INSCRIPTIONS OF THE CHANDĒLLAS OF JĒJĀKABHUKTI

No. 97 : PLATE XCIII

KHAJURĀHŌ STONE INSCRIPTION [OF HARSHADĒVA ?]

(Fragmentary)

The stone bearing this inscription appears to have been found near the temple of Vāmana at the village of **Khajurāhō**¹ in the Chhatarpur District of the Vindhya Division of Madhya Pradesh. Alexander Cunningham, who discovered it in 1883-84, noticed the inscription in his *Archaeological Survey of India Reports*, Vol. XXI (1883-1885), p. 65, with a small-scale lithograph (Plate xvi-B); and the record was subsequently edited by F. Kielhorn in the *Epigraphia Indica*, Vol. I (1892), pp. 121 ff., without a facsimile and with a transcript of the text prepared by him from an impression supplied to him by Dr. Burgess, the editor of the *Journal*. From Kielhorn's writings we know that the stone existed in "the mausoleum near the temple" till the time when he wrote. The present situation of it, however, is unknown; and, as a fresh impression of it is not now forthcoming, I edit the inscription from the lithograph published by Cunningham.

It is only a fragment of an apparently very large inscription, and contains thirteen imperfect lines.² Its shape is irregular, roughly appearing as triangular. The total height of it, as stated by Kielhorn, is equal to 40·64 cms., and the length, beginning with 17·78 cms. in the first line, gradually increases to 38·10 cms. in l. 8, and decreases again to 15·24 cms. in l. 13. The size of the letters is 2·22 cms. and the photograph shows the writing fairly well preserved.

The inscription is very neatly engraved in the Nāgarī alphabet, showing a close resemblance to that of the inscription of Yaśōvarman, edited immediately after this. With reference to the formation of the individual letters, we notice that the vowel *ā*, which occurs only once in *āstām*, l. 9, is engraved so as to resemble *mā*; the letter *k* in *kshiti*, l. 10, loses its loop as a superscript; *ch*, *dh* and *v* are often almost alike throughout, e.g., in *chatur-vidham*, l. 4; *bh* is formed as *h*; cf. *prabhā*, l. 4; and finally, the slightly different forms of the dental *s* can be seen in *-asmāt* and *sakala*, respectively, in ll. 2, where it appears as a combination of the palatal and the dental sibilants, and also in l. 5. The palaeography shows that the inscription is of about the same time as of Yaśōvarman referred to below, or slightly earlier than that.

The **language** is Sanskrit; and the fragment now available is all in verse. The **orthography** does not call for any special remark except that (1) the consonant that precedes and follows *r* is, as a rule, doubled, e.g., in *pāttra*, l. 2, and *kīrtti*, occurring three times in ll. 5, 6 and 11, respectively; and (2) the medial diphthongs are shown by *prishṭha-mātrās*.

Neither the **object** nor the **date** of the inscription is to be found in the existing fragment; but from the way of writing, it appears to be a *praśasti* of a **Chandēlla** king who had Khajurāhō included in his kingdom, as we know from the names occurring therein.

To note briefly the contents of the inscription, we find the word *namah* in the first line thereof, showing that the verse containing this word must have been devoted to pay obeisance to some deity; and ll. 2-4 where words like *kalpa*, *viśva* and *bhūta-vikāra* occur, tend to show that they contained an account of the creation of the universe, as we find in the following two of the records of the house.³ The next line mentions **Jējāka** and **Vijjāka**, two rulers as born from a king (*tasmāt*) whose name is lost, but taking these two names denoting respectively the well-known ancestors of the house of the Chandēlla rulers and the first of them as giving his own name to Jējākabhukti, which is now known as Bundelkhand, we may take the lost name as of

¹ This place with its antiquities is described by Cunningham in his *A. S. L. R.*, Vol. II, p. 412; Vol. X, p. 16, and Vol. XXI, p. 55. In the last of these Vols. it is stated that the fragment may have belonged to the temple of Vāmana, from which it was found not far off (p. 65).

² For the sake of convenience, the lines of the extant portion are numbered here from one.

³ See Nos. 98 and 114, below.

Vākpati who was their father. The name of **Rāhila**, the son of Vijayaśakti is again lost in ll. 6-7, which describe him as "vanquishing the haughty enemies by the prowess of his arms." Rāhila's son was **Harshadēva**, whose name appears in l. 7; and the description of him in ll. 8-9, which obviously refers to his fame and valour as conquering the earth up to the ocean, is all conventional.

The next line, which preserves only a foot of a verse which is otherwise completely lost, informs us that "he (a ruler whose name is not preserved) again (*punar* =) placed Kshitipāladēva on the throne". The latter of these rulers has of course been unanimously taken to be the imperial Pratihāra monarch, Mahīpāla,¹ and as for the former, Kielhorn has shown good grounds to identify him with the Chandēlla king Harshadēva and not his son Yaśovarman, as was conjectured by Hoernle.² R. S. Tripathi has also given cogent reasons for taking this ruler to be Harshadēva.³ Thus the incident appears to have an obvious reference to the long-drawn hostility between the two great powers of the North and the South India, viz., the Pratihāras and the Rāshtrakūṭas, culminating in the sensational achievement of Indra III (914-927 A.C.) in capturing Kanauj,⁴ some time between 915 and 918 A.C., and the subsequent recovery of the throne by Mahīpāla, soon after the retreat of the enemical forces whose main interest was in the south.⁵

On the other hand, however, there is a set of scholars who urge that the incident when Harsha rendered help to Mahīpāla has a reference not to the latter's restoration after the field was left by the Rāshtrakūṭas but to his very accession by defeating his rival and half-brother, Bhōja II, who, after the death of his father, Mahēndrapāla, succeeded in obtaining the throne with the help of the Kalachuri king Kōkalla I.⁶ R. S. Tripathi, who belongs to this set, goes so far as to suggest that the word "*punah*" of the verse under reference should be taken not to mean "again" but in the sense of "introducing further details about the achievements of the Chandēlla ruler."⁷ But this suggestion, though ingenious, is not corroborated by any other source, and there is no positive evidence to establish that there was actually a war between the two brothers.

Whatever may have been the fact, it is doubtless that the help rendered by the Chandēlla king to his Imperial overlord speaks highly of a valorous feat which increased the prestige of the latter's house.

What remains of the inscription makes it fairly clear that it was a very important record throwing light on the Chandēlla ruling house, and its loss is indeed greatly felt.

No **geographical name** occurs in the portion now available.

¹ The words *kshiti* and *mahī* are synonymous. Cunningham was disposed to regard Kshitipāladēva as a son of Harshadēva and thus an elder brother of Yaśovarman, but as pointed out by Kielhorn, there is nothing in support of this view in the fragment. His conjecture, however, that Harshadēva first defeated and subsequently re-instated Kshitipāla in the government of his dominions (*op. cit.*, p. 122) is baseless.

² See *J. R. A. S.*, 1904, p. 654.

³ *H. K.*, p. 257, n. 1. Some hold this view doubtful, for which, see *C. I. I.*, Vol. IV, p. lxxv.

⁴ *A. I. K.*, p. 13; *R. T. T.*, p. 102.

⁵ *A. I. K.*, pp. 35 f.

⁶ See *R. T. T.*, p. 101; *H. K.*, pp. 255 ff; R. D. Banerji, *Haihayas of Tripuri, etc.*, p. 4. This theory is based on the mention of the dubious name Bhōja, without any details, in a Kalachuri grant (*C. I. I.*, Vol. IV, No. 48, v. 7). According to Tripathi and others, he was Bhōja II of the Pratihāra dynasty. But if we take him to have been the first ruler of the name, the whole theory falls flat on the ground.

⁷ See n. 3, above.

⁸ From plate XVI-B in Cunningham's *A. S. I. R.*, Vol. XXI.

⁹ Metre: *Anushṭubh*. Kielhorn read the last of the bracketed *aksharas* as चिन्व, but the plate does not show the consonant of the letter as doubled.

¹⁰ Metre: *Śārdūlavikrīḍita*. For the sake of the metre, the letter *ram* has to be read as separate from the following one.

No. 98; PLATE XCIV

KHAJURĀHĪ STONE INSCRIPTION OF YAŚŌVARMAN

[Vikrama] Year 1011

THE stone which bears this inscription is said to have been discovered, some time after 1843, amongst the ruins at the base of a temple known as the temple of Lakshmanaji at Khajurāhō¹⁴ in the Chhatarpur District of the Vindhya region of Madhya Pradesh, and is now built into the wall inside the entrance porch of the temple. The inscription was briefly noticed by General Alexander Cunningham in his *Archaeological Survey of India Reports*, Vol. II, (1862-1865), pp. 425 ff. and again in *ibid.*, Vol. XXI (1883-1885), pp. 65 and 84, where a small photograph of it was also published on Plate xvii-B. The record was first edited by F.

¹ Metre: *Sārdūlavikrīḍita*. Kielhorn read the first letter in this line as ऋ, but the vertical stroke that distinguishes it from ऋ is clear. It may also be noted that the last letter in this line is totally lost and has been adopted from Kielhorn's reading.

² Metre: *Upajāti*. Kielhorn's reading of the last two *aksharas* is ज्ञत, but on the plate the first is a clear ha with the *mātrā* very distinct.

³ Metre: *Sragdharā*, or *Mandākrāntā*, the last caesura of both of which is identical in syllables.

⁴ Metre: *Anushtubh*. Kielhorn read the first letter of the line as श्व but the initial loop of the letter is only ornamental.

⁵ Metre: *Sragdharā*, or *Mandākrāntā*.

⁶ Read तस्मात्श्रीहर्ष—Metre: *Sragdharā*.

⁷ Metre: *Āryā* or its variant, i.e., *Gīti* or *Upajāti*.

⁸ Metre: *Anushtubh*.

⁹ Metre: *Sārdūlavikrīḍita*.

¹⁰ Metre, as above. The last two *aksharas* in this line are as suggested by Kielhorn.

¹¹ Metre: *Anushtubh*.

¹² Metre: *Āryā* or its variant.

¹³ Metre: *Rāthōddhatā* or *Svāgatā*, both of which are distinguished only from the interchange of the *mātrās* of the 9th and the 10th *aksharas* in each of its feet.

¹⁴ Kujrow of the *Indian Atlas*, sheet No. 70. Situated at N. Lat. 24° 51' and E. Long 80°, this place is 43 kms. east of Chhatarpur and 55 kms. south of Mahōbā, and is now connected with a metalled road with each of these places. The antiquities of this place are described by Cunningham in his *A. S. I. R.*, Vol. II, pp. 412 ff. *ibid.*, Vol. X, pp. 16 ff. and again in *ibid.*, Vol. XXI, pp. 55 ff.

¹⁵ Cunningham found the slab placed 'sloping against the wall' of the temple, and he also remarked that it was not seen by Burt in 1838, but was obtained in course of repairs carried on to this temple by the Chhatarpur Rājā some time after 1843. In Burt's time the temple was known as of Chaturbhuj.

Kielhorn in the *Epigraphia Indica*, Vol. I (1888-1892), pp. 122 ff., with text in the Nāgarī, from impressions supplied to him by Burgess, with a translation (pp. 130 ff.) and a photolithograph facing p. 216; and some of its historical importance was later on discussed by scholars from time to time.¹ It is edited here from an excellent inked impression which I owe to the kindness of the Chief Epigraphist, Archaeological Survey of India.²

As stated above, the record is engraved on a large slab. The inscribed surface measures 1.72 metres broad by 0.74 metres high and consists of twenty-eight lines of writing. The stone has suffered considerably about the middle of lines 17-21, and in the latter half of the last lines and some others *aksharas* here and there have been damaged or rendered illegible by the effects of weather; moreover, a few of the *aksharas* which were wholly or partially visible in Kielhorn's time have now been completely broken away. However, in most of the cases the missing *aksharas* can be supplied by conjecture, in view of the context and occasionally from the lithograph published in the *Epigraphia Indica*, referred to above, from which too I have compared my reading of the text. The letters are well formed and carefully engraved. Their size varies from 1.9 to 2.2 cms.

The **characters** are of the Nāgarī alphabet. To make some general observations, we find that the top-strokes are occasionally angular, e.g., of *dānava*, l. 1, the vertical strokes of the letters generally end in a curve and the *dandas* are often marked as the modern Nāgarī *ra*. The initial *a* and the consonants *t*, *n*, *v* and *s* show transitional forms; see, e.g., *a* in *āhalpa*, l. 3, and *āsthāna*, l. 23; *t* in *avatu* and *vikrānta*, both in l. 1; *n* in *dānava*, l. 1, and *-ajani*, l. 3, and *s* in *yasya* and *sānu*, both in l. 8. The initial *i*, which appears in ll. 4 and 26, is formed of two dots horizontally placed and subscribed by a loop ending in a tail; and the initial *ē*, e.g., in *ēk=aiu*, l. 20, has its left curve joined to the right vertical, which has a tail below. The loop of *k* as the first member of a conjunct consonant or in letters like *ku* and *kyi* gives place to a stroke or is joined to the vertical not directly but by a stroke; cf., e.g., *kshaya*, *kyita* and *krida*, all in l. 6, *kula* in l. 12, and *chakrē* and *kyiti*, both in l. 26. The letter *ṛ* has not developed the dot, e.g., in *saṅga*, l. 2; the lingual *ṇ* is laid flat when a subscript; see *vitirna*, l. 2; the rare *ḥ* appears twice, in *nirjjhara* and *ḥātkāra*, both in l. 8; and *ph* in *phala* in l. 6. *Dh* is in a transitional stage, showing its left limb resembling *v* in most cases, but occasionally this limb appears developed and is very rarely horned, though this horn is not joined to the lower part of the vertical; cf. respectively, *dhāttri*, *dhīr* and *-mudha*, all in l. 3. *R* which has assumed the modern form as in *tārā*, l. 2, is sometimes engraved in a slightly varying way, e.g., in *kirāta*, *ramya* and *vāri*, all in l. 8. The subscript form of this letter is denoted by a serif attached to the lowest extremity of the vertical, as in *prasava*, l. 3. This form is occasionally indistinguishable from the curved end of the verticals which appear throughout the inscription, as stated above, or from the stroke for the medial short *u*, which sometimes shows this form; see, e.g., *-asura*, *vara* and *trīn*, all in l. 1.

In spite of the carefulness devoted to the record by the mason in its technical execution, we observe that in some cases it is difficult to distinguish between *t* and *v*, as in *tanu*, l. 1, between *p* and *y* as in *pātu* and *paya*, both in l. 2, and between *bh* and *h*, as in *-bhṛiti* and *bhīma* in ll. 2 and 10, respectively. As for the *mātrās*, a peculiar example of the medial *ā* is to be seen crescent-shaped in *kaṭāksha-chchhatā* in l. 2, and a rare instance of the medial *ō* is in *trilōka*, l. 1, where the *prishtha-mātrā* assumes the form of a dot attached to the left of the top-stroke of *l*. The secondary short *u* appears both in its ordinary form as in *avatu*, l. 1, and as a serif as of the subscript *r*, as in *bhuvana* in the same line. And finally, the formation of the last *akshara* *trē* is noteworthy.

The **language** is Sanskrit, generally correct; and with the exception of a short sentence paying obeisance to Vāsudēva in the beginning and the date and some other particulars in the last line, the record is all metrically composed. The style is ornate and the composition abounds in figures of speech like *anuprāsa*, *upamā*, *rūpaka*, *vyatirēka* and the rare *parisaṅkhyā* (v. 25). The language is fluent; but one of the verses (No. 4) does not admit of proper construction, as shown in a note appended to the text. The total number of verses is forty-nine; they are not numbered.

As regards **orthography** we notice that (1) the sign for *v* is everywhere employed to denote *b*; see *vrahma*, l. 2; (2) the dental sibilant is occasionally written for the palatal as in *Kasmīra*, l. 13, while the reverse is also found e.g., in *Kailāsa* in l. 24; but such cases are very few; (3) the

¹ For example, in *Ind. Hist. Quart.*, Vol. XXV, p. 213 and in *ibid.*, Vol. XXX, pp. 189 ff.

² His No. B-246 (1959-60).

class-consonant following *r* is sometimes doubled and sometimes not; examples of the first are afforded by *nirmala*, and *hīrti*, both in l. 20, and of the second, by *nirmāna*, l. 4 and *karmāni*, l. 9. In the word *varga* occurring twice in the record, the *akshara g* is doubled in l. 25 but not in l. 7. *T* before *r* is also often doubled, e.g., *tattra*, l. 6¹; (4) the *visarga* after *vaksha* in l. 2 is dropped in accordance with *vārttika* on Pāṇini, VIII, 3, 36, and besides this we have four other cases of this type, in ll. 4, 6, 19 and 20; but in two examples, viz., in *-prāptih = kshayāya*, l. 6, and *dharmaḥ = pra-*, l. 28, the *visarga* is wrongly dropped; (5) one of the two similar consonants forming a conjunct is dropped by syncopation in some instances like *ujvala*, in ll. 3, 5 and 11, *satva*, l. 11, *asṛikshīva* and *prōdyajvālā*, both in l. 16, and *rāgā = drishti*, in l. 24; (6) the *anusvāra* is often used for the nasals *n* and *m* and the final *m* is also incorrectly changed to it at the end of a stich; on the other hand, it wrongly takes the place of a nasal in words like *vanśa*, l. 5, and *samvatsara* and *samvat*, both in l. 28; (7) the dental *n* stands for the lingual in *nishanna*, l. 8, and a superfluous *v* is inserted after *m* in words like *namvri-*, l. 14 and *namvra*, l. 26; and finally, (8) the vowel *ri* is used for *ri* in *tridiva*, l. 24.

The inscription belongs to the reign of **Dhaṅgadēva** of the **Chandrātrēya** (Chandēlla) family. It is a *praśasti*, a laudatory account, as stated twice in its vv. 47 and 48, and was composed by the poet **Mādhava**, whose father was Dēdda, a grammarian whose fame as a poet was celebrated in tales by wise men with repute (vv. 46-47). That this fame was well deserved is indicated by the style of composition. The inscription was written on stone, 'in pleasing letters', by the *karāṇika* **Jaddha**, the Gauda, who was a son of Jayaguna (?), the writer of the legal documents (*karāṇika*). The name of the engraver who was an artisan (*rūpakāra*) is lost in l. 28.

The immediate **object** of the inscription is to record the construction of a temple of the enemy of the Daityas, i.e., Vishṇu, by the illustrious **Yaśōvarman** (also called **Lakshavarman** in vv. 37 and 39) of the Chandrātrēya ruling house and setting up in the same an image of the god under the name **Vaikunṭha** (vv. 42-43). The record is dated, in l. 28, in words as well as in numerical figures, in the year **1011**, without any specification of the month, fortnight, *tithi* or week-day; and the year which is evidently to be referred to the Vikrama era, is equivalent to **954 A.C.**, taking it as expired of the Chaitrādi year.

The inscription may be divided into two parts. The first part, which traces the genealogy of the ruling house, ends with verse 41; and the second part, which speaks of the temple and the image and also gives some other particulars, comprises the remaining portion.

After three *maṅgala-śloka*s in praise of Vishṇu respectively under the names of the boar and man-lion incarnations, **Vaikunṭha** and **Lakshmi's** husband, the record introduces the name of **Yaśōvarman**, referring to his personal qualities and valour (v. 47). In the following five verses that are devoted to describe the origin of the world and springing of the early sages of holy conduct, **Marīchi** and others from the mind of **Brahmā**, it tells us that **Attri**, one of them, begat the sage **Chandrātrēya** and from him proceeded the family known after him. In that family was born the illustrious prince **Nannuka**, 'a touch-stone to test the worth of the gold of the regal order', whose fame spread far and wide and who conquered hosts of enemies (vv. 10-11). **Nannuka's** son was **Vākpati**, whose fame was sung by **Kirāra** women in the **Vindhya** mountain (vv. 12-13). He had two sons, **Jayaśakti** and **Vijayaśakti** (vv. 14-15). The latter's son was **Rāhila** who destroyed his adversaries (vv. 16-17), and his son again was **Harsha**, who was endowed with the excellencies like heroism, vigour and self-confidence. **Harsha's** wife was **Kaūchukā**, who sprang from the **Chāhamāna** tribe, and she bore to him a son, named **Yaśōvarman**, (vv. 18-22).

Of all these names, those of **Jayaśakti** and **Vijayaśakti** are the same as **Jējjāka** and **Vijjāka** of the preceding inscription which also mentions the name of **Harshadēva**. It must however be stated here that much of the description in the present inscription is entirely conventional and altogether devoid of any historical interest. **Yaśōvarman** is further eulogised in as many as nineteen verses (23-41), most of which too are equally poetic and only mean to say that he was a great warrior destroying his antagonists, possessed wide fame which spread in all quarters and

¹ In all such cases I find that the oblique strokes are three and therefore I have read this *akshara* as *tr* and not *tr*, as read by Kielhorn.

² For an analogous instance of describing the reigning king in the beginning of a record, see *Ep. Ind.*, Vol. XXXVI, p. 224, and n. 1.

that he equalled Karṇa in munificence, Yudhishṭhira in truthfulness and Arjuna in heroism. Verse 30 states that 'in his victorious march his armies reached up to the Himālayas'. The only historically important verses of this portion are 23, 28 and 31, the first of which mentions the exploits of this ruler, stating that he was "a sword to (cut down) the Gaudas as if they were pleasure-creepers, equalled the forces of the Khasas and carried off the treasures of the Kōsalas; before him perished the Kāsmīrī warriors; he weakened the Mithilas, (and) was, as it were, a god of death to the Mālavas, who brought distress on the shameful Chēdis and was to the Kurus what a storm is to trees, (and) a scorching fire to the Gūrjaras".

Nothing is known about Yaśovarman's expedition against Gauda of Bengal, his contemporaries then ruling over the region were the Pāla kings Rājyapāla (c. 908-40) and the latter's successor Gōpāla II (c. 940-60 A.C.). Both of them were admittedly weak rulers and the Chandēlla king may have taken an opportunity to invade their dominions, probably to make them still weaker and not with the objective of any territorial gain. It also seems possible that in course of this expedition Yaśovarman may also have come into conflict with the people of Mithilā, i.e., North Bihār. We may also note here that the separate mention of Mithilā in this verse clearly indicates that this kingdom was a separate political unit and not under the Pālas, as held by some scholars.¹ So far as Mālava is concerned, Yaśovarman's contemporary on the throne was Śiyaka *alias* Harshadēva, who was then busy extending his conquests particularly in the north, as we have seen while editing his Harsōlā grants of V.S. 1005 or 949 A.C.; and it is reasonable to presume that his further extension of the territories in that direction may have been frustrated by the menacing potentiality of Yaśovarman who was equally keen to extend his conquests towards the south and southwest, as we also learn from verse 45 of the present record, which reports that his son Dhāngadēva had under him some region around Bhilsā. As we shall presently see, Yaśovarman snatched the fort of Kālāñjara from the Rāshtrakūṭas, on behalf of the contemporary Pratihāra king; and in view of this, he may be taken to be naturally hostile to the Paramāra king who was deeply attached to the Rāshtrakūṭa power.

Yaśovarman's kingdom was conterminous with that of the Kalachuris on its south and the struggle of this ambitious prince with them too was inevitable. His contemporary on the Kalachuri throne was Yuvarājadēva I (915-945 A.C.), who appears to have suffered a defeat at his hands, as the present inscription informs us. That Yaśovarman had a more-than-usual grudge against the Kalachuris is indicated by the repeated mention of his victory over them. Verse 28 of the present inscription also tells us that "the fearless Yaśovarman vanquished a Chēdi prince with his countless forces, who was being protected by a furious multitude of invincible bowmen riding elephants in rut presenting a scene of a lofty mountain of collyrium and who had planted his lotus-foot on rows of diadem of famous kings".²

The adjective *sāvadya*, meaning shameful, applied to the Chēdis in the aforementioned verse of the inscription has been taken to explain that the Chandēllas had some special reason for being provoked against the royal house of the Kalachuris. We know that these kings were attached to the Rāshtrakūṭas who were southerners and were carrying on constant raids in North India; and besides this, Dr. S. K. Mitra has also drawn our attention to the series of political marriages between the Rāshtrakūṭas and the Kalachuris, particularly pointing out cases in each of which the bride came from the Kalachuri family; and this was sufficient to provoke the Chandēllas whose interests were linked up with the politics of North India.³

The verse under reference also mentions Yaśovarman's invasion of the Kōsalas. Kōsala here obviously appears to designate Dakṣiṇa Kōsala, i.e., the region of the upper Mahānadī

¹ see *E. R. K.*, pp. 48-49. On p. 51 of *ibid.* Dr. S. K. Mitra suggests that this show of allegiance in official documents was nothing but a mere formality; but it is rather strange that this show of allegiance and the open declaration of his hostility should find place in the same record.

² Dr. V. V. Mirashi has shown that since the Kalachuri prince was a senior contemporary of Yaśovarman, and moreover that he courted the defeat after vanquishing a number of kings, the struggle between the two has to be dated towards the close of his reign. And this is exactly the time of Yaśovarman's military expedition. For Mirashi's view, see *C. I. I.*, Vol. IV, p. lxxxiv, which is followed here. But according to R. S. Tripathi, the Chēdi ruler was Kōkalla I, and according to S. K. Mitra, he was most probably Bālaharsha, the elder brother of Yuvarājadēva. For the respective views, see *H. K.*, p. 256, and *E. R. K.*, p. 42.

³ See *Ind. Hist. Quart.*, Vol. XXX, pp. 189 ff. Kṛishṇa II, his son Jagattinga and the latter's son Indra III had all their wives from the Kalachuri family.

valley where the Sōmavāṁśis were ruling; and Yaśōvarman's contemporary ruler Śivagupta (c. 950 A.C.) carried on congenial relations with the Kalachuris after his defeat by the Kalachuri king Lakshmanarāja II (945-970 A.C.). And this may have enraged Yaśōvarman to invade this region. It must be admitted, however, that there is no evidence in support of this view.

The statement of the *praśasti* crediting Yaśōvarman to be 'a scorching fire to the Gūrjaras' would naturally suggest his enemies to have been the imperial Gurjara-Pratihāras of Kanauj, as is generally held;¹ but this statement would be nothing less than directly challenging the overlordship of his master Vināyakapāla whose name is mentioned below in the same record with all due honour. I am therefore inclined to agree with Dr. D. C. Sircar who takes these Gurjaras of the present inscription to be identical with the Pratihāra dynasty represented by Harirāja who was then ruling over the Jhānsī-Gunā area and who too, like Yaśōvarman and some others, originally owed his allegiance to the imperial Gurjara-Pratihāra power. Editing the Bhārat-Kalā-Bhavan copper-plate inscription of Harirāja, Dr. Sircar has suggested that it is this house of the Gūrjaras which is alluded to in the expression occurring in our inscription and that Harirāja claims for himself the title of *Adhirāja* in l. 2 and *Mahārājādhirāja* in l. 6 of the record goes to indicate that he openly declared independence when the imperial power was hard pressed by the Rāshtrakūtas.²

With reference to the other countries and people which are alluded to in the verse under reference, it appears to be practically impossible that Yaśōvarman actually invaded Kashmir and the kingdom of the Kurus or Khasas which were far distant from his region.³ Equally conventional is another statement which is made in v. 30 of the record that he led his conquests up to the Himālayas in the north. The expression *dig-jaya* used in this verse and again in verse 39 below only reminds us of the description of conquests of kings of the ancient times. Verse 36 tells us that this king was also known as Lakshavarman.

Verse 31 of the record under study states that Yaśōvarman easily conquered the Kālāñjara mountain, the dwelling place of Śiva. The name of the enemy from whom he captured this mountain is not mentioned; and *prima facie* this enemy of the Chandēlla king would appear to be either the Rāshtrakūta king Kṛṣṇa III (939-967 A.C.), whose predecessor Indra III may have occupied it in one of his northern campaigns, or the imperial Pratihāra ruler. The first of these suggestions is obviously untenable, since we do not find the name of any Rāshtrakūta ruler in the long list of Yaśōvarman's adversaries as given in v. 23 of the record. Similarly the second view also cannot be upheld in view of the fact that not only Yaśōvarman but his son Dhāṅga also acknowledged the suzerainty of the Gurjara-Pratihāra king Vināyakapāla in this very record. Bringing to our notice all these difficulties, Dr. D. C. Sircar, while editing the Bhārat Kalā Bhavan grant of Harirāja Pratihāra of V.S. 1040, suggested that the Chandēlla ruler seems to have captured the fort from any of the ancestors of the Pratihāra ruler Harirāja, who, as a feudatory of the Gurjara-Pratihāras of Kanauj and perhaps as belonging to the imperial family, was holding the Jhānsī-Gunā area under him, with Kālāñjar included in it.⁴ We have no hesitation in accept-

¹ See *E. R. K.*, p. 51.

² *Ep. Ind.*, Vol. XXXI, pp. 309 ff.

³ The *Mārk. Purāna* (p. 346, n.) places the Khasas in Nepal, whereas according to some, they were masters of the Lohara country on the borders of the Kāshmir State (*E. R. K.*, p. 50). Dr. R. C. Majumdar observed that the appropriate sense of the expression *tulita-khasa-balah* of the verse under reference is that Yaśōvarman treated these people with contempt, and Kielhorn's translation thereof as 'equalled in strength' does not therefore appear to be correct. In support of this view the scholar drew attention to some uses of the participle 'tulita' in some Sanskrit texts (*Ind. Hist. Quart.*, Vol. XXV, p. 213). Pointing out, however, that the sense taken by Majumdar would be hardly applicable in v. 32 of an inscription of Dhāṅga re-issued by Jayavarman (No. 114, below), we may also quote here a verse from Halāyudha's *Kavi-rahasya*, describing its hero the Rāshtrakūta king Kṛṣṇarāja:

सोलयलतुलुं कक्त्या सो वारं भुवनेश्वरः ।
कस्त तुलवति स्वाम्ना राष्ट्रकूटकूलोद्भवम् ॥

(Cited in *E. H. D.*, p. 133, n).

Instances may be multiplied by the well-known expressions like *tulit-ārjuna-brih* (*C. I. I.*, Vol. IV, p. 282, v. 10); and two of the instances mentioned above clearly show that Kielhorn's translation of the expression used in the present inscription is absolutely correct and also that all the instances enumerated by Dr. Majumdar denote only the secondary sense.

⁴ *Ep. ind.*, Vol. XXXI, pp. 310 ff.

ing Sircar's suggestion, but the difficulty of how and from whom Harirāja obtained the fort remains unexplained, besides the fact that it is doubtful whether a feudatory ruler in the Jhānsī-Gunā region could have extended his sway in the east so far as Kālañjar which is not less than 150 miles (about 240 kms.) from Chandēri, which is said to have been his capital, after crossing two big rivers (the Dhasan and the Ken) and the region around Khajurāhō which was then held by the Chandēllas.

The second part of the inscription which commences with verse 42, says that Yaśōvarman erected the lofty and splendid shrine of Viṣṇu (enemies of the Daityas), which is described in the usual poetic style. In the next verse we are told how this ruler obtained the image which he set up in the temple, *viz.*, that originally the lord of Bhōṭa obtained it from Kailāsa, from him, Sāhi, the king of Kīra, from him, Hērāmbapāla, and finally, Yaśōvarman received it from Dēvapāla, the lord of horses and the son of Herāmbapāla.¹

The next three verses introduce Yaśōvarman's son Dhaṅga, describing him as a source of joy to his subjects. This king, who was endowed with valour and fame, as we are further told, ruled the earth, 'as far as Kālañjara and as far as Bhāsvat situated on the banks of the river Kālindī, and from there to the frontiers of the Chēdī country and even as far as the marvellous mountain called Gōpa. Dhaṅga is also described here as a brave, intelligent and righteous ruler causing the belief that 'the Kali age had, out of season, come to an end'.

Then we have the mention of the poet and the writer (vv. 46-48); and the next verse expresses the hope that the king may protect the earth, may the laws of the three Vēdas prosper and may the cows and the twice-born (*dvijas*) obtain happiness. This account is followed by the particulars of the date and the name of the engraver, as seen above; and the inscription comes to an end with the name of Vināyakapāladēva who had annihilated the enemies,² and finally, with a salutation to the glorious Vāsudēva and the Sun.

Of the **geographical names** mentioned in the present inscription, **Kālañjara** (vv. 31 and 45) is the well-known fort of that name in the Bāndā District of Uttar Pradesh and situated about 145 Kms. west-southwest of Allahabad. **Mālavanadi**, on the bank of which **Bhāsvat**, *i.e.*, Bhilsā (now known as Vidishā) is situated (v. 45), is the river Bētū; and **Gōpa-giri** (v. 45) is of course Gwālīor, the Chief city of the district of that name in Madhya Pradesh. The other places mentioned in the record in v. 45 have already been identified above.

¹ Hērāmbapāla *alias* Vināyakapāla mentioned below in l. 28 was the Imperial Pratihāra ruler of Kanauj, for whose grant of 931 A.C., see *Ind. Ant.*, Vol. XV, p. 138. By some scholars he is presumed to be identical with Mahīpāla *alias* Kshītipāla, as shown in detail in *A. I. K.*, p. 34, while others are of the view that he was quite a distinct person. See *C. I. I.*, Vol. IV, p. lxxiv, n. 2. Also see *H. K.*, pp. 273-74, and *Ind. Ant.*, Vol. LVII, p. 232.

² See the preceding n.

^१ And not *tra* as read by Kielhorn. The middle cursive stroke is clear though smaller. In all the instances below, where the stroke is clear, I have taken the *akshara* as *tra*.

^२ As already suggested by Kielhorn, read लच्छने. Probably the preceding word is intended to be ताराचिते.

^३ The *visarga* is dropped in accordance with the *vārttika* on Pāṇini VIII, 3, 36.

^४ The *akshara* म्, which was originally omitted, is written above the line. Kielhorn also observed that the first half of this verse does not admit of a proper construction but he has not proposed any emendation, which I propose as गंभीरोम्बुध्रयच्छटाङ्कः.....धीरो घातुसमो महीधरमहात्मत्यागेन कल्पद्रुमः. Kielhorn translates the first pause of the second quarter of this verse as 'firm like the Creator'; but I think that what is intended here is *dhātṛi*, the Earth, as often found in Sanskrit literature. For similarity of construction in the last foot of this verse, see *G. I. I.*, Vol. IV, p. 413, v. 22.

^५ Originally लभन्त, with the sign of *anusvāra* later on scratched off. The idea in this verse is taken from the *Sāṃkhya* system of Philosophy.

^६ The two *aksharas* कल्प were at first omitted and subsequently written above the line.

^७ See n. 3, above.

^८ The other sages created by Brahman are named in the *Mā. P.*, Canto L. One of them was Atri who begot the Moon.

^९ Read वृजः. The *daṇḍa* that follows is superfluous.

^{१०} For dropping the *visarga*, see n. 3, above.

¹ See n. 3 on the preceding page.

² Read व विचिन्त्य.

³ The *akshara* in the brackets has now peeled off but it is clear in the Plate in *Ep. Ind.*, Vol. I.

⁴ Read -त् वरिष्ठः, as already suggested by Kielhorn.

⁵ The sign of *visarga* was inserted afterwards. This *akshara* is a combination of both the palatal and the dental sibilant.

⁶ Both the bracketed letters are now lost and the reading here is from the context.

⁷ Read सवर्णां वि.

⁸ The bracketed *akshara* is now lost, as some others also, below, which are not put in brackets when they can be made out from the context.

⁹ Read हस्ताः. The reading of the preceding *akshara* is certain but it appears to have been intended for क्त.

¹⁰ Kielhorn translated this expression as 'a thousand eyes of averted enemies became closed'. To me, however, with the correction of *ta* to *tra*, it appears to mean that the thousand eyes of *Vjitraśatru*, i.e. Indra, became closed (for fear of another enemy though he had slayed the demon *Vjitra*, as mentioned in the *Rig-Vēda*). Similarly, the seventeenth *akshara* in the first quarter of this verse is as written here, and not *bhē*, as taken by Kielhorn. The traces show it to have been *vō*, and *vōdōntarālē* means the space between the earth and the sky, which is quite appropriate. Kielhorn omits this expression in his translation.

¹ As also remarked by Kielhorn, the first of the *aksharas* looks like *ha* in the impression; and the impression before me shows some of the following *aksharas* more damaged than in the lithograph accompanying his article; this lithograph too I have consulted in my transcript of this verse.

² All these *aksharas* are so damaged as to give no certain reading. Kielhorn read the last four as [चाहंक्तेः], but they do not give any intelligible sense.

³ In place of the bracketed letter some other *akshara* was originally engraved.

⁴ Here I suggest the reading क्रक्रेकानिनादप्रभ्रम्यद्वलुपला-

⁵ The *aksharas* from *thē* to *chā* are broken and the reading is uncertain; it is adopted from Kielhorn, but the sense is not clear. And what is more is that *ta* appears to have been followed by a conjunct consonant which is necessary to stress it metrically. For dropping the *visarga* here, see *n.* above.

⁶ I fail to see the alteration of this *akshara* to *सु*, as suggested by Kielhorn, though I agree with him in taking the following two *aksharas* looking similar to *भ्रम* or *इम*. The reading of all the three letters appears to be *चं भ्रमं*.

⁷ For dropping the *visarga*, see *n.* above, on 1, 2.

⁸ The *aksharas* of the fourth quarter of this verse have all peeled off and the reading is as of Kielhorn.

⁹ The reading of the *aksharas mahāh* is from the traces left. Kielhorn read them as *mahā* with some hesitation; but coupled with *श्र* they do not give a good sense. The reading I have adopted is in the sense of 'the splendour of the moon-shine'. The verse, which is an example of the figure of speech known as *vyatirēka*, means to say that the bright fame of the king proceeds to that region (*i.e.*, the vault of heaven) which was reached neither by the stride of Vāmana, the dwarf incarnation of Vishnu, nor even by the Sun. The first of these allusions refers to Vāmana extending his steps so as to measure the earth and the sky, and the second to the mythical mountain that encircles the earth and beyond which is a region of complete darkness where the Sun's rays do not reach.

And giving the name of the *Mahārāja-guru Vāsavachandra*¹ and recording the month and date at the end, the inscription comes to a close.

To study the names of the gardens mentioned here, it is tentative to suggest that the first of these is obviously named after the donor himself, i.e., Pāhilla; Nos. 2 and 3, after the Chandrātrēya, i.e., Chandēlla house, and No. 7, after the name of king Dhaṅga. I am, however, unable to explain the origin of the fifth of these gardens, viz. *Pañchāntala-vāṭikā*. It may be that what was really intended is *Pañchāmla-taru-vāṭikā* and the third and the fifth letters of this name are wrongly engraved as some others in the inscription. If so, the five sour fruits (*amlataru*), as enumerated in the following verse of the *Śabda-chandrikā*,² are really meant:

Kōla-dāḍīma-vṛikshāmlair = amla-vēṭasa-saivyutair |
Chatvāmlam cha pañchāmlam mātulinga-samanvitam ||

However, it is only a suggestion.

The record is dated, at the end, on **Monday, the seventh tithi of the bright half of Vaiśākha** in the year which, due to the mason's error, can be read either as **1011** or **1111**, the second figure being compounded of zero and one. Noticing this error, Cunningham preferred to take the latter of these years as true, in view of his calculation of the *tithi* falling on Monday, the 18th April, 1054 A.C.³ But his calculation of the date has shown to be wrong by Kielhorn, according to whom the said *tithi* in reality fell on Sunday, a day before. Besides Kielhorn's observation, we have also to note that the record was put up in the reign of Dhaṅga who was on the throne in the latter half of the tenth and not of the eleventh century A.C., unless we presume the existence of a successor of his who bore the same name. While editing the inscription, Kielhorn has also shown that taking the figure 1011 to denote the Southern Vikrama year 1011, *expired*, the corresponding day works out to be **2nd April, 955 A.C.**, which was a Monday, as actually mentioned, and thus the date works out satisfactorily for the year.⁴ But as the characters of the inscription are definitely not earlier than the thirteenth century A.C., I agree with him in observing that the inscription, as we now have it, appears to have been engraved from a more ancient copy.⁵

TEXT

[Metres : Verse 1, *Mālini*; v. 2, *Anuṣṭubh*].

- 1 सिद्धिः⁷[॥⁸] संवत् १०११ समये ॥ निजकुलधवल्लोयं⁸ दि-

- 4 मान्यः⁹ प्रणमति जिननाथोयं भव्यपाहिल-¹⁰
- 5 नामा ॥(॥)१॥ पाहिल¹¹वाटिका १ चंद्रवाटिका २¹²
- 6 लघुचंद्रवाटिका ३ सं(शं)करवाटिका ४ पंचाइ-

¹ Kielhorn translates this epithet as 'high priest'. The purpose of the mention of this name is not evident; possibly what is meant is 'in his presence'.

² Quoted in *Sabdarahatpadruma*, III, p. 16.

³ See *A. S. I. R.*, Vol. XXI, p. 67.

⁴ *Ind. Ant.*, Vol. XIX, p. 35, No. 59.

⁵ *Ep. Ind.*, Vol. I, p. 135.

⁶ From an ink-impression supplied by the Chief Epigraphist.

⁷ Expressed by a symbol.

⁸ In the sense of *dhaivalayan*, making whiter, i.e., prosperous. It is according to *Pāṇini*, III, 1, 134.

⁹ The *ā-mātrā* of *dhā* appears to have been struck off subsequently.

¹⁰ Read *Pāhillanāmā*, as required by the metre. The last quarter offends against the metre. It contains a number of grammatical and other errors, and Kielhorn proposes to read the whole verse thus:

निजकुलधवल्लोयं दिव्यमूर्तिः सुशीलः शमदमगुणयुक्तः सर्वसत्त्वानुकंपी ।
स्वजनजनिततोषो घंमरुजेन मान्यः प्रणमति जिननाथं भव्यपाहिलनामा ॥

¹¹ Read *Pāhilla*.

¹² This figure is damaged as already seen above.

No. 100; PLATE XCV-B

NANYAURĀ COPPER-PLATE INSCRIPTION OF DHANĠGADEVA

[Vikrama] Year 1055

THE plate bearing this inscription was found in 1872, along with another which is edited below (No. 107), by a peasant in the process of ploughing his field at the village of Nanyaurā, or Nānyaur, in the Jaitpur-Panwārī *taluk* of the Hamīrpur District in Uttar Pradesh. The plate was acquired by W. Martin, B.C.S., who presented it to the Asiatic Society of Bengal, Calcutta; and six years subsequently (in 1878) the inscription was published by V. A. Smith, with a translation of the text prepared by Pt. Prānnāth but without a facsimile, in the *Journal* of the same Society, Vol. XLVII, Pt. I, pp. 80 ff., which also included a note by the Pandit himself. Subsequently, the record was edited by F. Kielhorn, with a facsimile, in the *Indian Antiquary*, Vol. XVI (1887), pp. 201 ff., with his own reading of the text from an impression made and supplied to him by J. F. Fleet, with a fresh translation and facsimile, and also with the remark that his reading of the text 'would be found to differ considerably from that of his predecessors'.¹ The plate is stated to have been made over some time subsequently, to the Indian Museum by the Asiatic Society to which it had been presented by Martin, as stated above; and it is regretted that all my efforts failed to know anything about its present whereabouts.² And, as no impression of the inscription could now be available, it is edited here from the photo-lithograph accompanying Kielhorn's article in the Volume of the *Ind. Ant.*, referred to above.

It is a **single** copper-plate, incised on one side only, and measures about 14½" (36·20 cms.) by 7½" (19·7 cms.). Kielhorn described the plate in the following words: "The edges of it were turned up, so as to form a high raised rim all round, which was fastened, by fusing, at two of the corners, but not at the other two. The plate is rather thin; and the letters, being fairly deep, shew through very plainly on the back of it. The engraving is good; but, as usual, the interiors of most of the letters show marks of the working of the engraver's tool.— There is no ring-hole in the plate, for a **ring** with a seal attached to it; and no indications of a **seal** having ever been soldered on to it."

The **writing** covers the upper three-fourth of the surface, which measures about 32·5 cms. broad by 12·5 cms. high, and consists of fourteen lines, the last of which extending slightly more than half of the others. Below it and on the proper left side of the plate is engraved the **sign-manual** *Śrī Dhanīga*, in characters which are almost of the double size of the others and followed by two vertical strokes, but it does not show the representation of the royal emblem. On the right

¹ Better read पाहिल्वसे तु क्षीणोऽपरो यः कोपि तिष्ठति.

² Better read दासोयं.

³ Read *dattim*, in the sense of 'a gift'. See *C. I. I.*, Vol. IV, p. 617, n. What appears as an *anusūtra* over *da* is a fault of the stone.

⁴ Read *Vaiśākha*.

⁵ *Op. cit.*, p. 201.

⁶ From personal correspondence with both these institutes I can only conclude that this plate, along with some others which are recorded to have been handed over to the Indian Museum by the Asiatic Society of Bengal, is not now forthcoming.

side, again, the lines leave an open space which increases almost uniformly in each of the subsequent lines and thus the alignment of the record is not exactly vertical but slightly slanting inwards. The average height of the letters ranges between .5 and .7 cms.

The **characters** of the inscription are Nāgarī of the tenth century, to which the record belongs. To note the peculiarities of the formation of some of the letters, we find that *g* as a subscript is engraved as *n*, cf. *svargga*, l. 13; *ṅ* continues to be devoid of its dot, as in *bhaṅga* and *kalaṅka*, both in l. 5; and *ch*, *dh* and *v* are often alike; see *dhavala*, l. 3 and *chandra*, l. 5; occasionally the first of these letters, i.e. *ch*, resembles *v*; see *chatuh*, l. 10; and in a few instances *dh* shows the beginning of a horn on its fore-limb, as in *vasudhā*, l. 12, where the verticals of *dhā* are also joined. The letters *t*, *n* and *ś* appear in their antique form; see *nayan-āṃṛita* and *śchandra*, both in l. 1. *P* is often engraved as *y*; cf. *parama*, l. 6, and *y* is generally found with the curve bent upwards so as to serve the purpose of the vertical; see *yasya*, l. 12. *R*, which is generally marked as a vertical with a horizontal stroke attached to the middle of its left, often resembles *v*, as in *kairava*, l. 5, and is sometimes also like *g*, as in *ravi*, l. 8; this letter in its subscript form is shown by a serif; cf. *pranayi*, l. 1. The signs for *n* and *v* are not frequently distinguished; cf. *vridha* and *tmana*, both in l. 11, and also the signs for *ch* and *v*; see *chatuh* and *nāma*, both in l. 10. The medial short *u* is a slanting stroke attached to the middle of the vertical and bent to the right; see *āru*, l. 4; and the sign for the medial long *ū* is shown by a loop turned upwards and then suddenly bent down; cf. *bhūmim*, l. 12. A curious form of *ph* appears in *phalam*, l. 12.

The **language** of the record is Sanskrit; and it is written in an admixture of prose and poetry. In all there are thirteen verses which are not numbered. With reference to **orthography**, we may note (1) the use of the sign for *v* to denote *b* as well, as in *vahubhi*, l. 12; (2) the general use of the *prishṭha-mātrā* with a few exceptions; (3) the reduplication of a class-consonant following *r*, as in *suvarṇa*, l. 13, and frequently of a class-consonant preceding *r*, as in *mitra*, l. 1; (4) the correct use of all the sibilants and class-nasals; and finally, (5) no change of *m* to an *anusvāra* in *samvatsara*, l. 7, and *samvat*, l. 8; and the use of the dental nasal in *pratigrihṇāti*, l. 12.

The inscription is one of **Dhaṅgadēva** of the **Chandēlla Dynasty**. Its **object** is to record the bestowal, by Dhaṅga himself, of the village **Chullī** (or **Yullī** connected with *Usharavāha*, to **Yaśōdhara bhaṭṭa**, son of the *bhaṭṭa* Jayakumāra of the Bhāradvāja *gōtra*, with the three *pravaras viz.*, Bhāradvāja, Āngirasa and Bārhaspatya, of the Vājasaneyā *lākṣhā*, who had migrated from Tarkārikā. Yaśōdhara was the grand-father of the donee of the Nanyaurā grant of Dēvavarman, as will be discussed below while editing that grant.¹ The present grant was made by the king for the increase of the religious merit and fame of his parents and himself, from Kāśikā, i.e., Vārāṇasī, on **Sunday**, the **lunar-eclipse** day in the month of **Kārttika** in the (Vikrama) **Year 1055**, as expressed both in words and numerical figures. The corresponding Christian date is Sunday, the **6th of November, 998 A. C.** when there was a **lunar eclipse** visible in India.²

The inscription opens with the symbol for *Siddham*, followed by seven stanzas giving the genealogy. The first two of these stanzas introduce **Harshadēva**, mentioning him to be valorous and fierce like the scorching Sun of summer and also endowed with some other qualities. Stanzas 3 and 4 mention his son **Yaśōvarman**, who earned fame 'by cleaving the temples of opponents' elephants; and the following three stanzas describe Yaśōvarman's son, **Dhaṅgadēva**, stating that he was victorious in countless battles, righteous and just. All this description is merely poetic, the verses being good examples of the classical style of composition, containing figures of speech like *upamā*, *rūpaka* and *parisaṅkhyā*. Historically they are of no value, as all the three kings who are mentioned here with their mutual relationship are already known from the other records of the house. All these three names are repeated in the prose passage that follows and

¹ See text, *n.* on the name, below.

² He also appears to be the royal priest mentioned in No. 114, v. 56.

³ See *Ind. Ant.*, Vol. XVI, p. 201 and *ibid.*, Vol. XIX, p. 23, No. 5. In the former of these references Kielhorn also says that calculated by General Cunningham's Tables, the result would be the following day, Monday, the 7th November. But considering the Tables and Kielhorn's calculations to be correct, it is possible to hold that Sunday was the day of the eclipse and the grant was made actually on Monday when the period of the eclipse was over.

each of them is mentioned here with the usual title of *Paramabhaṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*, with an additional epithet of *Kālañjar-ādhipati* attached to the name of Dhaṅgadēva. Then comes the formal portion, followed by the date, which we have seen above; and with the five oft-quoted imprecatory verses, the document comes to a close. In the end there is the sign-manual of the king.

Of the geographical names mentioned in the record, *Kālañjara* (l. 7) is the well-known fort; and *Kāśikā* (l. 8) is the renowned *Vārāṇasī*, as we have seen above. I am unable to identify *Dūrvāhara*, the habitation of the donee, and the grant village *Chulli* or *Yulli* (ll. 9-10). The maps at my disposal show a place *Dēvrāo*, which is roughly about 80 kms. south-east of *Jhānsī*; but besides some similarity in the names and the situation of the latter in the region of Bundelkhand, we have nothing to establish its identity with *Dūrvāhara*. Or it may be identical with *Dhurvai*, c. 55 kms. west of *Jaītpur*. The grant village is described as *Usharavāho-pratibaddha*; this expression, as far as I think, is not a place-name but an adjective of the word *grāma*, in the sense of 'connected with or bounded by a barren spot', and along with it, we may take the other expression *sa-sār-ōsharam*, i.e., fertile and saline soil. Lastly, *Tarkārikā*, the original home of the donee (l. 9), seems to be the same as mentioned variously as *Tarkārika*, *Ṭakkārikā*, *Ṭakkārī* or *Ṭakārī* in epigraphic records as the original home of Brāhmaṇa donees as well as of the *Vāstavya* family of the *Kāyasthas*. Our attention has been drawn by Dr. V. V. Mirashi to the fact that there were more than one place of this name;² some of these were situated in *Mālwā*, as we have seen while editing the *Māndhatā* grants of *Dēvapāla* and *Jayavarman*,³ while some others in *Uttar Pradesh*; and though nothing can definitely be said about the location of this place, the *Tarkārikā* of the present record appears to be the same as situated about 25 kms. north-west of *Gayā* in *Bihar*, as pointed out by *Mirashi*.⁴ It is easy to understand a man from *Gayā* going to *Vārāṇasī* to receive the donation made by *Dhaṅgadēva*, who ruled at *khajurāhō*.

⁴ *Mirashi*, *op. cit.*, p. 475.

⁵ From the facsimile accompanying Kielhorn's article in *Ind. Ant.*, Vol. XVI, p. 201.

⁶ Denoted by a symbol.

⁷ The *anusvāra* on ण is redundant. — Before ण two *aksharas* are omitted in the text, as is evident from the metre. Kielhorn's guess that they may stand in the margin just above where there appears to be some writing, seems to be correct. He proposes to read something like *suhrit* here, but *śubha* or *śruti* appears to me to be more appropriate.

⁸ The *aksharas* in the brackets are not distinct in the facsimile and are adopted here from Kielhorn's reading.

⁹ Kielhorn read the bracketed letter as ण and corrected it to ञे. But the slanting stroke before it with its extremity joined to the preceding *akshara* appears to be the sign of the *prishtha-mātrā*.

One of the seven principal mountains of the continent. *Kinnara* is a mythical being with a human figure and the head of a horse.

¹ As n. 7 above. This verse has the figure of speech known as *parisaṅkhyā*, instances of which are found in the *Kādambarī* and some other works of the type. It means to say that *bhaṅga* (break and curls of hair), *kṣā-graha* (seizure by the hair), hardness, crookedness, stain, self-willingness, aversion and superficiality — all these are to be found only in what is mentioned with each of these and not in his kingdom. There is a play on the word *mitra*, meaning (1) the Sun and (2) a friend.

² By a wrong stroke of the chisel the bracketed letter appears as *hū*.

³ The *daṇḍa* is redundant.

⁴ Originally *वृद्धेहाव*. But what one naturally expects is *प्रवेहेव*.

⁵ This verse and No. 11 that follows are introduced in the middle of a prose portion, as in a *Champū-kāvya* and the word *pravēṣhṛita* is used for, as Kielhorn has already observed, *pravishṭa* or *pravēṣita*. It means to say that when the orb of the 'deer-marked' (moon), the root (source) of joy to the heart of Rohini, had been devoured by the son of Sindhikā (Rāhu), i.e., when there was a lunar eclipse.

⁶ Read *भारद्वाजाङ्गिरस*—

⁷ The *daṇḍa* is superfluous.

⁸ The consonant of the first *akṣhara* of the name might also be read as *ch*; cf. *ch* in *chatur* — appearing just before in the same line. The village is described as 'appertaining to Ūsharavāha, with its water and (dry) land, with its low and high (land), with its mango and *madhūka* (*madhuca indica*) trees and with its fertile and saline soil'.

⁹ I am very doubtful about the reading of this *akṣhara*, though I have adopted it as read by Kielhorn. What looks like *t* at the beginning may have been a wrongly cut loop of *m*.

¹⁰ Some word like *iti* has to be supplied after this verse.

¹¹ Here the word *suvarṇa* is used in the sense of a gold coin. For the sake of metrical euphony, read *सुवर्णमेकं गामेकां*—

¹² Kielhorn takes *krama* in the sense of *vidhivat*; but comparing the use of this word in some other records, I feel that it has the sense of *kram-āgata*, i.e., 'obtained by succession'. See *C. I. I.*, Vol. IV, p. 222, n. 1.

¹³ Here we have the use of *anusvāra*, unlike in all the other instances in the record where we have the nasal.

Nos. 101-06; PLATES XCVI-XCIX

SIX DUDĀHĪ STONE INSCRIPTIONS OF DĒVALABDHI

(Undated)

THE six inscriptions which are edited here were first brought to notice by Sir A. Cunningham, who published transcripts of them, accompanied by photozincographs of five, in his *Archaeological Survey of India Reports*, Volume X (for 1874-75 & 1876-77), pp. 94-95, and Plate xxxii, 1-2 and 4-6. Subsequently they were edited by F. Kielhorn in the *Indian Antiquary*, Volume XVIII (for 1889), pp. 236 ff., from rubbings taken by Cunningham and supplied to him by Fleet. But Kielhorn's article is not illustrated. The inscriptions are edited here from impressions kindly supplied to me by the Chief Epigraphist, and in my readings thereof I have also taken into account the plate illustrating Cunningham's writings.

All these inscriptions were discovered by Cunningham, as stated above, in a shrine dedicated to Brahmā and standing on a ridge to the east of **Dudāhī**,¹ a petty hamlet in the Lalitpur subdivision of the Jhānsī District of Uttar Pradesh, situated about 29 kilometres to the south of Lalitpur and about 19 kilometres south-east of Dēogadh, the well-known place of antiquity. They are said to have been carved on parts of the temple, though neither Cunningham nor Kielhorn gives a clue as to their exact location. As stated above, they are six in all, and all are short, ranging from one to eleven lines. In his *Report*, Cunningham, while describing them, uses figures (1 to 6), whereas Kielhorn uses alphabetical figures from **A** to **F**, to denote them, and for facility's sake, he also makes alterations in their order fixed by the former scholar. In the subjoined transcripts thereof, I have followed the order given to them by Kielhorn, and in brackets I have also given the respective numbers in which they are treated by Cunningham.

The following table is intended to show the number of lines of the respective records, along with their dimensions.

Serial No.	Kielhorn No.	Cunningham No.	Total Lines	Breadth in cms.	Ht. in cms.	Size of letters, in cms.
101	A	2	11	8.25	25.4	1.27 to 2
102	B	3 ^a	10	7.00	21.1	
103	C	1	5	15.25	12.5	1.5 to 3
104	D	4	3	15.3	7.5	
105	E	5	1	15.37	0.12	
106	F	6	1	10.16	2.0	2.0

All the inscriptions are fairly legible and are engraved, as stated above, on parts of the temple so as to suit the space available. For example, **A** and **B** are arranged in short lines, each of which consists of about 5 or 6 letters, while **C** and **D** are in longer lines, the first of these two showing about ten and the second about twelve letters in each of the lines.

The **characters** of all these records are Nāgarī of the eleventh century A.C. Attention may be drawn to the general tendency that the letters have their curves sharp and some of the

¹ Doodhai, N.L. 24°26'; E.L. 78°27' (*Ind. Atlas*, Sheet No. 70 N.W.); Cunningham describes the antiquities of this place in his *A. S. I. R.*, Vol. X, pp. 90-96. For the description of the temple, see *ibid.*, p. 94, where he observes that the ascription of this temple to the Gonds, as stated in the *Gazetteer of the N. W. Provinces* (now U.P.) Dist. Lalitpur, should evidently be taken as pertaining to later times. A parallel example of an earlier temple captured later on by the Gonds is shown by the temple of Bōramdēo at Chhaprī near Kawardhā in the Chhattīsgadh Division of Madhya Pradesh (See *C. I. I.*, Vol. IV, p. 581).

This inscription is not noted by Cunningham; and instead of it, he gives transcript of another (his No. 3); but it is not illustrated by him.

top-strokes are triangular. *J*, *n*, *ś* and *s* are engraved in their antique forms; *ch* shows its loop triangular, and the formation of *dh* is like that of *v*. The subscript *ṛ* resembles *l*, and *r* is in a transitional stage, showing both its forms — with and without the loop.

The **language** is Sanskrit and all the inscriptions are in prose. **Orthographically**, there is nothing worth noting except that the medial *ś* is denoted both by the *prishṭha*- and *ūrdhva-mātrās* and the consonant following *r* is generally doubled.

The **object** of all these inscriptions is to record that the temple *kīrtana*, evidently the one where they were found, was erected by **Dēvalabdhī** of the **Chandēlla** family, who was a son of **Kṛishṇapa** and lady **Āsarvā**, and a grandson of the *Mahārājādhirāja*, the illustrious **Yaśovarman**. The first three of the inscriptions (A-C) give this information completely; **D** states the same but omits the name of the grandfather Yaśovarman with his epithets; and **E** and **F**, both of which consist of one line each, mention only the name Dēvalabdhī, the former of these adding that it is his (built by him) temple.

Yaśovarman, the grandfather of Dēvalabdhī, as we are informed here, was undoubtedly the Chandēlla king of the same name, whose long inscription of V.S. 1011, *i.e.* 954 A.C. has been edited above.¹ We have seen that his son Dhaṅga had succeeded to the Chandēlla throne shortly before this date; and from the present records we know that Dēvalabdhī, who was Kṛishṇapa's son and thus a nephew of Dhaṅga, was in those days guarding the western frontiers of the Chandēlla dominions, as his subordinate, when the boundaries of his kingdom are known to have extended up to the Bētṅā river in the west. The necessity of appointing an officer in that region may have been particularly felt in apprehension of an attack by an enemical power from the west.

Kṛishṇapa of the present records is no doubt the same as Kanhapa, mentioned in ll. 8-10 of a fragmentary stone inscription found at Jhānsī and now preserved in the Provincial Museum at Lucknow (E. 24 of the Museum Catalogue). This record is not included here as it is in a very bad state of preservation and nothing but mere names of some of the rulers can be read in some of the lines. But what is absolutely certain is that it refers to Kanhapa as a *ṇṛipa*, unlike the present inscription; and from what is stated in this connection, he seems also to have founded a city which was his capital (*rājadhānī*).² Whether he actually ruled cannot be said with certainty, since the use of the word *ṇṛipa* can be justified even by concluding that he held a command under his father or his brother, who were Yaśovarman and Dhaṅga, respectively. Here it is noteworthy that he is called a *ṇṛipa* in another fragmentary inscription also, which was found by Hall at Vidishā (Bhilsā) in the last century.³

Since Dudāhī, the find-spot of the present inscription is only about 120 kms. north by east of Vidishā, the situation of both these places in the same region corroborates the statement of Yaśovarman's inscription of V. 1011, *viz.* that the Chandēlla kingdom in those days extended in the west so far as Vētravatī which flows by the town.⁴

While editing these inscriptions in the *Indian Antiquary*, Kielhorn has observed that they furnish an older form of the name of the royal family, *i.e.*, Chandrēlla, instead of the later Chandēlla. The former of these names he takes to be a derivative, by means of the Prakrit suffix *illa*, from *chandra*, 'the moon', formed like Bhāilla from *bhās*.⁵ But the subjoined transcripts clearly indicate that the word is spelt in all of them without the subscript *r*, excepting in only one (**B**), where too the reading is doubtful.⁶ Thus this slender evidence precludes the possibility of drawing any conclusion with reference to the older form of the name, as done by Kielhorn, particularly bearing in mind that the inscriptions were engraved by different hands, as is clear from a look at the plate.

¹ No. 98. Another Yaśovarman is mentioned in the Baṭeśvara stone inscription of Paramardin of the Vikrama year 1252, as the latter's father. But his name figures in no other record of the house, and whether he actually ruled is doubtful, as we shall see below, while editing that inscription. The palaeographic evidence too points to an earlier ruler.

¹ From impressions supplied by the Chief Epigraphist and also from photozincographs (Plate xxxiii) in Cunningham's *A. S. I., A. R.* Vol. X. Cunningham's number of the inscriptions is given here in brackets, where the letter C denotes Cunningham.

² Sandhi is not observed here and below in similar cases.

³ Kielhorn read this letter as ३ , but what he took to be the subscript ३ appears to me only a scratch, as can be seen also above this letter and below those that precedes and follows it. This portion is damaged and we cannot be certain about the existence of the subscript.

⁴ What appears as an *anusvāra* above ३ is only a defect in the stone.

⁵ The word सत्क , 'belonging to' is used to express the meaning of the possessive case in contemporary inscriptions; but, as Kielhorn has rightly observed, it is redundant here since the name that precedes this word is already included in that case.

NANYAURĀ COPPER-PLATE INSCRIPTION OF DĒVAVARMAN

[Vikrama] Year 1107

THE copper-plate which bears the subjoined inscription was found in 1872, along with the one issued by Dhaṅgadēva and edited above (No. 100), by a farmer, in the process of ploughing his field at Nanyaurā, or Nānyaur, a village in the Panwāri-Jaitpur *tahsil* of the Hamīrpur District in Uttar Pradesh. The plate was acquired by W. Martin, B.C.S., who presented it to the Asiatic Society of Bengal; and six years subsequently the record was published by V. A. Smith, with an English translation, in the *Journal of the Society*, Vol. XLVII (1878), Pt. I, p. 81, without an illustration, though accompanied by a note by the local Pandit who prepared the transcript. The inscription was thereafter systematically edited by F. Kielhorn in the *Indian Antiquary*, Vol. XVI (1887), pp. 201 ff., with his own reading of the text and a fresh translation,¹ accompanied by a photo-lithograph, from an impression prepared by Fleet who was then one of the editors of the *Journal*. Some time subsequently, the plate is stated to have been made over to the Indian Museum, Calcutta, but in my attempt I failed to obtain a definite clue regarding its present whereabouts; and as neither the original nor any estampage of the inscription is now forthcoming, I edit the record from the facsimile accompanying Kielhorn's article in the Volume of the *Indian Antiquary*, referred to above.

It is a single copper-plate, smooth and plain with its corners rounded off, and is inscribed on one side only. According to Kielhorn's statement it measures about 16½" by 10½", which are respectively equivalent to 38·7 and 27·4 cms. "The plate is not very thick but the letters are rather shallow and do not show through on the reverse side". The inscribed portion covers a space about 36 cms. broad by about 25 cms. high; and the size of the letters varies from .5 to .8 cms. The central part of the first line of the plate shows a mark as for a ring, but no ring nor any seal was ever obtained. The photo-lithograph shows that a few of the *aksharas* in the lower proper right corner have been slightly damaged by verdigris, but they are throughout legible; otherwise the plate was in a good state of preservation when Kielhorn wrote. There are also redundant marks of the engraver's tool. The inscription consists of nineteen lines of writing.

The characters are Nāgarī of the eleventh century A.C. and are slightly developed than those employed in the plate-inscription of Dhaṅgadēva, which was obtained along with it from the same place and under the same circumstances. The initial *a* generally begins with a curve and resembles the modern *ā*, as in *Abhi*, l. 11, but occasionally it has a more modified form, as in *anyarya*, l. 15. The form of the initial *i* which occurs in *ittham*, l. 6, is represented by two hollow circles placed horizontally and subscribed by the sign for medial *u*. The loop of *k*, which is often formed with a sudden bend of the lower extremity of the vertical, as in *Kālañjara* in l. 2, appears generally in its developed form, as in *bhaffāraha* in the same line; and in such *aksharas* as *kṛi* and *kṛī*, or when the first member of a conjunct consonant, it shows an unlooped form; see, e.g., *kṛimi*, l. 18 and *dikshā*, l. 4, but there are exceptions like *vihṛīṇa*, l. 15. *kh* is formed of two loops with a vertical stroke on each and joined by a horizontal bar at the top; see *Vaiśākha*, l. 7; but occasionally this letter appears in its modern form; cf. *sākhinē*, l. 11, showing it in a transitional stage. The *aksharas* *t* and *n* which in rare instances have their antique form as in *varjita*, l. 13 and *snātvā*, l. 9, respectively, show the developed form as in *hutvā*, l. 10 and *pitṛin*, l. 9. *N* occasionally also shows its unlooped form, see *bhōgēna*, l. 15. In a few instances the upper loop of *th* is not developed; cf. *panthi*, l. 16; sometimes this letter is engraved as the modern Nāgarī *gh*, as in *yathāvat*, l. 10; and a totally different form of its subscript occurs in *sthala*, l. 12 where it much resembles the modern *dh*. The letters *dh*, *v*, *ch* and *r* are occasionally confused; see, e.g., *dhavala*, l. 5, *Vāchaṣpati*, l. 5, and *kara*, l. 14. *Y* shows its forms with and without the vertical bar, e.g. in *gāṁblāryēṇa* and *satyēna*, both in l. 4; and in addition to some of its forms noted in the preceding inscriptions, *r* has its form resembling *ch* in *pravara* and *pāra*,

¹ The necessity of the fresh attempt is explained by Kielhorn himself who says: "my own reading will be found to differ considerably from those of my predecessors."

both in l. 11, and *v*, as in *phura*, l. 7. *ś* shows its antique form as in *śubha*, l. 6, and occasionally it is only a triangle surmounted by a hook; see *kuśali*, l. 3; *s* which is in its older form occasionally appears as modern, e.g., in *Sachī*, l. 4. And finally, *h* is occasionally without the tail; cf. *mahārāja*, l. 1. One *akshara* each in ll. 6 and 9 was originally omitted and is engraved above and below the line.

There are a few instances showing that some of the letters have totally different forms than in the rest of the record: e.g., *ś* in *yaśō*, l. 10, *jña* in *ājñā*, l. 14, *sya* in *yasya* and *ph* in *phalam*, both in l. 16. Mistakes of writing or engraving, e.g., *vāh* for *kah* in *dhārmikah*, and *guh* for *jñah* in *krīta-jñah*, both in l. 5, and others are pointed out in the text that follows. There are a few grammatical errors, e.g., *krishāpayatu* and the use of the wrong *dvandva* compound in *kshityudadhīn* for —*dhi* (neuter), both in l. 15; they are also corrected in the text.

The **language** is Sanskrit; and except two stanzas devoted to the description of the donor Dēvavarman in ll. 4-6 and five imprecatory verses in the concluding portion, the record is composed in prose. The verses are not numbered. A tendency of the writing, as to be seen in some other records also, is the use of a *daṇḍa* to denote a comma as well, as in ll. 3 and 10-13; and another peculiarity is to introduce verses in the very middle of a prose portion (see vv. 1-2) as in a *Champū-kāvya*.

In respect of **orthography**, we may note the following: (1) the general use of the sign for *v* to denote *b* as well, as in *vōdhayati*, l. 8; (2) occasionally putting the dental for the palatal sibilant, e.g., in *Sachī* for *śachī*, l. 4 and *saila* for *śaila*, l. 12; (3) the doubling of a class-consonant following *r*, as in *harmmāṇau* and *svargga*, both in l. 17, with rare exceptions like *varjita*, l. 13; (4) the sparing use of the *prishṭha-mātrā*; (5) the wrong change of the final *m* to an *anusvāra* at the end of a sentence as in *upanētavyam* and *bhavitavyam*, respectively in ll. 14 and 16, and also at the end of a stich as in ll. 18-19, and *vice versa* in *sāmvaṣarikē*, ll. 8-9; (6) the general use of an *anusvāra* except in four instances, viz., *jitēndriya*, l. 5, *ānanda*, l. 6, *bhagavanta*, l. 9 and *pariyanta*, l. 13, where the dental nasal is correctly used; and finally, (7) the wrong spellings of *arghya* as *argha* and *dattvā* as *datvā*, both in l. 9, and of *puṇya* as *puṇya* in l. 10.

It is a royal charter and its **object** is to record the grant of a village by king Dēvavarman, in honour of the first death-anniversary of his mother Bhuvanadēvī; and the day is recorded to be **Monday** falling on the **third of the dark half of Vaiśākha** of the (Vikrama) **year 1107**. The details of the date are to be discussed below.

The inscription opens with the auspicious symbol for *Siddham*, followed by a prose passage naming the ancestors of **Dēvavarman**, introducing him as *Parama-bhattāraka*, *Mahārājādhirāja* *Paramēśvara*, and the supreme lord of Kālāñjara, meditating on the feet of the *P.M.P.*, the illustrious **Vijayapālādēva** who, in his turn, had meditated on the feet of *P.M.P.*, the illustrious **Vidyādhara-dēva**. The inscription does not name the family to which all these kings belonged; but from the occurrence of these names in succession and also from the use of the epithet *Kālāñjara-dhipati*, they may safely be taken as belonging to the house of the **Chandēllas** holding their sway over the Vindhya region, particularly when Dēvavarman who issued this grant has given us another record in the very next year which is to be dealt with just below. Dēvavarman is further described as a great warrior (ll. 3-4); and in a stanza that follows, he is said to have surpassed Yudhisṭhira by his truthfulness, the ruler of Champā i.e., Kaṇva, by his generosity, the ocean by his depth, the lord of Sachī (Indra) by his might, the mind-born (Kāmadēva) by his handsomeness and Śukra and Vāchaspati (Guru) by his shrewdness. The next stanza describes him as endowed with many good qualities, stating that he was wise, righteous, valiant, truthful, subduing senses and grateful.

Then the record says that 'having realised that the world which is beautiful to look at is like the innermost part of a plantain tree and void of substance', on the day as stated above, after performing all the rites and in the presence of all the *mahattamas* and the *janapadas* (chief and other persons), the Brāhmaṇas and others dwelling at the village of **Kathahau** which appertains to **Raṇamaṇu** in the **Rājapura** *avasthā*,¹ the king Dēvavarman, from his camp at Suhavāsa, donated the village, exclusive of what had already been given, the occasion being the death

¹ As also in the *Sēmra* grant of Paramardīn, below, No. 126.

² This word seems to be connected with *avasatha* or *avasthāna*, a dwelling place. Here it may be taken to denote a town or a territorial unit.

anniversary of his mother **Bhuvanadēvi** (ll. 8-9). The **purpose** of the grant was also to increase the merit and fame of the king himself and his parents and the donee was the Brāhmaṇa **Abhimanyu**, the son of Bhaṭṭa Ēllā and grandson of Jasadhara (Yaśōdhara), hailing from the *Bhaṭṭa-grāma* known as Takārī. His *gōtra* was Bhāradvāja with the three *pravaras*, viz., Āngirasa, Bārhaspatya and Bhāradvāja, and he was a *Yajurvedin*, versed in all the Vēdas and the Vēdāṅgas,¹ and was devoted to the six duties adjoined on Brāhmaṇas² (ll. 10-13).

Lines 13-16 specify the details of the gift village and all express the full right of the donee and his successors over it. And with the usual benedictory and imprecatory stanzas (vv. 3-7), the document ends, desiring bliss and good fortune and with the sign-manual '*Śrīmad-Devavarmanmadēvaḥ*'.

This is the earliest known record of the house to give us the names of the three kings who ruled at Kālañjar, in close succession, viz. Vidyādharma, Vijayapāla and Dēvavarman. The Khajurāhō inscription of Dhaṅgadēva, V.S. 1011, supplies the names of Harshadēva, Yaśōvarman and Dhaṅga, in succession; and the names of two intermediate princes, viz., Dhaṅga's son Gaṇḍadēva, and the latter's son Vidyādharma, are known from some later records of the house, e.g., the Mahōbā stone inscription of Kīrtivarman and the Mau stone inscription of Madanavarman, both of which are fragmentary and bear no date. Thus all these records taken together enable us to establish a line of succession of the Chandēlla kings from Harsha to Dēvavarman. The present record also informs us that Vijayapāla's queen was Bhuvanadēvi.

The word *vāhalā* (l. 12) is of lexicographical interest. While editing this inscription in the *Ind. Ant.*, referred to above, Kielhorn translated it by the word 'water-course' and quoted epigraphical references in support of his views. M. Williams, however, showed the meaning of this word to be 'a stream' and rightly remarked that 'it has not yet been met with in any published text'. It appears to me to be a Prakrit or local word, from the root *vah*, to flow, as we find two other words in their Prakrit form, viz. Ēllā and Jasadhara, respectively the father and grandfather of the donee, in this record.

The **date** of the document does not yield satisfactory equivalent for v. 1107 mentioned in it. Making calculations for four years, i.e., for 1105, 1106, 1107 and 1108, Kielhorn concluded that the only year in which the third day of the dark half of Vaiśākha, as mentioned in it, was associated with Monday, is V.S. 1105, and in the other three years the day differed.³ Elsewhere he observed that the details work out properly for the immediately following year which was V.S. 1108 or 1052 A.C.; and accordingly the day was **Monday, 20th April**.⁴ He rejects his calculation of the date which is equivalent to Monday, 1st April, 1051 A.C., probably because, as noted by himself, the desired *tithi* (*trītiyā*) commenced 6 h. 4 m. after mean sunrise and also that either Monday was joined with the (third) *tithi*, or the year 1107 has been put erroneously for 1108. But as far as I think, it is less likely to take the year wrong. It may also be remarked here that on Monday, 1st April, 1051, *trītiyā* was current in the afternoon, which is preferred to the forenoon for performing a *śrāddha*. Thus this seems to be the desired day.

Of the **localities** mentioned in the inscription, **Kālañjara** and **Takārī** have already been identified, respectively with the well-known fort and Tarkārikā of the Nānyaur grant of Dhaṅgadēva. **Rājapura** suggests its identification with the modern Rājapurā which is about 40 kms. west-north-west of Chhatarpur, the headquarters of a district of the same name in the Bundelkhand region of Madhya Pradesh. This identification appears to be probable in view of another, viz. of **Raṇamau** with the modern Mhow, which is about 16 kms. north-west of Chhatarpur and about 32 kms. north-east of Rājapurā. Both these identifications are suggested in view of the fact that these places are situated in the same region as Jaitpur-Panwārī, the headquarters of the *tahsīl* in which the present plate was discovered. I am, however, unable to locate **Kaṭhahau**, the donated village, and **Suṇa(kha)vāsa** where the king was encamped when he issued the grant.

¹ These are *Sikshā, chhandas, nirukta, vyākaraṇa, kalpa* and *gyōtisha*.

² See *M. S.*, X, 75. The donee of the present grant was evidently the grandson of Yaśōdhara, the donee of the Nānyaura grant of Dhaṅgadēva, in which the name figures in its Sanskrit form. For, besides the fact that the *gōtra* and the *pravaras* of both were the same, their families are also mentioned as hailing from the same place.

³ *Ind. Ant.*, Vol. XVI, pp. 201-02.

⁴ *Ibid.*, Vol. XIX, p. 364, No. 178. In his *I. N. I.*, No. 129, D. R. Bhandarkar takes the English equivalents as 1st April, 1051 A.C.

^१ From facsimile in *Ind. Ant.*, Vol. XVI.

^२ Denoted by a symbol.

^३ Here and in some cases below, which are not separately noted, the sign of punctuation is redundant.

^४ That is, Karna. The consonant of the preceding ष्ट is not well formed.

^५ The *akshara* in the brackets was originally omitted and was later on written below the line with an arrow-mark to draw attention, but after the sign of *visarga* and not before where it is actually to be supplied. This was not noted by Kielhorn.

^६ Better read - कार संसार -.

^७ The reading of the consonant of this *akshara*, as also noted by Kielhorn, is not certain. In सुहवास that precedes, the vertical showing the *mātrā* in the third *akshara* is detached from it so as to look like a *danda*.

^८ This *akshara*, which was originally omitted, is written below the line but without an arrow-mark to draw attention to it as in n. 4, above.

^९ Kielhorn read टकारी, but to me it appears to be as given here. What follows the point of ट is a chisel-stroke and not the bend.

^{१०} The reading of the first *akshara* of the name is not certain. Moreover, no *sandhi* is made here as also in -म अग्नि- that precedes. The Sanskrit form of the name that follows is यशोधर.

^{११} This *akshara* is followed by two small dots vertically placed. It cannot be ascertained whether they form the sign of the *visarga* inserted subsequently or are merely strokes of the chisel.

^{१२} This word is not known to dictionaries. The context, however, shows that *vāha*, water-course, is intended. See n. on this word in No. 4, l. 11, above. The word *vāha* occurs also in No. 100, l. 10.

No. 108 : PLATE C - B

CHARKHĀRI COPPER-PLATE INSCRIPTION OF DĒVAVARMAN

[Vikrama] Year 1108

THIS plate, together with some others,¹ is stated to have been in the possession of the ruling Chief of **Charkhāri**, formerly a State in Bundelkhand, Central India Agency, but now included in the Hamirpur District of Uttar Pradesh. Its original find-spot is unknown and there is no information as to how and under what circumstances it was obtained. The inscription on it was edited by R. B. Hiralal, with text in Nāgarī characters but without a lithograph, in the *Epigraphia Indica*, Vol. XX (1929-30), pp. 125 ff.² It is edited here from an inked estampage kindly furnished by the Chief Epigraphist of the Archaeological Survey of India.³

It is a large plate of copper, with its corners rounded off. Its dimensions, as recorded by Hiralal, are 18 $\frac{3}{4}$ " by 12 $\frac{3}{4}$ " which are equivalent to 47.63 and 30.48 cms. respectively, and it is stated to weigh 360 $\frac{1}{2}$ tolas, or 4.20 kgs. Hiralal described the plate as "surmounted by a copper-hook, 2 $\frac{3}{4}$ " (6.85 cms.) long, which is rivetted to it and holds a ring 2 $\frac{3}{4}$ " (5.80 cms.) in diameter".

The plate is inscribed on one side only. The writing covers a space measuring 42 cms. broad by 28 cms. high and consists of 23 lines, the last of which is only 19.5 cms. long. At the top of the plate is engraved a representation of the four-armed goddess **Lakshmi**, being sprinkled by an elephant holding a pot in its trunk raised up, on either side. The figure is seated

¹ Kielhorn explained this as *niyat-āniyata*, in the sense of 'fixed and not fixed'.

² The first *akshara* in this line is damaged and Kielhorn doubtfully read it *sa*. But the two verticals which are clear show it as taken here.

³ Read *सुवर्णमेकं*, so as to suit the metre.

⁴ The sign-manual and the preceding six *aksharas* are separated by some space from the main body of the record.

⁵ Below, Nos. 132, 144 and 151.

⁶ From impressions sent to him by Hirananda Sastri who was then the Government Epigraphist for India.

⁷ His No. A-45 (56-57). The present whereabouts of the plate are unknown.

on a full-bloomed lotus and holds a lotus-bud in each of the upper hands which are raised. The whole design is included in an oval figure of beaded borders, 8 cms. in height and 10 cms. in breadth, and divides the first six lines of the writing into equal halves.¹ Under the seat of the goddess is inscribed the **sign-manual** *Śrīmad-Dēvavarmmadēvuh̄ sva-hastah̄*, in two lines. The average height of the letters is about one cm., except for those of the second line of the sign-manual which are slightly smaller. The impression shows the plate to be in a perfect state of preservation.

The **characters** are Nāgarī. They share the characteristics of the script of those of the preceding charter which was issued only a year back: but they are somewhat irregularly formed and slovenly incised, evincing that some of the letters and signs of the original draft were misunderstood both by the writer and the engraver. The record also abounds in grammatical and other mistakes, as will be known from the notes appended to the text that follows.

Despite this, the points that call for notice regarding the palaeography of the letters employed in the present inscription are as follows. The initial *ē* which resembles a triangle with its vertical point below, in *ēha-*, l. 5, appears as *pa* in *ēvam̄*, l. 13; *Kh* shows its older form in *vyākhyāna*, l. 17, but its advanced form in *-sākhinē*, l. 16 and *likhitam̄*, l. 23; the conjunct consonant *gg* sometimes appears as *gg* as in *mārgga-*, l. 4 but as *gn*, in some other cases as in *vinirgata-*, l. 16; *ṅ* has not developed its dot; cf. *-anaṅga*, and *-aṅganā*, both in l. 7; the letters *ch*, *dh*, *v* and occasionally *r* also are often confounded; e.g., *ch* appears as *v* in *suchira-*, l. 11, and *cha*, l. 15, and reverse is the case in *gatvā*, l. 21; *r* is cut as *ch* in *-rātma-*, l. 15; *dh* is endowed with the top-stroke in *bandhu*, l. 7, but is devoid of it in *dhārā*, l. 5, where the verticals of *dhā* are also joined, as is often the case, with a horizontal stroke; *d* occasionally appears as the modern *r*, e.g., in *paṇḍita*, l. 16; and finally, *s* in *satam̄*, ll. 11 and 21, and *-sākhāya*, l. 11, shows that this *akshara* had then begun assuming the modern form.

The **language** is Sanskrit, often barbarous and incorrect; and in some places the case-terminations are altogether omitted, whereas in others we have wrong cases, incorrect verbal derivations, false genders, incorrect numbers, and moreover, often, putting the *visarga* sign unnecessarily. The record is in prose, with the exception of a verse in ll. 11-13 and six imprecatory verses in ll. 18-23 in the end, which are not numbered. In the composition the writer has evinced his fondness for similes and we also find some portions of the composition reading as parts of verses, e.g., in *anushubh*, *mandākrāntā*, and *mālinī*, respectively in ll. 4, 7 and 8.

With reference to **orthography**, we may note (1) the general use of the sign for *v* to denote *h* also, as in *vudvudu*, l. 10; (2) the doubling of a class-consonant following *r*, e.g., in *vargga*, l. 6; (3) putting the dental for the palatal sibilant in some cases, cf. *sāsana*, l. 5 and *asāsata*, l. 13; (4) the wrong use of an *anusvāra* at the end of a stich; see ll. 12 and 18; (5) the use of a dental nasal for the lingual; cf. *visnu*, l. 6, *hiranya*, l. 18, *-grihṇāti*, l. 19 and *puṇya*, l. 20; and finally, wrong spellings, e.g., of *tri* as *truh*, l. 16, *jē* as *yē* in v. 6 (l. 22) but not in v. 5, and *jala* in l. 10 spelt as *yala*, some of which evince the effects of the locality. The spelling *Kālīñjara* (in ll. 3 and 5) and not *Kālañjara*, as it often appears, may also be noted with interest. In some cases the *mātrās* are detached from the letters to which they belong so as to make them appear as a *daṇḍa*, e.g., in *pauruṣimā*, l. 14.

It is a royal charter referring itself to the reign of the king **Dēvavarman** who belonged to the **Chandēlla** dynasty ruling at *Kālañjara*. The **object** of it is to record the grant of the village **Bhūtapallikā**, situated on the bank of the *Yamunā* river in the *viśhaya* of **Navarāshṭramaṇḍala**, by the king **Dēvavarman**. The donee was a **Brāhmaṇa-Paṇḍita** named **Kikkana**,² the son of *Paṇḍita Sōmesvara* and grandson of *Paṇḍita Jayasvāmin*, whose ancestors had come from a *bhāṭa-grāma* known as *Kumbhāṭī*. He belonged to the *Kṛishṇātrēya-gōtra* with the *pravaras* *Ātrēya*, *Ārchanānasa* and *Śyāvaśva* and to the *Bahvṛicha śākhā*, and expounded the *Vēdas*, the *Vēdāṅgas*, *Itihāsa*, the *Purāṇas* and *Mīmāṃsā*, and was devoted to the six-fold duties (*ṣaṭ-karm-ābhirata*) obviously enjoined on the *Brāhmaṇas*.³

¹ This is the first of the *Chandēlla* grant issued with the representation of a royal emblem.

² As we find the dental nasal often put for the lingual in the present inscription, it is not possible to know whether the last letter of the name was really *na* or *ṇa*.

³ See *M. S.*, X, 75. *Hiralal* took these six duties to designate the practices of *haṭha-yōga*, given under *ṣaṭkarma* in *Apte's Dictionary*. But his statement cannot be upheld for want of evidence. It is also worth nothing here that the donee of the *Nanyaurā* grant of the same king also was *ṣaṭ-karma-rata*.

The day of the grant, as mentioned both in figures and words, was **Monday the 15th day of the bright half of Mārgaśīrsha** of (the vikrama) **Saṃvat 1108**, when there was a **lunar eclipse**. The details of the date do not work out satisfactorily. Calculating the date to be equivalent to 20th November of 1051 A.C., Hiralal observed that it fell on Wednesday and that there was no lunar eclipse on that date.¹ In a foot-note to this sentence he also says that the date in V.S. 1109 would correspond to Tuesday, the 8th of December, 1152 A.C., when there was a lunar eclipse. And remarking that neither of these dates is associated with Monday he takes the date to be irregular. A solution of this difficulty, however, may be sought by suggesting that charitable deeds associated with an eclipse are generally performed only after the period of the eclipse is over; and taking the day of the eclipse to be Monday, as mentioned in the inscription, it would be **Tuesday** when the gift was actually made.² Thus, if what has been suggested here is all correct, the present grant appears to have been made about eight months later than the previous one which was issued by the same king on the occasion of the death-anniversary of his mother.

After a symbol of auspiciousness and a sentence in prose showing obeisance to Śiva, the inscription gives the genealogy of the illustrious king Dēvavarman; and this portion is nothing but a mere repetition of what we find in the preceding grant. He is said to be the sole and supreme lord of Kālīnjara; and in the portion that follows, a fulsome praise is lavished on him, comparing him with Vishṇu, Bali, Karṇa and Yudhisṭhira and also stating that he was as pious as a sage. The passage that follows says that Dēvavarman, having reflected that the world is unsteady like the interior of a plantain tree, that wealth is as momentary as (the flash of) lightning, that human life is transitory as water-bubbles and that youth is fickle, and also realising that righteousness alone is eternal, set his mind on giving alms and made the donation, as seen above. The purpose is stated to be the increase of his own merit and fame, as well as of his parents. Thereafter we have the conditions of the gift (l. 18); and with the customary imprecatory stanzas, the inscription comes to an end, stating that it was written by Yaśobhaṭa, the *akṣha-pāṭalika*, i.e., the writer of legal procedure.³

As for the **geographical names** occurring in the inscription, **Kālīnjara** (l. 3) is the well-known fort, as we have often seen; and **Kōṭīrtha** (l. 15) is obviously the celebrated place of pilgrimage within the fort. The river **Yamunā** (l. 14) needs no remark for its identification. The gift village **Bhūtapallikā**, which is stated to have been situated on this river (l. 14) does not appear to have been far from Hamīrpur, close to which the Bētṅā joins it. I am, however, unable to locate the place definitely. **Navarāshṭra-maṇḍala** (l. 14) roughly corresponds to the region where all these places were situated and a part of which was watered by the Yamunā, north of the present Hamīrpur District. We have no clue to identify the *Bhaṭagrāma* of the name of **Kumbhaṭī** (l. 15); it may, however, be pointed out that a place bearing the same name figures in the Mallār stone inscription of the Kalachuri Jājalladēva where it is stated to have been situated on the Ganges in Madhyadeśa.⁴ It appears that the Kumbhaṭī of the present inscription is identical with this place in view of the fact that whereas the first is said to be a *bhaṭa-grāma*, the second is described as a 'habitation of the twice-born (*dvija-vara-vasatī*)'.⁵ Thus this place has to be sought on the Ganges, somewhere to the north of Hamīrpur, though I am unable to know its definite location.

¹ *Ep. Ind.* Vol. XX, p. 126.

² It has also to be observed here that the consonant of first *akshara* showing the day may really have been *bh* and a redundant vertical stroke above its tail would make it appear as *s*, as also in *saubhāgya* towards the end of l. 7. This suggestion is made in view of the fact that the inscription teems with errors in engraving of this type. It may also be noted here that the thirteenth *tithi* ended at 10 moment of the day, on Monday, and the next was a *kṣaya tithi*; and thus the fifteenth day, when there was an eclipse, actually commenced on Monday.

³ One of the meanings of *akṣha* is 'legal procedure' which gives us this word. But in epigraphy it is generally used to denote an officer in charge of records and documents. See *I. E. G.*, p. 14.

⁴ *C. I. I.*, Vol. IV, p. 514, v. 9.

⁵ It is interesting to note here that like the donee of the present grant, the one mentioned in the Mallār grant also hailed from Kumbhaṭī and belonged to the same *gōtra* with the same *pravara*.

TEXT

¹ From an inked estampage.

² Perhaps originally द्वा, corrected to द्वा.

³ Hiralal read मही(ही), but the curve above the *akshara* is distinct in the impression before me.

⁴ Read संवत्सर. From सं up to के the portion reads like a half of verse in *Anuṣṭubh*, of course, without the elision of *a* for the sake of metre.

⁵ Originally engraved as ङ later on altered to ङ.

⁶ The meaning of this expression is not clear. The reading of the second of these *aksharas* is not certain, and the last of them can also be read as षः.

⁷ Read इतविष्याताकीत्तिः. The *visarga* was inserted later on, and the vertical stroke above the loop of the second of these *aksharas*, and also the stroke representing the medial *ā* or a *danda* after त्, appear to have been struck off subsequently.

⁸ Read-स्तोनङ्ग इव. The consonant of the second of these *aksharas* was originally incised as ष but later on changed to त.

⁹ Read-छन्दोलक्षण. It appears that an *anusvāra* was originally engraved on छ and also on the preceding ल, but both these signs were later on struck off.

¹⁰ Read-दणित्वादिन्दि, as suggested by Hiralal. The sign of the *visarga* that follows is only one dot.

¹¹ Originally ती, with the sign for medial *ī* chiselled off later on.

¹² Read तडिचञ्चलतां लक्ष्मीं.

¹³ To be restored to यौवनं च तृणाद्यजलविन्दुः.

¹⁴ Read धर्म एको हि सखा. The sense requires the use of त् or some such word before this.

- 23 शुष्यति ॥[१७¹⁹] मङ्गलं महाश्रीः । अक्षपटलिक्यशोभटेन लिखितं(तम्) ॥

¹ This *akshara* has a redundant chisel stroke above and it is also separated from the following letter by some space showing another redundant chisel stroke. Similarly, there are some redundant strokes over some of the following *aksharas*.

² The vertical strokes are redundant. A top-stroke representing the medial \bar{e} was originally incised above \bar{e} and subsequently struck off, as unnecessary. This verse is from Bhartṛihari's *Vairāgyaśataka*.

³ Hiralal put a query mark after these six *aksharas*; but to me they appear to be restored to दाने मति चके. The subscripts of both the bracketed letters that follow are formed alike, though they are different.

⁴ What is perhaps intended is -जाष्ठशोचरपर्यन्तः.

⁵ This *akshara* is incised as व and the same in -वमके- that follows has an oblique stroke separated from its loop.

⁶ Read मातापितृरात्मनश्च or -पितृरात्मनश्च. रा appears somewhat like षा, as it was actually read by Hiralal.

⁷ Read पुण्यप्रसोविबुद्धये इति, इति is redundant here.

⁸ The name of the third *pravara* can also be read in the original as ससात्राय. But read the whole as सात्रेया-चनानससोवासवेति विप्रवराय, following the *Gōtrapravaranibandhakadamba*.

⁹ The last but one *akshara* has the sign of medial *ai* above it, which is superfluous.

¹⁰ Read शाननेन प्रदत्तम् ।

¹¹ Read -विकामचितानुचितप्रभृति-

¹² The figure २ is intended to show the repetition of the preceding word. Cf. above, No. 91, Text, l. 3.

¹³ The *daṇḍa* is superfluous.

¹⁴ Read the latter half of this verse as अच्छेता चान्मन्ता च तान्येव नरके वसेत्.

¹⁵ The *akshara* in the brackets was originally engraved as ऋ and then altered to न्ध.

¹⁶ This form of the verb is singular whereas that of the subject is plural. Read in the first half : यो हरेत्.

¹⁷ These four *aksharas* are as actually engraved in the original. Restore: वसुन्धराम्.

¹⁸ The *daṇḍa* is superfluous and the *sandhi* is not made *metris causa*.

No. 109; PLATE CI

DARBAT ŚĀNTINĀTHA IMAGE INSCRIPTION OF THE TIME OF KĪRTTIVARMAN

[Vikrama] Year 1132

THIS inscription, which is engraved on the pedestal of a statue, was discovered in the village of Darbat,¹ near Mahōbā in the Hamīrpur District of Uttar Pradesh, in 1935, and was presented to the State Museum, Lucknow, by the Commissioner of the Jhānsī Division. It is No. G. 308 of the Acquisition Register of the Museum. The record was noticed by Dr. N. P. Chakravarti, then Government Epigraphist for India, who gave a brief description of it in the *Annual Report of the Archaeological Survey of India*, 1936-7, p. 92. His description of the inscription runs in the following words:

"It is found on a marble frieze containing a sitting lion on each side. Apparently the statue once set up has now disappeared. The whole record is in three parts. The one to the left records that the image of Śāntinātha was caused to be made by the merchants Pāhila and Jijū, that in the middle mentions *Paṇḍitāchārya* Vāsavachandra and the inscription on the right says that the image was set up by Kīrttidhara in Saṁvat 1132 in the reign of the illustrious Vijayapāla. This ruler is most probably to be identified with the father of Vikramasimha of the Dubkund branch of the Kachchhapaghāta family for whom we have a record of V. 1145. The Vijayādhirāja of the Bayānā Jaina inscription of V. 1100 has been identified with this Vijayapāla. But if he is a prince of the Sūrasena family whose inscriptions have been found in Bharatpur State, as he seems to be, then the present inscription would be the only record so far known of the Kachchhapaghāta Vijayapāla."

Dr. Chakravarti had also prepared impressions of this record in his visit to the Provincial Museum, Lucknow; and from a study of these impressions, lying in his office since then, Dr. D. C. Sircar, then Government Epigraphist for India, published a note in the *Indian Historical Quarterly*, Volume XXX, pp. 183-85, with a transcript and a photograph of the inscription. In this article he rightly observes that "Dr. Chakravarti does not appear to have taken note of the find-spot of the inscription." Sircar goes on to state that since in the eleventh century A.C. to which time the record belongs Mahōbā was one of the strongholds of the Chandēlla kings, it should be ascribed to this dynasty and not to that of the Kachchhapaghātas.² More in this respect will be said in its proper place, after giving the preliminary details of the document.

As stated above, the inscription contains **three sections**: the portion on the left, middle, and right, called here Sections **A**, **B** and **C**, each of which contains two lines of writing. The letters are not very carefully formed and a few of them are also damaged in Section **C**, but the text of the record can be completely restored. The **writing** belongs to the eleventh century A.C. Attention may here be drawn to the formation of *ṇ* in *paṇḍita* in **B**, l. 1, of which the lowest extremity is just a stroke, of *t* which is devoid of its tail of the left limb, as in *praṇamati* in **B**, l. 2, and of *r* which is denoted by a vertical with a horizontal or a slanting stroke attached to it on the left, as in *rūpaṁ* and *srēyaskaraṁ*, both in **A**, l. 1. The cursive way of writing *htyā* in **A**, l. 2, is noteworthy, and in *paṇḍitāchārya* in **B**, l. 1 *ch* appears as *d*.

The **language** of the record is Sanskrit; and whereas Section **B** is wholly in prose, Sections **A** and **C** have one verse each in the *Anuṣṭubh* metre, the latter also embodying the word *Saṁvat* in the end, in prose. **Orthographical peculiarities** are the same as to be found in the inscriptions of the time, e.g., the use of the dental for the palatal sibilant, as in *srēyaskaraṁ* and *Sāntēh*, in **A**, l. 1, which also illustrate the use of an *anusvāra* for a class-nasal, and the reduplication of a consonant following *r*, as in *Sāntēr-vaśava* in **A** l. 1, but not in *paṇḍitāchārya* in **B** l. 1. A grammatical error occurs in the use of *pratishṭi* (*thi*)*tā* for *pratishṭhāpitā* in **C**, l. 2.

The inscription is **sectarian**; and its **object** is to record the setting up of an image—evidently the one which is now lost, of Śānti, i.e. the Jaina Tirthaṅkara Śāntinātha, in V.S. 1132, corresponding to 1075 A.C. The details of the year are not recorded.

¹ The exact location of the village is not recorded and I have no means to ascertain the same.

² *I. H. Q.*, Vol. XXX, p. 184.

To note the contents of the inscription, it begins with an auspicious symbol for *Siddham*, and goes on to state that the image (*rūpaḥ*) of *Sānti*, i.e., the Jaina Tīrthaṅkara *Sāntinātha*, which bestows on prosperity, was caused to be made with praise, i.e., out of devotion to the deity, by the *Śreṣṭhins* *Pāhila* and *Jīḷu*. Section B says that *Vāsavachandra*, apparently the same as *Vāsavēndu* of Section A, bows down to the Jina, i.e., to the Tīrthaṅkara (whose image was set up), and a verse in *Anuṣṭubh* in Section C records that the statue was set up in the kingdom (i.e., during the reign of) *Kīrtivarman*, the son of *Vijayapāla* and during the administration of a group of his hereditary ministers.¹ The concluding part of the inscription records the *Samvat*, as we have seen above, and it is followed by what I take to be an auspicious symbol resembling *chha*.²

Vāsavēndu or *Vāsavachandra*, as his name figures in Sections A and B, respectively, appears to have been the sage who influenced *Pāhila* and *Jīḷu* to set up the image and not their preceptor, as remarked by Dr. Sircar in his paper in the *Ind. Hist. Quarterly*, referred to above. Similarly I do not see any reason to take *Pāhila* and *Jīḷu* to be the ministers under *Kīrtivarman*, as taken by Dr. Sircar. The reading *tatkulāmātya-vṛindasya* in stanza 2, which is in a separate section C, can hardly be connected with the names of these two persons figuring in an altogether separate stanza in Section A. Again, of the two ministers under *Kīrtivarman*, the first, that is *Pāhila*, is proposed to be identified, by Dr. Sircar, with *Pāhilla* of the *Grahapati* family, who was the son of *Śreṣṭhin* *Dēdū* and who is known from the *Khajurāhō* Jaina image inscription of V.S. 1215 (1158 A.C.).³ The difference between the years of these two records is of 83 years; and Dr. Sircar's suggestion can be accepted only if we presume that the *Pāhila* who caused to set up the present image when he was at least a young man could have enjoyed a life of more than hundred years. The name *Pāhila* also figures in another inscription at *Khajurāhō*, dated in V.S. 1011 (955 A.D.), showing that it was a very common name.

Since *Kīrtivarman* is mentioned in the present record as the son of *Vijayapāla*, there is no difficulty in taking him to be the well-known **Chandēlla** monarch of that name. The earliest known date for this king is offered by the *Kālañjara* stone inscription, to be V.S. 1147 or 1090 A.C.; and the present inscription, which gives for this king a date 15 years earlier than that of the record from *Kālañjara*, is of inestimable value as it offers a clue to solve the problem of the *Kalachuri-Chandēlla* contest, as will be seen below while dealing with the following inscription.

TEXT⁴[Metre: *Anuṣṭubh*]

- A 1 सिद्धम्⁵ [॥⁶] ष(रु)पं स्त्रे(श्रे)पस्करं सां(शां)तेर्व्वासवेन्दुकृतस्तुति⁷ । स्त्रे(श्रे)ष्टिपाहि-

तत्कुलामाल-
2 वृंदस्य प्रतिमा संप्रतिष्ठिता⁹ [॥२॥¹⁰] संवत् ११३२ ॥०⁹[॥]

¹ Dr. Sircar translates it as 'or belonging to king's *kul-āmātya-vṛinda*'.

² It is taken to be an ornamentation by Dr. Sircar.

³ See below, No. 124.

⁴ From the facsimile in *I. H. Q.*, Vol. XXX, between pp. 184 and 185.

⁵ Expressed by a symbol.

⁶ Sircar corrects this word to *स्तुते*; and takes it as an adjective of *शान्तेः* = *शान्तिनाथस्य*; but as an adjective of *रुपं*, it requires no emendation.

⁷ By a break in the horizontal stroke the fourth letter appears as *दा*, as in some other contemporary inscriptions.

⁸ The loop forming the lower portion of the preceding letter is broken; but to me it appears to be *उ* and not *उ* as read by Sircar.

⁹ In Sircar's reading in *I. H. Q.* this appears to be a zero; but I take it to be the letter *chha* (छ) as found to be the symbol of prosperity in some of the contemporary inscriptions.

KĀLAÑJAR STONE INSCRIPTION OF THE TIME OF KĪRTTIVARMAN

[Vikrama] Year 1147

THIS inscription was brought to notice, by N. P. Chakravarti, in the *Annual Report of the Archaeological Survey of India* for 1935-6, pp. 93 ff. It was edited by Dr. Sant Lal Katare in the *Epigraphia Indica*, Vol. XXXI (1933-34), pp. 163 ff., with text in Nāgarī and a facsimile facing p. 165. From the same facsimile the inscription is edited here.

The record is engraved on a slab of stone affixed to a wall of the sanctum of the temple of Nilakanṭha on the well-known fort of **Kālañjar** in the Bāndā District of Uttar Pradesh.¹ It consists of twenty lines of writing which covers a space about 43 cms. broad by 64 cms. high. The last of the lines is about three-fourth of the others, in length. The size of the letters in the first seventeen lines is between 1.8 and 2 cms., whereas in the remaining lines, which show letters of a slightly bigger size, it is about the double of this size.

The inscription is very slovenly engraved and shows a number of cases of subsequent corrections and insertions. It has also suffered considerably from the peeling off of the surface of the stone on the proper right side which has wholly or partially broken away one or two *aksharas* in each of the lines from 6 to 16, the loss being greater in ll. 15-16. Even in the extant part of the inscription some of the letters here and there are mutilated or rubbed out and a long horizontal scratch running over about the three-fourth portion of line 5 makes it difficult to restore the text for a great part thereof.

Besides what is said above, the proper right side of the bottom of the slab contains four lines of writing which occupies a space about 10.5 cms. high by 9 cms. broad; and the letters in these lines, which are of about the same size as in the last three lines of the main inscription, range from three to five in each of the lines. This portion of the inscription is wholly corrupt and the reading of it is almost uncertain, as will be shown below.

The **characters** are Nāgarī of the eleventh century A.C., to which the record belongs. They lack in showing uniformity, and in this respect they share the same peculiarity as of the preceding inscription. However, to note the outstanding peculiarities of the letters, we find that *k* in *havi*, l. 15, shows a sudden curve of the lower end of the vertical so as to form the loop and is altogether different from that employed all through the record. *Ṇ* has not developed the dot, as in *Gaṅgā*, l. 1; the lingual *d* is round-backed; e.g., in *mandapa*, l. 5; and the conjunct consonants *gg* and *gn* appear as *gn* and *ll*, respectively in *vargga*, l. 6 and *pūrṇā*, l. 12. *Dh* is without the horn on its left limb and thus it resembles *ch*; see *vidadh* = *vidhi*, l. 4; *r* is generally represented by a vertical with a horizontal stroke attached to its middle on the left; e.g., in *rachita*, l. 15, but its lowest extremity is occasionally curved to the right, showing it in a transitional stage, as in *rāja*, l. 9. We have at least one clear instance to show that as the latter member of a conjunct consonant this letter appears complete with a slanting stroke attached to the lower end of a long vertical; see *gra* in l. 19.

The **language** of the record is Sanskrit; and with the exception of the introductory *Om namah Śivāya* and the last five lines which are in prose, it is all in verse. The stanzas are not numbered, but each of them has the letter *tha* engraved at the end to show its completion.² A mistake in versification occurs in the very first stanza, to which attention has been drawn in n. appended to the text below.

The **orthography** calls for only a few remarks, *viz.*, (1) the use of the sign for *v* to denote *b* as well, as in *vōdha* in l. 3; (2) the occasional use of the dental for the palatal sibilant; cf.

¹ The place lies at 80°50' E. Long. and 22°58' N. Lat. and is about 30 kms. straight north-east of the fort of Ajaygadh and about 145 kms. due south-southwest of Allahabad. For the description of the Nilakanṭha temple and the other antiquities at the place, see Cunningham's *A.S.I.R.*, Vol. XXI, pp. 20 ff.

² For the significance of this syllable, see *Ep. Ind.*, Vol. XXX, p. 218, n. 2.

Sivāya, l. 1; (3) showing the medial diphthongs more often by the *mātrā* at the back than above; and (4) the general use of *anusvāra* mostly to represent all the class-nasals except *n* and *ṇ*, as in *Gāṅgā*, l. 1 and *kaṅṭha*, l. 8, though exceptions are also to be found, e.g., the word *maṇḍapa* is written with the lingual nasal in l. 5 but with an *anusvāra* in l. 18; (5) occasionally it is difficult to distinguish between a redundant chisel stroke and a *daṇḍa* which is, in some instances, put so close to a letter as to appear a *mātrā* attached to it, e.g., after *tha* in l. 2, and after the word *sūtradhāra* in l. 18; (6) a class-consonant after *ṛ* is reduplicated as in *pūrvāṇā*, l. 12; and finally, (7) *yuga* in l. 3 is spelt as *juga*, betraying local influence.

The **object** of the inscription is to record the construction of a hall (*maṇḍapa*) for the temple of Nīlakaṅṭha by the *guru* (spiritual preceptor) of Kīrtivarman (ll. 5-7), the latter of whom is mentioned here only as a king. The house to which this king belonged is not mentioned in the record, but from the time of the inscription and from the region where the inscribed slab was found, he appears to be evidently identical with the homonymous Chandēlla ruler and the son of Vijayapāla, as known from the preceding inscription.

The inscription is dated in ll. 16-17, in figures only, on the **seventh day of the bright half of Māgha**, of the year **1147**, on **Rēvatī nakṣatra**; and referring this date to the Chaitrādi Vikrama era and taking the year as *expired*, it corresponds to **Thursday, the tenth January, 1090 A.C.** This date falls within the reign period of Kīrtivarman whose earliest and latest known years are furnished respectively to be V.S. 1132 (1075 A.C.) and V.S. 1154 (1098 A.C.) by the Darbat and Dēogaḍh inscriptions. Thus the present date is not new; but the record reveals for the first time the name of Kīrtivarman's *guru* and also his patronage to Śaivism.

Opening with the customary invocation of Śiva, the inscription has a *maṅgala-ślōka* in praise of the same god, who is described as the basic pillar of the world and is evidently Nīlakaṅṭha himself in whose temple the inscribed slab was found. The second verse introduces the preceptor (*guru*) of Kīrtivarman as one who commanded mastery over the vast field of literature with its various phases of subtleties and who had attained enlightenment and high position by the favour of the three-eyed deity (Śiva).¹ The expression *śrīmūrti* used in this stanza may have been either his name or his title.² Stanzas 3-7 inform us that this person built a beautiful *maṇḍapa* adjoining to the temple of Nīlakaṅṭha, at Kālañjara, and now he requests (desires) the chief of the royal *śrīkaraṇa* (superintendent of the records department) and the other Śaivas who were Pāsupatas and the vārikas and others³ to comply with the request of Vāsudēva, by which they would also earn a part of the merit. The next two verses (8-9) speak highly of pouring water on *Siddhalingas* and also repeat the request of Vāsudēva. It may be noted here that it is not an official record, and hence the preceptor of Kīrtivarman, who enjoyed a high position (*mahimā*, as used in v. 1), desires the *śrīkaraṇādhipa* to regularise the whole affair. Further we are told that the inscription was composed by the Kāyastha, *Thakkura Dēvapāla*, son of Payā,⁴ and the *maṇḍapa* was built by the *sūtradhāra* **Rāma**.⁵

Line 19 of the inscription under study is extremely mutilated but the reading is certain. It may be translated as follows: "When the *sūtradhāra* Rāma constructed the *maṇḍapa*, two *halas* (of land) were obtained." It appears possible that Rāma was the donee, but who donated the land cannot be made out from the context. Admitting this difficulty, Dr. Katare who edited the

¹ Katare translated the compound word *prabōdha-mahimā* as 'glory of knowledge' (p. 163 of his article); I would, however, prefer to take here a *dvandva* compound, taking the latter of these words in the sense of 'power' as the royal preceptor could naturally have commanded.

² The way in which the word *śrīmūrti* is put in this stanza is rather obscure, and Dr. Sircar who takes this to be rather 'an honorific expression' than a personal name, observes that his real name was Vāsudēva, as quoted in his own speech in v. 5 (*Ep. Ind.*, Vol. XXXI, p. 164, n. 1). But this would involve *dūrānuvaya*; and as the word *śrīmūrti* is followed here by *it*, I am inclined to take it the name of the royal preceptor, presumably so called after he had acquired attainment and prestige. If so, it is consistent with his birth-name Vāsudēva, as given in his own speech.

³ See n. on the corresponding portion of the text, below.

⁴ The reading of this name is uncertain. We cannot be definite about the reading of the consonant of the second *akṣara*.

⁵ The name Rāma figures also in another inscription found at the same place and of V.S. 1188 (No. 117), as the father of the mason Lāhaḍa; and Dr. Katare identifies them both. This may be possible, but excepting only the similarity in name, we have no other evidence to hold this view definitely.

inscription, suggested that the donor may have been either the *sūtradhāra* Rāma himself, or, as also is not unlikely, Vāsudēva.¹ On the other hand, while publishing Katare's article in the *Epigraphia Indica*, referred to above, Dr. D. C. Sircar observed that "although the context appears to require a word like *dattam* instead of *labdham*, lines 17-20 mean to say that, on the completion of the construction by the mason Rāma, Kāyastha Dēvapāla granted, on the occasion of its installation ceremony, two *hala* measures of land for its maintenance."² The argument advanced by Sircar appears to be very cogent, but in view of the word *labdham* as we actually find in the record, and connecting it with *Rāmēna* in l. 18, it does not appear to be altogether improbable that the mason Rāma obtained the land by way of his wages for constructing the *maṇḍapa*, presumably from Vāsudēva, who, as the royal preceptor, could donate it on the occasion,³ and this is why he desires the royal superintendent (ll. 9-10) to regularise the gift by obtaining the formal royal sanction for this donation also, as is implied by the expression *anumanyantām* in l. 9 and again by *pālanīyaṁ* in l. 20, as in the case of the *maṇḍapa*.

Reference has also been made at the beginning of this article to four small lines incised on the proper lower right corner of the stone on which the present inscription is engraved. All the four lines contain about 14 or 15 *aksharas* which are extremely mutilated and nothing except the name Vāsudēva in the first of its lines is eligible. Dr. Katare is inclined to take this inscription as a 'marginal note' and he observed that "the scribe who appears to have omitted a portion of the text which he later on inscribed in the margin, has drawn the attention of the reader to it by adding a note at the end of the main record, saying that the wise will read the small inscription also."⁴ But it is noteworthy here that in l. 20 the inscription uses the word *ēva* and not *api*; that the word *laghu*, as read by Katare, is used without any case-ending and without any adjunct; and also that in the sense in which he took it, the use of *sudhībhiḥ* instead of *sudhiyām* would have been not only grammatically correct but also more appropriate. It may also be observed here that there should have been no necessity of forming letters of bigger size at the end of the record in the last three lines, particularly knowing when the writer or the engraver could at that stage have perceived that the record would thereby remain incomplete. Viewing all these points, I am inclined to hold with Dr. Sircar that the inscription seems to be complete in itself and what Katare takes to be a 'marginal note' may have formed part of an altogether different record which cannot be deciphered owing to its mutilated condition.⁵

The only geographical name figuring in the inscription is Kālañjara in l. 5. It is the well-known fort in the Bāndā District of Uttar Pradesh, as already seen above.

TEXT⁶

[Metres: Verses I, 3 and 4 *Āryā*; v. 2 *Vasantatilakā*; vv. 5-9 *Anuṣṭubh*].

- 1 [हरि(रिः)] ओ' नमः सि(शि)वाय । ग[ङ्गा] यत्र पताका हैमवती सा(शा)ल[भं]जिका⁸ यत्र ॥(1)⁹
2 यत्र¹⁰ स्तुतिः प्रस(श)स्तिर्मूलस्तम्भं नमामि जगतः¹¹ । [।१॥] अस्ति त्रिनेत्रपट(द)-

¹ *Op. cit.*, p. 163.

² *Op. cit.*, p. 166, n. 2.

³ See n. 2, on the previous page.

⁴ *Op. cit.*, p. 164. Also see my reading in the text, below, and n. on it.

⁵ *Op. cit.*, p. 166, n. 1. Attention may also be drawn here to text, n. 15 on the next page.

⁶ From the facsimile in *Ep. Ind.*, Vol. XXXI, facing p. 164. After the text was finalised, an impression kindly supplied by the Chief Epigraphist was helpful to me in deciding the reading of a few disputable letters.

⁷ This syllable is preceded by traces as of *fr*, probably showing that the letters हरि may have been engraved before it. Katare, who edited the inscription, took no notice of it.

⁸ *Bha* is engraved as *ha*, as also below.

⁹ Here two *danḍas* were at first engraved and the latter of them was subsequently scored off as unnecessary. It is also followed by what looks like a *kāka-pada* symbol.

¹⁰ A slanting stroke on the top of the left limb of this letter has changed its form.

¹¹ The fourth foot of this stanza, with its sixteen *mātrās*, offends against the metre, *Āryā*. If we add *गम्* in the end of it, as required by the use of *यत्र* in each of the other *pādas*, this quarter will have eighteen *mātrās*, showing the verse in the *Gīti* metre. Secondly, the *danḍa* which was later on inserted at the close of the verse, has damaged the following letter *त्र*, which looks like *स्त्र*, as actually read by Katare. For the similar idea as found in this verse, see above, No. 84, v. 1.

^१ A dot above the first of these *aksharas* is probably due to a redundant stroke of the chisel, as some others in this inscription, or it may have been due to the fault in the stone. Taking the letter as with the *anusvāra*, the editor of the *Ep. Ind.* remarked that the intended reading seems to be गंडुष, i.e., handful; but according to M. Williams, it is for *āchamana* or for rinsing the mouth. Moreover, the *śāstras* lay down that water is poured on an image by a pot (*gaduka*) and (not from the palm). Katare agrees with me in reading the word as I have done here.

^२ This *akshara* is wrongly engraved as म्.

^३ The letters lost here may have been मान्, as to be restored from the traces, as also read by Katare.

^४ It is also possible that the intended reading here may have been स नामतः = he. by name.

^५ This and the following sibilant show a combination of the dental and the palatal sibilants. Dr. Sircar translated the expression as "the Śaivas headed by the Pāśupata *āchāryas* and *vārikas*, i.e., temple superintendents like the *Paṇḍās* of today", for which see *op. cit.*, p. 164, n. 1. Our remark on the word *vārika* may be seen in No. 83 where too it occurs.

^६ I take *yēna* as an example of *Hētau trīṭyā* and the correction in the brackets is as suggested by Dr. Sircar.

^७ Both these letters are indistinct in the impression but the latter appears as a conjunct consonant.

^८ The *akshara* in the brackets has altogether disappeared and the reading is only from the traces left. Katare suggested *dhi* but my reading of it is more suitable.

^९ Read तावच्छु । The superscript is perhaps *t*, wrongly engraved.

^{१०} The sign of *anusvāra* above *ya*, which was wrongly engraved at first, appears to have been struck off subsequently.

^{११} Here the *aksharas* appear to be as—[त्?]नित्त, but nothing can be made out of them. It is possible that a portion of the *v*, in l. 15, which could not be accommodated in this little space, is given below, which Katare took as a marginal note, though he has not pointed out its exact fitting. It is also possible that this half of the verse has to be completed by what is engraved in l. 17, after the portion containing the date, which, in this case, has to be taken as a parenthesis, and it would then give us the name of the engraver as देवपाल. In fact, the whole of this portion is so carelessly engraved and is also damaged that nothing can be said with certainty, and the suggestions made here should all be taken as tentative.

^{१२} Both these *aksharas* are lost, leaving only traces.

^{१३} In his notice of the inscription in *A. S. I., A. R.*, 1935-36, p. 93, Chakravarti took two *mandapas* constructed by Vāsudeva, but this sense does not fit in the record. He appears to have taken the word in neuter dual, but it is masculine. The use of *sati* also shows that it is one (and not two), and the word is in the locative absolute. Also read घटिते.

^{१४} The *śaṅḍas* are redundant.

^{१५} Katare read लक्ष एव च सुधिया पटनीय, for which see my remarks in the article above.

^{१६} This letter is again damaged and the reading is doubtful.

DĒOGADH ROCK INSCRIPTION OF THE TIME OF KĪRTTIVARMAN

[Vikrama] Year 1154

THIS inscription was found by Sir A. Cunningham who published a rough transcript of it, accompanied by a photozincograph, in his *Archaeological Survey of India Reports*, Vol. X (for 1874-75 & 1876-77), pp. 103 ff. and Plate xxxiii-3. Cunningham's transcript was corrected by Hultzsch, who also translated the text into English in the *Indian Antiquary*, Vol. XI, pp. 311 ff. Subsequently, the record was edited by Kielhorn, showing some differences between his own and Hultzsch's readings and also attempting a fresh translation, in the same *Journal*, Vol. XVIII, pp. 237 ff. but without a facsimile. The inscription is edited here from an excellent impression which I owe to the Chief Epigraphist of the Archaeological Survey of India.

The inscription is incised on a rock near the river gate of the fort of the town of **Dēogadh**,¹ situated at the western end of the Lalitpur range of hills immediately overhanging the river Bētṅā in the Lalitpur division of the Jhānsī District of Uttar Pradesh. The record contains eight lines of writing which cover a space about 66·04 cms. broad by 35 cms. high; and the letters are beautifully formed, showing angles at their bends and joints. The size of the individual letters is between 3 and 3·5 cms.; but in the first three lines they are slightly longer in size and are sparsely written. The **characters** belong to the Nāgarī alphabet of the eleventh century A.C. and they are peculiar in showing a crescent incised under the straight line forming the top-stroke.² The inscription is in a good state of preservation.

As regards individual letters, attention may be drawn to the form of the initial *ē* with the tail of its left limb joined to the vertical on the right so as to bear resemblance to *p*, as in *ētē*, l. 5 (for comparison, see *prasanna* which follows it immediately). *N* as the second member of a conjunct consonant appears as *l*, e.g., in *Vishnu*, l. 3; the subscript *th* is laid flat on its side; see *-asthārya*, l. 4; *dh* is devoid of the top-stroke and thus resembles *v*; cf. *vidyādhara*, l. 2; and the letter *b*, which appears in three certain instances in all, is put by its own sign, which resembles *p* only with the difference that it is almost a rectangle with the horizontal stroke slightly less drawn; see *babhūva* in ll. 1 and 6 and *-abdhi*, l. 4. *Bh* which is generally indicated by a wedge joined to a vertical by means of a horizontal or oblique stroke, as in *babhūva*, ll. 1 and 6, resembles the modern *t* in one case, viz., *-bhavat*, l. 3; and *r* appears with a wedged loop as in *nara*, l. 2, but in one instance viz., *raṅga*, l. 8, we see a sudden bend in its lowest extremity; the subscript *r* is shown by a serif attached to the lowest extremity of the vertical of the preceding consonant, as in *prakara*, l. 5; and the slightly varying form of this subscript can clearly be seen in *śrī* in ll. 4 and 6; and occasionally as in *nyāpēndra*, l. 2 and *tēn = ātra*, l. 8, the serif assumes the form of a curved stroke.

The **language** of the record is Sanskrit; and with the exception of the customary obeisance in the beginning and the portion containing the date in the end, it is metrically composed. It contains seven verses composed in the usual *hārya* style, the first six of which are numbered. The language is correct. Metrical irregularity occurs in the last quarter of verse 5, which, though *anushṭubh*, obstructs against the metre *ślōka*. As regards **orthography**, we may note that (1) *b* is denoted by the sign for *v* except in the three instances noted above; (2) a class-consonant following *r* is usually doubled, as in *dharmma*, l. 2, of the exception of which we have probably only one instance in *-vinigata*, ll. 5-6; *Chaitra* is spelt with the double *t* in l. 8; (3) *ś* occasionally figures as *s*; e.g., in *-subhra*, l. 3 but not in *viśāla* in l. 1; (4) the medial *ē* and *ō* have both been denoted by the *prishṭha-mātrā* or the *mātrā* above, cf. for the latter, *ētē*, l. 5 and *rājō*, l. 4, respectively; in one case, in *-sthārya*, l. 4, we have both the *mātrās* above the letter; and finally, the word *aiṅghrī* in l. 1 is spelt as *amhri*, probably because of the influence of the local pronunciation of the word.

¹ Situated at Long. 78° 18' E. and Lat. 24° 32' N. The antiquities of this place are described by Cunningham in his *A. S. I. R.*, Vol. X, pp. 100 ff.

² Cunningham, and following him, Kielhorn call the head-strokes 'saucer-shaped'.

The inscription refers itself to the reign of **Kirttivarman** of the **ChandĒlla** ruling Dynasty (v. 2) and the **object** of it is to record the construction of a flight of steps (*ghaṭṭa*) by the king's Counsellor and Chief Minister **Vatsarāja**, who was the son of Mahādhara (v. 7). The inscription is dated at the end of l. 8, in figures only, on **Sunday**, the **second of the bright half of Chaitra** of the (Vikrama) era **1154**. The day and the date regularly correspond to **Sunday the 7th March, 1098 A.C.**, according to the Kārttikādi Vikrama year 1154, *expired*, when the second *tithi* ended 22 h. 13 m. after mean sunrise.¹

After the introductory *Om namah Śivāya*, the inscription introduces the name of **Vidyādhara**, "whose wide-spread fame was to the ChandĒlla family what the moon is to the night-lotuses." From him was born the king **Vijayapāla** (v. 1). The next verse states that the latter's son was the illustrious **Kirttivarman**, whose fame spread far and wide. Verse 3 goes on to describe the same prince, saying that in withdrawing royal fortune from (enemical) kings and making it firm, he appeared to be a new Vishnu who recovered Lakshmi from the sea and made her leave off her fickleness. This is evidently a reference to his conquest of the Kalachuri Karṇa, alluded to in a number of inscriptions of the house and will be discussed at length below.² The next verse informs us that Kirttivarman, among the other kings, resembled the moon moving in the midst of stars, and also that Yudhisṭhira, Sadāśiva and Rāmachandra—all these three have entered his graceous person which was endowed with all (lit. these and those) virtues.³ It may be noted here that these three in particular have probably been chosen by the poet with the intention of signifying the best specimens of *satya*, *śiva* and *sundara*, respectively.

The royal genealogy appearing in the present document is also known from some other inscriptions of the house, and in this respect it adds nothing new to our knowledge. Verse 5 introduces Kirttivarman's Counsellor and Chief Minister Vatsarāja who was the illustrious son of Mahādhara and a native of **Ramaṇipura**. We are informed in verse 6 that Vatsarāja wrested the surrounding region from the enemy and constructed the fort of Dēvagiri, which, from the use of the expression *idam* appears to be the fort of Dēvagari itself where the inscribed slab was found. The enemy from whom Vatsarāja snatched the neighbouring region is not mentioned here, but he appears to have been Karṇa or Lakshmi-Karṇa of the Kalachuri dynasty who is referred to above, though vaguely, in the description of Kirttivarman himself. As we shall see below, the credit of repelling Karṇa from the ChandĒlla territories is ascribed to Kirttivarman's Brāhmaṇa general Gōpāla; however, it is possible to hold in view of the information supplied by the present record, that Vatsarāja too may have had some significant share in that exploit.

It is stated in the last of the verses (v. 8) that Vatsarāja caused this flight of steps (*ghaṭṭa*) which was known after him. And with the date as seen above, the record comes to a close.

Of the **geographical names** mentioned in the inscription, **Kirttigiri** appears, as stated above, to be the hill near its findspot, probably named after Kirttivarman. I am unable to identify **Ramaṇi-pū**, *i.e.*, Ramaṇipura, or -puri, the native place of Vatsarāja.

NO. 112 ; PLATE CIV

AJAYAGADH ROCK INSCRIPTION OF THE TIME OF KĪRTTIVARMAN

(Undated)

THIS inscription was found by Alexander Cunningham in the touring season of 1883-84 and was noticed by him in his *Archaeological Survey of India Reports, Volume XXI*, p. 54 (Pl.), where he says that the inscription consists of four lines and contains the name of Kīrtti-varman in the last line. The record was again noticed by N. P. Chakravarti in the *Annual Report of the Archaeological Survey of India*, for the year 1935-36, p. 92; and from an ink-impression supplied by the Government Epigraphist for India, it was edited by Dr. Sant Lal Katore, in the *Epigraphia Indica*, Volume XXX, pp. 87 ff., with the text in Nāgarī and Plate (facing p. 90). From the same plate the subjoined transcript is prepared.

The inscription is engraved above a group of female images on a rock lying below the upper gate of the fort of Ajayagadh, situated by the side of the chief town of a *parganā* of the

¹ Originally incised as त्रि and later on the curve above the top-stroke was attempted to alter so as to form a *mātrā*.

² Kielhorn remarked that the superscript of *rbhū* was omitted while engraving, but in the impression before me it is very clear. This verse has a pun on the word *agada* meaning (1) free from disease and (2) without the *gadā*, mace.

³ Kielhorn read the bracketed letter as रु and corrected it to रू.

⁴ Above this letter is a fault of the stone appearing as an *anusvāra* sign.

⁵ Both the bracketed *aksharas* are rather peculiar; the fore-part of the first was probably formed as that of *y* and subsequently corrected, and the second appearing as *दे*. In the following निघौ ति- appears as *t*.

⁶ The subscript of ष्ठ appears more like ष्.

⁷ This *akshara* looks somewhat like रौ but it is as I have taken it here.

⁸ The fourth *pāda* of this verse obstructs against the metre *śloka*, though it is a different type of *anushtubh*.

⁹ Kielhorn says that the subscript is formed as *o* but in the impression before me it is clearly the same as taken here.

¹⁰ This *akshara* is a combination of the palatal and the dental sibilants.

¹¹ The vowel attached to the bracketed letter is clearly *u* and the consonant of the following letter, though indistinct and cramped, is *ś*, making the whole *akshara* to be *śu* and not *ba*, as it was read by Hultzsch in *Ind. Ant.*, Vol. XI, p. 311. And thus I agree with Kielhorn who observes that perhaps this letter (शु) was at first omitted and was inserted on revision and this is why it appears as a *visarga* in Cunningham's photozincograph. In the impression the two circles, as of *ś* (and not *v*) are clear.

¹² The tail of रू is curved to the left.

same name in the Pannā District of Madhya Pradesh.¹ At this place a number of inscriptions of the time of the ChandĒlla kings have been discovered.

The **writing**, which is damaged in the initial portion and a letter or two here and there, as can be seen from the transcript, covers a space measuring 1.22 metres broad by 9 cms. high. It consists of four lines, as already stated above. The size of letters is about 1.2 cm. The **characters** are Nāgarī of the eleventh century A.C. The initial *ē* shows its right limb as a vertical resembling that of *p*; see *ēk-ātapatrah*, l. 3, in which both these letters appear. The guttural nasal *ṅ* figures twice in l. 4, in *siddh-āṅganā* and *-kāraṅ = grāmaṅ*, where it is formed of straight strokes showing angles where they meet, and is also without the dot. *Ch* and *v* are almost alike; cf. *vimuchya*, l. 1. *Dh* shows a horn on the left limb; this horn is more often a slanting stroke, as in *sūtradhārah*, l. 1, but occasionally it is curved and separated from the lower limb, as in *nāmadhēyō*, l. 2. *Th* which occurs only once, in l. 4, is formed of two loops placed vertically before a vertical stroke; and almost so is the letter *sh*, which too occurs only once in *maharshih*, l. 2, with the distinction that its upper loop touches the top-stroke and the lower one is comparatively bigger in size. *R* which ends in a tail, e.g., in *charanti*, l. 2, is sometimes engraved as *v*, cf. *grāmō*, l. 3. The sibilants *ś* and *ṣ* present transitional forms. The former of these syllables sometimes appears in its old form beginning with a curve as in *śaila*, l. 1, but in some other instances it is without the knot in the middle of the left limb and shows a sudden bend to the right; cf. *śilais*, l. 2; its developed form almost resembles the modern one, as in *śimā*, l. 2. Similarly the antique and the developed forms of *ṣ* are to be seen side by side in *vāsaḥ svarg-auhasām*, l. 1. The dots of the sign of the *visarga* are rectangular.

The **language** of the inscription is Sanskrit; and, excepting the initial sentence denoting obeisance to Chandikā, the record is **metrically composed**. In all there are eight verses; all of them are numbered.² **Orthographically**, the following peculiarities may be noted: (1) the letter *h* is throughout denoted by the sign for *v*; e.g., in *vivudha* for *vibudha*, l. 1; (2) in two instances out of about a dozen, the dental sibilant is put for the palatal; they are *visuddha*, l. 2 and *sāstra*, l. 3; and the palatal sibilant appears for the dental about half a dozen times out of 21; cf., e.g., in *śimā* for *śimā*, l. 3. The wrong use of both these sibilants occurs in *śāsana*, l. 4, spelt as *sāsana*; (3) consonants following *r* are doubled, e.g., in *āviraabhiṭva*, l. 1, with a few exceptions like *śarīpūrṇa*, l. 4; (4) the final consonants *t* and *n* appear in their full forms in *āvira-āṣṭ*, l. 4 and *dhīmān*, l. 3; (5) the diphthongs are denoted by the *prishṭha-mātrā*, an additional upward stroke being marked for *ai* and *au*; but there are a few exceptions to this, like *-śaila*, l. 1, *-tatō* and *kyitinō*, l. 2; (6) *dri* is spelt as *dru* in *pītādri*, l. 4; and (7) sandhi has wrongly been observed in *sthitim-stāh api* put as *sthitim-stāpi* in l. 2.

The **object** of the inscription is to record the grant of the village of **Pipalāhika** and the sanction of the authority over the gates³ of the fort of **Kālānjara** in favour of one **Mahēśvara**, by the illustrious **Kirtivarman**. Nothing besides the name of the king is mentioned in the record, but from the statement that he donated a village to Mahēśvara on whom he also conferred the authority over the gates of the fort which was then included in the dominions of the ChandĒlla kings, he is none else than the king Kirtivarman of the **ChandĒlla** house, whose earliest and the latest dates are provided respectively by the Darbat inscription of 1075 A.C. and the Dēogadh inscription of 1098 A.C. (our Nos. 109 and 111). And the present inscription, which unfortunately bears no date, has to be placed during this period, as also indicated by its palaeography.

After the auspicious symbol, the record contains a stanza in glorification of (the fort) of Kālānjara, stating that it is lodged for their abode even by the inhabitants of the heaven, i.e., gods. The next verse describes Brahmā who created the three worlds, and in verse 3 is mentioned Brahmā's son (*ātmaja*) Kaśyapa, a sage who gave his name to the earth (*kāśyapī*). The following two stanzas introduce a family sprung from Kaśyapa and known as Vāstavya, in which was born **Jājūka**, who crossed the ocean of (was dexterous in) knowledge consisting of *kalā*, *purāna*,

¹ The place is situated at 24° 54' N. Lat. and 80° 20' E. Long. It is about 25 kms. due north-east of Pannā and about 32 kms. south-west of Kālānjara. Its antiquities are described by Cunningham in his *A. S. I. R.*, Vol. VII, p. 46; and Vol. XXI, pp. 46 ff.

² The number at the end of the last verse is not visible.

³ See text, *n.*, for the details.

āgama, *dharmaśāstra* and *sāhitya* and who was an abode of compassion and a limit of tranquility (*śama*) and truth (*satya*). In verse 6 we are told that this personage bestowed upon Gaṇḍa the 'undisputed sovereignty' of the world (*i.e.*, the Chandēlla kingdom) and (in reward), obtained as a royal grant, the village of **Dugaudā**.¹ The nature of help rendered by Jājūka to his overlord Gaṇḍa, the great-grandfather of Kīrttivarman, is not definitely known. The seventh verse of the record informs us that in the family of Jājūka was born Mahēśvara, who was of virtuous behaviour, vigorous, and his fame was sung by the wives of the Siddhas; we are also told here that by establishing the laws of Manu, this person restored the 'golden age'. The last verse (8th stanza) mentions the proper object of the record, as we have seen above.

The Vāstavya family of the Kāyasthas mentioned in the present inscription is also described in some other records of the house and at some more length in the Ajayagaḍh stone inscription of the time of Bhōjavarman,² as we shall see in its proper context. It is, however, evident that the ancestors of Mahēśvara of the present record enjoyed the hereditary right of appointment to high posts under the royal house of the Chandēllas.

The geographical names mentioned in the inscription are **Kālañjara** (l. 1), **Dugaudā** (l. 3) and **Pitādri** and **Pipalāhikā** (both in l. 4). The first of these places is well known. **Dugaudā**, as observed by Katare while editing the inscription, may be the modern Digaura (Dogora of the map), situated at 24° 58' N. Lat. and 78° 55' E. Long., about 24 kilometres north of Tikamgaḍh. There is, however, another place known as Dongorā (with an additional *n*), lying about 25 kilometres straight south-east of Lalitpur, the chief town in the District of Jhānsī in Uttar Pradesh but physically on the western borders of Bundelkhand which constituted the Chandēlla kingdom. The only difficulty in identifying Dugaudā of the present inscription with either of these places is that they are at a long distance of not less than 165 kilometres straight west of Kālañjar where Mahēśvara was intended to be constantly present. Katare proposes to identify **Pitādri** of the inscription with the *Pita-saila*³ which is about 7 kilometres south-east of the village of Digaurā in the Baldeogadh *taluk* of the former Orchhā State. But if the word *pīta* is to be taken in its figurative sense, it denotes the yellow soil found in the region from Lalitpur to Jhānsī;⁴ and if the hill in this region may possibly have been suggested here by the use of **Pitādri**, the identification of Dugaudā with the village Dongorā in the Lalitpur division, as mentioned above, gains some support. **Pipalāhikā** cannot be identified for want of the details, but it appears to be a village in the vicinity of the Pita hill.

TEXT

[Metres: Verses 1-2 *Vasantatilakā*; vv. 3-7 *Upajāti*; v. 8 *Indravajrā*].

1 ओम्⁵ नमश्चण्डिकायै । कैलासशैलमसमं प्रवरं गिरीणां — — — — — स नीलकण्ठः

¹ The expression *yēn-arjitaṁ śāsanam-āvibhāti* in v. 6, presents a difficulty of interpretation. Katare explains it by saying that "the grant of the village was recorded on a copper-plate, which has not yet been discovered" (*op. cit.*, p. 88). But in that case the use of *āvibhāti* would be redundant. The intended reading is possibly *yēn-arjitaṁ śāsanam*, to give the sense that he strengthened the government. Cf. *śrīr-asthairyam-amārajyat*, v. 3 of the Dēvagadh inscription of the time of the same ruler.

² Nos. 149 and 150. The latter of these inscriptions also mentions both Jājūka and Mahēśvara. Both these names are also found in an inscription from the same place, dated v. 1335 Chaitra-śu 13, Monday (27th March, 1279 A.C.). See *A. S. I., A. R.*, 1935-36, p. 91. It is not included here; its contents are the same as of the present record. For the fanciful origin of the Kāyasthas, also see *C. I. I.*, Vol. IV, p. 267; and *Naishadhīya Charita*, XIV, v. 66.

³ Pet hill of the map of former Orchhā state, as suggested by Katare.

⁴ *I. G. I.*, Vol. IX, p. 351.

⁵ From the facsimile facing p. 90 in *Ep. Ind.*, Vol. XXX.

⁶ Expressed by a symbol.

⁷ All these letters are crisped and damaged. The last five of them appear to read सपदि सच. Is the intended reading सुखदा कैलासशैलसदृशः प्रवरं गिरीणां... सपदि सच स नीलकण्ठः(?)

⁸ Originally some other letter engraved and later on corrected.

⁹ What is partly visible at the end of the line may have been a *kāka-pada* symbol, intended to indicate that the word is completed in the next line.

No. 113; PLATE CV

FRAGMENTARY MAHĪBĀ INSCRIPTION ENDING WITH THE NAME OF
KĪRTTIVARMAN

(Date lost?)

THIS inscription was discovered by General Cunningham in 1865, at Mahōbā,⁸ the ancient Mahōtsavanagara and the chief town of a Parganā of the same name in the Hamīrpur District of Uttar Pradesh. The place lies 86 kilometres to the south of Hamīrpur and 55 kilometres to the north of Khajurāhō, and is connected with both these places by metalled roads and is also a railway station on the Jhānsī-Mānikpur branch of the Central Railway. Cunningham found the stone let into the wall of a *Dargāh* known as of Pīr Muhammad Shāh; but some time later it found its way to the Museum at Allahabad, where Cunningham saw it again in 1872, and from an impression thereof taken by him there, he published a short account of it in his *Annual Report of the Archaeological Survey of India* for 1883-1884, Volume XXI, p. 71, and facsimile (Plate xxi). In 1885 a transcript of the inscription with a short abstract thereof in German was published in *Zeitschrift d. Deutsch. Morg. Ges.* Volume XL, p. 47, by E. Hultzsch, who also edited it almost about the same time in the *Epigraphia Indica*, Volume I (1888), pp. 217 ff. It is edited here from the original and a fresh impression kindly supplied by the Director of the Provincial Museum, Lucknow, where the stone is now exhibited.

¹ अ is probably dropped by the writer in view of the preceding *mātrā* and not knowing that the *sandhi* would be wrong since the *visarga* has already been dropped here.

² The *mātrā* of *ū* is partly visible above this letter.

³ There is a *kāku-pāda* sign at the end of this line.

⁴ cf. एकात्पत्रं जगतः प्रचलम् in *Raghuvamśa*, Canto II, v. 47.

⁵ Kātare read *द्रो*. But what he takes to be a *prishtha-mātrā* is in fact intended to be a *danda* which is very closely engraved before this syllable.

⁶ A redundant stroke makes this letter appear as श्री cf. *Pīta-laila-vishayēshu*, below, in No. 150, v. 9, and *Pīta-parvata-talē*, in *C. I. I.*, Vol. IV, p. 280, and text, v. 10. In the former, it is called a *vishaya*.

⁷ The reading of *न* is doubtful, as a horizontal stroke appears between the two limbs of this letter.

⁸ This means either (1) authority over the main gate of the fort (द्वार-वर) or the supreme authority over (all the) gates (द्वारधिकार) of the fort.

⁹ Dr. Kātare observes that the inscription ends abruptly and also that the scribe apparently left out the last two letters *कञ्च* which have to be conjecturally restored. But what appears to me is that these two letters may have been scribed just below the last two letters of the line, since there appears an *anusāra* and a horizontal stroke in the Pl.

¹⁰ Mahōbā is one of the well-known strongholds of the Chandēlla rulers; it is situated in Long. 79° 53' E.; Lat. 25° 18' N. The place and its antiquities are described by Cunningham in *A. S. I., A. R.*, Vol. XXI, pp. 71 ff. For the discovery of the inscription, see *ibid.*, Vol. II, p. 447.

The inscription, which is incised on the sunken panel of a slab of black basalt, is fragmentary, containing seventeen imperfect lines, written in ornamental characters. The stone is broken on the proper left side and also at the bottom. The maximum height of the extant portion of writing is about 39 cms., while the length of the lines is irregular; it begins with 24 cms. in the first line, and gradually increasing to 59.5 cms. in line 14, with the exception of lines 11 and 12 in each of which some 2-3 letters are lost, and decreasing again from line 15, it is only 15 cms. in the last line where a major portion is again lost. It cannot be said how many more lines the inscription contained originally, but the length of the lines can be estimated by a calculation of space covered by the letters which are lost and comparing the same with those in the existing portion; for example, the complete length of writing in l. 14, which now contains 60 letters and 2 other symbols and has lost 43 letters, must have been approximately of about 102 cms.; and this may have been the length of the writing in the whole inscription. However, whatever remains is well preserved, though the stone has also suffered from a crack measuring about 12 cms. and developed in the proper left corner at the bottom. Fortunately no letter is lost in this crack, which appears to have developed some time after Cunningham saw the inscription, as he does not refer to it.

The **writing** is well executed. The **size** of the letters varies from 1 to 2 cms. in height, including the *mātrās*, subscripts and the ornamental flourishes appearing occasionally above the tops. The **characters** are Nāgarī closely resembling those used in the Ajaygadh stone inscription of Kīrttivarman which has been noticed just above. The tendency of attaching a slight vertical stroke to the left of the top-strokes of some of the letters is further developed here, using the stroke in the cases of all letters.

Worthy of note are the forms of the following letters:—the initial *i* is represented by two hollow circles below a horizontal top-stroke, as in *ity-*, l. 10, and the initial *ē* resembles *p* only with the difference that the vertical is not completely drawn, as in *ēva*, l. 16. *K* as a superscript has its loop joined to the vertical not directly but by a small horizontal stroke, for which see *kshamā-*, l. 15; *ñ* is still devoid of its dot; cf. *tvāṅgat-tvāṅga-taraṅga-*, l. 8; the initial horizontal stroke of *ch* is not drawn beyond its loop; see *chakāra*, l. 7; *dh* begins with a curve but it is quite separate from the loop below; see *sudhā-* and *uddhata-*, both in l. 15; *b* is represented by its own sign as in the Deogarh inscription of the time of Kīrttivarman; see *babhūva* in ll. 6 and 8, but not in the same word in l. 14 and not also in *kuvja-*, l. 13; and *bh* often resembles *t*, as in *lēbhē*, l. 15. *R* has assumed the modern form but occasionally it is incised as a vertical stroke with a horizontal stroke or a wedge attached to its left; cf. *runmajjat-* and *ruddha-*, respectively in ll. 9 and 11; and lastly, *ś* has its left limb often joined to the vertical by a stroke as of *s*, and the latter of these letters occasionally begins with a loop as *ś*; cf. *śasvat*, l. 2 and *tasmād-*, l. 11 respectively. The tail of letters like *s* and *h* are occasionally not developed, as can be seen in *sudhā-* and *hari-*, both in l. 15. The *mātrās* above are thin but ornamentally treated. The forms of the letters, however, indicate that the inscription belongs probably to the latter part of the eleventh century A.C., or to the early years of the twelfth.

The **language** is Sanskrit which is generally correct; and excepting a small sentence paying obeisance to Śiva in the beginning, the record is composed in verses full of ornate style which often remind the reader of the works of our classical poets. **Orthographically**, we may note that only on two occasions, *viz.* in *śasvat* and *śasi-*, both in l. 1, we have the use of the dental sibilant for the palatal; a class consonant following *r* is often doubled, *e.g.*, in *kīrttayah*, l. 4; and particularly noteworthy is the use of *b* in *babhūva*, occurring twice in ll. 6 and 8, but not in other cases as already stated above. The use of *anusvāra* and *parasavarṇa* may also be noted, *e.g.*, in l. 8.

The inscription opens with the auspicious symbol for *Siddham* and, following the usual sentence paying obeisance to Śiva, *Namah Śivāya*, it has two stanzas, the first of which invokes the blessings of Śiva, and the second, of the Moon-deity adorning his forehead. Stanzas 3-5, introducing the (*Chandrātrēya*) **Dynasty** sprung from the moon, are partially preserved; and stanzas 6-9, which are all fragmentary, speak in glorification of the dynasty, probably also naming the earliest heroes thereof. The first of these heroes is explicitly stated to have been **Nārāyaṇa**, in stanza 8; possibly what the poet means is **Nannuka** (?), the earliest of the known kings belonging to this house. The name of **Vākpati**, who was Nannuka's son, as we know from other records of the house, appears to have been lost in stanza 9, of which only three

aksharas are preserved. Stanzas 10-11 mention the names of **Jējā** and **Vijā**, evidently the Prakrit forms of **Jayaśakti** and **Vijayaśakti**, who were brothers.

The next name we have in the record is that of **Dhaṅga**, in stanza 17, and the names of three of his predecessors—**Rāhila**, **Harsha** and **Yaśovarman** may have figured in stanzas 12-16 which are only partially preserved, the extant portions describing them all to be valorous, in a poetic way. **Dhaṅga**, as we are told here, destroyed his adversaries, and, by the strength of his arms, equalled (lit. weighed) even the powerful **Hamvīra** who was 'a heavy burden for the earth'. The identification of **Hamvīra** or **Hammīra** and **Dhaṅga** weighing him with his arms have been discussed above while dealing with the **Khajurāhō** inscription of **Yaśovarman** of V.S. 1011 (No. 98, above), where we have also seen that this powerful enemy was none else than **Sabuktigīn** (977-997 A.C.), against whom the king of **Kālañjara** (who was no other than **Dhaṅga** himself) helped **Jayapāla** with troops and money, according to the report of **Firishta**.

Stanza 18, which is again incomplete, appears to have a reference to **Dhaṅga**; and the following verse, of which the first half is fortunately complete, mentions his son **Gaṇḍa**, "an ornament of the earth and an unrivalled hero," the ladies of whose enemies, as we are told in a poetic way of expression, "used to resort to the forest." Referring to the description of **Gaṇḍa**, **Hultzsch** accepted **Cunningham's** identification of this ruler with **Nandā**, the king of **Kālañjar**, who, according to **Firishta**, **Nizamuddin**, and others, was twice attacked by **Mahmūd** in 1021 and 1023 A.C.¹ But from **Ibn Asīr**, who mentions **Mahmūd's** enemy as **Bīdā** and adds that he was the greatest of the rulers of India in the territory around **Khajurāhō** and had the largest army,² it is now definitely known that the Sultān launched his campaign not against **Gaṇḍa** but his son **Vidyādhara** (**Bīdā**).

Stanzas 21-22 state that from him, that is from **Gaṇḍa**, was born **Vidyādhara**, who snatched from his enemies the flower of fame and who brought about the destruction of the king of **Kānyakubja**; and who, a master of warfare, was worshipped by **Bhōjadēva**, together with the moon of the **kalachuris** (*kalachuri-chandra*) who were full of fear, on his throne.³

The **Bhōjadēva** referred to here is evidently the **Paramāra Bhōja** (c. 1000-1050 A.C.) and the **Kalachuri** king is either **Kōkalla** who ascended the throne some time before 998 A.C., or his son by whom he was followed some time before 1019 A.C.; **Mm. V. V. Mirashi** takes him to be the latter.⁴ All the three names have a reference to **Vidyādhara's** assassination of the **Pratīhāra** king **Rājyapāla** of **Kanauj** for the latter's surrender to Sultān **Mahmūd** of **Ghaznī**, as seen above. This chivalrous feat must naturally have made **Vidyādhara** a conspicuous figure among the contemporary kings, and it was natural for the **Paramāra** and the **Kalachuri** kings to hold him in high honour.

Stanza 23 mentions **Vidyādhara's** successor **Vijayapāla**, "whose conquest of the quarters, as we are told in it, was checked (only) by the ocean;" and the following stanza states that "perceiving this terrible (adversary) before himself, (even) the lotus of the heart of **Gāṅgēyadēva** closed its knot of pride in battle". While editing the inscription, **Hultzsch** thought that this expression means nothing more than that the two rulers were contemporaries, but we have now definite evidence to show that the eastern portion of the former kingdom of **Kanauj**, around **Vārāṇasī**, which was included in the **Chandēlla** kingdom under **Dhaṅga**, as we know from his **Nanyaurā** grant, dated V.S. 1055, had been subsequently captured by **Gāṅgēyā**,⁵ of course, definitely at the time when the present record was put to stone.

What is preserved of the last of the verses (stanza 25) is only the name of **Vijayapāla's** successor **Kirttivarman**,⁶ who in the next verse is described "to have acquired (royal) fortune just as **Purushōttama** (**Vishnu**) had obtained **Lakshmī** by churning by his mountain-like strong arms the stormful ocean in the form of **Lakshmīkarṇa**, who had swallowed several kings (mountains)". **Lakshmīkarṇa** is no doubt identical with the **Kalachuri Karṇa** (1041-1073 A.C.) who is known to have attained remarkable success in the east, south and west, and was thus

¹ See *Ep. Ind.* Vol. p. 219.

² *Kāmil-i-Tawārīkh*, Vol. IX, pp. 115 ff.

³ The expression *talpabhōjān*, as rendered by **Hultzsch** by 'who was lying on a roach' (*E. I.*, I, p. 219) is not at all appropriate here.

⁴ *C. I. I.*, Vol. IV, p. lxxxix, and notes 2-3.

⁵ For details, see *C. I. I.*, Vol. IV, p. xci; *H. E.*, p. 293.

⁶ The name of **Dēvavarman** is omitted here because he was a collateral.

regarded to be the Indian Napoleon; and the defeat of such a powerful adversary was indeed a marvellous achievement. This event is also referred to in a general way in the Deogaḍh inscription¹ and is described at length in the *Prabōdhachandrōdaya*, a drama written by Kṛishṇa Mishra some time between 1050 and 1116 A.C.² The work in its prologue states that Kīrtti-varman's general Gōpāla vanquished Karṇa, the Lord of the Chēdī country, and again placed his master over the throne. A lengthy Sanskrit passage of the drama again says that "Gōpāla, having crushed the ocean-like army of Karṇa, obtained the splendour of victory in battle, just as Madhumathana (Vishṇu), having crushed the milky ocean obtained the goddess Lakshmi. The way of description is exactly similar to that of the present inscription which also uses the same simile, probably with the drama before its poet. It is therefore clearly visible that the same event is referred to in both the works, viz., the drama and the present inscription.

The expression *pītādri-gaṭam* used in v. 8 of the preceding inscription, which is undated but which also belongs to the reign of Kīrtti-varman, enables us to solve the problem, in view of the situation of this mountain in Bundelkhand (in the present Tīkamgaḍh District).³ In the Rēwā stone inscription of 1060-1061 A.C. Karṇa's general Vappulla is reported to have vanquished one Trilōchana, whose details are not mentioned in it, at the fort of the Yellow mountain (*pīta-parvata-talē*);⁴ and the mention of this place where the encounter took place goes to suggest that in all probability it is the same Kalachuri-Chandēlla contest which is referred to in the *Prabōdhachandrōdaya* on the one hand and the present inscription on the other; and in view of this, Trilōchana about whom nothing is known from the record and who is diversely identified by scholars⁵ appears to have been a Chandēlla general (under Dēvavarman) who was overthrown by Vappulla some time before 1061-1062 A.C., which is the year of the aforementioned Rēwā stone inscription. If this view is accepted, the date of the newly-discovered Darbat image inscription⁶ may further help us in ascertaining the time of the Chandēlla-Kalachuri contest. The latest known date of Dēvavarman is 1051 A.C. when he issued the Charkhārī grant; and he may have been exterminated⁷ between this year and that of the Rēwā stone inscription, i.e., 1061-1062 A.C., and the kingdom, which had terribly suffered with his death, appears to have been recovered by his brother Kīrtti-varman some time before 1075 A.C., the year of the Darbat inscription which mentions him as the ruling prince.

Combining all these evidences we may also hold that though the main credit of exterminating the Kalachuri forces goes to Kīrtti-varman's Brāhmaṇa general Gōpāla, the valient Chandēlla Chief Minister, Mahidhara, also appears to have participated in the general rising and wrested from the enemy the region around Bētṵā, and the Kāyastha Mahēśvara also participated in this stupendous task, as applied by the Ajayagaṛh inscription, stating in v. 8 that he rendered help to Kīrtti-varman when the latter was in distress at *Pītādri*.

The next two verses (stanzas 27-28) of the inscription are again devoted to the extolment of Kīrtti-varman's bravery in the usual way and telling us that he was a brave and warlike prince. And after this, we have the expression *āsīt tuḍīya-tanayō-* (his son was.....). The remainder of the inscription is lost. This son of Kīrtti-varman, as we know from the inscriptions of the house, was Sallakshaṇavarman.

Though it is a hazardous statement to make, it appears that the inscription probably included one or two names more; and the lost portion also contained the date and the purpose of the record.

No geographical name figures in our inscription.

¹ Above, No. 7 vv. 5 and 6.

² Calcutta edn., p. 6; also see *ibid.*, pp. 5, 7 and 8. For the date of the drama, see *Ind. Ant.*, Vol. XVI, p. 204. As observed by Hultzsch, the historical importance of this verse was first recognised by General Cunningham in his *A. S. I. R.*, Vol. II, p. 453 and *ibid.*, Vol. IX, p. 108.

³ *Ep. Ind.*, Vol. XXX, p. 89.

⁴ *C. I. I.*, Vol. IV, p. 282, v. 10.

⁵ R. D. Banerji took him to be a descendant of Bārappa of the Chālukya dynasty, and V. V. Mirashi is inclined to hold that he was a Gurjara-Pratihāra. For both the views see *C. I. I.*, Vol. IV, pp. 280-81.

⁶ Above, No. 109.

⁷ The *V. D. Ch.* (Canto XVIII, v. 93) describes Karṇa as the death of the lord of Kālanjara, who thus appears to be Dēvavarman and not Kīrtti-varman as held by Smith in *Ind. Ant.*, Vol. XXXVII, p. 127.

TEXT

[Metres : Verses 1, 6 and 8 *Anuṣṭubh*; vv. 2, 4, 7, 14, 18, 27 and 28 *Sārdūlavikrīḍita*; v. 3 *Indravajrā*, *Upajāti* or *Vasantatilakā* (as shown by the first five letters only); v. 5 *Mandākrāntā*; vv. 10, 15, 17, 19, 21, 25 and 29 *Vasantatilakā*; v. 12 *Pushpitāgrā*; v. 16 *Sragdharā*; vv. 20 and 26 *Harinī*; vv. 22 and 24 *Mālinī*; v. 25 *Drutavilambita*; v. 9, 11 and 13 are totally lost].

¹ From impressions and the original stone, which is No. E-25 of the Lucknow Museum Catalogue.

² Expressed by symbol. What immediately follows it may have been a *danda*, with its lower end mixed with the curve of the following syllable, as already noted by Hultzsch.

³ Read *निष्कम्प*.

⁴ Here 21 syllables of v. 1 and 54 of v. 2 are lost. The number of lost syllables here and in the following notes are mentioned as already noted by Hultzsch.

⁵ Here the remainder of v. 3 and 27 syllables of v. 4 are lost. As in this line, all the *ūrdhva-mātrās* throughout are beautifully engraved, but occasionally they are not deep and consequently have only faintly come out in the impressions.

⁶ Here 18 syllables of v. 4 and 48 of v. 5 are lost.

⁷ Here 20 syllables of v. 6 and 47 of v. 7 are lost.

⁸ By an additional redundant stroke this letter appears as *myā*.

⁹ Here 23 syllables of v. 8 and the commencement of v. 9 are lost.

¹⁰ Here 20 syllables of v. 10 and the commencement of v. 11 are lost.

¹¹ Read *babhūva*. The first of these *aksharas* is lost in the preceding line.

¹² Here 7 syllables of v. 12, the whole of v. 13, and 6 syllables of v. 14 are lost.

¹³ This syllable, which is mutilated, looks like *ma*, but the reading is certain.

¹⁴ Here 18 syllables of v. 14 and 37 of v. 15 are lost.

¹⁵ Here 46 syllables of v. 16 and 7 of v. 17 are lost.

¹⁶ Here 49 syllables of v. 18 are lost. For the use of *tulayāñchakāra*, cf. *tulita-khasa-balaḥ* in No. 98, above.

¹⁷ Here 21 syllables of v. 19 and 32 of v. 20 are lost.

¹⁸ *Pa*, the first syllable of this word, is lost in the preceding line.

¹⁹ Here 32 syllables of v. 21 and 18 of v. 22 are lost. Read—*vārya-vāryaḥ* in the end of the line.

FRAGMENTARY MAHŌBĀ INSCRIPTION ENDING WITH THE NAME OF KĪRTTIVARMAN (DATE LOST)

Scale: Three-tenth

In 1888, when Kielhorn wrote, the stone had already suffered from a crack running through it from top to bottom and rendering one or two *aksharas* illegible, but it has since developed another crack in the middle which cuts the stone transversally, from ll. 1 to 21 on the right. Except these two cracks which have rendered a few *aksharas* illegible, the writing is well preserved throughout. The size of the letters varies from about 2 to 2.5 cms. Lack of uniformity in their size is occasionally noticeable and some of them are closely packed up. Slovenliness on the part of the writer as well as of the engraver is also apparent from subsequent corrections by over-writing or chiselling parts of letters and also making insertions, which are all noticeable here and there.

The **characters** belong to the Nāgarī alphabet and resemble those of the Kālañjara inscription of the time of Kīrtivarman which was incised only about twenty-five years earlier in V.S. 1147. Owing to the slovenliness in writing, as already remarked, it is sometimes difficult to distinguish between the forms of some of the letters; nevertheless, the present inscription evinces some **palaeographical peculiarities** showing a number of letters both in their older as well as in advanced form, indicating that they were in a transitional stage in the region during this period.

As regards the formation of the individual letters, the initial *i* appearing e.g., in *ity-ālāpa-*, l. 24, consists of two loops, the first of which shows a fine tail below and the second a hook above; *k* which is written in its modern Nāgarī form is occasionally incised in ligature, e.g., in *kālēna-*, l. 8; and as the first member of a conjunct consonant or with a *mātrā* below, this letter either loses its loop or the same is joined to its vertical not directly but with a horizontal stroke; see *Sākuni*, l. 19, and *hṛita-* and *kshunna*, both in l. 20, but with a few exceptions like *hṛita-* in l. 13, where we find the loop of *k*; *ṅ* appears as *ṅl*, as in *karṇa-*, l. 19; the upper loop of *th* is closed as found in modern Nāgarī; see *padārtha-*, l. 3; *dh* is written both in its older form without a horn on its left limb, as in *vyadhatta*, l. 20, and also in its advanced form where the horn appears, as in *sudhī-* in the same line; in *vidhī-*, l. 2, this letter has a top-stroke; in *dhara-* in the same line the top-stroke resembles a crescent, and in *-dhava*, l. 29, the horn assumes the form of a loop and is separated from any other limb; the slightly varying forms of this letter are to be seen in expression *dhana-dhānya-dhēnu-vasudhā-*, l. 28, where we also find the verticals of *dhā* joined by a horizontal stroke in the middle. *N* in many cases is formed as *t*; cf. *rājani* and *tēna-*, both in l. 18; *p* is occasionally marked as *y*; see *śilpi-*, l. 27; and the latter of these letters is frequently written as *s*; see *yāvāt*, l. 32; *bh* is incised as a dot, a wedge, or a vertical joined to the right limb by means of a horizontal stroke as in *bhṛū-bhaṅga-bhīm-ānana-*, l. 13; the letter *r* is incised in at least five slightly different ways; e.g., its *ch*-like form can be seen in *hāra-*, l. 15; the wedged form in *saṅgara-*, l. 33; its form as a vertical with a horizontal stroke attached to its middle in *-rārtta*, l. 1; as a vertical with a triangular loop in *rūpā-*, l. 3; and the developed modern form as in *dvāri*, l. 2. As a subscript, this letter appears in its complete form with the superscript half drawn, as in *chakrē*, l. 27, and occasionally the subscript form also is shown by a serif, e.g., in *tivra-*, l. 12. Both the sibilants *ś* and *s* are written in their older forms, e.g., in *Śivāya*, l. 1 and *suhrīt-*, l. 12, and also in their modern form, as in *Śivāya*, l. 2 and *tasmāt*, l. 12, respectively. The peculiar form of the ligature *ś* is also to be seen in some examples in *Śrīvāma-* and *prasasti-*, both in l. 30; and occasionally the former of these sibilants has also the horizontal stroke as in *s*; cf. *-driśvā-*, in the same line. In some cases *s* and *kh* have not developed the tail of the left limb; cf. both the letters in *sakhī-*, in l. 10; and finally, in a few examples the tail of *h* is either undeveloped or is altogether missing; see *varhā-*, l. 2 and *muhu-*, l. 3 respectively. As regards the *mātrās*, in a very few examples the medial *ā* is denoted by a curve above the letter, e.g., in *tasyā-*, l. 23; and the medial short *u* is in rare instances shown by a curve turned downwards and attached to the middle of the vertical stroke, as in *-Achhyuta-*, l. 13.

The **language** is Sanskrit; and except for the opening obeisance to Śiva, the two dates, one each at the end of ll. 32 and 34, and a sentence at the beginning of l. 33, the whole record is metrically composed in an artistic *kāvya* style abounding in figures and hyperbolic expressions. In all there are sixty-four verses, four of which are composed in the *Rathōddhatā* and one the *Hariṇī* metre which are rather rare. The verses are not marked by numbers, and one of them (No. 12) offends against the metre.

As regards **orthography**, we may note that (1) *b* is throughout denoted by the sign for *v* as in *-Vrahma-*, l. 4; (2) the class-consonant following *r* is generally doubled; see *nisargga*, l. 6; and the consonant preceding *r* is also doubled in some instances, e.g., in *-karttrā* but not in

sātra, both in l. 31; (3) the dental sibilant is often used for the palatal even in ordinary words like *sukla*, l. 3, *sihara*, ll. 20 and 26 and *suddha*, l. 27, and *vice versa* is the case in a few examples like *yalasā*, l. 18 and *unyasā* and *prāsāda*, both in l. 31; and lastly, the *anusvāra* does the duty of the final *m*, even wrongly at the end of a stich except in a few instances in vv. 25, 27 and 35 and some others. *Anusvāra* is generally put for all the nasals except *n* which is used indiscriminately.

The record contains some grammatical errors as in *prōllikhat*, l. 34, *nihkriyāya*, l. 1 and *iyōtīh-patāla*, l. 5. Rules of *sandhi* are violated in a few instances, e.g., in *ripōh chhētā*, l. 22, *bahih-hyita*, l. 14, and *svachchhan cha*, l. 16; instances of wrong spellings are to be seen, e.g., in *nētru* for *nētra*, l. 5, *amhris*, ll. 10 and 30; and the dental nasal for the lingual is wrongly used in *hiranmaya*, l. 4 and *kshunna*, l. 20. And finally, one of the two similar consonants forming a conjunct is dropped by syncopation in *ujjala* in ll. 5, 10, 15, 24 and 31. The *mātrās* above the letters in the first line are ornamentally treated.

The inscription refers itself to the reign of **Jayavarmadēva** of the **Chandrātrēya** (Chandēlla) **Dynasty**. The object of it is to record the renewal, in clear letters, of a *prasasti* which had been originally put in the temple of the glorious and illustrious Marakatēsvāra (the emerald lord) at **Kharjūravāhaka**, by his honoured predecessor **Dhaṅgadēva**, in (Vikrama) *Samvat* 1059 or 1001-2 A.C. and which had become damaged or illegible (l. 33). The inscription is dated, at the end, in the year 1173 (expressed in numerical figures only), the third of the bright half of Vaiśākha when it was a Friday. The date does not work out satisfactorily, but discussing all the possible alternatives, Kielhorn concluded that "Friday, April 6, 1117 A.D. is really the day intended by the inscription, although according to the civil reckoning that day was the 2nd of the bright half of Vaiśākha."¹ The year is thus to be taken as the kṛttikādi Vikrama expired. The *prasasti* was rewritten by the Kāyastha **Jayapāla** of the Gauda country.

The record opens with a short sentence paying homage to Śiva, and it is followed by four *maṅgala-ślōhas* in honour of the same deity under the names Rudra, Śiva and Śambhu and then of Nāgavakra (Gaṇapati). After two more verses, — one of them eulogising Bhārati (the goddess of speech) and the other expressing the poet's devotion to good people (old poets), the inscription says how the mundane egg came into existence, how from its two halves Brahmā made heaven and earth and also that the same god created the sages Marīchi with others (v. 8). The most eminent among these sages was Atri, from whose eye sprang the moon and the latter's son was the pious sage **Chandrātrēya** (v. 9). He was the progenator of the renowned race which is called after him and which would (in the form of a prophesy) rule the earth as long as the moon shines! (vv. 10-12). The poet then pays regard to the former great kings who were born in this illustrious race and ruled gloriously.

Verse 14 begins the genealogy of the Chandrātrēya (Chandēlla) house; and the first king mentioned here is **Nannuka**, whose valour in the battle-field reminded the gods, of Arjuna (vv. 14-15). His son was **Vākpati** who resembled Vākpati² (i.e., Bṛhaspati, the preceptor of the gods) and excelled the mythical kings Prithu and Kakustha (vv. 16-17). Vākpati's son was **Vijaya**, who is called Vijayaśakti in the other records of the house and whose fame was sung by semi-divine beings. He, subdued the adjacent regions and led an expedition, "in the interest of his friend," to the south as far as the seacoast, as Rāma had done (v. 20). This statement is no doubt hyperbolic but may contain some historical truth, viz., that this prince may have helped

¹ Kielhorn has noted that in this inscription the dental sibilant is 43 times put for the palatal and the palatal 12 times for the dental; but this number has to be taken approximate and not exact, as there are a few cases where both these sibilants cannot be distinguished from one another as I found in preparing my transcript of the record.

² *Op. cit.*, p. 139. Also see *Ind. Ant.*, Vol. XIX, p. 362, No. 171. Here the day (Friday) appears to have been joined with the *tithi* which commenced on it, 2 h. 16 m. after mean sunrise, probably in view of the fact that the third day of the bright half of Vaiśākha (*akshaya-tritīyā*) is a holy day generally favoured for undertaking any auspicious work.

³ It is significant to note that Yaśōvarman's inscription of V.S. 1011 also begins the account from the creation of the earth, though in a somewhat different way.

⁴ This simile is obviously borrowed from our No. 98, the inscription referred to above. In fact, from the account given in the present inscription it appears almost certain that the poet of this record had before him the same inscription, i.e., of Yaśōvarman.

his overlord the Gurjara-Pratihāra king, in the latter's expedition over a region which adjoined to the south of his kingdom.¹

The name of Jayasakti, who was the elder brother of Vijayasakti, is omitted in the present record probably for the simple reason that it deals with the line of succession from the latter. We are further told that Vijaya's son was **Rāhila** (vv. 21-23) and the latter's son was **Sriharsha** whose description is merely poetical, as of some of his predecessors (vv. 24-25). Harsha's wife was **Kāñchukā** (vv. 29-30) who bore him a son of the name of Yaśovarman, who was devoted to Brāhmanas, excelled Sivi in liberality, powerful, far-famed and highly meritorious (vv. 31-37). We are further told that Yaśovarman caused to be dug a large tank which was known as *Bailou-tadāga*, and also constructed a magnificent temple dedicated to Vaikuṅṭha (Vishnu) (vv. 38-39), which is evidently the same shrine as referred to in v. 42 in his inscription of V.S. 1011. His wife was Puppā (Pushpā) who bore him a son named Dhaṅga (vv. 40-42). The following five verses describe **Dhaṅga** in a poetic way and are devoid of any historical interest, though indicating the poet's skill in composing highly ornamental verses. In these verses Dhaṅga is compared with deities like Kṛishṇa and Nṛisinha, telling us that he exercised his complete control over the kings of Kōsala, Kratha, Sindhala and Kuntala and had put in prison the queens of the lords of Kāñchī, Āndhra, Rāḍhā and Aṅga. This claim cannot be justified from any of the available evidences.

The formal part of the original record commences with verse 48 and states that Dhaṅga constructed a magnificent temple and installed in it a lofty *līṅga* of emerald, also telling us that it was originally worshipped by Yudhishtira on the earth, where it was brought by Arjuna through the favour of Indra who used to pay homage to it (v. 48). It is interesting to note that the way of devising an exceedingly sacred origin and antiquity of the *līṅga* is much similar to the case of the image of Vaikuṅṭha described in Yaśovarman's inscription of V.S. 1011. In the same shrine Dhaṅga also installed another *līṅga* which was of stone (vv. 49-51); he also distributed a large mass of gold (v. 52) and established there pious Brāhmanas, honouring them by gifts of wealth, grain, cows and land (vv. 53-54).

The next verse of the inscription tells us that Dhaṅga, after he had ruled the whole earth (*i.e.*, his kingdom), and lived upwards of hundred years of age, abandoned his body in the waters (confluence) of the Gaṅgā and the Yamunā, closing his eyes in meditating upon Rudra and muttering holy prayers and thus obtained liberation. This statement makes it evident, as Kielhorn has pointed out, that the death of Dhaṅga must have taken place before V.S. 1059 which is the date of the original inscription and after V.S. 1055 when his Nanyaurā copper-plate was issued.²

Verse fifty-six of the inscription tells us that this *kīrti* of the lord was accomplished when Yaśodhara, the illustrious priest of the royal house was administering justice.³ The word *kīrti* (temple) is probably used here with a *double entendre*, as we so often find in inscriptions; and it also signifies all the charitable deeds of Dhaṅga which are mentioned here.

The *prasasti* was composed by the illustrious **Rāma** who was clever in 'composing pleasing expressions and also was an ocean of knowledge.' He was the son of Balabhadra and grandson of Nandana who was the foremost among the poets (*kavi-chakravartin*) and belonged to the Sabara (or Sābara) family of Tarkārika (vv. 57-58). It was written (on the stone) by the Kāyastha **Yaśahpāla**, who was dexterious in *padavidyā* (grammar), and was engraved by **Simha** who had mastered the art of writing (vv. 59 and 62 respectively). Verse 60 of the record says that the temple of Pramathanātha, *i.e.*, *Śiva* (where it was engraved) was built by Chhīchhā, who was an expert architect.

Here ends the original *prasasti* adding a sentence in prose, as seen above; and the remaining two verses are devoted to express that it was got re-written, in clear letters, by the

¹ We have no clear indication that Vijayasakti was a feudatory of any Pratihāra (*i.e.*, Gurjara-Pratihāra) king nor do we know any Pratihāra king leading any expedition to the extreme south. For a different view and its contradiction, see *E. R. K.*, p. 31, which also denies the suggestion of R. C. Majumdar, *viz.*, that Vijayasakti may have helped the Pāla king Dēvapāla in his campaign in the south (*H. B.*, Vol. I, p. 119, n. 4).

² See No. 100, above. Also see Kielhorn, *op. cit.*, p. 139.

³ He is apparently the same person as the donee of the Nanyaurā grant of Dhaṅgadēva and mentioned in it with the title *bhāṭṭa*.

king Jayavarmadēva who had spread his fame in all the directions. The inscription is concluded by expressing the name of the writer and the date which we have seen above. It is strange that the record contains no allusion to the successors of Dhaṅga nor anything else about Jayavarma besides his name. From the other records of the house, however, we know him to be the sixth descendant of Dhaṅga, as we shall see in their proper context.

Of the two place-names mentioned in the inscription, **Kharjūravāhaka** (ll. 32-33) is the modern Khajurāhō in the Chhatarpur District of Madhya Pradesh, as already seen above; and **Tarkārikā** from where the poet originally hailed (v. 57) and which is also the original home of the donee of the Nānyaurā grant of Dhaṅgadēva, has already been shown to be existing in Bihar. The other names like **Kāñchī**, **Āndhra**, **Rādhā** and **Āṅga** do not figure in the main context and they are all well known to need identification.

¹ Reading conjectural and as required by the context. In the original these two *aksharas* look like वृष्य, or वृष्य.

² Probably some other letter was originally cut and it was later on altered to र.

³ The *danda* is redundant.

⁴ Noting that this *akshara* looks like वा or वा Kielhorn proposed to correct it to धो to suit to the sense, but the *anusvara* on the third letter, which appears as र with its *v*-like form, as at many places in the inscription, tempts me to take the whole word as नितरां, with the second of the *aksharas* misformed. The reading proposed by me would also be suitable to the sense.

⁵ By play on words, the expressions used in this verse are applicable to *varṣa*, meaning (1) family and (2) bamboo.

⁶ This hemistich is metrically faulty. It may be restored as चन्द्राशेयकुजे जाता आचन्द्रं क्षितिपः क्षितिम्

⁷ The punctuation mark, as some others below, is superfluous; and not noting them separately in each case, I have put them in brackets. Kielhorn read the two of the preceding *aksharas* as *sargga* and noted that the second of these letters is rather *amma* than *rgga*. I think that *mma* is really intended here in the sense of 'having happiness by righteous conduct'.

⁸ न, which was originally omitted, was added subsequently in a smaller form below the line and the dots of the *visarga* that follows are combined with the *danda*.

⁹ Originally two dots, later on changed to the curve of the medial *i*. Here we can have the *pada-chchhāda* as *krāmātā* or *ākrāmātā*, walking (proceeding), or attacking.

¹⁰ The consonant of this *akshara* looks like न, and the fore-limb of the preceding *akshara* looks somewhat like व, because of a redundant chisel stroke.

¹¹ The consonant of the first letter of the name is cut as च, and of the *bhyu* that follows appears a *gh* probably with a medial *u*. *Sah* is here in the sense of 'renowned'.

¹² These *aksharas* are misformed and in the impression they look like वाक्पतस्वाधिनां वाक्. But I fail to see the mark above the last of these which Kielhorn, with some hesitation, supposed to be intended for वा.

¹³ The seventh *akshara* of this verse is engraved as *dhā* and Kielhorn corrected it to *vā*, giving the word *vārayōshītām*. He also translated the verse, for which see the text, f.n. 32.

¹ Some other letters originally cut in place of *nmū* and *dru*, which were subsequently corrected.

² The *akshara* in the brackets was lost in Kielhorn's time also, and the reading adopted here is as proposed by him.

³ Read बहिःकृता. The consonant of the second of these *aksharas* is damaged.

⁴ The bracketed *akshara* is entirely lost.

⁵ Kielhorn read *-sitaṁ* and corrected the first of these letters to *si*, to give the sense of *āsitaṁ*. But my impression shows a *rēpha* attached to *s* and thus I take the letter as *Sra*.

⁶ The preceding letter was originally cut as *ṣ* and later on altered to *ṣ*. This verse contains a play on *vr̥tta* meaning (1) round and (2) conduct, and on *guṇa* meaning (1) thread and (2) merit.

⁷ The *visarga* is omitted here not wrongly, as Kielhorn has observed, but in accordance with the *Vārttika* on Pāṇini, VIII, 3, 36.

⁸ This refers to the legend according to which Bhīṣma was born from the Ganges (*Tridasa-sarit*) by Sāntanu. See *Mbh.*, I, 99, 47; *Mēdini*, 118, 81 (*Gāṅgēyah Śyāt Pumaṁ Bhīṣmā*).

⁹ The bracketed *akshara* appears to have been changed to *sa*, which suits the sense.

¹⁰ There is a pun here on the word *pala*, meaning (1) flesh and (2) a weight (and thus a coin of that weight). *Sivi* is the well-known mythical king.

¹¹ Kielhorn read this *akshara* as *ti* and corrected it to *ni*, but I do not think that the emendation proposed by him is necessary. *Rājati* is in the *loc. absolute*; the verb is *ubhayapadī*.

¹² Read सुधाघनत्व. The latter *ha*, which was repeated by mistake, has been scored off; but I fail to find the two signs of the *anusvāra* also struck off, as Kielhorn observed.

¹³ The *prishtha-mātrā* of द्रो is very thin and the consonant of च in द्रचा appears to have been corrected. The letter च is damaged by the crack.

¹ Kielhorn read correctly the first letters of feet 3 and 4 as *tañ* and *na* respectively, but finding them indistinct in the impression before him, he suggested *nā* and *sañ* instead, without any cogent justification. He also translated the verse accordingly, for which see *Ep. Ind.*, Vol. I, p. 144, n. 54. But I prefer to retain both these letters (*tañ* and *na*), which are quite clear in my impression. The former of these would mean 'the celebrated (Yudhishtira) on the one side, and 'the recognised' (canons of dharma) on the other. Kielhorn's translation 'that Dhritarashtra did not oppose Yudhishtira' would also factually go against the statement of the *Mbh.* viz. that he actually did so 'when he saw his own race being destroyed', though not after his family was decimated. Thus the figure of speech applied here is what is technically called *Virōdha* and not *Virōdhābhasa*, as taken by Kielhorn. The reading *na* also brings out the significance of the use of the word *adbhuta* with more force, while its emendation to *sañ*, as suggested by Kielhorn, misses the point almost completely.

² Originally *सि*, later on changed to *नु*.

³ Some letter was first cut before *स्त्री* and subsequently was struck off as redundant.

⁴ Here the reference is to the mythical story of Sagara's sixty thousand sons digging down towards the *Pātāla* in search of the sacrificial horse and thus extending the boundaries of the ocean. Cf. *R. V.*, XIII, v. 5. The name *Baihya* seems to suggest that the tank was excavated in a spot containing numerous *bilva* (*Aegle marmelos*) trees sacred to Śiva to whom this temple was dedicated.

⁵ Originally *सु*, with the *mātrā* erased later on.

⁶ Kielhorn observed that this *akshara* (*tra*) is probably engraved below the line, but I do not find it in my impression. His restoration of the following *अपवयति* to *अपवयति* is not necessary since the reading here gives the sense of 'turning away (from the main path)'. The temple referred to in this verse is obviously the same as described in No. 98, v. 42.

⁷ Both the letters of the name are partly abraded but the reading is certain. Kielhorn stated that they 'are quite distinct in the best of the impressions'; and, following him, I take it to be the name of the queen. It may also be observed here that generally a lady is compared to Lakshmi; but the comparison of this queen with Narmadā may go to suggest that she came from the region where this river was flowing.

⁸ Kielhorn has noted that the letter in the brackets is rather *व* than *घ* but the present inscription has a number of instances, e.g., in *ll.* 25 and 26, where the *akshara* can distinctly be read as *घ* not *व*.

⁹ Read *रिपोश्छेत्ता*. By *Usha* this verse is applicable to both Dhañga and Krishna.

¹⁰ The reading of the first *aksharas* of this verse, from my impression, is exactly as given here, of course with the exception that the second of these may also be read as *स्ना* and also that the third and the fifth appear to be altered. Read *तस्मात्समृष्वत्*.

¹¹ Kielhorn read the bracketed *akshara* as *स्या* and restored it to *स्य*, but the *mātrā* is marked above the letter, a small trace of which can be seen in the photograph.

¹² The *mātrā* is incised above the letter, resembling a *rēpha*.

^१ Both the signs for the *visarga* are hollow rectangular marks, as also in the beginning of l. 28. below.

^२ This is a mythical range of mountains round the world. The Sun and the moon move along on side of it.

^३ The first *akshara* of the name is almost mixed with the preceding one.

^४ For प्रतिष्ठापितः which, of course, would not suit the metre.

^५ The fabulous mountain round which the planets are said to revolve; it is also said to consist of gold, and thus the idea well suits the description of *kalāṣa* made of *kalādhautā*, i.e., gold.

^६ The bracketed *akshara* has no top-stroke and thus it appears as *dh*. *Tulā-purusha* used in the same verse (or *tulā-dāna*) means the gift to a Brāhmana (or, Brāhmanas) as much gold, jewels or other valuable things as equal of the weight of one's body. For this *mahādāna* see Hēmadri's *Chaturvarga-chintāmaṇi*, (Banaras edn.), I, p. 175.

^७ The sign of *visarga* was originally incised but later on struck off. For the six duties of a Brāhmana, see *M. S. Ch.* X, v. 75.

^८ The sign of *anusvāra* is cut before the curve.

^९ *Sandhi* is not made here, as it is optional.

^{१०} As n. 50, above.

^{११} The first of the bracketed letters is rather peculiarly formed and the second appears to be corrected from *ta*, which was originally incised.

^{१२} The sign of the *visarga* was incised subsequently, as the upper dot is above the line and the lower one for below.

No. 115 ; PLATE CVII

KĀLAÑJAR PILLAR INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1186

THIS inscription was found on a pillar in the temple of Nilakanṭha inside the fort of Kālañjara, in the Bāndā District of Uttar Pradesh.¹² It was noticed by General Alexander Cunningham who transcribed and translated it in his *Archaeological Survey Reports*, Vol. XXI (for 1883-84 & 1884-85), p. 34 and Plate x-A. It is edited here from an inked impression which I owe to the kindness of the Chief Epigraphist, Archaeological Survey of India.

The record, which consists of five lines, is incised on a shaft, rounded at the top, and below another record separated from it by a space of about 2 cms.¹³ It covers a space 28 cms.

¹ Kielhorn read the first *akshara* of this word as *प्र* but the *mātrā* is marked as a horn above.

² Above *re*, and also above the preceding *ra*, the sign for the medial *ē* was first cut and then struck off as unnecessary.

³ Kielhorn doubtfully read the third *akshara* as *न* and remarked that it might also be read as *nā* or *tā*. But I see a curve representing the medial *ī* which appears to have been either struck off in the original or brushed.

⁴ The thousand-figure, though damaged, is quite clear.

⁵ The sign for *ē* (not *i*) before *ha* was originally marked and later on struck off as unnecessary. Kielhorn also remarked the same after studying it from two of the impressions with him. The *akshara* *ha* which was quite distinct in his time can now be recognised only in traces.

⁶ Read *द्विपता*. The *akshara* *प* so far as I can make out, had a sign *ā* attached at its top, but it has disappeared now, leaving only traces above. The following *akshara*, as many others in this inscription, has *π* for its consonant.

⁷ Kielhorn read this *akshara* as *शी* and corrected it to *शी*. But the loop at the top shows it definitely as taken here, and the tail is mixed with the horizontal stroke.—The vertical stroke that follows is redundant.

⁸ For *प्रोल्लिख* *metris causa*. To suit the metre it may be restored to *प्राल्लिख*.

⁹ The second *akshara* of this word is engraved as *त्त* with a small curve representing the superscript of the following letter.

¹⁰ From *शुति*: up to the end the letters are slightly bigger in form.

¹¹ For the situation and archaeological importance of Kālañjara, see No. 110, above.

¹² The inscription above consists of two and a quarter of lines and ends with the usual expression paying obeisance to Nilakanṭha (*nityam pranamati*). The letters in it are smaller and the palaeography shows them to belong to a slightly earlier time. The technical execution too is crude. For all these reasons I hesitate to agree with Cunningham who took both the records as one.

KĀLAÑJAR PILLAR INSCRIPTION OF THE TIME OF
MADANAVARMAN, VIKRAMA 1186

Scale: Four-seventh

broad by 24 cms. high and is in a fair state of preservation, except one letter each in ll. 2 and 3 where it is slightly damaged, though it can well be made out. The average height of the letters is 3 to 5 cms.

The inscription consists of four lines. The characters are Nāgarī. They are beautifully formed and carefully engraved. The vowel *a* which occurs only once, in l. 5, begins with a curve: and among the consonants, *ch* shows its loop triangular in *-nācha-*, l. 4; the joining bar of *s* continues to be a curvature of the lowest extremity of its left limb; see *Samgrāmasiḥa*, l. 3; and *h* has developed a tail as in the same example. *R* shows two different forms in the same word *-pratihāra*, l. 3. The language is Sanskrit, influenced by the local dialect, as we find from the use of *-Siha* and *-nāchani-*, both in l. 4. The inscription is in prose: and orthographically there is nothing worth noting, except that *m* after *r* is doubled in *-varmma-*, l. 2.

The inscription refers itself to the illustrious *Mahārāja Madanavarmadēva*, whose name figures in l. 2. The family to which this king belonged is not mentioned in the record, but the title of the king and the discovery of the inscription at Kālañjara, which was a stronghold of the Chandella rulers, leave little doubt that he was no other than the son of Prithivīvarman and the grandson of the illustrious Kīrtivarman, as we know from the other inscriptions of the house.

The date of the record, as mentioned in numerical figures only, is (Vikrama) **Samvat 1186** without further particulars: and the year, if taken as the northern Vikrama *expired*, corresponds to **1129 A.C.** In the absence of the necessary details the date cannot be verified.

Opening with the year and mentioning the name of the king, the inscription introduces the *mahā-pratihāra* (the great personal attendant of the king) of the name of *Samgrāmasiḥa* and the great (court) dancer *Padmavati*. The object is not stated therein but the record appears to mention some benefactions made to the deity by both these persons. The last two names *Lāshu* and *Auji* appear to represent those persons who engraved the record: or these names may have been written some time subsequently and have no concern with the main record. We have nothing to ascertain either of the views.

The importance of the inscription lies in the fact that it furnishes the earliest year for the reign of Madanavarman.

The geographical name mentioned in the record is that of **Kālañjara**, which is the well-known fort as we have often seen.

No. 116; PLATE CVIII-A

KĀLAÑJAR PILLAR INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1187

THIS inscription was brought to notice by General Alexander Cunningham, who published his transcript thereof, in Roman characters, with an English translation and a small-scale lithograph in his *Archaeological Survey of India Reports*, Vol. XXI (1883-1885), p. 34 and Plate X-B. The inscription is edited here from the same plate.

^१ From an impression which I owe to the Chief Epigraphist, Archaeological Survey of India.

^२ Expressed by a symbol.

^३ This is a contraction of संवत्.

^४ Read either राजश्री or राज्यश्री देवस्य, dropping the *dandas*.

^५ A colloquial word in the sense of 'dancer'.

The record is inscribed on a piece of a broken stone pillar which Cunningham found at the police station in the town of **Kālañjar**, and was reported to have been brought from the temple of Nilakanṭha, inside the fort at that place.¹ As the pillar was broken, the record is incomplete. The preserved portion contained four lines of writing of almost equal length, the dimensions of which are not recorded.

The **letters** which are carelessly incised belong to the twelfth century A.D. The **language** is incorrect Sanskrit, as will be known from corrections made in the following transcript. From the point of palaeography it is worth noting that whereas the letter *k* has assumed the modern form, *j*, *r* and *s* are older; see *kālīñjara*, l. 3, and *su* in *sudī*, l. 1. The preserved portion is all in prose. **Orthographically**, we may note that the letter *ma*, ending the name of the king in l. 2, has been doubled.

The **purpose** of the record is not to be found in the existing portion; it is probably to record some benefactions made by one Śrī-Trisalka during the reign of the illustrious madanavarmadēva, who is evidently the Chandēlla king (c. 1129-1163 A.D.).

The **date** of the record, which is mentioned only in figures, is **the ninth of the bright fortnight of Jyēshṭha of the (V.) year 1187**. It cannot be verified, but taking the year as the Northern *expired*, it corresponds to Sunday, 18th May, 1130 A.C.²

NO. 117; PLATE CVIII-B

KĀLAÑJAR ROCK INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1188

THIS inscription is incised on a rock to the left of northern side of the gateway of the temple of Nilakanṭha in the fort of **Kālañjar** in the Bāndā District of Uttar Pradesh. The record was first transcribed and translated into English by Lieut. F. Maisey in the *Journal of the Bengal Asiatic Society*, Vol. XVII (1848), pp. 321 f., and subsequently it was published, with a fresh transcript and a small-size photozincograph, by General Cunningham, in his *Archaeological Survey of India Reports*, Vol. XXI (1883-85), pp. 34-35 and plate x-C. It is edited here for the first time from an impression which I owe to the kindness of the Chief Epigraphist.

The inscription contains nine lines of writing which covers a space 46 cms. broad by 33.5 cms. high. The first three of the lines form one group, and, after leaving some space which is more than the ordinary distance requires, the third line is followed by three pairs of two lines

¹ Cunningham, *op. cit.*, p. 34, n.

² For the Northern V. correct, the date would be equivalent to Wednesday, 29th May, 1129 A.C.; and for the Southern V. *expired*, to Thursday, 7th March, 1131 A.C.

³ From Pl. x-B in Cunningham's *A. S. I. R.*, Vol. XXI.

⁴ Cunningham read *Aum* (Om) before *Sarvat* but I do not find the symbol in the plate. It is not known if it has disappeared.

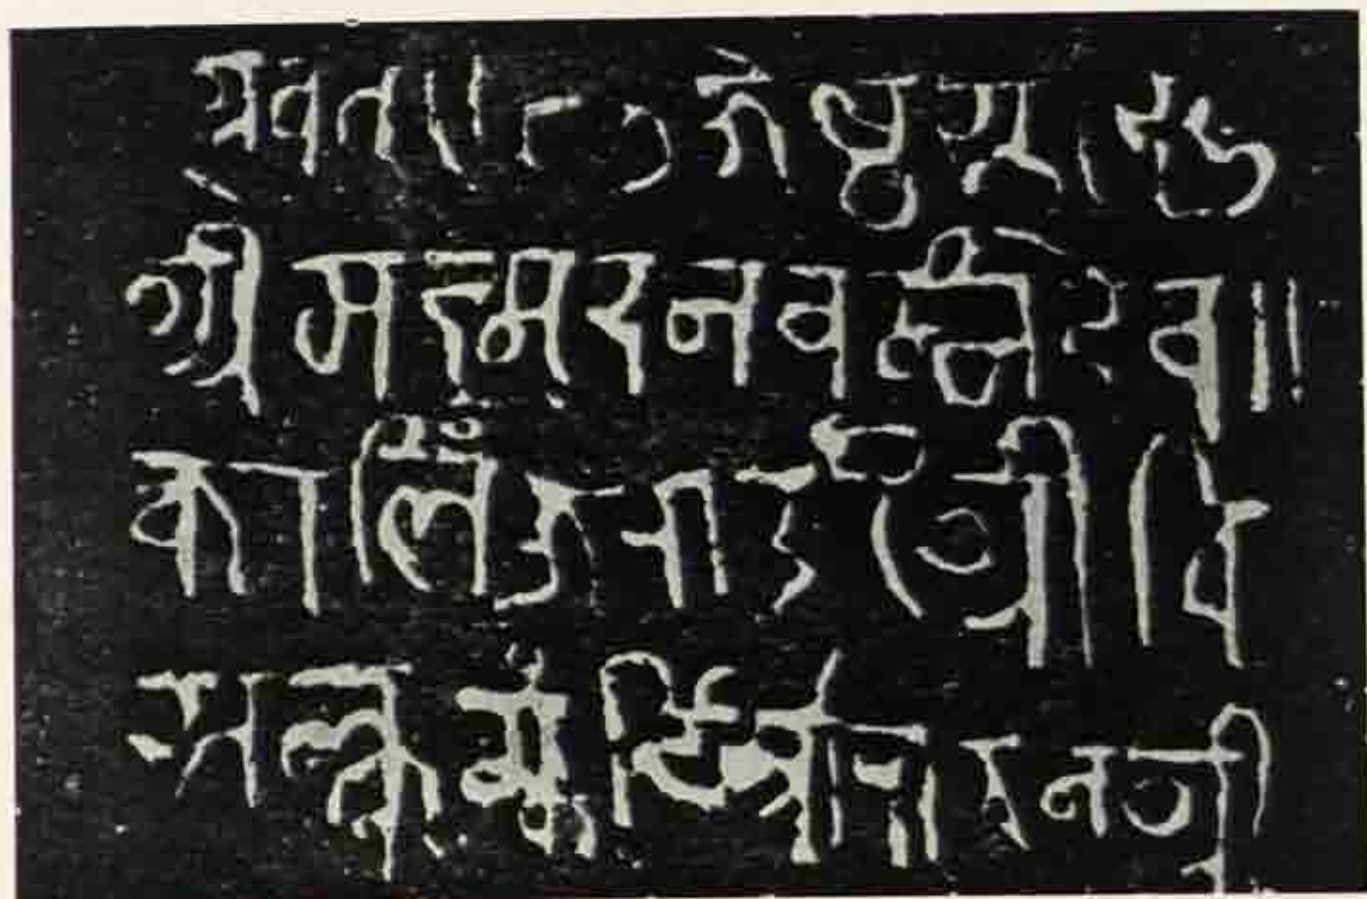

⁵ This word is used without any case-ending. Read द्वे.

⁶ The reading of this *akshara* is doubtful; it may also be read as वि.

⁷ The asterisk is put here to denote that one letter is illegible here. Cunningham read the second of the letters as *ā* and omitted the rest.

⁸ The inscription is incomplete.

KĀLAÑJAR PILLAR INSCRIPTION OF THE TIME OF
MADANAVARMAN, VIKRAMA 1187

From Facsimile

KĀLAÑJAR ROCK INSCRIPTION OF THE TIME OF
MADANAVARMAN, VIKRAMA 1188

Scale: One-third.

each. The size of the letters ranges between 2 and 3 cms.; some of them are bigger than others, causing confusion in the reading. The record has also suffered from weather and some of the letters are damaged.

The **characters** are Nāgarī of the twelfth century A.D. With respect to palaeography, attention may be invited to the form of *ch* with an angular loop, see *charaṇa*, l. 2; to the form of *n* in the same example; to that of *dh* which has developed a horn on its left limb, as in *sūtradhāra*, l. 7; to *r* which generally ends in a sharp tail, as in the same word; and finally, to the mediaeval *ñ* attached to *r* below, e.g., in *rūpakāra*, ll. 7-8.

The **language** of the record is Sanskrit and it is entirely in prose, though there are some examples appearing as parts of verses, e.g., *dhūmān-dharmma-parāyaṇō* in l. 3, which is the beginning of a foot of the *Śārdūlavikrīḍita* metre, and *Dēva-Śrī Nilakaṇṭhasya*, in ll. 6-7, which appears as a complete foot of the *Anuṣṭubh* metre. With respect to **orthography**, we may note the occasional use of the dental for the palatal sibilant, as in *paramēswara*, l. 1, but not in *Śrī* throughout; that of the sign for *h* to denote *v* also, as in *amvūja*, l. 2, the reduplication of a consonant following *r*, e.g., in *-varmma-*, l. 2, and in one example the preceding *t* in *-puttra*, l. 5. *Sandhi* is not observed in *Śrī-Udana* in l. 6, and the influence of Prakrit while giving the names is also visible, as in *Vachchha* for *Vatsa* in l. 5. It may also be observed here that the person who prepared the draft of the document had a very poor knowledge of Sanskrit; more in this concern will be said below, while studying its contents.

The record refers itself to the illustrious **Madanavarman**, the supreme lord of Kālañjar, who is endowed with the royal titles and is also called to have been a zealous devotee of Mahēśvara. The **object** of it is to record the installation of an image of Nilakaṇṭha; and the **date**, as given in the numerical figures only, is **the eighth day of the bright half of kārṭtika of the (Vikrama) era, 1188, on Saturday**. Kielhorn calculated the date and found it equivalent to **31st October, 1131 A.C.** when there was a Saturday.¹ Thus the date is quite regular and the year was Chaitrādī *expired*.

The date of the record has no special interest since we know the Chandēlla Madanavarman to have occupied the throne from 1129 to 1163 A.C. And to summarise the contents of the record, we find that both Maisey and Cunningham expressed a wide difference of opinion, since the language used here is such as not to enable one to interpret the expressions quite satisfactorily, as to be seen below. Here it may also be observed, however, that both these scholars have missed the prominent floral design at the end of l. 5, which affords great help in solving the problem, showing the end of the first or the historical part of the inscription, as we find in several other cases which have often been noted by us. Here is introduced one Vatsaraja of the Kumara family, who is described as a son of *Mahārāja*, a general and a son of *Sōlhaṇa*. As his father's name is explicitly mentioned to be *Sōlhaṇa*, he cannot be taken identical with Kirtivarman's general Vatsarāja mentioned in the *Dēogaḍh* inscription of the time of the king as a son of *Mahādihara*.² But from the tenor of the record he appears to have been a military officer under Madanavarman and governing some region around Kālañjar.

Here ends the first part of the inscription, separated by the flowery design, as stated above. But the expression occurring in the second part of it, *viz.*, about the name of the deity whose image was installed and also about the persons who did it have been differently understood by both the above-named scholars. For example, whereas Cunningham took the image as of Lakshmīdhara, Maisey read the name as *Varadā*; and following the rubbing before me, I agree with Cunningham in this respect, as to be shown below in the text. As for the names of the persons who installed the image, we find that whereas Maisey took them to be two persons, *viz.*, *Raja Dēva* and *Sōlhaṇa*, Cunningham took them more in number. But considering that each of the names has a punctuation mark (*dayda*) at its end, I am inclined to take the names as two, *viz.*, *kavi-Ghayaṅka-Achchhōda* and the illustrious *Rāūta Udana*. After this the inscription tells us that the image was made by the mason (*rūpakāra*) *Lāhada*, the son of the illustrious

¹ *Ind. Ant.*, Vol. XIX, p. 29, No. 6.

² *Above*, No. 111, v. 5.

Rāma' who made the image of Nīlakaṅṭha.⁸ And with the date, as discussed above, the inscription comes to a close.

TEXT

- 1 सिद्ध¹ स्वस्ति [।²] परमभट्टारकमहाराजाधिराजपरमेस्व(स्व)र परममा-

- 9 तेलि¹⁵ ॥ संवत् ११८८ कार्तिकसुदि = सनै(शनौ)¹⁶ ॥

¹ It is not known whether the prefix *śrī* is a part of the name.

² Here too the language is ambiguous, as throughout the inscription. Some of these points will be discussed in the text below. But the record is not of any historical importance. Rāma is the same person as mentioned in No. 110, l. 18, above.

³ From a rubbing.

⁴ Expressed by a symbol.

⁵ Cunningham read this *akshara* without the *mātrā* which is clear in the impression before me.

⁶ There are traces to show that *tra* was first incised at the end of this line but probably scored off and written in the next line.

⁷ Maisey read and second letter of the name as *lu* but what he took as the sign of the *mātrā* is a badly formed *ha*. We have no *mātrā*-sign of this type throughout the record. See *suta* which is just the next word.

⁸ The first of the epithets used here is a Prakrit form of *sādhnika* which means a general; and the implication of the second is not known to me, though the reading is absolutely certain. Maisey read *सहणिकेन दुःखेन* but it is not vouchsafed by the rubbing before me. The third *akshara* is *vi* and not *si*; for the form of the consonant *ṅ*, cf. *parāyana* in l. 5. It again cannot be definitely said whether the sign denoting the medial *ā* was engraved at the end of the line so as to read *kumāra*.

⁹ Cunningham read this *akshara* without the sign of *mātrā* which has faintly come out.

¹⁰ The Sanskrit form of this word is *Vatsarāja*. After this name there is a floral design where Maisey sees letters reading them as *Dēvatī*, and following it, his transcript gives *निलविशयंकजछोदः*, which I do not find in the rubbing.

¹¹ The first *akshara* in the line has totally disappeared and has been adopted here from Cunningham's reading. Maisey read here *nitya*, as stated in the preceding note, but the space shows that only one and not two letters could have been accommodated here.

¹² The reading of the bracketed letter, which also seems to have been *ja*, is uncertain. In that case the name would be *Jaidana*. It may also be noted that the names are all without case-ending but they are separated by the *daṇḍas*.

¹³ The reading of both these *aksharas* is from the traces left and therefore uncertain. Cunningham read both these letters as *Badrī* and Maisey read the whole expression as *श्री साहाय्यावबदानुरूपकारश्रीलः* which is merely fanciful.

¹⁴ The reading of this and the preceding *akshara* is uncertain. The reading of the name *Lakshmidhara* is certain but it is doubtful whether this was the name of the deity or of the mason. The language is very defective here, as stated above. Moreover, it may also be observed that the two deities *Lakshmidhara* and *Sānti* can in no way be connected.

¹⁵ Here Maisey read *रेषाकारापिता* (for *कारिता*) and this reading may be adopted. But I do not find the space to accommodate the last three letters.

¹⁶ The vertical of the *mātrā* of this *akshara* may have been on the original but being lightly engraved, it could not come in the rubbing.

No. 118; PLATE CIX

AUGĀSĪ COPPER-PLATE INSCRIPTION OF MADANAVARMAN

[Vikrama] Year 1190

THE copper-plate which bears this inscription was found in the Augāsi' parganā of the Bāndā District in Uttar Pradesh and was presented to the Asiatic Society of Bengal, Calcutta, by A. Cadell, then Assistant Magistrate at Bāndā, some time in the eighth decade of the last century. No information is available regarding its original find-spot and of the circumstances in which it was obtained. The inscription engraved on it was brought to notice, in 1878, by the late Babu Rajendralal Mitra, by publishing transcript of it in Nāgarī characters, followed by a translation by Durga Prasad Basu, in the *Journal* of the same Society, Vol. LXVII, Pt. I, pp. 73 ff., and a facsimile facing p. 73 (Pl. VI). In 1887 it was critically edited in the *Indian Antiquary*, Vol. XVI, pp. 202 ff., by F. Kielhorn, who gave his own reading of the text from an inked impression supplied to him by J. Fleet, and who also stated that his own reading of the record 'will be found to differ considerably.' His article is accompanied by a fresh translation and also by an illustration. Some time subsequently, the plate was transferred to the Indian Museum, but as I am informed, it is not traceable there; and also failing to obtain its impression, I edit the record here from the facsimile accompanying Kielhorn's article in the *Ind. Ant.*

It is a **single copper-plate**, inscribed on one side only, and measuring about 41·3 cms. broad by 26·8 cms. high. It is smooth, and all round it there is a flat rim about 1·27 cms. broad and ·64 cms. thick, fastened on very tightly by twenty-one rivets. The plate is not very thick but the letters, being shallow, do not show through on the other side of it.² There are nineteen lines of writing, covering a space 37·5 cms. by 23·3 cms. In the middle of the last line is a round hole, 1·2 cms. in diameter, apparently intended for a ring, which, with a seal, if attached to it at all, was never found. In the first four lines the continuity of the writing is disturbed by a rude representation of the four-armed goddess Lakshmi with an elephant on either side, pouring water over her head, with raised trunk. The whole device is enclosed in a rectangular border 5·5 cms. broad and 5 cms. high.

The **writing** is well preserved. The mechanical execution, however, is crude as the letters are not well formed and some of them are out of recognition, rendering it somewhat difficult to be certain about the personal and geographical names occurring therein. The lines too do not run straight, for, after about one-third portion from the beginning, they tend to creep upwards and again come down towards the end, showing a sort of hump in the middle. In the first seven lines the letters are rather slightly bigger and sparsely written.

The **characters** are Nāgarī of the twelfth century A.C. As regards the formation of individual letters, the initial *i* appears with two small circles placed side by side with curved or hooked ends turned in opposite directions; see *vō-*, l. 1; the initial *ē* e.g., in *ēsha-*, l. 5, completely resembles *p*; and the conjunct consonant *gg* in *-vinirggata-* l. 12, looks like *gn*, and *ṅṅ* as *ll*; cf. *-pūrnṅimā-*, l. 11. The letters *ch*, *dh* and *v* are often almost alike in form and can be distinguished only by the sense required; cf., e.g., *ch* in *chatur-*, l. 9, and *v* in *virōdhi-*, l. 2 where *dh* shows no horn on its left limb but is endowed with a top-stroke. The same letter appears also with a horn on its left limb, as in *vldhivat*, l. 11, and in rare instances as in *dhyita-*, l. 1, it resembles a taurine. Sometimes no distinction is observed between *t* and *n*, both of which are in their antique and advanced forms—the former with a straight vertical above and a curve below, and the latter as a vertical suddenly ending in a loop with a tail: cf. respectively *-nirmmali-*, l. 6 and *likhita-* in l. 19. The subscript *th*, as in *sthāvara*, l. 9, is laid flat and the letter *ḍ* is generally engraved as *ḍ*, as in *yadā* and *tadā*, both in l. 19, though it appears in its graceful tail as in *-dḍva*, l. 4. *T* as a superscript is engraved only as a horizontal stroke, as in *hutvā* and *snātvā*, both in l. 12. *Y* is occasionally engraved as *p* as in *punyāya*, l. 12, but often like *s*, as in

¹ The Augasi of the maps, Lat. 25.24 N.; Long. 80.23 E. The name is also written as Augāsi. It lies on the southern bank of the Jumnā at its confluence with the stream Garara.

² These remarks are based on Kielhorn's writing as the original could not be had for study.

pravarāya, both in l. 13. The usual form of *r* appears as a vertical with a horizontal stroke attached to its left in the middle, as in *chatur*, l. 9 and *-rātma*, l. 12, but its slightly varying forms are also to be seen in *-māhēsvara*, *Kālañjara* and *-paramu*, all in l. 4. Wrong strokes of the chisel give altogether different forms to this letter at several places, e.g., in *-śirō*, l. 1, *urrōdhi*, l. 2 and *-vārē*, l. 11. There are several examples of wrong and careless engraving throughout the record, e.g., in *-ktyā* in l. 2 is incised as *ttshā*, *pra* in l. 13, as *da*, *bhū* in l. 19, as *kṛi*, l. 19 and *-sti*, l. 14, as *sti*.

The language of the inscription is Sanskrit; and except for the initial verse as to be found to begin a Chandēlla grant and another at the end, it is all in prose. With respect to orthography, we may note that (1) the letter *b* is always denoted by the sign for *v*, as in *-vādha*, l. 17 (2) the dental sibilant is put for the palatal in many cases, e.g., in *visvēsvara*, l. 1, though *ś* is written in *-śirō* which immediately follows; (3) a consonant following *r* is doubled as in *-sarvva*, l. 16; (4) the sign of *avagraha* is employed only once in l. 7, to denote the merging of *a* into *ō*, though there are several other cases of this type; (5) the word *ujjala*, in l. 1, is wrongly spelt with a single *j*; and local influence is to be seen in the spellings of *punya*, ll. 11-12 and *tru* for *tri* in l. 13; it is also to be found in words like *vāū*, l. 7, *duṃḍaku*, l. 8 and *vṛikshu* and *valmīkū* l. 9, for which Kielhorn has invited attention to Hemachandra's *Prakrit Grammar*, IV 331.

The inscription begins with the oft-quoted verse glorifying the family of the Chandrātrēya (Chandēlla) kings, and after mentioning the names of their earliest ancestors Jayaśakti and Vijayaśakti, it proceeds to give the ancestry of the donor beginning from the Paramabhaṭṭāraka-Mahārājādhirāja-Paramēsvara, the illustrious Kīrttivarman, his successor the P.M.P. Prīthivīvarman and his successor the P.M.P. Madanavarman, who was a devout worshipper of Mahēsvara (Śiva) and the supreme lord of Kālañjara (ll. 2-5). This account is followed by the formal portion of the document (ll. 5-15), the object of which is to record the donation of a plot of land by Madanavarman, in favour of a Brāhmaṇa whose name was Rābhala (or Rāsala?),¹ who was the son of Jāta, the grandson of Sānhi (Sātiki?) and the great-grandson of Vāpāna (Vāmāna?). His *gōtra* was Bhāradvāja, and his *pravaras* were Bhāradvāja, Āngirasa and Bārhaspatya. The donated land existed in the village Bamhardā in the Sūdalī *vishaya* and its dimensions were as measured (probably to be determined later on) by ten ploughs, i.e., as much as could be ploughed in a day by ten pairs of oxen, as mentioned both in figures and words, and also by the total quantity of $7\frac{1}{2}$ *droṇas* of seed sown.² The boundaries of the plot are stated to be as follows: in the eastern direction the boundary-mark of the village Raṅasūā; in the southern direction the village Kamaṇauḍā; in the western direction an ant-hill near a *madhūka* tree; and on the north the boundary-mark of the village Vijaulī.

The king donated the above-mentioned plot of land after performing all the necessary preliminaries, and he also announced the gift in the presence of all assembled in the village. The conditions of the grant are stated in ll. 15-17, according to which, the donee was entitled to enjoy, plough, cause to be ploughed, give away, mortgage or sell the plot, with the ways from it and to it, with all its sap-trees (*āsava*), sugar-cane, cotton, safflowers, hemp, mango, *madhūka* (*madhuca latifolia*) and other trees, with the treasure in its forests and mines, and together with the other things contained within its boundaries and with the income from within and without.³ With a request to future rulers to preserve the gift and quoting a well-known verse to the effect (ll. 18-19), the record concludes, stating that it was written by the writer of legal documents (*dharmatēkṣin*) Sūdha and engraved by the skillful Ūhaṇa. As we shall presently see, they are respectively the writer and the engraver of the following grant also.

The date of the grant is expressed both in words and figures in ll. 10-11. It is Monday, the full-moon day of the month of Māgha, (Vikrama) Sainvat 1190, which as calculated by

¹ The reading of this and some other names that follow is uncertain, as shown below in the text.

² The reading here is: *hala 10 satha-bhūmir = yatra vāūgē*. While editing a grant of Madanavarman's grandson Paramardin, A. Venis takes *vāūgē* to be the same as the Prakrit *vaugē*, from the Sanskrit *vāpa-gatya*, and adds that 'it describes the grain as sown broadcast, i.e., not as sown first in seed and beds and then transplanted' (*Ep. Ind.*, Vol. X, p. 47). While publishing Venis' article the editor quotes some instances to show that land was often measured also by the amount of seed required to sow it; but we have a number of similar instances in the Paramāra epigraphs edited above, as in No. 13, l. 13; No. 45, l. 27; and also in *C. I. I.*, Vol. IV, page 191, l. 32 and *n*. Also see No. 131, l. 8, below.

³ This account is based on Kielhorn's translation. The last expression means, as we have seen in the text below also, 'with internal and external taxes' i.e., on custom and excise duties.

Kielhorn, corresponds to **12th January, 1134 A.C.**; but it was a Friday and not a Monday, and thus the date is irregular.¹

The importance of the inscription under study lies in the fact that it furnishes an undoubted evidence regarding Madanavarman's political relations with his neighbouring powers in the south and south-west. The grant was issued by him from his camp in the vicinity of Bhāilasvāmin, which has been identified with the town of Bhilsā (modern Vidishā); from his camp at that place in 1134 A.C. when he donated the land may be interpreted in the terms of his leading an aggressive campaign against his adversary in that direction, who can be no other than the contemporary Paramāra king of Mālava. The history of the royal Paramāra house shows that subsequent to the death of the great king Bhōjadēva in c. 1055 A.C., his successors were incessantly in troubles and their military resources were almost exhausted by protracted warfare with their enemies amongst whom the Chaulukyas of Gujārāt were a source of constant menace; and though Bhōja's brother Udayāditya (c. 1080-1094 A.C.) had succeeded reviving the glory of the house, the latter's son Naravarman (c. 1094-1133 A.C.) and his son Yaśovarman (c. 1133-1142 A.C.) suffered a crushing defeat at the hands of the Chaulukya king Jayasīṃha Siddharāja (c. 1094-1142 A.C.), who is known to have annexed the kingdom of Mālwā.² And the year of the present inscription, that is 1134 A.C., which was incidentally the first regnal year of the Paramāra Yaśovarman also, tends to show that Madanavarman had definitely extended his dominions further in the south, gaining victory over the Paramāra king who was then hard-pressed.

The expressions of the Khajurāhō inscription *viz.*, that Dhaṅgadēva was like a death to the Mālavas and that his kingdom in the west extended so far as Vidishā on the Mālava-nadī,³ are only of a general type; and of equally indefinite nature is the account of the victory of Kīrtivarman's general Vatsarāja who claims to have constructed the fort of Kīrttidurga in the Bētṡā region.⁴ The statement of the Ajaygaḥ rock inscription of V.S. 1317 about Sallakshaṅavarman, that he took away the fortune of the Mālavas,⁵ is also not explicit on the point and what is more is that it is a later report; and hence the record under notice which definitely shows Madanavarman's sway over a part of the Bētṡā valley near Vidishā is of great significance. It may also be noted here that the present charter was issued about 82 years after V.S. 1108, the year when Dēvarman issued his Charkhārī grant. And the absence of any copper-plate issued during this long period by the Chandēlla house may be explained by supposing that either we have not so far found them or they were not at all issued, as the rulers were constantly busy establishing peace and order in the State from the time of Kīrtivarman who revived the glory of the house which had been eclipsed by the Kalachuris, as already seen above.

Of the **geographical names** occurring in the present grant, the place where the deity locally known as **Bhīlla-svāmin** was worshipped is evidently the modern town of Bhilsā or Vidishā, and the *vishaya* **Sūdali** was the region close to it. The modern name of this place I am unable to find out; and I am also unable to identify the villages **Raṅasuvā** and **Bijanli** mentioned in the record. Since the donation was made by Madanavarman from his camp near Bhāilasvāmin, *i.e.*, Bhilsā (modern Vidishā), as we are informed by the inscription, the places occurring in it are to be looked into in the area lying to the east of this town. A village of the name of Bambari exists about 8 kms. north by east of the Binā Station (near Jhānsī), with another village known as Kamarkheḥī to its south. The names of both these villages suggest their identification respectively with **Bamhānuḍā** and **Kamhānuḍā** mentioned in the present inscription. Both these

¹ This is what Kielhorn observed while editing the inscription in the *Ind. Ant.*, Vol. XVI, on p. 202. And finding the date to be irregular, he also calculated the details with the month *Mārgga*, *i.e.*, Mārgaśīrṣha (for Māgha) when he concluded that the date works out satisfactorily not for 1190 but for 1192, *expired*, when it was a Monday. See *ibid.*, Vol. XIX, pp. 368 l. No. 187. But the facsimile published with his edition of the inscription shows that the second *akshara* of the month is not *gga* but *gha*; in two instances side by side, in l. 11. My own calculations for the Southern Vikrama, *expired*, shows the equivalent as 22nd January, 1133 A.C., falling not on Monday, as stated, but on Sunday. A satisfactory solution of this irregularity may perhaps be sought in presuming that though the *Parvīṃā* really occurred on Sunday, but the donation made or desired to be made on that day was registered the next day (Monday).

² As discussed in detail in the section on the Paramāras.

³ Above No. 98, v. 5.

⁴ No. 111.

⁵ No. 145, v. 4.

villages are now included in the Khurai *tehsil* of the Sagar District, which is separated by the Vetravati from the Vidishā District. If this identification is correct, it also appears almost certain that the Sūdali *vishava*, in which these places are said to have been then included, denoted the region lying to the east of the river and more or less comprising the modern *tehsil* of Khurai (now in the Sagar District).

¹ From facsimile accompanying Kielhorn's article in *Ind. Ant.*, Vol. XVI.

² Denoted by a symbol.

³ The superscript of this letter is so formed as to appear a combination of the palatal and the dental sibilant, and in the subscript of the same letter that follows, it is shown by a serif.

⁴ The sign of punctuation is superfluous and the name that follows can also be read as सूदल.

⁵ The consonant of the last *akshara* of the name appears to have been changed subsequently. Looking to other instances in the record we cannot be certain whether it is *ḍ* or *d*.

⁶ The whole *akshara* is struck out but it cannot be *dhō* as conjectured by Kielhorn. For वाडने, see n. above. *सङ्ग* means 'belonging to'.

⁷ The consonant of this *akshara* can also be read as *ḍ*.

⁸ It literally means a pillar (marking the boundary).

⁹ This expression, which is an example of *madhyama-padalōpi samāsa* means 'an ant-hill by a *madhūka* tree'.

¹⁰ The first *akshara* of this expression looks like the archaic *ta*.

¹¹ The punctuation-marks are unnecessary, as some others in this and the following lines. They are not marked here. The same we find in the Sēmra grant, below, No. 126.

¹² The syllable in brackets also looks like *ḍha* but it seems to be intended for *ḍa*, which is all the more certain from a comparison of it in the name *Sūdha* in l. 19, below, which is so read in the light of the next inscription. Takārī (and not Dhakārī) appears as a famous place in some other plates also.

No. 119; PLATE CX

BHĀRAT KALĀ BHAVAN PLATE-INSCRIPTION OF MADANAVARMAN

[Vikrama] Year 1192

THIS inscription is incised on a set of two copper-plates, preserved in the Bhārat Kalā Bhavan, which is now attached to the Hindu University, Vārāṇasī. They are said to have been purchased some twenty years ago, from a dealer of the name of Thākur Dās Jain, a resident of Tikamgaḍh, the chief town of a district of the same name in Madhya Pradesh. No information is available as to the original findspot of the plates or about the circumstances in which they were obtained. Rai Kṛishṇadāsī, the founder-Curator of the Kalā Bhavan, took immediate steps to bring to light the inscription by lending its pencil-rubbings to Dr. D. C. Sircar who was then the Government Epigraphist for India, in 1955. Dr. Sircar edited the record in the *Epigraphia Indica*, Vol. XXXII (1958-59), pp. 119 ff., with his transcript thereof in Roman characters, accompanied by facsimiles (between pp. 122-23).¹³ The inscription is edited here from a set of inked impressions kindly supplied to me at my request by Rai Kṛishṇa Dāsī who

¹ This letter appears as *hā* but it is *ya*.

² The *danḍa*, which appears as a *mātrā*, is redundant, as others in this line.

³ The reading of the second *akshara* in the name is doubtful.

⁴ The *akshara* in the brackets may also be read as *स*.

⁵ The vowel-mark is faintly visible above.

⁶ The letter in the brackets is damaged and is read by the sense. This expression also shows the confusion between the formation of *t* and *n*.

⁷ Both these letters too are mis-formed and look like *dāsām*. Kielhorn translates this expression as "with the income from without and within", which can better be explained as 'with external and internal taxes'.

⁸ Kielhorn read -ठासीमु[तेन]. But in that case the very name of the writer is missing. The inscription is engraved in a slipshod manner; and in the light of the next grant of which the writer was the same, we have to read -नाथीसुदेन or ठ। (ठकुर)थी

⁹ The *sandhi* is not made here. Kielhorn read -बहणेनेति, but the first *akshara* is clearly *ū* as also shown by the following inscription.

¹⁰ Sircar also noticed this grant, along with the other two which are now in the Bhārat Kalā Bhavan (our Nos. 134 and 138), in the *J. H. Q.*, Vol. XXXIV (1958), pp. 87 ff.

also allowed me to have a look at the plates. Subsequently, I also compared the text from another set of impressions which I owe to the Chief Epigraphist.

As stated above, the set consists of two plates which are thick and heavy, and each of them bears the writing on one side only. Each of the plates measures 45 by 32 cms. and the inscribed portion on each covers a space about 41.5 cms. broad by 29 cms. high. All round the rim of each, flat copper-bands about one cm. broad and two cms. thick are fastened by twenty-two copper-rivets on the inscribed side. The band above the right-hand corner of the second plate is slightly broken. In the middle of the bottom of the first and top of the second plate there are corresponding ring-holes, showing a diameter of about 1.5 cm. and interrupting the writing on both of them. But the ring, which originally held the plates together, is now lost. The continuity of the writing in the first three lines is also disturbed in the middle by a rectangular space about 5.5 cms. broad by 4 cms. high, which occupies the figure of Gajalakshmi seated on a full-blown lotus with an elephant on either side, sprinkling water over her head. The weight of both the plates together is 6.96 kilograms.

The inscription consists of forty-three lines of writing, of which twenty-two are cut on the first plate and twenty-one on the second. The size of the letters varies from 1 to 1.2 cms. The letters are well formed but not so deeply engraved as to show through on the other side. But despite all this care, the interiors of many letters show marks of the working of the tool, e.g., the *akshara pa* in *Parēyī*, l. 14, *pari*, l. 28; and *pā* in *pāshāṇa*, l. 31 is engraved as *sh* and *sphuṭa* in l. 42 as *sphuḍha*. Due to wrong engraving the letters *ta*, *ga*, *shṭha* and *pā* all in l. 31 appear as *la*, *chā*, *shva* and *shā*, respectively. Occasional omissions of parts of letters are also to be noted; for example, *myāṁ* in *pañchamyāṁ*, l. 14, is cut as *gyāṁ*, omitting the horizontal stroke distinguishing the two letters. The sign of *anusvāra* is often very small, and occasionally it is visible only on the plate. However, the mechanical execution is on the whole much better than that of the Augāsī plate which was written and engraved by the same persons as we shall presently see.

The **characters** belong to the Nāgarī alphabet of the twelfth century and show a close resemblance to those of the Augāsī plate of the same king, though more carefully and beautifully formed and engraved. They show that the letters *a*, *k*, *ch*, *dh* and *r* were in a transitional stage in the region, at the time when the present document was written. The initial *a*, which occurs about a dozen times in the record, shows its advanced form beginning with a curve only in two or three instances, whereas it retains its older form beginning with a vertical stroke in others, both the forms being visible side by side in *Āngirasa-Amvārīsha* in l. 16, and again in l. 19. The letter *k*, which has assumed its modern Nāgarī form, has in rare cases also retained its form in which the vertical is suddenly bent so as to form the loop, as in *samkrāntau*, l. 15. *Ch* also presents two different forms; the older one with a round loop as in *cha*, l. 6, and the developed one with an angular loop as in *vācha*, l. 5. The letter *dh* appears at least in three different forms; e.g., in *-dhi-vijaya*, l. 2, it resembles *v*; in *dhishanē*, l. 5 and *vadhū*, l. 8, it shows a horn on its left limb; and in *dharmma*, ll. 13 and 40, the horn is so formed as also to serve for the top-stroke. *R* presents at least three different varieties, viz., that with a wedge as in *pravara*, l. 17; that with a vertical ending in a hook, as in *paramēśvara*, l. 2; and that with a fully developed tail as in *nara*, l. 1. It is also worth noting that in its subscript form, in which it is shown by a serif attached to the lower extremity of the vertical of its superscript, this letter often appears complete and the superscript is half drawn; e.g., see *yatra*, l. 6 and *chaitra*, l. 14. Of the other letters, *ñ* has not developed its dot, as in *jaṅgama*, l. 10; the subscript forms of *chh* and *th* are almost alike; see *-chchinna*- and *sthāvara*, both in l. 10; and the stroke on the left of *bh* is sometimes lengthened so as to make the letter appear as *t*, as in *bhāsvara*- and *bhattā*-, both in l. 2. Attention may also be drawn to the form of *gg* *vinirggata*-, l. 25, etc., where the subscript clearly appears as *g* and is also endowed with a top-stroke, though there are examples showing it as *gn*, as we also find in the inscriptions of the time.

The **language** is Sanskrit; and the record is written in an admixture of prose and verses. The **orthography** shows the usual peculiarities of (1) the use of the sign of *v* to denote *b* also with a few exceptions where *b* is used, e.g., in *-labdha*-, l. 6; (2) the doubling of a consonant following *r*, as in *-varmma* ll. 2-3; (3) the occasional use of *s* for *ś*, e.g., in *-vasāt*-, l. 5, and *vice versa* in the only instance of *-kuśuma*-, l. 30; (4) the use of *m* in place of an *anusvāra* in *samvat-sara*- and *samvat*-, both in l. 14; (5) incorrect change of an *anusvāra* to denote *n* in *samkrānta*, l. 7, and the use of *ri* for the vowel *ṛi* in *krimi*- in l. 37. Occasionally, the vertical stroke is engraved in

such a way as to be easily confounded with the sign for medial *ā* or *ē*, and these strokes also are often put to separate the names as in ll. 20-21. *Sandhis* are violated in showing the *gōtras etc.*, in ll. 16-17 and, on the other hand, the *visarga* at the end of v. 11 is changed to *r* in view of the following *i*.

The record belongs to the king **Madanavarman** of the **Chandēlla Dynasty** and the lord of **Kālañjara** and gives the details of some plots of land granted by him to learned Brāhmanas from his camp at **Parēyī-grāma**. The date is mentioned to be **Tuesday, the fifth of the darh half of Chaitra** in the (Vikrama) year **1192** on the **Vishuvat saṁkrānti**. The date, as calculated by Dr. Sircar, corresponds to **24th of March, 1136 A.C.**, if the month is regarded *amānta*.¹ The charter was drafted by the *dharmalēkhin* (writer of legal documents) **Sūḍha** of the **Vāstavya** family, by the order of the king (v. 12) and he also wrote it on the plates. It was engraved by **Ulhana**² who belonged to the brazier (*rītikāra*) family (v. 13).

Opening with an auspicious symbol followed by the customary verse in praise of the Chandrātrēya (Chandēlla) family, the record mentions the name of the *Parama-bhūṭāraka*, *Mahārājādhirāja* and *Paramēsvara*, the illustrious **Madanavarman**, the lord of **Kālañjara**, who meditated on the feet of the illustrious *P.M.P.* **Prīthivīvarman** who, in his turn, had meditated on the feet of the *P.M.P.*, the illustrious **Kirtivarman**. This portion of the text is copied *verbatim* from the *Augāsī* grant issued only a couple of years before. Then we have two new stanzas lavishing praise on the donor, the first of which states that the creator with his ripe knowledge and incessant practice endowed Madanavarman with good qualities such as handsomeness, profundity, might, wisdom and truthfulness, and the second that his liberality put the wish-filling trees on the golden mountain with their bent tops appearing as if they turned their faces to the ground due to shame. Then begins the formal part of the record which states that from his camp at the aforementioned **Parēyī-grāma** the king bestowed $2\frac{1}{2}$ *pādas* of land in **Valahauḍā-grāma** in the *vishaya* of **Mahisiñēha** on the Brāhmaṇa, Paṇḍita **Sōmēśarman** of the *Kautsa gōtra*, with the three *pravaras* **Āṅgīrasa**, **Ambarīsha** and **Yauvanāśva**. He is stated to be the son of the *Thakkura* **Śrī-Śrīpāla**, grandson of the *Dvivēda* **Sahārāna** and great-grandson of the *Avasathin* **Dēvata(?)** and his family hailed from the *Bhūṭāgrahāra* of **Pāṭaliputra**.

This portion of the charter is followed by the donation of two other plots of land, by the king, in favour of one each of the two Brāhmanas, in lieu of those which they had in their possession. This change was made apparently for the sake of convenience. The first of these two Brāhmanas was **Dīkshita Nārāyaṇasārman** of the *Gautama gōtra* with the *Gautama*, **Āṅgīrasa** and **Āyāśya pravaras**. He was the son of **Dīkshita Dēvēndra**, grandson of **Dīkshita Vāmanasvāmin** and great-grandson of **Dīkshita Kēśava**, and his family had hailed from the *Bhūṭāgrahāra* of **Paṇikabhadrā**. It is stated that instead of the land he possessed in the villages of **Pipalahā** in the **Tintiri-pattalā**, **Vasanhā** in the **Kōlavā-pattalā**, **Goulā** in the **Vāndiuri-pattalā**, **Dādari** in the **Navaraṭha-pattalā** and **Dēnavaḍā** in the **Mahisiñēha-pattalā**, the king granted him four *pādas* of land in exchange for **Astavāla-grāma** in **Tintiri-pattalā** as well as his land in **Valahauḍā-grāma** in **Mahisiñēha-pattalā** and **Ḍāvaha** (or **Ḍavēha**)-**gramā** in **Nandāvāna** (or **Nandavēna**)-**pattalā** which he had received respectively from **Nādūka** (or **Nādūki?**), the priest attached to the queen **Lakhamidēvī**, and **Sōmēka**, son of *Thakkura* **Śrī-Śrīpāla**.

The third donee was the Brāhmaṇa **Sahajūsarman** who was a brother of **Sōmēśarman**, mentioned above, as we know from his details given in the charter. He received $1\frac{1}{2}$ *pādas* of land in exchange of that which he possessed in the **Pipalahā-gramā** in the **Tintiri-pattalā** and

¹ *Ep. Ind.*, Vol. XXXII, p. 119. The year was *Kārtikadi expired*.

² This person also engraved the *Augāsī* charter of the same king. In that great the second *akshara* of the name is distinctly *lha*, as also read by *Kielhorn* who edited it. In the present inscription, however, *ha* is clear and the upper part of what precedes it is bent to the right, showing that it was intended to be *l* and not the medial *ē-sign* as taken by *Sircar* who read the name *Uhēna*. The name can be read definitely by a comparison of these letters in both the plates.

³ For the reading of the third letter of the name, see *n.* in the text, below.

⁴ In view of the fact that this name is distinct as *Nandāvāna* in the *Ichchhāvar* grant, we must take it to be correct and not the one in the brackets, the confusion being caused by the vertical stroke which is detached from both the *aksharas* before and after it. This inscription contains a number of errors of this type.

in **Mahuāli-grāma** in the **Kōlavā-pattalā**, donated to him previously by the chief queen Vāhṛa-dēvī and queen Chāndala, respectively, with the consent of the king.

Lines 29-33 mention the conditions of the grant, which are almost the same as to be found in the other Chandēlla charters. This portion is followed by eight benedictory and imprecatory verses (ll. 34-40); and a prose-passage showing the king's consent. Then the inscription has two verses recording the names of the writer and the engraver, as seen above; and wishing good to all, the grant ends with a symbol between two vertical strokes engraved three times.¹

Of the **geographical names** occurring in the inscription, **Kālanjara** (l. 4) has often been seen to be identical with the hill-fort in the Bāndā District, and **Pātaliputra** (ll. 16 and 25) is the modern Patnā in Bihār. **Parēyi-grāma**, where the king was staying while making the donations (l. 14), cannot be identified for want of details, as also the names of the villages mentioned in the grant. Dr. Sircar located **Nandāvana-pattalā** which is also mentioned in the Ichchhāvar grant of Paramardīn,² in the Bāndā District and **Navarāṣṭra-vishaya** of the Charkhārī grant³ in its vicinity on the Yamunā; and **Ērachha-pattalā** may be taken identical with the modern Erich, about 96 kms. from Mahōbā, as suggested by Hiralal.⁴ Sircar also suggested that **Vāndiuri**, **Tintiri** and **Pipalahā** (ll. 21 and 27) may possibly be the same as the modern Bāndā, Tēonthar and Piplōn-durga. **Kōlavā**, after which the *pattalā* was so known, has so far remained unidentified. It appears to be represented by the modern village of the same name (also spelt as Kōlvā), situated almost 40 kms. due north-east of Vidishā. This suggestion receives strength from the identification of both the villages which are stated to have been then included in it, namely, **Mahuāli** (l. 28) and **Vasauhā** (l. 20), the first of which may have been the same as Mahault, about 20 kms. straight north of Kōlvā, and the second as Vasāi, about 10 kms. south-east of it.

A consideration of the places mentioned in the inscription makes it evident that Madanavarman's kingdom, which included parts of the modern Hamīrpur, Bāndā and Vidishā Districts and probably extended up to the Yamunā, in the north, also included parts of the former Rewā State (now a district of the same name) to the north of the Kaimūr range as is also known from the discovery of a hoard of his silver coins in the Tēonthar *tehsāl* of this district.⁵

¹ Sircar read the letter in the brackets as *pdh* and then corrected it to *bdh*. This form of *bdh*, however, began to appear in the inscriptions of this dynasty only slightly earlier, for which see *babhūva* in l. 6 of No. III, where it shows a slight variation from *p*.

² See the preceding *n*.

³ The superscript of this *akshara* has faintly come out. The consonant of the preceding *vi* is cut as *ch*.

⁴ As *n*. 9 on the previous page. It would be better to read *इष्टकानां मध्ये*, as suggested by Sircar. Mitra read the letters as *Vakshata*, but they give no meaning. See *E. R. K.*, p. 227, No. 20. as *Vakshata*, but they give no meaning. See *E. R. K.*, p. 227, No. 20.

⁵ The reading of the *akshara* in brackets is doubtful. It also appears as *ta*. The same *akshara* which is a part of a name, is incised as *ha* in l. 26 below. It may also be noted that in this and the other lines giving the names, etc., *sandhi* is not made.

⁶ Sircar read the name as *panikavada*, but both the last of the *aksharas* are clear, *bh* resembling *t* and the second (इ) showing a bend like *d* with the subscript *r*. Read also गौतमङ्गिरसा-

⁷ The reading of *va* is not certain as it also resembles *cha*. The punctuation marks in this and the next two lines are redundant.

¹ The word *grāma* is in masculine; probably *gramē* is intended, as in the next instance.

² Sircar read *Nādūkēna*; but the curve of the *mātrā* above *k* is clear though faint. Possibly there is also an *anusvāra* on the first of these *aksharas*. Similarly, in the name of the queen in this line the curve of the medial *i* on *mā* was also missed by Sircar, who read the name as *Lakhamā*.

³ The upper curve of *vi* is certain and I hesitate to accept Sircar's reading of the name as *Davēha*. The previous name may, however, be also read as *Nandavēna*, as suggested by him.

⁴ Sircar states that the reading may also be the *Chandēla*, but the vertical stroke of the *mātrā* is nearer to the first of the *aksharas* and hence I have adopted the name as given here.

⁵ Perhaps the word *bhāga* is omitted before *bhōga* through inadvertence.

⁶ In place of these four *aksharas* some others were probably incised originally.

⁷ The reading is certain but the word *talla* does not give any sense. Probably *talka*, meaning a forest, is intended.

⁸ The upper curve of the *mātrā* is missing in this *akshara* and also in *mi* of *bhūmi* that follows in the same line.

No. 120 ; PLATE CXI-A

KĀLAÑJAR ROCK INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1192

THIS inscription was discovered in 1848, by Lieutenant Maisey, at **Kālañjar** in the Banda District of Uttar Pradesh.¹ Maisey briefly noticed the record in the *Bengal Asiatic Society Journal*, Vol. XVII, p. 322, No. 5. His account was generally followed by A. Cunningham, in his *Archaeological Survey of India Reports*, Vol. XXI, pp. 35 f., and Plate X-D. From the same plate the inscription is edited here.

Cunningham found the record incised on the upper side of a rock beside the figure of Narasiṃha near the temple of Nīlakaṇṭha in the fort. Immediately below it, there is another inscription, which has the same purport and which also has been dealt with here. The present inscription consists of four lines of equal length, the dimensions of which are not recorded. The **characters** are Nāgarī of the twelfth century A.C. But in formation they are more ornamental than those of the other inscriptions found at the place. What is again worth noting is that several of the letters either show a crescent below their top-strokes or begin with a notch, as we find in the Dēogaḍh inscription of the time of Kīrtivarman.²

Palaeographically, we may note the formation of *k*, which, as the first member of a conjunct consonant, loses its loop on the left side, as in *Dīkshita* in l. 1 ; *th* is formed as a vertical bar assuming the shape of a loop on the left by the sudden bend of its lowest extremity, as in *Thakkura*, l. 1 ; *ih* is represented by two loops placed vertically, as in *Prithvīdhara*, l. 1 ; *dh* has developed a horn on its left limb, along with the top-stroke, as in the same example. Attention may also be drawn to the proper sign of *b* as distinguished from *v*, and to the form of *bh*, both in *babhava*, l. 2 : to that of *s* in *Nṛisimha*, l. 3, and to that of *r* in *Ravau*, l. 4.

The **language** of the record is Sanskrit, which is generally correct. The consonant *t* in *Saṃvat*, l. 4, is not marked ; and a *kāka-pada* sign appears to have been engraved at the end of line 2.³

The **purpose** of the inscription is to record the construction of an image of Nṛisimha, the same deity beside which the record was found, by a *Thakkura* whose name was also Nṛisimha.

¹ Originally *ima*, changed to *īma*.

² The letters and figures cut here are only to complete the line. What may possibly be guessed here is that the *akshara chha* is intended to show, with a floral design on either of its sides.

³ For the situation and antiquities of the place, see above, No. 110.

⁴ Above, No. III.

⁵ The photograph shows a faint trace thereof.

He was a son of the *Thakkura* Rālhapa and a grandson of the Dīkshita Pṛithvīdhara. This shows that the family names were not stereotyped in the locality in the twelfth century A.C., as also in Mālavā, as we have so often seen.

The last line of the record mentions the date, only in figures. It is **Sunday, the ninth day of the dark half of Jyēshṭha** of the (Vikrama) year 1192, which regularly corresponds to **Sunday, the 26th April, 1136 A.C.** for the Southern (Kārttikādi) expired year and the Pūrṇimānta month.¹

The record below also consists of four lines which are in bigger letters and written in a different hand. These letters do not show ornamentations in their top-strokes, as noted above. But here the noteworthy is the form of *r* as in *Rālhapa* in l. 2.

No. 121; PLATE CXI-B

AJAYGADH STONE INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1208

THIS inscription is incised on a jamb of the Upper Gate of the fort of **Ajaygadh**¹¹ the chief town of a *tehsil* in the Pannā District of the Vindhya region of Madhya Pradesh. The record was discovered by General Cunningham in 1883-84, and he noticed it, with his own reading of the text and a rough translation thereof, in his *Archaeological Survey of India Reports*, Vol. XXI, p. 49 and Plate xii-A. From the same plate it is edited here.

¹ See *Ind. Ant.*, Vol. XIX, p. 178, No. 125.

² From Plate x-D in Cunningham's *A. S. I. R.*, Vol. XXI.

³ Expressed by symbol.

⁴ Cunningham read the consonant of this *akshara* as *s*, but on the plate is clear as taken here. He has, however, corrected the reading of the preceding title *Thakkura* which was misread as *Sarkhāra* by the editor of the *Bengal Asiatic Society's Journal*. See his *A. S. I. R.*, Vol. XXI, p. 35, n.

⁵ In the *J. A. S. B.* these *aksharas* are read as कल्हणोपाभूतस्तदेव. and Cunningham read them as *paruva*.

⁶ The letters in the brackets are mutilated. Read नृसिहेन.

⁷ For कारितेति.

⁸ Cunningham read this word as *sudi*, but I find the first *akshara* very distinct as taken here. Also see *Ind. Ant.*, Vol. XIX, p. 178, No. 125.

⁹ Expressed by symbol.

¹⁰ As n. 6 above.

¹¹ The antiquities of this place are described by Cunningham in his *A. S. I. R.*, Vol. XXI, pp. 46 ff.

The record occupies an oblong shape, more in height than in breadth, and consists of 18 lines, the last of which is about half in length of the others. Each of the lines contains about ten letters, but in a few instances, this number goes up to fourteen. The dimensions of the writing are not recorded. The inscription is in a good state of preservation.

The characters are of the **Nāgarī** alphabet of the 12th century A.C. Attention may be drawn to the formation of *k* which loses the loop when it is the first member of a conjunct consonant, e.g., in *-kshatriya-*, l. 4; to the consonant *gg* appearing as *gn*, as in some of the inscriptions of the time, e.g., in *-durggiyē-*, l. 2; and finally, to the form of *dh* resembling *v*, as in *ś(s)ātradhāra*, l. 18, also showing a curved horn above its left limb, and, not joined to it but to the vertical of the letter, as in *Mahīdhara*, l. 10. Some of the letters cannot be easily recognised and some others are cramped, e.g., the vowel *u* in *-Rāūta-* and the conjunct *grā* in *grāmīya*, both in l. 5. The other instances are drawn attention to in the text and the foot-notes appended to it.

The **language** is Sanskrit, and the record is all in prose. As to the general **orthographical peculiarities**, we may note the use of the dental for the palatal sibilant, as in *sanau*, l. 2, and *vice versa*, in *-Sōmarāja-* for *Sōmarāja*, in ll. 13-14, which is obviously due to the local pronunciation of the name. The record was carelessly drafted; and the vertical bar is used to separate names in ll. 4, 10 and 11. The local influence is throughout visible, particularly in proper names.

The inscription refers itself to the reign of the illustrious **Madanavarman**, who is undoubtedly the Chandella king bearing the same name and reigning from about 1129 to 1163 A.C. The record opens with the **year 1208** (given in figures only), which must be taken as of the Vikrama era, and the *tithi* was the **15th of Mārga**, i.e., **Mārgaśirsha**, when it was a **Saturday**. The date, as calculated by Cunningham himself, regularly corresponds to the **10th November, 1151 A.C.** The year was Northern Vikrama, expired, and the month pūrṇimānta.

The **purpose** of the record cannot be definitely made out, but from the expression *pratipādannāḥ kṛitāḥ* in l. 7, and also from the use of the word *kshētra* in l. 16, it appears to mention some donation which was perhaps made in a sham-fight (*krīḍā-yuddhē*, l. 6). The gift was to be enjoyed by the public of the fort of Jayapura, i.e., Ajaygadh, where the inscription was found. The donor was the illustrious Rāūta Vēda, who was a Kshatriya by caste, a son of the Rāūta Jaunapāla and a resident of the village of Kōṭiā. The names of the illustrious *Śrī-karavīka* and *Thakkura Ghalēśvara* (?), the illustrious *Thakkura Jālhaṇa*, the illustrious *Thakkura Mahīdhara* and the illustrious *Thakkura Pāsala*, and some others are also recorded; possibly these persons were witnesses. In l. 12 the record also shows the figures 13 and 52, the significance of which cannot be made out; possibly they represent the numbers of persons who were present on the occasion; and that they were residents of some neighbouring villages, we can make out from Saṅkaliā, figuring as the name of a place in another record also.¹

It is stated in the last line that the record was engraved by the mason Sūprata. Nothing of importance can be gleaned from the inscription, except that it offers an intermediate date for the Chandella king Madanavarman, who was on the throne from about 1129 to 1163 A.C., as already seen above.

As for the **names of the places** occurring in the inscription, **Jayapura** (l. 2) is evidently Ajaygadh where the stone was found. This name and not Ajaygadh is invariably to be seen in the Chandella inscriptions.² The villages of **Kōṭiā** (l. 4) and **Saṅkaliā** (l. 12), which appear from the description to have been in its neighbourhood cannot be identified. It may be suggested, however, that about 16 kms. due southwest of the find-spot of the inscription is a village bearing the name Kōrār; and it is not unlikely that this place may have been intended. The name bears some resemblance to that appearing in the inscription, though philologically it cannot be connected with it. It may also be connected with that of kōṭi-tīrtha, at kālañjar, appearing in No. 108, l. 15.

¹ *A. S. L. R.* Vol. XXI, p. 49. Also see *Ind. Ant.*, Vol. XIX, p. 167, No. 85.

² See No. 128, l. 10. Cunningham read *Saṅkali Ajān* but did not explain the expression. Similarly, he was silent about the occurrence of the figures 13 and 52. He took the object of the record as building a (*Sirotha* ?), for which see n. on the relevant portion in the text below.

³ See Numbers 128, 137, 149, etc.

¹ From Plate xii-A in Cunningham's *A.S.I.R.*, Vol. XXI.

² Expressed by a variant of the symbol.

³ The *daṇḍa* here, as in some of the lines below, is used only to separate the names, as in some other records of the house.

⁴ Cunningham read a superscript *r* on the penultimate letter in this line; but in the plate it is missing on this letter, though in some other instances the *repha* is distinct e.g. in Nos. 128 and 137, in the fifth line of each.

⁵ Cunningham read *anēna*, which gives no meaning here. What looks like the sign of *anusāra* on *a* is merely a fault of the stone, or a scratch, when compared with the other marks throughout the inscription.

⁶ That is, in sham-fight.

⁷ Cunningham read *Sirothayena pralipādanam atam Bhadrantam*, which gives no meaning. He also translated a part of the expression as "built a (*Sirotha*?)". The meaning of this word is still not known, but the third case makes me inclined to suggest that it should be combined with *anēna*.

⁸ The sign of the medial *ē* on the fourth letter in the name is probably intended for the preceding letter.

⁹ The sign of *anusāra* appears to have been wrongly put on this *akshara*. There should be a *visarga*, or the word should not have a *vibhakti*, as the others below. See the next *n*.

¹⁰ As stated above, all the names in this line and below, appear without a case-ending and separated by a horizontal stroke.

¹¹ The last two letters in this line cannot be definitely made out, and here I follow Cunningham who took them *one* and read as given here.

¹² The first of the *daṇḍas* is joined to the preceding *akshara*, so as to look as the sign of medial *ā*.

¹³ The meaning of this expression is not known. The reading *too* is not certain.

¹⁴ As above. The reading of *a* is doubtful. Cunningham took it as *vī* but gave no sense.

¹⁵ The third letter in this line appears more likely to be *cha*, followed by a *daṇḍa*; but it gives no meaning.

¹⁶ That is, *Thakkura*.

¹⁷ Possibly the second letter of the name is *pa*, for which compare *da*, the second *akshara* in 1-8, above.

HORNIMAN MUSEUM IMAGE INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1208.

THIS inscription is incised on the pedestal of a Jaina statue which is exhibited in the **Horniman Museum**. It was published by Kielhorn, with a reproduction of the figure, in the *Journal of the Royal Asiatic Society*, for 1898, pp. 101 f., and Plate. The image is of Nēminātha, the twenty-second Tirthaṅkara, as can be recognised from the cognisance conch-shell, carved on its breast and also on the pedestal; and the total height is reported to be equal to 91.44 cms., and the width at the base, to 71.12 cms. The inscription is edited here from its facsimile in the photograph accompanying Kielhorn's article.

The record consists of three lines, the first of which is unusually larger than the other two. It is well preserved. The **characters** are Nāgarī of the twelfth century, to which the record belongs. The **language** is Sanskrit, which is grammatically incorrect: and the record is in prose. With reference to **orthography**, we may note the use of the dental sibilant for the palatal, e.g., in *Vaiśākha*, and also that of the consonant *m* for the *anusvāra* in *Samvat*, both in l. 1.

The **object** of the inscription is to record the installation of the image, on the pedestal of which it is incised, by the *Śreṣṭhīn* Māhula¹ of the *Grahapati* lineage, and his homage to the deity by him, along with some of the members of his family. The **date**, as mentioned in numerical figures, at the beginning, is **Thursday, the 5th of the dark half of Vaiśākha of Samvat 1208**. As calculated by Kielhorn, it corresponds, for the *Kārttikādi* Vikrama year, *expired*, and the *pūrṇimānta* Vaiśākha, to **Thursday, the 27th March, 1152 A.C.**, when the 5th *tithi* of the dark half ended about 5 h. 57 m. after mean sunrise.² The date is quite regular.

The original find-spot of the image is unknown, nor is any king named therein. However, a guess in this respect may be hazarded here. The family known as *Grahapati* flourished at Khajurāhō, as we are informed by one of the following inscriptions (No. 124) which bears the date V. 1215, only seven years later than that of the present inscription; and, as noted by Kielhorn, the names figuring in it are similar to those of the *Sēmra* grant of Paramardīn,³ showing a very strong possibility that the image under reference was originally found in the Vindhya region, and very probably somewhere in the vicinity of Khajurāhō itself, from where it may have sailed to London, where Horniman purchased it in 1895, as Kielhorn was informed by Quick, the then curator of that Museum.

The family referred to in the inscription belonged to **Maḍilapura**. In the text given by him, Kielhorn⁴ corrected this name to Maṇḍilapura; but this correction is not free from doubt for there is also a possibility that the consonant of the second *akshara* may have been intended to be *h*, its left-hand curve being either altogether omitted or engraved so lightly that it could not come out in the photograph.⁵ If this be the case, the reading of the name would be Mahilapura, which appears to be identical with Mahēvā, a village about 10 kms. north by west of Chhatarpur and in the very close proximity of Khajurāhō itself, which may have been the original provenance of the statue. Following this line of thought, we may take the image to have been engraved during the reign of the Chandēlla king Madanavarman who was on the throne from 1129 to 1163 A.C.

¹ From the construction it is not clear whether this name is given here only to show the genealogy, or that the person denoted by it was also one of the participants for setting the image.

² *J. R. A. S.*, 1898, p. 102. Also see *I. N. I.*, No. 285.

³ Below, No. 126.

⁴ Kielhorn, *op. cit.*

⁵ For a parallel case, cf. the incision of the last letter in line 1.

No. 123 ; PLATE CXI-C

MAHĪBĀ IMAGE INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1211

THIS inscription was discovered by Alexander Cunningham in the working season of 1883-84, at **Mahōbā** in the Hamīrpur District of Uttar Pradesh. It is incised on the pedestal of a statue with a shell (conch) symbol, showing the figure to be of Nēminātha, and consists of two lines. Cunningham published an eye-copy of the record, together with an indifferent transcript of the lower line, in his *Archaeological Survey of India Reports*, Vol. XXI, p. 73, with Plate xxiii-D. The present whereabouts of the statue, on the pedestal of which the record is incised, are not known, and thus it is not possible to have an impression thereof. Therefore, I edit the inscription here, for the first time, from the eye-copy published by Cunningham.

The characters belong to the Nāgarī alphabet. The language is Sanskrit ; and the inscription is in prose. It is not known how far the eye-copy published by Cunningham is trustworthy, but we can say that the letter *dh* differs from *v* only in that it is devoid of the top-stroke, as in *sādhu*, l. 1 ; *th* is formed of two loops placed below each other ; cf. *nātha*, l. 2 ; and *r* shows two different forms in the same word *Rūpakāra*, l. 2. The **orthography** does not call for any special remark, except that *sh* is written in place of *hh* in the name Lākhaṇa. The mistakes of engraving will be noticed in the foot-notes appended to the text.

The inscription mentions the name of the illustrious ruler Madanavarman, who was no doubt the homonymous chandēlla king (1129-1163 A.C.), as also shown by its provenance. Its **object** is to record the dedication of the image of Nēminātha, whose symbol of conch-shell is engraved in the middle of the lines. The image was made by the *Rūpakāra* Lākhaṇa and it was consecrated by Gālhū, the son of *sādhu* Lākhū, who was, in his turn, the son of *sādhu* Sāthē.

The **date** of the record, as given only in figures in the second line, is **Saturday, the third day of the bright half of Ashāḍha of 1211** of the (Vikrama) era ; and, as calculated, it regularly corresponds to **Saturday 4th June, 1155 A.C.**⁷ The record gives an intermediate date for the king Madanavarman, and thus it is not of any historical importance except that it shows that Jainism was popular among some classes of people at that time.

¹ From photograph.

² Read सवत्.

³ I have given here the name as read by Kielhorn. But also see n. 5 on the preceding page.

⁴ The names are all without the case-suffixes which are marked by me only as could be conjectured.

⁵ This possible correction is adopted from Kielhorn's reading.

⁶ This word here means 'all together'.

⁷ For the situation of the place and its antiquities, see above, No. 113.

⁸ See *I. N. I.*, No. 293.

KHAJURĀHŌ STONE IMAGE INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1215

THIS inscription was discovered by Sir A. Cunningham and was first brought to notice by him in his *Annual Reports of the Archaeological Survey of India, Vol. II* (1862-65), p. 435. He also published its transcript and a specimen of letters employed in it, in *ibid.*, Vol. XXI (for 1883-84 and 1884-85), p. 61, and Pl. xx-D. The inscription was then edited by Kielhorn in the *Epigraphia Indica*, Vol. I (1888), pp. 152 f., where he gave his own reading of the text from an impression supplied by the late Dr. Burgess. But the article is not illustrated. The inscription is edited here from an impression placed at my disposal by the Chief Epigraphist for India.¹

The inscription is incised on the top of the pedestal of a colossal stone image, seated, of the third Jaina pontiff, Sambhavanātha, in a small ancient Jaina temple dedicated to Ādinātha at Khajurāhō² in the Chhatarpur District of the Bundelkhand region of Madhya Pradesh. The record consists of a single line divided into two parts by a boss showing the seated figure of a horse,³ to right, in a rectangle of a beaded border, with a petal-like object on either side, the whole design occupying a space 6 cms. broad by 3.5 cms. high. The first part of the writing measures 48.8 cms. and the second 43.4 cms. The average size of the letters is 1 cm. The inscription is in a good state of preservation.

The **characters** belong to the twelfth century A.C., and are precisely of the same type as to be found in the Chandēlla inscriptions of the age. What is worth noting in this respect is that the form of *dh* is devoid of the horn on its left limb, as in *sādhu*, and the form of the subscript *r* is complete, with the former member of the conjunct half-drawn, of which *tat-putra* is the only instance and *prabhṛiti* is a probable exception. The medial short *u* attached to *r* has the same form as when attached to other letters; cf. *-ruha*, and this consonant, appearing all the three times in the end, shows a loop with a wedge attached to it.

The **language** is incorrect Sanskrit and the inscription is in prose. In respect of **orthography**, we note the use of *ś* for *ś*, only in one instance (*-vaśisē-*), the doubling of a consonant following *r*, as in *-varmma-*, the medial *ē* denoted both by the *prishṭha-* and the *ūrdhva-mātrā*, the wrong use of an *anusvāra* in the end, and lastly, the use of the local element in the name *Sirichandra* for *Śrī-Chandra*.

¹ From Cunningham's eye-copy (Plate xxiii-D) in *A. S. I. R.*, Vol. XXI.

² The symbol appears as the letter *dh*, and almost resembles the one in No. 117.

³ What is intended is गोलापूर्व्वान्वये, as it figures in No. 190, l. 1.

⁴ Read तत्पुर-

⁵ The last two *aksharas* also appear to form a name as some others in this inscription. All the names are without the case-endings.

⁶ This is, संवत्-

⁷ There is an ornamentation between the double *daṇḍas*, and a couch after the figures showing the *tithi*.

⁸ His No. C-1742 of *A. R. Ep.* for 1962-63.

⁹ For the location and archaeological importance of this place, see No. 97, above.

¹⁰ This is the *lāñchhana* of Sambhavanātha.

It is a sectarian inscription; and the **object** of it is to record the dedication of a statue, on the pedestal of which it is engraved, by Sādhu **Sālhē**, who was a son of Pāhilla of the *grahapati* family and a grandson of *śrēshṭhin* Dēdu. Incidentally, the record also mentions Sālhē's sons *viz.*, Mahāgaṇa, Mahāchandra, Sīri (Śrī) chandra, Jīnachandra and Udayachandra. The image, as we are also told, was dedicated during the prosperous reign of the illustrious **Madanavarmadēva**; and though the record is silent in mentioning the name of the family of the king, he is evidently the **Chandēlla** ruler of that name, whose inscriptions we have from V.S. 1186 to 1220 or 1129 to 1163 A.C. This view is supported by the find of the inscription in a reign which is known to have been under him.

The **date** of the inscription is stated to be the **fifth day of the bright half of Māgha** (*vasanta-pāñchamī*) of **Sāmvat 1215**, which, as a year of the Vikrama era, corresponds to (1157-58 A.C.),¹ and fits exactly into the reigning period of Madanavarman.

The chief interest of the inscription lies in its mention of the name Pāhilla and his genealogy for four generations. Dr. D. C. Sircar takes him to be probably identical with the homonymous Jaina minister under Kīrtivarman mentioned in the Darbat inscription dated in V.S. 1132;² and the present record which was inscribed eighty-three years subsequently and which mentions the dedication of an image by his son goes to confirm the probability. The name Pāhilla we have also met before in a Jaina temple inscription at Khajurāhō, dated V.S. 1011, where he is stated to have been a devout Jaina who was honoured by King Dhāṅga;³ but we are unable to say anything about the relationship of both these persons though they appear to belong to the same family. The name of this family also occurs in an inscription from Khajurāhō itself.⁴

No. 125; NO PLATE

MAU STONE INSCRIPTION OF THE TIME OF MADANAVARMAN

(Fragmentary)

THE stone which contains this inscription is stated to have been found in 1813, "at the foot of a rocky hill in the vicinity of the town of **Mau**, also spelt as Mhau, in the Jhānsī District" of Uttar Pradesh. Lieutenant William Price, who discovered it, published a transcript and translation of the inscription in the *Asiatic Researches*, Vol. XII, pp. 357 ff., and

¹ The date cannot be verified. For the Northern V year, *current*, it would correspond to Thursday, 17th January, 1157 and for the *expired*, to Tuesday, 7th January, 1158 A.C.

² Above, No. 109. For Sircar's suggestion, see *J. H. Q.*, Vol. XXX, p. 185.

³ Above, No. 99, v. 1.

⁴ See Kielhorn's article in *Ep. Ind.*, Vol. I, No. VIII. This family is also mentioned in No. 122, above, in *I. N. I.*, No. 99, and in a Kalachuri inscription of 1019 A.C., where the reading is *Grahapati-kulatilaka-śrēshṭhin*. The origin of the name cannot be satisfactorily explained. It signifies the sun, and not the moon, as taken by Mirashi, in *C. I. I.*, Vol. IV, p. 235 and n. II, where it is taken perhaps as a mistake for *Grihapati* in the sense of 'a house-holder', or, the 'head of a village'. The word may also be connected with the modern surname Gahōl, members of which family now reside in parts of Bundelkhand.

⁵ From a rubbing supplied by the Chief Epigraphist.

⁶ Expressed a variant of the symbol.

⁷ The *danda*s are redundant.

⁸ Between the double *danda*s is engraved the figure of a horse to right, within a design.

⁹ Drop the *danda*s separating the names and read प्रभृतयः.

also presented the stone to the Asiatic Society of Bengal, which subsequently transferred it to the Indian Museum, Calcutta. The inscription was also edited, without any lithograph, by Dr. F. Kielhorn in the *Epigraphia Indica*, Vol. I (1888), pp. 195 ff. The stone has since then become untraceable, and as an estampage of the inscription is also now not forthcoming, I give below the transcript of it, made by Kielhorn, with minor changes so as to suit to the system adopted here, and also adding my notes to it.

"The inscription, so far as I can judge from the impression, consists of 29 lines. The writing covers a space about 4'0½" (1.37 metres) broad by 3' 1" (1.4 metres) high, and a considerable portion of it is greatly damaged. Thus, the last line is almost completely effaced, and portions of about half the number of lines are "either gone altogether or have become illegible." This damage is of course due to the weather to which the stone remained exposed for long, but probably more due to the fact, as noted by Lt. Price himself, that "the natives were accustomed to sharpen their knives and *talwars* upon it."

The letters, which are of the size of 2.2 cms., were noted to be similar in style to those of the inscriptions from Ajaygadh and Mahōbā, of which photo-lithographs are published in Cunningham's *A.S.I.R.*, Vol. XXI, Pls. xv and xxi-xxiii.¹ The present inscription also shares the peculiarity that it is sometimes difficult to distinguish between the letters *g*, *n* and *m*.²

The **language** is Sanskrit, and the existing portion of the record is in verse throughout. It contains 49 verses in different metres, including also the rare *Svāgata* and still more rare the *Aupachchhandasika*. The verses are not numbered. The style is classical, often reminding us of the poets of old and using figures of speech also. With reference to **orthography**, we may note that (1) *h* is denoted by the sign of *v* except in a few instances occurring in ll. 3, 4, 18, 21 and 25; (2) the consonant following *r* is not unoften doubled, e.g., in *durppa*, l. 3; (3) the sign of *avagraha* is used to show the elision of *a* in the preceding *e* or *ō*, and occasionally also in *dīrgha-sandhi*, e.g., in *sūnritā-ananta*, l. 16; and finally, (4) the dental *n* is used instead of the sign of *anusvāra* in *śubhrānsu*, l. 10, *vanśa*, ll. 11 and 23, *mīmānsaka*, l. 11, and *vajñānsa*, l. 19; and the word *ujjvala* appears with a single *j* in ll. 13 and 15 but not in l. 16.

The inscription refers itself to the reign of **Madanavarman**, (who belonged to the **Chandēlla** dynasty of Mahōbā). The proper **object** of it is to record the construction of a temple of Vishnu, the building of a tank and the execution of some other works of piety, by one of his Ministers, who appears to have been Gadādihara. The **date** and the names of the poet and the engraver, which may have been given in the concluding lines, appear to be lost.

The inscription is a *prabasti*, and, as customary, may be divided into two parts. The first part, which consists of vv. 1-16, gives an account of the ancestors of Madanavarman, during whose reign the record was incised and put up, and the rest of the record, consisting of verses 17 ff., describes the genealogy of the minister and the object in hand. After two *maṅgala-ślōkas* in praise of Vishnu, the poet proceeds to state the pedigree of the ruling king Madanavarman, from **Dhaṅga**, who is stated to have defeated the king of Kānyakubja (v. 3). Dhaṅga's son was **Gaṇḍadēva** (v. 4), his grandson, **Vidyādihara** (v. 5) and his great-grandson was **Vijayapāla** (v. 6), whose son, again, was **Kirtivarman**, who is stated to have vanquished his enemies (v. 8). The names of the enemies are not mentioned here, but this statement probably refers to his defeat of the Kalachuri Karṇa, as seen above.³ Dēvarman, who was the elder brother of Kirtivarman, is not mentioned in the present inscription, as he was a collateral. Kirtivarman's son was **Sallakshānarman** (vv. 9-10), and the latter's son was Jayavarman (v. 11), who was succeeded by his younger brother **Prithivarman**. The last named king was again succeeded by his son, Madanavarman, who, as stated in the present inscription, defeated the kings of Chēdi and Mālavā, and "through dread of whom the king of Kāśī passed his time in friendly behaviour."

The Chēdi or Kalachuri king, referred to as defeated by Madanavarman, appears to be no other than his contemporary Gayākarna who was ruling from *circa* 1123 to 1153 A.C. A hoard of Madanavarman's silver coins found at Panwar in the Teonthar *tehsil* of the former Rewā State and now a district of the same name⁴ may be taken to suggest that Gayākarna, who had

¹ Quoted by Kielhorn in *Ep. Ind.*, Vol. I, p. 195.

² Nos. 150, 113 and 136, respectively.

³ As we generally find in the copper-plates engraved by Pālhana, for which see below, Nos. 126, 129-132 and 134.

⁴ See above, No. 113.

⁵ *J. A. S. B.*, Vol. X (N.S.), pp. 199 f. This, of course, is not a strong evidence.

held the region around Teonthar, lost it to the ChandĒlla king; and thus the claim stated in favour of Madanavarman in the present inscription may be supported. About his conflict with the king of Mālava, reference may be invited to the former's Augasī grant, edited above,¹ where we have seen that the Paramāra king vanquished by the ChandĒlla ruler was no other than Yaśovarman, the son of Naravarman.

The king of Kāśī, who too is referred to in the present inscription, is evidently either Gōvindachandra of the Gahadavāl dynasty, the dates of whose reign range from 1114 to 1154 A.C., or his son Vijayachandra (1154-1170 A.C.). Both these rulers were contemporaries of Madanavarman; and the statement of the inscription, as rightly pointed out by Dr. S. K. Mitra, merely goes to suggest that the ChandĒlla and the Gahadavāl rulers realised the strength of each other and may have formed a sort of alliance for mutual peace.²

The second part of the inscription, which commences with v. 17, gives the genealogy of the person who constructed the temple and also made some other benefactions. This account is traced back to the creator of the world, *i.e.*, *Brahmā*, whose son was *Aṅgiras*; and in his lineage was born the holy sage *Gautama*, also known as *Akshapāda*, who is credited with expounding the *Nyāya* system of philosophy (vv. 18-19). In course of time, in this family was born *Prabhāsa*, who was held in high esteem, as the holy shrine at *Prabhāsa* (v. 20). He was the chief minister of *Dhaṅga* and *Gaṇḍa* (vv. 20-22). His son was *Śivanāga*, who resembled *Bṛihaspati* and who was the minister (*sachiva*) under *Vidyādharma* (vv. 23-24).³ His son was *Mahīpāla* who was chief minister under *Vijayapāla* (vv. 25-26). From *Mahīpāla* were born *Ananta* and *Yogeśvara*; and the former, who was the master of elephants and horses, was appointed minister by the king *Kīrtivarman* (vv. 27-32). *Mahīpāla* had two wives—*Āsarvā* was one of them, and the other's name is lost in v. 34. He had many sons. *Mahīpāla* continued as minister under *Sallakshavarman* also. One of his sons, *Vatsa* by name, was appointed *Pratīhāra* by *Jayavarman* (v. 40), and another son, probably *Gadadhara* by name, was the chief minister of *Prithivivarman* and continued in the same position under *Madanavarman* (vv. 41-42) also.

All the persons mentioned above are highly eulogised in the present record, but the description is entirely conventional, hardly furnishing any historical information. It may also be noted here, that the names of the kings are repeated in the present record in the same order in which they appear in the earlier part thereof. After describing this long line of the hereditary ministers and other officers, and also mentioning two of *Gadadhara's* sons, *viz.*, *Śrīdhara* and *Vidyādharma*, in v. 45, the inscription goes on to narrate his (*Gadadhara's*) charitable deeds. Besides constructing the temple of *Nārāyaṇa* in v. 46, which stood apparently at the place where the stone was originally found, he is also credited with building a tank with broad stones (v. 47), a cistern (?) with dressed stones on the boundary of the village *Dēḍḍu* (v. 48), and a stepped well in the vicinity of a place, the name of which appears to be *Kēṇḍī* (v. 49). The rest of the inscription is lost.

Of the **geographical names** figuring in the inscription, **Antarvēḍī** (v. 38) is the region between the *Gaṅgā* and *Yamunā*, and **Prabhāsa** (v. 20) is the famous place of pilgrimage, at *Vērāval* in *Saurāshṭra*, as also noted by *Kielhorn*. The villages **Dēḍḍu** and **kēṇḍī** as already suggested by the same scholar, must have been somewhere in the vicinity of the find-spot of the inscription. I am, however, unable to identify them.

¹ Above, No. 118.

² *E. R. K.*, pp. 116 f.

³ It may be noted here that v. 17, which begins the account of the ancestors of *Gadadhara*, uses the word *mahāmātya* which denotes a chief minister.

TEXT¹

[Metres: Vv. 1, 40 and 46 *Maulākrāntā*; vv. 2, 8, 10, 15-16, 30, 41-42 and 47 *Sragdhara*; vv. 3 and 6 *Mālinī*; vv. 4, 27-28, and 34 *Anuṣṭubh*; vv. 5, 12, 22, 45 and 49 *Āryā*; vv. 7 and 48 *Aṣṭupādaśika*; vv. 9, 18, 20, 29, 31-32, 36, 39 and 43 *Sārdūlavikrīḍita*; vv. 11, 23 and 37 *Vasantatīlakā*; vv. 13, 24-25 and 44 *Sihharīṇā*; v. 14 *Puṣṭiāgrā*; vv. 17 and 35 *Gīti*; v. 19 *Saṅgāṇī*; v. 21 *Upajāti*; v. 26 *Drutavilambita*; and vv. 33, 38 and 49 either *Āryā*, or *Gīti* or *Upajāti*, as the fourth foot is lost and no definite number of the mātrās in it can be ascertained].

¹ From Kielhorn's transcript in *Ep. Ind.*, Vol. I, pp. 197 ff.
² Kielhorn has noted that this verse is preceded by traces of about twelve *aksharas* and that one should expect here *यो नमो भगवते वामुदेवाय*, or some similar phrase.
³ It is impossible to say exactly how many *aksharas* are effaced at the end of this and the beginning of the next line (K).
⁴ The name missing here before *nama* may have been *पुन*. Similarly, the first two *aksharas* in the next line may have been *जित*. The lost portion of this verse may conjecturally be restored as *स्वत-विदितचन्द्रात्रेकवले प्रसूतो भूजवनविजितारिर्ध्वज*.
⁵ From the back of the impression before him, Kielhorn was certain that the first letter is *न*, and not *म*.
⁶ The gap may be filled in by *सुमनःपति*, which suits the sense and also the metre. Similarly, one would expect something like *सजनि चित्रपदा* at the beginning of the next verse and *पावो वरिष्ठ* at its end.
⁷ My conjectural suggestion for the *aksharas* missing here is *दोषिन्* or *निवर्त्त* and *वने* in the lacuna that follows.
⁸ Kielhorn remarked that *सद्विक* should be *ज्ञ* here. He has also noted that the internal enemies are *kāma* (desire), *Krōdha* (wrath), *lobha* (covetousness), *mōha* (bewilderment), *mada* (pride) and *matsara* (envy); and the seven constituent parts of the kingdom are: the king, his minister, capital, realm, treasury, army and ally. Cf. *Manu*, IX, 291.

¹ The lacuna may conjecturally be filled in by तमः प्रसर.

² Figure of speech: *Rūpaka*. The idea expressed in this stanza is apparently based on *Naiṣadhīyacharita*, Canto XII, v. 66.

³ As already pointed out by Kielhorn, it is an allusion to Gautama's other name Akṣhapāda.

⁴ *Upadhā* means test of honesty. Cf. *Dharmopadhābhir-viprānśha sarvaabhih sachivān punah* (*Kālikā Purāna*, 3).

⁵ *Trivarga* is *dharma* (virtue), *artha* (wealth) and *kāma* (pleasure); as also noted by Kielhorn. The idea expressed in this verse appears to have been borrowed from the *Sisupāla-vadha*, II. 89.

1 The letters omitted here in Kielhorn's reading may have been -स्तरःसत्य- or similar to them. He also takes स रामस्य as one word but it cannot be construed in the verse.
2 That is, Yudhishtira. The first three aksharas of the next stanza may conjecturally be supplied as प्राच्या(वा).
3 The missing aksharas may be conjecturally restored as पतिव्रता तस्य दक्षितामृत
4 Metrically वाङ् would suit here.
5 The three missing aksharas here may have been कृतिज्ञो.
6 This foot shows wrong pause by separating the first three aksharas from the fourth of the name.
7 Cf. *Silapadacudha*, II, 93.

over to me, at my request, by the Director of the Museum at Lucknow, to whom my thanks are due.

The record is on **three massive plates** of copper, large in size, each measuring about 65·75 cms. broad by 49·50 cms. high. All round the rims, flat bands apparently of copper and about 1 cm. broad, are fastened, by rivets, on the inscribed side of each of them, so as to approach quite close to the writing and occasionally hiding a part of a letter here and there. Each plate contains a hole, 2 cms. in diameter and interrupting the continuity of writing in the middle of two or three lines on each, at the top or bottom, apparently for a ring to pass through and hold them together.¹ The writing is also interrupted by a rectangular space, measuring 7 cms. each side and carved in the middle of the first five lines, containing a representation of the goddess Lakshmi, seated on a lotus and being sprinkled with water by an elephant on either side, as to be found generally on Chandella charters.

The second of the plates, which is full of verdigris, is inscribed on both the sides and the rest two on the inner side only. The height of the individual letters is about 1 cm. The record consists of one hundred and twenty-four lines, twenty-nine of which are engraved on the first plate, thirty-one on the first side of the second, and the rest are equally distributed on the other side of the second and on the third plate. All the three plates together weigh 5 kgms. and 600 gms.

The writing is in a state of good preservation, except that one *akshara* here and another there is wholly or partially lost, though it can be supplied from the context. The letters on the middle portion of ll. 67-77 (on the reverse side of the second plate) are either slightly rubbed or are not deeply carved, probably in view of the fact that it bears letters on both the sides. The letters are well formed but not carefully cut, as to be shown below.

The **characters** are Nāgarī of the twelfth century A.C., resembling those of the Mahōbā inscription of the time of Kirtivarman, as already observed by Cartellieri, and as we may also note, those of the Bhārat-Kalā-Bhavan grant of Madanavarman, which was engraved about 30 years prior to the present inscription.² As regards the individual letters, attention may be drawn to the two forms of the vowel *a*, one, e.g., in *Ajai*, l. 74, and the other in *Asadhara*, l. 75, to the formation of *h* which is sometimes in ligature, e.g., in *dasaha*, occurring thrice in l. 7, to that of the conjunct *gg* engraved as *gn*, as in *Bhārggava*, l. 29, and to that of *ch* and *v*, both of which are almost similar, e.g., in *sūcha*, l. 5, where we have both these *aksharas* quite alike. Whether *h* had developed a dot or not cannot be clearly known; it however appears possible that the dot was marked in the original, but was engraved so lightly that it could not come out in the impression, as some other signs and parts of letters also. *Dh* is in a transitional state, sometimes appearing without a horn so as to resemble *v*, e.g., in *sādha*, l. 10, whereas in a few instances it is engraved with a horn on its left limb; the horn is often slanting, as in *dhvajē*, l. 4, but occasionally it is curved and is either joined to the top of the vertical of the letter, e.g., in *adhi*, l. 4, or to that of the *mātrā* attached to it, e.g., in the same prefix in l. 2. The subscript form of this letter, however, is always devoid of the horn. *Bh* often resembles *t*, of course by a wrong stroke, as in *bhūta-bhavishyad*, l. 10. *R*, which has generally assumed its modern Nāgarī form, is often confounded with *v*, e.g., in *māhēsvara*, l. 4; sometimes it ends in a wedge, as in *gōtra*, l. 31, and occasionally, it is only a vertical line with a stroke attached to its middle, on the left, as in *Visvarūpa*, l. 40. The subscript *ṛ* shows the full form of the letter with its superscript half-drawn, cf., e.g., *Chandrātrēya*, l. 1. It may also be noted here that some of the numerical symbols bear top-strokes as the *aksharas*. And lastly, a final consonant in some instances is either not clearly marked or is indicated by its smaller size.

¹ Cartellieri observed that the plates were 'joined by a plain ring'. But I am informed by the Director of the Museum at Lucknow that the ring is missing. To give some more details which I noted in my personal examination of the plates, I found that strips of copper, 0·8 to 1 cm. broad, are fastened to each of the inscribed sides, with ten nails of copper, on each of the horizontal, and seven on each of the vertical sides, so as to show the thickness of the strips in the case of the first and the third plate to be 0·5 cm. each and in case of the second plate, which is inscribed on both the sides, it is almost double of this. All the rivets are still intact. The letters are fairly deep but do not show through on the back of the plates which are sufficiently thick.

² In V.S. 1192. Above, No. 119.

Cartellieri has already drawn attention to the 'uncouth' forms of some of the *aksharas*; e.g., *śhu* with the following *danda* in ll. 6 and 73, is engraved as *puhū*; *k* is occasionally engraved as *p*, e.g., in *Kuladhara*, l. 93, and *p* as a perfect rectangle in *pala*, l. 31. Instances of occasionally omitting limbs of letters are common, e.g., in *Dāmōdara*, l. 110, *m* is cut as *g*; in *padārddham*, l. 58, *m* is engraved as *n*, and in *Vasishṭha*, l. 57 and in some other instances below (in ll. 115 and 116) the slanting stroke of *sh* distinguishing the letter from *p* is omitted, and in l. 123, *alikhāt* appears as *ālahūt*, without the curve of the *mātrā* on the second of these *aksharas*. The signs of *anusvāras* and of the superscript *ṛ* are often omitted: and all such flaws make it difficult to ascertain the exact forms of the proper names which are numerous in the record and in which the influence of local elements is also throughout noticeable. To give one example only, in ll. 48 and 56 the consonants of the letters giving a name are so formed as to make it read as *Dhāvāna*, *Vāvāna*, *Vāchāna* and *Rāvāna*, etc.; and this sort of sloven engraving is also responsible for the reading *Vāsē-gōtra* in place of *vāsa*—the letter *t* appearing as a *prishṭha-mātrā*, as actually taken by Cartellieri without noticing the flaw.

The language is Sanskrit, which is occasionally incorrect, particularly in the long list of names of the donees which are all in their local forms, and also in the names of the villages. The record is in prose, except for the initial verse as to be found to commence the Chandēlla grants, one verse eulogising the donor in ll. 4-6, and five verses towards the end in ll. 120-24. The verses are not numbered. As regards **orthographical** peculiarities, we notice (1) the use of the sign for *v* to denote *b* as well, e.g., in *vādha*, l. 9; (2) a confusion between the dental and the palatal sibilant as in *vaśundharā*, l. 6, and *sākhā*, l. 15; (3) occasional reduplication of a class-consonant following *ṛ*; see *Paramarddi*, l. 4, but also *chandārka*, l. 16; (4) The wrong change of *anusvāra* to *m*, as in *samvat*, l. 13; and finally, (5) the use of a *prishṭha-mātrā* with a few exceptions as in *Kēśava* and *gōtra*, both in l. 82. The *prishṭha-mātrā* is often confounded with the vertical stroke, which is also used to show that the letter preceding it is a concise form (of a surname), and also confounded with the sign for medial *ā*; e.g., in l. 59, we cannot make it certain whether the name is *Jahēda* or *Jāhūda*, (6) the *danda* is also often superfluous, e.g., after *sē* in *vasēt*, l. 13; *sandhis* are generally neglected in the formal portion of the record which abounds in names; and we have examples of wrong *sandhis* also, e.g., in *chaturthānsa*, ll. 36, 39, 40 and below; and in *maṅgalan-mahārīb* in the end; (7) The Prākṛit word *satha* in the sense of 'belonging to' is used more than once, e.g., in l. 7 and below, besides some other Prākṛit words as *pañchēla* in l. 8 and *Laṭṭā* in l. 12, which are also occasionally to be seen; and, last of all to mention, (8) that the local element throughout prevails, not only in the names but also in some other instances, e.g., in the spellings of names as in *Dharmmānanda* in l. 116, *rishi* for *rishī* in ll. 33 and below, *sāmi* for *svāmi* in l. 44, *Yayurvōda* for *Yajurvōda* in l. 62, and *krimi* for *krīmī* in l. 121. All these and such other errors have also been drawn attention to in the text that follows, in addition to the cases of scratching or scoring off the original writings and also overwriting that we find occasionally.

The plates were issued by the *Parama-bhattāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious *Paramardidēva* of the royal house of the Chandēllas. The object is to record the confirmation of a grant, from his camp at *Sōnasara*, for the sake of the increase of his own and his parents' merit and fame, of the villages which had already been donated to certain Brāhmanas by his grandfather, the illustrious *Mahārājādhirāja* *Madanavarman*, from his camp at *Vāridurga* on the **fifteenth of the dark half of Māgha, Thursday, of the (Vikrama) era 1219**. The day and the date correspond to Thursday, the **15th of February, 1162 A.C.**, taking the month to be *amānta*; but, as already aptly remarked by Cartellieri himself, the solar eclipse mentioned in the inscription did not take place on that day but on the preceding new-moon day, the 17th

¹ Some of these names can be traced to their original Sanskrit forms, e.g., *Paṅṅa*, ll. 39 and 94, to *Pradyumna*, *Tikama*, l. 21 and *Tihava*, l. 25, to *Trivikrama*, and *Vīṭhu*, l. 96, to *Vīṭhala*. But the names like *Asadhara*, l. 63, create a difficulty to ascertain whether it is a corrupt form of *Aśvadhara* or *Aśādhara*. It may be noted here that the suffix *ka* is often added to a name not ending in *a*, to form the genitive, e.g. in l. 31 we read not only *Pālṅhū-putra* but also *Pālṅhūkasya*, clearly showing an addition. The other examples of this type are *Risūkasya*, l. 22, *Dēlhākasya*, l. 25 and *Rīthākasya*, l. 88.

January, and was visible all over India.¹ Thus the reckoning was according to the *pūrṇimānta* month, but according to it, the week-day was Wednesday. The date of the grant confirmed by Paramardin is stated in figures only; it was 7th of the bright half of Vaiśākha, Thursday, 1223 of the (Vikrama) era, which, following the southern *expired* year, regularly corresponds to 27th of April, 1167 A.C.²

After the auspicious symbol followed by the verse eulogising the royal Chandella house and generally occurring at the commencement of the inscriptions of the house, the present grant gives the pedigree of the donor, introducing the *Paramabhūttāraku*, Mahārājadhivāja and *Param-ēvara*, the illustrious Prithivīvarman, his successor, the illustrious P.M.P. Madanavarman, and the latter's successor, the illustrious P.M.P. Paramardidēva, and says that he was a devout worshipper of Śiva, and the sole lord of Kālanjara. Then, we have a verse which conventionally glorifies Paramardin and states that he excelled Cupid by his handsome form, the ocean by depth (sobriety), the Sun by his lustre, Brīhaspati by his wisdom and Yudhiṣṭhira by his truthfulness. This verse is an exact copy of the one occurring in the corresponding portion of Madanavarman's Bhārat-Kalā-Bhavan grant.³ With reference to the genealogy occurring in the present grant, we have to observe that the names of the first two of the rulers mentioned here are already known from the other records of the house, and the present inscription supplements our knowledge by stating that Paramardin was the grandson of Madanavarman.⁴ The latter's son was Yaśovarman, whose name occurs only in the Baṭeśvara stone inscription of Paramardin; and whether he ruled or not will be seen while dealing with that inscription where there is a proper place for it.

The necessity for Paramardin to confirm the grant which was made by his grandfather Madanavarman in V.S. 1219, suggests that the latter may have died soon after the grant was made and it could not possibly be stabilised. Indeed, we have no record to show Madanavarman's name after this date. And the suggestion made here receives a strong corroboration from the fact that Madanavarman's last known year is V.S. 1220 or 1163 A.C.;⁵ and during his last days his attention may have been constantly required in driving off the Chaulukya army which under Jayasīṃha Siddharāja (1094-1143 A.C.) had already annexed the Paramāra dominions and began to invade the territories of the Chandellas, as we have already seen in the political history of the house.⁶

The villages which were donated are mentioned in ll. 7 ff. They are:

- (1) In the district (*vishaya*) of Vikraura, Khaṭaurā-12, Tānta-12, belonging to Rālha, and Hāta-18, and Sēsayi-grāma.
- (2) In the district (*vishaya*) of Dudhai, Pilikhiṇi-*pañchēla* (group of five ?) and Lāva-*pañchēla*.
- (3) In the district (*vishaya*) of Vaṅṅavāri, Isarahara-*pañchēla*, Uladana and Kakaradaha.
- (4) In Gōkula (?), Hathidaha ll. 7-8.

The mention of the procedure of sanctioning the grant begins in l. 10; it is all common, as stated in the other grants of the house and need not be repeated here. It is also stated here that the king donated all these villages with the exception of the following:— The town of Madanapura and the ground belonging thereto, (*viz.*) Gaḍḍarakula, and the glorious deity Somanātha, further, the villages of Vaḍavāri and Dudhai, the property belonging to Liṅgiā and Jalhūā connected with the town of Madanapura, and also a plot of land in it, measuring four ploughs which is the property of the Laṭiās and is connected with the Ajayasāgar (ll. 11-12).

The donees are mentioned in ll. 17 ff. Their total number was 309 and they had immigrated from the various *agrahāras* of learned persons (*bhāṭṭāgrahāra*) and belonged to the various

¹ *Op. cit.*, p. 156. It may be remarked here that the charity in honour of a lunar eclipse is given actually on the next day when the eclipse is over. Also see *I. N. I.*, No. 313, n.

² See *I. N. I.*, No. 325.

³ Above, No. 119, text ll. 4-6. It may be observed here that the present grant copied many of its expressions from the same.

⁴ By the use of the expression '*asmat-pitāmahēna*' in l. 13.

⁵ Vide the Mahōbā Jaina image inscription, Cunningham's *A. S. I.*, Vol. II, p. 448, No. 25. It is not traceable now.

⁶ Also see the Kālanjara stone inscription of Viravarman (undated), No. 148, below, which claims that Madanavarman defeated the king of Gūrjara (*i. e.*, Jayasīṃha).

gōtras. It is interesting to note that this list also includes a general and a *pratihāri* (ll. 19-20), who appear to have been Brāhmanas like the others. Most of the Brāhmanas were also distinguished by their surnames which were subject to change from father to son in the period to which the grant belongs.¹

The names of the donees are arranged according to their Vedas, *gōtras*, fathers' names with their surnames given in an abbreviated form, followed by their own names with surnames in the abbreviated form, each of these being separated by a vertical stroke, and in the end is the mention of the share (*pada*) which he received. This procedure is occasionally deviated, e.g., in l. 74, where more than one donee is mentioned together, and also in ll. 113 and 115 where their names are jointly mentioned with the expression *samāsatvē*. Another point that is worth noting here is that in l. 113 the number of the Brāhmanas mentioned in a group is written 82, in figures, and after the use of the expression *samāsatvē*, the shares which were really 41, as each of them was to receive a half, are mentioned to be 43, both in figures and words. It is thus evident that the remaining two shares consisted of land to be left fallow between the two adjoining fields.²

The gift was perpetual and was to be enjoyed by the donees and their sons and grandsons, in their turn. The conditions of the grant are mentioned in ll. 117-120; they are all usual, as to be found in the other Chandēlla grants. Following this, we have four benedictory and imprecatory verses in ll. 120-22, and then the **sign-manual** of the king in l. 123. This is followed by a verse giving the name of Prithvīdhara who wrote the document with distinct and elegantly formed characters and under the order of the king. Prithvīdhara is stated to have belonged to the Vāstavya family of the exalted name, who had performed meritorious acts and possessed all good qualities and who was the writer of religious documents. A prose portion in the end states that the grant was incised by the brazier Pālhana;³ and with the expressions meaning "auspiciousness, great fortune," the inscription comes to a close.

Most of the **place-names** occurring in the present inscription have already been identified. **Vikaura**, which is probably the same as Vikrauntī of the Garrāh plates of Trailōkyavarman,⁴ is Beekore of the maps, situated in N.L. 24° 13' and E.L. 78° 41' in Sāgar District. It is about 6 kms. south-west of Madanapur. **Khataudā** (Khutourea) and **Sēsayi** (Sajec ?), as noted by Cartellieri, lie south-east of Beekore. **Dudhai**, mentioned as the principal town of another territorial division of the grant, is the modern place retaining its name in the form of Dudāhī (N.L. 24° 26' ; E.L. 78° 27') and the find-spot of the inscriptions of Kṛishnapa, Dhaṅga's brother.⁵ **Itāva** as suggested by Cartellieri, is the modern Etāwah (N.L. 24° 12' ; E.L. 78° 16'). While proposing this identification he had some doubt, but his conjecture is justified by the consideration that the place lies about 30 kms. south-west of Dudāhī i.e., the modern Binā, a railway junction between Bhōpāl and Jhānsī and is known by its complete name Binā-Etāwa, in the khuraī *tehsāl* of the Sāgar District. **Vadavāri**, still another district mentioned in the inscription, is probably represented by the modern Bērwarā (N.L. 24° 30' ; E.L. 78° 41') ; and **Uladana** has been identified with Ooldana-khurā, about 12 kms. north-east of Madanapur but a place more appropriately falling in the *vishaya* in which it is stated to have been then included, is Uldar (24° 00' N. ; 78° 45' E.), situated about 15 kms. south by east of Baṅḍā, the headquarters of a *tehsāl* in the Sāgar District. This place is on the junction of the rivers Dhasan and Bhandar and a legend is associated with it.⁶ **Patha**, as read by Cartellieri in ll. 8-9, has been identified by him with the modern place of the same name lying about 6 kms. east of Bērwarā.

¹ For example, in l. 41, the father of Alhū who was a *Chau*, i.e., Chaturyēdin, is mentioned as *divivēdin*, and in the line that follows, the father is mentioned as *Pamdāta* but the son as *Thakkura*. For similar examples, see above, No. 60.

² For another instance of the kind, see above, No. 51.

³ It may be noted that Nos. 129-130 were also written and engraved respectively by the same persons. Pālhana also engraved Nos. 129-132, 134.

⁴ Below, No. 141. The name of the place is spelt as Bikaura by Cunningham, who noticed some small temples there. See his *A. S. I. R.*, Vol. XXI, p. 175.

⁵ Above, Nos. 101-106.

⁶ See *Gaz. of Sāgar Dist.*, 1965, p. 549; *A. S. I. R.*, Vol. XXI, pp. 175 f.

Kakaradaha, another village situated in the Vadavāri *vishaya*, appears to be identical with Karhaiyā, lying about 55 kms. south-southwest of Lalitpur. This place is also mentioned in the grant of Trailokyavarman, as to be seen below. **Madanapura**, which still retains its old name, is the find-spot of Prithvirāja's inscriptions¹; it is about 38 kms. to the south-east of Dudāhi. **Sōnasara**, which is stated in the grant to have been the camp of Madanavarman, has not been previously identified. It appears to be identical with Samsar, the headquarters of a *tehsil* in the Chhindwādā District of Madhya Pradesh. The rest of the localities cannot be traced. It may, however, be stated here that a study of all these place-names reveals that Paramardin's kingdom comprised, besides his main dominions in Bundelkhand, the whole of the present Lalitpur division of the Jhānsī District stretching to the west up to the Bētawā and to the south up to some parts in the Chhindwādā District.

APPENDIX

As prepared by Cartellieri (*Ep. Ind.*, Vol. IV, pp. 170 ff).

A. List of Names of *gōtras*

Atri, II. 59, 68, 79 (twice).	Kausika, II. 30, 61, 67, 78, 82, 83, 85 (twice), 104, 105 (three times).
Bābhavya, I. 25.	Kausa, II. 27, 40, 64, 97.
Bandhula, II. 38, 95, 112.	Krishnātrēya, II. 20, 21, 25, 28, 32, 37 (twice), 40, 58, 89, 103, 110, 116.
Baudhāyana, I. 80.	Kutsa, II. 44, 58.
Bharadvāja, II. 18, 20, 23, 24, 45, 51, 61, 62 (twice), 63 (twice), 64, 65, 71, 73, 75, 76 (twice), 77, 79, 87, 91, 92, 95, 97, 98, 100, 102, 105, 106, 107, 108 (twice), 111 (twice), 112 (twice), 113, 114.	Laugākshi, I. 91.
Bhāradvāja, II. 85, 86.	Māhula, I. 70.
Bhārgava, II. 21, 29, 43 (twice), 44, 46, 47, 48, 50, 51, 53, 56, 78, 92, 112.	Māndavya, I. 32.
Chandratrēya, II. 27, 53, 66 (twice).	Mandalya, II. 73, 85, 88, 107.

ABBREVIATIONS OF SURNAMES USED IN THE INSCRIPTION

<i>A</i> , or <i>Agni</i>	= Agnihōtrin.
<i>Chau</i>	= Probably, Chandhuri, also figuring in No. 131, below.
<i>Di</i>	= Dīksita.
<i>Dvi</i>	= Dvivēda, or Dvivēdin.
<i>Nā</i>	= Nāyaka, found in some other Chandēlla records also.
<i>Pam</i>	= Pāmdita, i.e., Pandit.
<i>Rā</i>	= Rāṭita (Rājaputra), or, Rājānaka.
<i>Tri</i>	= Trivēda, or Trivēdin.

Note.—The letters *Dvi*, *Tri*, and *Di* are occasionally so formed as they could not be distinctly made out even on the original.

TEXT

[Metres: Verses 1, 3-5 *Anushubh*; v. 2 *Sardūlakṛdita*; v. 6 *Sālinī*; and v. 7 *Mālinī*].

¹ From impressions. Subsequently I have compared the reading from the original plates, placed at my disposal by the Director of the Provincial museum at Lucknow, to whom my thanks are due.

² Expressed by a symbol.

³ The bracketed *akshara* is redundant. It seems to have been cut while copying the draft of a grant of Madanavarman and was not struck off even after it was known to be superfluous.

⁴ This punctuation mark, as many others below, is joined to the following letter so as to appear as a *mātrā*.

⁵ Originally the sign of *nisarga*, which was subsequently altered.

⁶ The consonant of this *akshara* appears as *m*.

⁷ This punctuation mark is quite close to the letter that follows, which may also be read as *kē*.

⁸ Cartellieri (denoted as C, below) read these two *aksharas* as *patha* by similarity of forms, but it is not suitable here. He also divided the previous portion of the text as गोकुले नसहृषिदहा; but I hesitate to agree with him as the name नसहृषिदहा is rather too long.

⁹ The horizontal stroke of this letter is missing, and consequently, it appears as *vā*.

¹⁰ This word is not known to me.

¹¹ The horizontal stroke of the bracketed *akshara* was not cut.

¹ The reading of this name is uncertain due to the similarity of the forms of *dh* and *v*. The stroke here, as also below, is probably used to show that the letter preceding it is a concise form of a word denoting a surname.

² The consonant *m* is not marked below, here and in most of the instances, below; but it is not every-time shown in the transcript.

³ The first syllable of a word showing *gōtra* is changed here to *bhā* (from *bha*), which is really the first letter of the *gōtra* which traces descent from the sage Bhāradvāja.

⁴ The *sandhi* is not observed here, as also in almost all the cases below. Similarly, the *vibhaktis* too are missing, and no corrections have been shown in the transcript, to minimise the numbers of foot-notes. So also with the redundant insertions of the punctuation marks.

⁵ A *mātrā* also above this letter was originally cut, and later on erased.

⁶ C. observed that this name is perhaps *Parimāha*, but it can also be a corrupt form of *Padmanābha*.

⁷ The curve of the *mātrā* above this letter is not visible.

⁸ The *danda* is so placed as to appear as a punctuation mark or a *mātrā*-sign of the next letter. There are many cases of this type, below.

⁹ The consonant of this *akshara* can also be read as *dh* or *v*.

¹⁰ By a wrong chisel stroke, this *akshara* looks like *chan*.

¹¹ The letter in the brackets is mutilated and may also have *ṣ* before it.

^१ This syllable is cut as *ldga*.

^२ Both these *aksharas* are unnecessary. Moreover, the last *akshara* of the preceding name appears to have been engraved as *kha*, and *k* (one of the consonants) was later on scored off.

^३ The reading of this letter is uncertain. It is so formed as also to be read as *dha*, as also both the consonants in टट in l. 7, above.

^४ That is, *Pradyumnaya*.

^५ The reading of the first letter of this name is uncertain.

^६ The *akshara* in the brackets looks like *thla*, and the *thla* of *Vasishtha* as *shu*.

^७ The first of these *aksharas* is crisped, and the consonant of the second appears also as *d*.

^८ The superscript of the bracketed *akshara* is cut as *k*.

^९ C. suggests that it is perhaps *Bhuvanassvamin*.

¹ Delete what is within the brackets, as already noted by C.

² C. observed that probably *Rāvanasya* (or *Vāmanasya*?) is intended here. But the name cannot definitely be made out as the consonants of the first two *aksharas* are similar in form. The first, of course, cannot be *r*.

³ Either there is no mention of *ita* after *gōtra* and the name begins with *tri*, or it may be that the father *Lōchana* was *Trivēda* and the son was *Dvēda*.

⁴ The surname is omitted here.

⁵ This name also figures in another grant of the king and hence the first of its letters is read as *dh*. See No. 134, l. 12.

⁶ Originally *vā*, changed to *dā*.

⁷ Originally *sh*, changed to *ch*.

⁸ He may have been *Aśvadhara* or *Āśadhara*, also mentioned in l. 64 below.

⁹ These two letters may also be read as *Paśtu*. Here too the surname is not mentioned.

¹⁰ See *n.* on l. 48. above.

¹¹ The bracketed *akshara* looks like *gpa*; and the two letters *maithu*, that follow, are crudely engraved.

¹² The reading of the first two syllables is distinct, but the name may also have been *Jāhāda*.

¹³ This *akshara* was first cut as *pa* and later on altered to *va*. The original sign is still visible. The same is the case with *g* in *gōtra* before it in the same line.

¹ C. read this *akshara* as *sha* and corrected it to *ra*, possibly in view of the *ra* that follows. But it is not necessary as the surnames were changing in that age, as seen above. The actual name of the donee is not mentioned here.

² The consonant of *Ka* may also be read as *a*.

³ Here *agni* and not *a* as it is written before. It is an abbreviation of *agnihōtrin*.

⁴ This name may be also read as *Sēmēka*, and in that case we have to supply the preceding *dauda*.

⁵ This name may also be read as *Gā*, with the supply of the preceding *dauda*.

⁶ Here appears a superfluous *dauda*, with its top curved to right so as to appear as *pih*.

⁷ As C. suggested, read पदमेकम्.

⁸ Read पदद्वयम् or पदाद्धम्.

¹ The bracketed *akshara* also appears as *stī*.

² See n. on the same word in l. 25. The *mātrā* of *nyu* that follows is faint.

³ Perhaps *na* is redundant here.

⁴ Above this letter is a faint slanting stroke appearing as a *mātrā*, erased later on.

⁵ Probably, *Vikrama* is intended. The first and the third of the letters are misformed.

⁶ As both the verticals are joined by a stroke, this *akshara* is *dhā* and not *vā* as read by C.

⁷ The *mātrā* above this letter is faint, and the name may also be read as *Gōhala* with a *danīa* after as in some other cases.

⁸ C. proposed to correct this letter to *dā* but it may be taken to denote *Dikshita* and the change is not necessary.

¹ Here, as in some cases below, the subscript of this letter is either faintly visible or is altogether missing. The emendations have all been made in view of this.

² The lower portions of the last three letters were already lost in the time of C. As also noted by him, the sign of *anusvara* may be accidental and the first two *aksharas* may be *Gāgē, Gāngē* or *Gāgū*. On the original, which I subsequently scrutinized, the reading is distinctly *Gāngū*.

³ The bracketed letter is indistinct, and the traces show it to have been *śrī*, as also suits the context.

⁴ The *anusvara* is doubtful. It is clear on the plate as I noted in my examination subsequently.

⁵ The *aksharas* in the brackets appear to be overwritten, as also noted by C.

⁶ This letter is perhaps to be read with a subscript *r*. It is not known whether *iti* is intended here.

⁷ The reading of the *mātra* here is doubtful.

⁸ This *akshara* contains some redundant strokes in its formation.

⁹ The slanting stroke distinguishing this letter from *pa* is not formed.

¹⁰ The Sanskrit word is *Yasōdēva*.

¹ The form of this letter is crude and the reading may also have been *ama*.

² C. correctly observed that the consonant of the second *akshara* of the name may have been *L*.

³ The first of the bracketed letters is engraved as *pa*, and the *da* is mingled with the letter that follows it.

⁴ Some other *akshara* was originally engraved here.

⁵ C. read the first *akshara* of the name as *sa*, but the *mātrā* is distinct.

⁶ See n. 9 in line 100 above.

⁷ The consonant of the bracketed *akshara* is cut as *v*.

⁸ Originally *tr*, with the consonant changed to *da*.

⁹ As also noted by C., the bracketed letter is crudely formed and appears like *ha*.

¹⁰ That is, in aggregation. C., however, proposes to correct the word to *samāśatvā*, in the sense of equal share.

¹¹ Read -रिज्। अङ्क-

¹² The *akshara* in the brackets looks like *ka*.

¹³ The reading of this *akshara* is uncertain and the name that precedes it is rather curious. Is *Balarīsa* intended?

¹⁴ Here and below in all such cases read either *śarmā* or *śarman*, as required by grammar.

¹⁵ It cannot be ascertained whether a curve of the medial long *ī* is above *pa*.

No. 127; Plate CXIV

MAHŌBĀ STATUE INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1224

THIS inscription was brought to notice by General Alexander Cunningham in his *Archaeological Survey of India Reports*, Vol. XXI (for 1883-1885), p. 74 (No. 7), by publishing a transcript of its text, accompanied by a lithograph, which appears to have been prepared from an eye-copy. The record is stated to have been incised on the pedestal of a broken Jaina statue, found by him at Mahōbā¹³ in the Hamīrpur District of Uttar Pradesh. Nothing about its exact find-spot is stated in the *Report*, and its present whereabouts are unknown. Thus it

¹ Read ईकम्.

² Some of these five aksharas are mutilated but the reading is certain, as also seen from the plate. In view of this, we cannot agree with H. K. Sastri, who had no opportunity to examine the original and who suggested the reading to be sa-parvo-śhshu, which gives no sense. For his suggestion see *Ep. Ind.*, Vol. XVI, p. 275, n. 5. The word śhana used here has to be modified to śsava, in the sense of (a plant) from which spirituous liquor has to be extracted, as also used in some other grants of the house, for example, in our No. 118, l. 16.

³ This letter is ornamentally formed and looks like pta.

⁴ C. read śvabhva here, but it is not suitable to the sense.

⁵ The top-stroke of this letter is the same as the curve of the medial long ṛ above it. The r̥pha on स that follows is distinct on the plate but it is not deeply engraved.

⁶ The repetition of the two letters is redundant as also in No. 119, above, from where this portion appears to have been taken.

⁷ Nyō is crude. The loop is separated from the horizontal stroke.

⁸ Read भवद्भिः [11६*] इति

⁹ The joining horizontal stroke is either not marked or has not come out in the impression. The letter looks like rā.

¹⁰ Probably to be read as -कम्मो वाम-

¹¹ For situation and antiquities of the place, see above, No. 113, the inscription is also referred to by Smith, in *J. A. S. B.*, Vol. I, Pl. I (1881), p. 20.

is not possible to obtain an impression, and therefore the record is edited here from the small-scale lithograph published by Cunningham.

The inscription consists of one long line, the length of which is not known. The characters are **Nāgarī** of the twelfth century A.C., to which the record belongs. The **language** is Sanskrit and the record is all in prose. The **orthography** does not call for any special remark, even taking the inscription reproduced is a faithful eye-copy.

The record refers itself to the victorious reign of the illustrious **Paramardīn**, the sole lord of Kālāñjar; and thus he is undoubtedly the homonymous Chandēlla king ruling at Mahōbā from 1166 to 1202 A.C. The **aim** of the inscription is evidently to record the installation of the image of a Jaina pontiff, whose name does not appear in it.

The inscription is **dated** in the year 1224, on **Sunday**, the 2nd *tithi* of the bright half of **Āshādhā**. The year and the *tithi* are expressed in numerical figures only. The year, as in the other cases, has to be referred to the Vikrama era, and the date, according to Kielhorn's calculations, corresponds to **Sunday, 9th June, 1168 A.C.**, taking the year 1224 to be the Southern Vikrama, *expired*.¹ The present inscription was thus incised only a couple of years subsequent to Paramardīn's accession to the throne, and it speaks of the popularity of Jainism during his reign.

AJAYAGADH STONE INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1227

THIS inscription was discovered by Alexander Cunningham; and a transcript of it with a rough translation and a facsimile was published by him in his *Archaeological Survey of India Reports*, Vol. XXI (for 1884-85), pp. 49-50, and Plate xii-B. Subsequently, F. Kielhorn corrected and discussed its date, as to be seen below, but it has not been systematically edited so far. The record is edited here from an inked impression kindly supplied by the Chief Epigraphist, Archaeological Survey of India, to whom I am grateful for taking the trouble of preparing it fresh, at my request.

The record is inscribed on a jamb of the upper gate in the fort of **Ajayagadh**, in the Pannā District of Madhya Pradesh.⁶ Just beneath it, and as if in continuation thereof, is another inscription which will be edited below.⁷ The present record consists of eleven lines of writing, covering a space 26.5 cms. long and 42.5 cms. high. The length of the last of the lines is only about 10 cms. The height of the individual letters varies from 2 to 3 cms. The writing has suffered considerably by exposure to weather, and consequently, one letter at the beginning of l. 10 and probably some more at the end of ll. 9 and 11 are altogether lost. Besides, the portion on which the record was inscribed was not originally well dressed and the technical execution too is most sloven.

¹ See *Ind. Ant.*, Vol. XIX, pp. 36-37, No. 64.

² From Plate xxiii-G in Cunningham's *A. S. I. R.*, Vol. XXI.

³ An ornamentation is engraved between the double *danda*.

⁴ Cunningham read निजयराज्ये which is evidently wrong or a misprint. The inscription appears to be incomplete. In the eye-copy published by him, the consonant of the first *akshara* is clearly न.

⁵ The installation of an image appears to have been intended here.

⁶ For the situation of the place and reference to its antiquities, see above, No. 112.

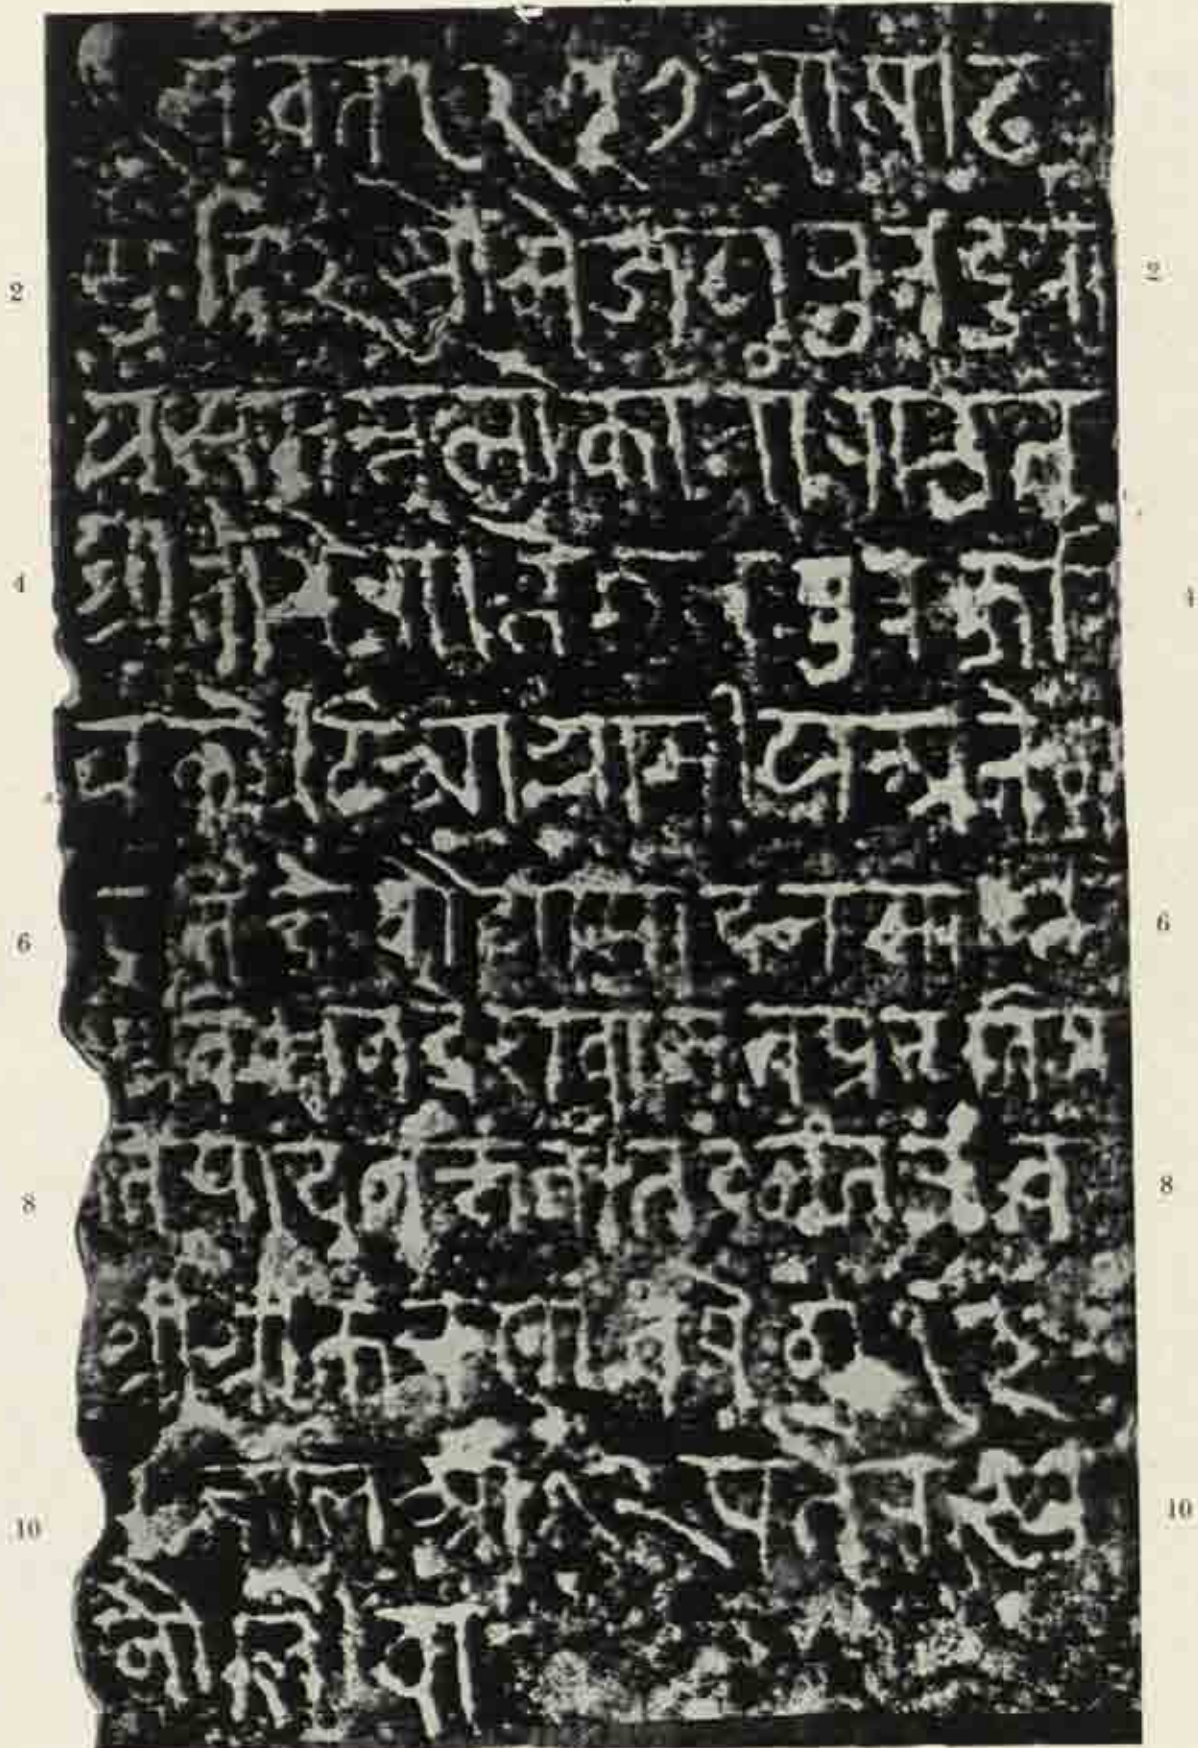

⁷ No. 137.

MAHÖBÄ STATUE INSCRIPTION OF THE TIME OF
PARAMARDIDĒVA, VIKRAMA 1224

सैवत१२४ आषाढ सु दि २३ वै ॥ ॐ ॥ काञ्चनराधियति
श्रीमत्पद्मर्द्धिदेव पादानामही प्रवर्द्धमानकल्याणविजयराज्ये

From Facsimile

AJAYGADH STONE INSCRIPTION OF THE TIME OF
PARAMARDIDĒVA, VIKRAMA 1227

Scale : One-half

The inscription is written in the **Nāgari** alphabet of the 12th century. The initial *a* which occurs twice in *kōṭiā-* and *anēna*, both in l. 5, shows its form slightly different. Attention may also be invited to the initial *u* which has begun to assume the modern form; see *rāūta-*, l. 3; to the loop of *k*, which, when it is the first member of a conjunct consonant or when the medial *ri* is attached to it, gives place to a horizontal stroke: see *bhikshē*, l. 6 and *kṛita-*, l. 8; the conjunct consonant *gg* appears as *gn*, as generally in the inscriptions of the time; cf. *mārgga-*, l. 6; and lastly, the letter *r* is represented by a vertical with a slanting stroke attached to its middle on the left, as in *rāūta*, l. 3. **Orthographically** nothing is worth noting, except that a consonant following *r* is reduplicated in *mārgga-* and *durgga-*, respectively in ll. 6 and 2. The *mātrās* of the diphthongs are all marked above.

The **language** of the record is Sanskrit and it is all in prose. It is full of errors, as will be shown in the foot-notes appended to the text that follows. The inscription has in it a number of local words also. The **purport** of the record is probably to commemorate the construction of a step-well (*bāūli*, l. 11)¹ by the *rāūta* (*rājaputra*) śrī-Vira,² the son of Tējala who was a Kshatriya of the village of Kōṭiā, on the road, during the time of famine.

The **date** of the record, as expressed only in figures, is **Monday, the second day of the bright half of Āshāḍha** of the (Vikrama) year, which was read by Cunningham as 1237. But the impression before me shows the decimal figure more similar to two than three, and a careful scrutiny goes to indicate that the curve at the top of the figure has suffered from a slanting stroke which may have been either the original fault of the stone, or a redundant stroke of the chisel, or a later development due to weather or human agency, of course some time before Cunningham discovered the inscription. And here I agree with Kielhorn who took the figure to be 2. Thus according to him the year is **1227**; and the date, as calculated by him, corresponds to **7th June, 1171 A.C.**, which was a **Monday**.³

The record purports to mention some more purposes also, as we can gather from the use of *-pādanam*, appearing twice in ll. 6 and 8, and also from the expression *tadanantaram cha*, after *kṛitam* in l. 8. I am unable to make out this portion.

The inscription does not mention the name of the king, but he was evidently the illustrious **Paramardin** of the royal house of the **Chandēllas** whom we know as occupying the throne from c. 1166 to 1202 A.C., and as is also shown by the provenance of the record. As already stated above, the rest of the record is unintelligible to me.

Of the **geographical places** mentioned in the inscription, **Jayapura** (l. 2) is the same as Ajayagadh; and the village **Kōṭiā** (l. 5) I am unable to identify.

TEXT*

- 1 सिद्धम्⁵ [1⁶] संवत्⁶ १२२७ आषाढ-
- 2 सु(शु)दि⁷ २ सोम⁸ जयपुरदुर्गा-⁹

¹ And not *nauli*, as read by Cunningham. He did not explain the word.

² Here Cunningham read the name as *Vira*, but the impression shows the sign of the medial *i* very clearly. It is not known if the *śrī* was a part of the name.

³ See *Ind. Ant.*, Vol. XIX, p. 357, No. 162. It may also be noted here that reading the year as 1237 and making his calculations according to it, Cunningham found that the day could not be worked out to be a Monday, as stated in the inscription, but a Wednesday; and to solve this difficulty, he also observed that the word *sōmē*, in l. 2, may be a mistake of the writer or the engraver for *saumyē*, i.e., Wednesday, as Budha is regarded to be the son of the Moon-deity (Cunningham, *op. cit.*, p. 50). This ingenious suggestion, however, goes against the poor knowledge of the writer and the engraver.

⁴ From an impression.

⁵ Expressed by a symbol.

⁶ The sign marking this consonant is not cut in its proper place and appears as touching the top of the *mātrā* of *sō*, just below it in the next line. For the reading of the year that follows, see n. above.

⁷ A redundant stroke makes this syllable appear as *di* or *ddhi*.

⁸ It is probably the original fault of the stone that makes this letter appear as *bhō*.

⁹ The last of the verticals of the *mātrā* of *ā* is ornamental, resembling *ra*.

NO. 129: PLATE CXVI

ICHCHHĀVAR COPPER-PLATE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year: 1228

THE two copper-plates which bear this inscription are stated to have been found some time in the closing years of the last century, in the ruins on the western side of the modern village of Ichchhāvar,⁸ which is also known as Nichhāvar and lies in the Pailāni *tahsil* of the Bāndā District in Uttar Pradesh. The ruins go by the name of Dhanēsar, or Dhānikhēdā, and are surrounded by a lake which is called *Bahī Tāl*, and sometimes as the *Madana-Sāgar*, the latter of these names being applied to it in commemoration of the Chandēlla king Madanavarman who was the grandfather of the ruler who issued the present grant. The circumstances under which the plates were obtained are not known; but it is stated that they somehow came in the possession of Dr. William Hoey and appear to have been presented by him to the Provincial Museum at Lucknow, where they are now preserved. Dr. Hoey published his article on the inscription, jointly with V. A. Smith, giving a full summary of the contents of it, in the *Journal of the Bengal Asiatic Society*, Vol. LXIV, Pt. 1 (1895), pp. 155-58, with a facsimile Plate (VII), but without a transcript. Subsequently, the record was edited by F. Kielhorn, who transcribed it from the photolithograph appearing in the *Journal of the As. Soc.*, and his article, without a facsimile, appeared in the *Indian Antiquary*, Vol. XXV (1896), pp. 205 ff. The inscription is edited here from a set of fresh impressions which I owe to the Director of the Lucknow Museum where the plates are now exhibited.

As stated above, they are two copper-plates, each of them measuring about 33.65 cms. in length and 25.5 cms. in breadth. Both the plates are inscribed on the inner side only. For the

¹ The reading of this letter is not certain but I have adopted Cunningham's reading. The *repha* on the second syllable is indistinct, but it is clear on the same letter in No. 137, l. 5, below.

² Cunningham read *naiyapadunam*, but the first two of the letters are quite distinct, and the reading as in the transcript appears to be certain. However, with either of the readings the sense is not clear.

³ The whole line appears to have been intended for सुतप्रभृतेषु सुतप्रभृतिभिः

⁴ The reading of this syllable is doubtful. If it is as taken here, this letter is a contraction of *thakura*. The other possibility of reading it is *ra* and taking the whole as *carēna*.

⁵ The first letter in this line has disappeared, leaving only a trace. It has been restored here from the same word appearing in the inscription which is edited below, No. 137.

⁶ Perhaps it means 'lord of the *Sankhāliya*'¹² applied to the excavator of the well. See *n.* on the same word on No. 121, above.

⁷ Some traces after this word probably indicate that a portion of the inscription is lost in this line.

⁸ Situated in Long. 80° 34' E.; Lat. 25° 52' N. The name is also spelt as Ichchhāvar.

protection of the writing, as to judge from the impressions and also from the original plates, their ends were bordered with strips, about 1 cm. broad and obviously of copper, secured by rivets, four on each of the vertical and five on each of the horizontal sides. All the strips are now lost. The plates were originally held together by a ring passing through a hole, which is about two cms. in diameter and bored at the bottom of the first and the top of the second plate so as to disturb the writing in two lines in the middle; but the ring is stated to have been lost, presumably also with the seal which may have been originally attached to it. The weight of both the plates together with the existing nails is 3 kgs.

The inscribed surface on each of the plates measures about 30.5 by 23 cms. The first plate contains 17 lines of writing and the second 18 lines of equal length, leaving a fair margin on all the four sides. The top of the first plate shows a crude representation of the goddess Lakshmi, seated on a lotus, and on either of her sides is an elephant sprinkling her with water from a pot held in the trunk. This device, which is usually to be seen on the charters issued by the Chandēlla kings, roughly measures 5.5 cms. long and 5 cms. high and interrupts the writing in the first four lines. The average height of the letters is 1 cm. They are deeply incised but are not seen on the other side of the plates which are thick. They are fairly legible and the writing is in a state of good preservation.

The characters are Nāgarī, bearing a close affinity to those of the Sēmṛā grant which was written and engraved only five years before, in V. S. 1223, by the same persons who respectively wrote and engraved the present inscription, viz., Prithivīdhara and Pālhaṇa, who were respectively the writer and the engraver of some other grants of the house also, as to be seen on proper occasions. And though the technical execution is neat, as observed above, the work is not although faultless, for we find throughout the whole inscription the same type of slipshods as in the Sēmṛā grant, e.g., deforming some of the letters, omitting their limbs, and also omitting the signs of *mātrās*, *anusvāras* and the superscript *r* above the top-stroke. For example, *m* in *bhūmi*, l. 27, is engraved as *g*, and in the same word in l. 29, and also in *mata*, l. 33 and *kumuda*, l. 34, it is cut as *n*; the joining horizontal stroke is missing in the first instance, and the vertical stroke in the second. In *vansa*, l. 2, the consonant of the first letter appears as *ch*, and the sign of the *anusvāra* is not marked; in *varsha*, l. 29, and in *pārthiva*, l. 31, the sign of the superscript *r* is omitted; and in *utkārṇa*, l. 35, the curve of the secondary *ī* has not come out. There are several such slips in the present and in the other grants engraved by Pālhaṇa.¹

To note the peculiarity of the individual letters, attention may be here drawn to the slightly varying forms of *a* in *ashta*, l. 12, *atra*, l. 25, and *āchchhētā*, l. 29; to the occasional ligatured form of *h* in *avihala*, l. 8; to the conjunct *gg* appearing as *gn*, e.g., in *svargga*, l. 28; to *ṛ* which resembles *ḍ*, as in *vihāṅgama*, l. 24; to *ṇ* shown by a cursive bar across the letter, cf. *suvarṇa*, l. 30; and to *sh* engraved as *shl*, as in *Krishṇa*, l. 16. The *aksharas* *ch*, *dh* and *v* are only occasionally distinguished, e.g., in *charūchara* and *Bhavānī*, both in l. 15 and in *samvōdha*, l. 9; but *ch* is often engraved as *r*; see *yāchatē*, l. 32; *dh* is transitional; for whereas in *dharmma*, l. 32, this letter is devoid of its horn on the left limb, in *vadhū*, l. 7, the horn is prominent and joined not to its left limb but to the top of its horizontal; in *virōdhi*, l. 2, it is joined to the curve of the *mātrā*, and in *vidhēya*, l. 21, to the sign of the *prishṭha-mātrā*. And above all, in *nīdhāna*, l. 23, this letter shows a top-stroke instead of the horn, which is a rare example, if not a mistake. The form of *hh* is occasionally confounded with that of *l*, e.g., in *bhāvī*, l. 27; and lastly, *r* appears in all the forms as in the Sēmṛā grant, e.g., whereas the ordinary form of this letter can be seen throughout in the inscription, it resembles *v* in *narakē*, l. 30, *ch* in *Rāhu*, l. 14, and its form with a wedge can be seen in *pravara*, l. 17. The subscript form of this letter is occasionally shown by a double slanting stroke, for which see *grāma*, l. 10.

¹ Pālhaṇa is known to have engraved as many as half-a-dozen grants, all issued by Paramardīn. They are Nos. 126, 131, 132, 134, in addition to the present one; and No. 138 also appears to have been engraved by him, as to be seen on the proper occasion. In the earliest of them he is called a brazier, then in the subsequent records, an artisan (*śilpin*), and in one, the term *viṣṇānīn* (skillful artist) is prefixed to his name; but as Hiralal has already noted, a comparison with the earliest that was engraved by him (No. 126), does not indicate "any marked improvement" in the mechanical execution seen all through these inscriptions.

The **language** of the inscription is Sanskrit; and with the exception of one verse at the beginning and six in the end, the whole record is in prose. The verses are not numbered. As to **orthography**, we note almost the same peculiarities as in the contemporary inscriptions, *viz.*, (1) the use of the sign of *v* to denote *b*, as in *vādhū*, l. 25; (2) the reduplication of a class-consonant following *r*, e.g., in *harimma*, but not in *varṇa*; both in l. 35; (3) occasionally putting the palatal for the dental sibilant, cf. *śahāśra*, l. 12; (4) mostly the use of the sign of *anusvāta*, even wrongly at the end of a stich; (5) sometimes leaving the final consonant unmarked; (6) the use of the *prishṭha-mātrā*; and (6) wrong spellings as in *samvatsara*, l. 12 *etc.*, and wrong *sandhi*, e.g., in *vikrayamvā*, l. 25. Besides these, we also note the confusion between a *prishṭha-mātrā* and a *danḍa*, and occasionally the influence of local elements, e.g., in *Nandinī* and *Nandāvana*, both in l. 8, where we find the lingual nasal instead of the dental. As in the *Sēmrā* grant, the *danḍa* is put to separate the names of the *pravaras* in l. 17.

The **object** of the inscription is to record the grant, by the illustrious **Chandēlla** king **Paramardin**, of the village *Nandinī* situated in the territorial division (*varshaya*) *Nandāvana*, in order to increase the merit and fame of his parents and himself (ll. 16-21). The donee was the *Brāhmaṇa*-General *Madanapāla*, the son of *Thakkura Mahēśvara*, grandson of *Thakkura Bhōṇapāla* (*Bhuvanapāla*) and the great-grandson of *Thakkura Tihunapāla* (*Tribhuvanapāla*). He was a student of the *Chhāndōgya śākhā* and his *gōtra* was *Krishnātrēya*, with the three *pravaras* *Ātrēya*, *Ārchunamasa* and *Syāvaśva*. He had migrated from the *bhātṭagrahāra* (a village granted to learned *Brāhmaṇas*) of the name of *Naugāva*. The gift was made, as expressed both in figures and words in ll. 12-14, on **Sunday, the full-moon day of the bright half of Śrāvāṇa** when there was an **eclipse**, in the (*Vikrama*) year 1228. The date, as calculated by Kielhorn, corresponds for the *Chaitrādi* *Vikrama* year 1228 expired, to Sunday, **the 18th July, 1171 A.C.** when there was a lunar eclipse visible in India, 20 h. 54 m. after mean sunrise.¹ The charter was written by the learned *Kāyastha* *Prithvīdhara*, by the order of the king (*Paramardin*) and was engraved by the artisan *Pālhaṇa*, the son of *Rajapāla* (vv. 6-7). The engraver can evidently be identified with the homonymous *brazier* (*pittalahāra*) as mentioned in the *Sēmrā* grant engraved by him; and the writer too is the same person who drafted it and also the one that follows.

The inscription begins with a verse in the *anushṭubh* metre in honour of the *Chandrātrēya* (*Chandēlla*) race, and referring to its earliest heroes *Jayaśakti* and *Vijayaśakti*, it provides us with the genealogy of the kings born in it for three generations, *viz.*, the *Paramahattāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious **Prithvīvarman**, his successor, the *P.M.P.*, the illustrious **Madanavarman** and the latter's successor, the *P.M.P.*, the illustrious **Paramardidēva** who is mentioned also as the great **lord of Kālāñjara** and an ardent devotee of *Mahēśvara*, or *Śiva*, (ll. 3-7). All this portion is *mutatis mutandis* identical with the corresponding portion of the *Sēmrā* grant and thus we cannot glean from it any new historical information. The chief portion of the document begins in l. 8, stating that while residing at *Vilāsapura*, *Paramardidēva* donated the village *Nandinī*, falling in the territorial division *Nandāvana*, to the *Brāhmaṇa*-General *Madanapāla*, whose ancestry is given above. The details of the grant and the conditions pertaining to it are stated in ll. 21-27, where there is nothing particularly noteworthy. Following this, we have four imprecatory and benedictory verses in ll. 27-32; and the next two stanzas (ll. 34-35) state the names respectively of the writer and the engraver of the royal charter, bringing the inscription to a close.

Of the **geographical names** mentioned in the inscription, **Kālāñjara** (l. 6) is, of course, the well-known fort in the *Bāndā* District, as seen above; and the village **Nandinī** or *Nandinī* (l. 9) has with some probability been identified by V. Smith, with the village of *Nandandēo* or *Nandadēo*, lying about 16 kms. south-west of *Ichchhāvar*,² the find-spot of the plates. The territorial division **Nandāvana** or *Nandāvana* (l. 8), in which the gift-village was situated, may be taken to represent the region around it though a name corresponding to it cannot now be traced in its neighbourhood. This division may have extended up to the *Jamnā* in the north. **Vilāsapura**, from which place the grant was issued (l. 12), seems to be the same, as already suggested,³ as modern *Pachhār*, about 20 kms. to the north-east of *Jhānsī* in *Uttar Pradesh*.

Scale : Four-seventh

About the exact location of **Naugāva**, the original place of the donee (l. 16), we can hardly be certain for want of details. However, it may be noted here that one Navagāmva is mentioned in the Māndhātā grant of the Paramāra king Jayavarman II, of V.S. 1317, but there the name appears with the word *sthāna* applied to it, whereas in the present grant it is mentioned as a *bhāṅgāgrahāra*.

¹ See No. 60, text, l. 31, and my remarks about the location of the place mentioned in it.

² From a set of estampages supplied by the Director, Provincial Museum, Lucknow. After my writing on the record was completed, I have also compared my transcript of this inscription from the original plates in the Provincial Museum, Lucknow, for which I am thankful to its Curator Shri V. N. Shrivastava, for placing them at my disposal and giving me all facilities for my work there.

³ Denoted by a variant of the symbol.

⁴ The upper stroke of *th* in *prithvī* is not engraved.

⁵ A superfluous stroke makes this *akshara* look like *thō*.

⁶ The *ē* resembles *pa* and the lower extremity of the vertical of the following letter is joined to that of its fore-limb.

⁷ The vertical stroke showing the *mātrā* is detached from the letter so as to look like a *danda*. Below are some other instances of the type, which are not noted every time.

⁸ The *danda* is superfluous.

⁹ Read *cha* followed by a *danda* and then *astu*.

¹⁰ Both these *aksharas* are mutilated and the first of them appears more like *sā* than *lā*. It may also be noted here that the third *pravara* of this *gōtra* is *Syāoāśva*. Read -मोदायाञ्चन्वेदानमग्वावाश्वेतिप्रवराय. By wrong strokes of the chisel, *reheya* appears as *silha* and *va* in *pravara* as *tra*. *Vā* in *śyāoāśva* also appears to have been tampered.

¹ The correct Sanskrit form of this name is Bhuvanapala.

² The horizontal stroke of the second *akshara* is missing, making it appear as *ra*.

³ This *danda* is rather attached to the following letter and appears as a *prishtha-mātrā*. The preceding sign of *anusvāra*, as some others below, is so faintly marked as to be visible only on the plate.

⁴ The *āyādas* are redundant. For राजराज that follows, Kielhorn suggested राजराजकं.

⁵ This *akshara* in brackets is engraved as *sa*. Drop *Rāja* at the beginning of this line.

⁶ The consonant of this *akshara* is engraved as *g* with the horizontal stroke missing.

⁷ The curve above is omitted in the process of engraving.

⁸ The superscript *r* is lightly engraved and the medial *r* sign is detached so as to look like a *danda*.

⁹ Read *bhauudbhik* followed by a *danda*, and then *iti*.

¹⁰ Read न मन or नद मन, as in No. 119, l. 41.

¹¹ Here again the upper curve of *khi* is missing.

¹² This *akshara* is disfigured by some redundant strokes.

¹³ The subscript *dh* is only partly engraved and looks like *r* with double strokes, as in *grāmah* in l. 10.

MAHŌBĀ COPPER-PLATE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year 1230

THE copper-plates which bear this inscription are stated to have been discovered in about 1920, in course of digging for earth to build a house, at Mahōbā in the Hamīrput District of Uttar Pradesh. The inscription was edited, with lithographs, by Rai Bahadur Hiralal in the *Epigraphia Indica*, Vol. XVI (1921-22), pp. 9 ff. The present whereabouts of the plates are not known, and no fresh impressions of the same are now possible; and hence the record is edited here from the lithographs accompanying Hiralal's article.

The plates are two in number and about their discovery Hiralal has stated that they were "deposited in a stone-chest, about 30' (9.14 metres) below the surface. They were strung together with a ring having a seal, which the finder took for a lock and broke, inferring from the figure of **Gajalakshmi** (Goddess of wealth) in the middle of the first four lines, that the record dealt with some hidden treasure". Each of the plates measured 39.6 by 30.5 cms. and their weight, as recorded by him, is equal to 3.173 kilograms. The rims of both the plates are said to have been bordered with flat copper strips, about 6 cms. in breadth, fastened with nails; and on cleaning, both the plates were found to be in a good state of preservation, as is also shown by the lithographs.

The record consists of 33 lines, 16 of which are inscribed on the first plate, and the remaining 17 on the second. The **characters** are of the Nāgarī alphabet, and generally resemble those of the Sēmārā and Ichchhāvar grants,¹ which were written and engraved by the same persons as of the present grant; and the palaeographical peculiarities are therefore almost the same. To pick up some examples from the present grant, we find that the vowel *ē* is formed as *p*; see *ēsha-* in l. 7; the consonant *ō* continues to be devoid of its dot, as in *-aiha-*, l. 16; *Ch*, *dh* and *v* are often not clearly distinguished, though *dh* in several cases shows a horn on its left limb, as in *virōdhi*, l. 2, but not in *vadhū*, l. 7. *R* also occasionally resembles *v*, as in *Viśvēśvara*, l. 1, and its different form is to be noted in *thakkura*, l. 21. The palatal *ś* sometimes begins with a loop and at others without it; see *Viśvēśvara*, l. 1, where we have both the instances side by side. A notable peculiarity is that occasionally some of the letters are formed with their bends angular, e.g., *v* in *vidhvāt*, l. 17, and *shashṭyanvitā* and *pūrvva-* both in l. 12.

So far as technical execution is concerned, the letters are clear, but we find here the same type of mistakes as in the Sēmārā and other grants which were engraved by the same mason, e.g., often omitting parts of letters, the *mātrās*, and the signs of *anusvāra* and *visarga*, etc., as also noted by Hiralal. For example, *m* is cut as *g* in *bhūmi*, l. 29; *shu* as *pn* in *Kṛishṇa-*, l. 16; *v* as *t* in *vijayī*, l. 6 and *shṭ* as *vṛi* in *-chatushtaya*, l. 11. The transcript below will show slips of this type, all through.

The **language** is Sanskrit; and except for a verse in the beginning and two in ll. 30-33, which are all not numbered, the record is all in prose. As regards **orthography**, we may note the use of (1) *v* to denote *b*, e.g., in *Frāhmaṇa*, l. 13; (2) of the dental for the palatal sibilant, and *vice versa*; see *sākhā-* and *Sāṅkṛitya-*, both in l. 20; (3) the doubling of a class-consonant after *r*, as in *nirmmala-*, l. 8; (4) the change of *anusvāra* to *m* as in *samvat*, l. 16; (5) the use of the *prishṭhamātrā*, and finally, not marking the final consonants in ll. 31 and 33.

It is a royal charter, issued by the **Chandēlla** king Paramardin, the lord of Kālāñjara; and its **object** is to record the bestowal of some land in the village Dhanaura, falling in the territorial division of Ērachha, by the king, in order to promote the religious benefit of his parents as of himself, from his temporary residence at a village named Gahilū (ll. 8-15). The **date** of the record, as mentioned both in words and figures in ll. 16-17, is the fourth day of the **dark half of Māgh of 1230, Tuesday**, when the Sun entered the zodiacal sign Makara. This date must plainly be referred to the Vikrama era, and as calculated by Hiralal, it regularly corresponds to **25th of**

NO. 131 : PLATE CXVIII

PACHHĀR COPPER-PLATE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year 1233

THE copper-plate on which this inscription is engraved is said to have been found some time in the third quarter of the last century, by one Gaṇeśjū, in course of excavating the foundation of his house at **Pachhār**, a village about 20 kms. north by east of Jhānsī, the headquarters of a District of the same name in Uttar Pradesh. The record was edited by Arthur Venis in the *Epigraphia Indica*, Vol. X (1909-10), pp. 44 ff., with a facsimile. It is edited here from inked impressions kindly supplied to me, at my request, by the Director of the Provincial Museum, Lucknow, to which the original plate was presented by the Zamindār of the village and where it is now exhibited.¹³

¹ Originally *mā*, changed later on to *yā*.

² The letters forming the name cannot be read with certainty.

³ The *gōtra* usually appears as *Sāṅkṛiti*, and its *pravara* as *Sāṅkṛitya*, *Śāṅkṛitya* and *Gaurivita* (not *vrata*). See *Gōtrapravaranibandha-kadamba*, p. 44.

⁴ The ten *aksharas* ending with this are omitted in Hiralal's transcript.

⁵ The bracketed *akshara* is defectively formed.

⁶ Hiralal read *इरण्यविड(वे)द्वै*— but it is due to the fault in engraving.

⁷ The two letters in the bracket are indistinct. Hiralal read this expression as *सखनिनिमना(म्)*, in the sense, according to him, 'together with forests, mines and hollows'. It appears as *सखनिनिद्याना* in the *Sēmra* grant (l. 118).

⁸ This letter has an additional redundant stroke at the end.

⁹ The *dayda* is redundant.

¹⁰ The subscript of this letter looks like *ṛ*, with the loop of *ṣ*.

¹¹ A *kāka-pāda* sign appears at the end of this line.

¹² It is not known if the sign marking *m* is hidden below the band, and what looks like the sign of *anusvāra* above this *akshara* may be a redundant stroke of the chisel, as there are some others.

¹³ The exact spot of the discovery of the plates is not known; but the presumption of Venis that "it was somewhere on the raised mound (consisting of the usual debris of old houses, etc.) on which the village stands" may be taken to be true till we find anything to the contrary. In my visit to the Museum at Lucknow for examining the inscriptions exhibited there, in January 1973, I found recorded in the Register that this plate, which is catalogued as No. E-43, was presented by a Brāhmana, named Bindrabān of Pachhār, through Mr. Silberrad, I.C.S., and reached the Museum on the 5th December, 1908. The information is due to Mr. V.N. Shrivastava, Curator of the Museum, to whom I am thankful.

It is a **single** copper-plate inscribed on one side only. All round the borders it shows a flat strip of copper, about 1 cm. broad, fastened on to it very tightly with twenty rivets—six on each of the horizontal sides and four on each of the vertical. The strips are so close to the inscribed portion that some of the *aksharas* could not completely come out in the impressions which were prepared fresh. The engraving, as far as I could judge from the impressions and also from the plate which I examined subsequently, is rather shallow; and the interiors of a number of the letters show, as in some other inscriptions, marks of the engraver's tool, which is also responsible for mis-shaping or incompletely engraving several of them owing to the carelessness of either the writer or the engraver, as will be pointed out in the text given below. The writing too, which appears to have suffered from the deposit of verdigris on the plate, demands patience on the part of the reader. It covers a space 38 cms. broad by 27 cms. high, and contains 22 complete lines. The formation of the letters is not symmetrical, and whereas in the first fifteen lines they show an average height of 7 to 8 cm., the height gradually increases in the following lines till in the last five or six lines it is not less than 1 cm. The plate together with the strips and nails weighs 2 kgs.

In the middle of the last line of the writing, the plate has a ringhole, about 1.5 cm. in diameter, and it is natural to conclude that it was meant either for hanging the plate or holding with it another plate which was never discovered. But the ring with the seal, if at all attached to it, was not found. In the middle of the first four lines also, the writing is disturbed by a rude sketch of the goddess Lakshmi, in a rectangle, measuring about 5.5 cms. broad by 4.5 cms. high. The deity is seated cross-legged and is being sprinkled with water by an elephant on either side; she has four hands, the upper two of which are raised, with a lotus in each. The tips of the trunks of the elephants and the upper part of the diadem of the goddess are hidden under the strips fastened tightly on this portion of the plate.

The **characters** are Nāgarī, showing more or less the same palaeographical peculiarities as of the Sēmrā and the Ichchhāvar grants, which were engraved by the same hand. To note the peculiarities of the individual letters of the present inscription, we find that the vowel *i* is formed of two loops, the first of which shows a tail and the second a horn above, as in *iva*, l. 1; *ī* is still devoid of its dot, cf. *-āika*, l. 9; *ch* and *v* are often alike, and occasionally *dh* and *r* also share the same peculiarities. For example, *ch* is formed as *v* in *-chandra* and *r* as *v* in *śrī*, both in l. 1, and we find *r* engraved as *v* in *śrī*, *dh* as *v* in *-adhi* and *v* as *ch* in *vijaya* and *vīra*, all in l. 2. *Dh* has developed a horn on its left limb; this horn is occasionally joined to some other part of the letter than to the loop, e.g., to its vertical stroke or to that of the *mātrā*, as in *-rājādhi*, l. 2, and sometimes, though rarely, it takes the place of the top-stroke itself, as in *-vaśudhā*, l. 18. The verticals of *dhā* continue to be joined by a stroke in the middle. The vertical of *p* is often not drawn below the point where it meets the curve of its left limb, and consequently this letter is confounded with the vowel *ṛ*, e.g., see *-pati* and *ṛsha*, both in l. 4. The conjunct *ṣṣ* continues to be cut as *gn*; cf. *vinirggata*, l. 11, and the curve of the superscript *r* is at times only a cursive stroke, as in the same example. Occasionally, the forms of *ch*, *dh*, *r* and *v* are so alike as to be distinguished only from the context.

The **language** of the inscription is Sanskrit; and excepting one initial verse and five imprecatory and benedictory verses in the end, with two more which record the names of the writer and the engraver, the record is all in prose. The verses are not numbered. Grammatical and other errors are more to be found in the last portion.

As regards **orthography**, we may notice that *v* is throughout written for *b* and the dental sibilant for the palatal in some places; see, e.g., in *vādhā*, l. 15 and *visada*, l. 20; the palatal sibilant is sometimes put for the dental, as in *-vaśudhā*, l. 18; a class-consonant following *r* is generally doubled; see *dharmma*, l. 21. Besides these, the final consonant is occasionally not marked, and sometimes the mark cannot be clearly distinguished, as in *vasēt*, l. 20; the dental nasal is wrongly put for the lingual in *grihātī*, and the lingual for the dental in *purayāni*, both in l. 17; the *mātrā* of *ṛi* is wrongly changed to *ri* in *kyim*, l. 19; *anusvāra* is wrongly changed to *m* in *sanvat*, l. 9, and in some other examples; and finally, the vertical stroke of a *mātrā* and the *danda* used for marking punctuation are sometimes not distinguished from each other, e.g., in *yō*, the fifth letter in l. 9. The *anusvāra* is occasionally either not marked, or put haphazardly and in such a minute form as it could not come out on the impressions.

The plate was issued by the illustrious king **Paramardin** of the **Chandēlla** dynasty, from

his camp at Vilāsapura. The **object** of it is to record the bestowal, by him, of a plot of land measuring ten *halas*, in the village Lauvā in the territorial division Karigavā, on a Brāhmaṇa-Pandita of the name of Keśava, the son of Dvivēdin Tikava, grandson of Rāṇaka (or Rāūta?), Tihunapāla and great-grandson of Chaturvēdin (?) Valaha. The **date** of the record, as expressed both in figures and words, in ll. 8-9, is **Wednesday, the eighth of the dark half of Kārtika**, of Vikrama 1233, which regularly corresponds to **27th October, 1176 A. C.**¹ The inscription, or *tāmrpattu* as it is called in v. 7 (l. 22), was written by the order of the king, by Subhānanda of the Vāstavya family, who knew all the *śāstras* and was the writer of the legal documents (*dharma-lēkhin*). It was engraved by the artisan (*śilpin*) Pālhana, the son of Rajapāla, who, as we know, engraved some other inscriptions also, as we have seen while editing the Ichchhāvar grant.²

The inscription opens with a variant of the symbol for *Siddham*, and with the oft-quoted verse eulogising the royal house of the **Chandrātrēya** kings, it gives the genealogy of the house for three kings, viz., the *Paramabhāṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious **Prithvīvarman**, his successor, the *P.M.P.*, the illustrious **Madanavarman**, and lastly, his successor the *P.M.P.*, the illustrious **Paramardin** who is also mentioned to have been a devout worshipper of Mahēsvara (Śiva), and the **lord of Kālañjara** (ll. 2-4). This portion, which is evidently copied from the earlier grants of the ruler, does not furnish any new historical information. Lines 6-13 record the formal portion of the grant, stating that the king, from his camp at Vilāsapura, and on the date which we have seen above, donated ten *halas* of land pertaining to the village Lauvā, falling in the territorial division (*vishaya*) of Karigavā, to the Brāhmaṇa-Pandita Keśava, whose ancestry we have seen above and who belonged to the Kāśyapa *gōtra*, with the *pravaras* Kāśyapa, Avatsāra and Naidhruva, who studied the Vājasaneyā *śākhā* and who had emigrated from the *bhāṭṭāgrahāta* (land donated to learned Brāhmaṇas) Mutāūsha.

The land which is here stated to be worth ploughing by ten *halas*, as we have seen the significance of the expression, is also said to be measured by its sowing capacity of seven-and-half *drōmas* of seeds, 'as to be sown broadcast' and leaving a dividing line or boundary after each *prastha* of seed sown. The same expression occurs also in the Mahōbā inscription of the same king issued only three years earlier in V. S. 1230 :³ and while dealing with the same we have discussed it fully : here it is also interesting to note that the way of recording the measurement of land is also mentioned in the Augāsī grant of Paramardin's grandfather Madanavarman, issued in V. S. 1190.⁴ From all these instances it may safely be concluded that the method of measuring land by the quantity of seed required to sow it was not only popularly known but also officially recognised.⁵ The grant was to be, as we are further told, perpetually enjoyed by a succession of sons and son's sons (ll. 12-13).

The terms of the grant are mentioned in ll. 13-16 ; and accordingly, the donee was endowed with all the usual right over the land, without any obstruction. This portion is followed by five of the ordinary imprecatory and benedictory stanzas, and thereafter we have the sign-manual of Paramardin. Then the charter comes to an end with two stanzas, the first of which mentions the name of the writer and the second, of the engraver, as seen above.

As for the **localities** mentioned in the inscription, **Kālañjara** (l. 4), as often seen, is the renowned fort in the Bāndā District of Uttar Pradesh and a stronghold of the Chandēlla kings. The village **Lauvā** (l. 6) has been identified by Venis and it is said to have been situated 5 kms. west of Pachhār :⁶ and **Karigavā** which is mentioned as a *vishaya* in l. 5, cannot definitely be identified as in the region of Jhānsī there are several villages with this name. But as suggested

¹ See *Ep. Ind.*, Vol. X, p. 46. The year should be taken as *Chaitrādi*, expired.

² Above, No. 129.

³ Above, No. 130, text, l. 11.

⁴ No. 118; Text, ll. 7-8.

⁵ For comparison, we may note that in the surrounding regions also land was measured both ways, viz. by its capacity of being ploughed and also by that of quantity of seed sown. Sometimes both these methods are mentioned in one instance and sometimes either. See *C.I.I.*, Vol. IV, Nos. 19, 20 and 42, ll. 10, 10 and 32, respectively.

⁶ This identification seems to be in complete accord with his notice that the village contains some remains of Chandēlla workmanship, viz., a large well lined with square stones and "a granite slab that clearly formed originally part of a Chandēlla building but now used as a *Sati* stone" (p. 46, n.).

by Venis, it may have been the one which is the largest and most important and which is situated about 8 kms. north-east of Chūrgāon and 15 kms. north-east of Pachhār.¹ The place where the king took bath before making the grant is not mentioned, but it may have been on the banks of the Vētravatī which flows not far from the find-spot of the inscription. And finally, Mutāūsha, the original place of the donee (l. 11), I am unable to trace.

¹ Noticing a few old remains at the place and also recording a tradition which he was informed of, Venis suggested the identification of Pachhār itself with Vilāsapura where Paramardin was encamped when he issued the grant.

² From impressions, subsequently also comparing the text from the original plate.

³ Expressed by a symbol read by Venis as *ām*.

⁴ The preceding letter is engraved as *nni*.

⁵ Each of the consonants of the bracketed letters has a redundant slanting stroke, making the first of them appear as *sh*.

⁶ The preceding *rā* shows an abnormally long wedge as also in *narakē* l. 20, and in some other lines, below.

⁷ The *prishtha-mātrā* of *l* is not joined to the horizontal stroke at the top, as also in some instances, below.

⁸ All the three *aksharas* in the brackets show redundant chisel strokes in their formation.

⁹ A redundant stroke of the chisel makes this letter appear as *va*, and the subscript of the *lī* that follows is also engraved as *l*.

¹⁰ The vertical stroke of the medial short *i* is separated from the letter as some others in this line (see *vētravē*) and also in some other instances, and the curve above is also not engraved in its proper place.

¹¹ The bracketed *akshara* is engraved as *gnī*.

¹² This stroke is redundant.

¹³ Originally some other letter was engraved in place of the first showing the name of the village, and the *mātrā* attached to the second is struck off by two horizontal strokes.

¹⁴ Originally *vi* with a part of the curve later on erased so as to appear as a *mātrā* above.

¹⁵ Read *संबिदि*.

- 15 [भृ]ञ्जानस्य कर्षतः कर्षयतो दाना[धा]नविक्रयम्वा(यं वा)¹⁶ कुर्वतो न केनचित्काचिद्वा(द्वा)धा कर्तव्या ।
अत्र च राजराज¹⁷ पुरुषा(षा)टविकचाटादिभिः स्वं

¹ The first of the bracketed letters may also be read as *ou*, and the letter preceding it has the sign of a *prishṭhamātrā* which has not been joined to the stroke at the top; it has also a redundant curve as of the medial *r*. The second of the bracketed letters I take as *drē* and not as *dē*, as also conjectured by Venis. The whole word appears also in the Augaśī grant of Madanavarman (No. 118), where the second *akshara* is clearly *ra*, as also read by Kielhorn, who remarked that these syllables denote some particular kind or kinds of grain which he was unable to explain. But in that grant the third letter of the word is uncertain, appearing either as *dē* or *drē*. In the present inscription, of course, the second letter may be read either as *ra*, or *ou*, and the third I take to be *drē* as the upper portion thereof ends in an angle and as it is also shown by the subscript which is faintly visible. Thus the reading of these three syllables appears to me as *kōradrē* or *kōvadrē*, for *kōdravē*, in the sense of the common millet known as *kōdō* and *kōradē*, as is also suggested by Venis as an alternative in the sense of 'dry', since this word, which is in Marāṭhī, appears to have been unfamiliar in the region of Bundelkhand.

² The subscript of the bracketed letter is mutilated by a scratch on the plate.

³ The *dayā*, which was originally engraved, appears to have been later on scratched off as unnecessary.

⁴ The bracketed letter was originally *sa*, later on changed to *śa*.

⁵ Read संवत्सरे

⁶ Both the consonants of the second *akshara* are deformed and the curve at the end of the following figure appears as the slanting stroke marking the consonant *r*. Read संवत्.

⁷ The *dayā* is redundant.

⁸ As noted by Venis, this is one of the glaring examples of engraving, without caring for the exact forms of letters.

⁹ As n. 21 above. Better read -निवृद्धये

¹⁰ As Venis has rightly remarked, this stroke is probably used to show that the letter preceding it is a concise form of a word like *Chaudhuri*, or so.

¹¹ The reading of the first and the last *aksharas* of the name is uncertain.

¹² This is a contraction of *dvivōdā* (or *din*), and the *paṇ* that follows is a contraction of *Pañḍita*, i.e. *Pandit*.

¹³ As also in some other cases, the first *akshara* of this and also of the next two lines is completely hidden under the strip, but they are clear in the facsimile published in *Ep. Ind.*, Vol. X, facing p. 48.

¹⁴ Venis read —*śama*— which gives no such a meaning as may be applicable here. Therefore we have to adopt the reading as in the other grants of the house as *śśavēkshu*, in the sense of "palm-trees and sugar-cane".

¹⁵ The consonant of the bracketed letter is rather peculiarly formed and it also occupies more than the usual space. Here the use of the palatal sibilant instead of the dental appears probably due to the local influence, as we also find in some other records of the house, e.g. in No. 129.

¹⁶ Venis read दाना (द*)मत्, but this is because he mistook the horizontal stroke joining the verticals of *dhā* for *ma*.

¹⁷ These two letters are redundant here. See my remarks on the same word in No. 129.

No. 132; PLATE CXIX

CHARKHĀRĪ COPPER-PLATE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year 1236

THIS is one of the four copper-plate grants edited by R. B. Hiralal in the *Epigraphia Indica*, Vol. XX (1929-30), pp. 125-136,¹⁹ all without facsimiles. As to their find and the present deposits, we have already remarked above,²⁰ that all of them were found with the Chief of Charkhāri, formerly a State in the Bundelkhand region of the Central India Agency and now included in the Hamirpur District of Uttar Pradesh. The original find-spots of these plates are not known, and no information as to their present deposits is forthcoming; and even an impression is now not possible to have. Under the circumstances, I edit this record from the text given by Hiralal, appending my notes to it.

The inscription is on **two plates**, both of which are incised on the inner side only. The first plate is stated to measure 60.95 by 28.57 cms., and the second 61.25 by 26.70 cms. Their

¹ As also noted by Venis, the sign of *anusvāra* is half engraved so as to look like a superscript *r*. Cf. the same sign on the fourth letter in l. 16 above.

² A curve as of *ph* is attached to *ya* here, in the first of these letters.

³ The bracketed letter appears as a loop followed by the verticals, which are also joined by a horizontal stroke as that of *dhā*.

⁴ Because of a redundant stroke the superscript of this letter appears as *bh*.

⁵ In श्री the curve of the *mātrā* is lightly engraved, it is clear on the plate.

⁶ Read —गणेशो नाम, in the light of a similar expression in the Sēmra grant of the same king (No. 126).

⁷ It is not known whether the sign of *visarga* was inadvertently or purposely omitted here. In the latter case, it is a somewhat rare *sandhi* but can be justified in accordance with the *vārttika* on Pāṇini's rule VIII, 3, 36. Also better read विदित सकल—

⁸ The latter part of this *akshara* is hidden under the strip referred to above.

⁹ The sign of *visarga*, and probably also the horizontal stroke or strokes following it, are hidden under the strip.

¹⁰ For the three other grants, see Nos. 108, 144 and 151. The present inscription begins on p. 128 (of *Ep. Ind.*, Vol. XX).

¹¹ In No. 108.

rims are raised to a height of about 1 cm., to protect the writing. The first plate contains the figure of **Lakshmi**, the usual design to be seen on the plates issued by the ChandĒlla rulers, in the middle of the first three lines, and at the bottom, a space for a hole, interrupting the writing in the middle of the last line. But what is peculiar is that the hole was never made. The size of the letters on the first plate is about 5 cm.; on the second it is slightly bigger. Each of the plates weighs 2 kgms. and 108 gms.

The **characters** are Dēvanāgarī of about the 12th century A.C. The letters are distinct and well written, but the formation of *v*, *ch*, *dh* and *r* is such as to cause difficulty in distinguishing them from each other; and the letters also share the peculiarities of the work done by Pālhaṇa, who engraved some other plates also, about which we have already remarked above, e.g., the omission of parts of some of the letters, and of the signs of *anusvāra* and the superscript *r*, as to be noticed respectively, in *Bhāma* (for *Sōma*) in l. 9, and *shatṭriṃśat* and *varttamāna*, both in line 8.

The **language** is Sanskrit; and, with the exception of the introductory verse eulogising the race of the **Chandrātrēyas** and seven imprecatory verses in the end, the record is entirely in prose. It consists of 32 lines, 18 of which are engraved on the first plate and the remaining 14 on the second. The **orthographical** peculiarities are as in the preceding grants, for example, (a) the use of the sign of *v* to denote *b* also, e.g., in *samvōdhayati*, l. 7; (b) a confusion between the correct use of the palatal *ṣ* for the dental *ś*; see *silpi* and *visva*; both in l. 32 and *prāsāda* in l. 24; and (c) the doubling of a class-consonant following *r*, as in *svargga*, l. 26. The influence of local pronunciation is noticed in the use of *y* for *j* in *yāmadagnya* in l. 12; examples of wrong *sandhis* in *pravarēbleyō = chhāndōga*, l. 12, and *bahih = kṛito*, l. 14; and the *visarga* of *bhavadbhih*, which is the last word of a verse in l. 28, is combined with the following *r*.

It is a royal charter issued by the *Paramahattāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious **Paramardidēva**, who, from the expression "lord of Kālañjara", was evidently the **ChandĒlla** ruler. The text is copied *verbatim* from the preceding record, excepting the portion dealing with the details of the grant. The **object** of it is to record the royal donation of the whole land in the village Sagauḍō, included in the *vishaya* of *Kirāyīḍa*, by Paramardidēva. The grant was perpetual and it was made in favour of four Brāhmanas, all hailing from the *Bhattā-grahāra* known as Mutāūtha. All the Brāhmanas belonged to the *Vatsa gōtra* and had the five *pravaras*, *Vatsa*, *Bhārgava*, *Chyavana*, *Āpnuvāna* and *Jāmadagnya*, and all were the students of the *Chhāndōgya sākhā*.

The following table is intended to show the names of the Brāhmana donees, with some other details:

No.	Name of the donee	Father's name	Shares donated
1	Sōmēka	Dāvāra	2
2	Svapata ¹	Bāhīc	1
3	Ratana (Ratna)	Pāpē	1
4	Sidha	Sūlhaṇa	1
			Total=5 shares.

The grant was issued by the king from *Vilāsapura*, the same place from which the previous grant was also issued. It may be noted here that one of the donees of the previous grant, *viz.*, *Kēśavaśarman* also hailed from the same place as of the present grant; and it is also noteworthy that in the gift-village exclusion was made of the five *balas* of land which had already been donated to a Buddhist (monastery?), l. 14, which appears to have been in existence there some time in the past.

Among the royal officers mentioned in the grant, we also find *ātaviha* in l. 22, denoting one in charge of forest and wild tribes, as noted by Hiralal, who also invited attention to the same word in *Kauṭilya's Arthaśāstra*.² But there is another expression which appears here for the first time, *viz.*, *sakārūka-paṅka-varig-vāstuva*. While publishing Hiralal's article in the *Epigraphia*

¹ See above, No. 126.

² This name is perhaps *Sūpata*, as we find in some other grants of the house, e.g., in the *Sēmra* grant, No. 126, ll. 65, 70 (twice) and 104.

³ See *n.* on the same word in l. 22.

Indica, the editor remarked that "the exact implication of this expression is not understood", but at the same time he is inclined to suggest that perhaps it means "together with potter's mud and what has been left by merchants."¹ I am, however, afraid this explanation is not at all suitable here: and I may suggest that the word *kāruka* appears to be the same as *kāru*, i.e., an artizan, and *pañka-vaṇik* means one who is a trader in a thick mass or large quantities.² And last of all, *vāstavya* is used here to denote an inhabitant, it being formed according to Pāṇini, *Vārtika* No. 1920.

The inscription is dated, in ll. 8-9, on Monday, the seventh of the bright half of Chaitra, falling in the year 1236, which is expressed both in words and numerical figures. According to Hiralal, this year, which is of course to be taken as of the Vikrama era, regularly corresponds to Monday, the 27th March, 1178 A. C., taking it to be northern *current*,³ as shown by the word *upēta*. It is one of the few Chandēlla grants expressing the northern *current* year.

The charter was drafted, or rather adopted from that of the preceding grant with necessary changes, by the illustrious Śubhānanda of the Vāstavya family, by the order of the king. It was engraved by the artizan Pālhaṇa, the son of Rajapāla. It may be noted here that both these persons are the same who drafted and engraved, respectively, the previous and some other royal charters issued by the house. The sign-manual of the king is incised in line 29.

Of the geographical places mentioned in the inscription, Kālāñjara (l. 4) is of course the well-known fort in the Banda District, and Vilāsapura, the place where the grant was issued (l. 8), is Pachhār, as we have already seen. Kirāyida, after which the *vishaya* was known (ll. 5-6), has been suggested by Hiralal to be identical with Kirāḍi, about 12 kms. from Mahōbā. I have not been able to trace Sagaudō the gift-village (l. 6), in the vicinity: and last of all, Mutāūtha, the original place of the donees (l. 11), cannot be identified for want of the details.

¹ N. 2 on l. 19, in Hiralal's article.

² Cf. e.g. *agaru-pañka*, *kēsaru-pañka*, and such other words. The Hindi word for it is *ghōla*.

³ See *Ep. Ind.*, Vol. XX, p. 129.

⁴ From Hiralal's transcript in *Ep. Ind.*, Vol. XX, p. 129.

⁵ Expressed by a symbol, as usual. It has not been noted by Hiralal. It is for स्वस्ति.

⁶ This punctuation mark is redundant, as some others below. We may also remark here in a general way, that the curve on the top stroke above the preceding णि may not have been engraved at all, or it is faint and hence it did not come out in the impression, from which Hiralal prepared his transcript; and thus he read *tē* instead of *ti*. So is the case of his reading *pē* for *pi*. For similar reason, the *mātrā* of *dhū* was taken by him as *dh* and *ṛ* as *r* in this line. Errors of this type exist throughout, which are due to the carelessness of the engraver Pālhaṇa, as often noted by us.

¹ As already noted by Hiralal, the letter वो is superfluous.

² This *akshara* is perhaps *tri*, an abbreviation of *Trivēda*.

³ For the correct reading of the name, see n. 2 in p. 452 in the main article above.

⁴ I agree with the editor of the *Ep. Ind.*, who remarked that plural ought to have been employed here and also in l. 21 below.

⁵ For the meaning of this expression, see n. 2 in p. 453 in the article above.

⁶ It appears probable that in the original all these words are in the plural, as required by the context, but the defective engraving led Hiralal to make improper corrections. See n. 4 above.

⁷ *Ātaviha* is a government officer in charge of the forest and wild tribes.

NO. 133: PLATE CXX

AHĀR STATUE INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1237

THIS inscription, which is edited here for the first time, is incised on the pedestal of a colossal image of the sixteenth Jaina Tirthankara Sāntinātha, at Ahār, which is a sacred place of the Jaina community and lies about 25 kms. from Tikamgadh, the chief town of a district and tehsil in the Vindhya region of Madhya Pradesh. The record came to my notice in my exploration tour in the region, some 20 years ago, when I also obtained there a small brochure meant for circulation, in which I found a transcript of the record, somewhat incorrect, though illustrated. The lithograph, besides being indistinct, is of an extremely small size and thus altogether helpless. In view of the importance of the inscription, I requested the Chief Epigraphist to kindly prepare and provide a good impression thereof, and he was kind to depute his assistant for the work. The inscription is edited here on the basis of this excellent impression, for which my thanks are due to the Chief Epigraphist.

The record consists of 9 lines of writing, interrupted by the deer symbol, which is clear in the impression and which divides the lines into two sections which may be marked A and B, for the sake of convenience. The length of the writing on the left-hand side is 30.5 cms. and that on the right-hand side is 33 cms. The first three lines on either side are about 6 cms. shorter than the others, since a portion of them is occupied by the *lāñchhana*. The general height of the writing is 20.5 cms., and the average height of the letters is about 1.5 cms. The writing is well preserved, except in the last two lines which are obliterated in the impression.

The **characters** are Nāgarī of the 12th century A.C. The initial *i*, which occurs twice in l. 2 and once in l. 4, is formed of two circles placed below the third, and are joined with each other by a curve; and the initial *e* occasionally resembles the consonant *p*, e.g., in *eka*, l. 5. Of the consonants, *ch* can hardly be distinguished from *v*, e.g., in *chaitya*, l. 3; the horn of *dh* is prominent, as in *vyadhata*, l. 1; the slightly differing two forms of *bh* can be seen in *bhanna* and *bhata*, both in l. 6; and finally, the subscript *r* is marked by a serif at the lowest extremity of a letter to which it is attached.

The **language** is Sanskrit; and excepting a short sentence paying obeisance in the beginning and the date in l. 6, the record is metrically composed. There are seven stanzas, all of which are numbered. The only **orthographical** peculiarities that call for notice are that (i) the consonant following *r* is reduplicated, e.g., in *nirmimīcē*, l. 4; (ii) that the dental and the palatal sibilants are occasionally not correctly put, e.g., in *śrīmān* and *āśit*, both in l. 1; (iii) that the *prishtha-mātrā* occurs only sparingly; and that (iv) the sign of *anusvāra* is generally also to be found at the end of a stitch, except in a few cases as in *kīrttanam*, l. 8. The signs of *mātrās* and *anusvāra* in the topmost line are elegantly engraved.

¹ This verse occurs in the preceding and some other grants also.

The mason has done his work with much care, though we find that in one instance or two he has put wrong strokes. As for the writer, we note that a letter omitted at first in l. 4 has been written above in a smaller size.

The inscription refers itself to the victorious reign of the illustrious Paramardidēva (l. 7), who is no other than the ChandĒlla king Paramardin: and its purpose is to record the installation of an image in a *chaitya* which was then constructed. The date of the record is given in l. 6, in figure only, as **Friday, the third day of the bright half of Mārga**, i.e., Mārgaśīrṣha, of **Sāmvat 1237**, which has to be referred to the Vikrama era, following the practice of giving the year in that age. The date regularly corresponds to **21st November, 1180 A.C.** The year is the *Chaitrādi* Vikrama, expired.

No special value attaches to the date since Paramardin, the grandson of Madanavarman, is known to have been reigning from 1166 to 1202 A.C.

The inscription commences with a prose sentence paying homage to *Vītavāga*, as already stated, and introduces the lineage of the persons who built the temple. The first ancestor spoken of here is the illustrious Dēvapāla, who is stated to have built a multiple-peaked temple (*sahasakūṭa*) at Bānapura. He belonged to the *grahapati* family. The two verses that follow inform us that his son was Ratnapāla. His descendant was Ralhaṇa, whose son was Galhaṇa, who built two temples of Sāntinātha, one at Ānandapura, and the other at Madanapura (known after the tank and after the king Madana, i.e., Madanavarman).¹ Galhaṇa's son was Jāhaḍa, who had a younger brother called Dayachandra,² as we learn from the next verse. The following verse, i.e., verse 5 informs us that both these brothers, i.e., Jāhaḍa and Dayachandra, desiring to obtain salvation, jointly constructed the Sāntinātha *chaitya*, i.e., the sanctuary where the image of this *Arhat* was installed. Then comes the date as given above, and the name of the reigning king, which too we have seen above. Verse 6 desires the temple (*kīrtana*) to be everlasting, by stating that it may stand as long as the Sun, the moon, the sea and the stars continue. And the last stanza (v. 7) states that the image was prepared by the intelligent Pāpaṭa who was an architect (*vāstuśāstrajña*) and also a mason (*rūpakāra*), and was the son of Bālhaṇa. The inscription is silent about the person who constructed the temple.

The *Grahapati* family referred to here is known also from some ChandĒlla and other inscriptions, showing its prevalence, importance and continuation from the time of the very rise of the royal house. For example, the Khajurāhō inscription of V. 1011 mentions one Pāhila belonging to this family as held in high esteem by Dhaṅga.³ About two decades subsequently, flourished a person with the same name and taken identical with him by D. C. Sircar, as consecrating with his brother Jijū, an image of Sāntinātha at Darbat.⁴ Still another person bearing the same name and belonging to the same family is referred to in an inscription of V. 1215 (1158 A.C.), which states that his son Sālhe installed an image of Sambhavanātha at Khajurāhō.⁵ In course of editing the respective inscriptions, we have seen that some of the members belonging to this family occupied a very influential position under the ChandĒlla kings and also that these persons were noted for making gifts and donations. And the present inscription which gives the pedigree of the brothers Jāhaḍa and Dayachandra who jointly installed the image, indicates the donations made by the same family, though they did not actually belong to the house of Pāhila. It also tells us that their father Galhaṇa was the supermost of the *śrēṣṭhins* (*śrēṣṭhi-varishṭha*) in the locality.

As for the geographical names occurring in the inscription, **Bānapura** where Dēvapāla, the earliest ancestor of the house mentioned here, is stated to have built a shrine (l. 1), is obviously the modern place of the same name (Lat. 24°43' N.; Long. 78°45' E.), lying about 30 kms. east

¹ In view of the expression *sā'yam* in v. 3, I take the two temples to be built by Galhaṇa. The construction is somewhat obscure here.

² For the reading of the name, see *n.* in the text, below.

³ No. 99 v. 1. Also see *J. N. I.* No. 99.

⁴ No. 109, A. I. 2.

⁵ No. 124. Kōkalla, another member of the same family, built a temple at Khajurāhō, in V. 1058. See *Ep. Ind.*, Vol. I, p. 147.

AHAR STATUE INSCRIPTION OF THE TIME OF
PARAMARDIDĒVA, VIKRAMA 1237

Scale : One-fourth

of Lalitpur in the Jhānsi District and about 90 kms south-southeast of Jhānsi itself.¹ *Vasuhātikā* where the family resided (L 2), cannot be identified. It may, however, be pointed out that a village of the name of Hāṭa lies about 45 kms. due east of Bānapur. Similarly, we have no definite clue to identify *Ānandapura* (v. 3); and last of all, *Madanēśasāgarapura* (v. 3), as already mentioned above, is Ahār itself, where the inscription was found.²

¹ I am indebted to Shri B. C. Jain for the information that this place contains an old temple which may probably be identified with the *Sahasrakūṭa* of the inscription.

² Traditionally, the place is still so called as I came to know in my visit to it.

³ From an impression.

⁴ Denoted by a symbol.

⁵ The sign of the *mātrā* of this *akshara* resembles the subscript *n* and the preceding *akshara* is deformed by an additional wrong stroke of the chisel.

⁶ Both these *aksharas*, which are now lost, have been conjecturally restored from the context.

⁷ Owing to a wrong stroke of the chisel, the bracketed *aksharas* look more like -रि-

⁸ The first of the *aksharas* in the brackets is damaged and the sign of *mātrā* on the second is not distinct on the impression. It may have been clear on the original.

⁹ The letter in the brackets was originally engraved with the sign of *visarga*, which was later on changed to the *mātrā*.

¹⁰ The first *akshara* of the name was originally omitted in writing and was later on inserted just above its proper place, in a smaller size. The *padachhēda* shows that possibly the name may also have been Udayachandra, but to accept it would involve a literary error (*Vidhēyāvimarsha*).

¹¹ These letters indicate the end of recording the main purpose.

¹² These four *aksharas* have been restored from the traces left.

¹³ The whole of this line which has faintly and partly come out in the impression, has been restored from the traces left, and the reading has been finalised with the help of the brochure referred to above.

BHĀRAT KALĀ BHAVAN COPPER-PLATE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year 1239

THIS copper-plate, which is now preserved in the **Bhārat Kalā Bhavan Museum** of the Hindu University, Vārāṇasī, is said to have been purchased, along with some others,¹ from a resident of Tikangadh, the head-quarters of a district in Madhya Pradesh, some fifteen years ago. The provenance of the plate is not known but it appears to have been obtained by the dealer somewhere in the surrounding region, as we shall see below. The inscription on it was edited by Dr. D. C. Sircar, with its transliteration in Roman characters, and a facsimile, in the *Epigraphia Indica*, Vol. XXXII (for 1958-59), pp. 123 ff. and plate facing p. 126. It is edited here from an inked impression which was kindly supplied to me, at my request, by Rāi Kṛishṇa-dāsī, the founder Curator of the Museum.²

It is a **single plate**, incised on one side only, and measures about 39.2 cms. in length, 29.5 cms. in height and 2 cm. in thickness. To protect the writing, flat copper-bands, about 1 cm. broad and .3 cm. thick, are rivetted on all the four borders of the inscribed surface. This rivetting is done by means of copper-nails, five each at the top and the bottom, and four on each of the other two sides. The plate, together with the border-bands and nails, weighs 3 kgms. and 27.4 gms. The writing covers a space about 36 by 25.5 cms. and contains 20 lines, which are in a good state of preservation. In the middle of the first four lines is a rectangle, 5 by 6.5 cms., containing the representation of the four-armed goddess **Lakshmi** seated on a full blown lotus, and on her either side is an elephant sprinkling water over her head. Similarly, the writing is also interrupted in the last line, by a vacant space, about 4 cms. long, which is apparently intended for a hole that would have been required, if the inscription would have been continued on a second plate. The average size of the letters is 1 cm., except in the last three lines where it reaches up to about 1.5 cms.

The **alphabet** is Nāgarī, bearing a general resemblance to that of the Sēmṛā and the other grants which were engraved by the same mason who incised the present grant.³ And the palaeographical peculiarities too are more or less the same as we notice in them. For example, *ṅ* continues to be devoid of its dot; see *jaṅgama*, l. 7, but the dot is marked in *-aṅka*, l. 9 (if it is not an original fault on the plate); *dh* and *r* show a transitional stage; the first of these letters, e.g., is incised with a horn on its left limb in *dhṛitu*, l. 1, and without it in *vādhā*, l. 16; and the second, i.e., *r*, which has assumed its fully developed form as in the modern Nāgarī, survives in a few instances in its form resembling *v*, e.g., in *ripu*, l. 5, and is occasionally also marked with a wedge, as in *parama*, l. 4. Besides these, we may also note that *ch* is often confounded with *v*, as in *vanīśaśchandra*, l. 1,⁴ and *bh* with *t*, as in *bhāga-bhōga*, l. 14; and lastly, *ṇ* as a latter member of a conjunct consonant is written as *l*; see *bhrājishṇu*, l. 2 and *utkīrṇa*, l. 20. Slovenliness in marking the sign of *anusvāra* and of the *mātrās* above, continues as in the preceding grants, e.g., a redundant *anusvāra* is put on *ma* in *-mahlyarchya*, l. 10, whereas it is not cut on the last letters in *likhita* and *utkīrṇa*, both in the last line.

The **language** of the inscription is Sanskrit; it is generally correct, excepting a few minor types of mistakes which have been corrected in the text below. And leaving the initial verse and three imprecatory and benedictory verses in ll. 17-19, the whole record is in prose. The **orthography** shares the same peculiarities as of those records issued in the contemporary times, viz., (1) to denote *b* by the sign for *v*; cf. *vādhā*, l. 16; (2) the doubling of a consonant following *r*, as in *durvāśaha*, l. 5; (3) the use of the dental for the palatal sibilant in *vanīśa*, l. 1; and (4) occa-

¹ Nos. 119 and 138.

² In the meanwhile I was also favoured with another impression by the Chief Epigraphist, Archaeological Survey of India. This was indeed helpful to me in ascertaining some points in the reading.

³ See p. 422 n. 3.

⁴ In this connection see n. 5 on l. 6 in p. 460 below.

sionally placing a *dayda* as a punctuation mark so close to the preceding or the following letter, as to be confounded with the sign of a *mātrā*. Besides these, we also find a developed tendency to use the *prishtha-mātrā* and the *anusōra*, though the use of the *para-savarṇa* too is often resorted to, sometimes wrongly, as in *samvidita*, l. 7. The verb *grīhṃāti* is wrongly spelt with the dental *n*; the influence of the local pronunciation is reflected in proper names, e.g., in *Padumadhara*, l. 12; and lastly, as in the other grants of the king, a *dayda* is put to indicate that the syllable preceding it is an abbreviated form, as is the one after *tha* and another after *paḥ*, both in l. 12, to denote respectively *Thakkura* and *Paṇḍita*, i.e., *Paṇḍit*.

The inscription refers itself to the Chandēlla king **Paramardin of Kālanjara**, and its object is to record the gift of the village of the name of Chachōḍā¹ which was then included in the territorial division of Duduhī, by the king Paramardin himself, when he was encamped at Sallakshana-Vilāsaputa, on a **date** which is expressed both in words and numerical figures. It is **Tuesday, the fourth day of the dark half of Phālguna** of the (Vikrama) year 1239, which, taking the year to be *Chaitrādi*, expired, corresponds to **23rd of February, 1182 A.C.**²

To summarise the contents of the record, it begins with the auspicious symbol for *Siddham* and is followed by the expression *Svasti*, which, in its turn, is followed by a verse in the *Anuṣṭubh* metre which we generally find at the beginning of the grants of the house. Thereafter, the record mentions the *Paramabhūttāraka*, *Maharājādhirāja* and *Paramēśvara*, the glorious Paramardin, who was a great devotee of Mahēśvara and the supreme lord of Kālanjara, and who is stated to have meditated on the feet of the *P.M.P.* the illustrious **Madanavarman**, who, in his turn, meditated on the feet of the *P.M.P.*, the illustrious **Prithivvarman**. This portion has been copied from the earlier grants of the king and thus it affords no new historical material. Here it is worth noting that Paramardin's father Yaśovarman's name does not figure in the genealogy, for the latter had either predeceased his father Madanavarman, or may have ruled only for a short time, as we have seen above. The formal portion of the charter begins in l. 6; it goes on to convey the king's order to the Brāhmaṇas and all the other people who had assembled at the village of Chachōḍā when he had encamped at Sallakshana-Vilāsaputa. The grant was made in favour of a Brāhmaṇa *Pani* (i.e., *Paṇḍita*) Padumadhara-sarman, who belonged to the *Kautsa gōtra* and the *Vājasaneyī śākhā* with the three *pravrus*—*Āngirasa*, *Ambarīśha* and *Yauvanāśva*, and who was the son of *Tha*, i.e., *Thakkura*, Dhāim, grandson of Śrīpāla and the great-grandson of *Tha*, i.e., *Thakkura* Sahārāṇa and hailed from Pāṭalīputra.³ Lines 13-17 describe the usual conditions of the grant, stating that the donee and his descendants should enjoy the gift of the village with all the objects in its limits and without any obstruction from any quarter, and also that it may be continued by kings in future. Then, as usual, follow three of the benedictory and imprecatory verses and the **sign-manual** of the king Paramardidēva, in ll. 17-20. And with the statement that the inscription was written by the *dharmalēkhin* (writer of legal documents) *Thakkura* Viśṇuka, and engraved by Pālhaṇa,⁴ the record comes to a close.

As for the **localities** mentioned in the grant, **Kālanjara** (l. 4) is, of course, the renowned fort of the name, as we have often seen; and **Duduhī** or **Duduhī** (l. 6) has been correctly identified by Sircar with the modern Dudāhī in the Lalitpur sub-division of the Jhānsī District. **Chachōḍā** (l. 6), the gift-village, seems to be identical with the modern Chāchōḍā or Chachōrā in the Gumā District of Madhya Pradesh. This place is about 100 miles or 160 kms. west-southwest of Dudāhī and about 120 kms. north-west of Vidishā; and we know that the Vidishā-Dudāhī region was then included in the Chandēlla kingdom. **Vilāsapura** (l. 8) has already been identified with Pachhār,⁵ the find-spot of another grant of Paramardin, lying about 20 kms. north-east of Jhānsī. Here, however, the name Sallakshana is added to it, and it was so known probably because after the name of Sallakshana, the elder brother of Prithivvarman, who was the great-grandfather of

¹ *Ibid.*

² See *Ep. Ind.*, Vol. XXXII, p. 125.

³ This adjective is applied to the donee alone and hence the meaning is that he and not his family, as Sircar observed, hailed from Pāṭalīputra. He is obviously a nephew of the donee in No. 119, as known from his ancestry.

⁴ As already seen above, this person also engraved some other charters.

⁵ Above, No. 151.

Paramardīn. All these circumstances show that probably the plate was obtained by the dealer somewhere round about Jhānsī. And lastly, **Pātaliputra-nagara**, which is stated here to have been the original place of the donee (l. 11), is evidently the city of Patnā in Bihar. It may be noted that here it is called a *nagara* (city) and not a *bhattāgrahāra*, as in another grant of the same king.¹ And this statement may probably be taken to suggest that a rent-free locality of Brāhmaṇas existed side by side with the city of that name during that period.

¹ No. 158, l. 10.

² From the original plate and an impression.

³ Expressed by a symbol.

⁴ The consonant of the second letter of the name is formed as lingual *ç* (round-backed), but the dental *d* is probably intended here as we find in the name appearing in some of the grants of this house.

⁵ The consonants of the first and the second letter of the name can each be read either as *ch* or *v*, but I prefer to take it as the former, as the place being so called is situated in the territorial division in which it is mentioned here. See under identification of place-names in the article.

⁶ Originally engraved as *dayi*, with the curve of the *mātrā* scratched off. The *ya* of *chāya* that follows was also originally engraved as *ya* and corrected later on.

⁷ The bracketed *akshara* is not well engraved, and the *v* of *vi* that follows has a redundant stroke in it.

⁸ Drop the *danḍa* and read श्रीशङ्करसाम्बरीषयोवनासत्रिप्रवराय. Cf. No. 119 (ll. 16-17) and No. 158 (ll. 10-11) where these three *pravaras* are grouped together.

⁹ This and the other *danḍas* in this line are intended to show, as in the *Sēmra* and some other grants of this king, that the letter preceding it is a contraction of the word denoting a surname, as *Tha* of *Thakkura*.

¹⁰ This is a contraction of *Pandita* i.e., *Pandit*.

KĀLAÑJAR ROCK INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1240

THIS inscription was brought to notice by F. Kielhorn, who discussed its date, from a rubbing supplied to him by Burgess, in the *Indian Antiquary*, Vol. XIX, p. 37 (No. 67), and also included in his *List of Inscriptions of North India*.⁹ It is incised on a rock between the fourth and the fifth gate, locally known as Budh Budr (Būdhī Bhadrā) and Hanumān Darwāzā, respectively, in the fort of Kālañjar, in the Narainī Tehsil of the Bāndā District in Uttar Pradesh. It does not appear to have been noticed by Lieut. Maisey or General Cunningham who visited the place in the last century. It is edited here for the first time from an inked impression which I owe to the kindness of the Chief Epigraphist.

It is a short inscription consisting of 5 lines of writing, which covers a space 24.5 cms. broad by 22 cms. high. The writing is well preserved except that it has lost two *aksharas* in the middle of l. 1, which, however, can be made out from the context. The height of the individual letters, excluding the top-*mātrās*, is about 3.5 cms.

The **alphabet** is Nāgarī. The letter *dh* has developed a horn on its left limb, and *r* is denoted by a vertical with a stroke attached to its middle on the left, both these examples to be seen in *Yaśōdhara*, l. 3. The **language** is Sanskrit, which is generally correct; and the record is in prose. The **orthography** calls for no special remarks.

The inscription refers itself to the victorious reign of the illustrious **Paramardidēva**; and though nothing about his family or his titles is stated herein, from the provenance of the record

३।३६

¹ The *repha* above this letter is cut as the curve of the medial *i*.

² The *akshara* in the brackets was originally engraved as *pa*.

³ Better read -ञ्चन्द्ररादायं. In *kē* that follows the sign of the *prishtha-mātrā* is separated from the letter, as some others in this inscription.

⁴ *Pushpāni* or *puṣyāni* is intended.

⁵ Both these *dāndas* are endowed with a top-stroke with which they are joined to the preceding letter.

⁶ See *Ep. Ind.*, Vol. V, appx., p. 37, No. 178. It is No. 400 of Bhandarkar's *List of Inscriptions*.

he is undoubtedly the **Chandēlla** king bearing this name. The **purpose** of the inscription is to record the installation of an object which is not mentioned, by the illustrious *Pandita* Jājō, the son of the Nāyaka *Pandita* Yaśōdhara. The inscription is dated **Thursday, the fourteenth of the bright half of Vaiśākha** of the (Vikrama) year **1240**. Kielhorn, who discussed the date in the volume of the *Ind. Ant.* which we have referred to above, has already concluded that this date regularly corresponds to **the 26th of April, 1184 A. C.**, taking the year as of the southern Vikrama era, *expired*.

Yaśōdhara and his son Jājō are not known from any other record, but from the title attached to his name, the former appears to have been an influential person. No special value can be attached to the date of the record which gives only an intermediate year for Paramardin who is known to have occupied the Chandēlla throne from 1166 to 1202 A.C. In the present record, moreover, no imperial title is attached to his name, and this should not be taken to conclude that after the fall of Mahōbā in 1182, *i.e.*, only about two years before the time when the present record was incised, he was relegated to be a petty local ruler by the conqueror, Prithvirāja. The inscription is, after all, a private record and we have evidence to show that Paramardin ruled in the capacity of an imperial ruler even thereafter.¹

No **geographical name** occurs in the inscription.

NO. 136; PLATE CXXIII

FRAGMENTARY MAHĪBĀ STONE INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1240

THE slab which bears the subjoined inscription is said to have been discovered in 1843, by General Alexander Cunningham, at **Mahōbā**⁶ in the Hamīrpur District of Uttar Pradesh, and is now in the Provincial Museum, Lucknow. It was found placed upside down as a common building stone in the fort wall at that place. Cunningham very briefly noticed the record in his *Archaeological Survey of India Reports*, Vol. XXI (for 1883-85), p. 72, with a facsimile in Plate xxii, drawing attention to its date and conjecturing it to belong to the reign of the Chandēlla king Paramardin. A brief account of the record was also published by Vincent Smith in the *Proceedings of the Asiatic Society of Bengal*, for 1879, pp. 143-44; and subsequently,

¹ For example the Baṭeśvara Stone Inscription, No. 139, v. 10.

² From an impression.

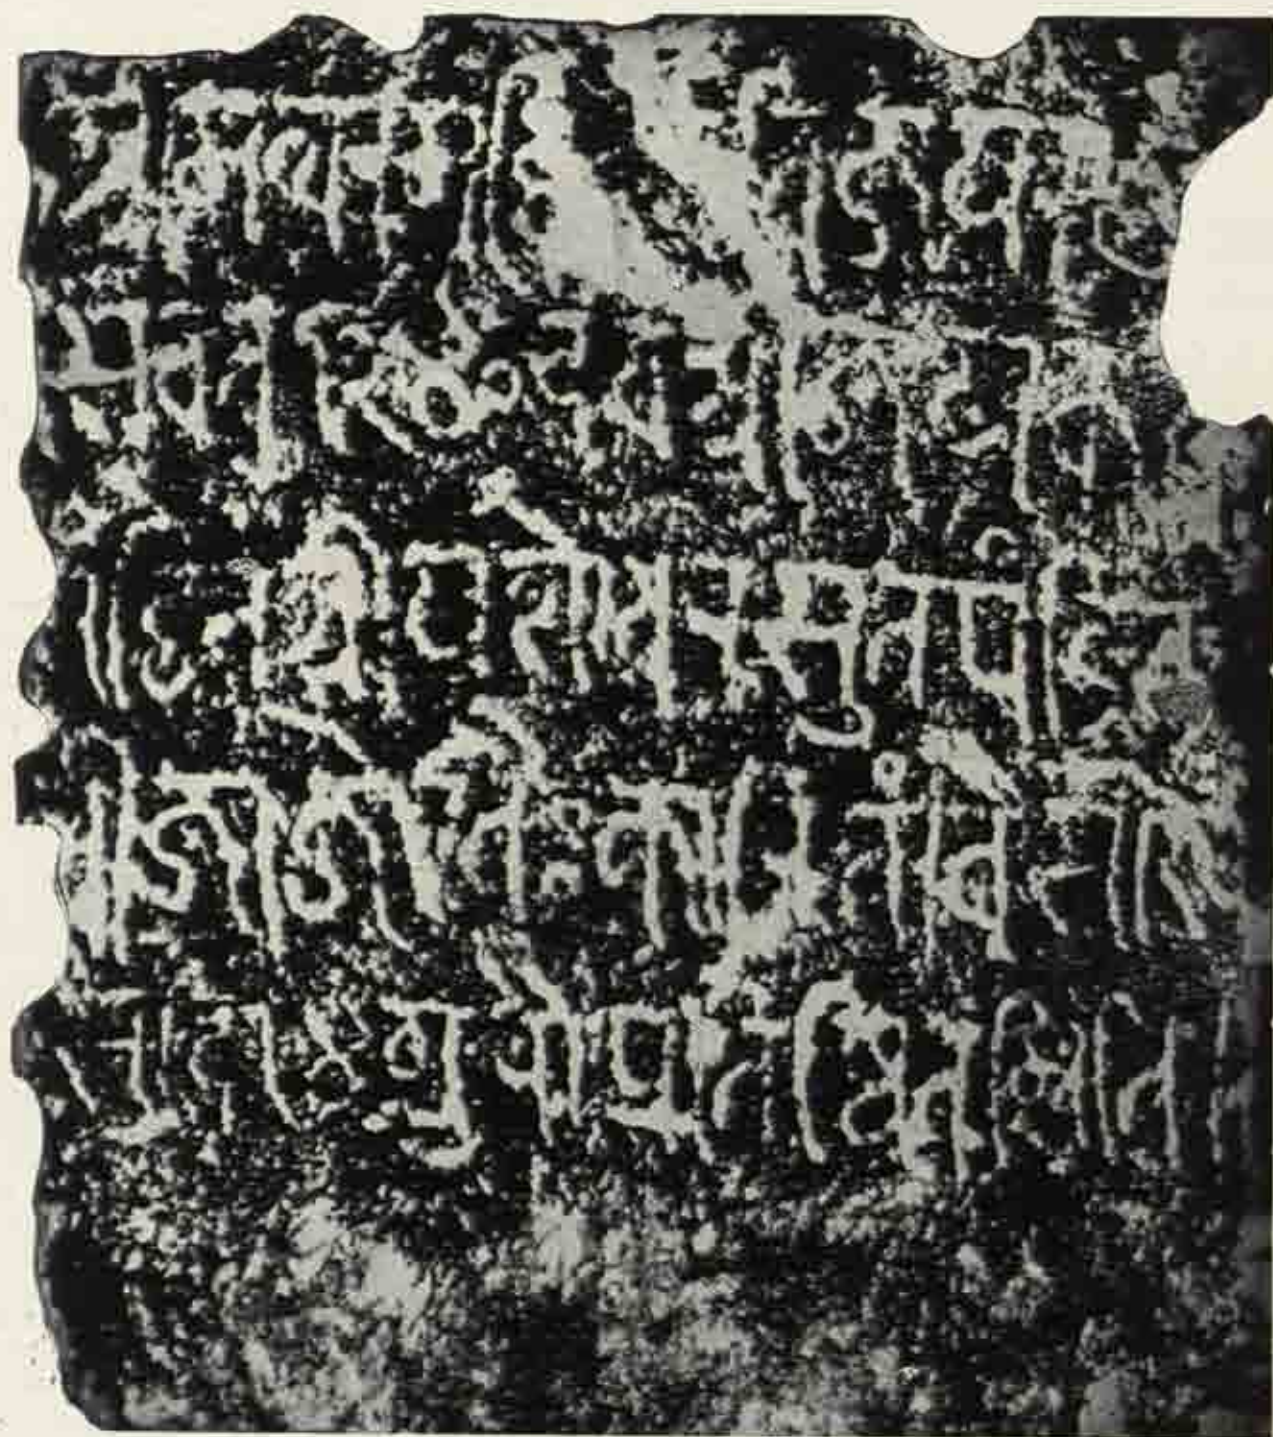

³ Of the *aksharas* in the brackets, the first is partly visible and the second is completely lost.

⁴ The first of these two letters is mutilated and the second has lost its subscript.

⁵ Probably due to some overwriting the reading of this *akshara* is doubtful.

⁶ For the situation and antiquities of this place, see my remarks above in No. 113.

KĀLANJAR ROCK INSCRIPTION OF THE TIME OF
PARAMARDIDEVA, VIKRAMA 1240

From Photograph

this document was edited by Dr. V. V. Mirashi in the *Bhārata-Kaumudī*,¹ Part I, pp. 433 ff. with a facsimile, facing p. 438. The inscription is edited here from an excellent inked estampage kindly placed at my disposal by the Chief Epigraphist of the Archaeological Survey of India.²

The inscription is a **fragment**, incised on a slab which is broken at the top and also on both the vertical sides from top to bottom, and the broken parts are all lost. It contains seventeen imperfect lines, the first of which shows only the lower parts of four or five letters. The total height of the extant portion of the writing is 46·5 cms., and the length of it, beginning with 35·5 cms. in the second line, gradually increases to 65·5 cms. in l. 11, and decreases again to 61·5 cms. in the last line. The breaks are all irregular. The upper proper right corner of the stone, which already had a crack extending up to l. 9 cms. at the time of Cunningham, has also since been lost. An approximate idea of the original length of the writing can be had from l. 11, which has lost only six of the letters, three on either side, the total breadth of which can be estimated to be about 6 cms., in view of that of the others; and thus the total length may be considered to have been about 71·5 cms. As for the original height of the writing, Prof. Mirashi observed that "it is now impossible to conjecture, but if it contained a *praśasti* of the reigning king's ancestors, as it is not unlikely, its height must have been at least the double of the present one of 1' 3" (31·75 mms.)." But we generally find that in a *praśasti* one of the kings is described in more number of verses than another and often some of them are mentioned only by name or are even omitted; and thus it precludes the possibility of saying anything definitely about the original height of the writing. The size of the letters is between 1·5 and 2 cms.

The record has also suffered due to weather and rough treatment, but excepting two letters which are totally lost though they are of minor importance and can conjecturally be restored with confidence, *viz.*, *vyu* in l. 12 and *smṛi* in l. 14, the extant portion of it is all legible. The letters are all symmetrically and carefully drawn and engraved. But there are some slips; some of the signs of the *mātrās*, *anusvāras* and the superscript *r*, which are expected on the top-strokes, are either faintly visible or are altogether missing; however, comparing all the three impressions before me, I could only conclude that these signs were engraved shallow on the original itself rather than taken as lost on account of the exposure. This was confirmed in my examination of the original, as stated above.

The **characters** are Nāgarī. They are ornamental, showing their bends and joints angular, and in this respect they resemble the Mahōbā inscription ending with the name of Kīrtivarman.³ To note the general feature of the forms of the letters, their vertical strokes are often not drawn below where they meet the ends of the left-hand curve, particularly in the case of *p*, *y* and *v*. As regards individual letters, the loop of *k* when the first member of a conjunct consonant is replaced by a horizontal stroke, as in *kshōbha*, l. 3; the left limb of *kh* begins with a loop as the palatal *ś*, e.g., in *khumdita*, l. 6; *ch* is distinguished from *v*; cf. *chaila* and *vikīṛṇa*, both in l. 8; the conjunct *ṇṇ* appears as *ṇl*, see the latter of these examples; and *l* as superscript, and often *s* also, are devoid of their tail, e.g., in *ttana*, l. 2, and *āśīl*, l. 4. *Dh* continues to be

¹ *Studies in Indology*, in honour of Dr. Radha Kumud Mookerji, Indian Press, Ltd., Allahabad, 1945. In his article Dr. Mirashi draws our attention to some of the errors committed by Smith. It is shown, e.g., that Smith's reading of the name Nānīka in l. 14, and connecting it with that of Nanmika, the founder of the Chandēlla dynasty, is entirely wrong, since the actual reading is Nōna and the person who bore this name is stated to have belonged to the Kāsyapa (not Chandēlla) family and constructed the temple referred to in the inscription. That the error committed by Smith continued for long may be pointed out by stating that in an excellent Volume entitled *The Early Rulers of Khatavāhō* (published in 1958) the same statement is repeated. See p. 232, No. 40. In my visit to the Provincial Museum, Lucknow, in January 1973 I had an opportunity to study the original stone which is No. E'22 of the Museum Catalogue; and I noticed that the record is in a sunken panel of black marble, the borders of which measure 4·5 cms. broad. The lower border is almost complete. The letters are well formed but the incisions are shallow. It was also noticed that some of the strokes and signs of *mātrās* and *anusvāras* which have not come out in the impression and therefore corrected by me in the text below in brackets, are visible on the original. In this respect attention is also invited to n. 7 in the text.

² In addition to this I have two more impressions kindly supplied to me, at my request, by the Director of the Lucknow Museum where the stone is at present exhibited. This material was indeed helpful to me in comparing my reading of the text, which, as shown below in the foot-notes appended to the text, differs in some places from that of Prof. Mirashi. These differences are, of course, of minor importance.

³ Above, No. 113.

without its top-stroke, but the horn on its left limb is sometimes joined to the loop below, as in *sādhattē*, l. 7, or to the top of the vertical, e.g., in *sudhūr*, l. 15; and occasionally the top of the verticle itself is slightly curved to the left so as to appear as the horn, for which, cf. *-adhika*, l. 4. The slightly different forms of *bh* can be seen in *kshōbha*, l. 3, *-abhya*, l. 4 and *bhaṭa*, l. 9; and *r* which has assumed its modern form, occasionally appears as a vertical marked with a horizontal stroke in the middle, e.g., in *māruta*, l. 9. The subscript form of this letter continues to be marked by a serif as in *prālēya*, l. 2, and occasionally also by a stroke to the left, as in *-agra*, in l. 6; and lastly, the middle of the left limb of *l* is formed as a vertical stroke, cf. *prālēya*, l. 2.

The **language** is Sanskrit, which is almost correct, and with the date in the end, the extant portion of the record is all in verse, containing 20 stanzas in the usual embellished style. The verses are not numbered; and with the exception of verses 10, 13, 16 and 19, all of them are fragmentary. In respect of **orthography**, we may note that (1) *b* is throughout denoted by the sign for *v*; see *vudha*, l. 13; (2) the dental sibilant is wrongly put for the palatal in some instances only; cf. *sāsvata*, l. 13, and of *vice versa* we have only one case, *āsvavīrā*, l. 10, where we find the wrong use of the dental sibilant; (3) a consonant after *r* is generally doubled; see *karṇa*, l. 2; (4) the *prishṭha-mātrā* is used with a few exceptions like *-vaṁsē*, l. 12; the final consonant is not marked except in *sativat* in the last line; and lastly, *kshuṇṇa* in l. 3 is spelt with the dental nasal, and *-ujjvala*, in l. 12, appears with a single *j*, which cannot be defended grammatically.

The inscription is a *prāsasti*, a laudatory account, as shown by the word used in v. 15 in l. 14; and its immediate **object** is to record the erection of a temple in honour of the lord Smarārāti (Śiva, the destroyer of Smara), as we learn from v. 17 in l. 15, by the learned Mādhava, a pious *dvija* and a teacher of arts and dance, who was the son of Lakshmaṇa and grandson of Nōne of the Kāśyapa lineage (vv. 16-17). The *prāsasti* was composed by Jayapāla, the son of Sūhila and grandson of Hallaṇa of the illustrious Vāstavya family (vv. 13-15). It was engraved by Dēvarāja, the son of Sōmarāja, and was probably written (on the stone) by Kartripāla, whose name alone is fortunately preserved in verse 18.

The **date** of the inscription, as expressed only in words in the end, is **Monday, the ninth of the dark half of Āshāḍha of the year 1240**; and the year is also mentioned in v. 18 in word-numerals, stating that it was the era of Sāhasāṅka. As stated above, the era was taken by Cunningham as of Vikrama and so by Kielhorn also, who calculated its date accordingly. But in his *List of Inscriptions of Northern India*, D. R. Bhandarkar conjectures it to be the Kalachuri era, on the basis of his assumption that Sāhasāṅka is the same as Sāhasamallāṅka, used to denote Malayasiṅha, in his Rēwā stone inscription dated in the Kalachuri year 944, and hence the year of the present record, if taken as that of the Kalachuri era, works out all right for that era also; and accordingly, it is equivalent to Monday, the 22nd June, 1184 A.C.¹ Showing that this view is incorrect, and also pointing out that Sāhasāṅka was the name of Vikramāditya, Dr. V. V. Mirashi concluded that the date of the inscription must be referred to the Vikrama era, as already done not only by Cunningham but also by Kielhorn, who calculated the year of the epigraph for the Southern *expired* Vikrama year 1240 and found the date equivalent to the **4th of June, 1184 A.C.**, when it was a **Monday**.²

The existing portion of the inscription does not mention the name of any king or the family to which he may have belonged, but from a reference to the **Moon** and from the expression *tatkulabhūshana* used soon after, we can conclude that the family belonged to the **lunar race**

¹ See his *List*, p. 282, n. 2.

² *Ind. Ant.*, Vol. XIX, p. 179, No. 127. For the whole discussion see *Bhārata-Kaumudī*, p. 435 and n. In *ibid.*, p. 435, Mirashi also draws attention to Kshīrasvāmin's commentary on the *Amarakōśa*, II, 8, 2, which identifies Vikramāditya with Sāhasāṅka. For the whole discussion also see *C. I. I.*, Vol. IV, pp. 349-50. It may, however, be noted here that Mirashi's conjecture in taking the words *sāhasa* and *āṅka* signifying four and nine respectively, may be taken to be incidentally applicable in the case of the singular example of the Rēwā stone inscription of Vijayasiṅha, dated in the Kalachuri year 944; but not anywhere else as in the present inscription. Also cf. *Fatsavā Sāhasāṅkē* in v. I of the Rōhtāsgaḍh rock inscription of V.S. 1279 in *Ep. Ind.*, Vol. IV, p. 311, where Kielhorn took the second word to denote Vikramāditya.

as pointed out by Mirashi. The mutilated condition of the record does not mention the name of the king, but the provenance of the inscription, together with the mention of the date in the end as the year 1240, leads us to conclude that he could be no other than **Paramardin**, whose known years range between V. 1223 and V. 1258. It may also be rightly conjectured that the initial portion, which is now lost, must have contained an account of this king, ending with his name, and verses 1-10 of the extant portion of the record may have given a eulogistic description of this very king. Though of a highly literary worth, these verses are of less historical interest.

To summarise the contents of the record, we find the first verse describing the flames of the king's glowing vigour pervading the sky, and the second refers to his *digvijaya* in a general way. The next verse purports to say that he was bounteous, and his struggle against Aṅga, Baṅga and Kaliṅga is referred to in the fourth verse. As his invasion of these regions is not known from any other source, this statement may be taken as a poetic panegyric. Verse 5 again refers to his conquests, in vague terms, and verse 6 states that 'the lord of Tripurī fainted whenever he heard the songs of the valour of his arms'. This reference seems to indicate that the contemporary Kalachuri king, who was probably either Jayasimha (1163-1188 A.C.) or his son Vijayasimha (1188-1210 A.C.), the last known ruler belonging to the Kalachuri dynasty, submitted to Paramardin. We have seen above that Paramardin's grandfather, Madanavarman, claims to have achieved some success against the Kalachuri Gayākarna (1123-1153 A.C.); and as since then the strength of the Kalachuris was on its wane, the statement of the present inscription about Paramardin, that he brought under submission the Kalachuri king, may have some justification, though this account cannot be verified from any other source.

The rest of the verses describe the king in a conventional manner. Thus, verse 10 means to say that he was devoted to Śiva; and vv. 11-12 mention the main purpose of the record, *viz.*, that during the reign of the prince described above (that is, Paramardin) was erected this lofty temple of Śiva, evidently the same where the inscribed slab may have been originally set up. The following portion of the record mentions the name of the poet who composed the *praśasti*, that of the sculptor who erected the temple and also that of the engraver of the *praśasti*. The last verse (20) wishes good to the lunar (*i.e.*, *Chandrātrēya*) family, and with the date as we have discussed above, the inscription comes to a close.

There is no **geographical name** in the existing portion of the record.

Cunningham noticed three inscriptions on the pillars of a temple at Madanpur, all stating that the Chāhamāna king Prīthvirāja III (1178-1192 A.C.) defeated Paramardin and ravaged his kingdom in V.S. 1239.² And the present inscription, which is dated only a year after, doubtless shows that soon after the ravage was over, the affairs in the Chandēlla kingdom were again normal.

TEXT³

[Metres: Verses 1-2, 4-5, 7-9, 14 and 20 *Śārdūlavikīrīḍita*; vv. 3 and 15 *Āryā*; vv. 6, 10, 13, 16 and 18-19 *Anuṣṭubh*; v. 11 *Vasantatilakā*; vv. 12 and 17 *Sīkharīṇī*]

¹ As shown by Mirashi, the word *murchchhanā* has a double *entendse* (1) a swoon, and (2) melody; and according to that the other meaning is that the king of Tripurī sings a melody in praise of Paramardin. See *ibid.*, p. 436, n. 6. Both the meanings, however, go to show that the Kalachuri king was subordinate to Paramardin.

² *A.S.I.R.*, Vol. XXI, pp. 173 f.

³ From impressions. Portions marked with an asterisk are read from Cunningham's *A.S.I.R.*, Vol. XXI, as the stone has now lost the portions containing these *aksharas*.

⁴ Prof. Mirashi read *-malva*, but the sign of medial *ṛ* is distinct on *ma*, though partly visible, and the letter that follows it is *kha*, for which cf. the same letter in *khamdita* in l. 6. The lower parts of *la* are also visible. The whole expression means 'the slope of the Himalayas'; and the first half of this verse appears to be an adjective of the group of the Sun's horses, the word now missing.

¹ The letter in the brackets is perhaps originally *ś*, later on changed to *s*, with an unsuccessful attempt.

² The consonant of the *akshara* in brackets appears as *ch*.

³ The *kula-parvatay* (seven mountain ranges) are well-known. See *Mark purāna* (*Bib-Indica series*), p. 284.

⁴ The horizontal stroke distinguishing this letter from *ga* is not marked.

⁵ In the latter part of this line a number of the *śirovāra*-signs have been cut so shallow that they are not distinct in the impressions.

⁶ This syllable is not properly formed, and the *mātrā* of *ji* that follows is mutilated. But the reading is certain. The missing five *aksharas* at the end of this line may be conjecturally restored to be *dhūli-prāṇān-disah*.

⁷ The stroke partly visible in the end of this line is probably the curve of *ka* and not the sign of medial *ā*; and *kt* is probably intended.

⁸ The slanting stroke of this letter distinguishing it from *p* is not marked.

⁹ The space for the sign of medial *ā* is blank in the impressions.

¹⁰ The *mātrā* above this letter is probably placed above the preceding letter.

¹¹ The bracketed letter appears as *sa*.

¹² The original has *nā* which Mirashi suggests to be taken as *nān*; but to me it appears to have been *nā*, forming an adjective of *marutah*.

¹³ The bracketed *akshara* looks like *tra*. Probably *thalita* may have been intended here.

¹⁴ The *mātrā* of the first *ka* is partially visible and of the second, it is completely lost. For the idea expressed in this verse cf. *Naishadhīya-Charita*, Canto VI, v. 27.

¹⁵ This verse also appears in No. 60, v. 33, which is a *Paramāra* grant.

¹⁶ Mirashi read these two *aksharas* as *dhamma* (*amma*), but the first of them has a top-stroke, unlike that of *dh* and the second has a point, and not a loop as of *m* in the left limb. Besides, his reading does not give any sense which may be applicable here.

¹ Mirashi suggests to read the following two letters as *smāna*, but following his suggestion, we miss here the finite verb. The lacunae may conjecturally be restored as *—मोपितं द्विमहिलो*.

² This word has to be construed with the first word in the second quarter of the verse. Mirashi reads *prāsāda-sphuṭita*, which cannot be construed.

³ The slanting stroke of the *mātrā* above this letter is wrongly cut on the preceding one.

⁴ The bracketed and the preceding *akshara* are mutilated.

⁵ These three letters may have been *rapāhyi*.

⁶ A redundant stroke makes this letter appear as *bha*, for which cf. *bhavana* in l. 15.

⁷ Suggesting correction of *nē* to *nai*, Mirashi translates this expression as "the only son of Nōnē"; but it also appears possible that the name was Nōnē and the suffix *ka* may have been added to it for metrical exigencies, or, what appears to be more probable, to give a form of the *shashihī* of the word Nōnē, as we find in some other grants of the house, e.g., in No. 126. This suffix is added to the name to form its case even today by those who have only some smattering of Sanskrit.

⁸ The *akshara* in the brackets has disappeared, leaving only traces. The letter *kshma* that follows is engraved as *kāma*.

⁹ The bracketed *akshara* is totally lost and I have adopted the reading as suggested by Mirashi. But it may also have been *bha*.

¹⁰ This lacunae may conjecturally be restored by the reading *यावत्तस्य मुखाम्बुजे स्वतवती—*.

¹¹ The unit figure is ornamental with four *śundipādas* around it and only one of them is complete. The vowel that follows is formed differently from others in the inscription.

¹² This *akshara* is deformed by a redundant chisel stroke.

¹³ Only the vertical of the *mātrā* and the first half of this letter are visible.

¹⁴ After I finished my article on this inscription, I had an opportunity to see what N. P. Chakravarti wrote on it in the section on Epigraphy in *ASL, AR.*, 1936-37. He remarked that in the fourth line of the extant portion of the epigraph the name of Madanava [rman¹⁵] is found partly preserved. But in my examination of the original I found that though the first of the bracketed letters ending the line may be doubtfully taken as *ma*, the second and the fourth of them are conjuncts and thus not fitting in the name. Again, in l. 22, he took the name as Ahallana, which, of course, may be possible, as shown by the *padachhēda*. In l. 14, he read the name as Nōlaka and not Nōnēka, as taken by me and also by Dr. Mirashi. The consonant of the second *akshara* appears also as *l*, but the sign of the *prishtha-mātrā* before it is absolutely certain and cannot be overlooked.

AJAYAGADH STONE INSCRIPTION OF THE TIME OF PARAMARDIN

[Vikrama] Year 1243

THIS inscription, which exists on one of the jambs of the upper gate of the fort of **Ajayagadh**¹ in the Pannā District of Madhya Pradesh, was found by Alexander Cunningham, who transcribed a portion of it in Roman characters, and published it with a photozincograph in his *Archaeological Survey of India Reports*, Vol. XXI (for 1883-1885), p. 50, and Pl. xii-C. It is edited here for the first time from a fresh inked impression which I owe to the kindness of the Chief Epigraphist of the Archaeological Survey of India.

The inscription is incised on the lower part of the jamb which also contains a record of V. S. 1227, which we have edited above.² It contains eight lines of writing of equal length, covering a space 26 cms. broad by 25 cms. high. The breadth of both these inscriptions is almost the same. The record shows the same sort of carelessness on the part of the engraver. The size of the letters varies from 2.5 to 3 cms. in height. When Cunningham visited the place, the record contained probably one more line in the end, but unfortunately the whole of it is now lost.

The inscription is written in the **Nāgari alphabet** of the twelfth century. From the point of view of palaeography, attention may be drawn to the form of *a*, which begins with a vertical stroke ending in a loop and then going up with a tail to the left; see *anēna*, l. 5; to the conjunct consonant *gg* appearing as *gn*; cf. *durgha*, l. 2; to the almost similar forms of *ch*, *dh* and *v*; see *vudhē*, l. 1 and *cha*, l. 7; to the somewhat older form of *ś* in *śrī*, l. 3; and lastly, to the formation of the subscript of *ksh* so as to resemble an initial *u*, for which see *kshatriya*, l. 4.

The **language** of the record is Sanskrit; it is incorrect at some places and also contains some local words, as some of the records discovered at the place. The record is all in prose. From the point of view of **orthography**, nothing is worth noting, except that *durgha* in l. 2, is written with *gg*, and the use of the *ūrdhva-mātrās* throughout.

The **purpose** of the inscription appears to record that a *chautrā* (l. 5), i.e., a platform, was constructed by a *Rāuta*, i.e., *Rājaputra* of the name of Sihada, who was a son of the *Rāuta* Sāntana (Sāntana?) of the kshatriya lineage, and was a resident of the village of Kōrtiā, for the use of all people of Jayapura. The **date** of the record, as expressed in figures only, is Wednesday, the **eleventh of the bright half of Jyēshtha** of the (Vikrama) Śaivāt **1243**, which, according to Cunningham, corresponds to 1st June, 1186 A.C.; and observing that the week-day should be Sunday, accordingly, the same scholar states that the letters *v(b)udhē* in l. 1 can also be read as *rauvau*.³ But the sign of the medial *u* attached to the first of the letters showing the name of the week-day is quite distinct, and consequently it cannot be taken as *rauvau*. The date was again discussed by Kielhorn, according to whom, it corresponded to **20th of May, 1187 A.C.** when there was a **Wednesday** and the *tithi* of the bright half ended 4 h. 15 m. after mean sunrise.⁴ The year was the Southern V. expired.

The name of the king, in whose time the construction of the platform is stated to have been made, does not figure in our record; but from the provenance thereof, he is evidently no other than the king **Paramardin** of the **Chandēlla** house, who is known to have occupied the throne from c. 1166 to 1202 A.C.

Of the **geographical names** mentioned in the record, **Jayapura** (l. 2) is evidently Ajayagadh, as known from several other inscriptions found at this place; and the village of **Kōrtiā**, the original place of the benefactor (ll. 4-5) I am unable to identify. This place is also mentioned in another inscription found on the upper surface of the same pillar which contains the present inscription, as already stated.

¹ For the situation and archaeological importance of this place, see No. 112, above.

No. 138 : PLATE CXXV

BHĀRAT KALĀ BHAVAN PLATE OF PARAMARDIDĒVA

[Vikrama] Year 1247

THIS plate is now in the **Bhārat Kalā Bhavan** attached to the Hindu University, Vārāṇasī, and is reported to have been purchased, as already stated above,⁹ some fifteen years ago from one Thakurdas Jain, a resident of Tikamgaḍh, the chief town of a district of the same name in the Bundelkhand region of Madhya Pradesh. The original find-spot of the plate is not known, nor is it possible to know it as the person from whom it had been purchased is now no longer living. The inscription on it has been edited by Dr. D. C. Sircar in his article "Three Chandella Charters", published in the *Epigraphia Indica*, Vol. XXXII (1958-59), pp. 126 ff., with transcript in Roman characters and a facsimile. It is edited here from two impressions, one of which I owe to Rai Kṛishṇadāsī, the founder-Curator of the Kalā Bhavan, and the other, kindly supplied to me by the Chief Epigraphist, Archaeological Survey of India, to whom the plate was some time back sent for examination.

It is a **single copper-plate**, inscribed on one side only, and measures about 43.5 by 29 cms. All round the inscribed surface, flat copper-strips about 1 cm. broad are fastened on to it very tightly by means of copper-rivets, which are now broken at some places, leaving only the holes bored for them. The plate is heavy, and the letters, though they are deeply cut, are not seen through on the reverse side. The plate is in a perfect state of preservation; and together with the border-bands and nails it weighs 2 kgms. and 220 gms. The size of the letters varies from 1 to 1.5 cm.

¹ From an impression.

² Denoted by a symbol.

³ Most probably this consonant appears to have been marked.

⁴ Both the bracketed letters are deformed but the reading is certain.

⁵ What looks like the sign of *anusvāra* above *sa* is an original fault of the stone, as some others below. The sibilant that follows it is cut with its left lower limb detached.

⁶ *Ta* is incised as *na*.

⁷ The *visarga* sign is faintly and partly visible here, and it was read by Cunningham as the sign for medial *z*. This and the following words are adjectives of *Sihada*.

⁸ The syllable *Śrī* is now almost distorted and hence the reading of it as taken by Cunningham has to be adopted here.

⁹ This letter and the whole of the last line are now lost, and the reading is from Pl. xii-C in Cunningham's *A.S.I.R.*, Vol. XXI.

¹⁰ Read *Thakkura*. The first of the *dandas* is incised quite close to the preceding syllable and with the same top-stroke as on *tha*. The implication of the figures that follow is not clear. *Sāṅkaliā*, from the sense, appears to be the name of a place in this region, as we know also from Nos. 121 and 128.

¹¹ The two figures that follow this name were read by Cunningham as 53 but in the accompanying plate the second figure appears as 2. Nothing can be definitely said now as the whole line is completely lost.

¹² See Nos. 119 and 134, above.

The inscription consists of eighteen lines of writing; and the inscribed surface measures about 40 cms. in breadth and 26 cms. in height. About the middle of the first four lines, the writing is interrupted by a square of about 6 cms. showing in it the figure of the four-armed goddess **Lakshmi**, with lotuses in two of her raised hands. The writing is also likewise disturbed by a hole of the diameter of about 1 cm., in the central part of the last line, indicating that it was cut for a ring passing through it for holding the plate with another, which is not now forthcoming, as we shall see below in the concluding portion of this article. The engraving is neat and boldly executed, but some of the letters are misformed and also bear redundant chisel strokes, as we shall presently see.

The **characters** are Nāgarī of the latter part of the 12th century A.C., and bear a general resemblance to those of the Sēmra plate record and some others of the same king. The letters *ch*, *dh* and *v*, and occasionally *r* also, are often alike in form, though *dh* occasionally appears with a horn on its left limb; for example, compare the resemblance between *ch* and *v* in *vāchana*, l. 12; between *r* and *v* in *pravaraṅga*, l. 11; and between *dh* and *v* in *virōdhi*, l. 2. As a member of the conjunct consonant the letter *ṅ* continues to appear as *l*; e.g., in *harṇikā*, l. 9; confusion is occasionally caused in the formation of *t* and *bh* both looking almost alike; e.g., *bhaṭṭāraka* in l. 2 looks like *taṭṭāraka*, and *varṇma* in l. 3, as *tarṇma*. The loop of the palatal *ṣ* is often altogether missing, as in *Paramēśvara* = *śrē* at the beginning of l. 3, or is not completely formed, as it appears more than once in l. 1. Instances of omitting some letters, their strokes or limbs, particularly those above the top-marks, are to be seen in the engraving of *svasti* as *svāsta* in l. 1, in *varsha* engraved as *vapa* in l. 18, and in *likhitē* in l. 7, engraved as *lēkhita*. In marking the signs of *anusvāras*, the engraver has become most lethargic, sometimes in putting them as minute dots and in some other cases omitting them altogether.

The **language** of the record is Sanskrit; and with the exception of one verse in the beginning and three in the end, it is all in prose. **Orthographical** peculiarities are almost the same as often noted above, e.g., (1) the use of *v* to denote *b* also; cf. *valubhiv*, l. 17; (2) the reduplication of a class-consonant after *r*; e.g., in *sarva*, l. 13; the occasional confusion between the palatal and the dental sibilant, as in *vaśundharā* in l. 5 and *varṇma* in l. 17; and (4) the use of the *anusvāra* in *phalaṁ* which is the last word of a verse in l. 18, but the wrong use of the consonant *m* in *samviditaṁ* and *samvatsarē*, respectively in ll. 7 and 9. *Sandhi* is violated while showing the name of the gift-village in l. 6 and the *pravaras* in l. 10; and the influence of local pronunciation is to be seen in *Jōvanāsa* for *yatvanūśva* in ll. 10-11; and the abbreviations *tha* and *paṁ* followed by a *daya* are also noteworthy.

The inscription is one of **Paramardin** of the **Chandēlla** (Chandrātrēya) **Dynasty** ruling at **Kālānjara**. The genealogical portion giving the names of his grandfather and great-grandfather along with that of his name is identical with that of the preceding grants of the king. The **object** of the present charter is to record the grant of a plot of land measuring ten *lāvas* in the village Italā situated in the Pāsuṅi *viśhaya*, made by the *Paramabhaṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious Paramardidēva who is also stated to have been a devout worshipper of Śiva and the great lord of Kālānjara. The grant was made at the Maṅikartīkāghaṭṭa, during the king's stay at Vārāṇasī, obviously in course of a pilgrimage. We know that at the time the grant was issued, this holy city was the headquarters of the Gahaḍavāla kings, and we also know that Paramardin's contemporary of the Gahaḍavāla throne was Jayachandra (c. 1170-93 A.C.), who is known to have helped the Chandēlla king in his encounter with the Chāhamāna Prithvī-rāja III (c. 1177-92 A.C.)¹ This evidently shows that Paramardin carried on friendly relations with Jayachandra; and in view of this, it is hardly possible to agree with Shri N. Bose who

¹ The dictionary meaning of this word is 'cutting, lopping or lopping off', and in this sense we find its use in the classical literature, e.g., in *R.V.*, XIII, v. 43. But it is unknown to inscriptions; and in none of the Chandēlla records I find this word used. Thus the word may be taken here in its secondary meaning 'a part'. If, on the other hand, it is presumed that the writer of the present inscription may have omitted the *akshara* *ha* before *lā* from the original draft, as we find in some other cases also, (cf. *vīkē* for *vīvēka* in l. 5, the expression would mean 'ten *halas* of land'.

² H. C. Ray, *D. H. N. I.*, Vol. II, p. 541.

suggests that the Vārāṇasī region formed a part of Paramardin's kingdom about the time of the record.¹

The date of the inscription is quoted in words and repeated in figures, in ll. 9-10. It is **Saturday, the 14th of the bright half of Phālguna**, (Vikrama) year **1247**, which, as calculated by Dr. Sircar,² regularly corresponds to **9th February, 1191 A.C.**

As seen above, the genealogical portion of the present grant is a copy of Paramardin's grant of V.S. 1239;³ and the variation is only in the formal portion of the grant, i.e., the details of the donations made. Even the donee in both the cases is the same, Padmadharaśarman, though his name figures in its Prakrit form in the earlier grant; and his father's name is written with a slight change in spelling. It is therefore not necessary to repeat here all that has been stated above, while editing the foregoing document. It has, however, to be observed here that in the present charter we do not find the name of the writer and of the engraver,⁴ after or before the imprecatory and the benedictory verses, as in that of which it is a copy and as we find in almost all the other grants of the king; in view of this it is possible to hold with Dr. Sircar who has remarked in course of editing this grant in the volume of the *Ep. Ind.* referred to above, that the writing was continued on another plate which is now lost and which would have borne inscription of the **sign-manual** of the king together with a reference to these two persons. The hole in the lower surface of the plate, which was meant evidently for a ring to hold it with another, also lends support to this view.

As for the **localities** mentioned in the inscription, **Kālañjara** (l. 4) and **Vārāṇasī** (l. 8) are well-known. **Pāṣuṇivishaya** (l. 9), where the gift-land existed, appears to have been the region in the valley of the Paisani river which flows in the eastern part of the Bāndā District and joins the Yamunā. And in view of this, the village **Italā** in which the land was situated (l. 6) suggests its identification with the modern village Ekdalā (Lat. 25° 43' N., Long. 81° 6' E.), lying about 25 kms. north-west of the confluence of these two rivers and about 30 kms. east-southeast of Augāst, the find-spot of one of the grants of Madanavarman.⁵ **Pāṭalipura**, which is mentioned here as a *bhattāgrahāva* from which the donee Padmadharaśarman is stated to have hailed (l. 10), is obviously the same locality figuring in another grant of Paramardin, as already seen.⁶

¹ See N. S. Bose, *Hist. of the Candēllas*, pp. 96 ff. D. C. Sircar has discussed this problem in detail in the *Ep. Ind.*, Vol. XXXII, p. 126, and elsewhere also. The fragmentary Mau inscription of Madanavarman (No. 125) has a clear statement regarding the friendly relations between this king and Kāśīrāja, and his contemporary Gāhaḍavāla kings were Gōvindachandra (1114-54 A.C.) and his son Vijayachandra (1154-70 A.C.); thus it is hardly possible to conceive that during the very next generation and within about 20 years of Vijayachandra's death, the situation may have changed. Similarly Dr. Ganguly's assumption based on the slender statement on Nayachandra's *Rambhāmāṇī* that "Madanavarman was then at war with the king of Kāśī", appears to be hardly acceptable. For Ganguly's conclusion see *Hist. and Cult. of the Ind. People* (Bhāratīya Vidya-Bhavan), Vol. V, p. 53.

² See *Ep. Ind.*, Vol. XXXII, p. 126.

³ Above, No. 134.

⁴ As the present charter contains the same type of errors, e.g., of occasionally omitting limbs of letters etc., it appears likely that it was probably engraved by Pāthana who engraved some other grants of Paramardin.

⁵ Above, No. 118.

⁶ No. 134, above.

⁷ From the original plates and impressions.

⁸ Expressed by a symbol. In the following word the curve of the *mātrā* of *ti* is not formed and the vertical of the same is placed close to the preceding letter so as to read the whole as *māṭā*.

⁹ This letter is disfigured by a redundant chisel stroke.

¹ This *dayda* is redundant, as also some others below.

² Read -पातीटला-

³ The consonant of *tu* is formed as *ti* and the curve of the *mātrā* on *vi* is not cut.

⁴ The curve of the *mātrā* on the first and the whole of it on the third letter is missing.

⁵ The sign of the superscript *r* is very faint.

⁶ Both the bracketed *aksharas* are misformed.

⁷ The curve of the *mātrā* of *dhi* is partly visible and is joined to the vertical.

⁸ Both the consonants of the bracketed letter are misformed. In the word *santant* that precedes, it cannot be ascertained whether the consonant is marked, as the verticals of most of the letters in this inscription have their lower ends slightly bent to the right.

⁹ Each of the names of the *pravaras* here is separated by a *dayda* so often used in the *Sēmra* grant of the same king. Read आङ्गिरसाभाम्बरीषयोवनाब्- *Th* and *Pam* in this line are contractions of *Thakkura* and *Pandita* i.e. *Pandit*, respectively.

¹⁰ In the other records the name appears as *dhā r*. See... The *anusvāra* on *dhā* appears to have been struck off but the mark is still visible.

^{10पं} The sign of *mātrā* of *pū* appears as a subscript *n*.

¹² Sixcar suggests the correction of this word to *gāmini*, but in the compound word this qualifies *hala* and thus the emendation does not appear to be necessary.

¹³ The consonant of the bracketed *akshara* was originally cut as *th*.

¹⁴ The curve of the *mātrā* of *di* is missing and the horizontal stroke before the letter is also missing.

¹⁵ In this and the following line there are a number of redundant strokes appearing as the signs of *anusvāra*.

¹⁶ The letter in the brackets is engraved as *la*.

¹⁷ Originally *yī*, with the earlier part of the curve scored off so as to make it the sign of superscript *r*.

The image shows a facsimile of a copper plate inscription. It features a central rectangular panel with a dark background and light-colored text. The text is arranged in two columns, one on the left and one on the right, with a central figure or emblem between them. The figure appears to be a seated deity or royal figure, possibly Paramardideva, wearing a crown and holding a mace. The text is in an ancient Indian script, likely Devanagari, and is numbered on both the left and right sides of the plate, from 2 to 18. The overall appearance is that of a high-contrast, black-and-white reproduction of an ancient artifact.

From Facsimile

BATĒŚVARA STONE INSCRIPTION OF THE TIME OF PARAMARDIDĒVA

[Vikrama] Year 1252

THIS inscription was transcribed for the first time by Dr. Hultzsch in *Zeitschrift D. Morg. Ges.*, Vol. XL (1886), pp. 51-54, and subsequently it was edited by F. Kielhorn in the *Epigraphia Indica*, Vol. I (1888), pp. 207 ff. But neither of these articles is accompanied by a facsimile, and I have not seen the record illustrated anywhere else. It is edited here from an inked impression supplied to me, at my request, by the Director of the Provincial Museum at Lucknow, where the inscribed slab is at present deposited. It is said to have been found in an ancient mound at **BatĒśvara**¹ a town in the Agra District of Uttar Pradesh, on the right bank of the Yamunā, about 56 kms. south-east of Agra.

The inscription, which is in a sunken panel of a black stone, contains 24 lines of writing and measures about 62 cms. broad by 48 to 50 cms. high. It is in a very bad state of preservation. A large crack has cut the stone vertically on the proper left side, destroying one or two *aksharas* in each of the lines and three in l. 12 where the break is wider. These *aksharas*, however, are of minor importance and can be made out from the context, except one in l. 16 and two in l. 23 which involve a part of a name. This apart, a portion of the proper left corner, about 12 cms. long, has been broken away and lost, resulting in the loss of 23 *aksharas* at the end of the first line and 8 at the end of the second. Furthermore, the surface of the stone which was made none too smooth before the letters were engraved on it, as it appears from the impression before me, has also suffered considerably owing to the effect of weather, and several letters which were probably in a somewhat better state of preservation in Kielhorn's time, have now become worn or indistinct as the engraving is shallow,² and consequently I had occasionally to resort to Kielhorn's readings as I have noted in the subjoined transcript.

The **characters** are Nāgarī, closely resembling those of the Mahōbā stone inscription of V. S. 1240.³ The size of the letters ranges between 1.2 and 1.5 cms. To note the peculiarities of the individual letters, the loops of the initial *i*, which are rectangular and placed horizontally, are superscribed by a horizontal stroke, as in *iti*, l. 2; *k* in a few instances, e.g., in *kavalita*, l. 9, as in ligature *kh*, begins with a curve as that in the palatal *ś*, cf. *līlkhā*, l. 23; *ñ*, which is generally without the dot, does not show the upward curve of its lowest extremity, as in *rathānga*, l. 2; *ch* and *v* are often alike, e.g., in *sachiva*, l. 21; and in a few instances the first of these letters is cut as the left limb of *g*; cf. *vargga*, l. 1. *N* in rare instances resumes its older form, as in *niya*, l. 19; the slightly different forms of *bh* can be seen in *-asōbhi* and *lubhva*, both in l. 3; and finally, *r*, which has assumed its modern Nāgarī form, is in several cases devoid of its tail and occasionally it resembles *v*, or has a wedge. The form of this letter as a vertical with a horizontal stroke attached to its left in the middle, is seen in *nirañkūśa*, l. 9.

The **language** is Sanskrit; and except for the introductory *Siddham om namo bhagavatē Vāsudēvāya* and the concluding *Śrī = astu*, the whole record is metrically composed. In all there are 34 verses: they are not numbered. They are composed in an artistic *kāvya* style, containing figures of speech like *anuprāsa*, *upamā*, *vāpaka*, *utprēkshā* and *ślēsha*, and the style, and the way of description is much similar to those of the Mahōbā stone inscription, from which the author of the present inscription has derived not only ideas but also expressions. As regards **orthography**,

¹ Kielhorn is doubtful about this, for, as he observed, the present inscription appears to be the same as mentioned by Cunningham in *A.S.I.R.*, Vol. XXI, p. 82, No. 52, as found on the bank of a lake at "Baghāri", which appears to be consistent from the number of lines mentioned in it. The antiquities found at BatĒśvara are described in Cunningham's *A.S.I.R.*, Vol. VII (1873-74), pp. 5 ff.

² For example, in l. 3 both the strokes of the *mātrā* on *jālaugha* have disappeared, and so the sign of *avisōra* on *chēshītām* and *dvishūm* in the same line. In both the latter examples the consonant *sh* is devoid of its slanting stroke distinguishing it from *p*. It may also be partly due to the shallow engraving that the two impressions taken at the same time show some minor differences, e.g., whereas the word *bhagavatē* in l. 1 has correctly come out in one of them, the other shows the third letter as *ta*. This statement was verified also by my examination of the original stone.

³ No. 136. above.

(1) the sign of *v* is used all through to denote *b*, except in *udbahlāvuh* and *bibhartti* in ll. 10 and 24, respectively, and in *babhāva*, which occurs as many as six times in ll. 10, 13, 14, 16, 20 and 22 and 24; (2) the dental sibilant is often employed in place of the palatal, and there are a few instances of *vice versa*, e.g., in *-sāstro-kara*, l. 11, showing both the instances; (3) a class-consonant is often doubled after *r*, as in *darppa*, l. 4, but not in *visarpi*, l. 6; (4) *prishṭha-mātrās* are generally used except in a few cases as in *Dēvadhara* and *-sachivō*, both in l. 22; (5) the sign of *anusvāra* is wrongly used instead of the final *m* at the end of a stich in ll. 5, 8, 10 and 15, though we have instances of the correct use of the consonant *m* also; (6) the *anusvāra* is changed to the dental nasal before a sibilant as in *vanśa*, l. 2 and *payānsi*, l. 9, but not in *-avataṁsa*, l. 2; and lastly, (7) the word *ajjvala* appearing twice in ll. 14 and 18 is spelt with a single *j*. The word *vibhāngi* in l. 12, as also noted by Kielhorn, is used in the sense of *bhāngi*.

The proper **object** of the inscription is to record the construction of a temple of Vishnu, and one of Śiva, by Sallakshana, the Minister of the king **Paramardin** of the **Chandrātrēya** (Chandēlla) family, and also that the latter of these temples was completed by Sallakshana's son, Purnshōttama, who succeeded him as the Minister. The poet who composed the record was Dēvadhara, and it was written by Dharmadhara, both of whom were sons of Gadādihara, the king's Minister for Peace and War, and it was engraved by Mahārāja, the son of Sōmarāja. The details about all these persons are noted below.

The inscription is a *prāsaśti*, a laudatory account, as stated in v. 31 in it, and falls into three parts. The first part, which comprises vv. 1-13, contains the genealogical account of the **Chandrātrēya** (Chandēlla) kings. After a short sentence paying obeisance to the venerable Vāsudēva¹ and followed by two verses invoking the blessings respectively of Sauri and Rathāṅga-pāni or Chakrapāni, both being the epithets of Vishnu (the second of the verse being lost in its latter half), the inscription proceeds in vv. 3-4 to refer to the origin of the race, the first two letters of which are again lost, but from the third and the fourth of them, *viz.*, *trēya*, which are extant, it can be known to be the family of the Chandrātrēyas. Verse 5 introduces **Madanavarman**, the lord of the earth, as a brave prince who, by extirpation of the armies of the hostile kings resembled Indra who cut off the wings of the mountains with his thunderbolt and who also killed the demon Bala. The enemies of this prince are not mentioned here by name, but this verse may have a reference to the Kalachuris on the one hand and the Chaulukyas and the Paramāras on the other, all of whom were vanquished by him, as we have seen while dealing with the Kālāñjara and Mau stone inscriptions of the time of this ruler.²

The next two verses describe Madanavarman's war-like activities in a conventional manner, and vv. 8-9 state that his son **Yaśōvarman**, an ornament among great rulers, caused joy to the people. Yaśōvarman's son, as we are informed in v. 10, was a powerful prince of the name of **Paramardin**, "whose foot-stool was pale-red with the lustre of crest-jewels of kings bowing down (before him)". Verses 11-12 are again devoted to eulogise Paramardin, the latter of these verses also describing his *digvijaya* in a conventional manner, as the Mahōbā stone inscription.

This part contains no new historical material, excepting that it introduces the name of Yaśōvarman, as the son and successor of Madanavarman and the father of Paramardidēva. That this prince actually ruled is not known from any other source; and unless this information is corroborated by any other record, we hesitate to accept it as a historical fact.³ Verse 8, which describes him, does not give him any regnal title, as to both his father and his son.

¹ This appears to be rather curious as the inscription refers to the completion of a temple of Śiva, as to be shown below.

² See Nos. 120 and 125, respectively.

³ Different views are prevalent on this point. Dr. H. C. Ray suggests that Yaśōvarman had a very short reign and the present inscription hints at the untimely end of his career which may have been due to some dynastic troubles (*D. H. N. I., Vol. II, pp. 712 ff.*). S. K. Mitra holds that Yaśōvarman died shortly after his accession, howsoever short a time it might have been (*E. R. K., p. 118*); and Dr. D. C. Sircar is inclined to the view that the epithet *Mahōbā-sirōmani* (the crest-jewel of the great rulers), of the present inscription (v. 8) is justified even if Yaśōvarman was the ruler of a district under his father. But it is significant that Yaśōvarman's name appears in none of the charters issued by his own son Paramardin, as also observed by Dr. Sircar (*Ep. Ind., Vol. XXXII, p. 118, n. 1*), nor also in the Ajayagadh inscription of Viravarman (No. 145), which gives an exhaustive list of the rulers from Kirtivarman to Viravarman, his name should have been overlooked. It may be noted here that the name of this prince is omitted also in the account of ministers in the present record.

The second part of the inscription, which comprises vv. 14-29, contains a description of the ancestors of the Chief Minister of Paramardīn who completed a temple begun by his father. Verse 14 introduces a family belonging to the well-known Vasishṭha *gōtra*; and the next two verses state that in that family was born one Lakshmīdhara, who was well-versed in all the Sāstras and who also performed sacrifices. His son was the twice-born Vatsarāja, who was of good conduct, reputed for his qualities and possessed of righteous wealth (vv. 17-18). His son, again, was Lāhara, who had studied the sacred lore (v. 19). He was placed at the head of his counsellors by the king Madana (v. 20). Lāhara's wife was Prabhā (v. 21), whose son was Sallakshana, through whom (because of whose efforts) Paramardīn became the lord of earth with three eyes.¹

The next two verses are historically important. They mean to say that the illustrious Paramardīn entrusted Sallakshana with the government of the kingdom and gave himself to taking delight in licentiousness with women. It is stated here that "he became all the time immersed in the enjoyment of decking the breasts of those whose eyes resembled those of a frightened young deer and who were filled with unbound love". This information is indeed noteworthy as possibly being the cause of Paramardīn's defeat at the hands of Qutb-ud-dīn Aibak in 1202 A.C. about 6-7 years after the present record was set up and the Minister-in-chief who was then taking care of the kingdom strongly resented surrendering the fort of Kālānjara to the Muslims.²

Verse 24 of the inscription again eulogises Sallakshana; and in the next two verses it is recorded that this person constructed a lofty temple of Vishṇu and one of Śiva. The next three verses introduce his son Purushōttama, who was his successor in the office of minister and who completed the Śiva temple, evidently the same which was begun by his father and at which the inscription was put up.

The third part of the inscription, which commences with v. 30, gives the genealogy of the poet who composed the *prāsaśi*. The first of his ancestors introduced here was Lakshmīdhara, who was an ornament of the Gauda family. His son was Gadādhara, a supreme chief among the poets and the first among the learned. He was minister of Peace and War of Paramardīn. His son Dēvadhara, a chief among the poets (*havīndra*), composed the *prāsaśi* (v. 31); and it was engraved by Mahārāja,³ the son of Sōmarāja. Verse 33 expresses the hope that the temple may stand for ever; and verse 34, which is the last one of the record, mentions the **date** by means of word-numerals, stating that it was the Vikrama era connected by wings (2), the faces of the three-eyed, *i.e.*, Śiva (5) and the Ādityas on the **fifth of the bright half of Āśvina** and on the day of the lord of the day, *i.e.*, **Sunday**. According to Kielhorn's calculations, the date corresponds, for the Northern Vikrama **1252, expired, to the 10th September, 1195 A.C.** when the fifth *tithi* ended 14 hours 14 minutes after mean sunrise. It was a Sunday;⁴ and thus the date is quite regular.

Hereafter the inscription comes to an end with the expression which means "may fortune attend".

The inscription does not mention any **geographical name**, but from the expression *idam = mandiram*, used in v. 26 and from *idam*, again in v. 29, we may conclude that the inscribed stone was originally set up in a temple where it was found. It may also be mentioned here that it is one of the latest known records of the reign of Paramardidēva.

¹ That is, Śiva. Sallakshana was the third eye of Paramardīn, according to the well-known saying *chāraih palyanti rājānah, etc.*

² Elliot and Dowson, *Hist. of Ind.*, Vol. II, p. 228.

³ The first two letters of the third quarter of this verse are lost and hence *mahārāja*, which also means, 'great king', has to be taken as a name. He appears to have been a brother of Dēvarāja who engraved the Mahōbā stone inscription of V.S. 1240 (No. 136) and who too is stated to have been a son of Sōmarāja. This view is of course based on the presumption that Sōmarāja was not a different person.

⁴ *Ind. Ant.*, Vol. XIX, p. 30, No. 38. Also see Kielhorn's remarks in *ibid.* where he states that Hultzsch's reading of the date differs. He took the year as V. S. 11[8]2.

¹ Read ह्योव्ववसिन्-

² Originally *vi*, corrected to *vi*.

³ These *aksharas* are indistinct and the reading is probable, as also stated by Kielhorn. They were read by Hultzsch as *saṅgub*.

⁴ This is as read by Kielhorn, but the reading is metrically defective. The traces, however, point out that *vāṅ* may have been intended. In this verse the word *mitra* is used in its double sense, viz. (1) friend and (2) the Sun. Similarly *shirṣa* means a twice-born and also a bird. A metaphor is employed in this verse.

⁵ Kielhorn's Query-mark after this letter shows that in his time it was already in traces. It has now totally disappeared and here I have adopted his reading. However, the whole word *eva* appears to be redundant here so far as the sense is concerned.

⁶ The words *shirṣarāj* and *Trinētra* are used here in *double entendre*, the first, meaning (1) twice-born and (2) the moon; and the second meaning (1) three-eyed and (2) Siva. Kielhorn has explained this verse to mean that by this person his master Paramardin became the lord with three eyes, i.e., Siva, on earth, he being the third eye of the king. But the full significance of the stanza may be brought out also by observing that Paramardin honoured this man as Siva honours the moon by placing him above his forehead. Similar expressions we often find in inscriptions, e.g., cf. *Dhangarājēna mānyah* in No. 99, v. 1, above. For similar idea, also see No. 60, v. 52.

⁷ From the traces that now remain, these three *aksharas* cannot be made out. Kielhorn read राज्व-[रम], but the second *akshara* is metrically required to be long and the impression before me shows it to be *ryā*. The conjectural restoration here would be *रुधम-*, or *भारम-*.

⁸ Kielhorn read कुरन् and corrected it to कुरन्, but I do not see the sign of the *mātsā* in the second syllable.

⁹ This word is used in its double meaning (1) Brāhmaṇa and (2) the moon, as some other words also in this stanza.

¹⁰ The sky is known to be the middle stride of Vishnu (Vāmāna). In the same sense it is also used above, in No. 33, v. 2.

¹¹ By *double entendre*, the expressions used in this verse are applicable to the person and also to Vishnu, that is Purushōttama, as he was named.

No. 140: PLATE CXXVII

KĀLAÑJAR STONE INSCRIPTION OF PARAMARDIDĒVA

[Vikrama] Year 1258.

THIS inscription was discovered, in 1848, by Lieut. F. Maisey, at **Kālañjar** in the **Narainī tehsil** of the **Bāndā District** of **Uttar Pradesh**, and he published a transcript of it with a translation of some of the concluding lines, but without a facsimile, in the *Journal of the Bengal Asiatic Society*, Vol. XVII (1848-50), pp. 313 ff. Maisey found the record incised "on a large black stone slab leaning against a pillar opposite the entrance of the Cave" adjoining to the temple of **Nilakantha** at that place.¹ The place was subsequently visited by **Alexander Cunningham**, who found the inscribed slab inside the temple, and who, noticing the record briefly, corrected Maisey's reading of the date in his *Archaeological Survey of India Reports*, Vol. XXI (1883-85), pp. 37-38, but without the facsimile. The transcript prepared by Maisey also suffers from inaccuracies: he neither marked it line by line nor did show the omissions of letters that were illegible to him, and what is more is that he continued in the same lines, without even showing the breaks, whatever was legible. No scholar has thereafter attempted to give a correct transcript of the inscription, since, besides the deteriorating condition of the record, a great part of it consists of a eulogistic address to **Siva** and **Pārvatī**, and thus it is of much less historical interest. The inscription is edited here from a fresh impression kindly supplied to me, at my request, by the **Chief Epigraphist, Archaeological Survey of India**.²

The record is incised on a counterstruck surface and contains 32 lines of writing, besides a sentence paying homage to **Nilakantha**, which was later on engraved on the left of the upper border thereof. The writing covers a space 81 cms. broad by 66 cms. high. It is in a very bad state of preservation, for a greater part of it and particularly the middle has become obliterated, as Maisey himself had noted in the last century, was "used at one time to macerate tobacco on

¹ The bracketed *aksharas* are engraved as *dhūm sa*.

² Some traces with two upright strokes on either side here, and also in l. 40, show that either the *akshara chha* or some flowery design was used to mark the end of the stanza.

³ The horizontal stroke of *va* is broken or not fully engraved, making the letter appear as *da*.

⁴ Of both these letters only traces are left now.

⁵ For Maisey's description of **Kālañjar** and its antiquities, see *J. A. S. B.*, Vol. XVII, pp. 171 ff. He wrongly read the date as 1298, instead of 1258.

⁶ Most of the letters have not clearly come out on this impression, and from l. 19th to the end, it fails to give the actual reading, though it has enabled me to prepare a somewhat improved version.

BATESVARA STONE INSCRIPTION OF THE TIME OF
PARAMARDIDEVA, VIKRAMA 1252

Scale : Four-thirteenth

KĀLAÑJAR STONE INSCRIPTION OF PARAMARDIDEVA
VIKRAMA 1258

Scale : One-sixth

it.¹ And since then it has also suffered highly not only due to the effects of weather but also from human inclemencies.²

The average size of the letters is 1.5 cms. in the first half, and in the remaining portion thereof it is gradually reduced till the letters in the last line are about 1 cm. high. The characters are of the Nāgarī alphabet of the 13th century to which the inscription belongs. They are symmetrically formed but are not deeply engraved, as can be judged from the impression showing most of the letters indistinct. As regards individual letters, attention may be drawn to the distinct form of *ch*, e.g., in *chandra* and *chūdā*, l. 1; to the horn of *dh*, which is sometimes oblique, as in *dhr̥ita*, but often curved, as in *vidhura*, both in l. 1; to the forms of *y* and *p*, as in *praguna*, l. 1; and to the slightly different forms of *bh*, as in *Śambhu* and *bhūshā*, both in l. 3.

The language is Sanskrit; and except for a short sentence paying obeisance to Śiva in the beginning and the date with the words *maṅgalaṁ mahāśrīḥ* in the end, the record is metrically composed. There are 19 verses followed by some which are fragmentary and cannot be counted; they are not numbered. As regards orthography, attention may be drawn to the few ordinary points, e.g., the use of the sign of *v* to denote *b* as well; the occasional use of the dental for the palatal sibilant; the indiscriminate use of the sign of *anusvāra*, *para-svarna*, etc., the use of both the *prishṭha* and the *ardhva-mātrās*, and finally, the doubling of a consonant following *r*.

The inscription is a *prasasti*, as stated in a verse in the end, and was composed by the king Paramardīn, who is well known to us as the Chandēlla king who bore this name. The composition, which is in a highly flourished *kāvya* style and abounds in figures using long compounded expressions, speaks highly of his poetic talent. It was written on the stone and also incised by the wise Padma, superior to all artists and the favourite of the valiant king Paramardīn, the grandson of an eminent artist whose name is not mentioned, and the son of Anṛiṇa, in company with his younger brother Dēuka.³ The inscription is dated in figures only, on Monday, the 10th of the bright half of Kārttika of the (Vikrama) year 1258. The corresponding Christian date has been calculated by Kielhorn to be the 8th October, 1201 A.C., taking the year expired.⁴ Northern Vikrama. It is regular.

The inscription may be divided into two parts, the first of which contains the eulogy of Śiva and Pārvatī, which is its main purpose, as stated above. This portion is devoid of any historical interest.

The first five stanzas of the second part which begins with line 25, are devoted to the description of Paramardīn himself, in general terms. It is stated here that he was the greatest of all the kings and the sole ruler (*adhinātha*) of Daśārṇa, and that he subdued his foes by his valour. By his liberality he won the esteem of his subjects. He also sought pleasure in company of women and his glory excelled that of the Divine jewel and the wish-granting cow.

The next verse states that Paramardīn himself composed the eulogy owing to his spontaneous devotion to the feet of Purāri, i.e., Śiva. This account is again followed by a verse making general remarks about the poem, by way of instructions to the reader. The next verse mentions the names of the writer and the engraver, as seen above; it is followed by a verse expressing that the eulogy may be everlasting. And finally, the last line of the inscription mentions the date, as we have discussed above, and with the words *maṅgalaṁ mahāśrīḥ*, the *prasasti* comes to a close.

The inscription under review provides the latest known date of Paramardīn. It is worthy of note that in it the king claims for himself the title of *Daśārṇādhinātha*, i.e., the supreme lord of Daśārṇa; and it also indicates that he effectively administered the entire dominions inherited from his grand-father Madanavarman, despite the reverses caused by the Chāhamāna ruler Pṛith-

¹ *J.A.S.B.*, *ibid.*, p. 193, n. 90.

² For example, in the shifting from place to place, for, whereas Maisey found the stone leaning against a pillar opposite the entrance of the Cave, Cunningham found it inside the temple; and the technical assistant of the office of the Chief Epigraphist, who visited the place in March, 1972, reports that it is "kept near the door of the sanctum of the same temple". In these attempts it is quite natural for this massive stone to suffer.

³ Here I do not agree with Maisey in translating the expression *alikhya svayam-ullilēkha* as "composed and inscribed the praise of the husband of Girijā" (p. 317). As we learn above, it was composed by Paramardīn himself.

⁴ *Ind. Ant.*, Vol. XIX, p. 354, No. 152, which also gives some details.

vīrāja in 1184 A.C. That he continued to maintain his dignity and the glory of the house even subsequent to this reverse is shown by v. 10 of the Baṭeśvara stone inscription and thereafter, by the present record, dated in V. 1258 or 1201 A.C. It is, however, curious, as already noted by Cunningham, that just 18 months after the present inscription was composed, Paramardin had to surrender the fort to the Muslims, on 27th April, 1203 A.C.¹

The only geographical name of importance mentioned in the inscription is that of Daśārṇa. Two countries are known by this name: the Western Daśārṇa comprised Eastern Mālava, including Bhōpāl, and the Eastern Daśārṇa signified a part of Chhattisgaḥ.² Following this clue the name appears to have been used here to denote both the territories roughly forming the region of the Western Vindhya.

¹ N. L. Dey, *G. D. A. M. I.*, p. 54.

² *A. S. I. R.*, Vol. XXI, p. 38.

³ Lines 1-18 from an impression, and the rest from transcript by Maisey in *J. A. S. B.*, Vol. XVII, pp. 313 ff.

⁴ It is not known if the symbol for Siddham was engraved in the beginning, as the portion is lost. Metre of this and of verses 2, 6, 8-11, 14-16 and 18-19; *Sragdharā*.

⁵ The *danḍa* has almost mingled with the vertical of the preceding *akshara*.

⁶ Maisey read — *यालोक*—, but the sign of the secondary *i* with the consonant *l* is distinct in the impression. It means 'false or feigned' and has to be taken as governing the next word.

⁷ Metre of this and of vv. 4-5, 7, 12-13 and 17; *Śārdūlavikrīḍita*.

⁸ The reading of this letter is uncertain, as it is mutilated.

⁹ These letters, which are indistinct in the impression, have been adopted from Maisey's reading, but they appear to be incorrect, particularly the first of the *aksharas*.

¹⁰ Maisey read here — *वेल*, and he has not marked the *danḍa*, which is clear in the impression.

 श्रीकंठकंठांशवः⁹ दोदंडवलयेर्हर्षनिष्यदिहक्को भद्रचन्द्रार्धमौलेः प्रगुणयतु परब्रह्मलम्नः समाधिः¹⁰

¹ The whole of the latter half of this verse is lost.

² After the end of the first half of the verse, Maisey read:—हस्तु भवचवं पिगलिम्नः पुरारे, which is in fact the end of the next verse. Thus he has mingled parts of two verses and gave the reading continuously, not even putting the punctuation marks. His reading therefore is not helpful, and, as stated above, the impression too is indistinct at several places.

³ The letters in the brackets are lost on the original due to flaking off on the stone, and have been adopted from Maisey's reading.

⁴ Maisey read the last *aksharas* of this verse as चैरवं चैरवन्व, but they are indistinct in the impression. Here too he wrote all his reading continuously without showing the breaks, and thus it all becomes unintelligible.

⁵ Maisey read न, but the consonant र is distinct in the impression. The first two letters in this line are lost in the original and have been adopted from his reading. Moreover, leaving these 14 *aksharas*, the whole verse is lost, as can be calculated from the space in the impression.

⁶ These four *aksharas*, which are lost in the original due to flaking, have been adopted from Maisey's reading.

⁷ Much of this verse is lost, as also of the following two verses. That they were two is known from the space in the impression.

⁸ The impression being very indistinct for the remaining portion of the inscription, I am obliged to give Maisey's transcript which does not show the exact portions lost, or those which he was unable to read at places. His transcript is not line by line, though I have retained it. The minor corrections made in brackets are mine, and in the rest the numbers of verses could not be followed due to lacuna.

⁹ Insert a double *dauda* here, as it appears to be the last foot of a verse in *Śārdūlavikrīḍita*. The preceding line is obviously disconnected with it.

¹⁰ Metre: *Sragdharā*, which appears to end here. Maisey's reading of this verse is again full of omissions, as in some other cases also, below, which are not separately noted, every time.

मङ्गलं महाश्रीः ।

¹ Here is the end of a verse in *Sragdharā*.

² A part of a verse in *Sārdūlavikrīḍita*.

³ As above. The same metre in the next verse also, which is numbered 25 by Maisey in his transcript.

⁴ Metre of this and the next verse: *Sragdharā*. This verse uses such expressions as are applicable to the enemies of the king and also to the bird known as *sārikā*.

⁵ Here Maisey's reading is evidently wrong, as this word has three letters whereas the metre requires only two, the first of which has to be short and the second to be long.

⁶ Metre of this and of the next verse: *Sārdūlavikrīḍita*. There is a play on the word *khaṇḍita*. The expressions used in this verse apply to *kāminīs*, as also to the enemies of the king. In the first case the second word of the third foot means *charana*, i.e., foot, and in the second, i.e., in case of the enemies, *cha* has to be separated from *raṇa*, i.e., battle.

⁷ Metre: *Vasantatilakā*.

⁸ Metre: *Anuṣṭubh*.

⁹ Metre: *Vasantatilakā*.

¹⁰ Metre: *Sārdūlavikrīḍita*.

¹¹ Metre: *Mālinī*. It is doubtful whether all the verses of this inscription were composed by Paramārdin himself. The latter part of it contains his own eulogy, but from one of these verses we also learn that it is a eulogy of Purāri, though the expressions such as *dēva* are applicable to the king, suggest that the latter part was composed by some other person, probably the engraver, for whom we find only the word *ullilēkha*, meaning wrote on the stone (also). Under the circumstances the point cannot be decided.

¹² The year of the date is wrongly given for 1258, as Kielhorn has already drawn our attention to in *Ind. Ant.*, Vol. XIX, p. 354. Similarly, he has also remarked that the corresponding date is stated to be, in *A. S. I.*, Vol. XXI, p. 38, the 28th October, which is evidently a misprint.

GARRĀ COPPER-PLATE INSCRIPTIONS OF TRAILŌKYAVARMAN

[Vikrama] Year 1261

THESE two copper-plates, each of which bears a complete record in itself, are stated to have been found in a tank near the village of Garrā (locally known as Gaḍhā), situated to the south-east of Chhatarpur, formerly the capital of a State and now the chief town of a *tehsil* and district of the same name in the Vindhya region of Madhya Pradesh. The plates were sent by Pt. Shukdeo Bihari Mishra, then the Diwān of the State, to Rao Bahadur K. N. Dikshit, who edited both the inscriptions together, with lithographs, in the *Epigraphia Indica*, Vol. XVI (for 1921-22), pp. 272 ff., and while doing so, he also stated that the plates were then "exhibited on loan in the Provincial Museum, Lucknow". Despite my constant attempts, however, I failed to know anything about the plates, and as fresh impressions could not be obtained, I edit the inscriptions here from the facsimiles accompanying K. N. Dikshit's article.¹

The plates measure 34.2 by 20.95 cms. and 32.38 by 20 cms., respectively. Each plate is inscribed on one side only, and each of them has a small round hole of the diameter of .95 cm., at the top, indicating that originally they were held together by a ring, which is now missing. In the middle of the first four lines on each of them is engraved the figure of the seated goddess **Lakshmi**, with four arms, holding a lotus in each of the upper hands, as we find on the Chandēlla charters. The writing on both the plates is protected by flat copper-bands, about .95 cm. in breadth and .3 to .45 cm. in thickness, rivetted along the edges of the inscribed surface, approaching quite close to it and sometimes hiding beneath them a letter or two and completely also the last line on the first plate. The writing is well preserved, as to be judged from the facsimiles. Each of the records consists of 17 lines, but the last line on the second plate is damaged. The plates are stated to weigh 124 and 122 *tolas*, approximating to 1 kgm. and 45 grms., and 1 kgm. and 43 grms., respectively.

The **characters** are of the Nāgarī alphabet. They are slightly advanced than those of the Sēmra grant of Paramardīn, with the Mahōbā and Bhārat Kalā Bhavan grants of the same king marking the intermediate state.² The noteworthy peculiarity of the alphabet in which these plates are engraved, is that the angular forms of the *aksharas* of the chronologically preceding inscriptions give place to their round forms. To note some of the more progressive forms of letters in the present inscriptions, the vowel *i* gives us its earliest form of the modern Nāgarī: see *iva-*, ll. 1 and 2, respectively (of both the plates); the vowel *ē* continues to be much similar to the consonant *p*, cf. *ēsha-*, ll. 5 and 6, respectively; the left-hand limb of *kh* begins with a loop as we have in the palatal *ś* see *khan-*, l. 13 (first plate); *ch* has occasionally developed an angular loop, as in *chāta-*, l. 10 (second plate); *dh*, with its horn developed, has assumed its form as in the modern Nāgarī, see *madhūka-*, l. 13; and lastly, *r* occasionally resembles *ch*, as in *rā* (*rāūta*), l. 11 (second plate).

The **language** is Sanskrit, which is almost correct and except for one verse in the beginning and one towards the end, each of the inscriptions is in prose throughout. The **orthography** presents more or less the same peculiarities as to be found in the contemporary inscriptions, e.g., (1) the use of the same sign to denote *v* and *b*; (2) the occasional reduplication of a class-consonant following *r*; (3) the wrong use of the consonant *m* for *anusvāra* in *samvidita-*, l. 8, but not in *saivut* in ll. 9 and 10, respectively in the first and the second plates; (4) the correct use of the sibilants, perhaps excepting two instances, viz., *-āsana-* (for *āsana*) and *-asva-* (for *aśva*), both in l. 13 in each plate. And lastly, we find in ll. 10-11 of the first plate a *danḍa* used to show that the preceding *rā* is the initial letter of *Rāūta*.

¹ Lastly, the plates were known to exist in the Lucknow museum. Subsequently, I had an opportunity to examine the plates in the Museum, and I found that they are not very thick, but the engraving being rather not very deep, the letters do not show themselves through on the reverse side. In the last line of the second plates, parts of letters already put by me in brackets, in the text, are lost with the copper.

² See Nos. 126, 130 and 138, respectively.

Each of the plates constitutes a royal charter, recording the grant of a village by the *Paramabhaṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*, the illustrious *Trailōkyavarmadēva* of the royal house of the **Chandēllas**, from his encampment at the village of *Vadavāḍa*, in favour of *Sāvanta* whose father, *Pāpē* was killed in a battle with the *Turushkas*. The first of the records relates to the grant of the village *Kādōha*, included in the territorial division *Pāniūli* (l. 7), and the second to that of the village of *Lōhasihānī*, in that of *Vikrauṇi* (l. 7). The first of the documents is dated **Friday, the 2nd tithi of the bright fortnight of Vaiśākha in the year 1261** and the second, on **Friday, the dark fortnight of Vaiśākha in the same year**. Both the years, which are given only in figures, are to be referred to the *Vikrama* era. Calculating the corresponding Christian dates accordingly for both the inscriptions, K. N. Dikshīt, the editor of the inscriptions has shown that the true equivalent of the first of the grants is **22nd April, 1205 A.C.**, and that of the second is **6th May of the same year**, according to the Southern *Vikrama expired* and taking the month to be *amānta* so far as the second date is concerned. Here we are also to note, as aptly remarked by him, that here we have instances of Northern Indian epigraphical dates calculated as southern expired *Vikrama* years with *amānta* months.¹ Thus the second grant was issued two weeks later.

Qutb-ud-dīn Aibak's invasion of the fort of *Kālañjara*, during the last days of the *Chandēlla* king *Paramardin*, in 1202 A.C., is well-known: and it is also known that *Paramardin* died a natural death during this invasion. Aibak succeeded in capturing the fort and subsequently directed his invasion on *Mahōbā*, which too was captured. This has been taken by some scholars to hold that *Mahōbā* and the surrounding regions were no longer part of the *Chandēlla* dominions.² Vincent Smith also observed that "the history of the *Chandēlla* dynasty, as one of the powers of Northern India, ends in 1203 A.D., and that *Trailōkyavarman* succeeded his father as a mere local chieftain, holding the eastern part of the ancestral kingdom of *Jējākabhukti*."³ But it is clear from the present inscriptions that shortly after the catastrophe, *Paramardin*'s son, *Trailōkyavarman*, rescued the country from the grip of the Muslims. He drove away the Muslim officers from both these places and the surrounding region, following them up to *Kakaḍadaha*, where an encounter appears to have taken place and his general *Rāuta Pāpē* seems to have lost his life in it. It is also significant, as remarked by Dikshīt, "that the claim should be assumed over the place within two years of its loss"; and here we are also to note that in the *Dhurēti* copper-plate record, dated 1212 A.C., *Trailōkyavarman* is mentioned as the sole lord of *Kālañjara*,⁴ and thus the paramount sovereign of the whole region of *Bundelkhand*. In one of the inscriptions of his successor he is also eulogised as a "veritable *Vishṇu* in lifting up the earth immersed in the ocean formed by the stream of the *Turushkas*." All these references along with the paramount titles claimed by him in the present inscriptions, go well to indicate that *Trailōkyavarman* was not a mere local chief, as held by Smith and others, but a paramount lord of his ancestral dominions, and that he also raised the prestige of his house by clearing off the temporary flood of the Muslim invasion. The restoration of the *Chandēlla* rule in the region may be dated between 1202 A.C., when Aibak attacked *Kālañjara*, and 1205 A.C., the year of the present records, which furnish the earliest date for *Trailōkyavarman*.

Each of the inscriptions ends with a verse speaking highly of making donations, followed by the **sign-manual** of the king. The engraver's name is not mentioned in either.

Of the **geographical places** mentioned in the inscriptions, *Kālañjara* (l. 5), is, as we have often seen, the well-known fortress in the *Hamīrpur* District of *Uttar Pradesh*; and all the other places have been identified by Dikshīt in his article. Thus, *Vadavāḍa* the place of encampment

¹ *Ep. Ind.*, Vol. XVI, p. 273. According to the calculations made by him, the date of the second grant also shows its equivalent to be 19th of March, 1204 A.C., following the Northern *Vikrama expired*, if we take the month *pūrṇimānta*, which too was a Friday. But I agree with him in rejecting this solution in view of the fact that the two grants must have been recorded almost simultaneously. His rejection of this date appears to be justified in view of the consideration that both the grants which were issued by the same king to the same donee and with the same object in view, should have been dated according to one and the same system of counting.

² *D. H. N. I.*, Vol. II, p. 722.

³ *Ind. Ant.*, Vol. XXXVII, p. 146.

of the king, appears to be identical with *Beḍwādā* in the Lalitpur sub-division of the Jhānsi District and situated in N.L. 24° 30' and E.L. 78° 41'. It is most probably the same as *Vaḍavāri* of the *Sēmra* grant of Paramardin,¹ and of the *Sāgar* plate of Trailōkyavarman, the latter of which is edited immediately below. *Kakaḍādaha*, where the battle is stated to have been fought (II. 10-11) and which too is mentioned in the *Sēmra* grant, has been suggested to be probably identical with *Kakaḍwā* or *Kukurooa* (N.L. 24° 28'; E.L. 78° 42'); this place also is in the Lalitpur sub-division. *Pāniūliḥ* may have been *Pannā*, the headquarters of the district of the same name in Madhya Pradesh; and the granted village (of grant No. 1) *Kādōhā* appears to be identical with *Kōdōa* (N.L. 24° 48'; E.L. 79° 52'),² now in the adjoining district of Chhatarpur. *Vikraunī* and *Lōḥashānī*, mentioned respectively as a territorial Division and the gift-village included in it (grant II, l. 7), may have been *Bikaura* in *Sāgar* District (N.L. 24° 13'; E.L. 78° 41') and *Lohāyī*, lying in N.L. 24° 23'; E.L. 79° 12', in the *Bijāwar tehsil* of the Chhatarpur District. A study of the situation of all these places clearly indicates that the first of the charters relates to a grant made in close proximity of the scene of the battle, and the second to a gift made in a region to its east, at some distance, and thus it is evident that Trailōkyavarman succeeded in re-establishing his authority in the central and also the western parts of his ancestral dominions.

¹ Above, No. 126, l. 8.

² It is noteworthy that this place is only a little south of Garrā where the plates were found.

³ From lithographs facing p. 275 in *Ep. Ind.*, Vol. XVI, subsequently comparing the text from the originals.

⁴ A part of this *akshara*, as of some others below, is hidden beneath the protecting hand.

⁵ There is a redundant horizontal stroke running across the vertical of the *mātrā* of this *akshara* and also across the one preceding it.

⁶ This name can also be read as *कदोह*.

⁷ Because of a superfluous stroke of the chisel the consonant of the third *akshara* of the name appears as *dh*.

⁸ A redundant bar runs across the verticals of this *akshara*, as also noted by Dikshit. See also n. 5 above.

⁹ This is *Rāuta*. The *daḍḍa* here and in the following line is put to show that it is a contraction.

¹⁰ The corrections are made here in view of the expression appearing in the second grant.

¹ The last line containing the name of the king is hidden beneath the copper-band. See the last line in the second inscription.

² As in n. 2 above.

³ Dikshit read this letter as —व and corrected it to —व ; but similar form of the palatal sibilant without the top-knot appears in some other instances also in the inscription, for which see *Vaisikhya*, in 1, 10.

⁴ The *akshara* in the brackets appears as *दि*.

⁵ This *ē* looks exactly as *pa*.

⁶ Dikshit read the letter as *sva*, but it is exactly as taken here in the transcript.

⁷ The letter *t* here is double and not single as taken by Dikshit.

⁸ The letters in brackets in this and the following lines are either completely or partly hidden beneath the protecting band, or are mutilated. The restoration, however, is not difficult.

No. 142: PLATE CXXIX

SĀGAR COPPER-PLATE INSCRIPTION OF TRAILŌKYAVARMAN

[Vikrama] Year 1264

THIS inscription is on a single plate of copper which was found by Pt. Govind Sitaram Harshe, in course of digging a pit in his house, in 1943, in the Lakshmīpurā mohallā of Sāgar the headquarters of a district in Madhya Pradesh. The epigraph was noticed in the *Annual Report on Indian Epigraphy* of the Archaeological Survey of India, for the year 1946-47, and was edited by B. M. Barua and P. B. Chakravarti, in the *Journal of the Bombay Branch of the Royal Asiatic Society*, Vol. XXIII (1947), pp. 46 ff., and was re-edited, with a lithograph, by Dr. Sant Lal Katare in the *Epigraphia Indica*, Vol. XXXI (1957-58), pp. 70 ff.² from an impression supplied to him by S. S. Patwardhan who was then the Curator of the Central Museum, Nagpur, where the plate is now deposited,³ and the impression supplied to me by the Chief Epigraphist,⁴ and another, by Shri V. P. Rode, the present Curator of the Museum, to whom my thanks are due.

It is a thick plate measuring 36.2 cms. by 26.67 cms., and is inscribed on one side only. It weighs 3 kgms. and 208 grms. It contains small round holes bored at intervals, on all the four sides, indicating that strips of copper were at some time fastened by rivets along its edges, to protect the writing, as to be seen on some other plates issued by the Chandella kings; but the strips were destroyed some time subsequently. The inscription contains 19 lines of writing, and the *aksharas* are all well preserved, except in the last one which has altogether been broken with the lower left corner of the plate, and a few of the *aksharas* are damaged but can be made out with some perseverance, in two or three lines in the middle of the plate, which was vertically bent when received but had to be straightened.

The first four lines of the inscription are divided by the figure of a seated Gaja-Lakshmi engraved at the top, as we find generally in the charters issued by the house to which the present inscription also belongs. The letters are not of the uniform size, their average height being about 1.3 cms. in the first six lines, but from the seventh line their size is reduced and in the last 2-3 lines they are almost half of this size. Since much of the space available on the plate was in the beginning covered by a small portion of the text, the rest of the document was crammed into a much smaller space.

The script used is Nāgarī, resembling that of the immediately preceding Gārā plates and showing more or less the same sort of palaeographical peculiarities, e.g., a confusion between the forms of *ch* and *v*, and occasionally between that of these letters and of *r*, e.g., in *śirō-* and *narēndra-*, both in l. 1, *chāta-* in l. 10, and *-chara-* in l. 16. The letter *ñ* continues to be without its dot, the conjunct *gg* is written as *gn* and the subscript *v* as *l*, e.g., in *janḡama*, l. 9, *nirḡgama*, l. 15, and *Krishna*, l. 11, respectively. And lastly, *dh* marks a transitional state, appearing sometimes as *v* as in *vādhā*, l. 17, where we also note the verticals joined by a stroke, while in the other instances its left limb has a horn above, which is sometimes joined to the preceding

¹ The reading from *ma* to the end in this line is as taken by Dikshīt. But it is conjectural as all these *aksharas* are concealed beneath the copper-band.

² In his article Katare called it as 'the Tehri plate', but as rightly remarked by the editor of the *Ep. Ind.*, while publishing the article, I prefer to name it as the Sāgar plate, after its find-spot. The record was also edited, with a photolithograph, by B. C. Jain, in *Vindhyabhūmi* (a Hindi magazine from Rēwā), in its special issue on archaeology, 1955, on pp. 51-52.

³ It is his No. 30 of 1946-47.

stroke of the *mātrā*, as in *virōdhi*, l. 2. The characters generally exhibit a distinct slanting curve at their right hand bottom.

The *aksharas* were well written, but their incision betrays carelessness on the part of the engraver, who, besides leaving some redundant strokes, is prone to make superfluous additions and omissions deforming their shapes, as we find in the *Sēmtrā* grant of Paramardin.¹ Instances of this sort of slovenliness are pointed out in the text or the foot-notes appended to it.

The **language** is Sanskrit, which is generally correct; and except for one verse in the beginning and two imprecatory verses in the concluding portion, the record is all in prose, being almost a copy of the preceding grant so far as the initial portion is concerned, the change being observed only in the formal portion. As regards **orthography**, (1) *h*, as usual, is denoted by the sign for *v*, cf. *vādhā*, l. 17; (2) the dental and the palatal sibilants are often confounded with each other even in very common words like *paṣu* written with the dental and *kusuma* with the palatal in lines 14 and 15 respectively; (3) a class-consonant following *r* is not unoften doubled, e.g., in *parṣva*, l. 16, and sometimes this sort of reduplication is also noted when the consonant precedes *r*, e.g., in *tattra*, l. 2; (4) the sign of *anusvāra* is used more often than the sign of the nasal; (5) the influence of the local element is noticed in the spelling of *Jāmadagnya* written as *Yāmadagnya* in l. 12; and lastly, (6) the use of the *prishṭha-mātrā*, which is in some instances so put as to be confounded with a *daṇḍa* and *vice versa*.

It is a **royal charter** recording the donation of land by the illustrious king **Trailōkyavarman**, who is endowed with the usual royal titles and is also stated to be the sole lord of Kālāñjara and belonging to the **Chandēlla** house. The initial portion mentions the genealogy of the king in the same way as the *Garrā* plates. The formal part of the present record begins in l. 7, stating that the king granted, from his encampment at *Tihari*, the village *Maṇḍāūra* included in the *viśhaya* (territorial division) of *Vaḍavāri* in the "administrative or territorial unit" in *Sihadōṇi*.² The donee was a *Brāhmaṇa* named *Kulēśarman*, who had hailed from *Rawkōra* and was a son of *Nāyaka Gayādhara*, a grandson of *Rāūta Sihaḍa* and a great-grandson of *Rāūta Naugrahaṇa* (?).³ He belonged to the *Vatsa-gōtra*, with five *Pravaras*, viz., *Vatsa*, *Bhārgava*, *Chyavana*, *Aurva* and *Jāmadagnya*, and was a student of the *Vājasaneyā śākhā*.

The inscription is **dated** in ll. 10-12, in the year 1264 (expressed both in figures and words), on the **second tithi of the dark half of the month of Bhādrapada**, on *Sukradina*, or **Friday**. The year must of course be taken as belonging to the *Vikrama* era, and, as has been calculated by *Katara*, the details of the date regularly correspond to **29th August, 1208 A. C.**⁴

Lines 14-18 contain the usual admonitions to give to the donee whatever might be due to him and not to obstruct him enjoying the gift; and with two customary benedictory and imprecatory verses followed by the **sign-manual** of the king *Trailōkyavarman* in ll. 18-19, the record comes to a close.

While dealing with the *Garrā* grants of 1205 A.C. we have seen that immediately after his accession *Trailōkyavarman* consolidated his strength, and driving away the Muslim forces from the region, he succeeded in regaining his ancestral kingdom some time before that date. The present grant, which was issued about three years subsequently, goes to indicate that in 1208 he was again in the same region in which lies the place of his camp mentioned in the present inscription, viz., *Siyadōṇi*, which is only about 50 kms. due north-west of *Vaḍavāri* where he

¹ Above, No. 126.

² It is difficult to reconcile the mention of *Sihadōṇi-sainyē*, l. 7, with *Tihari-samāvāse* in l. 10. While editing the inscription, Dr. *Katara* is inclined to hold that "the announcement of the grant was made at the *Sihadōṇi* military camp (*sainyē*), and the king, when he actually issued it, was residing at *Tihari*". Dr. D. C. *Sircar*, while publishing *Katara's* article, observed that "the language of the record shows that *Sihadōṇi* was the name of an administrative or territorial unit in which the gift land was situated" (*op. cit.*, p. 71, n. 4). But we find the *viśhaya* actually mentioned in l. 7 as *Vaḍavāri*, and Dr. *Sircar* appears to have ignored it. It appears to me, however, that the grant was issued when the king was residing at *Tihari* and his forces were encamped at *Siyadōṇi* which is not far off from the camp, being only about 50 kms. distant from it. For the sake of some facility, kings have their camp often at a small distance from the scene of the battle, though not far from it.

³ As we have so often remarked, this is another example to show how the surnames were subject to change with generations.

⁴ *Katara, op. cit.*, p. 71.

was camped when the Garrā grants were made. On the strength of this we may also assume that in 1208 he had rather advanced further in the north.

Of the **geographical** names occurring in the record, Tihari, the place of the king's residence when he issued the grant (l. 10), has been identified with the same village and also known by its longer name Tehri-Bānapur, near Tikamgaḍh, the chief town of a district in Madhya Pradesh. **Mandāūra** or Maḍaura, the gift-village (l. 7) has been identified with the modern Madaora in the Lalitpur sub-division of the Jhānsī District and lying about 45 kms. south of Tikamgaḍh; and Tehri is at almost the same distance to the south-east of Lalitpur. **Sihādōṅi** (l. 7) is, of course, identical with Siyādōṅi of the inscriptions and has been taken identical with Sirōn Khurd, situated about 15 kms. west-northwest of Lalitpur. And lastly, **Vaḍavāri** (l. 7) is obviously the same as Vaḍavāḍa of the Garrā plate (No. 1) and is also mentioned in the Sēmrā grant of Paramardīn. There is no sufficient data in the inscription to identify **Raikōura**, the original place of the donee, mentioned in l. 12.

^१ From impressions.

^२ Expressed by symbol, which is more probably for Siddham.

^३ The vertical of the consonant *v* is not completely cut and it appears as *v*. A faint trace above the top-stroke indicates that the sign for the *mātrā* was incised very lightly and it could not come in the impressions.

^४ A redundant stroke makes the subscript of क्त appear as bh.

^५ Both these names appear as carved after rubbing out some other *akṣaras* engraved originally. The first of the names may also be read as सिंहडोणि. The *anuvāra* on *ma* of the name that follows is doubtful.

^६ A redundant horizontal stroke appears between this letter and the *mātrā*, as in some other places also.

^७ Kanare read the letter as *da*, but it is mutilated and the *prishtha-mātrā* appears partially.

^८ The *akṣara pa* is not fully cut, as also in some other lines below.

^९ The name can be read also as Raikōura.

^{१०} The *damālas* in this and the preceding lines are redundant.

No. 145; PLATE CXXX

DHURĒTI COPPER-PLATE INSCRIPTION OF THE TIME OF TRAILŌKYAMALLA

[Kalachuri] Year 968

THIS inscription was first brought to notice by N. P. Chakravarti, Government Epigraphist for India, who published a brief account of it in the *Annual Report, Archaeological Survey of India*, 1935-36, pp. 90 f., and also edited it, with a photolith, in the *Epigraphia Indica*, Vol. XXV (1937-38), pp. 1 ff. and Plate facing p. 5. Subsequently, a revised transcript with translation of it was published by Dr. V. V. Mirashi in his *Corpus Inscriptionum Indicarum*, Vol. IV, pp. 369 ff. and Plate, from impressions provided by the Government Epigraphist. The plates from which Chakravarti took the impressions were preserved in the Treasury at Rēwā which was then the capital of a State and is now the headquarters of a district of that name in Madhya Pradesh; but no information is forthcoming as to the present whereabouts of the original.⁶ And as a fresh impression thereof could not be obtained, I edit the inscription here from the plate accompanying Mirashi's article.

The inscription is on two plates of copper, which are said to have been found by a cultivator in 1926, in course of ploughing his field in the village at Dhurētī, about 10 kms. south-east of Rēwā, the headquarters of a district in Madhya Pradesh. The edges of the plates are turned up all round the rim, and each of them measures 38.75 cms. broad by 26.67 cms. high. They

¹ The word *paṣu*, mentioned here in the list of other taxes, probably means "the supply of bullocks for the conveyance of royal officers on tour". Cf. *a-paramparā-baliwarda-grahana* in *E. I.*, Vol. XXVI, p. 149. Dr. Sircar interprets it in the sense of "cattle or animal for sacrificial purposes", for which see *I. E. G.*

² The bracketed *akshara* is cut as *ya*. There are some other instances of the type, not noted separately.

³ Both the bracketed letters are misformed, and the *prishtha-mātrā* of *lō* is cut closer to the preceding *akshara*, making it appear as *sā*.

⁴ *midam*, as it appears in the writing, cannot be defended and the expressions should be taken as I have corrected here.

⁵ This *akshara* may also be read as *vā*.

⁶ The portion of the plate bearing the last letter has peeled off, and possibly *dēvayya* after the name may have been intended.

⁷ The plates appear to have sailed off to the British Museum along with the four other copper-plates which are stated to have been presented to it by the Rājā of Rēwā, for which see *Ind. Ant.*, Vol. XVII, p. 244, n. 1. And as their present provenance is not definitely known, I prefer to call them after the name of its find-spot, following Mirashi.

were originally held together by a ring, which was cut off some time before Chakravartī examined them in the Treasury at Rēwā. The ring has a seal measuring about 17·14 cms. by 11·43 cms., bearing the figure of Gaja-Lakshmi and the legend *Śrīmat-Trailōkyamalla* in one line below it. The weight of the two plates along with the ring and the seal is stated to be equal to 190 klgms.

Each of the plates is inscribed on the inner side only; and the writing, which is well preserved in consequence of the raised rims of the plates, as stated above, consists of 22 lines, each of the plates containing 11 lines. The approximate height of the letters is about 1·3 cms., except in the last two lines where they are written in a slightly smaller size, in view of completing the remaining portion of the record in a limited space.

The characters are Nāgarī. In spite of our observation that the signs of the *mātrās* and *anusvāras* are gracefully treated, the mechanical work evinces extreme slovenliness. The record contains glaring mistakes of grammar, for example, often using the names without case-endings, as in l. 20, neglect of *sandhi*-rules even in a compoundword where it is necessary, and wrong *sandhi* in *-suto*, l. 13. The inscription was composed jointly by two village Paṇḍitas who had, as can be gathered from the gross errors occurring therein, very little knowledge of Sanskrit. The work of engraving is also sloven in omitting a letter here and another there, and occasionally also omitting strokes and limbs of letters: some of these foibles being possibly due to oversight. All these mistakes have been drawn attention to and corrected in the text or notes accompanying it.

With reference to the formation of letters, it may be pointed out that the vowel *ē* is confounded with *pa*, as in *ēka*, l. 13, and *paṁ*, l. 22; and *ch* with *v*, e.g., in *vichāra*, l. 6; and that it is at times rather difficult to distinguish between the palatal *ś* and the dental *s*, showing a sort of combination of both these *aksharas*.

The language is Sanskrit, which is often incorrect, as already stated above; and, excepting three verses in the beginning, the record is all in prose. There are no imprecatory verses as it is not a royal charter. The orthographical peculiarities are all as usual, for example, (1) the sign for *v* throughout does the duty to denote *b* also, as in *vaṁdha*, l. 19; (2) occasionally there is a confusion between the correct use of the palatal and the dental sibilant, e.g., in *-sivaśuta*, l. 18; and lastly, (3) the *prishṭha-mātrā* is used only here and there. The somewhat rare word *pravani* occurs in l. 14; and (4) often the signs of the *mātrās* and *anusvāras* above are gracefully formed.

The inscription refers itself to the reign of Trailōkyamalladēva; and its object is to record the mortgage (*vitta-bandha*) of a village by the Śaiva ascetic Śāntaśiva in favour of one Rānaka Dhareka, on a date which is expressed in l. 7, in words, as the 7th day of the bright fortnight of Jyēshṭha in the year 963. The era, which is not specified, is taken by Chakravartī to be the Kalachuri era, and the equivalent Christian date, as calculated, is the 9th of May, 1212. But this fails to satisfy the requirements of the case. For, as rightly observed both by Chakravartī and Mirashi, in the current Kalachuri year 963 (1210-11 A.C.) the *tithi* fell on a Friday, and in the expired year 963 it fell on a Wednesday. We have therefore to agree with these scholars in their suggestion that the word *Sōmē* may have been wrongly written for *Saumyē* (i.e., *Budhē*) in the inscription. Without offering any other justification on the date-problem, however, I feel it doubtful if the use of *Saumyē* to indicate *Budhē* was known to the composers of the inscription with their limited knowledge.

The inscription opens with the auspicious *Om*, followed by salutation to Śiva and Gaṇapati and three verses thereafter, in honour of Mukunda, Śulapāṁ (Śiva) and Sarasvatī, of which the last one is reproduced from the introductory portion of Daṇḍin's *Kāvya-darśa*. After this, the record refers in ll. 5-7 to the victorious rule of the illustrious Trailōkyamalladēva, whose epithets, besides the imperial titles commencing with *Bhūttāraka* (i.e., *Paramabhūttāraka*, *Mahārājādhirāja* and *Paramēśvara*), occur also as the lord of horses (*akṣapati*), the lord of elephants (*gojapati*), the lord of men (*narapati*), the overlord of the three Rājās (*Rājatrayādhipati*), and what appears rather curious, the lord of Kānyakubja (*Kānyakubjādhipati*).¹

Noticing a copper-plate grant from Rēwā, dated in the (Vikrama) year 1298 or 1240-41 A.C., Cunningham has already pointed out that the king Trailōkyamalla mentioned therein is doubt-

¹ As suggested by Chakravartī, this title may possibly have been assumed by the Chandēlla ruler with the decline of the Gūhāḍavāla rulers who originally used it. See *op. cit.* p. 3.

less the Chandēlla prince Trailōkyavarman¹; and this view is also accepted by Kielhorn while editing the grant.² Here we follow these scholars in regarding both the names identical, and, in view of this, it would appear that this ruler evidently extended his sway around the Rēwā region at the cost of the Kalachuri ruler Vijayasimha (1188-1210 A.C.) and, in consequence of it, he adopted the titles of *śwāpati* and *gajapati* which were borne by the former. Here we may also note that this particular portion of the present inscription agrees very closely with the corresponding portion of the Kalachuri Vijayasimha's grants; and the writers of the present grant, who possessed only a smattering of Sanskrit, as seen above, copied this portion from some Kalachuri charters where these titles appear.³

In ll. 10-14 of the document it is stated that during the reign of the aforementioned king, i.e., Trailōkyamalla, who had then encamped at Dhōvahaṭṭa included in the *puttalā* of Dhanavāhi, and on the date mentioned above, the Śaiva ascetic Śāntaśiva of the Vatsa *gōtra*, who was a son of the *Bhaffāraka*, the holy *Rājaguru* Vimalaśiva, and who had attained the lordship of the Śaiva ascetics through the practice of self-restraint, observances, study of the sacred texts and meditation and who was the foremost among the learned and had mastered all lores,⁴ had placed, by way of mortgage, the village Alaurā, with all its dues, i.e., all the rights of collecting taxes, to the *Rānaka*, the illustrious Dhareka, the son of Sēvarāja, who was, in his turn, the son of the *Thakkura* Rāsala. The taxes are not specifically mentioned in the record, nor the amount of money taken as loan; but the expression *yāvad=ādityatē* (in l. 18) tends to indicate that the village was to be kept on pledge till all the dues were realised.

Vimalaśiva of the present inscription appears to be no doubt identical with the homonymous sage mentioned as the religious preceptor of the Kalachuri king Jayasimha (1163-1188 A.C.), the father of Vijayasimha, two of whose inscriptions we have, one dated in 1164-65 A.C. and the other in 1174 A.C.;⁵ and though we have nothing on record in this respect, it is not unlikely that the sage may have received the village as a donation from the king who was, like the other Kalachuri kings, a devoted Śaiva.

We are further informed in ll. 15-19 that the deed was actually executed by Nālaśiva, a younger son of Vimalaśiva, with the authority of Śāntaśiva. Line 20 contains the names of eight persons as witnesses of the deed. In the end it is stated that the record was drawn jointly by two *Panditas* whose names were Viśvēśvara and Gaṅgādhara, and also that it was engraved by *Strūka*.

The record also names, in ll. 8-9, some officers who were then present, on duty. They are:— (1) the *Mahāmahattaka*, *Mantrin* and *Māṇḍalika* Malayavarman; (2) the *Sāndhinigrahika* (minister of Peace and War), the *Thakkura* Haripāla; (3) the *Koṭṭapāla* (guardian of the fort) Vāhada (Chāhada?); and (4) the *arthalēkhin*⁶ (keeper of accounts), the illustrious Chandraśreṣṭhīn. Of these personages, Nos. 1 and 2 have been identified with their namesakes mentioned in the Rēwā stone inscription of Vijayasimha, and No. 3 may have been the same as Vāhadavarman, the son of Sallakshanavarman, the feudatory chief of Kakrēḍi, figuring in a record from Rēwā.⁷

The mention of the name of Malayasimha in the present inscription deserves more than a passing notice. He is no doubt the same officer who had defeated a ruler of the name of Sallakshana, in a battle fought at Karkarēḍi, modern Kakrēḍi, lying 45 kms. north of Rēwā, and forced him to acknowledge the suzerainty of Vijayasimha (1188-1210 A.C.), who was the last Kalachuri ruler, as we know from the Rēwā stone inscription of Vijayasimha, dated in the Kalachuri year 944, which corresponds to 1193 A.C.⁸ Another inscription of the same king, the

¹ *A. S. I. R.*, Vol. XXI, p. 147.

² *Ind. Ant.*, Vol. XVII, pp. 230-31.

³ This particular title which was originally assumed by the Kalachuri king was used not only by his descendants but by several other kings of other dynasties. See *C. I. I.*, Vol. IV, p. c.

⁴ In l. 17 below, he is also stated to have been proficient in wielding arms as in the *Sāstras*, reminding us of *Sastrin dvijātībhir-grāhyam=apatkāṭhy=upasthitī*.

⁵ *C. I. I.*, Vol. IV, Nos. 63 and 64, respectively, in ll. 22 and 17.

⁶ This term is rendered by Chakravarti in the sense of 'writer of deeds' and by Mirashi, as 'Secretary'. But we take the word *artha* to denote accounts.

⁷ For all these identifications, see *C. I. I.*, Vol. IV, p. 370 and n. 6. Also see n. in the text below where we have shown that the name may also be read as *Chāhada*.

⁸ *C. I. I.*, Vol. IV, p. 348, and text, v. 24.

date of which is not clear but is calculated to range between 1208-09 and 1210-11 A.C., mentions the same Malayasimha as a *Mahāmāyālikā* of the Kalachuri ruler.⁷ And his mention in the present inscription as a *Mahāmāhātaka*, *Mantrin* and *Māyālikā* of the Chandēlla prince makes it almost certain that within two or three years thereof, this erstwhile zealous feudatory of the Kalachuri king had to transfer his own allegiance to Trailōkyavarman who had by that time annexed the region around Rēwā from the Kalachuris, in whose dominions it had been so far included.⁸

Of the geographical names mentioned in the present inscription, **Dhōyabatta** (l. 10) has been identified by Chakravarti with Dhurētī, whereas Mirashi thinks it more likely to be identical with Dhōbhat near Makundapur, about 16 kms. south by west of Rēwā. The former view is supported by the fact that the plates were actually found at the place, and the latter by a closer similarity in the names of the places, which, as far as I think, can hardly be regarded as a decisive argument. In favour of Chakravarti's identification of the place, it may also be pointed out that the village that was mortgaged, as to be seen below, is situated not only nearer to Dhurētī but also in the same direction. **Dhānavāhī**, the headquarters of a *pattalā* in which the village was then included (l. 10), may be identical with the village of the same name lying about 35 kms. to the south-west of Dhōbhat, as already suggested by Mirashi. And I propose to identify the mortgaged village **Alaurā** (l. 14) with Laur⁹ included in the present Mauganj *tehsāl* of the Rēwā District and lying about 48 kms. north by east of this city itself, on metalled road to Mirzapur. The geographical consideration thus suggests that the Chandēlla territory then extended in the east as far as the region of the present Rēwā District, including its north-eastern portion beyond the Kaimur range, in the early years of the thirteenth century A.C. That the northern portion of the district may have been under the Chandēllās still earlier in Madanavarman's time is suggested from the find of a hoard of coins at Patvār which is in its northern part in the modern Tyōnthar *tehsāl* of it.¹⁰

¹ *Ibid.* p. 366 text, ll. 9-10.

² N. P. Chakravarti attempts to make this date more precise. Drawing attention to an inscription of Vijayasimha of (Chēdi year) 982 (A.R., A. S. I., 1935-36, pp. 89 f.) and pointing out that the record under consideration is later than it by one year, only, he suggests that the territory contiguous to the Rēwā town passed from the Kalachuris to the Chandēllās between the dates of these two records. But this view is not certain in consideration of the fact that the reading of the date in Vijayasimha's record is only tentative, as he himself stated, and its provenance too is unknown. The document is still unedited.

³ For the disappearance of the first vowel of the name, we have a number of examples to cite, e. g. the name Arānipadra later on changed to Ranipadra and gradually to Rānōd (Shivpurī District, M.P.), for which see *J. M. P. I. P.*, No. IV, p. 12. Another parallel case where not only the initial vowel but also the consonant of the name has disappeared is that of Pāshānibrada changed to Sañḍarī. See *C. I. I.*, Vol. IV, p. 45.

¹ This *yati* has one letter more. Mirashi corrects it to पुरदहनसमर्थो. It may also be restored as विपुरदहनदक्षो as already suggested by Chakravarti.

² This *danda* as also some others below is redundant.

³ As already noted by Chakravarti and Mirashi, this verse occurs in Dandin's *Kāvya-darśa*, I, 1.

⁴ The *akshara* व is written above the line.

⁵ The *sandhi* is neglected here, as also in some places below, sometimes not noted here separately.

⁶ The medial *ā*-sign of *lā* is applied to the preceding letter by mistake.

⁷ The third letter in this line looks somewhat like *ma*. Read मालयसिंह

⁸ The consonant of the first letter of the name can also be read as *ch*, for which see *chivūda* and *pañcha* in the next line. Read सांघविग्रहिके ठक्कुर हरिपाले as suggested by V. V. Mirashi.

⁹ A redundant stroke appears above the first letter in the line. Read *śrēṣṭhī*, which appears without any case-ending as some other titles and names below.

¹⁰ Restore अवृहियमाणे पंचकुलधर्माधिकरणे चितायां is redundant. It appears to mean 'with due deliberations'.

¹¹ As already noted by Mirashi, this expression seems to be out of place in a deed of mortgage.

¹² It appears rather curious that the Śaiva ascetic should call himself as devoted to the feet of the king.

¹³ Read कुब्जीण एवाय—

¹⁴ Read वीतशिवः. As already noted by Chakravarti, the name is here in the honorific plural whereas all the qualifying adjectives are in the singular.

¹⁵ That is, ठक्कुर.

¹⁶ The reading of the bracketed *akshara* is doubtful and I have followed Mirashi's reading.

¹⁷ Here also I agree with Mirashi in taking the second *akshara* of the name as *lau*, and not *li*, as taken by Chakravarti, remarking that *lau* which was first engraved was subsequently corrected into *li*. Mirashi particularly draws our attention to similar *mātrās* of medial *au* in *Kalau*, II, 11-12.

¹⁸ Mirashi elsewhere takes this word in the sense of 'banker' (*C. I. I.*, Vol. IV, p. 331, n.), but it does not suit here. The word, which is obviously derived from *pravāna*, meaning 'a descent' and also 'a place where four roads meet', appears to denote the customs duty charged here on articles brought from other places.

¹⁹ The correct construction would be ग्रनीययामः . . . मदितः . . . दत्तः. Also read यवद्विरण्य

No. 144; PLATE CXXXI

CHARKHĀRĪ COPPER-PLATE INSCRIPTION OF VĪRAVARMAN

[Vikrama] Year 1311

THIS inscription, which is on a copper-plate, was edited along with three others,¹⁶ by R. B. Hiralal, in the *Epigraphia Indica*, Vol. XX (1929-30), pp. 132 f., without a facsimile.

The plates bearing all these inscriptions are reported to have been possessed by the Chief of the former State of Charkhārī, now a *tehsil* in the Hamīrpur District of Uttar Pradesh, but there is no information as to their original find-spot or regarding the circumstances under which they were found. Hiralal's edition of the present inscription is not accompanied with a facsimile, as also of those of the other three edited along with it; and as an impression too of it is not now forthcoming, I edit the record here from his transcript, adding my notes to it.

As said above, it is a **single copper-plate** which is stated to measure as equal to 38.5 cms. by 28.9 cms., with its rim raised to the height of about .5 cm. and rivetted with nails all round. It is inscribed on one side only and the inscription consists of 19 lines of writing. It weighs 2 kgms. and 689 grams. In the middle of the upper part of it, there is a hole, apparently made for a ring, which, with any seal if it was ever attached to it, is not forthcoming; and thus it appears more likely that the hole was made not to join it with a second plate but (subsequently by the owner) to string the plate with some other plates, since the inscription on it is complete in itself. In the middle of the first six lines the writing is interrupted by a representation of the goddess **Lakshmi**, holding a lotus flower in each of the two upper hands and water-pots in the two lower hands. The letters are stated to have been well formed, showing an average size of .5 cm.

¹ The *danḍas* are superfluous.

² The *akshara* ३ is written above the line.

³ As remarked by Mirashi, the text is corrupt here and what is intended appears to be वेच्छा या प्रतिपद्यते

⁴ This contraction cannot be explained. It probably denotes विद्वान् or विद्वत्

⁵ Probably a letter has disappeared at the beginning of this line, as shown by a trace.

⁶ The text is again corrupt here. Probably प्रविष्टे is meant.

⁷ Read बाल्याद्दुर्वीरितं

⁸ For उत्कीर्णं.

⁹ An ornamental design appears between the double *danḍas*.

¹⁰ For the other three inscriptions, see above, Nos. 108, 152 and 151.

The characters belong to the Nāgarī alphabet. The language is Sanskrit; and, except for one verse in the beginning and three in the end, the whole record is in prose. It shows the usual orthographical peculiarities, such as (a) often putting the dental for the palatal sibilant, as in *subha*, l. 19, and the palatal for the dental, as in *prśāda*, l. 14; (b) the reduplication of a class-consonant following *r*, e.g., in *nirmala*, l. 8; and (c) the use of the sign for *v* to denote *b* as well. The influence of the local pronunciation of *n* for *ṇ* is seen in the spellings of *bhrājishṇu* in l. 2, *grihṇāti* in l. 18 and *punya* in l. 18, but not in the same word in ll. 12 and 13. We may also note that the word *ujjala* is wrongly spelt with a single *j* in l. 1.

The engraver, whose name is not mentioned, is also responsible for a few mistakes, e.g., those of the omission of limbs of certain letters and of the signs of *anusvāra*, *visarga* and the superscript *r*, all of which have been corrected in the text, below. It is also doubtful whether all these were engraved lightly and may not have come out clearly on the impression from which Hiralal prepared the transcript.

It is a royal charter issued by **Vīravarma**n of the **Chandēlla Dynasty**. The object of it is to record the grant, by Vīravarma, the sole lord of Kālīñjara, of the village Tumuṭumā, situated in the territorial division (*viśaya*) Dāhī, from (his camp at) Vilāsapura, in favour of the *Rāūta* Abhi, son of the *Rāūta* Haripāla, grandson of the *Rāūta* Devashamū of the *Kāśyapa* gotra and of the family of Chandrēsvara (ll. 12-3). The donee is stated to have performed a deed of valour in the struggle¹ with Dabhyuḥaḍavarman, and the donation was made in recognition of the meritorious service rendered by him. He does not appear to have been a Brāhmaṇa, for, as Hiralal has rightly pointed out, his *pravara*s are not mentioned and as is also indicated by the family-name Chandrēsvara and his title *Rāūta*. But it appears rather curious that despite all this, the purpose of the grant is stated to be the promotion of the religious merit and fame of the king himself and of his parents (l. 13).

The grant is dated, in l. 12, on **Monday, the 8th tithi** of the bright fortnight of **Āśvina** in the year **1311**, expressed in the decimal figures only. The year, of course, must be referred to the Vikrama era, and the corresponding Christian date, as calculated by Hiralal himself while editing the record, is **the 21st of September, 1254 A.C.**² The date is quite regular for *Chaitrādi* expired, or *Kārtikādi* current year. But as current years are cited very exceptionally, I am inclined to take it as the former.³

The arrangement of the contents of the record is similar to what we see in many other Chandēlla charters. Opening with the usual verse eulogising the house, it gives the genealogy of the donor, the details of the grant followed by the address to the inhabitants of the donated village, the date and the purpose of the grant, and finally, the benedictory and imprecatory verses.

The genealogical portion (ll. 3-7) mentions the *Paramabhūttāraka*, *Mahārājādhirāja* and *Paramēsvara* Madanavarman, his successor the *P.M.P.* Paramardin, his successor the *P.M.P.* Trailōkyavarman and the latter's successor the *P.M.P.* Vīravarma, who was the sole lord of Kālīñjara. The succession of the first three of these names is well known; and we also know from the Ajaygadh stone inscription of Vīravarma himself, dated V.S. 1317,⁴ that he was the son of Trailōkyavarman whom he succeeded. The present record, however, which is the only plate-grant of the king known so far, furnishes the earliest date for him.

While dealing with the Garrā plate inscriptions,⁵ we have seen that the remarks of V. A. Smith as to the end of the Chandēlla dynasty as one of the important powers of North India, with the death of Paramardin in 1203 A.C., is baseless in view of the fact that the epithet *Kālīñjarādhipati* is applied to his successor Trailōkyavarman; and since the same epithet is again borne by the latter's son and successor Vīravarma in the present grant, the conclusion is irresistible that Vīravarma had under his sway the whole of the region controlled by his father; and the evidence of the present inscription also goes to indicate that he had extended his kingdom up to the Sindh on the west, as we shall see while identifying the places mentioned

¹ The word used here is *saugrāma*, involving the whole village, and thus the battle appears to have been severe.

² *Ep. Ind.*, Vol. XX, p. 132.

³ For an analogous example, see Kielhorn's remarks in *Ep. Ind.*, Vol. V, p. 115.

⁴ Below, No. 145.

⁵ Above, No. 141.

in the record. Some of the distant regions of his kingdom, however, appear to be slacking in control, as we know from the present inscription itself that the donee of the grant had performed a deed of valour by vanquishing Dabhyuḥaḍavarman, whose identity remains uncertain. From his name ending in *varman*, Hiralal took him to be a member of the Chandēlla family, but S. K. Mitra, on the other hand, is inclined to hold that he was "either a usurper or a rebel trying to create troubles within the state",¹ though for want of any definite evidence, nothing on this point can be said with certainty. It can however be imagined that some of the remote provinces were probably not in full grip and caused troubles as is also shown by Vīravarma's struggle with the contemporary Yajvapāla king Gōpāla, only about 27 years subsequently,² in the same region, lying to the west of the Chandēlla kingdom in the neighbourhood of the Seondhā fort, which is in the modern Datīā District of Madhya Pradesh, on the Sindh, as correctly identified by Hiralal.

Of the place-names mentioned in the inscription, **Kālīnjara** (l. 6) is of course the well-known fort, and **Vilāsapura** (l. 12) is Pachhār, as we have seen above.³ **Dāhī** is identical with the modern village of the same name, lying about 6 kms east of Bijāwar, the chief town of a *tehsil* in the modern Chhatarpur District of Madhya Pradesh. **Tumutumā**, the gift-village (l. 8), I am unable to trace in the vicinity.⁴ And last of all, **Sōndhī**, as already observed above, is the modern fort of the name in the Datīā District of Madhya Pradesh. It is about 60 kms. north by east of Datīā and connected with it by a metalled road.

³ In No. 129, etc.

⁴ Hiralal has remarked that in this plate the consonant *s* is often engraved as *t*, and the vowel *a* as *ma*. And in view of this, if we presume that the last two *aksharas* of the name, which were engraved as *suā*, may have been read by him as *tumā*, the intended village is Tinsuā, which lies about 100 kms. south by west of Dāhī and about 45 kms. north-east of Sāgar, the headquarters of a district in Madhya Pradesh. The village contains an old temple attributed to the Chandēllas. See *Sāgar Dist. Gaz.*, Bhopāl, 1967, pp. 548 f.

⁵ From Hiralal's transcript in *Ep. Ind.*, Vol. XX, pp. 133 f.

⁶ One of the *datidas* is superfluous.

⁷ Read -रज्वलः.

⁸ The *datida* is redundant.

⁹ The *datida* is redundant.

¹⁰ The *datida* is redundant.

No. 145 ; PLATE CXXXII

AJAYAGADH ROCK INSCRIPTION OF THE TIME OF VĪRAVARMAN

[Vikrama.] Year 1317

THIS inscription was noticed for the first time, with a photograph and a somewhat incorrect abstract of its contents, by Sir Alexander Cunningham in his *Archaeological Survey of India Reports*, Vol. XXI (1883-85), p. 51 and Pl. xiii-E. Subsequently it was edited by F. Kielhorn, with a translation but without a facsimile, in the *Epigraphia Indica*, Vol. I (1888), pp. 325 ff. In this edition Kielhorn, who prepared the text of it from Cunningham's rubbings placed at his disposal by Fleet, has also pointed out the errors in Cunningham's account of it, which was based on its reading by his Simla Pandit. The inscription is edited here from a fresh impression which I owe to the courtesy of the Chief Epigraphist, Archaeological Survey of India.⁶

¹ The syllable च is omitted here either in the transcript or in the original.

² The *danda* is redundant.

³ *Sandhi* is not performed here.

⁴ The use of च shows that it may have been preceded by वनाच्छेद, as we find in the other grants of the house.

⁵ Read पालनीयम्.

⁶ His No. B-189 of 1969-70.

The inscription is engraved on a rock above a well which is locally known as *Gaṅgā-Jamnī*, in the fort of **Ajayagadh**¹ in the Pannā District of the Bundelkhand region of Madhya Pradesh. It consists of fifteen lines, the first seven of which are on the proper right side and the remaining eight on the proper left side, both the portions being divided by a crack between them and showing the width of about 1.5 to 2 cms. The portion on the proper right side measures 72.40 cms. broad by 16.5 cms. high, and that on the proper left, 91.45 cms. broad by 16.5 cms. high. In Kielhorn's time it was "on the whole fairly well preserved", but as far as I can judge from the impression before me and comparing the same with the plate in the *A. S. I. R.*, the letters have suffered now a little on account of exposure, particularly in the last two lines on either side, though they can be made out with certainty. Only one *akshara* each at two places just close by the crack has disappeared, which is of minor importance; and I have read it from the photolithograph given by Cunningham. The average size of the letters is about 1.5 cms., except that they are slightly smaller in the last two or three lines on either side. The mechanical execution is also not free from slovenliness and redundant strokes of the chisel have deformed some of the letters here and there.

The inscription is written in the **Nāgarī** alphabet of the 12th century A.C. Almost all the letters have assumed or begun to assume their modern form. However, to note some of the peculiarities of the writing, the vowel *i* differs in *īshyā*, l. 1 from that in *indu*, l. 2; and *ḍ* in *khadga*, l. 3 from that in *mandapa*, l. 13; *j* continues in its older form; see *jaya*, l. 3; *lh* in *kumbha* is more advanced than in *bhūshapa*, both in l. 2; and the letters *ch*, *dh* and *v* have developed their distinct individual shape; cf. *Dadhīchi-vaiśā*, l. 8; *gg* continues to be engraved as *gn*, as in *durgga*, l. 6, and *ṅu* is shown by a single letter marked with a slanting stroke across it, as in *Karṇa*, l. 2. *B* has a distinct form of its own, as in *babhūva* in l. 10. And finally, *r* occasionally appears in its older form as in *ruchira*, l. 13, where we find the *mātrā* marked below the letter.

The **language** is Sanskrit, which is correct; and except for the introductory *Om Om Siddhi* and the date in the end, the record is metrically composed. In all there are 22 verses, all of which are numbered. The language is fluent and the style is chaste. The poet was conversant with the works of Kālidāsa, whose thoughts are reflected in vv., e.g., 3, 6, 7, 8, 11 and 12. The **orthography** calls for no remarks other than the usual, e.g., (1) the use of the sign of *v* to denote *b* except in *babhūva*, as stated above, and in *vudha*, l. 14; (2) putting the dental sibilant for the palatal in some instances, e.g., in *yasa*, l. 13, and *vice versa* is the case in *suta*, l. 8, and *āimā*, ll. 9 and 10; and lastly, (3) *sh* is employed for *kh* in *Vaiśāsha*, l. 15. The sign of *avagraha* has been used six times, in ll. 1, 4 (twice), 5 and 8 (twice), to mark the elision of the initial *a* into *ē* or *ō*, except in one instance in *varman-ābhavat*, l. 4, to denote the *dīrgha-sandhi*. The final *m* is frequently substituted by an *anusvāra*.

The proper **object** of the inscription is to record that **Kalyānadēvi** the wife of the **Chandēlla** king **Viravarman**, built a well, called *Nirjara-kūpa* (v. 18), established a place where water was to be distributed to travellers, furnished it with a water-pot and a pavilion, and also built a Siva temple at Nandipura (vv. 19-20). The *prastāvi*, as the composition is called in v. 21, was written by Ratnapāla, the son of the poet Haripāla and the grandson of the poet Vatsarāja, and it was engraved by Rāma. The **date** of the record, as given in word-numerals in the next verse, is the Vikrama year measured by the seas (7), the moon (1), the fires (3) and again the moon (1), i.e., in the (Vikrama), year 1317 on Thursday, the 13th day of the bright half of Vaiśākha. According to Kielhorn's calculations, Thursday, the day mentioned in the record, falls on 14th April; and the Vikrama year mentioned in the inscription is taken to be the Southern expired year, which is equivalent to 1261 A.C.² The year 1317 and the date are repeated in figures in the last line, which also mentions the name of the king Viravarman and of Jētana who was then holding office.

Usually a *prastāvi* commences with the pedigree of the king in whose reign it was put up; and accordingly, the present inscription also devotes its first part comprising vv. 1-17 to this purpose. Invoking the blessings of the Ganges in the first verse and referring to the moon-born, i.e., the **Chandrātrēya** (Chandēlla) race, in the second, the inscription introduces the illustrious

¹ For the situation of the place and its antiquities, see reference under No. 112, above.

² *Ep. Ind.*, Vol. I, p. 326; also see *Ind. Ant.*, Vol. XIX, p. 373, No. 198.

ruler **Kirtivarman**, who was born in it, and adds that he was an Agastya in swallowing the ocean who was Karṇa and also Brahmā in creating the kingdom anew. We have seen above how Kirtivarman succeeded in subduing the Kalachuri king Karṇa or Lakshmiṅkarṇa, who was then bent on wiping out the Chandēlla kingdom, and after vanquishing him, stabilized the kingdom on firm grounds.¹ Kirtivarman's son was **Sallakshanaavarman**, "whose sword took away the fortune of the Mālavas and the Chēdis" (v. 4). This king is presumed to have occupied the Chandēlla throne from about 1100 to 1110 A.C.;² and his contemporary on the throne of Mālwa should be taken to be only Naravarman who was then incessantly busy with the overwhelming Chaulukyas of Gujaraṭ. We have seen that during the time of Kirtivarman the Chandēllas were well settled in the Bētwa region;³ and from there Sallakshanaavarman may have carried on a sweeping raid on some of the adjoining provinces which then formed the Paramāra territories. As for his success against the Chēdis, his contemporary on the Kalachuri throne was Yaśahkarṇa (1073-1125 A.C.), who had suffered a defeat at the hands of Naravarman's elder brother Lakshmadēva (circa 1086-1094 A.C.), as attested to by the Nagpur Museum stone inscription of Naravarman himself.⁴ We have, no evidence, however, to conclude that the success of Sallakshanaavarman against both these powers was more than a sweeping raid which did not result in any territorial gain.

The *prabasti* proceed to state that Sallakshanaavarman was succeeded by **Jayavarman** (v. 4), and he by **Prithivivarman** who resembled Prithu, the well-known legendary king, who was again succeeded by **Madanavarman**, who was constantly wrangling in the minds of his enemies (v. 5). Madanavarman's successor was **Paramardin** (v. 6), and the latter king was succeeded by **Trailokyavarman** (v. 7). The relationship that each of these kings bore to his predecessor is not explicitly stated in the present inscription, but it is known from the other records of the house. Trailokyavarman is again mentioned here as Vishnu who lifted up the earth immersed in the ocean formed by the streams of the Turushikas; and this is a reference to his temporarily recovering the Chandēlla kingdom from the Muslim invaders who had captured the fort of Kālañjara, as we have already seen above.⁵ Trailokyavarman's son and successor was Viravarman who is conventionally eulogised in vv. 8-9. Here ends the first part of the inscription, giving the account of the members of the royal house.

The second part which begins with v. 10, describes the descent of Viravarman's chief queen Kalyānadēvī. The first personage spoken of here was Chādala who belonged to the race of Dadhūchi and who was a Kshatriya (*bhuja-janna*), and his son was Śrīpāla (v. 10). The latter's son was Mahēśvara who was revered even by crown-princes (v. 11). This person married Vēsaladēvī, the daughter of Gōvindarāja, and from this union was born Kalyānadēvī, who was the chief queen of Viravarman (vv. 12-13). None of these names can be identified for want of evidence. The next three stanzas are devoted to eulogising Kalyānadēvī in a conventional way. Reverting to the main purpose of the inscription, here we are told in the usual way, that perceiving the fickleness of life, fortune and charms of youth and also that the creeper of good fame alone grows, Kalyānadēvī made this never-failing well (where the inscribed stone was found), and made the other provisions as seen above.⁶

There is only one **place-name** mentioned here, *viz.*, **Nandipura**, which, as suggested by Kielhorn, may have been identical with Ajayagadh itself. But this name of the place is not found in any of the inscriptions of the house whereas Ajayagadh is often mentioned as Jayapura in them.⁷

¹ Above, No. 113.

² As suggested by V. A. Smith in *Ind. Ant.*, Vol. XXXVII, p. 127.

³ Above, No. 113.

⁴ Above, No. 33.

⁵ See No. 141.

⁶ This is as presumed by Kielhorn. But I have seen in my personal visit to the spot that the well has a natural reservoir of water constantly trickling from the hill above.

⁷ See, *e.g.*, No. 128, l. 2.

¹ From an impression.

² Expressed by a symbol.

³ The consonant of *te* appears more like *l*.

⁴ Kielhorn read the preceding letter as *dhī*, but it has no horn on the left limb, as the other letters in this inscription.

⁵ Kielhorn translated this expression as 'a god of love to opponents', and added in a *f.n.* that 'it admits of no other interpretation, as the word *mādana* itself is one of the synonyms of *manmatha* (*op. cit.*, p. 329, n. 26). But this sense is not applicable here and we have to take the word *manmatha* in its literary meaning, *manāmsi mathnāti*, i.e., wrangling (as a thorn) in the minds of (his adversaries). In this verse, moreover, the word *tasmāt* has to be taken in the sense of *tasmādanantaram*, i.e., after him, and not from him as we know that Prithivīvarman was an uncle of Jayavarman.

⁶ The *aksharas* in the brackets have now totally disappeared.

⁷ This letter appears as *dh*. The expression *bāl = ōpi nātē* reminds us of an analogous instance of the Pāla King Gopāla III, who came to the throne when he was a child. See *Ep. Ind.*, Vol. XXXV, p. 232.

⁸ These three *aksharas* are now totally lost and Kielhorn's reading is adopted here. But possibly *mahēndrō* appears to have been originally engraved here.

⁹ The word *Vīra* in the first quarter of this verse is a contracted form of the name of the king, and following this clue, I read *vārmah* (*vārmā*) here, as the first of these letters is without a horn on its left limb, as the second in this expression.

¹⁰ Perhaps it may be read as *त्रिपुराभिभेत्ता*.

¹¹ As Kielhorn also remarked, this letter may have a *mātrā* or an *anusvāra* above. The Kāhatriya caste is fabled to have sprung from the arms of Brahmā.

¹² *Śivā* is a synonym of *Pārvatī*. Kielhorn read *śivēna* which cannot be construed here.

¹³ The consonant of the first letter may also have been *d*, and the second letter is mutilated.

श्रीजे[त]नव्यापारे ॥ श्रीमद्वीरवर्मराज्ये ॥ वैशाख(ख) शुदि १३ गुरौ¹⁴

¹ The reading is certain, but Kielhorn read *svācharitairu*, which is not possible besides that it also offends against the metre.

² This is as read by Kielhorn; but both these letters are distorted and it is possible that *-dhuqam* may have been the intended reading.

³ Read—के.

⁴ Both these *aksharas* are damaged beyond recognition and I have adopted Kielhorn's reading here.

⁵ The sense requires here something like *vidhātu*, which also suits the metre.

⁶ Kielhorn read these two letters as *gira*, which cannot be construed. The first of the letters is indistinct but *r* is certain.

⁷ The nine *aksharas* ending with *stra* are distorted and are adopted here from Kielhorn's reading. It is, however, not known why such a place needed a protection as mentioned here.

⁸ Originally *trā*, perhaps altered to *trā*, as Kielhorn observed.

⁹ The *anusāstra* is faintly visible on the impression.

¹⁰ Originally *mat*.

¹¹ The first two letters in this line were read by Kielhorn as *mahā*, but I am confident about my reading which is also applicable here.

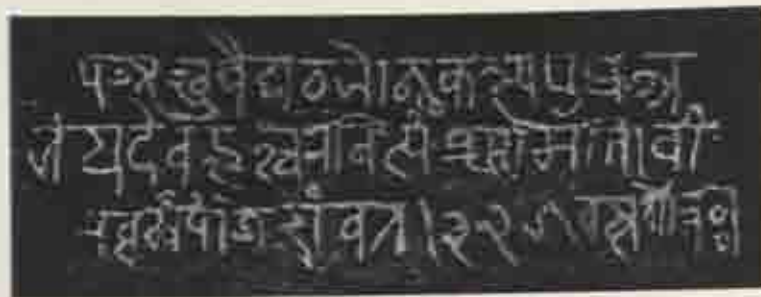

¹² The bracketed *aksharas* are now totally lost and I have adopted them from Kielhorn's reading.

¹³ The letters *sudhā* are repeated here and the first combination of them is probably struck off in the original. Moreover, the first *akshara* we have to read as *sā*. This quarter, though of the *anushtubh* class, offends against the metre *Shōka* which requires the sixth letter to be long.

¹⁴ Read *Rāūta*, or *Rānaka*.

¹⁵ Kielhorn found about eleven *aksharas* here which were illegible in his impression. The impression before me, however, shows only eight and they appear as वाचकस्य [शुभमस्तु-] The line is complete, without space for any other letter.

AJAYGADH ROCK INSCRIPTION OF THE TIME OF VIRAVARMAN, VIKRAMA 1325

From Facsimile

AJAYGADH ROCK INSCRIPTION OF THE TIME OF VIRAVARMAN, VIKRAMA 1337

Scale : Five-twelfth

AJAYGADH ROCK INSCRIPTION OF THE TIME OF VĪRAVARMAN

[Vikrama] Year 1325

THIS inscription is incised on a wall of a temple in the fort of Ajaygadh in the Pannā District of the Vindhya region of Madhya Pradesh. It was first noticed by Alexander Cunningham in 1884-85, and he also transcribed and translated the record in his *Archaeological Survey of India Reports*, Vol. XXI, p. 51 and Plate xiv-F. It is edited here from the same plate.

The record contains three lines, the last of which is slightly longer than the other two. The characters are Nāgarī of the thirteenth century A.C., to which the record belongs. But they are very badly formed, for example, the letter *va* in *prayamati* (1.2), *va* in *vatsa* and *r* in *rājē* (both in 1.3), can be recognised only by the context. **Palaeographically**, the two forms of the initial vowel *a*, one in *asva* and the other in *abhaya*, both in 1.1, go to indicate that this letter was in a transitional stage. The initial short *i*, which is the fore-runner of its modern form, shows its loop and the tail as a hook; see *īvara* in 1.2. *S* the first member of a conjunct consonant *sva* in 1.1 and 2, begins with a loop as of *ś*. As regards **orthography**, what is worth noting is that the consonant following *r* is doubled in *-varmma-*, in 1.3.¹

The **language** of the inscription is Sanskrit, which is full of grammatical and other errors. The sign of a *visarga* of the nominative singular form in *putra*, 1.1, and *Abhayadēva*, and *i(ī)śvara*, both in 1.2, have not been engraved, and in *samvat*, 1.3, the final consonant is not marked. In this word the palatal sibilant is also used for the dental. Errors in technical execution are in *Vīravarmmarājē* for the correct *Vīravarmmarājyē*, in 1.3.

The **object** of the inscription is to record the adoration of one Abhayadēva of the Vatsa *gōtra*, who was a son of *Tha* (*Thakkura*) Bhōjaka, who was expert in curing horse diseases, in the reign of **Vīravarma**, whose genealogy is not mentioned but who was evidently the **Chandēlla** king ruling in the country around Ajaygadh from c. 1247 to 1286 A.C. The record is **dated** only in figures, i.e., (V.)S. 1325 or 1268 A.C. For want of details the exact date cannot be worked out.

The name of one Bhōjaka figures in the Ajaygadh stone inscription of Vīravarma's successor, Bhōjavarman.² It is possible to identify the Bhōjaka of our record with this Bhōjaka, and the calculation of the time of both these persons would favour this view. But in the absence of any definite evidence on this point, nothing can be said with certainty.

TEXT

- 1 सिद्धम्[॥]³ अश्ववेद्य ठ भोजकस्य⁴ पुत्र(त्रः) अ-
- 2 भयदेव(वः) इ(ई)श्वर(रः) नित्यं प्र[ण]मति⁵। वी-
- 3 र्व्व(व)र्मराजे(ज्ये) [।]⁶ शं(सं)वत्(त्) १३२५ व[त्स]गोत्रः।⁸

¹ These remarks are based on the Plate given by Cunningham, which seems to be an eye-copy.

² Below, No. 150, v. 19.

³ From Pl. xiv-F in Cunningham's *A. S. I. R.*, Vol. XXI.

⁴ Expressed by a symbol.

⁵ The two strokes following the symbol probably represent the punctuation mark.

⁶ The letter *Tha* is an abbreviation for *Thakkura*. The reading of *ja* is not certain.

⁷ The syllable in the brackets is not well formed.

⁸ The letter in the brackets is badly incised; and the *daṇḍa* in the end is endowed with a top-stroke which is combined with that of the preceding one.

AJAYGAḬH ROCK INSCRIPTION OF THE TIME OF VIRAVARMAN

[Vikrama] Year 1337

THIS inscription is incised on a rock bearing the statue of Gaṇapati in relief, on the fortress of AjaygaḬh, the headquarters of a *tehsil* in the Pannā District in the Bundelkhand region of Madhya Pradesh. It was found by General Alexander Cunningham in 1883-84, and noticed by him, with a transcript of the last two lines containing the date and with a lithograph, in his *Archaeological Survey of India Reports*, Vol. XXI (1883-85), p. 52, and plate xiv-G. Subsequently, its contents were summarised by N. P. Chakravarti in the *Annual Report of the Survey for 1935-36*, p. 91; but it was not transcribed so far. It is edited here for the first time from my own transcript prepared from an inked impression kindly supplied by the Chief Epigraphist, and also from the lithograph published by General Cunningham.

The inscription consists of twenty-one lines of writing in a lined border on all the four sides, and covers a space 85 cms. broad by 42 cms. high. The height of the individual letters is about 1.5 cms. The technical execution is rather crude, betraying want of skill not only on the part of the writer but also on that of the engraver; and what is besides is that the writing has suffered considerably due to the influence of weather and peeling off some of its portions, particularly in ll. 9-17. Even in the portion that is now preserved, some of the letters can be made out only with patience and perseverance.

The **alphabet** is Nāgarī of the twelfth century A.C. The antique and modern forms of the letter *j* are to be seen side by side in *vijayaṁ jaya*, l. 7; *m* and *s* are often engraved alike; and it may also be noted that sometimes it is difficult to distinguish between the signs of *ch*, *dh*, *v* and *r*, those of *g*, *n*, *m* and those of *t* and *r*, some of the examples of these being afforded by *nāga*, l. 2, *haṁta* and *jaṅanti*, both in l. 3, and *Śrīdhara*, l. 6. And finally, the superscript *s* often appears without the tail of the left limb so as to resemble *m*, e.g., in *yasya*, l. 5.

The language is Sanskrit; and with the exception of the customary adoration to Gaṇapati in the beginning and the portion containing the date, in figures, in the end, the whole record is metrically composed. The total number of verses is 14; they are all in the *anushṭubh* metre, except the first one which is in *Indravajrā*. Grammatical mistakes are few and of the minor type.

As regards **orthography**, we may note that (1) *b* is denoted by the sign for *v*, except in *bahūva*, l. 12 and *buddhi*, l. 16; (2) the letter following *r* is generally doubled, e.g., in *kīrtti*, l. 4; (3) *prishṭha-mātrās* are used throughout, with a few exceptions as in *Sōmē*, l. 21; (4) the word *vimukha* in l. 2 is spelt with *sh*; (5) the sign of *avagraha* appears only once in l. 7, though there are some other occasions for it; and, finally, (6) the word *ujjala* is wrongly spelt as *ujvala*, in l. 10.

The immediate **object** of the inscription is to record the installation of a statue of Gaṇapati, *Vānī-Vināyaka* as the name occurs therein, by Vāsudēva, a son of Gaṇapati, who was the younger brother of Jagadvīra, the minister of Viravarman (v. 12). The family name of the king is not mentioned in the record, but he was undoubtedly the **Chandēlla** king of that name and the son of **Trailokyavarman**, as can be known from the genealogy recorded therein, from **Kirtivarman** down to him. The date of the record is expressed in the last verse, by word-numerals, viz., *Sāgara* (the ocean), standing for 7, *anala* (fire), for 3, *Vēda* for 3, and *Indu* (the moon), for 1, and thus giving the year 1337. The *tithi* is stated to be the **13th of the bright fortnight of Māgha** and the week-day **Monday**. The date is repeated in decimal figures in the end; and according to the calculations made by Cunningham, the corresponding Christian date is **3rd February, 1281 A.C.**, which fell on Monday, showing the date to be quite regular.¹

Beginning with the auspicious symbol for *siddham* and paying obeisance to Gaṇapati, the inscription has one verse to invite the blessings of the same deity. This verse is followed by a list of the names of (the Chandēlla) kings from Kirtivarman to Viravarman, as already stated above, and it records the names of ministers and the other distinguished officers, under each of

¹ Also see *Ind. Ant.*, Vol. XIX, p. 25, No. 102.

them, also showing that they all belonged to one and the same family to which Jagadvīra belonged. The names of the kings and the other officers mentioned herein may be tabulated as follows:

No.	King's name	Officer	Other details	Verse
1.	Kīrtivarman	Lakshmīdhara	ornament of the king's court	2
2.	Sallakṣhaṇavarman	Yaśahpāla	(minister of Sallakṣhaṇavarman)	3
3.	Jayavarman	Śrīdhara	a military officer under Jayavarman ; devoted to Viṣṇu & Śiva	4
4.	Prīthvīvarman	Gōkula, or Gōdāla' (?)	(minister of Prīthvīvarman)	5
5.	Paramardin'	Mahīpāla	(an officer under Paramardin)	7
6.	Trailōkyavarman	Mādhava	Trailōkyavarman	8
7.	Vīravarman	Jagadvīra	(minister)	9

The inscription further states that the minister Jagadvīra had a younger brother of the name of Gaṇapati, who is poetically called here Gaṇādhiṣa ; and he had two sons Vāsudēva and Rajapati (vv. 10-11). We further learn that Vāsudēva, who is called here *mahābuddhi* (of great intellect),² installed the image of Gaṇapati in honour of his father who actually bore the name Gaṇapati.

The inscription is closed with the date which we have already discussed above.

All the kings mentioned in this record are well known with their precise relationship in the Chandēlla house, and there is nothing new about any of them here. The importance of the present record, however, lies in the fact that it reveals for the first time the name of Jagadvīra, the minister of Vīravarman, with his pedigree for the last seven generations, as we find in some other Chandēlla records also.³

TEXT

[Metres: Verse 1. *Indravajrā*; vv. 2-14. *Anuṣṭubh*].

- 5 पाले(ल)स्ततो जातो यस्य —⁵वर्त्तनिःश्रिया । श्रीसल्लक्षणवर्म्मस्थियो निविष्टे(ष्टे?)

¹ This name cannot be distinctly read in the impression.

² Verse 6, which is not complete, may have recorded the name of Madanavarman and his minister or an officer under him.

³ What is really intended is 'of sharp intellect (*kuśāgra-buddhi*)'.

⁴ For example, see No. 149 below.

⁵ From an inked impression kindly supplied by the Chief Epigraphist and also from PL. xiv.G in Cunningham's *A.S.I.R.*, Vol. XXI.

⁶ Expressed by a variant of the symbol.

⁷ The first and the third of the letters in the line are lost in the impression and in the plate in *A. S. I. R.* and their consonants appear somewhat like *bh* and *dh*, respectively, but the whole word cannot be made out. It is also noteworthy that this foot of the verse contains one *akṣara* more than necessary.

⁸ Read नागान् । मर्त्येन.

⁹ The reading of both the *akṣaras* in the brackets is uncertain, but it appears that what was possibly intended is च करोति.

¹⁰ The reading *aula* is certain, but better restore it to —वल्—, for the sake of metre.

¹¹ This letter is mutilated. In the plate in *A. S. I. R.* it appears as *ma*, but the sense is not clear. The following निः may have been णेः also.

- 6 नाकनागकम्¹ ॥३॥ यस्ये(स्ये)न्दुश्रीधरे²भक्तिर्व(र्ब)भूव श्रीधरस्ततः । य[स्तेने]करवा-³
 7 लेन विजयं जयवर्मणः ॥४॥ गो[कु]लो भूततो⁴ धर्मो जाग-
 8 र्ति यस्य मानसे [।'] पृथिवी पृथिवीवर्मा शृ(शृ)त्वा य[र्म]वमा - - ⁵ ॥५॥ - -
 9 विश्रुत - - नुरागी - - व(र्ब)भूवतां(ताम्) । भूशोभियद्याशोभिश्च भूवनत्रयमु-
 10 ज्वलं(उज्वलम्) ॥६॥ सत्यवीरदयासिधुर्महीपालोभवत्ततः । फलं य - कु-
 11 सद्रसं(शं) ? परमर्हितः⁶ ॥७॥ [श्री]माधवः सुतस्तस्य क - णो⁷ कालर्पजरः । - -
 12 निरंजितं येन वि[त्तं] त्रैलोक्यवर्मणः ॥८॥ व(र्ब)भूव जगति ख्यातो जगद्गीर-⁸
 13 स्तदात्मजं । श्रीवीवरर्मभूपालराज्ये यो नायको मणिः ॥९॥ तस्यानु-
 14 जोगणाधोशस्तत्कनिष्ठो - णाभिघः । नासत्याविव⁹ ख्यातौ धन्यौ
 15 - - -¹⁰ कारिणौ ॥१०॥ गणपतेः सुतो ख्यातौ राघवलक्ष्मणाविव । वा-
 16 सुदेवो महाबृद्धी राजपतिर्गुणाकरः ॥११॥ मुक्तिं वं(घ)तरा
 17 भेतां समस्तपापनाशिनीं(नीम्) । गणपतिर्म[हा]बुद्धिर्गणपतेरची-
 18 कृत् ॥१२॥ [दाणकियोस]¹¹युक्तस्य गणपतेस्सुकीर्त्तये ।
 19 वाणीविनायकं नाम मूर्त्तः फलन्तु पंडिताः ॥१३॥ सागरा-
 20 नलवेदेन्दुयुक्ते संवत्सरे वरे । माघे मासि सिते पक्षे त्रयोद-
 21 श्यां विधौ दिने ॥१४॥ संवत् १३३७¹²माघ सुदि १३ सोमे ॥

¹ Perhaps something like नाकनागकनिविशेषः is intended, in the sense of 'was as prominent as Indra'.
 विनियोगे (?)

² That is, he was devoted to both Vishnu and Siva. The letters are mutilated, and it is not known if
 -न्दुश्रीधरे is intended.

³ The verticals of *वे* are jointed by a stroke as of *dhā*.

⁴ The reading of the bracketed letter is not certain; it may also have been *ह* or *हृ*. From the litho-
 graph in *A. S. J. R.*, the name appears to have been पाहुल, but nothing is certain.

⁵ Both these *aksharas* are obliterated and their consonants appear to have been *l* and *m*, respectively.
 A word meaning 'governed' may be expected here. With some hesitation Chakravarti read here the
 name Bhōja (?).

⁶ Most of the letters of the latter half of this verse are either altogether lost or partly visible. One would
 expect here the name of Madanavarman and of either his minister or his subordinate.

⁷ The traces indicate that these two *aksharas* may have been *द्राम्ये*, but the complete word cannot be
 made out so as to give some sense. The last two *aksharas* in the line may have been *nityam* or *saddā*,
 to fill in the gap.

⁸ Chakravarti read this name as Jagaddhara; but besides the fact that it would not suit the metre, I
 find the sign of the *mātrā* (of long *ṛ*) very clear in the impression.

⁹ That is, the two *Aśvins* (physicians of gods). It is unfortunate that the letters showing the names
 of the two brothers are broken here.

¹⁰ Only traces of these three letters are left. A word like *सुहृत्* which also suits the metre, may
 have been written and engraved here.

¹¹ The consonant of the first *akshara* in this line is *ḍ*, as also read by Chakravarti; but it appears to
 be the engraver's mistake who left the middle portion of the vertical in the process of carving, of which
 we have a number of examples. *Dāni-* would also give no sense.

¹² The unit figure is mutilated but the reading is certain.

No. 148; PLATE CXXXV

KĀLAÑJAR STONE INSCRIPTION OF VĪRAVARMAN

(Fragmentary)

THIS inscription was first transcribed and translated into English by Lieut. F. Maisey, in the *Journal of the Asiatic Society of Bengal*, Vol. XVIII (1848), pp. 317 ff., and some thirty-five years subsequently, it was again noticed by General Cunningham in his *Archaeological Survey of India Reports*, Vol. XXI (1883-85), pp. 38-40. Neither of these writings is accompanied by a lithograph, and the record too has not been critically edited so far. At my request, the Chief Epigraphist of the Archaeological Survey of India favoured me with a fresh impression of the inscription which showed that the record is highly weather-worn and several *aksharas* have become illegible or are completely lost owing to the flaking off of the surface of the stone, here and there, whereas some others, being damaged or obliterated, have become altogether illegible. Under the circumstances, I prefer to give below the transcript of it made by Maisey, together with my notes and occasionally taking help of the afore-mentioned impression.¹

Maisey found the record inscribed on a soft sand-stone leaning to the left of a pillar, opposite the entrance of the cave in the fort of **Kālañjar** in the *Narainī tehsil* of the *Bāndā District* of *Uttar Pradesh*.² It is at present kept in the sculpture shed in the temple of *Nilakaṭṭha* which is near by, as reported by the technical assistant who prepared the fresh impression for my use. And it is possible that during the process of shifting it from place to place, the stone, which was already a fragment of an apparently very large inscription, has furthermore suffered. It contains 51 imperfect lines. The total height of the writing is 90.5 cms., and the length of the lines is about 58 cms. in the beginning and the end, some of the lines in the middle being one or two cms. longer. An idea of the original length of the lines can be had from the writing which is now preserved; thus for example, the first line which now has 37 letters, appears to have lost the latter half of a verse in *Mālinī* (i.e., 30 letters) and the whole of a verse in the *Sārdūlavikrīḍita* metre, except 6 letters which begin the second line. And thus calculating the number of the letters which are lost, to be 30 of *Mālinī* plus 70 of the *Sārdūlavikrīḍita*, along with the signs for punctuations etc., it can fairly be conjectured that the lost portion was only slightly less than the double of that which is now available. The inscription, moreover, appears to have lost some lines at the bottom also, of which no correct estimate can be made. The height of the individual letters is about 2 cms.³

The **script** in which the record is written is *Nāgarī*; and the **language** is *Sanskrit*. Except for a small sentence saluting *Śiva*, as usual, the extant portion of the record is all metrical. The last number of the verse is 72; some of the verses are totally and some others are partially lost. Nothing can definitely be said as to the **orthographical peculiarities**, as Maisey's transcript of it suffers from inaccuracies, as already stated above. In the extant portion there is no definite mention of what was intended to record; it appears, however, to have been the setting of some images as can be judged from the last lines of it. The **date** and the other features, for example, the names of the composer and the engraver, if at all recorded in the end, are also lost.

¹ It may be noted here that Maisey's transcript is not only inaccurate but is occasionally wrong also. For example, in l. 19 he writes *pratyakshamudvīkshya* and joins the following *te* with the next word, whereas *udvīkshyatē* is the verb used here; and again in l. 28 he does not take *aphuranti* separately, as it vividly appears. Nor does he mark the double *danḍas* on either of the sides of the numbers of the verses, the existence of which can be seen in the impression. Moreover, sometimes he continues writing, without showing the breaks, what could be legible to him in the later portion of the line. All these things have made confusions in his transcript. I have, however, made some minor amendments in the text below, e.g., changing the place of a letter here and there, marking the double *danḍas*, as required, and putting question-marks wherever the sense is not clear.

² *J. A. S. B.*, Vol. XVIII, p. 193. For another record found by the side of it, see above, No. 140. For the description of the place, see above, No. 110.

³ For all these observations the impression was very helpful. It also shows some later scribbling at the top and on the proper right side of the stone. This seems to have no connection with the present inscription.

In spite of the deficiencies, however, the record is important, as will be seen by noticing its contents. After paying the formal homage to Śiva, in a small sentence, the inscription adores Kṛishṇa, as can be judged from the description given in the first verse, and possibly pays homage to some other deities also in some of the following verses, as it can naturally be presumed. Coming to the historical portion, verse 12, a part of which is now preserved, appears to eulogise (the Chandella) **Yaśovarman**, as indicated by the expression *suto yaśah*, his name along with that of his father, is lost; and his great-grandson **Vijayapāla** is mentioned in l. 7, without this relationship. The next line mentions **Vijayapāla's** son whose name is again lost but who, from the Ajayagadh inscription of **Viravarman** using almost similar expressions,² is no other than Kīrtivarman. A portion of v. 19, which is now preserved in parts, states that this king "removed (repulsed) Karna in the form of an ocean", which is evidently a reference to his conquest of the Kalachuri Karna. The same Chandella prince is further eulogised as penetrating into a part of Mālava, which is of course, a new statement indicating his victory over the army of his contemporary who was the Paramāra king Udayāditya the details of which are not known.

Verse 10 of the record introduces (Kīrtivarman's) son **Jayavarman**, who was devoted to Nārāyaṇa, and, as stated in v. 25, being weary of the government, he made the throne over to a person whose name is lost in the earlier portion, giving us only the latter part of it as "varman". This successor of Jayavarman is well known to have been his younger brother Prithvīvarman, and the clear statement that he was entrusted with the government by Jayavarman solves the whole problem of succession here. Jayavarman is also stated to have proceeded to the Ganges in v. 25, which again, is fragmentarily preserved. Verses 29-33 describe Prithvīvarman's successor **Madanavarman**, who vanquished the lord of the Gurjaras, as Kṛishṇa vanquished Kamisa. This statement appears to have a reference to Madanavarman's success over the Chaulukya king Jayasīṃha Siddharāja (1109-1143 A.C.), who, after annexing the kingdom of Mālava, proceeded to invade Kālāñjar, as recorded in the Gujarāt chronicles.

Verse 36 introduces Madanavarman's younger brother **Pratāpavarman**, who is not otherwise known. He looked after those "who were maimed, sick and distressed", and was also brave and liberal.

The names of **Paramardīn** and his son **Trailōkyavarman** are again lost in the record, but fortunately, that of **Viravarman**, the son and successor of the latter king, is completely preserved at the end of l. 22. The description of his bravery that follows is all figurative; but from v. 59 we learn that he constructed temples, planted gardens and excavated tanks and wells here and there. No definite places are shown in this description. The next verse informs us that he donated (to Brāhmaṇas) gold weighing against himself, and further we learn that he installed Nīlakaṇṭha (in the form of *liṅga*) and the images of Kamalā (Lakṣmī) and Kālī in splendid temples. He also performed sacrifices.

The composition is a *prastuti*, as the word is used in l. 30; and just following it, we find the word *Vallakīvira-nāma*. It is not known whether it was the name of the person who composed the record or the expression may be taken as applicable to Viravarman himself, meaning that he was "expert in playing on lute".³

The extant portion of the inscription ends here, leaving us in the dark as to what it may have stated below.

Besides **Gurjara** and **Mālava** which are well known, the extant portion of the record does not mention any geographical name.

TEXT

1. ओं नमः शिवाय । अनुसरति सरोषे पारिजाताय तस्मिन् सपदि किल यथार्था रोदसी संबभूव ।

¹ No. 147.

² Cf. *Trivikṣitāra* in case of Arjunavarman (*Parandāra*), in No. 47, v. 19, above.

³ From Maisey's transcript in *J. B. A. S.*, Vol. XVII, pp. 317 ff. As already observed, the reading is fragmentary and also often incorrect, but I have no means to amend it.

⁴ Metre: *Mālinī*, the latter half of which is lost. Here is a reference to the mythological story where Kṛishṇa wrested the divine tree from Indra. See *Vishṇupurāṇa*, Chs. 30-31; *Brahmapurāṇa*, Chs. 205-206, etc. The legend is the theme of a *mahākāvya* entitled *parijātāharana* by the poet Karnapūra (Mithilā, 1956).

¹ Metre: *Sārdūlavikrīḍita*, of which only six letters are preserved, and the same of the next two verses which are partly preserved. The number of the verse to be read 2, as shown by the impression in which it is slightly worn out.

² Metre of this and the next verse: *Upajāti*. The reading here is often incorrect and also offending against the metre.

³ Metre: *Sragdharā*.

⁴ Metre: *Mālinī*. Insert a *danḍa* after *jit* and at the end of the line.

⁵ Metre: *Indravajrā* or *Upajāti*. Insert a *danḍa* before *yō* in the preceding line.

⁶ Metre: *Rathādātātā*. Insert a *danḍa* after *siktayā*, as also below, wherever necessary, which have not been separately pointed out.

⁷ Metre: *Upajāti*.

⁸ Metre: *Anuṣṭubh*.

⁹ Metre: *Mālinī*.

¹⁰ Metre: *Sragdharā*.

¹¹ Metre: *Upēndravajrā* or *Upajāti*, which cannot be ascertained as the first half of the verse is lost.

¹² Metre: *Sārdūlavikrīḍita*.

¹³ Metre of this and of the next verse: *Upajāti*.

¹⁴ Metre: *Sragdharā*.

¹⁵ Metre: *Upajāti*. Probably *yuh* is intended.

¹⁶ Metre of this and the next verse which is partly preserved: *Sārdūlavikrīḍita*. Read *udvikshatē* as one word. Errors of this type are often to be found in Maisey's transcript, for which see note in the edition of this inscription.

¹⁷ This line is full of errors but I have no means to show the correct reading.

¹⁸ Metre: *Mālinī*, the half of which is not marked, as in some other cases, as already noted.

¹⁹ Metre: *Sragdharā*.

²⁰ Metre: *Sragdharā*. The first twelve letters in this line cannot be correctly construed and the last two offend against the metre. The transcript is obviously incorrect.

²¹ Metre: *Sārdūlavikrīḍita*.

AJAYGAḬH STONE INSCRIPTION OF THE TIME OF BHŌJAVARMAN

[Vikrama] Year 1345

THE stone which bears this inscription was discovered by General Steward and, according to James Prinsep, he presented it to the Museum of the Asiatic Society of Bengal. In the Catalogue of the Society Vol. XV, it is inserted as 'a stone slab from AjaygaḬh in Bundelkhand with a Sanskrit inscription' or 'a stone bull from Kālañjar with a Sanskrit inscription'. For the first time the text of the inscription, with a specimen of the letters (7 ll. facing p. 881) and a translation, was published by Prinsep in the *Journal of the Asiatic Society*, Vol. VI (1837), pp. 881 ff., and Plate XLVIII, with specimen facsimile. Subsequently, a brief account of the record was given by General Cunningham in his *Archaeological Survey of India Reports*, Vol. XXI (1883-84), p. 52, where it is mentioned that the inscribed stone existed (in his time) in the Indian Museum. The corresponding English date of it was calculated by Kielhorn in the *Epigraphia Indica*, Vol. I (1888), p. 332, n.; and D. R. Bhandarkar included it in his *List of Inscriptions of Northern India*, No. 620. The record was finally edited by H. L. Srivastava in the *Epigraphia Indica*, Vol. XXVIII, pp. 98 ff., and a Plate.⁶ It is edited here from an impression which was kindly supplied to me, at my request, by the authorities of the Indian Museum where the slab is now deposited. Later on, I also compared my reading from an impression kindly supplied by the Chief Epigraphist (No. B 245 of 62-63).

The inscription consists of 21 lines of writing, covering a space about 1.20 metres broad by 0.82 metres high. The letters are beautifully formed and carefully cut, the signs of *mātrās* being ornamentally treated. The average height of the letters ranges between 2.5 and 3 cms., except in the last line where they are smaller in size and are also partially preserved and more or less lost or damaged. Besides this, except for two and four *aksharas* respectively at the beginning of lines 18 and 19, which are totally lost due to the breaking off of the lower part of the right corner of the stone, and one or two others here and there, which are partially abraded or broken away, the inscription is in a state of perfect preservation.

¹ Metre: *Upajāti*.

² Metre: *Upajāti*. Here also Maisey's transcript is not accurate and there are metrical errors in it.

³ Metre: as above. Insert a *śloka* after *shu*.

⁴ Metre of this and the next verse: *Sragdhara*.

⁵ Though worn out, this is a letter and not the figure, as can be seen from the impression. Is it ५ ?

⁶ The transcript of the inscription published by Prinsep is full of errors to be found almost in every line, and the opening sentence showing salutation to Vāsudeva is altogether omitted by him. H. L. Srivastava also invited attention to the statement of Prinsep's Assistant pt. Kamalakanta who remarked that "he was not responsible for the various defects of grammar, prosody and rhetorics occurring in the text since he read as he saw it and copied it so." All these mistakes were corrected by Shri. Srivastava in his transcript in the Vol. of the *Ep. Ind.* referred to above.

The **characters** are Nāgarī, resembling those of the other inscriptions from Ajaygaḍh or Kālañjar.¹ As regards the individual letters, attention may be drawn to the form of the initial *a* which somewhat resembles *sr*; see *avētya*, l. 16; to the vowel *i* which has assumed its modern Nāgarī form but with the loop and the tail detached from the main body, see *iti*, l. 6; to *kh* which begins with a loop, cf. *maukhya*, l. 8; to the similarity between *ch* and *v*, either of which occasionally also resembles the left limb of *g*; see, e.g., *bibhrat* and *chakita*, both in l. 1; to *ṃ* which is marked by a single letter with a slanting bar across it; see *pūrṃya*, l. 1; to *dh*, the left limb of which shows a cornered horn joined not to the lower limb but to the top of the vertical; e.g., in *vadhū*, l. 3; to the palatal and the dental sibilants which are sometimes so formed as to show a combination of both these letters and thus cannot be easily distinguished; e.g., *sa* in l. 18, and the first of which also shows two forms as in *sruta* and *prakāsa*, both in l. 15. The letter *b* has a sign of its own, as in *bibhartu*, l. 1 and *babhāra*, l. 8, but it is often confounded with that of *v*, the loop of which is sometimes marked circular but more often rectangular.

The **language** is Sanskrit; and except for *Om namō bhagavatē Vāsudēvāya* in the beginning, which is partly lost, the date in figures in ll. 19-20 and the names of the writer and the engraver at the end, the inscription is metrically composed. In all there are thirty-eight verses, which are all numbered.² The number of the last verse is wrongly entered as 24 for 38. The verses are composed in an artistic style and the poet is fully justified in comparing the composition to 'an invaluable fabric which he has woven by fibres of letters of manifold complexion and has highly decorated it (with *alamhāras*)'. But with all this, the inscription is not altogether free from literary foibles. Though written in a fluent style, it has some grammatical errors, e.g., in the use of *vidadhan* for *vidadhat* in l. 2 (probably a scribe's mistake) and in *bhavanō* for *bhavanān* in l. 6. To note some other points, the use of the word *jantu* (creature) for a person is not happy; the expression *kshālita-kāya-sundarah* in v. 19 is inappropriate, for it is not the body but the mind that is purified by good deeds; and the long expression *mumibhyō mudam=ādadhāti* in v. 29 is used only for the sake of alliteration. Verse 22 does not admit of a proper construction. But despite this, the poem is of a high order.

As regards **orthography**, (1) *b* in some cases is denoted by the sign for *v*, e.g., in *vibhartu*, but not in *bibhrat*, both in l. 1; (2) when *r* is a superscript the following class-consonant is frequently doubled, as in *mārgga*, l. 8 and *ruchir=mmurārih*, l. 2, but not in *mūrtir=diti*, l. 1; (3) *s* is occasionally put for *ś*, e.g., in *visuddha*, l. 10, and vice versa frequently, as in *nivāsa*, l. 9. Besides these general points, the final *m* at the end of a verse or a stich is sometimes wrongly changed to an *anusvāra* though we find its correct use also; the *anusvāra* is wrongly replaced by *m* as in *samvat*, l. 19; the use of the dental nasal and *anusvāra* is seen side by side, as in *amanādayanmanādanam*, l. 14; medial diphthongs are more often expressed by the *ūrdhva-mātrās*; the sign of *avagraha* occurs only twice in ll. 12 and 17; and the *kāka-pāda* only once at the end of l. 5. Local element is responsible for writing *sēmukhī* for *sēmushī* in l. 8 and also in the forms of the names in l. 11; and finally, the sign for the medial *ā* is sometimes engraved closer to the following letter so as to appear its *prishṭha-mātrā*, e.g., in *hamalē*, l. 10, which was read as *hamāla* by Prinsep himself.

The inscription refers itself to the reign of the king **Bhōjavarman** of the **Chandrātrēya (Chandēlla) Dynasty** (v. 25). The immediate **object** of it is to record that his minister Nāna constructed a temple of Hari, or Kēśava at Jayadurga, or the fort of Ajaygaḍh, for the increase of (his own) fame (vv. 33-34). But in reality the inscription furnishes an account of the clan known as that of the Vāstavya race of Kāyasthas to which Nāna belonged, and also that of his ancestors. The inscription was composed by the poet Amara;³ and was written by *Paṇḍita* Suhaī, the son of the illustrious *Thakura* Ayan, who was in charge of the fort at Jayapura (Ajaygaḍh)

¹ For example, Nos. 143-148, above.

² The number of verses wrongly appears as 39 instead of 38 since a portion in prose showing the date in l. 20 is also numbered, as 38, and this number is continued. It is not known whether a name was given in verse 38 which is now lost. In fact, there is no sufficient space for it. But at the same time it appears curious that the father's name in v. 38 is lost (?).

³ And not Amaraṇḍī as read by Cunningham in his *A. S. I. R.*, Vol. XXI, p. 52. Similarly, *chitravarnām* in v. 36 is an adjective of the composition (*vākyaṇam*) and does not mean that it was written (on the stone) in ornamental letters, as Cunningham wrote and commented upon.

with its highway. It was engraved by Gōpala.¹ The record is dated at the end in ll. 19-20, first in word-numerals (v. 37) and then in figures in prose, as in *Vaiśākha* of the year measured by *kṣayada*, i.e., the moon (1), *Śiva's eyes* (3), *śruti*, i.e., the Vēdas (4) and *bhūta*, i.e., the elements (5). Thus the year is 1345 (Vikrama). It is here noteworthy that this method is contrary to the usual rule of reading the figures from right to left (*aukṣānāṁ vāmatō gatih*). The *tithi*, the fortnight and the week-day, if at all given in it, are lost at the beginning of l. 20.

After the customary obeisance to Vāsudēva, the inscription has as many as ten verses in praise of, respectively, Viśvanūrti (Viṣṇu), Murāri, Hari and the incarnations of the deity in the forms of tortoise, Varāha, Nṛsiṁha, Vāmana, Paraśurāma and Rāma. It then mentions the great sage Kāśyapa, who was born of Brahmā (v. 11). Kāśyapa had two sons Kuśa and Sanābha (v. 12), the first of whom was residing at Kausāmyapura (v. 13), perhaps the modern Kausāmbī (?). He was the Chief minister of a king whose name is not mentioned (v. 13). He was a renowned kāyastha and his intellect was highly esteemed by learned persons (v. 14). His family was known as Śrīvāstava as it was an abode of wealth (v. 15). In that family was born Hārūka whose son Jālihana was a resort of excellences and was like the preceptor of the gods in helping kings in their work of the world (administration) (vv. 16-17). His son was Gaṅgādharma, who possessed noble qualities and who was a devotee of Viṣṇu (*Kamalāpati*) and was therefore called Kamalē, thus signifying his name (vv. 18-19).² From him was born Mālēka, who was of pure body and possessed all merits (v. 20). Mālēka had four sons named Padmasiṁha, Ratnasīṁha, Jagasiṁha (Jagatsiṁha) and Kumarasiṁha (Kumārasīṁha) (v. 21). Ratnasīṁha had three sons who were all self-controlled (v. 22). The eldest of them was Nāna, who was handsome in form, devoid of pride, clever, a resting-place of knowledge, and because of his exalted rank he attained honour and dignity in the royal assembly (v. 23). He was minister of Bhōjavarman who belonged to the royal house of the Chandrātreyas i.e., the Chandēllas (vv. 24-25). The next four verses are devoted to glorify Nāna in a conventional poetic way and to say that he bore his name significantly. His son was Prithivīdhara (v. 30). The following two verses inform us that Nāna constructed a temple at Jayadurga and installed in it the image of Hari. Verse 35 expresses the desire that the temple may stand so long as the mountains, the earth, the gods, the seas and the Sun and the moon endure; and the next two verses furnish, respectively, the name of the poet who composed the record, and the date.³ The next verse (38) probably mentions a name which is lost. This man had two sons by his wife Champakā (v. 39). The names of these sons were Suma and Antar-nātha.⁴ They were righteous. Then follows a passage in prose which probably mentions the names of the writer and the engraver, as seen above; and wishing blessings to the builder of the temple, the inscription ends.

The genealogy of Nāna as recorded in the inscription, is of little historical interest, but what is here noteworthy is that his ancestors were hereditary ministers under the Chandēlla kings. Some of them we know from the Ajaygadh inscription of the time of Kīrtivarman which mentions Jājūka and Mahēśvara of the Vāstavya family of the kāyasthas, and also from the Mahōbā inscription of V.S. 1240 which speaks of the great and illustrious Vāstavya family, in which was born Sūhila, whose son Jayapāla composed the *prastāvi* and also constructed the temple where the stone bearing it was originally set up by Mādhyava who too belonged to the same lineage.⁵ The inscription that follows here mentions another family of the same clan, as we shall see on the proper occasion.

¹ The line giving these names is partially broken and this is what could conjecturally be culled out from what remains.

² From the construction it is not clear whether Hārūka himself was called Kamalē or he had a son of that name. I take the first of these alternatives more probable than the second, as taken by Śrī Srivastava.

³ As already stated above, this part is broken.

⁴ Here the construction which is not clear precludes the possibility of knowing the two names clearly.

⁵ Above, Nos. 112 and 136 respectively. Kielhorn and following him, Srivastava, drew attention to some other inscriptions mentioning the Vāstavya family. These records are: (1) the Mallār inscription of the Chēdī year 919 or 1167-68 A.C., (*Ep. Ind.*, I, p. 42, l. 27); (2) Set-Mahet inscription of V.S. 1276 or 1219-20 A.C. (*Ind. Ant.*, XVI, p. 62); and (3) the Garwa inscription of V.S. 1199 (Cunningham, *A. S. I. R.*, XVII, p. 254). And to this list we may add the Ratanpur stone inscription of the Kalachuri year 1207, or 1149-50 A.C. (*C. I. L.*, IV, p. 488, No. 93). Also see the word *Vāstavya* in the Index in *C. I. L.*, Vol. IV.

AJAYGADH STONE INSCRIPTION OF THE TIME OF BHĪJAVARMAṆ, VIKRAMA 1345

Scale : One-fourth

This is the first known record of the reign of Bhōjavarman of the Chandēlla house of kings, though his exact relationship with any of them is not mentioned in it. The latest known date of his predecessor Viravarman is V.S. 1342, or 1284 A.C., and from this it is evident that Bhōjavarman succeeded Viravarman sometime between these two years. It is not possible to know the exact relationship between the two rulers from this or from any other record known so far, though he appears to have been the son or a younger brother of Viravarman.¹

Of the geographical names mentioned in the inscription, **Kauśāmyapura** (l. 8) cannot be identified for want of details, though the name suggests its identification with the modern Kauśāmbī or Kōsam, on the Yamunā, near Allahabad, as stated above. **Jayadurga** (l. 17), which is also mentioned as **Jayapuradurga** in l. 20, is evidently the fort of Ajaygaḍh, as seen so often.

TEXT²

[Metres: Verses 1 and 25 *Śraḡdhurā*; vv. 2-4 and 35 *Vasantatilakā*; vv. 5, 8, 15-16, 18, 25-28, 30, 31 and 32 *Upajāti*; v. 6 *Sārdūlavikrīḡḡita*; vv. 7, 10 and 29 *Upēndravajrā*; vv. 9 and 12 *Drutavilambita*; v. 11 *Indravajrā*; vv. 17, 33 and 36 *Mālinī*; v. 19 *Firyōḡinī*; vv. 20-22, 24, 34 and 37 *Anuṣṡṡubh*; and v. 39 *Vamśasthavilā*].

¹ As already noted by N. P. Chakravarti, who also conjectured that Bhōjavarman reigned only during the minority of Hammiravarman. See *A. S. I. A. R.*, 1935-36, p. 92.

² From an impression.

³ The letters in the brackets are totally lost and the next two letters are mutilated. Originally engraved उने, corrected later on to नमो.

⁴ The consonant of the superscript of *vi* is so formed as to resemble *sh*.

⁵ The *akshara* in the brackets has totally disappeared.

⁶ These two letters are lost, leaving only the verticals of the second.

⁷ Read उद्धरि-

⁸ Originally श्रियं, later on corrected to श्रियः.

⁹ An attempt appears to have been made to correct the consonant of this letter to *t*.

¹⁰ By a wrong stroke this *akshara* appears as *gah* or *vāh*.

¹¹ There is a *kāka-pāla* sign at the end of this line.

¹² probably उद्धर-, meaning 'magnanimous', is intended.

^१ This and the preceding *akshara* which were originally omitted were subsequently written in a smaller form below the line.

^२ Above *mā*, there appears to have been the sign of *anusvara*, which was engraved at first and scored off later on.

^३ This *akshara* is engraved as *shtha*.

^४ What is intended here is *Srīvāstava* which would not suit the metre.

^५ The use of this word is not befitting here. Recast as हाकनामात्र पुमान्बभूव.

^६ Srivastava read मानव(व)न्वुः but I agree with Prinsep in my reading. The *matra* on *va* is faintly visible and the last of these *aksharas*, thought misformed, looks more like *nivah* than *ndhuh*. The reading also suits the metre.

^७ This letter has left only traces and it was read by Srivastava as *shu*, following Prinsep, but *shām* may also be equally possible.

^८ The *daṅḍas* are redundant and the *visarga* on *ya* is doubtful. Read इजीजन्तु. In the latter half of this verse the correction is made in view of the metre but grammatically it is wrong.

^९ Perhaps *जानातो* is intended.

No. 150; PLATE CXXXVII

AJAYGADH STONE INSCRIPTION OF THE TIME OF BHŌJAVARMAN

(Undated)

THIS inscription was found by General Cunningham on a slab near the Ashta-Sakti image at the Tichāwan Gate of the fort of Ajaygadh in the Pannā District of the Bundelkhand region of Madhya Pradesh.¹⁰ It was brought to notice by him in the *Archaeological Survey of India Reports*, Vol. XXI (1885-1886), pp. 47, 53 and 88 and Plate xv, and was subsequently edited by Dr. F. Kielhorn, with translation but without a facsimile, in the *Epigraphia Indica*,

¹ The *mātrā* of *nā* is mixed with the following one.

² The *dayā* is placed closer to the letter that follows it.

³ The lower parts of the bracketed *aksharas* are lost.

⁴ The letters in the brackets have peeled off and the reading of Srivastava is adopted here. While composing this verse the poet had in his mind the idea expressed in the *Naishadhīya-Charita*, I, 12, which compares Nala's fame to a cloth-piece woven by his (or his warriors') dexterity on the battle-field.

⁵ The horizontal stroke of this *akshara* is faintly visible.

⁶ Six or seven *aksharas*, which may have mentioned the *tithi*, the fortnight and the week day, are lost here.

⁷ The letters in the brackets are damaged and have been adopted here from Srivastava's transcript. But the meaning is not clear. Prinsep read सुतो सुकर्मोत्त-

⁸ The second *mātrā* on this *akshara* is partly abraded and it is not known if that too was scored off in the original. The syllable *paṁ* that follows is a contraction of *Paṁdita*, i.e., *Paṁdī*; its use in a *samāsa* cannot be grammatically defended. Perhaps we have also to read the two names as Ashan and Subāḍa, as they appear below in No. 193.

⁹ The whole portion which is in brackets is incised in smaller letters which are not very clear in the impression and here I have adopted Prinsep's readings as also done by Srivastava. The first seven *aksharas* are probably to be amended to — केन निमित्तां वृत्तिं

¹⁰ For the situation of this place and its description, see above, No. 112.

Vol. I (1888), pp. 330 ff. The record is edited here from a fresh and excellent impression which I owe to the kindness of the Chief Epigraphist, Archaeological Survey of India.

The inscription consists of 16 lines of writing, and covers a space measuring 2·8 metres broad by 64 cms. high. The average height of the letters is about 2·5 cms, which, with the *mātrās* above, reaches up to 4 cms. The last of the lines, which is engraved close below the beginning of l. 15, in very small characters, is only about 30 cms. long and some of the letters in it are lost whereas some others are not clear in the impression, though, possibly, they can be read with certainty on the original stone.¹ Besides this, the penultimate line, which shows a peeling on the surface of the stone, has completely destroyed eight *aksharas* at the commencement and the four that follow them are visible only in their lower parts. Leaving off these breaks, however, the record is in a tolerably good state of preservation. The letters are beautifully formed and neatly engraved, but we also note a number of mistakes when the original engraving is altered and also that the sign of the *visarga* and of the vertical strokes are often omitted, as pointed out in the text, below.

The characters are Nāgarī. They closely resemble those of the immediately preceding inscription which too was discovered at the same place and was incised near about the same time. Thus they naturally share the same peculiarity in their formation, but to mention some other points, the *akshara* *ñ* has developed its dot, e.g., in *saṅgha*, l. 2; *p* is frequently confounded with *y*; see *tulya* written as *tulpa* in l. 7, and vice versa, *satya* as *satpa* in l. 10; the slightly differing forms of *s* may be noted in *āsa*, *saṅgha* and *śaśi*, all in l. 1, *saha* in l. 5, and *samara* in l. 6; and lastly, *h* is often devoid of its left-hand stroke, as in *mōha* and *hubara*, both in l. 4.

The language is Sanskrit; and except for a short sentence showing adoration to Kēdāra (a form of Śiva), the whole record is in verse. In all there are thirty-two verses which are all numbered. The language is no doubt fluent, as also remarked by Kielhorn, but the composition is not of a very high order, as can be known from mistakes of grammar, prosody and rhetorics occurring therein. For example, *śat-triṃśatiḥ* or *-taḥ* is used for *śat-triṃśat* and *samadhigamya* for *adhigamya*, in ll. 1 and 2 respectively; *yuhtaḥ* for *niyuktaḥ* in l. 5; *niśpati* for *niśapati* in l. 4, and *krīyatām* (or *kāryatām*) in l. 15, which cannot at all be grammatically defended. The expression *nalini-gaṇatā* in v. 7 is less known and possibly wrong: a redundant *cha* occurs in v. 28, *tu* in v. 10; *saṁ* is very often used; and the word *sadā* has been put not less than ten times in vv. 6, 11, 12, 13, 15, 17, 24, 25, 27 and 29. Verses 4, 19 and 20 do not admit of a proper construction, as to be shown below while giving the text; and lastly, redundant words are often put up merely to fill up the verses, e.g., *kalpā* in v. 2, *āśu* in v. 7, *loka* in v. 10 and *mōksha-kārī* in v. 11.

As regards **orthography**, we note (1) the use of the sign of *v* for that of *b* as in *vuddhi*, l. 14, though the latter has its own sign, e.g., in *prabāhhūva* in l. 6 but not in *hubhūva* in the same line; (2) a confusion between the use of *l* and *s*, e.g., in *-praśūna*, and *subha*, both in l. 6; (3) a class-consonant under a superscript *r* is generally doubled, as in *kanḍarppa*, l. 1; and (4) the *prishṭha-mātrās* are mostly used. Besides these, the sign of the *jihvāmūliya* and that of the *upadhmanīya* occurs each once in l. 2; the *avagraha* has been used only twice in ll. 6 and 7 where its form slightly differs from each other; the influence of the local element is to be seen in the use of *sh* for *kh* in *-ākshyō*, l. 8 and *prakshāta*, l. 14; and in *vigraṇajya* in ll. 8 and 10. And lastly, *vāgmin* is spelt as *vāḍigmin* in l. 13 and *ujjala* as *ujjala* in l. 9. The *hāka-pada* sign is occasionally used.

The proper **object** of the inscription is to record the construction of a temple by Subhata, the Superintendent of the treasury of the king Bhōja, or Bhōjavarman as it would appear from vv. 28-31, and that this shrine was dedicated to the god Kēdāra, as we also know from vv. 28-31 and from the introductory salutation and v. 1. But this main object is only very briefly stated in the inscription which gives a detailed account of the clan to which Subhata belonged, i.e., the Vāstavya race of the Kāyasthas some of the members of which held high position under the Chandēlla kings. The record is **not dated** and moreover, it is abruptly closed; and it may rightly be presumed that the concluding portion thereof may have been continued on a separate stone which is not forthcoming. It may have contained the description of the temple, wishing

¹ I have, however, succeeded in deciphering most of these *aksharas* which Kielhorn found illegible in the impression supplied to him. See the last *fn.* in the text below.

it to stand for ever, the date and the names of the poet and the engraver.¹ However, to judge from the characters and also from the fact that it was set up by a counsellor of the king Bhôjavarman of the Chandëlla Dynasty, the record may be assigned to the short period between 1286 and 1289 A.C. when this king was occupying the throne, and thus it belongs almost to the same time as of the one dealt with here, immediately before.

After the customary salutation to (the god) Kēdāra and a verse paying obeisance to the same deity, the inscription introduces the Kāyastha clan of the Vāstavyas which is here said to have originated from Vāstu² himself, who was residing at Takkārikā, the foremost among the thirty-six towns, where dwelt the people of the writers' caste, and which, by the crowds of its residents, was made to resound with the chants of the Vēdas (vv. 2-4). One of the descendants of Vāstu was Jājūka, who was proficient in all the sciences and arts, and was endowed with the title of *Thakkura*; and he was entrusted by the invincible king Gaṇḍa with the work of superintending all the affairs (of the State) and (for this service), to enjoy the village of Dugauḍā, granted to him by means of a copper-plate (v. 7). The record further informs us that one of Jājūka's descendants was Māhēśvara,³ who assisted Kirtivarman, the crest-jewel of the princes, in the Yellow-Mountain districts, and in recognition of this service, he was appointed an officer to guard the *viśikhā* (high-road) of Kālāñjara and also enjoyed the donation of the village Pipalāhukā (vv. 7-9). Māhēśvara spoken of here is evidently identical with his namesake who is mentioned, along with Jājūka, in the undated Ajaygadh inscription of the time of Kirtivarman; and the details about both these persons are all recorded in the same inscription, as seen above.⁴

The inscription proceeds to state that in course of time one Gaṅgādhara was born in that family; he was a favourite counsellor of the king Paramardin who entrusted him with the high office of a chamberlain (v. 10). Gaṅgādhara's younger brother was Jaṃbādhara, who took delight in deeds of war (v. 11). They had a younger brother named Mālādhara who too was a great hero (v. 12). In course of time was born in that family one Ālhū; he was full of energy and was entrusted with the administration of (guarding) the streets (*pratōli*). He lived happily in the fort (v. 13). Ālhū's son was Subhata, whose son again was Vidana, who was a store-house of knowledge; he was entrusted by the king whose name is not mentioned, with the affairs of the realm (vv. 14-15). Vidana's son was Vāsē, who possessed excellent qualities of influencing people, and the king Trailōkyavarman appointed him to the high office of guarding the fort with endowments of the village of Varbhavāri (vv. 16-17). This officer is described as having established Trailōkyavarman's kingdom by killing in a battle the irresistible Bhōjūka, who, seized with the frenzy of war, was rendering the kingdom into two (vv. 19-20). This Bhōjūka, as suggested by Kielhorn, may have been identical with the *Thakkura* Bhōjūka, father of Abhaya-dēva of the Ajaygadh stone inscription of the time of Viravarman, dated 1268 A.C.⁵ But there is no definite evidence to prove this identity. However, the expression that "Bhōjūka was rendering the kingdom into two" goes to suggest that he was an internal enemy who had gained considerable importance at that time.

Vāsēka's younger brother was Ānanda, who was then an officer in charge of the fort of Ajaygadh (Jayadurga) and who had brought under control the Bhillas, the Sabaras and the Pulindas who were then residing there (vv. 21-22). He was a great warrior and a zealous devotee of Durgā; and he is also said to have been liberal, righteous and skilled in the use of weapons (vv. 23-25). His sons were Gōpati, Mahi(hi)pāla and Subhata. The last-named person is stated to have been virtuous, a leader of the eloquent and possessed praiseworthy character; and was

¹ Here we may cite the instance of the Udaipur *Prabasti* (No. 24), the latter portion of which was engraved on a separate stone discovered later on.

² The word *vāstu* means the site of a house or a building and here it probably denotes Viśvakarman, the architect of gods. Vāstavya originally means a resident, for which, cf. *purvāsyā vāstavya-kuṣumbitān yayuh, Śilpāpāradhā, I, 66.*

³ The vowel of the first syllable being lengthened here evidently for metrical purposes. The name occurs as Māhēśvara, above, in No. 112, v. 7, and Jājūka in *ibid.*, v. 5.

⁴ Here the reading is *Kālāñjarasya viśikhābhūdhānaḥ* and in No. 112 *dvāraṇavādhikāraṇi* (v. 8). Evidently both these expressions mean the same thing, particularly in view of the fact that the main gate of the fort along with its adjoining streets had to be carefully watched by a strong guard, because of its strategic importance. Thus the word has to be taken as *viśikhā* and not *viśikha* as read by Kielhorn who was unable to explain it. However, *viśikha* appears to denote the commander of the fort.

⁵ Above, No. 146.

the chief Superintendent of the treasury and a counsellor of the illustrious king **Bhōjavarma** (vv. 26-29).

The next four verses are devoted to eulogise Subhata, but the description is all conventional. Verse 31, which is now partially lost, states that 'considering the world to be a resort of three kinds of pain, and wealth to be as unsteady as the motion of a swing, and also that it is religious merit which alone accompanies a man when he enters another body, and that fickle is the life of man', he ordered a temple to be built.

The inscription is silent as to the place where the temple referred to here was built; but there is no doubt that it was Ajaygadh itself where the inscribed stone was discovered. That the temple was dedicated to Kēdāra is evident from the opening stanza and the verse following it, as we have already seen.

The next verse (32), where we naturally expect something more about the temple, leaves the purpose in hand and states that Subhata had three sons, two of whom were Kīrtirāja and Kumāra, and the name of the third was Harirāja, as I see in the next line which is shorter and in smaller letters and which looks more like a continuation. This line cannot be completely deciphered, as stated above, and in what connection these three sons of Subhata are mentioned is also not known. It is however possible that this portion, which may have said something more about the temple and may also have furnished the names of the poet and the scribe, was perhaps continued on another slab which is not forthcoming, as we have already remarked.

The Chandēlla kings mentioned in the present inscription without speaking about their mutual relationship, are Gaṇḍa, who is eulogised in v. 6, (his great grandson) Kīrtivarman in v. 9, (his seventh descendent) Paramardin in v. 10, (his son) Trailōkyavarman in v. 19, and lastly, (his grandson) Bhōjavarma in v. 29. The description, though written in an artistic style, is merely conventional and provides no historical information which is new, except in the case of the wise Vāsē or Vāsēka, who is stated to have killed in a battle the irresistible Bhōjūka, as seen above, and about his younger brother Ānanda who was the governor of the fort and subjugated the wild tribes (v. 22).

As for the **localities** mentioned in the present inscription, **Takkārikā** the original home of the Vāstavya family of the kāyasthas (v. 2) cannot be definitely located as there are several places mentioned by this name, as seen already.¹ However, in view of its being in the neighbourhood of the place of the inscription, it may probably be the same as situated either in Bihār, near Gayā, or in the modern Uttar Pradesh.² **Jayadurga** (vv. 17 and 24) is evidently the fort of Ajaygadh in the Pannā District of Madhya Pradesh, where the stone was discovered, while **Kālanjara** (v. 11) has already been shown to be the place of that name in the Bāndā District of Uttar Pradesh. The village **Dagaṇḍā** (v. 7) is perhaps identical with Digaurā, as already remarked, and **Pita-śaila** is the same as the hills known as Pitadri or Pēt hills in the Ṭīkamgaḍh District of Madhya Pradesh.³ The rest of the places, *viz.*, **Pipalāhikā** (v. 9) and **Varbhavari** (v. 17) cannot be identified. The first of these names occurs also in No. 112 above, in its last verse, and the second is probably the same as Vadavāri, mentioned in No. 126, l. 8.

¹ See above, No. 51 (p. 179).

² *Ibid.* It may also be noted that the Kaṣas-Budrukḥ grant of Bhīllama III of the Yādava house mentions this place as situated in Madhyadēśa (*Ind. Ant.*, Vol. XVII, p. 121) which roughly corresponds to the modern Uttar Pradesh.

³ See above, No. 112.

¹ From an impression.

² Denoted by a symbol.

³ The vowel-sign of the bracketed letter is indistinct and the expression has to be taken in the sense of *vidhīta-Kēdāra-rūpaya*, as already remarked by Kielhorn who gives the parallel example of *dēha-baddha*.

⁴ This expression, which grammatically cannot be defended, is used for metrical exigencies and *ti* is not changed to *tē* in the original, as supposed by Kielhorn. This appellation is better known by its modern name Chhattisgaḍh which signifies (the region or country of) thirty-six forts but not cities, as Kielhorn also remarked. But though the word *gaḍh* primarily means a fort, in its secondary sense it may be taken to denote a town which was thus fortified. The word *karana* that follows is used to denote the occupation of a Kāyastha. It also means a document, for which see *C. I. I.*, IV, p. 150, l. 35.

⁵ In many cases in the record the sign for *b* and *v*, though separate, are not distinguishable. Also see *tirōbhāva* in v. 27, below.

⁶ The *anusvāra*, about which Kielhorn was doubtful, is clear in the impression before me, though indistinct in the Plate.

⁷ A *kāka-pada* sign is engraved here. The fourteen *vidyās* referred to here are the four *Vedas*, the six *Vēdāngas*, the *Mīmāṃsā Nyāya-Dharmaśāstra* and the *Purānas*.

⁸ The word *dharma* has to be taken here to denote a title or a distinguishing feature.

⁹ Originally *āvādhya* and later on the sign of the *mātrā* put above the second letter. The word *tāmra* is used here in the sense of *tāmra-paṭṭa*, a royal grant, authorising him to enjoy the village. Cf. *śāsana* in v. 6 of No. 112 above.

¹⁰ Originally *वाङ्मय* with the superfluous *ma* struck off later on. *Nisī* is wrongly put here for *nīśā* which would not suit the metre, as also *ṣ* lengthened in the fourth foot.

¹¹ Originally *saṃtām*, with the *mātrā* of *tā* scored off later on.

¹² Originally *कुञ्चकतया*, which is later on corrected. This one and the preceding two errors have also been noted by Kielhorn. Also read *niyukta* in place of *yukta*.

¹³ The reading of *sa* is certain, but the metre requires this letter to be long, e.g., *nityam* which also gives the same sense.

- 6 कालञ्जरे युयुधतुर्विशिखाच्छलेन¹ ॥११॥ तथैव मालाघरनामधेयस्तस्य द्वितीयोऽजनि वीरमुख्यः । सुरैः सदा कल्पतरुप्रशू(सु)नैरभ्याच्चितो यः समरेषु रेमे ॥१२॥ क्रमेण तस्मिन्प्रबभूव धीर आल्लू प्रतोलीरुचिराधिकारः । येनावरुद्धे कलुषे वृषेण सदैव रेमे रभसेन दुर्गे ॥१३॥ तस्यात्मजश्चापि व(व)भूव रम्यः सु(शु)भान्वितः सो(शो)भन-

¹ Kielhorn doubtfully read *-kulēna* and stated that the construction is wrong. But the bracketed *akshara* appears to be *chha*, as was also guessed by him. The lower parts of both the consonants are joined, and thus it is not *ku*. The expression means *visikhāyām* (on the highway) or *visikhābhīh* (with arrows). For this use of *chhalēna* cf. *parikhā-valaya-chhalēna* and *parikhā-kopaja* in the *Naishadhīya-Charita*, II, 95 and 79, respectively.

² Read *-nūmadhēyē*. The correction appears to have been made in the original, as also noted by Kielhorn.

³ Originally *vā*, with the second vertical scored off by two horizontal strokes. The idea of connecting *vā* with the name *vāṣṭ* is peculiar. *Ara* in this verse is also unnecessary.

⁴ A *kāka-pada* symbol appears here and also at the end of the next line.

⁵ The construction in this verse is faulty, as the verb which is used in the active voice in its first three quarters is suddenly changed to the passive in the fourth.

⁶ As also noted by Kielhorn, the verse does not admit of a proper construction. Besides, the redundant use of words may be noted in the second quarter and in *Kailāsa-vāsōpanē*, which means only *Kailāsa*. Here *atī* is misplaced.

⁷ Possibly *ā* is changed to *a* in the original, as also noted by Kielhorn.

⁸ The consonant of this letter is deformed and a part of it is lost in a scratch on the stone. But it is definitely lingual and not dental as read by Kielhorn. Compare the form of this letter in *-aṅganēshu* and *-anaishit*, which is unlike that of *s* occurring in *tāsu sakalāsu kalāsu* in the same line. *Ashau* appears to be the name of his son.

⁹ Read *प्रबलासुरौच्चव्विध्वंसनी* *Rouchcha* is altered to *rūchchhai* and *sa* to *si* in the original, as also noted by Kielhorn.

¹⁰ A *kāka-pada* sign is engraved here.

¹¹ The sign as above. The name *Mahipāla* is changed to *Mahipāla* in the first foot of this verse is probably for metrical exigency.

CHARKHĀRĪ COPPER-PLATE INSCRIPTION OF HAMMĪRAVARMAN

[Vikrama] Year 1346

THIS is one of the four inscriptions edited for the first time by Rai Bahadur Hiralal in the *Epigraphia Indica*, Vol. XX (1929-30), pp. 125 ff. The plates of all these records are known to have been found in the possession of the Ruling Chief of **Charkhāri**, an old State in Bundelkhand, which has later on integrated with the modern Uttar Pradesh and is now the chief town of a *parganā* in the Hamīrpur District in it. The provenance of the plates is unknown; but as we further learn, they were all received, through the Director-General of Archaeology in India, by Hirananda Sastri, who was then the Government Epigraphist and who supplied their impressions to Hiralal for editing the inscriptions. But excepting the present one, none of the records edited by him is accompanied by a facsimile. The inscription on the present plate is edited here from an impression which was subsequently prepared and which I owe to the kindness of the Chief Epigraphist.¹

The inscription is incised on one side only, of a **single copper-plate**, measuring 29 cms. broad and 21.5 cms. high. All round the plate there is a flat rim, about 1.2 cm. broad, fastened on very tightly by twenty rivets (five on each side).² The weight of the plate is recorded to be 48 *tolas*, i.e., 559.86 grams. From the impression the plate does not appear to be well preserved. Its surface has been corroded here and there, resulting in the loss or damage of a few *aksharas* making their forms indistinct. The inscription consists of twenty lines of writing, the last of which is only 6 cms. long. In the middle of the first four lines is engraved the figure of the

¹ The *māyā* of the letter is perhaps struck off in the original.

² The prefix *ā* in *ābhāra* is redundant.

³ Either of these words would have denoted the intended sense and one of them is superfluous.

⁴ The reading of the bracketed *akshara* is doubtful.

The impression shows that the first two of these *aksharas* may have been altered to *kārya* in the original. But *Kāryatām* is equally wrong as *kriyatām*.

⁵ Here the inscription ends abruptly and the next line which is in smaller letters reads [ह]निराजी रजो—
(जो)मन्तोमवरव(वप्रय)अर्णैः । [सु]तो(सौ)लः क

⁶ It is his No. A-48 of 1956-57. The impression from which Hiralal edited the inscription must evidently have been taken some time before 1929-30 when his article appears in the Vol. of *Ep. Ind.* for that year.

⁷ The rivets appear to be thick as can be judged from their marks on the impression, and the one in the middle of the top of the plate appears to have been lost probably making Hiralal conjecture the vacant place for a ring-hole.

four-armed goddess **Lakshmi**, seated on a lotus and holding lotus-flowers in both of her upper hands which are raised, and a water-pot on the palm of each of the remaining two.

The **characters** are Nāgarī, but, to judge from the impression, there are cases where the exact forms of the letters cannot be clearly made out. For example, besides the fact that *ch* is almost similar to *v*, the form of this letter is often confounded with that of *r*, as in *vīra*, l. 2, that of *d* with *h*, as in *vadi*, l. 13, and that of the dental *s* with the palatal *ś*, as in *Viśvēsvara*, l. 1, and occasionally also with that of *t*, e.g., in ll. 3 and 6 where the two letters appear as *tyādi*, as they may have been intended to be, but the same also appear as *sāhi* in l. 5. This sort of confusion here and there is also responsible for the fact that some of the letters cannot satisfactorily be deciphered in l. 14 and l. 15, as to be seen in the transcript.

Nor is the mechanical execution satisfactory. The interiors of most of the letters show marks of the working of the tool of the engraver, who has also deformed some of the *aksharas*, e.g., *bhrājishṭu* in l. 2 is engraved as *pnū*, by omitting the slanting stroke which distinguishes *sh* from *p*, and *rāja* in l. 4 has become *saja* by a redundant stroke between the letter *r* and the vertical following it, *matpara* in l. 4 is engraved as *masana*, and *sahasrā* in l. 17, as *mahapā*. Occasionally the upper curve of the medial *i* is omitted, as also the sign of the *visarga*, as in ll. 11-12. The writer too is equally responsible for commissions and omissions; for example, he wrote *panyantān* as *prajantān* in l. 10, *Bhārdvāja* for *Bhāradvāja* in l. 13, and has made confusion between *r* as a superscript and a subscript, e.g., by writing *tartta* for *tatra* in l. 2 and *svagra* for *svarga* in ll. 17 and 19, by omitting some words from the draft, as in l. 12, by putting unnecessary punctuation marks as in ll. 3-7, and occasionally marking the same as to appear signs of *prishṭha-mātrās* or of the secondary *ā*. Mistakes of the writer who possessed only a smattering of Sanskrit, and also of the engraver who appears to have been a novice, are to be noted throughout the record, as pointed out in the notes to the text.

The **language** is Sanskrit, full of errors as stated above; and with the exception of the first verse which generally occurs at the beginning of the Chandēlla grants and four customary and benedictory verses at the end, the record is in prose. The first verse is not numbered and the last four are numbered from one to four. With respect to **orthography**, we note (1) the use of the dental *s* for the palatal *ś* in many places, and *vice versa*, occasionally, e.g., in *subha*, l. 13 and *sakala* (for *sakala*), l. 8; (2) the doubling of a class-consonant, e.g., in *karmma*, l. 19; (3) denoting *h* throughout by the sign for *v*, e.g., in *brāhmaṇa*, l. 9; (4) showing the medial diphthongs by the *prishṭha-mātrā* here and there; (5) the use of the dental nasal for the lingual in *punya*, l. 19, and *vice versa* in *saṃkalpēna*, l. 15, and writing *ujjala* with a single *j* in l. 1, *kṛmi* as *krami* in l. 18; (6) not marking the consonant *t* in *sanvat*, l. 13, but on the other hand, wrongly marking it in *anudhyāta* in ll. 4-6. And lastly, it is interesting to note that the *visarga* after *bhi* in *rājabhīh*, l. 16 and *pitṛibhīh*, l. 18 is changed to *s* before the same letter.

It is a royal charter issued by the illustrious **Mahārāja Hammiravarmmadēva** of the **Chandēlla** house; and its **object** is to record the donation of the village Kōkaḍa or Kīkaḍa (?) in the Vēdēsaittha (nya?) *vishaya*. The donees were two Brāhmaṇas, who appeared to have been brothers, *viz.*, the *Paṇḍita* Śrīdhara and the *Paṇḍita* Ābhē of the Bhāradvāja *gōtra*, and the sons of Sahila, grandsons of the *Thakkura* S(S)ubharāja and great-grandsons of the *Thakkura* Vidyādhara.¹ The grant was made on **Sunday, the twelfth tithi** of the **dark fort-night of Bhādrapada of the (Vikrama) year 1346**, when the *nakshatra* was Pushya. The *tithi* and the year are expressed in numerical symbols only, and the day has been calculated by Hiralal to regularly correspond to **Sunday, the 11th September, 1289 A.C.**² The charter was written by the *Paṇḍita* Raun (Rāma) pāla. It does not contain the sculptor's name.

After an auspicious symbol followed by the verse eulogising the Chandrātṛeya (Chandēlla) dynasty of kings, the document mentions the names of **Jayaśakti** and **Vijayaśakti** who were the earliest rulers belonging to it. This portion has been copied *verbatim* from the earlier records of the house. The document then proceeds to trace the pedigree of the ruling king, Hammī-

¹ The text here is corrupt and for the precise relationship of these persons, see *f.n.* to the transcript.

² Hiralal has also noted that the twelfth *tithi* commenced on Sunday at 98 but the *nakshatra* Pushya ended on that day at 23. Thus, his calculation, which is for the *amānta* Bhādrapada, presents a difficulty. And hence I prefer to accept the calculation of Chakravarti, according to whom the corresponding date would be the 14th August, 1289, following the month as *pūrnimānta* and showing all the details correctly.

ravarman, the first person named here being **Paramardin**, who was succeeded by **Trailōkya-varman**, he by **Viravarman**, and he again by Hammīravarman. The names of the three predecessors of Hammīravarman are known to us from the Charkhārī grant of Viravarman, of V.S. 1311,¹ but curiously enough, we note here the omission of the name of Bhōjavarman who was the immediate predecessor of Hammīravarman, as we know from the two inscriptions from Ajay-gadh, one of which bears the date V.S. 1345 or 1288 A.C.² and was incised only a year prior to the present record. And the only reason that can be inferred for this deliberate omission, as it would appear, is that Bhōjavarman may have been either an elder brother of Hammīravarman,³ and thus being a collateral, his name was omitted, or he was a rival, the definite relationship being unknown from any other record discovered so far.

Attention may also be drawn to the titles attached here to all the names of the predecessors of Hammīravarman and to those attached to his own name. Each one of his predecessors is called the most worshipful (*parama-bhāṭāraka*), the supreme king of *Mahārūjas* and the supreme lord. The two *aksharas* following the last of the titles were read as *sāhi* by Hiralal, who remarked that "the title *Sāhi* against the names of all these kings indicates the growing Muhammadan influence".⁴ But in the text below I have pointed out that the reading in all these cases appears more likely to be *-tyadi*, i.e., *ityadi*, the vowel *i* being changed to the medial *ē* along with the previous *a* and attached to the previous letter, by *guṇa-sandhi*. No Indian ruler who is proud of his own heritage and his hereditary titles would of his own accord like to attach a Mohammedan title to himself or to his predecessors' names. I am also unable to agree with Hiralal in his observation that in his own case Hammīravarman 'has left the grandiloquent title of the *Mahārūjādhirāja Paramēśvara*, which he duly attached to his predecessors; and inferring therefrom 'that he was fully conscious of his reduced position';⁵ since the expression *rāj-āvalī-tray-ōpēta* in l. 7 would point to the same, i.e., the two great titles stated to have been left by Hammīravarman in his own case.

This is the only known grant of Hammīravarman, the last known ruler of the Chandēlla house, and issued in the same year V.S. 1346 which is also the known year of his predecessor Bhōjavarman,⁶ indicating that Hammīravarman's accession took place in the same year. This ruler also seems to have retained his hold over the fort of Kālāñjara when this grant was issued.⁷ This hold continued for about twenty years, i.e. up to 1309 A.C. when we find the neighbouring region under the sway of the Mohammedans, as we are informed by a Satī record found in the Damōh District and mentioning the name of (the Sultān) Alauddin as the reigning king.⁸

Of the **geographical places** mentioned in the inscription, **Kālāñjara** (l. 7) is evidently the same as the modern fort of the name occurring in the several grants of the Chandēllas, as we have often seen. The other places I am unable to identify.

[Metre: Verses 1-5 *Anuṣṭubh*].

1 ओं¹⁰ सिद्धिः ॥ जयत्याह्ला(ह्ला)दयन्विस्वं विश्वेस्व(स्व)रशिरोधृतः¹¹ [1^{*}] च्चे(च)द्वात्रेयनरेद्राणां वंशस्वं(स्व)द-

¹ Above No. 144.

² Above, Nos. 149-150.

³ As presumed by Hiralal, which may be plausible but there is no definite evidence to confirm his presumption. In this connection, also see our remarks above, on p. n., that Bhōjavarman was possibly a younger brother of Viravarman, and thus also his name may have been omitted in this grant.

⁴ *Ep. Ind.*, Vol. XX, p. 151.

⁵ *Ibid.* Hiralal also guessed that the Hamūrpur District in which Mahōbā, the civil capital of the Chandēllas, is included, derived its name from this ruler. This appears plausible; and in view of it we may also hold that the Chandēlla kingdom at that time was bounded on the north by the Yamunā in the region where the Bētṅwā meets it and where Hamūrpur is situated.

⁶ Above, No. 149.

⁷ As known from the title.

⁸ *Ep. Ind.*, Vol. XVI, p. 11, l. n.

⁹ From an impression.

¹⁰ Expressed by a variant of the symbol.

¹¹ Here, as also in several cases below, it is difficult to distinguish between the signs of *s* and *ś*.

¹ The punctuation sign, as some other below, is superfluous. The two letters that follow are distorted.

² The two bracketed *aksharas*, which also occur below in ll. 5 and 6, were taken by Hiralal as *sāhi*, but to me they appear to be as in the transcript. In each case, as we note, the immediately preceding letter has the sign of the medial *ē* before it, showing that it is a change of the vowel *i* of the complete word *ity-ēdi*. Besides this we have also to note that the engraving in this plate was done in a slipshod manner, for the sign of *d*, see *Pēḍē*, l. 9, *-dēḍē*, l. 7, and *vadi*, l. 13, where it is formed as almost resembling *h*.

³ The *akshara* has a redundant curve attached to its vertical, and the inner slanting stroke of *sh* is cut as a loop making the *akshara* appear as *kh*. The following *da* is also misformed.

⁴ A redundant sign of *anusvara* above the letter *vē* was at first cut and may have been subsequently struck off in the original.

⁵ This is as suggested by Hiralal, but he has not explained how the third case would be construed with *maih* that precedes. Read—*महिः । प्रसभः ।* The reading of the last letter of the name that follows is uncertain, since it can also be read as *nya*.

⁶ The first *akshara* of the name is indistinct and it was written after scratching off another which was engraved originally. Its reading by Hiralal is adopted here; in fact the space shows that not one but two *aksharas* were engraved here.

⁷ Read *ग्रामोपगतान्*, as already suggested by Hiralal.

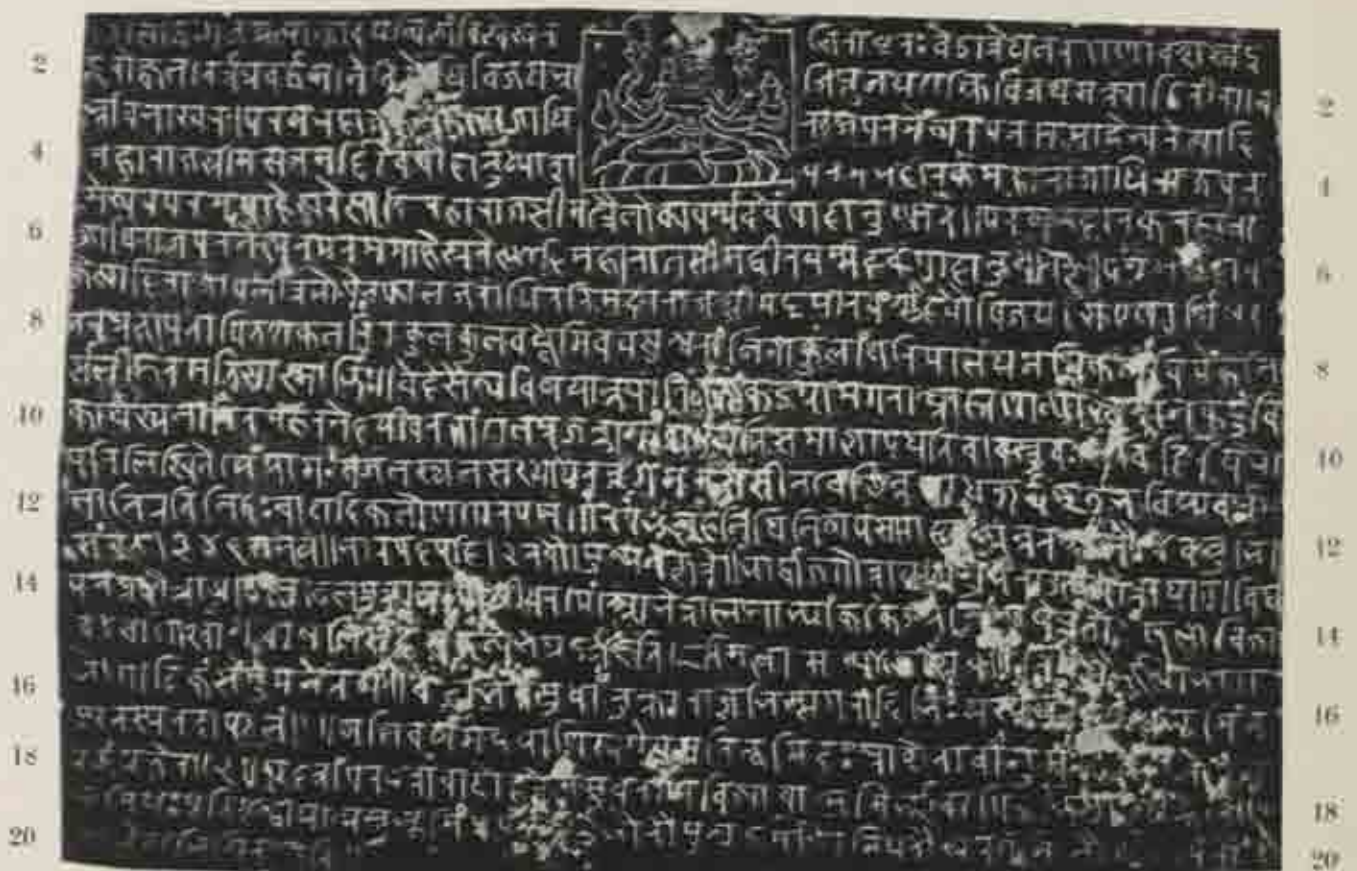

⁸ Read *पर्यन्तान्*. It may also be noted that *nāpita* and *dāyara* are newly added here and *dāta* and *vaidya* occurring in the preceding inscriptions are dropped.

⁹ The *akshara* *ma* is inadvertently repeated here.

¹⁰ These corrections and additions are as suggested by Hiralal; but the word *sahitah* should be taken at the end of l. 12. No *sandhi* is made in this portion; and the punctuation marks, as already stated above, are all redundant.

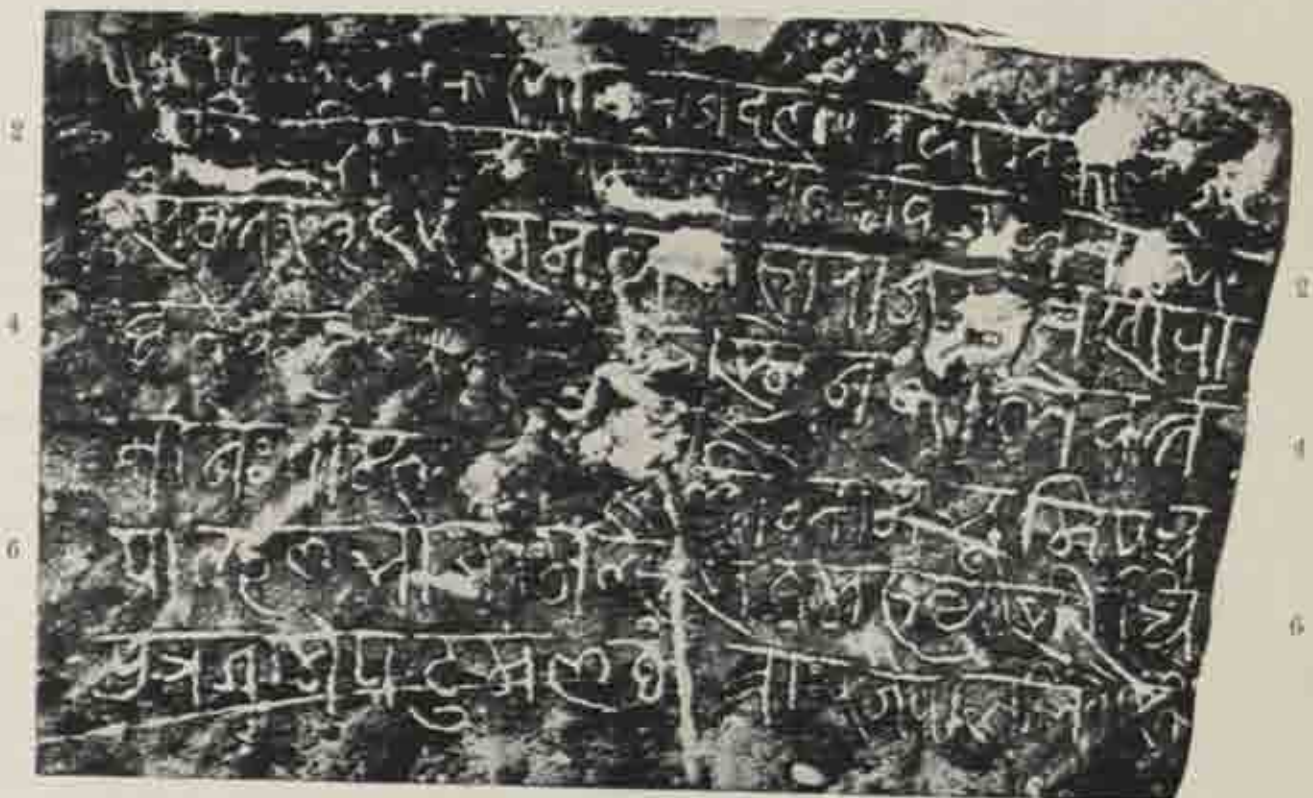

¹¹ This is an abbreviation of *Jhakkura*.

No. 152; PLATE CXXXIX

BAMHNI SATI STONE INSCRIPTION

[Vikrama] Year 1365

THIS inscription was first brought to notice in 1923-24, by Rai Bahadur Hiralal in his edition of the Mahābā grant of the Chandēlla king Paramardin, which was published in the *Epigraphia Indica*, Vol. XVI, pp. 9 ff. He published a rough transcript of the text of the record in a foot-note on p. 10 of it, and subsequently, also noticed its contents, in brief, in his *Inscriptions in the Central Provinces and Berar*.¹³ The record is edited here for the first time from inked impressions kindly supplied to me, at my request, by the Superintending Archaeologist, Central Circle, Bhopal, who got them prepared recently by his technical assistant.

The inscription is incised on a slab discovered in the village **Bamhni** situated about 35 kms. north-northwest of Hattā, the headquarters of a *tehsil* in the Damōh District of Madhya Pradesh.¹⁴

¹ Hiralal is perhaps right in proposing the omission of the prefix *pra*. The text is corrupt here. The name that follows was read by him as *Sathēla*, but the second letter thereof looks more as resembling *hi*, the upper curve of the *mātrā* being not marked as in many other cases.

² Hiralal suggests the addition of *ubhābhyām* here and it may be adopted.

³ Seven *aksharas* are illegible here. Hiralal read the last three as नोष्मनी(स्नाभिः), but the traces show them to be मंत्रपूर्तरस्नाभिः.

⁴ The reading is only tentative. The second, fourth, sixth and eighth *aksharas* of this line cannot be clearly made out and possibly some villages marking the boundaries are mentioned here.

⁵ The repetition of *iti* is unnecessary here. The vowel *i* is shown here by two horizontal strokes.

⁶ As to be read from the traces left.

⁷ The vertical strokes are probably hidden below the strap fastened to the end of the plate.

⁸ Both the bracketed letters are highly corroded.

⁹ One *akshara* appears to have been at first engraved at the end of the line and then scratched off. Consequently the writer's name is not completely known.

¹⁰ *Second edn.*, p. 57. It is also stated here that the inscription is also noticed or referred to in the *Proceedings* of the 4th Oriental Conference held at Allahabad, Vol. I; but I was unable to find this reference in this Vol. Similarly, I failed to find the record edited in the *Ep. Ind.*, Vol. XIX, p. 30, as stated by Dr. S. K. Mitra in his *Early Rulers of Khajurāhō* (1958), p. 239, No. 64.

¹¹ Shri L. P. Jain, Tehsildar at Hattā, informs me that the village Bamhni is about 10 kms. by country track, either from Sāgoni or from Ghatērā, both stations on the Binā-Katnī line of the Central Railway. It is interesting to note here that the place is about 15 kms. south of Dāhī and almost double the distance due east of Sēmra, the find-place of the other two Chandēlla grants.

It consists of seven lines, covering a space 54 cms. broad by 33 cms. high, and has suffered considerably from exposure to weather and also due to human frivolities. Two *aksharas* in l. 3 and one in the next line, which were read by Hiralal when he prepared his transcript, as stated above, have now totally disappeared, and two or three in l. 5 have been either wholly or partly damaged. The letters are sparsely written and their size ranges between 3 and 3.5 cms.

The **characters** are Nāgarī. They are not well formed, but except the three letters which are now lost, as stated above, they are legible throughout. The only palaeographical peculiarities are that the letter *n* resembles *l* without the vertical stroke, e.g., see *Paṭumāṇa-* and *Jaipāla-*, both in l. 7, and *r* is denoted by a vertical bar with a horizontal stroke attached either to its middle on the left, as in *bhāṭṭāraka-*, or with a slanting stroke at its top, as in *Mahārāja*, both in l. 3.

The **language** is corrupt Sanskrit; and the record is all in prose. The **orthography** does not call for any special remark except that the consonants *m* and *l* are doubled after *r* in *-varmma-* and *-varttamāna-*, respectively in ll. 2 and 4, and that *ṛ* is used for *y* in *bhārjā* in l. 5. Some local words are put in the last line.

The inscription refers itself to the reign of **Hammīravarmadēva** who is described with his imperial title *Paramabhāṭṭāraka* (Lord paramount) and is also mentioned as a lord of Kālañjara, which indicates that he was no doubt the **Chandēlla** king bearing this name. It is a *Satī* record, dated in the year **1365** (in numerical figures only), without further particulars; and taking the year to be Chaitradī expired, of the Vikrama era, the corresponding Christian year would be **1308 A.C.**

The **purport** of the record is that in the overlordship of Hammīravarmadēva when the *Mahārājaputra* Vāghadēva was enjoying the village V(B)rāhmaṇī, *Bhūmi*putra (?) Pālhaṇa's wife Malhāi immolated herself on his funeral pyre, and in memory of her (or due to devotion to her), the stone was erected by her son Jāmē (?). The inscription was written by *Pañi*, i.e. *Paṇḍita*, Jaipāla.

The way in which Vāghadēva is mentioned in this inscription denotes his feudatory rank and it is obvious that he owed allegiance to the Chandēlla king Hammīravarma who is styled here as an imperial lord. This is also known from an inscription discovered at Hindoriā, mentioning him as a feudatory of Bhōjavarman, who was Hammīravarma's predecessor on the Chandēlla throne.¹ The name of this local ruler figures in as many as three stone inscriptions, one found at Pāṭan, about 80 kms. south-east of Damōh and dated V.S. 1361 (1303 A.C.), another discovered at Salaiyā, about 5 kms. south of Bamhni and dated V.S. 1362 (1304 A.C.), and the third at Siṅgorgadh, about 48 kms. south-east of Damōh, dated V.S. 1366 (1308 A.C.); and that he was a Pratihāra chief is known, as has been drawn attention to by Hiralal, from the tradition recorded by General Cunningham to the effect that the Pratihāra kings ruled at Siṅgorgadh itself,² with portions of the Damōh and Jabalpur Districts under their sway. The hold of the Chandēllas in this region, however, appears to have ended soon; for we find that the neighbouring country went under the Muslim rule, as we are informed by a record of V.S. 1366 (1308 A.C.) discovered at a deserted village Aruayā Khēdā in the same region and stating that it was under Alāvadīna,³ i.e., Alā-ud-dīn (Khiljī), who was then extending his sway in all the surrounding region.

The importance of the present record lies in furnishing the information that Hammīravarma, whose earliest date is supplied to be V.S. 1346, or 1289 A.C. by his preceding grant,⁴ continued to occupy the Chandēlla throne at least up to 1309 A.C. and also, as we know from the Salaiyā inscription, that some time about this year portions of the Damōh-Jabalpur region, which were included in the Chandēlla kingdom at the time of his predecessor Bhōjavarman, slipped out of his hands because of the penetration of the Muslim power in this region.⁵

¹ *J. C. P. B.*, (second edn.), p. 56.

² *Ibid.* All these have been referred to by Hiralal in his article in the *Ep. Ind.*, Vol. XVI, pp. 9 ff. which is mentioned above.

³ *Ibid.*

⁴ *Above*, No. 151.

⁵ As also known from an inscription of Jallāl Khōjā, who was then in charge of the country now comprised in the Damōh District and dated V.S. 1385 (1328 A.C.), found at Batiāgadh, about 35 kms. north-west of Damōh and in the same region as Bamhni. See *J. C. P. B.*, p. 58.

The only geographical name mentioned in the inscription is that of V(B)rāhmaṇi-grāma, in l. 5, which is, evidently the village Bamhni where the record was found.

AJAYAGADH SATĪ STONE INSCRIPTION OF THE TIME OF HAMMĪRAVARMAN

[Vikrama] Year 1368

THIS inscription was discovered by R. B. Hiralal in his visit to the fort of Ajayagadh in the Pannā District of the Vindhya region of Madhya Pradesh. He also transcribed the record in a foot-note to his edition of the Charkhārī copper-plate grant of Hammīravarma, published in the *Epigraphia Indica*, Vol. XX, pp. 125 ff. The exact spot where he found the inscription is not mentioned; nor is it now possible to know it so as to prepare an impression of the record. It is therefore edited here from Hiralal's transcript referred to above.

The record consists of four lines of writing. The last line consists of only four *aksharas*. The dimensions of the writing and the palaeographical and orthographical peculiarities are not recorded.

The inscription refers itself to the *Mahārāja*, the illustrious Hammīravarmadēva, but it does not mention any of his predecessors or even the royal family to which he belonged. The provenance of the record, however, shows that it undoubtedly belongs to the time of the Chandēlla ruler bearing this name.

¹ From impressions.

² Denoted by a variant of the symbol.

³ Hiralal read *bhē*; but what he took to be the sign of the medial *ē* may have been an original fault of the stone.

⁴ Hiralal read this and the preceding *aksharas* as given here, but while editing the Charkhārī grant of Hammīravarma he stated that the correct reading of these letters is *sāhi* (*Ep. Ind.*, Vol. XX, p. 134, n. 4). The bracketed *akshara* is now totally lost, leaving only a trace; but from the sign of the medial *ā* attached to its preceding *akshara*, what appears to have been incised is *adhi*.

⁵ Hiralal read this *akshara* as *jya*. Read कलिञ्जरा-

⁶ The vertical is joined to the letter by a horizontal stroke as in the case of *dhā*.

⁷ Read श्रीमदमीर-

⁸ This *akshara* in rectangular brackets has now disappeared.

⁹ The reading of the bracketed *akshara* is not certain. It appears somewhat like *rū* also. I am unable to explain the meaning of *bhūmi-putra* which signifies the planet Mars. Here it may have been a title, or the first two *aksharas* may have constituted a name. It may also be observed that the consonant of the bracketed *akshara* may have been a *ṣ* as well.

¹⁰ The reading of the consonant of the first *akshara* is doubtful. It may have been a *p* as well.

¹¹ The portion from *tanitama* in the preceding line up to here is unintelligible to me. It may perhaps denote some names ending with *putrāh*, as the reading of *kva* is uncertain.

¹² Read विजितमल्लि. The bracketed *akshara* is damaged.

It consists of seven lines, covering a space 54 cms. broad by 33 cms. high, and has suffered considerably from exposure to weather and also due to human frivolities. Two *aksharas* in l. 5 and one in the next line, which were read by Hiralal when he prepared his transcript, as stated above, have now totally disappeared, and two or three in l. 5 have been either wholly or partly damaged. The letters are sparsely written and their size ranges between 5 and 3.5 cms.

The **characters** are Nāgarī. They are not well formed; but except the three letters which are now lost, as stated above, they are legible throughout. The only palaeographical peculiarities are that the letter *ṛ* resembles *l* without the vertical stroke, e.g., see *Paṭumāṇa* and *Jaipāla*, both in l. 7, and *r* is denoted by a vertical bar with a horizontal stroke attached either to its middle on the left, as in *bhāṭṭāraka*, or with a slanting stroke at its top, as in *Mahārāja*, both in l. 3.

The **language** is corrupt Sanskrit; and the record is all in prose. The **orthography** does not call for any special remark except that the consonants *m* and *l* are doubled after *r* in *-varmma-* and *-varttamāna-*, respectively in ll. 2 and 4, and that *j* is used for *y* in *bhārjā* in l. 6. Some local words are put in the last line.

The inscription refers itself to the reign of **Hammiravarmadēva** who is described with his imperial title *Paramabhāṭṭāraka* (Lord paramount) and is also mentioned as a lord of Kālāñjara, which indicates that he was no doubt the **Chandēlla** king bearing this name. It is a *Satī* record, dated in the year **1365** (in numerical figures only), without further particulars; and taking the year to be Chaitrādi expired, of the Vikrama era, the corresponding Christian year would be **1308 A.C.**

The **purport** of the record is that in the overlordship of Hammiravarmadēva when the *Mahārājaputra* Vāghadēva was enjoying the village V(B)rāhmaṇī, *Bhūmiputra* (?) Pālhaṇa's wife Malhai immolated herself on his funeral pyre, and in memory of her (or due to devotion to her), the stone was erected by her son Jāmē (?). The inscription was written by *Paṇ*, i.e., *Pandita*, Jaipāla.

The way in which Vāghadēva is mentioned in this inscription denotes his feudatory rank and it is obvious that he owed allegiance to the Chandēlla king Hammiravarman who is styled here as an imperial lord. This is also known from an inscription discovered at Hindoriā, mentioning him as a feudatory of Bhōjavarman, who was Hammiravarman's predecessor on the Chandēlla throne.¹ The name of this local ruler figures in as many as three stone inscriptions, one found at Pāṭan, about 80 kms. south-east of Damoh and dated V.S. 1361 (1303 A.C.), another discovered at Salaiyā, about 5 kms. south of Bamhni and dated V.S. 1362 (1304 A.C.), and the third at Siṅgorgadh, about 48 kms. south-east of Damoh, dated V.S. 1366 (1308 A.C.); and that he was a Pratihāra chief is known, as has been drawn attention to by Hiralal, from the tradition recorded by General Cunningham to the effect that the Pratihāra kings ruled at Siṅgorgadh itself,² with portions of the Damoh and Jabalpur Districts under their sway. The hold of the Chandēllas in this region, however, appears to have ended soon; for we find that the neighbouring country went under the Muslim rule, as we are informed by a record of V.S. 1366 (1308 A.C.) discovered at a deserted village Arpaiyā Khēḍā in the same region and stating that it was under Alāvādīna,³ i.e., Alā-ud-dīn (Khiljī), who was then extending his sway in all the surrounding region.

The importance of the present record lies in furnishing the information that Hammiravarman, whose earliest date is supplied to be V.S. 1346, or 1289 A.C. by his preceding grant,⁴ continued to occupy the Chandēlla throne at least up to 1309 A.C. and also, as we know from the Salaiyā inscription, that some time about this year portions of the Damoh-Jabalpur region, which were included in the Chandēlla kingdom at the time of his predecessor Bhōjavarman, slipped out of his hands because of the penetration of the Muslim power in this region.⁵

¹ *I. C. P. B.* (second edn.), p. 56.

² *Ibid.* All these have been referred to by Hiralal in his article in the *Ep. Ind.*, Vol. XVI, pp. 9 ff., which is mentioned above.

³ *Ibid.*

⁴ *Above*, No. 151.

⁵ As also known from an inscription of Jallāl Khōjā, who was then in charge of the country now comprised in the Damoh District and dated V.S. 1383 (1328 A.C.), found at Batiāgadh, about 35 kms. north-west of Damoh and in the same region as Bamhni. See *I. C. P. B.*, p. 58.

The only **geographical name** mentioned in the inscription is that of **V(B)rāhmaṇi-grāma**, in l. 5, which is, evidently the village Bamhuī where the record was found.

No. 153; PLATE CXXXX

AJAYAGADH SATI STONE INSCRIPTION OF THE TIME OF HAMMĪRAVARMAN

[Vikrama] Year 1368

THIS inscription was discovered by R. B. Hiralal in his visit to the fort of Ajayagadh in the Pannā District of the Vindhya region of Madhya Pradesh. He also transcribed the record in a foot-note to his edition of the Charkhārī copper-plate grant of Hammīravarma, published in the *Epigraphia Indica*, Vol. XX, pp. 125 ff. The exact spot where he found the inscription is not mentioned; nor is it now possible to know it so as to prepare an impression of the record. It is therefore edited here from Hiralal's transcript referred to above.

The record consists of four lines of writing. The last line consists of only four *aksharas*. The dimensions of the writing and the palaeographical and orthographical peculiarities are not recorded.

The inscription refers itself to the *Mahārāja*, the illustrious **Hammīravarmadēva**, but it does not mention any of his predecessors or even the royal family to which he belonged. The provenance of the record, however, shows that it undoubtedly belongs to the time of the **Chandēlla** ruler bearing this name.

¹ From impressions.

² Denoted by a variant of the symbol.

³ Hiralal read *bhē*; but what he took to be the sign of the medial *ē* may have been an original fault of the stone.

⁴ Hiralal read this and the preceding *aksharas* as given here, but while editing the Charkhārī grant of Hammīravarma he stated that the correct reading of these letters is *sāhi* (*Ep. Ind.*, Vol. XX, p. 134, n. 4). The bracketed *akshara* is now totally lost, leaving only a trace; but from the sign of the medial *ā* attached to its preceding *akshara*, what appears to have been incised is *adhī*.

⁵ Hiralal read this *akshara* as *ṣya*. Read कालिञ्जरा-

⁶ The vertical is joined to the letter by a horizontal stroke as in the case of *dhā*.

⁷ Read श्रीमदहंमीर-

⁸ This *akshara* in rectangular brackets has now disappeared.

⁹ The reading of the bracketed *akshara* is not certain. It appears somewhat like *sū* also. I am unable to explain the meaning of *bhūmi-putra* which signifies the planet Mars. Here it may have been a title, or the first two *aksharas* may have constituted a name. It may also be observed that the consonant of the bracketed *akshara* may have been a *ṣ* as well.

¹⁰ The reading of the consonant of the first *akshara* is doubtful. It may have been a *p* as well.

¹¹ The portion from *samtama-* in the preceding line up to here is unintelligible to me. It may perhaps denote some names ending with *putrāh*, as the reading of *kva* is uncertain.

¹² Read लिखितमस्ति. The bracketed *akshara* is damaged.

The inscription is dated on the **sixth day of the bright half of Śrāvana, on Wednesday, of the (Vikrama) year 1368.** Calculating the details of the date, we find that its Christian equivalents are:

For the Chairādi Vikrama *current* = 1st August, 1310 A.C. : Saturday-
 " " " " expired = 22nd July, 1311 A.C. : Thursday,
 " " Kārttikādi " " = 10th July, 1312 A.C. : Monday .

None of these equivalents shows the week-day to be a Wednesday, as given in the record ; however, taking the second of them, we find that the sixth *tithi* actually commenced on 17 moments of the day (4 h. 5 m.) after mean sunrise when the fifth *tithi* ended ; and according to this calculation, the date of the record would correspond to **21st July, 1311 A.C.**, which may really have been intended.

Citing some evidences we have noted in the preceding inscription that the reign of Hammīravarma terminated either in the latter half of 1308 or the earlier half of 1309 A.C. The present inscription, however, which is dated at least a year and a few months later, evidently shows that though Alā-ud-dīn annexed the region round about Damōh in 1309 A.C., Hammīravarma continued to hold under his sway the fort of Ajayagaḍh at least up to July 1311 A.C., the date of the present inscription.

DUBKUNḌ STONE INSCRIPTION OF THE TIME OF VIKRAMASIMHA

[Vikrama] Year 1145

THIS inscription was discovered by Captain W. R. Melville who was in charge of Gwālior Survey, in 1866, at **Dubkunḍ**, also known as Dubkunḍ, in the Shivpurī District of Madhya Pradesh. He sent two copies of the record to the Asiatic Society of Bengal, but the inscription was not published probably because both the copies were too imperfect for editing it. A brief and somewhat imperfect notice of it appeared subsequently in the *Journal* of the same Society, Volume XXV, p. 168 ; it was made by General Cunningham's draftsman, Babu Jwala Prasad, who accompanied Melville in his visit to Dubkunḍ. An account of the record, together with a small photolithograph from one of Cunningham's rubbings, appeared in his *Archaeological Survey of India Reports*, Vol. XX, (1882-83), p. 99 (with pl.), and *Preface*, p. 5. And in 1894 the inscription was edited by F. Kielhorn in the *Epigraphia Indica*, Vol. II (1894), pp. 232 ff., from one of Cunningham's rubbings, apparently the same from which the photolithograph published by the latter scholar was prepared.⁶ The inscription is edited here from the original

¹ From Hiralal's transcript in *Ep. Ind.*, Vol. XX, p. 134, n. 2.

² This appears to be the name of the woman and the preceding one, of her husband.

³ Note the subordinate title given to Hammīravarma, though it is not a sure sign that he was reduced to subordination. We have also to bear in mind that it is after all a private record.

⁴ Probably to read सुभ

⁵ Supply a *danda* here.

⁶ This article of Kielhorn is not illustrated.

stone which is now preserved in the Central Museum, Gwalior,¹ and two impressions, one of which was supplied to me by the Curator of the Museum and the other by the Superintending Archaeologist at Bhopal.²

The place, where the inscribed stone was found, lies in a dense forest and is situated about 70 kms. west-northwest of Shivpurī, on the top of a table-land, 122 kms. due south-west of Gwālior, the actual distance by road being about 160 kms. It is on the left bank of Kuru, a tributary of the Chambal. The inscription was seen by Cunningham's draftsman, on one of the pilasters in the south cloister of an old temple standing in the midst of an enclosure surrounded by the remains of several small temples.³

The total height of the pilaster is 112 cms., and it is 47·7 cms. broad. The inscription contains 61 lines of writing which covers a space 42·5 cms. broad by 100 cms. high. It is in a state of fair preservation, with the exception of a few *aksharas* in the first two lines where parts of the surface of the stone have peeled off. Some of the *aksharas* are here and there damaged, but they can be made out from the context, with the exception of two at the commencement of l. 7 and one in l. 15. Nothing of historical interest, however, is lost. The size of the letters is between 1·1 and 2·5 cms.

The **characters** are Nāgarī of the eleventh century A.C. Attention may be drawn to the formation of some of the letters. The initial *a* is written in two different ways; cf. e.g. *adhyāśya*, l. 9 and *ajani*, l. 21; in a singular instance in *dyuti*, l. 16, the medial short *u* appears in the middle in right as attached to *r* in *guru* in ll. 40 and 45; the medial long *ū* is indicated by a curve attached to the middle of the vertical on the left and turned downwards as to appear as a subscript *t*; see *pāga*, l. 7; the rare initial *ṛi* occurs in *Rishabhā*, l. 2, and the initial *ē* resembles a triangle with its vertical point below, as in *ēva*, l. 21. Of the consonants, *k*, when the first member of a conjunct and when the *mātrā* of *ṛi* is attached to it, loses its loop, as in *kshaya*, l. 5 and *kyichch*, l. 6; the conjunct consonant *gg* occasionally appears as *gn* and *ṅṅ* as *nl*, for which see respectively *vinirggata*, l. 32 and *mūrggana*, l. 16, and *varṇana*, l. 19; the lowest extremity of *ḍ* is not turned up as a tail; see *ḍiṅḍira*, l. 13; *th* and *chh* as subscript are laid flat and appear almost alike; cf., e.g., *prasthāna* and *nirgachchhad*, both in l. 14; *dh* is in a transitional stage, appearing both as with and without the horn on its left limb and also with or without the top-stroke, and occasionally the vertical of *dhā* is joined by a horizontal stroke; see *prasādhita*, l. 8, *-dhārā*, l. 16 and *Vōdha* and *gandha*, both in l. 9, for all these examples. Occasionally it is difficult to distinguish between *t* and *n*, *ch* *dh* and *v*, *m* and the palatal and the dental sibilants.

The **language** is Sanskrit, and except for the introductory obeisance, a portion in lines 54-58, and the date etc., in the end, the record is metrically composed throughout. It has 37 verses, which are not numbered.

As regards **orthography** we may note (1) the use of the sign for *v* to denote *b* as well, as in *vōdha* for *bōdha* in l. 9; (2) the occasional use of the dental for the palatal sibilant and vice versa; see *sāsinau*, l. 37 and *śatasō*, l. 45; (3) the reduplication of a consonant following *r* (with a few exceptions like *dharma-karma*, l. 49); (4) the use of the *prishṭha-mātrā*; and (5) the general tendency to use an *anusvāra* in place of a nasal, except in a very few instances, as in *kālāntara*, l. 54, as opposed to *chandra* in l. 6 and *gandha*, l. 9. This remark does not apply to a nasal when it ends a verse or a hemistich.

In spite of the fact that the letters are well formed and carefully engraved and also that the language is generally correct, a few grammatical errors have crept in; they are *ujvala* for *ujjala*, l. 13; *chchhatra* for *chhatra*, l. 18 and *niḥparyāyam* for *nishparyāyam*, l. 28.

¹ The stone was removed to the Museum some time about 1916 A.C. See *Gwalior Arch. Rep.* for V.S. 1973, No. 46 which is in manuscript form.

² Neither of the impressions alone is perfect for editing the record on its basis, but they supplement each other. And my transcript of the record, which was prepared from them both, was also revised from the original, subsequently.

³ Cunningham's *A.S.I.R.*, Vol. XX, pp. 99 ff. For Dubkund, see *Ind. Atlas*, Quarter-Sheet 51; Long. 77° 54'E., 25° 43' N., as mentioned by Kielhorn, in *Ep. Ind.*, Vol. II, p. 232. However, in the map of the C.I. Agency, published by the Survey of India Office, Calcutta, in 1886, the place is shown situated on the west bank of Parang (Pārā) which too is a tributary of the Chambal and flows about 15 kms. west of Kuru, almost parallel to it.

The inscription belongs to the reign of **Vikramasimha**, who was a member of the Dubkund branch of the **Kachchhapaghāta Dynasty**. The **object** of it is to record the construction of a Jaina temple, evidently the same at which the stone bearing the record was found, by some private persons (vv. 31-35), and some grants made in favour of it by the illustrious **Mahārājādhirāja Vikramasimha** (ll. 54-57). The **date** of the record, as given in the last line, in figures, is **Monday, the third of the bright half of Bhādrapada** of the (Vikrama) year **1145**, which, taking the year to be Chaitrādi expired, regularly corresponds to **Monday, 21st August, 1088 A.C.**¹

The inscription falls into four parts as marked by the engraver himself with a sign somewhat resembling the Nāgarī *akshara chha* at the end of each. The first of these parts (vv. 7-19) mentions the genealogy of **Vikramasimha** and his ancestors, the second (vv. 20-24) gives an account of the builder of the temple; the third (vv. 25-35) names some sages; and the fourth (prose ll. 54-60) records the donations made by the king.

To note the contents of the record, it begins with six introductory verses which either invoke the blessings of or praise (the Jaina Tīrthaṅkaras) Rishabhasvāmin, Śāntinātha, Chandraprabha and Jina (Mahāvīra), and the sage Gōtama and last of all, Śrutadēvī, *i.e.*, the goddess of eloquence or learning, as the persons who put up the inscription were devoted to Jainism.

With verse 7, begins the description of the pedigree of the ancestors of the ruling king **Vikramasimha**. The first name introduced here is that of **Yuvarāja**, who was the originator of the Kachchhapaghāta house (vv. 7-9). Yuvarāja's son was **Arjuna**², and his son was **Abhimanyu**, (vv. 10-13), whose son again was **Vijayarāja** (v. 14). Vijayarāja had a son of the name of **Vikramasimha** whose stronghold (*pura*) was known as **Dōbha**,³ which was then a flourishing place noted for its trade (vv. 15-20). The whole of the description of these princes is conventional and devoid of historical interest, except what is stated in v. 8, that Arjuna, as an ally or feudatory of Vidyādhara, killed Rājyapāla "by a shower of arrows piercing his neck-bones", and in v. 11 that his son Abhimanyu's skill "in the marvellous management of horses and chariots and in the use of powerful weapons was highly spoken of by the highly intelligent and illustrious king Bhōja".

To take up the first of these statements, we find that Vidyādhara, whose ally Arjuna is mentioned in the record, was evidently the homonymous Chandēlla king; and Rājyapāla is no other than the Gurjara king of Kanauj, as we well know; and thus the Kachchhapaghāta Arjuna was a contemporary of both these rulers who flourished in the first quarter of the eleventh century A.C. The Mohammadan sources go to tell us that when Sultan Mahmūd, after his victory of Kanauj in 409 A.H., *i.e.*, in 1018 A.C., returned to his country, Vidyādhara killed Rājyapāla in a battle which resulted in the latter's flight and surrender of his territory to the Musalmans.⁴ Thus the statement of our inscription is corroborated by the Muslim account, adding to our knowledge that it was Arjuna who actually killed Rājyapāla of Kanauj, as a feudatory of the Chandēlla king.

With reference to the other statement of our inscription which alludes to Arjuna's son Abhimanyu's military skill as highly spoken of by Bhōjadēva, Dr. D. C. Ganguly suggests that Abhimanyu entered into an alliance with the Paramāra Bhōja on the eve of the latter's northern expedition,⁵ whereas Dr. H. C. Ray takes the statement to interpret that after the death of

¹ See *Ind. Ant.*, Vol. XIX, p. 461, No. 170. According to Kielhorn, the date is one of those in which the *tithi* is joined with the week day on which it commenced, 3 h. 28 m. after mean sunrise. Also see *L.N.D.*, No. 151. Generally, the *tithi* current at mean sunrise is mentioned in the inscriptions; but the ceremonies connected with the construction of the temple may have been performed or continued late in the afternoon of that day, and hence the day seems to have been joined with the *tithi* which commenced on it.

² Kielhorn also remarks that "The expression *Bhīmasēna-ānugah* suggests that Arjuna had an elder brother of the name of Bhīmasēna; but he is otherwise unknown".

³ For the interpretation of the expression containing the name of the capital, see *n.* in the corresponding portion of the text, below. Moreover, as this branch of the Kachchhapaghāta family had a separate capital, we cannot hold with D. R. Bhandarkar who stated that "these were two divisions of one ruling family with a common capital (at Gwālior)". See his *List of Inscriptions* (Genealogical Table) in *Ep. Ind.*, Vol. XXII, *appx.*, p. 392, *n.* 1.

⁴ *T.K.A.*, Vol. IX, pp. 115 f.

⁵ *H.P.D.*, pp. 103 ff.

Vidyādhara (in c. 1022 A.C.) the Chandēlla throne was occupied by rulers of lesser calibre. Bhōja, who outlived Vidyādhara, exerted his influence in the north as far as Dubkūṇḍ and Abhimanyu became subservient to him.¹ And though this is plausible, we have no definite statement in support of either of the theories and the simple praise as recorded in the present inscription cannot be taken so far as to support either of them.

It is interesting to note that Vikramasimha is called a *Mahārājādhirāja* in l. 55 of our inscription, which reports nothing else of historical importance about him. This statement, taken in its true sense, would go to indicate that he was then enjoying the status of an independent ruler. And in view of this statement it appears possible that during the time when the Chandēlla Kirtivarman was busy restoring the fame of his house, which had been temporarily eclipsed by the Kalachuris of Tripurī, as seen above, Vikramasimha may have succeeded in throwing off the Chandēlla yoke to whom his house had been paying obeisance. From the Dēogaḍh inscription of Vatsarāja, which is dated in 1098 A.C. and in the same year as of the present inscription, we know that some time previously the Chandēlla ruler's all attention was occupied towards the Bētṽā valley;² and this may have given an opportunity to Vikramasimha to declare independence. It is not definitely known whether he became an ally of Bhōja, as Dr. Ganguly holds, and the very imperial title with which he is credited in our record, goes against the view of Dr. Ray who thinks that on this occasion this ruler became a feudatory of the Paramāra king.

To resume the story of the contents of the inscription, its second part (vv. 20-24) introduce two Jaina merchants of the names of Rishi and his brother Dāhaḍa, on whom the renowned Vikramasimha had conferred the rank of *śrēṣṭhin* in his town. They were sons of Jayadēva by his wife Yaśomatī and grandsons of Jāsūka, a devoted Jaina, who is stated to have been the head of a family or guild of merchants, migrated from the city of Jāyasa (v. 20), which cannot be identified for want of details.

The third part of the inscription (vv. 25-35) begins with an account of some Jaina sages, the first of whom was Guru Dēvasēna, an ornament of the Lāṭa-Vāgata-gaṇa (v. 25). His son (disciple?)³ was Kulabhūṣhaṇa (v. 26), and his son again was Durlabhasēna (v. 27), from whom sprang Śāntishēna, who, in an assembly held before the king Bhōjadēva, defeated hundreds of disputants who had assailed Ambarasēna and other learned persons (v. 28). Śāntishēna's son was Vijayakīrti, who composed the present *prasasti* (v. 29) and who also induced Dāhaḍa and some other persons, by his religious teachings, to build the temple where the inscription was engraved (v. 30). Then the record proceeds to mention the names of those who contributed towards the construction of the temple. They are: the good Dāhaḍa (the same as mentioned above), Kūkēka, Sūrpata, Dēvadhara, Mahāchandra, Lakshmana, and some others who are not named (vv. 31-34), probably because their contributions were insignificant. Then we have a verse (35) which extols the temple in a poetic way.

The inscription then mentions the donations made to the temple and the sages by the *Mahārājādhirāja* Vikramasimha (ll. 54-60). He assigned (the tax of) one *viṃśōpaka* (a coin) on each *gōṇī* (a measure of grain) which passed that side, donated a tract of land, situated in the village of Mahāchakra and capable of being sown with four *gōṇīs* of wheat, a garden with a well existing in the east of Rajakadraha, for the purpose of performing worship and for carrying on repairs to the temple whenever necessary, and providing oil⁴ for the lamps and also for anointing the bodies of holy men (*muni-jana*).

The inscription lastly makes the usual appeal to future rulers to continue the gifts made so long as the Sun and the moon shine; and the last two lines (60-61), which are again separated by an inter-punctuation, as before, have a verse in *anushṭubh*, stating that the *prasasti* was written on the stone by Udayarāja and was engraved by the mason (*śilāhūṭa*) Tilhaṇa. And the docu-

¹ D.H.N.J., Vol. II, p. 870.

² See No. 154, above.

³ Since Jaina sages do not generally marry, I prefer to take the relation of *guru* and *śishya* in all cases here.

⁴ The expression used here is "*kara-ghaṭṭihā-dvayam*" (text. l. 57); and while editing the inscription Kielhorn remarks on p. 236, n. 16 that the first word of this he is unable to explain. To me it seems to be 'a pair of machines to be turned up by hand, i.e., human force.'

ment then closes with the date as we have seen above, and with the expressions indicating 'auspiciousness and great fortune'.

Of the geographical places mentioned in the inscription, Dobha (v. 19) is no other than Dubkuṅḍ or Dōbkuṅḍ, as we have seen above; and the other names, viz., Jāyasapura (v. 20), Mahāchakra and Rajakadraha (l. 56) I am unable to identify. Both the latter places appear to be somewhere in the vicinity of Dubkuṅḍ; but in the maps at my disposal I could not trace out any place with its name similar to either of these. However, taking all these places to have been then situated in the vicinity of the find-spot of the inscription, I am tempted to suggest that Jāyasapura may perhaps be identical with the modern town of Jasarājapura; and Mahāchakra-grāma may have been the same as either the modern Makrērā or Mahurā, all of which are now included in the Shivpurī tehsīl in the district of the same name. Rajakadraha may have been either the modern Rājpurā or Rājōr, both of which are also situated in the same district. Lāṭa has already been identified; and Vāgata is obviously the same as Vāgaḍa, which too is well known.

TEXT

[Metres: Verses 1-4, 7-8, 10-11, 15-16, 20, 24, 26, 28 and 31 Śārdūlavikrīḍita; vv. 5, 31-34 and 36-37 Anuṣṭubh; vv. 6, 18-19, 21, 23, 25, 27 and 30 Faxantatīlaka; vv. 9 and 17 Sragdharā; vv. 12-13 and 29 Mātrī; v. 14 Sikkharī; v. 22 Upajāti.]

² From the original and impressions.

³ Both denoted by symbols.

⁴ Both the bracketed letters are now lost and I have read them from the photolithograph in *A. S. I. R.*, Vol. XX. The upper curve of the *mātrā* of *pi* and the sign of *anusvāra* on *tha* are also lost.

⁵ The *hākapada*-sign is engraved at the end of this and some other lines below, which is not noted separately. Again, in this line, some of the consonants are lost, leaving their *mātrā*, as shown here.

⁶ Kielhorn read the first *akṣara* as [yu] but on the stone it is clear as taken here.

⁷ Kielhorn could not make out the first of these two letters, but the traces show them to be as taken here. Both the letters are almost lost.

¹ The bracketed *akshara* was originally omitted and was later on written below the line, with a mark above, to draw attention.

² The *dayla* is redundant or, it may have been a *kāka-pada* sign.

³ The *mātra* of the preceding *akshara* has partially come out.

⁴ The sign of *anusvāra* is struck off on the original.

⁵ The *dayla* appears to have been inserted subsequently.

⁶ स् is clear on the original. Kielhorn read it as *nya*.

⁷ Taking the preceding *cha* with these two letters, Kielhorn remarks in *op. cit.*, p. 236, that *Chadōbha* is evidently the place now called Dubkund. But failing to see any similarity between the two names, I interpret the expression so as to take *cha* separately, and thus it is easy to explain *Dōbha* connected with Dubkund or Dōbkund, the latter of which also appears in maps, as seen above.

^१ Sandhi is not made here. The reading of the five aksharas following the name is clear; they were read by Kielhorn as *praka[ākshata]*, but they give no suitable sense.

^२ Only the *mātrā* of this akshara now survives. Similarly the first two aksharas of the next line have also peeled off completely and they have been restored here from Kielhorn's reading. This shows that the stone was in a better condition when Cunningham took the impression.

^३ This is *yābhyām*, which would not suit the metre. The first and the third letters are not distinct.

^४ The consonant of the bracketed akshara has now peeled off.

^५ Sandhi is now made here.

NO. 155 : PLATE CXXXII

GWĀLIOR STONE INSCRIPTION OF MAHĪPĀLA

Vikrama Year 1150

THIS inscription is engraved on two long stone slabs which were found inside the portico of the larger of the two neighbouring temples locally known by the name of *Sāsbahū* and situated on a projecting point near the middle of the eastern wall of the fortress of **Gwālior**, the headquarters of a district in Madhya Pradesh. The record was noticed by General Alexander Cunningham in his *Archaeological Survey of India Reports*, Volume II (1862-1865), pp. 357 ff., and from a facsimile supplied by him, it was edited by Rajendralal Mitra, with transcript and an abstract of its contents, in the *Journal of the Bengal Asiatic Society*, Vol. XXXI (1862), pp. 400 and 411 ff. It was re-edited, with translation and a facsimile, by F. Kielhorn in

^१ Sandhi is not made here.

^२ The reading is certain, though the last letter is mutilated. But the name appears to be rather long and peculiar.

^३ This *akshara* was totally lost even in Kielhorn's time. From the context it appears to have been *di*.

^४ At the end of the line there are two redundant curves, as also at the end of the next line. *Gāshihika* is a member of the managing committee.

^५ After *ni* there are six redundant curves, as also after *ita* in the next line.

^६ It is a coin, for which see *C.I.I.*, Vol. IV, p. 195, n.

^७ The *danḍa* is intended to show a parenthesis that follows. The grammar requires *ṣaṅkhaḥ*.

^८ Sandhi is not made here.

the *Indian Antiquary*, Vol. XV (1886), pp. 33 ff.¹ The inscription is edited here from the original stones and ink-impressions kindly supplied to me by the Chief Epigraphist of the Archaeological Survey of India.²

The two temples, inside the portico of one of which the inscription exists, are known, as stated above, by the name of *Sāsbahū*, i.e., of the mother-in-law and daughter-in-law. Both these names appear to be rather peculiar; but we have a number of instances to show that these two names are given to temples and other monuments in this part of the country, in consequence of which the real name being forgotten in course of time.³ These shrines are also associated with the mythical name *Sahasrabāhu*, the thousand-armed, which is obviously a further attempt to Sanskritise the name *Sāsbahū*. Furthermore, both these temples are also locally known as Jaina temples; and this seems to have misled Rajendralal Mitra to associate them with Jainism. He goes so far as to take the word *Padmanātha* occurring at the commencement of the present inscription as a short form of *Padmaprabhānātha*, the sixth of the Jaina Tirthankaras. But this argument cannot hold ground in view of the fact that the inscription itself again and again states that the temple was constructed for the worship of Vishnu. In this connection Cunningham's remarks too are noteworthy. He writes: "But as the sculptures, which can be recognised both inside and outside of the large temple are chiefly confined to the members of the Hindu triad and their consorts, I conclude that the temple must belong to the Brāhmanical worship."⁴

As stated above, the inscription is engraved on two slabs, the writing on the first of them covering a space about 156·2 cms. broad by 47·7 cms. high, and on the second 162·5 cms. broad by 45·7 cms. high. Each of the slabs contains twenty-one lines. In the last line of the second slab the writing covers only about one-third of the length of the whole line. The inscription is tolerably in a good state of preservation, with the exception of a few letters where the stone is worn. The letters are carefully written and beautifully engraved, though occasionally their forms are indistinguishable, as will be shown below. The size of the letters varies from 1½ to 2 cms., and in the first 3 or 4 lines they are bigger and sparsely written.

The characters are Nāgarī, regular for the period to which the inscription belongs, i.e., the eleventh century A.C. The initial form of the short *i* is marked by two loops with a curved or hooked end turned in opposite direction and placed one below the other; see *īha*, l. 13; and the initial long *i*, which occurs only once in *īvara*, l. 5, is denoted by an additional stroke above the top, as the sign for medial *ē*. The initial *ē* has its forelimb suddenly turned to the right and its end joined to the middle of the vertical, e.g., in *ētat*, l. 20; and in a few instances, e.g., in *ēsha*, l. 38, it cannot be distinguished from *p*. The letter *k*, when an initial member of a conjunct consonant, occasionally changes its loop to a horizontal stroke as in *kshiti*, l. 2, but not in the same word in l. 12. The conjunct consonant *gg* appears as *gn*, e.g., in *durggē*, l. 4, and *ñ* continues to be without a dot. Letters like *ñ*, *ḍ* and *h* have not developed the upward curve of their end; cf. *brahmāyuda*, l. 13, contrary to the fact *h* in *Malūpāla*, l. 14, has a fine curve of its end. Sometimes there is no distinction between *g*, *m* and *bh*, between *t*, *v* and *h* and between *ch* and *v*; and the superscripts *t* and *n* in a conjunct consonant often assume the form of a horizontal stroke, as in *chitta*, l. 21 and *gadanti*, l. 20. The verticals of *dhā* continue to be joined by a horizontal stroke, as in *dadhāsi*, l. 17. The two different forms of *ph* can be noted in *harsh-ōtphulla*, l. 1 and *phalam*, l. 11, and of *bh* in *bhagavān* and

¹ In this article Kielhorn gives the text transcribed by him from an estampage supplied to him by Hultsch and revised from a photolithograph prepared by Cunningham from an ink-impression. Kielhorn also points out that "the text prepared by Rajendralal Mitra is so full of errors and omissions that it may be considered almost valueless and his abstract of contents of the inscription cannot be made to agree with the Sanskrit text published by him". See *Ind. Ant.* Vol. XV, p. 33, n. 2.

² In the meantime a fresh rubbing was supplied to me, at my request, by the Superintending Archaeologist, Central Circle, Bhopal; this rubbing was also consulted by me at times and to him my indebtedness is due. In my personal examination I noticed that the record is engraved on the sunken panels of the stone-slabs and also that each of the slabs has a protruded base below and a projected portion above, somewhat resembling a shade, and carved with row of geometrical figures representing diamonds and beads alternately placed.

³ E.g., temples with this name exist at Kōhlā (Mandsaur District), for which see *A. S. I. R.*, *W. C.*, 1912-13, p. 57 and *ibid.*, 1919-20, p. 86.

⁴ Cunningham: *A. S. I. R.*, Vol. II, p. 357

subhuga, both in l. 3. The left limb of *bh* sometimes ends in a long tail; see *gubhīratā*, l. 23. *Y* is occasionally ornamental and sometimes it cannot be distinguished from *p*; cf. *yad-ātmanā*, l. 1 and *rachitēyam*, l. 40 respectively. The letter *r* is formed at least in three different ways, viz., by a vertical to which a horizontal stroke is attached at the left, with a loop, and with a wedge, as respectively to be seen in *Purushōttama*, *vava* and *vismaya-kāri*, all in l. 17. And lastly, the subscript form of this letter is represented either by its full form, with the preceding letter half drawn, as in *chakirē*, l. 6. or by a serif attached to the lowest extremity of its superscript, as in *sahasra*, l. 5. The loops representing the sign of *visarga* have a triangular notch between them.

The language of the inscription is Sanskrit; and with the exception of the introductory *Om śm namah Padmanāthāya* and the expressions showing the date in l. 40, the entire inscription is in verse. The total number of verses is 112; they are not numbered. The language is correct and fluent, containing elegant and florid expressions as in the best *Kāvya* style using figures of speech like *upamā*, *rūpaka*, *ślēsha*, *sandēha*, *apahnuti*, *vyatirēka* and also *parisaṅkhyā* which is of rare occurrence.¹

In respect of **orthography**, we have to note (1) the use of the sign for *v* to indicate *b* as well, except in *s(ś)aurya-ābdhinā*, l. 5 where it is correctly used, but also in *bapuh*, l. 1 where it is wrong; (2) putting the dental for the palatal sibilant in a large number of instances as in *-aṁsu*, l. 8 but the use of *aṁsu* also to be seen in l. 29; on the other hand, the use of the palatal for the dental sibilant, e.g., in *sāsan-ōdita*, l. 54. Here it may be pointed out that the word *śasvat* occurring three times in the inscription is spelt as *sasvat* twice in ll. 12 and 25 but as *śasvat* in l. 19; (3) the reduplication of a consonant, more often, following *r* and occasionally, also preceding it; see, e.g., *gīrvāṇa-mantr=iva*, l. 41; (4) writing *ch* frequently as *chh*, see *vānchchah*, l. 22; (5) the use of the *jihvāmūliya* instead of the lingual sibilant in four instances all of which occur in l. 36; (6) the general tendency to put the *parasavarṇa* which is sometimes so strong that the final *m* is wrongly used in instances like *tvam=viśuddha*, l. 25 and in combining the expressions *tvam* and *kō=si* as *tvamko=si*, which though grammatically correct, gives an idea of clumsiness, in ll. 20 and 25; (7) the change of a final *m* occasionally to an *anusvāra* at the end of a stich, e.g., in l. 37; and (8) a few instances of putting the *danda* so close to the preceding letter as to appear as a medial *ā* attached to it, as after *bhagavān* in l. 3. Some of the lines have the *kāha-pada* sign as the end.

The inscription refers itself to the reign of **Mahipāla** who belonged to the **Kachchhapaghāta** dynasty of Gwalior. The **object** of it is to record the completion of the temple of Padmanātha, begun by his cousin **Padmapāla** and the grants made by the king in honour of the deity installed therein and in favour of some Brāhmanas. The **date** of the record is expressed in l. 40, in words, to be the **expired Vikrama year 1149**, and it is repeated in figures in the same line, as the **current year 1150, the day being the fifth of the dark half of Āśvina**. The date does not admit of verification, though it is one of the few dates mentioning both the current and the expired era. The year corresponds to 1092 A.C., taken as Northern.

The inscription falls into three parts, the first of which (vv. 5-33) gives an account of the king **Mahipāla** and his ancestors, the second (vv. 34-67) glorifies him in bardic expressions, and the third (vv. 68-103) records the construction of the temple and the establishment of a Brāhmana colony in its vicinity and the endowments made to them.

Opening with a short sentence paying obeisance to Padmanātha and after four *māngala-ślōkas* in praise of Aniruddha, Hari and Ushā's husband installed in the temple, in 26 verses it describes the genealogy of the **Kachchhapaghāta** (*kachchhapāri*, as mentioned in verse 5-7) family to which Mahipāla, who completed the temple belonged. Here we are told that the originator of the house was **Lakshmana** (v. 5). His son was **Vajradāman** who by honest means put down the valour of the ruler of Gādhinagar (**Kānyakubja**) and performed *tulā-dāna* a number of times (vv. 6-7). He was succeeded by **Maṅgalarāja**, who was a Śaiva (v. 8), and the

¹ These remarks are with reference only to verses 1-68 forming the first two parts of the inscription. With the exception of a few verses, the rest of the record, which merely gives names and lists of articles is in the poetic form but not of the same high rank. With reference to the language it is interesting to note that in three instances, in ll. 14, 29 and 33, the *visarga* followed by *s* is dropped, which is against Pāṇini VIII. 3. 36 but quite in accordance with the *vārtika* on the same.

latter by **Kīrtirāja**, who vanquished the countless army of the king of Mālava and also built a Siva temple at Simhapāniya which is the modern town of Suhāniyā in the Mōrena District near Gwālior (vv. 8-11). Kīrtirāja's son was **Mūladēva**, who was also known as **Bhuvanapāla** and bore the title of *Trailōkyamalla*. His wife was *Dēvavratī* (vv. 12-13), and the son of this union was **Dēvapāla** (v. 14). Dēvapāla's son was Padmapāla who, in a poetic language, is described as valorous, munificent and an able ruler (vv. 14-24). Then we are told that "considering fortune and life unsteady as the flood of a river and setting his mind on the performance of pious deeds, Padmapāla, the supporter of the subjects caused the temple of Hari to be built". The temple is further on described to be "sky-kissing," and it is also stated that "its white banner suspended from the staff and fluttering on its golden egg-shaped *kalāśa* resembled the Ganges descending from the sky on the tawny matted hair of Sambhu, whose body is smeared with ash" (vv. 25-29). The next two verses state that through the adversity of fortune Padmapāla deceased, and his brother **Mahipāla** who was the son of Sūryapāla, occupied the throne at Gōpādri.

Here ends the first part of the inscription, and the only historical information that can be gathered from it is that Mahipāla's great-grandfather Kīrtirāja achieved a crushing victory over the king of Mālwa, who has been identified with the Paramāra Bhōjadēva.¹ This statement appears to have a reference to Bhōja's defeat in his expedition of the Chandēlla kingdom when the Chandēlla ruler Vidyādharma foiled his attempts, as recorded in the Mahōbā inscription stating that "Bhōjadēva, together with the moon of the Kalachuris, worshipped, full of fear like a pupil (his master of warfare (i.e., Vidyādharma)).² And it is possible that Kīrtirāja who was then a feudatory of the Chandēlla Vidyādharma, may have inflicted a crushing defeat on the Paramāra army.³ The gravity of the reverse sustained by Bhōja on this occasion is graphically described in v. 10 of the present record, telling us that "when the Mālava army had dispersed, the villagers thatched their houses with multitudes of spears which through fear had fallen from the hands (of the soldiers) in every direction." And if this account be not a poetic panegyric, it can hardly be believed that such a crushing defeat on the Paramāra army would have been inflicted by the Kachchhapaghāta ruler unilaterally.

The second part of the inscription refers to the coronation of Mahipāla and states that he was panegyricised by bards in their lofty strain when his coronation was performed and when he was seated on the throne. This long panegyric, to which as many as thirty-three stanzas (vv. 35-67) are devoted, describes his valour, fame, glory, benefactions and religious merit, instituting his comparison with deities like Brahmā, Vishnu, Śaṅkara and their various incarnations, with Indra, Kuvēra, the Sun and the moon, with legendary kings and sages like Yudhishtira, Bhagiratha, Māndhātā and the Pāṇḍavas, and with objects like the ocean, lotus and the sandle tree etc. This account is all void of historical interest, except that it shows that Mahipāla was the son of king Sūrya, i.e., Sūryapāla (vv. 51 and 58) that he belonged to the family of the Kachchhapaghātas (v. 57), his title was *Bhuvanaskamalla* (vv. 49 and 63), and that he vanquished an army of a king of the Gandharvas (v. 50) about which nothing is so far known.

Following this long bardic account is a mention of Mahipāla's religious and charitable works: and here it is also stated that he completed the construction of the temple which was begun by his brother Padmapāla and which was an 'imperishable embodiment of his fame' (vv. 68-70). He also established a Brahmapurī, i.e., a settlement for Brāhmanas, and selected the other (in addition to those already settled there by Padmapāla) occupants. He also established a *sattra* (charitable feeding hall) where dainty food and drink were distributed (vv. 70-71). He made donations for the cooking of the *naivēdya* of the glorious Padmanātha and for lights, and divided the sanctuary of the temple into two parts, assigning one-half to the glorious Padmanātha and the other half to Vaikuṅṭha (vv. 72-73), and also arranged suitably for the maintenance of dancing girls, musicians, singers and the rest for public performances (v. 74).

¹ See *Ind. Ant.*, Vol. XV, p. 824.

² See No. 113, n. 22.

³ Also see S. K. Mitra, *F. R. E.*, pp. 83-84.

The inscription proceeds to record that for the maintenance of all this establishment, the king properly divided (the village of) Pāshānapalli, and allotted five shares and a half to the god and twenty-four shares and a half to the most excellent Brāhmaṇas to whom he made gifts (vv. 75-76); and to look after this, he kept a Brāhmaṇa, the renowned son of Yōgēśvara and Salakshana by name,¹ who was himself a sage, a seat of learning and possessing other good qualities and enjoyed the confidence of the king (vv. 77-78). The following seven verses (79-85) embody the names of donees (see Appx. A) and verses 86-100 mention the implements for the gods, such as ornaments, dresses, pots for worship *etc.*, which were donated by the king on this occasion (see Appx. B).

Then we are told that the king also made arrangements for stone-cutters, carpenters, engineers, carmen and other persons and also for excavating and building reservoirs, wells, tanks and so forth, by donating the tenth part (of the revenue) in his whole dominions, also giving the twentieth part to Anituddha, to keep up the charitable distribution of food *etc.* (vv. 101-02). The next stanza expresses the hope that the temple of Padma, *i.e.*, of Padmanātha built by the king of that name, may be ever-lasting.

The following two stanzas (104-05) state that the *prastā* was composed, by the order of the king, by the poet Maṇikanṭha, an eminent Brāhmaṇa of the Bhāradvāja *gōtra*, the son of the poet Gōvinda and the grandson of the chief of the poet Rāma, and whose "intellect was polished by (the study of) Mīmāṃsā and Nyāya, and who took delight in eloquent sayings,"² and that it was written by his friend Yaśōdēva Digambarārka who was a poet in all the languages. Then is given the date in vv. 107-08, which we have seen above.

The next two verses (109-110) introduce the king's Minister Gaura, who is said to have resembled Viśiṣṭha and Brīhaspatī in intelligence and due to whose power in the form of a blazing fire, the king's adversaries perished as moths, in a battle. The inscription closes with two stanzas which state that the record was engraved in excellent letters, in the temple of the glorious Padmanātha, by the artisan Padma, the son of Dēvasvāmin and also by the artisans Simhavāja and Māhula,³ and expressing hope, in the end that "may the letters engraved (here) serve the purpose."

As for the **localities** mentioned in the inscription, **Gōpādri** which figures twice in v. 6 and again in v. 31 is evidently the city of Gwālior where the inscription was found. **Gādhi-nagara** (v. 6) is Kānyakubja; and **Mālava** (v. 10) roughly corresponds to the present Mālwa region of Madhya Pradesh. Simhapaniya where a temple is said to have been built by Kīrtirāja (v. 11) is, as stated above, the modern town of Suhāniyā in the Mōrēnā District and lying about 50 kilometres due north-east of Gwālior. It is well known for a large and fine temple of Siva still existing at that place,⁴ and possibly it appears to be the same temple as built by Kīrtirāja. **Pāshānapalli** (v. 75) reminds us of the name of the modern village of Pabādgaḍh which is situated about 55 kilometres due west of Gwālior and thus appears to have been then included in the kingdom of the Kachchhapaghātas.⁵

¹ Here the reading is *śūri-salakshanaḥ* and Kielhorn translates it as 'endowed with the characteristics of a sage'. But in view of his name not appearing in the whole verse when his father's name is given, I am inclined to take Salakshana as his name.

² He is also the composer of the following inscription where he is stated to be a poet in six languages.

³ If we take Simhavāja as the title of Māhula or *vice-versa*, then instead of three we have only two engravers. But nothing can be said to be certain in this respect.

⁴ See Cunningham's *A.S.I.R.*, Vol. II, p. 400; also see Marshall's *A.S.I.R.*, for 1925-26, p. 190.

⁵ We have nothing to verify this identification. It may also be stated here, however, that there is one more place of the name of Padhāvalli which lies about 30 kilometres due north-east of Gwālior and contains remains of a tenth century temple (Cunningham, *A.S.I.R.*, Vol. XX, p. 107). And in view of the latter half of its name is the same as of the Pāshānapalli and also in view of its proximity from Gwālior where the temple described in the present inscription stands, one may be tempted to identify both these places with each other. But this is only a surmise.

APPENDIX A

NAMES OF BRĀHMAṆAS WHO WERE GIVEN SHARES

S. No.	Names of Brāhmaṇas	Share	Verse No.
1.	Dēvalabdhi Sudhīra	$1\frac{1}{2}$	80
2.	Śrīdhara Dīkshīta	"	80
3.	Kīrtiratha sūri	"	80
4.	Gaṅgādhara	1	81
5.	Gautama	"	81
6.	Malaka	"	81
7.	Gay(ḍ)ādhara	"	81
8.	Dēvanāga	"	81
9.	Vasīshtha	"	81
10.	Dēvasārman	"	81
11.	Yaśaskara	"	81
12.	Kriṣṭya	"	82
13.	Varāhasvāmin	"	82
14.	Gṛihadāsa	"	82
15.	Prabhākara	"	82
16.	Ichchādhara	"	82
17.	Madhu	"	82
18.	Tilhēka	"	82
19.	Purushōttama	"	82
20.	Rāmēśvara	"	82
21.	Dāmōdara	"	83
22.	Shatṭhabha	$\frac{1}{2}$	82-83
23.	Ratna	}	84
24.	Tihunēka		

Total number of shares distributed are $(3 \times 1\frac{1}{2}) + (18 \times 1) + \frac{1}{2} + (2 \times \frac{1}{2}) = 23\frac{1}{2}$.

¹ In his article in *op. cit.*, p. 12, n. 133, Kielhorn shows the total of all the distributed shares to be $24\frac{1}{2}$; but according to my calculations it comes to be 24. The expression in v. 84 I interpret to mean that 'both the worshippers, viz., Ratna and Tihunēka obtained half-a-share together' and not each as Kielhorn takes it. But the actual number of shares mentioned above in v. 75 is $24\frac{1}{2}$, and we may presume that the land constituting half-the-share may have been left fallow to mark the boundaries between the different shares.

APPENDIX B

SHOWING THE ARTICLES DONATED BY THE KING

N.B. — The numbers in brackets denote the verse in which the article is mentioned.

A. *Ornaments for the god Hari :*

Gold diadem covered with precious stones, with a very large jewel shining in its midst ; frontal ornament made of emeralds (86) ; gold necklace blazing with precious stones ; pair of arm-rings set with precious stones (87) ; four bracelets ornamented with jewels (88).

The same set solely of gold for Aniruddha.

For Achyuta, in addition to these — Four bracelets, a pair of *tālapaṭṭas*, *hṛttidāra* with a golden handle (ornament for the fist (?), waist-coat of silver and four *kauchōlas* (?) 90-1.

B. *For holding the naivedya* — four plates of brass (91).C. *For decoration of the attendants of the gods :*

Three oval globes (*sivarṇāṇḍas*) ; gold-lotus made into an umbrella (92).

D. *For bathing the gods :*

Two copper-basins and a pair of copper-vessels (for the oblation of *arghya* (96).

E. *For waving the light :*

Seven bells with incense burners ; vessels for waving lights and seven conch-shells with four copper-pots (97). *Vāḍhadhā* of brass, two *kāhalas*, a chowrie and a pair of staves made of bell-metal and crystal (98).

F. *For cooking food :*

Two large kettles of copper, two pitchers, five pails and a spoon — all of copper (99).

¹ From impressions and the original.

² Expressed by a symbol.

³ Kielhorn translates this word correctly as 'pearlstone' but he says that he is doubtful about the meaning. This appears to have been due to the use of 'vāṭa' used here and in the following line to denote the hugeness of the image.

⁴ Bh is engraved as h.

⁵ *Indra-tanaya* is Arjuna. The latter half of this verse compares the king with Prithu who, according to the *Vishnu Purāna* (1, 13, 82), uprooted the mountains, as he vanquished his enemies (kings).

⁶ Both the bracketed letters are damaged but the reading is doubtless, as also recognised by Kielhorn, and not *vāri*, as taken by Rajendralal. *Gādhinagara* is *Kānyakubja*. The following bracketed letter is *vā*, corrected to *pā*.

⁷ The plural used here denotes frequency and not number.

⁸ This is an example of *vṛadh-ābhāsa* and the apparent contradiction disappears by taking the word *mītra* to denote the Sun.

⁹ Here, and at the end of some other lines below, is engraved the *haka-pāta* symbol which is not noted every time. The word *daṇḍa* in this verse means 'army'.

^१ There is a play on the word *kara* which means (1) a ray and (2) a tax.

^२ As suggested by Kielhorn, *Sri* (majesty) and *Gauri* (the earth) are represented as the wives of the king.

^३ Read

^४ This letter is damaged and the reading is conjectural. In the following verse the figure of speech is *Parivāṅkhyā*, examples of which are often found in the *Kādambari*. *Nagna* in the present case means 'a *chārāṇa*'. For a similar expression, cf. *Kuvināṣa* *trām lāvat*, in *Kāvya-Prahāra*, VII.

^५ This verse has the *double entendre* with a play on the use of *gava* meaning (1) virtue and (2) bow-string; and *nīstriṅśa* meaning (1) merciless and (2) sword.

^६ For grammatical construction, cf. *prabhravālayām yō nahusham chakāra*, in *Raghuvamśa*, XIII, 36.

^७ For Kielhorn's translation of this verse, see *op. cit.*, p. 43 and n. 122. Differing from him, I take it to mean that "the wives of his enemies residing in the bees looking to their faces, could not decide whether the forest take one night of the Hēmanṭa season as many (*haimanī-rajāni-chaya*); and consequently, they were really gold-houses (or the faces were pale in consequence of the separation from their husbands).

^८ Kielhorn translates this as "from the top of the golden staff..." But a *n* is clear enough before the following *da*, and thus the expression would mean "falling on the golden jar from the tip of the staff". Kielhorn also takes *maṇḍa* in the sense of 'ornamental'; but in that case the simile would not be complete and where the banner was falling is also not known. My interpretation of the expression (with the reading *auḍam*) compares the banner to the Ganges, falling from the staff (as from the sky) on the matted hair of Sambhu. The word *auḍa* here to be taken in the sense of *auḍākāra-kalāla* cf. *svastāvāḍam nigaditam Agni-Parāna*, 61. v. 23.

^१ This verse intends to express eternity to the temple and also to its constructor, as shown by the particle *cha* and the description is applicable to both of these. Kielhorn's translation does not bring out this point.

^२ That is, he died. *Samkramana* is Indra. The number of the Brāhmanas settled by the king suggests that they were as firm (*pratikshita*) as the eight guards of the quarters.

^३ The *visarga* here, as after in l. 33, is dropped according to the *vārtika* on Pāṇini VIII. 3. 36.

^४ All the three *aksharas* are mutilated and the reading may also have been *Māgadhāh*. Most of the following verses from 35 to 67 are full of words showing double meanings describing the king and the object of comparison in identical expressions. All this portion is historically devoid of interest, as already stated.

^५ That is, who tears (ends) the age of his enemies (by killing them) and who has his good conduct as *hala* (*hāla*).

^६ That is, Kāmadēva who was born of Krishna and also as killing the demon Sambara.

^७ There is a play on the following words: *bhūbhūit* meaning (1) king and (2) mountain, i.e., the Hima-
layas; *viśha* meaning (1) bull and (2) dharmā; *bhūti* meaning prosperity and ashes. Śaṅkara is well
known as *purāri*.

^८ That is, Nandin, who is known to have extinguished the fire in the sacrifice performed by Dakṣa.

^९ That is, Sumera. Here *vibudha* means (1) learned persons and (2) gods, and *guru* means (1) a precep-
tor and (2) Brīhस्पति. *Sahasra-vilochana* is Indra.

¹ Vyāsa, whose complexion was dark.

² The word *anādhaka* here means (1) not a striker and (2) relieved of Tādakā; and Hari has the double meaning of (1) a horse and (2) a monkey.

³ That following his brother's intention Bhīma disguised himself as a cook at the time of *ajñāta-vāsa* is well known.

⁴ The reference is to Arjuna who vanquished the army of Chitraratha.

⁵ Here is an allusion to Karṇa (horn of the Sun) who removed the pride of the enemies of Duryōdhana (strong in contest), who made an attempt to check the fame of the enemy Arjuna (chock the white fame of the enemies) and who removed the misfortune of the supplicants.

⁶ *Simhaka-bhū* is Rāhu (Saimhikēya) who causes an eclipse by devouring the Sun. The king is here described as overpowering the Sun in the form of his haughty adversaries and killing their elephants. For *ahk-āgata-satva-vṛttih*, cf. *Rāghuvamśa*, II, 38.

⁷ Here is a play on the following words: *dāna* means (1) a gift and (2) *ichar*; *karuṣāla* means (1) a sword and (2) turn of the trunk of an elephant. *Dantapālī* is a kind of weapon.

⁸ *Mitra* means (1) the sun and (2) a friend; and *jada* means dull (the same as *jala*, meaning 'water').

⁹ This verse mentions the actions of Viṣṇu, Paraśurāma, Vāmana, Kṛṣṇa and Nārāyaṇa, respectively. The word *jada* is used here in its double meaning: (water) and (stupid), as above.

^१ Here is a reference to Partha's putting to flight the enemies capturing Uttara's cows, for which see *Mbh., Virāta Parva*.

^२ For the *visarga* dropped here, see n. 20, above.

^३ A *kalpa* is a day of Brahmā, extending over one thousand *yugas*. Here it is suggested that the king may live long for a *kalpa* and even longer; that the Sun, the moon and the stars taking their birth and coming to an end many time in one *kalpa*.

^४ Kielhorn observes that this letter might be read as *mm*. It seems to me, however, that the reading is intended to be *sēshān*—*vidhāya* meaning that having made the remaining of (the Brāhmaṇas) *śeshā*, i.e., *śeshavat ādhārabhūtān*, indicating their stay to be permanent. The word *śeshā* is used here in a double sense.

^५ Read *chakrē dvayam*.

^६ Kielhorn explained it to mean "the sanctuary of the temple rising from the small hall". But the context shows that here the word denotes the share which was due to the Brāhmaṇas, out of that collected in the customs house (*mandapikā*). Compare *dvōttara*, meaning rent-free holding in the possession of a god.

^७ Kielhorn translated this word as 'the tribe of attendants', and admitted that he could not quote any authority for this. *Pāda* here means feet (of the gods), and *kula* denotes abode, i.e. the temple. The word thus appears to mean 'a group of worshippers'. A worshipper is called *pādamūla* in the Śirpur inscription (*E. I.*, XI, p. 192) and is probably connected with it. *Pāda-mūla* is of course primarily the foot-print (*Pādūkā*). Cf. *Rāmāgiri-svāmīnāḥ pādāmūlāi* in the Riddhapur plates of Prabhāvatī-Gupta, for which, see *C. I. I.*, Vol. V, p. 35, Text-line 1, translated as 'foot-prints'.

^८ The word is unknown to the dictionaries and Kielhorn also noted his inability to explain it.

^१ There two aksharas may also be read as *le hi*.

^२ Probably *tilapatra*, i.e., ear-ornament. The word *kriddāra* is also not known to the dictionaries.

^३ A bodice. *Kaṅchōla* is probably *kaṅchuka*.

^४ Kielhorn remarked that he does not understand this word. To me, however, it appears to denote the egg-shaped object attached to the *chhatra*, below, for ornamentation.

^५ The first of these objects is a precious stone and the second, bell-metal.

^६ A drum. The word *vādhadhā* is again unknown.

^७ Both these strokes are ornamental and one of them is superfluous.

No. 156 : PLATE CXXXIII

GWĀLIOR STONE INSCRIPTION OF THE TIME OF MAHIPLĀA

[Vikrama] Year 1161

THIS inscription is incised on a long slab of yellow sand-stone discovered by General Alexander Cunningham in the fortress of **Gwālior**, which is now the chief city of a district in Madhya Pradesh, and was brought to notice by him in his *Archaeological Survey of India Reports, Volume II* (1862-1865), p. 354. The record was also transcribed and translated by Rajendralal Mitra in the *Journal of the Asiatic Society of Bengal, Volume XXXI* (1862), pp. 418 ff., but his article is not illustrated. His transcript too is inaccurate in a number of places, particularly in the historical portion thereof, as rightly pointed out by E. Hultzsch, who subsequently edited the record in the *Indian Antiquary, Volume XV* (1886), pp. 201 ff. Hultzsch succeeded in recognising in it three names of the royal personages and also in correcting the genealogy given by Mitra; but his article too, which contains his reading of the text, is not accompanied by a facsimile, and he has not given some other details, e.g., the dimensions of the writing, language and orthography, etc. The inscription is edited here from an excellent inked impression kindly prepared and supplied to me, at my request, by the Director of the Provincial Museum, Lucknow, where the stone is now preserved.

The writing consists of nine lines, and originally it covered a space about 154 cms. broad by 25 cms. high. The last of the lines is about 2 cms. longer than the others, to accommodate two more letters completing the inscription. But the record is fragmentary, as a part of the stone from top to bottom on the proper right side and containing about twenty *aksharas* at the commencement of each of the lines, is broken and lost, as can be made out by the number of verses in the inscription. A small portion of the upper proper right corner and the top portion covering a major part of the first line have also broken away. The extant portion, however, is

¹ Kielhorn was somewhat doubtful about the reading of the bracketed *aksharas*, but they are clear enough on the stone, though somewhat rubbed.

in a good state of preservation and indicates that the letters were beautifully formed and carefully engraved. Their average size with the *mātrās* is between 1.2 and 1.5 cms.

The **characters** are Nāgarī of the beginning of the twelfth century A.C. and show a sort of affinity with those of the preceding inscription which too is from the same place; but some of the forms of letters of the present inscription are rather archaic. To note some of their peculiarities, we find that *g* and *th*, when subscripts of a conjunct consonant, lose their vertical; see respectively, *-āṅga*, l. 1 and *kaṅṭha-* and *adhishṭhāya*, both in l. 2, but there are exceptions, e.g., the *akshara g* retains its vertical in *-aṅgīrām-*, l. 5. *Th* is represented by two hollow circles placed vertically and sometimes assuming the form of the modern *sh*, as in *paṭha* and *Manōratha*, both in l. 4. The letter *ṅ* appears as *ṅl*, for which see *arṇava-*, l. 5. *N* is by mistake often engraved as *t*; cf. *Manōratha* and *oipināmou*, both in l. 4. The slightly different varieties of the form of *r*, as noted while editing the preceding inscription, may be illustrated in *dharitrīm*, l. 2, where the letter shows a wedge, in *kurutē*, l. 3, where a horizontal stroke is attached to the left of the vertical, and in *kshatriya*, l. 2, where it appears almost as modern. This very letter, when the latter member of a conjunct consonant, is sometimes complete with the preceding letter half-drawn, as in *kshatriya*, and is sometimes shown by a serif, as in *pratāpa*, both these words to be found in l. 2.

The **language** is Sanskrit; and with the exception of the concluding portion containing the date, the record in its preserved portion is composed in verses. In all there are 24 stanzas, composed in different metres; and the rare metres like *Bhujāṅgaprayāta* and *Prithvī*, and *Atitōṭaka*, which is still seldom to be seen, have been used, showing the poet's skill in versification. The verses are not numbered, but are marked in the end by two vertical strokes and their first halves are marked by one vertical stroke, as usual.

With respect to **orthography**, we notice (1) the use of the sign of *v* to denote *b* as well, e.g., in *vabhau*, l. 2; (2) reduplication of a consonant following *r*, as in *vārttā*, l. 3; (3) the use of the dental sibilant in place of the palatal to be found only five times in the extant portion of the record, viz., in *-asmavēśma*, l. 5, *visadī*, l. 6, and *śasvat*, occurring twice in l. 7; (4) the sporadic use of the *prishṭha-* and the *īrḍhva-mātrās*; (5) the tendency to use a *para-savarna* more often than an *anusvāra*; (6) the use of *h* for *gh* in *aṅghri*, l. 2; and (7) the marking of final consonants regularly, including *m*, which is rightly used at the end of a word, excepting only two instances showing its wrong use by its change to an *anusvāra* at the end of both the hemistiches in verse 21.

The **object** of the inscription is to record the construction of a temple dedicated to Hara (Śiva), by Āśāchandra, who is said to have been a younger brother of Madhusūdana, a son of Mānichandra and a grandson of Manōratha of the Māthura Kāyastha clan, who was in charge of recording the income and expenditure of king Bhuvanapāla. The **date** of the *pratiśṭhā* of the temple when the *līṅga* was set up in it, is recorded in words in the last line; it was the sixth day of the bright half of the month of 𑀧Māgha when eleven hundred and sixty-one years had elapsed from the time of the king Vikrama. The date cannot be verified; but taking the year to be the Chaitrādī Vikrama expired (*atīta*), it corresponds to Tuesday, 5th January, 1104 A.C., when the *tithi* ended at 45 after mean sunrise, and for the Kārttikādī, to Monday, 23rd January, 1105 A.C., when the *tithi* ended at 55 after mean sunrise.

As stated above, the inscription is fragmentary. Its contents, as can be known from the extant portion thereof, may now be reviewed briefly. The first stanza, of which only the third quarter is preserved, introduces a king of the name of Bhuvanapāla, and the second, which too is fragmentary, mentions his son whose name is unfortunately lost.¹ Stanza 3 is rather better preserved; it gives the name of Padmapāla and states that he was a grandson of Bhuvanapāla and a son of Dēvapāla, thus supplying the name which has been lost in the second stanza.² This

¹ The beginning too may have contained a sentence in prose paying obeisance to Śiva; this portion too is now lost.

² Verse 2 has the reading "*aparājita*" at the end of each of the hemistiches; and, as observed by D. R. Bhandarkar, it is possible to take Aparājita as an elder brother of Dēvapāla, or, as the Yamaka shows a *hīruḍa* of Dēvapāla himself, whose name occurs in stanza 5. See his *List of Inscriptions*, No. 169, n. Bhuvanapāla is the same as Mūladēva of the preceding record, as said in its verse 12.

account is also in confirmation with that of the preceding inscription. The stanza that follows is again much damaged, but its first quarter is the same as that of Kālidāsa's *Kumāra-sambhava* (I, 43): in all probability it is devoted to describe the face of the king,¹ i.e., Padmapāla. The record proceeds to state that he (i.e., Padmapāla) was succeeded by Mahipāla who was 'a destroyer of his enemies and was honoured by kings bowing down their heads so as to drop down their head-garlands on his foot-stools' and 'whose fame adorned the temples of the elephants guarding the quarters'. The next two stanzas (vv. 7-8) intend to express the majesty of the king (i.e., Mahipāla), comparing him with the Sun, by means of *double entendre*, meaning that his glory spread in all quarters and he placed his feet on the heads of kings (vanquished them, as the Sun spreads his rays on the summits of mountains), removed vices (of his subjects, as the Sun dispels darkness) and was a good, i.e. capable lord.² And the last stanza (v. 9) again refers to Mahipāla and says that 'even the news of his approach drives his enemies away to a distance'.

Here ends the first part of the inscription, dealing with the genealogy of the royal house. Unfortunately the very name of the house to which all these kings belonged cannot be known from the portion now available, but from the genealogy which is materially the same as recorded in the inscription edited above, we may safely conclude that it refers to the house of the **Kachchhapaghātas** ruling at Gwālior.³ It must be admitted here, however, that in respect of genealogy, the present inscription has nothing new to say.

The latter part of the inscription which gives the object, as seen above, is separated by a sign of interpunctuation resembling a wheel with eight spokes.⁴ It also gives a long genealogical account of the person who built the temple; and as it is not of any historical value, it will, I think, be sufficient to give here only an abstract of its contents. After eulogising the god Śiva in the form of a sacrificer (*Kāla-yajvā*), in v. 10, it introduces one Manōratha of the Māthura clan of Kāyasthas and says that he was the Secretary (or Accountant) of the king Bhuvanapāla (v. 12). Manōratha's wife was Bhāvā (?) and their son was Mānichandra (vv. 13-14), who built a temple containing statues of Smar-ārāti (Śiva) and of some other gods⁵ and who married Rāsagatī (vv. 15-16).⁶ Their son was Madhusūdana; whose younger brother Āśāchandra built (the present) temple of Hara (v. 17).⁷ Verses 18-22 are devoted to eulogise Āśāchandra as a learned and pious person doing religious and charitable works; but this description is all poetic, specifying not even one illustration to give him the credit.

Following this account, we have two more stanzas; the first of them records that the inscription was composed by the Jaina sage (*nirgranthinātha*) Yaśōdēva (v. 23),⁸ and the second (v. 24) contains the blessings of the deity. The concluding passage, which is in prose, gives the details of the date which we have seen above.

There is only one place-name **Gwālikēra** in the preserved portion of the record (v. 5). It is the well-known city of Gwālior where the stone was found. As noted by Hultzsch while editing the inscription, it seems to be the original form and the immediate source of the modern name 'Gwālior' or more correctly Gwālhēr.

¹ The very name Padmapāla may have given our poet an idea to utilise this verse in his composition.

² See text, below, *f.n.* 9. Hultzsch suggested that stanzas 7-9 of this record seems to refer to the death of Mahipāla, and must have recorded the name of his successor, which, however, is not certain. See *Ind. Ant.*, Vol. XV, p. 202. Following this view, it is possible to hold that some time before this record was put up, the throne was occupied by Mahipāla's successor and the temple was built in his reign. But this view is not certain.

³ It is very probable that the very name of the house is lost in 1.1. See text, below, *f.n.* 3.

⁴ See text, below, *f.n.* appended to verse 10.

⁵ As noted by Hultzsch in *Ind. Ant.*, Vol. XV, p. 202, n. 8, this temple may be the smaller *Sōi-Bahū* temple at Gwālior.

⁶ In verse 16 the reading is *Janai-rāsagatīr*; and the name may be taken either to be *Āsagatī* or *Rāsagatī*.

⁷ According to Hultzsch, the probable site of this temple is the same as in Cunningham's *A.S.I.R.*, II, p. 364 and Plate lxxxviii.

⁸ He is the same person who is called in the preceding inscription as Yaśōdēva Digambarārka who wrote it (on stone). In the present record he is called 'a poet in six languages', which are, as Hultzsch observes, Sanskrit, Prākṛit, Saurasēṇī, Māgadhī, Palīchī and Dēlājā (see *Ind. Ant.*, Vol. XV, p. 202, n. 10). In the preceding inscription he is called 'a poet in all languages' (*aśēsha-bhāshāsu kavīh*).

¹ From inked stampages.

² Parts of स्वरिडो, as of some other aksharas in this line, are visible in the impression, but the sense cannot be made out.

³ Here the missing letters may have been नौ(पचित)कण्डपचलकुले वरः.

⁴ Here and below, the dots represent the numbers of the aksharas which are lost.

⁵ It may here be noted that whereas the stanza in the *Kāmāra-Saṁbhava* (I. 43) describes the face of Pārvatī, it is utilised here to glorify a male face.

⁶ Though correct according to the *sandhi*-rules, the metre requires this word to be read as in the brackets.

⁷ Read — धि

⁸ This *daṇḍa* is redundant.

⁹ This verse compares the king to the Sun, by the double meanings of पट्ट — (i) a foot and (ii) a ray; भूमिभूत् — (i) a king and (ii) a mountain; दोष — a vice, and a night; and इत् — (i) a lord and (ii) the Sun.

¹⁰ Here is an eight-spoked wheel between double *daṇḍas*. Somewhat similar signs of inter-punctuation also occur in the *Dubkund* inscription, and, as noted by Hultzsch, at the end of the *Kōṭā* Buddhist inscription of the *Sāmānta Dēvadatta* (*Ind. Ant.*, Vol. XIV, p. 46) and in a *Gwalior* inscription of *Bhōjadēva* (*Journ. of the German Ori. Soc.*, Vol. XI, p. 55).

¹¹ This word goes with the word that follows and hence in plural.

¹² This is, even *Bṛihaspati* is *laghu*, i.e., unable.

No. 157: PLATE CXXXIV

NARWAR COPPER-PLATE INSCRIPTION OF VIRASIMHADĒVA

[Vikrama] Year 1177

THIS inscription was transcribed and translated by Fitz Edward Hall, without a facsimile, in the *Journal of the American Oriental Society*, Vol. VI (1858-60), pp. 542 ff., where he also states that "a negative facsimile" of it "has been lithographed in the *Journal of the Archaeological Society of Delhi*, for January, 1853." Nothing is now known about the journal mentioned by Hall; and in his writing he did not state anything as to how, when and where the plate was actually found. The present whereabouts thereof are also unknown, and as even an impression too of it is not now forthcoming, I have copied here Hall's transcript and added my notes to it.

¹ Read स्तुतयोर्. There may originally have been the *rēpha* on the following *akshara*.

² A *kāka-pada* sign is engraved at the end of this line. This quarter also shows a wrong pause-fall.

³ Here, as often elsewhere, ष is engraved as ष

⁴ The word *pārvā* means a *pralasti*; and while editing this inscription, Hultzsch failed to see this when he remarks that "the word *pralasti* has to be supplied with *pārvām*" (*Ind. Ant.*, Vol. XV, p. 202, n.).

⁵ There is no punctuation mark to close the inscription.

As stated above, the provenance of the plate is not known, but it must have been discovered somewhere in the region around **Narwar** in the Shivpuri District of Madhya Pradesh. The preservation of the plate seems to have been satisfactory, as Hall found it completely legible. Its size and that of the letters incised on it, and also its weight, have not been recorded. The exact number of the lines too is not known, for Hall does not appear to have transcribed the record line by line. Judging from the specimens of letters published by him, the characters belong to the **Nāgarī** alphabet. The **language** is Sanskrit, and except for seven imprecatory verses towards the end, the record is all in prose. With reference to **orthography**, what we can be sure about is that *ja* is employed in place of *ya* at the end of L. 8 in the text given below, and that in the formal portion some of the names appear in their Prakrit form and also without proper case-endings.

The inscription is one of the victorious, the illustrious **Vīrasimhadēva** who belonged to the **Kachchhapaghāta** house of Narwar, and its **object** is to record the donation of the village Babādō to certain Brāhmaṇas, by the king himself. The **date** of the grant is given in words only; it is *amāvāsya* of **Kārttika** in the year **1177** of an unspecified era, which, from the practice current in the age, has to be taken as that of the Vikrama era. The week-day was **Sunday**. Accordingly, the date regularly corresponds to **24th October, 1120 A.C.**, when there was a Sunday, as mentioned in the record and also a solar eclipse visible in India, which, though not mentioned in it, appears to have been intended.

After a small sentence paying obeisance to Nārāyaṇa and the date as stated above, the inscription introduces **Gaganasimhadēva** of the **Kachchhapaghāta** house, who bore the titles of *Mahārājādhirāja* and *Paramēśvara* and ruled from the great fort of Nalapura. Gaganasimha's successor was **Śaradasimha** (probably his son though not explicitly mentioned), with the additional title *Paramabhūttāraka*; and his chief queen was Lasha(kha)mādēvī, who gave birth to Vīrasimhadēva who bore the same title as his father whom he succeeded. Vīrasimhadēva is stated to have been a zealous devotee of Viṣṇu and also compassionate to the indigent, helpless and poor, possessing a collection of virtues, devoted to his parents. He resembled Yudhisṭhira in truth-speaking, possessing supernatural strength as Bhīmasēna, foremost among the archers as Arjuna, resembling Karṇa in earning fame by liberality, possessed of self-respect as Duryōdhana, of matchless valour as a lion, and also one who had earned fame by controlling hostile elephants on the battle-field.

This account is followed by the formal portion of the record. Among the dignitaries to whom the royal order was addressed, there were the Brāhmaṇas, *mahantas* (mahattaras?) and the (residents of the) *janapadas*. The donation was made in order to increase the religious merit of the king's parents and of himself. The village named Babādō, as stated above, was split up into eighteen parts which were donated. The following table is intended to show the details of the donees and the share obtained by each of them:

No.	Name of donee	gōtra	surname	share obtained
1.	Gōvinda	Kāśyapa	avasathika	2
2.	Pādmanābha	"	—	1 brother of No. 1
3.	Kēśava	—	—	1
4.	Rāma	Upamanya	Chaturvēdin	1
5.	Kēśava	—	—	1
6.	Nārasimha	—	—	1
7.	Lashamaṇa	—	—	1

¹ As calculated by Kielhorn in *Ind. Ant.*, Vol. XIX, p. 167, No. 84. The same scholar also pointed out that the year was expired and the month *pūrṇimānta*, when the new moon *tithi* ended 4 h. 58 m. after mean sunrise.

8.	Saṭhē	Bhāradvāja	—	1
9.	Dāmōdata	Kāśyapa	—	½
10.	Kēśava	—	—	½
11.	Pañchhūhila	Kṛishṇātrēya	—	1
12.	Gōpati	Kāśyapa	Patī (Paṇḍita)	1
13.	Mahasōṇa	Atri	—	1
14.	Śilē	Bhārgava	—	1
15.	Nānū	Kṛishṇātrēya	—	1
16.	Mālyē	Bhāradvāja	—	1
17.	Chāmara	Kapila	—	1
18.	Thāā (Thāā?)	Gautama	—	1

Total number of shares = 18

It will be seen that in a few cases (Nos. 3, 5-7 and 10), only the names of the donees are mentioned without any further details, and in three of the instances (Nos. 1, 4 and 12), the surnames are also mentioned along with the *gōtras*.

The record is of considerable historical interest as it reveals the existence of an altogether new Kachchhapaghāta house reigning at Narwar which was its capital, as a paramount sovereign.

Of the **geographical names** figuring in the inscription, Nalaputra, the capital of the house, is evidently identical with Narwar in the Shivpuri District of Madhya Pradesh. **Babādō**, the donated village, cannot be identified for want of the required data. It is not known if it is represented by the modern village Barod, the name of which sounds somewhat similar to it and which is situated about 28 kms. south of Narwar.

TEXT

[Metre: Verses 1-7 *Anuṣṭubh*]

^१ From Hall's transcript in *J. A. O. S.*, Vol. VI (1858-60), pp. 542 f. The lines here are as given by Hall, who does not appear to have followed the lines of the original.

^२ It is not known whether this sign of *avagraha*, as some others below, is actually engraved in the original or inserted by Hall in the transcript. The same remark may be made here about the use of the *anusvāra* and *parasavarṇa*, about doubling the consonant after *r* and about the correct use of sibilants etc. While calculating the corresponding Christian date in the *Ind. Ant.*, Vol. XIX, Kielhorn also remarked that Hall has changed the original *amāvāsyām* to *amāvāsyāyām* unnecessarily (p. 167, n). It is true that we get the *loc. sing.* form *amāvāsyām* from the word *amāvāśī*, but in the absence of an impression we cannot be definite about the original reading.

^३ The use of the word *pītri* before *mātrī* may be justified by Pāṇini's *sūtra Alpāchāram* (II, ii, 34).

^४ As Hall remarked, the letters ऋँ are repeated in the original and are left unraised.

^५ In the original, ऋ appears instead of ऋ as stated by Hall.

¹ The correct form of this name is *Saratsimha*. Also read तदानुध्यात

² The Sanskrit form of this name is *Lakshmi*.

³ Insert a *danda* after this word.

⁴ In fact, the name of the village occurs below in the text.

⁵ *Mahanta* appears to be wrongly read for *mahattara* in the original.

⁶ This word is not known to the dictionaries. Hall translates it by 'class'.

⁷ Read *दि* or better, -*दिने*. Some of the names occurring in the list are not Sanskrit and some with-
out the proper case-endings, as already noted by Hall.

⁸ The sign of zero is redundant, and what follows has to be read as 'a half', and not *danda*.

⁹ The *nisarga* is wrongly dropped here in the original, or it is a printing error.

¹⁰ The reading of the preceding *akshara* appears to be doubtful.

¹¹ The correct word to be used here is *kshantaryam*.

AN INSCRIPTION OF THE DYNASTY OF VIJAYAPĀLA

No. 158 ; PLATE CXXXV

INĠNĠDĀ STONE INSCRIPTION OF VIJAYAPĀLADĒVA

[Vikrama] Year 1190

THIS inscription was brought to notice by Nilakantha Janardana Kirtane who transcribed and translated it in his article "On three Inscriptions from Mālwa", all published with facsimiles thereof in the *Indian Antiquary*, Vol. VI, pp. 46 ff. In his introduction to the article, Kirtane observed that the present record is engraved "on a slab into the wall of a newly built temple at **InġnĠdā** a large village included in the territories of the junior branch of the Dēwās State in Central India." Some time subsequently, the slab was removed to Dēwās, the chief town of the (former) State, and was deposited there in the local Victoria High School.² The historical importance of the record is often discussed,³ but it remained to be systematically edited. In my recent visit to Dēwās, in order to study the document from the original stone, I found that the slab is now missing; nor could I succeed in tracing it at Rīġnġd where it was originally found. Under the circumstances, the record is edited here from a photograph which I owe to the kindness of the Chief Epigraphist.⁴

In his article Kirtane has stated that the stone on which the record is engraved measured about 20" by 14", which are respectively equivalent to 50.80 cms. and 35.56 cms. The inscription consists of fifteen lines of writing which is carefully engraved and is well preserved. The last line is a little smaller in length than the others.

The **characters** belong to the Nāgarī alphabet of the twelfth century. The initial *i* which occurs thrice in ll. 1, 5 and 7, shows in the latter two examples its old form consisting of two circles horizontally placed and subscribed by the medial short *u*, but an advanced form in the first. *T* and *n* are occasionally alike as in *duttāni*, l. 10 and *puṅar = ādadītu*, l. 11; *th* is formed of two hollow circles placed vertically: see *pathakē*, l. 7; the fore-limb of *dh* has a horn above for which see *vasudhā*, l. 11, where the verticals of *dhā* are joined by a horizontal stroke. The consonant *k* as the first member of a conjunct, loses its loop, as in *pakshē* and *dakshīpa*, both in l. 7; and lastly, the form of *bh* in *bhartṛi* in l. 2 is different from that as appearing in the other instances.

The **language** of the record is Sanskrit; and except for the five imprecatory verses in ll. 10-14, it is all in prose. The **orthographical peculiarities** that call for notice are (1) the use of the sign for *v* to denote *b*, as well, e.g., in *vrahma*, l. 5; (2) writing the dental for the palatal sibilant about half-a-dozen times, as in *Sivāya*, l. 1 and *Āsādhara*, l. 14; (3) the reduplication of a class-consonant, e.g., in *samabhyarchchya*, l. 4; (4) the general use of an *anusvāra* for a class-nasal even at the end of a hemistich and even before a vowel, though wrongly; cf. *phalaṁ* and *vasudharāṁ*, both in l. 12, and *samētaṁ udaka* l. 8. In addition to these, the medial diphthongs are indicated both by the *prishtha* and the *ārdhva-mātrās*; the dental and the labial nasal are wrongly changed to an *anusvāra*, e.g., in *maḥāṁ*, l. 5 and *-samētaṁ*, l. 8 respectively; wrong spellings and grammatical errors are also to be seen, e.g., in *parīvāra* and *svāmih*, both in l. 5, *yusākhara*, in l. 11 and *bhūmī* and *svadatām*, both in l. 12. The local element is to be noticed in the name *Lashamaṇa*, and in those in l. 6 and in the end, which are all indicated without the *vibhakti*. And lastly, the *kāka-pada* sign is used at the end of ll. 2, 5, 8 and 13, and a *daṇḍa* in ll. 6 and 12, to show that the word is completed in the next line.

¹ *Op. cit.*, p. 49. The village is known also as Rīġnġdā, Inġnġdā, Ignōdā, etc.

² *Central India Gazetteers, Western States (1907)*, Vol. V, Pt. A, pp. 74 and 78. The School is now known as the Nārāyaṇa Vidyā Mandira.

³ For example, in D. R. Bhandarkar's *List of Insers.*, No. 229; and D. C. Ganguly, *H.P.D.*, p. 165.

⁴ No. C-2045 of 1964-65. Negative No. 5814.

The inscription refers itself to the king **Vijayapāladēva**, who is styled *Mahārājādhirāja*, with two of his predecessors mentioned therein; but it is silent about his dynastic name, which we shall consider below. The object of the inscription is to record the grant, by the said Vijayapāladēva, of the village of **Agasiyaka**, for defraying the expenses of the worship of **Gōha-dēvara**, which is evidently a local name of **Śiva**, in the *Īṅgaputra dakṣiṇapathaka*. The donation was made, as recorded in figures in l. 1 and repeated in words in l. 7, on the **eleventh of the bright half of Āshāḍha of the (Vikrama) year 1190**, which, for the Northern Vikrama-current, would correspond to **Sunday, the 26th June, 1132, A.C.**, and for the expired, to **Thursday, the 15th June, 1133 A.C.** The date cannot be verified.

As stated above, the donor of the grant is the *Mahārājādhirāja, Paramēśvara*, the illustrious *Vijayapāladēva*. He is said to be the successor of the *Paramabhūṭjāvaka, Mahārājādhirāja, Paramēśvara*, the illustrious **Tihunapāladēva**, who again was the successor of the *M.P.*, the illustrious **Prithvipāladēva** alias **Bhartripada** (ll. 2-3).¹ The record does not specify the name of the family to which these princes belonged, but all the three names are to be found in the same order in another inscription dated in Samvat 1212 (1155 A.C.), which was discovered by G. H. Ojha in the former Dūngarpur State (now a district of the same name) in Central Rājasthān.² The only difference shown by both these inscriptions is that whereas the latter one gives the name Tribhuvanapāla in its Sanskrit form, the former gives the name in its Prakrit form as Tihunapāla. Dūngarpur is about hundred miles or 160 kms. due west of the find-spot of the present inscription, and the two inscriptions taken together indicate that the kings mentioned in the present inscription ruled independently, as shown by their titles, over the central parts of Mālwa and Rājasthān in the middle of the twelfth century A.C., or, to be more precise, in the second quarter of that century.

The grant of a village in the locality which formed a part of the Paramāra kingdom at that time by a king who styles himself as a *Mahārājādhirāja* clearly indicates that he may have wrested a part of the Paramāra kingdom in the last days of Naravarman whose last year is known to be 1133 A.C.,³ which is, curiously enough, also the year of the present grant. We know that Naravarman had to sustain a reverse in his last days at the hands of the Chandēlla Sallakṣhanavarman on the east⁴ and the Chaulukya Jayasinha Siddharāja on the west of his territories; and an unpublished inscription from Ujjain also shows that Mālwa was annexed to the Chaulukya kingdom in V.S. 1193 or 1136 A.C.⁵ From all these evidences, we may conclude that Vijayapāladēva, who may presumably be taken to have entered the service of the royal Paramāra house as governor in the region around Īṅgnōdā, declared himself independent when the Paramāra kingdom was on its wane during the last years of Naravarman. It is significant to note here that after the Kadambapadraka grant of Naravarman which was issued in V.S. 1167, or 1110 A.C.,⁶ we have no epigraphical record of the king till his death; and it is also worth noting that the princes of Vāgaḍa, which was then governed by one of the junior branches of the Paramāras, also suffered with them, giving an opportunity to Vijayapāla to include that part too in his kingdom, as shown by the record found in the Dūngarpur region.

But the *Ṭhākardā* inscription too is equally silent as to the name of the house to which these kings belonged; and G. H. Ojha, in his notice thereof in the *Report of the Rājputānā Museum*, suggests that possibly they may have been the descendants of the Pratihāra kings of Kanauj.⁷ But we have no evidence in support of this conjecture, and I am inclined to agree with D. R. Bhandarkar who took them to belong to the Kachchhapaghāta house of Gwālior, taking the name Prithvipāla of both these inscriptions as synonymous with Mahipāla mentioned

¹ For the southern V. expired, it would correspond to Tuesday, 3rd July, 1134 A.C.

² See text, n. 5. It appears to be synonymous with the title *Paramabhūṭjāvaka* of the inscriptions. It may also be noted that this epithet is again missing before the name of Tihunapāla.

³ At *Ṭhākardā*. Its contents are noticed in *Ann. Rep. of the Rājputānā Museum*, Ajmer, 1915-16, p. 3.

⁴ His anniversary was performed by his son Yaśovarman in V. 1192=1134 A.D. See No. 39, above.

⁵ See No. 145, v. 4, above. Also see *H. P. D.*, pp. 162-63.

⁶ *P. C. M.*, pp. 85 ff.; *H. P. D.*, pp. 162-63. For the inscription from Ujjain stating that Mālwa was annexed to the Chaulukya kingdom in V.S. 1193 or 1136 A.C., see *A. S. I. R., W. C.*, 1912-13, pp. 54-55. It is still not edited.

⁷ See No. 34, above.

⁸ See n. 6 above.

in two of the records edited above.³ In this connection the similarity of the names is again noteworthy. For the name of Mahāpāla's grandfather, which is mentioned in both the Gwālior inscriptions as Bhuvanapāla, occurs with a slight change as Tihunapāla and Tribhuvanapāla, respectively in the present and the Thākardā inscriptions; and this person is also said to have been the son of Prithvīpāla, showing similar names in that house. And if this view is accepted, the present record carries the genealogy of the royal Kachchhapaghāta house to two reigns further; and the Thākardā record which mentions Sūrapāla as a son of Vijayapāla whose son Anayapāla is mentioned as making a donation of a village, may be taken to carry the genealogy still further by one generation.

The view that Vijayapāla, the donor of the present grant, was a scion of the royal Kachchhapaghāta house also gets support from chronological considerations. Both the Gwālior inscriptions referred to above show that the Kachchhapaghāta Mahāpāla was on the throne in V.S. 1150 (1008 A.C.) and V.S. 1161 (1104 A.C.); and calculating for him a period of c. 1090 to 1110 A.C., we may take his son Tihunapāla to be reigning from c. 1110 to 1130 A.C., and the latter's son Vijayapāla from c. 1130 to 1150 A.C., giving each of them an approximate period of twenty years. The year of the present grant thus falls during his reign. His son Sūrapāla, accordingly, may be taken to have been on the throne from c. 1150 onwards; and thus the year 1155 A.C., when Sūrapāla's son Anayapāla, who was then a prince who issued the Thākardā grant, can well be justified.

Lines 4-6 of the inscription state that Vijayapādēva made the grant of the village, in order to increase the religious merit and fame of his parents as well as of himself, in the presence of his councillor (or councillors), the family-priest, the astrologer, all his dependents and the Brāhmaṇa Indasvāmin,⁴ Sōmadēva, and Kōkala Gadelaka who were all residents of the Brahmapurī at that place, and also in the presence of the *Śrēṣṭhins* Lāla, Sādhā and Lashamaṇa (Lakshmaṇa). Lines 10-14 reproduce four of the customary imprecatory verses; and the inscription closes with the statement that it was written by **Kēhana**, the son of Āśādharā and grandson of Rājapāla, a Kāyastha from Valabhī, and engraved by **Sājana** who was the son of Harasēna and grandson of the artisan Mahāvala (Mahābala?) who belonged to Kukāsakya (?) family.

As for the localities mentioned in the inscription, **Inganapadra**, which is mentioned here as *dakṣiṇa-pāthaka* in l. 7, has already been identified with the modern village Ignōdā or Ingnōdā, also called Rīngnōd. The temple of **Gōhaḍēsvara** in favour of which the grant was made (l. 7) may have existed on the Sīprā about ten Kms. east of Rīngnōd, as suggested by Kirtane. In my personal visit to that place about ten years back, I noticed extensive remains of a Śaivite temple on this site which is on the confluence of the river Piṅgalā with the Mālinī; and the temple still goes by the name Godēsvara. About 2-3 Kms. east of this spot is a modern village of the name of Bāmanpurī, suggesting its identification with the Brahmapurīkā of the inscription (l. 5). Agasiyaka, the donated village cannot be definitely identified. In his edition of the inscription Kirtane has stated that it may have been no longer in existence, and I could not succeed in finding any village in the locality. A conjecture, however, may be hazarded in this respect, *viz.*, that it may be a compound name formed of two villages Āgā and Sīyaka. The first of these is probably to be identified with the modern village Āgā or Ākyā, lying on the Ratlām-Mandsaur metalled road, about 35 kms. north of Ratlām and 10 kms. south by west of Rīngnōd, the find-spot of the inscription. If this is to be taken as the first component, the second one of the name appears to be Sīyaka, which too is situated in the same region, about 25 kms. south of Rīngnōd and almost equidistant, to the south of Ākyā. This conjecture gains ground in view of the consideration that we have a number of villages named after kings, and to cite an example from the same locality, we may point out the village called Muñja, probably named after Muñja and situated about 3 kms. north-west of Alōt, a station not very far from Ratlām on the Ratlām-Koṭā branch of the Western Railway.

³ Nos. 155 and 156, above.

⁴ This passage which contains some names presents difficulty of interpretation, for which see n. on the corresponding portion of the text. Besides, it is not known whether *Indasvāmī* is really one name or two, and so the following expression. Kirtane also takes *Mahākōkala* as one name but the word *mahān* may also have been put as an adjective showing reverence.

¹ From a photograph.² Denoted by a symbol.³ Kirtane omitted these three *aksharas* in his transcript.⁴ Kirtane read -पट्टे here, and also in 1. 7, but the reading as taken above is quite certain. This name occurs also in No. 30, 1. 6, above.⁵ The cursive stroke at the bottom shows this letter to be a *dda*, probably intended for *da*, as also read by Kirtane. It is in the sense of rank or dignity. In his *List of Inscriptions*, No. 229, D. R. Bhandakar took the whole word *bhartri-paṭṭa* to denote a title. He evidently followed G. H. Ojha who read the same in an inscription noticed by him in *A. R. Rāṣṭrānā Museum*, 1915-16, p. 3.⁶ An arrow-mark appears here to indicate that the word is continued in the next line.⁷ Kirtane read the five letters in this line as षट्टिकावित and took the expression to mean an "officer who keeps time". The consonant of the first of these letters can also be taken as *th*, but that of the third is definitely as taken here, for which, cf. *Gadālāka* in the same line and *Ingana* in 1. 1, above, and 7, below. The *akshara* *n* in the fourth one appears as if omitted at first and inserted later on, by a small scratch. Thus here we have the name of the royal preceptor whose presence is shown while making a grant, which is not the case with the time-keeper.⁸ Kirtane read the first *akshara* of the name as ङ, but in the translation as इ. The following *daṇḍa* is superfluous.⁹ This is a contraction of *īrēshṭhin*. The names appearing in 11. 5-6 are all without any case-ending and often the *sandhi*-rules also are not observed.¹⁰ Read लक्ष्मणप्रभृति-¹¹ On *ksha* there is a redundant *anuvāra* or a fault of the stone.¹² Perhaps originally *maī*, with the sign of *mātrā* erased later on. The *dātī* appears to have been wrongly engraved for *dattī*, which means a gift. See *C. I. I.*, Vol. IV, p. 617, n. 5.¹³ Read -दत्तः. Kirtane took the following *daṇḍa* as a medial *ā*, which is evidently wrong.¹⁴ Read -वम्. The following two *aksharas* are redundant.¹⁵ Read प्रतिबन्धो न कार्यः¹⁶ Read वृक्षकराणि¹⁷ The *akshara* stands for ञ. Or better read तान्यय.

- 12 स्य यस्य यदा भूमी तस्य¹ तस्य तदा फलं(लम्) ॥[२²] स्वदत्तां(तां) परदत्तां वा यो हरेत्
वसुंधरां(राम्) । षष्ठि(ष्टिं) वर्षसहस्रा(त्रा)णि रौरवे³ नरके वसे ।⁴
- 13 त् ॥[३⁵] वाताभ्रविभ्रममिदं वशु(सु)धाधिपत्यं⁶ आपातमात्रमधुरो विषयोपभोगः । प्राणास्तृणाग्रजलवि-
(वि)दुसमा नराणां धर्मः[⁷]⁸

केल्हणेन त(च) लेखिता¹² ॥[५¹³]
- 15 कुकास[क्या?] न्वयसूत्रधारमहाव(ब)लस्य सूनुतां(ना) हरसेणमुत्साजणेन¹⁴ लेखितां¹⁵ ॥

¹ Read भूमिस्तस्य.

² The *mātra* on the first of these letters was first formed as of medial long *i* and later on corrected.

³ Drop the *danda* and read the whole as वसेत्.

⁴ Read पत्यमा-

⁵ Here too is an arrow-mark.

⁶ Read वाताभ्रा- in the sense of a family coming from Valabhi. The *mātra* of *ha* that follows is separated from the letter.

⁷ Read विद्विता; but it does not suit the metre.

⁸ I am not certain about the reading of the *akṣara* in the brackets and it is taken here as read by Kirtane, which appears to be possible.

⁹ The word *sūnu* used here probably denotes a grandson, as it also means in Sanskrit, because the word *suta* is also used along with it.

¹⁰ Read विद्वित्, or rather *utkīyah*, to avoid repetition. The signs of both, the *anusvāra* and the *visarga*, are inadvertently put together. The whole line reads like a verse, though metrically defective.

INSCRIPTIONS OF THE YAJVAPĀLAS OF NARWAR

NO. 159 : PLATE CXXXVI

BHĪMPUR STONE INSCRIPTION OF THE TIME OF ĀSALLADĒVA

[Vikrama] Year 1319

THE stone which bears this inscription was found in a ruined Jaina temple in the village **Bhīmpur** which lies about 5 kms. almost due south of Narwar in the Karērā parganā of the Sīprī (Shīvpurī) District of Madhya Pradesh. It was discovered in the early years of the present century by M. B. Garde, the Superintendent of Archaeology in the former State of Gwālior, and was noticed by him in the *Annual Report* of the department for V.S. 1971 (1914 A.C.),¹ and again referred to in his note on "the Yajvapālas or Jajapāllas of Narwar" in the *Indian Antiquary*, Vol. XLVII (1918), pp. 241-244, pointing out for the first time that the name of the house was really Jajapālla, which was Sanskritised as Yajvapāla and was also associated with a mythical progenitor named Jayapāla. The inscription was also included by D. R. Bhandarkar in his *List of Inscriptions of Northern India*, as No. 562. It is edited here for the first time from my transcript, prepared from the original stone which is now preserved in the Archaeological Museum at Gwālior.

The inscription is engraved on a rectangular sunken panel surrounded by a plain border of a massive stone, which measures 109.5 cms. broad and 94 cms. high. It consists of 40 lines, each of which is 87.5 cms. long, except the last one which is about three-fourth of the others in length. The size of the letters, which varies from 1.5 to 1.8 cms. in the first fourteen lines, gradually decreases till it is about 1 cm. in the last 10 or 11 lines. The writing is well preserved, except that a letter here and another there have wholly or partially disappeared due to the effects of weather. The letters are not systematically formed; and both in writing and engraving, there are mistakes of subsequent corrections, erasing or scratching off their parts, as noted in the transcript that follows. What is particularly to be noted in this respect is that three letters in l. 30 and an equal number of them in l. 34 are left unengraved, keeping a blank space of 3.5 cms. in the former and 4.5 cms. in the latter, so as to accommodate them.

The **characters** belong to the Nāgarī alphabet. The slightly varying forms of some of them show that they were then in a transitional stage, e.g., the two varying forms of the vowel *i*, one in *iti*, ll. 4 and 22, and the other in *Ajāni* in l. 19; those of the conjunct *m*, the subscript of which is marked by a slanting stroke across the letter, as in *-arṇava*, l. 25, whereas in the same word in l. 4, it appears as *l*; those of *bh* appearing side by side in *bhābhāti* in l. 8; and those of *ṣ*, the varying forms of which are to be seen in the word *ṣṛṅgāra*, appearing twice in l. 17. *R* which is written mostly in its modern Nāgarī form as in *pārusha*, l. 12, is wedged in *-rujvala* in the same line, and it is occasionally also denoted by a vertical marked by a horizontal stroke on the left of its middle, e.g., in *guru*, l. 25. The subscript form of this letter is often drawn complete with its superscript marked half, cf. *atru*, l. 25. The vowel *ē* has a form similar to that of *pu*, a triangle with the base above and a tail below, e.g., in *ēsha*, l. 9, and *p* often resembles *y*; see *parama*, l. 5; the conjunct *gg* figures as *gu*; cf. *svargga*, l. 7; *dh*, which has developed a horn on its left limb, is devoid of the top-stroke, and the verticals of *dhā* are joined in the middle by a horizontal bar, e.g., in *dhāma*, l. 17. And lastly, the superscript forms of *t* and *n* are occasionally denoted by a horizontal stroke; e.g., in *kīrti* in ll. 4 and 5, and in *-indu* in l. 26 but not in *kīrti*, in l. 26 and in *punantu*, in l. 4.

The **language** is Sanskrit, with a few grammatical errors appearing here and there, which are all pointed out and corrected in the text given below. And except for the word *svasti* in the beginning, *itaś=cha* in l. 4, *atha cha* in l. 10 and the portion giving the date in the end, the

¹ This report was not printed and my reference to it is from H. N. Dvivedī's *Gwālior Rājya-kē Abhilekha* (Hindi). It is No. 122.

entire record is in verse, consisting of 70 verses composed in the Kāvya style, all of which are numbered.

With reference to **orthography**, we note that (1) *b* is everywhere denoted by the sign for *v*, as in *vabhāva*, l. 25; (2) a class-consonant as a subscript of *r* is generally doubled, e.g., in *sarvva*, l. 5, and *t* as a superscript of *r* is occasionally doubled, as in *chhattra*, l. 5 but not in *tatra*, l. 6; (3) in a very few instances the dental sibilant is employed for the palatal, e.g., in *prasasti*, l. 39, and *vice versa* is the case in *śrōta* (for *rōta*) in l. 38; (4) *prishṭha-mātrā* is used with a few exceptions as in *pratisṭhō*, l. 21; and in a few instances the vertical of it cannot be distinguished from a *daṇḍa* and the *ā-mātrā* of the preceding letter; (5) omitting a few instances, e.g., in vv. 13 and 26, the final *m* is wrongly changed to *anusvāra*; and finally, (6) *ujjala* in l. 12 is spelt as *ujvala*, *aṅghri* in l. 14 as *aṅhri*, *arṇava* in l. 40, with dental *n*, *parjanya* as *paryanya* in l. 33; and *kh* is substituted by *sh* in instances like *ashvaṇa*, l. 23, *shāha*, l. 27 and *shaṇḍita*, l. 32. The word *tanūruha*, which generally denotes a 'hair' is used in the sense of 'a son' in l. 20. Errors in composition are pointed out in the transcript below.

The inscription belongs to the reign of **Āsalarāja** or **Āsalladēva** of the **Yajvapāla** dynasty of Narwar (Nalapura), and its **object** is to record the construction of a temple by the royal officer Jaitrasīma (v. 36) and its consecration by Nāgadēva, in the year which is mentioned in v. 40 in wordnumerals as *nidhi* (9), *indu* (1), *agni* (3) and again *indu* (1), i.e., **1319**, which is evidently to be taken as of the Vikrama era. The year is repeated in figures in the end, where the unit figure is partly engraved and the decimal figure is altogether omitted, leaving its place vacant. The month, the *paksha* and such other details are not mentioned; and taking the year as **Chaitrādi current**, it is equivalent to **1261 A.C.**, and as *expired*, to 1262 A.C.

The inscription is a sectarian record, and a *praśasti*, as the word is used in v. 67 and also in each of the following two verses. It may be split up into three sections. The first of these sections, which comprises vv. 1-14, begins with paying homage to Adidēva (Rishabhadēva), Pārśvanātha, Mahāvīra, Śāradā and the (Jaina) saints, devoting one verse to each of them. It then mentions the ruling family of the Yajvapālas, 'which was glorious in bringing the earth (i.e., the particular region) under one sovereignty'; and the first person introduced here is **Y(P)aramādirāja**, who is stated to have 'excelled Skanda, the destroyer of the demon Tāraka' (v. 7). Nothing can be gleaned from this poetic description. He was succeeded by **Chāhaḍa**, who is stated to have been 'a conflagration to scorch the forest of hostile kings'; and though none of his adversaries is specified here, one of them appears to have been, as we are informed by Minhāj-ud-dīn, Malik Nusrat-ud-dīn Tayasī, a general of Sultān Iltutmish, defeated by him on the bank of the Kālī Sindh in 1234 A.C.¹ He is no doubt the Chāhar-i-Ajar of Minhāj-ud-dīn who calls him 'the greatest of raes' in tract comprising Gwaliur, Chandiri, Nurwur and Malwah and as having 5,000 horsemen and 200,000 footmen under his command' and also the same as Jahir Deo of Firishita.² We have no inscription of Chāhaḍa himself or of his time, but on the basis of coins issued by him,³ we know him to have been on the throne at least from V.S. 1294 (?) to 1311 (1237-1254 A.C.). The first of these dates, as rightly observed by Dr. D. C. Sircar, may be taken at least three years earlier when this king is stated to have gained victory over the Muslim general, as just seen. He was a contemporary of Sultan Nāsir-uddīn (1246-66 A.C.) of Delhi.

The record mentions nothing particular about Paramādirāja; and this is the only record where his name figures. He may have been an ancestor of Chāhaḍa, and perhaps his father, as can be known from the way in which he is introduced here as any other ruler.⁴ We have no evidence to show that this person actually occupied the throne; and it is evident that in the confusion that followed the death of Iltutmish in 1233 A.C., Chāhaḍa, who was then watching

¹ *Tabaqāt-i-Nāsiri*, Raverty's Translation, Vol. II, p. 175.

² *Ibid.*, pp. 690-91; and *Tārīkh-i-Firuz Shāhi*, Briggs' Translation, Vol. I, p. 239 respectively.

³ Cunningham, *Coins of Med. India*, pp. 92 ff. Also see R. D. Banerji, *Num. Suppl.*, No. XXXIII, pp. 80 ff. and the Section on Coinage and Currency, above.

⁴ Verse 8 introduces Chāhaḍa by the expression *tadanu* (after him), and similar expressions occur in vv. 9 and 11 while introducing Nrivarman and Āsalla, who were respectively his son and grandson, as we know from the other records of the house.

an opportunity, captured the hill-fort of Narwar, as stated in the inscription of the time of Gōpāladeva of V.S. 1349,¹ and establishing himself there, began to raid the surrounding region and also to extend his kingdom. Thus he was the first ruler of the Yajvapāla house of Narwar.

Verses 9-10 of the inscription state that Chāhaḍa was succeeded by Nṛivarman, who 'knew the vulnerable points of his adversaries,' and he by Āsallarāja 'who closed the lotuses which were the faces of his enemies.' Here the relationship that either of these princes bore to his predecessor is not stated, but we know from the other records pertaining to the house that they were Chāhaḍa's son and grandson, respectively. The description of both these is too vague. It is, however, worth noting here that the last year when Chāhaḍa issued his coins is recorded to be V.S. 1311 or 1254 A.C., as seen above, which is also the first known year of the coins of Āsalladēva;² and presuming this record to be correct, we have to conclude that Chāhaḍa was succeeded by his grandson Āsalla and also that Nṛivarman predeceased him. It is possible, however that Nṛivarman may have been a governor of some part of the kingdom under his father when he also participated in his warfare, as we learn from the following inscription, which states that he vanquished the haughty ruler of Mālava and exacted a tribute from him.³

Verses 12-13 describe Āsalla as a great warrior and a daring prince vanquishing his enemies; but this description is all poetic, supplying no historical information. The verse that follows mentions his capital Nalapura (i.e., Narwar), situated in a *vishaya* (territorial division) known as *Pādōmalaksha*, i.e., comprising 75,000 (villages).

The second part of the *praśasti*, which comprises vv. 15-64, contains the description of a family known as Jēyavāla (perhaps Jāyaswāl of the modern days), in which Jaitrasīmha, who built the temple, was born. The first of his ancestors mentioned here is Sādhadēva, whose son was Kumāra, who, again, had a son named Nāgana, who married Rājalladēvī and from her had a son named Jaitrasīmha. This person is described here as 'an ornament of the royal assembly,' obviously that of Āsalladēva (vv. 16-20). He was a zealous devotee of Jainism. His wife was Śrī, who was a daughter of one Kēśava (about whom nothing is known) and who bore him seven sons of the names of Udayasīmha, Śringārasīmha, Rājasīmha, Virasīmha, Lakshmanasīmha, Ramasīmha and lastly, Nayanasīmha, successive in age (vv. 22-29). Incidentally some other members of the house are also mentioned here. Thus, the record states that Udayasīmha, the eldest of the brothers, married Ajaiṇī, who bore him four sons, viz., Karṇasīmha, Dēvasīmha, Padmasīmha and Dharmasīmha; and the wives of the three of his successive younger brothers were Laduādā, Padmā and Vijayadēvī, respectively. Vijayadēvī's son was Kshēmasīmha (vv. 24-33).

Verses 34-36 inform us that following the example of his ancestors, viz., Vīlha, Agapē (?) and Kshēmāsankata, the last of whom was honoured by the lord of Śākambharī, whose name is not mentioned, and realising that some of them consecrated one Jaina lord every day, the blessed Jaitrasīmha, whose mind had been purified by the doctrine of Jainism, erected a temple for Jīna (name not mentioned) at Palāsavāha. The next verse describes the temple in a poetic way, using varieties of the figure known as *utprēkshā*.

In the following four verses (37-40) it is stated that Nāgadēva, the foremost among the Jaina society, performed the consecration ceremony. He was the son of the brother of Śrīdhara.⁴ He had two brothers Chāhaḍa and Gāngadēva and two sons, Āmradēva and Sōmadēva by name. We are further informed that the consecration was supervised by Vasantadēva, who was 'the moon sprung from the ocean of nectar in the form of enlightenment' and by Amarakīrtidēva, who was 'a thunderbolt for (to shatter) the mountains of false reasoning and was of chaste fame' (v. 41).

The next twenty-three verses (42-64) record the names of those who were on the managing committee (*gōshthikas*)⁵ for the construction and consecration of the temple. In all they were 21; and this portion being historically worthless, only their list is given below. It may, however, be observed here that some and not all are mentioned here with their family names and

¹ Below, No. 175.

² Below, No. 160.

³ Cunningham, *C. M. I.*, p. 90.

⁴ Here the text is *Śrīdhara-v(b)andhu-sūnuh*, which literally means as taken here. It is not known if *Śrīdhara-bandhu* is vaguely used to denote his father's name (the son of the *bandhu* of Śrīdhara).

⁵ For this word, see n. in text, above, No. 154, v. 34.

some with surnames, whereas in the case of some of them the names of their dependents are also given—

1. *Srēshṭhin* Mādhava of the Jēsavāla (Jāyaswāl) family, whose son was Dēvasiṃha and whose wife Virā had two sons, Salakshaṇasiṃha and Kṛityasiṃha, and a daughter of the name of Dhūrā (vv. 42-44).
2. *Sādhu* Jasē's son *Sādhu* Vijayadēva, whose wife was Śṛīngārādēvī and who had two sons, named Sh(S)āhadēva and Āmrādēva (vv. 45-46).
3. *Srēshṭhin* Jājē of the Paravāḍa family (v. 47).
4. Sahadēva (v. 48).
5. *Sādhu* Dhaināka (v. 49).
6. Āhāḍa (v. 50).
7. Chāhāḍa (v. 51).
8. Ābhū (v. 54).
- 9-10. Marādū and Chāha (v. 55).
11. V(B)ahula, the village headman (v. 56).
12. Nārāyaṇa (or Satyanārāyaṇa ?) of the Māthura family (v. 57).
13. Bhṛigu's son *Sādhu* Kuladhara (v. 58).
- 14-18. Jaṇṇapāla and Guṇṇapāla, who worshipped the Jina, *Sādhu* Mādhava, Nāsala and Tajū (v. 59).
- 19-20. Sihuna and Vihula, the sons of *Sādhu* Mālū (vv. 60-62).
21. Mardura of the Paurapāṭa family (v. 63).

The last section, which commences with v. 65, expresses the hope that as long as the splendour of the sky is adorned by the moon, the Sun and the stars resembling a string of pearls— even so long may the temple last.

The next two verses furnish the details about the poet who composed the *prāśasti*. He was the illustrious Dēvachandra, a disciple of Virēndra, or Virachandra, who was known as the moving goddess of Learning and who again was a disciple of Dēvagupta of the Svētāmbara clan who is stated to have delighted the king or kings (whose name or names is/are not mentioned). Lastly, we are informed that the *prāśasti* was written by Vēdē, the son of Śarad,¹ a Kāyastha of the Vāstavya clan, and was engraved by Āmadēva, the son of the artizan Pāpaka of the Kāśyapa *gōtra*. In the last line we read the names of Uḍai, the son of Lakshmī, who belonged to the Māthura clan (of the Kāyasthas); but the connection in which this name appears here is not stated in the inscription.

Of the **localities** mentioned in the present inscription, **Nalapura** (l. 10), the capital of the royal house of the Yajvapālas, is evidently the modern town of Narwar in the Shivpurī District of Madhya Pradesh; and the *vishaya* of **Pādōnalaksha**, in which it is stated to have been situated (l. 9), is obviously the surrounding region, **Palāsavāha**, where the temple was erected (l. 22), cannot be identified; but from the provenance of the inscription, it is possible to suggest that this may have been the ancient name of Bhūmpur itself, the details of which have already been mentioned above.

TEXT*

[Metres: Verses 1-4, 10, 14, 25, 41, 49 and 70 *Vasantatilakā*; v. 5 *Indravaiśā*; vv. 6 and 30 *Soḍgatā*; vv. 7, 17, 19, 22-23, 27-28, 36, 38-39, 42, 53 and 65 *Upajātī*; vv. 8, 18 and 63 *Rathōddhatā*; vv. 9, 11, 13, 16, 20, 24, 29-34, 40, 43-48, 51, 54-62, 64 and 68-69 *Anushubh*; vv. 12, 26 and 66-67 *Sārdūlavikrīḍita*; v. 15 *Mālinī*; vv. 21 and 37 *Mandākrāntī*; v. 35 *Indravajrā*; v. 52 *Sālinī*].

^१ Read *sa ksha* but it would not suit the metre. The consonant of the preceding letter was first engraved as *l* and later on corrected.

^२ The *lanka* is to show the vocative case, addressing the king.

^३ The preceding letter was originally engraved as *pu* and later on, the sign of the *mātrā* was erased, as can clearly be seen on the original.

^४ What appears as the sign of *anuvāsa* on *kshya* is the original fault of the stone.

^५ The figure of speech in this verse is metaphor, using expressions as are applicable to the name of the royal family, as well as to a lotus.

^६ The ends of the consonant of the preceding letter and the horizontal stroke are lined by a curve. Below, there are some other instances of the type, which are not noted separately.

^७ There is a redundant horizontal stroke at the end of the line.

^८ A *dayā* was at first engraved after the bracketed letter and was subsequently scored off by a stroke.

¹ Here the reading is certain but I am unable to make out the sense.

² The horizontal stroke of this *akshara* is not incised and the one marking it as consonant resembles the *mātrā* of long *ū*, the whole letter appearing as *gu*. Some other omissions of this type there are, but they are not noted separately.

³ The stroke is to show that the word ends in the next line.

⁴ Read *sudhāmsu*.

⁵ The Sanskrit form of this name would be *ajayini*.

⁶ This word strictly means 'a hair' and hence it is better to read *tanūdbhavaḥ*.

⁷ Grammar requires a *visarga* after *gha*, but it would not suit the metre.

⁸ *Mudrā* is the mode of holding the fingers in religious worship.

⁹ Read *guravō babhūvub* dropping *atra* to suit the metre.

¹⁰ Read *parivāṣaṭi* which would not suit the metre.

¹¹ The consonant of the *akshara* appears as *s*.

¹ The first letter in this line was originally engraved as given here but subsequently it was changed to *hna*.

² This family is the same as Paurapāta appearing in line 25 above.

³ Read *kalāvātām*.

⁴ A *danda* at the end of this line, as also at the end of some others below, is only to fill in the gap.

⁵ Read *dhārayan* but it would not suit the metre.

⁶ The reading is certain but what is intended is not precisely known. Moreover, the number of the verse is followed by a vacant space for three *aksharas* which began the verse in *Sālini*, as is evident from what follows. The preceding name *Chāhāḍa* is engraved in comparatively smaller letters.

⁷ *Sarvajña*, which is a synonym of Buddha, is here to denote Jina. Moreover, a participle from the adjective *smēra* is formed here. The flaw can be removed by reading *smēra pathōja*. The first three *aksharas* of this verse are lost. Conjecturally they may have been *bhāsvaddhā*.

⁸ Originally *chēh* with the sign of *mātrī* erased later on.

⁹ Both these letters are crissped into each other.

¹⁰ The reading of these letters is certain, but the meaning is not clear.

¹¹ The decimal figure of this number was at first carved as two horizontal strokes and subsequently corrected.

¹² The bracketed letter is not well formed and therefore the reading is not certain.

¹³ The three letters were not engraved on the original stone and the space for them was left vacant.

¹⁴ The bracketed *akshara* may also be read as *hva* at both the places.

¹⁵ The reading of this and the preceding *akshara* is not certain as one of them is overwritten after tampering the original.

¹⁶ This letter is deformed and the sign of *usarga*, which was first put, was subsequently rubbed off. Read चान्ये.

¹⁷ There are two redundant horizontal strokes here.

No. 160 : PLATE CXXXVII

A YAJVAPĀLA STONE INSCRIPTION FROM NARWAR

(Undated and Incomplete)

THE stone bearing this inscription was discovered by M. B. Garde, the then Director of Archaeology in the (former) Gwālior State, in 1925 A.C. It was found by him in a vegetable vendor's (*kūnjadā's*) house, at **Narwar**, an ancient town in the *Karērā tehsil* of the *Sipri* (*Shivpurī*) District of Madhya Pradesh. Garde, who removed the stone to the Archaeological Museum at Gwālior, briefly summarised the contents of the record in the *Annual Report* of the Department for the same year, where it is stated that the inscription was engraved during the reign of Āsalladēva of the Yajvapāla dynasty. Subsequently, the record was edited by Dr. D. C. Sircar, in *Epigraphia Indica*, Vol. XXXII, pp. 65 ff., and Plate. He has rightly shown that the epigraph did not belong to the time of Āsalladēva but to that of his son Gōpāladēva, as to be seen below. The inscription is edited here from the original stone, which I examined in the Museum, and an inked impression supplied by the Chief Epigraphist, to whom my thanks are due.

The record is inscribed on the countersunk surface of a dark pinkish stone surrounded by a plain border, and measures 64.5 cms. broad by 61 cms. high. It consists of eighteen lines of writing, covering a space 48.3 cms. broad by 34.5 cms. high. But a noteworthy feature of it is that it is **incomplete**. Its last line, which contains the concluding part of verse 22, ends with the first six syllables of a new stanza, but the rest of the verse was not incised, even though there is enough space below (about 10 cms. high).

^१ There is a redundant vertical stroke here also.

^२ Originally *khā* with the *mātrā* scored later on.

^३ These letters are partly lost and hence cannot be distinctly made out.

^४ Originally *syā* with the *mātrā* scored on subsequently.

^५ These letters too are partly preserved and cannot be made out.

^६ The fourth foot does not appear to be metrical.

^७ The decimal figure is only a dot and the tail of the unit figure appears to have been left while engraving. It may have been 9.

The letters are carefully drawn and incised, but the surface of the stone on the proper right side has irregularly peeled off or worn here and there, resulting in the loss of a number of the *aksharas* in each of the lines, the loss being greater in ll. 7-10 where almost the first half in each has disappeared. Nothing, however, is lost on the proper left side. The average height of the letters is about 1.5 cms.

The **characters** are Nāgarī, bearing a general resemblance to those of the preceding record but showing angular bends. Worth noting is the fully developed form of *ch*, e.g., in *chandra*, l. 5, and that of *dh*, with its horn bent in some instances as in *Dhār*, l. 11, but not in the same word in l. 5; that of the slightly different forms of *bh*, as in *-abhūta-* and *bhata*, both in l. 4; the slightly different forms of *ś* in *śuchi-* and *śyāma-*, both in l. 10; and lastly, that of *s*, which is devoid of the tail on the left limb, as in *asti*, l. 9.

The **language** of the record is Sanskrit, which is generally correct, and except a small sentence in the beginning which invokes the blessings of *Gaṇapati*, the whole of the extant portion of the inscription is in verse, containing 22 verses and a part of the next verse, as stated above. The verses are all numbered though we find that some of the numerical figures are lost with the *aksharas* which have now peeled off. In spite of the fact that the engraver has done his work with care, arbitrary strokes of the chisel have in some instances changed the forms of letters, e.g., in *prasādāt*, l. 1, the third letter appears as *dvā*, and in *kuruṇati*, l. 8, the second letter has become *rdva*.

The **orthography** shows the usual peculiarities, e.g., (1) throughout *v* is written for *b* also, as in *vala-* and *valavān-*, both in l. 12; (2) the occasional use of the dental for the palatal sibilant as in *śivāy = ādisatām*, l. 2, in which only the second of the sibilants wrongly takes the place of the palatal; (3) the doubling of a consonant following *r*, e.g., in *Durgā*, l. 9; (4) the use of the *prishṭha-mātrā*; (5) the *anusvāra* generally serving the purpose of a nasal, except in a few cases, e.g., in *nīlām*, l. 1 and *khaṇḍa*, l. 2; and lastly, the spelling of the word *ujjala* in l. 2, with a single *j*, is noteworthy. The *kāka-pada* sign is put at the end of some of the lines, to show that the word is completed in the next line.

The inscription, in its present form, contains no date; and since it is incomplete, its **object** cannot be definitely known, though it may be surmised that it was to record some meritorious work like the excavation of a step-well, as to be found in some other inscriptions of the time of the Yajvapāla kings.¹ The first two verses of it invoke the blessings of the gods Murāri (Kṛishṇa) and Vānī (Sarasvatī), as we find also of verse 2 of inscription No. 175, below; and the expression *saurājya-bhāsuta* in its verse 9 is also used in a similar context in one of the inscriptions of the house (No. 161). This fact led Dr. Sircar to suggest that the record, like both of them, belongs to the reign of Āsalla's son Gōpāla, and was probably composed by Śivanābha, the same poet who drafted the other two records just referred to. Following this suggestion, we may also conjecture that the name of Gōpāla may have been mentioned (in its short form Gōpa) in verse 7.

Beginning with the customary obeisance to *Gaṇapati*, in a small sentence as said above, the inscription invokes the blessings of Murāri (Kṛishṇa) and Vānī, respectively in the first two of its verses. The third verse mentions a *vishaya* (territorial division), the name of which is lost but can be made out on the basis of the preceding record as *Pādōmalaksha*. The next five verses are devoted to tracing the genealogy of the ruling house. The name of the first of the kings is lost in verse 4, but he was undoubtedly **Chāhaḍa** since the following verse mentions his son **Nṛivarman**, who is known from the preceding record.

Verse 5 of the inscription is historically important. It states that Nṛivarman vanquished the proud king of Dhārā and exacted tribute from him. This statement cannot be verified, and therefore the details thereof can only be conjectured. The Balvan inscription of the Chāhamāna Hammira, dated V.S. 1345, tells us that his father Jaitrasimha harassed a king named Jayasimha in Maṇḍapa;² and we have seen above that this Jayasimha was no other than the king Jayavarman II of Dhārā, whose earliest inscription is dated V.S. 1312 or 1256 A.C.³

¹ See below, Nos. 161, 175 and 179. They were all composed by the poet Śivanābha, suggesting that like them all, the present inscription too may have been composed by the same poet, as held by Dr. Sircar.

² *Ep. Ind.*, Vol. XIX, pp. 49 ff. See Text, vv. 7-9.

³ The Rāhuagadh Stone Inscription. See above, No. 54.

And though there is nothing to verify the suggestion, it is possible to hold, in view of the close proximity of both the places, namely Narwar and Raṅgathambhōr, that Nṛivarman (the Yajvapāla prince), who was the eastern neighbour of Hammīradēva, may have sided Hammīra in the latter's expedition over Mālwa. But while making this suggestion, we have to presume that Nṛivarman, who predeceased his father Chāhaḍa, may have participated in the struggle, referred to above, as a prince, during the reign of his father.

The latter half of verse five gives the names of three persons, namely, Skanda, Chandra and Parita, who may have been, as pointed out by Sircar, while editing the inscription, the Yajvapāla generals who helped Nṛivarman in his encounter with the king of Dhārā.

The next verse introduces Nṛivarman's son, **Āsalladēva**, the first *akshara* of whose name is mutilated. Verse 9 of the record informs us that Āsalla's queen was Savanā.¹

The remaining portion of the inscription is devoted to the description of a family of the Māthura Kāyasthas, hailing from Gōpagiri, i.e., Gwālior. The first of the names introduced here is Śyāma, who is stated to have been meritorious and resembling a banyan tree (of course, in giving shade and protection). The next member in this family was Bhuvanapāla; his relationship with his predecessor is lost in verse 12, but he appears to have been a son of Śyāma. Verse 13, which is fortunately preserved with the exception of a few letters towards the end, mentions Bhuvanapāla's contact with Bhōja, the king of Dhārā, the half of whose throne he is said to have occupied; but, because of the loss of a portion which may have said something definitely in this respect, we can hardly be definite on the point, though the expression *mantra-balāt*, used in this verse, indicates that he was Bhōja's minister, and probably the Chief minister, as also suggested by the word *mukhya* used along with it. Bhuvanapāla's son was Vāsudēva, who is said to have curbed all his enemies, who are not mentioned by names; and his son was Dāmōdara, who was the Treasury Officer of the king Chāhaḍa.

Taking Dāmōdara as a contemporary of Chāhaḍa (1231-1254 A.C.), and the former's grandfather as a contemporary of Bhōjadēva of Dhārā, as mentioned in the record, we find an interval of nearly two centuries between the Paramāra Bhōja and the Yajvapāla king, which appears to be rather great, though Sircar has observed that it is not altogether impossible.

Reverting to the main theme, we are told that Vāsudēva's wife was Dharmā, who gave birth to five sons, all of whom were intelligent (vv. 11-19). The name of the first of these sons is again lost in verse 20; he is stated to have acquired proficiency in all the branches of learning and was also expert in describing families (*varṇa-varṇana*). He was helpful to the kings of Gwālior, in the work of administration, and he was a warrior too. Here the expression *Gōpa-bhūpa* appears to signify Gōpāla, the Yajvapāla king, in its shorter form.

A portion of the next verse only states that "I am his younger brother"; and here the inscription abruptly ends.² It however appears that the following portion may have been desired to be devoted to the description of this younger brother whose name and the other details we do not know. And it may also be apparently presumed that the remaining portion of the epigraph was devoted to mention the object of the record and the date, probably also with the name of the composer and the year at the end.

Pithana mentioned in line 15 cannot be identified. He may or may not have been the homonymous person mentioned in verse 15 of the next inscription.

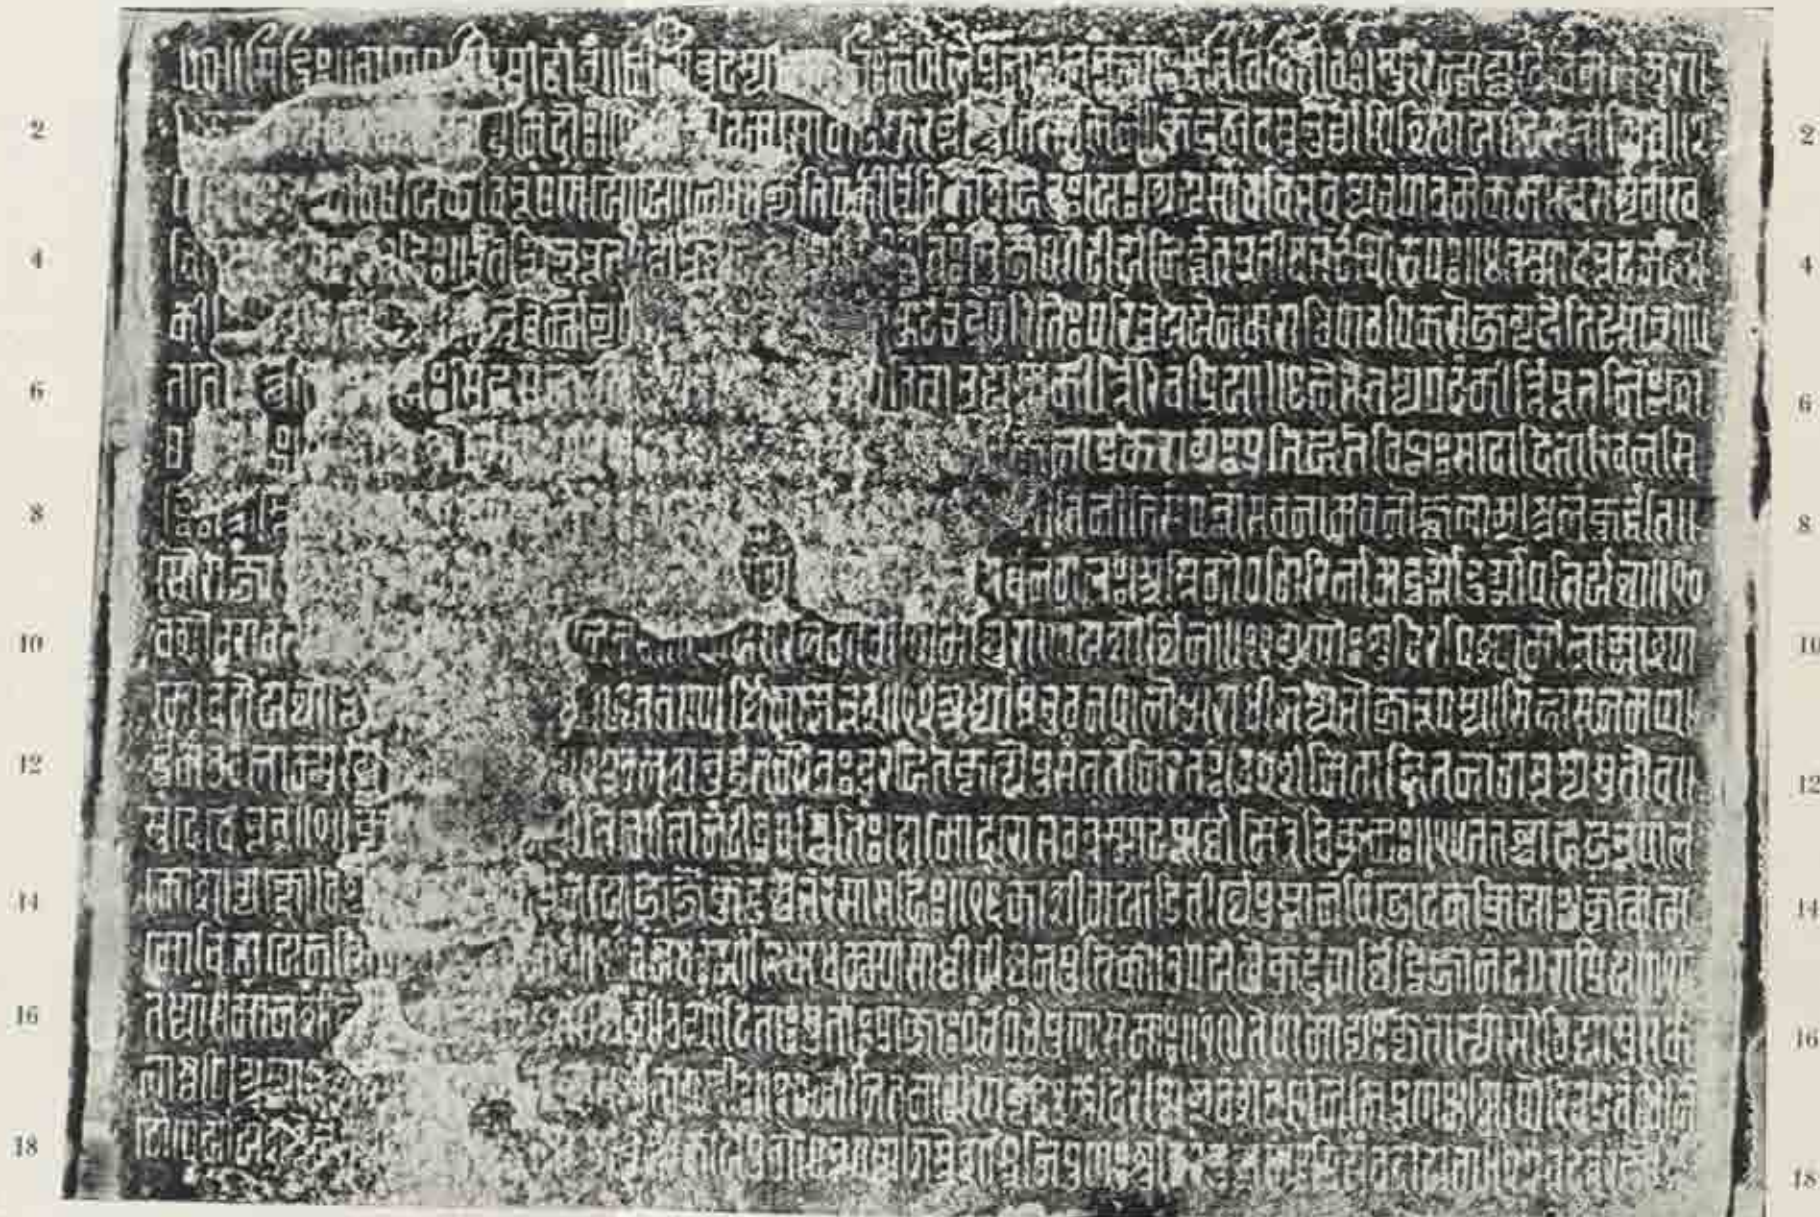

As for the **geographical** names mentioned in the inscription, **Kāśi** and **Gayā** (v. 17) are the well known holy places; and **Paḍōnalaksha** (v. 8) may have been applied to the dominion of the Yajvapālas. **Dhārā** (vv. 5 and 13) is evidently the Paramāra capital Dhār, and **Gōpagiri** (v. 10) is the well-known Gwālior.

¹ Here the reading is *Savanām*, with a portion lost. It is not known if we should have the *padachchhēda* as *sah vanām*, which, however, appears to be rather curious.

² For a similar incomplete inscription, see *C.I.I.*, Vol. IV, p. 687.

NARWAR STONE INSCRIPTION OF THE TIME OF ASALLADEVA (FRAGMENTARY, UNDATED)

Scale : Two-fifth

¹ From the original stone and an inked impression.

² Denoted by a symbol.

³ A *kāka-pada* sign (taken by Sircar as a *dayda*) is engraved here, as also at the end of lines 8, 11 and 12, below.

⁴ These three syllables are restored by Sircar as *Sambhavi*, qualifying *tanuh*.

⁵ The reading of the bracketed letters is from the traces left. The name also appears in the preceding inscription, text, lines 9-10.

⁶ Conjecturally restored by Sircar as *तस्त् ननाभिषादिः*. Two letters after *ga* are also missing; they are probably written above the line, which Sircar took as an unnecessary mark.

⁷ The bracketed syllables are all damaged and the restoration is conjectural. The name *Chāhaja* is partially preserved.

⁸ The first lacuna in this line may be conjecturally restored as *vīrajamānah*, and the second as *prathita-pratāpah*.

⁹ The lacuna may be filled in by reading *n-nripa-ā*.

¹⁰ Sircar conjecturally restored these four *aksharas* as *Lāvanyati*, suggesting the name of the queen to be *Lāvanyadevi*, as it appears also in verse 6 of the next inscription. Or, the intended reading may have been *Lōnābhidhā*, as well, giving the Prakrit form of the name.

¹¹ To read *dīn-mukha*, as suggested by Sircar, or, the intended reading may have been *vishāpa*, as well.

¹² The reading of the bracketed *aksharas* is conjectural.

¹³ The verse is *mātrika* and hence the short and long syllables cannot be known; and thus this long line, to show that the latter half of the verse is completely lost.

¹⁴ The first of the *daydas* is redundant and the second is a *kāka-pada* sign, partly visible.

¹⁵ All these letters are visible in their lower parts. As Sircar observed, the intended reading may have been *kulēna chu dhanēna chu*.

No. 161 : PLATE CXXXVIII

BAḌŌDĪ STONE INSCRIPTION OF THE TIME OF GŌPĀLADĒVA

[Vikrama] Year 1336

THE stone bearing this inscription was discovered in 1922, by M. B. Garde, who was then the Superintendent of the Archaeology department in the former State of Gwālior, now integrated with Madhya Pradesh. It was found lying on a hill near the village of **Baḍōdī**, a petty hamlet not far from Narwar in the Karērā parganā of the Shivpurī District, and was removed to the archaeological museum at Gwālior, where it is now exhibited. The inscription was noticed by Garde himself in the *Annual Report of the Department for V.S. 1979 (1922-23 A.C.)*, as No. 26,¹ and also in the *Annual Report of the Archaeological Survey of India*, for the same year, on p. 187. Subsequently, it was edited by Dr. D. C. Sircar, with text in the

¹ There is a play on the words *śūchi* and *śyāma*, which, besides their meaning 'pious' and the name 'Śyāma', as applicable here, convey the sense of white and black, and respectively show a contrast. For the mention of *śyāma (vata)* in literary works, see reference given in *Ep. Ind.*, Vol. XXXIII, p. 67, n. 2.

² The *akshara* in the brackets is conjecturally restored.

³ The intended reading may have been *śūlāyam*. What look like *anuvāyas* on some letters in this line are due to scratches on the stone.

⁴ Probably *kalāgradhī* is intended.

⁵ The word appears to denote Gopāladēva, as mentioned above.

⁶ Sircar read the last letter as *hri*, but on the stone it is clear as taken here. The rest of the *prāśasti* was not engraved although there is enough space below on the stone.

⁷ Unfortunately, this report is not available as it was not printed. The reference here is from H. N. Dvivedī's *Gwālior Rājya kē Abhūzkh*, a Hindi publication of the same department, No. 132.

Roman characters and a facsimile prepared from impressions under his supervision in 1952, in the *Epigraphia Indica*, Vol. XXXIII (1959-60), pp. 31 ff. It is edited here from the original stone and one of the above-mentioned impressions, which was kindly supplied to me by the Chief Epigraphist.¹

The slab, on which the record is inscribed in a sunken panel, measures 70 cms. broad by 58 cms. high, including the plain border it has on all the four sides. The writing, which covers a space 55 cms. broad by 46.5 cms. high, consists of twenty-nine lines. The size of the individual letters ranges between 1 and 1.5 cms. In about the first one-third portion of the inscription, they are slightly bigger and sparsely written than those in the remaining portion, where they are somewhat unsymmetric in form and size. The mechanical execution of the inscription is sloven and subsequent insertions as of the *visarga* in *namah*, l. 1 and the *daṇḍas* often, corrections by overwriting, changes of the forms of some of the *aksharas* by redundant chisel strokes, and such other foibles on the part of the engraver are to be noticed here and there, to which attention has been drawn in the transcript that follows or in the foot-notes appended to it.

The **characters** are Nāgarī. As regards individual letters, attention may be drawn to the form of *k*, which sometimes loses its loop when a *mātrā* is attached to it below, e.g., in *amkura*, l. 1, and when it is a superscript of a conjunct consonant, e.g., in *vakshah*, l. 2; *ch*, which has already developed its modern Nāgarī form, occasionally shows its reversion to that of *v*, e.g., in *chakāra*, l. 4; the superscript forms of *t* and *n* are occasionally alike; cf. *chhinna* and *tanvat*, both in l. 6; the slightly varying forms of *bh* may be noticed in *bhaṅga*, *bhūti* and *bhēva*, all in l. 24; *r*, which generally appears in its modern form, is occasionally wedged as in *ravēr=api*, l. 4, and is also sometimes marked as a vertical with a stroke attached to it on the left at the middle, cf. *Rauhinēya* and *riva*, both in l. 9; and lastly, the left limb of the palatal *s* is often joined to its vertical and that of the dental *ś* begins with a curve so as to show a combination of both these letters; cf., e.g., *vilāśa*, l. 2, *śuta*, l. 3 and *dhipāśya*, l. 13. Because of these peculiarities both these consonants cannot occasionally be distinguished from each other.

The **language** is Sanskrit; and except for a short sentence in the beginning and the portion embodying the date at the end, the whole record is metrically composed. In all there are 29 verses, all of which are numbered; but in the process of marking them, the figure 23 is repeated by inadvertence. Thus the total number of the verses is really 30. The language is fluent and often contains figures of speech like *anusprāsa*, *upamā*, *utprēkshā*, *rūpaka* and *ślēsha*.

As regards **orthography**, the inscription follows more or less the same system as to be observed in those of the contemporary times, e.g., (1) the use of the sign for *v* to denote *b* as in *vīja*, l. 1; (2) the general use of the sign of *anusvāra* to denote a nasal even at the end of a stich, with a very few exceptions as in l. 2; (3) the occasional doubling of a consonant following *r*, as in *kīrtti*, l. 13 but not in *śaṅkarpana*, l. 25; and (4) an indiscrimination between the use of the palatal and the dental sibilant, e.g., in *śrī*, l. 4, *śvasita*, l. 8 and *Paśupati*, l. 17, the dental sibilant is put for the palatal, and in *āśit*, l. 14, *śita*, l. 18 and *śima*, l. 25, the reverse is the case. Besides these, the *kāka-pada* sign appears at the end of some of the lines, to indicate that the word which could not be completed there is continued in the next line. There are a few grammatical and scribal errors, e.g., the word *ujjala* is written with a single *j* in l. 23, *nīstrīhā* as *nīstrumśa* in l. 8, *kīrttvatām* for *kīrttimatām* in l. 12, and *śēsharu* for *śēshava* in l. 19.

The proper **object** of the inscription is to commemorate the construction of a step-well (*vāpī*), by Dēvadhara, son of Jalhana and the chief officer (Minister) of Āsalladēva. The **date** given in the end of the record, in numerical figures only, is, **Friday, the 6th day of the dark half of Mārgaśirsha** of the (Vikrama) year **1336**. It regularly corresponds to **Friday, 27th October, 1279**, for the Chaitrādī V. *expired* and the *pūrṇimānta* month.

The contents of the record are as follows. Opening with the auspicious word *Svasti* and following it, a short sentence paying obeisance to Siva, in the first verse, it glorifies the same deity, and in the second it invokes his blessings. Verses 3 and 4 respectively describes Nalapura (modern Narwar in the Śivpurī District) and the king **Chāhaḍa** who was reigning at that place.

¹ It is A.R. No. 141 of 1952-53. In my visit to Gwālior in December, 1970, I succeeded in availing myself of a fresh impression taken under my supervision; it helped me to finalise the transcript.

The name of his family is not mentioned in the record, but it is known to be **Yajvapāla** from the Bhūmpur stone inscription.¹ Chāhaḍa's son was **Nṛivarman**, who was devoted to Krishna and who also respected Śiva by worshipping the earth, which is one of his (eight) images, with lotuses in the form of the heads of his enemies (v. 5). His son was the illustrious **Āsalladēva**, a brave king who was a resort of multitudes of merits, and his consort was **Lāvanyadēvi** (vv. 6-7). He had a son whose name was **Gōpāla** who succeeded him (v. 8).

The record then introduces a Kshatriya family of the lunar race which was as dignified as the Brāhmaṇas (*mahādēva-sādhāraṇa-śrīḥ*) and belonged to the Vatsa *gōtra* and of the Gaudahara clan (v. 10). The persons born in this race were devoted to main power, Chāmūṇḍā, the goddess with her nine forms, and Gaudaharā, their family-deity known after the clan Gaudahara (vv. 9-12).² In that family was born Dāmōdara, a Minister of the king of Śūrasēna (v. 13). He had a son of the name of Nāmadēva, who was meritorious, efficient and righteous (vv. 13-14) and who again had three sons — Pīthana, Jalhana³ and Mālādhara (v. 15). Of these, Jalhana, who was warlike, dexterous, well-versed in politics, a capable administrator and a man of confidence (of the king), was appointed an officer at Gwālior (*Gōpa-saila*) by Hammīra himself (v. 16), whereas Pīthana, the eldest of the brothers, who was devoted to the worship of Śiva (*Paśupati*) and whose consort was Champā, begot a son of the name of Dēvadhara, who became Chief Minister (chief among the officers) under Āsalladēva (v. 20). Dēvadhara's consort was Nilā (v. 21). He excavated a well at the village of Vatapadra, which had been (previously) donated to some Brāhmaṇas by the King Nāmiṅga (?), who is otherwise unknown (vv. 22-23). The following two verses describe the well in an ornate style of poetry, containing *alaṅkāras* like *utprēkshā* and *ślēṣha*, and it is blessed to be everlasting.

Verse 26 introduces three sons of Dēvadhara, in an incidental way, *viz.*, Harirāja, Mahārāja and Śivarāja; and further we are told that the *prastuti* was composed by Śivanābha, a son of the Treasury Officer (*kōśādhipa*) Lohana and a grandson of Dāmōdara who belonged to the writers' clan (*lipikṛit-kula*) known as Māthura (v. 27), and that it was written (on the stone) by Vikrama, the son of Dhim(?) sūka (or Bhūnguka?), who too belonged to the Māthura clan of the Kāyasthas (v. 28). It is interesting to note here that the word *Kāyastha* is clearly mentioned in the latter of these statements, though not in the former. The last verse (No. 29) embodies the name of the architect (*sūtrahāra*) Bhīmadēva, who incised the record, and also states that the whole work was carried on under the supervision of Sōmadēva. Here the inscription ends with the date, as already discussed above.

The names of Chāhaḍa, his son Nṛivarman, and the latter's son Āsalladēva, are known from the other records of the house; but the present inscription mentions for the first time the name of Lāvanyavati, the queen of Āsalla, and also the names of some officers under the reigning house of the Yajvapālas. The king of Śūrasēna (or, the king named Śūrasēna?) and Nāmiṅga cannot be definitely identified. Hammīra of the present record, however, in all probability appears to have been the homonymous Chāhamāna king of Raṇathambhōr who succeeded his father Jaitrasimha in 1282 A.C. We know that he was a brave and warlike prince, who immediately after his succession defeated the Paramāra king Bhōja II and also captured parts of Rājasthān in his military exploits.⁴ We have no definite evidence on the point, but it is not unlikely that he may have held for some time Gwālior also. In his *Hammīra-mahāhārya* Nayachandra gives this king the credit of conducting a sort of *digvijaya*, during which he vanquished some of the rulers of Rājasthān and Mālwa.⁵ And the contemporary history also gives some clue to solve this problem. It is well known that Itutmish recovered

¹ Above, No. 139, v. 9.

² These nine forms appear to be those referred to in the *Dēvī-kāvachā* of the *Mārkaṇḍēya Purāna*, *viz.*, Śailaputrī, Brahmachārīṇī, etc. For the other nine forms of the deity, as remarked by Sircar, see *Ep. Ind.*, Vol. XXXIII, p. 32. He has also remarked that the word Gaudahara possibly denotes the Gour Rājputs of the modern times.

³ As the name is spelt in the record. It is, however, not known whether we have to take the name as Jalhana.

⁴ This No. is in fact 30, for which see above.

⁵ *Cambridge History of India*, Vol. I, p. 516.

⁶ *Ind. Ant.*, Vol. VIII, pp. 59 ff.

Raṅthambhōr in 1234-35 A.C.¹ and following his death in 1236 A.C., the ruling house of the slave kings was not free from internal troubles and also from the external struggles. This state of affairs continued till about 1266 A.C. when Balban ascended the throne of Delhi, after ruling *de facto* for about two decades during the reign of his father-in-law Nasir-ud-din Mahmud (1246-1266 A.C.). Balban's activities in the Punjab, the rebellion of Bengal against Delhi and in the Doab, and, above all, the incursion of the Mughals in the north-west frontiers of India, continued to occupy his thoughts incessantly; and it is not unlikely that during this period of unrest, Hammīra, after strengthening his position at Raṅthambhōr, may have endeavoured to extend his dominions in the east and up to Gwālior also, which is only about 180 kms. north-northeast of Raṅthambhōr. Thus it is not unlikely, though this statement cannot be verified, that he may have appointed Jalhaya to control the region around Gwālior, as stated in our inscription. It has to be admitted, however, that this suggestion, which is purely tentative, cannot be finalised unless and until we have some definite information on the point.

As for the **place-names** mentioned in the record, **Nalapura** (l. 3) has already been identified with the modern town of Narwar in the Shivpur District and the capital of the house of the Yajvapāla princes. **Gōpaśaila** is, of course, the mountain at Gwālior; and **Vaṭapadra-grāma** where the well is said to have been excavated (l. 22) can safely be identified with the modern village of Baḍōdī, near Narwar, where the inscribed slab was found on an adjacent hill, as seen above.

¹ As we are informed by Minhāj-ud-dīn. See Elliot, Vol. II, p. 234. D. C. Sircar took the name Hammira to denote the Sultan Htutmish (1210-1236 A.C.).

² From the original stone and impressions.

³ Denoted by a symbol.

⁴ As already stated, this letter is often a combination of the palatal and the dental sibilant.

⁵ The subscript is devoid of its oblique stroke, as also in some instances below. The bracketed letters perhaps also may have been चर (But read दृष्टं as read by Sircar).

⁶ It is doubtful whether this *akshara* is *ksha* or *kshya*, as also in the preceding instance. Perhaps वृत्तः is intended.

⁷ That is, whose conduct is as pure as that of Bhīṣma. For शौचैव = शीघ्र.

⁸ The *daṇḍa* is redundant. It is perhaps intended to be the *kāka-pada* sign, showing that the word is completed in the next line.

⁹ This *daṇḍa* is thin and was engraved subsequently.

¹ This *dayda* is thin and was engraved subsequently.

² The sign of *visarga* was inserted subsequently.

³ The *kāka-pada* sign is engraved here and also at the end of some of the lines below.

⁴ As n. 3 above. *Mahīdēva* means a *Brāhmaṇa*.

⁵ First *ona* engraved and then altered to *emma*.

⁶ On the original *मि* later on changed to *रु* and the *mātrā* of the following letter has been scored off. But *र* remains as before. The following letters were read by Sircar, as विश्रुता राजधानी.

⁷ This sign for *visarga* was first engraved and later on scored off as redundant, by starting strokes.

⁸ The sign of *visarga* was later on inserted.

⁹ The superscript *r* is clear on the original, though not in the impression.

¹⁰ Sircar read सामान्यभूषणप्रवृद्धा.

¹¹ Both the bracketed *aksharas* are mutilated and the reading is only conjectural. The idea here is that he did not marry again (*nivāśraya*) after the loss (*apāya*) of his consort, as Rāma did not marry another after that of Sītā. Here Sircar read: पतिव्रतस्तत्पितामियाय.

¹² The letters *tish/ha* were repeated and later on scored off by vertical strokes above the top-strokes.

Nos. 162-74 : PLATES GXXXIX

BAŅGLĀ STONE PILLAR INSCRIPTIONS OF THE TIME OF GŌPĀLADĒVA

[Vikrama] Year 1337

THE pillars which bear these inscriptions were all found on a waste land in the vicinity of a tiny hamlet known as **Baᅅglā** situated about 8 kms. east of the fort of Narwar in the Shivpurī District of Madhya Pradesh. This site, which marks a battle-field, was first discovered in 1934-35 by the late M. B. Garde, who was then the Director of Archaeology in the former State of Gwālior, now integrated with Madhya Pradesh. He noticed the inscriptions in general in his *Annual Report* of the department for V.S. 1991 (1934-35 A.C.), pp. 8 and 12, and enlisted seven of them in its *appendix* (Nos. 7-13). The site was also visited subsequently in 1955, by Dr. D. C. Sircar, as the Government Epigraphist of the Archaeological Survey of India, who prepared impressions of fifteen of these inscriptions; and he edited seven of them

¹ न् is cut as *mta*.

² The number 23 is by mistake repeated in the original, and following it the subsequent numbers are continued. These I have retained here for the sake of facility.

³ Most of the letters of the third quarter of this verse are mutilated and my reading is from the traces left. The consonant *t* is engraved as *r*, and *m* as *bb*. Possibly *bhūtyambū* is intended but it would not suit the metre.

⁴ The reading is doubtful. The consonant of the first letter appears as *s* and the superscript of the second, as *n*.

⁵ The *mātrā* of *u* is clear, and the following *akshara* is engraved as *ga*.

⁶ The sign of *visarga*, which was by mistake omitted first, was later on marked above its proper place.

⁷ Some other *aksharas* were first engraved here.

⁸ The second letter of the name is deformed. Sircar read it as *ga*, but the *mātrā* is clear on the original.

⁹ The form of a petal is engraved after *nē*.

¹⁰ These four *aksharas* are only to fill in the gap so as to complete the line. In the end, there is a heart-shaped design.

(Nos. 1-7) and noticed the remaining eight (Nos. 8-15) in an *appendix* in the *Epigraphia Indica*, Vol. XXXI, pp. 326 ff. Thirteen of these inscriptions are edited here from the same impressions, kindly placed at my disposal by Dr. G. S. Gai, the Chief Epigraphist of the Archaeological Survey of India.

Garde gave the following description of the village and the site where the pillar were found by him:

"... There are traces of fortification wall round the village which is mainly populated by the Rajpūts. The piece of waste land, rocky and covered with thorny shrubs, which extends between the village and the river Barua, a small tributary of the Sindh, flowing at a distance of about a mile to the east, is studded with a number of memorial pillars. In a day's hurried survey I counted over sixteen such pillars either standing or lying on the ground, entire or broken. But further examination may bring to light some more pillars. They bear panels of sculptures usually depicted on pillars commemorating warriors killed on battle-fields—scenes of warriors, foot-men, horse-men and elephant-riders engaged in combat, and of fallen heroes reaching heavens and enjoying the company of heavenly nymphs or worshipping Śiva liṅga."

Almost the same description is given by Dr. Sircar also, in his article referred to above; but Garde's writing is reproduced here in a complete form, since his reports are now rarely obtainable.

Many of the pillars, as also observed by Garde, have their tops moulded into fluted *āmalakas* crowned with pinacles.

Four of the inscriptions dealt with here (Nos. 162 and 164-166) are purely in prose and the remaining four (Nos. 163 and 167-169) are partly in prose and partly in verse. The **language** is Sanskrit, often incorrect. The **alphabet** of all these inscriptions is Nāgarī and all are written in different hands, in a slovenly way. The epigraphs, in a majority of cases, have suffered from exposure to weather, so much so that on some of the pillars they have become partially or wholly undecipherable. On some of the pillars even the portions containing the inscriptions were not well dressed before making the incisions.

All the inscriptions, as stated earlier, refer to the death of certain warriors who lost their lives in a battle between the **Yajvapāla king Gōpālādēva** (c. 1279-89 A.C.) and the **Chandēlla monarch Viravarman**, whose known dates range from 1261 to 1286 A.C. The date of the battle thus falls well between the range of dates known for both the kings. In seven of the records dealt with here (Nos. 164-167, 170 and 173-174), the **date** is given as the **7th of the bright half of Chaitra of the (Vikrama) year 1338**, the day being **Friday**. It regularly corresponds to **28th of March, 1281 A.C.** Four of the records (Nos. 162, 163, 169 and 171) on the other hand, mention the year as **1337** instead of 1338; and the reference to both these years, *i.e.*, 1337 and 1338, as Dr. Sircar has observed, indicates the year by regarding the latter as *expired* and the former as *kārttikādi current*.

The mention of the week-day as **Friday** in all these inscriptions goes to indicate that the battle lasted only for a day. However, Garde has noticed a solitary instance (his No. 8) which mentions the week-day as **Saturday**. From this he concluded that it is either mistake or it may be that the same *tithi* covered both the days, *i.e.*, Friday and a part of Saturday, and thus the battle may be taken as fought on two consecutive days.¹

The dimensions of writings on these pillars with some other details are as tabulated below:

No.	Lines	Breadth of writing in cms.	Ht. of writing in cms.	Ht. of letters in cms.	Condition
162	5
163	16	28	45	2.5	Good; letters sparsely written.
164	9	30	23	2	ditto.
165	11

¹ Garde, *op. cit.*, p. 12, No. 3. For the unit figure of the number of the year, see *n.* in the text given below. This record is our No. 164.

No.	Lines	Breadth of writing in cms.	Ht. of writing in cms.	Ht. of letters in cms.	Condition
166	12	30	36	2.5-3	weather-worn and also damaged.
167	14	26	47	2.2-5	Carefully written but weather-worn.
168	9	23.5	15.5	.8	as above.
169	12	26.5	32.5	1.1-5	" "
170	8	30	28	2.5	Last two ll. in a different hand, with slightly smaller letters, Highly weather-worn; writing sloven.
171	9	30	31	2.5	Extremely damaged.
172	5	25	8	1	Several letters lost.
173	10	28.5	28	1.5	Highly weather-worn.
174	10	29.5	28	2	as above. ll. 7-9 totally lost with some other letters also.

Note.—In editing the inscriptions here I have followed the numbers given to them by Dr. D. C. Sircar, but his numbers 13 and 14 are excluded, as I am not sure whether they are connected with the battle. See his note also where he says that "it is not possible to be sure on the point."

None of the heroes whose names are recorded in the inscriptions seems to be historically important, except Brahmādēva who is endowed with the title *Mahākumāra* and who is mentioned as Gōpālādēva's Chief Minister. All the warriors commemorated in the records are stated to have fallen in field while fighting on behalf of the Narwar ruler Gōpālādēva, which may perhaps indicate that ultimately he came out victorious. The whole incident appears to have been that the Chandēlla forces took the initiative and penetrated into the Yajvapāla territories, but soon after they crossed the river, they were defeated and driven back by the army of the Yajvapāla king.¹

Only one **geographical name** is mentioned in the inscription. It is variously spelt as Valuvā, Vālukā, Valuā, Valuā, Valubā, Vāluka and Valuka, which is no other than the stream mentioned above as the tributary of the Sindh and flowing about a mile to the east of the hamlet of Baṅglā where the inscriptions were found.

¹ For more remarks on the same, see the Dābī plate inscription of the Chandēlla Vīravarma, in *A.-S.-I. R.*, Vol. XXI, pp. 74 ff. Also see *Ind. Ant.*, 1918, p. 241; and *I. H. R.*, XXXII, pp. 104 f.

² From photographic illustration accompanying Dr. D. C. Sircar's article in *Ep. Ind.*, Vol. XXXI.

³ Expressed by symbol, which, as already noted by Sircar, has not the usual globular sign at the end.

⁴ This and some other *dandas* below are redundant.

⁵ As suggested by Sircar, read परमभट्टारकेत्यादिसमस्तरोजावलीसमालंकृत—

⁶ This may be a contraction of *Samrāṭ*.

⁷ Read चतुभिः (or चतुर्भिः—) राजभिः. This clearly shows that the besiegers were repulsed.

⁸ Read सद्राणः— It cannot be definitely known whether it is one word, as taken by Sircar, or the prefix *sat* may be taken in the sense of showing faithfulness on the part of the *Rājaka*, to his sovereign lord.

⁹ This expression is grammatically incorrect but the meaning is clear, viz., that *Dhūmadēvī*, the chief consort of *Viśala* who died fighting, committed *Sati*.

¹ From an impression. It is No. 219 of *A. R. Ep., 1954-55, Appx. B.*

² Expressed by symbol.

³ The left limb of this *akshara* is not joined to the right, and the signs above the top-stroke are ornamentally treated.

⁴ Sircar read the bracketed letter as *tā* which he corrected to *grā*; but the space with some traces in it goes to show that the letter appears to have been actually cut as *grā* in the original.

⁵ The *danḍa* is redundant, as also some others below.

⁶ As also noted by Sircar, this is a variant of Chandēlla.

⁷ The consonants of both these *aksharas* are so formed so as to make the word appear as नवे.

⁸ This expression also implies that the hero died in fighting. A slanting *danḍa* attached to the latter one indicates the end of the writing.

⁹ From an impression which is No. 216 of *A. R. Ep., 1954-55, Appx. B.*

¹⁰ Denoted by symbol.

¹¹ Read स्वस्ति. The subscript of the bracketed letter is so formed as to appear as *t*. It is so in *ḥvāra* in the next line also.

¹² The sign of *repha* has not come out on the impression but from the reverse it appears to have been incised.

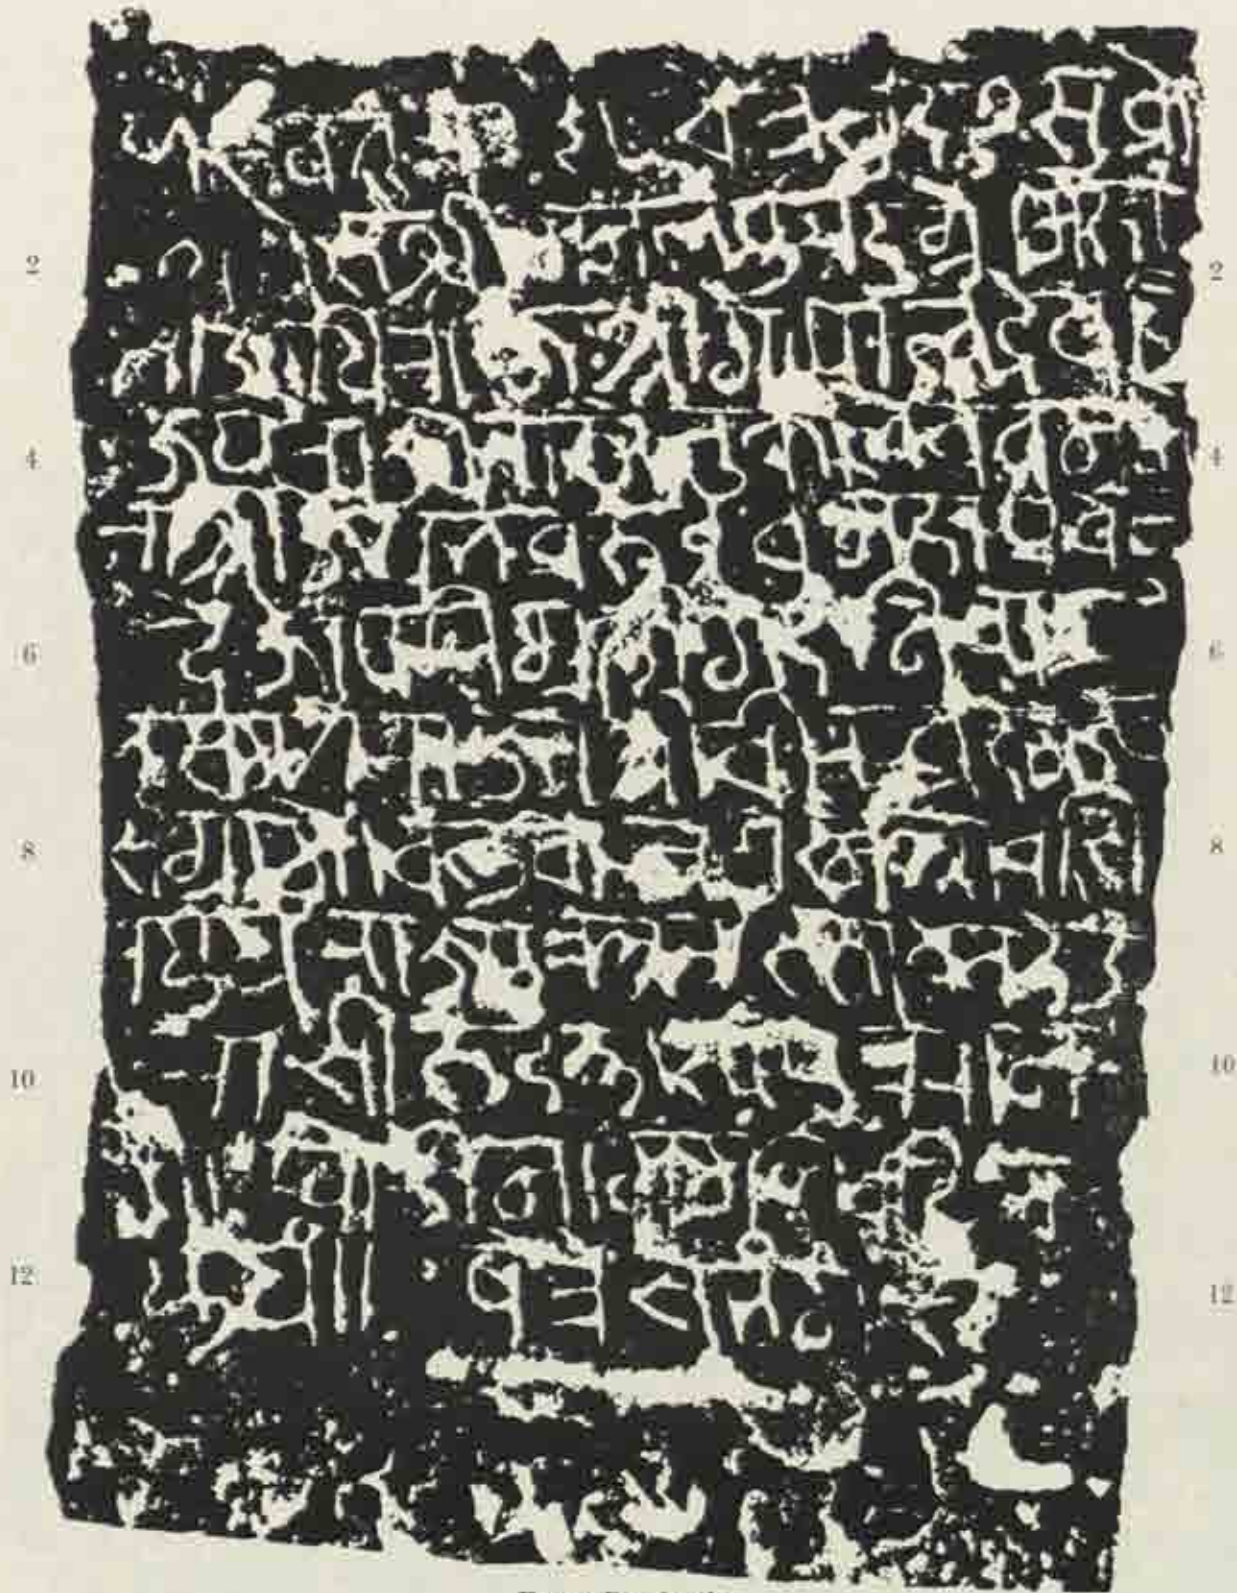

¹³ The sign of *mātrā* on *h* may have been incised on the original, as shown by a trace left there.

¹⁴ The horizontal stroke, which distinguishes this letter from *g*, is not formed. The word *guru* that follows is used here to denote 'the esteemed one', and not a preceptor.

¹⁵ As already noticed by Sircar, the first part of the name appears here and also in No. 176 as *Jaita*, in No. 165 as *Jnyata*, and in No. 166 as *Jeyata*. The complete name appears to have been *Jaitravarma* and from the title *Mahākumāra*, he appears to have been the son of *Gōpāladēva* (?).

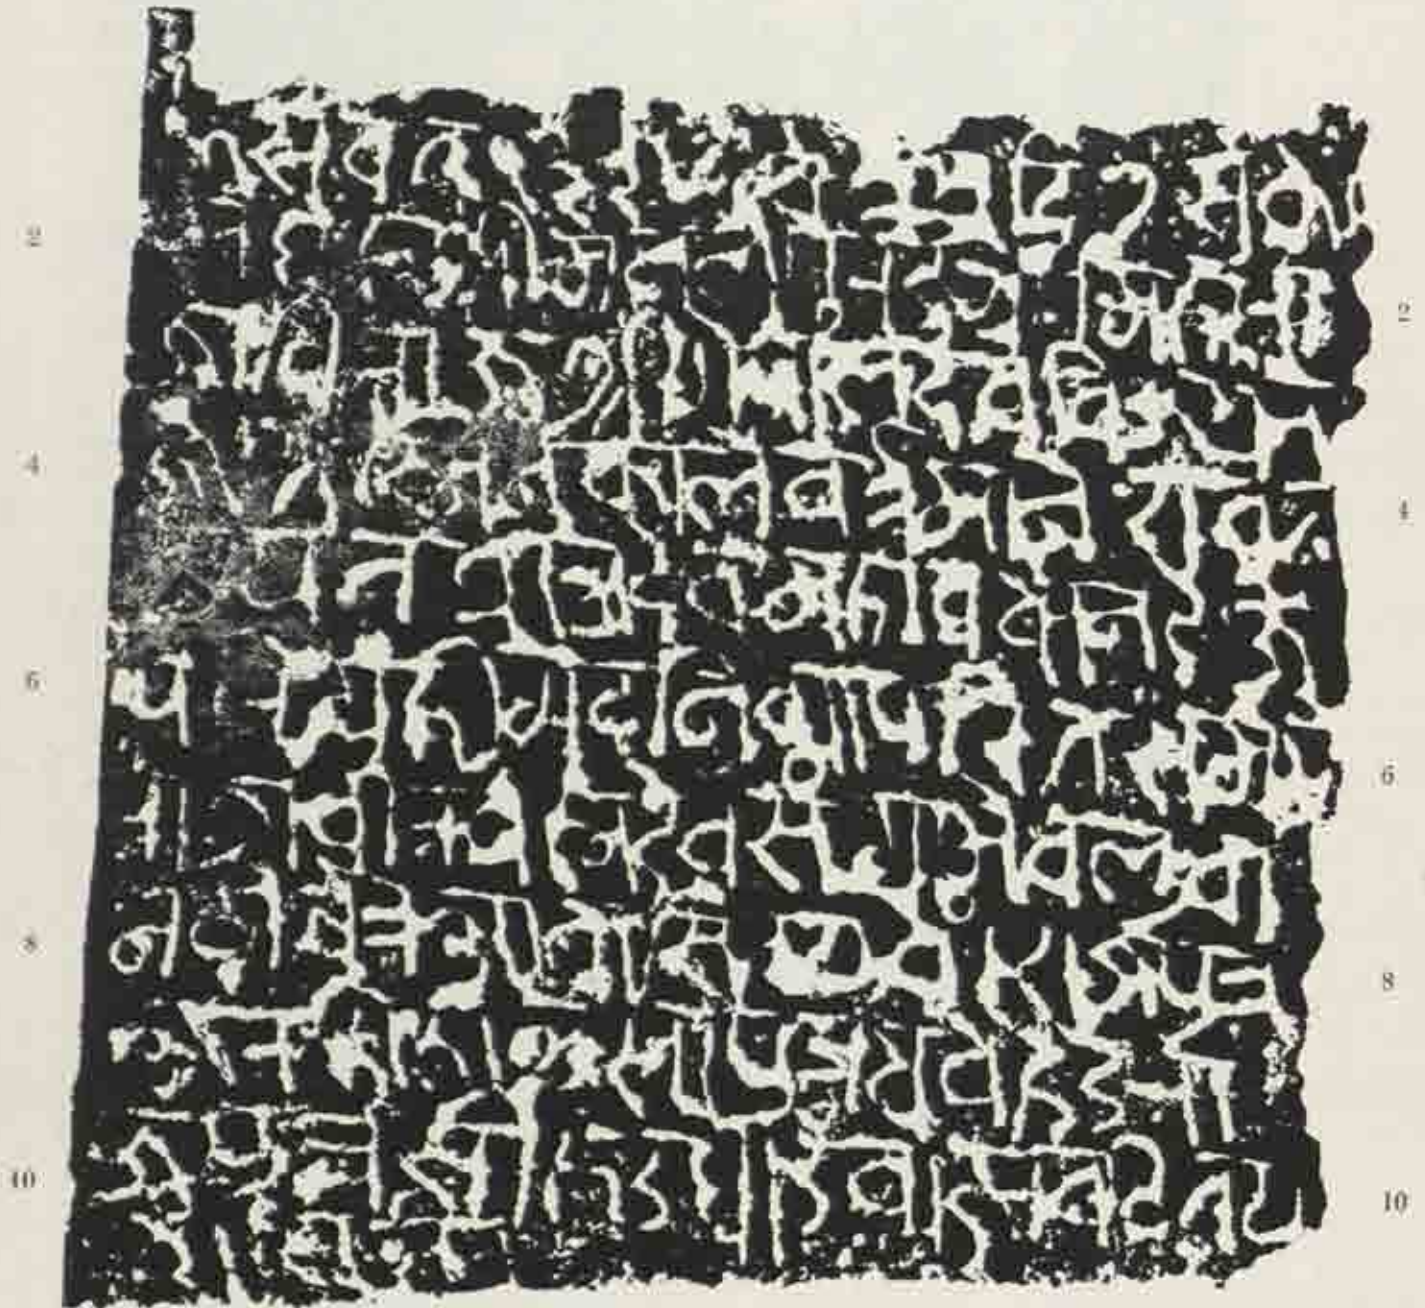

¹⁶ All these three *aksharas* are mis-formed. The consonant of the first appears as *s*, the second may have been *v*, and that of the third is indefinite. And what follows is intended to denote the family name *Yajrapāla*.

¹ As Sircar has already observed, it is difficult to determine whether the first three *aksharas* denote the family name Chauhāna here.

² The *anda* which was first put appears to have been struck off by two horizontal strokes.

³ I agree with Sircar's suggestion that here we should read रा(राजत)कुमारनिह—

⁴ The *akshara* in the rectangular brackets is damaged and I am not certain about its reading, though here it is adopted as read by Sircar.

⁵ I am not certain about the reading of this expression. Sircar takes it as *pañcha-padātikaib*, with some hesitation; but I think that it is perhaps intended to be the same as *pañchatvam-upayātaḥ*.

⁶ Sircar read this number as 2 but to me it appears as 7.

⁷ From photo-lithograph accompanying Sircar's article.

⁸ Expressed by symbol.

⁹ This *anda*, as also the one in the next line, is redundant.

¹⁰ For the name, see *n.* on the corresponding portion in the preceding inscription. Here the language is obscure but the sense seems to be that these persons were then looking after the affairs of administration.

¹¹ He is perhaps Viravarma in whose battle Arasiba, mentioned in l. 9 for Arisimba, lost his life along with some others.

¹² Probably to read युद्धे सति. Sircar suggests that this obscure passage seems to mean "that a person named Vaṣṭa who was a resident of Dēvāsa (modern Dēwās) lost his life in the battle and that his wife committed *Sati*, or it may mean two persons named Dēvāsa and Vaṣṭa. But to me it appears to be restored to देवसेनाद्विवयुद्ध—, i.e., battle fought for the lord for two days (?).

¹³ From an impression. It is No. 221 of *A. R. Ep.*, 1954-55, Appx. B.

¹⁴ Denoted by symbol.

 12 वीरवर्मणा सह
 13 युद्धं दशवर्तहि ज-
 14 नम्¹⁹ [ह]त्वा युद्धं जितं(तम्)²⁰ [॥⁸]

¹ A faint trace above shows that the sign of *mātra* may have been cut above this *akshara*.

² The correct form of the name seems to be Jairavarman, for which see *n.* elsewhere on the corresponding portion.

³ Elsewhere this name appears as *Dējai*. The *danda* is superfluous.

⁴ For the sense and also for the name that follows, see *n.* in the preceding inscription.

⁵ It is possible that this *akshara* is *vā*.

⁶ All these letters are indistinct in the impression. Sircar read them as ख[नी]भट[?] नभ [; *]देहे but I am not certain about the reading.

⁷ That is, *Rdūta*.

⁸ Read *सिहदत्तास्य*.

⁹ The name also indicates that the person died in the struggle.

¹⁰ This expression is again obscure and we may accept Sircar's interpretation of it that the person in question died in an area belonging to a person named Sabhamma.

¹¹ From an impression which is No. 212 of *A. R. Ep.*, 1954-55, Appx. B.

¹² Denoted by symbol.

¹³ Sircar read this *akshara* as *et*, but what he took the sign of *rēpha* appears to be a fault of the writing which is very careless; and besides this, a number of the *aksharas* are damaged and indistinct as the stone appears to have been for long exposed to rains.

¹⁴ Read *वीरवर्मणा*. The foot is metrically defective.

¹⁵ The reading of the bracketed *akshara* is not certain. Should we read ख[नी]भट[?] नभ [; *]देहे (?) The name that follows is not known.

¹⁶ The consonant of this *akshara* appears as *dh*.

¹⁷ This appears to be the same as *Kṛuddha*, but the preceding word, the reading of which is doubtful, is unintelligible, as also remarked by Sircar. Can it be the same as appearing in No. 162, l. 5 (?)

¹⁸ The name consists of five *aksharas* but the reading is doubtful.

¹⁹ The reading is not certain and the language too is defective. But as rightly held by Sircar, the passage refers to the heroes of the enemy's side who were killed by him.

²⁰ This statement indicates that he won the battle, and if so, the victory favoured the Yajvapāla king.

¹ From an impression which is No. 222 of *A. R. Ep.*, 1934-35, *Appx. B*.

² Six syllables along with the symbol for *Siddham* are indistinct here.

³ The *aksharas* for the name of the family are indistinct in the impression.

⁴ The reading of this name is not certain. The consonants of the first two letters are damaged.

⁵ From an impression which is No. 214 of *A. R. Ep.*, 1934-35, *Appx. B*.

⁶ Expressed by a symbol. The *daṇḍa* that follows it has disappeared, leaving only a trace.

⁷ Sirar read *cha vabhūvach* and emended it to *babhūvach* but the *mātra* of *bhū* is distinct.

⁸ I am not certain if the curve of the *mātra* wrongly put on the first of these *aksharas* is later on scored off by a vertical stroke or it is only a scratch.

⁹ By a redundant stroke of the chisel this letter has become *na*.

¹⁰ Here appears a symbol to show that the record is complete. Its exact form cannot be made out.

¹¹ These two lines are illegible.

¹² It is difficult to know whether the first of these *aksharas* is *na* or *va*.

¹³ The first and the third letters are rather so formed as to make the reading appear doubtful. The last two lines of the record, as also noted by Sirar, are in a different hand and the letters are slightly smaller in size. They appear to me in a local dialect, and it is also a guess that the first five *aksharas* give the name of the girl who committed *Sati*. *Jwālī* seems to be the same as the silver ornaments for fingers still put on by newly married girls in the locality. Taking the second letter *ण* (of line 11) for *र* the name of the lady may conjecturally be taken as *Dhīṇuka*, whose hands and figures were decorated with the ornaments as stated here.

No. 170^a

^a From an impression which is No. 213 of *A.R. Ep.*, 1954-55, *Appx. B*. The letters are extremely damaged.

^b Expressed by a symbol.

^c The sign of *vimsa*, if engraved, is smaller in size.

^d As in the corresponding portion of the preceding records. Here the person seems to be called a *mantrin*.

^e Read देवेन.

^f As already noted by Sircar, these are probably the sons of the person who died in fighting.

^g Lines 6-8 are damaged and therefore indistinct.

^h From an impression which is No. 223 of *A.R. Ep.*, 1954-55, *Appx. B*.

ⁱ Expressed by a symbol followed by two illegible letters which appear as traces of *Sumti*.

^j The number showing the *tithi* is lost here.

^k Read श्रेवे, which is followed by 2 or 3 letters which I cannot make out as they are carelessly formed.

^l Sircar observed that the broken letters may have been महा, and the reading has to be adopted here. They are in the form of traces only.

^m See *n.* on the corresponding portions in Nos. 165, 166 and 174.

ⁿ Possibly to be read as राजाधिराज. The rest of the inscription, which contains four lines, is illegible.

^o From an impression which is No. 218 of *A.R. Ep.*, 1954-55, *Appx.*

^p This portion which is broken, may have contained the year and the name of the month. Also whether the consonant of the following *akshara* is dental or palatal cannot be ascertained.

^q Possibly to be restored to राजाधिराजश्रीम-

^r The letters are not clear in the impression but the lacunae may conjecturally be filled in by विजयराज्ये.

¹ The lost letters may have been राजश्री, as in No. 162.

² Sircar observed that here the portion may have contained *are*, but to me they appear to be traces of क्षेत्रे, as taken here.

³ Here the name of the father may have been given but it cannot be made out completely.

⁴ That is, *Rāūta*. Following it is probably the name of the hero and the letters appears as कैजेको, but the reading is uncertain.

⁵ Whether the *daydas* were followed by some more letters cannot be determined.

⁶ From an impression which is No. 217 of *A.R. Ep.*, 1954-55, *Appx.* B.

⁷ The first two letters in this line are broken off, and except a letter or two here and there, the whole of the rest is lost. It is, however, included as it belongs to the battle and shows the year 1338.

⁸ From an impression which is No. 215 of *A.R. Ep.*, 1954-55, *Appx.* B.

⁹ Expressed by a symbol.

¹⁰ The year agrees with that in Nos. 162, 168-69 and 171 although in Nos. 164, 167, 170 and 173-174 it is given as 1338, for which see Dr. Sircar's remarks, as already stated above.

No. 175; PLATE CXL

NARWAR STONE INSCRIPTION OF THE TIME OF GŌPĀLADĒVA

[Vikrama] Year 1339

THE stone on which this record is inscribed was discovered in 1917-18, by M. B. Garde, the then Superintendent of Archaeology in the former State of Gwālior, and was brought to notice by the same scholar in the *Annual Administrative Report* of the department for the year Vikrama 1971 (No. 9), which was not printed,¹ and also in the *Indian Antiquary*, Vol. XLVII (1918), p. 242. The record was also enlisted by D. R. Bhandarkar in his *List of Inscriptions of Northern India* under No. 603, and subsequently it was edited by Dr. D. C. Sircar, with transliteration of the text in Roman characters, in the *Epigraphia Indica*, Vol. XXXIII (1959-60), pp. 36 ff., with Plate, facing p. 40. It is edited here from the original stone which now exists in the Archaeological Museum at Gwālior.

The inscription was found at **Narwar** the ancient Nalapura, which was the capital of the Yajvapāla dynasty in the latter half of the thirteenth century A.C. The place lies in the Karērā parganā in the Sīpri (Shivpurī) District of Madhya Pradesh, about 26 kms. north by west of Karērā and almost equidistant south-east of Shivpurī, and contains ruins of old palaces ascribed to the ruling house of the Yajvapālas. The stone bearing this inscription is stated to have been discovered in these ruins.

The complete dimensions of the stone including a plain border which it has on all the four sides, are 73.5 cms. by 72 cms. The writing, which is in a sunken panel thereof, covers an area about 56 cms. broad by 54 cms. high and contains 27 lines of equal length. But it has suffered a good deal owing to the effects of weather. A number of the *aksharas* have been brushed off or damaged, particularly in the middle portion of ll. 7-18, where some of the letters are more or less rubbed out, since the work of engraving too was far from satisfactory, as will be shown below. The size of the letters varies from 1.2 to 1.5 cms. in height.

The characters are Nāgarī of the thirteenth century A.C. The forms of *ch*, *dh* and *v* are often confounding with each other; e.g., the letter *ch*, which almost resembles *v* in *vidhau cha*, l. 1, has its loop angular in *prōmchchhita*, l. 3 and it also approaches its modern Nāgarī form as in *-Achhuta*, in the same line. The horn of the left limb of *dh* is prominent in most of the cases; it is sometimes oblique, e.g., in *vidhau*, l. 1, but in some instances it is joined to the top of the horizontal bar, as in *nirumdhau*, l. 3. Unlike the preceding record, this letter bears a top-stroke in the present one. *J* is in a transitional stage, its antique and modern forms being noticed respectively in the same word *Jajapōlla*, in l. 5. The subscript forms of *chh* and *th* are alike; cf. *avasthā* and *vāmchhita*, ll. 1 and 19, respectively. The middle vertical bar of *ṇ* often ends in a loop as in *-varmanah*, l. 18; as a latter member of a conjunct consonant, this letter is marked as *l*, e.g. in *vardhishṇu*, l. 21; and when joined with the same syllable, it is marked by a slanting stroke, as in *kā(kī)ṇṇa*, l. 20. The forms of *t* and *bh* continue as in the preceding inscriptions; and those of the palatal and the dental sibilants are so engraved as to show a combination of both; see *saiḥata*, l. 18. The consonant *r* which has assumed its modern Nāgarī form, has occasionally the wedged form and also the one as the vertical marked by a horizontal stroke, as in the preceding records. The medial short *u* is sometimes denoted by a curve attached to the vertical of a letter to which it belongs, as in *-ṣruti*, l. 7, sometimes the lower extremity of the curve is curled up, sharply, as in *-Achhuta*, l. 3, and with an angle, as in *nirumdhau*, in the same line; but generally it assumes the modern form, e.g., in *disatu* in the same line. The medial long *ā* is occasionally marked as the subscript *t* attached to the left lower part of a letter, e.g., in *pūta*, l. 17.

Mistakes of the writer and the engraver are to be noticed throughout the inscription;

¹ The reference here is H. N. Dvivedī's *Gwālior Rājya-kē Abhilēkha*, No. 141, as noted before also.

² For the antiquities of Narwar, see Cunningham's *A. S. I. R.*, Vol. II, p. 308; Vol. VII, p. 95 and Vol. XXI, p. 58. Also see *A. S. I. R.*, 1922-23, p. 187; *ibid.*, 1924-25, p. 164, and *ibid.*, 1925-26, p. 189.

and we also find limbs of some of the letters occasionally omitted, e.g., *tasmād-* in l. 7 appears as *tasgād-*, without the horizontal stroke of *m*, and *visva-* in l. 1, as *vimva-*, as the tail of the left limb of *s* is omitted. On the other hand, a redundant chisel stroke has changed *g* to *m* in *ganyā-*, l. 3, and *l* is often formed as *v*, e.g., in *tadū-*, l. 5. Errors of this type and subsequent corrections and insertions that the inscription often has are all noted in the text that follows.

The **language** is Sanskrit; and with the exception of the opening word *Siddham* and the portion containing the date in the end, the record is metrically composed in the same fluent style as the preceding one, by the same poet Śivanābha. In all there are 27 verses, which are all numbered. It is interesting to note that verse 10 is composed in a metre of rare occurrence, known as *pañkti* which belongs to the *supratishṭhā* group.

The following **orthographical** peculiarities may be noted. (1) The general use of *v* to denote *b* as in *vimvita-*, l. 2; (2) the doubling of a consonant following *r* with certain exceptions, cf. *kīrtti-* and *ārjita-*, both in l. 5; (3) the occasional use of the dental for the palatal sibilant e.g., in *visuddha-*, l. 25, and *vice versa* in *śenā-*, l. 15; (4) the general use of the sign of *anusvāra* in place of an appropriate nasal, even at the end of a stich, with a few exceptions as in *kānti-kāntam*, l. 2. Besides these, the medial diphthongs are denoted sometimes by the *prishṭha-mātrā* and in the other instances by the *ūrdhva-mātrā*: the sign of *avagryaha* occurs only once, in l. 14, to denote the name of Ajayadēva correctly; and the *kāha-pada* sign is used at the end of ll. 1, 2, 10 and 22.

The inscription is a *prasasti* (laudatory account), as the word is used in l. 26 (v. 26), and refers itself to the reign of **Gōpāladēva** of the royal house known as that of the **Jajapēlla (Yajvapāla)** dynasty of Nalagiri (the fort of **Narwar**). The immediate **object** of it is to record the excavation of a stepped well (*vāpī*) and planting of a garden by Gāngadēva, Minister of Gōpāladēva, evidently at Narwar, where the stone was found. The last line of the record shows the date in decimal figures only; it is **Thursday, the tenth of the dark half of Pausha of the (Vikrama) year 1339**, which, as calculated by Dr. Sircar, regularly corresponds to **26th November, 1282 A. C.** The month was *Pūrṇimānta*.¹

Like any other *prasasti*, the record falls into two parts, the first nine verses containing the *maṅgala-slohas* followed by the genealogical account of the royal house, and the remaining eighteen verses speaking about the well and its excavator, with the names of the composer, writer and the engraver of the composition. After the introductory word *Siddhih*, the inscription has two invocatory stanzas inviting the blessings of Sadāśiva and Achyuta, respectively. The next verse introduces Ratnagiri, and says that a hero of the name of **Jayapāla** was created by Maha(hā)ruṇḍā, who appears to have been the family-deity of the house to which he belonged. Ratnagiri, where the family is stated here to have its stay, cannot be satisfactorily identified, though Dr. Sircar suggests that it may be the same as the modern town of Ratangarh Khedi (Lat. 24° 49'; Long. 75° 13') in the Mandasaur District of the former Gwālior State on the route from Neemuch to Būndī, 36 miles (58 kms. north-east of the former and 73 miles (117 kms.) south-east of the latter.² The description of the mountain in v. 3, that it (is so lofty as to) obstruct the speed of the Sun's chariot is all poetic. With reference to the family name Yajvapāla, it is possible to say that it may have been the Sanskritised form of Jayapāla, who appears to be an eponymous hero, or mythical king, in view of the fact that the real history of the house begins from **Chāhaḍa**. This prince is stated to have captured, by the force of his arms, Nalagiri and some other places from his enemies whom he vanquished (vv. 6-7); and then we find the name of his son, **Nṛivarman**. After him (*tadānu*) was born **Āsalladēva** whose description is merely conventional (v. 8). The definite relationship between these two rulers is not mentioned in the present record, but from the other inscriptions of the house we know that the latter was the son of the former. Āsalladēva's son was **Gōpāladēva** who is stated here

¹ Sircar, *op. cit.*, p. 36.

² Ratnagiri can hardly be identical with Rarangarh, as suggested. The fort at that place is not old. See *G. A. R. for 1929-30*, p. 21, and besides, it is situated about 460 kms. south-west of Narwar. It is possible that the place may have been identical with the village known as *Dōngar*, lying almost mid-way between Narwar and Shivpurī (See *G. A. R. for 1928-29*, p. 11), but in this case we have to presume that this place was called by the name Ratna, or it may have been a poetic fancy. In any way the hill appears to be near Narwar and not so far in the Mandasaur district.

to have vanquished Viravarman, the king of Jējābhuktī, in a struggle on the banks of the river known as Sikatā. The Chandēlla ruler Viravarman's reigning period is known to be from c. 1247 to 1286 A.C. and the battle referred to here is the same in which his distinguished general Balabhadra Mallaya vanquished the lord of Narwar, as seen above, while commenting on the Dāhī grant of the Chandēlla king.¹

What is new in the genealogy of the royal house of Narwar is only the name of Āsalla's son Gōpāla, as stated in v. 9 of the present record, which also goes to corroborate the account of the battle between him and Viravarman, as seen above.²

The second part of the *prabasti* which commences from v. 10, mentions the ancestors of Gāṅgēyadēva who got excavated a stepped well, evidently at Narwar, the place where the inscribed stone was found. The first name mentioned here is that of Vijayadēva, whose son was Surāśrī, who was a warrior and who killed enenical forces consisting of elephants in a battle (v. 13). Here the reading *viśvala-prabhu-balāni* is doubtful; but it is not unlikely, as suggested by Dr. Sircar, that the word Bundēla may have really been intended here. The successor of this man there was one Jayadēva "who put the mark of gold in the form of his weapon on the army of the Mlēcchhas which was the touch-stone". It is a poetic way of saying that he struggled with the Muslim forces and conquered them, which appears to be a reference to his battle with the army of Gayās-ud-dīn Balban who was then carrying on raids in Rājasthān and in the surrounding region.³ Jayadēva's wife was Saubhāgyadēvī (v. 16). She gave birth to Gāṅgadēva, who became Minister of Gōpāladēva and who actively participated in his master's warfare with Viravarman, the struggle with the Chandēlla king, as we have seen above. Verse 18 supplements our information by recording that in this battle he was associated with Jayanta, the Minister of the son of Nṛivarman, i.e., Āsalladēva.

Verses 21-24 state that Gāṅgadēva, gratified the distressed (his subjects), spread merits, directed welfare, removed sins and distributed wealth. With a desire to increase his merits, he excavated the well where good water was obtained, and also planted a beautiful garden for the satisfactions of his ancestors, gods and travellers. The next verse expresses the hope that the well may be everlasting.

Verse 26 gives the name of the poet, Śivanābhaka, who composed the *prabasti*. He was the son of the Treasury-Officer, Lōhaṭa by name, and a grandson of Damōdara, who had emigrated to Gōpādrī from Mathurā. The verse giving all this account is reproduced from the preceding inscription which too was composed by the same poet some three years earlier. The last verse states that the record was written (on the stone) by Mahārāja. Here the inscription closes with the date, as seen above, and with the expression *subham = astu* (may it be well) and the Nāgarī letter *chha* showing auspiciousness.

The name of the engraver, which does not appear in the main body of record, is incised on the lower border of the stone. He was Jīṅ(n)ēs(ś)vara belonging to the engraver's clan.

As for the **geographical names** mentioned in the inscription, **Ratnagiri** (v. 3) may be the hill near Narwar, as seen above, and **Nalagiri** (v. 6) is the hill adjoining to Narwar where the stone was discovered probably the same. **Sikata-nīmnagā** (v. 10), also appearing as **Saikata-taṭīnī** (v. 9) is the stream known as Baruā or Baluā, a tributary of the Sindh which flows near Narwar; and **Gōpādrī** (v. 26) is, of course, Gwālior.

¹ *ASIR.*, Vol. XXI, pp. 74 ff.

² See above, nos. 162-174.

³ See *S. E.*, p. 148.

⁴ As the second *akshara* of the name is so spelt also in No. 178, below, the name does not appear to be a mistake for Mahārāja. This person is also obviously different from Mahārāja, the son of Śamarāja, who incised No. 159, above, which is dated v. 1202, and is thus earlier by 87 years.

⁵ All these variants appear in the inscriptions discovered at Bānglā (to be seen above). Baluā is the corrupt form of *Bāluā = Sikatā*.

TEXT¹

[Metres: Verse 1 *Upajūti* (combination of *Pānāsthā* and *Indravāṅśā*); vv. 2, 6-7 and 19 *Paśantatilakā*; vv. 3, 7 and 14-17 *Upajūti*; vv. 4, 21, 23, 25 and 27 *Anuṣṭubh*; vv. 8, 11 and 12 *Mālinī*; v. 9 *Mandākrāntā*; v. 10 *Pankti*; v. 13 *Rathōddhatā*; v. 18 *Āryā*; vv. 20, 22 and 26 *Sārdūlavikrāntā*; and v. 24 *Aupa-chchhandasika*].

¹ From the original stone.

² Denoted by a symbol.

³ What appears as the sign of *Anuṣṭubh* above *ta* is the original fault of the stone.

⁴ This may also be taken as *सदाशिवः*.

⁵ In many cases this *akṣhara* appears as a combination of the palatal and the dental sibilant. At the end of the second line, as also at the end of some other lines below, the sign of *kāka-pāda* is engraved.

⁶ By a redundant horizontal stroke, *ga* appears as *ma*. In contrast, see n. 9 below.

⁷ In No. 178, below, the name appears as *Mahārundā*. Evidently the *mātrā* of the second letter of the name is here dropped as it would not suit the metre here.

⁸ First engraved as *शानोदित*, and then the stroke above the top of the second letter is scored off. *Avāṅśā* means 'a glorious achievement'.

⁹ The horizontal stroke of the consonant *m* is not engraved and thus it appears as *g*. Cf. n. 5 above.

¹⁰ Restore to *भूमिपुत्रात् पटिना* — meaning 'who was dexterous in curbing the elephants of his enemies, lived on the hill'.

¹¹ It can also be read as *चण्डिव(व)लं*. The reading of the six bracketed letters that follow is from the traces left. The word *Chandāra* here probably denotes Chandēlla (or Chandēri ?).

¹² *Simā* here gives the sense of 'the end', and *ṛā* means a distress, usually of six types as *atvishṭi*, *anāvishṭi*, etc.

¹³ The reading of the bracketed *akṣharas* is only from the faint traces on the stone and therefore uncertain. Sircar read [वड]वंशानवदो.

¹ Here too the reading is from the traces left.

² The sign of *visarga* is almost mingled with the letter that follows.

³ This *akshara* appears as *खो*.

⁴ Most of the *aksharas* in the latter half of this verse have now disappeared, leaving only traces.

⁵ The reading of bracketed letters at both the places in this half of this verse is uncertain; and according to Dr. Sircar, they are Hastināpura and Viśvala, respectively. Sircar also suggested that the latter denotes the Chāhamāna king Vīrabharāja IV, whose known dates are 1153 and 1164 A.C.; and since Vijayadēva's grandson, the hero of the present record, was a later contemporary of the Imperial Chāhamāna king of Ajmer and Delhi, and probably also an officer under the Gāhaḍavāla monarch Vijayachandra (c. 1255-70 A.C.), who is reported to have come into conflict with the king of Delhi, his grandfather (Vijayadēva) may be taken to have been a minister under Śalla, son of Nṛivarman, who also defeated Viravarman, in battle with Gōpāla and thus he continued for two generations. For this suggestion of Sircar, see *Ep. Ind.*, Vol. XXXIII, p. 37. But this is merely a conjecture, unsupported by any other evidence and also involving a number of probabilities, besides that it is based on the uncertain reading of both the names, *viz.*, Hastināpura and Viśvala, which may also be read as *Vimvāla*.

⁶ Engraved *व*, subsequently changed to *व*, with the mark of the *mātrā* still visible.

⁷ The upper curve of the *mātrā* of the preceding letter is extremely faint on the original.

⁸ Sircar read *युष्वा[त]रती[प]वा*.

No. 176; PLATE CXLI

SURWĀYĀ STONE INSCRIPTION OF THE TIME OF GŌPĀLADĒVA

[Vikrama] Year 1341

THE stone bearing this inscription was found in an old ruined well, locally known as Dabia *bāoḍī* in a jungle about 5 kms. to the north of *Surwāyā*⁴ a tiny hamlet on the Jhānsī-Sīprī metalled road, about 20 kms. to the east of Sīprī, the headquarters of a *tehsīl* and district in Madhya Pradesh. Removed from its original place some time in 1918 by the late Shri M. B. Garde who found the stone in the well, it was for some time exhibited in the portico of a temple at *Surwāyā* and was subsequently transported to the archaeological museum at Gwālior where it now exists. The inscription was briefly noticed in a publication of the department of archaeology of the former Gwālior State and entitled '*A Guide to Surwāyā*' (1919), on pp. 25-26 and illustrated on plate XII. It was also included by D. R. Bhandarkar in his *List of Inscriptions in Northern India* (No. 607). It is edited here for the first time from the original stone which I examined in the Museum where it exists, and from an impression of it which I owe to the Curator of the Museum.

The inscription covers a space 43.5 cms. broad by 42.5 cms. high. It is engraved on a counterstruck surface of a dark pinkish stone which has broad borders on all the four sides including which, the stone measures 57.5 cms. in each side. The writing is in a state of good preservation, except a letter each in the middle of 11, 6.9, which has been abraded though it can be read with certainty. The letters are well formed and carefully cut and their size is about 1.5 cms., except in the last line where are a little smaller. On the upper border of the stone and separated from the main body of the record, is another line, 20 cms. long, in slightly bigger letters which are sparsely written. It reads *Paṇḍita-Sōmadhara-putra-īsoara-vāpikā* : and similarly, on the right side of the lower border of it is engraved another line which gives the name of the engraver of the record with date in figures.

The characters are Nāgarī of the thirteenth century A.C., to which the record belongs. They are symmetrical in form and are written and cut more carefully than those of the preceding

¹ The sign of *rēpha* on the bracketed letter is very faintly carved.

² On this name, see n. in the edition of the inscription.

³ It is the sign showing auspiciousness. On the lower border of the stone, in the middle but slightly towards the left is engraved in the same hand सुखी टंकान्वयनायुह्यकार लिखित (१३)२ (२१) ॥

⁴ The history and antiquities of this place are described in *A. S. J. R.*, XXIV, p. 25 and also in the *P. R. A. S., W. C.*, for 1915-16, p. 11.

inscription which was engraved only a couple of years before. Attention may be drawn to the form of the initial *i*, the loop with the tail of which is separated from the rest (e.g., in *īti*, l. 12); to that of the initial *u* incised as *nu* (see *udāra*, l. 9); to that of *u* with its middle vertical stroke ending in a loop (see *purāṇa*, l. 13); to that of *p* engraved as *y* (cf. *kalpa*, l. 1); and lastly, to the mark of a final consonant resembling the *mātrā* of long *ū*, as in *samyak*, l. 5. The limbs of the letters are formed angular.

The writing is correct but involves a few mistakes as *tammāt* for *tasmāt* and *nimmala* for *nirimmala*, both in l. 9. The language is Sanskrit, which is generally correct; and except for the opening word *siddhiḥ*, the record is metrically composed. The verses, which are all numbered, total 19. The poet who had a deep knowledge of the *Harshacharita* on which the initial portion of the record is based, has some slackness in his composition: e.g., the use of the word *su-vidvān* and the redundant *tē* and *tu*, all in v. 9.

As regards **orthography**, we note that (1) *v* is written throughout for *b*; cf. *vudha*, l. 2; (2) the dental *s* is put for the palatal *ś* in a few instances like *Sariva* for *Sariva* in the same line; (3) *anusvāra* is wrongly used in a few cases at the end of a stich, e.g., at the end of the first half of v. 1, but not so at the end of it; and lastly, (4) a consonant after *r* is generally doubled excepting in a few instances; see *sariva*, l. 1 but not in *-arjita*, l. 13.

The **object** of the inscription is to record the excavation of a stepped well (*vāpī*), evidently the same in which the stone was found, by a person whose name was *Īvara*. The record does not refer to any ruling prince by name nor to any dynasty which was then holding its sway in the region; but as the **date** is mentioned to be **the fifth of the bright half of Kārttika, Wednesday of the Vikrama year 1341**, which regularly corresponds to Wednesday, 3rd October, 1285 A.C.¹, it may be ascribed to the period of the **Yajvapāla Gōpāladēva** who was holding sway in that region from 1279 to 1289 A.C.

Opening with the auspicious word *Siddhiḥ*, the record has one verse to invoke the blessings of Śiva under the name *Sarya*. It then mentions the origin of the *Sārasvata Brāhmaṇas*, stating that the river *Sarasvatī* married the sage *Dadhīchi* who was performing penances on her bank and had from him a son of the name of *Sārasvata* (born of *Sarasvatī*). He pleased *Indra* by his penances at the time of a drought and obtained rains from him (vv. 2-3). In his generation which flourished at *Sarasvatī-pattana*, there were several learned persons who were all devoted to performing sacrifices and worshipped Śiva (v. 4). The next verse states that in his lineage was born *Bhadrēvara*, the crest-jewel of the *Dīkshitas*, who worshipped *Vishṇu* (*yajñapurusha*) by sacrifices. His son was *Āśadhara*, the foremost among those who knew the supreme Spirit and the good conduct personified (v. 6). From him was born *Ḥriṣīkēśa*, whose heart was pure and who was compassionate, generous, of good conduct and a member of a society (*sabhāstāra*).² His wife was *Lahuvadā*, the daughter of *Rālha*, who knew two of the *Vēdas* (v. 8). She gave birth to three sons, viz., *Sāmadhara*, *Nāyaka* and *Ghuḍaddēva* (v. 9). *Sāmadhara* was proficient in the three *Vēdas*, the *Purāṇas* and grammar (v. 10). His wife was *Dēvasirī* (*Dēvaśrī*), the daughter of *Bharaha-jāla* (v. 11), who is otherwise unknown. Her sons were *Ratnākara*, *Sōma*, who was a poet, *Īvara*, *Silāṇa* and *Rudra* (v. 12). The next verse states that the well, evidently the same where the stone was discovered, was excavated by *Īvara*. Nothing more about this person is known.

Verse 14 is devoted to describing the well in a poetic way; and the next verse states that the *praśasti* was composed by *Sōmamiśra*, the son of *Sāmadhara* and thus a brother of *Īvara* himself, who excavated the well, as known from v. 12, above. Verse 19, the last of the verses of the record, states that it was written by *Gāṅgadēva*, the son of the *Brāhmaṇa Manē* who belonged to the *Gauḍa* lineage. It was engraved by *Ratana* (*Ratna*), whose name appears on the lower border of the stone, as seen above, along with the date in figures.

The inscription is void of any historical interest.

The only **geographical name** appearing in the inscription is *Sarasvatī-pattana* (v. 4), which is the modern village *Surwāyā*, near which the stone was found. For the ending *-wāyā*, we may compare the name *Padmāvati* changed to *Pawāyā*, which is in the same region.

¹ See *I. N. J.*, No. 607. The year is expressed in word-numerals, excepting the first one.

² For the meaning of this word, see *n.* under verse 7 in the text, below.

TEXT¹

¹ From the original stone and an impression.

² Expressed by a symbol.

³ This *danda* is very close to the following letter and appears as a part of it.

⁴ A redundant chisel stroke has made this *akshara* appear as *tha*.

⁵ For all this mythical account and the origin of the *Sārasvatas*, see *Harsha-charita*, Ch. I.

⁶ The word *itihāsa* has been contracted here for metrical exigencies.

⁷ The *akshara* in the brackets is engraved as *nu*.

⁸ One who conducts or is a member of an assembly. See *Vāchaspatya*, under the word, where it is stated:

प्रविप्रत्यभिनी सम्मानं नेचक्रेषेणकारक यः ।

धर्मवाक्यं रञ्जयति स समास्तारतामिषात् ॥

Also see *Sabdakalpadruma* in M. William's Dictionary, under '*sabhā*'.

⁹ It is not known if the second *akshara* of the the name has to be read as *i*, for which cf. *itī* in the next line and again in l. 13.

¹⁰ By a wrong stroke the letter in the brackets shows a combination of the dental and the palatal sibilant.

¹¹ The Sanskrit form of this name would be *Dēvaśrī*. What is intended is *nāmninī*, which would not suit the metre. It may also be noted that in each of the quarters of the verse, which is *Ṣṣṣṣṣ*, the first *akshara* which should be long has been changed to two short ones.

No. 177 : PLATE CXLII

SĒSAI PILLAR INSCRIPTION OF THE TIME OF GŌPĀLADĒVA

[Vikrama] Year 1841

THIS inscription is on a memorial stone pillar in the tiny hamlet of Sēsai on the Agra-Bombay road, situated about 15 kms. south of Sīpī (Shivpurī), the headquarters of a district of the same name in Madhya Pradesh. It was discovered in 1914, by M. B. Garde, the Superintendent of Archaeology in the former State of Gwālior, and was brought to notice by him in the *Annual Report* of the department for that year (i.e., V.S. 1971), which is not available in print.¹ The pillar was again found at the same place by Dr. D. C. Sircar, in 1955, in his tour in the Shivpurī District : and from the impressions then prepared by him, he edited the record, along with some others, in the *Epigraphia Indica*, Vol. XXXI (1957), pp. 323 ff. with its transcript in Roman characters. The record is edited here from one of those impressions which were taken by Dr. Sircar and kindly supplied to me by Dr. G. S. Gai, the Chief Epigraphist of the Archaeological Survey of India.²

The inscription consists of twelve lines of writing, covering a space about 30.5 cms. broad by 20.3 cms. high, and has suffered from long exposure to weather. Its preservation is not satisfactory. The mechanical execution was rather sloven. The average size of the letters is 1 cm.

¹ This word denotes Sukrāchārya who is known to have been a poet.

² The *visarga* of *uras-* is dropped according to the *Vārtika* on *Pāṇini*, VIII, 3 36. It is rare *sandhi*.

³ The adjectives used in this verse are applicable to both, i.e., a pearl and the *pratāsti*.

⁴ The name of the engraver, which could not be accommodated in the main body of the inscription, is incised on the lower part of the border of the stone, on the right side, along with the date in numerical figures. The whole reading is :

शुवकार रत्न ॥ ७ ॥ ७ ॥ सं[व]त् १३४१ कार्तिक सुदि ३ वृ(वृ)धे ॥

⁵ Here the reference is to H. N. Dvivedi's *Gwālior Rājya-kē Abhilekha*, No. 151.

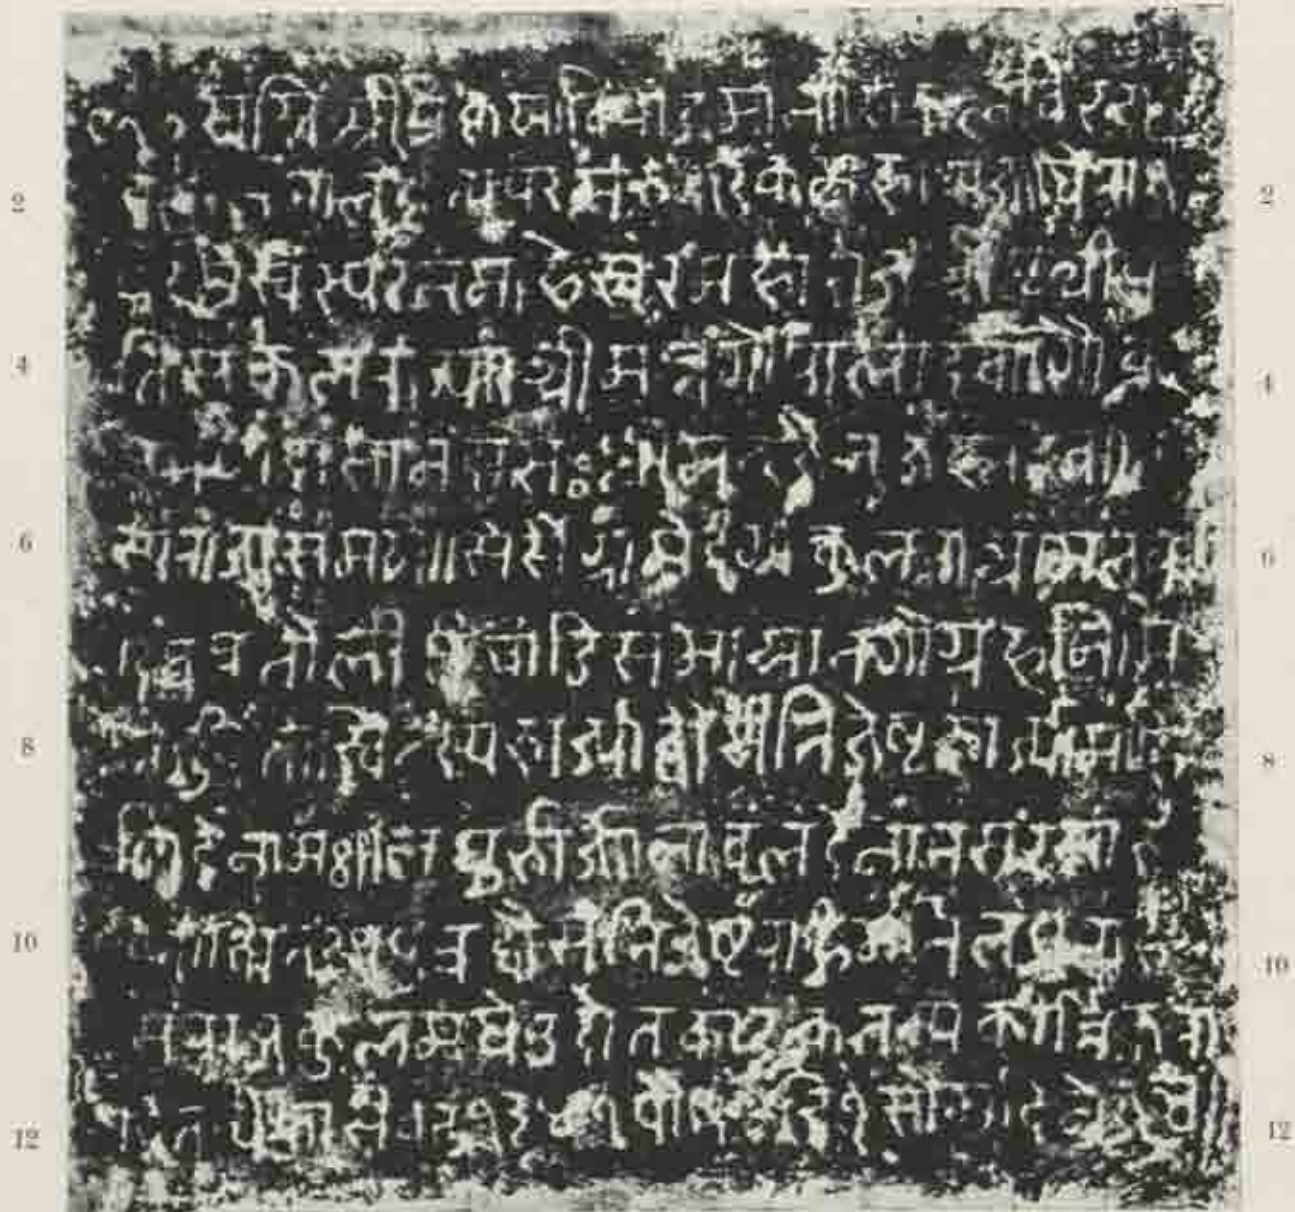

⁶ His No. is B-231 of 1955-56.

SURWAYA STONE INSCRIPTION OF THE TIME OF GOPALADEVA, VIKRAMA 1341

From Photograph

SĒSAI STONE INSCRIPTION OF THE TIME OF GOPĀLADEVA, VIKRAMA 1341

Scale : One-half

The characters belong to the Nāgarī alphabet; and from the point of view of the palaeography, it may be noted that the letter *bh* is antique in form, e.g., in *bhattāraka*, l. 2; that *r* is sometimes denoted by a vertical with a horizontal stroke attached to its middle, on the left, as in *rājya*, l. 4; and that the sign of the final consonant in *śaiva*, l. 12, almost resembles the sign of the medial *u*. The language is Sanskrit, which is corrupt and often also grammatically incorrect; and the entire record is in prose.

The orthography does not call for any special notice, except that vertical strokes, which are decorated with top-strokes, are often used to separate words as the commas of the modern times, for which see ll. 1, 2 and 4.

Beginning with auspicious words, the inscription mentions the name of the illustrious Gōpālādēva with the epithets including *Paramabhāṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*, stating at the same time that he was a great devotee of Mahēśvara (Śiva). From the provenance of the record and also from the year mentioned in it, this king is no doubt the homonymous ruler of Narwar, whose rule extended from c. 1279 to c. 1289 A.C. Following this, is introduced the illustrious Jaitujamhadēva a slave of the devotees of Brāhmaṇas, who was then governing the region. The relation that this person bore to Gōpālādēva is not specified in the record; but as rightly remarked by Dr. Sircar, on the basis of taking him identical with the *Mahākumāra* or *Kumāra* Jaitavarman called Jaitavrahmadēva, Jayatavrahmadēva and Jeyatav(b)rahmadēva of the Baṅglā inscriptions,¹ that he was undoubtedly a subordinate ruler under the Yajvapāla monarch and probably also enjoyed the status of a crown-prince (*yūvarāja*).²

The object of the inscription, as given in ll. 5 ff., is to record the death of *Rā*, i.e., *Rāuta* Malayadēva in a battle fought in connection with a case of cattle-lifting at the street (*pratōḷī*) in the village of Sēsai (where the inscribed pillar was found), probably along with both the wives who too were killed by the cattle-lifters, as suggested by the language of the record. The elder wife was Māhīṇīdēvī and the younger one was Nāvuladēvī (ll. 8-9). The pillar was erected by their sons who were the *Rā* (*Rāuta*) Himāna and the *Rā* (*rāuta*) Haṁsarāja (ll. 10-11), who (thus) brought fame to the family.

The inscription ends with the date viz., the (Vikrama) year 1341 (expressed in numerical figures only), the first *tithi* of the dark fortnight of Pausa when it was Monday. Working out the details of the date, Dr. Sircar observed that "they (the details) are irregular, but may refer to the 25th of December, 1284 A.D." This view may be accepted.³

Sēsai-grāma, mentioned in l. 6 of the inscription, is, no doubt the village of the same name where the pillar has been found.

No. 178 ; PLATE CXLIII

SURWĀYĀ STONE INSCRIPTION OF THE TIME OF GAṆAPATI

[Vikrama] year 1850

THE slab bearing this inscription is stated to have been discovered at **Surwāyā**¹² a small village about 20 kms. east of Sīprī (Shivpurī), and is now exhibited in the archaeological Museum at Gwālior. A synopsis of the contents of the record, prepared by Hiranand Sastri, was published in the *Annual Report of the Archaeological Survey of India*, Vol. for the year 1903-04, Pt. II, pp. 286 f. and it was included by D. R. Bhandarkar in his *List of Inscriptions of Northern India*, No. 636. The inscription was also published in the *Epigraphia Indica*, Vol. XXXII, pp. 339 ff., and Plate. It is edited here from the original stone, which I examined in the museum where it exists, and from an inked impression which I owe to the kindness of the Chief Epigraphist of the Archaeological Survey of India.

The record is incised on a stone slab measuring 57.5 cms. square, including a broad border on all the four sides. The inscribed portion, which is in a sunken panel of it, consists of 22 lines covering a space 41.9 cms. broad by 43.18 cms. high. It is neatly engraved and is in an excellent state of preservation, with a few *aksharas* damaged here and there. Writing in 1903, Hiranand Sastri remarked that "one letter in the second line, two in the third and fifth lines and one in the seventh and the seventeenth lines are abraded"; but now it has suffered slightly

¹ This is a contraction of *rāūta*. Perhaps we have also to read *daṅgrōta*.

² This word stands for *samghāṭṭa*, meaning a battle (D.C.S.).

³ That is, died in fighting, as in some of the Baṅgā inscriptions. Cf. No. 168; l. 9, and No. 172; l. 5, above.

⁴ Restore the whole to तस्य भाज्ये द्वौ स्तः । जेष्टा भाज्या माहिर्षादेवीनामा । लघुभाज्या नाबुलदेवीनामा.

⁵ Read नहृत्. The second *akshara* which was probably intended to be ह, is misformed and appears as रा.

⁶ That is, were killed in the battle.

⁷ Read ज्येष्ठो—, *Rā* stands for *rāūta*; see *n.* above. The reading of the name that follows is not certain.

⁸ The word *tasya* here refers to Malayavarman, and the word *kīrti* denotes the pillar raised in memory of him.

⁹ What follows the second *akshara* in this is probably त्वेति.

¹⁰ This letter is extremely mutilated and I follow Sircar's reading, though the probability of it being न cannot be altogether avoided.

¹¹ The last letter appears to have a faint sign of *anuvāta* above, or it may be the fault of the stone.

¹² The information about the name of the place is based on H. N. Dvivedi's *Gwālior Rājya-kē Abhilēkha*, No. 163. In his *A. S. I. R.* (Vol. II, p. 316) Cunningham states to have discovered an inscription in a well locally known as the *Sūpat bāodī* and it appears to have been the same. In his *Guide to Surwāyā*, p. 25, *n.* 3, M.B. Garde also expressed the same view.

SURWAYA STONE INSCRIPTION OF THE TIME OF GANAPATI, VIKRAMA 1350

1 ५०॥ उंनमः शिवाय ॥ अदिदिवशुवः शंमोर्ध्वी द्विद्वी ताशवी कला कालेद्या लोकाते ककुमा

Scale : Two-fifth

more showing damage of parts of one letter each in 11, 6, 15 and 22, though the whole text can be made out with certainty. The size of the individual letters varies from 1.3 to 1.5 cms. On the lower border of the slab is another line in two parts, the one on the left measuring 8.5 cms. and the other on the right measuring 8 cms. long. The letters in the main record are well formed and deeply incised, but those in the line on the panel are somewhat roughly formed, though they show the same palaeography. Two or three letters on the right side are indistinct.

The **characters** are *Nāgarī*, resembling those employed in the preceding inscriptions, but also showing some development in their formation and approaching those of the modern *Nāgarī*. The tail of the left limb of *t*, *h* and *s* is occasionally not carved when the letter is the first member of a conjunct consonant or when a *mātrā* is attached to it below; e.g. in *disatu*, l. 1, *surasā*, l. 3 and *haranīti*, l. 16. The initial stroke of *ch*, which distinguished the letter from *dh* and *v*, is occasionally lightly treated, or is bent, e.g., in *-Chāchiga*, l. 13, *chētō*, l. 16, which is almost similar to *v* in *vasu* in the same line, and in *ruchirā*, l. 21; the slightly different forms of *bh* are to be seen in *sambhava*, l. 2, and *bhūmī*, l. 12; and lastly, the palatal sibilant, which has assumed its modern *Nāgarī* form, shows its ligature form less number of times and almost when it is a superscript.

The **language** is Sanskrit; and except for *Om namah Śivāya*, in the beginning, and the date at the end, the record is metrically composed throughout, containing 23 verses, all of which are numbered. All the numerical figures are marked by two vertical strokes at their beginning, except the figures 3 and 5 which have the strokes also after them. The **orthographical peculiarities** are almost the same as we find in the preceding records, e.g. *ḥ* denoted by the sign for *v*, as in *vabhava*, l. 7; and the use of the sign of *anusvāra* in place of a nasal except in a few instances. The sibilants are correctly used, except in one case where the dental is put for the palatal, in *anusvara*, l. 20, and there are two cases, viz., *śita*, l. 8 and *śalīla*, l. 18, where the case is *vice versa*. A consonant following *r* is reduplicated but there are exceptions; e.g., in *karma* in l. 4 it is observed but not in the same word in l. 5. The rule of *sandhi* is violated in *padmāiva*, l. 7, and the plural in *niyōjitāḥ*, l. 9, is grammatically wrong, as shown in a foot-note. Writing *vāpī* instead of *vāpī* in l. 18, is apparently a scribal error. The name *Siyā* in its Prakrit form in l. 9 is interesting.

The inscription is one of **Chāchigadēva** an officer¹ under the illustrious **Gaṇapatidēva** whose dynasty is not mentioned, but from its provenance and from the year recorded therein, he can be identified with the **Yajvapāla** ruler **Gōpāladēva** of **Narwar**, whose known dates range from V.S. 1348 to 1356. The **object** of the document is to record the construction of a stepped well by Chāchigadēva. The record is dated in the year 1350 (expressed in decimal figures only). The **tithi** was the **7th of the dark half of Kārttika, on Wednesday**. The year is evidently of the Vikrama era, and the date regularly corresponds to 23rd September, 1293 A.C. for The Northern Vikrama expired, as already calculated by Sircar, who also observed that the *saptamī tithi* began on that date at 19 of the day.

After the customary obeisance to Śiva, the inscription opens with three invocatory verses in honour of the crescent moon adorning the forehead of Sambhu, the goddess Mahārūḍḍā, the family deity of the Yajvapāla royal house,² and lastly, the speech of the poets (goddess of Learning), devoting one verse to each of them. With verse 4 begins the pedigree of Chāchigadēva who built the well. His grandfather was Gōddhala(?) born in the Lubdhaka family of the Kāśyapa *gōtra*. He was famous for his liberality and ever brought contentment by acts of pious liberality (vv. 4-6). He had a son, Padma by name, who was an abode of the goddess of wealth.³

¹ In his article in *I. H. R.*, Vol. XXXII, p. 399, Dr. D. C. Sircar takes Chāchigadēva to be a feudatory of Gōpāla, which may be possible from the use of *Rājaka* about him; but he is also called Gōpāla's *dharmaputra*.

² See Narwar inscription of V. 1339, v. 4, above, No. 175.

³ For the word *pūrta*, see *M. S.*, Ch. IV, v. 226. D. C. Sircar connected Lubdhaka with the Lothās of the neighbouring Agra region who are stated to be an agricultural community. See his article, p. 340.

⁴ The text here reads *padmā padmāiva sthitā* (v. 7). Grammatically the correct form would be *-padmāiva*; but what appears to have been intended is *-savasthitā*, meaning the goddess of wealth made her residence in him by *padma*, i.e., ten *arbudas* or ten thousand millions. Cf. *'Padma-sakhā-dayō nidhēḥ (bhēdāḥ)*, as stated in the *Amara-kōśa*.

His description in verses 7-9 is all poetic. His wife was Siyā (v. 10), who gave birth to two sons (v. 11). The elder of them was Kākali (v. 12), and his younger brother was the illustrious *Rāṇaha*¹ Chāchigadēva, who was a learned Kshatriya and the adopted son of Gōpāla (v. 13). Verses 14-16 inform us that Chāchigadēva performed pilgrimages to the holy places Kēdāra (in the north), Sōmēśa, i.e., Sōmēśvara (evidently in Saurāshtra), Prayāga, and the Ganges, which are all well known. He performed obsequies for the manes at Gayā and paid his debt to Gopāladēva by noble deeds at the *tirthas* and on the battle fields (vv. 15-16). His wife was Sahajā (v. 17). The next verse tells us that considering wealth and life to be fickle and desiring to increase his spiritual merit, Chāchigadēva built a stepped well (v. 18). Verse 19 is devoted to the description of the well: and v. 20 informs us that he also planted a garden full of creeper and trees bearing fruits and flowers to remove the fatigue of travellers. The next verse expresses the desire that the meritorious place (where Chāchigadēva built the well and planted the garden) may prosper.

Verse 22 embodies the name of the poet of the *prāsasti*. He was Jayasimha, a son of Lōhata,² belonging to the Māthura clan of the Kāyasthas. And the last verse of the record tells us that it was written (on the stone) by Maharāja, who was the son of Sōmarāja, who too belonged to the Māthura clan of the Kāyasthas. He is the same person who also wrote the Narwar inscription of V. 1339 (No. 175).

The record was engraved by Dēvasimha, whose name appears on the lower border of the stone: and the right side thereof supplies the person who supervised the whole work. It cannot be definitely made out as this portion is mutilated.

Of the geographical names mentioned in the inscription, Kēdāra is in the Himayālas, Sōmēśa or Sōmanātha, is in Saurāshtra, and Prayāga is near Allahābād, as already stated. Gayā is in Bihar. The community of the Māthura Kāyasthas was known after Maithurā in Uttar Pradesh.

TEXT

[Metres: Verses 1-11, 16-17, 19-20; and 22-23 *Anuśtubh*; vv. 12 and 13 *Upajāti*; v. 13 *Indravajrā*; v. 14 *Sālinī*; v. 18 *Pañcattillakā*; and v. 21 *Āryā*].

¹ As remarked by Hiranand Sastri, the word *rāṇaha* here appears as an attempt to Sanskritise the word *rāṇā* though the latter is commonly rendered by Sanskrit *rājānaka*.

² Lōhata appears to have been the same person who is mentioned as Chāchigadēva's treasury officer. See v. 27 of the next inscription.

³ From the original stone and an inked impression.

⁴ Denoted by a symbol.

⁵ A *kāka-pāda* appears here, as also at the end of ll. 4, 6, 16 and 20.

⁶ Originally *सु* with the sign of *anusvāra* scratched off later on; but its mark is still visible.

⁷ In place of the first of these letters some other letter was originally written and the second letter is misformed; but the reading is certain, as also taken by D. C. Sircar. For a similar form of *l*, see *Śradhōtu* in l. 14, below.

⁸ All the three *aksharas* are abraded and the reading is not certain. I have, however, adopted the reading of D. C. Sircar.

⁹ This is a fine example of *vyatirēka* based on *ślēṣha* and meaning that the person described just above, is, as if, another *rājārāja* (Kuvēra, and his sovereign), for whereas Kuvēra is devoted to one god (Śiva), is attended by the *kinnaras* and is a friend of the one who is not *ugra* i.e., is pleasant (meaning the moon), this person, quite unlike him, is devoted to many deities; he is served by several unferocious people and is a friend of those who are gentle in behaviour.

⁷ The consonant of this *akshara* has totally disappeared.

⁸ Gramatically singular is required here. Drop the sign of *visarga*.

⁹ The sign of *anusvāra*, which was originally put on this *akshara*, was later on erased on the stone, but the mark of it still exists.

¹⁰ This *akshara* was first omitted and was engraved in a very small size just above the line. The *matra* in *m* that follows (*bhāmā*) is lengthened *metris causa*. The dot on *ज* is a fault on the stone.

¹¹ And not *cha*=*Ashigudra*, as originally read by Hirananda Śāstri and was followed later on. This was first corrected by Dr. Sircar in *I.H.Q.*, Vol. XXXII, p. 399.

¹² This *akshara* is mutilated.

¹³ As above.

¹⁴ *Chachau* is the colloquial form of *Chāchiga*, mentioned above in v. 15.

¹⁵ On the correct form on the name, see *n.* in No. 175, above.

¹⁶ This line is engraved on the lower panel of the stone. The *aksharas* in the brackets are mutilated and the *sandhi* in the end, if the reading is corrected, is wrong. But the reading is not certain. Sircar read these *aksharas* as *kama* [*thāpīsaddhā*], taking them as two names, *Kama*/*thā* and *Saddhā*.

NARWAR STONE INSCRIPTION OF THE TIME OF GAṆAPATIDĒVA

[Vikrama] Year 1355

THIS inscription was first brought to notice, in 1864-65, by General Cunningham in his *Archaeological Survey of India Reports*, Vol. II (1862-1865), p. 315. Subsequently, a short account of it was published by Kielhorn in 1893, in the *Indian Antiquary*, Vol. XXII, pp. 81 ff.; but this account, which is based on a pencil rubbing supplied to him by Dr. Burgess, is without a transcript or a lithograph. The record was again referred to by M.B. Grade in the same *Journal*, Vol. XLVII (1918), p. 241, and also in the *Annual Report of the Archaeology Department of the former Gwālior State*, for Saṃvat 1971 (1914-15 A.C.); and it was also enlisted by D. R. Bhandarkar in his *List of Inscriptions* (No. 642); and subsequently, it was edited by D. C. Sircar, in the (1958), *Epigraphia Indica*, Vol. XXXII pp. 343 ff., with a facsimile. I edit it here from the original stone and from two impressions, one of which was prepared by me, and the other which I owe to the courtesy of the Chief Epigraphist of the Archaeological Survey of India.

The stone bearing this inscription was found at Narwar¹ in the Sīprī (Shivpurī) District of Madhya Pradesh and is now deposited in the Archaeological Museum at Gwālior. It has a broad border on all the four sides, and along with it, measures 66.5 cms. broad and 47.5 cms. high. The record consists of twenty-one lines of writing, covering a space 58.4 cms. broad and 40.6 cms. high, and is in a good state of preservation, except that three letters in l. 15 are abraded, though they can be made out with certainty from the traces left. The mechanical execution is good; the letters are bold and carefully formed and beautifully incised. The average height of the letters is about 1.2 to 1.5 cms.

The **characters** are Nāgarī, resembling those of the Surwāyā inscription that immediately precedes. Attention, however, may be drawn to the two forms of the vowel *a* in *ajāśra-* and *Asalla-*, both in l. 4; to the subscript forms of *chh* and *th*, both of which are alike, as in *achchha-* and *sthāna-*, both in l. 16; to that of *ṛ* as subscript appearing as *ṛ*, e.g., in *pushṇati*, l. 16, but not in *utkṛṣṇa-*, l. 21; and finally, to that of *j* which appears both in its antique and modern forms, e.g., in *nijatejas-* in l. 7.

The **language** is Sanskrit; and with the exception of a small sentence paying obeisance to Śiva in the beginning and the concluding portion mentioning the name of the engraver and the date, the record is in verse. The total number of verses is 28, composed in all well-known metres; but in verse 2 the rare metre known as *pādākūlaka* is employed. The style is fluent and the verses are often decorated with figures of speech, e.g., *anuprāsa* (v. 5), *vūpaka* (v. 13) and *upamā* (v. 24). In respect of **orthography**, the points that call for notice are: (1) the use of the sign for *v* to denote *b* as well, e.g., in *vrahma-*, l. 5; (2) the diphthongs denoted by the *prishtha-* and also by the *ārdhva-mātrā-*; (3) the occasional doubling of a consonant after *r*; cf. *dharmma-*, l. 4, but not in *varma-*, l. 3; (4) the occasional use of the dental for the palatal sibilant, as in *-sarmma-*, l. 4, and *vice versa* as in *ajāśra-*, l. 4, and *śarōja-*, l. 9; (5) the general tendency to put the sign of *anusvāra* for the final class-nasal, with a few exceptions as in v. 9. The spellings *avāhri* in l. 9 and *yajūē* for *jajūē* in l. 10 exhibit the local element; and (6) placing the *daṇḍa* occasionally so close to the preceding letter as to look like an *ā-mātrā*, e.g., at the end of l. 5.

There are a few mistakes of the engraver, e.g., *raṇṇē* for *raṇṇē* in l. 2, *śuschi* for *śuchi* in l. 2, and *raṇḍavirēpham* in l. 18; all such errors are pointed out in the text below.

The **proper object** of the inscription is to record that Palhadēva or Palhaja, who belonged to the Māhura clan of the Kāyasthas, constructed a *dharmu-śthāna* (sacred place). He erected a temple of Śambhu (Śiva), built a stepped well and also laid out a garden in memory of and for the spiritual benefit of his younger brother who had predeceased him. It is a *prastāśī*, as the word is used in v. 27; and as such, it gives an account of the ancestors of Palhadēva and also

¹ For the description and archaeological remains found there, see n. in above, No. 175.

of those of **Gaṇapati**, the king of **Nalapura**, in whose reign all these works of munificences were performed. The date of the record, as given in numerical figures only, is the **fifth of the dark half of Kārttika** of the (Vikrama era) **1355** and day was Thursday.¹ The date regularly corresponds to 25th September, 1298 A.C.

The inscription opens with the customary sentence paying obeisance to Śiva; and the first two verses thereof, invoke the blessings of his matted hair and the Sun respectively.

The stanza, which describes the Sun, is rather ambiguous, inviting difference of opinion as to its interpretation. D. C. Sircar is inclined to take *Raṇṇā* as a Prakrit form of *Rājñī*, who, as he adds, is known to the Epic and Purānic mythology as the wife of the Sun called *Sāmbāditya* whose abode is at *Samīsthala*, which cannot be identified but may have formed a part of Narwar itself or may have been in its vicinity. But the difficulty in accepting this view is that the Prakrit form of *Rājñī* would be *Rāññī* and also that *Raṇṇā* can hardly be connected with it. It is also noteworthy that the word used here is with the dental and not the lingual n, as the Prakrit form would require. Thus, the suggestion, though ingenious, appears to be conjectural. To me, however, it appears that the Sun is here described as *ratnēśa*, and it is so called because it supersedes all the shining objects and imparts brilliance to them all. The last of the adjectives used in the verse, namely *samīsthala-vāśaḥ*, probably denotes the residence of the Sun in the *samī* tree, in the form of fire, as is well known to the Purānic mythology.

The next verse describes Nalapura, and verses 4 to 8 are devoted to give an account of Gaṇapati and his ancestors, beginning from **Chāhāḍa** whose son was **Nṛivarman**. The latter's son was **Āsalladēva**, his son **Gōpāla**, and his son again was **Gaṇapati**. This genealogy is all known from the other records of the house and it is also known that Nṛivarman predeceased his father and did not occupy the throne. The description is all conventional; but verse 8 is historically important as it tells us that Gaṇapati made his fame firm by capturing Kīrtidurga.

The name of the enemy from whom he captured this fort is not mentioned in the record, but it can be guessed. Kielhorn is perhaps correct in taking Kīrtidurga identical with Kīrtigīrdurga (i.e., the fort at Dēogaḍh), mentioned in l. 7 (v. 6) of the Dēogaḍh rock inscription of the time of the Chandēlla Kīrtivarman;² but the possibility that it may have been the fort at Chandēri in the Gunā District cannot be altogether avoided.³ Both these places, however, are in the same region and both are situated to the east or south-east of the dominions of the Yajvapālas, which was then included in the dominions of the Chandēllas. Gaṇapati's contemporaries on the Chandēlla throne were Bhōjavarman (c. 1286-1289 A.C.) and Hammīravarman (c. 1289-90 to 1308 A.C.), and we know that during the reign of these two rulers who were the last to occupy the Chandēlla throne, the sway of this house was almost on its decadence. And though we have no evidence to support the suggestion, it is possible to presume that Gaṇapati may have renewed the struggle with the Chandēllas, which was begun at the time of his father Gōpāla, as known from the Narwar inscription of V.S. 1338 and also from those found at Baṅglā and dated in V.S. 1339. Or it may be, as suggested by Sircar, that Gaṇapati as a subordinate ally of the Muslim Sultāns at Delhi, may have helped them in their struggle with the Chandēllas. Both of these views are hypothetical.

With verse 10 begins the genealogy of the two brothers Palhadēva and Haṁsarāja. It commences with the praise of the fort of Gōpāchala (i.e., Gwālīor), the abode of many wealthy persons. At that place also flourished a family of the Māthura Kāyasthas of the Kāśyapa gōtra, who were intelligent and well known for their behaviour as also for their valorous deeds (v. 11). In that family was born a certain Alhāṇa, who was well versed in all arts and was also bountiful (v. 12). Alhāṇa's son, Kāhāḍa, was a devotee of Kṛishṇa (v. 13), and his son again was Vijahāḍa, who is stated to have been a Chief Minister (*mantri-varishṭha*) of a king whose name is not mentioned (v. 14). Vijahāḍa's wife was Maṇagā (v. 15), who worshipped Gaṅgā and Yamunā at

¹ In his notice of the inscription in *Ind. Ant.*, Vol. XXII, p. 81, Kielhorn reads "either Gurau or Sukrē", from the rubbings he had, and supposing the day to be a Friday, he equates the date to be 26th September, 1298 A.C. In his *List of Inscriptions* (No. 642) D. R. Bhandarkar read Sukrē doubtfully, but accepted the equivalent of the date. But in all the impressions before me I can clearly read Gurau, and I have also verified the reading from the original stone. Also see *I.N.I.*, No. 642, where the week-day is doubtfully taken as Sukrē.

² See above, No. 111.

³ See Bhandarkar's *List*, No. 2107, mentioning Chandēri (as Kīrtidurga).

Prayāga and obtained two sons who were named Gāṅgadēva and Yāmunadēva respectively (v. 16). Gāṅgadēva is again extolled in the next verse, the description being all conventional. His wife was Lōṇā (v. 18), who gave birth to four sons, *viz.*, Pallhaja, Harirāja, Śivarāja and Hāmsarāja (vv. 19-20). Pallhaja, who is evidently the same as Pallhadēva of the inscription, as seen above, is enlogised in v. 21, as the object of his master's confidence, benevolent, pious, truthful and learned. He constructed a sacred place (*dharma-sthāna*) by building a stepped well and a temple of Sambhu with Umā and planting an orchard, for the merit of his deceased brother, Harirāja, evidently at the same place and at Narwar where the stone was discovered (vv. 22-23).¹ The next verse expresses the hope that the religious place may prosper.

The verse that follows is devoted to the description of Dāmōdara of the Māthura clan (of the Kāyasthas), his son Lōhata, who was a treasury-officer (of Chāhāda, as already seen above), and the latter's son Śivanābha who composed the present *prasaśti*.² He is the same person who also composed the Badodī and the Surwayā inscriptions, dated respectively in V.S. 1336 and V.S. 1339; and the same verse which describes him for three generations and appears in those two records is repeated here. The record was written by Arasimha, the son of Abhinanda and was engraved by the *Sātradhāra* (architect) Dhanauka. And here the *prasaśti* closes with the date which we have already discussed above.

As for the localities mentioned in the present inscription, Nalapura (l. 2) is the same as Narwar, as seen above, and Gōpāchala (l. 7) is, of course, Gwālior. Kirtidurga (l. 6), as we have already remarked, may have been identical either with Dēvagadh or Chandēri; and Gaṅga, Yamunā and Prayāga (l. 11) are all well known. Samsthala, or Samsthala (l. 2), if it is a place, cannot be identified.

¹ As is also evident from the expression *tha* in l. 6 and *alam* in l. 18 of the present inscription.

² He also composed Nos. 161 and 175; and his brother Jayasimha composed the preceding record, as stated in its v. 22.

³ From the original stone and impressions.

⁴ Expressed by a symbol.

⁵ The part of the stone bearing the *Orlho-mūtra* has peeled off, leaving only a trace of it visible.

⁶ Here, as also at some places below, the letter in the bracket, appears as a combination of the palatal and the dental sibilant. The *is* that follows appears as *ye* by a wrong stroke.

⁷ Here the parts of two letters appear as mixed with each other. *रा* bears an additional chisel stroke.

⁸ As also noted by Śircar, an *anuvāra* above *pu* seems to be rubbed off by the engraver.

⁹ The sign of *anuvāra* is faintly visible on the stone and the superscript *kh* is not properly formed. Śircar read *सुताख्या*.

¹⁰ Read as one *pāda* after dropping the *visarga* after *dha* and also after *sa*. The adjective *trivīdha* here denotes *Mavapati*, *Gajapati* and *Narapati* (i.e., strong in cavalry, elephant force and infantry, as already suggested by Śircar).

^१ This syllable is supplied *metris causa*.

^२ An unnecessary *anusvāra* above स was rubbed off by the engraver.

^३ There is an unnecessary mark above ज. The sign of *visarga* at the end of the verse appears to have been engraved in course of revision.

^४ Sarkar read the first *akshara* of the name as हे but the sign of its *mātra* appears to have been chiselled off.

^५ This letter appears as चि as the vertical stroke that follows is placed close to it and a curve is also engraved above by way of ornamentation. The last *akshara* in this line is misformed; or it may have been उ as Sarkar actually read it.

^६ These three *aksharas* are abraded.

^७ The superscript is wrongly engraved as भ.

^८ This *akshara* is superfluous. On the stone it also appears to have been cancelled.

HALĀYUDHA-STŌTRA IN THE AMARĒSVARA TEMPLE AT MĀNDHĀTĀ

[Vikrama] Year 1120

THIS inscription, which is a *stōtra* in praise of Śiva, was enlisted by R. B. Hiralal in his *List of Inscriptions in Central Provinces and Berar*, and subsequently it was transcribed and edited for the first time by P. P. Subrahmanya Sastri, whose article, without a lithograph but with a note by N. P. Chakravarti, was published in the *Epigraphia Indica*, Vol. XXV (1939-40), pp. 173 ff. Chakravarti also transcribed the colophon of the *stōtra*, which was omitted by Sastri, since it was irrelevant to the main *stōtra*. The complete epigraph is edited here from the original stone which I examined on 21-3-1973, and a set of impressions placed at my disposal by Shri R. S. Garg, Curator of the Central Museum at Indore.¹

The inscription is incised on four rectangular slabs of stone fixed into the southern wall of the *ardha-maṇḍapa* of the Amarēśvara temple at Māndhātā² in the Khandwā *tehsil* of the East Nēmāḍ District of Madhya Pradesh. The first slab contains ten lines, the second twenty-one lines, the third twenty-two lines, and the fourth only three lines of writing. The last lines of the second, third and the fourth slab are only half lines. They are all vertically placed, one below the other, and respectively measure in height 17.5, 35, 35 and 4.5 cms. The breadth of the writing on the first slab is 90 cms. and on the others, which are wider on the left side, it is about 94 cms.

The slabs bearing the epigraph are all coarse and none of them was made smooth before engraving. And though the mason has done his work carefully, the writing has suffered from damages here and there, more so on the second and the third slabs which have lost a few *aksharas* owing to slightly breaking off parts of stone on the farther left corners, where some of the *aksharas* have also suffered from weather. It is a pity that a few *aksharas* (7 to 10) at the end of each complete line of the whole inscription are also now lost in a part of a wall which was later on constructed.³ The engraving is rather shallow.

The whole epigraph consists of 56 lines. The language is Sanskrit. Except for a short sentence paying obeisance to Śiva in the beginning, the composition in lines 1 to 50 is metrical, and the rest of the inscription is all in prose. In all, there are 71 verses; and 61 of these in which the *stōtra* is composed, are in the *Mandākrāntā* metre, in imitation of the style of Kālidāsa's *Meghadūta*, from which expressions have been occasionally adapted.⁴ The stanzas of the *stōtra* are all numbered. The language is almost correct, except in the colophon (ll. 48 ff.) which is the writer's own composition.

The alphabet is Nāgarī of the time to which the document belongs. In respect of palaeography we note that the initial short *i* is indicated by two loops placed side by side and subscribed by the *mātrā* of short *u* ending in a graceful curve, as in *iththha*, l. 2, and the lower extremity of the forelimb of the initial *i* is joined to its vertical, as in *ēha*, l. 3. Of the consonants, *ṅ* has not developed its dot, e.g., in *-utsaṅga*, l. 20; *ch* has begun developing its own

¹ *Second edn.*, p. 84, No. 151.

² It was prepared by R. G. Ojha, the former Curator of the Museum, in 1931 A.C. It may also be noted here that Chakravarti copied the inscription in 1938 when some letters were lost.

³ As already noted by Chakravarti, in the *A.R.* on Epigraphy for 1938, the northern wall contains (a) the *Narmadā stuti* in 8 ll. and 9 vv., (b) the *Śiva-Mahimna-stōtra* in 22 ll. and 40 vv., and (c) *Śiva-Pārvatī-stōtra* in 3 ll. in 1 v.

⁴ These letters were, however, restored by Prof. Sastri from manuscripts of the *stōtra* preserved in Government Oriental Library, Madras (No. 11271-11278). In the text given below, I owe these letters to him.

⁵ For example, see vv. 24-25 and 58-59.

form as in *pañcha*, l. 2; *dh* is in a transitional stage, occasionally showing a horn on its left limb, as in *dadhā*, l. 1; and the slightly differing forms of *ḥ* are to be noticed in *Śiva*, and *ślāghya*, both in l. 1.

The **orthography** points out the usual peculiarities of the inscriptions of the time, for example, the use of *v* to denote *b* as well, as in *vibhrad*, l. 2; the occasionally doubling of a consonant following *r*, e.g., in *arkha* but not in *archita*, both in l. 6; the use of a nasal and *anusvāra*, both of which are placed side by side, as in *danta* and *hanṭha*, both in l. 1 and in *pañcha*, l. 2. *Anusvāra* is generally employed for *m* at the end of a stich; and the diphthongs are indicated both by the *mātrā* before and above. There are a number of orthographical and other mistakes, e.g., in *pankaja*, l. 6, *sansāra*, l. 7, *ṣunsāh*, l. 42, *sansakta*, l. 45, *hinchit*, l. 89, *trudaṣa*, l. 22, *nihkrāntā*, l. 26, *kṛipīṇa*, l. 40, *trīṣya*, l. 48 and *trīhāla*, l. 52. *J* is employed for *y* in *sañjama*, l. 51, and the reverse is the case of *yushāh* for *-jushāh* in l. 42.

The epigraph does not refer to any reigning king or the dynasty to which he belonged, but the main interest of it lies in the colophon containing the date. It is given in the last line as the **13th day of the dark half of Kārttika**, and the **year** is mentioned, in numerical figures, as (V.) **1120**. In his reading of the year, Dr. Chakravarti expressed his doubt about that of the second digit and held that it may have been 2 as well, and accordingly, the year may be taken as 1220. But from my personal examination of the stone I am sure about my reading which is also confirmed by the impressions before me and taken about seven years before Chakravarti copied the record. The date cannot be verified, but taking the year as *Chaitrādi* (expired) and the month *pūrnimānta*, the corresponding date in the Christian era would be Wednesday, the **22nd October 1063 A.C.**

As stated above, the main theme of the *stōtra* is to praise Śiva. It was composed by the poet Halāyudha, whose identity we shall consider after giving the gist of the record. Opening with the auspicious symbol and a short sentence paying obeisance to the deity, it invokes the blessings of Gaṇapati, Viśākha (Kārtikēya), Śiva and Mahākāla, respectively, devoting one verse to each of them. In verses 5-6 the poet, with all due modesty, proposes to describe the majesty of Śiva, stating in v. 7 that His aspects are manifold. Verse 8 again expresses The poet's modesty; and the next verse enumerates the well-known eight forms of Śiva. The tenth verse is again general, and the following verse identifies Him with Arhat and Sugata. The next five verses state that it is Śiva who directs the works of the Sun, the day and night, and the seasons, and also describes some of His forms, invoking blessings in favour of His devotees. Verses 16-30 again glorify The god's majesty, and the next eight verses speak highly of His various aspects, His *āyudha* and His abodes. In verses 39-57 He is said to reside in Vārāṇasī and Śrīgiri, and finally, verses 58-63 invoke the blessings of the deity.

The *stōtra* ends with verse 64, which states that it was composed by a Brāhmana named Halāyudha, who had hailed from Navagrāma in the Southern Rāḍha.

Immediately after the *Stōtra* actually finishes, we have the writer's own composition, which is a sort of another hymn. Giving the twelve principal names of Śiva, in ll. 48-50, it enumerates in a verse the five *jyōtirliṅgas*, viz., Avimukta (at Vārāṇasī) and Kēdāra, besides Omkāra, Amara and Mahākāla (at Ujjain). In this verse, as Chakravarti has already noted, though the name of Omkāra and Amara have been given separately, the eight other *liṅgas* have been omitted in the list.⁸

Lines 51-53 give the names of a few Śaivite teachers, recording that in the city of Bhōja, living in the Sōmēśvaradēva monastery and hailing from Nandiyāḍa was the Pāsupata teacher, *Bhaṭṭāraka*, the illustrious Bhavavālmīka, whose disciple was *Bhaṭṭāraka*, the illustrious Bhāvasamudra. Line 53 mentions *Paṇḍita* Bhāvavīriñchi; and apparently, he, with the last-mentioned

⁸ In *A.R.*, on *Ind. Ep.*, 1963-64, appx. C-1983, the year is correctly read as 1120, as also mentioned by D. R. Bhandarkar in *L.N.J.*, No. 138, which, for the Chaitrādi Vikrama year, expired, would correspond to Wednesday, 22nd October (for the *pūrnimānta* month), and, to Friday, 21st November, when the 13th *lithi* was combined with the 14th (for *amānta*), both of 1063 A.C. For the Kārttikādi V. Year, it would be equivalent to Monday, 11th October (for *pūrnimānta*), and to Tuesday, 9th November (for *amānta*) both of 1064 A.C. But we have no means to verify it.

⁹ Taking *Māndhātā* and *Omkāra* as two, we have here 13 *jyōtirliṅgas*, and not 12, as we find in the list in the *Śiva Purāna* beginning with *Saurāshīrē Sōmanātham cha*.

person, set up the record found on the slabs. From the following two lines we learn that the inscription was written by *Paṇḍita* Gāndhadvaja of the Chāpala *gōtra*. He was a disciple of Vivekarāsi, who was again a disciple of the *Paramahuttāraka*, the illustrious Supūjitarāsi.

The last line contains the date, which we have already discussed above.

Only stating that the epigraph is of inestimable value for the study of religion, we advert to Halāyudha, the poet of the *stōtra*, which again is important from the point of view of the study of Sanskrit literature. On certain grounds he has been identified with the poet of the same name, who was a follower of the Saiva cult and a native of Navagrāma and who is referred to in the *Dvipada Basavapurāṇa* by the Telugu poet Pākuriki Sōmanātha who lived about 1190 A.C. Pointing out that he is also the same as the author of the *Kavirahasya* and the *Abhidhānatatvamālā*, Prof. Sastri who edited the inscription held that he should have been flourished in the latter half of the tenth century A.C.¹

As for the **place-names** mentioned in the inscription, **Navagrāma** in Dakṣiṇa-Rājha (v. 64) has already been identified with the village of the same name in the Bhurshut *parganā* of the Hooghly District in Bengal.² **Bhōjanagar**, where a monastery known as Sōmēśvaradēva-maṭha existed (L 51) appears to be identical with Dhārā, but while suggesting this identification, Chakravarti rightly observed that the Paramāra capital is always referred to by its name Dhārā even at the time of Bhōja and his successors. And in view of this, we may suggest another alternative of its identification with Bhōjapur, which is near Bhopāl and contains an old shrine of Śīva with a huge *liṅga* installed in its sanctum. **Nandiyāda** the original place of the Saiva ascetic Bhavavālmiki (L 51), remains unidentified in the absence of details; however, it may be observed here that the name appears much similar to that of the town of Nadiyād near Baroda in the Gujārāt State.

4. तिपयपदज्ञानमात्रावसन्नं(न्नम्) । ज्ञात्वैवेदं त्रिनयन मया त्वद्गुणस्तोत्रभक्त्या स्वात्मन्येव स्वयमपि कृतो
घृष्टतापट्टव(व)न्धः ॥५॥ वागीशस्त्वं युगपदखिलज्ञानसंपत्तिवृत्तः का ते तुष्टिः स्तुतिरचनया
माह्यस्याल्पशक्तेः । एवं ज्ञात्वा हर विर[मति स्तोत्रहेतौ हठा]-

¹ For details, see *Ep. Ind.*, Vol. XXV, p. 173. Sastri has also shown that the poet must have lived prior to the 11th century and therefore he could not be identical with the famous Halāyudha who adorned the Court of Lakshmanasēna of Bengal and who was the author of several *śaravāgas*.

² *Ind. Cult.*, Vol. I, p. 503.

³ From the original stone and an inked impression. Later on, the text was compared by me from another impression supplied by the Chief Epigraphist; it is his No. C-1983 of *A. R., Ind. Ep.*, 1963-64. In *appx. C*, 1985, the date is read as (V.) 1120.

⁴ Expressed by symbol. For the *urūha-nūrī* form of Gaṅapati, in inscriptions, see *Journal of the Oriental Institute, Baroda*, Vol. XXI, p. 328.

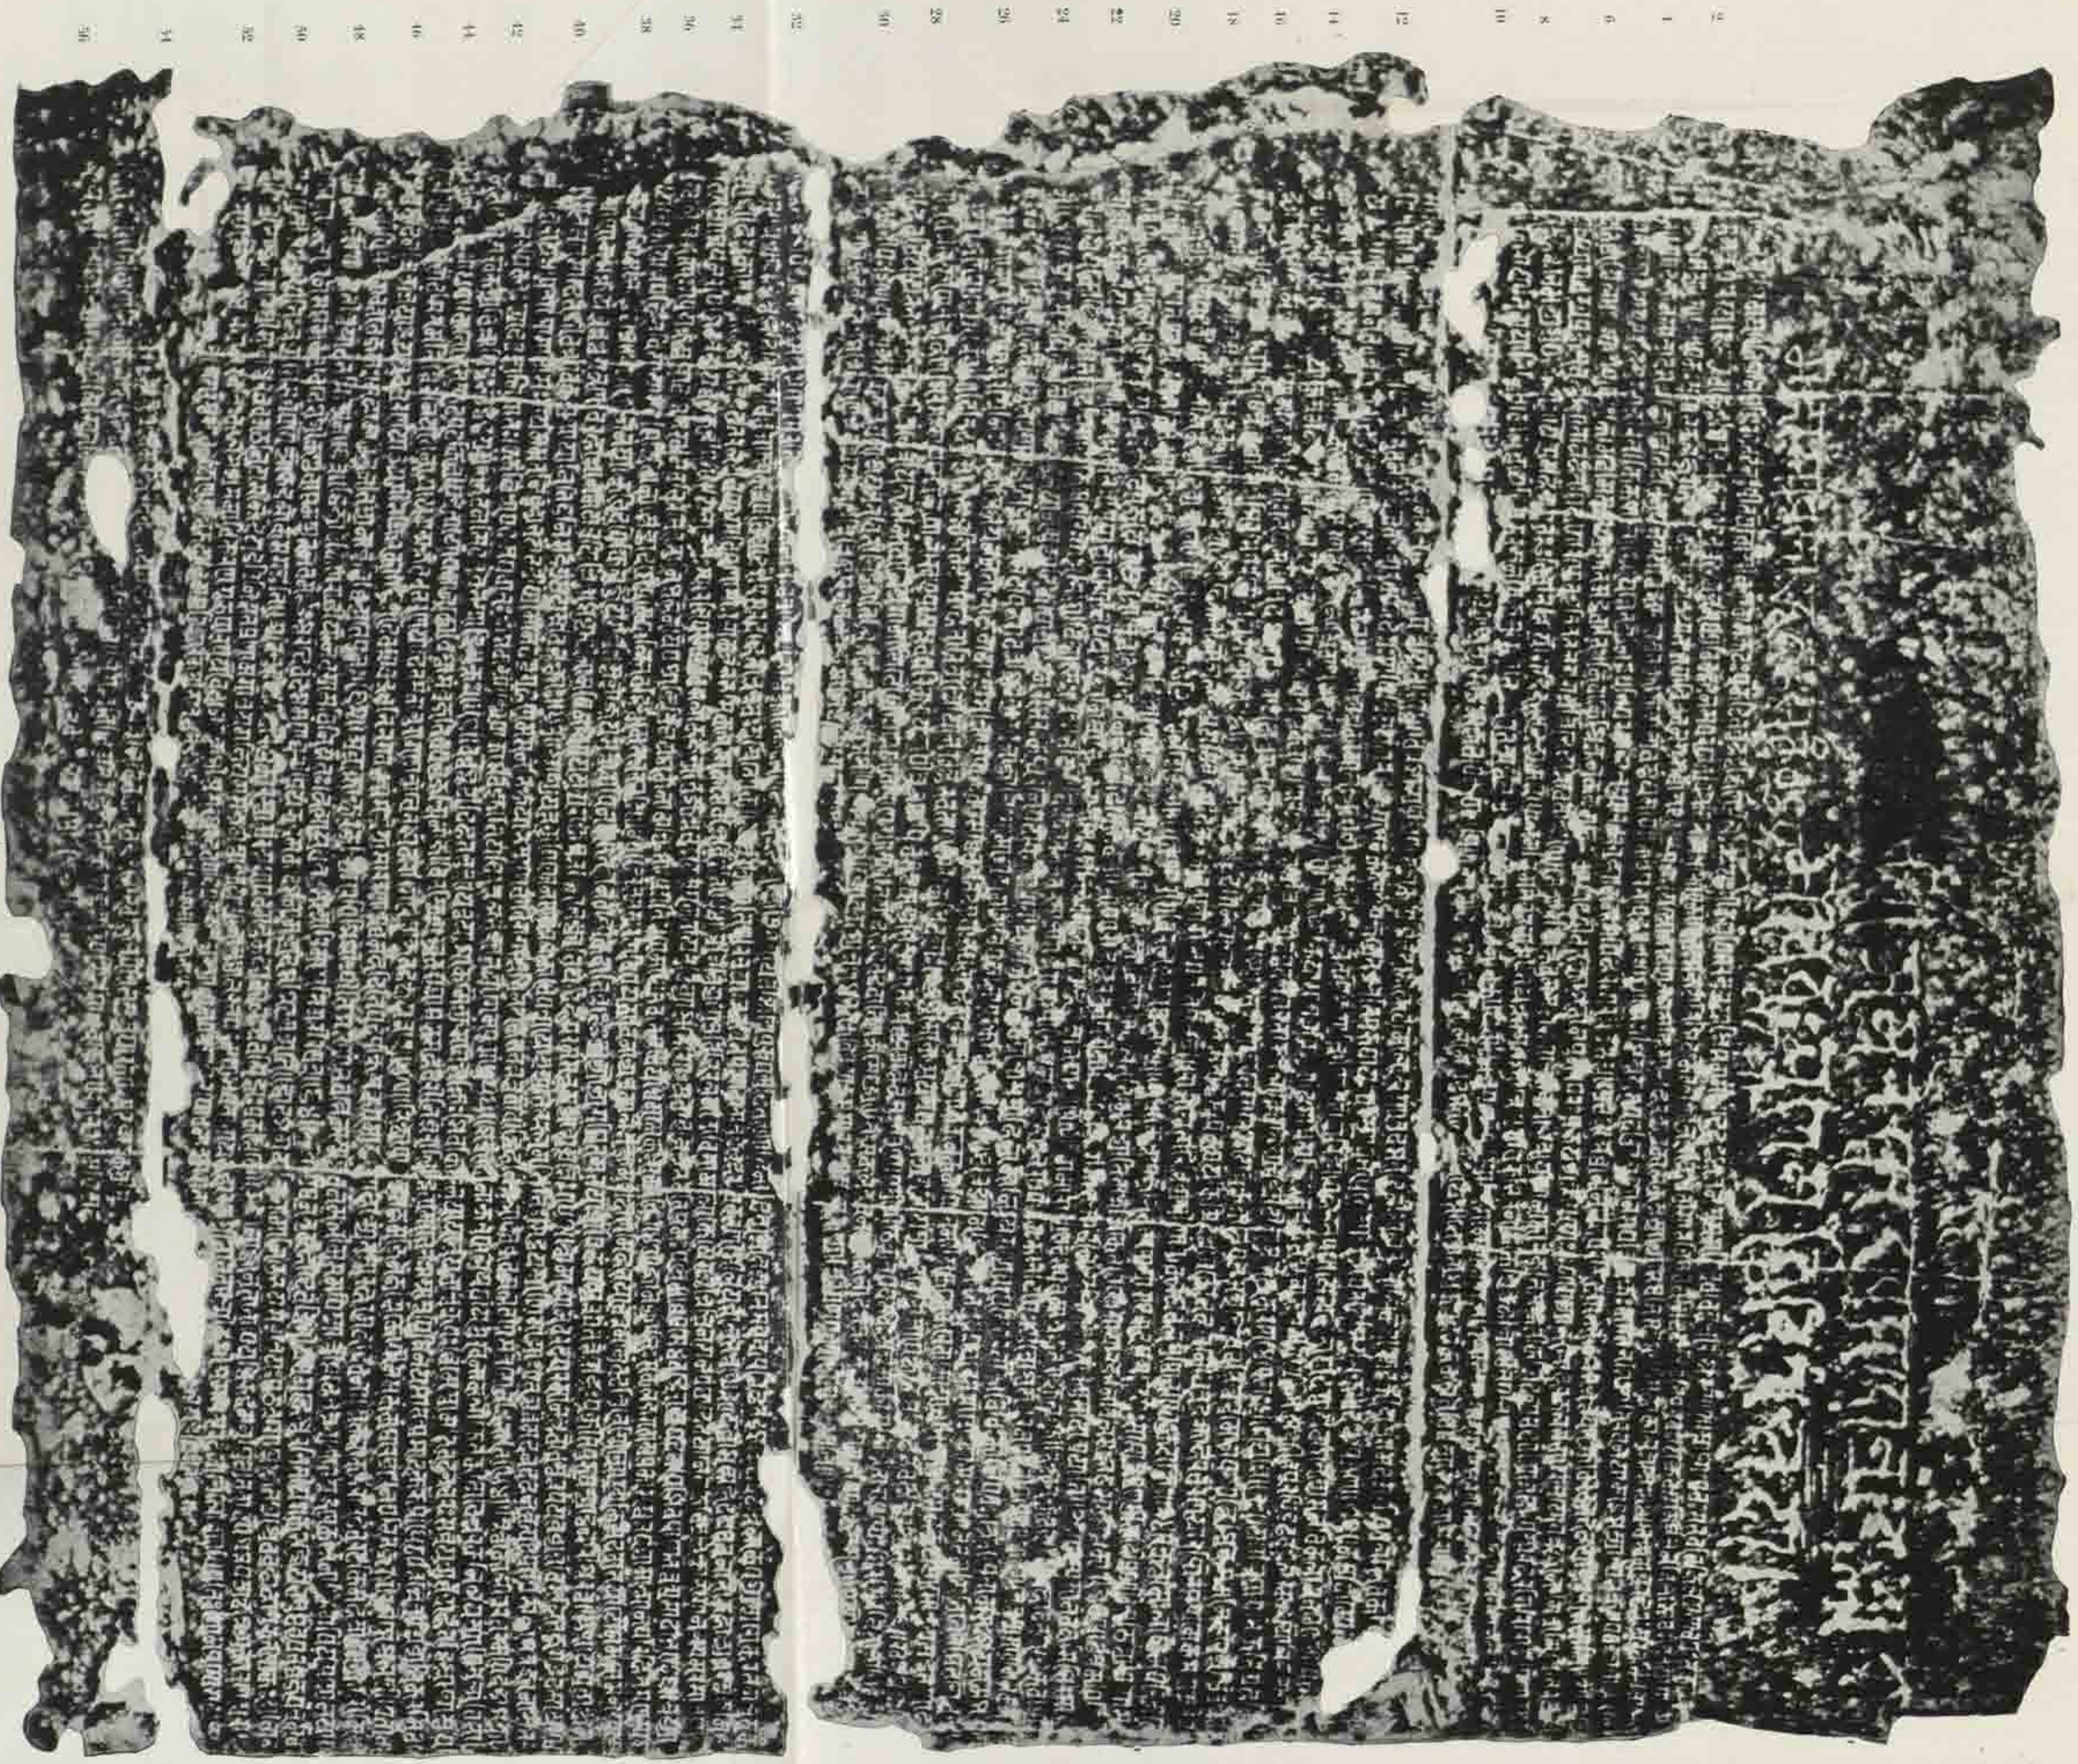

⁵ The portion between square brackets in this and the following verses is hidden behind a new creation in the temple and it has been adopted here from Sastri who restored it from manuscripts in the Government Oriental Manuscript Library, Madras.

- 5 न्मे भक्त्यावेशात्प्रसरति मुखाद्भारती किं करोमि ॥६॥ यत्ते तत्त्वं निरुपाधि परं बाह्मनःपारभूतं व्र(ब्र) ह्यादीनामपि हर गिरस्तत्र भग्नाः प्रवेष्टुं(ष्टुम्) । अर्वाचीनं यदपरमिदं पार्व्वतीवल्लभन्ते रूपं भक्त्या वरद तदहं वाग्भिरभ्यर्चयामि ॥७॥ अन्यैः स्तोत्रं रचितममृतस्य]-

¹ The *daṇḍa* is redundant.

² A flowery design is carved between the double *daṇḍas*, as intended to separate the second part of the inscription.

³ Read तवममीश्वरं, but it would be metrically defective. Better वरकेश्वरं.

⁴ Read उग्रयोः सन्ध्यातोः पठेत्, or better, विमन्थ्य यः पठेन्नरः.

⁵ The *pāda* contains seven (and not eight) syllables.

⁶ Read सुराप्यो, for the sake of metre.

⁷ These two letters are illegible. They may be conjecturally restored as -मेतः.

⁸ The portion in the brackets is now lost and has been restored here from Chakravarti's reading. He also observed that some portion after त् was probably left owing to its damaged condition.

UDAIPUR STONE INSCRIPTION OF THE TIME OF UDAYĀDITYA

(Undated)

THIS inscription is incised on a pillar standing on the left side just above the stairs leading to the eastern entrance of the celebrated Siva temple, (and on the right side of the same slab which bears inscription No. 19, edited above) at **Udaipur** in the *Bāsōdā tehsil* of the *Vidishā District* of *Madhya Pradesh*. It was noticed in the *Annual Administration Report* of the Department of Archaeology of the former *Gwālior State*, for V.S. 1974, No. 111; but the report is now not available.¹ The inscription is edited here from the original stone which I examined *in situ*, in my visit to the place on 10-3-1978.

The inscription consists of seven lines which are in a fair state of preservation, except two *aksharas* which are lost at the end of l. 6. The writing covers a space 32.5 cms. broad by 24.5 cms. high and the height of the individual letters is about 4 cms. The **script** is *Nāgari*. The **language** is *Sanskrit*.

The inscription does not bear a **date**; but the palaeography and the peculiarities of writing and engraving the letters suggest it to have been almost of the same time as No. 19, above, which is inscribed by its side, just to its left. The **purpose** of the record is to state that **Udayāditya** named the place as *Udayapura* and also excavated a tank there. The record was engraved by a mason whose name is lost and who was a brother of the mason *Madhusūdāna*.

The inscription consists of two verses in the *Amuṣṭubha* metre in the beginning, and following them, a portion in prose. Nothing special is worth noticing by way of **orthography**. The first of the verses state that the king *Udayāditya*, whose family is not named but who can be no other than the well-known *Paramāra* king, excavated a tank in the best of the towns which he also named after himself; and the second verse is devoted only to eulogise him. In the prose portion that follows, we learn that the stanzas were engraved by a mason whose name is lost² but who was a brother of *Madhusūdāna*, as already seen above. The record ends with the customary words meaning auspicious, great fortune.

On a separate slab of stone of the same type and just below the inscription No. 19, mentioned above, is engraved another stanza in two lines, which appear to be in continuation of the

¹ This symbol is mutilated.

² Read ब्राह्मणोऽयं स्वयं लिखितेति.

³ There is a flowery design between each of the double *śandas*.

⁴ The Report was not printed. Our reference here is to *Harīhar Nivasa Dvivedi's Gwālior Rājya-kā Abhilēkha*, No. 649.

⁵ The details of this are discussed below, in the corresponding portion of the text.

present record. The verse has lost three *aksharas* at the end of l. 1 and six at the end of l. 2. It states that the stanzas were composed by Mahipāla and were engraved by the illustrious Sthiradēva, who appears also to have been the engraver of the present record and whose name, as we have seen above, is lost at the end of l. 6.

Calling both these documents mentioned here as A and B, respectively, and connecting them with our No. 19, above, as our study of them enables us to do, we are inclined to suggest that they are all mutually connected and very probably are the parts of the same record engraved on separate slabs of stone and placed together. Thus the records were all composed by Mahipāla, who is called a *Pandita* in B and a son of Śringavāsa in No. 19; and also that it was engraved by Sthiradēva, whose name is missing in No. 19, lost in A here, but can clearly be read in B.

Thus all the three records taken together go to show that Udayāditya gave his name to the place where he also excavated a tank and built the celebrated temple of Śiva.

DABHŌKA STONE INSCRIPTION OF THE TIME OF NARAVARMAN (UNDATED)

Scale : Four-seventh

No. 182; PLATE CXLVII

DABHOKA STONE INSCRIPTION OF THE TIME OF NARAVARMAN

(Undated)

THIS inscription was discovered by the Superintendent of Archaeology, Mēwād, at **Dabhōka** a village situated about 18 kms. to the east of Udaipur, formerly the capital of a State of the same name and now the headquarters of a district, in Rājasthān. The inscribed stone was subsequently removed to the Archaeological Museum at Udaipur, where it is now exhibited.

The record was noticed by N. P. Chakravarti, in the *Annual Report* of the Archaeological Survey of India, under Epigraphy, for 1936-37, on p. 124. In his notice, he observed that the stone was found fixed in a small platform built round the worship stone known as Rādājī.

The inscription consists of 20 lines of writing, and measures 24 cms. broad by 31 cms. high. It is in a very bad state of preservation. Besides a few letters which have completely disappeared in the middle of ll. 9-12, the stone has lost a portion at the top of the right side, and also at the lower left corner, measuring about 11 cms. long. Moreover, very few of the letters that now remain are completely decipherable, and most of the syllables are partly or wholly worn away. However, from a set of impressions prepared by the technical Assistant of the Western Circle of the Survey and with my gratitude to the authorities of the Museum for kindly according permission for the same, a general idea of the contents of the inscription is given below.

The **alphabet** is Nāgarī and the **language** is Sanskrit. The **object** of the inscription appears to mention the building of two Śaiva temples, probably by Mahīpati (l. 12), who belonged to the Kāyastha family and was probably a son of one Rudrāditya, who is mentioned as a pre-eminent Kāyastha (*Kāyastha-kuñjara*), in l. 9. The inscription appears to belong to the reign of the (Paramāra) king **Naravarman**, whose name is mentioned in l. 7. By way of the genealogy of the house, the record gives the names of **Sindhurāja Bhōjadēva**, and **Udayāditya** respectively in ll. 4, 5 and 6. The portion containing the description of each of these rulers cannot be fully made out, and equally so the relationship of each of them with his predecessor, which, of course, is otherwise well known. The names of Jayasīmbha and Lakshmīvarman are, however, omitted.

The extant portion of the inscription does not bear any date, nor any geographical name is mentioned therein. The information supplied by the record is very meagre, but it undoubtedly indicates that the Paramāra kingdom continued to extend up to Udaipur during the days of Naravarman.¹

As the inscription cannot be completely made out, the text is not given here.

No. 183; PLATE CXLVIII

HOSHANGĀBĀD HERO STONE INSCRIPTION OF THE TIME OF
THE MAHAKUMĀRA HARISCHANDRA

[Vikrama] Year 1243

THIS inscription was found by Shri Jagadish Dube, a lecturer in the Government Intermediate College at Hardā in the Hoshangābād District, who intimated this discovery to me in 1972, also providing me with an eye-copy of it. Almost at the same time, a note on the record was contributed to the Session of the All-India Oriental Conference held at Ujjain in December 1972, by Dr. Haladhar Pathak, Professor in the Home Science College at Hoshangā-

¹ Vide our observations in the general history portion where we have shown that the region around Aghāra (Chitor) was annexed by Vākpati-muñja to his kingdom. Also see *P.B.P.*, p. 86 and note.

bād. Being interested in its date, I visited the place with the kind permission of the Director-General of Archaeology in India, and studied the inscription *in situ*, on 8-3-1973. The record was edited by me, for the first time, from the original and a photo-copy kindly supplied to me by Prof. Pathak, in the *Journal of the Andhra Historical Research Society*, Vol. XXXV, pp. 231-32. From the same photograph, it is edited here.

The inscription is incised on one of the facets of a dwarf rectangular pillar of hard sandstone, about 95 cms. high, now set on a platform of mud and stone, in front of the General Post Office in Kōthī Bazar Mohallā at **Hoshangābād**, the chief town of a district of the same name in Madhya Pradesh. I found the pillar obliquely resting against the lower part of a tree, with a part of it imbedded in the earth below so as to hide its lower portion. The writing, which consists of seven lines of crude engraving, covers a space 28 cms. high by 22 cms. broad. The **script** is Nāgarī, and the **language** is Sanskrit, all written in prose. In respect of **orthography** nothing is worth noting except that *sha* is spelt as *kha* in *paikha*, in l. 1.

The inscription refers itself to the reign of the illustrious *Mahākumāra* **Harīśchandra**, and its purpose is to record the death of a hero, as also can be known from some figures carved in relief on all the sides of the pillar. The name of the hero, which was engraved before *suta* in l. 5, cannot be made out; but that he certainly lost his life in an encounter is suggested by the word *yudhīya* (for *yuddhvā*) in the last line. The letters giving his father's name are also equally indistinct. The **date** of the record, as given only in figures in the beginning, is the 5th day of the bright fortnight of Pausha of the (Vikrama) year 1243, and the day is mentioned as Thursday. The date regularly corresponds to 18th December, 1186 A.C., taking the year as expired and the month beginning with the full moon.

The royal family to which Hariśchandra belonged is not mentioned in the inscription; but his designation *Mahākumāra* shows him to have been the homonymous Paramāra ruler whose two inscriptions, one of which was found at Bhōpāl and the other at Pipliānagar, are dated respectively, in V. 1214 (1157 A.C.) and V. 1235 (1178 A.C.).¹ From both these years we know that the Paramāra *Mahākumāra* Hariśchandra was on the throne at least for 21 years, which is the average period generally calculated for the reign of a king; and accordingly, this king appears to have closed his reign soon after he issued the second grant. The historical value of the present inscription, however, lies in indicating that Hariśchandra continued to rule for at least about eight years thereafter, thus making the interregnum between himself and his son Udayavarman still shorter, as the latter of these rulers is known only from his grant of V. 1256 (1200 A.C.).²

There is no evidence to know anything about the struggle in which the hero mentioned in our inscription lost his life. But the political situation of the time reveals that the Yādava Bhīllama V, who ascended the throne in 1185 A.C. and thus only a year before the present record was issued, was carrying on military expeditions in the north, and it is not impossible that in the course of his invasions he had also to face the Paramāra Vindhya-varma, who had only shortly before this date relieved Mālava from the Gujrat³ sovereignty and who may have endeavoured to check the Yādava forces. The Mutgi stone inscription of the reign of Bhīllama, dated 1189 A.C., describes the Yādava ruler as "a severe pain in the head of the Mālavas;" and this appears to have been the encounter mentioned in the present inscription.⁴

No **geographical** name occurs in the inscription.

¹ For example, a hero on horse, with weapons, the same worshipping *Śiva-linga*, and finally, lying on a coach, with a lady (his wife) sitting by his side.

No. 184 ; PLATE CXLIX

A FRAGMENTARY STONE INSCRIPTION FROM UJJAIN

(Date lost ?)

THE stone bearing this inscription was found some forty years ago by Pt. Sūrya Nārāyaṇa Vyās, in the ruins near the temple of Mahākāla at Ujjain the well-known ancient place which is now the headquarters of a district of the same name in Madhya Pradesh. The contents of the record were briefly noticed by the late M.B. Garde in the *Annual Report of the Archaeology Department* of the former Gwālior State for V.S. 1992 (1935-36 A.C.), p. 15, and it was also published in the *Nāgarī-prachārīnī-Patrikā* (a Hindi Monthly), Vol. XIX, pp. 87-89, with a lithograph. The stone is now kept in the University Museum at Ujjain. The inscription is edited here from the original stone which I inspected in my visit to the place, and from an impression kindly supplied to me by Shri V. S. Wakankar, the Curator of the Museum.

The inscription is only a loose fragment of apparently a very large inscription incised on a smooth black stone. The piece is almost triangular in shape, with one of its sides, on the left, showing its maximum height to be 18.5 cms. and another side, that at the top, showing the total length of 29.5 cms. The third of the sides, which begins at the right corner at the top and gradually decreases the number of letters as it comes down to the bottom on the left, measures 30 cms. The inscription contains fourteen imperfect lines, the first of which shows only four complete letters with the lower parts of the others. The number of the *aksharas* gradually decreases from 25 in the second to 4 in the penultimate line, and the last line shows only the upper parts of two letters. We have no means to ascertain the actual size of the original inscription. The existing portion is in a perfect state of preservation, and the average size of the *aksharas* is about 1 cm.

¹ From the original stone.

² The unit figure is mutilated but its reading is certain. As for the decimal figure, the curve at its lowest extremity is damaged and partly disappeared, making it appear also as 5. But my close and minute examination shows it to be 4, as taken here, which is also consistent with the period assigned to Harīschandra, mentioned in the inscription.

³ The reading of both the names is uncertain.

⁴ Some three *aksharas* are lost at the beginning of this line, and in the next one, the letters are partly imbedded below.

⁵ The inscription appears to be incomplete and it is not known as to how many lines are below the surface.

The **alphabet** is Nāgarī, closely resembling that of the Mōḍī and Māndhātā inscriptions of Jayavarman. The mechanical execution also is as careful as of those. The vowel *i* is indicated by two loops placed horizontally and subscribed by the sign of the medial *u*; the *aksharas* *ch* and *dh* are distinguished from *r*; the former by its beginning with a stroke on its loop, as in *chakvē*, l. 5, and the latter by a curved horn on its left limb, as in *vaidhuvya*, l. 8; and lastly, the palatal *ś* has a horizontal *stroke* in the middle as the e.g., in *śithiḥi*, l. 5.

The **language** is Sanskrit and the available portion is all metrical. The verses were all originally numbered, as we notice the numbers 18, 19, 22 and 26, respectively in ll. 5, 6, 8 and 10. None of the verses in the existing fragment is complete. The only point worth noting from the point of view of **orthography** is that whereas the *mātrās* of *ē* and *ō* are marked above the line, those for *ai* and *au* one of the *mātrās* is a *pristha-mātrā*.

The inscription seems to be a *prasasti*, as suggested by its ornate style and the conventional manner of the description. Its immediate **object**, however, cannot be ascertained, though it appears to record the construction of a temple, as we usually find. That the temple was constructed by a scion of the royal house of the **Paramāras** of Mālava is known from the expression *Nirvāṇa-Nārāyaṇa* occurring in its line 9, and we know it to be one of the titles of Naravarman,¹ the son of Udayāditya. This is also suggested from the name Muñ[*ja*] at the end of l. 7,² used to denote another illustrious member of the royal house and well known to us from the inscriptions. The preserved portion does not contain any **date**, but on palaeographical grounds it may be assigned to about the **13th century** or a little earlier.

The first five lines of the existing fragment describe a king or kings leading his (their) victorious army to the north up to Ayōdhya on the Sarayū and up to the Himālayas, in the west up to Dvārakā, and to the south up to the Malaya mountain and father up to Laṅkā.³ This description is all conventional and it does not yield any historical information.

All the **geographical names** occurring in the preserved portion of the inscription are well known.

¹ See above, No. 36, ll. 12-13.

² See n. 9 in the text below.

³ For a similar extravagant assertion, see above, No. 24, v. 17.

⁴ From the original and an inked impression.

⁵ None of the verses is complete and the metres here are as indicated by the cadence of the *aksharas* as preserved in each of the lines.

⁶ Of both these *aksharas* the *mātrās* above are broken.

⁷ The reading here is certain but it cannot be grammatically defended.

⁸ Apparently, the letter *ra* is lost before the *mātrā*.

⁹ The bracketed letter is broken in its latter part but the restoration appears to be certain.

No. 185 ; PLATE CLX.

A FRAGMENTARY INSCRIPTION FROM MĀNDU

B

(Date probably lost)

TWO small fragments of a long inscription were found built up in a modern wall at **Māndū**, the well-known archaeological place in the Dhār District of Madhya Pradesh, by R. B. Deshpande, supervisor of the repairs of ancient monuments at that place, in 1923. Fitting both the pieces together, the text was deciphered and published, with a small introductory note, translation and a small-size photograph, by K. K. Lele, in the *Annals of the Bhandarkar Oriental Institute*, Vol. VIII (1927), pp. 142 ff. The inscription is edited here from the original fragments, which are now preserved in the archaeological museum at Dhār, and from the photograph accompanying Lele's article.

The record is incised on a well polished black stone, and, as stated above, it is **fragmentary**. The initial portion which pays homage to Sarasvatī is fortunately preserved. The extent portion shows fifteen lines of writing, of which a number of *aksharas* are lost on either of the sides; and we have no means to ascertain the portion which is lost below also. The dimensions of the existing portion are not noted. All the lines being incomplete, no coherent sense of the record can be made out, except the general idea that it contained a hymn to Sarasvatī, the Goddess of Learning.

The **Language** of the inscription is Sanskrit; and except for the customary *Oṃ namah Sarasvatyai* in the beginning, the preserved portion thereof is all metrical. The verses seem to be all in the *anushṭubh* metre. They are not numbered, but it appears that they were separated from each other by a double *daṇḍa*, and a single *daṇḍa* was also put at the end of each of the halves. As to **palaeography** and **orthography**, we find that the letter *k* is its ligature form, e.g., in *kalpa*, l. 1; that *ṛ* has not developed the dot, as in the first letter. That is preserved in l. 7; that *ch* and *v* are alike in form, cf. *chēd* = *bhavatī*, l. 5, but *dh* has its distinct shape in showing a curved horn above its fore-limb, as in *dharmma*, l. 3. The signs of the medial diphthongs are put above and also before the letter to which they belong; and the sign of *avagraha* occurs in l. 11. All these peculiarities tend to indicate that the inscription was engraved in the 11-12th century.

Beginning with paying homage to Sarasvatī, as already seen, the inscription eulogises the deity as fulfilling all desires, like the wish-giving tree, and therefore highly victorious. In ll. 3-6 we read that all *dharma*s (undertakings?) are supported by her and her alone, that she is embodied in sounds and words, and for these reasons her charm attracts in every dispassionate ascetic. Lines 7-10 state that her charm is in the form of the various metres used in the hymns of the *Vēdas*; her devotee becomes a good poet and also that the entire universe is held by the wise persons. And lastly, ll. 11-15 appear to mean that *Vālmīki*, *Vyāsa* and the other poets were sent in this world by her, for doing favour to it (the region) and that *Dīlīpa* and *Vasiṣṭha*, by serving her (in the form of) a cow became a model king and a model sage, respectively.

1 Only the upper parts of two *aksharas* are visible, but they cannot be made out.

Connecting the present inscription with the one found at Dhār and now in the British Museum,¹ we note that Māṇḍū, where it was discovered, must also have been a place of learning in the 11-12th centuries A.C.

No. 185; PLATE CLXI

A FRAGMENTARY STONE INSCRIPTION FROM MĀṆḌU

A

(Date lost ?)

THE stone bearing this inscription was discovered 'in the debris of fallen houses, in Māṇḍū' and brought over to Dhār by Pt. Vaman Shastri Islampurkar towards the close of the last century. It is said to have been found broken in more than half of the earlier portion which was lost. The extant fragment is stated to have measured about 9" (*i.e.*, 22.86 cms.) in height and about 26" (*i.e.*, 66 cms.) in length. The inscription was first deciphered and pub-

¹ Above, No. 14.

² From the original and also from the facsimile accompanying Lele's article.

³ Two indistinct letters, probably to be read as दा, are partly visible before this word.

⁴ The letter in brackets is partly rubbed out and the reading is therefore uncertain.

⁵ The *mātrā* of short *i* is visible after this *akshara*.

⁶ The first three *aksharas* are indistinct and the reading is not certain. It is adopted here from Lele's reading.

⁷ The *aksharas* in this line read like a foot of *Vasantatilakā*.

⁸ One letter in the beginning of this line is indistinct. It may have been ऋ.

⁹ To be split up as done here and not to be taken as one word as taken by Lele, as *charanē*.

A FRAGMENTARY INSCRIPTION FROM MANDU (B)
(DATE LOST)

Scale : Actual size

lished by the late K. K. Lele, in the *Annals of the Bhandarkar Oriental Institute*, Vol. XI (1929), pp. 49-53, without a lithograph. The present whereabouts of the stone could not now be traced; and as even an impression of the record is also not now forthcoming, there is no alternative before me except to reproduce the text given by Lele in his article and add to it my own notes.

The record is said to have been incised on an oblong plain slab which is broken at the top and also on portions of both the vertical sides. The correct estimate of the broken portion cannot be made, and the record has also suffered considerably. As stated by Lele, "some of the letters in the middle portion are much worn, precluding the possibility of deciphering the inscription completely". The existing portion contained seventeen lines of writing, which are all fragmentary. The letters are well formed and carefully incised. The height of the individual letters is not recorded.

The **script** is Nāgarī of the 12-13th century A.C. The **language** is Sanskrit. The extant portion of the inscription is all metrical; and except for the last three verses, the first of which is in *Mālinī* and the other two in the *Rathōddhatā* metre, all the rest of the verses are in the *Sārdūlavikrīḍita* metre, composed in the artistic *kāvya* style. They are not numbered but each of them has a double *daṇḍa* at the end, and the halves are separated by a single *daṇḍa*. The **orthography** shows the usual peculiarities of the occasional reduplication of a consonant after *r*, the substitution of *b* for *v* and of *s* for *ś*, and finally, the use of the sign of *anusvāra* to denote the final *m*, except in a few instances like *arṇavām-vaṇa*, l. 6. The word *ujjvala* in l. 7 is wrongly spelt as *ujvala* and *nishphala* has the sign of *visarga* instead of *śh* in the same line. *Sandhi* is not performed in *mē-āpi* in l. 14.

The inscription refers itself to the reign of the son of the king **Vindhyavarman**. He is not named here but can be inferred to be undoubtedly the Paramāra king Subhatavarman. The **object** of the inscription is to record the donation of two gardens by the same king, *i.e.* Subhatavarman, to Bilhana who was his *sāndhivigrahika*, *i.e.*, Minister for Peace and War. The record was composed by Bilhana himself, with whose acquiescence were composed the three inscriptions of Arjunavarman, as already seen. The date is perhaps lost in the last line.

The earlier portion of the inscription that was available (vv. 1-8) gives a poetic description of God Vishṇu in his different incarnations and thus it is of no historical interest. Verses 10 ff. eulogise the same deity in his Kṛishṇa incarnation, and is equally devoid of historical value. The concluding part of the record (ll. 16-17, vv. 18-19) informs us that "observing that his material body was frail and mortal, Bilhana composed this poem of (describing) the eternal glory of the god, and Subhatavarman's son, Vindhyavarman, highly respected the poet and donated two gardens (*vāṭikās*)," presumably for the maintenance of the deity installed by the latter in a temple, about which our inscription has nothing to say. It is not known if the construction of the temple and the installation of the deity therein were mentioned in the portion that is now lost.

From the three preceding inscriptions we know that Bilhana held the post of the Minister of Peace and War under Arjunavarman and Dēvapāla;¹ and the present inscription adds to our knowledge that he was on this post during the reign of Arjunavarman's father, Vindhyavarman, also. It also tells us that this officer was highly devoted to Vishṇu; and, as Lele has rightly pointed out in his article referred to above, *Maṇḍapa-durga*, where the inscription was discovered, also appears to have been a great seat of learning at that time.

No **geographical** name figures in the extant portion of the inscription.

¹ See above, Nos. 47-48 and 51.

¹ From Lele's transcript in *A. B. O. I.*, Vol. XI, pp. 49 ff. It may be noted here that his transcript does not represent the original accurately and he has made several changes, e.g., that of *v* to *b*, as is obvious.

² For the sake of convenience the verse existing on the extant portion has been taken here as 1. Its metre is not certain; and the portion commencing the second line appears to be a part of either *Mandākrantā* or *Śragdhara*.

³ I am not certain about the metre in this line which is fragmentary.

⁴ Insert a *daṇḍa* here.

⁵ Here the number marking the stanza is put, of course presuming that two stanzas are fragmentary on the preceding portion which is now not available.

⁶ This verse has lost 14 letters of the first quarter, the whole of the second quarter, and three letters of the third.

⁷ Read — *वृ* विकृतशी —.

⁸ Read a *visarga* after this *akshara*.

⁹ Here this *akshara* has to be taken separately in the *padachchhēda*.

¹⁰ Read भयम्.

¹¹ Lele has taken this line separate but it appears to be connected with the preceding one and in continuation of it.

¹² This *akshara* should be prosodically long. Should we read *mō* with the case-ending?

UDAIPUR STONE INSCRIPTION OF JAYASIMHA IV

[Vikrama | Year 1366

THIS inscription was brought to light by Kielhorn, by publishing transcript of its first four lines, in the *Indian Antiquary*, Vol. XX, p. 84. It is edited here from the original stone which I examined *in situ*, in my visit to Udaipur on 9-5-1978.¹

The record is incised on the lower part of a sand-stone pillar on the right side just above the flight of steps leading to the eastern porch of the celebrated Śiva temple at Udaipur in the *Bāsodā tehsil* of the Vidishā District of Madhya Pradesh. It consists of nine lines of writing, measuring 31 cms. broad by 32 cms. high. The average height of the letters, which were cursively drawn, is about 2 cms. The engraving was done most carelessly, even without making the surface of the stone none too smooth. The letters have also suffered from weather; and as a result of it, the last two lines have become almost illegible. A few letters are also at the end of ll. 6-9, as this part of the stone has peeled off.

The **alphabet** is Nāgarī and the **language** is Sanskrit. The record is all in prose. The **orthography** does not call for any remark except that in l. 4 *gha* is employed for *ha* in the name of Jayasimha.

The inscription refers itself to the reign of the *Mahāvājradhara*, the illustrious Jayasimhadēva who was endowed with all regnal titles; and the **object** of it is to record the donation of one-eighth of the revenue from the village Hathivāhā by The *Thakura* (?) Vidyādhara, to a Brāhmaṇa whose name is indistinct. The last line contains the name of Chandraprabha, who is mentioned as witness.

The **date**, which is given in numerical figures only, in l. 1, was the **twelfth of the dark half of Śrāvāṇa, on Friday, of the (Vikrama) Year 1366**, which regularly corresponds to **Friday 24th July, 1310 A.C.**,² for the Southern Vikrama, *expired*, and the month ending with the full moon.

The inscription says nothing about the lineage of the king mentioned in it; but from its find-spot he appears to have been no other than a Paramāra ruler. He cannot be the same as Jayasimha-Jayavarman, one of whose inscriptions was found at Udaipur itself and another at Pathāri, about 15 kms. distant from it, and dated, respectively, in V.S. 1311 (1255 A.C.) and V.S. 1326 (1269 A.C.), since the latter of these records bears a date which is about 40 years earlier than that of the present inscription. We also know that Jayasimha-Jayavarman was succeeded by Arjunavarman II, and he by Bhōja II; and that the last known ruler of the house, Malhākadēva, was killed in a battle with the Sultān Alā-ud-dīn Khaljī, in 1305 A.C.³ The present inscription, which was dated about six years later, tends to indicate that Jayasimha, during whose reign it was engraved, was a successor of Malhākadēva, if a Paramāra king at all,⁴ and that he was reigning as an independent king in the region around Udaipur; or it may be that he was allowed to rule there after he had accepted subordination to the Muslim throne. And unless any corroborative evidence is available, this view should remain to be hypothetical.

The only **geographical name** mentioned in the inscription is the village **Hativāhā** (ll. 4-5), which is obviously the modern Hatavāhā, about 24 kms. east-south-east of Udaipur.

¹ Since this article was written, the inscription been edited, with transcript and a facsimile, by Dr. Ramsharma, of the office of the Chief Epigraphist, in the *Ep. Ind.*, Vol. XXXVIII, pp. 34 ff., from impressions, *A. R. Ep.*, 1961-62, No. C1637. The facsimile which was prepared about 10-11 years ago, was helpful to me in reading some letters which are now wholly or partially lost on the original.

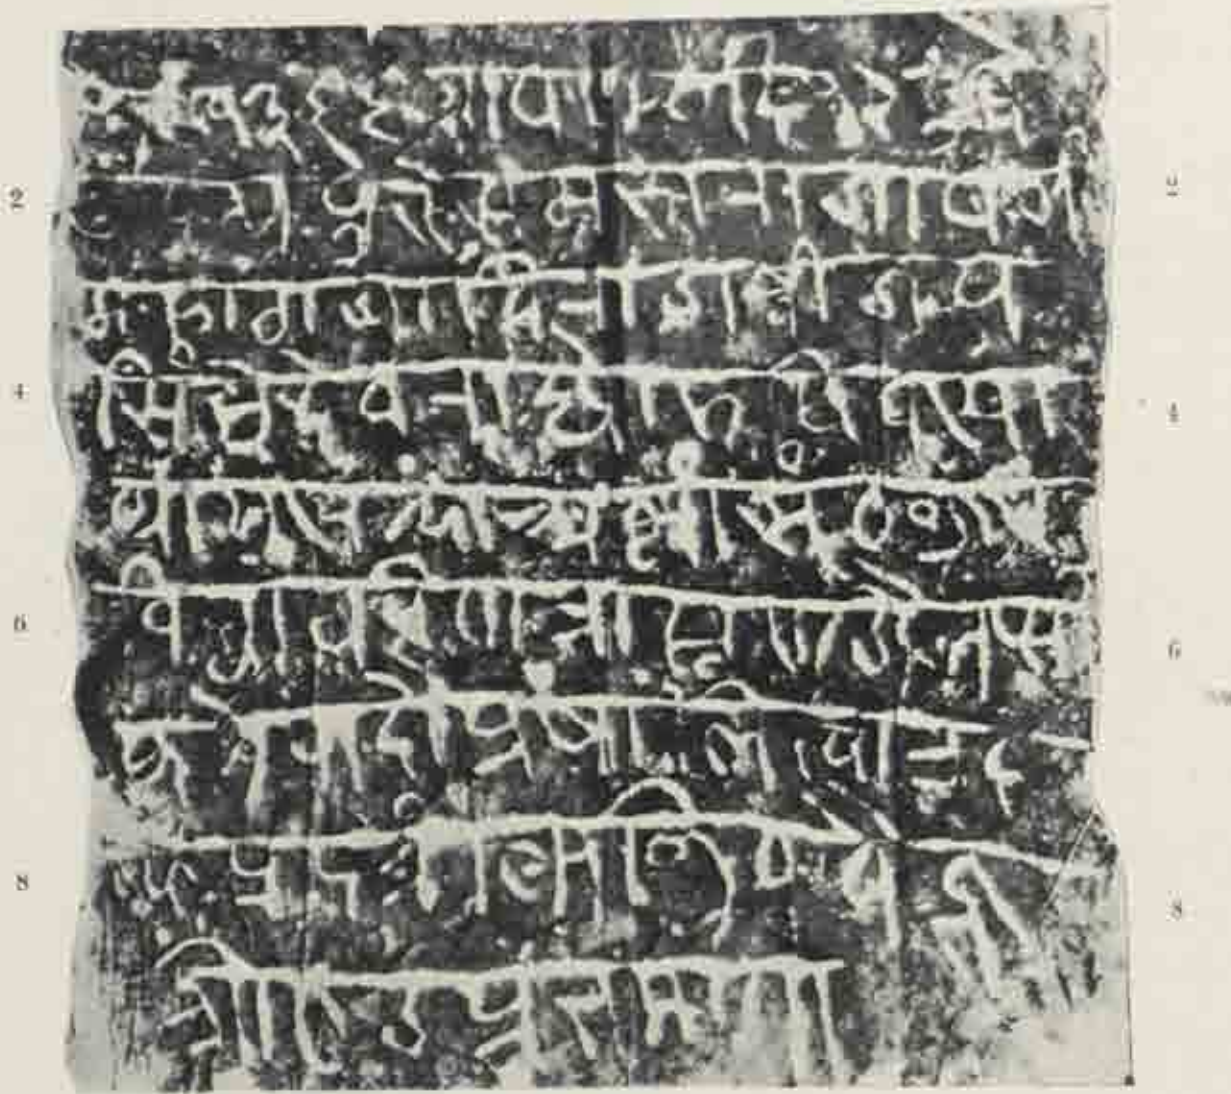

² See *I.N.I.*, No. 661.

³ *C.H.I.*, Vol. III, p. 93. Also see *Elliot*, Vol. III, p. 76.

⁴ This view too is doubtful, as neither the family to which this ruler belonged nor any of his predecessors is mentioned in the inscription. He is tentatively taken to have been a Paramāra ruler on the similarity of names and also as we do not find in this region any other ruler bearing this name during this period.

No. 187 : PLATE CLXIII

GIRVAD STONE INSCRIPTION

[Vikrama] Year 1181

THE stone slab bearing this inscription is built into a side-wall of the *mandapa* of the Pātānārāyaṇa temple at **Girvad**¹¹, a tiny hamlet about 16 kms. west of Ābū Road, the principal town of a *tehsil* in the Sirohī District, Rājasthān. The record was briefly noticed by D. R. Bhandarkar in the *Progress Report of the Western Circle*, 1906-07, p. 27¹² and it is edited here, for the first time, from personal examination and from an impression prepared under my guidance, by N. M. Ganam, the Technical Assistant of the Western Circle of the Archaeological Survey of India.

¹ From the original stone. Subsequently, I have also compared my reading from facsimile facing p. 35 of *Ep. Ind., Vol. XXXVIII*. The inscription begins with a symbol which is partly mutilated.

² Here supply विरहद्वय, or मालवकृत, or, as suggested by Ramsharma, महिड; but on the original it appears, as taken here, at the beginning of the third line.

³ The reading of the bracketed *aksharas* is based on those ending the name of a village which exists in the neighbourhood even to-day. The *mātrā* of the first of them appears to be mixed with the slanting stroke of the second. On the original the last two syllables appear as कृत.

⁴ This *akshara* is followed by two hollow circles and a horizontal stroke, and the reading of them, as adopted here, is doubtful. Ramsharma read the fourth and the fifth letters in this line as सप्त.

⁵ This *akshara* is deformed, and the *mātrā* on the preceding: रे resembles a curve.

⁶ Two or three *aksharas* are lost at the end of the line and the reading: तसी is adopted here from that of Ramsharma; but the reading is not certain, as the last of the *aksharas* appears as a conjunct.

⁷ Read प्रक्षालित्वा. Possibly, what is intended is उदके, for (उदक?).

⁸ Two or three *aksharas* are lost here also.

⁹ Some letters are indistinct here, and some lost at the end. Ramsharma read them as [श][जा*](नि) उ वैद्व (?). He also took वैद्व engraved for वैद्व; but I do not find the reading certain.

¹⁰ Eight *aksharas* are lost here and they were read by Ramsharma as श्रीचन्द्रम[प्र*]न(मा)ण, with some doubt from an impression prepared in 1951-62.

¹¹ The temple is about 3 kms. south of the village known as Chandēla which is connected with Ābū Road by a metalled road. The present inscription just faces the one edited above under No. 82.

¹² Also see *A.S.I., P. R. W. C., 1916-17*, recording some more antiquities at that place.

The inscription is on the lower part of the slab bearing another above, with which we are not concerned. The writing measures 48.5 cms. in breadth by 28.5 cms. in height, and consists of 14 lines, the last of which is about half of the length of the others. It is well preserved, excepting three *aksharas* in l. 13, as to be seen below. The technical execution is, on the whole, fair; and the signs of the *mātrās* above show a graceful curve. The letters are all distinct and vary in size from 1 to 2.5 cms., including the flourishes.

The **script** is Nāgarī of the 12th century A.C. The *akshara* *ṇ* as a subscript resembles *l*, as in *Vishṇu*, l. 1; *chh* and *th* in their subscript form have the same sign, for which see *chchhāya*, l. 5, and *sthāna*, l. 9; and the slightly varying forms of *bh* are to be noticed in *bhāsa*, l. 1, and *bhakti* in l. 10, and those of *r* in *purandava* and *ratna*, both in l. 2.

The **language** is Sanskrit, which is generally correct: and with the exception of the customary obeisance to Nārāyaṇa in the beginning and the formal part in ll. 11-14, the record is all in verse, consisting of seven verses, which are all numbered. The **orthographical** peculiarities are as usual, *viz.*, (1) the use of the sign of *anusvāra* to denote the class-nasal even at the end of a verse or its stich, (2) of *v* to denote *b* as well; (3) of the *prishtha-mātrā*, occasionally, *e.g.*, in *tējasvīmat*, l. 4, and *vidadhē*, l. 8; and (4) the reduplication of a class-consonant following *r*. The name of the village is spelt as *Griṇḍa* in l. 8 but as *Griṇḍa* in l. 9.

The **object** of the inscription is to record that the temple in which the stone is set up was repaired by one *śrī* Satyātmā, after taking permission from the Griṇḍa (Girvaḍ) Brāhmaṇas who too made some donations to the deity, in **Samvat 1181, Jyēshtha vadi 12 v(b)udha-dīnē**. The date is given only in numbers; and, for the Chaitrādi expired; it regularly corresponds to **11th June, 1124**, when it was a **Wednesday** and the month, *amānta*. The names of the writer and the engraver of the inscription are not mentioned.

Beginning with a sentence in prose paying customary obeisance to Nārāyaṇa, as seen above, the epigraph has three stanzas to record homage, respectively to Vishṇu, Murāri and Paṭṭa-Nārāyaṇa, who are all the same. The last of these deities (now enshrined in the temple) is here described as "possessing boundless greatness (*amēya-vibhava*), and excelling all the other forms of lustre." From the next two stanzas we learn that the great sage Vasishṭha had established the god near a *kuṇḍa* called *Paṭṭa-hrada*, and that this temple was repaired by Satyātmā, after taking permission of the Brāhmaṇas residing there, as already stated above. The portion that follows records the donation of the villages of Pāṭīkshetra and Rudrāvantī to the god by the people of Girvaḍ. The other donations mentioned in the inscription consist of a *dramma* for clothing those who observed fast for a month (*māsōpavāsika*), twenty *palas* of thread for *pavitrika*, *naiṇḍya* (details not mentioned), two *karshas* of oil for smearing the body (of the deity), and some others, all mentioned in the local language which I cannot make out.

Nothing about Satyātmā who repaired the temple is known either from the present record or from any other source. Nor is the name of the king mentioned here. However, the find-spot of the record goes to suggest that the repairs of the temple referred to above were made during the reign of the Ābū Paramāra ruler Vikramasīṅha or his elder brother Rāmadēva, respectively the uncle and father of Yaśōdhavala, whose earliest known date is V. 1202.¹ The absence of material to throw light on the history of this period prevents us from saying anything definitely on this point. It is, however, interesting to see that the Brāhmaṇas could jointly make a donation, as stated above.

Of the two localities mentioned in the inscription, *viz.*, Pāṭīkshetra and Rudrāvantī, neither can be satisfactorily identified for want of names of places fully corresponding with them, around Girvaḍ. To make some suggestions in this respect, however, I am tempted to identify the first of these names either with Panjoorī, lying about 14 kms. north-east of Girvaḍ, or with Padrūkhēḍā, situated about 25 kms. in the same direction. Both these places are now included in the adjoining *tehsil* of Rēodhar. The other place, *viz.*, Rudrāvantī, may possibly have been the modern village of Reḍvā, situated about 6 kms. south-east of Girvaḍ.

The name of the reigning king is not mentioned in the inscription and the reason of it is not far to seek. In the history of this house we have seen that Dantivarman was succeeded by his son Krishnarāja, by ousting his nephew Yōgarāja who was the legitimate heir to the throne; and it is possible that Yōgarāja and his son Rāmadēva may have been striving hard to oust

¹ See the Ajāharī stone inscription, above, No. 64.

Krishnarāja and his successors, viz., his son Kākala and grandson Vikramasimha. Thus a struggle for the throne appears to have been going on for two or three generations from the time of Krishnarāja to that of his grandson Vikramasimha, roughly from about 1060 to 1115 A.C.; and during this period Rāmadēva, who is described as fierce in battle (*raṅ-ōtkata*) in our No. 76 (v. 7), may have occupied the throne at least for some time. If this suggestion is accepted, we may conclude that it is perhaps owing to the confusion caused by this struggle that the mention of the name of the reigning king may have been avoided by the composer of the inscription.

¹ From the original and an impression.

² Expressed by a symbol.

³ The first of the *daṅḍas* is so close to the preceding *akshara* as to look like a *mātrā*, and the second appears to have been inserted subsequently.

⁴ The sign of *rēpha* on the first of the bracketed *aksharas* is faint even on the original. The idea of the water of the Ganges flowing out of the *hamarudala* recalls that in N.S.G. Canto I, v. 48.

⁵ The slanting stroke of the subscript of the bracketed *akshara* is faintly visible even on the original.

⁶ The sign of *anusāra* on the penultimate letter is blurred. The meaning of the word *patikā* is not known to me. Though not known to lexicons, from context it appears to denote a territorial division.

⁷ The construction in this verse is not proper, but it shows that in that region *araghattas* (water-wheels) were used for irrigating fields. The word *seti* (*kṣēṭi*?) is local, meaning cultivation, from *kṣētra* (?). According to M. Williams, *setaki* is *nadyādi*.

⁸ The subscript letter of the second *akshara* is cut as *y*, ending in a stroke as of *ph*. The preceding sentence is in the local language and I am unable to understand it. The sense shows that *nēchaka* is a local word meaning a garden.

⁹ The reading is certain. It probably means those who observe fast for a month.

¹⁰ *Pala* is a weight equal to four *karshas*.

¹¹ The word *karsha* appears also in No. 84, v. 76. The expression that follows has to be corrected to -अन्वैकदशे.

A PARAMĀRA STONE INSCRIPTION FROM CHITRI

[Vikrama] Year 1314

THE discovery of this inscription was intimated to me by Shri V. Mishra, Superintending Archaeologist of the Western Circle of the Archaeological Survey of India, who also favoured me with a set of impressions which were prepared by his technical assistant Shri K. P. Gupta, who found the stone in 1971. The inscription does not appear to have been noticed before, and it is edited here, for the first time, from the above mentioned impressions.

As I was informed, the record is incised on the upper part of a pillar on the right side of the entrance to the *mandapa* of a temple dedicated to Śiva, popularly known as Śātalēśvara, in the village Chītrī, on the bank of the Māhī and about 10 kms. south-southwest of Sagwādā, the principal town of a tehsil in the Dūngarpur District in the southern part of Rājasthān. The inscription consists of six lines, and, to judge from the impressions, it covers a space 37.5 cms. broad by 25 cms. high. It is in a fair state of preservation, except that parts of some letters in the first line are obliterated. The height of the individual letters ranges between 2.5 and 3 cms.

The **alphabet** is Nāgarī of the thirteenth century, to which the record belongs. What is worth noting from the palaeographical point of view is only that the letters *ch*, *dh* and *v* have developed their distinct forms, e.g., in *uddhṛita* in l. 2 and *v(b)ūdā*- and *Chītalīya*-, both in the last line. The record is **bilingual**: in the first three lines the language is Sanskrit, and what is stated here is repeated in its latter part, in a local dialect. The **orthography** calls only for the general remarks, such as the use of *v* for *b*, as in *vudha*, l. 1, of the dental for the palatal sibilant, as in *-vamsa*, l. 3, of the *prishtha-mātṛās*, and of the Prakrit word *satka* in l. 2.

The **aim** of the inscription is to record the restoration of the temple where it was found, viz., that of Śātalēśvara, as called in l. 2 thereof. It is stated to have been originally constructed by Sanatkumāra who belonged to the **Paramāra** clan, and it was restored by the *Rāuta* Jāla. The **date**, which is recorded in the first line only in figures is the **amāvāsyā of the month Phālguna, on Wednesday** in the (Vikrama) year **1314**, which corresponds to 6th March, **1258 A.C.** The year was Kārtikādi and the month *amānta*. But as the circle of the unit figure shows a point at the bottom, it is also possible to take the figure as 7, with its curve lost. If it was so intended, the date would correspond to **Wednesday, 7th February, 1257 A.C.**, for the Chaitrādi expired year and for the month beginning with the full moon.

With respect to Sanatkumāra who originally constructed the temple, the inscription says nothing except that he was in the Paramāra clan: but we have no evidence to show that he belonged to any of the royal houses of the Paramāras. However, the inscription is included here in view of its being bilingual and also in that of its provenance, which is in the southern region of the Dūngarpur District which adjoins to that of Rānswādā in Rājasthān. The region as a whole was at one time known as Vāgada where one of the junior branches of the Paramāras held sway, as already seen above.

In respect of the **geographical names** occurring in the inscription, **Chītalī** is the modern village of Chītrī, as already seen above, and **Būdāpata**, occurring in the last line, appears to be the village Bēdoowā, situated about 12 kms. south of Chītrī.

No. 189: PLATE CLXV

VARMĀN STONE INSCRIPTION OF THE TIME OF VIKRAMASIMHA

[Vikrama] Year 1356

THIS inscription is incised on a pillar in the vestibule of the marble-temple dedicated to the Sun-god in the village of **Varmān** in the Sirōhī District of Rājasthān.⁶ The place lies along the main road from Dēvakhētār to Mandār, about five kms. south-west of Rēodhar, the principal town of a *tehsil* in the district. The inscription was first referred to by V. S. Sukthankar in the *Progress Report* of the Western Circle of the Survey, ending 1917, p. 72. It is edited here, for the first time, from the original stone and inked impressions prepared in my presence by Shri N. M. Ganani, Technical Assistant of the Western Circle, who accompanied me in the tour.

The inscription, which is in a good state of preservation, contains six lines, the last of which is about three-fourth in length of the others. The writing covers a space measuring 25 cms. broad by 16 cms. high. The average size of the letters is about 2 cms. The **characters** are Nāgarī and the **language** is Sanskrit. As regards **orthography**, medial *ē* is indicated by both, the *śivā-mātrā* and the *prishṭha-mātrā* e.g., in *Sōmē*, ll. 1-2: *Jyēshṭha* is spelt as *yēshṭha*, in l. 1, *śimha* as *śimha* in l. 3, and the influence of local element is visible in the last three lines.

The inscription refers itself to the auspicious and victorious reign of the illustrious **Vikramasimha** who is called here as belonging to the family of *Muhārāja* (*Muhārāja-kula*). The **object** is not clearly mentioned, though it appears to record some donation made to the temple, or, what is more likely, some repairs made to it, by Lalatādēvī, which name has probably to be restored to Lalitādēvī, the wife of Chīchāi, or Chāchiga, about whom nothing is known from this or from any other record. This portion, which contains two abbreviations in l. 4, cannot be satisfactorily made out. The inscription also appears to be incomplete in the end.

The inscription begins with the date, which is the **fifth of the dark half of Jyēshṭha** of the (Vikrama) year **1356**, given in figures only, on a **Monday**. The date regularly corresponds to **9th May, 1300 A.C.**, taking the year as Southern Vikrama, *expired*, and the month beginning with the full-moon.

The record is silent about the name of the family to which Vikramasimha belonged, nor

¹ The sign of *visarga* has disappeared, leaving traces. The letter that preceds this sign is deformed, also appearing as *m* or *lha*.

² That is, *Rāṭhā*.

³ The reading of the first *akshara* in this line is not certain, the second is indistinct, and the third one has a vertical stroke on either side, appearing as the sign of either a *prishṭha-mātrā*, or of *ā*. Thus the reading of the first four letters in this line is uncertain.

⁴ This *akshara*, which may have been intended to be *Om*, as it appears also, is redundant.

⁵ This *akshara* also appears to have attached to it a *mātrā*, which was probably subsequently erased, but the sign is still there.

⁶ For the other inscription from the same place, see No. 61.

does it say anything about his pedigree. But from the provenance of the record it is not unlikely that he may have been a successor (and probably a son) of the Paramāra king Pratāpasimha mentioned in the preceding inscription which was dated in V.S. 1344 or 1285-86 A.C. and which comes from a place (Girvaḍ) which is only 20 kms. to its south.

The preceding inscription which we have just referred to, mentions Pratāpasimha, a brave king who relieved his kingdom from Jaitrakarna who was, as we have already seen, the Guhila king whose known dates range between 1215 and 1255 A.C. And in view of this, it would appear rather curious that Vikramasimha, who was his successor, as we have presumed here, is mentioned in the present record not with any reigning title but only as belonging to the family of a *Mahārāja* or *Mahārājakula*, i.e., *Mahārāṣṭra*, which is a lower title¹; and this may go to indicate that his kingdom, too, may have been circumscribed about this time. The Sūndhā stone inscription of 1263 A.C. states that Chāchigadēva of Jālōr (c. 1255-1285 A.C.) "enjoyed the fall of the tremulous Pātuka"² who has been correctly identified with Pratāpasimha, the Paramāra ruler of Ābū.³ From his inscriptions found in the areas of Jālōr, Sirōhī and Mēwād, Chāchiga also appears to have made further conquests in these regions⁴ adding to the dominions left to him by his father Udayasimha, even in the turbulent days when Nāsiruddīn Mahmūd and Balban were invading parts of Rājasthān, and his zest of conquest is also well known from his inscription of V.S. 1330 or 1274 A.C. found at Barloot,⁵ which is only about 16 kms. from Sirōhī, to its north-west, and situated about 50 kms. north of Girvaḍ, where the preceding inscription was found. In view of this, Vikramasimha, who may have been the last ruler of the house, appears to have lost some of his territories to the Chāhamānas, who were gradually extending their conquests in this direction in consequence of the pressure caused on them by the armies of Alauddīn Khiljī from 1310 to 1314 A.C.⁶

The only geographical name appearing in the inscription is V(B)rahmāna in L 2, which may undoubtedly be identified with Varmān where the inscription was found and which is the corrupt form of Brahmānḍa, as already seen above.⁷

- 6 णस्वामिकरा[य ?]¹² तं¹³.....

¹ This title was also borne by some other kings, e.g. Sūmasimha, son of Dhāravarsha of this house, Udayasimha and his son Chāchigadēva of the Chāhamāna house and some of the kings of the Guhila dynasty, and it is taken to have been probably a religious rather than a political title somehow connected with the *Rāwals*. See *A. S. I. R.*, W. C., 1907-08, pp. 38 f.

² *Ep. Ind.*, Vol. IX, pp. 74 ff.; text, v. 30.

³ *E. C. D.*, p. 156.

⁴ The Sōnpur and Sūndhā inscriptions come from Sirōhī and the Karhēḍ inscription from Mēwād.

⁵ See *Ep. Ind.*, Vol. XXXVI, pp. 58 ff.

⁶ From Nainsi's account it is rightly concluded that the Chauhan conquered Ābū from the Paramāras. See *E. C. D.*, p. 176.

⁷ See No. 61, above.

⁸ From the original and inked stampages.

⁹ Expressed by a symbol which is partly visible.

¹⁰ This and the following abbreviations I am unable to make out. The reading of this letter too is doubtful and the horizontal stroke of the *mātrā* is joined to the letter, as in the case of *dhā*.

¹¹ It is impossible to say whether Chūchāī was a royal personage or a private individual. It is equally impossible to say whether the word व्र(ब्र) has to be restored to *bhāryā*; in that case, however, the name that follows has also to be restored to Lalitādēvi, i.e., Lalitādēyī.

¹² The upper part of the loop of the subscript of *ma* is faintly visible.

¹³ This portion is corrupt. Before the last *akṣara*, appears a sign resembling a crescent with that of *anusāra* above; and the inscription is incomplete.

No. 190 ; PLATE CLXVI

DHUBĒLĀ MUSEUM STONE INSCRIPTION OF THE TIME OF MADANAVARMAN

[Vikrama] Year 1203

THIS inscription was very briefly noticed by N.P. Chakravarti in the *Annual Report* of the Archaeological Survey of India, 1935-36, p. 94. As he stated therein, he found it "lying in the compound of the Dewan's house at **Chhatarpur**, the principal town of a State of the same name and now the headquarters of a district in Madhya Pradesh. Some time subsequently, it was removed to the Museum at **DhubĒlā**, an adjoining village, where it is now exhibited.¹ The record was edited by B.C. Jain, Deputy Director of Archaeology and Museums in Madhya Pradesh, in the *Journal* of the M.P. Historical Association, No. VI (1968), p. 44. The same scholar also favoured me with a rubbing, from which, and also from a photograph which I owe to the Chief Epigraphist, Archaeological Survey of India, the inscription is edited here.

The record is incised on the pedestal of a black stone statue representing Śāntinātha, the sixteenth Jaina Tīrthāṅkara. The figure, which is in the *kāyōtsarga* posture, measures 150 cms. by 56 cms. The inscription consists of four lines of writing, measuring 28.5 cms. wide by 8 cms. high. It is in a perfect state of preservation. The writing shows slovenliness. The average size of the letters ranges between .8 and 1 cm.

The **alphabet** is Nāgarī. The letter *dh* has developed a horn on its left limb, as in *sādhu*, l. 1; the *mātrā* of long *ū* is marked so as to appear a subscript *t*, as in *pūrvva* in the same line; and the form of *ch* is distinct from that of *v*, as in *cha* in l. 1, and *varma* in line 4.

The **language** is Sanskrit, but the names in the last line are all without any case-ending. The record has two verses in the *Anuṣṭubh* metre, followed by a portion in prose, giving the date along with some other details. The **orthographical** peculiarities are that the consonant following *r* is reduplicated, as in *dharmma*, l. 1; the dental sibilant is put for the palatal except in one clear instance, *śrēṣṭha* in l. 2; and the *prishṭha-mātrās* are occasionally used.

The inscription refers itself to the reign of the illustrious **Madanavarman**, whose dynasty and the royal titles are not mentioned in it, but he appears to be doubtless the homonymous king belonging to the **ChandĒlla house of JĒjākabhukti**. The **object** of the record is to show the installation of the statue of Jinōttama (Śāntinātha), by Lakṣmīdhara, the son of Hariśchandra,² whose predecessors are mentioned in it. The names are all without any historical interest. We are further told that the image was regularly worshipped by his successors.

The **date** is given in the last line, as **Samvat 1293, Phā (Phālguna) sudi 9th Monday**, which corresponds to the **10th February, 1147 A.C.**³ It is an intermediate date for the reign of Madanavarman who is known to have occupied the ChandĒlla throne from 1125 to 1168 A.C.

The inscription is sectarian and devoid of any historical interest. It does not mention any geographical name. It appears to have originally belonged to **Ajaygadh**, one of the strongholds of the ChandĒllas.

¹ Museum Register, No. 24.

² This conclusion is probable and not certain. The language of the inscription is faulty and it cannot clearly be made out as to who really installed the image.

³ Chakravarti read *vadi*, but the first of these letters is clearly *su* in the photograph and also in the rubbing.

⁴ On Monday, the ninth *tithi* commenced at .04 moment of the day, after mean sunrise. The year was Kārtikādi Vikrama, expired.

No. 191 : PLATE CLXVII

AJAYGAḬH STONE INSCRIPTION OF THE TIME OF TRAILŌKYAVARMAN

[Vikrama] Year 1269

THIS inscription was found by Alexander Cunningham at **AjaygaḬh**, in the working season of 1883-84, and he transcribed its portion containing the date and published the same with his comments in the *Archaeological Survey of India Reports*, Vol. XXI, for the same year, on p. 50, with Plate xii-D. From the same Plate it is edited here.

The record consists of six complete lines. It has extremely suffered from weather, and consequently nothing except the portion containing the date and the name of the king in the beginning, is legible, besides a few letters here and there. The dimensions of the writing are not recorded.

The **alphabet** is Nāgarī of the 13th century A.C., to which the record belongs. The **language** is Sanskrit, and the inscription is all in prose. By way of **orthography**, nothing is noteworthy except that the letters *ra* and *va* are almost similar in form, for which, see *vijaya-rājya*, in 1. 2.

The inscription refers itself to the victorious reign of the illustrious king **Trailōkyavarman**, who, from its provenance, can be no other than the Chandēlla ruler, the son of Paramardin and three of whose inscriptions have been edited above.¹¹ The **object** of the record cannot be made out from its mutilated nature. As to its **date** the day is obliterated, but the month is given as **Phālguna-vadi of the(Vikrama) year 1269**. The **week-day** is mentioned as **Saturday**. From the data available, I agree with Cunningham in concluding that the date must be either

¹ From a photograph supplied by the Chief Epigraphist.

² Expressed by a symbol.

³ It seems that *Dēvasvāmi* was a name and he was a younger brother of Svāmi. If so, the change of *svām* to *svāmi* is not necessary. The construction here is faulty and nothing can be definitely said.

⁴ This foot is metrically defective as it has one *akshara* more than necessary. Singular is also wrongly used instead of dual.

⁵ This word is wrongly put in the accusative instead of the nominative, as required by the construction.

⁶ Two *aksharas* are indistinct here.

⁷ The reading of the *akshara* in the brackets is not certain and the name of the family cannot be known definitely.

⁸ All the names in this line are without any case-ending, which is nominative.

⁹ I am unable to explain the meaning of this expression.

¹⁰ This is, *Phālguna*.

¹¹ Nos. 141-143.

2nd or 9th of the month, dark half, Saturday, the latter being equivalent to the 16th of February, 1213 A.C. However, it may be remarked here that according to the scheme of the current and expired year and also that of the *pūrṇimānta* and *amānta* month, the number of alternatives, with Saturday, may be multiplied, and in view of this, we cannot be definite on this point.

The latest known year of Trailōkyavarman's reign is supplied by the Dhurēti copper-plate, dated in the Kalachuri year 967, equivalent to 1212 A.C. The month given in it corresponds to May;¹ and the importance of the present record is in that it furnishes for the ruler a date which is above 8-9 months later.² It is also the only record of this king's reign available so far at Ajaygadh itself.

No. 192; PLATE CLXVIII

AJAYGADH STONE IMAGE INSCRIPTION OF THE TIME OF VĪRAVARMAN

Vikrama Year 1335

THIS inscription was brought to light by N. P. Chakravarti by mentioning its purpose and date, in the *Annual Report of the Archaeological Survey of India*, under Epigraphy, for 1935-36, p. 92. It is edited here for the first time from a photograph kindly supplied to me, at my request, by Shri B. C. Jain, Deputy Director of Archaeology in the State of Madhya Pradesh.

The record is incised, as we learn from Chakravarti's report, on the pedestal of a colossal image of Sāntinātha in a ruined Jaina temple, to the west of the Ajaypāl tank, on the fort of Ajaygadh in the Pannā District of the Vindhya Division of Madhya Pradesh. The inscribed portion measures about fifty cms. broad by nine cms. high. The size of the letters gradually decreases in each of the lines, which are four in all, till in the latter half of the last line it is almost half of those employed in the first line. The preservation of the record is satisfactory, except that four letters at the end of l. 2 and three at the end of l. 3 are totally lost.

The **script** is Nāgarī of the thirteenth century to which the record belongs. Worth noting from the **palaeographical** point of view are the somewhat similar forms of *ch* and *v*, as in *cha* and *vāṇi*, both in l. 3, and the slightly varying bend of the horn of *dh*, as in *sādhu* and *madhurā*, in ll. 2 and 3 respectively. The consonant *s* is occasionally written so as to resemble *m*, e.g., in *Māsala* and *sādhu*, both in l. 2.

The **language** is Sanskrit; the inscription is all in prose, excepting two verses in the concluding portion.

The **orthography** calls for no remark, except that the class consonant preceded by *r* is

¹ See No. 143, above.

² For a still later date for the king, see No. 202, below, of v. 1283.

³ From plate in Cunningham's *A. S. I. R.*, Vol. XXI.

⁴ Expressed by a symbol.

⁵ The first of these figures is broken, but the reading is absolutely certain.

⁶ The figure for the day is obliterated.

⁷ The rest of the inscription is obliterated.

doubled, as in *varmma* and *-durggē*, both in l. 1; *Yasō-* in l. 2 is written as *Jasō-*, and *yasya* in l. 4, as *jasya*, and that the proper names used in l. 2 are without the case-endings and are separated by a *danḍa*.

The inscription refers itself to the reign of the king **Viravarmadēva**, who, from the provenance of the record, can safely be identified with the Chandēlla king of that name, the son and successor of Trailōkyavarman, and whose earliest and latest records bear the years V. 1311 and 1337 respectively.¹ The purpose of the record is to register the installation of an image of Sāntinātha (evidently the one on the pedestal of which it was found), the sixteenth of the Jaina pontiffs, by the *sādhu Sōḍhala*, the son of *sādhu Sīdhala* (also called Sīdha below in the verse) and Dēvaki, residing at the Jayapura-*durgga* and belonging to the *Grahapati* family. The inscription was dated on **Monday, the thirteenth of the bright half of Chaitra of the (Vikrama) year 1335**. The corresponding Christian date, as calculated by Chakravarti, is **27th March, 1279 A.C.** It is regular. The year was *Kārttikādi* (Southern Vikrama) *expired*.

The record is of sectarian interest and gives only an intermediate date of the Chandēlla king Viravarman, who is known to have occupied the throne from c. 1247 to 1286 A.C. Beginning with the auspicious symbol for *Siddham*, which is followed by the customary adoration to *Vītarāga*, it mentions the setting up of the image in the temple on the fort, by Sōḍhala, in the year which we have seen above. Sōḍhala is described in it as devoted to pleasing others by doing good to them. His speech was sweet and his body was ever pure in consequence of paying homage to the feet of Jina. He had three brothers of the names of Dāmōdara, Gaṅgādhara and Jasōdhara, that is, Yaśōdhara, and a son called Nānadēva.

The only point of interest that the inscription contains is to show the prosperity of the *Grahapati* family in the Chandēlla kingdom, since we know that one of its members installed a Jaina image at Khajurāhō in V. 1215 or 1157-58 and another at Ahār in V. 1237 or 1180 A.C.,² which also speak of the continuity of the family.

The only **geographical name** mentioned in the record is **Jayapura**, which is Ajayagadh, as we have often seen.

³ From a photograph.

⁴ Expressed by a symbol.

⁵ The *akshara* in brackets shows an unnecessary curve above.

⁶ This and the other proper names below are all without case-ending but separated by a *danḍa*.

⁷ The bracketed letters are all lost. Rather read एते नित्यं, . . .

⁸ The *akshara* in brackets is formed as *va* by a wrong stroke of the chisel, as some others also; which are not noted separately.

⁹ The same as above, in the forms of *trya* and *tra*.

¹⁰ The correct word required here is प्रतिष्ठितः, which would not suit the metre.

¹¹ I am not certain about the closing sign in the end.

AJAYGADH STONE INSCRIPTION OF THE TIME OF VIRAVARMAN, VIKRAMA 1335.

From Photograph

AJAYGADH STONE INSCRIPTION OF THE TIME OF BHOJAVARMAN, VIKRAMA 1344

Scale : Nine-fourteenth

No. 193 ; PLATE CLXIX

AJAYGAḌH ROCK INSCRIPTION (OF THE TIME OF BHŌJAVARMAN)

[Vikrama] Year 1344

THIS inscription was discovered by N. P. Chakravarti, Government Epigraphist. A brief notice of it appeared in the *Annual Report of the Archaeological Survey of India*, 1930-34, p. 92. It is edited here, for the first time, from an inked estampage kindly supplied by the Chief Epigraphist.

The record is incised on a rock to the right side of the pedestal of a group of sculptures carved on the rock of the so-called Ashta Shakti images near the Tarhāon gate in the fort at **Ajaygaḍh** in the Pannā District of the Vindhya region of Madhya Pradesh. It consists of only one line which is very long, measuring 165 cms. It is carefully engraved and is in a fair state of preservation. The average size of the letters ranges between 2.5 and 3 cms.

The **characters** are of the Nāgarī alphabet resembling those of the stone inscriptions of the time of Bhōjavarman¹. The top-strokes of letters occasionally show either a crescent or a slanting stroke at the beginning, as in the Déogadh stone inscription of Kīrtivarman.² The vowels ī and ē show the same peculiarities as in them ; cf. *Īvara* and *ētāh* ; the subscript r is written in its complete form with the preceding letter half drawn, e.g., in *pratimā* ; and lastly, the conjunct gg is engraved as gn, as in *durgga*, as we find in several inscriptions from the region. The **language** is Sanskrit and the record is in prose throughout. The **orthography** does not call for any special remark.

The inscription opens with an obeisance to Kēdāra, i.e., Śiva. Following this, it records that one Suhaḍadēva caused to be made (carved) the images of Kēdāra and Pārvatī, Vṛishabha, Kṛishnā, Ambikā, Tārā, Tripurā, Kāmākshyā, Durgā, Harasiddhi, Aindri, Chāmunḍā, Kālikā, and again Īvara and Pārvatī. The images, as already noted by Chakravarti, are all found in the neighbourhood on the rock and most of them also bear separate labels.

The inscription mentions the pedigree of Suhaḍadēva. It tells us that he was the son of *Thakkura Ashau*, the grandson of the *Thakkura Vāsē* and the great-grandson of the *Thakkura Vidana*, who was in charge of the Jayapura-durgā, along with its gate-house (*pratōḷī*). The same genealogy of Suhaḍadēva is also found in the undated Ajaygaḍh stone inscription of the time of Bhōjavarman ;³ and thus he is undoubtedly the same person as Subhata called therein, and the Superintendent of the Treasury and the Chief Minister of the king.

The **date** of the inscription, which is recorded in the end, is (V.) S. 1344, in the month of **Vaiśākha, in its dark half**. The figure for the week-day is not clear but we are also told that it was a **Saturday**. And presuming the figure for the date to be nine, as it resembles the unit figure of the year in line 32 of No. 114, above, the date would regularly correspond to Saturday, 27th March, 1288 A.C., for the Kārttikādi Vikrama expired and the *pūrṇimānta* month.

The name of the king is not mentioned in the present record, but it definitely belongs to the time of the same Chandēlla king whose latest known date is V.S. 1346,⁴ which is also the earliest known date of his successor Hammīravarman, as we know from the latter's Charkhārī grant.⁵

The inscription closes with the expression *Subham = astu*.

On the basis of the dates of both these rulers, Chakravarti guesses that Bhōjavarman was not a usurper, as conjectured by Hiralal, but that he had only a short reign of 3 or 4 years, and possibly he was a younger brother of Vīravarman and reigned only during the minority of Hammīravarman. And this is probably the reason why his name has been omitted in the

¹ Nos. 149-150, above.

² No. 111, above.

³ No. 150, vv. 28-30.

⁴ *Ep. Ind.*, Vol. XX, p. 135.

⁵ No. 151.

Charkhārī grant of the latter. Or it may be, as we have already suggested while editing this grant, that Bhōjavarman's name may have been omitted in it, as he may have been a collateral of Hammīravarman and possibly another son of Viravarman.¹ Neither of these views can be finalised unless we get some fresh material to enlighten us on the point.

There is only one **geographical name** mentioned in the inscription. It is **Jayapura-durga**, which is, as we have seen above, the fort of Ajaygaḥ where the inscription was found.

No. 194; PLATE CLXX

PANNĀ STONE PEDESTAL INSCRIPTION

[Vikrama] Year 1866

THIS inscription was first brought to notice by N. P. Chakravarti, Government Epigraphist, who published a short abstract of its contents in the *Annual Report of the Archaeological Survey of India, 1930-34*, p. 94. It is edited here for the first time from an inked impression kindly supplied by the Chief Epigraphist.

The inscription is incised below a group of images, carved on a block of stone, which Chakravarti found lying near the waterfall in the old part of the town of **Pannā**, the headquarters of a district of that name in Madhya Pradesh. The record falls into two parts, called here **A** and **B**. Part **A**, which is on the left-hand side, covers a space measuring 33 cms. broad by 6.5 cms. high; and part **B**, which is on the right-hand side, measures 92 cms. broad by 12 cms. high. The former contains 2 lines of writing, with nine or ten **aksharas** in the end of the third line, and the latter 3 lines, the last of which is about half in length of the other two. The average size of the letters is about 2.5 and 3 cms., respectively.

The inscription is very carelessly written, and it has also suffered considerably on both the sides; but much of it can be read with confidence, except a few letters which have altogether disappeared or have left only a few traces. The **characters** belong to the Nāgarī alphabet of about the beginning of the fourteenth century A.C. The **language** is Sanskrit and the record is throughout in prose. The **orthography** does not call for any special notice.

The **object** of the inscription is to record the installation of a group of images by Subhāḍadēva, the son of Ashau and the grandson of Vāsē, born in the Vāstavya Kāyastha family,

¹ See above, No. 151.

² From an impression, which is No. B-192/69-70 of *A.R. of Ind. Ep.*

³ The sign of *mātrā* of the first *akshara* of the name is detached from it.

⁴ This and the names that follow are all without case-endings, which can easily be supplied.

⁵ The consonants of this and the preceding letter are conjunct; but I am unable to make them out from the impression. The reading of both these letters is uncertain.

⁶ In the transcript the names are separated by me with horizontal strokes for facility of reading.

⁷ The *mātrā* is denoted by a curve above.

⁸ A flourish above the first of these letters denoting the *mātrā* is to be seen.

sprung from Kāśyapa and belonging to (in charge of) the gateways of Jayapura and Kālañjara. The names of Suhaḍadēva and his wife Dēvalladēvī are also written in the part on the left-hand side. The inscription is dated in the (Vikrama) year 1366, on Thursday, the 10th of the bright half of Śrāvāṇa, which, as calculated by Chakravartī, is equivalent to 17th July, 1309 A.D. Thus we know that these images were carved nearly 22 years later than those mentioned in the preceding and the following inscriptions which are dated in 1344 and 1348 A.C., respectively, by the same Suhaḍadēva and his wife Dēvalladēvī, about whom we have said in our editions of them.

The block on which the present inscription was found must have originally belonged to Ajaygaḍh, as is indicated by its contents, and seems to have been brought to Pannā, some time in the past. The record does not give the name of any reigning king; but from the year mentioned in it, we may well conclude that it undoubtedly belonged to the time of the Chandēlla king Hammīravarman who was on the throne from 1289-90 to about 1309 A.C. when the Muslim armies were overrunning Bundelkhaṇḍ. Thus it is clear from the present record that though a great part of the Chandēlla territories was then occupied by Alā-ud-dīn, at least the fort of Ajaygaḍh was in possession of the Chandēlla Hammīravarman in whose reign the images were engraved.

The geographical places mentioned in the inscription, namely, Kālañjara and Jayapura, have already been identified. The latter of these is Ajaygaḍh itself.

¹ From an impression which is No. C-1996-97 of A.R., Ind. Ep., 1963-64.

² The reading of this *akshara* is absolutely certain. Whether the vertical after it is a part of a letter is not known.

³ The letter lost here is to be restored as णः. Read देव्यः and preceding word as पत्न्या.

⁴ Six syllables are lost here. They should be taken as showing the names of some deities.

⁵ The lost letters may have been कारिताः followed by a punctuation mark.

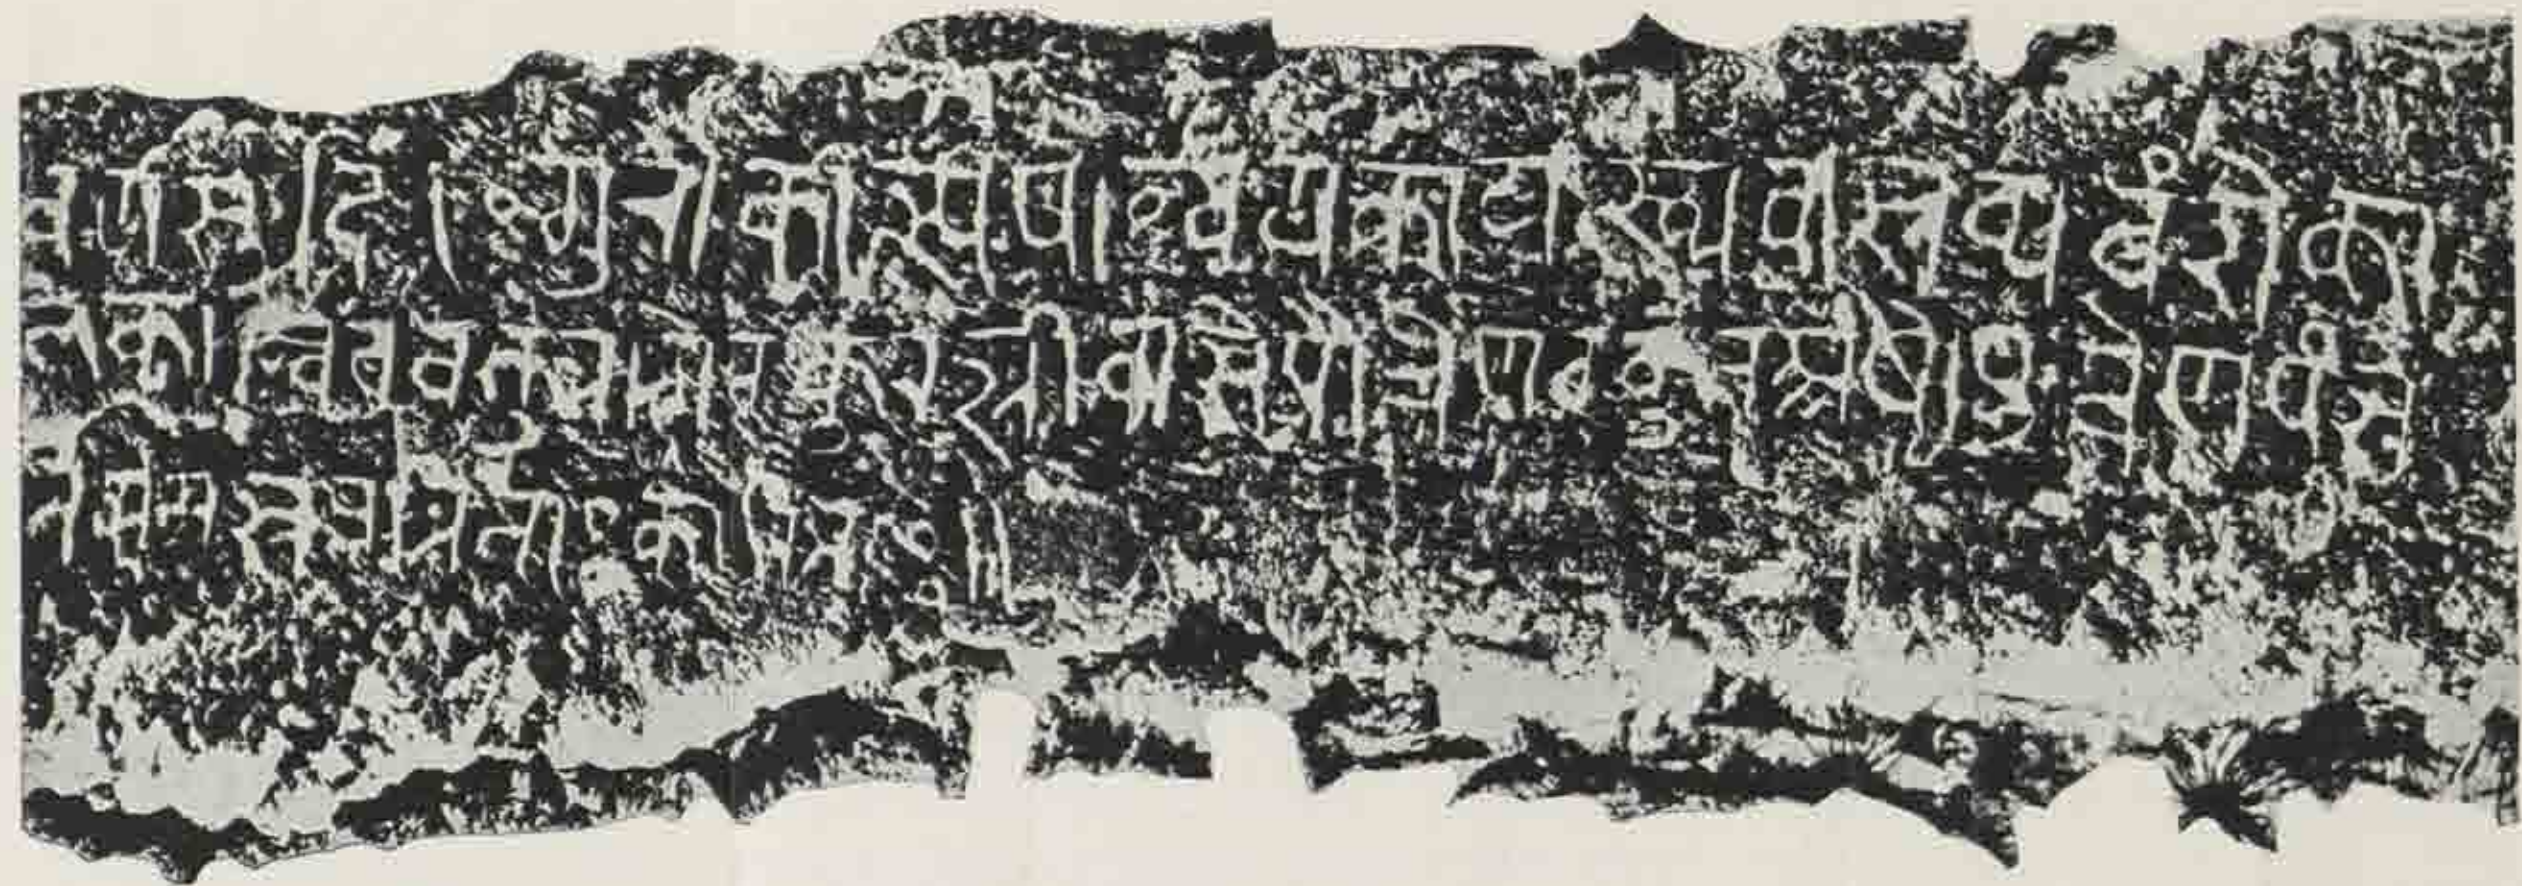

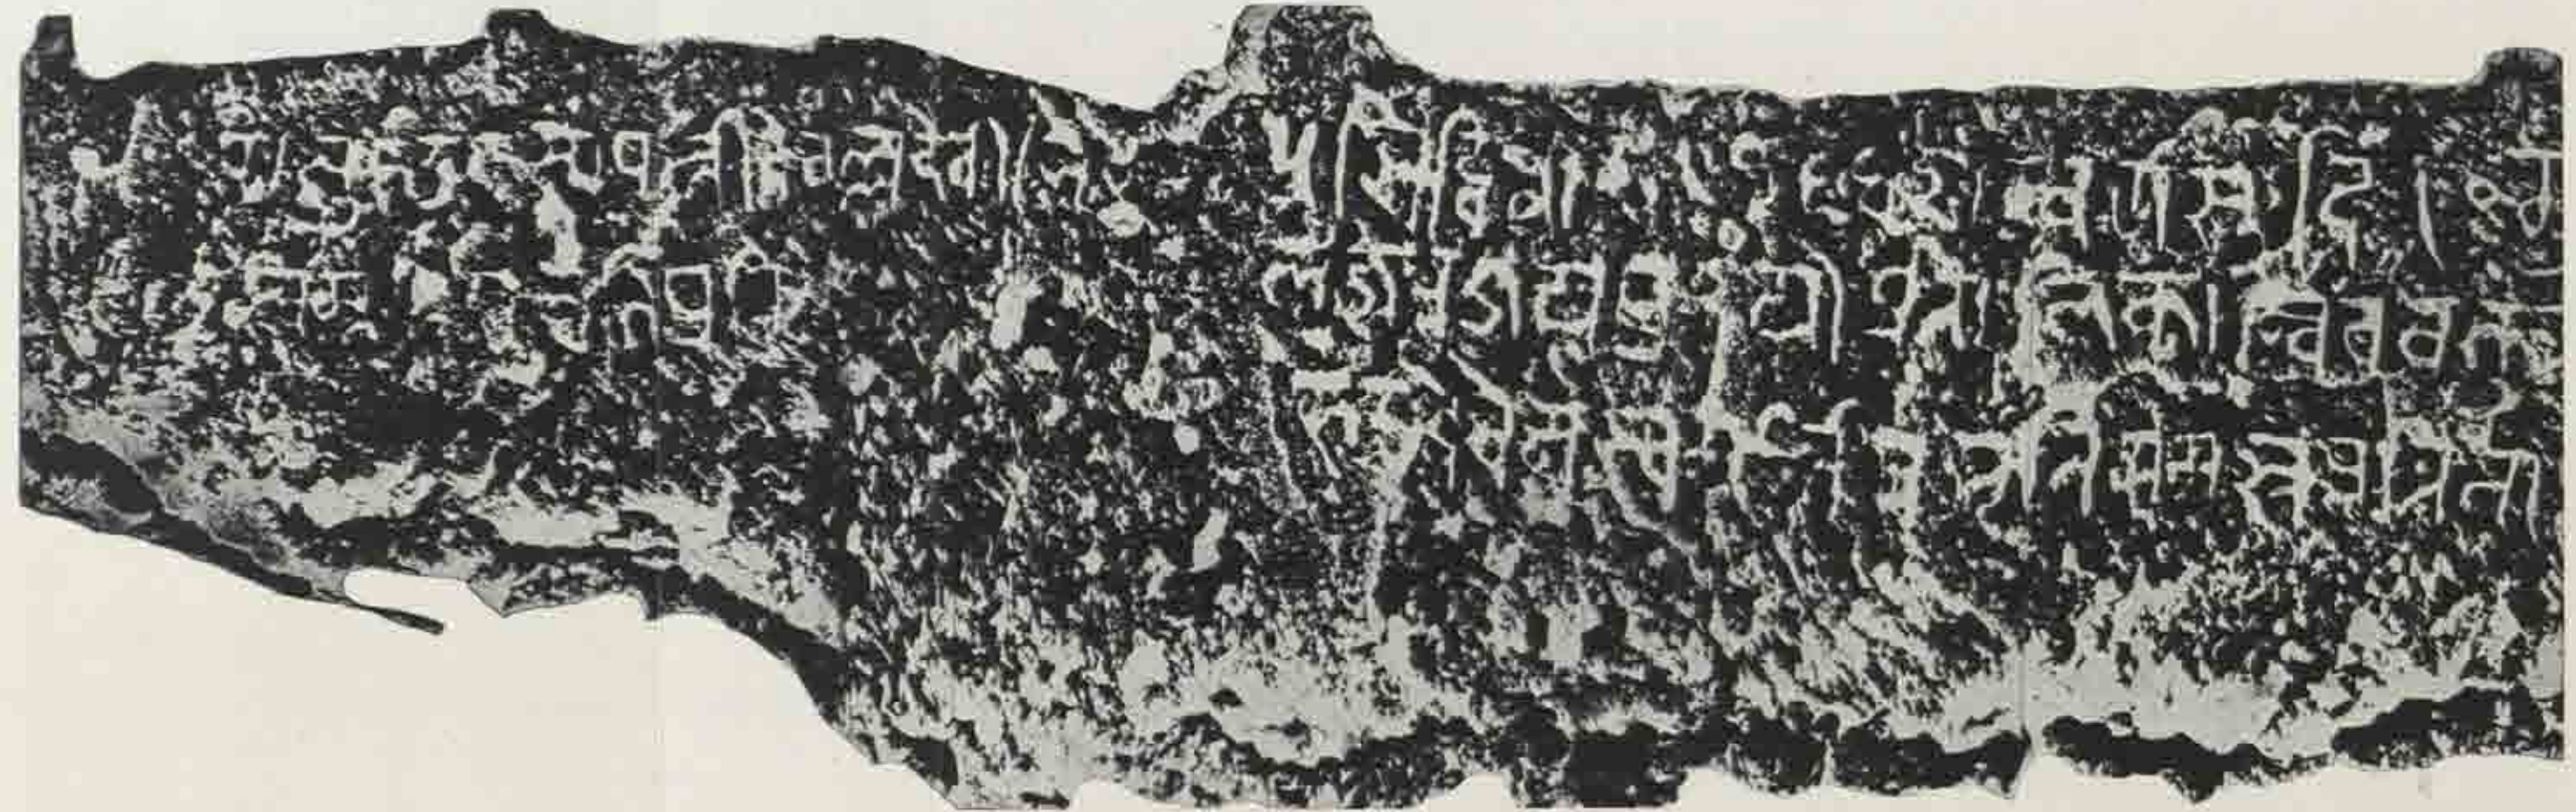

⁶ Denoted by a symbol.

⁷ Four *aksharas* are indistinct here.

⁸ Five *aksharas* are lost here, leaving only traces.

Better read the first of these words separately, both in the nominative plural.

PANNA STONE PEDESTAL INSCRIPTION, VIKRAMA 1366

Scale : One-half

AJAYGAḌH ROCK INSCRIPTION (OF THE TIME OF BHOJAVARMAN)

[Vikrama] Year 134X

THIS inscription, like the previous one, was discovered by N. P. Chakravarti, Government Epigraphist for India, and was briefly noticed by him in the *Annual Report of the Archaeological Survey of India, 1930-34*, p. 92. It is still unpublished. It is edited here from an impression which I owe to the kindness of the Chief Epigraphist.

The inscription is engraved on the rock to the left side of the pedestal of a group of sculptures carved on another, incised with the so-called Ashta Śakti images near the Tarhaoni gate in the fort of **Ajaygaḍh**, in the Pannā District of Madhya Pradesh. The record consists of one line, which is unusually long and measures 200 cms. It is all in prose. The letters are crudely engraved, unlike those of the preceding one, and have also suffered from exposure to weather; but with the exception of 2 or 3, they can be restored, of course, with the help of the other epigraphs near it. The average size of the letters is 3 cms., excluding the flourishes of the *mātrās* above.

The **characters** are Nāgarī. Some of the letters, like those of the previous one, show either a knot or a curve at the beginning of the top-stroke, and the letter *ē* in *ētāh* appears as a triangle ending in a vertical strike. The subscript *r* is written so as to appear as *l*, e.g., in *pratimā*.

The **language** is Sanskrit, which is incorrect; and the whole inscription is in prose. The *prishtha-mātrās* are generally used, and sometimes they appear side by side with *ardhua-mātrās* as in *Dēvalla dēvī*.

The inscription does not mention the name of any king. Its **object** is to record that the images of Surabhi, Śiva, Gaurī and some other deities were caused to be made (carved) by *Dēvalladēvī*, the daughter of the *Thakkura* *Dēvadhara* and the wife of one *Subhadadēva* of the *Vāstavya Kāyastha* family. *Subhadadēva* was the son of the *Thakkura* *Ashau*, grandson of the *Thakkura* *Vāṣe* and the great-grandson of the *Thakkura* *Vīdana*, who was in charge of the *Jayapura-durga* along with its gate-way (*pratōlīhā*).

The **year** of the record is mentioned in the end as the (Vikrama) **Year 134x**, without the other details. The unit figure of the year is not clear, though from the long vertical stroke it appears to have been either 1 or 5; and taking the year as 1345, the Christian equivalent would be **1286**, when *Bhōjavarma*n was on the *Chandēlla* throne.

Subhaḍa of the present inscription is the same as mentioned in the previous record as *Subhata*, who was the Treasury officer and Chief Minister of the king, as we have already seen.¹ The genealogy recorded in this inscription is also the same as known to us.

The additional information that the present record supplies is that *Subhaḍa's* wife was *Dēvalladēvī*, the daughter of the *Thakkura* *Dēvadhara*.

Subhaḍa and his wife *Dēvalladēvī* also caused to be made some other images, as we understand from still another inscription engraved below a group of them, on a block of stone, discovered by Chakravarti in his tour, lying near the water-fall at Pannā.² The record, as he informs us, gives the same genealogy of *Subhaḍa*, along with the name of his wife, and was dated **on Thursday, the bright half of Śrāvaṇa of the (Vikrama) year 1366**, which is equivalent to **17th July, 1309 A.C.**

The block appears to have originally belonged to *Ajaygaḍh*; and the inscription shows that the images on it were carved nearly 22 years later than those mentioned in the present inscription and in the days when a great part of *Bundelkhand* was under the Muslim ruler *Alā-ud-dīn*.

Jayapura-durga mentioned in the inscription is, as we have already seen, is the fort of *Ajaygaḍh*.

No. 196 : PLATE CLXXII

RĀSIN STONE INSCRIPTION OF THE TIME OF PARAMARDIN

[Vikrama] Year 1466

RASIN, or Rāsin, is an old town situated on the high road leading from Bāndā to Kālāñjar, 45 kms. distant from the former and about 30 kms. from the latter. The antiquities found at this place go to show that it must have been a place of considerable importance in former times.⁶ The present inscription was noticed here by Alexander Cunningham, in his visit to the town in 1884, on a temple of goddess, locally known as Chandā Māhēsvarī and situated in a dense jungle on the top of a hill, about a mile to the east of the town. The record was published by the same scholar, in his *Archaeological Survey of India Reports*, Vol. XXI (1883-1885), p. 18, with a translation and a photo-lithograph, Plate No. XIV. From the same plate it is edited here.

The inscription consists of six short lines of equal length. The dimensions of the writing are not recorded, but it can be stated here that each of the lines has eight *akṣaras* in it. The photo-lithograph shows that it was well preserved when seen by Cunningham. The **alphabet** in which it is written is Nāgarī of the fifteenth century. The **language** is Sanskrit, which is almost correct; and except a verse in the *Anuṣṭubh* metre in the end, it is all in prose.

The epigraph is a pilgrim's record, and its aim is to register the name of one Jaipāla, the son of Surapāla, who visited the place, apparently for paying homage to the deity enshrined in the temple where it is engraved. The **date** is given in figure only: it is the **seventh day of the bright half of Chaitra of the (Vikrama) year 1466**, falling on a **Saturday** which, as calculated by Kielhorn, corresponds to **Saturday, 23rd March, 1409 A.C.**⁷

The record begins with the date, as seen above, and then it proceeds to mention a person, without giving his name, who was the king's slave in **Rājavāsini**, the royal residence of **Paramardin**, the lord of the earth, whose slave was Jaipāla. The name of Paramardin is mentioned here without that of his family and also without any of his ancestors; and even his royal titles are missing. And for the reason that the record was found not very far from Kālāñjar, he is likely to be identified with the homonymous Chandella king, the grandson of

¹ From an impression which is Chief Epigraphist's *A. R.*, No. B-191/69-70.

² The *danda* may have been preceded by a symbol which is now lost.

³ Read either *Pāṇinīya* or supply *ṭasya* after it. The names are all given without case-endings and there are some more grammatical errors throughout the record. They are not shown here and can easily be known.

⁴ The letters in the brackets are all mostly lost leaving only parts of them. The reading is probable in view of the sign of *waṭi* visible on the first of the letters. The word has been restored from Chakravarti's writing.

⁵ The reading is probable but not certain. I am unable to explain the use of the following word *slā*.

⁶ The unit figure which appears to have been later on corrected, may possibly have been 4 or 5, the vertical stroke of which is clear.

⁷ See Cunningham's *A. S. I. R.*, Vol. XXI, pp. 15 ff.

⁸ See *Ind. Ant.*, Vol. XIX, p. 355, No. 156. The year was the Northern Vikrama, expired.

Madanavarman. But since the last year of this ruler is well known to be 1202 A.C., and we also know that after the reign of Hammīravarmaṇ the region was conquered by the Moham-medans in *circa* 1308 and in view of the date of the present record, we have to presume that there was a second king of the name Paramardīn, whose existence we do not know from any other source. This view, however, appears to be less possible, in view of the fact that the region was then annexed by Alā-ud-dīn. Thus this point remains uncertain till we get fresh material to solve it.

Rājāvāsīnī, the place mentioned as the king's residence, is Rāsin itself, where the record was found.

No. 197 ; PLATE CLXXIII

MAKĀVAL STONE INSCRIPTION OF THE TIME OF DHĀRĀVARSHA

[Vikrama] Year 1276

THIS inscription was discovered by V. S. Sukthankar, then an Assistant Superintendent in the Archaeological Survey of India, in 1916-17, and its date was noticed by him in the *Progress Report of the Western Circle* for that year, on page 69. It is edited here for the first time from an inked impression supplied by the Superintending Archaeologist of the Western Circle.

The epigraph is incised on the base of a column of stone pertaining to a temple on the western bank of a small tank, about 1 km. north-east of the village of **Makāval**, in the Rēodhar *tehsil* of the Sirōhī District in Rājasthān. The place is about 8 kms. straight south of Rēodhar and about 25 kms. west-northwest of Ābū Road.

The writing is in a sunken panel and covers a space about 19 cms. broad by 18.5 cms. high, and consists of ten lines. It has suffered a good deal owing to exposure. The portion on the left-hand side is almost completely obliterated and only an *akshara* here and another there is now visible; whereas that on the right-hand side, which has suffered less, cannot be completely read. But the record is of interest, as we shall see presently.

^१ From facsimile in *A. J. R.*, Vol. XXI, Pl. XIV.

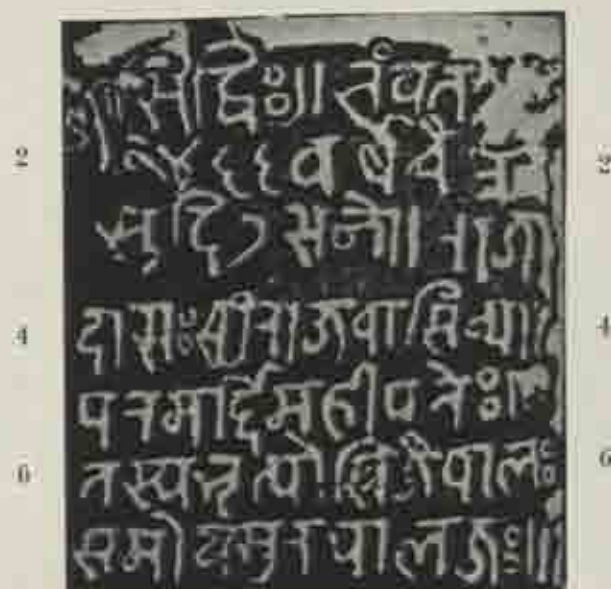

^२ Expressed by a symbol.

^३ This word remains unconnected.

^४ The sign of *anusvara* appears as a vertical stroke.

^५ I am unable to make out the meaning of this

RASIN STONE INSCRIPTION OF THE TIME OF
PARAMARDIN (II?), VIKRAMA 1466

From Facsimile

MAKĀVAL INSCRIPTION OF DHARĀVARSHA, VIKRAMA 1276

Size : Three-fourth

The script is Nāgarī and the record appears to have been in a local dialect. The purport cannot be made out. The inscription refers itself to the reign of the illustrious Dhārāvarsha, whose name is fortunately preserved in l. 4 in it. It is dated, as we read in the beginning of it, on the 3rd day of the bright half of Śrāvaṇa in the (Vikrama) year 1276. The probable equivalents for V. 1276 the surrounding years are:

Northern V. 1276 <i>current</i> :	=	Friday, 27th July, 1218 A.C.
Northern V. 1277 <i>current</i> :	=	Tuesday, 16th July, 1219 A.C.
Northern V. 1277 <i>expired</i> :	=	Saturday, 4th July, 1220 A.C.
Northern V. 1275 <i>expired</i> :	=	Friday, 27th July, 1218 A.C.

None of these equivalents shows the week-day to be a Monday, as mentioned in the inscription; and, in view of the second of these alternatives, which is of course the nearest from the point of view of the week-day, I am inclined to think that the true equivalent seems to be the 15th of July, 1219 A.C., when the third *tithi* commenced on it at .35 of the day and ended at .41 moment of the next day, on the 16th. But since the object of the inscription cannot be made out, I can give no reason why the day should have been joined with the *tithi* which commenced on it.

The importance of the epigraph under study is that it shows the western most limit of the dominions of Dhārāvarsha, evidently the Ābū Paramāra ruler, since it is the only record found so far of his time in the adjoining *tehsil* Rēodhar. The record is also important from the point of view of its date. Before its discovery the last known date of Dhārāvarsha was supplied by the Kāṅṭal inscription dated V.S. 1274 (1216 A.C.)¹ and the epigraph under study extends his reigning period by about three years. The next certain date that we know is V.S. 1277 (1221 A.C.) when his queen Śrīngārādēvī was looking after the administration of his son Sōmasīṃha² whose earliest known date is furnished by the Ābū inscriptions of V.S. 1287 (1230 A.C.)³ Thus we may presume, of course hypothetically, that Dhārāvarsha died some time after July, 1222 A.C. and was succeeded by his son Sōmasīṃha who was a minor at that time and the administration of whose kingdom was conducted by the dowager queen Śrīngārādēvī for about 7-8 years, particularly during the time when the kingdom was threatened by the Sōngirā Chauhāns from the north, as we know from the Bārlūt inscription of V.S. 1283 (1226 A.C.)⁴

The only geographical name appearing in the record is Makāvāla (l. 6), which is evidently the place where the inscribed stone was found.

RĀJPUR COPPER-PLATE CHARTER OF THE PARAMĀRA RAṆADHAVALA

[Vikrama] Years 1148 and 1127

THE present charter is the earliest record of the time of the Paramāra king Naravarman, yet found and issued by his subordinate chief Raṇadhavala whose name is revealed from it for the first time. It is engraved on three copper-plates which were received as a treasure-trove find, in 1958, in the Collectorate at Khargōne in the West Nēmāḍ District of Madhya Pradesh. As far as information is available, the plates were found by a peasant, in course of ploughing his field at Rājpur, the principal town of a *tehsil* in the district; and very recently they were acquired by the Central Museum at Indore. When received, they were considerably corroded, with most of the letters choked with verdigris. With great care they were cleaned by Shri R. S. Garg, the Curator of the Museum, who also deciphered a major part of the record; and finding it important, placed the plates at my disposal for critically editing the inscription, which is done here from the originals, owing my thankfulness to the Curator.

Each of the plates measures 28 cms. broad by 19.5 cms. high, but the height of the third one exceeds that of the other two by .3 cm. Their rims are slightly thickened (.3 cm.), to protect the writing. A small circular hole (dia. 1 cm.) in the middle of the lower border of the first plate and in the upper border of the second and the third, so as to disturb the continuity of the writing, shows that they were held together by a ring, which is not now forthcoming. The total weigh of the plates is 2800 grams. The lower right corner of the third plate is occupied by a roughly-engraved figure of Garuḍa in human form, kneeling and facing left, with folded hands, with letters *Garuḍa*, engraved in Nāgarī, near its face. The figure occupies a space 5 cms. high by 4 cms. broad. The average height of the letters engraved on the plates is 1 cm., except on the third plate which shows letters slightly bigger in size, and sparsely written. The last of the lines consists of the sign manual of the king Naravarman, and the one just before it is in bigger letters which I am unable to make out.

The inscription comprises 56 lines of writing, fourteen of which are inscribed on the inner side of the first plate, fifteen on either side of the second, and twelve on the inner side of the third plate. The engraving is shallow, and thus the letters do not show through on the other side of the plates, which are rather thick. They are slovenly formed, and besides that, a number of them are uncouth in shape; some of them were also distorted by the engraver who committed mistakes of omission and commission in cutting them. For example, *grāma*, the first two syllables in l. 28, are cut as *mnāh*; the consonant of the second *akshara* in *Kauṇḍinya*, l. 26, as *ga*; the second letter in *vaṁśa*, l. 49, as *ra*, by omitting the middle horizontal stroke, and in the same line *pa* is engraved as *sha*, and *ma* as *na*. In this respect, the record shares the peculiarities of the Kadambapadraka grant of Naravarman.¹ Similar expressions appearing in some other charters are no doubt helpful in deciphering a great part of the inscription, but this device fails to vouchsafe the correct reading of names occurring in the record, for example, in l. 27. Besides this, owing to mutilation, the reading of some of the letters remains uncertain, and hence there are a few lacunae in the transcript given below.

The alphabet is Nāgarī, which is regular for the period and locality to which the record belongs. For example, the initial short *i* is formed by placing two loops side by side and subscribed by the sign of short *u*, as in *iti*, l. 24; the letter *k* loses its loop when subscribed by the *mātrā* of short *u*, or *ri*, or by a conjunct; the signs of *ch*, *dha* and *v* are distinct from each other; and the conjunct; *uv* is found as *ll*.

The language is Sanskrit; and except two stanzas in the beginning, two in the middle, and eight in the end, which are all almost the same as generally to be found in the Paramāra charters, the record is in prose throughout. As regards orthography, we may note the identity of the signs of *b* and *v*, the use of the *prishṭha-mātrā* with a very few exceptions, the interchange

¹ Above, No. 34.

of the palatal and the dental sibilants, occasionally ; sometimes doubling the consonant following *r* ; and lastly, a confusion between the formation of a *daṇḍa* with that of a *prishṭha-mātrā* or one of the components of the signs of the secondary *r*, almost all the same as to be found in the contemporary inscriptions. The *anusvāra* is throughout employed for the consonant *m* ; and it is often carved so lightly as to be seen only on the original. Examples of superfluous marks of punctuation are to be found in ll. 25-26 where the names of the donee and his forefathers are engraved. And finally, *mahārūyāh* in l. 4, *sutahattari* in l. 32, and *Vishāika* and *yāyatē*, in ll. 14 and 47, respectively, betray the influence of the local element.

The inscription refers itself to the reign of the illustrious king Naravarmadēva, who meditated on the feet of the illustrious Udayāditya who meditated on the feet of the illustrious Bhōjadēva, who, in his turn, had meditated on the feet of the illustrious Sindhurāja. All these kings are mentioned in the record as endowed with the sovereign titles of *Paramabhaṭṭāraka*, *Mahārājādhirāja* and *Paramēśvara*. The purpose of the inscription is to record the perpetual donation of the village Mahudahā, by the subordinate prince, the *mahāmaṇḍalēśvara* Raṇadhavala, from his own *bhukti*, viz., Madhumati-700, which was also a *pratiṅgarāṇaka* in the *Dakṣiṇa-pathaka* and was bounded on the west by Pāṇḍū(ḷi?)350, lying in the *Pūrṇa-pathaka*. The donee was the *Nāyaka*, Tripāṭhī Mādhalā(va?)śarman, son of Tripāṭhī Vāvana (Vāmana)? and a grandson of Tripāṭhī Pavaṇāha (Pavanāha), and belonging to the Lāḍa community and migrated from the *mahāsthāna* Pañchāura. His *gōtra* was Kaundinya, with the three *pravaras* Kaundinya, Vasishṭha and Maitrāvaruṇī, and he was a student of the Saṇī (?) *sākhā*.

The grant was issued by Raṇadhavala from the Amareśvara *tīrtha*, after bathing in the confluence of the Rēvā and the Kapilā, for the spiritual benefit of his parents and of himself. It is dated in ll. 16-18, both in words and numerical symbols, on the fifteenth tithi of the dark fortnight of Pausha in the (Vikrama) year 1148 on a solar eclipse. Below, in ll. 35-36, there is another date, when the grant was confirmed (or re-issued?) by Naravarman. It is Thursday, the seventh day of Chaitra of 1177, expressed both in words and numerical figures.

In view of the general practice of dating in the expired year, the European equivalent for the first of these dates would be Sunday, 25th December, 1091 A.C. ; but there was no eclipse on this day, and we have no other means to verify our calculation. The solar eclipse that occurred just before, however, fell on the 15th of the preceding Jyēshṭha, corresponding to Wednesday, 21st May of the year ; and this would seem to point out that the grant was originally made at the time of the eclipse, but was actually registered seven months later, in December.

According to the same scheme, the English equivalent for the second date would be 10th March, 1120, A.C., but the week-day on this date was Wednesday, not Thursday, as mentioned in the inscription. I am unable to explain this difference.

The *Dūtakas* of the grant were the *Purōhita*, the illustrious Vāmanasvāmin and the *Rājaputra* Kumarapāla (Kumārāpāla?). The inscription was composed by the *Akshapatālika* (keeper of records) whose name cannot be made out, in the *bhaṇḍāgāra* (royal treasury), the name of which appears to have been *Śrījaya* (or the illustrious *Jaya*). The announcement of Raṇadhavala was made in the presence of officers, viz., *daṇḍanāyaka*, *karāṇa-purusha*, *śayyāpāla* *daṇḍavarishṭha* (or *daṅḡavarishṭha*?), *niyuktipurusha*, *vishayika*, and the people of the village.

The inscription is composed on the model of the royal charters of the Paramāra kings of Mālava, and it ends with the *sign-manual* of the king Naravarman, as stated above. The genealogy mentioned in it is all well known ; but the record presents a number of problems, the first of which concerns the accession of Naravarman. On the evidence of the Amēra inscription and the Dēwās grant, we have seen above that Naravarman ascended the throne in 1093-94 A.C.,¹ but the present charter tends to show that he was actually reigning in 1090 A.C., with the paramount title of *Mahārājādhirāja*. From the Dēwās grant, we also know that his father Udayāditya died in 1093 A.C., and the conclusion that can apparently be drawn from the date given in the present record is that Udayāditya may have abdicated some time about 1090 A.C., of course in favour of his youngest son Jagaddēva, whom he liked most, and the latter offered it to Naravarman, some time before or about 1090 A.C. Whatever may have been the case, the record

¹ Above, Nos. 30-31.

under study seems to push back the accession of Naravarman by about a couple of years than known at present.

The view expressed above, however, appears to be one-sided when we take into account what is stated in ll. 33-36 of the present record, namely, that Raṇadhavala, who had originally made the grant as a subordinate prince, again got it verified in the office of the *Muhākshapaṭala*, in order that the next king (obviously Naravarman) may know all about it, for restoring the same. From this statement it is evident that the grant may have been issued by Raṇadhavala, during the reign of Udayāditya; and thus we can neither place Naravarman's accession earlier than the generally accepted date, nor Udayāditya's abdication in favour of any of his sons.

Another historical information furnished by the present record is that Naravarman had under him a feudatory of the name of Raṇadhavala, who governed the southern region of the Paramāra kingdom. This name, which is otherwise unknown, may perhaps be recognised in its Prakrit form Rindhuvula, mentioned in the *Rāsamālā*, as a son of Udayāditya and thus a brother of Naravarman, by whom he was appointed as the governor of the region around Rājpur, the find-spot of the inscription. This place lies to the south of the Narmadā, and thus it is rightly said to have been included in the *Dakshina-pathaka*, in l. 12 of the inscription.

The reason why the grant was renewed is not stated but can be conjectured in view of the political events of the time. In this respect, the present charter of course shares the peculiarities of the Kadambapadraka grant which is referred to above and which was originally issued in V. 1167, and also records the confirmation of it along with two other grants made previously, by the king. One of these was made by the *Mahāmaṇḍalika* Rājadēva in V.S. 1154, and the other by his daughter-in-law (*padhū*) Mahādēvī, probably on the same date. A reference to all these grants in the Kadambapadraka charter, is, as observed by R. D. Banerji and N. P. Chakravarti, may have been made with a view to bringing together all the grants of land made to the donee up to the time when that charter was issued;¹ but the case of the present grant is altogether different. It is possible that the grant made by the feudatory Raṇadhavala would probably not be valid unless it is confirmed by his sovereign, and that appears to have been done in the present case, under his sign-manual engraved in the end.

The confirmation or re-issuing of the original grant after the long time of twenty-nine years leads us also to presume that it may have fallen into abeyance due to reasons which are not stated, or which cannot be made out due to the uncertainty of the reading, and thus we are reduced to making a conjecture in this respect. We know that Naravarman was pre-occupied with his enemies on all sides, viz., the Chaulukyas on the west, the Chāhamānas in the north, and the Chandēllas in the north-east of his kingdom; but particularly in the south of his territory, beyond which lay the kingdom of the Western Chālukyas, who were the most inveterate enemies of his house. As is evident from the present epigraph, the region to the south of the Narmadā and around Rājpur, the find-spot of the plates, was under the Paramāras in V.S. 1148 (1091 A.C.), but the recently published Aśvī plates, dated Śaka 1020 (1098 A.C.)² show that the Yādava king Āirammadēva was at Narmadāpura, which we have identified with Nemāwar (now in Dēwās District), just opposite to it, on the north bank of the Narmadā.³ Āirammadēva was a zealous feudatory of the Chālukya king *Tribhuvanamalla* Vikramāditya VI (1076-1126 A.C.), whose principality lay in the south; and unless it be presumed that he made an encroachment on some territory lying to the north of the river, his feudatory could not have issued the grant from that region. This part of land appears to have been subsequently re-conquered by the Paramāras, some time before the date when the grant was confirmed or re-issued.

Most of the **geographical names** occurring in the inscription can fortunately be identified. **Rēvā** is doubtless the Narmadā; and **Kapila**, which is mentioned as its tributary, as in the *Schōre* grant of Arjunavarman and the *Māndhātā* grant of Jayavarman II, edited above, dated

¹ Vol. I, p. 117.

² See *Ep. Ind.*, Vol. XX, p. 105.

³ *Ibid.*, Vol. XXXVI, p. 254; text ll. 36-37. This grant mentions *Siddhēśvara* at Narmadāpura; and our identification of the town with Nemāwar is supported by the fact that a temple known as of *Siddhanātha*, or *Siddhēśvara*, exists there, on the banks of the Narmadā. See *P. R. A. S. W. I.*, 1920-21, p. 98.

⁴ For details, see above, No. 46.

respectively in V. 1272 and 1317, is evidently the small stream known as Kōlār, and figuring as Kuvilātā in one of our inscriptions.¹ **Pūrnāpathaka** has already been identified by us with the territory around the modern town of Punāsā, situated about 30 kms. south-east of **Amarēśvara**,² which is at Māndhātā. **Mahudahā**, the gift-village, is obviously the modern Mōhadiyā, lying about 40 kms. north by east of Rājpur, the find-spot of the plates, which itself is about 50 kms. due west-northwest of Khargōne. The village is about 20 kms. south-west of the adjoining *tehsil* of Kasrāvād and about 6 kms. south of the Narmadā. As for **Tawā**, the other gift-village, it is impossible to speak with confidence, in the absence of any place with that name existing in the neighbourhood. It may however appear to have been a village, now no more extant, lying on a stream known as Tēv, also spelt as Tēva and Tēo, one of the southern tributaries of the Narmadā and flowing about 12 kms. east of Mahudahā. Or, from the use of the word *antaḥ* before it, it seems to have been, rather more probably, a part of Mahudahā itself, though separately mentioned in the inscription. **Madhumatī**, the *bhukti* of the donor which was also a *prati-jāgarunaka*, may probably be identified with Mahāpurā, also known as Mōhīpurā, situated about 20 kms. north by west of Rājpur, on the southern bank of the Narmadā. The place is mentioned by this name (*Madhumatī-nagara*) in an inscription of the thirteenth century, found there and recording the construction of a Śiva temple, and has a mound in its vicinity, vouchsafing its antiquity.³ **Pāṇōni**(li) may perhaps have been either the same as Pānwā, about 10 kms. south of Rājpur, or, more probably, Pānyā, lying about 16 kms. north by east of it. **Dakṣiṇa-pathaka** appears to be the same as *Dakṣiṇāpathaka* or, *patha*, which denotes that portion of the Indian Peninsula which lies to the south of the Narmadā. And finally, **Pañchaūra**, the original place of the donee and mentioned as a *mahāsthāna* in the inscription, suggests its identification with the modern town of Pachōr in the Rājgadh District of Madhya Pradesh, on philological grounds; but the word *vinirgata* (migrated from) after the name indicates its existence outside Mālava, unlike Pachōr, and another similar name, *viz.*, that of Pañchamahāla in Gujarāt (just to the west of Bāṅswādā and south of Dūngarpur, in Rājasthān) and adjoining to Mālwa on its south-west, may be suggested here, though nothing can definitely be said in this respect.

¹ The *anuvāra* is redundant. The hyphen is used by me, to denote the end of one title. The preceding *स्व* is not necessary in the *samāsa*.

² The reading is uncertain. Probably to be restored as *ante* (near its end), or, *antar*, (inside it).

³ The same as *Drāṅgika*, i.e., the officer in charge of a town, for which cf. the *Unā* inscription, *Ep. Ind.*, Vol. IX, pp. 4 f. Also see *C.I.I.*, Vol. III, p. 169, n. 6. Or, with the supply of u at the beginning, *Udrāṅga-varuṣṭha*, i.e., an officer who collected levy. Cf. *C.I.I.*, Vol. III, p. 97, and n.

⁴ The letters in the brackets have left only traces. The use of the initial *i* in *viśhaika* that follows is noteworthy, instead of *yi*.

⁵ The sign of *visarga*, which can be seen only on the original, was inserted later on. The *daṇḍa* that follows is redundant.

⁶ The bracketed *akshara* is formed as *yam*.

⁷ Read *पतिमम*. A redundant *daṇḍa* is engraved after *पति* that follows.

⁸ Probably what is intended is *śāntis*. The five *śāntis*, to propitiate the *grahas*, *pītris*, *bhūtas*, *dēvas*, and *Brahman*.

⁹ Read *ददुस्तेषां*.

¹⁰ The *daṇḍa* in this and the following lines are redundant.

¹¹ Read *कोविन्द*.

¹² The *daṇḍa* is engraved as a *prishṭa-mātrā* of the following letter. This *lākhā* is not known to me. Probably *Vājasaneyi* is intended (?).

¹³ The correct form of the first of the names is *Pavanāha*; and of the second, *Vāmana*. The consonant of the first *akshara* of the latter name can also be read as *ch*.

¹⁴ Read *—पतरस्तवाग्रमयोः*, but the meaning of *āntara* is not clear in this reading. Probably what is intended is "in the neighbourhood", or "another".

 54 पुत्रकुमारपालौ । मंगलं महाश्रीः¹⁵ ॥

¹ Both the bracketed *aksharas* are engraved only in parts.

² The three *aksharas* in the brackets show uncouth forms.

³ That is, 77, mentioned here in Prakrit. For the Prakritism in the expression, cf. *bayāsa* (Sans. *duāchat-vāriṃśat*) in the Kamauli plate of V.S. 1190, in *Ep. Ind.*, Vol. IV, pp. 111-112.

⁴ Originally, a *danda*, with an attempt to change it to the sign of *visarga*. *Nibaddha* means registered. Cf. *Ep. Ind.*, Vol. XIX, p. 18, l. 16. The reading of the two preceding letters in the brackets is not certain.

⁵ The sense of this and the preceding word is not clear to me. The reading of the first two of these *aksharas* is also uncertain.

⁶ This is grammatically incorrect. Read वसुं ह्यो दत्तौ or ग्रामद्वयं दत्तम्. Obviously, the same villages which were donated previously. The *danda* in the preceding line is redundant.

⁷ The *akshara* in the brackets is written above the line, in smaller form.

⁸ Read पार्थिवेन्द्रान्.

⁹ Read त्रिलोकाः ॥१२॥ इति ।

¹⁰ This is a contraction of *Dūtaka*. The consonant of *hi* that follows is engraved as *d*.

¹¹ Delete the *danda*, and read both the names as one word.

(Incomplete & Undated)

EULOGY OF SUN-GOD FROM UDAIPUR

(Incomplete & Undated)

THIS inscription was noticed, by M. B. Garde, in the *Annual Administrative Report* of the Department of Archaeology, former Gwālior State, for the Vikrama year 1977. It is edited here, for the first time, from an inked impression, prepared by the Technical Assistant of the Central Circle of the Survey, to whom my thanks are due.

The inscription is incised on the counterstruck surface of a rectangular slab of stone surrounded by a plain raised border, imbedded in the left hand side of what appears to have been the *mandapa* of an old temple, at **Udaipur** in the Vidishā (Bhilsā) District of Madhya Pradesh. This temple, which stands at a little distance to the south of the well known Śiva temple at that place, is now dilapidated, and is owned by a resident of the place, who continued making additions and alteration to it from time to time. It is locally known as *Bijāmandala*.³ In my visit to the place, I found a number of old images lying helter-skelter in the inner cells of the structure, all to be ascribed to about the time of those carved on the Udayēśvara temple in its vicinity, as stated above.

The inscription consists of eight lines of writing, covering a space 80 cms. long by 26 cms. high, with one *akshara* in the line that follows. It is incomplete, in spite of the fact that the lower portion of the stone, measuring about half of the whole, is left blank. The reason why the record was not fully engraved is not known; it may, however, be conjectured from the engraving of the last two lines, where the letters are rather indistinct in comparison with those of the earlier portion, that the sand-stone, on which it is engraved, was probably found unfit to bear the marks of the chisel,⁴ in its lower portion. The size of the letters ranges between 2 and 2.5 cms. A number of them are lost, and some mutilated.

The engraving is fairly deep. The **characters** are Nāgarī of the twelfth century, and bear a close resemblance to those of the celebrated Udaipur praśasti, edited above. The formation of the letters is also of the same type, more or less also showing the same characteristic feature of the writing, *viz.*, that a short vertical stroke is attached to the left of the top-line of almost all the letters, and occasionally, also to its right. To note the peculiarities of the individual letters,

¹ The syllable in the brackets, which was originally omitted, is engraved just above the preceding letter, and it also appears to have been rubbed off.

² The preceding line is in bigger letter and engraved as separate from the main body, as we find also in No. 51, above. Two of the letters in the line, *viz.*, नृ and रत may perhaps be explained as the initial *aksharas* of नृवर्मणः राज्ञः. The first of the *aksharas* in the line, *i.e.*, र, is also found in No. 38, I, 14.

³ It also goes by the name *Ghadiyalan-kā-mahān*; and from this expression it is inferred that "it was probably the house of the time-keeper or clock-man on the establishment of the great temple." See D. R. Patil, *The Cultural Heritage of Madhya Bhārat* (Gwālior, 1952), p. 104. But the word *Bijāmandala*, which may have been at the root of the name, appears to have been a corrupt form of *Pijayā-mandala*, an analogous instance of which is furnished by one at Vidishā, where too we have an inscription, No. 36, above.

⁴ For another incomplete inscription edited here, see above, No. 160, in which case the reasons appear to be different.

we find that *ch* and *v* are almost alike in form, as in *vivarita* and *chakra*, both in l. 1, whereas *dh* shows its own distinct form in bearing the horn on its left limb, and the vertical of *dhā* are joined by a horizontal stroke, as in *braddadhā*, l. 2. The *rēpha* is often denoted by a serif, attached to the lowest extremity of the preading letter, as in *chakra*, l. 1; and the slightly varying forms of the palatal sibilant are to be seen in *kyīta* and *braddadhāna*, both in l. 2. The conjunct *shya* in *ushya*, l. 3, is written as *shla*. Mistakes of engraving, which are only a few, are noticed below in the text.

The **language** is Sanskrit; and excepting an initial short sentence paying obeisance to the Sun-deity, the record is metrically composed. It contains ten verses, the last of which is incomplete. The verses are not numbered. The **orthography** calls only for a few remarks, which are usual, e.g., the doubling of a class consonant following *r*, as in *karṃma*, l. 5; the occasional interchange of the palatal and the dental sibilants, e.g., in *praśāda* and *prakāsa*, respectively in ll. 2 and 4; the general use of the sign for *v* to indicate *b*; and finally, the use of *anusvāra* for final *m*, even wrongly at the end of stich, except in a few instances, e.g., at the end of the first-half of vv. 1 and 2. The *mātrās* of diphthongs are used before a letter, and sometimes also above it.

The extant portion of the inscription does not refer itself to the name of any **king** nor does it bear any **date**. Thus, historically it is of no value. Its importance, however, lies in showing the popularity in Mālwā, of the worship of the Sun-deity, eulogised in it, in the twelfth century, to which its **palaeography** belongs, and this account is corroborated by another eulogy of the same deity, engraved on a slab which was found at Vidishā.¹

Beginning with the *Siddham* symbol followed by the word *svasti* and a short sentence showing obeisance to the Sun, the inscription has a *maṅgala-śloka*, intending to say that this deity bears the nave of the moving world-wheel, to which his rays in the form of spokes are attached. In the next stanza the poet shows his modesty, and the god's (Sun's) favour which actuates him to compose the eulogy. The following two stanzas refer to the well-known fact that the Sun's splendour is (reflected) in the moon and also to be seen in the fire, which is eulogised by the gods, and that he is the lord (store) of the eternal light. Verses 5-6 state that the Brahman and the world are nothing but the forms of the Sun, the first of these being unmanifested and minute, as to be seen only by the ascetics, and the latter, when it becomes manifest and extensive, in the world. The next stanza, which is partly preserved, means that the deity imparts lustre, not only to the eyes but also to the mind. The last verse identifies the world with the Sun-God.

No **geographical name** appears in the extant portion of the record.

TEXT

[Metres: Verses 1, 4-5, 7-8 *Anuṣṭubh*; vv. 2, 9 *Mandākrāntā*; vv. 3, 6 *Sāritilavikrīṭita*; v. 10 *Śikharinī*].

¹ Above, No. 37.

² From the original and an impression.

³ Expressed, respectively, by symbol, and the Nāgarī letter ङ with the sign of *anusvāra* above.

⁴ Here, and at the end of some other lines below, there is an unnecessary *danḍa* followed by a horizontal stroke, intended to cover a little blank space at its end.

⁵ The *danḍa* is placed quite close to the preceding *akṣhara*; so as to appear as the sign of *mātrā*.

⁶ The *anusvāra* on *lli* is redundant.

No. 200: PLATE CLXXVI

SĀWARGĀON STONE INSCRIPTION OF THE TIME OF JAGADDEVA

(Undated)

THE stone bearing this inscription was discovered by Doctor A.M. Shiralkar, an officer in charge of registering antiquities in the State Department of Archaeology in *Mahārāshtra*. The same scholar also published the record in the *Indian History and Culture*, a Quarterly Journal in Marāthī (Bombay), in its issue of January, 1973, on pp. 44-49, with the text but without a facsimile.

About ten years thereafter, the inscription was edited by Prof. V. B. Kolte of Nagpur, with his own reading of it from an impression sent to him by Shri Kawadkar, Officer in charge of archaeology of *Mahārāshtra* State, stationed at Aurangābād. Kolte's article, in which he corrected Shiralkar's reading of some important interpretations, is published in the *Vidarbha Research Society's Annual* for 1973, pp. 73 ff., with a lithograph. From the same lithograph the inscription is edited here.

The slab bearing the inscription is said to have been found at **Sāwargāon**, also known by its longer name **Rānī Sāwargāon** a village in the Parbhani District of the Marāthawāḍā region of *Mahārāshtra*. Its exact find-spot is not known.¹ The writing covers an almost squarish

¹ These three *aksharas* are mutilated beyond recognition, and the traces show that they may have been रनमी.

² This *akshara* appears as शो, followed by a *danda*; but it gives no meaning.

³ The fourth *akshara* in this foot is required to be long. Probably we have to read it as सं.

⁴ Should we read it as स्तोत्रं नु ?

⁵ Both these *aksharas* are mutilated beyond recognition. The lacunae may be filled in by reading ब्रह्म.

⁶ It is doubtful whether it is the sign of *visarga*, or *jīvaṃmūṛṭya*.

⁷ The marks show that all these letters are either mutilated or misformed. They cannot be made out.

⁸ The reading of this singular *akshara* in this line is not certain. It is followed by a flowery design and a double *danda*, as marked here, but the inscription is incomplete, as already stated above.

⁹ I could not obtain Shiralkar's article on the inscription, and Kolte's writing is the only source of my information on this subject.

EULOGY OF SUN GOD FROM UDAIPUR (UNDATED AND INCOMPLETE)

Scale : One-fifth

space, about 30 cms. The size of an individual letter is about 2.5 cms. The lower left corner of the stone is slightly broken and lost, causing no loss of any letter.

The writing consists of eight lines of equal length, and, with the initial word *Svasti* and with the exception of a small sentence in the end, which gives the poet's name, the record contains only one stanza in the *Śragdharā* metre.

The **language** is Sanskrit, which is correct. The **palaeography** shares the peculiarities of the Dōngargāon and Jainād inscriptions, edited above.¹ For instance, the letter *dh* is formed as *v*, in *kudhra*, l. 3; *ṅ* when doubled is written as *ṅṅ*; see *Karṇāṭa* in l. 2; and the letter *r* resembles a verticle with a horizontal stroke attached to it on the left in the middle, as in *vīra*, l. 6. The rare *jha* occurs in l. 3.

Orthographically, we note that the syllable following *r* is doubled, of which we have only two examples, namely, *Karṇāṭa* (l. 2) and *pūrvvā* (l. 5). The diphthongs are denoted both by the *ṣṣiṣṭha* and the *ūrdhva-mātrās*, even side by side, as in *Jagaddēva-dēvō* in line 6.

The record refers itself to an illustrious hero of the name of **Jagaddēva** who is described as vanquishing thousands of (enemical) warriors, all alone, when even those who sided him in the battle had fled off. The stanza was composed by the poet *Aśvatthāma*. The record bears no date, but on palaeographical grounds, it may be assigned to about the same time as of the Dōngargāon inscription which was dated in Śaka 1034 or 1112 A.C.

Beginning with the auspicious word *Svasti*, as said above, the inscription says that when the terrified *Kālidāsa* had fled and the *Karṇāṭa* forces were melting away (had dispersed somewhere), when the *Pāṇḍya* chieftain had sought hasty refuge in some mountain crevices, and even when his own army too had scattered at the nick of the time, when *Bhānu* (lit. *Āditya*, the Sun) was wandering (busy) in the eastern hill-peaks, the daring, dauntless, valiant and illustrious *Jagaddēva*, riding his (war) horse *Kālamēgha* (lit., the cloud of deluge), only by the strength of his arms, vanquished hundreds of thousands (*lakṣa*) of the hostile warriors.²

Neither the family nor the parentage of our hero is mentioned in the record, but on the basis of its find-spot, which is in the same region where the Dōngargāon and Jainād stone inscriptions³ were found, it is not difficult to identify him with the homonymous son of *Paramāra Udayāditya* and a brother of *Naravarman*. Our conclusion is supported by the fact that this record was composed by the poet *Aśvatthāma* who also composed the latter of these records. The palaeography too points to the same, as observed above.

In the above respect, the expression *Bhānanu pūrvvādri-sānu* (ll. 4-5) is also noteworthy. *Kolte* has rightly shown that the word *Bhānanu*, as a synonym of *Āditya* (the Sun), obviously refers to *Vikramāditya* (VI), the Later *Chālukya* emperor (1076-1126 A.C.), who has entrusted *Jagaddēva* with the administration of a province which comprised parts of the *Yeōtmāl* and *Ādilābād* Districts, roughly to speak, the northern districts of the old *Hyderabad State*; and the find-spot of the present inscription, which is in the same region, leaves no doubt in identifying the latter with the illustrious son of the *Paramāra Udayāditya*.

The verse obviously refers to some engagement by *Jagaddēva*, in which he was sided by *Kālidāsa*, the army of the *Karṇāṭas* and the *Pāṇḍyas*, against an enemy who is not mentioned by name. *Kālidāsa* appears to be the same who was the general of the *Western Chākukya* king *Vikramāditya* and the son of *Madhavarasa*, the Commander of the army of *Sōmēśvara I Āhavamalla*.⁴ *Karṇāṭa-danda*, mentioned next, obviously refers to the *Chālukya* army led by *Kālidāsa*, though the word sometimes refers to the *Hoyasālas* also.⁵

¹ Above, Nos. 28 and 29.

² The reading is *lakṣa* and not *lakṣya*, as emended by *Kolte*, for which, see note on the text below.

³ Above, Nos. 29 and 29. *Yeōtmāl* is about 80 kms. straight north-west of *Ādilābād* from which, *Parbhani* lies about 160 kms. straight south-south-west. Still another inscription of *Jagaddēva*, dated Śaka 1056 (1134 A.C.), was found at *Dharmapuri* (*Bijla* District), which is about 120 kms. west of *Sāwargāon*. This information is due to *Shri. Chandrashekhara Gupta*, Registering Officer of antiquities, *Nagpur*. For want of an impression this inscription could not be edited here.

⁴ See *Yazdani, Early History of the Deccan*, p. 396. This general appears to be the same as defeated with some others, by *Rājādhirāja*, son of *Rājendra Chōla*. See *Journ. of Ind. History* (Calcutta), Vol. VIII, Pts. I-II, p. 61.

⁵ Above, p. 55 (no. 84), Textverse 19. Also see above, pp. 78f.

The enemy who was vanquished by Jagaddēva by killing the warriors of his army is not mentioned in the record, but he can be no other than the Hoysala Ballāla I, who probably ruled conjointly with his brother Vishnuvardhana. Jagaddēva's conflict with the Hoysala king is mentioned in the Jaināśī inscription, which states that he slaughtered the enemies at Dōra-samudra, as already seen, while editing the inscription. We know that Ballāla's grandfather, Vinayāditya recognised the sovereignty of the Chālukyas from 1078 A.C., and he was faithful to his overlord till his death in c. 1100 A.C., also siding him in some of his battles. But Ballāla or Vīra Ballāla as he was also known, was an ambitious and adventurous prince, and he appears to have made an attempt to declare his independence, by making aggressive activities against some of the feudatories of the Chālukyas and also by aggrandising himself against his neighbours. From one of his inscriptions we learn that he, along with Vishnuvardhana, put down the Pāṇdyas of Nolambavāḍī and seized their wealth.¹ This account is supported by another inscription dated in 1116 A.C., which tells us that Vishnuvardhana fell upon the Pāṇdyas, from whom he captured the fortress of Uchchhaṅgī.²

Vikramāditya, however, could not tolerate this sort of overbearingness on the part of his own subordinate, but since he was fully occupied with the Chōla affairs in the east,³ he appears to have sent a punitive expedition against Ballāla, under his loyal subordinate Jagaddēva with a strong force of the Chālukyas, led by his general Kālidāsa, which on the occasion, was also joined by the army of the Pāṇdyas, who had a special grudge against the Hoysala king.

In the conflict that ensued, the armies of the Chālukyas and the Pāṇdyas left the field, but Jagaddēva, all alone, killed the soldiers of the enemy and came out victorious, as we learn from the present inscription.

That the Chālukya emperor was then fully occupied with Chōla affair in the east is shown by the expression *Bhānu pūrvvādri-sānu*, the significance of which can hardly be missed, as already seen above.

The struggle between Jagaddēva and Ballāla appears to have taken place after the latter ascended the throne in 1100 A.C.⁴ and in the very initial years of his reign.⁵ Jagaddēva's success against the Hoysalas has also been discussed above.⁶ But this does not seem to have been the only phase of the battle, which may have continued even thereafter, as we know from some of the Hoysala records which also claim victory of Ballāla over the Chālukyan army.⁷ It also appears possible that these conflicting references may not be taken to allude to one and the same contest.

The geographical names appearing in the inscription have already been identified above.

No. 201 ; PLATE CLXXVII

KUNDEŚVARA COPPER PLATE INSCRIPTION OF THE TIME OF VIDYĀDHARADĒVA

[Vikrama] Year 1060

THE plate which bears this inscription was found at **Digōdā**,^{*} a village about 24 kms. straight north of Tikamgaḍh, the principal town of a district in the Vindhya region of Madhya Pradesh. The record was briefly noticed in the *Annual Report of Epigraphy*, 1971-72, as No. A-7. The plate was then in the possession of Shri S. P. Srivastava, Principal of the Basic Training Institute at Kundēśvara, near Tikamgaḍh ; but at present, as I am informed, it is exhibited at the local Museum at that place. The definite year and the circumstances under which the plate was found are not known. The inscription, which is of great value for the history of the Chandēlla rulers and the Turkish invasion of India, as to be seen below, is edited here for the first time, from an impression kindly provided to me by the Chief Epigraphist. I also revised my reading from the original plate placed at my disposal, due to the courtesy of Shri P. C. Sen, the Director of Archaeology, Madhya Pradesh.

The inscription is on a **single** copper-plate, which is fairly large but thin. The plate is broken on all the four sides and the corners, especially at the lower right-hand side, resulting in the loss of some letters in the last three lines. Its ends are slightly raised and it shows a curvature on the right side also. It is inscribed on one side only. The greatest length of it is 58.8 cms. and the breadth is 34 cms. The writing covers an area about 58 cms. broad by 38.5 cms. high. In the middle of the top-margin the plate shows a rectangular hole (1 cm. by .5 cm.), which appears as bored some time later, apparently for hanging it by a nail on the wall, as also stated in the *Report of Epigraphy*, referred to above. A similar attempt also appears to have been made at the bottom, which has mutilated a portion of the plate. It weighs 2 kilograms and 8.80 grams.

¹ The word, which is used here for alliteration, means a mountain.

² The *daṇḍa* has disappeared, leaving only traces.

³ As said above, here the word denotes Vikramāditya VI of the Western Chālukya dynasty.

⁴ The word *bala* is used in double meaning: army and strength. Since Jagaddēva's army had scattered, he won the battle on his own strength.

⁵ Prof. Kolte emends the second letter to *śhya*, meaning the aim. But it is unnecessary. Here it means hundred thousands, that is, innumerable, which is also consistent with *ajāyal*.

⁶ The first *akshara* in this line is partly broken, and the *sandhi* is not observed for the sake of metre.

⁷ This *akshara* too is partly broken. *Kālamēgha*, literally meaning 'cloud of deluge', appears as the name of Jagaddēva's horse.

⁸ Kolte read the third letter of the name as *chchhu* and corrected it to *stha*. But also see the same letter in the name of the poet, above, on Plate XXXII, line 28.

⁹ This place is mentioned as Dugauḍā, above in No. 112, verse 6, and as Dugauḍa, above, in No. 150, verse 7.

The incisions are not deep, excepting in the commencing and the concluding portions, which also show the chisel-strokes on the other side. The inscription has also suffered from corrosion and oxidization, particularly in the middle of ll. 7-14 and also in the lower left corner, and consequently, a number of letters and their parts, with their subscripts and the signs of *anusvāras* and *mātrās*, have either totally disappeared or are damaged. The writing consists of 23 lines, the last two of which, containing the **sign-manual** of the king, are inscribed in the lower left corner. Besides these, there are two lines along the top and one in the left margin, which are all completely corroded, leaving one or two *aksharas* here and there, appearing as containing names which were engraved some time subsequently. In the right-hand margin too is incised a line, repeating in figures, the year, which has already been given in the main inscription, as we shall see presently. The size of the letters ranges between 1 and 1.5 cms. in the first five lines, but it is reduced to about three-fourth of it, in the rest of the lines which are incised most slovenly.

The record is written in the **Nāgari** script of the tenth century. The characters, though closely resembling those of the Nanyaurā copper-plate inscription of Dhaṅgadēva, which was incised only five years before, also mark the transitional stage between those of this plate and the one issued by Dēvavarman and found at the same place.² Noting the **palaeographical peculiarities** of the writing, we find that the letter *ñ* in *Dhaṅga* in l. 1 is written without the dot; *ch*; *y* and *v* are often alike in form; and *dh* is devoid of its horn on the left limb. The syllable *t* occasionally occurs in its old form also, as in *datvā* in l. 6; and the palatal sibilant in almost all cases begins with a short stroke with a loop in the middle, as in *Paramēśvara* in l. 2.

Most of the letters, particularly the conjuncts, are imperfectly formed; and due to the carelessness of the writer and also of the engraver, many of them appear so much alike in form that it is difficult to distinguish between them, for example, between *ga* and *va*, as in *Gaṇḍa* and *śvara*, both in l. 2; between *ya* and *va* in *Vidyādhara* in the same line and also in line 5; and between *n* and *t* in *pitri* and *manuṣya* in l. 5. Too often it is not known whether a vertical stroke is intended for a *danḍa*, which is so often redundantly put throughout the inscription, or for a sign of *mātrā*, particularly after a geographical or personal name; and consequently, all the names, which are several in the record, cannot be read with confidence. Often the mis-formed or lost *aksharas* have also to be conjecturally supplied, for example, it is not known whether in l. 19 the name has to be read as *Uddāha* or *Uddāma*. All these difficulties, which baffle the efforts of a decipherer of the record, are noted below, in the foot-notes appended to the text.

The **language** is Sanskrit, and except for one customary imprecatory verse in the end, the record is all in prose. The **orthographical** peculiarities are almost the same as to be found in the Nanyaurā grant referred to above. For example, the sign for *v* is put throughout to denote both *v* and *b*; the palatal sibilant is used for the dental in *sahāra*, l. 4, and *Vājaśanēya*, l. 10, but not in the same word in ll. 8 and 9. The consonant following *r*, and also often preceding it, is usually doubled, as in *tayōr = mmātā*, l. 4, and in *putra* and *gōtra*, so often figuring in the record. The *pyishṭha-mātrās* are generally used, except in a few instances. Besides these, we find the unnecessary use of the sign of *visarga* after *dhyāta* in l. 1, and *tri* in l. 7; the change of *anusvāra* to *m* in *samvat* and *samvatsara*, both in l. 4, and the violation of *sandhis* throughout the record, particularly in the formal portion thereof. The rules of grammar and syntax are also occasionally violated, and most of the personal names, with those of the *gōtras*, *pravāras*, etc., are put without case-endings and are also separated by marks of punctuation, which are, on the other hand, omitted where they are really required. The sign of the *mātrā* is often detached from the letter to which it belongs, and in several cases it appears as a mark of punctuation. Besides all these, some unnecessary strokes of the chisel make the task of the decipherer indeed a difficult one, as already observed above.

The inscription belongs to the time of the **Chandēlla king Vidyādhara** who is mentioned in it with the royal titles *Paramabhāttāraka*, *Mahārājādhirāja* and *Paramēśvara*, with two of his predecessors, viz., his father **Gaṇḍadēva** and grandfather **Dhaṅgadēva**, with almost the same royal titles. This purpose of the inscription is to record the grant to some Brāhmanas the (produce of the) village *Isaunī*, situated in the *Vāraṅgi-84*. The language giving the names of the donors in

² Above, Nos. 100 and 107, respectively.

ll. 3-4 is grammatically incorrect, but the sense appears to be that the donation was made by one Chāha who belonged to the Chandrātrēya family, the chief queen Satyabhāmā and the *mahārāja-putras* Gōpāla and Vītvaṇa, all combined. The record is dated on the **Amāvāsya of Srāvāṇa** of the (Vikrama) year **1060**, on a **solar eclipse**. The week-day is not mentioned. The date has been calculated to correspond to **20th July, 1004 A. C.** when there was a solar eclipse. The year was Kārttikādi expired.

Commencing with the sign for *Om* which is followed by the expression *Brahma-śrīḥ*, which is indeed a peculiar feature of the record and is generally not found in land-grants, the inscription gives the genealogy of the royal house of the Chandēllas, from Dhaṅga to Vidyādhara, and with the date, it then mentions the donation of the village, as stated above, by the chief queen **Satyabhāmā** (one of the donors), who is known from it for the first time. She is said to have been the daughter of one Nanna, who cannot be identified for want of details. Then the record states that the gift was announced in the presence of the headman (*mahattama*) and the village folk (*janapadas*), who were obviously concerned. We do not know that Vidyādhara in whose time the grant was issued, had two sons of the names of Gōpāla and Vītvaṇa, and hence the expression *mahārājaputra* has to be taken here to denote feudatories or some royal office holders, or noblemen, in which sense we often find it used in inscriptions.¹ There is nothing definite to show that the gift-village was included in their fief and hence they are mentioned here, or that of the queen.

The proceeds of the village were divided among Brāhmaṇas belonging to different *gōtras*, *sākhās* and *pravaras*, and they are mentioned as hailing from different villages, most of which are called *bhatta-grāmas*, probably indicating rent-free localities in the possession of learned Brāhmaṇas. In a number of cases some of these details are dropped, particularly in the latter part of the record, mentioning only the names of the donees, sometimes with those of their fathers. Sometimes two brothers are mentioned together, without any other details. And with each of the Brāhmaṇas is mentioned the share (from one to four) that he was to receive.

It has already been noted above that because of the indistinct engraving a number of the names of the Brāhmaṇas, with the details about them, can not definitely be read; and this difficulty is enhanced by the punctuation-marks so often used in the inscription. It is also not known where we are exactly to add the names of the donees mentioned in the left-side margin and also at the top of the plate.

The inscription comes to an end with the **sign-manual** of Vidyādhara, engraved in two short lines in the lower left margin, as already stated above.

Having thus disposed of the formal part of the grant, we now turn to the historical information furnished by it. The so far latest known year of Dhaṅgadēva is 998 A.C., when he issued his Nanyaurā grant; and it has been usually presumed that he closed his reign not long after this date, since at that time he had already been on the throne for more than a normal period of reign commencing sometime before 953-54 A.C. when he put up the Khajurāhō stone inscription of his father Yaśovarman.² Some scholars, on the other hand, are inclined to hold that this king may have lived at least up to 1008 A.C., which saw the downfall of the Sāhī dynasty.³ But the present record, which mentions Vidyādhara on the Chandēlla throne in 1004 A.C., undoubtedly shows that Dhaṅga had already died before this year, and also that he was succeeded by his grandson Vidyādhara, and also that the latter's father, Gaṇḍa, if at all he occupied the throne may evidently be presumed to have done so only for a few months.⁴ Thus the present inscription materially adds to our knowledge with reference to the successor of Dhaṅga on the Chandēlla throne.

Another important point that may be noted here is that the present inscription solves finally the controversy raging so long with reference to the name of the enemy of the Pratihāra

¹ See D. C. Sircar, *Epigraphical Glossary*.

² Above, No. 98.

³ See *Ind. Ant.*, Vol. XXXVII, p. 142. But we have to observe that the very basis of this conclusion is frail, since the confederacy of some Hindu chiefs organised by Anandapāla, as referred to in it, is reported only by Firishṭa (Briggs, Vol. I, p. 46) and by no other Muslim writer. Here also see *D.H.N.I.*, Vol. II, p. 683.

⁴ As also shown by G. S. Gai, in his Presidential Address of the Ind. Hist. Congress, December, 1974.

king Rājyapāla. Muslim chroniclers are not unanimous in mentioning his name; for whereas Ibn-ul-Asir calls him Bidā,¹ Nizamuddin,² Firishta³ and Gardizi⁴ refer to him as Nandā. Considering all these different readings, Cunningham thought that Nandā of these writers is a misreading for Gaṇḍa;⁵ and this view was accepted by Hultzsch,⁶ Smith,⁷ Ray,⁸ Tripathi,⁹ and some other scholars. But the present inscription, which is dated in 1004 A.C., shows that Vidyādhara came to the throne immediately after Dhāṅga, and thus both the names referred to above, viz., Nandā and Bidā should be taken as denoting only Bidā, obviously the Prakrit form of the Sanskrit word Vidyā and thus signifying only Vidyādhara. This also shows that Rājyapāla, the ruler of Kanauj who is said to have acknowledged the sovereignty of Mahmūd, was killed at the instance not of Gaṇḍa but of Vidyādhara. This conclusion is also in agreement with the statement of the fragmentary Mahōbā inscription, which gives to Vidyādhara the credit of bringing about the destruction of the king of Kānyakubja, i.e., Rājyapāla, and also with that of the Dubkund inscription of the time of the Kachchhapaghāta king Vikramasinha, which states that his predecessor Arjuna killed Rājyapāla at the instance of Vidyādhara.¹⁰

As regards the geographical names figuring in the inscription, none of them can be satisfactorily identified for want of details. The gift-village **Isami** and the territorial division **Vārāngi** however, suggest their identification with the modern places respectively appearing in the maps as Isanagar and Barnagar, the former of which is situated almost about 45 kms. east, and the latter about the same distance in the south, from the find-spot of the plate. As regards the various *bhūṭṭa-grāmas* mentioned in the inscription as the places of the donees, no name corresponding any of them appears on the maps; and besides this, they may also have been in distant regions, and hence I have not attempted to identify any of them. It may here be observed, however, that one of them, viz., Paṅkavāḍa, occurs in a Chandēlla inscription.¹¹

⁹ Hist. of Kanauj, p. 285, n. 5. Also see J.D.L., Vol. X, p. 74, n. This led scholars to suggest that Vidyādhara was then the crown-prince who led the army. See Hist. of Kanauj, p. 285; Ind. Ant., Vol. XXXVII, pp. 128 and 142.

¹⁰ See above, No. 113, v. 22; and No. 134, v. 8.

¹¹ Above, No. 119, Text, l. 19.

¹² From the original plate and an impression.

¹³ Expressed by a symbol represented by the Nāgarī ō with the sign of anusvāra above.

¹⁴ The upper circle of the visarga is engraved as the Nāgarī ō and the lower is omitted. The names of Chandēlla kings also end in *Byahma* in the *Prithvīnāja-Rāsā* (Nāgarī Prachārīṇī Sabha), pp. 25-28.

¹⁵ For the reading of the consonant in *gō*, see the same in *Gaṇḍa* in line 2, and for that of *trā*, see the same letter in *datā* in line 6. The second appear to be a strange name. The sense of *Chōha* above, is not clear to me, but the reading is certain. Probably *ōin=atra* is intended (?).

¹⁶ Sandhi is not made here and also in the next line in *idha* and *I*.

KUNDĒSVAR COPPER-PLATE INSCRIPTION OF CHANDELLA
KING VIDYĀDHARA, VIKRAMA 1060

¹ What appears to have been intended is *kṛṣṇānavē tōvam*. The punctuation mark is redundant.

² What seems as the sign of *anuvāra* on *ra* in the impression is due to the fault of the plate, as seen from the original.

³ This verb goes with *mātā* in line 4, which, however, cannot grammatically be connected with the word *Saryubhūmā* nor also with *tayā*. Moreover, after this verb, one expects an expression like *yathā*.

⁴ That is, *Ṭhakkura*. The next *akshara* may also have been a misformed *ja* and thus its reading is not certain. Most of the names and some other words in this and the following lines are without case-endings and are also unnecessarily separated by punctuation marks. The corrections are not made every time lest the number of foot-notes should increase. The first *akshara* of the name is blurred and also seems as *ma*. It may also be noted that in the following lines some details with reference to the donees are dropped, and in some instances, nothing besides the names is found, as already stated.

⁵ The numeral ४ probably represents the *pravaras*, or it may have been a misformed *ya*, as required here.

⁶ The consonant of the first *akshara* of the name of the place may also be read as *r* or *v*.

⁷ All the *aksharas* of the name after *tathā* are blurred and their reading is uncertain.

⁸ Grammatically it is incorrect.

⁹ From the construction it is not possible to know anything about the names of the brothers, here and in some cases below. Perhaps *Nimvāka* and his brothers (?).

¹⁰ An arrow-mark above this *akshara* probably indicates that the line in the left margin has to be supplied here, but the corresponding mark is not engraved.

¹¹ The consonant of the preceding *akshara* appears as *l*.

¹² The reading of the bracketed *akshara* is doubtful, and it is not known whether the *mātrā* of the third *akshara* of the name is of *ē*. One naturally expects the name of the village here.

¹³ In this line, and also in some others below, the use of both the words *pada* and *padaka* occurs side by side.

¹⁴ This *gōtra* seems to refer to those mentioned previously. The letter *tra* is also written as *tra* in this line.

- 17 तमस्य (स)गोत्र । वाजसनेयशाखा । पणिकवडविनिर्माताय । तथा महायश । पद १ तथा महीपाल

१-----¹⁰
- 2 सुताय-वौ । णरा(?)विद--१ (?)¹¹

[सं]वत् १०[६०]¹²

¹ After an indistinct *akshara* following *tathā*, a portion of the plate is lost in this and the rest of the lines.

² One syllable after *dha* is indistinct and cannot be made out. It is engraved as *vai*, or *vai*, but what appears to be intended is *sya*.

³ Both these *aksharas* are partly broken and their reading is not certain. They may also be read as *ddhāma*. The first three letters, though not separated by a punctuation mark as in the other cases, denote the names of the donee or his father.

⁴ Perhaps a *daṇḍa* is intended here.

⁵ Read *sāsanēna pradattam* for *pradattam*. One expects a word line *evam*, before this and also *iti*, before *matō*.

⁶ The correct form would be *etēshām=upanēlavyam*.

⁷ For *bhuktā*, as usually found.

⁸ The use of the numeral showing repetition is noteworthy. Also see above, p. 319, Text-line 3.

⁹ The *aksharas* in this line are slightly advanced in form than those in the main inscription. After *jālha*, two of them are altogether lost, and the third one is indistinct. The reading of the number after *pada* is also uncertain.

¹⁰ The letters which are indistinct on the plate are shown here by the number of dots, and when more, by a line. The second line begins after some space in the first, and ends much before it.

¹¹ Reading from the original. The *aksharas* here are most slovenly formed and those in the brackets are also weather-worn, but are faintly visible.

¹² Both the numbers in the brackets are almost lost, and their reading is from the traces left.

No. 202; PLATE CLXXVIII

RĀMVAN MUSEUM COPPER-PLATE INSCRIPTION OF TRAILOKYAVARMAN

[Vikrama] Year 1283

INFORMATION about this plate was received by me from Shri B. C. Jain, Deputy Director of Archaeology and Museums in Madhya Pradesh, Eastern division, who also favoured me with a photograph of the inscription. From the same photograph the inscription is edited here.¹

The record is inscribed on a **single plate** of copper, now preserved in the Museum at **Rāmvan** a village lying about 16 kms. from Satnā on metalled road to Rēwā, in Madhya Pradesh. It was presented to the Museum by Professor Urmila Prasada Shukla of Amarapāṭan (in Satnā District), who procured it from his friend the late R. D. Gautama, belonging to the family of spiritual preceptors of the former State of Nāgōḍ (in the Vindhya region of the present Madhya Pradesh),² in whose possession it was from heredity. Nothing could now be known about the provenance of the plate.

The plate is inscribed on one side only. The writing is protected by copper-bands (.7 cms. wide) fixed with copper-rivets on all the four borders of the inscribed side. It measures 40 cms. broad by 27.5 cms. high, and is in a good state of preservation, except in ll. 14-15 where most of the letters are either abraded or mutilated. In the central part of the upper section of the inscription, a space about 4.5 cms. square is occupied by the seated figure of the **goddess Lakshmi**, with four arms, the upper two of which hold a lotus in each. The figure disturbs the continuity of the writing in the first four lines of the inscription. The plate, together with the rivetted border bands, weighs 2502 grams, as I am informed by Shri Jain.

The writing shows slovenliness, though the charter is an imperial Chandēlla record. Most of the letters are rather carelessly formed; and the engraver, who failed to follow the precise shape of the letters, worked in his own arbitrary way, deforming most of them, with the result that often they cannot be deciphered satisfactorily. This difficulty is accentuated particularly in reading the names of the donees mentioned in the grant portion where we have no clue to decide the precise letters forming a name. Moreover, the signs of *mātrās*, *anusvāras* and the superscript *r* are often omitted in the process of engraving; the *danda*, which also bears a top-stroke, as the letters do, is many a time confounded with a sign of *ā-mātrā*, and the curve of the *mātrā* of short and long *i* is often omitted.

The inscription has in all twenty-four lines of writing, the last of which, which is about one-third of the length of the others, is wholly occupied by the **sign-manual** of the king.

The **alphabet** is Nāgarī, regular for the period and the locality to which the record belongs. The characters resemble those of the Gadhā and Sāgar plates of Trailōkyavarman, who issued this plate also. To note the formation of the individual letters, *ch*, *dh*, and *v* often appear alike; *p*, *m*, and *y* occasionally resemble each other; *t* is sometimes confounded with *n*; and *r*, which is generally marked as a vertical, so as to resemble a *danda*, has sometimes a slanting or horizontal stroke, or only a dot, attached to it on the left. Occasionally the letters are also crisped into each other, and the limbs forming them are often separated.

The **language** is Sanskrit, excepting in the use of some of the Prakrit words which are given in their original or local forms. The record is composed in prose, with the exception of two verses in the beginning and two in the end.

The inscription refers itself to the victorious reign of the **Chandrātrēya** (Chandēlla) king **Trailōkyavarman**,³ and speaks of the royal house to which he belonged. Its **object** is to record

¹ From the same photograph, the inscription was edited by me in the *Journ. of Academy of Ind. Numismatics* (Indore), Vol. I, pp. 1 ff.

² Satnā and Rēwā, both of which are now district headquarters in Madhya Pradesh, are connected by a metalled road. Amarapāṭan is now the headquarter of a *tehsil*, situated about 16 kms. north by east of Satnā and 40 kms. south by east of Rēwā. And Nāgōḍ, now a *tehsil* headquarter in the Satnā District, is about 25 kms. west of Satnā, which is a Railway Station on the Central Railway. Thus all these places are situated in the same region.

the donation made by him, of the village Varāhi lying in the *vishaya* (territorial division) of Paṭisā, to some Brāhmaṇas, from his stay at the fort of Jayapura, which is Ajayagaḍh itself, as we have so often seen. The date of the record, as mentioned in line 7 in numerical figures only, is the **eleventh** of the **bright half** of **Chaitra** of the **Vikrama year 1283**, on a **Wednesday**, the date regularly corresponds to **11th March, 1226 A. C.**, for the expired Vikrama year, when the *tithi* was current at mean sunrise.

The **orthographical** peculiarities to be noted are : (1) *b* has been written by the sign for *v*, as in *kuṭumvi*, l. 5 ; (2) the letter following *r* is often reduplicated, e.g., in *durggē*, l. 7, but not in *nirgama*, l. 10 ; (3) occasionally we find the use of the palatal for the dental sibilant ; see *vasundharā* in l. 4 ; and (4) the *mātrā* of *ē* is marked by a vertical before the letter and not above. Signs of the *anusvāra* and the *visarga* are often omitted in the process of engraving. Another feature of the epigraph is that the names occurring in the grant portion are separated by the *daṇḍa*, the use of which is sometimes so close to a letter as to look as an *ā-mātrā* or a *ṣṣiṣṭha-mātrā*. In this respect, the grant shares the peculiarities of the Sēmra grant of Paramardīn, edited above.

This is the third grant of the Chandēlla king Trailōkyavarman, brought to light for the first time, as already stated above, the other two grants of him being the two Gaḍhā plate inscriptions and the Sāgar inscription.¹ Beginning with the symbol for *Siddham*, which is followed by the auspicious word *svasti* and the off-quoted two verses generally to be found at the commencement of a Chandēlla grant, the inscription gives the genealogy of the house, beginning from **Maḍanavarman**, who was succeeded by **Paramardīn**, who, in his turn, was succeeded by **Trailōkyavarman**, the donor of the present grant. All the three rulers are mentioned as sovereign lords, and the additional title of *Kālañjarādhipati* (supreme lords of *Kālañjara*) is applied to Trailōkyavarman. The relationship existing between these rulers is already known from the other records of the house. Thereafter, is named the village Varāhi, with the *vishaya* as mentioned above, followed by the names of the Brāhmaṇa donees, with the names of father and grand-father of each, the *gōtras* they belonged to, and the shares donated to them each, as given in the appendix that follows. Then we find the usual terms of the gift : and, with two of the concluding verses followed by the **sign-manual** of the king, the inscription is closed.

The historical significance of the inscription lies in its date. The latest known date of Trailōkyavarman is V.S. 1269 or 1212 A.C., supplied by the fragmentary stone inscription found at Ajayagaḍh ; and the earliest known date of his son, Viravarman, who succeeded him is V.S. 1311 or 1254 A.C. when he issued the Charkhārī grant.² Trailōkyavarman is also known to have occupied the throne after V.S. 1258 or 1201 A.C., the latest known date of his father Paramardīn. The present grant, which supplies for him the year 1226 A.C., shows that he ruled at least up to this year, when he was succeeded by his son Viravarman.

It is worthy of note that the first-mentioned person of the donees was called Gautama. It is therefore likely, that along with some others, he may have settled at the gift-village. It is also likely that some of his descendants later on came to Nāgōd, which is not far from the village, and may have become the religious preceptor of the house which ruled over the territory. And in view of this assumption, it is likely that the plate was his ancestral property and he adopted the surname Gautama.³

As for the **localities** mentioned in the inscription, **Jayapura** (l. 7) is of course Ajayagaḍh, as we have so often seen. It is interesting to note that this stronghold of the Chandēllas is about 50 kms. north by west of Nāgōd, the findspot of the inscription. **Paṭisā**, the donated village (l. 5), is probably represented by its modern name Paṭihā, with the last consonant *s* changed to *h*, as we generally find in Prākṛita. The place lies about 16 kms. west of Nāgōd,

¹ Above, Nos. 141-142.

² See, respectively, Nos. 141 and 144. This account of course omits the date of the Dhurēti plate which was issued at the time of a Kalachuri king. See *apps.* of No. 143.

³ For a parallel instance, see above, p. 20.

where the plate was for some time deposited; and last of all, **Varāhi** mentioned as the headquarters of the territorial division in which the grant village was situated (L. 5), is the modern village Varahi, lying about eight kms. south by west of Nāgōd, on metalled road to Jasō and in the same region as of the well-known archaeological place Chandréhē.

APPENDIX

The following table shows that the produce of the village was divided into 33 shares which were donated to thirty-four Brāhmanas, excluding, of course, two or three in each cases mentioned in line 15 where their names and the other particulars are chiselled off. It is not necessary to presume that each of the donees received one share, for, as we are told, two of them (Nos. 3 and 4) obtained three shares each, one (No. 6) two and a half shares; three (Nos. 1, 5 and 19) received two shares each; five (Nos. 7, 14, 22, 29 and 33) got half a share each; and the rest sixteen obtained one share each.

It may also be observed here that donees No. 8 to 12 appear to have been all brothers; and Nos. 17 and 27, whose particulars are not mentioned, seem to have been, in each case, a brother of the donee mentioned just before.

Note:—In the table that follows, a question mark is put in the case of doubtful reading; an asterisk to show that the particular item is not mentioned; and two asterisks to show that the details are lost in the chisel strokes.

No.	Name of donee	gōtra	Surname or title	Father's name	Father's surname	Shares received	Line

प । आल्हणस्य साढं(ढं) पदद्वयं(यम्) । तथा प(प) । गोण्हेक-

¹ From a photograph.² Expressed by symbol.³ The punctuation mark and the preceding *varjya* sign are intervened by the figure of the goddess.⁴ The punctuation mark is redundant.⁵ Read व । वस्तु.⁶ Read वासन इत्वा.⁷ These two syllables we also find in some other Chandella grants. For example, see above, No. 126, line 17. In the business portion that follows, the words denoting names *etc.*, are all without case endings and are also intervened by unnecessary punctuation marks. They are reproduced here, without any emendation.⁸ That is, *Śrītriya*.⁹ Reading uncertain. Probably *श* is intended, as in the other cases.¹⁰ Probably to be emended to *tri*, for *Trivēda* or *Tripāthin*.¹¹ That is, *Upādhyāya*. The reading of the first name that follows is doubtful.¹² Here, as also in some cases below, this syllable has no *anuvāra* sign above, and with the following *dayda*, it is likely to be taken as *Pā*, for *Pāthāna*. But in view of all the instances which are invariably followed by a punctuation mark, the syllable denoting the first letter of the surname is read as used for *Pandita* in all these cases. — Also note *Vyāsa* as a name.¹³ The curve of *ḥ* is not engraved.¹⁴ Either the father's name is omitted here, or, the first letter *dī* may denote *Dikshita*, and the rest two, which are indistinct, may have been intended to denote the name, which cannot be made out.

उक्तञ्च ॥ श(शे)खं भद्रासनं छत्रं वरा[स्वा]वरवा-

¹ This syllable is mutilated beyond recognition.

² The reading of the bracketed *akshara* is doubtful, and the construction is also grammatically faulty. Should we read भ्रातृभिस्तुभिः सह?

³ The Sanskrit form of the second name is probably *Sripati*, or *Ruhiputra*.

⁴ The reading of the *mātrās* in these two names is not certain. May also be read as *Jāśvōd*.

⁵ The first two letters are mutilated and the reading thereof is only from the traces left.

⁶ The reading of the first two letters is again doubtful here.

⁷ That is, *Thakura*.

⁸ The reading of the consonant of the first letter of the name is doubtful, as also of the stroke after *ra*, which may be taken either as a *mātrā* of *ṛ*, or a *prishtha-mātrā*.

⁹ About eighteen *aksharas* are lost here, and one point is used in the text to denote two lost *aksharas*.

¹⁰ About ten *aksharas* are again lost here.

¹¹ Here the *gōtra* consisting of four letters cannot be made out.

¹² A curve above the first syllable shows that it may also be read as *Vi*, and the reading of the second is not certain.

¹³ The details of this donee, as of some others, are not mentioned.

¹⁴ The curve of the *mātrā* of the bracketed letter is omitted in engraving.

¹⁵ Read देवोदित्यस्य, or more probably, देवदित्यस्य, as in the preceding line.

¹⁶ A redundant stroke here, as also at the beginning of the next line, is probably put to show that name is not completed here.

¹⁷ The bracketed syllable, which was omitted at first, is written above the line, in smaller form.

¹⁸ The *repha* of this *akshara* is cut on the preceding syllable, and the *anusvāra* sign on the one that follows it.

¹⁹ The three *aksharas* शैलप, which probably denote hilly product, are not found in any other known grant of the house.

²⁰ All the letters in the bracketed are most crudely formed.

²¹ Read परिदुर्लभ्यम् । इदं

No. 208 ; PLATE CLXXIX

BUDHĒRĀ PILLAR INSCRIPTION OF THE TIME OF GANAPATI

[Vikrama] Year 1351 ; Śaka Year 1216

THIS inscription was first brought to notice by M.B. Garde, the then Director of Archaeology in the former State of Gwālior, who announced its discovery in the *Annual Report of the Archaeological Department*, for Śaṁvat 1986 (1929-30 A.C.), pp. 22 and 59-60 (No. 23). A number of errors appearing in this notice were subsequently corrected by D. C. Sircar, who edited the record in the *Epigraphia Indica*, Vol. XXXIII (1960), pp. 162 ff. and plate, in which he also gave a revised reading of the text. From the same plate the inscription is edited here.

The inscription is incised on a pillar which is about 5.5 metres high above the ground, and stands on a hillock close to the northeastern end of the Jhālōnī tank, at **Budhērā**³, in the Pichhōre *parganā* of the Shiypuri District of Madhya Pradesh. The pillar is roughly dressed and the portion on which the record is incised was not made smooth for the purpose. The letters too were not well formed, and they have also suffered very much from the weather ; some of them are lost altogether and some others are mutilated. Thus, the preservation of the inscription is far from satisfactory, and at times, we have to resort to imagination to decipher them.

The inscription has seven lines of writing, occupying a space about 36 cms. in breadth and 25 cms. in height. The letters too are indifferently formed, as said above. In all these respects the record resembles the Banglā inscriptions edited above (Nos. 162-174). The individual *aksharas* are about two cms. in height.

The record is all in prose. As to the **orthography**, we notice scribal errors, e.g., in *durgrē* (for *durgē*), *bhattācha* (for *bhattāraka*), in ll. 2 and 3, respectively and in the proper names which are all given in the local language.

The inscription refers itself to a ruler named the glorious **Ganapati**⁴, whose dynasty or lineage is not mentioned, but from the Imperial titles used in it, he was undoubtedly the last of the **Yajvapāla** rulers whose known dates range between V. 1348 and 1357, or 1292 and 1300 A.C. The **purpose** of the inscription is to record the raising of the pillar on which the inscription was incised, to commemorate the memory of two persons who are described in it as *hata* (killed), apparently in a contest with some enemies who are not specified. The **year**, which is given only in figures and without the further particulars, is (Vikrama) **1351**, Śaka 1216, regularly corresponding to **1294-95 A.C.**

Beginning with the date, as mentioned above, the record, in its first half (ll. 1-3) refers to the ruler Ganapati, endowed with royal titles, and says that his *mahāpradhāna* (Chief Minister) Dēūva was in charge of administration i.e., his governor or viceroy, at **Kirtidurga**. This place appears to be more likely the town of Chandērī in the Gunā District, rather than Dēogaḍh, as

¹ The first two letters in this line are repeated inadvertently, by the writer.

² The curve of the *mātrā* of *mi* is omitted in engraving.

³ Also spelt as Budhēr, Budhēra, Budēr and Budhera.

⁴ The first of the *aksharas* of the name is in traces, with *Śrī* before it.

we have already seen above, while identifying place-names in No. 179. For we have no evidence to show that the Yajvapālas in their last days succeeded in extending their dominions so far as to include Dēogaḍh in the Jhansi District which was under the Chandellas.

The second half of the inscription (ll. 4-7) is more corrupt and also fragmentary; but as reconstructed by Sircar, it seems to introduce the *Pradhān* Raviḥa of Jatuhatta, his son Mudhaisīha, and the latter's two sons, Harirāja and Jayarāja, both of whom lost their lives in a battle with an unspecified enemy, and also that the pillar was erected in memory of their death, by Jayarāja's son, Yamarāja. Here the word used is *nirvāhita*.¹

As already observed by Sircar, the name of Raviḥa's wife and that of the mother of Yamarāja cannot be fully deciphered, because of the mutilated condition of the record.

Of the geographical names appearing in the inscription, **Kirtidurga** is more possibly Chandēri rather than Dēogaḍh with which we have identified above;² and **Jauhatta** (Sansk. Jatuhatta) appears to be a locality in the vicinity of Budhērā where the pillar was found.

TEXT³

- 1 [सं]वत् १३५१ शाके⁴ १[२१]६॥ स्वन्ति श्रीकी-
- 2 त्तुप्रे(र्गं) समस्तराज(जा)वलीसमलंकृतप[मं(रम)]-
- 3 [म]टाक(ट्टारक)[पडि]मरज⁵[श्रीम]णपतिमहाप्रधान-
- 4 देज्व . . 'व्यापा[रं] करोति [।⁶] जौहट्टिप्रधान⁷।
- 5 रविज[पत्नी]दिनसुतमुघइसीह⁸ पु-
- 6 [त्र]ह[रि]राजजेरा[जु]दौहतु⁹ [।¹⁰] लघुपुत्रत्रि[घौ]
- 7 . . . 'न्दि[सुपु]त्रे[ण] [ज]मरायण¹¹ नि[वे]हेदे[यं(यम्)]¹² ॥

¹ See note on the corresponding portion of the text.

² See No. 179, above.

³ From plate facing p. 165 in *Ep. Ind.*, Vol. XXXIII.

⁴ The consonant of the penultimate sibilant is palatal and not dental, as used in *samasta* in the next line.

⁵ Read मरज.

⁶ The two *akṣaras* which are lost here may have been मद्र, as suggested by Sircar.

⁷ As read by Sircar, according to whom, the first of these words is the Sanskrit *Jatuhattiyā*. But all the letters here are mutilated and the last two appear as मण.

⁸ All these letters are either mutilated or lost, and are given here as tentatively read by Sircar.

⁹ Reading uncertain.

¹⁰ Four syllable are lost here.

¹¹ Probably we have to read *yēṇa*, to be restored to *Yamarājēna*.

¹² As read by Sircar, who amended them to *nirvāhit = ēyaṇ*. But some of the letters are misformed and some others are lost.

 Orthography—
 ē, medial, sometimes appearing as *prishthamātrā*
 of the adjoining letter, 511
 ai and au, *mātrā* sometimes used as *prishtha-*
mātrā, 616
 anusvāra, use of, before a vowel, 19
 anusvāra, use of, to denote final *m.*, 325, 329,
 383, 420, 443, 447, 474, 499, 511, 619, 641,
 647, 652
 anusvāra, use of, to denote *n.*, 400
 anusvāra, use of, wrongly at the end of a stich,
 440, 455

- anusvāra*, use of, as nasal, 279, 287, 305, 313, 488, 529, 556, 569, 587, 597, 600, 624
- anusvāra*, use of, except *ṅ*, 383
- anusvāra*, representing class nasals, except *ṅ* and *ṇ*, 368
- anusvāra*, wrong use of, 592
- anusvāra*, wrong use of, to dental and the labial nasal, 556
- anusvāra* and *parasavarna*, use of, 377, 479
- anusvāra* and *visarga*, signs omitted, 658
- avagraha*, use of, 11, 15, 19, 62, 76, 90, 99, 127, 130, 177, 195, 202, 211, 271, 329, 396, 413, 499, 504, 511, 516, 587
- avagraha* and *jihvāmūliya*, use of, 313
- avagraha* and *prishthamātrā*, use of, 310
- b*, use of, for *v*, 107, 134, 201, 251, 377, 382, 393, 396, 522, 597, 619, 658
- b*, use of, for *v* and *vice versa*, 640
- ch*, confounded with *v*, 491
- chh*, use of, for *ch*, 537
- chh*, use of, for *ts*, 43
- consonant, doubling of, following *r*, 279, 297, 303, 313, 325, 332, 339, 347, 354, 357, 361, 371, 374, 377, 396, 400, 411, 413, 443, 447, 452, 458, 464, 474, 479, 488, 503-04, 522, 569, 587, 592, 600, 641, 647, 649
- Consonant, doubling of, following superscript *r*, 516
- Consonant, doubling of, following and preceding *r*, 287, 382, 652
- Consonant, doubling of preceding *r*, 339, 631
- Consonant reduplicated, 11, 15, 19, 28, 32, 36, 40, 46, 49, 55, 62, 65, 70, 72, 76, 83, 90, 94, 99, 103, 107, 115, 121, 123, 127, 130, 134, 138, 142, 145, 148, 158, 162, 172, 177, 195, 201, 211, 228, 233, 243, 260, 271, 335, 350, 365, 393, 470, 488, 496, 556
- danda*, use of, superfluous, 420
- danda*, use of, to denote abbreviated form, 459
- danda*, use of, to separate the names of the *pravaras*, 440
- danda*, use of, to be confounded with the sign of a *mātrā*, 459, 562, 600, 641
- danda*, use of, to appear as a medial *ā*, 537
- danda*, use of, the redundant chisel stroke making it difficult to distinguish, 368
- dental nasal and *anusvāra*, use of, 511
- diphthongs denoted by the *prishtha-mātrā*, 374
- ē*, medial, denoted both by the *prishtha*- and *ūrdhva-mātrās*, 354, 371, 627
- gh*, use of, for *h*, 192, 622
- h*, use of, for *gh*, 549
- j*, use of, for *jj*, 474, 496, 504, 522, 569
- j*, use of, for *y*, 99, 368, 452, 526, 553, 632
- jō*, use of, for *yah*, 243
- jō*, use of, for *yō*, 192
- jihvāmūliya*, use of, 108
- jihvāmūliya*, use of, for lingual sibilant, 537
- jihvāmūliya* and *upadhmanīya*, use of, 516
- kāka-pāda*, use of, 287, 297, 511, 516-17, 537, 556, 587
- m*, use of, 470, 537
- m*, wrong use of, for *anusvāra*, 332, 400, 409, 483, 511, 537, 562
- m*, doubling of, following *r*, 391-92
- m* and *l*, doubling of, following *r*, 526
- mātrā*, showing the medial diphthong, more often at the back than above, 368
- mātrā*, detached from the letter, appearing as *danda*, 361
- mātrās* of the diphthongs marked, 437, 647
- mātrā*, sign detached, 652
- mātrā*, of *ē* is marked by a vertical before the letter and not above, 658
- mātrā*, vertical stroke and the *danda* are sometimes not distinguished, 447
- ṅ* resembles *l*, 526
- ṅ*, use of, for *anusvāra*, 350, 413
- ṅ*, use of, for *ṇ*, 43, 361, 459, 464, 496
- ṅ*, use of, for *ṇ* and *vice versa*, 447, 522
- ṅ*, use of, for *anusvāra*, before *s*, 474
- ō*, medial, denoted by *prishtha-mātrā* and *ūrdhva-mātrā*, 371
- Parasavarna*, use of, for *anusvāra*, 549
- prishthamātrā*, use of, 297, 300, 303, 305, 420, 440, 445, 464, 474, 491, 504, 516, 529, 562, 569, 624, 626, 629, 636, 640, 652
- Prishtha-mātrā*, use of, for medial diphthong, 279, 287, 332
- prishtha* and the *ūrdhva mātrās* use of, 313, 479, 549
- prishtha* and the *ūrdhva mātrās*, use of, for medial diphthong, 522, 556, 587, 600
- prishtha-mātrā* confounded with *danda* and *vice versa*, 488
- prishtha-mātrā* and *ūrdhva mātrās*, use of, for diphthongs, 649
- r*, reduplication of, 300, 368, 420, 437, 440, 455, 483, 529, 537, 549, 597, 619, 624, 629, 658
- r*, subscript, reduplication of, 562
- r*, superscript, reduplication of, 511
- ri*, use of, for vowel *ri*, 400
- rī*, *mātrā*, use of, to *ri*, 339, 447
- s*, use of, for *ś*, 19, 28, 32, 36, 40, 43, 46, 51, 55, 62, 65, 72, 76, 83, 94, 99, 103, 106, 121, 130, 142, 147, 158, 177, 192, 201, 211, 228, 233, 237, 243, 256, 271, 287, 297, 300, 303, 305, 310, 325, 332, 338, 347, 357, 361, 365, 367, 371, 374, 377, 383, 393, 396, 400, 407, 409, 411, 440, 452, 458, 474, 511, 529, 549, 556, 569, 577, 619, 626, 629, 632, 641
- s*, use of, for *sh*, 138
- ś*, use of, for *s*, 40, 46, 256, 470, 474, 479, 503, 529, 537, 652, 658
- s*, use of, for *ś* and *vice versa*, 279, 313, 443, 455, 464, 483, 488, 496, 499, 522, 562, 587, 592, 597, 600, 647
- ś*, use of, for *s*, and *vice versa*, 420, 447, 516
- ś* and *s*, use of, not correctly, 491
- sandhi*, not observed, 313, 374, 393, 470, 597, 619
- sh*, use of, for *kh*, 173, 186, 188, 207, 211, 267, 310, 347, 410, 499, 504, 516, 562
- sha*, use of, for *kha*, 614
- t*, doubling of, 300, 371
- t* and *n*, final consonant, appear in their full form, 374
- upadhmanīya*, use of, for *visarga*, 15
- ūrdhva-mātrās*, use of, 468, 511, 636
- v*, use of, for *b*, 9, 11, 15, 18, 28, 32, 36, 40, 43,

- 46, 51, 55, 62, 72, 76, 83, 90, 94, 99, 103, 115, 121, 123, 127, 130, 138, 142, 145, 147, 158, 172, 177, 195, 211, 225, 233, 237, 243, 245, 260, 279, 287, 297, 300, 303, 305, 310, 313, 325, 338, 347, 350, 357, 361, 367, 371, 374, 400, 413, 420, 440, 443, 447, 452, 458, 464, 470, 474, 479, 483, 488, 491, 496, 499, 504, 511, 516, 529, 537, 549, 556, 562, 569, 587, 592, 600, 624, 626, 647, 652
visarga sign, wrongly omitted, 347
visarga, changed to *s*, 522
visarga, use of, for *sh*, 619
visarga, use of, superfluous, 652
v, use of, for *j*, 207, 627
