is to give Notice to the Governor of their great Diftrefs, and, as a full Proof thereof, to fend a very confiderable Prefent. By this Means Leave is obtained to come afhore, to erect a Warehoufe, and to unload the Ship; but then all this is performed under the Eye of the King's Officers, and the Goods are regularly entered in the Regifter, as they are brought into the Warehoufe, which, when full, is fhut up, and the Doors fealed; all thefe Precautions taken, the Bufinefs is effectually carried on in the Night, by a Back-door, and the European Goods being taken out, Indigo, Cochineal, Vanillas, Tobacco, and above all, Bars of Silver, and Pieces of Eight, are very exactly packed in the fame Cafes, and placed as they ftood before.

But then, that fuch as have bought may be able to fell publicly, a new Scheme takes place, a Petition is prefented to the Governor, fetting forth the Strangers Want of Money to pay for Provifions, building the Warehoufe, Timber for repairing the Ship, and a proportionable Number of public Items; in Confideration of all which, Leave is defired to difpofe of fome fmall Part of their Cargo, in order to difcharge thofe Debts; thefe being obtained in the ufual Manner, fomething of each Sort of Goods, which has been privately fold, is now publicly brought to Market, and purchafed by thofe Perfons refpectively who had large Quantities in their Warehoufes before. Thus this whole Scene of Iniquity is tranfacted with all the formal Solemnity which could attend an Act of Juftice and Compaffion. The larger Concern the Dutch have in this Kind of Trade, the lefs they will be inclined to planting; that is to fay, while they lave this Channel for the bringing in of Wealth open, they will be the lefs ready to think of fettling new Colonies, or of extending and improving thofe that they already have ; and indeed, if they were to think otherwife upon this Subject, they would find infinite Difficulties in the Execution of any Defign of that Nature, at a Time when all the Nations in Europe are thoroughly convinced of the Importance of their American Sett.ements, and are extremely jealous of each other's Progrefs therein.
8. There remains now but one little Iland more in this Part of the World, of which the Nature of our Defign obliges us to give an Account: This is, the fnaall Inand of St. Thomas, which lies in the Latitude of 18 Degrees North, and is one of the largeft of that Clufter of Inands which are called the Virgins. This Illand is not above feven Leagues in Circumference, but has the Advantage of a very good Situation in all Refpects: The Port is excellent, the Form of it an Oval, almoftentirely
furrounded

## Chap. III. of the DUTCH in AMERICA.

furrounded by two Promontories, which defend the Ships are ftiled Pirates. This paffes in the Eye of the World that lie within from almoft all Winds. In the Centre of the Port there is a fmall Fortrefs, which ftands in the Middle of a Plain; it is a regular Square, with four good Battions though very little, but has neither Outworks or Ditch ; and the only Security, befides its Walls, is a Pallifade, with which it is furrounded. On the Right and Left of the Fort, there are two fmall Eminences, which in our Plantations would be called Bluffs, and feem by Nature defigned for Batteries, which would command the whole Harbour ; but whether the Danes have miftaken her Intention, or are unwilling to be at any Expence that may be avoided, certain it is, that there are no Batteries here. The Ifland belongs to the King of Denmark, who has a Governor and a Garrifon here; but there is befides, a large Factory on the Illand, which belongs to the Brandenburgbers, or Subjects to the King of Prufia.
The Neighbourhood of the Spanifs Inland of Porto Rico, which is at no greater Diftance than feventeen Leagues, fecures the Inhabitants of St. Thbomas, from any Danger of wantirg Provifions, to which otherwife they would not fail to be expofed; for though the Soil of their Inand be tolerably grod, and every Foot of it cultivated, yet it would not produce fufficient for the Maintenance of the Inhabitants, which for the Size of the Place, are very numerous. The Town of St.Themas confifts of one long Strect, at the End of which is the Danifl Magazine, which is a very large, magnificent, and convenient Building, wherein there is room for Stores, Slaves, and Goods of all Sorts. The Brandenburgh Factory is alfo very confiderable, and the Perfons belonging to it are chiefly Frenid Refugees, who fled thither when the Proteftants were expelled from the Frencb Inands. The chief Produce of their Plantations here is Sugar, which is very fine-grained, but is made in finall Quantities, and the whole Amount cannot be very confiderable; yet the Dani/h Governor is generally a Man of fome Rank, lives in a Manner very fuitable to his Character, and generally acquires a very good Fortune in that Station. The Director of the Daniff Trade becomes likewife rich in a few Years; and the Inhabitants in. general, by the Neatnefs of their Houfes, and the Condition of their Plantations, fhew plainly enough that they are in eafy Circumftances.
All this is cerived from their Trade, which is very large and extenfive, and of very different Kinds; of all which, however, we will do the beft we can to give the Reader a tolerable Idea. In the firt Place, the Spaniards fend hither large Veffels continually, for the Purchafe of Slaves, which is the chief Support of the Danifb and Brandenburgh Commerce, as they draw the Slaves which they fell, from their Settlements, upon the Coaft of Africn, and which, if they had not this Vent for them, would leng ago have become ufelefs, and confequently have been deferted. But befides Slaves, the Spaniards buy here, as it Curaga, all Sorts of European Goods, of which there is always a vart Stock in the Magazine, which belong chiefly to the Dutch, who carry on a prodigious Commerce here, by which they are great Gainers. Befides this Trade with the Spaniards, there is a very great Refort of Englifh, French, and Dutch Veffels to this Port, where there is a common Market for them all ; where they can always depend upon the Sale of fuperfluous, and the Purchafe of, neceffary Commodities; and this cannot be done without confiderable Advantage to the Inhabitants of the Place where thefe Dealings are tranfacted. But if in Time of Peace there is a vatt deal of Bufinefs done at St. Thomas, and immenfe Sums of Money turned in the Space of a Year, in Time of War this is vaftly increafed; for being a neutral Port, the Privateers of all Nations refort thither to fell their Prizes; and the Dutch, who will not receive any thing taken from the Spaniards at Curacao, buy thefe Goods without Scruple at St. Thomas, and have always an Agent and large Sums of Money there, ready for that Purpofe.

This Manner of dealing, in Time of War, is fo advantageous, that in Time of Peace the People of St. T.homas can hardly leave, it off, but are a little too apt to
deal with that Sort of Privateers, which deal with that Sort of Privateers, which, in plain Englijh,
Yow. II. NUMB. XCV.
are ftiled Pirates. This paffes in the Eye of the World
for the Work of the Danes, but the Truth of the Matter is, that the greateft Part of this Commerce is driven by their Neighbours, who are not fcrupulous of dealing with any Sort of People, provided always they can deal to Advantage. It was here that the famous Captain Avery or fome of his Companions, difpofed of the greateft Part of the rich Goods, taken in aShip belonging to the Mogul, about forty Years ago, when the Magazines at St. Thomas, were fo excefively crouded with Indian Goods, that they were not entirely emptied in twenty Years after, though they generally fold them at low Prices; and it was by this Accident, that Pieces of Arabian Gold, which were, properly fpeaking, Pagodas, were long current in the Weft Indies, under the Name of Sequins, for they knew not what to call them, at the Rate of about fix Shillings, and Nutmegs, Cloves, Cinnamon and Mace, were likewife bought there very cheap, for many Years after.
9. We have now run through the entire Hiftory of America, from its firt Difcovery to the prefent Time: We have fhewn how, when, and by whom, all the different Parts of the Continent; and all the feveral Inands of this new World were difcovered, planted, or conquered; but we have been more particularly careful to explain the prefent State of its Commerce, and the Importance of their Settlements to the feveral Nations in Europe which have Territories in that Country. All therefore that we have now to do is, to add fomewhat by Way of Conjecture, as to what may be the future State of thefe vaft Countries, and what Changes may poffibly happen in the Affairs of their prefent Poffeffors. It is very certain, that a Writer runs a great Rifk, who hazards his Credit upon fuch Contingencies, and is commonly but very little pitied, if he is fo unfortunate as to fall into Miftakes, becaufe he might have avoided, if he had been wife, the running any fuch Rifk; but there is great Difference between an Author who has nothing fo much in View as raifing his own Character, and one who confiders only the Benefit of bis Readers, and the Advantages that may refult from his Writings to others. The latter I freely own is all I aim at, and as I am very certain, that whether the Event juftifies my Conjectures or not, the Public will be Gainers, I am very little concerned about my Character as a Writer, and therefore am very willing to take my Chance, whether what I am going to fay upon this Subject may raife, or ruin, my Reputation.
The Spaniards have undoubtedly; the faireft, largeft, and richeft Countries in Amerita; but I am very far from thinking that they are the moft powerful Nation in thofe Parts, or that they draw greater Advantages from their Settlements, than are derived from their Colonies to the Britijf Nation. This will appear to many an abfurd and ridiculous Affertion, and will appear to moft a Paradox hardly to be maintained; but to me it feems a Truth, and therefore I venture to lay it down; and fhall next offer my Reafons in the Support of it. In the firtt place, though the Spanifb Empire in America be very wide, yet it is alfo very weak: In the Kingdom of Mexico, where they are ftrongeft, the Government is in a very ticklifh Situation, the People in general are difcontented, and even thofe entrufted with the Government are far enough from being pleafed; infomuch that I am very certain, if any Attempt had been made with a reafonable Force upon that Country, in the Beginning of the prefent War, a general Infurrection would have enfued. In Peru or Soutb-America their Situation is much worfe, their Force being not near fo great, and the Difpofition of the People not at all better; fo that if any Notice had been taken of a Project publifhed when we firft declared War againft that Nation, under the Title of A Propofal for bumbling Spain, we might have made ourfelves Mafters of Buenos Ayres, with as little Lofs as was fuftained in the fruitlefs Attempt upon Laguira and Porto Cavallo, which could not have turned to any great Account if we had fucceeded. The Spaniards, on the contrary, had it not in their Power to hurt us, as appears from their being defeated in an Attempt upon the leaft and weaket of our Colonies, with all the Force

56
they
they were able to raife. Such is the Difference between the Strength of their Governments in that Part of the World, and ours.

But to enter more clofely into the Matter, let us confider the vaft Extent of the Country they have, and the Number of People they have in it, and compare it with our own Territory and Force. The Spaniards, on one Side of the Continent; poffefs a Tract of Land, from 37 Degrees of North Latitude, to 53 Degrees of South; that is to fay, from Cape Sebaftian, the moft northern Part of Califormia, to the Streights of Magellan, which makes about two thoufand Leagues; and on the other Side of the Continent, from the River of Plate, to the Head of the Bay of Mexico, their Territories lie directly along the Shore, or immediately behind it. Yet to guard this immenfe Tract of Ground, they have not above fix hundred thoufand white People of all Ranks; Sexes, and Ages, and not above three Millions of Subjects of all Colours; and of thefe it is generally reckoned that a fixth Part are Ecclefiaftics, and confequently ufelefs to the State for its Defence; on the other Side we have five or fix hundred Leagues Coaft, in which we have very near as many white People as the Spaniards, and thofe continually increafing, both by the Number of Perfons bred and born in thofe Countries, and by the Acceffion of People from other Places, drawn thither by the Hopes of Profit. The Spanifh Colonies have been always held dangerous and deftructive to Old Spain, by draining that Country of its People; but this is fo far from our Cafe, that, as I have already obferved, our Numbers have not only encreafed, fince we began to make Settlements in America, but have really been encreafed by them, that is, in Confequence of the Navigation and Trade which thofe Colonies have produced.

At the Time Spain difcovered the Weft Indies, and for fome Time after, fhe was the greateft maritime Power in Europe; but the Maxims fhe laid down for fecuring her Dominions in the New World, ruined her naval Strength in the Old; fo that inftead of great Fleets and numerous Squadrons, She is now reduced to a few Ships of War of no great Strength; and the whole Trade of her Weft Indies is, as to Shipping and the breeding of Sailors, very inconfiderable. On the other Hand, our naval Power took Rife from our Difputes with them, grew in Proportion as theirs declined, and is, at this Day, fupported and maintained by what has weakened them, our Americon Settlements, where, comparatively fpeaking, we carry on as great a Trade, and employ as much Shipping, as in Europe.
The Spanifh Subjects in America are, generally fpeaking, a weak, lazy, and effeminate People; fo that whatever good is derived from them to their Mother Country, arifes not from their Induftry, but from the Labour and Pains of their tributary Indians or Negro Slaves. With refpect to our People, it lis the very Reverfe; they are generally active and bufy, engaged in different Methods of getting their Living, and very feldom remain fixed to one Spot for their whole Lives; and whenever there is a War in that Part of the World, and tolerable Encouragement given them, they are able to raife confiderable Armies, and fit out Numbers of Privateers. The Weaknefs and Declenfion of the Spanifh Power, is vifible in all Parts of their Empire; where feveral great and flourifhing Cities, erected by their firft Conquerors, are either funk into Villages, or totally deferted; but is more efpecially apparent in their Inands, which were formerly the beft peopled, and the moft flourifing Parts of their Dominions; whereas they are now fallen fo low, that it is with Difficulty they keep them, and there is no direct Trade between them and Old Spain at all. Our Colonies are fo far from being in fuch a State, that they are daily increafing; and fome of them, fuch as the Inlands of Bermudas, are rather over than under peopled; and whenever a long Peace, and a wife Adminiftration, with refpect to our Settlements, fhall take Place, they will become infinitely ftronger, and more confiderable, than they are at prefent; and perhaps it will be found both practicable and expedient to make new Settlements, a
thing unthought of by the Spainiards, who can fcarce keep what they have.

Upon the whole, all thefe Circumftances confidered, I flatter myfelf it will not be thought the mere Effects of Partiality, in Favour of Britain, that have led me into this Notion, but rather a ferious and attentive Confideration of the Situation and Circumftances of both Countries, with refpect to their American Dominions. I am very well aware of one Objection, which is, the general Computations made of the Profits of both Colonies. It may be faid, what Proportion does the Trade, or rather the Ballance of Trade, from the Englifh Settlements, bear to forty Millions of Pieces of Eight, which in a Time of Peace, it is computed, are annually brought home by the Spanifb Flota and Galleons; and how idle and ridiculous a thing is it, to compare fuch immenfe Treafures of Gold and Silver, with our Cargoes of Sugar, Tobacco, naval Stores, and Fifh? But, perhaps, when we confider this more attentively, it will neither appear fo ridiculous, nor fo much to our Difadvantage, as at firft Sight it may feem.

We might, in the firf Place, difpute the Matter of Fact; for it is certain, that if we examine it nicely, and require all the neceffary Proofs, it can never be brought any thing near that Sum; but this we are content to wave, becaufe if the fraudulent, as well as fair, Trade, be taken in, it is not impofible, in Time of Peace, that there may be in Jewels, Gold, Silver, and Goods, the Value of eight Millions of our Money exported in one Year, from America into Old Spain. But the next Queftion is, does it remain there? Does this prodigious Wealth belong to the Subjects of Spain? Does it circulate throtigh that Nation? All thefe Queftions muft be anfwered in the Negative, and I believe it will be allowed me, That to fuppofe two Millions Sterling, or, at moft, ten Millions of Pieces of Eight, become Spanifb Property, is over-doing the thing, and allowing them more Riches than really comes to their Share. But admiting the Cafe to ftand thus, the Comparifon between what they gain by their Colonies, and we by ours, is far enough from appearing ridiculous.

But it may be objected, that we do not bring home Money or intrinfic Riches, which is all that can add to the real Wealth of a Nation. Yet this very Objection, which feems to fet us farther back than ever, confirms our Argument. The Commodities we receive from our Colonies, are the Produce of Labour and Induftry; they are returned us for what was the Produce of Labour and Induftry here, become, when imported, the Objects of Labour and Induitry again; and after fupplying our home Confumption, for the Supply of which we muft otherwife have fent out ready Money, the Overplus is once more exported, and actually produces ready Money. Now if we reflect, that every Fact, and every Circumitance attending each of thefe Facts, is ftrictly true, with refpect to ourfelves, and that nothing can be replied to it on the Behalf of the Spaniards, who have the Goods and Manufactures they fend to the Weft Indies carried to them in foreign Veffels, and the Money which pays for them again, exported from Spain in foreign Veffels; we Thall be fatisfied that this is no delufive Scheme of the Advantages derived to Great Britain from her Colonies in America. No fpecious Dream of imaginary Treafures, but a clear and ftrict Demonftration that Labour, Induftry, and Commerce, are more valuable Mines than any in Mexico or Peru.
But all this is not faid with any Defign to lift us up, or render us proud, lazy, and negligent, but quite the contrary; it is exhibited to the. View of the Reader, that he may fee the real Value of Induftry and Navigation, and why the Author is of Opinion that the Englifh are as powerful as any Nation at prefent in America, and may become, out of Comparifon, more fo, if they are not wanting to themfelves. The Frencis come certainly next, but with regard only to their Inands; for as to their Plantations on the River of St. Laurence, I cannot believe they will ever turn much to their Advantage; and as to their Settlements on the Mififippi, I am perfuaded
they will never irrich the prefent Generation, and a thoufand Accidents may fall out that will hinder their turning so the Advantage of Pofterity.

Two Points thoroughly laboured, would fet us free from all Apprehenfions of the French, and confequently of any other Nation in America. The firft is, giving Relief to the Sugar Planters, which either muft be done, or, by degrees, that Trade will be loft, at leaft as to us, and fall, entirely, into the Hands of the Frencb and Dutch. People do not go into the Weft Indies to work for others, but for themfelves; and if it once comes to pafs, that they find they cannot do this in our Colonies, they will go where they can; we have certainly no Power, and I think it very doubtful whether we have any Right, to hinder them. To oblige People to work for little or nothing, at fo great a Diftance from their Country, and in fuch uncomfortable Climates, fuppofing it could be done, would be degrading them into white Negroes, which, except to fome modern Governors, would not, I prefume, appear a thing reafonable to any of the Inhabitants of the Britijb Ines. We are free by Birth, by the Law of Nature, and the Law of thefe Realms, and therefore Freedom is our Inheritance, in the moft diftant Part of the Britijh Dominions, as well as in the County of Middlefex; and the Interefts of Britijo Subjects, wherever they are fettled abroad, ought to be the Care of the Government at home, becaufe they ate the Interefts of the People at home; and therefore I take it for granted, that the Reports of laying new Duties upon Sugar are abfolutely falfe and groundlefs; and that as foon as the War is over, proper Meafures will be taken for removing fome of thore Duties that have been laid upon this Commodity already, which are juft as ferviceable to the French, as prejudicial to our own Subjects.
The other Point neceffary to be confidered is, the raifing of Silk, which would open a new Branch of Trade, equal in Value, perhaps, to half of what is now gained by our Trade to the $W_{e f t}$ Indies. It is very probable that the introducing and eftablifhing this Commodity, may coft us a great deal of Trouble and Expence; but if Silk can be raifed in our Colonies, upon any Terms, whatever, it is worth our while to be at all this Trouble and Expence; fince if we once have it, we fhall, in Time, molt certainly have it cheap. It was with vaft Difficulty that Silk was introduced into France, nor was it done without Trouble and Expence; but it has paid that Nation abundantly for both, and there is no doubt, could we but get it, it would pay us as well. Befides, laying out our Money is nothing with us, we lay it out every Day, not only for ourfelves, but other People, and in fome Cafes lay it out vifibly to our Prejudice; the only Queftion therefore ought to be, when we are laying it out, what we lay it out for? 'And if, as in this Cafe, it can be anfwered, that we lay it out to get more, all is well. The Sugar Trade preferved, and the Silk Trade acquired, I, for my Part, fee no more that can be wifhed, except it be the improving and preferving them, in order to make us an active and wealthy, as well as keep us a free and happy, People.
But if we fhould neglect thefe Advantages, I take it for granted that the French would grow upon us in the Wef Indies; for if once they become Mafter of the Sugar Trade, it will be very difficult, if not impoffible, to get it from them : Becaufe it is much eafier to preferve a flourifhing, than to raife a declining, Commerce. If they get the Sugar Trade, and the Inand of St. Domingo, they will certainly rival us in the Tobacco; and as their Plantations grow rich and populous, the very Overflowings of them may, for any thing I know, make their Settlements, on the River Miififippi, turn to a good Account; which, without fome fuch lucky and unforefeen Accident, they never will. Thus I make the efficient Caufe of the French Greatnefs, in thofe Parts, our Negligence, and not their own Power or Abilities, for thefe can do nothing, unlefs we give them room to work; then, indeed, they may, 'and certainly will, prove dangerous; for where they have the Capacity, we know they never want Will to hurt us.

As for the Dutch, whatever they may be ellewliere, 站 is certain they need not be here the Objects of our Apprehenfions; for they can neither extend their own Trade to a Degree of provoking our Jealoufy, nor is there any juft Reafon to fear they will ever hurt ours, unlefs by our ill Management we drive the moft Induftrious of our Sugar Planters to take Shelter in Surinam, which, with all its Inconveniences they would be apt to prefer to nearer and better Countries, under an arbitrary and popifh Government. To conclude the Whole, I cannot forbear faying, that I look upon the Spani乃 Empire in Ainerica, as a decaying Structure which cannot fubfint long, unlefs its Neighbours will charitably contribute to its Support, in which perhaps they may confider their own Intereft enough, to be fufficiently compenfated for their Labour. I look upon the Engliff Acquifitions there, as the Glory of our Crown, and if we manage them prudently, the inexhaurtible Treafures of the Nation. The French, in my Apprehenfion, thrive; but not in fuch a Degree as to be very formidable hitherto. And as for the Dutch, I reckon their Trade more beneficial, but lefs valuable, than that of the French, as being more precarious, and depending entirely upon the good Pleafure of Spain, which if her Difputes were thoroughly adjufted with Great Britain, might prove but a fandy Foundation.
We might eafily ftrengthen thefe Remarks if it was neceffary, by many others of the fame Nature, and perhaps it may not be amifs, for the fake of Perfpicuity, to give the Reader a few; the rather becaufe they will ferve to illuftrate this Subject in many other Refpects. The Inhabitants of the Spanifb America have it certainly in their Power to make ftill great Difcoveries, and to extend their Conquefts in that Country confiderably, if they had Men, or if they had not addicted themfelves fo much to their Mines, which has been equally the Ruin of their Indian Subjects, and of themfelves. In the Mand of Hippaniola it is faid to have deftroyed Millions, and many more Millions in Mexico, which is the true Source of their own Weaknefs; for had they performed what they pretended in their Applications to the Court of Rome, on the Subject of their Difcoveries in the Weft Indies, had they ftudied the Converfion of the People to the Chriftian Faith, inftead of converting them into Slaves, and had they contented themfelves with Settlements upon the Coafts, their Power would have been fufficiently great ; the Induftry of the Spani/s Nation had been encouraged, and their Navigation extended; whereas, in the prefent State of Things they are Lords indeed, but precarious Lords only of wide Territories, which are diminifhing daily; and at the fame time have the Mortification of feeing mighty Acquifitions practicable, if they had but Force fufficient to keep them ; but inftead of grafing thefe, they are forced to withdraw their Colonies in the more diftant Parts of their Territories, to fuftain the main Body of their Dominions, which fhew their Government to be in a kind of paralitic State, likely to fubfift long, though part all Hopes of Recovery. The Englijh, as they have Numbers of People in America, fo taking Things generally, they are not at all in Danger of wanting Rooin for their Inhabitants. To the North they have Nova Sootia and the Country of Nero Rritain; to the South they have Caroiza and Georgia, thinly peopled. A great-Part of the Inand of famaica, is fill uncultivated, and many of the Leevard IJlands that we claim are unplanted; fo that as our Power is greater than that of the Spaniards, by being more connected at prefent, fo it is very eary for us to extend that Power by Degrees, without leffening this neceffary, this falutary Connection. The Frencb have indeed Room enough, and to fpare, in Canada; but the more People they fend there, the more they lofe to their Country; for if that Colony was twice as numerous as it now is, it would be very little, if at all, more advantageous to France, unlefs fhe confiders its being troublefome to us in the Light of an Advantage, and of fuch an Advantage as may balance the valt EXpence fhe muft be at in maintaining and fupporting its Her Illands are already as well peopled as the can wifh, unlefs fhe knew better how to furnifh thein with Pro-
vifions,

## 376 The Discoveries and Setthements, ©oic. Book I.

vifions, their Wants often putting them entirely into the Power of their Neighbours, and rendering, not their Trade only, but their very Subfiftance precarious. In St. Domingo, indeed, they have more Room, but, perhaps, there may be Reafons why, unlefs they can 'procure the entire Poffefion of the Illand, they may be unwilling to fend more People there, than they have in it already. Upon the River Miffifippi they might certainly eftabiifh twenty times the Number of People they have there, but this they will be hardly able to do, if they cannot give them better Encouragement than thofe Planters have had they have fent thither already; fo that take it altogecher, the French have confiderable Difficulties to frriggle under, but more efpecially thefe three: The firft is, the great Ditance of their $\mathrm{Co}_{0}$ lonies from each other, and their being fituated in fuch a Manner, as to have their Correfpondence eafily interrupted by an Enemy more powerful than themfelves at Sea. The fecond is, the Dangers and Inconveniencies that'attend their Navigation, from their refpective Colonies to each other; fo that even in Time of Peace, they are very far from being either fafe, regular, or expeditious. Thirdly, their Want of proper Commodities in their moot Northern, and mof Southern, Colonies, to create, or to continue, fuch a Commerce; which therefore is farce to be apprehended, notwithtanding
the Power and Policy of the French will be always bent to promote it. As for the Dutch and Danes, they are at their Ne Plus ultra; they may, indeed, increafe their Traffic occafionally, and by Intervals; but it is impofible they fhould extend their Dominions, or, confequently, that their future Power, in thofe Parts, fhould ever become much greater than we now fee it. And though it may inrich themfelves, it can give their Neighbours no Umbrage.

Thus in parting with the Subject, I have endeavoured to give the Reader a Profpect of the future Condition, as in the foregoing Sections I have endeavoured to exhibit the prefent State, of this great Country, the Difcovery of which gave Chriftians an Oppoittunity of propagating their Religion, which they miferably abufed. If any thing that is faid herein could contribute to the redreffing this and other Evils, and infpire Men with free and generous Sentiments of promoting Virtue, Induftry, and Peace, it will fully anfwer the Author's Intention, and, which is of far greater Confequence, tend to the Welfare and Benefit of the Human Species; which it is our Intereft, our Duty, and our Glory, to promote, the only good Thing we can defire here, or hope to be rewarded for hereafter.

## VOYAGES and TRAVELS.

# B O O K II. <br> Voyages and Discoveries towards the NORTH, and through moft of the Countries of Europe. 

## C H A P. I.

The Discoveries made directly towards the NORTH, and the Attempts hitherto made for finding the North-east and Nortil-west Paffages.

## SECTIONI.

The History of the Countries lying round the North Pole; their Climate, Soil, and Produce; together with an Account of the Cuftoms, Manners, and Irade of their Inbabitants.
i. A fuccinct Introduction to the Hiftory of the northern Parts of the World, Serwing the Reafon of conjidering them in this Part of the Work, rather than in any other. 2. The 'firf Difcovery, Situation, and Plantation of Groenland, or old Greenland, and the Accidents by wbich the Knoweledge of that Country was afterveards loft. 3. The Several Voyages for the Recovery of that Country, from the Reverend Mr. John Egede, a Danih Mifionary, who refided there fifteen Years. 4. The Soil, Produce, Plants, \&cc. in this Country, and the Probability of its being anciently much more fruitful than at prefent. 5. The Climate, Seafons, Length of the Days, Fogs, Mountains of Ice, \&cc. in tbis Country, and in the Seas adjacent.

- 6. Of the various Animals in Groenland, and of the Manner in which the Inbabitants bunt the RainDeer in the Inland Part of the Country. 7. The different Metbods praEtijed by the Inbabitants in Fijbo ing, particularly the various Inventions made ufe of for catcbing Seals, and other ampbibious Anmals. 8. Their Ingenuity in making Hooks, Lines, and other fflbing Tackle; their Metbod of confructing Boats of feveral Sorts, and their furprizing Manner of navigating them. 9. Their Houfes in which they live in Winter; their Beds, Lamps, Kettles, and other Furniture; their Tents in wobich they live in Summer, and their Manner of tranfporting them. Io. Their Cuftoms, Manner of Living, Virtues, Vices, Civility, to Strangers, and whatever elfe concerns the Bebaviour of the Natives. In. Their Cloaithing, Neatnefs, and Conveniency of it; Diference in the Habits of Men and Women, and tbe Cbanges wrought in this Refpect, by the Settling a Danifh Colony in that Country. I2. The Commodities and Commerce of Groenland; the Religion of the Inbabitants; their Notions of Affronomy, and furprizing Pafion for Poetry. I3. Remiarks upon the foregoing Particulars; and the Reafons wobich induced the Englifh, Dutch, and Vol. II. Numb. 95
ofber Nations, to make I'oyages for Difcovery in thefe northern Parts. 'I4. The Difcovery of Spitzbergen, or Greenland, more properly New Greenland ; and a Soost Account of the Difpute between the Englinh and Dutch, about that Difcovery. I5. A Defcription of this Country, wis Iflands, Bays, Sounds, Harbours, and the uffal Places where the Englith and Dutch fix themfelves afbore, during the Whale Fifbing. It. The Soil, Climate, and Seafons, in this Country; with fome curious Remarks on the Colcur of the Sea Water. 17. Of the Animals that are found bere, particularly Deer, Bcars, Foxes, \&xc. with the Method of dreffing their Skins upon the Spot. I8. A diftinct Account of the Whale; the Size, Strength, and Manner of Swimming of that Creature; and the vaft 2uantities of Oil cxtracted from the Fat, or Blubber. 19. An accurate Account of the Manner of catcbing the Wbale, cutting up, and making Train Oil, and Bone, from it, as praEzijed in this Fiflery. 20. Of the other valuable Fijb in thefe Seas, fuch as the Fin-ffo, Morfe, Horfe-wbales, Dragon-fifh, White-fijh, Sword-fif, Sea-unicorn, Hay-fjh, and the Profits derived from then. 21. Of the Countries adjacent to Spitzbergen, or Greenland, fuct as Mayen's Ifland, Nova Zembla, Gic. the Reafons why they revere formerly frequented, and bave been funce deferted. 22. Of the Land of Yedzo, or Jedzo, fubject to the Emperor of Japon; fuppofed to join to, or to be divided by a narrowe Streight from, the North Continent, either of Greenland or Nova Zembla. 23. Of the undifcovered Parts of the World, from the Borders of the Land of Yedzo, to the Frontiers of North America towards Hudfon's Bay. 24. Of the Advantages that migbt attend the farther and more complete Krowededge of thefe Countries, towards the perfect underfanding of the terrieftrial Globe, and the mutual Relation between its Parts. 25. A circumpantial Account of the prefent State of the Whale-ffbery, and a Computation, as near as may be, of the Sbare of feveral Nations in the annual Produce of that Fijbery.

HE RE is hardly a general Rule that admits of fewer Exceptions than this; That no Sort of Knowledge is burthenfome, or appears, upon Reflection, not worth obtaining. If there were any fuch dark and ufelefs Spot in the noble Science of Cofmography, or general Knowledge of this Globe, one might expect it fhould lie in this very Quarter, upon which we are now entering; I mean the Hiftory of thefe Northern Countries lying round the Pole, of which, hitherto, we cannot, with any Certainty, fay whether they belong to this or that Quarter of the World, or whether they do not form a fifth Part diftinct; that is to fay, divided from Europe, Afa, Africa, and America; and, if fo, there may be, very probably, a fixth Part lying in the like Manner round the South Pole.
But Experience has taught us, that the Knowledge of thefe dark and dreary Regions is very far from being ufelefs and unprofitable, and ftill farther from being dry or unentertaining. We have thrown them into a Section by themfelves, for the Reafon before affigned; becaufe there is no Certainty of thefe Countries being joined to any Part of the known World, and we have chofen to place them at the Head of this Book, becaufe all we know of them is from their being vifited by Europeans.
It is for the fame Reafon that we begin with Groenland, which, for any thing that appears from Hitory, was the firft of them that was difcovered. The Reader is to obferve, that though Groenland and Greenland be the fame Words, the former being only the Daniß Way of pronouncing and writing the latter, yet they are now made ufe of to denote two different Countries, fometimes alfo diftinguiihed by the Names of Old and Nero Greenland; for want of attending to which, many modern Authors have fallen into great Miftakes and Abfurdities. We fhall begin with the firtt of thefe, and after giving the beft Account of it we can, we fhall then proceed to the latter.
2. Groenland lies but forty Miles to the Weft off of Iceland, beginning from the 59 th Degree 50 Minutes of North Latitude. The Eaftern Coaft extends itfelf to the North, as far, probably, as Spitzbergen; or Greenland, between 78 and 80 Degrees, which is thought to be an Inand feparated from the Continent of Groenland. The Weftern Shore is difcovered as far as 71 or 72 Degrees. Whether it be a large Inand, or borders upon Countries to the North, is not yet found out. There feems great Reafon to believe it is contiguous to America on the North-weft Side, becaufe there we meet with the Bay or Inlet, which in the Sea Charts is called Davis's Streigbt, from that famous Englifbman, who in the Year 1585 , was the firt Difcoverer of it, and is yearly frequented by Ships of different Nations, on Account of the Whale Fifhery, but no body, as yet, has been able to find out the bottom of
it. And according to the Notice we have endeavoured to gather from thofe Groenlanders, who live fartheft to the North, there is either but a very narrow Paffage between America and Groenland, or, as is moft likely, they are quite contiguous; and one is the more inclined to believe this, becaufe the farther you go Northwards in the faid Streight, the lower is the Land, contrary to what wè obferve where it borders on the Sea or main Ocean, where it never wants lofty Promontories.
It is faid to have been firft difcovered by a Norvee gian, named Eric Rotcop, who, having committed a Murder in Iceland, refolved to fy to fome flrange Country. He landed here, and becaufe of its Greennefs, called it Groenland; he fent his Son to Olaus Trugger, King of Norway, to get his Pardon, which was obtained. Upon this many Gentlemen ventured to plant there, fettled Chriftianity, and built two Towns, called Garde and Albe. The King fent thither a Viceroy, who had his Seat at Albe, which was alfo made a Bilhop's See, and had a Cathedral. They write alfo of a Monaftery, dedicated to St. Thomas, which they pretended was built of Pumice-Stone, and that it had a Spring fo hot, as to boil their Meat, and being conveyed into the Rooms by Pipes, warmed them as well as Stoves: But this feems fabulous. This fmall Colony failed in I 349, whether by a Difeafe they call the Black Plague, or the Barbarity of the Natives, is not certain. In I 406 the Bihhop of Drontheim fent one Andreas to bring an Account of the State of Chriftianity there, but he never returned.
The fabulous Accounts after this Period are not worth preferving, becaufe they contain nothing certain, ufful, or entertaining; as to Sir Martin Frobiber's Voyages, we fhall have Occafion to mention them in another Hace. It is fufficient for our Purpofe to take Notice here, that his Difcoveries upon the Coaft of Groenland put the Danes upon attempting fomething on that Side alfo, but with very little Succefs; what they have fince done, from that Time to this, is much more within our Power, and worthy of the Reader's Notice; which therefure we fhall give him in the Words of the Reverend Mr. Fobn Egede, a Dani/h Miffionary, who has written a Hiftory of this Country from his own Knowledge, and in his own Language, wherein, as to that Matter, he gives us the following, curious, and authentic Account.
3. "After the Expeditions of Frederick II. Clriftion "IV. his Succeffior, with great Coft, ordered four dif" ferent Expeditions for this Difcovery. The firft was "" undertaken under the Command of Godjke Lindenow, " with three Ships. And, as the Hiftory tells, Linde" now, with his Ship, arrived upon the Eaft Coaft of "Groenland (which I can hardly believe) and found " none but wild, uncivilized, People there, like thofe "Frobifer is faid firft to have met with. He - ttaid " there three Days, during which Time the wild Groen" "f landers came to trade with him, changing Furs, Skins,

## Chap. I.

lying round the NORTHPOLE.
${ }^{6}$ and precious Stones, againft all Kinds of fmall Ironware; fuch as Knives, Sciflars, Needles, common sc Looking-Glaffes, and other fuch Trifles. When he fet
" fail from thence, there were two Groenlanders remain-
" ed in the Ship, whom he carried off, and brought
" them home with him. Thefe, as they endeavoured
" to get away from him, and fometimes would have " jumped into the Sea, they were obliged to tie and
" fecure, which, when their Countrymen obferved, who
" flocked together on the Shore, they made an hideous
"Out-cry and Howling, flung Stones, and fhot their
"Arrows at the Sailors; upon which thofe from the
"Ship fired a Gun, which frightened and difperfed
"s them, and fo the Ship left them. The two other Ships
" that fet fail in Company, and under the Command, of
"Lindenow, after they had doubled Cape Farewell, fteer" ed directly for the Streight of Davis, in which Navi" gation they difcovered many fine Harbours; delightful "green Meadow Lands, but all the Inhabitants along " the Coafts wild and favage. It is pretended alfo, that " they, in fome Places, found Stones which contained " fome Silver Ore, which they took along with them ; " of which one hiundred Pound yielded twenty-fix "Ounces of Silver. Thefe two Ships alfo brought four
"Savages home with them to Copenbagen.
"The fecond Expedition was made by order of the " fame King, in the Year 1606 ; with five Ships, under " the Conduct of the afore-mentioned Admiral Linde" now, carrying along with him three of the Savages " (one of them dying in the Voyage) which they had " brought off the Year before from Groenland. But " this Time he directed his Courfe to the Weftward of "Cape Farewell, ftanding for the Streight of Davis, "c where, coafting along, he took the Survey of feveral "Places, and then returned home again. The third and " laft Expedition of this glotious King, was only of two "Ships, commanded by Captain Carten Ricbards, an "Holfenian by Birth. He efpied the Land, and its high cc and craggy Rocks afar off, but could not come near " it on Account of the Ice, and fo returned home. The "" fourth Expedition of King Cbriftian IV. under the
"Conduct of Captain Fens Munck, in the Year 1616,
"was not made for the difcovering of Groenland, but
"t to find out a Paffage between Groenland and America
"t to Cbina, the Misfortunes of which Expedition are re-
" lated by the faid Commander.
"There were befides thefe four Expeditions at the "King's Coft, a fifth, undertaken in the fame King's "Reign, by a Company fettled in Copenbagen, in the
" Year 1636; of which Company, the Prefident was the "Lord HighChancellor Cbriftian Friis. Two Ships, fitted "Out by this Company, directed their Courfe for the " Weftward of Groenland, fell in with the Streight of Davis, " where they traded for a while with the Savages; but this "was not the main Defign of the Commander, who was "، acquainted with a Coaft whofe Sand had the Colour and
"Weight of Gold, which he accordingly did not mifs, "" and filled both their Ships with the fame. After their "Return to Copenbagen, the Goldfmiths were ordered to " make a Trial whether this Sand would yield any Gold "s or no; who not being fkilful enough to make fuch a "Trial, condemned it to be all thrown over-board ; "which was done by Order of the High Chancellor,
"Prefident of the Company. Some Part of the faid
"Sand was yet kept out of Curiofity, out of which an
"Artificer, who afterwards came to Copenbagen, did ex-
"ctract agood deal of pure Gold. The honeft and well-
" meaning Commander who went upon this Adventure
"\% was turned out of Favour, and foon afterwards died
"" of Grief, whereby not only the Treafure they had
" brought home, but alfo the Knowledge of the Place
" where it was to be found was entirely loft, as he
" kept this abfolutely a Secret to himfelf.
"In the Year 1654, during the Reign of King
"Frederick III. a noble and wealthy Adventurer, Henry
" Muller, fitted out a Ship for Groenland, under the
"Command of David de Nelles, who arrived fafe in that
"Country, and brought from thence three Women, ${ }^{\S}$ whofe Names were Kunelick, Kabelau, and Sigokou,
"who, according to the Opinion of Bithop quorlais, who " had perufed the faid Captain's Journal, were taken " in the Neighbourhood of Herjolfnefs, on the eaftern "Shore; but which I cannot believe. My Opinion is, " they were brought from the wellern Shore near Baal"s " River, as fome of the Inhabitants who are ftill living " had in frefh Remembrance, telling me their Names, " as they are laid down in the afore-mentioned Journal. "The laft Adventurer that was fent upon the Difcovery " of Groenland, according to Torfous in his Hiftory of "Groenland, was Capt. Otto Oxelfon, in the Year 1670 , "" in the Reign of Cbrijtian V. of glorious Memory ; but " what Succefs this Adventurcr met with he leaves us to " guefs ; neverthelefs we find, in a Manufcript Defcrip"s tion of Groenland, written by Arngrim Vidalen, That his " faid Majefty did invite, and with great Privileges en"courage, Mr. George Tormunten, Counfellor of Com${ }^{6}$ " merce at Bergen, to fit out Ships for the faid Difcovery; " whereupon the faid Counfellor, not only got ready "Shipping well-ftored for fuch an Expedition, but alfo " got together a Number of Paffengers, who refolved " to go and fettle in thofe Parts; whom he provided with " all Things neceffary for that Purpofe, both Provifion "، and Ammunition; as well as Houfes made of Timber, " ready to be erected in that Country; but this great
"D Defign mifcarried, the Ship being taken by the French, and carried into Dunkirk.
"Thus for a long while it feemed that all Thought " of Groenland was laid afide, until the Year 172 I, when, "، after many well-meant Invitations and Projects pro" pofed by me to the Groenland Company at Bergen in "Norzeay, approved and authorized by lis late Majefty "Frederick IV. of glorious Memory, the Company "t thereupon refolved, not only to fend Ships,' but alfo " to fettle a Colony in Greenland in the 64th Degree ; " when I went over with my whole Family, and re" mained there fifteen Years. During my Stay, I endea" voured to get all the Intelligence that could be, both " by Sea and Land, of the prefent State of the Country, " and did not lofe my Labour; for I found fome Places ' that formerly were inhabited by the Norweegians on the " weftern Shore.
" But whereas my main Drift and Endeavour has " been all along to difcover the eaftern Diftrict of Groen"t land, which always was reckoned the beft of our ancient "Colonies; accordingly I received a Letter from the " above-mentioned Groenland Company at Bergen, in the " Year ${ }^{1723}$, in which I was told, that it was his Ma" jefty's Pleafure, That the Eaft Diftrict might likewife " be vifited, and difcovered; which, the better to effect, "I took the RefoIution to make this Voyage in perfon, "c and accordingly I coafted it fouthwards as far as the "States Promontory, looking out for the Streight of "Frobijber, which would have been my fhorteft way " according to thofe Charts, which lay the faid Streight "d down in this Place; but fuch a Streight I could not " find. Now, as it grew too late in the Year for me to " proceed further, the Month of September being near at " an End, when the Winter Seafon begun in thofe Parts, " accompanied with dreadful Storms, I was obliged to " return. In the Year ェ 724 the Directors of the faid "Bergen Company, according to his Majetty's Good-will ' and Pleafure, fitted out, a Ship to attempt a Landing "s on the eaftern Shore, as had been formerly practifed 's on that Coaft which lies oppofite to Iceland; but. the " furprifing Quantities of Ice which barricaded the Coaft " made the Enterprize abortive and quite mifcarry, as " many others had done, as there was no Convenience for "Ships to approach this Shore.
"The fame King, in the Year 1728 , refolved, be"، fides other very confiderable Expences, to have Horfes " tranfported to this Colony, in hopes that, with their " Help, they might travel by Land to this eaftern Dif" trict: But nothing was more impoffible than this "Project, on Account of the impáffable, high and "c craggy Mountains, perpetually covered with Ice and "S Sows, which never thaw. Another new Attempt " by Sea was, by Order of the fame King, made in the ${ }^{66}$ Year 1729 , by Lieutenant Richard, who with his
"s Ship paffed the Winter near the new Danifh Colony in "Groenland; and in his Voyage back to Denmark made
${ }^{66}$ all the Endeavours he could, to come at the afore $=$
${ }^{6}$ faid Shore oppofite to Iceland, but to no Purpofe, be" ing herein difappointed like the reft before him.
" 6 All thefe Difficulties and continual Difappointments
${ }^{56}$ have made moit People lofe all Hopes of fucceeding in
" this Attempt ; neverthelefs I flatter myfelf to have hit
sc luckily on an Expedient, which to me feems not im-
"s practicable, though hitherto not tried, or at leaft but
" nightlyexecuted, viz. To endeavour to leave the Land,
" from the StatesPromontory, (or as we call it) Cape Prince
"Cbrifition, northwards. The Information I have had
" from fome Groenlanders, who in their Boats have coafted
" ${ }^{6}$ a great Part of the Eaft-fide, confirms me in my Opi-
" nion; for although an incredible Quantity of driven
"Ice, yearly comes from Spitzbergen, or New Greenland,
" along this Coaft, and paffes' by the States Promontory,
"which hinders the approaching of Ships, as far as the
"Ice ftretches, where about the beft Part of the Nor-
" reegian Colonies were fettled, yet there have been found
${ }^{66}$ Breaks, and open Sea, near the Shore, through
" which Boats and fmall Veffels might pafs accord-
"s ing to the Relation of the Groenlanders, as well
"s as agreeable to my own Experience, the Current
" that comes out of the Bays and Inlets, always
" running along the Shore South-weftwards, hinders the
"Ice from adhering to the Land, and keeps it a
" Diftance from the Shore. By which Means the Groen-
" landers at certain Times, without any Hindrance, have
"s paffed and re-paffed part of this Coaft in their Cone-
"boats (fo they call their large Boats) though they
${ }^{\prime}$ 'have not been fo far as where the oid Norway Colonies
" had their Settlements, of which, no doubt, there are
" ftill fome Ruins to be feen on the Eaftern Shore.
"Furthermore : I have been credibly informed by
"Dutcb Seamen that frequent thofe Seas, That feveral
"of their Ships have at times found the Eaft-fide of
is Groenland cleared of the Ice as far as the 62d Degree ;
${ }^{*}$ "and they had tarried fome time among the Out-rocks

* on that Coaft, where they carried on a profitable Trade
" with the Savages; and I myfelf, in my Return from
"Groenland homewards, in the Year 1736 , found it to
" be fo when we paffed the States Promontory and Cape
"Farewell, and ftood in for the Shore, where at that
" time there was no Ice to be feen, which at other Times
" is very uncommon; but as this happens fo feldom, it
${ }^{66}$ is very uncertain, and unfafe for any Ship to venture
" fo far up under the Eaftern Shore.
"B But, as I obferved a little before, it is more fafe and
"practicable to coaft it from the Promontory along, the
"Shore in fmall Veffels, efpecially if there was a Lodge
"s erected in the Latitude of between 60 and 6 I Degrees;
" 6 and it would be ftill more convenient, if there could
"6 be Ways and Means found likewife to place a Lodge
" on the eaftern Shore, in the fame Latitude; for accord-
" ing to the Account the Ancients have left us of Groen-
" land, the Diftance of Ground that lies uncultivated,
"s between the Weft and Eaft-fide is but twelve Norway
s6. Miles, by Water; or, according to a later Compu-
" tation, it is a Journey of fix Days in a Boat; and as
"s the Ruins of old Habitations, which I have difcovered
"b between 60 and 6I Degrees, are without doubt in
" 6 the moft foutherly Part of the Weft-fide, it of Necef-
${ }^{66}$ fity follows that the Diftance cannot be very great from
"s thence to the moft foutherly Part of the eaftern Side.
"Now, if it fhould be found practicable at certain
"Times to pafs along the Shore with Boats or fmall
*Ships to the Eaft-fide, to the Latitude of $\sigma_{3}$ and $\sigma_{4}$
ss Degrees, little Lodges might be made, though larger
©Ships could not yearly vifit one of them, but only
"s touch at the moft fouthern ones, I am alfo perfuaded
of that the Thing is poffible, if it fhould pleafe God in " his Mercy to forward this Affair, Colonies might be
${ }^{\text {os }}$ eftablifhed here, which without great Trouble might
os be fupplied yearly with all Neceffaries.

4. As to the Soil, we are informed by ancient Hiftories that the Groenland Colonies bred Cattle, which afforded Milk, Butter, ${ }_{3}$ and Cheefe, in fuch abundance, that a
gteat Quantity was brought over to Norway, and, for its particular Goodnefs, was fet apart for the "King's Kitchin, which was practifed until the Reign of Queen Margaret. We alfo read that fome Parts of the Country yielded the choiceft Wheat; and in the Valleys the Oak Trees produced Acorns of the Bignefs of an Apple, very good to eat. The Woods afforded plenty of Game, fuch as Rain-Deers, Ecc. The Rivers, Bays, and Seas, furnifhed an infinite Number of Fifhes, Seals, Morfes, and Whales, of which the Inhabitants made a confiderable Trade. And though the Country, at prefent, cannot boaft of the fame Plenty, as it lies deftitute and uncultivated, yet, no doubt, but the old dwelling Places, formerly inhabited and manured by the ancient Norway Colonies, might recover their former Fertility, if again peopled, as about thefe Places there grows fine Grafs, efpecially from the Latitude of 60 to 65 Degrees.

In the great Bay, which at prefent is called the Bay of Good Hope (from the Danib Colony fettled near the Entrance of this Inlet) there are on both Sides of the Colony many good. Pieces of Meadow Ground, for the grafing of Numbers of Cattle; befides plenty of Provifions, which the Sea, as well as the Land, yields. Woods of any Confideration are rarely to be met with, yet there are Underwoods and Shrubs in great Quantity, efpecially of Birch, Elm, and Willows, which afford fufficient Fuel for the Ufe of the Inhabitants. The largeft Wood is in the Latitude of 60 and 6I Degrees, where the Birch Trees are two or three Fathom high, fomewhat thicker than a Man's Arm. Small Juniper Trees grow here in abundance; the Berrics of which are of the Bignefs of Grey-peafe.

The Herb called. Quaun, which is our Angelica, is very common, as well as wild Rofemary, which has the Tafte and Smell of Turpentine, from which is extracted a fine Oil and Spirit, of great Ufe in Medicine. That precious Herb Scurvy-grafs, the moft excellent Remedy for the Cure of the Diftemper which gives its Name, grows every where on the Sea-fide, and has not fo bitter a Taite as in fofter Climates. The Country alfo produces a Grafs with yellow. Flowers, the Roots of which fimell in the Spring like Rofes, and are very wholefome. In the Bays and Inlets you have wild Time, on the Side of the Mountains, which, after Sun-fet, yields a fragrant Smell. Here alfo you meet with the Herb Tormentil, and a great many other Herbs. Their moft common Berries, are thofe called Blew-Berries, TittleBerries, and Bramble-Berries; Mult-Berries, which are common in Norway, do not come here to any Perfection, on Account of the Fogs that hang upon the Inand at the Time thefe Plants bud.

This Country yields the pleafanteft Profpect about the Latitude 60 to 64 Degrees, and feems fit to be manured for the Produce of all Sorts of Grain, and there is to this Day Marks of arable Land to be obferved. The Author, himfelf, made a Tryal of fowing Barley in the Bay joining to their new Colony, which fprung up fo faft, that it ftood in its full Ear towards the latter End of $\mathcal{F u l y}$; but did not ripen on Account of the Night Frofts which nipped it, and hindered its Growth. But as this Grain was brought over from Bergen in Norrvay, no doubt it wanted a longer Summer, and more Heat to ripen. Turnips and Cole are very good here, and of a fweet Tafte, efpecially the Turnips, which are very large. It is to be obferved, that all that has been faid of the Fruitfulnefs of the Groenland Soil, is to be undertood of the Latitude from 60 Degrees to 65 Degrees, and differs according to the different $\dot{D} e g r e e s$ of Latitude; for in the moft Northern Parts, you find neither Merbs nor Plants; fo that the Inhabitants cannot gather Grafs enough to put in their Shoes to keep their Feet warm, but are obliged to buy it from the Southern Parts.
5. The Natives of Groenland have no Reafon to complain of Storms or Rain, which feldom trouble them, efpecially in the Bay of Difco, in the 6gth Degree of Latitude, where they commonly have clear and fettled Weather during the whole Summer Seafon. But when foul Weather falls in, it rages with an incredible Violence, chiefly when the Wind comes about Southerly, or South-

## Chap. I. lying round the NORTH POLE.

weft, and the Storm is fucceeded by fair Weather, as foon as the Wind Thifts to the Weft and North. The Country would be exceeding pleafant and healthful in Summer-time, if it was not for the heavy Fogs, efpecially near the Sea Coaft, for it is as warm here as any where, when the Air is clear, which happens when the Wind blows Eafterly; and fometimes it is fo hot, that the Sea-Water, which, after the Ebbing, has remained in the hollow Places in the Rocks, before Night, by the bare Heat of the Sun, is coagulated into a fine white Salt.
Sometimes for three Months together they have fair fettled Weather, and warm fun-fhiny Days, without any Rain; the Length of the Summer is, from the latter End of May, to the Midft of September ; all the remaining Part of the Year is Winter, which is tolerable in the Latitude of 64 Degrees; but to the Northward of 68 Degrees, and even there, the Cold is fo exceffive, that the moft fpirituous Liquors, as French Brandy, will freeze near the Fire-fide. At the End of Auguf the Sea is all covered with Ice, which does not thaw before April or May, and fometimes not till the latter End of June. It is remarkable, that on the Weftern Coafts of different Countries, lying in one and the fame Latitude, it is much colder than on the Eaftern, as in fome Parts of Groenland and Norsway. And though Grociland is much colder than Norway, yet the Snow never lies fo high, efpecially in the Bays, where it is feldom above half a Yard higher than the Ground; whereas the Inland Parts, and the Mountains, are perpetually covered with Ice and Snow, which never melt, and not a Spot is bare, but near the Shore, and in the Bays; where, in the Summer, you are delighted with a charming Verdure, caufed by the Heat of the Sun; reverberated from Side to Side, and concentred in thofe lower Parts of the Valleys, furrounded by high Rocks and Mountains, for many Hours together, without Intermifion. But at Sun-fet the Air is changed at once, and the cold Ice Mountains make you foon feel the Nearnefs of their Neighbourhood, and oblige you to put on your Furs.
Befides the Ice that covers the whole Face of the Land, the Sea is almoft choaked with it : Some large and flat Fields of Ice, and fome prodigious Mountains of an aftonifhing Bignefs, lying as deep under Water as they foar high in the Air. Thefe are Pieces of the Ice Mountains on Land, which lie near the Sea, and, burfting, tumble down into the Sea, and are carried off. They reprefent to the Beholders, afar off, many odd and flange Figures, fome of Churches, Caftles with Spires and Turrets; others you would take to be Ships under fail, and many have been deluded by them, thinking they were real Ships, and going to board them. Nor do their Figures and Shape alone furprize, but alfo their Diverfity of Colours pleafes the Sight; for fome are like white Chryftal, others as blue as Saphires, and others again green as Emeralds. One would attribute the Caufe of thefe Colours to Metals or Minerals, in Places where this Ice was formed, or of Waters of which it was coagulated; but Experience teaches, that the blue Ice is the Concretion of frefh Water, which at firft is white, and at length hardens and' turns blue. But the greenifh Colour comes from Salt-water. For it is obferved, that if you put the blue Ice near the Fire, and let it melt, and afterwards remove it to a colder Place to freeze again, it does not recover its former blue Colour, but becomes white ; from whence it feems that the volatile Sulphur which the Ice had attracted from the Air, by its Refolution into Water exhales and vanifhes.

Though the Summer-feafon is very hot in Groenlond, it feldom caufes any Thunder and Lightening; the Reafon of which may be the Coldnefs of the Night, which allays the Heat of the Day, and caufes the fulphúrous Exhalations to fall again, with the heavy Dew, to the Ground; as for the ordinary Meteors, frequently feen in other Countries, they are common in Groenland, as the Rainbow, flying and fhooting Stars, and the like; but what is more peculiar to the Climate, is the Northern Light, or Aurora Borealis, which, in the Spring of the Year, about the Time of the new Moon, darts Streams of Light all

Vol. II. Numb. 95.
over the Sky, as quick as Lightening, efpecially if it be a clear Night, with fuch a Brightnefs, that you may read. by it as by Day-light. The Air is not at all unhealthy, for if you except the Scirvy, and Diftempers in the Breaft, they know nothing here of many other Difeafes; and thefe pectoral Infirmities are the Effects of that nafty foggifh. Weather, which this Country is fubject to; which we may impute to the vant Quantities of Ice that coven the Land, and drive in the Sea, from the Beginning of April, to the End of $\mathcal{F u l y}$, which is therefore called the foggy Seafon, and from that Time the Fog decreafes.

But as in the Summer-time they are troubled with the Fog, fo in the Winter-feafon they are likewife plagued with, the Vapour, called Froft-fmoak, which, when the Cold is exceffive, rifes out of the Sea, as the Smoak out of a Chimney, and is as thick as the thickeft Mift, efpecially in Bays where there is any Opening in the Ice; 'tis very remarkable, that this Frof Damp, or Smoak, if you come near it, will finge the very Skin off your Face and Hands ; but when you are in it, you find no fuch piercing or finging Sharpnefs, but warm and foft, only it leaves a white Froft upon your Hair and Cloaths. There is a wonderful Correfpondence obferved in Groenland, between Fountains and the main Sea, viz. That at Springtides, in new and full Moon, when the ftrongeft Ebbing is at Sea, the hidden Fountains or Springs of frefh Water break out on Shore, and difcover themfelves often in Places where one could fcarce expect to meet with any fuch, efpecially in Winter, when the Ground is covered with Ice and Snow. Yet at other Times there are no Water-fprings at all in thofe Places.
6. There are no venomous Serpents, or ravenous wild Beafts, in Groenland, if you except the Bear, which fome will have to be an amphibious Animal, as he lives chiefly upon the Ice, in the moft Northern Parts, and feeds upon Seals and Fifh. He very feldom appears near the Colony in which our Author lived. He is of a very large Size, and of a hideous and frightful Afpect, with white long Hair, greedy of human Blood. Rain-Deer are, in fome Places, in fo great Numbers, that you will fee whole Herds of them; and when they go and feed in Herds, they are dangerous to come at. The Natives fpend the whole Summer-feafon in hunting them, going up to the innermoft Parts of the Bays, and carrying, for the moft part, their Wives and Children along with them, where they remain till the Harveft Seafon comes on. In that Space, they, with fo much Eagernefs, purfue and deftroy thofe poor Deer, that they have no Place of Safety but what the Groenlanders know; and where they are in any Number, there they chafe them by Claphunting, rufhing upon them on all Sides, and furrounding them with all their Women and Children, to force them into Defiles and narrow Paffages, where the Men lie in wait for them and kill them. And when they have not People enough to furround them, then they put up white Poles with Pieces of Turf to head them, which frightens the Deer and hinders them from efcaping.

There are alfo vaft Numbers of Hares which, are white; Summer and Winter, very fat, and of a good Tafte. There are Foxes of different Colours, white, grey, and blewifh; they are of a leffer Size than thore of Denmark and Norway, and not fo hairy, but more like Martens. The Natives commonly catch them alive in Traps built of Stones, like little Huts ; the reft of four-footed Animals, which ancient Hiftorians tell us are found in Groenland, are Sables, Martens, Wolves, Lofies, Ermins, and feveral others, but none on the Weftern Side; domeftic Animals there are none, but Dogs in great Numbers, and of a large Size, with white Hairs, or white and black, and ftanding Ears. They are, in their Kind, as timorous as their Mafters, for they never bark, but howl only. In the Northern Parts they ufe them inftead of Horles to drag their Sledges, yoaking four or fix, and fometimes eight or ten, to a Sledge, loaden with five or fix of the largeft Seals, with the Mafter fetting upon them himfelf, who drives as faft with them as we can do with good Horfes, for they often travel fifteen German Miles with them, in a Winter Day, upon the Ice; and though the poor Dogs are of to great Service "to
them ${ }_{2}$
them, yct they don't ufe them well: For they are left to fubift themfelves as wild Beafts, feeding upon Mufcles thrown upon the Sea-fide, or upon Berries in the Sum-mer-feafon ; but when they catch a multitude of Seals, they give them their Blood boiled, and their Entrails.

As for Liand-Fowls, or Birds, Groenland knows of none but the Rypper, which is a Sort of large Partrige, white in Winter, and grey in Summer-time, and thefe they have in great Numbers; Ravens feem to be domeftic Birds with them, for they are always about their Huts, hovering about the Carcaffes of Seals that lie upon the Ground. There are likewife very large Eagles, their Wings fpread out, being a Fathom wide, but they are feldom feen in the Northern Parts of the Country; Falcons or Hawks, fome grey, fome of a whitifh Plumage, and fome fpeckled, as alfo large fpeckled Owls. There are different Sorts of little Sparrows, Snow-Birds, and Ice-Birds', and a little Bird not unlike a Linnet, which has a very melodious Note. Amongtt the Infects of Groenland, the Gnats are the moft troublefome, whofe Sting leaves a fwelling and burning Pain behind it ; and this Trouble they are moft expofed to in the hot Seafon, againtt which there is no Shelter to be found. There are alfo Spiders, Flies, Humble-Bees, Wafps. They know nothing of any venomous Animals, as Serpents and the like; nor have they any Snakes, Toads, Frogs, Beatles, Ants, or Bees; neither are they plagued with Rats, Mice, or any fuch Vermin. In regard to the Fifh in thefe Seas, more efpecially Whales, and other large Fifh, valued for the Sake of Oil, we thall have Occafion to fpeak of them fo fully, when we come to treat of the Whale-fifhing hereafter, that for the Readers Benefit, as well as our own, we fhall, to avoid Repetitions, forbear fpeaking of them here, and proceed to the Manner of thefe Peoples living, providing for their own Subfiftance; and acquiring wherewithal to trade with Strangers.
7. If we meafure the good Senfe, prudent Behaviour, and polite Carriage of other Nations, by what is efteemed Wifdom, Prudence, and Politenefs amongft ourfelves, which is the ordinary Way of fettling the Standard of thofe things, it is very certain that thefe Groenlanders will pafs for a Race of ftupid, barbarous, and brutifh People. But if we meafure their Conduct, by the Situation of the Country in which they live, the Neceffities they are under, and the Want of Communication with any other Race of Men but themfelves, which we may juftly call the Standard of Nature; we fhall find they are neither defpicable with refpect to their Capacities, nor liable to Reproach from their Manner of living, which, however oppofite to ours, is very confiftent with their Circumftances, and the Helps with which Providence has furnifhed them. Their ordinary Employments are Hunting and Fining: On Shore they hunt the Rain-Deer, and at Sea they purfue the Whales, Morfes, Seals, and other Animals. As for their hunting, we have fpoke of it already, and fhall therefore only add here, that their Bow is commonly of Fir-Tree, which, in Norway, is called Tenel, and on the Back ftrengthened with Strings made of Sinews of Animals, twifted like Thread; the String is made of a good ftrong Strap of Seal-Skin, or of feveral Sinews twifted together, and the Bow is a good Fathom long; the Head of the Arrow is armed with Iron, or a tharp-pointed Bone, with one or more Hooks, that it may keep hold when thot into a Deer's Body. The Arrows they thoot Birds with are covered with one or more pieces of Bone, blunt at the End, that they may承ill the Fowl without tearing the Flefh. The Sea-Fowls are not fhot with 'Arrows, but ftruck with Darts, headed with Bones, or with Iron; which they throw very dextrounly, and with fo fteady a Hand, at a great Diftance, that no body can hit furer with a Gun.

They are more frequently employed at Sea than on Shore, and they furpafs therein moft other Nations; for their Way of taking Whales and other Sea Animals is by far the moft fkilful and eafy. When they go a Whale-catching they put on their beft Apparel, as if they were going to a Wedding Feaft ; the Groenlanders fancying that if they did not come cleanly and neatly dreffed, - Whale would thun and fly from them The Manner
of their Expedition is thas: About fiffy Perfons, Men and Women, fet out together in one of the large Boats, called a Cone Boat. The. Women carry with them their Sewing Tackle, confifting of Needles and Thread, to few and mend their Hufbands Spring Coats or Jackets, if they fhould be torn or pierced through, as alfo to mend the Boat in Cafe it fhould receive any Damage. The Men go in fearch of the Whale, and when they have found him, they ftrike him with their Harpoons, to which are faftened Lines or Straps, two or three Fathoms long, and made of Seal-Skins; at the End of which they tie a Bag of a whole Seal-Skin, filled with Air like a Bladder, that the Whale, when he finds himfelf wounded, and runs away with the Harpoon, may the fooner be tired, the Air-Bag hindering him from keeping long under Water. When he grows tired, and lofes Strength, they attack him with Spears and Lances till he is killed, and then they put on their Spring-Coats, made of dreffed SealSkin, all of one Piece, with Boots, Gloves, and Caps, laced fo tight together, that no Water can penetrate them. In this Garb they jump into the Sea, and begin to flice the Fat of him all round the Body, even under the Water; for in thefe Coats they cannot fink, becaufe they are always full of Air; fo that they can, like the Seal, ftand upright in the Sea; nay, they are fometimes for daring, that they will get upon the Whale's Back while there is yet Life in him, to make an End of him, and cut away his Fat the fooner.

They go much the fame Way to work in killing the Seals, except that the Harpoon is lefs, to which is faftened a Line of Seal-Skin, fix or feven Fathom long, and at the End is a Bladder or Bag, made of a Seal-Skin, filled with Air, to keep the Seal, when he is wounded, from diving under the Water, and being loft again. In the Northern Parts, where the Sea is all frozen over in the Winter, they ufe other Methods in catching of Seals. They firt look out for the Holes which the Seals themfelves make with their Claws, about the Bignefs of a Half-penny, that they may fetch their Breath; after they have found any Hole, they feat themfelves near it in a Chair made for that purpofe; and as foon as they perceive the Seal coming up to the Hole, and putting his Snout into it for Air, they immediately ftrike him with a fmall Harpoon, which they have ready in their Hand; to which Harpoon is faftened a Strap of a Fathom long, which they hold in the other Hand. After he is ftruck, and cannot efcape, they cut the Hole fo large that they may get him up through it; and as foon as they have got his, Head above the. Ice, they kill him with one Blow of the Fift. But befides thefe there is a third Way of catching of Seals. They make a great Hole in the Ice, or in the Spring they find out Holes made by the Seals, through which they get upon the Ice to lie and balk themfelves in the Sun. Near thefe Holes they place a low Bench, upon which they lie down upon their Belly, having firit made a fmall Hole near the large one, through which they let foftly down a Perch, fixteen or twenty Yards long, headed with a Harpoon, a Strap being faftened to it, which one holds in his Hand, while another, -who lies upon the Bench, with his Face downwards, watching the coming of the Seal, which, when he perceives, he cries $K_{a}$, whereupon he who holds the Pole pufhes and itrikes the Seal. The fourth Way is this: In the Spring, when the Seals lie upon the Ice near Holes which themfelves make to get up and down, the Groenlanders, difguifed in Seal Skins, and a long Perch in their Hand, creep along upon the Ice, moving their Head forwards and backwards, and fnoring like a Seal, till they come fo near him, that they can reach him with the Perch and ftrike him. A fifth Manner of catching Seals is, when in the Spring the Current makes large Holes in the Ice, the Seals flocking in great Shoals there; the Natives watch their Opportunity to ftrike them with their Harpoons, and hawl them upon the Ice. There is yet a fixth Way of catching them; when the Ice is not covered with Snow, but clear and tranfparent, then they lay under their Feet Foxes or Dogs Tails, or a Piece of a Bear's Hide to ftand upon, and watch the Animal; and when by his blowing and froring, they find whaz

## Chap. I.

lying round the NORTH POLE.

Courfe he takes, they foftly follow, and ftrike him. All thefe Methods prove, that the Greenlanders are fo far from being ftupid, that they are fubtile and ingenious.
8. As this Affair of their Fifhing is in a manner the fole Concern of thefe People, fo, from thence we are beft enabled to judge of their Characters and Capacities. It is true, that this appears to us a very infignificant Thing; but it is not fo to them; for upon their Ability in Hunting and Fifhing depends their Subfiftance, both as Individuals, and as a Nation, which alters the Cafe extremely, fince with refpect to every People -upon Earth, the right Management of their principal Concern is what contributes moft to their own Happinefs, and ought confequently to fix the Notions of the reft of the World about them. In Fiihing they make Ufe of Hooks of Iron, or Bones; their Lines are made of Whalebones cut very fmall and thin, and at the End tacked together ; and with fuch Lines they will draw a hundred Fifh, to one that our People can catch with their Hemp-Lines; but to catch Holy-Butts, they make ure of ftrong Lines made of Seal-fkins, or thick Hemp-Lines. Their Way of fifhing for fmall Salmon, or Sea-Trout, is this: At low Water they build fmall Inclofures with Stone, 'near the River's Mouth, or any other Place where the Salmon runs along; and when it begins to flow, and the Tide comes in, the Salmon retreats to the River, and in high Water , paffes over the Enclofure, and remains in the River till the Water falls again ; and then the Salmon ftrives to return to the Sea; but theFinhermen way-lay him at the Inclofure, and ftop his Paffage; and foon after, when the Water is quite fallen, and it is low Ebb, the Salmon remains upon dry Land, and may be caught with Hand; and when they are left in Holes, they take them with an Infrument made for this Purpofe, viz. a Perch headed with two fharp-hooked Bones, or with one or two Iron Hooks.
The Rogn-fifh, or Roe-fifh, fo named from the great Quantity of Roe that is found in it; as he is commonly found in flallow Water, and upon the Sands, fo is catched like the Salmon with the afore-mentioned Inftrument. There is fuch abundance of thefe Fifh that, as they cannot confume them while frefh, they are obliged to dry them on the Rocks, and keep them for Winter Provifion: When catching of them is over, which happens in the Month of Mey, the Groenlanders retire into the Bays and Creeks where the Stint-fifhing then takes place ; there are fuch numberlefs Shoals of them near the Shore, that they catch them in a kind of Sieves fartened upon long Poles, and throw them upon the Shore. They open and dry them upon the Rocks, keeping them for their Winter Stock. This Fiifh is not either agreeable or wholefome when eaten frefh; befides, they have a naufeous Smell, but when dried they are tolerable; the Natives eat them with a bit of Fat, or foufed in Train-oil, and fo they do all other forts of Fifhes. What the Groenlanders cannot confume freth, they dry upon the Rocks in the Sun, or in the Wind, and lay then up for Winter's Provifions.
As to the Groenlanders Boats, there are two forts of them ; the one, of which the Men alone make ufe, is a fmall Veffel, fharp, and pointed at both Ends, three Fathom in Length, and at moft but three Quarters of a Yard Broad, with a great Hole in the Midft, juft large enough for a Man's Body to enter it and fit down : The Infide of the Boat is made of thin Rafts, tacked together with the Sinews of Animals, and the Outfide is covered with Seal-fkin dreffed, and without Hair ; one only can fit in it, who faftens it fo tight about his Wafte, that no Water can enter it. In thefe frnall Boats they go to Sea, managing them with one Oar of a Fathom's length broad at both Ends, with which they paddle, fometimes on one fide, and fometimes on the other, with fo much Strength and Swiftnefs, that they are faid to row ten or twelve Norzvay Miles in a Day; they chiefly make ufe of them in catching of Seals and Sea-Fowls, which they can approach on a fudden and unawares: Whereas in our large Boats we can very feldom come fo near as to touch them. They have no fear in venturing out to Sea in them in the greatelt Storms, becaufe they fwim as light upon the largeft Waves as a Bird can ly: and when the

Waves come upon them with all their Fury, they onif turn the Side of their Boat towards them, to let them pafis without the leaft Danger of being funk; for though they may be overfet, yet they eafily raife themfelves up again with the Paddle; but if they are overfet unawares,' as if often happens, and the Boat be not clofe and tight about their Wafte, they are inevitably drowned.
The other Kind of Boats are large and open, like ours, fome of them twenty Yards long, and thofe are called Cone-Boats, that is, Womens-Boats, becaufe the Women commonly row them, for they think it unbecoming a Man to row fuch a Boat, unlefs great Necefity requires it. And when they firt fet out for the Whale-fifhing, the Men fit in a very negligent Pofture, with their Faces turned towards the Prow, pulling with their little ordinary Paddle; but the Women fit in the ordinary Way, with their Faces towards the Stern, rowing with long Oars: The infide of thofe Boats is compofed of thin Rafts, and the Outfides covered with thick Seal-fkins. In thofe Boats they tranfport their Baggage, as Tents, and the little Houfhold Furniture, when they go to fettle in fome diftantPlaces, for Conveniency of Provifion; in thefe Boats they alfo carry Sails made of the Infide of Seals-Guts, faftened to the Deck at the lower-end; fo they neither want Braces, Bowlines, or Sheet-ropes, and with thefe Sails they fail well enough with the Wind, but not otherwife : Thefe Boats, as they are flat-bottomed, are foon overfet. The Men meddle, at home, with nothing but what concerns their Tools for hunting, and their Fihing-Tackle, viz. their Boats, Bows, Arrows, and the like'; all other Work, even of building and repairing their Houfes, belong to the Women, who are to the full as induftrious, dextrous, and fearlefs as the Men.
9. As to their Houfes, they have one for the Winter, and another for the Summer-feafon: Their Winter-habitation is a low Hut, built with Stone and Turf, two or three Yards high with a flat Roof: In this Hut the Windows are on one Side, made of Seals Guts dreffed, and fewed together, or of the Maws of Holy-butts, and are white and tranfparent: On the other Side the Beds are placed, which confift of Shelves or Benches, made of Deal-Boards raifed half a Yard from the Ground : Their Bedding is made of Seals and Rain-Deer Skins. Several Families live in one of thefe Huts, each Family occupying a Room by itfelf, feparated from the reft by a wooden Poft, by which the Roof is fupported ; before it there is a Hearth, in which there is a great Lamp, in the Form of a Half-Moon; on a Trivet, over this, are hung their Kettles, of Brafs, Copper, or Marble, in which they boil their Victuals; under the Roof, juft above the Lamp they have a fort of a Shelf to put their wet Cloaths upon, to dry.
The Fore-door, or Entry of the Houfe, is very low, fo that they muft creep upon their Hands and Feet to get in at it, which is contrived fo to keep the cold Air out as much as it is poffible; the Infide of the Houfe is covered, or lined with old Skins, which before have ferved for their Boats; fome of thefe Houfes are fo large that they afford Lodgings for feven or eight Eamilies. Upon the Benches, or Shelves, where their Beds are placed, is the Seat of the Women, attending their Work of fewing, and making up of the Cloathing. The Men, with their Sons, fit on the foremoft Parts of the Benches, turning their Backs to the Women. On the oppofite Side, under the Windows, the Men belonging to the Family, or Strangers, take their Seats upon Benches placed for that Purpofe. I cannot forbear taking Notice that though in one of thefe Houfes there are ten or twenty Train-Lamps; one does not perceive the Steam or Smoke thereof to fill thefe fmall Cottages -; the Reafon probably is, the Care they take in trimming thefe Lamps, viz. They take dry Mofs rubbed very fmall, which chey lay on one fide of the Lamp, which, being lighted, burns foftly, and does not caufe any Smoke if they do not lay it on too thick, or in Lumps. This Fire gives fuch a Heat that it not only ferves to boil their Victuals, but alfo heats their Rooms to that Degree, that they are as hot as a Bagnio; but to thofe who are not ufed to this Method the smell is very difagreable, as
well by the Number of birning Lamps, all fupplied with Train Oil, as on Account of diverfe Sorts of raw Meat, Fin, and Fat, which they heap up in their Habitations; but efpecially their Urine Tubs fmell moft infufferably, and frike one that is not accuftomed to it, to the very Heart.

Thofe Winter Habitations they refort to immediately after Michaelmas, and leave them again at the Approach of Spring, which is commonly about the latter End of March; and all the warm Part of the Year lodge in Tents, which are their Summer Habitations. Thefe Tents are made of Rafts or long Poles, fet in a circular Form, bending at the Top, and refembling a Sugar-Loaf, fenced by a double Cover, of which the Innermolt is of Seal or Rain-Deer Skins, with the hairy Side inward (if they be rich) and the Outermoft alfo of the fame Skin, without Hair, dreffed with Fat, that the Rain may not penetrate them. In thefe Tents they have their Beds, Lamps to drefs Meat, and a Curtain made of the Guts of Seals fewed together, through which they receive the Day-light, inftead of Windows. Every Mafter of a Family has fuch a Tent, and a great Woman's Boat to tranfport their Tents and Luggage from Place to Place, where their Bufinefs calls them, in the Manner before-mentioned.

- io. They are, undoubtedly, as good-natured, and as inoffenfive People in their Behaviour, as any in the World; Hatred and Envy, Strife and Anger, are never heard of among them; and though it may happen that one bears a Grudge to the other, yet it never breaks out into any fcolding and fighting; neither in their Language have they any Words to exprefs fuch Paffions. It has, indeed, happened, that a very wicked and malicious Fellow, out of a fecret Grudge, has killed another, which none of the Neighbours have taken Notice of, but all let it pafs with a furprizing Indolence, fave the next of Kin to the Dead, if he finds himfelf ftrong enough, revenges his Relation's Death upon the Murderer: They know no other Punifiment. But as for a Sort of old Women, called Witches, and fuch as pretend to kill or hurt by their Conjuration, to fuch they fhew great Rigour, making nothing of deftroying and killing them without Mercy. And they infift on it, that it is very well done, thofe People not deferving to live, who by fecret Arts can hurt others. They have as great an Abhorrence of ftealing among themfelves, as any Nation upon Earth, and therefore they keep nothing under Lock and Key, but leave all free that every body can come at it, without Fear of lofing it.

This Vice is fo much hated among them, that if a Maid fhould fteal any thing, fhe would forfeit all Hopes of a good Match. Yet if they can lay Hands upon any thing belonging to Foreigners, they make no great Scruple of Confcience about it. But as the Danes have now lived fome Time in their Neighbourhood, and are looked upon as fettled Inhabitants of the Country, they at lait have forbore to moleft them any more that Way. As to any Trefpaffes in point of Chaftity, cither in Words or Deeds, they are never guilty, except what paffes amongft the married People in their public Diverfions. They never enter any Houfe where they are Strangers, unlefs they are invited; and when they come in, the Mafter of the Houfe, to whom they pay the Vifit, fhews them the Place where they are to take their Seat. As foon as a Vifiter enters the Houfe, he is defired to ftrip ftark naked, and fit down in this Manner, like all the reft; for this is the grand Fafhion with them to dry the Cloaths of all their Guefts.

When Vifuals are put before him, he takes Care not to fall to eating immediately, for fear of being looked upon as ftarved, or of paffing for a Glutton. He muft ftay till all the Family be gone to Bed before he can lie down, for to them it feems unbecoming, that the Guefts fhould go to reft before the Landlord, When ever a Stranger comes into a Houfe, he never afks for Victuals, though never fo hungry, nor is there any need he thould; for they exercife great Hofpitality, and are very free with what they have, and, what is highly to be admired and praife-worthy, they have moft things in
common; and if there be any among them who cannot work or get his Livelihood, they do not let him itarve, but admit him freely to their Table; in which they ought to confound, with Shame, fuch as are called Chriftians, who fuffer, notwithftanding, fo many poor and diftreffed Creatures to perifh for Want of Neceffaries.

But after all, the Groenlanders, as to their Manners and common way of Life, are very flovenly, nafty, and filthy; they feldom wafh themfelves; will eat out of Plates and Bowls after their Dogs, without cleaning them; and, what is moft naufeous, they eat the Vermin which feed on them. They do not blufh to fet down and eafe themfelves in the Prefence of others; every Family has an Urine-Tub placed before the Entry, in which they make Water, and leave it fo ftanding till it fimells infufferably; for they put all the wet Skins which are to be dreffed, to fteep in it, which affords a loathfome Scent; to the increafing of which, the rotten Pieces of Flefh and Fat, thrown under their Benches, contribute a great deal. Yet notwithftanding this nafty and moft beaftly way of Living, they are very good-natured and friendly in Converfation. They can be merry and bear a Joke, provided it be within due Bounds; never any of, them offered to hurt the Danes, unlefs provoked to it; but on the contrary, reverence them as a Nation fuperior to themfelves.

I I. The Reader will not fuppofe thefe Folks are overnice in their Apparel, and yet they are far from being deficient in that Point. Their Cloaths are, for the moft Part, made of Rain-Deer and Seal Skin, as alfo of Birds Skin nicely dreffed and prepared, for in this lies their greateft Ingenuity. The Mens Drefs are a Coat or Jacket, with a Cap or Hood fewed to it, to cover the Head and Shoulders, in the Fafhion of a Domino or Monk's Hood. This Coat reaches down to the Knees; their Breeches are very fmall, not coming above their Loins, that they may not hinder them in getting into their fmall Boats; and as they wear no Linen, the Hair of the Skins the Coat is made of is turned inward, to keep them warm. Over this Coat they put a large Frock made of Seal Skin, dreffed and tanned without Hair, to keep the Water out; and thus they are dreffed when they go to Sea. Between the Leathern Frock and the under Coat they were a Linen Shirt, or for want of Linen, one made of Seal-Guts, which alfo helps to keep out the Water from the under Coat; of late they appear fometimes in more fhewy Dreffes, as Shirts made of ftriped Linen, and Coats and Breeches of red and blue Stuffs, which they buy of Danifh or Dutch Merchants, but fafhioned. after their own Way. In thefe they make Parade when they keep Holidays afhore. The Stockings they wore formerly were made of Rain-Deer or Seal Skin, but now they are better, fuch as worfted Stockings of different Colours, white, blue, and red, which they buy of the Danes; their Shoes and Boots are made of Seal-Skins, red or yellow, well dreffed or tanned. They are nicely wrought with Folds behind and before, without Heels, and fet well upon the Feet.

The only Difference in Drefs between the Men and the Women is, that the Womens Coats are higher on the Shoulders, and wider than the Mens, with higher and larger Hoods. The married. Women, that have got Children, have got much larger Coats than the reft, moft like Gowns, beaufe they muft carry their Children in them upon their Backs, having got no other Cradle or fwadling Cloths for them. They wear Drawers which reach to the Middle of their Thigh, and over them Breeches. The Drawers they always keep on, and fleep in them. Their Breeches come down to the Knee; thefe they do not wear in the Summer, nor in the Winter, but when they go abroad, and as foon as they come home they pull them off.

Next to their Body they wear a Waftecoat, made of a young Fawn's Skin, with the hairy Side inward. The Coat, or upper Garment, is allo made of fine coloured SwanSkins, trimmed and edged with white, and nicely wrought in the Seams, and about the Edges, which looks very well. Their Shoes and Boots, with little Difference, are like

## Chap. I. lying round the NORTH POLE.

thofe of the Men. Their Hair, which is tery long and thick, is braided, and tied up in a Knot, which becomes them; they commonly go bare-headed, as well without as within Doors; nor are they covered with Hoods, but in Cafe it rains or fnows. Their chief Finery is to wear Glafs-Beads of divers Colours, or Corals about their Neck and Arms, and Pendants in their Ears; they alfo wear Pracelets of black Skin fet with Pearls, with which they alfo trim their Cloaths and Shoes.

The Groenland fair Sex have, befidesthis, another Sort of Embellifhment, viz. they make long black Strokes beeween the Eyes, on the Forehead, upon the Chin, Arms, and Hands, and even upon the Thighs and Legs. Thefe they make with a Needle and Thread made black, and though this to others feems disfiguring and frightful, yet they think it very handfome and ornamental; and they fay thole who do not thus decorate or deform their Faces, their Heads fhall be turned into Train-Tubs, which are placed under the Lamps in Heaven, or rather in the Land of Souls. They keep their Cloaths pretty clean, though in other things, efpecially in their Victuals, they are not fo nice, particularly the Women, who have got Children are very dirty, well knowing that they cannot be repudiated or divorced. But thofe which are barren, or whofe Children are dead, and do not know the Moment they may be fent away, are obliged to be more careful in point of Cleanlinefs, that they may pleafe their Hufbands, and enjoy Maintenance and Protection from them.
12. The Commodities Groenland affords, for the entertaining of Commerce, are Whale-Blubber or Fat, and Whale-Bones, Sea-Unicorn-Horns, Rain-Deer Skins, and Bears, Seal and Fox-Skins. Thefe Wares they ufed to barter againft the following Merchandizes, viz. Coats and Shirts, made of white, blue, red, and ftriped Linen, or Woollen-Cloth ; as alfo Knives, Hand-Saws, Needles, Hooks to angle with, Looking-glaffes, and fuch other Merchandizes, or hard Wares; befides what they buy of Wood, as Rafts, Poles, Deal-Boards, Chefts; and of Brafs and Copper, as Kettles, and the like; Tin Difhes and Plates, for which they pay to the full Price. At the Beginning of the Danifh Settlements in thofe Parts, the Trade was much brinker than at prefent, and much more profitable; for foreign Traders flocking there in great Numbers, fo over-ftocked them with Goods, and underfold one another, to draw the Natives to them from others, that the Trade is now conftantly flackened and fallen. Yet fays Mr. Egede, from whom we take this, if we once become Maiters of this Trade, as it in juftice belongs to us, by the Right the King of Denmork claims to thefe Countries, as much as to any Kingdom or Province fubject to him; I truft, continues he, that with this Provifo, the Trade to Groenland would prove as profitable as any other Trade whatfoever, which has been evidenced not long ago; when, by his Majefty's fpecial Order, the foreign Trade has been prohibited within a certain Diftance on each Side of the Colonies. For if the lading of fome Ships with Fifh and Train, from Finmark, and others with Fifh, Train, Salt-Meat, and Butter, from Iceland and Ferro, bring to the Traders confiderable Profit ; who would queftion but the fame, or better Advantage, may be expected from the importing Quantities of WhaleTrain, Whale-Bones, Rain-Deer Hides, Fox and SealSkins, which are of more Value than the Iceland or Ferro Commodities? And if the Produce of Groenland was formerly reckoned of that Importance, that it was efteemed fufficient to maintain the King's Table, why not alfo at prefent, provided Groenland may, by Settlements and Improvement, receive its former Abundance, which is not impolible?
If the old Lands, formerly inhabited and manured by the Noxway Colonies, were again peopled with Men and Itocked with Cattle, they would, without doubt, yield as much as either Iceland or Ferro, feeing there is as good Pafture Ground as in thofe Inlands. I fhall forbear to mention Salmon and Cod-fifhing, as it feems at prefent to be of little or no Importance, efpecially on the Weft-fide; though I am credibly informed by the Natives, that on

Vol. II. Numb. $95^{\circ}$
the Southern Coaft they catch abundance of fine Large Cods ; yet this may be more than fufficiently compenfated by the Whale-fifhery on the North, and the Capture of Seals on the South, which, if rightly undertaken, and with Vigour fet on foot, will bring as much; nay far more, Profit than the Salmon and Cod-catching does in other Places, chiefly the catching of Seal, which can be undertaken at very fmall Expence, viz. at the Coaft, with ftrong Nets, with which they may catch many thoufands in Groenland, which if hitherto not practifed, ought to be imputed to Negligence, and want of a good Regulation. In hhort, Groenland, as we fee, is very convenient for trading, and may be very well worth one's while to take in hand, but there is little to be done without an eftablifhed and formed Company of Men of Subftance as well as Refolution, it being altogether impofible for any private Man to mafter and go through with it.

The Ignorance Thewn by thefe People of a Creator would make one believe they were Atheits or Naturalifts; for when they have been afked whence they thought that Heaven and Earth had their Original? they have anfwered nothing but that it had always been fo'; but if we confider that they have fome Notion of the Immortality of Souls, and that there is another much happier Life after this; as they are addicted to different kinds of Superftition, and that they hold there is a Spirit, which they call Torngarfuk, to whom they afcribe a fupernatural Power, though not the Creation or the Production of Creatures, one would think they did own a God. But notwithftanding all their 'Superftitions are grounded upon the Notion they have of Torngarfuk, whom their lying Angekuts or Prophets hold for their Oracle; yet the Commonality know little or nothing of him, except the Name only; nay even the Angelkuts themfelves are divided in their whimfical Ideas they have formed of his Being; fome faying he is without any Form or Shape, others giving him that of a Bear, others again pretending he has a large Body, and but one Arm, and fome make him as little as a Finger, $\varepsilon^{3} c$.

They affign him his Abode in the lower Regions of the Earth, where they tell you there is conftantly fine fun-hiny Weather, good Water, Deer and Fowls in abundance. They alfo fay he lives in the Water, wherefore when they come to any Water; of which they have not drunk before, and there is any old Man in the Com ${ }^{-1}$ pany, they make him drink firft, to take away its Torngarfuk, or the malignant Quality of the Water, which might make them fick and kill them. They hold likewife that a Spirit refides in the Air, which they name Innertirror $\int 0 k$, that is, the Moderator or Reftrainer, be-caufe it is purfuant to his Order, that the Angekuts command the People to reftrain or abftain from certain earthly things or Actions, that they may not come into HarmsWay. According to their Theology, there are Spirits that govern all the Elements, and their Conjurers pretend ta have familiar Spirits, and to be able to do great Matters. They are, however, a Crew of Knaves and Lyars, and it would give very little Satisfaction to the Reader to infert their Fables, which are not at all more falle than they are foolifh, and ferve to fhew us that tho Reafon may go a great Way in teaching Men how to manage their Affairs in this World, yet it is far from being ftrong enough to penetrate into the Secrets of the other World, and of a future State.
Their Notions of the heavenly Bodies ate very whim: fical; they fay the Moon was once a young Man, and the Sun a young Woman his Sifter, with whom he was familiar in the Dark; but that fhe, being defirous to find out her Lover, rubbed her Hands with Soot, with which the marked his white Deer-Skin Coat, and hence they fay are the Spots in the Moon. The Sun, flying from his Embraces, afcended into the Air, whither the Moon followed her, and ftill continues to purfue, without being able to overtake her.

Yet for all this Nonfenfe, they have given Names to many of the Stars, and Conftellations, viz. The three Stars in the Belt of Orion they name Sickiur, that is Separated, becaufe thefe three, they fay, before their Metempfychofis, or rather Metamorphofis, were three honeft

Groenlandersy

Groenianders, who being out at Sea a Seal-catching, were bewildered, and not being able to find the Shore again, were taken up into Heaven. Urfo Major, the great Bear Star, is ftiled by thofe who dwell in the 64th Degree, Tugto, or Rain-Deer; while they that live in the Bay of Difco, at 99 Degrees, call it Affelluit, the Name of a Tree to which they tie their Line when they fhoot Seals, Taurus, the fecond Sign in the Zodiac, is named Kelluckturfet, or Kennel of Hounds, who feem to have a Bear among them; by this Conftellation they reckon their Hours by Night. Iverfuck, that is two Perfons that contend with Songs or Verfes in taunting one another, as is cuftomary among the Groenlanders. Thefe two Stars are in the Conftellation Tourus, of which we have already fpoken, and there too is Aldeboren, or Nennerroak, that is, a Light who lights the two Singers.

Canis Major is called Neleragnek, which is a Name of a Man amongft them. This they fay has got on a Coat ef Rain-Deer Skin. Gemini, Auriga, and Cupella, are named Killoub Kuttuk, that is the Breaft-Bone of Heaven. When two Stars feem to meet together, they fay they are vifiting one another; others will have it to be two Women, who being Rivals, take one another by the Hair. Concerning Thunder and Lighening, they fay that two old Women live together in one Houfe in the Air, who now and then fall out and quarrel about a thick and ftiff out-ftretched Seal-Skin; becaufe fuch a Skin, if beaten as a Drum, has fome Likenefs to the Noife of Thunder; whilf they are thus by the Ears together, down comes the Houfe with great bouncing and cracking, and the Lamps are broken, the Fires and broken Pieces fly about the Air, and this, in their Philofophy, is Thunder and Lightning. In their aftronomical Syftem, the Heaven turns about the Point of a huge Rock.

The Snow, according to their Fancy, is the Blood of the Dead, on account that it turns reddifh if you keep it in the Mouth. The Rain comes from a Ditch or River above in Heaven. When it overflows there, it rains here below. They have no Kalendar or Almanacks, nor do they compute or meafure the Time by Weeks or Years, but only by Months, beginning their Computation from the Sun's firft rifing above their Horizon in the Winter, from whence they tell the Month, in order to know exactly the Seafon in which every fort of Fifh, SeaAnimals, or Birds, feek the Land, according to which they order their Bufinefs. As to their Diverfions, they have many, fuch as Running, Leaping, Wreftling, Football and Dancing.

The moft fingular Circumfance however in this Reipect is, their Talent for, and mighty Delight in, Poetry. Inthis, from the Specimens we have received in the Relations of Groculand lately publifh'd, it appears that they are far from wanting either Genius or Method. The Poems they compofe are a kind of Lyric Odes, the Harmony of which depends both upon Rhyme and Quantity, there being a vifible Regularity in the Number of Syllables of which their Verfes are compofed, and a plain Regard to Cadence even in our Manner of reading them. They ufe this fort of Poetry, which, all Things confidered, is as far from being rude as it is from being exact, to exprefs all their Paffions, fuch as Love, Joy, Grief, but more efpecially Anger; for when two People quarrel in this Country, they challenge each other not to fight, for that they never do but in Jeft, or by way of Diverfion, but to contend in Verfe; and he who firft wants Words to exprefs himfelf in this poetical Duel, is held to be conquered, and fo the Controverfy ends without either Blood or Law-fuit.
13. We have given this large Defcription of this Country, and thefe People, becaufe both were very much wanted; nothing of this kind having occurred in any of our Collections of Voyages. It accounts for what happened to Capt. Davis and his People, which we have related in the former Book; as alfo, for what befel Capt. Hudfon's Crew, after they had bafely deferted their Captain. It fhews how confiftent thofe Relations may be with Truth, which feem to be inconfiftent with themfelves, by fhewing that Savages, that are gentle, kind, and humane to each other, may be faithlefs, thievifh,
and cruel to Strangers, as thefe People really are from Principle; becaufe they look upon the reft of Mankind to be of a different Race, and therefore they don't think that they are obliged to treat them as they do one another.

We may likewife fee from hence, how ingenious thofe People are in providing Neceffaries for themfelves, who difcover, notwithftanding, very little Genius or good Senfe in contriving for the Conveniencies of Life. The Boats of the Groenlanders are'very perfect in their Kind; their Cloaths not only fufficient for Covering, and very warm and ftrong, but alfo well-fhaped and neatly put together ; and their Inftruments for Hunting and Fifhing admirably contrived in every refpect; but then their Houfes are very poor, their Manner of living very wretched, and the Bounds of their Knowledge almoft as confined as the Animals upon which they feed. Their Skill and Succefs in former Inftances plainly fhew that they they do not want Capacity; and the Rudenefs of their Condition in other Refpects, is plainly owing to theirWant of Education; or, if I may be allowed to ufe the Word, becaufe it exprefles my Meaning better, Cultivation: Their Minds are not barren, but produce few Things for Want of a Variety of Seed fown in them; and this fhews the Advantage of Commerce, not only for improving the Circumftances, but for enlarging and bettering the Underftandings, of any People.

Trade will not mend the Climate of Groenland, but it may enable the People to live more comfortably there: Fifh, Train-Cil, Skins, Furs, and whatever elfe the Country produces, or can be made to produce, when converted into Commodities, will bring the Inhabitants Variety of Conveniences, will enable them to convert their Huts into Houfes, and change their inhofpitable Deferts, not into a fine and pleafant, but into a tolerable, Country and at the fame time will enrich thofe who take the Pains to trade with, and civilize, thefe People. If this could be done effectually, they might be made ure of to perfect thofe Difcoveries, that politer and wifer Nations have not hitherto been able to make. They may be employed to find out how far the Country behind them is inhabited to the North; and whether, after advancing nearer the Pole, the Climate continues to grow more rigorous, or, as fome have imagined, not altogether without Reafon, becomes milder.
Our general Notions, with refpect to the Situation of the different Parts of the Globe, are not always confirmed by Experience: The Ancients thought the Torrid Zone uninhabitable, on the Score of Heat, but we now know with Certainty, that they were miftaken; neither is it impofible that in thinking the Land or Sea abfolutely frozen under the Pole, we may be miftaken likewife. That an Experiment of this Kind would not be impracticable to the Groenlanders, appears from hence; that as cold as their Country is in 69 Degrees, there are Perfons living, who have advanced full ten Degrees farther North, without finding the leaft Inconveniency from the Cold, in the Day-time. Upon this Occafion, I will take the Liberty of obferving, that there is no Country in the World, the Inhabitants of which might make Difcoveries of more Importance than the Groenlanders, as may appear from what the Reverend Mr. Egede tells us he learned among them: "According, fays he, to the Relation "s and Opinion of thofe that inhabit the Gulph of Dijco, "s their Country is an Inand, which they incur from the "s frong Current that runs from the North, and keeps "s the Ice open, even in the Midift of the Sea. They "s will alfo tell you, they have fpoken with People dif"ferent from themfelves, on the other fide of the Ice, "6 and haled them. Their Language, they fay, is the "f fame, but the Perfons different; fo that a fmall Streight " only divides Groonland from America. The Streights "c are fo narrow, that Men on both Sides can fhoot, at " one and the fame Fifh. The Continent fartheft to the " North, is all covered with Ice, the Ifland's only un"s covered, where Rain-Deer, Geefe, and other wild Birds, "6 are found in great Numbers."

I muft confefs, I am not very well fatisfied with this Account, and believe that the Danes may with little

Trouble,

## Chap. I.

 Sying round the. NORTH POLE.Trouble, engage the Groenlonders to gain them in time a better, and more certain Account; for, without doubt, in one Summer, they might do more towards the fettling the Poffibility, or' Impoffibility, of finding a North-welt Paffage by their Difcoveries on Land than we have been able to do, in upwards of one hundred and fifty Years, by Sea; befides, they might alfo make. Difcoveries on the oppofite Coaft, looking towards Spitzbergen; which would lead us to a Certainty, whether there be an open Sea on that Side, or not; a Thing which, as the Reader will fee hereafter, is a Matter of far greater Importance than is commonly imagined. It was to penetrate into thefe Secrets of Nature, and to open to Mankind the entire Knowledge of the Univerfe, that fo many Expeditions were made towards the North, by the Englija and Dutch, in the Beginning of the laft Century ; but which, after all, ferved only to difcover another Country to the Eaft of Groenland, which, for any thing that is hitherto known, is abfolutely uninhabited, but mutt not therefore be left undefrribed, efpecially as we want not fufficient Materials for that Purpofe.
14. The Country of Spitzbergen, or Greenland, lies the neareft to the North-Pole of any yet examined by Seamen, that is, from 76 to 82 Degrees North Latitude; but whether it be Continent or Inands is not yet difcoveed. It received its Name of Greenland from the Englifs, on Account of its being thought Part of Old Groenland; but the Dutch call it Spitzbergen, that is, fharp Mountains, becaufe the icy Rocks of this Country mount like Pyramids, one behind, or rather, above another, to marvellous Heights. There are great Difputes as to the Difcovery of this Place: For, on the one hand, we affert that it was found out by Sir Hugh Willougbby, in 1553 ; which the Dutch deny, and have invented a Country called Willougbby Land, and placed it in their Maps, to quit themfelves of this Difficulty. He was afterwards frozen to death, with his Ship and Company, in the River Arzana in Lapland, leaving upon his Table an Account of his Difcoveries, drawn up in very concife Terms: Wherein he mentions failing for feveral Days on the Weft-fide of a Country, in a very high Latitude, which it is believed, and on very good Grounds, could be no other than Greenland. After this, Mr. Stepben Burrows, in the Year 1556, arrived in the Latitude of $7^{8}$ Degrees, and failed along a Coaft altogether defolate, the Ice blue, and abounding with Birds, to the Latitude of 80 Degrees IIMinutes; which was certainly no other than Greenland.
The Dutch Difcoverers were William Barentz, and Fobn Cornelius, who vifited this Country in 1595, and called it Spitzbergen. Our Maps differ from the Dutch, becaufe the Names of Places in them are all Englifh; whereas, in the Dutch Maps, they are in their own Language; which however determines nothing as to the Matter of Fact, or who were the firt Difcoverers. If we decide the Points according to Evidence, the Difcovery perhaps ought to be adjudged to the Englif/; but the prefent Poffeffion, and the Profits refulting from thence, are moft undoubtedly wholly in the Dutch.
15. Spitzbergen is actually undifcovered on the North, fo that it is not poffible to fay with Certainty, how it is bounded: On the Weft it has the Northern Ocean ; on the South, the fame Ocean between it and the Mufcovite Lapland; on the Eaft an undifcovered Country, to which It is joined by an Ifthmus ; on the Weft-fide of it lies Cbarles Ifland, which is divided from the main Land by a narrow Streight called Foreland Ford, between which and Muscle Haven are the higheft Mountains, moft of which are of a red Colour, and reflect the Sun-beams fo as to feem all on fire; but feven of the Mountains, all of a remarkable Sharpnefs, are of a fine Sky-blue. SoutbHaven is the moft commodious Place on the Inand, affording all the Conveniences neceffary for repairing leaky or damaged Ships, and is fo large that thirty or forty Sail may ride at Anchor there very conveniently; here alfo may be had frefh Water, from the melting of the Snows ; for as to the Rivers they are brackifh, as far as hitherto they have been difcovered, and no Springs or Wells have been yet found.

The Mountains about Soutb Haven are very high, efpecially on the Leift; and in the Midit of the Harbour is an Iland called Deadiran's Ifland, becaufe fuch as die in the Voyage are ufually buried here; if the Bodies can be preferved from the Bears, they remain uncorrupt for many Years. There are feverai Inlands in this Neighbourhood, called Foroll flands, from the prodigious Number of Birds that are bred there. The next capacious Haven is that called by the Dutch, Mourice Bay, where fome have wintered: , Near this Place were a few Cottages built by the Dutch, for the Convenience of making their Oil, and this Place they call Smearbourg, or the Haerlems Cookery. In the North Bay there is an Inand which the Dutch call Voegelfang, from the great Noife which the Fowls make when they take their Flight; whence fome have imagined the famous Problem of our Birds of Paffage may be eafily folved, fince they fuppofe they are bred in the Fowl-Ifands, and at a certain Seafon of the Year fly fouthward from the Illand before-mentioned. Deer Sound is fo called from the Abundance of Deer which feed about it, though the Soil feems to be all Slates fet edgewife. Mufcle Heven lies at the Nicuth of the Waygate. Martens a Fumburgher, who has given us the beft Account of this Country, failed as high as 8 I Degrees North, where the Ice hindered him from approaching.
I6. The Soil of Greenland is for the moft part nothing but Rocks, or Heaps of vaft Stones, fo very high, that half of them are loft in Clouds; the Valleys between them are full of Stones and Ice, which fall from thofe prodigious Mountains. About Deer Sound and Mufcle Flaven there is fome low Land, which is alfo itony, and, for the moft part, covered with Snow and Ice; and this being melted, as ir fometimes is in the Summer, difcovers nothing but a barren Soil, covered with Heath, Mofs, and very few Plants. Such of the Mountains as are expofed to the warm Air and Sun-beams are likewife covered with Heath and Mofs; and, in the Clifts of thofe Rocks, there are infinite Numbers of Fowls, that reft there all the Year.
The Dung of thofe Birds, with the Mofs wafhed down by the melted Snow, makes a rich kind of Mould on fome Places near the Shore, where it produces a kind of Lettuce, Scurvy-grafs, exceeding mild and pleafant, Sorrel, Snakeweed, Moufe-ear, Heart's-eafe, wild Strawberries, Houfe-leeks, Wall-pepper, and fome Plants unknown to us. The Sea is obferved not to be fo falt here as in other Places, and changes (as it does every where) its Colour with the Sky. If the Air be clear, the Sea is blue; if cloudy, green; if foggy, yellow; in ftormy Weather, quite black: But there is one thing remarkable, which is, that, in fair Weather, the Sea is fo clear, that you may fee ten or twelve, or even fourteen Fathom deep. The Air is fo coid, that there is almoft a continual Froft, which is ffrongeft in April and May, and then in a manner intolerable, efpecially if the Wind blows from the North or Eaft; South or Weft Winds bring Snow or Rain, and moderate the Cold. In Fune, Fuly, and Auguft the Weather is ufually calm; and in the laft two Months, but efpecially in futy, the Sun fhines fo hot, as to melt the Tar between the Seams of a Ship, if the Wind cannot come at it.

The Sun appears about the Middle of February, and difappears about the ift of OEfober; but they have-a Twylight when he comes near their Horizon. From the Beginning of May to the ift of Auguff the Sun never fets; yet they reckon Day and Night very eafily: for, when he is in the Weft, they call it Night; and, when he comes about again to the Eaft, they reckon aroother Day begins. It is obferved, by Martens, that the Light of the Sun is then like that of the clear Moon, fo that Men may look upon it without dazzling their Eyes.
17. The Beafts of this Country are white Bears, very differently fhaped from thofe that are feen eifewhere; they have long Heads like Dogs, and bark like a Dog that is hoarfe. They are leaner and fwifter than other Bears, and very bold. Some of them are fix Feet high, and fourteen Feet long; and there has been fometimes an hundred Weight of Fat taken out of one of them. When any of them are killed and not carried off, the reft eat
them; but when they are attacked, and begin to howl, fuch as are within hearing run to their Affiftance, and the old ones will rather fuffer themfelves to be killed,' than defert their Young. The largeft are thofe which are called Water-Bears, which live upon what they can get at Sea, and have been fometimes found fourteen Miles from Shore. The Skins of thofe Creatures make very comfortable Cloathing for fuch as travel in the Winter, and are drefled at Spitzbergen, by treading them in hot Sawduft.

The Deer in Greenland are grey and fhaggy in Spring, afterwards of a dunky Colour, with cleft Feet, and Horns like a Hart, or Elk. They have three or four Branches on each Side, about two Inches broad, and a Foot long; their Ears are long, and their Tails fhort. By feeding upon the ycllow Mofs, they grow fo very fat in three Months, that they cut fomctimes four Inches deep on the Ribs, which enables them to hold out during the Winter; and yet many of them are ftarved, and in the Spring they are all very lean. At the Sight of a Man they fly; but, if he fops, they ftop too, and this gives an Opportunity for thooting them. Their Flefh is exceeding good roafted. There are Foxes here of various Colours, and prodigious Numbers of Seals, or Sea-dogs, and Seahorfes, which are the fame that, in the South-Seas, are called Sea-lions; Animals which we fhall hereafter defrribe. There are very few Land Fowl; but of Water Fowl abundance, yet none fo curious as to merit a Defcription here.
18. As for the Fifh on this Coaft, they deferve Notice, becaufe the taking them is the fole Motive that brings Ships into thofe Seas, where the Whale-finhing is carried on with great Profit. The true large Whale differs from the reft of the Fith fo called by his having no Teeth, inftead of which, on each Side of the upper Jaw, grows the Whale-bone, in four or five hundred different Blades, at equal Diftances, fome exceeding twelve Feet in Length, and a Foot broad at Bottom, growing narrow upwards, like the Sticks of a Fan inverted, the largeft of them weighing about twenty Pounds.

He contracts and dilates the Diftances of thofe Blades at the fhutting and opening his Mouth, making them ferve as Strainers, to feparate the Water from the Shrimps, Prawns, and fuch fmall Fifh as his Food confifts of; and, for the fame Purpofe, on the Infide of the Bone, next the Tongue, grows a Quantity of Hair, to make ftill a finer Percolation, which is the more neceffary, becaufe, notwithttanding the Bulk of a Whale's Body, the Throat of the largeft is not above a Foot wide. His Bones are hard, like thofe of four-footed Beafts; but, inftead of having one large Cavity in the Middle, are porous, and full of Marrow. His Eyes meafure about fix Inches over, with Eye-lids and Hair like a Man's. His Belly and Back are quite red; his Flefh is coarfe and hard, like that of a Bull, mixed with many Sinews, and is very dry and lean, becaufe the Fat lies between the Flefh and the Skin. The Fat is mixed with Sinews, which holds the Oil as a Spunge does Water ; the other ftrong Sinews are about the Tail, with which he turns and winds himfelf, as a Ship is guided by a Rudder.

He fwims as fwift as a Bird flies, and makes a Track in the Sea like a large Ship under fail. Befides the uppermoft thin Skin, there is another almoft an Inch thick; but neither of them are very ftrong, which is believed to be the Reafon why the Whale does not exert that mighty Force that might be expected from a Fifh of its Size. They are mightily tormented with Lice, which makes them fometimes foring out of the Sea in an Agony. It is alfo believed they feel great Pains in their Bodies before a Storm, which makes them twift and tumble violently while the Wind blows from the Eaft; but, notwithftanding their violent Agitation, they are naturally very timorous. The middle Sort of them are from fifty to fixty Feet long, and yield from feventy to a hundred Barrels of Blubber; though fometimes they are much larger. Martens mentions one that yielded a hundred and thirty Hogheads. This Blubber lies immediately under the Slin; they cut it into thin Slices, which are put into hot Coppers. The Oil foon melting out, the Skin is thrown away. The Tail
ferves for a Chopping-block, upon which they cut the Blubber before it is boiled. The Manner of taking the Whale deferves a particular Defcription.
19. As foon as the Fihhermen hear a Whale blow, they cry out, Fall, fall! And then every Ship gets out its Long-boat, in each of which there are fix or feven Men; they row till they come pretty near, then the Harpooneer ftrikes him with his Harpoon, which is a fharp Iron, refembling the Head of an Arrow, fixed to a Stick ; and this requires great Dexterity. Through the Bone of his Head there is no ftriking; but, near his Spout, there is a foft Piece of Flefh, into which the Iron finks with Eafe. As foon as he is fruck, they take care to give him Rope enough; for otherwife, when he goes down, as he frequently does, he would inevitably fink the Boat: and this Rope he draws fo quick, that, if it were not well watered, it would fet the Boat on fire. The Line faftened to the Harpoon is fix or feven Fathom long, and is called the Forerunner. It is made of the fineft and the fofteft Hemp, that it may nip the eafier. To this they join a Heap of Lines, of ninety or a hundred Fathom each; and, when there are not enough in one Long-boat, they borrow from another.

The Man at the Helm obferves which Way the Rope goes, and fteers the Boat accordingly, that it may run exactly out before; for the Whale runs away with the Line as faft as the Wind, and would overturn the Boat if it were not kept ftrait. When the Whale is truck, the other Long-Boats row before, and obferve which Way the Line ftands, and fometimes pull it: If they feel it ftiff, it is a Sign the Whale ftill pulls in Strength; but if it hangs loofe, and the Boat lies equally high before and behind upon the Water, they pull it in gently, but take Care to lay it fo that the Whale may have it eafily again, if he recovers Strength. If he runs out one Level, as he fometimes does, they take Care not to give him too much Line, becaufe he fometimes intangles it about a Kock, and fo pulls out the Marpoon. The fat Whales do not fink as foon as dead, but the lean ones do, and come up fome Days afterwards. They begin to ftink as foon as they expire, and their Fleff ferments, creating fuch a Steam as inflames weak Eyes. When they fee him fpout out Blood, they know that he draws towards his End, and then prepare for cutting him up. In order to this, they hawl him clofe to the Shipficle, and with great Knives flice his Sides, raifing the Blubber by a Hook and a Pully, which they lift up as they cut. Many of thefe great Flakes they ftring upon a Rope, and fo drag them on Shore, where they are heaved up by a Crane laid upon the Whale's Tail, and chopp'd into fmall Pieces; afterwards hew'd into Pieces no bigger than Trenchers, and fo thrown into Coppers; and as foon as they become brown, are called Fritters, taken out, and caft away.

The Liquor is then laded out into a Boat half full of Water to cool and cleanfe it; and thence, by long Troughs, that it may be more cool, conveyed into Hogfheads clofe to the Shore. In the mean time the Head is cut off, and drawn as near as can be to the Shore, and hoifted up by a Crane till the Whale-Bone is cut out, and tied up by Fifties, and then the reft of the Head is boiled for Oil. The Tongue, which in its Figure refembles nearly that of a Wool-Pack, is craned up with great Care: That of a large Whale will weigh about eight Ton, and will yield from fix to eleven Hogfheads of Oil, tho? there have been Inftances of their yielding twenty-four Hoghtheads ; but this is look'd upon as a Thing very extraordinary. The Ships that ufe this Trade carry thirty or forty Men, five or fix Sloops, and from four-hundred to eight-hundred Hogtheads of Blubber. Their Arms conffit of fixty Launces, fix Sea-Horfe Launces, forty Harpoons, ten long Harpoons for friking Whales under Water, fix fmall Sea-Horfe Harpoons, and thirty Lines of ninety or a hundred Fathom each.
20. There are in thefe Seas feveral other kind of valuable Finh, many of which are looked upon to be of tha Whale-kind; of thefe the mort remarkable is the FinFifh, which is full as long, tho' not fo thick, as the Whale, by two Thirds: He blows Water higher than a

Whale

The Whale Fishery and Kilifig the Bears.

## Chap. I. lying round the NORTHPOLE.

Whale of his Size, thence called the Trumpeter; his Lips are brown, and twifted like a Rope, and the WhaleBone hangs to his upper Lip; in Colour he refembles a Tench; and is fo nimble, as well as ftrong, that the Fifhermen dare not ftrike him with a Harpoon near the Ice, becaufe by a fudden Jerk he is able to pull them and the Boat under it. When thefe Fifh come upon the Coafts it is a Sign that the Whales are gone. The Horfe-Whale, which is alfo called the Morfe, the Whalerufh, or the SeaHorfe, in Shape refembling the Seal, but in Size is full as big as an Ox; the Head is thick, round, and exceeding ftrong; the Neck is covered with fhort Hair, and with a Skin near an Inch thick; upon the reft of the Body the Hair is longer, but the Skin thicker; in their upper Jaw they have two long Teeth, from twelve to twenty-fix Inches, which are clofer, whiter, and keep their Colour better than any kind of Ivory. This Creature feeds upon Herbs and Fifh, and is very bold, making toward the Boat as foon as he is attacked, and endeavouring to overfet it, by leaping into it; and when he cannot effect this, he fometimes beats Holes through it with his Tufks. They are not eafily killed either with Shot or Blows, and therefore the Seamen ufually difpatch them with Launces.

When Whales happen to be fcarce, the Oil and Teeth of this Creature make up the Voyage. The DragonFifh has two Fins on his Back, and two Holes in his Neck, through which he fpouts the Water; his Body is long and thin, his Skin greyifh, and glitters like Silver. The Buthopf, or Place-head is another Fifh of the Whale-kind, with a Spout-hole in his Neck, his Back brown, his Belly white; in Length from fixteen to twenty Feet: And it is to be obferved that they fwim along by the Shore-fide. TheWhite-fifh is as large as the Buthopf, and is very fat. When there is Plenty of there Finh, it is a Sign of a good Whale-Seafon. The Sea-Unicorn has no Fin upon his Back, but a Spout-hole in his Neck, their Bellies are white; they are from fixteen to twenty Feet long, and are chiefly valued for their long and wreathed Hom, which proceeds from their Snout, and is exceedingly white and firm; which Horn, when they are purfued, they fometimes thruft above Water. His Danifs Majefty's Throne is compofed entirely of thefe Horns, which were formerly efteemed as Specifics againft Poifon. All thefe Fifh fwim againft the Wind, and are obferved to tumble againft Storms, which fome attribute to their having the Cramp in their Bellies.

The Saw-Fifh, or Sword-Fifh, is of all Sizes from two to twenty Feet long: He is fhaped like a Man's Arm ; his Eyes ftand high out of his Head; his Sword is fometimes fmooth and fometimes ribbed or indented like a Saw. This Creature is by Nature an Enemy to the Whale and Fin-Fifh, purfuing them with the greateft Eagernefs. A few of them will difpatch a great Whale, and then they eat no part but the Tongue. In calm Weather the Fifhermen are often Spectators of the Combat; and when they perceive the Whale dying, they row towards him, upon which the Sword-Fifh retreats and leaves his Prey in their Mands. The Hay is another Enemy to the Whale, and of thefe there are feveral forts; they are generally of a grey Colour, and from one to three Fathom in Length. Of all Fifh the Hay is the moft voracious, for it bites great Pieces out of the Whale, as if they had been dug with Shovels, infomuch that fometimes Fifhermen take Whales that have half their Blubber torn away in this Manner. The Liver of this Fifh abounds in Oil, and is exceffively large. The Flefh of their Back, when dried fome Days in the Air, is accounted tolerable Provifion eicher boil'd or roafted, and the lefs the Fifh the better. They are caught by a large Hook, baited with Flefh, and faftened to a ftrong Iron Chain; and in the Sea, if Men fall over-board by Accident, the Hays in their Turn devour them.
21. There are, befides Spitzbergen or Greenland, fome other Illands in thefe Seas that deferve our Notice, fuch as Cherry-Iland, which lies directly South of Spitzbergen, in the Midft between it and the Continent of Europe. It was fo called in, 1603 , in honour of Sir Francis Cberry, by a Ship's Crew which he had fitted out. There were

Tok. Il. Numb. XCVI.
for many Years after many profitable Voyages made to this Place, which lies in the Latitude of 74 Degrees and. 5. Minutes; and where, in one Seafon, they made ttrentytwo Tons of Oil out of the Fleih, and got three Hogfheads of Morfe's Teeth. In the Year 1610 , the Ruffar Company took Poffeffion of it, and that Year they killed. a thoufand Morfes, and made near fifty Tons of Oil: They likewife difcovered three Lead and Coal Mines upon this and the fmall Iflands near it, and found the Country fo hot towards the End of the Month of Jume, that the Pitch ran down the Side of their Ship. This Inand alfo abounds with feveral forts of wild Fowl and Seals; and there are likewife in it a vart Number of Bears. It does not appear that for the laft hundred Xears any Ships have-vifited this Coaft.
On the South-Eaft of Spitzbergen lies the great Country of Nova Zembla, which has been difcovered from 58 to 68 Degrees of Latitude. It is very uncertain whether it be an Inand, or joined to the Continent; for that which is called the Streights of Weygatz, and is fuppofed to divide this Country from Rufia, is but a frefh Water Bays In the Mufcovite Tongue, Nova Zembla fignifies New Land. It is a moft wretched Country, and yet not altogether deftitute of Inhabitants. This Land was firft dif covered by the Englifh, and afterwards frequented by the Dutch; and their famous Pilot, William Barenz, perifhed in a Voyage made hither in I596. Some Maps lately publifhed in Ruffa, fay, that this Country is joined to that of the Sammoieds by the Pater-nofer Mountains; and there are fome Maps that join it with Spitzbergen or Greenland on the North. However, all this is very uncertain at leaft, and I think very improbable. The Dutch, who winter'd therein, affert, that this Country produces neither: Leaves nor Grafs; but Mr. Hudfon, who vifited it in the Summer, fays, The high Land was very green and pleafant, on which he faw large Herds of Deer grazing. Farther Difcoveries are expected from the Incluftry of the Ruflans, who have already made great Progrefs in their Searches on this Side.
Fobn Mayens Ifland, as the Dutch call it, lies to the South-weft of Spitzbergen; it lies from South-weft to North-eaft ; the Extremity of it is in the Latitude of 7 I Degrees 23 Minutes. There were formerly abundance of Whales in the Sea which wafh the Shore of this Inand, but their being removed farther northward, is the Reafon that this Illand is in a Manner forfaken: There is a Mountain towards the northern Part of it, which extends quite a-crofs the Inland: It is of a prodigious Height, and abfolutely perpendicular, being difcernable thirtyMiles off, at Sea; Beerenbergen; i. e. Bear-mountain, from the prodigious Numbers of thofe Creatures that have been feen upon it; there are feveral good Bays, the Names of which I need not fet down, becaufe, they are no longer vifited. This Coaft, though it is allowed that the Land is habitable, and abounds with Stone; Fifh, and in all Kind of Deer, is forfaken. The greateft Inconveniences attending the Navigation thereabout, is the vaft Quantities of Ice which float on all Sides, but efpecially towards the Eaft, where, in the Spring, it is abfo: lutely inacceffable.

The many Hardfhips and Difficulties to which People are expofed in Voyages to thefe Places, and the many Loffes and Misfortunes that happened to fuch as were employed in the Fifheries upon thefe Coafts, brought them into Difcredit with us, and by Degrees occafioned their being totally deferted, notwithftanding the great Pains that had been taken to promote thefe Difcoveries originally; yet it is very certain, that the Confufions which happened here, in the Time of the Civil War, contributed not a little to check Endeavours of this fort ; and one may very fafely affirm, that thofe unhappy Times were very prejudicial to our Navigation, by confining Mens Thoughts and Endeavours to Things of immediate Profit which are foon worn out, and diverting them from Difcoveries which, how hard and difficult foever, in the Beginning, commonly turn in the End to the greateft Account. Thus we were brought by Degrees to abandon thefe Northern Expeditions, as dangerous, ufelefs, and unprofitable, though we had feveral Advantages over other

Nations:

Nations; and from perffting in which the Dutcb have actually raifed one of the moft confiderable Branches of their Commerce; forfuch, next to their Herring, the Greentand Finhery is efteemed, and very juftly too, as thall be fully hewn in its proper Place. This Advantage however may be faid to have refulted to us from thefe Difcoveries, that it has given us an indubitable Right to refume and purfue them whenever it fhall be judged neceffary or expedient; and perhaps there may come a Time when this will be thought an Undertaking worthy of Encouragement.

Cberry IJland, before-mentioned, lies in the Latitude of 74 Degrees; the Weather in Fune, July, and Auguft, is not only warm, but extreamly hot, fo that, in 1610 , the melted Pitch is faid to have run down the Ship-fides. In this Ifland thère are both Lead and Coal Mines, and in the Seafon of the Year a very profitable Fifhery might be carried on there; perhaps too, greater Advantages might be found out by leaving People to winter in that Inland, which is very well feated for Difcoveries. But it may be faid, that this can never be attempted, becaufe there is no Reafon to imagine that any Englifs would be prevailed upon to ftay in fuch a miferable Place. But to this I anfwer, That two Things ought to be confidered; the firft is, that Cberry Ifland, in all Probability, cannot be a worfe Place than fome of the Factories belonging to the Hudfon's Bay Company; where fome People actually refide at no very confiderable Expence; and that in the Compafs of a Year, we have many condemned in England that, either from the Nature or Circumftances of their Crimes, are very juftly held to be no fit Objects of Royal Mercy ; but if fuch Perfons would make it their Choice to go and winter in this Inand, in order to obtain their Pardon, in cafe they furvived, it might turn to the Advantage of their Country. And I do not doubt, if the Profits that might be probably acquired by a regular Voyage thither every Year were clearly ftated, there would be People enough found willing to furnifh the Expences neceffary for recovering this Trade, which in a few Years would become equally beneficial to them, and to their Country in general. I hint this Matter here for the Employment of their Thoughts, who have a truly public Spirit, and would be glad to fee any thing attempted that may encourage Induftry, promote our Navigation and encreafe our Commerce. I fhall add but one thing more upon this Head; which is, that fo long ago as King Alfred, the Founder of our naval Force, thefe Seas were vifited, and a very profitable Fifhery carried on.; and therefore I can fee no Reafon why we fhould fuppofe that it is impracticable now; and if not impracticable, why it may not be attempted with reafonable Hopes of Succefs, by the prefent Generation : We confider ourfelves as much more knowing, and at the fame time as much more powerful, than our Anceftors were in thofe Days, and therefore it ought to be thought fcandalous in us, to fall Thort of them in Induftry, which every one muft acknowledge to be the Cafe, when Branches of Commerce which were enjoyed by them are loft to us, and that Lofs too abfolutely unregarded.
22. We are very far from having any Certainty that Greenlan! 'is united, on the Eaft, to any other Country whatever : Some have imagined that it was joined to Nova Zembla, but the Difcoveries made by the Dutch in 1670 , have difproved this; for they advanced a great way behind the laft-mentioned Country, and found nothing but Snow and Ice. In order therefore to give fome Account of the Arctic Regions lying next to Greenland on this Side, we mutt have Recourfe to the Expeditions made for Difcovery from Japon. We have, in our former Volume, given fome Account of the Land of Yedzo , or Fe efo, which lies to the North of the great Inand of Nipbon, which is the largeft of thofe known to us by the general Name of Fapon, and from which it is moft probable that Word was framed. The Faponefe are very bad Sailors, and confequently have not been able to make any great Difcoveries on that Side. Our Countryman Mr. Willian Saris, of whom I have given the beft Account I was able, in the former Part of this Work. had a, Commifion from the Government of

Fapon to make Difcoveries on that Side; but it does not appear that he had any Opportunity of executing this Commifion; if he had we hould probably have had a better Account of this Country than we have at prefent, or indeed are ever like to have, in confequerce of any Difcoveries made from Fapon by the Natives.

This Commifion was granted to Mr. Saris in the Year 16I3; and about feven Years after, Father Angelis, a Sicilian Jefuit, adtually went thither to plant the Chriftian Faith, and from him we had the firft tolerable Account of this Country. Some other Miffionaries followed him, and from their Accounts it appeared, that $\mathcal{F} f \int J o$ was neither a very excellent nor a very defpicable Country, in fome Things very far fhort, in'others rather better, than Fapon. The Climate they found to be very cold, but withal very wholefome; the People lefs fprightly, but much honefter, than the faponefe; the Produce of the Place they found not much to be boatted of, but as they came to be better acquainted with it, they were well informed that it was very rich in Silver Mines, and that prodigious Quantities of this precious Metal were yearly tranfported to Japon; notwithfanding which the Traders from this Country brought thofe People, annually, confiderable Quantities of filver Ear-rings, and other Toys; for which they paid a high Price. I mention this Circumftance becaufe fome of the Portugueze Writers would perfuade us, that becaufe filver Rings are brought from Fapon to Feffo, there can be no Silver Mines in the laft-mentioned Country; whereas, by comparing the original Authors, from whom they take their Accounts, it is very evident that the Fact is as we ftate it; neither is there any thing ftrange in it; for in Mexico, where Silver is the principal Commodity, Silver-Toys, and indeed all forts of wrought Plate, fell very dear.

Thefe Miffionaries however deliver it as their Opinion, that the Country of $7 e f f_{0}$ is an Inland, which agrees very well with the foponefe Accounts; but then they diftinguifh better the Upper and Lower Jeffo; the latter they make an Ifland, the former a Contment, the Northern Parts of which they fay are not difcovered, that is, they are not known to the Faponefe; but, as we fhall fhew hereafter, they are not only known, but have been conquered by the Ruffians, who have extended their Empire to the Frontiers of that of Fapon, if we allow the Country of Feffo to make a Part of the Faponefe Dominions; and that it is really dependent upon the Empire of $7 a p o n$, is no longer to be queftioned.

But it is now time to fpeak of the Dutch Difcoveries on this Side; and in order to have a clear Notion of thefe it is requifite to obferve, that the Dutch Eaft India Company, after they had eftablifhed themfelves in the Inand of Formofa, and had fettled their Commerce in Gapon, began to think that it would contribute greatly to the Advancement of their Affairs, if they could find a nearer Paffage into Europe from thofe Countries, and therefore they determined to try whether a North-weft Paffage might not be found on that. Side, which would have been the fame Thing as finding a North-eaft Paffage from Europe. In 1643, the Company fitted out from Batavia two Sloops for this Difcovery; the firft was called the Bufkins, commanded by Capt. HenryCornelius Scbaep; the other, the Caftricoom, under the Orders of Martin Heritfzoom Van Uriez. The Inftructions that the Commanders received were, that they fhould fail on the moft Northern Point of the Illand of Fapon, and from thence to the Height of 56 Degrees; but the former of thefe Veffels being feparated from the latter in a Storm, and obliged to feek for Shelter in one of the. Ports of $\mathcal{F} a p o n$, there was an End of their Expedition, it being feized, and the Crew made Prifoners; but Capt. Uriez, in the Caftricoom, continued his Voyage, and made thofe Difcoveries which will render his Name immortal. In the Latitude of 42 Degrees he difcovered Land, and failed to the Height of 43 Degrees, along a Coaft which was tolerably well peopled, and landing feveral times, was informed by thofe People, that there were feveral rich Mines in their Neighbourhood.

As he failed higher, he found the Country mountainous, covered with very high Trees, and, as the People informed him, abounding with Silver Mines; he called
the higheft of the Nountains Pico Antonio; and tells us fornia and Gapon, is a Point I believe no reafonable farther, That the Country thereabouts was very like that of England, that is to fay, a rich Clay, covered with Grais and Herbs, and at a Diftance he faw very wide Downs. There is no fort of Doubt, that this was the Faft Coaft of the Continent of Geffo. He proceeded from thence through a Gulph, which in the Latitude of 55 Degrees 50 Minutes difcovered itfelf to be a Streight about fourteen Leagues, or fomewhat more than forty of our Miles broad, in the Midft of which was an Inand, and two vaft Continents on each Side. He called the Inand States Land ; the new difcovered Continent, Company's Land; and to the Streights he gave his own Name, which they have ever fince borne, and thefe are the famous Streights of Uriez; which are fuppofed to divide the Continent of Afa from that of 'America; the Land of Feffo, which belongs to Afa, lying on the Left-hand, and Company's Land, which is fuppofed to be Part of America, on the Right.

If this Notion be well founded, then the Country between California and the Streights of Uriez, comprehends no lefs than 80 Degrees of Longitude, and is confequently one thoufand fix hundred Leagues in Extent. The Account that Capt. Uriez gives of States Ifland is, that it is full of high Mountains, the Tops of which are covered with Rocks, without Trees or Grafs: He gives us a large Defcription of the Country on the Left-hand, which is the Land of $\mathcal{F}$ effo; but I do not find that he landed upon the Company's Land at all, or made any farther Difcoveries about it; we muft therefore confine ourfelves at prefent to this Land of Feffo, with which the Mufcovites have brought us better acquainted; for they, by travelling from Siberia, have difcovered that, in the Latitude of 59 Degrees, there is a Gulph which feparates the Continent of Great Tartary from a Peninfula, which they call the Country of Kamt fchatcka which extends from the 42 d Degree of Latitude, which is the moft fouthern Part of the Continent of $\mathcal{F e} / \sqrt{0}$, to 65 Degrees 30 Minutes, and there is bounded by the Ocean.

This Country is divided from the Peninfula of Corea and Great Tartary, by a Gulf of its own Name, and from Company's Land by the Streights of Uriez; fo that we need be in no farther Perplexity about the Land of $\mathcal{F} f l 0$, fince it appears plain to be the fouthern Extremity of this vaft Country, of which the Ruflans are in a great meafure Mafters, and actually navigate that great Sea which feparates Afa from America, in which they have difcovered large Iflands, well peopled, and abounding with various rich Commodities.

- All thefe Difcoveries plainly fhew what vaft Advantage would accrue to the maritime Powers, if a Paffage to the North-eaft were practicable; and perhaps, whoever confiders thefe Difcoveries attentively, will be apt to think it might be done, more efpecially when it is remembred that the Dutch, who were employed in 1670 , in endeavouring to find a North-weft Paffage, advanced within a very few Degrees of that open Sea which is commonly navigated by the Ruffans, and which had infallibly brought them to the Coafts of Fapon and Cbina; fo that it feems equally ftrange that in former Times, when there was no Sort of Knowledge in our Part of Europe, of the Vicinity' of thefe Countries to the Rufian Doniinions, fo many Attempts fhould be made (as will appear hereafter) to the North-eaft, and that none at all fhould be made now, when there is a kind of moral Certainty that fuch a Paffage might be difcovered.

The only fatisfactory Reafon that, as I apprehend, can be given is, the Dutcb are now of Opinion, that the Difcovery of a North-eaft Paffage, or indeed of any other Paffage to the Indies, except that by the Cape of Good Hope, would be extremely prejudicial to them, and therefore think no more of it; and as we are generally governed in our Notions of Things by what the reft of the World thinks, we likewife have quitted all Thoughts of finding fuch a Paffage ; but the Confideration of this Matter belonging properly to another Place, we will fay nothing more of it here, but proceed to the proper Bufinefs of this Section.
23. That there is fome Country or other between Cali-

Man ever doubted, though it muft be confeffed, that no fuch Country has been ever hitherto clearly difcovered: I fay, clearly, becaufe fome obfcure Hints we have both of Continents and Ilands within the Extent before* mentioned. I have, in fome Spanibh Authors, met with an Account of one Frederick de Gama, who in paffing from the Pbilippines to Mexico, difcovered in a high Latitude a very fine Country, along which he failed for a few Days together, and if I am not miftaken, there are in fome Spanifb Charts the Coafts of this Country laid down; but as it is many Years ago fince I faw thefe Charts, I cannot take upon me to fpeak of this Matter with any Degree of Certainty. I mint however obferve, that there is no great Weight in the Objection commonly made to this Suppofition, as if the Spaniards muft certainly have difcovered thefeCountrles, or fome of them at leaft in their Acapulco Ships, and this for two Reafons; firft, becaufe it is certain they really have difcovered feveral Iflands; and next, becaufe for the fake of an expeditious Paffage, they fail in too low a Latitude for making any of thefe Difcoveries that we expeet, fince, I think, it is not probable that any Part of the Country between'Afia and America lies farther to the South than forty-five Degrees, and confequently is not within their Rout from the Pbilippines: but we are not entirely deftitute of Accounts relating to thefe Countries, though it muft be confeffed they are not fo diftinct and clear as we could wifh, yet, fuch as they are, the Reader will very probably be glad to fee them, and it is our Bufinefs to give them.

The firft that occurs is from the Account publifhed by Dr. Cox, in his Defcription of the Province of Carolana, of which he looks upon himfelf as the Proprietor, in virtue of feveral Grants from the Kings of England, the Validity of which I am fure I hall not difpute; and which takes in all, or the greateft Part, of the French Settleménts on the Mififippi. The Defign of the Doctor's Book is to fhew the Importance of this Country to the Crown of Great Britain, which I think he has unqueftionably made out, and in the fifth Chapter thereof he gives us a very large Account of a Part of that Country now under our Confideration, and therefore we fhall make no Scruple of inferting it here for the Reader's Perufal, who will very probably find many Things therein not eafy to be credited, but which, notwithftanding, deferve to be known and examined, and which certainly ought not to be abfolutely explöded, till by fome kind of pofitive Evidence the Facts he afferts are actually difproved.
"It will be one great Conveniency of this Country, "if ever it comes to be fettled, that there is an eafy "Communication therewith and the South-Sea, which " lies between America and Cbina, and that two Ways. «6 By the North Branch of the great yellow River, by "s the Natives called the River of Malforites, which " hath a Courfe of five hundred Miles, navigable to its " Heads or Springs, and which proceeds from a Ridge " of Hills fomewhat North of New Mexico, paffable "s by Horfe, Foot, or Waggon, in lefs than half a Day; "s on the other Side are Rivers which run into a great " Lake that empties itfelf, by another great navigable " River, into the South-Sea. The fame may be faid, "s of the River Mifchaouay, up which our People have "been, but not fo far as the Baron le Hontain, who "s paffed on it above three hundred Miles almoft due "Weft, and declares it comes from the fame Ridge "s of Hills above-mentioned; and that divers Rivers "s from the other Side foon make a large River, which, "s enters into a vaft Lake, on which inhabit two or three "s great Nations, much more populous and civilized "s than other Indians. And out of that Lake a great "River difembogues into the South-Sea, which is, " doubtlefs, the fame with the before-mentioned, the "Head of the two Rivers being little diftant from each " other.
"About twelve or fourteen Years fince, I had im" parted unto me a Journal, from a Gentleman ad" mirably well fkilled in Geography, efpecially of Ame"r rica; who had made thither divers Voyages from
${ }^{6}$ New England, and all our Englifh. Plantations in Ame${ }^{6}$ rica, and vifited moft Parts of the Gulph of Mexico; is where he became acquainted with one Captain Cox-
"s ton, a famous Privateer, who, towards the latter End
os of the Reign of King Cbarles II, was entertained in
"s his Majefty's Service. But whether he was difo-
"s bliged, or his Genius prompted him to follow his old
${ }^{66}$ Trade, having with his Carpenters fitted up a Ship
${ }^{66}$ of twenty-fix Guns, he failed to the South-Sea, with "s a Defign to take the Ship which comes annually
"from the Manillas, or Pbilippine Ifands, in the Eaft-
"r Indies, to Acapulco, the chief Port of Mexico; which
"s Ship, as he had been well informed, ufually made that
"s Part of the Continent that lies between Fapon and
os America, at a famous Point in 42 Degrees; but when
sc he came to the Head of the Ifland, or Peninfula of
© California (it being too foon, by fome Months, for the
${ }^{66}$ putting in Execution his intended Defign) rumaging
${ }^{6}$ o the Coaft, he difcovered a great River in about -

* Degrees North Latitude, which entered a great Lake
${ }^{66}$ near the Mouth, whereof he found a very conve-
©s nient Inand, where he ftaid two or three Months
${ }^{6} 6$ to refit himfelf, happening to have a Man aboard
${ }^{66}$ who underftood the Language of the Country.
cs The Natives finding he was engaged in Expedi
ec tions againft the Spaniards, treated him very kindly,
${ }^{6}$ fupplying him very chearfully with whatfoever he
© wanted, and he contracted great Friendfiip with
"s them: He calls them the Nation Thoya. The Spa-
${ }^{6}$ niards, as. I find, in divers of their Expeditions, call
${ }^{6}$ it Theyago, fometimes Tejago; they are often at War
${ }^{6}$ with the Spaniards, who have been always repulfed
"s by them. They bring thirty or forty thoufand Men
${ }^{6} 6$ in one Body into the Field. Thefe, and two other
"s neighbouring Nations, not much inferior unto
cs them, are accounted the moft Penfible and civilized
© Indians in America. When the Seafon came fit for
© 6 their Expedition, they failed Weft by South, and
"s happened to ftop, upon fome Occafion, at an Inand
"called Earinda, or Carinda; there were five in all
"c near each other, like the Canary Ilands, bur lay
"s rounder, and were thought, one with another,
${ }^{66}$ about fifty or fixty Miles in Compafs. The Inha-
©s bitants were not Thy of them, but fupplied them
${ }^{6} 6$ with Provifions, and brought them Gold to barter,
© for fuch Commodities of ours as they liked, and in
© 6 three or four Days, they purchafed eighty-fix Pound
${ }^{6}$ Weight of that Metal. The Natives told them they
"s were forry they had no more. They taking Care to
si provide only againft a certain Time of the Year, for
is Perfons who come from the Sun-fetting, at a particu-
"c lar Searon, and bartered divers Commodities with
s them for Gold.
"6 Thefe Traders, or Merchants, muft certainly be
© 6 the Inhabitants of Fapon, which I gather from a large
${ }^{6}$ Relation in the Hiftory of that Inland, publifhed by
cs the Dutch, and tranflated into our Tongue, and "s makes the fixth Volume of Ogleby's Collections. They
"s theirein declare, That they fent from Batavia two
${ }^{6}$ Ships (as they prétended) to difcover a Paffage for
"6 the North-eaft Part of Fapon, round Tartary, to
sc Europe, though 'tis very probable they had other
«6 Views. Thofe Ships were feparated a little Eaft of
© Fapon, by a Storm; the Caftricoom proceeded, and
es found the Streight entering into the Gulph of Tarta-
"c ry or Felfo, and fearched the Gulph on the Weft-fide
is to 49 Degrees. The other Ship, the Blefkints, having
s fuffered much by the Storm, put into the Port of
os Nambo, near the North-eaft End of Japon, not "6 doubting they fhould be kindly received, being in
© League, and having a free Trade with their Empire
"s but while they were refitting, they were unexpectedly
so furprized by the Faponefe, fent to Court, and very
os ftrictly examined, whether they had not been at, or
ss went not to difcover, the Gold Illands, as they called
66 them, lying to the Eaft, of which the Emperor
os is fo jealous, that it is capital for any to go thither es without his Permiffion, or to declare to others the Diftance and Situation of them; and had not the Dutch given uncontroulable Evidence ${ }_{3}$ that they had
's not been, nor were they going thither, but only upon ' the formentioned Difcovery, they had been all exe6 cuted.
" There are, upon the Coaft, between America and " Fapon, divers very large and fafe Harbours, and a " very good Climate; the Coaft ftretching South-weft " moitly from 40 to - Degrees of North Latitude.
" The Seas abounding with Fifh, and the Land with
"6 Fowls and Venifon ; the Inhabitants are fociable and
" hofpitable. I have a Draught and Journals of all the
\& Coafts from America, with thofe of diverfe Harbours, " until you are within about one hundred Leagues of the "6 Streight of Uriez, which the Dutch difcovered about
"f fixty or feventy Years fince; and which is the En"s trance of the Sea or Gulph of Tartary, lying one " hundred and twenty Leagues North-eaft from Nam" boe, the moft Northerly Haven or Promontory of c Japon. This Streight, or rather thefe Streights (there " being two made by a long Illand) are the Inlets into "s a great Sea or Bay, into which difembogues a vaft " River on the Weft-fide of it, between 49 and 50 " Degrees of North Latitude; navigable many hundred " Miles, by the biggeft Ships, and is made by the Con" flux of many large Rivers, fome of which come "from the South-weft, as Cbingola, Hiluras, Ola, Sun"goro, and their Fountains near the great Wall of Cbina, " and run through the Dominions of the Eaftern Tar-
" tars, who are now Mafters of Cbina. Other Rivers
"s from the North-weft, proceed from the Territories of ss the Czar of Mufcovy, who hath built divers large " and well fortified Cities, on the main River of " mour, and feveral of its Branches, as Negovim, Ne" pebou, Albazin, Argun, Nettinfkoy, \&c.
" This River of Xamour, or Amura, hath a Courfe © from its furtheft Fountains above one thoufand two "c hundred Miles, without any Interruption by Cata"s racts, fo frequent in all the other great Rivers in Muf"covy, as the Oby, Feneffeg, or Feneflca, \&xc. By this " River you may trade with the Inhabitants of Fed $\int$ "s for Furs, who have great Store, and thofe very rich; "6 they inhabit all the Coaft on both Sides the Mouth "s of the River, and a confiderable Way upit. You " may likewife traffic with the Mufcovites for the fame "Commodities, who fell them there for a fourth Part " of what they yeild in Mofcow, or Arcbangel; thefe " Parts being above 40 Degrees almoft due Eaft from
${ }^{6}$ Mofcore, their capital City, a moft prodigous tedious "s, and difficult Journey, as appears by divers large and "s accurate Journals, which have been many Years pub-
"6 lifhed in Print; and by means of the Rivers which
«s come from the South-weft, you may correfpond with
" the Eaftern Tartars, Cbinefe, and the great rich
" Kingdom of Tanguth, all now united under one and
" the fame Emperor, being very civilized Nations, and
" kind to Strangers. To fay nothing of the great and
" rich Pesinfula of Corea, which is contiguous to one
"s or two Branches of this River, was once a Province
ss of Cbina, hath the fame Manners and Language, and
"s is now tributary to the prefent Emperor. This Ri-
cs ver, and its Branches, are in a good Climate; it
"s never varying above two or three Degrees from a
"s due eafterly Courfe. Three or more Ships may be
"f fent every Year, who may part at the Streights of "6 the Tartarian Gulph, or Sea; one for Yedzo and the " River, another for Fapon, and a third for Nortb Cbi" na, to the great City Truxo, and the Port of Pekin, "s the Capital of that Kingdom, from which it is not
"، above one Day's Journey by Land or Water ; and
"s there is not a better Commodity, or of which more " Profit may be made, than of the Furs, which are fo "s eafily procured, and fo foon brought into that impess rial City, where, in the Court, and among the Gran" dees, there is a prodigious Confumption of them, and " moft extravagant Prices given for them, efpecially "s thofe of the better Sort, though even the meaneft "s come to an extraordinary good Market."

It muft be confeffed that there are fome very ftrange and fingular Paffages in this Relation, to which fome Objections might be made; but, however, I think it better to pafs thefe by at prefent, that we may bring in
all our Obfervations at once; fo as that they may affift and give Light to each other, and render the Subject upon the whole more intelligible. I fhall therefore proceed to another very curious and entertaining Relation, publifhed many Years ago, and fince revifed; and fome Remarks added by the ingenious Mr. Dobbs, to whom his Country is fo much obliged for the Pains he has taken to revive the Concern taken for, and Endeavours to find out, a North-weft Paffage. This Narrative is very clear in itfelf, and there is therefore no Sort of Neceffity that we fhould trouble the Reader with any farther Introduction; only it may be right to obferve, that it relates alfo to that Part of the Northern World of which we are now fpeaking.

The Viceroys of Nerv Spain and Peru, having Advice from the Court of Spain, that the Attempt for the finding a North-weft Paffage, which had been tried before by Hudfon and fames, was again attempted in 1609 , by fome induftrious Navigators from Bofon in New England, Admiral de Fonte received Orders from Spain, and the Viceroys, to equip four Ships of Force; and being ready to put to Sea the 3 d of April, 1640 , from Lima; the Admiral in the Ship Spirius, the Vice-Admiral, Don Diego Penelofa, in the St. Lucia, Pedro de Bernarda, in the Roffaria, and Pbilip de Ronquillo, in the King Pbilip, the 7 th of April, at five in the Evening, he got to St. Helen, in 2 Degrees South Latitude, where he took in a Quantity of Bitumen or Tar, by way of Medicine againft the Scurvy and Dropfy.' The Ioth he paffed the Equinox at Cape del Paffao, the I ith Cape St. Francijco, in I Degree 7 Minutes North I, atitude, and anchored at the Mouth of the River St. Fago, and took in there feveral Refrefhments. The 16 th he failed from thence to the Port and Town of Ralco, three hundred and twenty Leagues Weft-north-weft, Wefterly about II Degrees i4 Minutes North Latitude. It is a fafe Port, covered from the Sea by the Inands Ampallo and Mangreza, both well inhabited by Indians. Ralco is but four Miles over Land to the Head of the Lake Nicaragua, that falls into the North Sea, in 12 Degrees North Latitude, near the Corn or Pearl Iflands; here being plenty of fine Timber, he bought four Shalops, built exprefly for failing and rowing, about twelve Tons each, and thirty-two Feet in the Keel.
The 26th he failed from thence to Saragua, within the Iflands and Sholes of Chamilly, in 17 Degrees $31 \mathrm{Mi}-$ nutes North Latitude, four hundred and eighty Leagues North-weft by Weft from Ralco. From Saragua, and Compoffello, near this Port, he took in a Mafter, and fix Mariners ufed to trade on the Eaft-fide of California for Pearl; which the Natives catch on a Bank in Latitude 29 Degrees, North from the Baxas St. Juan, in 24 . Degrees North Latitude, twenty Leagues North-north-eaft from Cape St. Lucas, the South-caft Point of California. The Mafter the Admiral had hired, with his Veffel and Mariners, informed him that two hundred Leagues North from Cape St. Lucas, a Flood from the North had - met the South Flood, and he was fure it muft be an Inand. Don Diego Penelofa. undertook with his Ship and four Shallops, to difcover whether Califormia was an Inand or not, along with the Mafter and his Mariners, they hired at Saragua; but Admiral de Fonte, with three Ships, failed from them, within the Ines of Cbamilly, the roth of May, 1640 ; and having got the Length of Cape Abel, on the Weft-fouth-weft of California, in 26 Degrees North Latitude, one hundred and fixty LeaguesNorth-weft by Weft from the Ines of Cbamilly, the Wind fprung at South-fouth-eaft a fteady Gale; that from the 26 th of May, to the 14th of fune, he had failcd to the River of Rays, in 53 Degrees North Latitude, not having Occafion to lower a top Sail in failing eight hundred and fixty-fix Leagues North-north-weft, four hundred and ten Leagues from Port Abel to Cape Blanco, and four hundred and fixty-fix to Rio los Reys, and failed two hundred and fixty Leagues in crooked Channels, amongft the Iflands, named the Arcbipelago de St. Lazarus, where the Ship's Boats always failed a Mile a-head, founding to fee what Water, Sand, and Rocks there were.

The 22d of June Admiral de Fonte difpatched one of
Vol. II. Numb. 96.
his Captains to Pedro de Bernarda, to fail up a fair River, a gentle Stream, and deep Water; he went fiift North-north-eaft, and North-north-weft, into a large Lake full of Inands, and one very large Peninfula, full of In habitants, a friendly honeft People in this Lake. He named it Velafoo, where Captain Bernarda left his Ship, nor all up the River was it lefs than four, five, fix, feven, and eight Fathom Water; both the Rivers and Lakes abounding with Salmon, Trouts, and WhalePearch, very large ones, fome two Foot long; and with three large Indian Boats, called Piragues, made of two large Trees, fifty and fixty Foot long; Captain Bernarda firft failed from his Ships in the Lake Velafoo, one hundred and forty Leagues Weit, and then four hundred thirty-fix Eaft-north-eaft, to 77 Degrees North Iatitude. Admiral de Fonte, after he had difpatched Captain Bermarda on the Difcovery of the North and Eaft Part of the Tartarian Sea, failed up a very navigable River, which he named Rio los Reys, that ran neareft North-eaft, but on feveral Points of the Compafs, fixty Leagues at low Water, in a fair navigable Channel, not lefs than four or five FathomWater; it flowed in both Rivers near the fame Water, in the River los Reys, twentyfour Foot, full and change of the Moon, a South-foutheaft Moon made high Water; it flowed in the River de Haro twenty-two Feet and a-half, full and change.

They had two Jefuits with them, who had been on their Miffion to 66 Degrees North Latitude, and had made curious Obfervations. The Admiral de Fonte received a Letter from Captain Bernardd, dated the 27 th of fune, 1640, that he had left his Ship in the Lake - Velafco, betwixt the Ifland Bernarda, and the Lake Conibaflet, a very fafe Port; he went down a River from the Lake, three Falls, eighty Leagues, and fell into the Tartarian Sea, in 6I Degrees with the Pater Jefuits, and thirty-fix Natives, in three of his Boats, and twenty of his SpaniJS Seamen; that the Land trended away North-eatt; that they fhould want no Provifions, the Country abounding with Venifon of three Sorts, and the Sea and Rivers with excellent Fifh (Bread, Salt, Oil, and Brandy, they carried with them); that he flould do what was pofible. The Admiral, when he received that Letter, was arrived at an Indian Town called Conalfet, on the South-fide of the Lake Belle (where two Pater Jefuits, on their Miffion, had been two Years) a pleafant Place. The Admiral, with his two Ships, entered the Lake the 22d of Fune, an Hour before high Water, and there was no Fall or Cataract, and four or five Fathom Water, and fix and feven generally; in the Lake Belle there is a little Fall of Water till half Flood, and an Hour and a Quarter before high Water the Flood begins to fet gently into the Lake Belle. The River is frefh at twenty Leagues Diftance from the Mouth or Entrance of the River los Reys. The River and Lake abound with Salmon, Salmon-Trouts, Pike, Perch, and Mullets, and two other Sorts of Fifh, peculiar to that River, admirable good; and Lake Belle alfo abounds with all thofe Sorts of Fifh, large and delicate; and Admiral de Fonte fays, the Mullets, catched in los Reys and Lake Belle, are much delicater than are to be found in any other Part of the World.
The firt of $\mathfrak{F u l y}, 1640$, the Admiral failed (from the Ships in the Lake Belle, in a good Port, covered by a fine Inland, before the Town Conafet) from thence to a River he named Parmentiers, after his Comerade Mr. Parmentiers, who had exactly marked every thing in and about that River, and paffed eight Falls, in all thirty-two Feet, perpendicular from its Source; out of Lake Belle. it falls into the large Lake he called Lake de Fonte, at which Place he arrived the 6th of $7 u l y$. This Lake is one hundred and fixty Leagues long, and fixty broad; the Length is Eaft-north-eaft, and Weft-fouth-weft, twenty, thirty, and in fome Places fixty, Fathom deep. The Lake abounds with excellent Cod and Ling, very large and well fed; there are feveral very large Inands, and ten fmall ones; they are covered with fhrubby Woods, the Mofs grows fix or feven Feet long, with which the Moofe, a very large Sort of Deer, are fat in the Winter, and other leffer Deer, as fallow, \& ${ }^{3}$. There are abundance of wild Cherries, Strawberries, Hurtle-

5 H
Berries,

Berries, and wild Currants, and alfo of wild Fowl, HeathCocks and Hens, likewife Partriges and Turkeys, and Sea-Fowl in great Plenty. On the South-fide of the Lake is a very large, fruitful $\ddagger$ fland, which had a great many Inhabitants, and very excellent Timber; as Oak, Ahh, Elm, and Fig-Trees very large and tall.

The +4 th of fuly, they failed out of the Eaft-north-ealt End of the Lake de Fonte, and paffed a Lake he named Eftricho de Ronquillo, thirty-four Leagues long, two or three broad, twenty, twenty-fix, and twenty-eight Fathom Water : They paffed this Streight in ten Hours, having a fout Gale of Wind and whole Ebb. As they failed more eafterly, the Country grew very fenfibly worfe as it is in the North and South of America; from thirty-fix to the extreme Parts, North or South, the Weft differs not only in Fertility, but in Tenperature of Air, at leaft ten Degrees; and it is warmer on the Weft-fide than on the Eaft, as the beft Spaniff Difcoverers found it, whofe Bufinefs it was, as it is noted by Alvarez Acofto and Mariana. The iyth they came to an Irdian Town, and the Indians told their Interpreter, Mr. Parmentiers, that a little way from them lay a great Ship, where there never had been one before; they failed to them, and found one Man advanced in Years, and a Youth: The Man was the greateft Man in the mechanical Parts of the Mathematics he had ever met with; the Admiral's fecond Mate was an Englifbman, an excellent Seaman, as was his Gunner, who had been taken Prifoner in Campeachy as well as the Mafter's Son.

They told him the Ship was of New England, from a Town called Bofon, and the whole Ship's Company came on board the 3oth, and the Navigator of the Ship, Capt. Sbapley, told him his Owner was a fine Gentleman, and Major-General of the fineft Colony in New England, called the Maflachufets, fo he received him like a Gentleman, and told him his Commiffion was to make Prize of any People feeking a North-weft or Weft Paffage into the South-Sea; but he would look upon them as Merchants, trading with the Natives for Beavers, Otters, and other Furs and Skins; and fo for a fmall Prefent of Provifions, he had no need of, he gave him his Diamond-Ring, which coft him one thoufand two hundred Pieces of Eight, (which the modeft Gentleman received with Difficulty) and having given the brave Navigator Capt. Shapley, for his fine Charts and Journals, a thoufand Pieces of Eight, and the Owner of the Ship, Seamor Gibbons, a QuirterCafk of good Poruvian Wine, and the ten Seamen each twenty Pieces of Eight, the 6th of Auguft, with as much Wind as they could lly before, and a Current, they arrived at the firft Fall of the River Parmentiers; the IIth of Auguf, eighty-fix Leagues, and was on the South-fide of the Lake Belle, on board their Ships; the 16th of Auguf, before the fine Town Conaflet, where they found all Things well; and the honeft Natives of Conaffet had, in his Abfence, treated his People with great Humanity ; and Capt. de Ronquillo anfwered their Civility and Juftice.

The 26th of Auguf an Indian brought a Letter from Conaffet on the Lake Belle from Capt. Bernarda, dated the IIth of Auguf, where he fent him word, he was returned from his cold Expedition, and did affure him, there was no Communication out of the Spanifb, or Atlantick, Sea, by Davis's Streigbt, for the Natives had conducted one of his Seamen to the Head of Davis's Streight, which terminated in a frefh Lake about thirty Miles in Circumference, in the 8 oth Degree of North Latitude; and that there were prodigious Mountains North of it ; befides, North-weff from that Lake the Ice was fo fixed from the Shore, to a hundred Fathom Water, for aught he knew, from the Creation; for Mankind knew little of the wonderful Works of God, efpecially near the North and South Poles: He wrote farther, that he had failed from Baflet Ifand North-eaft, and Eaft-north-eaft, and North-eaft by Eaft, to the 7gth Degree of Latitude; and then the Land trended North, and the Ice reited on the Land.

He received afterwards a fecond Letter from Captain Bernarda, dated from Minbanfet, informing him he made the Port of Arena twenty Leagues up the River del Roye,
the 26th of Auguf, where he waited his Commands. The Admiral having good Store of falt Provifions of Venifon, and Fifh, that Capt. de Ronquillo had falted by the Admiral's Orders in his Abfence, and an hundred Hogtheads of Indian Wheat, or Maize, he failed the 2 d of September, $6_{4} \mathrm{O}$, accompanied with many of the honeft Natives of Conaffet; and, on the 5 th of September in the Morning, about eight was at Anchor between Arena and Minbanfet in the River of Reys; after that he returned home, having found there was no Paffage into the Soutb Sea by that they call the North-wefl Paffage : The Charts will make this much more demonftrable.
" The Style of the foregoing Piece, fays Mr. Dobbs
"s very juftly, is not polite (being wrote like a Man whofe
" Livelihood depended on another Way, but with
" abundance of Experience, and like a Traveller) yet
" there are in it fo many curious and hitherto unknown,
"Difcoveries, that it was thought worthy a Place in thef
"Memoirs, and it is humbly prefumed, it will not be
"s unacceptable to thofe who have either been in thofe
" Parts, or will give themfelves the Trouble of reviewing
"s the Charts. By this Abftract of de Fonte's Voyage, "w which has all the Appearance of being authentic, it is " plain, that there is a navigable Paffage from Hudfon's "Bay to California, and though it has not had Juftice "c done to it in the Tranflation, and probably has not been "s exactly copied, or printed; yet, making an Allowance "for Errors of that Kind, it has throughout the Air "s of Truth: There may be, probably, fome Errors in " the Figures relating to the Degrees of Latitude and "Leagues in their Courfe, for the Length of the Lake " de Fonte is faid to be one hundred and fixty Leagues, "s and the Streight Ronquillo thirty-four. Upon his Re" "urn from the Bofon Ship, he is faid to have got again "s to the Mouth of the River Parmentiers in five Days, "s with a ftotit Gale and brifk Current, which, he fays, "s was eighty Leagues; which plainly ought to have " been one hundred and eighty, otherwife, with that "s ftout Gale and Current ; it would have been but fixteen, "Leagues in twenty-four Hours, and the other would " be but thirty-fix, which was reafonable failing. As to "s his faying there was no Paffage, although he met the "E Bofton Ship, I take his Meaning to be, that either "Bernardo found no Paffage by the North-weft of Davis's "Streigbts, the Way probably the Spaniards expected it, " or, that by his paffing upon a River ta Lake Belle, "s and down another to Lake de Fonte, by what he called "Sharps or Falls, he apprehended there was no navigable " Paffage for Ships the Way he went ; or he defired to "s difguife it, to prevent other Europeans from attempting *s it to his Country's Prejudice; and therefore he did not " publifh his Chart which he refers to in his Letter.
"s It is plain that it was an Inand below the Lake Belle, " which divided the River los Reys from the River Par" mentiers, and as the Seain Lake de Fonte was upon a " Level with the Sea at the Mouth of Rio los Reys, and "s the Tide flowed up that River into the Lake Belle, it ' muft alfo flow up the River Parmentiers, and the Sharps " and Falls be obferved in that River, were only the "Sharps occafioned by the feveral Ebbs he had in failing " down the River, being five Days in paffing to the Sea,
"fo that the great and true Paffage was without that "Illand, which the Admiral miffed, by getting among ss the Inands in the Arcbipelago of \$t. Laurence. It is a "Misfortune his Chart was not publifhed, which would " have given more Light as to the Lands, Lakes, and " Rivers he mentions, row we can only guefs in the " dark, and may be miftaken.
"However, I fhall venture to give my Opinion of "s their Situation, though I may not judge right. As I "s apprehend it the Arcbipelaga of St. Lazarus, and Rio " los Reys, and Lake Belle, and alfo the Lake of Velafco, "s are no Part of North America, but a Country diftinct " from it; the Paffage lying betwixt thofe Lands and "America; for in his Journal he fays he failed eight " hundred and fixty-fix Leagues North-north-welt from "Cape Abel, in California, in Latitude 26 Degrees, "s the laft two hundred and fixty of which was in crook" ed Channels, among Illands, until he got to Rio los
"Reys, in Latitude 53 Degrees; fince by all other Ac" counts the Coaft of Anzerica falls off North-eaft from "Cape Blanco. This muft have been a Country diftinct " from America; here he found two Rivers, one came " from the North, from the Lake Velafco, which Ber" narda failed up, and the other came from the North" eaft, from the Lake Belle, which lay betwixt Latitude " 45 and 55 Degrees. Upon what Point the Par" mentiers ran out of the Lake Belle is not mention" ed, but at Rio los Reys it ran South-weft. We may " fuppofe the other ran Eaft, or South-eaft, and fell " into the Sea, which he calls the Lake de Fonte, in " near the fame Latitude, that Lake, or Arm of the " Sea, ftretching thence Eaft-north-eaft one hundred and " fixty Leagues, if there was any Weft Variation, as " there is now, the North-eaft End of that Lake might " be in Latitude 57 or 58, almoft Weft of Cburchill ; " and the Streight Ronquillo running ftill North-eaft, " might end in Latitude 59. In two Days from thence " he came to an Indian Town, probably about Latitude " 60 , near which the Bofon Ship lay ; fo that it may be " imagined the Bofton Ship had paffed into fome of the
"Openings near Whale Cove, and got to Latitude " 60 , or, perhaps, to 59 Degrees, and was trading " for Furs, and the Ship might have been afterwards " loft or furprized by the E/fimaux, upon her return, " having but twelve or thirteen Hands aboard, fince no
" Account of this Voyage was ever tranfmitted from
"Bofon. Upon Enquiry, made by Order of Sir Cbarles
"Wager, whether any one of the Name of Shapley, which
" was the Mafter's Name, lived at that Time in Bofon, " it appeared from fome Writings, that fome of that
"Name then lived in Bofon, which adds to the Weight
" of de Fonte's Letter, and confirms its being an au"thentic Journal."
24. We have now gone compleatly round the Globe, making the North Pole our Centre; and have, fo far as the beft Difcoveries would enable us, given the Reader a Defrription of the Countries which lie in thefe cold Climates; this, for any thing I know, is a Work never before performed, or at leaft not fo fully and circumftantially. I mult, however, admit there would be no great Merit in doing this, if no Ufe could be made of it ; but this is very far from being the Cafe; for in the firt Place it opens to us the entire Knowledge of the terraqueous Globe; I fay the intire Knowledge, becaufe if we were once thoroughly acquainted with the Manner in which the Countries are difpofed about the North Pole, we might, from thence, gain tolerable Satisfaction with regard to the antarctic Regions, in refpect to which, from actual Difcoveries, we know very little. In the next Place, we ought to confider, that hitherto no new Countries have been found without confiderable Advantages refulting to thofe who difcovered them; and before we conclude this Section, we fhall fhew that the Whale-fifhing, in thefe Northern Seas, is an abundant Recompence to fuch as take the trouble of failing on them. There is yet a third Confideration, which is the Means of finding a Paffage, this Way round the Globe, which every body knows would be not only a great, but a gainful, Difcovery, more efpecially to us who lie fo conveniently for taking the Advantage of it, and to whom the bleak and barren Inands of the Orkneys, would become a kind of Indies, if once fuch a Difcovery was made. We can never, however, rationally hope for this, unlefs the Situation of all the Countries round the Globe, confidering the Pole as the Centre of the Northern Hemifphere, be tolerably well known.

What can be done with refpect to this, from the Pe sufal of actual Surveys has been already fhewn; we will now therefore endeavour to carry it a little farther, by adding Reafon to Experience, and refecting upon the Lights we have received. It is certain, becaufe it is felf-evident to every Reader, that the Countries round the Pole muft be difpofed in one of thefe three Manners : Firft they may be joined together, and alfo to fome of the great Continents already known. Or, 2 dly, they may be joined together, and make a diftinct Continent. Or, 3 dly, they may be feparated from each other, and
from all the other Continents. We muft allow, that there are Authorities, in favour of each of the three Dirpofitions, and therefore we will fpeak of them feparately, though very briefly. Firft then, that they are joined to gether, and to the known Continents, there are two Matters of Fact alledged in the Nature of Proofso The firlt is, that the People of Groenland, by which I mean the old Chriftian Colonies, had a Tradition of a Harald Goat, that travelled into their Country from Norway, which, whether true or falfe, by the Way proves nothing, or at leaft proves nothing to the purpofe. If the Story of the Goat be a Fable, there is an End of it; but if it was Truth, which, however, is very improbable, then it came by Sea, that is, in the Winter-Seafon upon the Ice; for that Groenland is not joined to Norwoy, is as certain as any thing can be. Tradition may probably prove fomething, where there is no other Evidence; but Tradition againft Evidence is Nonfenfe. The other Point of Fact is, that a Jefuit, who had been in California, going afterwards to the Pbilippines, and from thence to Cbina, fays there he faw a Woman whom he had known in the firft of thefe Countries, who faid fhe was brought thither over Land, except one or two little Streights which fhe paffed in fmall 'Veffels; but this does not come up to the Point, fince, however fmall thefe Streights might be, they moft certainly disjoin the Countries of each Side of them.

As to the fecond Opinion, that thefe Lands join together, though disjoined from the great Continent, I know nothing that has been faid for it, except the Tradition of the Groenlanders, about the narrow Streight between their Country and America, and of there being great Countries to the Eaft of them, of which they own they know nothing. The third Opinion, though it cannot be fully proved, feems to be very probable, and if it be not confiftent with Truth, looks, at leaft, very like it. It is thought that Groenland is disjoined from America by Davis's Streights, and that it is actually disjoined from Greenland we have tolerable Evidencee from thofe who have vifited the laft mentioned Coaft, none of them fpeaking of any Land on the Weft. It was formerly thought that Greenland, or Spitzbergen, and Nova Zem$b l a$ were the fame Continent, and that they were feparated from Rufia, or Tartary, by the Streights of Waygatz; but we are now fatisfied it is not fo, but that in all probability Greenland is an Inand, or rather a Clufter of Inlands, feparated by the Ocean, from the Land of Yedzo, as that Country moft certainly is from Companies Land, by the Streights of Uriez; as on the other Hand, this Arctic Continent is thought to be feparated from California, by the Streights of Anian. The Truth of the Matter feems to be, that there are a multitude of Inands of different Sizes, lying all round the North Pole, but how difpofed we cannot yet fay; and it is upon this Suppofition, that the Hopes of finding a North-eaft, or a Northweft, Paffage has been built.

What Reafons may be offered in both Cafes? What Attempts have been made? And how they have ended? the Reader will hereafter fee. At prefent we will content ourfelves with obferving, that fome very great Men have been of Opinion, that the moft probable, the moft feafible, and fhorteft Paffage, muft be by failing directly North, and under the very Pole itfelf. A bold and amazing Propofition at firlt Sight, and which we have more than once promifed the Reader fhould be fairly examined; for ftrange and furprizing as it feems, it is not all impoffible that it may be true. It has been already obferved, there are really fufficient Reafons to perfuade us, that the Countries round the Pole, are fo many Inands feparated from the known Continents, as well as from each other, it will thence appear highly probable that there may be an open Paffage immediately and directly under the Pole, becaufe it is plain there can be nothing but Sea there.
It may, indeed, be faid, that though there be Sea, there may, for all that, be no Paffage; in Proof of which it may be alledged, that the Dutch, in 1679 , found it impoffible to pafs for Ice, to the Northward of Nova Zembla; and if the Sea be thus frozen, in 79 or 80 Degrees,
what Reafon is there to believe that it is not much more ftrongly frozen in a higher Latitude? The Reafon feems to be clearly this: That freezing does not depend fo much upon the Latitude of Places, as upon their Situation, in other refpects; as is very plain from hence, that the moft intenfe Cold is felt in fome Parts of Hudfon's Bay, which lies very near in the fame Latitude with London. Now that under the Pole the Sea fhould not freeze, fome very ftrong Reafons may be given : Firft, it is not known that the main Sea ever freezes. Thofe vaft Mountains of floating Ice, that frequently render the Coaft of Groenland inacceffible, are formed three Ways: Firtt, by the falling of vaft Rocks of Ice, from the Mountains, into the Sea. Next by the Tides breaking up the Ice at the Mouths of great Rivers. And, laftly, by the Addition of Snow and frefh Water to the Sea Water, which weakens its Force, and difpofes it to freeze. We may alfo take Notice of what we have before heard of the Froft-Fogs or Vapours arifing from the Sea, through the Ice, which are allowed to be warm, and from whence we may, in fome Meafure, difcern the Caufe why the Ocean does not freeze.
Secondly, under the Pole itfelf, for fix Months, the Sun is continually above the Horizon, and confequently mult have a very great Effect, more efpecially on the Sea; fo that if we confider this Matter attentively, we cannot but be convinced that it is abfolutely impoffible the Sea fhould be frozen; ' on the contrary, there feems to be more probable Grounds to fufpect that the Heat may be troublefone. Thirdly, thefe Reafons are fupported, thefe Conjectures are verified, by daily Experience; for on the Coafts of Greenland, in the Latitude of 82 Degrees, the Heat is known to melt Pitch, when great Quantities of Ice, are unmelted on the Coaft in 69 Degrees. We may, from thefe Reafons, therefore conclude, not only with Probability, but with Certainty, that during the Summer, at leaft, there is a clear and open Sea under the Pole, and, if fo, the Paffage that Way is indifputably the fhorteft, the eafieft, and the moft practicable, that has been hitherto thought of. This was long ago obferved by the famous Sir William Monfon, as great a Seainan as this Nation could ever boaft, who affirms that the Paffage, this Way from England, to Cbina, does not exceed fifteen hundred Leagues.
But we will now proceed to Matters of Fact, and fhew that this not only may be done, but that it actually has been done; as will appear from the following Paper, communicated to the Royal Society, by Mr. 7ofepb Moxon, one of its Members; which therefore we flall tranfcribe, as a Piece that cannot fail to give the Reader, on this Head, as full Satisfaction as he can defire. Thus then it runs: "Among the many Effays that have been " made to find a clear Paffage to Fopon, Cbina, \&c. " the moft probable and likely, hath as yet (in my "Opinion) been overfeen, or, at leaft, not attempted; " and therefore I hall, hereby, communicate my Con"c ception to public Approbation or Cenfure; it is, that " a Paffage may very probably be about the North "Pole, and the Reafons inducing me to conceive fo is: " That we have no Certainty, from all the Difcoveries "c that have been made of any Land lying within eight "Degrees about the Pole; but on the contrary, I have " been credibly informed, by a Steerfman of a Dutch "Greenland Ship, that there is a free and open Sea un"s der the very Pole, and fomewhat beyond it; and I, " for my own Part, give Credit to his Relation, and " do conceive that any fober ingenious Man would do the "c like, did he know in what an honeft Manner, and by " what an Accident, I happened to hear it; for thus it ${ }^{6}$ was:
" Being about twenty-two Years ago in Amferdam, « I went into a public Houfe to drink a Cup of Beer "for my Thirft; and fitting by the public Fire, among "s feveral People, there happened a Seaman to come in, "c who feeing a Friend of his there, who he knew went in is the Greenland Voyage, wondered to fee him, becaufe " it was not yet Time for the Greenland Fleet to come es home, and afked him what Accident brought him "chome fo foon? His Friend (who was the Steerman.
${ }^{6}$ aforefaid, in a Greenland Ship that Summer) told that "t their Ship went not out to fifh as ufual, but only ". to take in the Lading of the whole Fleet, to bring it " to an early Market, E'c. But, faid he, before the "Fleet had caught Fifh enough to lade us, we, by Or"der of the Greenland Company, failed unto the North "Pole, and came back again. Wherenpon I entered " into Difcourfe with him, and feemed to queftion the "Truth of what he faid; but he did affiure me it was "s true, and that the Ship was then in Amferdann, and " many of the Seamen belonging to her ready to juftify " the Truth of it; and told me, moreover, that they "" had failed two Degrees beyond the Pole. I afked him " if they found no Land or Tliands about the Pole? He "s anfwered no, there was a free and open Sea. I afked " him if they did not meet with a great deal of Ice? " He told me no, they faw no Ice. I afked him what "Weather they had there? He told me fine warm "Weather, fuch as was at Amflerdam in the Summer" time, and as hot. I fhould have afked him more "Queftions, but that he was engaged in Difcourfe with " his Friend, and I could not, in Modefty, interrupt " them longer. But I believe the Steerfman fpoke Mat" ter of Fact and Truth; for he feemed a plain, honeft, " and unaffectatious Perfon, and one who could have ، no Defign upon me.
"But though I believe this Story, yet methinks I " hear many object againft it, and are apt to urge " three plaufible Reafons to prove it falfe, or, at leaft, " fome Particulars of his Relation : And firt, That it "cannot be warm under the Pole, becaufe that about "Greenland, and many other Parts lefs northerly, the Sea "s is fo full of great Bodies of Ice that Ships can hardly " fail for it. Secondly, if warm, yet not fo warm as at "Amferdam in the Summer-time, becaufe the farther "، northerly, the colder 'Weather. Thirdly, If they were " under the Pole, they could not tell how to come back, " but that they might as well go farther as return nearer " to home; becaule the Needle always pointing North, " they mutt therefore lofe themfelves in the North Pole, " where it mult refpect all Points of the Horizon " alike.
"One Anfwer may ferve to the firft and fecond Ob" jection, That it cannot be warm under the North "Pole, E $c$. If we confider the Experience of Travellers "" and Navigators, we are told, that between the Tro" picks, nay, under the Equinoctial, is generally as " moderate Weather as here in England in Summer-time; " why may it not then be as warm under the Pole as " here, or at Amferdam, in the Summer-time? The fnall "Height the Sun has there can be no Exception, for " then we, having the Sun, in its Summer-Soliftice, in " leffer Altitude than between the Tropicks, it muft " needs be colder here; which is contradicted: But one "Reafon why it is as warm here as between the Tropicks " is, becaufe between the Tropicks the Sun remains "above twelve Hours of twenty-four above the Ho"rizon, to warm it; when, as here, it remains al" moft feventeen Hours of twenty-four above the Ho" rizon, and therefore leaves a greater Impreffion of "Heat upon it ; and the farther northward we go, the " longer it remains above the Horizon, and lefs under " the Horizon every twenty-four Hours, till we come "within the Arctic Circle, where the Sun remains for " half a Year together; viz. all the Summer above the "Horizon, and never fets; and therefore, though his "Beams are not fo perpendicular, yet they muft needs "caufe a great Degree of Heat upon the Horizon. "And if it be argued, that it is fo cold about Green" land, \&xc. and the Seas fo full of Ice that Ships can " hardly fail for it, yet cannot that Argument prove that " it is fo about the Pole; becaufe the Ice is made about "Shores of Land, but never in open Sea, and comes " here only by Strength of Currents, or high Winds, "which do indeed carry it fome fmall Diftance from "the Shore;, but as this Relator faid, there is under " the Pole a free and open $\mathrm{Sea}, \mathcal{E}^{3} c$. and confe"quently clear of Ice, in Summer-time, at leaft.
"B Befides, Experience tells us, that all Land-breezes

## Chap. I.

lying round the NORTH POLE.
" are colder than thofe that come from the Sea, and "therefore it may be cold about Greenland, becaufe of "s the Land, yet warmer under the Pole while the Sea is " open, $\delta^{2} c$. The third Objection is, That if they were under the Pole they could not tell how to come back, " becaufe of the Indifferency the Needle fhould bear " to every Point of the Horizon. I examined not my "Relator upon this Argument, though when I was " parted from him I was forry I did not ; but it is eafy
" to apprehend how to guide a Ship either forward or " backward, by an Obfervation of the Sun a little before
" they enter the Pole; for by finding in, or near, what
" Meridian it is; or upon what Part of the Ship it bears, " whether on the Head or Stern, or Star-board or Lar" board; you may meafure Time near enough with " a Glafs, to know feveral Days after, in, or near, what " Meridian the Sun is, at any known or eftimate Time, " "and confequently know how to proceed, or come back
" with your Ship: Or, if the Moon have North Lati-
"s tude, you may do the fame by the Moon; but if the
"Pole were traded, in a fhort time it might be found by
" Variation of the Needle ; for there is doubtlefs Varia-
" tion in it, and in all the Meridians about it feveral
"Variations.
" Thus far it appears there is a free and open Sea in
" Summer-time (at leaft) about the North-Pole. But I
" thall add another Relation of Games Ben, whofe Eather
" lived about five Years ago in Crown-court in Ruffel-
" fireet, Covent-gerden, and himfelf now lives in Wap-
"ping : This Mr. Ben failed to Fapon with the Dutch, as
" a Carpenter of the Ship, and he told me that that
"Year, viz. 1668 , he was newly come home from Fapon.
"I afked him how long they were on their Way home from
"thence? He told me he could not very well tell.;
"becaufe when they failed from Fapon, the Captain
" commanded the Steerfman to fail due North, and they " did fail fo from thence for about four hundred Dutch
" Viles, which is almoft twenty-feven Degrees due
" North. I afked him if they met with no Land or " Illands, as I had done before the Dutch Greenland Steerf" man? He told me, No, they faw no Land; but "6 there was a free and open Sea; fo far as they failed no "Land appeared. I afked him, why they failed fo far "s northward? He told me he could not tell, only the
"Captain commanded it, $\varepsilon_{\vartheta} c$. but I fuppofe the Eaft
"India Company commanded the Captain, either to
${ }^{66}$ make a Difcovery of Land to increafe Trade, or to " fatisfy themfelves with the Knowledge of another Sea, "s that when they faw Reafon they might expedite their
"V Voyages between Holland and thofe Parts that Way.
"I was thus inquifitive' with him, becaufe ever fince I
"s heard the former Relation of the Greenland Steerfman,
"s harped on a Paffage through, or about, the North-Pole " to Fapon, Cbina, \&x. And by thefe two Difcoveries " it appears very probable there is fo, and that it is paffa" ble in Summer-time."

It is very ftrange, that a Paper of this Confequence fhould not be more confidered; more, efpecially, as it is certain, that to this very Time the Dutch Men of War, when any are fent with the Greenland Fleet, cruize conftantly very far to the northward, without meeting either with Obftructions or Inconveniencies from Ice or Cold. And I have been informed by a Gentleman who was Surgeon to one of thefe Men of War, that in the Latitude of 82 Degrees, the Sea to the North was open, and the Weather very hot in the Month of June. I cannot fay exactly what Year this was in; but by a Comparifon of Circumftances I am led to think, that it might be in 1718 or 1719. There being an open Sea at that Seafon very plainly fhews it to be always open; for it is impoffible, if it had been frozen in the Winter, that it fhould have thawed fo foon, or that there fhould have been no Inands of Ice floating in it, as has been obferved from the Iatitude of 57 Degrees, or thereabouts, to 80 .

The Reader will eafily obferve, that the Difcoveries that have been lately made, as to the true Figure of the Earth, and its being flatted towards the Poles, favour this Opinion and Account for the Sea's being always open. Vore II. Numb. $g^{6}$.

It may alfo deferve fome Notice, that perhaps there is no Occafion for failing fo high as go Degrees; for if a Paf. fage is to be found either to the Eaft or Weft, and the Sea be open, a Ship might fail cither Way, perhaps in the Latitude of 85 Degrees, which would make this fhorter and eafier, by bringing the Veffels fooner upor known Coafts. While I am upon this Subject I will take the Liberty of obferving, that if any Attempts fhould be made of this kind by us, the moft probable Method of doing it would be in concert with the Coure of Rufia, by procuring an Order from the Emprefs, to the Govern ors of the frontier Countries towards Fapon, to give fuch Affiftance or Relief as might be neceffary, to any Vef fel that arrived upon thofe Coafts; and it would be requifite that fuch an Order fhould be procured, and expedited the Year before the Attempt was made from hence; and that the Commander of the Frigate employed in this Expedition, might carry with him an authentic Copy of that Order, for hisown Security and Advantage.
I am very fenfible that a Multitude of Objections may be raifed againft fuch an Undertaking; but I am very confident they may be very eafily anfwered, and whoever confiders that fo long ago as 1553, Sir Hugh Willougbby difcovered the moft Northern Part of Ruflia; and though he perifhed, in the Attempt, opened thereby that Trade which has been fince of lo great Advantage to this Nation, we may very well hope, that at this Diftance of Time, and with all the greut Advantages that modern Navigators have, farther and more ufetul Difcoveries may be made, with much lefs Hazard: Atleaift, it is very right to fuggeft Defigns of this Nature to the Public, whether they, may, or may not, be thought practicable for the prefent; becaufe the very mentioning fuch Things, and thereby creating Difcourfes about them cannot but be attended with good Effects, becaufe we know that they were the very Means by which former Difcoveries were brought about, and we cannot think fo meanly of our Countrymen as to fuppofe that either their Courage, their Judgment, or their Spirit, is inferior to that of their Anceftors, though Accidents and Circumftances may induce fome weak People to think or encourage fome wicked Men to fay fo, in order to ferve their own Purpofes. But perhaps we can never entertain any probable Hopes of Succefs in this great Affair, until we engage once again in the Whale Fifhery; and that we may be encouraged to think ferioully of that, we will conclude this Chapter with a clearer and more perfect Reprefentation of this Trade, than to our Knowledge has been hitherto publifhed, which cannot therefore fail of giving the ingenious and inquifitive Reader great Pleafure and Satisfaction.
25. We are to obferve then, that it was towards the latter End of the fixteenth Century, that the Whalefifhing, on the Coaft of Spitzbergen, became confiderable, and was entirely in the Hands of the Englifh, till the Year 1573. This Commerce was, by a Company, which fent thither annually a few Ships, and they actually excluded the reft of their Countrymen, and endeavoured to exclude Foreigners. In the Year $\mathrm{I}^{6} \mathrm{I}_{3}$, they fent a Squadron of feven Sail, which found there fifteen Dutch, French, and Flemifb Ships, befides Englifb Interlopers. And the next Year, the Dutch fent eighteen Sail, of which four were Men of War. And, in 1615 , the King of Denmark fent a Squadron of three Men of War, to affert. his exclufive Right, but with fuch indifferent Succefs, that he thought fit to give up the Point. In 1617 our Company were more lucky than in any other Year, and actually made one thoufand nine hundred Ton*of Oil. The Dutch made, for many Years after, very indifferent Voyages ; and as their great Statefman, M. de Wit, well ob ferves, had certainly been beat out of the Trade, if it had not been laid open by the Diffolution of their Greenland Company, to which he attributes their having beat the Englifh, and almoft all other Nations, ont of that Trade, which they carry on to a prodigious Advantage. And as the fame great Author obferves, it is the beft Nurfery of their boldeft and moft hardy Sailors. But as we do not affect to deal in general Terms, which never can convey any clear and diftinct Notions of any Subject, we

Thall endeavour to diefcend to fuch Particulars, as may fet this Matter in the cleareft Light poffible.

It is agreed by the Dutch Authors, who have written on Whale-fifhing, that the moft fortunate Seafon they ever had, was in the Year 1697 . We will therefore confider the State of this Fifhery, for that Year, in order to fettle the Profits of it; and will afterwards compare it with Accounts received from Holland, of the Fifhery for 1744, communicated while this Section was writing, that we may the better judge how things now ftand. In 1697 there were one hundred and eighty-nine Veffels, of feveral Nations, employed in the Finhery on the Coaft of Greenland; of thefe the Dutch made one hundred and twenty-nine, but feven were loft upon the Coaft. The Hamburgbers had fifty-one, of which they loft four. The Sreedes had two; the Danes four; the Bremeners twelve; the Embdeners two; and the Lubeckers one. The Number of Whales taken that Year amounted to one thoufand nine hundred and fixty-eight, which the Dutch, and the Ships of other Nations before-mentioned, caught in the following Proportions, viz.

| Nations. | No. of Whales. | Calks of Oil. |
| :--- | :---: | ---: |
| The Dutch | 1255 | 41344 |
| The Hamburgbers | 449 | 16414 |
| The Swedes | 113 | 540 |
| The Danes. | 52 | 1710 |
| The Bremeners | 96 | 3790 |
| The Embdeners | 2 | 68 |
| The Lubeckers | $\frac{8}{2}$ | 17 |
|  |  | 1968 |

I have not been able to procure, hitherto, as clear and diftingt an Account of the Whale-fifhery, for the two laft Years, as for that before given; but I am very well informed, that the Whale-fifhery farce ever anfwered better than it did in this prefent Year 1746, more efpecially to the Dutch, who had more Ships, and better Luck with their Ships, than any other Nation. It is worth obferving, that the wife Inhabitants of Holland have continually maintained and practifed this Fifhery, as de Witte advifed them; and have thereby added immenfe Sums to the Wealth of their People, as well as to the Strength of
their State, confidered as a maritime Power. We will reflect a little upon both there Points, that we may be the better fatisfied, as to the real Importance of the Whalefifhery. He judged it to be very beneficial to his Country, becaufe of the Eafe and Expedition with which it was performed; for in fix Day's Time the Ships failed out of Harbour, and were, actually, if the Seafon was favourable, engaged in their Fifhery. The whole Time it continues, does not exceed four Months; during which a great Number of Veffels are employed, in which abundance of hardy and experienced Seamen are bred, by whom alfo the whole Bufinefs is performed abroad, and, upon their Return, a much greater Number of People find work at home; fo that there is no great Reafon to doubt, that de Witte's Calculation, of twelve thoufand Perfons maintained by this Trade only, is very agreable to Truth, and not at all tinctured with Partiality towards his Country. He very juftly obferves, that what renders this Trade ftill more valuable, is the Exportation of the greateft Part of its Produce ; and if we confider this attentively, and make the neceffary Allowances in fuch kind of Calculations, we fhall be able to form to ourfelves a tolerable Notion of what the Dutch have got by the Greenland Fifhery, from that Time to this.

It is now fourfcore Years fince de Witte framed his Computation, and we thall certainly run no Hazard of over-valuing the Induftry of our Neighbours in this Particular, if we fuppofe that the Whale-fifning has brought them in, one Year with another, in Whale-Bone and Oil, two Millions of Florins, of which we may alfo allow that they have exported, at leaft, one Half; fo that they have faved fourfcore Millions of Florins in what they have ufed themfelves in thefe Commodities, which they muft otherwife have purchafed, and have drawn befides, from other Countries, into their own, as much in ready Money, which amounts to eight Millions Sterling. A prodigious Sum indeed, and which ought to cover us with Shame, confidering that we have had, at leaft, as great Opportunities as they, of making a like Advantage of this Finhery, of which, for many Years paft, however, we have not made one Shilling. Whence this arifes is very hard to fay, and the more fo as it is certain we were once the fole Proprictors of the Whale-fifhing, which we pointed out as worthy other Peoples Concern, and have fince neglected ourfelves, though many of our beft Writers upon Commerce, have taken Pains to expofe the grofs Abfurdity and inexcufable Negligence of fuch a Conduct. At prefent, perhaps, an Opportunity might be gained of reviving this Fifhery, if the Government fhould think fit to erect a Fortrefs, and open a Port in the Orkneys, which might, in many refpects, prove very beneficial; but more efpecially in this, becaufe it would give us, immediately, very great Advantages over the Dutch, Hamburgbers, and all other Nations that at prefent frequent the Greenland Seas, as we might have all kind of Utenfils neceffary, erected in any of thefe Inlands, which would enable us to make more, and better Oil, than any of our Neighbours, from the fame Quantity of Fifh; as it would alfo give us an Opportunity of vifiting the Coafts of Greenland earlier, and remaining there later, than other People. There is no Doubt that, if any Attempt of this Sort was once made, at the Expence of Englifh Merchants, they would be very foon able to raife a prodigious Number of fout and able Seamen in thofe Parts, as capable and as enterprizing as thofe of any other Nation whatever. It might alfo prove the Caufe of opening to us fome other Branches of Commerce hitherto not known, or which have been long difufed; and it might prove likewife a Means of renewing that 'Thirft for Difcoveries, for which this Nation was formerly fo famous, and to which fhe certainly ftands indebted for the moft valuable Branches of her Commerce. Thefe, I mean the Orkney Iflands, are the Illands, Sbetland excepted, the leaft known, but not the leaft valuable Part of the Britifo Dominions; for befides this Greenland Fifhery, for the eftablifhing of which there is not in Europe a Place fo proper, and a confiderable Fifhery round them, they might be made a general Magazine for fuch Commodities as fell to Advantage to the

North,

North, by which our Trade to feveral Parts of Germany, as well as to Sweden, Denmark, Norway, Poland, and Ruflia, might be rendered twice as valuable to us, as it is at prefent. But it is now Time to clofe the prefent

Section, and to proceed to the Hiftory of the Attempts made for the Difcovery of a North-eaft and North-weft Paffage into the Ocean; the latter of which, perhaps, may be difcovered before this Volume is concluded.

## S E C TION II.

The rational and pbiloopphical Motives for feeking a Paflage into the South Seas, by the North-weft, examined and explained; togetber with the Hifory of the Attempts made with that Vierw, for the Space of one bundred and thirty Years.

## Collected from Engli/h, Dutch, and Dani/ß Writers.

r. An Introduction herwing the Nature and Defign of this Section, and the Method purfued therein. 2. Tbe Importance of a North-weft Paffage, if it could be found; and the Advantages that reould refult from thence to our Navigation, which fully jufifies the Endeavours of fuch as have laboured to find this Paffage. 3. An Account of the Reafons, Arguments, and Prefumptions in favour of fuch a Paflage; in which the Strength or Weaknefs of each Motive is hewn fairly, and in its proper Light. 4. The Hifory of the Attempts made for the Difcovery of this Paffage, by John Cabot, Sir Martin Frobifher, Captain Davis, Mr. Henry Hudfon, Mr. James Hall, and Mr. William Baffin, from Anno Domini 1497, to 1615.5 . The Expedition of Sir Thomas Button into Hudfon's Bay, in 16 II, with a fuccinct Account of his Difcoveries. 6. The Attempts made for the like Purpofe by the Danes; and the unfortunate End of Captain John Monk, one of the ableft Navigators ever bred in Denmark, occafoned by bis undertaking and failing in an Expedition for this Purpofe. 7. The Expedition of Captain Luke Fox, in bis Majefy's Pinnace, the Charles, in the Year 1630 ; with the Reafons wobich induced feveral Perfons of the firft Diftinction, and fome of the greateft Merchants in this Kingdom, to enter into an Aflociation for the Difcovery of the North-weft Paffage; and the Meafures taken by themfor carrying this Defign into execution.

AFTER the Difcovery of America, by Cbrijtopher Columbus, and the publifhing to the World, the Reafons which induced him to look upon this Difcovery as a thing practicable; fuch as were well acquainted with Cofmography, and fuch as were practical Seamen, began to emulate his Succefs, and to think of raifing like Reputations to themfelves by Difcoveries of the fame Nature. Amongft thefe, Fobn Cabot, whom we have often had Occafion to mention, was the firt that fuggefted the Poffibility of a Paflage to the new found World, by the North-weft. His Son, who lived to be a very old Man, was the moft expert Mariner of his Time, and died Governor of our Rufia Company, always maintained this Opinion; which the more it was confidered and examined, by Men of the brighteft Parts, and greateft Experience, the more it grew into Credit, and the more it was generally believed. This Notion has prevailed to our Times, and if we follow the Opinion of Cicero, this alone is a confiderable Argument in its Favour; for he obferves that Truths founded in Nature, grow ftronger in length of Time, and from a Courfe of Obfervations; whereas weak and groundlefs Opinions are foon deftroyed, and become quickly out of date. There is, certainly, a great deal of good Senfe and found Reafon in this Obfervation; which, I believe, will be found to have ftood, generally fpeaking, juftified by Experience; and, perhaps, fooner or later this may be ranked among the Number of Truths, that ought to give Weight and Authority to this Maxim.
At prefent it is our Bufinefs to exhibit to the Reader as full and clear an Account of this Matter as it is pofble; the rather becaufe it is not only a Matter of great Importance in itfelf, and a Subject of general Enquiry, but alfo from a late'Act of the Legillature, and a great Undertaking founded thereupon, become the Topic of common Diicourfe, and of almof univerfal Expectation. In order therefore to difcharge our Duty effectually, and to reprefent the Reafon and Hiftory of this Matter with the utmof Perfpicuity; we fhall firft of all enquire into the Nature of thofe Advantages, that may be expected from the Difcovery of fuch a Paffage, fuppofing it to be practicable. We fhall next fet forth the Reafons that have been afigned in Favour of this Opinion, that fuch a Paffage may be found, by thofe who have maintained it. And laftly, we fhall give a diftinct hiftorical Ac-
count of the Attempts that have been made, for the find-: ing fuch a Paffage, and the Confequences with which thefe Expeditions have been attended. We have, indeed, already had frequent Occafions to touch this Subject, both in our former Volume, and in this; but wherever we have mentioned it, we have referred the Reader for a clearer and more particular Account to this Section; and we fhall herein take all imaginable Care to avoid all unneceffary Repetitions, by making the requifite Allowances on thofe Heads, which have been incidentally. examined and explained already.
2. The Reader will perceive, from what has been laid down in the foregoing Section, that if fuch a Paffage could be difcovered, it would open a Communication between the North and South Seas, infinitely fhorter and eafier than the only one that is at prefent known round Cape Horne, or through the Streights of Magellan. We have feen, in the Hiftory of the Circum-navigators, how very tedious and troublefome that Method of reaching the Coafts of Mexico and California is, with how many and great Inconveniences it muft be always attended, and how far it lies out of our Power, all thefe Circumftances confidered, to make any confiderable Ufe of it; which is the true Reafon why the Spaniards enjoy, with fo little Difturbance, fo many fine Countries, and hinder others from difcovering many more, the Knowledge of which might be highly advantageous to this NorthernHemifphere.

But if ever a Paffage could be this Way found into the South Seas, we might, very probably, reach, in fix Weeks, Countries that we cannot now vifit in twelve or fifteen Months ; and this by an eafy and wholefome Navigation, inftead of thofe dangerous and fickly Voyages, that have hitherto rendered the Paffage into the Soutb Seas a thing fo infrequent and ingrateful to Briti $\beta$ Seamen. If fuch a Paffage could be found, it would bring us upon the unknown Coafts of North America; which we have many good Reafons to believe are very populous, inhabited by a rich and civilized People, no Strangers to Trade, and with whom we might carry on a very great and beneficial Commerce; for this is, apparently, that Country, concerning which we have had fome dark Hints given us by the Savages that come to trade at Hudfon's Bay, mentioned by feveral of the French Writers; from the Information of the Indians inhabiting about the Lakes beyond Canada; from Doctor Cox, in the Account cited.
from
from him in the former Section, concerning the Advantages that might be drawn from fettling his Province of Carolana; from various Paffages in almoft all the Spanif Hiftorians, in reference to the Extremities of North America, of which they acknowledge themfelves to have very indifferent Accounts; and are, perhaps, not much inclined to gratify the reft of the World, even with the beft Accounts they have; from the memorable Fragment of the Spanijs Admiral's Voyage, quoted in the former Section, with Mr. Dobb's judicious Remarks, and a multitude of other Paffages, which it is needlefs to enumerate; all of which agree in this, that the Part of America, to which this North-weft Paffage would lead us, is a rich, fertile, and well inhabited Country, which would abundantly reward our Pains taken for the Difcovery of it, even fuppofing this Paffage would lead us to no other Country befides.
Yet this is far from being the Cafe; fince it is evident that it would likewifé bring us to an Acquaintance with thofe Countries that lie oppofite to America, whether Continents or Ilands, and that fill up that vaft Space between California and the Land of Yedzo, of which, at prefent, we have heard fo much, and yet know fo little. But though we know fo little of them from actual Difcoveries, yet we may be confident from Reafon, and the Confideration of the Climate in which they lie, that thefe Countries abound with valuable Commodities, and that the Inhabitants living, as they do, in a cold Country, would be very glad to deal with us for Wool-len-Goods, Egc. and perhaps for Iron Ware, and many other Commodities. If to this it be objected, that in the few Accounts we have of this Country, and thefe People, it is exprefly faid, they are well cloathed, ufe large Ships, and have Arms, and various Utenfils of Iron, and other Metals, as well as the Europeans; which they barter with the Inhabitants of North America for Gold and other things ; if I fay this fhould be objected, then the plain and eafy Anfwer is, they are a mercantile People; and confidering the vaft Diftance between us and them, there is no doubt that a very great and profitable Trade may be driven between us; and this is more than fufficient to prove the great and general Propofition, that the Difcovery of fuch a Peffage would be very profitable to, this Nation, though we fhould be ever fo much miftaken as to the Nature of the Commodities in which this Profit may. lie. Some Benefit we fee refults to the Danes, by their Commerce with the poor barbarous Groenlanders, and can we doubt of bringing things to a better Market among a rich and civilized People? The former, indeed, part with what they have for a Trifle, but then they have not much to part with; the latter may not be fo foon over-reached, but they have more to trade for, and confecuently more is like to be got by them.
There is ftill another great Advantage, which would refult from the Difcovery of a South-welt Paffage; and was that originally propofed from it, which is, the reaching Jopon, the Land of Yedzo, \&c. by a much eafier and fhorter Rout, than either that by the Cape of Good Hope, or round by Cape Horn; fo that the finding it would give us a much more facile Paffage to the Eaft Indies, as well as the Souttb Seas, and which is more, to thofe Parts of the Eaft Indies, with which we have no Correfpondence, and confequently would, in that refpect, be abfolutely a new Branch of Commerce, probably of much greater Benefit to this Nation, than the whole of our Eaft India Trade, as it is now carried on. All thefe Benefits are fo far from being hazardous or uncertain, that at firft Sight, and from the bare Infpection of the Globe and Charts of the Northern Hemifphere, they appear certain and indubitable; neither have they hitherto been called in queftion, by any who have fought to difcredit this Paffage, who all bend their Endeavours to prove the Difcovery impracticable, without infinuating any thing to the Prejudice of the Expectations raifed from it, in cafe it could be difcovered and failed through. We need not, therefore, wonder at all that fo much has been written on this Subject, fo many Undertakings fet on Foot, fuch a variety of Attempts made on all Sides, and by all means, to come at this North-weft Paf-
fage, fince, in refpect to this Part of Europe, it would be a kind of maritime Philofophers Stone; a Difcovery every Way equal, if not fuperior, to that of Columbus. I do not mean in regard to the Subject of the Difcovery, but in refpect to us; and what I would fay is, that we fhould, for our Part, owe as much Obligation to whoever fhould find this new Paffage, as to Columbus, who found out the new World; to which it is a Paflage, and fuch a one, as to us would double the Value of that Difcovery. So much may fuffice as to the firt Point we promifed to examine, let us now proceed to the fecond, and fhew why this Paffage is thought practicable.
3. We have already obferved that Cabot firtt projected this Paffage, in the Life-time of Columbus; and from the fame Motive which ergaged that illuftrious Perfon in the Difcovery of the new World, viz. to find a fhorter way to the Eafl-Tudies, than that practifed by the Portugueze, by the Cape of Good Fiope; he offered many Arguments to prove this was practicable by the North-weft; and fince his Time, and from the mighty Improvements that have been made in Navigation, there have been added many more. That we may reduce thefe within the narroweft Compafs poffible, without Prejudice to the Subject, we will propofe them feparately, not in the Order in which they were from Time to Time advanced, but in the Method the moft eafy, moft natural, and beft connected in our Power; fo that the Reader may very fairly judge of the Merits of the Caufe, though perhaps fome frivolous or doubtful Evidence may remain unexamined, in order to fpare Time and Trouble.
Firft, It is thought probable there muft be a free Circulation of the Waters at the Pole, becaufe if it were otherwife, it would not be eafy to conceive how the Equilibrium of Land and Water is maintained, or that Regularity which is obferved in the Tides, where the Shores are not covered by Inands, Rocks, or broken Lands. Becaufe if it was otherwife, there muft fall out great Changes in the Tides, the nearer we approached the Pole, as is feen in the Mediterranean and Baltic, which are clofe Seas, and therefore differ from the Ocean, there being a fenfible Tide only in fome Parts of the former, and that too not very confiderable, and none at all in the latter; whereas in the moft Northern Seas, the Tides are high and very regular, which renders it apparent there muft be fome Paffage, or rather Communication with the reft of the Ocean.
Secondly, This Argument becomes more preffing when confined to Hudfon's Bay, where there are not only Tides, but fuch irregular Tides in forne Places, as feem to indicate the Reception of more Water into that Bay, than comes from Hudfori's Streigbts, or any other Paffage into it hitherto known. But from the Nature and Height of thefe Tides, and the Situation of the Places where they are obferved, it feems almof indifputable that they come by the Weft, either through fome large and practicable, or through fome icy and impaffable, Channel; the former is Mr. Dobb's Sentiment, and the latter the Opinion of Captain Cbriffopher Middleton, a very knowing and ingenious Gentleman, who did not embrace this Notion, however, till he made a Voyage for the Difcovery of this Paffage, and failed in it.

Thirdly, We may difcern the Cogency of this Argument, from what has been actually difcovered towards the South Pole, where the Situation of the Streights of Magellan agrees perfectly with this Notion, and fuggefts according to the Analogy of things, a like Communication between the Seas towards the North Pole. We may alfo obferve, that thofe Streights are through broken Lands and Illands, in a very cold Climate, and, in many other refpects, agreeable, as far as hitherto has been diffcovered, to the Countries lying round the North Pole, more efpecially under the Latitudes where of late this North-weft Paffage has been fought for.

Fourthly, It has been generally believed, from the great Difference between the Productions of all kinds, and even between the Animals, in America, and the other Parts of the World, that they are abfolutely feparate; and as to its Southern Extremity, Experience has juftified the Conjecture, and fo renders the Prefumption flrong,

## Chap. I.

that there is a like Separation on the North, and that this Country is not contiguous to any of the other Continents.

Fifthly, The Situation of the Northern Parts of America, fo far as they are yet difcovered, afford very ftrong Prefumptions in favour of this Opinion. The great Ridge of Mountains beyond the Lakes of Canada, have many Rivers running from them into thofe Lakes, and we may from thence conclude, and the Teftimony of the Natives fufficiently confirm it, that there are alfo Rivers running on the oppofite Side, and thefe muft therefore neceffarily. fall into this Weft Sea, or Channel, which we feek: Part of this Argument is real and certain, viz. that there are fuch Mountains, and though we cannot affirm as much, in refpect to the other, as no European has yet reached thofe Mountains, yet there is nothing in it abfurd or improbable, but rather quite the contrary.

Sixthly, We have no Tradition, either on the Groenland or American Side, of any Communication between them ; but quite the contrary: The Groenlanders never fpeak of any civilized Nations near their Country diftinct from the Europeans; whereas the Americans do, and have always perfifted in a Story of Perfons coming in very large Canoes, or Ships, to the North-weft Coaft, and trading there with the People, who, according to their Accounts are alfo more civilized than any other Nation, Natives of America. If any Credit be due to this Account then we muft conceive that thefe Traders come from Fapon (which is very improbable) or from fome northern Country' hitherto unknown, equally feparated from America and Afa.

Seventhly, It is afferted that this Streight has been paffed before and fince the Difcovery of America, and that various Memorials of thefe Tranfits are ftill preferved in authentic Hiftories. Gemma Frifus reports, that it was paffed by three Brethren, and thence received the Name of Fretum Irium Fratrum; but he does not tell us when or where thefe Brethren lived, whence they failed, or whither they returned after performing this Voyage. It is reported by an ancient Latir Author, that certain Indians being caft on Shore in Germany, were prefented by a barbarous King, into whofe Dominions they came, to Quintus Metellus Celer; and it is taken for granted they came through this Paffage. It may be queftioned whether thefe Indians were any other than Groenlanders; and if fo, without queftion, their being caft upon the Coaft of Germany, proves nothing. About the Year 1160 , under the Reign of the Emperor Frederick Barbaroffa, certain Indians alfo are reported to have been wrecked on the German Coaft, and of thefe we may fay the fame thing. William of Newberry has a Story of much the fanne Nature, only accompanied with fome very incredible, not to fay ridiculous, Circumftances, of two Green Children, which in the Reign of King Stepben came hither from the Land of St. Martin, which, by their Defcription, appears to be Iceland: So that take them all together thefe Stories prove little or nothing, One Cortereal, a Portugueze, is alfo faid to have paffed this Streight, and to have beftowed upon it his Name; but how, when, or where, is not to be enquired, or at leaft not to be refolved. One Gomez is faid to have offered the Difcovery of this Paffage to the Emperor Cbarles V. which muft not be underftood, as grounded on his own Knowledge, but from a Perfuafion of Mind that the finding fuch a Streight was practicable, in which however upon Trial he failed. Some flying Reports of much the fame kind we meet with in manyWriters, but though they have, without Caufe, been urged as Proofs of fuch a Paffage, yet this by no Means turns againft it; nor can it be alledged, that fince thefe Stories are fome of them abfurd, others dark, and the reft incredible, therefore the North-weft Paffage they are brought to prove is fabulous. If Truths were to fuffer by the bringing of improper or improbable Arguments to fupport them, fome even of greater Confequence than this, of which we are at prefent fpeaking, might run no fmall Rifk; but as debafing Gold or Silver does not deftroy them, fo the Addition of Falfhoods, though they may fometimes difcredit Truths, cannot change their Nature.

Nol.II. NuMb, 96 .

Eighthly, There is one Argument in favour of this Paffage, which may be drawn even from thofe Fabless without being at all tinctured with Fiction : It is this, that the general Opinion amongft the Learned in favour of it was ftrong; which induced them to refer every thing of this Nature to the North-went Streight: In the like manner, the Notion of the Garden of Hypperedes made way for the Difcovery of the Canories; the Rumour of an Atlantis, or weftern World, proved the Means of unfolding America; nay, in the prefent Cafe, though thefe Tales have not hitherto helped us to this fo much defired Paffage to the North-weft, yet they may be faid to have. guided us to the oppofite Streight of Magellan; for it was upon the Reafons affigned by Cabot, in favour of this Way of going round the Globe, that Magellart formed his Project to difcover a Paffage into the fame Seas, by failing fouthward; which he happily effected at the firft Trial, and by doing this, gave fome Degree of Evidence that the original Scheme of opening a Way by the North-weft, is neither againit the Analogy of the MundaneSyftem, nor in its Nature impracticable from the Difficulties to which thofe employed to find it may be expofed; for though it appears that many have fuffered exceffively in the Attempts hitherto made for that Purpofe, yet no Account of Voyages to the North-weft reprefents the Cold more intolerable, or the Troubles occafioned by the Ice, greater than in going round Cape Horing through the Streights of le Maire, or thofe of Magellan. If therefore the Reafons perfuading this Paffage have (generally fpeaking) appeared fo conclufive to the Learned, as to give Credibility to ill-founded Stories; if they have actually led to the finding a Pafiage at the oppofite Extremity of the Globe, and this Streight be practicable, notwithftanding its being full of Ice, and the Weather rigorous beyond Defcription, why fhould we fufpect that an Opinion having fo many Circumftances in its Favour is notwithftanding abfolutely groundlefs, becaufe it is as yet unfupported by Experience, as if every thing not hitherto performed muft be in its Nature impoffible, which though Warrant enough for a vulgar Notion, cannot be thoughta fitFoundation for a philofophical Principle ; yet granting it were, even this Foundation perhaps might be fhaken; for if nothing but Experience will prevail, there are fome Inftances independent of thofe romantic Tales beforementioned, which look very ftrongly that way.

Ninthly, There was, fo long ago as A. D. 1567 , a Perfon in Portugal who affirmed, he had actually failed through this Streight into Europe, and publifhed immediately, on his Return, a Relation of his Voyage, which, had it been falfe, might have been eafily confuted; but inftead of that, by the King of Portugal's Command, the Book was called in, and very carefully fuppreffed. The Proof of this Fact, as it is very extraordinary and decifive, is thus fet down by the laborious Purchas, in the third Part of his Pilgrims, Pag. 840 ; viz. "I Tbomas Cowles "s of Bedminfter in the County of Somer Set, Mariner, do "6 acknowledge, that fix Years paft, at my being at "Liflon, in the Kingdom of Portugal, I did hear one " Martin Cbacke, a Portugueze of Lifbon, read a Book "s of his own making, which he had fet out fix Years " before that Time in Print, in the Portugal Tongue, "declaring, That the faid Martin Cbacke had found, ". twelve Years now pait, a Way from the Portugat " Indies, through a Gulph of the Nequforndiand, which " he thought to be in 59 Degrees of the Elevation of ${ }^{66}$ the North Pole by Means that being in the faid " Indies with four other Ships of great Burden, and he ${ }^{66}$ himfelf in a fmall Ship of fourfcore Tons, was driven " from the Company of the other four Ships, with a ${ }^{68}$ wefterly Wind; after which he pafted along by a great "s Number of Iflands, which were in the Gulph of the faid "Nerefoundland. And after heover-fhot the Gulph, he "s faw no more of any other Inland until he fell in with the " North-weft Part of Ireland, and from thence he took "s his Courfe homewards, and by that Means he came to "Libon, four or five Weeks before the other four Ships "c of his Company that he was feparated from, as "before-faid. And fince the fame time, I could
${ }^{56}$ never fee any of thafe Books, becaufe the King com-
${ }^{66}$ manded
"6 manded them to be called in, and no more of them to " be printed, left in time it would be to their Hindrance. "In Witnefs whereof I fet to my Hand and Mark, the "9th of April, Anno 5 579."
There is no doubt fomething ftrange enough in this Story; and one might be tempted to furpect, that either the Englifh Seaman had made fome Miftake, or that the Portugueze Pilot had boafted of more than he had done, if in thofe Days thefe kind of Points had not been much more thoroughly underfood, as well as more narrowly enquired after than they are at prefent: fo that if, there had been any juft Grounds for rejecting this Story; we fhould hardly have found it mentioned by thofe judicious Writers who feem to lay great Strefs upon it ; but it fo falls out, that I think I am able to join to this another Proof that has been very little taken notice of, and which notwithftanding feems very ftrongly to corroborate this Report, from which I do not at all doubt that it was derived.
The Fact upon which I depend is this. Captain Fames Lancafter, afterwards Sir James Lancafter, commanded the firft Fleet fent to the Eaft Indies by our Company, which failed in the Month of February 1600, and a very profperous Voyage he made: While this Gentleman was in the Indies, he heard a Report of another Paffage into thofe Parts, which, as I hinted was probably that through which the Portugueze Pilot had failed; and this Gentleman, who was a very experienced Mariner in Theory as well as Practice, was entirely perfuaded of the Truth of it, as appears from the following remarkable Accident which will do Honour to his Memory, as long as any Records remain of our maritime Affairs. In his Return to England, on board the Dragon, a very fine large Ship, with a moft valuable Cargo, he met with fuch a Storm off the Cape of Good Hope, as tore away his Rudder, and put him in fuch Danger that he very much doubted the Poffibility of his returning home; yet, inftead of quitting his Ship in this Diftrefs, he contented himfelf with writing a fhort Letter to the Company; which he fent on board the Heetor, and to this Letter he added the following remarkable Pofffript : The Paffage to the Eaft Indies lies in 62 Degrees 30 Minutes by the North-weft, on the American Side. Upon comparing this with the Map prefixed to Mr. Dobbs's Account of the Countries adjoining to Hudfon's Bay, I find it falls in precifely with an Opening called there by the Name of Lovegrove. And it agrees perfectly well with the Portugueze Pilot's Account; fince he might very well fail through broken Lands and Iflands from thence, as he did to Nerefoundland, or perhaps to Labrador, and thence to Ireland. I mention all thefe Facts together becaufe they feem to relate to the fame Thing, and to confirm each other. I fhall now proceed to another Inftance.

Tenthly, Mr. Michael Lock, a very intelligent Perfon, who refided at Venice in 1596 , obtained there, by a very fingular and extraordinary Accident, an Account of this very fame Paffage from a Man who had himfelf difcovered it on the American Side, of which, from hisown large Difcourfe preferved in Purchas's Pilgrims, I fhall give as fhort and true an Extract as I am able. In the Month of April, in the Year before-mentioned, he met with $\mathfrak{F} u a n$ de Fuca, a Native of the Illand of Cepbalonia, then about threefcore, who had long ferved the Spaniards in Quality of a Pilot in the South Seas, and in this Station was taken in the St. Anne, an Acapulco Ship coming from the Pbilippines, in A.D.1587, by Capt. Candifh, and by that Accident loft fixty thoufand Ducats. He told Mr. Lock that he was Pilot of three fmall Ships fent by the Viceroy of Mexico to fortify the Streights of Anian, to prevent the Englifh from penetrating that Way into the South Seas, which mifcarried by the Commander's being guilty of fome foul Practices that raifed a Mutiny. He was afterwards employed again for the fame Purpofe, in 1594, with a fmall Ship and a Pinnace; and having failed along the Coafts of New Spain, California, and, as he exprefly affirmed, Part of the Continent beyond, to the Height of 47 Degrees, and finding that the Land trended there North-north-eaft, with a broad Inlet of the Sea, between 47 and 48 Degrees, he
entered into this Streight, and failed therein more thar twenty Days; and found that Land trended fill fometimes North-weft and North-eaft, and North and Eaft, and South-eaftward, the Sea growing much broader than at the Entrance, and having in it many Iflands fmall and great, by which he paffed. He alfo took notice, that at the very Entrance of the Streight, there was a great Headland, or Inand, in which there was a prodigious large Rock, like a Pillar or Pyramid. He further affirmed, that he landed feveral times, and faw many of the Inhabitants, who were cloathed in Beaft-fkins, or Furs ; and as to the Country, he defcribed it as exceedingly fruitful, and rich in Gold and Silver, Pearl, and other valuable Commodities, and with every Thing that was to be found in Nere Spain.
He reported farther, that he having entered thus far into the faid Streight, and being come into the North Sea, and finding the Paffage wide enough every where, and about thirty or forty Leagues wide in the Mouth of the Streights where he entered; he thought he had now well difcharged this Office, and done the thing which he was fent to do; and that not being armed to refift the Force of the Savage People, he therefore fet fail, and returned homewards again, towards Newes Spain, where he arrived at Acopulco, A.D. 1594, hoping to be rewarded largely of the Viceroy, for the Service done in this Voyage. Alfo he faid, that after his coming to Mexico, he was welcomed by the Viceroy, and had great Promifes of great Reward; but that having fued there two Years Time, and obtained nothing, the Viceroy told him that he fhould be rewarded in Spain by the King himfelf, very largely; and defired him therefore to go into Spain, which Voyage he performed. He added, that when he was come into Spain, he was well received there at the King's Court, in Words after the Spanifs Manner; but after long Time of Suit there alfo, he could not get any Reward. And that therefore, at length he Itole away out of Spain, and came into Italy to go home again, and live among his own Kindred and Countrymen in his old Age. He likewife owned, that he thought the Caufe of his ill Ufage by the Spaniards was, becaufe they did underftand, very well, that the Engli/h Nation had now given over all their Voyages for Difcovery of the Northweft Paffage, wherefore they need not fear them any more to come that Way into the South Sea, and therefore they needed not his Service for the future.

This old Greek Pilot, offered Mr. Lack to go over to England; and in cafe Queen Elizabetb would have been pleafed to make him Compenfation for the Loffes fuftained when taken by Captain Candifh, in cafe of Succefs, he would, in her Majefty's Service, attempt the Difcovery of this North-weft Paffage from Europe, which, with a Veffel of forty Tons and a Pinnace, he doubted not to perform in thirty Days. At the Time of his making this Offer, Mr. Lock had it not in his Power to bring him over, but he acquainted the Lord Treafurer Cecil, Sir Walter Raleigh, and Mr. Richard Hackluit therewith, who approved his Defign, but fent him no Money. At laft, in 1602 , his own Circumftances being mendied, he refolved to bring this Man over, with whom he had all this while kept a conftant Correfpondence on his proper Expence; but upon his Arrival at Zant, to his great Grief and Difappointment, found him dead.

Eleventhly, Yet thefe Difcoveries by Sea are not all that is in our Power to produce on this Subject; we have likewife fome Proofs that are no lefs conclufive, drawn from Difcoveries made by Land, of which we have partly fpoken in another Place; but which it is abfolutely neceffary we fhould again mention here, though in Terms as fuccinct as it is poffible. In the Year 1568 Sir Jobn Hawkins, after an Expedition attended with indifferent Succefs againft the Spaniards, found himfelf obliged to fet about one hundred of his Crew anhore, about fix Leagues Weft of the River la Mina, and about one hundred and forty Leagues Weft by North of Cape Florida'; amongtt thefe was David Ingram, of Barking in Ef. fex, who, with fome of his Companions, travelled Northwards through many unknown Countries, where they faw vant Riches, as well as precious Stones, as of Gold and

Silver.

## Chap. I.

Silver. In the mof Northern Countries, through which they paffed, the People ware cloathed with Bear-Skinsand fine Furs. In the Month of May they came into a rich and fertile Country, which is particularly defcribed in his Travels, preferved by Hackluit. And in this Country he affirms he faw Elephants, and other ftrange Beafts, not knowin in Anserica; and after marching, according to his Computation, near two thoufand Miles; and paffing over feveral large Rivers, fome four, fome fix, fome eight, and fome ten Miles over ; and one fo large, that they were twenty-four Hours in croffing it in a Canoe; they came to Cape Breton, where himfelf, and two of his Companions, embarked aboard a French Ship, one Mr. Cbampaigne, to whom one of Ingram's Companions, Richard Brown, gave a very large Pearl, that he had picked up in this Journey. They landed at Nere Haven in France, in 1569 , and foon found a Paffage to England; where, within a Fortnight after their Arrival, they came to their old Captain Hawkins, to whom they related this Story, affirming that they had travelled to the North Sea, by which they meant the Sea that wafhed the Northern Part of America, oppofite to the Bay of Mexico; and they likewife affirmed, that for two Days together they travelled along the Shore of this Sea, and that the Inhabitants gave them to underftand, that they were not unacquainted with. Ships, drawing the Figure of them upon the Sand, with their Mafts, Sails, and Flags.
This Account of Ingram's was not digefted into writing till feveral Years after, as appears by his affirming that Richard Brown was flain five Years before, in a Ship called the Elizabeth, belonging to one Mr. Cockins of London ; and that his other Companion, Richard Trvide, died three Years before, at the Houfe of Mr. Sbeerwood, in Ratcliffe; but they had all given this Account upon their firft Arrival, to Captain Hawekins. It cannot be denied that there are fome very ftrange and improbable things in this Relation of Ingram ; which fhew him either a very weak and credulous Man, or one that delighted in ufing the Privilege of Travellers, of exceeding the Truth. Notwithitanding all this, Mr. Hackluit was of Opinion, that his Relation amounted to a ftrong Proof of a Northweft Paffage; as to which, however, it does not appear that the Man himfelf had any Notion, for otherwife he might have pretended, that the River he was twentyfour Hours in paffing was it ; for fo in all probability it really was. I mult acknowledge, that upon reading and confidering his Narrative, I was once in very great doubt, whether it deferved any Credit at all, or whether it ought to find a Place amongft thofe Matters of Fact, that deferve to be mentioned as Proofs of the Poffibility and Probability of there being a Paffage to the Soutb Seas by the North-weft ; but I was at laft determined to give it a Place, by meeting accidentally with another Account no lefs ftrange and extraordinary, and which the Reader will perceive has fuch an Agreement therewith, that is not eafily to be accounted for, without allowing that there is at leaft a confiderable Mixture of Truth in them both; for that the one fhould be copied from the other, confidering the Perfons by whom both Relations were made, is, in my Judgment, abfolutely impoffible. Befides they feem alfo to be confirmed, both by the moft ancient, and by the more modern Spani/b Authors, who mention the Northern Extremities of America. But it is Time to come to the Matter of Fact.

Twelfthly, The Author of the French Mercury Galant, for the Year 1712 , gives us the following Relation, viz.
"That ten Frenchmen, and two Savages, fet out from
"Montreal in Canada, and having continued for fome
5s. Time in the Country of the Illinois, and on the Banks
us of the River $M i \sqrt{2} / 2 p p i$, they refolved to proceed farther

* on new Difcoveries. They made ufe of three Canoes
${ }^{s} s$ of Bark of Trees, to remount the Miflifippi, and be-
* ing gone up the fame one hundred and fifty Leagues,
" they were ftopped by a Fall, which obliged them to
${ }^{66}$ carry their Canoes over Land, and then they embark-
es ed again on the faid River, and went up the fame
" forty Leagues more, without meeting any People;
- they fpent a Month and a Half in hunting, and conti-
st nuing their Defign of attempting fome new Difcoves ry, they met, fifteen Leagues from thence, with a " River running to the South-fouth-weft, from whence 'they conjectured it difcharged itfelf into the South "Sea, its Courfe being oppofite and contrary to thofe "s which fall into the North Sea. They refolved there"upon to carry their Canoes into it, and in their Way "faw Lions, Leopards, and Tygers, which did not of "s fer to attack them. They fell down that River about " one hundred and fifty Leagues, and met with a Na"t tion called Efcaaniba, which poffefs a Country of is two hundred Leagues at leaft, in which they faw feve"c ral Forts, Towns, and Villages, whereof the Houfes "s are built of Timber, and Bark of Trees. They have "s a King who pretends to defcend from Motezuma, and "6 who is commonly cloathed with Beafts Skins; which "s is alfo the ordinary Cloathing of the Inhabitants:
"They feem, in their Manner, to be under fome "Rules of Policy. They are Idolaters, and their Idols; "s which are in their Kings Palace, are frightful, and of " 6 prodigious Size. There are two amongft others, "s whereof one is the Figure of a Man armed with "Lances and Arrows, having one Foot upon the " Ground, and the other lifted up, with a Hand on "s the Figure of a Horfe, as if he were going to mount ${ }^{6} 6 \mathrm{it}$. They fay that this is the Statue of one their "Kings, who was a great Conqueror. That Statue holds " in its Mouth a large fquare Carbuncle, which cafts a "s Light in the Night as Fire. The other Figure is a " Woman, who was a Queen, fetting on a Saddle, upon "6 an Unicorn, having four great Dogs on one Side. "Thefe Figures are of maffy Gold, but very ill made. "They are fet on'a raifed Place, being a Square about "6 thirty Feet, covered with Gold. Between thofe two "Statues is the Way into the King's Apartment; and " at the Door of the fame ftands his Guards, confifting ss of two hundred Mens The Palace is very large, and 6 is three Stories high. The Walls are eight Feet high, " and of mafly Gold, cut in fquare little Bricks, and " laid one upon another, faftened with Hooks and Bars "s of the fame Metal. The reft of the Building is of " Timber, and covered with the fame. Thofe People "c have a great Trade for Gold, but our Difcoverers ${ }^{6}$ could never guefs with what Nation, unlefs it be with "s the People of Japon; for they carry their Gold to "s fo great a Diftance, that they told the French, that "s they fpent fix Months in their Journey to that Nation. "Our Adventurers were prefent at the fetting out of one "6 of their Carravans, which confifted of above three hun${ }^{6 s}$ dred Oxen laden with Gold, and guarded by the like "s Number of Men, armed with Lances and Arrows, " and with a kind of Poniard.
${ }_{66}$ They barter their Gold for Iron, Steel, Lances, $E^{\circ} c_{0}^{\prime}$
"They are altogether Strangers to writing, but ufe a "Sort of Bark dreffed for that Purpofe, on which they "s mark the Quantity of Gold intrufted to each of the " Men aforefaid, for which he muft be accountable at " his Return. The King is called Agauzan, which fig"s nifies, in their Language, the great King; and though "s he is at War with nobody, he keeps a flanding Army ${ }^{66}$ of one hundred thoufand Men. Their Trumpets are s6 of Gold, and ftrait, and they found the fame, in "s difagreeable Manner. Their Drums are large Kettles "s of Gold, covered with Hart-Skins, and fo large, that "s they muft be carried by Oxen. Thefe Troops exercife " once a Week in the King's Prefence. The Inhabitants " are of a brownifh Complexion, and look frightful, "chaving a long narrow Head, which they form into "s that Shape, by preffing the Heads of Children between "s two pieces of Board. The Women are handfome, "s and as white as in Europe: They have, as well as the ${ }^{6} 6 \mathrm{Men}$, large Ears, which they account a great Beauty, "s and adorn them with Gold Rings. They let their "Nails grow as long as they can, and this is, amongft "t them, a mark of Diftinction. The moft hairy Men, "s are looked upon to be the moft handfome. Polygamy ${ }^{6} 6$ is in ufe, and they fhew little. Concern for the Con${ }^{4}$ duct of their Daughters. They love Rejoicing and 66 Dancing, and are great Eaters. They make a Sort of
${ }^{66}$ Wine of Palm-Trees, and have feveral other Sorts of ${ }^{6}$ Liquors. They fmoak very much, and have good ${ }^{66}$ Tobacco, which grows in their Country without any ${ }^{6}$ Culture.
${ }^{66}$ The Climate is very temperate, and the Inhabitants ${ }^{66}$ live to a great Age, without being troubled with Dif-
"c eafes. The Country affords all forts of Fruits both of
© the Indies and of Europe. They have Abundance of ${ }^{6}$ Indian Wheat, and wild Oats, which are as white ${ }^{\text {sc }}$ and as good as Rice. They make Bread of both, but ${ }^{66}$ cultivate only the former. They have large Plains, ${ }^{6}$ which afford excellent Pafture for all forts of Cattle. ${ }^{66}$ Their Rivers are full of Fifh, and their Woods abound ${ }^{66}$ with all forts of Birds, efpecially Parrotss They have
${ }^{6}$ Monkies and Animals peculiar to that Country. Their
${ }^{66}$ capital City lies within fix Leagues of the River Miffr,
"6 which fignifies the River of Gold. The French, upon
"taking their Leave of that King, promifed to return
${ }^{66}$ in 36 Moons, i.e. in threeYears, and to bring with them
" fèveral Goods from Canada, to barter with their Gold,
${ }^{66}$ which they value fo little, that the King bid them take
${ }^{66}$ as much as they pleafed, which they did, and brought
"s away each fixty Bars, weighing about two hundred and
"forty Pounds. Two of the Adventurers had the Cu-
${ }^{*}$ riofity to go to the Place from whence they bring their
" Golds and informed the others, that the Mines are
${ }^{66}$ within the hollow Parts of the Mountains, from which
" 6 the Gold is carried away by Rivers, and is found on
${ }^{\text {s }}$ the Banks of themi. Thofe Rivers are almoft quite
${ }_{66}{ }^{6}$ dryed up for four Months in the Year. Moft of thefe
"Adventurers returning home, were killed at the Mouth
"6 of the River St. Laurence, by an Englifh Pirate, and
"two of them only efcaped, who, after a long Captivity,
"s during which they had been in feveral Bays in the Eaft
os and Weft Indies, and in Cbina, at laft arrived at Breft;
©s and offered, upon pain of their Lives, if conducted
${ }^{6}$ to the Mififippi, eafily to find back again from thence
" the Way leading to that New Peru."
It would be no very difficult Matter to affemble other Paffages of a like Nature from the Works of various Authors, Englifh, French, and Spanifh, all concurring in the Report, that there are very great Nations in the moft Northern Parts of America, and that they trade and have Correfpondence with the Inhabitants of fome other Country abfolutely unknown; but that this feems to be unneceffary after what lias been before related. One Thing however I will take the Liberty of hinting to the. Reader, becaufe I think it máy contribute to give fome Light to thefe Stories of a civilized Nation in Nortb America; and it is this, that the Mexicans themfelves always acknowledged, that they came from the North, and were not the original Inhabitants of that Country where the Spaniards found them: So that if we fuppofe the French Adventurers above=mentioned fpoke Truth, we may very well conclude that it was not the laft Motezuma, but a former Prince of that Name thefe Indians fpoke of; and that inAtead of being the Mexicans expelled by the Spaniards, they may be the original Nation from whom thofe Mexicans were derived that contended with the Spaniards. This I do not pretend to lay down as a Thing certain, but as a Thing poffible, if not probable, and therefore worthy of future Confideration.

Thirteenthly, The laft Argument I fhall offer is from the conferring and comparing together thofe that have gone before; for I think it can hardly be efteemed poffible, that Nature, Art and Tradition, fhould confpire to lead Mankind into Error in this Refpect, by affording fo many probable Inducements to look upon the finding fuch a Paffage to the North-weft as not only probable but practicable. The wifeft Philofophers, as well as Cofmographers, have admitted this Propofition, confidering only the Reafon of the Thing. The moft able Seamen have been of thatOpinion, after repeated'Trials and Experiments; fuch as Cabot, Davis, Hudfon, Button and Baffin, not to mention others that have been employed in the Danifb Service. We find the Rumour of fuch a Paffage fpread every where in Italy, Spain and Portugal, as well as in Great Britain, Denmark and Holland. In the Eaft Indies, and in the Weft, amongtt the Indiak Natives, as well as

European Planters: Whence I conclude, that as no Fiction was ever fo generally believed, this will fooner or later be found a Truth, and then the Wonder will be that it was found no fooner. But let us now proceed, from the Reafon of the Thing, which I have laboured to make as clear as I could, to an Hiftorical Account of the Expe ditions which the Perfuafion that there is fuch a Paffage by the North-weft has occafioned; in difcourfing of which I fhall be as concife as it is poffible.
4. The firft who attempted this Difcovery, as has been often faid, was the famous Fobn Cabot, towards the latterend of the fifteenth Century, but was prevented from finifhing his Difcovery by a Mutiny on board his Ship. He conftantly retained his Opinion that there was a Paffage this Way, and that he fhould have found it if this Accident had not happened. It was however fifty Years before another Attempt was made, and then Sir Martin Frobihber, in I576, failed with two Barks in fearch of this Paffage. He difcovered in the Height of $6_{2}$ Degrees, on the Coaft of Groenland, a large Inlet, to which he gave the Name of Frobiher's Streigbts, through which he failed about fixty Leagues, with main Land on both Sides, and faw fome of the Inlabitants. He made a fecond and a third Voyage, and called the Country he difcovered Meta Incognita. In 1583 Sir Humpbry Gilbert failed to the River of St. Laurence, took Poffeffion of that Country which the French call Canoda, and fettled our Fifhery upon that Coaft. In 1585 Capt. Fobn Davis, of whom we have given elfewhere a large Account, made an Attempt to find this North-weft Paflage, and difcovered a Part of Groenland, to which he gave the Name of the Land of Defolation. He failed afterwards as high as 64 Degrees 15 Minutes, through that which has been fince called Davis's Streigbts, ard thence to the Latitude of 66 Degrees 40 Minutes. In 1586 he made another Voyage, in which he made farther Difcoveries, and returned full of Hopes that a third Voyage would compleat his Defign. Accordingly in 1587 he proceeded through Davis's Streights to the Height of 72 Degrees 12 Minutes, and found an open Sea to the South-weft.

In 16 Io Mr. Henry Hudfon, after he had in vain made Trial of the North-eaft Paffage, attempted a Difcovery to the North-weft, and made a great Progrefs therein; paffing through the Streights that have fince bore his Name into a large open Sea, called Hudfon's Bay, and would have proceeded further, but was hindered by a Mutiny among his Seamen, who bafely deferted him, as we have formerly mentioned. In 1612 Fames Hall and William Baffin made a like Attempt, in which the former was killed by a Savage. This Accident did not hinder Mr. Baffin from going thither in the Year 1615 , who proceeded to the utmoft Extremity of that Sea, which communicated with Davis's Streights, and found it to be no other than a large Bay, which has been fince known by his Name. He went thither again the next Year, and difcovered an Inlet, which he called Sir T'bomas Smitb's Sound, in the Latitude of 78 Degrees, but returned to England without Succefs, though he remained firm in his Opinion of a North-weft Paffage to his Death, which happened in the Eaft Indies, yet his Mifcarriage difcouraged for a long Time any Attempts from hence.
5. Mr. Henry Button, (afterwards Sir Henry) in the Year 1 6II, having been encouraged by Prince Henry to attempt a more perfect Knowledge of that Sea which had been found by Mr. Hudfon, went thither accordingly, and proceeded 200 Leagues farther to the South-weft ${ }_{3}$ coafting along a great Continent, to which he gave the Name of New Soutb Wales, and winter'd at Port-Nelfon: then failing crofs that Sea, which has fince been called Button's Bay, he difcovered another Country, to which he gave the Name of New North Wales, which feems to be only an Inand in that great Sea, which opens into the Northern Ocean by the Paffages of Hudfon's Streights and Davis's Streigbts, and of which Hudjon's Bay, Button's Bay, and Baffin's Bay, are only Parts, bounded by the Continents of Groenland and North America. In his wintering at Port-Nelfon, which is in the Latitude of 57 Degrees io Minutes North, he loft the beft Part of his Crew through extreme Cold, notwithftanding all the Presau-

Chap. I.
NORTH-WESTPASSAGE.
tions he could take to prevent it ; but it does not appear that he was in any Degree diftreffed for want of Provifions, fince he affures us that befides Deer and other wild Beafts, there was fuch vaft plenty of Partridges, and other Fowls, that they killed upwards of one thoufand eight hundred Dozen; and he likewile obferves, that the Natives fifhed in their Seal-Skin Boats, without appearing to be much incommoded by the rigorous Seafon. He, for Caufes elfewhere related (efpecially the Tides) concluded a Northweft Paffage certain, and thereby reftored the Hopes of it, then fallen very low.
6. The King of Denmark, believing that the Vicinity of his Country gave him greater Advantages than any other European Power, refolved to perfect thefe Difcoveries, which the Englifb had begun ; in order to which he caufed two Ships and a Pinnace to be fitted out in 1605 , under the Command of Captain Yobn Cunningbam, a Native of Scotland; with whon one Lindenare, a Danibb Nobleman, was joined in Commiffion; Fames Hall, and Fobn Knigbt, both Englijbmen, were Pilots. The Dane very foon returned, but Cumning gam proceeded a little Way through Davis's Streigbts, to a Place called Cunningbain's Ford; from whence he brought away a kind of Stone, which he took to be Silver Ore; out of one hundred weight of which there were extracted twentyfix Ounces of fine Silver. In 1607 another Ship was fent from Denmark, of which Fames Fall had the Command; but before they had advanced as high as Cunninggam's Ford, the Dani/S Seamen mutinied, and forced them to return. His Danifb. Majefty, however, perfifted fo obftinately in this Defign, that he fent for Seamen from Norway and Iceland, fuppofing that they were better able to endure Cold than other People; and having fitted out two Ships for Difcovery, gave the Command of them to one Cbrifian RicbardJon, a Native of Holfein. Thefe People, however, behaved worfe than the Danes had done, for they mutinied before they faw the Coaft of Groenland, and fo difappointed that Voyage. In 1619 Captain Fobn Munk undertook this Voyage, and arrived fafely at Cape Farewell, in the Latitude of 60 Degrees thirty Minutes, where, though their Tackle was fo frozen, and full of Ificles, that they could not handle them; yet the next Day was fo hot and fultry, that they were forced to work in their Shirts. He gave here Names to feveral Places in Hudfon's Bay, but made no great Difcoveries, though he was obliged to winter in the Latitude of 63 Degrees 20 Minutes, in a Place which has fince retained his Name, on the Weft-fide of the Bay before-mentioned.
The Hardfhips this Man endured in the long Winter he paffed there, are almoft incredible. In the Month of May, 1620, he found himfelf alone in a Hut, fcarce alive himfelf, and almoft morally certain that all his Mariners were dead: He collected his Spirits, however, as well as he could, crawled out, and found, of all his Crews, no more than two left, and thofe in almoft as weak a Condition as himfelf; however, they removed the Snow in fome Places, and finding frefh Herbs underneath, recovered from the Scurvy by eating them; and when the Seafon permitted, and they had collected a little Provifion, they left their Ship behind them, and ventured to retum in their Pinnace, with which, after overcoming great Difficulties, they fafely arrived in Norway. This Captain Munk was not only a great Seaman, but a very ingenious Mathematician ; and fome Years after revived this Defign of finding a North-weft Paf fage, of which he gave fo good an Account to feveral of the Danijb Nobility, and made it fo probable to fome of the richeft Merchants in Norway, that they raifed a joint Stock to defray the Expences of his Voyage.

When all things were in a Manner ready, Munk himfelf was taken off by a very odd Accident. The King afked him how he came not to difcover the North-weft Paffage the laft Time, upon which he gave him a large Account of his Misfortunes. The King told him that he had deftroyed a great many Men already, to which Captain Munk made a quick Reply, and provoked the King to ftrike him over the Stomach with his Cane. This Indignity had fuch an Effect upon the Man's Spirit, that as foon as he came home, he obftinately refufed all

Refrefhnent, and died in two or three Days. The unfortunate Iffue of this Affair fo difcouraged the Danes, that we hear nothing more of their Attempts, though it is certain, that with refpeet to fuch Expeditions, they enjoy much greater Advantages than almoft any other Nation.
7. As long as the Greenland Trade was carried on with Advantage to this Nation, the Endeavours for a Difco ry were kept up, and a feecial Committee was appointed by the Merchants concerned in that Trade, for drawing Inftructions to the Commanders of fuch Veffels as were fent abroad in that Service, and Sir Fobn W-olfe enbome the younger was appointed their Treafurer. We have a great many Letters and Papers tranfimitted to this Committee, in the third Part of Purchas's Pilgrims, and of thefe there are fome that are very well worth the readings It appears from them, that Thomas Marmaduke; of Hull, had failed as far as the Latitude of $8_{2}$ Degrees North, which was to the utmoft Extent of Greenland; but he feems to have kept too near the Shore, which was the Reafon that he found himfelf much incommoded by Ice; whereas if he had kept a little to the Weftward, it is allowed that he would have met with an open Sea. But by this Time other Nations began to interfere in the Greenland Trade, and the Company found themfelves under a Neceffity of having recourfe to the Crown for Protection and Affiftance, as well for defending their Fifhery, as for profecuting their Difcoveries; and accordingly they addreffed themfelves to King Cbarles I. upon both Heads, who very readily granted them all that they defired, particularly a Frigate, called the Cberles, under the Command of Captain Luke Fox; which, being manned and victualled for eighteen Months, failed in the Spring of the Year 1631, in order to make Difcoveries towards the North-weft; and, as he tells us himfelf, this was the fixteenth Voyage that had been undertaken exprefly for this Purpofe.
He traced Frobiber, Hudfon, Davis, Bafin, and Button, meeting with Whales, much Ice, and foul Weather He built a Pinnace in River Nelfon, where he found feveral Remains left there by Sir T'bomas Button. He obferved abundance of fmall fpruce Firr-Trees on both Sides the River, almoft covered with Mofs, and other Sorts of Trees, but fmall. The Valleys had good Grafs, Blackberries, Strawberries, Vetches, Venifon, $\mathcal{E}_{6}$. but no Natives or Inhabitants to be met with in this Place; tho in other Parts of the Sea he faw feveral Savages. Captain fames departing from England foon after Captain Fox, upon the fame Defign, they both met, and careffed each other, near Port Neljon, in the Month of Aug. 163 I Fox got home before Winter, and fome cime afterwards publifhed a large Account of his Voyage, under a pompous Title, which, however, was never much efteemed; and funk frill lower, in the Opinion of Mankind, aftes Mr. James's Voyage was made public, which every body allowed to be an excellent Performance, and to have all the Merit that could be expected from a Work of that kind.
It appears from hence, that there was a furprizing De gree of Vigilance and Steadinefs in the Conduct of the mercantile Part of the Nation at that Time. They applied themfelves to the Study of Navigation and Commerce, as to Sciences capable of raifing their Fame and Reputation, as well as their Fortunes; and this made them jealous of feeing themfelves rivalled, or out-done, by any other Nation whatever. The King too had great Knowledge in thefe Matters, conferred about them with the principal Commanders in his Navy, and the moft able Seamen throughout his Kingdom; offering freely whatever Affiftance his Prerogative enabled him to give, and encouraging the wealthier Sort of Merchants to continue thefe Kinds of Expeditions, by his own Example. It was this that became a kind of Law to the Nobility and Courtiers, who, in imitation of the King, interefted themfelves deeply in Attempts of this Nature, as manifeftly appears by the Names given to Roads, Sounds, Bays, Inands, Headlands, Promontories, and Coafts in Hudfon's Bay, and other Northern Regions, by which the Titles of fome noble Families are preferved, which are now extinguifhed, and their Memories alfo almof totally forgotten.
Vol. IL Numb. XCVII.

## S E C T I O N III.

The accurate and admirable Voyage of Captain Thomas James, for the Difcovery of a Passage into the Soutir Seas, by the North-weft; bis rointering in Charlton Illand, and wonderful Return with bis Ship, and moft of the Crew, into England.

## Extracted from his own Account, and delivered in his own Words.

i. An Intiroduction containing the Reafons of this Expedition; and the Motives and Preparations of Captain James, for undertaking this Voyagei 2: The Autbor departs from Brifol, and arvives upon the Coafl of Groenland. 3. Finds bimfelf and bis Crevo expofed to great Danger, and prodigious Inconvertiencies, by the vaff quantitites of Ice in thofe Parts. 4. An Account of their landing at feveral Places, the mijerable Barrennefs of the Country, and the Sea deffitute of Fijb. 5. They fall into newo Perils from the Ice, from wobich they free themfelves by incefliant Labours. 6. A fartber Account of the Country, Coaffs, and Seas. 7. The Metbods taken by Captain' James, to encourage and keep up tbe Spirits of bis Seaminen, in the Midft of fo many Difficulties. 8. Their. Dangers and Labours fill increaffe, notroitbjianding all the Precautions that could be taken to avoid them. 9. A Misfor tune happens in tbe revighing of tbeir Anchor, by which feveral of the ableft Men in the Sbip are mijerably burt. Io. They meet weitb Captain Luke Fox, zubo bad been fent outt the Year before upon the Jame Difcovery; and after mutual Civilities, part from, and fee, each otber no more. II. A violent Storm, by webich they are in great Danger; from which they are delivered by tbeir cown Induyfry, and the Care of thbir Conmander, woith the Blefing of God. 12. The Ship runn afoore by an Accident, webich put them into fo great Danger, that they bad Thougbts of quititing their Veffel, and making their Efaape in their Boat; but afterwards are fo lucky as to get the Ship off. I3. Anotber Storm in whbich they loft their Shallop, and weve driven to fuch diffrefs, that they weere forced to think of wintering in thofe Seas. 14. They are mijerably incommoded with Fogs, Arong Currents, and floating Iflands of Ilce, by wehich they are put in tbe utmoft Danger for feveral Days togetler. 15. The Captain lands upon an IJand in order to make Difooveries; to procure Wood, Water, and otber Correceriencies, and to fearch out a proper Place for tbeir wintering in. I6. Their Houff is fet up, a Deer taken, and one of tbeir Men loft in feeking for Refrefloments. 17. An Account of tbeir various Precautions taken to aroid fuch Accidents for the future; their Diftrefs from the Severity of the Weatber; and the Death of their Gumner. I8. Captain James inclines to rum bis Ship aground; the Reafons which induced bim to think of tbis Expedient, and the Accidents rwbich bindered bim from putting it in execution. 19. They refolved, after mature Deliberation, to fink the Ship, as the fureft Meens of preferving ber; this Refolution executed, and tbe Difficulties they met weith in getting afoore. 20. Captain James's Speech to bis Creew, in Relation to tbeir Wintering; the Afjurances given binn by them, of their Fidelity and Obedience, togetber weitb the Diftribution made of the Men to feveral Employnnents. 2T. Farther Precautions taken for fecuring thennflves in this uncomfortable Country, getting thbir Boat afbore, and rajing a Storeboufe for their Provifions. 22. A large and very curious Account of their Habitations in this defert IJand, and of the Metbods taken for the Eafe and Refrefloments of the Sick. 23. Obfervations on the Cold, Ice, Snowes, Spring-Tides, and other things, at the Beginning of the Xear 1632. 24. The Mijeries cudured by the webole Creew, from the dif fnal Effects of the Scurvy; and the great Pains taken by their Chirurreion to give thben all the Relief in bis Power. 25. The Dificulties that attended the getting of Wood; and various Metbods pracijifed to overcome thofe Dificulties. 26. The Captain refloved to dig a Paflage through the Ice to the Ship, which, weith inexprefible Labour, woas effected, and the Veflel found fafe and found. 27. The Order in wobich their Provifions were ferved to them, wobile they contimued afbore; and the Danger their Sick zeere in of being farved, for weant of a Power of eating. 28. The Death of their Carpenter; their Rudder recovered; and the IJland named, from 'tbeir wintering' upon it, Charles Town, or Charlton Inland. 29. The Ship cleared; the Men recover chiefly by the Help of Sallads; the Nature of the Sprinis in this Country. 30. The Ship begins to float; Captain James takes Poffefion of the Ifland for King Charles I. and begins to tbink of his Departure. 31. The Captain in Danger of being burnt by a very Arange Accident; ereels Tombs for bis dead Men; the Nature of Freezing in this Country. 32. The Manner of the Waters Thawing deforibed; woith a Viewo of the Country in the Spring, and otber Particulars. 33. They labour to leave Chariton Inland, but are bindered by tbe Ice, 34. Put to Sea vivith much Dificulty, and meet with great Tempelfs, and other Misfortunces. 35. Undergo vafk Varieties of Har djhips, thbrougb Storms, Rocks, Ice, \&cc. 36. In much greater Danger than ever; fo tbat not only the Creew, but the Captainn bimfelf, began to deppair of the Poplibility of returning. 37. He lays bold, notwitbfanding, of the fivf Opportunity that offered, for profecuting the intended Dijcovery. 38. Expoped to newo Dififulties and Dangers, wwbich engage them, after mature Deliberation, to refolve upon Japping their Courfe bome, wwbich waas accordingly done. 39. Captain James changes bis Sentiments, woith recpect to the Poffibility of funding a North-weff Pajage; Motives affigned by bim, in Suipport of that Change; and bis Recfons for tbinking the Paflage ifjelefs cund unprofitable, if it could be difccovered. 40. His Notions uponn this Subjeck confidered and confuited. 4.1. Conchufon of ibis Voyage, woith Obfervations and Remarks.

A$S$ curious and inftructive as the Hiftory of the Expeditions made for finding a North-wef Paffage murt certainly be eftecmed by all competent Judges of a Collection of this kind, yet it is very natural for them to expect to fee fome Voyage entire, by which they may judge of the Nature of fuch an Expedi-
tion; the Method of purfuing it; the Difcoveries that incidentally fall in; the Difficulties that occur; the Na ture of the Climate and Coafts; and other Singularities which render fuch kind of Pieces equally ufeful and entertaining. The Forefight of this, and the Defire of complying, as far as pofible, with the Expectations of

## Chap. I.

my Readers, induced me to think of giving Place to the Voyage of Captain Thomas Fames, undertaken for the Satisfaction of King Cbarles 1. at the Expence of the Merchant Adventurers of Brifol. And this for various Realons: Firf, Becaufe the original Edition of 1633, publifhed by the Author himfelf, from whence this, with the Omiffions only of fome obfolete Phrafes, and fome Verfes, not much to the Purpofe, is literally taken, is become exceeding fcarce, and, indeed, hardly to be met with. Secondly, Becaufe it is very juftly looked upon as the very beft Work of its kind that ever was publifhed, and this in every refpect; the Author being a knowing, careful, and experienced Seaman, one who wrote every thing as it occurred, and framed the Hiftory of his Voyage while it was making, and not after his return Home, from loofe Papers, or a bare Sea Journal. Thirdly, Becaufe the giving this Voyage will fatisfy the Reader in all the Points of Enquiry that he can poffibly frame, and this upon the Authority of fo judicious and candid a Writer, that the famous Mr. Robert Boyle chiefly depended upon the Extracts he made from his Work, in framing one of the moft valuable Pieces that he publifined, I mean his Hiftory of Cold. Fourthly, Becaufe it will free us from the Neceffity of inferting any more Voyages into thefe Northern Parts, as containing every thing that is worth reading in the reft of them ; digefted clearly and plainly, fo as to carry Conviction throughout, and leave us no room to queftion either the Abilities or the Sincerity of its Author. And Fifthly, Becaufe it affords us an Opportunity of exhibiting, at once, the Reafons from which it was for many Years after this believed, that the finding fuch a Paffage was impracticable, and adding thereto the Motives that have induced able and experienced Perfons in later 'Times to conceive, that how formidable foever thefe Objections may at firft Sight appear, they are not abfolutely conclufive, but that fuch a Paffage may be ftill fought for with rational Hopes of Succefs.

After having given this Account of the Caufes of inferting this long Voyage, I fhall next prefent the Reader with an Account from Captain $\begin{aligned} & \text { Fames's Preface, which is }\end{aligned}$ to be found only in his original Edition; of the Manner $\cdot$ in which this Voyage was undertaken, containing many Particulars that are very well worth Notice, and which will not fail to convince the Reader that never any Enterprize of this kind was better concerted, or more Deliberation ufed in providing for its Succefs, Captain Games had been employed, as he tells us, in fome Northern Voyages before, whence he came to be thought the fitteft Perfon in the Kingdom, for attempting this fo long wifhed for Difcovery; which, however, he was not determined to undertake, till it was fignified to hinn on the Part of the King, that it would be highly fatisfaciory to his Majefty. After he was once come to a Refolution, he fignified to the Merchants of Brifol, in whofe Service probably he had been formerly employed, both his own Inclination to venture on this Voyage, and the Encouragement he received from his Majefty ; upon which they very readily raifed fuch a Sum of Money as was requifite, and depofited it in the Hands of a Treafurer, for carrying it on with the utmoft Facility and Expedition.
Captain Fames defired only a fingle Ship, and that a fmall one, of the Burden only of feventy Tons. She was built for this Voyage; and it will appear from what follows, that fhe was as well and ftrongly built as cver any Veffel of her Size was. The Number of Perfons that he defired for the Execution of fo difficult and fo dangerous a Defign, was no more than twenty-two; and the Provifions and other Neceffaries that he required, was for 18 Months; and he acknowledges that they were provided for him in the full Proportions he demanded, and that in their feveral kinds they were as wholefome and as good as he could wifl. He had the free Choice of the Men that were to ferve under him, but he abfolutely refufed all Volunteers that had never been at Sea, in which there is nothing Atrange; but it muft be allowed that it was fomewhat furprizing, that he thould reject alfo fuch as had failed in , thofe Seas before; for which he fays he wanted not good

Reafons, though it feems they were fuch as he did not think fit to difclofe. The Qualities he required were, that they flould be unmarried, approved, able, and healthy Seamen; he likewife took care that they flould not have the leaft Knowledge or Acquaintance with each other; and, infead of entering them all at once, he frot fixed upon a Boatfwain and his Crew for rigging the Ship, and put them aboard before the reft of the Scamen ; then he fripped the common Men, and laftly his Officers; fo that all things were ready at once; the Expence kept as much within Bounds as it was poffible, and the wifeft Precautions taken to prevent Factions, and Mutinies, with which, as we fall fee, he was never troubled, notwithtanding all the Miferies and Misfortunes that he and his People endured.
When all things were ready he made a fhort Journey to Loridon, to receive his Majefty's laft Commands, and fuch Letters and Commifions as he judged might be of Service to him; and, upon his Return to Brijol, he went directly aboard his Ship, with a Refolution of failing the firt fair Wind. After his Return he drem up the following Hiftory of his Voyage, for his Mafter's Satisfaction; and prefixed to it the following Dedication, which is alfo not to be met with, entire and correct, in any but the original Edition.
"Moof gracious Sovereign: That my unfkilful felf was " made Choice of for this Employment, and my Un"dertaking in it encouraged by your gracious Com"" mandment, I muft ever account of, as the greateft "Honour ever yet befel ime. Many a Storm, and " Rock, and Mift, and Wind, and Tide, and Sea, and "s Mount of Ice, have I in this Difcovery encountered "withal; many a Defpair and Death had almoft over"whelmed me; but fill, the Remembrance of the Ac-
"count I was to give of it, to fo gracious a Majefty, put " me in Heart again, made me not to give Way to iny " own Fears, or the Infirmities of I Iumanity. Your " Majerty, in my Employment (like a true Father of "your Country) intended the Good of your Subjects, "s and who is not bound to blefs God for your royal "Care in it, had it now been my Fortune to have done ". my Country this Service, as to have brought home the "News of this fuppofed and long-fought for Paffage; " then fhould the Merchant have enjoyed the Sweetnefs "s of the hoped Profit, and the Subjects have been fen"" fible of the Benefit of your Majefty's Royal Intention " in it. I have done my Good-will in it, and though "I have not brought home the News, yet fhall I here di"s vulge thefe Obfervations, which may (I hope) become " fome Way beneficial unto my Country. The Account of them I here in all Humility offer unto your moft judi"cious Majefty; your gracious Acceptance of what I " had done, though I had not done what was expected " emboldneth me to do fo; and fince your Majefty was "pleafed to fignify your Defires of having a brief Ac"count of my Voyage prefented unto you, that Word " became a Command unto me, to draw this rude Ab " ftract of it. Your Majefty will pleafe to confider, that "they were rough Elements which I had to do withal, "" and will, with Favour, vouchfafe to pardon, if a Seaman's Stile be like what he moft converfeth with. In the Plainnefs therefore of well meaning, fince your "" Majefty hath been fo gracious to me, as to appoint me y your Servant, I am now bound to vow you my Ser"vice, and it flall be my Honour to be commanded "it; and I flall account no Danger too great in the going through it. There are the Relolutions of "Your Majefty"s humbleft Subject and Servant Thoomas " James."

But it is now Time to proceed to the Captain's Narrative, which is delivered mofly in his own Words, becaufe it was found impoffible to exprefs his Senfe in Words better chofen, or that could bring the Facts he relates into a narrower Compafs.
2. The 2 d of Moy I took my Leave of the MerchantAdventurers in this Action, in the City of Brifol; and being accompanied by the Reverend Mr. Palmer, and feveral of the Merchants I repaired aboard; where Mr. Polmer made a Sermon, exhorting us to continue bra-
therly Love, and to be bold to profefs the Chriftian Religion, wherever we flould come in this our Peregrination. After they had received fuch Entertainment as I could afford they departed for Brifol. This Afternoon - I made a Review of all Cloaths, Neceffaries, and - Victuals. The 3d of May, after Prayer, about three in the Afternoon, we failed down the Severn to the weftward of Lundy, where the Wind oppofed us fo ftrongly, that we were obliged to anchor in Lundy Road ; where we 'remained till the 8th in the Morning, when we failed; but were forced to put into Milford, where we anchored about Midnight: Here we remained till the I 7 th, when, in the Morning, with the firft fair Wind we proceeded, and doubled Cape Clear, off Ireland. The 22d we were in Latitude 51 Degrees 26 Minutes, and the Blafes bore from us North-eaft about twelve Leagues off; which Blafkes is in Latitude 52 Degrees 4 Minutes; here I ordered the Courfe that fhould be kept, which was generally Weft-north-weft, as the Wind would permit, which in this Courfe and Diftance is very variable. The 4th of Fune we made the Land of Groenland, ftanding in with it, to have Knowledge of the trending of it: It proved very foul Weather, and next Day, by two in the Morning, we found ourfelves encompaffed with Ice; and endeavouring to clear ourfelves of it we were the more engaged, and ftruck' many fearful Blows againft it. At length we made faft to a great Piece, and, with Poles, wrought Day and Night to-keep off the Ice; in which Labour we broke all our Poles.

The 6th, about two in the Morning, we were befet with extraordinary Pieces of Ice, that came upon us with great Violence, and doubtlefs would have crufhed us to Pieces if we had not let fall fome Sail, which the Ship prefently felt. In efcaping the Danger we ran againt another great Piece, that we doubted whetier our Ship had not been flaved to Pieces; but by pumping we found fhe made no Water. The former Pieces of Ice had cruthed our Shallop all to Pieces, wherefore I caufed our Long-boat to be had up from betwixt the Decks and put over-board, by the Help whereof we recovered our broken Shallop, and fet her uporí the Deck, intending to new-build her. All this Day we beat, and were beaten amongft, the Ice, it blowing a perfect Storm. In the Evening we were enclofed among great Pieces as high as our Poop, and fome of the fharp blue Corners of them reached quite under us. In this Extremity I made the Men let fall, and make what fail they could, and the Ship forced herfelf through it, though fo toffed and beaten as I think never Ship was. When we were clear we tried the Pumps, and found them ftaunch; upon which we went inftantly to Prayer, to praife God for his merciful Delivery of us.

The feventh and eighth Days we endeavoured to double about Cape Farcwell, being ftill peftered with much Ice. The gth we were in the Latitude of 59 Degrees, and we made Account the Cape Farecwell bore off us due Eaft, and fome ten Leagues off. The Blafies in Ireland is in Latitude $5_{2}$ Degrees 4 Minutes, and Cape Farewell in Latitude 59. The Courfe is Weft-north-weft, and the Difance about four hundred and ten Leagues: I know very well thefe Latitudes, Courfes, and Diftance, do not agree with mathematical Conclufions; but thus we found it by Practice. The Variation of the Compafs in Latitude 52 Degrees 30 Minutes, and thirty Leagues to the weftward of Ireland, is about 3 Degrees to the eaftward; in Latitude 57 , about three hundred and ten Leagues Weft-north-weft from the Blafkes, the Compals doth vary nine Degrees to the weftward; in Latitude 59 Degrees $I_{5}$ Minutes, fome forty Leagues to the eaftward of Cape Farezell, the Variation is 14 Degrees 45 Minutes. In this Courfe I have been obfervant whether there were any Current that did feit to the North-eaft, as fome have have written there did, and that as well in calm Weather as otherwife, but I could not perceive any. The Winds here are variable, and the Seas of an unfearchable Depth; we have not feen from Ireland hitherto any Whales, or Qther Fifh; the Weather for the moft part was foggy.
3. On the roth all the Morning was very foul, and high Sea, although we had Ice about us, and fome Pieces
as high as our Topmaft Head. Our Long-boat, which we were forced to tow a-ftern, broke away, and put us to fome Trouble to recover her. This we did, and brought her into the Ship, though much bruifed, and had two Men much hurt. By eight in the Morning we were fhot up as high as Cape Defolation; for finding the Land to trend away North and by Eaft, we certainly knew it to be the Cape : It ftands in Latitude 60 Degrees, and the Land from Cape Farervell to it trends North-weft the Diftance about forty Leagues, the Courfe Weft half a Point North. The Latitude of the South-end of the Ifland being 6 I Degrees 20 Minutes, fome twelve Leagues to the weftward of Cape Defolation, the Variation 16 Degrees. In this Courfe we were much beaten with the Ice, many Pieces being higher than our Topmaft Head. In our Way we faw many Grampuffes amonglt the Ice, and the Sea is full of them; the Weather, a ftinking Fog, and the Sea very black; which I conceive to be occafioned by the Fog.

The Iyth, at Night, we heard the Tract of the Shore, as we thought; but it proved to be the Rutt of a Bank of Ice. It made a hollow and hideous Noife, like an Overfall of Water, which made us to reafon among ourfelves concerning it, for we were not able to fee far, it being dark-night and foggy; we ftood off from it till break of Day, then in again; and about four in the Morning we faw the Land above the Fog, which we knew to be the Illand of Refolution. This Night was fo cold that all our Rigging and Sails were frozen. We endeavoured to compafs the fouthern Point of the Ifland, where runs a quick Tide into the Streight; but the Ebb is as firong as the Flood. The Fog was of fuch apierceing Nature that it fpoiled all our Compaffes, and made them lag, and fo heavy that they would not traverfe; wherefore I would advife any that fhall fail this Way, to provide Compaffes of Mof core Glafs, or fome other Matter that endures the Moifture of the Weather. As the Fog cleared up we could fee the Entrance of the Streight to be full of Ice clofe wedged together ; endeavouring to go forward we were faft enclofed amongft it ; and fo drove to and again with it, finding no Ground at two hundred and thirty Fathoms, four Leagues from the Shore.
The 2oth in the Morning we had got about the fouthern Point of the Inand; and the Wind at Weft drove both us and the Ice upon the Shore; when we were driven within two Leagues of the Coaft, we came among the ftrongeft Whirlings of the Sea that can be conceived. There were great Pieces of Ice aground in forty Fathoms Water, and the Ebb coming out of the broken Grounds of the Inand among thofe Infes of Ice, made fuch a Deftruction that we were carried round fometimes clofe by the Rockś, and fonetimes fo clofe by thefe high Pieces, that we were afraid they would fall upon us. We made faft two great Pieces of the Ice to our Side, with our Sledges and Grapnels, that drew nine or ten Fathoms; that fo they might be on Ground before us, if we were driven on the Shore; but that Defign failed us. And now from the Top feeing in among the Rocks, I fent the Boat to fee if fhe could fird fome Place of Security ; but the was 110 fooner parted but fhe was inclofed, and driven to trail upon the Ice, or clfe fhe had been dafhed to Pieces; they ran her over the Ice from Place to Place, and in the mean while, with the whirling of the Ice, the two Pieces broke away from our Sides, and 'carried away our Kedger and Grapnels : Then we made Signs to the Boat to make all the hafte fhe could to us, which fhe perceiving, did ; the Men being with much Difficulty forced to flide her over many Pieces of Ice. In the mean time we made fome fail, and got to that Piece of Ice which had our Grapnel on it, which we recovered.
By this time our Boat was come, and we put a frefh Crew into her, and fent her to fetch our Kedger, which The endeavoured with much Danger of Boat and Men. By this time the Ship was driven fo near the Shore that we could fee the Rocks under us, and about us, and we were carried by the Whirlings of the Watèr clofe by the Points of Rocks, and 'then round about back again; and all this notwithftanding the Sail we had aboard, and we expected continually when fhe would be beaten to

Pieces. In this Extromity I made them open more Sail, and fo forced her in among the Rocks and broken Grounds, and where there were many large Pieces of Ice aground. We went over many great Pieces of Rocks that had but twelve or thirteen Feet Water on them, and fo let fall an Anchor; this Anchor had never been able to wind up the Ship, but that by good Fortune the Ship ran againft a great Piece of Ice that was aground: This Shock broke the main Knee of her Beakhead, and a Corner of it tore away four of our main Shrouds, and an Anchor that we had at her Bow; and fo ftopped her Way that the did wind up to her Anchor.

We faw the fharp Rocks under us, and had but fifteen Feet Water; being alfo in the Tides Way, where the Ice would drive upon us. Our Boat we could not fee, which made us doubt fhe had been crumed to pieces; in her was the third Part of our Company; but foon after we faw her come about a Point among the Rocks, the had recovered our Kedger, which made us joyful; with all Ipeed we laid out Hawfers to the Rocks, and cvery one worked to the beft of his Strength to warp her out of this dangerous Place to the Rock's Side, where we had three Fathom Water, and were under the Shelter of a great Piece of Ice that was aground, which kept of the ftraggling Ice that otherwife would have driven upon us. Here we lay very well at the Ebb, but when the Flood came we were affaulted with Pieces of Ice, that every half Hour put us into defperate Diftrefs ; we worked continually to keep off the Ice: At full Sea cur great Piece of Ice which was our Buckler was afloat, and do what we could got away from us, and left us in imminent Danger from the Ice that drove in upon us; but the Ebb being once made, this grat Piece of Ice came again aground, very favourable to us, and Theltered us all the reft of the Ebb. All Night we wrought hard to fhift our Cables, Hawfers, and to make them faft aloft on the Rocks, that the Iee might the better pais under them. All Day and Night it nowed hard, and blew a Storm at Weft, which drove in all the Ice out of the Sea upon us. In working againft the Violence of the Ice, the Hook of our Kedger was broken, two Arms of our Grapnels, and two Hawfers, our Shallop being again very much bruifed; whereupon we went to work to repair it. This Tide the Harbour was choaked full of Iee, fo that it feemed firm and immoveable, but when the Ebb came it moved; fome great Pieees came aground, which altered the Courfe of the other Ice, and put us on the Rocks.
Here, notwithtanding our utmoft Endeavours, the fettled upon a fharp Roek, about a Yard above the main Maft, and as the Water ebbed away, fhe hung after her Mead, and held to the Ofing: We made falt Cables and Hawfers aloft to her Mafts, and fo to the Rocks, ftraining them tough with our Taekles; but as the Water ebbed away fhe was turned over, that we could not ftand in her. Having now done to the beft of our Underftandings, 'but to little Purpofe, we went all upon a Piece of Ice and fell to Prayer, befeeching God to be merciful unto us. It wanted yet an Hour to low Water, and the Tide wanted a Foot and Half to ebb to. what it had ebbed the laft Tide: We were careful Obfervers of low Water; and had Miarks by Stones and other Things which we had fet up, fo that we could not be deceived. The Ship was fo turned over that the Portlefs of the Forecaftle was in the Water, and we looked every Minute when fhe would overfet; indeed at one Time the Cables gave way, and the funk down half a Foot at that Slip; but unexpectedly it began to flow, and fenfibly we perceived the Water began to rife apace, and the Ship withal; then was our Sorrow turned to Joy, and we all fell on our Knees, praifing God for his Mercy in fo miraeulous a Deliverance. As foon as the was freed from this Roek, we wrought to get her farther off. All the Flood we were pretty clear from the Ice, but when the Ebb came the Ice came driving again upon us, which drove us to great Extremity: We got as many Pieces between us and the Rocks as we could, but there came a great Piece upon our Quarter, which was above three hundred of my Paces about, but it came aground. Thus came divers great Pieces befides; which was the Oc-

Vol.II. Numb. 97.
cafion that this Tide the Harbour was quite choaked up fo that a Man might go any Way over it from Side to Side.
When it was three Quarters Ebb, thofe great Pieces that came aground began to break with a moft terrible thundering Noife, which put us in great Fear that thofe about us would break us all to Pieces; but God preferved us. This Morning the Water veered to a lower Ebb than the laft Tide it had done by two Feet, whereby we faw God's Merey appear to us in our late Extremity. That Flood we had fome Refpite from our Labours, but after full Sea our Hopes ebb'd too. The great Piece that was by us fo ftopt the Channel that the Sea came all driving upon us, fo that now undoubtedly we thought to have loft our Ship.

To work we went with Axes, Bars of Iron, and any thing proper for fuch a Purpofe, to break the Corners of the Ice, and to make way for it to go from us. It pleafed God to give good Succefs to our Labours, and we got fo much of the fofter Sort of the Ice betwixt us and the Rocks, that we thought ourfelves pretty fecure: But at low Water thofe Pieces that were aground breaking, kept a moft thundering Noife about us. This Day I went afhore, and built 'a great Beacon with Stones upon the higheft Place of the Inand; and put a Crofs upon it, and named this Haven, The Harbour of Good Providence.
4. On the 23 d in the Morning with the Flood the Ice drove up among the broken Grounds, and with the Ebb drove all out except one great Piece, which coming aground not far from us, fettled itfelf in fuch a Manner that we much feared it: But there came no more, otherwife we muft have expected as great Danger as heretofore. I took the Boat and weint afhore upon the Eaftern Side, to fee if I could find any Place free from Danger, and where, among the Rocks, I defcried a likely Place. From the Top of the Hill where I was I could fee the Ship. It was now almoft lowWater: At whieh Inftant the great Piece of Ice broke with a terrible Noife in four Pieces, which made me afraid it had fpoiled the Ship, it being full half Maft high. I made what Hafte I could to the Boat, and fo to the Ship to be fatisfied, where I found all well, God be thanked. I inftantly fent away the Boat to found the Way to a Cove which I had found, which was a very dangerous Pafage for the Boat. At her Return we unmoored the Ship, and with what Speed poffible warped away from among this terrible Ice. We were not a Mile from them before they broke all to Pieces, and would furely have made us bear them Company, but that God was more merciful to us.

We got round the Rocks, and fo in to this little Cove. Here we made faft to the Rocks, and thought ourfelves indifferently fafe; which being done, I went afhore again to wander up and down, to fee what I could difcover: I found it all broken rocky Ground, and not fo much as a Tree, Herb, or Grafs upon it. Some Ponds of Water there were upon it, which were not yet thawed, and therefore not ready for the Fowl. We did not find in the Snow any Footing of Deer or Bears, but Foxes we faw one or two. We found where the Savages had been, but it appeared to have been long fince: They had made five Hearths, and we found a few Fire-brands about them; and we found fome Heads and Bones of Foxes about them, with fome Whale-bones. I could not conceive to what Purpofe they fhould have come thither, for we could find none or very little Wood on the Shore-fide, and no Fifh at all, though we endeavoured to take fome. But it may be the Seafon was not yet come. I called this Cove by the Mafter's Name of my Ship, Price's Cove: The Latitude of it is 6 I Degrees 24 Minutes. The Firebrands and Chips, which I fpoke of, had been cut with fome Hatchet or other Inftrument of Iron. From the Top of the Hills we could fee the Illands that are on the South Shore, commonly called Sir Tbomas Button's Ifands. They bear South and by Eatt, half a Point Eafterly, fome fourteen or fifteen Leagues Diftance. Upon the Change-Day it flows here at feven $0^{\circ}$ Clock and a halfs and the Tide higheft' at moft three Fathom. The Flood comes from the Eaftward, and thither it returns. I have 5 M
been
been obfervant from the Top of the Hills, and defcried the great Pieces of Ice two or three Leagues from the Shore, drive to and againt the Flood and Ebb indifferently : Hence I collected that affuredly no Current fets in liere, but that it is a mere Tide. Near the Shore the Eddies whirl in twenty Manners when the Ebb is made, which is becaufe it comes out of the broken Ground amongft the Ice, that is, a Ground near the Shore; befides which Reafon there are divers Rocks lying under Water, on which you fhall have thirty, then twelve, and anon but eight, and then twenty Fathoms; and thofe Uncertainties occafion fuch Diftractions, I would therefore advife no one to come near thofe dangerous Shores, for fear he lofe his Ship.

This Morning, being the 24 th, there fprung up a frefh Gale of Wind at Eaft; and after Prayer we unfaftened our Ship, and came to fail fteering betwixt great Pieces of Ice that were a-ground in forty Fathoms, and twice as high as our Top-maft-head. We failed out of this Cove upon the Flood; and had none of thefe Whirlings of the Waters as we had at our going into it. We endeavoured to gain the North Shore, kept ourfelves within a League of the Shore of the Ifland of Refolution, where we had fome clear Water to fail through. In the Offing it was all as thick wedged together as poffible. By tweive o'Clock we were faft inclofed, and notwithftanding it blew very hard at Eaft, yet we could make no Way through it, but the Ice grated us with that Violence that I verily thought it would have wrenched the Planks from the Ship's Sides. Thus we continued in Terror till the 26th Day, driving to and fro in the Ice, not being able to fee an Acre of Sea from Top-mafthead. The 26 th was calm funfhiny Weather, and we took the Latitude and Variation, and had Ground, at a hundred and forty Fathom, fmall white Sand. I caufed the Men to lay out fome Fifhing-Lines, but to no Purpofe, for I could not perceive the Bait had been fo much as touched. The Nights are very cold, fo that our Rigging freezes, and frefh Ponds of Water ftand upon the Ice about haif an Inch thick.

On the 27 th there fprung up a litcle Gale at South-eaft, and the Ice did fomething open. Hercupon we let fall our Fore-fail, and forced the Ship through the Ice. In the Evening the Wind came contrary, at Weft-north-weft, and blew hard, which caffed us to faften to a great Piece, to which we remained moored till the 2gth. I an fatiffied here is no Current by many Experiments I have made; fuch as thefe, by making Marks on the Land, and noting our Drift to and again, with Ebb and Flood, for many Days together, as well in calm Weather as ocherwife. By all thefe Experiments I found that the Tide was no ftronger there than that betwixt England and France. This Morning there fprung up a fine Gale at Eaft, and the Ice opened fomething, fo that we forced the Ship through it with her Fore-fail. By twelve o'Clock we were got into fome open Water, with a fine Gale of Wind at Eaft, and fo clear Weather that.we could fee the Inand of Refolution, the Eaft End bears Eaft-north-eaft, fome twelve Leagues off.
5. From the 29 th to the 5 th of $7 u l y$ we failed continually through the Ice, with variable Winds and Fogs, and fometines calm. The 5 th at Noon we had a good Obfervation, and were in Latitude 63 Degrees 15 Minutes, and then we faw Salijbury. Ifland bearing Weft-by-north, fome feven. Leagues off, with much Ice betwixt it and us, to weather which we were driven to fand to the northward. Soon after we faw Prince Cborles's Cape, and MillIfand; and to North-north-weft (and indeed round about us) the Sea moft infinitely pefter'd and cumber'd with Ice. This grieved me very much; for as I had determined to profecute the Difcovery to the North-weftward, I faw it was not poffible this Year. We were driven back again with contrary Winds, ftill clofed and peftered with Ice, and with all the Perils and Dangers incident to fuch Adventurers, fo that we thought a thoufand times the Ship had been beaten to Pieces. By the 15 th of July we were got betwixt Digg's Ifland and Nottingbam's Ifland, not being able to get more Northward. There, for an Hour or two, we had fome open Water.
But-before I proceed further, it will not be amifs in
fome manner to defribe the Streight which begins at the Ifand of Refolution, and ends here at Digg's Ifland. - If yout go down into the Bay, the Streight is about a hundred and twenty Leagues long, and trends Weft-north-weft and Eaft-fouth-eaft. Generally in the Entrance it is about fifteen Leagues broad, and then on the fouthward Side is a great Bay: About the Midft it is likewife about fifteen Leagues broad, and then the Land opens fomething wider; fo that betwixt Digg's Ifland and Cape Cbarles it is about twenty Leagues broad, betwixt which two ftand Salifbury Ifland and Nottingbam Ifland. If it be clear Weather, you may fee both the South and the North Shores. The Depth in the Middle of the Streight is a hundred and twenty Fathoms, white Sand, a certain Tide runs in $\mathrm{it}_{2}$ and no Current. The North Shore is the ftraiteft and the clearefl from Ice. Along this North Shore you have many low fmall Inlands, which cannot be feen far from Land, and in many Places the Land appears as if it had fmall Sounds into it: The main Land on both Sides is indifferent high Land.
Being now convinced of the Impofibility of doing any thing to the North-wefward, for the Reafons aforefaid, I gave Orders to the Miafter of my Ship to fteer away Weft-fouth-weft, to have a Sight of $\operatorname{INansfield}$ Ifond, which the next Day by three o'Clock in the Afternoon we had; having fo much dangerous foul Weather among the Ice, we ftruck more fearful Blows againft it than we had ever yet done. This was the firft Day that we went to Half-allowance of Bread on Flefh-Days, and I ordered Things as fparingly as I could. Two of our Men likewife complained of Sicknefs, but foon recovered. In the Evening we came to an Anchor, and fent the Boat afhore to try the Tides: They brought me word whilft the Boat was afhore it flowed about three Feet, as we found by the Ship and by the Ice. The Water at that Time came from the Weft-fouth-weft; and the higheft Tides, fo far as they could perceive, had not fwelled above two Fathoms. They found that the Savages had been upon it by certain Fires which they left, and Heaps of Stones, Tracts of other Beafts, but Foxes they could not find. The Wind was fo contrary, and the Weather fo foggy, that we were forced to fpend fome Powder to recover our Boat again.
6. Next Morning being the 17 th, the Wind came favourable, and we weighed the Shore, being fomething clear of Ice, though very thick all to the Offing. We itood along it South-and-by-weft ten Leagues. In the Afternoon the Wind came contrary, and we came again to an Anchor within a Mile of the Shore, for out to Sea was all thick Ice and impaffable. I went afhore myfelf, to be well refolved of the Tide, and found whiltt I was ifhore that it flowed two Feet, and at that Time the Flood came from Southweft-and-by-weft. I doubted it was a Half-Tide, which afterwards I found to be true. I found where the Savages had been upon the Inand, but could find little or no Drift-wood on Shore, no Beafts on the Inand, or Fifhes in the Sea. It flows on the Change-Day about eleven o'Clock. We faw fome Fo 1 on it, one of which we killed, and returned on board. This Illand is very low Land, little higher than a' Sand-bank; it hath Ponds of frefh Water, but no Grafs, and is utterly barren. On the 18 th in the Morning the Wind came favourble, we weighed and made fail, for the Ice was all come about us.

We endeavoured to proceed to the Weftward, intending to fall in with the Weftern Land about the Latitude of 63 Degrees; by twelve $0^{\circ}$ Clock, having been muck peftered, we were come to a firm Range of Ice; but it pleafed God that the Wind larged, and we flood away to Weft-fouth-weft. At Noon in Latitude 62 Degrees, by four in the Evening, having efcaped dangerous Shocks, we were come as we thought into an open Sea, and joyfully fteered away Weft and Weft-by-North, though the Joy was foon quell'd, for by ten $0^{3}$ Clock at Night we heard the Rut of the Ice, and it grew a thick Fog, and very dark with it; neverthelefs we proceeded, and the nearer we came to it the more hideous Noife it made. On the 1gth by three in the Morning we were come to it, and as it cleared a. little we could fee the Iee as thick as

## Chap. I.

any we had yet feen, thefe being impaffable, and moreover the Wind at North-weft. We ftood along it hoping to weather it to the Southward, but at laft we became io blind with Fog, and fo encompaffed with Ice, that we could go no farther.
7. On the 20th in the Morning, notwithftanding the Fog, we endeavoured to get to the Weftward, our Ship beating all this while dreadfully. In this Wilfulnefs we continued till the next Day, when, being faft among the Ice, I obferved we were in Latitude 60 Degrees 33 Mi nutes, and then looking what Damage our Ship might have received, we could perceive that below the Plate of Iron which was before her Cut-water fhe was all bruifed and broken, the two Knees the had before to ftrengthen her fpoiled and torn, and many other Defects which we could not by any means come to mend. Notwithftanding all this, and the extraordinary thick Fog, that we could not fee a Piftol-fhot about us, we proceeded with the Hazard of all till the 27 th, which was the firt Time we had clear Weather to look about us. The Wind withal came up at South, and the Ice opened fomething, fo that we made fome Way through it to the Weftward.
In the Evening we were faft again, and could go no further, the Wind veering from the South to the Eaft and blowing a frefh Gale. This occafioned our Grief the more that with a good Wind we could not go forward. Putting therefore a Hawfer upon a great Piece of Ice, to keep the Ship clofe to it, we patiently expected better Fortune. Since we came from Mansfeld Ifand our Depth was conmonly a hundred, and a hundred and ten Fathoms, ouzy Ground. Now the Water began to fhallow, for driving faft to and again in the Ice we had but eighty Fathoms. On the 28 th and 2 2th we were fo fart inclored in the Ice, that notwithftanding we put abroad all the Sail that was at Yards, and it blew a very hard Gale of Wind, the Ship ftirred no more than if fhe had been in a dry Dock. Hercupon we went all boldly out upon the Ice to fport and recreate ourfelves, letting her ftand ftill under all her Sails. It was flat extraordinary large Ice, the worft to deal withal that we had yet found. I meafured fome Pieces, which I found to be one thoufand of my Paces long.
This was the firft Day that our Men began to murmur, thinking it impofible to get either forwards or backwards. Some were of Opinion that it was all fuch Ice betwixt us and the Shore: Others, that the Bay was all covered over, and that it was a Doubt whether we could get any Way, or to any Land to winter in. The Nights were long, and every Night it freezed fo hard that we could not fail by Night, nor in the thick foggy Weather. I comforted and encouraged them the beft I could; and to put away thofe Thoughts we drank a Fealth to his Ma jefty on the Ice, not one Man in the Ship, and the ftill under all her Sails. I muft confefs that their Murmuring was not without Reafon; wherefore doubting that we fhould be frozen up in the Sea, I ordered that Fire fhould be made but once a-Day, and that with but a certain Number of Shides that the Steward fhould deliver to the Cook by Tale, the better to prolong our Fuel whatfoever fhould happen.

On the zoth we made fome way through the Ice, heaving the Ship with our Shoulders, and with Mauls and Crows of Iron, breaking the Corners of the Ice to make way as we got forwards. The Water fhoaled apace, fo that I believed it to be fome Illand. At Noon we obferved through the Fog, with the Quadrant upon a Piece of Ice, and were in Latitude 58 Degrees 54 Minutes, our Depth thirty Fathoms. We put out Hooks to try to catch fome Fifh, but to no Purpofe, for there are none in this Bay. On the 3 Ift we laboured as before, and got fomething forward. At Noon we were in Latitude 58. Degrees 40 Minutes, our Depth twenty-three F'athoms. It was very thick hazy Weather, or elfe I think we fhould have feen the Land.
8. On the ift of Auguf, the Wind came up at Weft which drove us to the Eatward where our Depth increafed to 35 Fathom. At Noon, by Obfervation with the Quadrant on the Ice, we were in Iatitude 58 De-
grees 45 Minutes. At $60^{\circ}$ Clock this Evening we might perceive the Ice to heave and fet a little, which was occafioned by a fwelling Sea that came from the South-s weft. This did comfort us very much, hoping fhortly we flhould get out of the Ice. On the 2 d it blew hard at South-weft, and yet we could not feel the fwelling Sea, which did again quench the Hopes we had formerly conceived. On the 3 d we faw a little open Water to the North-weftward and felt a Sea from thence, which doth affure us that there is an open Sea to the Wefto ward. On the 5 th we faw the Sea clear but could by no Means work ourfelves to it with our Sails, wherefore about 6 in the Evening we let fall an Anchor in 50 Fathom Water, and food all with Poles and Oars to fend off the Ice and let it pafs to Leeward, and continued this Labour all Night. In the Morning the Wind came up at North-weft and we weighed with much Joy, as hoping now to get into an open Sea to the Southward. This by Noon we had done and were in Latitude 58 Degrees 28 Minutes, very free of Ice. The Wind larged upon us, fo that we ftood away North-weft to get us as high Northward as we could, and fo come coafting to the Southward. We went to Prayer and to give God Thanks for our Delivery out of the Ice. On the $9^{\text {th }}$ being in Latitude 59 Degrees 40 Minutes, we came again to the Ice which lay very thick to North, fince we, came out of the Ice our Depth increafed to 11O, and fince decreafed again, fo that I think we approached towards the Shore. The ioth proved very foggy Weather, the Wind contrary, and the Water flallowing apace, we came to an Anchor in 22 Fathom. On the It th in the Morning we weighed and made in for the Shore, and about Noon faw the Land our Depth being 16 Fathom in Latitude 59 Degrees 40 Minutes. The I.and to the North of us did trend North by Eaft and fo made a Point to the Southward, and trending away Weft by South, which we followed taking it for that Place which was formerly called Hubbart's Hope, and fo it proved indeed, but it is now hopelefs. The Tide fet in the Miiddle of the Bay Eaft and Weft, as we have often tried by our Lead aground but near the Shore, as they forced by the Land; I am of Opinion, that in the Ocean or large Bays the Tide naturally fat Eaft and Weft, and that this gives little Hope of a Paffage. The greateft Depth we' had in the Bay was rio Fathom, and to flooaling as you approach the Land, we coafted round this forementioned little Bay which is 18 Leagues deep in 8 and 6 Fathom, and in the Bottom of it we were two Fathom and a half Water, and faw the firm Land almoft round about us. Then we proceeded to the Southward 6 and 7 Fathoms Water, within Sight of the Breach of the Shore keeping the Lead continually going, and in the Night we came to an Anchor.
This Night having little Wind we came to an Anchor with our Kedger, but in weighing of him we loft him, having no more aboard us. The 12th we were in Latitude 58 Degrees 46 Minutes, fome two Leagues from the Shore, the Variation is about 17 Degrees. On the 13 th in the Afternoon it being fomething hazy, we faw fome Breaches a-head of us, our Depth was 9 and 10 Fathom, and loofing to clear ourfelves of them, we fuddenly ftruck upon the Rocks, the Ship being under our two Top-Sails, Fore-Sail and Sprit-Sail with a frefh Gale of Wind. In this dreadful Accident we ftruck all our Sails amain, and it pleafed God to fend two or three good fwelling Seas, which heaved us over the Rocks into three Fathorin, and prefently into three Fathom and an half, where we chop'd to an Anchor and tried the Pumps, but we found fhe made no Water, tho' fhe had three fuch terrible Blows that we thought her Maft would have fhivered to Pieces, and that fhe had been affuredly bulgesd. . We hoitted the Boat over-board and double mann'd her to go arid found a Way out of this perilous Place, fhe was no fooner gone but there arofe a Fog, fo that we were obliged to fpend fome Powder that fhe might hear whereabouts we were. The Wind dull'd fonething, otherwife it had been doubtful whether the could ever have recovered us again. After fhe had been abfent two or three Hours fhe brought us word that it was all Rocks and Breaches round about us, and that withal, fhe had found a Way where there was
no lefs than two Fathom and an half Water, and that afterwards the Water deepened; we prefently weighed and followed theBoat, and paffed over two Ledges of Rocks on which there were but is Feet Water, then it deepened to three, or four, and fo to 14 Fathom, then it fhoaled agrain to nine.

It being now dark, we came to an Anchor where we rid all the Night. In the Morning the Wind came contrary, fo that we could not go that Way we intended to clear ourfelves; and therefore we went to work to fit our Holds, to fplice our Cables, and made ready two Shot, and fo placed them in the Hold that they might on all Occafions run clear, the Ends of them being faftened to the Main-maft. We alfo looked to our Anchors and fitted our fpare ones. We got out our long Boat from betwixt the Decks, which was very much broken and bruifed. The Carpenter went to fit her, for I intended to tow the Shallop a-ftern and to have the Boats ready at an Inftant, either to lay out Anchors, or to be ferviceable to what God fhould be pleafed to try our Faith and Patiènce with, for in him was our only Trut and Hope.
At Noon, in Latitude 57 Degrees 45 Minutes, we could fee the Land from the North-weft to the Southeaft by Eaft, with Rocks and Breaches, and the Rocks that we came over dry above Water, whereby I knew it flows here above two Fathoms at leaft. At Noon I fent the Boalt off to found to the Eaftward, becaufe the Water fhallowed when we came to an Anchor. She brought us Word the thalloweft Water the had been in was leven Fathom: We intending thereupon to weigh, the Wind came Eaft early, fo that we could not ftir, but lay here the 14 th all Night with a ftiff Gale of Wind. On the 15 th in the Evening, our Cable rubbed off, by Reaton of which perilous and fudden Accident, in which we had not Time to put a Buoy to it, we loft our Anchor, and were driven into four Fathom Water before we could fet our Sails. When we had done we food South-fouth-eaft, the Wind being at Eaft, but the Water fhallowed to three Fathom Water, then we frood North-north-eaft, and it deepened by Degrees to xo Fathom, and becaufe it grew dark they came to an Anchor, and rid there all Night.
9. On the 16 th in the Morning, the Wind came up at North, a frefh Gale, and we weighed and made fail; by $90^{\circ}$ Clock it came to a very Storm, and we turned to and again in 10 Fathom Water. In the Evening the Wind dulled, and we ftood South-weft to have a Sight of Port Nelfon, which Courfe we ftood all Night, by the Stars being in the Latitude 57 Degrees 25 Minutes, the Variation about in Degrees. On the s 7 th in the Morning we ftood South, and our Depth decreafed to eight Fathom ; at Noon we had good Obfervation, being in Latitude 5? Degrees is Minutes, and made Account that we were come fix or feven Leagues of the Southern Side of Port Nelfon. Here the Appearance of the Water changed, and was of a fandy red Colour: We ftood into fix Fathoms, and could not fee the Land from Top-maft Head; fo Night coming on, and it begining to blow hard at Eaft by South, we ftood in again to ten and twelve Fathom, where the Water was again of the ufual Colour of the Sea.

On the 18 th, as the Wind and Weather favoured us, we ftood in again South and came into thick Water, into eight, feven, and fix Fathom, and then off again, fo it grew foggy Weather, keeping our Lead continually going Night and Day. The Igth being clear fun-fhiny Weather, we food in again into the thick Water into eight Fathom, where we came to an Anchor to try the Tides, for from the Top-maft Heads we could not fee the Land; we were at Noon, by good Obfervation, in Latitude 57 Degrees 20 Minutes, and the Tide fet North-weft-and-by-weft, and South-eaft-by-eaft. It ran two Knots and a half in two Glaffes; I perceived that there were nothing but Sholes to the Land. In the Afternoon it began to blow, fo that we had much ado to get up our Anchor; this done, we ftood Eaft-foutheaft, but the Water hallowed apace, and then we ftood Eaft and deepened a little. In the Evening the Wind came up at Weft, and then we ftood Eadt-fouth-eaft
into ten and eight, and afterwards South-eaft as our Depth guided us by our Lead and the Colour of the Water into feven and fix Fathom.

On the 2oth at fix in the Morning we faw the Land it being very low Land, we ftood in to five Fathom to make it the better, and fo ftood along it. At Noon we were in Latitude 57 ; we named it the Principality of South Wales, and drank a Health, of the beft Liquor we had, to his Royal Highnefs Prince Cbarles, whom God preferve; we ftood along it, and came to a Point where it trends to the Southward, near to which Point there are two fmall Inlands. In the Evening it was calm, and we came to an Anchor; the Tide came as before. There we rid all that Night and the next Day. About nine at Night it was very dark and it blew hard.

We perceived by the Lead that the Ship drove, wherefore bringing the Cable to the Capitang to heave in our Cable, for we thought we had loft our Anchor, the Anchor lritched again, and. upon the Chopping of a Sea threw the Men from the Capttang; a fmall Rope, in the Dark, had gotten foul about the Cable and about the Mafter's Leg too; but by the Help of God he cleared himfelf, tho' not without bruifing. The two Mates were hurt, the one in the Head, the other in the Arm ; one of our luftieft Men was ftruck on the Breaft with the Bar, that he lay fprawling for Life, another had his Head betwixt the Cable, and hardly efcaped. The reft were flung where they were much bruifed, but our Gunner, an honeft and diligent Man, had his Leg taken betwixt the Cable and the Capitang, which wrung of his Foot, and tore the Flefh all off his Leg, and criulhed the Bone to Pieces, and bruifed his whole Body, in which miferable Manner he remained crying till we had recovered ourfelves, and had Strength to clear him. Whilft we were putting him and the reft down to the Chirurgeon, the Ship drove into fhallow Water, which put us all in Fear, we being fo forely weakened by the Blows which had hurt eight of our Men. It pleafed God that our Anchor held again, and the rid it out all Night. By Midnight the Chirurgeon had taken off the Gunner's Leg at the gartering Place, and dreffed the others that were hurt and bruifed, after which we comforted each other as well as we could.

On the 22 d we weighed and ftood a little off into deeper Water, expecting a better Wind, which in the Afternoon favoured us; we ftood in again for the Shore and we proceeded along it; it is very fhallow about 14 Leagues off and full of Breaches. On the 23 d at Noon we were in Latitude 56 Degrees 28 Minutes; in the Evening the Wind came contrary, and we were fain to turn to and again. All this Month the Wind was very variable, and continued not long upon one Point, yet it happened fo that we could get but little forward.

Io. On the 26 th there fprung up a fine Gale at Weft, but thick Weather neverthelefs; we food in to feven and fix Fathom, the Water very thick. At Noon it cleared, and we could fee that we were in a little Bay, the Land being almoft round about us; we ftood out of it, and fo along it in Sight till the $27^{\text {th }}$ in the Morning, when we came to higher Land than we had yet feen fince we came from Nottingham Iland; we ftood in to it and came to an Anchor in five Fathom; I fent off the Boat well manned and armed, with Order in Writing what they were to do, and a Charge to return again before Sun-fet. The Evening came, and no News of our Boat; we fhot, and made alfo Fires, but had no Anfwer, which much perplexed us, fearing there had fome Difafter befallen her through Careleffnefs, and in her we fhould lofe all, we aboard at prefent not being able to weigh our Anchor nor fail the Ship.

At laft we faw a Fire upon the Shore, which made us the more doubtful, becaufe they did not anfwer our Shot nor falfe Fires with the like; we thought it liad been the Savages that triumphed in their Conqueft; at length they came all fafe and well, and excufed themfelves, that upon their coming on Shore it ebbed fo fuddenly, that a Bank of Sand was prefently dried, fo that they could not come away till that was covered again, and with that they pacified me. They reported that there was great Store of Drift-wood on the Shore, and a good

## Chap. I.

 and wintering in Charlon Illand.Quantity growing on the Land. That they faw the Tracts of Deer and Bears, and ftore of Fowl, of which they killed fome, but no Sign of People. That they paffed over two little Rivers, and came to a third, which they could not pafs. That it flowed very near three Fathom fometimes, as appears by the Shore. That it was low Water at four o-clock ; that the Flood came from the North-weft a and that it flowed half Tide, which both they and we had perceived by the Ship. At low Water we had but three Fathoms where we fid.
On the 29 th in the Morning we made Account we had driven back again fome fixteen or eighteen Leagues, and in the Morning, as it cleared, we faw a Ship to Leeward of us three or four Leagues, fo we made fail and bore up with her; the was then at anchor in thirteen Fathom. It was his Majefty's Ship, commanded by Captain Fox; I faluted him according to the Manner of the Sea, and received the like of him; fo I ftood in to fee the Land, and thought to tack about, and keep the Weather of him, and to fend my Boat aboard of him ; but the Wind fhifted, fo that for that Time I could not. Yet in the Evening I came to weather of him, who prefently weighed, and ftood off with me till Midnight, and then we ftood in again. In the Morning Captain Fox and his Friends came aboard of me, where I entertained them in the beft Manner I could, and with fome frefh Meat I had gotten from the Shore. I told him that I had named the Land the Principality of Soutb Wales. I fhewed him how far I had been to the Eaftward, where I had landed, and, in brief, I made known to him all the Dangers of this Coaft, as far as I had been. He told me he had been in Port Nelfon, and had made but a curfory Difcovery hitherto; and that he had not landed, nor had many times feen the Land. In the Evening after I had given his Men fome Neceffaries, with Tobacco, and other things they wanted, he departed aboard his Ship, and the next Morning ftood away South-fouth-weft, fince which Time I never faw him. The Wind fometimes favouring me, I food in for the Shore, and fo proceeded along. The Month of Auguf ended with Snow and Hail; the Weather being as cold as at any Time I have felt in England.

Ir. September the ift we coafted along the Shore in ten Fathom, when it cleared in fight of Land; at length the Water fhallowed to fix and five, and, as it cleared, we faw it all Breaches to Leeward, fo we hulled off North-north-eaft, but ftill raifed Land; by Night we had much ado to get out of this dangerous Bay. At Midnight the Wind came up at South, and fo we took in our Sails, and let the Ship drive to the Northward, into deeper Water. This Day was the firt Time the Chirurgeon told me that there were diverfe of the Men tainted with Sicknefs. At Noon we were in Latitude 55 Degrees 12 Minutes.

On the 2 d we ftood in for the Shore ; but as we came into flallow Water it began to fhew the Weather threatening a Storm, wherein we were not deceived; for in ftanding off we had a violent one. By Midnight it broke up, and the 3 d in the Morning we ftood in for the Shore, and by eleven we faw it; here we found the Land to trend South-fouth-eaft, and South, fo that we knew that we were at a Cape Land, and named it Henrietta Maria, by her Majefty's Name, who had before named our Ship. At Noon we were in Latitude 55 Degrees 5 Minutes, and that is the Height of the Cape. From Port Nelfon to this Cape the Land trends generally Eaft-fouth-eaft, but makes with Points and Bays, which in the Particulars doth alter it, a Point two or three; the Difance is about one hundred and thirty Leagues. The Variation at this Cape, taken by Amplitude, is about 16 Degrees, a moft fhallow and perilous Coaft, in which there is not one Harbour to be found. The 3 d Day in the Afternoon, we had a Storm at North, which continued till Midnight with extreme Violence. The 4th in the Morning the Storm being broke up, we ftood in again South-weft, the Weather being very thick, and we continued founding. By Noon it cleared, and we faw the Land; here it trended South-eaf, and the Tides fat Vol. II. Numb. 97.
along it with a quick Motion. In the Evening there came a great rolling Sea out of the North-north-eat, and at eight o-clock it blew very hard at South-eaft; and by Realon of the Encounter of the Wind, and this greas Sea, the Sea was all in a Breach; and to make up a perfect Tempeft, it did fo lighten, fnow, rain, and blow all the Night long, that I was never in the like. We fhipped many Seas, but one more dangerous, which racked us fore and aft; and I verily thought it had funk the Ship, it ftruck her with fuch Violence. The Ship did labour moft terribly in this Diftraction of Wind and Waves; and we had much ado to keep all things faft in the Hold, and betwixt Decks.

The 5 th in the Morning the Wind fhifted South-weft, but changed not its Condition; in the Afternoon it changed again to the North-weft, with that tearing Violence, that not I, nor any that were then with me, ever faw the Sea in fuch a Breach. Our Ship was fo tormented, and fo laboured with taking it in on both Sides, and at both Ends, that we were in moft miferable Diftrels, in this fo unknown a Place; at eight o-clock in the Evening the Storm broke up, and we had fome Quietnefs in the Night following, not one having flept a Wink in twenty Hours before. If this Storm had continued Eafterly, as it was at firft, without God's Goodnefs we had all perifhed.
On the, 6th the Wind was at South-weft, fo that we could do no good to the Windward. We fpent the Time therefore in trimming our Ship; we brought all our Coals, which for the moft part was great Coal, aft, as we alfo did fome other things, and all to lighten her afore. Others picked our Bread, whereof there was much wet; for do what we could we fhipped abundance of Water between Decks, which ran into the Hold, and into our Bread-Room; for the Sea fo continually overracked us, that we were like Fonas in the Whale's Belly. We overlooked our Tacks and Sheets, with other Riggings of Strefs, becaufe that henceforward they were to look for no other but Winter Weather. This Evening our Boatfwain, a careful Man, and one that had laboured extremely thefe two or three Days, was very fick, fwooning away three or four Times, infomuch that we thought he would prefently have died.
The 7 th in the Morning the Wind came up to Southweft, and we ftood away South-weft, under all the Sail that we could make. In this Courfe we faw an Ifland, and came clofe aboard it, and had twenty Fathom Water, which was fome Comfort to us; for hitherto we could. not come within four or five Leagues to the Shore at that Depth. This Illand flands in 54 Degrees io Minutes. The Afternoon we ftood away South-weft, and in the Evening had the fhallowing of the Weftern Shore, in eight, ten, and feven Fathom, but it was fo thick, that we could not fee the Land. It is about fourteen Leagues between this Inand and the Main. The 8th was foggy and calm, which fo continued till the gth in the Morning, the Wind then coming up at South-fouth-weft. In the Evening the Water fhallowed to ten and nine Fathoms, wherefore we ftood off and on all Night. The roth we made it, finding it an Inand of about eight or nine Leagues long. It fands in Latitude 53 Degrees 5 Minutes, and about fifteen Leagues from the Weftern Shore. The Part of it that we coafted, trends Weft-north-weft, I named it my Lord Wefton's IJand. We ftood ftill away to the Eaftward, it being foggy Weather. In the Afternoon we defcried Land to the Eattward of us, which made like three Hills. Towards them we failed, keeping our Lead ftill going and very circumfpect.

At length we alfo faw Land to the Southward of us, whereupon we loofed up and made to that by Courfe, as we had fet it in the thick Fog. We came in among fuch low broken Grounds, Breaches, and Rocks, that we knew not which Way to turn us; but, God be thanked, it was but little Wind, and foon came to an Anchor. Soon after it cleared, at which Time we could fee nothing but Sands, Rocks, and Breaches, round about us, that Way only excepted which we came in. I fent prefently the Boat to found among the Sholes and Rocks, that if we

Thould
fould be put to extremity, we might have fome Knowledge which Way to go. This Night proved calm, and fair Weather, and'we rid quietly.
12. On the i th, in the Noming, I went in the Boat afhore myfelf, and fent the Boat about among broken Grounds, to found: I found the Land utterly barren, even of that which I thought eafily to, be found ; which was Scurvygrafs, Sorrel, or fome Herb or other, to have refrefhed our fick People. I could not. perceive that the Tide flowed here ordinarily above two Feet. There was much Drift-Wood on the Shore, and fome of it drove up very high in the North-fide of the Ifland, where I judged that the Storms were very great at North, in the Winter. Thus I returned aboard, and fent many of our fick Men to another Part of the Iland, to fee if themfelves could fortunately find out any Relief for their Grief. At Noon, by good Obfervation, we were in Latitude 52 Degrecs 45 Minutes. In the Evening our Men returned comfortlefs, and then we weighed, and ftood to the Weitward, coming to an Anchor under another Illand, in twenty Fathom.

The 12 th in the Morning it bergan to blow hard at South-eaft, which was partly off the Shore, and the Ship began to drive, it being foft oozy Ground. We heaved in our Anchor thereupon, and failed under two Courfes. Whilf moft were bufy in heaving out the Top-Sails, fome, that fhould have had efpecial Care of the Ship, ran her afhore upon the Rocks, out of mere Careleffnefs in looking out and about, or heaving of the Lead, after they-had feen Land all Night long; and mighe even then have feen it, if they had not been blind with Self-conceit, and been envioufly oppofite in Opinion. The firf Blow ftruck me out of deep Sleep, and I, running out of my Cabin, thought no other, at finf, but I had been wakened to provide myfelf for another World.

After I had controuled a little Paffion, and had chocked fome bad. Council that was given me to revenge myfelf upon them that had committed this Error, I ordered what fhould be done to get off thefe Rocks. Hinf we hawled all our Sails back, but that did no good, but made her beat the harder. Whereupon we ftruck all our Sails amain, and furled them up clofe, tearing down our Stern to bring the Cable through the Cabin, to Capftang, and fo laid out an Anchor to heave her aftern. I ordered all the Water in the Hold to be ftaved, and fet fome to the Pumps to pump it out, and intended to do the like with our Beer; others I put to throw out all our Coals, which was foon and readily done. We coiled out our Cables into the Long-boat, all this while the Ship beating fo furioully, that we faw fome of the Sheathing fwim by us. Then we ftood, as many as could, to the Capftang, and heaved with fuch a good Will, that the Cable broke, and we loft our Anchor, but with all Speed therefore we put another. We could not now perceive -whether the leaked or no, and that by Reafon we were employed in pumping out the Water, which we had bulged in Hold, though we feared the had received her Death's Wound. Therefore we put into the Boat the Carpenter's Tools, a Barrel of Bread, a Barrel of Powder, fix Mufkets, with fome Matches, and a Tinder-Box ; FifhHooks and Lines; Fitch and Oakham; and, to be brief, whatever could be thought on in fuch an Extremity. All this we fent afhore to prolong a miferable Life for a few Days. We were five Hours thus beating, in which Time fhe fruck an humdred Blows, infomuch that we thought every froke had been the laft that it was poffible the could have chdured. The Water we could not perceive all this while to flow any thing at all.

At length it pleafed God the beat over all the Rocks, though yet we knew not whether the was ftaunch; whereupon we went to pumping all Hands, till we made the Pumps fuck, and then we faw how much Water fhe made in a Glafs. We found her to be very leaky, but we went to Prayer, and gave God Thanks it was no Worle; and fo fitted all things again, and got further off and came to an Anchor. In the Evening it began to blow very hard at Weft-fouth-weft, which if it had done whilf we were on the Rocks, we had loft pur Ship with-
out any Redemption. With much ado we weighed our Anchor, and let her drive to the Eaftward, among the broken Grourid and Rocks, the Boat going before founding; at length we came among Breaches, and the Boar made Signs to us that there was no going further among the Rocks, therefore we again came to an Anchor, where we rid all Night, and where our Men, which were tired out with extreme Labour, were indifferent well refrefhed. Here I muft obferve, that when the Wind was at South; it flowed very little, or no Water at all, fo that we could not bring our Ship a-ground to look to her, for we pumped almoft continually.

I3. The isth at Noon we weighed, and food to the Weftward, but in that Courfe it was all broken Ground, Sholes, and funken Rocks; fo that we wondered how we came in among them in a thick Fog. Then we fhaped our Courfe to the Northward, and after fome Confultations with my Affociates, I refolved to get about this Land, and fo to go down into the bottom of Hudfon's Bay, and fee if I could difcover a Way into the River Caroda; and if I failed in that, then to winter on the main Land, where there is more Comfort to be expected than among the Rocks or Inands. We ftood along the Shore in Sight of many Breaches. When it was Night we food under our Fंore-fail, the Lead ftill going. At laft the Water fhallowed upon us to ten Fathom, and it began to blow hard. We tacked about, and it deepened to twelve or fourteen Fathom, but by and by it fhallowed again to eight Fathom; then we tacked about again, and fuddenly it hallowed to fix and five; fo we ftruck our Sails amain, and came to an Anchor, refolving to ride it for Life and Death. We rid all Night, and thought our Ship would have been torn to Pieces. At Break of Day, the I4th, we were joyful Men when we could look about; we defcried an Ifland fome two I_eagues off at Weft and by North, and this was the Shole that lay about it. Here ran a diftracted, but yet a very quick, Tide, of which we taking the Opportunity, got up our Anchor, and food North-weft, to clear ourfelves of this Shole; in the Afternoon the Wind came up at Northeaft, and we ftood along the Weftern Shore, in Sight of a multitude of Breaches. In the Evening it began to blow a Siorm, and the Sea went very high, and was all in a Breach. Our Shallop, which we now towed at Stern, being moored with two Hawfers, was funk, with her Keel up. This made our Ship to hull very broad, fo that the Sea did continually over-rack us. Yet we endured it, and thought to recover her. All IVight the Storm continued with Violence, and with fome Rain ; in the Morning it was very thick Weather.

The Water fhoaled apace, with fuch an over-grown Sea withal, that a Sail was not to he endured; and what was worfe, there was no trufting to an Anchor. Now therefore we began to prepare cir felves, how to make a good End of a miferable tormented Life. About Noon, as it cleared up, we faw two Inands under our Lee, whereupon we bore up to them, and fecing an Opening betwixt them, we endeavoured to get into it before Night, for that there was no hope of us if we continued out at Sea that Night, therefore come Life, or come Death, we muft run this Hazard. We found it to be a good Sound, where we rid all Night fafely, and recovered our Strengths again, which were much impaired with continual Labour; but before we could get into this good Place, our Shallop broke away, being moored with two Hawfers, and we loft her to our great Grief. Thus now we had but the Ship's Boat, and fhe was all torn and bruifed too. This Ifland was the fame that we had formerly coafted the Weftern Side of, and had named Lord Wefon's Iland. Here we remained till the 19 th, all which Time it did nothing but fnow and blow extremely, infomuch that we durft not put our Boat overboard.

This Day the Wind Mifted North-north-eaft, and we weighed and ftood to the Southward, but by Noon the Wind came up at South, and fo we came to an Anchor under another Ifland; on which I went on Shore, and named it The Earl of Brifol's Ifand. The Carpenter wrought hard in repairing our Boat, whilt I wandered
up and down in this defart Ifland. I could not perceive that there had been any Savages on it, and in brief, we could neither find Fifh, Fowl, or any Herb upon it; fo that I returned comfortlefs again. The Tides high, about fome fix Foot, now the Wind is northerly. The Flood comes from the North, and it flows Half Tide; the full Sea this Day was at one $0^{\circ}$ Clock. Here, feeing the Winds continue fo northerly that we could not get about to go into Itudfon's Bay, we confidered again what was beft to do, to look out for a wintering Place; fome advifed me to go for Port Nelfon, becaufe we were certain that there was a Cove where we might bring in our Ship. I liked not that Counfel, for that is a moft dangerous Place, and it might be fo long ere we got thither, that we might be debarred by the Ice ; moreover, feeing it was fo cold here that eivery Night our Rigging froze, and fometimes in the Morning we fhoveled away the Snow, half a Foot thick, off our Decks; and in that Latitude too I thought it far worfe than the other Place: I refolved thereupon to ftand again to the Southward, there to look for fome little Creek, or Cove, for our Ship.
14. On the 2 Ift the Wind came up at North, and we weighed although it was a very thick Fog, and ftood away South-weft, to clear ourfelves of the Sholes, that were on the Point of this Inand. This Inand is in Latitude 53 Degrees io Minutes. When we were clear we fteered away South. At Noon the Fog turned into Rain, but very thick Weater, and it thundered all the Afternoon, which made us fear a Storm, yet we ventured to proceed. In the Evening the Wind blew hard, therefore we took in all our Sails, and let her drive to the fouthward, heaving the Land every Glafs. Our Depth, when we took in our Sails, was thirty Fathom, and it increafed to forty-five, which was a great Comfort to us in the dark. At Midnight our Depth began fuddenly to decreafe, and as faft as the Lead could be heaved it fhoaled to twenty Fathom, wherefore we hop'd to come to an Anchor, and trimmed our Ship aft, to mount to the Sea, and fitted all Things to ride it ont. There was no Need to bid our Men watch now. We rid it out all Night although it blew very hard.

The 22 d in the Morning, when we could look about us, we faw an Inand under our Lee fome Leagues off, all Sholes and Breaches between us and it. At Noon, by the Help of the windward Tide, we attempted to heave up our Anchor, although the Sca went Mountains high; joining all our Strength therefore with our beft Skills, God be thanked, we had it up; but before we could fet our Sails we were driven into nine Fathoms, endeavouring thereupon to double a Point, to get under the Lee of this Illand, the Water fhoaled to five Fathoms; but when we were about it, deepened again; and we came to an Anchor in a very good Place, and it was well for us that we did; for the Wind increafed to a very Storm; here we rid well all Night, and recovered our Strength again. The laft Night, and this Morning it fnowed and hailed, and was very cold; neverthelefs I took the Boat and went athore to look for fome Creek or Cove to carry in our Ship; for the was very leaky, and the Company became very fickly and weak with much pumping and extreme Labour. This Inand, when we came to the Shore, was nothing but Ledges of Rocks and Banks of Sand, and there was a very great Surf on them; neverthelefs I made them row through it : And on Shore I got with two more, and made them row off without the Breaches, and come to an Anchor and ftay for me. I made what Speed I could to the Top of a Hill, to difcover; but could not fee what we looked for; and becaufe it began to blow hard I made haite toward the Boat again. I found that it had ebbed fo low that the Boat could not, by any Means, come near Shore for me, fo that we were forced to wade through the Surf and Breaches to her, in which fome got fucli a Cold that they complained of it to their dying Day.

But now it began to blow hard, fo that we could but get little to Windward toward our Ship, for the Wind was fhifted fince we went afhore; and return to the Shore we could not, by Means of the Surf. We rowed for Hife: They in the Ship let out a Buoy by a long Warp,
and by God's Affiftance we got to it, and fo halled up to the Ship, where we all rejoiced together. This was a Premonition to us to be careful how we fent off the Boat in fuch Weather. I named this Inand Sir Thomas Roe's Ifland; it is full of fmall Wood, but in other Benefits not very rich, and ftands in Latitude 52 Degrees io Minutes. At Noon we weighed, feeing an Ifland that bore South-fouth-eaft of us fome four Leagues off, which was the higheft Land we had yet feen in this Bay; but as we came near, it fuddenly thoaled to fix, five, and four Fathom; wherefore we ftruck our Sails amain, and chopped to an Anchor, but it was very foul Ground; and when the Ship was wound up we had but three Fathom Water at her Stern; as it cleared, we could fee the Breaches all, along under our Lee; holding it not fafe therefore to ftay long here, we fettled every thing, in order for the Ship to fall the right Way. We had up our Anchor, got into deeper Water, and ftood up again for Sir Thomas Roe's Ifand, which by Night we brought in the Wind of us, fome two Leagues off; which did well fhelter us. The Tides run very quick here, and the Times of running Ebb or Flood, Fery uncertain; their Currents are likewife fo diftracted that in the Night there is no failing by the Compafs, therefore we were forced to feek, every Night, fome new Place of Security, to come to an Anchor.

The 24th in the Morning, it lowered, and threatened a Storm, which made us, with the windward Tide, weigh; to get near under the Ifland. It was very foggy Weather; and as we food to the North-eatward we came to uncertain Depths; at one Caft twenty Fathom, the next feven; then ten, five, eight, and three ; and coming to the other Tack, we were worfe than we were before. The Currents defeating our Judgments in the thick Fog; when we could fee no Land-marks. It pleafed God that we got clear of them, and endeavoured to get under the Lee of the Mand; which being not able to do, we were obliged to come to an Anchor in thirty-five Fathom fome two Leagues off the Shore: All this Afternoon, and indeed all Night too, it fnowed, hailed, and was very cold. The 25 th we weighed, and thought to get to the eaftward ; but as we tacked to and, again, the Wind fhifted fo in our Teeth, that it put us within a Quarter of a Mile of the very Shore, where we chopped to an Anchor, and rid it out for Life and Death. Such Miferies as thefe we endured among the Sholes and broken Grounds, or rather more defperate than I have related, with Snow, Hail, and formy Weather, and colder than ever I felt in England in my Life. Our Sheet-Anchors were down twice or thrice in a Day; which extreme Pains made a great Part of our Company fickly. All this lafted with us until the 30 th of this Month September, which we thought would have put an End to our Miferies, for now we were driven among Rocks, Sholes, Overfalls, and Breaches round about us, that which way to turn we knew not, but there rid among them in Extremity of Diftrefs.
15. The Ift of OEtober was indifferently fair Weather, and with a windward Tide our Boat went to found a Channel, to help us out of this dangerous Place; the Boat within two Hours returned, and told us the had been a Way where there was not lefs than ten Fathom; we thereupon weighed, but found it otherwife, and came among many ftrange Races and Overfalls, upon which there went a very great and breaking Sea; as we proceeded, the Water fhoaled to fix Fathoms. Well! there was no Remedy, we mutt go forward, feeing there neither was any riding, and as little Hope to turn any way with a Sail, but that there appeared prefent Death in it: It pleafed God fo to dired us that we got through it. The Water fometimes deepened to twenty Fathom, then upon a fudden it fhoaled to feven, fix, and five Fathoms, fo that we ftruck all our Sails amain, and chopped to an Anchor, where we rid till Midnight for Life and Death, it blowing a mercilefs Gale of Wind; and the Sea going very lofty, and all in a Breach; the Ground was foul Ground too, infomuch that we doubted our Cable every Minute.

The ad in the Morning there was little Wind, where-
upon, taking the Opportunity of the Tide, the Boat went forth to found, which returning again in two Hours told us, they had founded about that Shole, and had found a Place of fome Safety to ride in, and had been in no lefs Water than five Fathom. We weighed, and found our Cable galled in two Places; which had foon failed us if the Weather had continued. We ftood the fame Way that the Boat clirected, us; but it proved fo calm that we came to an Anchor in 18 Fathom, hooked the Boat, and went on Shore on an Ifland that was on the fouthward of us; which I named the Earl of Danby's Ifland: From the higheft Place in it I could fee all broken Grounds and Sholes to the fouthward, and rather worfe, than any thing better, than that which I had been in. I found that the Savages had been upon it, and that it was full of Wood. I made hafte to found the Bay, for fear of Sholes and funken Rocks; but found it indifferent good.

Toward the Evening it began to blow hard, wherefore we made towards the Ship; fhe put forth her Buoy, and a Warp, and we rowing for Life reached her, wore to Leeward of her ; but by getting hold of the Warp, we hauled up to her. The Boat we left half full of Water, ourfelves being as wet as drowned Rats ; and it made us the more rejoice that we had efcaped fo great Danger ; all Night it blowing a moft violent Gale of Wind, with Snow and Hail. On the 3d, about Noon, the Wind dulled, and we had up her Anchor, ftanding farther into the Bay in four Fathom and an half Water; here we came again to an Anchor with our fecond Anchor, for many of our Men are fick, and the reft fo weakened that we can hardly weigh our Sheet-Anchor. I took the Boat and went prefently on Shore to fee what Comfort I could find: This was the firft time that I put Foot on this Inland, which was the fame that we afterwards wintered upon; I found the Tracks of Deer, and faw fome Fowl; but that which rejoiced me mot was, that I faw an Opening into the Land, as if it had been a River. To it we made with all Speed, but found it to be barred, and not a Foot Water at full Sea, on the Bay, and yet within a moft excellent fine Harbour, having five Fathom Water. In the Evening I returned aboard, bringing little Comfort for our fick Men, more than Hopes.

On the $4^{\text {th }}$ it fnowed very hard, yet I got afhore and appointed the Boat to go to another Place (which made like a River.) and to found it; in the mean time I went with four more fome four or five Miles up into the Country, but could find no Relief for my Sick, but a few Berries only. After we had well wearied ourfelves, I returned to the Place I had appointed them to tarry for me; where at my coming I ftill found her, fhe having not been where I ordered her, for it had blown fuch a fevere Gale of Wind that the could not row to Windward; thus we returned aboard with no good News. It continued foul Weather with Snow and Hail, and extremely cold till the fixth, when with a favourable Wind I ftood in nearer to the Shore and moored the Ship. On the 7 th it fnowed all Day, fo that we were fain to clear it off the Decks with Shovels, and it blew a very hard Storm withal; it continued fnowing and very cold Weather, and it froze fo that all the Bows of the Ship with her Beak-head were all Ice; about the Cables alfo was Ice as thick as a Man's Middle; the Bows of the Boat were likewife frozen half a Foot thick, fo that we were fain to beat it off. The Sun fhined very clear, and we bore the Top-fails out of the Tops which were hard frozen in them into a Lump, fo that there they hung a funning all Day in a very Lump, the Sun not having Power to thaw one Drop of them. After the Boat was fitted we rowed towards the Shore, but could not come near the Place where we were ufed to land, for it was all thick. Water with the Snow that had fell upon the Sands that are dry at low Water; this made it fo difficult to row that we could not get through it with four Oars; yet fomething higher to the Weftward we got afnore. Seeing now the Winter to come thus extremely on upon us, and that we had very little Wood, I made them fill the Boat and went aboard, and
fent the Carpenter to cut Wood, others to carry it to the Water-fide whilft the Boat brought it on board; for I doubted that we fhould not be able to go to and again with the Boat. It was miferable cold already aboard the Ship, every Thing froze in the Hold and by the Firefide; feeing therefore we could no longer make ufe of our Sails, it raifed many Doubts in our Minds that we muft ftay and winter.

After we had brought as much Wood on board as we could conveniently ftow, and enough, as I thought, to have lafted two or three Months, the fick IMen defired that fome little Houfe or Hovel might be built on Shore, whereby they might be the better iheltered to recover their Healths: I took the Carpenter and others whom I thought fit for fuch a Purpofe, and chufing out a Place, they went immediately to work upon it ; in the mean time, I accompanied with fome others wandered up and down the Woods to fee if we could difcover any Signs of Savages, that we might the better provide for our Safeties againft them; we found no Appearance that there were any upon this Illand nor near it; the Snow by this Time was half Leeg high, and through it we returned comfortlefs to our Companions, who had all this Time wrought upon our Houfe; they on board our Ship took down our Top-fails the mean while ; and made great Fires upon the Hearth in the Hatch-way; fo that having well thawed them, they folded them up and put them betwixt Decks, that if we had an Occafion they might bring them again to Yard.
16. The 12 th we took our Main-fail from the Yard which was hard frozen to it, and carried it on Shore to cover our Houfe withal, having been forced to thaw it by a great Fire; by Night they had covered it, and had almoft hedged it about, and the fix Builders defired to lie in it afhore that Night, which I condefcended unto, having firft fitted them with Mufkets and other Furniture, and a Charge to keep good Watch all Night: They had on Shore two Buckhounds, a Dog and a Bitch, which I had brought out of England, to kill us fome Deer, if happily we could find any. By the Izth at Night our Houfe was ready, and our fix Builders defired they might travel up into the Country to fee what they could difcover. On the I4th by Times in the Morning, being fitted with Ammunition and their Order to keep together, but efpecially to feek out fome Creek or Cove for the Ship, they departed. We on board took down our two Top-mafts and their Rigging, making Account, if we removed, to make ufe of our Fore-fail and Mifen.

The 15 th in the Evening our Hunters returned very weary, and brought with them a fmall lean Deer in four Quarters, which rejoiced us all, hoping we fhould have more of them to refrefh our fick Men withal; they reported that they had wandered above twenty Miles, and had brought this Deer above twelve Miles, and that they had feen nine or ten more. The laft Night they had a very cold Lodging in the Woods, and fo it appeared, for they looked almoft ftarved, nor could they recover themfelves in three or four Days after; they faw no Sign of Savages nor of any ravenous wild Beafts, nor yet any Hope of Harbour.
The 19th my Lieutenant and five more defired they might try their Fortune in travelling about the Inand, but they had far worfe Luck than the others, although they endured all Night, and had wandered very far in the Snow, and returned comfortlefs and miferably difabled with the Cold. But what was worfe than all this, they had loft one of their Company, Fobn Barton, our Gunner's Mate, who beirg very weary, merely to fave the going about, had attempted to go over a Pond that was a Quarter of a Mile over, where when he was in the very Middle the Ice broke and clofed upon him, and we never faw him more. Confidering thefe Difafters, I refolved to fifh no more with a golden Hook for fear I fhould weaken myfelf more with one Hunting than twenty fuch dear Deers could do me Good. Being now affured that there were no Savages upon the Inand, nor yet about us on the other Inands on the Main, as far as* we could difcover, and that the cold Seafon was now in
that Extremity that they could not come to us, if there were any, we comforted and refrefhed ourfelves by neeping the more fecurely.

We changed our Inand Garrifon every Week, for other refrefhing we were likely to have none till the Spring. From the 19 th to the 20th it fnowed and blowed fo hard that the Boat could hardly venture on Shore, and but feldom land unlefs the Men waded in the thick congealed Water, carrying one another; we fenfibly perceived withal, how we daily funk into more Miferies. The Land was all deep covered with Snow, the Cold ftrengthened and the thick Snow Water encreafed, and what would become of us, cur moft merciful God and Preferver knew only. The 2gth I obferved an. Eclipfe of the Moon with what Care poffible I could, both in the Trial of the Exactnefs of our Inftruments, as alfo in the Obfervation. This Month of Oftober ended with Snow and bitter cold Weather
17. On the firft of November, I caft up Accounts with the Steward concerning Vićtuals, the third Part of our Time being this Day out. I found him an honeft Man; for he gave me an Account every Week what was fpent and what was ftill in the Hold remaining under his Hand. I would take no Excufe for Leakage or other Wafte, unlefs he daily fhewed it to me. Every Month I made a new Survey, and every fix Months put what he fpared by itfelf, which now was at leaft a Month's Provifion of Bread, and a Fortnight's Peafe, Fifh, $\varepsilon^{\circ} c$. The 3d Day the Boat endeavoured to get on Shore, but could not go through the congealed Water.

On the 4 th they found a Place to get on Shore, and fo once in two or three Days till the gth, bringing Beer to our Men on Shore in a Barrel, which would freeze firmly in the Houfe in one Night; other Provifions they had fore. The Ice Beer being thawed in a Kettle was not good, and they broke the Ice of the Ponds to come at Water to drink. This Pond Water had a moft loathfome Smell with it, fo that doubting leaft it might be infectious I caufed a Well to be funk near the Houfe; there we had very good Water, which tafted, as we flattered ourfelves, like Milk. The Ioth, havino enough Boards for fuch a Purpofe, I fet the Carpenter to work to make a Boat which we might carry over the Ice, and make ufe of her wherever there was Water. At Noon I took the Latitude of this Illand by two Quadrants; which I found to be 52 Degrees. I urged the Men to make Traps to catch Foxes; for we daily faw many; fome of them were pied black and white, whereby I gathered that there were fome black Foxes, whofe Skins I told them were of great Value, and I promifed that whoever could take one of them fhould have the Skin for his Reward; hereupon they made divers Traps, and waded in the Snow, which was very deep, to place them in the Woods.

The 12th our Houfe took Fire, but we foon quenched it; we were obliged to keep an extraordinary Fire Night and Day, and this Accident made me order a Watch to look to it continually, fince if our Houfe and Cloathing fhould be burnt we fhould be in a woeful Condition; I lay afhore till the 17th, all which Time our Miferies increafed.
It fnowed and froze extremely, at which Time we looking from the Shore towards the Ship, fhe appeared a Piece of Ice in the Fafhion of a Ship, or a Ship refembling a Piece of Ice; the Snow was all frozen about her, and all her Fore-part firm Ice, and fo the was on both Sides, alfo our Cables frozen in the Hawfe. I got me aboard, where the long Nights I fpent with tormenting Cogitations, and in the Day-Time I could not fee any Hopes of faving the Ship. This I was affured of, that it was impoffible to endure thofe Extremities long; every Day the Men muft beat the Ice off the Cables, while fome within, with the Carpenter's long calking Iron, digged the Ice out of the Hawfers: In which Work the Water would freeze on their Cloaths and Hands, and would fo benumb them that they could hardly get into the Ship without being heaved in with a Rope. The rgth, our Gunner who, as you may remember, had his Leg cut off, languifhed irrecoverably, and now grew very weak, defiring that for the little Time
Vol. II. Numb. 97.
he had to live, he might drink Sack altogether, which ordered he fhould.
The $22 d$ in the Morning he died, an honeft and a ftrong hearted Man. He had a clofe boarded Cabin in the Gun-room, which was very clofe indeed, and as many Cloaths on him as was convenient; and a Pan of Coals and a Fire continually in his Cabin, notwithftanding which Warmth, his Plaifters would freeze at his Wound, and his Bottle of Sack at his Head; we committed him, at a good Diftance from the Ship, unto the Sea.
18. On the 23 d the Ice increafed extraordinarily, and the Snow lay in Flakes as it fell, much Ice alio drove by us, yet nothing hard all this while. In the Evening, when the Watch was fet, a great Piece of Ice came athwart the Hawfer, and four more followed after it, the leaft of them a Quarter of a Mile broad, which in the Dark very much aftonifhed us, thinking it would carry us out of the Harbour upon the Shole's eaftern Point, which was full of Rocks. It was newly congealed two Inches thick, and we broke through it, the Cable and Anchor enduring an incredible Strefs, fome time ftopping the whole Ice. We fhot off three Mufkets, fignifying to our Men afhore that we were in Diftrefs; who anfwered us again, but could not help us. By ten o'Clock it was all paffed, neverthelefs we watched carefully, and the Weather was warmer than we had felt it any time this Month.

In the Morning by break of Day I fent for our Men aboard, who frut up the Houfe and arrived by ten, being forced to wade through the congealed Water, fo that they received the Boat with Difficulty. There drove by the Ship many Pieces of Ice, tho' not fo large as the former, but much thicker: - One Piece came foul of the Cable and made the Ship drive. As foon as we were clear of it we joined our Strength together, and had up our eaftermoft Anchor; and now I refolved to bring the Ship aground, which I had delayed for the following Reafons. Firft, It was all ftony Ground, fome Stones lying dry three or four Font above the Water, fo that it was to be fufpected that it was the like all round. Secondly It ordinarily flowed but two Foot and a half here, and if fhe fhould bed deep in the Sands we could not ever come to dig her out again, for that fhe would not be dry by four or five Foot. Thirdly, it was a clofe Sand which might rife with the Surface, or fo mount about her, that ail our weak. Powers could not heave it away the next Spring. Fourthly, We doubted the Tides would not rife fo much in the Summer as they did now. Fifthly, We could not bring her out of the Tide's Way, which ran fomething quick here, and the Ice befide might drive and mount up upon her, and fo overfet her, and tear her, and carry away her Planks and Iron Work; and alfo that we fhould have nothing left to finifh our Pinnace with. Sixthly, If it blew a Storm at North-weft or thereabouts, the Water would flow ten Foot and upwards, and that Wind being off the Shore, it would blow away all the Ice, and there would come in an extraordinary great Surf about the Shole to the eaftward Point, which was occafioned by a deep Overfall, befides the would beat extremely, and if the were put up by the Sea or that Surf, it was very doubtful that we hould never heave her off again; for thefe Reafons we endured all, ftill hoping for fome fortunate 'Accident : But now all our Defigns we faw Foolifhnefs, and that a great deal of Labour had been fpent in vain by us. With the Flood we weighed our weftermoft Anchor, perceiving God's Affiftance manifeftly, becaufe it happened to be, fine warm Weather, otherwife we had not been able to work.

The Wind was now South, which blew in upon the Shore, and made the loweft Tides. We brought the Ship into twelve Feet Water, and laid out one Anchor in the Offing, and another in Shole-water, to draw her on Land at Command: Our Hope alfo was, that fome Stones that were to the Weftward of us would fend off fome of the Ice; we then being about a Mile from the Shore. About ten o ${ }^{9}$ Clock in the dark Night the Ice came driving upon us, and our Anchors came home. She drove fome two Cables-length, and the Wind blowing
on the Shore, by two $0^{\circ} \mathrm{Clock}$ fhe came aground and flope much Ice, yet fhe lay well all Night, and we took fome Reff.

The $25^{\text {th }}$ the Wind fhifted Eafterly, and put abundance of Ice on us. When the Flood came we encouraged one another, and drew home our Anchor by main Force, under great Pieces of Ice, our Endeavour being to put the Ship to the Shore: But to our great Difcomfort, when the Half-Tide was made, the Ship drove among the Ice to the Eaftward, do what we could, and fo the would on the Shole of Rocks. As I have faid before, thefe two Days and this Day was very warm Weather, and it rained, which it had not yet but once done fince we came hither, otherwife it had been impoffible we could have wrought. Withal the Wind flifted alfo to the South, and at the very Inflant blew a hard Puff, which fo continued half an Hour. I caufed the two Top-fails to be had up from betwixt Decks, and we hoifted them up with two Ropes in all Hafte, and we found the Ship afhore when the had not half a Cable's Length to drive on the rocky Sholes. In the Evening we broke way through the Ice, and put an Anchor to Shoreward in five Fect Water, to keep her to the Shore if pofible. Here Sir Hugb Willougbby came into my Mind, who without doubt was driven out of his Harbour in this Manner, and fo ftarved at Sea. But God was more merciful to us. About nine at Night the Wind came up at North-weft, and blew a Storm. This Wind was off the Shore, which blew away all the Ice from about us long before we were afloat. There came in a great rolling Sea withal about the Point, accompanied with a great Surf on the Shore. And now we were left to the Mercy of the Sea on the Ground. By ten the began to roll in her Deck, and foon after began to beat againft the Ground. We ftood at the Capitang as many as could, others at the Pumps, for we thought that every fifth or fixth Blow would have ftaved her to Pieces. We heaved to the uttermoft of our Strength to keep her as near the Ground as we could.
By reafon of this Wind it flowed very much Water, and we drew her up fo high that it was doubtful if ever we got her off again. She continued thus beating till two o'Clock the next Morning, and then fhe fettled again, whereupon we went to feep, feeing the next Tide we expected again to be tormented.
19. The 25 th in the MorningTide ourShip did not float. After Prayers I called a Confultation of the Mafter, my Lieutenant, the Mate's Carpenter and Boatfwain, to whom I propofed, that now we were put to our laft Shifts, and therefore they fhould tell me what they thought of it, viz. Whether it were not beft to carry all our Provifions on Shore; and when theWind fhould comeNortherly, to draw her further off and fink her? After many Reaforings, they allowed of my Purpofe, and fo I communicated it to the Company, who all willingly agreed to it; and fo we fell to getting up of our Provifions: Firf, of our Bread, of which we landed this Day two Dryfats, with aHoghead of Beef, having much ado to get the Boats thro' the congealed Water. In the Evening the Wind came up at North-caft and Eaft, and filled the Bay full of Ice.
The 27 th the Bay continued full of Ice, which I hoped would fo continue and freeze, that we fhould not be forced to fink our Ship. This Day we could land nothing. The 28 th at Break of Day three of our Men went over the Ice unknown to me, and the Wind coming up at Weft drove the Ice from betwixt us and the Shore, and moft part of the Bay alfo; and yet not fo but the Boat could go afhore for any thing. I made the Carpenter fit a Place againft all fudden Extremities, for that with the North-weft or Northerly Wind I meant to effect our laft Project. In the Run of her on the Starboard Side he cut away the Cieling and the Plank to the Sheathing fome four or five Inches fquare, fome four Feet high from the Keel of her, that fo it might be bored out at an Inftant. We brought our Bread which was remaining in the Bread-Room up into the great Cabin, and likewife all our Powder, fetting much of our light dry Things betwizt Decks.
The 2gth at five in the Morning the Wind came up at Weft-north-weft, and began to blow very hard. It was ordinary for the Wind to Bhift from the Weit by the

North round about: So firt I ordered the Cooper to go down into the Hold, and look to all our Cafks; thofe that were full to mell in the Bungs of them, and thofe that were, empty to get up, or if they could not be gotten up to fave them; then to coil all our Cables upon our lower Tire, and to lay on our fpare Anchors, and any thing that was weighty, to keep it down from rifing. By feven o'Clock it blew a Storm at North-weft. The Ship was already bedded fome two Feet in the Sand; and whilft that was a-flowing the muft beat. This I before had in my Confideration, for I thought the was fo far driven up that we fhould never get her off. Yet we had been fo ferreted by her laft Beating that I refolved to fink her right down, rather than run that Hazard. By nine fhe began to roll in her Deck with a moft extraordinary great Sea, which I found to be occafioned by the forementioned Overfall. And this was the fatal Hour that put us to our Wits-end: Wherefore I went down into the Hold with the Carpenter, and took his Auger and bored a Hole in the Ship and let in the Water. Thus with all Speed we began to cut out other Places to bore through; but every Place was full of Nails. By Ten, notwithftanding the lower Tire was covered with Water, tor all which fhe began fo to beat in her Deck more and more, that we could not work nor fland to do any thing in her, nor would fhe fink fo faft as we would have her, but continued beating double Blows, firft abaft and then before, that it was wonderful how the could endure a Quarter of an Hour with it.
By Twelve her lower 'Tire rofe, and that did fo counterbeat on the Infide, that it bored the Builk-Heads of the Bread-Room, Powder-Room and Fore-piece, all to Pieces. And when it came betwixt Decks, the Chefts fled about, and the Water did flafh and fly wonderfully, fo that now we expected every. Minute when the Ship would open and break to Pieces. At One fhe beat off her Rudder, and that was gone we knew not which Way. Thus fhe continued beating till Three, and then the Sea came upon the upper Deck, and foon after The began to fettle. In her we were fain to fink the moft part of our Bedding and Cloaths, and the Chirurgeon's Cheft. Our Min that were on Shore ftcod looking upon us, almoft dead with Cold and Sorrow to fee our Miferies and their own; we looked upon them again, and both upon each other with woeful Hearts. Dark Night drew on, and I ordered the Boat to be hawled up, and commanded my loving Companions to go all into her, who expreffed their tuithlul Affection to me, as loth to part from me. I told them that my Meaning was to go afhore with them, and thus laftly I forfook the Ship. We were fourteen poor Souls now in the Boat, and we imagincd tiuat we were leaped out of the Frying-pan into the Fire. The Ebb was made, and the Water extraordinary thick with Snow, fo that we thought affuredly it would carry us away into the Sea. We thereupon double manned four Oars, appointing four more to fit ready with Oars; and fo with the Help of God we got to the Shore, hawling up the Boat after.

One Thing was moft itrange in this thick Water, that there went a great fwelling Sea. Being arrived upon the Land we faluted our Fellows the beft we could; at which Time they could not know us, nor we them, by our Habits and Voices, fo frozen we were, Faces, Hair and Apparel. And here I miean to take Breath a-while, after all this long and unpleafant Relation of our miferable Endeavours, craving Leave firt of all to fpeak a Word or two in general. The Winds fince we came hither havs been very variable and inconftant, and till within this Fortnight the Southerly Wind was the coldef. The Reafon I conceive to be, that it blew from the main Land, which was all covered with Snow; and the North Winds came out of the great Bay, which hitherto was open; fo that we were under a. South Bank, that fheltered us fo that we were not fenfible of it.
20. After we had hawled up the Boat on the 2gth of November, we went along the Deach-fide in the Dark towards our Houfe, where we made a good Fire, and with it and Bread and Water we comforted ourfelves, beginning after that to reafon one with another concerning our Ship. I required that every one flould fpeak his Mind
freely.

## Chap. I.

freely. The Carpenter efpecially was of Opinion, that the was foundered, and would never be ferviceable. He alledged, that fhe had fo. beaten that it was not poffible but that all her Joints were loofe and Seams open; and that by Reafon it flowed fo little Water, and no Creek being near to bring her agtound, he could not devife how he might come to mend it ; moreover, her Rudder was loft, and he had no Iron-Work to hang on another. Some alledged, that we had heaved her up fo high on the Sands that they thought we fhould never get her off again, and that they were affured the was already docked three Feet; others, that fhe lay in the Tide's Way, and that the Tides might tear her to Pieces off the Ground. Befides which, two of our Anchors we could not now get from under the Ice, which, when the Ice broke, would break them to Pieces, and then we fhould have no Anchors to bring us home withal, provided we got off the Ship, and that the proved found alfo. I conforted them thic beft I could to this Effect.
" My Mafters and faithful Companions, be not dif"c mayed for any of thefe Difafters, but let us put our "whole Trurt in God. It is he that giveth and he that " taketh away; he throweth down with one Hand, and " raifeth up with another. His Will be done. If it be " our Fortunes to end our Days here, we are as near "Heaven as in Eygland, and we are much bound to " God Almighty for giving us fo large a Time' of Re"s pentance, who, as it were, daily calls upon us to prepare " our Souls for a better Life in Heaven. I make no "d doubt but he will be merciful unto us both here on "Earth and in his blefied Kingdom. He doth not in " the mean time deny that we may ufe all honeft Means "c to fave and prolong our natural Lives; and in my "Judgment we are not fo far paft Hope of returning " into our native Country, but that I fee a fair Way by "c which we may effect it. Admit the Ship be foun"c dered, (which God forbid, I hope for the beft) yet " have thofe of our own Nation and others, when they " have been put to thofé Extremities, even out of the "Wreck of their loft Ship built a Pinnace, and re"turned to their Friends again. If it be objected that "they have happened into better Climates, both for "Temperatenefs of the Air, and for pacific and open "Seas, and provided withal of abundance of frefh. Vic"c tuals, yet there is nothing too hard for courageous "c Minds, which hitherto you have fhewn, and I doubt " not will ftill do to the uttermoft of your Power."

They all protefted to work to the utmoft of their Strength, and that they would refure nothing that I fhould order them to do to the utmoft Hazard of their Lives. I thanked them all, and to the Carpenter for his chearful Undertaking I promifed to give him fo much Plate prefently as fhould be worth $10 \%$ and if fo be I went to Englond in the Pinnace, I would give him her freely, and 50 l . in Money over and above, and would moreover gratify all them that I hould fee induftrious. Thus we refolved to build us a new Pinnace with the Timber we hould get upon the Inand, that fo in the Spring, if we found the Ship not ferviceable we might tear her up, and plank her with the Ship's Planks; and fo for this Night we fettled ourfelves clofe about the Fire, and took fome Reft till Day-light.

The zoth, betimes in the Morning, I caufed the Chirurgeon to cut off my Hair fhort, and to fhave away all the Hair of my Face, for it was become intolerable, and becaufe it would be frozen fo great with Ificles. The like did all the reft, and we fitted ourfelves to work. The firlt Thing we were to do was to get our Cloaths and Provifions afhore, and therefore I divided the Company. The Mafter and a convenient Company with him were to go aboard and get Things out of the Hold. The Cockfwain with his Garg were to go into the Boat, to bring and carry Things athore. Myfelf with the reft to carry them half a Mile through the Snow, unto the Place where we intended to build a Store-houfe. As for the heavier Things, we propofed to lay them on the Beach. In the Afternoon the Wind was atSouth-fouth-weft, and the Water veered fo low an Ebb that we thought we might get fomething out of the Hold. We launched out our Boat therefore, and with Oars got through the thick congealed Water. It froze extreme hard, and I tood
on the Shore with a troubled Mind, thinking verily that with the Ebb the Boat would be carried into the Sea, and then we were all loft Men: But by God's Aniftance they got all fafe to the Ship, and made a Fire there to fignify their Arrival on board. They fell prefently to Work, and got fomething out of the Hold upon the Decks, but Night coming on, they durft not venture to come on Shore, but lay on the Bed in the great Cabin being almoft ftarved.

2I. The Ift of December was fo coid that I went the fame Way over the Ice to the Ship where the Boat had gone Yefterday. This Day we carried upon our Backs in Bundles five hundred of our Fifh, and much of our Bedding and Cloaths, which we were fain to dig out of the Ice. The $2 d$ was mild Weather, and fome of the Men going over the Ice fell in, and very hardly recovered; fo that this Day we could land nothing, neither by Boat nor Back. I put them therefore to make us a Storehoufe on Shore. In the Evening the Wind came up at Weft, and the Ice broke and drove out of the Bay. In was very deep and large Ice, that we were afraid it would have fpoiied the Ship. The 3d Day there were divers great Pieces of Ice that came athwart the Ship and fhe dtopt them, yet not fo as we could go over them. We found a Way for the Boat, but when fhe was laden fhe drew four Feet Water, and could not come within a flight Shot of the Shore; the Men therefore muft wade through the congealed Water, and carry Things out of the Boat upon their Backs. Every time they waded in the Ice it was moft lamentable to behold. In this extreme cold Evening they cut away as much Ice from about the Boat as they could, and picked it with Handfpikes out of her, and endeavoured to hoift her into the Ship, there being fmall Hopes that the could go to and again any more: But ufe what Means they could, fhe was fo heavy that they could not hoift her in, but were forced to leave her in the Tackles by the Ship-fide.
The 4th being Sunday we refted and performed the Sabbath-Duties of Chriftians. The 5 th and 6 th were extreme cold, and we made Bags of our Store-Shirts, and in them we carried our loofe Bread over the Ice on Shore upon our Backs: We alfo digged our Cloaths and new Sails with Hand-filkes of Iron out of the Ice, and carried them afhore, which we dried by a great Fire. The $7^{\text {th }}$ Day was fo exceeding cold, that our Nofes, Cheeks and Hands, did ficeze as white as Paper. The 8 th and 9 th it was extremely cold, and it fnowed much; yet we continued our Labour in carrying and rolling Things on Shore. In the Evening the Water raifed the Ice very high, and it broke two Thawghts of our Boat, and broke in the Side of her, but for that Time we could not help it.
The roth our Carpenter found Timber to make a Keel and a Stern for our Pinnace, the reft wrought about our Provifions until the 13 th Day, and that we fpent in digging our Boat out of the Ice, which we were fain to do to the very Keel, and dig the Ice out of her, then we got her up; indoing which many of their Nofes, Cheeks and Fingers, did freeze. The Cold now encreafed moft extremely. By the 1gth we could get no more Things out of the Hold, but were fain to leave five Barrels of Beef and Pork, all our Beer, and divers other Things, which were all frozen in her. The 2 ift was fo cold that we could not go out of the Houfe. The 23 d we went to get our Boat afhore, running her with our Oars, but by ten $0^{\prime}$ Clock there came fuch a thick Fog that it was as dark as Night. I made them give over, and we made what Hafte we could to the Shore, which we had much ado to find without lofing one another, At laft we met all at the Houfe, the molt mifcrable and frozen that can be conceived. Upon divers the Cold had raifed Blifters as big as Walnuts. This we imagined to come by Reafon that they came too haftily to the Fire. Our Well was now frozen up, fo that dig as deep as we would, we could come at no Water. Melted Snow-Water is very unwholefome, either to drink or to drefs Victuals: it made us fo fhort-breath'd, that we were fcarce able to fpeak.
All our Sack, Vinegar, Oil, and every thing elfe that was liquid, was now frozen as hard as a Piece of Wood, and we cut it with a Hatchet. Our Houfe was all frozen
on the infide; and it froze hard within a Yard of the Fire-fide. When I landed firt upon this Inand, I found a Spring under a Hill's fide, which I then obferving, I cauled fome Trees to be cut, for Marks to know the Place aggain by. It was about three Fourths of a Mile from our Houfe. I fent three of our Men which had been with me thither. Upon the 24 th thefe wandering through the Snow, at laft found the Place, and fhoveling away the Snow they made Way to the very Head of it. They found it fpring very ftrongly, and brought me a Can of it, for which I was right joyful. This Spring continued all the Year, and did not freeze, but that we could break the Ice and come to it. We labouted very hard thefe three or four Days to get Wood to the Houfe, which we found to be very troublefome, through the deep Snow.
22. We then fettled our Bedding and Proviions, providing to keep Chriftmas-Day holy, which we folemnized in the joyfulleft Manner we could. So likewife did we St. Fobn's Day, upon which we named the Wood we did winter in, in Memory of that honourable Knight, Sir Fobn Winter, Winter's Foref, and now, inftead of a Chriitmas Tale, I will defcribe the IFoufe that we did live in, with thofe adjoining. When I firft refolved to build a Eloufe, I chofe the warmeft, and convenienteft Place, and the neareft the Ship withal. It was among a Tuft of thick Trees, under a South Bank, about a flight Shot from the Sea-fide. True it is, that at that Time we could not dig into the Ground to make us a Hole or Cave in the Earth, which had been the beft Way, becaufe we found Water digging within two Feet, and therefore that Project failed; it was a white light Sand, fo that we could by no Means make up a Mud-Wall.
As for Stones there were none near us; befides we were' all now covered with the Snow. We had no Boards for fuch a Purpore, and therefore we muft do the beft we could with fuch Materials as we had about us. The Houfe was fquare about twenty Feet every Way, as much namely as our main Courfe could well cover. Firft we drove long Stakes into the Earth, round about which we wattled with Boughs, as thick as might be, beating them down very clofe. This, our firt Work, was fix Feet high on both Sides, but at the Ends was almoft up to the very Top. There we left two Holes for the Light to come in at, and the fame Way the Smoak did vent out alfo. Moreover I caufed, at both Ends, three Rows of Bufh Trees to be ftuck up, as clofe together as pofible. Then, at a Diftance from the EIoure, we cut down Trees, proportioning them into Lengths of fix Feet, with which we made a Pile on both Sides, fix Feet thick, and fix Feet high; but at both Ends ten Feet high, and fix Feet thick. We left a little low Door to creep into, and a Portal before that, made with Piles of Wood, that the Wind might not blow into it. We next faftened a rough Tree aloit, over all, upon which we laid our Rafters, and our main Courfe, over them again; which lying thwartways over all, reached down to the very Ground on either Side; and this was the Fabric of the outfide of it.
On the infide we made faft our Bonnet Sails round about, then we drove in Stakes, and made us Bedftead Frames, about three Sides of the Houfe, which Bedfteads we doubled one under another, the lowermof being a Foot from the Ground. Thefe we firt filled with Buoughs, then we laid our fpare Sails on that, and then our Bedding and Cloaths. We made a Hearth in the Middle of the Houfe, and on it made our Fire ; fome Boards we laid round our Hearth to ftand upon, that the cold Damp fhould not ftrike up into us. With our wafte Cloaths we made us Canopies and Curtains, others did the like with our fmall Sails. Our fecond Houfe was not more than twenty Feet Diftance from this, and made, for the Wattling, much after the fame Manner, but it was lefs, and covered with our fore Courfe. It had no Piles on the South-fide, but, in lieu of that, we piled up all our Chefts on the infide; and, indeed, the Reflex of the Heat of the Fire againft them did make it warmer than the Manfion-Houfe. In this Houfe we dreffed our Victuals, and the fubordinate Crew did refrefl themfelves
all Day in it. A third Houfe, which was our Storehoufe, was twenty-nine Paces off from this, for fear of firing.

This Houfe was only a rough Tree fattened aloft, with Rafters laid from it to the Ground, and covered over with our new fuit of Sails. On the Infide we had laid fmall Trees, and covered them over with Boughs, and fo Atored up our Bread and Fifh in it, about two Feet from the Ground, the better to preferve them; the other things lay more carelefsly. Long before Chriftmas our Manfion-Houfe was covered thick over with. Snow, almoft to the very Roof of it; and fo likewife was our fecond Houfe, but our Store-houfe all over, by Reafor we made no Fire in it.

Thus we feemed to live in a Heap and a Wildernefs of Snow; for out of our Doors we could not go, but upon the Snow, in which we made us Paths Dividdle deep in fome Places, and in one fpecial Place the Length of ten Steps. To do this, we muft fhovel away the Snow firt, and then, by treading, make it fomething hard under Feot. The Snow, in this Rath, was a full Yard thick under us. And this was our beft Gallery for our fick IMen, and for my own ordinary Walking; and both Houfes and Walks we daily accommodated more and more, and made fitter for our Ufes. On the 27 th we got our Boat ahhore, and fetched up fome of our Provifions from the Beach-fide, into the Store-houre, and fo by degrees did we with the reft of our Provifions, with Extremity of Cold and Labour, making Way with Shovels through the thick Snow, even from the Sea-fide to our Store-houfe; and thus concluded we the old Yeas 1631.
23. The firt of Ganuary, 1632 , and for the mont part all the Month, was extreme cold. The 6th I obFerved the I, atitude with what Exactnefs I could, it being clear funfhiny. Weather, which I found to be 5 I Degrees 52 Minutes; this Difference is by Reafon that there is a great Refraction. On the 2 ift I obferved the Sun to rife like an Oval along the Horizon ; I called three or four to fee it, the better to confirm my Judgment; and we all agreed that it was twice as long as it was broad. We plainly perceived withal, that by Degrees, as it got up higher, it alfo recovered its roundnefs. The 30 th and 3 Ift there appeared, in the Beginning of the Night, more Stars in the Firmament than ever I had before feen, by two Thirds; I could fee the Clouds in Cancer fuil of finall Stars. About ten o'clock the Moon rofe, and then a Quarter of them were not to be feen. The Wind, for the "moft Part of this Month, hath been Northerly, "and: very cold. The warmeft of which Time' we employed curfelves in fetching Wood, working upon our Pinnace, and other things. In the Beginning of this Month the Sea was all firmly frozen over, fo that we could fee no Water any where. I hope it will not feem tedious to the Readers, if I here deliver my Opinion, how this Abundance of Ice comes to be ingendered.

The Land that incircles this great Bay, which lies in a broken irregular Form, making many little Shole-Bays and Guts, full of Inands and dry Sands, is, for the moft Part, low and flat, and hath Sholes adjoining to it half a Mile or a Mile, that are dry at low Water. Now yous mult know that it flows half Tide, that is, from whence the Flood cometh, the Water returneth two Hours before it is high Water, or full Sea. It feldom rains after the Middle of September, but then falls Snow, and that Snow will not melt on the Land, or Sands. At low Water, when it fnows, the Sands are all covered over, which the half Tide carries twice in four Hours into the great Bay, which is the common Rendezvous of it. Every low Water the Sands are left clear, to gather more to the Increafe of it.
Thus it daily gathers together in this Manner, till the latter End of Oztober; and by that Time it brings the Sea to that Coldnefs, that as it fnows, the Snow will lie upon the Water in Flakes, without changing Colour; bur with the Wind is wrought together, and as the Winter goes forward, it begins to freeze upon the Surface of it, two or three Inches or more in one Night; which being carried with the half Tide, meets with fome Obftacle,
and then it crumples, and for runs upon itfelf, that in a few Hours it will be five or fix Feet thick. The half Tide ftill flowing, carries it quite away, that by December it is grown to an infinite Multiplication of Ice. And thus, by this foring of it up, the Cold gets the Predominancy in the Sea, which alfo furnifhes the Springs and Water in the low flat Lands, that it cools it like itfelf. This may appear by our Experience; though in all this I freely fubmit myfelf to the more Learned.

Our Men found it more mortifying cold to wade through the Water in the Beginning of Fune, when the Sea was full of Ice, than in December, when it was increafing; our Well, out of which we had Water in December, dried up in $7 u l y$; the Ground, at ten Feet deep, was frozen. The Quantity of Ice may very eafily be made to appear by matheinatical Demonftration; and yet I am not of the Opinion that the Bay freezes all over. For the 2 If the Wind blowing a Storm at North, we could perceive the Ice to rife fomething in the Bay.
24. Februcry 1632 . The Cold was as extreme this Month as at any Time we had felt it this Year, and many of our Men complained of Infirmities; fome of fore Mouths, all the Teeth in their Heads being loofe; their Gums fwoln with black rotten Flefh, which every Day was to be cut away; the Pain was fo great, that they could not eat their ordinary Meat; others complained of Pains in their Heads and their Breafts; fome of Weaknefs in their Backs; others of Aches in their Thighs and Knees; and others of Swellings in their Legs. Thus were two thirds of the Company under the Chirurgeon's Hands; and yet, neverthelefs, they were forced to work daily, and go abroad to fetch Wood and Timber, notwithftanding moft of them had no Shoes to put on. 'Their Shoes, upon their coming to the Fire out of the Snow, were burnt and forched upon their Feet, and our Storefhoes were all funk in the Ship. In this Necenity they made this. fhift to bind Clouts about their Feet, and endeavoured, by that poor Help, the beft they could, to perform their Duties. Our Carpenter likewife by this time fell fick, to our great Difcomfort.

I practifed fome Obfervations by the rifing and fetting of the Sun ; calculating the Time of his rifing and fetting, by very true running Glaffes. As for our Clock and Watch, notwithftanding we fill kept them by the Firefide in a Cheft, wrapped in Cloths, yet were they fo frozen, that they could not go. My Obiervations by thefe Glaffes, I compared with the Stars coming to the Meridian. By this means we found the Sun to rife twenty Minutes before it fhould; and in the EVvening to remain twenty Mlinutes, or thereabouts, longer than it fhould; all this by Reafon of the Refraction. Since now I have fpoken fo much of the Cold, I hope it will not be taken ill, if I, in a few Words, make it fome Way appear to our Readers.

We made three Differences of the Cold, all according to the Places. In our Houf, in the Woads, and in the open Air, in our going to the Ship. For the laft, it. would be fometimes fo extreme, that it was almof unindurable; no Cloaths were Proof againft it; no Motion could refift it ; it would fo freeze the Hair on the Eyelids, that we could not fee; and I verily believe that it would have ftified a Man in a very' few Hours. We daily found, by Experience, that the Cold in the Woods would freeze our Faces, or any Part of our Flefh that was bare, but it was not fo mortifying as the other. Our Houfe, on the outfide, was covered two third Parts with Snow, and, on the infide, frozen and hung with Ificles. The Cloaths on our Beds would be covered with Hoar-Froft, which in this IFabitation was not far from the Fire. The Cook's Tubs, wherein he watered his Meat, ttanding about a Yard from the Fire, and which he all Day plied with 'Snow Water; yet in the Night Seafon, whilf he feeped but on watch, they would be frrm frozen to the very Bottom. And therefore he was forced to water his Meat in a Brafs Kettle, clofe adjoining to the Fire. And I have many times both feen and felt, by putting my Hund into it, that Side which was next the Fire very warm, and the other Side an Inch frozen.

The Chirurgeon, who had hung his Bottles of Sirrups,
and other liquid things, as conveniently as he could, to preferve them, had them all frozen. Our Vinegar, Oil, and Sack, which we had in fraall Cafks in the Houfe, were all firm frozen. It may further, in general, be conceived, that in the Beginning of Fune the Sea was not broken up, and the Ground was yet frozun; and this we found by Experience, -in the burying of our Men, in fetting up the King's Standard, towards the latter End of Fune, and by our Well; in coming away in the Beginning of $\mathcal{F u l y}$, at which Time, upon the Land, for fome other Reaions, it was very hot Weather.
25. March 1632 . The firft of this Month, being St. Dovid's Day, we kept Holiday, and folemnifed it in the Manner of the ancient Britons; praying for the Happinefs of his Royal Highnefs, Cbarles, Prince of Woles, aiterwards Cbarles II. The I $5^{\text {th }}$ one of our Micn thought he had feen a Deer, whereupon he, with two or three more, defired that they might go to fee if they could take it. I gave them leave, but they returned in the Evening fo difabled with Cold, which rofe up in Blifters under the Soles of their Feet, and upon their Legs, to the bignefs of Walnuts, that they could not recover, their former State, which was not very well, in a Fortnight after.

The 26th three others alfo defired to go out to try their Fortunes, but they returned worfe difabled, and even almoft tifled with the Cold. This Evening the Moon rofe in a very long Oval along the Horizon. By the laft of this Month the Carpenter had fet up feventecn Ground Timbers, and thirty four Staddles, and, poor Man, he proceeded the beft he could, though forced to be led to his L.bour. In fhort, all this Month it was very cold, the Wind about the North-weft, the Snow as deep as it was all this Winter. But to anfwer an Objection that might be made; you were in a Wood (fome Mien may fay unto us) and therefore you might make Fire enough to keep you from the Cold. It is true, we were in a Wood, and under a South Bark too, or ocherwife we had alt ftarved.
But I muft tell you withal, how difficult it was to have Wood in a Wood. And firt I will make a Mufter of the Tools we had. The Carpenter, in his Chef, had two A xes indeed, but one of them was fpoiled in cutting down Wood to pile about our Houre before Chriftmas. When we firft landed we had but two whol, Hatchets : which, in a few Days, broke tivo Inches beiow the Sockets. I called for three of the Cooper's Hatchets. The Carpenter's Ax, and the Cooper's beft Hatctict I caufed to be locked up; the other two Hatchets to be new helved; and the Blades of the two broken Hatchets to be put into a cleit Piece of Wood, and then to be bound about with Kope Yarn, as foft as might be, which was to be repaired every Day; and thefe were all the -curting Tools we had. Befides, the 6th of Febriary the Carpenter had out his beft Ax about fomething, and one of the Company, in his Abfence, by his indifcreet handling of it, broke that too two Inches below the Socket; we were henceforward forced to ufe theie Picces of Tools the beft we could. Wherefore I gave Orders that the Carpenter fhould have one of the Cooper's Hathits, they that looked for Timbur in the Woods to have the other; and they that cut down Wood to burn, were to have the two Pieces; and this was before Chritumas.
The three that were appointed to look crooked Timber, ftalked and waded fometimes on all fours through the Srow, and where they faw a Tree likely to fin the Moull, they heaved away the Srow, and then faw if it would fit the Mould, and then they mult make a Fire to it to thaw it, otherwife it could not be cut ; then they cut it down and fit it to the Mould, and then with other Help get is home, a Mile through the Snow. Now, for our firing we could not burn green Wood, it would fmoke fo intolerably; nay, the Men. would rather ftarve withour in the Cold than fit by it; as for the dry Woote that alfo was bad enough, for it was full of Turpentine, and would fend forth fuch a thick Smoak that would make abundance of Soot, which would make us all look as if we had been free of the Company of Chimney-Sweepers.

Our Cloaths were quite burnt to Pieces about us, and, for the moft part, we were without Shoes.
5 P
our Fuelers again: They mutt firf, as the former, go up and down in the Snow till they faw a Tree ftanding, for the Snow covered thofe that were down-fallen; then they mult hack it down with their Pieces of Hatchets, and then others muft carry it home through the Snow. The Boys with Cutlaffes muft cut Boughs for the Carpenter; for every Piece of Timber that he worked, muft firft be thawed in the Fire, and he muft have a Fire by him or he could not work. And this was our continual Labour throughout the forementioned Cold, befides our cending upon the Sick, and other neceflary Employments.
26. April 1632 . 'The firft of this Month being Eafterday, we folemnized it as religioully as God gave us Grace to do. Both this Day, and the two following Holidays were extreme cold; and now fitting all about the Fire, we reafoned and confidered rogether about our Eftate; we had five Men, whereof the Carpenter was one, not able to do any thing; the Boatfwain and many more were very infirm and of all the reft we had but five that could eat of their ordinary Allowance. The Time and Seafon of the Year came on apace, and the Cold very little abated. Our Pinnace was in an indifferent forwardnefs, but the Carpenter grew worfe and worfe. The Ship, as we then thought, lay all full of folid' Ice; which was Weight fufficient to open the Seams of any new and found Veffel, efpecially one that had lain fo long upon the Ground as fhe had done. In fhort, after many Difputes and laying open of our miferable and helplefs Eftates, I refolved upon this Courfe, that notwithftanding it was more Labour, and the Men weaker and weaker, yet with the firft warm Weather we would begin to clear the Ship, that we might have the Time before us to think of fome other Courfe: This being ordered, we looked to thofe Tools we had to dig the Ice out of her; we had but two Iron Bars on Shore, the reft were funk in the Ship, and one of them was broken too.

We fell to fitting of thofe Bars and four broken Shovels that we had, with which we intended, and afterwards we did, to dig the Ice out of her, and to lay the Ice on a Heap upon the larboard Bow, and fo fink ir down to the Ground, fo faft that it Thould be a Barricado to us when the Ice brake up, which we feared would tear us to Pieces. The 6th was the deepeft Snow we had had all this Year, which filled up all our Paths and Ways by which we were ufed to go to the Woods; this Snow was fomething moifter and greater than any we had had this Year, for formerly it was as dry as Duft and as fmall Sand, and would drive like Duft with the Wind: The Weather continued with this Extremity till the I5th, at which Time the Spring was harder frozen than it had been all the Year before. I had often obferved the Difference betwixt clear Weather and mifty refracting Weather, in this manner, from a little Hill which was near adjoining our Houfe; in the clear Weather when the Sun thone with all the Purity of Air, that I could not fee a little Inland which bore off us South-fouth-eaft four Leagues, but if the Weather was mifty as aforefaid, then we could often fee it from the loweft Place.

This little Inand I had feen the laft Year when I was on Danby Ifand. The 1 3th I took the Height of it by an Inftrument ftanding near the Sea-fide, which Ifland I take to be 34 Minutes, the Sun being 28 Degrees high; this fhews how great a Refraction here is ; yet this may be noted by the Way, that I have feen the Land elevated by Reafon of the reflected Air, and neverthelefs the Sun hath rifen perfect round. The 16th was the molt comfortable funfhiny Day that came this Year, and I put fome to clear off the Snow in the under Decks of the Ship, and to clean and dry the great Cabin, by making Fire in it, others I put to dig down through the Ice to come by our Anchor that was in Shole-water; which the 17 th in the Afternoon we got up and carried aboard. The 18 that put them to dig through the Ice near the Place where we thought our Rudder might be; they digged down and came to Water, but no Hopes of fnding it.

We had many Doubts that it might be fanded, or that the Ice might have carried it away already the laft Year. $\mathrm{O}_{\mathrm{E}}$ if we could not recover it by digging before the Ice
broke up and drove, there were little Hopes of it. The Igth we continued minding our Work aboard the Ships and returned in the Evening to Supper afhore. This Day the Mafter and two others defired they might lie aboard, which I agreed to; for, indeed, they had lain very difcommodioufly all the Winter, and with fick Bed-fellows, as I myfelf had done, every one in that kind taking their Fortunes. By lying aboard, they avoided the hearing the miferable Groanings and Lamentations of the fick Men, all Night long, enduring, poor Souls, miferable Torments. By the 24 th we had laboured fo hard, that we came to the Sight of a Cafk, and could likewife perceive that there was fome Water in the Hold. This we knew could not be thawed Water, becaufe it froze very hard Night and Day aboard the Ship, and on the Land alfo. By the 23 d in the Evening we came to pierce the fore-mentioned Cafk, and found it full of very good Beer, which much rejoiced us all, efpecially the fick Men, notwithftanding it tafted a little of the bulged Water. By this we thought that the Holes we had cut to fink the Ship were frozen, and that this Water had ftood in the Ship all the Winter.

The 24th we went betimes in the Morning to work, but we found that the Water was rifen above the Ice where we had left work, above two Foot, for the Wind had blown very hard at North the Night before. In the Morning the Wind came about South, and blew hard, and, although we had little Reafon for it, we yet expected a lower Veer of Water. I thereupon put them to work on the outfide of the Ship, that we might come to the lower Hole, which we had cut in the Stern-Shoots; with much Labour, by Night, we digged down through the Ice to it, and found it unfrozen, as it had been all the Winter ; and, to our great Comforts, we found that on the infide the Water was ebbed within the Hole, and that on the outfide it was ebbed a Foot lower. Whereupon I caufed a Shot-board to be nailed upon it, and to be made as tight as might be, to try if the Water came in any other Way; to the other two Holes we had digged on the infide, and found them frozen. Now I did this betimes, that if we found the Ship foundered, we might refolve on fome Courfe to fave or prolong our Lives, by getting to the Main before the Ice was broken up; as for our Boat it was too little, and bulged befides that.

Our Carpenter was by this Time paft Hopes, and therefore little Hope had we of our Pinnace. But which was worft of all, we had not four Men able to travel through the Snow over the Ice, and in this miferable State were we at this prefent. The 25 th we fatisfied our longing; for the Wind now coming about Northerly, the Water rofe by the Ship's-fide, where we had digged down a Foot and more above the Hold, and yet did not rife within Board. This fo encouraged us, that we fell luftily to digging, and to heave the Ice out of the Ship. I put the Cook, and fome others, to thaw the Pumps, who, by continual pouring of hot Water into them, by the 27 th in the Morning had cleared one of them, which we proving, found it delivered Water very fufficiently. Thus we fell to pumping, and having cleared two Feet Water, we left the other to a fecond Trial, continuing our Work thus in digging the Ice. By the 28th we had cleared our other Pump, which we alfo found to deliver Water very well. We found likewife that the Water did not rife any thing in the Hold.

The 2gth it rained all Day long, a fure Sign to us that Winter was broken up. The 3oth we were betimes aboard at Work, which Day, and the 3 Ift, were very cold with Snow and Hail, which pinched our fick Men more than any Time this Year. This Evening being May Eve, we returned late from our Work to our Houfe, and made a good Fire, and chofe Ladies, and ceremonioully wore their Names in our Caps, endeavouring to revive ourfelves by any Meanis.
27. At our coming from England we were ftored with all forts of Sea-provifions; as Beef, Pork, $\varepsilon \xi^{\circ}$ c. but now, as we had little Hopes of recruiting, our Cook ordered it in this Manner: The Beef which was to ferve on Sunday Night' to Supper, he boiled on Saturday Night in a Kettle full of Water, with a Quart of Oatmeal, about
an Hour ; then taking the Beef out, he boiled the reft to half the Quantity; and this we called Pottoge, which we eat wich Bread as hot as we could, and after this we had our Ordinary of Fifh. Sunday, for Dinner we had Pork and Peare, and at Night the former boiled Beef made more Pottage. In this Manner our Tiuefday's Beef was boiled on the Monday Nights, and the Tburfday's upon Wedrefdays ; and thus all the Week, except Friday Night, we had fomething warm in our Bellies every Supper; and furely this did us a great deal of Good: But foon after Cbriftmas many of us fell fick, and had fore Mouths, and could neither eat Beef, Pork, Fifh, nor Pottage. Their Diet was only this; they would pound Bread in a Mortar to Meal, then fry it in a Frying-pan with a little Oil, and fo eat it. Some would boil Peafe to a foft Pafte, and feed, as well as they could, upon that ; for the moft part of the Winter Water was our Drink. In the whole Winter we took not above a Dozen Foxes, many of which would be dead in the Traps two or three Days oftentimes; and then, when the Blood was fettled, they would be unwholefome; but if we took one alive, and he had not been long in the Trap, him we boiled and made Broth for the weakeft fick Men; the Flefh of them being foft boiled they eat alfo. Some white Partridges we killed, but not worth mentioning.

We had three Sorts of fick Men; thofe that could not move, nor turn themfelves in their Beds, who muft be tended like Infants; others were, as it were crippled with Aches; and others that were fomething better; moft had fore Mouths. You may now afk me, How thefe infirm Men could work ? I will tell you : Our Surgeon, who was a diligent and fweet conditioned Man as ever I faw, would be up betimes in the Morning, and whilft he picked their Teeth, and cut away the Pieces of Flefh from their Gums, they would bathe their Thighs, Knees, and Legs. The Manner of it was thus; there was no Tree, Bud, or Herb but we made Trial of it; and this being firft boiled in a Kettle, and then put in a fmall Tub and Bafons, they put it under them, and covered them with Cloths upon it. This fo molified the grieved Parts, that though, when they rofe out of their Beds, they would be fo crippled that they could fcarce ftand, yet after this was done half an Hour they would be able to go, (and go they mult) to wade through the Snow to the Ship, and about other Bufinefs; by Night they would be as bad again, and then they nouft be bathed, anointed, and their Mouths drefed again before they went to Bed; and in this Diet, and in this Manner we went through our Miferies.

I was always afraid that we fhould be weakeft in the Spring, and therefore I referved a Tun of Alicent Wine unto this Time: Of this, by putting feven Parts of Water to one of Wine, we made fome weak Beverage, which, by reafon that the Wine had been froze and loft its Virtue, was little better than Water. The ficker Sort had a Pint of Alicant a Day by itfelf, and of fuch poor Aqua Nite too as we had, theyhad a Dram allowed them next their Hearts every Morning: And thus we made the beft Ufe of what we had, according to the Seafons. May 1632 , the 1 ft , we went aboard by-times, to heave out the Ice ; the 2 d , it did fnow and biow, and was fo cold that we were forced to keep houfe all Day. This unexpected Cold, at this time of the Year, did fo vex our fick Men that they grew worfe and worfe; we could not now take them out of their Beds, but they would fwoon, and we had much ado to keep Life in them.

On the 3 d, thofe that were able, went on board ivetimes, to heave up the Ice; the Snow was now melted in many Places upon the Land, and food in Plafhes; and now there came fome Cranes and Geefe to it. The $4^{\text {th }}$, while the reft wrought on board, I and the Surgeon went with a Couple of Pieces, to fee if we could kill any of thofe Fowls for our fick Men; but never did I fee fuch Wild Fowl; they would not endure to fee any thing move ; wherefore we returned in two Hours, not being able to endure any longer ftalking through the Snow and the wet Plafhes. I verily thought my Feet and Legs would have fallen off, they fo tormented me with aching. The 6th, Fo.mn Wardon, the Maiter of my Ship's Chief

Mate, died, whom we buried in the Evening, in the moft Chintian-like manner, on the Top of a bare Hill of Land, which we called Brandon-bill. The Weather continued very cold, it freezing fo hard in the Night that it would bear a Mian. By the gth we were come tos, and got up, our five Barrels of Beef and Pork, and had found four Butts of Beer and one of Cyder, which God had preierved for us; it had lain under Water all the Winter, yet we could not perceive it was any worfe. God make us ever thankful for the great and feafonable Comfort it gave us.
The roth it fnowed, and blew fo cold that we could not ftir out of the Houfe, yet neverthelefs, by Day, the Snow vanifhed apace on the Land. The I ith we were on board betimes, to heave out Ice. By the 12 th at Night we had cleaned out all the Ice out of the Hold, and found likewife our Store Shoes, which had lain foaked in the Water all the Winter, but we dried them by the Fire, and fitted ourfelves with them. We ftruck again our Cables into the Hold; there ftood a Butt of Wine alfo, which had been all the Winter on the Upper-deck, and continued as yet all frozen. We fitted the Ship alfo, making her ready to fink again when the Ice broke up. We could find no Defect in her, and therefore we hoped that fhe was ftaunch; the Carpenter neverthelefs argued to the contrary, alledging that now fhe lay on the Ground, in her Deck the Ice had filled her Defects, and the Ice was the thing that kept out the Water; but when fhe fhould come to labour in the Sea, fhe would certainly open, and indeed. we could now fee quite through her Seams betwixt Wind and Water; but that which troubled us moft was, the Lofs of her Rudder, and fhe now lay in the very Strength of the Tide, which whenever the Ice drove might tear her to Pieces ; but we ftill hoped the beft.
28. The I 3 th, being the Sabbath-day, we folemnized it, giving God Thanks for thofe Hopes and Comforts we daily had. The Weather in the Day-time was pretty warm, but it froze by Night, yet now we could fee fome Land. The I4th we began a new fort of Work: The Boatfwain, and a convenient Number, brought on Shore the reft of our Rigging, which was much fpoiled by pecking it out of the Ice, and this they now fell to fitting, I fet the Cooper to fit our Calk, although, poor Man, he was very infirm; my Intent being to pafs fome Cables under the Ship, and fo to buoy her up with thofe Cafks, if we could not get her off otherwife; fome others I ordered to go and fee if they could kill fome wild Fowl for our fick Men, who now grew worfe and worfe; but this is to be remembred, that we had no Shot but what we made of the Aprons of our Guns, and fome old Pewter that we had; for the Carpenter's Sheet-Lead we durft not ufe.

The'I 5 th I manured a little Patch of Ground that was bare of Snow, and fowed it with Peafe, hoping to have fome fhortly to eat; for as yet we could fee nó green Thing to comfort us. The 18 th our Carpenter Williams Cole died; a Man beloved of us all, as much for his innate Goodnefs, as for the prefent Neceffity we had of a Man of his Quality: He had endured a long Sicknefs with Patience, and made a very godly End. In the Evening we buried him by Mr. Wardon, accompanied with as many as could go, for three more of our principal Men lay then expecting a good Hour. And now were we in the moft miferable State that we were in all the Voyage. Before this extreme Weaknefs, he had brought the Pinnace to that pafs, that fhe was ready to be bolted, $\xi^{2} c$. and to be joined to receive the Planks ; fo that we were not fo difcouraged by his Death, but that we hoped, ourfelves, to finifh her, if the Ship proved unferviceable. This Pinnace was twenty-feven Feet by the Keel; She had feventeen Ground-Timbers, thirty-four principal Staddles, and eight fhort Staddles: He had contrived her with a round Stern, to fave Labour, and indeed fhe was a well-proportioned Veffel; her Burden was twelve or fourteen Tons.
In the Evening the Mafter of our Ship, after the Burial, returned aboard, and, looking about him, difcovered fome Part of our Gunner under the Gun-Room Ports. This Man we had committed to the Sea at a good Dif-
eance from the Ship, and in deep Water, near fix Months before. The 19 th, in the Morning, I fent Men to dig him out. He was faft in the Ice, his Head downwards, and his Heels upwards, for he had but one Leg; and the Plaifter was yet at the Wound. In the Afternoon they had digged him clear out, and he was as free from Noifomnefs, as when we firft committed him to the Sea. This Alteration had the Ice, and Water, and Time only wrought on him, that his Flefh would nlip up and down, upon his Bones, like a Glove on a Man's Hand. In the Evening we buried him by the others. This Day one George Ugganes, who could handle a Tool beft of us all, had pretty well repaired our Boat, and fo ended this mournful Week. The Snow was by this time pretty well waited in the Wood; and we having a high Tree on the highett Place of the Inand, which was called our Watch-Tree, from the Top of it might fee into the Sea*, but found no Appearance of breaking up yet.

The 2oth, being Whit funday, we fadly folemnized it, and had fome Tatte of the Wild-fowl, but not worth the writing. The 2 Ift was the warmeft funfliny Day that came this Year. I fent two a-fowling; and myfelf, the Maifter, Chirurgeon, and one more, with our Pieces and Dogs. We went into the Woods to fee what we could find; we wandered from the Houfe eight Miles, and fearched with all Diligence, but returned comfortefs; not an Herb or Leaf eatable could we find. Our Fowiers had as bad Succefs. In the Woods we found the Snow partly melted away, fo that it was paffable. The Snow does not melt away here with the Sun or Rain, and fo make Land-Floods, as in England, but is exhaled by the Sun, and fucked full of Holes like the Foney-combs; fo that the Sand whereon it lies will not be wetted. The like Obfervations we alfo made, that let it rain ever fo much you fhall fee no Land-Floods after it. The 22 d we went aboard the Stip, and found fhe had made fo much Water that it wis men above the Ballaft, which made us doubt again of her Soundnefs. We fell to pumping, and pumped her quite dry. And now by Day fometimes we have fuch hot Glooms that we cannot endure the Sun, and yet in the Night it freezes very hard. This Unnaturalnefs of the Seafon tormented our Min that they grew worfe and worfe daily.
The 2 3d our Boatfwain, a careful Man, having been long fick, which he had heartily refifted, was taken with fuch a Pain in one of his Thighs, that we thought he would have died prefently. He kept his Bed in great Extremity. And it was a Maxim among us, that if any one kept his Bed he could rife no more. This made every Man to frive to keep up for Life.
The 24th was very warm Sun.hine, and the Ice confumed by the Shore-fide, and cracked all over the Bay with dreadful Noife. About three in the Afternoon we could perceive the Ice with the Ebb to drive by the Ship, whereupon I fent two with all Speed to the Mafter, with Order to beat out the Hole and to fink the Ship, as likewife to look for the Rudder betwixt the Ice. This he prefently performed; and a happy Fellow, one David Hammon pecking betwixt the Ice, ftruck upon it, and it came up with his Launce, who crying that he had found it, the reft came and got it upon the Ice, and fo into the Ship. In the mean time the little Drift which the Ice had began to rife and mount into high Heaps againft the fhole Shores and Rocks, and likewife againft the Heap of Ice which we had put for a Barricado to our Ship, but with little Harm to us; yet we were forced to cut away twenty Fathom of Cable which was frozen in the Ice. After an Hour the Ice fettled again, not having any Vent outwards. This was a joyful Day to us all, and we gave God Thanks for the Hopes we had of it.
The $25^{\text {th }}$ was a fine warm Day, and with the Ebb the Ice drove againft the Ship and ftruck her foundly. The 26th I took the Chirurgeon with me, and went again to the Wood, and to that Bay where laft Year we had loft our Man Fobn Barton, but we could find no Sign of him. The 28 th it was pretty clear betwixt the Ship and the Shore, and I hoped the Ice would no more opprefs us; wherefore I caufed the lower Holes to be firmly ftopped,
the Water then remaining three Feet above the Ballaft The 2 gth being Prince Cbarles's Birth-day, we kept Holiday, and difplayed his Majefty's Colours both on Land and aboard, and named our Habitation CbarlesTown, by Contraction Cbarlion, and the Inand Cbarlion Jhand.

The 3oth we launched our Boat, and had Intercourfe fometimes between the Ship and the Shore by Boat, which was new to us. The laft Day of this Month we found fome Vetches to appear out of the Ground, which I made our Men pick up and boil for our Sick. This Day we made an end of fitting all our Rigging and Sails, and ic being a very hot Day we dried our Fifh in the Sun, and aired all our other Provifions. There was not a Man of us at prefent able to eat of our falt Provifions but myfelf and the Mafter. It may be remembered that all this Winter we had not been troubled with any Rheums nor Phlegmatic Difeafes. All this Month the Wind was variable, but for the moft part Northerly.
29. Fune 1682. The firt four Days fnowed and hailed, and blew very hard, and it was fo cold that the Ponds of Water froze over, and the Water in our Cans was frozen even in the very Houfe. Our Cloaths alfo that had been wafhed and hung out to dry did not thaw. All Day the 5 th it continued blowing very hard on the broad side of the Ship, which made her fwag and wallow in her Dock, notwithfanding fhe was funk, which fhook her very much. The Ice withal crove againft her, and gave her many fearful Blows. I refolved to endeavour to lang the Rulder, and when God fent us Wiater, notwithfanding the abundance of Ice that was yet about us, to heave her further off. In the Afternoon we under-run our frmall Cable to our Anchor, which lay a-ftern in deep Water, and fo with fome Difficulcy got up our Anchor. This Cable had lain flack under Foot, and under the Ice all Wintur, and we could never have a cleai Slatch from Ice to have it up before now. We found it not a Jot the worfe. I put fome to make Coal-rakes, that they might go into the Water and rake a Hole in the Sand to let down our Rudder. The 6 th we went about to hang it ; and our young luftieft Men took it by Turns to go into the Water and to rake away the Sand, but they were not able to endure the Cold half a Quarter of an Hour, it was fo mortifying; and ufe what Comforts we could, it would make them fiwoon and die away. We brought it to the Stern-Poft, buit then we were forced to give it over, being able to work at it no longer. Then we plugged the upper Holes aboarl, and fell to pumping the Water out of her again.
The 7 th we wrought, about our Rudder, but were again forced to give over, and fo put our Cables over board with Menergers unto them, the Anchor lying to that Pafs that we might keep her right in the Dock when we had brought her light. By the 8th at Night we had pumped all the Water out of her, fo that at high Water the would float in hor Dock, tho' the were ftill docked in the Sand almoft four Feet.' This made us confider what was to be done. I refolved to heave out all the Ballaft; for the Bottom of her being fo foaked all the Winter, I hoped was fo heavy that it would bear her. If we could not get her of that Way, I then thought to cut her down to the lower Deck, and take out her Nafts, and fo with our Cafks to buoy her off. The gth betimes in the Morning we fell to work, we hoifted out our Beer and Cyder, and made a Raft of it, faftening it to our Shore-Anchor. The Beer and Cyder funk prefently to to the Groind, which was nothing ftrange to us, for any Wood or Pipe-ftaves that had laid under the Ice all the Winter would alfo finl: down as foon-as ever it was hove over board.
This Day we heaved out ten Ton of Ballaft; and here I am to remember God's Goodnefs towards us, in fending thofe forementioned green Vetches; for now our feeble fick Men, that could not for their Lives ftir thefe two or three Months, could encure the Air, and walk about the Houfe. Our other fick Men gathered Strength alfo: And it was wonderful to fee how foon they were recovered. We ufe them in this manner twice a Day; we went to gather
the Herb or Leaf of thofe Vetches as they firft appeared. out of the Ground, and then we waihed and boiled them; and fo with Oil and Vinegar that had been frozen we eat them. It was an excellent Suftenance and refrefhing; the moft part of us eat nothing elfe. We likewife bruifed them, and took the Juice of them and mixed it with our Drink: We alfo eat them raw with our Bread.

The inth was very warm Weather, and we hung our Rudder. The Tides now very much deceived us, for a Northerly Wind would very little raife the Water. This made us doubt of getting off our Ship. The I 3 th I refolved to know the Latitude of this Place; fo having examined the Intruments and practifed about it this Fortnight, I found it to be 52 Degrees 3 Minutes. The 14 th we had heaved out all the Ballaft, and carried all ourYards and every thing elfe on Shore, fo that we now had the Ship as light as pofible it could be.

The isth we did little but exercife ourfelves. By this Time our Men that were moft feeble grew ftrong and run about, the Flefh of their Gums being fettled again, and their Teeth faftened fo that they eat Beef with their Vetches. This Day I went to our Watch-Tree, but the Sea, for any thing I coald perceive, was ftill firm frozen, and the Bay full of Ice, having no Way to vent it.

The 16th was wondrous hot, with fome Thunder and Lightning, fo that our Men went into the Ponds athore to fwim and cool themfelves, yet the Water was very cool ftill. Here had lately appeared divers forts of Flies, as Butter-flies, Butchers-flies, Horfe-fies, and fuch an infinite Number of blood-thirfty Mufketoes, that we were more tormented with them than ever we were with the hot Weather. Thofe I think lie dead in the old rotten Wood all the Winter, and in Summer they revive again. Here are likewife infinite numbers of Ants and Frogs in the Ponds upon the Land, but we durft noteat of them: They looked fpeckled like Toads. By this Time there were neither Bears, Foxes, nor Fowl to be feen.
30. The 1 th the Wind came Northerly, and we, expecting a high Tide, in the Morning betimes put out our fmall Cable aftern out at the Gun-Room Port, but the Morning-Tide we had not Water by a Foot. In the Evening I had laid Marks by Stones, $\mathcal{E}^{\circ} c$. and thought that the Water flowed apace: Making Signs therefore for the Boat to come afhore, I took all that were able to do any, thing with me aboard; and at high Water, although fhe wanted fomething to rife clear out of the Dock, yet we heaved with fuch Good-will, that we heaved her through the Sand into a Foot and an half deeper Water, and further we durft not bring her ; for the Ice was all thick about ias. After we had moved her we all went to Prayers, and gave God Thanks that he had given us our Ship again. The 18th we were up betimes, the Cooper and fome with him to bring frefh Water, myfelf with others to gather Stones at low Water, which we piling up at low Water, the Cockfwain and his Gang fetched them aboard, where the Mafter with the reft fowed them. to the Offing, by which means we could the better come and flop the two upper Holes firmly: After which we fitted other convenient Places to make others to fink her, if Occafion were.

The igth we were all up betimes to work as afore fpecified. Thefe two Days our Ship did not float, and it was a very happy Hour which we got her off, for we never had fuch a high Tide all the Time we were here. In the Evening we went up to our Watch-Tree; and this was the firf Time I could fee open Water any way except that little by the Shore-fide where we were. This put us in fome Comfort that the Sea would Chortly break up, which we knew muft be fo to the Northward, feeing that Way we were certain there were about two hundred Leagues of Sea. The zoth we laboured as formerly, the Wind at North-north-weft. The Tide rofe fo high that our Ship floated, and we drew her off into a Foot and half deeper Water. Thus we did it by little and little, for the Ice was ftill wonderfully thick round about us.

The 22d there drove much Ice about us and within us, and brought home our Stem-Anchor at high Water.
Val. IL Numb. 98.

Notwithftanding all the Ice we heaved our Ship further off, that fo fhe might lye afoat at low Water. The next low Water we founded all about the Ship, and found it very found Ground. We difcovered Stones three Feet high above the Ground, and two of them within a Ship's-breadth of the Ship, whereby did more manifeft-s ly appear God's Mercy to us; for if when we found her on Shore fhe had ftruck one Blow againft thofe Stones; it had bulged her. Many fuch Dangers were there in this Bay, which we now firft perceived. In the Evening we towed of the Ship into the Place where fhe rode the laft Year, and there moored her, fteering the Ship Night and Day, Flood and Ebb, among the difperfed Ice that came athwart us.

The 23d we laboured in fetching the Provifions on board, which to do we were forced to wade to carry it to the Boat a full Bow-fhot, and all by reafon the Wind was Southerly. This Morning I took an Obfervation of the Moon's coming to the South, by a Meridian Line of a hundred and twenty Yards long, which I had rectified many Weeks beforchand.

The 24 th I took another Obfervation of the Moon's corning to the Meridian. I had formerly cut down a very high Tree and made a Crofs of it: To it I now faftened uppermoft the King and Queen's Pictures drawn to the Life, and doubly wrapped in Lead, and fo clofe that no Weather could hurt them. Betwixt both thefe I affixed his Majefty's Royal Title, viz. Chorles the firft, King of England, Scotland, France and Ireland, as alfo of Newfoundland, and of thefe Territories, and to the Weftward as far as Nova Albion, and to the Northward to the Latitude of 80 Degrees, $\mathcal{E}^{\circ} \mathrm{c}$. On the Outfide of the Lead I faftened a Shilling and a Sixpence of his Majeity's Coin; under that we faftened the King's Arms fairly cut in Lead, and under that the Arms of the City of Briftol: And this being IVidfummer-day, we raifed it on the Top of the Bar-hill, where we had buried our dead Fellows, by this Ceremony taking Poffeffion of thefe Territories for his Majeity's Ufe. The Wind continuing Southerly, and blowing hard, put all the Ice upon us, fo that the Ship now rode among it in fuch apparent Danger, that I thought verily we fhould have loft her.

We laboured Flood and Ebb with Poles and Oars to heave away and part the Ice, but it was God that protected and preferved us; for it was paft any Man's Underftanding how the Ship could endure it, or we by our Labour fave her: In the Night the Wind fhifted to the Weftward, and blew the Ice from us, which gave us fome Reft.
31. The $25^{\text {th }}$ in the Morning the Boatfwain with a convenient Crew began to rig the Ship, the reft fetching our Provifion on boaid. About ten o' Clock when it was fomething dark, I took a Launce in my Hand, and one with me with a Mußket, and went to our Watch-Tree to make a Fire on the moft eminent Place of the Ifland, to fee if it would be anfwered. Such Fires I have formerly made to have Knowledge if there were any Savages on the Main or the Iflands about us. Had there been any, my Purpofe was to have gone to them to get Intelligence of Chriftians, or fome Ocean Seas thereabouts. When I was come to the Tree I laid down my Launces and fo did my Confort his Munket, whilft I climbed up to the Top of the Tree. I ordered him to put Fire to fome low Tree thereabouts. He unadvifedly put Fire to fome Trees that were to Windward, fo that they and all the reft too, by reafon it had been very hot Weather, being dry, took Fire like Flax and Hemp; and the Wind blowing towards me, I made hafte down the Tree; but before I was half-way down the Fire took on the Bottom of it, and blazed fo fiercely upward that I was forced to leap off the Tree and down a fteep Hill, and in fhort with much ado efcaped Burning. The Mofs on the Ground was as dry as Flax, and it run moft Atrangely, like a Train along the Earth. The Mufket and Launce were both burnt. My Confort at laft came to me, and was joyful to fee me, for he thought verily I had been burnt: And thus we went homeward together, leaving the Fire encreafing and burning moft furioully.
I flept but little all Night after, and at Break of Day ordered all our Powder and Beef to be carried aboard
this Day. I went to the Hills to look to the Fire, where I faw it fill burn both to Weftward and Northward, leaving one upon the Hills to watch it. I came home inmediatcly, and made them take down our new Suit of Sails, and carry them to the Sea-fide, ready to be caft in if Occainon were, and to make hafte to take down our Houfes. About Noon the Wind fhifted Northward, and our Centinel came running home, bringing us Word that the Fire followed him at his Heels, like a train of Powder. There was no Occafion to bid us pull down, and carry all to the Sea-ficie. The Fire came towards us with a moft terrible rattling Noife, bearing a full Mile in Breadth; and by that Time we had uncovered our Houfes, and going to carry away our laft things, the Fire was come to our Town, and feized it, and, in a Trice, burnt it down to the Ground. We loft nothing of any Value, for we had brought all into a Place of Security. Our Dogs, in this Condition, would fit down on their Tails, and howl, and then run into the Sea, and there ftay. The Wind inifted eafterly, and the Fire ranged to the Weftward, feeking what it might devour. This Night we lay together aboard the Ship, and gave God Thanks, who had been thus merciful unto us.

The 27 th, 28 th, and 20 th, we wrought hard in fetching our things aboard, as likewife our Water, which we towed off with the Ebb, and fent it to the Ship, with the Elood: we were forced to go about the Eaftern Point for Driftwool, for the Tools were all fo fpent, that we could cut none. Therefore about three Days before I had caufed our Pinnace to be fawed to pieces, and with that we ftowed our Cank, intending to burn it at Low-water; and fuch other times as we could not work in carrying things aboard, I employed in fetching Stones; and we built three Tombs over our three dead Companions, filling them with Sand, in a decent and handfome Manner. The leaft Tomb had two Tons of Stones about it. The 3oth we earneilly continued our Labour, and brought our Sails to Yard; and by eleven o'Clock at Night had made a pretty Ship, meaning to have finifhed our Bufinefs with the Week and Month, that we might the better folemnize the Sabbath afhore, and fo take leave of our wintering Iland.

The Wind had been variable a great while, and the Bay fo clear of Ice, that we could not fee a Piece of it, for it was all gone to the Northward. Hoping that it may give Content to fome Readers, I will relate the Manner of the breakiug of it up. , It is firt to be noted, that it did not freeze naturally above fix Feet, the reft is, by Accilent; fuch is that Ice, that you may fee here fix Fathom thick; this we had manifeft Proof of, by digging the Ice out of the Ship, and by digging to our Anchors before the Ice broke up.
32. In May, when the Heat increafeth, it thaws firft on the Shole by the Shore-1ide, which when it hath done round about, then the Courfes of the Tides, as well by the Ebb and Flood, as by their rifing and falling, do fo thake the main Ice, that it cracks and breaks it. Thus, when it hath got room for Motion, then runs one Piece of it upon another, and fo bruifes and grinds itfelf againft the Sholes and Rocks, that a Ship may run through it. Befides this, much of it is thruft upon the Sholes, where it is confumed by the Heat of the Sun. The Seafon of this Climate is moft unnatural; for in the Day-time it will be extueme hot, nay intolerable, by Reafon it is a fandy Countiy. In the Night again it will freeze an Inch thick in the Ponds, and in the Tubs about, and in our Houfes; and all this towards the latter End of June. The Mukketoes, upon our coming away, were infup portable. We tore an old Flag in Pieces, and made us Bags of it to put our Heads in, but it was no Fortification againt them; they would find ways and means to fing us, that our Faces were fwoln out in Pimples, which would fo itch and fmart, that we muft needs rub and far them; and thefe Flies, indeed, were more tormenting to us, than all the Cold we had endured before.

July 1632 . The Ift of this Month we were up betimes, and I caufed our Ship to be adorned the beft we could. Our Flag in the Poop, and the King's Colours in the Main-Top. I had provided a fhort Account of all the

Paffages of our Voyage to this Day. I likewife wrote in what State we were in at prefent, and how I intended to profecute this Difcovery, both to the Weftward and to the Southward, about this Mland. This brief Difcourfe I had concluder, with a Requeft to any noble minded Traveller that thould take it down, or come to the Notice of it; that if we fhould perifh in the Action, then to make our Endeavours known to our Sovereign Lord the King. And thus, with our Arms, Drums, and Colours, Cook and Kettle, we went afhore, and firt we marched up to our eminent Crofs, adjoining to which we had buried our dead Fellows. There we read Morning Prayers, and then walked up and down till Dinnertime. After Dinner we walked up to the higheft Hills, to fee which way the Fire had wafted; we deforied that it had confunsed to the Weftward fixteen Miles at leaft, and the whole Breadth of the Inand. Near our Crofs and Dead it could not come, by reafon it was a bare Sand. After Evening Prayer I happened to walk along the Beach-fide, where I found an Herb refembling ScuryyGrafs; I had fome gathered ${ }_{2}$ which we boiled with our Meat to Supper.

It was moft excellent good, and far better than our Vetches. After Supper we went to feek for more of it, which we carried off to the Quantity of two Bufhels, which did afterwards much refrefh us; and now the Sun was fet, and the Boat came afhore for us; whereupon we affembled ourfelves together, and went up to take the laft View of our Dead, and to look to their Tombs, and other things. So fattening my Brief, which was fecurely wrapped up in Lead to the Crofs, we prefently took Boar and departed, and never put Foot more on that Inand. This Ifland, and all the reft, as likewife the Main, is a light white Sand, covered over with a white Mofs, and full of Shrubs and low Bufhes, excepting fome bare Hills and other Patches: In thefe bare Places the Sand will drive with the Wind like Duft. It is very full of Trees, as Spruce and Juniper, but the biggeft Tree I faw was but a Foot and a Half Diameter.

At our fint coming hither we faw fome Deer, and killed one, but never any fince; Foxes all the Winter we faw many, and killed fome Dozens of them; but they went all away in Mey; Pears we faw a few, but killed none; we faw fome other little Peafts. In May there came fome Fowl, as Ducks and Geefe, of which we killed very few; white Partridges we faw, but in fimall Quantities, nor had we any Shot to thoot at them. Fifh we could never fee any in the Sea, nor no Bones of Fifh on the Shore-fide, excepting a few Cockle-Shells, and yet nothing in them neither.
33. Sunday being the 2d of $\mathcal{F}_{112},{ }_{1} 632$, we were up betimes, about ftowing and fitting our Ship, and weighing our Anchors; which, when the laft was a Trip, we went to Prayers, befecching God to continue his Mercy to us, and rendering him Thanks for having thus reftored us. Our Ship we found no Defect in. We had abundance of fuch Provifions as we brought out of England, and we were in indifferent Health, and gathered Strength daily. This being done, we weighed and came chearfully to fail. The Wind at North-weft, bad to get away, wherefore we flood over to Danby Ihand, to take in more Wood, and there to be ready to take the Opportunity of a fair Wind. I went afhore with the Boat, for fome of the Company had told me they had feen fome Stakes the laft Year driven into the Ground, where we came afhore, whilft fome gathered Wood. I went to the Place, where I found two Stakes drove into the Ground a Foot and $\bar{a}$-half, and Fire-brands, where a Fire had been made by them. I pulled up the Stakes, which were about the thicknefs of my Arm, and they had been cut Sharp at the Ends with a Hatchet, or fome other good Iron Tool, and driven in as it were with the Head of it. They were diftant about a Stones-throw from the Waterfide. I could not conceive to what purpofe they fhould be there fet, unlefs it were for fome Mark for Boats. This augmented my Defire to fpeak wiin the Savages, for, without doubt, they could have given us Notice of fome Chriftians with whom they had Commerce.

About four in the Evening I returned with a Boat's

## Chap. I.

 and wintering in Chariton Ifland. 427Lading of Wood, and the Wind fomething favouring; we weighed with our Lead, feeking out a Channel amongtt thofe dangerous Sholes. In the Evening the Wind oppofing itfelf, we came to Anchor betwixt Cbarlion Ifloud, and that Inand we named the latt Year, in memory of that honourable Gentleman Mr. Thomas Cary, one of the Bed-chamber to the King, Cary's IJland, where we rid all Night. On the 3d, at Break of Day, we weighed, with a bare Wind, and, founding up and down for a Channel, we were many times in five and four Fathom Water. The Wind larging upon us, we flood away Weft by Noon; we faw all the Ice Southward of us, endeavouring therefore to compafs about the Weftern Point of Cbarltoin Jfland, and fo to feek to the Southward, we found it all Sholes, Rocks, and Breaches. By four in the Afternoon we faw the Weftern Land, but all full of Ice; whereupon, as the Wind favoured us, we ftood along it in Sight to the Northward.
The fourth was calm, but fo very thick and foggy withal, that we could not fee a Piftol-Shot about us; we knew not which Way to turn us. Now to avoid telling the fame thing twenty times, we were continually till the 22 d fo peftered and tormented with Ice, that it would feem incredible to relate it ; fometimes we were fo blinded with Fog, that we could not fee about us; and we did fo ftrike againft the Ice, that the Fore-part of the Ship would crack again, and make our Cook and others to run up all amazed, and think the Ship had been beaten all to Pieces. Indeed we did hourly ftrike fuch unavoidable Blows, that we left the Hatches open, and twenty times in a Day the Men would run down into the Hold to fee if fhe were bulged. Sometimes when we had made her faft in the Night to a great Piece of Ice, we Thould have fuch violent Storms, that our faftning would break, and then the Storm would beat us from Piece to Piece moft dreadfully ; other times we fhould be faft inclofed among great Ice as high as our Poop: This was made, as I have formerly faid, by one Piece running upon another, which made it draw eight or ten Fathom Water; befides which the Lowermoft would rife from underneath, and ftrike us under the Bulge with Pieces of five, fix, nay of eight Tons, that many times we have pumped clear Water for an Hour together, before we could make the Pump fuck. Among thefé feveral and hourly Dangers, I overheard the Men murmur, and fay, That they were happy that I had buried, and that if they had a thoufand Pounds they would give it, fo they lay fairly by them; for we, fay they, are deftined to flarve upon a piece of Ice. I was forced to fuffer all this with Patience, and to comfort them again, when I had them in a better Humour.
34. The 22d, having been vexed with a Storm all Night, and this Morning with a thick Fog, we drove in thirteen Fathom Water. About Noon it cleared, and swe faw the Land, and at that Inftant had a good Obfervation, whereby we kneyy it to be the Cape Henrietta Maria. I made the Mafter ftand in with it, and in the mean Time we fitted a Crofs, and faftened the King's Arms, and the Arms of the City of Brifol to it. We came to an Anchor within a Mile of the Shore, in fix Fathom Water, fo we hoifted out our Boat, and took our Arms and our Dogs, and went afhore. Upon the moft eminent Place we erected the Crofs; and then feeking about we foon faw fome Deer, and by and by more and more. We,ftole to them with the beft Skill we had, and then put our Dogs on them, but the Deer ran clear away from them at Pleafire, We tired the Dogs, and wearied ourfelves, but to no purpofe, neither could we come to thoot at them. I faw, in all, about a Dozen old and young, very goodly Beafts. We took half a Dozen young Geefe on the Pools, by wading into them; and fo returned to our Boat, vexed that we had found a Place where there were Refrefhments, and we could get none of them. Whereas we had kept our Dogs with a great deal of Inconvenience aboard the Ship all the Winter, and had pardoned them many Mirdemeanours (for they would fteal our Meat out of the fteeping Tubs) in Hopes they might hereafter do us fome Service; and fee-
ing they now did not, and that there were no Hopes they could hereafter, I caufed them to be left afhore. They were a Dog and a Bitch, Buck Dogs, of a very good. Breed. The Dog had a Collar about his Neck, which, perhaps, hereafter may come to Light.
I fav no' Sign of any Sarages, nor could we find any Herbs, or other Refrefhments here. In the Evening, being returned aboard, and the Wind blowing fair at South, I caufed the Mafter to weigh, and come to Sail, and to lofe no Time, for we hoped for an open Sea to the North-weft. This Cape has a very Shole Point that lies off it, which we endeavoured to compafs. Sailing therefore upon fhattered Ice, we came to very Thole Water, four and five Fathom deep, and could not avoid it. At length, flanding North, the Water deepened, but we came withal among great Pieces of Ice, which by reafon of fome open Water there were a pretiy Sea. Thefe hard Pieces of Ice made a moft dreadful Noife. It proved a fair Moonfhine Night, otherwife it had gone ill with us. We turned among this Ice, ftaying the Ship, fometimes within her Length of great Pieces as bad as Rocks; but by Reafon we were often forced to bear up, we let fall an Anchor, and ftood all on the Decks to' watch the Ice, fheering off the Ship to and again to avoid it. Thus having Poles and Oars to fend it, we could not keep ourfelves fo clear, but many Pieces came foul of us. We broke two of our great Poles with it, which were made to be handled by four Men, befides fome other Damage. At Break of Day we weighed and fought all ways to clear ourfelves of Ice, but it was impofible. I conceive it impertinent to relate every particular Day's Paflage, fince they were much alike to us. Our Endeavours were fometimes with our Sails, giving and receiving five hundred dreadful Blows in a Day.
Sometimes we ftopped at an Anchor, when we could get a little open Water, and fo fuffer the Ice to drive to Leeward. Other times we fhould be enclofed among it, and then it would fo break and rife, and leap up under us, that we expected every Hour to be beaten to Pieces. Befides we had fuch Storms in the dark Nights, as would break our Moorings we had made faft to fome pieces of Ice, for Security in the Night Seafon; and then we were beat moft dangeroully from Piece to Piece till Day-light, that we could fee to make her faft again. I forbear to fpeak of the Fogs which we had daily, which froze our Rigging Day and Night; befides all which, we fhould coine into moft uncertain Depths, fometimes twenty Fathom, next Caft ten, next fifteen, then nine; rocky foul Ground; the great deep Ice withal, driving on thefe uncertain Depths, did fo diftract the Tides, and deceive us -fo much in our Account, that by the zoth we were driven back fo far to the Eaftward, and to the Southward of the Cape, that at five o'Clock in the Evening it bore North-weft of us fome three Leagues off, contrary to our Expectations.

With all thefe Mifchiefs, our Ship now became very leaky, that we pumped every half Watch. Here I called a Confultation, and after confidering all our Experience, we were of Opinion that it was impofible to get to the Northward, or to the Eaftward, by Reafon of the Ice; wherefore I refolved upon this Courfe; when the Wind blew South, it would blow the Ice off the South Shore, then we would feek to get to the Weftward, betwixt it and the Shore. I muft confefs that this was a defperate Refolution, for all the Coaft we knew to be fhole and foul Ground, all Rocks and Stones; fo that if the Wind fhould fhift to the Northward, there would be, without-God's Mercies, little Hopes of us. But here we muft not ftay, the Nights grew long, the Cold fo increafed, that betwixt the Pieces of Ice the Sea would be frozen. I caufed the Ship to be fitted, and Places again prepared to fink her a fecond Time, if fo be, we were put to Extremíties. We prefently put our Project in Execution (the Wind being at South) and got about the Sholes of the Cape, ftanding then into the Shoreward, to get betwixt it and the Ice. We came into four Fathom Water (very foul rocky Ground) thinking to come to an Anchor all Night, and let the Ice drive to Leeward. But ftill there was to much Ice betwixt us
and the Shore, that we were forced to bear up againft it into deeper Water, and to let the Ship drive among it; the Wind increafing we endured a mot dangerous dark Night of it.

In the Morning we fell to work to get the Ship again out of the Ice into fome clear Water, which we faw Weit by South of us. Some of our Company went out upon the Ice to heave her with their Shoulders, whilft others flood aboard with their Poles; the reft flood to fill and fill the Sail. By nine in the Morning we had got into fome clear Water, and food. Weft and by South into four Fathom Water, foul Ground ; but being not able to weather fome Rands of Ice which drove, we were forced to ftand off again, and when the Evening grew dark to come to an Anchor. About Midnight there came a great Piece of Ice (which we could not avoid) athwart of our Cable, and made her drive and drag her Anchor: This drove her into fhole Water, it being very rocky and foul Ground: We brought the Cable to Capftang, and heaved with fuch a Courage that we heaved home our Anchor from under it. Thus we endeavoured the beft we could to keep ourfelves in eight or ten Fathom Water. It then pleafed God that the Wind blew along the Shore, otherwife it had gone far worie with us.
35. Auguf 16 32. The ift of this Month, at break of Day, when we could fee all about us, we were forced to fruggle again with the Ice, and to get in nearer to the Shore, by reafon the Wind was oppofite, to come to an Anchor; we let the Ice drive to leeward, hoping there was a clearing Sea to the weftward: The Ice drove very thick upon us, and one Piece came foul of us, which touched our Sprit-fail Yard, and made the Ship drive; but we foon cleared ourfelves of it. Then we weighed, and flood in nearer to the Shore; but the N Water fhoaled, and there were fo many thick Rands of Ice betwixt us and the Shore that there was no coming to an Anchor, fo we turned betwixt the Ice, many Pieces of it being aground in fhole Water, and few Pieces diflant one from the other a Cable's Length: This Day we faw two Sea Mawes on the Ice. The 2 d in the Morning we were glad at break of Day, having moft dangerounly turned among the Ice, and endured many a Blow; we ftood in zgain to the fhoreward, to fee if we could get fome clear Water; for to the northward it was all impaffable Ice: We ftood into five and four Fathom, but ftill all impaffable with Ice, fo we ftood off again into deeper Watcr ; and in the Evening we were inclofed with extraordinary great Pieces; it was a very thick Fog withal, fo that we made faft the Ship to a great flat Piece and went to neep, after our extreme Painstaking.

The $3 \mathrm{~d}, 4$ th, and 5 th we were inclofed among very great Ice, and it blew fuch a Storm of Wind that we, endeavouring to get forward to the weftward, ftruck fuch heavy Blows that made all the fore-part of the Ship crack again; then we gave over working, and let her alone among it, but then the Ice would break and rife under us, and that endangered us as bad as the former. Our Ship made now above a Ton of Water every Watch, which we pumped out before our other Labour. God e merciful unto us among all thefe Dangers.
The $5^{\text {th }}$ at Noon we were in Latitude 55 Degrees, the Cape bearing off us South-eat by Eat, twelve Leagues off, and this all we have got fince the 22 d of Fuly; all Night it blew a violent Gale of Wind at Weft-north-weft, and about Midnight our Hawfer (by which we made fant to a Piece of Ice) broke, and we lof four Fathom of it. We beat all Night moft fearfully, being toffed from Piece to Piece, becaufe in the Dark we durt not venture our Men to go on the Ice, for fear of lofing them. All the 6 th the Storm continued, and drove us again quite with the Ice almoft to the Cape. The 7 th was the moft comfortable Day we had fince we came out of our Wintering-place. The Wind came up fair at Eait,' and we got, although with our former Inconveniences and Dangers, nearer the Shore, and into fome open Water, making good way to the Weftward. Add to this that our Leak now ftopped of
its own Accord, fo that we pumped but little. We failed all Night, keeping good Watch on the Forecaftle, bearing up from one and loofing from another. Thus we did the 8 th alfo; but then the Wind fhifting to the North-weft, it drove the Ice on the Shore, and we came to an Anchor in eight Fathom Water. The main Ice we had fome two Miles to windward of us; but the Set of the Tide kept it off from us. At Noon we were in Latitude 55 Degrees 34 Minutes. In the Evening a Range of Ice drove upon us, which made us weigh, and ftand in nearer the Shore into fix Fathom, and there come to an Anchor. The Wind increafing about Midnight, the Ship drove, and was quickly in five Fathom Water, wherefore we let fall our Sheet Anchor, and both held her ; but what troubled us was, we expected every Minute that the main Ice would come upon us, then there would be no Hope but to run on Shore.

The gth in the Morning we weighed our fecond Anchor, the Ice being within lefs than a Mile of us. About eight in the Moning a Point of it came foul of us, which we prevented by weighing, and came to Anchor in three Fathoms and a Half Water. The Wind continued North-north-weft, which was in on the Shore. This Morning I caufed all our empty Cafks to be filled with Water, and the Ship to be left unpumped, and the Place. looked to that we had prepared to fink her, for we were at prefent in as apparent Danger as any time this Voyage, and to our great Grief it was all full of foul rocky Ground. The Danger of this was, if we made fatt to a Piece of Ice that drew deep Water, then as foon as it came to Ground on the Rocks it would break all to Pieces and betray us to cur Deftruction. About Noon there came foul of us the Point of a Range of Ice, which we refolved to endure the Extremity of with an Anchor, thinking to ride and break through it, we now perceiving fome open Water beyond it; thrufting therefore, and fencing with our Poles, at laft a great Piece of Ice came athwart our Hawfer, and there was a brifk Sca among it: The Ship now fell upon it fo violently that I expected every Blow fhe would beat out her Bows; at length fhe drove with it fo that I thought the Cable had been broke; we brought it to Capftang to heave it in, but found that our Sheet Anchor vas broke in the Middle of the Shank. We prefently fet our Sails thereupon, endeavouring that Way to edge in amongt the Ice off of this dangerous Shore. It pleafed God to favour our Labour fo, that by eight in the Evening we got off into feven Fathoms Water, and a dark Night coming on we made fant to the biggeft Piece we could find. It blew all Night, but at Midnight the Wind came up at North, which was more on the Shore than before.
By break of Day, on the 10 th, we were driven into four Fathom very foul Ground, fo that the Lead fell off the Rocks three or four Foot, we fet our Sails and ufed our utmoft Endeavour's to edge off. Some of us went upon the Ice to haul her, others food with Poles to thrut by Night. At Night we got off to eight Fathoms, and made faft to the biggeft Piece we could find. If any Man fhould alk, Why we kept fo near the Shore in this continual Danger ? I anfwer, becaufe in the Offing, the Ice was fo extraordinary thick that we could make no Way through it ; befides, when we were in that great thick Ice, and the Wind came up fair at South, or South-eaft, or Eaft, we could not get out of it ; therefore we chofe to run this Adventure, and fo prevent and overcome all Dangers with God's Afliftance, and our extreme Labour.
36. The IIth in the Morning was a thick Fög, yet there fprung up a Gale of Wind at Eaft, and we made in for the Shore. From the inth to the 14th the Wind continued fair, and we made all the Sail we could Night and Day as the Ice would fuffer us; we had the Shore in fight by Day on one Side, and the Ice within two Miles on the other; and we failed among difperfed Pieces loofing from one, and bearing up for another. The 14 th at Noon we were in Latitude 57 Degrees 55 Minutes. In the Evening we were embayed in Ice, and ftood South-eaft to clear ourfelves of it, but could not; but feeing from the Topmat-head clear Water over it, we put up to it .

But there arofe a very thick Fog, and Night came on withal, that we were forced to faften to a Piece of Ice expecting Day, and better Weather.

The I 5 th in the Morning, although the Fog was very thick, we would endeavour to get out of the Ice, and ftood away Weft; but within two Hours the Water fhoaled from forty to twenty-five Fathoms; whereby we knew that we had the Shoaling of the weftern Shore. Then we fhaped our Courfe to the northward; the Fog continued fo thick, that we could not fee a Piftol-fhot about us. We had not food this Way two Hours, but we heard a Rut of Ice ahead of us, which made the moft hideous Noife of any I had heard this Voyage. We hauled our Tacks aboard, and ftood to the weftward in this Day-darknefs; hearing it fometimes, and feeing it fometimes, which was very large, deep, and high Ice above the Water; we weathered it all except fome few Pieces, and got into open Water. About Sun-fet there came a fudden Guft at North-north-weft, and before we could handle our Sails it was with us, and put us into fome Trouble ; it dallied with us, by Gufts, till nine $0^{5}$ Clock ; and then it fell into a moft violent Storm. We confidered where we might have the cleareft Drift, and fo took in all, and let her drive her Head to the fhoreward. Before Midnight the Water fhoaled on us unto fifteen Fathoms.

Then we turned her Head to the eaftward, and fet our main Courfe low-fet, but as much as fhe could bear. The Water deepened but little, and we knew that we were on thofe rocky Sholes which we ftruck on the laft Year ; God be merciful unto us. Here was the firft great breaking Sea we had this Year. The 16 th, in the Morning, we were driven to a great Rand of Ice ; to avoid which we fet our Force and Courfe too; and ftood to the thoreward in fifteen Fathom Water, and then about again. We flood in a Mile to the Ice, but there was a great fwelling Sea in it, that it was not durable; fo we ftood out again. About three in the Afternoon the Storm broke up, and blew fair at North-weft, which produced Good for us, for we had not Drift for four Hours, befides, it was but five Leagues betwixt the Sholes and the Ice: We fet all our Sails, and endeavoured to weather the Ice, but in the Evening we were ftill peftered with it. By Midnight we knew not which Way to turn, nor what to do ; fo we took in all our Sails, and let her drive among it. The Ice beat us on every Side, for there went among it a very great full Sea. The I gth in the Morning, when we could fee about us, we were in the Midft of it; but in the laft Storm it was all broken to Pieces, as big as a Boat of three or four Ton, which gave us many a heavy Blow in the dark Night. If this Storm had taken us among it, it had broken us all to Pieces without God's miraculous Prefervation. We made fail, and endeavoured to clear ourfelves of it to the northward, which, by eight in the Morning, we had done ; we then went to Prayer, and gave God hearty Thanks, that had delivered us out of it; for we were hourly, for the Space of fix Weeks, as it were in the Jaws of Death; yea, never had any, that I have heard of, been for fuch a Space in fuch long Nights upon a foul Shore, tormented with Ice, as we have been.

At Noon we were in 58 Degrees 20 Minutes. Now, as touching the Difolution of the Ice, we found that this Storm had torn and fhattered this Rand of Ice which was on the Outfide, although it mut have a long time to work into the main Body of it. I have in fuly, and in the Beginning of Auguf, taken fome of the Ice into the Ship and cut it fquare, two Foot, and put it into the Boat where the Sun fhone with a very ftrong Reflection about it, and notwithftanding the Warmth of the Ship, for we kept a good Fire, and all our Breathings and Motion, it would not melt in eight or ten Days. It was our Practice, when we thould be two Days together faft to a Piece of Ice, to fet Marks to it, to fee how it confumed, but it yielded us fmall Hope of diffolving; we could not in that time perceive any Diminution by the finking of it, or otherwife; neverthelefs, I think that it is ruined by Storms, or confumed by Heat fome Years, or elfe the Bay would be choaked up; but I confefs thefe Secrets of Nature are paft my Comprehenfion. Being out
Vol. II. Numb. 98.
of it (but we yet faw it from of the Decks to the Eaftward) I ordered the Mafter to fteer away North and by Eaft, keeping the Shoalings of the weftern Shore. The 18th at Noon we were in Latitude 53 Degrees $3^{6}$ Minutes.
37. The Igth we continted our Coirfe betwixt the North-north-eaft, and the North and by Eaft, and by Noon were in Latitude 6I Degrees 7 Minutes, fome twelve Leagues off the Shore: I ordered the Mafter to Thape his Courfe North-eaft, to look into that Place bewixt Cary's Swans-neft and Ne plus ultra. The 2oth we were in Latitude 6 I Degrees 45 Minutes. This Day we faw fome few Seals about the Ship. The 2 Ift the Water fhoaled fo that it was concluded we were near Land; but about Noon the Wind came up at North-ealt, directly oppofite; we loofed as near as we could, and as it larged we came to ftand Eaft, and Eaft and by North. The 22d we fell with the Land to the Weftward of Cary's Swans-neft, where we had forty Fathoms three Leagues off. We ftood in within a League of the Shore into eighteen Fathoms, and feeing the Land to the Southward of us, we compaffed about it, it being Cary's Swansneft, which is in the Latitude of 52 Degrees. All the 23 d we failed North-eaft, and, for the moft part, in Sight of Land.

The 24th at Noon, by Judgment, we were in Latitude 69 Degrees 30 Minutes, having failed a North-eaft Courfe: All this' Day was a very thick Fog, which about one $0^{\circ}$ Clock cleared a little, fo that I expected to fee the Land; fome of our Men, better fighted, fpied it about two Leagues off. I knew it could be none other than Nottingbam Ifland, though it was fomething contrary to the Expectation of our beft Mariners: We ftood in to make it, it was the North-end of it, and it bore off us due Eaft; I was foon affured of it , and I ordered the Mafter to Shape his Courfe North-weft and by North. Both he and others were unwilling, but without muchado fubmitted themfelves : It was very foul, thick Weather. The Reafons of my Refolution were thefe: The Time of the Year was far fpent, and the Winter came upon us, therefore I would make the fhorteft Way betwixt the Lands already difcovered. If I found an open Sea, I had my Defire, and then I intended to proceed to the utmoft of our Power.

If I met with Land, I fhould then finifh the Difcovery; it being not above fifteen Leagues from Land to Land, and not above ten Leagues from Nottingbam Ifland to the Main of the North Shore, we made what fail we could, it blowing a very ftiff Gale of Wind till eight in the Evening; then it began to blow fiercely, and we took in our Topfails, and ftood under our two Courfes and Bonnetts; at nine it blew a violent Storm at South-fouth-eaft, fo that we took in our Forefail, and let her drive North-weft. All Night it continued an extraordinary Storm; that we heaved the Lead every half Watch: but the Ship drove fo faft that the would be paft the Lead before there were two Fathoms of Line out, all the Night being exceeding cold withal. The 25 th the Storm continued, and fo perplexed us, that there were but few that could neep or eat for twenty-four Hours. About fix in the Afternoon the Storm began to abate, yet there blew a frefh Gale of Wind between the South and South-weft: we flood Weft-north-weft, and made a North-weft Way; when fuddenly the Sea became very fmooth. We reafoned thereupon among ourfelves, What might be the Caufe of it? We all thought it to be a Leeward Tide, nothing doubting what we afterwards encountred; the Ship had a very quick Way in the fmooth Water.
38. The 26th by two in the Morning we were fudden ly got among the Ice, and it pleafed God that the Moon at that Inftant gave us fo much Light that we could fee a little about us. We would have ftayed the Ship, but it was fo thick to the Windward, and fo near us that we durft not. We then bore up in this unexpected Accio dent, and I verily believe did not efcape ftriking the Length of a Foot againt the Ice, as hard as Rocks, two or three times, as the Ship now having Way after twelve Leagues a Watch. Then we ftood clofe by the Wind to the Eaftward, expecting Day' that we might fee about ${ }_{5} \mathrm{R}$
us. We could from Top-maft Head fee the Ice from the North-north-weft, the North-weft, and fo round about by the South to the Eaft; and fome there was to the Leeward of us. It was all flat found Ice, and the Sea as fmooth as a Wall amongtt it. This ftruck us all into a Damp, whereupon I called a Confultation of my Affociates, namely, Artbur Price, Mafter; William Clements, Lieutenant; $\mathcal{F}$ obn Wbittered, Mafter's Mate; Natbaniel Bilfon, Chirurgeon; and Fobn Palmer, Boatfwain; requiring them to advife and counfel me how to profecute our Bufinefs to Effect. Thefe went all together and reafoned amongft themfelves, and then brought me their Opinions in Writing under their own Hands, viz. Our Advice is, that you repair homeward from this prefent 26 th, and that for thefe Reafons:
Firft, That the Nights are long, and fo extreme cold withal that we can hardly handle our Sails and Rigging. Secondly, The Seafon is now fubject to ftormy and gufty Weather, as witnefs the prefent, it having continued a Storm ever fince the 24 th , and yet doth continue no Weather to difcover in. Thirdly, We doubt whether Hudjon's Streights be fo clear of Ice that it may be paffable in convenient Time, Winter coming on apace, before we are frozen up, feeing the Ice lies here all over the Sea. Fourthly, We muft, have fair Weather to pafs the Streight, for which we may flay à long Time, if we neglect the firt Opportunity. Fifthly, Our Ship is fo very leaky that in foul Weather we are forced to pump every Glafs, which is great Labour. Moreover, we know her to be fo bruifed with Rocks and Blows of the Ice that fhe is no more to be adventured among it, but in faving our Lives homewards. Befides all this our Men grow very weak and fickly with extreme Labour. Sixthly, The Seafon of the Year is fo far fpent that we can expect no other Weather than we have had both lately and at prefent; that is to lay, Snow and Fog freezing our Rigging, and making cvery thing fo flippery that a Man can fcarce ftand, and all this with the Wind Southerly, which if it hould come to the Northward then we are to expect far worfe. Seventhly and laftly, That the Ice lies all in thick Rands and Ranges in the very Way we fhould go, as you and all Men here may fee; and therefore we conclude as aforefaid, that there is no Poffibility of proceeding further : Wherefore we now counfel you to return homeward, hoping that God will give us a favourable Paffage to return to our native Country, if we take 'Time and not tempt him too far by our Wilfulnefs.
Indeed moft of thefe Difficulties were in view, and I could not reafonably oppofe them, nor any Reafon could I give for proceeding further; wherefore with a forrowful Heart, God knows, I confented that the Helm fhould be borne up and a Courfe fhaped for England, hoping that his Majefty would grácioully confider our Endeavours, and pardon our Return. And although we have not difcovered populous Kingdoms, and taken fpecial Notice of their Magnificence, Power, Policy, $E^{c}$ c. brought Samples home of their Riches and Commodities, pried into Myfteries of their Trade and Traffic, nor made any great Fight againft the Enemies of God and our Nation ; yet I hoped that our. Willingnefs in thofe defart Parts may be acceptable to our Readers.

When we bore up Helm we were in Latitude $6_{5}$ Degrees $30^{\circ}$ Minutes, at Weft-north-weft and by North from Nottingham-Ifand. Sume were of Opinion that we were farther to the Northward; but by rearon it was my Judgment, I chofe to fet down the leffer Diftance. The 27 th the Wind came up at North-weft, with which we could not have gone on with our Defign.. That Wind made nơ great fwelling Sea. By Noon we were athwart of Cape Cbarles, fo that we went in between that Cape and Mill-Ifands. The laft Night it fnowed very much, and was very cold, fo that all our Rigging and Sails were frozen, and all the Land covered with Snow. And here it will not be amifs to confider the Reafons of it: When I was upon Cbarles-Ifand (our Wintering-place) and in Fune when the Snow was cleareft off the Ground, I have in the Nights, and fome of them following the hotteft Days, obferved whether there fell any Dew or no, but I could never perceive any, and from Mofs and

Sand little I thought was to be expected. Now of what was exhaled from the fnowy Ice and cold Sea could there probably be returned but the like again? Generally we continued on our Courfe blinded with Fog and dirty Weather, and that internixed with Snow and Froft among difperfed Pieces of Ice, many of them higher than our Top-maft Head. With great variety of Windfalls we were driven within three Leagues of both Shores; fo that the laft of this Month we were in the Narrow of the Streight, which is about fifteen Leagues over ; the South Shore was much peftered with Ice.

September 1632 . The ift and 2 d we endeavoured to get on our Way. The 3 d in the Evening, as the Weather cleared up, we faw the South-End of the Ifland Refolution. Thefe three Days and Nights had been extreme cold with Fog and Froft, infomuch that our Men in the Evening could hardly take in our Top and Sprit-fails. We have failed through much mountainous Ice, far higher than the Top-maft Head, but this Day we failed by the higheft I ever yet faw, which is incredible indeed to be related. Now as the Wind comes Eafterly, we feel another Sea out of the Ocean, and the Ship labours with another Motion than fhe hath done with any that we ever obferved to come out of the Weftward. From the 3d to the 8 th we had variety of Winds, and were got clear out of the Streights, but were now come into fuch a tumbling Sea, the Weather dirty and windy, and by Intervals calm again, that the Ship did fo labour and roll that we thought verily fhe would have' rolled her Mafts by the Board. This made her fo leaky that we were forced to pump every Glafs; nay, her Seams fo opened aloft that we lay all wet in her.
39. This was the laft Day we faw any Ice. The Wind now favouring us we made all the Hafte we could homeward, by the Way having endeavoured, obferved, and experimented fome Things in this our unfortunateV oyage. I perfected my Obfervations, which being afterwards commanded to publifh, I here moft fubmiffively offer unto the judicious Reader. What hath been long ago fabled by fome Portuguefe that fhould have come this Way out of the South Sea, the mere Shadows of whofe miftaken Relation have come to us, I leave to be confuted by their own Vanity ; thefe Hopes have firred up from. Time to Time the more active Spirits of this our Kingdom to refearch that merely imagined Yaffage. For my part I give no Credit to them at all, and as little to the vicious and abufive Wits of later Portuguefe and Spaniards, who never fpeak of any Difficulties, as SholeWater, Ice, nor Sight of Land, but as if they had beeri brought home in a Dream or Engine; and indeed their Difcourfes are found abfurd; and the Maps by which fome of them have prackifed to deceive the World mere Falfities, making Sea where there is known to be main Land, and Land where there is nothing but Sea.
Moft certain it is, that by the Induftry of our own Nation thofe northern Parts of America have been difcovered to the Latitude of 80 Degrees or upwards; and it hath been fo curioully done, the Labours of feveral Men being joined together, that the main I and may be feen and fearched; and they have brought this fuppofed Paffage to this Pafs, that it mult be to the North of 66 Degrees of Latitude, a cold Climate, peftered with Ice and other Inconveniencies, and where the Spaniards Difpofitions and their weak Ships can hardly endure it: And withal it is known, that the Entrance of Hudfon's Streights is but fifteen Leagues broad, and in the Middle not fo much; and between Saliffury Ifand and the Main it is but eight Leagues. Then proceeding to the Northward toward the forementioned Latitude, it is but fifteen Leagues from Main to Main. This in Length is about a hundred and forty Leagues, as will more plainly appear by the Map, and infinitely peftered with Ice until Auguft, and fome Years not paffable then ; and I believe the Streight is never clear of. Ice entirely. Now it is mof probable there is no Paffage for the following Reafons; Firft, There is a conftant Tide, Flood and Ebb, fetting in to Hudjon's Streigbts, the Flood ftill coming from the Eaftward, which, as it proceeds, correfpondent to the Diftance, it alters his Time of full Sea. This alfo entering into Bays and broker Ground, it becomes difturbed, and overfets with Half-

Tides.

## Chap. I.

 and wintering in Charlton Illand.Tides. Secondly, Here are no fmall Fifhes, as $\operatorname{Cod}, \varepsilon^{2} c$. and very few great ones, which are rarely to be feen, nor are there any Bones of Whales, Sea-Horfes, or other great Fifh to be found on the Shore, nor any DriftWood.

Thirdly, we find the Ice in the Latitude 65 Degrees 30 Minutes, to be lying all over the Sea in Rands, and I am inoft certain that the Sholes, and Shole Bays, are the Mother of it. Had there been any Ocean beyond, it would have been broke all to Pieces, for fo we found, it coming through the Streight into the Sea, to the Eaftward. Fourthly, The Ice feeks its Way to the Eaftward, and fo drives out at Hudfon's Streight; which I - have often obferved upon' the Inland of Refolution, and driving among the Ice in the Streight. Admit there were a Paffage, yet it is known that it is narrow for one hundred and forty Leagues, and infinitely peftered with Ice, as every one has found who has gone that Way; comparing therefore fome Obfervations taken at Bantam, Gilolo, and Firando, in Fapon; and the Diftance between Fapon and the Weftern Part of California; with the Obfervations taken at Cbarlton IJand, referring all to the Meridian of London; and then the Diftance betwixt the Meridians of Cape Cbarles, and the Weftern Part of Cabifornia, will be found to be about five hundred Leagues, in Latitude 66 Degrees, where yet the Meridians incline very much together. 'To this may be added, that near about Cape Cbarles the Variation is 29 Degrees to the Weft, which is a probable Argumient that there is much Land to the Weftward, and that this Streight muft be very long, and that you have no Time to pafs it, but in Auguft and September; when the Nights are fo long, and the Weather fo cold, that it will not be bearable. Add to this, that neither can any great Ships, which are fit for carrying of Merchandize, endure the Ice, and other Inconveniencies, without extraordinary Danger.

Moreover, one thoufand Leagues is fooner failed to the Southward, and about the Cape de Bona Speranza, where the Winds are conftant, and that with Safety, than one hundred in thefe Seas, where you muft daily run the Hazard of lofing Ship and Lives. Add hereunto that Comfort for the Sick, or Refrefhment for your Men, here is none to be had in thefe Quarters. Towards the latter End of Auguft, and in September, the Weather grows tempeftuous, and the Winds incline to be Wefterly, that there will be but fmall Hopes of performing your Voyage this Way. But let us, by way of Imagination, enlarge this Streight in this Latitude, and free it of Ice. Yet what Advantage in fpeedy Performance will be got by this Paflage, if the Winds be withal confidered, to Fapon, Cbina, and the Northern Parts of Afa? It may be the nearer Cut, but in Navigations the fartheft Way about is well known, in fewer Days, to be performed, yea with leffer Pains, and more Safety of Ship and Goods. Again to the Eaft-Indies, and other Parts, where we have the greateft Commerce and Employment of Shipping, the other Way is as near.

What Benefit of Trade might have been obtained in thofe Northern Parts of Afia, I will not prefume to fpealk of? Holding that there is a great Difference betwixt thofe Parts, and the Northern Parts of America, whereas I am fure that there is none in any Place where I have been in all this Voyage.
40. "Before we proceed to the Account our Aulsc thor gives us of his return home, it will be requifite
"to confider the Force of his Arguments againft the
"Probability of finding any fuch Paffage; becaufe if
"s they were as conclufive as he imagined, they muft ab-
"s folutely prove that all future Aitempts of this kind,
ss are weak and rafh in themfelves, and will appear ab-
${ }^{6}$ folutely abfurd and ridiculous in their Confequences.
${ }^{6}$ In this refpect, however, we differ from him. And
${ }^{66}$ though we are very far from pretending, That Cap
${ }^{66}$ tain 7 ames's Temper might be fo far fowered by Dif
sc appointment, as to miftake things difficult for things
${ }^{6}$ impracticable; yet we may have leave to fay, that the s6 want of Succefs in his Voyage, had fome Influence on
${ }_{66}{ }^{66}$ his Judgment; becaufe it is very evident that he ${ }^{66}$ now treated as light and idle Fables, thefe Portu-
"s guefe Relations, which he had formetly confidered as "c carrying a great degree of Evidence; for otherwife "6 one can hardly account for his taking up the Opinion "s of a North-went Paffage, and that fo ftrongly, as to ${ }^{66}$ offer his own Service for the Difcovery of that Paffage.
" Let us next then confider the Reafons by which he re" futes the Portuguefe Relations.
" He fays, Firf, that they proceed from their Vanity; "s next, that they are inconfiftent with Experience; and, " Laftly, that their Maps and Charts are falfe and "groundlefs, and therefore not to be irufted. With re" fpect to the firft, if what the Portuguefe delivered, ${ }^{68}$ had been the pure Effeets of a vain-glorious and boaft* " ing Temper, their Government would not have fup" preffed fuch Relations, but rather have taken Pains to " difcover their Falfhood, which had been no difficult "Tafk, and would have effectually anfwered their Pur${ }^{66}$ pofe; for at this Time there was no Nation in the ${ }^{6}$ World fo much concerned in Point of Intereft, to dif, "s credit- the Belief of a North-weft Paffages as the Por"tugue e. If, therefore, the Pilot before-mentioneds "s. publifhed, as perhaps he did, an Account of his Paf. "s fage through this Streight, out of Vanity ; the Coure "s need only have fhewn that the Fact was falfe, as, if it ${ }^{6}$ had been fo, was in their Power, and it had done their: "s Bufinefs; whereas the calling in, and fuppreffing his " Book, was a kind of Proof, that what he faid was "6 true. As to the Inconfiftency of fuch Accounts, be' caufe they do not mention any Hardihips fuftained in "s the Voyage, or Troubles that they met with from Ice "a and Snow; we hould be able to fpeak of them more "clearly, if we had thofe Accounts, or if we were fure "s that Captain James had himfelf perufed them at large " any more than we.
"c But fuppofing the thirig as he ftates it, perhaps we "s - fhall not find any good Caufe to conclude that they "s talked idly, and as if they came in an Engine, becaufe "s they mentioned no fuch Difficulties. It is very poff-
"s ble, That Voyages between the fame Places may be "s performed at very different times, and under very dif*, "c ferent Circumftances: As for Inftance, the Spaniards "s fail from Acapulco to Manilla, in thirteen Weeks; but "from Manilla to Acapulco, is commonly a Voyage of "6 thirty Weeks; in failing to Cape Breton, in the Sum"s mer Months, able Seamen Iteer one Courfe, but when "s they go later in the Year, they fteer another; and by " this Management they generally avoid any Difficulties ${ }^{6}$ in either Seafon.
"S We do not know at what Seafon of the Year the " Portuguefe Pilot made his Voyage through the North"s weft Strcight, but we know that he failed in a pretty " high Latitude; and as he tells us, had a fair Wind "s through the whole Paffage ; if fo, there is nothing im"s probable in fuppofing that he reached the Streight in of the fame Time, that the Sponiards make the fame "Tranfit. from the Weft to the Eaft Indies, and then ${ }^{6}$ there is nothing ftrange in his reaching Nerofoundland ${ }^{6}$ in fixteen Weeks, which will account for his arriving 's at Lifon a Month fooner than the Fleet that came "chome by the Cape of Good Hope; and if he came. "6 through the North-weft Streight in the Month of $A t$ "s guft, which is alfo very probable, he might not be is much incommoded by the Ice.
"Befides, we know that Captain Candifte made the "Tour of the Globe, in much lefs Time than any, " other Circum-navigator ; and we find fome Voyages, ${ }^{6}$ round Cape Horn, much more eafy and fortunate than "s others; fo that if this Portuguele Pilot was remarkably " lucky, the thing is very poffible, and there is no "Ground at all for denying the Fact, becaufe hitherto " no other Man has met with the fame Succefs. As to " falfe Charts and Maps, we are far from denying the "Fact, but we know another. Reafon has been given for ${ }^{66}$ this, directly oppofite to, an'd yet no lefs probable than, " that afligned by Captain fames, viz. that by thefe falfe " Reprefentations they may conceal this Paflage from " the Knowledge of Strangers, and difcourage them from ${ }^{66}$ looking for it. This laft Reafon may be fupported ${ }^{86}$ by Facts, becaufe it is apparently againft their Intereft
"to have fuch a Paftage difcovered, and becaufe we " have authentic Proofs that the Spaniards have actually "c taken all the Precautions in their Power, to guard "s againt the Englifs coming, by this North-weft Paffage, © ${ }^{6}$ into the South Seas.
"As to what he fays of the Coafts being examined as
${ }^{\text {ct }}$ far as the Latitude of 66 Degrees, and that all the "Coafts of America had been fearched, as far as 80 De-
"s grees, by Englifmen, is only in Part agreeable to Fact;
" fome great Navigators having, indeed, failed fo far, ${ }^{66}$ and reported that they had examined the Coafts, but * it has been fince found that they had not done this, at co leaft, very accurately; and that it was very poffible,
"6 and very probable too, that the Streight lay to the
"S Southward of 66 Degrees; neither is this a Matter yet
"cleared up, for other Sea Officers who have been fent
© upon this Expedition, have fallen into Captain James's
"S Sentiments, and upon their Return have reported the
"Coafts thoroughly fearched, and no Streight to be met ${ }^{6} 6$ with.
"c The thing, indeed, is natural enough ; for when a
${ }^{\text {ec }}$ Man has attempted the Difcovery of this Paffage, and
se failed, why fhould he not endeavour to confole him-
"c felf, by pretending to have difcovered that all former
er Hopes were in vain, and that in reality there is no fuch
©s Paffage to be found? By this he fecures a Reverfion of
" Fame, and exchanges one kind of Reputation for
${ }^{\text {cs }}$ another; if he cannot be tranfmitted to Pofterity as a
"c fortunate Man, he may, at leaft, tranfmit the Me-
" ${ }^{6}$ mory of his Prudence, by which an Error long receiv-
${ }^{66}$ ed was detected. But if we fhould ever refolve to be
" fatisfied, at all Events, of the Truth of the Fact, not-
${ }^{66}$ withftanding Difappointments at Sea, it muft be by
"6 fixing Colonies upon Hudfon's Bay, and offering a
" large Reward to any that fhould have Boldnefs enough
"s to traverfe the Countries behind the great Lakes, and
"s bring us an Account of them, which would effec-
es tuaily clear up all our Doubts and Difficulties; which
${ }^{6}$ till this be done, 'or the Paffage difcovered by Sea,
${ }^{\text {ec }}$ mult remain ftill, and prove, as fatiguing to Pofte-
" rity, as they have been to paft and prefent Ages.
"But let us now proceed to the reft of his Argu-
${ }^{\text {se }}$ ments. As to the Regularity of the Tides in Hudjon's
${ }^{6}$ Bay, fubfequent Difcoveries fhew plainly, that not
${ }^{6}$ only no Argument can be drawn from them againft a
${ }^{6}$ Paffage, but quite the contrary; for Hudfon's Streight,
s6 at the Entrance, is only thirteen to fourteen Leagues
"s wide, from the South-fide to Refolution Ifle; and a
"s fmall Channel, fome Leagues wide, to the Northward
${ }^{66}$ of that Illand, in which is no great Current; it runs ${ }^{e}$ in the Entrance about five or fix Miles an Hour, and

* rifes about eighteen Feet at Spring-Tide. At Cape
"C Cbarles, in the Middle of the Streight, it is about
©s fifteen Leagues wide, and has there loft nigh half its
«F Force. At Cape Diggs, the Weft End of the Streight, " it is about twenty Leagues wide, and is ftill more "c diminithed in its Heighth and Current ; and when it
" enters the Bay at Cary's Swans Neft, it rifes but fix
«s Feet. Now it is very reafonable it fhould be diminifh-
"s ed fo; when it is confidered what Space it has to fill
"s in its Courfe fo far, for there is a great Bay or Inlet ic on the South-weft-fide, within Button's Ifle, and fe"s veral others betwixt Cape Cbarles and Cape Diggs, and ${ }^{6}$ great Inlets on the North-fide; and the Streight be«ing one hundred and forty Leagues in Length before
\&s it reaches the Bay, it requires a great Current even to
${ }^{66}$ fill the Streight; when to thefe is added the Space it ${ }^{66}$ has to fill in the great Bays and Inlets above Mill Ifles,
is by Cape Comfort, and Wefland's Portland, it may be
${ }^{66}$ eafily conceived to be almoft fpent, before it pafles
${ }^{6}$ Manfell's Ithe and Cary's Sroans Neft.
" How then is it poffiblé that a Tide or Current, runsc ning through fo narrow a Paffage, only five or fix *s Miles an Hour, which is not above thirty Miles each " 'Tide, fhould raife a high Tide, not only for one hun${ }^{66}$ dred and forty Leagues, befides all the Bays and In-
os lets on each Side the Streight, and above Mill Ifles, but
${ }^{6}$ alfo fill a great Inland Sea, above eight hundred Miles
sf long, and five hundred broad: and after it is expand-
"e ed in the Bay; and thie Current loft, fhould be able " to raife a Tide on the Weft and Nortlh-weft Side of the
"Bay, from twelve to fixteen Feet, nay fometimes to
" $w$ twenty-two Feet? And if Norton and Scroggs are to
" be believed, even to five Fathom, and Occafion fuch "rapid Cursents, as at Brook Cobbam, Marble Ifland, "Wager River, \& \& . fo as to run there from four to fix "s and feven Miles an Hour, if only filled from Hudjon's "s Streigbt; when at the fame Time the Tide flowing "through Davis's Streights, which are above forty
" Leagues wide up into Baffn's Bry, in Latitude feventy " eight Degrees, does not there exceed. five or fix Feet ${ }^{6}$ any where. Since therefore no other inland Sea has any "s fenfible Tide, and even the Tide in the South End of "Hudfon's Bay, does not rife above four Feet without a " ftrong Wind at North; how can thefe high and rapid 6 Tides beat the North-weft Side, withoit a Communication with fome other Ocean than that which flows through Hudfon's Streight? When it is alfo known
"s that a North and North-weft Wind raifes a higher
"Tide on the Weft-fide of the Bay at neap Tides, than "s an Eafterly or South-weft Wind does at Spring-Tides, "6 which blows from our Ocean; does not that almoft "s amount to a Demoniftration, without further corobora"s ting Proofs? And yet of thefe there want not many, as "s the Reader will fee as we proceed in anfwering his " Reafons.
"His fecond Objection is, that no Fifh, more efpeci"6 ally Whales, are to be met with in thefe Seas, or " Drift-wood; whence he infers they have no Commu"s nication with the Ocean Weftward. This Objection "c is very juft in itfelf, and well founded, neither can it " be denied that it proves very ftrongly, that no fuch "Paffage was to be expected near Cbarlton Illand; but "c when this is admitted and allowed as a negative Ar "s gument, it follows that the contrary, viz. the feeing "Fifh, more efpecially large ones of the Whale kind, is " an Indication of fuch an Opening, Paffage or Streight, " 6 and a Proof that there is a Communication between "s the two Oceans in this Bay. But we know from all " the later Voyages into this Bay, that on the North" weft there are abundance of Whales, though it is true "s there are none in other Parts of the Bay; whence, ac"s cording to Captain James's Method of Reafoning, it is "s plain fuch a Paffage there is; and as from about fixty " Degrees to that Inlet, which Captain Middleton called " lately Wager River, thofe great Fifh abound moft, it " is very rational, on the Principles laid down by both " thefe great Seamen, to conclude that this Paffage is "fomewhere thereabouts. Thus it plainly appears, "s that when duiy weighed, this Objection extends no ${ }^{6}$ farther than to the Seas and Country about Cbarltona "I Iland; and as it affords a Proof there is no Paffage there, "c it alfo affords a Prefumption that fuch a Paffage there is " on the North-welt Side of the Bay; where, for many " other Reafons, it was moft likely to expect it.
"His next Motive for concluding no Paffage, is the * Quantity of Ice, and its driving Eaftward. But, in re"s fpect to this, granting him all he lays down, it proves " nothing. For as to the vaft Quantities of Ice formed s6 in that Part of the Bay, where he navigated, no doubt, " 6 as he obferves, it proceeded from Shole-water, and "s there is as little Doubt that this Ice paffes out at the "Streights ; but this fignifies but little, fince the very "s fame thing happens in regard to Magellan's Streigbts "6 into the South Seas, where no ftronger Signs are to be "s met with than here. I muft, upon this Occafion, ob"Serve, that if Magellan's Streigbts had not been difco"6 vered at once, there might have been as many, and as " ftrong, Reafons given, why no fuch Paffage fhould have " been expected at the Soutb Pole, as our Author, or any " other Man, could alledge againft this Paffage by the " North-weft ; which ought certainly to afford us a Caul' tion againft too hafty Conclufions upon this Subject, let 'them be grounded on any Reafons or Authority whatever. For though human Reafon is fufficient to give ' us a juft Senfe of the Wifdom of the Creator, in difpofing all Parts of the terraqueous Globe, yet we know by Experience, that Reafon is not always capable of
penetrating

## Chap. I.

${ }^{6}$ penetrating the Difpofition of the different Parts of the Globe, independent of Difcoveries which frequent-
"s ly owe as much to Accident as to Reafon: In regard
to Authority, Americus Vefpucius, who had the beft ' Genius for Theory of any Man of his Time, and ", gave his Name to the new difcovered Continent, not becaufe he firft found it, but becaufe he firft laid it down
" handfomely in a Map, and was miftaken in reference to
"the Southern Paffage ; therefore though we may al-
" low Capt. Fames to be as great a Man, in doing which " perhaps we pay him no great Compliment; yet this " will give no great Sanction to his Authority; for he ' may as well be miftaken in the North, as the famous "Florentin in the South: Befides, Difappointment gives " a Bias to moft Mens Opinion, and, Why may we not
"s fuppofe fomething of this in both Cafes? The Paf-
"6 fage from the North Seas into the South, by the Streights
"s before mentioned, and the Coaft to the Northward in
"6 the fame Latitudes, refembling, in all Refpects, that " to the Southward, being low broken Iflands before a " bold rocky Shore, fuggeits very naturally, that there " is fome fuch Paffage there.
"But after laying down thefe Reafons, Capt. James "s very plainly difcovers how much they have operated ${ }^{66}$ upon his own Mind, and to how great a Degree he
" 6 is fatisfied no North-weft Paffage is to be found; he
${ }^{6}$ attacks the very Expediency of finding it, and feems
" to think it an Argument there is no fuch Paffage, be-
"caufe he has wrought himfelf into a Notion that it
"" would be of no great Confequence, if there was fuch
"s a Paffage. Why be it 10 : But there was no fort of "Occafion for making his perilous Voyagुe into Hud" Jon's Bay, to know this ; he might have faid all that he "s has faid againft the Expediency of enquiring any farther
" after the North-weft Paffage, without fturring from "Brifol. It is therefore manifeft, that his failing in " his hoped-for Difcovery changed his Mind, and in" duced him to fee Things in a different Light, than " he did before ; becaufe otherwife, thofe very Argu"6 ments which he urges at laft againft making any future Attempts on this Side were as ftrong, to have diffuad' ed his going. If before he went he never thought of, "s or regarded, thefe Arguments, he did not fufficiently " weigh and examine the Nature of the Expedition in "s which he rifqued his Life, and on which he fet his "s Reputation at Stake. But if he had (which is certain"s ly much more probable) taken Pains to examine all " thefe Reafons; then his very going, his wintering, and "s the Confancy he fhewed in aiming at the Profecution "s of the Difcovery afterwards, vifibly demonftrate thofe
"R Reafons made no Impreffion on him then; if they had,
" he would have ftaid at home, and never have given ' the King, or the Briftol Adventurers, fuch Encourage" ment as was requifite for the fitting him out for that "Voyage ; but this we muft own would be not much si to the Purpofe, if the Reafons he gives us were ab"folutely conclufive ; for whether he bethought him"s felf of them firft or laft, makes nothing for or againft ${ }^{66}$ the Reafons themfelves ; but it fo falls out that when ${ }^{66}$ maturely confidered, they will be found to have very
*s little or no Weight at all. As to the Narrownefs, or
" Inconvenience, of the Streight, if there be one, that is " mere Matter of Conjecture, fo is the Length of it;
sc the Hardhips of the Voyage are now known to be " very inconfiderable; and as to its being no fhorter "Rout to the Eaft-Indies than by the Cape of Good Hope, "' no body ever faid that it was. He acknowledges it is " much nearer to the South Seas, to Terra Borealis Incog"s nita, to Fapon and Cbina, which is all that is defired, ${ }^{6}$ and more than fufficient to recommend it.
${ }^{6 c}$ It is clear enough, from the Whole of Capt. Fames's
${ }^{6}$ : Account that he had a very indifferent Opinion of
ss his Expedition, and confidered it in no other Light than s6 as tending to fatisfy the Englifo Nation, that it was to
${ }^{66}$ no fort of Purpofe to venture any more Veffels into
os thofe Seas, and upon thofe Coafts, upon that or "6 any other Defign; for it is plain that he thought a more barren, a more inhofpitable, and more worthlefs, Part of the World was not to be found ; yet ExVoL. II. Numb. 98.
' perience has fince fhewn us, that as wild and wafte as ' the Countries about Inudfon's Bay were and are, yet they ' have been found to deferve both Notice and Keeping : ' and I dare fay, have produced this Nation full as much? if not more, than the Colony of Canada, frictly and di' ftinctly confidered, ever did to the Freneb; which is a ' Proof that no Mian's Authority ought to be regarded ' where it tends to difcourage a Nation from extend' ing its Navigations or Difcoveries. It is not intended ' by this, to leffen the Reputation of Capt. Fames, or ' that Efteem which his Work has very juftly procured " him from the very beft Judges. There is no doubt, 's that he did what he could, and much more than moft ' other Men could have done; and there is as little " Reafon to doubt, that he fpoke what he thought, and what he fpoke was upon good Grounds; but notwith' ftanding this, we fee he was miftaken, and miftaken in many Refpects. He doubtlefs conceived, that a more perilous Navigation could not be, and that it would be ' a very difficult Thing to fend Ships into this Bay con' ftantly without lofing them ; yet this is a Thing now ' fo common, that there is nothing of Wonder in it: " he apprehended that there muft be always an infinite Difficulty in failing amongft Mifts and Ice, but we fee from Capt. Middleton's Letters, that there is now very little in this, and that the Seamen and Officers ufed to the Hudfon's Bay Trade, have fo far overcome all
${ }^{6}$ Inconveniencies, that taking it with every Circumftance, ' there is, perhaps, no Navigation now ufed, fo fafe as this; and from the Account he has given us of his 6 Wintering, we may very fairly infer, that he never fo ' much as furpected that an Englifh Factory would be ' fettled in a higher Latitude than Cbarlion Iland, and ' yet the Factory of Fort Cburcbill has fubfifted for many Years. There is one Paffage in his Voyage which Shews his very great Sagacity; for by pulling up fome 'Stakes in a defart Inand, and perceiving they were cut by a tharp Inftrument, he judged that the Savages " muft have had fome Communication with Chriftians, "s in which he judged very right; but it was near half a ${ }^{66}$ Century after, before this Riddle could be explained,
"s or any body could guefs, that thefe Savages had thofe
" Hatchets from the French.
But to return to the North-weft Paffage. The Ex"t perience we have of thefe Countries has convinced us " of many things, that to Captain fames, without doubt, ' after his Return from this Expedition, would have ap. peared abfurd and incredible. As for Inftance, that "the Continent Weft and North-weft from Cbarltors " Ifland, is inhabited by feveral Nations, and that the " moft Northern of thefe Nations are the beft clad and "the moft civilized. Amongft thefe there is a Nation, " diftinguifhed by the Name of the Mofemleek Indians, "6 who are not only a very rational People themfelves, " but who conftantly affirm, and there is no Reafon to "fufpect that they affirm a Falfoood, there are large "Towns, and a civilized Pcople, to the North-weft of " them, who trade upon a large falt Lake, in Veffels " twenty times as big as their Canoes; and what Nations "6 may live beyond thefe, is, indeed, to us uncertain; ' but this is very certain, that if there be a North-weft " Paffage they muft inhabit the Confts of it ; and there ' never yet was a Country found inhabited, but it was
" found alfo that thofe Inhabitants might be traded with
"s to Advantage. But this is not all, the oppofite Coaft ' muft, very probably, be inhabited too, and it is very " likely that the Streight that falls into the South Seas, "s may be under a Climate, milder, in many refpects, " than Cberlton Ifland in the Summer. Upon the whole, " therefore, all the Difficulties and Difcouragements, "s which, from too ftrong a Senfe of his own Difappoint" ${ }^{6}$ ment, Captain fames has conjured up, fink to nothing, " when duly confidered and compared with the Circum"s ftances that later Difcoveries have brought to light; fo "s that there feems to be no Reafon his Conjectures thould ${ }^{6 s}$ have any Weight to deter us from profecuting Attempts "s on this Side, even though they fhould fill continue to "s prove, in feveral Inftances, as they have hitherto done ${ }_{3}$ 6 abortive.

5 S
${ }^{6} 6$ Thefe
"Thefe Reflections may, to fome Readers, appear "long, but I hope to very few they will appear ufelefs "c or unentertaining; for I will freely confers, that if I " had not intended thefe Reflecions, I would not have " inferted this Voyage, though in all refpects the beft of " its kind that ever was written. 'But the Excellency of "Ranufio"s Collection, is allowed to confift in his Re" marks; and without Remarks, this Voyage, as well "wwitten as it is, might do a great deal of Mifchief. "Nay, I am perfuaded did do a great deal of Mifchief; ${ }^{6}$ ' for from the Time of his Return in 1632 , to 1667 , there
"" ncver was any Voyage made into thefe Parts, nor pro-
" bably ever would have been made, but for the Saga-
"s city of Mr. Montague, our Embaffador in Fronce, af-
"terwards Duke of Montague, and Father to the prefent
: Duke, both eminent Friends to the Commerce of this
${ }^{6}$ Nation. He it was that furnifhed us with the firft Lights
' that revived our Correfpondence to IFudfon's Bay, to
" which Captain Guillam was fent in 1668 , and we have
" been poffeffed of the Trade thither ever fince. A Trade "G granted to private Perfons, by a Charter in Truft for "؛ the public Benefit, which was to arife from their En-
"c deavours to find a North-weft Paffage; which public
"Advantage they have neglected in the very fame Pro" portion they have been ftudious after their own; a "thing fo very common with Companies, that they " might certainly be acquitted, if Cuftom could be "eftcemed a juft Excufe. Yet from their fettiing a " Trade in thefe Parts, it has been found extremely ad" vantageous, as drawing to their Factories Indians from "very diitant Countries, who bring them very rich Furs, "but who deslared alfo that a much larger Trade ' might be carried on, provided their Factories were " more in Number, and fixed more conveniently; nay, "t they have brought down and fold, at fome of the Set"tlemenrs, Copper Oar, fo very rich, that by barely " beating it between two Stones, it has been reduced into
"Metal. But neither what they faw, nor what they " heard, could tempt them to alter their Manner of " proceeding; they judged, and no Queftion judged "right, that as they were circumftanced, the Method "s they are in was the moft beneficial that could be, sc and that by extending their Commerce they muft oper
s it, and fo render it lefs beneficial.
"All this was natural enough, and I do not repeat " it here (for I know that I have touched it often before) " out of any Spinit of Malice or Ill-will; for I really ' wifh the Hudlon's Bay as well as I do any Company;
" but only as it makes for my Purpofe; which is to fhew "that notwithftanding Capt. F̛ames was a very honeft
" Man, a very experienced Seaman, and one who very
" probably had no private Views; yet, in his Conclufions " from this his perilous Expedition, he was abfolutely
" wrong, and by his Authority gave Credit to many "Falfhoods, of which thefe Inftances may fuffice
" 1 . He thought the Hardfhips in navigating thefe Seas,
"، and wintering on thefe Coafts, were invincible; but
"" we know the contrary. 2. He judged the Country
" fo barren as to furnifh no Subfiftance, and the Inhabit-
" ants fo poor as to have nothing worth feeking; in
" both which Experience fhews he was miftaken.
" 3. Fie firmly believed, that if any Streight was dif-
" covered more to the North than about the Place he
" wintered, it would be impaffable, and its Coafts unin-
" habited; but we are fatisfied this is groundlefs, from
"the many Openings difoovered along the Welcome; "and their being all in the Neighbourhood of very " friendly and tractable Indion Nations. 4. He was " clearly fatisfied, that from what he had feen and " difcovered in his Voyage, there no longer remained
ss any Hopes of finding fuch a North-weft Paffage through
"Hudfon's Bay: But here too his Art failed him; for even
"Capt. Middleton, who I think his Equal as a Mariner,
${ }^{4}$ thought it highly probable, till very lately. 5. He
" does not appear, from what he has written, to have
" had any diftinct Notion of what Part of the World he
"s was in, or how the Countries lay round about him ;
"6 but to the prefent Navigators all this is very clear and
"certain; we know that from Canada to New Mexico,
"and probably even to Coliformia, is all one Continent,
"the Weft-fide of which only remains undifcovered; " and we further know, that all that has been hitherto "found, agrees exactly with, and is every way conform"s able to, the Notions that have been entertained of " fuch a North-weft Paffige, and even with all the tra" ditional, and othier kind of Accounts, that we have "received of it. But having now made this Piece as "ufeful as we can, without curtailing or interpolating " it; let us return to Captain Fames's Conclufion, and having attended him through his long and dan"gerous Voyage, his cold and comfortlefs wintering, his "difficult and wonderful Paffage homewards, let us fee " him fafe afhore, and fo take our leaves."
41. The 22d of OEzober we arrived in the Road of Brifol, having been hindered and croffed with much contrary and tempeftuous Winds and Weather. The Ship being brought into Harbour, and haled on dry Ground, to look to her, it was there found, that all her cut Water were torn and beaten away, together with fourteen Feet of her Keel; much of her Sheathing cut away, her Bows broken and bruifed, and much Timber cracked aboard, and under the Starboard bulged; fharp Rocks had cut through the Sheathing, the Plank, and an Inch and an Half into a Timber that it met withal. Many other Defects there were befides; fo that it was miraculous how this Veffel could bring us home again. Being all arrived we went to Church, and gave God Thanks for his Prefervation of us amidft fo many Dangers. I very well know that what I have here hafily written, will never difcourage any noble Spirit, that is minded to bring this fo long-tried Action to abfolute Effect; and it is likely withal, that there be fome who have a better Underftanding, and a furer Way of profecuting it than myfelf have, to whofe Defigns I wifh a happy Succefs.

And if they do but make a Review of what hath been done, and give more celeftial Obfervations, hydrographical Defcriptions, or exacter Practice in Navigation, it will be a moft commendable Labour; for although' I have fpent fome Years of my ripeft Age, in procuring Intelligence from foreign Nations, and have travelled with diverfe honourable and learned Perfonages of this Kingdom, for their Inftructions; have bought up whatever I could find in Print or Manufcript, and what Maps or Papers foever conducive to this Bufinefs, that poffibly I could procure; and have ferved voluntary befides, and fpent fome time in rendering a Relation fince my coming home, and expended withal, of my own Money, in my aforefaid Endeavours, and in furnihing extraordinary Neceffaries, above 200 l . in ready Money; yet I repent not, but take a great deal of Comfort and Joy, that I am able to give an Account, in fome reafonable Way, of thofe Parts of the World, which heretofore I was not fo well fatisfied in.
Thus ends this Voyage, which, as I have hinted before, has been feveral times abridged, and more than once reprinted at large, but never, that $I$ know of, compleat, and as it fands in the original Edition of 1633 ; which is the Reafon this Book has been fo much valued. I have feen many Copies that concluded with Profeffor Gellibrand's Obfervations aftronomical ; but I never met with more than one Copy that had the Addrefs to the Univerfity of Cambridge; which, though printed in a different Character, and in fuch a Manner as if it were a Piece by itiflf, yet is thus mentioned in the Title Page of this Book : An-Advice concerving the Pbilofophy of the fe late Difcoveries, by W. W. though the Difcourfe itfelf is fubfribed X. Z. Who was the Author of it I cannot fay; but whoever he was,' it is plain that he had the Correction of Captain fames's Work, and was himfelf, for thofe times, a Perfon of furprizing Knowledge and Freedom of Thought; and therefore I judged the preferving this little Piece, by reprinting it, would be highly agreeable to all true Lovers of Learning; and therefore it is here fubjoined.
To the venerable Artists, and younger Students in Divinity, in the famous Univerfity of Cambridge.

[^0]"demians, whofe Excellency, in all kind of Learning, "s all foreign Univerfities do admire, and none attain unto. I here prefent you a Voyage to Cbolcos, though not the Golden Flece with it. The Search I mean, but " not the finding, of that fo much talked of, fo often fought for, Noitb-weft Paffege, and nearer Way into the Soutb Sea. That wherein fo much Time and Irea-
" fure hath been expended, fo many brave Spirits em" ployed, and yet none difcovered. Perchance there is no fuch Paffage to be found; and that the Spaniards, by the Gullery of their falfe Sea Cards, and the Fable " of an old Greek Pilot, have but diverted our Englif " and Dutch Seamen from the Golden Indies. This Plot " of theirs has taken for thefe many Years, and it " appears to be but a Plot; 'for that themfelves never made ufe of this Paffage. For mine own Part, I fup". pore that the Pbilofopher's Stone is in the Nortb-rwef "Paflage. My Argument for it is, that there is fo " much Pbilofopoly in the Way to it.
"So much and fuch Variety, and that fo vari" ous (I think) from what is received in the Schools, " that it were well worth the Difquifition of an Uni"verfity (and I wifh you the firt Honour of it) " either to find out how thefe Obfervations may be reduced to Arifootle's Pbilofopby, or whether they need any other Enquiry, and ought to be examined by " fome other Ruiles than Arjfotle hath, yet lit upon. " This is my Purpofe of infcribing it unto you. Of " this one thing am I confident, That you are all fo "rational and ingenuous, as to prefer Trutb before Au"thority; Amicus Plato, amicus Arijfoteles, but magis "amica veritas. Your Sciences then being liberal, your "Studies I know have fo far paffed into your Manners, " that your Minds are fo too; and that fuch as have " already profited beyond the Credulity required in a " young Learner, and are themfelves prompted to be " Mafters of the Arts', though they ftill reverence their " oid Greek Iutor, yet they will not fuffer that of Pytba" goras's Scbool, fo to domineer in Arijfotle's, as to let an " ipfe dixit go away with it; much lefs allow it the Au" thority of a Mayor's Hammer, with one Knock to fi" lence all Arguments.
" Upon this Confidence, I, with all due Refpects, " here prefer two Propofitions unto your difcuffing. "The firft this, Whetber there Rules of Ariftotle's Pbilo"Sopby be to be allorved So univerfal, tbat they bold all the "World over. The fecond this, Whetber they ought to "be so magiterial as to prefrribe againfl all otber Exa' minations. The firf of thefe I fhall but problemati"c cally propound unto you; but in the fecond, I hope " a Mian of my cloathing may be allowed the Free" dom of being fomething more earneft.
"" But that I may not come with Prejudice to the " making of theie Niotions, or be thought upon fome " Ignorance or Ambition to fpeak againft the incomparable "Arifootle, I fhall defire all my fellow Academians to al" low me fo much Difcretion, as to know, That he that " fhall in your Hearings, oppofe your Arifotle, does "" like the Ship here fpoken of, run againft a Rock, en" danger his own Bulge, and the ftaving of his Veffel. " NO , I fo far honour the old Ariftotle, that I will allow " "him to be Nafter and Moderator of the Schools; anid " that there is the fame Reipect due to him in the Schools, which, by Rerfon of long Cuflom, is due to one of the King's Sbips in the narrow Seas. That in Acknoweledg"ment of Sovereignty, every other Nome ougbt to frike "Sail to binn. Arifotle (it muit be confeffed) hath made all Learning beholding to him. No Man hath learned ' to confute him, but by him, and unle's he hath plowed with his Heifer. He had the moft incomparable "Wit, and was the moft logical and demonftrative " Deliverer of himvelf, of all the Sons of Nature. One " who beft of all deferved to be called her principal Se"cretary: One who not only adorns a Library, but " makes it Qui babet Arijotetem, babet Bibliotbecam, is " truer of him than of the great Comparer. This is my "Opinion of him, and I wifh him more ftudied.
'Tis not therefore the Name, or the Authority, of $\because$ the great Arifootle, that my Propofitions meddle with-
" al ; but whether his Propofitions, gathered out of this "Part of the World alone, could, like a royal Pafs, " or a Commiffion, carry a Man all the World over.
" It muft be confefled, that in refpeef to the Equi" nocial, and the Latitude that Arifoole lived in, he was "but a Nortbern Mon, and it was his own Rule, that " nibil agit extra Spharam aetivitatis fuce, fo then is "would be put to Voices to confider, whether he " that knew but thofe Northern Parts, and the Medi"terranean Sea, could poffibly make fuch Collections " by what was there to be learned, as fhould be infalli" ble in the SoutbernHemifpbere, and the two Indies. Plain-
" ly, thofe that are converfant in the Navigations and "Books of Voyages into thofe Parts, have found fo many "Contrarieties to obferve, that it was rather tedious than " difficult to fill up a Note-Book with them.
"The Ancients we know (as if they had meafured the "World by the Yard-Wand) reftrained the Limits of "Temperature and Habitation by the five Zones, withour "Confideration of any interloping or concurring Caufes, " which Experience hath now found out to have quite alter" ed their Cblervations. Iadd, that a good Leifure and Di" ligence might obferve how, in a contrary Part of the "World, there be found clean contrary Coufes and Effects unto there in this Part of the World. The Soutb Wind " there brings Ciold, and Winter; and the Nortb is the rainy Wind. How will the Thunder and Wind be made ' to agree with Arifotle's. Difinction of a Mcteor? In " fome Places of the Mountains Andes, by Peru, it "thunders ever. The Eaft Indies have their Monfons, "" and their Steady Winds, conftant for fix Months toge"ther, and Who fhall affign their Caufes? Then the " Doeirines of the Tides, nothing fo uncertain which ebb " and fow in fome Places different, and in others con" trary to the Moon and her Motions. This (as I re" member) is Arifotle's Diftinction of a Moteor; that it " is an imperif fect mixed Body generated out of cin infrom and inconfant Concretion of Elements, which therefore can" not be durable. Now the Monfons are both conftant in " their Continuance this Year ; and in their Return next " Year, moft conftantly keeping their Seafons half Year " one Way and half another Way, for all A.ges nothing " more conftant and durable, and therefore nothing like Arifotle's Meteor. And fo for the T'bunder upon the "Andes; it is firf perpetual; and fecondly, not caufed " by a dry Exbalation (as Arijotle wills); but hanging " over fuch Hills as are covered with Snow, and a per" petual Winter; witnefs the Thunder on the Alps alfo; " yea, and that in the Middle of the Sea, five hundred "Leagues from Shore, or any thing that is dry; 'nay, it frequently both frowes and thunders upon the "Andes at the fame Inftant; and in dry Places, that are " hard by, fcarce ever tbundering.
"But not to pafs the Line forit: You fee in this little Book " how Charlton Ifland, which is no more northerly than " your Combridge, yet is fo unfufferably cold that it is not " habitable, and that there encounter fo many different (at
" leaft fo feeming) Occurrences of Nature, as were well "worthy the Difquifition of a Pbilofopher. I could (in " my fmall Reading) inftance in many other Particulars, "which I had rather fhould be found out by fome in"duftrious Searchers after Nature in the modern Relations " of our Difcoverers, than in this my fhort Propofition. "، 'Tis not to be doubted but that the careful reading of " our Books of Voyages would more illuftrate the Fiftory " of Nature, and more conduce to the Improvement of "P Pbilofop, hy than any Thing that hath been lately thought " upon. Thefe Navigations have in part fulfilled that of "" of the Propbet: Many 乃all pafs to and fro, and Knowe" ledge Joll be increafed. This I fuppofe might be ob"ferved from this Study, That the great and infinite "Creator hath fo difpofed and varied every thing, that " it is impofible for Man's Reafon and Obfervation to conclude him; and therefore though the vulgar and receiced Pbilofopby may give a Man a general Efint all the World over; yet no univerfal and unfailing Certainty.
"This brings me to my fecond Propofition': That feeing "God will not have his Works (no more than his King-
as dom) to come by Obfervation, Whether then ought "c any Human Diefates to be fo magifterial as to prefcribe "t againft all oiber Imagination?
"No Human Study more conduces to the fetting ${ }^{66}$ forth of God's Glory, than the Contemplation of his ${ }^{66}$ great Works in Pbilofophy; for though a fmattering " Knowledge in fecond Caufes works the Mind towards
" Atheifm, yet a higher Speculation of them brings it "s about again to Religion. No Man I believe will think
"s it fit for us to have a Pope in Philofophy, one that " no body fhall prefume to cenfure; but all be bound ${ }^{* 6}$ to advance his Decretals above the holy Scripture.
${ }^{6}$ This is the Scandal that myfelf and divers good Men
${ }^{\text {ss }}$ take at the undue Authority in fome Heats pinned
*s upon the Stagerite.
"' I am forry that the Ifraelites Dotage upon Solomon's
${ }^{\text {"s }}$ Philofophy, fhould have caufed the zealous Hezekiab
"to call in and fupprefs thofe invaluable Phyfics, for
${ }^{66}$ fear, I fuppofe, left their Credit fhould have as much
"s derogated from the Authority of the holy Scriptures, as
"s the brazen Serpent (which he deftroyed about the fame
"6 time) had done from Religion; none will believe that
"Solomon's Pbilofopby was contrary to the Scriptures,
"feeing the Scriptures commend Solomon for them. It was
"s not Hezekiab's Fear therefore (or not only) left there
${ }^{56}$ might have been a Competition between them, but a
${ }^{36}$ Neglect of one of them: He was zealous, left the
"Scripture might have any Writing fet upon by it,
${ }^{6} 6$ though not againft it.
"Can Divines then be blamed for fpeaking, when
"s they hear Arifotle's Pbilofophy to be folely magnified,
${ }^{6} 6$ and the Study of the Scripture Pbilofophy difrefpected;
${ }^{66}$ or, that when 'tis confeffed that fuch a Thing is true
${ }^{6}$ in Divinity, and yet the moderating the Point deter-
"s mine for Pbilofopby? Nay, to hear it called abfurd and
"s ridiculous to have Scripture urged at all in Point of
"Pbilofophy? No doubt there is but whatfoever is
"s falfe in Divinity is alfo falfe in Nature, how much
"Shew of "Truth foever it paffes within Pbilofophy: Pbi-
" lofopby hath taken its Turn in the Scbools, and the
"6 holy Texts, by the Schoolmen, have even been fubmitted
${ }^{*}$ " unto Arifotle's; yea, to the great Corruption of The-
os ology, as the Complaint is, hath this Man been fo far
"s advanced, that Contra eft Pbilofopbus, EO contra eft
" Apoftolus, have familiarly paffed up and down for
© equal Oppofitions; fo that it hath been a meafuring Caft
"s oftentimes, betwixt the Propbet and the Peripatetic;
"s and by foul Play hath the Meafure been made to ftand
"s the harder at the Peripatetic, for that the Prophet hath
" been forced to comply with him by a wrefted Inter-
© pretation. Thus had St. Paul need give his Caveat
${ }^{6} 6$ unto Theology as well as unto Theologues; Beware left
"c any Man fpoil you tbrough Pbilofopby.
" All this were to no Purpofe, unlefs the Text of
" God were excellent in this Kind, and embellifhed here
ac and there with moft admirable Pbilofopby; what in-
"s comparable rare Footfteps of it have we in the Books
"s of Genefis, $\mathcal{F}$ ob, and the P Salms? How noble a Study
\$t then were it, and how worthy the Leifure of fome
${ }^{6}$ excellently learned Men to beftow fome Time upon it?
ss Valefus the Pbyfician hath, in his Sacra Pbilofoplia,
© done fomething in this Kind, who yet might have
${ }^{6}$ done better here and there for the Honour of the
${ }^{6}$ Scriptures. I am not fo fottifh, to believe that every
"Particular is to be drawn out of the Scriptures; 'tis
© none of my Dotage that; or that God, in Scripture, did
or intend every where the Accuratenels of Pbilofophy, or
se ftand to be focurious in Definitions and Difcuffions;
' nor that nothing fhould be determined on till a Text c confirmed it. But this perchance might profitably be ' thought upon; that where the Scriptures have any s: thing of this Kind, it fhould more reverently be ' efteemed; Collections out of fcattered Places (as is done " out of Ariftotle's) made ; thefe compared, and their " Refultances obferved. This furely would amount to "6 more than is yet thought of; and in God's Name let "Scholars be fo bold with Ariftotle as to examinehim upon "s goodAffurance by what is Truth's Touchjfone: Received "Pbilofophy is a moft neceffary Handmaid to the Scrip-
"tures; but let her not be fet above her Lady; nor no " Competition be made betwixt them.
"Something elfe remains to be thought of. That
" feeing the fame God who gave Arifotle thefe good
" Parts, hath, in like Manner, raifed up many excellent
"Spirits more; whether it were not injurious to what is "d done, and a Difcouragement to what might be done, "s to have the Inventions, or Obfervations, of thofe ex"cellent Wits, and great Induftries, fo abafhed with ": Arifotle's Authority, that they can have no Credit in ${ }^{6}$ the World; for that his Dictates have pre-occupated 's all good Opinion? Let it not then be thought unequal 's to examine the firft Cogitations of the old Pbilofopby, by " the Second Thoughts of our more modern Artits; for "s that the fame Improvement may by this means accrue " unto the Pbyfics, that hath advanced our Geograpby, "' our Mathematics, and our Mechanics; and let it nos "s be thought fo infolent to refufe Arifotle's Authority " fingly, where his Reafon is not fo concluding. Seeing "s other Men have taken the Boldnefs to do that before "s in feveral Kinds; fome have perfected, and others " controlled his Etbics, by the Scriptures, as Scultetus "Wallous, and fome others. Fufin Martyr, firnamed " the Pbilofopber, hath purpofely written contra Dog" meta Arifotelis. Baffon and Gaffendus (two brave Men)
"" have newly written point-blank againft him, nor have
" they taken away all Liberty from thofe that are to fol${ }^{6} \cdot$ low them.
" And thus, with renewing my former Proteftation " for mine own Refpect to Arifotle, I conclude my " two Propofitions; which I defire may receive a fa"s vourable Conftruction from all ingenuous, incapri" cious Scbolars; I mean them out of Good-will to "s promote Learning; to encourage and countenance " future Undertakings; and, in fuch a Cafe, a little too "s much faying may be thought not to have exceeded an "s boneft Rbetorication ; for I would not be thought too " earneft in it. The Hint, for all this, I took from this " Book, which in mine own, and fome better, Judg. "6 ments, is (to fay no more) as well done, and inrich" ed with as fure and ufeful Obfervations, as any in this "' kind. I was defired by the able Author, and fome "s other Friends, to overlook the written Copy of it, and "s to amend the Englifh here and there, in which I did "s not defpair of doing fomething: For that in my "s younger Time, I had a little acquainted myfelf with " 6 the Language of the Sea, that which put me in the "Head to infcribe it unto your Names (moft excellent " learned Academians) was, for that the Place of this, " wintering was within a Minute or two of the Height of "6 our Cambridge: Which my Prayer to God is, that your "Studies may make famous.
" Yours,
"X. Z ${ }_{n}{ }^{n}$

## S ECTION IV.

The late Attempts made for the Discovery of a Passage to the South Seas, fromit Hudfon's Bay ; more particularly that of Captain Christopher Middieton, Commander of his Majefty's Sloop the Furnace.

## Interfperfed with original Papers.

1. The Reafons why there bave not bitberto been any great Difcoveries made from Hudfon's Bay, notwitho Fanding our Seitlements in, and Trade :tbereto. 2. Capiain Chriftopher Middleton's accurate and curious Account of the Erange Effects of Cold; the Nature of Animals, and manner of living on the Coafts of Hudion's Bay. 3. Mr. Middleton enters into a Correfponderice rwith Arthur Dobbs, Efq; for the Difcovery of a North-weft Pafjage. 4. Reafons afigned by bim, to Joero the Probability of finding fuch a Paffage, rebich actually produced this Voyage. 5. An Account of the Undertaking, and of the Impediments throwen in the Way, to binder Captain Middleton's going, or meeting with Succefs, in Caje of attempting this Difcovery. 6. Captain Middleton's Gournal of bis V.oyage for Difcovery, from bis Departure to bis Return. 7. The Point of FaCl as to the Streight, by bim called Wager River, more clearly fated, with Copies of original and amended Declarations. 8. An Account of Mr. Dobbs's Exceptions taken to the Relation given by Captain Middleton of bis Difcoveries, and Opinion grounded on them, that there is no Streigbt, or that it is not practicable. 9. Mr. Dobbs's Reafons weby the River Wager ought ratber to be confidered as a Streight; Captain Middleton's Anfwer, and Replies, to them. 10. Captain Middleton's pofitive Proofs that this Opening is a frefb Water River, and not a Streight, communicating with any Ocean or Sea, except Hudfon's Bay; weith Refutations of thofe Proofs. II. An Account of a late. AEt of Parliament, for encouraging the Difcovery of a North-weft Paffage.

"N the two foregoing Sections, we have given the Reader as full and as fair an Account as it was in our Power, of the Motives which induced the moft knowing and able Perfons, in the laft Century, to fuppofe that a Paffage might be found, through Hudfon's Bay, into the South Seas; and how this Notion, after prevailing long, and being generally entertained, grew into Difcredit, by the Mifcarriage of Captain $\mathcal{F}$ ames, and by the Account he gave of the Nature and Caufes of his Difappointment. We have alfo touched upon the Foundation of the Hudfon's Bay Company; but having confidered that Point more largely in another Place, we thought there was no Neceffity for dwelling upon it here. In this Section we propofe to fpeak of the late Expeditions made that Way, and particularly of Captain Cbrifopher Middleton's, which has afforded Occafion to the Legiflature to pais a Law for encouraging Attempts for this Difcovery, which fooner or later there is great Reafon to hope will be attended with Succefs.

One would have imagined, that after the Company was eftablifhed, for carrying on the Trade to Hudfon's Bay, with a View to the finding a North-weft Paffage, continual Attempts would have been made for that purpofe, agreeable to the Petition upon which that Charter was granted, and to the Preamble of the Charter itfelf, which has been fo often mentioned; but fo far has this been from the Practice of the Company, that they have taken all Methods poffible to prevent the Notion of a Paffage being found that Way from reviving in the World, by preventing their Captains from publihing their Journals; and as by their Charter they have an exclufive Trade, if they do nothing in this Matter, it is impofirible any body elfe fhould. There was, indeed, one Captain Barlow employed for this Purpofe about twenty Years ago, but he was never heard of more; and whether he made the Paffage, and never returned, or whether he was loft as the Company's Servants report, in the Latitude of 63 Degrees, is what we can give no Account of, at leaft with any Degree of Certainty. The Reader will hereafter find fome Account of another Attempt, made by Mr. Fobn Scroggs, which, though not attended with Succefs, was far from giving any Difcouragement to future Endeavours of the fame kind. But what gave Occafion to the laft Attempts, was the Informations receivs ed from Captain Middleton before-mentioned.

This Gentleman had been for many Years in the Service of the Hudfon's Bay Company, which gave him an Opportunity of making all the Enquiries neceffary, and acquiring all the Lights poffible, to direct him in an Affair of this Nature; and of his Capacity and Knowledge Voi. II. Numb. XCIX.
in this refpect, the Reader will find an ample Teftimony in the following Extract of a Relation delivered by him, to the worthy Sir Hans Sloane, then Prefident of the Royal 'Society ; from whom he received the Prize Medal which, by the Will of the late Sir Godfrey Copley, is annually beftowed by the faid Society. A Relation equally curious in itfelf, and extremely fuited to our Purpofe; as it very fully fhews how much better we are now qualified for making Difcoveries in thofe frozen Climates; than in the Days of Captain Fames; and how far the Difficulties, which that Gentleman looked upon as infupportable, are in the prefent Age overcome. But this Paper has fo much Merit, that it really needs no farther Introduction.
2. It is obferved that the Hares, Rabbets, Foxes, Partridges, in September, and the beginning of OEFober, changed their native Colours to a Snowy-white, and that for fix Months in the fevereft Part of the Winter. I never faw any but what were white, except fome Foxes of a different Sort, which were grizled, and fome half red half white.

That Lakes and ftanding Waters, which are not above ten or twelve Feet deep, are frozen to the Ground in Winter, and the Fifh therein all perifh.

Yet in Rivers near the Sea, and Lakes of a greater Depth than ten or twelve Feet, Fifh are caught all the Winter, by cutting Holes through the Ice down to the Water, and therein putting Lines and Hooks. But if they are to be taken with Nets, they cut feveral Holes in a ftrait Line, the Length of the Net, and pafs the Net with a Stick faftened to the Head-line from Hole to Hole, till it reaches the utmoft Extent; and what Fifh come to thefe Holes for Air, are thereby entangled in the Net; and thefe Fifh, as foon as brought into the open Air, are inftantly frozen as ftiff as a Stock-fifh. The Seamen likewife frefhen their falt Provifions, by cutting a large Hole through the Ice in the Stream, or Tide of the River; which they do at the Beginning of the Winter, and keep it open all that Seafon. In this Hole they put their Salt-meat, and the Minute it is immerfed under Water, it becomes pliable and foft, though before its Immerfion it was hard frozen.

Beef, Pork, Mutton, and Venifon, that are killed at the Beginning of the Winter, are preferved by the Froft for fix or feven Months, entirely free from Purrefaction, and prove tolerable good eating; fo likewife Geefe, Partridges, and other Fowl, that are killed at the fame time, and kept with their Feathers on, and Guts in, requirc no other Prefervation but the Froft, to make them good wholefome eating, as long as the Winter continues. All kind of Fifh are preferved in the like Manner.

In large Lakes and Rivers the Ice is fometimes broken by imprifoned Vapours, and the Rocks, Trees, Joifts, and Rafters of our Buildings, are burt, with a Noife not lefs terrible than the firing off a great many Guns together. The Rocks which are fplit by the Froft; are heaved up in great Heaps, leaving large Cavities behind, which I take to be caufed by imprifoned watery Vapours that require more room when frozen, than they occupy in their fuid State. Neither do I think it unaccountable, that the Froft hould be able to tear up Rocks and Trees, and fplit the Beams of our Houfes, when I confider the great Force and Elafticity thereof. If Beer or Water is left in Mugs, Cans, Bottles, nay, in Copper Pots, though they were put by our Bed-fides in a fevere Night, they were furely fplit to Pieces before Morning, not being able to withftand the expanfive Force of the inclofed Ice.

The Air is filled with innumerable Particles of Ice, very marp and angular, and plainly perceptible to the naked Eye. I have feveral times tried this Winter, to make Obfervations of fome celeftial Bodies, particularly the Emerfions of the Satellites of Fupiter, with reflecting andrefracting Telefcopes; but the Metals and Glaffes, by that Time I could fix them to the Object, were covered a quarter of an Inch thick with Ice, and thereby the Object rendered indiftinct ; fo that it is not without great Difficulties that any Obfervations can be taken.

Bottles of Strong-Beer, Brandy, ftrong Brine, Spirits of Wine, fet out in the open Air for three or four Hours, freeze to folid Ice. I have tried to get the Sun's Refraction here, to every Degree above the Horizon, with Elton's Quadrant, but to no Purpofe, for the Spirits freeze almoft as foon as brought into open Air.

The Froft is never out of the Ground, how deep we cannot be certain. We have dug down ten or twelve Feet, and found the Earth hard frozen in the two Summer Months; and what Moifture we find five or fix Feet down, is white like Ice. The Waters, or Rivers, near the Sea, where the Current of the Tides flow ftrong, do not freeze above nine or ten Feet deep.
All the Water we ufe for Cooking, Brewing, $E^{\circ} c$. is melted Snow and Ice. No Spring is yet found free from freezing, though dug never fo deep down. All Waters on Land are frozen faft by the Beginning of Oitober, and continue fo till the Middle of May.

The Walls of the Houfe we live in are of Stone, two Feet thick; the Windows very fmall, with thick wooden Shutters, which are clofe fhut eighteen Hours every Day in Winter.

There are Cellars under the Houfe, wherein we put our Wines, Brandy, Strong-Beer, Butter, Cheefe, $\varepsilon^{\circ} c$. Four large Fires are made in great Stoves, built on purpofe; every Day, as foon as the Wood is burnt down to a Coal, the Tops of the Chimnies are clofe ftopt with an Iron Cover. This keeps the Heat within the Houre (though at the fame Time the Smoak makes our Heads ach, and is very offenfive and unwholfome.) Notwithftanding which, in four or five Hours after the Fire is out, the infide of the Walls of our Houfe and Bed-Places will be two or three Inches thick with Ice, which is every Morning cut away with a Hatchet. Three or four times a Day we make Iron-Shot, of twenty-four Pounds weight, red hot, and hang them up in the Windows of our Apartments. I have a good Fire in my Room the major Part of the twenty-four Hours; yet all this will not preferve my Beer, Wine, Ink, E $\sigma^{\prime} c$. from freezing.

For our Winter-Drefs we make ufe of three Pair of Socks, of coarfe Blanketting, or Duffel for the Feet, with a Pair of Deer-Skin Shoes over them; two Pair of thick Englifs Stockings, and a Pair of Cloth Stockings upon them; Breeches lined with Flannel; two or three Englifh Jackets, and a Furr Coat, or rather Gown, over them; a large Beaver Cap, double, to come over the Face and Shoulders, and a Cloth of Blanketting under the Chin; with Yarn Gloves, and a large Pair of Beaver Mittens, hanging down from the Shoulder before, to put our Hands in, which reach up as high as our Elbows. Yet notwithftanding this warm Cloathing, almoft every Day, fome of the Men that ftir abroad, if any Wind blows from the Northward, are dreadfully frozen. Some have their

Arms, Hands, and Face, bliftered and frozen in a terrible Manner, the Skin coming off foon after they enter the warm Houfe, and fome have loft their Toes. Now their lying indoors for the Cure of thefe frozen Parts, brings on the Scurvy in a very lamentable Manner: Many have died of it, and few are free from that Diftemper. I have procured them all the Help I could, from the Diet this Country affords in Winter; fuch as frefh Fifh, Partridges, Broths, E $\sigma^{\circ}$ and the Doctors have ufed their utmoft Skill in vain; for I find nothing will prevent that Diftemper from being mortal, but Exercife and ftirring abroad.

Coronce and Parbelia, commonly called Halos and Mock-Suns, appear frequently about the Sun and Moon here. They are feen once or twice a Week about the Sun, and once or twice a Month about the Moon, for four or five Months in the Winter ; feveral Coronse of different Diameters appearing at the fame Time.

I have feen five or fix Parallel Corone concentric with the Sun, feveral times in the Winter, being for the moft Part very bright, and always attended with Parbelia or Mock-Suns. The Parbelia are always accompanied with Coronce, if the Weather is clear, and continue for feveral Days together, from the Sun's rifing to his fetting. Thefe Rings are of various Colours, and about 40 or 50 Degrees in Diameter.

The frequent Appearance of thefe Pbenomena, in this frozen Clime; feems to confirm Defcartes's Hypothefis, who fuppofes them to proceed from Ice fufpended in the Air.

The Aurora Borcalis is much oftner feen here than in England; feldom a Night paffes in the Winter free from its Appearance; they fline with a furprizing Brightnefs, extinguifhing all the Stars and Planets, and covering the whole Hemifphere. Their tremulous Motion from all Parts; their Beauty and Luftre are much the fame as in the Northern Parts of Scotland, Denmark, \&cc.

The dreadful long Winters here, may almoft be compared to the Polar Parts, where the Abrence of the Sun continues for fix Months; the Air being perpetually chilled and frozen by the Northerly Winds in Winter, and the cold Fogs and Mifts obftructing the Sun's Beams in the fhort Summer we have here; for notwithftanding the Snow and Ice is then diffolved in the Lowlanids and Plains, yet the Mountains are perpetually covered with Snow, and incredible large Bodies of Ice, continue in the adjacent Seas. If the Wind blows from the Southern Parts, the Air is tolerably warm, but infufferable cold when it comes from the Northward; and it feldom blows any otherwife, than between the North-eaft and the North-weft, except in the two Summer Months, when we have for the major part light Gales, between the Eaft and the North, and Calms. The Northerly Winds being fo extremely cold, is owing to the Neighbourhood of high Mountains, whofe Tops are perpetually covered with Snow, which exceedingly chills the Air paffing over them. The Fogs and Mifts that are brought here from the Polar Parts in Winter, appear vifible to the naked Eye, in Ificles innumerable, as fmall as fine Hairs or Threads, and pointed as fharp as Needles. Thefe Ificles lodge in our Cloaths, and if our Faces or Hands are uncovered, they prefently raife Blifters as white as a Linnen Cloth, and as hard as Horn: Yet if we immediately turn our Backs to the Weather, and can bear our Hand out of the Mitten, and with it rub the bliftered Part for a fmall Time, we fometimes bring the Skin to its former State, if not, we make the beft of our Way to a Fire, and get warm Water, wherewith we bathe it, and thereby diffipate the Humours raifed by the frozen Air, otherwife the Skin would be off in a fhort Time, with much hot ferous watery Matter, coming from under it along with the Skin; and this happens to fome almoft every time they go abroad, for five or fix Months in the Winter; fo extreme cold is the Air when the Wind blows any thing ftrong.

Now I have obferved, that when it has been extreme hard Froft, by the Thermometer, and little or no Wind that Day, the Cold has not near fo fenfibly affected us, as when the Thermometer has fhewed much lefs freezing, having a brink Gale of Northerly Wind at the fame Timer This Difference, perhaps, may be occafioned by
thofe fharpopointed Ificles before-mentioned, ftriking four Months; in the Winter; at Canada, about five more forcibly on a windy Day than in calm Weather, thereby penetrating the naked Skin, or Parts but thinly covered, and caufe an acute Senfation of Pain or Cold. And the fame Reafon, I think, will hold good in other Places; for fhould the Wind blow Northerly any thing hard for many Days together, in Englond, the Ificles that would be brought from the Polar Parts, by the Continuance of fuch a Wind, though imperceptible to the naked Eye, would more fenfibly affect the naked Skin, or Parts but lightly covered, than when the Thermometer has fhewn a greater degree of freezing, and there has been little or no Wind at the fame Time.

It is not a little furprizing to many, that fuch extreme Cold fhould be felt in thefe Parts of America, more than in Places of the fame Latitude, on the Coaft: of Norway; but the Difference I take to be occafioned by the Winds blowing conftantly here, for feven Months in the twelve, between the North-eaft and North-weft, and paffing over a large Tract of Land, and exceeding high Mountains, $\mathcal{E}^{3} c$. as before-mentioned. Whereas at Drontheim in Nor way, as I obferved fome Years ago in wintering there, the Wind all the Winter comes from the North and North-north-weft, and croffes a great Part of the Ocean, clear of thofe large Bodies of Ice we find here perpetually. At this Place we have conftantly, every Year, nine Months Froft and Snow, and unfufferable Cold, from October to the Beginning of May. In the long Winter, as Air becomes lefs ponderous towards the polar Parts, and nearer to an Equilibrium, as it happens about one Day in a Week, we then have Calms and light Airs all round about the Compats continuing fometimes four and twenty Hours, and then back to its own Place again, in the fame Manner as it happens every Night in the Weft Indies, near fome of the Iflands.

The Snow that falls here is as white and fmall as Duft, but never any Hail except at the Beginning and End of Winter: Almoft every Full and Change of the Moon, very hard Gales from the North.

The conftant Trade-Winds in thefe northern Parts, I think undoubtedly proceed from the fame Principle which our learned Dr. Haley conceives to be the Caufe of the Trade-Winds near the Equator ; and their Variation. " Wind, fays he, is moft properly defined to be the "s Stream or Current of the Air, and where fuch Current " is perpetual and fixed in its Courfe, it is neceffary that "s it proceed from a permanent and unintermitting Caufe, " capable of producing a like conftant Effect, and agree"s able to the known Properties of Air and Water, and "the Laws of Motion of fluid Bodies. Such an one is, "I conceive, the Action of the Sun's Beams upon Air © and Water, as he paffes every Day over the Oceans, ${ }^{66}$ confidered together with the Nature of the Soil, and *S Situation of the adjoining Continents: I fay therefore, ${ }^{66}$ firft, that according to the Law of Statics; the Air ${ }^{66}$ which is lefs rarefied and lefs ponderous, mutt have a © Motion towards thofe Parts thereof which are more " rarefied, and lefs ponderous, to bring it to an Equili" brium," E'c.

Now that the cold denfe Air, by reafon of its greater Gravity, continually paffes from the folar Parts to the Equator, where Air is more rarefied, to preferve an Equilibrium, or Balance of the Atmofphere, I think is very evident from the Wind in thofe frozen Regions blowing from the North and North-weft, from the Beginning of Obzober until May; for we find that when the Sun, at the beginning of fune, has warmed thofe Countries to the Northward, then the South-eaft, Eaft, and variable Winds continue till October again; and I do not doubt but the Trade-Winds and hard Gales may be found in the Southern polar Parts, to blow towards the Equator when the Sun is in the Northern Signs, from the fame Principle.

The Limit of thefe Winds from the polar Parts towards the Equator, is feldom known to reach beyond the 30 th Degree of Latitude; and the nearer they approach to that Limit the fhorter is the Continuance of thefe Winds. In Nero England it blows from the North near

Months ; at the Dawes Settlements in Streight Davis, in the 63 d Degree of Latitude, near feven Months; on the Coaft of Norreay, in 64 Degrees, not above five Months and a Half, by reafon of blowing over a great Part of the Ocean, as was before mentioned; for thefe northerly Winds continue a longer, or fhorter Space of Time, according to the Air's being more or lefs rarefied, which may very probably be altered feveral Degrees, by the Nature of the Soil, and the Situation of the adjoining Continents
The vaft Bodies of Ice we meet with in our Paffage from England to Hudfon's Bay, are very furprifing; not only as to the Number, but Magnitude. It is in truth unaccountable how they are formed of fo great a Bulk, fome of them being immerfed a hundred Fathoms or more under the Surface of the Ocean, a fifth or fixth Part above, and three or four Miles in Circumference : Some hundreds of thefe we fometimes meet in our Voyage here, all in Sight at once if the Weather is clear; fome of them are frequently feen on the Coafts and Banks of Nerefoundland and Nere England, though much diminifhed.

When I have been becalmed in Hudfon's Streights, for three or four Tides together, I have taken my Boat and lain clofe to the Sides of one of them, founded, and found a hundred Fathoms Water all round it. The Tide floweth here above four Fathoms, and I have obferved upon a Body of Ice, the Tide to rife and fall that Difference; which was a Certainty of its being a-ground: Likewife, in a Harbour in the Inand of Refolution, where I continued four Days, three of thefe Inands of Ice (as we call them) came a-ground; I founded along by the Sides of one of them quite round it, and found thirty-two Fathoms Water, and the Height above the Surface but ten Yards, another was twenty-eight Fathoms under, and the perpendicular Height but nine Yards above the Water.

I can in no other manner account for the Aggregation of fuch large Bodies of Ice; but that along the Coafts of Streight Davis, both Sides of Baffin's Bay, Hudfon's Streights, Anticofic or Labradore, the Land is very high and bold, and a hundred Fathom and more clofe to the Shore. Thefe Shores have many Inlets or Firths, the Cavities of which are full of Ice and Snow by the almoft perpetual Winter there, and frozen to the Ground, in creafing for four, five, or feven Years, till a kind of Deluge, or Land-flood, which commonly happens in that Space of Time throughout thofe Parts, breaks them loofe and launches them into the Streights or Ocean, where they are driven about by the variable Winds and Currents, in the Months of Fune, $\mathcal{F} u l y$, and Auguf, rather increafing than diminifhing in Bulk, being furrounded (except in four or five Points of the Compafs) with fmaller Ice fos many hundred Leagues; and Land covered all the Year with Snow, the Weather being extreme cold for the moft Part in thofe Summer Months. The fmaller Ice that almoft fills the Streights and Bays, and covers many Leagues out into the Ocean along the Coaft, is from four to ten Fathoms thick; and chills the Air to that Degree that there is a conftant Increafe to the large Ines, by the Sea's wafhing againft them, and the perpetual wet Fogs like fmall Rain, freezing as they fettle upon the Ice; and their being fo deeply immerfed under Water, and fuck a fimall Part above, prevents the Wind's having mucla Power to move them; for though it blows from the North-weft Quarter near nine Months in twelve, and confequently thofe Ines are driven towards a warmer Climate, yet the progreffive Motion is fo flow, that it muft take up many Years before they can get five or fix hundred Leagues to the Southward: I am of Opinion, fome hundred Years are required; for they cannot, I think, diffolve, before they come between the 50 th and 40 th De grees of Latitude; where the Heat of the Sun confuming the Upper-parts, they lighten, and wafte in Time; yet there is a perpetual Supply from the Northern Parts, which will fo continue as long as it pleafes the Author of all Beings to keep Things in their prefent State.

Obfervations of the Longitude, Latitude, and the Declination of the Magnetic-Needle at Prince of Wales's Fort, Churchill River.

Having obferved the apparent Time Hou. Min. Sec. of an Emerfion of Fupiter's firft Satellite at Fort Cburcbill, on $\}$

II: 55
Saturday the zoth of March laft,
1741-2, at
I find the fame Emerfion happened at Iondon, by Mr. Pound's Tables
compared with fome Emerfions 18 : 15 : I actually obferved in England, near
the fame Time, at
Whence the horary Difference of Meridians, between Fort Cburchill $\}$ $06^{\circ}:$ and London, comes out
Which converted into Degrees of
the Equator, gives for the Diftance $\} 94: 50: 00$ of the fame Meridians

Wherefore, fince the Time at London was later in Denomination than that at Cburcbill, it follows that, according to this Obfervation, Churchill is 94 Degrees $50 \mathrm{Mi}-$ nutes in Longitude Weft of London.
I took feveral other Obfervations, which agreed one with another to lefs than a Minute; but this I looked upon as the moft difinet and beft.

The Obfervation was made with a good fifteen Foot refracting Telefcope and a two Foot Reflector of Gregory's Kind, having a good Watch of Mr. Grabam's that I could depend upon; for I have frequent Opportunities of difcovering how much its Variation amounted to, and contantly found its daily Deviation or Error to be fifteen Seconds too flow; by which Means it was as ufeful to me, for all Purpofes, as if it had gone moft conftantly true, without any Change. This Watch I kept in my Fob in the Day, and in Bed in the Night, to preferve it from the Severity of the Weather; for I obferved that all other Watches were fpoiled by the extreme Cold.

I have found, from repeated Obfervations, a Method of obtaining the true Time of the Day at Sea, by taking eight or ten Altitudes of the Sun or Stars, when near the prime Verticle, by Mr. Smitb's or Mr. Hadley's Quadrant, which I have practifed thefe three or four Years paft, and never found, from the Calculations, that they differed one from another above ten or fifteen Seconds of Time. This Certainty of true Time at Sea, is of greater Ufe, in the Practice of Navigation, than may appear at firf Sight; for you not only thereby get the Variation of the Compafs, without the Help of Altitudes, but likewife the Variation of the Needle from the true Meridian every cime the Sun or Star is feen to tranfit the fame. Alfo, having the true Time of Day or Night, you may be fure of the Meridian Altitude of the Sun or Star, if you get a Sight fifteen or twentyMinutes before or after it paffes the Meridian ; and the Latitude may be obtained to lefs than five Minutes; with feveral other Ufes in aftronomical Obfervations, as the Refraction of the Atmofphere; and fo allow for it by getting the Sun's apparent Rifing and Seting, which any-body is capable of doing; and from thence you will have the Refraction.

If we had fuch a Telefcope contrived as Mr. Smith recommends to be ufed on Shipboard at Sea, now we can have an exact Knowledge of the true Time of the Day or Night, from the above Inftruments, and a good Watch, we fhould probably be able to obferve the Eclipfes of the firft Satellite of fupiter, or any other Phrnomenon of the like Kind, and thereby find the Diftance of Meridians or Longitude at Sea.

The Variation of the Magnetic-Needle, or Sea Compafs, obferved by me at Cburcbill in 1725 (as in No 393 of the Pbilofopbical Tranfaciions, for the Months of March and April, 1746) was at that Time North 21 Degrees wefterly; and this Winter I have carefully obferved it, and find it no more than Iy Degrees; fo that it has differed about one Degree in four Years; for in 1738 I obferved it here, and found its Declination 58 Degrees wefterly. I have carefully obferved, and
made proper Allowance for the Sun's Declination and Refraction, and find the Latitude here to be 58 Degrees 36 Minutes North ; but in moft Parts of the World where the Latitudes are fixed by Seamen, they are; for ehe moft Part, faifely laid down, for want of háving regard to the Variation of the Sun's Declination, which computed at a diftant Meridian, when the Sun is near the Equator, may make a great Error in the Sun's rifing and fetting, Azimutbs, \&c."
s 3. We cannot, after the Perufal of this ingenious Difcourfe, full of fo much curious Matter, and containing fuch pregnant Proofs of the Author's perfect Acquaintance with his Subject, doubt, that fuch a Perfon fhould be received with all the Marks of Efteem and Confidence poffible; by one who had formed a Defign of reviving this fo long neglected Difcovery, by an Attempt through Hudfon's Bay. The Gentleman who had then, and fill has, this Matter at Heart, was Artbur Dobbs Efq; a Man born to revive the old heroic Spirit, of turning all our Endeavours to the Service of the Public. This had led him to obferve, that the fureft and moft effectual Means of improying our naval Force, and extending our Navigation (things that have hitherto gone, and, indeed, muft always go together) was to open fome new Branches of Commerce, to which, as we fhould thereby have a better Title, fo by getting the Start of other Nations, we might be able to manage to greater Advantage.
He faw, likewife, that with whatever Expence this might be attended to the Public, it would not only repay the fame abundantly, but would alfo be, at the Bottom, much lefs chargeable than in Appearance; for there is in this refpect, fuch a Difference between public and private Expence, as deferves to be thoroughly examined; becaufe the comprehending of it is a thing of much greater Confequence, than can, at firf Sight, be eafily conceived. For if private Men embark in any Undertaking which demands the Difburfement of large Sums of Money, they can do it only with a View of Profit to themfelves; and confequently if they are either miftaken in their Defign, or mifcarry in the Execution of it, they are real Sufferers in proportion to the Lofs with which fuch an Attempt is attended; but the Cafe is very far from being the fame, when Undertakings of the like Kind are managed by the Public; for then the Money difburfed falls into the Hands of Individuals, and confequently though the Attempt may be difappointed, yet the real Lofs is little or nothing ; becaufe thofe who furnifh the public Expences receive the Money that is thus fpent, and it is no more than a different kind of Circulation, which, in the End, comes to very near the fame thing, as if the original Undertaking had coft little or nothing.

On the other Hand, the Views of private Perfons tend to their particular Advantage; ', and though this turns to the general Good of the Society, yet this is in a very fmall Proportion in Comparifon of what may be expected, and, indeed, muit neceffarily follow from Undertakings of fuch a public Nature, when attended with Succefs. An Inftance will make this plain. The Hudjon's Bay Company has now fubfifted near fourfcore Years, within which fpace of Time the Proprietors have been very large Gainers, but the Advantage to the Public has been very far from being great. They have expörted our Manufactures, but in very fmall Quantities; their Profit, upon fuch Exportations, has been very confiderable; but the Gain to the Public would have been much greater, if thofe Exportations had been larger, though the Balance, in favour of the Company, would then have been lefs. They employ but a few Ships, and a fmall Number of Seamen; their Factories are few and thin, all which may anfwer their Purpofes very well; but 'tis plain they do not anfwer the national Purpofe of enlarging our Navigation, and encreafing our Seamen.

Yet this is not all; we ought to confider the wide Difference between the Advantages accruing to the Public from the Trade of the Company, and the Advantages that would have accrued if a North-weft Pafiage had been fearched for and found; for if ever this hould be brought about, it is very clear, that for a great Part of this Time the Nation has loft all that might have been
acquired

## Chap. I. for difoovering a North-west Passage.

acquired thereby. It may be anfwered that this is founded upon a Suppofition only, to which I anfwer, that it is founded upon the fame Suppofition with their Charter; and therefore it was their Duty to look for it, which they have not donie. But let us now fee what Hopes Captain Middleton gave Mr. Dobbs of the finding fuch a Paffage and thefe we fhall give in this Gentleman's own Words, which are as follow.
4. "In his Letter to me of OEFober the 18 th, 1739 , ${ }^{66}$ he fays I was this Year at Cburcbill Factory, where Mr.
${ }^{\text {" }}$ Norion is Governor; he was along with Scroggs in the
"Year 1722 , and remembers very well, that when they " came to an Anchor in the Welcome, near the Latitude " of 65 Degrees, they had twelve Fathom at high ${ }^{6}$ Water, and but feven Fathom at low Water; and he
" feems confident, from a View that he took from a Pro-
${ }^{* 6}$ montary afhore, that there muft be a clear Paffage.
${ }^{6}$ "The Land is very high, and falls off to the Southward
${ }^{36}$ of the Weit. This Year fome of the Natives, who
" came down to treat at Churchill, and had never been
"6 before at any of our Englifh Settlements, informed
" him that they frequently traded with Europeans, on
"s the Weft Side of America, near the Latitude of Cburcb-
"ill, by their Account, which feems to confirm the
${ }^{66}$ two Seas muft meet. I remain, $E^{2} c$. Cbrifopher Mid-
st dieton.
"In another of his Letters of the 2 Ift of Fanuary,
" 1737 , he fays, That the Company think it their In-
" tereft, rather to prevent than forward new Difcove-
" ries in that Part of the World ; and for that Reafon
" they won't fuffer any of our Journals to be made pub-
" lic. All the Intimation I am able to give is, that the
*Tides rife more with a North and a North-weft Wind,
" at neap Tides, than ever the Spring-Tides do at
"Cburcbill or Albany, with a Southerly or Eafterly Wind;
" and as there is little or no Tide between Mansfield
" and Cary's Sxaans Neft, nor any in the North, or North-
" north-weft of Mill Ifles; in that Bay, it muft come
"from the Welcome, which cannot be far from fome
"Weftern Ocean. Alfo in Mr. Fobw Scroggs's Journal of
" 1722 , he mentions, that in Latitude $6_{4}$ Degrees 50
" Minutes, the Tide ebbed five Fathoms, but gives no
*Account which way, or from whence, the Tide came,
" and they all agree that a great many Whales are feen
" in the Welcome. Whereas I don't remember to have
" feen any in other Parts of Hudfon's Bay, and I have
" been in all Parts of it except the Welcome; all which
st are favourable Circumftances. I fhall be glad, at all
" times, to contribute what I can to your Information,
${ }^{46}$ and beg you will believe me to be, Sir, EGc. Cbrifopber
" Middleton.
"In another of his Letters of November the 5th, " 1737 , he mentions the Company's having fent out two "Sloops (at my Sollicitation) upon the Difcovery; they
" profecuted their Voyage no farther than Latitude 62
" Degrees 15 Minutes North, and returned without
" making any new or ufeful Difcovery; fo far as I can
" learn, they found a great many Inands, abundance of
" black Whales, but no very great Tides, the higheft
"s about two Fathoms, the Flood coming from the
As Northward.
" In his Extract from Siroggs's Journal, of the Wel-
"come, he alfo fays, that he had two Northern Indians
" aboard, who had been entertained in the Factory all
"t the foregoing Winter, upon the Account of his Dif-
"c covery; they gave us Information of a rich Copper

* Mine that lay near the Surface of the Earth, and faid
os they could direct the Sloop or Ship to lay her Side to
"it, where fhe might land very foon. We had feveral
"Pieces of Copper brought to Cburchill, and made it
"s evident there is a Mine fomewhere in that Country.
"Thefe Indians fketched out the Lands with Charcoal,
"s upon a Skin of Parchment, before they left the Fac-
${ }^{\text {sc }}$. tory, and as far as they went they found it agree very ${ }^{56}$ well.
"He afterwards fays, when they returned, which was ${ }^{66}$ in a Month's Time, or thereabouts, I examined the
${ }^{66}$ Officers and Men; feveral had been my Scholars, in
©s the Winter, to learn Navigation. They told me they Vol. II. Numb. 99.
${ }^{6}$ law nothing at thofe times they were afhore to hinder "s their going farther; for when they were eight or ten "Miles from Wbale-bone Point, which bore Eaft-north" eaft from them; they faw an open Sea, and the Land "s Atretched away to the Southward of the Weft. This "6 they faid to Scroggs's Face, as foon as they were got " aboard our Ship at Cburcbill; though while they were "s under his Command they diffembled it, and faid what " he pleafed to have them. From this; and all other Ac"counts, it appears there muft be a Paffage for the "Tides, from the Weftern Ocean."

We need not at all wonder, that upon having fuch Lights as thefe, Mr. Dobbs refolved to proceed, and to make ufe of all his Intereft at the Admiralty Board, to procure fuch Affiftance, and fuch Encouragement; to Captain Middleton, as fhould appear requifite for carrying this Defign into Execution. It is very evident that there was nothing precipitate, rafh, or hafty, in this whole Proceeding ; bur Mr. Dobbs acted with all the Caution and Difcretion, that in a Matter of fo great Importance to the Public, and of fo great Confequence to his own Character, it became him to do. He had advanced as far in this Enquiry, as it was poflible for a Man to do, without going to Hudfon's Bay in Perfon; and his Acquaintance with Captain Middleton feemed fufficient to fupply thar Defect; for he was allowed to be an excellent Seaman, and therefore a very proper Judge of the Probability, or Improbability, of fuch a Paffage; he had confidered that Point of his own Accord, and as we have โeen before, had collected Reafons fufficient to determine him to believe it probable. He had been, not once, but twenty times, at Hudfon's Bay. and confequently appeared one of the fitteft Men living, to be intrufted with the Direction of this Difcovery. Mr. Dobbs, therefore, acted with Wifdom and Prudence, as well as Honour and Gratitude, in recommending him to the Admiralty, as the rioft proper Perfon to be employed in an Expedition for the difcovering a North-weft Paffage. All thefe Facts I have related as they appear to me, and with the Impartiality becoming an Hiftorian. I have no perfonal Knowledge of either of thefe Gentlemen, and I never fought it, that I might not fall tinder any Prejudices, or Prepoffeffions. I report all things as fairly as I can, and if there be any Errors or Miftakes, they muft proceed, not from any Fault in my Will, but in my Underftanding. And with this $I$ thought it neceffary to acquaint the Reader, as well as that I am not at all a Party in this Difpute; and that my only Motive to meddle therewith, is for his Service.
5. It was natural for Mr. Dobbs to expect this Expedition fhould meet with fome Checks and Difcouragements; from thofe who were moft capable of promoting it, I mean the Hudfon's Bay Company; but it is certain that he did not expect near fo much Trouble in this Affair, as he met with. Speaking of it after the Return of Captain Middleton, he throws all the Paffages relating to this Matter together; and having firft obferved that this was an Undertaking the Company was by their Charter bound to promote, goes on in the following Nianner :
" This, fays he, they have not only neglected to do, "but have concealed the Knowledge or Prefumptions " they had of it as much as poffible; and have not "6 only chicaned when applied to, but have actually, by " Letter from their Governor, refufed to look for it, "when applied to tipon that Account; and have alfo
"difcouraged the Attempts of others; not only by con-
"cealing the Navigation into thofe Seas, by obliging
"s their Captains, under a Penalty, not to make or pub-
"c lifh any Charts or Journals of thofe Seas and Coafts, "6 orVoyages thither, but alfo by putting all the Difficulties
"s they durft, upon the King's. Ships lately fent upon the "Difcovery; having claimed, and taken from Captain "Middleton, an Indian Boy, whom he had brought to "England, and having learned the Englifs Tongue, " would have proved a good Interpreter; and made his " Clerk a Governor of one of their Factories, to induce " him to leave him, and alfo fent away their Ships a " Month earlier than ufual, to lie in the Orkneys, left he " fhould have gotten any of the Sailors, who had been is accuitomed to, and acquainted with, the Navigation;
${ }^{66}$ but
" but even went farther, to tempt the Captain to quit "s the King's Service,' and not to attempt the Difcovery; " and offered him 5000 l. either to return into their Ser-
"s vice, or look for it in Davis's Streight, or Baffin's Bay,
"A and hot to look for it in Hudfon's Bay, or at the TWe elcome.
"Alledging it would coft the Company fo much to Tup-
". port their Right againt the Crown ; and as the had
"been their Friend, and knew all their Concerns, it
" would be better to give him that Sum; than to give it
"to the Lawyers.
"When they found him Proof againt their Bribery,
" they then thought to diftrefs him another Way, by
"s writing to their Governor at Cburcbill, which was the
" moft convenient Harbour for the King's Ships to
" winter in, anid was neareft to the Paffage, not to re-
"ceive him into their Port. And afterwards, when the
". Company was applied to by the Lords of the Admi-
" ralty, to allow him to winter there, if it was neceffary
"for him, and to give him what Affiftance they could,
" in fupplying his Wants, which they would thankfully
"repay the Company in London; after deliberating
" fome Time upon an Anfwer, they wrote to the Lords
" of the Admiralty, that they had fent fuch a Letter as
" their Lordfhips defired, to their Governor at Cburcbill,
" and difpatched it by Poft to their Ships at the Orkneys.
"This being no way fatisfactory to Captain Middletorn,
"who had been informed of their Letter to the Governor
" not to admit him, he applied for a Duphcate, to car-
" ry it with him, in cafe the other fhould mifcarry, there
" being no fettled Poft to the Orkneys; upon which
" they gave him a Duplicate fealed up, and, upon Ap-
"plication, a Copy of it, to know what it (contained,
" which was in thefe Words:
Hudjon's Bay Houle, London, May 15, I74.
Mr. Fames I/bam, and Council, at Prince of Wales's Fort, Clourcbill River.

## Gentiemen,

" Notwithftanding our Orders to yoit, if Captain ${ }^{6}$ Middleton (who is fent abroad in the Government's Ser"s vice, to difcover a Paffage North-weft) Mould, by in"s evitable Neceffity, be brought into real Diftrefs, and "Danger of his Life, and Lols of his Ship; in fuch Cafe "y you are then to give him the beft Affitance and Relief "you can. We remain,
"s Tour loving Frieit?s,
"Biove Lake, Governor, "Willian Ederton,
" F. Winter,
"Atwoell Lake,
"Fobir Antbony Merle,
"Fobn Meriry.
" Upon fo extraorainary a Difcovery of the Incli${ }^{56}$ nations of the Company, to baffe the Attempt of find"s ing out the Paffage, and to difcourage Captain Middle" 6 ton from profecuting the Difcovery; the Lords of the "Admiralty thought it neceffary to apply to the Lords "s of the Regency, that the Secretary of State might, by s6 their Orders, write to the Company, to require that "s Affiftance which they refufed to the Admiralty, which "6 was fent, and upon that the Company gave a Letter to "s the Captain, in a more humane and friendly Stile; but ${ }^{6}$ in Confequence of their Offer, it is plain that he ftifled os and difguifed the Difcovery of the Paffage. By this it "s is evident that the Company believe there is a Paffage, os which they want to conceal; for otherwife it had been "s their Interelt to have had the Attempt made, and if not ${ }^{66}$ found, there would have been an'End put to the pro"s fecuting it any farther; and they might probably have
${ }^{66}$ enjoyed their Trade to the Bay, without its being cos6 veted or enquired into. ${ }^{33}$

When all Difficulties were overcome, and things fo difpofed that nothing was wanting to Captain Middleton'ṣ purfuing his Voyage, but his Initructions from the Ad-
miralty, with refpect to the Meafures he was to purfue in his intended Difcovery; thefe were very foon procured, and appear to have been drawn up with great Circumfpection, and the moft perfect Knowledge of the Subject to which they relate, as the Reader cannot but allow, after the ferious Perufal of them.

Thefe Inftructions ran thus: "Whereas we have, in "Obedience to his Majefty's Commands, ordered the "Furnace Sloop, whereof you are Commander, to be "s fitted out, in a proper Manner, to proceed on a Voy "s age towards Hudfon's Streight, in order to attempt a "Difcovery of a Paffage, that Way, into the Weftern "American Ocean; and have appointed the Difcovery "s Pink, William Moor, Mafter (who is hereby required, "s and directed to follow, your Orders) to attend you on ${ }^{6}$ the Service: You are hereby required and directed, fo "foon as the faid Sloop and Pink are ready for the Sea, "s to fall down to the Nore; and when they have been "s paid what is due to their Companies, to proceed to
s Leith, and deliver the inclofed Packet to Captain Hol-
"born, Commander of his Majetty's Ship the Dolpbin; "containing Orders for the faid Captain to proceed, in
" Company with you, as far as the Inands of Orkney, for
" your better Security againft the Privateers of the Ene my, faid to be cruizing thereabout.

You are accordingly to proceed with the faid Ship "Dolpbin, as far as the aforefaid Inands, and then to st make the beft of your Way with the Sloop and Pink, ' under your Command, towards Hudfon's sitreight; and; "s after palling the fame, to proceed to Cary's Szians Nefe, "s and then fteer North-wefterly, fo as to fall in with the
"North-weft Land, at Sir Thomas Roe's Welcome, or ne "ultro, near the Latitude of 65 Degrees North.
"You are there to make the beft Obfervations you sc can, of the Height, Direction, and Courfe of the "s Tides, bearing of the Lands, Depth and Soundings of " the Sea and Sholes, with the Variations of the Needle. "6 When you come up with Wbalebone Point, in $6_{5}$ "D Degrees, you are to try the beft Paffage in doubling "s that Land, whether to Weftward or Eattward, in cafe "s it be an Ifland; and on which Side foever you meet "s the Tide and Flood, to direct your Courfe, fo as to ss meet the Tide, whether North-wefterly or Souths wefterly.
"If after, in doubling that Cape, you find either a
"Streight or an open Sea, you are to keep on your "Courfe, till meeting the Tide of Flood; and if it be
" fo wide as to lofe Sight of Land, then keep to the
"Larboard or American Shore, fteering South-weiterly,
" fo as to take the Bearings of the Lands and Sound-
" ings, and obferve whether there are any Inlets, Bays, "s or Rivers, to fhelter the Ships in, in cale bad Wea" ther, or contrary Winds, oblige you to take Harbour; "s and there make the beft Plans you can of fuch Har"s bours, and the Charts of the Coaft.
"You muft make no fay any where, whilft Wind "، and Weather permits (except for making Obferva" cions for your Safety in your return) until you get to "s the Southward of 60 Degrees North; and then, if you "continue to find an open Sea, make more careful Ob"fervations of the American Coaft or Iflands, and of "s the Head-lands, Bays, and Rivers, until you make "s the Latitude of 50 Degrees, or any more Southerly "Latitude, in cafe you find it convenient to winter on "s the Weftern Side of America. But if you hould find "s it more convenient to come into the Bay to winter, or "s can make your Paffage home in Time, after making " a Difcovery of the Paffage to the Weftern American "Ocean (which is more eligible) in order to profecute " the Difcovery to Advantage next Seafon; then you ${ }^{6}$ need proceed no. farther Southerly than 50 or 60 De" grees Latitude, and make all proper Obfervations of 's the Tides, Bays, Head-lands, Sholes, and Rocks, on " both Sides, if the Paffage be narrow, on which ever "s Side the Wind and Weather permits you; with the
"Variation, or any other curious Obfervations you can ' make.
"I If you find any Inhabitants upon the Coaft, or any "populous Nation to the Southward, you are to endea-
${ }^{6}$ vour, by all proper Means, to cultivate a Friendfhip "s and Alliance with them ; prefenting them with fuch
"t Trifles as they value, and fhewing them all poffible
"Civility and Refpect; but to take Caution, if
" they be numerous, not to let yourfelf be furprifed;
"c but to be conftantly on your Guard againft any "Accidents.
" If you find it proper to winter on the other Side of " the Paffage, get to a warm Clinnate, not more ". northerly than 42 Degrees, in fome fafe Harbour that "" may be of Ufe in a future Settlement, and rather "s make an Ifland, if there be a good Harbour, which
"s would be fafer than on the Continent for an Infant
"Settlement.
" If your Place of wintering is within a proper Diftance " to be fupplied by the Natives on the Continent, take " proper Seeds of Fruit-Trees, Plants, Grain, and Pulfe,
" and fow them in the Spring ; or in cafe you find any
"civilized Nation who want fuch Kinds, you may pre-
" fent fome to them, and make them fenfible of their
"Ufe and Manner of Culture.
" In Places where you meet with Inhabitants, make
"Purchares with their Confent, and take Poffefion of
" convenient Situations in the Country, in the Name of
" his Majefty of Great Britain.
"But when there are no Inhabitants, you muft take
"Poffeffion by fetting up proper Infcriptions as Firft
"Difcoverers and Poffeffors.
" If in your Paffage you meet with any Ships trading
" to the weftern Countries eaftward of Japon, or any
"Faponefe Ships, and you apprehend any Danger from
"them, either from their Force or Number, you are to
"c proceed no farther in the Difcovery, but are imme-
"d diately to return, that Ships of fufficient Force may be
" fent out the next Seafon to begin a Trade, or to make
" a Settlement without any Apprehenfion of Difturbance
"' from any powerful Nation on that Side, left any Ac-
"cident fhould prevent your Return, and difcourage any
" farther Attempts to be made for the future. If you
"f hould arrive at California without any Apprehenfion
"s of Danger, and chufe to winter in 42 Degrees (where
"Caxton is faid to have found a civilized Nation and a
" good Harbour) or more foutherly, then endeavour to
" meet Capt. Anfon in the Month of December, before
"t the Arrival of the Manilla Ship at the Cape St. Lucas,
" the fouthern Cape of Californic, and leave a Copy of
" your Journal with him, left any Accident fhould
" happen to you upon your Return, and fo the Difcovery
" be loft, and it might prevent Ships being fent out to
" your Relief in cafe of Shipwreck.
" But forafmuch as in an Undertaking of this Nature,
" feveral Ennergencies may arife not to be forefeen, and
" therefore not io particularly to be provided for by $\mathrm{In}_{\mathrm{n}}$ -
"ftructions before-hand, you are in fuch Cafe to pro-
"c ceed as upori Advice with your Officers you fhall
" judge may be moft advantageous to the Service on " which you are employed.
"When you return home, you are to proceed into
" the River Tbames, and fend our Secretary an Account " of your Arrival, and Proceedings, for our Inform" ation. Given under our Hands the 20th of May, " 174 I .
"Cbarles Wager,
"Thbomas Frankland.
"Glenorchy.
"To Capt. Middleton, Commander of His Majefy's Sloop " the Furnace, Deptford.
"By Command of their Lordfhips.
"Thomas Corbett.
"By the Commifioners for executing the Office of Lord "High Admiral of Great Britain and Ireland, Esc.
" You are hereby directed, during the Courfe of your "" intended Voyage, not to give any. Difturbance or Mo" leftation to any of the Ships or Sloops employed in the
"Service of the HudJon's Bay Company; but to give "them all Protection and Affiftance that lies in your
"Power, whenever any Oppertunity offers of your be= " ing ferviceable to them. Given under our F-Iands the 2 2 th Day of Mcy, 174I.

〔Charles Wager,<br>"Vere Beauclerk,<br>"Glenorchy.

${ }^{6}$ By Command of their Lordfhips.
"Thomas Corbett." ${ }^{\text {T }}$
We may plainly fee from thefe Inftructions, that nothing was wanting on the Part of the Admiralty to further this important Difcovery, but that however Captain Middleton was leff fufficientiy at his Liberty, as indeed it was very reafonable he fhould, to profecute whatever Methods his own Circumfances and the Situation of Things fhould fuggeft to him for the Furtherance of the Defign when he came to be engaged in the Execution of it, and which it was impoffible to forefee and provide for before that time. It is plain alfo, that all due Care was taken of the Hudfon's Bay Company, in that they had not the leaft Reafon to complain that this Expedition made by the King's Ships, within the Limits of their Charter, could in any Degree turn to their Prejudice. But it is now time to fee what Effects a Scheme executed with fo much Judgment and Deliberation produced, and this will be beft feen from an Extract of the Captain's own Journal which we fhall give the Reader; and fhall then furnifh him with with fome other Lights, in order to thew why the want of Succefs in this Undertaking did not entirely deftroy all Thoughts of finding fuch a Paffage as Captain Middleton fought for through Hudfon's Bay.

## An Abtract of Captain Chrifopher Middleton's Fournal.

6. I failed from Cburcbill the Ift Day of July, and continued failing with a fair Wind till the 3 d, when we faw an Inland, the two Extremities bearing North by Eaft, and Eaft by North, lying in the Latitude of 63 Degrees North, and Longitude from Cburchill ${ }_{3}$ Degrees 40 Minutes Eaft; which I took to be the fame which Fox named Brook Cobbam. On the 5th Day I faw'a Head-Land on the North-fide of the Welcome, bearing North-weft by North, feven or eight Leagues diftant, in the Latitude of 83 Degrees 20 Minutes, and Longitude from Cburcbild 4 Degrees. Here I tried the Tides feveral times, and found clofe in with the Land the Tide to run two Miles an Hour from the North by Eaft, which I took' to be the Flood ; and by the Slacks, from feveral Trials, I found that a Weft, or Weft by North Moon, made high Water, having a Full Moon that Day. On the 8th Day I faw the North-fide of the Welcome, with much Ice in Shore: I tried the Tide, and found it fet Eaft north-eaft, two Fathoms. On the oth, continuing my Courfe, and failing through much Ice, I was obliged at length to grapple to a large Piece, the Tender did the fame, to keep off from Shore, the Wind blowing us right upon it : I tried the Tide frequently, and could difcover neither Flood nor Ebb by my Current-Log: Here we were faft jammed up in Ice, being totally furrounded for many Miles, and the Wind fetting it right upon us: It was all Ice for ter Leagues to windward, and we were in great Danger of being forced afhore; but it happily falling calm after we had lain in this Condition two or three Days, the Pieces of Ice feparated, or made fmall Openings; we being then within two Miles of the Shore, and with no fmall Difficulty hauled the Ship from one Place to another, till we got amongft what we call Sailing Ice, that is, where there are fuch Intervals of Water as a Ship, by feveral Traverfes may get forward towards the intended Courfe. In this Manner we continued till we faw a fair Cape or Head land to the northward of the Wbalebone Point, in the Latitude of 65 Degrees io Minutes; Longitude from Churcbill 8 Degrees 54 Minutes Eaft; and this named, after my worthy Friend, Cape Dobbs.
I had very good Soundings between the two Shores of the Welcome, having forty-fix, forty-eight, and forty-nine Fathoms Water. At the fame time that I faw Cape Dobbs I faw a fair Opening bearing North by Weft, which, ac-
cording
cording to my Inftructions, I ftood in for, among the failing Ice; it was juft Flood when we entered it, the Tide running ftrong; which, by Obfervations afterwards I found to run five or fix Miles an Hour. I run over fome Rocks on the North-fide of it very luckily, being juft high Water, and anchored in about thirty-four Fathoms; but fo foon as the Tide of Ebb was made, it ran fo ftrong, and fuch Quantities and Bodies of Ice came down upon us, that we were obliged to fteer the Ship all the time, and keep all Hands upon their Guard with Icepoles, to thove off the Ice; notwithftanding which we brought our Anchor home, and taking hold again, one of the Arms of the Anchor was broke off.

The next Day I fent my Lieutenant in the Boat, to feek out fome fecurer Place for the Ships, it being impoffible to keep afloat where we were. Some Ufkimay Savages came off to us; I ufed them civilly, made them Prefents, and difmifed them. As foon as I got the Ships fecured, I employed all my Officers and Boats, having my felf no little Share in the Labour, in trying the Tides, and difcovering the Courfe and Nature of this Opening; and after repeated Trials, for three Weeks fucceffively, $I$ found the Flood conftantly to come from the Eaftward; and that it was a large River we had gor into, but fo full of Ice there was no fteering the Veffel with any Probability of Safety, while the Ice was driving up and down with the ftrong Tides.

Here I lay not a little impatient to get out, went feveral times in my Boat towards the Month of the River, and from a Hill that over-looked Part of the Elcome, fidw that Place full of Ice, fo that I found there was no Time loft by our being in Security; however, I fent my Lieutenant and Mafter, in the eight-oared Boat, to look out for a Harbour near the Entrance of the River, but they found none'; and it was no fmall Miracle they got on Board again, for they were fo jammed up with Ice, which driving the ftrong Tides, would inevitably have fove the Boat to Pieces, and all muft have perifhed, had it not been for an Opening in a large Piece of Ice, into which they got the Boat, and with it drove out of the River's Mouth; but when the Tides nacked, the Ice opened as ufual, and they rowed over to the North Shore, fo got in with the Flood. I feveral Times fent the $I_{n}$ dions afhore to fee if they knew any thing of the Land, but they were quite ignorant of it. 'In this vexatious Condition I continued three Weeks, refolving to get out the firf Opportunity the River was any thing clear of Ice, and make what Difcoveries I could by meeting the Flood-tide. This River, of which by frequent Tryals of the Lands, Soundings, Tides, E' $c$. I was able to take a Draught, I named the River Wager, after the Right Honourable Sir Cbarles Wager.

On the 3 d of Auguf the River, for the firft Time, was a little clear of Ice; and accordingly, in Purfuance of our Difcovery, on the 5 th by Noon I got into the Latitude 66 Degrees 14 Minutes; we had then got into a new Streight, much peftered with Ice, and on the North-fide of which we faw a Cape or Head-land bearing North; we had deep Water, and very ftrong Tides within four or five Leagues of it: I named this Head-land Cape Hope, as it gave us all great Joy, and Hopes of its being the extreme North Part of America. Seeing little or no Land to the Northward of it, we turned or. worked round it the fame Night, and got five or fix Leagues to the North by Weft, before we could perceive any otherwife than a fair Opening; but about Noon the 6th Day, having got into the Latitude of 66 Degrees 40 Minutes, found we were embayed, and, by two in the Afternoon, could not go above three Leagues further, and having tried the Tides all the Forenoon every two Hours 'till two o'Clock in the Afternoon, found neither Ebb nor Flood, yet deep Waters. From this it was concluded, that we had overfhot the Streight on the North-eat Shore, from whence the Flood came; and as there was no. Proceeding above three or four Leagues further, it was agreed upon by all, to turn back and fearch narrowly for a Streight or Opening, near where we found the ftrong Tides.
On the $7^{\text {th }}$, after we were confirmed the Flood came in at the North-eaft from the Eaft by South, I went on

Shore in the Boat, and found it flowed fifteen Feet thre Days after the Full, and a Weft by South Moon made high Water. I travelled twelve or fifteeen Miles, from Hill to Hill, in Land, 'till I came to a very high Mountain, from whence I faw a Streight or Opening the Flood came in at, and, the Mountain I food on being pretty near the Middlè of this Streight, I could fee both Ends of it, the Whole being about eighteen or twenty Leagues long, and fix or feven broad, and very high Land on both Sides; but it was all frozen faft from Side to Side, and no Appearance of its clearing this Year, and near the 67 th Degree of Latitude, and no anchoring the Ships, being very deep Water clofe to the Shore, and much large Ice driving with the Ebb and Flood, and but little Room if thick Weather fhould happen, which we continually expected in thofe Parts, it was agreed upon in Council to make the beft of our Way out of this dangerous narrow Streight, and to make Obfervations between the 64 th and $6_{2} \mathrm{~d}$ Degrees of Latitude. The frozen Streight I take to run towards which Bylot named Cape Comfort, and the Bay where Fox had named a Place Lord Wefton's Portland; it is in the Latitude of 66 Degrees 40 Minutes, and 12 Degrees 49 Minutes Eaft from Churcbill.
Purfuant to this Refolution we bore away, and tried the Tides on the other Side the Welcome, founding and obferving clofe in Shore, but met with little Encouragement. On the Ith of Auguft I once more faw the Inand of Brook Cobbaw, and continued trying the Tides; and ftill finding the Flood come from the Eafward, and by coafting along the Welcome was certain of its being the main Land, though there are feveral finall Inands and deep Bays, and faw feveral black Whales of the right Whalebone Kind, I worked off and on by Brook Cobbam, fent the Northern Indians on Shore upon the Inand, who, at their Return, gave me to underftand, it was not far from their Country, and defired I would let them go Home; being tired of the Sea. I kept them with Affurances that I would act according to my Promife, and finding no Probability of a Paffage; in two or three Days after I gave them a fmall Boar, well fitted with Sails and Oars, the Ufe of which they had been taught, and loaded it with Fire-arms, Powder, Shot, Hatches, and every thing defireable to them; they took their Leave of me, and I fent another Boat for Water, which accompanied them on Shore, the Southern Indian being with them.
The Southern Indian, who was Linguift for the Northern ones, returned with the Boat ; being ufed to the Englif Cuftoms at the Factory, and defirous of feeing England, being a willing handy Man, I brought him with me; and the fame Evening, which was the I5 th of $A u$ guf, I bore away for England, thinking to have tried the Tide at Cary's Sroans Neft, but could not fetch it. On the 2oth I faw Manfells Ifle, on the 2 Ift Cape Diggs was in Sight; on the 26th made Cape Refolution, and arrived at Carrifon, in Pomona, one of the Inands of Orkney. Moft of my Men being fo very much afflicted with the Scurvy, and otherwife fick and diftempered, that I was obliged to leave Part of them behind me, and only wait to imprefs Hands to carry the Ship fafe to London.

This Account appeared very clear and very fatisfactory, even to Mr. Dobbs for fome Time; but upon re-confidering the Motives which induced him to believe there was fuch a Paffage, the Accounts given him by Captain Middleton formerly, and what he delivered upon this Subject in his Journal, he began to fufpect that Things were not fo clear as they feemed to be, but that fomewhere or other there was a Miftake; yet without charging Captain Middleton with any Breach of Duty, or fo much as fufpecting a Defign in him to conceal any Part of his Difcovery.
7. By Degrees, however, the Scene began to change. Mr. Dobbs came into an Opinion, that the Opening to which Captain Middleton had given the Name of the River Wager, was, in Reality, the Streight he was fent to difcover. He fuggefted this to that Gentleman, who adhered to his former Opinion, that it was a River and no Streight, that it was frefh Water and not falt, and that th. Whales which were feen in it, came through the frozen

## Chap. I. for difocering a North-west Passage.

Streight from the Eaftward. But while Mr. Dobbs and Captain Middleton were difputing this Matter in Letters, a new Affair broke out, which made a great Noife; for fome of the Ogicers who had ferved under Captain Middleton declared pofitively, that in their Judgment there was a Paffage, and that the Captain's Journal was calculated to conceal it. This produced a long Controverfy, attended with many perfonal Reffections on both Sides, into which it is not my Bufines's, nor have I any Inclination, to enter ; but fhall content myfelf with giving the Reader what I take to be the moft material Part of Mr. Dobbs's Charge, as it fhews upon what Grounds he believed the River Wager to be a Streight, and the Methods which, in his Opinion, Captain Middletori had taken to conceal its being thought fo; and this I fhall give in Mr. Dobbs's own Words, that I may not feem prepoffeffed in Favour of one Side, or prejudiced againft the other.
8. "In Captain Middleton"s going out, fays Mr. Dobbs, " he faw much Ice from Latitude $6_{3}$ Degrees 35 Minutes "to Cape Dobbs, as well as to Deer Sound in Wager River, " and in the Streight and Bay near Cape Hope this "Year; but none was feen in the Welcome by Button, " Fox, and Scroggs, the feveral Years they were there at "the fame Seafon, though Button and Scrogos were as " high up as.Whalebone Point, in Latitude 65 Degrees, " and Foo faw as far from Latitude 64 Degrees ro Mi"sutes, without feeing any Ice in the Sea, or Snow up" on the Land, but faw great Numbers of fmall Fih
" leaping, as well as many Whales near Brook Cobbam. "C Captain Middleton had, during his whole Voyage out
"from Cburcbill and back again to Brook Cobbam, very
" fine Weather, without any Storm, or Froit; or Snow,
"the Winds for the moft Part blowing from the Eaftern
"Quarter, fo that he had no Pretence upon his Return
"to avoid fearching the Weft-fide of the Welcome. It "" was thefe Eafterly Winds that Year which carried fo
" much Ice into the Welcome from the South-eaft as well
" as from the Bay and Streight near Cape Hope, all which
"was forced by the rapid Tide into Wager River; and
" it appears from che Journal, that it was thefe Winds " which caufed fo great a Quantity of Ice in the River " as far as Deer Sound, and not from the breaking out " of the Ice above in a Frefh-water River as he gave out; " and he would have made the Flowing-in of the Tide "fo far from the South-eaftward, to have been a Confirm-
"s ation of it; whereas, by what he has mentioned in
" his Journal, it is by all Circumftances a Salt-water

* Streightor Paffage; for the Increafe of itsWidenefs from
" feven Miles at its Entrance to eight Leagues, and of " its Depth from fourteen to eighty Fathoms, the Bold" nefs, Height, and Craggednefs of the Coaft, without
"t Tree or Shrub, and without any Snow or Ice in the "Valleys or Hills, are all Symptoms of its being a Salt-
"water Paffage; but the Number of Whales and other
" Fifh feen above in the Streight, at leaft twenty Leagues " up the River, when none were feen below, or in the "Welcome or Streight, and Bay above Cape.Hope, is a "Demonftration they did not come under the Ice into "Wager River from the Eaftward, and there being "none ever feen in the Bay or Streights of Hudjon, " but by broken Lands on the North-weft Coaft, it is " next to a Certainty that they came from the Weftern "Oceaz to that Place; for it is contrary to Reafon and "Fact, to fuppofe that Whales and other Sea-fifh fhould ${ }^{26}$ go up a Frefh-water River, as he affirms it to be; " but it was very natural for the Whales to be there, if " they come in from the Weftern Ocean, which was not " fo liable to be frozen as an Inland Bay, for they would "pufh their Way through the Streights and broken "Lands, until they were prevented by the Ice, which ${ }^{\text {s6}}$ "the Eafterly Winds drove into the Streight from the "Welcoine along with the Flood; and this was jammed "c in among the Iflands in the Paffage, and appeared to "t to be firm Ice, as it alfo appeared from the Hills to be " fo below them to the Mouth of the River.
"This alfo cafily accounts for the Number of Whales "feen from Whalebone Point to Brook Cobbam, and even "to Whalecove, in Latitude 62 Degrees 30 Minutes, where many are caught by the Efkimaum Indians, when none Vor. II. Numb. 99.
${ }^{66}$ are feen in the other Parts of the Bay, on in the "Streights; for if there be a Communication between "the Weflern Ocean and the Bay in this Place, the Pre"fumption is, that it is not by one Paffage, but that is " may be all a broken Land, interfperfed with Mands, " as the Inands of Terra del Fuego are at the Streights of "Magellan, which is almoft a parallel Inftance; and " therefore this Streight of Woger may not be the only " Inlet into the Bay, but from Wbalecove unto that Ri" ver may be all broken Lands, with feveral Sounds a" mong the Iflands which are mentioned by Scroggs and "Fox, and cannot be controverted from this Journal; ;o " that the Whales might get to that Part of the Bay "fooner, as there was no Ice there to obftruct their Paf "fage, when there was much Ice in the Welcome and "Eaft Entrance of Wager Streight, which prevented "thefe Whales getting any farther than Deer Sound. " This, I think, makes it highly probable, that there " is a better and eafier Paffage Southward of Cape Dobbs "betwixt that and Whalecove, in Latitude 62 Degrees " 30 Minutes, where there is no Ice to obitruct the Paf" lage from the Middle of ${ }^{\text {Fune }}$ to OETober: and if the "Trade was once opened, this might be difcovered by any "Ships who would go there to fifn for Whales, or would " trade with the Natives for Fin or Oil, who might fol" low them into Inlets, through which they come into " the Bay; and this may be done without wintering " in the Bay; for they may return any Time in Septem"ber or Oitober, fafe from any Obftruction from the " Ice."
The only feeming Objection to this, and which gave a Hand to Captain Middleton to reprefentWager Streigbt as a Frefl-water River was, the Tide flowing into it from the Eaftward, when if it had been a Streight, he imagined he might have met a Tide of Flood from the Weftward, and therefore reprefented it as if the Ice was but breaking up in the River after he had entered it. But fince this is a Streight, and not an immediate Communication with the Weftern Ocean, he could not expect to meet the Weftern Tide 'till he had got half Way through the Streight; for each Tide flows up its own End of the Streight, and meet in the Middle. This is not only founded upon Reafon, but upon Fact, in the only parallel Inftance we know, that is, in the Magellanic Streigbt ; though, by Appearance, this Streight is a greater and bolder Streight than the other.
The Tide at the North-eaft Entrance of Magellan Streigbt flows from the Eatward, and rifes four Fathoms before it comes to the firft Narrow, which is but half a League wide, and from thirty to thirty-five Fathom deep; after a League or two it increafes to fix or feven Leagues wide, to the fecond, where it is about a League wide, and thirty Fathom deep. Within the fecond Narrow it increafeth again to five or fix Leagues wide, and the Tide ftill flows from the Eaftward, and rifes about ten Feet. In the middle Channel, about thirty Leagues within the Streight, it is two hundred Fathom, and the Channel but three Leagues wide, and from thence to the Middle of the Streight it leffens to two L.eagues wide, and about a hundred Fathom deep, and the Tide ftill flows from the Eaftward for above fifty Leagues. As they come near the Middle of the Streight, the Current of the Tide is not above an Hour at each Tide, and the Tide rifes nine Feet. Near Cape Quad, beyond the Middle of the Streight, it is but two Leagues wide, and for about thirteen Leagues farther it is rather lefs, fometimes not four Miles wide, from whence it gradually widens to the Weft Entrance, where it is five Leagues wide: So that Wager Streigbt is much larger fo far as they were in it, which was about thirty Leagues; it being by the Account, as mentioned in the Journal, fix or feven Leagues wide, and eighty Fathom deep; which, if there be no other, is a noble Paffage. But there is a great Probability of there being a better and fafer Paffage to the Southward of Whalebone Point, by which the Whales get into that Part of the Bay.
Thus, fays Mr. Dobbs, from the former Accounts, and. what has been divulged by Captain Middleton in his Journal, there feems to beftrong Prefumptions of a Paffage. But after fhewing what he has concealed, and falfified in his Jour-
nals and his whole Conduct from his going to Cburchill, until his Return to England, and even fince his Return, it will appear plainly that he intended to ferve the Company at the Public Expence, and contrived every Thing fo as to ftifle the Difcovery, and to prevent others from undertaking it for the future, fo as to fecure the Favour of the Company, and the Reward he faid they promifed him before he began the Voyage.

As to his Declarations and Conduct. during the Voyage, it appears by underiable Evidence, that he declared, in Prefence of fome of his Officers, to the Company's Governor at Cburcbill, that he fhould be able to make that Voyage, and none on board him fhould know whether there was a Paffage or not, and he would be a better Friend to the Company than ever.

The Lieutenant finding one of the Men at the Factory, who very well underftood the Northern Indian Language, and would have been of great Ufe upon the Difcovery, offered to take him with him at his own Rifque, faying, he would anfwer it when he came back, it being for the Good of the Service they were upon; but the Captain would not allow of it, for fear of difobliging the Company. The Captain in going Northward from Churcbill, never once went athore, nor fent his Boat to look out for any Inlet, or 'try the Tide, having only once tried the Current at Sea in Latitude $\sigma_{3}$ Degrees 20 Minutes, where he found a very rapid Tide, although he found much Ice to the Northward, and had Time enough before he entered the Ice, to try all the Coalt, but ftood off to the Faftward, until he paffed Cape Dobbs, and though he then found an Opening North-weftward, he only went in with a View to Chelter his Ships, but not to look out for a Paffage ; and therefore, when he went in, got to the North-eaft Side out of the Tide inftead of out of the South-weft Side, where he ought to have gone, if he had pufhed for a Paffage; and though he lay there three Weeks, he never but once went crofs to the Weftern Shore, and that only one Day or two before he quitted the River, pretending he could not do it for the Ice; and even this he does not mention in his Journal, although he found there an excellent Cove for fheltering his Ships. He once pretended to crofs the Streight from Deer Sound, where he had no Ice to prevent him; but after going two Leagues he returned and faid," it was too far, and he had tafted the Water, which was frefh, afking the Boat-men if it was not fo, which they contradicted, faying only, it was not very falt. When the Iieutenant went up to Deer Sound, he difcovered from a Mountain an Opening South-weftward, upon the other Shore, ten Ieagues diftant betwixt a high and low Headland, and alfo obferved the Ice there, when it was a Quarter Flood at Wager River, move down the River againft that Tide. Upon his mentioning this to the Captain, he was laughed' at, who afked him, From whence that Tide could come? and no farther Enquiry was made into it.

Afterwards, when from the Numbers of Whales, and Breadth and Depth of the River, it was given out among the Ship's Company, that they believed it was a Streight and no River, he rated feveral of them for pretending to fay fo againft his Opinion, faying, his Clerk was a double-tongucd Rafcal; that he would cane the Lieutenant, broomftick the Mafter, and lafh any others who hould concern themfelves about the Voyage, and threatened that if any kept private Journals, he would break up their Boxes, and take then from them; and though he allowed his Clerk to take the Bearings of the Land, and Profpects in other Parts of the Voyage, yet, when in the Wager River and at the Welcome, he forbid him from taking any. This happened when the Lieutenant and Mafter were down the River to look out for a Cove for the Ships, when they fhould fail out of the River. When they returned, he, imagining that Rumour would turn out to his Prejudice, in cafe no farther Enquiry was made about its being a Streight or River, faid they might go up and try the Tide, and fee if there was any other Way out into the Welcome, which was into the Bay, not into the Weftern Ocean; but by his Warrant limitted them to go to Deer Sound, or thereabouts, which was only where he had been himfelf before, and ordered
them to come back with the utmoft Difpatch the Nature of the Service would allow. This was the 28 th of $\mathfrak{f}$ uy. When they were gone he faid, he fuppofed the Lieurenant would bring back fome romantic Account of a Streight or a Paffage, but for his Part he would not take the Ships a Foot farther; and accordingly before their Return ummoored, and was preparing to warp out of the Cove, which he did the Morning after they returned. The Lieutenant, upon his Return, gave the following Report under his Hand, viz. July 27, 1742, I was ordered with the Mafter to take the fix-oared Boat, and to go up Savage Sound as high as Deer Sound, and try the Tides. I found that, the Flood there comes from the River Wager. It flowed there ten Feet Water.

We then failed from Deer Sound from the high bluff Land on the Weft-fide of the River Wager. The Courfe from the Inands off the North-fide of Deer Sound is NorthWeft, and North-Weft by North. By Compafs Variation allowed Weft by North. We founded all the Way over, and had no Ground with a Line of fixty-eight Fathom to the high bluff Land. We then ran up a Branch of the main River, and founded and found fifty Fathom one third, over that Branch; there were feveral Inands in it founded about a Leagme off an Inland on the North Side, and found thirty. Fathom Water, in running between the Iflands and the fuppofed Main, which was on the Weftfide of that Branch; the Frefhes fuddenly turned againft us, the Boat altering the Land very much before, founded, and had no Ground at fixty-eight Fathom; as we run up it we founded near a fmall Inand, and had twenty nine Fathom. We fteered Weft North-weft, between the Illands and the Weft Land, by Compafs (Weft by South) there being feveral Inands in the Fair Way, and no Ground in the Middle of the Channel at fixty eight Fathom. We went about fifteen Leagues above Deer Sound, and faw a Frefh or Run of Water coming againft us; and the Wind being fair, I was afraid of ftaying any longer, for fear of hindring the Ships from going to Sea; there is a great Probability of an Opening on the Weftfide, by the coming in of the Whales; but I could not go higher up to try it, for the above-mentioned Reafons.

We went to the Top of a high mountainous Land, from whence we faw a great Run or Fall of Water between the Weft Land and the Inands. It was very narrow, and, feemingly, not a Mile broad; and at the fame Time faw a fair Channel or Streight to the Northwards of the Inands, with Land on both Sides, as high as the Cape of Good Hope, running away to the Weftward, with many bluff Points and broken Lands; in coming down we faw feveral very large black Whales, playing about the Boat and afhore.

> Auguft I.

Jobn Rankin.
1742.

This being a ftrong Proof of an open Channel or Streight going to the Southward of a Wett, the Captain thought it too flagrant, and therefore there being fome little Variation between his Account and the Mafter's, made them cook up the following Report between them, which both were to fign; which being not fo particular, did not appear fo ftrong for the Yaffage. It run in thefe Words:

Purfuant to an Order from Captain Cbriftopher Middleton, Commander of his Majefty's Ship the Furnace, bearing date the 27 th of Fuly, 1742, We whofe Names are hereunto fubfcribed, took the Furnace's Six-oared Boat, and went from Savage Sound, where his Majefty's Ships, Furnace and Difcovery, then lay; and on the 28 th, at one in the Morning, arrived at Deer Sound, where we tried the Tide, and found the Flood came into that Place from the River Wager, and rofe at that Time ten Feet. At fix o'Clock the fame Morning we left Deer Sound (where we put the two Northern Indians afhore to kill fome Deer) and failed for a high bluff Land, on the North-weft Side of the River Wager. Our Courfe from the Inands on the North Side of Deer Sound, to the high bluff Land, was North-
welt

## Chap. I. for difoovering a Northewest Passage en.

weft by North, by Compafs. We founded frequently, and had no Ground with a Line of fixty-eight Fathom, all the Way over. When we were a-breaft of the high bluff Land, we fteered Weft-north-weft keeping the MidChannel, and ftill found no Ground at fixty-eight Fathom, excepting fome Inands that lay in the fair Way, about one third over the River, and thirty Fathom within a League of one of them. This Courfe we kept until we got about fifteen Leagues from Deer Sound; but finding the Tide or Frefh againft us, and the Wind coming fair, we were afraid of faying any longer, for fear of hindring the Ships from going to Sea. However, we came to a Grapnel with the Boat, and went up a high mountainous Land, where we had a fair View of the River, from whence we faw a great Run or Fall - of Water, between the fuppofed main Land, and the dforefaid Inand, very narrow feemingly, not a Mile broad, about a League from where the Boat lay. But to the Northward we difcovered a large Collection of Waters, in which were many Iflands, and high mountainous Lands on both Sides of it; the Weft-fide of it having many bluff Points and broken Lands. In our Return towards the Ships, and not far from Deer Sound, we faw feveral large black Whales, of the Whale-bone kind, fome of which came very near the Boat; fo that upon the whole, we think there may be fome other Paffage into the Sea, from the River Wager, befides that which his Majent's Ships, Furnace and Di/covery, came in at; and imagine there is a great Probability of an Opening or Inlet into the Sea, fomewhere on the Eaftfide thereof, though we cannot fix the Place. Given under our Hands this ift Day of $A$ Aggut, 1742.

Fobn Rankin.
Robert Wilfon.
It may be eafily feen with what View the Report was altered, the molt material Points being changed; for when they got beyond the North-weft Bluff, inftead of faying that the Current or frefh Water fuddenly turned againft them; it is here faid, being againft them, the firft being a Tide, the other a Stream. Again, inftead of mentioning a fair Channel or Streight over the Illands, running between the high Lands to the Weftward, it is here altered to a large Collection of Water to the Northward, in which were feveral Inands with high Land on each Side of it ; the Weft-fide having bluff Points and broken Lands, without determining the Courfe of the Streight ro the Weftward. And inftead of faying there was a great Probability of an Opening on the Welt-fide, by the coming in of the Whales, it is here altered to, Upon the whole, wethink there may be fome other Paffage into the Sea, from the River Wager, befides that which his Majefty's Ships came in at, without determining it to the Weftward, as in the other; but on the contrary, to make it feem otherwife, they fay, and imagine, there is a great Probability of an Opening or Inlet into the Sea, fomewhere on the Eaft-fide thereof, though we cannot fix the Place. This Change feems wholly calculated with a View to leave it undetermined, that the Captain might have it in his Power to fay, that the Opening was to the Northward or Eaftward, from Boffins's Bay, and pretend that the Whales came from thence. But both the Lieutenant and Mafter have fince confirmed that the Streight beyond the Inands, was four or five Leagues wide, free from Ice, and its Courfe ran Weft South-weft; and the Mafter having feen further than the Lieutenant, from the Top of a Mountain, where he killed two Deer, was for going further; but the Lieutenant, his Provifions being fpent, and he having exceeded his Orders by fifteen Leagues at leaft (for he computed it twenty Leagues, but the Captain would not allow it to be fo far) and had alfo out-ftaid his Time, he was afraid he fhould be put in Arreft, if he proceeded farther, and durft not proceed. However, he took a Bottle of Water filled there at the Shore, and two Botthes filled further down the Streight Eaftward. And the Captain, when he came aboard, owned that the Bottle of Water, taken up at the Weftern End of the Streight, near the Current or Fall of Water, was the falteft, which
the Mafter faid was as falt as any he had faited in thofe Seas, which was alfo confirmed by others who had tafted it aboard: The Lieutenant is now convinced that it was a Tide or Ripling, which came from the Went Sonth* weft, which ftopped the Way of the Boat, and made them come to a Grapnel, and that it was the Tide of Flood; for it was then flowing Water, and flowed fix Feet when he was afhore. But the Captain, under pretence it was brackifh, would not purfue the Difcovery of that South-Weftern Streight or Paffage, but immediately warped out of the Cove; and on the 4 th of Augufts the beft Month in the Year to perfect the Difcovery, he failed out of the River to make the Difcovery Northeaftward, the quite contrary Courfe he fhould have taken, according to his Inftructions. Nor did he call a Council to warrant him for quiteing the Difcovery s though on all Emergencies, or where it was likely to turn out to Advantage in promoting the Difcovery, he was directed to call one, and act for the beft of the Ser vice he went upon; but quitted the Paffage without Advice, by his own Authority and Pleafure; pretending all the while he was in the Paffage, to regret that he could not get out off the River for the Ice in it and the Welcome, in order to profecute the Difcovery. After this, in order to have an Excufe, and to pretend that he had followed his Inftructions, which was to proceed, without lofs of Time, to Wbalebone Point, and there to endeavour to meet the Tide of Flood, on cither Side of that Point he found the beft Paffage, in cafe it were an Inand, whether the Flood came from the North-weft or South-weft ; and if he found, after doubling the Cape; either a Streight or open Sea, to purfue his Courfe, ftill meeting the Tide of Flood; though this limited him to meet the Tide, if it came from any Part to the Weftward, yet he finding the Tide did not meet him; but followed him into Wager River; and having taken no Pains to know how the Flood was at the Weft End of the Streight, beyond Deer Sound, defpifing the Lieutenant's firft Report, which mentioned a Tide from the Weft South-weft meeting them; thought if he could find a Tide, or have a Probability to account for a Tide's coming from the North Eaftwards into Wager Rivers he might then fay he followed his Inftuctions in meeting the Tide, although it came from the North-eaft; and accordingly, without allowing any Boat to go amore to try the Tide, until he himfelf landed at Frigid, at what he calls the Frozen Streight, he, in his Journal from his own Obfervations of the Current, always affirms the Tide of Flood came from the North-eaft, by Cape Hope or Wager River ; and affirms, that at Cape Firigid a Weft-by-fouth Moon made high Water, and that it flowed from the South Eaftward, through a frozen Streight, from four to feven Leagues wide; and accordingly he has laid it down fo in his new Chart, fince his Return, and pointed all the Darts in it ; fhewing the Courfe of the Flood through the Frozen Streigbt, up into Wager River, and as far as Brook Cobbam, along the Welcome, where he pretends the South Eaftern Tide meets it.
9. Now I fhall plainly make it appear from Reafon, and from the Obfervations of experienced Men aboard him, his own Officers, and from his Caution in preventing any aboard him from knowing the Time, Current, and Heighth of the Tide, by his making his Obfervations only aboard, and regulating and minuting them down only in his Log-Book and Journal, only as he thought proper ; that there was no fuch Tide from the North-eaft, and that he muft have known that there is no fuch. Tide; but endeavoured to conceal the true Tide from his People aboard. I thall alfo fhew that the Tide of Flood came the contrary Way from the South WeItward, near Brook Cobbam, and fo went up Part of Wager River. I fhall alfo fhew there was no fuch Frozen Streight as he has laid down in his Chart, but the whole is falfely laid down, and the only Streight there was round the Ifland he food upon, which was but three Leagues wide, and full of fmaller Inands, which Streight went round the Illand from North by the Ean, and came out again by the South and Weft. between the Inland he was on, and the low Beach of Cape

Hope; in that to make out the Point, that he had fo far followed his Inftrutions in meeting the Tide of Elood, he has manifefly and falfely impoled upon the Public in his Chat, by making a Streight and Tide where there Was none.

To fhew that he has given a falfe Account of this Tide and frozen Streight I muif obferve, That when he fent down the Lieutenant and Mafter to look out for a Cove at the Mouth of IV ager River, they were inclofed in the Ice, and drew up the Boat upon a large Piece of Ice, which was carried by the Tide of Ebb to the Southeaftward, clofe by the Shore, about Cape Dobbs; and when the Tide flacked they rowed over with the Flood to the North Shore, to get into the Eddy out of the Current, and next Day went up the River. Again, When the Ship failed up the River they were becalmed, and were afraid of being forced up again by the Return of the Flood; upon which they towed with their Boats ahead, and plied with the Ship's Oars with all their Force to the North-eaftward to get out of the way of the Tide of Flood; but if the Flood had come from the Northeaft, they would have been juft in the way of the Tide of Flood, and to have avoided it they ought to have fteered their Courfe South-eaf, to Cape Dobbs; fo that both the Accounts tally, that the Flood came from the Southweft round Cape Dobbs. At half an Hour after two, on the 6th of Auguf, he ordered the Lieutenant afhore at the low Beach, to try the Tide, being then four Miles from the Shore; at three he made the Signal for him to come on aboard before he got to the Shore; but he was fo near as to report, That the Tide had fallen two Feet ; fo that he feemed to repent his having fent him to try the Tide, left he. fhould find a contrary Tide to what he gave out. 'Tho' the Lieutenant, when he got aboard, told him it was ebbing Water, and that the Ebb went to the South-weftward, yet he minuted it down in his LogBouk, and printed it fo in his Defence, that it was flowing Water, and the Flood came from Eaftward; but in his Journal he fays, it had ebbed two Feet, and the Flood came from the Eaftward.

The Captain's Clerk, Gunner, and Carpenter, went afhore at Cape Frigid the 8th of Auguf, about ten in the Morning; and after going fifteen Miles into the Country returned to the Boat about feven at Night, when he found it was low Water, and rofe fifteen Feet, which being three Days and a half after the Full Moon, a Weft-fouthweft Moon made low Water, and confequently a North-north-weft Moon made high Water ; and having afcertained that a Weft by North Moon made high Water in Wager River, the Tideat Cape Frigid being five Points later, could not raife that Tide; for the Tide, the further it flows, is always the later in flowing; and therefore the Tide in Wager River, being at leaft three Hours fooner than at Cape Frigid, it could not poffibly be caufed by any Tide from thence, nor could the Tide near Brook Cobbam, where a Weft Moon made high Water, be caufed from that Tide for the fame Reafon, it being above four Hours fooner than the Tide at Cape Frigid.

It appears alfo, that there was no Tide or Current in the Bay above Cape Hope; and the Gunner, who was afhore with the Captain, went with the Carpenter two or three Miles farther than the Captain and Clerk, even to the very Shore of what he called the Frozen Streight, and confequently knew it: better than the Captain. He fays it was an Inand they were upon, and the Streight was only an Arm of the Sea that furrounded the Inand, and detached it from the low Beach; that it was not above three Leagues wide on the Eaft fide, and full of Inands ; that the Ice was frozen faft from Side to Side: fo that it is impofible fo great a Quantity of Water could pafs through that Paffage if it had a Communication with Hudfon's Streigbts by Cape Comfort, as would fill fo large a Bay as that above Cape Hope (the Streight from Cape Hope to Wager River) all that River for thirty or forty Leagues, which was from four to twelve Leagues wide, and the whole Coaft of the Welcome to Brook Cobbam above fixty Leagues, and that from a Streight which was but three Leagues wide, and had many Inands in it : fo that the Streight, exclufive of the Inands, was not
probably four Miles wide. Befides, had fo much Water flowed from that Streight, as he has laid down in his Chart, it muft have caufed a very rapid Current in the Bay above Cape Hope, it being in the direct Courfe of the Tide. The Captain of the Difcovery alfo, in his Anfwer allows, that the Opening of the Streight he faw, which was betwixt Cape Firigid and the Low Beach was not above three Miles wide, and no fuch Tide flowed there as in Wager River, although it was fo narrow in that Place.

This alfo accounts for thatArm of the Sea's being frozen which furrounded the Inand, becaufe there was no Tide or Current there to break it up. It alfo appears from the Lieutenant who was left on board to command when the Captain went afhore, that, at eleven $0^{\circ} \mathrm{Clock}$, after the Captain left the Ship, a ftrong Current forced him to northward, which muft have been the Flood, as it was not high Water until one o'Clock. And it appears alfo the fame from the Men who were left with the Boat; for upon the Captain's Return to the Boat he afked them which way the Flood fet, and they faid to the North ward; which he contradicted, and faid, they were miftaken, for it could not be fo. So that from all thefe Facts, as well as from Reafon, it appears, that the Tide of Flood came from the South-weftward to that Place and the River Wager ; and that the Tide and Streight which he has laid down in his Chart, and publifhed in his Journal, is falfe, and an Impofition upon the Public, and only calculated to ferve his Purpofe of concealing the Paffage, by endeavouring to make out that no Tide came from the Weftward, but all through Hudforn's Streight and Baffin's Bay; and that Wager was a frefh Water River, and that the Whales feen there came all in through that frozen Streight from Baffin's Bay or Cumberland's Inlet, he having allowed that none came in through Hudjon's Streiglot, or round Cary's Sevans Neft.

But as a further Confirmation of this South-weftern Tide, and that it came from the weftern Ocean, it appears that, after the Captain had neglected looking into the Bays and Inlets in the Weft fide of the Welcome, from Cape Dobbs to Marble Ifland (aithough it had been ordered in Council) in thefe Words, " It was agreed upon " to make the beft of ourWay out of this cold, dangerous " 6 and narrow Streight, and to make further Obfervations " between the Latitude of 64 and 62 Degrees on the
" North-fide of the Welcome, having feen large Openings,
" broken Land, and Illands, with ftrong Tides; but " had not an Opportunity of trying from whence the "Flood came, in our Paffage hither. Given under our " Hands this 7 th of Auguf, I 742 .

"Geo. Axx.
"F. Hodgton.
"W. Moor, Mafter of the Dijcovery."
When he came to Marble Ifand, which he called Brook Cobbam, having called another Inand io upon his going northward, the fame Fox had called fo before, on the 12 th, at three in the Morning, he fent the Lieutenant afhore to try the Tide, and to look out for a Place of Safety, to water the Ships before they returned to England. The Inand was feven Leagues long and three over in the broadeft Place. It lay Eaft by South, and Weft by North, the true bearing Variation allowed, and about three Leagues from what they called the Weftern Main. The Lieutenant on the South-fide found an excellent Cove fafe from all Winds, with a fmatl Inand lying crofs the Entrance : He founded without and within the Cove, and found two and a half Fathom in the Entrance at low Water, and deep and fafe lying within it; whilft he was founding, taking a Draught of the Cove, and upon the Illand taking a View of an Opening, he obferved on the Weft Main the Indians killed a Deer and a white Bear; and about eight at Night, as they were taking of the Bear-Skin, a ftrong Tide of Flood came from the North-weft by the Compars, and had almoft carried the Bear away; which proves that the Tide of Flood came from the Weitward. This I fhall

## Chap. 1. for difcovering a NORTH-WEST PASSAGE.

give in his own Words, as he minuted it down at Marble Ifland at the fame Time it happened, annezed to the rough Draught he made of the Cove, riz.
This is the Cove upon Brook Cobbamz or Marble Ifland; it was almoft dark; my Men were taking the Skin off the Bear they had killed in the Water.
The Tide came fuddenly from Weft-north-weft, round the North-weft-end of the Ifland, upon us, and flowed fo faft that we had almoft loft the Bear ; we were forced to throw it into the Boat, our Men up to the Middle in Water, by the fudden Flowing of the Tide; as all the Men can prove.
I am very certain that there is a great Probability of a Paffage or Streight leading to fome Weftern Ocean, from the above Reafon; for I did obferve an Opening to the Weftward of Marble Ifland, and defired I might go there : But he told me it did not fignify much to go thither; but if I had a Mind to go to Marble Ifand tor Water, I might. So I did not come near the Opening I perceived to the Weftward; it was almoft calm all the Day we lay there.

Auguff : 12,<br>1742.

Fobn Rankin.

After the Lieutenant returned aboard, the Mafter was fent afhore ; upon his Return, he told him, the Tides rofe there very high, and wanted to go afhore again, to obferve them, which he refufed, under Pretence he had ftaid too long afhore before. It appears from the Journal, that by the Marks on the Shore, it fometimes rofe there twenty-two Feet.
It is allowed alfo, that a North-wefterly Wind, at Cburchill, always raifed the Tides higher at Neap Tides; than a South-eafterly Wind did at Spring Tides.

The two Northern Indians, who were aboard Captain Middlleton, were very intelligent Men; and the other Indian being a very bad Interpreter for them, Mr. Thompfon the Surgeon, who could fpeak fome of the Southern Indian Tongue, was endeavouring to learn their Language, and to teach them Englifh; and was making out a Vocabulary of their Language, which the Captain obferving, threatened to ufe him ill, or crop him, in cafe he had any Correfpondence with them; fo that he was obliged to meet them in private; and for that Reafon could not know fo much from them, as he otherwife would; but from the beft Account he could get from them, they told him, that the Copper Mine, which they generally went to once in two Years, was not far from the Coift where they were, between Latitude 62 De grees and 64 Degrees; that it was upon an Arm of the Sea, the Water being falt; that they were five Days in paffing it in their Cances; that it was fo deep, that if they cut a Deer's Skin into Thongs, it would not reach the Bottom ; that the Streight went towards the Sun almoft at Noon, and that there were many large black Fifh in it, fpouting up Water. Lovegrove, one of the Factory Men at Cburchill, who had been often at Whalecove, in Latitude 62 Degrees 30 Minutes, in the Company's Sloop, trading for Whale-Fin with the Natives, alfo told them, that the Coaft there was all a broken Land and Illands; and that upon his going upon one of thefe Illands, he faw an open Sea Weftward of it. Wilfon alfo, who has been Maiter of the Sloop which goes to Whalecove, for feveral Years, told, at Cburcbill, that he had the Curiofity to pars in through thofe Inands, near the Whalecove, and found the Opening enlarge .itfelf Southweft, and became fo wide, that he could fee no Land on either Side. Yet though the Captain might have known this, and much more, which he had from Norton and Scroggs's Crew, as well as Accounts from the Indians before this Voyage to the fame Purpofe, he never once made an Effay to land upon the Weftern Coaft, or to look out for a Weftern Tide or Inlet.
What was fill as unpardonable as neglecting the Difcovery, was his putting the two Northern Indians afhore, at Marble IJand, againtt their Inclinations, when they were defirous to come to England, in a very bad Boat he got at Cburcbill, which they did not know how to manage in an Inand three Leagues from the fuppofed
Yol. II. Nuabr. g9.

Main; the Efimaux Indians, their Enemies living upon that Coaft, and fome hundred Miles diftance from their own Country, infomuch that one of them, who was about forty Years old, when he parted with Mr. Thomp fon the Surgeon, with Tears, told him, he did not know what would become of them. He told them, he was very much concerned at it, but fince it was the Captain's Pleafure, it muft be complied with.
The Captain gave them fome Provifions, Ammunition, Hatchets, and Toys; but leaving them in a defolate Ifland, with a bad Boat among ther Enemies, at fo great a Diftance from their own Country, was unpardonable ; when by a Day or two failing to the Southward, he could have landed them in a Country they knew, where they had no Enemies to be afraid of. The Excufe he made for not bringing them to England was, That upon his Return his Friends might be out of the Admiralty, and as he had no Orders to take them home, they would be left a Charge upon him; and when they learned to fpeak Englifh, they would be talking of the Copper Mine and Paffage, and would put the Public to the Expence of fending out more Ships in queft of it. And this, no doubt, was the true Reafon for that Piece of Cruelty; for he thought if they came to England, he fhould not be able to conceal the Parfage.

It is, however, to be obferved, that Captain Middleton, being an excellent Seaman, has very vigorounly defended himfelf againft all thefe Objections and Imputations; and has offered many plaufible Arguments to deftroy the moft weighty of thofe Reafons alledged by Mr. Dobbs, to prove, that what he calls a River, ought to be accounted a Streight. Thus, in anfwer to what Mrr. Dobbs fays of its increafing in Breadth and Depth the farther they advanced, Captain Middleton obferves, that this happens frequently in Rivers, more efpecially on the Swedifh and Norvergion Coafts; where, though they are narrow, and have no great Depth at their Entrance, perhaps, but ten or twelve Fathoms, yet they afterwards grow wider, and difcover no Ground with Lines of two or three hundred Fathoms.
All this may be, and yet this Inlet may be a Streight and not a River; for though there may be Rivers with there Properties, yet Experience fhews us that they belong alfo to Streights; and though the Argument, urged by Mr. Dobbs, muft be allowed not to be conclufive, if what the Captain fays be true, yet it ftill has great Weight, taking it in Conjunction with the other Reafons offered; becaufe if it is a Streight, we fhould naturally expect to find things fo ; and therefore their being found fo, ftill argues this to be a Streight, till fome pofitive Reafon can be fhewn that it is not fo. In fhort, what Mr. Dobbs fays amounts to no more than that probably it may be a Streight; and what the Captain anfwers, allowing it to be true, proves no more than that pofibly it may be a River; not that it is fo.
As to the Height of the neighbouring Lands, the Captain fays, that the Lands about the Sweedif/a and Norwegian Rivers, are as high as any he faw about the River Wager. But allowing this alfo, it is not at all conclufive. If the Lands had been low, it would have been very improbable that this fhould be a Streight; but as it is on all Hands allowed that they are high, it is very probable it may be fo; the Proof makes one Way as ftrong as the other, but then it depends entirely on the Strength of the Captain's Memory ; and it would have been ftronger in his Favour, if he had mentioned the particular Rivers, on the Banks of which he had feen as high Lands, as he owns to be on this.

As to the want of Trees and Shrubs, Captain Niddleton fays, that all who have travelled the Country between the Latitude 58 and 66 Degrees 30 Minutes by Land, agree, that higher than 6I Degrees they faw neither Tree nor Shrub, but only Mofs, even among frefh Rivers and Lakes. This again is only a general Affertion, and does not at all prove that it is not a Streight; perhaps, however, Trees and Shrubs might be fhewn to grow on the Banks of Rivers in a more Northerly Latitude, at lean fome Travellers tell us fo; but the thing is not very material cither Way; but if these had
been Trees or Shrubs, they would have been efteemed Proofs of its being a River; and therefore, among the Arguments of its not being fo, there was no Impropriety in mentioning the Want of Trees and Shrubs on all the Lands near it.

As to the black Whales, Seals, and Sea-Horfes, feen at twenty Leagues above the Entrance, the Captain gives a very large Return. He fays it does not appear, from any Journals, Reports, or Anfwers, that one Whale was feen higher than Deer Sound, which is but fifteen Leagues up; whereas the Weftward is above thirty Leagues; or that one Sea-Horfe or Seal was feen in any Part of the River; but that feveral were feen juft without the Mouth of the River, in the Welcome, is attefted by the Log-Book, and by the Affidavits of Torens, Van Sobric, and Grant ; and Captain Middleton has traded for Whalebone in all Parts of the Bay and Streights where the Efkimaux frequent, which could not be if the Whales, from whence they get it, were not killed there; becaufe in ten or twelve Days after they are dead, the Bone all drops from their Mouths; all which amounts, together, to almoft a Demonftration, that the Whales, both in the Bay, and Wager River, come from the North-eaft; which is alfo fomewhat confirmed from the great Number of Indian Store Houfes, of Oil, Fin, and Blubber, not above eight Leagues upon the North-eaft Coaft of the River; whereas their proper Habitations are on the Main, on the other Side the River. Moreover if thefe Whales come out of any Sea from the Weftward, they would have been feen in plenty the higher they had gone up, which was not fo. However, Conclufions drawn from Whales being feen in any Place, are, at the beft, but very precarious.

In Reply to this, it is neceffary to take Notice of a Fact which feems directly oppofite to the Account given in Captain Middleton's Anfwer. Mr. Rankin, in his Report, has the following Paffage: "We went above fif"teen Leagues above Deer Sound, and faw a Frefh or ${ }^{6}$ Run of Water coming againft us; and the Wind being * fair, I was afraid of ftaying any longer, for fear of " hindering the Ships from going to Sea. There is a "great Probability of an Opening on the Weft Side, by the "coming in of the Whales; but I could not go higher up "t to try it, for the above-mentioned Reafons." In the amended Report this Paffage is entirely left out ; for as to what is faid therein, I mean in the amended Report, figned by Rankin and Wilfon, of their feeing large black Whales in their Return from the Ships, not far from Deer Sound; this is alfo contained in the original Report, wherein Mr. Rankin fays, In coming doron we fare feveral very large black Whales playing about the Boat, and aforere; fo that nothing can be plainer, than that the Meaning of Rankin, was to diftinguifh between thofe Whales, the Sight of which induced him to believe there was an Opening to the Weft, and the black Whales that he faw in returning to the Ships. And why the former Whales were left out in the amended Report, is a Matter that deferves Confideration; but it is very plain, that as it ftood in the original Report, it is irreconcileable to the Captain's Anfwer; and therefore he was in the right to guard againft it, by faying, However, Conclufons drawen from Whales being feen in any Place, are at the beft but very precarious. It may be fo; but it is very evident that Mr. Rankin concluded from therice, that there was an Opening to the Weft; and thofe who incline to believe him, will conclude fo ftill, though, as the Captain fays, that Conclufion be but precarious. And yet their other Conclufion of their coming in from their Frozen Slreight muft be allowed to be altogether as precarious.
As to the laft Reafon affigned by Mr. Dobbs, viz. from broken Lands North-weftwards, and a vaft Collection of Waters, full of Iflands on the South-weft-fide, this Anfwer is given by Captain Middleton, viz. It is moft likely that thefe watery Places, feen at a Diftance, are the fame Sort of Lakes of melted Snow from the Mountains, as were every where feen from the Eminences they af cended in that Country, to over-fpread the 'Vallies; but be that as it will, there was no coming nigh them for the Rapidity of the Water-falls, that hindered the Boat from
going higher up then fhe did, and the immenfe Quantities of Ice along the South-weft Shore.
This Anfwer is plainly conjectural, and Captain Middleton only offers a Suppofition to refute what others had affirmed to be a Fact; for Mr. Dobbs tells us, that when the Lieutenant and another Perfon were examined before the Lords of the Admiralty, they pofitively affirmed that they had feen a fair open Channel, with Lands on each Side, as high as the Cape of Good Hope. It likewife appears, that the Lieutenant was preffed to go up this Clian nel ; and the Reafon he gave for not complying with this Requeft, was, that he had already exceeded his Orders in extent of Time, and of the Difcovery, which he had profecuted farther than he was directed to do ; and therefore declined what was propofed from an Apprehenfion of being punifhed upon his Return, if he had complied with it.
10. But we are now to come to thofe Arguments, which have been produced by Captain Middleton in the Affirmative, and in Proof of his Affertion that this is no Streight, buta Frefh-water River. In the firf Place, he fays, that he conceives it can have no Communication with the Sea Weftward, becaufe the Tide of Flood comes in at its Mouth Eaftward. To this Mr. Dobbs replies, that it was to be confidered as a Streight, like the Magellan, and therefore he was not to look for the contrary Tide, till they were in the Middle of the Streight. In Confirmation of this, Mr. Dobbs farther obferves, the Tide at the North-eaft Entrance of Magellan Streigbt flows from the Eaftward, and rifes four Fathom before it comes to the firf Narrow, which is but half a League wide, and from thirty to thirty-five Fathom deep; after a League or two it increafes to fix or feven Leagues wide to the fecond Narrow, where it is about a League wide, and thirty Fathom deep; within the fecond Nurrow it increafes again to five or fix Leagues wide, and the Tide ftill flows from the Eaftward, and rifes about ten Ficet. In the Middle Channel, about thirty Leagues within the Streight, it is two hundred Fathom, and the Channel but three Leagues wide; and from thence to the Middle of the Streight, it is leffened to two Leagues wide, and about one hundred Fathom deep, and the Tide ftill flows from the Eaftwards for above fifty Leagues. As they come near the Middle of the Streight, the Current of the Tide is not above half an Hour at each Tide, and the Tide rifes nine Feet near Cape Quad; beyond the Middle of the Streight it is but two Leagues wide, and for about thirteen Leagues farther it is rather lefs; fometimes not four Miles wide; from whence it gradually widens to the Weft Entrance, where it is five Leagues wide, fo that Wager Streight is much larger; for fo far as they were in it, which was about thirty Leagues, it being by the Account as mentioned in the Journal fix or feven Leagues wide, and eighty Fathom deep; which if there be no other, is a noble Paffage; but there is a great Probability of there being a better and fafer Paffage to the Southward of Whalebone Point, by which the Whales get into that Part of the Bay.
The fecond Reafon offered by Captain Middleton is, becaufe of the gradual Declenfion in the rifing of the Tides, which flowed eighteen Feet at the Entrance, but thirteen at Deer Sound; and the higheft the Boat could go for Water-falls, was no more than five or fix Feet. But whoever confiders what is before replied to the Argument, drawn from the Tides coming in from the Eaftward, will very eafily fee, that allowing all the Captain fays to be true, this is very far from being conclufive; fince it appears to agree well enough with what happens in the Streight of Magellan; and, befides all this, Mr. Dobbs fays, that in the Captain's Journal, the Tide at Savage Sound is faid to have rofe but twelve Feet fix Inches, inftead of fifteen, and at the fame Time it yofe ten Feet in Deer Sound. He likevife fays, that when they were behind the Weft Bluff, they did not ftay a Tide, and could only conjecture how much it flowed; nor did they obferve in their Report, whether the Eaftern or Weftern Current was Ebb or Flood; though upon Recollection, the Lieutenant was pofitive it was the Tide of Flood from the Weftward, which brought the Boat to
a Grap-
a Grapnel, it having flowed fis Fect immediately after he anchored the Boat.

The third Reafon afigned feems the ftrongeft of all; for the Captain therein afierts, that the Water was found to be fo frefh in the Mid-Channel, above Deer Sound, that the Men freely drank it, along-fide the Boat, inftead of Beer; and the higher they went they found it the frefher. But it has been before obferved, that the Lieutenant, in his Expedition, filled a Bottle of Water at the Shore, and two Bottles farther down to the Eaftward; and that the Captain, when he came aboard, own'ed, that the Water, taken up at the Weft-end, near the Fall of Water, was the falteft; and the Mafter faid, that it was as falt as any he tafted in thofe Seas, which was confirmed by all thofe who tafted it aboard. It is alfo affirmed, that when the Captain caufed the Water to be taken up, which he fays was frefh, the Crew did not come entirely into his Opinion, but only faid that it was not very falt.
The Captain urges next, that no Whales were feen there ; but at the Entrance of the River, and at Deer Sound ; this being an Argument that they came not from any Sea to the weftward, but entered by fome Inlet from the North-eaft. We have already taken notice, that the Lieutenant contradicts this in his original Report, by afferting pofitively that the Whales came from the Weft. And Mr. Dobbs, in anfwer to this very Argument of Capt. Middleton's, expreffes himfelf thus: "The next " Falfity he would have impofed upon me was, That the " Whales came in certainly at the Eaft Entrance of Wa"ger River, for he faw feveral in the Welcome and Cape " Dobbs, before they came in and after they went out, " which none of them faw but himfelf. And the Journal exprenly fays, when they came up with the Ice, "Hi" therto have been feen no Whales, except one white "Whale as big as a Grampus, and five or fix Seals: "And both Log-Book and Journal are entirely filent a" bout any when they came out, until they came near "Brook Cobbam. When 1 taxed the Captain with this, " all he could fay was, he lieard one or two blow; yet " in the Log-Book which he has printed, he fays he heard "two or three blow in that Watch, though nothing of it " is entered in the Original large Log-Book, rior was "any feen by any other Perfon on board the Furnace; "t nor did Capt. More, in the Difcovery, fee any, though "two on board him took upon them to fwear, they faw "6 or heard two or three blow."
Another Reafon made ufe of by Capt. Middleton is, becaufe Travellers which have gone from Churcbill by Land, as high as the Arctic Circle, affirm, that they met with neither falt Water, River, nor Sea, in any Part of their Journey. This Argument would alfo be very conclufive if the Fact was abfolutely certain; but if it was, it is not eafy to conceive why Capt. Middleton, by his Letters to Mr. Dobbs, written before the undertaking of this laft Expedition, fhould give him any Hopes of Succefs in fuch an Undertaking ; for had he known and confidered the Force of this Argument at that Time, in its full Extent, he mult have feen that it proved any fuch Paffage as he went in Search of, if not impoffible, at leaft impracticable, and therefore not worth the feeking. When the Reader reflects upon the Obfervations made in the very laft Article upon the Conduct and Sentiments of Capt. Fames, after his Return from Cbarlton Ifland, he will probably fee good Grounds to believe, that Difappointment operates very powerfully upon fome Mens Underttandings, and engages them to treat as Vulgar Errors what themfelves formerly efteemed undoubted Truths, either from an Over-weaning Fondnefs for their own Abilities, or from an envious Defire to put that out of the Thoughts of others, which by Accident was put out of their own Power.
II. It was however natural enough for Mr. Dobbs, after examining this Matter attentively, to wifh that all the Doubts about it might be removed by a fubfequent Expe-
dition, and one would have thought that this Scheme muft have been alfo fatisfactory to Captain Cbrijtopboer Middleton and the Hudfon's Bay Company ; becaure being fo firmly perfuaded as they feem to be, that no fuch Paffage can ever be found from Hudfon's Bay into the Weft Oceen, they fhould liave been willing to have had this Truth, as they efteem it, fo fairly and fully made out as to leave no Grounds, or, if poffible, no Colour, of Sufpicion about it, as this would have entirely juftified that Gentleman's Conduct, and have faved the Company all future Trouble.
But it does not appear that this actually was the Cafe; on the contrary, fuch Objections were ftarted, and fo many Difficulties fuggefted, as quite overthrew all Hopes of obtaining fuch Affiftance from the Admiralty as they had before ; but the Spirit of the Nation being awakened, the Opinion of there being fuch a Paffage gaining Ground; and the Defire of finding it increafing daily, produced an Application to Parliament in 1744 , when, after mature Deliberation, a Law paffed upon that Subject, in Confequence of which another Expedition has been fet on foot.

The Preamble of this Act takes Notice, that as the difcovering another Weft Paffage through Hudjon's Streight to the Weftern American Ocean, would be of great Benefit and Advantage to this Kingdom; and that it would be of great Encouragement to the Adventurers to attempt the fame, if a public Reward was given to fuch Perfons as fhould make a perfect Difcovery of the faid Paffage, it is therefore Enacted, that if any Ships or Veffels belonging to his Majefty's Subjects fhall find out, and fail through any Paffage by Sea, between Hudfon's Bay and the Weftern Ocean of America, the Owners of fuch Ships or Veffels thall be intitled to receive as a Reward for fuch Difcovery, the Sum of Twenty Thoufand Pounds. The following Perfons are, by the faid Act, appointed Commifioners for examining the Claims that may be made under it; viz. the Lord Chancellor, the Lord Prefident of the Council, the Lord Privy-Seal, the Lord Steward of his Majefty's Houfhold, the Lord Chamberlain, the firt Commifioner of the Treafury, the firt Commiffioner of the Admiralty, the principal Secretaries of State, the Speaker of the Houfe of Commons, the Chancellor of the Exchequeir, the firft Commiffionier for Trade and Plantations; the Treafurer of his Majefty's Navy, and the Admirals of the Red, White, and Blue Squadrons for the Time being; and thefe Commifioners are empowered to examine the ClaimantsWitnefles upon Oath ; and the Certificate of the Majority of them (of which the firft Commiffioner of the Admiralty fhall be one) under their Hands and Seals given, flall intitle the Perfon or Perfons, having fuch Certificate, to receive of the Lord Migh Treafuret, or Commiffioners of the Treafury, the faid Sum of $T$ wenty $T$ boufandPounds, after the faid Difcovery fhall be completed, and the Certificate thereof produced as aforefaid. As a farther Encouragement, and to promote the executing of, and finding oit, fuch Paffage, It is further Enacted, That all Perfons, Subjects of his Majefty, refiding in any Place where the raid Adventurers may come, in the Profecution of this Difcovery, fhall give the faid Adventurers all Affiftance: and Perfons, Subjects, as aforefaid, fhall no Way obftruct, moleft, or refufe the faid Adventurers reafonable Succour in any Diftrefs they may fall into in the profecuting this Difcovery. A Provifo is added, that nothing in this Act fhall extend to prejudice the Eftate, Rights or Privileges of the Governor and Company of Adventurers of England, trading into Hudjon's Bay.
Such is the Hiftory of the Defign for penetrating into the Weftern Ocean, by a Paffage to the North-weft; fuch have been the Steps taken for putting it in Execution; fuch the Difappointments with which Expeditions of this Sort have been attended ; and fuch, finally, the Provifion made by the Legilature, that whoever fhall be at the Expence and Hazard of this Difcovery for the public Service, fhall receive a public Reward.

## SECTION V.

#### Abstract

A fuccinet Account of the Grounds upon which a North-east Passage into the Sea of Japon bas been expected and Sought for. The Attempts of the Englifh and Dutch on ithat Side, with the Reafons why all Thoughts of a Paffage that W ay bave been for many Years given up.

## Collected from Dutch as well as Engli/h Authors.

1. A View of the Advantages propofed from the Difcovery of a North-eaft Paffage, and of the principal Reafons which bave induced Jkilful Geographers, and able Seamen, to believe that fuch a Paflage might be found. 2. The Attempts made by Sir Hugh Willoughby, Captain Stephen Burroughs, Captain Arthur Pett, and Captain Charles Jackman, for the Difcovery of that Paflage, zoithout Effect. 3. An Account of three Voyages made by the famous Dutch Pilot, William Barentz, for that Purpofe, and with no better Succefs; the Reafons that induced Barentz to die in the Perfwafion that fuch a Paflage might fill be found ; and the Motives upon which the Hopes of difcovering tbis Paflage were revived, after all Thougbts of it bad, for a long Time, been laid afide. 4. A fhort Account of Captain Wood's Voyage, in Search of that Paffage, by the Direction of King Charles II. and bis Mifcarriage. 5. The Reafons publibed by bim, after bis Difappointment, to prove the finding fuch a Paflage impoflible, or at leaft impracticable. 6. The Difcoveries made by the Ruffans in their Affatic Dominions, and more particularly their late important Difcovery, that there is a very eafy Paffage that Way to North America. 7. The Conclufion of this Subject, with fome free Thoughts thereupon, tending to prove, that if we are difappointed in all Attempts of fuding either a North-weft or North-eaft Paflage, it will amount to a Demonfiration that there is a clear Pafage by the North, in or near the Pole.

THE Advantages propofed by the Difcovery of a Paffage to the North-eaft, may be reduced to three. The firt is, That it would fave a great deal of Time; for, whereas we are now obliged to go round by the Cape of Good Hope, or, which is fill a longer Navigation, by the Streights of Magellan, we might then pais by the Coant of Muscouy, and Great Tartary, into the Sea of Fapon, in iittle more than three Months. The fecond turns on the Wholefomenefs of the Voyage, which, according to the Methods now in Ufe, confumes abundance of Seamen; but by this means would become as healthy as any Navigation can be, and be performed with very little Hazard. In the third Place, there is good Reafon to hope that it would change the very Nature of the Eaf India Trade, by bringing the Balance over to the Side of Europe; whereas in the Way we now carry it on, it is morally certain, that if the We/t Indies had not been difcovered, the Eaft India. Trade muft have eat up and deftroyed us, I mean the People of Europe in general ; for whatever there may be gained by us, or by the Dutch, it is an uncontroverted Point, that immenfe Sums in Silver are annually fent from Europe to balance the Accounts of our Traders with thofe in the Eaft Indies; but if a Paf fage fhould be found to this Country by the North-eaft, we might then hope to gain as much by cloathing the Inhabitants of the Northern Countries as would balance our Commerce with thofe in other Parts. We are next to examine the Reafons why fuch a Paffage has been expected and fought for ; and this may be likewife reduced under threeHeads. The Firft is grounded on the Difpofition of the terraqueous Globe, which feems to require a perfect Circulation of that great Body of Water which is intermixed with the Earth; and as we find this Conjecture verified towards the South Pole, it makes the Argument fo much the ftronger with refpect to the North. The'Second arifes from Obfervation, which affords Variety of Inftances, in Confirmation of the fame Notion We will mention one or two: All theWood that is thrown on the Coafts of Greenlard, Nova Zembla, Lapland, and other Northern Countries is worm-eaten; which is a Proof that this Wood came from a warmer Climate; fince it is certain that Ships are not worm-eaten in the Northern Seas. There is likewife a Kind of Molucca Bean thrown almoft by every Tide upon the Northern Coants, which is with great Probability believed to be the

Product of the Eaftern Climes ; and, what fill more ftrongly corroborates this Manner of Reafoning, fome Dutch Seamen, who were fhipwrecked at Corea, obferved a Harpoon in the Head of a Whale caft upon that Coaft, which muft therefore have come thither from the Northern Seas. Laftly, there are fome Fazts which, if they could be depended upon, would put this Matter out of Difpute, fince they relate to Ships which have actually paffed this Way, or at leaft have difcovered an open Sea through which they inight have paffed; but as this cannot be verified by proper Vouchers, they ought to be confidered only as Reports, and as fuch I lay no great Strefs upon them.
2. The firt who attempted the actual Difcovery of fuch a Paffage to the North-eaft, was Sir Hugh Willoughby, in 1553 . He advanced as far as 72 Degrees North Latitude; but finding himifelf blocked up by the Ice, he retired, as well as he could, into the Mouth of the River Arzina, in Lapland; , where he and all his Company were frozen to Death, and were the next Year found in that Condition. This did not difcourage Captain Stephen Burroughs, afterwards Comptroller of the Navy, in the Reign of Queen Elizabeth, from purfuing this Difcovery; on which he failed in 1556 , and having doubled the North Cape, entered the Streights of Weygatz, between the South of Nova Zembla, and the Country of the Samoieds, believing the Gulph, on the Eaft of that Streight, to be a free and open Sea, in which Opinion he returned to England. This occafioned a third Voyage, by the Direction of that glorious Queen, who, in 1580, fent Captain Artbur Pett, and Captain Cbarles Jackman, to perfect this Difcovery. They entered the Strcight, but found themfelves fo embarrafied among the Ice, that after long ftruggling, with much Difficulty, they got out again, and refolved to return home; but meeting with very bad Weather, they were feparated, and Captain Pett was never heard of afterwards, which gave a Check to all farther Thoughts of fearching for a Northeaft Paffage, by our Countrymen.
3. But the Dutch, who were extremely fenfible of the Benefits that might refult from fuch a Difcovery, and being withal very emulous of thie Englifb Glory, refolved to try what might be done in this Refpect; and with this View they fent the famous William Barentz thither, in 1594, who paffed the Streights of Weygatz, and having
examined the Gulph into which they open, abandoned The fame Perfon that gave me this Date acquainted mes the Defign, after having obferved that the Water was frefh, which had not been taken notice of before. He thought, however, that fomething might fill be done, though not that Way, and therefore undertook a fecond and a third Voyage to Nova Zembld, in Hopes of fucceeding better. In 1596, which was his laft Voyage, he and his Crew wintered in that Country, in the Latitude of 78 Degrees. After having loft their Veffel, they got off the next Spring in their two Shallops, defigning for Cola in Lapland, where they fafely arrived; but Barentz died in the Paffage. He remained to the laft Moment in the Sentiments he entertained after his firft Voyage, and declared if he had lived, he would have made another Voyage, from a thorough Perfuafion, that notwithftanding all he had fuffered, there was a free and open Sea between Nova Zembla and Greenland.

The beft Accounts we have of this Undertaking, and of the Extremities of Norreay, Lapland, Nova Zembla, Wcygatz, the Mouth of the River Oby, the Coaft of T'artary at the Mouth of that River, and of the Wbite Sea, are in the Works of the famous Linfchooten, who made this Voyage at the fame time with Barentz. Our great Navigator Henry Hudjon had fome Thoughts of difcovering the Paffage, and actually made a Voyage for that Purpofe in 16 Io; but the Fate of Barentz, and the unpromifing Appearance of the Frozen Coafts, obliged him to abandon very foon fo troublefome an Expedition. In 1653 the King of Denmark fitted out three Ships for the finding the North-eaft Paffage, and directed the making an exact Chart of their Difcoveries: Thefe Ships paffed the Streights of Weygatz, and in the Bay beyond them found fome of the Inhabitants of Nova Zembla in their Canoes; which were the moft brutal and intolerable Savages that were ever feen: Their Garments were made of the Skins of Penguins, Pelicans, and other large Birds, with their Feathers on: They lived upon raw Fifh, and Iad the utmoft Abhorrence of more civilized Nations ; which was not by any Means to be foftened by Prefents or kind Ufage. This made the Danes foon weary of fo inhofpitable a Coaft, and fo put an End to the Expedition, which brought fuch a Difcredit on the North-eaft Paffage as prevented any farther Attempts for near twenty Years. At laft, after the Royal Society was founded here, by which Means Subjects of this fort came to be more known and more freely examined, the Hopes of finding a North-eaft Paffage was again renewed, and feveral Papers were written, to fhew both the Utility of fuch a Paffage, and that the finding of it was practicable.

The firf that revived, at leaft with any Degree of Vigour, the Notion of difcovering a Paffage to the North-eaft, after that Scheme had lain fo long under Difcredit, was a Company of Merchants in Holland, who fitted out a Ship for the Difcovery; which, upon its Return, brought an Account, That they had failed to the Height of between 70 and 80 Degrees, and had difcovered a fair open Sea, without any Ice to the Eaftward of Nova Zembla, which feemed fo plain and fo perfect a Proof of the Probability of a fafe Navigation on that Side, that the Merchants concerned in that Undertaking applied to the States for a. Charter, that might fecure to them the Advantages that might refult from this new-found Paffage. But the Eaft India Company having Notice of this Application, and forefeeing how far it might affect their Trade, inftantly petitioned the States on their Side, fetting forth the great Services they had done the Republic, the Nature of the Charters which had been granted to them, and the Confequences that muft attend the beftowing on this new Company, the Privileges that they demanded. The States had Regard to their Reprefentations, and refufed the Charter applied for. The Merchants, upon this, applied to the King of Denmark, and having obtained his Licence, an Expedition was made for Difcovery; but by reafon of a Mutiny on board the Ship, it came to nothing. A large Account of all thefe Tranfactions was printed in the Memoirs of our Royal Society, in the Year 1675 , but without any Date; one, however, I have with much Difficulty recovered, which is the Voyage wherein the Dutch Merchants were fuccefsful, and which I find was in 1670.

- Vol. II. Numb. C.
that at the Time this Application was made to the States, it was afferted that there was no Difficulty in failing North about Greenland; that feveral Dutch Ships had actually done it, and that the Merchants being required to verify this Fact, they defired that the Journals of the Greenland Squadron in 1655 might be produced; in feven of which there was Notice taken of a Ship, which that Year had failed as high as the Latitude of 89 , within one Degree of the Pole; and three Journals of that Ship being produced, they all agreed as to an Obfervation taken by the Mafter, Auguft the Ift, $1655^{\prime}$, in 88 Degrees 56 Minutes; and it was farther fet forth in thofe Journals, that the Sea was entirely clear of Ice, and was a hollow rowling Sea, like that of the Bay of Bijcay.

4. Soon after the publifhing the Accounts before-mientioned in the Pbilofopbical Iranfactions, Capt. Jobn Wood, an experienced Seaman, who had accompanied Sir $\neq 0$ in Narborough in his Voyage through the Streights of Magellan, offered his Service to attempt the Difcovery of the North-eaft Paffage; which was accepted, and the eight following Perfons, viz. Thomas Dike of York, Lord Berkley, Sir Jofeph Williamfon, Sir fobn Bankes, Mr. Samuel Peeps, Capt. Herbert, Mr. Dupey, and Mr. Hoopgood, at their own proper Charge, bought a Pink called the Profperous, of the Burden of one hundred and twenty Tons, fitted her to Sea, with Men, Ammunition, Provifion, and Merchandize, which was fuch as was reafonably propofed to vend on the Coaft of Tartaria, or at $\mathcal{F} a$ pon, if a Paffage had been found. The Command of this Veffel was given to Captain William Flawes, and a new Ship of the King's called the Speedroell, manned and victualled at the King's Expence, was given to Captain Wood, who had the Conduct of the Expedition.

They failed from the Buoy at the Nore, May the 23 th, 1676, but the Voyage was very unfortunate; for the Speedruell was hipwrecked on the Coaft of Nova Zernbla, and Captain Wood, and his People, returned aboard the Profperous, which put an End to all Thoughts of Expeditions of this Nature; for Captain Wood, like other difappointed Commanders, "changed his Opinion upon his Return, and undertook to prove that it was impolible to find any Paffage to the North-eaft, There is nothing very remarkable, either in his Journal, or in that of Captain Flarves; but his Relation of his Shipwreck; of the Country of Nova Zembla, and his Reafons for changing his Sentiments, are, in themfelves, very curious, and therefore deferve the Reader's Notice.
5. "After giving both thefe Journals, fays he, mean"s ing his own, and that of Captain Flawes, I intend to "s Thew my Conceptions of the faid Voyage, and a true " Relation of our Mifcarriage, with fome Obfervations "s made in the faid Voyage. The firft was, the follow" ing the Opinion of Willian Barentz, that was to fteer " directly North-eaft from the Nortb Cape, and fo fall " in the Middle-way, between Greenland and Nova Zenir" blo; fo having made the Land to the Weftward of the "North Cape, the Igth Day of Fune, I fteered away
"North-eaft by Compafs, which was not fo much by " the true Courfe, becaufe of the Variation that is there "6 Wefterly; and the 22 d Day at Noon we faw the main "Body of Ice, being in the Latitude 76 Degrees, and " about fixty Leagues to the Eaftward of Greeinland. At " the firft feeing of Ice, I did imagine it had been the "Ice that joined to Greenland, and that if I went more "Eafterly there might be a free Sea; fo I'ran clofe by "" the Ice, it lying away Eaft-fouth-eaft, and Weft-north"weft; and every League or lefs that we ran, we mee " with a Cape of Ice; fo when we were about that we " could fee no Ice to the Northward; fo ftanding in "North-eaft fometimes two Glaffes, that is one Hour, " we could fee more Ice ahead, and then we were forced " to go out the fame Way we came in, and thus I "continued coafting the Ice, fometimes in Hopes of a "clear Sea, and then again difheartened by feeing more " Ice, till at laft I had no Hopes at all; which was s when I faw the Land of Nova Zembla and the Ice join ' to it. So here the Opinion of William Earentz was " confuted, and the reft of the Dutch Relations, which
$5 \mathbb{Z}$
". certainly
© certainly are all forged, abufive, Pamphlets, as alfo the © Relations of our own Countrymen.
"But certainly if Mien did really confider the many er inevitable Dangers and Mifchiefs that come upon the
os broaching of fuch Untruths, they would never do it ;
"s for I do now verily believe, that if there be no Land
${ }^{66}$ to the Northward of the Latitude of 80 Degrees, that
" 6 ' the Sea that is there is all frozen, and always continueth
is fo; for $I$, that could get no farther than $j 6$ Degrees,
os found it fo frozen without Intermifion, and fonse of
"s the Ice that we faw, that was on the main Body, if it
${ }^{56}$ had been conveyed io Degrees more Southward,
"" would have taken fome Centuries of Years to thaw it;
${ }^{66}$ for the loofe Ice that lay about the Edges of the main
"Body, was not more than a Foot thick, in fome Pieces,
"s above the Superficies of the Water, and the reft of the
sc Cake that was funk, was more than 18 Feet below;
"foI conclude that thofe vaft Mountains that were on the
${ }^{66}$ main Body, were all afhore, as of Neceflity they mutt
" if they hold the fame Proportion; and confidering the
"Shallowners of the Water, which I found all along the
" Ice, which in the Mid-way, between the two Lands,
"I found to be no more than ten Fathom, was doubt-
" lefs a Sign that to the Northward is Land, and that
" the main Body of Ice, that lycth cluftered about the
ss Shore, may be twenty Leagues or more; and that
"Nova Zembla and Greenland are the fame Continent;
"s for if there had been any Paffage, there would have
" been fome Current, which I could never, or very hard-
" ly , find to be any; and the little there was run Eaft-
"fouth-eaft along the Ice, which is nothing elfe but a
"s fmall Tide, which rifes fome eight Feet. Thus the
"Ice having been an Obftacle in our Way, as alfo the
" Caufe of my coming fo far to the Eaftward, which, be-
" fore I never intended, I will come to the Misfortune
" that happened to us in the Lofs of our Ship, which was
"s thus: Being long amongtt the Ice, the 2gth Day of
"f June, in the Morning, we had like to have been in-
"c clofed in it; it proving likewife foggy Weather, I
" ftood out to the Southward, thinking to lie there till
"s fairer Weather, or to fpend fome Time to the South-
"s ward, and then come to the Ice again, to fee if there
" might be any Alteration in it, as to its Removal,
" either to the Eaft, Weft, North, or South; but all
"s this Day it proved foggy dirty Weather, the Wind
"s being at Weft, fo we lay South-fouth-weft with the
"Stern, and by our Judgnent and Reckoning, the Weft-
" ermoft Land of Nova Zembla bore from us Eaft-fouth-
"ceaft, that was four Points under our Lee-Bow; but
"fuch was our Misfortune, that it proved not fo; for
" about ten o'Clock, Captain Flarees, being upon our
" Weather Quarter, fired a Gun, and bore to me, and
" called out that there was Ice ahead; then I looked
"s out ahead, faw fomething white juft under the Bow,
$\because$ which prefently I perceived to be a Breach and no Ice;
"t now if I had ftaid with the Ship, Captain Flawes be-
"s ing to the Windward, I fhould have been aboard of
" him, and then certainly we had been both loft; fo I
"6 was forced to bear up with Hope that I might get
"clear of it; but the Ship being a great while wearing
" fruck on the Rock, herHead lying to Seaward, which
"s if it had not, but that the Broad-fide had been to the
" Sea, we had all perifhed, without God's great Mercy. "Captain Flawes, in the mean Time (being a fhorter "Ship) wore round, and came clofe under our Stern,
cs and with great Providence efcaped and ftood off to
"Sea; here we lay beating on the Rock in a moft cruel
${ }^{66}$ Manner, for the Space of three or four Hours, ufing
"s all poffible Means to fave her, but all in vain; for it
"s blew fo hard, that it was impoffible to carry out an
"A Anchor, capable of doing us any Service; though
"s we had an Opportunity to carry out a fmall Anchor,
"6 and Warp to haul another out by, which fignified but
"s little; the Ship all this while lay, and at the End of
" four or five Hours we faw Land clofe under our Stern,
" to the great. Amazement of us all, which before "s we could not fee for foggy Weather; fo I commanded
"s the Men to get out our Boat before our Maft came by
es the Board; which was done. I fent the Boatfivain
' toward the Shore in the Pinnace, to fee if there was any Poffibility of landing, which I much feared, becaufe the Sea ran fo high. In half an Hour he returned " with this Anfwer: That it was impoffible to fave a
"Man the Sea ran fo high; and the Snow being in high
"Cliffs on Shore it was inacceffible, which was but bad
«Tidings; fo then it was high time to think on the
"Safety of our Souls, and we all went together to
"Prayers, to befeech God to have Mercy on us; for here "s nothing but inevitable Ruin appeared before our Eyes.
" After Prayers were done it proved a little clearer
"Weather, and I, looking over the Stern, faw a fmall
" Beach directly with the Stern of the Ship, where I thought
"s there might be fome Poffibility of landing; fo I fent the
"s Pinnace again with fome Men, to be landed; but they " durft not venture on Shore : fo I fent the Longboat " with fome twenty Men, to land, who attempted it, " and got fafe on Shore; fo they in the Pinnace feeing "s that followed them and their Men likewife, and both
"s returned on board again. Now the Men on the Shore " fent to me to defire fome Fire-arms and Ammunition; " for there were many Bears on Shore: So I caufed to " be put into the Pinnace two Barrels of Powder that we " had faved dry, before the Ship was bulged, and fome " fmall Arms and Provifions, with my own Papers and
" Money; but as the put off from the Ship-fide a Sea
" overfet her, fo that all was loft, with the Life of one
" Man, by Name Jobn Bofman, being Cooper's Mate, "s and feveral others, taken up for dead. The Longboat " being then on Shore to land more Men; and they
" hearing us call from a-board (when, as then, we could " not fee the Shore) they came on board, and faved the " Men ; but the Pinnace was all broken to Pieces, which
"s was no fmall Grief to us; fo the Lugboat being on
" board, and the Sea running prodigious high, the "Boatfwain, and fome others, would compel me and the
"Lieutenant to leave the Ship; faying, It was impoffible
"s for the Boat to live any longer in that Sea; and that
"s they had rather be drowned than I; but defiring me
" when I came afhore (if it was poffible) to fend the
"Boat again for them; fo I being half way on Shore, " the Ship overfet, fo I made all the hafte poffible to " land the Men I had in the Boat ; and, having landed " them, I went off to the Ship again, to fave thofe poor " Men that had been fo kind to me ; and, with great "Hazard, I got with the Boat to the Quarter of the "Ship, and they came down the Ladder into the Boat, " only one Man who was left for dead, which was one " that had been caft away in the Pinnace, whofe Name "was Alexander Frazer, a very pretty Sailor; fo I re" turned to the Shore, and got fafe to Land, though "s very wet and cold; fo we hauled up the Boat on " Shore, and went up the Land about a Flight" Shot, where our Men were making a Fire, and a "Tent with Canvas and Oars, which we had faved " for that Purpofe; fo we lay all that Night very cold, wet, and weary.
" The next Morning, the Man that was left on board "s recovered, and got unto the Mizen-top, for that Maft "s was left ftanding when we came away, the others we " had cut all down. The Ship laboured, and beat vio-
" lently, but it blew fo hard, and the Sea ran fo high, " that it was impoffible to fave him; fo the Weather " continuing blowing, with extreme Fogs, and with "Froft and Snow, and all the ill-compacted Weather "s that could be imagined together; we built more Tents " to preferve ourfelves, and the Ship breaking in " Pieces came all afhore to the fame Place where "s we landed, which ferved for Shelter and Firing ; befides, there came to us fome Hogtheads of Flower, " good Store, which was no fmall Comfort in our great "Extremity ; and we lay betwixt Hope and Defpair, " hoping for fair Weather, that Capt. Flawes might find "us, which was impoffible that ever he fhould, if it "c continued foggy ; fome defpairing of his being fafe; " but that he might be loft as well as me.
"But fuppofing we were never to fee him again, I was "refolved to try the utmoft to fave as many as I could ${ }^{6}$ in the Longboat; in order thereunto we raifed her two

## Chap. I.

North-éast Passage.
${ }^{6}$ Feet higher, and laid a Deck upon her, to keep the "Sea out as much as polfible; and with this Boat and s6 thirty Men (for fhe would carry no more) I intended
"s to row and fail to Rufia; but the Crew, being not fatif" fied who thould be the Men, began to be very ss unruly in their Minds and Behaviour, every one
" having as much Renfon to fave himfelf as another,
"fome holding Confultation to ftave the Boat, and all
" to run the like Fortune; but here Brandy was our
" beft Firiend, for it kept them always foxed; fo that in
"s all their Defigns I could prevent them. Some were of
"s the Mind to go by Land; but that I knew was impof-
" fible for any "Man; neither had we Provifions or
"Ammunition to defend ourfelves from the wild Beafts;
"s and if it had been paffable, that is, any going on
" the Ground for Bogs, they would have met with
"Rivers, that they knew not whither to go ; fo there
" being no Probability of going by Land, nor for any " to attempt going by Boat with forty Men, leaving the
"e reft to be deftroyed, I will fubmit to the Confideration
"s of any, whether we were not in a very miferable Condi-
" tion, without the Intervention of divine Providence. To
"s write my Thoughts I had at that time, to fave as ma-
" ny Men as I could, it is not pertinent at all to the Dif"s courfe, fince it cannot but be tragical.

The Weather continued ftill very bad, with Fogs " Snow, Rain, and Froft, till the ninth Day of our be" ing on Shore, which was the 8th Day of $\mathcal{F} u l$, when,
" in the Morning it cleared up; and to our great Joy
" one of the Sailors cried out, A Sail; which proved
" Capt. Flazees, as reafonably may be imagined; fo we
"fet Fire to our Town, that he might fee where we
"s were, which he prefently faw, fo came, and fent his
" Boat to us; but before I went off I wrote a brief Re-
" lation of the Intention of the Voyage, with the Ac-
" cidents that had befallen us, and put it into a Glafs
" Bottle, and left it in the Fortification I had there built.
${ }^{66}$ So by twelve o'Clock we all got fafe on board, but left
" all on Shore that we had faved from the Ship, for we
${ }^{6}$ much feared it fhould prove fogrgy Weather again.
" Now I intend to give a brief Defcription of the Land, 6s and the Obfervations I made there.
' Nova Zembla is fo called by the Ruflans, which
" fignifies Nerv Land, in their Language. To prove either "s that it is an Illand, or whether it joineth to the Continent "s of Tartaria, would be a very hard Tafk, nor is it cer-
"s tainly known to any; for by Circumftances I think it
"impoffible to prove; and by Experience, the Search
" thereof is fo impoffible that it will hardly be tried;
" but let it be either, I think the Matter is not much,
" fince it is the moft miferable Country that lieth on the
" Foundation of the Earth ; a Country, moft part of it
" covered perpetually with Snow ; and that which is bare,
" is not to be walked on, being like Bogs; upon
"s whofe Superficies grows a Kind of Mofs which
" beareth a fmall blue-and-yellow Flower ; and this is " all the Product of the Earth of this Country. Under
" the Superficies of the Earth, about two Feet deep, after
"s we had dug fo low, we came to a firm Body of Ice;
" which, as I think, was never heard of before; fo
" thofe Men that did imagine, if they were forced to
" winter to the Northward, to dig Caves in the Earth
"t to preferve themfelves from Cold, would find here
" but very bad Lodging. The Snow lieth here contrary
" to what it doth in any other Country; for in all other
" Climates the Snow melteth fooneft away near the Sea-
" fide, but here in fome Places it rifes as high as either " of the Forelands in Kent.
"The Sea has wafhed underneath the Snow a prodigi"s ous way, and the Snow from the Weftern Sea, upon "s the high Ridge, over-hanging, is moft fearful to be" hold, and up from the Water-fide, upon the firft
" Ridge of Hills, the Snow was melted, till you came " to the next Ridge, which are mountainous, and they " all the way up are covered with Snow, which I believe
" hath lain there ever fince the Creation; but after we " had afcended this, which in fome Places was almoft ' perpendicular, we came to the Top of all the Mountains, as we fuppofed, for we could not fee far, for we could hardly fee one or the other, the Fog was fo thick,
and remained fo all the Time we were in the Country 's but on the Top of the Hills we found it bare from "S Sow, and indifferent good walking. The Beafts that I " found in the Country were only Bears. I continued on the " Top of thofe Hills fome two Hours, and went as far as "t was convenient, that we might find the Way back again. ${ }^{6}$ Here I found the Track of many large Deer; alfo we " found an Horn or Branches of Deer. Befides Deer, there " are abundance of large white Bears, and fome Foxes " and a little Creature much like a Coney, but not fo big "s as a Rat; and fome few little Birds like Larks; and " thefe are all the Beafts or Fowls we found in the Coun" try. Every quarter of a Mile there runneth down from " the Hills, into the Sea, a fimall Rivulet of very good "Water, which is melted from Snow. Upon the Hills " we found abundance of Slate-Stone, which made it "s good walking; but at the Sea-fide, where the Rivuler " came down, we found very good black Marble, with ' white Veins in it.
" The Point where we loft our Ship I called Speedill; "' the high Hills I called King Cbarles's Snow Hills; and "s the next Point to the Southward, which is the Wefter" molt Point of Nova Zembla, I named Fames's Fore" lond, and the Point to the Northward, York Point. "Speedill lieth in the Latitude of 74 Degrees 30 Mi "s nutes North, and in the Longitude, Eaft from the Ci" ty of London, $\sigma_{3}$ Degrees; the Variation of the Com" "pafs is $I_{3}$ Degrees Weft, and it is full Sea at the South"weft Moon. The Tide rifeth eight Feet, and fetteth " directly upon the Shore, which is a certain Sign that "6 there is no Paffage to the Northward. The Sea "Water, about the Ice and Land, is very falt, and " much falter than any I ever tafted, and a great deal " heavier, and I may certainly fay, the cleareft in the " World; for I could fee the Ground very plain in "s eighty Fathom, which is four hundred ànd eighty Feet, "t there being few Steeples fo high as that was deep, "s and I could fee the Shells at the Bottom very plain."" Upon this Account, and thefe Reflections, I have only a few of thefe Obfervations to make. In the firt Place, it is owned by Captain Wood, that he did not fail fo high as the Dutch did by 4 Degrees; in this he fays he was hindered by Ice, and no doubt he might be fo; but his Conclufions from thence, that it is impoffible to proceed higher that Way, and that the Accounts we have of thofe who have proceeded farther, are to be regarded as fictitious, is very wild and extravagant; for that it is poffible to fail to the South of Greenland is notorious, and that there may be a Channel between this broken Land and Nova Zembla, is more than probable; but that this Channel may be very difficult to find, may be free from Ice but for a fimall Part of the Year, and that in fome hard Winters it may not be free at all, is very poffible.
In the next Place, I muft take notice, that notwithftanding we fee it laid down, that fearching higher than fixty-four Degrees on the North-weft-fide is to no parpofe; becaufe if a Paffage could be found in a higher Latitude, it would be impracticable on the Score of Ice and Cold, yet we fee that a Paffage has been fought on the North-eaft-fide; and as a Company of Dutch Merchants affirm, without any Reafon for affirming it if it was not true, that fuch a Paffage has been found into a Sea free from Ice; his thews that Opinions ought not to be too haftily taken up, which limit the Intelligence and Power of Mankind ; and that we fhould not be overready to liften to fuch Doctrines in Geography or Navigation, as are evidently dictated by Difappointment

My laft Obfervation is, that on the North-eaft, as well as on the North-weft, there appear to be broken Lands, which, if we confider the Nature of things, feem to indi cate a Paffage ; and that fuch a Paffage on either Side is worth feeking, by the Inhabitants in the Northern Part of the World, will appear plainly to any Man who confiders the Nearnefs of that Paffage, in Comparifon of the Streight of Magellan; and therefore we need not at al wonder, that from Tinse to Time new Attempts are made, notwithitanding repeated Difappointments. I muft confefs, that with refpect to us, a North-weft Paffage deferves the Preference, becaufe of our Poffeffions in Hudfois's Bay, which would enable us the better to fecure it
and therefore I confers it appears to me highly reafonable, that if a Reward of 20000 l. fhall be found not to produce the defired Effect, it fhould be enlarged to $100000 \%$. for this plain Reafon, that the Benefit of this Paffage, when found, would refult to the Public; and the Reward for finding it, however large, as it would be paid to our own Subjects, ought not to be efteemed either a Burden or a Lofs to the Public.
6. The Situation of the Dominions of Ruffa is fo favourable for Difcoveries on this Side, that it may be juftIy wondered we have not long ago had a clear and cersain ${ }^{\circ}$ Relation from the Subjects of that Empire, in Reference to their Commerce with the Nations inhabiting the Northern Parts of "Afaa; but partly from our Want of Correfpondence formerly with the Ruflan Court, partly from the great Ignorance of the People inhabiting the Northern Provinces of that Empire, and partly from the frequent Revolutions to which their Government has been always fubject; fo it has fallen out, that till within this laft Century we have never had any confiderable Informations from thence; and even now we are very far from having fuch clear and diftinct Accounts, as are neceffary to refolve this great Queftion, whether there is, or is not, a Paffage to the North-eaft?

Thus much, however, is pretty clear, that the Streights of Weygatz, as they were called, do not open into the Sea of Tartary, or the Nortbern Ocean, but into a Gulph which is bounded on the North-eaft by a high mountainous Country, by which it is joined to the Continent ; neither have we any abfolute or pofitive Account, that the Sea, to the North of Nova Zembla, is navigable or free from Ice. But in the Reign of Peter the Great, and fince his Time, vaft Difcoveries have been made to the Eaftward, and through that Sea, into which Ships muft neceffarily come, if a North-eaft Paffage could be found. The River Lena falls into the Northern Ocean very near, if not under, the Polar Circle; and from thence the Continent extends two hundred Leagues to the Mouth of the River Kebuma, all which is fubject to the Ruffons.

Beyond this River lies the Country of the Tychalt/ki, a sery barbarous and warike People, who poffefs a Country one hundred and twenty Leagues in Extent, from Weit to Eaft, and is the utmoft Bounds of Afia on that Side. This Country, which reaches as far North as 66 Degrees, is alfo the Extremity of that great Peninfula, to which the Ruflans have given the Name of Kamfobat$k a$; the Weft-fide of which is, in a good Meafure, under their Power, and fome Settlements they have on the Eaft. The Southern Extremity of this Peninfula, is that Country fo well known to the World, by the Name of the Land of Fedzo, directly over againt Fapon; fo that this great Peninfula has the Ocean on the North and on the Eant, the Sea of Fapon on the South, a Gulph of its own Name, which divides it from Corea, Cbinese Tortary, and the Dominions of Rufia, to the Weft; it extends from the Latitude of 39 to 66 Degrees, and contains 15 Degrees of Longitude, or thereabouts.

On the Eaft-fide of this Country lies a very large Inand, called $P_{u c h o c h o t / k i}$, extending from the Latitude of 59 to 63 Degrees; the Inhabitants of which are tributary to the Rufians. To the South of this lies another large Inand, from 5 r to 55 Degrees; the Inhabitants of which are a very warlike People, hitherto unfubdued, and with whom the Ruffians trade for Caftors, and other rich Furs. It is from this Inand that one Mr. Stoller, a famous Botanift, failed laft Year upon Difcoveries, and is faid to have found but a very flort Paffage to the Coafts of Nortb America. The Reader will eafily apprehend this, if he pleafeth to confider what we have heretofore delivered, of the Situation of the Countries on this Side, from the Frontiers of the Ruflan Dominions, to California; for, without doubt, in the Accounts we have from Peterfburgb of this Matter, they can mean no more by North America, than that Mr. Stoller had difcovered Inlands to the Eaftward of thofe with which the Ruffans were hitherto acquainted; but whether thefe belong ftrictly to -America or not, is a Queftion, that, till we are better acquainted with the Nature of this Difcovery, cannot be tefolved. The Reafon I have mentioned it is, becaufe it
affords a clear and certain Proof, that if we could pafs to
the North-eaft of Nova Zembla, we thould find a fhort and eafy Way to Japon and Cbina; notwithftanding al! that has been before afferted by Captain Wood, who, from his own Account, appears not to have failed far enough to the North, to be able to contradict, with any tolerable degree of Affurance, the Truth of what was afferted by the Dutch Navigators, upon the Faith of actual Difcoveries; for he was fhipwrecked in the Latitude of 74 Degrees, and they paft to the North of Nova Zembla, in the Latitude of 80 Degrees; and if they could have perfected that Difcovery, there is no doubt but that, by this Time, all the Trade of Cbina and Fapon had been carried on that Way; for it appears clearly, from the Ruflan Accounts, that thofe Dutch Navigators were aftually advanced into that Part of the Nortbern Ocean, which wafhes the Coaft of Kamfchatka, and confequently had no great Impediments to hinder them in their Paffage to Fapon, and from thence to Cbina.
7. We will conclude this Section, with oblerving, that from the Nature of the Tides in Hudfon's Bay, on the Coaft of Greenland, and in other Parts of the North Seas, it is apparent that fome Way or other they have a Communication with the Ocean, for otherwife it is fimply impoffible they fhould rife fo high as they do; and therefore if after all our Endeavours no Paffage fhould be found to the North-weft or North-eaft, we may reft fatisfied, that this Communication is from the North; and that by paffing round Spitzbergen or Greenland, we might enter what is called the Tartarian Sea, or that Part of the Ocean which wafhes the Northern and-Eaftern Extremities of Afa. This might always have been difcovered by dint of reafoning, fince the Figure of the Globe, and the Difpofition of the feveral Parts of it, have been tolerably known; but in Proportion as the true Figure of the Earth has been found out, by the Skill and Labour of Mathematicians; and as their Accounts of this Matter have been juftified by Experiments, this has grown clearer and clearer; fo that at prefent there can remain few or no Doubts about it, in the Minds of thofe who are competent Judges of the Subject.

It feems therefore to be a Point of the greateft Importance to make the beft and fpeedieft Ufe of the feveral Lights we have received that is poffible, in order to obtain a Share, at leaft, in the vaft Advantages that muft neceffarily accrue from the being able to extend our Na vigation through any of thefe Paffages. We have certainly, in this Refpect, as great or greater Opportunities than any of our Neighbours; and there feems to be, at prefent, fuch a Spirit in the trading Part of our People, as would difpofe them to be at any Expence that fhould be neceffary to carry Attempts of this Nature into Execution. There is, likewife, another Motive to excite our Induftry in this Refpect, which is the Incertainty of our being able to fecure any Advantages we might defire from a Trade throngh Ruffic, which we are told, of late, is become more and more precarious. But if we could once perfect this Defign, of penetrating into the Eaft by a new Paffage, we fhould not only be lefs dependent upon the Courtefy of that Government, but likewife have it in our Power to make it more dependent upon us, in cafe we fhould be able to fix a confiderable Settlement on any Inand in thofe Parts.

There is no doubt but abundance of Objections may be raifed to a Scheme of this Nature, which at prefent would be very difficult to anfwer, becaufe we muft proceed on both Sides, merely upon Suppofition; but if the Difcovery was once made, the Cafe would be altered, and the Advantages flowing from it would encourage us to take fuch Meafures, as by the Help of our great maritime Power, which can never be better employed than in fupporting the Commerce of the Nation, might fecure to us the Trade of thefe New Indies. If any thing delivered in this Performance, either now or at any Diftance of Time, fhall fortunately lead to promote or facilitate fuch a Difcovery, it would fully anfwer the Ends of its Author; and if not, he muft be content with the Satisfaction of having offered all that occurred to him upon a Subject, which he thought might be improved to the Benefit of his Country.

## C H A P TERII.

Comprehending fuch Voyages and Travels, as relate to the Northern Parts of Europe, and fuch of the Countries adjacent, as are fubject to any of the European Powers.

## S E C TION 1.

$A$ Voyage to the North, containing an Account of the Sea Coasts and Mines of Norway, the Danifh, Swedifh, and Mufcovite Laplands; Borandia, Siberia, Samojedia, Zembla, and Iceland; witth fome very curious Remarks on the Norwegians, Laplanders, Ruffians, Poles, Circaffians, Coffacks, and other Nations.

Extracted from the Journal of a Gentleman employed by the North-Sea Company at Copenbagen; and from the Memoirs of a French Gentleman, who, after ferving many Years in the Armies of Rufia, was at laft banifhed into Siberia.

I: Introduction to this Secrion; an Account of the Author; the Occafion of bis Voyage; bis Arrival in Norway; and Obfervations made by bim on the Country; its Produce and Inbabitants. 2. His Arrival at Berghen; Yourney from tbence to the Copper and Silver Mines; woith otber currious and entertaining Particulars. 3. He profecutes his Voyage from Drontheim; the Practice of the Laplanders in felling Winds; and the Nature of that Impofure detected. 4. FTe is driven by a Storm on the Coaft of Danih Lapland; an Account of that Country; its Produce and Inbabitants; their great Poverty, and their Willingnefs to exercije Hoppitality Jo far as is in their Poweer. 5. The Autbor's fourney, from the Danifh to the Mufcovite Lapland; a Defcription of the Sledges, Rain Deer, and other Singularities of thofe Parts. 6. The Profecution of this Sulbject; an Account of the Kilops, the moft brutal and favage of any of the Lapland Nations; and thbe Autbor's Airrival at Kola, the Capital of the Mufcovite Lapland. 7. His Departure from Kola, ond his Adventures in bis Return; rwith a Defrription of the Manner in wobich the Laplanders travel in their Snow-Sbocs. 8. A Defrription of the Coafs of Borandia; the Manner of his frif $/$ Interviewo weith the People of tbat Country; the Motives wobich induced him to think of making a Yourney from thence by Land, to Siberia. '9. The Manner in webich be and bis Cominpanions travelled to Vitzora; their Reception by a Ruffian Governor; Trade with bim for Furs; and obtain his Leave and Afiftance for continuing tbeir intended Yourncy. 1o. They proceed from thence to Petzora, trade by the Way, and are kindly treated by the Inbabitants. 11. The Author enters Siberia; Defcription of that Country; Manner in webich thofe People live, wobo are exiled; bis Conference with a French Gentleman banilhed thither, wobo made him a Prefent of bis Memoirs. 12. An Account from thofe Memoirs, of the Manners, Cayfoms, and Vices of the Ruffians; their Religion, Contempt for Learning, and Obfinacy in adbering to their own Sentiments. 13. The Jecret Hifiory of a Ruffian Princefs, wobo, by a malicious Contrivance, zwas hindered from efpouffing the Czar Alexis, Fatber to the late Peter I. and other Particulars. 14. Of the Dignity of the Patriarchs of Ruffia ; the flange. Superffition of the People; the Manner of tbeir punijbing Heretics, and other things woorthy of Notice. ${ }^{15}$. Of the Circaflians and Coflacs; of the Lawes of Ruffia ; of the Ruffian Letters; Manner of writing; and a Cbaracter of the then reigning Emperor. 16. The Rije and Progrefs of the Ruflian Empire; the Hiflory of John Bafilowitz; and a remarkable Story of the Englif Embaflador, Sir Jerom Bowes, zuith other Eveents during bis Reign. 17. The Derivation of the Word Czar ; the Stile of the Ruffian Emperor; and an Account of his Family and Court. 18. Of the Czar's Revenues; the Empref's Court ; and the Manner in wobich Ladies of Quality travel in that Counn try. 19. Of the Nature of the PuniJmments in Rufiaa; Manner of inflicting them; weith various otber Particulars. 20. Some Account of the Poles; the frange Difeafes to whbich they are fubject; and a Comparion between the Polifh and Ruffian Language. 21. The State of the Ruffian Empire at that time; the principal Favourrites and Miniters; weith fome very curious and remarkable Paffages relating to the Politics of tbat Court. 22. Of the Commodities and Trade of Ruffia; and of tbe Meetbods ufed by tbe Dutch to recommend their owen Wares, and prejudice thofe of the Englifh. 23. A large Defoription of Siberia; the Manners of the Inbabitants, and tbofe evbo live amonget them; weith an Account of the Produce of that Country. . 24. This Subject continued; and a Defcription of the Fruits, Aringe Beaffs, Birds, \&cc. 25. A foort Account of Tartary, and fome of its Inbabitants, particularly the Calmucs, ©c. 26. The Hifory of the Autbor's Travels refumed; bis Arrival at Papinogorod; and his Yourrey thence into Samojeda; Defoription of tbat Country, and its Inbabitants. 27. He profecuites bis Travels to Zembla; Account of that Country, its Inbabitants, and the Fifbery upon its Coaffs. 28. This Subject fartber profeVol. II. Numb, 100. Arrival in Greenland, an Account of the Herring Fiflery, and bis Voyage thence to Iceland. 30. A Defoription of that I/land, and its Inbabitants, with various otber Particulars. 31. The Author's Safe Return to Copenhagen; the Rarities prefented to the King of Denmark; and bis Majely's Satisfaction with the Account given bin of this Voyage. 32. The Autbor's Remarks, on the erroneous Accounts formerly publifhed of the Countries tbrough webich be travelled. 33. Some fartber Obfervations upon the Facts de-
livered in this Section.

HE following Voyage, though written juft a Century ago, has, notwithftanding, a great Variety of Circumftances, which ought effectually to recommend it: As for Inftance, it relates to Countries that have been very little vifited fince; and therefore what is written about them here may be confidered as new, though penned at fuch a Diftance. The Author appears plainly to have been a Man of great Curiofity; one great End of his Travelling being to inform himfelf; to which his principal Motive was the Defire he had of informing others. He was remarkably fortunate in the Opportunities that offered themfelves for this Purpofe; and he was no lefs diligent and affiduous in improving thefe Opportunities to the utmoft. The Accounts he gives us are equally candid and circumftantial; he fhews much Wil lingnefs to acquaint us with what he faw, and with his Notions upon every Subject; he has added to his own Performance, that of another Perfon; who had the fame Occafions to make himfelf acquainted with the interiour of the Country, that he had to examine the Sea-Coaft; he tells us very fairly how he came by thefe Memoirs; fo that we have all the Reafon in the World to be fatisfied with his Conduct, and to think ourfelves obliged for the Care and Circumfpection he has ufed. There is no doubt, that many things will occur in the Perufal of this Section, which critical Readers may fee juft Caufe to dinike; but we cannot expect that Men, who, like our Author, are driven all the World over for a Subfiftance, fhould have the fame Qualifications with thofe who fpend all their Days at Eafe, and in the quiet Purfuit of Learning, in a regular Method. We muft take Mankind as they are, and judge of their Writings according to their Capacities; making fuch Allowances as are reafonable, and as we fhould expect if we were in their Places. Thefe Travels follow very naturally, and may ferve as a proper Supplement, in many refpects, to what is laid down in the former Chapter; and having thus fhewn the Nature of this Performance, and why we give it a Place here, let us proceed next in the Words of our Author:
About the Year 1647, Frederic the IIId. King of Denmark, being defirous to advance and increafe the Trade of his Kingdom, eftablifhed two Companies of Merchants at Copenbagen, his capital City; the one was an Iceland Company, and the other was a Company of Traders to the North. The latter, having obferved that the Trade to Norway was very beneficial, obliged all that were concerned in that Company to fign a Petition to his Dani/b Majefty, in February 1653 , reprefenting that a great Profit would arife to his SubjeEts, by encouraging that Trade more, and enabling them to enlarge it, by making further Difcoveries to the North, whence feveral rich Merchandizes might be imported. His Majefty liftened to their Requeft, granted it, and allowed them to extend their Commerce as far Northward as they fhould think fit; upon which they fitted out feveral Ships, to make a Voyage to Norway and the North. It happened I was at Copenbagen when one of the Northern Fleets was outward bound; and underftanding the King had commanded the Undertakers of this Enterprize to make all pofible Difcoveries of the Countries to which they came, and to bring back the moft rare Curiofities that they could find, I took a Fancy to the Voyage; one of the Company being my Friend, I went to him, defired him to recommend me to his Partners, as a Perfon qualified to go Surgeon of one of the Ships. It was not difficult for him to fucceed in procuring that Employment; the Company entertained me, and I entered into their Service.

All our Merchandize, Provifions, and Neceffaries, be-
ing aboard, we embarked in the Beginning of Aprit, 1670, weighed Anchor, and fet fail with two Ships in our Company, and fair Wind and Weather, from the Port of Copernagen. We had a frefh Gale at South-eaft, till we arrived at Kat-Gat, a Streight which divides the German Ocean from the Baltic Sea. It is a very dangerous Paffage, full of Rocks, and is forty Leagues in Length, from Elfenore to Scbagerbort. When we came over againt Mailfrand, a little City and Sea Port about thirty Leagues from Copenbagen, the Wind turned Northward, drove us back ten Leagues, and forced us to make fome Port on the Coaft. The firft we came at we put into, and that was Scbalot, a Creek; where we caft Anchor, and rode fafe under the Caftle, which looked rather like a heap of Ruins, than a Place that was inhabited : 'Tis famous only for its Promontory; well known to Mariners who ufe the Baltic. We Itaid there neas three Days; on the fourth, an Hour before Sun-rifing, the Wind fhifted again to the Eaft, fo we weighed Anchor to proceed on our Voyage. We had not been at Sea above "four Hours before the Wind varied to the Northeaft, and blew fo ftiff a Gale, that we were obliged to leave the Coaft of Gottenburgb, on which Shore we were then, and to fteer directly over to that of futland. The Sands being frequent and fhallow in thofe Parts, we were obliged to be almoft always cafting our Lead. As we failed along this Coaft, a Guft of Wind drove us to a Place where there were but three Fathom and a half Water; and we fhould certainly have run aground, had not our Pilot, who was a very dextrous Seaman, immediately tacked; when, getting the Advantage of the Wind, in half an Hour we founded, and had fifteen Fathom Water.

By the Help of a fide Wind, we held on our Way for near two Leagues from the Sands; here we found ourfelves in an Eddy, where we were as fteady as if we had been at an Anchor. We prefently furled all our Sails except the Top-Maft, endeavouring to keep ourfelves out of it; but all our Endeavours would have been in vain, had not the Wind varied a Point or two to the South-eaft. We then loofed our Sails, got through it, the Wind blowing frefh, and failed towards the Coaft of Babus; we continued our Courfe feveral Days and Nights; and about eight $0^{5}$ Clock one Morning difcovered the Promontory of Chriftian Sand, in Norway. The Village that gives Name to the Mountain is fmall, the Port, however, is commodious. We did not ftay long there, for the next Day we arrived at Cbrijfiana, or Oblo, the capital City of one of the five Governments of that Kingdom. As foon as we were got into Port, we went afhore to deliver our Letters to the Company's Agents; who received us with Joy, for the good News we brought them, of the King's giving Encouragement to the Norzoay Company, to make their Difcoveries, and enlarge their Trade in the North. One of thefe Agents hearing I was a Stranger, and had been recommended to his Principals, by one of their Society, and not the leaft confiderable Merchant among them, was very civil to me, fhewed me all that was worth feeing, and told me all that was worth knowing, relating to the Place at which we arrived. He alfo commanded a Servant of his, who fpolse French tolerably well, to go with me into the Country three or four Leagues, that I might fee more of it. Early next Morning we took Horle, and rode to Wijby, a large Village, nine Miles from Cbrificiana, which flands between two Mountains ; the Houfes are very low, and of Wood, without Iron-work or Windows. There is a fort of Lattice on the Top of the Houfes, to admit the Light, and they are all covered with Turf.

The Reader is defired to take notice, that this is not
Wijby,

Chap. II.

Wfly, the Capital City of Gotbland, where the Marine Laws were made, which are fo famous. The Norwegian Peafants are fimple, and very hofpitable: They are all Fifhermen; 'their only Trade is in Herrings, ${ }^{\text {Cod }}$, Stockfifh, and other Finh frefh falted or dried: They are Slaves to the Nobility. The Norvegian Women are very handfome, though they are red-haired; they love Strangers, and are good Houfewives : They fpin, and make Cloth for their Families; they look after the Cattle, of which there are great Numbers of all Kinds, as in France. There is alfo Plenty of Gane in this Country ; as Elks, Stags, Roebucks, Boars, Goats, Rabbets, Hares ; all Sorts of wild Fowl, Otters, Linxes, and wild Cats of divers Colours. All Norvary is a mountainous Country, and confequently Bread-Corn will not grow there in any Quantity; but the Inhabitants are abundantly fupplied from other Parts, by their Commerce, and what they want of Corn-Ground, is made up in Paftures and Woods. As we were returning towards Cbrificina, we met a Gentleman of the Neighbourhood, followed by two Servants and fome Dogs, going a Hunting: He knew the Man that was with me, and alked him if he would divert himfelf with an ElkChace, bidding him afls the fame Queftion of me. We had Time enough upon our Hands, fo we readily accepted his Propofal. After we had rid about a Mile we met his Huntiman, fome other of his Servants, and ten or twelve Boors, who led us three Miles further, to a Wood full of Bulhes; when we came to the Entrance of it we alighted, and gave our Horfes to one of his Domeftics.

The Chace had been prepared the Day before by the Gentleman's Vaffals, or rather Subjeets; for theNobility of Noorway are Sovereigns under the King, in their own Territories. We were faarce forty Yards within the Wood, before we perceived an Elk running towards us; but before we could fire a Piece he dropped. I afked of my Guide and Interpeter, how the Beaft came to fall down dead in that manner? He anfwered, It was the Nature of that Animal to be taken thus with a kind of Falling-Sicknefs, which often feized him in the Beginning of the Chace. I did not fland to refleet whether his Fears might not contribute to his Dittemper. I feemed to doubt the Truth of it, and thought it to be an Accident which did not often happen ; my Guide affiured me to the contrary, adding, that from this Difeafe they were called Elks, or miferable Creatures. The Beaft is as big as a great Horfe, his Body like a Stag's, but larger and longer; his Legs are long,' his Feet broad and cloven, his Anters great, hairy, and broad, like a Fallow-Deer's, but not fo well furnihed with Horns as a stag. Had he not dropped as he did, I believe it would have been hard for us to have brought him down, as I perceived foon after when we had rouzed another, which we chafed above two Hours before we could catch him; and we had never caught him had he not dropped down dead, as the other did. He killed three of the Gentleman's beft Dogs with his Forefeet ; the Gentleman was extremely forry for the Lofs of them, and would hunt no more. He fent to a Farm of his a Mile off for a Cart, to carry the Game we had caught to his Caftle; we accompanied him thither at his Requeft : It was built like the reft in that Country, after an odd manner; ftood four Miles from Wijly, and he treated us there very fplendidly.
My Guide elling the Lord of the Cartle that I was a Frenchman, employed by the Norroay Company at Copenkagen, he made me a Prefent of the two hinder Left-legs of the two Elks we had killed, or rather feen die of themfelves; giving me to undertand it was no finall Favour, thoof Leegs being an infallible Cure of the Falling-Sickneis. I repied by my Interpreter, I wondered, fince the Foot of an Elk had fo much Virtue in it, why the Animal that carried it always about with him, did not cure himfedf. The Gentleman reflecting on what I had faid, laughed out aloud, and told me I was in the right; for that he had given it to feveral Perfons afficted with the fame Difeafe, and it did not cure them; wherefore he had a Iong time furpected that the pretended Virtue of the Elk's Foot was a vulgar Mittake; of which, he faid, he did no more coubt than that the eating of the Flefh of the Beart infected People with their Dittemper. He gave me many

Infances of the bad Effeets eating Eliks Flefh had on Human Bodies. I anfwéred, the Nails of thefe unhappy Perfons would be a more fovereign Cure in an Epileppy, than thofe of an Elk.
The Gentleman obliged us to lodge with him that Night; and early the next Morning, after we had made a good Breakfaft, we took our Leaves of him and returned to Cbrijfiena, where we flaid four or five Days ; and having received further Orders and Directions from the Company's Agents there, embarked, weighed Anchor, and made the beft of our Way for Bergben. We had a frefh Gale at North-eaft till we arrived at Strafanger, where we were on a fudden becalimed; and having nothing elfe to employ ourfelves about, owe fell all to fifhing ; there is abundance of all Sorts of Filh on the Coafts of Norroay ; we got fuch Store by our Fifining that we were forced to keep Lent a long while after, being unwilling to throw the Fifh overboard: The Calm lafted five Days. On the 6th, towards Evening, it blew up a brifk Gale South-eaft, by which in a Sew Days we reached the Port whither we were bound to unload the Merchandize we had taken in for that Place.
2. We anchored in the Port of Bergben, one of the fineft in Europe; and when our Cargo was unladen, I went to fee the City, which is as large as $A b$ beville; ;it is divided into the high and low Town; the one built on Rocks, the other on the Sea-Shore. It is full of Merchants, and was formerly an Archbifhopric, which was abolifhed upon the Reformation of Religion in the King of Denmark's Territories. The Epifcopal Palace was given to the Hanf-Fowins, the principal of which are Hamburgb, Lubeck, and Bremen, for the antient Merchants to live in ; and the greateft Part of the Houres were turned intoWarehoufes, from whence they are called Clojiers, and the Merchants Monks, though they do not wear a Cowl, nor obferve the Rules of any Order. This Place, in the Popif Times, belonged to a Convent adjoining to the Epiicopal Palace; and when it was granted to the Merchants, trading to and from the Harj $f_{- \text {-Towns }}$, the King obliged them to keep up theForm of a religious Houre fo, far, that no-body fhould marry who lived in it.
He that will have a Wife murt leave the Cloitter, and live elfewhere; however, he may deal and correfpond with his Brethren, whofe principal Trade is in Herrings, Cod, and Stock-fifh, Commodities that gooff in great Quantities, in Muffcory, Swedern, Poland, Dennmark, Germany, Holland, and other Parts of Europe. As foon as we had dircharged the Cargoo we had to deliver at Bergben, we fet fail for Drontbeim with a South-wefterlyWind; we were to unlade above half our Lading there; it was con? figned to the Surveyor of the Copper and Silver Mines, for the Ufe of the Workmen and Miners whom he employed in that Service, and confifted in a Supply of Bread and Beer. We were farce half way thither when the Wind blew fo fliff, that in fifteen or fisteen Hours we found ourfelves over-againt Stora, where it ceafed on a fudden, and the Storm was followed by a Calm, the moft. uneafy Thing in the World to Mariners. We were obliged to return to our former Diverfions, and fo fpend the Time, that we could not tell how to pafs away better, in fifhing. We took fuch a prodigious Quantity of Klip Fifh, that we were forced to falt and barrel a great Part of them up; and they were very ferviceable to us in the Courfe of our Voyage. Klip Fifh are a Sort of Cod, bigger than thofe of Newfoundland; they never leave the Rocks, lying always upon or under them, from whence they are called Kip Fijb in Germany, which fignifies Rock Fijb.
The Calm held feveral Days, and then the Wind blew a frefh Gale Weft-fouth-weft, which was fair for us, and in three Days we arrived at Drontbeim. When we came afhore we delivered our Leeters to the Surveyor-General of the Mines. By thefe Letters the Surveyor was ordered to unlade our Ships as faft as poffible, that we might purfue our Voyage. He told us he could not go to work until the Officers who were to receive the Provifions came back from the Mines, whither they were gone about thofe Works: We preffed him to haften our Difcharge, and
he offered to fend a Meffenger on purpofe to fetch an Officer to unlade us. I defired Leave of our Mafter to accompany the Meffenger, which having obtained, the next Day by times in the Morning the Surveyor's Man and I mounted on Horfeback, and departed for the Mines. When we came to Steckby we were obliged to put up, the Night coming on, and we had a long Wood to go through, wherein were Boars, Wolves, and Linxes, in great Numbers, very dangerous for Paffengers to encounter.

The Road was fo rocky, that we could reach no farther in a whole Day, though that Town was fcarce eighteen Miles from Drontbeim. The next Morning, before Sun-rife, we left Steckby, and proceeded towards the Mines, where we arrived juft as it was Night, and lodged at the Forges; we were entertained by the People who had the Charge of the Mines, according to the Cuftom of the Country, with Tobacco, Beer, and Brandy.
Our Hoft believed we would not think ourfelves welcome unlefs we were made drunk, and therefore plied us fo faft with Bumpers that there was no avoiding a Debauch. I met with an Officer there who fpoke French, having waited upon a Norwegion Gentleman in France. $I$ told him that I came out of Curiofity to fee the Mines, and I begged him to let me enter them; he promifed I fhould do it on the Morrow ; and after two Hours drinking and talking, he permitted me to go to bed. The next Day as foon as it was light, the Meffenger that came with me to the Mines pofted for Drontbeina with one of the Officers who were to receive the Provifions we brought for the Mines. I was left at the Houfe of a Mafter-Miner, who went to Drontbeim the next Day, and I was glad of the Opportunity of his Company, by which Means I had a whole Day to fpare to vifit the Mines and Miners. When I rofe I went to the Officer that fpoke French, and he had provided a Breakfaft for me and the Mafter Miner, my Landlord, whom he defired to fhew me the Way down into the Mines, that I might fee them work. When we had breakfafted; and it is obfervable that the Norwegians are much given to Drinking and Good-cheer, we went fifty or fixty Paces from the Forges, which are on a high Mountain; there we came to the Mouth of one of the Mines; over which was erected a Machine like a Crane, turned by two Men in two great Wheels, to draw up Pieces of the Mine, as Mafons draw Free-ftones out of the Quarries near Paris, or Potters their Clay, in many Places in France. The MafterMiner and I were put into a wooden Tub, and our Hands into Iron Bands fattened to it: Thus we defcended into the Mine above fifty Fathom deep.

When we got to the Bottom of it, it looked like Pluto's Kingdom ; there was nothing to be feen all round but frightful Caverns, flaming Fire, and Creatures more like Devils than Men: They were cloathed with black leathern Jackets, each having a Camail, fuch as our Priefts in France wear in Winter; a P Piece of patched Leather about the Head of each Miner, a little above the Nofe, and hangs down to his Breaft like a Muffer ; they have all Aprons of the fame. The Miners are conftantly and differently employed; fome ufe the Chiffel, fome the Hatchet, to knock out the Copper Stones; others look after the Veins of Copper, or found, to try if they can difcover any Waterplace, which fometimes is hid in the Bowels of the Earth, and breaking forth on a fudden drowns them all that don't take care. The Mafter-Miner who defcended with me into the Mine, perceiving I was afraid, and that I was taken with a cold Fit, rung a Bell; which was to give Notice to the People above, that they fhould draw us up again; accordingly we got up with the fame Eafe that we went down. I was very glad to breathe the ferene Air, free from the unwholfome Damps of thefe fubterranean Dwellings. I had feen enough to fatisfy my Curiofity, and could I with Safety have ftaid longer, there was little more to be feen.
We went to the Officer's Houfe, who could difcourfe with me in my own Language, and were entertained very handfomely and generounly by him; his travelling having rendered him more polite than his Brethren at the Mines; after Dinner he ordered Horres to be got ready, to ride
to the Silver Mines. The Officer, the Mafter-Miner, and myfelf, went thither; where we waited on the Surveyor of the Works, who made us heartily welcome, prefented each of us with a great Glafs full of Brandy, drank off one of the fame Size to fhew us the Way, and then gave us the fecond Courfe in the Norwegian Colla tion, Beer and Tobacco. When we had fmoaked and drank as much as the Surveyor thought fit, he conducted us to the Forges, a Mile off his Houfe; at which, as in the Copper Mines, there are feveral Workmen always employed. Some break the Stones, orhers wafh them, others melt and refine the Ore, and others coin the Money for the King of Denmark. Thefe Mines turn both very well to account, and are not the leaft Part of his Dani/b Majefty's Revenue. From the Forges we went to the Mine that was next to it ; ${ }^{\text {'twas on a high Moun- }}$ tain; the Mafter Miner and I were let down, as at his own Mine, and I faw nothing there which I had not feen before in that of Copper. Thefe Miners are cloathed like the others; and their Work and Habitations feemed much the fame. They, both the one and the other, leave off working in the Mines in the Winter; Spring, Summer, and Autumn, being the only Time of their Bufinefs. They work in the Spring and Fall three Hours in the Forenoon, and three after Dinner ; in the Summer, fourHours in the Morning, and five after Dinner; the reft of their Time they fpend in Mirth and Feafting. They delight much in dancing, and have their Hautboys, Violins, and other Inftruments, for that Purpofe.
When I returned to the Copper Forges, I found the People at their Sports, and was not a little pleafed to fee the Variety of their Humours and Paftimes. For three Months, in the dead of the Winter, they don't work at all; neverthelefs they receive their full Pay, at the rate of a Crown a Day. Having feen all that was to be feen at the Silver Mines, the Surveyor took us home with him, gave us fuch another Collation as we had before, and a good Supper after it. When we had all of us fufficiently refrefhed ourfelves, we went to Bed; and the next Morning the Mafter-Miner and I took our leaves of the Surveyor, who had provided a plentiful Breakfaft againft we got up ; and rode from his Houfe to the Copper Mines, where I thanked the Officer, that fpoke French, for his Civiilities; and the Mafter-Miner, and myfelf, fet out for Drontbeim. Night overtook us by the Time we were got eight Miles from the Mines, which put us on a Neceffity of taking up our Quarters at a Boor's Houfe, in the next Village we came to. The Peafant knew my Companion, and thought himfelf highly honoured in fuch a Gueft : He therefore did his utmoft to treat us to our liking.
He provided two Pheafants, and a Hare he had lately killed, for our Supper; that Game being free for the Boors in thofe Parts, they are feldom unfurnifhed with it. Before we fat down he brought us his Tobacco, Beer, and Brandy, made of Malt Spirits. After Supper we all of us fell to fmoaking like Dragons, and drank Brandy and Beer almoft all Night, which was the moft beaftly one I ever faw in my Life; but 'tis the Cuftom of the Country ; and both the Gentry and People, by Converfation and Merriment, mean only Lewdnefs and Debauchery. The Peafant perceiving the Mafter-Miner was quite drunk, was fo rejoiced at it, that he foon became in as bad a Condition himfelf. We had all now had our Dofe, and fome clean Straw was brought and fpread in the Middle of the Chamber, to ferve us inftead of Beds. We lay down together and fiept till Morning. The Sun was up before the Mafter-Miner and the Boor waked. I ordered, as well as I could, our Horfes to be got ready; refolving, if poffible, to get to Drontbeim that Day. I made the Boor's Sons guefs at my meaning by Signs. Our Horfes were faddled, and then I waked my Companion and his Hof. They were no fooner up, than we muft again fall to eating and drinking; that Work done we mounted on Horfeback, took our Leaves of the Peafant, and made the beft of our Way to Drontbein; where we'arrived before it was dark.
3. Two Days after I thus returned to Drontbeim, all our Cargo was unladen, and we had taken aboard the

## Chap. II. Northern Coafts of EUROPE.

Provifions the Surveyor General of the Mines was to furnifh us with; the Wind fetting fair we embarked, and 2 few Hours after fet fail to continue our Voyage to the North. :The Wind held fair feveral Days, till we were under the Arctic Polar Circle, where we were becalmed on the Coaft; fome of our Crew were fo fuperflitious, as to give Credit to the common Tradition, that the Inhabitants of the Country, under that Circle, as well as thofe that dwell on the Coafts of Finland, are Wind Merchants, and can raife and fell a Gale when they; pleafe: Certain it is they are almolt all of them Wizards, and, as Children of the Prince of the Air, pretend to difpofe of the Winds as their proper Merchandize. We were impatient of lying on that Coaft, and that Impatience put us upon trying any Means, however improbable to fucceed, rather than flay there any longer. The Captain of our Ship was for trading with the Wizards; accordingly he fent his Long-boat athore with his Mate, to traffic with thefe Traders, and purchafe a Wind of them, the Commodity we ftood moft in need on at that Time. Though I believed nothing of the Matter, I had the Curiofity to accompany him. We landed at the firft Village we came to, applied ourfelves to the chief Necromancer, told him what we wanted, and anked if he could furnifh us with a Wind that would laft till we arrived at Mourmanfincre. The Mate could fpeak enough of his Language to underftand him, and to be underttood. The Conjurer gravely replied, No; his Power extended no farther than the Promontory of Rouxella. We had a great Way thither, and if we reached fo far, we thought we might eafily make the North Cape ; fo the Mate defired him to go aboard with us, and drive a Bargain with our Captain. The Wizard confented to the Propofal, took three of his Comerades with him, leapt into a fmall Fifher-Boat, and went aboard our Ship.

Our Captain and he foon agreed upon the Price; he was to give him ten Kronen, about five or fix and thirty Shillings in Englijb Money, and a Pound of Tobacco; for which the Wizard was to furnihh a fair Wind as far as Rouxella. When the Bargain was made, and the Money paid, the Wizard tied a Woollen Rag to the Corner of our Forematt; 'twas about half a Yard long and a Nail broad; it had three Knots; and this was all our Captain had for his ten Kronen. When the Necromancer had done this Feat, he returned in his Boat to the Village with his Companions. The Captain of our Ship, according to the Inftructions he had received from the Conjurer, untied the firft Knot in the Rag, and immediately the Wind ftruck up Weft-fouth-weft a brifk Gale, and drove us, and the other Ship in our Company, thirty Leagues beyond Maelfroom, without giving our Captain any Occafion to untie the fecond Knot; and this Accident confirmed our Crew in their diabolical Superftition. This Maelfroom is the greateft Eddy or Whirlpool in the Norwegion Sea; in which many Veffels that approached too near it have perifhed. For this Reafon, fuch as are acquainted with thofe Coafts, keep out to Sea eight or ten Leagues to avoid it, and the Rocks that lie off Oftraford, oppofite to Maelfiroom. There are feveral fuch Eddies, five, fix, and feven Leagues from the Shore; and this. Danger obliges all Pilots to keep far out to Sea.

The Wind beginning to fhift a little, and inclining to the North, our Captain untied the fecond Knot, which kept it in its old Corner, till we made the Promontory of Rouxella. When we had paffed it, the Needle of our Compafs turned back half an Inch, by which fome fancied that there was Loadfone in the Mountain; and had not we "had a very dextrous Pilot, we flould certainly have loft our Courfe. Knowing that the other Ships in our Company were in the fame Trouble as ourfelves, our Pilot fhut up his Compafs, and hung out a Flag on his Foremaft Top, as a Signal for the other Ships coafts and Cous; he was. very well acquainted with the Coalts and Courfe, having often piloted the Dutch Ships trading that Way; in which he had no other Helps than his Sea Charts. We were two Days and two Nights in this dangerous Condition, having nothing to depend on but the Pilot's Experience. On the third Day, being far
Vol. II. Nums. IOD. Yol. II. Numb. 100.
diftant from the Mountains of Roureella, the Needle of our Compafs pointed again to its Object; from whence we concluded that we drew near the North Cape; where the Wind failing us, our Captain untied the third, Knor, at which there arofe a North-north-eaft Wind, fo furious, that we thought the Heavens would fall down upon us; and that God would juftly punifh us with Deftruction, for dealing with infernal Artifts, and not trufting to his Providence ; we could bear no fail during the Tenipeft ; ous Ship drove at the Mercy of the Winds and Waves, which toft us fo violently, that' we expected every Minute to go to the Bottom.
The Reader - will, doubtlefs, wonder at thefe ftrange and extraordinary Paffages, in regard to the Witchcraft of thefe Northern People; and therefore it is neceflary to inform him, that their Witchcraft, like moft other forts of Witchcraft, is downright. Fraud and Impofture. They have in thefe Countries many deep Caverns, and fubterraneous Grottoes; by their Obfervations in which, they are able to judge of the Variation of Winds for feveral Days to come; and they talke care to ftart fo many Difficulties in making their Bargains, that they are fure never to come to a Conclufion till the Signs appear, by which they are morally certain that thofe Winds will blow which they pretend to fell. In the prefent Cafe it is evident, that the pretended Conjurer made a very prudent Obfervation before he made his Bargain with the Captain $\frac{1}{3}$ which was, that his Power extended only to a certain Cape; but the Truth of the Mater was, that he very well knew, by Experience, that Cape was the Limit of his Obfervations, and that he fhould rifque his Credit if he prefumed to exceed his Bounds. The People in Iceland are the mof famous of any for carrying on this Trade of felling of Winds; and they fell them with lefs Limitation, becaufe living in an Inand, they are more able to judge of the Variation of Winds in all the Seas round about them; and therefore it is from the Accounts given by fenfible People who have lived in that Inand, and who have taken Pains to enquire into this Matter, that we are able to give fo good an Account of it. This Sort of Knowledge is kept in the Hands of a few People, who thereby awe their Neighbours, and cheat Foreigners. All this may be very naturally expected in a barbarous Country, where Learning and Religion are at a very low Ebb; and I believe it will be generally found, that in Proportion as People are little acquainted with the Word and Works of God, they are moft apt to pretend to converfe with the Devil ; and this feems to be confirmed by the declining of fuch Notions, wherever the Lights of Reafon and the Gofpel prevail.
$\because$ 4. Though we were not above ten or twelve Leagues from the Coaft of the Danijs Lapland, yet we did not imagine the Storm would throw us upon it; we feared the Winds fo much, we did not think of Land; and when we thought ourfelves fecure from the Rocks, we were almoft driven upon one, by a fudden Blaft thirty Leagues above the Cape, and four from Shore; every Man fell upon his Knees, and begged Pardon of God, believing we fhould, at that very Inftant, be dafhed to pieces; I confefs I never was fo afraid in my Life, and I believe all the Crew was in as great Confternation as myfelf; when by good Luck, or rather through divine Mercy, the extraordinary Force and Agitation of the Waves prevented our ftriking, and drove us a Mufket Shot from the Rock. Our Ship having received no Damage, only by a little night. Touch on the Skirt of the Rock, fprung a Leak a little above the Keel, and two or three Planks were fomewhat bulged in the Bottom of the Ship's Hold; the Water entered, and we were obliged to pump inceflantly. On the fourth Day the Wind fell ; however we could not heartily rejoice for our Safety, having loft Sight of our Friends in the other Veffels, who, we feared, were at the Bottom by this Time. Notwithftanding we continued our Courfe with a favourable Gale; we had feveral Feet Water in our Hold, and had much ado to live. The Wind was pretty fair, wherefore we refolved to make the firft Port, to flop our Leaks and refito.

6 B
But

But the Coalts of the Sea, all over the North, are fo full of Rocks, that the Ports and Creeks are inacceffible; and we were forced to fail on two Days longer, before we could find any Place for our Purpofe; the next Morning we arrived on the Coait of Wardbus, the chief Town of the Government of Danifb Lapland; where the King of Denmark has a Caftle garrifoned by two Companies of Soldiers. Here is alfo a Collector to receive the Duties impofed on Foreigners trading to, or from, Archangel, on the White Sea; this Officer fuffered us to pals. without examining us, believing, by our Colours and the Guns we gave him to falute the Caftle, that our Ship was a Dane: We then failed to Varanger, and calt Anchor half a League from the Town. We prefently put our Long-boat by our Ship"s Side, to carry fome of the Crew athore; no body aboard had any Knowledge of the Place, which feemed to us to be very wild; wherefore our Captain took eight Men well armed with him, and refolved to fee whether there was any Conveniencies for us there to refit, or any Trade to be driven with the Inhabitants. In lefs than half an Hour we arrived at Varanger, a populous Town, and a convenient Port; but fo little frequented, that the Inhabitants were amazed to fee us. Whether their Aftonifhment proceeded from the Sight of Men armed, or of Nien lefs barbarous than themfelves, I Thall not pretend to determine.

But our Captain addreffed himfelf to thofe who feemed to have moit Authority among them; demanding if they would permit us to enter their Port, and affift us to refit our Ship, and were difpofed to trade with us. They gave him little Encouragement for Traffic; but underttanding. we were Merchants, who were going to carchWalrus, they offered us their Affitance to refit our Ship, which we thankfully received. Having oblerved the Commodioufnefs of the Harbour, we returned to our Ship, weighed Anchor, and entered the Port; where we difcharged our Ballaft, which wasi only Sand, to ferve for Counterpoife to fome bundles of Tobacco, and Bales of Cloth, which were the Cargo we were to trade with. When the Ship was unladen, we fecured the Goods in a Houfe near: the Shore, that was locked up'; and the Captain and Supercargo ordered a Wacch to be let over it. To gain the Good-will of the Inhabitants of the Country, who, as I have faid, were Laplanders, fubject to the King of Denmark, we gave them fome Rolls of Tobacco, a more grateful Prefent to them than Gold. To retaliate our Kindnefs, they treated us with the beft they had, fome dry: Fith, that lerves inftead of Bread; fome Venifon, not very extraordinary, being the Flefh of Rain-Deer, an Animal that is often co be met with in Lapland, Borandia, Samojedia and Siberia. They brought us Bear's Flefh, and the Flefh of other wild Beafts which we had no Knowledge of; allo. frefh Finh, boiled without Salt; the Sauce to this Difh, is either the Oil of other Fih, or a four Drink; which is one of the beft of Liquors in their Opinioin. We could none of us bear them Company at this. Repaft; their Ragouts were not to our liking, fo we fent for Provifions from aboard, and endeavoured to be as merry as we could in fuch a Place, and among fuch Barbarians. Salt-Beef and Bifket was our choiceft Difh; we offered fome of it to the Laplanders, but when they had tafted: it, our Food feemed as unfavoury to them, as theirs did to us.

Our Beer was more acceptable; they drank of it-freely, and were pleafed with the Brandy we gave them; yet their own four Drink they had more Gouft to, than either our Brandy or Beer. It confirts of an Infufion of Juniper Berries, and of a Grain like Lentils, the Name of which I have forgot: It grows there in abundance, as Juniper Trees do. I never faw any thing fo like that Grain as Lentils ; and our Botanifts have made no mention of it in any of our Difcoveries; they make Brandy with the fame Grain; it has the like Effect as ours that is drawn off of Grapes; and their common Drink is as ftrong as our common. Wine, and ferves for the fame Ufes.

1. Thofe Laplanders are Lutberans, and have Priefts to inftruct them; they are faid; however, to deal ftill with the Devil; almoft all of them are Wizards, and fo fuperAitious, that if they meet a Beaft in the Way, whofe Ap.
pearance is reckoned ominous, they return home, and do not fir out all that Day; and when they go a fiffing, if they have but one Fifh in the firft Draught; they take it for an ill Augury, pack up their Nets, and leave Work for that Time. Both Men and Women are low of Stature, yet ftrong and active: Their Faces broad and flat ; they are flat nofed; their Complexions fwarthy, like the reft of the People in the North; their Eyes are like a Hog's and their Eyeleds are almoft all like thofe that are bleareyed. They are ftupid, brutal, and lafcivions, efpecially the Women, who proftitute themfelves to all Comers, if they can do it unknown to their Hufbands. The Womens Cloaths are made either of coarfe Cloth or RainDeer Skins, with the Hair outward; their Stockings are of the fame ; their Shoes of Fifh Skins, the Scales hanging on them; they have no Straps, and refemble fomewhat the wooden Shoes worn by the Poor in France. Their Coifs are like the Norqegian Womens; their Hair is twifted up in two Rolls, one hangs down on one Shoulder, and the other on t'other. They wear a Cornet Coif on their Heads, made of coarfe Canvas; all their Linnen is of the fame Finene $f_{s}$; fome of them wear a Sore of Ruff eight Fingers broad, which they tie behind as the Gypfies do in other Countries.

As for the Men they are cloathed in Rain-Deer Skins, the Hair outwards; their Coats are flort, and come down but half way to their Thighs, like a, Waiftcoat; their Breeches and Stockings are of the fame, the Hair always outwards. On thefe they wear a Sort of Boots, made of Fifh Skin, which though rough and coarfe, are fitched fo neady, that the Seams are not to be feen. Some of them wear no Boots at all, but Stockings, like the Women: their Bonnets are round like a Seaman's Cap; they are always made of Rain-Deer Skins, the Hair ftill outwards and edged with a Band of a Fox's Skin, fome white, fome grey. Thefe Laplanders Lodgings are like thofe of the Boors about Cbriftiana.

They have no Light but what enters by a Hole at the Top of the Hut. They don't make ufe of Beds to lie on, any more than the other Laplanders, the Borandians, Samojedians, Siberians, Zemblians, Ilanders, or the reft of the Northern Nations. The whole Family of a Dani/h Laplander, Mafter, Miftrefs, Children, Men and Maids, lie down altogether very familiarly; on Bear-Skins fpread in the Middle of the Room; and when they rife in the Morning the Bear-Skins are taken up, and laid by till they are wanted again at Night. In each Houfe there is a great black Cat, which is highly valued by them; the Laplanders talk to it as if it was a reafonable Creature; every Night they go out of their Huts with it, to confult it alone; and it will follow like a Dog, either in Fifhing or Hunting. Though this Animal looks like a Cat in Appearance, yet if I had a little more Superftition, I hould have believed it to have been a familiar Spirit.
5. We unloaded our Ship the next Day after our Arrival at Varanger; the Inhabitants helped us to haul her afhore, that we might refit her; the Captain found her much more damaged than he expested, and defired the Laplanders to provide him Timber proper for the Carpenters ufe; they readily anfwered his Requeft, and went to a neighbouring Mountain to fell fome for him. Our Supercargo, as he found the Ship would be fome time refitting, thought it would not be improper to take a Journey into the Country, to try there whether any Trade could be had; to this Purpofe he picked out myfelf and two more of the Ship's Company, to accompany him. Early the next Morning, being the I2th of May, we fet out for our Journey, taking with us fome Tobacco and Cloth to trade with; and Bifket, and falt Beef, and Pork, to ear. We defired three of the Inhabitants of Varanger to go along with us, as well to fhew us the Way, as to help to carry our Goods and Provifions to the next Village. The Laplanders were willing enough to ferve us; fo we followed them through the Woods, and Mountains, and Valleys, without meeting any living Creature, till towards four $0^{\circ}$ Clock in the Afternoon, when we perceived two white Bears of an exceffive bignefs, coming, as we Strangers thoughts to devour us:

## Chap. II.

Northern Coafts of EuRoP̀。

Our Guides perceiving the Terror we were in, bid us not be afraid, for we need only have our Arms ready to defend ourfelves, in cafe they approached too near us; which we did, cocking and priming our Pieces, and hacking our Flints. Whether or no the Bears were frightened at the Fire we ftruck out of the Flints, or with the Smell of the Powder, I hall not undertake to decide; but they prefently fled away from us fo faft, that in a Moment they were out of Sight. An Hour before Night, as we defcended a Mountain, we efpied a Dozen Houfes at the Foot of it ; they were at a great Diftance one from another. Somewhat farther off we faw a Herd of Beafts like Stags, which our Guides told us were RainDeer. When we came to the Village, the Laplanders that travelled with us conducted us to a Hut, where, being very weary, we were glad to reft ourfelves, for we had a long Journey in very bad Way, with Luggage on our Backs, that incumbered and tired us. We gave a Piece of a Roll of Tobacco to our Hofts who received it with Joy, affuring us he had not had fo valuable a Prefent in nine Months before; to make us Amends he brought out his Brandy Bottle, fome Rain-Deers Flefh dreffed without falting, and fome dried Fifh; which we gave to our Guides, and fupped ourfelves with the Victuals we brought with us; when we had made an End of our Supper we went to our Repofe, and laydown on Bears-Skins, after the Country Fafhion. When we rofe in the Morning, we afked our Hoft if he had nothing to barter with us for Cloth and Tobacco ; he replied he had fome Woif, Fox, and white Squirrel Skins, and his Neighbours had fome of the fame Commodities, and would gladly truck with us. We bid him, by our Interpreters, bring out his Skins; and if he had any Cloaths made of Rain-Deer Skins, we would deal with him for four Suits, which we wanted to keep us warm ; accordingly, he brought forth his Merchandize, and we bought it of him, paying him Part in Tobacco, and Part in Cloth. We trucked alfo with his Neighbours, as long as they had any thing to offer us worthy our buying; and when we had drained that Market, we prayed the Hoft to lend us fome Rain-Deers, to carry uss farther up the Country ; and he was very willing to help us to the atmoft of his Power.
TheTobacco we gave him having gained his, Friendfhip intirely, he took down a Horn that hung up in his Cottage, went out and blew it to call the Rain-Deer to him. Immediately fourteen or fifteen of thofe Animals came running towards the Hut: He put fix of them to fix Sledges, each Sledge made.fomewhat like a Gondola ; it was placed on four Pofts joined together by other crofs Pofts nailed to them, and this was faftened to two Pofts two Feet longer than the Sledge that run on the Ground. We put our Merchandize in one Sledge, each of us had one for himfelf, and the other we affigned to one of our Guides, who underftood the Language of the $M u f$ covite Laplander, and that of the Kilops; him we took with us; the other two Inhabitants of Varanger we difmiffed, having paid them in Tobacco for their Trouble. We put on our Lapland Cloaths, and lay down each of us in his Sledge covered with a Bear-Skin ; at the Back of the Sledge there were two Girts made of Rain-Deer Skin Leather, in which we thruft our Arms up to the Shoulders, to keep ourfelves fteady; and we had each a Stick with a ftrong Ferrel to it, to fupport the Sledge if it fhould be likely to overturn by Stumps of Trees, or Stones lying in the Way. When we were ready to fet out, ourHoft muttered fome Words in the Ear of the RainDeer; I enquired afterwards of our Guide, what he meant by it. He faid, it was to tell them whither they fhould carry us; fo filly are thefe barbarous Wretches.

Cuftom had made that muttering fo familiar to the Beafts that drew us, that when our Hoft had gone to all fix, they ran away with us fo fwiftly, that we thought we were drawn by fo many Devils; they continued their Pace over Hills and Dales, without keeping the beaten Road all Day long, till feven o'Clock in the Evening, when they brought us to a large Village fituate between two Mountains, near a great Lake; here they ftopped fhort at the fourth Houfe in the Place, which though large
was very ordinary and clownifl. They beat the Ground with their Feet; and the Man hearing a Noife; came forth with his Servants, to take us out of the Sledges; and unharnefs bur Cattle, and one of them brought out a little Juniper Can, full of Brandy, of which he gave each of us a Brimmer, out of a Bowl made alfo of Juniper Wood. This was to put us in heart; for our Guide had informed him that we were afraid of our Lives, being drawn away fo fwiftly by thefe Animals in Sledges, which was a Way of Travelling we were not ufed to. The Horns of thefe Beafts, both Male and Female, are fomewhat higher than the Stags; but more crooked, hairy, and not fo well furnifhed with Sprouts as a Stag's are; they are of the fame Colour as Stags; and not much bigger; their Feet are cloven like theirs; but as big as Hoofs of Oxen: They live upon Mofs; which grows every where in thofe Parts: The Females yield Millk like Cows ; the Laplanders make Butter and Cheefe of it, and both are very good. Their Harnefs is a Collar of Rain-DeerLeather, by which they are faftened to the two Shafts of the Sledge, not much unlike our Horfes to a Coach; thus they draw. it with incredible Speed directly to the Place whither you are to go, without being guided by him who rides in it
6. When we got out of our Sledges; we were conducted by our Hoft into his Hut, which; like the reft of the Cottages in the Place, was very little, low, and covered with the Bark of Trees, the Light entering in at a Hole at the Top of it, as we have elfewhere obferved. Thefe Laplanders were cloathed in a manner little differing from thofe of Varonger; their Apparel was of the fame Make and Materials, but longer ; their Coats were of Rain-Deer Skins, the Hair turned outwards. The Women were dreffed in Garments of the fame Skin, their Hair twifted as the Womens of $V a$ ranger; on their Heads they wore a high Bonnet inftead of a Coif, which was made of the fame Skins with their Cloaths, and the Hair ftill outwards:

We gave our Hoft an End of Tobacco about two Inches long, with which he was mightily pleafed, and thanked us heartily for it: We gave an End not quite fo long to each of the Inhabitants of the Place, to make them our Friends, and to fecure us the better againft any Attempts of thefe Barbarians, who were more brutal than thofe we laft deal with. We. fupped on the Provifions we brought with us, and our Guides eat fome of our Hofts falt Fifh, and frefh Rain-Deer Venifon. We afked him how many Leagues we had come that Day? he anfwered, about thirty; and that we were in the Ter ritories of Mourmanfeimore. The Inhabitants talked a Language quite different from thofe at Varanger; bue our Guide had been often in the Country, and underftood them, and was underftood by them. After Supper we lay down on Bear-Skins to take our Reft, as we had done the Night before, having firft bartered away our Lapland Habits with our Hoft for others that were longer, and a. Parcel of Tobacco for a hundred grey Squirrels, a Fur very much efteemed in Denmark, and other Parts of Europe. The next Day, being the rith of May, we told our Hoft, by our Interpreter, that we defired him to provide Sledges to go farther into the Country; this he did accordingly. The other Inhabitants of the Village came to help us forward in our Journey, bringing Brandy with them to drink to us at parting. They put fix Rain-Deer to fix Sledges, in one of them we ftowed our Merchandife and Provifions: and our Hoft having performed the Ceremony of muttering in the Ears of the Beaits, we were drawn along with the fame Swiftnefs as before. We came to no Place that was inhabited till about three $0^{9}$ Clock in the Afternoon, and then we arrived at a Village, wherein were eight Cottages, built on a high Mountain by a Woodfide, where our Cattle ftopped; by which we gueffed that there were fome Inhabitants; but feeing no-body come to us, we baited our Rain-Deer with Mofs, which grew there plentifully, and refrefhed ourfelves with falt Beef and Bifket; our Interpreter regaled himfelf upon fome Rain-Deer, Venifon, and dried Fifh: All of us making merry with the Brandy we had given us in ${ }^{\text {L }}$ laft Village. We ftaid in this Place near an Hor
then our Guide, who underftood the Way of making Rain-Deers go as well as the other Laplanders did, endeavoured to get them forward; but he had much-ado to effect it.

This Place being their ufual Stage, he was forced to perform feveral myiterious and ridiculous Ceremonies; he went alone into the Wood, and coming out again, muttered fomeWords in the Ears of thefe Animals, which whether they undertood or not, had little Effect upon them, for they did not ftir. He did fo four or five times, and then he began to proceed, though not fo fwiftly as before. We anked him the Reafon why we faw no body in the Village? He replied, 'twas a very common thing in that Country; thefe Dwellings belong to the Kilops, a Nation of Laplanders more wild than the others; who often change their Habitations; fly from Strangers, and fubfift only by what they get by hunting. Continuing our Journey, we defcended the Mountain; about nine o'Clock we fpied four Kilops not far off, returning from hunting, in Sledges drawn by Rain-Deer; to avoid us they turned afide out of our Way, and took another. In lefs than half an Hour we entered a long Wood, in which we heard terrible howlings and cryings, but faw nothing; when we got through the Wood, we had another Mountain to defcend, at the Bottom of which we perceived there was a Village ; our Cattle carried us to it, and ftopped and beat the Ground at what Cottage they pleafed. Our ufual Prefent of Tobacco, purchafed us our ufual Welcome of the Mafter of the Houfe; we made a good Supper on our Provifions, as our Guide did on his, and down we lay, according to Cuftom, to talke our reft on Bear Skins; which, though homely, was a welcome Repofe to our wearied Limbs, fufficiently jogged in the Sledges.

In the Morning we rofe as early as the Hort, and demanded of our Interpreter how many Leagues we had travelled the Day before? He replied, at leaft, forty. But he muft be out, either in his reckoning, or the Leagues muft not be fo long as they are generally calculated to be; for forty of their Leagues make one hundred and fixty of thofe between Paris and Lyons; each Laplanid League being as long as a German: Let a Man be ever fo well mounted, he cannot ride on Horfe-back above five a Day. Our Guide alfo informed us that we were in the Mufcovite Lapland; we bid him afk the Inhabitants of the Village, whom we had prefented with Tobacco, and been treated by them with Brandy, whether they had any Commodities to truck with us for Tobacco and Cloth? We had fome Rolls of the former left, and moft of our Bales of the latter. Tobacco being by much the better Commodity, the Laplanders replied, they had fome Furs, we afked to fee them, and they brought them out to fhew us: They were white Fox Skins, black and grey Fox Skins, grey Squirrels, and Sables, though not of fo fine a Colour as thofe of Borandia, Samojedia, and Siberia. Thefe Merchandizes were what we wanted, fo we foon ftruck a Bargain, and paid the Inhabitants in Cloth and Tobacco. When our Market was over, we fell to drinking with them; they were not quite fo brutal as the other Laplanders we had dealt with, but they were very rude and indecent in Converfation, doing things before us that Decency will not permit me to name. It growing late, and we defigning to proceed yet further, to difpofe of the few Rolls of Tobacco we had left; we prayed our Hoft, by our Interpreter, to furnifh us with Sledges and freh Rain-Deer.

- He harnefled and prepared as many as we had Occa-fion-for; we mounted our Sledges and departed at one $o^{\prime}$ Clock; we ran with our former Speed, through different and unbeaten Paths, till fix, without meeting with one Habitation; half an Hour after we were defcending a Hill, we fied two Huts under a Rock, a little out of the Way; our Guide told us that two Kilops lived there, who, as foon as they faw us, fled with their Wives and Families. We travelled two Hours longer, and came to no Houfe, or any thing like a dwelling Place; till at laft we difcovered a great Village on the Side of a Hill, and on the Banks of a River; here we arrived at
eleven o'Clock at Night, and went to the Cottage for a Lodging, whither our Cattle were pleafed to conduct us. It happened to be in the Middle of the Village; the Mafter of the Houfe received us very kindly, made a Fire in the Middle of his Hut, gave us Brandy, dried Fih, and Rain-Deer-Venifon falted, at which we were a little furprized, having not met with any in our Travels hitherto, who made ufe of Salt as thefe did; he alfo gave us Milk and Salt-Butter, very good, and it would have been better, had we had any Bread to eat with it; but we had confumed our Store, and thould have been very much put to it, had we not met with fo good Entertainment here. Our Guide would not tafte a bit of SaltMeat, fo he was obliged to live on the frefh Venifon he brought with him. Having fupped plentifully, we lay down on Bear Skins, and nept till Morning; we rofe early the next Day, took our Leave of our Hoft, and there being rio trading in that Village, paffed the River to proceed to Kola, on the other Side of that Stream, which is as big as the Seine.
We came to another Village, and went to the moft likely Houfe to hire Sledges and Rain-Deer, to carry us to Kola, for we could get none in the Place where we lodged; here we furnifhed ourfelves, and about Noon arrived at Kola, a little City, or rather a great Town; built among Mountains, on the Side of a River, near ten Leagues from the North Sea. To the Eaft of it are large Forefts and Defarts; Mourmanfkeimore to the Weft, and prodigious high Mountains to the South. The Houfes are very low, built of Wood, and handfomely covered with Fifh-bones: On the Top of them the Light enters in at a Hole, as in other Places in Lapland. There is but one Street in it, and that no fine one. The Inhabitants, like the other Mufcovites, are fevere, fufpicious, and fo jealous, that they lock up their Wives, that Strangers may not fee them. Our Hoft took all our Cloth off our Hands, for which he gave us, in Exchange, two Lynx-Skins, fpotted like a Leopard's, three Dozen of white Fox-Skins, half a Dozen of Wyetfras, an Animal which fomewhat refembles a Badger, but its Hair is longer and rougher; his Colour is a blackifh red, and his Tail like a Fox's; we had alfo fome Ermines of him. There were fome Ells of Cloth above what we were to give him, for which he obliged himfelf to fupply us with Provifions for our Journey back to Varanger, and to help us to Sledges, as far as the River we lately paffed; he treated us as weil as he could, and we fupped, and flept as we had done elfewhere.

7. The next Morning, as we were preparing to depart, our Hoft, having provided Bifket, Ginger, Bread, and Rain-Deer-Venifon falted and dried, as alfo a Barrel of Brandy, to ferve us in our Return; before we had quite packed up our Furs in Bales, his Neighbours underftanding we had ftill a few Rolls of Tobacco left, came to ank if we would truck them for more Skins? We replied, with all our Hearts; fo they fetched them, being a Dozen of Ermines, two white Foxes Skins, and four Lynxes, not fo good as thofe we had of our Hoft. The Bargain made, we took their Furs, and gave them the refidue of our Cargo of Tobacco, except feven or eight Rolls, which we referved for our own Ufe, and to pay :or the Hire of our Rain-Deer and Sledges in our Way back. Tobacco is more neceffary than Money, to thofe who travel in that wild and unfrequented Country; the Laplanders valuing an End of Tobacco as long as ones Finger, more than a Crown Piece. The Kings of Denmark and Sweden, and the Czor of Mufcouy, have laid feveral Taxes upon it; and there are Officers fettled in their frontier Towns, to collect their Impofs upon it. When we had done our Bufinefs, according to the Cuftom of the Place, we muft drink with our Chapman; our Entertainment every where was Brandy, and it held till two o' Clock in the Afternoon. We then intreated our Hoft to get the Sledges, we had hired of him, ready; which he did in one Minute. We flored our Merchandize in one of them, got into the other ourfelves, drank a full Glafs at parting with our Dealers, bid them adieu, and fet out for the Village on the other Side of the River we
paffed the Day before. Our Rain-Deer, to our Apprehenfion, ran fafter than any we had hired in our Journey to Kola.
We arrived at the firft Village by feven o' Clock; we paffed the River and came to the fecond; where we put up at our old Landlord's, who received us with Joy, hoping that we had ftill an End of Tobacco left, to give him for the Hire of fome Rain-Deer and Sledges. He prefently gave each of us a Cup of Brandy, for they tols it off there as we do Beer in the South; and afked us if we would have the Rain-Deer put to the Sledges? We replied, we had rather reft ourfelves till Morning, for there was no Village befides in fome fcores of Miles from this. He filled out another Cup, which when we had drank, he offered to take us with him to the Funeral of one of his Neighbours, who had been dead about four Hours. We were very glad of the Opportunity of feeing their Ceremonies on this Occafion, hearing much talk of them. We accompanied him to the Houfe of the Deceafed; we faw his Corpfe taken from the BearSkins, on which it lay, and removed by fix of his moft intimate Friends, into a wooden Coffin, being firft wrapped in Linnen, his Face and Hands only bare. In one Hand they put a Purfe with Money in it, to pay the Fee of the Porter at Paradife Gate, and in the other a Pals, figned by a Prieft, to be given to St. Peter, as a Certificate that he was a good Chrititian, and ought to be admitted into Heaven. They alfo put into his Coffin a Barrel of Brandy, fome dried Fiih, and Rain-DeerVenifon, to ferve him to eat and drink on the Road, haveing a long Journey to take. They then lighted fome FirTree Roots, piled up to a convenient Diftance from the Coffin, wept and howled plentifully, making ftrange Geftures, and turring themfelves in a thoufand different Poftures, to fhew the Extravagance of their real and affected Sorrow. When this Noife and Gefticulation was over, they marched round the Corpfe feveral times in Proceffion, afking the dead Man why he died? if he was angry with his Wife? if he wanted any thing? if he was hungry or a-dry? if he had loft his Game at hunting? or had bad Luck at fifhing? or had not Cloaths to his Mind? Then they fell a howling again, and ftamping like fo many Madmen. One of their Priefts, who affifted at the Solemnity, every now and then fprinkled fome Holy-water on the Corple; the fame did the Mourners. I forgot to inform the Reader, that having an extraordinary Veneration for St. Nicholas, they, as well as the Mufcovites, are Nicholatians by Religion, and always place the Image of that Saint near the Bodies of their Dead, inftead of a Crucifix. This Saint is not the fame for whom we celebrate a Feftival in France; but Nicholas, one of the feven Deacons, mentioned in the Atts of thé Apofles. His Image is dreffed up by them in a Pilgrim's Habit, in a long Robe, with a Camail hanging down over his Shoulders, a broad Girdle about his Middle; and a Staff in his Hand.

The Noife they made having almoft deafened us, and being weary with looking on their barbarous Rites, we left the Cortage of the Defunct, to go to our Hofts, where we found only our Hofteis at Home. She had made a Sally out of the Place to which her Hufband had confined her, on our Arrival; as foon as fhe faw us, fuppofing he was with us, the would have retired to her Corner; but our Guide and Interpreter, giving her to undertand the good Man was at the Funeral, and would not come home prefently, fhe ftayed and viewed us all round, one after another, looked very kindly on us, drew her Seat near us, and fhewed us a Bonnet of her own embroidering, done very curioufly with Tinfel Threads. The Work of all the Mufcovite Laplanders, is to make Cloaths for themfelves, their Hubbands, and their Children. The Edges of them are all emoroidered with Tinfel Thread. They draw them between their Teeth, as fine as the Wiredrawers do their Gold and Silver Threads with their drawing Iron. They work with a good Grace. They are handfome, well fhaped; and good humoured, and, if they did not very well know how jealous their Hubbands are of them, and fear their Refentments, they would willingly proftitute themfelves to Strangers; for which Reafon they
Vol. II. Numb. CI.
are thut up when any come among them. While aut Hoft was bufied about the Funeral, we pulled out fome of our Provifions, and gave our Landlady fome of every Sort to tafte. She liked all, but efpecially the Gingerbread; the drank two or three Glaffes of Brandy, and then withdrew to the Place of Confinement, fearing her Hufband might furprize her with us, which would have. raifed his Jealoufy to fuch a Degree, that he certainly would, have ufed her very indifferently. When our Landlord came home, he obliged us to take a Cup or two more with him, to finoak a Pipe, and fup together: for us he brought forth the Victuals he had in the Houre, which he thought would be moft grateful to our Tafte, as Salt-Butter, which we ear with Bread ; our Guide would not touch it, and for him the Man of the Houre got fome Bear's Flefh, which he broiled on the Coals, and fome dried Fifh.
All the Cottages in this Village were like the others we had obferved elfewhere, built of Wood, and covered with Turf; but they were handfomer and better fet off than any we had feen in the Country; being both within and without adorned with Works of Finh-bones, curiounfy inlaid. We made as good a Supper as we could, and, according to Cuftom, lay down with the Family on Bear's Skins; our Landlady only was miffing, and fhe was to do Penance by herfelf in a Corner, till we were gone. In the Morning early, on the I8th of May, our Hoft provided our Rain-Deer and Sledges. We ftowed. our Bales, feated ourfelves, and away went our RainDeer, running as faft as thofe we hired at Kola. In two Hours they carried us fix Leagues, where, paffing between two Hills, we fpied a Laplander going a Hunting; he came up towards us, fliding on the Snow, which, in that Country, does not melt till Midfummer, as faft as we rid in our Sledges; his Skates were made of the Bark of a certain Tree; they were feven Feet and a half long, only four Fingers broad, and flat at Bottom; he was dreffed like the other Laplanders, in a Garment made of Rain-Deer-Skin, with the Hair outwards; his Cap, his Gloves, his Coat, his Breeches, and Boots, were embroidered with Tinfel; he had a Girt of Rain-Deer-Skin about his Waift, a Dart in one Hand, and a Bow in the other, a large Quiver hanging at his Back, and a black Cat followed him. He kept Company. with us about half a League; wie parted at the Foot of the next Mountain; we defcended it, and he ftruck off another Way. We continued our Rout three Days, flopping at the fame Places where we lay in our Journey outwards; and, meeting with no new Adventures, our Entertainment, our way of Travelling, and every thing was the fanie as before.
About nine $0^{\circ} \mathrm{Clock}$ at Night, on the 2 Ift of May , we arrived fafé at Varonger, having received many Services, and no W.rong, throuighout the whole Country of Danif/ Lapland; for though the Inhabitants are poor and ignorant, they are, however, faithful, and given to no Manner of Theft or Fraud. Their Honefty is their greateft if not their only, Virtue. They are fo dextrous in throwa ing a Dart, that they will put a Crown Piece, thirty Paces off, and ftrike through it; as for the Bow, they are fo fkilful, that they will fhoot their Game in what Part they pleafe. They don't much care to go to the Wars; and whenever the Kings of Sweden and Denmark, or the Czar of Nufcovy, have Occafion for Soldiers, for fear of being forced to ferve, they leave their Dwellings, and fly to the Woods. - They have plenty of Fowl, as Geefe, Ducks, Pullets, and other Sorts. They feed them not with Juniper Berries, but with another Grain, of which they make their Drink; and when that is fcarce, or for Variety, they give them Fifh to eat. The greateft Part of the wild Beafts in Lopland are white; as Bears, Wolves, Foxes; and Hares; and even their Crows are fo white, that they may be compared to the Swan, having nothing black about them, but their Bills and Feet.

The Fifh they dry to eat inftend of Bread, is very broad, and two or three Ells long, without Bones, and, excepting the Fat, has a very good Tatte; it is firm and fubftantial, and they call it Raff. As for other Finh they

6 C
eat boiled, they have all Sorts among them. Their UtenRils, within Doors, are made of Copper or Wood; and though they eat no Salt, and in general hate it, yet they boil all their Meat in Sea-Water, if they are near enough co get it conveniently. They have a kind of Dogs a Foot long, and four Inches high; their Hair is an Inch long, of a yellowifh white Colour, rough, and fanding up like a Hog's Briftes. They have curled Tails, ftrait Ears like a Wolf; Head and Snout like a Rat; are very fit to catch Mice, which they watch like our Cats ; and when they have caught them, eat them; for this Reafon the Laplanders value them at an high Rate, though they are very ugly. There is alfo a Sort of wild Bird in Lapland of a grey pearl Colour, as big as a Sheep; his Head is like a Cat's, his Eyes red and fparkling, his Claws and Beak like an Eagle's, with which he will take up Hares, and other fimall Game.
8. Our Captain began to caulk the Ship the fame Day we returned to the Port. In two or three Days after, it was in a Condition to put to Sea, and we loaded our Ballaft. In the mean Time we treated the Inhabitants with Tobacco and Brandy, to keep them in good Humour; for our Crew fancied, that if we did not bribe them to be our Friends, they might, in revenge, raife contrary Winds by their Conjurations. They were very good to us in the Opinion of our Mariners; for five Days after, being the 26 th of May, there fprung up a Wind the moft favourable for us in the Compafs, to carry us out of the little Sea of Varanger; wherefore we weighed anchor, and failed at feven o ${ }^{\circ}$ Clock in the Morning. The Wind fhifting afterwards from one Quarter to another, we were obliged to caft Anchor under the Shore, over againft the Inland of $W_{v}$ ardbus. The Captain of the Caftle fpying us, and knowing who we were, came to us in a Shallop; when he was aboard we entertained him as well as we could, and he returned to the Caftle very well fatisfied with his Reception. The next Day the Wind fettling to a Point, we kept out to Sea, and held our Coürfe North-north-eaft, with all our Sails loote. In three Days Sail we were got into a Climate where was no Night ; we never loft Sight of the Sun there, it always fetting on one Side or the other of us, before us, or behind us.

- On the laft Day of May we fpied the Mountains called Spitzbergen; at which Time a North Wind blew fo violently, that we could not keep to Sea, and were forced to leave them to the North-north-weft, and fteer our Courfe Eaft-fouth-eaft, endeavouring to make the Shore, that we might lie under it, and be fheltered from the Weather. We continued our Courfe three Days longer, very much incommoded by the Ice; which being broken, and toffed by the Tempeft, beat againft our Ship's Stern and Sides, fo furiouny, that we expected every Minute to founder. On the 4th of June we fpied fome high Mountains to the Eaft; we fteered that Way to make them, and fhelter ourfelves under a Promontory; but the Wind blowing frefher and frefher, and ftill North, we were obliged to tack about towards the Coafts of Borandia. We arrived at a Bay, and entered it in a few Hours. The Haven was very commodious; we lay there fafe from all Weather, in twelve or thirteen Fathom Water. We had fcarce caft Anchor before we fpied two Ships in the Bay, about a Murket Shot of us. We perceived they were two of our Company, from whom we were feparated, in the Storm that drove us into Varanger. We were extremely glad to meet with them, fired three Guns, and hung out our Flag in the Stern, as a Signal of our Arrival. They rejoiced as much to fee us fafe; for we reciprocally believed, that they and we were gone to the Bottom. They anfwered our Guns by twice as many, hung out all their Flags and Pendants. We did the like, wifhing for an Opportunity to throw out our Long-boat and go aboard; but the Wind blew fo ftiff we durf not attempt it till four and twenty Hours after. They were as impatient as we, to know how we efcaped in the Storm, in which we were feparated from them; and as foon as the Wind flackened, a. Boat came off from each of them to board us. We embraced one another with extraordi-
nary Affection and Joy, as People that had found Priends whom they thought had been buried in the Deep.
They told us how the Storm drove them on the Coaft
 becaufe of the Rocks, which they difcovered by founding. They had fcarce three Fathom Water, and were forced to tack about immediately, for fear of running: upon them. By the Favour of a Point of Wind North-north-eaft, they continued their Courfe, keeping to Sea as well as they could, though with much Difficulty. In three Days time they reached the Bay, where we met them, and anchored under the Promontories of Borandia, eight or nine Leagues from the Inand called Kildomovia We told them, in our Turn, what Perils we had run and that we were forced to enter the Sea of Varanger, and to anchor there to refit our Ship, or we fhould not have been able to have performed our Voyage. We informed them alfo of our Supercargo's and my Journey into, and through, all Lapland, both Danifs, Swedifh, and Mufcovite; and of our Traffic and Adventures. The Account we gave them of our Trade, encouraged them to go afhore, and try if they could find any body there to trade with them. We held a Council, and refolved, that a Captain, a Supercargo, two Accountants, who underftood both the Language of the North and the Ruffian; twenty Seamen out of all our Crews, and myfelf, well armed, fhould land, taking with us feveral Days Provifions.

Purfuant to this Refolution two Long-boats were got ready, we went into then, and failed to Shore; where we landed and afcended a Hill, to fee if we could dif cover any Habitations; bur feeing none, we marched to a neighbouring Mountain, half a League from thence; where we fpied five or fix Perfons, at two or three Leagues Diftance, among Bufhes of Thorns and Briars; they came towards us till they perceived us advancing, then they turned their Backs, and fled away fo faft, that we loft Sight of them in an Inftant. However, we followed their Tracks fo diligently, imagining it would lead us to fome Village, that in two Hours March, as we defcended a Mountain, we faw fome Huts in the Vale below, and advanced towards them, and faw thirty or forty Men, armed with Darts and Arrows, prepared to receive and give us Battle; for the Inhabitants feeing us come in fo ftrong a Body, took us for Enemies. We halted a while, and confulted what we had beft to do, whether we fhould retreat to our Ships, or attack them. They were wild and bold, and nothing was to be got by defeating them, which inclined us to retire; but one of ous Accountants offered to go up to them by himfelf, and let them know that we were Friends and Merchants who came to trade with them, if they had any Commodity to truck with us for ours. All the Company approved of this Propofal
He approached nearer to them, carrying two Rolls of Tobacco, and a little Barrel of Brandy; when he was fo near that he might hear what they faid, one of them, who feemed to be their Captain, afked him, in the Mufcovite Language, who we were, and what we would have? The Man replied, we were Merchants and Friends, and defired nothing but their Friendhip, and to trade with them, if they had any thing to fell us that was for our Purpofe. They immediately abated of their Fury, feemed very well difpofed to deal with us, and made Signs to the Man to come up to them. He returned the Signal to us, and we joined Companies, to our mutual Satisfaction. When we came near them, I was amazed to fee them much fhorter than the Laplanders; their Eyes were little, the white of them inclined to a reddifh Yellow; their Faces flat and broad ; their Heads great; their Nofes flat; their Legs thick, and their Complexion fwarthy; their Cloaths were a Jerkin that reached down to their Knees, a ftrait Pair of Breeches, a Cap and Stockings, all of white Bear-Skin, the Hair turned outwards; their Shoes were made of the Bark of Trees. Their Huts were all built and covered with Fifh-Bones, very low and oval; their Light entering only at the Door, which was made like the Mouth of an Oven.

They fubfit by hunting and fifhing, eat all their Meat soafted, without Salt, and ufe undried Fifh inftead of Bread; they drink Water after they have infufed fome Juniper Berries in it, without boiling or any other Preparation; they put the Berries and the Water into a Tub together, and let it fand till the Berries rot there, which gives the Water an agrecable Tafte, at leaft in a Country where there is nothing better to be got. The Borandion Women are as ugly as the Men; they are dreffed alike, and go as well as them a fifhing and hunting. They have no Notion of Religion, and live . like Beafts. We bartered away all the Tobacco and Brandy we brought with us, for Fox-Skins, Wolf-Skins, and a few Ermines; they had a great many more Skins of all Sorts, and would fain have trucked with us for Brandy and Tobacco. We told them we had enough of both Commodities on board; if they would go with us we would be fure to give them all poffible Satisfaction. They agreed to it, took up their Skins, and carried them to the Shore, where they ftood admiring our Ships. We made a Signal to them to fend us off Boats to fetch our Chapmen; each Ship fent ustwo. I went in one of them, with the Supercargo, the Accountant that treated with the Borandians, the Borandians with whom he firt treated, and another of them, who underftood the Mufcovite Language, having been in Mufcovy; the other Borandians ftood on the Sea-fhore. When they came on board ${ }_{3}$ our Captain underftanding what fort of Perfons they were, how wild and brutal; to tame them a little, and render them ferviceable ${ }^{\text {c }}$ to $u s$, gave each of them an End of Tobacco about an Inch long, which they took with Joy; he alfo filled out a Brimmer of Brandy to each; and Inever faw to many of the Borandions fo much tranfported as they were at this Entertainment.

They brought fome Furs with them, which we bought for Tobacco and Brandy. We demanded of them if there was any Conveniency of travelling in their Country to trade with the Inhabitants. They told us there was; but that we muft expect nothing but Furs. We replied that was the Commodity we wanted. They anfwered, we might have what we would of that Kind, for Tobacco, Brandy, and Money; and, if we pleafed, might trade as far as Siberia, whither they would conduct us. We hired them to be our Guides forwards and backwards, and to furnifh us with what Conveniences the Country afforded in our Journey, for two Rolls of Tobacco and two Quarts of Brandy, promiling then further Rewards in caf du Trade turned to Account, and they affifted us in it. They faid that we muft pay for our Rain-Deer and Sledges, and as for other Things, they would take care to provide what we thould think neceffary. Our Captain made the Bargain with them, gave them another Brimmer of Brandy and fent them áfhore, to prepare what was proper for our Journey. They got Things ready in an Inftant, and made fuch a Report of our Kindnefs to them aboard, and our Generofity, that their Countrymen were very much our Friends; two Boats Crew went ahore, and our Supercargo with them, to truck with the other Borandians, Brandy and Tobacco for Furs. They were unwilling at firtt to come on board our Ships; but afterwards, when we were better acquainted, they came freely, if they had any Opportunity. We bought their Furs of them, treated them with Brandy; and in return they invited us by fezeral Signs to their Habitations.
9. In feven or eight Hours we had provided ourfelves for our Journey, and our two Borandians had brought down fix Sledges, drawn by fix Rain-Deer, to the Waterfide. We akked them why they did not bring more? They aniwered, there were no more to be had in thole Parts. Obferving that thefe Rain-Deer were larger than the Rain-Deer of Lapland, we demanded if they were alfo ftronger? They replied, Yes; and that one of their Rain-Deer would draw two Men, whereas thofe of Lapland could draw but one. There was Convenience in the Borandian Sledges for two Men to fit. Upon this our Captain called a Council of all the Officers, and it was agreed, That our Supercargo, the two Accountants that could fpeak the Rufian Language, myfelf, and a Seaman out of each Ship, fhould go with the two Borandians, to
trade. One of the Sleciges we loaded with Tobacco, Brandy, Gold, Silver, and Copper, to the Value of three or four thoufand Pounds. Our Supercargo and myself rode to" gether in one of thefe Sledges; one Accountant and 2 Borandion in another; the other Accountant and alye othet Borandian in a third; two Seamen in the fourth, the other Seaman in the fifth; and he riding by himfelf we fowed fome Barrels of Brandy and Tobacco in his Sledge; the fixth carried our Provifions and other Merchandize. We fat one at one End of the Sledge and the other at the other, facing each other. The Rain-Deer ran away witl us as faft as thofe of Lapland. In eight Hours time they drew us twenty Leagues over Hills and Dales, through Woods and Valleys; and we met no-body in our Way. At the Village we baited our Rain-Deer with Mofs, and ourfelves with Bifket and Beef; our Borandians eat dried Fifh dipped in Fifh-oil, for they would not touch our falt Meat, and did not love our Bifket. They drank at a neighbouring Fountain, and then cheared themfelves with a Glafs of Brandy; we did the like: And being refrefhed mounted our Sledges, fet our Rain-Deer a gcing, and travelled three Hours longer; when we perceived a large Village at the Foot of a Mountain. The Huts were better built. and clofer together, and thither we hafted to take up our Lodging that Night: We were obliged to divide our Company, for one Cottage would not hold us alls We met with the fame Reception from our Hofts as we had in Lapland; we gratified them with an End of Tobacco and a Cup of Brandy. Our Guides took Care of our Rain-Deer, and we lay down to reft on Bear-Skins: I diftinguin one Part of the Day from the other by Day and Night; though really there was no Night at all ; but I do it to make myfelf the better underftood by the Reader. We nept fix or feven Hours, then rofe to fee if we could trade with the Inhabitants of the Village: Our Guides informed them what our Bufinefs was there, and that we would barter our Commodities for theirs. They prefently produced fome Wolf-Skins, white Fox-Skins, two dozen of Ermines, three hundred grey Squirrels, and feven Pair of Sables. They did not care to deal for Tobacco fo much as the Laplanders did, nor as the Borandians dwelling on the Coafts; they were not fuch good Fellows; Hunting was their only Diverfion and Employment. In the Summer they eat their Meat frefh boiled, or broiled on the Coals: in Winter they eat it dried, providing enough in Summer to laft them the whole Seafon; their rvianner of drying it is thus: They cut it out in Pieces, fpread it on the Tops of their Houfes, and leave it in the Sun. Their Huts are flat at Top; covered with Branches of Trees and Turf; they are very low, having no Place but the Door for the Light to enter at : the Doors of their Huts are like the Mouth of an Oven. Thefe Borandians, as our Guides told us, change their Dwellings from time to time, like the Kilops; they, like Beafts, live without any Knowledge of Religion; they are Atupid and ugly ; their Shoes are made of the Bark of a Tree; their Stockings, Breeches, Caps; Coats, which come down below the Calf of their Legs, and are tied round their Waift with a Girdle four Inches broad, are all of white Bear-Skin, the Hair outward.

One cannot diftinguifh the Women from the Men but by their Hair, which is twifted, and hangs down on their Shoulders; they are as dextrous at hunting as the Men, and only carry a Stick, fharp at one End, in their Hands; it is of a tough Wood, and ferves them for a defenfive Weapon; the Strings of their Bows are made only of the Paring of a Tree: they hang a Quiver at their Backs, and a Stone that will cut like a Razor at their Girdles. We bought the Furs the Inhabitants had to fell for Money and Copper, and ordered our Rain-Deer to be put to the Sledges, mounted them, and having drank each a good Glafs of Brandy, which may be called Liquor of Life, in the North, we proceeded on our Journey. We ran eight or nine Hours before we came to any Habitation: At laft our Guides fpied three or four Huts, and turned our RainDeer up to them. We found no-body in them; however, thither we went and refrefhed ourfelves on our own Prom vifions, while our Cattle bited on the Mofs, which grew
there
there in abundance. We refted three Hours, and then mounted again, to proceed on our Journey: We went Iffteen Hours before we came to any Dwelling, or faw any human Creature ; when we had been fo long on our way we efpied three Hunters riding before us: We overtook them under a Hill. One of them was dreffed in a long Robe, after the Mufcovite Fafhion, tied round his Waift with a Girdle four Inches broad. It was all Bear-Skin, Hair outwards, and as white as Snow, the Edges black as a Coal. His Cap was like a Seaman's, made of black Fox-Skin. His Breeches and Stockings were of Rain-Deer-Skin. His Shoes of Fifh-Skin, fomewhat like chofe we faw at Varanger. The two others were dreffed as we were; their Robes were of white Bear-Skin, the Hair outwards. They had each a dozen of Furs at their Backs, Bear-Skins, Wolf-Skins, and white FoxSkins, fome Ermines, and very fine Sables; the Bears Tails hanging ftill to the Skin. The firft of them carried only a dozen of white Crows and feven Sables hanging at his Gircles. When we came up near enough, one of our Guides ftopt to talk with him. He lighted out of his Sledge, and the other went into it. While our Accountant rode with him, we admired to fee our Borandian leave us, and this Man fupply his room. Our Supercargo could not tell what to make of it. The Hunter travelled with us for above an Hour, and we had as bad Luck as before in this uninhabited Country. We met with neither Houfe nor Man. At laft we drew near the Brow of a high Mountain. We perceived the Sea at a Diftance, and at the Foot of the Mountain feveral Houfes built clofe together, which looked like a little Town. Thither our Rain-Deer carried us. We alighted to repofe our wearied Limbs at that Man's Door who had taken our Guide's Place in one of our Sledges. We found he was a Man of Authority in the Place by Office, and defired of the Inhabitants to ferve us as his Friends.

The Name of the Village was Vitzora; the People that belonged to it, as foon as they faw that Perfon in our Company, ian to help us out of the Sledges, and to unharnefs our Rain-Deer. He bartered all his Skins with $u s$ for Tobacco and Brandy, except his Bear-Skins; which we did not care to buy, and his Sables, which he would not fell; indeed, he durft not. The Great Duke of Mufcovy, in whofe Territories we were, and whom his Subjects call Czar, referves that Commodity for himfelf. Thofe who fell it without Iicence from him, in any Ian of his Dominions, are feverely punifhed: He appoints certain Officers to take thofe Furs of fuch as have them. Thofe Officers have Ware-houfes in feveral Places of his Empire, and only they trade in that Merchandize. If any one elfe fells a Sable-Skin, it is by Stealth and in fecret, and thofe that buy it muft be careful how it is feen 3 for if the Officers we have mentioned, or the Governors of Places that Strangers go through, find any Sable-Skin, or Skins among their Goods which were not bought of the proper Officer, all their Merchandize will be feized, and condemned. Having dealt with the Borandian Gentleman, if any of that Country deferve the Name, for all the Furs he had by him that were to be fold, he fent two of his Servants about the Village to tell the Inhabitants, That if they would bring us their Skins to his Houfe, they might have Brandy and Tobacco for them, as their Mafter had already had for his. The Borandians of Vitzora were glad to hear of fo good a Market; they brought us all their Furs immediately, and we gave them Tobacco and Brandy in Exchange for them. We bought in this Place fifteen hundred Skins of all forts; and our Cargo being too great for a Sledge, we defired our Landlord to do us the Favour to lend us a Bark, which he had, and fome of his Servants to go in it with one of our Seamen, who was a good Sailor, and one we could truft to carry our Goods a-fhip-board. Our Ship; it is true, lay above an hundred Leagues off; but the Sailor and the Borandian's Servants, who were ufed to the Coafts, could eafily manage that fimall Veffel, and convey our Merchandize to our Companions on the Coaft of Borandia. The Gentleman agreed to lend us the Bark at fuch a Price, and his Servants to help our Sailor.

We paid him in Tobacco and Brandya as currene as ready Cafh at Vitzora.

The Bark was built in the Form of a Gondola, broad in the Middle, and tharp at each End. It was all of Wood. There was in it no Iron or Nails. It had a FirTree Maft in the Middle, and a quare Piece of coarfe Cloth, the Thread of it wove of the Rind of a Tree, tied to the Maft to ferve for a Sail. The Cordage was of the fame Make as the Sail. The two Anchors were of Wood, and very heavy. The Cables that held them were made alfo of Ropes of the fame kind as the other Cordage. He lent us two of his Servants to affift our Sailor: And when they were about to put to Sea, he Thewed them privately thirty Pair of Sable-Skins, which we bought with Ready Money, clapped them aboard, and fent them away. We were glad we had got them fo; for otherwife he would not have fold them to us; the Bark being ready to fail was a fair Temptation ; and feeing there was no Likelihood of the Officers fearching, he let us have them. The Veffel was now put off immediately, and there was no Officer near to examine it. It was a dangerous Rifk, had there been any Searchers at hand, for himfelf would have been corporally punifhed, and he and all his Family fent Slaves into Siberia. Our Seaman and the two Borandians fet fail with our Merchandize; and our Supercargo and Accountants fell to drinking with the Borandian Gentleman. While they were making a Debauch, I went about the Town with our other two Seamen. I was pleafed with its Situation between two Mountains, each of them almoft a League high. All the Houfes were built and covered with Fifh Bones very artificially; the Crannies were every where ftopped up with Mofs as faft as a Ship new caulked; and above all, Turf was laid handfomely in fome Places that were moft expofed to the Wind, which had no Paffage into the Houfes, except at the Doors, which were like Ovens Mouths, as in other Places in Borandia. At the Top of the Houfes where were Lattices or Windows for the Light to enter, I faw abundance of Women and Children at work, fome making Fifhing Nets of the Rind of Trees; others were making of Sails, which looked like fine Mats ; others ufing their I-Iatchets; others Knives. Their Needles were of Fifh Bones. All of them are ugly, dwarfifh, flatnofed and fwarthy.
10. When we returned to our Lodgings, we confultod with nur Supercargo and Accumulants, what we had beft to do ; our commodities were not half difpofed of, and we were in a Country that was full of Furs; the farther we went, the Plenty was the greater, and confequently the Markets the more encouraging. We had a great deal of Cafh, and our Commiffons being as large as our Captains, who were to go whither they thought fit, for the Service of the Company ; we refolved to proceed as long as we found the Trade to be good. We fent our Guides back with the Rain-Deer, and Letters to our Captains, to acquaint them with our Intentions, and give them an Account of our Succefs. We then hired a Bark to carry us to Petzora, the Capital City of a Principality of the fame Name, on the North Coaft of the Mufcovite Sea. Our Landlord got us a fmall Veffel and two Men. We embarked on board it with our Cargo, and by the help of an Eafterly Wind, coafted along Shore till we arrived at Petzora. We got there in fifteen Hours.

The City is not very big, it is fituated on the Coaft, and gives Name to the Sea as well as the Province about it. We went to wait on the Governor at the Caftle. He affumes that Title's tho' in reality he is no more than a Collector of Cuftoms. Indeed all the Czar's Governors are fuch fort of Perfons, for there are few Noblemen or Gentlemen in Mufcouy. They are all uncivil and jealous; Qualities that are incompatible with Nobility. This Governor was a Mufcovite ; he was drefs'd after the Fafnion of his Country, in a Robe of Violet-coloured Cloth, with a Mixture of Red. He gave us fome excellent Metheglin, which went down very pleafantly, and was as racy as Sack; after that we had Brandy and Gingerbread, the common Collation in Nuwfovy. Knowing he
had the Charge of the Czar's Sables, we anked him if he would fell us fome? He anfwered, he would, enquiring how many we wanted? We anfwer'd, all he had, if he would let us have them a Pennyworth. He then carried us to the Warehoufe, where there were five Zimmers, each Zimmer fifty Pair; among which there were two Zimmers of the fineft I ever faw, as black as Jet; for which we paid him five hundred Ducats; and we had the other three Zimmers for eight hundred Crowns, or four hundred Ducats. We bought all the Skins he had; they were fealed with the Czar's Arms. After we had paid him his Money, he would treat us again at the Caftle

He ordered two Boats prefently to get fome frefh Fifh for us; he killed a young Rain-Deer, and roatted fome Wild-fowl that his Servants had brought in. We had a noble Entertainment of Fifh, and Fowl, and young RainDeer Venifón, which is good Meat; we drank Brandy and Metheglin eight Hours together; and the Fumes had got up into my Head fooner, had I not every now and then eat a Mufcovite Bifket, the beft Bread in the World. The Governor and his Guefts at laft began to be tup-heavy; and we all lay down to reft on white Bear-Skins, for he had no Beds to lodge us in. We flept fix or feven Hours, and then rofe. Our Hoft prefented each at our Uprifing with a Brimmer of Brandy.

We then went about the Town to try if there was any Trade to be driven with the Inhabitants. The Governor ordered one of his Under-Offcers to accompany us; and we bought of Several People two thoufand grey Squirrels, four Dozen of Ermines, five hundred Fox-Skins, the greateft Part of them as white as Snow, fix fore of white Wolf-Skins, two hundred Martens of a greyifh Colour. All of them coft four hundred Ducats. We obliged them to take half in Copper, becaufe it incumbered us, and half in Cafh. We went back to the Caftle, whither we fent our Merchandize, and where we packcd it up in Bales. The packing Cloth was made of the fame fort of Stuff as the Sails of the Bark fent to the Ships. Our Goods being thus taken care of, we refolved that one of our Accountants fhould return with them to our Ships. To that end we entreated our Hoft the Governor to furnifh us with a Bark, which he did; and we hired, three Borandions to affift the Accountant in his Voyage ; the Governor paffing his Word for them that they fhouid be trufty and do us no wrong. For the Hire of the Bark and the Borandians Wages, we paid him ten-Ducats more, and prefented the Borandians with fome Ends of Tobacco. The Governor engaged to facisfy them farther for their Trouble when they came back.
Our Accountant embarking, fet fail, the Wind Eaft-foutheaft, and we fell to drinking again with our Hoft the Governor. The Gentleman who had entertained us at Vitzora, accompanied us to Petzora, and drank fo hard, that I could not imagine where he found Stowage for fo much Brandy and Metheglin as he fwallowed. We continued tippling four Hours together, and then lay down, according to Cuftom, on Bear-Skins to repofe ourfelves. As foon as we awoke, our Supercargo defired the Governor of Petzora to hire us fome Rain-Deer, to carry us into Siberia, a Province which fome Geographers place in Europe, and others in Aqa. He furnifhed us with feven Rain-Deer and feven Sledges; one for our Supercargo, one for our other Accountant, one for myfelf, two for our two Seamen, one for our Guide, and the other to load our Tobacco and Prandy. The Provifions he fupplied us with, were to laft till we arrived at Papinowgorod, another City in the Province of Petzora, on the the Borders of Siberia. Our Factor took what Money he had left with him; and the feven Rain-Deer being put to the feven Sledges, the Governor ordered another to be got ready for one of his Domeftics, whom he commanded to wait upon us feven Leagues of our way to a Village, where we were to change our Rain-Deer, and give them to the Governor's Servant to carry back. For all which he was to have four Ducats. He would not let us go till we had drank five or fix Glafles of
Brandy at parting - Brandy at parting

We gave both him and our Hoft of Vitzora hearty Thanks for their kind Entertainment, and then got into
Voz. II. Numb. IOX.
our Sledges. The Ways were very difficuit to pafs. We had no beaten Road, and were four Hours before we could fee any living Creature ; at laft we met four white Bears, of an exceffive Bignefs; they croffed our Ways and feeing us, fled into a Wood. Two Hours after we came to a Village, confifting of feven or eight Cottages 3 there was no body in them, the Inhabitants being all gone a Hunting. We alighted out of our Sledges to bait a little on the Provifions we brought with us. While we were eating, five or fix Men, with their Wives and Children, returned from hunting, which it feems had been very lucky to them, for they brought in with them fix Bear-Skins, four Wolf-Skins, a couple of Ermines, and eight Sables. The People of the Place were furprized to fee us there, and would have fled from us, had not the Governor of Petzora's Servant affured them we were Friends and Merchants, bound for Papinowoorod, When they underftood we were Traders, they came up to us, and viewed us narrowly. They wondered to fee fo many Strangers in a Place fo unfrequented. They were aftonifhed at our Way of Drefs, our Looks and Shape, as alfo at our Language, fo different from theirs, and fo unintelligible to them; however, we deale with them, by the Affiftance of our Interpreter; we bought all the Skins that they darcd to fell us; and they. lent us Rain-Deer and Siedges, to carry us as far as the Mouth of the River Papinowegorod.
11. When we parted from them, we left the Courfe of the River Petzora, and proceeded to that of Papinoregorod, the Ways were almoft unpaffable, yet, with much Difficulty and Fatigue, our Rain-Deer drew us over Mountains and Valleys, through Woods and Forefts, for three Hours before we met with Man, Woman, or Habitation. When we had travelled fo long, and approached near a thick Wood, we efpied five Men in white Bear-Skin Robes, after the Mufcovite Fanhion; each of them had a Fuzee on his Shoulder, a Pouch on one Side, and a Knife and Sheath on the other, like the Borandian Huntimen. They feemed to make up towards us, for which Reafon our Guide, who underfood the Management of Rain-Deer, immediately fopped them; and by that Time the five Men were advanced fo near us, that we could hear them; one of them perceiving that we were Strangers, bid us Good-morrow in the German Language, withing they were as free as we were. Our Supercargo, who was a Native of the Lower Saxomy, hearing him talk his own Tongue, afted him what Countryman he was? The Man anfwered him to his Satisfaction; and, entering, into a longer Converfation, they recollected things in their Minds, by which they undertood that they liad formerly been intimately acquainted. Our Supercargo alighted out of his Sledge, embraced him, and demanded how he came there? The Man replied, he was one of thofe whom the Grand King, or Czar, had lately banifhed for hunting Sables.

This is a Crime that is punifhed with Banifhment, and that in Mufcory is equivalent to the Galleys in France. Some are banihhed for ten Years, fome for fix, fome for three, fome for more, and fome for lefs; after which they have their Liberty to go where they pleafe. The more Ilooked on one of the five Men, the more I thought I had feen him before, and alighted out of my Sledge to fatisfy my Curiofity. As foon as I was on the Ground, the Man who remembered me better than I did him, ran to me and embraced me; fighing, afked me, in the Frencb Tongue, whence I came, and whither I went? I was fomewhat furprized at it, becaufe I could not yet call to mind who he was; his Habit had ftrangely altered him; his Beard was long, and his Head bald; befides, he was fo fallen away, he was nothing but Skin and Bones. Seeing I could not recollect where I had known him, he told me his Name, and that he had drank very often with me at Stockbolm. I then remembered that, indeed, he was the Man to whom I had been very much obliged, for the many Civilities I had received from him in Srweden: He was a Gentleman by Birth, a Lorrainer, and was Lieutenant-Colonel of a Regiment of Mufcovite Horfe. He would fain have perfuaded me to go with him to Moforev , promifing to procure me an

6 D
honourable
honourable and profitable Place, in the Service of the Czar, but I did not think fit to accept of his Propofal.
The fine Appearance he made at that Time, the Refpect that every one paid him, as well on Account of his Eftate, for he was rich; as for the Place he enjoyed, and the Character he bore, of a Man of Courage and Honour, and the miferable Condicion I now faw him in, made me figh; when I embraced him again with extraordinary Affection and Tendernefs, afking him what was the Occafion of his Difgrace? He anfwered, the Czar furpected he had not been fo zealous in his Service as he might have been, and for that Reafon only banifhed him to Siberia for three Years; that he was to endure Miferies which are not to be expreffed, befides the Dangers to which all banifhed Perfons are expofed in hunting wild Beafts for their Subfiftance; as likewife Hunger, and the Rigour of the Seafon, which they were forced to fuffer, and none durft relieve them. He faid they were almoft every Day attacked by wild Beafts, which they met in Herds, feeking for Pafture; and that they had often much ado to defend themfelves: And further, if they did not each of them catch fuch a Number of Sables, as they were condemned to furnifh the Czar's Officers with, they were each of them lafhed with a Whip made of Leathern Thongs, thick and hard, on their naked Backs, and fometimes all over their whole Bodies, till they were all in a gore Blood.

Our Supercargo's Acquaintance told him the fame Story, fo did the other three, who fpoke the German and French Tongues tolerably well. One of them had been Receiver-General of the Czar's Revenues, in one of his Provinces ; the fecond had been a Major General, and the third a Man of Note. They all deplored their Mif fortune, affuring us, that when the Time of their Banifhment was out, they would get far enough from the Czar's Power. We were extremely touched with the Relation of their miferable Condition. We fet down on the Mofs, took out the beft Provifion we had, and defired them to take Part of it. We offered them our Help to make their Efcapes, but they told us it was impracticable; for that they were known to all the Governors of the Forts and Places through which they and we muft neceffarily pais: And in cafe they fhould be taken, all our, and their, Lives mult pay for their Attempt to get off. That Death would certainly be our Punifhment, and theirs; and the moft cruel Death, which boundlefs Power, and northern Barbarity, could inflict. This increafed our Concern for thofe poor unfortunate Gentlemen; we all weeped heartily at the fad Sight of what they fuffered, and the Idea of what they were fill to fuffer.

We could not think of parting prefently with Perfons in their difconfolate State. We had feen them when Fortune fmiled on them, at leaft fome of them; we had been their Friends, and we thought it had been cruel to leave them, without endeavouring to render a Day or two, of the difmal Time they were to pafs, pleafant to them ; the Society of fuch as they had formerly had a Friendinip for, would contribute towards eafing them a little of the Load of Grief that hung at their Hearts. We told them what we wifhed, and that we were loth to part fo foon; our Trade was not in fo much hafte, confidering the two large Parcels of Goods we had already fent to our Veffels, as to hinder us fpending a Day or two with Men in their Circumftances, whom we equally loved and efteemed. The meeting them in fuch a Place, and in fo fad a Condition, had fomething romantic in it; and as much as we were Merchants, we had more of Heroes than to fly from our Friends in Adverfity, without taking a few Days to condole with them, and endeavour to alleviate their Sorrows.

Befides thefe Confiderations, I had another. My Defign, in the Beginning of my Voyage, was more to make Obfervations on the North Parts of the World, than to reap any Benefit by it. I had formerly made more beneficial Voyages to the Indies and Africa, than any thing I could propofe to myfelf by Travelling into the North. But having feen thefe two Parts of the World, I had a Curiofity to vifit that in which I was
now trading, and to inform myself of the Manners and Cuftoms of a People lefs known to us than the Indians in the Eaft and Weft, though they are at a greater Diftance from us. I knew the Gentleman of Lorrain to be a fenfible Man, who had lived a long Time in Mufoov, under the State of the Empire, and the Court of the Czar, as well as any Man; and intending to communicate my own Obfervations to the World, I thought I could not better fecure the Reader's Satisfaction, than by giving him his, which would make my Account of the North complete; wherefore I refolved to flay a Day or two with him, and his poor Brethren in Adverfity, and learn of him what he could inform me of, as to the more noted and more populous Part of Mufcovy; the City of Moforw, and the Czar's Court. Our Bufinefs obliged us to keep as near the Coaft as poffible; and the Countries that lay near the Sea came within my own Knowledge; but the Inland Provinces were out of our Way, and we had no Pretence to vifit them; my Companions travelling for Profit, and not for Pleafure. Our unhappy Friends rejoiced mightily at our offering to fpend fome Hours with them.
To encourage us, they told us they had built themfelves five little Huts in the Wood, which they came out of, where each of them retired when he chofe to be alone; that there was room enough to entertain us all ; and if we would be fo kind as to go thither with them, they fhould be infinitely obliged to us. They knew our Bufinefs, and we fhould not lofe our Time; all the Skins they had were at our Service, except the Sables, which they were forced to referve for the Czar; but they were little to be valued, in refpect to the Joy they fhould have in our Company. They faid, the very Remembrance of the happy Hours they fent with us, in their profound Solitude, would make many future Months glide on the more fweetly. Our Supercargo and I confented to ftay with them, out of refpect, as the reft of our Company did out of Hopes of Profit, hearing them offer to give us their Furs. The banifhed Men told us we mutt travel fome fcores of Leagues before we could meet with a Market for our Commodities. We readily agreed to the Propofals they made us. When we had refrethed ourfelves on our own Provifions, we ordered our Guide to unharnefs the Rain-Deer, and convey our Goods into the Huts the Gentlemen had built to defend them from the Weather. Their Neceflity made them ingenious, and nothing could be better contrived, either for Pleafure or Convenience, in fo wretched a Place.

They were built of Fir, higher than any we had feen in our Travels; there were two or three Rooms in each of them, and Lattices to let in the Light at the Side. They were each fhaded by a Tuft of Trees, and paved wi h broad Finh-bones, fo artificially, that they looked as if the Floors were inlayed with Ivory. They had digged a Trench round them, and pallifaded the Circumference of the Ground, on which they were built, with ftrong Pofts, which were joined together with crofs Sticks of ftrong Wood, and on the Top were Spikes of Fifhbones. By this means, when the Gate, that was the Entrance into it, was fhut, they were fafe againft the Infults of wild Beafts, and as fecure as in a fortified Place. They had all Sorts of hunting and fifhing Tackle, Store of Metheglin, Bifket, and falted Rain-Deer-Venifon. The Lorrainer was a temperate Man, but the others loved drinking ; fo they and my Companions fell to it. I I always abhorred the Debauches we were forced to make in the North, and was very glad I had an Excufe to avoid tippling now.

My Friend and I withdrew to converfe together, and the Company perceiving we were old Acquaintance, permitted us to do fo. We retired into his Hut, and left the reft with the Saxon in his; where they drank away Sorrow at that Time; and after fix or feven Hours fpent over Brandy and Tobacco, they all lay down on Bear-Skins to take their Reft. The Lorrainer and I, in the mean Time, entered into a Difcourfe on his own Adventures. He told me how he intended to return home, after his Time of Exile was expired, and how I might hear of him
in France. Our Converfation was tender and pleafant; it ran partly on our former Acquaintance, and partly on the Wildnefs of the Country, and the Barbarity of the Inhabitants; upon which I took occafion to defire him to communicate to me the Obfervations he had made of the Court, Country, and Cuftoms of Mufcovy; telling him I intended to publifh my Voyage to the North; and wanted only fome Account of the inland Provinces, to render it, in fome Meafure, perfect.

He replied, he was loth to. fpend any of the little Time we had to be together, on fo general a Subject: But if I thought his Reflections and Remarks would be of any Ufe to me, he would give me the Memoirs he had collected when he came firft into Mufcovy, for his private Satisfaction. He could not recommend them to me as things that did not require to be carefully digefted and methodized: But he affured me the Obfervations were as juft and entertaining as any he had been able to make fince, in fifteen or fixteen Years Refidence in that Country.

He then went to a Cheft he had in a Corner of an inner Room, and took out about twenty Sheets of Paper, containing the Subftance of what I infert in the following Pages, relating to the Manners and Policy of the Rulfans; as alfo the Account I give of Siberia, which I took entirely from his Memoirs. I would fain have excufed myfelf, and not accepted his Prefent, believing he could finifh his Work, and make it ufeful to the Public, with more Succefs than I could : But he obliged me to take the Memoirs, faying, The things in it were now fo common to him, that he needed no Remembrances; and his Sufferings had given him fuch a Difguft to the Country, that he fhould never more have any, Curiofity concerning it, or defire to let the World know any thing of it. And as to thefe Memoirs, though probably they might be of Service to me, they could not be fo to him: In a Word, he obliged me to take them with me, and I refolved to add them to my own, when I returned to France, and fhould put the Journal of my Voyage into order for the Prefs. I have not publifhed above half the Obfervations the Lorrain Gentleman gave me: However, they are the moft uffeful and diverting of them, and what'I doubt not the Reader will be pleafed with. The Perfon that made them being a Perfon of good Senfe, and very curious in his Refiections on Places and Perfons; he mingled feveral Paffages of the Mufcovite Hiftory with his Memoirs, which he took from their own Books; for he undertood their Language as well as the Natives; fpoke it and wrote it as well as their beft Scholars; who, indeed, are not the moft learned or elegant Perfons in Europe: For Learning is held in Contempt by almoft all the Ruffans; their Clergy being as brutal and illiterate as their ILaity. When my Friend and I had tired ourfelves with talking, we lay down as ufual, on Bear-Skins, and flept found till the next Morning.

We rofe early, and at the Defire of the five banifhed Gentlemen, took each of us, our Guide excepted, a Fuzee in our Hands, which they lent us; and we went with them into the Woods, to their Walks, to fee if their Game were caught in the Snares we had laid for them. We killed among us ten or twelve white Foxes, and half a Dozen grey Martens; we met with none of the larger Game; and both the Gentlemen and we were loth to fpend any more Time about it, for we intendto proceed on our Journey when we had dined; fo we returned to their Huts, brought forth our Provifions, the fame did our Hofts, and refrefhed ourfelves, as well as could be expected in fo wretched a Place. After we had drank plentifully, the Gentleman forced us to take feven Bear-Skins, ten white Fox-Skins, two Pair of Ermines, and eight Wolf-Skins; they would not have any Money for them, and it was with Difficulcy that we could perfuade them to accept of fome Brandy, Tobacco, and Cloth, to the Value of their Furs. We were fo grateful to them for their Civilities to us, that we took care our Commodities fhould be rather worth more than lefs than theirs. Having eat and drank fufficiently, we took our Leaves of them, embracing them heartily, and wifhed
them Patience to endure their Sufferings, and a happy Deliverance out of them, and faluting them all round, wept reciprocally at parting. Our Rain-Deer and Sledges being got ready we mounteds and bid them all adieu; the like did the Gentlemen to us. Our Rain-Deer, at our Guide's Signal, ran away with us ; and the unfortunate Exiles went to their Huts.
12. The Territories of the Czar or Emperor of Rufia are fo little known, that we have few Defcriptions of them worth reading, which proceeds from the little Commerce there is between his Dominions and other Parts of Europe, and indeed between fome of his Provinces with the reft ; his Country is the largeft in Europe befides what he poffeffes in Afa, but moft of it is thinly peopled; and being uninhabited in many Places, it is confequently unfrequented. By this Means Travellers never give themfelves the Trouble of going far beyond the Coaft, or the Province of Mofcow; and the Czar's Subjects are fo illiterate they can give no Account of Things, for they are fo ignorant that they know as little of their own Country as thofe that were never in it. I found very few Obfervations on the geographical Part of Mufcovy among my Friend's Papers ; but feveral Remarks on the Cuftoms and Religion of the Mufcovites, with which I believe the Reader will be diverted; for they were made by one who had more Opportunities of informing himfelf than ever any other Man had before him.

Every body that travels into $N u f c o v y$, with a Defign to fatisfy their Curiofity, about the Manners and Polityso Ecclefiaftical and Civil, of the Mufcovites, will meet with many Difficulties that they will hardly have Patience to furmount: The People of Ruffic are naturally jealous, and miftrultful; they have no Knowledge of the World, and but very little in any kind of Affairs either Spiritual or Temporal ; wherefore they fufpect all that make any Enquiries into the State of their Government or Religion, and yet know not why or for what. Printing was brought into Mijcovy in the Year 1560, and the Czar then reigning erected a College for teaching Grammar, and the Latin Tongue; but it came to nothing in a few Years. The Priefts, the moft ignorant, illiterate Creatures that ever affumed that Office, ruined it, for fear it might in Time ruin them : Thefe Priefts are only Laics of good Lives and Converfation, who are for that Reafon chofen into the Priefthood. The Occafion of the Mufcovites embracing the Chriftian Religion, was from the Prayers of a Prieft of Cbioff, who praying to Almighty God for the Duke, who was dangerounly ill, his Prayers were heard, and that Prince miraculoully recovered to his Health. Their Liturgy is taken from that of the Greeks in the Sclavonian Language, the Knowledge of which is as rare among them as that of the Latin among the Roman Catholics. They imitate the Greeks in the Manner of building their Churches.

They have Pictures in them, and formerly had Images richly adorned with Jewels, and other coftly Ornaments; but this is not fuffered now, all Sorts of Sculptures being forbidden; and they looked upon the Worfhip rendered them by the Papifts to be Idolatry. They don't kneel at their Prayers, but proftrate themfelves on the Ground. On the Eve of certain Feafts celebrated among them, they fpend the whole Night at Church in their Devotions. They often throw themfelves on the Floor, fign themfelves with the Sign of the Crofs, and beat their Heads againft the Ground. Amidft the feveral Parts of their Services, there are Intervals in which they difcourfe of their temporal Affairs. The Emperor feldom miffes affifting at the Public Worfhip; he is generally attended by the whole Court: He difpatches Bufinefs at Church, and if any of the Courtiers are not prefent he feverely reprimands them.

On Wbitfunday their Churches are filled with Maple Boughs, which the Ruffans miftake for Sycamore. Whenever they proftrate themfelves, they verily believe the Holy Ghoft defcends on thofe Boughs, as Manna fell on the Leaves of Oak in the Defart. Mufical Inftruments are not ufed in Churches; the laft Patriarch abolifhed that Cuftom. Their Prayers, which are performed three

Hours

Hours after Sun-rifing, are called Obedni ; thofe that are made after Sun-fetting are called Vackerny; and thofe an Hour after Midnight, Zaoutrinys.

Their Obedni, or Morning Prayer is: Have Mercy upon me, OLord, according to thy loving Kindness, and blot out niy Iranfgreflion, according to thy Greatnefs, and Multitude of thy Bounties.

Their Vackerny, or Evening Prayer is: O Lord! bear my Prayer when I call upon thee, and let my Cry come unto thee.

Their Zaoutrinys, or Prayer an Hour after Midnight is: We put our Truft in Cbrif, our Saviour; and all our Hope is in bim.

They repeat the Miferere, which they call Hofpody Pomelee, a hundred times over, and the Prieft who can repeat it ofteneft in a Breath is reckoned the beft Man; five or fix of them will read aloud together; one a Chapter, the other a Pfalm, the third a Prayer, and the reft fo many other different Things, with Noife and Confufion inexprefible. Every Prieft is called Pope, or Father; as Pope $70 n$, or Pope Peter; every Bifnop is ftiled a Metropolitan, and the Chief-Prieft, Proto-Pope: the Parifh-Priefts are commonly cloathed in red Veftments, fome wear green and others blue, according to their feveral Fancies; the Form of their Garments is diftinguifhed from that of Laymen, by two little Piecès of Stuf fewed on each Breaft.

They wear a red Leather Cap on their bald Pates, and that is all the Difference between their Drefs and the Laity; the Hair of their Heads and Beards is never fhaved, only the Crown of their Heads, which is always fhorn; they muft have Wives, but, according to the Apoftle St. Paul's Rule, no Prieft is allowed to have any more than one during his whole Life: Thus their Priefthood depends on their Wives, and when they die it ceafes; for which Reafon they marry young, that they may have a Benefice early, and ufe their Wives better than "other Men. Their Wives Garments are diftinguifhed like the Hufbands, by two little Pieces of Stuff fewed on each Breaft. Their Manner of Baptifm is much like that of the Roman Catholics, except that they always dip the Children they baptize quite under the Water. The Cuftom of buying Foreigners, on Purpofe to oblige them to turn Chriftians, which was very much practifed by them formerly, is now out of Ufe. When any Man, either Proteftant or Papift, renounces his own Religion to embrace the Ruflan, he muft renounce his firft Baptifm, his Father and Mother, and fpit three times over his Shoulder. Some antient Inhabitants of the Country have obferved, that of two hundred Englijh, Scotch, and Dutch, who have made Profeffion of the Rufian Religion, hardly one died a natural Death.

The greateft Part of the Marriages in Mufcovy are brought about by third Perfons, and without much Solemnity. Five or fix of the young Woman's Friends who is to be married, examine her ftark naked before the is further engaged, to fee if the has any bodily Infirmity; and if they find any, they do what they can to cure it: As for the young Man, he never fees her, perhaps till he meets her in the Chamber where the Marriage is to be confummated. The NuptialCeremonies are not very great, a few Perfons of both Sexes wait on the Bride about three $0^{3}$ Clock in the Afternoon to Church. When the Prieft has done hirs Office, the Panama, or Sexton, throws Hops on her, and wifhes that the may be as fruitful as that Plant; another Officer of the Church, cloathed in GoatSkin, the Wool outwards, accompanies her Home, praying all the Way, that the may have as many Children as there are Hairs on his Habit. Young Men lead the Bridegroom home, and old Women the Bride, who is veiled fo that nothing of her Perfon is to be feen. The Parim Prielt carries the Crofs before her to her Hufband's Houfe.

The new married Couple fit down at the Table together; fometimes they have Bread and Salt laid before them; but they don't eat a Bit. In the mean time, a Chorus of Boys and Girls fing an Epitbalamium, or Wedding Song, fo lewd and impudent, that it is a Shame to repeat it. When this Ceremony is over, an old

Woman and a Prieft conducts the Bride and Bridegroom to their Chamber, where the old Woman advifes the Bride to be loving and obedient to her Hufband, and the Bridegroom to be kind to his Wife; , the Bridegroom in one of his Bufkins has a Whip, and in the other a Jewel, of Purfe of Money; he commands the Bride to pull them off, and if it happens fhe lights upon that Bufkin firt where the Jewel or Purfe of Money is, he gives it to her, which is looked on as a happy Omen for the Wife; but it is reckoned unlucky for her to pull off that Bufkin firft in which the Whip is; and the Bridegroom gives her a Lafh with it to punifh her for it, as a Token of the Treat ment fhe is like to meet with. When this is done, they are fhut up in a Chamber for two Hours; then the old Woman goes in and examines if the Signs of Virginity are apparent, and in fuch Cafe the ties up her Hair in Treffes that before hung loofe about her Shoulders, and goes to her Parents to demand the Albricia, or MarriagePortion.
13. To keep the Chambers warm in Ruffia, they are covered with Earth two Feet deep ; but when a Couple is newly married the Earth is taken away from the Place where the Marriage is confummated; for Earth being an Image of Mortality the Muffovites think it is not proper for the Man or Woman to have it in their Thoughts at that Time. The Children of the Ruflans, young Men or Maids, dare not refufe Hufbands or Wives propofed to them by their Parents; nor thofe that depend on any great Man, thofe defigned for them by their Superiors. Boaris Fuanowitz Morifo, the fecond Perfon in the Empire, having refolved to marry one of his Friends to a rich Widow, a Dutch Woman born, who had embraced the Ruffan Religion, the Widow went to Boaris's Wife, Sifter to the Emprefs, threw herfelf at her Feet, and prayed her to prevail with her Hufband not to put fuch a Conftraint upon her Inclination, nor oblige her to break a Vow fhe had made never to marry again. All her Prayers and Tears were ineffectual. Boaris's Wife replied, What would you Befcbeat; as much as to fay, difhonour my Hufband fo far as to refufe one that he offers you, and make him worfe than his Word to his Friend.

The Manner of the Ruffans ufing their Wives is very fevere and inhumane, though it is much lefs fo now than formerly: Four or five Years after my Fricnd came to Mufcovy, a Tradefman in Mofcow, after having beaten his Wife unmercifully, forced her to put on a Smock dipped in Brandy, to which he fet fire and burnt her to Death. What is more ftrange even than his Barbarity is; that no-body profecuted him for his Wife's Murder. It feems there is no Law in Ruffa to punifh a Man for killing his Wife if it was in Correction. Some of thefe Barbarians tie up their Wives by the Hair of the Head, ftrip them ftark naked, and whip them till they are almoft dead: It is true, they never chaftife them fo feverely unlefs it be for Adultery or Drunkennefs, and incleed it is very feldom now that they deal fo by them at all. The Fathers of young Women who are married, now take the neceffary Precautions to prevent their Daughters being fo ill ufed ; they oblige their Hurbands to Narriage Articles to treat them according to their Quality, to maintain them with good Victuals and good Drink; not to whip them, nor fcratch, nor kick them.

That Woman who kills her Hufband is buried alive all but her Head, and fo left to expire in that miferable Condition. There is feldom any Marriage celebrated in Nufcovy, efpecially among Perfons of Rank, without fome conjuring, and ufing Charms: The Friars and Nuns are accufed as the moft guilty of this wicked Practice, which, it is faid, they ftudy in their Solitude. My Friend writes, that he has feen a Man come out of the Wedding-chamber like a mad Man, tearing his Hair and crying, he was undone and bewitched. The Cure in thefe Cafes is to apply to fome, commonly called, wbite Magicions, who for a fmall Matter of Money diffolves the Charm, and unties the Knot that others had tied This Man was fo ferved, fo diftempered, and fo cured, as my Papers report; but Credulity perhaps infects even Strangers in Rufiae The Mufcovite Canon forbids any Man

## Chap. II.

Mian to have conjugal Commerce with his Wife, three Days in the Week, as Monday, Wednefday, and Friday. Thofe who break this Law, muft bathe themfelves before they enter the Church Door. No Man is admitted into the Church that has had two Wives; every fuch Perfon muft ftay in the Porch; and he who marries a third Time, is excommunicated.

If a Woman is barren, a Man may do what he can to perfuade her to retire into a Convent willingly, and if the will not, he may beat her till the gives her Confent to it. It is reported that the laft Emprefs would have been thut up in a Monaftery, had the not at laft brought forth the Czaroroitz, or Prince Royal, who was born nine Years ago, on the 2 d of Fune, 1661. The Emprefs had feveral Daughters, but that would not have excufed her, unlefs fhe had had a Son and Heir. When the Czar of Mufcovy is willing to marry, there are feveral young and beautiful Ladies prefented to him, out of which he generally chufes one to be his Wife.
The laft Czar on this Occafion made Choice of a young Lady who was not at all liked by Boaris Fuanosvitz, the reigning Favourite and Minifter. This Lord would fain have had his Mafter accept of a Wife of his chufing, and endeavoured to fet him againft the Lady he had himfelf chofen. He propofed to him the Daughter of Elich Danelowitz, a Man of obfcure Birth, who had got into fome Credit, by Means of a good Eftate left him by his Uncle, one Gramatin, Secretary of the Embaffador's Office. The young Gentlewoman's Name was Mary, fhe was not extraordinary handfome; but witty and cunning, modeft and devout, at leaft in Appearance. Boaris thought if the was advanced to the Emperor's Bed, by his Procurement, fhe would be governed by him; and his Favour with the Czar made his Hopes the more probable. He intended to marry the younger Siter himfelf, to ftrengthen his Intereft by that Alliance. The Propofal he made to the Emperor, was not, at firft, approved of. He was very much troubled at it, , but thought it would be his fafeft Way to diffemble his Difcontent; and knowing the Emperor's Inclination for the young Lady he had chofen was too powerful for him to refift openly, and that it might, perhaps, irritate him, if he difcovered his Averfion for the Match; he refolved to break it off by Treachery, to prevent any Sufpicion of his Defigns. He bribed the Women that were, according to Cuftom, to prefent her with the Crown, and they tied the young Lady's Hair fo hard, that the fell down into a Swoon ; the Women gave out that fhe had the falling Sicknefs; her Father, who brought her, was feized, accufed of Treafon, whipt, and banifhed into Siberia.

The Gentlewoman, when the came to herfelf, found fhe was a vaft Diftance from the Throne, to which a few Minutes before the was fo near: However, fhe valued herfelf fo much on the Emperor's Choice of her, that fhe would never afterwards marry, though feveral beneficial Matches were offered her. She was not troubled with the falling Sicknefs any more. The Ring and a Pocket Handkerchief which the Czar gave her, fhe always kept as Tokens of her Preference in his Favour, though of fo Chort Duration. When the Emperor underftood it was only an Accident occafioned by the tying her Hair too ftrait, he was very much troubled at it, and affigned her a confiderable Penfion to make amends for the Lofs of a Crown, and the ill Ufage her Father had fuffered on her Account. Boaris prevailed with him to marry Danelowitz's Daughter, to which he was the rather induced, becaufe he was afraid of being bewitched. if he refufed; and the Favourite married Ame the Czarina's Sifter, as he intended to do, if the Czar confented to marry Mary the eldeít Sifter.

Though he got feveral Advantages by this Marriage, he loft one that was more valuable than all the reft, which was his Quiet. He was old and jealous. His Wife handfome and young. They quarrelled in a fhort Time; and he caufed Mr. William Barnley; an Enelifhman of Worcefter/bire, to be banifhed to Siberia, becaufe he fufpected that he was too familiar with her. Barnfley lived twenty Years in Exile, and afterwards was recalled;

Vol. II. Numb. iol.
he turned from the Proteftant Religion to the Rufran married a great Fortune, and lived at Mofcow in Splendour. Eliab, the Emperor's Father-in-law, durft not fay that the Emprefs was his Daughter, nor any of the Family, that they were related to her, even not her Un $\rightarrow$ cle, Fobn Paolowitz Martifcba, who was preferred to feveral Pofts, one after another. When the Czarowitz, or Prince Royal, is fifteen Years old, he is carried to the Market Place, and fhewn on Mens Shoulders, that he , may be known; thereby to prevent any Impofture, there having been many Cheats impofed on the Mufcovites for real Princes. Till he arrives at that Age nobody fees him, but thofe who are intrufted with his Education, and fome of the Chief of his Domeftics.

Even the ordinary Sort of People, in Mufcovy, hide their Children from every body, but their intimate Friends, and neareft Relations; they having a Superftition among them, that Strangers have certain Looks that are unlucky. Their Children are ftrong and robuft; they never fuck above a Month, or two Months at the moft; after which they give them a Horn, or a Sort of Silver Cup, made like a Horn, with a dry Dug of a Cow tied to the End of it, for them to fuck.

At two Years old they make them obferve Fafts, which are-very ftrict. They have four general ones in a Year. In Lent they faft three Days in a Week; Wednefdays, Fridays, and Saturdays. On which Days they don't fo much as eat Fifh, living on Cabbage, Cucumbers, and Rye-bread. They then drink nothing but Quafl, a Sort of Beverage, weaker than Small-beer. They won't drink after a Man who has eat Flefh; and when they are fick, they will take no Phyfic in the Compound, of which there is either Cor Cervi, or Pil. Lepor; fo fcrupulous are they in the Obfervation of their Fafts.

Their ufual Penances are, to bend their Bodies crooked ; to ftrike their Heads againft an Image ; fometimes to eat nothing but Bread, Salt, and Cucumbers, and to drink only fair Water. They never eat any thing that they call Pagano, i. e. impure; as Horfe-flefh, Hares, Rabbets, Elks, or Mares-milk, Affes-milk, $\xi^{\circ} c_{\text {}}$. in which they obferve the Mofaical Law in fome Mea. fure. The Emperor's Magazines being burnt lately, no lefs than fix thoufand Flitches of Bacon were burnt with them. By which we may fee there is fome Difference between their Religion, and that of the Tartars, who abhor all Manner of Swine's Flefh. Veal is reckoned impure, yet Lamb is not. Venice Treacle is alfo not allowed by them, becaufe there is Viper's Flefh in the Compofition of it; nor will they eat any thing, if there is the leaft Murk, Civet, or Caftor Flefh in it ; though the Barbarians feed on it in the North very frequently. Sugar, and Sugarcandy, are Scarmunas, i. e. forbidden on Faft Days; and a Knife that has cut Flefh, muft not be ufed for twenty-four Hours after.

The Regularity that the Mufcovites obferve in their Faits is of great Advantage to them ; they would not, without it, have Meat enough to ferve their Occafions; becaufe they are forced all the Winter long to fhut up their Cattle in Houfes, for five or fix Months together; and the Peafants, who are perfect Slaves, don't much care to trouble themfelves about encreafing their Stock of Cattle, for fear their Lord fhould come and take them away from them, which is very common for them to do.

I4. The Patriarch is Chief of all the Ecclefiaftics. The Perfon who executes that Office at prefent left the Court two or three Years ago, on fome Difguft he took at the Minifters. It was faid he began to make Innovations, and that he did not love Pictures; to which the Nufcovites have a great deal of Refpect. The patriarchal See has been ever fince vacant. But the Metropolitan, or Bifhop, or rather Coadjutor, performs all the Duties of this Office. And the Czar dares not fill the patriarchal Chair, fo long as the abdicated Prelate lives; fo highly is his Perfon reverenced in Rulfa. Of all the Mufcovite Ceremonies, that of Palm Sunday is the moft extraordinary. A hundred Men are ordered to clean the Streets, for the magnificent Proceffion.

The Emperor marches afoot, richly dreffed in Cloth of Gold; the Train of his Robe born up by Princes, and
all the Court waiting on him. The firft that goes before him, is the Officer that carries his Handkerchief, lying on another embroidered all over, which hangs on his Arm. The Servants of his Houfhold going before him. In this order they proceed to the Church, called Ferufalem, but they ftop by the Way, at a Place built of Free-Stone, in the Manner of a Platform, where he fays his Prayers, bends his Body almoft double, turning towards the Eaft; and then he enters the Church of 'ferufalem, which is not far off. He ftays there an Hour, and then returns back to his Palace; holding on his Arm the Bridle of the Patriarch's Horfe, caparifoned with white Linnen, on which the Prelate rides afide, carrying a Crofs in his Hand, and giving his Benediction to the People. The Reins of his Bridle are three Ells long, fupported by three Gentlemen, marching behind the Emperor. Inftead of a Mitre, the Patriarch wears, at that Time, a flat Cap on his Head, adorned with Diamonds and Gold Loops, edged round with Ermines. A Band of young Men carry feveral pieces of Stuff, of three or four Ells long, before him ; fome red, fome blue, fome green, fome yellow, and fome of other Colours. The Metropolites, the Protopopes, and the Popes, have all of them Chafubles, or a Sort of Caps ufed by the Popifh Priefts, when they fay Mafs. The Gentlemen and Lawyers have Boughs of Willow, inftead of Branches of Palm, in their Hands.

The Czar's Guards, who are pretty numerous, proftrate themfelves flat on the Ground, and a triumphal Arch is born along with a Tree on it, from which feveral Boys, in the Machine, frive to reach the Apples. When the Ceremony is over, the Patriarch fends the Emperor a Purfe, with a hundred Rubles in it. The Bells in the Church, called ferufalem, are faid to be the biggeft in the World. There is one of them that weighs thirty Ton; and when it is rung, it almoft deatens all that ftand near it. The Czar delights mightily in hearing them. There is a Niche in the Church, where the Patriarch ftands to give the People his Bleffing; after which he fays thefe Words: Go and eat notbing thefe three Doys. As for him himfelf he lies proftrate on the Ground all Night, and continues in Prayer till Eafter Day. The Gentleman of Lorrain, from whofe Memoirs this Account is taken, told me a Story of an Accident that happened to an Englifh Merchant's Servant on this Occafion.

The Servant was a Rufian by Birth, but born far in the Country; and having never feen fuch a Ceremony before, when he went to Church, he came back fo very melancholy, that his Mafter took notice of it, and afked him the Reafon of it: The Ruffan told him the Orders that were given by the Patriarch, that no-body fhould eat any thing in three Days Time, and was afraid, in the mean Time, that he Chould die of Hunger. He fafted two or three Days, and was ready to eat himfelf, not being ufed to fuch Penance: However, he held out, and then fwore he would never go to Church to hear the Patriarch's Bleffing again. On Eafter Day the Mufcovite Men and Women falute one another with a Kifs, give a red Egg, and cry, Cbrifos vas Cbrejch, God blefs you.

In Eafter Week all the Emperor's Gentlemen and Domeftics kifs the Patriarch's Hand, and he prefents them with red Eggs, or thofe that are gilt. Thofe of the higheft Quality have three; thofe of the Middle Rank two; and thofe of the loweft one. The Patriarch's Palace joins to that of the Emperor's; but it is built of Stone, and, for its Largenefs, is very ftately; but elfe it is a mean Building. The greatef Sign of Joy in the Rufians, on their Feftivals, is their drinking; and their moft folemn Days are thofe in which they make the moft Debauches. It is no great Shame among them, for Men, Women, Priefts, and Lawyers, to be feen reeling in the Streets. When the Women of Quality have a merry meeting together, the who makes the Encertainment, fends to all of them, the next Day, to know how they got home, and how they paft the Night? The common Anfwer to this Compliment is, I thank your Miftrefs for our good Cheer, I was fo
merry laft Night, I can't tell how I found our Houfe out.

The Burials of the Ruffians are very particular. As foon as a Man has given up the Ghoft, all the Windows in the Chamber, in which he died, are fet open. A Bafon of Holy Water is brought for him to bathe his Soul in; a Piece of Bread is put on the Crown of his Head, that he may not die of Hunger, in the long Journey he has to take. They put a Pair of black Shoes on his Feet; fome Copeaks, or Pieces of Money in his Mouth; and, in his Hand, a Certificate, figned by the Metropolite of the Place, to inform St. Nicholas of his Life and Conyerfation. When that is done his Body is carried to Church, where it is kept a very little while before it is interred. The Wife of the Deceafed is obliged to fhew an inconfolable Affliction, and to hire other Women to mourn with her. The moft pompous Funerals are thofe at which a great Number of thefe mercenary Mourners affift.

Thefe Women have feveral mournful Queftions which they afk of the Deceafed, in a difmal Tone, as, $A b m y$ Dear! why bave you left us? did not your Wife do every thing you would bave ber? did She not take Care of your Houfe? did he not bring you Several pretty Cbildren? did you want any thing? Or elfe they ank him, Why did yous die? bad you not a bandfome Wife, lovely Cbildren, and as much Brandy as you could drink? For it feems Brandy is fo divine a Liquor with them, they fancy it will make them immortal. When a Man dies without having confeffed himfelf, or received the extreme Unction, he muft not have Chriftian Burial.

Such as have been killed, or are ftarved to Death with Cold, are removed to a Place, where the Zemgky procaus is; there they lie expofed for three or four Days; thofe that own them in that Time are permitted to bury them, or elfe they are fent to Bofke, or Bogzi Dome, that is, the Houfe of God; where, in a vaulted Cave, may fometimes be feen three or four hundred Carcafes at a Time, which the Priefts bury, one after another, in St. Fobn's Church-yard. They read a Pfalm over their Graves every Day for a Month after they are buried; during all that Time the Dirt is not thrown in upon them, but their Graves are covered with a thick Mat, to keep out the Rain. All the Carnival Time the Mufcovites abandon themfelves to all Manner of Debauchery, and drink fo exceffively the laft Week before Lent, that one would think they ought to drink no more as long as they lived. There is a Sort of Brandy drank among them, fo ftrong, and fo fubtle, that it will take Fire in their Mouths; from whence I have been told, that fometimes Flame will iffue out, and the Country People fancy it would kill them prefently, if they had not Milk ready at Hand to extinguifh it. Many of them, after a Debauch, in the Time of Carnivals, going home, fall down on the Snow, and would freeze to Death, if others, fomewhat more fober, did not meet with them:

It is a very melancholy Sight, at that Time, to fee ten or twelve dead Men drawn along on a Sledge, one having a Shoulder eaten off by Dogs, another his Face, and fome nothing but Bones left. There feldom paffes a Carnival without two or three hundred fuch terrible Accidents. If a Rufian finds any one of his Acquaintance in Danger of Death, he will not affift him to get out of it ; becaufe if he dies in his Hands, he muft pals Examination by the Judge of the Zemfky presaus, who always takes Care to make him pay feverely before he acquits him.

The Mufcovite Images, while they had any, were like the ancient Greeks, only they were more ugly and courfe. My Friend afking them, Why they reprefented their Gods under fuch deformed Figures? they replied, Tbeir Gods were not proud. When the Painting of any Images was worn out, it was carried to a Place, called Goas Market, where thofe that bought it had another given them in Exchange, for which they paid fome Money. If the Man who made the Image was not fatisfied with it, he gave the Perfons that would exchange the Image a Pufh on the Back, which was a Toker that he did
not like the Sum, and the Perfons gave him more, till he was content. This Traffic was carried on without any Words, to fave Decencies, for they would not have it thought they fold their Gods. It was a great Crime for any one to fay he bought an Image; he only called it exchanging. Thofe Images that were done with were thrown into the River, with a Piece of Silver. Thofe that flung them in, making the Sign of the Crofs, and faying, Profti; in Englifh, Adieu Brotber; or elfe, Profii Grandi, that is, God be with you my Brotber. When there happens a Fire any where, the firft Care of the Inhabitants was to fave their Images; and if by Chance they were burnt, they did not fay they were burnt, but vanifhed on high. When a Church is burnt, they do not call it burning, but afcending; as that, Such a Cburch is afcended. They give to their Nicbolas's, fo their Images were named, becaufe, generally, they were that of St. Nicbolas, their moft precious Treafures. A Wuman who had dreffed up her Nicbolas very rich with Pearls and Diamonds, being fallen to decay, went to Church to beg him to lend her fomething, reprefenting the Neceffity fhe was in.

The Nicbolas made her never a Word of Anfwer. She took his Silence for Confent, and prefumed upon it to take away a Ruby or two. The Priefts watching her narrowly, faw her take it off, feized her, and carried her before a Magiftrate, who condemned the poor Woman to have both her Hands cut off; which Sentence was executed accordingly. As for the Images that were in private Houles, they put Jewels upon them, and took them away as they thought fit; and when they were ftreightened in their Affairs, they fometimes ftript them to their very Shirts. When one is convicted of Herefy, he is put upon the Top of a low Houfe, whence he is to be thrown down headlong into a Fire, and there confimmed to Afhes. The Rules of the Mufcovite Monks and Nuns are not very ftrict. The Monks are great dealers in Wheat, Barley, Hops, Horfes, and every bling they can get a Penny by. The Nuns take a great deal of Liberty; they go out of their Nunneries when they pleafe, vifit their Friends, and commonly live with more Licence than becomes their Sex, as well as their Profeffion.

The Rufluan Mufic is very bad, notwithftanding they have feveral Schools where their Children are taught to Sing and play upon mufical Inftruments, with Care and fevere Difcipline. They borrowed their Notes, either from the Greeks or Sclavonians; their Gamot is not at all waried; inftead of Sol fala, they fing, Ga ga ge. Their Cadences are the moft extravagant of any in the World; and nothing can be more ridiculous, or rather monftrous, than their awkward Imitation of the Italian Recitativö. The laft Patriarch having forbidden the making mufical Inftruments, and it being thought by fome of the Ruffan Miniters, that the Ufe of them was prejudicial to the good of the State; they have very few Inftruments, of any Sort, left among them: However, they fill referve the Bag-pipe, which is in great Reputation there. They have fome Violins, the Bellies of which are made like a Lute ; but they can't play above four or five Notes upon them.

Elich, the Emperor's Father-in-law, being fent Embaffador to the Hague, the Dutch, who were willing to gain his good Graces, prepared an Entertainment for him; at which their beft Muficians, and beft Voices, performed their utmoft to divert him. Some Gentlemen, alking him, How be liked the Mufic and Singing? he anfwered, Very well ; for the Beggars in bis Country afked Alms after the fame Manner; meaning the Beggars there always fing when they beg, as they really do in Mufcovy. The warlike Mufic of the Mufcovites, is the Kettle Drum, whofe dull Sound agrees with the melancholy Genius of the Nation. They have fome Trumpets which they found very ill, and hunting Horns made of Brafs. I have feen fome Anthems of theirs fet by the Patriarch of one of their Choirs, for fo the chief Mufician is called. The Rufians do not know how to dance; they imagine it does not fuit well with their Gravity. Their chiff Dancers are their Tartarian and

Polifh Slaves, whom they call in to divert them at their Debauches with rude Dances.
15. The Circaffians inhabit Part of Tartary. They are barbarous in their Manners, and fwarthy in their Complexions. The Circaffan Women are fat; and extremely given to drinking; they fometimes get drunk at a Feaft, before they fet down to Table; grow fober with eating; get drunk a fecond Time, as foon as their Meal is over; and a fecond Time grow fober, either with dancing, or fome other Exercife. They are all, in general, fo much in Love with dancing, that he who has not a Fiddle in his Houfe, is looked upon as a very pitiful Fellow. Their Government is entirely an Anarchy. The People, in an Infurrection they made, deftroyed all the Nobility ; and they are now governed by Chiefs or Colonels, chofen among themfelves, with whom the Vulgar are as familiar as they pleafe. Though their Religion is the fame, they don't like the Ruflans; forbid all the Strangers to enter their Church-doors; on the contrary, they are open to all Nations, and they receive every body with all poffible Demonftrations of Good-nature and Hofpitality.

Their Soldiers are called Coffacs, in the Language of the Country; from whence fome Perfons have imagined, that the Coffacs are a Nation of themfelves, whereas they are only the Militia of the Circaflans. The Soil of Ruffa is not fo fruitful and warm as that of Circafia. Witchcraft is very common among them, and the Women of the higheft Rank', ftudy what they efteem fo. The Governmènt of Mufcovy is an abfolute Monarchy. There are feveral Courts of Juftice, called Precauces; and the Judgments they pronounce are decifive. The Ruflians have few written Laws; and their Judges, when not biaffed with Bribes, which have more. Power over them than Right and Precedents, govern themfelves in all Caufes by Cuftom. . Their Clerks write always kneeling, notwithftanding they have Tables before them. They leave a great Space between each Line, to wafte Paper, of which prodigious Quantities are confumed amongft them, and thus pick their Clients Pockets. Podiack is a Name given to the Clerks, or Secretaries of their Courts; and their principal is called Diack.

All their Bufinefs at Law runs in the Nature of Petitions. They are rolled up in Rolls. The Advocate prefents them to the Judge, over whom there is commonly a Boyar fet, to oblerve his Actions, and to interpofe his fuperior Authority, when he thinks fit. If the Boyar fits in Perfon, all Petitions are prefented to him, who gives it to the Secretary, if he does not incline to return an Anfwer prefently; and the Secretary will not put him in Mind of it, unlefs the Advocate bribes him. They have two and forty Characters in their Alphabet, and mort of them Greek.

Thie Czar now reigning, Anno 1670 , was born ins the Year 1630. He defcended, by his Mother's Side, from Fobn Bafilowitz, and had an elder Brother that died young, who was a Prince of great Hopes, only he fhewed too much Inclination to Cruelty. He took Delight in plucking out Pidgeon's Eyes, calling them Rebels and Traitors, and fometimes to pull off their Heads; faying, they had betrayed his Father and himfelf, and deferved to be fo ufed. The prefent Czar is fix Feet high ; his Mien is lofty and majeftic ; he is fat, and of a fanguine Complexion. His Hair is of a light-brown Colour ; he never fhaves his Beard. When he is angry he is very cruel, but otherwife goodnatured. Being one Day preffed very hard by the Officers of his Army to condemn a Deferter, he anfwered, It was not reafonable to do its for God bath not givens Courage alike to all Men. He loves his Wife tenderly, and is given to no Manner of Debauchery; he is very kind to his Children and Sifters. He has an excellent Memory ; is very devout ; and never miffes to go to Morning and Evening Prayer. If he is not well, he has divine Service performed in his Bed-chamber; but if his Health permits him, he conftantly goes to Chapel at Prayer Hours, to be prefent at the public Worfhip.

In general Fafts he always affifts at the Midnight Devotions, and ftands upright two or three Hours together; on fome Occafions proftrates himfelf to the Ground a thoufand times; and on others more folemn, fifteen hundred times: He never makes any fet Meal during the general Fafts, except on Sundays, Tuefdays, and Saturdays; on the other Days he eats only a Bit of brown Bread and Salt, fome Cucumbers and pickled Mufhrooms, and drinks only a little fmall Beer ; in Lent he never eats Fifh above twice; he obferves an exact Faft for the feven Weeks; during which time he lives on Eggs and Milk; befides the great Fafts, and fome little ones particular to the Rufians, every Monday, Wednefday, and Friday, throughout the Year, he wont touch a Bit of any thing that comes from Flefh Meat; fo that of the twelve Months he farts eight: In public Proceffions he walks with his Head bare in dry Weather. Though he is thus a great Bigot to his own Religion, neverthelefs he will not fuffer his Subjects, when they die, to bequeath large Legacies to his Church; nay, in time of War, and fometimes under the Pretence of Borrowing, he takes away the Church Plate, and never returns it; if he did not fo, his Revenues would not anfwer his Expence, the Church being in Poffeffion of two Thirds of the Riches of his Empire.

There is an Hofpital for old Men in his Palace, in which fome have lived to be one hundred and twenty Years old; he takes a Pleafure in vifiting them, and talking with them of Events that happened in the Reigns of his Anceftors. On Good Friday, at Night, he vifits all the Prifons, pays fome of the Prifoners Debts, pardons fome Criminals according to their feveral Deferts, or the Smallnefs of their Offences, and gives Alms to all that are in Want. All the Ecclefiaftical Benefices in the Empire are in his Gift; but he was fo angry with the laft Patriarch, that he would not nominate another to fucceed him ; wherefore he ordered, that the Pretenders to the Patriarchate fhould caft Lots; which Cuftom is fince abrogated. In fhort, the Emperor has a great many good Qualities, and was it not that he has abundance of ill Counfellors about him, who turn him from the good Way he would otherwife chufe to walk in, he might be reckoned amongft the greateft and wifeft Princes of his Age.

His Father's Inclinations tended to Peace, his own to War; he has had feveral Quarrels with the Tartars, Swedes, and Poles; by which his Dominions have been fo impoverifhed and depopulated, in ten Years time, that they will not recover their Lors in forty, nor be in the flourifhing Condition they were in at his coming to the Crown. The laft Plague in Mufcory carried off, in fix Years time, feven or eight hundred thoufand Men, Women, and Children: The Cham of Tartary, in four or five Years, led above four hundred thoufand into Captivity, who never will return to Mufiovy more; and three hundred thoufand at leaft were killed in the Wars. The beft Lands in Ruffia are worn out, and the worft cannot be cultivated for want of Labourers. Thofe who fail up the Volga, all the Way meet with fix Women to one Man. The Price of all Commodities are rifen to fix times the Value before thofe Troubles; and Copper Money, which formerly ufed to pafs current among them, is now in no Credit, the Englifh and Dutch refufing to take it in all Payments.
16. The Ruflians were freed from the Slavery of the Tartars in the Year 1479, by Fobn Duke of Volodomir, who at firft had only the Sovereignty of that Duchy ; but at laft he extended his Conquefts, feized the City of Mofow, the Capital of the Rufion Empire, and expelled the Tartars out of his Territories. His Succeffor, Fobn Bafilowitz rendered the Rufian Name, which had for feveral Ages been the Contempt of the North, formidable to their Neighbours. He was cruel, and therefore was called the Tyrant, however, that Cruelty was exercifed moftly on the Enemies of his Empire, whom he fubdued, and made way for its future Growth. He was brave, but of a very whimfical Humour: One Day he went to his Diack, or Secretary of State, and prefented him with a Petition drawn up in form in his own Name, and addreffed to the Diack; wherein he prayed him to
furnifh him, by fuch a Time, with an Army of two hurdred thoufand Men; which would extremely oblige him, and engage him to mind him always in his Prayers.
The Diack, who knew his Humour, received the Petition, and faid it fhould be anfwered. He raifed the Men with extreme Diligence ; and it was with this Army he conquered Cafon and Afracan, and made himfelf Mafter of Sibcria. The Mufcovites loved him for his Valour and Familiarity with them. He affected to be as kind to the Populace as he was fevere to the Boyars; he always held a Stick in his Hand, with an Iron-fpike in it, the Point of which was very fharp; and often, as he talked with them, he would prick them in the Legs. If they endured the Pain with Conftancy, he ever after took them into his Favour, and ever after had a great Efteem for them. Complaint being made to him, that a Wayvod, or the Governor of a Province, had received the Prefent of a Goofe full of Ducats, he fent for him to Court, making as if he knew nothing of the Bribe: When he came there, he took him to a Place where Criminals were commonly executed, and commanded the Hangman to cut off his Arms and Legs, and at every Blow he afked him, bore be liked Goofe-Flefh?

Hearing the Inhabitants of Bologda cheated their Cuftomers by fhort Meafure, he fent Orders to his Officers there to get them a certain Yard or Meafure, to fee whether it was fo long as it fhould be, and finding it fall fhort of the lawful Length, he fined them feverely. SomeEnglijh and Scots Men laughing at fome ofhis Freaks, he commanded they fhould be brought before him ftripped naked, and in that Condition he forced them to pick up five or fix Burfhels of Peafe one by one, which he had thrown about his Chamber on Purpofe. When they had done he let them go, having firit made them drink, and admonifhed them not to laugh at him another time: He ordered a Perfon of the Province of Cafan, whofe Name was Plebafve, or Baldpate, to be fent for: His Secretary miftook him ; for inftead of writing to the Wayvod of the Province to fend up Plebafve, he wrote for one hundred and fifty baldpated Men. The Wayvod could find but fourfcore, which he fent to the Secretary with a Letter of Excufe, that he could not complete the Number he required of him. The Einperor reading the Letter was amazed at it, and could not imagine what he meant by fo many Baldpates. At laft the Secretary's Overfight was found out, and the Czar was fo far from being angry at it, that he made them drink ; and fo difnifired them.
